PLUMBUM-OSTIUM, among Chymists, a Composition made of two Parts of Lead, and one Part of Sulphur. See LEAD.

PLUME Alum, Alumen Plumosum. See ALUM.

PLUMES, a Set or Bunch of Ostrich-Feathers, pull'd out of the Tail and Wings, and made up to serve for Ornament in Funerals, &c.

PLUMES, in Falconry, is the general Colour or Mixture of the Feathers of a Hawk; which shews her Constitution. See HAWK.

When a Hawk seizes her Prey and dismounts it of its Feathers, she is said to plume it.

The Word is form'd of the Latin *Pluma*, Feather.

PLUMBE, or PLUMULE, in Botany, a little Member of the Grain, or Seed of a Plant; being that which in the Growth of the Plant becomes the Stem or Trunk thereof. See SEED and STEM.

The *Plume* is included in a Cavity form'd in the Lobes on Purpose for its Reception.—'Tis almost of the same Colour with the *Radicis*, or little Root, on the Basis whereof it is sustain'd. See RADICLE.

The *Plume* is the first Part that appears out of the Earth; as, in effect, 'tis the Part that first appears out of the Membrane or Cover of the Seed; there being a Hole over against it in the Membrane, thro' which it makes its Escape.

'Tis the Appearance of the *Plume* without the Cavity of the Grain, that makes what we call the *Bud* or *Germ* of a Plant. See GERMINATION; see also PLANT.

The *Plume* is so call'd, because consisting of several Pieces bound together in manner of a Feather.—In Corn, the *Plume* is that which after the Radicle is shot forth, shoots out towards the smaller End of the Seed; whence some call it the *Acrospire*. See ACROSPIRE, MALT, &c.

PLUMET, PLUMBE-RULE, or PLUMBE-LINE, an Instrument used by Masons, Carpenters, &c. to draw Perpendiculars withal; in order to judge whether Walls, &c. be upright, Planes, horizontal, and the like.

It is thus call'd from a Piece of Lead, *Plumbum*, fastened to the End of a Thread or Cord, which usually constitutes this Instrument.

Sometimes the String descends along a Ruler of Wood or Metal rais'd perpendicularly on another; in which Case it becomes a Level. See LEVEL.

At Sea the *Plummet* is used by the Pilot to sound the Depth of the Sea. See SOUNDING.

PLURAL, in Grammar, a particular Inflection of Nouns, and Verbs, whereby they come to express a Plurality or Number of things. See NUMBER.

The *Latin*, *English*, &c. have only two Numbers, *Singular* and *Plural*; the *Greeks* and *Hebrews* have three, *Singular*, *Dual*, and *Plural*. See DUAL.

In *Latin*, &c. both Nouns and Verbs have usually distinct Terminations to their different Numbers; in *English*, Nouns

Substantives usually become plural by the Addition of an *s* or *es* to the Singular. See SINGULAR.

Nouns Adjectives are the same in both Numbers; and in Verbs, the Number is distinguish'd by that of the Pronouns. See NUMBER, ADJECTIVE, VERB, PRONOUN, &c.

PLURALITY, a discrete Quantity, consisting of two, or a greater Number.

A *Plurality of Worlds* is a thing which Mr. *Hoggen* has endeavour'd to prove in his *Cosmotheoria*.—The same is likewise contended for in a very pretty Treatise of M. *Fantouelli*, under that Title.

See the chief Arguments for a *Plurality of Worlds*, under the Articles MOON, PLANET, and EARTH.

The greatest Absurdity in the Pagan Theology, is, the *Plurality of Gods*. See GOD.

The *Plurality of Benefices* is a thing tolerated in the Church, but never approved of. See BENEFICE.

'Twas the Smallness of some Benefices that first gave occasion to *Pluralities*; for an Ecclesiastic not being able to subsist on a single one, was allowed to hold two: at length the Number increas'd without Bounds.

The Abuse was endeavour'd to be remedied at the Council of *Lateran* under *Alexander III.* and *Innocent III.* when the holding more than one Benefice was expressly forbid by a Canon; but the same Canon granting the Pope a Power to dispense with it in Favour of Persons of distinguish'd Merit, there were so many found a Title to this Merit, that the Prohibition became useless.

In *Germany*, the Pope grants Dispensations for possessing a *Plurality of Benefices*, on Pretence that the Ecclesiastic Princes there, need large Revenues to bear up against the Protestant Princes.

PLUS, in Algebra, a Term commonly used for *minus*, more.

Its Character is +. See CHARACTER.

Thus 4 + 10 = 14 is read, four, plus, or more, 10, is equal to 14. See QUANTITY; see also ADDITION, &c.

PLUSH, in Commerce, &c. a Kind of Stuff, having a Sort of Velvet Nap or Shag on one Side; compos'd of a Wool of a single woolen Thread, and a double Warp, the one Wool, of two Threads twisted, the other Goats-hair.

*Plush* is manufactured like Velvet, on a Loom with three three Steps or Treadles.—Two of these separate and depress the woolen Warp, and the third raises the Hair-Warp; upon which the Workman throwing the Shuttle, passes the Wool between the woolen and Hair-Warp; and afterwards, laying a brass Brooch under that of the Hair, he cuts it thereon with a Knife designed for that Use, conducting the Knife on the Brooch which is made a little hollow, all its Length; and thus gives the Surface of the *Plush* an Appearance of Velvet. See VELVET.

Some ascribe the Invention of *Plush* to the *English*; others say it was first made in *Holland*, and particularly at *Haarlem*.—Be this as it will; 'tis certain, the *French* are the People who make the most of it; there being several very considerable *Plush* Manufactures at *Amiens*, *Abbeville*, and *Compiègne*.

There are other Kinds of *Plush*, all of Silk; some of which have a pretty long Nap on one Side, some on both.

PLUS, among Botanists, a Name given to the Middle of *Ros*, *Anemions*, &c. call'd *Thorum*, or *Thorny Heads*; by others, *hairy Heads*, *Buttons*, *Basi*, *Tuft*, or *Wart*.

PLUVIAL, PLUVIALE, anciently signified a Hood, or Cloak, which Ecclesiastics, chiefly Religious, wore in the Country; to shelter themselves from the Rain: by the *Latin*s call'd *Pluvialis Lacuna*.

The Word is now used in the *Romish* Church, for a large Hood wore by the Chantor and Sub-Deacon, at Mass and Vespers, &c.—It covers the whole Man, and is fixed before with two Clasps.

PLUVIUS, in Antiquity, an Attribute of *Jupiter*; implying him the Author of Rain: *q. d. he* that sends Rain. See RAIN.

Among the *Basso* Relievo's of the *Antonine* Column, in the Place where the Miracle of the Thundering Legion is represented; we see a flying Man in the Air, his Arms spread out, and with a very long Beard, which seems to dissolve into Rain.—The Learned take this to be a Representation of *Jupiter Pluvius*. See FULMINATING Legion.

PNEUMATICKS, PNEUMATICE, call'd also PNEUMATOLOGY and PNEUMATOSOPHY, the Doctrine and Contemplation of Spirits and Spiritual Substances. See SPIRIT.

The Word is form'd of the *Greek* *pnoua*, Spiritus, Breath; whence, from the different Acceptations of that Word, either as an incorporeal Substance, or as Air, there arise two sorts of *Pneumatics*.

PNEUMATICKS, in the Schools, is frequently used for the Doctrine of Spirits; as GOD, Angels, the human Mind. See SPIRIT, GOD, ANGEL, SOUL, &c.

In this Sense the Word coincides with what we otherwise call *Metaphysics*. See METAPHYSICS.

PNEUMATICKS is more commonly used among us, for the Doctrine of the Air; or the Laws wherein that Fluid is condens'd, rarified, gravitates, &c. See AIR.

Some make *Pneumatics* a Branch of *Mechanicks*; because it considers the Air in Motion, with the Effects thereof.—'Tis certainly a Sister of *Hydrostatics*; the one considering Air in the same manner that the other does Water. See MECHANICKS, and HYDROSTATICKS.

Wolffius, in lieu of *Pneumatics*, uses the Word *Aerometry*, &c. the Doctrine of Measuring the Air. See AEROMETRY.

The Doctrine and Laws of *Pneumatics* will be found under the Articles, AIR, ATMOSPHERE, ELASTICITY, GRAVITY, COMPRESSION, CONDENSATION, RAREFACTION, EXPANSION, &c.

PNEUMATICK Engine, *Machina Pneumatica*, the Air-Pump. See AIR-PUMP.

PNEUMATOCELE, in Medicine, a Swelling or Windy *Hernia*; or a Tumor of the Membranes of the Testicles, proceeding from pent up Vapours; and attended with a tenive Pain. See HERNIA.

Sometimes, one of the *Testes* only is thus inflated, sometimes both, and sometimes likewise the Scrotum. See TESTICLE.

This *Hernia* is of all others the lightest, and least dangerous.—It is cured by Dissections internally, and Fomentations and Cataplasms externally.

The Word is form'd from the Greek *πνευμα*, Wind, and *κελος*, Tumor.

PNEUMATOMACHII, ancient Hereticks so call'd because they oppos'd the Divinity of the Holy Spirit; placing him in the Number of Creatures. See EPIPHANIAS.

PNEUMATOSIS, a Term which some Authors use for the Generation or Formation of Animal Spirits, in the Brain. See SPIRIT and BRAIN.

PNEUMONICKS, Medicines proper in Diseases of the Lungs, where Respiration is affected. See LUNGS, RESPIRATION, &c.

Of this Number are Sulphur, Lung-wort, Hyssop, Ground-ivy, and Cats-foot; used in Phthisis, Asthma's, Peripneumonia's, Pleuritis, &c. See ASTHMATIC, ANTIPHTHISIC, &c.

The Word is form'd from the Greek *πνευμα*, Lungs, or *πνευμα*, Spiritus, Breath.

POCK. See POX.

POCKET of Wood, is half a Sack. See PACK of Wood.

POD, probably of the Dutch *Boede* or *Bode*, an Habitation; or the Husk of any Pulse. See PULSE.

PODAGRA, in Medicine, the Gout in the Feet. See GOUT.

It is thus call'd from the Greek *πους*, Foot, and *αγρα*, I seize.

PODAGRA dentium, sometimes, tho' with Impropriety enough, is used for the *Tooth-ach*. See ODONTOLOGIA and TOOTHACH.

PODESTATE, or PODESTE, a Magistrate, or Officer of Justice and Policy, in a free City.

The Word is originally *Italian*, *Podesta*; and is chiefly used for certain Magistrates of *Venice* and *Genoa*, whose Function is to administer Justice in those Republicks.

The *Podestate* in *Venice* corresponds to the *Prætor* in ancient *Rome*; tho' Appeals lie from his Decisions, to the New Auditors, or the new Civil Quaranty. See QUARANTIA.

PODEX, in Anatomy, &c. the same as the Anus, or Fundament. See ANUS.

PODOMETER, or PEDOMETER. See PEDOMETER.

POEM, POEMA, a Composition in Verse, of a due Length and Measure. See VERSE.

Poems are of as many kinds as there are Branches of Poetry. See POETRY.

We have Epic-Poems, Dramatic-Poems, &c. See EPIC, DRAMATIC, LYRIC, &c.

POESY, POESIS. See POETRY.

The Word is form'd from the Greek *ποιησις*, of *ποιω*, fabrico, fabrico, fingo, I make, I frame, I invent.

Hence, Alchemy, or the Art of making Gold, was anciently call'd *Poesy*, *Chrysooesy*, &c. See ALCHEMY, &c.

POETICAL, something that relates to Poetry or Poets. See POETRY and POET.

In this sense we say, a *Poetical* Genius, a *Poetical* Phrase, *Poetical* Licence, *Poetical* Fury, &c.

POETICAL Justice, is chiefly used in respect of the Drama, to denote a Distribution of Rewards and Punishments to the several Persons, at the Catastrophe or close of the Piece, answerable to the several Characters they have appear'd in.

Whatever Difficulties and Distresses the Virtuous and Innocent may labour under, and how prosperously soever it may go with the wicked, in the Course of the Piece; the Poet usually takes care to give each of 'em their due &c'er he parts with *them*.—'Tis contriv'd whether this Piece of Justice

be indispensable, and whether it mayn't be allowed to have Virtue oppress'd and Vice flourishing? See TRAGEDY, &c.

Most Languages have their *Poetical Words*, which are never used on other Occasions.—These prove of great Advantage to the Poets; who are hereby enabled to raise the Style and Diction into the *Poetical Character*, with the greater Ease.

The French lament the want of a Set of such Words in their Language; for want hereof their Poetry appears in a too familiar Garb, not sufficiently distinguished from the common Language. 'Tis too retriv'd; not being allowed any Boldness, or Flights, but what might pass in Prose. To this, in good measure, is attributed the little Success their Authors have met withal in the Epic Way. See FRENCH, EPIC, &c.

POETICAL Rising and Setting. See RISING and SETTING.

The ancient Poets referring the rising, &c. of the Stars to that of the Sun; make three kinds of rising and setting; viz. *Cosmical*, *Acronyical*, and *Helical*. See each under its proper Article COSMICAL, &c.

POETICKS, POETICS, the Doctrine of Poetry; or the Laws and Rules of conducting Pieces or Compositions of Poetry. See POETRY.

*Aristotle's Poeticks* is a Work infinitely valued; and M. *Dacier's* Comment thereon is one of his best Pieces.—*Horace's Poeta*, *Visslar* and *Saliger*, have likewise published *Poeticks* in Latin. The Duke of Buckingham, in English: And *Ménardiere*, *Hedelin*, and *Despreaux* in French.

POETA, POETA, an Author who composes Poems, or Discourses in Verse. See POETRY and VERSE.

*Cicero* relates it as a Saying of *Democritus* and *Plato*, that there could be no good Poet *fine assiduus furor*, without a Tincture of Madness; and *Aristotle* calls Poets expressly, *Maniacs*, *Manics*, *Madmen*. See ENTHUSIASM.

M. *Spanheim* tells us, that the Arab-AUTHORS are more poetically given than those of any other People; and adds, that that there are more Verses among the *Arabians* than among all the other Nations put together.

The Word *Poeta*, *Poes*, signifies *Maker*; whence the Poets were anciently call'd *Fæcti*.—The Name they were properly denoted by among the *Romans*, was *Vates*, which signifies *Prophet*. See PROPHET.

By a Law of the Emperor *Philip*, inserted in the Code L. 10. T. 52. Poets are expressly excluded from the Immunities granted the Professors of all other Sciences.

*Homer*, *Virgil*, *Milton*, and *Tasso*, are the chief, almost the only just, Epic Poets.—*Sophocles*, *Euripides*, *Shakespeare*, *Ormay*, and *Racine*, Tragic Poets.—*Aristophanes*, *Ménander*, *Plautus*, *Terence*, *Fletcher*, *Johnston*, *Moliere*, &c. Comic Poets.—*Horace*, *Copley*, and *Maher*, Lyric Poets.—*Juvenal*, *Perseus*, *Regnier*, *Bodels*, *Dryden*, and *Olathan*, Satyrick Poets. See EPIC, TRAGIC, COMIC, &c.

POETRY, POESY, the Art of composing Poems, or Pieces in Verse. See POEM and VERSE.

The Word is form'd from the Greek *ποιησις*; of *ποιω*, fabrico. See POESY.

If a Verse be consider'd as a mere Series of just six Feet following one after another in the same Line; *Poetry* and *Verification* will appear two very different Things; But *Bossius*, in his Idea of Verse, includes Cadences, peculiar Constructions, Arrangements and Expressions, unknown in common Discourse; and above all, a certain noble, bold, elevated, metaphorical Turn and manner of Diction.—These, he observes, are so essential to *Poetry*, that without them the most exact Arrangement of long and short Syllables, makes little else but a kind of measur'd Prose: whereas these, in a Discourse that has no poetical Feet or Measures, do yet give it the poetical Character, and make it a kind of *unmeasured Poetry*.

The Rules of *Poetry* and *Verifying* are taught by Art, and acquired by Study; but this Force and Elevation of Thought, which *Horace* calls *jametlung divine*, and which alone makes the *Poetry* of any Value, must be derived from Nature; or, according to *Aristotle*, from some happy Transports to which that Author gives the Name of Madness *ἡμεροῦς ἢ θάνατος ἢ ἄλλο τι*.—But there must ever be conceived a just solid Judgment at the Head of this Fury of the Poets Imagination.

Hence, the Critic concludes that, the End of *Poetry* is to please; its Cause, either the Excellence of the Poet's Genius, or a poetical Faculty, and Transport of the Soul manageable by the Judgment; its Matter, long and short Syllables, and Feet compos'd hereof, with Words furnish'd by Grammar; and its Form, the Arrangement of all these things in just and agreeable Verse, expressing the Thoughts and Sentiments of the Author after the manner already mention'd.

But, after all, how narrow are these Boundaries, if we consider *Poetry* in the Light wherein the Works of *Homer* and *Virgil* have set it? What is here laid down pretends to no Praise which a mere Translator may not rise to, and which the War of *Catiline* might not merit if turn'd out of the Prose of *Salust*.—'Tis with reason, therefore, that we distinguish

the *low and simple*, from the *grand Poetry*; by giving the former the Title of *Verseification*: and that we make *Poetry* and *Verseification* two distinct Arts. In effect, there is not more difference between Grammar and Rhetoric, than between the Art of making Verses and that of inventing Poems. See *VERSEIFICATION*.

The *Grand Poetry*, then, consists principally in Fiction, or the Inventions of Fable; in the expressing of things by Allegories and Metaphors; and in the inventing of Actions under which the Truths which the Poet has to teach, may be agreeably disguis'd. See *FABLE*.

In this view, scarce any Poems retain the Nature and Essence of the *grand Poetry*, but the *Epopœa*, *Tragedy* and *Comedy*; the rest, be they *Elegies*, *Satires*, *Songs*, or what they will, come under *Verseification*.

The ancient Eloquence, 'tis observ'd, was full of Myths and Allegories.—The Truth was by them usually disguis'd under those ingenious Inventions call'd Fables, *g. d. Words*; as if there were as much difference between these fabulous Discourses of the Learned, and the common Language; as between the Speech peculiar to Man, and the Voice of Brutes. See *FABLE*.

At first, Fables were chiefly us'd in treating of the Divine Nature, after the manner they then conceived of it: This occasioned the first Poets to be call'd *Divines*, and *Poetry* the *Language of the Gods*.—The divine Attributes they separated into a Number of Persons; by reason the Weakness of the human Mind could not conceive so much Power, and so much Action, in a Simplicity so strict and indivisible as that of God. See *GOD*.

Nor could they speak of the Operation of this almighty Cause, without speaking likewise of its Effects.—They therefore added *Physics* to their Theology, handling both after the same Manner, without quitting their Veils or Allegories. See *ALLEGORY*.

Now, Man being the most considerable of all the Works of the Deity; and there being nothing so proper for Poets, or of such general Use to Mankind, as such a Subject; they therefore added *Ethicks* to the former, and treated the Doctrine of Manners in the same way as they had done *Divinity* and *Physiology*.—And hence arose the *Epopœa*, or *Epic Poem*. See *EPIC*.

The *Epic Poets* have done, with regard to Morality, just the contrary of what the *Divine Poets* did for their Theology.—As the too great Diversity of Divine Actions and Perfections, so little proportionate to our Understanding, occasioned the latter to divide the single Idea of the simple Essence of God into several Persons under different Names; as *Jupiter*, *Juno*, *Neptune*, &c. So, on the contrary, the Nature of Moral Philosophy, which never gives any Rules for particular things, occasioned the *Epic Poets* to unite in one single Idea, in the same Person, and even in a single Action, whatever of the like kind occurs in different Persons, and different Actions.

Thus, says *Aristotle*, *Poetry* teaches Moral Philosophy, not by reciting historically what *Alcibiades* has done, or suffered; but by proposing what such a Person, whom the Poet calls by any Name he pleases, would necessarily or probably have done or said on the like occasion.—This in this manner, it represents either the unhappy Consequences of Designs ill concerted, of wicked Actions, &c. or the Reward of good Actions, and the Pleasure reap'd from a Design laid in Virtue, and conducted by Prudence.

Thus, according to our Critic, the poetical Actions and Persons are all feign'd, allegorical, and universal; not historical and singular.—This is likewise the Sentiment of *Horace*, who adds, that Poets teach Morality as well as Philosophy; but the Preference herein he gives to *Homer*. See *MANNERS*.

This Advantage of the Poets over mere Philosophers arises hence, that all *Poetry* is an Imitation.—Now Imitation is a thing extremely natural; and hence this manner of proposing things becomes better fitted to engage the Auditors. Again, Imitation is an Instruction given by Examples; and Examples are the more proper to persuade, in regard they prove the thing possible.—In effect, Imitation is so much the Nature of *Poetry*, that *Aristotle* tells us 'tis to this the Art owes its Rise. See *IMITATION*.

But the Poets by becoming Philosophers did not cease to be Divines; on the contrary, the Morality they taught oblig'd them frequently to introduce the Deity in their Works; and the Share to assign a Being had in the Action, oblig'd the Poet to make it grand, important, and conducted by Persons of Kings and Princes. See *MACHINE*.

Add to this, that it likewise oblig'd the Poets to think, and speak after a manner elevated above the common Pitch of Men, and to equal, in some measure, the divine Persons he introduced; and to this purpose serv'd the poetical, figurative Language, and the Majesty of Heroic Verse.

To convey their Truths to the best Advantage, and adapt them to the particular Purposes they were intended for;

Poets found out various Forms.—Hence the *Epopœa* and *Drama*.

*Epic Poetry* is more for the Manners and Habitudes, than the Passions; these last rise all at once, and their Violence is but of a short Duration; but the Habitudes are cooler and more gentle, and rise and fall more slowly. See *HABITUDE*.

The *Epic Action*, therefore, could not be restrained to a Day, or two, as that of the *Drama*; a longer and a juster Space was required for this, than for *Tragedy*, which is only for the Passions.—And hence arose a still greater difference between *Tragedy* and the *Epopœa*.

For the *Tragic Violence* required a stronger and more lively Representation than the *epic*; and accordingly it consists wholly in the Action, the Poet never speaking; as he does in the *Epopœa*, where there are no Actors.

The *Laws of Epic and Dramatic Poetry*; see under *EPIC*, *CHARACTER*, *INVOCATION*, *DRAMATIC*, *THEATRE*, *TRAGEDY*, *COMEDY*, *ACT*, *SCENES*, *CHARACTER*, *SENTIMENT*. For the lower *Poetry*, see each under its proper Article, *ODE*, *SONG*, *EPIGRAM*, *ELEGY*, *SATIRE*, &c.

**POINT**, **PUNCTUM**, in Geometry, is defined by *Euclid* to be, that which has no Parts, or is indivisible. See *PART*, *INDIVISIBLE*, &c.

*Wallis* defines it, that which terminates itself on every side; or which has no Terms or Boundaries distinct from itself. See *TERM*.

This is what we otherwise call the *Mathematical Point*; and is only conceived by the Imagination; yet is it in this that all Quantity begins and ends; the Flux or Motion of the *Point* generating a Line, that of a Line a Surface, &c. See *QUANTITY*; see also *LINE*, &c.

Hence some define a *Point* to be Inceptive of Magnitude. See *INCEPTIVE* and *MAGNITUDE*.

A Line can only cut another in a *Point*. Any three *Points* being given, out of a right Line, a Circle, or part of a Circle, may be drawn that shall pass thro' them all. See *CIRCLE*.

To draw a parallel Line, a Perpendicular, a Tangent, &c. to a given Point, are popular Problems in Geometry. See *PERPENDICULAR*, *PARALLEL*, &c.

#### Proportion of Mathematical Points.

'Tis a current Maxim, that all Infinites, whether infinitely great or infinitely small, are equal; yet is the Maxim false in both Cases.—Dr. *Halley* shews several infinite Quantities which are in a finite Proportion to one another; and some infinitely greater than others. See *INFINITE QUANTITY*.—The like, the Honourable Mr. *Robartes* shews of infinitely small Quantities, viz. *Mathematical Points*.

He demonstrates, for instance, that the Points of Contact between Circles, and their Tangents, are in a subduplicate Proportion to the Diameters of the Circles. That the Point of Contact between a Sphere and a Plane is infinitely greater than that between a Circle and a Tangent; and that the Points of Contact in Spheres of different Magnitude are to one another as the Diameters of the Spheres. See *CONTACT*, &c.

**POINT** of contrary Flexure, in the higher Geometry, is a Point of a Curve, wherein it is bent, or inflected to a Part contrary to that it before tended to: so, *e. gr.* as to turn its Convexity towards its Axis, or any other fix'd Point which before it turn'd its Concavity towards. See *CURVE*.

If the Curve turn back again towards the Point whence it first set out, the Point of the Flexure is particularly call'd the Point of Regression, or Retrogradation. See *RETROGRADATION* of Curves.

*Wallis* illustrates the Use of the Calculus differentials in finding the Point of Contrary Flexion in various kinds of Curves. See *FLEXION*.

**POINT**, *Punctum*, in Physics, is the smallest, or least sensible Object of Sight, mark'd with a Pen, Point of a Compass, or the like. See *OBJECT*.

This is what we popularly call a *Physical Point*; which in reality has Parts; tho' those Parts are not here regard'd.—Of such Points does all Physical Magnitude consist. See *MAGNITUDE*.

This *Physical Point* coincides with what Mr. *Locke* calls the *Point sensible*, and which he defines to be the least Particle of Matter, or Space, we can discern.—He adds, that to the sharpest Eye this is seldom less than 30 Seconds of a Circle, whereof the Eye is the Centre. See *VISION*.

**POINT**, in Grammar, is a Character us'd to mark the Divisions of a Discourse. See *CHARACTER*.

The *Point* proper, is what we otherwise call a *Full-Stop*, or *Period*, and serves to denote the Sense complete, and the Period ended. See *PERIOD*.

Two *Points* usually mark the middle of a Period, and shew a Construction complete, and the Sense to be perfect, yet

yet intimating something to come after it;—this we call a *Colon*. See *COLON*.

A *Point* with a *Virgula*, call'd a *Semicolon*, marks a Sense less complete than the *Colon*; tho' Authors seem to use them indifferently; nor are Grammars agreed about their precise Difference. See *SEMICOLON*.

The *Virgula*, call'd *Comma*, marks a Sub-division of a Member of a Period. See *COMMA*.

A *Point of Interrogation*, as? marks something to be pronounced in a higher Tone, as intimating a Question ask'd. See *INTERROGATION*.

A *Point of Admiration*! marks a sudden Surprise and Wonderment. See *ADMIRATION*.

Our *Points* and Accents were entirely unknown to the Ancients. And in the ancient *Greek* Manuscripts, the whole seems wrote with the same stroke of the Pen; the Words and Letters being join'd throughout.

In after-times, *Points* were invented and added a-top of the Letters, to shew when the Sense was finish'd; hence the Grammarians coming to retouch the old Manuscripts thought fit to add the *Points* and Accents.—*Salmafius* affirms, that he has even observed, plainly, where they have been added, by the difference of Hands. See *ACCENT*.

*POINTS*, in the *Hebrew* Learning, are certain Characters, which, in the Writings of that Language, serve to mark the Vowels; which, in effect, are only *Points*. See *VOWEL*.

The Antiquity of the *Points* in the *Hebrew* Tongue makes the Subject of a celebrated Controversy among the Learned; some maintaining their Origin to be the same with that of the *Hebrew* Language; and others asserting them to have been first introduced by *Eldras*, after the *Babylonish* Captivity, when he compiled the Canon, transcribed the Books into the present *Chaldee* Character, and restored the Purity of the *Hebrew* Text.

Others will have them invented by the Doctors of the School of *Tiberias*, usually call'd the *Massoretas*, five or six hundred Years after Christ.—The Rabbin *Elias Levita* was the first who started this question in the last Century; and maintain'd them to have been an Invention of the *Massoretas*, for the Ease of those who were to learn the *Hebrew* Tongue. See *MASSORETES*.

This Sentiment was espous'd by *Capella*, to whom adher'd *Luther*, *Calvin*, *Casabon*, *Scaliger*, &c.—*Buxtorf* attack'd *Capella* violently on this Article, and gain'd a great Number of Divines on his Side, who took the Alarm; imagining it a grievous Wound to the holy Text, to allow the Vowel-Points to have been added by the *Massoretas*, and not to have been found in the ancient Text; because without these 'tis very difficult to fix the reading thereof.—Yet in the *Samaritan* Text there is no *Point* or *Vowel*, nor in many of the most ancient *Hebrew* Manuscripts. See *HEBREW*, &c.

*POINT*, in Music, a Mark or Note anciently used to distinguish the Tones. See *NOTE*.

Hence we fill call it *Simple Counter-Point*, when a Note of the Bass, answers precisely to that of the Treble; and *Figurative Counter-Point*, when a Note is syncope'd, and one of the Parts makes several Inflections of the Voice or Tone, while the other only makes one. See *COUNTER-POINT*.

We fill use a *Point* to raise the Value of a Note, and prolong its Time by one half, *e. g.*, a *Point* added to a Semibreve, instead of two Minims, makes it equal to three. See *TIME*, and CHARACTERS in *MUSIC*.

*POINTS*, in Astronomy, is a Term apply'd to certain Parts or Places mark'd in the Heavens; and distinguished by proper Epithets.

The four Grand *Points* or Divisions of the Horizon, *viz.* the *East*, *West*, *North*, and *South*, are call'd *Cardinal Points*. See *CARDINAL*; see also *EAST*, *WEST*, &c. each under its proper Article.

The *Zenith* and *Nadir* are the *Vertical Points*. See *VERTICAL*, *ZENITH* and *NADIR*.

The *Points* wherein the Orbits of the Planets cut the Plane of the *Ecliptic*, are call'd the *Nodes*. See *NODE*.

The *Points* wherein the *Equator* and *Ecliptic* intersect, are call'd the *Equinoctial Points*. See *EQUINOCTIAL*.—Particularly, that whence the Sun ascends towards the North-Pole, the *Vernal Point*; see *VERNAL*: And that by which he descends to the South-Pole, the *Autumnal Point*. See *AUTUMNAL*.

The *Points* of the *Ecliptic*, where the Sun's Ascent above the *Equator*, and Descent below it, terminate, are call'd the *Solstitial Points*; see *SOLSTITIAL*.—Particularly, the former of them the *Estival* or *Summer Point*, see *SUMMER*; the latter the *Brumal* or *Winter Point*, see *WINTER*, &c.

*POINT*, in Navigation and Geography.—*Points* of the *Horizon*, or of the *Compass*, are certain *Points* form'd by the Intersections of the *Horizon*, with *Vertical Circles*. See *HORIZON*.

The Number of these *Points*, therefore, is really the same with that of the *Points* conceiv'd in the *Horizon*, *i. e.* infi-

nite: Tho' in Practice we only distinguish 32 of them. See *COMPASS*.

Some use *Points*, for the Intersection of a *Vertical Circle*, with a *Circle* parallel to the *Horizon*; and even some, for the Segment of a *Vertical* intercepted between the *Meridian* and *Horizon*, or a *Circle* parallel thereto.

The *Points* are shewn by right Lines drawn from a *Point* assum'd in a horizontal Plane.

So that a *Point* of the *Compass*, is popularly taken for a 32d Part of the whole; or for an Arch of 11 Degrees 15 Minutes; half of which, *viz.* 5° 38' is call'd a *half a Point*; and half of that, or 2° 49' a *Quarter Point*. See *COMPASS*.

These *Points* of the *Compass* are divided into *Cardinal* and *Collateral*.

*Cardinal Points* are the Intersections of the *Horizon* and *Meridian*, call'd the *North* and *South Points*; and the Intersections of the *Horizon* with the *Prime Vertical*, call'd the *East* and *West*. See *NORTH*, *SOUTH*, &c.

These coincide with what the *Latins* call *Cardines Mundi*; and are a *Quadrant*, or 90 Degrees, distant from each other. See *CARDINAL*.

*Collateral* or *Intermediate Points*, are those lying between the *Cardinal Points*.—Which are either *Primary*, *viz.* those equi-distant from the two *Cardinals*, as *North-East*, *South-West*, &c.

Or *Secondary*, which are again, either of the *first Order*; *viz.* such as are equidistant from a *Cardinal* and the next *Primary*, as *North-North-East*; or of the *second Order*, *i. e.* equidistant between a *Cardinal* or *Primary*, and first *Secondary*, as *North-East* by *North*.

The *Primary Collateral Points*, therefore, are 45° distant from the *Cardinals*; the first *Secondaries* 22° 30' from the *Cardinal* and next *Primary Collateral*; and the *Secondaries of the second Order* 11° 15' from a *Cardinal*, or first *Collateral*, and a *Second*. See *COLLATERAL*.

*POINT*, among Seamen, is also used for a *Cape*, or *Head-Land*, letting out into the Sea. See *CAPE*.

They say, two *Points* of Land are one in another, when they are so in a right Line against each other, as that the innermost is hindered from being seen by the outermost.

*POINT*, in Perspective, is a Term used for various Parts or Places, with regard to the Perspective Plane. See *PERSPECTIVE PLANE*.—Such are, the

*POINT of Sight*, or *View*, or of the *Eye*, is a *Point* on the Plane, as *F*, (*Tab. Perspective Fig. 12.*) mark'd out by a right Line *BF*, drawn from the *Eye*, perpendicular to the Plane, call'd also the *Principal Point*. See *VISION*; see also *PRINCIPAL*.

This *Point* is in the Intersection of the *Horizontal* and *Vertical Planes*. See *PLANE*.

Some Authors call the *Point* wherein the *Eye* is actually placed, and where all the Rays terminate, as *O*, the *Point of Sight* or *View*; and define the *Principal Point* to be that wherein all the Lines drawn from the horizontal Plane to the Line of View or Distance, terminate. See *PRINCIPAL*.

*POINT of Distance* is a *Point*, *v. gr.* *P* or *Q*, in the horizontal Line *PQ*, at the same Distance from the principal *Point F*, as the *Eye O*, is from the same. See *DISTANCE*.

*Third POINT* is a *Point* taken at Discretion in the Line of Distance, wherein all the *Diagonals* drawn from the Divisions of the Geometrical Plane, concur.

*Objective POINT*, a *Point* on a Geometrical Plane, whose Representation is required on the Perspective Plane.

*POINT*, in Opticks.—The *POINT of Concurrence*, or *Concurrence*, is that wherein converging Rays meet; more usually call'd the *Focus*. See *FOCUS*.

*POINT of Dispersion*, is that wherein the Rays begin to diverge; usually call'd the *Virtual Focus*. See *VIRTUAL*.

*POINT of Incidence*, is a *Point* on the Surface of a Glass, or other Body, wherein a Ray falls. See *INCIDENCE*.

*POINT of View*, with regard to Building, Painting, &c. is a *Point* at a certain Distance from a Building, or other Object, wherein the *Eye* has the most advantageous View, or Prospect of the same.

This *Point* is usually at a Distance equal to the Height of the Building.—For an instance,—To consider with Judgment, the whole of the famous Church of the *Invalides* at *Paris*; we must not stand at above 340 Foot distance from it, which is nearly its Height. To be able to judge of the Ordinance of its *Facade* or *Frontispiece*, and the Regularity of its Order, the *Eye* should be as far off as the *Frontispiece* is high, *viz.* 100 Foot.

But to examine the Correctness of its Profiles, and the Spirit of its Ornaments; the *Eye* should only be distant the Height of the *Doric Order*, which is about 40 Foot; if it be nearer, the Parts too much shortened will appear out of Proportion.

A Vague or indeterminate *Point* has a different Effect from the *Point of View*; in that, in looking at a Building from an indeterminate *Point*; the *Eye* can only form an Idea of the Magnitude of its Mass; by comparing it with other Buildings adjacent to it.

**POINT of Reflexion**, is a Point on the Surface of a Glass or other Body whence a Ray is reflected. See REFLECTION.

**POINT of Refraction**, is a Point in the Surface of a Glass or other refracting Surface, wherein the Refraction is effected. See REFRACTION.

**POINTS**, in Heraldry, Divisions of the Escutcheon into several Squares, sometimes to the Number of 9, sometimes to 15; some whereof are of one Colour or Metal, the others of another; called also *Equipollent Points*.

There is also another Division of the Escutcheon into Points, which have several Names and Values, according to their several Places.

There are nine Principal Points in an Escutcheon; as mark'd in the Figure adjoining.—A represents the *dexter Chief Point*.—B the *middle Chief Point*.—C the *sinister Chief*.—D the *Honour Point*.—E the *Fess Point*, call'd also the Center.—F the *Nombril or Navel Point*.—G the *Dexter Base*.—H the *Sinister Base*.—I the precise middle Base. See each further described in its Place.

*Colombiere* makes the Points and their Situations symbolical.—As the several

Bearings in an Escutcheon are so many Types representing the commendable Actions of the Person they are given to; so the Escutcheon itself represents the Body of the Man that perform'd them, and the Points, or Parts, signified by these Letters, the principal Parts of his Body.—Thus, A, B, C represent the Head, in which the three great Faculties reside: D, the Neck where Ornaments are chiefly bore: E, the Heart, &c. See ESCUTCHEON.

**POINT** is also an Ordinary, something like the Pile, rising from the bottom of the Escutcheon to the Top; very narrow, and only taking up two Thirds of the Point of the Escutcheon.—When it thus rises from the Base, it is peculiarly call'd *Point-in-point*.

**Point inverted**, is when it descends from the Chief downwards; possessing two thirds of the Chief, but diminishing as it approaches the Point of the Escutcheon, tho' without touching it.

**Point en Band**, or **Point en Barre**, is when the Point is placed transverse, in the Situation of a Bend or Bar.—When it comes from the Sides of the Escutcheon, it is also call'd a *Point Dexter* or *Sinister*, according to its Situation.

The **Point Dexter** is commonly reputed an Abatement due to a Braggadocio.—**Point-Champion-Ten** due for killing a Prisoner after Quarter demanded.—**Point in Point**, a Diminution belonging to a Coward.—**Point plain**, an Abatement belonging to a Liar, &c. See ABATEMENT, DIMINUTION, &c.

**POINT** is also used in Heraldry, for the lower part of the Escutcheon, which usually terminates in a Point. See ESCUTCHEON.

In the **French Arms** the Flower de Lys's are two in Chief and one in Point.

**POINT**, is also an Iron or Steel Instrument, used with some Variety in several Arts.

Engravers, Etchers, Wooden Cutters, Stone Cutters, &c. use Points to trace their Designs on the Copper, Wood, Stone, &c. See ENGRAVING, ETCHING, &c.

Statuaries, &c. have likewise Points in manner of little Chisels, used in the first forming or sketching out their Works. See STATUE, FOUNDRY, &c.

Turners work or fashion their common Works between two Points fastened to the Puppets.—Lapidaries have Iron Points, to the Ends whereof are fastened Pieces of Diamonds, serving to pierce the precious Stones withal. See TURNING, LAPIDARY, &c.

**POINTY**, in the Manufactories, is a general Term used for all kinds of Laces wrought with the Needle;—Such are *Point de Venise*, *Point de France*, *Point de Genoa*, &c. which are distinguished by the particular OEconomy and Arrangement of their Points.

The Word is sometimes also used for Lace wove with Bobbins; as, *English Point*, *Point de Malines*, *Point de Hoore*, &c.

**POINT**, in Poetry, is a brisk lively Turn, or Conceit, usually found or expected, at the Close of an Epigram. See EPIGRAM.

**POINT-Blank**, in Gunnery, denotes a Shot or Bullet to go directly forward, in a straight Line, to the Mark; and doth not move in a Curve, as Bombs and highly elevated random Shots do. See MORTAR, PROJECTILE, GUNNERY, &c.

**POINTED**—A Cross *pointed*, is that which has the Extremities turn'd off into Points by straight Lines. *Colombiere* calls it *aiguisee*. See CROSS.

**POINTING the Cable**, is a Sea-Term, denoting the untwisting it at the Ends, and lessening the Yarn, and twisting them again, making all fast with a Piece of Marline, to keep it from rattling out. See CABLE.

**POINTING**, in Grammar, the Art of dividing a Discourse, by Points, into Periods and Members of Periods; to facilitate the Pronunciation and Understanding thereof. See PUNCTUATION.

**POINTING**, among Seamen, the marking on the Chart in what Point or Place the Vessel is. See CHART, RHOMB, &c.

All the Difficulty in *pointing a Chart* arises from our Ignorance of the Longitude.—The Pilot easily finds the Latitude by taking the Height of the Pole; but for the Longitude there is no coming at it but by Computation which is ever uncertain. See LONGITUDE, LATITUDE, SAILING, &c.

**POINTING**, in War, the levelling or directing of the Cannon or Mortar-Piece, so as to play against any certain Point. See LEVELLING, CANNON, ORDNANCE, MORTAR, PROJECTILE, &c.

This is done by means of a Quadrant with a Plummet. See GUNNERS QUADRANT.

**POISON**, in Medicine, a malignant Quality in some Animal, Vegetable or Mineral Body, which renders it hurtful, and even mortal to those who take it.

Some define a *Poison* to be any thing taken inwardly, whose Properties are contrary to those of a Food, or to what they should be in order to Nutrition. See FOOD.

*Poisons* are of various kinds; and operate in various manners: some by dissolving the Blood, others by coagulating it; and others by corroding and destroying the solid Parts. See BLOOD, DISSOLUTION, COAGULATION, CORROSION, &c.

Some attack, equally, all the Parts; some only a particular one.—Thus the *Lepus Marinus* is an Enemy to the Lungs, *Cantharides* to the Bladder, &c.

Some again, which prove *Poison* to Man serve for Food to other Animals.—Thus *Mandragera* and *Jugiosannus* feed Hogs, kill Man; and thus that deadly *Poison* Hemlock is wholesome for Goats, Bulls, and, as *Galen* says, for Starlings too. The *Coffada* Plant, *Sir Hans Sloane* tells us, poisons, unprepared; but prepared is the very Bread of the *West Indies*; particularly *Jamaica* and the hotter Parts; and is used to victual Ships.

Nay, what is more, some *Poisons* are not only Food, but even Physick to other Animals.—In the *Phil. Transact.* we have an Instance of a Horse troubled with the Farcy, which could not be cured by the most famed Remedies, which yet cured himself in a short time, by feeding greedily on Hemlock.—*Fonsanus* tells us of a Woman who eat Hemlock for some time to procure Sleep; and with very good Effect; tho' repeated Doses of Opium had no Operation.

*Dr. Tanc. Robinson*, in a Letter to Mr. *Roy*, gives an Account of several poisonous Plants, which if truly corrected, or exactly dosed, he says, may prove the most powerful Remedies known.—Thus the Hellebores incorporated with a Sapo, or Alkali-Salts alone, are successful in Epilepsies, Vertigos, Pulses, Leucargies, and Mania's. Dose from *ʒi*. to *ʒiſs*. The Roots of *Cicuta*, *Affarum*, and *Napellus*, in Aque and periodical Pains: Dose *ʒi*. to *ʒiſs*. The *Hysocyamus* in Haemorrhages, violent Heats and Inflammations: Dose *ʒi*. to *ʒiſs*. The *Senen Stramonie* is a good Anodyne, useful in *Vigilia's*, Rheumatism's, Hysteric Cases, &c. Dose *ʒi*. to *ʒiſs*. *Elaterium*, *Soldanella* & *Gratiola*, in Hydroptic Cases. Opium corrected loses its Narcotic Quality, and is safely given in great Doses in convulsive Cases, Fluxes, Cartarrhs, &c.

The Word *Poison* is derived from the Latin *Potio*, Draught, and was antiently used in an Innocent Sense. See POTION.

Physicians distinguish three Kinds of *Poisons*: *Animal Poisons*; i. e. those drawn from Animals; as the *Viper*, *Aspic*, *Scorpion*, *Lepus Marinus*, &c. See VIPER.

*Vegetable Poisons*, as *Aconite*, *Cicuta*, or *Hemlock*, *Hellebore*, *Napellus*, &c. See ACONITE, CICUTA, HELLEBORE, &c.

And *Mineral Poisons*, as *Arsenic*, *Corrosive Sublimate*, *Corruse*, *Orpiment*, *Realgum*, &c. See ARSENIC, &c.

The Theory of the Effects, Operations, &c. of *Animal Poisons*, is very accurately and mechanically delivered by *Dr. Mead*; in those remarkable Cases, the Bites of a *Viper*, *Tarantula*, and a *mad Dog*. See his Doctrine under the respective Articles, TARANTULA, VIPER, and HYDROPHOBIA.

The Operation of *vegetable Poisons*, see deliver'd under the Article OPDIATES.

As to *Mineral Poisons*, they all bear so much Analogy to that made of Quicksilver in the common Sublimate, that their Operation will easily be conceiv'd from what we have already laid down under the Heads, MERCURY and SUBLIMATE.

They are all more or less dangerous, as their Salts receive a greater or less Force from the metallic Particles; and hence, as the most virulent may be mitigated by breaking the Points of the siline Crystals; the most innocent Minerals may become corrosive by combining them with Salts, as is seen in the Preparations of Silver, Antimony, Iron, &c. See MESPITES, GROTTO, &c.

The general Remedies against *Poisons* are known by the Name of *Antidotes*, *Alexipharmicks*, *Alexiterials*, &c. See ANTIDOTE, ALEXIPHARMIC, &c.

**Counter-Poison**, See **COUNTER-POISON**.

To **POISON** a Piece, among Gunners, is the same as to clog and nail it up.

**POISONING**, in Law, the Crime of administering Poison to a Person.

This, by a Law of Henry VIII. was made High-Treason; but that Law was afterwards repealed; and the Punishment made for it was to be put alive into a Cauldron of Water, and boil'd to Death.—At present it is only Felony without Benefit of Clergy. See **PUNISHMENT**.

**POLAR**, something belonging to the Poles of the World. See **POLAR**.

In this Sense we say, *Polar Virtue, Polar Tendency, &c.* See **POLARITY**.

**POLAR CIRCLES**, are two Circles parallel to the Equator; at the Distance of 23 Deg. from each Pole; serving to mark the beginning of the Frigid Zone. See **CIRCLES** and **ZONE**.

The *Polar Circles* are particularly denominated from their respective neighbouring Poles, the *Arctic* and *Antarctic*. See **ARCTIC** and **ANTARCTIC**.

**POLAR DIALS** are those whose Planes are parallel to some great Circle passing through the Poles, or to some one of the Hour-Circles; so that the Pole is neither elevated above, nor depressed below the Plane.

Such Dial therefore can have no Center, and consequently its Style, Substyle, and Hour-Lines are parallel. See **PLANE**.

This therefore will be an Horizontal Dial to those who live under the Equator or Line.

To construct a **POLAR DIAL**. See **DIAL**.

**POLAR PROJECTION** is a Representation of the Earth or Heavens, projected on the Plane of one of the Polar Circles. See **PROJECTION**.

**POLARITY**, the Quality of a Thing considered as having Poles. See **POLAR**.

By heating an Iron Bar, and letting it cool in a vertical Posture, it acquires a *Polarity*.—The lower End becomes the North End; the upper the South. See **IRON**.

Iron Bars acquire a *Polarity*, by being kept a long time in an erect Posture, even without Heating.—Thus the Bars of Windows, &c. are frequently found to have Poles. Nay a Rod of Iron acquires a *Polarity*, by the mere holding it erect; the lower End in that Case attracting the South End of a magnetic Needle; and the upper the North End.—But these Poles are mutable, and shift with the Situation of the Rod. See **MAGNET** and **MAGNETISM**.

**POLAR**, **POLUS**, in Astronomy, the Extremity of the Axis whereon the Sphere revolves. See **AXIS** and **SPHERE**.

These two Points are called, by way of Excellence, the *Poles of the World*. See **WORLD**.

The Word is form'd from the Greek *πολις, vertere*, to turn.

*Wolfius* defines the *Poles*, those Points on the Surface of the Sphere through which the Axis passes: such are the Points P Q (*Tab. Astronomy, Fig. 52.*)—whereof, that visible to us, or rais'd above our Horizon P, is called the *Arctic* or *North Pole*; and its Opposite Q, the *Antarctic* or *South Pole*. See **ARCTIC** and **ANTARCTIC**.

**POLAR** in Geography, is the Extremity of the Earth's Axis; or the Points on the Surface of our Globe, thro' which the Axis passes. See **EARTH**.

Such are the Points P Q (*Tab. Geography, Fig. 7.*) whereof that Elevated above our Horizon P, is called the *Arctic* or *North Pole*; and its Opposite Q, the *Antarctic* or *South Pole*. See **GLOBE**.

Dr. *Haley* shews, that the solstitial Day, under the *Pole*, is as hot as under the Equinoctial, when the Sun is in the Zenith; in regard all the 24 Hours of that Day under the *Pole*, the Sun's Beams are inclined to the Horizon with an Angle of 23½ Degrees; whereas, under the Equinoctial, tho' he becomes vertical, yet he shines no more than 12 Hours, and is absent 12 Hours.—besides, that for 3 Hours 8 Minutes of that 12 Hours he is above the Horizon there, he is not so much elevated as under the *Pole*. See **HEAT**.

The *Altitude* or *Elevation of the Pole*, is an Arch of the Meridian, intercepted between the *Pole* and the Horizon. See **ALTITUDE**.

To find this Elevation is a very popular Problem in Astronomy, Geography, and Navigation; This and the Latitude of the Place being ever the same. See **LATITUDE**.

To observe the **ALTITUDE of the POLE**.

With a Quadrant, observe both the greatest and least Meridian Altitude of the *Pole-Star*. See **MERIDIAN**.

Subtract the least from the greatest, and divide the Difference by two; the Quotient is the *Star's* Distance from the *Pole*; which added to the lesser Altitude found, gives the Elevation of the *Pole* required.

Thus *M. Casper* the younger, at *Ulyssipoo*, in 1697, at the

End of September, observ'd the greatest Meridian Altitude 40° 51' 40", The smallest, 36° 28' 0". The Difference whereof is 4° 37' 40"; one half whereof, 2° 18' 50", added to the less, gives 38° 46' 50". The Altitude of the *Pole* of *Ulyssipoo*. See **ALTITUDE**.

The Altitude of the *Pole*, together with the Meridian Line, being the Basis of all Astronomical Observations; to determine it with the greater Accuracy, the Meridian Altitudes must be corrected from the Doctrine of Refractions, hereafter delivered. See **REFRACTION**, **MERIDIAN**, &c.

By Means hereof, *M. Casper* subtracting 1' 25" in the proposed Example, leaves the corrected Altitude 38° 45' 25".

Hence 1. The Altitude of the *Pole* being subtracted from 90°, leaves the *Altitude of the Equator*. See **EQUATOR**.

2. If the greatest Meridian Altitude of this *Star* exceed the Altitude of the Equator, the latter subtracted from the former, leaves the Declination of the *Star* Northward; if the Altitude of the *Star* be less than that of the Equator, the former subtracted from the latter leaves the *Star's* Declination Southward. See **DECLINATION**.

Dr. *Hook*, and some others, imagined, the Height of the *Pole*, and the Position of the Circles of the Heavens, in respect of those on the Earth, to be changed from what they anciently were: But *M. Cassini* thinks there is no Ground for such Surmise; but that all the Difference we now find in the Latitudes of Places, &c. in respect of the ancient Accounts, arises from the Inaccuracies of the ancient Observations.

Indeed 'tis no wonder they should err in their Observations, considering what Instruments they used: He adds; 'tis probable there may be some Variation in the Height of the *Pole*; but thinks this never exceeds two Minutes; and that even this will vanish, after it is arrived to its highest Difference. See **EQUATOR**, &c.

**POLAR**, in Sphericks, is a Point equally distant from every Part of the Circumference of a greater Circle of the Sphere; as the Center is in a plain Figure. See **CENTER**.

Or, *Pole* is a Point 90° distant from the Plane of a Circle, and in a Line passing perpendicularly thro' the Center, called the *Axis*. See **CIRCLE**.

The Zenith and Nadir are the *Poles* of the Horizon.—The *Poles* of the Equator are the same, with those of the Sphere or Globe. See **ZENITH**, **NADIR**, &c.

**POLAR** of the Ecliptic are Points in the Solstitial Colure 23° 30' distant from the *Poles* of the World. See **SPHERE**, **EQUATOR**, **HORIZON**, &c.

**POLAR** in Magneticks, are two Points in a Loadstone; corresponding to the *Poles* of the World; the one pointing to the North, the other to the South. See **MAGNET**.

If the Stone be broke in ever so many Pieces, each Fragment will have its two *Poles*.—If a Magnet be bisected by a Line perpendicular to the *Axis*; the two Points before join'd will become opposite *Poles*, one in each Segment.

To touch a Needle, &c. that Part intended for the North End is touch'd with the South *Pole* of the Magnet, and that intended for the South End with the North *Pole*. See **NEEDLE**.

A Piece of Iron acquires a *Polarity*, by only holding it upright, &c. See **POLARITY**. But its *Poles* are not fix'd; but shift, and are inverted as the Iron is.—A fix'd North *Pole* may be made all the Ways a fix'd South *Pole* is made; but not vice versa; and whatever Way we get a fix'd South *Pole*, 'tis always weaker than a fix'd North *Pole* got the same Way.

Fire deffroys all fix'd *Poles*; but strengthens the mutable ones. See **FIRE**.

The End of a Rod being heated, and left to cool Northward, Dr. *Gilbert* says, becomes a fix'd North *Pole*; if Southward, a fix'd South *Pole*: yet this does not hold in all Cases.—If the End be cool'd held downward or to the Nadir, it acquires somewhat more Magnetism, than if cool'd horizontally towards the North. But the best Way is to cool it a little inclined to the North. Repeated Ignitions don't avail more than a single one.

Dr. *Pooper* says, that if we hold a Rod Northwards, and hammer the North End in that Position; it will become a fix'd North *Pole*; and, contrarily, if you hammer the South End.—What is said of Hammering is to be likewise understood of Filing, Grinding, Sawing; nay, a gentle rubbing, provided it be continued long, will produce *Poles*. See **FRICITION**.

The more heavy the Blows are, *ceteris paribus*, the Magnetism is the stronger.—A few hard Blows do as much as many. Old Drills and Punches are fix'd North *Poles*, because almost constantly used downwards. New Drills are either mutable *Poles* or weak North *Poles*. Drilling with such a one Southward horizontally, 'tis a Chance if you produce a fix'd South *Pole*, much less if you drill South downwards; but if you drill South upwards, you make a fix'd South *Pole*.

A weak fix'd *Pole* may degenerate into a mutable one in a Day; nay in a few Minutes, by holding it in a Position contrary to its *Pole*. The Loadstone itself will not make a

fix'd Pole in any Iron. 'Tis required the Iron have a length, if it be thick. Mr. Ballard tells us, that in six or seven Drills made before his Face, the Bit of each became a North Pole, merely by hardening.

POLE of a Glass in Opticks, is the thickest Part of a Convex, or the thinnest of a Concave Glass. See CONVEX and CONCAVE.

If the Glass be truly ground, the Pole will be exactly in the Middle of its Surface. See OPTIC, GLASS, GRINDING, &c.

This is sometimes also called the *Vertex* of the Glass. See VERTEX.

POLE in Surveying, is a Measure, containing 16 Foot and an half; called also *Perch*. See PERCH.

POLE-STAR, or POLAR-STAR, is a Star of the second Magnitude; the left in the Tail of Ursa Minor, or Little Bear. See URSA MINOR.

Its Longitude Mr. Flamsteed makes  $24^{\circ} 14' 41''$ , its Latitude,  $66^{\circ} 04' 11''$ .

The Nearness of this Star to the Pole, whence it happens that it never sets; renders it of vast Service in Navigation, &c. for determining the Meridian Line, the Elevation of the Pole, and consequently the Latitude of the Place, &c. See POLE; see also MERIDIAN and LATITUDE.

POLEM, *Anno 4. Edm. IV. cap. 7.* was a sharp or picked Top, set in the Fore-part of the Shoe or Boot. This Fashion was first taken up in the Time of King William Rufus; the Picks being made so long, that they were tied up to the Knees with Silver or Golden Chains: they were forbidden by Edm. IV. *Tunc flexus Crinium, tunc latus Vestium, tunc usas Calceorum cum arcuatis aculeis inventus est.* Malm. in Will. II.

POLEMICAL, an Epithet applied to Books of Controversy; especially those in Divinity.

Hence also we say *Polemical Divinity*, for Controversial, &c. See DIVINITY.

The Word comes from the Greek  $\piολεμος$ , War, Battle. — *Sealiger's* Exercitations against *Cardan* make a pure polemical Book.

POLEMSCOPE, in Opticks, a kind of crooked or oblique Prospective Glass, contrived for the seeing of Objects that don't lie directly before the Eye.

It was invented by *Hervelius*, in 1637, who gave it this Name from the Greek  $\piολεμος$ , *pagus*, because it may be of Use in War, in Engagements, Duels, &c.

Something of this Kind are those now known among us under the Name of *Quing Glasses*, or *Opera-Glasses*, thro' which one sees a Person in appearing to look at another.

#### Construction of the Polemscope.

Any Telescope will be a Polemscope, if the Tube be but crooked, like a rectangular Syphon A B D M (*Tab. Opticks, Fig. 70.*) And between the Object Glass, A B, and first Eye-Glass G H (if there be several) be placed a plain Mirror, in such manner as that the Mirror is inclined to the Horizon, at an Angle of  $45^{\circ}$ , and its reflected Image found in the Focus of the Eye-Glass G H.

For, by this means, Objects situate over against the Lens A B will appear the same as if the Mirror K were away, and the Object-Glass with the Objects were directly opposite to the Eye-Glasses.

If 'tis desired to look in at O, not at M, another plain Mirror, N must be added. See TELESCOPE.

POLETA, in our ancient Law-Books, signifies the Ball of the Foot. — *Tres orisuli scindantur de pede anteriori sine Poleta.* Mat. Par. *Anno 1215.* See EXPEDITE.

POLICY, or POLITY, the LAWS, ORDERS, and Regulations prescribed for the Conduct and Government of States and Communities. See GOVERNMENT.

In the general, Policy is used in opposition to Barbarism. — Different States have different Kinds of Policy; thus the Policy of *Aticus* differ'd from that of *Sparta*.

*Loyseau* observes, that Policy properly signifies the Course and Administration of Justice in a City. — The Direction of the Policy of *London* is in the Hands of the Lord-Mayor. See MAYOR.

At *Paris* they have a Chamber of Policy, where People are verbally accused for Contraventions of Policy.

Some divide Policy into two Parts, *Agonomy*, that relating to the Affairs of Merchandize; and *Astonomy*, that concerning the Civil and Judiciary Government of the Citizens; Some add a third Branch, *viz.* what relates to the Ecclesiastical Government. See ECCLESIASTICAL.

Bishop *Hosker* has a fine Treatise of the Laws of Ecclesiastical Policy.

The Word is of Greek Original; being derived from the Greek  $\piολις$ , *Civitas*, City.

POLICY of Assurance, or Insurance of Ships, is a Contract or Convention whereby a Person takes upon himself the Risques of a Sea-Voyage; obliging himself to make good the Losses and Damages that may befall the Vessel, its Equipage, Tackle, Victualling, Lading, &c. either from Tem-

pests, Shipwrecks, Pirates, Fire, War, Reprizals, &c. in Part or in whole; in Consideration of a certain Sum of Seven, Eight, or Ten per Cent. more or less, according to the Risk run; which Sum is paid down to the Assurer by the Assuree, upon his signing the Policy. See ASSURANCE.

There are some Assurances for the Going, some for the Returning, and some for both; or for a limited Time; though some maintain, that the Time ought never to be limited, in that the Contract thereby becomes Usury.

The Policy is to contain the Name and Dwelling of the Person assured; his Quality, whether as Proprietor or Agent; the Effects, Name of the Vessel, and of the Master; those of the Place where the Goods are to be laden or unloaded; the Port whence and whither, the Time, the Risques, and the Conditions.

If the Vessel or Merchandizes assured be lost, the Assuree must notify the same by an A&T in form; declaring he renders the whole to the Assurer, on his paying the Sums assured in the Time expressed.

The Origin of these Assurances is ascribed to the Jews, at the Time they were expelled *France*, in 1182; who are said to have used this as a Means to facilitate the transporting of their Effects.

The Term Policy is Spanish, and comes from *Polica*, Schedule; but the Practice comes from the *Italians* and the *Lombards*, who, again, derived it originally from the Latin *Policario*, Promissio. — Some say, the Merchants of *Marseilles* were the first who set on Foot this Kind of Commerce.

Anciently, Policies were given by Word of Mouth, called *Policies of Credit*; it being supposed the Assurer would enter them in his Ledger: but of late that Honesty is become less frequent among Traders, they have been constantly in Writing.

The Grand Mart for the Assurance of Ships is the City of *Amsterdam*. 'Tis here not only the Dutch Traders assure their Vessels, but, what is infinitely more considerable, such is the Riches, Reputation, &c. of the Inhabitants, as to engage the Generality of Merchants of other Countries to prefer them to their own Countrymen, and to assure with the Dutch, when it would be much easier for them to find Assurers at Home, or in the Ports where the Vessels are laden.

The Number of Assurers at *Amsterdam* is not above Fifty or Sixty Persons; yet is their Wealth and Character such, that a Man never fails of an Assurer, be the Countries or Ports what they will, the Cargo ever so rich, or the Dangers ever so imminent.

POLICY of Assurance, or Insurance of Houses, is an Instrument form'd on the Model of that for Vessels; whereby a Person, or Community of Persons, take on themselves the Risques and Damages that may befall Houses, their Furniture, in whole or in Part, &c. from Fire; on Consideration of a certain Sum or Sums, to be paid by the Assurer, according to the Terms of the Agreement. See ASSURANCE.

The Assurance from Fire is now a popular Piece of Commerce; and we have a Number of Societies erected into Corporations, for that very Purpose. See FIRE-OFFICE.

POLICY of Assurance of Lives, is an Instrument whereby a Society of Persons erected into a Corporation, &c. oblige themselves to pay a certain Sum of Money, *e. g.* an Hundred Pounds upon the Death of a Person whose Life they assure; in Consideration of a Sum of Money, *e. g.* one Guinea, paid Quarterly, to the Assurers during the Life of the said Person assured.

The Policy is under the Seal of the Office, and entitles the Person, in whose Favour 'tis granted, to make good his Claims, according to the Tenor of the Articles, or By-Laws of the Society.

There have also been lately set on Foot, Policies of Assurance of Houses, from Death, Damages in Travelling, Dis-eases, being stolen, &c. In which Cases the Assurers are to make them good to the Assurees, &c.

POLICY in Letter-Foundry, is sometimes used, for a Rule that regulates the Number of Letters of each Kind in a complete Font; *i. e.* to determine how many, in Proportion to the whole Set, there are to be of each particular Kind. See LETTER, &c.

For instance, in a Font of an hundred thousand Characters, there are to be a thousand for the *e*, five thousand for *a*, three thousand for the *m*, thirty only for *k*, as many or a little more for the *x*, the *y*, and *z*; and in Proportion for the other Letters, the great and little Capitals, the initial Letters, Points, Comma's, double Letters, &c. See LETTER-FOUNDRY.

POLIOPTRON, or POLYOPTRON, in Opticks. See POLYOPTRON.

POLISHER, an Instrument call'd also a *Burnisher*; used for polishing and burnishing Gold, Silver, and other Metals, when gilt or silver'd; and Matters of other Kinds proper to take a Polish. See BURNISHER and POLISHING.

The Polisher is different in the different Arts and Manufactories. — The Gilders use an Iron Polisher to prepare their

their Metals before Gilding, and the Blood Stone to give them the bright Polish after Gilding. See GILDING.

The *Polisher* used by the Makers of Spurs, Bits, &c. is part Iron, part Steel, and part Wood.—The Instrument consists of an Iron Bar, with a wooden Handle at one End, and a Hook at the other, to fasten it to another Piece of Wood held in the Vice, while the Operator is at Work. In the Middle of the Bow, within side, is what they properly call the *Polisher*, which is a triangular Piece of Steel with a Tail, whereby it is riveted to the Bow.

What the Cutlers call their *Polishers*, are a kind of wooden Grindstones (if we may be allowed the Word) made of Walnut-tree, an Inch thick, and of a Diameter at Pleasure. They are turn'd by the Great Wheel; and 'tis on these they polish and smoothe their Works with Emery and Putty.

The *Polishers* used in the Manufactures of Glass are very different from all these.—They consist of two Pieces of Wood, the one flat, cover'd with old Hat; the other long and half round, is fasten'd on the former, whose Edge it exceeds on both Sides by some Inches, which serve the Workman to take hold of, and to work it backwards and forwards by. See GLASS.

The *Polishers* used by Spectacle-Makers are Pieces of Wood a Foot long, seven or eight Inches broad, and an Inch and half thick, cover'd with old Castor-Hat, whereon they polish the Shell and Horn Frames their Spectacle Glasses are to be fit in. See SPECTACLE.

**POLISHING**, the Art of giving a Gloss, Lustre, or Brilliant to a thing, particularly a precious Stone, Marble, Glass, Mirror, or the like. See LUSTRE, &c.

**POLISHING of Glasses, Lens's, &c.** succeeds the Grinding thereof. See GRINDING; see also GLASS, LENS, &c.

The *Polishing of a Mirror* is the last Preparation given it, with Emery or Putty. See MIRROR.

For the *Polishing of Diamonds, &c.* see DIAMOND, &c.

**POLITICAL**, something that relates to Policy or Civil Government. See POLICY and GOVERNMENT.

In this Sense we say, *Political Interests, Political Views, Political Discourses, &c.*

The Word is form'd from the Greek *πολις, Civitas, City.*

**POLITICAL Arithmetick** is the Application of arithmetical Calculations to *Political Uses*; as, the publick Revenues, Number of People, Extent and Value of Lands, Taxes, Trade, Commerce, Manufactures, or whatever relates to the Power, Strength, Riches, &c. of any Nation, or Commonwealth. See ARITHMETICK.

The chief Authors who have attempted Calculations of this Kind, are Sir *William Petty*, Major *Grant*, Dr. *H. Rey*, Dr. *Davenant*, and Mr. *King*; and the principal Points settled by each heretofore are as follows.

According to Sir *William Petty's* Computations, tho' the Land of *Holland* and *Zealand* be not above 1000000 Acres, nor that of *France* less than 80,000, yet the former are near a third Part as rich and srong as the latter.—That the Rents of Lands in *Holland* are to those in *France*, as 7 or 8 to 1.—That the People of *Amsterdam* are  $\frac{1}{2}$  of those of *Paris* or *London*; which, according to him do not differ above a 20th Part from one another.—That the Value of the Shipping of *Europe* is about Two Millions of Tons, whereof the *English* have 500000, the *Dutch* 900000, the *French* 100000; the *Hamburgers*, *Danes*, *Swedes*, and *Danzickers* have 250000; and *Spain*, *Portugal*, *Italy*, &c. about as much.—That the Value of Goods exported yearly from *France* into all Parts, is quadruple of that exported into *England* alone, and consequently in all about 5000000: What is exported out of *Holland* into *England* is worth 300000 *l.* and what is exported thence into all the World 18000000.—That the Money yearly raised by the *French* King, in Time of Peace, is about 6  $\frac{1}{2}$  Millions Sterling; And that the Monies raised in *Holland* and *Zealand* are about 2100000 *l.* And in all the Provinces together about 3000000 *l.*—That the People of *England* are about 6000000, and their Expenses at 7 *l.* per Annum a Head, 42000000 *l.* or 800000 *l.* a Week.—That the Rent of the Lands is about 8 Millions, and the Interests and Profits of the personal Estates as much.—The Rent of Houses in *England* 4000000 *l.* That the Profits of the Labour of all the People is 26000000 *l.* yearly.—That in *Ireland* the People amount to about 1200000.—That the Corn spent in *England*, at 5 *s.* the Bushel for Wheat, and 2 *s.* 6 *d.* for Barley, amounts to Ten Millions per Annum.—That the Navy of *England* (then) required 36000 Men to man it, and other Trade and Shipping about 48000.—That in *France*, to manage the whole Shipping Trade, there are required 15000 Men. That the whole People of *France* are about Thirteen Millions and a half; and those of *England*, *Scotland*, and *Ireland*, together, about Nine Millions and a half.—That in the three Kingdoms are about 20000 Churchmen; and in *France* above 270000.—That in the Dominions of *England* above are 40000 Seamen, and in *France* not above 10000.—That in *England*, *Scotland*, and *Ireland*, and all other Dominions depending thereon, there was then

about 60000 Tunn of Shipping; which is worth about Four Millions and a half in Money.—That the Sea-Line round *England*, *Scotland*, and *Ireland*, and the adjacent Isles, is about 3800 Miles.—That in the whole World are about 300 Millions of People; whereof those with whom the *English* and *Dutch* have any Commerce, are not above 80 Millions.—That the Value of Commodities traded for in the whole is not above 45000000. That the Manufactures exported out of *England* amount to about 5000000 *l.* per Annum. Lead, Tin, and Coals to 500000 *l.* per Ann.—That the Value of the *French* Commodities (then) brought into *England* did not exceed 1200000 *l.* per Ann.—That the whole Cash of *England*, in current Money, was then about 6000000 *l.* Ster. Dr. *Davenant* gives some good Reasons, why many of Sir *Wm. Petty's* Numbers are not to be entirely depended upon; and therefore advances others of his own, founded on the Observations of Mr. *Greg. King*.

Some of the Particulars are,—That the Land of *England* is 39 Millions of Acres.—That the Number of People, according to his Account, is about 5545000 Souls, they increasing about 9000 every Year, Allowances being made for Plagues, &c. Wars, Shipping, and the Plantations.—The People of *London* he reckons at 530000. Those in the other Cities and Market-Towns in *England* 870000, and those in the Villages and Hamlets at 410000.—The yearly Rent of the Land he accounts to be 10,000000 *l.*—That of the Houses and Buildings 2,000000 *l.* per Ann.—The Produce of all Kinds of Grain he reckons to be worth 9,075000 *l.* in a Year moderately plenty.—The Rent of the Corn Lands annually, 2,000000 *l.* and the neat Produce above 9,000000 *l.*—The Rent of the Pasture, Meadows, Woods, Forests, Commons, Heaths, &c. 7,000000 *l.*—The annual Produce by Cattle, in Butter, Cheese, and Milk, he thinks, is about 2,500000 *l.*—The Value of the Wool yearly shorn about 2,000000 *l.*—Of Horses yearly bred about 250000 *l.*—Of the Flesh yearly spent as Food about 35,00000 *l.*—Of the Tallow and Hides about 600000 *l.*—Of the Hay yearly consumed by Horses about 1,300000 *l.* Of Hay consumed by other Cattle 1,000000 *l.*—Of the Timber yearly sold for Building, 500000 *l.* Of the Wood yearly spent in Firing, &c. about 500000 *l.*—The Land of *England* to its Inhabitants is now about 7  $\frac{1}{2}$  Acres per Head.—The Value of the Wheat, Rye, and Barley, necessary for the Sustainance of *England*, amounts to at least 6,000000 *l.* Sterl. per Annum.—The Value of the Woollen Manufacture made here is about 8,000000 *l.* per Annum; and our Exports of all Kinds of the Woollen Manufacture amount to above 2,000000 *l.* per Ann.—The annual Income of *England*, on which the whole People live and subsist, and out of which Taxes of all Kinds are paid, is now about 43,000000 *l.*—that of *France* 81,000000 *l.* and that of *Holland* 18,250000 *l.*

Major *Grant*, in his Observations on the Bills of Mortality, computes that there are 30000 square Miles of Land in *England*.—That in *England* and *Wales* there are 4,600000 Souls.—That the People of *London* are about 640000; one fourteenth Part of the People of *England*.—That in *England* and *Wales* are about 10,000 Parishes.—That there are 25 Millions of Acres in *England* and *Wales*; viz. about 4 Acres to every Head.—That but 64 out of 100 of the Children born, are living at 6 Years old.—That but 40 of 100, are alive at 16 Years End.—That but 25 of 100 at 20 Years End.—That but 16 at 36 Years End.—That but 10 out of 100 at 46 Years End.—That but 6 out of 100 at 56 Years End.—That but 3 out of 100 at 66 Years End. And that but 1 out of 100 at 76 Years End.—And that *London* doubles itself in about 64 Years.

Sir *William Petty*, in his Discourse about Duplicate Proportion, further tells us, that it is found by Experience, that there are more Persons living between 16 and 26 than of any other Age; and laying down that as a Supposition, he infers, That the square Roots of every Number of Mens Ages under 16 (whose Root is 4) shews the Proportion of the Probability of such Persons reaching the Age of 70 Years.

Thus, It is 4 times more likely, that one of 16 Years Age lives to be 70, than a Child of one Year old.—It is thrice as probable, that one of 9 Years lives to be 70, as such a new-born Child, &c.—That the Odds is 5 to 4, that one of 25 dies before one of 16 Years.—That it is 6 to 5, (thill as the square Roots of the Ages) that one of 36 Years old dies before one but of 25 Years of Age. And so on according to any declining Age to 70, compared with 4.6: which is nearly the Root of 21, the Law-Age.

Dr. *Halley* has made a very exact Estimate of the Degrees of the Mortality of Mankind, from curious Tables of the Births and Burials, at the City of *Breslaw*, the Capital of *Silesia*; with an Attempt to ascertain the Price of Annuities upon Lives.—From a Table which he has calculated thence, publish'd in the *Phil. Transf.* he derives the following Uses.

1<sup>o</sup>. To find in any Multitude or Body of People, the Proportion of Men able to bear Arms; which he reckons from 18 to 56 Years old; and accounts about  $\frac{1}{2}$  of the whole.—2<sup>o</sup>. To thew the

the different Degrees of Mortality, or rather Vitality, in all Ages; by which means he finds the Odds there is, that any Person of any Age doth not die in a Year's Time, or before he attains such an Age.—3°. To shew of what Number of Years it is an even Lay that such a Person shall die; and finds, for Instance, that it is an even Lay, that a Man of thirty Years of Age lives between twenty seven and twenty eight Years.—4°. To regulate the Price of Insurance upon Lives. 5°. And the Valuation of Annuities upon Lives. 6°. How to value two or three Lives after the same Manner. See ANNUITY.

From the whole, he makes two very good Observations. 1. How unjustly we use to complain of the Shortness of our Lives; for that it appears, that one half of those that are born, do not live above seventeen Years.

2. That the Growth and Increase of Mankind is not so much stinted by any thing in the Nature of the Species, as it is from the curious Difficulty most People make of venturing on the State of Marriage: And therefore that Celibacy ought to be every way discouraged by all wise Governments; and those who have numerous Families of Children to be countenanced and encouraged by good Laws; such as the *Jus trium liberorum*, &c. among the *Romans*.

Farther Particulars relating to the Number of Births, and Burials, the Proportion of Males and Females, &c. See under the Article MARRIAGE, BIRTH, MALE, &c.

**POLITICKS, POLITICS**, the first Part of Oeconomy or Ethics, consisting in the governing and regulating of States, for the Maintenance of the Publick Safety, Order, Tranquillity, and good Morals. See ETHICS, PHILOSOPHY, GOVERNMENT, &c.

My Lord Bacon divides *Politicks* into three Parts; with regard to the three grand Ends thereof, or the three Offices incumbent on those who have the Administration; viz. the Preservation of the State, the Happiness and Flourishing of the State, and the Enlargement of its Bounds, &c.

The two first Parts he observes are well handled by several Authors; but about the third there is a deep Silence.—He ranks this therefore in the Number of the *Desiderata*, and gives us a Specimen of an Essay to supply it.

We have several Systems of *Politicks* by *Aristotle*, *Machiavel*, *Lipsius*, &c. In which last we have nothing but Particles, and Conjunctions of the Author's own; the Body of the Book being all Quotations.

The Word is form'd from the Greek *πολις*, *Civitas*.

**POLITY, or POLICY**. See POLICY.

**POLIUM**, a medicinal Plant, which makes an Ingredient in the Treacle of Andromachus. See TRACLE.

It grows in mountainous Places, and is thence denominated *Montanum*.—The Tops of its Flowers are esteem'd Cephalick, proper to promote Urine and the Menfes, and to prevent Corruption.

It has its Name from the Greek *μαλακ*, *White*; in regard the Heads of the *Pelium* of the Ancients, according to *Dioscorides*, and the Leaves according to *Pliny*, were white.

**POLL**, a Term used in ancient Writings for the Head. See HEAD.

The Word is doubtless form'd from *Pole*; this Part being as it were the Pole of the Microcosm. See POLE.

Hence, *to poll*, is to enter down the Names of Persons, who give their Votes or Voices at an Election. See VOTE, VOICE, SUFFRAGE, ELECTION, &c.

**POLLARD**, among Hunters, a Stag or Male Deer, which has cast its Head. See HEAD, HUNTING, &c.

**POLLARD**, or *Pollenger*, in Agriculture, an old Tree which has been often lopp'd. See TREE.

**POLL-MONEY**, or *Capitation*, a Tax imposed by Authority of Parliament, on the Person or Head; either on all indifferently, or according to some known Mark of Distinction, as Quality, Calling, &c. See TAX and CAPITATION.

Thus, by the Statute 18 Car. II. every Subject in the Kingdom was assess'd by the Head or Poll, according to his Degree; every Duke 100 l. Marquis 80 l. Baronet 30 l. Knight 20 l. Esquire 10 l. &c. and every single private Person 12 d.

This was no new Tax; as appears by former Acts of Parliament, particularly that Anno 1380, where, *Qui libertatem conjugatarum quam solutus, utriusque sexus, pro Capite suo solvere cogebatur*. Wallingh.

*Camden*, in his Remains, of *Coins*, says there was anciently a personal Tribute, call'd *Capitatio*, Poll-Silver, imposed on the Poll, or Person of every one; on Women from the Age of 12 Years, and on Men from 14.

**POLLUTION, POLLUTIO**, the Act of profaning a Temple or Holy Place. See PROFANATION.

The Romanists hold a Church to be polluted by the Effusion of Blood, or of Seed therein; and require its being consecrated anew.

The Jews were held polluted by the touching of a dead Body, or of the Menfes of Women; and were to be purified in From. See the Laws hereof in *Leviticus*.

The Indians are so superstitious on the Head of *Pollution*,

that they break all the Vessels which those of another Religion have drunk out of, or even touch'd; and drain all the Water out of a Pond a Stranger has bath'd in.

**POLLUTION, or Self-POLLUTION**, is also used for the abusing or defiling of one's own Body, by Means of lascivious Frictions and Tittillations, rais'd by Art, to produce an Emission. See EMISSION.

We read in Scripture, that *Err* and *Onan* were severely punish'd for having polluted themselves by spilling their Seed on the Ground; whence the Crime has been denominated by some Emperors, *Onania*. See ONANIA.

Of *Pollutions* some are *Voluntary*, others *Involuntary*, and *Nocturnal*.

*Nocturnal-POLLUTION* is an involuntary Emission of Seed, from a too great Turgency of the Seminal Vessels, or from the Seed's being too sharp and irritating, or from a Weakness of the Parts. See SLEEP.

The Romish Church puts up Prayers in the Clofe of the Evening Office, to be preserved from *Nocturnal Pollution*.

**POLLUX**, in Astronomy, the Hind Twin; or Hind Part of the Constellation *Gemini*. See GEMINI.

**POLLUX** is also a Star of the 2d Magnitude in the Constellation *Gemini*, or the Twins. See GEMINI.

Its Place is in the Head of the Hind-Twin, named *Pollux*.—Its Longitude 18° 56' 09". Its Latitude 6° 39' 27" N.

**POLLUX** is also used in Meteorology. See CASTOR.

**POLTRON, or POLTRON**, a *Comard*, or Dastard; wanting Courage to perform any thing great, or noble. See COWARD.

The Word we borrow from the *French*, who, according to *Salmafius*, derive it a *Police tractata*; because anciently those who would avoid going to the Wars, cut off their Thumbs. See THUMBS.

*But Menage*, with more Probability, derives it from the *Italian*, *Poltrone*, and *Fotro*, a Bed; because timorous, pusillanimous People take Pleasure in lying a Bed.—He adds, that the *Italian*, *Poltra*, is again derived from the *German*, *Polster*, a Pillow or Cushion.

Others derive the Word from the *Italian*, *Poltro*, Colt; because of that Creature's Readiness to run away.

**POLTRON**, in Falconry, is a Name given to a Bird of Prey, when the Nails and Talons of his Hind-Toes are cut off, wherein his chief Force and Armour lay; in order to intimidate him, and prevent his flying at great Game. See HAWK and HAWKING.

**POLYACOUSTICKS**, Instruments contriv'd to multiply Sounds; as multiplying Glasses, or Polyscopes do Images of Objects. See PHONICKS, SOUND, &c.

The Word is compounded of the Greek *πολυ*, *much*, and *ακουσ*, *I hear*. See ACOUSTICKS.

**POLYANTHEA**, a famous Collection of Common-Places, in Alphabetical Order; of great Service to Orators, Preachers, &c. of the lower Class. See COMMON-PLACE.

Its first Author was *Dominic Nomini de Miravilla*.

The Word is form'd from the Greek, *πολυ*, *much*, and *ανθη*, *Homer*.—And is of much the same Significancy with *Anthology*, *Florilege*, &c. See ANTHOLOGY.

**POLYANTHUS, or Polyanthus**, is also used to denote a PLANT, which bears or produces several or many Flowers. See PLANT and FLOWER.

The Word is compounded of *πολυ*, *multus*, *much*, and *ανθη*, *Flor*, Flower.

The Word is more particularly used for a Species of the Hyacinth.

**POLYGAMY**, a Plurality of Wives, or of Husbands, held by the same Man or Woman, at the same time. See WIFE and HUSBAND.

*Polygamy* is prohibited among Christians, but was allow'd by divine Appointment among the Jews; as it still is among the *Mohometans*.

*Mrs. Grant* observes, that the Males and Females brought into the World are nearly on a Balance; only abating for a little Excess on the Side of the Males, to make up for the extraordinary Expence thereof in War, and at Sea: whence it follows, that Nature only intends one Wife, or one Husband for the same Person; since, if they have more, some others must go without any at all.—Hence he concludes, that the Christian Law, which prohibits, is more agreeable to the Law of Nature than the *Mohometan*; and we may add, than the *Jewish* Law, which tolerates, *Polygamy*. See MARRIAGE.

Yet *Selden* has proved, in his *Uxor Ebraica*, that Plurality of Wives was allow'd of, not only among the *Hebrews*, but almost among all other Nations, and in all Ages.—'Tis true, the ancient *Romans* were more severe in their Morals; and never practis'd it, tho' 'twas not forbid among them: And *Mark Anthony* is mentioned as the first who took the Liberty of two Wives. See CONCUBINE.

From that Time it became pretty frequent in the Empire, till the Reigns of *Theodosius*, *Honorius*, and *Arcadius*, who first prohibited it by express Law in 393.—After this the Emperor

Emperor *Valentinian*, by an *Edict*, permitted all the Subjects of the Empire to marry several Wives; nor does it appear from the Ecclesiastical History of those Times that the Bishops made any Opposition to this Introduction of *Polygamy*.

In effect, there are some even among the Christian Casuists who don't look on *Polygamy* as in itself criminal.—*Jurieu* observes, that the Prohibition of *Polygamy* is a positive Law, from which a Man may be exempted by sovereign Necessity.—*Bailler* adds, that the Example of the Patriarchs is the most pressing Argument in favour of *Polygamy*.

At London we had some Years ago an artful Treatise published in behalf of a Plurality of Wives, under the Title of *Poligamia Triumphatrix*; the Author whereof assumes the Name of *Theophilus Aletheus*; but his true Name was *Islerus* a Native of Saxony.—It has been answered by several.

POLYGAMY is also used in the Canon Law, for a Plurality of Wives, tho' only had successively, or one at a Time. See WIFE.

In the *Romish* Church this still disqualifies a Man for the Episcopate. See BIGAMY.

The Word is form'd from the Greek *πολυ*, *multum*, and *γυναικων*, *Uxor*, *Wife*.

POLYCHRESTON, POLYCHREST, in Pharmacy, a Medicine that serves for many Uses, or cures many Diseases. See PANACEA.

The Word is compounded of the Greek *πολυ*, *multum*, much, and *χρησις*, *utilitas*, *useful*.

SAL-POLYCHREST is a compound Salt, made of equal Parts of Salt-Petre and Sulphur, laid on a Crucible first heated red hot for the Purpose. See SALT.

POLYEDRON. See POLYHEDRON.

POLYGLOTT, or POLYGLOTTA, among Divines and Critics, a Bible printed in several Languages. See BIBLE.

It is thus call'd from the Greek *πολυ*, and *γλωσσα*, Tongue.

The first *Polyglott*-Bible is that of Cardinal *Ximenes*, printed in 1551, at *Alcala de Henares*; and commonly call'd the *Bible of Complutum*, or *Complutensium Bible*.

It contains the Hebrew Text, the Chaldee Paraphrase on the Pentateuch, the Greek Version of the LXX. and the ancient Latin Edition. See PENTATEUCH, PARAPHRASE, &c.

In this *Polyglott* there is no other Latin Version from the Hebrew beside this last, but there is added another literal one from the Greek Septuagint.—The Greek Text of the New Testament is here printed without Accents, to bring it nearer to the Original of the Apostles, or at least to the most ancient Copies, wherein there are no Accents found. See ACCENT.

At the End is added an Apparatus of Grammars, Dictionaries, and Indices or Tables.—The chief Author, *Ximenes de Cisneros*, Cardinal and Archbishop of Toledo, in his Dedication to Pope Leo X. observes, that it was necessary to give the Holy Scriptures in their Originals; there being no Translation, how perfect soever, that can render them perfectly.

The second *Polyglott* is that of Philip II. printed by *Plantin* at *Antwerp*, in 1572. and the Care of the Edition imposed on *Arias Montanus*.

In this, besides every thing in the Bible of *Complutum*, are added the Chaldee Paraphrases on the rest of the Old Testament beside the *Pentateuch*, with a Latin Translation of those Paraphrases. In this *Polyglott* is likewise a very literal Latin Version of the Hebrew Text, for the Use of those who have a mind to learn the Hebrew Language.

As to the New Testament, beside the Greek and Latin of the Bible of *Alcala*, in this Edition is added an ancient Syrian Version, both in Syrian and Hebrew Characters, with Points, to facilitate the reading thereof to those accustomed to read Hebrew.—To the Syrian is likewise added a Latin one, composed by *Gay le Ferre*, who had the Care of the Syrian Version of the New Testament.

Lastly, in the *Polyglott* of *Antwerp* is added a more copious Apparatus of Grammars, Dictionaries, &c. than in that of *Complutum*; with several little Treatises judg'd necessary for clearing up the more difficult Passages in the Text.

The third *Polyglott* is that of *M. Jay*, printed at *Paris* in 1645. which has this Advantage over that of *Philip II.* that it has the Syrian and Arabic Versions of the Old Testament with Latin Interpretations.—In the *Pentateuch* it has likewise the Hebrew and Samaritan Text; and the Samaritan Version in Samaritan Characters.

As to the New Testament, beside every thing in the *Polyglott* of *Antwerp*; here is added an Arabic Translation, with a Latin Interpretation.—But here wants the Apparatus, and the Grammars and Dictionaries, which are in both the former *Polyglots*, which renders this great Work very imperfect.

The fourth *Polyglott* is that of *London*, printed in 1657, call'd *Walton's Polyglott*, from the Author of the Edition *Dr. Brian Walton* afterwards Bishop of *Worcester*.

This is indeed less magnificent than that of *M. Jay*, with regard both to the Size of the Paper, and the Beauty of the Characters; but is in all other respects preferable; being both much more ample and more commodious.

In this, the Vulgate is printed according to the revised and corrected Edition of *Clement VIII.* which is not done in that of *Paris*, where the Vulgate is printed as it stands in that of *Antwerp* before the Correction. See VULGATE.

It likewise contains an interlinear Latin Version of the Hebrew Text; whereas the *Paris* Edition has no other Latin Version from the Hebrew beside the common Vulgate; again, the Greek Septuagint printed in this *Polyglott* is not the same with that printed in the Bible of *Complutum*, which was retained in the Editions of *Antwerp* and *Paris*; but the Greek Text of the Edition of *Rome*: to which are added the various Readings of another very ancient Greek Copy call'd the *Alexandrian*, because brought from *Alexandria*. See SEPTUAGINT.

The Latin Version of the Greek of the Seventy is that published by *Flaminius Nobilius*, by Authority of Pope Sixtus V. Add, that in this *Polyglott* are found some Parts of the Bible in *Ethiopian* and *Persian*, nothing whereof appears in any of the rest.

Lastly, this Edition has the Advantage of Preliminary Discourses call'd *Prolegomena*, on the Text both of the Originals, and Versions; with a Volume of various Readings of all the different Editions.

To the Number of *Polyglots* may likewise be added the two *Pentateuchs* printed by the *Jews* of *Constantinople*, in four Languages; but all in Hebrew Characters.

In one of these *Pentateuchs*, printed in 1551, is found the Hebrew Text in large Characters; on one side whereof is the Chaldee Paraphrase of *Onkelos* in moderate Characters; and on the other side a Paraphrase in the *Persian*, composed by a Jew, one *Jacob de Tous*, so call'd from the City where he lived.—Beside these three Columns, the Arabic Paraphrase of *Saadias Gauri* is printed in small Characters a-top of the Pages; and at bottom is added the Commentary of *Rashi*.

The other *Polyglott* is printed at *Constantinople* in 1547, in three Columns like the former.—The Hebrew Text of the Law is in the middle, a Translation into the Vulgar Greek on one side, and a Spanish Translation on the other. These Versions are both in Hebrew Characters, with Points to determine the Pronunciation. A-top of the Page is added the Chaldee Paraphrase of *Onkelos*, and at the bottom the Commentaries of *Rashi*.

To these may be added as a seventh *Polyglott*, the Psalter published by *Aug. Justinian*, a Dominican, and Bishop of *Nebis*, at *Genoa* 1516; containing the Hebrew, Greek, Arabic, and Chaldee, with Latin Interpretations and Glosses. See PSALTER.

There are various other Editions of the Bible either in whole or in part, which might be rang'd under the Article of *Polyglots*; tho' they are not so denominated—such are the *Hexapla*, and *Octapla*, of *Origen*. See HEXAPLA and OCTAPLA.

And the Bible of *Hatter* printed at *Hambourg*, in Hebrew, Chaldee, Greek, Latin, German, Saxon, Italian, French, Slavonic, Danish, &c. See BIBLE.

POLYGON, in Geometry, a multilateral Figure; or a Figure whose Perimeter consists of more than four Sides, and Angles. See FIGURE, PERIMETER, &c.

If the Sides and Angles be equal, the Figure is call'd a Regular Polygon. See REGULAR.

The Word is form'd from the Greek *πολυ*, and *γωνια*, *Knee*, *Angle*.

*Polygons* are distinguish'd according to the Number of their Sides.—Those of five Sides are call'd *Pentagons*; those of six, *Hexagons*; those of seven, *Heptagons*; those of eight, *Octagons*; &c. The particular Properties, &c. of each whereof, see under its proper Article, PENTAGON, HEXAGON, &c.

#### General Properties of POLYGONS.

*Euclid* demonstrates these which follow.—1<sup>o</sup> That every *Polygon* may be divided into as many Triangles as it hath Sides. See TRIANGLE.

This is done by affixing a Point as *F*, (*Tab. Geometriae*, Fig. 29.) any where within the *Polygon*, and thence drawing Lines to every Angle *F A*, *F B*, *F C*, *F D*, &c.

2<sup>o</sup> The Angles of any *Polygon* taken together, make twice as many right ones, abating four, as the Figure hath Sides. See ANGLE.

Thus, if the *Polygon* have five Sides; the double of that is 10; whence subtracting 4 there remains 6 right ones.

3<sup>o</sup> Every *Polygon* circumscribed about a Circle is equal to a reſtangled Triangle, one of whose Legs is the Radius of the Circle, and the other the Perimeter or Sum of all the Sides of the *Polygon*.

Hence, every Regular *Polygon* is equal to a Reſtangled Triangle, one of whose Legs is the Perimeter of the *Polygon*,

find the other a Perpendicular drawn from the Centre to one of the Sides of the Polygon. See TRIANGLE.

Hence also every Polygon circumscribed about a Circle is bigger than it; and every Polygon inscribed, less than the Circle.—The same likewise appears hence, that the thing containing is ever greater than the thing contain'd.

And hence again, the Perimeter of every Polygon circumscribed about a Circle, is greater than the Circumference of that Circle; and the Perimeter of every Polygon inscribed, less: whence it follows, that a Circle is equal to a Right Angle Triangle, whose Base is the Circumference of the Circle, and its Height the Radius; since this Triangle is less than any Polygon circumscribed, and greater than any inscribed. See CIRCUMSCRIBING.

Nothing therefore is wanted to the Quadrature of the Circle; but to find a right Line equal to the Circumference of a Circle. See CIRCLE, CIRCUMFERENCE, QUADRATURE, &c.

To find the Area of a Regular Polygon.—Multiply a Side of the Polygon, as A B, by half the Number of the Sides, *e. gr.* the Side of a Hexagon by 3. Again, multiply the Product by a Perpendicular let fall from the Centre of the circumscribing Circle to the Side A B; the Product is the Area required. See AREA.

Thus, suppose A B, 54; and half the Number of Sides 2 1/2; the Product or Semiperimeter is 135. Supposing then the Perpendicular F G, 29; the Product of these two, 3915, is the Area of the Pentagon required.

To find the Area of an irregular Polygon, or Trapezium.—Resolve it into Triangles; find the several Areas of the several Triangles, see TRIANGLE; the Sum of these is the Area of the Polygon required. See TRAPEZIUM.

To find the Sum of all the Angles in any Polygon.—Multiply the Number of Sides by 180°: From the Product subtract 360; the Remainder is the Sum required.

Thus in a Pentagon, 180 being multiplied by 5 gives 900; whence subtracting 360 there remains 540; the Sum of the Angles of a Pentagon.

Hence, if the Sum found be divided by the Number of Sides; the Quotient will be the Angle of a regular Polygon.

Or, the Sum of the Angles is more speedily found thus: Multiply 180 by a Number less by two than the Number of Sides of the Polygon; the Product is the Quantity of the Angles required: thus 180 being multiplied by 3, a Number less by 2, than that of its Sides; the Product is 540, the Quantity of Angles as before.

The following Table exhibits the Sums of the Angles in all rectilinear Figures, from a Triangle to a Dodecagon; and is of good use both for the describing of regular Figures, and for proving whether or no the Quantity of Angles have been truly taken with an Instrument. See REGULA, FIGURÆ, &c.

Numb. Sides.	Sum. Ang.	Ang. of Reg. Fig.	Numb. Sides.	Numb. Angl.	Ang. of Reg. Fig.
III	180°	60°	VIII	1080°	135
IV	360	90	IX	1260	140
V	540	108	X	1440	144
VI	720	120	XI	1620	147 1/2
VII	900	128 1/2	XII	1800	150

To inscribe a regular Polygon in a Circle.—Divide 360 by the Number of Sides in the Polygon required, to find the Quantity of the Angle E F D. Set off the Angle at the Centre, and apply the Chord thereof E D, to the Periphery, as often as 'twill go.—Thus will the Polygon be inscribed in the Circle.

The Resolution of this Problem, tho' it be Mechanical; yet is not to be despis'd, because both easy and universal.—Euclid, indeed, gives us the Construction of the Pentagon, Decagon, and Quindecagon; and other Authors give us those of the Heptagon, Enneagon, and Hendecagon; but they are far from Geometrical Strictness.

Resaldinus lays down a Catholic Rule for the describing of all Polygons, which many other Geometricians have borrow'd from him; but Wagenerus and Wolfius have both demonstrated the Falsity thereof.

On a Regular Polygon to circumscribe a Circle: or to circumscribe a regular Polygon upon a Circle.—Bisect two of the Angles of the given Polygon A and E, by the right Lines A F and E F, concurring in F. And from the Point of Concourse with the Radius E F describe a Circle.

To circumscribe a Polygon, &c. Divide 360 by the Number of Sides required, to find *e. gr.* F d; which let off from the Centre F, and draw the Line e d; on this Construct the Polygon as in the following Problem:

On a given Line, E D, to describe any given regular Polygon.—Find an Angle of the Polygon in the Table; and in E set off an Angle equal thereto, drawing E A = E D. Tho'

the three Points A E D describe a Circle. See CIRCLE. In this apply the given right Line as often as it will go.—Thus will the required Figure be described.

To inscribe or circumscribe a Regular Polygon, Trigonometrically.—Find the Sine of the Arch produced by dividing the Semi-Periphery 180 by the Number of Sides of the Polygon: the double of this is the Chord of the double Arch, and therefore the Side A E to be inscribed in the Circle.—If then the Radius of a Circle wherein, *e. gr.* a Pentagon is to be inscribed, be given in any certain Measure *e. gr.* 345, the Side of the Pentagon is found in the same Measure by the Rule of Three, Thus as Radius 10000 is to 1176 :: so is 345, to 4057. The Side of the Pentagon, —With the given Radius therefore describe a Circle; and therein set off the Side of the Polygon as often as 'twill go; thus will a Polygon be inscribed in the Circle.

To save the trouble of finding the Ratio of the Side of the Polygon to radius, by the Canon of Sines; we shall add a Table expressing the Sides of Polygons in such Parts whereof Radius contains 10000000. In practice, as many Figures are cut off from the Right-Hand, as the Circumstances of the Case render needful.

Numb. Sides	Quantity Side	Numb. Sides	Quantity Side
III	17320508	VIII	7653668
IV	14142135	IX	6840402
V	11755705	X	6180339
VI	10000000	XI	5614691
VII	8677674	XII	5176180

To describe a Regular Polygon, on a given right Line, and to circumscribe a Circle about a given Polygon, Trigonometrically.—Taking the Ratio of the Side to the Radius out of the Table; and the Radius in the same Measure wherein the Side is given. For the Side and Radius being had, a Polygon may be described by the last Problem. And if with the Interval of the Radius, Arches be struck from the two Extremes of the given Line the Point of Intersection will be the Centre of the circumscribing Circle.

POLYGON, in Fortification, is the Figure or Perimeter of a Fortress or fortified Place. See FORTIFICATION.

Exterior-POLYGON is a right Line drawn from the Vertex or Point of a Bastion, to the Vertex or Point of the next adjacent Bastion. See BASTION.

Such is the Line C F, *Fig. Fortification, Fig. 1.*

Interior-POLYGON is a right Line drawn from the Center of one Bastion to the Centre of another, such is the Line G H.

Line of POLYGONS, is a Line on the French Sectors, containing the homologous Sides of the first 9 regular Polygons, inscribed in the same Circle, *i. e.* from an Equilateral Triangle to a Dodecagon. See SECTOR.

POLYGONAL Numbers, in Algebra, are the Sums of Arithmetical Progressions, beginning from Unity. See SERIES, NUMBER, PROGRESSION, &c.

Polygonal Numbers are divided, with respect to the Number of their Terms, into Triangular, which are those whose difference of Terms is 1; quadrangular or square, where 'tis 2; Pentagonal, where 3; Hexagonal, where 4; Heptagonal, where 5; Octagonal, where 6, &c.

They have their Names from the Geometrical Figures into which Points corresponding to their Units, may be disposed *e. gr.* three Points corresponding to the three Units of a triangular Number may be disposed into a Triangle; and so of the rest. See TRIANGULAR, &c.

The Genesis of the several kinds of Polygonal Numbers from the several Arithmetical Progressions, may be conceived from the following Examples.

Arithmetical Progression	1, 2, 3, 4, 5, 6, 7, 8
Triangular Numbers	1, 3, 6, 10, 15, 21, 28, 36
Arithmetical Progression	1, 3, 5, 7, 9, 11, 13, 15
Square Numbers	1, 4, 9, 16, 25, 36, 49, 64
Arithmetical Progression	1, 4, 7, 10, 13, 16, 19, 22
Pentagonal Numbers	1, 5, 12, 22, 35, 51, 70, 92
Arithmetical Progression	1, 5, 9, 13, 17, 21, 25, 29
Hexagonal Numbers	1, 6, 15, 28, 45, 66, 91, 120

The Side of a Polygonal Number is the Number of Terms of the Arithmetical Progression that are sum'd up to constitute it: And the Number of Angles is that which shows how many Angles that Figure has whence the Polygonal Number takes its Name.

The Number of Angles, therefore, in Triangular Numbers is 3. In Tetragonal 4. In Pentagonal 5, &c. consequently the Number of Angles exceeds the difference of Terms sum'd up, by two Units.

To find a Polygonal Number, the Side and Number of its Angles being given. The Canon is this.—The Polygonal Number

Number is the Semi-difference of the Squares of the Side into the Number of Angles, diminished by two Units; and of the Side itself into the Number of Angles diminished by four Units.

The Stems of *Polygonal Numbers* collected in the same manner as the *Polygonal Numbers* themselves are out of Arithmetical Progressions; are called *Pyramidal Numbers*. See PYRAMIDAL.

**POLYGRAPHY, POLYGRAPHIA, POLYGRAPHIC**, the Art of writing in various unusual, Manners or Cyphers; as also of deciphering the same. See WRITING.

The Word is usually confounded with *Steganography* and *Cryptography*. See STEGANOGRAPHY and CRYPTOGRAPHY.

The Ancients seem to have been very little acquainted with this Art; nor is there any Mark of their having gone beyond the *Lacedaemonian Scytals*. See SCYTALA.

*Truhemius, Porta, Vigenere,* and *Father Nicéron*, have wrote on the subject of *Polygraphy* or *Cyphers*. See CYPHER.

The Word is form'd from the Greek *πολυ*, *multum*, and *γραφω*, *scriptura, writing*.

**POLYHEDRON, POLYEDRON**, in Geometry, a Body comprehended under several Faces or Sides. See BODY and SOLID.

Such are all the five regular Bodies; viz. the Tetrahedron, Octahedron, Cube or Exahedron, Dodecahedron, and Icosihedron. See each under its proper Article.

If the Sides of the *Polyhedron* be regular Polygons, all similar and equal; the *Polyhedron* becomes a regular Body, and may be inscribed in a Circle. See REGULAR BODY, &c.

*Gnomonic POLYHEDRON*, is a Stone with several Faces, whereon are projected various kinds of Dials. See DIAL.

Of this kind that in the *Privy-Garden, London*, now gone to ruin, was anciently the finest in the World.

The Word is form'd from the Greek *πολυ*, *much*, and *εδω*, *scat*.

**POLYHEDRON, or POLYSCOPE**, in Opticks, is a Glass or Lens consisting of several plain Surfaces, disposed into a Convex Form; popularly call'd a *Multiplying-Glass*. See LENS and MULTIPLYING GLASS.

The Phenomena of the *Polyhedron* are as follow.

*Doctrine of the POLYHEDRON, or Multiplying-Glass.*

If several Rays, as EF, AB, CD, (*Tab. Optick, Fig. 71.*) fall parallel on the Surface of a *Polyhedron*; they will continue parallel after Refraction. See RAY and REFRACTION.

If then the *Polyhedron* be supposed regular; I, H, H, IM, will be as Tangents cutting the Spherical Convex Lens in F, B and D; consequently Rays falling on the Points of Contact intersect the Axis.—Wherefore, since the rest are parallel to these; they also will mutually intersect each other in G.

Hence, if the Eye be placed where the parallel Rays decussate; Rays of the same Object will be propagated to it still parallel from the several Sides of the Glass. Wherefore since the Crystalline Humour, by its Convexity, unites parallel Rays; the Rays will be united in as many different Points of the Retina, *a, b, c*, as the Glass has Sides.

Consequently, the Eye, thro' a *Polyhedron*, sees the Object repeated as many times as there are Sides.—And hence, since Rays, coming from remote Objects, are parallel; a remote Object is seen as often repeated thro' a *Polyhedron* as that has Sides.

2. If Rays, AB, AC, AD, (*Fig. 72.*) proceeding from a Radiant Point A, fall on several Sides of a regular *Polyhedron*; after Refraction they will decussate in G; and proceed on a little diverging.

Hence, if the Eye be placed where the Rays coming from the several Planes, decussate; the Rays will be propagated to it from the several Planes a little diverging, *i. e.* as if they proceeded from different Points. But since the Crystalline Humour by its Convexity, collects Rays from several Points into the same Point; the Rays will be united in as many different Points of the Retina, *a, b, c*, as the Glass has Sides. Consequently the Eye being placed in the Focus G, will see even a near Object repeated as often thro' the *Polyhedron* as that has Sides.

Thus may the Images of Objects be multiplied in a Camera obscura; by placing a *Polyhedron* at its Aperture, and adding a Convex-Lens at a due Distance therefrom.—And it really makes a very pleasant Appearance, if a Prism be applied so as the colour'd Rays of the Sun refracted therefrom be received on the *Polyhedron*. Form by this means they will be thrown on a Paper, or Wall near at hand in little lucid Specks, much exceeding the brightness of any precious Stone; and in the Focus of the *Polyhedron*, where the Rays decussate, (for in this Experiment they are received on the convex Side) will be a Star of surprising Lustre.

If Images be painted in Water-Colours in the Arcoles or little Squares of a *Polyhedron*, and the Glass applied to the

Aperture of a Camera obscura; the Sun's Rays passing thro' it will carry with them the Images thereof, and project them on the opposite Wall.

This Artifice bears a Resemblance to that other, whereby an Image on Paper is projected on the Camera, *viz.* by wetting the Paper with Oil, and straining it tight on a Frame; then applying it to the Aperture of the Camera obscura, so as the Rays of a Candle may pass through it upon the *Polyhedron*. See CAMERA.

To make an *Anamorphosis* or *deform'd Image*, which thro' a *Polyhedron* or *Multiplying Glass* shall appear regular and beautiful.

At one End of a Horizontal Table erect another at right Angles, whereon a Figure may be design'd; and on the other End erect another; to serve as a Fulcrum or Support, moveable on the horizontal one.—To the Fulcrum apply a Plano Convex *Polyhedron*, consisting *e. gr.* of 24 plain Triangles; let the *Polyhedron* be fitted in a Draw Tube, whereof that End towards the Eye to have only a very small Aperture, and a little further off than the Focus.—Remove the Fulcrum from the other perpendicular Table, till it be out of the Distance of the Focus; and that more, as the Image is to be greater.—Before the little Aperture place a Lense; and trace the Luminous Arcoles projected from the Sides of the *Polyhedron*, with a black Lead Pencil, on the vertical Plane, or a Paper apply'd thereon.

In these several Arcoles, design the several Parts of an Image, in such manner as that when join'd together they may make one whole; looking-fresh, every now and then thro' the Tube, to guide, correct, &c. the Colours, and to see that the several Parts match aptly together.

The intermediate Space fill up with any Figures or Designs at Pleasure; contriving it so as that to the naked Eye the whole may exhibit some Appearance very different from that intended to appear through the *Polyhedron*.

The Eye, now, looking thro' the little Aperture of the Tube, will see the several Parts and Members dispos'd among the Arcoles to exhibit one continued Image; all the intermediate ones disappearing. See ANAMORPHOSIS.

**POLYHISTORES**. See HISTORY, POLYMATHY, &c.

**POLYMATHY, POLYMATHIA**, the Knowledge of many Arts and Sciences; or an Acquaintance with a great Number of different Subjects. See ENCYCLOPEDIA.

The Word comes from the Greek *πολυ*, *multum*, and *μαθησις*, *Knowledge, Learning*.

*Lipsius, Scaliger, Kircher, Petavius, Politian, Salmastius*, &c. were famous for *Polymathy*.

Among the Ancients, such as were eminent this Way were called *Polyhystores*. See HISTORY.

*Polymathy* is frequently little more than a confused Heap of useless Knowledge occasionally detail'd, either pertinently or impertinently, for Parade.—The genuine *Polymathy* is an extensive Erudition, or a Knowledge of a great Number of Things, well digested, and applied to the Purpose, and never but out of Necessity.

**POLYMYTHY, POLYMYTHIA**, in Poetry, a Multiplicity of Fables, in an Epic or Dramatic Poem; in lieu of an Unity, or a single one. See FABLE, UNITY, &c.

*Polymythia* is a very great Fault.—It consists in assembling a Number of distinct Actions or Fables into one complex Body. See ACTION.

Such a Work *Bosiu* compares to the *Batrachomyomachia*; or one of the Fables of *Esoy*; and such would be the Idea of a Theſeid, an Heracleid, an Achilleid, or the like Poems, which should comprehend all the Actions of those Heroes; compared with the *Iliad*, or *Aeneid*. See HERO, EPIC, &c.

**POLYNOMIAL**, or rather *Multinomial, Root*, in Mathematics. See MULTINOMIAL and ROOT.

**POLYOPTRUM**, in Opticks, a Glass through which Objects appear multiplied, but diminished. See MULTIPLICATION.

The *Polyopteram* differs both in Structure and Phenomena from the common *Multiplying-Glasses*, call'd *Polyhedra*. See POLYHEDRON.

The Word *Polyopteram* is form'd from the Greek *πολυ*, *much*, *many*, and *οπτρον*, *I see*.

*Construction of the Polyopteram.*

In a Glass, plain on both Sides, A B, (*Tab. Opt. Fig. 73.*) and about three Fingers thick, cut out spherical Segments, scarce a fifth Part of a Digit in Diameter.

If then the Glass be removed from the Eye, till you can take in all the Cavities at one View, you will see the same Object as if thro' so many several concave Glasses, as there are Cavities, and all exceedingly small.

Fit this, as an Object Glass, in a Tube A B C D, whose Aperture A B is equal to the Diameter of the Glass, and the other C D equal to that of an Eye Glass; *e. gr.* about a Finger's Breadth. The Length of the Tube A C to be accommodated to the Object and Eye-Glass, by Trial.

In C D fit a Convex Eye-Glass, or in lieu thereof a Meniscus, having the Distance of its principal Focus a little larger than the Length of the Tube; so that the Point, from which the Rays diverge after Refraction in the Object-Glass may be in the Focus.—If then the Eye be applied near to the Eye-Glass, a single Object will be seen repeated as often as there are Cavities in the Object-Glass, but still diminished.

**POLYPETALOUS**, in Botany, a Flower consisting of several Petals or Leaves. See **PETALA**.

The Covers or Defences of Flowers consist either of a single continued Petal, thence call'd *monopetalous*; or of several distinct Pieces, call'd *Polypetalous*. See **FLOWER** and **MONOPETALOUS**.

The Word comes from *πολυ*, *multum*, and *πέταλον*, *Petalum*.

*Polypetalous* Flowers are either *regular* or *irregular*.—The *Regular*, according to some Botanists, are either those consisting of two Pieces, as the *Cercia*; or of four, thence call'd *Cross-Flowers*, as the *Clove Tree*; or of five, call'd *Umbelliferous*, as *Fennel*; or of six, as the *White Lily*, thence call'd the *Lily-kind*. See **UMBELLIFEROUS**, &c.

Those exceeding this Number, in any Quantity, equal or unequal, form a new Class of *polypetalous* Flowers, called the *Rose* Kind; among which are rank'd all those of three, four, five, or six Pieces, whose Fruits differ so from the rest, that 'tis required they be distinguish'd from them.

Such is the Flower of the *Water Plantane*, which tho' it has only three Leaves, yet by the Relation of its Seed with that of the *Ranuncula*, is rang'd in this last Class.—Such, also, is the Flower of *Tormentille*; which by Reason of the Difference of its Fruit from the *Siliques* or *Siliacites* of the *Cross-Flowers*, cannot be rang'd among them.—Such also is the *Pink*, which tho' consisting of five Pieces, yet is excluded the Class of *umbelliferous* Plants, because its Fruit is not divided into two Parts.—Such, lastly, are the Flowers of some *Ranuncula's*, *Houfe-leek*, and *Anemones*; which though they have six Petals, yet never produce Fruits divided into three Lodges, as those of the *Lily Kind*, and therefore cannot belong to their Class.

The *irregular polypetalous* Flowers are so called from the odd Figure and Disposition of their Petals, what Number of them so ever they have.

Such are those of two Pieces resembling two Chaps, as in *Fumitory*; or those of five Pieces resembling *Butterflies*, common to all leguminous Plants.

**POLYPODY**, in Botany, a Plant of the parasitical Kind, popularly call'd *Many-feet*; of considerable Use in Medicine, &c. See **PARASITE**.

There are two Kinds.—*Common Polypody*, and *Polypody of the Oak*. The first usually grows on old Walls in the Country, among Moss, &c. the latter call'd also *Oak-fern* from the Resemblance it bears to Fern, grows on the Branches of that Tree, in the Places where they shoot or spread out, feeding on a little Earth collected there from the Dust blown about with the Wind, and water'd with the Rain.

*Polypody of the Oak* is much the better of the two.—It must be chosen new, well-fed, dry, brittle, of a Tan-red without, green within, of a sweet Taste resembling *Liquorice*.

The Root is what is chiefly used in Medicine, being esteem'd Cathartic; tho' Dr. *Quincy* says 'tis no more so than a common Detergent; in which Capacity it is much prescribed; in Medicated Ales against the Jaundice, Scurvy, Obstructions of the Viscera, Hypochondriacks, &c.

The Word is form'd from the *Greek* *πολυ*, and *ποδ*, *Foot*, in regard the Root of the Plant clings to Walls and Trees, by a great Number of little Fibres like Claws.

**POLYPTOTON**, in Rhetorick, a Figure wherein the same Word is repeated in different Cases, Genders or Numbers, i. e. with different Terminations. See **FIGURES**.

Such is that of *Cicero*, *pro Arch. Sed pleni sunt omnes libri, plena sapientum voces, plena exemplorum vetustas*.

**POLYPUS**, in Medicine, a fleshy Tumor or Excrecence arising on the inside of the Nostrils, prejudicial to Respiration and Speech; call'd also, by way of Distinction, *Polypus Narium*. See **NOSE**, **EXCRESCENCE**, &c.

This *Polypus* arises by several Roots from the *Oz Crissum*, and hangs down, sometimes, as low as the Lip; growing, likewise, backwards, so as to stop the Hole of the Palate, whereby the Air and Pituita depend out of the Nose down into the Throat; and by this means strangles the Patient.

It has its Name from the Resemblance it bears to the Fish *Polypus*, call'd in *English*, *Four-centers*, or *many-feet*.—Tho' some derive the Name from the Resemblance its Substance bears to that of the *Polypus*; and others, from the Resemblance its many roots bear to the many feet of the Fish, &c.

If it have no Roots, or only one continued Root, it is call'd a *Sarcoma*; which is only a beginning *Polypus*. See **SARCOMA**.

*Polypus's* are chiefly found in scrophulous or cancerous Constitutions, along with Venereal Galls, Ulcers, Ozenas, &c.—Caustics, Cauterics, emollient Fomentations, Extirpa-

tion, and diffective Powders and Lotions are the usual Remedies.

**POLYPUS**, is also used for a morbid Excrecence in the Heart; consisting of a tough Concretion of grumous Blood lodg'd therein. See **HEART**.

*Adalgaphi* gives a very accurate Description of this *Polypus*. In the right Ventricle of the Heart, he observes, 'tis usually larger, and of a paler Colour like *Pituita*, with reddish or blackish Streaks; in the left Ventricle it is smaller, blacker and denser.—He adds, that it seems to have a sort of Organisation, and appears like a Congeries of Pellicles stretch'd over one another, which form a kind of nervous Compages.

*Polypus's* are frequently found upon opening the Bodies of Persons dying apopleptic; and are doubtless frequently the occasion of sudden Death.—They are seldom discover'd till they have dispatch'd the Patient.

'Tis a dispute among Physicians, whether *Polypus's* be produced any considerable time before, or always immediately after, Death.—Mr. *Gould* has an express Discourse in the *Philosoph. Transact.* to evince the former.

**POLYPUS of the Lungs**.—In the *Philosophical Transactions* Dr. *Rob. Clarke* gives us a very odd Instance of a Patient who cough'd up, at times, several hundred *Polypus's* of the Lungs.

They seem'd to have some Organization, and were all perfectly alike.—The Patient said, tho' they had no Life, he had frequently press'd a slimy matter out of the Body.

Dr. *Lifter* observes, that such *Polypus's* are form'd in the remoter and deeper Branches of the *Affers Arteria*, whence they are very difficult to get up.—The Patient above-mention'd never brought them up till after a continued coughing of half a Day and Night.

He adds, that they are nothing but viscus Excretions of the small Glands, hard bak'd in those Glands whose Form they receive.—M. *Buffier* observes, they are frequently mistaken for pieces of the Blood-Vessels or Lungs.

**POLYPYRENEOUS Fruits**, in Botany, are such as contain several Kernels, or Seeds. See **FRUIT**.

They are thus call'd from the *Greek* *πολυ*, *much*, and *πυρην*, *Nucleus*, *Kernel*. See **POLYSPERMOUS**.

**POLYSCOPE**, a Multiplying-Glass, i. e. a Glass which represents one Object to the Eye, as if it were many; call'd also *Polyhedron*. See **MULTIPLYING GLASS** and **POLYHEDRON**.

**POLYSPASTON**, **POLYSPASTY**, in Mechanicks, a Machine so denominat'd by *Vitreuius*; consisting of an Asssemblage of several Pulleys; used for raising of huge Weights in a little time. See **MACHINE**.

The Word comes from the *Greek* *πολυ*, and *σπασ*; q. d. *That may be torn'd many ways*.

The Multiplication of Pulleys in the *Polyspaston* is to very good purpose; it being demonstrat'd in Mechanicks, that the Force required to sustain a Weight by means of a *Polyspaston*, is to the Weight itself, as Unity to the Number of Ropes, or of the Pulleys; those Ropes or Pulleys being supposed parallel to each other. See **PULLEY**.

Hence, the Number of Pulleys, and the Power being given; the Weight that will be sustain'd thereby is easily found; viz. by multiplying the Power by the Weight.

E. g. Suppose the Power 50 Pounds, and the Number of Pulleys 5. The Weight they will balance is 250.

In like manner the Number of Pulleys being given, together with the Weight sustain'd; the Power is found by dividing the Weight by the number of Pulleys; Thus, if the Weight be 900 Pounds, and the Number of Pulleys 6, the Power will be 150.

*Deshaies* observes, that 'tis found by experience, that a moderate Man standing barely on the Ground will lift 150 Pound; whence the same Man by means of a *Polyspaston* consisting of 6 Pulleys, will be able to sustain 900 Pounds.

The Power of the Pulleys will be still exceedingly increas'd by joining several *Polyspastons*.

To find the Number of Pulleys a *Polyspaston* is to consist of to raise a given Power.—Divide the Weight by the Power; the Quotient is the Number required.

Suppose, e. g. the Weight 600 Pounds, and the Power 150; the Pulleys will be 4, whose Diameters are to be all equal, supposing two of them upper and two lower, moveable on the same common Axes.

**POLYSPERMOUS**, in Botany, is applied to such Plants as have more than four Seeds succeeding each Flower, without any certain Order or Number. See **PLANT**.

Thes, Mr. *Ray* makes a distinct kind of Herbs; calling them *Herbe semine nudo polysperme*; where, by *Semine nudo*, is meant such Seeds as do not put off spontaneously the Integuments or Coverings, which they either have, or appear to have, but fall off cover'd from the Mother-Plant. See **SEED**.

The Word is form'd from the *Greek* *πολυ*, *much*, and *σπέρμα*, *Seed*.

*Polyspermus* Herbs are subdivided into 1<sup>o</sup> Such as havea Cirylix or Perianthium, consisting either first of three Leaves, and the Flower Tripetalous, as the *Plantago Aquatica*, and the *Sagittaria*; both Water-Plants; or the Flower Polypetalous, and the

the Calyx falling with it, as the *Chelidonium minus*; or remaining after the Flower is dropp'd, as in the *Hepatica Mobilis*. 2<sup>o</sup> Of *five Leaves*, in some deciduous with the Flower, as in the *Ranunculus*; in others Perennial, as in the *Helieborus niger ferulaceus*; or annual, as in the *Flos Adonis* 3<sup>o</sup> Of *eight Leaves*, as the *Malva* and *Alcea*. 4<sup>o</sup> Of *ten Leaves* as the *Carrophylla*, *Fragaria*, *Pentaphyllum*, *Tormentilla*, *Argentina*, *Althea*, and *Pentaphylloides*.

2<sup>o</sup> Such as have no Calyx, or Perianthium; as the *Clematis*, *Filipendula*, *Ulmaria*, *Anemone Nemoros*, *Pulsatilla*, &c. POLYSYLLABICAL *Exchorum*, those which repeat many Syllables, or Words. See *ECCHO*.

POLYSYLLABLE, in Grammar, a Word consisting of more than three Syllables. See *WORD* and *SYLLABLE*. A Word of one Syllable is called a *Monosyllable*; one of two, *Disyllable*; one of three, *Trisyllable*; one of four or more, *Polysyllable*. See *MONOSYLLABLE*, &c.

The Word comes from the *Greek mou, multum*, and *os, Syllabe*.

POLYSYNDETON, in Rhetoric, a Figure consisting in an abundance of Conjunctions Copulative. See *FIGURE* and *COPLATIVE*.

Such is, *Ad, praeteris & colis & observat & diligit*.—In opposition to this stands *Ayndeton*. See *AYNDETON*.

POLYTHEISM, the Doctrine or Belief of a Plurality of Gods. See *GOD*.

The Word comes from the *Greek mou, multum*, and *os, Deus*. See *IDOLATRY*, &c.

POMADA, an Exercise of vaulting the wooden Horse, by laying one Hand over the Pommel of the Saddle.

POMATUM, or POMADO, a Composition of Apples, with Lard and other fatty Substance; used by way of Unguent on many Occasions, particularly for Diseases of the Skin, Pimples, Scuffs, &c. to soften the Hands, render the Skin smooth, the Complexion fresh, &c. See *UNGUENT*.

*Pomatium* are occasionally made with *Jessamines*, *Oranges*, *Jonquills*, *Taberofs*, &c. i. e. they are perfumed with the Odours of those Flowers.

The best is said to be that prepared of *Kid's Grease*, *Pippins*, an *Orange* slic'd, with a *Glass of Rose-Water*, and half a *Glass of White-wine*, boll'd and strain'd, and at last sprinkled with *Oil of sweet Almonds*.

The Unguentum *Pomatium* prescribed in the *College Dispensary* consists of *Hog's Lard*, *Sheep's Suet*, the *Apple* call'd *Pome-water*, *Rose Water*, and *Orrice Root*, boll'd till the Apples are soft, strain'd and perfumed with *Oil of Rhodium*.

*Dr. Quincy* observes, that the *Apple* is of no Significance at all in the *Recipe*; and that the common *Pomatium* sold in the *Shops* is only *Lard* beat into a *Cream*, with *Rose-Water*, and scented with *Lemons*, *Thyme*, or the like.

POME, among Gardeners.—To *Pome* is to grow or knit into a round Head, somewhat like an *Apple*.

Thus, they say a *Cabbage* begins to *Pome*, &c.—They sometimes use the Term to *cabbage* in the same Sense.

POMEGRANATE, *Granatum*, a medicinal Fruit, in Form of an *Apple* or *Quince*; full of *Seeds* or *Kernels*, enclosed within a reddish Pulp, sometimes sweet, sometimes acid. See *FRUIT*.

It is denominated from its Abundance of *Grains* or *Kernels*; *q. d. Pomum Granatum*, a *Kernel'd Apple*; or from the *Country* where it was anciently produced, *viz. Granada*.

The *Granada* Tree is of two Kinds, the one wild, which produces a Kind of *Flowers* used in *Pharmacy*, called *Balaustia*. See *BALAUSTIA*.

The other cultivated in *Gardens*; whereof there are again two Kinds; the one only bearing *Flowers*; the other, both *Flowers* and *Fruit*.—The *Flowers* of each are inclosed in an oblong purple *Calyx*, resembling a *Bell*.

The *Trees* never grow high; their *Branches* are a little prickly; their *Leaves* resemble those of the greater *Myrtle*, and their *Fruit*, which is composed of a great Number of red angular *Grains*, sometimes sweet, sometimes sour, and sometimes vinous, according to the *Quality* of the *Tree*, are all inclosed in little distinct *Cells*, and cover'd, in common, with a thick brownish *Rind*; over this grows a Kind of *Crowning*, of the same *Nature* with the *Rind*, form'd of a *Production* of the *Calyx*.

In the general, *Pomegranates* are not only agreeable to the *Taste*, but good for the *Stomach*; and of considerable *Use* in *Medicine*.

Of the *Grains* are made *Syrups* and *Conerves*; and the *Rind*, which is held very astringent, is an *Ingredient* in several *Remedies* and *Pisians*, for *Dysenteries*, *Diarrhœas*, *Lienteries*, *Hæmorrhagies*, and *Relaxations* of the *Gums*.—The *Ancients* used the *Rind* as the *Moderis* do *Sumac*, in the *Preparation* of *Leather*.

The *Rind* ought always to be dry'd, after the *Grains* are taken out; that dry'd without scooping always tasting musty, and more likely to increase the *Distempers* than cure them.

As to the *Conserve*, there is but little of the true fold; being very difficult to make.—That which ordinarily passes for it is only *Sugar* melted down; to which they give the *Colour* and *sharp Taste*, with *Cochineal*, *Cream of Tartar*, and *Alumina*.

POMEIS, in *Heraldry*, are green *Roundies*; so called by

the *English* *Heralds*, who express different colour'd *Roundies* by distinct *Names*. The *French*, who content themselves to denote the different *Colour* of the *Roundie*, call them *Torrens Vert*. See *TORTRAU*.

POMIFEROUS; *q. d. Apple-bearing*, in *Botany*, a *Plant* given to those *Plants* which have the largest *Fruit*, and are cover'd with a thick hard *Rind*; by which they are distinguish'd from the *Bacciferous*, which have only a thin *Skin* over the *Fruit*. See *PLANT* and *BACCIFEROUS*.

The *Pomiferous* Kind have a naked *monopetalous* *Flower*, divided into five *Partitions*, and growing on the *Top* of the succeeding *Fruit*.—They are divided into 1<sup>o</sup>. *Capreolite*, or those creeping along the *Ground*, &c. by means of *Tendrils*; as the *Cucurbita*, *Melo Cucumis*, *Cepo*, *Bellamina*, *Anguria*, and *Colocynthis*. See *CAPREOLIT*.

And, 2<sup>o</sup>. without *Capreoli*, or *Tendrils*, as the *Cucurbita* *Clypeota*, or *Melo-Cepo* *Clypeiformis*.

The *Word* is form'd from *Pomum*, *Apple*, and *fero*, I bear. POMMEE, or POMMETTE in *Heraldry*.—A *Cross-Pomme* or *Pommette*, call'd also a *Trochæe*, is a *Cross* with a *Ball* or *Knob* at each *End*. See *CROSS*.

POMMEL, or PUMMEL in the *Manège*, a *Piece of Brass* or other *Matter* a-top and in the *Middle* of the *Saddle-Bow*, to which are fasten'd the *Hollfers*, *Stirrup Leathers*, &c. See *SADDLE*.

POMMEL is also a round *Ball* of *Silver*, *Steel*, or the like, fix'd at the *End* of the *Guard* and *Grasp* of a *Sword*; to serve in some measure as a *Counterpoise*.

*Balzac* observes, that there are still extant *Charters* and *Privileges* granted by *Charlemain*, and sealed with the *Pommel* of his *Sword*, which, ordinarily, he promises to defend with the same *Sword*. See *SEAL*, *SIGNATURE*, &c.

POMP. See *CARCUS*, *CAVALCADE*, &c.

POMPHOLYX, or *white Calamine*, in *Pharmacy*, the *Flowers* of *Brass*; or a *white*, *light* and *friable* *Substance*; found adhering to the *Lid* or *Covercle* of the *Crucibles* or *Furnaces*, wherein *Copper* is melted with *Calamine Stone*, for the making of *Brass*. See *BRASS*, *CALAMINE*, &c.

It is esteem'd *detractive* and *deffensive*, tho' only apply'd externally; and much used in *divers* *Kinds* of *Fevers*; tho' its *Violence* requires its being used with great *Precaution*.

The *Apothecaries* sometimes call it *Nil* or *Nihil Album*, and sometimes *white Tully*, in regard of its *Resemblance* thereto in *Vertue*. See *TULLY*.

The *Word* is form'd from the *Greek πομπη*, *q. d. Babble arising on Water*.

POMUM *Adami*, in *Anatomy*, a *Protuberance* in the *Fore-part* of the *Throat*. See *THROAT*.

Some fancy it thus called upon a *strange* *Conceit*, that a *Piece* of the *forbidden Apple*, which *Adam* eat, stuck by the *Way*, and was the *Occasion* of it.

In reality, it is only the *Convex Part* of the *first Cartilage* of the *Larynx*, called *Scutiformis*. See *LARYNX* and *SCUTIFORMIS*.

POND, in *Geography*, a little *Lake*, which neither receives nor emits any *River*. See *LAKE* and *RIVER*.

PONDERARE, in our ancient *Customs*, a *Method* of curing *fish* Children.

The *Practice* was, *ponderare*, to weigh, the *sick Child*, at the *Tomb* of some *Saint*, counterpoising, or balancing the *Scale* with *Money*, *Wheat-Bread*, or any other thing the *Parents* were willing to offer to *God*, his *Saints*, or the *Church*.—But a *Sum* of *Money* was always to make *Part* of the *Counter-balance*. By this Means the *Care* was effected.—*Ad sepalchrum Sancti, Nummo se ponderabat*.—

PONDUS, *Weight*. See *WEIGHT*.

PONDUS, in ancient *Records*, is a *Duty* paid to the *King* according to the *Weight* of *Merchandizes*. See *POUNDRAGE*.

PONDUS *Regis*, the *Standard-Weight*, anciently appointed by the *King*. See *STANDARD*.

PONE, a *Writ*, whereby a *Cause* depending in the *County*, or other *inferior Court*, is removed to the *Common Pleas*. See *WRIT*, &c. *COURT*, &c.

PONE per *Vidiam*, is a *Writ* commanding the *Sheriff* to take *Surety* of one for his *Appearance* at a *Day* assign'd. See *SURETY*, *VADIM*, &c.

PONIARD, a little pointed *Dagger*, very sharp-edg'd; bore in the *Hand*, or at the *Girdle*, or hid in the *Pocket*. The *Poniard* was anciently in very great *Use*, but is now in good measure set aside, except among *Assassins*. See *ASSASSIN*.

*Sword* and *Poniard* were the ancient *Arms* of *Duellists*; and are said to continue still so among the *Spaniards*.—The *Practice* of *Sword* and *Poniard* still make a *part* of the *Exercise* taught by the *Maisters* of *Defence*.

The *Word* is form'd from the *French* *Poiniard*, and that from *Pointe*, *Handful*.

PONS *Varoli*, or *Varolii*, or PONS *Cerebri*, in *Anatomy*, the upper *Part* of a *Duct* in the third *Ventricle* of the *Brain*; situate in the *Cerebellum*, and leading to the *Infundibulum*. See *BRAIN*, *VENTRICLE*, *INFUNDIBULUM*, &c.

It is thus called from its *Discoverer* *Varolius*, an *Italian Physician*, who flourish'd in the *University* of *Pavia* about the *Year* 1572.

**PONTAGE**, a Contribution towards the Maintenance, Repairing, and Rebuilding of Bridges. See **BRIDGE**.

This was, antiently, one of three general National Charges, whence no Person of any Degree whatever was exempted.

The three Things call'd *Trinoda Necessitas*, whence, *Inguifus* tells us, *Nalli possunt laxari*, were, the Expedition to the Wars, the Building of Castles, and the Building and Repairing of Bridges. See **TRINODA**.

Mr. *Selden*, in his Notes on *Euámerus*, observes, that *ne quidem Episcopi, Abbates, & Monachi immunes erant*.—And *Max. Paris* adds, Anno 1244, that in all Grants of Privileges to the Monasteries, those three Things were always excepted, for the Publick Good, and that the People might be better able to resist an Enemy.

**PONTAGE** is also a Due antiently belonging to the Lord of the Fee, for Persons or Merchandizes, that pass over Rivers, Bridges, &c. call'd in the later Latin *Pontagium*, or *Pontonagium*, **Pontage**.

**PONTIBUS reparandis**, a Writ directed to the Sheriff, willing him to charge one or more to repair a Bridge, to whom it belongs.

**PONTIFICAL**, **PONTIFICALIA**, a Book of the Rites and Ceremonies belonging to Pontiffs, Bishops, Popes, &c. See **RITUAL** and **CEREMONIAL**.

**PONTIFICALIA**, the Robes and Ornaments, wherein a Bishop performs Divine Service. See **EPISCOPAL**.

**PONTIFICAT**, the State or Dignity of a Pontiff.

*Cesar* reform'd the Calendar in the Time of his Pontificate. See **CALENDAR**.

The Concordat was pass'd in the Pontificate of *Leo X.* See **CONCORDAT**.

There was a Pontificate that only lasted twenty four Hours.

**PONTIFEX**, **PONTIFF**, *High-Priest*; a Person who has the Intendance and Direction of divine Worship, as the offering Sacrifices and other Religions Solemnities. See **PRIEST**, **SACRIFICIA**, &c.

The *Romans* had a College of *Pontiff*, and over those a Sovereign *Pontiff*, or *Pontifex Maximus*, instituted by *Numa*; whose Function it was to prescribe the Ceremonies each God was to be worshipp'd withal, compose the Rituals, direct the Vestals, and for a good while to perform the Business of Angary; till on some superstitious Occasion he was prohibited intermeddling therewith. See **AUGUR**.

He consecrated the Statues of the Gods, e're they were put up in Temples; bless'd the Figures of some of *Jove's* Thunderbolts, to preserve the People from Harms; and compiled their Statutes. See **ANNALS**.

The Jews too had their *Pontiff* or High-Priest; and among the *Romanists* the Pope is still stiled the Sovereign *Pontiff*. See **POPE**.

Authors differ about the Etymology of this Word: Some derive it from *posse facere*, that is, from the Authority the *Pontiffs* had to sacrifice; others, as *Varro*, from *Pons*, because they built the *Sabulicid* Bridge, that they might go and offer Sacrifice on the other side of the *Tiber*.

**PONTON**, or **PONTOON** in War, a little floating Bridge, made of Boats and Planks. See **BRIDGE**.

The *Pontoon* is a Machine consisting of two Vessels, at a little Distance, join'd by Beams; with Planks laid cross for the Passage of the Cavalry, the Canon, Infantry, &c. over a River, an Arm of the Sea, &c.

The late invented *Pontoon* is of Latten, furnish'd with an Anchor, &c. to fix it.—To make a Bridge several of these are dispos'd two Yards asunder, with Beams across them, and over those, Boards.

They are also link'd to each other, and fasten'd on each Side the River, by a Rope rung thro' a Ring in each of their Heads, and fix'd to a Tree or Stake on either Shore.—The whole makes one firm, uniform Bridge, over which a Train of Artillery may pass.

*Cesar* and *Aulus Gellius* both mention *Pontons*; but theirs were no more than a Kind of square flat Vessels, proper for the carrying over of Horse, &c. Ours however, take their Names from them; those Authors call them *Pontones*, of *Pons*.

**PONT-VOLANT**, q. d. *Flying Bridge*; a Kind of Bridge us'd in Sieges; made of two small Bridges laid one over another, and so contriv'd by means of Cords and Pulleys placed along the Sides of the under Bridge, that the upper may be push'd forwards, till it joins the Place where it is fix'd: the whole Length of both however not to be above five Fathom long, least they should break with the Weight of the Men. See **BRIDGE**.

**POOL**, is properly a Reservoir of Water, supply'd with Springs, and discharging the Overplus by Sluices, Defenders, Weirs, and other Cause-ways. See **SLUICE**, &c.

**MILL-POOL** is a Stock of Water, by whose Force, &c. the Motion of a Mill is effectu'd. See **MILL**.

**POOP**, *Poppis*, the Stern or uppermost Part of a Ship's Hull. See **POPPIS** and **STERN**.

**POPE**, **PAPA**, the Chief or Head of the Roman Catholic Church. See **PAPA**.

*Father de Comte* in his *Annals* observes, from *St. Jerom*,

*St. Cyrius, St. Gregory, St. Augustin, and Sebastianus Apollinaris*; that the Title *Pope* was antiently given to all Bishops. See **BISHOP**.

They were also address'd under the Term *Holiness*, and *Beatitude*; and their Churches call'd *Apostolical* Secs. See **HOLINESS**, **APOSTOLICAL**, &c.

He adds, that 'twas only in the Eleventh Century, that *Gregory VII.* first appointed, in a Synod held at *Rome*, that the Title *Pope* should be restrain'd to the Bishop of *Rome*, as a particular Distinction and Prerogative.

In the Council of the Lateran, held under *Innocent III.* the *Pope* was declared *Ordinary of Ordinaries*. See **ORDINARY**.

The *Pope* is chose by the Cardinals, out of their own Body. See **ELECTION**, **CARDINAL**, &c.

His See is at *Rome*, whence he issues out his Orders, call'd *Briefs* and *Bulls*, throughout the Catholic World. See **BULL**, &c.

History mentions a *Pope's*, *Joan*.—The Reality hereof has been oppos'd and defended by many learned Men.—The Tradition might possibly take its Rise from the Weakness of *Pope Job* VIII. in restoring *Photius* to his Communion, and owning him as true Patriarch: For he hence got the Appellation of *Woman*; as that Prince call'd *King Mary* did, by leaving himself to be govern'd by *Q. Mary* his Wife. See **KING** and **QUEEN**.

*M. Spaulheim*, Professor of Theology at *Leiden*, has lately wrote very amply on the Subject; and shows it to be a Question *de facto*, scarce determinable at this Time of Day.

**POPE**, **PAPA**, among the *Romans*, was the Name of certain Inferior Officers, or Ministers of Sacrifice. See **SACRIFICIA**.

The Business of the *Papa* was to whet the sacrificing Knife, to bind the Victim, prepare the Water, and other Necessaries, to smite the Victim, &c.

They did their Office naked to the Girdle, and crowned with Laurel.

**POPLES** in Anatomy, that Part where the Thigh is joined to the Tibia. See **THIGH** and **TIBIA**.

**POPPLICANI**, *Populicani*, or **PUBLICANS**, a Name given in the West to the *Adamicans*; or to a particular Branch thereof, call'd in the East *Phariseans*. See **PUBLICIAN**.

**POPLITEA**, in Anatomy, is the third Vein of the Leg. See **VEIN**.

It arises from the Heel, where it is form'd out of several Branches, coming both from the Heel and Ankle.

It lies pretty deep in the Flesh; and ascending up to the Ham, terminates in the Crural Vein. See **CRURAL**, &c.

**POPLITEUS**, or **SUB-POPLITEUS**, a Muscle, which arises from the external and inferior Protruberance of the Thigh-Bone, and passing over the Joint obliquely, is inserted into the superior and internal Part of the Tibia.—It assists in bending of the Leg, and turns it inwards. See **LEG**.

**POPPY**, *Papaver*, a medicinal Plant, famed for its Narcotic Quality. See **NARCOTIC**.

There are divers Kinds; some wild; some cultivated, white, purple, scarlet, &c. But those most us'd are the white, *Papaver Hortense fœmine albo*; and black, *Papaver Hortense fœmine nigro*.

The Heads of these Plants are of singular Virtue to promote Sleep, allswage Pain, &c. they stop Diarrhœas, Hæmorrhages, &c.

Of the Juice of these is prepared the *Mecconium* sold in the Shops. See **MECONIUM**.

The Opium brought from *Turky* is an Extract of the Juice of *Turky Poppies*. See **OPIMUM**.

**POPULAR**, **POPULARIS**, something relating to the People.

The *Roman Nobility* was distinguish'd into two Factions; the *Optimates*, who adhered strenuously to the Ministry, the Senate, &c. in opposition to the People.

And the *Populares*, who favour'd the Rights and Pretensions of the People, in opposition to the Noblesse.

**POPULAR DISEASES**, are such as become common, and run thro' the Body of the People, call'd also *Epidemic Diseases*. See **EPIDEMIC**.

*Hippocrates* has wrote expressly *de Morbis Popularibus*. See **DISEASE**.

**POPULAR ERRORS**, are such as People imbibe from one another, by Custom, Education, and Tradition, without having consider'd the Reasons or Foundations thereof. See **ERROR**.

**POPULEUM**, or **POPULNEUM**, in Pharmacy, an Unguent prepared of the Buds of black Poplar, Violet Leaves, Navel-wort, and Lard, bruis'd and miscerated; to which are added Bramble-tops, Leaves of black Poppies, Mandragora, Henbane, Nightshade, Lettice, and Burdock, boil'd in Rose-water, and strain'd.

It is much us'd as a Cooler, in Burns, Scalds, and all Sorts of Inflammations; and to allswage arthritic Pains.

**PORRAGEOUS**, in Medicine, a Term applied to the Bile, when its Colour is green, approaching that of a Leek. See **BILE**.

The Word is form'd from the Latin, *Porrum*, Leek.

**PORCELAIN, or PURCELAIN**, a delicate sort of Earthen-Ware, chiefly manufactured in *China*, and thence, also, call'd *China*, or *China-Ware*; but brought into *Europe* from other Parts of the East, especially *Japan*, *Siam*, *Surat*, and *Persia*. See **POTTERS-Ware**.

*Sainger*, and *Cardan*, tho' generally of contrary Sentiments, are yet agreed, that what the *Romans* call'd *Vasa Myrrina*, which were first seen at *Rome* in *Pompey's* Triumph, and which afterwards became so very precious; were the same with the *Porcelain* of our Times. See **MYRRHINE**.

This may be true: But if the Opinion be only founded on *Pliny's* Description of these Vessels, one would rather take 'em for a kind of precious Stones, of a whitish Colour, but variously vein'd and variegated; found in some Parts of *Persia*.

Be this as it will, 'tis certain both those Authors are mistaken, when they tell us, that *Porcelain* is made of Egg and Oyster-Shells beaten small, and buried under ground for 80 or 100 Years. The Account we shall here give, will put that out of question.

'Tis not known who was the Inventor of *Porcelain*; the *Chinese* Annals, which use to contain every thing in any wise memorable, are perfectly silent about it; nor do we know much more of the Time of its Invention. Only, 'tis certain it must have been before the beginning of the fifth Century: The Annals of *Foualdan* relating, that from the second Year of the Reign of the Emperor *Tau*, about the Year of Christ 442, the Workers in *Porcelain* of that Province had alone furnish'd the Emperors therewith.

There is *Porcelain* made in several Provinces of *China*; particularly those of *Fou-Kien*, *Canton*, and *Kinteschim*; but that of the last is most esteem'd.

The *Chinese* call the *Porcelain*, *Tsiki*: The word *Porcelain* is but little known there, except among a few Workmen and Merchants; and seems derived from the *Portuguese* *Porcellane*, a Cup, or Pottinger.

*Porcelain* makes a very curious Article in Commerce, and even in Natural History. Its Manufacture has hitherto pass'd for a Mystery in *Europe*; and that in spite of all the Endeavours of the Jesuit-Missionaries to penetrate into the Secret. The Veil, however, is at length drawn; and in a Letter of *F. Entrecolles* to *F. Orry*, from *Jaocheou*, dated September the 18, 1722, and lately published in *French*, the whole Process is describ'd in all its Circumstances; with an Extract whereof we shall here gratify the curious Reader.

*The Art of making Porcelain, or China-Ware; from a Letter of F. d'Entrecolles, a Jesuit-Missionary in China.*

In the Manufacture of *Porcelain*, there are four essential things to be consider'd; *viz.* The Matter it is made of. The Art of forming the Vessels, and other Works. The Colours wherewith it is painted. And, lastly, the Baking, or giving it the proper degree of Fire. Each of which will make the Subject of a several Article.

*Matter, whereof Porcelain, or China-Ware, is made.*

There are two kinds of Earths, and as many kinds of Oils or Varnishes used in the Composition of *Porcelain*. The first Earth, call'd *Kaolin*, is best with glittering Cap-picks; the second, call'd *Petunsa*, is a plain white, but exceedingly fine, and soft to the Touch. They are both found in Quarries twenty or thirty Leagues from *Kinteschim*, a City which produces the finest *Porcelain-Works* in all *China*; and hither these Earths, or rather Stones, are brought in an infinite Number of little Barks, incessantly passing up and down the River *Jaocheou* for that purpose. The *Petunsa's* are brought in form of Bricks; having been scot out of the Quarries, where they are naturally Pieces of a very hard Rock. The white of the best *Petunsa* is to beard a little on green.

The first Preparation of these Bricks, is to break and pound 'em, first into a coarse Powder with Iron-Mallets; then in Mortars with Pistils that have Stone-Heads, arm'd with Iron, and wrought either with the Hand, or with Mills.

When the Powder is almost tender'd impalpable, they throw it in a large Urn full of Water, stirring it briskly about with an Iron Instrument. After the Water has rested a little while, they skim off from the Top a white Substance form'd there, of the thickness of four or five Fingers; and dispose of this Scum or Cream in another Vessel of Water. They then stir again the Water of the first Urn, and again skim it, and thus alternately till there remain nothing but the Gravel of the *Petunsa's* at bottom; which they lay a-treth under the Mill, for a new Powder.

As to the second Urn, wherein are put the Skimmings of the first; when the Water is well settled, and become quite clear, they pour it off; and with the Sediment, collected at bottom in form of a Paste, fill a kind of Moulds; whence, when almost dry, they take it out, and cut it into square Pieces, which are what they properly call *Petunsa's*; reserving 'em to be mix'd with the *Kaolin* in the Proportion hereafter assign'd.

These Squares are sold by the hundred, but 'tis very rare to meet with 'em un-falsify'd: The Workmen, who, like the rest of the *Chinese*, are errant Knaves in their Dealings, usually mixing Refuse along with 'em; so that they are usually obliged to purify 'em e'er they can be employ'd.

The *Kaolin*, which is the second Earth used in *Porcelain*, is much softer than the *Petunsa*, when dug out of the Quarry; yet is it this, which, by its mixture with the other, gives the Strength and Firmness to the Work. *F. Entrecolles* observes, that some *English* or *Dutch*, having prosecuted some *Petunsa's* to be bought, privately; upon their attempting to make *Porcelain* at their Return into their own Country, could not succeed for want of taking *Kaolin* along with it. Which the *Chinese* being apprised of, said, drolling, "That the *Europeans* were wonderful 'eople to "go about to make a Body, whose Flesh was to sustain "itself without Bones."

The Mountains whence the *Kaolin* is dug, are cover'd without-side with a reddish Earth; the Mines are deep, and the Matter is found in Glebes, or Clods, like the Chalk in ours. The Author is of opinion, that the white Earth of *Malta* is not much different from the *Kaolin*, except that it wants the silver'd Particles. The Preparation of *Kaolin* is the same with that of the *Petunsa's*, except that the Matter being less hard, less Labour is required.

The *Oil of Varnish*, which makes the third Ingredient in *Porcelain*, is a whitish, liquid Substance, drawn from the hard Stone whereof the *Petunsa's* are form'd; that which is whitest, and whose Stains are the greenest, being always chos'n for this purpose.

The Manner of preparing the Oil, is thus: The *Petunsa's* being wash'd, undergo the same Preparations as for making the Squares; excepting that the Matter of the second Urn is not put in Moulds, but the finest Part of it taken to compose the Oil. To an hundred Pounds of this Matter they cast a Mineral Stone call'd *Chekao*, resembling our Alum: This Stone is first heated red-hot, and thus reduced in a Mortar into an impalpable Powder; and serves to give the Oil a Consistence; which, however, is still to be kept liquid.

The Oil of Lime makes the fourth Ingredient; the Preparation whereof is much more tedious and circumstantial. They first dissolve large Pieces of quick Lime, and reduce it to a Powder by sprinkling Water on it; on this Powder they lay a Couch of dry Fern, and on the Fern another of the slack'd Lime, and thus alternately, till they have got a moderate Pile; which done, they set fire to the Fern: the whole being consumed, they divide the Ashes that remain on new Couches of dry Fern; setting 'em on fire as before. And this they repeat five or six times successively, or even more; the Oil being still the better as the Ashes are often burnt.

In the Annals of *Foualdan* 'tis said, instead of Fern they antiently used the Wood of a kind of Medlar-Tree; and that 'twas this gave the antient *Porcelains* that admirable Hue, which the Moderns cannot come up to for want of that Wood. 'Tis certain, however, the Quality of the Fern and Lime contribute very much to the goodness of the Oil.

A Quantity of these Ashes of Fern and Lime are now thrown into an Urn full of Water; and to an hundred Pounds of Ashes is added a Pound of *Chekao*, which dissolves therein. The rest being performed after the same manner as in preparing the Earth of the *Petunsa's*; the Sediment found at the bottom of the second Urn, and which is to be kept liquid, is what they call the Oil of Lime; which the *Chinese* esteem as the Soul of the former Oil, and which gives the *Porcelain* all its Lustre. This Oil is easily sophisticated by adding Water to increase the Quantity; adding at the same time proportionably of the same *Chekao* to maintain the Consistence. Ten Measures of Oil of *Petunsa* usually go to one of Lime. To have the Mixture just, the two Oils should, be equally thick.

*Manner of forming the Vessels, and other Works of Porcelain.*

The first thing is to purify the *Petunsa* and *Kaolin*; which, for the first, is done after the manner already describ'd in preparing the Squares. For the second, as its softness makes it dissolve easily, 'tis sufficient, without breaking it, to plunge it in an Urn full of Water in an open Basket. The

Dregs that remain are perfectly useless, and are emptied out of the Work-house when a quantity is got together.

The Work-Houses are properly vast Yards wall'd round, with Sheds, and other Conveniences for the Workmen to work under; as well as other Buildings for 'em to live in: It is almost inconceivable what number of Persons are employ'd in these Works; there being scarce a Piece of *Porcelain* but passes thro' above twenty hands, e'er it come to the Painter's Work-House; and above sixty e'er it be brought to Perfection.

To make a just Mixture of *Petunsa* and *Kaolin*, regard must be had to the Fineness of the *Porcelain* to be made: For the finer *Porcelains*, they use equal Quantities; four Parts of *Kaolin* to six of *Petunsa*, for moderate ones; and never less than one of *Kaolin* to three of *Petunsa*, for the coarsest.

The hardest Part of the Work is the Kneading and Tewing the two Earths together; which is done in a kind of large Basons, or Pits, well paved and cemented, wherein the Workmen trample continually with their Feet, relieving one another, till the Mass be well mixed, grow hard, and become of the Consistence required to be used by the Potter.

The Earth, when taken out of the Basons, is kneaded a second time, but piece-meal, and with the Hands, on large Slates for the purpose; and on this Preparation, in effect, it is, that the Perfection of the Work depends; the least heterogeneous Body remaining in the Matter, or the least Vacuity that may be found in it, being enough to spoil the whole. The smallest Grain of Sand, nay, sometimes a single Hair, shall make the *Porcelain* crack, splinter, run, or warp.

The *Porcelain* is fashion'd or form'd either with the Wheel, like Earthen Ware, or in Moulds. See POTTERY. Smooth Pieces, as Cups, Urns, Dishes, &c. are made with the Wheel. The rest, i. e. such as are in Relievo, as Figures of Men, Animals, &c. are form'd in Moulds, but finish'd with the Chiffel.

The large Pieces are made at twice; one half of the Piece is raised on the Wheel by three or four Workmen, who hold it till it have acquired its Figure; which done, they apply it to the other half, which has been form'd in the same manner; uniting the two with *Porcelain-Earth*, made liquid by adding Water to it, and polishing the Juncture with a kind of Iron Spatula.

After the same Manner it is that they join the several Pieces of *Porcelain* form'd in Moulds, or by the Hand; and after the same Manner they add Handles, &c. to the Caps and other Works form'd with the Wheel.

The Moulds are made after the Manner of those of our Sculptors, viz. of divers Pieces which severally give their respective Figure to the several Parts of the Model to be represented; and which are afterwards united to form a Mould for an entire Figure. The Earth they are made of is yellow and fat, dug out of its proper Quarries, whereof there are abundance about *Kimstebim*. It is kneaded like glaz'd Earth, and when sufficiently mellow, fine, and moderately dry, beating it stoutly, they form it into Moulds, according to the Works required, either by Hand, or on the Wheel. These Moulds are sold very dear, but last a long time. See MOULD.

All the Works made in Moulds are finish'd by the Hand, with several Instruments proper to dig, smooth, polish, and to touch up the Strokes that escape the Mould; so that 'tis rather a Work of Sculpture than of Pottery. There are some Works whereon Relievo's are added, ready made, as Dragons, Flowers, &c. Others that have Impressions in Creux; which last are engraven with a kind of Punchcons. In the general, all *Porcelain* Works are to be shelter'd from the Cold; their natural Humidity making 'em liable to break when they dry unequally.

To conceive the Number of Hands each Piece of *Porcelain* passes thro' e'er perfect; we shall close this Article with F. *Enrocolles* instances of a common Cup, e'er it be fit for the Painter: The Cup begins with the Potter, who has the Management of the Wheel, where it acquires its Form, Height, and Diameter. This Operator has not above a Farthing *Sterling* for a Plate furnish'd with twenty six Caps; accordingly, they go out of his Hands exceedingly imperfect, especially towards the Feet, which are only unform'd Lumps of Earth, to be afterwards cut with the Chiffel when the Cap is dry. When it comes from the Wheel, the Cap is received by a second Workman, who fits it on its Base. A third takes it immediately from him, and applies it on a Mould to bring it to its true Form. This Mould is on a kind of Lathe. A fourth Workman polishes the Cap with a Chiffel, especially about the Edges; and brings it to the thinness necessary to make it transparent; in doing which, he moistens it from time to time, lest its dryness should make it break. When of its proper thickness, another Workman turns it gently on a Mould, to smooth its inside; taking a deal of Care it be

done equally, lest any Cavity be form'd, or it warp. Other Workmen add, some, Ornaments in Relievo; others, Impressions in Creux; & others, only Handles, as the quality of the Cup requires. At last, they round and hollow the Foot on the inside with a Chiffel; which is the Function of a particular Artift, who does nothing else.

This Multiplicity of Workmen, so far is it from retarding the Work, that it is found, by Experience, to go on the faster for it; as well as to be the better done; each Workman, by a continual Attention to the same thing, becoming very dextrous at it; besides saving the time of changing Instruments, &c.

#### Painting of Porcelain, and the Colours used therein.

The *Chinese* Painters, especially those that meddle with human Figures, our Author observes, are all forty Workmen: He adds, that the defect is scarce any where so feasible as in the *Hospei*, or *Porcelain-Painters*, among whom, setting aside Flowers and Landscips, which are sometimes tolerable, the greatest Masters are not to be compared to ordinary Apprentices among the *Europeans*, for the Beauty and Justness of Design. But it is otherwise with the Colours these *Hospei* use; which are so exceedingly lively and brilliant, that there is but little hopes our Workmen should ever come to vye with 'em.

The Painting Work is distributed among a great Number of Workmen, in the same Laboratory: To one it belongs to form the colour'd Circle about the Edges of the *Porcelain*; another traces out Flowers, which another paints: This is for Waters, and Mountains alone; that for Birds, and other Animals; and a third for human Figures.

There are *Porcelains* made of all Colours; both with regard to the Grounds, and to the Representations thereon. As to the Colours of Landscips, &c. some are simple; such are all Blues, which are those most usually seen in *Europe*; others are mixed up of several Tints; and others, again, heighten'd with Gold.

The *Blus* is made of *Lapis Lazuli*, prepared by burning it the space of twenty four Hours, in a Furnace, where it is buried up in Gravel, to the height of half a foot; when burnt, they reduce it into an impalpable Powder in *Porcelain* Mortars, not varnish'd, and with Pestles of the same Matter.

For the *Red*, they use *Coppers*, which they call *Hausen*; a Pound of this they put in a cover'd Crucible, in the Lid whereof is left a little Aperture, thro' which the Matter on occasion may be seen. The Crucible is heated with a Reverberatory Fire, till the black Smoke cease to ascend, and a fine red one succeeds it. A Pound of *Coppers* yields four Ounces of red Liqueur, which is found at the bottom of the Crucible, tho' the finest part is that usually adhering to the Lid and the Sides of the Crucible.

Beside the natural Whiteness of the *Porcelain*, which is still improved by the Oil wherewith they cover it, they have an artificial White, serving for the Grounds of *Porcelains* of several Colours; and made of a transparent Flint calcined like the *Lapis Lazuli*, and mixed with pulverized Cerufs: The Proportion is an Ounce of the latter to half an Ounce of the former.

This Powder of Flint is likewise an Ingredient in most of the other Colours; e. g. for *Green*, to three Ounces of *Zombosien*, or *Scoria* of beaten Copper, they use half an Ounce of Powder of Flint, and an Ounce of Cerufs. *Violet* is made by adding a Dose of White to the *Green* already prepared; the more *Green* is added, the deeper is the *Violet*. For *Yellow*, they use seven Drachms of White, and three of the *Coppers-Red*.

Most of these Colours are mixed up with Gum-Water, for Application; a little Saltpetre, sometimes Cerufs or *Coppers*, but more usually *Coppers* alone, being first dissolved in the Water. Indeed for *Porcelains* that are to be quite red, the Colour is usually applied with Oil; i. e. with the common Oil of the *Porcelain*, or another made of the white Flints.

There is also another Red, call'd *Brown Red*, because in reality applied by blowing with a Pipe, one of whose Orifices is cover'd with a very fine Gauze. The bottom of this Tube is lightly applied to the Colour wherewith the Gauze is smear'd; when, blowing against the *Porcelain*, it becomes all sprinkled over with little Points. This *Porcelain* is very rare, and of great Price.

*Black Porcelain*, which they call *Onumian*, has likewise its beauty: This Colour has a leady Cast, like our Metal-burning Mirrors; and is usually heighten'd with Gold. It is made of three Ounces of *Lapis Lazuli*, with seven of the common Oil of *Stee*; tho' that Proportion is varied, as the Colour is designed to be more or less deep. The *Black* is not given the *Porcelain* till it be dry, nor must the Work be put to the Fire till the Colour be dry.

The Gold is not apply'd till after the baking, and is re-baked in a Furnace for the purpose: To apply the Gold, they break and dissolve it in Water at the bottom of a *Porcelain*, till a thin gilded Cloud arise on the Surface; it is used with Gum-Water, and to give it a Body, they add three parts of Cerufs to thirty of Gold.

There is likewise a kind of *marbled Porcelain*, which is not made by applying the Marblings with the Pencil; but for Oil to varnish it withal, using that of white Flints, which hatches and cuts the Work with a thousand humourous Strokes, in manner of *Mosaic Work*. The Colour this Oil gives, is a white, somewhat ashy: The *Porcelain* is call'd *Tzomki*.

There are several other kinds of *Porcelain*; but they are such as are rather for Curiosity than Use: The prettiest are the *Magic Porcelains*, whose Colours only appear when fill'd with some Liqueur. These are made double: The outside is white, and all laid out in Compartments; the inside is a solid Cup, of colour'd *Porcelain*; tho' the Cup is sometimes of Glass, which has a better Effect than *Porcelain*. The Secret of these *Magic Porcelains*, which the *Chinese* call *Kiatfui*, is almost lost; yet F. *Entrecolles* has furnish'd us with the following Account.

The *Porcelain* to be painted thus, must be very thin; and the Colours, which in other *Porcelains* are apply'd on the Outside, are here apply'd on the Inside: When the Colour is dry, they lay over it a light Couch of a Size made of the *Porcelain Earth*; by which means the Colour is inclos'd between two carthen *Lamine*. When the Size is dry, they throw Oil within the *Porcelain*; and when it has enough, they return it to the Mould, and the Wheel, to render it as thin and transparent as possible. When dry, 'tis baked in the Common Furnace. The Colours here used are always the finest, and the Figures painted are Fishes; as the most suitable to the Liqueur put within them, and in which they seem to swim.

The several Kinds of *Porcelains* above-mention'd, being quite painted, with their several Colours, and all the Colours dry, are to be polish'd, to prepare them to receive the Oil or Varnish; which is done with a Pencil of very fine Feathers, moisten'd with Water, and pass'd lightly over, to take off even the smallest Inequalities.

The Oiling or *Varnishing*, is the last Preparation of the *Porcelain*, before it be carry'd to the Furnace: This is apply'd more or less thick, and seldom or oftener repeated, according to the Quality of the Work. For this, fine *Porcelains*, they give two very thin Couches; to others one; but that one equivalent to the other two. There is a deal of Art in applying the Varnish; both that it be done equally, and not in too great quantity. The Couches on the Inside are given by Asperion, i. e. by casting in as much Varnish as is necessary: Those on the Outside, by Immersion, or by plunging the Pieces in a Vessel of Oil.

It must be observ'd, that the Foot is not yet form'd, but continues in a mere Mass, till the Work has been varnish'd: 'Tis at length finish'd on the Wheel; and when hollow'd, a little Circle is painted in it, and sometimes a *Chinese Letter*. This Painting being dry, the Foot is varnish'd, and the Work now carry'd to the Furnace to be baked.

Our curious Author omits nothing; not even the Dexterity of the People, who carry the *Porcelain* to the Bake-house: He has been frequently surpris'd, he tells us, to see a Man pass thro' several Streets full of People, with two very long, narrow Boards, rag'd with *Porcelains* on his Shoulders; still preserving the Equilibrium so accurately, as not to do any damage to so frail a Commodity.

#### Manner of Baking Porcelain.

There are two Kinds of Ovens used in baking of *Porcelain*: Large ones, for Works that are only to come to the Fire once, which is the common way; and small ones, for such as require a double baking. The large ones are two *Chinese* Futhoms deep, and almost four wide. They are form'd of a Mixture of three Earths; one whereof, Yellow and Common, makes the Basis; the two others are scarce, and dug out of deep Mines, wherein People can only work in Winter. One of them, call'd *Laotou*, is a very strong, stiff Earth; the other *Tsoutou*, oily.

The Sides and Roof of the Ovens are so thick, that one may lay the Hand on them, when the Fire is at its height, without danger of burning. At the Top of the Vault, which is in form of a Tunnel, is a large Aperture to give vent to the Flames and Smoke, which mount up incessantly, as soon as Fire is once set to the Furnace. Beside the principal Aperture, there are four or five (small ones around) which, by being open'd and shut, serve to augment or diminish the Heat: like the Holes in the *Chymists Furnaces*, call'd *Registers*. The Hearth, which takes up the whole Breadth of the Furnace, is placed in Front, precisely against the opening of the Door, and is two or

three Foot deep, and two broad; People passing over it on a Plank, to go into the Furnace to dispose the *Porcelain*.

As soon as the Fire is lighted, the Door is wall'd up; only leaving an Aperture for the Conveyance of Wood. Lastly, the Bottom of the Oven is cover'd with Sand, wherein part of the first *Porcelain* Cases are buried. The Furnace itself is usually placed at the Extremity of a long, narrow Vestible, which serves in lieu of Bellows; the cold Air and Wind being thus driven directly in the face of each Furnace.

Each Piece of *Porcelain* of any Note, is disposed, in the Furnace, in its separate Case, or Coffin. Indeed, as to Tea-Dishes, &c. the same Case serves for several. The Cases are all of the same Matter with the Furnace: They have no Lids; but serve each other mutually, the Bottom of a second Case fitting into the Aperture of the first; and thus successively, to the Top of each Column. Each Coffin, which is usually of a Cylindrical Form, that the Fire may communicate itself more equally to the *Porcelain* inclos'd, has, at bottom, a little Lay of very fine Sand, cover'd over with Dust of *Kaolin*, that the Sand may not stick to the Work; and care is taken that the *Porcelain* may not touch the Sides of the Case. In the larger Cases, which hold the small Pieces; they leave the Middle vacant; as in regard *Porcelains* placed there would want the necessary Heat. Each of these little Pieces is mounted on a little Massive of Earth, the thickness of two Crowns, cover'd with Powder of *Kaolin*.

F. *Entrecolles* observes, that the *Porcelains* are put in Cases, to prevent any Diminution of Lustre from the too violent Effect of a naked Fire; adding, that 'tis owing to these thick Veils, that the *Beauty*, or, as he calls it, the Completion of the *Porcelain*, is not tann'd by the Heat of the Fire.

As fast as the Cases are fill'd, a Workman ranges them in the Cavity of the Furnace; forming them into Piles or Columns; whereof those in the middle are at least seven Foot high: The two Cases at the bottom of each Column are left empty; because being partly sunk in the Sand, the Fire has the less effect on them; and for the same reason, the uppermost one is left empty. In this manner is the whole Cavity of the Furnace fill'd with Columns, excepting that part precisely under the grand Aperture.

In ranging the Cases, they observe always to place the finest Piles of *Porcelain* in the Centre; and the coarsest at Bottom; and those that are high-colour'd, and consist of as much *Petunja* as *Kaolin*, and wherein the worst Oil is used, at the Mouth.

These Piles are all placed very near one another, and are bound together at top, at bottom, and in the middle, by Pieces of Earth; in such manner, as that the Flame may have a free Passage among them, and insinuate equally on all sides: in which a great part of the Workman's Art lies, and on which the Perfection of the *Porcelain* much depends. Another thing to be observ'd, is that a Furnace must never be set altogether with new Coffins; but half one, half t'other: the old ones at the bottoms and tops of the Pile, and the new ones in the middle. Indeed 'twere better to have them all burnt in a Furnace a-part, e'er they come to be used for *Porcelain*; as was anciently done. The Cases, our Author observes, are brought ready prepared from a little Village on the River, a League distant from *Kimetschin*. E'er burnt, they are yellow; and afterwards of a dark red.

When the Furnace is fill'd, they wall up the Door, only leaving a little Aperture for the throwing in of little Pieces of Wood, a Foot long, but very slender, to keep up the Fire. 'Tis then heated, by degrees, for the space of a Day and Night; after which two Men, who relieve one another, continue to throw in Wood without any interruption. To know when the *Porcelain* is baked enough, they open one of the latter Holes of the Furnace, and with a pair of Tongs take off the Lid of one of the Piles. If the Fire appear very brisk and clear, and the Piles equally inflam'd; and especially if the Colours of the *Porcelains* that are uncover'd, dart forth a noble Lustre; the Cognition is sufficient, they discontinue the Fire, and wall up what remain'd of the Door of the Furnace.

If the Furnace be only fill'd with small *Porcelains*, they take them out twelve or fifteen Hours after the Fire is extinct: If it be fill'd with larger, they defer opening it for two or three Days. In this the modern Practice differs from the ancient; wherein the Door was not open'd till after ten Days for the large Pieces, and five for the small ones.

One thing very surprising, and almost inconceivable, F. *Entrecolles* observes, is, that there are never found any Afflux on the Hearth of the Furnace; what Quantity of Wood soever is consum'd. He adds another thing, which with him passes for equally strange, that the Work men employ'd about the Furnaces, shake their Thirst, by continually drinking hot Tea, with Salt dissolv'd in it.

The *Chinese* make another Kind of *Porcelain*, which they paint and bake twice; and for this second Baking they have a kind of little Ovens or purpofe. When very fmall, they are made of Iron; otherwife; of a kind of Bricks an Inch thick, a Foot high, and half a Foot broad; made of the fame Earth with the *Porcelain* Cafes. The biggest of thefe Furnaces does not exceed five Foot in Height, and three in Diameter; and being made mach in form of Bee-Hives, the Bricks are arch'd a little, to form the Curvity the better. The Hearth is of Earth half a Foot high, form'd of two or three Ranges of Bricks; and on this Mafive is the Furnace built. Around the Furnace, at the diftance of about half a Foot, is rais'd a Shell of common Bricks, join'd to the Furnace itfelf, by a kind of Archourant of Earth, which ferve to ftrengthen it. They ufually build four or five of thefe Furnaces at equal Difiances from each other. At the bottom of the Shell are Holes to give Air to the Fire when lighted: A-top is an Aperture, which they cover up with a piece of the baked Earth, when the *Porcelains* are laid in the Furnace.

The *Porcelains*, here, are not inclos'd in Coffins, as in the common Furnaces; the Furnace, itfelf, ferving that purpofe; and being fo exactly clos'd, that they receive no other Impreffion of the Fire, but that of the Heat of the Charcoal dispos'd in the Hearth, at the bottom of the Furnace, as well as a-top of the Vault, and in the Interval between the Furnace and the Shell, or Brick-Wall.

To prepare the *Porcelains* for a fecond Baking, they muft have had their Varnifh in the common manner, and have pafs'd the great Furnace: In this State they are painted with various Colours, after which, without giving them any new Varnifh, they are rang'd in Piles in the little Furnace; fetting the little ones over the larger, in form of Pyramids.

This fecond Baking is fometimes intended to preferve the Luftre of the Colours the better, and at the fame time to give them a kind of *Relievo*. But more ufually, its Defign is to hide defective Places, by covering them over with Colours: But the Artifice is eafily found out, by paffing the Hand over them.

When the Workman judges his *Porcelains* enough baked, he takes off the Piece that covers the Aperture; and if the Works appear glittering, and the Colours glowing, he takes out the Charcoal; and when the Furnace is cold, the *Porcelain* too.

How beautiful foever the modern *Porcelain* may be; the Taft for Antiquity, which reigns in *China*, as well as in *Europe*, gives the ancient *Porcelain* a Value far above that of the modern: It muft be own'd, the Ancient feems finer as to the Matter, more perfect as to the Baking, and of a more pleafant Caft, both as to the White of the Ground, and the other Colours; yet 'tis certain the moft able and difcerning may be deceiv'd herein: And there are Workmen who make it their bufinefs to counterfeit the ancient *Porcelain*, call'd *Koutans*, in the modern.

The Matter of thefe falfe *Koutans* is a yellowifh Earth, found near *Kimctobin*: There is nothing particular in the firft part of the Procefs, except that they are made thicker, and that they are varnifh'd with an Oil drawn from the yellow Stone, mix'd with the common Oil, which gives them a kind of Sea-green Hue. When taken out of the Furnace, they throw it into a fatty Broth, made of Capons, &c. in which they boil it a fecond time; they then bury it in the filthieft Sink they can find for a Month or fix Weeks, or more, according as they would give it the greater appearance of Antiquity. Befides their Thicknefs and their Colour, thefe falfe Antiques refemble the true ones in this; that they do not refound when ftruck, nor even give the leaft buz, when held to the Ear.

Notwithstanding the vaft Quantity of *Porcelains* made in almoft all the Provinces of the Empire of *China*; they fill continue very dear; tho' not near fo dear, as antiently. The *Chinese* Annals tell us of Times wherein a fingle Urn coft ninety or an hundred Crowns on the fpot. What chiefly occafions the extraordinary Price of this Commodity, efppecially in *Europe*, is, befide the great Profits of the Merchants in *Europe*, and their Factors in *China*; that it rarely happens a Furnace fucceeds throughout; that it is frequently quite fpoilt, fo that upon opening it, in lieu of fine *Porcelains*, is found a hard unform'd Maſs, into which both the *Porcelains*, and their Coffins, are converted either by Excefs of Heat, or fome ill Qualities in the Matter.

Another reafon of the Dearnefs of *Porcelain*, is, that the Ingredients it is made of, and the Wood wherewith it is burnt, grow more and more fcarce: One may add a third reafon for the exceffive Price of *Porcelains* to the *Europeans*; and 'tis this, that moft of thofe fent to *Europe* are form'd on new Models, frequently very odd, and difficult to fucceed in; which, yet, for the fmalleft Defects, are turn'd on the Manufacturer's hands; and he not being able to difpofe of them to the *Chinese*, becaufe not to their

Taſte, nor for their Ufe, is forc'd to charge the *Porcelain* he delivers, the higher, to pay himfelf for thofe refus'd.

The *French* have been thefe fifteen Years attempting to imitate *Porcelain*: The firft Effays made at *Rouen*, are faid to have fucceeded tolerably well; and M. *Savary* tells us, are now carry'd to fuch a point in the Manufactures of *Paffy*, and *S. Cloud*; that the *French Porcelains* want nothing to make them of equal Value with the *Chinese*, but to be brought five or fix thouſand Leagues. In effect, for the Finenefs of the Grain of the Matter, the Beauty and Form of the Veffels, the Exactitude of the Defign, and the Luſtre of the Colours, at leaft the Blues; the *French* are not much behind the *Chinese*. But their grand Defect is in the White of the Ground, which is uſually dingy and dull; and eafily diftinguiſhes itfelf from the pure fprightly White of the *Chinese*.

*PORCELAIN*, is alfo a kind of little white Sea-ſhell, found along with the Sponges; and current in feveral Parts of *Aſia*, *Africa*; and *America*, by way of Money. See *COIN*.

Authors have hitherto been of opinion, that theſe Shells were the Matter wherof the *Porcelain*, or *China*-Ware, was made. They are of fome ufe in Medicine, and are preferib'd pounded or broken, in manner of Pearls. See *PEARL*.

*PORCH*, a kind of Veſtible fupported by Columns; much uſed at the Entrance of the antient Churches, Temples, &c. See *VESTIBLE*.

In the antient Architecture, *Porch* was a Veſtible, or a Diſpoſition of insulated Columns, uſually crown'd with a Pediment, forming a Covert Place before the principal Door of a Temple or Palace.

When it had four Columns in Front, it was call'd a *Tetraſtyle*; when fix, *Hexaſtyle*; when eight, *Oſtoſtyle*; when ten, *Decaſtyle*, &c.

*Vitruvius* calls it *Pronaos* and *Prodamos*. When it has Iron Gates, it is call'd *Propyleum*.

*PORE*, a little Interſtice, between the Particles of Matter which conſtitute Bodies; either empty, or fill'd with ſome inſenſible Medium. See *BODY* and *MATTER*.

Condensation, and Rarefaction, are only perform'd by cloſing and opening the *Pores*. See *RAREFACTION* and *CONDENSATION*.

The Transparency of Bodies is uſually ſuppos'd to ariſe from their *Pores* being directly oppoſite to one another. See *TRANSPARENCY*.

The Matter of inſenſible Perſpiration is convey'd thro' the *Pores* of the *Cottis*. See *PERSPARATION*.

The Word *Pore* is form'd from the *Greek*  $\pi\omicron\tau\omicron\varsigma$ , *Aperture*, or *Duct*, thro' which a Thing paſſes.

Sir *Iſaac Newton* ſhews, that Bodies are much more rare, and porous, than is commonly believ'd: Water, e.g. is 19 times lighter, and confequently rarer than Gold; and Gold itfelf is fo rare, as very readily, and without the leaſt oppoſition, to tranſmit Magnetic Effluvia, and eaſily to admit Quickſilver into its *Pores*, and to let Water paſs thro' it: for a coarſe Sphere of Gold bath, when fill'd with Water, and folder'd up, upon preſſing with a great Force, let the Water ſqueeze thro' it, and it ſtand all over its outside, in multitudes of ſmall Drops like Dew, without burſting or cracking the Gold: whence it may be concluded, that Gold hath more *Pores* than ſolid Parts; and by confequence that Water hath above forty times more *Pores* than Parts. See *GOLD*.

The Magnet tranſmits its Virtues without any Diminution or Alteration, thro' all cold Bodies that are not magnetic; as Gold, Silver, Braſs, Glaſs, Water, &c. See *MAGNET*.

The Rays of Light, let them be either Bodies actually coming to us from the Sun, or only Motions or Impreſſions upon the Medium, move in right Lines, and are hardly ever, unleſs by great chance, refleſted back again in the ſame right Line, after their Impingence upon Objects; and yet we ſee that Light is tranſmitted to the greateſt Diſtances thro' pellucid Bodies, and that in right Lines. See *RAY*, &c.

Now how Bodies ſhould have *Pores* ſufficient for theſe Effects, may be difficult to conceive, but not impoſſible: For Sir *Iſaac* ſhews, that the Colours of all Bodies ariſe from their Particles being of ſuch a determinate Size or Magnitude. Wherefore, if we conceive theſe Particles to be ſo dispos'd, as that there is as much *Poreſity*, as there is of Matter; and in like manner theſe Particles to be compos'd of others much leſs, and that have as much interſpers'd Vacuity or Space, as their Quantity of Matter amounts to; and ſo on, till we come to ſolid Particles without *Pores*: then, if in any Body there be (for inſtance) three of theſe Sizes of Particles, and that the laſt be of the ſolid, or leaſt ſize; that Body will have ſeven times as much Vacuity as ſolid Matter. If four ſuch Degrees, and the laſt be leaſt, and ſolid, that Body will have fifteen times

times as much Porosity as Solidity: If five such Degrees, it will have thirty-one times as much Space as Solidity: And if six Degrees, then it will have sixty-three times as much Vacuity, as solid Matter.

And perhaps in the wonderful Conformation and Fabrick of natural Bodies, there may be other Proportions of Space to Matter, to us wholly unknown; whence it is possible, there may be yet farther great Quantities of interspers'd Vacuity. See VACUUM.

PORES, in Anatomy, are certain permeable Spaces, between the Parts of the Skin; whereby we sweat, or perspire, &c. See CUTIS and PERSPIRATION.

The Pores are most remarkable in the Hands and Feet: By viewing the Palm of the Hand with a moderate Glass, after washing it well, we perceive innumerable little Ridges, of equal Size and Distance, running parallel to each other; especially on the Tips and Joints of the Fingers, &c. where they are regularly dispos'd into spherical Triangles and Ellipses.

On these Ridges stand the Pores, in even Rows, big enough to be seen by a good Eye without a Glass; but with one, every Pore looks like a little Fountain; and the Sweat may be seen to stand therein, clear as Rock-Water; and as often as it is wiped off, springs up again. See SWEAT.

The Pores are plac'd on the Ridges, not in the Furrows between them; that they might be less liable to be stopp'd by Compression: For the same reason, the Pores of the Hands and Feet are larger than the rest; those Parts being more used and press'd than the rest: and hence again, there are no Ridges on other Parts.

These Pores are a very convenient Out-let for the more noxious Parts of the Blood, which by the continual Use of the Hands, and Feet, are pleasurably brought into them: Whence in Hypochondriac and Hysteric People, there is a continual Burning in the Palms and Soles.

In the Stoppage or Constriction of the Pores of the Skin, consists that Disease we popularly call a Cold. See COLD.

In the *Philosophical Transactions*, we have an Instance of a Student near Leyden, much addicted to Astronomy, who spending many Nights in Star-gazing, had by the nocturnal Wet, and Cold, so obstructed the Pores of his Skin, that little or nothing exhaled from his Body; as appear'd hence, that the Shirt he had wore five or six Weeks, was then as white as if it had only been wore one Day. In the mean while, a Water was collected under the Skin, whereof he was afterwards cured.

PORIMA, in Geometry, a Theorem, or Proposition, so easily demonstrated, that it is almost self-evident. See AXIOM.

Such, e.g. is this, That a Chord is wholly within the Circle.

On the contrary, an *Aporisma*, is a Proposition so difficult, as to be almost impossible to be demonstrated; as the Quadrature of the Circle is now, and as the Squaring of any assign'd Portion of *Hippocrates's Lunes* formerly was.

The *Porisma* coincides nearly with the *Lemma*, or Assumption. See LEMMA.

The Word is form'd from the Greek *πύρον*, a Thing easy to conceive; and which opens the way to something more difficult.

PORISMA, in Mathematicks, a general Theorem, or Canon, deduc'd from a local Problem. See THEOREM.

*Proclus* derives it from the Greek *μενω*, to establish, and conclude, from something already done and demonstrat'd; and accordingly defines *Porisma*, a Theorem drawn occasionally from some other Theorem already demonstrat'd.

PORISTICK Method, in Mathematicks, is that which determines when, by what means, and how many different ways, a Problem may be solved. See PROBLEM and RESOLUTION.

PORPHYRY, in Natural History, &c. a precious Kind of Marble, of a brownish red Colour; frequently interspers'd with white Stains; antiently brought from Egypt, and exceeding all others in Hardness. See MARBLE.

The Art of cutting *Porphyry*, practis'd among the Antients, is lost. In effect, 'tis hard to conceive what kind of Tools they must have used for the fashioning of these huge Columns, and other *Porphyry*-Works found in some of the antique Buildings in Rome.

One of the most considerable Pieces, now remaining entire, is a Tomb of *Constantia*, Daughter of the Emperor *Constantine*, in the Church of *St. Agnes* without the Walls, or, ordinarily call'd, *The Tomb of Bacchus*, because of several Boys represent'd herein, playing among the Vine-Leaves. Add to this *Apollon's*, and the Bulls of twelve Emperors, all in *Porphyry*, in the Palace of the *Tuileries*.

Some of the antient Pieces appear to have been wrought with the Chisel, others with the Saw, others with Wheels, and others ground by degrees with Emery. Yet the modern Tools will scarce touch *Porphyry*: either the Antients,

therefore, had the Secret of tempering Steel better than we; or, as some incline to think, they had the Art of softening the *Porphyry*: Tho', 'tis more probable, that Time and Air have contributed to increase its Hardness.

Mr. *Addison* tells us, he saw a Workman at Rome employ'd in the cutting of *Porphyry*; but his Advances were exceedingly slow, and almost insensible.

All the way the Italian Sculptors have to work the Pieces of old *Porphyry* Columns still remaining (for the *Porphyry* Quarries are long since lost) is with a Brais Saw without any Teeth. With this, together with Emery and Water, they rub and wear, with infinite patience. See EMERY.

Yet have many excellent Persons endeavour'd to retrieve the antient Art, particularly *Leon Baptista Alberti*; who searching for the necessary Temper, says, he found Goats Blood the best of any; yet even this avail'd but little; for in working with Chisels temper'd herein, Sparks of Fire came much more plentifully, than Pieces of the Stone. By means hereof, the Sculptors were able to make a flat or oval Form; but could never attain to any thing like a Figure. See TEMPER.

'Tis true; in 1555, *Cosmo de Medici* is said to have distill'd a Water from certain Herbs, wherewith his Sculptor *Francesco Tadda*, gave his Tools such an admirable Hardness and Temper, as that he perform'd some fine Works with them; particularly, our Saviour's Head in *Demi-relievo*, *Cosmo's* Head, and his Dutchess's. Even the very Hair and Beard, how difficult soever, are here well conducted; and there is nothing of the Kind, better in all the Works of the Antients: But the Secret seems to have died with him.

The French have lately found another Method of cutting *Porphyry*, viz. with an Iron Saw without Teeth, and *Gres*, or a kind of Free-Stone pulveris'd, and Water. The Authors of this Invention pretend, they could form the whole Contour of a Column hereby; had they Matter to work on.

PORPHYRIANS, a Name given to the *Arians*, in the fourth Century; by Authority of *Constantine*. See ARIANS.

That Prince publishing an Edict against *Arius* and his Writings, declares, That as *Arius* has imitat'd *Porphyry* in composing Books against Religion, he deserves to be noted with his Infamy; and that as *Porphyry* is become the Reproach of Posterity, and his Writings suppress'd; so he wills, that *Arius* and his Followers be call'd *Porphyrians*, &c.

The Propriety of the Name seems to consist in this, that the *Arians* endeavour'd to restore Idolatry: For in saying that the Son, whom they call a begotten God, is a Creature; they put a Creature in the Rank of God: And only differ from the Heathens in this, that the one give the Quality of God to one Creature, the other to a great many.

PORPHYROGENETES, in Antiquity, a Name given the Children of the Eastern Emperors; implying, born in the Purple.

*Cedrenus* will have the Word to signify born in the Palace of *Porphyry*, a Palace so call'd in *Constantinople*.

PORRETANS, a Religious Sect, the Followers of *Gilbert de la Porree*, Bishop of *Poitiers*, condemn'd in the XIIIth Century, for admitting a Physical Distinction between God and his Attributes; or, as *Marston* says, for having wrote too curiously on the Subject of the Trinity: For his real Sentiments, we are not over well acquainted withal.

However, he gave occasion for these Suspicions, by maintaining that this Proposition, *Deus est bonus*, is not true; unless reduc'd to this, *Deus est bonus*. And there are some Passages noted by *St. Bernard*, who wrote warmly against him, wherein he seems to admit a real Distinction between the Nature of God, and his Attributes.

The *Porretans* are set in opposition to the *Nominals*. See NOMINAL.

PORRIDGE, of *Porreus*, French, of *Porrum*, Latin, a Leek or Herb frequently put in Broth; a liquid Food of Herbs, Flesh, &c.

PORT, or Haven, a commodious Place situate on the Sea-Coast, or at the Mouth of a River, with depth of Water sufficient for Ships of Burthen, and convenient Bottom for Anchorage; where Vessels lie by, to load or unload; screen'd from the Wind, and safe from any Enterprize of Enemies; either by the disposition of the Place, or by means of a Mole, a Dike, or the like, with a Chain and Light-House.

Ports are either Natural or Artificial.

Natural are those which Providence seems to have form'd, for the Communication of Commerce.

Artificial Ports are those form'd with Moles or Projectures into the Sea. See MOLE.

The English Coasts are exceedingly thin of Ports. France has the Advantage of all other Countries in the Number

and Excellence of Ports; that of *Bress* is the finest natural Port in the World, as that of *Dunkirk* was lately the strongest artificial one.

Ports de Barre are such as can only be enter'd with the Tide; as that of *Goa*. *Clofe Ports* are those within the Body of a City; as those of *Rodes*, of *Venice*, *Amsterdam*, *Rechel*, *Bayonne*, and *St. John de Lwo*.

Free Port, in Commerce, a Port open and free for Merchants of all Nations to load and unload their Vessels in, without paying any Duties or Customs. See FREE and DUTY.

Such is the Port of *Genoa*. The Emperor, since his being in possession of the States in *Italy*, formerly belonging to *Spain*, has seem'd determined to establish a Free-Port in some of the Cities he possesses on the *Adriatic Sea*.

*Marsilles* was declared a Free Port by an Edict of Louis XIV. bearing Date 5 March, 1669.

Free Port is also used for a total Exemption, and Franchise, which any Sett of Merchants enjoy, for Goods imported into a State, or those of the Growth of the Country, exported.

Such was the Privilege the *English* enjoy'd for several Years after their Discovery of the Port of *Archangel*; and which was taken from 'em on account of the Regicide in 1648.

Port is also used for the Burthen of a Ship. See BURTHEN.

The Capacity of a Vessel is estimated in Tuns; each whereof may contain about two thousand Pounds Weight of Sea-Water. When, then, we say a Vessel is of the Port or Burthen of a thousand Tuns; it is not meant, as some imagine, that it bears so many Casks full of Merchandize; but that the Sea-Water, which would be contained in the Space which the Capacity of the Vessel possesses in the Sea, weighs a thousand Tuns fill'd therewith, which at the rate of 2000 Pounds each, is as much as to say, it bears a Burthen of two Millions Weight.

Port is also used for the Court of the Grand Seigneur, or Emperor of the *Turks*.

Port is also used for a strong Wine brought from *Oporto*, or *Port-a-port* in *Portugal*; whence its Name. See WINE.

PORT of the Voice, in Music, the Faculty and Habit of making the Shakes, Passages, and Diminutions; wherein the Beauty of a Song, or piece of Music consists, and which the *Italians* comprehend under the Terms *Trilli*, *Gioppi*, *Strafcini*.

*Baculus* calls Port of the Voice, the translating or passing of a lower to a higher Note. It consists in three things: The lower Note, which is to be sustain'd; the doubling made on the higher Note, and the sustaining of that same Note after it has been doubled. Some call it *Anticipation*.

PORT, among Sailors, the Larboard, or left Side of the Ship. See LARBOARD.

To Port the Helm, is to put the Helm on the left Side of the Ship. See HELM.

PORT GREVE, was antiently the principal Magistrate in several Maritime Towns; thus called from the *Saxon*, Port, City; and Greve, a Collector of Rents in divers Lordships at this day.

*Cambden* observes, that the chief Magistrate of *London* was antiently call'd Port-greve; in stead of whom, *Richard I.* ordained two Bailiffs; and soon afterwards King *John* granted them a Mayor for their yearly Magistrate. See MAYOR.

The Charter of *William the Conqueror* to the City of *London* run thus: " *William King*, grete *William Bishop*, and *Godfrey Port greve*, and all the Burgis within " *London*, French and *Englis*. I grant you that I will " that ye be all your Law-worth that ye were in *Edward's* " day the King. And I will that each Child be his " Fader's Eyer, and I will not suffer that any Man you any " wrongs breed, and God you keepe."

PORTA, in Anatomy, or Vena PORTA, a very considerable Vein, employ'd in bringing the Blood from several Parts, by an infinite number of Branches which it is divided into, to the Liver, thro' the whole Substance whereof it is diffused. See VEIN and LIVER.

The Vena Porta is form'd of two large Veins; the Mesenteric and Splenic; which are again form'd of several other smaller Veins coming from the Stomach, Intestines, Spleen, Epiploon, &c. See MESENTERIC and SPLENIC.

The Antients gave it the Name Porta, as imagining it to bring the Chyle, by its Mesenteric Branch, from the Intestines to the Liver; but some of the Moderns have found another use for it.

It is remarkable of the Porta, that, after the manner of the Arteries, it shoots itself from a Trunk into Branches, and being at last lost in Capillaries, it delivers the Blood

into the Cava, by which it is immediately reconvey'd to the Heart. See CAVA.

The Porta is formed out of the concurrence of divers Veins, which, meeting together, make one of the most considerable Venous Trunks of the Body, as to its Bulk; tho', contrary to the Course of other Veins, it runs not far is a Trunk, but is, as before observed, soon distributed again, by Ramifications, into the Liver.

This Vein is vulgarly divided into *Branchees without the Liver*, and *Branchees within*, and a Trunk intermediate; But this Division is not very clear, the Branches, as they are call'd, without the Liver, not being so properly Branches as Roots; which have, by Anatomists, been dignify'd with distinct Names from the Parts whence they come.

The Veins which conspire towards the Formation of this Trunk, which having been described in their proper Places, or being to be described there, we shall not here enlarge upon; are, from the *Placenta Uterina*, in a Fetus, the *Vena Umbilicalis*; from the Gall-Bladder the *Cystica Gemelle*; from the upper Part of the Stomach the *Pylorica*, or *Gastrica dextra*, which goes to the Trunk; the *Gastrica major*, and *minor Sinistra* from the Stomach, (of which the major is formed out of the *Coronaria Ventriculi*;) the *Epiplois sinistra*, and *Postica* from the Omentum; the *Vas*, or *Vasa brevia* from the Stomach; the *Splenic* from the Spleen: All which join to form the left, or *Splenic Branch* of the Porta.

The right, or *Mesenteric Branch*, consists of the *Gastrica* and *Epiplois dextra*, from the Stomach and Omentum; the *Duodena* from the Duodenum and Jejunum; the *Hemorrhoidalis interna* from the Intestinum Rectum and Colon; the *Mesaraica* from the Mesentery.

By means of all these Vessels, the Porta receives the Blood from most of the Viscera of the Abdomen; and, after the coalescence of its Branches, enters the Liver in a Trunk; immediately under the Surface whereof, having first form'd a kind of a Sinus, it is divided into two principal Branches, and those again into five, which (after innumerable Ramifications thro' the whole Substance of the Liver.

The true Use of this Vein, hitherto unknown, *Dr. Keil* thinks he has discover'd. And 'tis this: The Bile, says he, being to be mix'd with the Chyle, as it comes out of the Stomach into the Duodenum, could no where be so conveniently secreted from the Blood as where the Liver is placed. But if all the Branches of the *Celiac Artery* carried all the Blood to the Liver from which the Gall was to be separated; 'tis evident, considering the Nearness of the Liver to the Heart, and the intestine Motion of the Blood, that so viscid a Secretion as the Gall is, could never have been formed. See GALL.

Nature, therefore, is forced to alter her constant Method of sending the Blood to all Parts of the Body by Arteries: She here forms a Vein, by which she sends the Blood from the Branches of the Mesenteric and Celiac Arteries to the Liver.

By this means the Blood is brought a great way about e'er it arrive at the Liver; so that its Celerity being diminished, all the Corpuscles that are to form, may have time to attract one another, and unite e'er they come to their separating Vessel. *Keil's Anim. Secret.* p. 56, &c. See SECRETION.

PORTABLE, something easy of Carriage. BOOKS in 12<sup>o</sup> are valued for their being Portable; easily put in the Pocket. This Machine is the better, as being Portable. Armies carry with 'em Portable Bridges, Portable Mills, Boats, Ovens, Forges, &c.

PORTABLE Barometer, a Barometer so contrived as that it may be carried from Place to Place without being disordered. See BAROMETER.

A Portable Barometer was an extraordinary thing a little while ago: At present the common Barometers are Portable; being so made as that the Mercury may be screw'd quite up to the seal'd end of the Tube; by which means it is secured from swagging, and so endangering the breaking of the Tube. A Contivance for which we are indebted to *Mr. Patrick*.

PORTAL, in Architecture, a Term used for a little square Corner of a Room, cut off from the rest of the Room, by the Wainscot; frequent in the ancient Buildings, but now disused.

The Word seems a Diminutive of the French, *Port*, Door, Gate; it being thro' this that they enter'd into the Room.

PORTAL is sometimes also used for a little Gate, *Portella*; where there are two Gates of a different bigness. See GATE.

The Word sometimes also stands for a kind of Arch of Joiner's Work, before a Door.

PORTAIL, in Architecture, the Face or Frontispiece of a Church, view'd on the side wherein is the great Door.

*Portail* is also used for the great Door itself of a Palace, Castle, &c.

**PORTATE**, in Heraldry, a Cross-PORTATE is a Cross which does not stand upright, as Crosses generally do; but lies athwart the Escutcheon, in Bend, as if it were carry'd on a Man's Shoulder. See CROSS.

*Columbiere* tells us, it is by some call'd *Portie*, that is, carry'd; because when our Saviour went to suffer Death, he was oblig'd to carry his Cross, which is always thus represented sloping, and inclin'd after this manner.

**PORTCULLICE**, *Herse*, or *Sarazin*, in Fortification, an Assemblage of several great Pieces of Wood laid, or jointed a-crofs one another, like an Harrow; and at the bottom pointed at the end of each Bar with Iron.

These formerly used to hang over the Gate-ways of fortify'd Places, to be ready to let down in case of a Surprise, when the Enemy should come so soon, as that there was not time to shut up the Gates.

Barrow a-days the Orgues are more generally used, as being found much better. See ORGUES.

**PORT-DIEN**, among the *French*, is a Parish-Priest, whose Business is to carry the Viaticum, or Sacrament, to sick People. See VIATICUM.

**PORT-ROYAL**, a Term that makes a considerable Figure in the Republic of Learning. Its Origin is this:

*Philip Augustus* wandering from his Company in Hunting near *Chevresse*, Westwards of *Paris*, found a little Chapel, where he put up, expecting some of his Attendants might meet him. This happening accordingly, he gave the Place the Name of the *King's Port*, *Port au Roi*, or *Port Royal*; and to give thanks for his Deliverance, resolv'd to erect a Monastery there.

*Odo*, Bishop of *Paris*, apprized of his Intention, prevented him; and, with the concurrence of *Mathilda*, Wife of *Matth. Montmorency*, first Lord of *Marly*, built a Nunnery in 1224, filling it with *Cisterciens*, who continued under the Jurisdiction of the General of that Order till the Year 1627; when they were removed to a House given 'em in the *Fauxbourg St. Jacques* at *Paris*.

In 1647, they quitted the Habit of *Cisterciens*, and embraced the Institution of the perpetual Adoration of the Sacrament. In 1647, the Archbishop of *Paris* allowed 'em to remain some of their Religions to their former Abbey, and to re-establish the same.

Some time after, the Formulary of *Alexander VII.* being appointed to be subscribed throughout the Kingdom; the Religious of *Port Royal* in the City sign'd it; those re-mitted to the former Abbey scrupled it extremely, and at last only sign'd it with great Restrictions.

Still persisting in the same Sentiments, the King finding no way to reduce 'em but by dispersing 'em; that was executed in 1709, and the Revenues given to the other Monastery.

Upon this Evacuation, several Ecclesiastics, and others, who had the like Sentiments with regard to the Subscription, as the Religious; retir'd to *Port Royal*, and had Apartments there; and there published several Books both on the Subject of this Dispute, and other Topics; whence all who adhered to that Party, took the Name of *Port Royalists*, and their Books, *Books of Port Royal*.

Hence we say the *Writers of Port Royal*, *Metaphis de Port Royal*, the *Translations of Port Royal*, the *Greek and Latin Methods of Port Royal*, which are Grammars of that Language.

**PORT-GLAIVE**, q. d. *Sword Bearer*, an Order of Knights in *Poland*, call'd by the *Latin* *Essiferi*. See KNIGHT.

It was confirm'd by *Pope Innocent III.* and by him sent into *Livonia* to defend the Preachers of the Gospel against the Infidels at the first Conversion of that Country. Being too weak to effect that Business, they united themselves with the *Teutonic*, or *Marian* Knights, by the Pope's Authority; and instead of Knights of the Sword, were call'd Knights of the Cross.

They separated again in the time of *Union*, their Great Master, Anno 1541.

The *Teutonic* Knights being then dispossest of *Prussia*, and the *Port-glaives* going into *Luther's* Opinions, soon dwindled away; for in the Year 1557, they fell out with the Bishop of *Riga*, of the House of *Brandenburg*, because he would not embrace their Notions; and he, to secure his own Estate, put *Riga* into the hands of the *Poles*.

Afterwards, the Knights having most of *Livonia* taken from them by the *Muscovites*, they put themselves under the Protection of *Sigismund Augustus*, King of *Poland*, Anno 1559; but *William* of *Fursenbourg*, their Great Master, being betray'd by his own Mercenaries into the hands of the *Muscovites*, *Gorbard* his Successor, following the Example of *Albert*, the Great Master of *Prussia*, transferr'd with the aforesaid *Sigismund* for the whole Estate, which he surrender'd to his own use in the Castle of *Riga*, together

with his Cross, the Seal of the Order, the Charters and Grants of the several Popes and Emperors, which concern'd the same; as also the Keys of the City and Castle of *Riga*, the Office of Great Master, the Rights of Coinage, and all the Powers and Privileges appertaining to it; receiving back again from *Ratzevil*, the King's Commissioner, the Dukedom of *Courland* to him and his Heirs for ever.

**PORT-FIRE**, a Paper-Tube, about ten Inches long, fill'd with a Composition of Meal-Powder, Sulphur, and Saltpetre, ram'd moderately hard; used to fire Guns and Mortars instead of Match. See MATCH.

**PORT-MANTEAU**, a piece of Joiner's Work, fasten'd to the Wall, in a Wardrobe, Armory, &c. proper for the hanging on of Cloaks, Hats, &c.

*Port-manteau* is also used for a Cloak-Bag, of Cloth, Leather, or the like, wherein the Cloak and other Habilliments of Travellers are disposed, and laid on the Horse's Crupper.

*Port-manteau* is also an Officer under the King of *France*, whereof there are twelve: Their Business is to keep the King's Hat, Gloves, Coat, Sword, &c. to take 'em from him, and to bring 'em to him again when wanted.

The *Dauphin* has also his *Port-manteau*. Answerable to these are the Cardinal's *Candaries*, or Tail-Bearers.

The *Ranish* Bishops have their *Port Croix*, *Port Mitres*, &c.

**PORT-VENT**, in an Organ, is a wooden Pipe, well clos'd, which serves to convey the Wind from the Bellows to the Sound-Board of the Organ. See ORGAN.

**PORT-CRAION**, a *Penicil-Case*; an Instrument serving to inclose a Pencil, and to serve both as a Handle for holding it, and a Cover to make it portable.

'Tis usually four or five Inches long, and contriv'd so as the Pencil may be slid up and down it by means of a Spring and Button. Its outside is filed into eight Sides or Faces, whereon are drawn the Sector-Lines: Its inside, round; sometimes it is made round or cylindrical both without-side end within, and has its length divided into Inches and parts of Inches.

**PORT-LAST**, in a Ship, the Gun-wale. Hence when a Yard is down on the Deck, they say, the Yard is down a *Port-last*.

**PORTMANNIMOTE**, in old Records, the Portmen's Court, held in any City or Town.

**PORT-ROPES**, in a Ship, those which serve to haul up the *Ports* of the Ordnance.

**PORT-SALE**, *Ann. 35 Hen. 8. cap. 7.* is the Sale of Fish presently upon its Arrival in the Port or Haven. See PORTMEN.

**PORT-NAILS**, in a Ship, such as are used to fasten the Hinges to the Ports. See NAIL.

**PORT-HOLES**, in a Ship, are the Embrasures, or Holes in the sides of the Vessel, thro' which the Muzzles of the Cannons are put. See EMBRASURE.

Large Ships have three Rows of *Port-Holes*, or Batteries; each usually consisting of fifteen *Port-Holes*.

In Storms, they use to shut up the *Port-Holes*, to prevent the Water's driving thro' them.

In *English*, *Dutch*, and *French* Ships, their Valves or Casements are fasten'd a-top of the Aperture; in *Spanish* Vessels a-side of 'em.

**PORTER**, in the Circuit of Justice, is an Officer that carries a Verge, or white Rod before the Justice in *Eyre*; so call'd *portando Virgam*. See VERGER.

**PORTER** of the Door of the Parliament House, is a necessary Officer belonging to that High Court; who enjoys the Privileges accordingly. *Crompt. Jurisd.*

**PORTICO**, in Architecture, a kind of Gallery built on the Ground; or a Piazza inclos'd with Arches, supported by Columns; where People walk under Cover. See PIAZZA.

The Roof is usually vaulted, sometimes flat. The Antients call'd it *Lacunar*. See LACUNAR.

Tho' the Word *Portico* be derived from *Porta*, Gate, Door; yet is it apply'd to any disposition of Columns which form a Gallery; without any immediate relation to Doors, or Gates.

The most celebrated *Porticos* of Antiquity were those of *Solomon's Temple*, which form'd the *Atrium*, and encompass'd the Sanctuary: That of *Athen*, built for the People to divert themselves in; and wherein the Philosophers held their Disputes and Conversations; which occasion'd the Disciples of *Zeno* to be call'd *Stoicks*, from the *Greek*, *στα*, *Porticus*: And that of *Pompey* at *Rome*, rais'd merely for Magnificence; consisting of several Rows of Columns supporting a Plat-Form of vast Extent: a Design whereof, *Serlio* gives us in his Antique Buildings.

Among the modern *Porticos*, the most celebrated is the Piazza of *St. Peter* of the *Vatican*. That of *Covent-Garden*, *London*, the Work of *Inigo Jones*, is also much admired.

**FORT-Men**, the twelve Burgeffes of *Ipswich* are thus call'd in the *Stat. 13 Eliz.* *Causeden* adds, that the Name was common to the Inhabitants of all the Cinque-Ports. See **QUINQUE-PORTS**.

**PORTMUTE**, fignifies a Court kept in Port or Haven-Towns; as *Swain-Mute* in the Forcitt. It is call'd the *Portmote Court*. See **PORT** and **COURT**.

*Portmotes* are also held in fome Inland-Towns; as at *Knafl* in *Cheshire*.

The Word is form'd from the *Saxon*, *Porte*, Port, and *Genot*, *Conventus*, Meeting.

**PORT-SOKA**, the Suburbs of a City, or a Place within the Liberties and Jurisdiction thereof.

The Word is form'd from the *Saxon*, *Port*, City; and *Soka*, Jurisdiction. *Concessit quod nullus de Civitate, vel Port-Soka sua captus, &c. Somner's Gloss.*

**PORTIO Dura**, and *Mollis*, in Anatomy, a Partition of the fifth Pair of Nerves of the Brain; which, before its egress out of the *Dura Mater* is apparently divided into two Branches; the one pretty tough and firm, call'd *Portio Dura*; the other soft and lax, call'd *Portio Mollis*. See **NERVE**.

**PORTIO**, *Portion*, a Part, or Division of any thing. See **PART** and **DIVISION**.

**PORTION**, in the Canon-Law, is that Allowance, or Proportion, which a Vicar ordinarily has out of a Rectory or Impropriation, be it certain, or uncertain. See **VICAR** and **IMPROPRIATION**.

**PORTIONER**. Where a Parsonage is served sometimes by two, sometimes by three Ministers, alternately; as *Bromyard*, *Burford*, &c. in *Shropshire*; the Vicars or Incumbents are call'd *Portioners*; because they have but their Portion, or Proportion of Tythes, or Profits of the Living.

**PORTLAND-Stone**, see **STONE**.

**PORTRAIT**, or **PORTRAITURE**, in Painting, the Representation of a Person, and especially a Face, done from the Life. See **PAINTING**.

In this sense we say, *Portrait-Painting*, in opposition to *Hilbry-Painting*, where all Resemblance of Person is disregarded.

*Portraits* are usually painted in Oil-Colours, sometimes in Water; sometimes in Miniature, with Crayons, Pens, Pastels, &c. See **LIMING**, **MINIATURE**, &c.

It was said of a great Painter, who never succeeded in the Likeness, (Sir *Peter Lely*, if we mistake not) that he made a great many fine Pictures, but all poor *Portraits*.

**FORUS Biliaris**, *Biliary Pore*, or *Hepatic Duct*, in Anatomy, a Duct, which, with the *Cyctic*, or *Cholcidic*, forms the common Canal of the Bile. See **BILE**.

*Fallopian* was mistaken in imagining that the *Forus Biliaris* carried the Bile into the Gall-Bladder. Its Office is to convey it into the Intestines, by the *Ductus Communis*; for in blowing into it, that Intestine is found to swell. See **BILARY** and **DUCTUS COMMUNIS**.

**POSE**, in Heraldry, denotes a Lion, Horse, or other Beast standing still, with all four Feet on the Ground; to denote thereby that it is not in a moving Posture.

**POSITION**, in Physics, *Site*, or *Situation*; an Affection of Place, which expresses the Manner of any Body's being therein. See **BODY**, **PLACE**, &c.

**POSITION**, in Architecture, the Situation of a Building, with regard to the Points of the Horizon. See **BUILDING**.

*Vitruvius* directs the *Position* of a Building to be such, as that the four Corners point directly to the four Winds.

**POSITION**, in Astronomy, the *Position* of the Sphere is either right, parallel, or oblique; whence arises the Inequality of our Days, Difference of Seasons, &c. See **SPHERE**.

*Circles of POSITION*, are six great Circles passing thro' the Interfection of the Meridian and Horizon, and dividing the Equator into twelve equal Parts. See **CIRCLE**.

The Spaces included between these Circles, are what the *Astrologers* call the *twelve Houses*; and which they refer to the twelve Triangles mark'd in their *Themes*. See **THEME**.

These Circles are represented on the Globe by the Semi-circle of *Position*. See **GLOBE**.

**POSITION**, in Dancing, the Manner of disposing the Feet, with regard to each other.

There are four regular *Positions*: The first, when the Feet are join'd in a Line parallel to the Shoulders; The second, when the Heels are perpendicularly under the Shoulders; and of consequence, the width of the Shoulder a-part: The third, when one Foot is before the other, in such manner, as that the Heel is in the Cavity form'd by the *Retula* and *Carpus* of the Foot: The fourth, when one Foot is the width of the Shoulders a-part from the other; the Heel still answering to the Cavity of the former; which is the only regular manner of Walking.

**POSITION**, in Arithmetic, a Rule so call'd, for *Supposition*.

Rule of *false Position*, or of *Falshood*, consists in the calculating on several false Numbers, taken at random, as if they were the true ones; and from the Differences found therein, determining the Number sought.

*Position* is either *single* or *double*.

*Single POSITION* is, when there happens in the Proposition, some Partition of Numbers into Parts proportional; in which Case, the Question may be resolv'd at one Operation by this Rule:

Imagine a Number at pleasure, and work therewith according to the Tenour of the Question, as if it were the true Number; and what Proportion there is between the false Conclusion, and the false *Position*; such Proportion the given Number, has to the Number sought.

Therefore, the Number found by Argumentation, shall be the first Term of the Rule of Three; the Number suppos'd, the second Term; and the given Number, the third. See **GOLDEN RULE**.

**POSITION Double**, is, when there can be no Partition in the Numbers to make a Proportion.

In this Case, therefore, you must make a Supposition twice; proceeding therein according to the Tenour of the Question.

If neither of the suppos'd Numbers solve the Proposition, observe the Errors, and whether they be greater or lesser than the Resolution requir'd; and mark the Errors accordingly, with the Signs + and -.

Multiply, contrariwise, the one *Position* by the other Error; and if the Errors be both too great, or both too little, subtract the one Product from the other, and divide the Difference of the Products by the Difference of the Errors.

If the Errors be unlike, as the one +, and the other -, add the Products, and divide the Sum thereof, by the Sum of the Errors added together. For the Proportion of the Errors, is the same with the Proportion of the Excesses or Defects of the Numbers suppos'd, to the Numbers sought.

**POSITION**, in Geometry, &c. a Term used in contradiction to *Magnitude*, &c. Thus, a Line is said to be given in *Position*, *Positione data*, when its Situation, Bearing, or Direction, with regard to some other Line, is given: On the contrary, a Line is given in *Magnitude*, when its Length is given, but not its Situation.

Sir *Isaac Newton* shews how to find a Point, from which three Lines, perpendicularly let fall to three other Lines given in *Position*, have any given Ratio, &c.

**POSITION**, is also used for a Thesis, or Proposition, maintain'd in the Schools. See **THESES**.

**POSITIVE**, a Term of Relation; sometimes oppos'd to Negative.

Thus, we say, the Commandments are some of them *Positive*, others *Negative*. See **NEGATIVE**.

*Positive* is also used in opposition to *Relative*, or *Arbitrary*.

Thus, we say, Beauty is no *positive* Thing, but depends on the different Tastes of the People. See **RELATIVE**.

*Positive* is also used in opposition to *Natural*: Thus we say, a Thing is of *positive* Right; meaning, it is founded on a Law, which depends absolutely on the Authority of him who gave it.

Thus, e. g. the Prohibition of eating certain Beasts, under the Old Law, was of *Positive* Right; the Command to honour Father, and Mother, of *Natural* Right. See **RIGHT**.

**POSITIVE Quantity**, in Algebra, a real, or affirmative Quantity; or a Quantity greater than nothing: thus call'd, in opposition to a privative or negative Quantity, which is less than nothing. See **QUANTITY**.

*Positive Quantities* are design'd by the Character +, prefix'd to them, or suppos'd to be prefix'd. See **CHARACTER**.

**POSITIVE Degree**, in Grammar, is the Adjective in its simple Signification; without any Comparison. See **DEGREE**.

Or, *Positive Degree*, is that Termination of an Adjective, which expresses its Subject simply, and absolutely; without comparing it with any other. Thus, good, *bonus*, fair, *pulcher*, &c. are in the *positive Degree*; better, *faciens*, in the Comparative. See **COMPARATIVE**.

**POSITIVE Theology**, is that which consists in the simple understanding, or expounding of the Dogma's, and Articles of Faith; as contain'd in the Holy Scriptures, or explain'd by the Fathers and Councils; clear of all Disputes and Controversies. See **THEOLOGY**.

In this sense, *Positive Theology* stands oppos'd to *Scholastic*, and *Polemical Theology*. See **SCHOLASTIC** and **POLEMICAL**.

**POSITIVE**, in Music, the little Organ usually behind, or at the foot of the Organist, play'd with the same Wind, and the same Bellows, and consisting of the same Number of Pipes with the large one; tho, those much smaller, and in a certain Proportion. See **ORGAN**.

In the Organs of the Jesuits, the *Positive* is in the grand Body.

**POSITIVE Levity.** See **LEVITY**.

**POSITIVE Cold.** See **COLD**.

**POSSE Comitatus, Power of the County**, a Phrase in Law, signifying the Aid, and Attendance of all Knights, Gentlemen, Yeomen, Labourers, Servants, Apprentices, Villains, and others, above the Age of fifteen Years, within the County; because all above that Age are bound to have Harnes by the Statute of *Winchester*: Only Women, Ecclesiastical Persons, and such as are decrepid, and infirm, are excus'd. For the Statute of 2 Hen. 5. says, That Persons able to travel, shall be assistant to this Service. See **SERVICE**.

It is us'd, where a Possession is kept upon a forcible Entry, or any Force of Refuse us'd, contrary to the Command of the King's Writ, or in opposition to the Execution of Justice.

**POSSESSION**, in Law, *quasi pedis possessio*; an Action whereby we hold, or occupy, any thing, either *de Jure*, or *de Facto*. See **OCCUPANCY**.

*Possessio de Facto*, is when there is an actual, and effectual Enjoyment of the Thing. See **DE FACTO**.

*Possessio de Jure*, or in Law, is the Title a Man has to enjoy a thing, tho' it be sometimes usury'd, and in the actual Possession of another. See **DE JURE**.

*Unity of Possession*, is what the Civilians call *Consolidation*. E. g. If a Lord purchase a Tenancy, held of himself by Heriot-Service; the Service becomes extinct by *Unity of Possession*, i. e. by the Seignory and Tenancy's coming to the same hand. See **CONSOLIDATION**.

A Possession of three Years, in Matters personal, begets a Right; and in real Estates, a Possession of ten Years, among Persons living near the Premises, and twenty Years among those that live elsewhere. See **PRESCRIPTION**.

**POSSESSION**, is sometimes also us'd for the Act of taking Possession; which is perform'd with certain Formalities, whereby a Person is justify'd to be in the Enjoyment of any thing.

Artiently, upon buying an Estate, Possession was taken with a deal of Ceremony: In some places, by a Stick, a Branch, or a Straw, put in the hands of the Buyer by the Seller. See **INVESTITURE**.

*Possession of a Benefice*, in some Customs, is taken, by entering the Church, kneeling down, kissing the Altar, and ringing the Bell.

In some Cases, Possession is taken by the Sight of the Scepter.

The Emperors anciently put Prelates in Possession, by giving them a Ring and a Staff.

**POSSESSION** is also us'd for the Title, or Prescription, that gives a Right to hold any thing: Annual Possession is the *Uti cursum*, which gives a Right to Moveables: A triennial and peaceable Possession of a Benefice, is sufficient to maintain it; provided it be founded on a plausible Title.

A Possession of an Estate for ten Years by a Person present, and of twenty Years by one absent, with a Title; or of thirty Years, without any; gives a full Right. See **PRESCRIPTION**.

Centenary Possession, constitutes Possession Immemorial; the best and most indisputable of all Titles.

**POSSESSION**, is also us'd for the State of a Person possessed by the Devil.

It differs from *Obsession*; in that in the former, the Devil acts inwardly; and in the latter, outwardly. See **OBSESSION**.

**POSSESSIVE**, in Grammar, a Term apply'd to Pronouns, which denote the Enjoyment or Possession of any thing, either in particular, or in common. See **PRONOUN**.

Thus, *mine, ibine, his, ours*, &c. are Pronouns Possessive.

**POSSIBILITAS**, in our old Law-Books, is us'd for a thing done wilfully, or wrongfully; in opposition to *Impossibilitas*, a thing done against the will. — *Si autem Causa amissa reddat eversam ejus, & Impossibilitatem accusatoris in eo factis*. Leg. Alfred. Again, — *Si quis agat impossibilitate, non est omnino simile ac si voluntarie faciat*. Leg. Sax. Ed. Scior.

**POSSIBILITY**, **POSSIBILITAS**, a Non-Repugnance to Existing, in a thing that does not any way exist. See **POSSIBLE**.

This Non-Repugnance of Existing is no other than the Producibility of any thing; which consists in this, that there are sufficient Causes actually existing, or at least possible, whereby the thing may be produc'd, or be brought to exist; principally as there is a God, or an Almighty Cause.

So that Possibility does not imply any thing in the thing possible, but is a mere extrinsic Denomination taken from the Power of the Cause, and principally of God.

In effect, if a creditable thing had any intrinsic Possibility, it would follow that such thing must exist even without the Cause.

And yet we may allow an intrinsic Possibility of a thing; if by Possibility, we do not understand its Producibility, or its Non-Repugnance to exist; but only the Non-Repugnance of the Attributes contain'd in its Idea. But such Possibility is merely Logical.

**POSSIBLE**, **POSSIBILE**, is sometimes oppos'd to real Existence, and understood, in the Schools, of a Thing, which tho' it does not actually exist, yet may exist; as a new Star, another World, &c. which are particularly said to be *physically possible*.

It is also oppos'd to *Impossible*; in which sense it is applicable to any thing that does not contradict itself, or involve contradictory Predicates; whether it actually exist or not: As Man, Fire; these are also said to be *Logically possible*.

'Tis a great Point of Controversy among the School Philosophers, whether, and how far Things may be said to have any Entity, while only in a State of Possibility. See **POSSIBILITY**.

Possibles are ordinarily conceiv'd to be three-fold; *future, potential, and merely possible*.

*Future*, is that of a Thing, whose Production is decreed, and ascertain'd: V. g. the Eruption of all those Events, fix'd by the Immutabile Decree of the Immutabile Will of the Almighty.

*Potential, or in potentia*, is that which is contain'd, or lies hid in its Causes; as the Tree in the Seed, the Fruit in the Tree, &c.

A *mere Possible*, is that which might exist, tho' it never shall.

Others distinguish Possibles into *Metaphysical, Physical, and Possible*.

*Metaphysical*, is that which may at least be brought to Being by some supernatural and divine Power; as the Resurrection of the Dead: In which sense the Word is oppos'd to an Impossible even to God himself; as a crooked Straightness, a square Circle, an infinitely perfect Creature, a mortal God.

*Physical, or Natural*, is that which may be effected by a natural Power; as to overturn the *Turkish Empire*. In opposition to such Things as cannot be produc'd by any finite Power; as, to restore the Dead, &c.

*Ethical, or Moral*, is that which may be done by prudent Persons; using all the proper means they have for the same: And again, it is us'd for any thing done according to right Reason, and consistently with the Laws. In the first sense, it is possible for the *Venetians* to beat the *Turks* at *Sea*: In the second, whatever is right and just, is possible.

**POST**, in the Military Art, any Ground, or Place, fortify'd or not, where a Body of Men make a Stand, to fight themselves, or remain in a Condition to fight an Enemy.

Hence they say, the *Post* was reliev'd, the *Post* was quit- ted, the *Post* was taken Sword in hand, &c.

A Spot of Ground seiz'd by a Party to secure the Front of an Army, and to cover the *Posts*, that are behind, they call an *advance'd Post*: And the Advance Guard, or the Right of the two Lines of an Army, &c. they call the *Post of Honour*.

The Word is form'd from the *Latin postus*, plac'd; some derive it from *Postus*, Power.

**POSTS**, in Building, pretty big Pieces of Timber, plac'd upright in Houses, &c.

The corner *Posts* are call'd the *principal Posts*; and the *Posts* framed into Breastsummers between principal *Posts* for strengthening the Carcase of the House, are call'd the *Prick-Posts*.

An excellent Method to preserve *Posts* from rotting, is to burn the Ends that are to be set in the Ground; the Outside to a very Coat.

**POST**, the Dispatch a Courier, or Letter-Carrier, makes, by changing Horses from time to time. See **COUPLIER**.

The Word is also apply'd to the Person himself; the Houses where he takes up, and lays down his Charge; and the Stages or Distances between House and House.

The Name is borrow'd hence, that the Horses are *postari*, plac'd, or dispos'd from distance to distance.

We find mention made of *Post-Horses* in the *Theodosian Code, de Caris publicis*; but these were very different from the present Establishment, and were only public Horses, first appointed by *Trajan*; till whose Time, the Messengers seiz'd any Horses that came in their way.

*Louis Hornigk* has an express Treatise on *Posts*, whereof he makes four kinds; viz. on *Horseback*, in *Chariots*, in *Boats*, and on *Foot*; which last kind is in use in *Italy, Turkey, and Peru*.

*Herodotus* ascribes the Origin of *Posis* to *Cyrus* or *Xerxes*; but the *Posis* instituted by those Princes were no more than Couriers. See **COURIER**.

In effect, *Posis* on the present footing are but a modern Invention; tho' some go back as high as *Charlemain*.

'Tis certain it was the Policy, or rather the Diffidence of *Louis XI. of France*, that they owed their Rise to; that uneasy Prince first settling them by an Ordinance of the 15th of *June*, 1464. to be the sooner, and the more surely advertis'd of what pass'd in his own Kingdom, and in the neighbouring States.

From *France*, the Institution propagated itself, by degrees, thro' the several other Parts of *Europe*: In *Germany*, *Hornigk* observes, *Posis* were first settled by the Count de *Taxis* at his own Expence; in acknowledgment whereof, the Emperor *Matthias* in 1616, gave him, in Fief, the Charge of *Post-Master* under him and his Successors.

In *England*, *Posis* were first establish'd by Act of Parliament 12 Car. 1. which enabled the King to settle a *Post-Office*, and appoint a *Governour*.

The *English Post-Office* is now manag'd by two Commissioners, who have under them about forty other Officers, of their own appointing, who are all sworn, and give Security for their faithful Discharge, &c. as the *Receiver*, *Comptroller*, *Accountant*, six Clerks of the several Roads, a *Window-Man*, and sixteen *Sorters*, for the Inland Office. For the Foreign Office, are a *Comptroller* and *Alphabet-keeper*, six Clerks, and a Foreign Officer. Besides Solicitor and Clerks, and sixty-seven Letter-Carriers.

From this Office, Letters and Packets are dispatch'd every *Monday*, to *France*, *Spain*, *Italy*, *Germany*, *Sweden*, *Kent*, and the *Downs*; every *Tuesday* to all Parts of *England*, *Scotland*, and *Ireland*; also to *Holland*, *Germany*, *Sweden*, &c. every *Wednesday* to *Kent* only, and the *Downs*; every *Thursday* to all Parts of *England* and *Scotland*; as also to *France*, *Spain*, and *Italy*; every *Friday* to *Flanders* and *Holland*, *Germany*, *Sweden*, *Kent*, and the *Downs*; and every *Saturday* to all Parts of *England*, *Scotland*, and *Ireland*.

Again, Letters are return'd to *London* from all Parts of *England* and *Scotland*, *Wales* only excepted, every *Monday*, *Wednesday*, and *Friday*: From *Wales* every *Monday* and *Friday*; and from *Kent* and the *Downs*, every Day.

On this grand Office depend 182 *Post-Masters* in *England* and *Scotland*, who keep regular Offices in their Stages, and Sub-*Post-Masters* in their Branches.

The Number of Letters in *England* was anciently very inconsiderable; yet is it now so increased, that this Office, before the Addition of the *Penny Post*, was farm'd at 50000 l. per Ann.

The Charge of a Letter of a Sheet of Paper 80 Miles, is 3d. of two Sheets, 6d. for above 80 Miles, a Sheet 4d. two, 8d. An Ounce of Letters for 80 Miles, 11. for above, 11. 6d.

Note, The *Post* travels at the rate of 120 Miles in 24 Hours. For those who chafe to travel with the *Post*, Horses are ready, at the Rate of 3d. per Mile, and 4d. to the Boy every Stage.

The Great Mogul performs part of his *Postage* by *Pigeons*, kept in several places, for the Conveyance of Letters on extraordinary Occasions. They will carry them from one end of that vast Empire to another. The same Vehicles have been used by the *Dutch* in *Sieges*. And at this day, *Laurinier* observes, the Consul of *Alexandria* sends News daily to *Aloppo*, in five Hours time, by means of *Pigeons*; tho' those two Places are three Days Journey on horseback a-part.

*Penny-Post*, a *Post* establish'd for the Benefit of *London*, and the Parts adjacent; whereby, any Letter or Parcel, not exceeding one Pound Weight, or ten Pound Value, is speedily and safely convey'd to and from all Parts within ten Miles of *London*.

This Office is managed by a *Comptroller*, under whom are an *Accountant*, *Collector*, six *Sorters*, seven *Sah-Sarters*, and above an hundred *Messengers*.

*POSTS*, in Sculpture, &c. Ornaments form'd after the manner of *Rolls*, or *Wrappings*; thus call'd, because they seem to run after one another.

Some are simple; others enrich'd, or flourish'd.

*Post, after*, is also a *Latin* Preposition, used, in Composition, with several *English* Words; and generally implying a Relation of *Posteriority*.

*Post-Communion*, a Prayer which the Priest recites after the Communion. See **COMMUNION**.

*Post Diem*, a Fee, by way of Penalty, on a Sheriff, for his Neglect in returning a Writ after the Day assign'd. See **RETURN**.

For this the *Custos Brevisium* has four Pence; whereas he has nothing, if it be return'd at the Day. See **WRIT**.

*Post-Nati*, in our Statutes, is particularly used for such

Persons as were born in *Scotland*, after the Accession of King *James I.* to the Crown of *England*.

7 Jac. 1. it was by all the Judges solemnly adjudg'd, That such Persons were no Aliens in *England*; as, on the contrary, the *Auto-Nati*, or those born in *Scotland* before that Accession, were Aliens here in respect to the Time of their Birth.

*Post-Natus* is also used by *Bracton*, *Fleta*, *Glavville*, &c. for the second Son: Thus in *Brompton*, lib. 2. Est consuetudo in quibusdam partibus quod Post-Natus preferitur primogenito.

*Post-posing*, the putting any thing after, or behind another; with regard either to the Order of Time, or Place.

Sometimes it is taken in an ill part; as when we say, The Book-binder has post-poned a Sheet, &c. of a Book.

*Post-Script*, an After-Thought, or Article added to a Letter or Memoir; containing something learnt, or recollected after the Subscription, or Conclusion of the Piece.

It is usually mark'd thus, P. S. The *Spectator* observes, that a Woman's Mind is ever better learnt from her P. S. than her Letter.

*Post Date*. See **DATE**.

*Post Dissesin*, a Writ given by the Statute of *Westminster*, for him who having recover'd Lands or Tenements, by *precipe quod reddat*, upon Default or Reddition, is again disseis'd by the former Disseisor. See **DISSEISIN**.

*Post Fine*, a Duty belonging to the King for a Fine formerly acknowledg'd before him, in his Court; paid by the Cognizee after the Fine is fully pass'd, and all things touching the same accomplish'd.

The Rate is so much, and half so much, as was paid to the King for the *Pre-Fine*; and is collected by the Sheriff of the County where the Land lies, and to be answer'd by him into the Exchequer. See **FINE**.

*Post Term*, a Fee, or Penalty, taken by the *Custos Brevisium* of the Court of Common-Pleas only, for the filing any Writ by an Attorney, after the Term or usual Time in which such Writs are returnable: for which the *Custos Brevisium* has twenty Pence. See **WRIT**.

**POSTEA**, in Law, a Return or Certificate of the Proceedings by *Nisi Prius* into the Court of Common-Pleas; after a Verdict; and there afterwards recorded.

**POSTSCENIUM**, in the ancient Theatre. See **PARASCENIUM**.

*Post Predicaments*, in Logic, are certain general Affections, or Properties, arising from a Comparison of *Predicaments* with each other; or, Modes following the *Predicaments*, and often belonging to many.

Such, according to *Aristotle*, are *Opposite*, *privus*, *suavus*, *metus*, and *habere*; the three first of which are in all *Predicaments*.

**POSTERIOR**, a Term of Relation, implying something behind, or that comes after another. In which sense it is used in opposition to *Prior* and *Anterior*.

The Back and Hips are the *Posterior Parts* of Man. *Aristotle* gives *Prior* and *Posterior* Analytics. A Date is *Posterior* to another, when it is later, or fresher. See **DATE**.

**POSTERIORITY**, in Law, a Term of Comparison and Relation in Tenure, opposite to *Priority*.

A Man holding Lands, or Tenements of two Lords, holds of his antienter Lord by *Priority*; and of his later Lord by *Posteriority*.

**POSTERN**, in Fortification, a false Door, usually made in the Angle of the Flank, or of the Curtain, or near the Orillon; descending into the Ditch, for the Convenience of private Sallies.

The Word is also used in the general for any private or back Door. *Poteslas habere posternam in omni Curia penitus inbibetur, sed unicus si Ingressus*, &c. *Fleta*.

**POSTHUMUS**, or **POSTHUMOUS**, a Child born after the Death of his Father, or even of his Mother.

Among the *Romans*, *Posthumus* was also used for a Child born after the making of a Testament, which occasion'd the Testator to alter it.

The Word is compos'd of the *Latin*, *Post*, and *Humus*, ground. Hence the Word comes to be used figuratively for the Works of an Author that were not published till after his death.

**POSTILLA**, a Word anciently used for a Note, or Remark, wrote in the Margin of the Bible; and afterwards for a Note wrote in any other Book posterior to the Text.

*Trivet*, in his Chronicle, speaking of *S. Langton*, Archbishop of *Canterbury*, says, *Super Bibliam Postillas fecit; Et eam per Capitula quibus nunc utuntur modernis distinxit*: And that *Alexander* Bishop of *Chesler*, *Super Psalterium Postillas scripsit*. *Knignton*, another of our Historians, speaking of one *Hugh*, Dominican and Cardinal, says, *Totam bibliam postillavit*.

**POSTING**, among Merchants, the putting an Account forward, from one Book to another. See **BOOK-KEEPING**.

**POSTIQUE**, or **POSTIC**, in Architecture, &c. An Ornament of Sculpture is said to be *Postique*, when it is added after the Work itself is done.

A Table of Marble, or other Matter, is also said to be *Postique*, when it is incorporated in a Decoration of Architecture, &c.

The Word is form'd from the *Italian*, *Posticcio*, added.

**POSTLIMINIUM**, **POSTLIMINY**, among the *Romans*, the Return of one who had gone to sojourn elsewhere, had been banish'd, or been taken by the Enemy; to his own Country, and State. Thus call'd, according to *An. Gellius*, from *Post* and *limen*, *i. e.* a Return to the same *Limen*, *i. e.* the same Bounds or Threshold.

Some, from *Anno. Marcell.* will have it thus call'd, because Persons were restored to the House thro' a Hole in the Wall, *Post limen*, not by going over the Threshold, which was esteemed ominous.

*Postliminium* was also a Law whereby one recovered an Inheritance or other Matter that had been lost.

**POSTULATE**, in Mathematics, a clear, evident Proposition; wherein it is affirm'd or deny'd, that something may or may not be done. See **PROPOSITION**.

A thing immediately deduced from the Consideration of one single Definition, if it expresses something to agree, or disagree to another, is call'd an *Axiom*: If it affirm that something may or may not be done, it is call'd a *Postulate*.

Thus, *e. gr.* from the Genus of a Circle, 'tis evident that all right Lines drawn from the Centre to the Circumference, are equal; since they only represent one and the same Line, in a different Situation: This Proposition, therefore, is esteem'd an *Axiom*. See **AXIOM**.

But, since it is evident from the same Definition, that a Circle may be described with any Interval, and from any Point; this is accounted a *Postulate*.

*Axioms*, and *Postulates*, therefore, seem to have nearly the same relation to each other, that *Theorems* and *Problems* have. See **THEOREM**, &c.

**POSTULATION**, in the Canon-Law, the Nomination of a Person to a Dignity in the Church; to which, by the Canons, he cannot be elected; as, for want of Age, of Birth, because already beneficed of a Benefice incompatible therewith, or the like Impediment.

Thus the formal Election of such a Person being faulty, they are obliged to proceed by way of *Postulation*; that is, the Chapter beseeches the Person to whom the Confirmation of the Election belongs, to approve of it, tho' it be not Canonical.

The Person to whom the Supplication is made by the Protestants in *Germany*, is the Emperor; by the Papists, the Pope.

*Wicquefort* observes, that when a part of the Chapter elects, and another *Postulates*, the Number of *Postulators* must be twice as great as that of the Electors, to bring the Matter to a *Postulation*.

**POSTURE**, in Painting, Sculpture, &c. the Situation of a Figure, with regard to the Eye; and of the several principal Members thereof, with regard to one another; whereby its Action is express'd. See **ATTITUDE**.

A good part of the Painter's Art consists in adjusting the *Postures*; in giving the most agreeable *Postures* to his Figures; in accommodating them to the Characters of the respective Figures, and the part each has in the Action; and in conducting them and pursuing them throughout.

*Postures* are either *Natural*, or *Artificial*. The former are such as Nature seems to have had a View to in the Mechanism of the Body; or rather such as the ordinary Actions and Occasions of Life lead us to exhibit, while young, and the Joints, Muscles, Ligaments, &c. flexible.

*Artificial* are those which some extraordinary Views, or Occasions lead us to exhibit: Such, *e. gr.* are those of our *Posture-Masters*.

A Painter would be strangely puzzled with the Figure of *Clark*, (the late famous *Posture-Master* of *Pall-Mall*) in a History-piece. This Man, as we find in the *Philos. Transact.* had such an absolute Command of his Muscles, &c. that he could disjoint almost his whole Body; so that he impos'd on that great Surgeon, *Milless*; who look'd on him in such a miserable Condition, he would not undertake his Cure. Tho' a well-made Man, he would appear with all the Deformities imaginable: Hunch-back'd, Pot-belly'd, Sharp-breasted, &c. He disjointed his Arms, Shoulders, Legs, and Thighs; and render'd himself such an Object of Pity, that he has frequently extorted Money, in quality of a Cripple, from the same Company he had the Minute before been in, in quality of a Comrade. He would make his Hips stand a considerable way out from his Loins; and so high as to invade the place of his Back. Yet his Face was the most changeable part about him; and shew'd more *Postures* than all the rest of him-

self; he could exhibit all the unorth odd Faces of a Quaker's Meeting.

**POT-Ashes**, are properly the Ashes of certain Vegetables used in the making of Glass and Soap. See **ASHERS**.

Such are the Ashes of the Herb *Kali*, call'd also Salt-Wort, Glass-Weed, &c. from its great use in Glass-making. See **GLASS**.

*Pot-Ashes* are also call'd *Cineres clovellati*, and make the Basis of Salt of Tartar, and most of the lixivial Salts, as our Chymists of late manage 'em for Cheapness. See **KALI**, &c.

The *English* and *Dutch* make a considerable Commerce of *Pot-Ashes* which they bring from about the *Black Sea*; using great Quantities thereof in the Preparation of their Cloths, &c. those Ashes being found excellent to scour withal. See **PULLING**.

The Name *Pot-Ashes* is also popularly apply'd to all kinds of Ashes bought up and down the Country, and mixed together, for the making of green Glass: But the best of *English Pot-Ashes* are those made of the smaller common Highway-Thistles; tho' all Thistles are good. Fern also makes excellent *Pot-Ashes*.

**POTABLE**, something that may be taken, or swallow'd, by way of Drink. See **DRINK**.

The Chymists talk much of *Potable Gold*, *Aurum Potabile*. See **AURUM** and **GOLD**.

**POTENT**, or **POTENCE**, in Heraldry, a Term for a kind of a Cross in the Figure adjoining. See **CROSS**.

He beareth Sable, a Cross *Potent*, Or, by the Name of *Alejo*.

This Form represents the upper end of a Crutch; for antiently Crutches were call'd *Potents*.

**POTENTIA**, *Power*, or that whereby a thing is capable either of acting, or being acted on. See **POWZA**.

Hence, *Power* is of two kinds, *Active*, and *Passive*. *Active Power*, call'd also by a barbarous, but significant School-Term, *Operativity*, is the Efficacy, or Faculty of any Being, in virtue whereof something arises, or is produced by it. Such is the Power of speaking, in Man.

*Passive*, or *Receptive Power*, is a Capacity of receiving some Act; *e. gr.* the Capacity of Knowing a Man.

This is also call'd *Subjunctiva Potentia*, Subjective Power. *To exist in POTENTIA*, is used among the School-Writers, to denote that Evidence which a thing has in a Cause capable of producing it, but which has not actually produced it: In which it stands opposed to Existence *in actu*. See **POSSIBILITY** and **EXISTENCE**.

**POTENTIAL**, in the Schools, is used to denote, and distinguish a kind of Qualities, which are supposed to exist in the Body *in Potentia* only; by which they are capable, in some manner, of affecting and impressing on us the Ideas of such Qualities, tho' not actually inherent in themselves. In this sense we say *Potential Heat*, *Potential Cold*, &c. Brandy and Pepper, tho' cold to the Touch, are *Potentially* hot.

*Potential Cold* is a relative Term, by which we mean that such a thing is not actually cold to the Touch, but in its Effects and Operations, if taken inwardly. See **COLD**.

This Quality is supposed to arise from the Size, Shape, &c. of its component Particles, which give some check or retardation to the Blood's Motion, whereby it is less agitated, and upon which the sensible parts of the Body are not so briskly struck by it; the perception of which diminution or change of Motion in the Organs of Feeling, is call'd *Cold*.

Hence every thing that lessens the Blood's Motion, with relation to the Sensation before made, is cold; and every thing which increases it, may be call'd *Potential Heat*. See **HEAT**.

**POTENTIAL**, in Medicine, &c. Caustics are either *Actual*, *viz.* a Button of red-hot Iron; or *Potential*, as Lime, and other Caustic Drugs. See **CAUSTERY**.

**POTENTIAL**, in the Schools, is also used for something that has the Quality of a Genus. See **GENUS**.

*Grotius* uses the Phrase *Potential Parts of a State*, in opposition to the *Subjunctive Parts*.

By *Potential*, he means those Parts which have the Sovereign Power: By *Subjunctive*, those subject thereto; which are that, with regard to the Sovereign Power, that several Species are with regard to the Genus, whereof they are the subjective Parts.

For in the Schools, a *Potential* Whole is that which has its Parts under it, as a Genus has its Species; to distinguish it from an *Actual* Whole, which has its Parts in itself; as a Body composed of Matter and Form.

*Grotius* maintains, that tho' the Sovereign Power be one and indivisible, yet it may have several *Potential* Parts: For, as in the *Roman* Empire, there have been two *Potential* Heads, the one ruling in the East, the other in the West; yet the Imperial Authority all the while single and in-

Indivisible: So is it possible the Subjective Parts combining to give away their Sovereignty, may not give it in-ire, but reserve a part of it for certain Emergencies. In which Case the Subjective part becomes *Potential*. And thus there are two *Potential* parts, yet the Sovereignty single.

**POTENTIAL**, in Grammar, gives the Denomination to one of the Moods. See **MOOD**.

The *Potential* Mood is the same in Form, with the Subjunctive; but differs from it in this, that it hath always implied in it, either *possunt, volo, or deo*; as *Reges, that is Regere potest*, a Man may ask. See **SUBJUNCTIVE**.

It is sometimes called the permissive Mood, because it often implies a Permission, or Concession to do a thing; as, *Habent, volest, vivat, cum illa Terent.*

**POTION**, a liquid Medicine, in form of a *Draught*, to be taken at one time.

There are purging *Potions*, Emetic *Potions*, Diaphoretic, Peccoral, Cephalic, Cardiac, Stomachic, Hysteric, Vulnerary, Carminative, &c. *Potions*.

**POTTERY**, the Art of making Earthen-Pots, and Vessels; or, the Manufactory of Earthen-Ware. See **EARTH**.

The *Wheel* and *Lathe* are the Chief, almost the only Instruments, used in *Pottery*; the first for large Works, the second for small: Tho, in reality, they are much the same as to the manner of using them.

The *Potter's Wheel* consists principally in its Nut, which is a Beam or Axis, whose Foot or Pivot plays perpendicularly on a Free-stone Sole or Bottom. From the four Corners a-top of this Beam, which does not exceed two foot in height, arise four Iron Bars, call'd the Spokes of the Wheel; which forming diagonal Lines with the Beam, descend, and are fasten'd at bottom to the Edges of a strong wooden Circle, four foot in Diameter, perfectly like the Fellos of a Coach-Wheel, except that it has neither Axis nor Radii; and is only join'd to the Beam, which serves it as an Axis, by the Iron Bars. The Top of the Nut is flat, of a circular Figure, and a foot in diameter. On this is laid a piece of glas'd Earth, to be turn'd and fashion'd.

The Wheel thus dispos'd, is encompass'd with four Sides of four different pieces of Wood, sustain'd on a wooden Frame: The hind-piece, which is that whereon the Workman sits, is made a little inclining towards the Wheel: On the fore-piece are placed the pieces of prepared Earth. Lastly, the side-pieces serve the Workman to rest his Feet against; and are made inclining to give him more or less room, according to the Size of the Vessel to be turn'd. By his side is a Trough of Water, where-with from time to time he wets his Hands, to prevent the Earth's sticking to 'em.

To use the *Wheel*. The Potter having prepared his Earth, and laid a piece of it suitable to the Work he intends, on the Top of the Beam; sits down; his Thighs and Legs much expanded, and his Feet rest'd on the side-pieces, as is most convenient.

In this Situation he turns the Wheel round, till it has got the proper Velocity; when, wetting his Hands in the Water, he bores the Cavities of the Vessel, continuing to widen it from the middle; and thus turns it into Form: turning the Wheel a-fresh, and wetting his Hands, from time to time.

When the Vessel is too thick, they use a flat piece of Iron with a Hole in the middle, and somewhat sharp on one Edge, to pare off what is redundant. Lastly, when the Vessel is finish'd, they take it off from the circular Head by a Wire pass'd underneath the Vessel.

The *Potter's Lathe*, is also a kind of Wheel, but simpler and lighter than the former. Its three chief Members are an Iron-Beam or Axis, three foot and an half high, and two Inches in Diameter; a little wooden Wheel all of a piece, an Inch thick, and seven or eight in Diameter, placed horizontally a-top of the Beam, and serving to form the Vessel on; and another larger wooden Wheel, all of a piece, three Inches thick, and two or three Foot broad, fasten'd to the same Beam at bottom, parallel to the Horizon. The Beam or Axis turns by a Pivot at bottom, in an Iron Stand.

The Workman gives the Motion to the Lathe with his Feet, by pushing the great Wheel alternately with each Foot; still giving it a greater or less degree of Motion, as his Work requires.

They work with the Lathe, with the same Instruments, and after the same manner, as the Wheel.

But neither the one nor the other serve for any more than the forming of the Body of the Vessel, &c. The Feet, Handles, and Ornaments, if there be any, beside the Mouldings, being to be made and set on by Hand; if there be any Sculpture in the Work, 'tis usually done in Earthen or Wooden Moulds, prepared by a Sculptor, un-

less the Potter have Skill enough to do it himself, which is very rare.

As to the Glazing, or Varnishing of the Work; 'tis usually done with mineral Lead, i. e. Lead pulveris'd by throwing Charcoal-Dust into the melted Lead, and the Ashes of Lead; which, in effect, are only its Scum and Scoria. See **LEAD**.

For the Chinese *POTTERY*, see **PORCELAIN**.

**POUTLE**, an English Measure, containing two **QUARTS**.

See **MEASURE**.

Two of these *Pottles*, in the Liquids, make a Gallon; but in dry Measure three go to a Gallon. See **GALLON**.

**POUDER**, or **POWDER**, in Pharmacy, a dry Medicine pulveris'd, or prepared by being broken and reduced into almost imperceptible Atoms, either in a Mortar, or by Chymical Operations, &c. See **PULVERIZATION**.

**POUDER of Viper**, Viperine Powder, has of late days come much in request. See **VIPERINE**.

**STYPTIC Powder**, Sympathetic Powder, &c. See **STYPTIC**, **SYMPATHETIC**, &c.

**POUDER for the Hair**, is Flower of Wheat, or Beans, well sifted and prepared, to give it an agreeable Odour.

That wherein Starch Grounds is mixed, is the worst. See **STARCH**.

**Jessuis POWDER**, *Pulvis Patruus*. See **CORTEX Peruvianus**.

**GUN-POWDER**, see **GUN-POWDER**.

**POUDER Glass**, in the Sea-Language, are Boards join'd in form of a Triangle, and fill'd with Gun-powder, Pebbles, &c. which they set fire to when the Ship is boarded by an Enemy, and soon make all clear before 'em.

**POUDERINGS**, in Building, a Term sometimes used for Devices serving to fill up vacant Spaces, in cav'd Works: As also, in Escutcheons, Writings, &c.

**POUDERINGS**, in Heraldry, see **FEW**.

**POULTICE**, or **POULTIS**, a Form of Medicine call'd also *Cataplasma*. See **CATAPLASMA**.

**POULTRY**, see **POWL**.

**POUNCE**, among Artificers, a little Heap of Charcoal-Dust, inclosed in some open Stuff; to be pass'd over Holes prick'd in a Paper, in order to mark the Lines or Designs thereof on a Paper placed underneath; to be afterwards finish'd with a Pencil, a Needle, or the like.

*Pounce* is much used by Embroiderers, to transfer their Patterns upon their Stuffs; by Lace-Makers, and sometimes also by Engravers, and Writing-Masters.

The Word is form'd from the *French*, *Pounce*, *Pumice-stone*; in regard they antiently used Pumice-stone powder'd for this purpose.

**POUNCES**, in Falconry, the Talons, or Claws of a Bird of Prey.

**POUND**, a Weight, of a certain Proportion, much used as a Standard for determining the Gravities and Quantities of Bodies. See **WEIGHT**.

The Word is derived from the *Saxon*, *Pound*, *Pondus*, Weight.

We have two different *Pounds* in England; the *Pound Troy*, and the *Pound Avoirdupois*.

The *Pound Troy* consists of 12 Ounces, each Ounce of 20 Penny-weights, and each Penny-weight of 24 Grains; so that 450 Grains make an Ounce, and 5760 Grains a *Pound*. See **OUNCE**, &c.

This *Pound* is used in the weighing of Silver, Gold, precious Stones, all kinds of Grains, &c.

It is also used by the Apothecaries, tho' differently divided: Among them 24 Grains make a *Scruple*, 3 *Scruples* a *Drachm*, 8 *Drachms* an *Ounce*, and 12 *Ounces* a *Pound*. See **SCRUPLE**, &c.

The *Pound Avoirdupois* consists of 16 Ounces; but then the *Avoirdupois Ounce* is less by 42 Grains than the *Troy Ounce*, which amounts to nearly a 12th part of the whole; so that the *Ounce Avoirdupois* only contains 438 Grains, and the *Troy Ounce* 480.

The difference whereof is nearly as that of 75 to 80; i. e. 75 *Ounces Troy* make 80 *Ounces Avoirdupois*. 112 *Avoirdupois Pounds* make the Hundred Weight, or *Quintal*. See **QUINTAL**.

By this *Pound* are weigh'd all large and coarse Commodities, Flesh, Butter, Cheese, Iron, Hemp, Lead, Steel, &c.

An *Avoirdupois Pound* is equal to 14 *Ounces*  $\frac{1}{2}$  of a *Paris Pound*. So that 100 of the former *Pounds* make 91 of the latter.

The *French Pound* contains 16 *Ounces*; but one *French Pound* is equal to one *Pound* one *Ounce*  $\frac{1}{2}$  of an *Avoirdupois Pound*; so that 100 *Paris Pounds* make 109 *English Avoirdupois Pounds*.

The *Paris Pound* is divided in two manners; the first division is into two *Marses*, the *Mars* into eight *Ounces*, the *Ounce* into eight *Gros*, the *Gros* into three *Deniers*, the *Denier* into twenty four *Grains*, each weighing a *Grain* of Wheat.

The second Division of the *Pound* is into two half *Pounds*; the half *Pound* into two Quarters; the Quarter into two Demi-quarters; the Demi-quarter into two Ounces; the Ounce into two half Ounces, &c.

The first Division is usually follow'd in weighing Gold, Silver, and other precious Wares; and the latter in those of less value.

At *Lyon* the *Pound* is 14 Ounces. One hundred *Paris Pounds* make 116 *Lyon Pounds*.—At *Venice*, the *Pound* is equal to eight Ounces, three Quarters of the *French Pound*, &c.

For the several *Pounds* of the several Cities and Countries, their Preparation, Reduction, Division, &c. see *WEIGHT*.

*POUND* is also an imaginary Money, used in accounting; containing more or less, according to the several Names added to it, and the several Countries it is used in. See *MONEY*.

Thus in *England* we say a *Pound Sterling*; in *France*, a *Pound*, or *Livre Tournois* and *Paris*; in *Holland* and *Flanders* a *Pound*, or *Livre de Gross*, &c.

The Term took its rise hence, that the ancient *Pound Sterling*, tho' it only contain'd 240 Pence, as ours does, yet each Penny being equal to five of ours, the *Pound* of Silver weigh'd a *Pound Troy*. See *PENNY*.

The *Pound Sterling*, or *English Pound*, contains twenty Shillings, the Shilling twelve Pence, and the Penny four Farthings. See *SHILLING*, *PENNY*, &c. See also *COIN*.

Antiently there were three ways of paying a *Pound* of Money into the Exchequer. 1<sup>o</sup>. The payment of a *Pound de numero*, which was just twenty Shillings in Tale. 2<sup>o</sup>. *Ad felam*, which was 6 *d.* over and above the 20s. 3<sup>o</sup>. *Ad pensam*, which was giving the full Weight of twelve Ounces.

The *French Pound*, or *Livre Tournois*, contains twenty Sols or Shillings, and the Sol 12 Deniers or Pence *Tournois*; which was the Value of an antient *French Coin* call'd *Franc*, a Term still synonymous with *Livre*. See *FRANC*.

The *Pound*, or *Livre Tournois* contains, in like manner, 20 Sols or Shillings, and the Sol 12 Deniers or Pence *Paris*. Each Sol *Paris* is equal to 15 Deniers *Tournois*; so that a *Pound Paris* is equal to 25 Sols *Tournois*. Thirteen one third Deniers *Tournois* is equal to a Penny *Sterling*; so that the *Pound Sterling* is equal to 15 *Pounds* or *Livres*, 6 Sols, and 8 Deniers of *French Money*; and the *Pound French* to 18 *d. English*; which is to be understood when the Exchange is on the foot of fifty four Pence *Sterling* for a *French Crown*, or *Ecu* of 60 Sols *Tournois*; which is the Par between *France* and *England*. See *LIVRE* and *PAR*.

The *Pound* or *Livre de Gros* of *Holland* is divided into 20 Shillings *Gros*, and the Shilling into 12 Pence *Gros*. It is equal to six Florins; the Florin valued at 24 Sols *Tournois*; supposing the Exchange on the footing of 100 Pence *Gros* for a *French Crown* of 3 *Livres Tournois*; so that the *Pound Gros* amounts to 10 Shillings and 11 Pence Farthing *Sterling*. The *Pound Gros* of *Flanders* and *Brabant* is divided like that of *Holland*; and like that too, is equal to three Florins; but the Florin is equal to 25 Sols *Tournois*; so that the *Flanders Pound* is equal to 7 *Livres*, 10 Sols *Tournois*, or 11 *s.* 3 *d.* *Sterling*.

Merchants, Factors, Bankers, &c. use Characters, or initial Letters to express the several kinds of *Pounds* of Account, as *L.* or *L. St.* *Pounds Sterling*. *L. G.* *Pounds Gros*; and *L.* or *lb.* *Pounds Tournois*.

*POUND* is also an Inclosure, or strong Place, where Cattle distrained, or caught in any Trespas, are put till they are relieved or redeemed. See *TRESPASS*, *RELEVY*, &c.

The *Pound* is either *overt* or *cloft*.

*Pound Overt*, or *Open Pound*, is that built upon the Lord's Waste; and hence also call'd the *Lord's Pound*; because he provides it for the use of himself and his Tenants.

*Pound Overt* also includes Back-fides, Court-Yards, Pasture-Grounds, or any Place whatever.

To this *Pound* the Owner of the Beasts impounded may come to give them Meat and Drink, without Offence of their being there, or his coming thither.

*Pound Cloft*, on the contrary, is such an one as the Owner cannot come to for the said purpose without Offence; as some cloft Hoofe, Castle, Fosters, &c.

*POUNDAGE*, a Subsidy granted to the King upon all manner of Merchandise, and of all Merchants, Denizens, and Strangers; whether imported, or exported. See *DUTY*.

It is call'd *Poundage*, because fixed at the Rate of so much per *Pound*; viz. one Shilling in every *Pound*, or 20s.

It was first granted to *Henry VI.* for Term of his Life; and afterwards to *K. Charles II.* Anno 12 Car. 2.

*POUP*, *Puppis*, in Navigation, the hind-part of a Vessel, or that where the Helm is fixed; call'd also *Stern*. See *STERN*.

The *French* frequently call it *Queue*, Tail; because the Helm, here apply'd, serves the same purposes in a Ship as the Tail does to Fishes. See *HELM*.

It is divided into three or four Stories. The lowest, at the bottom of the Keel, is the Bizar Room: The second in the first Deck is for the Gunners; here the Helm is usually found; tho' the Person who guides it, is above, and turns it by a Bar pass'd thro' a Hole: over this is the Captain's Apartment, before which is the Armory, wherein is the Compass, the Hour-Glass, &c. over this is the Pilot's Cabin, and that of some other Officers; over, is the Pharos or Lantern, with the Flag.

All these together form the *POOP*-Castle, or Hind-Castle; the outside whereof is richly adorned with Balconies, Galleries, Pillasters, Trophies, the Arms of the Prince, &c.

To have the Wind in *POOP*, is to have it behind, or favourable. See *WIND*.

Some Vessels have their *POOP* square, others round.

The Word is form'd from the *Latin*, *Puppis*.

In the Sea-Language, the *POOP* is strictly the Floor, or Deck over the Round-House, or Master's Cabin; being the highest part of her Hull a-stern.

*POUR-Partie*, or *Pour-Party*, in Law, a Term used in opposition to *pro Indiviso*. See *PRO INDIVISO*.

To make *Pour-partie*, is to divide and sever the Lands that fall to Parteners; which before Partition, they held jointly and *pro Indiviso*.

*POUR-Prejure*, in Law, is defined by *Glaucille* to be, when any thing is unjustly occupied, that properly belong'd to the King; as in encroaching on his Grounds, obstructing the King's High-ways, diverting publick Rivers from their proper Course, or building any thing over the High-Streets of a City; and in the general, where any thing is done to the prejudice of the King's Tenements, High-ways, or Cities.

*Crompton* in his *Jurisd.* says, *Pour-prejure* is properly when a Man takes to himself, or encroaches any thing which he ought not; whether it be in Jurisdiction, in Land, or in Franchife; and, generally, where any thing is done to the Nuisance of the King's Tenants.

Some Authors divide *Pour-prejure* into three kinds: The first against the King, the second against the Lord, the third against a Neighbour.

*Pour-prejure against the King*, lib. Nig. in *Schac. fol.* 38. is that happening thro' the Negligence of the Sheriff, or the long Continuance of Wars, &c. when those that have Lands near the Crown-Lands, inclose part of them, or lay them to their own.

*Pour-prejure against the Lord*, is when the Tenant neglects to perform what he is bound to do for the chief Lord, or deprives him of his Right.

*Pour-prejure against a Neighbour*, is a Nuisance against a Neighbour, &c. mention'd in the *Messag. Tom.* 1.

*POURSUIVANT*, a Messenger, antiently attending the King, in his Wars, or at Council-Table, or in the Exchequer; to be dispatch'd upon any Occasion or Message; as for the Apprehension of a Person suspected, or accused, &c.

Many of the Nobility, too, had their *Poursuivants*: A Knight Banneret was allow'd a *Poursuivant*, with the Consent of a Herald.

The Word is form'd from the *French* *poursuivre*, to pursue. There were also *Poursuivants* particularly employ'd in Martial Causes, call'd

*POURSUIVANTS* at Arms; a Term antiently apply'd to Gentlemen, who attended the Heralds, and assist'd to their Office; to which they could not rise, till after seven Years Apprenticeship pass'd in this Quality. See *HERALD*.

They were entirely dependant on the Heralds, and assist'd at their Chapter; officiating for them in preparing and assigning Tournaments, and all other parts of their Ministry.

They were baptis'd at solemn Feasts with some gallant Name; as *Jolicour*, *Verluisant*, *Sausquair*, &c.

Their Coats of Arms were different from those of the Heralds, and they bore plain Staffs without Ornament.

Of the great Number of *Poursuivants* antiently on foot, there are now only four remaining; viz. *Blue-Mantle*, *Rouge-Croix*, *Rouge-Dragon*, and *Fortculier*.

Their Business is to attend with the Heralds in marshalling and ordering publick Solemnities, Funerals, Interviews, Cavalcades, &c. See *COLLEGE* of Arms.

*Upton*, de *Re Militari*, calls the *Poursuivants*, *Milites Linguares*; because, says he, their chief Honour was in *Cassidia Lingue*.

He divides them into Foot and Horse *Poursuivants*, *Courriers Equitantes* & *Profectores*. *Stow*, speaking of *Richard the Third's* End, has these Words: "His Body was naked to the Skin; not so much as one Clout about him, and was truss'd behind a *Poursuivant* at Arms, like a Hog, or a Calf."

**FOURVEYANCE**, the providing of Corn, Victuals, Fuel, and other Necessaries, for the King's House.

By a Stat. 12 Car. 2. no Person under colour of *Fourveyance* shall take any Timber, Cattle, Corn, or other Matter from any Subject, without his free Consent. See **FOURVEYOR**.

**FOURVEYOR**, an Officer of the Household, who provides Corn and other Victuals, &c. for the King's House; mention'd in *Magna Charta*, and several Statutes.

The Name of *Fourveyor* became so odious in times past, that by Stat. 36 Edw. 3. the heinous Name *Fourveyor* was chang'd into that of *Buyer*. The Office itself was much restrain'd by the Stat. 12 Car. 2. See **FOURVEYANCE** and **ACHAT**.

**POUZZOL**, or **POZZOLANE**, a reddish Earth, used in Italy for Sand. See **SAND**.

The best is found about *Pouzzoli*, *Baye*, and *Cume*, in the Kingdom of *Naples*.

Mix'd with Lime, it makes the best Mortar in the World. See **MORTAR**.

It hardens and petrifies in Water: It penetrates black Flint, and whitens them. It is of particular service in making Moles, and other Buildings, in Maritime Places. *Agricola* takes it to be of an aluminous and sulphurous nature. See *Vitruvius*, *Pliny*, *de Lorm*, &c. who set a great Value on it.

**POWER**, *Potentia*, in Physics, a natural Faculty of doing or suffering any thing. See **POTENTIA**.

Mr. *Locke* explains the Origin of our Idea of *Power* to the following effect: The Mind being daily inform'd by the Senses, of the Alteration of the simple Ideas of things without; and reflecting on what passes within itself; and observing a constant Change of its Ideas, sometimes by the Impressions of outward Objects, upon the Senses; and sometimes by the Determinations of its own Choice; and concluding from what it has so constantly observ'd to have been, that the like Changes will for the future be made in the same Things, by the same Agents, and by the like Ways; considers, in one Thing, the possibility of having a-ny of its simple Ideas chang'd; and in another, the possibility of making that Change: and so comes by that Idea, which we call *Power*.

Thus we say, Fire has a *Power* to melt Gold, and make it fluid; and Gold a *Power* to be melted.

*Power* thus consider'd, is two fold, viz. as able to make, or able to receive any Change: the one may be call'd *active*, the other *passive Power*.

Of *passive Power*, all sensible Things abundantly furnish us with Ideas; nor have we of *active Power* fewer Instances: since whatever Change is observ'd, the Mind must suppose a *Power* somewhere able to make that Change.

But yet if we attentively consider it, Bodies, by our Senses, do not afford us so clear and distinct an Idea of *active Power*, as we have from Reflection on the Operations of our Minds. For all *Power* relating to Action; and there being but two sorts of Action, viz. Thinking and Motion; it may be consider'd whence we have the clearest Ideas of the *Powers*, which produce these Actions.

Of Thinking, Body affords us no Ideas at all; it is only from Reflection that we have that: neither have we from Body any Idea of the beginning of Motion. A Body, at rest, affords us no Idea of any *active Power* to move; and when it is set in motion itself, that Motion is rather a Passion, than an Action in it. The Idea of the beginning of Motion, we have only by Reflection on what passes in ourselves; where we find by Experience, that barely by willing it, we can move the parts of our Bodies, which before were at rest.

We find in ourselves a *Power* to begin or forbear, continue or end, several Actions of our Minds, and Motions of our Bodies, barely by a Thought or Preference of the Mind: This *Power*, which the Mind has, thus to order the Consideration of any Idea, or the forbearing to consider it; or to prefer the Motion of any part of the Body to its Rest, and *vice versa*, in any particular Instance, is what we call the *Will*. The actual Exercise of that *Power*, is that which we call *Volition*, or *Willing*. See **WILL**.

The Forbearance or Performance of that Action, consequent to such Order or Command of the Mind, is call'd *Voluntary*; and whatsoever Action is perform'd without such a Thought of the Mind, is call'd *Involuntary*. See **VOLUNTARY**, &c.

The *Power* of Perception, is what we call the *Understanding*. See **UNDERSTANDING**.

Perception, which we make the Act of the Understanding, is of three sorts; first, the Perception of Ideas in our Minds; the Perception of the Signification of Signs; and the Perception of the Agreement or Disagreement of any distinct Ideas. See **PERCEPTION**.

These *Powers* of the Mind, viz. of perceiving, and preferring, are usually call'd by another Name; and the or-

dinary way of speaking is, that the *Understanding* and *Will* are two Faculties or *Powers* of the Mind. A Word proper enough, if used so, as not to breed any Confusion in Mens Thoughts, by being suppos'd (as there is room to suspect it has been) for some real Beings in the Soul, that perform those Actions of Understanding and Volition. See **FACULTY**.

From the Consideration of the Extent of the *Power* of the Mind over the Actions of the Man, which every one finds in himself, arise the Ideas of Liberty and Necessity.

So far as a Man has a *Power* to think, or not to think; to move or not to move, according to the Preference or Direction of his own Mind; so far is a Man free. See **LIBERTY**.

Wherever any Performance or Forbearance are not equally in a Man's *Power*; wherever doing or not doing will not equally follow upon the preference of his Mind; there he is not free, tho' perhaps the Action may be Voluntary. See **NECESSITY**.

So that the Idea of Liberty, is the Idea of a *Power* in any Agent, to do or forbear any Action according to the Determination or Thought of the Mind whereby either of them is preferred to the other: where either of them is not in the *Power* of the Agent to be produced by him according to his Volition, there he is not at Liberty; that Agent is under Necessity. So that Liberty cannot be where there is no Thought, no Volition, no Will: But there may be Thought, there may be Will, there may be Volition, where there is no Liberty. Thus a Tennis-Ball, whether in motion by the Stroke of a Racket, or lying still at rest, is not by any one taken to be a free Agent; because we conceive not a Tennis-Ball to think, and consequently not to have any Volition, or Preference of Motion to Rest, or *vice versa*. So a Man striking himself or his Friend by a convulsive Motion of his Arm, which is not in his *Power* by Volition, or the Direction of his Mind, to stop or forbear; no body thinks, he has Liberty in this; every one pities him, as acting by Necessity and Constraint. Again, suppose a Man be carry'd, whilst fast asleep, into a Room, where there is a Person he longs to see, and be there lock'd fast in, beyond his *Power* to get out; he awakes, and is glad to see himself in so desirable Company, which he stays willingly in; that is, he prefers his staying to going away: Is not this Stay voluntary? No body will doubt it; and yet being lock'd fast in, he is not at liberty to stay, he has not freedom to be gone.

Liberty, therefore, is not an Idea belonging to Volition, or Preferring; but to the Person having the *Power* of doing, or forbearing to do, according as the Mind shall chuse or direct.

As it is in the Motions of the Body, so it is in the Thoughts of our Minds: Where any one is such, that we have *Power* to take it up, or lay it by, according to the Preference of the Mind, there we are at liberty.

A waking Man is not at liberty to think, or not to think, no more than he is at liberty, whether his Body shall touch any other or no: but whether he will remove his Contemplation from one Idea to another, is many times in his choice; and then he is, in respect of his Ideas, as much at liberty, as he is in respect of Bodies he rests on. He can at pleasure remove himself from one to another.

Yet, some Ideas to the Mind, like some Motions to the Body, are such, as in certain Circumstances it cannot avoid nor obtain their absence, by the utmost effort it can use: Thus a Man on the Rack is not at liberty to lay by the Idea of Pain, and entertain other Contemplations.

Wherever Thought is wholly wanting, or the *Power* to act or forbear according to the Direction of Thought, there Necessity takes place: This, in an Agent capable of Volition, when the Beginning or Continuation of any Action is contrary to the Preference of his Mind, is call'd *Compulsion*; when the hindering or stopping any Action is contrary to his Volition, it is call'd *Refrains*. Agents that have no Thought, no Volition at all, are in every thing necessary Agents.

*Power*, in Mechanics, a Force, which being apply'd to a Machine, tends to produce Motion; whether it actually produce it or not. See **MACHINE**.

In the former Case, it is call'd a *moving Power*; in the latter, a *sustaining Power*.

If the *Power* be a Man, or a Brute, it is call'd an *animate Power*; if the Air, Water, Fire, Gravity, or Elasticity, and *insensate Power*. See **MECHANICS**.

*Power* is also used in Mechanics, for one of the six simple Machines; viz. the *Lever*, *Balance*, *Scissors*, *Axis* in *Peritrochio*, *Wedge*, and *Screw*; which are particularly call'd the *Mechanic Powers*. See **MECHANIC Power**.

See also each *Power* under its proper Article, **LEVER**, **BALANCE**, &c.

**POWERS**, in Pharmacy, the Result of a Combination or Union of the essential Oils with the Spirit of a Plant; where-

wherein, it is supposed, are contained all the principal Virtues thereof: whence the Name.

**POWER**, in the Feodal Jurisprudence, a Right which the Lord has to re-unite to his Fief, a Dependat Fee held of him; when the Vassal has alienated it; upon reimbursing the Money given for it, with the Legal Costs. See **FEU**.

The Lord is to exercise his Power over the Fee, within a Year after he has notice of the Fall; otherwise he loses it.

The Word is also used for the Right a Lord has to seize a Dependat Fee, to compel the Payment of all Dues, Services, &c.

**POWERS**, in Theology, a Term used among the Fathers, &c. for the sixth Order in the Hierarchy of Angels; commencing from Seraphim. See **SERAPHIM**.

These they suppose to be the Spirits who bridle and restrain the Power of the Devils; precise over inferior Causes; and prevent contrary Qualities from disturbing the Oeconomy of the World. See **HIERARCHY**.

**POWER**, in Optics. The Power of a Glass, is the Distance of the Convexity, from its solar Focus. See **FOCUS**.

**POWER**, in Arithmetick, the Produce of a Number multiply'd into itself. See **NUMBER**.

Thus the Produce of the Number 3, multiply'd by itself, viz. 9, is the second Power of 3; the Factum of 9, multiply'd by 3, viz. 27, is the third Power; and the Product of 27, again multiply'd by 3, viz. 81, is the fourth Power; and so on to Infinity. In respect hereof, the first Number, 3, is called the Root, or first Power. See **ROOT**.

The second Power is call'd the Square; with respect to which, 3 is the Square-Root. See **SQUARE**.

The third Power, 27, is call'd the Cube; with respect to which, the 3 is the Cube-Root. See **CUBE**.

The fourth Power, 81, is call'd the Biquadrato, or Quadrato-Quadratum; with respect to which, 3 is the Biquadratic Root. See **BIQUADRATIC**.

The Number which shews how oft the Root is multiply'd into itself, to form the Power; or how oft the Power is to be divided by its Root, to come at the Root, is call'd the Exponent of the Power. See **EXPONENT**.

The Moderns, after Des Cartes, are contented to distinguish most of their Powers by the Exponents; as, first, second, third, &c.

The particular Names of the several Powers were introduced by the Arabs; viz. Square, Cube, Quadrato-Quadratum or Biquadrato, Surdsolid, Square of the Cube, second Surdsolid, Quadrato-quadrato-quadratum, Cube of the Cube, Square of the Surdsolid, third Surdsolid, &c.

The Names given by Diophantus, follow'd by Vieta and Oughtred, are, the Side or Root, Square, Cube, Quadrato-quadratum, Quadrato-cubus, Cubo-cubus, Quadrato-quadrato-cubus, Quadrato-cubo-cubus, Cubo-cubo-cubus, &c.

The Characters wherewith the several Powers are denoted, both in the Arabic and Cartesian Notation, are as follow.

	2	4	8	16	32	64	128	256	512	1024
Arab. R	g	c	by	s	gc	ff	tg	bc	fr	
Cartes. a	a <sup>2</sup>	a <sup>4</sup>	a <sup>8</sup>	a <sup>16</sup>	a <sup>32</sup>	a <sup>64</sup>	a <sup>128</sup>	a <sup>256</sup>	a <sup>512</sup>	a <sup>1024</sup>

Hence, to raise a Quantity to a given Power, or Dignity, is the same as to find the Factum arising upon its being multiply'd a given Number of Times into itself: E. gr. to raise 2 to the 3d Power, is the same as to find the Factum 8; whose Factors are 2, 2, 2. See **SQUARE**, **CUBE**, &c.

Powers of the same Degree, are to one another in a Ratio of the Roots as manifest as their Exponent contains Units: Thus, Squares are in a duplicate Ratio; Cubes in a triplicate Ratio; Quadrato-quadrato, or fourth Powers, in a quadruple Ratio. See **RATIO**.

The Powers of proportional Quantities, are also proportional to one another. See **PROPORTION**.

From a given Power to extract the Root, or Side; is the same as to find a Number, e. gr. 2, which multiply'd any Number of times, e. gr. twice, produces the given Power, e. gr. the 3d Power, or 8. See **ROOT**.

To multiply or divide any Power by another of the same Root. 1<sup>o</sup>. For Multiplication, add the Exponents of the Factors; the Sum is the Exponent of the Factum. Thus:

Factors	$\sum x^2$	$\sum^m$	$\sum^n$	$\sum^p$	$\sum^q$
	$\sum x^4$	$\sum^m$	$\sum^n$	$\sum^p$	$\sum^q$
Prod.	$x^7$	$\sum^m$	$\sum^{m+n}$	$\sum^{m+p}$	$\sum^{m+q}$

2<sup>o</sup>. For Division, subtract the Exponent of the Power of the Divisor, from the Exponent of the Dividend; the Remainder is the Exponent of the Quotient. Thus:

Divid.	$x^7$	$\sum^m$	$\sum^n$	$\sum^p$	$\sum^q$
Divis.	$x^4$	$\sum^m$	$\sum^n$	$\sum^p$	$\sum^q$
	$x^3$	$\sum^m$	$\sum^n$	$\sum^p$	$\sum^q$

M. de la Hire gives us a very odd Property common to all Powers: M. Carre had observ'd, with regard to the

Number 6, that all the natural cubic Numbers, 8, 27, 64, 125, whose Root is less than 6, being divided by 6; the Remainder of the Division is the Root itself: And if we go further, 216, the Cube of 6, being divided by 6, leaves no Remainder; but the Divisor 6, is itself the Root. Again, 343, the Cube of 7, being divided by 6, leaves 1; which, added to the Divisor 6, makes 7 the Root, &c.

M. de la Hire, on considering this, has found that: all Numbers, rais'd to any Power whatever, have Divisors, which have the same effect with regard thereto, that 6 has with regard to Cubic Numbers.

For the finding of these Divisors, he discover'd the following general Rule:

If the Exponent of the Power of a Number be even, i. e. if the Number be rais'd to the 2d, 4th, 6th Power, &c. it must be divided by 2; the Remainder of the Division, in case there be any, added to 2, or to a Multiple of 2, gives the Root of this Number, corresponding to its Power, i. e. the 2d, 6th, &c. Root.

If the Exponent of the Power be an uneven Number, i. e. if the Number be rais'd to the 3d, 5th, 7th, &c. Power; the Double of this Exponent will be the Divisor, which has the Property mention'd.

Thus it is found in 6, double of 3, the Exponent of the Power of all the Cubes: Thus, also, 20 is the Divisor of all Numbers rais'd to the 5th Power, &c.

**POWER**, of an Hyperbola, in Conics, is the Square of the right Line CI, or AB (Tab. CONIC, fig. 27.)

The Power of the Hyperbola, is the sixteenth part of the Squares of the conjugate Semi-Axes; or the fourth part of the Squares of the conjugate Axes. See **HYPERBOLA**.

**POWER** of the County. See **POSS COMITATUS**.

**POX**, in Medicine, a Disease, whereof the Physicians admit several kinds; as the Small Pox, French Pox, Chicken Pox, and Swine Pox.

Small **POX**, Variole, is a contagious Disease appearing on the Cutis, which it covers with Pusles or Ulcerous Eruptions, that leave Eschars behind 'em. Or, it is a general Eruption of particular Pusles tending to Suppuration. See **PUSLE** and **SUPPURATION**.

The Origin of the Disease is uncertain: We find no mention of it before the Arabic Physicians. See **DISEASE**.

The Small Pox bear a great resemblance to the Measles; so that for the two or three first days 'tis difficult to distinguish 'em: They both arise from an impure Blood, and corrupt Humours; with this difference, that in the Small Pox, the peccant Matter is more thick and viscid; in the Measles more subtile, hor, and bilious; and neither of 'em are known to return after having pass'd 'em once. See **MEASLES**.

Deleus says, that the Cause of the Small Pox is brought into the World with us; and lies hid till it find an opportunity of bursting forth: He adds, that there is scarce one in many thousands that escapes it all his Life.

Dr. Drake observes, that the Small Pox not being founded in any permanent habitual Disposition, has its Period within a limited time necessary for the extrusion of the peccant Matter out of the Pores of the Skin. For the salt Serum of the Blood being in this Disease, by an accidental Fever, thrown out in great quantities on the Glands of the Skin, acts much after the manner of the Lepra Arabum; but when the Blood is desquamated, the Scales dry, and fall off. So that he thinks it would be no great Impropriety to call the Small Pox, a temporary critical Lepra. See **LEPRA**.

The Small Pox are of two kinds; the distinct, where the Pusles stand a-part; and the confluent, where they run into one continued Cake.

The distinct, or regular Small Pox, Sydenham observes, begin with a Shuddering and Chilliness, which is succeeded by an intense Heat, violent Pain of the Head and Back, Vomiting, Drowsiness, especially in Children, and sometimes Epileptic Fits; which shew the Pox to be ready to burst forth, and that they will be mild.

The Eruptions are usually on the fourth day; upon which the feverish Symptoms vanish, except that Adults are prone to sweat. The Pusles first appear in the Face, then the Neck, &c. They are at first reddish, by degrees swell and grow whiter; on the eleventh day the Swelling and Inflammation of the Face vanish; and the Pusles begin to wither. If ever this kind kill, 'tis on the fourteenth or fifteenth day.

The Symptoms of the distinct Small Pox, as enumerated by Dr. Shaw, are, 1. A Pain in the Head, Back, and Scrobticulum Cordis. 2. A Fever, which decreases as the Eruptions increase, with redness of the Eyes. 3. Nausea and Retchings. 4. Little reddish Spots, or beginning Pusles, appearing on the Neck, Face, Breast, &c. about the third or fourth day inclusive, from the beginning of the Illness. 5. Restlessness. 6. About the seventh or eighth day, other little red Spots usually appear between the growing Pusles. 7. The Pusles about the ninth day are at their State; being then generally as big as a large Pea, the

Matter in them well concocted, of a whitish Colour inclined to yellow; at which time, 8. The Patient is usually light-headed and feverish. 9. About the tenth day the Pustules begin to dry on the Face. 10. And about the sixteenth they appear shrank, and begin to scale off; and now the danger is esteem'd to be over.

The *distinct* kind is here consider'd unattended with a Loosness, and other Symptoms, which sometimes happen in it, as well as in the other.

The *Confluent*, or *Flux Small Pox* have the same Symptoms with the *distinct*, only in a more violent degree: They usually come out on the third day; not separate, as in the *distinct* kind, but spread into one another; and at length appear all like one whitish Pellicle, over the whole Skin. After the eighth day, the Pellicle darkens. In Adults this kind is attended with a Salivation; in Children with a Diarrhoea. The Salivation frequently succeeds immediately after Eruption; the Diarrhoea later. The *Confluent* kind usually kill on the eleventh day.

The Symptoms of the *Confluent* kind, according to Dr. Shaw, are, 1. Violent Pain in the Head, Back, and *Scrobiculum Cordis*. 2. Nausea and Retching, with a Fever, which rather increases than decreases after the Eruption. 3. In Children a Diarrhoea, which usually precedes the Eruption, and attends the Distemper throughout. 4. A *Prurifansus* in Adults, and but seldom a Diarrhoea. 5. Delirium, Convulsions, Hoarseness, Difficulty of Breathing, Fixtiness of the Eyes, and Restlessness; which may also in a lesser degree attend the *distinct* sort. 6. The Spots are here more red, thick, and close than in the *distinct*; and the Spaces between them more inflamed and swell'd; purple or livid Spots also often appear in these Spaces; whence the *Small Pox* with *Purples*. At other times in these Spaces, or on the Heads of the Eruptions, appear Bladders full of clear Water, vulgarly call'd the *white Hives*. Lastly, these Eruptions are frequently depress'd in the middle; and there turn black; whence the *black Small Pox*.

The Eruptions often rise and sink in the Progress of the Distemper. They usually first appear about the fourth or fifth day, and come to their State about the sixteenth.

Morton divides the Disease into four Stages: The *Apparatus* or Preparation, from the time of the first Infection to the Eruption of the Pustules. The *Eruption*, which comprehends three States: *Eruption*; *Maturation*; and *Declension*, wherein the Pustules are first incrustated with a Scab, then wither and dry off.

When the Eruptions are very round, distinct, encompass'd with a red Margin, &c. they are said to be *benign*; otherwise *malignant*.

There are four degrees of Malignancy: viz. when they are universally confluent; particularly confluent; distinct, but very small and coherent; and distinct, with Patches and military Eruptions. See PITCHING, &c.

Dr. Friend, Dr. Cade, &c. recommend Purging and Phlebotomy after an imperfect Crisis of the *Small Pox*; i. e. where the Fever remains after the Pustules decline. Many oppose it: Indeed Reason seems on its side; but Prescription is against it. *Alpharavivus*, in the first Stage of the *Small Pox*, prescribes Phlebotomy, even to a swooning, and great Quantities of cold Water to be drunk. In the malignant *Small Pox*, Dr. Lister found the Blood, when cold, excessively tender and friable, so as the softest Feather would easily divide its Globules. *Emuller* says there is nothing to be more regarded than the Breath and Voice; where these are good, 'tis an excellent Sign. He adds that Horfe-Dung is an admirable Medicine, in that it promotes Sweat, saves the Throat, &c.

A Method of managing the *Small Pox*, lately introduced from abroad, is by inoculating them. For the Reason, Proof, and Advantages whereof, see INOCULATION.

Why the *Small Pox* scarce ever visit a Person above once, is a famous Problem; long canvass'd, and with little success. Dr. Drake accounts for it very plausibly from the Alteration made in the Skin by that Disease. For the Diffusion the Glands and Pores of the Skin suffer therein is so great, that they scarce ever recover their Tonic again, so as to be able any more to arrest the Matter in its Course onwards long enough, or in quantity enough, to create those Ulcerous Pustules which are the Diagnostics of the Disease. For tho' the same feverish Disposition should arise again in the blood, yet the Passages thro' the Skin being more open, the Matter will never be stop'd, so as to exhibit the Appearance of the *Small Pox*.

Accordingly we find that in Persons severely handled with this Disease, the Face (which is usually the least), from the extraordinary obstruction the Matter meets with by the great Constipation of the Pores) seldom returns to its former Dimensions; which Enlargement he accounts for from the Dilatation of the *Aræole* of the Glands and Pores of the Skin, not from any Augmentation of the Substance itself.

What confirms this Hypothesis, is, that Nurses, &c.

who attend Persons sick of the *Small Pox*, are frequently a little affected with it; and have now and then two or three Eruptions: That they have no more, seems to follow from the free Course of the Matter thro' the Skin. With this, too, agrees that constant Observation, That People of coarse Skins, in whom the Pores are largest, are always more favourably treated by this Distemper than others; and that it constantly leaves fine Skins coarser than it found 'em.

This Solution would seem more probable, were it not that some have so very few of these Eruptions, perhaps not above twenty or thirty; which cannot fairly be allow'd so far to enlarge the Pores of the Skin.

Others hold, That in a genuine Eruption, the Cause of the Distemper is so far evacuated, as scarce to leave a possibility of a Return; and that if part of the original Cause did remain behind, it might, when the Air favours it, or when by other Accidents 'tis secreted from the Blood, appear in the form of Eruptions, and so prove to be the Measles, Chicken-Pox, &c.

It may, indeed, be object'd, that these last mention'd often happen before the *Small Pox*: But whatever be the Cause of the *Small Pox*, the separating Power must be in such a determined Proportion, or it will fail to cause a regular *Small Pox*; and so acting proportionably, may produce any of the other Distempers just mentioned.

The *occasional Causes* of the *Small Pox* may be, 1. Some Alteration in the Air; since they happen most frequently about the Spring Season; and both in *Europe*, and elsewhere, are more Epidemical and Mortal at particular times. 2. From Fear; which appears more evident than easy to explain. 3. From Sorcits, as by eating any thing too chilling to the Blood, as Cucumbers, Oranges, &c. in hot Seasons, or when the Body is heated by Motion, the drinking of cold Liquors. 4. From too plentiful feeding. 5. From any over-heating the Blood, or too suddenly cooling it after it is heated, whereby a sudden Check is given to Perspiration; and this more especially if the Air favours such an Eruption.

As to the *prognostic Signs* of the *Small Pox*; 1. The sooner they appear in the Spring, and the more the Air is disposed to favour the Distemper, the more fatal they prove. 2. The confluent Species both in Adults and Children, is dangerous; and the more so, if attended with a suppression of Urine, Nausea, Retching, Delirium, purple Spots, Crystallines, bloody Urine, &c. after the Eruption; but the blackness of 'em is not dangerous before the Crisis. 3. Diarrhoea in the confluent kind, are not so bad in Children as in Adults. 4. A *Prurifansus* is a regular Attendant of the confluent kind in Adults from the sixth or seventh day till after the Crisis; and is so necessary, that if it stop suddenly, and return not for twenty four Hours, the Patient is supposed to be in great danger. 5. A Quinzy here is highly dangerous. 6. The Eruptions swelling, and sinking suddenly, are bad Signs. 7. The danger is not over till about the twentieth day in the confluent Species. But if the Eruptions be distinct, few, round, plump, rise full, and grow up sharp at the top; if the Sickness, Vomiting, &c. go off, or remit upon the appearance of the Eruptions, and the Patient be under no dreadful Apprehensions; the danger is usually over about the tenth day in the distinct kind. Convulsions attending the first Symptoms of the *Small Pox* in Children, are said to forewarn the appearance of Eruptions within twelve Hours; which then generally prove distinct, and the Patient does well. The *Small Pox* succeeding a Debauch in Liquors, or happening upon an irregular Course of Life, is usually mortal.

*Chicken POX*, a cutaneous Disease, frequent in Children, wherein the Skin is cover'd with Pustules like those of the *Small Pox*, as to Figure and Magnitude; and only distinguishable therefrom, in that those of the *Small Pox* appear with a redness and inflammation; and those of the *Chicken Pox* whiter, resembling *Vesicles* full of a serous Humour; which in three days time burst, and dry away, without any danger, and usually without any Fever.

The *Chicken Pox* and *Swine Pox* seem to be the *Small Pox* in a less degree, tho' they sometimes precede, and sometimes succeed the *Small Pox*. The Pustules appear to be of the same kind, only in the *Swine Pox* they are much larger, and in the *Chicken Pox* somewhat less than in the *Small Pox*. There commonly appear five or six, sometimes twenty or thirty on the Face, and but very few on the Body.

The Patient is very little indisposed, either before, or after their appearance; tho' the sudden sinking of them often causes some disorder; but 'tis presently relieved by a little Suck and Saffron, or a Dose of Treacle-Water.

Grown Persons seldom keep within Doors for either; and upon that account the Eruptions may continue the longer, because the cold Air is supposed to hinder their ripening; so that 'tis sometimes three Weeks or a Month before they totally disappear.

*French* POX, a contagious Disease contracted by a poisonous Humour, usually in Coition; and manifesting itself in Ulcers and Pains. See *VENEREAL Disease*.

The *French* call it *Mal de Naples*, the *Neapolitan* Disease, because first observed among the Soldiers at the Siege of Naples under Charles VIII. The *Italians* call it *Mal Francese*, and we the *French* Disease, because first caught by the *French*. The *Spaniards* call it *Sarva das Indias*, because first brought from the *West-Indies*.

POYNING'S LAW, an Act of Parliament made in Ireland, by Henry VII. whereby all the Statutes of force in England were made of force in Ireland; which before that time they were not.

Not are any now in force there, made in England since that time.

The Law took its Name from Sir Edward Poynning, Lord Lieutenant at the time of its making.

PRACTICE, in Arithmetic, *PRACTICA Italica*, or *Italian Usages*; certain compendious ways of working the Rule of Proportion, or Golden Rule. See *GOLDEN Rule*.

They were thus call'd from their expediting of *Practice*, and *Business*; and because first introduced by the Merchants, and Negotiators of Italy. See *RULE*.

The most useful of these *Practices* are as follow:  
1<sup>o</sup>. Since the Use of the Rule of Three is to find a fourth Proportional, to three given Numbers; divide the first and second, or the first and third by some common Number, if that can be done exactly; and work with the Quotients in their stead: As in the following Example.

Price of 3 lb is 9 Shil. What's the Price of 7 lb?

$$\begin{array}{r} 3 \ ) \ 1 \ 5 \ 3 \\ \underline{9} \phantom{0} \\ 6 \phantom{0} \\ \underline{6} \phantom{0} \\ 0 \phantom{0} \end{array}$$

Facit 21 Shil.

Price of 14 lb is 26 Shil. What's the Price of 7 lb?

$$\begin{array}{r} 7 \ ) \ 2 \ 6 \\ \underline{7} \phantom{0} \\ 1 \ 4 \end{array}$$

Facit 13 Shil.

2<sup>o</sup>. If the first Term be 1, and the second an aliquot part of a Pound, Shilling, or Penny; divide the third by the aliquot Part: The Quotient is the Answer. *Note*, To find the aliquot part; those who cannot do it otherwise, may see the Table of aliquot parts of a Pound under the Article *MULTIPLICATION*.

*E. gr.* If 1 Ell cost 10 Shil. What cost 957 Ells.

Facit L. 478:10s.

3<sup>o</sup>. If the first or third Number be 1; the other not exceeding large; and the middle Term a Compound, *i. e.* consist of several Denominations; it may be wrought without Reduction thus:

Price of 1 lb is 3s. 8d. 3q. What's the price of 5 lb?

$$\begin{array}{r} 5 \\ \underline{5} \end{array}$$

Facit 18s. 7d. 3q.

For 4 Farthings making a Penny, 5 times 3 Farthings make 5d. 3q. and 12 Pence making 1 Shilling, five times eight Pence make 3s. 4d. which with 5d. from the place of Farthings, make 3s. 7d. Lastly, five times 3 Shillings makes 15 Shillings, and with the 3 Shillings from the place of Pence, 18s. The price required therefore is 18s. 7d. 3q.

4<sup>o</sup>. If the middle Term be not an aliquot, but an aliquant part; resolve the aliquant part into its aliquot parts; divide the middle Term by the several aliquots, the Sum of the Quotients is the Answer. To find the aliquot parts contain'd in an aliquant; see the Table of aliquot parts of a Pound under the Article *MULTIPLICATION*.

For an Instance of this Rule:

If 1 Ell cost 15 Shil. What cost 124 Ells?

$$\begin{array}{r} 15 \\ \underline{15} \end{array}$$

Facit 93 l.

5<sup>o</sup>. If the first, or second Term be 1; and in the former case, the second, or third, in the latter the first, be resolvable into Factors; the whole Operation may be performed in the Mind without writing down any Figures: As in the following Example.

Price of 1 lb is 24 Shil. What is the price of 20 lb?

$$\begin{array}{r} 4 \\ \underline{4} \\ 80 \\ \underline{6} \\ 86 \end{array}$$

Facit 48 | 0 s. = 24 l.

6<sup>o</sup>. Where one of the given Numbers is 1; we have several compendious Usages, to save Multiplication, and Division. *E. gr.*

If 9 Pounds cost 10s. What does 1 Pound cost?

'Tis obvious the Sum required is had by adding to the tenth part of 10s. *viz.* 2s. the ninth part of that tenth, *viz.* 3d. 7. and  $\frac{1}{2}$  of a Penny: The Answer therefore is 2s. 3d. 7. and  $\frac{1}{2}$ .

Again: If 3 lb cost 54 Shillings, What costs 1 lb?  
Since 3 is half of 6, the double of the tenth part of the given price, *viz.* 54s. 9d. 2q. is the Sum required.

Again: If 1 lb cost 18d. What will 19 lb cost?  
Since 19 = 20 - 1; from the given price doubled, and increased by 4 Cypher, *viz.* 360, subtract the simple 18; the Remainder is 342d. = 28s. 6d. the Sum required.

7<sup>o</sup>. If two Terms of the same Denomination differ by an Unit, we have a peculiar kind of Compend; which will be clear from the following Examples: *E. gr.* If 5 lb cost 30s. What will 4 lb cost?

Since the price of 4 lb is one fifth part short of that of 5 lb, divide the given price 30 by 5; the Quotient 6 being subtracted from the Dividend; the Remainder, *viz.* 24s. is the Sum required.

Again: If 9 lb cost 24s. What cost 9 lb?  
Since the price of 9 lb exceeds that of 8 by one eighth part; divide the given Price 24 by 8; and add the Quotient 3 to the Dividend; the Sum 27 is the Answer.

8<sup>o</sup>. Sometimes one may use several of these Compend, or *Practices* in the same Question. *E. gr.* If 100 lb cost 30s. 4d. What costs 50 lb?

$$\begin{array}{r} \text{Facit } 15 \text{ s. } 2 \text{ d.} \\ \text{Again: } 60 \text{ lb cost } 4 \text{ s.} \quad \text{What costs } 2520 \text{ ?} \\ \underline{6} \phantom{0} \\ 24 \phantom{0} \\ \underline{7} \phantom{0} \\ 168 \end{array}$$

P.R.E., a Latin Preposition, literally signifying *before*; used in Composition, with several Words in our Language, to denote the relation of Priority. See *PREPOSITION* and *COMPOSITION*.

Of late, our Writers, in Words thoroughly anglicized, for *pre* usually write *pro*, retaining the Latin Orthography to Words that are still Latin. Hence, for

PRÆCORDIA, the parts about the Heart; *e. gr.* the Pericardium, the Diaphragm, the Hypochondria, and even the Heart itself; with the Lungs, Spleen, &c. See *HEART*.

The Word is ordinarily used for the fore-part of the Region of the Thorax. See *THORAX*.

*Pliny*, and some other Authors, use it for all the Viscera, or Entrails. *Præcordia vocantur uno nomine exta in Homine*. See *VISCERA*.

One of the principal Differences between Men and Brutes, consists in this; that there is a greater Correspondence and Communication between the Head and Heart of the former than the latter: Which Correspondence is effected by means of a greater Number of Nerves, sent from the Brain to the Heart and *Præcordia*; Brutes only receiving Nerves to the *Præcordia* by the Branches of the *Par Vagus*; and Man, likewise, by the Intercoastal Pair.

The Reason, Dr. Willis well observes, is, that Brutes being void of Discretion, and but little subject to Passions, need not, like Man, a double Passage for the Spirits, the one for the Service of the vital Functions, the other for the reciprocal Impression of the Affections. See *NERVE*, *SPIRIT*, *BRAIN*, &c.

PREMIUM, literally denotes a Reward, or Remuneration.

Among Merchants, it is taken for that Sum of Money, *viz.* 8 or 10 per Cent. which is given to an Insurer, for insuring the safe Return of any Ship, or Merchandize. See *POLICY of Insurance*.

The same Term is also used in the Money and Paper Trade, for what is given for a thing above Par.

Thus, Lottery-Tickets, &c. are said to bear so much, *e. gr.* 10 or 20 l. *Præm.* when they are sold for so much beyond the prime Cost at which the Government vendeth them.

PRÆNOMEN, among the *Romans*, a proper Name; or Name prefixed to the general Name of the Family; as, *Caius, Lucius, Marcus*, &c. See *NAME*.

The *Prænomens* answers to our Christian Name, *Peter*, *Paul*, &c.

It was not introduced among the *Romans* till long time after the *Nomen*. See *NOMEN*.

The Name of the Family was given their Children the Day after their Birth; but the *Prænomens* was not given 'em till they took the *Virile Habit*. See *Virile*.

*Varro* reckons up thirty *Prænomina* among the *Romans*. The usual ones may be reduced to eighteen.

The *Greeks* had no *Prænomina*; they had but one Name.

**PREPARANTIA Vasa**, in Anatomy, the *Spermatic Vessels*; or two Arteries, and as many Veins of the Testicles; thus call'd by the *Antients*, from an Opinion that the Seed began to be prepared herein. See *Spermatic Vessels*, *SEED*, and *GENERATION*.

**PRÆPOSITUS**, a Term frequently used in our Law-Books: *Præpositus Ville* is sometimes used for the Chief Officer of the King in a Town, Manor, Village, or Recce. See *PREFECT*.

*Præpositus Ville* is sometimes also used for the Constable of a Town, or petty Constable. See *CONSTABLE*.

*Præpositus Ecclesie*, see *CHURCH-RECTOR*.

*Quatuor homines PRÆPOSITI*, in *Crompton*, &c. Four Men of each Town which are to appear before the Justices of the Forest, in their Circuit.

**PRÆPUTIUM, PRÆPUCE**, in Anatomy, the *Fore-Skin*; a prolongation of the *Cutis* of the *Pennis*, covering the *Balanus*, *Glans*, or Extremity of the *Yard*. See *PENIS* and *GLANS*.

Dr. *Drake* observes, that Nature does not seem more various in any part of her Works than in the *Præpuce*; for the Figure and Proportion whereof, there does not seem any Standard.

Hence, probably, arose the necessity of Circumcision, so generally practised throughout the Oriental parts; not out of a view to Religion, but to Cleanliness, and to prevent Diseases which a detention of the Mucus of the *Sub-præputi* Glands might breed in those hot Countries. For even here the same Author adds, he has known some, who, having large *Præpuces*, call'd *Fibers-Præpuces*, have been frighted at the appearance of a Mucus coming out upon a mere plenitude, from between the *Præpuce* and *Glans*; which 'tis probable the great Legislator of the *Jews* might have a view to in the first Institution of Circumcision. See *CIRCUMCISION*.

The Skin of the *Præpuce* is double; at the connexion of the internal Skin, to the other part, are several oval and roundish Glandules placed irregularly about the joining of the *Glans* to the *Corpora Cavernosa*, and on the *Glans* itself.

Their use is to separate a Liquor to render the agitation of the *Præputium* on the *Glans* easy. When this Liquor becomes rancid, as upon old Age, or Venereal Contacts, it excoriates the *Glans* and *Præputium*; and even sometimes contracts the latter, and renders it necessary to be divided to afford a passage to the *Glans*. See *FURUNCULUS* and *PAPULOSUS*.

**PRÆSEPE**, in Astronomy, three Nebulous Stars, in the Sign *Cancer*, or the *Crab*; two of 'em of the 7th, the third of the 6th Magnitude. Their Longitudes, Latitudes, &c. see among those of the other Stars in *CANCER*.

**PRÆTER Naturam**, in Medicine, see *NATURE*.

**PRAGMATIC Sanction**, in the Civil Law, is defined by *Hottoman*, a Rescript, or Answer of the Prince, deliver'd by Advice of his Council, to some College, Order, or Body of People, upon their consulting him on some Case of their Community.

Such an Answer to a particular Person, is call'd simply *Rescript*. See *RESCRIPT*.

The Word is form'd from the *Greek* *πραγμα*, *Negotium*, *Business*.

The Term *Pragmatic Sanction* is chiefly used among the Modern Writers, for that famous Ordinance of *Charles VII. of France*, published in 1268; containing a Regulation of Ecclesiastical Discipline, conformable to the Canons of the Council of *Basil*; and since used by the *Gallican Church*, as a Barrier against the Enterprizes and Encroachments of the Court of *Rome*.

The Scope of the *Pragmatic Sanction*, was to regulate the form of Elections made by the Clergy; to declare the Collations to belong to Ordinaries, the Prevention alone reserv'd to the Pope; to establish Prebends; to assign a Third of the Benefices to Graduates; to abolish Reservations, Annates, and other like Charges.

Pope *Pius II.* obtain'd an abrogation of this *Sanction* of *Louis XI.* On which occasion the Court of *Rome*, transported with Joy, dragg'd the *Pragmatic* thro' the Streets, whipping it all the way, as *Xerxes* antiently did the *Hellespont*. But the Parliament oppos'd this Abrogation with a great deal of Vigour, and refus'd its Consent to the last. So that maugre all the Efforts of *Rome*, the *Sanction* still

held in force; till the Concordat pass'd between Pope *Leo X.* and *Francis I.* in 1515, when the *Pragmatic Sanction* was abolished. See *CONCORDAT*.

The Parliament of *Paris* again oppos'd the Innovation, and refus'd to confirm the Concordat, and was not brought to give its Consent till after repeated Orders of the King; together with a secret Resolution taken always to judge conformably to the Tenor of the *Pragmatic Sanction*.

**PRAGMATICAL**, a Term sometimes used in the same sense as *Practical*, *Mechanical*, or *Probationary*.

Thus *Stevinus*, in his *Hydrostatical Elements*, calls certain Mechanical, or Practical Experiments, which he undertakes to instruct his Reader how to make, by the Name of *Pragmatical Examples*; and in the same sense it is sometimes used by other Naturalists.

**PRATIQUE**, or **PRATTICK**, in Commerce, a Negotiation or Communication of Commerce, which a Merchant-Vessel obtains in the Ports it arrives in, and the Countries it discovers.

Hence to obtain *Pratique*, is to obtain a Liberty to frequent a Port, to go a-shore, buy and sell, &c. We could never have any *Pratique* with the Inhabitants of *Nova Zembla*.

The Word is *French*, and signifies, literally, *Practice*.

**PRATIQUE** is particularly used for a Licence to traffic, granted to the Master of a Ship in the Ports of *Italy*, upon a Bill of Health; that is, a Certificate that the Place whence he came is not annoy'd with any infectious Disease.

**PRAXEANS**, a Sect of Heretics, so call'd from their Author *Praxas*.

This Heresiarch was of *Asia*, and lived in the second Century. He was at first a Disciple of *Montanus*, but quitted him, and soon after set up a Sect of his own; teaching, that there was no Plurality of Persons in the Godhead; and that it was the Father himself that suffer'd on the Cross. Which Sentiment was afterwards adopted by the Monarchs, Sabellians, and Patripassians. See *SABELLIAN*, *PATRIPASSIAN*, &c.

**PRAYER**, in Theology, a Petition put up to God, either for the obtaining of some future Favour, or the returning of Thanks for a past one.

Divines distinguish three kinds of Prayer; *Vocal*, which is cloth'd in Words and Sounds to be utter'd with the Mouth; *Mental*, which is only form'd or conceiv'd in the Mind, and not deliver'd in Words; and *Ejaculatory*, which is a short, sudden sigh without Study, Order, or Method. See *VOCAL*, *MENTAL*, &c.

The Mystic Divines, again, distinguish Prayer into *Active* and *Passive*. See *ACTIVE* and *PASSIVE*.

Among us, Prayer is frequently consider'd under the divisions of *Preconceived* and *Extemporary*. Under the first come all set Forms, whether public or private, by which the Mind is directed in the Order, Manner, Expression, &c. of its Petitions. The second is that where the Mind is left to itself, its own Conduct, both as to Matter, Manner, Words, &c.

Common PRAYER, see *LITURGY*.

The *Romanists* also prefer Prayers to Saints, the *Virgin*, the *Angel Gabriel*, &c. See *SAINTE*, *OFFICE*, *AVE MARY*, &c.

**PREACHING**, in Theology, the Declaration, or Promulgation of the Word of God, in public; by a Person authorized, and in a Place destined, for that purpose. See *SERMON*, *PRIEST*, *GOSPEL*, &c.

Antiently, none but Bishops were allow'd to preach. Now, not only Priests, but Deacons are qualify'd. See *BISHOP* and *DEACON*.

Bishop *Wilkins* has deliver'd the *Art of Preaching* in a Treatise call'd *Ecclesiastes*, or the Preacher. See *ECCLESIASTES*.

The Word is derived from the *Hebrew*, *Parasch*, *expulsi*, he expounded.

The Religious of the Order of *St. Dominic* assume the Quality of *Preaching-Brothers*, *Friars-predicant* or *predicants*. See *DOMINICAN*.

**PREADAMITE**, *Præadamita*, a Term given to the Inhabitants of the Earth conceiv'd, by some People, to have lived before *Adam*.

*Isaac de la Perreya* in 1655, published a Book to evince the Reality of *Præadamites*, by which he gain'd a considerable number of Profelytes to the Opinion; but the Answer of *Demarets*, Professor of Theology at *Groningen*, published the Year following, put a stop to its Progress; tho' *Perreya* made a Reply.

His System was this: The *Jews* he calls *Adamites*, and supposes 'em to have issued from *Adam*; and gives the Title *Præadamites* to the *Gentiles*, whom he supposes to have been a long time before *Adam*.

But this being expressly contrary to the first Words of *Genesis*, *Perreya* had recourse to the fabulous Antiquities of the *Egyptians* and *Chaldeans*, and to some idle Rabbin, who imagin'd there had been another World before that describ'd by *Moses*.

He was apprehended by the Inquisitors in *Flanders*, and very roughly us'd; tho' in the Service of the *Dauphin*. But he appeal'd from their Sentence to *Rome*; whether he went in the time of *Alexander VII.* and where he printed a Retraction of his Book of *Preadamites*.

**PREAMBLE**, in Law, the beginning of an Act of Parliament, &c. serving, as it were, for a Key, to open the Intent of the Makers of the Acts, and the Mischiefs designed to be prevented or remedied thereby. See **ACT**.

**PREBEND**, *Præbenda*, the Portion a Prebendary receives out of the Estate of a Cathedral, or Collegiate Church. See **PREBENDARY**.

The Term *Præbend* is usually confounded with *Canonicate*, *Canonate*, or *Canonica*; yet there is a real difference. A *Præbend* is properly a Right which an Ecclesiastic has in a Cathedral or Collegiate Church where he officiates, to receive certain Ecclesiastical Revenues, and to enjoy certain Dues, either in Money or in kind; (so call'd a *Præbenda*, q. d. *afforded*, or *allowed* him; not a *Præbendo Auxilium*, or *Consilium Episcopo*) whereas a *Canonica* is a mere Title, or spiritual Quality, which a Person enjoys independent of any *Prestation*, or any temporal Revenue: So that the *Præbend* may subsist without the *Canonicate*; but the *Canonicate* is inseparable from the *Præbend*.

For it is not to the *Præbend* that the Right of Suffrage, and other spiritual Rights are annex'd, but to the *Canonicate*; and when the *Præbend* is join'd to the *Canonicate*, it becomes spiritual by virtue of the *Canonicate* to which it is attach'd. See **CANONICA**.

Antiently the Pope created *Canons* with a Right of taking place in the Choir, a deliberative Voice in the Chapter, and an expectation of the first *Præbend* that should become vacant: But this was prohibited by the Council of *Trent*. Yet the Pope still confers the *Canonicate* without any *Præbend*, when he would confer a Dignity in a Church, for the obtaining whereof, 'tis required the Candidate be a *Canon*.

This they call a *Canonate ad officium*, and sometimes *jus ventosum*, which is no more than an empty Title confer'd purely to qualify a Man for a Dignity affect'd to the Capacity of *Canon*.

In some Churches there are *double Præbends*; and in others *Sevi-Præbends*.

Originally the *Præbend* was only a *Livery*, or Portion of things necessary to Life, given daily; at present the Rents and Profits of the Church are divided into fixed Portions, call'd *Præbends*, which are enjoy'd independently. The nomination to *Præbends* is in the King. In *France* 'tis one of the honorary Rights of the King, on his joyful Accession to the Crown, to nominate to the first *Præbends* vacant by death in the Cathedral and Collegiate Churches.

*Præbends* are either *Simple*, or with *Dignity*: The latter are such, as, beside their *Præbends*, have some Jurisdiction annex'd to 'em.

*Theological*, or *Divinity Præbend*, is a *Præbend* affect'd to a Doctor in Divinity, in each Cathedral and Collegiate Church throughout *France*, for preaching on Sundays, and making a public Lecture thrice a Week.

*Preceptorial Præbend*, a *Præbend*, the Revenues whereof are destin'd for the Support of a Preceptor or Master, who is oblig'd to instruct the Youth of the Place gratis. The *Canonate* is not here necessary to the *Præbend*.

*Panormus* observes, that in the Cathedral-Church of *Chartres*, there are *Præbends* reserv'd to Laymen, and for the Subsistence of some Persons of Birth and Distinction.

**PREBENDARY**, an Ecclesiastic, who enjoys a *Præbend*. See **PREBEND**.

*Præbendaries*, and *Canons* of Cathedral and Collegiate Churches, have this in common, that they have each a Portion of the Revenues of the Church for their Subsistence; the one under the Title of *Præbenda*, *Præbend*; the other under the Title of *Canonica*, or *Canonicate*; and have each Places, and Voices in the Chapter: But they differ in this, that the former receives his Portion or *Præbend* in Consideration of his officiating and serving in the Church; but the latter without any such Consideration, merely by his being received into the Cathedral or College, *per assignatum stallum in Choro, & locum in Capitulo*. See **CANON**, &c.

**Golden PREBENDARY** of *Hereford*, call'd also *Præbendarius Episcopii*, is one of the twenty-eight minor *Præbendaries*, who has, *ex officio*, the first *Canon's* Place that falls.

He was antiently Confessor of the Bishop and Cathedral, and had the Altarages; on which account he was call'd the *Golden Præbendary*.

**PRECARIÆ**, or *Preces*, in our antient Law-Books, Day-works, which the Tenants of certain Manors are bound to give their Lords, in Harvest-time; and which, in some places, are corruptly call'd *Bind-days*, for *Biden-days*, from the Saxon, *Bidan*, to pray.

*Baldwinus una locuta pro iis. & dimid. & ii Gallinas & xx ova & iii Precarias in Autumno; uno cum bovino, his arare, &c.* *Monast. Angl.*

*Magna Precaria*, was a great or general Reaping-day. The Lord of the Manor of *Harrovo* in *Middlesex* had, 23 *Rich. 2.* a Custom, that by Summons of his Bailiff on a general Reap-day, then call'd *Magna Precaria*, the Tenants should do one hundred ninety-nine days Work for him; every Tenant that had a Chimney tending a Man.

**PRECARIOUS**, in Commerce, is properly a kind of Trade carried on between two Nations at War, by the Intervention of a third at Peace with 'em both.

Thus the *English* hold a *precarious* Commerce with the *Spaniards* by means of the *Portuguese*; when the two former Nations being at War, the third lends its Vessels, its Colours, and Name, to continue their Trade.

**PRECARIOUS**, in Jurisprudence, a Term us'd for a Fund or Stock, whereof a Person has not the full Propriety, whereof he cannot dispose absolutely, and which is moit of it borrow'd.

**PRECE PARTIUM**, in Law, the Continuance of a Suit by consent of both Parties.

**PRECEDENCE**, **PRECEDENCY**, **Rank**, a Place of Honour, which a Person is entitled to in Companies; either for sitting or walking.

*Precedence* is either of *Courtesy*, or of *Right*, *de jure*.

The former is that due to Age, to Estate, &c. which is regulated by Custom and Civility; the latter is settled by Authority, and where broke in upon, gives an Action at Law. See **NOBILITY**.

The Point of *Precedency* is thus ordered by the Heralds.

After the King, the Princes of the Blood, viz. the Sons, Grandsons, Brothers, and Nephews of the King take place; then the Great Officers of the Church and Crown, viz. the Abp of *Canterbury*, then the Lord Chancellor, or Lord Keeper of the Great Seal; next the Abp of *York*; the Lord High Treasurer; the Lord President of the Privy Council; the Lord Privy-Seal: Next, Dukes, then Marquesses, Dukes eldest Sons, Earls, Marquesses eldest Sons, Dukes younger Sons, Viscounts, Earls eldest Sons, Marquesses younger Sons, Bishops, Barons, Viscounts eldest Sons, Earls younger Sons, Barons eldest Sons, Privy-Counsellors, Judges, Masters in Chancery, Viscounts younger Sons, Barons younger Sons, Knights Bannets, Baronets, Knights of the Bath, Knights Batchelors, Colonels, Sergeants at Law, Doctors, Esquires, Lieutenant-Colonels, Majors, Captains, Batchelors of Divinity, Law, &c. Masters of Arts, Gentlemen, Yeomen, Tradesmen, Mechanicks.

Note, That great Officers of Court, of what degree soever they are, take place above all others of the same Degree or Order of Nobility; viz. the Master of the Horse, Lord Great Chamberlain of *England*, Lord High Constable of *England*, Lord Marshal of *England*, Lord Admiral of *England*, Lord Steward, and Lord Chamberlain of his Majesty's Household.

So the Secretaries of State, if Peers, take place of all of that Degree, except the Great Officers *stare loco*.

Dukes, Marquesses, Earls, Barons, &c. not having any of the said Offices, take place according to the Seniority of their Creation.

The Ladies take place, or *Precedency*, according to the Degree of Quality of their Husbands.

**PRECEDENT**, in Law, an original, authentic Instrument, or Writing; serving as a Form to draw others by. See **ORIGINAL**, &c.

Hence *Precedens Books*, &c. fall of Draughts of Deeds, Conveyances, &c. for Attorneys.

**PRECENTOR**, or **PRÆCENTOR**, a Dignitary in Cathedral Churches, popularly call'd the *Chanter*, or *Master of the Choir*. See **CHANTER**.

The *Precentor* is so call'd, from the *Latin præ*, and *cant*; because he is supposed to lead the Choir, and sing before the rest.

**PRECEPT**, in Law, a Command in Writing, sent by a Chief Justice, Justice of Peace, or other like Officer, for the bringing of a Person, Records, or other Matters, before him.

**PRECEPT** is also us'd for the Command, or Incitement, whereby one Man stirrs up another to commit Felony, Theft, &c. *Bracton, lib. 3. Traç. 1. cap. 19.* whence we may observe three Diversities of offending in Murder; *Preceptio*, *Fortia*, *Concilium*.

*Preceptio*, is the Instigation us'd before-hand; *Fortia*, the Assistance in the Fact; *Concilium*, the Advice either before or after. See **MURDER**.

**PRECESSION**, **PRÆCESSION**, in Astronomy, a Term apply'd to the Equinoxes, which, by a very slow insensible Motion, change their place; going backwards, or westward, i. e. in *antecedentia* as the Astronomers call it, or contrary to the Order of the Signs. See **EQUINOX**.

It is shewn, in the new Astronomy, that the Pole, the Solstices, the Equinoxes, and all the other Points of the Ecliptic, have a retrograde Motion; and are continually moving from East to West, or from *Aries* towards *Pisces*, &c. by means whereof, the Equinoctial Points are carry'd further

further and further back, among the preceding Signs of Stars; at the rate of about 50 Seconds each Year: which retrograde Motion is call'd the *Precession, Regression, or Retrocession of the Equinoxes*.

Hence, as the fixed Stars remain immovable, and the Equinoxes go backward; the Stars will seem to move more and more Eastward with respect thereto; whence the Longitudes of the Stars, which are reckon'd from the first Point of *Aries*, or the Vernal Equinox, are continually increasing. See *LONGITUDE and STAR*.

Hence it is that the Constellations have all chang'd the Places assign'd them by the ancient Astronomers: In the Time of *Hipparchus* and the oldest Astronomers, the Equinoctial Points were fix'd to the first Stars of *Aries* and *Libra*; but the Signs are now no longer in the same Points; and the Stars which were then in Conjunction with the Sun when he was in the Equinox, are now a whole Sign, or 30 Degrees, to the East thereof: Thus the first Star of *Aries*, is now in the Portion of the Ecliptic call'd *Taurus*; and the first Star of *Taurus* now resides in *Gemini*; and *Gemini* is advanced into *Cancer*, &c. See *SIGN and CONSTELLATION*.

The Equinoxes will have made their Revolution Westward, and will be return'd to *Aries* again; or the Constellations will have made theirs Eastward, and will again fall into their former places, with regard to the Equinoxes, in 25816 Years, according to *Tycho*; in 25920, according to *Ricciolus*; and in 24800, according to *Cassini*.

The Antients, and even some among the Moderns, have taken the Equinoxes to be immovable; and ascribed that Change of Distance of the Stars here-from, to a real Motion of the Orb of the fixed Stars; which they suppose to have a slow Revolution about the Poles of the Ecliptic: so that all the Stars perform their Circuits in the Ecliptic, or its Parallels, in the space of 35920 Years; after which, they should all return again to their former places.

This Period the Antients call'd the *Platonic, or great Year*; and imagin'd that at its Completion, every thing would begin again as at first: and all things come round in the same Order they have already done. See *PLATONIC YEAR*.

The Physical Cause of the *Precession of the Equinoxes*, Sir *Isaac Newton* demonstrates, does arise from the broad spheroidal Figure of the Earth; which again arises from the Earth's Rotation a-round its Axis. See *EARTH*.

**PRECIOUS, or PRETIOS Stone**, call'd also *Gem*, and *Jewel*, is a Stone extraordinarily hard, durable, transparent, and of a beautiful Colour, or Water. See *STONE and GEM*.

Of these we may distinguish three Kinds: 1<sup>o</sup>. Such as are entirely transparent; which again may be divided into such as are either colourless, as the *Diamond*; or colour'd, as the *Emerald*: Which Division of colour'd Gems may be subdivided into those of one Colour, as the *Ruby*; and those with several, as the *Amythyst*. 2<sup>o</sup>. Brilliant, or shining, as the *Bohemian Granite*. 3<sup>o</sup>. Semi-transparent, as *Opal*.

*Bishop Wilkins* divides *precious Stones* into *more and less transparent*. The *less transparent* he distinguishes by their Colours: into red, as the *Sardius* and *Cornelian*; pale, fleshy Colour, like that of a Man's Nail, as the *Onyx*; bluish, as the *Turquois*; pale purple, as the *Chalcedony*; and those of various Colours, as *Opal* and *Cat's Eye*.

The *more transparent* he distinguishes into such as are colourless, as the *Diamond* and white *Saphir*; and colour'd, which are either red, as the *Ruby*, *Carbuncle*, and *Garnet*; yellow, as the *Chrysolite*, and *Topaz*; green, as the *Emerald*, *Smaragd*, and *Beryl*; bluish, as the *Saphir*; and purple or violaceous, as the *Amethyst* and *Hycinth*.

*Dr. Woodward* divides *precious Stones* somewhat more precisely, into *opaque, semi-opaque, and transparent*. Again, 1<sup>st</sup>, the *opaque* are either of one Colour, as the *Turquois*; or of various Colours, as *Lazuli* and *Jasper*. 2<sup>d</sup>, *Semi-opaque*, either have their Colours permanent, as the *Agar*, *Chalcedony*, *Onyx*, *Sardonix*, *Cornelian*, and *Beryl*; or their Colours vary, according to the Position of the Light, as the *Oculus Catæ*, and *Opal*. 3<sup>d</sup>, *Transparent Stones* are either with Colours; as the *Topaz* and *Jacinth*, yellow, or partaking thereof; *Garnet*, *Ruby* and *Amethyst*, red; *Saphir*, *Water Saphir*, and *Aquemarine*, blue; and *Emerald*, or *Crysolite*, green, or partaking thereof: or without Colours, as the *Crytal*, *Pseudo-Diamond*, white *Saphir*, and *Diamond*.

The natural History, Characters, Properties, &c. of each Stone; see under its proper Article: *DIAMOND, CORNELIAN, RUBY, TURQUOIS, ONYX, EMERALD, CRYSOLE, &c.*

The Medicinal Virtues of precious Stones, or Gems, in the general see under *GEM*.

The Origin and Formation of precious Stones, see under *STONE*.

For the Art of engraving on precious Stones, see *ENGRAVING*.

The Art of cutting them, see under *LAPIDARY*.

**PRECIPE, or PRÆCIPIT quod reddat**, a Writ of great Diversity, both as to Form and Use. See *ENTRY and INGRESSUS*.

It extends as well to a Writ of Right, as to other Writs of Entry and Possession; and is sometimes call'd a *Writ of Right, clofe*, as when it issues out of the Court of Chancery, clofe; sometimes a *Writ of Right, patent*, as when it issues out of Chancery, patent or open, to any Lord's Court, for any of his Tenants deformed, against his Deformor. See *RIGHT*.

**PRECIPITANT**, in Chymistry, a Term apply'd to any Liquor which, being pour'd on a Dissolution, separates what is there dissolved, and makes it precipitate, i. e. fall to the bottom of the Vessel. See *DISSOLUTION*.

Thus Oil of Tartar, and the Volatile Spirit of Sal Armoniac, are *Precipitants*, with regard to the Dissolution of Gold in *Aqua Regalis*; and common Water is a *Precipitant*, with regard to the Dissolution of Jalap in Spirit of Wine. See *PRECIPITATION*.

**PRECIPITANT**, is also used in Medicine, for a Remedy which separates and precipitates any heterogeneous Matter contain'd in the Mass of the Blood; and by this means abates any irregular Fermentations, Effervescences, or the like Disorders, which that Matter had excited.

Among the Number of *Precipitants*, are rank'd Hartshorn, Crabs-Eyes, Ivory, Bezoard, Barks of Oak, and Guaiacum, Iron, Quinquina, Chalk, &c.

**PRECIPITATE**, in Chymistry, a Substance which having been dissolved in a proper Menstruum, is again separated from its Dissolvent, and thrown down to the bottom of the Vessel, by the pouring in of some other Liquor. See *PRECIPITATION*.

The Chymists make various *Precipitates* of Mercury, which are of various Colours, as the *Precipitates* vary; viz. *White, Red, Yellow, Green*, &c. See *MERCURY*.

The *white Precipitate*, is prepared of Mercury dissolved in Spirit of Nitre, and precipitated with Salt-Water, or Spirit of Salt, into a white Powder.

If in lieu of the former *Precipitants*, hot Urine be pour'd on the Dissolution, we have a *pale Red Colour*.

To make the *red Precipitate*, they take the Dissolution of Mercury made in Spirit of Nitre, evaporate all the Humidity over a gentle Fire, till nothing remains but a white Mass; which by increasing the Fire, they rufify or raise to a red Colour.—*Green Precipitate* is made with Mercury, Copper, and acid Spirits.—*Yellow Precipitate* with Mercury, and Oil of Vitriol: But these three last are improperly call'd *Precipitates*; because not procur'd by Precipitation. See *PRECIPITATION*.

**PRECIPITATION**, an Operation in Chymistry, being a kind of Separation, whereby a Body dissolv'd in any Liquor, is detach'd there-from, and falls down to the bottom of the Vessel. See *OPERATION*.

*Precipitation* is either *Spontaneous or Artificial*.

*Spontaneous Precipitation*, is when the Particles of the dissolved Body, separate of themselves from their Dissolvent.

*Artificial Precipitation*, is when some other Body, call'd a *Precipitant*, is added to procure this Separation. See *PRECIPITANT*.

There is also a *total Precipitation*, wherein the dissolved Parts are all separated, and sunk to the bottom; and a *partial Precipitation*, wherein the Parts dissolv'd are still suspended in the Fluid; and don't fall down.

#### Theory of PRECIPITATION.

To account for the Operation of *Precipitation*: It may be observ'd, that a fluid Menstruum may be made to sustain a Body specifically heavier than itself, either by making the Resistance, arising from the Cohesion of the Parts of the Fluid, equal to the Excess of specific Gravity of those Bodies above that of the Menstruum. See *MENSTRUUM*.

Or, by the heavy Body's being join'd to some lighter one; so that the two together only make one whole, equal in weight to the Fluid.

In the first case, the Resistance, we know, is still proportional to the Surface of the Corpuscles; so that the Surface being diminish'd, the Resistance is weaken'd: the Proportion therefore of the Tenacity of the Menstruum, to the Gravity of the Corpuscles being thus destroy'd, a *Precipitation* must ensue.

*Precipitation*, then, may be effected two ways, on this Foundation: viz. either by the dropping in a Liquor specifically lighter, or specifically heavier; in the former Case, the Gravity of the Menstruum, which is always proportional to the compound Gravities of both, will by this Mixture become lighter: Thus, the Menstruum being diluted, the Force of

of Cohesion is also weaken'd, so as to become unable any longer to sustain the Bodies; so Hydrometers, which are easily sustain'd in Water, upon pouring in a good deal of any burning Spirits sink to the bottom of the Glass.

And this agrees not only with the Laws of Mechanics, but with Experiments: Thus Spirit of Sal Armonic does very plentifully precipitate the Filings of Metals, dissolved in acid Menstruums; tho' it be abundantly lighter than any of them.

The same thing is done quicker by Spirit of Wine, whose Gravity is known to be almost the least of any Liquor.

By this Spirit also, all Salts, which are suspended in Water, are precipitated, and so unite into Crystals. So if you drop in distilled Vinegar, the Drois of Antimony dissolved in Water, it falls to the bottom, and affords the Golden Sulphur.

After the same manner, Water, Vinegar, &c. make a Precipitation from Acids, tho' more sparingly: Nay, Acids themselves being pour'd upon others which are heavier, will precipitate whatever is swimming in them. Thus Spirit of Salt precipitates either Lead, Copper, or Tin, dissolved in Oil of Vitriol: so little need is there of Alkalies in this Business, tho' the Chymists have unanimously contended for them as absolutely necessary.

In the 2d Case, Precipitation will succeed by the Addition of a heavier Liquor to the Menstruum. For the Particles of this Liquor, what with their Weight, and what with the Impetus they acquire in their Descent, carry down and sink all the solid Corpuscles they meet with in their way; so that the Corpuscles being thus forced down, and kept there by this adventitious Liquor, cannot mount up into their former Situation.

To try the Truth of this Reasoning by Experiments; not only acid Spirits, but even mere Water, will be found to precipitate Tinctures of Vegetables extracted by Spirit of Wine: And the very same Tinctures, extracted with Water, or Wine, are precipitated very copiously by acid Spirits, which are heavier.

Metals, when dissolved in Spirit of Sal Armonic, are precipitated with Oil of Vitriol, or Spirit of Nitre. When suspended in *Aqua Fortis*, they are precipitated with Oil of Vitriol, or Bezoaric Spirit of Nitre.

As to Bodies suspended by means of their Union with other lighter ones: This is properly the Case of dissolved Metals; and to this may the last Case of Precipitation be reduced. Here, the Particles of a Metal being separated by a Dissolvent, and rendered imperceptible by their extreme Littleness, only float, because united to very light Particles of the acid Spirit, which keeps them suspended: Tho' the great Surface they have, both on account of their Smallness, and of their Union with the Acids, frequently contribute to the Effect.

Now, as they are in a forced Equilibrium with the Fluid wherein they swim; and as the Causes that sustain them, are only accidental; they must of course be precipitated to the bottom, when the Acid or Menstruum abandons them; from whatever Cause it be: It is even sometimes sufficient, that the Quantity of the Fluid, wherein they are sustain'd, be diminish'd. For then, several of the Metallic Particles, tho' still join'd to their Acid, coming to meet, and unite, assume a smaller Surface, with regard to their Mass; and thus, being no longer held up by the Largeness of their Surfaces, they subside to the bottom.

When the Menstruum abandons a dissolved Body; if that Body be lighter than the Menstruum, the contrary to a Precipitation will ensue, i.e. the Body will rise: Thus Camphor being mixed in Oil of Olives, and the whole dissolved, the Camphor rises first, &c.

If it happen that the Particles, when abandon'd by the Dissolvent, are equally heavy with the sustaining Fluid; they will neither rise nor fall; only several of them now re-uniting, form little Masses, sufficient to spoil the Limpidness and Transparency of the Fluid; as is the Case in Resins dissolved in Spirit of Wine, and Water pour'd over them: where the Water uniting closely with the Spirit of Wine, makes it let go the greatest part of the resinous Particles.

Thus is effected what we call an *Imperfect Precipitation*; which, in reality, is no more than a Diffusion to precipitate.

If in this Case, the Aqueous Particles of the Fluid be hid, and as it were, absorb'd among the gross *Molecules* of the dissolved Matter; it forms what they call a *Coagulum*. See COAGULATION.

Sometimes, when the Liquors are pour'd on one another, the Salts with which they abound, being put into Motion, by their attractive Force, they run mutually to embrace one another; and because they don't recoil far back after the Congress, they are at length so united, as to become like a Solid, there being very little Phlegm remaining, as is very observable in *Tartarum Vitriolatum*.

In these Experiments there happens such a Conflict and Effervescence, as evaporates almost all the Moisture, with which the Salts are diluted. And upon this depends the Rationale of Chymical Coagulation, a thing of very great consequence in the Business of Precipitation. Nor can we account for Oil of Tartar precipitating Bodies dissolved in Acids, any otherwise than from its making a kind of *Coagulum* with these Corpuscles, and thereby becoming too heavy for, and exceeding the Tenacity of, the Menstruum.

Such are the general Principles of Precipitation. PRECEPTORY, *PRÆCEPTORIA*, or *Commandry*, a kind of Benefice held by the more Eminent among the ancient Knights-Templars; who were created by the Grand-Master, with the Title of *Preceptors Templi*, i.e. *Masters of the Temple*. See *TEMPLAR*.

*Stephens de Jurisd. lib. 4. says, the Preceptors were only a kind of Cells, all subordinate to their principal Mansion, the Temple in London.* See *TEMPLE*.

Of these *Preceptors*, *Dugdale* says, he finds sixteen recorded, as essentially belonging to the Templars in *England*; viz. *Cressing Temple, Welbath, Sharnes, Newland, Teusland, Witham, Temple-Bruers, Willington, Rothley, Oronington, Temple Coube, Trebigh, Risham, Mount St. John, Temple Newston, and Temple Hurst*. But there were more. See *COMMANDRY*.

PRECIPUT, in Jurisprudence, an Advantage belonging to any one, in a thing to be divided; or a Portion taken off, and set by, in his favour, &c. or the Division be made.

In noble Partition, the Eldet has always the principal Part, or Manor, for his *Preciput*.

The *Preciput* coincides with the Right of Primogeniture. See *PRIMOGENITURE*.

The Word is form'd from the *Latin Precipuus*, Chief, Principal.

PRECISION, *PRÆCISIO*, in the Schools, the same with *Abstraction*. See *ABSTRACTION*.

PRECONISATION, a Proposition or Declaration, which the Cardinal Patron makes in the Consistory at *Rome*, of a Person nominated by some Prince to a Prelature; by virtue of Letters, whereof he is the Bearer; which the Pope complying with, gives his Collation.

The Date of the Bulls is dispatch'd on the same Day with the *Preconisation*.

PRECONTRACT, a Contract made before, or prior to another; chiefly us'd in relation to Marriages. See *CONTRACT*.

PRECURSOR, *PRÆCURSOR*, *Fore-runner*, in Theology, a Person who goes before any one to notify his coming.

The Term is peculiarly apply'd to *St. John Baptist*, who is stiled the *Precursor* of Jesus Christ; from what is said of him by *St. Luke*, *Thou, Child, shalt go before the face of the Lord, to prepare his way*.

PREDECESSOR, a Person who has preceded another in the same Office, or Employ.

PREDESTINARIAN, a Person who adheres to the Doctrine of absolute Predestination. See *PREDESTINATION*.

*St. Augustin* is look'd on as the Founder of the Sect of *Predestinarians*; he being the first of the Fathers that seems to have asserted the Doctrine in such explicit Terms; tho' the *Jansenists* and *Jesuits* are still greatly divided about the real Doctrine of *St. Augustin*, in this Article; each interpreting him consistently with their own Scheme. See *JANSENIST*, &c.

Farther *Sirmond* contends for an ancient Sect of *Predestinarians*, contemporary with *St. Augustin* himself, and who had their Rise in *Africa*, in the Monastery of *Aphrumet*; from a Misunderstanding of *St. Augustin's* Doctrine. 'Tis added, that the Opinion spread thence throughout the *Gauls*; where one of them, a Priest named *Lucidus*, was condemn'd by *Faustus* Bishop of *Rebges*; and his Sentence confirm'd by two Councils.

The Doctrine was again broach'd in the ninth Century by *Godschalocus a Bendisilne*, who, as *Hincmar* in a Letter to *Pop Nicholas*, says, maintain'd with the ancient *Predestinarians* who had been already anathematized, that God predestinated some to eternal Life, and others to eternal Death; that God did not will all People to be saved; that Jesus Christ did not die for all, but only the Elect; or those that are saved, &c. See *GRACE*, &c.

This Doctrine was again condemn'd in a Synod held at *Metz*: But the *Jansenists*, particularly the Friends of *Mess. de Port-Royal*, and among the rest, the President *Manquay*, have refused *F. Sirmond's* and shew'd, that the Heresy of the *Predestinarians* is a mere Chimera; adding, that *S. Fulgentius*, *S. Propper*, and the other Disciples of *S. Augustin*, only look'd on it as an imaginary Heresy, invented by the Enemies of *S. Augustin's* Doctrine, to traduce it. In effect, the chief Evidence Farther *Sirmond* produces to the contrary, is the Priests of *Maryville*, who

are suspected of *Semi-Pelagianism*. See SEMI-PELAGIAN.

**PREDESTINATION**, in Theology, a Judgment, or Decree of God, whereby he has resolved, from all Eternity, to save a certain Number of Persons, hence named *Elect*. See ELECT.

Other Divines define *Predestination*, a Decree to give Faith in Jesus Christ, to a certain Number of Men; and to leave the rest to their own Malice, and Hardness of Heart. See DECREE.

The Remonstrants define it more laxly, and generally, the Decree of saving Believers, and damning Unbelievers. See REMONSTRANTS.

The Difficulties wherewith the modern Theology is clogg'd, turn on the Article of *Predestination*; both the Roman and Reformed Churches are divided about it: The Lutherans speak of it with Horror; the Calvinists contend for it with the greatest Zeal; the Molinists and Jesuits preach it down as a most dangerous Doctrine; the Jansenists assert it as an Article of Faith: The Arminians, Remonstrants, and Pelagians, are all avowed Enemies of *Predestination*. See ARMINIAN, JANSENIIST, MOLINIST, JESUIT, PELAGIAN, &c.

Those strenuous Patrons of *Jansenism*, the *Port-Royalists*, teach, that God predestinates those who he foresees will co-operate with his Grace to the End. *Du Fin* adds, that Men don't fall into Sin, because not predestinated; but they are not predestinated, because God foresaw their Sins. See ELECTION, REPROBATION, &c.

**PREDESTINATION**, is also used for a Concurrence of second Causes, appointed by Providence; in virtute whereof, things are brought to pass by a fatal Necessity; contrary to all appearance, and manage all opposition. See FATE and DESTINY.

The *Jurks* see great *Predestinarians*; they esteem the highest Accident predestin'd; and on this account, are much more daring in Battle, and run greater riskses of their Lives, than they would otherwise do. See MAHOMETANS.

**PREDETERMINATION**, in Philosophy and Theology. The Schoolmen call that Concurrence of God, which makes Men act, and determines them in all their Actions, both Good and Evil, *Physical Predetermination*, or *Premotion*. See PROMOTION.

Divines hold, that God has no part in Sin; inasmuch as he only affords his Concurrence to the *physical* part of human Actions, not to the *moral* part. See LIBERTY and NECESSITY.

*Physical Determination*, or *Premotion*, if there be any such thing, is that Action of God, whereby he excites a second Cause to act; or by which, antecedently to all Operation of the Creature, or before it could operate in consequence either of the Order of Nature or Reason, he really and effectually moves, and occasions it to produce all its Actions: that is, whatever the Creature does, or acts, is really done, and acted, by the Agency of God on the Creature, who is all the time passive. So that without such *Predetermination* of God, all Creatures must remain in an eternal State of Inactivity; and with such *Predetermination*, it is impossible but they should do what they are thus put upon doing.

'Tis strongly controverted, whether or no such a *Physical Predetermination* be necessary to the Action of Natural Causes. The *Jesuits* maintain the Negative; urging, that all Natural Causes are, of their own Nature, determin'd to a certain Action; whence it should seem needless to call in a new *Predetermination* of God, e. g. to Fire, to make it warm the hand. For if an Object be, by the Course of Divine Providence, apply'd to Fire; what need a second Application of the Fire, to make it warm the Object apply'd thereto? since Beings are not to be multiply'd unnecessarily. See CAUSE.

And such *Predetermination* some Philosophers hold still less requisite to produce the Acts of the Will: At least, say they, the human Mind must be allow'd the common Power and Privilege of a second Cause; and therefore be entitled to produce its own Acts, as well as other strictly natural Agents.

The *Theologians*, on the other hand, stand up strenuously for the *Physical Predetermination*: One of their principal Arguments is drawn from the Subordination of second Causes to the first. Where there are several subordinate Agents, say they, the lower Agents do not act, unless first moved and determin'd thereto by the first; this being the very Essence of Subordination.

Again, the like they argue from the Dominion of God over all his Creatures: 'Tis of the Essence of Dominion, say they, to apply and direct Things subject thereto, to its own Operations; and this, if the Dominion be only moral, morally; but if it be also physical, physically. And that this is the Case in respect of God, and his Creatures, is confess'd. See God.

**PREDIAL Tithes**, are Tithes paid of Things, which grow from the Ground only; as *Corn, Hay, Fruit, &c.* See TITHES.

**PREDICABLE, PREDICABLE**, in Logic, a general Quality, or an Epithet which may be *predicated* of, or applied to several Subjects. Thus Animal is *predicable* both of Man and Beast: Man is *predicable* of Peter, and James: Triangle is *predicable* of an hundred different Kinds of Figures; as right Angles, Scalenes, Isosceles's, &c. See PREDICATE.

The Schoolmen reduce the *Predicables* to five Classes, viz. *Genus, Species, Proprium, Differentia, and Accident*; under one or other of which, all that can be *predicated* of any Subject, is included. See GENUS, SPECIES, PROPRIUM, &c.

A *Predicable* is also call'd an *Universale Logicum*, as having respect to other particular, and inferior, or subject Things: Thus Animal is an *Universal*, with regard to Man and Beast.

'Tis call'd a *Logical Universal*, to distinguish it from a *Metaphysical* one; which is a common Being, consider'd in itself, and therefore denominat'd *universal* in *Essendo*; whereas the Logical one is only universal as to our Conception and Application. See UNIVERSAL.

Among the Schoolmen, *Predicable* is usually defined *unum, aptum Predicari de multis, univoce, & diviso*; or, somewhat more clearly, a *Predicable* is a Nature which may be *predicated* univocally of all things to which it is common; and which, as it is *dividually multiply'd* in all its Subordinates, may be *applied* *predicated* of them all.

Thus, when the Appellation of *Virtus* is attributed to Justice, Prudence, Temperance, Fortitude, Charity, &c. the same Reason may be given why each is distinguish'd by such Name; as being all founded in a Mediocrity, and being agreeable to right Reason, which is the Character of *Virtus*.

Hence, if there be several things call'd by some common Name; but the Reason of such Name is not the same in all, but different; these do not come under the Number of *Predicables*. As in the Instance, *Canis, Dog*, which is both apply'd to a Domestic Animal, distinguish'd by its barking; to a Constellation of the Heavens; and to a Sea-Fish.

The way by which the Mind comes to form such *Predicables*, or *Universals*, is thus: Among those things which fall under our Observation, we find some Characters and Properties common to several; and others peculiar to each: What we find common, we consider a-part; and thus form an *Universal* equally applicable to all. See GENERAL.

**PREDICABLY, PREDICABILITY**, is used in the Schools in opposition to *predicamentally*. Thus, Matter is said to be united to Form *predicably*, or *per accidens*; to exclude the Notion of a predicamental Accident.

**PREDICAMENT, PREDICAMENTUM**, in Logic, a Class, or Order of Beings, or Substances rang'd according to their Natures; call'd also *Category*, or rather *Categoryema*. See CATEGORY.

The Word *Predicamentum* was first introduced by *Bertrius*, in lieu of the Greek *Category*; and is used among the School-Writers with a good deal of Latitude and Variety: For it either signifies the Act of *predicating*; or, a common *Predicate* itself; or, the Genus or Basis of any *Category*; or, the Collection of several common Predicates disposed in a certain Order. Which last is its most usual Acceptation.

Hence some define it a Series of Predicates drawn from the Genus, or highest Term, thro' all the inferior Genera, and Species. Thus, a Series of *Substance* drawn from *Substance thro' Body, Living, Animal, Man, to Peter*, is call'd the *Predicament* of Substance.

But the usual Definition of *Predicament* among Logicians, is, That it is a natural Order, or Scheme, of some most general or universal Thing, and all that is contain'd under the same, that is, all the subordinate Genera, Species, and Individuals.

The Properties of a *Predicament*, *ex parte vocis*, i. e. of the Term, or Word whereby the *Predicament* or *predicamental* Series is denoted, the Logicians hold, are, that it be one, simple, precise, and continuous.

*Vox una, & simplex, rebus concinna locandis.*

The Conditions requisite *ex parte rei*, or of the Thing to be rang'd in a *Predicament*, are contain'd in the following Verse:

*Entia per sese, Finita, Realia, tota.*

i. e. it must be a *positive Being*, in exclusion of Non-Entities, Negations, Privations, impossibilities, &c. and a *Being per se*, to exclude accidental Things, fictitious Things, &c. And *finite*, that is, of a limited Nature and Extent, to exclude God and other Transcendentals: *Real*, since its

Intention is for the better and more commodious disposing of Things in their places to be the more distinctly known and conceiv'd; and *wholes*, or complet, as not being in the relation of a component Part, or as only accessory to some other.

**PREDICATE**, *PREDICATUM*, in Logic, that part of a Proposition which affirms or denies something of the Subject. See **PROPOSITION**.

Thus, in God made the World; *made the World*, is the Predicate; God, the Subject. See **SUBJECT**.

A Predicate, say the Schoolmen, is properly a Name predicated, or spoke, of another, as its Subject. As *Man*, in the Proposition *Peter is a Man*.

It is a celebrated Rule or Law of Predicates, That nothing is esteem'd to be absolutely spoke or affirm'd of another, unless it be affirm'd thereof in such manner, or by such an Affirmation, as wants nothing either in the Subject, Predicate, or Copula, to make it true.

This also is a noted Property of a Predicate, That it contains, in some measure, its own Subject. Thus Metal contains Gold, Copper, Iron, &c. of which it is predicated.

The Word *Predicate* is sometimes used indifferently with *Attribute*; but the more accurate Writers make a distinction. Every Predicate is indeed an Attribute, since whatever is predicated of a Thing, is attributed to it: So, if Animated be predicated of Man, it is also attributed to him. But every Attribute is not a Predicate: Thus Soul, Learning, &c. are attributed to Man, but not predicated of him. See **ATTRIBUTE**.

**PREDICATING**, in Logic, is properly the Act of affirming or denying somewhat of something: As, Man is not a Stone, Body is Substance. The Thing thus predicated, is call'd *Predicate*. See **PREDICATE**.

In the Doctrine of Universals, or Predicables, to predicate is to speak or declare a Thing truly, directly, and affirmatively. Thus Man is predicated of several, i. e. it is truly, and directly affirm'd that these several are Men; as when I say, *Socrates is Man, Plato is Man, Aristotle is Man*, &c. See **PREDICABLE**.

The Things predicated of others, are reducible to three Classes. *Genera*, as Animal, of Man, &c. *Formas*, as Whiteness, of a Swan, &c. and *Equals*, of Things of equal Extent, as Species, Difference, Proprium, &c.

The Schoolmen distinguish several ways of *Predicating*; as, 1<sup>o</sup>. *In quod tantum*, which is to predicate essentially, both as to the thing and the manner; as Justice is a Virtue. 2<sup>o</sup>. *In quale tantum*, which is to predicate accidentally, both as to the thing and the manner; as Peter is Learned. And, 3<sup>o</sup>. *In quale quid*, or *in quale post quid*, which is, to predicate both essentially and accidentally; as Man is rational.

**PREDICTION**, *PAEDICTIO*, Divination, Prophecy, or Foretelling of what is to come; either by divine Revelation, by Art and human Invention, or by Conjecture. See **DIVINATION**, **REVELATION**, &c.

Divines labour hard to make the Predictions in the Old Testament tally with the Events in the New. See **PROPHET**.

The Predictions of Oracles were all dark and ambiguous. See **ORACLE**.

**PREDOMINANT**, *Reigning*, that which prevails, appears most, or has some Superiority, or Ascendance over another thing.

Thus we say, Bitterness is the predominant Quality among Tastes, or that which is most perceiv'd. 'Tis a Rule, that Sugar never predominate in Confections, nor Pepper in Ragouets.

**PRE-EXISTENCE**, the State of a thing actually in being before another. See **EXISTENCE**.

The ancient *Pythagoreans* and *Platonists* all asserted the Pre-existence of human Souls, i. e. that they were in being before their being join'd to our Bodies. See **METEMPSYCHOSIS** and **TRANSMIGRATION**.

*Origen* held the eternal Pre-existence of Souls. See **SOUL**.

We believe that God created the World out of nothing; and not of pre-existent Matter. See **CREATION**.

Some Persons have held Mankind pre-existent to Adam. See **PRE-ADAMITE**.

**PREFACE**, *PREFATIO*, a Note, or Advertisement in the beginning of a Book, to inform the Reader of the Order, Disposition, &c. observed therein; of what is necessary to receive its full effect; and facilitate the understanding thereof.

The Word is form'd from the Latin, *pre* and *fari*, q. d. to speak before.

There is no part of Writing that requires more Art, or that fewer Authors succeed in, than Prefaces. Prefacing is, in effect, a particular Species of Writing, and has its Character and Taste to distinguish it from all others. It

is neither Argumentation, Discourse, Narration, nor Apology.

The *Romanists* call that part of their Mass which precedes the Consecration, and which is to be rehearsal in a peculiar Tone, *Preface*. See **MASS**.

The Use of Prefaces in the Church, they contend, is very ancient; and coequeure, from some passages of St. *Cyrilian*, &c. that it was in use in the times of the Apostles.

The Preface to the Mass anciently had, and still has, very different Names in different Churches. In the *Gothic*, or *Gallican* Rite, it is call'd *Immolation*; in the *Mozarabic* Rite, *Motion*; anciently among the *French*, it was call'd *Complation*; in the *Roman* Church, alone, it is call'd *Preface*.

**PREFECT**, *PRAEFECTUS*, in ancient *Rome*, one of their chief Magistrates, who govern'd in the Absence of their Kings, Consuls, and Emperors.

His Power was somewhat different at different times; but was always greatest under the Emperors. His principal Care was the Government and Administration of the City of *Rome*.

He took cognizance of all Crimes committed in the City, or within as hundred Miles thereof. He judged capitally and finally, no Appeal lying from him; and even by the *62d* Norel, he presided in the Senate; taking place before all the *Patricii* and *Consulares*, &c.

He had the Superintendance of the Provisions, Policy, Buildings, and Navigation. There is still a *Prefect* of *Rome*, who is a kind of Governour; differing little from the ancient *Prefect*, except that his Authority only extends to 40 Miles without *Rome*.

**PREFECT of the Praetorium**, *PRAEFECTUS Praetorii*, was the Chief, or Leader of the *Praetorian* bands or Cohorts, destined for the Emperor's Guard. See **PRAETORIAN**.

The *Praetorian* Legion, according to *Dion*, consisted of ten thousand Men. *Suetonius* refers the Institution of *Praefectus Praetorii* to *Augustus*. 'Tis added, that he was usually taken from among the *Roman* Knights.

By the Favour of the Emperors, his Authority grew very considerably; insomuch that he became the Arbitrer and supreme Judge of all Affairs.

To reduce this extravagant Authority, *Constantine* divided the *Praefecture* of the *Praetorium* into four *Praefectures*; and each of these he again subdivided into Civil and Military; tho' the Name was only reserved to him who was invested with the Civil Authority; and that of *Comes Belli* given him who had the Command of the Cohorts. See **COUNT**.

Thus the Office of *Praefect* of the *Praetorium*, which, in its Origin, and till the time of *Constantine*, was Military, and succeeded to that of *Magister Equitum*; is now commended a purely Civil Magistrature; and at length became the prime Dignity of the Empire.

The succeeding Emperors following *Constantine's* Division, divided the Empire into four *Praefectures Praetorii*, as into four Dioceses; viz. the *Gauls*, *Illyria*, *Italy*, and the *East*. See **DIOCESIS**.

The Provinces whereof these Dioceses consisted, had their particular Governours; at the Head of whom was the *Praefect*, who, tho' he had not the Command of Arms, yet had the Power of the Sword; decided ultimately of all Affairs, and had all the Marks and Honours of Sovereignty.

*Justinian* created a fifth *Praefect* of the *Praetorium* for the Government of *Egypt*, which had been torn off from the Diocese of the East, by the invasion of the *Vandals*, during the Empire of that Prince.

Under *Augustus*, the Officer sent to govern *Egypt* with a proconsular Authority, was call'd *Praefectus Aegypti*.

**PRE-EMPTION**, a Privilege antiently allow'd the King's Purveyor, of having the Choice, and first buying of Corn, and other Provisions for the King's Houle; but taken away by the *Stat. 19 Car. 2*. See **PURVEYOR**.

**PREENING**, in Natural History, the Action of Birds cleaning, composing, and dressing their Feathers, to enable 'em to glide more easily thro' the Air. See **FEATHER**.

For their use herein, Nature has given 'em an admirable piece of Furniture; viz. two peculiar Glands which secrete an unctuous Matter into an Oil-bag, perforated; out of which the Bird, on occasion, draws it with its Bill. See **OIL-BAG**.

**PREGNANCY**, the State of a Woman when she has conceiv'd, or is with Child. See **CONCEPTION**.

The same State with a View to the bearing of the Child in the Womb, is call'd *Gestation*. See **GESTATION**.

Hence also the Act of *Impregnating*. See **GENERATION**, **FLOWER**, **SEED**, &c.

**PREJUDICE**, *PREJUDICIUM*, a false Notion, or Opinion of any thing, conceiv'd without a due previous Examination thereof. See **FALSHOOD**, **OPINION**, &c.

*Prejudice*, q. d. Pre-judgment, does not imprint a Judgment merely as prior to another in respect of Time, but as being

being prior therein in respect of Knowledge, or of sufficient Attention to the thing; the Proposition *pre* expressing an Anticipation, not so much of Time, as of Knowledge, and due Attention. See ERROR.

Hence *Prejudice* is also call'd among the Schoolmen *Anticipatio & preventio Cognitio*, a pre-conceiv'd Opinion, &c. See JUDGMENT, TRUTH, FALLACY, SENSE, &c.

**PRELATE**, an Ecclesiastical Superior, constituted in some eminent and superior Dignity of the Church. See DIGNITARY.

Patriarchs, Primate, Archbishops, Bishops, Generals of Religious Orders, certain Croic'd and Mitred Abbots, and even Deans and Archdeacons are ranked among the Number of *Prelates*.

The Word comes from the *Latin*, *Prelatus*, of *pre* and *laus*.

**PRELATE of the Garter**, is the first Officer of that Noble Order, and antient as the Institution itself. See GARTER.

*William de Edynston*, then Bishop of *Windsor*, was the first *Prelate* at the creation of the Order; and it has been continued in that See ever since.

'Tis an Office of great Honour, but has neither Salary nor Fees; only a convenient Lodging allow'd in *Windsor-Castle*, and as oft as the *Prelate* comes thither (by the Sovereign's Command) he is to have Court-Livery allow'd for himself and Servants.

**PRELIMINARY**, something to be examined, dispatch'd, or determin'd, e'er an Affair can be decided, or treated of thoroughly, and to purpose.

*Preliminaries of Peace* take up the greatest part of *Treaties*. They consist in examining of Powers, Qualities of Princes, Ranks of Ambassadors, &c.

The Word is form'd from the *Latin*, *pre*, and *limen*, Threshold.

**PRELUDE**, in Music, a *Flourish*, or an irregular Air which the Musician plays off-hand, to see if his Instrument be in Tune; and to lead him into the piece to be play'd.

**PREMISES**, **PREMISSA**, **PRÆMISSA**, in Logic, the two first Propositions of a Syllogism. See SYLLOGISM.

When a Syllogism is in form; the two *Premises* being granted, the Conclusion cannot be deny'd. See CONCLUSION.

The *Premises*, says *Charron*, are properly the parts of the Antecedent of an Argument, when complex; and are call'd *Premises*, because premis'd to the Conclusion. See ANTECEDENT, &c.

Thus in the Argument, Every Man is an Animal, *Peter* is a Man, therefore *Peter* is an Animal; the Propositions, Every Man, &c. and *Peter*, &c. are the *Premises*. See PROPOSITION.

*Premises* are the Principles of our Reasonings; as being clear, evident, and demonstrative Propositions, from the relations whereof to one another, we draw or infer new Truths, Propositions, &c. See REASONING, PRINCIPLE, MAXIM, &c.

The *Premises* are either equal, where neither suffices alone for the drawing a Conclusion, as in the Instance above; or unequal, the one major, greater, from which alone the Conclusion is drawn; the other minor, or less, which only serves in applying the Antecedent to the Consequent. See CONSEQUENT.

In the common Practice of the Schools, however, every Syllogism, or formal Argument, of what kind soever, is said to have a Major and a Minor; how equal soever the *Premises* may be. See MAJOR and MINOR.

**PREMISES**, in Law, the Lands, &c. before mentioned in a Lease, Conveyance, or the like.

**PREMONSTRANSES**, or **PREMONSTRATENSES**, a Religious Order of Regular Canons instituted in 1120. by *S. Norbert*; and thence also call'd *Norbertines*.

The first Monastery of this Order was built by *Norbert* in the Isle of *France*, three Leagues to the West of *Laon*; and by him call'd *Premontre*, *Premonstratum*, whence the Order itself was denominat'd; tho' as to the occasion of that Name, the Writers of that Order are divided.

The Order was approved by *Honorius II.* in 1126. and again by several succeeding Popes. At first the Abstinence from Flesh was rigidly observ'd; in 1245, *Innocent IV.* complain'd of its being neglected, to a general Chapter; in 1288, their General, *William*, procur'd leave of Pope *Nicholas IV.* for those of the Order to eat Flesh on *Journies*. In 1460, *Pius II.* granted 'em a general Permission to eat Meat, excepting from *Septuagesima* to Easter.

The Religious of this Order are clothed in white, with a Scapular before the Calf; Out of Doors, they wear a white Cloak and white Hat; within, a little Camail, and a Church surplice, &c.

In the first Monasteries built by *Norbert*, there were one for Men, and another for Women, only separated by a Wall. In 1157, by a Decree of a General Chapter, this Practice was prohibited, and the Women removed out of those already built, to a greater distance from those of the Men.

**PREMOTION**, in the Schools, the Action of God co-operating with the Creature, and determining him to act. See PREDETERMINATION.

*Physical Premotion*, according to *Aloarez*, *Lemas*, &c. is a Complement of the active Power, whereby it passes from the first Act to the second; *i. e.* from a compleat, and next Power, to the Action. 'Tis an Influence or participation of the Virtue of the first Cause which makes the second Cause actually active. See CAUSE.

**PREMUNIENTES**, in Law, Writs dispatch'd to each Bishop to call 'em to Parliament, and warning them to bring with them the Deans, and Archdeacons, one Proffor for each Chapter, and two for the Clergy of his Diocess. See CONVOCATION.

**PREMUNIRE**, *Premunire*, a Term used both for an Offence; and for a Writ granted thereupon; and for the Punishment thereof.

These will all be understood from one: Antiently, then, the Church of *Rome*, on pretence of her Supremacy and the Dignity of *St. Peter's* Chair, took upon her the disposal of moit of the Bishopsricks, Abbies, and other Ecclesiastical Benefices of Worth, by Mandates, or Bulls call'd *Expectative Graces*, and *Provisiões*, before they became void. See PROVISION and EXPECTATIVE.

*Edward III.* not brooking so intolerable an Incroachment, made several Statutes against those who drew the King's People out of the Realm, to answer to things properly belonging to the King's Court; and another to restrain the Privilege of the Pope.

The Pontiff, however, still persisted in his Preventions; and the flux of People from *England* to *Rome*, to sue for them, was as great as ever.

This occasion'd *Richard II.* to make several Statutes of the like Import with those of *Edward III.* particularly one, where he assign'd their Punishment to be this; That they should be out of the King's Protection, attach'd by their Bodies, *i. e.* surpris'd during Life; and lose their Lands, Goods, and Chattels; which is since call'd the Penalty of a *Premunire*.

*Henry IV.* made new Statutes against other Abuses of this kind, not fully obviated in those of his Predecessors; adding certain new Cases, and laying on 'em the same Penalty.

By later Statutes, the same Penalty is laid on some other Offenders; as, *e. g.* by that of *Elis.* on him who denies the King's Supremacy a second time. By 13 *Elis.* on those who assert the Pope's Authority, or refuse the Oath of Supremacy; on seditious Talkers of the Inheritance of the Crown; and such as affirm the King or Queen to be a Heretic. And by Statute 13 *Car. 2.* on those who affirm that the Parliament begun *November 1640.* is not yet dissolved; or that there is any Obligation in an Oath or Covenant, &c. to endeavour a Change of Government either in Church or State; or that the Houses of Parliament have a legislative Authority without the King.

The Word *Premunire* is now chiefly used for the Punishment appointed by the Statutes above-mentioned: Thus when 'tis said, a Man for an Offence, shall incur a *Premunire*, 'tis meant he shall incur the Penalty appointed by the Statute 16 *Rich. 2.* commonly call'd the Statute of *Premunire*.

The Word is a Corruption of the *Latin*, *Premovere*, *q. d.* to forewarn, or bid the Offender take care; of which a Reason may be drawn from the Words of the Statute 27 *Edw. 3.* and the Form of the Writ, *Premunire facias presertim preposuisti, & J. R. procuratorem, &c. quod tunc sine coram volis.*

**PRENDER**, in Law, (from the *French*, *prendre*, to take) a Power or Right of taking a thing before it is offer'd. It lies in *Rent*, but not in *Prender*. *Coke's Rep. 1 part.* Sir *John Peter's* Case.

**PRENDER de Baron** is an Exception to disable a Woman from pursuing an Appeal of Murder against the Killer of her former Husband; taken from her having married a second. See APPEAL.

**PRENOTION**, *Prænotio*, or *Præcognitio*, a Notice, or piece of Knowledge preceding some other, in respect of time. Such is the Knowledge of the Antecedent; which must precede that of the Conclusion. See NOTION, KNOWLEDGE, &c.

**PREPARATION**, *Preparatio*, or *Apparatus*, in Mathematics, one of the Parts or Branches of a Demonstration. See DEMONSTRATION.

If it be a Proposition in Geometry, the *Preparation* consists in some Lines to be drawn in the Figure; if a Proposition in Arithmetic, in some computation to be made to come the more easily at the Demonstration.

**PREPARATION**, in Chymistry and Pharmacy, is used for the several Manners of managing the *Materia Medica*, and of disposing it to serve the several purposes.

There are various Preparations of Mercury, Antimony, and other Drugs to purify 'em, sublimate, calcine, edulcorate 'em, &c. See MERCURY, &c.

Crude Antimony is used in Iudæic Decoctions; tho', when it has undergone a certain Preparation, it becomes a violent Vomitive. See ANTIMONY.

PREPOSITION, in Grammar, one of the parts of Speech, or Discourse. See SPEECH.

The Preposition is an indeclinable Particle, which yet serves to govern the Nouns that follow it. Such are *per, pro, propter*, in, with, thro, from, by, &c.

They are call'd Prepositions, because *prepositæ*, placed before the Nouns they govern.

*P. Suffix* does not allow the Preposition to be a Part of Speech; but merely a Modification of a Part of Speech, viz. of the Noun, serving only to modify or circumstantiate. See MODIFICATIVE.

PREPENDED, in Law, *Fore-thought*. In this sense we say *prepending Malice*.

If, when a Man is slain upon a sudden Quarrel, there were Malice *prepending* formerly between them, it makes it Murder; and, as it call'd in some Statutes, *prepending Murder*. See MURDER.

PREPUCE, *Præputium*, in Anatomy, the Fore-Skin; see PRÆPUTIUM.

PREROGATIVE, a Privilege, or Pre-eminence, which a Person has over another.

The Word is borrowed from the Name of a Century in ancient Rome, which gave the first Vote, or Suffrage in the *Comitia*, or Assemblies, for the Election of Magistrates; *quasi Prærogati*; because first ask'd, or their Suffrage first required. See SUFFRAGE and CENTURY.

Their Vote was call'd *Omens Prærogativæ*, because the rest usually gave their Votes the same way. See OMENS.

PREROGATIVE of the King, is that Power and Privilege which the King hath over, not only other Persons, but over the ordinary Course of the Common Law, in Right of his Crown.

Such are these, That the King may pardon a Person condemn'd to die: That the King's Person is subject to no Man's Suit: His Possessions cannot be taken from him by any Violence, or wrongful Diffusion: His Goods and Chattels are subject to no Tribute, Toll, or Custom, nor distrainable, &c. See KING.

PREROGATIVE Courts, is a Court belonging to the Archbishop of Canterbury, wherein all Wills are proved, and all Administrations granted, that belong to the Archbishop by his Prerogative; that is, where the Party at his death had five Pounds or upwards in the Diocese, or ten Pounds out of the Diocese where he died. See COURT.

The Archbishop of York hath also the like Court call'd, his *Exchequer*.

All Citations and Decrees of this Court run in the Name of the Archbishop. See ARCHBISHOP.

This Court, for the Province of Canterbury, is kept in the common Hall in Doctor's Commons, in the Afternoon, next day after the Arch.

The Judge is attended by the Register, who sets down the Decrees and Acts of Court; and keeps, records, &c. all original Wills and Testaments of Parties dying, having *bona notabilia*.

The Place is usually call'd the *Prærogative Office*, now kept in *Dean's Court*; where, for a moderate Fee, one may have a Copy of any such Will. See WILL.

PRÆSAGE, PRÆSAGIUM, an Augury, or Sign of something to come. See AUGURY.

The Romans judgment of future Events by certain Signs, which their Superstition, or the Artifice of their Priests had invented. Their most celebrated *Præfages* were founded on the Flight of Birds, or the Entrails of Victims: All Night-Birds pass'd for Birds of ill *Præfage*. See VICTIM, &c.

'Tis a popular Error, that Comets *præfage* Misfortunes. See COMET.

Clofe Weather, and a Southern Wind, *præfage* Rain. See WEATHER, &c.

PRESBYTER, a Priest; or a Person in Priests Orders. See PRIEST.

He is thus call'd from the Greek *πρεσβυτης*, *Elder*, of *αηλις*, *Old*; because, antiently, none were ordained but such as were advanced in Years.

The great Dispute between the Retainers to the *Geneva*, and the *Roman* Discipline, is about the Sameness or Difference of *Presbyters* and Bishops, in the Times of the Apostles. The *Presbyterial* Character is indelible.

PRESBYTERIANS, a Name assumed by the *Calvinists* of Great Britain. See CALVINIST.

The *Presbyterians*, as to Doctrine agree with the Church of England: Their chief Difference lies in the Point of Discipline; viz. who shall appoint the Governours of the Church, and what Subordination there shall or shall not be between them. See DISCIPLINE.

The *Presbyterians* allow of no Hierarchy; no Subordination in the Persons of their Ministers: Bishops and Priests, they maintain, in the Times of the Apostles were the same; and, therefore, tho' they allow Episcopacy as now settled in the Church of England to be very antient, yet they deny it to be *jure divino*. See HISTOR and EPISCOPACY.

In lieu of a Series of Ministers one over another, in Quality of Priests, Bishops, and Archbishops, their Policy consists in a Series of Assemblies, or Synods: Thus every Minister is to be obedient to the *Class* under which he lives; and that *Class* to a *Synod*, *Provincial*, *Classical*, or *Oecumenical*. See CLASS, SYNOD, &c.

The Power of Ordination, with them, resides in a *Class*; and none are admitted to administer the Sacrament, but those ordained by the Imposition of Hands of other Ministers.

They make use of Deacons to take Care of their Poor, and in the Government of the Church, call in *Lay-Elders*; whence their Name, from the Greek *πρεσβυτης*, signifying *Senior*, *Elder*. See ELDER.

This now the reigning Discipline in the Church of Scotland; as it was, during the Inter-regnum, in England.

PRESBYTERY, *Presbyterium*, an Assembly of the Order of Presbyters, or Priests, with *Lay-Elders*; for the Exercise of Church-Discipline.

The Kirk or Church of Scotland is divided into sixty-nine *Presbyteries*, each consisting of a number of Parishes, not exceeding twenty-four, nor less than twelve.

The Ministers of these Parishes, with one Ruling-Elder chosen half-yearly, constitute a *Presbytery*; who, meeting in their chief Town whence the *Presbytery* is denominated, chuse a Moderator, or rather Prolocutor, half-yearly.

They determine all Appeals from Kirk-Sessions, i. e. from the several Parochial-Assemblies; but can try nothing at the first Instance cognisable before a Kirk-Session. See KIRK-SESSION.

They compose all Differences between Ministers and People; for which end they hold *Presbyterial* Visitations in each Parish, where they examine the Registers of the Kirk-Sessions, &c.

They enquire into Repairs of Churches, see that the Glebe, &c. suffer no Dilapidations; appoint Schools in the Parishes, and see that the Funds ben't misapply'd.

'Tis they alone can exclude from the Communion, license Probationers, suspend, depose, and, in effect, determine all Ecclesiastical Matters within their District. From the *Presbytery* there lies an Appeal in all Cases to Provincial Synods. See SYNOD.

PRESBYTERY, *Presbyterium*, is sometimes also used for the Choir of a Church, because antiently appropriated to the Presbyters; in opposition to the Nave or Body of the Church, which was for the People. See CHOIR and CURIA.

PRESBYTIE, in Optics, a Term apply'd to Persons in whom the Configuration of the Crystalline of the Eye is too flat, so that they see distant things clearly, but those near at hand confusedly. See VISION.

The Reason is, that, in near Objects, the visual Rays passing the Retina before they unite, there can be no distinctness, since the distinct Base falls too far off beyond the Retina. See CRYSTALLINE and RETINA.

This defect is helped only with convex Glasses, or Spectacles; which will make the Rays converge sooner, and if they are well fitted, fall exactly on the Retina. See CONVEX and SPECTACLE.

The Word is form'd from the Greek *πρεσβυς*, *Senex*; because old People are naturally subject to this defect; Time and the Friction of the Eye-Lids, &c. gradually wearing the Ball flat.

*Presbyta* are opposed to *Myopes*, in whom the Crystalline is too round. See MYOPE.

If the distance between the Retina and the Crystalline be too small, the Person will likewise be a *Presbyta*. See CRYSTALLINE, &c.

PRESCIENCE, in Theology, *Prevision*, *Fore-knowledge*; the Knowledge which God has of things to come.

The Doctrine of Predestination is founded on the *Prescience* of God, and on the supposition of all Futurity's being present to him. See PREDESTINATION.

Human Reason can scarce reconcile the *Prescience* of God with the Free-Agency of Man. See LIBERTY and NECESSITY.

How are we to admire the depth of the *Prescience* and Wisdom of God; who, in giving the first Motion to Matter, fore-saw all the possible Combinations this first Impression might undergo during infinite Ages? *Mahdy*.

PRESCRIPTION, in Law, a Title introduced for assuring the Property of Effects in favour of Persons who have possess'd them a certain time; and to keep off any who would disquiet them, or recover the thing possess'd, after the Term fixed by the Laws. See POSSESSION.

*Tour.* it calls *Prescription* a Penalty imposed by the Laws upon Negligence; and adds, that Possessors who have no other Title to plead but *Prescription*, are only honest Usurpers.

In effect, however, the Law of *Prescription* does not punish the Indolence of Proprietors; but only interprets their Silence for their Consent; presuming that a Man who neglects to assert his Right for a long Series of Years, gives it up.

There are some of the Lawyers who doubt whether *Time* and unjust *Prescription* be any legitimate Means of acquiring; others, more favourable, call it the *Patron of Mankind*; as being a general Presumption, under which the Law will have Men live in peace.

In the Common Law, *Prescription* is usually understood of a Possession for Time immemorial; as when my Ancestors, or his, from whom I have an Estate, have enjoy'd and used it all the Time wherof any Memory remains.

But in the Civil Law, and even in our Common Law, there are *Prescriptions* of a much shorter Date. *Prescription* of forty Years excludes all Actions whatever. *Reform. Leg. Eccl.*

The Custom of *Paris* allows of a *Prescription* of ten Years, if the Parties be present, and twenty if absent, in favour of peaceable Possessors of an Inheritance, if they have any Title, however controverted; and of thirty Years in favour of those who possess without any Title at all.

In *Normandy*, a *Prescription* of forty Years peaceable Possession is equivalent to a Title, to Immoveables; and for Moveables and personal Actions, a *Prescription* of thirty Years suffices.

In *Romish* Countries, *Prescription* does not avail against the Church, if less than a hundred Years. In *France*, *Prescription* of twenty Years is admitted against all Crimes, except Duelling, which was excluded by a Declaration of the Year 1679. In Matters of Adultery, five Years suffice, i. e. provided there have been a discontinuance of Prosecution all that time.

By our Statutes, a Judge or Clerk convicted of false entering Pleas, &c. may be fined within two Years; but those elapsed, he prescribes against the Punishment of the Statute.

The Crime of Maintenance or Embracery, whereby Perjury is committed by a Jury, must be prosecuted within six days; otherwise the Parties prescribe. See *JURY*.

There is no *Prescribing* against a Man's Lord; so *Prescription* avails to take off a Servitude or Tenure: A Title is always required there.

The Author of the History of the Inquisition observes, that no Time or *Prescription* avails in Matters of Heresy; even Death itself does not secure the suspected from the Researches of the Inquisition. See *INQUISITION*.

*PRESCRIPTION*, in Medicine, the Art, or Art of assigning a proper and adequate Remedy to a Disease; from an Examination of the Symptoms thereof, and an Acquaintance with the Virtues and Effects of the *Materia Medica*. See *REMEDY AND DISEASE*.

The *Methodus prescribendi* is the last, finishing piece of Furniture of a Physician, and is the result of all the rest; join'd with a ready, present Thought. See *MEDICINE AND PHYSICIAN*.

To *Prescribe* with Judgment, Elegance, &c. a moderate Acquaintance with Pharmacy, i. e. with the Forms and Preparations of Medicines, is required. See *PHARMACY*.

The Merits of a Bill or *Prescription* consist in its being concise, pertinent, efficacious, and agreeable; in the best and suitablest Materials being pick'd on; those assembled in the most judicious Proportions, made up in the best and most convenient Form, and apply'd in the justest Dose; a due regard being still had to the Non-naturals, Regimen, intervals of Application, &c. *Sydenham* excell'd in *Prescription*. See *DOSE*, *DIET*, &c.

*Prescription* is either *Official* or *Extemporaneous*; the former consists in the ordering of the Medicines which the Apothecaries keep by 'em ready prepared according to their Dispensatory. See *OFFICIAL AND DISPENSATORY*.

*Extemporaneous* is that which the Physician frames of himself, *pro re nata*, according to the Circumstances of the Patient, to be made up by the Apothecary according to the Physician's Bill. See *EXTEMPORANEOUS*.

*PRESENCE*, *Præsentia*, a Term of relation, used in opposition to *Absence*; and signifying the Existence of a Person in a certain Place; or the State of a Person consider'd as co-existing with another. See *CO-EXISTENCE*.

In this sense an Obligation is said to be paid in *Presence* of a Notary and Witnesses: At the breaking open of a Seal of a Minor or an absent Person, the *Presence* of a Substitute is necessary.

The Schoolmen hold, that *Presence*, in speaking of Bodica, denotes not only a Co-existence, but a sort of Contact. They make two kinds of *Presence*; the one *virtual*, in which sense a Spirit, or Mind, is said to be *present* to a Body when it acts thereon; the other *corporeal*, which consists in a physical Contact.

The Treasurers, &c. of *France* have what they call a *Right of Presence*, a certain Sum due on their actual Attendance in their Offices; to oblige 'em to be the more assiduous in their Function. A Person absent in the Service of the King, or a Community, is reputed *present*.

The *Roman Catholics* believe the real *Presence* of *Jesus Christ* in the Eucharist, both in Body and Soul. See *TRANSUBSTANTIATION*.

*PRESENT*, in Grammar, the first Tense, or Inflection of Verbs; expressing the Time *present*, or that which now is. See *TENSE*.

'Tis a peculiar piece of Address in Eloquence to make use of the *present*, for a *past* Tense, in order to express a past Action with the more force and warmth: Thus; The Fleet is no longer in full Sea, than the Heavens begin to lower, the Winds rise, the Waves dash against each other, Thunder rolls, and Lightning glares on all sides; the Ships lose their Masts and Rudders, and are driven impetuously against the Rocks.

*PRESENTATION*, in the Canon Law, the Act of a Patron, nominating and offering his Clerk to the Bishop, or Collator, to be instituted in a Benefice of his Gift. See *PATRON*, *COLLATOR*, &c.

The *Presentation* must be tender'd to the Bishop within an hundred eighty-two days after the living is vacans, else it lapses to the Bishop; and if the Bishop do not collate in half a Year more, it lapses to the Archbishop; and from him in a like time to the King, who may stay as long as he pleases; for *Nullum tempus occurrit Regi*.

By some Customs, a Lay-Patron has only four Months time to make his *Presentation* in; and if he have presented a Person incapable, he may vary it, and make a new *Presentation* within the four Months. See *BENEFICE*.

The Word is form'd from the antient Phrase *Presentare ad Ecclesiam*, which originally signify'd the Patron's sending, or placing a Person in a Church; and which itself is form'd from *Representare*, which, *Selden* observes, is used in the Council of the *Lateran* and elsewhere, for *Presentare*. See *PATRON*.

*PRESENTATION*, also, gives the Title to three Orders of Nuns. See *RELIGIOUS*.

The first, projected in 1618, by a Maid nam'd *Joan of Cambray*. The Habit of the Nuns, according to the Vision she pretended to have, was to be a grey Gown of natural Wool, &c. but this Project was never accomplished.

The second was established in *France* about the Year 1627, by *Nich. Sanguin*, Bishop of *Senlis*. It was approved by *Urban VIII*. This Order never made any great progress.

The third was established in 1664; when *Fred. Barriano*, being Apostolical Visitor in the *Vateline*, was interested by some devout Maids at *Norbeguembourg* to allow 'em to live in Community in a retir'd place; which he granted, and erected 'em into a Congregation, under the Title of *Congregation of our Lady*. They live under the Rule of *St. Augustine*.

*PRESENTATION of the Virgin*, is a Feast of the *Romish* Church held on the 21st of *November*, in memory of the Virgin's being presented by her Parents in the Temple, to be there educated.

It is pretended, that there were young Women brought up in the Temple of *Jerusalem*; which some endeavour to prove from the second Book of *Maccabees*, *Sed & Virgines que convulsa erant, procurabant ad Omans*; which is the Sentiment of *Eusebius* on this Passage. And *Lyrano*s adds, that other more antient Authors observe, that young Women were educated till Marriage, either in the Temple, or at least in Buildings contiguous thereto.

*Emanuel Commelin*, who began to reign in 1145, makes mention of this Feast in his Constitution. Some even imagine it to have been established in the XIth Century among the *Greeks*; and think they see evident Proofs of it in some Homilies of *George of Nicomedia*, who lived in the time of *Phocas*; so that it seems a Mistake in some modern Critics to refer its Institution to *Gregory XI*. in 1572.

Some take it to have been instituted in memory of the Ceremony practis'd among the *Jews* for their new-born Females; corresponding to the Circumcision on the eighth day for Males. See *CIRCUMCISION*.

*PRESENTEE*, in the Canon Law, a Clerk presented by a Patron to a Collator. See *PRESENTATION*.

*PRESENTMENT*, in Law, a mere Denunciation of the Jurors themselves, or some other Officer, as a Justice, Constable, Searcher, Surveyor, &c. of an Offence, inquireable in the Court whereto it is presented.

*PRESENTS*, *Præsentia*, *Free-gifts*, or *Gratuities*; especially those given by the Clergy, or the States of a Realm, to a King. See *BENEVOLENCE*.

They are so call'd because given into the Hands of a Person *present*; by which they are distinguished from *Munera*, Gifts which are sent to the Party, or delivered by the intervention of a third Person.

Thus the XVIIIth Law, *de Verb. signif. Absentibus rei avari dicantur, munera autem missi, & presentia offerri.*

There is no accosting the Eastern Princes without making 'em sine *Preferens*. Kings usually make rich *Preferents* to Embassadors sent to their Courts.

**PRESERVATIVE**, in Medicine, a Remedy taken by way of precaution; or to secure a Man from a Disease that threatens him. See **REMEDY**.

The principal *Preservatives*, according to *Boerhaave*, are Abstinence, Ease, drinking of warm Water, and after this, a gentle and continued Motion till the first appearance of Sweat; then a profuse sleeping, the Body well cover'd.

By such means, crass Humours are diluted, the Vessels are loosen'd, and noxious Matters excreted. He adds, that the best defence against the force of external Cold, is to lessen the Winter's Clothing late in the Spring, and to increase the Summer's Clothing soon in Autumn.

In time of Plague, *Preservatives* are very necessary against the Contagion of the Air, &c. See **PLAGUE** and **CONTAGION**.

Generous Wines, Cardiacs, and Sudorifics are *Preservatives*. Dr. *Agravaus* tells us, he made Incisions with a Lancet in *Legum dextra* and *sinistra*, and put in Scions, to give passage to the Venom; which prov'd an excellent *Preservative* against the Plague that rag'd at Prague in 1680.

Dr. *Wenceslaus Dobr. Zensky de Nigro Poute* gives us an universal *Preservative* against Intention in all Diseases. Whoever, says he, in conversing with Patients of any kind, would *preserve* himself from Infection, must, while he is within the Sphere of the Steams, never swallow his Spittle, but spit it out: For he conceives it to be the Spittle that first imbues the Infection.

**PRESIDENT**, an Officer created, or elected, to *preside* over a Company, or Assembly; so call'd in Contradistinction to the other Members, who are term'd *Residentes*.

*Lord President of the Council*, is the fourth great Officer of the Crown; as ancient as the Time of K. *J. I.*; when he was titl'd *Conciliarius Capitalis*. See **COUNCIL**.

His Business is to attend on the King, to propose Business at the Council-Table, and to report to the King the several Transactions there.

**PRESIDIAL**, a Tribunal, or Bench of Judges, established in the several considerable Cities of France, to judge, *en dernier ressort*, or ultimately, of the several Cases brought before them, by way of Appeal from the subaltern Judges.

The *Presidials* make one Company with the Officers of the Bailiages and Seneschauffees, where they are established.

The Edict of 1551, establishes *Presidials* under these two Conditions; first, that they may judge definitely, and without Appeal, to the Sum of 250 Livres, or 10 Livres *per Annum*. And, 2<sup>o</sup>. to the Sum of 1500 Livres by Provision.

When they judge in the former Case, they are obliged to pronounce it with these Words, *par Jugement dernier*; in the second, *par Jugement Presidial*.

When they judge finally of Appeals from inferior Judges, they may not pronounce the Sentence, or Appeal, *au sens*, void; that Form only belonging to the Sovereign Courts: But are to pronounce simply, that it has been well or ill judg'd. To judge *presidially* and finally, they must be at least seven in number.

**PRESS**, in the Mechanic Arts, a Machine made of Iron, or Wood; serving to squeeze, or compress any Body, very tightly. See **MACHINE** and **COMPRESSION**.

The Ordinary *Presses* consist of six Members, or Pieces; viz. two flat, smooth Planks, between which the Things to be press'd are laid; two Screws, or Worms, fasten'd to the lower Plank, and passing thro' two Holes in the upper; and two Nuts in form of an S, serving to drive the upper Plank, which is moveable, against the lower, which is stable, and without Motion.

*Presses us'd for expressing of Liquors*, are of various Kinds; some, in most respects the same with the common *Presses*; excepting that the under Plank is perforated with a great number of Holes, to let the Juice express'd, run thro' into a Tub, or Receiver, underneath.—Others have only one Screw, or Arbor, passing thro' the middle of the moveable Plank; which is made to descend into a kind of Square Box, full of Holes on all sides, thro' which the Juice flows in proportion as the Arbor is turn'd, by means of a little Lever apply'd thereto.

The *Press us'd by Joiners*, to keep close the Pieces they have glued; especially Panels, &c. of Waincot, is very simple; consisting of four Members, viz. two Screws and two Pieces of Wood, four or five Inches square, and two or three Foot long, whereof the Holes at the two Ends serve for Nuts to the Screws.

The *Press us'd by Inlayers*, resembles the Joiner's *Press*, except that the Pieces of Wood are thicker, and that only one of them is moveable; the other, which is in form of a Tressel or Horse, being sustain'd by two Legs, or Pillars, jointed into it, at each end.

This *Press* serves them for the sawing and cleaving the Pieces of Wood required in Marquetry, or Inlay Work. See **MARQUETRY**.

**Founders Press**, is a strong square Frame, consisting of four Pieces of Wood, firmly join'd together with Tenons, &c. This *Press* is of various Sizes, according to the Sizes of the Moulds; two of them are required to each Mould, at the two Extremes whereof they are placed: so as that by driving wooden Wedges between the Mould and the Sides of the *Presses*, the two parts of the Mould, wherein the Metal is to be run, may be press'd close together. See **FOUNDER**.

**Printing Press**, is a very complex Machine, serving to *press* the Sheet of Paper upon the Forms, which the Workman has first smear'd or beat over with Ink; so, as that the Characters, or Types, whereof the Forms are compos'd, may leave their Marks or Impressions thereon.

The Parts of this *Press* are the two Cheeks, the four Planks, viz. the Cap, Head, Strokes and Winter, the Back of the *Press*, where the Ink is placed, the Spindle with its Nut, the Host with its Hooks, the Platten-Plate and its Plug, the Carriage, the Coffin, Gallows, Tympan with its Joins, &c. Lastly, the Handle, to bring the Plank on which the Coffin is fix'd backwards and forwards; and the Bar to work the Spindle, and *press* the Platten on the Forms.

See the Form and Use of these several Parts described under the Article **PRINTING-Press**.

**Rolling-Press**, is a Machine us'd for the taking off Prints from Copper-Plates. It is much less complex than that of the Letter-Printer: See its Description and Use under the Article **Rolling-Press-PRINTING**.

**Press**, in Coining, is one of the Machines us'd in the striking of Money; differing from the Balancier, in that it has only one Iron Bar to give it Motion, and press the Moulds or Coins; is not charg'd with Lead at its Extreme; nor drawn by Cordage. See **COINING**.

**Binders Press**, or Cutting-*Press*, is a Machine used equally by Book-binders, Stationers, and Passboard-makers; consisting of two large Pieces of Wood, in form of Cheeks, join'd by two strong wooden Screws, which being turn'd by an Iron Bar, draw together, or set asunder the Cheeks, as much as is necessary for the putting in of the Books, or Papers, to be cut.

The Cheeks are placed flat on a wooden Stand, in form of a Chest, into which the Cuttings fall. A-side of the Cheeks are two pieces of Wood, of the same length with the Screws; serving to direct the Cheeks, and prevent their approaching or opening unequally upon turning the Screw.

Upon the Cheeks is the Shaft or Fast, to which the Cutting-Knife is fasten'd by a Screw, which has its Key to dismount it on occasion to be sharpen'd.

The Shaft consists of several Parts; among the rest, a wooden Screw or Worm, which catching within the Nuts of the two Feet that sustain it on the Cheeks, bring the Knife to the Hook or Paper, which is fasten'd in the *Press* between two Boards. This Screw, which is pretty long, has two Directories or Pieces of Wood, which both as to their Form and Effect, resemble those of the Screws of the Cheeks. To make the Shaft slide square and even on the Cheeks, so that the Knife, push'd along by the Workman, may make an equal paring; that Foot of the Shaft where the Knife is not fix'd, has a kind of Groove, directed by a Thread fasten'd along one of the Cheeks. Lastly, the Knife is a piece of Steel, six or seven Inches long, flat, thin and sharp; terminating at one end in a point like that of a Sword; and at the other in a square form, which serves to fasten it to the Shaft. See **BOOK-BINDING**.

**Press**, in the Woollen Manufactory, is a large wooden Machine, serving to *press* Cloths, Serges, Rames, &c. thereby to render them smooth and even, and to give them a Gloss. See **CLOTH**, &c.

This Machine consists of several Members; the principal whereof are the Cheeks, the Nut, and the Worm or Screw, accompany'd with its Bar, which serves to turn it round, and make it descend perpendicularly on the middle of a thick wooden Plank, under which the Stuffs to be *press'd* are placed. See **PRESSING**.

The Calender is also a kind of *Press*, serving to *press* or calender Linens, Silks, &c. See **CALENDER**.

**PRESSING**, in the Manufactory, the Action of violently squeezing a Cloth, Stuff, Linnen, &c. in a *Press*, to render it even, smooth, polish'd, and glossy. See **CLOTH**, &c.

This, in the Silken and Linnen Manufactory, they properly call **Calendring**. See **CALENDER**.

There are two manners of *Pressing*; the one *hot*, the other *cold*.

*Method of PRESSING, Cold.*

After the Stuff has had all its Preparations, *i. e.* has been scour'd, full'd, and shorn (see SCOURING, FULLING, SHEARING) it is folded square, in equal Plaits; and a Skin of Velom, or fine, smooth Past-board, put between each Plait. Over the whole is laid a square wooden Plank; and in this Condition it is put in the Press; which is driven tight down by means of the Screw turn'd full open it, by the bands, assist'd with Levers.

After it has lain a sufficient time under the Press, they take it out, remove the Past-boards or Veloms; and lay it up to keep. It may be observ'd, that some do not use a Press with a Screw in *pressing cold*; but content themselves with laying the Stuff on a firm Table, after plaiting and past-boarding it as before; covering the whole with a wooden Plank, and loading this with a Weight, greater or less, as is judg'd necessary.

*Method of PRESSING, Hot.*

The Stuff having receiv'd all its Preparations as before, it is sprinkled a little with Water, sometimes with Gum-Water, spurted over it with the Mouth; then plaited equally, and between each two Plaits are put Leaves of Past-board; and between every sixth and seventh Plait, as well as over the whole, an Iron or Brass Plate, well heated in a kind of Furnace for the purpose.

This done, it is laid under the Press; and a Screw brought forcibly down upon it, by means of a long Iron Bar.

Under this Press are laid five or six Pieces one over another, at the same time; all furnish'd with their Past-board, and Iron Plates. When the Plates are well cold, they take the Stuffs from under the Press, remove the Past-boards and Plates, and stitch it a little together, to keep in the Plait.

This manner of *Pressing* Woolled Stuffs, is very pernicious; and was only invented by the Manufacturers to cover the Defects of the Stuffs; and excise their not giving them all the Shearings, Dyes, and Preparations, that are necessary to render them perfect: Accordingly it has been frequently prohibited.

*PRESSING to death*; see PAINÉ FORT & DURÉ.

**PRESSION**, or **PRESSURE**, in the Cartesian Philosophy, *Trifusion*; an impulsive kind of Motion, or rather Endeavour to move, impress'd on a fluid Medium, and propagated thro' it. See MOTION, FLUID, and CARTESIAN.

In such a *Pression*, the Cartesian suppose the Action of Light to consist; see LIGHT: And in the various Modifications of this *Pression* by the Surfaces of Bodies, whereon that Medium is thus press'd, they suppose the various Colours to consist, &c. See COLOURS.

But Sir Isaac Newton has taught us better: For if Light, *e. g.* consist only in a *Pression*, propagated without actual Motion, it could not agitate and warm such Bodies as reflect, and refract it; as we actually find it does; and if it consisted in an instantaneous Motion, or one propagated to all Distances in an instant, as such *Pression* supposes, there would be required an infinite Force to produce that Motion, every moment in every liquid Particle.

And if Light consisted either in *Pression*, or in Motion propagated in a fluid Medium, whether instantaneously, or in time, it must follow that it would infect itself *ad umbra*; for *Pression* or Motion in a fluid Medium, cannot be propagated in right Lines beyond any Obstacle, which shall hinder any part of the Motion; but will infect and diffuse itself every way into those parts of the quietest Medium, which lie beyond the said Obstacle.

Thus the Force of Gravity tends downwards, but the *Pression*, which arises from that Force of Gravity, tends every way with an equable Force; and with equal Ease and Force, is propagated in crooked Lines, as in straight. Waves on the Surface of Water, while they slide by the sides of any large Obstacle, do infect, dilate and diffuse themselves by degrees into the quietest Water, lying beyond the Obstacle. The Waves, Pulses or Vibrations of our Air, in which Sounds consist, do manifestly infect themselves, tho' not so much as the Waves of Water; for the Sound of a Bell, or of a Cannon, can be heard over a Hill, which intercepts the sonorous Object from our sight; and Sounds will be propagated as easily thro' crooked Tubes, as thro' straight.

But Light is never observ'd to go in Curve Lines, nor to infect itself *ad umbra*. For the fixed Stars do immediately disappear on the Interposition of any of the Planets, as well as some parts of the Sun's Body, by the Interposition of the Moon, Venus, or Mercury.

**PRESSURE of the Air.** See AIR.

Most of the Effects anciently ascribed to the *Fuga Vacui*, are now accounted for from the Weight and *Pressure* of the Air. See VACUUM.

The *Pressure of the Air* on the Surface of our Earth, is balanced by a Column of Water of the same Base, and about thirty-five Feet high; or one of Mercury of about twenty-nine Inches. See TORRICELLIAN Experiment and BAROMETER.

The *Pressure of the Air* on every square Inch on the Surface of the Earth, is computed to be about fifteen Pounds *Avoirdupois*. See BATHING.

**PREST**, a Duty in Money, to be paid by the Sheriff, upon his account, to the Exchequer; or for Money left or remaining in his hands.

**PREST Money**, from the French Word *Press*, ready, is a Sum of Money which binds those who receive it, to be ready at command, at all times appointed; chiefly understood in the listing of Soldiers.

**PREST-SAIL**, in the Sea-Language, is when a Ship carries all the Sail she can possibly crowd; which is sometimes done in giving Chase, &c. But 'tis a dangerous Experiment, lest the Ship over-set, or bring her Masts by the Board; in which latter Case she becomes an easy Prey.

**PRESTATION-MONEY**, a Sum of Money paid yearly by Archdeacons, and other Dignitaries, to their Bishop, *Pro exteriori Jurisdictione*.

*Prestation* was also anciently used for other Payments: *Et quasi sint de Prestatione Maragii*, Chart. Hen. 7. and sometimes for *Purveyance*.

**PRESTER**, a Meteor, consisting of an Exhalation thrown from the Clouds downwards with such Violence, as that by the Collision it is set on fire. See METEOR.

The *Prester* differs from the Thunder-bolt in the manner of its Inflammation; and in its bursting and breaking every thing it touches with greater Vehemence. See THUNDER-BOLT.

The Word is Greek, *πρεστέρι*; so called from the resemblance this Meteor has with a kind of Serpent call'd *αφροδι*, and sometimes *αβδα*.

**PRESTER JOHN**, or *Jean*, a Term given the Emperor of the *Abyssinians*; because anciently the Princes of this Country were really *Priests*, and the Word *Jean* in their Language signifies *King*.

'Twas the French who first made him known in Europe under this Title. His Empire was anciently of vast Extent; at present it is confin'd to six Kingdoms, each about the big-eels of Portugal.

The Name *Prester John* is altogether unknown in *Ethiopia*; and took its rise hence, That the People of a Province where this Prince usually resides, when they request any thing, say *Jean-Coi*, *i. e.* my King. His proper Title is, *The Grand Negus*.

There is also a *Prester John of Asia*, mention'd by M. Paolo the Venetian. His State is in the Country of *Cangingu*, between *China*, and *Sifan*; a Kingdom mightily valued by the *Chinese* for its Policy, and the Number of its fortify'd Cities; tho' they have usually the utmost Contempt for foreign Countries.

Some say he is so call'd from a *Nestorian Priest*, mention'd by *Americus*, towards the Year 1145, to have mounted the Throne. Others, that he takes his Name from a Cross which he bears in his hand, as a Symbol of his Religion.

**PRESTIMONY**, **PRESTIMONIA**, in the Canon Law, a Term about which Authors are much divided; it is deriv'd *2<sup>o</sup>* *Prestations quotidiana*, and is defin'd a kind of Benefice form'd by a single Priest; in which sense, *Prestimony* is the same with a presbyterical Chappel. See BENEFICE.

Others will have *Prestimony* to be the Incumbency of a Chappel, without any Title or Collation; such as are most of those in Castles, where Prayers, or Masses are said; and which are mere Oratories un-endow'd: Whence also the Term is given in the *Romish Church* to certain perpetual Offices bestow'd on Canons, Religious, or others, for the saying of Masses, by way of Augmentation of their Living.

Others, again, will have *Prestimony* to be a Lease, or Concession of any Ecclesiastical Fund, or Revenue belonging to a Monastery; to be enjoy'd during Life.

*De Moulin* makes *Prestimony* a prophane Benefice, which, however, has a perpetual Title, and an Ecclesiastical Office with certain Revenues attach'd to it; which the Incumbent is allow'd to sell; and which may be possess'd without Tonsure: Such as the Lay-Church-Wardens of *Notre Dame*. He adds, that in Propriety, the Canons of Chappels are Benefices of this nature.

Upon the whole, the safest Opinion seems to be this, that *Prestimony* is a Fund or Revenue affect'd by the Founder for the Subsistence of a Priest, without being erect'd into any Title of Benefice, Chappel, Prebend, or Priory; and which is not subject either to the Pope or to the Ordinary; but whereof the Patron, and those who have a Right from him, are the Collators; and do nominate and confer, *pleno jure*.

**PRESUMPTION**, in Law, a Sup'picion, or Conjecture founded on a Verisimilitude.

*Presumption* is of three sorts, 1<sup>o</sup>. *Violent*, which many times is allow'd a full Proof; as if one be kill'd in an House, and a Man is seen to come out of the House with a bloody Sword, and no other Person was at that time in the House; this, tho' but a *Presumption*, is a Proof.

2<sup>o</sup>. *Probable*, which hath but a small effect.

3<sup>o</sup>. *Levis*, or *Teneraria*, which is of no prevalency at all. In Cases of a Charter or Feoffment, if all the Witnesses to the Deed be dead; the violent *Presumption*, that stands for a Proof, gives continual and quiet Possession: *Stabit presumptio donec probetur in contrarium*. Coke on Lit.

PRESUMPTION was also antiently us'd for *Intrusion*. See *INTRUSION*.

PRESUMPTIVE *Heir*, the next Relation, or *Heir at Law* to a Person; who is to inherit from him *ab intestato*, and who 'tis presumed will be *Heir*; nothing but a contrary disposition of the Testator being able to prevent him. See *HEIR*.

PRETENCE, in Heraldry, see *ESCUTECHON* of *Pretence*.

PRETENS'D, or *PRETENDED Right*, in Law, is where one is imposition of Lands and Tenements, which another who is out, claims and sues for. Here, the *pretens'd Right* is in him who so claims or sues.

PRETER *Naturam*, in Medicine, &c. see *NATURE*.

PRETER, or *PRETERIT*, *PRÆTERITUS*, *Pass*, in Grammar, an Inflection of Verbs, expressing the Tense, or Time past'd. See *YEAR*.

*Preter*, or *Preterit*, is a general Name that comprehends the Inflections corresponding to the several Tenses, or several Circumstances and Relations of the Time past; all which the *Latins*, &c. distinguish'd by particular Inflections, or Terminations of the Verb; which make the proper Notion of Tenses. See *TENSE*.

The modern Languages, particularly the *English*, in lieu of different Terminations of the Verbs themselves, have frequently recourse to those of their Auxiliaries and Participles. See *PARTICIPLE*.

The *Preter*, or past Time, is subdivided by Grammarians into the *Preter-imperfect*, as, e. g. *I had, I thought*, in the *Latin*, *habebam, cogitabam*, in the *French*, *j'avois, je pensois*: The *Preter perfect*; *I have had, I have thought, I have had, I have thought, j'ai eu, j'ai pensé*: And *Plusquam Preter-perfect*, *I had thought, I had had, habueram, cogitaveram, j'eus eu, j'eus pensé*.

The *English* have properly but two Cases or Kinds of the *Preter Tense*; viz. the *Preter Time* of the imperfect Action; as, *I was at Supper then*, but had not yet done it. And the *Preter Time* of the perfect Action; as, *I had then supp'd*, and it was then done.

The *Preter Tense* is often us'd form'd of the present Tense by adding *ed*; as *I burned*.

The *French* have a particular Case of the *Preterit-perfect*, which *L. Buffier* calls the *Preterit Simple*, in opposition to the former, call'd the *Preterit Composite*; others call it the *Preterit Indefinite*, because expressing a thing done indeterminately, as *je feris un bien*. This answers to the *Aoristus* of the *Greeks*; and in the distinction of this from the composed *Preterit* does one of the greatest Niceties in the Practice of the *French Language* consist. See *AORISTUS*.

In the passive Voice, the *Latins*, *French*, &c. have recourse to Participles, and Auxiliaries, like the *English*, to form their *Preter Tenses*, *I was loved, amatus eram, j'étois aimé*, &c.

PRETERIT, *PRÆTERITUS*, in the *Roman Jurisprudence*. A *Preterit Child*, *Infans præteritus*, is that of whom the Father has forgot to make mention in his Testament; which renders it entirely null. See *TESTAMENT*.

A Father may make Institution, or Exheredation of his Son, but never *Preteritum*.

PRETER-*Imperfect*, } in Grammar, see *PRETER*.

PRETER-*Perfect*, }

PRETER-*Plusperfect*, }

PRETERITION, or *PRÆTERMISSION*, in Rhetoric, a Figure, whereby, in pretending to pass over a thing unthought of, we make a summary mention thereof.

*I will not say he is valiant, he is learned, he is just*, &c.

The most arduous Praises are those given by way of *Preterition*.

PRETEXT, *Pretence*, a Colour, Motive, or Cause, either real, or apparent. See *COLOUR*.

PRETEXTA, or *PRÆTEXTA*, among the *Romans*, was a long white Gown, or Toga, having a Band, or Border of Purple at bottom. See *TOGA*.

It was wear'd by Children of Quality till the Age of Puberty, i. e. by Boys till seventeen, at which time they laid it aside, and assumed the Virile Gown. Girls wear'd it till Marriage. See *Virile*.

It took its Name *Pretenta*, according to *Godwin*, *quod ei purpura Prætexta erat*, because guarded about with purple Silk.

The *Pretests* at first was a Robe of State, or Ceremony, wore only by the Chief Magistrates, and the *Præcits*; nor was it lawful for such who wore this Gown to be arraigned, or Sentence to pass against 'em, till it was pull'd off.

In continuance of time, it was permitted to Noblemen's Children; and, at length, even to all *Roman Children* in general.

PRETIUM *Sepulchri*, in old Law-Books, &c. those Goods accruing to the Church, wherein a Corpse is buried.

In the *11th Canon*, lib. 19. it is ordered, that along with every Body that is buried, there go his Cow, Horse, Apparel, and the Furniture of his Bed; none of which may be disposed of otherwise than for the payment of Debts, &c. as being Familiars and Dumesticks of the Deceased. See *HERIT*, *MORTUARY*, &c.

PRETOR, *Prætor*, an eminent Magistrate in ancient *Rome*.

In the first Ages of the Commonwealth, all the Magistrates were call'd *Prætors*; afterwards, the Title was bestow'd on all the principal Officers of the Army: At last, *Prætor* became restrained to a particular Magistrate.

About the Year of *Rome* 388, the People soliciting to have one of the *Consuls* always chosen from among the People; the *Senators* granted it, on condition that a new Magistracy should be erected, to be fill'd wholly from among the Patricians: Such was the Origin of the *Prætor*, *Prætor* 3 which, *Livy* observes, was first discharged by *Spurius Furens*; and whose Office was to look to the administration of Justice and Equity between Man and Man; much in quality of a Lord Chief Justice, or Lord Chancellor, or rather both in one.

But Business increasing in proportion as the Empire was enlarged, a second *Prætor* was created, to take cognizance of the Affairs of Foreigners residing at *Rome*: upon which the former was distinguished by the Title of *Prætor Urbanus*, or *major*; and the latter by that of *Prætor Peregrinus*, or *minor*.

The Number, in after-times, was much increased; under the Reign of *Augustus* there were twelve, and afterwards eighteen; two whereof were call'd *Prætores Cereales*, as being charged with the providing of Corn and Grain; and two others *Prætores Fidei Commisarii*. In the Code, L. 1. T. 39. we find a Law of the Emperors *Valentinian* and *Marcian*, which reduces the *Prætors* to three.

The Office of the *Prætor*, or *Prætor Urbanus*, was to render Justice in the City; he had a Power to interpret the Laws, to supply, and reform 'em; and even to make new ones, when the public Good required it.

In the Infinites, the Edicts of the *Prætors* are call'd *Jus honorarium*; whence it should seem, they had only the force of Laws out of respect to that eminent Magistracy; the Business of the *Prætor* being rather to look to the Observation of the old Laws, than to make new ones. See *CIVIL LAW*.

Some are of Opinion he had not the Right of the Sword; the cognizance of Crimes being the special Province of the *Præfect* of *Rome*. See *PREFECT*.

But others are of another Sentiment. In the general, 'tis very difficult to fix precisely how far his Power extended. When he walk'd, he was preceded by six Lictors; and was clothed with the Robe call'd *Træben*. See *LICTOR* and *TRÆBA*.

His Authority, like that of the other Magistrates, was very much weaken'd and reduced under the Emperors. In the Digest and Code, is a Title de *Officio Prætoris*.

PRETOR was also a Title among the *Romans* for the Governour of a Province, who had past'd the Office of *Prætor*.

Whence Provinces govern'd by *Prætors*, or restrained to those who had discharged that Office, were call'd *Prætorian Provinces*. See *PROVINCE*.

PRETORIAN *Guard*, or *Cabors*, were the Soldiers of the Emperor's Guard; so call'd, as some imagine, from their Place or Station in the Palace or Court call'd *Prætorium*. See *PRÆTORIUM*.

Their Institution is owing to *Scipio Africanus*, who first established a Company of the bravest Men in his Army, pick'd out for the purpose, to be his Guard; and who never stir'd from his side in Battel. See *GUARD*.

Their Number was at length increased, as *Dion* tells us, to ten thousand. They were commanded by an Officer created by *Augustus*, call'd *Præfectus Prætorii*. See *PREFECT*.

PRETORIUM, among the *Romans*, the Place, Hall, or Court wherein the *Prætor* liv'd, and wherein that Magistrate sat, to administer Justice to the People. See *PRÆTOR*.

There were of these *Prætoriums* in all the Cities of the *Roman Empire*. See *CURIA*, *COURT*, &c.

The Scripture mentions that of *Jerusalem*; and there are still some remains of one at *Nisius* in *Languedoc*.

PRETORIUM was also the Tent, or Pavillion of the General of the Roman Army; wherein Councils of War, &c. were held.

From the time of Augustus, the Emperor's Tent in the Camp was distinguish'd by the Titles of *Pretorium Augustale*.

PRETORIUM was also a Place in Rome where the Pretorian Guards were lodged. See PRETORIAN.

Some will have the Pretorium to be properly the Tribunal of the *Præfatus Pretorii*; or an Auditory destined for the rendering of Justice in the Emperor's Palace. See PREFECT.

This they argue from St. Paul's Epistle to the *Philippians*; and from this place call'd Pretorium, they will have the Guards denominated *Pretoriani*, because assembled here for the Emperor's Guard.

Others will not allow the Pretorium to be any Tribunal, or Seat of Justice, but merely the Imperial Guard-house.

*Perizonius* has an express Dissertation to prove that the Pretorium was no Court of Justice in St. Paul's time; but the Camp or Place where the Pretorian Guards were assembled. He adds, that the Name Pretorium was not given to Places where Justice was administered, till long time after; when the Office of the *Præfatus Pretorii* was converted into a Civil Function.

PREVARICATION, *Prevaricatio*, in the Civil Law, is where the Informer colludes with the Defendant, and so makes only a feign'd Prosecution.

*Sylvius*, in his Comments on *Cicero, pro Cluentio*, gives us the difference between the three Terms, *Calumniari, Prevaricari, et Tergiversari*. He who in his Accusation forges faults never committed, is said *Calumniari*. He who undertakes one's Suit, and either will not urge Reasons in behalf of his Client, or not answer the Objections of his Adversary, when he is able, is said *Prevaricari*. And he who defects in his Accusation, and lets the Suit drop, *Tergiversari*.

PREVARICATION, in our Law, is when a Man falsely and deceitfully seems to undertake a thing, *ea intentione*, that he might destroy it; e.g. where a Lawyer pleads booty, or acts by collusion, &c.

PREVARICATION is also used for a secret Abuse committed in the Exercise of a public Office, or of a Commission given by a private Person.

PREVARICATOR, in the University of Cambridge, is a Master of Arts, chosen at a Commencement, to make an ingenious, satirical Speech, reflecting on the Misdoings of the principal Members. See *TERRA FILIUS*.

PREVENTION, in the Canon, &c. Law, the Right a superior Person, or Officer has to lay hold of, claim, or transact an Affair before an inferior to whom it more immediately belongs.

The Word is chiefly used for the Pope's Prevention of ordinary Collators; and the Royal Judges of subaltern ones.

The *Romish* Canonists maintain, that the Pope, who is the Source of all Jurisdiction, has not transmitted it privatively to the ordinary Collators; but that he may still not only collate concurrently with them, but also prevent them by using his original Power as Head of the Church. See COLLATOR.

These *Preventions* are grown odious in several Countries, where they don't now obtain without a world of Modifications and Restrictions; and the Civil Power in France, always judges in favour of the ordinary Collators.

The Pope has no Prevention to the prejudice of Lay-Patrons; but by the *Concordat* he has reserved to himself the Right of conferring elective Benefices by *Prevention*, and even Cathedral and Collegiate Dignities. See CONCORDAT.

If the Provisions of the Pope, and Collations of the Ordinary bear Date of the same Day; the Ultramontane Canonists give the preference to the Pope; the French to the Ordinary.

The Cardinals have a particular Indulgence not to be prevented by the Pope within six Months.

PRIAPEIA, in Poetry, a Name given to certain obscene Epigrams, and other Pieces, composed on the God *Priapus*; whereof we have many Instances in the *Greek Cataloga*. See PRIAPUS.

PRIAPISMUS, PRIAPISM, in Medicine, a continual and painful Erection or Tension of the Yard. See ERECTION.

The immediate Cause of a *Priapismus*, is the Heat, Pungency, or Acrimony of the Semen; accompanied with a Convulsion of the Muscles of that part, which compressing the Veins and cavernous Bodies, prevent the return of the Blood.

The more remote Causes are too hot, sharp, stimulating Foods; Cantharides are also found to perform the same effect, but with much more violence. There are Instances of People, especially old Men, who, making use of Cantharides to enable 'em to satisfy their Passions the better,

have been seiz'd with a *Priapismus*, which has been follow'd with universal Convulsions, and even Death. See CANTHARIDES.

The Term is derived from *Priapus*, a Heathen God, whom the Poets and Painters represent with a Yard always stiff and erect.

As Satyrs are usually painted after the same manner, the Difcase is also call'd *Satyriasis*.

Some, however, distinguish between the *Satyriasis* and *Priapismus*; in that the latter is without any effusion or desire; but the former attended with both. See SATYRIASIS.

PRIAPUS, a Term sometimes apply'd to the genital Parts of Men, viz. the Penis and Testes. See GENITAL.

The Name took its rise from *Priapus*, a fabulous Deity, particularly adored at *Lampfacus*, the Place of his Birth; who, for the extraordinary Size of his Parts was exceedingly revered by the Women; inasmuch that the Scripture tells us, King *Ash* dethroned his Mother *Maachab*, because she had consecrated a Grove to *Priapus*, and presided at his Sacrifices.

PRICE, *pretium*, the Value of a thing. See VALUE.

PRICE-CURRENT, in Commerce, a weekly Account of the current Value of most Commodities. See CURRENT.

PRICE-POSS, in Building, see POST.

PRICKING, in the Sea-Language. To prick the Flat, or Chart, is to make a Point therein, near about where the Ship is to be at any time; in order to find the Course they are to steer. See COURSE, CHART, &c.

PRIEST, *Sacerdos*, a Person set a-part for the performance of Sacrifice, and other Offices, and Ceremonies of Religion. See SACRIFICE, RELIGION, &c.

Thus the false Gods and Goddesses of the Heathens had their Priests; Priests of Mars, of Bacchus, of Hercules, of Isis; and some of 'em their Priestesses. See PONTIFF, &c.

The Jews too had an Order of Priests and Levites, who serv'd in the Temple. See LEVITE, &c.

The Mahometans have their Priests call'd *Scheik* and *Muphti*; and the Indians and Chinese their *Bramans* and *Bonzes*. See SCHEIK, MUPHTI, BONZE, and BRAMAN.

PRIEST, *Presbyter*, in the Christian Church, is a Person invested with holy Orders; in virtue whereof, he has a Power to preach, pray, administer the Sacraments, &c. and, in the *Romish* Church, also, to bless, absolve, &c. See ORDERS.

By the Canons, a Man must be twenty-four Years of Age e'er he be admitted to the Priesthood; antiently thirty Years were required. See ORDINATION.

The Holy Scripture usually confounds the Title of Priest, Presbyter, with that of Bishop, Episcopos; and does not seem to give any Superiority to the one, over the other; and, yet, the absolute Equality among all the Priests in the Government of the Church has few Instances, but what are contested. See PRESBYTER.

*Blondel* and *Salmasius* maintain with a world of Reason, that in the primitive Church, the Priests govern'd with perfect Equality, and without any other pre-eminence beside that of Age; and yet to consult the Fathers, and Tradition, the Presbyterian Form of Government would scarce seem to have been known among the Antients. See PRESBYTERIAN.

In effect, the primitive Writers speak of nothing but Episcopacy; and of that too, frequently in such Terms, as if they esteem'd it of Apostolical Institution. See EPISCOPACY and BISHOP.

As, in the antient Church, the Deacons had the Management and Administration of the Revenues of the Church, their Authority grew apace, and in a little time they were got above the Priests; St. Jerome used his utmost Endeavours to prove that Deacons were originally inferior to Priests; and the Council of Nice decided the Question in favour of the latter. See DEACON.

Indeed, an Order of Deacons having been instituted without any other Function than to assist the Priest at the Altar; these have made no difficulty of owning the Superiority of the Priests. Add to this, that the Order of a Deacon being now become necessary to arrive at that of a Priest, there is no room to dispute the precedence: But the Deacons who had retain'd their Function, had the disposal of the Revenues, and paid the Priests their Pensions, still maintain'd the Superiority. Upon which, the sixth Council in Trullo pronounced once more on the Dispute, and gave the Pre-eminence to the Priests.

Cardinal Priest, see CARDINAL.

High Priest, see PONTIFEX.

PRIEST'S CAP, in Fortification, see BONNET a Petre.

PRIMA NATURALIA, in Physics, Atoms, or the first Particles, whereof natural Bodies are primarily composed; call'd also MINIMA NATURALIA, which see: See also PARTICLE, ATOM, &c.

PRIME Via, in Medicine, the first Passages of the Chyle;

Chyle; as the Stomach, Intestines, and their Appendices. See *CYCLE*, &c.

**PRIMAGE**, a Duty appointed by a Statute of Henry VIII. to be paid to the Mariners, and Sailors, for the loading of any Ship, at its setting forth from a Haven.

This is different, in different places; in some, a Penny per Pound; in others, Six-pence per Bale or Pack. See *DUTY* and *CUSTOM*.

**PRIMARY Planet**, a Planet which revolves round the Sun as a Centre. See *PLANET*.

Such are *Saturn*, *Jupiter*, *Mars*, the *Earth*, *Venus* and *Mercury*; thus call'd in opposition to *secondary Planets*, or *Satellites*. See *SATURN*, *VENUS*, &c.

Some Authors restrain the *primary Planets* to the superior ones, *viz.* *Saturn*, *Jupiter* and *Mars*; but very impudently.

**PRIMATE**, an Archbishop, invested with a Jurisdiction over several Archbishops, or Bishops. See *ARCHBISHOP*.

Father *Sirmond* derives the Origin of *Primates* hence; That the large Provinces having been divided and subdivided by the Emperors; the first Divisions were call'd *Foris*, others *Secunds*, others *Tbirds*, &c. and the Title *Primate* given to the Metropolitans, *i. e.* to the Bishop of the City which was the Capital of the Province, e'er the Division was made. See *MYTROPOLIS* and *MYTROPOLITAN*.

This Metropolitan *Primate* had some Jurisdiction over the Bishops of the inferior Provinces; and was also call'd *Patriarch*. See *PATRIARCH*.

The Term *Primate* is *Latin*, and signifies the *First* or *President* of a Society: The *Greek* Word corresponding to it, is *Exarcha*. See *EXARCHA*.

Those who hold for a strict Ecclesiastical Hierarchy, maintain a *Primate* to be he who has several Metropolitans under him; as a *Patriarch* has several *Primates*: yet 'tis pretty evident from History, that *Primates* were at first confounded with *Patriarchs*: Thus *Socrates* enumerating ten *Patriarchs*, does not make any distinction thereof from *Primates*.

In *Africa*, after the Distinction was made, the *Primates* were not at all subject to the *Patriarch*: Thus the Bishop of *Carthage*, who was *Primate*, paid no Obedience to the Bishop of *Alexandria*, who was *Patriarch*.

Not, to be a *Primate*, was it necessary to have Metropolitans for Suffragans: Each Province of *Africa*, except those which composed the Diocese of *Alexandria*, had its *Primate*; this Quality being given to Age.

In *France*, the Subdivision of Provinces gave occasion to the Election of *Primates*: Thus *Aquitain*, *e. g.* being divided into two Provinces, the Archbishop of *Bourges* became *Primate* of the *Aquitains*, because *Bourges* was the Capital of the first.

Thus also the Division of *England* into two Provinces, *Canterbury* and *York*, in 1152, gave occasion to the Introduction of *Primates* among us; *Canterbury*, which was the Metropolis before, thence giving the Title of *Primate* of all *England*, to its *Prelate*; tho' the Archbishop of *York* still claims that of *Primate* of *England*. And accordingly, the first has some Jurisdiction over all *England*, relating to Administrations, &c. which the latter has only within his own Province. See *PROVINCE*.

**PRIME**, **PRIMUS**, the first in Order, Degree, or Dignity, among several Things of the same, or like kind.

Thus we say, *Prime Minister*, *Prime Mover*, *Prime Cost*, &c. See *MINISTER*, *MOBILS*, &c.

**PRIME**, or **PRIME Minute**, in Geometry, the sixtieth part of a Degree. See *DEGREE*.

*Prime* is sometimes also used for the tenth part of an Unit. See *DECIMAL*.

In Weights it is used for the twenty-fourth part of a Grain. See *GRAIN*.

**PRIME Number**, in Arithmetic, a Number which can only be measur'd by Unity; or whereof 1 is the only aliquot part. See *NUMBER*.

Such are 5, 7, 11, 13, &c.

*Prime Numbers*, *inter se*, among themselves, are those which have no common Measure besides Unity; thus 12 and 19 are *Prime Numbers inter se*.

**PRIME Figure**, in Geometry, is that which cannot be divided into any other Figures more simple than itself. See *FIGURE*.

Such is a Triangle among Planes; and the Pyramid in Solids: for all Planes are made of the first, and all Bodies or Solids compounded of the second.

**PRIME Vertical**, is the Vertical Circle which passes thro' the Poles of the Meridian. See *VERTICAL*.

**PRIME Verticals**, in Dialling, or **PRIME Vertical Dials**, are those projected on the Plane of the *Prime Vertical* Circle, or on Planes parallel thereto. See *DIAL Plane*.

These are what we likewise call *Direct*, *Erect*, *North* or *South* Dials. But since every Plane hath that Pole raised

or depressed thereon, which lies open to it; therefore this Plane, (if a direct South) hath the South Pole elevated, and consequently the Style (whose Height must be the Complement of the Latitude of the Place) will point downwards. Wherefore to find the Hour's Distance from the Meridian upon this Plane, the Proportion is, As the Radius is to the Sine of the Style's Height, or Co-Latitude; so is the Tangent of the Hour, or Angle at the Pole: To the Tangent of the several Hours Distance from the Meridian. By this Canon, the Hours requisite for the Plane, as also the Half-Hours, Quarters, &c. being calculated and set in a Table; the Dial is described after the same manner, as the Horizontal Dial. North Direct Erect Dials, are but the backside of the South, because lying in the same Azimuth with it; therefore it is no more but turning the South Dial upside-down, and leaving out the superfluous Hours between 5 and 7, and 4 and 8, and the North Dial is made. Only note, that the Style must point upwards to the North Pole. See *DIALLING*.

**PRIME of the Moon**, is the new Moon at her first Appearance, for about three Days after her Change. See *NEW MOON*.

**PRIME** is also used in the *Roman* Church, for the first of the Canonical Hours, succeeding to *Lauds*. See *LAUD*.

**PRIME**, in Fencing, is the first, and chief of the Guards, which is that the Body is in, immediately after drawing the Sword; being first to menace and terrify the Enemy, by reason the Point of the Sword is held higher up to the Eye, than in any of the other Guards. See *GUARD*.

**PRIME**, or **PRIMING of a Gun**, is the Gun-Powder put in the Pan, or Touch-hole of a Piece, to give it fire by.

The *Priming* is the last thing done in Charging. See *CHARGE*.

For Pieces of Ordnance, they have a painted Iron Rod, to pierce the Cartridge thro' the Touch-hole; call'd *Primer*, or *Priming Iron*.

**PRIMING**, among Painters, signifies the laying on of the first Colour. See *COLOUR* and *PAINTING*.

**PRIMICERIOUS**, in Antiquity, the first, or chief Person in any Office, or Dignity.

In this sense the Word occurs frequently in the Code, and even in our old *English Laws*; tho' it is there also occasionally used for the Nobility, as *Primicerius totius Anglie Mon. Ang.*

The *Romans* had great Variety of *Primicerii*, both in Church, and the Emperor's Court; a *Primicerius of the Euprestis*, a *Primicerius Augustalis*, a *Primicerius of the Barbarian*, &c. of the *Legions*, of the Court, of the Chamber, of the Palace, &c.

The Ecclesiastical *Primicerius*, *Du Cange* observes, was the same with the *Chamber* among us. See *CHAMBER*.

In the Church of *Metz*, the *Primicerius* is the first Dignitary of the Diocese, and presides at Assemblies of the Clergy, in prejudice of the Bishop.

At *Venice*, the Dean of the Church of *St. Mark* is call'd *Primicerio*, or *Primicerius*: He is independent of the *Patriarch* of *Venice*, and enjoys Episcopal Privileges.

**PRIMIER Seisin**, in Law, *q. d.* the first *Seisin*; a Branch of the King's Prerogative, whereby he had the first possession of all Lands, and Tenements held of him in chief, whereof his Tenant died seized in Fee; and consequently the Reus and Profits thereof, till the Heir, if he were of Age, did homage; and if under Age, till he became of Age.

But all Charges arising by *Primier Seisin*, are annulled by a Stat. 12 Car. 2. See *SEISIN*.

**PRIMPILARI**, or **PRIMOPULARI**, in Antiquity, the Soldiers of the first Company, or Cohort of a Legion. See *LEGION* and *COHORT*.

The *Primpilarii* had considerable Advantages; one of the chief was, that most of the Soldiers who died in the Campaign, left them their Heirs.

**PRIMPILUS**, or **PRIMOPILUS**, in Antiquity, the first Centurion, or Captain of a Cohort, who had charge of the *Roman* Banner. See *CENTURION* and *COHORT*.

**PRIMITIE**, the First-Fruits gather'd of the Earth; whereof the Antients made Presents to the Gods. See *FRUITS*.

In *Leviticus*, the *Primitie* of all Fruits are enjoin'd to be offer'd to God. See *TYTHE*.

In our Law, the *Primitie* are one Year's Profits, after Avoidance, of every Spiritual Living, as rated in the King's Books. See *FIRST-FRUITS*.

**PRIMITIVE**, in Grammar, a *Root*; or a Word in a Language, which is neither derived from any other Language, nor compounded from any other Words of the same. See *ROOT*.

Thus, *God* is a *Primitive*; *Godly*, a Derivative; *God-like*, a Compound. See *DERIVATIVE*.

**PRIMITIVE**, in Arithmetic, See *PRIME Number*.

**PRIMO Beneficio Ecclesiasticum habundo**, in Law, a Writ directed from the King to the Lord Chancellor, appointing him to bestow the Benefice that shall first fall in the King's Gift,

Gift, above or under such a Value, upon this or that Clerk-See BENEFICE.

**PRIMOGENITURE**, *Birtheright*; the Right of the First-born, or eldest Child. See BIRTHRIGHT.

The Right of *Primogeniture* seems to be an unjust Prerogative, and contrary to natural Right: For since 'tis Birth alone gives Children a Title to the paternal Succession, the Chance of *Primogeniture* should not throw an Inequality among them.

Accordingly, the Right of *Primogeniture*, which calls the Elder-born to the Crown, preferably to the other, was not introduced into France till very late: 'Twas unknown to the first Race of Kings; and even to the second.

The four Sons of *Clovis* shared the Kingdom equally among themselves; and *Lois le Debonnaire* did the same: 'Twas not till the Race of *Hugh Capet*, that the Prerogative of Succession to the Crown was affected to the First-born.

By the ancient Custom of *Goelkind*, still preserv'd in some parts of our Island, *Primogeniture* is of no account; the paternal Estate being equally shared by all the Sons. See GAVELKIND.

**PRIMUM Mobile**, in the *Ptolemaic* Astronomy, the ninth or highest Sphere of the Heavens, whose Centre is that of the World, and in comparison of which, the Earth is but a Point. This they will have to contain all the other Spheres within it, and to give motion to them, turning it self, and all them, quite round in twenty-four hours. See MOBILE.

**PRINCE, PRINCES**, in Politicks, a Person invested with the supreme Command of a State or Country; independent of any Superior. See MONARCH. See also KING.

**PRINCE** is also used for a Person who is Sovereign in his own Territory; yet holds of some other, as his Superior, or Lord, and pays Homage or Tribute to him.

Thus all the *Princes of Germany* are Feudatories of the Emperor; they are all as absolute in their respective Principalities, as the Emperor himself; yet are all bound in certain Services to him. See EMPEROR. See also ELECTOR, and COLLEGE.

In many ancient Titles, the Word *Prince* signifies no more than *Lord's Du Gange* gives a great many Instances of it. See LORD.

In effect, the Word *Principis* in Latin, whence *Prince* in English, originally signifies the Chief, or First; it is compounded of the Latin *primus*, and *Caput*; and is properly a Word of Dignity and Office, not of Property and Sovereignty.

Thus, in the Charter of King *Offa*, after the Bishops had subscribed their Names, we read, *Boradavus Patritius, Binnanus Princeps*; and afterwards the Dukes subscribed their Names.

And in a Charter of King *Edgar*, in *Mon. Angl. tom. 3. p. 501. Ego Edgarus Rex rogatus ab Episcopo meo Deorotolse, & Principe meo Aldredo, &c.* And in *Mat. Paris. p. 155. Ego Halden Princeps Regis pro viribus assensum prebui, & ego Turketillus Dux concedo.*

Among the ancient Romans, it was the Custom for the Emperor in his Life-time to nominate him whom he would have succeeded in the Empire, under the Title of *Princeps Juventutis, & Cesar*. See CESAR.

In the *Ludus Trojanus*, the Youth who was chose Captain, was also call'd *Princeps Juventutis*. See TROJANUS.

**PRINCE** is also a Title given to the Issue of *Princes*, or those of the Royal Family; in which sense, they are called, particularly in France, *Princes of the Blood*; as partaking of the Blood to which the Sovereignty is affected: and not by any Hereditary Right, but as a Patrimony sub-stituted to all the Royal Race. See BLOOD.

In England, the King's Children are call'd *Sons and Daughters of England*: The Eldest is created *Prince of Wales*. See PRINCE OF WALES.

The Cadets, or Younger, are created Dukes, or Earls, with what Title the King pleases. See CADET.

They have no Appanages, as in France; but only what the good pleasure of the King bestows on them.

The Sons are all by Birth Counsellors of State: The Daughters are stiled *Princesses*; to violate the Eldest of which, unmarried, is at this day High Treason.

To all the King's Children belongs the Title of *Royal Highness*: All Subjects are to kneel, when admitted to kiss their Hand; and at Table, out of the King's presence, they are serv'd on the Knees.

The first *Prince of the Blood in France*, is call'd absolutely, *Monsieur le Prince*. The Quality of *Prince of the Blood*, gives a Rank and Precedency, but does not include any Jurisdiction; they are *Princes by Order*, not by Office.

*Wicqesfort* observes, that 'tis not fifty Years since the *Princes of the Blood of France* gave place to all Embas-

sadors, even those of Republicks; and it was at the King's request, that they were since allow'd the Precedency.

The moment the Popo is elected, all his Relations become *Princes*.

**PRINCE of Wales**, the eldest Son of England. He is born Duke of *Cornwall*; and immediately entitled to all the Rights, Revenues, &c. belonging thereto; as being deemed, in Law, at full Age on his Birth-day.

He is afterwards created *Prince of Wales*; the Investiture whereof is perform'd by Imposition of a Cap of State, and a Coronet, a Verge of Gold, and a Ring. He holds the Principality by Patent, granted him and his Heirs, Kings of England.

The Title and Principality were first given by King *Edward* the first to his eldest Son: Till that time, the eldest Son of England was call'd *Lord Prince*. While *Normandy* remained to the King of England, the eldest Son was always stiled *Duke of Normandy*: Since the Union, his Title is *Magne Britannie Princeps*.

He is reputed, in Law, the same Person with the King: To imagine his Death, or to violate his Wife, is High-Treason. His Revenues, as Duke of *Cornwall*, are computed at 14000*l. per Annum*. The Revenues of the Principality were estimated 300 Years ago at 4800*l. per Ann.*

**PRINCIPAL**, the chief, most considerable, or necessary part of a thing.

Thus we say, the Mayor is the *principal* Magistrate of a City or Town: A Council of War consists of the *principal* Officers. In a Peroration, the *principal* Points insist'd on, are to be briefly summ'd up. The *Principal* of a College, or Hall, is the Master thereof. See COLLEGE, and HALL.

**PRINCIPAL**, in Commerce, is the Capital of a Sum due or lent; in which sense the Word is used in opposition to Interest. See INTEREST.

**PRINCIPAL** is also used for the first Fund or Sem per by Partees into common Stock; by which it is distinguish'd from the Calls or Accessions sometimes required, when the former proves insufficient.

**PRINCIPAL Point**, in Perspective, is a Point in the perspective Plane; upon which a Line drawn from the Eye, perpendicular to the Plane, falls. See POINT.

This Point is in the Intersection of the horizontal and vertical Plane, and is also call'd the *Point of Sight*, and *Point of the Eye*. See SIGHT, &c.

**PRINCIPAL Ray**, in Perspective, is that which passes perpendicularly from the Spectator's Eye to the perspective Plane. See RAY.

Whence, the Point, where the Ray falls on the Plane, is called the *principal Point*, which some Writers call the *Centre of the Picture*, and the *Point of Concurrence*.

**PRINCIPAL, Principality**, in old Law-Writers, is sometimes used for a *Heir looms*; which see; and sometimes for a *Mortuary*, or *Corse prent*.—Item *lego equum meum vocatum le Bay Gelding, ut offeratur ante Corpus meum in die sepulture mee, nomine Principatus Test. Job de Macclesfield, 9 Hen. 5. in U. combefeld Com. Hereford, certain Principals*; as the best Beatt, best Bed, best Table, &c. pass to the eldest Child, and are not subject to Partition.

**PRINCIPLE, PRINCIPUM**, a Term frequently used for the Cause, Source, or Origin of any thing; in which sense we say, the *Principle of Thinking, of Willing, &c.*

In Physics, we must ever have recourse to a first *Principle*; which is God. See CAUSE.

The *Manichæes* admit of two *Principles*, the one of Good, the other of Evil; which they establish in quality of two contrary Deities, constantly opposing each other. See MANICHÆE. See also GOOD and EVIL.

According to the Doctrine of *Pelagius*, our Wills are the *Principles* of our good Actions, and we ourselves the *Principles* of our good Wills. See PELAGIANS.

**PRINCIPLE** is defined, among the School Philosophers, to be that from which any thing is, is done, or known: *Unde aliquid est, fit, aut cognoscitur*; which is a very extensive Signification, and agrees to all kinds of *Principles*.

Thus, the Premises are *Principles*, in respect of the Conclusion; and thus Fire, and every other Agent, are the *Principles* of Things which they produce.

The *Thomists* define *Principle* to be the like effect; *id è quo aliquid procedit aliquo modo.*

The Philosophers usually distinguish *Principles, Principia*, into those of *Being, Essenti*; and those of *Knowing, Cognoscendi*: Or *Principia Rei* and *Cognitionis*.

Of the first they make two Kinds; *viz.* of *Origination*, which are those from which something proceeds really the same with the *Principle*; as in the Procession of the Son and Spirit from the Father in the Trinity: And of *Dependency*; in which sense, any Cause is a *Principle*, in respect of the Thing caus'd; or a Subject, in respect of the Accidents inherent in it.

The *second* is that from which we borrow, or derive our Knowledge of some other Thing; or, it is that which makes the Thing be known. Such are *Axioms, Definitions, Hypotheses*; such also are *Examples, Explanations, &c.* See KNOWLEDGE.

PRINCIPLE, in *Physica*, or PRINCIPLES of a natural Body, is something that contributes to the Essence of a Body; or, whereof a natural Body is primarily constituted. See BODY.

*Aristotle* defines *Principles* to be those things which are not made or constituted of themselves, nor of other things, but all things of them: *Quæ non sunt ex se invicem, nec ex aliis, sed ex its omnia.*

To give an Idea of natural *Principles*, consider a Body in several States; a Coal, e.g. that was just now a piece of Wood: 'tis evident there is something in the Coal, which before existed in the Wood; this, whatever it is, is a *Principle*; and is what we call *Matter*. See MATTER.

Again, there must be something join'd with this *Matter*, to make it Wood rather than Fire; or Fire, rather than Wood: This is another *Principle*; and is what we denominate *Form*. See FORM.

*Matter*, and *Form*, then, are universal *Principles* of natural Bodies.

The *Peripateticks* add a third *Principle*, viz. *Privation*; for tho', they say, a thing is not made from nothing; yet it must be made from its not being that thing before: This *Aristotle* calls *Privation*, and admits it as a third *Principle*.

But the *Moderns* reject it; for if *Privation* be a *Principle*, 'tis at least so, in a very different sense from *Matter* and *Form*. See PRIVATION.

Some late Philosophers admit no *Principles* but *Acid* and *Alkali*. See ACID and ALKALI.

*Aristotle* makes two sorts of natural *Principles*, as they concur in the Generation, or the Composition of Bodies.

The *Principles* of Generation, or of a Body *in fieri*, are those without which a natural Generation can neither be, nor be conceiv'd. Such are the three *Principles* above mention'd; *Matter, Form*, and *Privation*.

The *Principles* of Composition, or of a Body *in facto esse*, already made, are those whereof natural Bodies really consist. Such, according to him, are *Matter* and *Form*; to which some add a third, viz. *Union*, to connect the two other together. But this is only necessary upon supposition of substantial Forms. See SUBSTANTIAL FORM.

*Principles* are usually confounded with *Elements*; yet in there a real difference: *Elements* are properly the first and simplest Beings, arising from the first Determination or Assemblage of *Principles*. They are the simplest things in which *Matter* and *Form* are combined. *Elements* and *Principles*, therefore, differ in this, that a *Principle*, as *Matter*, is only a began, not a complet Nature; but an *Element* is perfect and complet. See ELEMENT.

To this Head may likewise be referred what we call *Mechanical Principles of Bodies*, which explain the Mechanism or artificial Structure of Things, and all the Varieties and Differences of Bodies from Motion, Figure, and other common Affections. See MECHANICAL.

These *Principles* are differently maintain'd by three or four different Sects of Philosophers; viz. the ancient *Epicureans*, or *Corpuscularians*; to which may be added the modern *Gassendists*; the *Cartesians*; and the *Newtonians*. See EPICUREAN, CORPUSCULARIAN, CARTESIAN, and NEWTONIAN.

PRINCIPLES, in *Chymistry*, are the first and simplest parts whereof natural Bodies are compounded; and into which they are again resolv'd by Fire. These are more properly, as well as more commonly, call'd *Elements*. See ELEMENT.

The *Chymists* make five *Principles*; three whereof are call'd *active Principles*, viz. *Salt*; *Sulphur*, or *Oil*; and *Mercury*, or *Spirit*. The *Salt* they suppose the Foundation of all Savours; see SALT. The *Sulphur* of Odours; see SULPHUR: and the *Spirit*, or *Mercury*, of Colours; see ELEMENT.

The two *passive Principles*, are *Phlegm*, and *Caput Mortuum*; which they also call *elementary Principles*. See PHLEGM, &c.

PRINCIPLES, in the *Hermetic Philosophy*. According to these Gentlemen, the two *Universal Principles* of sensible Nature, are *subtile* and *solid*, which being join'd in a greater or less degree, generate all that beautiful Variety of Beings in the Universe.

The three *Natural Principles* are *Salt*, *Sulphur*, and *Mercury*. These *Principles* generate the four *Elements*; and are, as it were, secondary *Elements*, inasmuch as they are contain'd in all mix'd Bodies. *Sulphur* is the first, and stands in the place of *Male*; *Mercury* the second, standing in the place of *Female*; and *Salt* the third, which copulates the others together. *Diâ. Hermet.*

PRINCIPLE is also apply'd to the Foundations of Arts and Sciences. See ART and SCIENCE.

In this sense we say, *Principles* are not to be proved; they must be common Notions. See NOTION and AXIOM.

There is no disputing against a Man that denies *Principles*. The worst Reasoning is that which includes a *Petito Principii*, i. e. which supposes a *Principle* that ought to be proved.

The Word *Principle* is also us'd by extension for the first Rules, or Maxims of an Art. In this sense we say, a Man is ignorant of the *Principles* of Geometry; meaning, he has not learnt *Euclid's* Elements.

The *Principles* of all Arts and Sciences are found in this Dictionary, under their respective Heads.

PRINTER, a Person who composes, and takes Impressions from, moveable Characters, ranged in Order; or from Plates engraven; by means of Ink, a Press, &c. See PRINTING.

*Just, Guttembourg, Schoeffer, Mentel, and Koster* were the first Printers. The first that practis'd it in England, was *Fred. Corbely*, brought over from *Haverly*, under King Henry VI. In France, *Gering*; at Rome, *Coverd Sweeneybeim*, and *Arnold Pannartz*, both Germans; at Naples, *Sixtus Rufinger*.

The great Printers were *Aldus*, and *Paul Manutius*; the two *Badii*; *William* and *Friderick Morel*; *Oporn*; *Proben*; *Rob. Hen. and Char. Stephens*; *Gryphæus*; *Turnebus*, *Torrei*, *Camelini*, *Plantin*, *Rapheing*, *Vossian*, *Bleau*, *Crispin*, and the two *Elsevirs*.

The learned Printers were the *Mantuisii*, the *Stephens's*, the *Badii*, *Turnebus*, *Wicel*, *Morel*, &c.

*Plantin* had the Title of *Arch-Printer* given him by the King of Spain, in consideration of his printing the *Polyglot of Anoverp*.

The Names, Characters, and Eloges of all the famous Printers are found in the II<sup>d</sup> Book of the *Conjura Authorum*.

The Printers, since the establishment of that Art, are esteem'd a part of the Company of Stationers and Book-sellers: Before that establishment, the Company consist'd only of Book-sellers, Binders, Illuminers, and Parchment-makers.

The Parchment-Makers prepared the Skins, and made the Parchment or Vellum; which were then almost the only Matters Books were wrote on. The Writers, or Stationers, wrote and transcribed Books after Copies given 'em by the Book-sellers. The Binders were charged with the binding of those days, which was very coarse; only consisting of two slight Boards cover'd with some paltry Leather. The Illuminers painted in Miniature, and gilt initial Letters, Head-pieces, Tail-pieces, and other Compartments. Lastly, the Book-sellers set the Stationers to work, and sold their Copies in Shops, and other Places, on the days allow'd 'em by the Statutes to expose the same.

PRINTING-HOUSE, a Place designed for Printing, and fitted up for that purpose with Presses and other Furniture.

The most considerable Printing Houses in the World are those of the *Louvre* and *Vatican*.

The first began under Francis I. carried to its utmost Perfection under Lewis XIII. by the Care of the Cardinal *Richelieu*; and removed into the Galleries of the *Louvre* by Louis XIV. See LOUVRE.

The *Vatican Printing House*, call'd also the *Apostolical Printing House*, because the Pope's Bulls, Decrees, &c. are printed thereon, was begun by *Pius IV.* and built with great Magnificence by *Sixtus V.* See VATICAN.

Out of both these Printing-Houses have come forth very beautiful and splendid Editions of the ancient Authors: The *Vatican* was the first that printed in Arabic.

The *Clarendon Printing-House* at Oxford, call'd because open'd with an Edition of the History of the Lord of that Name, promises well: It has already furnish'd us with a fine English Bible.

PRINTING, the Art of taking Impressions with Ink, from Characters and Figures moveable, or immovable, upon Paper, Vellum, or the like Matter. See CHARACTER, INK, PAPER, &c.

There are two kinds of Printing; the one for Books; the other from Copper-Plates, for Figures: The first call'd *Common-Press-Printing*; the second *Rolling-Press-Printing*.

The prime difference between the two consists in this, that the Characters of the former are cast in Relief; and those of the latter engraven in Creux. See RELIEVO, ENGRAVING, &c.

The Art of Printing is a modern Invention: 'Tis, indeed, of a very ancient standing among the Chinese; but thence their Printing is very different from ours. It must be own'd the European Printing, in its Original, was much the same with the Chinese; yet, as there was at that time no Commerce or correspondence between Europe and China, the passage into the East by the Cape of good Hope being as

yet undiscover'd by the *Portuguese*; there is no room to charge the *Europeans* with borrowing their Art from the *Chinese*: But each must be own'd to have fall'n on the same thing, tho' at very different times.

Father *Couplet* affirms us, that *Printing* has been in use in *China* from the Year 920. Father *le Comte* speaks more largely; saying, that it has been there from, almost, all Ages: He adds, that there is this difference between theirs and ours, that, whereas we have but a very small Number of Letters in our Alphabets, and by the various Arrangement of these, are able to form infinite Volumes; we have the Advantage, by making our Characters moveable, to print the largest Works with an inconsiderable Quantity of Letter; those that served for the first Sheers, serving over again for the succeeding ones: The *Chinese*, on the contrary, by reason of the prodigious Number of their Letters, are precluded this resource; and find it more easy and less expensive to cut all their Letters on wooden Blocks; and thus to make as many Blocks as there are Pages in a Book, and these of no further use but for that single Work. Their Method of Printing see hereafter.

#### Origin and Invention of the European PRINTING.

Who the first Inventors of the *European Printing* were; in what City, and what Year 'twas first set on foot, is a famous Problem long disputed among the Learned: In effect, as the *Grecian Cities* contended for the Birth of *Homer*; so do the *German Cities* for that of *Printing*.

*Mentz*, *Haerlem*, and *Strasbourg*, are the warmest on this Point of Honour: *Italy* also would have enter'd the Lists; but the Suffrages being at first divided between the first three Pretenders, they are left in possession of the Question, which, in reality is not yet justly decided; tho' it must be own'd, *Mentz* has always had the Majority of Voices.

We shall not enter into a nice Disquisition of the Merits of the Cause, but only propose the Pretensions of each.

*John Mentel* of *Strasbourg*, *John Guttenbourg* and *John Fust* of *Mentz*, and *L. John Koster* of *Haerlem*, are the Persons to whom this Honour is severally ascribed, by their respective Countrymen; and have all their Advocates among the Learned.

*Mentel*, a Physician of *Paris*, enters the Lists in behalf of his Name-lake of *Strasbourg*; and contends that 'twas he first invented *Printing* in the Year 1422, and that in consideration hereof, the Emperor *Frederic III.* gave him a Coat of Arms corresponding thereto: He adds, that *Guttenbourg*, whom he had taken in as a Partner or Associate, carry'd it to *Mentz*, where he took in *Fust* a Partner.

The *Haerlemers*, with *Beehornius*, *Schrevelius*, &c. refer the first Invention to *Lawrenus Janus Koster* of *Haerlem*, in the Year 1430. Adding, that his Associate, *Guttenbourg*, stole away his Tools while he was at Church; and carried 'em to *Mentz*, where he set up for the first Inventor; tho' others attribute this Theft, &c. to his Partner *Fust*.

*Munster*, *Polydore Virgil*, *Pasquier*, &c. will have *Guttenbourg*, or *Guttenbourg*, to have really been the Inventor of *Printing*; and add, that he took in *Fust* and *Schoeffer* for Associates.

*Naude*, in his *Mascurat*, espouses the Cause of *Fust*, or *Fanst*, or *Fanstus*; and will have him to be the first Printer in *Europe*, and that he took in *Guttenbourg* for a Partner. His reason for putting *Fust* in possession of this Privilege, is, that the first Books that were printed, appear to have been all of his Impression. 'Tis more than probable, had *Guttenbourg* or *Koster* had a greater or an equal Share in the Invention, they would not have allow'd him to attribute the whole to himself and his Son-in-law *Schoeffer*, as he has done, without ever offering to do the like, or in the least contradicting him, and asserting their own Right.

These Editions are, 1<sup>o</sup>. The *Catholicorum Fœderis*, dated in 1450, and now in the King's Library. *Fust's* Name, indeed, is not to this; but 'tis perfectly like the following ones, where it is. 2<sup>o</sup>. The *Latin Bible* of 1462, now in the French King's Library. 3<sup>o</sup>. *Tully's Offices*, in 470 (the rest being all *Folio's*) in the Year 1455 and 1466; for there are Copies in the *Bodleian*, and the Library of *C.C. College*, *Oxon*, of both those Dates. 4<sup>o</sup>. Other Bibles of 1471. 5<sup>o</sup>. *St. Augustine de Civitate Dei*, 1475. 6<sup>o</sup>. *Mercurius Trismegistus de Potestate & Sapientia Dei*, in 1503. 7<sup>o</sup>. *Titus Livius*, in 1518.

Add to this, that at the beginning of *Livy*, is a Privilege granted by the Emperor *Maximilian*, to *Schoeffer* for the sole Power of printing that Author for ten Years; and for six Years to all the other Books he should print thereafter, in consideration of his Father-in-law, *Fust's* having invented the Art of *Printing*. This Privilege is dated 1518, and signed *Jac. Spiezer*.

*Erasmus*, however, in the Epistle after that Privilege, does not positively aver the Fact; but only observes, that the first, or the chief Inventor of that Art is held to be *J. Fust*. In the Advertisement to the said Book, *Nich. Car-*

*bachius* speaks to the same effect as the Privileges, and *Erasmus*.

As to *Guttenbourg*, *Mentel*, and *Koster*, *Naude* observes, the Person is not yet born that can say he has ever seen Books printed by any of 'em, before, or as early as those of *Fust*. All that is urged on their behalf, is only founded on Reports, Conjectures, Probabilities, forged Authorities, and the Jealousies of Cities against one another.

Yet *Salmuth*, in his Additions to *Faucirollus*, cites a public Act, whereby it appears that *Fust*, after having invented *Printing*, and sustain'd it a long time on his own footing; at length took in *Guttenbourg* as a Partner, to contribute to the Expence; which was very great, by reason the first Books were most of 'em printed on Vellum, or at least Parchment, and after the *Chinese* way.

But the Cause is not thus decided: The Advocates for *Koster* urge divers things, to put him in the place here assigned to *Fust*. Mr. *Ellis*, in the *Philos. Transact.* fathers Books on him prior to any of those above mention'd to *Fust*; and even some as early as 1430, and 1432. 'Tis certain, the *Haerlemers*, shew printed Books of that Date, which agreeing so well with the account given by *Theod. Schrevelius*, and others, leaves little room to doubt, whether the Honour of the Invention be his or the others due. All that belongs to *Fust*, according to this Writer, is the honour of establishing the Art in greater Lustre and Perfection at another place many Years after.

But the difficulty lies, either in shewing why the Practice should be at a stand from 1432, to the reviving of it at *Mentz* by *Fust* and *Schoeffer*, in 1465; or else in giving some account of the Condition and Progress of this Invention during that Interval.

Now, *Beehornius*, *Schrevelius*, and other Authors, expressly affirm, that so large a Work as the *De Spiegel*, *Speculum Salutaris*, of *Koster*, shewn at *Haerlem* for the first printed Book, could never be his first Essay: He must have had the Art in its rougher Rudiments before, and have made many Trials on lesser Works: No doubt his first Attempts were on loose Sheets, which we may suppose were easily lost. In effect, it must be allow'd no inconsiderable Argument in *Koster's* behalf, that the rudest and most artless Performances seem to be his: Mr. *Ellis* mentions some things of this kind without Date, which he had seen in the King's Library at *St. James's*, in that of *Bennet's College* and the *Bodleian* at *Oxford*, with all the Marks of the utmost Simplicity, and which might fairly bid for first Essays: There is something so awkward and coarse in 'em, that any body almost might have done 'em; mere Nature being sufficient, without any Art or Experience at all. The Ink was only common writing Ink, unartfully spread upon wooden Blocks, very clumsily cut, &c.

By this time we have traced up the Art to such a State, that it may, perhaps, scarce seem worth the contesting who it was invented in; and no doubt, *Printing* as it now stands, owes more to the Genius and Address of some of the later Improvers, than it did to its Author.

The same Consideration may make us more easy under our present Ignorance of the Inventors of most other Arts; many of which had such simple un-meaning Originals, that you or I should, perhaps, think it no mighty Credit to be esteem'd the Authors of Inventions nothing less Artful and ingenious.

#### Progress of PRINTING.

The first Printers, then, whoever they were, whether *Koster*, *Fust*, *Schoeffer*, or *Guttenbourg*, made their first Essays on wooden Blocks, or Forms, after the *Chinese* manner.

'Tis not improbable, says Mr. *Bogford*, they might take the Hint from ancient Medals and Seals; but others rather imagine it to have come from the Method of making playing Cards, which, 'tis certain, bears a near resemblance to the primitive Process of *Printing*; as appears from the first Specimens of that Art above-mentioned. See CARD.

The Book at *Haerlem*, the Vocabulary call'd *Catholicorum*, and the Pieces in the *Bodleian* and *Bennet's College*, are all perform'd in this way; and the Impression appears to have been only given on one side the Leaves; after which the two blank sides were pasted together.

But they soon found the Inconveniences of this Method; and therefore bethought themselves of an Improvement; which was by making single moveable Letters, distinct from one another.

These being first done in Wood, gave room for a second Improvement; which was the making of 'em, at length, of Metal; and, in order to that, forging Moulds, Matrises, &c. for casting 'em.

From this ingenious Contrivance, we ought to date the Origin of the present Art of *Printing*, as practis'd in *Europe*; contra-distinguish'd from the Methods of the *Chinese* abroad, and the Card-Makers at home, which were the same Art, only practis'd in a different place, or with a different view.

And of this, *Schoeffer*, or *Schoffer*, first, Servant, and afterwards Partner, and Son-in-Law, of *Fust*, at *Mentz*, above-mentioned; is pretty generally allow'd the Inventor. So that he was properly the first *Printer*; and, in strictness, the Bible, which was printed with moveable Letters in 1450, was the first printed Book; the next was *Angustia de Civitate Dei*, then *Tully's Offices*, &c. about the Year 1461.

But the Art being yet in its Infancy, there were some Imperfections in the Books they printed; among the rest was the want of Capital Letters: hence they left the places of the initial Letters blank, and gave 'em to the Illuminers to paint in Gold, or Azure: 'Tho', others say, this was done designedly, to enable 'em to pass off their Books for Manuscripts.

Some Authors tell us, that *Fust* carrying a parcel of his Bibles to *Paris*, and offering 'em to sale as MSS. the *French*, upon considering the number of Books, and their exact Conformity with one another, even to a Point; and that the best Book-Writers could not be near so exact; concluded there was Witchcraft in the case; and, by either actually indicting him as a Conjuror, or threatening to do so, extorted the Secret. And hence the Origin of the popular Story of *Dr. Faustus*.

From *Mentz*, the Art of *Printing* soon spread itself throughout a good part of *Europe*; *Haerlem* and *Strasbourg* had it very early; which, as the current of Authors represent it, occasion'd their pretending to the honour of the Invention.

From *Haerlem* it pass'd to *Rome* in 1467; and into *England* in 1468, by means of *The. Bourchier*, Archbishop of *Canterbury*, who sent *W. Turner*, Master of the Robes, and *W. Caxton*, Merchant; to *Haerlem*, to learn the Art: These privately prevailing with *Corseles*, an Under-workman, to come over, a Press was set up at *Oxford*; and an Edition of *Ruffinus* on the Creed printed the same Year in a broad Octavo on Paper.

From *Oxford*, *Caxton* brought it to *London* about the Year 1470. In the same Year it was carried to *Venice*, and to *Paris*, where *Gering*, *Grants*, and *Friburger*, all Germans, invited thither by two Doctors of the *Sorbonne*; set up a Press in that learned House.

Hitherto there had been nothing printed but in *Latin*, and the vulgar Tongues; first in *Roman* Characters, then in *Gothic*, and at last in *Italic*. But in 1480, and, as some say, in 1476, the *Italians* cast a Set of *Greek* Types; and it

was at *Venice*, or, as some say, at *Milan* or *Florence*, that the first Editions in that Language appeared.

The *Italians*, too, have the honour of the first *Hebrew* Editions, which were printed about the same time with the *Greek*, at *Savigno*, a little City in the Duchy of *Milan*; under the direction of two Jewish Rabbins, *Jehus* and *Moses*, whose Works are dated in the Year of the World 5240, answering to the Year 1480 of the Christian *Æra*.

Towards the end of the 16th Century, there appeared various Editions of Books in *Syriac*, *Arabic*, *Persian*, *Armenian*, *Coptic*, or *Egyptian* Characters; some out of the Curiosity of the Learned, and others for the Liturgic Uses of the Christians of the *Levant*, printed chiefly at *Paris*; whither Punctuons and Matrices were sent from *Constantinople* by *M. Secretary*, then Ambassador at the *Port*.

Out of *Europe*, the Art of *Printing* has been carried into the three other Quarters of the World: For *Asia*, we see Impressions of Books at *Gas*, and in the *Philippines*; at *Lima*, *Bogota*, *Mexico*, &c. for *America*; and at *Morocco* for *Africa*.

The *Turks*, indeed, rigorously prohibit *Printing* throughout their Empire, as imagining that the too free Communication with Books, might occasion some change in Religion or Government; yet the *Jews* have several Editions of their Books printed at *Constantinople*, *Thebalonica*, &c.

#### Method of PRINTING.

The *Printing* Letters, Characters, or Types as they are sometimes call'd, we have already spoke of, under the Articles *LETTER* and *CHARACTER*.

Of the Method of forming or casting them, under the Article *Letter-Foundery*.

And of the Art of Engraving the Punctuons, Matrices, &c. in order thereto, under the Articles *ENGRAVING*, *PUNCTUON*, *MATRIX*, &c.

There are Letters of several Sizes, or *Bodies*; each of which, again, are sometimes cast with the *Roman*, sometimes in *Italick*, and sometimes an *English* Face. There are also Bodies with *Greek*, *Hebrew*, and the *Misic* Face.

The most usual Sizes, or *Bodies*, with their Proportions, are shewn and exemplify'd in the following Table; where, it is to be observed, that the Verse answering to each is compos'd in the respective Letter

Small  
Large  
Loy Primer  
Small Pica  
Pica  
English  
Great Primer  
Double Pica  
Two lined  
English  
Great  
Canon.

Which when I saw, and for my selfe drew.

Enkelt with Belle, and never being Geif.

Which Love had taught with his dextery Dears;

With wounding Words, and Terms of foul Reprif,

He pluck'd from us all hope of due relief,

That erst us held in love of lingering Life.

The Hopeless, heartless 'gan the cunning Thief

Perfuade to die to stint all further strife:

To me he lent this Rope, to him a rusty Knife:

With which sad Instrument of hasty Death,

That woful Lover lothing

A Set or *Font* of any of these Sizes, includes current Letters, Capitals, numeral Figures, Points, Spaces, &c. See *Font*.

The Workmen employ'd in *Printing* are of two kinds; *Compositors*, who range and dispose the Letters into Words, Lines, Pages, &c. according to the Copy deliver'd them by the Author: And *Press-men*, who apply Ink upon the same, and take off the Impression. See *COMPOSITION*, &c.

#### Office of the Compositor.

The Types being cast, &c. are distributed, each kind by itself, among the Divisions of two long wooden Frames, an upper, and under one, call'd *Cases*; each of which is divided into little Cells, or *Boxes*, of different Sizes.

The Boxes of the upper Case are in Number 98; and in these are disposed the Capitals, small Capitals, accented Letters, &c.

In the Cells of the lower Case, which are fifty four, are disposed the common running Letters, with the Points, Comma's, Spaces, Quadrates, &c.

Each Case is placed a little slope, like a reading Desk, that the Operator may reach the upper Boxes the better; and be in less danger of mixing the Letters by stretching his Arm over them. See *CASE*.

The Compositor's Poit is against the middle of the Case, and he works standing; holding an Instrument, call'd the *Composing-Stick*, in one Hand, with the other he takes out the Letters, Points, Comma's, &c. as he needs them, out of the Boxes; ranges them on his *Composing-Stick*; and, putting

ting a Space between each two Words, forms one Line after another; till the Stick being full, he empties it out upon an other Instrument, call'd the *Galley*; several of which ranged in a Frame, call'd a *Chasse*, are ready for the Press.

This short View of Composing, we shall further illustrate and enlarge upon.

The *Composing-Stick*, then, (represented Tab. MISCELLANY, Fig. 7.) consists of a Plate, or Slip of Brass, Iron, or Wood, more or less broad, and contriv'd so as to be made more or less long according to the width of the Page, and the Number of Lines to be compos'd in it.

From the right Side of this Plate arises a Ledge *a*, about half an Inch high, running the whole length of the Plate, and serving to sustain the Letters, the sides of which are to rest against it; from the same Plate likewise arise two other lesser pieces, *b* and *c*. one of which, *b*, is contriv'd to slide along it, that so the two pieces may be either approached or withdrawn at pleasure, to adjust the length of the Line to the Measure intended. See COMPOSING-*Stick*.

Add, that where Marginal Notes, References, &c. are required in a Work; a second sliding Piece is added in the Composing-Stick, at the proper distance from the former: as at *e*.

E'er the Workman proceeds to compose, a *Rule*, or Slip of Brass-Plate, cut to the length of the Line, and of the same height as the Letter, is placed in the Composing-Stick against the Ledge thereof; for the Letter to bear immediately against.

Things thus prepared, and having the Copy lying before him, and the Stick in his left Hand; with the right he picks up the Letters, Spaces, &c. and places 'em against the Rule; while with the Thumb of the left he presses them close to the upper Screw, or *Check*; and thus keeps them tight and steady: while the other Hand is constantly employ'd in setting in more Letters: The whole performed with a degree of Expedition and Address, not easy to be imagin'd.

A Line being thus compos'd, if it end with a Word or Syllable, and fill the Measure; there needs no farther Care; or otherwise more Spaces are to be put between the several Words to justify the Lines, *i. e.* to make the Measure pretty stiff; and thus he proceeds to another Line.

The Spaces here used are a sort of blank Characters, of the like Dimensions as the Letters, but less high; and whose Faces, therefore, when set, do not appear, nor give any Impression. They are of several kinds according to the Dimensions of the Blanks, or Intervals to be made by them, *viz.* *Quadrats*, to fill up a Break at the end of a Paragraph, or the like; *At quadrats*, which are square, and of the thickness of an *m*, serving to make the distance after a Period, or between Sentence and Sentence; *N quadrats*, of the thickness of an *n*, to be placed after Colons, Semicolons, and Comma's; and *thick or thin Spaces*, to be used between the Words in justifying, or above.

For Marginal Notes, in the Spaces reserved for them, between the two sliding pieces of the Composing-Stick, are put little quadrated pieces of Metal, call'd *Quadrations*; which are justified by other smaller pieces: a Slip of Scale-board being placed from the top of the Page to the bottom, to keep the Note and Text at a due distance.

The first Line thus completely justify'd, the Compositor advances to a fresh one; in order to which, he moves the brass Rule from behind the former, and places it before it, and thus composes another Line against it, after the same manner as the former: and thus he goes on till his Stick be full, which he empties into the Galley, after the manner following.

Taking the Rule from behind the last Line, he places it before it; and with his two middle Fingers squeezes the Lines in the Stick close; his two Fore-fingers at the same time being apply'd on the outside of the Rule: thus he lifts them out of the Stick, and clapping his two Thumbs behind the first Line, lifts them into the Galley; taking care to disengage his two Thumbs without breaking the Lines.

The Compositor having thus set the proper Number of Lines in his Stick, *viz.* four, six, or eight, and emptied them out into the Galley; he again fills, and empties as before, till a complete Page be form'd: Remembering at the bottom of every Page to set a Line of Quadrats, and at the end thereof the first Word of the Page ensuing, for a *Catch-Word*; and, if it be the first Page of the Sheet, one of the Letters of the Alphabet for a *Signature*.

The *Galley* is a flat wooden Instrument, in form of a long Square of a length and breadth proportionable to that of the Page: It consists of two Parts, the Upper, call'd the *Slit*, whereby the Pages of large Volumes, when compos'd, are slid'd upon the Stone; the other, which is the Body of the Galley, is ledged on three sides, to contain the Slit; the inner Ledge not to exceed half an Inch in height, that the compos'd Page rising above it by one half

the height of the Letter, may be *tyed up*, or bound down, and removed without danger.

This Galley is placed at the Top of the Case, and detained by two wooden Pins from sliding down the Boxes. See GALLEY.

The Page, then, compos'd and ranged in the Galley, he ties it up therein with a *Cord* or Pack-thread; and lets it by; and proceeds to the next, till the Number of Pages of the Sheet be compleated: which done, he carries them to the *Imposing* or *Correcting-Stone*, there to range them in Order, in a *Chase*; which they call *Imposing*.

The *Chase* is a Rectangular Iron Frame of different Dimensions, according to the Size of the Paper to be printed on; having two cross pieces of the same Metal, call'd a *long* and *short Cross*, mortis'd, at each end, into the Frame, so as to be taken out occasionally.

By the different Situations of these Crosses, the *Chase* is fitted for different Volumes; for Quarto's and Octavo's, one traverses the middle lengthwise, the other breadthwise, so as to intersect in the Centre; which is the most customary Situation: For Twelves and Twenty-fours, the short Cross is shifted nearer to one end of the *Chase*: For Folio's, the long Cross is left entirely out, and the short one placed in the Middle; and for Broad-sides, or Sheets printed on one side only, both Crosses are set aside.

To dress the *Chase*, or range and fix the Pages therein, they make use of a Set of *Furniture*, consisting of *Rightlets*, or slips of Wood of different Dimensions, and about half an Inch high, that they may be lower than the Letters: Some of these are placed at the Top of the Pages, call'd *Head-sticks*; others between them to form the inner Margin, call'd the *Gutter sticks*; others at the Sides, call'd *Side-sticks*; and others at the Bottom, call'd *Foot-sticks*.

The Pages, then, placed in order on the Stone, the *Chase* is put over 'em, and the *Rightlets* apply'd between the Letter and the *Chase*, in the Position above-mentioned; the whole is lock'd up by means of other lesser pieces, cut in the Wedge-form, call'd *Quoins*, which are driven with a *Mallet* and *Shooting-stick*, to a sufficient Tightness.

Before the Form be quite lock'd up, they dress down the same, by passing a smooth piece of Wood, call'd the *Plainer*, over the Letters, to make their Surfaces stand flat and even; and when lock'd up, they shake it, to see that nothing stir.

In this condition the Work is call'd a *Form*, containing more or fewer Pages, according to the Volume. See FORM.

As there are two Forms required for every Sheet, when both sides are to be printed, 'tis necessary they be exactly of the same length and breadth, *i. e.* the corresponding *Rightlets*, *Head-sticks*, &c. are to be equal in both Forms.

Here, then, properly ends the Compositor's Office; the Form, thus finish'd, being to be committed to the Press-Man.

Indeed, as it is impossible but there must be Mistakes in the Work, either thro' the Oversight of the Compositor, or by the transposition of the Letters in the Cases; after drawing off a Proof, it is deliver'd to the Corrector, who reading it over, and rectifying it by the Copy; it is remanded to the former Operator, to be corrected accordingly.

For the Characters used in correcting a Sheet for the Compositor, see CORRECTION.

The Compositor, then, unlocking the Form upon the correcting Stone, by knocking out or loosening the *Quoins*; and spreading his corrected Proof so, as that the Lines thereof range with the respective ones of the Metal; by running his Eye along both, he easily spies where Corrections are to be made: according to which, he proceeds to pick out the faulty Letters, Points, &c. with a sharp-pointed Steel-Bodkin, and puts others in their places.

Where the Alterations are considerable, and particularly where Insertions or Omissions are to be made, there usually arises a necessity of *over-running*; in order to which, they must de-compose, or return the Lines back from the *Chase* into the Galley, and from the Galley again into the Composing-Stick, to be new modell'd and rectify'd accordingly.

If, *e. gr.* one or more Words to be inserted in a Line, cannot be *got in* by changing the Spaces of the Line for lesser ones; part of the Line must be put back into the close of the preceding one, or forward into the beginning of the subsequent one, or both; till room is got. If the Insertion be large, several Lines will need to be over-run, either backward or forward, till a Break is arriv'd at; when, if it be not *got in*, a Line is to be driven out; and to get in that Line, the next Pages, either backward or forward, must sometimes be over-run e'er it can come in.

Where an Omission is to be made, the contrary course must be taken. If it be but little, the Compositor takes it out, and drives out the Matter; by either enlarging his Spaces, or by showing the beginning of the following, or the close of the preceding Line, therein. If it be considerable, he may be oblig'd to over-run several Pages e'er it can be driven out.

Office of the Pressman, or PRINTING, properly so call'd.

To work off the Form thus prepared and corrected by the Compositor, there are three things required, Paper, Ink, and a Press.

To fit the Paper for use, it is to be first wet or moisten'd, by dipping several Sheets together in Water; these are afterwards laid in a heap over one another; and to make 'em take the Water equally, are all press'd close down with a Weight a-top. As to the degree of wetting, it must be according to the Quality of the Paper, and the Size of the Letter; small Letters, and stiff Paper, requiring moist wetting.

The Printer's Ink is of two kinds, black and red. The last occasionally used in Title-Pages, Calendars, &c. the first for the Body of Books. The Composition of each, tho' now reckon'd no part of the Printer's Business, but usually furnish'd 'em by other hands, is as follows.

#### Method of making the PRINTING-Inks.

**For black Ink:** An hundred Pounds of Nut, or Linseed-Oil being reduced, by boiling, to the Consistence of a Syrup, is cleas'd and purify'd by throwing into it two Pounds of coarse Bread, and about a dozen Onions. They then boil thirty or thirty-five Pounds of Turpentine, a-part, till such time as they sink, upon its cooling on Paper, that it breaks clean, like Glaz, without pulverizing; so for it pulverize easily, 'tis a sign it is burnt. The Oil and Turpentine thus prepared, the first is gently pour'd, half cold, into the latter; and the two stirr'd together with a Stick till they be well mixed; after which, the Composition, which is call'd the Varnish, is set by, to be used occasionally.

Now, to proceed to make Ink, they take a quantity of this Mixture, and add to it a certain quantity of Lamp-black; working it up with a kind of wooden Mallet, or Brayer, till the whole be incorporated and reduced into a kind of Pulp; which is the Ink for use.

Where, Note, that its Thickness or Strength are always to be proportion'd to that of the Paper and the Warmth of the Weather; strong Paper and hot Weather requiring strong Ink: and that the Strength or Weakness of the Ink depends on the greater or less degree of Coction of the Varnish.

**For red Ink:** They use the same Materials as for black, excepting that instead of Lamp-black they add a proper Quantity of Vermillion. Some hold, that by mixing and incorporating the bigness of a Nut of Fish-glue, or Brandy, or the White of an Egg with the Ink; the Vermillion acquires a greater Luitre.

The Ink is applied upon the Forms by Balls, which are a kind of wooden Funnels, the Cavities whereof are furnish'd with Wool, cover'd with Leather nailed to the Wood. One of these the Press-man takes in each Hand, and applying them on the Ink-block, to charge 'em with Ink, he rubs one against t'other to distribute the Ink equally; and, at last, smears over the Form by *beating* or dabbing 'em several times over the whole Face thereof: This leaves the Form in a condition to be pass'd under the Press, with the moisten'd Paper laid thereon.

#### The PRINTING-Press.

The **Printing-Press** (represented Tab. MISCELLANY, fig. 8.) is a very complex Machine; its two principal Parts, each whereof consists of several others, are the *Body* of the Press, which serves to give the Pinch or Stroke for the Impression; and the *Carriage*, on which the Form is laid to undergo the same.

The *Body* consists of two strong *Cheeks* *b b*, placed perpendicularly, and join'd together by four cross Pieces or *Planks*.

The first Plank *cc*, call'd the *Cap* of the Press, is fixed, and serves to keep the two *Cheeks* together at the due distance, at top: The second *dd*, call'd the *Head*, is moveable; being sustain'd by two Iron-Pins or *long Bolts*, that pass the *Cap*: In this Plank is fix'd a Female Screw or *Worm*, with a *brass Nut*, sustain'd by two *short Bolts* which keep it up: The third Plank *ee*, call'd the *Shelves*, serves to keep steady a Part call'd the *Hoffe*, in which the *Spindle* (to be spoke of hereafter) is enclosed: The fourth Plank *ff*, call'd the *Winter*, is moveable; it bears the *Carriage*, and sustains the Effort of the Press beneath, as the Head does above; each giving way a little, the one upwards, the other downwards, to make the Pull the easier.

The *Spindle* *gg*, is an upright piece of Iron pointed with Steel, of different Dimensions; having a Male-Screw which goes into the Female of the *Head* about four Inches. Thro' the *Eye* *h*, of this *Spindle*, is riveted the *Bar*, by which the Press-man works the Press.

The lower part of the *Spindle* passes thro' the *Shelves*, being inclosed in a square wooden Frame *i*, call'd the *Hoffe*; and its Point works into the *Pin*, fix'd in a *brass Pan* supply'd with Oil: which *Pan* is fix'd to an Iron Plate let into the top of the *Platten*. The Press-man, then, by pulling or turning the *Bar* fix'd in the *Eye* by an Iron Key, presses upon a square smooth Piece of Wood call'd the *Platten*, and enables it to compress the Form cover'd with the Paper, Tympan, and its Blankets, which, in order hereto, are brought under the *Platten*.

At each Corner of the *Hoffe*, is an Iron-Hook fasten'd to those at each Corner of the *Platten*, with Cords or Pack-thread very exactly.

The *Carriage* *llll*, which makes the second principal Member of the Press, is placed a foot below the *Platten*, having its fore-part supported by a wooden Prop *mm*, call'd the *Fore-ley*, while the other rests on the *Winter*. On this *Carriage*, which sustains the *Plank*, are nail'd two long Iron-Bars or *Ribs* *oo*, and on the *Plank* are nail'd short pieces of Iron or Steel *pp*, call'd *Crimp-Irons*, equally tempered with the *Ribs*, and which slide upon 'em when the Press is turn'd in, or out.

Under the *Carriage* is fix'd a small piece of Iron call'd the *Spit*, with a double Wheel in the middle, round which *Leather Girts* are fasten'd, nail'd to each end of the *Plank*. To the outside of the *Spit* is fix'd a *Handle*, or *Rounce*, by which the Press-man turns the *Plank* in or out at pleasure.

Upon the *Plank* is a square wooden Frame, or *Coffin* *qq*, wherein is inclosed a *Marble*, or *polish'd Stone*, for the Form to be laid on: To this *Coffin* are fasten'd *Leather Stay Girts*, one on each side; which being again fasten'd to the *Cheeks* of the Press, prevent the *Plank* from running too far out, when drawn from under the *Platten*. On the fore-part of the *Plank* is a *Gallows* *rr*, which serves to sustain the *Tympan*, when taken from off the Form.

On the Front of the *Coffin* are three Frames much alike, tho' serving for different purposes, viz. the two *Tympan* and *Frisket*: The *Tympan* *ss*, are square, made of three Slips of very thin Wood, and a-top of a slip of Iron, still thinner, call'd a *Head-Band*: That call'd the *outward Tympan* is fasten'd with *Iron Joints* to the *Coffin*. They are both cover'd with *Parchment*; and between the two are placed *Blankets*, which serve to make the Impression of the *Platten* upon the Surface of the Letters more equable; as also to prevent the Letters from being broke by the Force of the Press. The *Frisket* *tt*, is all of Iron, very thin; fasten'd a-top to the great or *outward Tympan*; and sustain'd by a slip of Wood hanging from the *Coffin*, when open'd, to take out the printed Sheets, and put in others. It is also cover'd with *Parchment*, or Paper, cut in the necessary places, that the Sheet, which is between the great *Tympan* and *Frisket*, may receive the Ink, and that nothing may hurt the *Margins*. On the *Parchment* of the great or *outward Tympan* it is, that the blank Sheet is laid to be printed.

To regulate the *Margins*, and make the *Lines* and *Pages* answer each other when printed on the other side; in the middle of the Wood in the sides of this *Tympan* are two Iron Points which make two Holes in the Sheet, to be placed on the same Pins when the Sheet is return'd for an Impression on the other side, call'd the *Restoration*.

Every thing now about the *Tympan* being prepared for printing, and the Press-man having ink'd, or beat his Form now placed on the *Stone*; he brings the *Tympan* and *Frisket* down from the *Gallows* upon the Form; and advancing the *Plank* under the *Platten* by means of the *Spit*-*Handle*, or *Rounce*, gives two Strokes or *Pulls* with the *Bar*; and with the same *Handle* turn'd the contrary way, brings back the *Plank*, to take out the printed Sheet, and put in a fresh one; and this he repeats till he have taken off the full Number of Sheets the Edition is to consist of.

One side of the Sheet thus printed, 'tis remanded to the Press for the other; and so disposed as that the Iron Points pass thro' the Holes already made in the Sheet.

Sometimes 'tis required to cut the *Frisket* a-fresh, where the second side is to be more or less full of *Printing* than the first; as is frequently the case at the beginning and ending of Books, &c.

The Number of Sheets of the Edition being complete, and the Form to be separated, to restore the Letters into the *Cases*; they first wash it in a boiling Lye to take out the Remains of the Ink, scouring it with a Brush, and then with fair Water. This done, it is carry'd to a wooden Frame to be unlock'd, and the Furniture, i. e. the Sticks, &c. taken off to disengage it from the *Chafe*. Then the Compositor taking out several Lines at once upon a little wooden Rule, he replaces each Letter in its proper Box, to be again used in the remainder of the Impression; which last Operation they call *Distribution*.

Beside the several kinds of Letters and Characters above-mentioned, used in *Printing*; they have likewise Rules for blank Lines, Borders, and Head and Tail-Pieces, accommodated to the several kinds of Letters.

The *Rules* for blank Lines are of Brass, and made exactly the height of the Letter; & otherwise they will either hinder the neighbouring Letters from *printing*, or will themselves be hindered by 'em. These the Compositor occasionally cuts into proper Lengths, as his Work requires.

The *Borders* are a kind of Ornaments in form of long Bars, serving for the Divisions of Books, Chapters, &c. Their Depth is proportion'd to the Letter, and their Length adjusted to the Page; for being composed of several moveable Pieces, 'tis easily lengthening or shortening 'em.

The *Head and Tail Pieces*, cut either in Wood or Pewter, are Compartments used at the beginnings and endings of Books.

The initial Letters are sometimes cut in Wood, and figured; sometimes cast like the other Characters.

For the Convenience of the Binding, the *Printers* had early recourse to *Signatures*, i. e. Letters of the Alphabet placed at the bottom of the Sheet, which shew the Order they are to be bound in; as well as whether the Quires be complete.

The *Catch-Words* serve nearly the same purpose; & these are the first Words of each Page, which are repeated at the bottom of the preceding Pages. The Numbers of the Pages are equally serviceable to the Reader and the Binder, to guide to References, and to warrant the Book duly bound and collated: Some *Printers* formerly put 'em at the bottoms of the Pages; but Custom has carried it for the Tops.

In the Infancy of *Printing*, they had likewise a *Register* Character, for the Convenience of the Binders: To draw this, at the end of each Volume, they collected the Signatures, and the first Words of the four first Sheets of each Alphabet. To abridge it, they afterwards contented themselves to express the Signatures, and how oft each Letter was repeated. But the *Register* has been long disused.

As to the Faults which escape the Corrector, and Compositor; they are usually noted in what they call *Errata*. The ancient Editions had no *Errata*; but in lieu thereof they corrected the Faults in each printed Copy with a Pen; which was easy enough in those days, the impracticable now. In effect, we have antiently had *Printers* who did not need an *Errata* of above five Articles in a Volume of five hundred Sheets: How different from some of the present Set, who might make an *Errata* of five hundred Articles in a Book of five Sheets?

*The CHINESE-PRINTING.*

There are three Opinions as to the Antiquity of the *Chinese-Printing*; one fixing it 300 Years before Christ; another 900 Years after him; and a third carrying it still farther back, and making it co-eval with that mighty Empire: tho' it must be allow'd the last is much the least probable of the three.

Their Manner of *Printing*, we have already hinted to be very different from that which now obtains among the *Europeans*: 'Tis true, it has some Advantages over ours in Correctness, and the Beauty of the Character; but in other Respects it comes far short: The single Advantage of moveable Characters making more than amends for all that is urged against us by some zealous Advocates for this *Oriental Printing*.

Books are printed in *China* from wooden Planks, or Blocks, cut like those used in printing of Callico, Paper, Cards, &c. among us. See *CARD*, &c.

These Blocks are of a smooth, firm, close Wood, and the Size of the Leaf required. On the Face-side they glue a Paper, upon which some able *Chinese* Writer draws out the several Letters and Characters, with a *Chinese* Pen, which is a kind of Pencil. This is the principal part of the Work, and that whereon the Success of the rest depends.

When finish'd, the Block is put into the Hands of a Sculptor, or Cutter in Wood; who, following the several Strokes of the Writer with his Gravers, and other sharp little Instruments, makes 'em all appear in *Relievo* on the Wood. See *CUTTING in Wood*.

When the Engraving is finish'd, they moisten what remains of the Paper, and rub it gently off.

The Ink they use in *printing* is the same with the common *Chinese* Ink; wherewith they also write; and is made of Lamp-black, mixed up with Oil.

Their *Press* resembles our *Rolling-Press*, much more than the Letter *Press*. See *ROLLING-Press*.

As to their Paper, it is inferior to ours: It is made of the inner Bark or Rind of a kind of Rushes, beat up with Water into a Pulp or Paste, and form'd in Moulds, much like ours. See *PAPER*.

The Advantages of the *Chinese-Printing* consist in this, that they are not obliged to take off the whole Edition at once; but print their Books as they need 'em: That the Blocks are easily retouch'd, and made to serve a-fresh; and that there needs no Corrector of the Press.

Its Disadvantages are, that a large Room will scarce hold all the Blocks of a moderate Volume; that the Colour of the Ink easily fades; and that the Paper is apt to tear, and is subject to Worms: whence it is that we see so few antique Books in *China*.

*Rolling-Press-PRINTING.*

*Rolling-Press-Printing*, is employ'd in taking off Prints, or Impressions from Copper-Plates engraven, or cut'd. See *ENGRAVING* and *ETCHING*.

It differs, as we have before observ'd, from Letter-printing; in that the Marks and Characters, whose Impressions are to be taken, in the former Case, are indented, or cut inwards; and in the latter, are in *Relievo*, or stand out.

*Origin and Progress of Rolling-Press-PRINTING.*

This Art is said to be as antient as the Year 1460; and to owe its Origin to *Figuerra*, a *Florentine* Goldsmith, who calling a piece of engraven Plate in melted Brimstone, found the exact Print of the Engraving left in the cold Brimstone, mark'd with Black licked out of the Strokes by the liquid Sulphur.

Upon this he attempted to do the same on silver Plates with wet Paper, by rolling it smoothly with a Roller; and this succeeded.

This Novelty tempted *Baccio Baldini*, a Goldsmith of the same City, to attempt the same; which he did with Success; engraving several Plates of *Sanuro Boticello's* Design, and printing them off this new way: in which he was follow'd by *Andrew Mantegna*, then at *Rome*.

This knowledge getting into *Flanders*, *Martin of Antwerp*, a famous Painter, grav'd abundance of Plates of his own Invention, and sent several Prints into *Italy*, marked thus, M.C.

After him *Albert Durer* appear'd, and gave the World a vast number of Prints, both in Wood and Copper.

About this time one *Hugo de Carpi*, an *Italian* Painter, found out a way, by means of several Plates of Wood, to make Prints resemble Designs of *Claro Olivaro*; and some Years after, the Invention of *Enobing* was discover'd, which was first made use of by *Parungiano*.

The Art was not used in *England* till the Time of King *James I.* when it was brought from *Antwerp* by *Speed*.

The Structure of the *Rolling-Press*, and the Composition of the Ink used therein; with the Manner of applying both in taking off Prints, are as follow.

*Structure of the Rolling-Press.*

This Machine, like the common *Press*, may be divided into two parts; the *Body* and *Carriage*, analogous to those in the other.

The *Body* consists of two *Cheeks* of different Dimensions; ordinarily about 4  $\frac{1}{2}$  foot high, a foot thick, and 2  $\frac{1}{2}$  apart; join'd a top and bottom by *Cross-pieces*. The *Cheeks* are placed perpendicularly on a wooden Stand, or Foot, horizontally placed, and sustaining the whole *Press*.

From the Foot likewise rise four other perpendicular pieces, join'd by other cross or horizontal ones; which may be consider'd as the *Carriage* of the *Press*, as serving to sustain a smooth, even *Plank*; which is about 4  $\frac{1}{2}$  foot long, 2  $\frac{1}{2}$  foot broad, and an inch  $\frac{1}{2}$  thick: upon which the engraven Plate is to be placed.

Into the *Cheeks* go two wooden *Cylinders*, or *Rollers*, about six Inches in diameter, bore up at each end by the *Cheeks* and *two Ends*, which are lessen'd to about a Inches diameter, and call'd *Trunnions*, turn in the *Cheeks* between two pieces of Wood, in form of *Half Moons*, and lined with polished Iron, to facilitate the Motion.

The Space in the half *Moons*, left vacant by the *Trunnion*, is fill'd with Paper, *Fastboard*, &c. that they may be rais'd and lower'd at discretion; so as only to leave the space between them, necessary for the passage of the *Plank*, charg'd with the Plate, Paper, and *Blankets*.

Lastly, to one of the *Trunnions* of the upper *Roller*, is fasten'd a *Cross*, consisting of two Levers, or Pieces of Wood, traversing each other. The Arms of this *Cross* serve, in lieu of the Handle of the common *Press*; giving a Motion to the upper *Roller*, and that to the under; by which means the *Plank* is protruded, or pass'd between them.

*Preparation of the Ink.*

The Ink used in *Rolling-Press-Printing*, is a Composition of Black, and Oil mix'd and boil'd together in a due Proportion.

The Black is a fatitious Matter, made of the Stones of Peaches and Apricots, Bones of Sheeps-foot, and Ivory; all well burnt; beaten, sifted, and mix'd together with Spirit of Wine, and sometimes only with Water.

This Black is usually brought hither ready prepared from *Frankfort on the Main*; whence our Printers call it *Frankfort-Black*. See **BLACK**.

The Oil wherewith they dilute this Black, is Nut-Oil; which is boil'd up differently, according to the different Works it is to be us'd in.

They usually make three Kinds, *thin, thick, and strong*; only differing in the degree of Coction: The Strong is that us'd in the finest Works, &c.

To make the Ink, they pulverize the black Stone very carefully, and pass it thro' a fine Sieve; then mix it up on a Marble with the proper Oil, by means of a Mallet; after the same manner as the Painters do their Colours.

#### Method of PRINTING from Copper-Plates.

The Ink being prepared, they take a little Quantity of it on a *Rubber*, made of Linnen Rags, strongly bound about one another; and therewith smear the whole Face of the Plate, as it lies on a Grate, over a Charcoal-fire.

The Plate sufficiently inked, they first wipe it coarsely over with a foul Rag, then with the Palm of the left Hand, then of the right; and, to dry the Hand, and forward the wiping, rub it from time to time on Whiting.

In wiping the Plate perfectly clean, yet without taking the Ink out of the Engraving, consists a good part of the Address of the Workman. The *French* Printers use no Whiting, as being detrimental to the Colour of the Ink; nor do they lay the Plate on the Grate so warm, till after inking and wiping it.

The Plate thus prepared, is laid on a thick Paper, fitted upon the Plank of the Press: Over the Plate is laid the Paper, first moisten'd, to receive the Impression; and over the Paper, two or three Folds of Blanketing, or other Stuff.

Thus disposed, the Arms of the Cross are pull'd; and by that means, the Plate with its Furniture pass'd thro' between the Rollers; which pinching very strongly, yet equably, presses the moisten'd Paper into the Strokes of the Engraving, whence it licks out the Ink.

Some Works require being pass'd twice thro' the Press, others only once, according as the Graving is more or less deep, or the greater or less degree of Blackness the Print is desired to have.

It must be observ'd, that the stronger, and thicker the Ink is, the stronger must the Rollers pinch the Plate: This tempts many of the Workmen to use a thinner Oil, in order to save Labour; which proves prejudicial to the Impression.

The wetting of the Paper ought to be done two or three days before printing it, to render it the more supple and mellow: As the Prints are drawn off, they are hang up to dry on Lines, &c.

Lastly, after the Number of Prints desired, have been wrought off from the Plate; they rub it over with Oil of Olives, to prevent its rusting, and set it by against a new Impression. If the Strokes of the Graving be perceived full of Ink harden'd therein, in the Course of the Printing; they boil it well in a Lye, e'er the Oil be apply'd.

**PRIOR**, before, something that is nearer the beginning, than another to which it is refer'd. See **PRIORITY**.

**PRIOR**, is particularly us'd for a Superior of a Convent of Monks; or the second Person, after the Abbot. See **SUPERIOR** and **CONVENT**.

*Priors* are either *Claustal*, or *Conventual*. **CONVENTUAL PRIORS** are the same as Abbots; all the difference between them being in Name; both having the same Rights; and both, alike, Governours of Monasteries. See **ABBOT**.

A *Claustal PRIOR*, is he who governs the Religious of an Abbey, or *Priory, in Commendam*; so called, because he has Superiority in the Cloister, or Monastery. See **COMMENDAM**.

His Jurisdiction is wholly from the Abbot; and ends with the Abbot's Death, unless he has been elected by the whole Convent. See **CLAUSTRAL**.

**Conventual Priors**, are of two kinds, *viz.* *Regular Conventual Priors*, who govern Religious living in Community; and *Secular-commendatary-conventual Priors*.

**Conventual Priors**, are oblig'd to take up the Priesthood within a Year, or at most two, from the Dates of their Provision; in default whereof, their Benefices are declared vacant.

*Priors* must be twenty-five Years old, e'er they can govern the Convent; and twenty, if the Convent be govern'd by another.

**Grand PRIOR**, is the Superior of a large Abbey, where

several Superiors are required; as in the Abbeyes of *Cluny* and *Picamp*.

In the Monastery of *St. Dennis*, there were antiently five *Priors*; the first whereof was call'd the *Grand Prior*. In most Monasteries, there is a *Sub-Prior*.

There are also *Grand Priors* in the Military Orders; as *Priors of Malta*, or of *St. John of Jerusalem*, &c.

**PRIORITY**, the Relation of something, consider'd as it is before, or prior to, another; *i. e.* nearer to the beginning, or the first. See **POSTERITY**.

The principal Modes of *Priority* are five, *viz.* in respect of *Time*; as when we say, that the *Grecian Empire* was prior to the *Roman*; *Nature*, as when we say one is prior to two; *Order, Dignity, and Causality*. Which are summ'd up in the Technical Dilecti:

*Tempore, Natura, prius Ordine, die & Honore;*  
*Effecto Causam dicimus esse prius.*

**PRIORITY**, in Law, is an Antiquity of Tenure, in comparison of another less antient. See **TENURE**.

*To hold by Priority*, is to hold of one Lord more antiently, than of another; in respect whereof, the Tenant is said to hold in *Posteriority*. See **POSTERITY**.

The Lord of the *Priority* shall have the Custody of the Body. *Cramp. Jurist.*

**PRIORS ABBES**, certain Religious, born in *France*, and *Normandy*; Superiours of Religious Houses, erected for their Country-Folks here in *England*.

These, *Henry V.* deeming no good Members for this Land, suppress'd; and their Livings were afterwards given by *Henry VI.* to other Monasteries, and Houses of Learning; but chiefly, as *Stow* observes, to the erecting of those two famous Colleges, call'd the *King's Colleges of Cambridge, and Eaton*.

**PRISSAGE**, that Share which belongs to the King or Admiral, out of such Merchandizes as are taken at Sea, as lawful Prize; which is usually a tenth part. See **PRIZE**.

*Prisagium of juxta Prissam captendi; vel ipse alius.*

**PRISSAGE of Wines, Butlerage**; a Custom whereby the King challenges out of every Vessel laden with Wine containing twenty Tuns, or upwards; two Tun of Wine, the one before, the other behind the Mast, at his own price; which is twenty Shillings per Tun. See **DUTY**.

This Custom varies a little, in various places: At *Dorset*, *e. g.* every Bark laden with ten Tuns of Wine, pays *Prisage*.

The Term is now, almost grown into disuse; and in lieu of *Prisage*, the Custom is popularly call'd *Butlerage*; because tis the King's chief Butler that receives it. See **BUTLERAGE**.

**PRISCILLIANISTS**, antient Hereticks, who arose in *Spain* towards the end of the fourth Century.

The *Priscillianists* were a Branch of the *Manichees* and *Gnosticks*. See **GNOSTICKS**, &c.

We are at a loss for their particular Tenets. *St. Leo* says, they attributed to *Jesus Christ* only a fictitious or imaginary Body.

*Priscillian*, their Leader, was a *Lay-man*: He was condemn'd with some Bishops his Adherents, in a Council at *Saragossa*, and in another at *Bordeaux*; but he appeal'd to the Emperor *Maximus*, and had a hearing at *Troves*, where being convicted of broaching Novelties, he was condemn'd to death, with several of his Followers.

**PRIZE**, or **PRIZE**, in Navigation, a Vessel taken at Sea from the Enemies of the State, or from Pirates; by a Man of War, or a Merchant-man, having Commission from the Admiral.

Vessels are lock'd on as lawful *Prize*, if they fight under any other Standard, than that of the State from whom they have their Commission; if they have no Charter-Party, Invoice, or Bill of Lading on-board them; if they be laden with Effects belonging to the King's Enemies, or with Contraband Goods.

Those of the King's Subjects recover'd from the Enemy, after having remain'd twenty-four Hours in their hands, are deem'd *Prize*.

Vessels that refuse to strike their Sails, after having been summon'd thereto by the King's Ships; may be constrain'd to do it; and if they make resistance, and fight, are lawful *Prize*.

**PRIZE**, in our Statutes, is us'd for Things taken of the Subjects by the King's Purveyours. See **POURVEYOR**.

*Speiman* describes *Prizes* to be Corn and other Provisions taken from the Country People, at lower Rates than ordinary; for the Maintenance of the King's Household, Garrisons, &c.

*Roger de Montealto*, who married the Sister of *Hugo de Abenev*, claim'd the following Privileges; *viz.* his Castle of *Rifingne cum Prissa 40 Dierum*, with *Prisses* of 40 Days; Which Phrase the same Author understands of the Liberty

of taking Provisions for the Support of the Garrison of his Castle, upon paying for them within 40 Days. See Stat. 12 Car. 2. cap. 34.

**PRISM**, in Geometry, an oblong Solid or Body, whose Planes are all rectilinear and regular, and the opposite ones equal. See SOLID, &c.

It is thus call'd from the Greek *πρισμα*, something *sawn*, or *cut off*.

The *Prisma* is generated by the Motion of a rectilinear Figure, as ACB (Tab. GEOMETRY, fig. 16.) descending always parallel to itself, along the right Line AE.

If the Descrber be a Triangle, the Body is said to be a *triangular Prisma*; if square, a *quadrangular one*, &c.

From the Genesis of the *Prisma*, 'tis evident it has two equal and opposite Bases; that it is terminated by as many Parallelograms as the Base consists of Sides; and that all the Sections of a *Prisma* parallel to its Base, are equal.

Every triangular *Prisma* may be divided into three equal Pyramids. See PYRAMID.

To measure the Surface and Solidity of a PRISM.

Find the Area of the Base, e.g. ABC (see TRIANGLE) and multiply it by E; find the Areas of the Planes or Parallelograms, that include or circumscribe it, and add their Sum to the former Product. The Sum is the whole Surface of the *Prisma*.

Multiply then, the Base BAC, by the Altitude CD; the Product is the Solidity of the Cube ABCDEF. See CENTRO-BARIC.

All *Prismas* are in a Ratio compounded of their Bases and Altitudes: If then their Bases be equal, they are to each other as their Heights; and *vice versa*. Similar *Prismas*, &c. are in a triplicate Ratio of their homologous Sides, as also of their Altitudes.

**PRISM**, in Dioptricks, is a Glass in form of a triangular *Prisma*, much used in Experiments about the Nature of Light and Colours. See LIGHT, &c.

The Phenomena and Use of the *Prisma*, arise from its separating the Rays of Light in their Passage thro' it. See RAY.

The more general of these Phenomena are as follow: For, to enumerate all, would be endless; and even these are sufficient to demonstrate, that Colours don't either consist in the Contortion of the Globules of Light, as *Des Cartes* imagined; nor in the Obliquity of the Pulses of the Aetherial Matter, as *Hooke* fancied; nor in the Configuration of Light, and its greater or less Concitation, as *Dr. Barrow* conjectured: but that they are original and unchangeable Properties of Light itself.

Phenomena of the PRISM.

1<sup>o</sup>. The Sun's Rays transmitted thro' a *Prisma* to an opposite Wall, project an Image like the Rainbow, of various vivid Colours; the chief whereof are red, yellow, green, blue, and violet. See RAINBOW.

The reason is, that the various colour'd Rays, which were before mixed and blended together, are now, in virtue of their different Refrangibilities, separated by Refraction, in passing thro' the *Prisma*, and thrown, each Colour, by itself. See REFRACTIBILITY.

For the blue Rays, e.g. represented by the dotted Lines, (Tab. OPTICKS, fig. 30.) beginning to be separated from the rest in the Side *ca*, of the *Prisma abc*, by the first Refraction in *dd*; are again separated further in the other face of the *Prisma bc*, by a second Refraction, the same way, in *ee*. Whereas in a plain Glass, or even in a *Prisma*, in a different Position; the blue Rays separated by the first Refraction in the first Surface, are again mixed by the second Refraction at the other Surface, which is made a contrary way. See REFRACTION.

2<sup>o</sup>. The Image thus projected, is not round; but when the Angle of the *Prisma* is 60 or 65 Deg. about five times as long as broad.

Because some of the Rays are refracted more than others, and therefore exhibit several Images of the Sun, stretch'd out in length, as if it were but one.

3<sup>o</sup>. Those Rays which exhibit the yellow Colour, swerve more from the rectilinear Course, than those which exhibit the Red; and the Green more than the Yellow; and the Violet most of all.

4<sup>o</sup>. If the *Prisma* thro' which the Rays are transmitted, be turn'd about its Axis; so as the red, yellow, green, &c. Rays be receiv'd in order, on another *Prisma*, about twelve Foot distant from the former, thro' a little hole, and thence projected further; the yellow, red, &c. Rays, tho' they fall in the same manner on the second *Prisma*, yet will not be projected on the same place as the red, but will be deflected further, that way towards which the Refraction is.

And if in lieu of the second *Prisma*, they be receiv'd on a Lens a little gibbous; the yellow, green, &c. Rays,

will be collected, each in its order, into a nearer Focus than the red ones: The reason of which two last Phenomena is, that the yellow Rays are refracted more than the red ones, the green ones more than the yellow ones, and the violet ones most of all.

5<sup>o</sup>. The Colours of colour'd Rays well separated, can neither be destroy'd, nor in any manner alter'd by repeated Refractions thro' a number of *Prismas*; nor by passing thro' an illuminated Space, nor by their mutual Decafations, nor by the Neighbourhood of the Shade, nor by being reflected from any natural Bodies.

Because their Colours are not Modifications arising from Refraction, but original and immutable Properties thereof. See COLOUR.

6<sup>o</sup>. All colour'd Rays collected together in any manner, either by several *Prismas*, or a convex Lens, or concave Speculum, form Whiteness; but being again separated after Decafation, each exhibits its proper Colour. See WHITENESS.

Because, as the Ray was white e'er its parts were separated by Refraction; so those parts being re-mix'd, it recovers its Whiteness; and the colour'd Rays when they meet, don't destroy one another, but only intermix.

Hence Dusts, or Powders, red, yellow, green, blue, violet, &c. mix'd in a certain proportion, become grey; or of the Colour arising from a Mixture of black and white; and would be perfectly white, but that some of the Rays are absorb'd.

Thus if a Circle of Paper be smear'd with all these Colours a-part, in a certain proportion, and turn'd swiftly about its Centre, so that the Species of the several Colours may be confounded in the Eye by the Velocity of the Motion; the several Colours will disappear, and the whole be seen of one uniform Colour, between black and white.

7<sup>o</sup>. If the Sun's Rays strike very obliquely on the inner Superficies of a *Prisma*; the Rays reflected will be violet; those transmitted, red.

8<sup>o</sup>. If there be two *Prismas*, the one full of a red Liqueur, the other of a blue one; the two join'd together will be opaque: tho' if both be fill'd either with a blue or a red Liqueur, they will, together, be transparent. For the one transmitting none but blue, the other none but red Rays; the two together will transmit none at all. See BLUE.

9<sup>o</sup>. All natural Bodies, especially white ones, view'd thro' a *Prisma* held to the Eye; seem fringed or hemmed, on one side with red and yellow, on the other with blue and violet.

10<sup>o</sup>. If two *Prismas* be so placed, that the red of the one, and the purple of the other, meet in a proper Paper encompass'd with Darkness; the Image will be pale; but view'd thro' a third *Prisma* held to the Eye at a due distance, will appear double, red and purple.

And if two kinds of Dusts, the one perfectly red, the other blue, be mixed; a little Body being cover'd thick with the Mixture, will exhibit a double image, the one red, the other blue, thro' a *Prisma* apply'd to the Eye.

11<sup>o</sup>. If the Rays transmitted thro' a convex Lens, be receiv'd on a Paper before they meet in the Focus, the Confine of Light and Shadow will seem tinged with a red Colour; if beyond the Focus, with a blue.

12<sup>o</sup>. If the Rays about to be transmitted thro' one part of the Pupil, be intercepted by the Interposition of some opaque Body near the Eye; the Extremes of Bodies lying beyond it, will seem ting'd with Colours, as if seen thro' a *Prisma*; tho' left void.

Because the Rays transmitted thro' the rest of the Pupil, are separated by Refraction into Colours; and the intercepted Rays, which would be refracted a contrary way, are prevented from mixing and diluting them: Whence also it is, that a Body view'd with both Eyes thro' two little Holes made in a Paper, does not only appear double, but tinged with Colours too.

**PRISMOID**, **PRISMOIDES**, in Geometry, a solid Figure, bounded by several Planes, whose Bases are right-angled Parallelograms, parallel and alike situated. See PRISM.

**PRISON**. See GOAL.

**PRISONER**, in Law, one that is restrain'd of his Liberty upon any Action, Civil or Criminal; or upon Commandment.

A Man, again, may be *Prisoner* either upon Matter of Fact, or of Record.

*Prisoner upon Matter of Record*, is he who being present in Court, is by the Court committed to Prison, only upon an Arrest, be it by the Sheriff, Constable, or other.

**PRIVATION**, the Absence, Want, or Defect, of something needed.

In the Canon Law, Privation is used for an Interdiction, or Suspension. See DEPRIVATION.

The Mystic Divines call *Privation of God*, the Dryness of a Soul experiences, to whom God does not make himself felt.

The Church of Rome teaches, that Children dying without Baptism, go into a *Limbus*, where they undergo a *Privation of the Sight of God*.

**PRIVATION**, in Physics, is a Negative Principle, which, with Matter and Form, the *Peripatetics* suppose, conspires to constitute natural Bodies. See MATTER and FORM.

*Privation* signifies no more than the absence of the future Form: Thus every thing, according to *Aristotle*, is form'd of this, that it was not that thing before, e. g. a Chick arises hence, that it was not a Chick before it was generated; which is what that Philosopher calls *Privation*. See PRINCIPLE.

*Aristotle* is very angry with the Antients, for not admitting *Privation* as a Principle; and imputes it to their Ignorance thereof. But it is an Injustice to reproach them with Ignorance, of what it is impossible to be ignorant of; and 'tis an Illusion to produce this poor Principle of *Privation* as such a mighty Mystery; there being no body but supposes it a thing known, that a thing is not before it is made. See PREPARETIC, &c.

**PRIVATIVE**, in Grammar, a Particle, which prefix'd to a Word, changes it into a contrary Sense. See PARTICLE.

Thus, among the Greeks, the *α* is used as a *Privative*; as in *αβουσι*, *Αβουσι*, *Αεθρα*, &c.

The Latins have their *Privative* in; as, *incurribilis*, *indeclinabilis*, &c.

The English, French, &c. on occasion, borrow both the Latin and Greek *Privatives*.

**PRIVATIVE Quantity**, in Algebra, is a Quantity less than nothing; call'd also a *Negative Quantity*: in opposition to Affirmative or Positive Quantities. See QUANTITY, NEGATIVE, &c.

*Privative Quantities*, are denoted by the Character of Substraction, —, prefix'd to them. See CHARACTER.

**PRIVILEGE**, in the general, any kind of Right, Pre-rogative, or Advantage, attach'd to a certain Person, Condition, or Employment; exclusive of others.

The Word is form'd from the Latin *privata lex*.

**PRIVILEGE**, in Law, is a particular Right granted to a single Person, Place, Community, or the like; whereby they are exempted from the Rigour of the common Laws.

*Privilege* is either *Personal* or *Real*: A *Personal Privilege* is that which is granted to any Person, either against or beyond the Course of the Common Law; such, e. g. is that of a Member of Parliament, who may not be arrested, nor any of his Servants, during the sitting of Parliament, nor for a certain time before and after. See PARLIAMENT.

*Privilege Real*, is a Franchise granted to a Place. See FRANCHISE.

Such is that granted to our Universities; by which none, thro' Members thereof, may be call'd to *Westminster-Hall*, upon any Contract made within their own Precincts.

So also, a Person belonging to the Court of Chancery, cannot be sued in any other Court; certain Cases excepted; and if he be, he may remove it by *Writ of Privilege*.

'Tis an ancient *Privilege*, for Men to be exempted from Arrests within the Verge of the Court; i. e. in or near the Palace, where the King is resident: Because, in such Cases, Quarrels frequently happen; and the Peace ought to be strictly kept there. See VERGE.

In the Laws of *Hon. 1.* 'tis express'd, that Peace ought to be maintain'd religiously and reverently within four Miles of the King's Doors towards the four Quarters; and forty nine Acres, nine Foot, nine Palms, and nine Barley-Corns around. See PEACE.

**PRIVILEGE**, in Commerce, is a Permission from a Prince, or Magistrate, to make and sell a certain Merchandize; or to engage in a certain Commerce; either exclusively of others, or concurrently with them.

The first is call'd an *exclusive Privilege*; the latter, simply, *Privilege*.

*Exclusive Privileges* are to be granted rarely; by reason of the hindrance they are of to Trade: yet they are sometimes very just and reasonable, by way of Reward for the Invention of useful Machines, Manufactures, &c.

*Exclusive Privileges for foreign Commerce*, are usually granted on the following Conditions: That the Commodities be brought from remote parts, where there is no going without running great risks: That the *Privilege* be only for a limited Time: That the *Privileges* be not allowed to monopolize, i. e. to raise and lower their Commodities at pleasure; but that the Sale and Price be always proportionable to the Expence, Interests, &c. And, That the *Privileges* assist the State, on occasion, with part of their Gains.

**PRIVILEGE for the Impression of Books**. This *Privilege* is properly exclusive; being a Permission which an Author or Book-seller obtains under the Great Seal, to have alone the Impression of a Book; with a Prohibition of all others to print, sell, or distribute the same, within a certain Term of Years, usually 14; under the Clauses and Penalties express'd therein.

These *Privileges*, were unknown till the Beginning of the

16th Century; when they were introduc'd in France: The oldest is said to bear Date in the Year 1507. and to have been occasion'd by some Printers counterfeiting the Works of others, as soon as they appear'd.

But People were yet at liberty to take or let them alone at pleasure; till the Interests of Religion, and the State, occasion'd the restraining of this Liberty.

In 1563, Charles IX. publish'd a celebrated Ordinance, forbidding any Person, on pain of Confiscation of Body and Goods, to print any Letter, Speech, &c. without permission.

The like has been since done in England: tho' at present, *Privileges* are not only, not requir'd; but by the late Act for securing the Properties of Books, seem needless.

**PRIVITIES**, the natural Parts, of either Sex; or those immediately ministering to the Business of Generation. See GENERATION, PUDENDUM, &c.

**PRIVITY**, an intimate Freedom, or private Familiarity, between two Persons. See PRIVY.

The Lawyers say, if there be Lord and Tenant, and the Tenant hold of the Lord by certain Services; there is a *Privity* between them in respect of the Tenure.

**PRIVY**, in Law, a Person who is Partaker, or has an Interest, in an Action or Thing.

In this sense they say, *Privies in Blood*: Every Heir in Tail, is *privy* to recover the Land entail'd.

In old Law-Books, *Merchants Privy* are oppos'd to Merchants Strangers.

Coke mentions four kinds of *Privies*: *Privies in Blood*, as the Heir to his Father: *Privies in Representation*, as Executors and Administrators to the Deceased: *Privies in Estate*, as he in Reversion; and he in Remainder, when Land is given to one for Life, and to another in Fee; the reason is, that their Estates are both created at the same time. The fourth is, *Privy in Tenure*, as the Lord by Escheat, i. e. when Land escheats to the Lord for want of Heir.

**PRIVY Council**, a Council of State, held by the King, to concert Matters for the public Service, the Honour and Safety of the Realm, &c. See COUNCIL.

The *Privy Council* is the *Primum Mobile* of the State, and that which gives the Motion and Direction to all the inferior Parts. It is likewise a Court of Justice of great Antiquity; the primitive and ordinary way of Government in England being by the King and *Privy Council*.

It has been frequently used by all our Kings, for determining Controversies of great Importance: The ordinary Judges have sometimes declin'd giving Judgment, till they had consulted the King and *Privy Council*; and the Parliament have frequently refer'd Matters of high moment to the same; as being by long Experience better able to judge of, and by their Secrecy and Expedition, to transact some State-Affairs, than the Lords and Commons.

At present, the *Privy Council* takes Cognizance of few or no Matters, except such as may not be well determin'd by the known Laws and ordinary Courts; such as Matters of Complaint, and sudden Emergencies.

The Oath of a *Privy Counsellor* is to the utmost of his power and discretion, truly and justly to counsel the King, and to keep secret the King's Counsels.

Antiently, to strike in the House of a *Privy Counsellor*, or elsewhere in his presence, was grievously punish'd: To conspire his Death, is Felony; and to effect it, High-Treason.

With the Advice of this Council, the King issues Proclamations that bind the Subject, provided they be not contrary to Law. See PROCLAMATION.

In Debates, the lowest delivers his Opinion first, the King last; and thereby determines the Matter.

A Council is never held without the presence of a Secretary of State. See SECRETARY.

The Members of the *Privy Council* in the Year 1710, were in Number 57. Their Officers; four Clerks of the Council, three Clerks extraordinary, three Clerks in the Council-Office, a Keeper of the Records, and two Keepers of the Council-Chamber.

*Lord President of the Privy Council*. See PRESIDENT.

*Privy Seal*, a Seal which the King uses, previously, to such Grants, &c. as are afterwards to pass the Great Seal.

Yet the *Privy Seal* is sometimes us'd in Matters of less consequence, which don't require the Great Seal. See SEAL.

*Lord Privy Seal*, is the fifth great Officer of the Crown; thro' whose hands pass Charters and Grants of the King, and all Pardons sign'd by him, before they come to the Great Seal: also Matters of less moment, which don't pass the Great Seal, e. g. for Payments of Money, &c.

He is a Lord by Office, and a Member of the *Privy Council*; he was antiently chief Judge of the Court of Requests. See PRIVY SEAL.

*Privy Chamber*. See CHAMBER.

**PRO Confesso**, in Law: when, upon a Bill exhibited in Chancery, the Defendant appears, and is in Contempt for not answering, and in Custody; upon a *Habeas Corpus*, (which is granted by Order) to bring him to the Bar, the Court assigns him a Day to answer; which being expired, and no Answer put in, a second *Habeas Corpus* is granted, and a farther Day assign'd: by which Day, if he answer not, the Bill, upon the Plaintiff's Motion, shall be taken *pro confesso*, unless Cause be shew'd by a Day, which the Court usually gives; and for want of such Cause shew'd, upon Motion, the Substance of the Plaintiff's Bill shall be decreed, as if it had been confess'd by the Defendant's Answer: or, after a fourth insufficient Answer made to the Bill, the Matter of Fact not sufficiently answer'd unto, shall be taken *pro confesso*.

**PRO Indiviso**, in Law, a Possession, or Occupation of Lands, or Tenements, belonging to two or more Persons; whereof none can say which is his several Portion; each having the whole, &c. as Co-partners before Partition. See **POUR-Party** and **PARTITION**.

**PROBABILISTS**, a Sect, or Division, among the *Romanists*, who adhere to the Doctrine of *probable Opinions*; holding, that a Man is not always obliged to take the more probable side, but may take the less probable, if it be but barely probable. See **PROBABLE**.

The *Jesuits* and *Molinists* are strenuous *Probabilists*. See **JESUIT**, &c.

Those who oppose this Doctrine, and assert, That we are obliged, on pain of Sinning, always to take the more probable side, are call'd *Probabiliorists*.

The *Jansenists*, and particularly the *Port-Royalists*, are *Probabiliorists*. See **JANSENIST**, &c.

**PROBABILITY**, in Reasoning, a *Verisimilitude*; or an Appearance of Truth. See **TRUTH**.

To define it Philosophically, *Probability* is the appearance of the Agreement or Disagreement of two things by the Intervention of Proofs, whose connection is not fixed or immutable, or is not perceived to be so; but is, or appears, for the most part, to be so; so as to suffice to induce the Mind to judge the Proposition to be true or false, rather than the contrary. See **EVIDENCE**.

That Proposition, then, is *probable*, for which there are Arguments and Proofs to make it pass, or be received for true. See **PROBABLE**.

The entertainment the Mind gives to this sort of Propositions, is call'd *Belief*, *Assent*, or *Opinion*. See **FAITH**.

*Probability*, then, being to supply the defect of our Knowledge, is always conversant about Propositions, whereof we have no certainty, but only some Inducements to receive them for true. See **OPINION**.

According to *Aristotle*, a Proposition is *probable*, if it seems true to all, or most People, and those the wiser, and more reputable Sort. But by *seems*, he means, what, after a close Inquiry, shall seem to be true.

Of *Probability* there are various Degrees, from the Confines of Certainty and Demonstration, down thro' *Improbability* and *Unlikelihoods*, to the Confines of *Impossibility*; and also Degrees of Assent from certain Knowledge, and what is next to it, full Assurance and Confidence, quite down to Conjecture, Doubt, Distrust, and Disbelief.

The grounds of *Probability*, are, in short, these two following, *viz.* the Conformity of anything with our own Knowledge, Experience, or Observation, call'd *internal Probability*; and the Testimony of others, vouching their Observation or Experience, call'd *external Probability*. See **CREDIBILITY**.

**PROBABILITY**, in Poetry, the appearance of Truth in the Fable, or Action, of a Poem. See **ACTION** and **FABLE**.

There are four Kinds of Actions: For a thing may be either only true, or only probable; or true and probable at the same time; or neither the one nor the other. See **ACTION**.

These four Kinds of Actions are shared between four Arts: History takes the first, still keeping to Truth, without regard to *Probability*. See **HISTORY**.

Epic and Dramatic Poetry have the second; and still prefer *Probability*, tho' false, to an *Improbability*, tho' true: Thus the death of *Dido*, who kills herself on her being deserted by *Aeneas*, tho' false in itself, is a fitter Subject for a Poem, than the Action of *Samson*, or the Maid of *Orleans*.

Moral Philosophy takes the third; and the Fabulists, as *Aesop*, &c. the fourth. See **FABLE**.

*Bossu* adds, that the *Epopoea* in its Nature and Essence, uses Truth and *Probability* like Morality; yet in its Circumstances and Expressions takes a liberty like that of *Aesop*: Instances of each we have in the *Aeneid*.

*Poetical Probability* may be so either in respect of the Rules of Theology, of Morality, Nature, Reason, Experience, or Opinion.

As to the Theology, there is scarce any thing but is probable, in respect hereof; because nothing is im-

possible to God. This is an Expedient they have frequent recourse to, in order to bring things seem'd contrary to the Order of Nature, within the bounds of *Probability*. See this consider'd under the Article **MACHINE**.

As to *Morality*, we have observed, it requires both Truth and *Verisimilitude*: An ancient Poet was condemn'd on the Theatre for a slip herein; *viz.* for making a *Perseus*, whom he represented as an honest Man, say, that *tho' his Tongue swore, his Mind did not*.

*Seneca* accuses *Virgil* of an Offence against *Natural Probability*, in saying, that the Winds were pent up in Caves; for, says that Philosopher, Wind being only Air in Motion, to suppose it at Rest, is to destroy its Nature. To which *Vossius* answers, that the Poet only speaks of the natural Origin of Winds; which are produced in Mountains by Vapours, &c. pent there: Just as we should say, the Winds are enclosed in an *Eolipile*.

*Virgil*, likewise, committed an Offence against *Natural Probability*, by making *Aeneas* find Deer in *Africa*; because that Country produces none.

Indeed these Faults are excusable, because, as *Aristotle* finely observes, they are not Faults in the Poet's Art, but arise from his Ignorance of something taught in the other Arts.

However, care must be taken they be not too gross; there being some *Probabilities* of this kind, which *si seipsum* could not dispense withal: He would never be forgiven, were he to represent a Lion fearful, a Hare daring, a Fox stupid, &c.

*Probability*, in respect of *Reasons*, is frequently broken in upon by those who affect nothing but the *Merveilleux*: Here *Statius* is a notorious Criminal: *Tidius* being surpris'd in an Ambuscade by fifty Bravoes, who had wound'd his death; kills forty-nine of 'em, and pardons the last.

Again, two young Kings, whereof this same *Tidius* was one, the other *Polyneus*, upon a Quarrel, go together by the ears; and box it out; their Swords all the while by their sides. *Scrutator* et *intima Vultus, unca manus, penitusq; oculis cederentibus instat*.

*Scaliger* accuses *Homer* of an Offence against *Experience*; in saying, that *Jupiter* thunder'd and snow'd at the same time. This, says the Critic, was never known; and yet have there been Instances thereof even in our time.

But the principal and most important Kind of *Probability*, is that in respect of *Common Opinion*. A thing is probable when it looks like Truth: But, sometimes, it shall appear true to the People, and false to the Learned; and *vice versa*. When, then, the Learned and the People are divided, to which side must the Poet adhere? Suppose, for instance, the Adventure of *Penelope*, the History of *Medeia*, *Helena*, or the like: What *Virgil* and *Homer* have wrote of 'em shall appear probable to the Populace; yet the Learned read the contrary in History; some Authorshaving wrote that *Dido* was chaste, and *Medeia* innocent; that *Penelope* was divorced and banished by *Ulysses* for abusing his Absence; and that *Helena* never saw *Troy*.

This Point is soon decided: *Homer* and *Virgil* make no scruple of leaving History, to improve their Fables: *Horace* does not send the Poets to the Truths of History; but either to Fables already invented, or to common Fame.

All which is confirmed by *Aristotle*; where he says, that a Poet does not tell, like an Historian, what kind of Person *Aleibades* was, nor what he really did or said on this or that Occasion; but what he probably might have done or said. Add to this, that *Aristotle* approves of the Fable of *Oedipus*, and *Iphigenia*; tho' it can never be imagined the truth of those Stories was believed by the Learned in those days.

In effect, every one finds his Account in this Conduct: The People think they see Truth; and the Learned do really see Truths, and more solid ones too, than those the People look for; and more sure than those of the History which the Poet neglects. The more understanding they are, the less will they desire these historical Truths in a Poem, which is intended for other and deeper Ends. The Truths they require, are Moral and Allegorical Truths. The *Aeneid* was not wrote to teach as the History of *Dido*, but to shew, under that Name, the Genius and Conduct of the Republic founded by her, and the Source and Series of its differences with *Rome*. This we see with pleasure; and these Truths are more agreeable, more constant and notorious than any the Poet could take from a History, so little known in his time.

To these kinds of *Probability*, may be added another; which we call an *Accidental Probability*: It consists, not in the using of several Incidents, each probable a-part; but in disposing 'em so as to hang probably together.

A Man, e.g. may probably die of an Apoplexy; but that this should happen just in the nick, when the Poet wanted it for an unravelling, is highly *improbable*.

'Tis an Offence against this kind of *Probability* to produce an Incident all at once, and without any preparation, which yet needed one. *Virgil* is wonderfully exact in this Point: *Juno* prepares the *Tempest* rais'd in the first Book; *Venus* in the same Book prepares the Amours of the fourth. The Death of *Dido* in the end of the fourth is prepared on the first day of Marriage; *Helorus* in the third disposes the whole Matter of the sixth; and in the sixth, the *Syll* predicts all the Wars that follow.

**PROBABLE Opinion**, a Term long time controverted among the *Romish* Casuists.

It is usually defined an Opinion founded on a grave Motive, or an apparently good Foundation; and which has Authority enough on its side to persuade a wife, disinterested Person. See **PROBABILITY**.

Others define a *probable Opinion* to be that, which, being compared to the contrary Opinion, becomes Problematic, by a perfect Equality of the Reasons on each side; so that there is nothing in Reason or Nature to determine a Man to this rather than that.

But the Jesuits go still farther, and maintain, that to render an *Opinion probable*, it suffices that it be either built on a Reason of some Consequence, or on the Authority of some one grave Doctor. With these Qualifications it is allowable to follow it, even tho it be less *probable* and less *safe* than the contrary Opinion. Here it is the Venom of *Probability* lies.

The Doctrine of *probable Opinions* is attack'd with infinite Address by M. *Feschal* in the *Provincial Letters*.

One of the twenty-four Patriarchs of the Jesuits, *Castro Palatio*, asserts, that a Judge, in a Question of Right, may give Sentence according to a *probable Opinion*, against a more *probable* one; and this, contrary to the Judgment and Persuasion of his own Mind; *imo contra propriam Opinionem*. Escobar, Tr. 6. ca. 6. n. 45.

*So Vespuge* maintains, that it is lawful to follow the less *probable* and less *secure Opinion*, discarding the more *probable* and more *secure* one.

*Lessius* and *Escobar* treating of the Question, Whether a Man may kill another for giving him a Box on the Ear; decide it to be a *probable Opinion*, and speculatively true; tho' there may be some inconveniencies in the practice, for which it would be as well to let it alone. *In praxi tutum & probabilem, judicari—sed non facile admittendum*. Let. Provinciales, p. 371, 308.

**PROBATE**, of a Will or Testament, in Law, is the exhibiting and proving a Will and Testament, before the Ecclesiastical Judges delegated by the Bishop who is Ordinary of the Place where the Party dies. See **WILL** and **TESTAMENT**.

The Ordinary is known by the Quantity of Goods the Deceased hath out of the Diocese wherein he departed; for if all his Goods be in the same Diocese, then the Bishop of the Diocese, or the Archbishop, according as their Composition leads, has the *Probate* of the Testament. If the Goods be dispersed in several Dioceses, so that there be any Sum of Note, as five Pounds, out of the Diocese where the Party liv'd; then is the Archbishop of *Conterbury* the Ordinary by *Prerogative*. See **PREROGATIVE**.

This *Probate* may be made two ways; either in common Form, or *per Testes*.

The Proof in common Form is only by the Oath of the Executor, or Party exhibiting the Will, who swears upon his Belief, that the Will exhibited by him, is the last Will and Testament of the Deceased. See **EXECUTOR**.

The Proof *per Testes*, by Witnesses, is, when over and besides his own Oath, he also produceth Witnesses, or makes other Proof to confirm the same; and that in the Presence of such as may pretend some Interest in the Goods of the Deceased; or at least in their Absence, after they have been lawfully summoned to see such a Will proved, if they think fit.

The latter Course is commonly taken when there is fear of Strife or Dispute about the Deceased's Goods: For more hold, that a Will proved in common Form only, may be call'd in question any time within thirty Years after.

Where a Will disposeth of Lands, and Tenements of Freehold, it is now frequently proved by Witnesses in Chancery.

**PROBATION**, in a Monastic Sense, a Time of Trial; or the Year of Noviciate, which a Religious must pass in a Convent to prove his Virtue, and Vocation, and whether he can bear the Severities of the Rule. See **NOVICIATE**.

The Year of *Probation* commences from the Day of Novices taking the Habit.

**PROBATION**, in the Universities, is the Examination and Trial of a Student who is about to take his Degree. See **DEGREE**.

**PROBATIONER**, in the Presbyterian Discipline, a Person licensed by a Presbytery to preach; which is usually done a Year before he be ordain'd. See **PRESBYTERY**.

A Student in Divinity is not admitted *Probationer* till after several Trials: The first, private, before a Presbytery; the second public, before a Congregation; the Presbytery being present.

The private Trials are a Homily and Exegesis; *i. e.* a Theological Subject is given into the Presbytery in Theses, and the Candidate answers any Objections started against it.

The public Trials are a popular Sermon, and an Exercise and Addition; *i. e.* a Text is handled, half an Hour, Logically and Critically; and half an Hour more, Practically.

If he acquit himself to the Satisfaction of the Presbytery, he signs the Confession of Faith, owns the Presbyterian Government, &c. Upon which he receives a Licence to preach.

**PROBATOR**, in Law, an Accuser, or one who undertakes to prove a Crime charged upon another; properly an Accomplice in the Crime.

**PROBATUM EST**, *q. d.* it is approved; a Term frequently join'd to a Receipt, for the Cure of some Disease. See **RECIPE**.

**PROBE**, a Surgeon's Instrument, to sound and examine the Circumstances of Wounds, Ulcers, and other Cavities. See **SPECULUM**.

**PROBLEM**, **PROBLEMA**, in Logic, a doubtful Question; or a Proposition that neither appears absolutely true, nor false, but which is probable on both sides, and may be asserted either in the Negative or Affirmative, with equal Evidence.

Thus, that the Moon and the Planets are inhabited by Animals in some respect like us, is a *Problem*: That the fixed Stars are all Suns, and each the Centre of a several System of Planets and Comets, is a *Problem*. See **PLANET**, **STAR**, &c.

The Word is originally *Greek*, *πρόβλημα*, signifying the same thing.

**PROBLEM** is also a Proposition expressing some natural Effect, proposed in order to a discovery of its apparent Cause. Such are the *Problems of Aristotle*.

A Logical or Dialectical *Problem*, say the Schoolmen, consists of two Parts; a Subject, or Subject Matter about which the Doubt is rais'd; and a Predicate or Attribute, which is the thing doubted whether it be true of the Subject or not. See **SUBJECT** and **PREDICATE**.

There are four Topical Predicates, *viz.* *Genus, Definitio, Proprietas, and Accidens*; whence arise four distinct kinds of dialectical *Problems*.

The first, when the thing attributed to the Subject is in the relation of a Genus: As, whether Fire be an Element or not. See **GENUS**.

The second, when the thing attributed has the Effect of a Definition: As, when it is ask'd, Whether or no Rhetoric be the Art of Speaking? See **DEFINITION**.

The third, when the Attribute imports a Propriety: As, Whether it belong to Justice to give every one their Due? See **PROPER**.

The last is when the thing attributed is adventitious: As, Whether Justice is to be desired? See **ACCIDENT**.

*Problems*, again, may be divided into those relating to things to be done, or avoided, call'd *Ethical*; those relating to the Knowledge of Nature, call'd *Physical*; those relating to Spirits, call'd *Metaphysical Problems*, &c.

**PROBLEM**, in Geometry, a Proposition wherein some Operation, or Construction is required; as, to divide a Line, to construct an Angle, to draw a Circle thro' three Points not in a right Line, &c. See **PROPOSITION**.

Mathiess of the *Port-Royal* define a *Geometrical Problem*, a Proposition given to be demonstrated, wherein something is required to be done; and what is done, to be proved to be the thing required.

A *Problem*, according to *Wolffius*, consists of three Parts. The Proposition, which expresses what is to be done. See **PROPOSITION**.

The Resolution, or Solution, wherein the several Steps whereby the thing required is to be effected, are orderly rehearsed. See **RESOLUTION**.

The Demonstration, wherein is shewn that by doing the several things prescribed in the Resolution, the thing required is obtain'd.

Accordingly, the general Tenor of all *Problems* is this: The things prescribed in the Resolution being done; the thing required, is done. See **DEMONSTRATION**.

**PROBLEM**, in Algebra, is a Question, or Proposition which requires some unknown Truth to be investigated, or discovered; and the Truth of the Discovery demonstrated.

In this sense 'tis a *Problem* to find a Theorem. See **THEOREM**. See also **INVESTIGATION**.

Algebra is defined to be the Art of Resolving all *Problems* that are resolvable. See **ALGEBRA**.

**Kepler's Problem**, in Astronomy, is the determining of a Planet's Place from the Time. See PLANET.

It took its Name from *Kepler*, who first propos'd it.

The *Problem*, stated in form, stands thus: To find the Position of a right Line, which passing thro' one of the Foci of an Ellipsis, shall cut off an Area describ'd by its Motion which shall be in any given Proportion to the whole Area of the Ellipsis.

The Proposer knew no way of solving the *Problem* directly, and geometrically; and therefore had recourse to an indirect Method; for which he was tax'd with an *anastrophe*, or want of Geometry; and his Astronomy charged with not being Geometrical. But the *Problem* has since been solved directly and geometrically several ways, by several Authors; particularly *Sir Is. Newton*, *Dr. Keil*, &c. See PLANET, PLACE, &c.

**Deliac Problem**, in Geometry, is the doubling of a Cube. See CUBE, &c.

This *Problem* was so call'd from the People of *Delos*, who, upon consulting the Oracle for a Remedy against a Plague they were then infected with, were answer'd, that the Plague should cease, when *Apollo's* Altar, which was in form of a Cube, should be doubled. See DUPLICATION.

This *Problem* coincides with that for finding two mean Proportionals between two given Lines; whence that, also, is call'd the *Deliac Problem*. See PROPORTIONAL.

**PROBLEMATICAL Resolution**, in Algebra, a Method of solving difficult Questions by certain Rules, call'd *Cannon*. See SOLUTION and CANON.

**PROBOSCIS**, in Natural History, the Trunk, or Snout of an Elephant; and some other Animals. See TRUNK.

The *Proboscis* is a Member issuing out of the middle of the Forehead, serving instead of a Hand; and having a little Appendix fasten'd to the end thereof, in form of a Finger.

By the *Proboscis*, the She-Elephant sucks herself; and by the same, conveys the Milk to her Young.

The *Proboscis*, *Mr. Derham* observes, is a Member so admirably contriv'd, so curiously wrought, and with so great agility apply'd by that unwieldy Animal; that it may pass as an Instance of the Creator's Skill, &c.

All Quadrupeds have the length of their Neck equal to that of their Feet; the Elephant alone excepted; in whom the Shortness of the Neck is compensated by the Length of the *Proboscis*.

The Camelion has also a kind of Trunk or *Proboscis*, which is its Tongue; and which it darts singly out of its Throat, as if it spat it; and draws it in again instantaneously. It serves like the Elephant's Trunk, to lay hold on, and take in its Food. See CAMELEON.

The Microscope shews us a little Trunk in Flies, and Gnats; by means whereof, they suck the Blood of Animals, or Liquors, for their Food.

The Word is *Greek*, *πρόβουσις*, where it has the same Signification.

**PROCATARCTIC Cause**, the original or pre-existent Cause of an Effect. See CAUSE.

Sach, *e.g.* is a Disease which co-operates with some other Disease, subsequent thereto.

Thus, Anger, or Heat of Climate, bring on such a Disposition of the Juices, as occasions a Fever; where the ill Disposition is the immediate Cause, and the Heat or Anger, the *Procatartick* Cause.

The Word is form'd from the *Greek* *προεπισημειωσις*, *antigredior*, I go before.

**PROCEDENDO**, in Law, a Writ whereby a Plea or Cause, formerly call'd from a base Court to the Chancery, King's Bench, or Common Pleas, by Writ of Privilege or *Cartorari*, is releas'd, and return'd to the other Court to be proceeded in; upon its appearing that the Defendant has no Cause of Privilege, or that the Matter compriz'd in the Party's Allegation is not well proved.

**PROCEDURE**, in Law, the Course of the several Acts, Expeditions, and Instructions of a Process, or Law-Suit. See PROCESS.

A *Procedure* is either Civil or Criminal: *Civil Procedure*, is that where the Estate alone is concern'd; *Criminal* or *extraordinary Procedure*, is that where the Person is prosecuted.

**PROCEED**, among Merchants, that which arises from a Thing. In this sense they say, the *next Proceed*.

**PROCELEUSMATICUS**, in the ancient Poetry, a Foot consisting of four Syllables; as *Howivins*. See FOOT.

**PROCESS**, in Law, in its general Sense, is us'd for all the Proceedings in any Cause, or Action real or personal, civil or criminal, from the original Writ, to the end. See ACTION.

In France, they carry on a formal *Process* against the Memory of People kill'd in Duels; or that have murder'd themselves.

Pirates, when taken in the Fact, are hang'd without any *Process*; as are sometimes also Robbers.

**PROCESS**, is also us'd in a more restrain'd sense, for that by which a Man is first call'd into Court; this being the beginning or principal part, and that by which the rest of the Business is directed.

The Difference between this *Process*, and a *Precept* or *Warrant* of the Justices, is this; the Precept or Warrant is only to attach or convene the Party, before any Judgment or Conviction, and may be made either in the Name of the King, or the Justice: But the *Process* is always in the King's Name, and usually after an Indictment. See PRECEPT.

**PROCESS**, in Chymistry, the whole Course of an Operation or Experiment. See OPERATION and EXPERIMENT.

**PROCESSUS**, in Anatomy, is a Term of equal Import with *Apophysis*, *Prominence*, *Protuberance*, and *Prothusion*; which see.

*Process* is particularly apply'd to certain Eminences of the Bones, and other Parts; distinguish'd by peculiar Names, expressing their Place, Form, or the like: As, *Processus Peritonei*, *Processus Vermiformes*, *Processus Papillares*, *Giliiars*, &c. See BONE, VERMIFORMES, PAPPILLARES, GILIIARS, PERITONEUM, &c.

**PROCESSION**, in Theology, a Term us'd for the manner wherein the Holy Spirit is conceiv'd to issue from the Father and the Son, in the Mystery of the Trinity. See SPIRIT, TRINITY, PERSON, &c.

The *Greeks* and *Latins* are not agreed about the *Procession* of the Holy Spirit. See GREEK.

**PROCESSION**, is also a Ceremony in the *Romish* Church, consisting in a formal March of the Clergy in their Robes, and the People after them, putting up Prayers, singing Hymns, &c. and in this manner, making a Visit to some Church, or other holy Place.

There are general *Processions* of all the People in Jubilees, and in publick Necessities. See JUBILEE.

The *Processions* of the Holy Sacrament are very solemn.

They have also *Processions*, frequently, a-round the Church, at the Salutations, &c. in the Mass.

Actively, among us, there were, in each Parish, customary *Processions* of the Parish-Priest, and the Parson of the Church, with the chief Flag, or holy Banner, attended by the other Parishioners, each Ascension-Week; to take a Circuit round the Limits of the Parish, and pray for a Blessing on the Fruits of the Earth. Of which Custom there still remains a Shadow in that annual Perambulation, still call'd *Processioning*; tho' the Order, and Devotion of the ancient *Processions*, be almost lost.

**PROCESSUM Continuendo**, a Writ for the Continuance of a *Process*, after the Death of the Chief Justice, or other Justices in the Writ or Commission of Oyer and Terminer. Register of *Writs*.

**PROCEIN Amy**, in Law, the Person next a-kin to a Child in Nonage; and who, in that respect, is allow'd in Law to deal and negotiate for him, to manage his Affairs, to see him redress'd of any Wrong, and to be his Guardian, if he hold in Socage.

By Statute of *Westminster*, the prosecution of any Action at Law, is by the Guardian, if the Plaintiff be an Infant; and by the *Prochein Amy*, *Proximum Amicum*, if the Infant be Defendant. See GUARDIAN.

**PROCIDENTIA**, or **PROLAPsus Ani**, in Medicine, is when upon a Discharge by Stool, the *Intestinum Rectum* is protrud'd so far, as that it cannot be drawn back again into the Body; or when drawn back, falls again. See RECTUM.

This is sometimes a Chronic Disease, especially when it arises from a Palsy: Its Causes are a Relaxation of the Fibres of the Rectum, either from the Addition of the Albus, a Diarrhea, Dysentery, or Tenesmus.

'Tis very difficultly cured, when attended with Hemorrhoids: The principal Cure is by Astringents.

External Assistance is requir'd to reduce the fallen Gut; which, if it be not soon had, is apt to tumefy and mortify, by the Contact of the Air.

'Tis subject to relapse after Reduction in Children, especially upon violent Crying; and is difficult to keep up, in case of a Diarrhea.

**PROCIDENTIA Uteri**, the Descent, or falling down of the Womb; from a Relaxation of the Ligaments, which hold it in its place. See UTERUS.

If the Uterus fall into the Vagina, so that its Orifice may be either perceiv'd with the Finger within, or by the Eye just without, the *Labia Vulvae*; it is call'd a *Prolapsus*, or *Procidentia*.—If, falling thus low, it be tam'd inside out, and hang like a fleshy Bar, with a rugged unequal Surface, it is call'd a *Perverfus Uteri*.

These Disorders may proceed from violent Motions, vehement Coughing, Sneezing, *Fluxus Albus*. They appear most frequent in Women with Child, from the Weight pressing

pressing and besting hard upon the Uterus; but especially if the Fœtus be dead, lie in a wrong posture, or be violently extracted.

After replacing the part, Restringents both inwardly, and by Injection, are here used; such as obtain in Diarrhœas, Hæmorrhoids, the Gonorrhœa Simplex, &c.

PROBENTIA, or PROLAPSUS, Uvula; the Descent or Relaxation of the Uvula, or Almonds of the East. See UVULA.

PROCLAMATION, an Instrument dispatch'd by the King, with the Advice of his Privy Council; whereby the People are advertis'd of something, which his Majesty thinks fit for them to know; and whereby they are sometimes requir'd to do, or not to do certain Things. See KING and PRIVY COUNCIL.

Proclamations have the Force of Laws; but then they are suppos'd to be consistent with the Laws already in being; otherwise they are superseded: *Proclamare est pascam & velle clamare.*

PROCLAMATION is also used for a solemn Denunciation, or Declaration of War or Peace. See WAR, &c.

PROCLAMATION is also the Act of notifying to the People the Accession of a Prince to the Crown. See ACCESSION.

The Proclamation does not invest the Prince with the Regal Authority; it supposes him already invested therewith; and only gives notice thereof to the People.

PROCLAMATION of a Fine, is a Notice openly and solemnly given thereof at all the Assizes held in the County within one Year after the Ingressing it. See FINE.

These Proclamations are made on Transcripts of the Fine, sent by Justices of the Common Pleas, to the Justices of Assize, and of the Peace.

PROCLAMATION, in the Monastic Sense, is the Accusation of a Friar or Brother, by another Brother, in open Chapter, and in presence of the Superior and Community, for some external Crime he has been him commit.

PROCONDYLI, among Anatomists, the Bones of the Fingers next the Back of the Hand. See FINGER.

PROCONSUL, a Roman Magistrate; sent to govern a Province with a Consular Authority. See CONSUL and PROVINCE.

The Proconsuls were appointed out of the Body of the Senate; and ordinarily, as the Year of any one's Consulate expired, he was sent Proconsul into some Province.

The Proconsuls had the same Honours, &c. with the Consuls themselves; except that they had only six Lictors, and Fasces before them.

The Proconsuls did not ordinarily hear and determine Processes in person, but had that Office perform'd by their Assessors, or other Judges, constituted or delegated by them.

As the Proconsuls had the Direction both of Justice, of War, and of the Revenues; they had their several Lieutenants in each Capacity: These were call'd *Legati*, and were ordinarily nominated by the Senate.

The Proconsular Function only held a Year: The Charges of their Journey backwards and forwards, was bore by the Publick; and was call'd *Viatium*. See VIATICUM.

After the Partition of the Provinces between Augustus and the People; those who presided over the Provinces of the People, were call'd specially *Proconsuli*.

In our ancient Law-Books, *Proconsul* is used for a Justice in Eyre, or Justice Itinerant. See JUSTICE.

PROCREATION, the Action of begetting, and bringing forth Children. See GENERATION.

PROCTOR, PROCURATOR, a Person commission'd to act as Proxy, or Delegate, in behalf of another. See PROCURATOR.

PROCTOR, Procurator, in the Civil Law, is an Officer appointed to appear in Court, and manage the Causes of Parties, who will make use of his Procreation. See CIVIL LAW.

Antiently, every body was oblig'd to appear in person; and when the Affair happen'd to be drawn out to a great length, was allow'd to create a *Proctor*, or Proxy, in his Cause.

But this was a Favour only granted for a certain Time; till towards the middle of the 16th Century, when it was decreed, that all Procreation should hold till revoked.

PROCTORS of the Commons, are Persons skill'd in the Civil Law, and the Practice of Doctors Commons; who exhibit their Proxies, and make themselves Parties for their Clients, to draw up Acts and Pleadings, produce Witnesses, prepare Causes for Sentences, and attend the Advocates with the Proceedings.

They are 34 in Number; are admitted by the Archbishop's Fiat; and wear black Robes, and Hoods lined with white Furs. See DOCTORS COMMONS.

PROCTORS of the Clergy, are Deputies, or Representatives, chose by the Clergy of each Diocese, two for each; and by the Cathedral and Collegiate Churches, one for each, to sit in the Lower House of Convocation. See CONVOCATION.

PROCTORS in the University, are two Officers, chosen from among the Students, to see good Orders, and Exercises daily perform'd there. See UNIVERSITY.

PROCUMBENT Leaves, in Botany, such Leaves of Plants as lie flat, or trailing on the Ground. See LEAVES.

PROCURACY. See PROCURATOR.

PROCURATION, an Act whereby a Person is empowered to act, treat, receive, &c. in a Person's Name, as if he himself were actually present. See PROCURATOR.

When a Man treats in behalf of another, the first thing is to examine his *Procurator*.

The Word is now little used in this sense, except in the Case of a Person who collects the Fruits of a Benefice for another.

PROCURATION, or *Proxy*, in the Canon Law, is used for the Repast or Entertainment antiently given to Church-Officers or Ordinaries, who came to visit in Churches or Monasteries; whether they were Bishops, Arch-deacons, or Visitors.

*Procuratio* was due to the Pope's Legates, and even to Popes themselves, when they came into France; and the Charge was comprised in the Bulls then granted.

Complaints were frequently made to the Pope, of the excessive Charges of the *Procurations* of Bishops and Arch-deacons; upon which they were prohibited by several Councils and Bulls.

That of *Clement IV.* mention'd in the *Monasticon*, is very express; wherein that Pope tells us, Complaint had been made, that the Arch-deacon of *Richmond*, visiting the Diocese, travel'd with one hundred and three Horses, twenty one Dogs, and three Hawks; and did so grievously oppress a Religious House with that vast Equipage, that he caus'd the Monks to spend in an hour, as much as would have maintain'd them a long time. See INDEMNITIES.

PROCURATION, or *PRAXUS*, is now used for a Sum of Money, paid yearly by Parish-Priests to the Bishop or Arch-deacon, in lieu of this Entertainment.

PROCURATOR, PROXY, PROXY, a Person who has a Charge or Office committed to him by another. See PROCURATION.

Thus the *Proxies* of the Lords in Parliament, in our Law-Books, are call'd *Procurators*. See PROXY.

The Word is also used for a Vicar or Lieutenant; thus, in *Petrus Blesensis*, we read of a *Procurator Regni*.

Those who manage Causes in Doctors Commons, are also call'd *Procurators*, or *Proctors*. See PROCTOR.

The Bishops are sometimes call'd *Procuratores Ecclesiarum*; and the Representatives sent by the Clergy to Convocation, *Procuratores Cleri*. See CONVOCATION.

In our Statutes, a Person who gathers the Fruits of a Benefice for another, is particularly call'd *Procurator*; and the Instrument empowering him to receive the same, *Procuracy*.

PROCURATOR, is also a kind of Magistrate in several Cities of Italy, who takes care of the publick Interests.

There are *Procurators* of *St. Mark*, *Procurators* at *Venice*, at *Genoa*, &c.

Originally there was but one *Procurator* of *St. Mark* at *Venice*: In 1442, the Number was augmented to Nine; when, the Senate made a Decree, appointing, that for the future, none should be admitted to the Dignity, but after the Death of some of the Nine. But in the Occasions of the Republick, the Number was afterwards enlarg'd to Forty; tho' of these, there are only Nine that bear the Title of *Procurators*, and whose place is regularly fill'd. They are Administrators of the Church of *St. Mark*, and of the Revenues attach'd thereto; the Patrons of Orphans, and Executors of Testaments.

This Office receives more Lustre from the Merit of those who discharge it, than from its Authority. They are clothed in Black or Violet, with Dual Sleeves.

PROCURATOR *Monasterii*, antiently, was the Advocate of a Religious House, who was to solicit the Interest, and plead the Causes of the Society. See ADVOCATE.

PROCURATORS *Ecclesie Parochialis*, are the Church-Wardens, whose Office is to act as Proxies and Representatives of the Church. See CHURCH WARDEN.

PROCURORS. See MALVEUS *Procurator*.

PROCYON, in Astronomy, a fixed Star of the second Magnitude, in *Canis Minor*. See CANIS.

PRODES *Homes*, *q. d.* Wife Men, in our antient Customs, a Title given to the Barons, and other military Tenants, who were call'd to the King's Council, and were to give advice according to the best of their prudence and knowledge. See TRANE, BARON, &c.

PRO-DICTATOR, among the *Romans*, a Magistrate who had the Power, and did the Office, of a Dictator. See DICTATOR.

The *Romans* sometimes created a *Prodictator*, in Cases where they could not have a Dictator. *Fabius Maximus* was *Prodictator*.

PRODROMUS, *προδρομος*, literally denotes a Forerunner, a Harbinger: Hence, *Prodromus Martis*, among

Physicians, is used for a Disease which foretells a greater. Thus a Strain'd of the Breast is a *Prodromus* of a Consumption, &c. See *PRŌNŌSIS*.

**PRODUCING**, in Geometry, denotes the continuing a right Line; or drawing it out farther, till it have any assign'd Length. See *LINE*.

**PRODUCT**, in Arithmetick and Geometry, the Factum of two Numbers; or the Quantity arising from, or produced by, the Multiplication of two or more Numbers, Lines, &c. into one another. See *FACTUM*.

Thus, if 6 be multiply'd by 8, the *Product* is 48. See *MULTIPLICATION*.

In Lines it is always (and sometimes in Numbers) call'd the *Rectangle* between the two Lines, multiply'd by one another. See *RECTANGLE*.

**PRODUCTION**, in Anatomy, a Continuation, or Process. See *PROCESS*.

**PROEDRUS**, in Antiquity. See *EPISTATES*.

**PROEM**, **PROEMIIUM**, a Term antiently used for *Preface*. See *PREFACE*.

**PROEMPTIOSIS**, in Astronomy, that which makes the New Moons appear a Day later, by means of the Lunar Equation, than they would do without that Equation. See *MOON* and *EQUATION*.

**PROFANATION**, in Religion, the doing of something disrespectful to Holy, or Sacred Things. See *PROFANE*.

**PROFANE**, a Term used in opposition to *Holy*, *Sacred*. See *SACRED*, &c.

Except Churches, and Church-yards, all places are call'd *Profane*.

By the Canon Law, a Sacred Chalice or Cup becomes *Profane*, by giving it a Blow with an Hammer.

**PROFANE** is also apply'd in the general to all Persons who have not the Sacred Character, and all Things that don't belong to the Service of Religion. In this sense we say, *Zenophon*, *Seneca*, &c. are *Profane* Authors. All the Heathen Priests, Pontiffs, &c. pass with us for *Profane*.

**PROFER**, in Law, the Time appointed for the Accounts of Sheriffs, and other Officers, to be given into the Exchequer; which by Stat. 51 Hen. 3. is to be twice in the Year. See *SHERIFF* and *EXCHEQUER*.

The Word is form'd of the French *proferer*, to produce.

We also read of *Profers*, Anno 52 Hen. 8. in another Acceptation: *Trinity-Term shall begin the Monday next after Trinity-Sunday, whenever it shall happen to fall, for the keeping of the Estates, Profers, Returns, and other Ceremonies heretofore in use.* In which place, *Profer* signifies the Offer and Endeavour to proceed in an Action, by any Man concern'd so to do.

**PROFER** the Half Mark. See *HALF MARK*.

**PROFESSED Monk**, or **Nun**, one who having made the Vow, is admitted of a Religious Order. See *VOW*, *MONK*, and *RELIGIOUS*.

In this sense the Word is used in opposition to *Novice*. See *NOVICE* and *PROBATION*.

**PROFESSION**, in the Monastic Sense, the entering into a religious Order; or an Action whereby a Person offers himself to God, by a Vow of observing three things, viz. *Obedience*, *Chastity*, and *Poverty*, which he promises invariably to maintain. See *VOW*, *ORDER*, &c.

This is call'd *Sacra Religioſa professio*, and the Person a *Religioſa professus*.

Persons are not admitted to make *Profession* till after a Year of *Probation*. See *PROBATION*.

**PROFESSOR**, in the Universities, a Doctor, or Regent, who teaches, or lectures publicly, some Art, or Science, in a Chair establish'd for that purpose. See *CHAIR*.

The *Professors* in Foreign Universities, teach the Arts, and have their Classes of Pupils; those in our Universities only read publick Lectures in Term-Time. See *TERM*.

Of *Professors*, we have a great Number; some denominated from the Arts they profess; as *Cassijust Professor*, *Hebrew Professor*, *Physick Professor*, *Trinity Professor*, &c.

Others from those who founded the *Professorſhip*, or assign'd a Revenue for the Support of the *Professor*; as the *Sevilian Professors* of Astronomy and Geometry, the *Lucasian Professor* of Mathematicks, *Margaret Professor* of Divinity, &c.

**PROFILE**, in Architecture, the Figure, or Draught of a Building, Fortification, or the like; wherein are express'd the several Heights, Widths, and Thicknesses, such as they would appear were the Building cut down, perpendicularly from the Roof to the Foundation; whence the *Profile* is also call'd the *Section*, and by *Vitruvius*, *Scitographia*. See *SECTION*, &c.

**PROFILE**, is sometimes also used for a Design, or Description; in opposition to a Plan, or *Isographia*.

In which Sense, *Profiles* coincide with what we popularly call *Prospects*.

**PROFILE** is also used for the Contour, or Out-Line of a

Building, or a Member of Architecture; as a Base, a Corniche, &c.

Hence *Profiling* is sometimes used for Designing, or describing the Member with Rule, Compass, &c.

**PROFILE**, in Sculpture, and Painting. A Head, a Portrait, &c. are said to be in *Profile* when they are represented side-ways, or in a side-view. As, when in a Portrait, there is but one side of the Face, one Eye, one Cheek, &c. shown, and nothing of the other.

In almost all Medals the Faces are in *Profile*. See *MEDAL*.

**PROFLUVIUM**, in Medicine, any kind of Flux, or liquid Evacuation; whence *Profluvium Ventris*, a Flux of the Belly, is a *Diarrhea*, or *Dysentery*. See *FLUX*.

**PROFUNDITY**, see *DEPTH*.

**PROFUNDUS**, in Anatomy, a Muscle, call'd also *Proforus*. See *PERFORANS*.

**PROGNOSTIC**, **PROGNOSIS**, in Medicine, a conjectural Judgment of the Event of a Disease; as, *e. gr.* whether it shall end in Life or Death, be long or short, mild or malignant, &c. taken from certain Symptoms thereof. See *SIGN* and *SYMPTOM*.

In all continued Fevers, *Morvus* tells us, a strong equable Pulse is a good *Prognostic*, and always presages well, whenever other threatening Symptoms attend it; on the contrary, a quick, feeble, intermitting Pulse is a *Prognostic* of Death, how much sooner the other Symptoms may flatter. See *PULSE*.

*Hippocrates* observes, that all Predictions and *Prognostics* of acute Diseases are very fallacious; *Diemerbroeck*, however adds, that in the Plague of *Ninive*, six day Crises were constantly found fatal *Prognostics*; also to be infected about the new, or full Moon; Faintings in the beginning of the Disease, and Palpitations of the Heart, were found deadly *Prognostics*; on the contrary, a Pleurisy, and Suppeliion of Stool, were good *Prognostics*.

The Word comes from the Greek *prognostikos*.

**PROGNOSTIC** of the Weather, see *WEATHER*.

**PROGRAMMA**, a Letter sealed with the King's Seal. See *SEAL*.

**PROGRAMMA** is also a College Term, signifying a Bill, or Advertisement posted up, or given into the Hand, by way of Invitation to an Oration, or other College Ceremony; containing the Argument, or so much as is necessary for the understanding thereof.

*Programmas* are sent to invite People to assist at Declamations, Dramatic Performances, &c.

**PROGRESSION**, an orderly advancing, or going forward, in the same Manner, Course, Tenor, &c.

**PROGRESSION**, in Mathematics, is either *Arithmetical*, or *Geometrical*.

*Arithmetical Progression*, call'd also *Arithmetical Proportion*, is a Series of Quantities equidistant from each other; *i. e.* either increasing, or decreasing by one common Interval or Difference. See *SERIES*.

Thus 3, 6, 9, 12, 15, 18, &c. make an *Arithmetical Progression*; because increasing, or differing equally, by 3. Thus also 25, 20, 15, 10, and 5, are in *Arithmetical Progression*, decreasing by a common difference, 5.

In every *Arithmetical Progression*, whether increasing, or decreasing, the Sum of the first and last Term, is equal to the Sum of any two intermediate Terms equidistant from the Extremes; as, also, if the Number of Terms be uneven to the double of the middle Term.

For Instance;

3,	6,	9,	12,	15,	18,	21	
				12,	9,	6,	3
—————							
				24,	24,	24,	24

Hence, 1<sup>o</sup>, we find the Sum of any *Arithmetical Progression* by Multiplying the Sum of the first and last Term by half the Number of Terms.

2<sup>o</sup>, Having, therefore, the first Term, the Difference, and the Number of Terms given; the Sum of the *Progression* is had by Multiplying the first Term by the Number of Terms, and to the Product adding the Product arising from the difference multiply'd into the Semi-difference of the Number of Terms from the Square of that same Number.

Thus, suppose the first Term 3, the Number of Terms 7, and the difference 3; the Product of 3 and 7 = 21 being added to the Product 63, of the difference 3 multiply'd into the Semi-difference of the Number of Terms 7, from the Square thereof 49, = 21; gives 84, the Sum of the *Progression*.

3<sup>o</sup>, The Number of Terms lessen'd by one, being multiply'd by the common Difference, and the first Term added to the Product; the Sum is the last Term. Thus in a *Progression*

*Progression* of 52 Places, where the difference is 3, and the first Term 53; 51 being multiply'd by 3, produces 153, to which adding 3, the Sum 158 is the last Term required.

4<sup>o</sup>. If the *Progression* begin with 0, the Sum of all the Terms is equal to half the Product of the last Term multiply'd by the Number of Terms.

Whence it follows, that the Sum of a *Progression* beginning from 0, is subduple the Sum of so many Terms, all equal to the greatest.

5<sup>o</sup>. In an *Arithmetical Progression*, as the difference of the Sum of the first and last Term from double the Sum of the *Progression*, is to the difference of the first Term from the last; so is the Sum of the first and last Terms to the *Progressional* difference.

*Geometrical PROGRESSION*, is a Series of Quantities increasing or decreasing in the same Ratio, or Proportion; or a Series of Quantities continually proportional. See PROPORTION.

Thus 1, 2, 4, 8, 16, 32, 64, &c. make a *Geometrical Progression*; or 729, 243, 81, 27, 9, 3, 1.

1<sup>o</sup>. In every *Geometrical Progression*, the Product of the extreme Terms is equal to the Product of two intermediate Terms equidistant from the Extremes; as also, if the Number of Terms be uneven, to the Square of the middle Term.

For Example;

3,	6,	12,	24,	48,	96
		12,	6,	3	
-----					
		288,	288,	288	

2<sup>o</sup>. If the difference of the first and last Term of a *Geometrical Progression* be divided by a Number less than the Denominator of the Ratio, i. e. than the Quotient of a greater Term divided by a less; the Quotient will be the Sum of all the Terms except the greatest: Hence, by adding the greatest Term, we have the Sum of the whole *Progression*.

Thus, in a *Progression* of 5 Terms, beginning with 3; and the Denominator being likewise 3, the greatest Term will be 243. If then the difference of the first and last Term 240, be divided by 2, a number less by 1 than the Denominator; the Quotient 120 added to 243, gives 363, the Sum of the *Progression*.

Hence, 3<sup>o</sup>, the first, or least term of a *Progression*, is to the Sum of the *Progression*, as the Denominator less'n'd by 1, to its Power likewise less'n'd by 1; the Exponent of which Power is equal to the number of Terms.

Thus, supposing the first Term 1, the Denominator 2, and the Number of Terms 8; the Sum will be 255.

4<sup>o</sup>. Hence, also, the difference between the last Term and the Sum is to the difference between the first Term and the Sum, as Unity to the Denominator: Wherefore, if the difference between the first Term and the Sum, be divided by the difference between the Sum and the last Term, the Quotient is the Denominator.

**PROHIBITED Goods**, in Commerce, such Commodities as are not allow'd to be either imported or exported. See CONTRABAND.

**PROHIBITIO de usso directa Parisi**, is a Writ judicial, directed to the Tenant, prohibiting him from making Waste upon the Land in controversy, during the Suit. It is sometimes directed to the Sheriff.

**PROHIBITION**, the Act of forbidding, or inhibiting any thing. 'Tis the Prohibition of the Law that makes the Sin. A Testator frequently bequeaths things with a Prohibition to alienate.

**PROHIBITION**, in Law, is a Writ issued to forbid any Court, either Spiritual or Secular, to proceed in a Cause there depending; upon suggestion, that the Cognizance thereof belongeth not to that Court.

It is now usually taken for that Writ which lieth for one, who is impleaded in the Court Christian for a Cause belonging to the Temporal Jurisdiction, or the Cognizance of the King's Court; whereby, as well the Party and his Council, as the Judge himself, and the Register, are forbid to proceed any farther in that Cause.

**PROJECTILE**, or **PROJECT**, in Mechanics, is a heavy Body put in Motion by an external Force impress'd thereon; or, more fully, a *Projectile* is a heavy Body, which being put into a violent Motion, is dismiss'd from the Agent, and left to pursue its Course. See MOTION.

Such, e. gr. is a Stone thrown out of the Hand or a Sling, an Arrow from a Bow, a Bullet from a Gun, &c. See PROJECTION.

The Cause of the Continuation of the Motion of *Projectiles*, or what it determines 'em to persist in Motion after the first Cause ceases to act, has puzzled the Philosophers. See MOTION.

The *Peripatetics* account for it from the Air, which being violently agitated by the Motion of the *projecting* Cause,

e. gr. the Hand and Sling, and forced to follow the *Projectile* while accelerated therein, does, upon the diminution of the *Projectile*, press after it, and protrude it forward; to prevent a Vacuum. See VACUUM.

The Moderns account for the Motion of *Projectiles* on a much more rational and easy Principle; it being, in effect, a natural Consequence from one of the great Laws of Nature, viz. That all Bodies being indifferent as to Motion or Rest, will necessarily continue the State they are put into, except so far as they are hindered, and forced to change it by some new Cause. See NATURE.

Thus a *Projectile* put in Motion, must continue to move eternally on in the same right Line, and with the same Velocity; were it to meet with no Resistance from the Medium, nor had any force of Gravity to encounter.

The Doctrine of the Motion of *Projectiles* is the Foundation of all Gunnery. See GUNNERY.

The Laws thereof are as follow.

#### Laws of the Motion of PROJECTILES.

1<sup>o</sup>. If a heavy Body be *projected* perpendicularly, it will continue to ascend or descend perpendicularly: Because, both the *Projecting*, and the Gravitating Force are found in the same Line of Direction.

2<sup>o</sup>. If a heavy Body be *projected* horizontally, it will, in its Motion, describe a Parabola; the Medium being supposed void of Resistance.

For, the Body is equally impell'd by the impressed Force, according to the right Line A R, (Tab. MECHANICS, Fig. 45.) and by the Force of Gravity according to the right Line A C, perpendicular thereto. While, then, the Body by the Action of the impressed Force is arrived in Q, by the Force of Gravity it will be arrived in M; and, therefore will be found in N. But the Motion in the direction A R will still be uniform; (see MOTION) and, therefore, the Spaces Q A and q A are as the Times; and the Spaces Q M and q m, are likewise as the Squares of the Times. Therefore, A Q<sup>2</sup>: A q<sup>2</sup> :: Q M: q m. That is, P M: p m :: A P: a p.

The Course, or Path, therefore, of a heavy Body *projected* horizontally A M m, is a Parabola. See PARABOLA.

Two hundred Years ago, the Philosophers took the Line described by a Body *projected* horizontally, e. gr. a Bullet out of a Cannon, while the force of the Powder exceeded the Weight of the Bullet considerably, to be a right Line; as after which it became a Curve.

N. Tartaglia was the first who perceiv'd the Mistake, and maintain'd the Path of the Bullet to be a crooked Line, throughout its whole Extent; but it was Galileo who first determin'd the precise Curve the Bullet described; and shew'd the Path of the Bullet, *projected* horizontally from an Eminence, to be a Parabola; the Vertex whereof is the Point where the Bullet quits the Cannon.

3<sup>o</sup>. If a heavy Body be *projected* obliquely, either upwards, or downwards, in a Medium void of Resistance; it will likewise describe a Parabola, in a Medium uniformly resisting.

Cor. Hence, t. the Parameter of the Diameter of the Parabola A S (Fig. 47.) is a third Proportional to the Space thro' which the Body descends in any given Time, and the Celerity, which is defined by the Space pass'd over in the same time; i. e. to A P and A Q. 2. Since the Space described by a Body falling perpendicularly in one Minute, is 15  $\frac{1}{2}$  Paris feet in a Second; the Parameter of the Diameter of the Parabola to be described is found, if the Square of the Space pass'd over by the *Projectile* with the impress'd Force in a Second, be divided by 15  $\frac{1}{2}$ . 3. If, then, the Velocity of the *Projectiles* be the same, the Spaces described in the same time by the Force impress'd, are equal; consequently the Parameter of the Parabola's pass'd over by the compound Motion, is the same. 4. If from the Parameter of the Diameter be subtracted quadruple the Altitude of A P, the Remainder is the Parameter of the Axis; the fourth part whereof is the distance of the Vertex of the Axis from the Focus of the Parabola. Hence the Celerity of the *Projectile* being given, the Parabola described by the *Projectile* may be laid down on Paper. 5. The Line of Direction of the *Projectile* A R is a Tangent to the Parabola in A.

St. I. Newton shows, in his *Principia*, that the Line a *Projectile* describes, approaches nearer to an Hyperbola than a Parabola.

4<sup>o</sup>. A *Projectile* in equal times describes Portions of its parabolic Path, as A M, A m, which are subtended by equal Spaces of the Horizon A T, T t. i. e. in equal times it passes over equal horizontal Spaces.

5<sup>o</sup>. The Quantity, or Amplitude of the Path A B, i. e. the Range of the *Projectile* is to the Parameter of the Diameter A S, as the Sine of the Angle of Elevation R A B to its Secant.

Hence, t. the Semiparameter is to the Amplitude of the Path A B, as the whole Sine to the Sine of double the

Angle of Elevation. 2. If then the Celerity of two *Projectiles* be the same, the Parameter is the same. Wherefore, since the Semiparameter of the Path, in the one Cafe, is to the Amplitude, as the whole Sine, to the Sine of double the Angle of Elevation; and the Semiparameter of the Path in the other Cafe is to the Amplitude as the whole Sine to the Sine of double the Angle of Elevation: We may say farther, as the Amplitude is to the Sine of the Angle of double the Elevation in the one Cafe, so is the Amplitude to the Sine of the Angle of double the Elevation in the other Cafe. The Amplitudes, therefore, or Magnitudes of the Paths, are as the Sines of double the Angles of Elevation; the Velocity of the *Projectile* remaining the same.

69. The Celerity of the *Projectile* being the same, the Amplitude AB is greatest, i. e. the Range of the *Projectile* is greatest, at an Angle of Elevation of  $45^\circ$ ; and the Amplitudes or Ranges, at Angles of Elevation equally distant from  $45^\circ$ , are equal.

This is found by Experiment; and is likewise demonstrable thus: Since the Ratio of the Sine of double the Angle of Elevation to the Amplitude is always the same, while the Celerity of the *Projectile* remains the same; as the Sine of double the Angle of Elevation increases, the Amplitude will increase. Wherefore, since the Sine of double the Angle of Elevation of  $45^\circ$  is Radius, or the largest Sine; the Amplitude, or Range in that Elevation must be the greatest. Again, since the Sines of Angles equidistant from right Angles; e. g.  $80^\circ$  and  $100^\circ$  are the same; and the double Angles must be equidistant from a right Angle, if the simple ones be so: The Amplitudes or Ranges at Elevations equidistant from  $45^\circ$ , must be equal.

Hence, since as the whole Sine is to the Sine of double the Angle of Elevation; so is the Semi-parameter to the Amplitude; and the whole Sine is equal to double the Sine of the Angle of Elevation, if that be  $45^\circ$ : Under the Angle of Elevation  $45^\circ$ , the Amplitude is equal to the Semi-parameter.

70. The greatest Range or Amplitude being given; to determine the Amplitude or Range under any other given Angle of Elevation; the Celerity remaining the same. Say thus; As the whole Sine is to the Sine of double the Angle of any other Elevation; so is the greatest Amplitude or Range, to the Amplitude required.

Thus, suppose the greatest Range of a Mortar at  $45^\circ$ , to be 6000 Paces, and the length of the Range at  $30^\circ$ , required; it will be found 3196 Paces.

80. The Velocity of a *Projectile* being given, to find its greatest Range or Amplitude. Since the Celerity of the *Projectile* is given in the Space it will pass over by the impressed Force; e. g. in one Second; there is nothing required to find the Parameter of the Path, (by Corol. 2. of the 3d Law.) for half of this is the Amplitude or Range required.

Suppose, e. g. the Celerity of the *Projectile* such as that in one Second it will run over 1000 Feet, or 12000 Inches: If then  $144000000$  be divided by 181, the Quotient will give the Parameter of the Path 795389 Inches, or 66298 Feet. The Range or Amplitude required, therefore, is 33149. Any Object, therefore, found within this Extent may be struck by the *Projectile*.

90. The greatest Range or Amplitude being given; to find the Velocity of the *Projectile*, or the Horizontal Space it will pass over in a Second. Since double the greatest Amplitude is the Parameter of the Path; between double the greatest Amplitude and the Space pass'd over in a Second by a Body falling perpendicularly, viz. 181 Paris Inches, find a mean Proportional; for this will be the Space described by the *Projectile* in the given Second.

Thus, if the greatest Amplitude be 1000 Feet, or 12000 Inches, the Space required will be  $=\sqrt{12000.181} = 120$  Feet and 4 Inches.

10. To determine the greatest Altitude to which a Body obliquely projected will rise. The Rule is; Bisect the Amplitude AB in  $t$ , and from the Point  $t$  erect a perpendicular  $tm$ ; this  $tm$  will be the greatest Altitude to which the Body projected, according to the Direction AR, will arise.

11. The Range or Amplitude AB, and the Angle of Elevation BAR, being given; to determine the greatest Altitude of the *Projectile*. If AR be taken for the whole Sine, BR will be the Sine, and AB the Co-sine of the Angle of Elevation BAR: Wherefore, say, as the Co-sine of the Angle of Elevation is to the Sine of the same; so is the Amplitude AB to a fourth Number; which will be BR; the fourth part whereof is the greatest Altitude required.

Hence, since from the given Velocity of a *Projectile*, its greatest Range or Amplitude, and thence its Range under any other Angle, is found; the Velocity being given, the greatest Altitude of the *Projectile* is likewise found.

12. The Altitude of the Range  $tm$  is to the eighth part of the Parameter, as the versed Sine of double the Angle of Elevation to the whole Sine.

Hence, 1. since, as the whole Sine is to the versed Sine of double the Angle of Elevation in one Cafe; so is the eighth part of the Parameter to the Altitude of the Range: And as the whole Sine is to the versed Sine of double the Angle of Elevation in any other Cafe; so is the eighth part of the Parameter to the Altitude: So the Velocity remaining the same, the Parameter, in different Angles of Elevation, will likewise be the same: The Altitudes of the Ranges under different Angles of Elevations are as the versed Sines of double their Angles. 2. Hence, also, the Velocities remaining the same, the Altitudes of the Ranges are in a duplicate Ratio of the Sines of double the Angles of Elevation.

13. The Horizontal Distance of any Mark or Object, together with its Height above, or Depth beneath the Horizon, being given; to find the Angle of Elevation required to hit the said Object.

Wetlious gives us the following Theorem, the Result of a regular Investigation: Suppose the Parameter  $= a$ ;  $1n = b$ ,  $AI = c$ , the whole Sine  $= r$ . Then, as  $c$  is to  $\frac{1}{2}a + \sqrt{(\frac{1}{2}a^2 - ab - c^2)}$ : So is the whole Sine  $r$ ; to the Angle of Elevation required RAB.

Dr. Halley gives the following easy, and compendious Geometrical Construction of the Problem; which he likewise deduces from an analytical Investigation.

Having the right Angle LDA (fig. 48.) make DA, DF, the greatest Range, DG the horizontal Distance, and DB, DC, the perpendicular Height of the Object; and draw GB, and make DE equal thereto. Then with the Radius AC, and Centre E, sweep an Arch, which, if the thing be possible, will intersect the Line AD in H; and the Line DH being laid both ways from F, will give the Points K and L; to which draw the Lines GL, GK.

Here, the Angles LGD, KGD, are the Elevations required for hitting the Object E.

But note, that if B be below the Horizon, its Defect  $DC = DB$ , must be laid upon A, so as to have  $AC = A + D - C$ . Note, likewise, that if in Deficents, DII be greater than FD, and so K fall below D; the Angle KGD, shall be the Depression below the Horizon.

It may be here observed, that the Elevation sought constantly bisects the Angle between the Perpendicular and the Object. This, the Author was not aware of, when he gave the first Solution of the Problem; but upon discovering it, observes, that nothing can be more compendious, or bid fairer for the perfection of the Art of Gunnery; since 'tis here, as easy to shoot with a Mortar at any Object in any situation, as if it were on the Level; nothing more being required but to lay the Piece, so as to pass in the middle Line between the Zenith and the Object, and giving it the due Charge. See MORTAR.

14. The Times of the *Projections*, or Casts under different Angles of Elevation, the Velocity remaining the same, are as the Sines of the Angles of Elevation.

15. The Velocity of a *Projectile*, together with the Angle of Elevation RAB being given (fig. 47.); to find the Range, or Amplitude AB, and the Altitude of the Range  $tm$ , and describe the Path A m B. To the horizontal Line AB erect a Perpendicular AD, which is to be the Altitude whence the *Projectile* falling, might acquire the given Velocity: On A D describe a Semi-circle A Q D, cutting the Line of Direction AR in Q; thro' Q draw C m parallel to AB, and make C Q = Q m. From the Point m let fall a Perpendicular m t to AB: Lastly, thro' the Vertex M describe the Parabola A m B.

Here, A m B is the Path sought, 4 C Q its Amplitude or Range,  $tm$  the Altitude of the Range, and 4 CD the Parameter.

Hence, 1. The Velocity of a *Projectile* being given, the Amplitudes and Altitudes of all the possible Ranges are given at the same time. For, drawing EA, we have under the Angle of Elevation EAB, the Altitude AI, and the Amplitude 4 IE: Under the Angle of Elevation FAB, the Altitude AH, the Amplitude 4 HF. 2. Since AB is perpendicular to AD, it is a Tangent to the Circle in A: Hence the Angle A D Q is equal to the Angle of Elevation RAB; consequently A I M is double the Angle of Elevation, and therefore C Q, the fourth part of the Amplitude, is the right Sine; AC the Altitude of the Range, the versed Sine of double the Angle of Elevation.

16. The Altitude  $tm$  of a Cast  $tm$ , or its Amplitude AB, together with the Angle of Elevation RAB, being given; to find the Velocity wherewith the *Projectile* first moved, that is, the Altitude A D, in falling from whence it would acquire the like Velocity: Since  $AC = tm$  is the versed Sine,  $CQ = \frac{1}{4} AB$ , the right Sine of double the Angle of Elevation A I Q: To the versed Sine of double the Angle of Elevation, find the whole Sine, and the height of the Cast.

Cast. Or to the right Sine of double the Angle of Elevation, the whole Sine and the fourth part of the Amplitude, find a fourth Proportional. This will be the Radius 1 Q or 1, the double whereof A D is the Altitude required.

**PROJECTION**, in Mechanics, the Action of giving a Projectile its Motion. See PROJECTILE.

If the Direction of the Force whereby the Projectile is put in motion, be perpendicular to the Horizon; the Projection is said to be *Perpendicular*: If parallel to the apparent Horizon, it is said to be a *horizontal Projection*: If it make an oblique Angle with the Horizon, the Projection is oblique. See OBLIQUE.

The Angle A R B, (Tab. MECHANICS, fig. 47.) which the Line of Direction A R makes with the horizontal Line A B, is call'd the *Angle of Elevation of the Projectile*.

**PROJECTION**, in Perspective, the Appearance or Representation of an Object on the perspective Plane. See PLANE.

The Projection, e.g. of a Point, as A, (Tab. PERSPECTIVE, fig. 1.) is a Point a thro' which the Optic Ray O A passes from the objective Point, thro' the Plane, to the Eye; or the Point a wherein the Plane cuts the optic Ray.

And hence is easily conceiv'd what is meant by the Projection of a Line, a Plane, or a Solid. See PERSPECTIVE.

**PROJECTION of the Sphere in Plano**, is a Representation of the several Points or Places of the Surface of the Sphere, and of the Circles described thereon, or of any assign'd parts thereof, such as they appear to the Eye situate at a given distance, upon a transparent Plane placed between the Eye and the Sphere. See SPHERE.

For the Laws of this Projection, see PERSPECTIVE; & the Projection of the Sphere being only a particular Case of Perspective.

The principal Use of the Projection of the Sphere is in the Construction of Planispheres, and particularly Maps and Charts; which are said to be of this or that Projection, according to the several Situations of the Eye, and the perspective Plane with regard to the Meridians, Parallels, and other Points and Places to be represented. See PLANISPHERE, &c.

The most usual Projection of Maps of the World is that on the Plane of the Meridian, which exhibits a right Sphere; the first Meridian being the Horizon. The next is that on the Plane of the Equator, wherein the Pole is in the Centre, and the Meridians the Radii of a Circle, &c. This represents a parallel Sphere.

See the Application of the Doctrine of the Projection of the Sphere, in the Construction of the various kinds of Maps, under the Article MAP.

The Projection of the Sphere is usually divided into Orthographic and Stereographic; to which may be added Gnomonic.

**Orthographic PROJECTION**, is that wherein the Superficies of the Sphere is drawn on a Plane, cutting it in the Middle; the Eye being placed at an infinite distance vertically to one of the Hemispheres. See ORTHOGRAPHIC.

#### Laws and Properties of the Orthographic PROJECTION.

1. The Rays by which the Eye at an infinite distance perceives any Object, are parallel.

2. A right Line perpendicular to the Plane of the Projection is projected into a Point, where that right Line cuts the Plane of the Projection.

3. A right Line, as A B, or C D, (fig. 17.) not perpendicular, but either parallel or oblique to the Plane of the Projection, is projected into a right Line, as E F, or G H, and is always comprehended between the extreme Perpendiculars A F, and B E.

4. The Projection of the right Line A B, is the greatest when A B is parallel to the Plane of the Projection.

5. Hence it is evident, that a Line parallel to the Plane of the Projection, is projected into a right Line equal to itself; but if it be oblique to the Plane of the Projection, 'tis projected into one which is less.

6. A plane Surface as A B C D, (fig. 18.) at right Angles to the Plane of the Projection, is projected into that right Line; e.g. A B, in which it cuts the Plane of the Projection.

Hence it is evident, that the Circle B C A D, standing at right Angles to the Plane of the Projection, which passes thro' its Centre, is projected into that Diameter A B, in which it cuts the Plane of the Projection.

It is likewise evident, that any Arch, as c c, is projected into o c equal to C a, C b, which is the right Sine of that Arch; and the complementary Arch e A is projected into o A, the versed Sine of the same Arch C C.

7. A Circle parallel to the Plane of the Projection, is projected into a Circle equal to itself; and a Circle oblique to the Plane of the Projection, is projected into an Ellipse.

**Stereographic PROJECTION**, is that wherein the Surface and Circles of the Sphere are drawn upon the Plane of a

great Circle, the Eye being in the Pole of that Circle. See STEREOGRAPHIC.

#### Properties of the Stereographic PROJECTION.

1. In this Projection, a right Circle is projected into a Line of half Tangents.

2. The Representation of a right Circle, perpendicularly opposed to the Eye, will be a Circle in the Plane of the Projection.

3. The Representation of a Circle placed oblique to the Eye, will be a Circle in the Plane of the Projection.

4. If a great Circle be to be projected upon the Plane of another great Circle, its Centre will lie in the Line of Measures, distant from the Centre of the primitive by the Tangent of its Elevation above the Plane of the primitive.

5. If a lesser Circle, whose Poles lie in the Plane of the Projection, were to be projected; the Centre of its Representation would be in the Line of Measures, distant from the Centre of the primitive, by the Sine of the lesser Circles distance from its Pole, and its Semi-diameter or Radius, be equal to the Tangent of that distance.

6. If a lesser Circle were to be projected, whose Poles lie not in the Plane of the Projection, its Diameter in the Projection, will be equal on each side of the Pole of the Primitive, to the Sum of the half Tangents of its greatest and nearest Distance from the Pole of the Primitive, set each way from the Centre of the Primitive in the Line of Measures.

7. If a lesser Circle to be projected, fall entirely on one side of the Pole of the Projection, and do not encompass it; then will its Diameter be equal to the difference of the half Tangents of its greatest and nearest distance from the Pole of the Primitive, set off from the Centre of the Primitive one and the same way in the Line of Measures.

8. In the Stereographic Projection, the Angles made by the Circles of the Surface of the Sphere, are equal to the Angles made by their Representatives in the Plane of their Projection.

**Gnomonic PROJECTION of the Sphere**, see GNOMONIC PROJECTION.

**PROJECTION of Globes**, &c. see GLOBE, &c.

**PROJECTION**, in Alchymy, the casting of a certain, imaginary Powder, call'd *Powder of Projection*, into a Crucible, or other Vessel full of prepared Metal, or other Matter, which is to be hereby transmuted into Gold. See POWDER of PROJECTION.

**Powder of PROJECTION**, or of the Philosopher's Stone, is a Powder supposed to have the Virtue of changing any quantity of an imperfect Metal, as Copper, or Lead, into a more perfect one, as Silver or Gold; by the admixture of a little quantity thereof. See TRANSMUTATION.

The Mark to which the Alchymists direct all their Endeavours, is to find the *Powder of Projection*; which every one of 'em has been within an Ace of, an hundred times. See ALCHYMY.

For the Characters, Properties, Virtues, &c. of this Powder, see PHILOSOPHER'S Stone.

**PROJECTION in Building**, see PROJECTURE.

**PROJECTIVE Dialling**, a Method of Drawing, by a Method of Projection, the true Hour-Lines, Furniture of Dials, &c. on any kind of Surface whatsoever, without any regard had to the Situation of those Surfaces, either as to Declination, Reclination, or Inclination. See DIALLING.

**PROJECTURE**, in Architecture, the Out-jetting, or Prominence, which the Mouldings and Members have, beyond the Naked of the Wall, Column, &c. See NARRD, COLUMN, &c.

Those the Greeks call *Echphora*, the Italians *Sporti*, the French *Saillies*, our Workmen frequently *Saillings over*, and the Latins *Projecta*, from *projicio*, I cast forward; whence the English, *Projecture*.

**Virtuous** gives it as a general Rule, that all the projecting Members in Buildings have their *Projectures* equal to their Heights: But this is not to be understood of the particular Members, or Mouldings, as Dentils, Corona's, the Fasciae of Architraves, the Abacus of the Tuscan and Doric Capital, &c. but only of the *Projectures* of entire Corinths, &c. See CORNICHE, &c.

The great Point of Building, according to some modern Architects, consists in knowing how to vary the Proportions of *Projectures*, &c. agreeably to the Circumstances of the Building: Thus, say they, the solemnity and remoteness making a difference in the View, requires different *Projectures*; but 'tis evident the Antients had no such Intention. See PROPORTION.

The *Projecture* of the Base and Cornice of Pedestals, M. Perrault observes, is greater in the antique than the modern Buildings by one third; which seems to follow, in good measure, from the Antients proportioning this *Projecture* to the height of the Pedestals; whereas the Moderns make the *Projecture* the same in all the Orders, tho' the height of the Pedestal be very different.

The reason of this Change which the Moderns have made of the antique, the same Author refers to a View to the Appearance of Solidity. See PEDESTAL.

**PROLABIA, Fore-Lips;** a Term in Anatomy for that part of the Labia which jets out. See LABIA.

**PROLATE,** in Geometry, an Epithet apply'd to a Spheroid produced by the Revolution of a Semi-Ellipsis about its longer Diameter. See SPHEROID.

If the Solid be formed by the Revolution of a Semi-Ellipsis about its shorter Diameter, it is call'd an *Oblate Spheroid*, of which Figure is the Earth we inhabit, and, perhaps, all the Planets too; having their Equatorial Diameter longer than their Polar. See OBLATE.

**PROLATION,** in Music, the Act of Shaking, or making several Inflections of the Voice, on the same Syllable.

**PROLEPSIS,** a Figure in Rhetoric, by which we anticipate, or prevent what might be objected by the Adversary. See FIGURE.

Thus; *It may perhaps be objected, &c.*  
The Word in the original Greek, *προληψις*, signifies Pre-occupation.

**PROLEPTIC Distaste,** a Distemper which still anticipates, or whose Paroxysm returns sooner, and sooner, every day; as is frequently the Case in Agues, &c.

**PROLIFIC,** in Medicine, something that has the Qualities necessary for generating. See FECONDITY.

Some Physicians pretend to distinguish whether or no the Seed be *Prolific*. See SEED.

**PROLIXITY,** in Discourse, the Fault of entering into too minute a Detail; of being too long, precise, and circumstantial to a degree of Tediousness. See STYLE.

*Prolixity* is the Vice opposite to Conciseness and Laconism. See LACONICAL.

*Prolixity* is a Fault commonly charged on Guiccardin, Gassendus, &c. *F. Rapin* observes, that formal Harangues, at the Head of an Army, and Deliberations, of nauseous *Prolixity*, formerly so frequent, are now disused in all the better Historians.

**PROLEGOMENA,** in Philology, preparatory Observations, or Discourses prefixed to a Book, &c. containing something necessary for the Reader to be apprized of, to enable him the better to understand the Book, to enter deeper into a Science, &c.

The generality of Arts and Sciences require some previous Instructions, some *Prolegomena*.

The Word is Greek *προλεγόμενα*, form'd of *προλέγομαι*, to *Preface*. See PREFACE.

**PROLOCUTOR,** of the Convocation, the Speaker, or Chairman of that Assembly. See CONVOCATION.

The Archbishop of *Canterbury* is, by his Office, President, or Chairman of the Upper House of Convocation.

The *Prolocutor* of the Lower House is an Officer chosen by the Members the first day of their meeting; and to be approved of by the Higher.

'Tis by the *Prolocutor* their Affairs, Debates, &c. are to be directed; and their Resolutions, Messages, &c. deliver'd to the higher House: By him all things propounded to the House are read, Suffrages collected, &c.

**PROLOGUE, PROLOGUS,** in Dramatic Poetry, a Discourse address'd to the Audience before the Drama or Play begin. See DRAMA.

The original Intention of the *Prologue* was to advertise the Audience of the Subject of the Piece, and to prepare them to enter more easily into the Action; and sometimes to make an Apology for the Poet.

This last Article seems to have almost excluded the two former, in the *English* Drama; and to be in sole possession of the *Prologue*.

The *Prologue* is of a much more ancient Standing than the Epilogue. See EPILOGUE.

The *French* have left off the Use of *Prologues*; those few they now and then make, have nothing in them of the genuine *Prologue*; as bearing no relation to the Subject, but being mere Flourishes or Harangues in praise of the King, &c.

In the antique Theatre, the *Prologus* was properly the Actor, who rehears'd the *Prologue*: The *Prologus* was esteem'd one of the *Dramatis Personae*, and never appear'd in the Piece in any other Character; so that the Learned are surpris'd to find *Mercury* in *Plautus's Amphitruo*, speaking the *Prologue*, and yet acting a considerable part in the Play afterwards.

The *Prologue*, therefore, among them was a part of the Piece; indeed, not an essential, but an accessory part.

With us the *Prologue* is no part at all; but something entirely distinct and a-part: With them the Drama was open'd with the appearance of the *Prologus*; with us 'tis not open'd till after the *Prologus* is retir'd: with us therefore the Curtain is kept close till after the *Prologue*, with them it must have been withdrawn before.

Hence proceeds a still more considerable Difference, in

the practice of the *Prologue*: For with us the *Prologus* speaks in his real or personal Character; 'tis Mr. *Booth* or Mrs. *Oldfield* speaks, not *Cato* or *Andromache*: With them the *Prologue* spoke in his Dramatic Character, not as *Tartarus* or *Astutus*, but as *Prologus*.

With us, he directs his Speech to the Audience, consider'd as in a Play-house; to Pit, Box, and Gallery: With them, he ought, in propriety, to have spoke as to a Chorus of By-standers, or Persons to be present at the real Action: But this being in good measure inconsistent with the Design of the *Prologus*; their Persons spoke in their Dramatic Capacity to the Audience in its personal Capacity; which was an irregularity that either the good Fortune, or the good Sense of the Moderns, have freed them from.

They had three Kinds of *Prologues*; the first *ωυδαίαις*, wherein the Poet deliver'd the Argument of the Piece; the second *ουραϊαίς*, wherein the Poet recommended himself or his Piece to the People; the third *εναγυαίαις*, wherein Objections were obviated, &c.

The Word '*Prologus*' is form'd from the Greek *προλογος*, *Prologionum, Fore-Speech*.

**PROLUSION, PROLUSIO,** in Literature, a Term apply'd to certain Pieces or Compositions, made previously to others; by way of Prelude, or Exercise.

*Diomedes* calls the *Catex* of *Virgil*, and his other *Opuscula, Prolusio*; because wrote before the great ones.

The *Prolusions* of *Strada* are very ingenious pieces: The famous *M. Huet*, Bishop of *Auranches*, has all *Strada's Prolusio* by heart.

**PROMETHEUS,** in the ancient Astronomy, was the Name of a Constellation of the Northern Hemisphere; now call'd *Hercules*, or *Erigone*. See HERCULES.

**PROMISE,** in Law, is when a Man binds himself by his Word to perform such an Act as is agreed on and concluded with another, upon a valuable Consideration. See CONTRACT, FACT, COVENANT, &c.

**PROMONTORY,** in Geography, a Point of Land, or a Rock, projecting out into the Sea; the Extremity of which to the Sea-ward, is usually call'd a *Cape*, or an *Headland*. See CAPE.

**PROMOTERS,** in Law, those Persons, who in popular and penal Actions, do prosecute Offenders in their Name, and the King's; and are entitl'd to part of the Fines and Penalties for their pains.

These, among the *Romans*, were call'd *Quadruplicatores*, or *Delatores*.

*Sir Tho. Smith* observes, that *Promoters* belong chiefly to the Exchequer and King's-Bench. My Lord *Coke* calls them, *turbidum Hominum Genus*, 3 Inft.

**PROMPT Payment,** ready Money, see PAYMENT.

In many Cases there is a Discount for *Prompt Payment*. See DISCOUNT, REBATE, &c.

**PROMPTER,** in the Drama, an Officer posted behind the Scenes, whose Business is to watch attentively the Actors speaking on the Stage, in order to suggest and put them forward, when at a stand; to correct them when smiv'd, &c. in their parts.

**PROMULGATED, PROMULGED, Promulgatus,** something publish'd or proclaim'd.

In this sense we say, the *Jewish* Law was *promulgated* by *Moses*: The *Promulgation* of the New Law was chiefly effected by the Apostles and Disciples.

**PRONAOS,** in the ancient Architecture, a Porch to a Church, Palace, or other spacious Building. See PONCE.

**PRONATION,** among Anatomists. The Radius of the Arm has two kinds of Motions; the one call'd *Pronation*, the other *Supination*. See RADIUS.

*Pronation*, is when the Palm of the Hand is turn'd downwards; *Supination*, when the back of the Hand is downwards.

There are two Muscles, whereby the *Pronation* is effected, call'd

**PRONATORS, PRONATORES,** in Anatomy, two Muscles of the Radius, which serve to turn the Palm of the Hand downwards. See PRONATION.

They are distinguish'd by the Names of *Rotundus* and *Quadratus*.

The Word is form'd from the Latin *Pronus*, that which lies on the Fore-side.

The Radius has two other Muscles, call'd *Supinators*, which have an opposite Effect. See SUPINATORS.

**PRONATOR Radii Quadratus, or Brevis,** rises broad and fleshy, from the lower and inner part of the Ulna; and passing transversely over the Ligament that joins the Radius to the Ulna, is inserted into the superior and external part of the Radius: which it helps to pull inwardly; together with the

**PRONATOR Radii Rotundus, or Teres,** a Muscle which rises fleshy, from the internal Extubercence of the *Os Humeri*, where those bending the *Corpus* and *Fingers* do sit; and firmly adhering to the *Flexor Carpi Radialis*, do

descends obliquely downwards to its fleshy Infertion a little above the Radius, in the middle externally: Its Use is to move the Radius and Palm inwards.

**PRONOUN**, **PRONOMEN**, in Grammar, a part of Speech used in lieu of a Noun, or Name; whence the Denomination; from *pro* and *nomen*, q. d. *For-Noun*, or *Name*. See **NOU**.

As it would have been disagreeable to have been always repeating the same Name; there are Words invented in all Languages, to save the Necessity thereof, and to personate Names: as, *I, thou, he, &c.*

As Nouns are the Marks, or Signs, of Things; *Pronouns* are of Nouns.

Father *Buffier* shews, that *Pronouns* are real Nouns or Names; and that all the difference between what the Grammarians call Nouns, and *Pronouns*, is, that the former are more particular, and the latter more general.

They are call'd *Pronouns*, because used in the place of particular Nouns: Indeed, sometimes they don't fill the place of Nouns entirely, but meet other Words to assist them, to express the Object spoke of: Such, *e. g.* are *sub, whoever, &c.* which don't express any determinate Object whereof a Thing may be affirm'd, unless accompany'd with another Word, especially a Verb: As, *Whoever labours, deserves a Reward.*

These, Father *Buffier* calls *Incomplete Pronouns*, to distinguish them from those which express an Object completely; as, *I, thou, he, &c.*

The Grammarians ordinarily distinguish *Pronouns* into four Classes, with regard to their different Signification, Formation, &c. *viz.* *Pronouns Personal, Relative, Possessive, and Demonstrative*; to which may be added, *Indeterminate Pronouns.*

*Personal Pronouns*, are those used in lieu of Names of particular Persons: Such are, *I, thou, he, we, ye, they.* See **PERSON** and **PERSONAL**.

*Pronouns Relative*, which *Buffier* calls *Modificative, or Determinative*, are those placed after Nouns, with which they have such Affinity, that without them they signify nothing: Such are, *qui, who, that, &c.* See **RELATIVE**.

*Pronouns Possessive*, are those which express what each possesses, or what belongs to him; as, *mine, thine, his, &c.* See **RELATIVE**.

These are pure Adjectives; and only differ from the rest, by the relation they bear to *Pronouns* whence they are deriv'd, and by some particular Inflections which they have in some Languages. See **ADJECTIVE**.

*Pronouns Demonstrative*, those which serve to indicate, or point out the Subject spoke of; as, *this, those, &c.* See **DEMONSTRATIVE**.

Lastly, *Pronouns Indefinite*, are those which express their Object indeterminately; as *whoever, any, &c.* These coincide with what F. *Buffier* calls *Incomplete Pronouns.*

**PRONOUNS** are likewise divided into *Substantive and Adjective*.

To the first belong, *I, thou, ye*: To the second, *he, she, they, it, my, mine, who, what, &c.*

*Pronouns* may be consider'd in two States; the first, or foregoing State; as *I, we*: The second, or following one; as *me, us.*

**PRONOUNCING**, **PRONUNCIATION**, in Painting, the marking, and expressing the parts of all kinds of Bodies with that degree of Force, necessary to make them more, or less distinct, and conspicuous.

Thus the Painter, in speaking of a Piece, say, these or these parts are well *pronounc'd*; which is a metaphorical way of speaking; as when we say, that a Man who talks well, has a fine *Pronunciation*. See **EXPRESSION**.

**PRONUNCIATION**, in Grammar, the Manner of articulating or sounding the Words of a Language represented to the Eye by Writing and Orthography. See **WORD**, **LANGUAGE**, **SOUND**, &c.

From the Definition it would seem, that the *Pronunciation* were only the Image of the Orthography. But as we pronounce before we write, and only write to express what we pronounce; 'tis more just to lay down the *Pronunciation* as the Rule, and Model of Orthography. See **ORTHOGRAPHY**.

*Pronunciation* makes much the most difficult Article of a written Grammar: In effect, a Book only expressing it self to the Eyes, in a Matter that concerns the Ears; the Case seems next a-kin to that of teaching the Blind to distinguish Colours. See **GRAMMAR**.

Hence it is, that there is no part so defective in the Grammars, as the *Pronunciation*; for the Writer has frequently no Term, whereby to give the Reader an Idea of the Sound he would express; for want of a proper Term, therefore, he frequently substitutes a vicious or precarious one.

Thus the French Grammarians ordinarily tell us, that the Vowels *a, e, i, &c.* are pronounced in French the same as in Latin; never considering, that there is not any known and determinate *Pronunciation* of the Latin; but each

Nation, now, Pronounces the Roman Characters in the Latin, the same as it pronounces those same Characters in its own Language. Thus the Latin *cæcus*, is pronounc'd by the English, *sekus*; and by the Italians, *sebekous, &c.*

Hence it appears, that the Relation between Sounds and Characters, as well as between Things and Words, is purely arbitrary and national.

Indeed, *Plato* seems of a contrary Sentiment, and will have a natural Relation between Words and the Things they express; as there is a natural Relation between the Signs made by Mutes, and the things they would intimate. So that according to *Plato*, to every several Word there must be a several Motion of the Mouth relative to the Action express'd by the Word.

Whether or no there might be such a thing in the primitive Language, we dare not undertake; but 'tis certain such a relation would require a Facility of Contorsions in the Mouth, to which we are Strangers.

To give a just and precise Idea of the *Pronunciation* of a Language, it seems necessary to fix, as nearly as possible, all the several Sounds employ'd in the *Pronunciation* of that Language: This Mr. *Lodwick* has done in his Attempt towards an universal Alphabet; where he enumerates forty-three several simple Sounds; (some of 'em, indeed, strangers to the English Language) and F. *Buffier*, who gives thirty-three several Sounds in the French Tongue, twenty-nine in the Italian, thirty in the German, twenty-two in the Spanish, and twenty-four in the English. See **ALPHABET**.

The French Language is clogg'd with a difficulty in *Pronunciation*, from which most others are free; and it consists in this, that most of their Words have two different *Pronunciations*; the one in common Prose, the other in Verse.

In Prose, *e. g.* they omit the *Pronunciation* of the final *s* in the Plural of Nouns, and of the *s* in the third Person of the Plural of Verbs, and of several other final Consonants; but in Verse they pronounce all.

Thus, in a *quai* *has recueillir mes Muses endormies?* the final *s* of *Muses* is pronounced; and in *Mille & mille douceurs* *je semblerais attaquer;* the *t* of *semblerais* is to be pronounced.

Add to this, that in Prose, they sustain the Sound of a great many Words, *pronouncing, craire for croire*; but in Poetry the genuine *Pronunciation* is retain'd. See **EMOLLISH**, **FRENCH**, &c.

**PRONUNCIATION** is also used for the first and last part of Rhetoric, which consists in regulating and varying the Voice and Gesture agreeably to the Matter and Words; so, as more effectually to persuade, and touch the Hearers. See **RHETORIC**.

The *Pronunciation* is of such Importance, that *Demosthenes* call'd it the first, the second, and the third Part of Eloquence.

*Quintilian* defines the *Pronunciation, Vocis & Vultus & Corporis moderatio cum venustate*; a decent, agreeable manner of managing the Voice, Gesture, and Action of the whole Body.

*Cicero*, somewhere, calls it *quædam Corporis Eloquentia*, a certain Eloquence of the Body; and in another Place, *Sermo Corporis*, the Language, or Speech of the Body.

*Pronunciation* is the same with what we otherwise call *Action*. See **ACTION**.

Some Writers, particularly Mr. *Henley*, confound it with *Elocution*, which is a very different thing. That Author, when he styles himself *Restorer of the antient Elocution*, means of the antient *Pronunciation*. See **ELOCUTION**.

There are three Things which come under the *Pronunciation*; the Memory, Voice, and Gesture. See each under its proper Article.

*Augustus*, to avoid being balk'd by his Memory, and at the same time save the trouble of getting off by Heart, used to baraque from a Writing; as we are told by *Dio* and *Suetonius*.

**PRONUNCIATION**, in Painting; see **PRONOUNCING**.

**PROOF**, in Arithmetic, an Operation whereby the Truth and Justness of a Calculation is examin'd and ascertain'd. See **CALCULATION**.

The proper *Proof* is always by the contrary Rule: Thus Subtraction is the *Proof* of Addition, and Multiplication of Division; and *vice versa*. See **ADDITION**, **SUBTRACTION**, &c.

The *Proof* of Multiplication by 9 or by 7, are precarious. See **MULTIPLICATION**.

There would need no *Proofs* in Arithmetic, were it not that a Man is liable to make Mistakes; for all the Rules and Operations being built on Demonstration, 'tis thence we are assured of their Truth and Certitude. See **DEMONSTRATION**.

The *Proof*, then, does not confirm the Rule, but only shews us whether or no we have apply'd it right. See **RULE**.

**PROOF**, in Law, Logic, &c. the Mediums, or Arguments used to evince the Truth of any thing. See **TRUTH**.

In Law, a *literal Proof*, or *Proof in writing*, is preferable to a *Testimonial*. The *Ordinance de Moulins* excludes all *Proof by Witnesses for Loans* of above 1000 Livres. See EVIDENCE, WITNESS, TESTIMONY, &c.

The *Proof of Crimes* was antiently effected among our Ancestors, divers ways; viz. by *Duel* or *Combat*, *Fire*, *Water*, &c. See PURGATION, DUEL, FIRE, WATER, &c.

The *Proof by red-hot Iron* was very frequent: The Accused, to purge himself, was here obliged to make an Oath as he touch'd the Iron. The *Formula*, *Ceremonies*, *Prayers*, &c. made on this Occasion, are still extant in the Notes at the end of the *Capitularies of Charlemaign*. See ORDEAL.

This Custom was abrogated by the Emperor *Frederic*; but still obtains in *Mingrelia*; as we are told by *Lamberti*, in his Relation inserted in *Thevenot's Voyages*.

If they cannot have *Proof of a Crime*, a *Cross* is laid at the bottom of a *Caldron* full of boiling *Water*; out of which the Accused is obliged to fetch it with his naked Hand and Arm: This done, the Arm is put up in a *Bag*, tied, and seal'd; and three days after open'd; when, if there be no Marks of the Burn or Scald, the Accused is declared Innocent.

In the Kingdom of *Siam*, to have *Proof of a Crime*, the Party is obliged to wash his Hands in boiling Oil, or to walk on burning Coals; from either of which he must come out unscald'd to be reputed Innocent.

Sometimes they oblige the two contending Parties to plunge under *Water*; and he who stays there longest, gains the Cause: And sometimes to swallow a Grain of *Rice*, prepar'd and charm'd by their Doctors; he who is able to swallow it, is declared Innocent, and carried home in *Triumph*; and the Accuser punish'd.

This looks like an *Imitation* of what was done among the *Jews*; to have *Proof of Adultery*.

The *Proof by Combat* is likewise said to subsist among the *Mingrelians*. See COMBAT.

PROPAGATION, the Act of *Multipling the Kind*; or of producing the like in the way of natural Generation. See GENERATION.

Some Plants are only propagated by *Sowing*; as *Wheat*, *Poppies*, &c. The Reason is, that the *Stem* in these Plants withers and dies away, and consequently is incapable of being planted: And as to the *Root*, the whole Force and Effect thereof passes into the *Ear*, or *Spica*, which being the useful part of the Plant, exhausts the whole. See SEED and SOWING.

Sometimes Plants are propagated by the *Roots*, as the *Anemones*, &c. In which Case, there is a considerable Stock of *Seminal* or *Spermatick Virtue* still reserv'd in the *Root*, so as to be in a condition for shooting new *Fibres* upon any favourable occasion. See ROOT.

Sometimes, a *Branch* lopp'd off, and set in the *Ground*, shall shoot into a new Plant; as we see in the *Willow*, *Vine*, *Poplar*, &c. And sometimes a *Truncheon* shall do the same. In this Case, the Plants being of a very porous Texture, readily imbibe *Nourishment*, and take *Root*. This Method of *Propagation* is particularly remarkable in the *Vine*, any part of which put any how in the *Ground*, will become a Plant. The little *Chips* of *Elm* are said to do the same. See BRANCH and PLANTING.

When a *Branch* or *Arm* of a *Vine* shoots too great a length, or withers towards the *Extreme*, or grows too small to feed its *Grapes*, 'tis usual to cut pieces of it off, and put 'em in the *Ground*; which readily grow into thriving Plants.

Nay, sometimes, to bring up young Plants, and make 'em grow and advance the faster, especially *Lemon*, *Orange*, and *Citron Trees*; they pass a *Branch* or *Shoot* of an old Tree, without cutting it off, thro' an *Aperture* of a *Vessel* fill'd with good *Earth*; upon which, the *Pores* opening by the *Moisture* and *Warmth*, *Roots* presently burst forth, which being furnish'd with *Food* both from the *Earth* and the *parent Plant*, grow at a great rate, and are soon in a Condition to be separated from the *Parent*, and shift for themselves. See STOCK, DWARF, &c.

Lastly, Plants are sometimes, also, propagated by *Bulbs*. See BULB.

PROPER, something naturally, and essentially belonging to any Being.

The *School-Philosophers*, after *Porphyry*, distinguish four kinds of *Proprs*, or *Modes of Propriety*; which are express'd in the following Verse:

*Est Medicus, Bipes, Canescens, Risibilisque.*

The first, call'd *PROPRIMUM primo modo*, is what agrees to a single Species, but not to all the Individuals: This they call *foli sed non omni*. As, to have a *Geometrician*, a *Physician*, a *Divine*, &c. which are things proper to Man; but not to all Men.

The second, *PROPRIMUM secundo modo*, is what agrees to the whole Species, but agrees likewise to another; which they call *omni sed non foli*.

Thus to have two Feet is proper to a Man, but is likewise proper to a Bird.

The third *PROPRIMUM tertio modo*, is that which agrees to a single Species, but not at all times; *omni & foli, sed non semper*: As, to grow grey, according to *Porphyry*, is proper to a Man, but 'tis to an old Man.

The last, and highest, *PROPRIMUM quarto modo*, is that which alone agrees to one Kind, to all the Individuals thereof, and at all times; *omni, foli, & semper*. Thus, the Faculty of *Laughing* is proper to Man; and of *Neighing* to Horses, &c. And 'tis this that *Porphyry* calls the *true Propriety*. See ESSENCE, &c.

The first three Species are only Accidents of the fifth vulgar *Predicable*, to which they directly belong. See PREDICABLE.

The fourth is an Universal agreeing to every Individual, or Subject of *Predication* of any Species, in such Manner, as to be always found absolutely in the Species alone, but not at every determinate time: Thus Man alone is naturally risible; not that he is always Laughing, but has the Faculty of Laughing at all times. See DEFINITION.

PROPER, in respect of Words, is understood of their immediate and particular Signification; or that directly and peculiarly attach'd to 'em.

In this Sense the Word stands opposed to *Figurative* and *Metaphorical*. See FIGURATIVE, &c.

PROPER is also laxly used in a Moral Sense, to denote something that is usually found in Things; as their particular or specific Virtues, &c.

In this sense we say, *Magnanimity* is the proper Virtue of Heroes. See HERO.

The Word is also used for the natural Qualities necessary to succeed in a thing. In this sense we say, People of a hot, vigorous Temperament are proper for the Army; the cold and phlegmatic are proper for Study. The Romans became less proper for War, in proportion as they grew more learned and polite.

PROPER, in Grammar, is a Term apply'd to Nouns, or Names, which are distinguish'd into *Proper*, and *Appellative*. See NOUN.

Man is the Appellative, *Peter* the proper Name. See APPELLATIVE.

The proper Name among Christians is that imposed at *Baptism*. See NAME.

PROPER FRACTION, is such a one as hath its Numerator less than the Denominator.

Such is  $\frac{1}{2}$ , or  $\frac{2}{3}$ , which is really less than Unity; and, therefore, properly speaking, a Fraction. See FRACTION.

PROPER, in the Civil Jurisprudence, is apply'd in opposition to *acquired*; for an Inheritance derived by direct or collateral Succession. See GOODS.

By the *French Laws*, a Testator can only dispose of one fifth of his proper Effects; the paternal Relations inherit the paternal *Propria*, and the Maternal the Maternal ones: So that *Propria* always return to the Line whence they proceed.

The Origin of the Law which fixes this difference between *Proprs*, and *Acquests*, is not known; neither the *Greeks* nor *Romans* having ever made any such distinction.

Indeed, it seems founded on this Principle of natural Equity, that Men are usually desirous to preserve and attach to their Family, the Goods they have received from their Fore-fathers; and to transmit them to those descending from the same Stock.

PROPER sometimes, also, stands as a Reduplicative, serving to mark or design a thing more expressly, and formally.

In this sense we say, *Jesus Christ* came to redeem the World in his proper Person. The King did such and such a thing of his own proper Motion.

PROPERTY, or PROPRIETY, that which constitutes or denominates a thing proper; or, it is a particular Virtue, or Quality which Nature has bestow'd on something. See PROPER.

Thus, *Colour* is a Property of *Light*; *Extension*, *Figure*, *Divisibility*, and *Impenetrability*, are Properties of *Body*. See COLOUR, BODY, &c.

Every Day discovers new Properties in the Load-stone. See MAGNET.

PROPERTY, or PROPRIETY, in Law, strictly speaking, is the highest Right a Man can have to a thing; and such as no ways depends on any other Man's Courtesy. See RIGHT.

In this Sense, none in our Kingdom have the Property of any Lands or Tenements, except the King, in Right of his Crown; all other Lands being of the nature of Fee, and held of the King either mediately or immediately. See FEE, KING, &c.

*Propriety*, however, is used for that Right in Lands and Tenements which common Persons have; and importing as much as *Utile Dominium*, tho' not *Directum*.

There are three Manners of Right or Property; viz. *Property* absolute, *Property* qualified, and *Property* possessory. See PROPRIETOR and FEU.

Incumbents have not the *Propriety* of Benefices, they have only the Enjoyment thereof. See BENEFICE.

The Monks have a long time disputed whether they had the *Propriety* of the Bread they eat, or only the Use.

One may give the *Propriety* of an Estate, yet reserve the Usefruit; by the Deam of the Usefruitary the Usefruit is consolidated to the *Propriety*. See CONSOLIDATION.

PROPHECY, a Prediction, made by Divine Inspiration. See PROPHET and INSPIRATION.

A late Author observes, that the Christians have this in common with the Pagans, that they equally build their Religions on *Prophecy* and *Divination*. See DIVINATION and AUGURY.

He adds, That *Divination* was an Art learnt by the Romans in Schools, or under Discipline; as the *Jews* did *Professing* in the Schools and Colleges of the Prophets.

In these Schools, as the learned *Dodwell* observes, the Candidates for *Prophecy* were taught the Rules of *Divination*, practised by the Heathens; who were in possession of the Art long before 'em. 'Tis added, that the Gift of *Prophecy* was not an occasional thing, but a constant and standing Matter of Fact; and some think they have discover'd an Establishment of an Order of Prophets in the Old Testament, in analogy to the Heathen Diviners.

This is certain, from many Passages of Scripture, that there were great Numbers of Prophets among 'em, who not only exercis'd their Talent in Matters of Government and Religion, but even in the discovery of lost Goods, and in telling of Fortunes. See AUGURY, ORACLE, &c.

One of the greatest Difficulties in Christianity, turns upon the Completion of the Scripture *Prophecies*: In the Prophets of the Old Testament are frequent Predictions of the Messiah; which, the Writers of the New, frequently urge to the *Jews* and Heathens as fulfill'd in *Jesus Christ*; and on this Principle evince the Truth of his Mission: But these Truths thus urged from the Old, in the New Testament; are sometimes not to be now found in the Old; and at other times, not urg'd in the New in the literal and obvious Sense which they seem to bear in the Old; whence most of the Christian Commentators, Divines, and Critics, Ancient and Modern, judge 'em to be apply'd in a secondary, typical, allegorical, or mystical Sense.

Thus, e. g. St. *Matthew*, after an Account of the Conception of the Virgin, and the Birth of *Jesus*, says, "All this was done, that it might be fulfilled which was spoken by the Prophet, saying, Behold a Virgin shall be with Child, and shall bring forth a Son, and they shall call his Name *Emanuel*." But the Words, as they stand in *Isaiab*, whence they are supposed to be taken, do, in their obvious and literal Sense, relate to a young Woman who was to bring forth a Child in the Days of *Ahas*; as appears from the Context, and as is own'd by *Gravius*, *Huetius*, *Cassalius*, *Carcellensis*, *Episcopius*, *Hammond*, *Simon*, *le Clerc*, *Lamy*, &c.

This *Prophecy*, then, not being fulfill'd in *Jesus*, in the primary, literal, or obvious Sense of the Words, is supposed, like the other *Prophecies* cited by the Apostles, to be fulfill'd in a secondary, typical, or allegorical Sense; i. e. this *Prophecy*, which was first literally fulfill'd by the Birth of the Prophet's Son in the Time of *Ahas*, was again fulfill'd by the Birth of *Jesus*; as being an Event of the same kind, and intended to be signified either by the Prophet, or by God who directed the Prophet's Speech.

*Gravius* observes this to be the Case in most, if not all the *Prophecies* and Citations quoted from the Old in the New Testament; and *Dodwell*, with Sir *John Marsham*, refer even the famous *Prophecy* in *Daniel* about the Seventy Weeks to the Times of *Antiochus Epiphanes*; shewing, that the Expressions taken thence by *Christ*, and urg'd by him as predicting the Destruction of *Jerusalem* by the Romans, have only in a secondary Sense, a respect to that Destruction.

And even that famous *Prophecy* in the *Pentateuch*, "A Prophet will the Lord God raise up unto thee like unto me, to him shall ye hearken;" which St. *Luke* refers to as spoken of *Jesus Christ*, is, by *Simon*, *Gravius*, *Stillingfleet*, &c. understood to signify, in its immediate Sense, a Promise of a Succession of Prophets.

'Tis allow'd then, the Apostles apply'd the *Prophecies* they quote from the Old Testament, in a typical Sense; but, unhappily, the Rules whereby they were quoted, are lost. Dr. *Strangely* laments the loss of the *Jewish* Traditions or Rules for interpreting Scripture receiv'd among the Rabbins, and follow'd by the Apostles. But this Loss, *Swenhusius*, *Hebrew Professor at Amsterdam*, thinks he has retrieved from the *Jewish Talmud*, and the ancient *Jewish*

*Commentaries*; and has accordingly published to the World, the Rules whereby the Apostles quoted the Old Testament.

But the truth is, these Rules are too precarious, strain'd, and un-natural, to gain much Credit. See QUOTATION.

Mr. *Whiston* condemns all allegorical Explanation of the *Prophecies* of the Old Testament cited in the New, as weak, enthusiastic, &c. And adds, that if a double Sense of the *Prophecies* be allow'd, and there be no other Method of showing their Completion, than by applying them secondarily and typically to our Lord, after having been in their first and primary Intention long ago fulfill'd in the Times of the Old Testament; we lose all the real Advantages of the ancient *Prophecies*, as to the Proofs of Christianity.

He therefore sets up a new Scheme in opposition thereto: He owns, that taking the present Text of the Old Testament for Genuine, it is impossible to expound the Apostles Citations of the *Prophecies* of the Old Testament, on any other than the allegorical Foundation; and, therefore, to solve the Difficulty, is forc'd to have recourse to a Supposition contrary to the Sense of all Christian Writers before him; viz. that the Text of the Old Testament has been greatly corrupted since the Apostolical Age by the *Jews*, See BIBLE.

His Hypothesis is, that the Apostles made their Quotations out of the Old Testament rightly and truly from the Septuagint Version, which in their Time was in vulgar Use, and exactly agreed with the *Hebrew Original*; and that as they made exact Quotations, so they argued justly and logically from the obvious and literal Sense of the said Quotations, as they then stood in the Old Testament: But, that since their Times, both the *Hebrew* and *Septuagint Copies* of the Old Testament have been so greatly corrupted, and so many apparent Disorders and Dislocations introduced therein, as to occasion many remarkable Differences and Inconsistencies between the Old and New Testament in respect to the Words and Sense of those Quotations. See SEPTUAGINT, &c.

As to the Manner wherein these Corruptions were introduced, he says, the *Jews* in the second Century greatly corrupted and alter'd both the *Hebrew* and *Septuagint*, especially in the *Prophecies* cited by the Apostles, to make their Reasoning appear inconclusive; that in the third Century, they put into *Origen's* hand one of these corrupted Copies of the *Septuagint*, which *Origen* mistaking for genuine, inserted in his *Hexapla*; and thus brought into the Church a corrupted Copy of the *Septuagint*: And that in the end of the fourth Century, the *Jews* put into the hands of the Christians, who, till then, had been almost universally ignorant of the *Hebrew*, a corrupted Copy of the *Hebrew Old-Testament*.

The Disagreement, then, between the Old and New Testament in respect to the said Quotations, he contends, has no place between the genuine Text of the Old Testament (now no where existing) but only between the present corrupted Text of the Old and New Testament: And, therefore, to justify the Reasonings of the Apostles, he proposes to restore the Text of the Old Testament, as it stood before the Days of *Origen*, and as it stood in the Days of the Apostles. From which Text thus restored, he doubts not, it will appear, that the Apostles cited exactly, and argued justly and logically from the Old Testament.

But this Scheme of accomplishing *Prophecies*, labours under Difficulties at least as great as the Allegorical Scheme. Its Foundation is incredible, and its Superstructure, from first to last, precarious: In effect, 'tis inconceivable the Old Testament should be so corrupted; and it is even made appear, that the *Hebrew* and *Septuagint* disagreed in the Times of the Apostles: Add to this, that the Means whereby he proposes to restore the true Text, will never answer that end; nor has he, himself, from all the Means he is yet possess'd of, been able to restore one prophetic Citation, so as to make that seem literally, which before only seem'd allegorically, apply'd. See PENTATEUCH, &c.

PROPHET, a Person inspired by God with the Knowledge of future Events; and commission'd to declare his Laws, his Will, &c. to the World. See PROPHET and DIVINATION.

Among the Canonical Books are those of sixteen *Prophets*; four of which are denominated the greater *Prophets*, viz. *Isaiab*, *Jeremiab*, *Ezekiel*, and *Daniel*; so call'd from the length or extent of their Writings, which exceed those of the others, viz. *Hosea*, *Josel*, *Amos*, *Obadiab*, *Jonas*, *Micah*, *Nahum*, *Habakuc*, *Haggai*, *Zachariab*, and *Malachi*; who are call'd the lesser *Prophets*, from the shortness of their Writings.

The *Jews* only reckon three greater *Prophets*; *Daniel* they exclude, as no more to be rank'd among the *Prophets* than *David*: Not but that both the one and the other foretell many important things; but because their manner of Life differ'd from that of the other *Prophets*, *David* being a King, and *Daniel* a Peer.

In the Greek Church, the lesser Prophets are placed in order before the greater ones; apparently because many of the lesser Prophets are more ancient than the greater.

Among the Greeks too, Daniel is rank'd among the lesser Prophets.

In the 48th Chapter of Ecclesiasticus, *Ishaiab* is particularly call'd the great Prophet; both on account of the great things he foretold, and the magnificent Manner wherein he did it.

*Spinoza* says, the several Prophets prophesied according to their respective Humours; *Jeremiab*, e.g. melancholy, and dejected with the Miseries of Life, prophesied nothing but Misfortunes.

*Dacier* observes, that among the Antients the Name Poet is sometimes given to Prophets; as that of Prophet is at other times given to Poets. See POET.

The Word is derived from the Greek *propheta*, said; whence the Latins derive their *propheta*, spoken. See VERBS.

PROPHYLACTICE, *προφυλακτικη*, that part of the Art of Medicine which directs the preventing or preserving from Diseases. See MEDICINE, PRESERVATIVE, &c.

PROPITIATION, in Religion, a Sacrifice offer'd to God to assuage his Wrath, and render him propitious. See SACRIFICE.

Among the Jews there were both ordinary and public Sacrifices, as *Holocauts*, &c. offer'd by way of Thank-giving; and extraordinary ones offer'd by particular Persons guilty of any Crime, by way of Propitiation.

If it were a Crime of Ignorance, they offer'd a Lamb or a Kid; if done wittingly, they offer'd a Sheep: For the Poor, a pair of Turtles was enjoin'd as a Propitiation.

The *Romish* Church believe the Mass to be a Sacrifice of Propitiation for the Living and the Dead. The Reform'd Churches allow of no Propitiation but that one offer'd by Jesus Christ on the Cross.

PROPITIATION is also a solemn Feast among the Jews, celebrated on the tenth of the Month *Tisri*, which is their seventh Month, and answers to our September.

It was instituted to preserve the Memory of the Pardon proclaim'd to their Fore-fathers by *Moses* on the part of God; who thereby remitted the Punishment due for their Worship of the golden Calfe.

PROPITIATORY, among the Jews, was the Cover or Lid of the Ark; which was lined both within and without-side, with Plates of Gold; inasmuch that there was no Wood to be seen. See ARK.

Some even take it to have been one piece of massive Gold. The Cherubim spread their Wings over the Propitiatory.

This Propitiatory was the Type or Figure of Christ, whom *St. Paul* calls the Propitiatory ordain'd from all Ages.

PROPLASM, *προπλασμα*, is used for a Mould, wherein any Metal or soft Matter, which will afterwards grow hard, is cast. See MOULD.

PROPLASTICE, *προπλαστικη*, the Art of making Moulds, for casting things in. See MOULD, FOUNDRY, &c.

PROPOLIS, a Virgin-Wax, of a reddish or yellowish Colour, wherewith the Bees stop up the Holes and Crannies of their Hives, to keep out the cold Air, &c. See WAX.

The Propolis is a friable Matter, esteem'd sovereign in Diseases of the Nerves. It is also used to make Holes in Abscesses; and being heated on the Fire, its Vapour is received to inveterate Coughs.

PROPORTION, in Arithmetic, the Identity or Similitude of two Ratios. See RATIO.

Hence, Quantities that have the same Ratio between 'em, are said to be Proportional: e.g. If A, be to B; as C, to D: or B, be to 4 as 30, to 15; A, B, C, D, and 8, 4, 30, and 15, are said to be in Proportion, or are simply call'd Proportionals. See PROPORTIONAL.

Proportion is frequently confounded with Ratio; yet have the two, in reality, very different Ideas; which ought by all means to be distinguish'd.

Ratio is, properly, that Relation or Habitude of two things which determines the Quantity of one from the Quantity of another without the Intervention of any third: Thus we say, the Ratio of 5 and 10 is 5; the Ratio of 12 and 24 is 12.

Proportion is the Sameness or Likeness of two such Relations: Thus, the Relations between 5 and 10, and 12 and 24 being the same, or equal; the four Terms are said to be in Proportion. Hence, Ratio exists between two Numbers; but Proportion requires at least three.

Proportion, in *sic*, is the Habitude or Relation of two Ratios, when compared together; as Ratio is of two Quantities. See QUANTITY.

Proportion, again, is frequently confounded with Progression. In effect, the two often coincide; the difference between 'em only consisting in this, that Progression is a particular Species of Proportion, wherein the second of

three Terms is a mean Proportional between the other two, or has the same Ratio to the third which the first has to the second.

Add to this, that Proportion is confin'd to three Terms; but Progression goes on to infinity; (so that Progression is a Series or Continuation of Proportions:) And that in four Terms 3, 6, 12, 24, Proportion is only between the two Couples 3 and 6, and 12 and 24; but Progression is between all the four Terms. See PROGRESSION.

Proportion is said to be continual, when the Consequent of the first Ratio is the same with the Antecedent of the second; as, if 3 be to 6, as 6 to 12. See CONTINUAL.

The Proportion is said to be Discrete, or Interrupted; when the Consequent of the first Ratio differs from the Antecedent of the second; as, if 3 be to 6, as 4 to 8.

Proportion, again, is either said to be Arithmetical, or Geometrical; as the Ratios are.

Arithmetical PROPORTION, is the Equality of two or more Arithmetical Ratios; or the Equality of difference between three several Quantities.

Thus, 1, 2, 3; 5 and 2, 5, 8, are in Arithmetical Proportion; because there is the same difference betwixt the Numbers compared, which are 1 to 2, and 2 to 3; or 2 to 5, and 5 to 8.

Every Term have the same Ratio to the next as the first has to the second; the Terms are said to be in continual Arithmetical Proportion; as 5, 7, 9, 11, 13.

If the Ratio between any two Terms differ from that of any others; the Terms are said to be in Arithmetical Proportion discrete, or interrupted; as where 2:5:6:9, the Ratios of 5 and 6 being different from that of 2 and 5.

A Series of more than four Terms in Arithmetical Proportion, form an Arithmetical Progression. See PROGRESSION.

#### Properties of Arithmetical PROPORTION.

1<sup>o</sup>. If three Numbers be in Arithmetical Proportion, the Sum of the Extremes is equal to double the middle Term. Thus, in 5, 7, 11; the Sum of 5 and 11 is equal to twice 7 viz. 14.

Hence we have a Rule for finding a mean Proportional Arithmetical between two given Numbers; half the Sum of the two being the Mean required: Thus half the Sum of 12 and 3, viz. 14, is 7.

2<sup>o</sup>. If four Numbers be in Arithmetical Proportion, the Sum of the Extremes is equal to the Sum of the middle Terms. Thus, in 2:5:4:5; the Sum of 2 and 4 is equal to the Sum of 5 and 4, viz. 7.

Hence, four Terms in Arithmetical Proportion, are still proportional if taken inversely 5:4:3:2; or alternately, thus, 2:4:5:5; or, inversely, and alternately; thus, 5:3:4:2.

3<sup>o</sup>. If two Numbers in Arithmetical Proportion be added to other two; the less to the less, &c. their difference is in a duplicate Ratio, i.e. double that of the respective parts added: Thus, if to 3:5 be added 7:9, the Sums are 10:14; whose difference 4 is double the difference of 3:5, or 7:9. And if to this Sum you add other two, the difference of the last Sum will be triple the difference of the first two, and so on.

If two Arithmetical Proportionals be subtracted from two others in the same Ratio, the less from the less, &c. the Arithmetical Ratio of the Remainder is 0. Thus from 9:7 taking 3:5, the Remainders are 4:4.

Hence, if Arithmetical Proportionals be multiply'd by the same Number, the difference of their Products will contain the first difference as oft as the Multiplier contains Unity. Thus 3:5 multiply'd by 4, produce 12, 20, whose difference 8 is equal to 4 times 2, the difference of 3 and 5.

4<sup>o</sup>. If two Numbers in Arithmetical Proportion be added to, or multiply'd by, other two, in another Ratio of the same kind, less by less, &c. the Sums are in a Ratio which is the Sum of the Ratios added or multiply'd. Thus, 2:4 and 3:9 being added; the Sums are 5:13, whose difference is 8, the Sum of 2 and 6, the differences of the Numbers given.

Geometrical PROPORTION, is the Equality of two Geometrical Ratios, or Comparisons of two Couples of Quantities. See GEOMETRICAL PROPORTION.

Thus 4:8:12:24, are in Geometrical Proportion; the Ratio of 4 and 8 being equal to that of 12 and 24; i.e. 4 being contain'd as often in 8, as 12 is in 24. Again, 9, 3, 1 are in Geometrical Proportion, 9 being triple of 3, as 3 is of 1.

If in a Series of Terms, there be the same Ratio between every two Terms that there is between the first and second; they are said to be Continual Geometrical Proportionals: As 1:2:4:8.

If any two Terms have a different Ratio from that of the first and second, they are said to be Disjunct, or Interrupted

rupted Geometrical Proportion; as are 1 : 4 : 3 : 6; where 2 is to 4 as 3 to 6; but not so as 4 to 3.

A Series or Progression of more than four Geometrical Proportionals, is call'd a Geometrical Progression. See PROGRESSION.

#### Properties of Geometrical PROPORTION.

1<sup>o</sup>. If three Quantities be in continual Geometrical Proportion, the Product of the two Extremes is equal to the Square of the middle Term. Thus, in 6 : 12 : 24, the Product of 6 and 24 is equal to the Square of 12, viz. 144. Hence we have a Rule,

2<sup>o</sup>. To find a mean Geometrical Proportional between two Numbers, e. gr. 8 and 72.

Multiply one of the Numbers by the other, and from the Product 576, extract the Square Root 24. This will be the Mean required.

3<sup>o</sup>. To find a fourth Proportional to three given Numbers, e. gr. 3, 12, 5; or a third Proportional to two given Numbers.

Multiply the second 12 into the third 5, in the first Case; and in the latter, multiply the second into itself. Divide the Product by the first 3, the Quotient 20 is the fourth Proportional sought in the one, or the third in the other.

The Solution of this Problem is what we popularly call the Rule of Proportion, or the Golden Rule, or Rule of Three. See RULE.

4<sup>o</sup>. If four Numbers be in Geometrical Proportion, the Product of the Extremes is equal to the Product of the two middle Terms. Thus in 2 : 5 : 4 : 10, the Product of 10 and 2 is equal to that of 5 and 4, viz. 20. Hence,

5<sup>o</sup>. If four Numbers represented  $a : b :: c : d$  be either in Arithmetical, or Geometrical Proportion; they will also be in the same, if taken inversely, viz.  $d : c :: b : a$ ; or alternately, as  $a : c :: b : d$ ; or alternately and inversely, as  $d : a :: b : c$ .

6<sup>o</sup>. If the two Terms of a Geometrical Ratio be added to, or subtracted from, other two in the same Ratio, the less to or from the less, &c. the Sums, or Differences, are in the same Ratio. Thus, in 6 : 3 : 10 : 5, where the common Ratio is 2; 6 added to 10, makes 16, as 3 to 5 makes 8; and 16 : 8 are in the same Ratio as 6 : 3, or 10 : 5. Again, 16 being to 8 as 6 to 3, their Differences 10 and 5 are in the same Ratio.

The Reverse of which Proposition is likewise true; viz. if to or from any two Numbers be added or subtracted other two, if their Sums, or the Differences, be in the same Geometrical Ratio as the first two, the Numbers added or subtracted are in the same Ratio. Hence,

7<sup>o</sup>. If the Antecedents, or the Consequents of two equal Geometrical Ratios 3 : 6 and 12 : 24 be divided by the same 3; in the former Case, the Quotients 1 and 4 will have the same Ratios to the Consequents; viz. 1 : 6 :: 4 : 24; and in the latter, the Antecedents the same Ratio to the Quotients, viz. 3 : 1 :: 12 : 4.

8<sup>o</sup>. If the Antecedents, or Consequents of similar Ratios 2 : 6 and 3 : 9 be multiply'd by the same Quantity 6; in the former Case the Facta 12 and 18 have the same Ratio to the Consequents, viz. 12 : 6 :: 18 : 9; and in the latter, the Antecedents have the same Ratio to the Products, viz. 2 : 6 :: 3 : 19.

9<sup>o</sup>. If in a Geometrical Proportion 3 : 6 :: 12 : 24, the Antecedents be multiply'd or divided by the same Number 2; or divided by the same Number 3; in the former Case, the Facta 3; in the latter, the Quotients will be in the same Proportion, viz. 6 : 18 :: 24 : 72, and 1 : 3 :: 4 : 12.

10<sup>o</sup>. If, in a Proportion 4 : 2 :: 10 : 5, the Antecedent of the first Ratio be to its Consequent as the Antecedent of the second to its Consequent; then, by Composition, as the Sum of the Antecedent and Consequent of the first Ratio, is to the Antecedent or Consequent of the first; so is the Sum of the Antecedent and Consequent of the second, to the Antecedent or Consequent of the second; viz. 6 : 2 :: 15 : 5, or 6 : 4 :: 15 : 10.

11<sup>o</sup>. If, in a Proportion 6 : 4 :: 15 : 10, as the Antecedent of the first Ratio is to its Consequent; so is the Antecedent of the other to its Consequent; then, by Division, as the difference of the Terms of the first Ratio is to its Antecedent, or Consequent, so is the difference of the Terms of the second Ratio to its Antecedent or Consequent; viz. 2 : 4 :: 5 : 10, or 2 : 6 :: 5 : 15.

12<sup>o</sup>. If, in a Proportion 4 : 2 :: 6 : 3, as the Antecedent of the first Ratio is to its Consequent, so is the Antecedent of the second to its Consequent; And as the Consequent of the first is to another Number 8, so is the Consequent of the second to another Number 12; viz. 2 : 8 :: 3 : 12; then will the Antecedent of the first be to 8, as the Antecedent of the second to 12; viz. 4 : 8 :: 6 : 12.

13<sup>o</sup>. If, in a Proportion 8 : 4 :: 12 : 6, as the Antecedent of the first Ratio is to its Consequent; so is the Antecedent of the second to its Consequent; and as the Consequent of

the first is to another Number 16; so is another Number 3, to the Antecedent of the second, viz. 4 : 16 :: 3 : 12. Then, will the Antecedent of the first be to 16, as 3 to the Consequent of the second, viz. 8 : 16 :: 3 : 6.

14<sup>o</sup>. Suppose any four proportional Quantities, viz. 3 : 6 :: 12 : 24, and any other four proportional Quantities 1 : 3 :: 9 : 27; if you multiply the several Terms of the latter into those of the former, the Products will likewise be Proportional, viz. 3 : 18 :: 108 : 648.

15<sup>o</sup>. If there be several Quantities continually Proportional, A, B, C, D, &c. the first, A, is to the third, C, in a duplicate Ratio; to the fourth, D, in a triplicate Ratio, &c. of the first A to the second B.

16<sup>o</sup>. If there be three Numbers in continual Proportion, the difference of the first and second will be a mean Proportional between the difference of the first and second Term, and the difference of the second and third, and the first Term.

Harmonical, or Musical PROPORTION, is a third kind of Proportion, form'd out of the other two; thus: Of three Numbers, if the first be to the third, as the difference of the first and second to the difference of the second and third; the three Numbers are in Harmonical Proportion.

Thus, 2 : 3 : 6 are Harmonical, because 2 : 6 :: 1 : 3. And four Numbers are Harmonical, when the first is to the fourth as the difference of the first and second to the difference of the third and fourth.

Thus 24 : 16 :: 12 : 9 are Harmonical, because 24 : 9 :: 8 : 3.

By continuing the Proportional Terms in the first Case, there arises an Harmonical Progression, or Series. See SERIES.

#### Properties of Harmonical or Musical PROPORTION.

1<sup>o</sup>. If three or four Numbers in Harmonical Proportion be multiply'd or divided by the same Number; the Products, or Quotients, will also be in Harmonical Proportion. Thus, if 5, 8, 12, which are Harmonical, be divided by 2; the Quotients 3, 4, 6, are also Harmonical; and reciprocally their Products by 2, viz. 6, 8, 12.

2<sup>o</sup>. To find an harmonical Mean between two Numbers given.

Divide double the Product of the two Numbers by their Sum, the Quotient is the Mean required. Thus, suppose 3 and 6 the Extremes; the Product of these is 18, which doubled gives 36; this divided by 9 (the Sum of 3 and 6) gives the Quotient 4. Whence, 3 : 4 : 6 are Harmonical.

3<sup>o</sup>. To find a third Harmonical Proportional to two Numbers given.

Call one of them the first Term, and the other the second; multiply 'em together, and divide the Product by the Number remaining after the second is subtracted, from double the first; the Quotient is a third Harmonical Proportional. Thus suppose the given Terms 3, 4, their Product 12 divided by 2 (the Remainder after 4 is taken from 6, the double of the first) the Quotient is 6; the Harmonical third sought.

4<sup>o</sup>. To find a fourth Harmonical Proportional to three Terms given.

Multiply the first into the third, and divide the Product by the Number remaining after the middle or second is subtracted from double the first; the Quotient is a fourth Term in Harmonical Proportion. Thus, supposing the Numbers given 9 : 12 : 16; a fourth will be found by the Rule to be 24.

5<sup>o</sup>. If there be four Numbers disposed in Order; whereof one Extreme and the two middle Terms are in Arithmetical Proportion; and the same middle Terms with the other Extreme, are in Harmonical Proportion; the four are in Geometrical Proportion: As here, 2 : 3 : 4 : 6, which are Geometrical; whereof 2 : 3 : 4 are Arithmetical, and 3 : 4 : 6.

6<sup>o</sup>. If betwixt any two Numbers you put an Arithmetical Mean, and also a Harmonical one; the four will be in Geometrical Proportion. Thus, betwixt 2 and 6, an Arithmetical Mean is 4, and an Harmonical one 3; and the four 2 : 3 : 4 : 6 are Geometrical.

We have this notable difference between the three kinds of Proportion; That from any given Number we can raise a continued Arithmetical Series increasing in infinitum, but not decreasing; the Harmonical is decreasable in infinitum, but not increasable; the Geometrical is both.

Contra-harmonical PROPORTION, is that Relation of three Terms, wherein the Difference of the first and second, is to the Difference of the second and third, as the third to the first.

Thus, 3, 5, 6, are Numbers in contra-harmonical Proportion, because 2 : 1 :: 1 : 6 : 3.

To find a Mean in Contra-harmonical Proportion between two Numbers; Divide the Sum of two Squares by the Sum of the Roots, the Quotient is the Mean requir'd. Thus the

the Sum of the Squares of 3 and 6, viz. 45, divided by 9, the Sum of the Roots, gives 5.

PROPORTION is also used for the Relation between unequal Things of the same kind, whereby their several Parts correspond to each other with an equal Augmentation, or Diminution.

Thus, in reducing a Figure into little, or in enlarging it, Care is taken to observe an equal Diminution, or Enlargement, thro' all its parts; so that if one Line, e. gr. be contracted by one third of its Length; all the rest shall be contracted in the same Proportion.

The making of Reductions of this kind, is the great use of the proportional Compasses. See COMPASSES. See also REDUCTION, and DRAUGHT.

PROPORTION, in Law. See *DRONERANDO pro rata portionis*.

PROPORTION, in Architecture, the just Magnitude of the Members of each part of a Building, and the Relation of the several Parts to the Whole; e. gr. of the Dimensions of a Column, &c. with regard to the Ordo of the Building. See SYMMETRY. See also BUILDING.

One of the greatest Differences among Architects, M. Torricelli observes, is in the Proportions of the Heights of Entablatures with respect to the Thickness of the Columns, to which they are always to be accommodated. See ENTABLATURE.

In effect, there is scarce any Work, either of the Antients or Moderns, wherein this Proportion is not different; yet Entablatures are even near twice as high as others—Yet 'tis certain, this Proportion ought of all others to be most regulated; none being of greater Importance, as there is none wherein a Defect is sooner spied, nor any wherein it is more shocking. See COLUMN.

PROPORTION is likewise understood of the Magnitudes of the Members of Architecture, Statues, or the like, with regard to the Distance whence they are to be view'd.

The most celebrated Architects are much divided in their Opinions on this Subject: Some will have it, that the parts ought to be enlarg'd in proportion to their Elevation; and others, that they ought to remain in their natural Dimensions. See STATUE.

PROPORTION, in Painting, is the just Magnitude of the several Members of a Figure, a Group, &c. with regard to one another, to the Figure, the Group, and the whole Piece. See PAINTING.

PROPORTION makes one of the most important Articles in the Art of Painting, the principal Subject it is employ'd in, being the human Body; for which reason, the Curious in that Art will thank us for the following Scheme of the Rules and Laws thereof.

By the way, let it be observ'd, 1°. That to measure and set off Proportions, we either divide the Module into twelve Parts, and subdivide each of those into four; or divide the Face into three Lengths of the Nose; subdividing each Length into twelve: Or lastly, divide the whole Face into three, and subdivide each of those into four: which last Method is what we shall here follow.

2°. That the Multiplicity of little Measures are to be studiously avoided, because they confound; and because they require great Skill in Osteology, to hit justly.

3°. That in Measuring, there be a regard had to the Relievo, or Juttings out of Figures.

#### The Rules of Proportion in Painting.

In the Proportions of a human Figure, regard is had to the Age, Sex, and Quality.

As to Age, we consider three Stages thereof; Infancy, Youth and Manhood. For the first; at three Years of Age, we count five Lengths of the Face, from Top to Toe; viz. from the Tip of the Head to the Bottom of the Belly, three; thence to the Foot, two; Breadth about the Shoulders, one Face, one eighth: and in the place of the Hips, one Face.

At four Years, the Height is six Faces  $\frac{1}{2}$ . viz. from the Top of the Head to the Bottom of the Belly, three Faces  $\frac{1}{2}$ ; thence to the Sole of the Foot, three Faces. The Breadth about the Shoulders one Face  $\frac{2}{3}$ . about the Haunches, one Face  $\frac{1}{3}$ .

At five Years, the Height is six Faces  $\frac{2}{3}$ .  $\frac{1}{3}$  abated, the lower being shorter.

In Youth at twelve Years, we have two Proportions; the one from Nature, which gives nine Faces for the Height; the Breadth about the Shoulders, two Faces; about the Haunches, 1 Face  $\frac{1}{2}$ . The other from the antique Statues, as that of *Laocoon*, &c. which give the Height, ten Faces. the Breadth from one Shoulder to another, one Face  $\frac{2}{3}$ . at the Haunches, 1  $\frac{1}{2}$ . at the place of the Muscle, call'd *Vellus Extensus*, 2. The Thigh 1, the Knee  $\frac{2}{3}$  and  $\frac{1}{2}$  a Subdivision, and at the Ankles 1.

In the State of Manhood, when the Measures are arriv'd at perfection; we reckon the Height ten Faces: the 1st, from

the Top of the Head to the Nostril; the 2d, to the Hole in the Neck between the Clavicles; the 3d, to the Pit of the Stomach, call'd *Cartilago Ensigiformis*; the 4th, to the Navel; the 5th, to the pyramidal Muscles; thence to the Knee 2  $\frac{1}{2}$ , and as much to the Sole of the Foot.—The Extent of the Arms is the same with the Height; viz. from the Tip of the long Finger to the Joints of the Wrists, one Face; thence to the Elbow 1  $\frac{1}{2}$ ; thence to the Juncture of the Shoulders, 1  $\frac{1}{2}$ ; thence to the Hole in the Neck, 1  $\frac{1}{2}$ ; in all five Heads, which with the five of the other Arm gives ten: The Thickness of the Arms to be adjusted by the Quality or Character.

As to the Breadth of the Figure seen Front-wise; the Width of the Shoulders a-crois the *Deltoides*, is 2 Faces  $\frac{1}{2}$ ; Breadth of the pectoral Muscle, to the Juncture of the Arm, 2. About the Haunches, where the *Obliqui externi* are, 1  $\frac{1}{2}$ , and three Subdivisions. The Thighs, at the biggest place, 1: The Knee  $\frac{1}{2}$ , three Subdivisions  $\frac{1}{2}$ . The Leg at the thickest, 2 and 1 Subdivision. The Extreme of the Ankle, 3, 1 Subdivision  $\frac{1}{2}$ . The Feet, 1, and  $\frac{1}{2}$  a Subdivision. Their Length, 1 Face  $\frac{1}{2}$ , 1 Subdivision.

Others, measuring by the Length of the whole Head, make only eight Heads, in Height and Breadth; thus: The Head, one; thence to the bottom of the Breasts, one; thence to the Navel, one; thence to the Yard, one; thence to the middle of the Thigh, one; thence to the lower parts of the Knee, one; thence to the small of the Leg, one; thence to the bottom of the Foot, one.

The Breadth, thus: From the End of the long Finger to the Wrist, one; thence to the Bend of the Arm, one; thence to the bottom of the Shoulder, one; thence over to the other Shoulder, two; thence to the End of the other long Finger, three.

To these general Proportions, may be added others, which usually obtain; as, that the Hand is the Length of the Face; the Thumb the Length of the Nose; and the great Toe the same: The two Nipples, and the Hole in the Neck, make a just equilateral Triangle: The Space between the Eyes, is the breadth of an Eye: The breadth of the Thigh, at the thickest, is double that of the thickest part of the Leg, and treble that of the smallest: From the top of the Head to the Nose, the same as from the top of the Nose to the Chin. The distance from the Chin to the Throat-pit, is the breadth of the Throat; the distance of the Centre of the Eye from the Eye-brow, the same as the Prominency of the Nostrils; and the Space between them and the upper Lip. The Length of the Fore-Finger, the same as the Space thence to the Wrist; the Space from the tip of the Fore-Finger to the Wrist, the Length of the Face.

For the Sex; The Proportions of Man and Woman differ in height; in that the Woman has a longer Neck; the parts at the Breasts, and the lower parts of the Belly, bigger by half a part; which makes the space from the Breast to the Navel, less by one part; and the Thigh shorter by a third part.

As to breadth, a Woman has her Breasts and Shoulders narrower, and Haunches larger; and Thighs, at the place of their Articulation, larger; Arms and Legs thicker, Feet straighter; and because Women are more fat and fleshy, their Muscles are less seen, and therefore the Contours more smooth and even.

Young Maids have little Heads, long Necks, low or down Shoulders, slender Bodies, Haunches big, Legs and Thighs long, Feet little.

Young Men have the Neck thicker than Women, the Shoulders and Breasts larger, the Belly and Haunches narrower, Legs and Thighs slenderer, and Feet larger.

As to the Quality of Subjects, we are either to follow simple Nature, or fine and agreeable Nature, or to chuse Nature, or exceed it. In following simple Nature, in common and Country Subjects, Men of dull Wit, and a moist Temperament to be of an heavier and rougher Proportion, the Muscles appearing but little distinguish'd; the Head big, Neck short, Shoulders high, Stomach little, Knees and Thighs thick, and Feet large.

In Nature, as fine and agreeable, for serious Histories, &c. the Figures of the Heroes to be well shaped, the Haunches high and upright, the Joints well knit, little and compact, free from Flesh and Fat.

Military Men, to have the Head little, Neck thick and nervous, Shoulders large and high, Body and Paps elevated, Haunches and Belly little, Thighs muscly, principal Muscles rais'd up and knit together at the Heads; the Legs smooth, Feet slender, Soles hollow.

Nature is sometimes to be selected, i. e. made up of parts from various good Originals, to form extraordinary and perfect Figures for great and heroic Subjects, as in *Romans Histories*; giving, thus, a Character of Force sufficient to execute Actions agreeable to the Descriptions the Poets, &c. make.

Lastly, sometimes Nature is to be exceeded, as in Representations of fabulous Deities, of Heroes and Giants: In

In these the great Pieces, which serve to form the Body, are to be set out in Measures agreeable to the Height; only diversifying them by their Bigness.

In the Rule of *Proportions*, it is to be observ'd, that there is a difference in the Contours of some parts, when put in different Postures. Thus when the Arm is bent, 'tis larger than when straight; the same is true of the Foot and Knee, as is shown by *Leonardo da Vinci*.

Rule of *PROPORTION*, in Arithmetic, a Rule whereby we find a fourth Proportional to three Numbers given.

This is popularly call'd, *The Golden Rule*, and sometimes, *The Rule of Three*. See *RULE*.

*Compass of PROPORTION*, a Name by which the *French*, and after them some *English* Authors, call the *Sector*.

See its *Construction and Use*, under the Article *SECTOR*.

*PROPORTIONAL*, a Quantity, either Linear or Numerical; which bears the same Ratio, or Relation to a third, that the first does to the second. See *PROPORTION*.

1. To find a fourth *PROPORTIONAL* to three given Lines, A B, A C, and B D. (Tab. *GEOMETRY*, fig. 62.)

Draw an Angle F A G at pleasure; from A set off the first of the Lines to B; from A, the second to C; and from B, to D, the third; draw B C; and in D make an Angle, equal to A B C; then is C E the fourth *Proportional* sought; and A B : A C :: B D : C E.

2. If a third *Proportional* be requir'd to two given Lines, A B, and A C; make B D equal to A C, i. e. let A B C be repeated twice; then A B : A C :: A C : C E.

3. To find a mean *Proportional* between two given Lines, A B and B E (fig. 63.) join the two given Lines, into one continu'd right Line, and bisect it in C. From C, with the Interval of A C, describe a Semi-circle A D E; and from B erect a Perpendicular B D; this is the mean *Proportional* sought; and A B : B D :: B D : B E.

The Geometricians have been these two thousand Years in search of a Method, for finding two mean *Proportionals*. See *MEAN*.

The Antients perform'd it mechanically, by the Movable, describ'd by *Eutocius*; and many of them attempted to give the Demonstration; some by the solid *Loct*, as *Menechmus*; others by the plain *Loct*, as *Nicomedes*, *Diocles*, and in our Times, *Vieta*; and others by implicit Motions, as *Plato*, *Archibatis*, *Pappus*, and *Sporus*; and others tentatively, by the Description of Circles, as *Hero* and *Apollonius*, &c. But all in vain. See *PROBLEM* and *QUADRATURE*.

4. To find a mean *Proportional* between two Numbers: Half the Sum of the two given Numbers is an arithmetical mean *Proportional*; and the square Root of their Product, a Geometrical mean *Proportional*. See *PROPORTION* *Arithmetical* and *Geometrical*.

To find a mean *harmonical Proportional*. See *PROPORTION* *Harmonical*.

*PROPORTIONAL COMPASSES*, an Instrument for the ready drawing of Lines, and Figures, in any given Ratio to other Lines, or Figures.

See their *Construction and Use*, under the Article *COMPASSES*.

*PROPORTIONAL SCALES*, call'd also *Logarithmical Scales*, are the Artificial Numbers or Logarithms, placed on Lines, for the Ease and Advantage of Multiplying, Dividing, &c. by means of *Compasses*, or of *Sliding-Rules*. See *LOGARITHM* and *SCALE*.

They are, in effect, only so many Lines of Numbers, as they are call'd by *Gunter*; but made single, double, triple, or quadruple; beyond which they seldom go. See *NUMBERS*, *GUNTER'S SCALE*, &c.

*PROPORTIONALITY*, a Term used by *Gregory à St. Vincent* for the Proportion that is between the Exponents of four Ratios. See *EXPONENT* and *RATIO*.

*PROPORTUM*, *PROPORT*, or *PROPORT*, in our Law-Books, the Intention or Meaning of any thing. *Secundum Proportum dicti Chirographi inter eos consistit*.

*PROPOSITION*, *PROPOSITIO*, call'd also *ENUNCIATION*, in Logic, part of an Argument, wherein some Quality, either Negative or Positive, is attributed to a Subject. See *ENUNCIATION*, *ATTRIBUTE*, &c.

*Chalcidius* defines a *Proposition*, a complete, consistent Sentence, indicating or expressing something either true or false, without ambiguity:—As, *Xantippe is a bad Wife*;—If an *Ass fly*, he has Wings.

Others, more Philosophically, define it a Speech utter'd, or produced to signify some Judgment of the Mind. See *JUDGMENT*.

A *Proposition* consists of two Terms; the one, that, whereof we affirm or deny; call'd the *Subject*: The other the thing affirmed or denied, call'd the *Attribute* or *Predicate*. See *SUBJECT* and *PREDICATE*.

These two are either join'd, or separated, by the Intervention of some Copula or Disjunctive. See *COPULA*.

Thus in the *Proposition*, *God is just*; the Subject, *God*,

is joined with the Attribute *just*, by the Verb substantive *is*.

The Schoolmen call the two Terms the *Matter*, and the Copula the *Form* of the *Proposition*. See *FORM*, &c.

Now, as Terms may be either singular; or common, and universal; if the Subject of a *Proposition* be a common Term, taken in all its extent; the *Proposition* is call'd *Universal*: As, *Every Ass is blind*. See *UNIVERSAL*.

If the common Term be only taken in an indeterminate part of its extent, the *Proposition* is call'd *particular*: As, *Some Asses are wicked*. See *PARTICULAR*.

If the Subject of the *Proposition* be singular, the *Proposition* is call'd *singular*: As, *George is King of England*. See *SINGULAR*.

Those *Propositions* which have only one Subject, and one Attribute, are call'd *simple*; those that have several Subjects, or Attributes, are call'd *compound*. See *COMPOUND*.

A Syllogism consists of three *Propositions*, Major, Minor; and Conclusion. See *SYLLOGISM*.

An Enthymem, of two. See *ENTHYMEME*.

The Schoolmen make several other Species and Divisions of *Propositions*; as,

A *PROPOSITION de primo adiacente*, where the Subject and Predicate are both included under the Verb; such are, *Veni, Vidi, Vici*.

A *PROPOSITION de secundo adiacente*, is, where either the Subject or Predicate is included in the Verb; as, *I love—I write*.

A *PROPOSITION de tertio adiacente*, is, where both the Subject and Predicate are express'd, and stand distinct from the Verb; as, *The King is just*.

This *Proposition* is the Rule or Standard of all the other; so that whatever *Proposition* can be reduced thereto, is legitimate; and what cannot, is not.

*Propositions*, again, are divided into three Classes: The first, regarding the *Matter*; the second, the *Form*; the third, the *Thought*.

Those of the first Class are subdivided into, finite and infinite; direct and indirect; single and manifold.

A *finite or definite PROPOSITION*, is that which declares something determinate on a Subject; as, *Man is a Biped*.—*The Wind is not visible*.

An *infinite or indefinite PROPOSITION*, is that where either one or both of the Terms are infinite, or have a Negative prefixed to 'em; as, *Non homo est albus*—*Homo est non albus*.

A *direct PROPOSITION*, is that wherein a higher or more general is predicat'd of a lower and more particular; as, *Man is an Animal*. Others will have it, that wherein the Subject stands as a Matter, receiving, and the Predicate, as a Form, received; as, *Peter is learned*.

An *indirect PROPOSITION*, according to some, is that wherein an inferior is predicat'd of a higher; as, *An Animal is Man*. According to others, it is that wherein the Subject stands as the Form, and the Predicate as the Matter; as, *Every Rational is Man*.

A *single PROPOSITION* is such, either Simply, or by Conjunction: *Simply*, when it affirms or denies one thing of one other thing; as, *The Sun shines*: By *Conjunction*, when several *Propositions* are join'd and coupled together; thus, *The Sun shines*, and it is *Day*; are two *Propositions*, which conjoin'd make this one, *If the Sun shines, it is Day*.

Of such *conjoin'd Propositions* there are divers kinds, viz. Hypothetical, Disjunctive, Copulative, &c.

*Hypothetical Proposition*, is that consisting of several simple ones, affected with some conditional one; as, *If the Sun be hot, it is Night*.

*Disjunctive Proposition*, is that consisting of several, affected with a disjunctive Conjunction; as, *It is either Day or Night*.

A *copulative Proposition*, is that consisting of several affected with a Conjunction Copulative; as, *Peter does not stand, and sit*.

Some add, *Discrete or Adversative Propositions*; as, *He is rich, but covetous*.

A *compound PROPOSITION*, is that where one or both the Terms excite several Ideas in the Mind; as, *A Man is Body and Soul, and both together*: Or, *a Foundation, Walls, and Roof, are a House*.

A *manifold PROPOSITION*, is that consisting of several Subjects; as, *Peter and Paul preach'd*: Or, several Predicates; as, *Simon reads and walks*: Or both; as, *Peter and Paul preach and pray*.

In respect of *Form*, *Propositions* are divided into Affirmative, and Negative; True, and False; Pure, and Modal.

An *Affirmative PROPOSITION*, is that whose Attribute is join'd to the Subject; as, *God is a Spirit*.

A *Negative PROPOSITION*, is that whose Attribute is separated from the Subject; as, *Man is not a Stone*,

A **True Proposition**, is that which declares a thing to be what it really is; or not to be what it is not. See **TRUTH**.

A **False Proposition**, is that which signifies a thing to be what it is not; or not to be what it is. See **FALSHOOD**.

The **Truth of a Proposition**, therefore, depends on the connecting of the Subject with the Attribute, which is done by the Act of the Mind, call'd Judgment. See **JUDGMENT**, **ERROR**, &c.

A **Proposition** is said to be *pure*, when it implies or involves nothing besides its Matter and Form; as, *Man is rational*.

A **Modal Proposition**, is that which beside the pure Matter and Form, involves some Mode or Manner of Disposition; as, *It is necessary Man be rational*.

Hence, such **Proposition** is said to consist of a Mode and a Diction; the Mode denotes some Circumstance which disposes the **Proposition**; as, *It is necessary*: The Diction is the rest of the **Proposition**; that *Man be rational*.

There are four of these Modes very famous, viz. *Necessary, Possible, Impossible, and Contingent*. See **NECESSARY**, **POSSIBLE**, &c.

Others possess other Modes, as *true, false, certain, uncertain, probable, &c.*

To **modal Propositions**, the Philosophers refer *exclusive, exceptive, and restrictive Propositions*; all which are denoted by a common Name, *Exponible Propositions*, because requiring some Explanation to make 'em clearly understood.

An **Exclusive Proposition**, is that denoted by a Sign, or Character of Exclusion; as, *only, solely, alone*; as, *God alone is eternal*; which is expounded thus, *God is eternal, and no other Being beside him is so*: Peter only plays; which we expound, *Peter plays, and does nothing else*.

Every **Exclusive Proposition** is expounded by two **Propositions**, one of which is affirmed, and the other denied.

**Exceptive Proposition**, is that denoted by an exceptive Sign; as, *beside, unless, &c.* Thus, *Every Animal, beside Man, is irrational*.

Every **Exceptive Proposition** is to be resolved, or expounded by three **Propositions**; as that, *e. gr.* above-mentioned, by these: *Every Animal that is not Man is irrational: Every Man is an Animal: No Man is irrational*.

**Restrictive, or Limitative Proposition**, is that affected with a restrictive Sign; as, *according to, so far as, consider'd as, quatenus, &c.* Thus, *Man quatenus an Animal, perceiving*.

**PROPOSITION**, in Mathematics, is some Truth advanced, and shewn to be such by Demonstration; or some Operation proposed, and its Solution shewn.

If the **Propositions** be deduced from several theoretical Definitions compar'd together; as this, A Parallelogram is double of a Triangle, standing on the same Base and of the same Altitude; it is call'd a **Theorem**. See **THEOREM**.

If from a Praxis or Series of Operations, a **Problem**; as, To find a third Proportional to two given Quantities. See **PROBLEM**.

Indeed, in strictness, the **Proposition** is only part of a Theorem, viz. that which shews what agrees to such a thing under such Conditions, and what not: In which sense it is distinguish'd from the **Demonstration**, which shews the reasons why the Understanding conceives that to agree to it. See **DEMONSTRATION**.

Again, strictly speaking, the **Proposition** is only a Member of a Problem, viz. that which shews what is required to be done: In which sense, it is distinguish'd from the **Solution**, which rehearses the several things to be done in order to effect what is required; and from the **Demonstration**, which proves, that by doing the things enjoin'd in the Solution, the thing requir'd in the **Proposition** is truly done. See **RESOLUTION**.

**PROPOSITION**, in Poetry, the first part of an Epic Poem, wherein the Author proposes, or lays down, briefly and in general, what he has to say in the Course of his Work. See **POEM**, **EPIC**, &c.

The **Proposition**, *Pere Bossu* observes, is to contain the bare Matter of the Poem, i. e. the Action, and the Persons that are to execute it, both human and divine.

This is what we have both in the *Iliad*, the *Odysee*, and the *Æneid*. The Action proposed in the *Iliad*, is the Wrath of *Achilles*; that of the *Odysee*, the Return of *Ulysses*; and that of the *Æneid*, the Translation of the Trojan Empire into Italy.

The same Author observes, that the divine Persons are nam'd in all the three **Propositions**. *Homer*, e. gr. declares, that what happens in the *Iliad*, is by the Will of *Jupiter*; and that *Apollo* was the Cause of the Quarrel between *Agamemnon* and *Achilles*: The same Poet says, 'twas *Apollo* prevented the Return of *Ulysses's* Companions; and *Virgil* mentions the Destinies, the Will of the Gods, and the Anger

of *Juno*.—But they all three dwell, chiefly, on the Person of the Hero, as if he were the Matter of the Poem. See **HERO**.

Yet there is some difference, in this respect, in the three Poems; in that *Achilles* is nam'd in the *Iliad*; but *Ulysses*, and *Æneas* are not: They are only pointed at, and that in such general Terms, as if it were supposed they were known before.

This practice seems to fall in with the first Intention of the Poet; who is to feign an Action without Names, and who, as *Aristotle* says, does not relate the Action of *Achilles* nor *Ulysses*, nor *Æneas*, nor any particular Person, but of an universal, general, and allegorical Person. See **FABLE** and **ACTION**.

Add to this, that the Character which the Poet is to give his Hero, and his whole Work, is express'd in the **Proposition**; both by *Homer* and *Virgil*. See **CHARACTER**.

The whole *Iliad* is Anger and Violence; 'tis *Achilles's* Character, and 'tis what the Poem commences with, *Miser audet*. The *Odysee* presents us in the first Verse with the Prudence, Diffimulation, and Address which makes the Character of *Ulysses*, and the Buñess of the Poem: *Ἄσπερα Πηλεΐδης*. And we see the Piety and Mildness of *Æneas* in the beginning of the Latin Poem: *Ingenium Pietate Virum*.

As to the manner of the **Proposition**; *Horace* contents himself to prescribe Modesty and Simplicity; not to promise much, nor raise great Expectations in the Reader. *Don't begin*, says he, *like that wretched Poet who set out with, Fortunam Priami catabo & nobile Bellum. How much better is that of Homer, Dic mihi, Musa, Virum, &c. He does not spend all his Fire at once, and leave nothing but Smoke: From this feeble beginning, you shal' soon see him rise to the Wonders of Antiphates, Scylla, Carybdis, and Polypheme.*

The same Modesty we find in the **Proposition** of the *Æneid*: If that of the *Iliad* be a little more furious, 'tis, perhaps, in conformity to the Character of the Poem, which is a Series of Violences and Extravagancies.

Add, that if the Poet be to speak with Modesty of his Hero; much more is he to do so of himself: Thus *Virgil* only says, *I sing the Action of Æneas. Homer* begs his Muse to say or sing. How far does *Claudian* swerve from these Examples?

— Audaci premere Cantu,  
Mens congesta suber, gressus remotos profani:  
Jam furor humanos vestros de peliore Jovis  
Expulsi, & totum spirant precordia Phœbum.

A short Poem, e. gr. an Ode, &c. wherein the violent Strain might be pursued to the end; might admit of such a pompous beginning: Thus we find *Horace* begin an Ode much after the Manner of *Claudian*:

Odi profanum vulgus, & arce—  
Carmina non prius audita Morsarum  
Sacerdos, Virginibus puerisque canto.

But the length of an Epic Poem quite excludes all pompous **Propositions**.

There is scarce any Fault we have yet observ'd a **Proposition** liable to, but there is an Instance of in the **Proposition** of *Statius's Achilles*: He bids his Muse rehearse the *Deeds of the Magnanimous Son of Æacus, who was formidable even to the Thunderer*. He adds, *That he has worthily distinguish'd a former Undertaking, and that Thebes esteems him a second Amphion*.

Magnanimum Æacidem formidatamque Tonanti  
Progeniem, & patrio vestitam succedere Calo  
Dixit refer.—  
Tu modo, si ceteros digno soplevissem haustus,  
Da fontes mihi, Phœbe, novos, &c.

**PRO-PRETOR**, or **PRO-PRETOR**, a Roman Magistrate, who having discharged the Office of Pretor at home, was sent into a Province to command there with his former pretorial Authority. See **PRETOR**.

The Name **Pro-pretor** was also given to those, who, without having been Pretors at Rome, were sent extraordinarily into the Provinces, to administer Justice with the Authority of Pretors.

Some also give the Name **Pro-pretors** to those sent by the Emperors into the Provinces, which, upon partition in *Augustus's* time, fell to their Lot; as the Name **Proconsul** was given to those sent into the Provinces that fell to the People's share. See **PROCONSUL**.

**PRO-PREFECT**, **PRO PREFECTUS**, among the Romans, the Prefect's Lieutenant; or an Officer whom the Prefect of the **Pretorium** commission'd to do any part of his Office in his place. See **PREFECT**.

In *Gruter*, p. CCLXX, the third Inscription mentions

*Pro* prefects of the *Prætorium* under *Gravian*, in the City of *Rome* and the neighbouring parts. See *PRÆTORIUM*.

**PROPRIETOR**, or **PROPRIETARY**, he who has the Property or Propriety of any thing. See *PROPERTY*.

**PROPRIETOR**, in Law, is strictly, such a one as has, or possesses any thing in the utmost degree: *Quæ nullius arbitrio est obnoxia*.

The Term was formerly apply'd in a particular manner to him who had the Fruits of a Benefice to himself, and his Heirs and Successors; as in ancient time Abbots and Priors had.

**PROPRIETARY-Monks**, were such as had reserved Goods and Effects to themselves, notwithstanding their formal Renunciation of all at the Time of their Profession.

They are frequently mentioned in the *Monach. Anglic. &c.* and were to be very severely dealt withal; to be Excommunicated, deprived of Burial, &c.—*Monachi Proprietarii excommunicantur ab Abbatibus, & si in morte Proprietarius inuentus fuerit, Ecclesiastica caret Sepulture, &c.* Addit. ad Matt. Far.

**PROPRIETATE PROBANDA**, is a Writ that lies for him that would prove a Property before the Sheriff.

For where a Property is alleged, a Replegiary properly lies not. See *REPLEGIARE*.

**PROPRIETY**, in Grammar, is, where the direct and immediate Signification of a Word agrees to the thing it is apply'd to.

In which sense *Propriety* is used in opposition to a figurative, or remote Signification.

**PROPLÆUM**, the Porch of a Temple, or Great Hall. See *POLEN*.

Hence the Word is used figuratively in Matters of Learning for an Introduction, Apparatus, or Proctromus to some greater Work.—In this sense we say, the *Proplæum* of the Jesuits at *Amberg*, &c.

The Word is Greek *προϋλαβω*, signifying the same thing. **PROQUESTOR**, **PRO-QUESTOR**, the Quæstor's Lieutenant, or a Person who discharged the Office of Quæstor in his stead. See *QUESTOR*.

The Word is chiefly apply'd to an Officer appointed by the Governour of a Province to discharge the Quæsture after the decease of the Quæstor, till the Senate and People should find a new one.

**PRO-RATA**, in Commerce, a Term sometimes used among Merchants, for *Proportion*. See *PROPORTION*.

Thus, when in speaking of any Undertaking they say, Each Person must reap the Profit or sustain the Loss in *Pro-rata* to his Interest; 'tis meant, each shall gain or lose in proportion to the Sum he put in Stock.

**PRO-RATA** *Portionis*, in Law, see *ONERANDO pro-rata portionis*.

**PRORÆ OS**, in Anatomy, a Bone of the Cranium, call'd also *Os Occipitis*. See *OS OCCIPITIS*.

**PROROGATION**, the Act of prolonging, adjoining, or putting off to another Time.

The difference between a *Prorogation* and an Adjournment of Parliament, is, that by the *Prorogation* in open Court the Session is ended; and such Bills as pass'd in either House, or both Houses, and had not the Royal Assent, must at the next Assembly begin again: For every Session of Parliament, is in Law a several Parliament. See *SESSION*.

If it be only adjourn'd, then there is no Session; and, consequently, all things continue in the same State they were in before the Adjournment. See *ADJOURNMENT*.

This difference between *Prorogation* and Adjournment is of no long standing; antiently they were used as Synonymous—*Prorogetur Curia de Hora in Horam, quousque placitum terminetur, MS de L. L.*

To *Prorogue* the Parliament the King goes in Person, with his Crown on his Head; and sends the *Black Rod* for the House of Commons to attend him at the Bar of the House of Lords; where, after giving an Answer to each Bill signified to him, he makes a Speech; and the Lord Chancellor, by command, signifies the Parliament to be *Prorogued*. See *PARLIAMENT*.

**PROSCENIUM**, in the antient Theatre, the *Pulpitum*, or Eminence whereon the *Romans* Actors exhibited. See *THEATRE*.

The *Proscenium* answer'd our Stage. It consisted of two Parts among the *Greeks*; one particularly so call'd, where the Actors perform'd. The other was the *Logeion*, where the Singers and the Mimicks acted their Parts.

Among the *Romans*, the *Proscenium* and *Pulpitum* were the same thing. See *PULPITUM*.

**PROSCRIPTION**, a Publication made in the Name of the Chief or Leader of a Party, whereby he promises a Reward to any who shall bring him the Head of one of his Enemies.

*Scylla* and *Marius* by turns proscribed each other's Adherents.—Under the Triumvirate a great part of the best and bravest of the *Romans* fell by *Proscription*.

The Term took its Rise from the Practice of writing down a List of the Persons Names, and posting it in publick; from *pro*, and *scribere*, I write.

**PROSE**, the natural Language of Mankind, loose, and unconfin'd by poetical Measures, Rhimes, &c.

The Word is used in opposition to *Verse*. See *VERSE*.

The *Prose* have its Connections, which sustain it; and a Structure, which renders it numerous; it ought still to appear free: its Character consists in running easy, and unrestrain'd. See *STYLE*.

Poets very rarely have the Talent of *Prose*: The Habit of wearing Chains fits fast upon 'em, even when the Chains are off.

*S. Ebermond* compares *Prose*-Writers to Foot-Travellers, who walk with less Noise, but more Security than the Cavaliers.

The Word comes from the *Latin Prosa*, which some will have derived from the *Hebrew Forsa*, *expedit*.

**PROSECUTOR**, in Law, is he that prosecutes a Cause in another's Name. See *PROMOTER*.

**PROSELYTE**, a new Convert to the Faith. See *CONVERT*.

The Term was most used in the Primitive Church.—The *Jews*, too, had their *Proselytes*; who from *Gentiles* embrac'd *Judaism*.

The Word is pure Greek *προσλυτῆς*; which in *Latin* signifies *Advena*; in *English*, *Stranger*, or one arriv'd out of another Country.

**PROSODY**, **PROSODIA**, that part of Grammar which teaches and directs the Pronunciation, and manner of Recitation; marks the Accents, and distinguishes the long and short Syllables. See *GRAMMAR*, *PONUNCIATION*, &c.

The Word is form'd from the Greek *προσῳδία*, *accino*; of *προσ* and *ωδὴ*, *Cantus*, Singing.

*Prosody* is properly that Branch of Grammar which relates to Syllables; treating of their true Pronunciation in respect of Accent and Time. See *SYLLABLES*; See also *ACCENT*, &c.

The *English Prosody* turns chiefly on two Things; *Numbers*, that is, a certain number of Feet or Syllables. See *NUMBERS*.

And, *Rhime*, or a Similitude of Sound between the last Syllables of Verbs. See *RHIME*.

The *Greek* and *Roman Prosodies* were unacquainted with Rhime; but in lieu thereof, had something to make their Verse harmonious, without, *vis. Quantity*. See *QUANTITY*.

**PROSONOMASIA**, *προσωνομασία*, a Figure in Rhetoric, whereby allusion is made to the Likeness of a Sound in several Names, or Words. See *FIGURE*.

**PROSOPOPEIA**, in Rhetoric, a Figure, whereby we make Persons that are absent, or dead, or even Things which are inanimate, as *Cities*, &c. to speak. See *FIGURE*.

The Poets, in their Fictions, make frequent use of the *Prosopopæia*; as also do the Orators, in their painting of violent Passions, which seem to transport, and make them forget themselves.

There are two kinds of *Prosopopæia's*, the one direct; the other indirect.

For an instance of the latter: *Justi Deus, Protectors of the Innocent, permit the Order of Nature to be interrupted for one moment, and let this Carcase resume the use of Speech, &c.*

Instances of the former are found every where, among the Orators and Poets; that which follows, is a very beautiful one, found by way of Epitaph on a Tomb-stone: The dead Wife addresses her surviving Husband, thus:

*Inmatura peri: sed tu felicior, annos  
Vive tuos, con,se optime, vive meos.*

The Word is form'd from the Greek *προσωπον*, *Person*, and *ωνομα*, I make, or feign.

**PROSPECT**, } See } **PERSPECTIVE**.  
**PROSPECTIVE** *Glass*, } **PERSPECTIVE** *Glass*.  
**PROSTAPHÆRESIS**, in Astronomy, the Difference between the true, and mean Motion, or true and mean Place, of a Planet; call'd also *Equation of the Orbit*, or of the *Centre*, and simply the *Equation*. See *EQUATION*.

Or, which amounts to the same, *Prostaphæresis* is the difference between the mean, and equated Anomaly. See *ANOMALY*.

Thus, suppose the Circle *A L M P N* (Tab. *ASTRONOMY*, fig. 51.) the or Orbit of the Earth, surrounded by the *Ecliptic* *P*,  $\ominus$ ,  $\oplus$ , &c. and suppose *S*, the Sun; and the Earth in *R*: the mean Anomaly will be the Arch *A P R*, or, casting away the Semicircle, the Arch *P R*, or the Angle *P C R*; and the true Anomaly, rejecting the Semicircle, will be *P S R*, which is equal to *P C R* and *C R S*. If then to the mean Anomaly, we add the Angle *C R S*, we shall have the true Anomaly *P S R*, and the Earth's Place, in the *Ecliptic*. See *PLACES*, &c.

And here, the Angle CLS, or CRS, is call'd the *Prof-  
mplitude*; by reason it is sometimes to be added, and  
sometimes to be subtracted from the mean Motion, that  
we may have the true Motion or Place of the Earth. See  
EARTH.

The Word is form'd from the Greek *πρωσι*, *ante* *super-*  
*ad* and *αριστοι*, *ademptio*.

PROSTATES, or PROSTATA, in Anatomy, a white,  
spongy, glandulous Body situate at the Root of the Penis;  
or just below the Neck of the Bladder; and about the Size  
of a Walnut. See GLAND and PENIS.

Authors ascribe two kinds of Substance to the *Prostata*,  
the one glandulous, the other spongy, or porous; which  
last seems nothing but a Congeries of minute Vesicles and  
Cells; thro' the middle of which passes the *Vesicula Semi-*  
*nalis*, without any Communication therewith.

It has excretory Ducts of its own, pretty numerous: *De*  
*Graaf* does not remember to have known them fewer than  
ten in the *Prostata* of a Man; in Dogs, they are sometimes  
an hundred; each of which discharges itself into the Ure-  
thra; some above, some below the *Caput Gallinaceum*:  
Each having its proper Caruncle. See EXCRETORY.

Out of these issues a whitish, slimy Humour, secreted  
in the glandular part of the *Prostata*, and convey'd into the  
Cavity of the Urethra.

The Use of this Humour is to line and lubricate the  
Capacity of the Urethra, and prevent it from being annoy'd  
with the Acrimony of the Urine in its Passage thro'  
it; and to serve as a Vehicle to the Seed, in the time of  
Ejaculation. See URINE, URETHRA, &c.

Some take it for a third kind of Seed; but without much  
reason. See SEED.

*Boerhaave* thinks it may serve to nourish the Animalcule  
during the first moments after Coition.—This Humour, he  
adds, remains after Castration; but is not prolific.

The same Author, from the Memoirs of the *French A-*  
*cademy*, makes the *Prostata* to consist of an Aggregate  
of twelve Glands, each of which terminates by its excre-  
tory Duct in a little Bag, into which it discharges its  
Humour. These twelve Bags open by as many excretory  
Ducts into the Cavity of the Urethra; so as to encompass  
the Exit of the *Vesicula*; whence the Seed and the Humour  
of the *Prostata* are the more accurately mix'd.

PROSTYLE, in the ancient Greek Architecture, a Range  
of Columns in the Front of a Temple. See TEMPLE.

The Word is form'd from the Greek *προς*, *before*, and  
*στυλη*, *Column*.

PROSYLLOGISM, PROSYLLOGISMUS, is used by some  
School-Writers, for a Reason or Argument produc'd to  
strengthen, or confirm one of the Premises of a Syllogism.  
See PREMISE.

Others define the *Prosylogism*, an Argument compos'd  
of two Syllogisms so dispos'd, as that the Conclusion of the  
former is the *major*, or *minor* of the latter.

As here, e.g. every Rational is risible; but every Man is  
rational, therefore every Man is risible; but no Ass is ri-  
sible, therefore no Ass is a Man.

The *Major* of the second Syllogism may be omitted or  
understood; and some even contend that it ought to be so:  
for that on their Principle, a *Prosylogism*, or redundant Syl-  
logism, is when two Syllogisms are so contain'd in five  
Propositions, as that the Conclusion of the former, is the  
*Major* or *Minor* of the latter. See SYLLOGISM.

PROTASIS, in the ancient Drama, the first part of a  
Comic, or Tragic Piece; wherein the several Persons of the  
Play are shewn, their Characters and Manners intimated,  
and the Action, which is to make the Subject of the Piece,  
propos'd, and enter'd upon. See DRAMA, TRAGEDY,  
&c.

The ancient *Protasis* might go about as far as our two first  
Acts. See ACT.

Where the *Protasis* ended, the *Epitasis* commenc'd. See  
EPITASIS.

The Word is form'd from the Greek *πρωσις*, *Protensio*.  
PROTATICUS, in the ancient Drama, was a Person  
who never appear'd but in the *Protasis*, or first part of the  
Play; as *Socia* in *Terentius's Andria*, &c.

PROTECTION, the Shelter, Defence, Authority, and  
Aid, employ'd by any one in behalf of the helpless, or un-  
happy. See PROTECTOR.

*Active Protection* supposes Power, Interest, Favour, &c.  
in the Person that protects: *Passive Protection*, on the  
contrary, implies Necessity, Weakness, and Dependence in  
the Person protected. See SAFEGUARD.

PROTECTION is also used for a Privilege belonging to  
Ambassadors, Members of Parliament, &c. whereby they  
and their Domesticks are secur'd from Arrests, &c. See  
PRIVILEGE, &c.

PROTECTION is sometimes also understood of the Person  
of the Protector. Such a Cardinal has the *Protection* of  
*France*—The *Protection* of *Spain* is become vacant by the  
Death of such a Cardinal. See PROTECTOR.

PROTECTION, in Law, has both a general, and a special  
Signification.

In the general, it is used for that Benefit, and Safety,  
which every Subject, Denizen or Alien, specially secur'd,  
hath by the Law. See LAW.

In the special Signification, it is used for an Exemption,  
or Immunity, given by the King to a Person, to secure him  
against Suits in Law, or other vexations, upon reasonable  
Causes moving him thereunto.

Of this, *Frederick* makes two kinds; the first he calls  
a *Protection*, *cum clausula volumus*; whereof he mentions  
four Particulars.

1<sup>o</sup>. A *Protection*, *quis profecturus*, for him that is to  
pass over Sea in the King's Service.

2<sup>o</sup>. A *Protection*, *quia moraturus*, for him who is abroad  
in the King's Service.

3<sup>o</sup>. A *Protection* for the King's Debtor; that he be not  
sued or attach'd, till the King be paid his Debt.

4<sup>o</sup>. A *Protection* for a Person in the King's Service beyond  
Sea, or in the Marches of Scotland.

The second Form of *Protection*, is *cum clausula volumus*,  
which is most commonly granted to a spiritual Company,  
for their Immunity, from taking their Cattle by the King's  
Ministers; but it may be also granted to a single Person,  
either spiritual or temporal.

*Protection* extends not to Pleas of Dower, *Quare impedit*,  
Assize of novel Discein, Darcin Presentment, Attains, nor  
Pleas before Justices in Eyre.

PROTECTOR, a Person who undertakes to shelter and  
defend the weak, helpless, or distress'd. See PROTECTOR  
and PATRON.

God, and the Magistrate, are the *Protectors* of the Wi-  
dow and Orphan—Among the Heathens, *Minerva* was esteem'd  
the *Protectors* of Arts.

Every Catholic Nation, and every Religious Order, has  
a *Protector* residing at the Court of Rome, who is a Cardinal,  
and call'd the *Cardinal Protector*. See CARDINAL.

The Name is sometimes also used for a Regent of a  
Kingdom, made choice of to govern it during the Minority  
of a Prince.

*Cromwell* assum'd the Title and Quality of *Lord Protec-*  
*tor of the Commonwealth* of England.

PROTEST, in Law, is used for a Caution, or Call of  
Witness, or an open Affirmation that a Person does either  
not at all, or but conditionally, yield his Consent to any  
Act; or to the Proceeding of any Judge in a Court, where-  
in his Jurisdiction is doubtful; or to answer upon his Oath  
farther than by Law he is bound.

Any of the Lords in Parliament have a Right to *protest*  
their Dissent to any Bill pass'd by a Majority; which *Pro-*  
*test* is enter'd in form. See PARLIAMENT.

This Privilege is said not to be very antient: The Com-  
mons have no Right to *protest*.

PROTEST, in Commerce, is a Summons made by a No-  
tary Publick to a Merchant, Banker, or the like, to dis-  
charge a Bill of Exchange, drawn on him; after his ha-  
ving refus'd either to accept or pay the same. See BILL  
of Exchange.

It is call'd *Protest*, because containing a Protestation,  
that the Party will return the Bill, and even take up Mo-  
ney at Interest; and charge all Costs, Damages, Carriage  
and Recarriage, on the Refuser.

There are two kinds of *Protest*; the one for want of Ac-  
ceptance; the other for want of Payment. See ACCEPTANCE,  
&c.

The first to be made by the Bearer of the Bill at the  
time of presenting it, in case the Person, on whom it is  
drawn, refuse to accept it for the time, or the Sum there  
express'd—The latter is made as the Bill falls due, whe-  
ther it have been accepted or not. See ACCEPTANCE.

The Bearers of Bills of Exchange, that have been ac-  
cepted, or which become payable at a certain Day, are ob-  
lig'd to have them either paid or *protested* within three Days  
after Due, on the Penalty of answering for the Omission;  
and it must be observ'd, that if the third Day happen to be  
a Holy-Day, the *Protest* is to be made on the Eve thereof.

At Paris and *Hambourg*, the *Protest* is to be made with-  
in ten Days: At *Venice*, where all Bills are paid in *Banco*,  
the *Protest* for want of Payment is to be made within six  
days; but then the Bank is suppos'd open, otherwise no  
*Protest* to be made: At *Rome*, *Protests* for want of Pay-  
ment are to be made within fifteen Days: At *Leghorn*,  
*Milan*, and *Boulogne*, there is no time fix'd: At *Amster-*  
*dam*, they are to be made within five Days: At *Venice*, the  
third Day.

The Negotians of some Places, as those of *Rome*, Mr.  
*Savary* observes, don't look on themselves as oblig'd to  
*protest* in default of Payment; but this Opinion is contrary  
to universal Custom and natural Reason: since, till after  
*Protestation*, they have no Remedy or Recourse against the  
Drawer, or Endorser; nor any Title to be reimburs'd. M.

M. Ricard adds, that Bills of Exchange drawn from *Amsterdam, or Anwerp, or Spain*, are to be protested, in default of Payment, within fourteen Days after they fall due; after which time, the Bearer stands the risk and chance of the non-proteted Bill, not the Drawer, or Endorser; in case the Party happens to fail after the said fourteenth Day.

**PROTESTANT**, a Name first given in *Germany* to those who adher'd to the Doctrine of *Luther*; because, in 1529, they protested against a Decree of the Emperor *Charles V.* and the Diet of *Spires*; and declar'd, that they appeal'd to a General Council.

The Name has been since also given to those who adhere to the Sentiments of *Calvin*; and is now become a common Name for all those of the Reform'd Churches. See **LUTHERAN**, **CALVINIST**, &c.

Great Endeavours have been made to unite the *Lutheran Protestants* with the *Calvinists*, but in vain.

**PROTESTATION**, a solemn Declaration made by some Judiciary Act or Proceeding against an Oppression, Violence, or Injustice; or against the Legality of a Sentence, Judgment, Decree, or other Procedure; importing that the Party is determin'd to oppose it at the proper time, &c. See **PROTEST**.

**Protestation**, in Law, is defin'd by Justice *Walsh*, a Defence or Safeguard to the Party that makes it, from being concluded by the Act he is about to do; so that Issue cannot be join'd upon it.

**Protestation** is a Form of pleading, when one does not directly either affirm or deny any thing alleg'd by another, or which he himself alleges. *Plowd.* fol. 276.

**PROTHESIS**, or **PROSTHESIS**, in Grammar, is the general is used for a Metaplasm. See **METAPLASM**.

But it also more particularly denotes a prefixing of something at the beginning of a Word; as in *gnævus, pro-nævus*.

This is also call'd **Apposition**. See **APPPOSITION**.

**PROTHESIS**, or **PROSTHESIS**, among Surgeons, is the filling up of what was before wanting: Such, e. g. the filling up of fistulous Ulcers with new Flesh. See **FISTULOUS**, &c.

**PROTHESIS** is also a little Altar in the *Greek Churches*, whereon a Ceremony is perform'd, call'd by the same Name, *εὐχώνη*.

On this Altar the Priest, with the other Ministers, prepares every thing necessary to the Celebration of Mass; viz. the Bread, Wine, &c. After which, they go in procession from this to the great Altar, to begin Mass; carrying with them the Species thus prepar'd. See **ALTAR**.

**PROTHONOTARY**, **PROTONOTARY**, or **PRONOTARY**, a Term properly signifying *first Notary*; and which was anciently the Title of the principal Notaries of the Emperor of *Constantinople*. See **NOTARY**.

With us, *Prothonotary* is now us'd for Officers in the Courts of King's Bench, and Common Pleas; the latter whereof has three; the former, one. See **COURT**, &c.

**PROTHONOTARY of the King's Bench**, records all Actions Civil, sued in that Court; as the Clerk of the Crown-Office doth all Criminal Causes. See **KING'S BENCH**, **RECORD**, &c.

**PROTHONOTARIES of the Common Pleas**, enter and enroll all Declarations, Pleadings, Affidaves, Judgments, and Actions: they also make out all Judicial Writs; as the *Veni-re facias*, after Issue join'd; *Habeas Corpus*, for bringing in of the Jury; *Disfringas Jurator*. Writs of Execution, and Scisin, of *Superfedat*, of Privilege, &c. They enroll all Recognizances acknowledg'd in that Court, all common Recoveries; make Exemplifications of Records, &c.

**PROTHONOTARY**, or **PROTONOTARY**, is also an Officer in the Court of *Rome*, who has a degree of Pre-eminence over the other Notaries.

There is a College of twelve *Prothonotaries*, call'd *Participantes*, because partaking in the Fees of the Expeditions in Chancery.

They are rank'd among the Number of Prelates, wear the Violet Rochet, the Hat, &c. They assist at all grand Ceremonies, and have a place in the Pope's Chappel.

Their Office is to dispatch the Acts in grand Causes, which the simple Apostolical Notaries dispatch in lesser Causes: they may create Apostolical Notaries, and Doctors, to officiate out of the City.

Those out of the College have none of the Privileges of the others, except the Habit.

The *Prothonotaries* were first establish'd at *Rome* by Pope *Clement I.* with design to write the Lives of the Martyrs. See **NOTARY**.

**PROTHYRUM**, *περὶθυρα*, a Porch at the outward Door of a House, or Portal. See **PORCH**.

**PROTHYRIS**, **PROTHYRIDE**, is also us'd by *Vignola* for a particular sort of a Key of an Arch, an Instance of which we have in his *Ionic Order*; consisting of a Roll of Water-Leaves, between two Reglets and two Filllets,

crown'd with a *Doric Cymatium*; its Figure being much like that of a Modillion.

**PROTHYRIS**, in the ancient Architecture, is sometimes also us'd for a Quoin, or Corner of a Wall; and sometimes for a cross Beam, or over-thwart Rafter.

**PROTO**, a Word us'd in Composition with divers Terms in our Language; affecting them with a relation of Priority: as in *Proto-Martyr, Proto-Type*, &c.

It is form'd of the *Greek πρῶτος, primus*, first.

**PROTOCOLLUM**, **PROTOCOL**, a Term us'd in the ancient Jurisprudence, for the first Leaf of a Book; where-in was the Mark of the Paper and Parchment.

It was even sometimes us'd for the Mark itself; which was usually in the Margin, but sometimes at the top of the Page.

The XLIVth Novel of *Justinian*, forbids the cutting of the *Protocolium* of Charters which shew'd the Year, wherein the Paper or Parchment were made, and the Officer commission'd for the Delivery of them; by means where-of, Frauds were frequently detected.

Others will have *Protocolium* to have been the first Minute, or Draught, or Summary, of an Act to be pass'd; which the Notary drew first up, in short, in little Table-Books, to be afterwards enlarg'd at leisure. See **NOTARY**.

**PROTO-FORESTARIUS**, was he whom our ancient Kings made Chief of *Woods*; or *Forest*, to take Cognizance of all Causes of Death, or Mayhem there. See **FOREST** and **FORESTER**.

**PROTO-MARTYR**, the *first Martyr*, or Witness, who suffer'd Death in Testimony of the Truth; as *Abel* in the Old Testament; and *St. Stephen* in the New. See **MARTYR**.

The Word is compounded of *πρῶτος, first*, and *μαρτυρ, Witness*.

**PROTONOTARY**. See **PROTHONOTARY**.

**PROTOPLAST**, **PROTOPLASTUS**, a Title sometimes given to our First-father, *Adam*; from the *Greek πρῶτοπλαστον, q. d. first form'd*. See **PLASTIC**.

**PROTOTYPE**, the Original, or Model whereon a thing is to be form'd. See **TYPE**.

It is chiefly us'd for the Patterns of things to be Engraven, Moulded, or Cast. See **MODEL**, **MOULD**, &c.

**PROTOTYPON**, in Grammar, is sometimes us'd for a primitive or original Word. See **PRIMITIVE**.

**PROTRACTING**, or **PROTRACTION**, in Surveying, the plotting, or laying down of the Dimensions taken in the Field; by means of a *Protractor*, &c. See **PROTRACTOR** and **PLOTTING**.

*Protracting* makes one half of Surveying. See **SURVEYING**.

**PROTRACTING-Pin**, a Mathematical Instrument; or rather, an Appendage of an Instrument call'd a *Protractor*.

The *Protracting Pin* is a fine Needle, fitted into a Handle; us'd to prick off Degrees and Minutes from the Limb of the *Protractor*. See **PROTRACTOR**.

**PROTRACTOR**, an Instrument us'd in Surgery, to draw out any foreign or disagreeable Bodies from a Wound, or Ulcer, in like manner as the Forceps. See **FORCEPS**.

**PROTRACTOR**, is also an Instrument us'd in Surveying; whereby, the Angles taken in the Field with a *Theodolite*, *Circumferentor*, or the like, are plotted or laid down on Paper. See **PLOTTING**.

The *Protractor* consists of a Semi-circular Limb B A G (Tab. SURVEYING, Fig. 29.) of Brass, Silver, Horn, or the like, divided into 180°, and subtended by a Diameter B A; in the middle whereof is a little Notch or Lip, o, call'd the *Centre of the Protractor*.

On the Limb of the *Protractor* are, sometimes, also placed Numbers, denoting the Angles at the Centers of regular Polygons: Thus, against the Number 5, denoting the Sides of a Pentagon is found 72°, the Angle at the Centre of a Pentagon. See **POLYGON**.

#### Use of the PROTRACTOR.

1. To lay down an Angle of any given Quantity, or Number of Degrees. Suppose, e. g. an Angle of 50° with the Line A o B, required on the Point o. Lay the Centre of the *Protractor* on the given Point, and the Diameter of the *Protractor* on the given Line. Make a Mark against the given Degree 50, on the Limb of the *Protractor*; thro' which, from the given Point draw a Line o p: This gives the Angle required.

2. To find the Quantity of a given Angle: E. g. the Angle p o A; lay the Centre of the *Protractor* on the Point of the Angle, o, and the Diameter on the Line. The Degree of the Limb cut by the other Line o p, viz. 50, is the Number of Degrees of the Angle requir'd.

3. To inscribe any given regular Polygon, e. g. a *Pentagon* in a Circle. Lay the Centre and Diameter of the *Protractor* on the Centre and Diameter of the Circle; and

make a Dot against the Number of Degrees of the Angle at the Centre, viz. 72. Thro' this Dot, and the Centre of the Circle, draw a Line cutting the Circumference of the Circle. To the Point of Intersection, from the Point where the Diameter cuts the Circumference, draw a right Line: This Line will be a Side of the Pentagon, which being taken in the Compasses, and set off as often as it will go, in the Circumference, will give Points, which being connected by Lines, will form the Pentagon requir'd. See POLYGON.

4. To describe any regular Polygon, e. gr. an Octagon on a given Line. Subtract the Angle at the Centre, which the Protractor gives, 45° from 180°, the Remainder 135° Degrees, is the Angle included between two Sides of the Octagon; one half whereof is 67½. Applying then the Diameter of the Protractor over the given Line, with the Centre over one Extreme; make a Dot against 67½, to which from the Centre draw a Line. Apply the Protractor to the other end of the Line, so as the Centre be over the Extreme, and there set off another Angle of 67½. From the Point where the two Lines thus drawn intersect, as a Centre, describe a Circle, with the interval of the given Line. The given Line will be one Side of the Octagon, which being set off as often as it will go in the Circumference thus drawn, will give Points, which being connected, will form the Octagon required.

PROTRACTOR *Improved*, is a Machine like the former, only furnish'd with a little more Apparatus, whereby we are enabled to set off an Angle to a Minute; which is impracticable in the other.

The chief Addition is an Index fitted on the Centre, and movable thereon; so as to play freely and steadily over the Limb. Beyond the Limb the Index is divided, on both Edges, into 60 equal parts of the Portions of Circles, in-cepted by two other right Lines drawn from the Centre, so as each makes an Angle of one Degree with Lines drawn to the affixed Points from the Centre.—Now to set off an Angle of any Number of Degrees and Minutes with this Protractor; move the Index so, that one of the Lines drawn on the Limb, from one of the forementioned Points, may be upon the Number of Degrees given: And prick off as many of the equal parts on the proper Edge of the Index, as there are Minutes given: thus, drawing a Line from the Centre to that Point so prick'd off, you have an Angle with the Diameter of the Protractor, of the proposed Number of Degrees and Minutes.

Indeed, it may be of good Use to lay down an Angle to a Minute, when we are able to take it to a Minute: But till we have other-guise Needles, and juster Theodolites, this are yet made, the old Protractor may serve very well. See THEODOLITE.

PROTUBERANCE, in Anatomy, an Eminence, or Tumour that projects, or advances out beyond the rest.

The Orbicular Protuberances of the third Ventricle of the Brain are call'd Nates; and the Apophyses of the Orbicular Protuberances, Testes. See NATES and TESTES.

The Annular Protuberance is a process of the Medulla Oblongata, in form of a Ring; whence its Name, first given it by Willis. See MEDULLA Oblongata.

PROVEDITOR, ΠΡΟΒΗΤΟΥΡΟΣ, or PROVIDITORE, an Officer in several parts of Italy, particularly at Venice.

There are various kinds of Provideditors in Venice: as Provideditor of the *Cannets*; who is nearly the same with the *Ædiles* among the Romans; the *Censurs* in *Languedoc*; and the *Sheriffs* in other Gaues. Of these Provideditors there are three.

*Providitor General of the Sea*, is an Officer whose Authority extends over the whole Fleet, when the Captain-General is absent. He has, particularly, the Disposal of the Cash, and pays the Strauens and Soldiers. The Captain-General, and *Providitor*, are mutually Spies over one another. Tho' the *Providitor* be inferior to the General; yet is the Power so divided, that one has Authority without Strength, the other Strength without Authority.

The *Providitore alle Ragione vecchia, a'la Biave, alla Giustitia*, have the Direction of Matters relating to Policy throughout the Signory.

PROVEND, or PROVENDE, is properly a sort of Bushel, or Vessel containing the Measure of Grains daily given to a Horse or other Beast of Labour, for his ordinary Subsistence.

Hence *Provender* is become a general Name for all Food of Cattel.

In Monasteries, when the Religious go to Meals; they are said to go to *Provend*.

Some derive the Word from the Latin *Præbendo*, *Præbend*. See PÆBEND.

PROVER, in Law, *Protractor*, an Approver; or a Person who, confessing Felony, appeals, or accuses another of the same.

He is thus call'd, because he must prove what he alleges in his Appeal; which Proof is either by Battel, or by the Country, at his election who is appealed. See TRIAL, COMBAT, &c.

39 *Edw. 3. coram Rege. Rot. 97. Suff.* A Man became an Approver, and appeas'd five, who all join'd Battel with him, and he overcame 'em all; four of 'em were accordingly hang'd, and the fifth pleaded he was a Clerk. The Prover was pardon'd.

PROVERB, is defined by *Cambden* a concise, witty, and wise Speech; grounded upon long Experience, and containing, for the most part, some good Cavet.

We are furnish'd with Instances out of his own Collection: Such are, *A close Mouth catches no flies.—A high Building, a low Foundation.—A carrion Kite will never be a good Hawk.—A short Horse is soon curried.—A Man may love his Houfe well, tho' he ride out on the Ridge.—A false Knave needs no Broker.—Better to spare at Brim than at Bottom, &c.*

PROVIDENCE, PROVIDENTIA, the Condu& and Direction of the several Parts of the Universe, by a superior, intelligent Being. See UNIVERSE.

The Notion of a Providence is very ancient, even in the Heathen Theology; we find *Thales* mentions it.

It is founded on this Supposition, That the Creator has not so fixed, and ascertained the Laws of Nature, nor so connected the Chain of second Causes, as to leave the World to itself; but that he still preserves the Reins in his own hands, and occasionally interposes, alters, restrains, interposes, suspends, &c. those Laws by a particular Providence. See MIRACLE.

Indeed, some use the Word Providence in a more general Sense; signifying by it, that Power, or Action whereby the several parts of the Creation are ordinarily directed.

Thus *Damascenus* defines Providence to be the Divine Will, whereby all things are order'd, and directed to the proper End: Which Notion of Providence, supposes no Laws at all fixed by the Author of Nature at the Creation; but that he reserved it at large to be govern'd by himself occasionally. See NATURE.

The Antients call'd Providence by the Names of Fate, Fortune, Nature, Destiny, Necessity, &c. See FATE, FORTUNE, &c.

The ancient Egyptians seem to have been the first who had the Notion of a Divine Providence: *Arnobius* observes they reason'd thus,—"Providence is so essential to a Prince, that without it he cannot be, nor even be call'd, a Prince; and the more August a Prince is, the more perfect ought his Providence to be. Since, then, God is the Greatest and most august of all Princes, to him must belong the most perfect Providence."

The Epicureans deny any Divine Providence; as thinking it inconsistent with the Ease and Repose of the Divine Nature to meddle with human Affairs. See EPICUREAN.

Others deny the Existence of a Providence, from the seemingly unjust Distribution of Good and Evil, which seem to fall indiscriminately on the Just and Unjust.

*Simplicius* argues thus for a Providence: If God don't look to the Affairs of the World, 'tis either because he cannot, or will not: But the first is absurd; since to govern can't be difficult, where to create was easy: The latter is both absurd and blasphemous. See God.

PROVIDENTIA, in old Law-Books, were Provisions of Eating and Drinking. See PROVIDENTIA.

*Providentia Vini ante adventum suum in Cellaria erat Centeno Doliorum.* Knighton, Anno 1354.

PROVINCE, PROVINCIA, among the Romans, was a Country conquer'd by them, without the Bounds of Italy; govern'd by a Deputy, or Lieutenant; and having peculiar Laws and Privileges.

Of these Countries, that part of France next the Alps was one, and still retains the Name *Provence*.

*Nicod* derives the Word, à *procul vivendo*, living a-far off.

Among us, PROVINCE is used for the Extent of an Archbishop's Jurisdiction; in which sense, England is divided into two Provinces, those of *Canterbury* and *York*.

PROVINCE is now chiefly used for a Canton or Division of a Kingdom, or Common-wealth comprehending several Cities, Towns, &c. all under the same Government, and usually distinguish'd by the Extent of a Civil or Ecclesiastical Jurisdiction.

The Provinces were anciently *Duchies*, *Counties*, &c. which have been since all reunited under the same Chief. See DUKE, COUNTY, &c.

The Church distinguishes its Provinces by Archbishopricks; each containing a certain Number of Bishopricks. See ARCHBISHOP.

The Monks make particular Divisions of their Provinces, according to the Antiquity and Number of Convents in each. See PROVINCIAL, ORDER, &c.

The United Provinces are the seven Northern Provinces of the Low-Countries, who, revolting from the Spanish Dominion, made a firm and perpetual Alliance, Offensive and Defensive, at *Utrecht* in the Year 1579. See STATES General.

**PROVINCIAL**, **PROVINCIALIS**, something relating to a Province. See **PROVINCE**.

Thus we say, a **Provincial Council**, or **Synod**, &c. See **SYNOD** and **COUNCIL**.

**PROVINCIAL**, in the Monastic sense, is a Person who has the Direction and Superintendency of the several Convents of a Province; according to the Division established in that Order. See **ORDER**, **CONVENT**, &c.

The General of the Order has several Provinces under him; the **Provincial** several Priors, Abbots, &c. See **GENERAL**, **ABBOT**, &c.

**PROVINE**, of the French **Provigner**, signifies to lay a Vine-Stock, or Branch, in the Ground, to take Root. See **VINE**, **PROPAGATION**, &c.

**PROVISION**, any thing got, or prepared as necessary for the Subsistence of Life.

**PROVISION**, in Traffick, is used for the Wages due to a Factor. See **FACTORAGE**.

**PROVISION**, in the Canon-Law, the Title, or Instrument, by virtue whereof an Incumbent holds, or is provided of a Benefice, Bishoprick, or the like. See **TITLE**, **BENEFICE**, &c.

Ordinary Collators give **Provisions** in Case of Vacancy by Death, pure and simple Demission and Permutation. See **COLLATOR**.

The Court of Rome grants **Provisions** by Resignation, Devolution, Prevention.

**Provisions** by Prevention, are call'd *Gratia Expectative*, or *Mendata de Providendo*; of the great Abuse whereof throughout England, frequent Complaint was made in our ancient Statutes, and a Remedy provided for the same by the Statute of *Premunire*. See **PREVENTION**, **PREMUNIRE**, &c.

**Provisions** of small Benefices, in the Court of Rome, are only simple Signatures, which are, as it were, Minutes of the Bull; because the Bulls themselves dispatch'd on Parchment would be too expensive. The Signature is no more than the Request of the Impetrant answer'd by the Pope in these Words; *Concessimus uti petitur in premissis*. *D. N. Pape*, wrote in the Hand of the Prelate who presides over the Signature. See **BULL**.

Extraordinary **Provisions** are sign'd by the Pope himself, in these Words, *Fiat ut petitur*, with the first Letter of his Name. See **SIGNATURE**.

**PROVISO**, in Law, a Condition inserted in a Deed, upon the Observance whereof the Validity of the Deed depends. See **CONDITION**, &c.

Sometimes the Word imports a Covenant. See **COVENANT**.

**PROVISO** hath also another signification, in Judicial Matters; as, if the Plaintiff desist from prosecuting an Action, by bringing it to a Trial; if the Defendant or Tenant may take out a *Venire facias* to the Sheriff, having in it these Words, *Provisio quod*, &c. to the end, that if the Plaintiff take out any Writ to that purpose, the Sheriff shall summon but one Jury upon them both: In which Case it is call'd, going to Trial by *Provisio*.

**PROVISO** is also a Sea-Term. A Ship is said to moor a *Provisio*, when she has an Anchor out, and also a Hawser a-shore; and so is moor'd with her Head to the Shore with two Cables. See **MOORING**.

**PROVISOR**, is generally taken for him that hath the Care of providing things necessary; in which sense it coincides with *Provovoyr*. See **PROVVOYR**.

**PROVISOR** *Monasterii*, is used for the Steward, or Treasurer of a Religious House.

**PROVISOR**, in our Statutes, is a Person who sued to the Court of Rome for a *Provision*. See **PROVISION**.

These were prohibited by Proclamation 42 Hen. 5. Ann. 1258. *Provisores dicuntur qui vel Episcopatum, vel Ecclesiasticam aliam dignitatem in Romana Curia sibi ambulant de futuro, quod ex Gratia expectantius nuncupant, quia usque dum vacaret expectandum esset.* Splm.

**PROVOCATIVE**, in Physic, a Medicine which strengthens Nature, and stimulates or incites to Venery.

Such are Cantharides, &c. See **CANTHARIDES**.

**PROVOST**, *Præpositus*, an Officer, whereof there are divers Kinds; Civil, Military, &c.

**PROVOST** of the City, or of the Merchants, is the Chief Municipal Magistrate in several considerable trading Cities, particularly *Edinburgh*, *Paris*, and *Lyon*; much the same with the Mayors in other Places. See **MAYOR**.

The **Provost** presides at the City-Courts, and, together with the Sheriffs, decides all Differences relating to Trade and Merchandize; takes cognizance of the Affairs of Officers of Policy of the City with regard to their Functions; of the Delinquencies of Merchants, Commissioners, and Factors; inspects the Ports, Rivers, the Duties, Imposts, &c.

Authors attribute the Institution of **Provost** of the Merchants of Paris to Philip Auguste. Du Haillan relates its Epoch to the Year 1190.

The Lord **Provost** of *Edinburgh* is principal Sheriff; the Bailiffs are his Deputies; he calls Conventions of the Boroughs by his own Missives.

**PROVOST**, or **PRÆVOT** *Royal*, is a sort of inferior Judge established throughout France; for the taking cognizance of all Civil, Personal, Real, and Mixed Causes, among the People; but without any Jurisdiction in the Causes of Nobles.

These in the *Bourbonnois*, *Auvergne*, &c. are call'd *Châtelains*; in *Normandy*, *Vicoues*; in *Languedoc* and *Provence*, *Viguier*.

**Grand Provost** of France, or of the Household; is a Judge of the Sword; who has Jurisdiction in the King's Houfe, and over the Officers therein; looks to the Policy and Regulation thereof; the Rates of Provisions following the Court, &c. He was anciently call'd *Roi des Ribauds*.

**Grand Provost** of the *Constable*, a Judge of the Sword, who manages the Processes against the Soldiers in the Army who have committed any Crime. He has four Lieutenants distributed throughout the Armies, call'd *Provosts of the Army*; and particular *Provosts* in the several Regiments.

**Provost General of the Marine**, an Officer who manages the Processes against the Mariners when guilty of any Crime; and makes report thereof to the Council of War. There is also a Marine **Provost** in every Vessel, who is a kind of Gaoler, and takes the Prisoners into his Care; and keeps the Vessel clean.

**Provosts of the Marshals**, are a kind of Lieutenants of the Marshals of France, established for the Security of the Country against Rogues, Vagabonds, and Deserters. They take cognizance of Royal Cases; which, for this Reason are call'd *prevotal Cases*; such are all Crimes committed by Strollers, or People without any fixed Abode; or Robberies on the High-way, infractions of Safe-guard, Burnings, &c. They pronounce *en dernier ressort*.

There are 180 Seats of these **Provosts** in France. Their chief Jurisdiction regards High-way-men, Fencers, Hoarse-breakers, &c. and correspond to the Officers establish'd by *Augustus* and *Tiberius*, call'd, as *Cujas* tells us, *Larrunculators*; to show, that their Office was to pursue Thieves.

**Provost of the Mint**, is a particular Judge instituted for the apprehending and prosecuting of false Coiners. See **MINT**.

**Provost Marshal** of an Army, is one appointed to secure Deserters, and all other Criminals. See **MARSHAL**.

He is to go often abroad round the Army to hinder the Soldiers from pillaging; it is his Office to indict Offenders, and to execute the Sentence pass'd upon them. He likewise regulates the Weights and Measures, and the Price of all Provisions, &c. in the Army.

There is also a **Provost Marshal** in the Navy, who hath Charge of the Prisoners taken at Sea.

**PROVOST** of an University; see **UNIVERSITY**.

**PROW**, in Navigation, the Head, or Fore-part of a Ship. See **SHIP**.

In the Front hereof is the Beak, that cuts the Water to make way for the Vessel.

The **Prow** is lower than the Poop, and contains fewer Stories or Decks. On the Beak is usually some Hieroglyphic, which often gives Name to the Vessel.

In strictness, however, the **Prow** is said to be only that part of the Fore-Castle which is aloof, and not in the Hold; particularly that between the Chase and the Loof.

The Antients represent'd Beaks of Birds in the **Prows** of their Ships, whence they were call'd *Rostra*.

The Word **Prow** is form'd from the Latin *Prova*, which signifies the same thing.

**PROXIMITY**, of the Latin *Proximitas*, denotes the Relation of Nearness, either in respect of Place, or Blood, or Alliance. See **VICINAGE**, **CONSANGUINITY**, &c.

**PROXINETA**, or **PROXINETE**, a Broker, or Manager between two Persons. See **BROKER**.

The Word is chiefly us'd for those who negotiate Offices, Marriages, &c.

The Roman Law grants the *Proxinetes* an Action for recovery of their Salaries. The Word is Greek *πρωξινετα*, Broker.

The Latins give 'em a more honourable Appellation, calling 'em *Interpreters*. See **INTERPRETER**.

These made a kind of Office, or College in Rome: To them the Fathers address'd themselves, to sound and examine the Inclinations of the young Men they intended for their Daughters.

A Commentator on the Digest, accounts it a great Defect in the modern Policy, that there are not now any of these *Proxinetes* or Match-Makers established by public Authority.

**PROXY**, *Procurator*, a Deputy, or Person who officiates in the room of another. See **PROCURATOR**.

Princes are usually married by *Proxies*.

**PROXY**, *Procuracy*, among Civilians, is also a Commission given

given to a Proctor by a Client to manage a Cause in his behalf. See PROCTOR.

PRUNA, in Physiology, *Hoar-Frost*; a Concretion of the Dew, made by the violence of the external Cold. See DEW and FREEZING.

PRUNELLA, in Medicine, a dryness of the Tongue, and Throat, happening in continued Fevers, especially acute ones; accompanied with a heat and redness of the Throat, and a Scurf covering the Tongue; sometimes whitish, and sometimes blackish. See FEVER.

Some give the Name *Prunella* to the Quinay. See SQBINANCY.

PRUNELLE *Sol*, in Pharmacy, is a Preparation of purified Salt-Petre; call'd also *Lapis Prunelle*, and *Crystal Mineral*. See SALT PÉTRE, CRYSTAL, &c.

It is prepared, by separating and absorbing some of the more volatile parts of the Salt-Petre; which is done by burning upon it, when melted in a Crucible over the Fire, about a thirtieth part of its Weight of Flower of Brimstone.

'Tis given to cool, and provoke Urine in Fevers, and Quinseys; the some think that Salt-Petre, purified three or four times, would be a better Medicine.

The *Sol Prunelle* is frequently adulterated with Alum; the Deceit is known by its Whiteness and Glittering.

PRUNES, are Plumbs dried, and baked in an Oven, or in the Sun.

The Prunes chiefly used among us, are black, and large; brought from *Bordeaux*: Great Quantities are used by the *English* and *Dutch*.

The Word comes from the Latin *Pruna*, Plumb. The Juice of *Prunes* is esteem'd laxative.

PRUNIFEROUS Trees, or Shrubs, the Plumb-bearing kind; are those whose Fruit is pretty large, and soft, with a Stone in the middle. See TREE and FRUIT.

In this kind, the Flower adheres to the bottom of the Bask of the Fruit.

PRUNING, in Gardening, and Agriculture, the Operation of lopping, or cutting off the superfluous Branches of Trees; either to dispose them to bear better, to grow higher, or appear more regular. See TREE, &c.

*Pruning* is one of the most important Branches of the Gardener's Province; and that whereon the Weal, or Woe of his Fruit-Trees, as well as the Air and Regularity of his Garden, in great measure depends. See GARDEN.

'Tis sometimes practis'd, partly, for the trimming or adjusting of Trees to the Eye, by taking away irregular Branches; as in Box, Holly, Yew, &c.

Sometimes to make the Stem grow fairer, and rise higher; by taking off all the large Branches arising out of it; and thus sending the Sap, which would otherwise be expended by them, to the Top of the Tree, to nourish, and prolong the same.

But its more ordinary use is to render the Tree more fertile, and to mend its Fruit; by retrenching such useless Branches as might impoverish the Trunk, and consume the Juice necessary to nourish the Branches that bear. See VEGETATION.

*Pruning* is an annual Operation; the Amputation is stopping; sometimes stump-wis. Its best Season is about the end of *February*; tho' it may be begun as soon as the Leaves are off, viz. in *November*; and continu'd to the time fresh Leaves come on, viz. in *April*.

As the Gardener has usually three kinds of Trees to manage, viz. some too weak, others too strong, and others in a just plight; he will find *Pruning Work* thro' all that space; it being proper to *prune* some sooner, and some later. The weaker and more languishing a Tree is, the sooner it ought to be *pruned*, to ease it of its offensive Branches; and the more vigorous the Tree is, the longer may the *Pruning* be defer'd. See FINCHING and BRANCH.

#### Practice of PRUNING Fruit-Trees.

For *Pruning a Tree of the first Year*; i. e. a Tree planted the Year before: It has only that one fine Branch from the middle of the Stem, it must be cut to that Branch; and the Branch shorten'd to four or five Eyes, or Buds; the effect of which is, that the next year, there will be at least two fine Branches opposite to each other.

If the Tree produce two fine Branches, well plac'd with weak ones among them; all requir'd is to shorten them equally, to the Compass of five or six Inches in length; Care, however, being taken, that the two last Eyes, or Buds, of the Extremes of the Branches thus shorten'd, look on the right, and left, on the two bare sides; that each may bring forth at least two new ones, and the four be so well plac'd, that they may be all preserv'd. If one of the two Branches be much lower than the other; or both on one side, or the like; only one is to be preserv'd, and that the fittest to begin a fine Figure: The other to be cut off so close, as that it may never be able to produce thick ones

in the same place.—If a Tree have put forth three or four Branches, all in the Extremity, or a little beneath; they must be all *pruned* by the same Laws as the two above-mention'd: If they be equally thick, they are to be used alike; if some of them be smaller than the rest, they must only be *pruned* with a prospect of getting a single Branch each; taking care to have it on that side which shall be found empty: in order to which, they should be shorten'd to an Eye, or Bud, that looks on that side; and the same care to be taken in the larger, in order to begin to fill up the better. If these fine Branches shoot a little below the Extremity, 'tis but shortening the Stem to 'em: On the contrary, if the Branches be most of them ill ones; two, at least, if possible, are to be preserv'd, and *pruned* in the same manner as the two fine ones, above. Good, weak Branches, are to be carefully preserv'd for Fruit; only cutting them a little at the Extremity, when they appear too weak for their length: Not failing to take away all the sapless Branches.—If the Tree has produc'd five, six, or seven Branches; 'tis sufficient to preserve three or four of the best: the rest to be cut quite off, at least if they be thick; for if they be weak, i. e. fit for Fruit-Branches, they should be kept till they have perform'd what they are capable of doing. And if among the great ones, there happen to be many small ones; two or three of the best, only, to be preserv'd; pinching off the Ends of the longest.

*Pruning of a Tree of the second Year*: If, having put out two fine Wood-Branches, and one or two small ones for Fruit, the first Year; the Sap have alter'd its Course in the second Year, from the thick Branches to the small ones; so that the small become Wood; and the large, Fruit-Branches: The Productions of the former must be quite cut off into the Mother-Branch, and those of the latter used as Fruit-Branches.—If a Tree, from the first Year's *Pruning*, have produc'd four or five Branches, or more; it must needs be very vigorous: for which reason it may be sometimes advisable to preserve those Branches, even tho' they be not necessary to the Figure of the Tree; but only to consume part of the Sap, which might otherwise be prejudicial to the Fruit-Branches: These superfluous Branches may be left long, without much ill consequence; but those essential to the Beauty of the Tree, must be all *pruned* a little longer than those of the preceding Year; i. e. about two, or at most three Eyes, or a good Foot. This is making an advantage of the Vigour of the Tree; which, without this, would not yield Fruit in a long time: the redundant Sap converting all the Eyes into Wood-Branches; which, with a more spare Diet, would have been Fruit-Branches. In these vigorous Trees, some Branches cut stump-wis, are to be left on, and even some thick ones, tho' of false Wood, especially where there are any necessary to the Form of the Tree; to employ the Excess of Sap, and prevent its doing mischief. Still more to assuage its Violence, it may be necessary to preserve many long, good, weak Branches, when plac'd so as to occasion no Confusion; and even on the thick Branches, a good number of Outlets for the Sap to range in.—Be it a general Rule, rather to spare the lower Branches, and cut off the higher; than the contrary: By this means, the Tree spreads more easily to the bottom of the Wall.

*Pruning of a Tree the third Year*: In a Tree that has been planted four Years, and *pruned* twice; if it be vigorous, as many old Branches as possible are to be preserv'd, especially for Fruit: If it be weak, it must be eas'd of the Burden of old Branches, as well those for Fruit, as Wood. It must likewise be cut short, to enable it to shoot out new ones; which, if it cannot do with Vigour, let it be pull'd up; and a new one, with fresh Earth, planted in its place.

In all *Pruning*, Provision to be made for Branches to proceed from those now under the *Pruning-Knife*; to prepare such as may be proper for the Form: with this assurance, that when the high Branch is taken down from over the lower; this latter being reinforc'd with the Sap that would have gone to the former, will certainly produce more Branches, than it would have done without such Reinforcement.

#### General Laws, or Rules, of PRUNING Fruit-Trees.

1. The more the Branches shoot horizontally, the apter and better dispos'd the Tree is to bear Fruit; consequently, the more upright the Branches, the more inclin'd is the Tree to increase in Wood; and the less in Fruit.

Hence, ever take care to keep the middle of a Tree from great Wood, or thick Branches; and as those increase, and grow upon you, cut them out entirely; for there is no danger but the place will be soon fill'd with better and more fruitful Wood.

In Dwarfs, you are to prune all open, and clear of Wood, leaving none but horizontal Branches; and in Wall-Trees, if you do but furnish your Walls with horizontal Branches,  
Nature

Nature will provide for the middle. Chuse therefore such Shoots as are not over-vigorous, to furnish bearing Branches.

2. Take care the Tree be not left over full of Wood; nor even of bearing Branches: as is frequently seen in the Management of Peaches, Nectarines, and Cherries.

Nature cannot supply them all with Juice enough; whence, none will be supply'd well: the consequence of which is, that either the Blossoms will fall off, or the Fruit dwindle. 'Tis certain, a multitude of Branches crowding on one another, produces neither for good, nor so much Fruit, as where there is a convenient Space; beside the disagreeable Effect of crossing one another.

3. All strong and vigorous Branches are to be left longer on the same Tree, than weak and feeble ones: consequently, the Branches of a sickly Tree must be *pruned* shorter, and fewer in number, than those of a strong healthful Tree.

4. All Branches shooting directly forward from Trees that grow against a Wall, are to be *pruned* close to the Branch whence they spring, &c.

5. When a Branch well plac'd, either against a Wall, or in a Dwarf, has shot some false Wood, neither fit for the Figure, nor the Fruit; *prune* it off within the Thickness of a Crown piece, or slopingly; tho' this is best *pruned* off in the beginning of Summer.

6. Cut off all Branches arising from hard Knobs, whereon Pear-stalks grow; or from short hard Branches, like Spurs.

7. If a Tree, in its Years, have produc'd Branches of moderate Vigour, and afterwards puts forth strong ones, well plac'd, tho' of false Wood; the latter may be used as the Foundation of the Figure, and the other kept a time for bearing Fruit.

8. When an old Tree shoots stronger Branches towards the bottom than the top, and the top is in ill Case, cut it off, and form a new Figure from the lower ones. If the top be vigorous, cut off the lower ones, unless well plac'd.

9. The Order of Nature in the Production of Roots and Branches, is, that a Branch is always less than that out of which it shoots: If this Order be inverted, use them as false Wood.

10. Regard to be always had to the Effects of former *Pruning*; in order to correct its Defects, or continue its Benefits.

11. In vigorous Trees, the weaker Branches are the Fruit-bearers. In weak Trees, the stronger, thickly; therefore in the latter, *prune* off the feeble and small.

12. In vigorous Trees, three good Branches may put forth at one Eye, or Bud: In which case, the two Side-Branches are generally to be preserv'd, and the middlemost cut off in *May* or *June*.

13. It is difficult to strengthen a weak Branch, without cutting off others above it: Sometimes it can scarce be done, without cutting off the End of the Branch it shoots out of.

14. The *Pruning* of vigorous Peach-Trees to be defer'd till they are ready to blossom, the better to know which are likely to bear Fruit.

15. Fruit-buds next the Ends of Branches, are commonly thicker, and better fed, than others. In weak Trees, therefore, it may be best to *prune* them early, that the Sap may not waste itself in such parts as are to be retain'd.

16. The further a weak Branch is from the Trunk, the less Nourishment it receives; and therefore the more it is to be shorten'd: but thick Branches, the more distant they are from the Heart, the more they receive; and are therefore to be remov'd, that the Vigour may extend itself to the middle, or lower part.

17. A Branch for Wood must never be *pruned* without especial occasion; as where they annoy others.

18. If an old well-liking Tree be disorder'd with false Wood, thro' ill *Pruning*, or want of *Pruning*; take it lower, by cutting off a Branch or two, yearly; till it is sufficiently reduc'd. Some Trees put forth so vigorously, that they cannot be reduc'd to compass in one year, but must be allow'd to extend themselves, otherwise they will produce false Wood.

19. All Trees have a predominant Branch or two, if not more; yet the more equally the Vigour is divided, the better: Where it runs much on one side, it is faulty.

20. The Buds of all Stone-Fruit frequently form themselves the same year in which the Branch they grow on, is form'd: the same holds of Pears and Apples; tho' 'tis generally, at least, two or three Years, e'er the latter come to perfection.

21. All Shoots put forth in Autumn, are to be *pruned* off, as naught: The same may be said of all sapless Branches.

22. When a Tree puts forth much stronger Shoots on one side, than the other; a great part of the strong ones must

be cut off close to the Body, or some of them stump-wisely. 23. In all Trees, less Length to be allow'd the weak, than strong Branches.

24. Upper Branches to be cut off, close to others, that they may heal over: Lower Branches to be cut sloping, or at a little distance, that new ones may grow out of them.

25. If a young crooked Tree produce a fine Branch beneath the Crook; cut the Head off close to the Branch.

26. Tho' five, six, or seven Inches, be the ordinary Lengths Wood-Branches are left at; yet must this be vary'd, on occasion of the Vigour or Weakness of the Tree, 'Tickeness or Smallness of the Branch, the Fullness or Vacuity of the Place, &c.

27. Be careful not to *prune* many thick Branches, standing over weak ones; lest the Sap, which fed the larger; flow so plentifully into the less, as to occasion them to put forth much ill Wood and Suckers.

28. Branches shot from the Ends of others, are usually good Wood; sometimes it happens otherwise, and then they must be *pruned*.

As to the grand yearly *Prunings*—Fruit-Branches being of short continuance, and perishing the first year wherein they produce Fruit, are to be cut off, unless they put forth Shoots for Blossoms the succeeding Year. In the second *Pruning*, about the middle of *May*, where the Fruit is so close, as to be like to obstruct each other, some of them and their Branches to be taken off; as mult' also the multitude of young Shoots that cause Confusion. Branches more luxuriant than others, to be cut clear off. To preserve old Trees, they must be disorder'd, by leaving few Branches for Wood on them; and those to be shorten'd to five or six Inches; and very few weak ones, and none dry, and nigh wasted.

#### PRUNING OF Forest or Timber Trees.

For large Trees, 'tis best not to *prune* them at all; yet if there be an absolute Necessity for it, avoid taking off large Boughs as much as possible; and observe the following Rules.

1. If the Bough be small, cut it smooth and close, that the Bark may soon cover it; and sloping, that the Water may run off.

2. If the Branch be large, and the Tree old, cut it off at three or four Foot from the Stem, or where any young Shoots are found issuing out of it.

3. Boughs growing upright, not to be cut cross over, but sloping upwards. In Boughs leaning from the Head, the Slope to be on the lower side.

4. If the Tree grow crooked, cut it off at the Crook, sloping upwards; and nurse up one of the most promising Shoots for a new Stem. Indeed, in Trees that have great Piths, as the Ash, Walnut, &c. we must be cautious of cutting off the Heads.

5. If the Tree grow top heavy, its Head must be lighten'd; and that rather by thinning the Boughs that grow out of the main Branches, than by cutting off the main Branches themselves. But if you would have them spring, 'tis best done by rubbing off the Buds, as they put out in the Spring, and shedding up the Side-Shoots.

6. If the Side-boughs still break out, and the Top be able to sustain itself, give the Boughs that put forth in Spring, a *Pruning* after *Midsummer*; cutting them very close. This will cause the Bark to cover and kill them, so as never to shoot out again; and is the only Method to make a Tree grow with a fine, neat, handsome Body.

PRUNING OF Vines. See VINE.

PRURITUS, a Sensation of the Skin, popularly call'd *Itching*; which is supposed to arise hence, that the Extremities of the Capillary-Veins being obstructed, cannot take up the redundant Blood of the Members, to carry it back again to the Heart; whence, as there is a fresh Stock of Blood continually sent into the part by the incessant Pulsation of the Heart, the Fibres become preter-naturally stretch'd or distended: And hence the uneasy, titillating Sense of *Itching*.

PRYTANEUM, in Antiquity, a considerable Building in *Athens*, where the Council of *Prytaneis* assembled, and where those who had render'd any signal Services to the Commonwealth, were maintain'd at the publick Expence. See PAVTANEUM.

PRYTANEUS, in Antiquity, the first Magistrate in most of the Cities of *Greece*.

At *Athens*, there were fifty *Prytaneis*: at *Corinth*, there was but one; who was, there, the same with the *Archon* was at *Athens*. See ARCHON.

The *Prytaneis* of *Athens* were the Senators who composed the grand Council that governed the State; and corresponded to what we now call, *The States General* of *see United Provinces*.

Fifty of these were chose each Year out of each Tribe; and to these were nominated fifty more, to supply the places of the former, in case of Death or Male-administration.

The Tribes took the Government by turns; each after other, for the space of thirty five Days.

All the fifty *Prytanes* of the Tribe did not govern together during those five Weeks; but in Companies, ten at a time, chosen by Lot; seven Days each Company; After which, another Tribe came into play; and had its five Weeks after the same manner.

This was an Establishment of *Solon*. *Scaliger* is mistaken, when he says the Tribes took their Turns every day. See **TRIBE**.

**PSALM**, a Divine Song, or Hymn. See **SONG**, and **HYMN**.

The Word is now appropriated to the *CL. Psalms* of *David*; and the Name *Canticle*, or *Song*, given to other pieces of the same kind, composed by other Prophets and Patriarchs.

The Antients, as is observ'd by *St. Augustin*, made this difference between a *Canticle* or *Song*, and a *Psalm*; that the former was sung solitarily, or by the Voice alone; but the latter accompany'd with a Musical Instrument.

The *Psalms*, in the antient Editions, are divided into five Books; nor is *David's* Name found at the Head of more than seventy-three of them; tho' some, and among the rest, *St. Augustin*, and *St. Chrysostom*, attribute all the hundred and fifty to him without exception.

The  *Jews*, however, were always of another Sentiment; and 'tis certain there are some few, at least, that are not his—*St. Jerome* observes, among the Number, several that were composed long time after *David*. *De Pin* adds, that 'tis difficult to ascertain the Authors; all we know of the Book, is, that 'tis a Collection of Songs, made by *Ezra*.

The *Gradual Psalms*, were those antiently sung on the Steps of the Temple. See **GRADUAL**.

The *Penitentiary Psalms*, were not formerly the same with those now call'd by that Name. See **PENITENTIARY**.

The Word is form'd of the *Latin Psalms*; and that from the *Greek ψαλμος*, *Psalmos*.

**PSALMODY**, the Art of singing Psalms. See **PSALM** and **SINGING**.

**PSALTER**, the Book, or Collection of Psalms, ascrib'd to *David*. See **PSALM**.

There are an Infinity of Editions of the *Psalter*—*Augustin Justinian*, a Dominican, and Bishop of *Nepes*, publish'd a *Polyglot Psalter* at *Genoa*, in 1516; *Costarinus* publish'd the *Psalter* in *Hebrew*, *Greek*, *Chaldean*, and *Arabic*, with *Latin* Notes and Glosses. See **POLYGLOT**.

**PSALTER** is also used among Religious for a large Chapter, or Rosary; consisting of 150 Beads; the Number of Psalms in the *Psalter*—*St. Dominic* is said to have been the Inventor. See **ROSARY**.

**PSALTERY**, **PSALTERION**, a Musical Instrument, much in use among the antient *Hebrews*; who call'd it *Nehel*.

We know but little of the precise Form of the antient *Psaltery*: That now in use, is a flat Instrument, in form of a *Trapezium*; or a Triangle truncated a-top.

It is strung with thirteen Wire Chords, set to Unison or Octave; and mounted on two Bridges on the two sides—It is struck with a *Plectrum*, or little Iron Rod; or sometimes a crooked Stick; whence it is usually ranked among the Instruments of Percussion.

Its Chest, or Body, is like that of a Spinnet. It has its Name à *Psallendo*; some also call it *Nablam*, or *Nablinum*.

*Papini* gives the Name *Psaltery* to a kind of Flute used in Churches, to accompany the Singing; in *Latin*, *Sambucinum*.

**PSAMISMUS**, in Medicine, a Term sometimes used for a Bath of dry and warm Sand, to dry the Feet of dropical Persons upon. See **BATH**, &c.

The Word is form'd from the *Greek ψαμμος*, *Sand*, or *Gravel*.

**PSATYRIANS**, **PSATYRIANI**, a Sect of *Arians*, who in the Council of *Antioch*, held in the Year 360, maintain'd that the Son was not like the Father, as to Will; that he was taken from nothing, or made of nothing; and that in God, Generation was not to be distinguish'd from Creation. See **ARIAN**.

**PSEUDO**, a Term, or Particle, used in the Composition of divers *Latin* and *English* Words; in the Sense of *false*, or *lying*.

Thus we say a *Pseudo Martyr*, &c. a *false Witness*; *Pseudo Prophet*, *Pseudo Apostle*, *Pseudo Christ*, &c.

The Word is form'd from the *Greek ψευδος*, *deceit*, *false*, *I deceive*.

**PSEUDONYMUS**, **PSEUDONYMOS**, a Name given by

the Criticks, to those Authors who publish Books under false, or feigned Names.

Much as the Name *Cryptonymus* is given to those who publish under secret and disguised Names; and *Anonymus*, to those who publish without any Names at all. See **ANONYMUS**.

The Apostolical Constitutions, the greater Epistles of *St. Ignatius*, &c. are usually suppos'd to be *Pseudonymus*, See **CONSTITUTIONS**.

The Word is form'd from the *Greek ψευδος*, *Lye*; and *ωνος*, *Name*.

**PSEUDO-DIPTERE**, in the antient Architecture, a Temple with eight Columns in Front; and a single Row of Columns all around. See **TEMPLE**.

The Word signifies *false* or *imperfect Diptere*; and is used to distinguish this, from the *Diptere*; which had two Rows of Columns all around. See **DIPTERE**.

**PSEUDO-STELLA**, in Astronomy, any kind of Meteor or Phenomenon, newly appearing in the Heavens, and resembling a Star. See **METEOR**, &c.

**PSILOTHRIX**, in Medicine, *Depilatory*; or something proper to make the Hair fall. See **DEPILATORY**.

Such are strong Lixiviums, Quick-Lime, Ants Eggs, Sandarac, Orpiment, and Arsenic.

The Word is form'd from the *Greek ψιλος*, *deglabro*, *I flea*, or take off the Bark; and *τριξ*, *Hair*.

**PSOAS Magnus**, or *Lumbos*, in Anatomy, a round, hard, fleshy Muscle, which arises from the internal Side of the transverse Processes of the Vertebrae of the Loins, within the Abdomen; and descending upon part of the internal Side of the Ilium, is inserted into the lower part of the little Trochanter—It is the first of the Flexors of the Thigh. See **FLEXOR** and **THIGH**.

**PSOAS Parvus**, arises fleshy from the Inside of the upper Vertebrae of the Loins, and hath a thin, and broad Tendon, which embraces the *Psos Magnus*; and which is inserted into the *Os Ischiuratum*, where the *Os Pubis* and *Ilium* join together.

This, tho' ordinarily reckon'd among the Muscles of the Thigh, properly belongs to the lower Venter.

**PSORA**, in Medicine, a cutaneous Disease, call'd by the *Latins*, *Scabies*; by the *English*, *Itch*. See **ITCH**.

The *Psora* is described by *Celsus*, as a reddish Hardness and Roughness of the Skin, from an Eruption of Pusles thereon; some dryer, others moister; and oozing out a famous Matter, that occasions a continual *Pruritus*.

These Eruptions are most frequent about the Joints of the Limbs, and betwixt the Fingers; in some they spread over the whole Body; in others they soon cease; and in some return at certain Seasons of the Year.

In Youth, this Disease frequently prevents others, or cures them—it sometimes degenerates into a Leprosy.

The dry is much more difficultly cured than the moist, which arises from a Disorder in the Humours, or Viscera. *Willis* derives the Disease from a sharp, saline Humour, occasioning an Itching.

Some of the later Physicians will have it to consist in a number of little Animals preying on the Skin: And hence it is, that it becomes so very contagious.

*Willis* observes, that in this respect it is second to no other Disease, but the *Plague*; which many conjecture to arise in like manner, from Animalscules.

For the Cure, *Borelli* recommends a Lotion of black Soap, for poor People, &c. But the Soap to be soon wash'd off, lest it excoriate the Skin. Where the Disease is inveterate, recourse is had to Salivation. See **SALIVATION**.

The Word is *Greek*, *Ψωρα*, *Itch*.

Hence, **PSORICA** are Medicines good against Scabs, and other cutaneous Eruptions.

**PSOROPHTHALMIA**, is a kind of *Ophthalmia*, accompany'd with a *Pruritus*, or Itching. See **OPHTHALMIA**.

The Word is form'd from *ψωρα*, *Itch*; and *οφθαλμος*, *Eye*.

**PSYCHOLOGY**, a Discourse concerning the Soul. See **SOUL**.

*Anthropology*, or the Science which considers Man, consists of two parts: The first treating of the Body, and the parts belonging thereon; call'd *Anatomy*: And the second of the Soul, call'd *Psychology*.

The Word is form'd from the *Greek ψυχη*, *Soul*; and *λογος*, *Discourse*.

**PSYCHOMANCY**, a kind of Magick, or Divination, perform'd by raising the Souls of Persons deceased. See **DIVINATION**.

The Word comes from *ψυχη*, and *μαντις*, *Divination*.

**PSYCHROMETER**, an Instrument for measuring the Degree of Moisture or Humidity of the Air; more usually call'd *Hygrometer*. See **HYGROMETER**.

The Word is form'd from the *Greek ψυχη*, *Humid*, and *μετρον*, *Measure*.

**PTARMICA**, Medicines proper to promote Sneezing; more usually call'd *Sternutatories*. See **STERNUTATORY**.  
The Word is form'd of the Greek *πταρμική*, *Sternutamentosa*, Sneezing.

**PTERIGIUM**, or **PTERYGIUM**, in Medicine, a Disease of the Eye, by the *Latins* call'd *Unguis*, Nail; and sometimes *Pannus*, Web. See **UNGUIS** and **PANNUS**.  
The Cure is much the same as of the *Ophthalmia*. See **OPHTHALMIA**.

The Word is form'd from the Greek *πτερυγία*, *Ala*, Wing.  
**PTERIGOIDES**, or **PTERYGOIDES**, in Anatomy, two Apophyses of the *Os Sphenoides*; so call'd from their resembling the Wings of a Bat. See **SPHENOIDES**.

From the Greek *πτερυγία*, *Ala*, Wing, and *ειδής*, Form.  
**PTERIGOIDEUS**, or **PTERYGOIDEUS Internus**, is a Muscle of the Jaw, which arises from the internal part of the *Pterygoides Processus*, and descends to be inserted into the inferior part of the internal side of the lower Jaw, near its Angle.

When it acteth, it draws the Jaw to one side.  
**PTERIGOIDEUS Externus**, is a Muscle which arises from the external part of the same Processus, and goes backward to be inserted between the *Condiloid Processus*, and the *Coronæ*, on the inside of the lower Jaw.

This pulls the lower Jaw forwards, and makes it shoot beyond the upper.  
**PTERIGOSTAPHILINUS**, or **PTERYGOSTAPHILINUS**, in Anatomy, the internal Muscle of the *Uvula*; call'd by *Valisava*, *Nodus Tabæ Musculus*; as being unknown to the ancient Anatomists.

It arises fleshy, near the *Sphenostaphilinus*, from the *Os Petrosus*, where the Tube from the Palate enters that, near an acute Process of the *Sphenoides*; and ascending to the *Processus Pterygoideus*, becomes a broad, flat Tendon, which expands itself on the fore-part of the *Uvula*.

Some of the tendinous Fibres ascend to the lower Edge of the *Os Palati*, others descend down the sides of the *Fauces*; the middle Series either unites with those of the other side, or is lost in two fleshy Bodies that compose the *Uvula*.

This Muscle, with its partner, draw the *Uvula* upwards, and forwards; and also raise the *Amygdalæ*.

The Word is form'd from the Greek *πτερυγία*, Wing, and *σταφίλη*, *Uvula*.

**PTERIGOPHARYNGÆUS**, or **PTERYGOPHARYNGÆUS**, a pair of Muscles arising from the *Processus Pterygoideus*, where the Tendon of the *Pterygostaphilinus* is reflected.—Some fleshy Fibres of it do likewise arise from the upper Jaw-Bone, behind the farthest Grinder, and some from the sides of the Tongue, and *Os Hyoides*.

From all these places its fleshy Fibres pass semi-circularly; and meet with those of the opposite side in a middle Line on the back side of the *Pharynx* externally.

In the inner Surface of the *Fauces* is another Order of fleshy Fibres, decussating each other at acute Angles.—They arise both from the sides of the *Uvula*, and from the Root of the Cartilage; and descend obliquely to their insertions in the glandulous Membrane of the *Pharynx*.

This Muscle serves both to constrict the *Pharynx*, and to compress the Tonsils, and force out the Mucus; whence its Use in Hawking.

The various Originations of the several parts of this Muscle has caus'd its being generally divided into several Muscles.—Thus *Valisava* calls that part (springing from the Tongue, the *Glossopharyngæus*; that immediately below it, the *Hypopharyngæus*.

Hence, in like manner, come the *Cephalopharyngæus*, *Sphenopharyngæus*, &c.

**PTEROPHORI**, in Antiquary, a Name given to such of the *Roman* Couriers as brought Tidings of any Declaration of War, a Battle lost, or any Mishap befallen the *Roman* Armies.

They were so call'd because they bore Wings on the Points of their Pikes; from the Greek *πτερυγία*, Wing, and *φορος*, I bear.

**PTISAN**, **PTISANA**, in Medicine, a cooling Prision, made of Barley boil'd in Water, and usually sweeten'd with Liquorice, &c.

To these are sometimes added the Herb Dog's-grass, and Senna to render it laxative.—Most of the Decoctions of Physicians are in *Ptisana*. See **DECOCTION**.

Feverish Patients are prohibited Wine, &c. and reduced to *Ptisana*.

The Word is form'd from the Greek *πτισην*, which signifies the same thing.

**PTOLEMAITES**, a Branch of the ancient *Gnostics*; so call'd from their Leader *Ptolemy*.

This Hierarchy is represented as a Man of considerable Learning, who improved considerably on the System of the *Gnostics*, his Predecessors, and enlarg'd it with a number of Notions and Visions of his own. See **GNOSTIC**.

S. *Epiphanius* is very ample on the Subject of the *Ptole-*

*mites*; and produces a Letter of *Ptolemy* to *Flora*, wherein that Heretic lays down his Doctrine.—He maintain'd, that in the Law of *Moses* there were three things to be consider'd; inasmuch as it did not all come from the same hand; but part of it, said he, from God, part of it from *Moses*, and part of it which came from neither of 'em, but confided altogether in the pure Traditions of the ancient Doctors; on which part it was that he founded his Dreams.

**PTOLEMAIC System**, or *Hypobolus*, the Order, or Disposition of the Heavens and Heavenly Bodies, wherein the Earth is suppos'd to be at rest, in the Centre; and the Heavens to revolve round it, from East to West; carrying with 'em the Sun, Planets, and fixed Stars, each in their respective Spheres. See **SUN**, **EARTH**, **PLANET**, &c.

This Hypothesis took its Name from *Ptolemy*, the great *Alexandrian* Astronomer; because maintain'd and illustrated by him: Not that it was his Invention; for it was much older, as having been held by *Aristotle*, *Hipparchus*, &c. See in further illustration under the Article **SYSTEM**.

**PTYALISM**, **PTYALISMUS**, in Medicine, a Spitting; or a discharge of Saliva by the Glands of the Mouth; whether it amount to an absolute Salivation, or not. See **SALIVATION**.

The Word is form'd from the Greek *πτύω*, *Spuo*, to ooze out.

**PUBERTY**, **POBERTAS**, in the Civil Law, a natural Majority; or the Age wherein a Person is allow'd to contract Marriage. See **MAJORITY**, &c.

Boys arrive at *Puberty* at fourteen Years of Age; Maids at twelve. *Full Puberty* is accounted at eighteen. See **AGE**.

**PUBES**, a Term us'd for the external parts of the *Pudenda*, or parts of Generation in both Sexes. See **PUDENDUM**, &c.

This, from the Age of *Puberty*, is suppos'd to be cover'd, more or less, with Hair; whence the Name. See **HAIR**.

**PUBIS OS**, or *Os Pelliis*, in Anatomy, a Bone of the Hip, situate in the fore and middle part of the Trunk; and making the lower and inner part of the *Os Innominatum*. See **INNOMINATUM OS**.

It is join'd to one other part by a Cartilage, thicker, but looser in Women than Men; in the former whereof, the *Os Pubis* recedes, or gives a little in time of Travel, to give way for the *Fœtus*. See **DELIVERY**.

It has a large *Foramen*, which makes room for the Passage of two Muscles of the Thigh; besides a Sinus, whereby the Cerebral Veins and Arteries pass to the Thighs. See **PACTINIS OS**.

**PUBLIC Notary**, see **NOTARY Public**.

**PUBLICAN**, **PUBLICANUS**, among the *Romans*, a Person who farm'd the Imposts, Taxes, and public Revenues.

The Name appears to have been odious to the *Jews*, &c. apparently because of the Exactions of this sort of People.

**PUBLICATION**, the Act of *Promulgating*, or making a thing known to the World. See **PROMULGATION**.

By the Canons, *Publication* is to be made of the Banns of Marriage three times, e'er the Ceremony can be solemniz'd; without especial Licence to the contrary. See **MARRIAGE**.

**PUCELLAGE**, see **VIRGINITY**.

**PUDICA Planta**, see **SENSITIVE Plant**.

**PUERILITY**, in Discourse, *Langens* defines it to be a Thought, which, by being too far stretch'd, becomes flat and insipid.—*Puerility*, he adds, is the common Fault of those who affect to say nothing but what is Brilliant and Extraordinary. See **SUBLIME**.

**PUGIL**, among Physicians, &c. a Measure of Flowers, Seeds, or the like Matters, containing so much as may be taken up between the Thumb and two Fore-Fingers. See **MEASURE**.

The *Pugil* is esteem'd the eighth part of the Handful. See **MANIFULUS**.

The Word comes from the *Latin*, *Pugillus*, little Hand. The *French* frequently call it *Pincel*, *Pinch*.—Some confound *Pugil* with *Manifulus*; and use it for a Handful.

**PUISNE**, **PENY**, in Law, a Younger-born; or a Child born after another. See **MULIER**.

The Word is not only apply'd to the second, third, fourth, &c. with regard to the first; but to the third with regard to the second, &c.

The last of all is call'd absolutely *Cadet*. See **CADET**.

The Word is pure *French*; in which Language it bears the same Signification.

In the like sense we say a *Puisne Judge*, a *Puisne Counsellor*. See **JUDICE** and **JURISCONSULT**.

**PUKING**, a cant Word for a Nausea, or Disposition to Vomit. See **NAUSEA** and **VOMITING**.

**PUL**, in Commerce, a general Name which the *Perseans* give to all the Copper-Money current in the Empire; particularly the *Kobessqui* and *Demi-Kobessqui*. See **MONEY** and **COIN**.

*Olearius*, who was at *Ispahan* in 1637, in the Retinue of the Ambassador of *Holstein*, assures us, That each City in *Persia* has its several Copper-Money, mark'd with its particular Badge, which is only current in that District, and changed every Year.—At the beginning of each Year, which is at the Vernal Equinox, all the old Money is cried down, and the new appears in its place.

Both the Emperor and the State find their Interest in this frequent change: The first, in that he only gives at the Rate of 17 *d.* Sterling per Pound for Copper; yet delivers it out coin'd in *Kabesjai* and *Demi-kabesjai* at above 2 *s.* per Pound: The second, in that the Copper-Money is by this Means less abundant, being reduced each Year to nearly the same Quantity.

The same Author adds, that at the Time when he was in *Persia*, the *Kabesjai* at *Ispahan* were struck with the Image of a Lion, at *Scamachia* with a Devil, at *Kasbean* with a Cock, and at *Kian* with a Fish.

**PULLEY**, *Trochlea*, in Mechanics, one of the five Mechanical Powers; consisting of a little Wheel, or Rundle, having a Channel around it, and turning on an Axis; serving, by means of a Rope which slides in its Channel, for the raising of Weights. See MECHANICAL POWER.

The *Latins* call it *Trochlea*; and the Seamen, when fitted with a Rope, a *Tackle*.—An Assemblage of several Pulleys is call'd a *Polyspaston*.

#### Doctrine of the PULLEY.

1<sup>o</sup>. If a Power P, (Tab. MECHANICS, fig. 49.) sustain a Weight Q, by means of a single Pulley A B; in such manner as that the Line of Direction of each is a Tangent to the Periphery of the Rundle; the Weight and the Power are equal.

Hence, a single Pulley, if the Lines of Direction of the Power and the Weight be Tangents to the Periphery, neither assists nor impedes the Power; but only changes its Direction.

The Use of the Pulley, therefore, is when the vertical Direction of a Power is to be changed into an horizontal one; or an ascending Direction into a descending one; and on the contrary.

This is found a good Provision for the safety of the Workmen employ'd in drawing with the Pulley.—For suppose a large Weight E F g requir'd to be rais'd to a great Height by Workmen pulling a Rope A B: If now the Rope should chance to break, the Workmen's Heads underneath would be in immediate Danger; but if by means of the Pulley B, the vertical Direction A B be changed into an horizontal one B C, there is no danger from a breaking of the Rope.

This Change of Direction by means of a Pulley has this further Advantage; that if any Power can exert more Force in one Direction than another; we are here able to employ it in its greatest force.

Thus, e. g. a Horse cannot draw in a vertical Direction; but draws with all its Advantage in a horizontal one. By changing the Vertical Draught, therefore, into a horizontal one, a Horse becomes qualify'd to raise a Weight.

2<sup>o</sup>. If a Power apply'd in E, (Fig. 50.) according to the Line of Direction B E, which is a Tangent to the Pulley in E and parallel to the Rope A D, sustain the Weight F suspended from the Centre of the Pulley C; the Power is subsample of the Weight.

But the grand Use of the Pulley, is where several of 'em are combined; thus forming what *Vitruvius*, and others after him, call *Polyspaston*; the Advantages whereof are, that the Machine takes up but little room, is easily removed, and raises a very great Weight with a very moderate Force.

The effect of *Polyspaston* is founded on the following Theorem.

3<sup>o</sup>. If a Power apply'd in B, (Fig. 51.) sustain (by means of a *Polyspaston*) a Weight F, so as all the Ropes A B, H I, G F, E L, C D, are parallel to each other: The Power will be to the Weight as Unity to the Number of Ropes, H I, G F, E L, C D, drawn by the Weight F; and therefore as Unity to the Number of Pulleys, higher and lower, taken together.

Hence, the Number of Pulleys and the Power being given, 'tis easy to find the Weight that will be sustain'd thereby: Or, the Number of Pulleys and Weight to be sustain'd, being given, the Power is found: Or, the Weight and Power being given, the Number of Pulleys the *Polyspaston* is to consist of, is found. See POLYSPASTON.

4<sup>o</sup>. If a Power move a Weight by means of several Pulleys; the Space pass'd over by the Power will be to the Space pass'd over by the Weight, as the Weight to the Power.

Hence, the smaller the Force that sustains a Weight by means of Pulleys, is; the slower is the Weight rais'd: So that what is saved in Force, is spent in Time.

**PULMO**, in Anatomy, see LUNGS.

**PULMO Marinus**, *Sea-Lungs*, among Naturalists, a light spongy Body, of a shining Colour, like Crystal, intermix'd with black, and usually of a Figure resembling the human Lungs; whence its Name.

It swims a-top of the Water; and is popularly supposed to presage a Storm.—It is in effect no more than a viscous Excrement of the Sea, hardened by the Sun.

It shines in the Night-time, and communicates its luminous Property to a Stick rubb'd therewith. Being apply'd to the Skin, it raises an Itching, and takes off the Hair.

**PULMONARY Vessels**, in Anatomy, are those which carry the Blood from the Heart to the Lungs, and back again from the Lungs to the Heart.

These are two in Number; viz. the *Pulmonary Artery* and *Vein*.

The *Pulmonary Artery*, which the Antients call'd *Vena Arteriosa*, the *Arterial Vein*, is, in reality, an Artery, and compos'd, like the rest, of several Tunics.—It arises from the right Ventricle of the Heart, and divides into two large Branches, which sub-dividing into several smaller, diffuses itself throughout the whole Substance of the Lungs. See LUNGS.

The *Pulmonary Vein*, which the Antients call'd *Arteria Venosa*, the *Venous Artery*, consists of four Membranes like the other Veins. It arises in the Lungs from an infinity of little Branches, which uniting in one Trunk, opens into the left Ventricle of the Heart. See HEART.

For the Office of these Vessels, see CIRCULATION. See also RESPIRATION, &c.

Mr. *Cowper* gives us an Instance of a *Polypus* in the *Pulmonary Vein*. See POLYPUUS.

**PULMONARY Consumption**, or Consumption of the Lungs, is what we properly call a *Phthisis*. See PHTHISIS.

**PULP**, in Fruits, the *Fibz*; or that part between the Skin, and the Core, or Seed. See FRUIT.

The *Pulp* of a Tree, or Plant, is the *Parenchyma*, which grows and swells by means of a Juice, at first very coarse and disagreeable; at length sweeter and more delicate. See PARENCHYMA; see also VEGETABLE, PLANT, &c.

**PULP**, in Medicine, the fattest, fullest, and most solid part of the Flesh. See FLESH.

Physicians apply the Word particularly to the upper part of the Belly; because fleshy, and because 'tis here that they feel Animals, to examine whether they be fat.

This part the *Latins* call *Pulpa*, from *palpare*, to feel, handle.

**PULP**, in Pharmacy, is the soft part of Fruits, Roots, or other Bodies, extract'd by infusion, or boiling, and pass'd thro' a Sieve.

**PULPIT**, **PULPITUM**, a Term now restrain'd to an Elevation, or Apartment in a Church, whence Sermons are deliver'd.

Among the *Romans*, the *Pulpit* was a part of the Theatre, call'd also *Proscenium*; or what we now call the *Stage*, whereon the *Actors* stood; tho' some say it was properly an Eminence thereon for the Music, or a *Suggestum* whence Declarations, &c. were spoke.

The *French* use the Word *Pulpit*, *Pupitre*, for a Reading-Desk in a Church, Library, or the like: Those large ones in Churches, they properly call *Lutrin*.

Some Authors derive the Word from *Publicum*, because People are there expos'd to open view.

**PULSATION**, in Medicine, the Motion of the Pulse; or the Beating of the Artery. See PULSE.

**PULSE**, in the Animal Oeconomy, the beating, or throbbing of the Arteries. See ARTERY.

The *Pulse* is that reciprocal Motion of the Heart and Arteries, whereby the warm Blood thrown out of the left Ventricle of the Heart, is so impell'd into the Arteries to be by them distributed throughout the Body, as to be perceivable by the Finger. See BLOOD.

The Palliation of the Arteries arises from that of the Heart; and has, like it, a Syftole and Diastole; the Syftole of the one corresponding to the Diastole of the other. See HEART, SYSTOLE, &c.

*Galen* tells us, that *Hippocrates* was the first who observ'd the Motion of the *Pulse*. *M. Homberg* mentions the Case of a Woman in *Paris* who had a *Pulse* in the Veins, perfectly like that we commonly observe in the Arteries. He adds, that he is the first Author that ever mention'd such a thing. See VEIN.

The *Pulse* is thus accounted for.—When the left Ventricle of the Heart contracts, and throws its Blood into the great Artery; the Blood in that Artery, is not only thrust forward towards the Extremities, but the Channel of the Artery is likewise dilated; because Fluids, when they are press'd, press again towards all sides, and their pressure is always perpendicular to the sides of the containing Vessels: but the Coats of the Artery by any small Impetus may be distended; therefore, upon the Contraction of the Heart, the Blood from the left Ventricle will not only press the Blood in the Artery forwards, but both together will distend

And the fibres of the Artery; and thus is a Motion of Dilatation effected.

And when the Impetus of the Blood against the fibres of the Artery ceases, that is, when the left Ventricle ceases to contract, then the spiral Fibres of the Artery, by their natural Elasticity, return again to their former State, and contract the Channel of the Artery, till it is again dilated by the Systole of the Heart; so that here is a Motion of Restitution effected.

This Diastole of the Artery is call'd its *Pulse*, and the space of the spiral Fibres returning to their natural state, is the distance between two *Pulses*.

This *Pulse* is in all the Arteries of the Body at the same time: for while the Blood is thrust out of the Heart into the Artery; the Artery being full, the Blood must be propell'd in all the Arteries at the same time; and because the Arteries are conical, and the Blood moves from the Basis of the Cone to the Apex, therefore the Blood is continually pressing against the Sides of the Vessels, and consequently every Point of the Artery must be dilated at the same time that the Blood is thrown out of the left Ventricle of the Heart; and as soon as the Elasticity of the spiral Fibres can overcome the Impetus of the Blood, the Arteries are again contracted.

Thus, two Causes operating alternately; the Heart, and Fibres of the Arteries, keep the Blood in a continual Motion. See CIRCULATION.

The Observation of the *Pulse* is of the last Importance to a Physician; both as it discovers the State of the Heart, the first Mover in the Animal Frame; and as it shews the Nature, Quantity, and Motion of the Blood, that universal Humour whereon all the rest depend; and as it indicates the condition of the Artery, the primary Vessel of the whole Body.

A *strong Pulse*, then, denotes, 1. A great Muscular Force of the contracting Heart; and, consequently, the strength of the contracting Cause; i. e. A brisk and copious influx of the nervous Juice into the Villi of the Heart. 2. Plenty of Blood. 3. A laudable Secretion and Circulation of Humours.

A *strong Pulse*, therefore, is a good Prognostic, if it be alike throughout the whole Body. Indeed it is frequently fallacious in Apoplectic, and some other Diseases; where the Passage between the Heart and the Brain is free; and in other parts, especially the Viscera, obstructed.

A *weak Pulse* denotes the contrary of the former; and this some times deceives, particularly in fat People.

A *hard Pulse* signifies, 1. That the Membrane of the Artery is dryer than ordinary; And, therefore, 2. Obstructions in the minute Vessels whereof the Membranes of the Artery are wove. 3. That the Arteries are full; but, 4. That their Capillary Extremities are obstructed with an inflammatory Viscidity. 5. That the Blood is very dense and compact: Hence, 6. That the Circulations, Secretions, and Excretions are depraved.

A *soft Pulse* denotes the contrary to all these; yet is very fallacious in an acute *Peripneumonia*.

A *slow Pulse* denotes, 1. That the Contractions of the Heart are slow; and, therefore, 2. A Slowness of the Influxes of the nervous Juice from the Brain into the Villi of the Heart. 3. That the Blood has circulated a great number of Times. 4. That all the Humours circulate easily thro' their Vessels. Indeed if the Pulse be thus from Weakness, 'tis an ill sign.

A *quick Pulse* denotes the contrary to all these; as Acrimony, Spiritus agitated, Fevers, Phrenzy.

An *equable Pulse* denotes a constant Tenor of the vital Functions; and an uneven one the contrary.

An *intermitting Pulse* shews Life in a slippery Situation.

An *intermitting Pulse* is either owing to a fault in the nervous Juice, which flows unequally into the Heart; or in the Vessel which transmits the Blood and Humours; or to the Humours themselves.

The Cause of this Disorder is various, as Convulsions, Polypus, Catochymias, Inflammations, want of Blood, bony or cartilaginous Arteries, &c.

A strong, equable, and, at the same time, slow *Pulse*, is of all others the best. A strong and great; or strong and slow *Pulse*, together, are good. A weak, small, hard, unequal, intermitting, quick *Pulse*, is of all others the worst.

Yet in all these things, regard must be had to the nature of the particular Artery, the Age, Sex, Temperament, Affections of the Mind, the six Non-naturals, Habit of Body, Season, Country, &c. All which have an influence on the *Pulse*.

A Diminution or total Suspension of the *Pulse*, is reducible, either to a *Leipsochymia*, where it fails to such degree, as that there is scarce strength left to sustain the Body. See LEIPSOCHYMIA.

Or to a *Leipsochymia*, when it strikes to a sensible Diminution of the natural Heat.

Or to a *Syncope*, when the Heart fails, so as the Heat, Motion, Senses and all are almost destroy'd.

Or, lastly, to an *Alphyxia*, where those are all absolutely destroy'd as to sense, and Death itself seems in possession. See SYNCOPES, &c.

*PULSE* is also used for the Stroke, with which any Medium is affected by the Motion of Light, Sound, &c. through it. See LIGHT and SOUND.

Sir Isaac Newton demonstrates, lib. 2. Prop. 48. Princip. That the Velocities of the *Pulses* in an Elastic Fluid Medium, (whose Elasticity is proportionable to its Density) are in a Ratio compounded of half the Ratio of the Elastic Force directly, and half the Ratio of the Density inversely: So that in a Medium whose Elasticity is equal to its Density, all *Pulses* will be equally swift. See MEDIUM, FLUID, &c.

*PULSÆ, Legumen*, in Botany, a Term used for those Grains or Seeds which are gather'd with the Hand; in contradistinction to Corns, &c. which are reap'd, or mow'd.

*Pulse* is the Seed of the leguminous Species of Plants. See LEGUMINOSUS.

The Word is primarily understood of Grains that grow in Pods; as Beans, Peas, Vetches, &c. but is also used, by Extension, for Artichocks, Asparagus, and other Kitchen-Roots and Herbs.

*PULSION*, or *Trusio*, the Act of driving, or impelling a thing forwards. See TRUSION.

The Word comes from *pello*, I drive. See ATTRACTION and ELECTRICITY.

*PULTURA*, in our old Law-Books, denotes a previous Examination; from *passare*, to ask, or demand, thus call'd on account of the Monks, who, e'er they were admitted into the Monasteries *passabant ad fores*, for several days—*Et volo ut sint quæsti de omnibus Casibus & Quæstionibus, & placitis Ballivorum & Prepositorum Hundredi, & a Pultura Serjanorum*; i. e. from the Examination of Serjeants; & de *rewards Forestarum*, i. e. the Visitation of the Forest.

*PULVERIZATION*, the Act of *Pulverizing*, or reducing a Body into a fine Powder. See POWDER.

This is performed, in friable Bodies, by pounding or beating in a Mortar; but to *pulverize* malleable ones, other Methods must be taken. See FRIBLE and MALLEABLE.

To *pulverize* Lead, or Tin, the Method is thus: Rub a round wooden Box, all over the inside, with Chalk; pour a little of the melted Metal nimbly into the Box, when shutting the Lid, and shaking the Box briskly, the Metal will be reduced into Powder. See TRITURATION.

*PULVINATA*, *PULVINATED*, in the ancient Architecture, a Term apply'd to a Freeze which swells, or bulges out, in manner of a Pillow; whence the Name. See FREEZE.

*PULVIS Fulminans*, or the thundering Powder; see FULMINANS *Pulvis*.

*PULVIS Patrum*, the Jesuits Powder; see CORTEX and QUINAQUINA.

*PUMICE Stone*, *PUMEX*, a kind of spongy Stone, very porous and friable. See STONE.

Naturalists are not agreed about the Nature and Origin of *Pumice*—Some look on it as pieces of Rock half-burnt and calcined, cast up in Eruptions of Volcano's, particularly *Etna* and *Vesuvius*, into the Sea; and which, by being there wash'd in the Salt-water, lays aside the black Colour that the Impression of the subterranean Fires had given it, and becomes whitish, or sometimes only greyish, according as it has floated more or less in the Sea.

Other Authors will have the *Pumice* to rise from the bottom of the Sea; whence they suppose it detach'd by subterranean Fires, and hence account both for its lightness and porosity, and its saline Taste. Alleging, in confirmation hereof, that *Pumice* is frequently found in parts of the Sea far remote from all Volcano's; and adding, that several parts of the *Archipelago* are frequently found cover'd with it, all at once, after a few inward shakes and heavings of the bottom of the Sea.

*Pumice* makes a very considerable Article in Commerce, and is much used in the Arts and Manufactures to polish and smooth several Works. See POLISHING, &c.

Its pieces are of several Sizes: The Parchment-Makers and Marblers use the largest and lightest.—The Carriers the heaviest and flattest.—Pewterers the smallest.

Pliny observes, that the Antients made considerable use of *Pumice* in Medicine; but it is out of the present Practice.

*PUMP, Astia*, in Hydraulics, a Machine form'd on the Model of the Syringe, for the raising of Water. See STRAINING.

*Vitruvius* ascribes the first Invention of *Pumps* to *Ctesibius* the Athenian, whence the Latins call it *Maquina Ctesibiana*, or *Organnum Ctesibianum*.

*Pumps* are distinguish'd into several Kinds, with regard to the several Manners of their acting—As the *Common*, sometimes call'd the *Sucking-Pump*, which acts by the pressure of the Air, and whereby Water is rais'd out of a lower into a higher Place not exceeding thirty-two Feet: The

The *Forcing-Pump*, which acts by mere impulse or propulsion, and raises Water to any Height at pleasure:—And *Ctesibius's Pump*, the first and finest of 'em all, which acts both by Suction and Expulsion.—The Structure of each is as follows.

*Structure and Action of the Common or Sucking Pump.*

1. A hollow Cylinder or Barrel ABCD, (Tab. HYDROSTATICS, fig. 27.) is provided, of any solid Matter, usually Wood; and erected perpendicularly in a Spring, or other Source of Water: The lower Base of the Cylinder being first fitted with a Valve I, which opens upwards.

2. A Piston or Embolus, call'd the Sucker, EK, furnish'd with a Valve L, which likewise opens upwards, is let down the Cylinder; and for the more easy working upwards and downwards, furnish'd with a Lever, as GH. See EMBOLUS and VALVE.

Now, the Embolus EL, being drawn up from I to L, will leave the Space L I void of Air, at least in a great measure: So the Pressure, therefore, of the Air on the Surface of the stagnant Water prevailing, will, by the Laws of Hydrostatics, lift up the Valve I, and raise it to fill the Cavity LI. See AIR and SIFON.

If, then, the Embolus be again let down; the lower Valve being now fast closed with the Weight of the incumbent Water, upon pressing the Piston, the Water must open the upper Valve, and get into the Embolus, by which it is raised up and discharged out at the Spout H.

This is the Embolus alternately raised and depressed, &c. See the Theory of the Pump more accurately laid down under the Article SYRINGE.

*Structure and Action of a Forcing Pump.*

1. In a Cylinder AB, (Fig. 28.) is divided by a Diaphragm, or transverse piece, CD, fitted with a Valve E, opening upwards; and thus immersed in Water.

2. An Embolus F, furnish'd with a Valve G, is so fitted to an Iron Rod IH, movable on a Hinge at H, as that it may be conveniently raised and depressed by the Hand apply'd in K.

Now, upon depressing the Embolus F, the Water will open the Valve G, and thus ascend into the Cavity of the Cylinder BC: But upon raising it again, the Valve G is shut; so that there is no Passage for it that way: The Valve E, therefore, becomes open'd, and the Water mounts thro' it; and by repeating the Agitation of the Embolus, is at length driven out through the Spout M.

The great difficulty of rectifying this Pump when it happens to be out of Order, on account of the chief Seat of Action's being under Water, makes People decline the Use of it, when they can do well without it; notwithstanding its Advantage of raising the Water to any given Height.

*Structure and Action of Ctesibius Pump.*

1. A brass Cylinder ABCD, (Fig. 29.) furnish'd with a Valve L, is placed in the Water. 2. In this is fitted the Embolus M K, made of green Wood which will not swell in the Water, and adjusted to the Aperture of the Cylinder with a covering of Leather; but without any Valve. In H is fitted on another Tube N H, with a Valve that opens upwards in I.

Now, the Embolus EK being raised, the Water opens the Valve in L, and rises into the Cavity of the Cylinder.—And when the same Embolus is again depressed, the Valve I is open'd, and the Water driven up thro the Tube H N.

This is the Pump used among the Antients; and that from which both the others are deduced.—Sir S. Morland has endeavour'd to increase its Force, by lessening the Friction; which he has done to good effect: Inasmuch as to make it work without, almost, any Friction at all.

PUMPS, used in Ships, are of several Kinds: As, the *Chain-Pump*, used in large Vessels. This yielding a great Quantity of Water, works easily, and is easily mended.

*Bare-Pumps* are small ones made of Cano, or a piece of Wood bored thro', used in lieu of Cocks, &c. to pump Beer or Water out of the Casks.

*Bur-Pumps*, call'd also *Bildge-Pumps*, are chiefly used by the Dutch, who have 'em by their Ships-sides. In these is a long Staff with a Bur at the End like a Gunner's Sponge, to pump up the Bildge-Water. See BUR-PUMP.

*Air-Pump*, in Pneumatics, is a Machine by means whereof the Air is emptied out of Vessels, and a sort of Vacuum produced therein. See AIR and VACUUM.

For the Invention, Structure, and Use of this Pump; see AIR-PUMP.

PUN, or PUNN, a *Lusus Verborum*, or Point, the Wit whereof depends on a resemblance between the Sounds or Syllables of two Words, which have different, and, perhaps, contrary Significations. See POINT and WIT.

Such are—*Cane Dogane Cane*—*Far Mole, Mole, Mole.*—*Lex Dei, Lux Diti.*—All-houses are Ale-houses.—The holy State of Matrimony, is become Matter of Money.—Some Men's Paradise is a pair of Dice.—Was it so in the time of Noah? Ah no.—*L'Orare tire du L'adorare, ou L'adorare Ordonne*, is the Title of a French Book.

PUNS, when they come easily, and are very ingenious, poignant, and apposite, are allow'd of in Conversation, Letters, Epigrams, Madrigals, and the like Compositions; but are absolutely banish'd out of the grave, serious, and sublime, by reason they weaken its Force and diminish its Beauty which consists in something great and elevated.—The Greeks and Romans, 'tis true, sometimes indulg'd themselves the Practice, and us'd them as Ornaments in the most serious Discourses. But the more severe and philosophical Genius of our Age, is by no means satisfy'd with such an outside of Wit.—Devils, Symbols, Rebus's, Motto's, &c. are their proper Sphere, where they shine to most advantage. See DEVISE, REBUS, &c.

PUNCH, an Instrument of Iron or Steel, used in several Arts, for the piercing or stamping Holes in Plates of Metals, &c. being to contrived, as not only to perforate, but to cut out and take away the Piece; whence the French call it *Emporte-piece*, *q. d.* take-off piece.

The *Punch* is a principal Instrument of the Metal-Button-Makers, Water-Makers, Patch-Makers, Shoe-Makers, &c.

The *Punch* of the Makers of Plate Buttons serves to cut and parcel out the Plates of Gold and Silver wherewith they cover their Moulds.—'Tis large, round, four, or five Inches high, the bottom hollow for about half an Inch, well steel'd, and the Edge very sharp.

To use it, they extend the Piece of Metal on a leaden Table or Block, and with a pretty heavy Hammer, strike the Head of the *Punch*, &c. See BUTTON-MAKING.

In the Manage, a *Punch Horse*, is a well-knit Horse; short-back'd, and thick-shoulder'd, with a broad Neck, and well lined with Flesh.

PUNCH, is also a sort of compound Drink, frequent in England, and particularly about the Maritime Parts thereof; tho' little known elsewhere. See DRINK.

Its Basis is Spring-Water, which being render'd cooler, brisker, and more acid with Lemon-Juice, and sweeten'd again to the Palate with fine Sugar, makes what they call *Sherbet*; to which a proper Quantity of a spirituous Liqueur, as Brandy, Rum, or Arrac being super-added; the Liqueur commences *Punch*.

Several Authors condemn the Use of *Punch* as prejudicial to the Brain, and nervous System.—Dr. Cbeyne insists that there is but one wholesome Ingredient in it, which some now begin to leave out, viz. the mere Element. See WATER, BRANDY, RUM, ARRAC, SUGAR, &c.

The proportions of the Ingredients are various; usually the Brandy and Water are in equal Quantities.

Some, instead of *Lea*-Juice, use Lime-Juice, which makes what they call *Punch Royal*; and some less liable to affect the Head, as well as more grateful to the Stomach.

Some also make *Milk-Punch*, by adding near as much Milk to the Sherbet as there is Water; which tempers the Acrimony of the Lemon.—Others prefer *Tea-Punch*, made of green Tea instead of Water, and drank hot.

Lastly, What they call *Punch for Chamber-Maids* is made without any Water; is of Lime-Juice, sharpen'd with a little Orange and Lemon-Juice; twice as much white Wine as Lime Juice, and four times as much Brandy, with Sugar.

PUNCHIN, or PUNCHION, in Building. See PUNCHION.

PUNCHION, a little Block, or Piece of Steel, on one End whereof is some Figure, Letter, or Mark engraven either in *Cross*, or in *Relievo*; Impressions whereof are taken on Metal, or some other Matter, by striking it with a Hammer, on the End not engraven. See ENGRAVING, &c.

There are various Kinds of these *Punchions* used in the Mechanical Arts.—Such, for instance, are those of the Goldsmiths, Cutlers, Pewterers, &c. See MARK.

PUNCHION, in Coining, is a piece of Iron steel'd, whereto the Engraver has cut, in *Relievo*, the several Figures, Arms, Effigy, Inscription, &c. that are to be in the Matrices, wherewith the Species are to be mark'd. See MATRIX, &c.

Coiners distinguish three Kinds of *Punchions*, according to the three Kinds of Matrices to be made: that of the Effigy, that of the Cross or Arms, and that of the Legend or Inscription.

The first includes the whole Portrait, in *Relievo*.—The second are small, each only containing a piece of the Cross or Arms, v. gr. a Flower-de-Lys, a Harp, a Coronet, &c. by the Assemblage of all which, the entire Matrix is form'd.—The *Punchions* of the Legend only contain each a Letter, and serve equally for the Legend on the Effigy-side, and the Cross-side. See COINING.

For the Manner of Engraving, Tempering, and Stamping these Punchions, to form the Matrices; see ENGRAVING on Steel, MATRIX, &c.

PUNCHIONS, in Printing, are those used in stamping the Matrices, wherein the Types, or Printing-Characters, are cast. See LETTER-FOUNDER.

PUNCHION is also used for several Iron Tools of various Sizes, and Figures used by the Engravers in Creux, on Metals—Seal-Gravers, particularly, use a great number; for the several pieces of Arms, &c. to be engraven—And many stamp the whole Seal from a single Punchion. See ENGRAVING.

PUNCHION is also a common Name for all the Iron Instruments used by Stone-Cutters, Sculptors, Lock-Smiths, &c. for the cutting, incising, or piercing their several Matrices.

Those of Sculptors and Statuaries, serve for the repairing Statues, when taken out of the Moulds. See STATUE, FOUNDERY, &c.

The Lock-Smiths use the greatest Variety of Punchions; some for piercing hot, others for piercing cold; some flat, some square, some round, others oval; each to pierce Holes of its respective Figure, in the several parts of Locks.

PUNCHION, or PUNCHIN, or NEEDLE, in Carpentry, is a piece of Timber placed upright between two Posts whose bearing is too great; serving, together with them, to sustain some large Weight. See BEARING, &c.

The Punchion is usually lower and lighter than the Post, and is join'd by a Brace, or the like, of Iron. See POST.

Punchion is also a piece of Timber raised upright under the Ridge of a Building, wherein the little Forces, &c. are joined—Vitruvius calls the Punchion, Column.

Punchion is also used for the Arbour, or principal Part, of a Machine, whereon it turns vertically; as that of a Crane, &c. See CRANE.

PUNCHION, is also a Measure for Liquida, containing  $1\frac{1}{2}$  of a Hoghead; or 48 Gallons, or  $\frac{1}{2}$  of a Tun. See MEASURE.

The Paris Punchion is the same with their Demi-queue: At Rome, it is three Bushels, &c.

PUNCTATED Hyperbola, in the higher Geometry, an Hyperbola, whose oval Conjugate is infinitely small, *i. e.* a Point. See CURVE and HYPERBOLA.

PUNCTION, or PUNCTURE, in Chirurgery, an Aperture made in the lower Belly, in Dropsical Persons; to discharge the Water: call'd also PARACENTESIS; which see. See also TAPPING, and DROPSY.

PUNCTIONATION, in Grammar, the Art of Pointing; or of dividing a Discourse into Periods, and Members of Periods; by Points, expressing the Pauses to be made in the reading thereof. See SENTENCE, PERIOD, &c.

The Points used herein are four; *viz.* the Period, Colon, Semi-colon, and Comma: See the particular Use of each under the proper Article; COMMA, COLON, PERIOD, and SEMI-COLON.

Punctuation is a modern Art—the Antients were entirely unacquainted with the Use of our Commas, Colons, &c. and wrote not only without any Distinction of Members, and Periods, but also without Distinction of Words: which Custom, Lestius observes, continued till the hundred and fourth Olympiad; during which time, the Sense alone divided the Discourse. See POINT.

There is much more difficulty in Pointing, than People are generally aware of—in effect, there is scarce any thing in the Province of the Grammarians so little fix'd and ascertain'd as this. The Rules usually laid down, are impertinent, dark, and deficient; and the Practice, at present, perfectly capricious; Authors varying not only from one another, but from themselves too.

Indeed, P. Buffier, and since him, Mr. Ward, have done something towards a fix'd and precise System of Pointing, from the Reason and Analogy of Things: Their Doctrine the Reader will find under the Articles, Comma, Colon, &c.

In the general, we shall only here observe, that the Comma is to distinguish Nouns from Nouns, Verbs from Verbs, and such other parts of a Period as are not necessarily join'd together—The Semi-colon serves to suspend and sustain the Period, when too long—The Colon, to add some new, supernumerary Reason, or Consequence, to what is already said—And the Period, to close the Sense, and Construction; and release the Voice.

PUNCTUM, in Geometry, &c. See POINT.

In the Schools, they have their *Punctum Terminans*, which is the indivisible Extreme of a Line, beyond which no part of the Line extends. See LINE.

*Punctum continuans*, which is an indivisible Magnitude between contiguous Points of a Line, whereby they are connected, and from whence arises a Continuity. See CONTINUITY.

And *Punctum Initians*, which is an indivisible, from which the Line begins.

PUNCTUM Formatum, or Generatum, in Conics, is a Point determin'd by the Intersection of a Right Line drawn thro' the Vertex of a Cone to a Point in the Plane of the Base that constitutes the Conic Section. See CONE and CONIC.

PUNCTUM ex Comparatione, is either Focus of an Ellipsis and Hyperbola; thus call'd by *Apollonius*, because the Rectangles under the Segment of the transverse Diameter in the Ellipsis; and under that and the Distance between the Vertex and the Focus, in the Hyperbola; are equal to one fourth part of what he calls the Figure thereof. See ELLIPSIS and HYPERBOLA.

PUNCTUM Lineans, in Geometry, is a Term used by some Authors for that Point of the generating Circle of a Cycloid, or Epicycloid, which, in the Genesis produces any part of the Cycloidal Line. See CYCLOID, &c.

PUNCTUM Salient, in Anatomy, the first Mark of Conception of an Embryo, which is in the place where the Heart is form'd. See CONCEPTION, HEART, and EMBRYO.

This is easily observ'd with a Microscope, in a Brood-Egg, wherein, after Conception, we see a little Speck or Cloud; in the middle whereof is a Spot that appears to beat, or leap a considerable time, e'er the *Fetus* be form'd ready for hatching. See EGG: See also GENERATION, and EMBRYO.

PUNCTUM Lachrymale, in Anatomy, a little Hole in the Edge of each Eye lid; opening into a Bag, call'd the *Glandula Lachrymalis*. See LACHRYMAL.

PUNCTURE, in Chirurgery, &c. any Wound made by a pointed Instrument. See WOUND.

In Pileotomy, People are sometimes brought in danger of the Loss of a Limb, and even of Life, by the *Punctura of a Testis*—The Patient, here, does not immediately feel any pain; but twelve Hours after the Operation, complains thereof; not in the *Punctura* itself, but in the parts tending towards the Armpit—The wounded part swells to the size of a Filbert, and distils an aqueous Humour, or Ichor, which is the chief Diagnostic of the *Punctura Testicis*. See TESTON.

PUND-BRECH, from the Saxon *Pund*, *Parcus*, Pound; and *Brech*, *Frothars*, Breaking, denotes the illegal taking of Cattel out of the Pound; either by breaking the Pound, picking the Lock, or otherwise. See POUND.

—*Si Pund-brech fiat in curia Regis plena Wyta sit: alibi quinque Mance.* Leg. Hen. 1.

PUNISHMENT, a Penalty impes'd upon the Commission of some Crime. See CRIME.

'Tis essential to the Nature of a Law, that it import or decree a Punishment to the Transgressors thereof. See LAW.

The Forms and Manners of Punishment are various in various Countries, and Ages, and for various Crimes; as Treason, Felony, Adultery, Parricide, &c. See ADULTERY, &c.

Among the Romans, the Pecuniary Punishments were the *Malla* and *Coppata*—The Corporal Punishments were *Capitis Diminutio*, *Aqua & Igni Interdictio*, *Proscriptio*, *Deportatio*, *Religatio*, *Furca*, *Crux*, *Carcer*, *Culeus*, *Equuleus*, *Scala Gemonia*, *Dammatio ad Gladium*, ad Metallum, *Flagellatio*, *Talis*, &c. most of which see describ'd under their respective Articles.

Among us, the principal Civil Punishments, are *Fines*, *Imprisonments*, the *Sticks*, *Pillory*, *Burning in the Hand*, *Whipping*, *Cucking-stool*, *Hanging*, *Beheading*, *Quartering*, *Burning*, *Transportation*, &c. See FINE, PILLORY, CUCKING-STOOL, GALLOWES, GIBBET, &c.

The Ecclesiastical Punishments, are *Censures*, *Suspensions*, *Deprivations*, *Degradations*, *Excommunications*, *Anathemas*, *Penances*, &c. See CENSURE, SUSPENSION, DEPRIVATION, DEGRADATION, EXCOMMUNICATION, ANATHEMA, PENANCE, &c.

The Military Punishments, are, being *Shot*, *Running the Gauntlet*, *Riding the wooden Horse*, *Bilboes*, &c.

Among the Turks, &c. *Insuling*, *Basinado's* on the Soles of the Feet, &c. obtain. See IMPALING.

PUNITORY Interest, in the Civil Law, such Interest of Money as is due for Delay of Payment, Breach of Promise, &c.

PUPIL, in the Civil Law, a Boy or Girl, not yet arriv'd at the State of Puberty; *i. e.* under fourteen Years of Age the Boy; and twelve the Girl. See PUBERTY.

While a Minor remain'd under the Direction of a Tutor, he was call'd *Pupils*; after Puberty, a Curator being assign'd him, he ceased to be call'd a *Pupil*. See TUTOR and CURATOR.

A Tutor is obliged to pay Interest for what Moneys of his *Pupils* lie idle and unemployed—A Tutor is allow'd to do any thing for his *Pupil*, but nothing against him.

**PUPILLA**, *PUPIL*, in Anatomy, a little Aperture, in the middle of the Uvea, and Iris of the Eye; thro' which the Rays of Light pass to the Crystalline, in order to be painted on the Retina, and cause Vision. See EYE and VISION.

'Tis observed, that as we are forced to use various Apparatus to our Optic Glasses; so Nature has made a like Provision in the Eyes of Animals, whereby to shut out too much, and admit sufficient Light; by the Changes in the Aperture of the *Pupil*. See TELESCOPE.

The Structure of the Uvea and Iris is such, as that by their Aperture, the *Pupil*, is contractible and dilatible at pleasure; so as to accommodate itself to Objects, and to admit more or fewer Rays, as the Object being more vivid and near, or more obscure and remote, requires more or less Light—it being a constant Law, that the more luminous the Object, the smaller the *Pupil*; and again, the nearer the Object, the smaller the *Pupil*; and vice versa. See UVEA and RAY.

This Alteration of the *Pupil* is effected by certain Muscular Fibres on the Outside of the Uvea; which are furnished with Nerves detach'd hither from the dextrorsity—These Fibres proceeding straight, from their Origin towards the Centre, terminate in the Orbicular Limb or Verge of the *Pupil*, which consists of Orbicular Muscles; whereby the Figure and Space of the *Pupil* are defined.—The first, or longitudinal Fibres, dilate the Aperture of the *Pupilla*; the latter, or orbicular ones, constrict it.

Some Authors, however, attribute the Motions of the *Pupilla* to the *Ligamentum Ciliare*; and others think, that both this, and the Fibres of the Uvea, concur herein—Mr. *Verham* adds, that while the *Pupil* opens, and shuts; the *Ligamentum Ciliare* dilates, or compresses the Crystalline, and brings it nigher to, or further from the Retina, as the Object is more or less remote. See CILIARE, &c.

The Figure of the *Pupil* in various Animals, is wonderfully adapted to their various Circumstances and Occasions. In some, e. g. in Man, 'tis round; that Form being fittest, for the position of our Eyes, and the various use we make of them in all Directions.

In others, 'tis elliptic or oblong; in some of which, e. g. the Horse, Sheep, Ox, &c. the Ellipsis is transverse, and the Figure large, to enable them to see laterally and even with a little Light; and thereby both to gather their Food the better in the Night, and to avoid Dangers on either side.—In others, e. g. the Cat, the Ellipsis is erect; and also capable of opening very wide and shutting very close; by means of the latter of which, that Animal can exclude all, but, as it were, a single Ray of Light, and so avoid all the Inconveniences of the bright Sun; and by the former can take in all the faintest Rays, and thus avoid the Inconveniences of the Night. An incomparable Provision for these Animals, which are to watch and way-lay their Prey both by Day and Night; to see upwards and downwards; to climb, &c. See EYE.

**PUPILLARITY**, the State of a Pupil; in opposition to *Puverty*. See PUBEITY.

Hence, also, *Pupil* comes to be used, by way of Extension, in Universities, &c. in the sense of *Alumnus*, for a Youth under the Education, or Discipline of any one.

**PURBECK Stone**, see STONE.

**PURCHASE**, in Law, the Acquisition of Goods, viz. Lands, Tenements, &c. by means of Money; in contradistinction to those descending from Ancestors. See GOODS.

**PURCHASE**, in the Sea-Language, has the same Signification with *draw*, at Land.—Thus, they say the *Capitan purchases a-pace*, i. e. draws in the Cable a-pace: And when they cannot draw or hale any thing in with the Tackle, they say, the Tackle will not purchase.

**PURK**, something free of any admixture of foreign or heterogeneous Matters. See PURIFICATION.

Hence *Pura Elemens*, *Pure Aims*, a Tenure whereby the Churchmen hold Lands in Scotland, somewhat on the footing of the primitive Clergy. See TITHES.

**PURK Hyperbola**, in Geometry, is a Hyperbola without any Oval, Node, Spike, or Conjugate Point. See CURVE.

**PURK Mathematics**, see MATHEMATICS.

**PURPLEW**, a Term in Heraldry, expressing Ermines, Peas, or any of the Furs, when they compose a Bordure round a Coat of Arms. See PEAN, BORDURE, &c.

Thus they say, He beareth Gules, a Bordure *Purples*, Verry; meaning, that the Bordure is Verry.

**PURGATION**, the Act of *purging*, scowering, or purifying a thing, by separating and carrying off any Impurities found therein. See PURIFICATION.

**PURGATION**, in Pharmacy, is a cleansing of a Medicine, by removing its Superfluities; as the Wood and Seeds out of Cassia, Stoeas out of Dates Tamarinds and other Fruits.

**PURGATION** is also used in Chymistry for several Preparations of Metals, and Minerals; to clear 'em of their Impurities: more usually call'd *Purification*. See PURIFICATION.

The *Purgation* of Mercury is performed by passing it thro' a Chamois Skin. See MERCURY.

Gold is *purged* by the Coppel, Cementation, &c. See GOLD, COPPEL, &c.

The *Purgations* of other Metals are perform'd by repeated Fusions, &c. See METAL, &c.

**PURGATION**, *Catharsis*, in Medicine, is an excretory Motion, arising from a quick and orderly Contraction of the fleshy Fibres of the Stomach, and Intestines; where by the Chyle, corrupted Humours, and Excrements lodg'd therein, are protruded further and further; and at length quite excluded the Body. See EXCRETION, STOMACH, INTESTINES, &c.

*Purgation* is one of the principal Species of *Evacuation*. See EVACUATION.

For the *Means and Manner* wherein it is effected, see PURGATIVE.

**PURGATION**, in Law, is the clearing one's self of a Crime, whereof he is accused before a Judge. See TRIAL.

Of these *Purgations* there was antiently much use in England; especially touching Matters of Felony charged on Clerks; and they are still retained in the Ecclesiastical Court, in suspicion of Incontinency, &c.

*Purgation* is either Canonical, or Vulgar.

*Canonical* is that prescribed in the Canon-Law; the Form whereof, now obtaining, is, that the Party shall take his Oath he is clear of the Fact objected; and bring so many of his honest Neighbours, not above twelve, as the Court shall assign him, to swear, on their Conscience, they believe he swears truly.

The *Vulgar*, and most antient Manner, was by Fire, or Water, or Combat; used by Infidels, and by Christians too, till abolished by the Canon Law. See ORDEAL, WATER, COMBAT, &c.

*Combat*, tho' now disused, may yet be still practised by the Laws of the Realm, in Cases where Evidence is wanting, and the Defendant rather chuses Combat than any other Trial. See SUTHERLAND, DUEL, CHAMPION, &c.

**PURGATION**, in Tragedy, a Term which *Aristotle* uses for the Effect of Tragedy on the Mind.

That Philosopher observes, that Tragedy, by means of the Terror and Compassion which it excites, *purges* those Passions out of the Soul.

Indeed, *Cornelle* adds, that Tragedy frequently makes those Passions, instead of *purging* 'em; so that he takes *Aristotle's* *Purgation* to be no more than a Chimera. See TRAGEDY.

*Menstrual PURGATIONS*, the *Catamenia* or *Menses* of Women. See MENSES.

**PURGATIVE**, or *PURGING Medicine*, a Medicament which evacuates the Impurities of the Body by Stool; call'd also a *Cathartic*. See STOOL, PURGATION, and CATHARTIC.

*Purgatives* are divided, with regard to their Effect, into *Gentle*, *Moderate*, and *Violent*.

*Gentle Purgatives* are such as operate very mildly; as *Tamarinds*, *Cassia*, *Manna*, *Rhubarb*, *Senas*, and most of the Mineral Waters. See CASSIA, MANNA, RHUBARB, &c.

The *Moderate* purge somewhat more briskly, as *Jalap*, *Scammony*, &c. See JALAP and SCAMMONY.

The *Violent* operate excessively; as *Coloquintida*, *Hellebore*, *Laurole*, &c. See COLOQUINTIDA, HELLEBORE, &c.

*Purgatives* are, again, divided with regard to the Humour they evacuate, into *Pblegmagogues*, *Cholagogues*, *Melanogogues*, and *Hydragogues*; each whereof see under its proper Article PULEMAGOGUE, CHOLAGOGUE, &c.

The modern Physicians reject this Division; and shew the Operations of all *Purgatives* to be alike.

#### Theory of the Operation of PURGATIVES.

*Purgatives* make one of the most important Articles in Medicine.—Their Effect is produced by vellitating and irritating the nervous Fibres of the Stomach and Intestines; and thereby urging 'em to an Expulsion. See STOMACH and INTESTINES.

An Idea of the Manner of their Operation is thus given us by Dr. *Cheyne*.

A *Purgative* Medicine being received into the Stomach, by the Mouth, its Particles do there vellitate or stimulate the Fibres of the Stomach, and thereby increase the digestive Faculty, i. e. bring the muscular Fibres of the Stomach and the Muscles of the Abdomen and Diaphragma into more frequent Contractions than ordinary; till the Medicine is admitted into the Intestines, the Fibres and Glands whereof being more sensible than those of the Stomach, (whose Parts by the frequent, rough Contacts of one against another, and of the gross Bodies often thrown into it, are, as it were, deadened) it easily moves and brings 'em into frequent, forcible Contractions, whereby these Glands are liquated,

squeez'd, and so omit a fluid Matter, which lubricates the Passages; and which mixing with the feculent Matter of the Intestines, (which is render'd fluid by the same active and stimulating Quality of the *Purgative* Medicine) renders it more fluid; by which, and by the uncommon Contractions of the Intestines, it passes more easily and plentifully into the *Intestinum rectum*, and is thence ejected by Stool.

Thus do gentle *Purges* act; and only cleanse the Intestines; few of their Particles entering in by the Lactical Veins so as to affect the Blood.—But in violent *Purgatives*, the stimulating Particles are mixed with the Blood, and produce there, many times, very great Effects, by occasioning unnatural Fermentations, by separating the natural Cohesions of the Fluids of the Body; and do also, by vellating the spiral Fibres of the Veins and Arteries, bring those into more forcible Contractions, and thereby accelerate the Motion of the Blood.—All which may have sometimes a good, sometimes a bad Effect.

As to the Effects of *Purgatives*, on animal Bodies, Dr. *Quincy* adds, that every Irritation of the Intestines, either quickens the peristaltic Motion in its natural Direction, or occasions some little Inversions of it.—Now, in both Cases, any Matters that but slightly adhere to the Coats, or inner Membranes, will be loosen'd, and shook off, and carried forward with the other Contents; and they will also be more agitated, and thus render'd more fluid.

Hence is manifest, how a *purging* Medicine hastens and increases the Discharges by Stool; but the same manner of Operation also carries its Effects much farther, in proportion to the Force of the Stimulus: For where it is great, all the Appendices of the Bowels, and even all the Viscera in the Abdomen, will, by a consent of parts, be pull'd or twitch'd, so as to affect their respective Juices in the same manner, as the Intestines themselves do their Contents.—The Consequence of which must be, that a great deal will be drained back into the Intestines, and made a part of what they discharge. And when we consider the vast Number of Glands in the Intestines, with the Outlets of those Viscera opening thereunto, and particularly of the Liver and Pancreas; it will be no wonder that vast Quantities, especially in full Constitutions, may be carried off by one *Purge*.

As to those *Purgatives* distinguish'd by the Names of *Cholagogues*, *Hydragogues*, *Phlegmagogues*, on a Supposition of an elective Quality therein; they may be accounted for upon more intelligible Principles.—For when the Discharges by Stool discover an Over-proportion of any particular Humours, it is to be supposed there was a Redundance of such an Humour, whose discharge any Irritation would occasion. Thus in proportion to the Proximity of some Humours in the Intestinal Tube, and the Disposition of the Passages to convey them that way, do they require greater or lesser Vibrations, or Shakes of the Fibres to fetch them out.

For this Reason, the brisker Cathartics, which vellicate the Membranes most of all, pump out, as it were, from all the Mesenteric Glands, and neighbouring Parts, their Contents, which because they abound so much with Lymphatics, and viscid watry Humours, make the Discharges thin and watry.

Those which act in somewhat a lower degree, yet irritate enough to deterge and draw out a great deal of mucous and viscid Matter, which sometimes by lodgment and want of due Motion, changing into various Colours, occasions the different Names of *Phlegm* or *Choler*. As the former therefore pass for Hydragogues, so do the latter for Purgers of Phlegm and Choler. See *PHLEGM*, *CHOLER*, &c.

But there is another Principle besides that of a Stimulus, whereby a *purging* Medicine is enabled to answer its Intention; *viz.* by fusing the Humours, and rendering them more fluid than before, whereby they are better fitted to pass off by their proper Emanatories.—Those which consist of very subtle and active Parts, are not so sensible in the larger Passages, because of the great Quantities of Matter which lays too great a Load upon them, and makes them unheeded; but when they are got into the Blood in any considerable number, they divide and fuse those Cohesions, which obstruct, or move heavily along the Capillaries, and scour the Glands, inasmuch that every Pulsation throws something through the intestinal Glands, which goes away by Stool, that the reflux Blood had wash'd away and brought back from all parts of the Body.

Of this kind are all those Cathartics, which are said to *purge* the Joints, and are prescribed in Rheumatisms, and Arthritic Pains, as the *Radix Turpethi*, and all the Aloetics.—And this is the Reason, why *purging* Medicines of this sort, are so easily changed into the most efficacious Alteratives; for an Alterative is a Cathartic in a lower degree, or of a more remiss Operation. Whatsoever brings such Particles to a Secretory Orifice, which are fitted for its Passage,

oftener, either by accelerating the Blood's Motion, or breaking it into more Particles of that particular Size and Inclination, will increase the Secretion. According, therefore, to the difference of the Parts, where such Secretions are enlarg'd, as the Glands of the Intestines, Kidneys, or Skin; so are the Medicines, which are the Instruments therein, call'd either *Cathartics*, *Diuretics*, or *Diaphoretics*. See *ALTERATIVE*, *SECRETION*, &c.

Dr. *Quincy* has made some Improvements in the Doctrine of *purging* Medicines, their Nature, Manner of Action, Effects, and Analogy with other Medicines; with the Circumstances of their Preparation, Management, &c. in a Discourse inserted in the *Philosoph. Transact.* The Substance of which we cannot do better than here subjoin.

In order hereto, it is to be premis'd, 1<sup>o</sup>. That all those parts of an animal Body which are vascular, or thro' which any Fluid passeth, from the Intestines to the minutest Fibre, are the Seat of the Operation of Medicines. See *MEDICINES*.

2<sup>o</sup>. That this whole Course of Circulation, or animal Motion, is naturally distinguish'd into three different Stages, by the different Capacities of the Vessels, and Motions of their Contents, each having its proper Outlet; and that these are the Seat of the three Concoctions, so often mention'd by physical Writers: the first being the Stomach and Bowels, and having the Anus for its Emanatory; the second all that Space within the Blood's Motion, so far as it retains its red Colour, having the Kidneys; and the third, all beyond that Circuit, having the Skin for an excretory Organ. See *CONCOCTION*, *EMUNCTORY*, &c.

3<sup>o</sup>. That every Medicine which causeth Evacuation is, in some sense, a *Purge*. See *EVACUATION*.

4<sup>o</sup>. That every *Purge* operates as a Dissolvent, by fusing the Juices, and increasing the Quantity fit for Expulsion; or as a *Stimulus*, by accelerating their Motions, so as to bring the Matter fit for Expulsion, oftener to the secretory Outlet; or both.

These *Posulata* are only premis'd in order to prove this grand Proposition, That a Change in the Bulks, Figures, and Motions of the component Particles of a *purging* Medicine, will change the Seat of its Operation, and fit it for exertion in the larger or smaller Vessels, as those mechanical Affections are intended, or remitted.

For Illustration hereof, it may be convenient to attend to the common way of making a *Purge* operate, more or less, than it otherwise would do.

Substances, then, which are gross and heavy, as those consisting chiefly of saline and earthy Particles; such as Tartar, Manna, and the like, when reduced smaller by Triture, or repeated Solutions, operate more gently; but when acated by Acids, or any way made to expose their Angles more plentifully to the Membranes, they become rougher, and sooner take effect.

Resinous Medicines, as Scammony, Gamboge, Jalap, and most of vegetable Production, are more violent, and operate sooner, when they are more tenacious, and adhesive, as in their Extracts; but gentler, when divided by hard, brittle Substances, such as Salt of Tartar, Sugar, &c.

Medicines which have in their Composition, Sulphur and Salt, are more or less rough, and speedy in their Operation, in proportion to their greater or lesser participation of the saline Ingredient, and the asperity of its Angles.—Of this kind are most Minerals, and their Preparations: It may be sufficient to instance in the management of Antimony, and Mercury; the first of these is by chymical Analysis known to be a Composition of a subtle Sulphur and Salt; and the more the saline Part is set loose by Preparation, and opening the Sulphur, as it is commonly term'd, the speedier, and with the greater vehemence will it operate; whereas in its more imperfect Preparations, when the Salts are closely wrap'd up in their native Sulphur, it will hardly work at all till it reaches the farthest stages of Circulation. See *ANTIMONY*.

Mercury *per se* is little known as a Medicine, and its first Preparation which makes it into Sublimate, so loads it with saline *Spicule*, that it amounts even to a Poison; but the more those *Spicule* are broken by Triture, Sublimation, &c. the milder doth it operate; and if to the comminution of its Points be added a Sulphur subtle enough to join it, it may be reduced to so mild a Medicine, as not to be felt, but in the last Stage of Operation. See *MERCURY*, *SALIVATION*, &c.

This short View may be sufficient to shew, 1<sup>o</sup>. That it is the too great Asperity, and Motion in a Medicine, that will not suffer it to pass the Stomach, without irritating it into such Convulsions, as will throw it up again by *Vomit*. See *EMETIC* and *VOMITING*.

2<sup>o</sup>. That a farther Comminution, and smoothing its Figure, will gain it admittance into the Bowels, and cause it to operate, as a proper *Purgative*, by Stool.

3<sup>o</sup>. That a yet farther Remission of these Properties will convey it into the Blood, and allow it there to promote Evacuation by Urine. See URINE and DIURETIC.

And, lastly, that a still farther Commination will pass it into the minutest Canals, where by the same Properties, only in a lower degree, it will cause Sweat, or increase Perspiration. See PERSPIRATION, SWEAT, DIAPHORETIC, &c.

Hence it appears, that the more subtile Medicines operate in the Capillaries, and smallest Fibres by the same Mechanism, that the more gross ones do in the common Stream of the Blood, when they go off by Urine; or as the grossest of all do in the greater Passages, when they promote Evacuation by Stool.

Hence it is evident, that the Skill of preparing and administering of Medicines consists in proportioning their manifest, and known Properties to the Capacity, and Circumstances of the Part they are to operate in; and to intend, or remit their mechanical Affections, as they are sooner or later to take place in the greater or smaller Vessels.

Of the first Class there are few to be reduced small enough to go beyond the larger Passages, and none of them are worth the pains they require, to fit them further than for Diuretics: Besides, their natural Disposition to attract, and join with the serous Part of the Blood, whenever they get into that stage of Motion, runs them off by the Kidneys, before they can undergo Commination enough to get farther; but if by frequent Reiterations of such Medicines, and an uncommon Laxity of the Passages, any thing is passed into the Habit, their Grossness fouls the delicate Strainers, which are destin'd for their Expulsion; and they lodge upon the Glands and Capillaries in such manner, as to induce Intermitents, which is observable in many Persons, after a long use of Cream of Tartar, the common cathartic Salts, and the purging Waters, especially at the latter end of the Summer, when the heat of the preceding Season has debilitated the Solids, and left 'em under too great a Relaxation.

Among the refinous Purges, there are many very powerful ones, but where their Operation is destin'd in the Viscera, Blood, and remoter parts, they must be extremely divided; and this we find spirituous Menstruums will do, by taking up the most subtile parts only, and carrying them into the very small Passages, where they operate chiefly by fusion; because the softness of such Substances cannot enable them, hardly in any degree, to act as Stimuli, farther, at least, than as ordinary Detergents. And thus we find that Aloes, the chief of this Tribe, goes farthest into the Habit, and continues longest e'er it operates, when managed with a spirituous Menstruum, as in the *Tinctura Sacra*. The *Rad. Turpetivi*, and *Colocynth* likewise, with all of the vegetable Kind, that will yield to a spirituous Liquor, are, by that means, to be carry'd into the farthest Scenes of animal Action; where they will prove efficacious Medicines in Cases, which, with other management, they would never be able to reach: And on this account it must undoubtedly have been, that we frequently meet, in practical Writers, with many Materials of this fort mention'd as Alterants; the *Colocynth* particularly by *Hobbes*: for all Medicines which operated in the farthest Passages, they commonly include under that general Appellation.

But the most efficacious Purges, and those which require the most Skill, are procured from the Mineral Kingdom; these abound in Solidity beyond any other Materials, and therefore wherever they are brought into Action, necessarily excel in quantity of Impulse: Many of these therefore was not only the utmost Commination to carry them into the farther Scenes of Operation, but also some restraint of their Afferities, and Motions, to fit them for many Inten-tions.—Thus Sublimate is not only to be much sweeten'd, that is, smooth'd in its Points, to make it a safe Purge in the larger Vessels; but if it be intended to go farther than the Blood, and these Glands, which, in that Circuit it is most apt to be lodged upon when it salivates, it must not only be render'd very fine, but also be cover'd with such Substances as weaken its Points, and make it strain into the last Subdivisions of the Constitution. To this purpose, the common Practice wisely contrives in Diutempers, which, according to the Course of Circulation, lie most remote, to wrap up the Basis of this Medicine, in Sulphur, and such like Substances, as follow it into its last Division, without giving it any Afferities to make it act as a Stimulus. Thus, for all cutaneous Foulnesses, and habitual Taints, the Cinna-bar, the Ethiops, and all of that Sortment, are in readiness; and that ordinary Sulphur will cover and deaden the efficacy of Mercurial Preparations, so that they shall not operate, but in such Parts only and in certain Circumstances, is demonstrable in ordinary Salivations, which are to be lower'd by Sulphureous Medicines.

Medicines from such Minerals, where a Salt and Sulphur are united by Nature, as they are in some Mercurials by Art, as in Antimony, the native Cinna-bar, Steel, &c. are ma-

nageable only upon the same Principles; and the more they are design'd to be carried into the Habit, the more are they to be restrained by their natural, or adventitious Sulphurs: Steel, when opened by, and joined with, the Points of acid Liquors, operates the sooner, and will sometimes prove even Emetic; but when it is cover'd with an additional Sulphur, it will go farther, and answer Intentions much more remote; as it manifest in the common Preparations of Steel, with Tartar, or Vinegar, and with Sulphur.

This way of reasoning on these Occasions, seems the more just, from considering the Texture of those Substances which by a natural Preparation are fitted for Operation in the minutest part of an animal Body; such as those of the Aromatic Kind, all which, more or less, according to their greater or lesser Degree of Subtility and Smoothness, promote a Diaphoresis: For these consist of exquisitely fine Salts, cover'd with a most subtile Sulphur, as is demonstrable by Chymical Analysis; and the common *Sal Volatile Olesifum* is an admirable Contrivance upon the same Foundation, where a very volatile animal Salt is cover'd with a most exalted vegetable Oil, whereby it is fitted to pass into the minutest Fibres, and make, as it were, a part of the animal Spirits themselves.

And here it may not be amiss to observe, that all animal Salts are very Volatile, or easily render'd so; but when bare and naked, just as the Fire draws them out, with a Mixture also of its own Particles in their Composition, they are too pungent to be felt without painful Sensations; and when soften'd with a fine Portion of somewhat of an opposite Texture, which is smooth and yielding, they become most efficacious, and safe Sudorifics.

On these Considerations it likewise ceases to be a wonder why the subtile Salts of Cantharides are more sensibly injurious to the Bladder, than any other Parts, and why Camphire prevents those Injuries; for the exquisite Smallness of those *Spicula* makes them imperceptible, but in the most minute Canals, into which the Fibres composing the Membranes of the Bladder are known to be divided; and Camphire blunts their Irritations, because its exquisite Subtility enables it to follow them into those Meanders, and smother their Afferities.

To this purpose is very remarkable, what many now commonly practise in guarding even Mercurials against their stimulating Properties, and sending them into the finest Passages to operate by Fusion, and the bare force of Impulse: For not only *Calomel* and the *Mercurius Dulcis* may be restrained from manifest Operation in the wider Passages, and the Glands about the Mouth; but even the mineral Turbith, which of itself, in a small Dose, will operate powerfully by Vomit and Stool, will not, when mixed with Camphire, be so much felt in those respects, but go into the farthest Circuit of Motion, and promote the cutaneous Discharge in a more efficacious manner, than any Medicine of less specific Gravity.—In this Management the Camphire is to be mixed but a very little while before taking, otherwise it hath not the effect; which appears to proceed from its great Volatility, which makes it in a great measure exhale while it stands mixed in a Medicine.

As to the Doses of *Purgatives*, *Dr. Cockburn* attempts to determine 'em on the following Suppositions—1<sup>o</sup>. That no part of 'em operate but in the Blood. 2<sup>o</sup>. That they operate there, by changing the Blood and other circulating Fluids derived from it.

From which *Postulata* he concludes, that in the same Constitution of Blood, the Dose requir'd to produce the like Effects, must be proportionable to the Blood's Quantity; so that where a certain Dose is requir'd to alter one Pound of Blood, for instance, to a certain degree, there will be requir'd a double Dose to alter two Pounds to the same degree, and a triple Dose to three Pounds, &c. And universally if the Quantity of Blood *b*, require the Dose *d*, the Quantity *m b* requires the Dose *m d*. For as *b : d :: m b : m d*. See DOSE.

PURGATORY, in the *Romish* Church, a Place where the Just are supposed to suffer the Pains due to their Sins for which they have not satisfy'd in this World. See MALICES, ABSOLUTION, &c.

'Tis by the Mercy of God, the Indulgences of the Church, and the Prayers of the Faithful, that People are supposed to be deliver'd out of *Purgatory*. See INDULGENCE, &c.

In *Ireland* is a Place call'd *St. Patrick's Purgatory*; where, as the Legend has it, at the Prayers of *St. Patrick* Bishop of the Place, there was made a visible Representation of the Pains which the Wicked undergo after Death, in order to deter Sinners, &c.

PURGE, in Medicine, a Term frequently used for a purgative Medicine; as Cassia, Senna, Rhubarb, &c. See PURGATION and PURGATIVE.

PURIFICATION, in Chymistry, &c. the Act of Purifying, or Refining Natural Bodies; or of separating the

Prices and Impurities therefrom. See PURGATION, REFINING, &c.

For the Methods of Purifying Metals, Gold, Silver, Iron, Copper, Tin, &c. See METAL, GOLD, SILVER, &c.

For the Purification of Semi-metals, Minerals, and other Matters, as Antimony, Sulphur, Camphor, Saltpetre, &c. See ANTIMONY, SULPHUR, CAMPHOR, &c.

PURIFICATION, in Matters of Religion, is an Offering made the Priest by Women rising out of Childbed, &c. they be re-admitted into the Church.

By the Law of *Moses*, a Woman after bringing forth a Male-Child, was unclean forty Days; after a Female, eighty Days. During which time, she was not to touch any thing Holy, nor to go near the Temple; but to continue within Doors, separate from all Company and Commerce of others.

This Term expir'd, she was to present herself at the Temple, and at the Door of the Tabernacle to offer a Lamb, as a Holocaust, and a Pidgeon or Turtle, which the Priest taking, offer'd to God, and pray'd for her that she might be purify'd.

This Ceremony, which consisted of two things, a Holocaust, and a Sacrifice of Expiation, was call'd Purification, *קריאת*, Purificatio, Purgatio.

The holy Virgin, tho' according to the Fathers, exempt from the Terms of the Law, yet comply'd therewith; and at the Time prescribed went to the Temple and accomplish'd the Law: In Commemoration whereof the Church yearly solemnizes the Feast of the Purification of the Virgin, on the second of February; call'd also the Feast of Candlemas. See CANDLEMAS.

The Feast of the PURIFICATION seems to be very ancient. 'Tis ordinarily said to have been instituted in the Time of *Justinian*, in the Year 542; and this, on occasion of a Mortality which that Year dispeopled almost the whole City of *Constantinople*. Yet are there some who imagine it to have been held before, tho' in another manner and on a different Day from that fix'd by *Justinian*, viz. between the *Circumcision* and *Epiphany*.

The same Day is the Presentation of our Saviour in the Temple. See PRESENTATION.

PURIM, a solemn Feast held among the Jews on the 14th of *March*, in Memory of their Deliverance from the Conspiracy of *Haman* by *Ester*. See ESTHER.

The Word is Hebrew, *פּוּרִים*, q. d. Lots.

PURITAN, a Term antiently us'd for the Calvinists of Great Britain, from their Proficision to follow the Pure Word of God; in opposition to all Traditions, Human Constitutions, and other Authorities. See CALVINIST, PRESBYTERIAN, NON-CONFORMIST, TORY, WHIG, &c.

PURLINS, in Building, those Pieces of Timber that lie a-cross the Rafters, on the inside; to keep them from sinking in the Middle of their Length. See RAFTER.

By the Act of Parliament for Rebuilding London, it is provided, That all *Purlins* from fifteen Foot six Inches to eighteen Foot six Inches long, be, in their Square nine Inches and eight Inches—And all in length from eighteen Foot six Inches to twenty-one Foot six Inches, be in their Square twelve Inches and nine Inches.

PURLUE, or PURLIEU, or POURALLEE, is all that Ground near any Forest, which being made Forest by our ancient Kings; was, by Perambulation granted by some of their Successors, sever'd again from the same, and made *Purlies*, i. e. pure and free from the Laws and Obedience of the Forest. See FOREST.

The Word is form'd from the French *pur*, pure; and *lieu*, place.

A *Pourlieu*, or *Pourallee*, is defined a Circuit of Ground, adjoining to the Forest, and circumscribed with immovable Boundaries, known only by Matter of Record; which Compass of Ground was once Forest, and afterwards disafforded by the Perambulations made for the severing the new Forest from the old.

*Purlies* or *Pourallees* commenc'd after the manner following—King *Henry II.* at his Accession to the Crown in 1154, took so much delight in the Forests of this Kingdom, that, not being contented with those he found here, tho' many and large, he began to enlarge divers of them; and to afforest the Lands of his Subjects near adjoining to the same. See AFFORESTING.

His Successors, *Richard I.* and *Henry II.* far from retrenching or restoring any thing; made still further Inroachments; and thus did the Lands continue till the 17th Year of King *John*; at which time, the Grievance being grown notorious, and generally felt by all degrees of People; divers Noblemen and Gentlemen besought the King to grant, that they might have all those new Afforestations, made by his Predecessors aforesaid, and himself, disafforded again; and the King, after much Solicitation, was at length prevail'd on to subscribe, and seal such Articles concerning the Liberties of the Forest, as they then de-

manded, being for the most part such as are now contain'd in the Charter of the Forest. See CHARTA de Foresta.

Hercupon choice was made of divers Noblemen, &c. to the Number of twenty-five, who were sworn, with others their Assistants, to see the said Liberties, so granted and confirm'd by the King, to be in every point observ'd.

But e'er any thing was done to the purpose, King *John* died, and King *Henry III.* succeeding, fresh Solicitations were made to him; who, for the better accomplishing of the said Disafforestation, order'd Inquisitions to be taken by substantial Juries for severing all the new Forests from the old: upon which, two Commissioners were sent to take those Inquisitions; in virtue whereof, many great Woods and Lands were not only disafforded, but improved to arable Land by the Owners thereof. See DISAFFORESTING.

After this Charter was made and confirm'd, some of the new Afforestations were perambulated, and proper Inquisitions taken, and the Certainty determin'd by Matter of Record, which were the old, and which the new: Tho' it appears that the greatest part of the new Afforestations were still remaining during the Life of King *Henry III.*

Under *Edward I.* fresh Petitions and Solicitations being set on foot; three Bishops, three Earls, and three Barons, were at length appointed to see those Perambulations perform'd and contain'd; who caus'd them to be made accordingly, and Inquisitions to be taken thereupon, and return'd into the Court of Chancery; and all those, that were ancient Forest, to be metred, and bounded with irremovable Boundaries, to be known by Matter of Record for ever.

Those Woods and Lands, that had been newly afforded, the King likewise caus'd to be separated from the old, and to be return'd into the Chancery by Marks, Meres, and Bounds to be known, in like manner, by Matter of Record for ever.

Thus it appears, how the *Purlies*, or *Pourallees*, had their first beginning; for all such Woods and Lands as were afforded by *Henry II.* *Richard I.* or King *John*, and by Perambulations sever'd from the ancient Forests, were, and yet are call'd *Pourallees*, q. d. Woods and Lands sever'd from the old Forests, and disafforded by Perambulation; *Pourallees* being the same as *Perambulatio* in Latin. See PERAMBULATION.

But notwithstanding such new Afforestations were disafforded by Perambulation, whereby the same became *Pourallees*, or *Purlies*; yet they were not thereby so disafforded as to every Man, but that they do in some sense continue Forest still, as to others—For by the Words of *Charita de Foresta*, if the King has afforded any Woods or Lands of his Subjects, to the damage of the Proprietors, they should forthwith be disafforded again; that is, only as to those Persons whose Woods and Lands they were; who, as the proper Owners thereof, might sell and cut down their Woods at their own pleasure, without any Licence from the King; as also convert their Meadows and Pastures into Tillage, or otherwise improve their Ground to the best advantage. So also they might hunt and chase the wild Beasts of the Forest towards the same, &c. But no other Person might claim such Benefit of hunting in the *Pourallees*, beside the proper Owner of the Soil thereof; who is left at liberty to suffer the *Pourallee* to remain Forest still; as some, in effect, have thought most expedient, because hereby entitl'd to the Benefit of the Common within the Forest, which otherwise they were excluded from. Hence, if the Beasts chance to wander out of the Forest into the *Pourallee*, the King hath a Property in them still, against every Man, but the Owner of the Ground wherein they are, who hath a special Property in them, *ratione soli*; yet so as he may only take them by hunting, or chasing with his Grey-hounds, or Dogs, without any Forestalling or Forcletting them in their Course again towards the Forest. See HUNTING, FORESTALLING, &c.

Beside what has been hitherto said of the Difference between Forest and *Purlies*, or *Pourallees*, there is this further Diversity, that all the Woods and Lands within the Regard of the Forest, are absolutely within the Bondage and Charge of the Forest, as well in respect of the Owners thereof, as of any other Person; for no one may cut down his own Woods, or improve his own Lands, within the Regard of the Forest, without Licence from the King, or his Chief Justice in Eyre of the Forest.—Neither shall any Person hunt, chase, or molest the wild Beasts of the Forest in his own Ground, within the Regard of the Forest, without Licence, or Warrant from the King, or his Chief Justice of the Forest, so to do. See REGARD.

But those, whose Grounds are within the *Pourallees*, are not subject to these Restrictions.

Yet are not the Woods and Lands in the *Pourallees*, absolutely freed from the Bondage of the Forest in respect of the wild Beasts having their Haunts therein, who they happen to fray out of the Forest; but as they were once absolutely Forest, so they are still conditionally so.

**PURLUE-Man**, or **PURLIEU-Man**, or **POURALLEE-Man**, is one who has Land within the *Purllue*; and is allow'd or qualify'd to hunt or course within the same, tho' under certain Restrictions.

By **Stat. 13 Rich. 2.** he who may lawfully hunt in any *Pourallees*, ought to have Woods or Lands of Freehold within the *Pourallees*, to the yearly Value of 40*l.*—By **Stat. Jac. 1.** he ought to have Lands of Inheritance of the yearly Value of 10*l.* or Lands of Freehold of the yearly Value of 50*l.* or have Goods worth 200*l.* or be the Son of a Knight, or Baron, or Person of a higher Degree, or Son and Heir apparent of an Esquire—But by a later **Act, Car. 2.** no Man may keep Grey-hounds within the *Pourallees*, or elsewhere within *England* or *Wales*, unless he have a free Warrant, or be Lord of a Manor, or such a Freeholder, as is seized in his own Right, or in Right of his Wife, of Lands, Tenements, or Hereditaments, of the clear yearly Value of 40*l.* over and above all Charges, and Reprises, of such Estate of Inheritance; or of Lands, Tenements, or Hereditaments, in his own Right, or in Right of his Wife, for Term of Life or Lives, of the yearly Value of 80*l.* over and above all Charges, and Reprises, or that is worth in Goods, or Chattels, 400*l.* See **GAME.**

The *Pourallees*, or *Purlieus*, then, is said to be for him that is so qualify'd: Others, not qualify'd, and therefore not *Purlieu-Men*, yet having Land in the *Pourallees*, may, if they find any wild Beasts of the Forest in their own Grounds within the *Pourallees*, chase them thereout with little Dogs, but not with Grey-hounds, or other Dogs.

Nor is the *Purlieu-Man* left at large to hunt at his own Discretion; but tied down to several Rules: As,

1. That he always begin his Chase in his own Ground; and that tho' he find such wild Beasts in his own *Pourallees*, and in respect thereof, hath a Property in them, *ratione soli*, against all Persons but the King; yet such his Property is only on this Condition, that he can slay them with his Dogs in Chase, without *Forestalling*, before they can recover the Forest—Tho' they be but within the List of the Forest, before the Dogs fasten on them; they are the King's, or other Owner of the Forest.

But if the *Pourallees-Man* first make his Chase in his own Freehold, he may pursue the same thro' every Man's Ground within the *Pourallees*, provided he enter not into the Forest.

2. If a *Purlieu Man* begin his Course in another Man's Ground, within the *Pourallees*; and his Dogs fasten on a wild Beast, before it can get within the Bounds of the Forest, and the Beast draws the Dogs into the Forest, and is there slain by them; here the *Pourallees-Man* shall not enter into the Forest, nor take the Beast for kill'd, because his Course was irregular from the beginning, as he could claim no Property in the Beast, *ratione soli*.

3. A *Pourallees-Man* may hunt in his own *Pourallees*, with no more Company than his own Servants; neither may he appoint, license, or warrant any other Person, except his Servants, to hunt by his Commandment in his *Pourallees*.

4. Every *Pourallees-Man* is forbidden by the Laws of the Forest, to hunt in his own Grounds within the *Pourallees*, every day, or oftner than three days in any one Week, Sunday excepted.

5. Nor is any Man to disturb, or make a Course after any Deer found in his *Pourallees*, within forty days after the King hath made a general Hunting in the Forest adjoining thereto; because then the wild Beasts of the Forest come not into the *Pourallees* of their own accord; but as they are forced into the same by the Hunters, with Clamor and Blowing of Horns; so that they fly thither for Refuge.

6. No Man shall hunt within seven Miles of the Borders of the Forest, or in his own *Pourallees*, within forty days next before the King hath issued out his Proclamation, declaring his Royal Will and Pleasure to make a general Hunting in that Forest.

Inasmuch as the *Pourallees* were once, and in some sense still are, Forest, it was necessary to have Officers to attend, and take on them the Charge of the Preservation of the Game that may happen to wander out of the Forest, into the *Pourallees*; since otherwise the Laws of the *Pourallees* could not be executed, but the Yareft would soon be destroyed by the *Pourallees-Men*.

For this reason, *Rangers* were first appointed; who, tho' not Officers in the Forest, yet appertain thereto; for all Officers in the Forest have Charge of the Vert, and Venison of the Forest; but a Ranger hath no Charge of Vert, but only of Venison coming out of the Forest into the *Pourallees*, his place of Charge; from whence his Office is to conduct the same back again into the Forest. See **RANGER.**

This Officer is appointed by the King, or his Chief Justice in Eyre, and made by Patent, with a Fee commonly

of 20, 30, or 40*l.* or more, by the Year, payable out of the Exchequer, as also certain Fee-Deer, both Red and Fallow, to be taken annually at proper Seasons, out of the Forest.

The Substance of his Oath is, to receive, and with his Hounds drive back, the wild Beasts of the Forest, as often as they range out of the same into his *Pourallees*; to prevent all unlawful Hunting and Hunters, of wild Beasts of Venary and Chase, as well within the *Pourallees*, as within the Forest; and to prevent those, and other Offences, at the next Court of Attachments, or Swinmote, which shall first happen.

Rangers, it is to be observ'd, are only to such *Pourallees*, as were once the Woods and Lands of the Subject, and were afterwards disafforested again, and so became *Pourallees*: Hence, as there are some Forests in *England*, which never had any Enlargement by new Afforestations, and therefore have no *Pourallees* at this day; there can be no Rangers belonging to them.

**PURPLE**, **PURPURA**, a red Colour, bordering on Violet; made chiefly with Cochineal, or Scarlet in Grain. See **COLOUR**; see also **RED**, **SCARLET**, **COCHINEAL**, &c.

*Purple* was much esteem'd among the Antients; especially the *Zyrian Purple*, which underwent more Dyes than the rest, and which was almost peculiar to Emperors and Kings. Yet this *Purple* did not exceed that now in use; the chief Reason why the former has been disused, are, that the latter is both cheaper and finer.

The ancient *Purple* was tinged or given with the Blood of a testaceous Sea-fish, call'd by the Greeks *πορφυρα*, and by the Latins *Purpura*; whereof we have Descriptions in several Authors, and Shells in most of the Cabinets of the Curious.

In the Seas of the Spanish West Indies about *Nicoya*, is found a Shell-fish which perfectly resembles the ancient *Purpura*, and in all probability is the very same: This Fish, *Gale* tells us, usually lives seven Years; it hides itself a little before the Dog-days, and continues to disappear for 500 Days running.

They are gather'd plentifully in the Spring, and by rubbing one against another, yield a kind of Saliva, or thick Glair, resembling soft Wax: But the *Purple* Dye is in the Throat of the Fish; and the finest part in a little white Vein—The rest of the Body is of no use.—He adds, that the chief Riches of *Nicoya* consist in this Fish. Cloth of *Sergovia* dyed with it is sold for twenty Crowns the Ell; and none but the greatest Spanish Lords use it.

Besides the *Indian Purple Fishes*, we have others much nearer home: In the *Pelagosipolis*, *Tranfald*. we have an Account of a *Purple-Fish* discover'd in 1686. by Mr. *W. Cole*, on the Coasts of *Somersetshire*, *South Wales*, &c. where it is found in great abundance.

The Fish, *M. Reaumur* observes, is a kind of *Buccinum*; a Name given by the Antients to all Fishes whose Shell bears any resemblance to a Hunting-Horn; and it appears from *Pliny*, that part of the ancient *Purple* was taken from this kind of Shell-Fish.—So that this may be esteem'd a recovery of what had been supposed entirely lost.

The Method of obtaining the Colour, the Author describes thus—The Shell, which is very hard, being broke, (with the Mouth of the Fish downwards, so as not to crush the Body) and the broken pieces being pick'd off, there appears a white Vein lying transversely in a little Furrow or Cleft next the Head of the Fish.

In this Vein is the *Purple* Matter lodged; some of which being laid on Linnen, appears at first of a light green Colour, and if expos'd to the Sun, soon changes into a deep green, and in a few Minutes into a Sea-green, and in a few more into a blue; thence it soon becomes of a purplish red, and in an Hour more of a deep *Purple* red.

And here the Sun's Action expires; but by washing in scalding Water and Soap, and drying it, it becomes of a most bright, beautiful Crimson; which will bear washing admirably without any Styptic. See **CRAMSON.**

The Fish, he observes, is good Food; and adds, that there are several Kinds, differing in Size, and Shell, and also in the Colour of the tinging Liqueur—There are some found on the Coasts of *Poitou*.

*M. Reaumur* has discover'd another very different Kind of *Purple*—It is produced in oval Grains, about a quarter of an Inch long, and about one thick, full of a white Liqueur bordering on yellow, which cover certain Stones or Sands, about which the *Buccina* of *Poitou* usually assemble.

By the Experiments *M. Reaumur* has made, it appears that these Grains are neither the Eggs of the *Buccinum*, nor the Seeds of any Sea-Plants, nor any rising Plants, but the Eggs of some unknown Fish.

These Grains being bruised on a white Linnen, at first tinge it yellow, and that insensibly; but in three or four Minutes give it a very beautiful purple red, provided the Linnen be expos'd to the open Air; for the Air of a Room,

even if the Windows be open, will not do.—This Colour fades a little by repeated Washings.

M. *Reaumur* concludes, from some Experiments he made, that the Effect of the Air on the Liquor, does not consist in its taking away any Particles thereof, nor in giving it any new ones; but only in its agitating it, and changing the Arrangement of the Parts that compose it.—He adds, that the Liquor of the *Buccinum*, and that of the Grains, seem to be nearly of the same nature; except that the latter is more watry, and only saline; whereas the other is hot, and pungent.

The *Caribbee* Islands have likewise their *Purple-Fish*—It is call'd *Borgan*; being of the Size of the End of the Finger, and resembling our *Periwinkles*: Its Shell is of a brownish azure, its Flesh white, its Intestines of a very bright red, the Colour whereof appears thro' the Body: and 'tis this dyes the Froth, which it calls wheo taken, and which is at first of a violet hue, bordering on blue.

To oblige them to yield the greater Quantity of Froth, they lay them on a Plate, shake and beat them against one another; upon which the Plate is immediately cover'd with the Froth, which is receiv'd on a Linnen Cloth, and becomes *Purple* in proportion as it dries.

P. *Labat* observes, that if this be the real *Syrian Purple*, the Secret of preparing and fixing it is lost; this Colour being found to dwindle and dissipate, in proportion as the Linnen dy'd with it is wash'd.

The same Author gives us the Description of another *Purple* Dyed produced by a Plant growing in the *Antilles*—The Juice of this Tree, when cut standing, is of a blood-red, and communicates the same Colour to Cloths; tho', like the former, it loses much in washing.

**PURFLE**, in Medicine.—The *Purple Fever* is a kind of Plague, or a Malignant-Fever, discovering itself in Eruptions on the Skin like the Bites of Bugs, or Fleas, or like Grains of Millet or the Small-Pox; whence it is sometimes also call'd the *Spotted Fever*. See *FEVER*.

The Eruptions are red, orange, violet, azure, livid, or black; and when they rise in great quantity, 'tis esteem'd a good Sign.

Sometimes they spread to a great extent, like *Erysipela's*, according to the Quality of the Poison. See *PLAQUE*.

**PURPURE**, or **POURPLE**, or **PURPLE**, in Heraldry, according to some, is one of the five Colours of Armories, mix'd or compounded of Gules and Azure bordering on Violet; according to others, of a little black and much red or mallow Colour. See *COLOUR*.

It is supposed a Symbol of *Temperance, Liberality, Dignity, Authority, Faith, and Piety*.

Most of the Authors in Heraldry, as *Favin, Geliot, Moser, and Menestrier*, don't allow *Purple* for a Colour; in regard it is not simple, but composed of an equal Mixture of four other Colours.—They rather esteem it a kind of mean Metal; sometimes Metal, and sometimes Colour. Hence the *Spaniards* call it *una mixtion*; so that one cannot lay it on Metal and Colour without falsifying the Arms.

Add; that many take the *Purple*, as it is accounted, on many ancient Bearings, by which some of the Moderns would evince the regularity and legitimacy of this Colour in Armory to be no other than Silver tarnish'd.

*Spelman*, however, in his *Aspilogia*, allows *Purple* the preference before all other Colours, as having been an Ensign of Royalty for many Ages; yet he allows it to have been excluded by the ancient Herald, as only an imperfect Colour.

It is represented in Engraving by transferve Strokes drawn from the dexter Point of the Chief.

In the Coats of Noblemen it is call'd *Aureus*, and in those of Princes *Mercurus*.

**PURPRESTURE**, in our ancient Law-Books, from the French *Pourpris*, and *Pourpres*, q. d. *Justiæ arreptum, est propriis terra aliena clandestina substractio, ejusdemque vicinis ascriptio*. See *POURPRESTURE*.

**PURPRISUM**, of the French *Pourpris*, a Close, or Enclosure.—Alfo the whole Compass or Extent of a Manor or Place.

—*Denovi eis meum Parprifum de Kirkeham & Demos meas & Molendinum & Prata, &c.* Charta Walteri Espec. Prioris de Kirkeham.

**PURPURATI**, i. e. the Sons of Emperors and Kings. *Neubrigensis*, lib. 3. cap. 4. *Malmesbury*, lib. 3.

**PURREL**, Anno 35 *Edw.* cap. 10. A List ordained to be made at the end of Kerfeys, to prevent deceit in diminishing their length.

**PURSE**, a manner of Accounting; or, as some call it, a Species of Money of Account, much used in the *Levant*; particularly at *Constantinople*. See *MONEY of Account*.

The *Purse* consists of about 112 Pounds Sterling.—'Tis

so call'd, because all the Grand Signor's Treasure in the *Scraglio* is kept in Leather Bags of this Value.

This Method of Accounting, the *Turks* derive from the *Greeks*, and they from the *Romans*; the Emperors whereof brought it to *Constantinople*, as appears from a Letter of *Constantine* to *Cecilian* Bishop of *Carthage*, quoted by *Eusebius* and *Nicephorus*, wherein is this Passage—"Being resolv'd to give something for the support of the Ministers of the Catholic Religion throughout the Provinces of *Africa, Numidia, and Mauritania*; I have wrote to *Vesit*, Treasurer-General of *Africa*, and given him orders to pay you three thousand *Folles*," i. e. *Purses*: For, as M. *Fleury* observes, we may call that *Purse* which the *Latins* call'd *Follis*, which was a Sum of two hundred and fifty silver *Denarii*, amounting to about seven Pounds sixteen Shillings, our Money.

**PURSER**, an Officer aboard a King's Ship, who receives her Victuals from the Victualler, and is to take care that it be in good Condition, and well laid up, and row'd.

His Office is also to keep a List of the Men and Boys belonging to the Ship; and to set down exactly the Day of each Man's admittance into pay, that so the Pay-Master or Treasurer of the Navy may issue out his Disbursements, and pay off the Men according to the *Purser's* Books.

**PURSIVENESS**, among Parriers, *Broken Wind*; a Name common to all those Diseases in Horses, whose principal Seat is in the Lungs; proceeding from an Ulcer, or some inward wasting thereof, wherein the small Vessels are worn or abraded by the Sharpness or Acrimony of the common Discharges. See *PHTHISIS*.

The like Disorder may also arise from a Stagnation, hindering the Air from penetrating so as to lift up the Lungs in the Act of Respiration; or from tough and mucilaginous Matter separated in the Branches of the Wind-Pipe.

The usual Occasions are Cold, Surfeits, and other Diseases not thoroughly carried off.—*Purfive* Disorders may also arise from unwholesome Food, bad Air, hard Riding when a Horse is full.

The Signs are commonly a heaving and heating of the Flanks; a whoosing and rattling. Sometimes the Kernels about the Throat will swell, and there will be a glandulous Running at the Nose, which is the utmost Stage of the Disease, and usually repented desperate, See *GLANDERS*.

**PURSUIVANT**, see *POURSUIVANT*.

**PURVEYANCE**, see *POURVEYANCE*.

**PURVIEW**, a Term frequently used by *Sir Edm. Coke* for the Body of an Act of Parliament; or that part which begins with *Be it Enacted*, &c. contradictingly call'd from the Preamble. See *STATUTE*.

The Statute of 3 *Hen. 7.* stands upon a Preamble and a *Purvey*. 12 Rep.

The Word comes from the French *Purveyer*, a Gift, Grant, Provision, &c.

**PURULENT**, in Medicine, something mix'd with, or partaking of Pus. See *PUS*.

Phthisical People frequently spit a *purulent* Matter. See *PHTHISIS*.

In a Dysentery, the Stools are *Purulent*; when there is an Ulcer in the Reins or Bladder, the Urine is *Purulent*.

**PUS**, in Medicine, a purid Matter, white and thick, form'd of corrupted Blood, and issuing out of the Lips of a Wound when open'd, or an Impothume when burst. See *WOUND* and *ULCER*.

Wounds are always to be kept open while they suppurate, i. e. while they generate Pus; for fear of shutting up the Wolf in the Sheep-fold. See *SUPPURATION*.

The Word is Latin, *Pus*, literally denoting Snot, &c. form'd of the Greek *πύς*, which signifies the same thing.

**PUSTULE**, a little Pimple, or Eruption, on the Skin, full of Pus; especially arising in the small and great Pox. See *POX*.

**PUTAGE**, **PUTAGIUM**, in our old Law-Books, *PUTANISM*; or *Fornicatio ex parte femina: quasi putans agere*; à Gall. *Putte*, i. e. *Meretrix*. See *PUTANISM*.

*Quod autem generaliter solet dici Putagio, hereditatem non admittit: illud intelligendum est de putagio Matris: quia filius hares legitimus est, quem Nuptie demonstrant.* *Glanv.* lib. 7. cap. 12.

**PUTANISM**, **PUTANISMO**, an Italian Term, naturaliz'd by some English Writers, signifying *Whoredom*, or the Life or Condition of a Courtesan.

The Word we borrow immediately from the French, *Putanisme*, and they from the Italians, *Putana*, Whore; or *Putta*, Girl.

**PUTATIVE**, *Suppositivus*; or something reputed to be what it really is not.

The Word is seldom used but in the Phrase *Putative-Father*.—Thus we say *Joseph* was the *Putative-Father* of *Jesus Christ*.

**PUTLOGS**, in Building, short pieces of Timber, about seven Foot long, used in building Scuffolds.—They lie at right Angles to the Wall with one of their ends resting upon the

the Ledgers or Poles, which lie parallel to the side of the Wall of the Building.

**PUTREFACTION**, or **PUTRIFACATION**, in Physics, a slow sort of Corruption produced in natural Bodies, generally by the Moisture of the Air, or some other ambient Fluid, which penetrating the Pores, and being agitated therein, dissolves and sets at liberty some of the more subtle Parts, particularly the Salts and Oils; and thus loosens and dislocates the Compages, quite change the Texture, and sometimes the Figure of the Mixt. See **COAGULATION**.

How much the Air contributes to *Putrefaction*, is evident hence, that Bodies buried deep under Earth or in Water out of any reach of Air, shall remain for Ages entire; which yet being exposed to the open Air, shall soon rot and moulder away. See **SUBTERRANEANS**.

The like appears from succulent Fruits and other vegetable Matters, which, for all their aptness to *putrefy*, will remain a long time unchang'd *in vacuo*. See **VACUUM**.

The perpetual Oscillations of so elastic a Fluid contain'd or shut up in the Pores of a Body, may be conceived sufficient to induce this Alteration in their Form and Texture; yet should it rather seem that the Water or vapoury Matter wherewith the proper Air is impregnated, is the more immediate Agent. Hence *Acosta* observes, that in *Peru*, and others have observ'd the same in *Egypt*, where it very rarely rains, every thing will continue a long time uncorrupted; unless we will rather ascribe the Effect to the abundance of nitrous Salt in the Air of those Places, which is known to resist *Putrefaction*. See **AIR**, **WATER**, **SALT**, &c.

In effect, all *Putrefactions*, both of Animal and Vegetable Bodies, are affirmed by the learned *Zoerbaave* to be perform'd by means of Water alone: Take (says he) a Pound of fresh Flesh, and keep it in a bear like that of our Body, and in few days the *Putrefaction* will be compleated; but if you first drain out or exhale all the watry Part from the same in some chymical Vessel; tho' the Salt and Oil remain, the Flesh will harden like a Stone, and may be kept for Ages without *Putrefaction*—Tho' when thus harden'd, Water pour'd on it, or even the common Dew, will soon set it a *putrefying*.

By such means, Bread, Flesh, or the like Foods, may be preserv'd for Ages; provided regard be had to the Place: Hence it is, that in dry Countries, as *Egypt*, dead Carcasses never *putrefy*, but dry and harden uncorrupted; as we see in the Mummies found buried under the Sand. See **MUMMY**.

Even human Blood, which naturally is so prone to *Putrefaction*, if you deprive it of its watry Part, may be kept for fifty Years. Goat's Blood we actually find kept so long in the Shops, without corrupting; tho', if you dissolve it in Water, and expose it to a gentle Warmth, it *putrefies* immediately.

**PUTREFACTION**, in Chymistry, is a spontaneous Operation whereby vegetable Substances, in virtue of their own Heat and Moisture, are dissolved, and turn'd into an animal Nature. See **ANIMAL** and **VEGETABLE**.

#### The Process of PUTREFACTION is as follows:

Throw together any of the tender, green, and succulent Parts of recent Vegetables, whether Acid or Alkaline, in a large Heap, in the warm open Air, and press them down with an additional Weight, if their own be inconsiderable, and the middle part of the Heap will in a little time, spontaneously conceive a small degree of Heat, and pass successively through the other degrees, till it arrive at a state of Ebullition, and be perfectly *putrefy'd*.

In the space of three days, from the first putting them together, they will yield a Heat, perceivable by the Hand, equal to that of a human Body in a healthy State; by the fifth it will be too great for the Hand to bear without pain; and, lastly, by the sixth, seventh, or eighth day, the Juices will generally appear ready to boil, and sometimes the Matter will even flame and burn away.

By this spontaneous Operation, the Vegetable acquires an abominably *putrid*, stercoraceous, or cadaverous Taste, and Odour; and turns intirely into one soft, simular, pappy Mass, or Crassamentum, greatly resembling fetid human Excrement in the Scent, and *putrefy'd* Flesh in the Taste. See **EXCREMENT**.

If now this fetid Matter thus obtain'd, be directly, whilst it remains in its fetid state, committed to a Glass-Retort, and distill'd with proper degrees of Fire, there will come over, 1. A Water impregnated with an urinous Spirit, perfectly like that obtainable from animal Subjects, and separable by a fresh Distillation slowly made in a tall Glass, into Elementary Water; and a large quantity of pure, white, volatile, dry, alkaline Salt, not to be distinguish'd from animal Salts. 2. A volatile, alkaline, oily Salt, that floats in the Gleebe. 3. An exceedingly volatile and a thick fetid Oil, both which are to entirely like those of Animals. And, lastly, the remainder being calcin'd in an open Fire, affords not the least Particle of fixed Salt, just as if the Sub-

ject had really been of the Animal, and not of the Vegetable Kingdom.

This Process is truly universal, and holds equally in all kinds of Vegetables, tho' ever so different in their Nature and Virtue. Experiments have been made in the coldest and moist succulent or watry Plants, such as Purslain, Sorrel, &c. as well as with the hottest or most acrimonious, such as the Spurge, &c. and it was always found to succeed; but the sooner, as the Vegetable employ'd contain'd the greater quantity of Oil; tho' with the same Phenomena.

It will likewise succeed with dry Vegetables; provided they be moisten'd with Water before they are thrown into heaps: And thus we sometimes see that Stacks of Hay will spontaneously take fire and blaze away; especially if it was not well dried in the making.

It is surprizing to consider, that by this means the difference betwixt Vegetables may be entirely taken away, and the whole Kingdom thereof reduced to the same common Nature; so that Wormwood and Tansey, for instance, or Sorrel and Scurvygrass, shall appear as one and the same thing; and this thing appear no otherwise than *putrefy'd* Flesh.

Tho' Sorrel be famed for its power of preserving the animal Fluids uncorrupted whilst they are circulating in the Body, and Scordium for its embalming Virtue, as continuing it in a state of Incorruption after Death; yet even these Plants are themselves thus easily corrupted and changed into such a kind of *putrefy'd* Flesh as is their Virtue to prevent.

This *Zoerbaave* considers as a general Law of Nature, wisely establish'd to produce wonderful Changes in the World, and prevent the Inaction and Decrease of Matter on our Globe; this active Principle or Medium giving an easy and reciprocal Transition of Vegetable into Animal Substances, and Animal into Vegetable.

Hence we are given to understand the Nature and Uses of *Putrefaction*, with its difference from Fermentation, both in regard of the Subject, Cause, and Effect—Vegetables alone are the Subject of Fermentation; but both Vegetables and Animals of *Putrefaction*. Fermentation also requires that its Subject be first reduced to the form of a Liquid, or at least made capable of floating in one, before it can obtain; whereas *Putrefaction* only succeeds when its Subject is half dry, or just barely moist; which is the reason why Must put up in a wooden Vessel does not *putrefy*; whilst the Grapes from which it was expressed, being thrown in heaps, would presently conceive heat, and run into a state of *Putrefaction*.

We see also that Vegetable *Putrefaction* is begun and promoted with Heat, and finish'd with Coolness, which requires a degree of Heat much greater than that excited by Fermentation, as being capable of causing an Ebullition in the Plant, and even of turning it into a Flame: As, indeed, the immediate Cause of Fermentation is the Motion of the Air intercepted between the Fluid and viscous Parts of the fermenting Liquor; but the Cause of *Putrefaction* is Fire itself, collected or included within the *putrefying* Subject.

Again, the Effects of Fermentation are the Production of Flowers or Yeast, the coarction of the saline part of the fermenting Body into Tartar, or an acrimonious Acid and fixed kind of Salt, and of Oils into inflammable Spirit, retaining something of the nature of the Vegetable; but *Putrefaction* makes all the acid Salts volatile and alkaline, renders the Oils not spirituous, but abominably fetid, utterly destroys what sets the specific difference between one Subject and another, and converts them wholly into a soft pulpy Mass, of an animal Nature, without the least Signs of any fixed Salt, tho' the recent Vegetable would, by Calcination, at the first have afforded a large Proportion: Or, in short, making nearly the same kind of Alteration in the whole Subject, as it would undergo by passing through a sound animal Body, suffering all the Actions thereof, and being at length turned into the form of Excrement. See **FERMENTATION**.

This Operation may let us a little into the nature of animal Digestion, or the Change which the Aliment suffers in the human Body—For the Change our vegetable Foods undergo in the Body, being such as brings 'em to be of the same Nature, and afford the same Principles with the Change induced by *Putrefaction*, is a presumption that Digestion is nothing else; at least it apparently comes nearer thereto than to Fermentation. See **DIGESTION**.

**PUTRID**, **PUTRIDUS**, something rotten, or putrify'd. See **PUTREFACTION**.

Thus we say *putrid* Flesh—A *putrid* Humour—*Putrid* Limbs, i. e. mortify'd ones, are to be cut off. See **MORTIFICATION**.

**PUTRID FEVER**, is that kind of Fever, where the Humours, or part of 'em, have so little circulatory Motion, that they fall into an intestine one, and putrify. See **FEVER**.

This is commonly the case after great Evacuation, or excessive Heat; where there is such a Scarcity of Spirits, that

that the Solids do not vibrate sufficiently to keep the Fluids in their due Velocity.

In these Cases the Pulse is low, and the Flesh cooler than natural at first.

**PURTY**, a Term used for Powder of calcined Tin. See TIN.

**PUTURA**, a Custom claim'd by the Keepers of Forests, and sometimes Bailiffs of Hundreds, to take Man's Meat, Horie's Meat, and Dog's Meat, of the Tenants and Inhabitants gratis, within the Perambulation of the Forest, Hundred, &c. See PURSUE, PERAMBULATION, &c.

This Custom within the Liberty of *Knaresburg* was long since turned into the Payment of four Pence pro *Putura*.

The Land subject to this Service, is call'd *Terra Puturata*. The learned *Sommer* erred in his Exposition of this Word—*Johannes clamat unam Puturam in prioratu de Penwortham, qui est quedam Cella Abbatie de Evesham pro se & Ministris, Equis & Garcionibus suis pro unum diem & duas noctes de tribus Septimanis in tres Septimanas, viz. de vicinalibus, ut in ejusdem & pœnulentis, ad Costas prioratus predicti indebitè*—Placit. apud Preston. 17 Edv. 3.

**PYANESPESIA**, in Antiquity, a Feast celebrated by the *Athenians* in the Month *Pyaneffion*; which, according to the generality of the Critics, was their fourth Month, and corresponded to our *September*. See FEAST.

*Plautarch* refers the Institution of this Feast to *Theſeus*; who, at his Arrival from *Crete*, made a kind of Sacrifice to *Apollo* of all the Provisions remaining in his Vessel; putting 'em all into a Kettle, boiling 'em together, and eating 'em with his six Companions; which Custom was afterwards discontinued.

The Scholiast of *Aristophanes* says, it was to acquit himself of a Vow he made to *Apollo* in a Tempest.

*M. Bandelot* writes *Pyanessia*; and takes it to be a Feast instituted in memory of *Theſeus*'s Return after killing the *Minotaur*. See MINOTAUR.

The *Greeks* vary as to the Origin and Signification of the word *Pyaneffion*, whence the Feast is denominated.—*Harpocration* calls it *Peanoffia*; he adds, that others call it *Panosia*, because then the Fruits all appear to the Eye. *Helychius* writes *Pyanessia*; and derives it from *πυα*, Bean, and *ωσπι*, I gather; because in this Feast the *Athenians* gather'd their Beans, and made a kind of Broth of 'em.

**PYCNOSTYLE**, or **PYCNOSTYLE**, in the ancient Architecture, a Building where the Columns stand very close to one another; one Diameter and a half of the Column being only allow'd for the Intercolumination. See INTERCOLUMINATION.

The *Pyenostyle* is the smallest of all the Intercoluminations mention'd by *Vitruvius*.

The Word is form'd from the Greek *πυκν*, close, and *ωσπι*, Column.

Some make the *Pycnostyle* the same with the *Systyle*; others distinguish the latter, by its allowing half a Module more in the *Corinthian* Intercolumination. See SYSTYLE.

The *Pycnostyle*, Mr. *Evelyn* observes, chiefly belong'd to the *Composite* Order; and was used before the most magnificent Buildings, as at present in the *Peristyle* of St. Peter's at *Rome*, consisting of near 300 Columns; and such as yet remain of the Antients among the late discover'd Ruins of *Palmira*.

**PYCNOTICS**, Medicines of an aqueous Nature, and which have the Faculty of cooling and condensing, or thickening the Humours.

Such are Purslain, the Nenopar, or Water-Lilly, Solacum, &c.

The Word in its original Greek, *πυκνωτικόν*, signifies something that has the power of thickening.

**PYGMY**, or **PYGMY**, or **PIGMEUS**, a Dwarf, or Person of exceedingly small Stature, not exceeding a Cubit in height. See DWARF and GIANT.

The Appellation is given among the Antients to a fabulous Nation, said to have inhabited *Thrace*, who generated and brought forth Young at five Years of Age, and were Old at eight; famous for the bloody War they waged with the *Greeks*.

The Word is form'd from the Greek *πυγμα*, Cubit. See CUBIT.

**PYLING** the Ground, for Foundations. See FOUNDATION.

**PYLORUS**, in Anatomy, the lower Orifice of the Stomach, whereby it discharges itself into the Intestines. See STOMACH and INTESTINES.

The *Pylorus* is situate on the right side of the Stomach, and passes by an oblique Ascend to the *Duodenum*; to prevent the too precipitate Passage of the Aliment out of the Stomach. See DUODENUM.

For this end, it is likewise furnish'd with an extraordinary Series of Fibres, to constrict it more than any other part: These running round it, serve as a kind of Sphincter, which is open'd by the Contraction of the Stomach,

and the Appulse of the Chyle. See DIGESTION, CHELIFICATION, &c.

At the bottom of the *Pylorus*, is a large Cavity, which *Willis* calls the *Antrum Pylori*, and conceives its Use to be, to keep the Food first digested, till the latter taken into the Stomach be digested; tho', if what *Wharton* observes be true, viz. that there are Lacsteals in the bottom of the Stomach, such a Provision should seem unnecessary. See LACTEAL.

The Word is derived from the Greek *πυλωρ*, Janitor, Door-keeper.

**PYRAMID**, in Geometry, a Solid standing on a square Basis, and terminating, a-top, in a Point; Or a Body whose Base is a Polygon, and whose Sides are plain Triangles; their several Tops meeting together in one Point. See SOLID.

*Euclid* defines it a solid Figure, consisting of several Triangles, whose Bases are all in the same Plane, and have one common Vertex. See TRIANGLE and VERTEX.

*Wolffius* defines it a Solid, bounded by as many Triangles, A D C, D C B, and A D B, terminating in one Point, D; as the Base A B C, has Sides. (Tab. GEOMETRY, fig. 78.)

The *Pyramid* is said to be *Triangular*, *Quadrangular*, *Quinquangular*, &c. as the Base is triangular, quadrangular, &c.—The *Pyramid* may be call'd a square, triangular, &c. Cone; or the Cone, a round *Pyramid*. See CONE.

*Properties of the PYRAMID.*

1. All *Pyramids* and *Cones* standing on the same Base, and having the same Altitude, are demonstrated to be equal.

2. A triangular *Pyramid* is the third part of a *Prism*, standing on the same Base, and of the same Altitude. See PRISM.

3. Hence, since every Multangular may be divided into Triangular; every *Pyramid* is the third part of a *Prism*, standing on the same Basis, and of the same Altitude.

4. If a *Pyramid* be cut by a Plane *abc*, parallel to its Base A B C; the former Plane, or Base, will be similar to the latter.

5. All *Pyramids*, *Prisms*, *Cylinders*, &c. are in a Ratio compounded of their Bases and Altitudes: The Bases, therefore, being equal, they are in proportion to their Altitudes; and the Altitudes being equal, in proportion to their Bases.

6. *Pyramids*, *Prisms*, *Cylinders*, *Cones*, and other similar Bodies, are in a triplicate Ratio of their homologous Sides.

7. Equal *Pyramids*, &c. reciprocate their Bases and Altitudes; i. e. the Altitude of the one is to that of the other, as the Base of the one to that of the other, &c.

A Sphere is equal to a *Pyramid*, whose Base is equal to the Surface, and its Height to the Radius of the Sphere.

8. A *Pyramid* is one third of the perpendicular Altitude, multiply'd by the Base.

To measure the Surface and Solidity of a *Pyramid*—Find the Solidity of a *Prism* that has the same Base with the given *Pyramid*: See PRISM.—And divide this by three; the Quotient will be the Solidity of the *Pyramid*.

Suppose, v. gr. the Solidity of the *Prism* be found 67010328; the Solidity of the *Pyramid* will be thus found 22366770.

The Surface of a *Pyramid* is had, by finding the Areas both of the Base A B C, and of the lateral Triangles A C D, C B D, E D A. See TRIANGLE. The Sum of these is the Area of the *Pyramid*.

The external Surface of a right *Pyramid*, standing on a regular Polygon Base, is equal to the Altitude of one of the Triangles which compose it, multiply'd by the whole Circumference of the Base of the *Pyramid*.

To describe a *Pyramid* on a Plane.—1. Draw the Base, v. gr. the Triangle A B C; (if the *Pyramid* requir'd be triangular) so as that the Side A B, supposed to be turned behind, be not express'd. 2. On A C and C B, construct the Triangles A D C, and C D B, meeting in any assumed or determined Point, v. gr. D; and draw A D, C D, B D; Then will A D B C, be a triangular *Pyramid*.

To construct a *Pyramid* of Past-board, &c.—Suppose, v. gr. a triangular *Pyramid* requir'd. 1. With the Radius A B, describe an Arch B E C; (fig. 79.) and thence apply three equal Chords, B C, C D, and D F. 2. On D C construct an equilateral Triangle D F C; and draw the right Lines A D and A C. This Past-board, &c. being cut off by the Contour of the Figure, what remains within, will turn up into a *Pyramid*.

**PYRAMID**, in Architecture, is a solid massive Edifice; which from a square, triangular, or other Base, rises diminishing, to a Point, or Vertex.

*Pyramids* are sometimes used to preserve the Memory of singular Events; and sometimes to transmit to Posterity

the Glory and Magnificence of Princes: but as they are the Symbol of Immortality, they are more commonly used as funeral Monuments. See MONUMENT.

Such is that of *Cephiss* at *Rome*; and those other celebrated ones of *Egypt*, as famous for the Hugeness of their Size, as their Antiquity.

These last are all square in their Bases; and 'tis a thing has been frequently propos'd, to establish a fixed Measure from them; to be thereby transmitted to Posterity.— See their Descriptions, Measures, &c. in *Thouvenot, Pictura della Valle, &c.*

Among the *Egyptians*, the *Pyramid* is said to have been a Symbol of human Life; the Beginning whereof is represented by the Base, and the End by the Apex: On which account it was, they used to erect them on Sepulchres. HERODOTUS.

Some derive the Word from *σῦς*, *Wheat*, and *ἀκμῆ*, *colligo*; pretending that the first *Pyramids* were built by the Patriarch *Joseph* for Granaries.—But *Villalpandus*, with much better reason, derives the Word from *πῦρ*, *Fire*; because ending in a Point like Flame.

When they are very narrow at bottom, i. e. their Base very small; they are call'd *Obelisks* and *Needles*. See OBELISK.

*Scenography* of a PYRAMID. See SCENOGRAPHY.

OPTIC PYRAMID. See OPTIC PYRAMID.

PYRAMIDAL Mirrors. See MIRROR.

PYRAMIDAL Numbers, are the Sums of Polygonal Numbers, collected after the same manner as the Polygon Numbers themselves are extracted from Arithmetical Progressions. See POLYGONAL Number, &c.

These are particularly call'd *prime Pyramidals*—The Sums of first *Pyramidals* are call'd *second Pyramidals*—The Sums of those *third Pyramidals*, &c. ad infinitum.

Particularly those arising from triangular Numbers are call'd *prime triangular Pyramidals*; those arising from Pentagonal Numbers are call'd *prime pentagonal Pyramidals*, &c.

From the manner of summing up polygonal Numbers it appears evidently how the *prime Pyramidal Numbers* are

$$(a-2)n^2 + 3n - (a-3)n,$$

found; viz.  $\frac{(a-2)n^2 + 3n - (a-3)n}{2}$  expresses all the *prime Pyramidals*.

PYRAMIDALE Corpus, in Anatomy, a Plexus of Blood-Vessels on the back of the Testicles; thus call'd from its Form: and from its Structure also call'd *Corpus Varicosum*, and *Paupini-forme*. See CORPUS and VARICOSUM.

It consists of innumerable little Veins, communicating with each other; and forming a kind of Net-Work; which, at length, uniting, terminate in one Vein; by which the Blood is convey'd into them all.

The Origin of this Plexus is from the spermatic Veins, which, a little above the Testicles, split into several Branches; which again uniting, several times, form the *Corpus Pyramidale*. See TESTICLE and SPERMATIC VEINS.

PYRAMIDALE Pappilæ, see PAPPILÆ Pyramidales.

PYRAMIDALIS, in Anatomy, a small Muscle of the Abdomen, lying on the lower part of the *Rectus*—It has its Name from its Figure; and its Origin from the Margin of the *Os Pubis*, with a pretty broad fleshy Head, whence it grows gradually narrower till it end in a small round Tendon in the *Lina alba*; sometimes almost at the Navel.

This Muscle is sometimes single, sometimes it has its fellow; and sometimes they are both wanting.

PYRAMIDOID, call'd also *Parabolic Spindle*, a solid Figure form'd by the Revolution of a Parabola round its Base, or greatest Ordinate.

Thus, if you consider it according to the Method of Indivisibles, you may conceive its Solidity to consist of an infinite Series of Circles, whose Diameters are all parallel to the Axis of the revolving Parabola. See PARABOLIC SPINDLE.

PYRATE, see PIRATE.

PYRENIDES Processus, in Anatomy, a Process of the second Vertebra; thus call'd from its pear-like shape; as also for the like reason, *Dentiformis*, or Tooth-like Process. See PROCESS and VERTEBRA.

The Word is compounded of *Pyram*, *Pear*, and *ides*, *Figure*.

PYRETICS, Medicines good against Fevers. See FEVER.

The Word is form'd from the Greek *πυρ*, *Fire*, and *ρετις*, *Fever*.

PYRIFORMIS, in Anatomy, a Muscle of the Thigh, receiving its Name from its Figure, which resembles that of a Pear.—It is also call'd *Iliacus externus*, from its Situation. See ILIACUS.

Its beginning is round and fleshy, from the inferior and internal part of the *Os Sacrum*, where it respects the *Pelvis* of the Abdomen; and descending obliquely in the great

Sinus of the *Os Ilium*, above the acute Process of the *Iscium*, and joining with the *Gluteus medius*, it is inserted by a round Tendon into the superior part of the Root of the great Trochanter.

This moves the *Os Femoris* somewhat upwards, and turns it outwards.

PYRITES, in Natural History, a Semi-metal, supposed to be the Marcasite of Copper; or the Matrix or Ore where-in that Metal is formed. See MARCASITE, ORE, COPPER, &c.

From this Marcasite it is that the *Roman Vitriol* is prepared. See VITRIOL.

The Word is form'd from the Greek *πῦρ*, in regard it takes fire more readily than any other Stone.—It is also call'd *Suis*.

Antiently it was used in lieu of the Flints in Fire-Locks.—Dr. *Siare* tells us of a Heap of *Pyrites* consisting of two or three hundred Tons; which being cover'd up from the Air five or six Months, took fire, and burnt for a Week. Some of it look'd like melted Metal, others like red-hot Stones. He adds, it emitted a most noisome Smoke.

Dr. *Lifter* attributes Thunder, Earthquakes, &c. to the sulphurous and inflammable Breath of the *Pyrites*. See THUNDER, EARTHQUAKE, EXHALATION, &c.

PYRITES, in a more general sense, is used for the Marcasites of all Metals; the Names whereof are varied according to the Metals they partake of. See MARCASITE.

Thus *Chryssites* is that of Gold; *Argyrites* that of Silver; *Siderites* that of Iron; *Chalcites* that of Copper; *Molybdites* that of Lead, &c. See ARGYTES, CHRYSITES, SIDERITES, &c.

PYROBIOLOGY, see PYROTECHNIA.

PYROENUS, from *πῦρ*, *Ignis*, *Fire*, and *ἔνωσ*, *Vinum*, *Wine*; is a Term sometimes used for rectify'd Spirit of Wine; thus call'd because made by Fire, or rather because render'd of a fiery nature. See SPIRIT and RECTIFICATION.

PYROET, or PIRROET, or PYROEX, in the Manage. See PIRROET.

PYROMANCY, a kind of Divination, perform'd by means of Fire. See DIVINATION.

The Ancients imagined they could foretel Futurity by inspecting Fire and Flame: To this end, they consider'd its Direction, or which way it turn'd.—Sometimes they add'd other Matters to the Fire; e. g. a Vessel full of Urine, with its Neck bound about with Wool; watching narrowly on which side it burnt, and thence taking their Augury.

Sometimes they threw Pitch on it; and if it took fire immediately, esteem'd it a good Augury.

PYROTECHNY, PYROTECHNIA, the Art of Fire; or a Science which teaches the Management and Application of Fire in several Operations. See FIRE.

The Word is form'd from the Greek *πῦρ*, *Fire*, and *τεχνη*, *Art*.

*Pyrotechny* is of two kinds, *Military*, and *Chymical*.

*Military Pyrotechny* is the Doctrine of Artificial Fire-Works and Fire-Arms; teaching the Structure and Use both of those used in War for the Attacking of Fortifications, &c. as *Gun Powder*, *Cannons*, *Bombs*, *Granades*, *Carcasses*, *Miner*, *Fuzes*, &c. and those made for Amusement-like, as *Rockets*, *Stars*, *Serpents*, &c. See FIRE-ARM, ORDINANCE, &c.

Some call *Pyrotechny* by the name *Artillery*; tho' that Word seems confin'd to the Instruments used in War. See ARTILLERY.

Others chuse to call it *Pyrology*, q. d. the Art of Missile Fires; from the Greek *πῦρ*, *Fire*, and *βολαιος*, to cast, throw. See GUNNERY, PROJECTILE, &c.

*Wolff* has reduced *Pyrotechnia* into a kind of mixt Mathematical Art: Indeed, it won't allow of Geometrical Demonstrations; but he brings it to tolerable Rules and Reasons; whereas, before, it had us'd to be treated by Authors at Random and without any Reason at all. See MATHEMATICS.

See the Elements of *Military Pyrotechny* under the several Instruments and Operations; CANNON, BOMB, ROCKET, GUN-POWDER, &c.

*Chymical Pyrotechnia*, is the Art of managing and applying Fire, in Distillations, Calcinations, and other Operations of Chymistry. See CHEMISTRY and OPERATION.

Some reckon a third kind of *Pyrotechnia*, viz. the Art of fusing, refining, and preparing Metals. See METAL, FUSION, REFINING, &c.

PYROTICS, in Medicine, Remedies either actually, or potentially hot; and which, accordingly, will burn the Flesh, and raise an Echar. See CAUSTIC and ESCHAROTIC.

The Word is form'd from the Greek *πῦρ*, *Fire*.

PYRRHIC, PYRRHICA, in Antiquity, a kind of Exercise on Horse-back; or a sign'd Combat, for th; Exercise of the Cavalry. See EXERCISE.

It was thus call'd from its Inventor *Pyrrhus*, or *Pyrrhus* of *Cydonia*, who first taught the *Grecians* to march in Measure and Cadence to Battel; and to observe the pace of the *Pyrrhic* Foot.

Others derive the Name from *Pyrrhus* Son of *Achilles*, who instituted this Exercise at the Obsèques of his Father. *Aristotle* says, 'twas *Achilles* himself that invented it.

The *Romans*, also, call'd it *Ludus Trojanns*, the *Trojan* Game; and *Aulus Gellius*, *Decursum*.

'Tis doubtless this Exercise that we see represented on Medals by two Cavaliers in Front running with Launces, and the Word *Decursum* in the Exercise.

**PYRRHIC**, in the *Greek* and *Latin* Poetry, a Foot consisting of two Syllables both short. See **FOOT**.

**PYRRHONIANS**, a Sect of ancient Philosophers, so call'd from their Founder *Pyrrho*. See **PHILOSOPHER**.

The distinguishing Character of this Philosopher was, that he profess'd to doubt of every thing; maintaining, that Men only judge of Truth and Falshood from Appearances. See **DOUBTING**.

On this Principle he kept himself in continual suspension of Mind, never determining on any thing; so to avoid the Inconveniences of Error and false Judgments. See **ERROR**, **FALSHOOD**, &c.

Those now distinguish'd by the Name of *Pyrrhonians*, or *Sceptics*, are Persons who, from the great Number of things that are dark and obscure, and from the Aversion they bear to popular Credulity, maintain that there is nothing certain in the World. See **SCPTICS**.

The truth is, *Pyrrhonism* has some foundation in Nature: We don't judge of things from their real Essences, but from their Relations to ourselves. Most of our Ideas we receive by means of our Senses; but our Senses are not given us to judge of the Essences, but the Relations of things to ourselves, i. e. how they may affect us, so as to do us good or harm. See **SENSATION**, **RELATION**, **SENSE**, &c.

Thus, e. g. our Eyes don't give us the real Magnitudes of Objects, but their relative ones only. See **VISION**. See also **BODY** and **MATTER**.

The *Academicks* differ'd from the *Pyrrhonians*, in that they own'd there were some things more like, or a-kind to Truth than others; which the *Pyrrhonians* preceptorily denied. See **ACADEMICKS**.

*Le Clerc* observes, that the *Pyrrhonians*, in affirming that there is nothing certain, were the most assuming and decisive of all Philosophers; since they must have first examin'd all things, to be able to determine precisely that all things are uncertain.

It may be added, that the very Principle of the *Pyrrhonians* destroys itself: For if there be nothing certain, then must that Dogma itself be precarious; and if no one thing be more probable or liker to Truth than another, why shall the Principle of the *Pyrrhonians* be believed preferably to the opposite one; since itself is come at in the same way as our other Knowledge.

**PYTHAGOREANS**, a Sect of ancient Philosophers, who retain'd to the Doctrines of *Pythagoras*. See **PHILOSOPHER**.

The Founder of this Sect was of *Samos*, the Son of a Lapidary, and Pupil of *Pherecydes*; who flourish'd about the seventh Olympiad, i. e. about 500 Years before Christ.

This Sect was also call'd the *Italic* Sect, or *Italic School*, because *Pythagoras*, after travelling into *Egypt*, *Chaldea*, and even into the *Indies*, to inform his Understanding; returning home to his own Country, and there unable to bear the Tyranny of *Polycrates*, or *Solison*, retir'd into the Eastern Part of *Italy*, then call'd the *Greater Greece*, and there taught and form'd his Sect. See **INNIC**.

He is held to have excell'd in every part of Science: *Laertius* says, among the *Chaldees* and *Hebrews* he learnt Divination, and the Interpreting of Dreams; in *Egypt* he learnt all the Mysteries of the Priests, and the whole System of Symbolical Knowledge, with all their Theology—*Porphyry* adds, that he learnt the Mathematical Sciences in his Travels; Geometry from the *Egyptians*, the Doctrine of Numbers and Proportions from the *Phoenicians*, and Astronomy from the *Chaldees*; Morality, and Theology he learnt chiefly from the *Magi*.

He was the first who assum'd the Title *Philosopher*; the Sages till his time having bore the arrogant Title *sophi*. See **PHILOSOPHER**.

*Jamblicus* observes, that in *Phoenicia* he conversed with the Prophets and Philosophers, the Successors of *Mochus* the Physiologist; which *Mochus*, *Selden* and some others will have to be *Moses*.

His School in *Italy* was at *Crotona*; where he is said to have been attended by no less than 600 Scholars—His House was call'd the Temple of *Ceres*, and the Street where it stood the *Museum*. See **MUSEUM**.

Out of his School proceeded the greatest Philosophers and Legislators, *Zaleucus*, *Charonidas*, *Archytas*—*Porphyry* says, as soon as he arriv'd in *Italy* he had an Auditory

of two thousand People; to whom he explain'd the Laws of Nature, Reason, and Justice.

He endeavour'd to assuage the Passions of the Mind with Verses, and Numbers; and made a Practice of composing his Mind every Morning by his Harp; frequently singing the *Pans* of *Zbales*. See **MUSIC**.

Exercises of the Body made a considerable part of his Discipline. See **GYMNASIAC** Exercise.

His School became so popular, that Cities and People committed their Republics to the Government of his Scholars—At length, *Porphyry* adds, Ravy stirring up Sedition against 'em, they were oppress'd; and in time, their Learning, which they ever kept secret, was lost; except those difficult things learnt by Rote by the Crowd of Hearers. For *Pythagoras* never committed any thing to Writing.

Beside his public School, *Pythagoras* had a College in his own House, which he call'd *navision*, *Cambidius*: In this were two Orders or Classes of Scholars, *Exoterici*, *Esoterici*, call'd also *Auscultantes*; and *isoterici*, *Intrinsici*.—The former were Novices and Probationers, who were kept under a long Examen, and even impos'd a Quinquennial Silence, to teach them Modesty and Attention, according to *Apleneis*; or, according to *Clemens Alexandrinus*, to teach them to abstract their Minds from sensible Objects, and enure them to the pure Contemplation of the Deity.

The latter were call'd *Gemini*, *Perfecti*, *Mathematici*, and *Pythagoreans*, by way of Eminence—These also were let into the *Arcana* and Depths of the real *Pythagoric* Discipline.

*Clemens* observes, that these Orders corresponded very exactly to those among the *Hebrews*: For in the Schools of the Prophets were two Orders, viz. the Sons of the Prophets, who were the Scholars; and the Doctors or Masters, who were also call'd *Perfecti*. And among the Levites, the Novices or Tyros, who had their Quinquennial Exercises, by way of Preparation. Lastly, even among the *Prophets* there were two Orders; *Esoterici*, or *Profelytes* of the Gate; and *Intrinsici* or *Perfecti*, or *Profelytes* of the Covenant. He adds, 'tis highly probable that *Pythagoras* himself had been a *Profelyte* of the Gate, if not of the Covenant. See **PROFELYTE**.

*Gale* endeavours to prove, that *Pythagoras* borrow'd his Philosophy from that of the *Jews*; to this end producing the Authorities of many of the Fathers, and ancient Authors; and even pointing out the Tracks and Footsteps of *Moses* in several parts of *Pythagoras*'s Doctrine.

*Pythagoras* taught, 1. That God is one; that he is a most simple, incorruptible, and invisible Being; and therefore only to be worshipp'd with a pure Mind, with the simplest Rites, and those prescribed by himself.

*Laertius* observes, that he made Unity the Principle of all things; hence arose Duality, &c. See **UNITY**, &c.

In his Conversation with the *Egyptians*, he learnt abundance of Secrets about Numbers; to which he attributed so much, that he even attempted to explain all things in Nature by Numbers—In effect, it was a common Opinion of the ancient Philosophers, that the Species of Things have to each other the Nature and Relation of Numbers; and that the Universe, and all Things therein, were produced according to certain Numbers, inherent in the Creator's Mind. See **CREATOR**.

Hence *Porphyry* observes, the *Pythagoreans* studied the Doctrine of Numbers with great Attention: Since the incorporeal Forms, and first Principles of Things, i. e. the Divine Ideas, could not be deliver'd in Words, they had recourse to Demonstration by Numbers; and thus call'd the common Reason and Cause of Unity, Identity, and Equality, by the Name *One*.

2. *Pythagoras* further taught, that there is a Relation or Kinship between the Gods and Man; and therefore the Gods take care of Man—Which, *Clemens Alexandrinus* says, is apparently borrow'd from the Christian Doctrine of Providence. See **PROVIDENCE**.

*Pythagoras* also assert'd a *Metempsychosis*, or Transmigration of Souls; and therefore the Immortality of the Soul. See **METEMPSYCHOSIS**.

3. He taught, that Virtue is Harmony, Health, and every good thing; and that God, and therefore every thing, consists of Harmony. See **HARMONY**.

**PYTHAGOREAN**, or **PYTHAGORIC** System, among the Antients, was the same with the *Copernican* System among the Moderns. See **SYSTEM**.

It was thus call'd, as having been maintained and cultivated by *Pythagoras*, and his Followers; not that it was invented by him, for it was much older. See **COPERNICAN** System.

**PYTHAGORIC** Theorem, or Proposition, is the 47th of the first Book of *Euclid*. See **TRIANGLE** and **HYPOTHEUSE**.

**PYTHAGORIC** Tetractys. See **TETRACTYS**.

PYTHIA, or PYTHIAN, in Antiquity, the Priestess of *Apollo*; by whom he deliver'd Oracles. See ORACLE.

She was thus call'd from the God himself, who was entitled *Apollo Pythius*, from his slaying the Serpent *Python*; or, as others will have it, ἀπὸ τοῦ πυθίου, because *Apollo*, the Sun, is the cause of Rottenness; or, according to others, from πυθίσσας, *I bear*, because People went to hear and consult his Oracles.

The Priestess was to be a pure Virgin—She sat on the *Covercis*, or *Lid*, of a brazen Vessel, mounted on a Tripod; and thence, after a violent Enthusiasm, deliver'd her Oracles, or rather explain'd those of the Gods; *i. e.* rehear'd a few ambiguous and obscure Verses, which were taken for Oracles.

All the *Pythias* did not seem to have had the same Talent at Poetry, or Memory enough to retain their Lesson—*Plutarch* and *Strabo* make mention of Poets, who were kept in pay, as Interpreters of *Jupiter*, &c.

PYTHIAN Games, ΠΥΘΙΚΑ ΛΑΪΑ, were solemn Games instituted in honour of *Apollo*, and in memory of his killing the Serpent *Python* with his Arrows. See GAMES.

The *Pythiæ* were celebrated in *Macedonia*, in a place call'd *Pythium*—They were the next in Fame after the *Olympic* Games; but were more antient than they: for 'tis pretended they were instituted immediately after the Deceas of the Serpent.

They were held every two Years, towards the Month *Euphrobolion*, which answer'd to our *February*.

The *Pythias* were also celebrated at *Delphos*; and 'twas these were the most renown'd—A part of *Findor's* Poems are compos'd in praise of the Victors in the *Pythian* Games. See PINDARIC.

The Critics are divided on the Subject of the Serpent *Python*—The Poets say, that *Juno* made use of it to persecute *Latona*, and prevent her bringing into the World *Apollo* and *Diana*, whom she had conceiv'd of *Jupiter*; and that 'twas for this reason *Apollo* kill'd it.

*Strabo* says, 'twas no other than a famous Villain, one *Draco*, that *Apollo* ridded the World of.

*Dickinson*, in his *Delphi Phœnicizantes*, maintains the *Python* of the *Greeks* to be the *Typhon* of the *Phœnicians*; and the *Typhon* of the *Phœnicians* to be the *Og* of Scripture; and *Apollo* who slew it, he will have to be *Josua*.

PYXIS Nautica, in Navigation, the *Seaman's Compass*. See COMPASS.

The Word *Pyxis* is Latin, and literally signifies a little Box.

Among Anatomists, *Pyxis* is also used for the Cavity of the Hip-bone. See ACETABULUM.

## Q

**Q** A Consonant, and the sixteenth Letter of the Alphabet. See LETTER and ALPHABET.  
The **Q** has this peculiar to it, that 'tis always follow'd by an **U**. See **U**.

The **Q** is form'd from the Hebrew **ק**, *Qeph*; which most other Languages have borrow'd; tho' some of them have rejected it again, particularly the Greeks, who now only retain it as a Numeral Character.

In effect, there is that resemblance between the **Q** and **C**, in some Languages, and **K** in others; that many Grammarians, in imitation of the Greeks, banish the **Q** as a superfluous Letter.

*Papius* even affirms, that all the Latin Words now wrote with a **Q**, were wrote among the ancient Romans with a **C**: But we want better Authorities. For tho' that may hold in many cases, inasmuch that we still write indifferently *quor* or *cur*, *quis* or *quis*, *quid* or *quid*, &c. Yet does it not thence follow, that they wrote *cis*, *ce*, *cid*; for *quis*, *que*, *quid*—What Inscriptions authorize such a reading?

Far from this the Antients sometimes substituted **Q** for **C**; and wrote *quojus*, *quos*, for *cujus*, *cus*, &c.

*Varro*, however, and some other Grammarians, as we are told by *Confrinius*, &c. would never use the **Q**. The truth is, its Use or Disuse seems to have been so little settled and agreed on, that the Poets used the **Q** or **C** indifferently, as best suited their Measures; it being a Rule, that the **Q** joined the two following Vowels into one Syllable; and that the **C** imported them to be divided.

Hence it is, that *Lucretius* uses *quirit* for three Syllables, in lieu of *quirit*; *acus* for *agua*; and that *Plautus* uses *relicium* for *reliquum*; as in *quod dedi datum non vellem relicium non*; where the *cum* must be two Syllables, otherwise the *Trochaic* Verse will be lame of a Foot.

In the French, the Sound of the **Q** and **K** are so near akin, that some of their nicest Authors think the former might be spared—*Ramus* adds, that till the Establishment of Royal Professors in the University of Paris under *Francis I.* they always used **Q** in the Latin the same as in the French; pronouncing *quis*, *kalis*, *kanus*, &c. for *quis*, *qualis*, *quantus*, &c.

Some very learned Men make **Q** a double Letter, as well as **K** and **X**—According to them, **Q** is evidently a **C** and **U** joined together—'Tis not enough that the Sound is the same; but they see the Traces of the **CU** in the Figure of the **Q**; the **V** being only laid obliquely  $\sphericalangle$ , so as to come within the Cavity of the **C**.

To confirm this, they say the Antients wrote *qi*, *qa*, *qid*. Tho' *Jos. Scaliger*, *Littleton*, &c. think this no Proof of the Point; as in *Gruter's* Inscriptions, we find not only the **Q**, but also the **C**, put for **QU**; as *Centus*, *Quintus*, *scis* for *quis*, &c. Yet no body ever imagin'd the **C** a double Letter.

**Q** among the Antients, was a Numeral Letter, signifying 500; as in the Verse,

*Q* velut *A* cum *D* quingentos vult numerare.

A Dash over it, as  $\bar{Q}$ , denoted it to signify five hundred thousand. See **A**.

**Q** is also used as an Abbreviation in several Arts—In Physician's Bills, **Q. Pl.** stands for *quantum placet*, or *quantum vis*, as much as you please of a thing; *q. s.* for *quantum sufficit*, or as much as is necessary.

Among Mathematicians, **Q. E. D.** signifies *quod erat demonstrandum*, which was to be demonstrated—**Q. E. F.** *quod erat faciendum*, which was to be done.

**Q. D.** is also frequently used among Grammarians, &c. for *quasi dictum*, as if it were said, &c.

**QUACK**, in Medicine. See **EMPIRIC**.  
**QUADRA**, in Building, any square Border, or Frame, encompassing a Basso-Relievo, Panel, Painter's or other Work.

The Word is also used abusively for a Frame or Border of another Form; as Round, Oval, or the like.

**QUADRAGESIMA**, a Term sometimes used for the Time of Lent; because consisting of forty Days. See **LENT**.

Hence, some Monks are said to lead a *Quadragesimal* Life; or to live on *Quadragesimal* Food all the Year.

**QUADRAGESIMA Sunday**, is the first Sunday in Lent; so call'd, because it is about the fortieth Day before *Easter*. See **EASTER**.

On the same account, the three preceding Sundays, are call'd *Quinquagesima*, *Sextagesima*, and *Septagesima*. See **QUINQUAGESIMA**, &c.

**QUADRAGESIMALS**, denote *Mid-Lent* Contributions, or Offerings. See **OFFERING**, **OBOLATION**, &c.

It was an ancient Custom for People to visit their Mother-Church on *Mid-Lent* Sunday, and to make their Offerings at the High Altar: and the like was also done in *Whitsun-Week*—But as these latter Oblations, &c. were sometimes commuted for by a Payment of *Pentecostals*, or *Whitsun-Farthings*: See **PENTECOSTALS**—So were the former also changed into a customary Payment, called *Quadragesimals*; *Denarii Quadragesimales*; and sometimes *Latare Jerusalem*, from a Hymn so call'd, sung on that day; beginning, *Jerusalem Mater omnium*, &c.

**QUADRANGLE**, in Geometry, a Quadrangular, or Quadrilateral Figure; or a Figure which has four Sides, or four Angles. See **FIGURE** and **QUADRILATERAL**.

To the Class of *Quadrangles*, or *Quadrangular Figures*, belong the *Square*, *Parallelogram*, *Trapezium*, *Rhombus*, and *Rhomboides*. See **SQUARE**, **PARALLELOGRAM**, **RHOMBUS**, &c.

A Square, &c. is a regular *Quadrangle*—a Trapezium an irregular one.

*Quadrangular Figures* are not proper for Fortification; so the Planks and flank'd Angles being too small. See **BASTION**.

**QUADRANS**, in Antiquity. See **A S.**

**QUADRANS**, in our Customs, is the fourth part of a Penny; or a *Farthing*. See **PENNY** and **FARTHING**.

**QUADRANT**, **QUADRANS**, in Geometry, an Arch of a Circle, containing 90 Degrees, or one fourth of the entire Periphery. See **ARCH** and **CIRCLE**: See also **DEGREE**.

Sometimes, also, the Space or Area included between this Arch and two Radii, drawn from the Center to each Extremity thereof, is call'd a *Quadrant*, or more properly *Quadrantal Space*; as being a quarter of the entire Circle. See **SECTOR**.

**QUADRANT**, is also a Mathematical Instrument, of great use in Navigation and Astronomy; for the taking of Altitudes, &c. See **ALTITUDE**.

The *Quadrant* is variously contrived, and furnished with various Apparatus, according to the various Uses it is intended for; but they all have this in common, that they consist of a *Quadrant*, or quarter of a Circle, whose Limb is divided into 90 Degrees; that they have a Plummet suspended from the Center, and are furnish'd with *Finisule*, or Sights.

The principal, most usual, and most useful *Quadrants*, are, the *Common* or *Surveying Quadrant*, the *Astronomical Quadrant*, the *Horodical Quadrant*, *Gunter's Quadrant*, *Sutton's* or *Collin's Quadrant*, and the *Sinical Quadrant*.

The *Common* or *Surveying Quadrant* (represented Tab. SURVEYING, fig. 30.) is made of Brass, Wood, or other Matter; usually 12 or 15 Inches Radius—Its Circular Limb is divided into 90°, and each of those subdivided into as many equal Parts as the Space will allow; either diagonally, or otherwise—On one Edge, or Semidiameter, are fixed two immovable Sights; and in the Angle, or Centre, is hung a Thread with a Plummet.

To the Centre is likewise, sometimes, fixed a Label or moveable Index, bearing two other Sights like the Index of a Telescope—And in lieu of the immovable Sights, is sometimes fitted a Telescope; tho' this more properly belongs to the *Astronomical Quadrant*.

On the under side, or face of the Instrument, is fitted a Ball, and Socket; by means whereof, it may be put in any position for use.

Besides the Essentials of the *Quadrant*, there is frequently added on the face near the Centre, a kind of Compartment, call'd the *Quadrat*, or *Geometrical Square*; as in the Figure—This, in some measure, making a distinct Instrument of itself; see its Description and Use under the Article **QUADRAT**.

The *Quadrant* is to be used in different Situations, according to the Dimensions to be taken—To observe Heights and Depths, its Plane is disposed at right Angles to the Horizon: To take horizontal Distances, the Plane is disposed parallel thereto.

Heights and Distances, again, may be taken two ways; viz. by means of the fixed Sights and Plummet, and by the Label.

Use of the Common, or Surveying QUADRANT.

1. To take the Height, or Depth of an Object, with the fixed Sights and Plummets—Place the Quadrant vertically, and the Eye under the Sight next the Arch of the Quadrant: Thus direct the Instrument to the Object, viz. thro' the Top of a Tower, till the visual Rays thereof sink thro' the Sights upon the Eye.

This done, the Portion of the Arch intercepted between the Thread and the Semidiameter, whereon the Sights are fasten'd, shew the Complement of the Object's Height above the Horizon, or its Distance from the Zenith; and the other Portion of the Arch intercepted between the Thread and the other Semidiameter, shews the Height itself of the Object above the Horizon.

The same Arch likewise gives the Quantity of the Angle made by the visual Ray, and a horizontal Line parallel to the Base of the Tower.

Note, to observe Depths, the Eye must be placed over that Sight next the Centre of the Quadrant.

From the Height, or Depth of the Object, in Degrees thus found, which suppose  $35^{\circ}$ ,  $35'$ , and the Distance of the foot of the Object from the place of Observation carefully measur'd, which suppose 47 Foot; its Height or Depth in Feet, Yards, &c. is easily determin'd by the most common Case in Trigonometry. See TRIANGLE.

For we have here, in a Triangle, one Side given, viz. the Line measur'd; and we have all the Angles: for that of the Tower is always suppos'd a right Angle, the other two therefore are equal to another right Angle; but the Angle observ'd is  $35^{\circ}$ ,  $35'$ ; therefore the other is  $54^{\circ}$ ,  $25'$ . See ANGLE.

The Case then will be reduced to this; as the Sine of  $54^{\circ}$ ,  $25'$ , is to 47 Feet; so is the Sine of  $35^{\circ}$ ,  $35'$ , to a 4th Term, viz. 33  $\frac{1}{2}$  Feet: to which add the Height of the Observer's Eye, suppos'd  $\frac{1}{2}$  Foot, the Sum 33  $\frac{1}{2}$  Feet, is the Height of the Tower required.

2. The further Use of the Quadrant in taking of Altitudes of Objects, both accessible and inaccessible; see under the Article ALTITUDE.

3. Use of the Quadrant in taking Heights and Distances by the Index and Sights.—To take, e. gr. a Height, as that of a Tower, whose Base is accessible.—Place the Plane of the Instrument at right Angles to the Plane of the Horizon, and one of its Edges parallel thereto, by means of the Plummets, which in that case will hang down along the other.—In this Situation turn the Index, till thro' the Sight you see the top of the Tower; and the Arch of the Limb of the Quadrant between that side thereof parallel to the Horizon, and the Index, will be the Height of the Tower in degrees: whence, and from the Distance measur'd as before, its Height in Feet, &c. may be found by Calculation, as in the former Case; or without Calculation, by drawing, from the Data, on Paper, a Triangle similar to the great one, whose Base is the Distance, and its Perpendicular measur'd on the Scale, the Height of the Tower. See SCALE.

4. Use of the Quadrant in measuring horizontal Distances.—Tho' the Quadrant be a less proper Instrument for this purpose than a Theodolite, Semicircle, or the like, by reason Angles greater than Quadrants cannot be taken hereby; yet Necessity sometimes obliges Persons to have recourse to it.

The Manner of its Application herein is the same with that of the Semicircle; all the difference between the two Instruments consisting in this, that the one is an Arch of  $180^{\circ}$ , and can therefore take an Angle of any Quantity; and the other only an Arch of  $90^{\circ}$ , and therefore confined to Angles of that Quantity. See, therefore, SEMICIRCLE.

Astronomical QUADRANT, is a large Quadrant, usually made of Brass, sometimes of wooden Bars, only faced with Plates of Iron, or the like; having its Limb curiously divided, diagonally or otherwise, into Degrees and Minutes, and even Seconds, if possible; with plain Sights fixed to one side of it, or instead thereof, a Telescope; and an Index moving about the Centre, carrying either plain Sights, or a Telescope.

These Quadrants are of principal use in taking Observations of the Sun, Planets, or fixed Stars. See OBSERVATION.

The Antients used only plain Sights, but the Moderns have found it of great benefit to use Telescopes instead of them. See SIGHT and TELESCOPE.

Add, that the Contrivance of moving the Index, by the help of a Screw on the Edge of the Limb, and of readily and easily directing it, and the Quadrant upon its Pedestal, to any desired Phenomenon, by means of the Screws and dented Wheels, is a still greater Improvement of the Instrument.

The Particulars of the Mechanism whereby this is effectu-

ted, would afford a very dry and intricate, as well as useless Detail; which we shall omit, as being sufficiently known among the Instrument-Makers: And in lieu thereof, content ourselves with giving a Figure or Representation, (Tab. ASTRONOMY, fig. 53.)

The Use of this Instrument is obvious.—Being adjusted as above, and turned horizontally round on its Axis, till thro' the moveable Telescope the Object be seen to fall in with the Point of Intersection of the cross Bars, the Degrees cut by the Index give the Altitude requir'd. See TELESCOPE.

The Horodical QUADRANT, is a pretty, commodious Instrument, thus call'd from its Use in telling the Hour of the Day; which is its only Use.

Its Construction is so simple and easy, and its Application so ready, that we shall describe both, for the Use of some who may want other Conveniences.

Construction and Use of the Horodical QUADRANT.

From the Centre of the Quadrant C, (Tab. ASTRONOMY, Fig. 54.) whose Limb AB is divided into  $90^{\circ}$ ; describe seven concentric Circles at intervals at pleasure; and to these add the Signs of the Zodiac in the Order they are represented in the Scheme. 2. Applying a Ruler to the Centre C, and the Limb AB, mark upon the several Parallels the Degrees corresponding to the Altitude of the Sun when therein, for the given Hours; connect the Points belonging to the same Hour with a curve Line, to which add the Number of the Hour.—To the Radius CA, fit a couple of Sights, and to the Centre of the Quadrant C, tie a Thread with a Plummets, and upon the Thread a Bead to slide.

If now the Bead be brought to the Parallel wherein the Sun is, and the Quadrant directed to the Sun till a visual Ray pass thro' the Sights, the Bead will shew the Hour.

For the Plummets in this situation cuts all the Parallels in the Degrees corresponding to the Sun's Altitude: Since, then, the Bead is in the Parallel which the Sun then describes, and thro' the Degrees of Altitude to which the Sun is elevated every Hour, there pass Hour-Lines; the Bead must shew the present Hour.—Some Persons who are not mighty nice, represent the Hour-Lines by Arches of Circles, or even by straight Lines; and that without any sensible Error.

Gunter's QUADRANT, is a kind of Quadrant (represented Tab. ASTRONOMY, Fig. 55.) invented by our Countryman Edm. Gunter.

This, beside the graduated Limb, fixed Sights, and a Plummets, as the other Quadrants; has, likewise, a Stereographical Projection of the Sphere on the Plane of the Meridian, with the Eye placed in one of the Poles; by which, besides the common Uses of other Quadrants, several useful Questions in Astronomy, &c. are easily solved.

Use of Gunter's QUADRANT.

1. To find the Sun's Meridian Altitude for any given Day; or the Day of the Month for any given Meridian Altitude.—Lay the Thread to the Day of the Month in the Scale next the Limb; the Degree it cuts in the Limb is the Sun's Meridian Altitude.

Thus, the Thread being laid on the 15th of May, cuts  $59^{\circ}$   $30'$ , the Altitude sought.—And conversely, the Thread being set to the Meridian Altitude, will shew the Day of the Month.

2. To find the Hour of the Day.—Having put the Bead (which slides on the Thread) to the Sun's Place in the Ecliptic, observe the Sun's Altitude by the Quadrant; then, if the Thread be laid over the same in the Limb, the Bead will fall upon the Hour requir'd.

Thus, suppose on the 10th of April, the Sun being then in the beginning of Taurus, I observe the Sun's Altitude, by the Quadrant, to be  $36^{\circ}$ . I place the Bead to the beginning of Taurus in the Ecliptic, and lay the Thread over  $36^{\circ}$  of the Limb; and find the Bead to fall upon the Hour-Line mark'd 3 and 9 accordingly the Hour is either 9 in the Morning, or 3 in the Afternoon.—Again, laying the Bead on the Hour given, (having first rectify'd or put it to the Sun's Place) the Degree cut by the Thread or the Limb, gives the Altitude.

Note, the Bead may be rectify'd otherwise, viz. by bringing the Thread to the Day of the Month, and the Bead to the Hour-Line of 12.

3. To find the Sun's Declination from his Place given; and conversely.—Set the Bead to the Sun's Place in the Ecliptic; move the Thread to the Line of Declination E T, and the Bead will cut the Degree of Declination requir'd.—Conversely, the Bead being adjust'd to a given Declination, and the Thread moved to the Ecliptic, the Bead will cut the Sun's Place.

4. *The Sun's Place being given, to find his right Ascension; or contrariwise*—Lay the Thread on the Sun's Place in the Ecliptic, and the Degree it cuts on the Limb is the right Ascension sought—Contrariwise, laying the Thread on the right Ascension, it cuts the Sun's Place in the Ecliptic.

5. *The Sun's Altitude being given, to find his Azimuth; and contrariwise*—Rectify the Bead for the Time (see the second Article) and observe the Sun's Altitude; bring the Thread to the Complement of that Altitude; thus the Bead will give the Azimuth sought, among the Azimuth Lines.

6. *To find the Hour of the Night from some of the five Stars laid down on the Quadrant*—Put the Bead to the Star you intend to observe, and find how many Hours he is off the Meridian, (by Article 2.) then from the right Ascension of the Star, subtract the Sun's right Ascension converted into Hours; and mark the difference: Which difference added to the observ'd Hour of the Star from the Meridian, shows how many Hours the Sun is gone from the Meridian, which is the Hour of the Night.

Suppose, e. gr. on the 15th of May, the Sun being in the fourth Degree of Gemini, I set the Bead to *Arcturus*; and observing his Altitude, find him to be in the West about 52° high, and the Bead to fall on the Hour-Line of two after Noon: then will the Hour be 11 Hours 50 Minutes past Noon, or 10 Minutes short of Midnight.

For, 62° the Sun's right Ascension converted into Time, makes 4 Hours 8 Minutes, which subtracted from 15 Hours 58 Minutes, the right Ascension of *Arcturus*, the Remainder will be 9 Hours 50 Minutes; which added to 2 Hours, the observ'd distance of *Arcturus* from the Meridian, shows the Hour of the Night to be 11 Hours 50 Minutes.

*Sutton's* QUADRANT, sometimes, also, call'd *Collins's Pocket* QUADRANT—One of the best of Mr. Sutton's Quadrants, (represented Tab. ASTRONOMY, Fig. 56.) is a Sarcographic Projection of that Quarter of the Sphere between the Tropics, upon the Plane of the Equinoctial, the Eye being in the North Pole.

'Tis fitted to the Latitude of London—The Lines running from the right Hand to the left are Parallels of Altitude, and those crossing them are Azimuths: The less of the two Circles bounding the Projection is  $\frac{1}{2}$  of the Tropic of Capricorn, the greater  $\frac{1}{2}$  of that of Cancer—The two Ecliptics are drawn from a Point on the left Edge of the Quadrant, with the Characters of the Signs upon 'em; and the two Horizons are drawn from the same Point—The Limb is divided both into Degrees, and Time; and by having the Sun's Altitude, the Hour of the Day may be here found to a Minute.

The quadrantal Arches next the Centre contain the Calendar of Months; and under them, in another Arch, is the Sun's Declination.

On the Projection are placed several of the most noted fixed Stars between the Tropics, and next below the Projection is the *Quadrat*, and Line of Shadows. See QUADRANT.

#### Use of Sutton's or Collins's QUADRANT.

*To find the Time of Sun-rising or setting, his Amplitude, Azimuth, Hour of the Day, &c.*—Lay the Thread over the Day and the Month, and bring the Bead to the proper Ecliptic, either that of Summer or Winter, according to the Season; (which is call'd rectifying) then, moving the Thread, bring the Bead to the Horizon; in which Case the Thread will cut the Limb in the time of the Sun's rising or setting, before, or after six; and at the same time the Bead will cut the Horizon in the Degrees of the Sun's Amplitude.

Again, observing the Sun's Altitude with the Quadrant, and supposing it found 45° on the 24th of April; lay the Thread over the 24th of April; bring the Bead to the Summer Ecliptic, and carry it to the Parallel of Altitude 45°. In which Case the Thread will cut the Limb at 55° 15', and the Hour will be seen among the Hour-lines to be either 41' past nine in the Morning, or 19' past two in the Afternoon.

Lastly, the Bead among the Azimuths shows the Sun's distance from the South, viz. 50° 41'.

But note, that if the Sun's Altitude be less than what it is at 6 a. clock, the Operation must be perform'd among those Parallels above the Winter Horizon; the Bead being rectify'd to the Winter Ecliptic.

*Sinecal* QUADRANT, is an Instrument of Use in Navigation—(It is represented Tab. NAVIGATION, Fig. 2.) and consists of several concentric quadrantal Arches; divided into eight equal parts by Radii with parallel right Lines crossing each other at right Angles.

Now, any of the Arches, e. gr. B C may be accounted a Quadrant of any of the great Circles of the Sphere, chiefly of the Horizon, and Meridian: If, then, B C be taken for a Quadrant, e. gr. of the Horizon; either of the Sides,

e. gr. A B, may represent the Meridian; and the other, A C will represent a Parallel, or Line of East and West; and all the other Lines parallel to A B will also be Meridians; and all those parallel to A C, East and West Parallels, or East and West Lines.

Again, the eight Spaces into which the Arches are divided by the Radii, represent the eight Points of the Compass in a quarter of the Horizon; each containing 11° 15'.

The Arch B C is likewise divided into 90°, and each Degree subdivided into 12' Diagonal-wise.

To the Center is fixed a Thread, as A L; which being laid over any Degree of the Quadrant, serves to divide the Horizon.

If the *Sinecal* Quadrant be taken for a fourth part of the Meridian; one side thereof, A B, may be taken for the common Radius of the Meridian and the Equator; and then the other side A C, will be half the Axis of the World—The Degrees of the Circumference B C will represent Degrees of Latitude, and the Parallels to the side A B, assumed from every Point of Latitude to the Axis A C, will be Radii of the Parallels of Latitude, as likewise the Sine-Complements of those Latitudes.

Suppose, then, it be requir'd to find the Degrees of Longitude contain'd in 85 of the lesser Leagues, in the Parallel of 48°—Lay the Thread over 48° of Latitude on the Circumference, and count thence the 85 Leagues, or A B, beginning at A: This will terminate in H, allowing every small Interval, four Leagues. Then tracing out the Parallel H G, from the Point H to the Thread; the part A G of the Thread shows that 125 greater, or Equinoctial Leagues, make 69 1/2; and therefore that the 85 lesser Leagues A H which make the difference of Longitude of the Course, are equal to the Radius of the Parallel G I, make 68 1/2 of the said Parallel.

If the Ship sail an oblique Course, such Course, besides the North and South greater Leagues, gives lesser Leagues Easterly and Westerly; to be reduced to Degrees of Longitude of the Equator—But these Leagues being made neither on the Parallel of Departure, nor on that of Arrival, but in all the intermediate ones; we must find a mean proportional Parallel between 'em.

To find this, we have on the Instrument a Scale of cross Latitudes. Suppose, then, it were requir'd to find a mean Parallel between the Parallels of 40° and 60°. With your Compasses take the middle between the 40th and 60th Degree on the Scale: This middle Point will terminate against the 51st Degree, which is the mean Parallel requir'd.

#### Use of the Sinecal QUADRANT.

The Use of this Instrument is to form Triangles upon, similar to those made by a Ship's way, with the Meridians and Parallels; the sides of which Triangles are measur'd by the equal Intervals between the concentric Quadrants, and the Lines N. and S. E. and W.

The Lines and Arches are distinguish'd, every fifth, by a broader Line; so that if each Interval be taken for one League, there will be five between one broad Line and another.

Now, suppose, a Ship to have sail'd 150 Leagues North-East, one fourth North; which is the third Point, and makes an Angle of 35° 45', with the North part of the Meridian—Here are given two things; viz. the Course and Distance sail'd, by which a Triangle may be form'd on the Instrument, similar to that made by the Ship's Course, and her Longitude and Latitude; and hence may the unknown parts of the Triangle be found. See TRIANGLE.

Thus, supposing the Centre A to represent the place of Departure; count, by means of the concentric Arches, along the Point the Ship sail'd in, as A D, 150 Leagues from A to D: Then is the Point D the place the Ship is arriv'd at; which note.—This done, let D E be parallel to the side 3; and then there will be form'd a right-angled Triangle A E D, similar to that of the Ship's Course, difference of Longitude and Latitude: The side A E gives 125 Leagues for the difference of Latitude Northwards, which makes 6° 15', and the side D E gives 83 lesser Leagues answering to the Parallels, which being reduced, as shewn above, gives the difference of Longitude—And thus is the whole Triangle found.

QUADRANT, in Gunnery, call'd also the *Gunner's Square*, is an Instrument serving to elevate or lower Cannons, Mortars, &c. according to the Places they are to be level'd or directed to. See MORTAR, LEVEL, &c.

It consists of two Branches, made of Brass; one about a Foot long, 8 Lines broad, and one Line in thickness; the other four Inches long, and the same length and breadth as the former—Between these Branches is a Quadrant divided into 90 Degrees, beginning from the shortest Branch, furnish'd with Thread and Plummet. See its Figure represented Tab. FORTIFICATION, Fig. 11.

The Use of this Instrument is easy; nothing more being requir'd

requir'd but to place the longest Branch in the Mouth of the Cannon or Mortar, and elevate or lower it, till the Thread cuts the Degree necessary to hit a proposed Object. Sometimes, also, on one of the Surfaces of the long Branch is noted the division of Diameters, and weights of Iron Bullets; as also the Bores of Pieces. See ORDNANCE, CALLIPER, &c.

**QUADRANT of Altitude**, is an Appendage of the Artificial Globe; consisting of a Lamina, or Slip of Brass, the length of a *Quadrant* of one of the great Circles of the Globe; and divided into 90 Degrees.

At the end where the Divisions terminate, is a Nut riveted on and furnish'd with a Screw, by means whereof the Instrument is fitted on to the Meridian; and moveable round upon the Rivet, to all Points of the Horizon.

Its Use is to serve as a Scale in measuring of Altitudes, Amplitudes, Azimuths, &c. See the manner of its Application under the Use of the GLOBE.

**QUADRANTAL Space**, in Geometry, see QUADRANT.

**QUADRANTAL Triangle**, is a spherical Triangle, one of whose Sides is a Quadrant of a Circle; and one of its Angles, a right Angle. See SPHERICAL Triangle.

**QUADRANTAL**, in Antiquity, a Vessel in use among the Romans for the measuring of Liquids. See MEASURE.

It was, at first, call'd *Ambora*; afterwards *Quadrantal*, from its Form, which was Square every way, like a Die. See AMPHORA.

Its Capacity was 80 *Libre*, or Pounds of Water, which made 48 *Sextaries*, or 6 *Congii*. See CONGIUS.

**QUADRANTATA Terra**, in our ancient Law-Books, is used for a quarter of an Acre; now call'd a Rood. See ACRE and ROOD. See also PARTINGDEAL.

**QUADRAT**, call'd also *Geometrical Square* and *Line of Shadows*, is an additional Member on the Face of the common Gunter's and Sutton's Quadrants; of some use in taking Altitudes, &c. See QUADRANT.

The *Quadrat*, K.L.H. (Tab. ASTRONOMY, Fig. 55.) has each of its sides divided into 100 equal Parts commencing from the Extremes, so as the Number 100 falls on the Angles; and representing Tangents to the Arch of the Limb.

The Divisions are distinguish'd by little Lines from 5 to 5, and by Numbers from 10 to 10; and the Divisions being occasionally produced a-crofs, form a kind of Lattice, consisting of 10000 little Squares.

The Proportion here, is, as Radius is to the Tangent of the Altitude at the place of Observation (i. e. to the parts of the *Quadrat* cut by the Thread) so is the distance between the Station and foot of the Object, to its height above the Eye. See ALTITUDE.

*Use of the QUADRAT, Geometrical Square, or Line of Shadows.*

1. The *Quadrat* being vertically placed, and the Sights directed to the Top of a Tower, or other Object, whose Height is required; if the Thread cut the side of the *Quadrat* mark'd *right Shadows*, the distance from the Base of the Tower to the Point of Station is less than the Tower's Height—If the Thread fall on the Diagonal of the Square, the Distance is just equal to the Height—If it fall on that side mark'd *vers'd Shadows*, the Distance exceeds the Height.

Hence, measuring the Distance, the Height is found by the *Rule of Three*; inasmuch as there are three Terms given—Indeed, their disposition is not always the same; for when the Thread cuts the side of *vers'd Shadows*, the first Term in the *Rule of Three* ought to be that part of the side cut by the Thread, the second the side of the Square, and the third the Distance measur'd—If the Thread cut the other side, the first Term is the whole side of the Square, the second the parts of the side cut by the Thread, and the third the Distance.

For an Instance of each—Suppose, e. g. in looking at the Top of a Steeple the Thread cut the side of *right Shadows* in the Point 40, and that the Distance measures 20 Poles; the Case then will stand thus: As 40 is to 100, so is 20 to a fourth Term, which I find to be 50; the Height of the Steeple in Poles.

Again, supposing the Thread to fall on the other side, in the Point 50, and the Distance to measure 35 Poles; the Terms are to be disposed thus: As 100 is to 50; so is 35 to a fourth Term, viz. 21, the Height required.

*Use of the QUADRAT without Calculation.*

The preceding Cases may be perform'd without Calculation when the Divisions of the Square are produced both ways, so as to form the Area into little Squares.

Thus, suppose, 1. The Thread to fall on 40 in the side of *right Shadows*, and the Distance be measur'd 20 Poles;

seek among the little Squares for that Perpendicular to the side which is 20 parts from the Thread; this Perpendicular will cut the side of the Square next the Centre, in the Point 50, which is the Height requir'd in Poles.

2. If the Thread cut the side of *vers'd Lines* in the Point 60, and the Distance be 35 Poles; count 35 parts on the side of the *Quadrat* from the Centre; count also the Divisions of the Perpendicular from the Point 35 to the Thread, which will be 21, the Height of the Tower in Poles.

Note, In all Cases, the Height of the Centre of the Instrument is to be added. See farther under SHADOW.

**QUADRAT**, in Astrology, call'd also **QUARTILE**, an Aspect of the heavenly Bodies, wherein they are distant from each other, a Quadrant, or ninety Degrees. See ASPECT.

This is held a malignant Aspect. See QUARTILE.

**QUADRAT**, in Printing, is a sort of Space; that is, a piece of Metal, cast like the Letters, to be used occasionally in Composing, to make the Intervals between Words, at the ends of Lines, &c. See PRINTING.

There are *Quadrats* of divers Sizes, as *m Quadrats*, a *Quadrat*, &c. which are respectively of the Dimensions of such Letters.

**QUADRATA Legio**, among the Romans, was a Legion consisting of 4000 Men. See LEGION.

**QUADRATIC Equation**, is an Equation wherein the unknown Quantity is of two Dimensions, i. e. is the Square of the Root or Number sought—As in  $x^2 = a + b^2$ . See EQUATION.

*Quadratic Equations* are of two Kinds; *simple*, or *pure*; and *affected*.

*Simple*, or *Pure QUADRATICS*, are those where the Square of the unknown Root is equal to the absolute Number given: As in  $aa = 36$ ; or  $aa = 146$ ;  $3y = 135225$ .

The Resolution of these is easy; it being apparent that nothing more is requir'd than to extract the Square-Root out of the Number or known Quantity. See EXTRACTION.

Thus the Value of  $a$  in the first Equation is equal to 6; in the second  $a = 12$ , and a little more, as being a *hard* Root; and in the third Example  $y = 365$ . See ROOT.

*Affected QUADRATICS*, are those which between the highest Power of the unknown Number, and the absolute Number given, have some intermediate Power of the unknown Number: As  $aa + 2a = 100$ . See AFFECTED.

All Equations of this Rank are in one or other of the following Forms; viz.  $aa + ad = R$ .  $aa - ad = R$ .  $aa - a = R$ .

There are several Methods of solving *affected Equations*, or of extracting their Roots; the most convenient is that of *Horriot*—Here,  $x$  being assumed as a part of the Root;  $a$ , the known Quantity of the second Term, will be double the other part; and therefore half of  $a$  is the other part—The Square, thereof, will be completed by adding one fourth of  $aa$ ; which done, the Root of the Square may be extracted thus:

$$\begin{array}{r}
 x^2 + ax = b \\
 \quad \quad \quad \frac{1}{4}aa \quad \frac{1}{4}aa \quad add. \\
 \hline
 x^2 \quad ax \quad \frac{1}{4}a^2 = \frac{1}{4}a^2 \quad b^2 \\
 \hline
 x^2 \quad 2ax = \sqrt{(\frac{1}{4}a^2 \quad b^2)} \\
 \hline
 x = \frac{1}{2}a \sqrt{(\frac{1}{4}a^2 \quad b^2)}
 \end{array}$$

In lieu of the Characters + and -, we here use two Points; to avoid the necessity of distinguishing several Cases. See RESOLUTION.

*Construction of QUADRATIC Equations*; see CONSTRUCTION.

**QUADRATING of a Piece**, among Gunners, is the seeing that a Piece of Ordnance be duly placed, and point'd in its Carriages; that its Wheels be of an equal Height, &c. See CARRIAGE, ORDNANCE, CANNON, &c.

**QUADRATO-quadratum**, or **Biquadratum**, the fourth Power of Numbers; or the Product of the Cube multiply'd by the Root. See POWER.

**QUADRATO Cubus**, **QUADRATO-QUADRATO-Cubus**, and **QUADRATO-Cubo-Cubus**, are Names used by *Diophantus*, *Vieta*, *Oughtred*, and others, for the 5th, 7th, and 8th Powers of Numbers. See POWERS.

**QUADRATRIX**, in Geometry, a mechanical Line, by means whereof we can find right Lines equal to the Circumference of a Circle, or other Curve, and the several Parts thereof. See CIRCLE, &c.

Or, more accurately, the *Quadratrix of a Curve*, is a transcendental Curve, described on the same Axis, the Semiordinates whereof being given, the Quadrature of the correspondent Parts in the other Curve, are likewise given. See CURVE.

Thus, e. g. the Curve A N D (Tab. ANALYSIS, Fig. 21.) may be call'd the *Quadratrix of the Parabola* A M C, since 'tis demonstrated that A P M A = PN<sup>2</sup>, or A P M A = A P. P N, or A P M A = P N a, &c.

The most eminent of these *Quadratures* are that of *Dinoftrates* and that of *Mr. Tschirnhausen* for the Circle, and that of *Mr. Perks* for the Hyperbola.

**QUADRATRIX of Dinoftrates**, is a Curve,  $A M m$ , (Tab. ANALYSIS, Fig. 22.) whereby the Quadrature of the Circle is effected, tho' not Geometrically, but Mechanically; thus call'd from its Inventor *Dinoftrates*.

In Geocifis is thus, — Divide the *Quadrantal Arch*  $ANB$  into any Number of equal Parts; in  $N n$ , &c. by a continual Bifectio—divide the Radius  $AC$  into the fame Number of Parts in the Points  $P p$ , &c. Draw Radii  $C N$ ,  $c n$ , &c. — Lastly, on the Points  $P p$ , &c. erect Perpendiculars  $PM$ ,  $p m$ , &c. the Curve form'd by connecting these Lines is the *Quadratrix of Dinoftrates*.

Here, from the Conftruction,  $AB : AN :: AC : AP$ ; and therefore, if  $AB = a$ ,  $AC = b$ ,  $AN = x$ ,  $AP = y$ ;  $a x = by$ . See **QUADRATURE**.

**QUADRATRIX Tschirnhauseniana**, is a transcendental Curve  $A M m$ , (Fig. 23.) whereby the Quadrature of the Circle is likewise effected; invented by *H. Tschirnhausen*, in imitation of that of *Dinoftrates*.

In Geocifis is thus conceived—Divide the *Quadrant*  $ANB$ , and its Radius  $AC$  into equal Parts, as in the former; and from the Points  $P p$ , &c. draw the right Lines  $PM$ ,  $p m$ , &c. parallel to  $CB$ ; and from the Points  $N n$ , &c. the right Lines  $N M$ ,  $n m$ , &c. parallel to  $AC$ —The Points  $A M m$ , &c. being connected, the *Quadratrix* is form'd; where  $AB : AN :: AC : AP$ .

Here again, since  $AB : AN :: AC : AP$ ; if  $AB = a$ , and  $AC = b$ ,  $AN = x$ , and  $AP = y$ ;  $a x = by$ . See **QUADRATURE**.

**QUADRATUM Cubi**, **QUADRATO-QUADRATO-QUADRATUM**, and **QUADRATUM Sursifolium**, &c. are Names used by the *Arabs* for the 6th, 8th, and 9th Powers of Numbers. See **POWERS**.

**QUADRATURE**, **QUADRATURA**, in Geometry, the squaring, or reduction of a Figure to a Square; or the finding a Square equal to a Figure proposed. See **FIGURE** and **SQUARE**.

Thus, the finding of a Square containing just as much Surface, or Area as a Circle, an Ellipsis, a Triangle, or other Figure, is call'd the *Quadrature* of a Circle, an Ellipsis, a Triangle, or the like. See **CIRCLE**, &c.

The *Quadrature* of Rectilinear Figures comes under the common Geometry; as amounting to no more than the finding their Areas, or Superficies; which are in effect their Squares. See **AREA**.

Squares of equal Areas are here easily had, by only extracting the Roots of the Areas thus found; and on such Root as a side constructing a Square. See **SQUARE**. See also the particular Methods of finding the Areas or Squares, under each particular Figure, as **TRIANGLE**, **PARALLELOGRAM**, **TRAPEZIUM**, &c.

The *Quadrature of Curves*, that is, the measuring of their Area, or the finding of a rectilinear Space equal to a curvilinear Space, is a Matter of much deeper Speculation; and makes a part of the higher Geometry. See **GEOMETRY**.

Tho' the *Quadrature*, especially of the Circle, be a thing many of the first-rate Mathematicians among the Antients were very solicitous about, (see **QUADRATURE of the Circle**) yet nothing in this kind has been done so considerable, as in and since the middle of the last Century; when, *viz.* in the Year 1557, *Mr. Neil* and *my Lord Brounker*, and afterwards, in the same Year, *Sir Christopher Wren*, Geometrically demonstrated the Equality of some Curves to a straight Line.

Soon after this, others at home and abroad, did the like in other Curves; and not long afterwards the thing was brought under an analytical Calculus, the first Specimen whereof ever published was given by *Mercator* in 1688. in a Demonstration of *my Lord Brounker's Quadrature* of the Hyperbola by *Dr. Wallis's* reduction of a Fraction into an infinite Series by Division. See **QUADRATURE of the Parabola**.

Tho' it appears by the way that *Sir Isaac Newton* had before discover'd a Method of attaining the Quantity of all quadrable Curves analytically by his Method of Fluxions, before the Year 1668. See **FLUXIONS**.

'Tis contended between *Sir Christopher Wren* and *Mr. Huygens* which of the two first found the *Quadrature* of any determinate Cycloidal Space—*Mr. Leibnitz* afterwards found that of another Space; and *M. Bernoulli* in 1699, discover'd the *Quadrature* of an infinity of Cycloidal Spaces, not only Segments, but also Sectors, &c. See **QUADRATURE of the Cycloid**, **QUADRATURE of the Lune**, &c.

**QUADRATURE of the Circle**, is a Problem that has employ'd the Mathematicians of all Ages; but still in vain. See **CIRCLE**.

It depends on the Ratio of the Diameter to the Periphery, which was never yet determined in precise Numbers. See **DIAMETER**, &c.

Were this Ratio known, (which would imply the Circumference's being express'd by some Affection of the Diameter; and, of consequence, that it were equal to a right Line) the *Quadrature of the Circle* were effected: it being demonstrated, that the Area of a Circle is equal to a rectangular Triangle, whose two Sides comprehending the right Angle, are the Radius, and a right Line equal to the Circumference—So that to square the Circle, all that is required is to rectify it. See **CIRCUMFERENCE** and **RECTIFICATION**.

Many have approach'd very near this Ratio—*Archimedes* seems to have been one of the first who attempted it; which he did by means of regular Polygons inscribed and circumscribed; and by using Polygons of 96 sides, fixed the Ratio as 7 to 22. See **POLYGONS**.

Some of the Moderns have come nearer, particularly *Jud. de Ceulen*, who with infinite Industry found, at length, that supposing the Diameter 1, the Circumference is less than  $3.141592653589793238462643383879501$  but yet greater than the same Number, if the last Cypher be turn'd into a Unit.

Strict Geometry here failing, Authors have had recourse to other Means; and particularly, to a sort of Curves, call'd *Quadratrices*: But these being Mechanical Curves, instead of Geometrical ones, or rather Transcendental instead of Algebraical ones, the Problem is not fairly solved thereby. See **TRANSCENDENTAL**, **MECHANICAL**, &c. **QUADRATRIX**.

Hence, recourse has been had, by others, to Analytics—and the Problem attempted by three sorts of Algebraic Calculations—The 1<sup>st</sup> gives a kind of transcendental *Quadratures*, by Equations of indefinite Degrees: as if  $a^2 + x$  be equal to 30, and  $x$  be sought, it will be found to be 33 because  $3^2 + 3$ , is 27 + 3, or 30.—The 2<sup>d</sup> by vulgar Numbers, tho' irrationally such; or by the Roots of common Equations, which for the general *Quadrature*, or its Sectors, is impossible—The 3<sup>d</sup> by means of certain Series, exhibiting the Quantity of a Circle by a Progression of Terms.

Arithmetic, in effect, affords us very accurate and intelligible Expressions for all rational Numbers; but it is defective as to Irrationals, which are infinitely more numerous than the former: there being, *e.g.* an Infinity of 'em between 1 and 2. The Root of 2, which is a mean Proportional between 1 and 2, is a very obscure Idea; and its Magnitude is such, as that if you would express it in rational Numbers, which alone are clearly intelligible, you may still approach nearer and nearer its exact Value, but never arrive precisely at it.

Thus, if for the Value of the Root of 2, you first put 1, 'tis visibly too little; if, then, you add  $\frac{1}{2}$ , 'tis too much; if for the Square of  $1 + \frac{1}{2}$ , or of  $\frac{3}{2}$ , exceeds 2. If, again, you take away  $\frac{1}{4}$ , you'll find you have taken too much; and if you'll return  $\frac{1}{8}$ , the Sum will be too great—Thus, may you proceed to Infinity, without ever finding a Number stop at.

Now these Numbers, thus found, being disposed in their proper Order, make what we call an *Infinite Series*. See **SERIES**.

Further, of infinite Series's, there are some which only yield a finite Sum, as  $\frac{1}{2}$ ,  $\frac{1}{4}$ , &c. and in general all such as decrease in Geometrical Progression—And there are others, on the contrary, which make an infinite Sum; as the Harmonical Progression,  $\frac{1}{2}$ ,  $\frac{1}{4}$ , &c. See **PROGRESSION**.

But, here, we have only to do with the former, as expressing a finite Magnitude; yet cannot even the Sum of these be always found—Thus, we are certain, that 'tis impossible to find the Sum of the Series expressing the Root of 2.

Geometry, however, is free from the Impossibility Arithmetical labours under, of expressing irrational Numbers.—Thus, the Diagonal of a Square, whose Side is 1, expresses the Root of 2. See **DIAGONAL**.

Yet in other Magnitudes, Geometry, itself, may fall under the same Difficulty with Arithmetic—For it is possible, there may be right Lines which cannot be express'd but by an infinite Series of similar Lines, whose Sum it may be impossible to find.

In effect, the right Lines, which should be equal to Curves, are frequently of this kind—in searching, *e.g.* for a right Line equal to the Circumference of a Circle, we find that the Diameter being put 1, the Circumference will be  $\frac{1}{2}$  less,  $\frac{1}{4}$  more,  $\frac{1}{8}$  less,  $\frac{1}{16}$  more, &c. making an infinite Series of Fractions, whose Numerator is always 4, and the Denominators in the natural Series of the uneven Numbers; and all these Terms, alternately, too great and too little.

Could the Sum of this Series be found, it would give the *Quadrature of the Circle*; but this is not yet done; nor is it at all probable it ever will be done—That, however, is not yet demonstrated; nor, of consequence, is the *Quadrature of the Circle* yet demonstrated if possible.

To this it may be added, that as the same Magnitude may be express'd by several different Series, 'tis possible the Circumference of the Circle may be express'd in some other Series, whose

whose Sum may be found—We have two infinite Series, expressing the Ratio of the Circumference to the Diameter, tho' indefinitely, as above—The first discover'd by Sir Isaac Newton; where the Diameter being put 1, the Circumference is  $4 - \frac{1}{2} - \frac{1}{8} - \frac{1}{16} - \frac{1}{32}$ , &c.—The second, discover'd by M. Leibnitz; where the Diameter being 1, the Circumference is  $4 - \frac{1}{2} + \frac{1}{4} - \frac{1}{8} + \frac{1}{16}$ , &c. The Investigation of each of which Series, by the Calculus Integralis, is as follows.

Sir Isaac Newton's Quadrature of the Circle; or the Investigation of his Series, for squaring the Circle.

If the Radius of the Circle, A C = 1 (Tab. ANALYSIS, fig. 24.) CP = x, y =  $\sqrt{1-x^2}$  and  $\sqrt{1-x^2}$  =  $1 - \frac{1}{2}x^2 + \frac{1}{8}x^4 - \frac{1}{16}x^6 + \frac{1}{128}x^8 - \frac{1}{512}x^{10}$ , &c. to Infinity. Then will  
 $y dx = dx - \frac{1}{2}x^2 dx + \frac{1}{8}x^4 dx - \frac{1}{16}x^6 dx + \frac{1}{128}x^8 dx - \frac{1}{512}x^{10} dx$ , &c. in infinitum.  
 $fy dx = x - \frac{1}{2}x^3 + \frac{1}{8}x^5 - \frac{1}{16}x^7 + \frac{1}{128}x^9 - \frac{1}{512}x^{11}$ , &c. to Infinity.

When x becomes equal to the Radius CA, the Space DCPM degenerates into a Quadrant. Substituting, therefore, 1 for x, the Quadrant will be  $1 - \frac{1}{2} - \frac{1}{8} + \frac{1}{16} - \frac{1}{128} + \frac{1}{512}$ , &c. in infinitum.—Which same Series will measure the entire Area of the Circle, the Diameter being 1.

M. Leibnitz's Quadrature of the Circle.

Let the Tangent KB (Tab. ANALYSIS, fig. 25.) = x, BC = 1; and the Secant AC, infinitely near another CK, and the little Arch KL be drawn with the Radius CK; then will AK = dx, KC =  $\sqrt{1+x^2}$ . Now since the Angles at B and L, are right Angles; and by reason of the infinitely small Angle KCL, the Angle BKC = KAC; we shall have

$$KC : BC :: KA : KL$$

$$\sqrt{1+x^2} : 1 :: dx : \frac{dx}{\sqrt{1+x^2}}$$

Further CK : KL :: CM : m M

$$\sqrt{1+x^2} : \sqrt{1+x^2} :: 1 : \frac{dx}{1+x^2}$$

Therefore the Sector C M m =  $\frac{1}{2} dx : (1+x^2) = \frac{1}{2} (dx - x^2 dx + x^4 dx - x^6 dx + x^8 dx - x^{10} dx)$ , &c. whence by the Summary Calculus, we find the Sector BCM, whose Tangent KB = x,  $\frac{1}{2} x - \frac{1}{8} x^3 + \frac{1}{16} x^5 - \frac{1}{128} x^7 + \frac{1}{512} x^9$ , &c. in infinitum. And therefore it is M the Octant of the Circle, or an Arch of 45°. The Sector will be  $\frac{1}{2} - \frac{1}{8} + \frac{1}{16} - \frac{1}{128} + \frac{1}{512}$ , &c. in infinitum. The Double, therefore, of this Series  $1 - \frac{1}{2} + \frac{1}{4} - \frac{1}{8} + \frac{1}{16} - \frac{1}{32}$ , &c. in infinitum, is the Quadrant of the Circle; or if the Diameter be = 1, the entire Area of the Circle.

QUADRATURE of the Lune.—Tho' a definite Quadrature of the entire Circle, was never yet given; yet there have been various Portions of it squar'd.—The first partial Quadrature was given by Hippocrates of Chio; who squared a Portion call'd, from its Figure, the Lune, or Lunula. See LUNZ, where the Quadrature is shown.

This Quadrature has no dependence on that of the Circle; but then it only extends to the entire Lune, or its half: If you would square any Portion thereof, at pleasure, the Quadrature of the Circle comes in the way.

Yet some of the modern Geometers have found the Quadrature of any Portion of the Lune at pleasure, independently of the Quadrature of the Circle; and tho' still subject to a certain restriction which prevents the Quadrature from being perfect, and, as the Geometricians call it, absolute and indefinite.

In 1701, the Marquis de l'Hopital publish'd a new manner of squaring the Parts of the Lune taken different ways, and under different Conditions—tho' this, too, is imperfect in the same manner as the others.

QUADRATURE of the Ellipsis.—The Ellipsis, too, is a Circle whose precise Quadrature in definite Terms is not yet effected. We have here therefore, as before, recourse to a Series.

To find the QUADRATURE of the Ellipsis.

Let AC (Tab. ANALYSIS, Fig. 26.) = a G C = c P C = x. Then will

$$\frac{y^2}{y} = a^2 = (a^2 - x^2) : a^2$$

But  $\sqrt{a^2 - x^2} = a - \frac{1}{2a}x^2 + \frac{1}{8a^3}x^4 - \frac{1}{16a^5}x^6 + \frac{1}{128a^7}x^8 - \frac{1}{512a^9}x^{10}$ , &c. in infinitum. Therefore,  $y dx = dx - \frac{1}{2a}x^2 dx + \frac{1}{8a^3}x^4 dx - \frac{1}{16a^5}x^6 dx + \frac{1}{128a^7}x^8 dx - \frac{1}{512a^9}x^{10} dx$ , &c. in infinitum.

If then for x be put a; the Quadrant of the Ellipsis will be  $a - \frac{1}{2a}a^2 + \frac{1}{8a^3}a^4 - \frac{1}{16a^5}a^6 + \frac{1}{128a^7}a^8 - \frac{1}{512a^9}a^{10}$ , &c. in infinitum. Which same Series exhibits the entire Area of the Ellipsis, if a denote the entire Axis.

Hence, if  $\frac{1}{2}ac = 1$ ; the Area of the Ellipsis =  $1 - \frac{1}{2} + \frac{1}{8} - \frac{1}{16} + \frac{1}{128} - \frac{1}{512}$ , &c. in infinitum: Whence it is

evident that an Ellipsis is equal to a Circle whose Diameter is a mean Proportional between the conjugate Axes of the Ellipsis. 2. Hence, also, an Ellipsis is to a Circle whose Diameter is equal to the greater Axis, as ac to a<sup>2</sup>; that is, as c to a, or as the less Axis to the greater. Hence, lastly, having the Quadrature of the Circle, we shall likewise have that of the Ellipsis, and on the contrary.

QUADRATURE of the Parabola.—For the Parabola, we have a Quadratrix or transcendit Curve, which gives its Square. See QUADRATRIX.

But it may be likewise had thus:

$$ax = y^2 \text{ See PARABOLA.}$$

$$\frac{a^2 : 2x^2 : x = y}{y dx = a^2 : 2x^2 : x dx}$$

$$fy dx = \frac{2}{3}a^2 x^{\frac{3}{2}} : a^2 x^{\frac{3}{2}} : a^2 \sqrt{x} = \frac{2}{3} \sqrt{x} \cdot y^2 = \frac{2}{3} xy.$$

Hence, the Parabolic Space is to the Rectangle of the Semiordinate into the Abscissa as  $\frac{2}{3}xy$  to  $xy$ ; that is, as 2 to 3.

QUADRATURE of the Hyperbola.—For this, too, we have a Quadratrix, invented by Mr. Perks. See QUADRATRIX.

The analytical Quadrature was first given by N. Mercator of Holstein, the first Inventor of infinite Series. But Mercator finding his Series by Division; Sir Isaac Newton and M. Leibnitz improv'd upon his Method; the one seeking 'em by the Extraction of Roots, the other by a Series suppli'd. See SERIES.

Mercator's Quadrature of the Hyperbola between its Asymptotes.

Since in an Hyperbola within the Asymptotes,  $a^2 = by + xy$ ; or, if  $a = b = 1$ , (which may be suppos'd, since the determination of b is arbitrary.)

$$\text{Then will } 1 = y + xy$$

That is (the Division being actually performed)

$$y = 1 - x + x^2 - x^3 + x^4 - x^5 + x^6, \text{ \&c.}$$

$y dx = dx - x dx + x^2 dx - x^3 dx + x^4 dx - x^5 dx + x^6 dx$ , &c.  
 $fy dx = x - \frac{1}{2}x^2 + \frac{1}{3}x^3 - \frac{1}{4}x^4 + \frac{1}{5}x^5 - \frac{1}{6}x^6 + \frac{1}{7}x^7$ , &c. in infinitum.

QUADRATURE of the Cycloid.—Since TP (Tab. ANALYSIS, Fig. 27.) = PM; in the Triangle PM T, the Angles M and T will be equal; and consequently, TP Q = 2 M. But the Measure of the Angle A P Q is the half Arch A P; which likewise measures the Angle T P A. Therefore AP Q = T M P = M M S, by reason M P and m q are parallel.

Wherefore, since the Angles at S and Q are right Angles, we have

$$AQ : QP :: MS : mS.$$

Let, then, AQ = x, AB = 1; then will PQ =  $\sqrt{(x-x)^2}$  and m S =  $dx \sqrt{y-x}$ ; x. But it is shewn, that  $\sqrt{(x-x)} = x^2 - \frac{1}{2}x^3 + \frac{1}{8}x^4 - \frac{1}{16}x^5 + \frac{1}{128}x^6 - \frac{1}{512}x^7$ , &c. in infinitum. Therefore,  $dx \sqrt{(x-x)} : x =$  (the Numerators of the Exponents being diminish'd by two Units in the Division by x)  $x^2 - \frac{1}{2}x^3 + \frac{1}{8}x^4 - \frac{1}{16}x^5 + \frac{1}{128}x^6 - \frac{1}{512}x^7$ , &c. in infinitum. Whose Sum  $x^2 - \frac{1}{2}x^3 + \frac{1}{8}x^4 - \frac{1}{16}x^5 + \frac{1}{128}x^6 - \frac{1}{512}x^7$ , &c. in infinitum, is the Semiordinate of the Cycloid Q M refer'd to the Axis A E. Hence, Q M dx, or the Element Q M S q of the Cycloidal Space A M Q =  $x^2 x^2 - \frac{1}{2}x^3 x^2 + \frac{1}{8}x^4 x^2 - \frac{1}{16}x^5 x^2 + \frac{1}{128}x^6 x^2 - \frac{1}{512}x^7 x^2$ , &c. in infinitum. Whose Sum is  $\frac{1}{3}x^3 - \frac{1}{8}x^4 + \frac{1}{48}x^5 - \frac{1}{384}x^6 + \frac{1}{3072}x^7 - \frac{1}{24576}x^8$ , &c. in infinitum, expresses the Segment of the Cycloid A M Q.

If then m S = g, G =  $dx \sqrt{(x-x)}$ ; x be multiply'd into G M = AQ = x; we shall find the Element GMHG of the Area A M G =  $dx \sqrt{(x-x)}$ . Which being the same with the Element of the Segment of the Circle AP Q, the Space AMG will be equal to the Segment of the Circle AP Q; and consequently, the Area A D C equal to the Semicircle A P B.

Hence, Since C B is equal to the Semiperiphery of the Circle; if that = p and AB = a; the Rectangle B C D A = a p; and the Semicircle A P B; and, consequently, the external Cycloidal Space A D C =  $\frac{2}{3} a p$ . Therefore the Area of the Semicycloid A C B =  $\frac{2}{3} a p$ , and A M C B P A =  $\frac{1}{3} a p$ . Consequently, the Area of the Cycloid is triple of the generating Circle.

QUADRATURE of the Logistic, or Logarithmic Curve.—Let the Subtangent PT (Tab. ANALYSIS, Fig. 28.) = x, P M = x P p = dx; then will

$$\frac{y dx}{y dx} = \frac{dy}{dy}$$

$$fy dx = ay$$

Wherefore the indeterminate Space H P M I, is equal to the Rectangle of P M into P T.

Hence, 1. Let Q S = s; then will the indeterminate Space I S Q H = a s; and, consequently, S M P Q = a y - a s = a (y - s); that is, the Space intercepted between the two Logistic Semiordinates is equal to the Rectangle of the

the Subtangent into the difference of the Semiordinates.

Therefore the Space BAP M, is to the Space PMS Q as the difference of the Semiordinates A B and P M to the difference of the Semiordinates P M and S Q.

Note, If a Curve be not supposed  $y$  describ'd but only an Equation to it given, so as it don't appear  $y$  e. gr. where the Origin of  $x$  is to be fixed, we are to put  $y=0$  in the Integral, and expunging what are multiply'd by  $x$ , add to it the Remainder, if there be any, under the contrary Sign; so have the *Quadrature* sought.

QUADRATURE of *Des Cartes's Curve*, which is defined by the Equation,  $y^2 \cdot x^2 = a^2 - x^2$ .

Since,  $y^2 = \frac{a^2 - x^2}{x^2}$

$$\frac{y}{x} = \frac{a^2 - x^2}{x^3} ; \text{ } \frac{y}{x} dx = \frac{a^2 dx - x^2 dx}{x^3}$$

$$\frac{y dx}{x^2} = \frac{a^2 dx - x^2 dx}{x^3} ; \text{ } \int \frac{y dx}{x^2} = \frac{a^2 x - \frac{1}{2} x^3}{x^3}$$

QUADRATURE of all Curves comprehended under the general Equation  $y = \sqrt{m(x+a)}$

Since  $y = \sqrt{m(x+a)}$  ;  $m$

$$\frac{y}{x} = \frac{\sqrt{m(x+a)}}{x} ; \text{ } \frac{y}{x} dx = \frac{\sqrt{m(x+a)}}{x} dx$$

To render the Element integrable;  $y$  suppose,

Then will  $\frac{x+a}{x} = \frac{m}{m+1}$

$$\frac{dx}{x} = \frac{m}{m+1} \frac{dx}{x+a}$$

$$\int \frac{y dx}{x^2} = \frac{m}{m+1} \int \frac{\sqrt{m(x+a)}}{x+a} dx$$

Remainder  $\frac{m}{m+1} a \sqrt{m} a$ . Whence, the Area of the Curve is  $\frac{m}{m+1} (x+a) \sqrt{m} (x+a) - ma \sqrt{m} a$ .

QUADRATURE, in Astronomy, that Aspect, or Situation of the Moon, when she is 90° distant from the Sun. See MOON.

Or, the *Quadrature* is when she is in the middle Points of her Orbit, between the Points of Conjunction and Opposition, which happens twice in each Revolution, viz. in the first and third Quarter. See ORBIT, OPPOSITION and CONJUNCTION.

When the Moon is in her *Quadrature*, she exhibits that Phase which we call the *Half Moon*, i. e. she shines with just half her Face; and is said to be affected, or *Dichotomiz'd*. See PHASES and DICOTOMY.

In the Moon's Progress from the Syzygies to her *Quadrature*, her Gravity towards the Earth is continually increasing by the Action of the Sun; and her Motion retarded for the same Reason—Her Motion, then, in her Orbit is slowest as her Gravity to the Earth is greatest when in the *Quadrature*. See GRAVITY.

In her receds from the *Quadratures* to the Syzygies, the Gravity continually decreases, and the Velocity increases.

The Ratio is thus: As Radius is to the Sum, or Difference of one and a half the Co-sine of double the distance of the Moon from the Syzygy, and half the Radius; so is the addition of Gravity in the *Quadratures* to the Diminution or Increase thereof in any other Situation. See SYZYGY.

Hence the Moon's Orbit is more Convex in the *Quadratures*, than in the Syzygies; and hence the Circular Figure of the Moon's Orbit is changed into an Oval, whose greater Axis goes through the *Quadratures*; and hence, also, the Moon is less distant from the Earth at the Syzygies, and more at the *Quadratures*. See ORBIT.

'Tis no wonder, therefore, that the Moon approach nearer the Earth when her Gravity is diminished; that Access not being the immediate effect of this Diminution, but of the inflexion of the Orbit towards the *Quadratures*.

In the *Quadratures*, and within 35 Degrees thereof, the Apices of the Moon go backwards, or move in *antecedentia*; but forwards in the Syzygies. See APICES.

The Moon's Orbit undergoes various Alterations in each Revolution—Its Eccentricity is the greatest when the Line of the Apices is in the Syzygies; least, when in the *Quadratures*. See ECCENTRICITY.

Considering one entire Revolution, the Nodes move slower and slower as the Moon approaches the *Quadratures*, and rest when she is therein: But considering several Revolutions, the Nodes go back fastest in the *Quadratures*. See NODE.

The Inclination of the Plane of the Moon's Orbit increases as the Nodes go from the Syzygies, and is greatest when the Nodes are in the *Quadratures*. See INCLINATION.

QUADRATURE-Lines, or Lines of QUADRATURE, are two Lines frequently placed on Gunter's Sector.

They are mark'd with the Letter Q, and the Figures 5, 6, 7, 8, 9, 10; of which Q signifies the side of a Square, and the other Figures the sides of Polygons of 5, 6, 7, &c.

sides—S there stands for the Semi-diameter of a Circle, and 90 for a Line equal to 90 Degrees in the Circumference, See SECTOR.

QUADRATUS, in Anatomy, a Name apply'd to several Muscles, in respect of their square Figure. See MUSCLE.

QUADRATUS Femoris, a Member of the Muscle *Quadrigenimus*, arising from the Apophysis of the *Iscium*, and maintaining an equal breadth and bulk to its insertion just below the great Trochanter.

This affixs with the other Muscles of the *Quadrigenimus*, to turn the Thigh outwards. See QUADRIGEMINUS.

QUADRATUS Genæ, or *Maxillæ inferioris*, call'd also *Moutanus*, is a broad square Muscle lying immediately under the Skin of the Neck—it arises thin and membranous from the upper part of the Spines of the *Vertebre* of the Neck and the Skin of the superior parts of the *Cucullaris* and pectoral Muscle; whence, spreading over the Neck, it becomes fleshy, and is inserted partly into the *Oss Hyoidæ*, and partly into the under Edge of the lower Jaw—it serves to pull the lower Jaw downward. See SUBCUTANEUS.

QUADRELS, in Building, a kind of Artificial Stones, perfectly square, whence their Name; made of a chalky, or whitish and pliable Earth, &c. dried in the Shade for two Years.

They were formerly in great request among the *Italian Architects*.

QUADRIGA, in Antiquity, a Car, or Chariot drawn by four Horses. See CAR and CHARIOT.

On the Reverse of Medals we frequently see Victory, or the Emperor, in a *Quadriga*, holding the Reins of the Horses; whence their *Census* are call'd among the Curious, *Quadrigates*, or *Victories*. See MENTAL.

Various are the Accounts we have of the Author of the *Quadriga*—*Cicero* makes it the Invention of *Minerva*.

*Hyginus* attributes it to *Erichonius* IV. King of the *Abdunians*; which Sentiment *Virgil* follows in his *Georgics*, lib. iii. v. 113.—*Ephobius* gives *Prometheus* the Honour thereof—*Tertullian*, de *Spectac.* l. 9. says it was invented among the *Argians*, by *Trochilus*, in honour of *Juno*; and at *Rome*, by *Romulus* in honour of *Mars*, or *Quirinus*. *Aton of Vienna*, *Chronic.* Act 3. will have it to have been invented by one *Procidus*, about the time of the establishment of the Kingdom of *Athens*. *Lamiardels*, *Hist. Univers. Epitom.* l. 24. says the fame of *Tripolemus*.—Lastly, if there be not Opinions enough already, *Heredotus* gives us another; and says the *Greeks* borrow'd it from the *Lybians*—*Pliny* tells us that his Seal was a *Quadriga*, lib. xvi. See SEAL.

The Word is form'd from the *Latin*, *quatuor*, four, and *jugum*, yoke. See BIGA.

QUADRIGEMINUS, in Anatomy, a Muscle, or rather an Assemblage of four Muscles; serving to turn the Thigh outward. See THIGH.

The first of the constituent Muscles of the *Quadrigenimus*, is the *Pyrriformis*; the second and third the *Gemini*; and the fourth *Quadratus Femoris*. See each described under its proper Article, PYRIFORMIS, GEMINUS, &c.

QUADRILATERAL, in Geometry, a Figure whose Perimeter consists of four right Lines, making four Angles; whence it is also call'd a *Quadrangular Figure*. See QUADRANGULAR.

If the several Angles be right, the Figure is a *rectangular Quadrilateral*—If oblique, an *oblique angular Quadrilateral*. See RECTANGULAR, &c.

If the Sides of a *Quadrilateral* be equal, and the Angles right, the Figure is a *Square*. See SQUARE.

If the Sides be equal, but the Angles unequal, the Figure is a *Rhombus*. See RHOMBUS.

If the Angles be equal, and the Sides unequal, the Figure is a *Rectangle*. See RECTANGLE.

If only the opposite Angles and Sides be equal, the *Quadrilateral* is a *Rhomboides*. See RHOMBOIDES.

If the opposite Angles and Sides be unequal, the *Quadrilateral* is a *Trapezium*. See TRAPEZIUM.

The two opposite Angles of any *Quadrilateral Figure* inscribed in a Circle, always make two right Angles. See INSCRIBED.

QUADRILL, QUADRILLA, a little Troop or Company of Cavaliers, pompously dress'd and mounted; for the performance of Carroufels, Jousts, Tournaments, Runnings at the Rig, and other gallant Diversions. See JOUST, TOURNAMENT, &c.

A regular Carroufel is to have at least four, and at most twelve *Quadrills*. See CARROUCEL.

Of these *Quadrills*, each is to consist of at least three Cavaliers, and at most of twelve.

The *Quadrills* are distinguish'd by the Form of their Habits, or the Diversity of their Colours. See COLOUR, LIBERY, &c.

The Word is borrow'd from the *Italian*, being a Diminutive of *Squadra*, a Company of Soldiers rang'd in a Square: For *Squadra* is, properly, to dispose any thing square; whence their *Quadrilla*, the *French Squadrille* and *Quadrilla*, and our *Quadrill*—'Tis not fifty Years since they wrote *Squadrilla*.

**QUADRIPARTITION**, the dividing by four; or a taking of the fourth part of any Number or Quantity. See **DIVISION**, **PARTITION**, &c.

Hence *Quadrifartite*, &c. something divided into four. See **INDIVISIBLE**.

**QUADRIREME**, **QUADRIREMIS**, a Galley or Vessel with four Oars on a side. See **GALLEY**.

**QUADRUGATA Terra**, in old Law Records, is a *Team-Land*; or so much as can be till'd by four Horses. See **CARUCATA**.

**QUADRUPED**, in Natural History, a four-footed Beast.

Mr. Ray defines *Quadruped*, a perfect, hairy, viviparous Animal, having but four Feet. See **ANIMAL**.

There is a great Analogy between the Structure of *Quadrupeds*, and that of Man—The principal differences result from their different Posture; and are seen in the Legs, Heads, Necks, Stomachs, Ears, and the Nostrils. See **LEG**, **HEAD**, **NECK**, **STOMACH**, &c.

Mr. Ray gives us the following Scheme or Division of *Quadrupeds*.

*Quadrupeds* are either hoof'd, (*ungulata*); or claw'd, or digitate, (*unguiculata*.)

Hoof'd *QUADRUPEDS*, are either, 1. Whole-hoof'd, *Solidungula*, *Mixungula*, *Mixungula*, *Solidungula*: As the Horse, Ass, the Ouzel or wild Ass; the Mule, and the Zebra of Africa, or the fine striped *Indian*, or *African Ass*, almost like a Mule in Form and Stature. See **HOOF**.

Of this whole-hoof'd Kind, *Aristotle* has observed, that no one hath two Horns—he might have said any Horns no one hath the *Talus*, or *Atragalus*, nor have the Males any appearance of Breasts. See **HORN**.

2. *Cloven-Footed*, and that either into two divisions only; as the *Alcega*, or *Bifalcate* Kind, which are again subdivided into such as are, first,

*Ruminant*, *Megacorn*, that is, such as chew the Cud; and these either have hollow and perpetual Horns, as the Bull, Sheep, and Goat-kind; or *Duoducous*, as the Hart and Deer kind, which usually shed their Horns annually. See **HORN**.

Of the *Bull* kind are reckon'd these; the common *Bos*, of which the Male is *Taurus*, the Female *Faeca*. (2.) The *German Urus*, *Urochs*, or *Anrochs*. (3.) The *Bison*. (4.) The *Boasiga*. (5.) The *Bubalus*, or *Bufalo*. (6.) The *Bos Africanus* or *Bellonius*; *Obs. l. a. c. 50*. which he takes to be the *Bubulus* of the Antients.

Of the *Sheep* kind, besides the common sort, are reckon'd the *Arabian Ovis Laticauda*, whose Tail is sometimes of 50 l. weight; the *Ovis Strepsiceros* *Cretica Bellonii*; the *Ovis Africana*, with short Hairs instead of Wool; the *Ovis Guineensis*, or *Angoleusis* of *Marcgrave*, (*Hist. Brasili. l. 6. c. 10*.)

Of the *Goat* kind, are, besides the common *Capra Domestica*; the *Ibex*, or *German Steinbock*, found in the Tops of the *Alps*; the *Rupicapra*, *French Chamois*, *German Gous*; the *Gazella Africana*, or *Antelope*; the *Gazella Indica*; the *Capra Sylvestris Africana* *Grimmii*; the *Capra Maubrina*, or *Syriaca* of *Gesner*; the *Byrrhaphus*, or *Mischelaphus* *Casi* in *Gesner*; the *Tragelaphus* *Casi* in *Gesner*.

Of the *Hart* or *Deer* kind, are reckon'd, the *Cervus*, *Elcega*, the red Deer; the *Cervus Platyceros* or *Palmaris*, the fallow Deer; *Alice* or the Elk; *Rangifer*, the Rain-Deer; the *Axis* *Plinii*, according to *Bellonius*; the *Caprea* *Plinii*, the *Cugucac*, &c. and *Cugucac-napara* of *Marcgrave*; the *Caprea* *Groenlandica*.

3. Of *Cloven-Footed* Animals into two parts only, and which do not chew the Cud, there is only the Hog and Swine-kind; and under this head, besides the common Swine, are reckon'd the wild Boar, or Swine; the *Porcus Guineensis* *Marcgravius*; the *Porcus Indicus* call'd *Babyroussa*; the *Tajaca* or *Aper Mexicana* *Moschiferus* of *Dr. Tyson*, call'd by *Marcgrave*, *Tajaca* *Cauigara*, by others *Quambilla* *Cosmali*, and *Quaspizotl*, and by *Acosta* and some others *Zaino*.

3. There are some four-footed Animals, whose Hoof is cloven into four Divisions; and these seem to be not Ruminant: As the *Rhinoceros*, the *Hippopotamus*, the *Tapijere* of *Brasili*, the *Capy-Bara* of *Brasili*, the *Animal Moschiferum*.

**Clawed or Digitate QUADRUPEDS**: Of this Kind, there is, (1.) a sort whose Claws are not divided or separated, but adhering to one another, cover'd with one common Skin, but with obtuse Nails, sticking out round the Margin of the Foot; as the Elephant, which is *Aomalous*, and not clearly referable to this Kind or that of *Cloven-footed Quadrupeds*.

(2.) There is another Species of this *Digitate* kind of

*Quadrupeds*, which hath only two Claws, as that of Camels; and tho' these have no Horns, they do both ruminate, and have also the four Stomachs of horned ruminant Animals. Of the Camel or Dromedary there are two sorts; one having but one Bunch on the Back, the other two. To this kind belongs the *Peruvian Glama*, which some have reckon'd among the Sheep-kind; as also the *Pacos*, the *Ovis Indica*, or *Peruviana Fulgo*, much less than the *Glama*.

3. A third Species of this *Unguiculate* kind, includes such Animals, as the *Greeks* call'd *Πλατοδοξα*, and *Αρβοραιοφα*, which have the Foot divided into many Claws, with broad Nails on them; as the Ape and Monkey kind: Of these, some have no Tails, and are call'd *Simia*, or *Apes*. Others have Tails, and are call'd *Monkeys*, *Cercopithecus*; and such as have either long or short Tails, if they are of a larger Size, are call'd *Papiones*, or *Baboons*. There are great Numbers and Varieties of this Species of *Quadrupeds*; of which Naturalists have described these: viz. the *Ourang*, *Outang*, or *Homo Sylvestris* of *Dr. Tyson*, described by him in a particular Discourse. The *Guarita* of *Brasili*, *Marcgravius*; the *Cagni* of *Brasili*, greater and lesser; the *Cay* of the same Country, described by *Lerius*; the *Caitata* of the same Country; the *Cercopithecus Barbatus* *Guineensis*, two or three sorts of it; the *Cercopithecus Angoleusis* major; the *Cercopithecus non barbatus* *Casi*; the *Cercopithecus Cluz* call'd *Sageuin*; and if Apes and Monkeys have their Snouts very prominent like Dogs, they are call'd *Cynocephal*.

4. A fourth Species of this *Unguiculate* kind, is, when tho' the Claws are many, yet they are not cover'd at the end with broad flat Nails, like *Monkeys* or *Apes*; but are rather like the Talons of Hawks, &c. crooked, and sharp-pointed: And these, in respect of their Teeth, may be divided into such as have many *Dentes Primores*, or *Incisores*, (that is, cutting Teeth) in each Jaw, of which there are two sorts; a greater, which either have a short, round Head, as the *Cat*-kind; or a lesser sort, having a long slender Body, with very short Legs, as the *Weasel* or *Vermi*-kind. There are some of this Species of *Quadrupeds*, which have only two large remarkable Teeth in each Jaw; and these are of the *Hare*-kind, and live only upon Herbs, Grass, &c.

Of the *Cat*-kind of *Quadrupeds* are reckon'd to be the *Lion*, the *Tiger*, the *Parasiti*, whose Male is *Pardus*, and Female *Panthera*, the *Leopard*; the *Lynx* *Cervarius*, or *Lynx*; the *Catus* *Pardus*, or *Cat*-a-mountain, the common *Cat*, and the *Bear*.

Of the *Dog*-kind are reckon'd the *Wolf*, the *Lynx* *Aureus*, the *Jackall*; the common *Dog*, of which kind they enumerate, the *Mastive*; the *Canis Venaticus* *Grainis*, or *Græcus*, or, according to some, *Sciurus*, the *Greyhound*; the *Grævis* *Hibernicus*, or *Irish* *Greyhound*; the *Canis Venaticus* *Sogæus*, *Indogator*, *Sclator* *Sororum*, &c. the *Hound*; the *Canis Venaticus* *Hispanicus* or *Asiaticus*, the *Spaniel* for Land or Water; the *Vortagus* or *Tumbler*; the *Canis* *Oxus*, *Domesticus*, the *Houie-dog*; the *Canis* *Meliticus*, or the *Lap-dog*; the *Canis* *Germanus*, or *Ilandicus*, the *Shock*; and of all these sorts there are many Varieties of *Mongrels*, and *Hybridous* Breeds.—Another sort of the *Dog*-kind is, the *Fox*; the *Animal Zibeticus*; the *Civet*-*Cat*, as it is corruptly call'd, but by its Teeth and Snout, is plainly of the *Dog*-tribe; the *American* *Coati*, or *Raccoon* or *Rattoon*; the *Toquepato*; the *Carigweya*, *Marinucaca*, *Lavigo*, *Ropoca* or *Polsum*; the *Taxus* or *Moles*; the *Badger*, *Grey*, or *Pate*; the *Lutra*, or *Oter*; the *Phoca*, or *Sea-Calf*, or *Seal*; the *Equus* *Marinus*, or *Marje*, or *Sea-Horse*, mistaken by some for the *Hippopotamus*; the *Dutch* call him *Walrus*, the *Danes* and *Ilanders*, *Rosmarus*; the *Manati*, or *Vaca* *Marina*, the *Sea-Cow*.

Of the *Vermi*, or *Weasel*-kind of *Quadrupeds*, is, first, the *Mustela vulgaris*, the common *Weasel*, in *Torkshire*, call'd *Foumart* or *Fitcher*, (*γυαία*) the *Fuerra Indica*, call'd *Onel* and *Quirpele*; and another sort call'd *Mungo*, and *Mungathia*, of a reddish grey. The *Mustela*, the *Ermine* or *Socas*, if white, and the *Mustela* *Sylvestris*, the *Fetret* or the *Putorius*, the *Pole-Cat*; the *Martes*, *Foyns*; the *Marten* or *Martlet*; the *Mustela* *Zibellina* the *Sable*; the *Genetta*, and the *Ichneumon* *Bellonii*.

Of the *Hare*-kind of *Quadrupeds*, are first, the *Lepus*, or common *Hare*; the *Cuniculus*, the *Rabbit* or *Coney*; the *Tasari*, or *Prasili* *Coney*, and the *Aperca* of *Brasili*; the *Hyllrix*, or *Porcupine*; and the *Hyllrix* *Americanus*, or *Cuanda* of *Brasili*; the *Castor*, *Fiber*, or the *Beaver*; the *Sciurus vulg*, or *Squirrel*; the *Virginian*, *Zeylandica*, the *Barbery*, and the *American* flying *Squirrel*, &c. The *Mus* *Domesticus*, major and minor, the common *Rat* and *Moose*; *Mus* major *Aquaticus*, the *Water-Rat*; the *Musk-Rat*; *Mus* *Austrianus*, major and minor; the *Dormouse* or *Sleeper*, *Mus* *Noricus*, *Cricetus*, *Alpinus* seu *Marmota*; the *Cavia* *Cobaya*, or *Cuniculus* *Americanus*; the *Guinea*-*Fig*; the *Agati*, and *Paca* of *Brasili*; the *Mus* *Norvegicus*, or *Lemming*; the *Glis* *Gestori*, or the *Reil*; the *Mus* *Indicus*, &c.

**Animans QUADRUPEDA.** To these several Kinds of *Quadrupeds*, the following Anomalous ones must also be added.

(1.) Such four-footed *Viviparous Animals*, as have a length Snout, with their Feet divided into many Claws, and Toes, and having Teeth; as the *Echinus Terrestris*, or common Urchin, or Hedge-Hog; the *Erinaceus Indicus albus*; the *Tatu* or *Armadillo prima* of *Marcgrave*; the *Tatu of Brasilia*, or the second Species of the *Armadillo*, according to *Marcgrave*; the *Tatu Apapa*, his third Species of the *Armadillo*; the *Tatu Muletinus*, *Soc. Reg. Mus.* the Weasel-headed *Armadillo*; the *Tatpa*, the *Mole*, *Went*, or *Mold-warp*; the *Mus Araneus*, *Shrew*, *Hardy-Shrew*, *Shrew-Mouse*.

(2.) *Quadrupedous* and *Viviparous Animals* with a longish Snout, having their Feet divided into many Claws or Toes, but without Teeth; as the *Tamandua guacu* of *Brasil*, *Marcgrave*; the *Ursus Formicarius Cordani*; the great Ant-Bear; the *Tamandua* of *Brasil*, or *Marcgrave's* lesser Ant-Bear.

(3.) *Anomalous flying Quadrupeds*, with a shorter Snout, and their Feet divided as above; being of the Bat-kind, or Flitter-Mice; of which there are several Sizes and different Forms.

(4.) There is one very anomalous Animal which has but three Claws on each Foot; and that is the *Ale*, or *Iguana* of *Marcgrave*, the *Sloth*, or *Sluggard*.

(5.) *Viviparous* and *Sanguineous Quadrupeds*, breathing with Lungs, but having only one Ventricle in the Heart; as the *Rana aquatica*, the *Frog* or *Froch*; the *Rana arborea*, seu *Ranunculus Viridis*, the small *Tree* or *green Frog*; the *Bufo*, *five Rubens*, the *Toad*; the *Tesudo*, the *Tortoise*, *Greek name*; of these there are Land and Water ones, and many different Species in foreign Parts.

(6.) *Oviparous Quadrupeds*, with a long Tail stretched out horizontally, of the Lizard-kind; as the *Lacertus omnium maximum*, the *Crocodile*; the *Cordylus*, *five Caudiverbera*, *Uromastix Græcis*, larger than the green Lizard; the *Lapayaxin Nova Hispanie*; the *Lacertus orbicularis* of *Hernandez*, the *Lacertus vulgaris*, the common *Eft*, *Swift*, or *Newt*; the *Lacertus viridis*, the green Lizard; the *Lacertus Fucatanus Aldrovand.* at *Rome* and *Naples* call'd the *Tarantula*; the *Lacertus Indicus*, call'd *Senambi* and *Jugwana*; the *Lacertus Brasiliensis*, call'd *Teguana*, and *Tenapara* by *Marcgrave*; the *Taraguira*, *Ameira*, *Taraguica*, *Acaraba*, *Americana*, *Carapocopa*, *Teimbam*, &c. of *Marcgrave*; the *Lacertus Indicus*; the *Scincus*, or *Crocodileus terrestris*; the *Seps*, or *Lacerta Coccinea*, a kind of footed *Serpent*; the *Stellio*, the *Swift*, or spotted Lizard; the *Salamandra terrestris*, *Salamandra aquatica*, the *Water Eft*; the *Lacerta volans Indica*; and the *Chamaeleo*, the *Chameleon*.

**QUADRUPLE**, a Sum or Number multiply'd by four, or taken four times.

*Quadruple* is particularly used for Gold Coin worth four times as much as that whereof it is the *Quadruple*. The *Quadruple* of the *Spanish Pistole* is a Piece of four Pistoles, worth about three Pounds six Shillings *Sterling*. See **PISTOLE**.

The *Quadruple* of the *Louis d'Or* is only equal to two *Louis d'Ors* or *French Pistoles*, or one Pound thirteen Shillings *Sterling*.

**QUA. Pura**, a Writ that astutely lay where Inquisition had been made by an Escheator, of such Lands or Tenements as any Man died seized of, and all was supposed not to be found by the Office. See **ESCHEATOR**.

This Writ was to enquire what more Lands or Tenements the Party died seized of. But it is now made useless by taking away the Court of Wards and Offices.

**QUA. Servitia**, a Writ. See **PER. que servitia**.

**QUÆSTA**, in our ancient Writers, an Indulgence, or Remission of Penance; exposed to sale by the Popes. See **INDULGENCE**.

**QUÆSTUS**, or **QUESTUS**, in Law, is that Estate, or those Estates which a Man hath by Acquisition or Purchase; in contradistinction to *Hereditas*, which is what he hath by Descent. See **GOODS**, **ESTATE**, &c.

So in *Glavville*, lib. 7. *qui habet hereditatem tantum, vel quantum tantum, aut hereditatem & quantum*.

**QUESTIONARI**, in our ancient Law-Books, were People who went about with Indulgences from Door to Door, desiring Charity either for themselves or others. See **INDULGENCE**.

*Mass. Weib* observes, 1240, that the King, *Terras suas per Papales Questionarios, depauperari, &c. permittit*.

**QUAKERS**, a Religious Sect, who made their Appearance in England, during the Time of the Inter-regnum. See **SECT**.

They took their Origin from *George Fox*, an illiterate Peasant, born at *Droiton* in *Leicestershire*; and by Profession a Shoemaker.

The Accounts of those Times tell us, that as he wrought at his Trade, he used to meditate much on the Scriptures; which, with his solitary Course of Life, improving his natural Melancholy, he began at length to have Visions; and, in consequence thereof, set up for a Preacher.

The new Prophet proposed but few Articles of Faith; dwelt mostly on Morality; preach'd mutual Charity, the Love of God, and a deep Attention to the inner Motions and secret Workings of the Spirit—He would have a simple Worfhip, and Religion without any Ceremonies; making it a principal Point to wait in profound Silence, the Motion and Direction of the Holy Spirit.

The Genius of the Times, the Novelty of the Doctrine, and the great Appearance of Devotion in the Man, soon gain'd him Disciples; and some unusual Shakings and Convulsions which they were forc'd withal at their first Meetings, procur'd 'em the Appellation *Quakers*.

They profess a great Austerity of Behaviour; a singular Probity and Uprightness in their Dealings; a Demureness, and Gravity of Countenance; a Coldness and Sparseness of Discourse, to have time to weigh what they say; a great deal of Frugality in their Tables, and of Painsness in their Drests.

They declaim much against the interested Views of the *English Ministers*; blame all War, and set aside all use of Oaths, as prohibited under the Gospel. See **AFFIRMATION**.

According to the Genius of rising Sects, an eager Zeal at first led 'em to some Extravagancies: They would run about the Streets naked; and were frequently in Prison for interrupting the Ministers in Service-time.

One of their Company, *Naylor*, is said to have had the Impiety to allow his Followers to call him Son of God, S. n of Justice, and King of *Israel*; to strew Garments before him, and Hail him at his Entry into *Brissel*, with *Hofanna* Son of *David*. He had his Trial for the same, was whip'd for Blasphemy, and excommunicated by the rest.

Beside other Penalties inflict'd on 'em, they were laugh'd at, and rally'd in Writing, and expos'd on the Theatre: But they despis'd alike both the Press and the Prison, and form'd their Sect, manage all Opposition of both; and under the Direction of *Fox*, *Dewsbury*, and others, grew from a loose, undisciplin'd Multitude, into a regular Body, with stated Laws and Polity; which they retain with great Oeconomy to this day.

The modern *Quakers* retain nothing of the Extravagancies charged on their Leaders; having approved themselves a sober, quiet People, of exemplary Morals, and remarkably charitable and friendly to each other.

Their Doctrine is not easily collected; at least, not easily represented out of their own Terms, which appear somewhat ambiguous.

They hold Christ to be a Light which hath lighted every Man; and that whoever will soberly and seriously turn into himself with a sincere desire to know and practise his Duty, will not fail to find there a sufficient Director; a Ray from the Fountain of Light illuminating the Understanding, and assisting to distinguish Good from Evil.

They add, That such as follow the Directions and Convictions of this Light, shall be Holy and Acceptable to God; and that this was the End of Christ's coming into the World—That so far as they follow this Light, they shall be infallible; and that it is not Opinions, or Speculations, or Notions of what is true, or Subscription of Articles or Formula's of Faith, how soundly soever worded, that make a Man a true Believer or Christian; but a conformity of Mind and Practice to the Will of God, according to the Manifestation and Dictates of this divine Principle of Light within 'em.

Our Saviour's Injunction about Baptism they understand, in a figurative Sense, of a Conversion and Change of the Heart; and wholly neglect the outward Sign—Water-Baptism they hold was only *John's*; that it was no more than a Type or Figure, fitted for the Infant-state of the Gospel; and therefore now useless, in a Dispensation, which is spiritual and inward.

The same they hold of the Supper; alledging, That both allude to old *Jewish* Practices, and were used as Types or Significations of a near and accomplishing Work—They add, that the Communion of Saints consists only in a participation of the same divine Principle, shewing itself in a Unity of Spirit.

As to Ministry and Ordinances, they deny that any are to be used of Man's Wit, or Will, or carnal Invention, or Imitation; or other than what the inward Principle directs 'em to—Accordingly, they have no Persons set apart for the Ministry; but without distinction of Quality or Sex, every one who is of sober Life, and approved Conversation, and believes him or herself called or moved thereto, is permitted to speak and prophesy in their Assemblies.

They own the Scriptures to be given by divine Inspiration, and allow 'em the Appellation of the Form of sound Words; but refuse to call 'em the Word of God, as being a Denomination properly attributed to Christ alone—They add, that what makes 'em more scrupulous in this respect, is, that People are apt to be hereby led to think that if they have the Scriptures, they have all; and so look for no farther Word or Light.

They acknowledge the Holy Three that bear Record in Heaven, Father, Word, and Spirit; but reject the School-Terms, Trinity, distinct Persons, Hypostases, &c. as not Scriptural, and as apt to convey too gross Ideas.

They have been even charg'd with denying the Incarnation, our Saviour's Humanity, Divinity, plenary Satisfaction, and the Resurrection of the Dead: But this is injurious to 'em; and all that can be justly said, is, that they don't allow of 'em in the same Sense, or speak of 'em in the same Terms, as is commonly done among others.—They allow the Incarnation, and that the *Godhead* dwelt bodily in Jesus; and yet many of 'em say, there is no Christ but what is within 'em: Whence it should seem their Notion of the Incarnation only imply'd this, that the Light, which they call the Christ within, dwelt in the Man Jesus Christ fully.—Their Reasoning, here, is, that Christ, as God, not being divisible, the Measure or Manifestation of the Spirit of Christ in us, is a Manifestation of the *same Christ* which dwelt bodily and fully in the Man Jesus Christ.

They are silent as to the Hypothetical Union; and some of 'em are charg'd with allegorizing away the whole History of the Crucifixion, the Resurrection, and Ascension; tho' their best and most approved Writers have been very explicit in their Acknowledgment of the Reality of the History.

They decline the Use of Modes or Forms of Civility; expressing their Respect to their Superiors no other way but by obeying all just Laws under their Government.

The System of *Quakerism* is laid down in fifteen Theses, by Robert Barclay, in a well writ Apology address'd to King Charles II. Their History, writ in *Low Dutch* by William Sewel, and since translated into *English*, traces 'em from the beginning to the Year 1717.—A History of this People was also published *An. 1695*, by Gerard Crofts; but the Author is by them accus'd as having misrepresented Facts, and in many respects done them injustice.

As to Discipline and Polity; the Affairs of the Community are all managed under a Democratical Government, by Rules established by common Consent; and this principally at their Meetings, whereof they have many kinds; *viz.* Monthly, Quarterly, Yearly, Second Day's Meetings, Meetings of Sufferings, &c.

Their *Monthly* and *Quarterly Meetings* are held in their respective Counties.—To these Deputies are sent from the several particular Meetings.—Here Enquiry is made into the State of each Meeting; who stand fast to the Rules and Orders, and who backslide; who pay Tithes, and Church Rates, and who suffer for non-payment of either; who are married by Priests, &c. and accordingly they proceed to Censure, or Encourage.—Here too they Excommunicate, and here receive again into Communion; of all which things exact Registers are kept.

From these Meetings Appeals lie to their *Yearly ones*, which are always held in *London*, and consist of three Orders or Classes *viz.* Representatives sent from the *Quarterly Meetings*; Correspondents for the several Counties, and foreign Counties; and Ministers, or Preachers.—Hither are transmitted Accounts of what has been transacted in all the Monthly and Quarterly Meetings over the World.—Here are Measures concerted, and Directions given as to Behaviour about Tithes, and Rates, providing for the Poor, composing differences, &c.—Here public Accounts are audited, and proper Instructions given to the Deputies to be observed at their Return, and a yearly Epistle of Admonitions dispatch'd to be read in all the Monthly and Quarterly Meetings throughout the World.

The *Second Day's Meeting*, is a standing Committee consisting of the principal Preachers in and about the City, who meet every Monday, to concert particular Cases, and Exigencies relating to the Body happening between the yearly Meetings; particularly to examine, approve, license, &c. all Books printed in their behalf.

The *Meeting of Sufferings* is held every Week, and consists of the Correspondents for each County;—and its business is to receive Complaints from such as have suffer'd for non-payment of Tithes and Rates, and to procure 'em Relief, either by sending 'em Money, for which they have a settled Fund, or by soliciting their Causes above, or both.

**QUALI** *finis*, was an ancient Writ Judicial, that lay where a religious Person had Judgment to recover Land; before Execution was made of the Judgment.

This Writ was issued forth to the Escheator between Judgment and Execution, to enquire whether the religious Person had Right to recover, or whether the Judgment were

obtained by collusion between the Demandant and Tenant to the intent that the true Lord were not defrauded.

**QUALIFICATOR**, in the Canon-Law, a Divine appointed to *qualify*, or declare the Quality of a Proposition brought before an Ecclesiastical Tribunal; chiefly before the Inquisition.

The *Qualificators* of the Office are not Judges; they only give their Sentiments on the Propositions presented to 'em—'Tis the Inquisitors that judge. See **INQUISITION**.

**QUALITY, QUALITAS**, that Affection of a thing whence it is denominated *Subst.*; or that which occasions a thing to affect our Senses, in this or that manner, and gives it this or that Denomination.

Thus, that Virtue in Fire, whatever it be, whereby it excites in us the Sensation of Heat, since it is that whence the Fire is denominated hot, is the call'd *Quality* of Fire.

The word *Quality, Qualitas*, is said to have been first introduced into the *Latin* by *Cicero*. Till his time the *Romans* studiously avoided the using a Term which denoted an Abstraction; and in lieu thereof, only consider'd the Concrete, signify'd by *Qualis*.—The like is observed of the ancient *Greeks*, who did not use *ουαλιζε*, but *ουαλις*. See **ABSTRACTION**.

The Term *Quality*, it is to be observed, is very ambiguous; and has been apply'd to some things, which ought rather to have been look'd upon as *States* of Matter, or Complexions of several *Qualities*; as Life, Health, Beauty, &c.

There are, also, other Attributes, as Size, Shape, Motion, and the rest, usually reckon'd among *Qualities*, which might more conveniently be esteem'd the primary Modes of the Parts of Matter; since from these simple Attributes, all the *Qualities* are derived. See **MODE**.

The ancient School Philosophers distinguish *Quality* in the general, into they call *Metaphysical* and *Predicamental Quality*; into *Essential*, and *Accidental*.—The Moderns, more usually, into *Spiritual*, and *Corporeal*.

*Spiritual QUALITIES*, or *QUALITIES of the Soul*, are Affections of the Mind, consider'd as it is in this, or that Habitude or Disposition.—Of these, they make two Kinds; the one belonging to the Understanding, the other to the Will: Of the former kind are Knowledge, Opinion, Certainty, Doubting, &c. Of the latter, are all the Moral Virtues and Vices. See **UNDERSTANDING**, **WILL**, **KNOWLEDGE**, **IGNORANCE**, **OPINIONS**, &c. See also **VIRTUE**, &c.

*Corporeal or Physical QUALITIES*, are what we chiefly consider under this Denomination, and to which the Definition above laid down is accommodated.

Philosophers are divided as to the Nature of these *Qualities*, or what they are in the Body.—The general Language of the *Peripatetic School*, is, that they are things distinct from the Bodies themselves; are superadd'd to 'em, or flow from their substantial Forms: On which Principle, they hold *Qualities* to be real, and denominate 'em Accidents; supposing 'em to be inherent in Substances, tho' not in the relation of Parts, but to be sustain'd thereby as in a Subject, and incapable of subsisting without 'em.—In effect, the *Thomists* define *Qualities* to be Accidents following or arising from the Form; in the same Manner as Quantity is an Accident following or arising from the Substance. See **FORM**, **ACCIDENT**, **QUANTITY**.

The Moderns absolutely explode the Notion of *Qualities* distinct from the Body; and insist, that the Powers whereby Bodies excite in us the Ideas of such *Qualities* are no other than the mechanical Affections of the Bodies themselves, *viz.* the Figure, Magnitude, Motion, &c. of the Parts whereof they consist. See **MECHANICAL**.

The principal Considerations insisted on by the Retainers to real *Qualities*, are, That these Powers may be actually separated from the Substances they inhere in; as we see in Light, Heat, &c. That from these very *Qualities* consider'd as so many Determinations, arises a very great diversity in Bodies: And that Bodies, according to the diversity of their *Qualities*, affect our Senses differently.

The Adherents to the Experimental way, on the contrary, account for all the *Qualities* of Bodies from mechanical Causes.

Thus all the Phenomena of a Clock, the Motion of its Wheels, its Hands, &c. whereby it strikes the Hour, points the Minute, Day, Moon's Age, &c. do all evidently arise from the single Spring; which we never imagine to have any particular Powers whereby it should be enabled to make such Discoveries; nor any other Principle but that one of Elasticity.—Again, when the Smith who first invented Locks and Keys, had made his first Lock, it was only a piece of Iron, contriv'd into a particular Shape; and when, afterwards, he made a Key to it, that also, consider'd in itself, was nothing but a piece of Iron of a determin'd Figure; but as these two pieces of Iron might now be apply'd to one another, after a certain manner, and as there was a congruity betwixt the Wards of the Lock, and those

those of the Key, they now each obtain'd a new Capacity ; and it became a principal part of the Notion and Definition of a Lock, that it was capable of being made to open or shut, by that other piece of Iron call'd a Key ; and it was look'd on as a peculiar Faculty and Power in the Key to be fit to open and shut the Lock.—And yet by these new Attributes there was not added any real or physical Entity, either to the Lock or the Key ; each of them remaining the same piece of Iron, just so shaped, as it was before. And, again, when the Smith made other Keys of different Sizes, or with differing Wards ; tho' the first Lock could not be open'd with any of those Keys, yet, that Indisposition was nothing new in the Lock, or distinct from the Figure it had before those Keys were made.

Why, then, may we not conceive, that sensible Qualities, tho', by virtue of a certain congruity or incongruity in point of Figure, Texture, or other mechanical Properties, the Portions of Matter they modify are enabled to produce various Effects, on account whereof the Bodies are said to be endowed with Qualities ; yet, that they are not in the Bodies endowed with them, any real or distinct Entities, or differing from the Matter itself, of such a determinate Bigness, Shape, or other mechanical Modifications ?

Thus, tho' the modern Goldsmiths and Refiners reckon it among the most distinguishing Qualities of Gold, that it is dissoluble in *Aqua Regia*, whilst *Aqua Fortis* will not work upon it ; yet these Attributes are not in the Gold any thing distinct from its peculiar Texture ; nor is the Gold we have now of any other nature than it was in *Pliny's* time, when *Aqua Fortis* and *Aqua Regia* were unknown.

If another *Mensurum*, of which *Mr. Boyle* suggests he was possess'd, should be invented to dissolve pure Gold in part, and change it into a different metalline Body, there would then arise another new Property, whereby to distinguish this from other Metals ; yet the nature of Gold is not at all different now from what it was before the discovery of this last *Mensurum*.

There are Bodies neither Cathartic nor Sudorific, with some of which Gold being joined, acquires a purgative Virtue, and with others a Power to procure Sweat.—Nature herself sometimes produces things, that have no relations to others : And Art, especially if assisted by Chymistry, may cause so many new Productions, that no Man can tell, but the most familiar Bodies may have multitudes of Qualities he dreams not of, which will hardly be imagin'd real physical Entities.

We all know that the Sun hath a Power to harden Clay, soften Wax, melt Butter, thaw Ice, turn Water into Vapour, make Air expand itself in Weather-Glasses, contribute to blanch Linen, render the white Skin of the Face swarthy, and mowed Grass yellow, ripen Fruit, hatch the Eggs of Silk-Worms, Caterpillars, &c. and perform many other things, some of which seem contrary to others ; yet these are not distinct Powers or Faculties in the Sun, but only the Productions of its Heat, diversify'd by the different Textures of the Body it chances to work on, and the condition of the other Substances concern'd in the Operation.—And, therefore, whether or no the Sun, in some Cases, has any influence at all distinct from its Light and Heat, we see that all the Phenomena mentioned, are producible by the Heat of common Fire, duly apply'd and regulated. *Boyle of Forms and Qualities.*

Some of the Antients, and particularly the *Peripatetics*, distinguish'd Qualities into *sensible* and *occuli*.

*Sensible*, or *Manifest* Qualities, are those arising from certain Modifications of the Matter, and which become immediately Objects of our Senses.—Such are all those above mentioned.

Tho', in strictness, those only are said to be *sensible* Qualities which affect some one Sense alone ; as Colour does the Eye, Sound the Ear, &c.

These are sometimes, also, call'd *Tactile*, or *Tangible* Qualities, by reason they only produce their Effect, i. e. excite their Ideas in us when contiguous, or in contact with the Organ.

*Oculi* Qualities, are certain latent Powers arising from the specific Forms of things, whereof no rational Solution can be given on any Principles of Physics. See *OCULI*.

*Sensible* Qualities are usually divided into *Primary* and *Secondary*.

*Primary*, or *general* Qualities are such as are found in all Bodies ; or which agree to all Matter, consider'd as Matter, and therefore to the Elements themselves.—Such are Extension, Figure, Motion, Rest, Solidity, Impenetrability, and Number. See *BODY*, *FIGURE*, *SOLIDITY*, &c.

*Secondary*, or *Particular* Qualities are such as result from a Composition or Mixture of Elements, and do not agree to Body as Body, but as a Mixt.—Such are Light, Heat, Cold, Colour, Sound, Taste, Smell, Hardness, Softness, Fluidity, Firmness, Roughness, Smoothness, Opacity, Transparency, &c.

According to *Aristotle* and the *Peripatetics*, the *Primary*, or *Elementary* Qualities are those of the four Elements themselves ; viz. Heat, Cold, Moisture, and Dryness. See *ELEMENT*.

The *Secondary* Qualities, according to the same, are all the rest ; which are Combinations or Assemblages of the former *Elementary* ones ; as Colour, Odour, Taste, &c.

To give an Idea of *Aristotle's* Method of accounting for these *Secondary* Qualities from his *primary* ones, we shall instance in his account of Colour.—All Colours, then, says he, are generated of a Mixture of the four *Elementary* Qualities : White, e. g. is produced when the Humidity furmours the Heat, as in old Mea, who grow grey ; Black is produced when the Humidity dries off, as in Walls, Cisterns, &c. Red, &c.

Among the School-Philosophers we meet with other Divisions of Qualities ; as *Active*, and *Passive* ; *Real*, and *Intentional*.

*Active* Qualities, were such by Virtue whereof Effects and Operations were actually produced on other Bodies duly disposed with respect thereto.—Such were the Heat of Fire, the Moisture of Water, &c.

*Passive* Qualities were those whereby Bodies were disposed to receive the Action of others.—Such are Inflammability in Oil, &c.

*Real* Qualities are those which remain in the Subject ; and only act on things adjacent thereto.—As Fire in a piece of Iron not ignited, &c.

*Intentional* Qualities are those which issue from the Subject, and operate at a distance.—Such is the Light emitted from the Sun, &c.

But the Moderns are agreed that either all Qualities are real, or all alike intentional.—So that the distinction is impertinent.

However ignorant we may be of the Nature of Qualities, or the Manner of their Operation ; yet we know the Laws of their Intention and Remission.—*Dr. Keil* demonstrates that every Quality which is propagated in Orbes, such as Light, Heat, Cold, Odour, &c. has its Efficacy increased or abated in a duplicate Ratio of the Distance from the Centre of Radiation, or Exertion of the Quality.

Thus, let A (Tab. GEOMETRY, Fig. 80.) be a Centre from whence any Quality exerts itself round about, according to the right Lines A e, A f, &c. The Efficacy of the Quality, be it Heat, Cold, Odour, &c. will be (at equal distances from A) as the Spiffitude or Thickness of the Rays A b, A e, A f. But the Rays within the inner Circle, or rather spherical Superficies, b c d h, when they come to be extended to the other spherical Surface, e f g k, will be much less close than before, and that in the reciprocal Proportion of the Spaces they take up ; that is, if the outer Surface be double of the inner, the Rays there will be but half as thick ; But since spherical Superficies are as the Squares of the Radii, therefore the Efficacy of the Quality in the inner Surface will be to that of the outer, as A e Square, to A b Square. Q. E. D.

*Sir Isaac Newton* lays it down as one of the Rules of Philosophizing, that those Qualities of Bodies which are incapable of being intended and remitted, and which are found to obtain in all Bodies wherein the Experiment could ever be tried, are to be esteem'd universal Qualities of all Bodies. See *PHILOSOPHERING*.

*Chymical* Qualities.—One may distinguish physical Qualities, with *Mr. Boyle*, into the first, second, and third ; to the two last of which may be refer'd several Qualities not treated of by the Writers of Physical Systems ; and these, for distinction sake, may, some of them, be stiled the *Chymical* Qualities of Things ; because *Aristotle* and the Schoolmen, being unacquainted with them, they have been principally introduced by means of Chymical Operations and Experiments : As Fumigation, Amalgamation, Capellation, Volatilisation, Precipitation, &c.

By these Operations, among other Means ; corporeal things come to appear volatile or fixed, *soluble* or *insoluble* in some Menstrua, *amalgamable* or *unamalgamable*, &c. which as well deserve the Name of Quality, as several other Attributes, to which it is allow'd.

To these chymical Qualities some others might be added, which, because of the Use that Physicians principally make of them, may be call'd *Medical* Qualities, whereby some Substances received into the human Body, are resolving, dissolving, suppurating, absterive, &c. For tho' some Faculties of Medicines, as those of heating, cooling, drying, attenuating, purging, &c. may be conveniently refer'd to the first, second, or third Qualities, mention'd by Naturalists, whilst others are reckon'd *occuli* ; yet as several of them ought not to be refer'd to the Qualities whereof they are often ascribed ; so the handling of them may be look'd upon as a  *desideratum*, and deserves a distinct Place in Natural Philosophy. See *MEDICINE* ; see also *PURGATIVE*, &c.

*Cosmical* QUALITIES, see *Cosmical Quality*.

QUALITY is also used for a kind of Title given to certain Persons in regard of their Territories, Signories, or other Pretensions. See TITLE.

Thus the King of *Great Britain* takes the *Quality* of King of *France*: The King of *Poland* that of King of *Sweden*: The King of *Sardinia* that of King of *Cyprus* and *Jerusalem*: The *Cazars of Russia* and Kings of *Spain*, have whole Pages of *Qualities*—The Emperor of *China* assumes the *Quality* of Son of the *Son*.

QUAM *din se bene gesserit*, a Clause frequent in Letters Patents, or Grants of Offices, to secure them so long as the Person they are granted to, shall not be guilty of abusing the same.

Thus, e.g. we find it in those given to the Barons of the Exchequer; where it intimates that they shall hold the same as long as they shall behave themselves well; which is to be restrain'd to the Matters of their Offices; and signifies no more than the Law would have imply'd, had the Office been granted expressly for Life.

A Grant, therefore, with this Clause, is equivalent to a Grant for Life. See *BARON*, *JUDGE*, *JUSTICE*, &c.

QUANTITY, QUANTITAS, any thing capable of Estimation, or Mensuration; or, which being compared with another thing of the same kind, may be said to be greater, or less, than; equal, or unequal to, it.

Mathematics is the Science or Doctrine of *Quantity*. See *MATHEMATICS*.

*Quantity* is a general Attribute, apply'd in a very different Manner to things of very different Nature; whence it is impossible to give any universal Definition thereof.

*Quantity* is apply'd both to Things, and to Modes; and this, either singularly, and to one; or plurally, and to several.—In the first Case it is call'd *Magnitude*, in the latter *Multitude*. See *MAGNITUDE*, &c.

*Quantity* may be reduced to four Classes, viz.

*Physical*, or *Natural Quantity*, which is of two kinds; viz. 1. That which Nature communicates us with, in Matter, and its Extensions. See *BODY* and *EXTENSION*.—And, 2. In the Powers, and Forces of Natural Bodies; as Gravity, Motion, Light, Heat, Cold, Rarity, Density, &c. See *FORCE*, *GRAVITY*, &c.

*Moral Quantity*, which depends on the Manners of Men, and the free Determination of their Wills.—As the Paces and Values of Things; Degrees of Dignity and Power, Good and Evil, Merit and Demerit, Rewards and Punishments, &c.

*Natural Quantity*, arising from the Operation of the Understanding only.—Such as the largeness or narrowness of the Capacity of the Mind, and its Conceptions.—In Logic, Universals, Predicaments, &c.—In Grammar, the *Quantity* and Measure of Syllables, Accents, Tones, &c.

*Transcendental Quantity*, as Duration, the Continuation of any Being, Existence, Time, &c. See *DURATION*, *TIME*, &c.

*Quantity* is also popularly distinguish'd into *Discrete* and *Continued*.

*Discrete QUANTITY*, is when the Parts whereof it consists, exist distinctly and unconnected together; which makes what we call *Number*. See *DISCRETE*.

The Antients distinguish'd this into two kinds, viz. *Permanent*, as *Numerus Numerans*; and *Successive*, as *Speech*.

*Continued QUANTITY*, is when the Parts are connect'd together.—This, again, is of two kinds; either *successive* and *improper*, as *Time*. See *TIME*.

Or *permanent* and *proper*, as *Space*. See *SPACE*.

*Permanent Quantity* is further distinguishable into length, breadth, and depth. See *LINE*, *SURFACE*, and *SOLID*. *Wolffius* gives us a more precise Notion of *Mathematical Quantity*, and its two Species of *Discrete* and *Continued*.—Whatever is refer'd to Unity in the same manner as one right Line to another, is what we call *Quantity*, or *Number* in general. See *NUMBER*.

If, now, the thing be refer'd to a given Unit, as 3, it is call'd a *determinate Number*: if to Unity in the general, or at large, it is call'd a *Quantity*; which, on this Principle, is the same with *indeterminate Number*.

Thus, e.g. the breadth of a River is accounted a *Quantity*: If, then, it be enquir'd how great it is? To conceive its *Quantity* we take some Unit at pleasure, and seek the Relation of the breadth hereto; and according to the different Unit assum'd, express the breadth of the River in a different determinate Number.

The breadth of the River, therefore, is a *Quantity* consider'd as refer'd to a vague Unit, or to Unity at large; but the Unit being determin'd, the thing is understood by a determinate Number.

In this sense, Algebra is the Arithmetic of *Quantities*. See *ALGEBRA*.

*QUANTITY of Motion*, in Mechanics, is of two kinds, viz. of *momentary Motion*, and of *entire Motion*.

*Quantity of entire Motion*—The *Cartesians* define the entire Motion as the momentary one, by the Lactam of the Mass, or *Quantity of Matter*, into the Velocity; but since Motion is a successive Being, and has no parts co-existing together, its *Quantity* ought to be estimated by the Aggregate of the several Parts existing successively; and is therefore equal to the Lactam of the Moments into the Time.

*QUANTITY of momentary Motion*, is the Lactam of the Velocity into the Mass; or a Measure arising from the joint Consideration of the *Quantity of Matter*, and the Velocity of the Motion of the Body; the Motion of any Whole being the Sum or Aggregate of the Motion in all the several Parts. See *MOTION*.

Hence, in a Body twice as great as another, moved with an equal Velocity, the *Quantity of Motion* is double; if the Velocity be double also, the *Quantity of the Motion* will be quadruple. Hence the *Quantity of momentary Motion* coincides with what we call *Momentum*, or *Impetus* of a moving Body. See *MOMENTUM*.

In the Collision of Bodies, the *Quantity of momentary Motion*, which is found by taking the Sum of Motions tending the same way, or their difference if they tend towards contrary Parts; is not at all changed by any Actions of the Bodies on one another. See *PERCUSSION*.

*QUANTITY of Matter* in any Body, is the Product of the Density into the Bulk; or a *Quantity* arising from the joint Consideration of its Magnitude and Density. See *BULK*.

As, if a Body be twice as dense, and take up twice as much Space as another, it will be four times as great.

This *Quantity of Matter* is the best discoverable by the absolute weight of Bodies. See *MASS*, *WEIGHT*, &c.

*QUANTITY Infinite*—Tho' the Idea of Magnitude infinitely great, or such as exceeds any assignable *Quantity*, does include a negation of Limits; yet are not all such Magnitudes equal amongst themselves; but besides *infinite Length*, and *infinite Area*, there are no less than three several sorts of *infinite Solidity*; all of which are *Quantities seu generis*; and those of each Species are in given Proportions.

*Infinite Length*, or a Line infinitely long, is to be consider'd, either as beginning at a Point, and so infinitely extended one way; or else both ways from the same Point: in which Case the one, which is a beginning Infinity, is one half of the Whole, which is the Sum of the beginning and ceasing Infinity, or Infinity *à parte ante*, and *à parte post*, which is analogous to Eternity in Time or Duration, in which there is always as much to follow as is past, any Point of Moment of Time. See *ETERNITY*.

Nor does the Addition or Subtraction of Time, Length or Space of Time, alter the Case, either as to Infinity or Eternity; since neither the one or the other can be any Part of the Whole.

As to infinite Surface or Area, any right Line infinitely extended both ways on an infinite Plane, divides that Plane into equal Parts, one to the Right, and the other to the Left of the said Line; but if from any Point in such a Plane, two right Lines be infinitely extended, so as to make an Angle; the infinite Area, intercepted between these infinite right Lines, is to the whole infinite Plane, as the Arch of a Circle drawn on the Point of Concurrence of those Lines as a Centre, intercepted between the said Lines, is to the Circumference of the Circle; or as the Degrees of the Angle to the 360 Degrees of a Circle.

For an Example.—Two infinite right Lines meeting at a right Angle on an infinite Plane, do include a quarter Part of the whole infinite Area of such a Plane: If two parallel infinite Lines be supposed drawn on such an infinite Plane, the Area intercepted between them will be likewise infinite; but at the same time will be infinitely less than the Space intercepted between two infinite Lines, that are inclined, tho' with never so small an Angle, for that in the one Case the given finite Distance of the parallel Lines diminishes the Infinity in one Degree of Dimension; whereas in a Sector, there is Infinity in both Dimensions; and consequently the *Quantities* are one infinitely greater than the other, and there is no Proportion between them.

From the same Consideration arise three several Species of infinite Space or Solidity; for a Parallelepiped, or a Cylinder infinitely long, is greater than any finite Magnitude, how great soever; and all such Solids supposed to be form'd on a given Basis, are in proportion to one another, as those Bases. But if two of those three Dimensions are wanting, as in the Space intercepted between two parallel Planes infinitely extended, and at a finite distance; or with infinite length and breadth, with a finite thickness; all such Solids shall be as the given finite Distances one to another.

But these *Quantities*, tho' infinitely greater than the other, are yet infinitely less than any of those wherein all the three Dimensions are infinite.—Such are the Spaces intercepted between two inclined Planes infinitely extended; the Space intercepted by the Surface of a Cone, or the Sides of a Pyramid, likewise infinitely continued, &c. of all

all which, notwithstanding the Proportions one to another, and to the *vis vivæ*, or vast Abyss of infinite Space (wherein is the Locus of all things that are, or can be; or to the Solid of infinite Length, Breadth, and Thickness taken all manner of ways) are easily assignable—For the Space between two Planes is to the Whole, as the Angle of those Planes to the 360 Degrees of the Circle. As for Cones and Pyramids, they are as the spherical Surface intercepted by them, is to the Surface of the Sphere; and therefore Cones are as the versed Sines of half their Angles, to the Diameter of the Circle: These three sorts of infinite Quantity are analogous to a Line, Surface, and Solid; and, like them, cannot be composed, or have any Proportion one to another.

QUANTITIES, in Algebra, are indeterminate Numbers, or things refer'd to Unity in the general. Quantities are properly the Subject of Algebra; which is wholly conversant in the Computation of such Quantities. See ALGEBRA.

The given Quantities are to be noted by the first Letters of the Alphabet *a, b, c, d*, &c. the Quantities sought by the last *z, y, x*, &c. See CHARACTERS.

Algebraical Quantities are of two kinds; Positive, and Negative.

Positive, or Affirmative QUANTITIES are those which are greater than nothing; and which are affected with the Sign + prefix'd; or supposed to be so. See POSITIVE.

Negative, or Privative QUANTITIES are those less than nothing; which are affected with the Sign - prefix'd. See NEGATIVE.

Hence, 1. Since + is the Sign of Addition, and - the Sign of Subtraction; a positive Quantity is produced by adding any real Quantity to nothing; e. g.  $0 + 3 = 3$ ; and  $0 + a = +a$ . And a privative Quantity is produced by subtracting any real Quantity out of nothing; e. g.  $0 - 3 = -3$ ; and  $0 - a = -a$ .

For an Illustration—Suppose when you are quite destitute of Money, somebody gives you an hundred Pieces; you have then an hundred Pieces more than nothing; which Pieces constitute a positive Quantity.

On the contrary, suppose you have no Money, yet owe an hundred Pieces; you have then an hundred Pieces less than nothing; for you must pay an hundred Pieces to have just nothing. This Debt is a negative Quantity.

Thus in local Motion, Progress may be call'd a positive Quantity, and Regress a negative one; because the first increases, and the second diminishes the Space pass'd over.

And in Geometry, if a Line drawn towards any Part be account'd an affirmative Quantity; another the contrary way will be a negative one.

2. Privative Quantities, therefore, are the Defects of the positive Quantities whereby they are understood; and, consequently are no real Quantities: For we measure the Defect by the Quantity defective; and thus it becomes intelligible.

Since one Defect may exceed another, (e. g. if seven be wanting, the Defect is greater than if only three be wanting) and since privative Quantities are the Defect of real Quantities; so privative Quantity being taken a certain Number of times, may exc'd another. Wherefore privative Quantities are homogeneous to one another.

4. But since the Defects of a positive Quantity taken any number of times can never exceed the positive Quantity, but grows still the more deficient; privative Quantities are heterogeneous to positive ones.

5. Hence, then, privative Quantities are heterogeneous to positive ones, homogeneous to privative ones; there can be no Ratio between a privative and a positive Quantity, but there is a Ratio between privative ones. E. g.  $-5 : -2 :: 5 : 2$ . The Ratio, here, is the same as if the Quantities were positive. But it may be noted, that between + and - 1, and between - 1 and + 1, the Ratio is very different.

Addition of QUANTITIES. 1. If the Quantities denoted by the same Letter be affected with the same Sign, the Numbers prefix'd to 'em are added as in common Arithmetic. 2. If they be affected with different Signs, the Addition is changed into Subtraction; and to the Remainder is prefix'd the Sign of the greater. 3. Quantities denoted by different Letters, are added by means of the Sign +; as in the following Example.

$$\begin{array}{r} 4a + 5b - 2c - 3d - g \\ 5a - 2b + bc + 2d - 3g \\ \hline 9a + 4c - 3d - 4g \end{array} \quad \begin{array}{r} a - b \\ \hline c \\ \hline a - b + c \end{array}$$

Subtraction of QUANTITIES; see SUBTRACTION.  
Multiplication and Division of QUANTITIES; see MULTIPLICATION and DIVISION.

Combination of QUANTITIES; see COMBINATION.

If a positive Quantity be multiply'd, or divided by another positive Quantity, the Result is a positive Quantity.

2. If a negative Quantity be multiply'd, or divided by a positive, the Result is a negative.

3. If a negative Quantity be multiply'd, or divided by another negative, the Result is a positive.

4. If a positive Quantity be multiply'd, or divided by a negative, the Result is a negative Quantity.

QUANTITY, in Grammar, is the Measure, or Magnitude of the Syllables; or that which determines them to be call'd long, or short. See GRAMMAR, PROSODY.

This Quantity is the Object of Prosody; and it is the regard to this that distinguishes Verse from Prose. See VERSE.

The Oeconomy and Arrangement of the Quantities, i. e. the distribution of long and short Syllables, make what we call the Numbers. See NUMBERS.

The Quantities are used to be distinguish'd among the Grammarians by the Characters  $\sim$  short, and  $-$  long. See CHARACTER.

The Proportion betwixt the long and short Syllables may be generally fix'd the same as between the Crochet and Quaver in Music; viz. as 2 to 1. See TIME.

In most Languages there are some Syllables whose Quantities vary, as the Measure requires; as in the English Record and Record.

Some Authors confound the Quantities with the Accent: But the difference is glaring; the former being the length or shortness of a Syllable, the latter the raising or falling of the Voice. See ACCENT.

From two Quantities, viz. long and short Syllables, arise all the Varieties of Poetic Feet, which are very great. Horace alone uses no less than twenty-eight. Yet the Greeks went vastly beyond the Romans in this respect—In effect, as many ways as two Quantities may be varied by composition, and transposition (from two to six Syllables, so many different Feet have the Greek Poets contriv'd, and that under distinct Names, to the Number of 124. Tho' it is the Opinion of some of the Learned, that Poetical Numbers may be sufficiently explain'd from the Feet of two or three Syllables, into which the rest are to be resolved.

The Feet form'd by the Antients of the long and short Syllables immediately; are the Spondee, consisting of two long Syllables; the Pyrrhic, of two short ones; the Trochee, of a long and short Syllable; and the Iambic, of a long and short Syllable. See SPONDEE, TROCHEE, IAMBIC, &c.

Those of three Syllables are the Anapaest, consisting of three long Syllables; the Tribrach of three short ones; the Dactyl of one long and two short Syllables; and the Anapaest of two short and one long Syllable. See DACTYL, ANAPOST, TRIBRACH, &c.

The English Tongue admits of no Feet above two Syllables, tho' both the Latin and Greek allow of six.

Our Heroic Verses consist of five long and five short Syllables intermix'd alternately; tho' not so strictly but that the Order may be dispens'd withal. Dryden varies them with admirable Beauty; sometimes his Heroic Verse begins with a long Syllable follow'd by two short ones.

The truth is, the Quantity of the Syllables is but little fix'd in the modern Tongues; and there is still less regard had to it in the Composition of modern Verses—The want of Feet, or rather the shortness and uniformity of our Feet, makes a world of difference between the Numbers of the ancient and modern Verse. Our Poets are fatter'd, and their Fetters are so short, but two poor Links, that it's no wonder they can make no extraordinary Motions.

The Antients substituted by their Quantities alone; so well were they distinguish'd, and such a Variety and Harmony did they afford. Our Quantities make such poor Music, that we are forced to call in the Gothic Aids of Rhime to distinguish our Verse from Prose. See ONE.

Yet have Attempts been made to settle our Verse on the ancient and natural footing of Quantities, in exclusion of Rhime, and with such success too, (witness the Immortal Paradise Lost) as seems to leave the practice of Rhiming inexcusable—The French have likewise attempted the same in their Tongue, particularly Jodeler, and after him Passquier, Passerat, and Rapin; but they have all fail'd. See RHIME.

QUANTUM MERUIT, an Action upon the Case, grounded upon a Promise to pay a Man for doing so much as he should deserve or merit.

QUARANTAIN, in old Law-Books wrote QUARANTENE, or QUARANTENA, denotes the Space of forty Days.

The Term is borrow'd from the French; and is sometimes used for the time of Lent. See LENT.

*Quarantain of the King*, is a Truce of forty Days appointed by *S. Louis*; during which it was expressly forbid to take any Revenge of the Relation or Friends of People, who had fought, wounded, or affronted each other in wars.

*QUARANTAIN* is particularly us'd for the Term of forty Days, which Vessels, coming from Places suspected of Contagion, are oblig'd to wait in certain Places appointed, to air themselves e'er they come into Port.

*QUARANTAIN, QUARANTENS, or QUARENTENA*, in Law, is a Benefit allow'd by the Laws of *England* to the Widow of a Man dying seized of Land; whereby she may challenge to continue in his Capital Messuage, or Chief Mansion-House (so it be not a Castle) for the space of forty Days after his decease—If the Heir, or any other Person attempt to eject her, she may have the Writ de *Quarantina habenda*; which lies for a Widow to enjoy her *Quarantine*.

*Quarantene* is also us'd for a quantity of Ground containing forty Patches.—*Quattor Carucatas terre arabilibi, censuatus in Longitudine 8 Quarentenas, & 8 Quarentenas in Latitudine.* Cart. Wihlslai Reg. Merc. apud Inghilf.

*Quaranta in London ponitur pro respectu habendi per 40 Dies post Summoatitionem per breve Regis ut consulant, &c. si sibi viderint expedire.* MS. de temp. Ed. 3.

*QUARANTIA*, in the Venetian Polity, a Court of Judicature composed of forty Judges.

The *Venetians* have an old *Civil Quarantia*, new *Civil Quarantia*, and *Criminal Quarantia*.

The *Criminal Quarantia* takes Cognizance of all Crimes except those against the State; which belongs to the Council of Ten.—The new *Civil Quarantia* Judges of Appeals made from Sentences pass'd by Judges out of the City.—The old *Civil Quarantia* takes Cognizance of Appeals from Sentences of Iubarten Judges in the City.

*QUARE EXECIT INFRA TERMINUM*, a Writ which lies for a Lessee in Case he be call'd out of his Farm before his Term be expir'd; against the Lessor or Feoffee that ejects him. See LEASE.

It differs from the *Ejectione firme*, in that the former lies where the Lessor, after the Lease made, enfeoffs another who ejects the Lessee; whereas the *Ejectione firme* lies against any other Stranger that ejects him. See EJECTION.

The Effect is the same in both, viz. the Recovery of the Residue of the Term. See EJECTIONES FIRME.

*QUARE IMPEDIT*, a Writ which lies for him who has purchased an Advowson, against him that disturbs him in the Right thereof, by presenting a Clerk thereto, when the Church is void. See ADVOWSON.

It differs from the Writ *Assisa ultima presentationis*, which lies where a Man or his Ancestors formerly presented; this other lying for him who is the Purchaser himself—Where a Man may have the *Assisa*, he may have this Writ; but not contrariwise. See ASSISA.

*QUARE INCUMBRAVIT*, a Writ which lies against the Bishop, who, within six Months after the Vacation of a Benefice, confers it on his Clerk, while two others are contending at Law for the Right of Presenting. See PRESENTATION, &c.

*QUARE NON ADMITTE*, a Writ which lies against the Bishop for refusing to admit his Clerk who has recover'd in a Plea of Advowson.

*QUARE NON PERMITTIT*, is a Writ that lies for one who has a Right to present for a turn against the Proprietary.

*QUARE OBSTRUXIT*, a Writ that lies for him who having Right to pass thro' his Neighbour's Grounds, cannot enjoy the same by reason the Owner has fenced it up.

*QUAREL, QUERELA*, in Law, properly relates to personal Actions, or at most to mixed, wherein the Plaintiff is call'd *Querens*, and in all Declarations of Trespasts it is said, *Quare*. See ACTION, PLAINTIFF, &c.

Yet if a Man release all *Quarels, or Querels* (a Man's own Deed being taken most strongly against himself) *Quarels* includes all Actions; and accordingly all Actions, both Real and Personal, are hereby released. See RELEASE.

*QUARERA, or QUARATIA*; see QUARRY.

*QUARREL*, in Law, see QUAREL.

*QUARREL of Glass*; see QUARRY.

The Word is form'd by diminution from the *Latin quadratum*, or the French *quarre*, square; or, perhaps, immediately from the *Italian quadrillo*, little square.

*QUARRY*, in our ancient Writers call'd *QUARERA, QUADRATA, QUARATIA*, a Place under Ground, out of which are dug Marble, Free-Stone, Slate, Lime-Stone, or other Matters proper for Building. See STONE.

See the several Kinds of *Quarries*, under the several Articles, MARBLE, SLATE, &c.

For *Quarries of Free Stone*, they first open a Hole in manner of a Well, twelve or fourteen Foot in Diameter; and the Rubbish drawn out with a Windlass in large Oiler Baskets, they heap up all around; placing their Wheel, which is to draw up the Stones, thereupon.

As the Hole advances, and their common Ladder becomes too short, they apply a particular Ladder for the purpose—When they have got through the Earth, and are arriv'd at the first Bank, or Stratum; they begin to apply their Wheel and Baskets to discharge the Stones as fast as they dig through 'em. See WHEEL.

They usually find seven of these different Strata, or Beds of Stones, of different Heights, and serving for different Purposes; tho' the Number as well as Order wherein they follow is various. See STRATA.

As to the drawing of the Stone, i. e. the freeing it from the Bed; they find that common Stone, at least the softer kinds, as they lie, have two Grains; a cleaving Grain running parallel with the Horizon, and a breaking Grain perpendicular thereto—After unroofing, then, i. e. clearing the Earth from off it, they observe by the Grain where the Stone will cleave, and there drive in a good Number of Wedges till they have thus cleft it from the rest of the Rock.

This done, they proceed to break it: In order to which, applying the Ruler to it at both ends, (ten, e. g. or twelve Inches a-part, according to the Uses the Stone is intended for) they strike a Line, and by this cut a little Channel with their Stone-Ax; and in the Channel fell five or six Wedges (supposing the Stone three or four Foot) driving 'em in very carefully, with gentle blows, and still keeping 'em equally forward.

Having thus broke 'em in length, (which they are able to do to half an Inch of any size) applying a Square to the straight Side, they strike a Line, and proceed as before to break it in breadth.

This Method of drawing is found vastly preferable to that where the Stones are broken at random—One Load of the former is found to do the Business of a Load and a half of the latter.

But it may be observ'd, that this cleaving Grain being generally wanting in the harder Stones; to break up these in the *Quarries*, they have great heavy Stone-Axes wherewith they work down a deep Channel into the Stone, and into this Channel, a-top, lay two Iron Bats, driving their Iron Wedges between these Bars.

Some, in drawing of Stone, especially the very hard kind, make use of Gun-Powder, and with very good effect—In order to which, making a small Perforation pretty deep into the Body of the Rock, so as to have that thickness of Rock over it judg'd proper to be blown up at once; at the further end of the Perforation they dispose a convenient quantity of Gun-Powder, filling up all the rest with Stones and Rubbish strongly ram'd in, except a little Space for the Train—By this means is the Rock blown into several Picots, most of 'em not too unwieldy for a Workman to manage. See GUN-POWDER.

*QUARRY, QUARREL*, in Glaziers, a Pane, or Piece of Glass cut in a Diamond Form. See GLASS.

*Quarrels, or Quarrels of Glass* are of two Kinds, viz. *Square, and Long*; each whereof is of different Sizes, express'd by the Number of 'em which makes a Foot of Glass, viz. 8ths, 10ths, 12ths, 15ths, 18ths, and 20ths; but all the Sizes are cut to the same Angles, the acute Angle being 77° 19' in the Square *Quarrels*, and 67° 24' in the long ones. See GLAZIERY.

The word *Quarry* seems form'd by Corruption from *Quarrel*, (which see;) unless we'll suppose it to come immediately from the French *quarre*, square.

*QUARRY*, in Falconry, is the Game or Fowl which the Hawk is in pursuit of, or has kill'd. See HAWK and HAWKING.

Among Hunters, the *Quarry* is sometimes us'd for part of the Viscera of the Beast taken; given by way of Reward to the Hounds. See HUNTING.

*QUART*, q. d. *Fourth*, in Music, Peering, Gaming, &c. See FURTH, GUARD, PICKET, &c.

*QUART*, is particularly us'd for a diminutive Measure, containing one fourth or a quarter of some other Measure. See MEASURE.

Thus the *English Quart* is a fourth of a Gallon, or two Pints; the *Roman Quart, or Quartarius*, was the fourth part of a *Congius*. See GALLON, PINT, CONGIUS, &c.

The *French*, from whom we borrow the Word, besides their *Quart, or Pot* of two Pints, have various other *Quarts*, distinguish'd by the whole whereof they are quarters; as *Quart de Muid, Quart de Boisson*. See MUID and BUSHEL.

They have also their *Quart of a Yard, &c.* See QUARTER.

*QUARTAN*, a Medicine, an intermitting Fever, or Ague, where the Fit returns every third day. See FEVER, &c.

It is call'd *Quartan*, q. d. *fourth*, by reason the two sick days are reckon'd, which, with the two intermitting ones, make four. See TERTIAN.

*QUARTATION*, among Refiners, a Method of purifying Gold; by melting three parts of Silver with one of Gold; and then casting the Mixture into *Aqua fortis*; which

which dissolving the Silver, leaves the Gold at bottom, in form of a black Powder. See REFINING.

*Quarteration* is what we more usually call *Parting*, or the *Depart*. See DEPART 5 see also GOLD, &c.

QUARTELOIS, CARTELOIS, or *Cotuca*, Sartons, or upper Garments with Coats of Arms quarter'd on 'em, wore by the ancient Knights in their Military Expeditions. See SEKTOUT, COAT of Arms, &c.

QUARTER, the fourth part of a Whole, or Integer divided into four equal Portions. See FOURTH.

In working of Fractions the *Quarter* is express'd by  $\frac{1}{4}$ , these *Quarters* by  $\frac{1}{8}$ . See FRACTIONS.

QUARTER, in Weights, is a fourth part of the Quintal, or Hundred Weight. See QUINTAL.

The *Quarter* is 28 Pounds *Avoirdupois*. See HUNDRED WEIGHT, POUND, AVOIRDUPOIS, &c.

QUARTER is also a dry Measure containing 8 Bushels struck 3; or the fourth part of a Chaldron. See MEASURE, &c.

*Quarterium frumentis constat ex octo Bushellis*. *Fleta*. l. 2. See BUSHEL, CHALDRON, &c.

QUARTER, in Law, *Quarterium Anni*, is the fourth Part of a Year. See YEAR.

Hence the Days whereon these *Quarters* stately commence, are call'd *Quarter-days*. See DAY.

*Quarter-days* are the 25th of March call'd *Lady-day*; the 24th of June, call'd *Midsummer-day*; the 29th of September, call'd *Michaelmas-day*; and the 25th of December, or *Christmas-day*.

QUARTER Sessions, a Court held Quarterly, by the Justices of Peace of each County, alternately, in the chief Towns thereof, appointed by the *Custos Rotularum*. See SESSIONS, JUSTICE, &c.

Hither the Grand Inquest, or Jury of the County is summoned to appear, who upon Oath are to enquire of all Traytors, Heretics, Thieves, Murderers, Coiners, Rioters, &c. See INQUEST.

Those who appear to be guilty are by the said Justices committed to Prison, to be tried at the next Assizes, when the Judges go their Circuits. See JUDGE, ASSIZE, &c.

QUARTER, in Navigation—A *Quarter of a Point*, Wind, or Rhumb, is the fourth part of a Cardinal Point, Wind, &c. See POINT, WIND, and RHUMB.

The *Quarter* contains an Arch of  $11^{\circ} 15'$ .

The *Quarter* is what *Wolhus*, with regard to the other Divisions, calls a secondary Point of the second Order. See CARDINAL Point, &c.

QUARTER Wind, at Sea, is a lateral, or side Wind; or a Wind which does not blow in Stern, but a little a-side of it. See WIND.

Properly, the *Quarter Wind* is that which comes in abast the Main-Mast Shrouds, even with the Quarter of the Ship.

The *Quarter Wind* is the best of all Winds, as bearing into all the Sails; whereas a Wind blowing full in Stern, is kept off by the Sails of the Mizzen. See SAILING.

QUARTER of a Ship, is that part of the Ship's Hull, which lieth from the Steerage-Room to the Transform. See SHIP.

QUARTER Deck, of a Ship, is that aloft the Steerage, reaching to the Round-house. See DECK.

QUARTER, in Astronomy—The Moon's Period, or Lunation, is divided into four Stages, or *Quarters*; containing each from seven to eight Days. See MOON and LUNATION.

The first *Quarter* is from the new Moon to the Quadrature; the second thence to the full Moon, &c. See QUADRATURE, &c.

QUARTER, in Heraldry, is a Term used for a Scutcheon, or Coat of Arms. See ESCUTCHEON.

In this sense there are sixteen *Quarters* required to prove Nobility, in Companies or Orders where none but Nobles are admitted. See NOBILITY.

The Word *Quarters*, requir'd as a Proof of Nobility, is derived hence; that they used antiently to put the Coats of Arms of the Father, Mother, Grand-father, and Grand-mother on the four Cotners of the Tomb of the Deceased.—In *Flanders* and *Germany* we frequently see Tombs that have eight, sixteen, and even thirty-two *Quarters*. See TOMB.

QUARTER is also apply'd to the Parts, or Members of the first Division of a Coat that is *quartered*, or divided into four *Quarters*; as in the Figure adjoining. See QUARTERING.

The King of Great Britain in the first *Quarter* bears Gules three Lions passant Or, &c.—In the second *Quarter* he bears Azure three Flowers de Lys, &c.

FRASE QUARTER, is a *Quarter single*, or alone; as that hereto adjoining.

This makes one of the honourable Parts of a Coat. See ORDINARY.

QUARTER pierced, in Heraldry, is used when there is a Hole or square Figure made in the middle of a Cross. See PIERCED.

QUARTER Bullet, a Bullet *quarter'd* into four or eight Parts. See BULLET, SHOT, &c.

QUARTER is also used for a Canton, or Division of a City; consisting of several Isles, &c. separated from some other *Quarter* by a River, a great Street, or other Boundary.

Such are the twenty *Quarters* of the City of Paris—Ancient Rome was divided several times, under its several Augmentations, into *Quarters*, call'd *Regions*; as may be observ'd in the *Topographies* of *Aurelius Victor*, *Omphrius Pavininus*, *Martian*, *Pyro Ligorio*, *Boissard*, and other Antiquaries. See REGION.

In many Cities there are *Commissaries* of the *Quarter* appointed to look to the Polity thereof.—The *Fraze* of the *Caperions* accounts himself the Chief, and Colonel of the fourteen *Regions*, or *Quarters* of Rome. *Mascani*, p. 134.

QUARTER, in War, the Place allotted to certain Forces to live, lodge, and incamp upon, during a Siege or the like. See INCAMPMENT.

The *General's Quarter* is that where the General lodges and incamps in Person.—They use to make Lines of Communication, to join the several *Quarters* together. See LINE.

The *Quarters* of a Siege are the principal Incampments, serving to stop the Avenues of a Place. See SIEGE.

QUARTER Master, an Officer in the Army, whereof there are several kinds; viz.—The

*Quarter-Master General*, whose Business is to provide good *Quarters* for the whole Army. See QUARTERS.

*Quarter-Master of a Regiment of Foot*, who is to provide *Quarters* for his Regiment. See REGIMENT.

*Quarter-Master of a Troop of Horse*, who is to provide *Quarters* for his respective Troop. See TROOP.

QUARTER-Master is also an Officer aboard a Ship, of which there are more or fewer according to her Burthen.—Their Business is to rummage in the Hold on all Occasions, to overlook the Steward in his delivery of Victuals to the Cook, and in his pumping and drawing out the Beer; and in general, to take care there be no waste.

He is also to mind the Ship's Loading, which is the Bass nets he is chiefly employ'd about. See LOADING, &c.

QUARTER is also used for any Lodgment made in the Field or Campaign out of a Siege.—Thus, they say, the General has extended his *Quarters* a good way.—The Enemy coming made him contract his *Quarters*.

WINTER QUARTERS, is the Place allotted Troops to pass the Winter Season in.—Wherein these differ from Garrison, see GARRISON.

The Term is also used for the Time they continue in this Lodgment; and for the Advantages the Captains make thereof.—Thus they say, such a Regiment was put to *Winter-Quarters* in such a Village.—The *Winter-Quarters* only held three Months.—Each Captain will make at least a thousand Crowns of his *Winter-Quarters*.

In Spain they have also *Summer-Quarters*.

QUARTERS of Refreshment, is some well-provided fertile Spot, to which Troops that have been much fatigu'd and harass'd, are sent to recover their Strength, or Health; even during the Season of the Campaign. See REFRESHMENT.

QUARTER of Assembly, is the Place of Rendezvous, where the Troops are to meet and draw up, for a March. See PARADE.

There are also *Quarters* assign'd for the Hucksters, and their Equipage.

QUARTER is also the Safety, and good Treatment promised to Persons, or Troops that surrender, and lay down their Arms.—Thus they say the Enemy begg'd *Quarter*.

The Phrase took its rise from an Agreement antiently made between the Dutch and Spaniards, that the Ransom of an Officer, or Soldier, should be a *quarter* of his Pay.—Hence, to beg *Quarter* was to offer a *quarter* of their Pay for their Safety; and to refuse *Quarter* was not to accept of that Composition for their Ransom. See RANSOM.

QUARTER Round, in Architecture, is a Term used by the Workmen for any Moulding, in general, whose Contour is either a perfect Quadrant, or *quarter* of a Circle, or approaches near that Figure. See MOULDING.

The Architects usually call it *Ovoio*; *Vitravian* the *Echinus*. See OVOIO and ECHINUS.

QUARTER Staff, a long Staff or Pole, bore by Foresters, Park-keepers, &c. as a Badge of their Office; and occasionally used as a Weapon.

**QUARTER Wheeling**, or **QUARTER of Conversion**, in the Military Art, is a Motion whereby the Front of a Body of Men is turn'd round to where the Flank was; thus making a *quarter* of a Circle. See **CONVERSION**, **WHEELING**, &c.

If it be done to the Right, the Man in the right Angle keeps his Ground, and faces about, while the rest wheel; if to the Left, the left-hand Man keeps his Place, &c. See **EVLUTION**.

**QUARTERS**, in a Clock, are little Bells which sound the *Quarters* of an Hour. See **CLOCK**, **HOUR**, &c.

**QUARTERS**, in Building, those thick upright Pieces of Timber, placed between the Puntions and Posts; used to lath upon.

They are of two kinds, *single* and *double*—The *single Quarters* are sawn to two Inches thick and four Inches broad; the *double* four Inches square.

**QUARTERIDGE**, Money paid quarterly, or by the Quarter.

**QUARTERING**, in the Sea-Language—When a Ship under sail goes at large, neither by a Wind nor before a Wind, but as it were betwixt both; she is said to go *Quartering*. See **SAILING**.

The Term is also used when a Ship sails with quarter Winds. See **QUARTER Wind**.

**QUARTERING**, in Gunnery, is when a Piece of Ordnance is to be travell'd, that it will shoot on the same Line, or on the same Point of the Compass as the Ship's Quarter bear.

**QUARTERING**, in Heraldry, the dividing a Coat into four or more Quarters, or *Quarterings*; by parting and coupling. See **QUARTER** and **QUARTERING**.

The King of Great Britain quarters with Great Britain, France, Ireland, Brunswick, &c. See **QUARTERLY**. *Counter QUARTERING a Coat*, is when the Quarters are quarter'd over again, or subdivid'd each into four.

There are *Counter-quarter'd Coats* which have twenty or twenty-five Quarters.

**QUARTERINGs**, call'd also *Partitions* and *Compartiments* are the several Coats born on an Escutcheon; or the several Divisions made in it, when the Arms of several Families are to be placed on the same Shield, on account of Intermarriages, or the like. See **ESCUTCHEON**, **SHIELD**, &c.

*Colombiere* reckons twelve sorts of *Quarterings*; but other Authors give us more.—*vis.* Party per Pale, dividing the Escutcheon from top to bottom. See **PALE**.—Party per Cross, dividing it on side to side. See **CROSS**.

—Party of six Pieces, when the Escutcheon is divided into six Parts or Quarters.—Party of ten; of twelve; of sixteen; of twenty; and of thirty-two, when there are so many Partitions respectively.

Others give the Divisions in another manner: As—Party per Cross—per Pale—per Chief—per Pale Inclave—per Bend dexter—per Bend sinister—per Chevron—Barry Bendy of eight Pieces—Paleways of six Pieces—Barry of six Pieces—Barry of eight Pieces—Bendy of six—Checky—Fusilly, or Lozengy—Poly Bendy, or Bendy Lozengy—Barry Bendy Lozengy, or Bend Lozengy—Gyronny—Barry Lozengy counterchanged—Waved of six Pieces—Barry Nebule of six Pieces—Party per Saltier—Party per Pale in Point. See *further under the respective Articles*.

*Colombiere* observes, that thirty two is the greatest Number used in France, but that the English and Germans sometimes extend to forty; as a Testimony of the Truth whereof, he says, he saw the Escutcheon of the Earl of Leicester, Ambassador Extraordinary in France in the Year 1639, divided into the Number of forty; and some, he affirms, do go on to sixty-four several Coats.

But a Multitude of Quarters makes a Confusion; and accordingly all the Writers of Armory cry out against it as an Abuse—The first Instance of *Quartering* whereof we have any Account, is said to be in the Arms of *Renaute King of Sicily*, &c. in the Year 1435, who quarter'd the Arms of Sicily, Arragon, Jerusalem, &c.

*William Wickley* observes, that such *Quarterings* are much proper for a Pedigree to be lock'd up in a Chest, and occasionally produced as an Evidence for the clearing or ascertaining of Alliances of Families, or Titles to Lands, &c. than to be borne as a Cognizance.

In Blazoning, when the *Quartering* is perform'd per Cross, the two Quarters a-top are number'd the first and second; and those at bottom the third and fourth; beginning to tell on the right side—When the *Quartering* is by a Saltier, &c. the Chief and Point are the first and second Quarters, the right side the third, the left the fourth.

**QUARTERING** is sometimes also used for the distinguishing of younger Brothers from Elder. See **DIFFERENCE**.

**QUARTERIZATION**, **QUARTERING**, part of the Punishment of a Traytor, by dividing his Body into four

Parts. *Washington in Ric. 2. Audium & Confessum cur-pissima seeler traelationi, Suspendio, Locollationi, Execrationi & Quarterizationi adjudicavit.*

**QUARTERLY**, in Heraldry, a Person is said to bear *Quarterly*, when he bears Arms *quarter'd*. See **QUARTERING**.

The King of Great Britain bears *Quarterly* of four; in the first quarter, Gulcs, &c. *Great Britain*: In the second, Azure, &c. *Ireland*, &c.

**QUARTERN**, or **QUARTERON**, a Diminutive of *Quart*; signifying a quarter of a Pint; or as a *Quart* does a quarter of a Gallon. See **QUART**.

**QUARTILE**, an Aspect of the Planets when they are three Signs, or 90 Degrees distant from each other. See **ASPECT**.

The *Quartile* Aspect is mark'd thus, □. See **CHARACTER**.

**QUARTO**, or 4<sup>th</sup>, a Book, whereof four Leaves, or eight Pages, make a Sheet. See **VOLUME**, **BOOK-BINDING**, &c.

**QUARTO Decimans**, **QUARTO Decimani**, an ancient Sect in the Church, who maintain'd that *Easter* was always to be celebrated conformably to the Custom of the Jews, on the 14<sup>th</sup> day of the Moon in the Month of *March*, whenever that Day fell out. See **EASTER**.

And hence their Name *Quarto decimani*, q. d. Four-tenths. See **PASSOVER**.

The *Astetics* were mightily attach'd to this Opinion, pretending it was built on the Authority of *St. John*, who was their Apostle; and *Pope Victor* could never bring 'em to Obedience in this Point, tho' he was upon the point of Excommunicating them—Some are of opinion he actually did Excommunicate them, but it is more probable he contented himself with Menaces.

*Polycrates*, Bishop of *Ephesus*, wrote a long and warm Letter, in the Name of all the Bishops of *Asia*, to *Victor* and the Church of *Rome*, wherein he explain'd at large the Usage of those Churches with regard to the Celebration of *Easter*; and maintain'd, that herein they only follow'd a constant Tradition that had obtain'd immutably among 'em from the Time of the Apostle *St. John*, who died at *Ephesus*—But the *Pope* not satisfy'd with this Answer of *Polycrates*, had proceeded to Excommunication, but that some of the most eminent Bishops, among the rest *Irenens*, interposed, and dissuad'd him from disturbing the Peace of the Church by excommunicating a People for adhering to what they accounted a Tradition.

**QUASHING**, in Law, the overthrowing and annulling a thing. See **ANNULLING**.—An Army return'd by one that has no Franchise, shall be *Quash'd*. *Coke on Littl. fol. 156.*

**QUASI Contract**, in the Civil-Law, an Act which has not the strict Form of a Contract, but yet has the force thereof. See **CONTRACT**.

In a Contract there must be the mutual Consent of both Parties; whereas in a *Quasi Contract*, one Party may be bound or obligated to the other without having given his Consent to the Act whereby he is obliged.

For an Example—I have done your Business, in your Absence, without your Procuration; and it has succeeded to your Advantage; I have then an Action against you for the recovery of what I have disbursed, and you an Action against me to make me give an account of my Administration: Which amounts to a *Quasi Contract*.

**QUASI Crime**, or **QUASI Delict**, in the Civil-Law, the Action of a Person who does Damage, or Evil involuntarily.

The Reparation of *Quasi Crimes*, consists in making good the Damages with Interest.

**QUASI-modo Sunday**, *Low Easter-Sunday*, or the next Sunday after *Easter*; thus call'd from the initial Words of the Introit of the Mass for the Day, *Quasi modo geniti Infantes*. See **SUNDAY**.

In ancient Decds these Words were signified by q. m. g. **QUATER-Cousins**, *quatre Cousins*; fourth Cousins, or the last Degree of Kindred. See **COUSIN**, **CONANGUINITY**, &c.

Hence, when Persons are at variance, 'tis said they are not *quater*, or *cater Cousins*.

**QUATRE Nations**, q. d. *Four Nations*, a College founded in 1661, by Cardinal *Mazarin*; for the Education and Maintenance of sixty Children, Natives of the four Countries conquer'd by the King, *vis.* fifteen for *Pignorel* and *Italy*, fifteen for *Alfatia*, twenty for *Flanders*, and ten for *Rouffillon*. See **COLLEGE**.

**QUATUOR Vir**, in Antiquity, frequently wrote III VIR, a Roman Magistrate who had three Colleagues join'd with him in the same Administration.

To the *Quatuor-viri* was committed the Charge of Conducting and Settling the Colonies sent into the Provinces. See **COLONY**.

Upon unlucky Accidents, and other dangerous Affairs, it was usual to create *Quatuor-viri* with Commission to take Care *ne quid detrimenti Respublica caperet*, that the Republic were not prejudiced.

There were also *Quatuor-viri* appointed to inspect and take Care of Repairs, &c.

**QUAVER**, in Music, a Measure of Time, equal to one half of the Crochet, or one eighth of the Semibreve. See TIME.

The *Quaver* is mark'd by the Character ♪. See CHARACTER.

The *English Quaver* makes what the *French* call their *Croche*, Crochet; because of the Hook at bottom. See CROCHET.

The *Quaver* is divided into two Semiquavers noted ♪, and four Demisemiquavers mark'd ♪.

**QUAVERING**, in Music, the Act of trilling, or shaking; or the running of a Division with the Voice. See DIVISION.

**QUAY**, *Key*, a space of Ground paved on the Shore of a River, or Port; destined for the loading and unloading of Merchandise. See WHARF.

**QUEEN**, *Regina*, a Woman who holds the Crown of a Realm, singly, and by Right of Blood. See CROWN.

The Name is also given by way of Courtesy to her that is married to the King; call'd, by way of distinction, *Queen Consort*.

The Widow of a King is call'd *Queen Dowager*. See DOWAGER.

The first is in all Construction the same with a King, and has the same Power and Prerogative in all respects that the King has. See KING.

The *Queen Consort* is inferior, and a Person distinct from the King—'Tis she be a *Feme covert*, yet may she sue, and be sued in her own Name, may make Leases, and Grants, &c. as a *Feme sole*. See WIFE and FEME.

She has several other Prerogatives—'Tis an Ailien, she may purchase Lands in Fee-simple, without either Naturalization, or Denization; she may present to a Benefice; nor is Plenary a Bar against her more than against the King—She shall not be amercied if she be non-suited in any Action; may not be impeached till first petitioned.

To conspire her Death, or violate her Chastity, is High-Treason. She had antiently a Revenue of *Queen-gold*; which see.

At present she hath a very large Dower, with a Royal Court and Officers apart.

The *Queen Dowager* has this particular, that she loses not her Dignity tho' she marries a private Gentleman—Thus, *Queen Katharine*, Widow of *Henry V.* being married to *Owen ap Ithodore* Esq; maintained her Action as *Queen of England*—Such lets does the *Queen* by Inheritance, follow her Husband's Condition, or is subject as other *Queens*, but is Sovereign to her own Husband, as *Queen Mary* was to King *Philip*; unless it be otherwise appointed by Parliament.

The Word *Queen* is deriv'd from the *Saxon* *Cwen*, *Cween*, *Uxor*, the Wife of any one, but apply'd by way of Excellency to the Wife of the King only; whence she was antiently call'd the *King's Queen*; the *West-Saxons* having no other Name for a *Queen*, but the King's Wife. *Affer. de Alfred. Rebus, &c.*

She was also call'd *Lady*, in *Saxon*, *Hlefdia*; just as *Madame*, or *Madamoiselle*, are still us'd for the Wife, and Daughter of the Duke of *Orleans*—

**QUEEN GOLD**, *Aurum Regine*, a Royal Revenue, belonging to the *Queen of England*, during her Marriage to the King, both by Law, Custom, and Prescription; and payable by divers Persons (upon several Grants of the King) by way of Oblation out of Fines; amounting to Ten Marks or upwards, viz. one full tenth part above the entire Fine; e. g. ten Pounds on every hundred Pounds Fine, &c. See FINE.

This becomes a real Debt to the *Queen*, by the Name of *Aurum Regine*, upon the Party's bare Agreement with the King for a Fine, and recording it; without any further Promise or Contract for this tenth part extraordinary.

**QUEEN'S BENCH**. See KING'S BENCH, &c.

**QUE ESTATE**, in Law, a Plea whereby a Man entitling another to Land, &c. saith, that the same Estate which himself had, he now has from him.

Thus, e. g. the Plaintiff alleges, that such four Persons were seiz'd of Lands, whereunto the Advwowin in question belong'd in Fee; and who did present to it, and that afterwards the Church was vacant, *que Estate*—i. e. which Estate he now has, and by virtue thereof presents, &c.

**QUE EST MENS**, in Law, a Term us'd in Actions of Trespass, &c. for a direct Justification of the very Act complain'd of by the Plaintiff as a Wrong. See TRESPASS.

Thus in an Action upon the Case, the Plaintiff saying

the Lord threaten'd his Tenants at Will in such sort, as he forced them to give up their Lands; the Lord in his Defence pleads, that he said to them, if they would not depart, he would sue them at Law—*Que est mens*, i. e. this being the same Threatning that he us'd, the Defence is good.

**QUERELA**, *Quærel*, in Law—In an Action where the Plaintiff is *Querens*, i. e. Complainant, his Brief, Complaint, or Declaration, was call'd *Querela*. See QUARREL.

**QUERELA coram Rege & Concilio**, a Writ whereby one is call'd to justify a Complaint of a Trespass against the King himself; before the King and his Council.

**QUERFO**. See CUERFO.

**QUERRIES**, or *EQUERRIES*, the Grooms of the King's Stables. See EQUERRY.

*Gentleman of the Querry*, is an Officer appointed to hold the King's Surrup when he mounts on horseback. See GENTYEMAN.

**QUEST**, or *INQUEST*, an *Inquisition*, or Inquiry made upon Oath of an Impanel'd Jury. See INQUEST.

**QUEST-MEN**, Persons chose yearly in each Ward, to enquire into Abuses, and Misdemeanors, especially such as relate to Weights and Measures.

**QUEST**, in Hunting, the seeking out of Hounds; or the venting and winding of Spanishs. See SCENT, HOUND, HUNTING, &c.

The Word is form'd of the *French* *quête*, Search, of the *Latin* *questio*, a thing sought.

**QUESTION**, *QUESTIO*, in Logic, &c. a Proposition, whose Truth a Person being inquisitive about, proposes it, by way of Interrogation, to another. See INTERROGATION.

*Logical Questions* are variously distributed; the ordinary Division is into *first* or *primary Questions*; as, *Quid sit*, What is such a Thing?—And *secondary*, which arise out of the former; as, *How is it?*

**QUESTION**, in Law—the *Question de Jure* must always be distinguish'd from the *Question de Facto*. See FACTO and JURE.

The first is decided by the Law, as explain'd and declared by the Judge; the second is decided by the Proof of a Truth in dispute. See TRIAL, JURY, &c.

**QUESTOR**, *Questor*, an Officer in ancient *Rome*, who had the Care of the publick Treasure. See TREASURE.

The *Questor-ship* is very antient, as having been established under the Kings—In the Time of the Republick, the Senate appointed *Questors* in each Province, to assist the Proconsuls, as Lieutenants, or Treasurers, in the Administration of the Revenues: But under the Emperors, there was but one *Questor*, or Treasurer General of the Empire—Those interior, or subordinate *Questors* were call'd *Commissioners of the Questor*, *Adjutores Questoris*.

The *Questor's* Office was originally confined to the Army.—They paid the Soldiers, took charge of Moneys coming by Spoil and Plunder, &c.

At length there were new ones erected to reside in the City, and to receive the public Money, Taxes, Tribute, &c.—Their Number was increased, as the Empire increased; *Sylla* augmented it to twenty.

There was also another kind of *Questors* whose Office was to enquire into, and take Cognizance of Capital Crimes.

The Word is form'd a *querendo*, seeking, searching.

**QUESTOR SACRI PALATII**, or of the *Sacred Palace*, was one of the first Dignities under the Emperors of *Constantinople*—'Twas the *Questor* that subscribed the Rescripts of the Emperor, and the Answers to the Requests and Supplications presented him—He drew up and sign'd the Laws and Constitutions which the Emperor thought fit to publish; and took care of the Administration of Justice.

Some compare his Function to that of our Lord High Chancellor—'Twas usually one of the *Juris Consulti* that was charged with this Office; it being required that he should know the Laws of the Empire, be able to dictate them, see them executed, and judge of Causes brought by way of Appeal before the Emperor.

*Constantine* was the first who erected *Questors* of the *Sacred Palace*. See PALACE.

**QUESTUS est nobis**, a Writ of Nuisance, which by Stat. 15 *Edw. 1.* lies against him to whom the House, or other thing that breeds the Nuisance is descended, or alienated; whereas before that Statute, the Action lay only against him who first levied, or caused the Nuisance to the Damage of his Neighbour. See NUISANCE.

**QUESTUS**, or *QUESTUS*; see QUESTUS.

**QUEUE de Aronde**, q. d. *Swallow's Tail*, in Fortification, a Term apply'd to Horn-Works, when narrower at the Gorge than the Face; i. e. when the Sides open towards the Campaign, or contract towards the Gorge. See HORN-WORK.

The Name is occasion'd by their Resemblance in Figure to a Swallow's Tail, which the French call *queue d'aronde*.

Of this kind are single and double Tenailles; and some Horn-Works whose Sides are not parallel. See *TENAILLES*.

On the contrary, when the Sides are less than the Gorge, the Work is call'd *Contre queue d'aronde*.

*QUEUE d'aronde*, in Carpentry, a Method of Joining. See *DOVE-TAIL*.

*QUEUE*, in Heraldry, the Tail of a Beast. See *TAIL*. It a Lion have a forked Tail, he is blazon'd by *double-queue*.

*QUIA*, in Logic; see *REASON*.

*QUIA Improvide*, a Superfecund granted in many Cases where a Wit is erroneously sued out, or mis-awarded. See *WIT*.

Thus it is granted in behalf of a Clerk of the Chancery sued against the Privilege of the Court, in the Common-Pleas, and pursued to the Exigent.

*QUICK-Lime*; see *LIME*.

*QUICK Silver*, a very ponderous fluid Mineral, properly call'd *Mercury*.

For the Method of gaining *Quicksilver*, of preparing it, &c. with its Properties, Uses, &c. see *MERCURY*.

*QUID*, *What*, in the Schools, is used for the Definition of a thing. See *DEFINITION*.

It is thus call'd by reason the Definition answers to the Question, *Quid est*, *What is it?* See *QUESTION*.

Hence we have two kinds of *Quids*; *Nominal*, *Quid nominis*; and *Real*, *Quid rei*.

*Quid pro quo*, in Law, a Latin Phrase, importing as much as the Greek *ἀλλάγμα*, among the Civilians; viz. a mutual Performance of both Parties to a Contract; or a giving of one thing for another—As ten Pounds for a Horse. *Kitchin*.

*Quid pro quo*, or *Qui pro quo*, is also used in Physic to express a Mistake of an Apothecary, in administering one Medicine for another; or in using an Ingredient in a Composition different from that prescribed. See *SUCCEDEANUM*.

In Propriety, the *Quid pro quo* is a Mistake in the Physician's Bill, where *quid* is wrote for *quo*, one thing for another; or of the Apothecary in reading *quid* for *quo*, and giving the Patient the wrong Medicine. See *PRESCRIPTION*.

Hence the Term is in the general extended to all Mistakes committed in Medicine, either in the Prescription, the Preparation, or Application of Remedies.

A Northern Physician in a printed Thesis on *quid pro quo*'s answers ingeniously, that they are very frequent—He distinguishes very accurately a great Variety of Kinds of *quid pro quo*'s; some with regard to the Operation, others with regard to the Subject, and others with regard to their Form, or their Effects.

The first comprehends the *quid pro quo*'s of the Physician, the second those of the Patient, the third those of the Apothecary.

He adds *quid pro quo*'s of the Chirurgion, and of the Cook; *quid pro quo*'s of the Nurse, &c. Nor does he omit that there are salutary *quid pro quo*'s, dangerous *quid pro quo*'s, indifferent, &c.—God preserve us from *quid pro quo*.

*QUIDDANY*, or *QUIDDENY*, of the *Latin Cydonium*, or *Cydoniatum*, a Conserve of Quinces. See *MARMELADE*.

*QUIDDITY*, *QUIDDITAS*, in the Schools, a Word of the same Signification with *Essence*. See *ESSENCE*.

The Name is derived hence, that it is by the Essence of a thing that it is *tale quid*, such a *quid*, or very thing; and not another—When upon seeing, or hearing the Name of a thing whose Nature, &c. we are unacquainted withal, we ask *Quid est*, *What is it?* we mean no more by the Interrogation, but that we desire to have its Nature and Essence explain'd by a Definition—Whence *Quiddity* is usually defined the Essence known or express'd in a Definition. See *DEFINITION*.

And hence what is essential to a thing is said to be *quiditative*—As *Quiditative Knowledge*, &c.

*QUIESCENT*, something at Rest; see *REST*.

*QUIETISM*, the Sentiments of the *Quietists*, a Religions Sect which made a great noise towards the Close of the last Century.

*Molinos*, a Spanish Priest, who died at Rome in the Prison of the Inquisition, passes for the Author of *Quietism*; and yet the *Illuminati* in Spain had taught something like it before. See *ILLUMINED*.

The Name is taken from a sort of absolute Rest, and Inaction, which the Soul is suppos'd to be in, when arriv'd at the State of Perfection, which in their Language is call'd *the unitive Life*—To arrive at this, a Man is first to pass thro' the purgative way; that is, thro' a Course of Obedience, inspir'd by the Fear of Hell; Hence he is to proceed into the illuminative way, e'er he arrives at Perfection; to go thro' cruel Combats, and violent Pains; i. e.

not only the usual Drynesses of the Soul, and the common Privations of Grace, but infernal Pains: He believes himself damn'd; and the Persuasion that he is so, continues upon him very strongly several Years: St. Francis de Sales, say the *Quietists*, was so fully convinc'd thereof, that he would not allow any body to contradict him therein—But the Man is, at length, sufficiently paid for all this; by the Embraces of God, and his own Dedication.

The Sentiments of the *Quietists*, with regard to God, are wonderfully pure, and disinterested—They love him for himself, on account of his own Perfections, independently of any Rewards or Punishments: The Soul acquiesces in the Will of God, even at the time when he precipitates it into Hell; inasmuch that instead of stopping him on this occasion, B. *Angelo de Foisigny* cry'd out, *Haſte, Lord, to caſt me into Hell: Don't delay, if thou haſt aſſon'd me, but finiſh my Deſtruction, and plunge me into the Abyss*.

At length, the Soul, after long Travail, caters into Rest, into a perfect *Quiétude*—Here 'tis wholly employ'd in contemplating its God; it acts no more, thinks no more, desires no more; but lies perfectly open, and at large, to receive the Grace of God, who by means thereof drives it where it will, and as he will.

In this State, it no longer needs Prayers, or Hymns, or Vows; Prayers where the Spirit labours, and the Mouth opens, are the Lot of the Weak, and the Imperfect: The Soul of the Saint is, as it were, laid in the Bosom, and between the Arms of its God, where, without making any Motion, or exerting any Action, it waits, and receives the divine Graces—It, then, becomes happy; quitting the Existence it before had, it is now chang'd, it is transform'd, and, as it were, sunk and swallow'd up in the Divine Being, inasmuch as not to know or perceive its being distinguish'd from God himself. *Fenel. Max. des Sains*.

*QUIETISTS*, the Disciples of *Mic. de Molinos*; or the Adherents to the Opinions deliver'd in the Article *QUIETISM*.

*QUIETUS*, q. d. *freed*, or *acquitted*; a Term used by the Clerk of the Pipe, and the Auditors in the Exchequer, in their Acquittances or Discharges given to Accountants; which usually conclude with the Words *Abſolvo receptis Quietus*; which is call'd a *Quietus est*.

A *Quietus est* granted to a Sheriff discharges him of all Accounts due to the King. See *SHERIFF*.

*QUINARIUS*, *QUINARY*, in Antiquity, a little Roman Coin, equal to half the *Denarius*. See *COIN*.

The *Quinarius* was properly the Roman Half-Penny. See *DENARIUS*.

The Medallists indeed use the Term *Quinarius* in the general for a Medal of any Matter, not exceeding the Size of our Six-Pence; but F. *Chamillart*, in an express Dissertation, shews this to be an Abuse—The Silver Coins, current under the Republic, he shews, were two: the one weighing a Drachm, and call'd *Denarius*, as containing ten As's; the other weighing half a Drachm, and call'd *Quinarius*, as containing five As's: which Coins continu'd on the same footing under the Emperors. See *A*.

Hence the Origin of the Word *Quinarius*; and hence, in propriety, 'tis only the Silver Medal of the Weight of half a Drachm that the Name belongs to; the Romans having never given it to any other Species of the same Size therewith—'Tis only by way of Analogy, therefore, that the Moderns apply it to Medals of Gold, or Copper, of the same Size with the Silver *Quinarius*; those of Gold being fix'd at a Value much above, and those of Brass much below five As's.

The only Relation between these *Quinarii*, is, that the gold *Quinary* is the half of a gold Medal as to Weight and Value, and the brass *Quinary* half a brass Medal, as the silver *Quinary* is half a silver Medal.

Hence a Series of *Quinaries* should seem at least as necessary in the Cabinets of the Curious, as the Series of great Medals; they being all equally different Species of Money, which teach us how many kinds of Pieces there were of any Metal current in Commerce. See *SERIES*.

Add to this, says our Author, that the *Quinaries* were of a finer and more finish'd Coin than the other Medals, being wrought by the Hands of the Masters; which seems owing to the Nicety requir'd in Engraving whole Figures in so small Compass. He adds, that tho' *Quinaries* are very scarce, yet M. the Duke of *Maine* has almost a complete Set of 'em.

*QUINCUNX*, q. d. *quinq; uncie*; a *Chequer*, or something that has five Inches, Ounces, or Parts.

The Term is chiefly used in Gardening for a Plantation of Trees, dispos'd originally in a Square, consisting of five Trees, one at each Corner, and a fifth in the Middle; which disposition repeated again and again, forms a regular Grove, Wood, or Wilderness, and when view'd by an

Angle of the Square, or Parallelogram, presents equal and parallel Alleys. See WILDERNESS.

Or the *Quincunx* is the Figure of a Plantation of Trees, disposed in several Rows, both length and breadthwise; in such manner as that the first Tree of the second Row commences in the Centre of the Square form'd by the two first Trees of the first Row, and the two first of the third; resembling the Figure of a five at Cards.—The finest manner of planting Trees to form a Grove, is in the *Quincunx*. See GROVE.

'Tis of this kind of *Quincunx* that Cicero speaks in his *Cato major*; and *Quintilian*, lib. 8. cap. 3.

The modern *Quincunxes*, *Daviler* observes, are made like those of the Antients, except for the fifth Tree, which is now generally disused; so that being, as it were, netted, and their Alleys view'd by the Side of the Rectangle, they form a perfect Chequer.

*QUINCUNX*, in Astronomy, &c. a Position, or Aspect of the Planets when distant from each other 150 Degrees, or five Signs. See ASPECT.

*QUINDECAGON*, in Geometry, a plain Figure which has fifteen Sides and fifteen Angles. See FIGURE.

If the Sides be all equal, 'tis a *Regular Quindecagon*. See REGULAR.

*Euclid* shews how to inscribe it in a Circle, *Prop. 15. c. 4.* And the Side of a regular *Quindecagon* so described, is equal in Power to the half-difference between the Side of the Equilateral Triangle, and the Side of the Pentagon; and also to the difference of the Perpendiculars let fall on both Sides, taken together.

The Word is form'd somewhat irregularly from the Latin, *quinque*, five; and the Greek *γωνία*, Angle.

*Pentadecagon* would be more regular.

*QUINDECIM VIR*, XV. VIR, a Roman Magistrate, who had fourteen Collegues join'd with him in the same Function.

Under *Tarquinius the Proud*, there were first two Magistrates erected to take care of the Sacrifices to be perform'd; these were call'd *Duumviri*. See DUUMVIR.—Their Number, at length, grew to ten, and then they were call'd *Decemviri*. See DECUMVIR.—In the time of Cicero it had reach'd fifteen, when they assum'd the Name of *Quindecim viri*; and tho' their Number grew to sixty afterwards, yet *Servius* observes, on the Vith of the *Æneid*, that their Name never changed, but they still continued to be call'd *Quindecim viri*.

'Twas they examin'd the Sibyls Books, and were the Interpreters thereof; yet they never did this but by express Order of the Senate, declared by a *Senatus-Consultum*.—They also presided at the Sacrifices, and other extraordinary Ceremonies of Religion. See SACRIFICE.

On Medals, a Dolphin join'd with a Tripod marks the Priesthood of the *Quindecim viri*; who, to publish their solemn Sacrifices, used the Eve thereof, to carry a Dolphin at the end of a Pole, throughout the City; this Fish being esteem'd sacred to *Apollo*, as the Crow was among Birds.

*QUINI-SEXTA*, in Ecclesiastical History, a Council held at *Constantinople* in the Year 692; call'd also the Council in *Trullo*, and by the Greeks *Pentecôte*, q. d. fifth-sixth; as intimating that it was only a Supplement of the two preceding Councils. Tho', in Propriety, *Fleury* observes, it was a Council itself. See COUNCIL.

*Marshall* observes, that the fifth and sixth General Councils having made no Canons, the Orientals judg'd it necessary to supply that defect by this; so that the 102 Canons falsely attributed to those, were, in reality, made here. See TRULLO.

*QUINQUAGENARIUS*, among the Romans, was an Officer in the Army who had command of a Company of fifty Men.

*Quinquagenarius* was also an Officer of Policy, who had the inspection of fifty Houses, or Families.

Lastly, in the ancient Monasteries, the *Quinquagenarius* was a Superior who had fifty Monks under his Guidance.

*QUINQUAGESIMA-SUNDAY*, *Shrove Sunday*; thus call'd as being about the fiftieth Day before Easter. See SHROVE-SUNDAY.

Antiently, they used *Quinquagesima* for *Whit-Sunday*, and for the fifty Days between Easter and *Whit-Sunday*; but to distinguish this *Quinquagesima* from that before Easter, it was call'd the *Paschal Quinquagesima*.

*QUINQUENNION*, *QUINQUENNIIUM*, in Antient Customs, a respite of five Years which insolvent Debtors formerly obtain'd by virtue of the King's Letters, to have time for the payment of their Debts. See RESPITE.

When the thing intended was only to prevent the Sale of their Effects at an under Value; the Term of one Year was ordinarily granted, call'd the Benefit of *Annion*. See ANNION.

But when the Debtor would avoid the surrendering of his Effects, upon proving that he was reduced by Poverty,

*Loffes*, &c. to make use of this Expedient, the Term of five Years was granted, call'd the Benefit of *Quinquennion*.

*QUINQUATRIA*, in Antiquity, a Name given the Feast of *Mimnerus*, otherwise call'd *Panathœnea*. See PANATHÆNEA.

Some think they were term'd *Quinquatria*, because they lasted five Days; but others with more reason, because they fell out five days after the Ides of the Month.

*QUINQUENNALIA*, in Antiquity, Games, or Festivals celebrated every fifth Year, in honour of the deified Emperors. See GAME, &c.

The *Quinquennalia* began to be express'd on Medals about the middle of the third Century.—*F. Paggi* produces a Medal wherein are engraven those of the Emperor *Posthumus*; which is not found in any Medals of his Predecessors.

*QUINQUENNALIS*, in Antiquity, a Magistrate in the Colonies, and municipal Cities of the Roman Commonwealth. See COLONY, &c.

The *Quinquennales* were much the same with the *Ediles* at Rome. See EDILE.

They were not thus call'd from their continuing in their Office five Years; but because they were elected every fifth Year, to preside at the Census, and to receive the Declaration each Citizen made of his Effects. See CENSUS.

*QUINQUE PORTUS*, the five Cinque Ports. See CINQUE PORT.

The five are *Hastings*, *Rouney*, *Hythe*, *Dover*, and *Sandwich*—To the first thereof belong *Windsor* and *Rye*, which are esteem'd Members of the Cinque Ports.

*Servitius quod Barones* *Quinque Portuum prescriptorum recognoscunt sacre ad summationem Regis per annum, si contigerint facere ad summationem Regis per annum, si contigerint per 15 dies ad consuetudinem propriam, ita quod primus dies computatur a die quo vela navium exierunt, usque partes ad quas tendere debent, vel ulterius quam dicit Rex voluerit ad custodiam ejus.*

*QUINQUE-VIR*, frequently wrote *V-VIR*, a Roman Magistrate, who had four Collegues join'd with him in the same Function.

There were various kinds of Officers thus denominated—*Pomponius* the Lawyer mentions *Quinque-viri* on this, and on that side the *Tiber*, established for the Administration of Justice in the Night-time, in lieu of the ordinary Magistrates, who were not judg'd proper to run up and down the Streets in the dark.

*Rafinus* tells us, that it was sometimes the *Quinque-viri* who conducted the Colonies, and divided the Lands assign'd them, among the several Families. See COLONY.

Sometimes the *Epulones* were five in Number; in which case they were call'd *Quinque-viri*. See EPULONS.

The *Quinque-viri monetarii* were Officers first erected under the Consulate of *Valerius Poplicola*, to moderate the excessive Usury, or Interest, which Creditors or Bankers used to exact upon the People. See USURY.

*QUINQUINA*, *QUINAQUINA*, call'd also *China China*, and *Kim-Kim*, a Medicinal Bark brought from the *West-Indies*; call'd also, by way of Eminency, the *Bark*; and *Cortex Peruviana*, the *Peruvian Bark*, from the Country whence it is brought; and popularly the *Jesuits Bark*, because at its first Introduction chiefly sold and administered by the *Jesuits*. See CORTEX.

The Tree which yields this Bark grows in a Province of *Peru* call'd *Quito*, on the Mountains near the City of *Lima*.—The Natives call it *Gaugaperi*, and the *Spaniards* *Palo de Calenturas*, i. e. Fever-Wood.

There are two kinds;—the one wild, the other cultivated; whereof the latter is much the best.

The *Quinquina* was but little known in *Europe* till the Year 1644.—The *Jesuits* of *Rome* first brought it in vogue in *Spain*, and *Italy* in 1649; and in 1650, the Cardinal *de Lago*, of that Order, brought it into *France*.

It was at first sold for its Weight in Gold; when reduced into Powder, it is by Foreigners call'd the *Cardinals Powder*; 3 among us usually, the *Jesuits Powder*, *Pulvis Patrum*.

It met with a world of Opposition at first.—*Elbist* and *Plempius* distinguish'd themselves against it. But is now almost universally allow'd one of the greatest and best Remedies within the whole Province of Medicine.

Some call the Gentian-Root the *European Quinquina*, because good against intermitting Fevers. See GENTIAN.

*QUINSEY*, or *QUINCY*, or *QUINCY*, in Medicine, the *Squinancy*, or *Angina*. See ANGINA and SQUINANCY.

*QUINSIEME*, or *QUINZIEME*, in our old Law-Books, a Tax antiently levied at the Rate of one Fifteenth Part of the Value of all moveable Goods. See TAX and FIFTEENTH.

It is a Millske committed by several Authors to make this a Tax of the fifteenth Part of all Lands; it being of the Goods only.—It was first granted by Parliament, 18 Edw. 1. viz. *Computus quinze decime Regi, An. 14. per Archiepiscopos, Episcopos, Albates, Priores, Comites, Barones*,

ronet, & omnes alios de Regno, de omnibus bonis mobilibus concessit.—The City of London paid this Year for the Fifteenth 2860 L. 13 s. 8 d. and the Abbot of St. Edmund's 666 l. 13 s. 4 d. which was by composition; and thereupon had all the temporal Goods of their District discharged of the Fifteenth.

The way of Collecting it was by two Assessors appointed in every County by the King, who appointed twelve more in every Hundred to make a true Valuation of every Man's personal Estate upon which the fifteenth Parr was levied.

QUINT, a Sequence of five Cards of the same Colour. See SEQUENCE, PICQUET, &c.

QUINTA ESSENTIA; see QUINTESSENCE.

QUINTAIN, QUINTENA, in antient Custom, a Post driven into the Ground, with a Buckler fix'd to it, for the Performance of Military Exercises on Horseback, throwing of Darts, Breaking of Lances, &c.

Borel, *Math. Paris*, &c. describe the *Quintain* as a kind of Mark, form'd like a Man from the Navel upwards, holding a Shield in his left Hand, and in his right a Sword or Stick; the whole so fitted as to turn round on its Foot, and so as that a Cavalier running 2-tilt against it with a Lance, if he hit it in the Breast, it whisk'd round, and, unless he were very dextrous, struck him with the Sword held in the other Hand.

In other Places, a-top of a Post was erected a slender Beam fitted to turn round a Spindle; at one of whose Ends was a sloop or flat Board, and at the other a Bag of Sand, or Dirt.—The Sport was, with a long Staff, or wooden Lance, to ride 2-tilt at the Board, and to either so skilful or lucky to escape the Blow of the Sand-Bag.

This some take to be the same with the *Arietum Levatio*, frequently prohibited in our old Synods and Episcopal Constitutions.

The Custom is still retain'd in *Schroffshire*, and some other Counties, among the Nuptial Solemnities.—He that breaks the most Poles against the *Quintain* has the Prize, which was antiently a Peacock, now a Garland.

Some derive the Word from an antient Game call'd *Quintus*; others from a Man call'd *Quintus*.

The *Valius* and *Passus* mention'd in *Cæsar*, are taken, by *Vigener*, for a kind of *Quintain*, or Wooden Man fix'd up at an Adversary, or Man of Straw, to prove one's Dexterity against.

Mention is made of this Exercise in the *Code de Montoryons*, and in the *Paratitles of Cujas* on the same.—*Juvenal* mentions Women engaging therein;

*Aur quis non vidit vulnere Pali?*

QUINTAIN was also a Right which the Lord had to oblige all the Millers, Watermen, and other young People unmarried, to come before his Castle every three Years, and break several Lances, or Poles, against a Post, or wooden Man for his Diversion.

QUINTAL, in Commerce, the Weight of an hundred Pounds. See HUNDRED Weight.

The *Quintal* admits of some difference in different Places, according as the Pound consists of more or fewer Ounces, and as the Ounce is lighter or heavier. See POUND and OUNCE.

Thus, *e. gr.* the *Paris Quintal*, or Hundred, yields 123 Pounds at *Montpelier*; and the *Montpelier Hundred* only 85 Pounds at *Paris*.—The *Quintal of Constantinople* is esteem'd the heaviest of all those us'd in the *Levant*. It contains 45 Ounces, the Ounces weighing two *Dutch Pounds*  $\frac{2}{3}$ ; so that the *Quintal* is equal to 112 Pounds  $\frac{1}{2}$  of *Austrian*, 124 Pounds of *Venice*, and 160 of *Loggona*.

The *English Quintal* usually consists of 112 Pounds Avordupois, and is divided into four *Quarters*. See QUARTER.

QUINTAL was also formerly us'd for a Weight of Lead, Iron, and other common Metals, usually equal to an hundred Pounds, at sixscore to the Hundred.

QUINTESSENCE, QUINTA ESSENTIA, in Chymistry, a Preparation consisting of the Essential Oil of some Vegetable Substance, mix'd and incorporated with Spirit of Wine. See OIL, &c.

Thus, on a proper quantity, *e. gr.* of Essential Oil of Fenel, pouring twelve times the quantity of pure Alcohol prepared *per se*; they instantly unite into one similar Liqueur, which is the *Quintessence* thereof.

The Antients were perfectly unacquainted with the Method of dissolving Oil in Spirit of Wine; and even some of the Moderns have question'd its Reality: But the Certainty of the thing is easily proved from the Instance above.

If such *Quintessence* be several times digested, cohobated, &c. the Oil will at length be brake so fine, as, like the Spirit itself, perfectly to mix with Water; which is one of the most extraordinary Effects in all Chymistry. See SPIRIT, SULPHUR, &c.

After the like manner is made a *Quintessence* of Camphor, by only reducing it into a Powder, and pouring on Spirit of Wine. See CAMPHOR.

*Quintessences* thus prepared are of great Medicinal Virtue; as may appear from the pure and potent Ingredients us'd in the Composition, which retain, in a great degree, all the Virtues of the Plants they are procured from: And hence their Denomination. See ESSENCE.

*Boerhaave* thinks they might properly be call'd Vegetable Saltpurasmade potable, and rais'd to their utmost degree of Power and Efficacy. See SULPHUR.

Dry *Quintessences* may be made from the Liquid ones, by adding to 'em some Essential Oil of the same Vegetable from whence the liquid *Quintessence* was procured, with a little Sugar; all mix'd together, and distill'd by a gentle Heat till all the Moisture is come over: The Matter remaining is a dry *Quintessence*.

This Form is principally useful to Travellers, Seilors, &c. inasmuch as it renders the *Quintessence* portable; so that the quantity, *e. gr.* of a Pin's Point, shall be an efficacious Medicine.

QUINTESSENCE, in Alchymy, is a mysterious Term signifying the fifth, or last and highest Essence, or Power of a natural Body.

This is supposed to be, as it were, the Soul drawn from the gross Body and its four Elements, by a most perfect Distillation; and by means hereof, the thing is said to be *spiritualis'd*, *i. e.* render'd exceeding pure, spirituous, and, as it were, incorruptible. *Diess. Hermetique*.

The Antients, who allow'd of nothing real but what has a Body; would have the Soul of Man to be a fifth Element, a kind of *Quintessence* without a Name, unknown here below, indivisible, immovable, all celestial, and divine. *Fenelon*.

QUINTESSENCE of the Elements, is the *Hermetical Mercury*. See MERCURY.

QUINT-EXACT, in old Law-Books, the last Call of the Defendant sued to an Outlawry.

It he appears not to it, he is by the Judgment of the Courtors return'd Outlaw'd; if a Feme, waverd. See EXIGENT, OUTLAWRY, WAIV, &c.

QUINTILE, QUINTELLIS, in Astronomy, an Aspect of the Planets, when they are 72 Degree distant from one another, or a fifth Part of the Zodiac. See ASPECT and CHARACTER.

QUINTILIANS, QUINTILIANI, a Sect of antient Heretics, the same with the *Peppuzians*; thus call'd from their Prophetess *Quintilia*. See PEPUZIAN.

In this Sect the Women were admitted to perform the Sacerdotal and Episcopal Functions; grounding their Practice on that Passage of St. Paul to the *Galatians*, where he says, *That in Christ there is no distinction of Males and Females*.

They attribute extraordinary Gifts to Eve, for having first eaten of the Tree of Knowledge; tell mighty things of *Mary* the Sister of *Moses*, as having been a Prophetess, &c. *Philip*, the Deacon, add they, had four Daughters, who were all Prophetesses.

In their Assemblies, it was usual to see the Virgins enter in white Robes personating Prophetesses.—The *Quintilians* bore a good deal of resemblance to the modern Quakers. See QUAKER.

QUIRE of Paper, of the *French Caber*; the quantity of 24 or 25 Sheets. See PAPER.

QUIRISTER, or CHOIRISTYER, *Christa*, a Person appointed to sing in the Quire or Choir of a Cathedral. See CHOIRISTYER.

QUIRINALIA, in Antiquity, Festivals celebrated among the *Romans* in honour of *Romulus*, who was call'd *Quirinus*. See QUIRITES.

The *Quirinalia* were held on the 13th of the Kalends of *March*, *i. e.* on our 17th of *February*.

QUIRITES, in Antiquity, an Appellation given to the People of *Rome*.

It took its Rise from the *Curates*, the Inhabitants of the *Sabin Town Cures*; on this occasion—*Romulus*, and *Tatius* King of the *Sabins*, having united their two People, and their two States into one; upon *Romulus*'s Death and Deification, the *Sabins*, one-doing the *Romans* in number, became Masters of the Councils; and accordingly appointed that *Romulus* should be denominated *Quirinus*, from *Cures* a City of the *Sabins*, or rather from *Quirinus*, the Name of a God worshipp'd in that City.

From the new *Quirinus*, all the People came afterwards to be call'd *Quirites*; unless we'll suppose that the same Authority which denominated *Romulus*, *Quirinus*, from *Cures*, did also denominate the People *Quirites*, immediately from the *Curates*.

Some Authors derive the Word *Quirinus* from *Curis*, which in the *Sabin Tongue* signify'd a Pike or Halberd—*Struvius* adds, that *Romulus* was always painted with Pike in Hand.

QUIRK, in Building, a Piece of Ground taken out of any regular Ground-Plot, or Floor.—Thus, if the Ground-Plot were Square, or Oblong; and a Piece be taken out

of a Corner, to make a Court, or Yard, &c. the Piece is call'd a *Quirk*.

**QUIS**, in Natural History, a kind of Marcasite of Copper, from which the *Roman Vitriol* is drawn. See *MARCASITE* and *VITRIOL*.

It is also call'd *Pyrites*. See *PYRITES*.

**QUIT CLAIM**, *Quista clamantia*, a Release or Acquitting of a Man of any Action, that he hath or may have on some certain occasion; or a quitting one's Claim or Title. See *CLAIM*.

**QUIT-RENT**, q. d. *Quier-Rent*, a certain small Rent, payable yearly, by the Tenants of most Manors in token of Subjection; upon the Payment whereof they are quit or free till it becomes due again. See *MANOR*, &c.

In some ancient Records it is written *White-Rent*; because paid in Silver, to distinguish it from Rent-Corn, Rent-Pepper, &c. See *RENT*.

**QUITTER-BONE**, among Farriers, a hard, round Swelling, upon the Coronet of a Horse's Foot; or between the Heel and the Quarter. See *HOOF*.

Or it is an Impolubum breeding between the Hoof and Coffin-bone, on the upper Part; and shewing itself by a Swelling on the Coronet.

Sometimes it is occasion'd by a Gravel under the Shoe, or by a Bruise, Stab, Prick of a Nail; or from peccant Humours descending to that Place; or a Blow, Strain, or Over-reach, &c.

It occasions the Horse to halt much, and the Swelling grows visible, and comes to a head in four or five days, and breaks out with Matter at a little deep Hole, like a Fittula.

**QUOD Clerici non eligantur in Officio Balivi**, &c. is a Writ that lies for a Clerk, who by reason of some Land he hath, is made, or like to be made, a Bailiff, Beadle, or Reeve, or such-like Officer. See *CLERICO infra sacros*, &c.

**QUOD non permittat**. See *CONSUETUDINIBUS & Servitiis*.

**QUOD persona nec presbiterarii**, &c. a Writ that lies for Spiritual Persons, when distrained in their Spiritual Possessions, for the Payment of a Fifteenth, with the rest of the Parish. See *QUINZIEME*.

**QUODLIBETICAL Question**, or *Quaestio Quodlibetica*, a College Term for a Thesis, or Problem, antiently proposed to be debated in the Schools out of Curiosity and Entertainment, rather than for the settling of any useful Point.

The Term is form'd from the *Latin Quodlibet*, any thing, what you please; and so well satisfy'd were the Public with the Impertinences of these Questions, that the Term *Quodlibet* has been since retained to signify any little, ridiculous Quibble.

**QUO JURE**, a Writ that lies for him who has Land, wherein another challengeth Common of Pasture time out of mind.

The design hereof is to compel the Party to shew by what Right or Title he challengeth it.

**QUO MINUS**, a Writ that lies for him who has a Grant of House-hote in another Man's Wood, against the Grantor making such Waste, as that the Grantee cannot enjoy his Grant. See *HOUSE-DOTE*.

The Writ *quo minus* also lies for the King's Farmer in the Exchequer, against him to whom he selleth any thing by way of Bargain, touching his Farm; or against whom he hath any Cause of personal Action.—For by the Vendor's detaining any Due from him, the Farmer is made lesable to pay the King's Rent.

Under this Pretence, any one who pays the King a Fee-Farm Rent, may have this Writ against any other for Debt or Damage, and bring the Cause to trial in the Exchequer. See *EXCHEQUER*.

**QUO WARRANTO**, a Writ that lies against him who usurps any Franchise, or Liberty against the King; as to have Waste, Straw, Fair, Market, Court Baron, Leet, or such like, without good Title.

It also lies against him that intrudeth himself as Heir into Land. See *INTRUSION*.

**QUON**, or **COIN**, a-board a Ship, is a Wedge fasten'd on the Deck, close to the Breech of the Carriage of a Gun, to keep it firm up to the Ship's Side.

The Word is form'd from the *Latin Cunus*, Wedge. See *WEDGE*.

**QUOINS**, in Architecture, the Corners of Walls. See *WALL*.

The Word is particularly used for the Stones in the Corners of Brick-Buildings.—When these stand out beyond the Brick-work (their Edges being chamfer'd off) they are call'd *Rustic Quoins*. See *RUSTIC WORK*.

**Clastic Quoins** are short, three-legged *Quoins*, put between Casks to keep 'em steady.

**QUOITS**, a Kind of Exercise or Game, known among the Antients under the Name of *Zistens*. See *DISCUS*; see also *EXERCISE* and *GAME*.

**QUORUM**, a Term frequently mention'd in our Statutes, and often used in Commissions, both of Peace, and others. See *COMMISSION*, *PEACE*, &c.

It is thus call'd in the Wards in the Commission, *Quorum A. B. annus esse volumus*.

For an Example.—Where a Commission is directed to seven Persons, or to any three of them, whereas A. B. and C. D. to be two; there A. B. and C. D. are said to be of the *Quorum*, because the rest cannot proceed without them.

So a Justice of the Peace and *Quorum*, is one, without whom the rest of the Justices in some Cases cannot proceed. See *JUSTICES*.

**QUOTATION**, in Literature, a Citation; or a Passage rehearsed expressly in one Author from another. See *CITATION*.

*Quotations* are used to be distinguish'd by inverted Comma's, thus; "Half an Age ago *Quotations* were wontedly common; and *Ovid* and *Catullus* came every day with the Pandects to the assistance of the Widow and the Orphan."—*La Bruyere*.

The *Quotations from the Old Testament*, found in the New, have occasion'd infinite Doubt, Dispute, and Criticism.—The Apostles are frequently referring to the Old Testament, and quoting Passages and Prophecies thence as fulfill'd in our Saviour; yet these Passages, thus quoted, are frequently either not found in the Old Testament, or are not urged in the New according to the literal and obvious Sense they seem to bear in the Old.

A late ingenious Author, in an Essay upon the Truth of the Christian Religion, frankly owns, that the Evangelists sometimes apply to the Messiah Passages of the Old Testament, which, as they lie in our present Copies, plainly relate to some other Person, or Thing.—This is evident, e. g. in the Passage, *Matth. ii. 15. Out of Egypt have I call'd my Son*; which are quoted from *Hosea xi.* where it is plainly understood of the coming of the *Israelites out of Egypt*. See *PROPHECY*.

This proves a heavy Obstacle in the way of Christianity, which the Divines, Commentators, Critics, &c. have long labour'd to remove, tho' by very different means.

Some have recourse to a double Completion; and imagine, that tho' the Prophecies were primarily accomplish'd in other Events, yet they might have a secondary one in the Messiah: But others set aside a double Completion, except where the Prophet himself declares as much, as making all Prophecy useless.

The generality chuse therefore to have recourse to an Allegorical, or Typical, or Spiritual Meaning in the Prophecies, &c. and suppose 'em to have been thus understood among the ancient Jews, that fulfill'd in our Saviour, and thus apply'd by the Apostles. See *TYPE*.

In effect, the Jewish Rabbins, 'tis allow'd, took a world of liberty in quoting and interpreting Scripture; and 'tis suppos'd the Apostles might follow those Rules in their *Quotations*. See *RABBIN*.

Accordingly M. *Surenhusius*, Hebrew Professor at *Amsterdam*, has endeavour'd to retrieve those Rules, long since lost, in an express Treatise on this Subject, published in 1713.

This Author observes a great deal of difference imply'd in the different Forms of *Quoting* used by the Sacred Writers: As, *It has been said*; *It is written*; *That it might be fulfill'd which was spoken by the Prophet*; *The Scripture says*; *See what is said*; *The Scripture foretelling*; *It is not written*, &c.—He adds, that the Books of the Old Testament having been disposed in a different Order at different Times, and having had different Names; 'tis thence that a Book or Writer is sometimes confounded with another.

For the Rules of *Quoting* and interpreting practis'd among the Rabbins, he gives us ten; recover'd with much Study from the *Talmud* and the ancient Jewish Doctors; Instances whereof he gives us in the Writings of the Apostles; and by those Rules he endeavours to explain and justify all the *Quotations* made from the Old Testament in the New.

The Rules are, 1. Reading the Words not according to the Points placed under them, but according to others substituted in their stead; as is done by St. *Peter*, *Acts xxxiii.* by *Stephen*, *Acts vi. 43.* and by *Paul*, *1 Cor. xv. 54. 2 Cor. viii. 15.* &c.

The second is by changing the Letters; as is done by *Paul*, *Rom. ix. 33. 1 Cor. xii. 9.* *Heb. viii. 9.* and *x. 5.* and by *Stephen*, *Acts vii. 43.*

The third is by changing both Letters and Points, as is done by *Paul*, *Acts xiii. 41.* and *2 Cor. viii. 15.*—The fourth is adding some Letters, and taking away others.

The fifth, transposing Words and Letters.—The sixth is dividing one Word into two.—The seventh, adding other Words to make the Sense more clear.—The eighth, changing the Order of the Words.—The ninth, changing the

the Order of the Words, and adding other Words. Both of which are done by the Apostles.—Lastly, changing the Order of Words, adding Words and retrenching Words; which is a Method often used by St. Paul.

Other Authors, as Bishop Kidder, M. le Clerc, Mr. Sykes, &c. solve the difficulty another way—That usual Form of Quotation among the Evangelists, "That it might be fulfilled which was spoken by the Prophets," according to these Authors, means no more than an Accommodation of the Prophets Words to the Case in hand.

The Word *πλησθῆναι*, fulfilled, does not necessarily determine us to such a Sense, as if the Evangelists design'd to speak of a Prediction of future Events accomplished; but may barely express an Accommodation of borrow'd Words.—In effect, says Bishop Kidder, a Scripture may be said to be fulfilled two ways; Properly, as when that which was foretold comes to pass; and Improperly, by way of Accommodation, as when an Event happens to any Place or People like to what fell out some time before.—

And thus it is that St. Matthew says, on occasion of the Murder of the Innocents, that "then was fulfill'd what was spoke by the Prophet *Jeremy*, *In Rama was a Voice heard*, &c.

This Interpretation is confirm'd by M. Le Clerc, who observes that the Jews, in their Language used to say, that a Passage of Scripture was fulfilled as often as any thing happen'd which it might be apply'd to: So that the Evangelist Matthew, who was a Hebrew, and wrote, as 'tis commonly supposed, in that Language, intended no more in the Passage just cited, but that a thing happen'd to which one might

apply what *Jeremy* had formerly said on another Occasion.

Accordingly, says Mr. Sykes, the Evangelists in citing that Passage of *Isaiah*, *Behold a Virgin shall be with Child*, &c. only use it as words of that Prophet remarkably agreeable to the miraculous Birth of Jesus, and not as a Prophecy of his Birth.

It may be added, that this way of speaking was not unknown among the Heathen Writers.—Thus in *Aelian*, *Diogenes Sinopensis* used continually to say of himself, that he fulfill'd and underwent all the Curſes of Tragedy.

QUOTIDIAN, in Medicine, an intermitting Fever, or Ague, the Access whereof returns every day. See FEVER and AGUE.

QUOTIENT, in Arithmetic, the Number resulting from the division of a greater Number by a smaller; and which shews how often the smaller is contain'd in the greater, or how oft the Divisor is contain'd in the Dividend. See DIVISION.

In Division, as the Divisor is to the Dividend; so is Unity to the Quotient.—Thus the Quotient of 12 divided by 3 is 4; which is thus disposed,  $3 \overline{) 12} (4$  Quotient.

The Word is form'd from the Latin, *quoties*, *q. d.* How often is such a Number contain'd in such another?

QUOYL, or QUOYLE, or COYLE, in the Sea-Language, a Cable is said to be Quoyled, when it is laid round in a Ring on the Deck of a Ship. See CABLE.

In the middle of such Ring, or Quoyle, is a good Place to lay Shot in, more safe there than in Lockers along the side, where the Enemy's Shot may fall into it.

## R.

**R**, A liquid Consonant, and the seventeenth Letter of the Alphabet. See LETTER and ALPHABET.  
The Grammarians hold it a Semi-vowel; especially in the Greek, where, in common with the other Vowels, it admits an Aspirate, &c. tho' whether the Aspirate should come before or after it is some doubt. We find instances of each.

Thus *psdi* the Latins wrote *Rhoda*; and *psido* the Æthiops wrote *psido*. The Ancient Goths, and *Trotones*, *Lactantius* observes, pronounced *b* to *r*.

The Hebrews allow'd it the Privilege of a Guttural, that is, they never double it, which yet is done by the *Arabs*, *Greeks*, and *Latins*, &c. See GUTTURAL.

*Perfus* calls it *littera canina*, because the Dogs seem to pronounce it in snarling: Yet it should seem to have had a softer Sound among the *Romans*, than among us, by its being frequently interpos'd to prevent the Clashing of Vowels: As in *rarus* from *æquis*, *narus* from *nois*, *mures* from *muus*, *narus* from *muus* *pois*; and this Softness was such as frequently occasioned its being dropt as useless in Writing.

Thus for *Hetrufci* they frequently wrote *Tetrufci*, and even *Tisfi*; and for *furfus*, *rurfus*, *profus*; *sufum* *vufus*, *profus*.

In effect there was that Agreement between the Sound of the *s* and *r*, that as the *Romans* avoided the doubling of their Consonants, 'twas no wonder they here dropp'd the *r*; the *s* supplying the place of both. Hence too it came to pass, that what they at first pronounced, *Afa*, *Afina*, *Cafum*; was afterwards, *Ara*, *Arena*, *Carum*; and those first named *Fufi* and *Falefi* were afterwards call'd *Furii* and *Falvii*; and *Cicero* tells us, the *papiri* were first call'd *papifi*; and even fixes the time when the Change was made, viz. in the Year of Rome 415. *Feftus* adds, that *alira*, *pegnora*, *plurima*, were antiently *olefia*, *pegnofa*, *plurima*.

From the same softness of the Sound of the *r*, it came to be us'd indifferently with the *l* in many Words, e. g. *Lattaris* and *Lattalis*, *publis* and *parilis*, &c.

Tho' the *r* more frequently degenerated into *l*; this *Romans* became changed into *Lemures*, *interlego*, *perbus* into *Intelligo* and *pelluco*, *frater* into *fratellus*, &c. and the same is sometimes done between *u* and *r*, as *ævus* and *ævus*, &c.

**R**, was antiently a Numerical Letter, signifying 80, according to the *Verbe*,

*Octoginta dabit tibi R, fupis numerabit.*

When a Dash was added a-top as *R̄*, it signified 80 thousand. The *Greek*, *r*, *ρ*, signified a hundred.

**R** or **R̄** in Medicinal Prescription, stands for *Recipe*, take. See RECIPE. See also CHARACTER.

**RABATE** in Falcovery. A Hawk is said to *rabate*, when by the Motion of the Hand of the Bearer, the Lure, Call, &c. the leaves pursuing her Prey, or Quarry; and recovers the Fift.

**RABATE** in Commerce. See REBATE.

**RABBI**, or **RABBIN**, a Doctor of the Jewish Law. See DOCTOR.

The Words *Rabbi*, and *Rabbin*, have the same signification; yet is there some Difference in their Use. When we speak absolutely, and without applying the Term to any proper Name, we say *Rabbin*, not *Rabbi*. Thus, it would be unjust to attribute to the ancient *Rabbin* all the Notions of the Moderns.

On the other Hand, when we prefix the Term to the proper Name of some Jewish Doctor, we say *Rabbi*, not *Rabbin*; as *Rabbi Salomon Jarrhi* is of this Opinion.

Yet *Rabbi* having no Plural, we say the *Rabbins*. *Jehuda Chijus*, and *Jehuda ben Chabias*, are the Authors of two antient Hebrew Grammars.

The Word in its Original *רַבִּי*, signifies *Master*.

The modern *Rabbins* are entitl'd to a good deal of respect among the *Jews*: They have the first Places in the Synagogues; they determine all Matters and Controversies of Religion, and very frequently pronounce upon Civil Affairs. They have even a Power to excommunicate the Disobedient.

They retain a vast number of superstitious Traditions, from the Writings of their Predecessors; which they observe as scrupulously as the Law of *Mofes*. See TRADITION. See also TALMUD.

The antient *Rabbins* were infinite dealers in Allegories: Their Writings are almost wholly Allegorical, particularly their Comments and Interpretations of the Scripture; See GABALA.

They had a great number of Rules, and Forms of Interpreting and Quoting, which some modern Writers suppose to have been follow'd by the Apostles, in their Interpretation, and Quotation of the Prophecies of the Old Testament, in the New. See PROFECY.

The loss of these Rules Dr. *Stanhope*, Dr. *Jenkins*, &c. lament, as what in all probability would reconcile the jarring Passages in the Old and New Testament. *Sarcobafius*, Hebrew Professor at *Amsterdam*, imagines he has retrieved those Rules from the antient Jewish Writers.

The *Rabbins*, he observes, interpreted Scripture in such a manner as to change the literal Sense into a more noble and spiritual Sense. To this End, he says they us'd ten ways of quoting and explaining the Old Testament; instances of each whereof he gives in the Writings of the Apostles.

They consist in changing the Points; the Letters; both Letters and Points; adding and taking away Letters; transposing Words and Letters; dividing one Word into two; adding Words; changing the Order, &c. See QUOTATION.

**RABBETING**, in Carpentry, the planing or cutting of Channels, or Grooves, in Boards. See PLANE.

In Ship-Carpentry it signifies the letting in of the Planks of the Ship into the Keel.

**RABBINIST**, a Follower of the Doctrine of the Rabbies; in contradistinction to *Caraites*. See CARAITE.

*Pere Simon* contends for *Rabbinit* or *Rabbinitis*, instead of *Rabbinit*; in effect, the former are apparently preferable to the latter; the Word being derived from the Hebrew *Rabbani*, which is the Name of the Sect, and which the *Jews* use to distinguish their Doctors from those of the *Caraites*.

*Rabbinit*, then, signifies a Jewish Doctor, who adheres to the Traditions of his Fathers; not simply a Rabbi or Doctor; for the *Caraites* who oppose those Traditions, have their Rabbins as well as the other *Jews*. See TRADITION.

RABDOIDES,	} Set	{ RHABDOIDES.	
RABDOLOGY,			{ RHABDOLOGY.
RABDOMANCY,			{ RHABDOMANCY.

**RABINET**, a small piece of Ordnance, between a Falconet and a Balis. Its Dimensions, &c. See under CANNON.

**RACA**, or **RACHA**, a Syrian Term, found in the Gospel of St. *Matthew*, Ch. v. 22. and preserv'd in most Translations.

*F. Simon* observes that the Greek Translator of St. *Matthew's* Gospel retain'd the Syrian *Raca* which he found in the Original, by reason it was very common among the *Jews*. And St. *Jeron*, *Luther*, the English Translators, those of Geneva, Louvain, Port Royal, &c. still preserve it in their respective Languages.

*F. Bossuors* chuses rather to express the Sense thereof in a sort of Paraphrase, thus: He that says to his Brothers, *Homme de peu de sens*, Man of little understanding, shall deserve to be condemn'd by the Tribunal of the Council, &c.

Most Translators, except the English, and *F. Simon*, for *Raca* write *Rachas*: But the latter seems the best founded; all the Latin Copies having *Raca*; and all the Greek ones *ρακα*, or, with *Hesychius*, *ρακα*, which is the same: All, we mean, but St. *Irenæus*, and *Beza's* Copy, now at Cambridge. In effect, the Origin of the Word shews it should be *Raca*; as coming from the Syrian *רַבָּא*, *Raca*, of the Hebrew *רָבָא*, *reb*, empty, shallow.

**RACCOURCY**, in Heraldry, signifies the same as *Gusset*, that is, cut off, or shortened; and denotes a Cross or arms ordinary, when it does not extend to the Edges of the Escutcheon, as they do when absolutely named, without such Distinction. See COUSSE.

**RACE**, in Genealogy, a Lineage, or Extraction continued from Father to Son. See LINK.

The Word is formed from the Latin, *rahis*, *rastr*; as intimating the root of the Genealogical Tree.

In several Orders of Knighthood, as in that of Malta, &c. the Candidates must prove a Nobility of four Races or Descents. See DESCENT.

In some Republicks the Magistrates are to prove themselves of Plebeian Race, to be qualified.

The French reckon their Kings by Races; as the first *Race*, the second *Race*, the third *Race*. We also say the *Race* of the Ottomans, the *Asfacides*, the *Ptolomy's*, &c. See DYNASTY.

*Hervieux* observes that 'tis usual to put the Female Canary-bird to the Male Goldfinch, Linnet, or the like, to breed; but,

for his part, he should chuse to put the Male Canary-Bird to the Female Goldfinch, Linnet, &c. because the Male usually *Races* more than the Female, *i. e.* the young ones take more after the Male than after the Female.

**RACHITIS**, or **RHACHITIS**, in Medicine, a Disease affecting the Bones of Children, more usually called the *Rickets*. See **RICKETS**.

**RACK**, an Engine furnished with Cords, &c. for extorting Confession from Delinquents. See **TORTURE**.

The Duke of *Exeter*, Countable of the Tower under Henry VI. with the Duke of *Suffolk*, and others, having a design to introduce the Civil Law into England; for a Beginning, the *Rack*, or *Brake* allowed in many Cases by the Civil Law, was first brought to the Tower, where it is still preserv'd.

In those Days the *Rack* was call'd the Duke of *Exeter's Daughter*.

**RACK**, in the Manage, a Pace wherein a Horse neither Trots nor Ambles, but shuffles, as it were between both. See **PACE**.

The *Racking Pace* is much the same as the Amble; only that it is a swifter Time and a shorter Tread. See **AMBLE**.

**RACKET**, a kind of Bat, to strike the Ball withal at Tennis. See **TENNIS**.

It consists of a kind of Lattice, or Net-work of Cat-gut, strain'd very tight over a Circle of Wood with a Handle or Shaft of a moderate length.

*Pasquier* observes, that antiently they used no Rackets at Tennis, but play'd with the Palm of the Hand; and hence, he conjectures it is, that the *French* call Tennis-Play, *Jeu de Paume*.

He adds, that Rackets were not introduced till a little before his Time. The English Wood Racket is formed from the *French*, *Raquette*, which *Motage* derives from the *Latin*, *Resquetta*, a diminutive of *Retis*, *Retium*, and *Retulium*.

**RACKET**, is also a Machine, which the *Savages* of *Canada* bind to their Feet, to walk more commodiously over the Snow; made much in the manner of a Tennis-Racket.

Its Figure is a Lozange, whereof the two obtuse Angles are rounded off. It is bound about with very fine Thongs of Leather, the Meshes whereof are much smaller and closer than those of our Rackets.

In the middle is fitted a kind of Shoe, lined with Wool, or Hair; and tied on to prevent its sinking in the Snow.

They oblige the Person to take very long Steps, and as we say, to walk a great pace, to keep them from knocking against each other.

To *Rack Wines*, &c. is to draw them from off their Lees, after having stood long enough to clear and settle. See **WINE**.

Hence *Rack-Portage* is frequently used for the second Voyage our Wine Merchants need to make into *France* for rack'd Wines; whence they used to return about the End of *December*.

**RADIAL** *Curves*, is a Term used by some Authors for *Curves* of the Spiral Kind, whose Ordinates, if they may be so call'd, do all terminate in the Center of the including Circle, and appear like to many *Radii* of that Circle; whence the Name. See **CURVE**. See also **SPIRAL**.

**RADIALIS**, or **RADIUS Extensor**, in Anatomy. See **EXTENSOR Carpi**.

**RADIALIS**, or **RADIUS flexor**. See **FLEXOR Carpi**.

**RADIATED**, in Botany, an Epithet applied to round flat Flowers, consisting of a Disk, and a single row of longish pointed Leaves, ranged all around it in manner of Rays, or Spokes. See **FLOWER**.

The Word is also used in speaking of Medals, and Heraldry; where the antient Crowns are called *radiated Crowns*, *Corone Radiate*. See **CROWN** and **CORONET**.

**RADIANT-Point**, or **RADIATING-Point**, is any Point of a visible Object, whence Rays proceed. See **RAY**.

Every *Radiant-Point* diffuses innumerable Rays all around; but only those *Radiants* are visible from which right Lines may be drawn to the Pupil; because the Rays are all right Lines.

All the Rays proceeding from the same *Radiant* continually diverge; the *Crystallin* collects or reunites 'em again. See **DIVERGING**. See also **CRYSTALLIN**.

Every Ray carries with it the Species, or Image of the *Radiant*. See **SPECIES**.

**RADIATION**, in Physick, the Action of a Body diffusing Rays of Light. See **RAY**.

Every visible Body is a radiating Body; it being purely by means of its Rays that it affects the Eye. See **VISION**.

Yet no Body can radiate, unless it be either luminous or illuminated; since the Rays it diffuses must either be its own, or it must receive them from another Body. Therefore no Body is visible unless it be either luminous or illuminated. See **BODY**, **LIGHT**, **COLOUR**, &c.

The Surface of a radiating Body may be conceived as consisting of *Radiant-Points*. See **RADIANT-Point**.

Place of **RADIATION** is that Space in a transparent Body, or Medium, through which a visible Body radiates. See **MEDIUM**, &c.

**RADIATION**, or **IRRADIATION**, is also used by some Authors to express the manner of the Motion of the Animal Spirits; on a Supposition that they are diffused from the Brain towards all

Parts of the Body, through the little Canals of the Nerves, as Light is from a lucid Body. See **SPIRIT**.

But in lieu of a *Radiatus*, many of the Moderns rather incline to the Opinion of the Circulation of the Spirits. See **CIRCULATION**.

**RADICAL**, **RADICALIS**, in Physicks, &c. something serving as a Basis or Foundation; or which, like a *Root*, is the Source, or Principle whence any thing arises. See **ROOT**.

The Schools talk much of a *Radical Moisture* in all Animals, which nourishes and preserves the vital Heat or Flame, as Oil does a Lamp; and which when exhausted, Life is extinguished.

Dr. *Keilney* observes that this *radical Moisture* is a mere Chimera; unless we thereby mean the Mass of Blood which is the promony whence all the other Juices and Humours are derived; and which, while it circulates, sustains Life, &c. See **CALIDUM**. See also **FLAMMA**, **BLOOD**, &c.

In Grammar we use the Term *Radical Words* for Roots and Primitives; in opposition to Compounds or Derivatives. See **ROOT** and **PRIMITIVE**.

**RADICAL Sign**, in Algebra, the Sign or Character of the Root of a Quantity. See **ROOT**.

✓ is the Character of Radicality, and expresses the Square Root;  $\sqrt[3]{}$ , the Cube Root, &c. See **CHARACTER**.

**RADICATION**, in Physick, the Action whereby Plants take Root, or shoot out Roots. See **ROOT**.

The *French Royal Academy of Sciences* have made a good number of curious Observations on the Germination and *Radications* of Plants. See **VEGETATION**, **SEED**, **PLANTING**, **PERPENDICULARITY**, &c.

**RADICLE**, **RADICULA**, *little Root*; in Botany, is a little Point discovered by the Microscope in all Seeds, which in the growth of the Plant becomes the Root. See **ROOT**. See also **SEED**.

When, in sowing, the *Radicle* happens to lie low; 'tis no wonder the Root should spread it self under Ground, and the Stem of the Plant rise up perpendicularly: But when the *Radicle* falls uppermost, by what means it is, that it changes its Position to favour the Alient of the Stem, is one of the Wonders of Vegetation. A more particular Account whereof see under the Article **PERPENDICULARITY**.

**RADIOMETER**, a Name some Writers give to the *Radius Astronomicus*, or *Jacob's Staff*. See **JACOB'S STAFF**.

**RADIUS**, **RAY**, in Geometry, the Semidiameter of a Circle; or a right Line drawn from the Centre to the Circumference. See **SEMI-DIAMETER**, &c.

The *Radius* is also called, especially in Trigonometry, *finis totius*, *suble finis*. See **SINE**.

'Tis implied in the definition of a Circle, and 'tis apparent from its Construction, that all the *Radii* of the same Circle are equal. See **CIRCLE**.

The Word is derived from the *Greek*  $\rho\acute{\alpha}\delta\iota\omicron\varsigma$ , *rad.* *Fleta* uses the Word *Radius* for a *Ferrous*.

**RADIUS**, in the higher Geometry. The *RADIUS* of the *Evoluta*, *RADIUS Curvæ evolutæ*, or *RADIUS Oculi*, is the right Line CM, *Tab. Analys. Fig. 12.* representing a Thread, by whose Evolution from off the Curve BC, whereon it was wound, the Curve AM was form'd. See **EVOLUTA** and **OCULUM**.

**RADIUS Astronomicus**, an Instrument properly call'd *Jacob's Staff*, or *Cross Staff*.

**RADIUS**, in Opticks. See **RAY**.

**RADIUS**, in Mechanicks, is used for the Spokes, or Fellows of a Wheel; because issuing like Rays, from the Centre thereof. See **WHEEL**.

**RADIUS**, in Anatomy, is a long slender Bone of the Arm, defending along with the *Ulna* from the Elbow to the Wrist; called also, *fascia minima*, the *lesser fascic*. See **FOCILE**.

The *Radius* only touches the *Ulna* at its Extremities; at the upper whereof it is both received by, and also receives it; making, by both Articulations, an imperfect Kind of *Ginglymus*. See **ULNA**.

The upper End, rolling upon the *Ulna*, is cover'd with a Cartilage; and has a-top, a small round *Sinus*, which receives the outer Process of the *Humerus*: The lower-end is thicker than the upper, and has besides the lateral *Sinus*, two other *Sinūs* at its Extremity which receive the Bones of the Wrist.

The *Radius* and *Ulna* are both a little crooked; by which means they are kept a-part, excepting at their Extremities; and are tyed together by a strong membranous Ligament. See **ARM**.

The *Radius* has four proper Muscles, besides the *Biceps* common to it and the *Ulna*: The proper are two *Pronators*, and two *Supinators*. See **PRONATOR** and **SUPINATOR**. See also **BECEPS**.

**RADIX**. See **ROOT**.

**RADIX** is used among some Anatomists, for the Sole of the Foot. See **FOOT**.

**RADIS**, among *Chymicists*. See **RADICAL**.

**RAD-Knights**. See **ROD-Knights**.

**RAFTERS**, in Building, are pieces of Timber, which stand by Pairs upon the *Reasens*, meet in an Angle at the Top, and help to compose the Roof of a Building. See **ROOF**.

'Tis a Rule in Architecture, that no Rafters should stand farther than twelve Inches from one another.

For the Sizes or Scantlings of *Rafflers*, is provided by Act of Parliament, that principal *Rafflers* from 12 Foot 6 Inches, to 14 Foot 6 Inches long, be 5 Inches broad a-top, and 8 at the bottom, and 6 Inches thick.

Those from 14, 6 to 18, 6 long, to be 9 Inches broad at the Foot and 7 a-top, and 7 thick.

And those from 18, 6 to 21, 6, to be 10 Inches broad at the Foot, 8 a-top, and 8 Inches broad.

Single *Rafflers*, 6 Foot 6 Inches long, to be 4 and 3 Inches in their Square. Those 8 Foot long must be 4 1/2 and 3 1/2 Inches square.

**RAPFLING**, a Game with three Dice, wherein he who throws the greatest Pair, or Pair-Royal, in three Casts, wins. See GAME and GAMING.

The *Raffle* is properly the double or triplet. A *Raffle* of Aces, or Duces, carries it against meer Points.

*Raffing* is also used when a Company of Persons club to the Purchase of a Commodity; and he that throws the highest on the Dice takes it.

The Word probably comes from the base Latin, *riflare*, to rife, plunter, take all away.

**RAG**, or RAKE, among Hunters, is a Company, or Herd of young Cois.

**RAGGED Hawk**, in Fowlconry, is an Hawk that hath its Feathers broken. See HAWK.

**RAGGULED**, or RAGOLED, or RAGGED, in Heraldry, is applied to an Ordinary, *Ex. gr.* a Cross, whose Out-Lines are jagged or knotted, as in the Figure adjoining. He beareth Sable, a Cross *Ragguled*, Or, by the Name of *Slouay*.

*Raggul* differs from indented, in that the latter is regular, and this former not.

The Bearing is very Antient: *Julius Cæsar* gave for his Badge, a Bull's Head, on a ragged Staff.

**RAGGULED** is sometimes also used in the Sense of *Truncated*, or *Cropped*, and applied to a Branch that is saw'd from the Tree; or a Stock saw'd from its Root.

**RAGMAN'S-Roll**, or rather **RAGMUND'S-Roll**, a Roll or List denominated from its Author *Ragmund*, a Legat in *Scotland*, who calling before him all the benighted Persons in that Kingdom, craved them, upon Oath, to give in the true Value of their Benefices; according to which they were taxed in the Court of *Rome*.

This Roll, among other Records, being taken from the *Scots* by our King *Edward I.* was re-delivered to them in the Beginning of *Edward III.*'s time.

**RAGOÛT**, or RAGOO, a Sauce, or Seasoning, to rouse or recover the Appetite when languishing or lost.

The Term is *French*, but natural'd.

The Term is also used for a high-season'd Dish, prepared of Fleish, Fish, Greens, or the like, by stewing them with the Addition of Bacon, Salt, Pepper, Cloves, and the like.

We have *Ragos* of Beef, of *Omy-Fish*, of Giblets, of *Asparagus*, of *Endive*, of *Cocks-Combs*, of *Gammon*, of *Celery*, &c.

The Ancients had a *Ragout* call'd *Garam*, made of the Purified Guts of a certain Fish, which they kept till it diffus'd by meer Force of Corruption, into a Sanie; This was held such a valuable Dainty among them, that *Pliny* observes, its Price equal'd that of the richest Perfumes.

**RAJA**, an *Indian* Term, used for a Kind of Idolatrous PRINCE, the remains of those who ruled there before the Conquest of the *Mysols*.

There are some *Rajas* who still retain a Kind of Sovereignty in the Mountains: The *Indians* call them *Rai*; the *Portugals*, usually, *Rajon*; our Travellers, *Rajas*, or *Rajons*.

The chief Lords of the *Mysols*, viz. the *Vice-Rays*, *Governours* of Provinces, and Chief Ministers of State, *F. Carrou* observes, are call'd *Ombra*; and the Idolatrous-*Rajas*, or *Indian* Lords, who govern'd petty States before the Conquest of their Country, hold the same Rank at Court with the *Ombra*.

All the difference is, that the Children of the *Rajas* succeed their Fathers in the shew of the Sovereignty left them; whereas the Children of the *Mahometan* Lords lose all in losing their Fathers.

The *Indians* account four Ages from the Beginning of the World; and in the second, which lasted 1296000 Years, they hold the *Rajas* or *Kabatsys* had their Rise; chaste, noble, &c. though inferior to the *Brahmans*. See BRAMAN.

Vice then began to creep into the World; Men only lived to 300 Years, and their Stature was reduced, &c. *Let. Edit. C. Car.*

**RAIL**, in Architecture, is applied variously; particularly, to those pieces of Timber, &c. which lie horizontally between the Panels of Waincot; to those that lie over and under Balusters in Balconies, Stair-Cases, &c. and to the pieces of Timber that lie horizontally from Post to Post, in Fences with Pales or without.

**RAIN**, a very frequent and useful Meteor; descending from above in form of Drops of Water. See METEOR and DROP.

*Rain* is, apparently, a precipitated Cloud; as Clouds are nothing but Vapours rais'd from Moisture, Waters, &c. See CLOUD.

And Vapours are demonstratively nothing else but little Bubbles or *Pebbles* detach'd from the Waters, by the Power of the solar, or subterraneous Heat, or both. See VAPOUR.

These *Pebbles* being specifically lighter than the Atmosphere, are buoyed up thereby, till they arrive at a Region where the Air is a just Balance with them; and here they float, till by some new Agent they are converted into Clouds, and thence either into Rain, Snow, Hail, Mist, or the like. See SNOW, HAIL, &c.

But the Agent in this Formation of the Clouds into *Rain*, &c. is a little controverted; the generality will have it the Cold, which constantly occupying the superiour Regions of the Air, chills and condenses the *Pebbles*, at their Arrival from a warmer Quarter; congregates them together, and occasions several of them to coalesce into little Maties: By this Means their Quantity of Matter increasing in a greater Proportion than their Surface, they become an overload to the light Air, and accordingly descend in Rain.

Mr. *Derham* accounts for the Precipitation, hence; that the *Pebbles* being full of Air, when they meet with a colder Air than that they contain, their Shell is contracted into a less Space, and consequently the watery Shell or Case render'd thicker, so as to become heavier than the Air, &c. See COLD.

Others only allow the Cold a Part in the Action, and bring in the Winds as Shavers with it; indeed 'tis clear, that a Wind blowing against a Cloud will drive its *Pebbles* upon one another; by which means several of them coalescing as before, will be enabled to descend; and the effect will be still more considerable if two opposite Winds blow towards the same Place. Add to this, that Clouds already form'd, happening to be aggravated by fresh Accessions of Vapour continually ascending, may thence be enabled to descend. See WIND.

Yet the grand Cause, according to *Robaut*, is still behind: That Author conceives it to be the Heat of the Air, which after continuing for some time near the Earth, is at length carried up on high by a Wind, and there thawing the snowy *Pebbles*, or Flocks of the half-frozen *Pebbles*, reduces them into Drops; which coalescing, descend and have their Dissolution perfected in their Progress through the lower and warmer Stages of the Atmosphere.

Others, as Dr. *Clark*, &c. ascribe this Descent of the Clouds rather to an Alteration of the Atmosphere, than of the *Pebbles*; and suppose it to arise from a Diminution of the Spring or elastic Force of the Air. See ELASTICITY.

This Elasticity which depends chiefly or wholly on the dry terrene Exhalations, being weaken'd; the Atmosphere sinks under its Burthen; and the Clouds fall, on the common Principle of Precipitation. See PRECIPITATION.

Now, the little *Pebbles* by any, or all, of these Means, being once upon the Descent, will perish therein, notwithstanding the Increase of Resistance they every Moment meet withal in their Progress through still denser and denser Parts of the Atmosphere.

For, as they all tend towards the same Point, viz. the Centre of the Earth, the further they fall the more Collisions they make; and the more Collisions, the more Matter will there be under the same Surface, the Surface only increasing as the Squares, but the Solidity as the Cubes; and the more Matter under the same Surface, the less Friction or Resistance there will be to the same Matter. See BAROMETER.

Thus if the Cold, the Wind, &c. happen to act early enough to precipitate the *Pebbles*, ere they are arrived at any considerable Height; the Collisions being few in so short a Descent, the Drops will be proportionably small; and thus is form'd what we call *Dew*. See DEW.

If the Vapours prove more copious, and rise a little higher, we have a *Mist* or *Fog*. See FOG.

A little higher still, and they produce a *small Rain*, &c.

If they neither meet with Cold nor Wind enough to condense or dissipate them; they form a heavy, thick, *dark Sky*; which lasts, sometimes several Weeks. See WEATHER.

Hence we may account for many of the Phenomena of the Weather; e. gr. why a cold, is always a wet Summer; and a warm a dry one? Because the Principle of Precipitation is had in the one Case, and wanting in the other.

Why we have ordinarily most *Rain* about the Equinoxes? Because the Vapours arise more plentifully than ordinary in the Spring, as the Earth becomes loosen'd from the brumal Constitutions; and because as the Sun recedes from us in Autumn, the Cold increasing, the Vapours that had linger'd above during the Summer Heats, are now dispatch'd down, &c.

Why a settled, thick, close Sky scarce ever *Rains* till it have been first clear? Because the equally diffus'd Vapours must first be condens'd, and congregated into separate Clouds, to lay the Foundations of *Rain*; by which means the rest of the Face of Heaven is left open, and pervious to the Rays of the Sun, &c. See WEATHER.

For other Phenomena of *Rain*, as they relate to the Weather-Glass, see BAROMETER.

As to the Quantity of *Rain* that falls; its Proportion in several Places at the same Time, and in the same Place at several Times; we have Store of Observations, Journals, &c. in the Memoirs of the French Academy, the *Philos. Transact.* &c. in the *Idea*

Idea whereof will not be unacceptable.

Upon measuring, then, the Rain falling yearly; its Depth, at a Medium, is found as in the following Table.

Depth of RAIN falling yearly, and its Proportion in several Places.

	Inches.	
At <i>Tromby</i> in <i>Lancashire</i> , observ'd by Mr. <i>Tromby</i> ,	42	$\frac{1}{2}$
<i>Upminster</i> in <i>Essex</i> , by Mr. <i>Derham</i> ,	19	$\frac{1}{2}$

Natural RAINS, as of Blood, &c. are very frequent in our Annals; and even Natural Histories, yet; if strictly tried into, will be all found other things than Rain.

Bloody Rains, Dr. Merret observes, are, certainly, nothing else but the Excrements of Insects.

Accordingly, Goffindus gives an Instance of a bloody Rain in France, which terrified the People; but which Perisic found to be only red Drops coming from a sort of Butterfly that flew about in great Numbers, as he concluded from seeing such red Drops come from them; from the Drops not being laid on Buildings, or the outer Surfaces of Stones, &c. but in Cavities and Holes; and from those Walls only being tinged therewith that were next the Fields, not those in the Streets; and the first only to a little Height, such as Butterflies are used to fly to.

The same Dr. Merret adds, that 'tis most evident the Rains of Wheat are nothing but Ivy-Berries, swallowed by the Starlings, and again cast forth by Stool.

An Instance of such a Rain we have in the *Phibisip. Transf.* from the Country about *Briffal*, by Mr. *W. Cole*; who, upon examining the Drops, found them to be the Seeds of Ivy-Berries, blown down by fierce Winds from Towers, Churches, Chimneys, Walls, &c. where they had been left by Birds, chiefly Sparrows and Choughs.

The French have a Tradition of a Rain of Stones, in a Plain six or seven Leagues long between *Arles* and *Marsillus*, call'd *la Crau*, which is now quite cover'd therewith.

The Fable is that, *Hercules* in his Engagement with *Albius* and *Argus*, in Favour of *Neptune*; wanting Darts, was assisted by *Jupiter* with a Shower of these Stones, seen to this Day. Another Account of their Origin, see under the Article STONE.

RAINS, in the Sea Language, is all that Tract of Sea to the Northward of the Equator, between 4 and 10 Degrees of Latitude; and lying between the Meridian of *Cape Verde*, and that of the Easternmost Islands of the same Name.

It takes its Name from the almost continual Calms, constant Rains, and Thunder and Lightning to a great Degree, found there. The Winds, when they do blow, are only small uncertain Gulls, and shift about all round the Compass; so that Ships are sometimes here detain'd a long while, and can make but little way.

RAIN-BOW, is, or simply, the Bow, a Meteor in form of a party-colour'd Arch or Semicircle, exhibited in a rainy Skie, opposite to the Sun; by the refraction of his Rays in the Drops of falling Rain. See METEOR, RAIN, and REFRACTION.

There is also a secondary or fainter Bow, usually seen inventing the former, at some Distance; and among Naturalists we read of *Lunar Rainbows*, *Marine Rainbows*, &c.

The *Rainbow*, Sir *Isaac Newton* observes, never appears but where it rains in the Sun-shine; and may be represented artificially, by contriving Water to fall in little Drops like Rain; thro' which the Sun shines, exhibits a Bow to a Spectator placed between the Sun and the Drops; especially if a dark Body, e. gr. a black Cloth be dispos'd beyond the Drops.

*Anton. de Dominis* first accounted for the *Rainbow*, in 1611: He explain'd at large how it was form'd; by refraction and re-

flexion of the Sun-beams in spherical Drops of Water; and confirm'd his Explications by Experiments made with Glass Globes, &c. full of Water. Wherein he was follow'd by *Des Cartes*, who mendes and improved on his Account: But as they were both in the Dark as to the true Origin of Colours, their Explications are Defective, and in some things erroneous; which 'tis one of the Glories of the *Newtonian* Doctrine of Colours, to supply and correct.

Theory of the Formation of the RAIN-BOW.

To conceive the Origin of the *Rainbow*, let us consider what will befall Rays of Light coming from a very remote Body, e. gr. the Sun; and falling on a Globe of Water, such as we know a Drop of Rain to be.

Suppose then ADKN (*Tab. Opticks, Fig. 45.*) to be a Drop of Rain, and the Lines EF, BA, ON, to be Rays of Light coming from the Centre of the Sun; which, by reason of the immense Distance of the Sun, we conceive to be Parallel. See Parallel RAY.

Now the Ray BA being the only one that falls perpendicularly on the Surface of the Water; and all the rest obliquely; 'tis easily infer'd that all the other Rays will be refracted towards the Perpendicular. See REFRACTION.

Thus the Ray EF, and others accompanying it, won't go on straight to G; but as they arrive at HI, deflect from F to K, where some of them, probably, elapsing into the Air, the rest are reflected upon the Line KN, so as to make the Angles of Incidence and Reflexion equal. See REFLEXION.

Further, as the Ray KN, and those accompanying it, fall obliquely upon the Surface of the Globule; they cannot pass out into the Air, without being refracted, so as to recede from the Perpendicular LM; and therefore will not proceed straight to P, but defect to Q.

It may be here observ'd, that some of the Rays arriving at P, do not pass out into the Air, but are again reflected to Q; where being refracted like the rest, they do not proceed right to Z, but declining from the Perpendicular TV, are carried to R: But since we have only regard the Rays as they may affect the Eye placed a little below the Drop, e. gr. at P, those which deflect from N to Q, we set aside as useless, because they never come at the Eye. On the contrary, it is to be observ'd, that there are other Rays, as 2, 3, and the like, which being reflected from 3 to 4, thence to 5, and from 5 to 6 may at length arrive at the Eye placed beneath the Drop.

Thus much is obvious: But to determine precisely the Quantities of Refraction of each Ray, there must be a Calculation: By such Calculation it appears that the Rays which fall on the Quadrant AD, are continued in Lines, like those here drawn in the Drop AD KN; wherein there are three things very considerable: First, That the two Refractions of the Rays in their Ingress and Egress are both the same Way, so that the latter does not destroy the effect of the former. Secondly, That of all the Rays passing out of AN; NP, and thence joining to it, are the only ones capable of affecting the Spectator; as being sufficiently close or contiguous; and because coming out parallel; whereas the rest are diversiz'd, and dispers'd too far to have any sensible Effect, at least to produce any thing so vivid as the Colours of the Bow. Thirdly, That the Ray NP has Shade or Darkness under it: For since there is no Ray comes out of the Surface NA, 'tis the same thing as if the Part were cover'd with an Opaque Body. We might add, that the same Ray NP has Darkness above it; since the Rays that are above it are inefficacious; and signify no more than if there were none at all.

Add to these, that all the effectual Rays have the same Point of Reflection, i. e. the parallel and contiguous Rays; which alone are effectual after Refraction, will all meet in the same Point of the Circumference; and be reflected thence to the Eye.

Further it appears by Calculation, that the Angle ONP, included between the Ray NP, and the Line ON drawn from the Centre of the Sun, which is the Angle whereby the *Rainbow* is distant from the opposite Point of the Sun, and which makes the Semicircumference of the Bow; contains 41° 30'. The Method of determining it see hereafter.

But since beside those Rays coming from the Centre of the Sun to the Drop of Water, there are many more from the several Points of its Surface; there are a great many other effectual Rays to be considered; especially that from the uppermost, and that from the lowest Part of the Sun's Body.

Since then, the apparent Diameter of the Sun is about 16 Seconds, it follows that an effectual Ray from the upper Part of the Sun will fall higher than the Ray EF, by 16 Seconds: This does the Ray GH, (*Fig. 46.*) which being refracted as much as EF; deflects to I, thence to L; and at length emerging equally refracted with the Ray NP, proceeds to M; and makes an Angle ONM, of 41° 14' with the Line ON.

In like Manner the effectual Ray QR coming from the lowest Part of the Sun, falls on the Point R, 16 Minutes lower than the Point F, on which the Ray EF falls; and being refracted declines to S; whence it is reflected to T; where emerging into the Air, it proceeds to V; 65, as the Line TV, and the Ray OT contain an Angle of 41° and 46'.

Again,

Again, upon computing the Deflexions of the Rays, which, like the 23 (Fig. 45.) coming from the Centre of the Sun, and being received into the lower Part of the Drop, we have supposed to be twice reflected, and twice refracted, and to enter the Eye by Lines like that 67 (Fig. 47.); we find that which may be accounted effectual, as 67, with the Line 86 drawn from the Centre of the Sun, contains an Angle 86°, of about 52 Degrees: Whence it follows that the effectual Ray from the highest Part of the Sun, with the same Line 86 includes an Angle less by 16 Minutes; and that from the lowest Part of the Sun, an Angle greater by 16 Minutes.

Thus, since ABCDEF is the Path of the efficacious Ray from the highest Part of the Sun to the Eye in F; the Angle 86 R becomes of about fifty one Degrees, and forty four Minutes. In like manner, since GHIKLM is the Way of an effectual Ray from the lowest Part of the Sun, to the Eye, the Angle 86 M becomes nearly of fifty two Degrees, and sixteen Minutes.

Since then we admit several Rays to be effectual, beside those from the Centre of the Sun; what we have said of the Shade will need some Alteration: For, of the three Rays described (Fig. 45 & 46.) only the two extreme ones will have a Shadow joining to them, and that only on the outer Side. Hence it is evident that these Rays are perfectly disposed to exhibit all the Colours of the *Prisim*.

For the great Quantity of dense or intense Light, i. e. the Bundle of Rays collected together in a certain Point, *sc. gr.* in the Point of Reflection of the effectual Rays, may be accounted as a lucid or radiant Body, terminated all around by Shade. But the several Rays thus emitted to the Eye are both of different Colours; that is, fitted to excite in us the Ideas of different Colours; and are differently refracted out of the Water into Air, notwithstanding their falling alike upon the refracting Surface. See *Colour*, &c.

Hence it follows that the different or heterogeneous Rays will be separated from one another, and will tend separate ways; and the homogeneous Rays be collected, and tend the same way: And therefore this lucid Point of the Drop, wherein the Refraction is effected, will appear fringed, or bordered with several Colours; that is, red, green, and blue Colours will arise from the extremes of the red, green, and blue Rays of the Sun transmitted to the Eye from several Drops one higher than another; after the same manner as is done in viewing lucid, or other Bodies through a *Prisim*. See *PRISM*.

Thus, adds Sir Isaac Newton, the Rays that differ in refrangibility, will emerge at different Angles; and consequently, according to their different Degrees of Refrangibility, emerging most copiously at different Angles, will exhibit different Colours in different Places. See *REFRANGIBILITY*.

A great number then of these little Globules being diffused in the Air, will fill the whole Space with these different Colours; provided they be so disposed as that effectual Rays may come from them to the Eye; and thus will the *Rainbow*, at length, arise.

Now to determine what the *Disposition* must be; suppose a right Line drawn, from the Centre of the Sun through the Eye of the Spectator, as the Line VX, (Fig. 46.) call'd the *Line of Aspect*: Being drawn from fo remote a Point, it may be esteemed parallel to all other Lines drawn from the same Point: But a right Line falling on two Parallels makes the alternate Angles equal. See *ALTERNATE*.

If, then, an indefinite Number of Lines be imagin'd drawn from the Spectator's Eye to a part opposite to the Sun where it rains; which Lines make different Angles with the Line of Aspect, equal to the Angles of Refraction of the differently refractible Rays, *e. gr.* Angles of 40°, 1°, and of 40°, 16'. These Lines falling on Drops of Rain illuminated by the Sun, will makes Angles of the same Magnitude with Rays drawn from the Centre of the Sun to the same Drops. And therefore the Lines thus drawn from the Eye will represent the effectual Rays that occasion the Sensation of any Colour.

That, *e. gr.* making an Angle of 42° 14' representing the least refrangible or red Rays of the several Drops, and of 40° 16', the most refrangible or violet Rays: The intermediate Colours, and refrangibilities will be found in the intermediate Space *Ee*. See *RED, VIOLET*, &c.

Now, 'tis known that the Eye being placed in the Vertex of a Cone, sees Objects upon its Surface as if they were in a Circle; and the Eye of our Spectator is here in the common Vertex of several Cones, form'd by the several Kinds of efficacious Rays, with the Line of Aspect. And in the Surface of that whose Angle at the Vertex or Eye is the greatest, and wherein the others are included, are those Drops or Parts of Drops which appear red; and in the Surface of that Cone whose Angle is least, are the purple Drops: And in the intermediate Cones are the green, blue, &c. Drops. Hence then several Kinds of the Drops must appear as if disposed into so many circular colour'd *Prisims* or Arches, as we see in the *Rainbow*.

This part of the Solution Sir Isaac Newton expresses more articulately thus: Suppose O (Fig. 48.) the Eye, and OP a Line Parallel to the Sun's Rays, and let POE, POB be Angles of 40° 17', and 42° 2'. And suppose the Angles to turn about their common Side OP, with their other Sides OE and OF, they will describe the Bounds or Verges of the *Rainbow*.

For, if EF be Drops placed any where in the conical Surface described by OE OF; and be illuminated by the Sun's Rays SE, SF, the Angle SEO being equal to the Angle POE or 40° 17' shall be the greatest Angle in which the most refrangible Rays can, after Reflection, be refracted to the Eye; and therefore all the Drops in the Line OE shall send the most refrangible Rays most copiously to the Eye, and thereby strike the Sense with the deepest *Violet Colour* in that Region.

And in like Manner the Angle SFO being = to the Angle POF = 42° 2', shall be the greatest, in which the least refrangible Rays after one Reflection can emerge out of the Drops; and these Rays shall come most copiously to the Eye, from the Drops in the Line OF, and strike the Sense with the deepest *red Colour* in that Region.

And by the same Argument the Rays, which have intermediate Degrees of Refrangibility, shall come most copiously from Drops between E and F, and so strike the Sense with the intermediate Colours, in the Order which these Degrees of Refrangibility require; that is, in the Progress from E to F, or from the inside of the Bow to the outside, in this Order, *Violet, Indigo, Blue, Green, Yellow, Orange, Red*: Though the Violet, by the mixture of the white Light of the Clouds, will appear faint, and incline to a purple.

And since the Lines OE OF may be situated any where in the above-mention'd conical Surface, what is said of the Drops and Colours in these Lines is to be understood of the Drops and Colours throughout the whole Superficies. Thus is the *primary*, or *inner Bow* form'd.

*Secondary, or outer RAIN-BOW.*

As to the secondary or fainter *Bow*, usually surrounding the former; in attaining what Drops should appear coloured, we excluded such as Lines drawn from the Eye, making Angles a little greater than 42° 2' should fall upon; but not such as should contain Angles much greater.

For, if an indefinite Number of such Lines be drawn from the Spectator's Eye, some whereof make Angles of 50° 57', with the Line of Aspect; *e. gr.* OG; or other Angles of 54° 9', *e. gr.* OH; these Drops whereon these Lines fall, must of necessity exhibit Colours. Particularly those of 50° 57'.

*E. gr.* the Drop G will appear red; the Line GO being the same with an effectual Ray, which after two Reflections and two Refractions, exhibits a red Colour. Again, these Drops which receive Lines of 54° 9', *e. gr.* the Drop H will appear Purple, the Line OH being the same with an effectual Ray which after two Reflections, and two Refractions, exhibits Purple.

Now, there being a sufficient Number of these Drops, 'tis evident there must be a *second Rainbow*, form'd after the like manner as the first.

Thus, Sir Isaac Newton: In the least refrangible Rays, the least Angle at which a Drop can send effectual Rays after two Reflections, is found by computation to be 50° 57', and in the most refrangible the least Angle is found 54° 7'.

Suppose, then, O the Place of the Eye, as before, and POG, POH to be Angles of 50° 57', and 54° 7'. And these Angles to be turn'd about their common Side OP; with their other Sides OG, OH, they will describe the Verges or Borders of the *Rainbow* CHGD.

For, if GH be Drops placed any where in the conical Superficies described by OG OH, and be illuminated by the Sun's Rays; the Angle SGO being equal to the Angle POG or 50° 57', shall be the least Angle, in which the then least refrangible Rays, can, after two Reflections, emerge out of the Drops; and therefore the least refrangible Rays shall come most copiously to the Eye from the Drops in the Line OG, and strike the Sense with the deepest *Red* in that Region.

And the Angle SHO being equal to POH, 54° 7', shall be the least Angle in which the most refrangible Rays, after two Reflections, can emerge out of the Drops; and therefore those Rays shall come most copiously to the Eye from the Drops in the Line OH, and so strike the Sense with the deepest *Violet* in that Region.

And by the same Argument, the Drops in the Region between G and H, shall strike the Sense with the intermediate Colours, in the Order which their Degrees of Refrangibility require; that is, in the Progress from G to H, or from the inside of the Bow to the outer, in this Order: *Red, Orange, Yellow, Green, Blue, Indigo, Violet*.

And since the Lines OG, OH, may be situated any where in the conical Surface; what is said of the Drops and Colours in these Lines is to be understood of the Drops and Colours every where in these Superficies.

Thus are form'd two *Bows*, an *interior*, and stronger, by one Reflection; and an *exterior* and fainter by two; the Light becoming weaker and weaker by every Reflexion.

Their Colours will lie in a contrary Order to one another; the first having the Red without, and the Purple within; and the second the Purple without and Red within; and so of the rest.

*Artificial RAIN-BOW.*

This Doctrine of the *Rainbow* is confirm'd by an easy Experiment: For upon banging up a Glass Globe full of Water in the

Sun-shine, and viewing it in such a Posture as that the Rays which come from the Globe to the Eye, may, with the Sun's Rays include an Angle either of 42°, or 50°; if, *e. gr.* the Angle be about 42°, the Spectator, suppos'd at O, will see a full red Colour in that Side of the Globe opposite to the Sun, as at F. And if that Angle be made a little less, suppos'd by depressing the Globe to E, the other Colours, Yellow, Blue, and Green, will appear successively, in the same Side of the Globe, all exceedingly bright.

But if the Angle be made about 50°, suppos'd by raising the Globe G, there will appear a red Colour in that Side of the Globe towards the Sun; though that somewhat faint; and if the Angle be made greater, suppos'd by raising the Globe to H; the Red will change successively to the other Colours, Yellow, Green, and Blue.

The same thing is observ'd in letting the Globe rest, and raising, or depressing the Eye to make the Angle of a just Magnitude.

*Dimensions of the RAIN-BOW.*

Dr Carter first determin'd its Diameter by a tentative, and indirect Method; laying it down that the Magnitude of the Bow depends on the Degree of Refraction of the Fluid; and assuming the Ratio of the Sine of Incidence to that of Refraction, to be in Water as 250 to 157. See REFRACTION.

But, Dr. Halley has since, in the *Philosoph. Transact.* given us a simple, direct Method of determining the Diameter of the Rainbow from the Ratio of Refraction of the Fluid being given; or vice versa, the Rainbow being given, to determine the refractive Power of the Fluid. The *Praxis* is as follows.

First, *The Ratio of Refraction being given; to find the Angles of Incidence, and Refraction of a Ray which becomes effulgent after any given Number of Reflections.* Suppose any given Line as AC (*Tab. Opticæ, Fig. 49.*) which divide in D; so, as that AC be to AD in the Ratio of Refraction; and again divide it in E, so as AC be to AE as the given Number of Reflections inscribed by Unity, is to Unity; with the Diameter CE describe a Semicircle CBE, and from the Centre A with the Radius AD describe an Arch DE intersecting the Semicircle in B. Then drawing AB, CB; ABC or its Complement to two right Angles, will be the Angle of Incidence; and ACB the Angle of Refraction required.

Secondly, *The Ratio of Refraction, and any Angle of Incidence being given to find the Angle which a Ray of Light emerging out of a refracting Sphæra, after a given Number of Reflections, makes with the Line of Aspect, or an incident Ray; and consequently to find the Diameter of the Rainbow.* The Angle of Incidence, and the Ratio of Refraction being given, the Angle of Refraction is given; which Angle being multiplied by double the Number of Reflections increased by 2, and double the Angle of Incidence subtracted from the Product, the Angle remaining is the Angle sought.

Thus supposing, the Ratio of Refraction to be, as Sir Isaac Newton has determin'd it, viz. as 108 to 81, in the red Rays, as 109 to 81 for the blue Rays, &c. the preceding Problem will give the Distances of the Colours in the

I. RAIN-BOW,	{ Red 41° 12'	} The Spectator's Back being turned to the Sun.
	{ Blue 40 16	
II. RAIN-BOW,	{ Red 50 58	}
	{ Blue 54 9	

If the Angle made by a Ray after three or four Reflections, were required, and therefore the Diameters of the third and fourth Rainbows, (which are scarce ever seen, by reason of the great Diminution of the Rays, by so many repeated Reflections) they will be found.

III. Rainbow,	{ Red 41° 37'	} The Spectator being turned towards the Sun.
	{ Blue 37 9	
IV. Rainbow,	{ Red 43 52	}
	{ Blue 49 34	

Hence, the Breadth of the Rainbow is easily found; For the greatest Semidiameter of the first Bow, *i. e.* from Red to Red being 42° 1', and the least, *viz.* from Purple to Purple 40° 16'; the Breadth of the *Fascia* or *Bow*, measured a-cross from Red to Purple will be 1° 45', and the greatest Diameter of the second Bow being 54° 9', and the least 50° 58', the Breadth of the *Fascia* will be 3° 10'. And hence the Distance between the two will be found 8° 15'.

In these Measures the Sun is only esteem'd a Point; wherefore as his Diameter is really about 30' so much must be added to the Breadth of each *Fascia* or *Bow*, from Red to Purple, and so much be subtracted from the Distance between them.

This will leave the Breadth of the primary Bow, 2° 15', that of the secondary Bow 3° 40'; and the interval between the Bows 8° 25'; which Dimensions deduced by Calculation, Sir Isaac Newton assures us from his own Observations, agree very exactly with those found by actual Mensuration in the Heavens.

*Particular Phenomena of the RAIN-BOW, with the Causes thereof.*

From this Theory of the Rainbows, all the particular Phæno-

mena are easily deduced: Hence we see why the Iris is always of the same Breadth; by reason the intermediate Degrees of refrangibility of the Rays between Red and Violet, which are its extreme Colours, are always the same.

Secondly, Why it is more difficultly terminated on the Side of the Red, than on that of the Violet? There being no efficacious Rays in the Space adjoining to the red Drops, *i. e.* to the Space between the Bows; whence it terminates abruptly; whereas in the Space on the Side of the Violet ones there are some Rays emitted to the Eye, which though too feeble to affect it strongly, yet have this effect, that they soften the Violet Edge insensibly, so that 'tis difficult to determine precisely where it terminates.

Thirdly, Why the Bow shifts its Situation as the Eye does; and, as the popular Phrase has it, *flies those who follow it, and follows those that fly it?* The Colour'd Drops being dispos'd under a certain Angle about the Line of Aspect, which is different in different Places; Whence, also, it follows that every different Spectator sees a different Bow.

Fourthly, Why the Bow is sometimes a larger Portion of a Circle, sometimes a less? Its Magnitude depending on the greater, or less Part of the Surface of the Cone, above the Surface of the Earth at the Time of its appearance; and that Part being greater or less as the Line of Aspect is more inclined or oblique to the Surface of the Earth; which inclination, or obliquity, is greater as the Sun is higher: Whence, also, the higher the Sun, the less the Rainbow.

Fifthly, Why the Bow never appears when the Sun is above a certain Altitude? The Surface of the Cone wherein it should be seen, being lost in the Ground, at a little Distance from the Eye, when the Sun is above 42° high.

Sixthly, Why the Bow never appears greater than a Semicircle, on a Plane? Since by the Sun never so low, and even in the Horizon; the Centre of the Bow is still in the Line of Aspect; which, in this Case, runs along the Earth, and is not all rais'd above the Surface.

Indeed, if the Spectator be placed on a very considerable Eminence, and the Sun in the Horizon; the Line of Aspect wherein the Centre of the Bow is, will be notably rais'd above the Horizon, (considering the Magnitude of the Circle whereof the Bow acts to be a Part.) Nay, if the Eminence be very high, and the Rain near, 'tis possible the Bow may be an entire Circle.

Seventhly, How the Bow may chance to appear inverted, *i. e.* the Concave Side be turn'd upwards? To wit, a Cloud happening to intercept the Rays, and prevent their shining on the upper Part of the Arch: In which Case only the lower Part appearing, the Bow will seem as if turn'd upside down: Which probably has been the Case in several Prodiges of this Kind, related by Authors.

Indeed the Bow may appear inverted from another Cause: For, if, when the Sun is 41° 46' high, his Rays fall upon the smooth Surface of some spacious Lake, in the middle whereof a Spectator is plac'd; and if, at the same time there be Rain falling to the same as if the Sun should shine below the Horizon, and the Line of View be extended upwards: Thus the Surface of the Cone wherein the colour'd Drops are to be placed, will be wholly above the Surface of the Earth.

But since the upper Part will fall among the unbroken Clouds; and only the lower Part be found among the Drops of Rain, the Arch will appear inverted.

Eighthly, Why the Bow sometimes appears inclined? The accurate roundness of the Bow depending on its great Distance, which prevents us from judging of it exactly; if the Rain which exhibits it, chance to be much nearer, we shall see its irregularities; and if the Wind in that Case drive the Rain so as the higher Part be further from the Eye than the lower, the Bow will appear inclined.

Ninthly, Why the Legs of the Rainbow sometimes appear unequally distant? If the Rain terminate on the Side of the Spectator, in a Plane so inclined to the Line of Aspect as to make an acute Angle on the left Hand, and an obtuse Angle on the right; the Surface of the Cone which determines what Drops will appear, will fall upon them in such manner as that those on the left Hand, will appear further from the Eye than those on the Right. For the Line of Aspect being Perpendicular to the Plane of the Bow, if you suppose two rectangular Triangles a Right and Left, the Cathetus of each to be Line of View, and the Base the Semidiameter of the Bow, inclined as above: 'Tis evident, since those Angles of the Triangles, next the Eye, must always be the same, (*viz.* 43° in the inner Bow) the Basis of the Right-hand Triangle will appear much longer than that of the Left.

*Lower RAIN-BOW.*

The Moon, sometimes, also, exhibits the Phenomenon of an Iris or Bow; by the Refraction of her Rays in the Drops of Rain in the Night-time. See MOON.

Aristotle says, he was the first that ever observed it; and adds, that it never happens, *i. e.* is never visible, but at the Time of the Full-Moon; her Light at other times being too faint to affect the Sight, after two Refractions, and one Reflection.

The *Lunar Iris* has all the Colours of the *Solar*, very distinct and pleasant; only faint, in Comparison of the other; both from the different Intensity of the Rays, and the different Position of the Medium.

In that mention'd *Philosoph. Transact.* N<sup>o</sup>. 331. Mr. *Townley* observes, the largeness of the Arch was not so much less than that of the *Solar*, as the different Dimensions of their Bodies, and their Distances from the Earth should seem to require: But, as to its Intensity and the Beauty of its Colours, it was admirable. It continued about 10 Minutes e're the Interposition of a Cloud hinder'd its Observation.

*Marine RAIN-BOW.*

The *Marine* or *Sea-Bow*, is a Phenomenon sometimes observ'd in a much agitated Sea; when the Wind sweeping Part of the Tops of the Waves, carries them aloft; so that the Sun's Ray falling upon them, are refracted, &c. as in a common Shower; and Paint the Colours of the Bow.

*F. Boreas*, in the *Philosoph. Transact.* observes, that the Colours of the *Marine Rainbow* are less lively, distinct, and of less duration than those of the common Bow; that there are scarce above two Colours distinguishable, a dark Yellow on the Side next the Sun, and a pale Green on the opposite Side.

But these Bows exceed as to Number, there being sometimes 20 or 30 seen together: They appear at Noon-Day, and in a Position opposite to that of the common Bow, i. e. the Concave Side is turn'd upwards, &c. indeed, it's necessary it should be, from what we have shewn in accounting for the Phenomena of the *Solar Bow*.

To this Class of *Bows* may be refer'd a Kind of *subite, colour'd Rainbows*, which *Montanus*, and others, affirm to have been at Noon-Day. *M. Mariotte* in his *IVth Essai de Physique*, says, these *Bows* are form'd in *Mists*, as the others are in Showers, and adds, that he has seen several both after Sun-riſing, and in the Night.

This want of Colours he attributes to the Smallness of the Vapours which compose the Mist: We should rather Account for it from the exceeding Tenacity of the little *Particels* of the Vapour; which being in effect only little wery Pellicles bloated with Air, the Rays of Light undergo but little Refraction in passing out of Air into them; too little to separate the differently coloured Rays, &c.

Hence the Rays are reflected from them, compounded as they came, that is, White. See REFRACTION.

*Robault* mentions colour'd *Rainbow* on the Grass; form'd by the Refractions of the Sun's Rays in the Morning Dew. *Trair. de Phys.*

RAISER, in Building, a Board set on-edge under the fore-side of a Steep, Stair, &c. See STAIR, &c.

RAISING, in the Manage, one of the three Actions of a Horse's Legs; the other two being the *Step* and the *Tread*; which see.

The *Raising*, or lifting up of his Leg in Caprioles, Curvetts, &c. is esteem'd good, if he perform it hardly and with ease; nor crossing his Legs, nor carrying his Feet too much out or in; yet bending his Knees as much as is needful.

RAISING-Pieces, in Architecture, are Pieces that lie under the Beams, on Brick or Timber, by the Side of the Hoale.

RAISINS, Grapes prepared by drying them in the Sun, or in Ovens; to fit them for keeping, and for some medicinal Purposes. See CUCURANTS.

Of these there are various Kinds: As *Raisins of Damascus*; thus call'd from the capital City of *Syria*, in the Neighbourhood whereof they are cultivated. They are much us'd in the Composition of *Pistans*, together with *Jujubes* and *Dates*; are brought flat and seed'd, of the Size of the Thumb; whence 'tis easy judging of the extraordinary Bulk of the Grape, when fresh. Travellers tell us of Bunches weighing 25 Pounds. Their Taste is faint and disagreeable.

*Raisins of the Sea*, a kind of Raisins brought from *Spain*, of a reddish or bluish Colour, seed'd, very agreeable to eat.

There are various other Kinds, denominated from the Place where they grow, or the Kind of Grape, &c. as *Raisins of Calabria*, *Muscade Raisins*, &c.

RAITING, or RATINO, the laying of Hemp, Flax, Timber, &c. when green, in a Pond or running Water, to season and dispose for future use. See SEASONING.

RAKE, of a Ship, is so much of her Hull as overhangs at both Ends of her Keel.

That Part of it which is before, is call'd the *Rake forward on*; and that Part which is at the setting on of the Stern-Post, is call'd her *Rake aft-ward on*: When a Ship hath but a small *Rake* forward on, but is built with her Stern too freight up, she is call'd *Bluff-headed*.

*Rake of the Rudder*, is the hindermost Part of it. See RUDDER.

RAKING, of a Horse, is the drawing his Ordure with the Hand out of the Fundament, when he is Cative and cannot Dung. In order to this the Hand must be anointed with Sallet-Oyl or Barter.

RAKING-Table, among Architects, a Member hollowed in the Square of a Pedestal, or elsewhere. See CAVETTO, SCOTIA.

RALLYING, in War, the re-assembling, or calling together of Troops broken, rout'd, and put to flight.—A Horse is said to *Rake* when being *Shoulder-Splash*, or having strain'd his Fore-Quarters, he goes so Lame as to drag one of his Fore-Legs in a Circle.

RAM, in Astronomy. } See ARIES.  
Battering RAM.

RAMADAN, a sort of Lent, observ'd by the *Mahometans*; during which they fast the whole Day, with such extreme Superstition, that they dare not wash their Mouth, nor even swallow their Spittle. See LENT and FASTING.

The Men indeed are allow'd to Bath themselves; but 'tis on Condition they don't plunge the Head under Water, lest some Drops enter by the Mouth or Ears, &c. But for the Women they are strictly forbid Bathing, for fear of taking in Water below.

To make amends, they Feast all the Night; and usually spend more this Month than in six others.

RAMAGE, a Term us'd for the Boughs or Branches of Trees. Hence,

*Ramage Hawk*, or *Falcon*, is one that is wild and coy, as having been long amidst the Boughs, preying for its self.

A Faulcon retains this Name till he has left the *Eyrie*, being so called in *May, June, July, and August*. These are very rarely recalled.

RAMMER, an Instrument for driving down Stones or Piles into the Ground; or for the beating the Earth, and making it more solid for a Foundation. See FOUNDATION.

RAMMER, of a Gun, or Gun-Stock, a Rod or Staff us'd in charging a Gun; to drive home the Powder to the Breech, as also the Shot, and the Wad, which keeps the Shot from rolling out. See CHARGE.

The *Rammer* of a great Gun has a round Piece of Wood at one End; the other is usually roll'd in a Piece of Sheep-Skin, fitted to the Bore of the Piece, in order to clear her after she has been discharged: Which they call *sponging the Piece*. See SPONGE.

RAMIFICATION, the Production of Boughs or Branches; or of Figures resembling Branches. See BRANCH.

RAMIFICATIONS, in Anatomy, are the Divisions of the Arteries, Veins, and Nerves, arising from some common Trunk. See ARTERY, VEIN, and NERVE.

RAMPANT, in Heraldry, is applied to a Lion, Bear, Leopard, or other Beast, in a Posture of Climbing, or standing upright on his Hind-Legs, and rearing up his Fore-Feet.

It is different from *Sabaut*, which is a Posture less erect. See SALTANT.

This Posture is to be specified in blazoning in all Animals, except the Lion and Griffin; it being their natural Situation.

The Term is *Breach*, and signifies literally, *creeping*.

RAMPART, in Fortification, a Mount or Mass of Earth, rais'd about the Body of a Place, to cover it from the great Shot; and form'd into Bastions, Curtains, &c. See FORTRESS, WALL, BASTION, &c.

Upon the *Rampart* the Soldiers continually keep Guard, and Pieces of Artillery are planted for the Defence of the Place.

Hence, to Shelter the Guard from the Enemies Shot, the out-side of the *Rampart* is built higher than the inside, i. e. a Parapet is rais'd upon it with a Platform. See PARAPET and PLATFORM.

Hence, also, Earth not being capable to be rais'd perpendicularly, like Stone; the *Rampart* is built with a *Talus* or Slope, both on the inner and outer-side. See TALUS.

The *Rampart* is sometime *ber'd*, i. e. fortified with a Stone Wall within-side; otherwise it has a *Berne*. See BERME.

'Tis incompass'd with a Moat or Ditch, out of which the Earth that forms the *Rampart* is dug. See DITCH.

The Height of the *Rampart* must not exceed three Fathom; this being sufficient to cover the Houses from the Battery of the Cannon: Neither ought its Thickness to be above 10 or 12, unless more Earth be taken out of the Ditch, than can be otherwise bestowed.

The *Ramparts* of Half-Moons are the better for being low; that the small Fire of the Defendants may the better reach the Bottom of the Ditch: but yet it must be so high, as not to be commanded by the Cover-Way.

The Word is form'd from the Spanish *Amparo*, Defence, Covering.

RAMPART is also us'd in Civil Architecture, for the Space left void between the Wall of a City and the next Hoafes.

'Tis is what the *Romans* call'd *Pemieries*, wherein it was forbid to build; and where they planted Rows of Trees, for the People to walk and amuse themselves under.

RAMUS, in Anatomy, &c. a Branch of a greater Vein. See VESSEL.

*Ramus Anterior* is particularly us'd for a Branch of the subcutaneous Vein passing under the Muscles of the Ulna. *Ramus posterior*, a Branch of the same Vein running near the Elbow. See SUBCUTANEOUS.

RANCID, something mouldy, or musty; or that has contracted an ill Smell, by being kept close. See MOULDINESS.

The Word is particularly understood of old rusty Bacon. It comes from the Latin *Rancidus*, of *rances*, to be rank.

**RANDOM-SHOT**, a Shot made when the Muzzle of a Gun is raised above the Horizontal Line, and is not design'd to shoot directly, or Point-blank. See GUNNERY.

The utmost *Random* of any Piece is about ten times as far as the Bullet will go Point-blank; and the Bullet will go farther when the Piece is mounted to about 45 Degrees above the Level-Range. See RANGE.

The Distance of the *Random* is reckoned from the Platform to the Place where the Ball first grazes.

**RAN-FORCE-RING**, of a Gun, that which is next before the Touch-Hole. See ORDINANCE.

**RANGE**, in Gunnery, the Path of a Bullet, or the Line it describes from the Mouth of the Piece, to the Point where it lodges. See GUN, BULLET, &c.

If the Piece be laid in a Line Parallel to the Horizon, it is called the *Right or Level Range*. If it be mounted to 45 Degrees, the Ball is said to have the *strong Range*; and so proportionally, all others between 00 Degrees, and 45°, being called the *intermediate Ranges*. See GUNNERY, PROJECTILE, &c.

**RANGER**, a sworn Officer of a Forest, or Park, whose Business it is to walk daily through his Charge, to drive back the wild Beasts out of the *Parsons* or disordered Places, into the wild Lands; and to prevent all Trespasses done in his Balliwick, at the next Court held for the Forest. See FOREST and PURLIEU.

The *Ranger* is made by the King's Letters, and has a Fee paid yearly out of the Exchequer, and certain Fee-Deer.

In the Charter of *Forest*, mention is made of twelve Kind of *Rangers*.

**RANGES**, in a Ship, are two Pieces of Timber, going across from Side to Side; one aloft, on the Fore-Castle, a little abaft the Fore-Mast; and the other in the Beak-head before the Wouddings of the Bow-sprit.

**RANGING**, in War, the disposing of Troops in a Condition proper for Engagement, or for Marching. The Army was *ranged* in Form of Battle to receive the Enemy; *ranged* in three Columns, for a March, &c.

In Building, the Side of a Work that runs straight, without breaking into Angles, is said to range, or *run range*.

**RANK**, a due Order; or a Place allotted a thing suitably to its Nature, Quality, or Merit. See ORDER.

Kings are Persons of the first *Rank* on Earth: In Cavalcades, Processions, &c. every Person is to observe his *Rank*. See PRECEDENCE.

**RANK**, in military Discipline, a Series or Row of Soldiers, placed Side by Side; a Number of which *Ranks* forms the Depth of the Squadron or Battalion, as a Number of *Files* does the Width. See FILE.

To *close the Ranks*, is to bring the Men nearer; to *open*, to set them further a-part: To *double the Ranks*, is to throw two into the Space of one.

**RANK**, in respect of Ships. See RATE.

**RANT**, in the Drama, an extravagant Flight of Passion; overflooding Nature and Probability. See PROBABILITY. See the Tragedies abound with *Rants*. The ranters, 'tis observ'd, frequently meet with Applause on the Stage.

We find instances of *Rants*, even in our severest Poets. Such, e. g. is that in the Beginning of *Ben. Johnson's Catalogue*, where the Parricide speaking to *Rome*, says, *I'd plough up Rocks, sleep at the Alps, in Dust; and leave the Tyrrhen Waters into Clouds; but I could reach thy Head.*

**RANSOM**, a Sum of Money, paid for the Redemption of a Person out of Slavery; or for the Liberty of a Prisoner of War. See REDEMPTION.

In our Law-Books, *Ransom* is also used for a Sum paid for the pardoning of some notorious Crime. *Horn* makes this difference between *Ransom* and *Amercement*, that *Ransom* is the Redemption of a Corporal Punishment. See AMERCIAMENT.

When one is to make a Fine, and *Ransome*, the *Ransom* shall be treble the Fine. *Crompt. Just.*

**RANULA**, in Medicine, a Tumour under the Tongue, which like a Ligament hinders a Child from speaking or sucking.

The *Ranula sub Lingua* is the same with what we otherwise call being *Tongue-tied*. See TONGUE.

The *Ranula* is usually caused by a short *Frenum* not permitting the Tongue to perform its proper Motions: At other Times, though rarely, there is a strong Concretion in that Part. Sometimes it is *adamantous*, at others *melancholic*, *fibrinous*, *black*, *livid*; in which Cases the Operation of Cutting is dangerous; and it grows to the Magnitude of a Bean or Chestnut.

If a short *vinculum* be the Cause, it is to be cut asunder with a Scalpel, and the Part gently touched with *Mell. Rosat.* and *Tinct. Myrrh*; being very careful not to cut the Arteries, Nerves, or Salival Glands in the Operation. See RANULARES.

**RANULARES**, or **RANINÆ VENÆ**, in Anatomy, two Veins under the Tongue, arising from the external Jugular, and running on either Side the *Arteria Mediana*. See TONGUE.

These Veins are opened with good Success in Quinzies. They take their Denomination from a resemblance of their State to that of *little Frogs*, call'd in *Latin*, *Ranula*, because never out of Water.

**RAPACIOUS Animals**, in the general, are such as live upon Prey. See ANIMAL.

Naturalists divide Birds into *Rapacious*, *Carnivorous*, and *Fringivorous*. See BIRD.

The Characteristic Notes of Birds of Prey are; that they have a great Head, and a short Neck; hooked, strong, and sharp-pointed Beak and Talons, fitted for tearing of Flesh; strong and brawny Thighs, for striking down their Prey; a broad thick fleshy Tongue like that of a Human Creature; 12 Feathers in their Train; and 24 Flag Feathers in each Wing. The two Appendices, or blind Guts, are always very short. See EAGLE, FALCON, HAWK, &c.

They have a membranous Stomach; and not a mucous one, or a Gizzard, such as Birds have, that live on Grain.

They are very sharp-sighted; and gather not in Flocks, but generally speaking, are solitary; though Vultures will fly 50 or 60 in a Company.

**RAPÉ**, in Law, a *Ravishing*; or the having Carnal Knowledge of a Woman by Force, and against her Will.

If the Woman conceive the Law effects it no Rape; from an Opinion that she cannot conceive unless she consent. *Case on Litt. lib. 2. cap. 11.*

This Offence is Felony in the Principal and his Aiders, by several Statutes; and the Criminal is excluded from the Benefit of his Clergy. See FELONY.

By the Civil Law, *c. de Rapto Virginum*, Ravishing is decreed Capital, unless the Woman, being a Maid, or Widow, may be married to the Ravisher. In *France* the Civil Constitution still obtains, and allows the Man to marry the Woman with her Consent.

By an Ordinance 1539, the Rape of a Girl or a Boy are put on the same footing. *Éléa oblige*, that by our Laws the Complaint must be made within forty Days, else the Woman may not be heard. *Litt. 3. Chap. 5.*

All Carnal Knowledge of a Maid before ten Years of Age, is deem'd by the Law Felony; *Stat. An. 8. Edm. cap. 6.*

In *Bradlow's* Time, the *Raptor or Ravisher*, was punished with the loss of his Eyes and Testicles, *Quia Colorem suæ Inducunt.* 3 *Inft.* Fol. 60.

The Civilians make another Kind of Rape, call'd *Subornatio*, or Rape of *Subornation*, or *Seduction*; which is when a Person seduces, or entices a Maid to unchastity, or even Marriage, and that by gentle Means; provided there be a considerable Disparity in Age or Condition between the Parties.

In this Case, the Father and Mother Intent their Action reciprocally for the *Crimes Raptus*, or *Subornationis*.

The *French* Laws make no difference between the Rape of Violence, and that of Solicitation, or Subornation; they make both Capital.

This Kind of Rape our Laws call Ravishment. See RAVISHMENT.

**RAPÉ**, of the Forest, is a Trespass committed in the Forest by Violence. See FOREST.

This is mentioned in the Laws of *Henry I.* as one of the Crimes punishable alone by the King.

**RAPÉ**, is also a Name given the Wood or Stalks of the Clusters of Grapes, when dried and freed from the Fruit.

The *Rapé* is used in making Vinegar, serving to heat and sour the Wine: But 'tis first put into a Place to sour itself, before it is cast into the Vinegar Vessel; to which End, presently after the Vintage, it is carefully put up in Barrels, lest it take Air, otherwise it would heat it self, and be spoiled: There is no other way of keeping *Rapé*, hitherto discovered, but to fill the Vessel, wherein it is contain'd, with Wine or Vinegar. See VINEGAR.

**RAPÉ**, is also used for Part of a County, signifying as much as a *Hundred*. See HUNDRED.

Though, sometimes *Rapé* is taken for a Division containing several Hundreds; thus *Suffex* is divided into six *Rapes*, viz. those of *Chichester*, *Arundel*, *Bramber*, *Le-wis*, *Preveisy*, and *Hundred*; every one of which besides its Hundreds, has a Castle, River, and Forest belonging to it.

These Parts in other Counties, are called *Tithings*, *Lathes*, or *Wapentakes*. See TITHING, LATHES, &c.

**RAPIER**, a long, ordinary, old fashion'd cutting Sword, such as those wore by the common Soldiers. See SWORD.

Hence, to *take the Rapier*, is to enter in the Army.

The Word is form'd from the *Greek* *ραπίον*, *rapeion*, to finite, strike.

**RAPINE**, in Law. To take a thing in private against the Owner's Will, is properly *Theft*; but to take it openly, or by Violence, is *Rapine*. See ABACTIO.

RAPSODIST, { See } RHAPSODIST,  
RAPSODY, { RHAPSODY.

**RAPTU heredi**, a Writ laying for the taking away an Heir, holding in Socage; of which there are two Sorts; one when the Heir is married, the other when not. See RAPE.

**RAPTURA**, an Ecstasy, or Transport of Mind. See EXTASY, ENTHUSIASM, RHAPSODY, &c.

**RARE**, in *Physics*, a Body that is very porous, whose Parts are at great Distance from one another, and which contains but little Matter under a great deal of Bulk. See **RAREFACTION**, **BODY**, **PORE**.

In this Sense *Rare* stands opposed to *Dense*. See **DENSITY**.  
The Corpuscular Philosophers, viz. the *Epicureans*, *Gassendists*, *Newtonians*, &c. assert that Bodies are *rarer*, some than others, in virtue of a greater Quantity of Vacuity included between their Pores. The *Cartesians* hold, that a greater rarity only consists in a greater Quantity of *Materia Subtilis*, included in the Pores. Lastly, the *Peripateticks* contend, that *Rarity* is a new Quality superinduced upon a Body, without any Dependence, either on Vacuity, or subtle Matter. See **CARTESIAN**, &c.

**RAREFACTION**, in *Physics*, the Action whereby a Body is render'd *Rare*; that is, whereby it comes to possess more room, or appear under a larger Bulk, without any Accession of new Matter. See **RARE**.

*Rarefaction* is opposed to *Condensation*. See **CONDENSATION**.  
In strictness, however, our more accurate Writers restrain *Rarefaction* to that Expansion of a Mass into a larger Bulk, which is effected by Means of Heat: All Expansion from other Causes they call *Dilatation*. See **HEAT** and **DILATATION**.

The *Rarefaction* decry any such thing as absolute *Rarefaction*: *Extensio*, with them, constituting the Essence of Matter, they are obliged to hold all Extension equally *fall*. See **EXTENSION** and **PLENUM**.

Hence, they make *Rarefaction* to be no other than an Accellion of fresh, subtle, and insensible Matter, which entering the Parts of a Body, sensibly distends them. See this disproved under **VACUUM**.

'Tis by *Rarefaction* that Gunpowder has its effects; and to the same Principle we owe our *Barometers*, *Thermometers*, &c. See **GUNPOWDER**, **THERMOMETER**, **BAROMETER**, &c.

The Degree to which the Air is *rarefiable* exceeds all Imagination: *Aeriformis*, long ago, by means of an intense Heat, found that Air might be rarified, so as to possess more than 70 times its former Space.

Mr. Boyle afterwards found, that Air, by its own Elasticity, and without the help of any Heat, would distend itself so as to take up 9 times its former Space; then 31 times; then 60; then 150; at length, by many Degrees he found it would reach to 8000 times, then 10000, then 13679. See **ELASTICITY**.

Such is the *Rarefaction* of common Air, from its own Principle of Elasticity, and without any previous Condensation; but if it be compressed, the same Author found its greatest Space when most rarified, is to its least when most condensed, as 55000 to 1. See **COMPRESSION**.

Such an immense *Rarefaction*, Sir Isaac Newton shews, is inconceivable on any other Principle than that of a repelling Force inherent therein, whereby its Particles mutually fly from one another. See **ATTRACTION**, &c.

This repelling Force he observes is much more considerable in Air than in other Bodies, as being generated from the most fixed Bodies, and that with much Difficulty, and scarce without Fermentation: Those Particles being always found to fly each other with the most Force, which when in Contact, cohere the most firmly. See **REPELLING-POWER**.

The Members of the French Royal Academy have bestowed a world of Attention on the different *Rarefactions*, or rather the different *Rarities* of the Air at different Heights. M. Mariotte established this as a Principle, from Experiments, that the different *Rarefactions* or Condensations of the Air follow the Proportion of the Weights wherewith 'tis press'd.

Hence, supposing the Mercury in the level of the Sea suspended to 28 Inches, which is the Weight of the whole Atmosphere; and that 60 Foot Height of Air are equivalent to a Line, or  $\frac{1}{2}$  of an Inch of Mercury; so that the Barometer at the Height of 60 Foot from the Sea, would fall a Line; 'tis easy finding what Height of Air would be equal to a Second, or any other Line of Mercury: For as 28 Inches of Mercury,  $\frac{1}{2}$ , are to 28 Inches, so is the Height of 60 Foot of Air, to a fourth Term; which is the Height of Air corresponding to a second Line of Mercury.

And after the same manner may the Heights of Air corresponding to each Line be found; which will make a Geometrical Progression, the Sum whereof will be the whole Height of the Atmosphere. Of consequence a certain Part of that Sum will be the Height of a Mountain; at whose Top the Barometer shall have sunk a certain Quantity. See **Mountain**.

Mess. Cassini and Maraldi, upon measuring the Heights of several Mountains, found that this Progression of M. Mariotte, was defective; that it always gave the Height of the Mountains, and consequently the *Rarefactions*, less than they really were; and from hence new Experiments M. Amontons found that the Principle will only hold in the mean *Rarefactions*, not in the Extremes. See **AIR**.

**RAREFACTIVES**, or **RAREFACTIVIA**, in Medicine, Remedies which open and enlarge the Pores of the Skins, to give an easy Exit to the Matter of Perspiration. See **PERSPIRATION**.

Such are Anise, Mallova, Pellitory, Camomile-Flowers, Linseed, &c.

**RASANT**, in Fortification. *Rasant Flank*, or *Lias*, is that Part of the Curtain, or Flank, whence the Shot exploded raze or glance along the Face of the opposite Bastion. See **FLANK**.  
The Defence of the Bastion is *Rasant*. See **DEFENCE**.

**RASIE**, in Medicine, an Eruption or Efflorescence upon the Skin, thrown out in Fevers or Surfeits. See **SURFEIT**, &c.

**RASP**, a sort of File. See **FILE**.

**RASPHUYS**, or **RASP-HAYE**, a celebrated Work-house or Hoarf of Correction, at *Austerdam*. See **WORK-HOUSE**.

**RASPATORY**, a Chirurgous Instrument wherewith they scrape loose, carious, or fractured Bones.

**RASURE**, **RASEMENT**. See **ERASURE**.

**RATAFIA**, a fine spirituous Liqueur, prepared from the Kernels, &c. of several kinds of Fruits, particularly Cherries and Apricocks.

*Ratafia of Cherries* is prepared by braining the Cherries, and putting them into a Vessel wherein Brandy has been kept; then adding to them the Kernels of the Cherries, with Strawberries, Sugar, Cinnamon, white Pepper, Nutmegs, Cloves; and to 20 Pound of Cherries, 10 Quarts of Brandy.

The Vessel is left open 10 or 12 Days, then stopp'd close, for two Months 't'is to be us'd.

*Ratafia of Apricocks* is prepared two ways; viz. either by boiling the Apricocks in white Wine, adding to the Liqueur an equal Quantity of Brandy, with Sugar, Cinnamon, Mace, and to 20 Pound of Cherries, 10 Quarts of Brandy.  
The Vessel is left open 10 or 12 Days, then stopp'd close, for two Months 't'is to be us'd.

**RATCH**, in Clock-Work, a sort of Wheel, which serves to lift up the Detens every Hour, and to make the Clock strike. See **CLOCK**.

**RATCHETS**, in a Watch, are the small Teeth at the Bottom of the Barrel, which stop it in winding up. See **WATCH**.

**RATE**, a Standard, or Proportion by which the Quantity or Value of a thing is adjusted. See **STANDARD**.

The Rates of Bread, &c. in *Louain*, are fix'd by Authority. See **ASSISE**.

The Rate of Interest, as now established by Law in *England*, is 4 per Cent. The Rate of Interest in *Italy* is 3 per Cent. In *Sweden* 6. In *France* 7. In *Spain* 10. In *Scotland* 10. In *Barbadoes* 10. In *Ireland* 12. In *Turky* 20. See **INTEREST**.

Low Rates of Interest advance the Prices of Land.

The Rates or Fees of Hackney-Coachmen, Chairmen, and Watermen, are fix'd by Act of Parliament, 14 Car. II. See **HACKNEY-COACH**, &c.

The Rates of Exchange, Factorship, &c. are different. See **EXCHANGE**, **FACTORAGE**, &c.

**RAYE-TYTHE**. When Sheep, or other Cattle, are kept in a Parish for less time than a Year, the Owner must pay Tythe for them, *pro rata*, according to the Custom of the Place. See **TYTHE**.

**RATE**, of a Ship of War, is its Order, Degree, or Distinction, as to Magnitude, Burthen, &c. See **SHIP**, &c.

The Rate is usually accounted by the Length and Breadth of the Gun-Deck, the Number of Guns, and the Number of Men and Guns the Vessel carries.

A First Rate Man of War has its Gun-Deck from 159 to 174 Feet in Length, and from 44 to 50 Foot Broad; contains from 1313, to 1382 Guns; has from 706 to 800 Men; and carries from 96 to 110 Guns. See **NAVY**.

Second Rate Ships have their Gun-Decks from 153 to 165 Foot long; and from 43 to 46 broad; they contain from 1086 to 1482 Guns; and carry from 524 to 640 Men; and from 84 to 90 Guns.

Third Rates have their Gun-Decks from 142 to 158 Foot in Length; from 37 to 42 Foot broad; they contain from 871 to 1262 Guns; carry from 389 to 476 Men; and from 64 to 80 Guns.

Fourth Rates are in Length on the Gun-Deck, from 118 to 146 Foot; and from 29 to 38 broad; they contain from 443 to 915 Guns; carry from 226 to 346 Men; and from 48 to 60 Guns.

Fifth Rates have their Gun-Decks from 100 to 120 Foot long; and from 29 to 31 broad; they contain from 259 to 542 Guns; carry from 145 to 190 Men; and from 26 to 44 Guns.

Sixth Rates have their Gun-Decks from 87 to 95 Foot long; and from 22 to 25 Foot broad; they contain from 152 to 256 Guns; carry from 50 to 110 Men; and from 16 to 24 Guns.

Note, The new-built Ships are much larger, as well as better than the old ones of the same Rate; whence the double Numbers all along; the larger of which express the Proportions of the new-built Ships, as the less those of the old ones.

For the Number of Vessels of each Rate in the *Engl's* Fleet, see **NAVY**.

**RATEEN**, or **RATINE**, in Commerce, a thick woollen Stuff, cross'd; wove on a Loom with four Treadles, like Serges and other Stuffs that have the Crossing.

There are some *Ratines* dress'd and prepar'd like Cloths; others left simply in the Hair; and others where the Hair or Nap is friz'd.

*Ratines* are chiefly manufactured in *France, Holland, and Italy*; and are mostly used in *Linings*.

The *Frize* is a coarse *Ratine*; the *Druggat* a *Ratine* half Thread, half Wool.

**RATIFICATION**, an Act, approving of, and confirming something done by another, in our Name.

A Treaty of Peace is never sure till the Princes have ratified it. See **TREATY**.

All Procuration imports a promise of *Ratifying* and approving what is done by the Proxy or Procurator. After treating with a Procurator, Agent, Factor, &c. A *Ratification* is frequently necessary on the Part of his Principal.

**RATIFICATION** is particularly used in our Laws for the Confirmation of a Clerk to a Benefice, Prebend, &c. formerly given him by the Bishop, &c. where the right of Patronage is doubt'd to be in the King.

**RATIFICATION** is also used for an Act confirming something we our selves have done in our own Name. An Execution, by a Major, of an Act pass'd in his Minority, is equivalent to a *Ratification*.

**RATIO, REASON**, in Arithmetick and Geometry, that Relation of homogeneous things which determines the Quantity of one from the Quantity of another, without the intervention of any third. See **RELATION**.

The homogeneous things thus compar'd, we call the *Terms of the Ratio*; particularly, that refer'd to the other, we call the *Antecedent*; and that to which the other is refer'd, the *Consequent*. See **TERM**, &c.

Thus, when we consider one Quantity, by comparing it with another, to see what Magnitude it has in Comparison of that other; the Magnitude this Quantity is found to have in Comparison thereof is call'd the *Ratio, Reason*, of this Quantity to that; which some think would be better express'd by the Word *Comparison*. See **COMPARISON**.

*Euclid* defines *Ratio* by the *Habitude or Relation of Magnitudes of the same Kind in respect of Quantity*.—But this Definition is found defective; there being other Relations of Magnitudes which are constant, yet are not included in the Number of *Ratios*; such as that of the Right Sine, to the Sine of the Complement in Trigonometry.

*Hobbs* endeavour'd to amend *Euclid's* Definition of *Ratio*, but unhappily; for in defining it, as he does, by the *Relation of Magnitude to Magnitude*; his Definition has not only the same Defect with *Euclid's*, in not determining the particular Kind of Relation; but has this further, that it does not express the Kind of Magnitudes, which may have a *Ratio* to one another.

*Ratio* is frequently confounded with *Proportion*; yet ought they by all means to be distinguished, as very different things. *Proportion*, in effect, is an Identity, or Similitude of two *Ratios*. See **PROPORTION**.

Thus, if the Quantity A be triple the Quantity B; the Relation of A to B, i. e. of 3 to 1, is call'd the *Ratio* of A to B. If two other Quantities, C, D, have the same *Ratio* to one another that A and B have, i. e. be triple one another; this sameness of *Ratios* constitutes *Proportion*; and the four Quantities A : B :: C : D, are in *Proportion*, or *Proportional* to one another.

So that *Ratio* exists between two Terms, *Proportion* requires more.

There is a twofold *Comparison* of Numbers: By the first, we find how much they differ, i. e. by how many Units the Antecedent exceeds, or comes short of, the Consequent.

This Difference is call'd, the *Arithmetical Ratio*, or *Exponent* of the Arithmetical Relation or *Habitude* of the two Numbers. Thus if 5 and 7 be compar'd, their *Arithmetical Ratio* is 2.

By the second Comparison, we find how oft the Antecedent contains, or is contain'd in the Consequent; i. e. as before, what Part of the greater is equal to the less.

This *Ratio*, being common to all Quantity, may be call'd *Ratio* in the General, or, by way of Eminence. But it is usually call'd *Geometrical Ratio*; because express'd, in Geometry, by a Line, though it cannot be express'd by any Number.

*Wolffius*, better distinguishes *Ratio*, with regard to Quantity in the general, into *Rational*, and *Irrational*.

*Rational Ratio*, is that which is as one rational Number to another. e. gr. as 3 to 4. See **NUMBER**.

*Irrational Ratio*, is that which cannot be express'd by Rational Numbers.

Suppose, for an Illustration, two Quantities A and B; and let A be less than B. If A be subtracted as often as it can be, from B, e. gr. five times, there will either be left nothing or something. In the former Case A will be in B, as 1 to 5; that is, A is contain'd in B five times; or  $A = \frac{1}{5} B$ . The *Ratio*, here, therefore, is *rational*.

In the latter Case, either there is some Part, which being subtracted certain times from A, e. gr. three times, and likewise from B, e. gr. 7 times leaves nothing; or there is no such Part, if the former: A will be to B, as 3 to 7, or  $A = \frac{3}{7} B$ ; and therefore the *Ratio, Rational*. If the latter, the *Ratio* of A to B, i. e. what Part A is of B, cannot be express'd by rational Numbers; nor any other way than either by Lines, or by infinite approaching Series. See **SERIES**.

The *Exponent* of a *Geometrical Ratio* is the Quotient arising from the Division of the Antecedent by the Consequent: Thus the Exponent of the *Ratio* of 3 to 2, is  $1 \frac{1}{2}$ ; that of the *Ratio* of 2 to 3, is  $\frac{2}{3}$ ; for when the less Term is the Antecedent, the *Ratio*, or rather the *Exponent*, is an improper Fraction. Hence the Fraction  $\frac{3}{2} = 1 \frac{1}{2}$ . If the Consequent be Unity, the Antecedent itself is the Exponent of the *Ratio*: Thus the Exponent of 4 to 1 is 4. See **EXPONENT**.

If two Quantities be compar'd without the intervention of a third; either the one is equal to the other, or unequal: Hence, the *Ratio* is either of *Equality* or *Inequality*.

If the Terms of the *Ratio* be unequal, either the less is refer'd to the greater, or the greater to the less: That is, either the less to the greater, as a Part to the Whole; or the greater to the less as the Whole to a Part: The *Ratio* therefore determines how often the less is contain'd in the greater, or how often the greater contains the less, i. e. to what Part of the greater, the less is equal.

The *Ratio* the greater Term has to the less, e. gr. 6 to 3, is call'd the *Ratio of the greater Inequality*. The *Ratio* the less Term has to the greater, e. gr. 3 to 6, is call'd the *Ratio of the less Inequality*.

This *Ratio* corresponds to Quantity in the General, or is admitted of by all Kinds of Quantities, discrete or continued, Commensurable, or Incommensurable. Discrete Quantity, or Number does likewise admit of another *Ratio*.

If the less Term of a *Ratio* be an aliquot Part of the greater, the *Ratio* of the greater Inequality is said to be *Multiplex, Multiple*: And the *Ratio* of the less Inequality, *Submultiple*. See **MULTIPLE**.

Particularly, in the first Case, if the Exponent be 2, the *Ratio* is call'd *duplex*; if 3, *triplex*, &c. In the second Case, if the Exponent be  $\frac{1}{2}$ , the *Ratio* is call'd *Subduplex*; if  $\frac{1}{3}$ , *Subtriplex*, &c.

E. gr. 6 to 2 is in a *triple Ratio*; because 6 contains two thrice. On the contrary, 2 to 6 is in a *Subtriple Ratio*, because 2 is the third Part of 6. See **DUPLX, SUBDUPLX**, &c.

If the greater Term contain the less once; and over and above, an aliquot Part of the same; the *Ratio* of the greater Inequality is call'd *Superparticularis*; and the *Ratio* of the less *Subsuperparticularis*.

Particularly, in the first Case, if the Exponent be  $1 \frac{1}{2}$ , it is call'd *Sesquialterate*; if  $1 \frac{2}{3}$ , *Sesquitercia*, &c. In the other, if the Exponent be  $\frac{1}{2}$ , the *Ratio* is call'd *Subsesquialtera*; if  $\frac{1}{3}$ , *Subsesquitercia*, &c.

E. gr. 3 to 2 is in a *Sesquialterate Ratio*; 2 to 3 in a *Subsesquialterate*.

If the greater Term contain the less once, and over and above several aliquot Parts; the *Ratio* of the greater Inequality is call'd *Superpartiens*; that of the less Inequality, *Subsuperpartiens*.

Particularly, in the former Case, if the Exponent be  $1 \frac{1}{3}$ , the *Ratio* is call'd *Superpartiens tertias*; if the Exponent be  $1 \frac{1}{4}$ , *Superpartiens quartas*; if  $1 \frac{1}{5}$ , *Superpartiens quintas*, &c. In the latter Case, if the Exponent be  $\frac{1}{3}$ , the *Ratio* is call'd *Subsuperpartiens tertias*; if  $\frac{1}{4}$ , *Subsuperpartiens quartas*; if  $\frac{1}{5}$ , *Subsuperpartiens quintas*.

E. gr. the *Ratio* of 5 to 3 is *Superpartiens tertias*; that of 3 to 5, *Subsuperpartiens tertias*.

If the greater Term contain the less several times; and besides, some quoter Part of the same; the *Ratio* of the greater Inequality is call'd *Multiplex Superparticularis*; and the *Ratio* of the less Inequality, *Submultiplex Subsuperparticularis*.

Particularly, in the former Case, if the Exponent be  $2 \frac{1}{2}$ , the *Ratio* is call'd, *Duplo sesquialtera*; if  $3 \frac{1}{2}$ , *triplo sesquialtera*, &c. In the latter Case, if the Exponent be  $\frac{1}{2}$ , the *Ratio* is call'd *Subduplo subsesquialtera*; if  $\frac{1}{3}$ , *Subtriplo subsesquialtera*, &c.

E. gr. the *Ratio* of 16 to 5 is *triplo sesquialtera*; that of 4 to 9, *Subduplo subsesquialtera*.

Lastly, if the greater Term contain the less several times, and several aliquot Parts thereof besides; the *Ratio* of the greater Inequality is call'd *Multiplex superpartiens*; that of the less Inequality, *Submultiplex Subsuperpartiens*.

Particularly, in the former Case, if the Exponent be  $2 \frac{1}{3}$ , the *Ratio* is call'd, *duplo Superpartiens tertias*; if  $3 \frac{1}{4}$ , *triplo Superpartiens quartas*, &c. In the latter Case, if the Exponent be  $\frac{1}{3}$ , the *Ratio* is call'd *Subduplo Subsuperpartiens tertias*; if  $\frac{1}{4}$ , *Subtriplo Subsuperpartiens quartas*, &c.

E. gr. the *Ratio* of 25 to 7 is *triplo Superpartiens septimas*; that of 3 to 8, *Subduplo Subsuperpartiens tertias*.

These are the various Kinds of *Rational Ratios*; the Names whereof, though they occur but rarely among the modern Writers, (for in few thereof they use the smallest Terms of the *Ratios*, e. gr. *Sex duplo*, 2 to 1, *Sex sesquialterate*, 3 to 2) yet are they absolutely necessary to such as converse with the ancient Authors.

*Clavius* observes, that the Exponents denominate the *Ratios* of the greater Inequality, both in Deed, and Name; but the *Ratios* of the less Inequality, only in Deed, not in Name. But 'tis easy finding the Name in these; if you divide the Denominator of the Exponent, by the Numerator.

*E. g.* if the Exponent be  $\frac{1}{2}$ , then  $5 : 8 = 1 \frac{1}{2}$ ; whence it appears the Ratio is call'd *Subsuperpartiaris quintas*.

As to Names of *Irrational Ratio's*, no-body ever attempted them.

Some, or *Identic Ratio's*, are those whose Antecedents have an equal respect to their Consequents, *i. e.* whose Antecedents divided by their Consequents, give equal Exponents. See IDENTICITY.

And hence may the Identity of *Irrational Ratio's* be conceiv'd.

Hence, *First*, as oft as the Antecedent of one Ratio contains its Consequent, or what ever Part it contains of its Consequent, so oft, or such Part of the other Consequent does the Antecedent of the other Ratio contain; Or, as oft as the Antecedent of the one is contain'd in its Consequent, so oft is the Antecedent of the other contain'd in its Consequent.

*Secondly*, If A be to B as C to D, then will  $A : B :: C : D$ ; or  $A : B = C : D$ . The former of which is the usual Manner of representing the Identity of *Ratio's*; the latter is that of the excellent *Wolffius*; which has the Advantage of the former, in that the middle Character =, which denotes the sameness, is scientific, *i. e.* expresses the Relation of the thing represented, which the other :: does not. See CHARACTER.

Two equal *Ratio's*, *e. g.*  $B : C = D : E$ , we have already observed, do constitute a *Proportion*: Of two unequal *Ratio's*, *e. g.*  $A : B$  and  $C : D$  we call  $A : B$  the *Greater*, if  $A : B > C : D$ ; on the contrary we call  $C : D$  the *lesser*, if  $C : D < A : B$ .

Hence, we express a greater and less *Ratio* thus. *E. g.* 6 to 13 has a *greater Ratio*, than 5 to 4; for,  $6 : 3 (= 2) > 5 : 4 (= 1 \frac{1}{4})$ . But 3 to 6 has a *less Ratio* than 4 to 5, for  $\frac{3}{6} < \frac{4}{5}$ .

The *Ratio* is said to be compounded of two or more other *Ratio's*, which the Factors of the Antecedents of two or more *Ratio's* has to the Factors of their Consequents. Thus 6 to 7 is in a *Ratio* compounded of 2 to 6, and 3 to 12.

Particularly, if it be compounded of two, it is call'd a *Duplicate Ratio*; if of three, a *Triplicate*; if of four, *Quadruplicate*; and in the general *Multiplicate*, if it be compounded of several *Ratio's*. Thus  $48 : 3$  is a *duplicate Ratio* of  $4 : 1$  and  $12 : 3$ .

#### Properties of Ratio's of Quantities.

*First*, *Ratio's* similar to the same third, are also similar to one another; and those similar to similar, are also similar to one another.

*Secondly*, If  $A : B = C : D$ ; then, inversely,  $B : A = D : C$ . *Thirdly*, Similar Parts P and p have the same *Ratio* to Wholes T and t; and if the Wholes have the same *Ratio*, the Parts are similar.

*Fourthly*, If  $A : B = C : D$ ; then, alternately,  $A : C = B : D$ . And hence,  $A = C$ ; hence, also, if  $A : B = C : D$ ; and  $A : F = C : G$ ; we shall have  $B : F = D : G$ . Hence, again, if  $A : B = C : D$ ; and  $F : A = G : C$ ; we shall have  $F : B = G : D$ .

*Fifthly*, Those things which have the same *Ratio* to the same, or equal things, are equal: & *vice versa*.

*Sixthly*, If you multiply any Quantities, as A and B, by the same or equal Quantities; their Products D and E will be to each other as A and B.

*Seventhly*, If you divide any Quantities as A and B, by the same or equal Quantities, the Quotients F and G will be to each other as A and B.

*Eighthly*, The Exponent of a compound *Ratio* is equal to the Factors of the Exponents of the simple *Ratio*. See EXPONENT.

*Ninthly*, If you divide either the Antecedents, or the Consequents of similar *Ratio's*,  $A : B$  and  $C : D$  by the same E; in the former Case, the Quotients F and G will have the same *Ratio* to the Consequents B and D; in the latter, the Antecedents A and B will have the same *Ratio* to the Quotients H and K.

*Tenthly*, If there be several Quantities in the same continued *Ratio* A, B, C, D, E, &c. the first, A, is to the third, C, in a *duplicate Ratio*, to the fourth, D, in a *Triplicate*, to the fifth E, in a *Quadruplicate*, &c. *Ratio* of the *Ratio* of the first, A, to each, B.

*Eleventhly*, If there be any Series of Quantities in the same *Ratio*, A, B, C, D, E, F, &c. the *Ratio* of the first, A, to the last, F, is compounded of the intermediate *Ratio's*,  $A : B, B : C, C : D, D : E, E : F, &c.$

*Twelfthly*, *Ratio's* compounded of *Ratio's*, whereof each is equal to another, are equal among themselves. Thus the *Ratio's*  $90 : 3 = 960 : 32$  are compounded of  $6 : 3 = 4 : 2$ , and  $3 : 1 = 12 : 4$ ; and  $800 : 5 : 1 = 20 : 4$ .

For other Properties of similar or equal *Ratio's*, see PROPORTION. *RATIO*, in our Law Writers, is used for a Reason, or Judgment given in a Cause. Hence, *poenae ad rationem*, is to Cite one to appear in Judgment. *Wolffius*, 88.

*RATIO-STATUS*, *RAGIONE di stato*. See REASON of State.

*RATIOCINATION*, the Action of REASONING. See REASONING.

*RATION*, in the Forces, a Pittance, or Proportion of Am-

munition, Bread, Drink, or Forrage, distributed to each Soldier and Seaman for his daily Subsistence. See AMMUNITION, &c.

The *Rations* of Bread are regulated by Weight.—The Officers have several *Rations* according to their Quality, and the Number of Attendants they are obliged to keep.

The Horse have *Rations* of Hay and Oats, when they cannot go out to Forrage.—The Ship's Crews have their *Rations* of Bisket, Pulse, and Water, proportion'd according to their Stock.—When the *Rations* are augmented on Occasions of Rejoycing, it is call'd *double Ration*.

The usual *Ration* at Sea, particularly among the *Portugese*, &c. is a Pound and half of Bisket, a Pint of Wine, and a Quart of fresh Water per Day, And each Month an Arrobre or 31 Pound of Salt Meat, with some dried Fish and Onions.

Some write *Racionem*, and borrow the Word from the *Spanish Racion*. But they both come from the *Latin Ratio*; and in some Parts of the Sea they call it *Rasion*.

*RATIONABILIS parte hominum*, a Writ which lies for the Wife, against the Executors of her Husband denying her the third Part of her Husband's Goods, after Debts and Funeral Expenses paid. See GOODS.

*Ritzberbert* quotes *Magna Charta* and *Glanville*, to prove that by the Common Law on England, the Goods of the deceased, his Debts first paid, should be divided into three Parts; whereof his Wife to have one, his Children a second, and the Executors a third. Adding, that this Writ lies as well for the Children, &c. as the Wife. But it seems only to obtain where the Gaolism of the Country makes for it.

*RATIONABILES Expense, Reasonable Expense*; the Commons in Parliament, as well as the Profitors of the Clergy in Convocation, were antiently allow'd *Rationabilis Expense*; that is, such Allowance as the King, considering the Prices of all things, shall judge meet to impose on the People, to pay for the Subsistence of their Representatives. See REPRESENTATIVE, &c.

This in the 17th of *Edward II.* was 10 Groats per Day for Knights, and 5 for Burgesses. Afterwards, 4 Shillings a Day for Knights, and a Shilling for Burgesses; which was then deem'd an ample Retribution both for Expences, for Labour, Attendance, Neglect of their own Affairs, &c. See PARLIAMENT.

*RATIONABILIBUS devisis*, is a Writ that lies where two Lords have the seigneries joining together, for him that finds his Waste encroached upon, within the Memory of Man, against the Encroacher; thereby to rectify the Bounds of the Seigneries: in which respect *Ritzberbert* calls it, in its own Nature, a Writ of Right.

*RATIONAL, Reasonable*. See REASON.

*RATIONAL, or true Horizon*, is that whose Plane is conceived to pass through the Centre of the Earth; and which therefore divideth the Globe into two equal Portions or Hemispheres. See HORIZON.

'Tis call'd the *Rational Horizon*, because only conceived by the Understanding; in opposition to the *visible* or *apparent Horizon*, which is visible to the Eye. See SENSIBLE.

*RATIONAL Quantity or Number*, a Quantity or Number Commensurable to Unity. See NUMBER and UNITY.

Supposing any Quantity to be 1, there are infinite other Quantities, some whereof are Commensurable to it either simply, or in Power; these *Euclid* calls, *Rational Quantities*. See QUANTITY.

The rest, that are Incommensurable to 1, he calls, *Irrational Quantities*, or *Sorab*. See SURD.

*RATIONAL Integer*, or whole Number, is that whereof Unity is an aliquot Part. See NUMBER and ALIQUOT PART.

*RATIONAL fraction*, or broken Number, is that equal to some aliquot Part of Unity. See FRACTION.

*RATIONAL mixed Number*, is that consisting of an Integer and a Fraction, or of Unity, and a broken Number.

Commensurable Quantities are defined by being to one another, as one *Rational* Number to another.

For Unity is an aliquot Part of Unity; and a Fraction has some aliquot Part common with Unity: In things, therefore, that are as a *Rational* to a *Rational* Number, either the one is an aliquot Part of the other, or there is some common aliquot Part of both: Therefore they are Commensurable. See COMMENSURABLE.

Hence, if a *Rational* Number be divided by a *Rational*, the Quotient is a *Rational*.

*RATIONAL Ratio*, is a Ratio whose Terms are *Rational* Quantities; or a Ratio which is as one *Rational* Number to another, *e. g.* as 3 to 6. See RATIO.

The Exponent of a *Rational* Ratio is a *Rational* Quantity. See EXPONENT.

*RATIONALE*, an Account, or Solution of some Opinion, Action, Hypothesis, Phenomenon, or the like, on Principles of Reason.

Hence *Rationales* has become the Title of several Books; the most considerable is the *Rationale of the Divine Office*, by *Guill. Durandus*, a celebrated School Divine, Bishop of *Mende*; finish'd in 1286, as he himself tells us.

*RATIONALE*, is also an antient sacerdotal Vestment, wore by the High-Priest under the old Law; and call'd by the *Hebrews* *חֹטֵאֵת* *hobefet*;

*byflies*; by the Greeks *λεπιδω*; by the *Latins* *Rationale* and *Pectoreale*; and by the *English* *Translators*, *Bread-Plate*. See *PECTORALE*.

The *Rationale* was a Piece of embroider'd Stuff wore on the Breast, about a Span-square.

De *Cassio* describes it as a double Square of Thread; of four Colours, interwove with Gold, and set with twelve precious Stones in four Rows, whereon were engraven the Names of the twelve Tribes; and fasten'd to the Shoulder by two Chains and two Hooks of Gold.

The Form of the *Rationale* was prescribed by God himself, *Exod. 28*.

The *Rationale* appears to have been also antiently wore by the Bishops under the new Law. But Antheos are in doubt about its Form; some will have it resemble that of the *Jew*; others take it to be only the *Pallium*. See *PALLIUM*.

**RATIONALIS**, an Officer mentioned in several antient Inscriptions

*Lamprias*, in the Life of *Alex. Severus*, uses *Rationalis* as synonymous with *Procurator*. See *PROCURATOR*.

The *Rationalis* were Intendants, or Surveyors under the Emperors; and though *Lamprias* pretends they were first established by *Severus*; 'tis evident there were some under *Augustus*.

**RATIONIS OS**, in Anatomy, the Bone of the Fore-head, otherwise call'd *Os Frontis*. See *FRONTIS*.

**RATTLE**, among the Antients, was accounted a Musical Instrument, of the pulsatile Kind; call'd by the *Romans*, *Crepitaculum*. See *MUSIC*.

Mr. *Makoto* takes the *Tritinabulum*, *Crotalum*, and *Sistrum*, to have been only so many different Kinds of Rattles. See *CROTALUM*, *SISTRUM*, &c.

The Invention of the *Rattle* is ascribed to *Archytas*; whence *Aristotle* calls it, *αρχυτου πηλοσφαιρα*, *Archytas's Rattle*.

*Diogenianus* adds the Occasion of the Invention; viz. that having Children, he contriv'd this Instrument to prevent their tumbling over things about the House. So that how much sooner some Instruments have chang'd their uses, the *Rattle* were sure has preserv'd its.

**RATLINES**, or as the Seamen call them, **RATTLINGS**; those Lines which make the Ladder Steps, to get up the Shrouds and Puttrels: Hence call'd the *Rattlings of the Shrouds*.

**RAVELIN**, in Fortification, was antiently a flat Bastion, plac'd in the middle of a Curtain. See **BASTION** and **CURTAIN**.

'Tis since made a detach'd Piece, compos'd only of two Faces, which make a Salient Angle, without any Flanks; and rais'd before the Curtains or Counterscarps, and commonly call'd a *Half-Moon*.

A *Ravelin* is a Triangular Work resembling the Point of a Bastion, with the Flanks cut off.

Its use before a Curtain, is to cover the opposite Flanks of the two next Bastions. 'Tis also us'd to cover a Bridge or a Gate; and is always plac'd without the Moat.

What the Engineers call a *Ravelin*, the Soldiers generally call a *Demi-Lune*, or *Half-Moon*. See *DEMI-LUNE*, &c.

There are also double *Ravelins*, which serve to defend each other. They are said to be *double* when they are join'd by a Curtain.

**RAVISHMENT de Gard**, is a Writ which lies for him who took from the Guardian, the Body of his Ward. See **GARD**, **GUARDIAN**, **WARD**, &c.

**RAVISHMENT**, in Law, an unlawful taking either a Woman, or an Heir in Ward.

Sometimes it is also us'd in the same Sense as *Rape*. See **RAPE**.

**RAY**, **RADIUS**, in Opticks, a Line of Light, propagated from a radiant Point, through an unrefracting Medium. See **LIGHT**, **DIAPHRAGM**, &c.

Sir *Isaac Newton* defines *Rays* to be the least Parts of Light, whether successive in the same Line, or Contemporany, in several Lines.

For, that Light consists of Parts of both Kinds, appears hence, that one may stop what comes this Moment in any Point, and let pass that which comes the next; and again, may stop what comes in this Point, and let pass that in the next. Now, the least Light, or Part of Light which may be thus stopp'd alone, he calls a *Ray of Light*.

If the Parts of a *Ray of Light* do all lie frst through the Radiant and the Eye, the *Ray* is said to be *direct*: The Laws and Properties whereof make the Subject of *Opticks*. See **OPTICKS**.

If any of them be turned out of the Direction, or bent in their Passage, the *Ray* is said to be *refracted*. See **REFRACTION**.

If it strike on the Surface of any Body, and be driven back, it is said to be *reflected*. See **REFLECTION**.

In each Case, the *Ray*, as it falls either directly on the Eye, or on the Point of Reflection, or of Refraction, is said to be *incident*. See **INCIDENCE**.

Again, if several *Rays* be propagated from the Radiant Equidistantly from one another, they are call'd *Parallel Rays*. See **PARALLEL**.

If they come inclining towards each other, they are call'd *Converging Rays*. See **CONVERGING**.

And if they go continually receding from each other, they are call'd *diverging Rays*. See **DIVERGING**.

'Tis from the Circumstances of *Rays*, that the several Kinds of Bodies are distinguished in Opticks. A Body, *e. gr.* that diffuses in its own Light, or emits *Rays* of its own, is call'd a *Lucid*, or *Luminous* Body. See **LUMINARY**.

If it only reflect *Rays* it receives from another, it is call'd an *illuminated* Body.

If it only transmit *Rays*, it is call'd a *transparent* Body. See **TRANSPARENT**.

If it intercept the *Rays*, or refuse them Passage, it is call'd an *Opaque* Body. See **OPACITY**.

Hence, so Body Radiates, *i. e.* emits *Rays*, unless it be either luminous, or *illuminated*. See **RADIATION**.

'Tis by means of *Rays* reflected from the several Points of illuminated Objects to the Eye, that they become visible, and that Vision is perform'd; whence such *Rays* are call'd *visual Rays*. See **VISUAL**.

In effect we find that any Point of an Object is seen in all Places to which a right Line may be drawn from that Point: But it is allow'd, nothing can be seen without Light, therefore every Point of an Object diffuses innumerable *Rays* every way.

Again, from other Experiments it appears that the Images of all Objects, whence right Lines may be drawn to the Eye, are painted in the Eye, behind the Crystallin, very small, but very distinct.

And lastly, from other Experiments, that each *Ray* carries with it the Species, or Image of the radiating Point: And that the several *Rays* emitted from the same Point are again united in one Point, by the Crystallin, and thus thrown on the *Retina*. See **VISION**.

'Tis the Spissitude, or closeness of the *Rays* emitted from a luminous Body, that constitutes the Intensity of the Light. Yet the Direction wherein the *Rays* strike the Eye, have a good Sway. In effect, a Perpendicular *Ray*, striking with more force than an Oblique one, in the Ratio of the whole Sine to the Sine of the Angle of Obliquity, (as follows from the Laws of *Refraction*) a Perpendicular *Ray* will affect the Eye more vividly than an Oblique one in that Ratio.

If then the Spissitude of the *Rays* be equal, the Intensity will be as the Direction; if the Direction be the same, the Intensity will be as the Spissitude. If both differ, the Intensity will be in a Ratio compounded of the Direction and the Spissitude.

Hence, First, If Light be propagated in Parallel *Rays* thro' an unrefracting Medium, its Intensity will not be varied by Distance.

Secondly, If Light be propagated in *diverging Rays*, thro' an unrefracting Medium, its Intensity will decrease in a duplicate Ratio of the Distances from the radiant Point, reciprocally. See **QUALITY**.

Thirdly, If Light be propagated in *converging Rays* through an unrefracting Medium; its Intensity will increase in a duplicate Ratio of the Distances from the Point of Concourse, reciprocally.

Fourthly, If the Breadth of an illuminated Plane be to the Distance of the radiant Point, as 1 to 200000, 'tis the same thing as if the *Rays* struck upon it Parallel: And hence, since the Diameter of the Pupil of the Eye, when largest, scarce exceeds  $\frac{1}{4}$  of an Inch; the *Rays* will fall upon it Parallel, as to Sense, at the Distance of 3860 English Feet, which is nearly 6 Furlongs. See **LIGHT**.

The effect of Concave Lenses, and Convex Mirrors, is to make Parallel *Rays* diverge; *converging Rays* become Parallel; and *diverging Rays* to become more divergent. See **MIRROR**.

The effect of Convex Lenses, and Concave Mirrors, is to make *diverging Rays* become Parallel; Parallel *Rays* become Convergent, and *Converging Rays* to Converge the more. See **LENS**.

The *Rays* of Light are not Homogeneous, or Similar, but differ in all the Properties we know of, viz. *Refrangibility*, *Reflexibility*, and *Colour*. See **REFRANGIBILITY**, &c.

'Tis probable from the different *Refrangibility*, that the other Differences have their Rise; at least it appears, that those *Rays* which agree or differ in this, do so in all the rest.

Thus from the different Sensations the differently disposed *Rays* excite in us, we call them, *red Rays*, *yellow Rays*, &c. See **COLOUR**.

The effect of the *Prisms* is to separate and sort the different Kinds of *Rays*, which come bleed'd promiscuously from the Sun; and to throw each Kind by it self, according to its Degree of *Refrangibility* and *Colour*, Red to Red, Blue to Blue, &c. See **PRISM**.

Besides, *Refrangibility*, and the other Properties of the *Rays* of Light already ascertain'd by Observation and Experiment, Sir *Isaac Newton* suspects they may have many more; particularly, a Power of being inflected, or bent by the Action of distant Bodies; and those *Rays* which differ in *Refrangibility*, he conceives likewise to differ in this *Flexibility*.

In passing by the Edges and Sides of Bodies, he conceives that the *Rays* may be bent several times backwards and forwards, with a Motion like that of an Eel; and that those *Rays* which falling on

on Bodies are reflected or refracted e're they arrive at the Bodies. And adds, that they may be refracted, reflected, and inflected, all on the same Principle, acting in different Circumstances. See INFLECTION, &c.

Again, Do not the Rays falling on the Bottom of the Eye excite Vibrations in the Retina; which being propagated along the Fibres of the Optic Nerve into the Brain cause Vision? And don't several sorts of Rays make Vibrations of several Bignesses, which excite Sensations of several Colours, much after the manner as the Vibrations of the Air, according to their several Bignesses, excite Sensations of several Sounds? See SOUND.

Particularly, don't the most refrangible Rays excite the shortest Vibrations to make a Sensation of a deep Violet; and the least Refrangibles, the largest, to make a Sensation of a deep Red? And the several intermediate Kinds of Rays, Vibrations of intermediate Bignesses, to make Sensations of the intermediate Colours?

And may not the Harmony and Discord of Colours arise from the Proportion of these Vibrations; as those of Sound depend on the Vibrations of the Air: For some Colours, if viewed together, are agreeable, as Gold and Indigo; others Disagreeable? See CONCORD and HARMONY.

Again, Have not the Rays of Light several Sides endued with several Original Properties?

Every Ray of Light has two opposite Sides, originally endued with a Property whereon the unusual Refraction of Island Crystals depends; and other two opposite Sides not endued with that Property. See CRYSTAL.

Lastly, Are not the Rays of Light very small Bodies emitted from shining Substances?

Such Bodies may have all the Conditions of Light: And there is that Action and re-action between transparent Bodies and Light, which very much resembles the attractive Force between other Bodies. Nothing more is required for the Production of all the various Colours, and all the Degrees of Refrangibility, but that the Rays of Light be Bodies of different Sizes; the least of which may make Violet, the weakest and darkest of the Colours, and be the most easily diverted by refracting Surfaces from its rectilinear Course; and the rest as they are bigger and bigger, may make the stronger and more lucid Colours, blue, Green, Yellow, and Red. See VIOLET, RED, &c.

Nor is any thing more requisite for the putting of the Rays into Fits of easy Reflection, and easy Transmission, than that they be small Bodies, which by Attraction, or some other Force, excite Vibration in the Bodies they act upon; which Vibrations being swifter than the Rays, overtake them successively, and agitate them to as by Degrees to increase and decrease their Velocity, and thereby put them into those Fits. See TRANSMISSION.

Lastly, The unusual Refraction of Island Crystals looks very much as if it were perform'd by some attractive Virtue lodg'd in certain Sides both of the Rays and the Crystal.

Common RAY, in Opticks, is sometimes used for a right Line drawn from the Point of the Concourse of the two Optical Axes, through the middle of the right Line which passes by the Centre of the Pupil of the Eye. See AXIS.

Principal RAY, in Perspective, is the Perpendicular Distance between the Eye, and the Vertical Plane, or Table, as some call it. See PERSPECTIVE.

Pyramid of RAYS. See PYRAMID.

Fencil of RAYS. See PENCIL.

RE, in Grammar, &c. an inseparable Particle, or Preposition, added at the beginning of Words, to vary, double, or otherwise modify and circumstance their Meaning.

The modificative Re was first introduced by the Latines, from whom it is borrow'd into most of the modern Tongues. Prifimus derives it from *retra*, backwards; others rather derive *retra* from *re*; others derive *re* from the Greek *πίνα*, easily, or from *πίνα*, I flow.

The effect of the Re is various: usually it signifies *again*, *re-versus*, *ana*; as in *re-joy*, *re-sign*, *re-fume*, *re-coarse*, *re-bound*, *re-cre*, *re-hear*, *re-cognize*, *re-compare*, *re-double*, *re-liquish*, &c.

Sometimes it stands for *contra*, *contra*, *against*; as in *re-luctance*, *re-cumbent*, *re-close*, &c.

Sometimes for *super*, *super*, *over*, as in *re-dundant*; sometimes for *supra*, *longer*, *far* as in *re-moving*, &c.

RE, in Music. See NOTE.

REACH, in the Sea Language, the Distance between any two Points of Land that lie in a right Line one from another.

RE-ACTION, in Physics, the Action whereby a Body act'd upon, returns the Action, by a Reciprocal one, upon the Agent. See ACTION.

The Peripateticks define *Reaction* to be that which a passive Body returns upon the Agent, by means of some Quality contrary to that receiv'd therefrom; in the same Part wherewith the Agent acted; and at the same time: As if Water, while it is heated by the Fire, does, at the same time, cool the same Fire.

It was known, even in the Schools, that there is no Action in Nature, without *Reaction*; and it was a Maxim among them. *Omne Agens, Agens reparatur.*

But the Equality of the Actions was not known: Sir I. Newton establish'd it as one of the Laws of Nature, that *Action and Reaction are equal and contrary*; or that the mutual Actions of two Bodies striking one against another, are exactly equal, but in contrary Directions; or in other Words, that by the Action and Reaction of Bodies one on another, there are produced equal Changes in each; and those Changes are opposit'd towards directly contrary Parts or Ways. See LAW of NATURE.

Thus, whatever Body presses or draws another, is equally press'd or drawn by it again: If any one press a Stone with his Finger, his Finger is touch press'd by the Stone.

If a Horse by a Rope, &c. draw a Stone, the Horse will be equally drawn by the Stone; for the Rope being stretch'd both ways alike, endeavours to relax itself again, and by that means draws the Horse towards the Stone, and hinders the Progression of the Horse, as much as it forwards that of the Stone.

If any Body striking against another, doth by its Force any way change its Motion, it self will undergo the same Change in its own proper Motion, but towards a contrary Part; from the *Reaction* of that Body, and the Equality of its mutual Pressure.

By these Actions are produced equal Changes, not indeed of the Velocities, but of the Motions of Bodies; (that is, of such Bodies as have no impediment any other way) for the Changes of their Velocities being made towards contrary Parts, (because the Motions are equally changed) are reciprocally Proportional to the Bodies themselves. See MOTION.

Some of the School Philosophers deny any such thing as *Reaction*, properly so call'd, at all; urging that Action arises only from the Ratio of the greater Inequality; that is, we are only to account for Action the Excess of the Action, or what the Agent does more than is returned by the Patient. But the Equality between Action and Reaction, is an aside the Exception.

READINGS, in Criticism. *Various Readings, Varie Lectiones*, are the different Manners of reading the Text of Authors in ancient Manuscripts: A Diversity arising from the Corruption of Time, or the Ignorance of Copists. See TEXT.

A great Part of the Business of the Critics lies in setting the Readings, by confronting the various Readings of the several Manuscripts, and considering the Agreement of the Words and Sense.

The various Readings in the Bible and Classic Authors, are almost innumerable.

READINGS are also used for a sort of Commentary or Gloss on a Law, Text, Passage, or the like; to shew the Sense an Author takes it in, and the Application he conceives to be made of it.

RE-AFFORESTED, is where a Forest having been disafforested, is again made a Forest; as the Forest of Dean was by an Act of Parliament in the fourth of King Charles II. See FOREST, AFFOREST, DISAFFOREST, &c.

RE-AGGRAVATION, in the Romish Ecclesiastical Law, the last Monitory, published after three Admonitions, and before the last Excommunication. See MONITORY.

E're they proceed to fulminate the last Excommunication, they publish an Aggravation, and *Reaggravation*. *Fequet* observes, that in France the Minister is not allow'd to come to *Reaggravation*, without the Permission of the Bishop or Official, as well as that of the Lay Judge. See EXCOMMUNICATION.

REAL, REALE, is applied to a Being that actually exists; in which Sense it coincides with *Actual*. See ACTUAL. See also REALITY.

Real, in Law, is oppos'd to *Personal*.

Real Estate, is that consisting in Lands, Tenements, &c. See PERSONAL.

Real Action, that whereby the Plaintiff lays Title to Land, &c. See ACTION.

Customs are said to be *real*; that is, they determine all Inheritances within their Extent; and none may dispose of them, but according to the Conditions allow'd by the Customs where they are situate.

REAL HORIZON. See HORIZON.

REAL, or REALS, or RYALS, a Spanish Silver Coin; being the eighth Part of the Piaster or Piece of Eight. See PIASTER.

The *Real* is equal to about Six-pence  $\frac{1}{2}$  Sterling. See COIN.

The Silver *Real* is equal to 34 Silver Maravedis; the Copper *Real* to 34 Copper Maravedis, which only amount to 18 Silver Maravedis. See MARAVEDIS.

There are also *Reals of Eight*, *Reals of four*, *Reals of two*, and half *Real*.

The *Reals of eight* are the Piasters; those of four, half Piasters, &c.

Great Quantities of *Reals*, or *Reals of Eight*, are carried into the East-Indies, where they are divided into three Classes, and received on different Footings, *viz.* the *Old Real*, known by the Chapellet around, whereof 100 are Current for 215 Roupies; the *second*, known by the largeness of its Beads, Current at 212  $\frac{1}{2}$  Roupies for 100; and the *new* at 208  $\frac{1}{2}$  Roupies for 100 *Reals*. See ROUPIA.

The Word in the Original Spanish, *Reale*, signifies *Royal*.

REALGAL, or REALGAL, a Mineral; a kind of red Arsenic, differing from the common Arsenic, which is white; and

from Orpiment, which is yellow. See ARSENIC and ORPIMENT.

There are two Kinds of *Realgal*, the one *natural*, and the other *facitios*: The *Natural* is calcined in the Mine by the subterraneous Fires: The *Facitios*, which is the more common, is calcined by a common Fire.

Some abic Druggists doubt whether there be any such thing as a native *Realgal*.

The *Realgal* is a violent Poison; yet less Caustic than the common Arsenic. 'Tis of some use in Chirurgery. See ARSENIC.

In the History of the French Academy, we have an account of a Cup brought to Paris by the Embassadors of Siam, and presented there, as a Remedy used by that People against all Distempers. Upon an Examination, which had like to have cost M. Hemberg dear, he found it to be a kind of *Realgal*, or red Arsenic, more Caustic than ours.

Its use, among the *Siamois*, he takes to have been the same with that of *Regulus of Antimony*; viz. to give an emetic Quality to the Wine drunk out of it.

As the Dose of Medicines is much stronger in the torrid Zone than among us, (the Quantity of Ipecacuanha, e. g. ordinarily taken by the *Indians*, being twenty times as great as that among us) 'tis very possible a Cup of *Realgal*, though enough to Poison an *European*, may prove a gentle Medicine to a *Siamois*.

REALISE, in Commerce, a Term little known in Trade before the Year 1719, when those immense Fortunes began to be made in France and England, by the Business of Actions or Stock.

By *Realising*, is meant the Precaution many of those who had gain'd most, took, to convert their Paper into real Effects, as Lands, Houses, rich Moveables, Jewels, Plate; but above all into Current Species.

A Precaution, capable of ruining the State; but which the French Regency had the Wisdom not to frustrate, by taking proper Measures to have the Money, thus ready to be boarded up, returned to the Publick.

REALISTS, a Sect of School Philosophers, form'd in opposition to the *Nominalists*. See NOMINALIST.

Under the *Realists* are included the *Stoicks*, *Thomists*, and all, excepting the Followers of *Osham*. See SCOTIST, THOMIST, &c.

Their distinguishing Tenet is, that Universals are *Realities*, and have an actual Existence, out of Idea and Imagination; or, as they express it in the School Language, *a parte rei*: Whereas the *Nominalists* contend that they exist only in the Mind; are only Ideas, or Manners of conceiving things. See UNIVERSAL.

DEO. OSM, or OSHAM, a Native of Orleans, afterwards Abbot of St. Martin de Tornay, was the chief of the Sect of the *Realists*: He wrote three Books of Dialectics; where, on the Principles of *Aristotles*, and the Antients, he maintain'd that the Object of that Art is *Things*, not Words: Whence the Sect took its Rise and Name.

REALITY, REALITAS, in the Schools, a diminutive of *res*, *thing*; first used by the *Stoicks* to denote a thing which may exist of itself, or which has a full and absolute Being of it self, and is not considered as a Part of any other: Yet a *Reality* is conceived as something less than *Res*; and accordingly every *Res* is supposed to consist a Number of *Realities*, which they otherwise call *Formalities*.

Thus, e. g. in a Man, according to the Doctrine of the *Stoicks*, are a Number of *Realities*, viz. a Substance, Life, Animal, and Reason.

Some distinguish *Reality* into Subjective and Objective.

REALM, a Kingdom; or a Country which gives its Head or Governour the Denomination of King. See KING, MONARCHY, GOVERNMENT, &c.

The Word is form'd of the French, *Royaume*, which denotes the same thing.

REAR, a Term frequently used in Composition, to denote something behind or backwards in respect of another; in opposition to *Face*, or *Forward*, before.

It is form'd by Corruption of the French, *Arriere*, signifying the same thing.

REAR, in a military Sense, is used for the Hind-part of an Army, &c. in opposition to the Front, or Face thereof. See FRONT.

REAR-GUARD, is that Part of an Army which marches last; following the main Body, to hinder or stop Deserters. See GUARD.

REAR-HALF-FIRE, are the three hindermost Ranks of a Battalion, when it is drawn up first Deep. See FILE.

REAR-LINE, of an Army encamp'd, is the second Line; it lies about four or five hundred Yards distant from the first Line, which is call'd the Reserve Line. See LINE.

REAR-RANK, is the last Rank of a Battalion, or Squadron, when drawn up. See RANK.

REAR-ADMIRAL, is the Admiral of the third and last Squadron of the Royal Fleet. See ADMIRAL, SQUADRON, and FLEET.

REASON, RATIO, a Faculty, or Power of the Soul, whereby it distinguishes Good from Evil, Truth from Falshood. See SOUL and FACULTY.

*Reason* is, properly defined, that Principle, whereby, compar-

ing several Ideas together, we draw Consequences from the Relations they are found to have. See IDEA and RELATION.

Some of the later School Philosophers define Reason the Comprehension of many Principles which the Mind successively can conceive, and from which Conclusions may be drawn.

Others conceive *Reason* as no other than the Understanding it self, considered as it discourses. See UNDERSTANDING and DISCOURSE.

*Charron* thinks it is better defined, a very diffusive, innate Notion or Idea, arising from a continued Attention.

*Reason*, Mr. *Lock* observes, comprehends two distinct Faculties of the Mind, viz. *Sensitivity*, whereby it finds intermediate Ideas; and *Illation*, whereby it so orders and disposes of them as to discover what Connection there is in each link of the Chain whereby the Extremes are held together, and thereby, as it were, draws into view the Truth sought for.

*Illation*, or Inference, consists in nothing but the Perception of the Connection there is between the Ideas in each Step of the Deduction, whereby the Mind comes to see either the certain Agreement or Disagreement of any two Ideas; as in Demonstration, in which it arrives at Knowledge: Or their probable Connection, on which it gives or withholds its Assent; as in Opinion. See KNOWLEDGE and OPINION.

Sense and Intuition reach but a little way: the greatest Part of our Knowledge depends upon Deductions and intermediate Ideas. In these Cases, where we must take Propositions for true, without being certain of their being so, we have need to find out, examine, and compare the Grounds of their Probability: In both Cases, the Faculty which finds out the Means, and rightly applies them to discover Certainty in the one, and Probability in the other, is that which we call *Reason*.

In *Reason*, therefore, we may consider four Degrees: First, The discovering and finding out of Proofs. See INVENTION.

Secondly, The regular and methodical Disposition of them, and laying them in such Order, as their Connection may be plainly perceived. See METHOD.

Thirdly, The perceiving of their Connection; and, Fourthly, The making a right Conclusion. See CONCLUSION.

*Reason* fails us in several Instances: As, First, Where our Ideas fall. See IGNORANCE.

Secondly, It is often at a loss because of the Obscurity, Confusion, or Imperfection of the Ideas it is employ'd about: Thus, having no perfect Idea of the least Extension of Matter, nor of Infinity, we are at a loss about the Divisibility of Matter.

Thirdly, Our *Reason* is often at a stand because it perceives not those Ideas which would serve to shew the certain or probable Agreement or Disagreement of any two other Ideas.

Fourthly, Our *Reason* is often engaged in Absurdities and Difficulties, by proceeding upon false Principles, which being followed, lead Men into Contradictions to themselves, and Inconsistency in their own Thoughts.

Fifthly, Dubious Words, and uncertain Signs, often puzzle Men's *Reason*, and bring them to a Non-plus.

Though the deducing one Proposition from another, be a great Part of *Reason*, and that about which it is usually employ'd; yet the principal Act of Ratiocination is the finding the Agreement or Disagreement of two Ideas one with another, by the Intervention of a third. As a Man, by a Yard, finds two Hoopes to be of the same Length, which could not be brought together to measure their Equality by *Juxta-Ponion*.

Words have their Consequences as the Signs of such Ideas and Things agree, or disagree, with what they really are; but we observe it only by our Ideas. See REASONING.

Hence we may be able to form an Idea of that ordinary Distinction of things, into such as are according to, those that are above, and those contrary to *Reason*.

According to *Reason*, are such Propositions, whose Truth we can discover by examining and tracing those Ideas we have from Sensation and Reflection, and by natural Deduction find to be true or probable.

Above *Reason* are such Propositions, whose Truth or Probability we cannot by *Reason* derive from those Principles.

Contrary to *Reason*, are such Propositions as are inconsistent with, or irreconcilable to, our clear and distinct Ideas.

Thus the Existence of one God, is according to *Reason*: The Existence of more than one God, contrary to Reason: The Resurrection of the Body after Death, above *Reason*. Above *Reason* may be also taken in a double Sense; viz. above Probability, or above Certainty.

They who dispute most against the Power and Privileges of Human *Reason*, do it because their own *Reason* persuades them to that Belief; and so, whether the Victory be on their or our Side, are equally defeated.

They seek to terrify us with the Example of many great Wits, who by following this *Ignis fatuus*, (so they call the only Pole Star God has given us to direct our Course by) have fallen into wild and ridiculous Opinions, and increas'd the Catalogues of Heresies to no great Number: But these Men either followed not their *Reason*, but made it follow their Will; or first hood-wink'd it by Interest and Prejudice, and then bid it shew them the way; or were wanting in those necessary Diligences required for so doubtful

doubtful a Privilege: Or, if, without any of these, the Weakness of their Understanding had deceived them, the Error is neither hurtful to themselves, nor would be to others, if this Doctrine of governing ourselves by our own Reason, and not by Authority and Example, were established. *Dist. amara. Hum. Reaf.*

It is not the use of such Liberty, but the appropriating it to ourselves, that is the Cause of all the Disorders charged thereon: For those who lay a Restraint on other Men's Reason, have first made use of their own to fetter them, and do make use of it in this very restraining of others. *Ibid.*

REASON, in Matters of Religion, is used in opposition to Faith. See FAITH.

This use of the Word, Mr. Lock takes to be in it self very improper: For Faith is nothing but a firm assent of the Mind; which if it be regulated, as it is our Duty, cannot be afforded to any thing but upon good Reason, and so cannot be opposite to it.

He that believes without having any Reason for believing, may be in love with his own Fancies, but neither seeks Truth, as he ought, nor pays the Obedience due to his Maker, who would have him use those discerning Faculties he has given him, to keep him out of Mistake and Error.—But since Reason and Faith are by some Men opposed, it may be necessary to consider them together.

Reason, as contradistinguished to Faith, is the Discovery of the Certainty or Probability of such Propositions, or Truths, which the Mind arrives at by Deductions made from such Ideas which it has got by the use of its natural Faculties, viz. by Sensation or Reflection.

Faith, on the other Hand, is the Assent to any Proposition upon the Credit of the Proposer, as coming immediately from God; which we call Revelation. See REVELATION.

REASON, in Logic, &c. a necessary or probable Argument; or an Answer to the Question, *cur est?* Why is it?

As, if it be enquired, Why do the Subject and Predicate agree? And it is answer'd, Because they are spoke of the same thing. This last Enunciation is a Reason.

Hence, say the Schoolmen, Because, *quia*, is the Sign or Character of a Reason, as *non, no*, of a Negation, and *est, is*, of an Assertion.

They make three Kinds of Reason, *Rationes; viz. Ratio ut, ut, that; ut, lest; and quia, because.* For, answering to a Question, *cur, Why*; we begin with *because, quia*; as, Why do you study? that I may become learned; which is the *Ratio ut, Again, Why do you study? Lest I should be ignorant; which is the Ratio ut, Lastly, Why is a Body tangible? Because Matter is impenetrable; which is the Ratio quia.*

The *Ratio ut*, properly denotes the End, or final Cause; the *Ratio no*, the Beginning; and accordingly the one is called the Beginning, the other the End; and the *Ratio quia*, left, the only Reason, properly so called.

Among Metaphysicians, REASON is used in the same Sense with Essence; or that whereby any thing is what it is. See ESSENCE.

This is sometimes also call'd *formal Reason*, as representing the thing under that Form or Nature under which it is conceived.

REASON, in Mathematics. See RATIO.

Reason of State, *Ratio Status*, in Matters of Policy, a Rule or Maxim, whether it be Good, or Evil, which may be of Service to the State.

Reason of State, is properly understood of something that is necessary and expedient for the Interest of the Government, but contrary to moral Honesty or Justice.

The Politicians have a long time disputed about the *Ratio Status*: Whether States and Governments are tied down to the same Laws of Morality with individual Persons; or whether things, otherwise Immoral and Unlawful, may not be practis'd on urgent Occasions, by way of Reason of State.

The Question is, Whether any thing be Unlawful, or prohibited a State, that is necessary to that State; or whether it be allow'd to preserve it self on any Terms.

The Phrase is borrowed from the *Italians*, who first us'd *Ratio de stato* in this Sense.

REASONABLE *Ad*, a Duty which the Lord of the Fee anciently claimed of his Tenants holding in Knight's Service, or in Socage, towards the marrying his Daughter, or the making his eldest Son Knight. See SERVICE, SOCAGE, &c.

It is taken away by the Stat. 2. Car. II.

REASONING, RATIOCINATION, the exercise of that Faculty of the Mind call'd Reason; or Reason deduced into Discourse. See REASON.

The Agreement or Disagreement of two Ideas, does not appear from the bare Consideration of the Ideas themselves; unless some third be call'd in, and compared, either separately or conjointly therewith: The Act, then, whereby from Ideas thus disposed and compared, we judge this or that to be so or not so, is call'd Reasoning.

Robault defines a Reasoning to be a Judgment depending on some Antecedent Judgment: Thus; having judg'd that no even Number can be compos'd of five uneven Numbers; and that ten is an even Number; to conclude that ten cannot be divided into five uneven Parts, is a *Ratiocinatio*, or Reasoning.

This agrees with Father *Mallebranche's* Doctrine, one of the great Points whereof is, that Reasoning, on the Part of the Understanding, is only a meer Perceiving. See PERCEPTION.

That excellent Author endeavours to shew, that as to the Understanding, there is no Difference between a simple Perceiving, a Judgment, and a Reasoning, except in this, that the Understanding perceives a simple thing without any Relation to any thing else, by a simple Perceiving.

That it perceives the Relations between two or more things in a Judgment.

And, lastly, that it perceives the Relations that are between the Relations of things in a Reasoning. So that all the Operations of the Understanding are no more than meer Perceptions. See JUDGMENT.

Thus, *e. gr.* when we conclude, that 4 being less than 6; twice 2 being equal to 4, are of Consequence less than 6; we do no more than perceive the Relation of the Inequality between the Relation of twice two and four, and the Relation of 4 and 6. See UNOBTAINING.

The manner of proceeding judly in Reasoning, so as to arrive with the greater safety at the Knowledge of Truth, makes what we call Method. See METHOD.

For the real Benefit of Logic to Reasoning, see LOGIC and SYLLOGISM.

RE-ATTACHMENT, in Law, a second Attachment of him who was formerly attach'd, and dismiss'd the Court without Day; as by the not coming of the Justices, or the like Casualty. See ATTACHMENT.

Brook makes Reattachment either General or Special.

General is where a Man is reattached for his Appearance on all Writs of Adlige lying against him; Special, for one or more certain Writs.

RE-BAPTISANTS, a Sect in Religion, who maintain that People irregularly baptized, are to be baptized a-fresh. See BAPTISM.

The Anabaptists are *Rebaptisants*; baptizing those at Maturity who had been before baptized in Childhood. See ANABAPTIST.

St. Cyprian, and Pope Stephen, had mighty Differences about the Rebaptisation of converted Heretics.

Donatus was condemn'd at Rome in a Council, for having re-baptized some Persons who had fallen into Idolatry after their first Baptism. See DONATIST.

REBATE, REBATEMENT, Prompt Payment, in Commerce, a Term much us'd at Amsterdam, for a Discount or Abatement in the Price of certain Commodities, when the Buyer advances the Sum in hand for which he might have taken time. See DISCOUNT.

The Rebate is estimat'd by Months; and is only allowed for certain Kinds of Merchandizes, which, according to the Custom of Amsterdam, are,

German Wools,	} which are fold at	} Months Rebate.
Albes, and Pot-Albes,		
Italian Silks,		
Sugars of Brazil,		
Spanish Wools,		

That is, these Commodities are sold for ready Money; only deducting or rebating the Interest of the Money, which ought not to be paid till the End of 15, 18, &c. Months.

This Interest, call'd *Rebate*, is usually regulated on the Footing of 8 per Cent. per Annum.

The Reason of this Expedient is, that the Merchants having not always wherewithal to pay for their Goods in hand, by means of the Rebatement, such as have, will find their Account in it; and such as have not, will be engag'd to discharge themselves as soon as possible, in hopes of the Discount.

REBATEMENT, in Heraldry, a Diminution or Abatement of the Dignity of the Figures or Bearings in a Coat of Arms. See ABATEMENT.

REBELLION, originally signify'd a second Resistance, or Rising of such as had been formerly overcome in Battle by the Romans and had yielded themselves to their Subjection.

It is now generally us'd for a traitorous taking up of Arms against the King; either by his own natural Subjects, or by those formerly subdued.

Rebel is sometimes also us'd in our ancient Statutes, for a Person who wilfully breaks a Law; and sometimes for a Villain disobeying his Lord.

Commission of REBELLION. See COMMISSION.

REBELLIOUS Assembly, a gathering of twelve Persons, or more, intending or going about, pestiling, &c. unlawfully, and of their own Authority, to change any Laws of the Realm; or to destroy the Enclosure of any Park or Ground enclosed, Banks of Fish-Ponds, Pools, Conduits, &c. to the intent the same shall remain void, or to the intent to have way in any of the said Grounds; or to destroy the Deer in any Park, Fish in Ponds, Conies in any Warren, Dove-Houses, &c. or to burn Stacks of Corn, or to abate Rents, or Prices of Victuals. See RIOT, &c.

REBOUND. See RECOIL.

**REBUS**, a *Name-Devise*, as *Cambles* explains it; or an enigmatical Representation of some Name, &c. by using a Figure, or Picture, instead of a Word, or Part of a Word. See *DEVISE*.

Such is that of the Gallant, mentioned by *Cambles*, who expressed his love to *Rose Hill*, by painting in the Border of his Gown, a *Rose*, a *Hill*, an *Eye*, a *Loaf*, and a *Wall*; which in the *Rebus-Stile*, reads, *Rose Hill I love well*.

The *Picards* have the Honour of the Invention of this notable Kind of Wit; whence the *French*, to this Day, call it, *Rebus de Picardie*. *Cambles* adds, that the *English* first learnt it of them in the Reign of our *Henry III.* by means of the Garrisones we then had in *Calais*, *Guisnes*, and other Places bordering on *Picardy*.

Its Origin is by *Messias*, &c. ascribed to the Priests of *Picardy*, who, it seems, antiently, in Carnival-Time, used every Year to make certain Libels entitled, de *Rebus que gerantur*, being Raileries on what Intrigues and Transactions had passed about the City; wherein they made great use of such sort of Equivoques and Allusives, breaking and joining Words, and supplying them with Paintings.

Thus in the *Rebus of Picardy*, says *Morat*, a Horse-comb, *Estrille*; a Scythe, *Janx*; and a *Calif*, *reus*, make *Errille Faveus*. But the Practice has been since prohibited, by reason of the Scandal.

*Cambles* tells us, the *Rebus* was in wonderful Esteem among our Forefathers; and that he was no-body who could not Hammer out of his Name an Invention by this Wit-craft, and *Picardie* it accordingly.

The *Secur Des Accords*, has made an ample Collection of the most famous *Rebus de Picardie*. And Mr. *Cambles* has done something of the same Kind in his Remains.—The Abbot of *Ramsay*, he tells us, engraving in his Seal a *Raw* in the *Sea*, with this Verse, to shew he was a right *Ram*, *Cujus signa gerat, dux Gregei est at ego.—Sic Thomas Caval*, (*Caval* signifying a Horse) engraved a galloping Horse in his Seal, with this impertinent Verse, *Thomas Cavalus, cum cernit equos Equum*.—So *John Englishhead* bore in his Seal an Eagle's Head with this Motto around it, *Hic Aquilo Caput est, signum: figura Johannis*.

*Baldwin*, Prior of *St. Bartholomew's*, signified his Name by a *Bait* thro't through a *Tau*.—*Isip*, Abbot of *Westminster*, a Man highly in favour with *Henry VII.* had a quadruple *Rebus* for his single Name; sometimes he set up in his Windows an *Eye* with a *Skip* of a Tree; and sometimes an *I* with the *fold skip*; in other Places one slipping Boughs in a Tree; and in others, one slipping from a Tree; with the Word, *I-sip*.

*Thomas*, Earl of *Arundel*, signified his Name by a Capital *A* in a *Rundell*. *Mortus*, the great Archbishop of *Canterbury*, was contem'd to use *Mov* upon a *Tau*; and sometimes a *Mulberry* call'd *Moras*, out of a *Tau*. So *Latius*, *Thornton*, *Athos*, &c. signified their Names with a *Late*, a *Thorn*, an *Alb*, upon a *Tim*. So a *Hare* on a *Bottle* was the Device of *Harebottle*; a *Mag-pye* on a *Goat*, of *Pigot*; a *Hare* by a *Sheaf* of *Rye* in the *Sun*, of *Harrison*; *Lionel Ducket* used a *Lion* with an *L* on his Head, whereas it should have been on his Tail: Had the *Lion* been eating a *Duck*, says *Cambles*, it had been a rare Device, worth a *Duck* or a *Duck-egg*. *Garret Dewis* signified his Name on his Sign by two Men in a *Garret* casting *Dewis* at *Dice*.

*Abel Dragger's* Device in *Ben. Jenson's Almanack*, and *Jack of Newberry* in the Spectator, are known to every Body.—But the *Rebus* being once rais'd to the Signs, grew out of Fashion at Court, and has been left to hang there ever since: Indeed Attempts have been lately made for its Rescue by a Reverend Divine, in his *Thoubridge Love-Letters*, &c.

Yet has the *Rebus* Antiquity on its Side, as having been in use in the pure *Anglian* Age: *Cicero*, in a Dedication to the Gods, inscribed *Marcus Tullius*, with a little Pease, call'd by the *Latins* *Cler*; by us, *Chib-Peas*. And *Julius Caesar*, in some of his Coins, used an *Elephant*, call'd *Caesar* in the *Mauritanian* Tongue. Add to these, that the two Mint Masters in that Age, *L. Aquilius Florus*, and *Vasinius Vistulus*, used, the first a *Flower*, the second a *Call*, on the Reverse of their Coins.

**REBUTTER**, in Law, when a Man grants Land secured to the use of himself and the Issue of his Body, to another in Fee, with Warranty; and the Donce leasing out the Land to a third Person for Years: The Heir of the Donor implies the Tenant; alleging the Land was in Tail to him; and the Donce comes in, and by virtue of the Warranty made by the Donor, repells, or rebuts, the Heir: Because, though the Land was intailed to him, yet he is Heir to the Warranty likewise.

This is call'd a *Relatter*, from *Re*, and the *French*, *bouter*, to repel, or bar.

Again, if I grant to the Tenant to hold *Sine Insuperatione Vassalli*, and afterwards impell him for Waste; he may debar me of the Action, by shewing my Grant, which is likewise a *Relatter*.

**RECAPITATION**. See **PALINOLOGY**.

**RECAPITULATION**, in Oratory, &c. a Part of the Peroration; call'd also, *Anaphorology*. See **PERORATION**, &c. *Recapitulation* is a summary of the preceding Discourse; or a concise, transient Enumeration of the principal things insisted on at large therein; whereby the Force of the whole is collected into one View.

An Instance of this may be given in the Peroration of *Cicero's*

*Mambian*: *Quare cum Bellum ita Necessarium sit ut neque non possit: Ita Magnus ut Accuratissime sit Adversus Romanos; & cum et Imperatorum proficere possint, in quo fit maxima belli fuitia, singulari Virtute, Clarissima auctoritate, egregia fortuna: Dubitatus, Quiritis, qua.*

**RECAPTION**, in Law, a second Distress of one formerly distrain'd for the same Cause, and also during the Plea grounded on the former Distress. See **DISTRESS**.

It is also a Writ lying for the Party thus distrain'd.

**RECEIPT**, or **RECEIT**, in Commerce, an Acquittance or Discharge; or an Act whereby it appears a thing has been paid off, or acquitted.

Where the *Receipt* is on the back of a Bill, &c. 'tis usually call'd an *Indorsement*. See **INDORSEMENT**.

Among *Mechanicks*, &c. *Receipt* usually makes the second of the three Articles of an Account: The *Receipt* contains the Money received; the two others the Expence, and the Return or Balance.

**RECEIPT**, or **RECEIT**, in Law, is an Admission, or receiving of any Person to plead his Right, in a Cause formerly commenc'd between two other Persons.

As if a Tenant for Life, or Years, brings an Action; he in the Reversion comes in, and prays to be received, to defend the Land, and to plead with the Demandant.

*Receipt* is also applied to an Admittance of Plea, though the Controversy be only between two.

*Receipt of Homage* is the Lord's receiving Homage of his Tenants, at his admission to the Land. See **HOMAGE**.

**RECEIPT** of the Exchequer; } See **EXCHEQUER**.

**RECEIPT**, in Medicine, } See **RECIPE**.

**RECEIVER**, a Vessel used in Chymistry, Pneumatics, &c. See **RECIPIENT**.

**RECEIVER**, is also an Officer; whereof there are various Kinds, denominated from the particular Matters they Receive, the Places where, or the Persons for whom, &c.

As, *Receiver of Rents*: *Receiver General* of the Customs. See **CUSTOMS**.

*Receiver of the Fines*, upon Original Writs in Chancery.

*Receiver General* of the *Dutchy of Lancaster*, who gathers all the Revenues and Fines of the Lands of the said *Dutchy*, all Forfeitures, Attachments, &c. See **DUTCHY**, &c.

**RECEIVER**, **RECEPTOR**, and **RECEPTOR**, in Law, is used commonly in the Evil Part, for such as knowingly receive stolen Goods from Thieves, and conceal them.

The Crime is Felony, and the Punishment Transportation.

**RECEPTACULUM** *Chylis*, or *Cisterna Chylis*, or **RECEPTACULUM** *Communis*, in Anatomy, a Reservoir or Cavity near the left Kidney, into which the lacteal Vessels do all Discharge their Contents. See **LACTEAL**.

This Receiver, call'd from its Inventor *Ducius Præpositus*, lies under the Emalgam and great Arteries, between the two Origins of the Diaphragm. Fisher do the lacteal vessels of the second Order, bring the Chyle after its being diluted, and render'd thinner by the Lympha in the Glands of the Mesentery. See **CHYLE** and **MESENTERY**.

In a Preparation of this Part, by filling it with Mercury, Mr. *Couper* found it to consist of three several large Trunks; two of them more than a Quarter of an Inch in Diameter.

This Division is only observed in human Bodies, in whom Dr. *Dryle* thinks its erect Position makes it necessary, in order to take off the Resistance which would arise from the Pressure of the Chyle and Lympha, were it contained in a single Receiver. In Quadrupeds, its Horizontal Position may make one Trunk sufficient.

Its *Osibus* or Exit is upwards in the THORAX, and thence call'd the *Thorax Duct*. See **THORACIC DUCT**.

**RECEPTION**, **RECEPTIO**, **Receiving**, in Philosophy, the same with *Passio*, considered as opposed to *Affectio*.

The Schoolmen, however, make some Difference: The *Receptive Passio*, say they, does not tend to the destruction of the Being, as *Passio* does; but to the Perfection thereof: It is conceived as the Acquisition of some new Reality or Modification, by means of the Action of another.

**RECEPTION** is also popularly used for the manner of treating or entertaining a Person; and of the Solemnities and Ceremonies practiced on that Occasion.

The Queen of *Sweden's Reception* into *Paris* was one of the most magnificent these Ages have seen. The *Reception* of Embassadors is usually done with a great deal of Pomp.

**RECEPTION**, is sometimes also used for the act of approving, accepting, and admitting a thing.

The Canon Law only binds where it is receiv'd: The Civil Law is received in some Countries.

The *French* would never receive the Council of *Trent*, the *Spanish* Inquisition, nor the Dogmata of the Ultramontane Canonists.

**RECEPTION**, in Astrology, is a Dignity befalling two Planets when they exchange Houses; *e. gr.* when the Sun arrives in Cancer, the House of the Moon; and the Moon, in her turn, arrives in the Sun's House.

The Term is also used when two Planets exchange Exaltation.

**RECESSION** of the Equinoxes. See PRECESSION.  
**RECESSUS Imperii**, *Recess of the Empire*, a Phrase used in speaking of the Affairs of Germany; signifying a Collection of the Vices or Detriminations of a Dyet. See DYET.

At the end of each Dyet, &c it breaks up, they gather together all their Resolutions, and reduce them into Writing; the Act which contains them they call *Recessus Imperii*, because made when on the Point of retiring.

There being, now, no Articles of Succours for the War against the Turks, which used to make the greatest Part of the *Recessus Imperii*; they are at a loss for Matter to fill them withal, as well as for the Manner of drawing them up. *Miscellan.*

The Disorders in the Imperial Chamber of *Spire* were so great, that in 1654, they made several Regulations therein; infered in the *Recessus Imperii*. *Id.* See CHAMBER.

**RECHABITES**, a Kind of Religious Order among the ancient Jews, instituted by *Jonathan* the Son of *Rehob*; comprehending his Family and Posterity.

Their Founder prescribed them three things; *First*, Not to drink any Wine. *Secondly*, Not to build any Houles, but to dwell under Tents. *Thirdly*, Not to till any Corn, or Plant any Vines.

The *Rechabites* observ'd these Rules with a great deal of strictness, as appears from *Jeremy xxxv. 6, &c.*

Whence *St. Jerom* in his xiii Epistle to *Paschasius*, calls them *Manichæi, Manichæi*.

This *Jonathan* lived under *Jofias* King of *Judah*; his Father *Rehob*, from whom his Posterity were denominat'd, descended from *Raguel* or *Jethro*, Father-in-law to *Moses*, who was a Chanaanite, or of the Race of *Cin*; in whence *Cinean* and *Rechabite*, are used as synonymous in Scripture.

**RECHANGE**, or **RE-EXCHANGE**, in Commerce, a second Payment of the Price of Exchange; or rather the Price of a New Exchange, due upon a Bill of Exchange that comes to be protested; and to be refunded the Bearer, by the Drawer, or Endorser. See EXCHANGE.

The Occasion of *Rechange* is, when the Bearer of a Bill of Exchange, after protesting it for want either of Acceptance, or of Payment, borrows Money on his own Promise, Bond, or the like; or draws a Bill of Exchange in the Place where the Payment was to be made, on the Person who furnished the first; for which he pays a second Exchange, which being added to the first already paid, the Drawer of the first Bill makes two Exchanges, properly call'd *Exchange* and *Re-exchange*. See BILL and PROTEST.

The Bearer of a protested Bill has a right to recover both the one and the other on the Drawer. Yet the simple Protestation the Bearer makes in the Act of *Protest*, that he will take up a like Sum at *Re-exchange*, for want of his Bill being accepted or paid; is not sufficient to entitle him to demand the Reimbursement of his *Rechange*; unless he make it appear he has actually taken up Money in the Place whereon the Bill was drawn.

Otherwise, the *Rechange* will only amount to the Reimbursement of the first Exchange, with Interest, the Expenses of Protesting, and of the Journey, if there have been any.

If a Bill of Exchange, payable to the Bearer, or Order, come to be protested, the *Rechange* is only due upon the Drawer for the Place where the Remittance was made; not for those Places where it may have been negotiated; at least, the Drawer has a Right to be refunded his *Rechange* for those Places, by the Endorser.

Indeed the *Rechange* is due from the Drawer upon all Places where a Power of Negotiating is given by the Bill, and upon all others, if the Power of Negotiating be Indefinite.

Laiety, The Interest of the *Rechange*, of the Expenses of the Protest, and the Journey, are only due from the Day of the Demand.

'Tis supposed to be the *Gibelin* driven out of *Italy* by the Faction of the *Guelphs*, and shelter'd at *Amsterdam*, who first established the Custom of *Rechange*, on pretence of the Interests, Damages, and Expenses they underwent, when the Bills given them for the Effects they had been obliged to abandon, were not accepted, but came to be protested. See BILL of Exchange.

RECHANGE is also used at Sea for such Tackle as is kept in Reserve aboard the Ship, to serve in Case of failure of that already in Use. See TACKLE.

The *Levantine* use the Word *Respost*, or *Resist* in the same Sense.

**RECHARGE**, of a Fire-Arm, is a second loading or Charge. See CHARGE.

The *Recharge* should never be so deep as the first Charge, lest the Piece being over-heated should burst.

**RECHACING**, in Hunting, the driving back of the Deer, or other Beasts, into the Forests, Chaces, &c. which had straggled out into the Copies, or Thickets, &c. See FOREST, &c.

Antiently there were Offices of *Rechargers* of the Deer, bestowed by the King on Gentlemen, or old Hunters, with Salaries for the keeping of running Dogs, to *recharge* the Deer into

the Forests, and then to beat them off, without pursuing any farther. See PURSUE.

**RECHÉAT**, in Hunting, a Lesson which the Huntsman teaches on the Horn, when the Hounds have lost their Game; to call them back from pursuing a Courser-licent.

**RECIPE**, in Medicine, a Prescription, or Formula of a Remedy, appointed to be administered to a Patient. See PRESCRIPTION.

'Tis thus call'd, because always beginning with the Word *Recipe*, Take; ordinarily express'd by *R.*

**RECIPIANGLE**, or **RECIPIENT-ANGLE**, a Mathematical Instrument, serving to take the QUANTITY of Angles, especially in the making of Plans of Fortifications.

The *Recipiangle* is a popular Instrument among the *French*, but little known among us: 'Tis usually very simple; in Form of a Square, or rather a Bevel; consisting of two Arms or Branches, riveted together, and yet moveable, like a Sector on the Centre or Rivet.

To take an Angle with it, they lay the Centre of the Protractor to the Joint, and the Degrees cut by the Edge shew the QUANTITY of the Angle: Otherwise the Angle made by the two Rulers is drawn on Paper, and then measured with a Protractor.

Sometimes there is a Circle divided into Degrees, added over the Centre or Rivet, with an Index to shew the Degrees without a Protractor: At other times the under Branch is divided.

To measure a Salient Angle with any of the *Recipiangles*, apply the Infixes to the Lines that form the Angle; for a re-entering Angle, apply the outfixes, &c.

**RECIPIENT**, **RECEIVER**, in Chymistry, an Appendage of an Alembic, Retort, &c. being a Vessel luted to the neck thereof, to receive the Liquor rais'd in Distillation, &c. See ALEMBIC, RETORT, DISTILLATION, &c.

**RECIPIENT** is also Part of the Apparatus of an Air Pump; being a Glass Vessel placed a-top of the Plume, for the Air to be exhausted from. See AIR-PUMP.

To an Air-Pump belong various *Recipients*, of various Forms and Sizes, and serving for various Purposes. See VACUUM.

**RECIPROCAL**, something that is Mutual, or which is return'd equally on both Sides, or affects both Parties alike. See MUTUAL.

Thus, we say, the end of Human Society is to afford each other reciprocal Aid.—There are reciprocal Duties between the Prince and his Subjects, the Husband and Wife, &c.

The *Lex Talionis* establishes a kind of Reciprocity of Justice.

There is a *Reciprocal* Action between the Agent and Patient.

See REACTION.

If two similar Triangles be cut by Parallel Lines, the Sections of the Lines will be Proportional; and *Reciprocally*, if the Sides be cut Proportionally, the Sides are similar. See TRIANGLE.

**RECIPROCAL**, in Logic, is applied to Terms which have the same Signification, or are convertible; as *Reasonable Animal*, and *Man*. See CONVERTIBLE and TERM.

The Schoolmen define *Reciprocation*, a Conversion of the several Terms in an Enunciation. And Terms are said to be converted in an Enunciation, when the Predicate is put in the Place of the Subject, and *reciprocally*, the Subject in that of the Predicate.

Thus Rationality and Rithibility are said to *reciprocate*; for we say, equal a Rational is Rithible; and a Rithible is Rational.

**RECIPROCAL**, in Grammar, is applied to certain Verbs and Pronouns, in some of the Modern Languages; in regard of their turning or reflecting the Noun, or Person upon himself.

Thus the Pronoun-relative *homoque*, refers *Cato* to *Cato's* self. See PRONOUN.

The *Abbe de Dangeau*, defines *Reciprocal Verbs* to be those whose Nominative is Plural, and denotes Persons acting mutually on one another; As, *Ces quatre hommes s'entrebattoient*; These four Men fought together. *Peter & soi vous vous aimez*; Peter and you Præse one another, &c.

*Reciprocal Verbs* are a Species of those which that Author calls *Prænominals*, and which he distinguishes into *Reciprocal* and *Identical*. See VERB.

**RECIPROCAL**, in Poetry, is applied to Verses which run the same both backwards and forwards; call'd also *Recurrents*. See RECURRENTS.

**RECIPROCAL Figures**, in Geometry, are such as have the Antecedents and Consequents of the same Ratio in both Figures; as *Tab. Geometry Fig. 22. Here*.

$$A : B :: C : D. Or.$$

$$12 : 4 :: 9 : 3$$

That is, as much longer as the Side A, in the first Rectangle, is than B; so much deeper is the Side C in the second Rectangle, than the Side D in the first; and consequently, the Length of one is compensated by the Depth of the other.

Also as the Side A is  $\frac{3}{2}$  longer than the Side C, so the Side B is  $\frac{2}{3}$  longer than D: Wherefore the Rectangles must needs be equal. See RECTANGLE.

This is the Foundation of that Catholick Theorem; that the Rectangle of the Extremes must always be equal to that of the Means: And consequently, the Reason of the Rule of Three, or Golden Rule. See RULE.

For, suppose there was given any three Numbers, or Quantities, Geometrically Proportional, as A, B, and C; and that it were required to find a fourth, D, Proportional to them: Since  $A : B :: C : D$ , therefore  $AD = BC$ , and consequently,  $D = \frac{BC}{A}$ , that is, the fourth Term is equal to the Quotient of the second, multiplied by the third Term, divided by the first.

Or thus, in Numbers: Suppose given 12, 4, and 9; required a fourth Proportional. Now as  $12 : 4 :: 9 : Q$ . But  $12 \times 9 = 108$ . Therefore  $Q = \frac{108}{4} = 27$  ( : 3, by dividing both Sides by 12.

And hence it follows, that if any two Triangles, Parallelograms, Prisms, Parallelepipeds, Pyramids, Cones, or Cylinders, have their Bases and Altitudes reciprocally Proportional, those two Figures or Solids are equal to one another; and *vice versa*, if they are equal, their Bases and Altitudes are reciprocally proportional. See TRIANGLE, PARALLELOPIPED, PRISM, CONE, CYLINDER, &c.

RECIPROCAL Proportion, is when in four Numbers, the fourth is less than the second, by so much as the third is greater than the first; and *vice versa*.

This is the Foundation of the Inverse, or indirect Rule of Three, thus;  $4 : 10 : 8 :: 5$  : See RULE.

There is great Use made of this Reciprocal Proportion, by Sir Isaac Newton, and others, in demonstrating the Laws of Motion. See PROPORTION.

RECITATION, the Act of reciting, or delivering a Discourse, either in the way of Narration, Rhetorical, Declamation, or Reading.

RECITATIVE *Musick*, a Kind of Singing, that differs but little from ordinary Pronunciation; such as that wherein several Parts of the Liturgy are recited in Cathedrals; or that wherein the Actors ordinarily deliver themselves on the Theatre, at the Opera, &c. See SINGING and OPERA.

The *Italian* value themselves on their Performance in the Recitative Way. The *Recitativo*, or *Recitativo*, in our Opera's, usually tire the Audience, by reason they don't understand the Language; the Songs make them amends. See SONG.

RECITATIVE *Style*, is the Way of Writing accommodated to this Sort of Music. See STYLE.

RECKONING, in Navigation, the estimating of the Quantity of the Ship's Way; or of the run between one Place and another. See SAILING and DISTANCE.

This is best perform'd by means of the *Log-Line*; the manner of applying which see under its proper Article, LOG-LINE.

Yet is this liable to great Irregularities;—*Vitruvius* advises an Axis to be pass'd through the Sides of the Ship, with two large Wheels depending out of the Ship; wherein are to be included Wheels touching the Water, by whose Revolution the Space pass'd over in any given time, may be measured. The same has been lately recommended by *Snelhus*: But there are few who have wrote of Navigation, but have shewn the insufficiency of this Method.

RECLAIMING, or RECLAIMING, in our ancient Customs, the Action of a Lord pur suing, prosecuting, and recalling his Vassal, who had gone to live in another Place, without his Permission. See LORD and VASSAL.

RECLAIMING is also used in a similar Sense, for the demanding of a Person or thing to be delivered up, or surrender'd, to the Prince or State it properly belongs to; when, by any irregular Means it has come into the Possession of another. See CLAIM.

An Officer was sent to reclaim the Vessel seiz'd by the *Allegians*, contrary to the Terms of the Treaty of Peace. The Ministry reclaim'd the late Cashier of the *South-Sea Company*, who had refus'd himself in *Flanders*, but in vain.

RECLAIMING, in Falconry, is the Calling of a Hawk, or Bird of Prey back to the Fist.

The Sparrow-Hawk, Goffe-Hawk, &c. are reclaim'd with the Voice: The Falcon otly by shaking the Lure.

So that Luring, with regard to the Falcon, is more proper than Reclaiming. See LURE.

The Partridge is also said to reclaim her Young ones, when she calls them together upon their feathering too much.

RECLINATION, of a Plane in Dialling, the Number of Degrees which a Dial-Plane leans backwards, from an exactly upright or vertical Plane, *i. e.* from the Zenith. See PLANE.

The *Reclination* is easily found, by means of a Ruler and a Quadrant; for having drawn an Horizontal Line on the Plane, by a Level or Quadrant, and to it another Line at Right Angles; apply a Ruler, so that one End of it may hang over, or reach beyond the Plane: Then will a Quadrant, applied to the under Edge of the Ruler, shew the Degrees and Minutes of the Plane's *Reclination*; accounting from that Side of the Quadrant that is contiguous to the Edge of the Ruler. See DIAL, QUADRANT, &c.

RECLINER, in Dialling, or RECLINING *Dial*, is a Dial whose Plane *reclines* from the Perpendicular; *i. e.* leans from you when you stand before it. See RECLINATION.

When this Reclination is equal to the Height of the Pole, the Dial is said to be *Equisidial*.

A *Declining RECLINER*, or *Declining RECLINING Dial*, is a Dial which neither stands perpendicularly, nor opposite to one of the Cardinal Points. See DECLINER.

RECLUSE, among Religious, a Person clost shut up in a very narrow Cell of a Hermitage, or other Religious House; and cut off, not only from all Conversation of the World, but even of the House. See HERMIT, &c.

The Word is chiefly used for such as thus imprison themselves out of Devotion, to do Penance. It is sometimes also applied to incontinent Wives, whom their Husbands procure to be thus kept in a perpetual Prison in some Convent. See CONVENT, &c.

*Recluses* were antiently very numerous: They were, then, a kind of Solitaries who shut themselves up in some little Cell, with a Vow never to stir out of it. See SOLITARY.

None were admitted to this Oath 'till they had given sufficient Proofs of their Abstinence, and had leave from the Bishop, or the Abbot of the Monastery where they were shut up; for the Cells of the *Recluses* were always to join to some Monastery.

The Prelate's Permission being obtain'd, they were tried for a Year in the Monastery; out of which, during that time, they never stir'd. See PROBATION.

They were then admitted to their Vow of Stability, in the Church before the Bishop; which done, and the *Recluses* enter'd his little Cell, the Bishop set his Seal on the Door.

The Cell was to be very small, and very exactly clost. See CELL.

The *Recluses* was to have every thing within it necessary to life; and, even, if he were a Priest or Oratory consecrated by the Bishop, with a Window which look'd into the Church, through which he might make his Offerings at the Mass, hear the Singing, sing himself with the Communicants, and answer those who talk'd to him. But this Window was to have Curtains before it, both within-side and without; so that the *Recluses* might neither see nor be seen.

Indeed he was allow'd a little Garden in his *Recluses*, to Plant a few Herbs, and take fresh Air: Adjoining to his Cell was that of his Disciples, which he was very rarely without, with a Window, through which they serv'd him with Necessaries, and received his Instructions.

When it was judg'd proper to have two or three *Recluses* together, their Cells were made contiguous to each other, with Windows of Communication: If any Women would consult them, or confess to them, it was to be in the Church, and in the Face of all the World.

Where there were two or three *Recluses* together, they were never to hold any Conference, but on spiritual Matters; and to confess to each other: Where there was but one, he was to confess and examine himself.

If the *Recluses* fell sick, his Door was opened for People to come in and assist him; but he was not allowed to stir out on any Pretence whatever.

These Articles are extract'd from a Rule, compiled for the *Recluses*, by *Granolus*, a Priest in the IXth Century.

There were also Women *Recluses*, who led the same Life, in Proportion. St *Viborade* lived a *Recluses* at St. Gall, and was there martyr'd by the *Hungarians* in 825. See RECLUSION.

RECLUSION, the State of a Recluse; or the Cell and other Appurtenances thereof. See RECLUSE.

F. *Majot* gives a particular Account of the Ceremonies practis'd at the *Reclusion* of a Woman, in that of the Mother of *Cambray*, Institutrix of the Order of the Presentation of *Notre Dame*.

A Cell being built for her in 1625, adjoining to the Church of St. *Andrew* in *Thornay*: The Bishop waited for her early in the Morning at the Church Door. Upon her Arrival, prostrating her self at the Feet of that Prelate, he gave her his Benediction, conducted her to the Grand Altar; and, there blessing a Mantle, Veil, and Scapulary, put them on her, and gave her a new Name.

Having here made her Vow, and the Bishop having harangued the People in Praise of the new *Recluses*; he conducted her Processionally to her *Reclusion*, the Clergy all the way singing, *Veni Sponsa Christi*, &c.

Here the Bishop blessing her a-fresh, consecrated the *Reclusion*, and that her up in perpetual Confinement.

RECOGNITION, an Acknowledgement.

The Word is particularly used in our Law Books, for the Title of the first Chapter of the *Stat. 1 Jacob. 1*, whereby the Parliament acknowledged the Crown of England, after the Death of Queen *Elizabeth*, to have rightfully descended to King *James*.

RECOGNITION, in the Drama. See DISCOVERY.

RECOGNITIONE *advolante per vim & desertum facta*, is a Wit to the Justices of the Common-Bench, for sending a Record touching a Recognizance, which the Recognizor suggests to have been acknowledged by Force and hard dealing; that if it do appear it may be dismissed. See RECOGNIZANCE.

**RECOGNIZANCE**, or **RECOGNISANCE**, in Law, a Bond, or Obligation of Record, testifying the *Recognitor* to owe to the *Recognisee* a certain Sum of Money. See **BOND**.

It is *recognised*, or *acknowledged* in some Court of Record, or before some Judge, Master in Chancery, or Justice of the Peace.

More *Recognizances* are not sealed, but enrolled; and Executions, by force thereof, is of all the *Recognitor's* Goods or Chattels, (except draught Beasts, or Implements of Husbandry) and the Moiety of his Lands.

**RECOGNIZANCE** is also used in our ancient Statutes, for the Verdict of the twelve Jurors impanelled upon an Afize; hence called *Recognitors*. See **JURY** and **VERDICT**.

**RECOGNISEE**, is he to whom one is bound in a *Recognizance*.

**RECOIL**, or **REBOUND**, the Reëtion of a Body, chiefly a Fire-Arm; or the Motion whereby, upon Explosion, it starts backwards. See **GUN**, **MORTAR**, &c.

The greater the Charge, *ceteris paribus*, the greater the Rebound.—By an Experiment made by the Royal Society, and related in the *Philosoph. Transact.* it was found that Cannons charg'd to a certain Degree, throw the Ball from right to left of their own Direction; but that the Cannons themselves Reëtil from left to right.

Some of the Gentlemen of the *French Academy*, doubting the Justness of the Observation, M. Cassini, the younger, undertook to repeat the Experiment; which he did by means of a Machine, as like that of *England* as he could; and that tried over, and over again.

The Result was, that the Ball, when the Gun had liberty to reëtil, was always thrown to the right of the Point to which it was thrown when the Gun was fix'd without a possibility of reëtiling; but then the Reëtil was always made the same way, viz. to the right; and he never found that contrariety of Directions between the Ball and the Rebound, observ'd in the *English* Experiment.

**RECOLLECTION**, a Mode of Thinking, whereby those Ideas sought after by the Mind, are with Pain and Endeavour found, and brought again to view. See **MEMORY** and **REMISENCE**. See also **MODE**, **THINKING**, &c.

**RECOLLECTS**, a Congregation of reform'd *Franciscans*, call'd also *Priors Minor of St. Francis, of the strict Observance*. See **FRANCISCAN**.

They were established about the Year 1530; when, some Religious of the Order of *St. Francis*, willing to keep his Rule to the Letter; *Clement VII.* gave them Houses, particularly *Talles* in the *Languedoc*, and *Morat* in *Avignon*, whether they might retire, and receive such as were disposed to follow them.

The same Year he approved the Reform; and in 1584 it was carried into *Italy*. See **REFORM**.

**RECONCILIARI**, in our old Law-Books, &c. A Church is said *reconciliari*, to be *reconciled*, when 'tis consecrated afresh, after having been polluted or profaned; as by the Possession of Pagans or Hereticks, &c. See **CHURCH**, **CONSECRATION**, **PROFANATION**.

**RECONNOITRE**, in War, to go view and examine the State of things, in order to make a report thereof.

Thus we say, a Body of Horse were sent to *Reconnoitre* the Enemy's Army, to *Reconnoitre* their Camp, the Ground, the Condition of the Roads, Rivers, &c.

To *Reconnoitre* the Coasts, to *Reconnoitre* a Port, &c.

A General is to go *Reconnoitre* in Person, the Place to be besieged, in order to learn its Situation, Avenues, its Strengths and Weaknesses.

The Word is pure *French*, signifying literally, to know, recollect.

**RECONNOITRE** is also used at Sea: thus, to *Reconnoitre* a Vessel, a Fleet, &c. is to approach near enough to examine the Rate and Burthen of a Vessel, &c. the Force it may have a-board, what Nation it is of, &c.

To *Reconnoitre* a Land or Shore, is to observe its Situation, in order to find what Land it is.

**RECORD**, in Law, an authentick and uncontrollable Testimony of any thing in Writing, contain'd in Rolls of Parchment, and preserv'd in Courts; thence call'd Courts of *Record*. See **COURT**, **ROLL**, &c.

*Records* are said to be *extantissimæ & veritatis, Vestigia*.

An Act committed to Writing in any of the King's Courts, during the Term wherein it is written, is alterable; being no *Record*; but that Term once ended, and the Act enrolled, it is a *Record*, and of that Credit, that admits no Alteration or Proof to the contrary.

Lawyers reckon three sorts of *Records*; viz. a Judicial *Record*, as Attender, &c. a Ministerial *Record* upon Oath, as an Office of Inquisition found; and a *Record* made by Conveyance and Consent, as a Fine, or Deed enrolled, and the like.

**RECORD**, among Fowlers: a Bird is said to *record*, when it begins to tune or sing within itself; to form its Notes, and dispose its Organs for singing.

The Cock Thrush is distinguished from the Hen in *recording*; the first being more loud and frequent than the second.

**RECORDARE facias**, a Writ directed to the Sheriff to re-

move a Cause depending in an inferior Court, as Hundred-Court, County-Court, Court of ancient Demesnes, &c. to the King's Bench, or Common-Pleas.

Thus call'd because it commands the Sheriff to make a Record of the Proceedings either by himself or others; and then to send up the Cause.

**RECORDER**, a Person whom the Mayor, or other Magistrate of any City or Town Corporate having jurisdiction of a Court of *Record* within their Precincts, does associate with him, for his better Direction in Matters of Justice, and Proceedings according to Law. See **MAYOR**, &c.

He is usually a Man versed and experienced in the Common Law.—In some Towns which have their particular *Affizes* within themselves, and no Mayor, the *Recorder* is the Judge.

**RECORDO & processu mittendis**, is a Writ to call a *Record*, together with the whole Proceedings in the Cause, out of an inferior Court into the King's Court.

**RECOVERY**, in a Legal Sense, an obtaining of any thing by Judgment, or Trial at Law; answering to the *Evictio* of the Civilians.

There is a *true*, and a *feigned Recovery*. *True Recovery* is an actual or real *Recovery* of any thing, or the value thereof, by Judgment; as if a Man sue for any Land, or other thing, and have a Verdict and Judgment for him.

A *feigned, or common Recovery*, call'd by the Civilians, *quodam fictis Juris*, is a certain Form or Course prescribed by Law to be observed for the better settling of Lands and Tenements so us; and the end and effect whereof is to discontinue and destroy Estates Tail, Remainders, and Reversions, and to bar the Intails thereof. See **TAIL**, **REMAINDER**, **REVERSION**, &c.

This *Recovery* is either with a *single*, or a *double Voucher*. In the first there are three Parties required, the *Demandant*, the *Tenant*, and the *Voucher*.

The *Demandant* is he who brings the Writ of Entry, and may be term'd the *Recoverer*: The *Tenant* is he against whom the Writ is brought, and may be call'd the *Recoveree*.

The *Voucher* is he whom the *Tenant* Voucheth, or calls to Warrant for the Land in Demand. See **VOUCHEE**.

A *Recovery* with double *Voucher*, is where the *Tenant* voucheth one, who voucheth another, or the common *Voucher*.

The Point is a little quaint and perplex'd: To explain it; Suppose a Man desirous to cut off an Estate Tail in Lands or Tenements, to the End that he may give, or bequeath them; the first thing he does, is to cause a feign'd Writ of Entry, for *Dessais in le poy*, to be brought, of the Lands of which he intends to dock the Entail; and in a feign'd Declaration thereupon made, pretends he was desist'd by him, who by a feign'd Fine, or Deed of Bargain and Sale, is named and supposed to be Tenant of the Lands.

This feign'd *Tenant*, if it be a *single Recovery*, is made to appear and vouch a poor Fellow, the Bag-bearer of Writs of the *Curios brevium* of the Common-Pleas; (where alone these common *Recoveries* are allowed) who makes *Default*: Upon which a Judgment is by this Fiction enter'd, that the *Demandant* shall recover, and have a Writ of Seisin for the Possession of the Lands in Question; and that the *Tenant* shall recover the Value of the Lands against the Lands of the *Vouchee* Bag-bearer, (who has not a Foot) which is an imaginary Satisfaction for the Heir in Tail, though he is to be never the better for it.

By this means one *Edward Hozer*, a Bag-bearer, and common *Vouchee*, in the space of 20 Years, paid, or suffer'd to be recover'd against him, a great Part of the Lands of *England*; obliging his own Lands to answer the Value of those recover'd against the *Tenants* or *Remainders* in Tail.

**RECOUPE**, in Law, to Rebate or Discount. See **REBATE** and **DISCOUNT**.

Thus, if a Man have ten Pounds issuing out of certain Lands, and he Dissesses the Tenant of the Land; in an *Affize* brought by the Dissessee the Dissessor shall *recoupe* the Rent in the Damages.

The Word is pure *French*, form'd of *re* and *Couper*, to cut again.

A *Recoupe* is also a quick, sharp Reply to a peremptory Demand. See **REPARTIE**.

**RECREANT**, in our old Law-Books, implies Cowardly, Faint-hearted. See **CHAMPION**, **COMBAT** and **DUEL**.

Hence, *Recreantiffi*. See **CRAVEN**.

*Recreant* was so reproachful a Word, that *Glawville* would not describe it.

*Recreantus Equi* is used by *Histo*, lib. 2. cap. 2. for dull, jaded Horses.

**RECREMENT**, *Fæces*, in Medicine, &c. some superfluous Matter mixed with other that is useful. See **FÆCES**.

Sometimes it also signifies such secreted Juices in the Body, as are afterwards of use to the OEOCRONY; as the Lympha, Gall, &c. which are thus call'd in contradistinction to *Excrementa*, which are expell'd out of the Body, as of no further use. See **EXCREMENT**.

**RECRIMINATION**, a Posterior Accusation brought by the accused against his Accuser, upon the same Fact.

When two Parties have made their mutual Complaint at the same time; the Business is first, to determine who shall be the Accuser, and who the Accused; *i. e.* on whom shall fall the *Re- crimination*.

*Re crimination* is of no force till the Criminal have been purged legally.

**RECRUDESCENCE**, in Medicine, is when a Disease that was gone off returns again. See *RELAPSE*.

**RECTANGLE**, in Geometry, call'd also *Oblong*, and *long Square*, a Quadrilateral rectangular Figure, (MLIK, *Tab. Geometry, Fig. 60.*) whose opposite Sides (OP and NQ, as also ON and PQ) are equal. See *QUADRILATERAL*.

Or, a *Rectangle* is a Parallelogram, whose Sides are unequal, but Angles right. See *PARALLELOGRAM*.

To find the Area of a *Rectangle*; Measure the length of the Sides ML and MI; and multiply them by one another: The Product is the Area of the *Rectangle*.

Thus ML being 345 Foot, and MI = 123 Foot; the Area will be found 42435 Square Feet.

Hence, 1<sup>o</sup>, *Rectangles* are in a Ratio compounded of that of their Sides ML and IK; and therefore *Rectangles* which have the same Height, are to each other as their Bases; and those which have the same Base are to each other as their Heights.

2<sup>o</sup>, If therefore there be three Lines in continual Proportion, the Square of the middle one is equal to the *Rectangle* of the two Extremes. See *PROPORTION*.

3<sup>o</sup>, If there be four right Lines in continual Proportion; the *Rectangle* under the Extremes is equal to the *Rectangle* under the middle Terms.

4<sup>o</sup>, If from the same Point A Fig. 41. be drawn two Lines; one whereof, AD, is a Tangent to a Circle, the other a Secant AB; the Square of the Tangent AD, will be equal to the *Rectangle* under the Secant AB; and that Part of it without the Circle, AC.

5<sup>o</sup>, If two or more Secants AA, AB, &c. be drawn from the same Point A; the *Rectangles* under their Wholes and their Parts without the Circle, will be equal. See *SECANT*.

6<sup>o</sup>, If two Chords intersect each other, the *Rectangles* under their Segments will be equal. See *CHORD*.

**RECTANGLE**, in Arithmetick, is the same with *Product* or *Faciem*. See *PRODUCT* and *MULTIPLICATION*.

**RECTANGLED**, **RIGHT-ANGLED**, **Triangle**, is a Triangle, one of whose Angles is right, or equal to 90<sup>o</sup>.

There can be but one right Angle in a plain Triangle; and therefore a *rectangled Triangle*, cannot be equilateral. See *TRIANGLE*.

**RECTANGULAR**, in Geometry, is applied to Figures, and Solids which have one or more Angles, Right. See *ANGLE*, &c.

Such are Squares, *Rectangles*, and *rectangled Triangles* among plain Figures; Cubes, Parallelepipeds, &c. among Solids. See *FIGURE*, *SOLID*, &c.

Solids are also said to be *Rectangular* with respect to their Situation: Thus, if a Cone, Cylinder, &c. be Perpendicular to the Plane of the Horizon, 'tis call'd a *Rectangular* or *Right Cone*; if a *Rectangular*, &c. Cylinder. See *CONE* and *CYLINDER*.

The Antients us'd the Phrase *Rectangular Section* of a Cone, to denote a *Parabola*; that Conic Section, before Apollonius, being only considered in a Cone whose Section by the Axis would be a Triangle, Right-angled at the Vertex.

Hence it was that Archimedes entitl'd his Book of the Quadrature of the Parabola, by the Name of *Rectangular Conic Section*.

**RECTIFICATION**, the Act of *Rectifying*, *i. e.* of correcting, remedying, or redressing some Defect or Error, in respect either of Nature, Art, or Morality. See *RIGHT*, *RECTITUDE*, &c.

The Word is compound of *rectus*, right, direct, and *facio*, I become.

**RECTIFICATION**, in Chymistry, is the repeating of a Distillation or Sublimation several times; in order to render the Substance purer, finer, and freer from Aqueous, or Earthy Parts. See *DISTILLATION*.

*Rectification* is a reiterated Depuration of a distill'd Matter, *s. gr.* Brandy, Spirits, or Oils; by passing them again over their Feces, or Marc, to render them more subtiler, and exalt their Virtues. See *SPIRIT*, &c.

Fix'd Salts are rectified by Calcination, Diffolution, or Ptiltration. See *SALT*, *DISSOLUTION*, &c.

Metals are *rectified*, *i. e.* refined, by the *Coppel*; *Regulus*'s, by repeated Fusions, &c. See *METAL*, *REFINING*, &c.

**RECTIFICATION**, in Geometry, is the finding of a right Line equal to a Curve. See *CURVE*.

All we need to find the Quadrature of the Circle, is the *Rectification* of its Circumference; it being demonstrated, that the Area of a Circle is equal to a *Rectangled Triangle*, whose two Sides comprehending the right Angle, would be the Radius, and the right Line equal to the Circumference. See *CIRCLE* and *CIRCUMFERENCE*.

To *rectify* the Circle, therefore, is to Square it: Or rather, both the one and the other are impossible.

For the various Attempts to *rectify* the Circle, in order to the Quadrature, &c. See *QUADRATURE* of the Circle.

The *Rectification* of Curves is a Branch of the higher Geometry; wherein the use of the new-invented Integral Calculus, or Inverse Method of Fluxions, is very conspicuous.—For, since a Curve Line may be conceived to consist of innumerable right Lines, infinitely small; if the Quantity of one of them be found, by the differential Calculus; their Sum, found by the Integral Calculus, gives the length of the Curve.

Thus, since MR = dx, mR = dy; and therefore Mn, or the Element of the Curve will be  $\sqrt{dx^2 + dy^2}$ .

If then, from the differential Equation, we substitute the Value either of dx, or of dy, to the particular Curve, we shall have the particular Element, which being integrated, gives the length of the Curve. See *CALCULUS*, *Integrals* and *FLUXIONS*.

Indeed, the Element of the Curve is sometimes more commodiously determin'd from some particular Circumstances; Instances whereof we shall give in the *Rectification* of the Parabola and Cycloid.

To rectify the Parabola.

For, the Parabola, we have  $adx = 2ydy$

$$\frac{a^2 dx^2 = 4y^2 dy^2}{dx^2 = 4y^2 dy^2 : a^2}$$

$$\sqrt{(dx^2 + dy^2)} = \sqrt{(dy^2 + 4y^2 dy^2 : a^2)} = dy \sqrt{(a^2 + 4y^2) : a^2} = a$$

To render this Element of the Curve Integrable; let us be resolv'd into an Infinite Series; (See *SERIES*.) Then in a general Theorem,

$$n = 2 \quad m = 1 \quad P = a^2 \quad Q = 4y^2 : a^2 \quad Pm : n = a = A$$

$$\frac{m}{n} AQ = \frac{1}{2} a \cdot 4y^2 : a^2 = 2y^2 : a = B$$

$$\frac{m-n}{n} BQ = \frac{1}{2} \frac{2y^2 \cdot 4y^2}{a^2} = \frac{2y^4}{a^2} = C$$

$$\frac{m-2n}{3n} CQ = \frac{1}{3} \frac{2y^4 \cdot 4y^2}{a^2} = \frac{4y^6}{3a^2} = D$$

$$\frac{m-3n}{4n} DQ = \frac{1}{4} \frac{4y^6 \cdot 4y^2}{a^2} = \frac{10y^8}{a^2}, \text{ \&c. in Infinitum.}$$

Wherefore,  $dy \sqrt{(a^2 + 4y^2)} = a dy + \frac{2y^3 dy}{a^2} - \frac{2y^5 dy}{5a^4} +$

$$\frac{4y^7 dy}{7a^6} - \frac{10y^9 dy}{9a^8}, \text{ \&c. Whole Integral } \int + \frac{2y^3}{3a^2} - \frac{2y^5}{5a^4} +$$

$$\frac{4y^7}{7a^6} - \frac{10y^9}{9a^8}, \text{ \&c. Whole Infinite expresses the Parabolic}$$

Arch AM. *Tab. Analysis, Fig. 18.*

Hence, First, Let AC, and DC (*Tab. Analysis, Fig. 19.*) be the Conjugate Axes of an Equilateral Hyperbola; then will AC = DC = a. Suppose MP = 2y, QM = x; and then will AP = x - a; consequently, by reason PB, AP = PM = xx - aa = 4y^2, and hence xx = 4y^2 + aa; consequently, x =  $\sqrt{(4y^2 + aa)}$ . If then pm be supposed infinitely near QM, we shall have Qy = dy; and therefore the Element of the Area CQMA = dy  $\sqrt{(aa + 4y^2)}$ . The *Rectification* of the Parabola therefore depends on the Quadrature of the Hyperbolic Space.

It is to be here noted that all Integrations or Summations, are reduced to the Quadratures of Curves; in what Cases soever they be used, so that to have them perfect, the Rule laid down under *Quadrature* of the Logarithmic Curve, must be observed throughout.

To Rectify the Cycloid.

Let AQ = x AB = 1, then will Qy = MS = dx, PQ =  $\sqrt{(x - xx)}$ . And hence: AP =  $\sqrt{x^2 + x^2} = x\sqrt{2}$ ; consequently by reason of the Similitude of the Triangles APQ and MNS,

$$AQ : AP :: MS : Mn$$

$$x : x\sqrt{2} :: 2 : dx : x - 1 : 2dx$$

Therefore Mn is the differential of the Cycloidal Arch AM =  $2x - 2dx$ . Wherefore  $fs - 1 : 2dx : 2x^2 : 2 \pm 2AP$  is the Arch AM.

The *Rectification* of Curves Mr. de Moivre shews may be obtain'd by considering the Fluxion of the Curve as an Hypotenuse of a Rectangular Triangle, whose Sides are the Fluxions of the Ordinate and Abscissa: Care being taken in the Expression of this Hypothenuse, that only one of the Fluxions be remaining, as also only one of the indeterminate Quantities, *viz.* that whose Fluxion is retained: an Example will render this clear.

The Right Line CB (*Fig. 20.*) being given, to find the Arch AC.

—Let AB = x, CB = y, OA = r, CE the Fluxion of the Abscissa, ED the Fluxion of the Ordinate, CD the Fluxion of the Arch CA. From the Property of the Circle  $2rx - xx = yy$ , whence  $2r - 2x = 2y$ , and therefore  $r = y$ . But  $CD^2 = y^2 + \dot{y}^2 = \dot{y}^2 + \dot{y}^2 + \dot{y}^2 + \dot{y}^2 = \frac{r^2 \dot{y}^2}{r^2 - 2rx + xx} + \frac{2y^2 \dot{y}^2}{r - y} = \frac{r^2 \dot{y}^2}{r - y}$ ; therefore  $CD = \frac{r \dot{y}}{\sqrt{r - y}} + r$ ;  $r = y$ ;  $\dot{y} = \frac{r - y}{2}$

And consequently, if  $r - y$  be thrown into an infinite Series, and the several Members of it be multiplied into  $r$ ; and then the flowing

Knowing Quantity of each be taken, we shall have the Length of the Arch AC.

RECTIFIED Spirits, &c. are such as have undergone the Operation of Rectification, or have been distilled over and over, to separate from them any heterogeneous Matter, which might have arisen with them in the former Distillations. See RECTIFICATION.

Hence we say, Spirit of Wine twice rectified, thrice rectified, &c. See SPIRIT.

As the Rectification that makes the Difference between Brandy and rectified Spirits of Wine. See BRANDY.

RECTIFIER, in Navigation, is an Instrument used for determining the Variation of the Compass, in order to rectify the Ship's Course, &c. See VARIATION and COURSE.

It consists of two Circles, either laid upon, or set into one another, and is fastened together in their Centres that they represent two Compasses, the one fixed, the other moveable; each divided into 32 Points of the Compass, and 360 Degrees, and numbered both ways, from the North and the South, ending at the East and West in 90 Degrees.

The fixed Compass represents the Horizon, in which the North, and all the other Points are liable to Variation.

In the Centre of the moveable Compass is fastened a Silk Thread, long enough to reach the outside of the fixed Compass. But if the Instrument be made of Wood, an Index is used instead of the Thread. See COMPASS.

RECTIFYING of Curves, &c. See RECTIFICATION.

RECTIFYING of the Globe, or Sphere, is a previous adjusting and preparing of the Globe or Sphere, for the Solution of Problems, &c.

To done by bringing the Sun's Place in the Ecliptic on the Globe, to the Graduated Side of the Brass Meridian; elevating the Pole above the Horizon, as much as is the Latitude of the Place; fixing the Hour Index exactly to twelve at Noon; and freeing the Quadrant of Altitude, (if there be Occasion) to the Zenith.

All this is comprehended under the Term, Rectify the Globe.

When this is done, the Cælestial Globe represents the true Po-  
sition of the Heavens, for the Noon of that Day it is rectified for. See GLOBE and SPHERE.

RECTILINEAR, right-lined, in Geometry, is applied to Figures whose Perimeter consists of right Lines. See FIGURE, PERIMETER LINE, &c.

RECTITUDE, RECTITUDO, RECTUM, in Matters of Philosophy, refers either to the act of judging, or of willing; and therefore whatever comes under the Denomination of Rectitude, is either what is true, or what is good: These being the only Objects about which the Mind exercises its two Faculties of Judging and Willing. See TRUTH and GOOD.

The Rectitude of the Mind, considered as it Judges, i. e. of the Faculty of Judgment, consists in its Agreement and Conformity to the Nature and Reason of things; in its determining and deciding about them, according to what their Constitutions, Properties, Uses, &c. really are. See JUDGMENT. See also LOGIC, &c.

The Rectitude of the Mind, considered as it wills, call'd also Moral Rectitude, or Uprightness, consists in the choosing and pursuing of those things which the Mind, upon due Inquiry and Attention, clearly perceives to be Good; and avoiding those that are Evil. See WILL.

RECTITUDINES, in Law, Rights or legal Dues, belonging either to God or Man.

RECTO, in Law, a Writ usually call'd a Writ of Right; of such a Name, as that whereas other Writs in real Actions are only to recover the Possession of the Lands, &c. in Question, but by the Plaintiff or his Ancestor; This Aims to recover both the Seisin thus lost, and the Property of the thing; to that both Rights are here pleaded together; that of Property, and that of Possession. See PROPERTY and POSSESSION.

If a Man lose his Cause upon this Writ, he is without all Remedy. See RIGHT.

There are two kinds of this Writ: *Rectum patens*, a Writ of right Patent; and *Rectum clausum*, a Writ of right Close.

The first is so called, because sent open.—It lies only for him that hath Fee-simple in the Lands sued for.

The Writ of Right Close, is directed to the Lord of ancient Demesne, and lies for those who hold their Lands and Tenements by Charter, in Fee-simple, or in Fee-Tail, or for Term of Life, or in Dower, if they be ejected out of such Lands or demesnes.

In such Case a Man or his Heirs may sue out the Writ of Right Close, directed to the Lord of ancient Demesne, commanding him to do him Right in his Court.

This is also call'd *breve parvum de Reita*.  
Indeed, the Writ of Right Patent is extended in Practice beyond its original Intention: for a Writ of Right of Dower, which lies for the Tenant in Dower, is Patent; and so in several other Cases. Fitzherb.

RECTO de Dote, a Writ of Right of Dower, which lies for a Woman that has received Part of her Dower, and proceeds to demand the Remnant in the same Place, against the Heir. See DOWER.

RECTO de Dote unde nihil habet, is a Writ of Right which lies in Case where the Husband having divers Lands and Tenements has assured no Dower to his Wife; and she is thereby driven to sue for her Thirds against the Heir, or his Guardian.

RECTO de rationabilibus partibus, a Writ that lies between Privies of Blood, as Brothers in Gavel-Kind, or Sisters, or other Co-purchasers, as Nephews and Nieces; and for Land in Fee-simple.

Thus, if a Man lease his Land for Life, and afterwards dye, leaving Issue two Daughters, and after, the Tenant for Life likewise dies; the one Sister entering on all the Land, and so de-forsing the other, the Sister so deforsed shall have this Writ to recover her Part.

RECTO quando Dominus remittit, a Writ of Right, which lies in Case where Lands or Tenements in the Seigniority of any Lord, are in Demand by a Writ of Right.

If the Lord hold no Court; or at the Prayer of the Demandant or Tenant, send his Writ to the King's Court, to put the Cause thither for that time; this Writ implies for the other Party, and has its Name from the Words comprised, which is the true Occasion thereof.

RECTO de advocacione Ecclesie, a Writ of Right, lying where a Man has Right of Advowson, and the Incumbent dying, a Stranger presents his Clerk to the Church; and he not having brought his Action of *quare Impedit* nor *damnum Praesentamentum* within six Months, has suffered the Stranger to usurp upon him.

RECTO de Custodia Terre & Hereditatis, a Writ which is to Lands holden in Capite, or by Knights Service, is become useless by the Stat. 12 Car. II. But not where there is a Guardian in Socage, or appointed by the last Will of the Ancestor.

RECTO jur. Disclaimari, a Writ which lies where the Lord, in the Court of Common-Pleas does avow upon his Tenant, and the Tenant disclaims to hold of him; upon which Disclaimers he shall have this Writ.

RECTOR, of a Parish, the Parson; or he who has the Charge or Cure of a Parish Church. See PARSON.

If the prædial Tythes of the Parish be Impropriated, i. e. in Lay Hands, instead of Rector, the Parson is call'd Vicar. See VICAR.

In England are reckoned 3845 Rectories. See PARISH.

The Name Rector denotes him Governour, or Ruler, *quis tantum fas in Ecclesia Parochiali habet, quantum Praelatus in Ecclesia Collegiata*. See PARSONAGE.

RECTOR, is also the chief Ecclesiastical Officer in several Foreign Universities; particularly that of Paris. See UNIVERSITY.

The Rector is chosen a-fresh every three Months: Antiently he was chose every six Weeks. The Alteration was made by the Legate of Pope Nicholas III. in 1278. He is chose out of the Faculty of Arts.

While that Faculty, and the Faculty of Theology were united, one Officer had the Inspection of both, under the Title of *Chancellor*: Upon their Division, a Rector was created. He makes a solemn Procession four times a Year, attended by the Doctors, Bachelors, &c. in their Formalities.

RECTOR is also used in several Convents for the Superior, or Officer who governs the House. See SUPERIOR.

The Jesuits use it for the Superiors in super of their Houses, as are either Seminaries, or Colleges. See JESUIT, COLLEGE, SEMINARY, &c.

RECTORY, RECTORATE, a Parish-Church, Parsonage, or Spiritual Living, with all its Rights, Glebes, and Tythes. See CHURCH, PARISH, PARSON, RECTOR, &c.

RECTUM. See RIGHT and RECTITUDE.

RECTUM, in our old Law-Writers, is also used for a Trial or Accusation.

*Commune Rectum*, for a Trial at Law, or in the common Course of Law.—*Stare ad Rectum*, denotes to stand a Trial.—*Rectum require*, to petition the Judge to do right.

RECTUM, in Anatomy, is the last of the large Intestines. See INTESTINE.

It is thus call'd, because it passes straight from the *Os Sacrum* to the *Anus*; without making any turns or Circumvolutions, as all the other Guts do.

Its length is usually about a Hands-breadth; and its Capacity, the thickness of three Fingers.

Its upper Part is tied fast to the *Ossa Sacrum*, and *Coccygis*, by means of the *Peritonæum*; and in Men to the Neck of the Bladder, in Women to the *Vagina Uteri*: Its lower end, the *Anus*, is furnished with three Muscles. See ANUS.

The first, the *Sphincter Ani* serving to shut it, and prevent the Excrements from passing out involuntarily. See SPHINCTER, &c.

The other two, the *Levatores Ani*, which serve to raise or pull back the *Rectum* after the Expulsion of the Excrements; which especially after hard Stools, is apt to be too far protruded. See LEVATOR ANI.

RECTUS, in Anatomy, a Name common to several Muscles; on account of the straightness of their Course from their Origin to their Insertion; having particular Denominations from the Parts to which they minister: As the *Rectus Abdominis*, *Rectus Femoris*, *Rectus Capitis Lateralis*, *Major Externus*—*Minor Externus*—  
Major

*Major Internus*,—*Minor Internus*, and *Rectus Palpebræ*.

*Rectus Abdominalis*, is a Muscle of the lower Belly, which arises from the *Sternum*, and the Extremity of the last two Ribs; and goes straight down to the fore-part of the *Abdomen*, to be inserted in the *Os Pubis*. See ABDOMEN.

It hath three or four Incurvations, or rather tendinous Constrictions of its fleshy Fibres, which divide the Belly of it, as it were, into as many distinct Muscles.

It has Veins and Arteries, which creep on its Inside from the Mamillary and Epigastrick Veins, which communicate together, that the Blood may return by the Mamillary Veins, when the Passage is stopped by the Epigastrick which are comprid'd in Women with Child.

*Rectus Femoris*, is a Muscle of the Leg, which arising from the lower Part of the Spine of the *Thigh*, and descending between the two *Pastis*, is inserted into the *Patella*. See FEMUR.

*Rectus Palpebræ*, is a Muscle that lifts up the Eye-lid: It arises from the Bottom of the Orbit of the Eye, where the Optic Nerves pierce the *Cranium*, and passing above the *Superioris*, is inserted by a large Tendon to the Border of the Eye-lid. See PALPEBRÆ.

*Rectus Capitis Lateralis*, a pair of short thick fleshy Muscles, rising from the superior Part of the Transverse Processes of the first Vertebra of the Neck, whence it ascends, and is inserted into the *Os Occipitæ*. See HEAD.

Its use is to move the Head laterally towards either Shoulder: When they act together, being Antagonists, they keep it steady.

*Rectus Externus Capitis Major*, the third pair of Muscles of the Head, arising fleshy and tendinous from the upper Part of the double Spine of the second Vertebra of the Neck, and spreading in its Ascend, is inserted into the Posterior Part of the *Os Occipitæ*.—It serves to draw the Head directly back upon the first Vertebra.

*Rectus Externus Minor*, a Pair of Muscles arising from the Hind-part of the first Vertebra of the Neck; and inserted into the middle of the *Os Occipitæ*.

It serves likewise to draw the Head directly backwards.

These two Muscles are also call'd *Resurrector*.

*Rectus Internus Capitis Major*, a Pair of Muscles arising from the Fore-part of the five Interior Transverse Processes of the first Vertebra of the Back, near its great Hole.

*Rectus Internus Minor*, lies on the Fore-part of the first Vertebra, like the *Rectus Minor*, on the Back-part; and is inserted into the Anterior Appendix of the *Os Occipitæ*, immediately under the former.

These serve to nod the Head forwards, being Antagonists to the *Rectus Externus*, or *Resurrector*, on the back of the Head; and are hence also call'd *Assensuæ*.

*Rectus in Caria*, in *Law*, is one that stands at the Bar, and no Man objects say thing against him.

When a Man hath reviewed the Outlawry, and can participate of the Benefit of the Law, he is *Rectus in Caria*. See OUTLAWRY.

**RECURRENT**, in Anatomy, a Nerve arising from the *Par Vagus*, and distributing several Branches to the Larynx; to assist in the formation and modulation of the Voice; thence also call'd the *Vocal Nerve*. See NERVE, VOICE, &c.

It has its Name *Recurrent* from its reascending or running back again from the *Thorax*, to the Larynx.

There are really two *Recurrents*, right and left; the left arises from the Trunk of the *Vagus*; the right from a *Plexus* thereof, immediately under the *Clavicle*.—They both run up along the *Trachea*, to which they impart some Twigs, and end at last in the Muscles of the Larynx.

Their Office appears partly hence, that a Dog is not able to bark after they are cut. See LARYNX.

**RECUSANTS**, Persons who refuse to acknowledge the King's Supremacy. See SUPREMACY.

Such are the Roman Catholics, who hold the Pope to be over him; hence call'd *Papal Recusants*. See POPE and KING.

The Romanists are not charged with double Taxes, &c. merely as Romanists, but as *Recusants*.

**RECUSATION**, an Act whereby a Judge is desired to refrain from judging some certain Cause, on account of his Relation to one of the Parties; or of some Capital Enmity, or the like.

A Relation within the fourth Degree, is deem'd a legal Cause of *Recusation*, as also the Judge's being God-father, &c. of one of the Parties.

**RED**, in Physics, one of the simple or primary Colours of natural Bodies, or rather of the Rays of Light. See BODY, RAY, and COLOUR.

The *Red Rays* are those of all others the least refrangible: Hence, as Sir *Isaac Newton* supposes the different Degrees of Refrangibility to arise from the different Magnitudes of the luminous Particles whereof the Rays consist; the *red Rays*, or *red Light*, is concluded to be that which consists of the largest Particles. See REFRAUGIBILITY.

Authors distinguish three general Kinds of *Red*: One bordering on the *Blue*, as *Columbine*, or Dove Colour, Purple, and Crimson. See PURPLE, &c.

Another bordering on *Yellow*, as Flame-Colour and Orange. See ORANGE, &c.

Between these Extremes is a Medium partaking neither of the one nor the other; which is what we properly call *Red*.

Acids turn Black, Blue, and Violet, into *Red*; and *Red* into Yellow; and Yellow into a very pale Yellow.—Alkali's change *Red* into Violet, or Purple and Yellow into fuscillemore, or dead Leaf Colour. See ACID and ALCALI.

Terrestrial and Sulphureous Matters become *Red* by extreme Heat; and some, at length, Black; as we see in Brick, red Bole, red Chalk, Slate, Pumice, &c. which when vitrified by a burning Glass, become Black.

Lobsters become *Red* by a moderate Fire; and by a violent one, Black. Mercury and Sulphur mix'd and heated over a moderate Fire, make a beautiful *Red* call'd *Artificial Cinnabar*. See CINNABAR.

An acid Spirit, as Lemon Juice, being poured on a blue Solution of Turnfol, turns it into a beautiful *Red*.—Alkali reinforces it to its original Blue. Filtrating of the reddish Wine takes from it all its red Colour.

*M. De la Hire* observes, that a very luminous Body view'd through a black one, always appears *Red*: As when the Sun is seen shining through a black Cloud. He adds, that many People who see all the other Colours perfectly well, yet have no Idea of *Red*, and only see it as Black. See BLUE.

**RED**, in Dying, is one of the five Simple or Mother Colours of the Dyers. See DYING.

Some reckon seven Kinds or Casts of *Red*: viz. Scarlet *Red*, *Crimson Red*, *Madder Red*, *Half-Grain Red*, *Lively Orange Red*, and *Scarlet of Cochineal*. But they may be all reduced to three; according to the three principal Drugs which give the Colours; which are Vermillion, Cochineal, and Madder.

The fine Scarlet, call'd *Scarlet of the Gabines*, is made of Agarie, Water prepared with Bran and turn'd a little fourth, Wood and Scarlet Grain, or Vermillion. Some Dyers add Cochineal, and others Fennigreek; brightening it with four Water, Agarie, Tartar, and Turmeric. See SCARLET.

*Crimson Red* is made with four Water, Tartar, and Cochineal Mefique. See CRIMSON.

*Madder Red* is made with Madder; to which some add Realgal, or Arsenic; others common Salt, or other Salts, with Wheat Flower; or Agarie with Spirit of Wine, with Galls or Turmeric. See MADDER.

The *Half-Grain* is made with Agarie and four Water, half Scarlet-Grain, half Madder, and sometimes Turmeric.

The *Half-Crimson* is made of half Madder, half Cochineal. As to the *lively Orange Red*, the Stuff must be first laid in Yellow, then in a Liqueur made of Goat's Hair, (which has been boiled several times with Madder, and now) dissolved over the Fire with certain Acids, as Urine, Tartar, &c.

The *Scarlet of Cochineal*, or *Dutch Scarlet*, is made with Starch, Tartar, and Cochineal; after first boiling it with Alum, Tartar, Sal-Gemma, and Aqua-Fortis wherein Tin has been dissolved. See COCHINEAL.

Besides these seven *Reds*, which are good and slow'd Colours, there is also a *Brasil Red*, which is discourag'd, as fading easily. See BRASILE.

Of the seven good *Reds*, only four have particular Casts or Shades: The *Madder Red*, *Crimson Red*, the *lively Orange Red*, and the *Scarlet of Cochineal*.

The Casts or Shades of *Crimson*, are the Flesh-Colour, Peach-Colour, Carnation-Rose-Colour, and Apple-Tree-Flower-Colour.—Those of *Madder*, are Flesh-Colour, Onion-Peel-Colour, and Flame-Colour.—Those of the Orange are the same with those of the *Crimson*. Scarlet, besides the Shades of all the rest has some peculiar to it self, as Cherry-Colour, Fire-Colour, &c.

**RED**, in Painting.—For Painting in Oil Colours they use a *Red* call'd *Cinnabar* or Vermillion; and another call'd *Lacca*. See each in its Place, CINNABAR, VERMILLION, and LACCA.

In Limning, and Fresco, for a *Violet Red*, instead of *Lacca* they use a natural Earth found in England; for a *Brown Red* they use *Oker*. See REDDLE, OKER, &c.

**RED**, in Heraldry. See GULES.

**RED**, in Cosmeticks, a Fucus or Paint wherewith the Ladies enliven their Cheeks and Lips.

There are two Kinds of *Red*; the one in Leaves, call'd *Spanish Red*; the other a Liqueur, which is an Extract of Scarlet Dye.

**RED Arsenic**. See ARSENIC.

**REDDENDUM**, in Law, a Clause in a Lease, &c. whereby the Rent is reserv'd to the Lessor.

**REDDITARIUM**, an ancient Law Term, for a Terrier, Roll, or Rental, in which the Rents and Services of Manour are set down. See ROLL and RENT, TERRIER, &c.

**REDDITION**, in Law, is a Judicial Acknowledgement that a thing in Question belongs to the Demandant.

**REDDLE, RUNDLE, or Red Chalk**, a Red Fossil Stone, which has its particular Mine or Quarry; and is used by Painters, &c. to make Red-Pencils, or Crions for designing. The best is the Produce of England; is moderately hard; easy to cut or Saw into long Slips. The Goldsmiths and Glaziers also use it to burn the Gold-Leaf they use.—Some call *Reddle*, *Lapis Hematites*; supposing it to have a particular Faculty of stopping Blood: But others

others will have the real *Hematites* to be another Stone. See *HEMATITE*.

**REDEEMABLES**, are Lands, Funds, &c. sold with a Reservation of the Equity of Redemption. See *REDEMPTION*.

Crown Lands are *redeemable* for ever; others only for a certain time. See *FUND*.

**REDEMPTION**, in Law, a Faculty or Right of re-entering upon Lands, &c. that have been sold, and assign'd; upon reimbursing the Purchase-Money, with legal Costs.

Bargains wherein the *Faculty*, or as some call it, the *Equity of Redemption*, is reserved; are only a Kind of *Pignorative Contracts*.

A certain time is limited, within which the Faculty of Redemption shall be exercised; and beyond which it shall not extend.

**REDEMPTIONS**, in our old Law-Writers, denoteprevious Mulcts imposed by way of Commutation for the Head or Life of the Delinquent. See *RANSOM* and *MISERICORDIA*.

**REDENS**, or **REDANTS**, or **REDAN**, in Fortification, a Kind of Work indented in Form of the Teeth of a Saw, with Salted and Re-entering Angles, to the end that one Part may defend another. See *WORK*, *DEFENCE*, &c.

It is also call'd *Saw-work*: The Faces flank one another.

*Redans* are frequently used in the fortifying of Walls, where it is not necessary to be at the Expence of building Bastions; as when they stand on the Side of a River, a Marsh, the Sea, &c.

The Parquet of the Corridor is frequently *redanted*. See *PARRAQUET* and *COUNTERSCARP*.

**REDINTEGRATION**, in the Civil Law, the Action of restoring a Person to the Enjoyment of a thing, whereof he had been illegally dispossessioned.

In *Fraser*, where a Person is despoiled of his Property, he claims it again by a *Redintegratio*, or Action of Restitution.

The *Redintegratio* must be demanded within a Year and a Day, otherwise it is precluded.

**REDINTEGRATION**, in Chymistry, the restoring of any mixt Body, or Matter, whose Form has been destroyed by Calcination, Corrosion, Sublimation, or the like; into its former Nature and Constitution.

The *Redintegratio* of Mercury is properly call'd *Revivification*. See *REVIVIFICATION*.

Mr. Boyle has an express Treatise on the *Redintegratio* of Salt-Petre; where he shews that after reducing it by Fluxion into fix'd Nitre, which is next of kin to Salt of Tartar in all its Properties; he could presently *Redintegrate* it by pouring a sufficient Quantity of Spirit of Nitre to it; i. e. he could re-produce true Crystals of the usual Form and Virtue. See *SALT-PETRE*.

'Tis a strong Objection against the Chymical Principles, that you cannot *redintegrate* the Body they were procured from, by re-mixing them. See *PRINCIPLE* and *ELEMENT*.

This seems to argue that the Body did not properly consist of such Elements. Or that they were not originally contain'd in it, but were rather produced by the Fire. See *FIRE*, &c.

**REDHIBITION**, in the Civil Law, an Action in a Court whereby to annul the Sale of some Movable, and to oblige the Seller to take it back again, upon the Buyer's finding it damag'd, or that there was some personal Cheat, &c.

The *Redhibitio* has Place in several Cases, in the Body of the Civil Law.—If a Horse was sold that had the Glanders, were broken-winded, or founder'd, 'twas a *redhibitory* Case; and the Buyer might be oblig'd to take him again within nine Days.

**REDISSISSIN**, in Law, a Dissolution made by him who once before was found and adjudg'd to have dispos'd the same Man of his Lands or Tenements; for which there lies a special Writ, call'd a *Writ of Redississin*.

**RED-MANS**, or **RADMANS**, in *Domesticy*, and other ancient Books, are probably the same with *Reds*, or *Red-Knights*; viz. Men who by the Tenure or Custom of their Lands were to ride with or for the Lord of the Manour about his Business.

**REDOUBT**, **REDUCT**, in Fortification, a small square Fort, without any Defence but in Front; used in Trenches, Lines of Circumvallation, Contravallation, and Approach; as also for the lodging of *Corps de Garde*, and to defend Passages. See *FORT*.

In marshy Grounds, *Redoubts* are often made of Mason's Work, for the Security of the Neighbourhood: Their Face consists of from ten to fifteen Fathom; the Ditch round them from eight to nine Foot broad and deep; and their Parapets have the same thickness.

The Word is form'd from the *Latin*, *redolere*.  
**REDRESSING**, the rectifying or setting of any thing straight again. See *RECTIFICATION*.

Trees and other Plants have a natural Faculty of *redressing* themselves, when by any external Cause they are forced out of the Perpendicular. See *PERPENDICULARITY*.

To *redress* Grievances, is to reform or remove them.  
To *redress* a Stag, among Hunters, is to put him off his Chances.

**REDSEAR**. See *IRON*.

**REDUBBORS**, those who buy *Stollen Cloaths*, &c. and to

the End they may not be known, turn them into some other Colour or Fashion, &c.

**REDUCING Scales**, is a thin broad piece of Box, with several different Scales of equal Parts, and Linear thereon; for turning Chains and Links into Acres and Rods, by Inspection. See *REDUCTION*, &c.

It is used by Surveyors to reduce Maps or Draughts from one Dimension into another: It is sometimes call'd the *Surveying Scale*. See *SCALE*.

**REDUCT**, is a military Term, signifying an advantageous Piece of Ground, entrench'd and separated from the rest of the Place, Camp, &c. for an Army, Garrison, &c. to retire to in case of Surprise.

**REDUCT**, in Building, a Quirk, or little Place, taken out of a larger, to make it more uniform and regular; or for some other Convenience, as for little Cabinets aside of Chimneys, Alcoves, &c.

**REDUCT**, among Chymists, is a Powder by which calcin'd Metals and Minerals are reduced again to their *Rogues*, or pure Substance. See *REGULUS*, *CALX*, &c.

**REDUCTION**, **REDUCTIO**, in the Schools, a manner of bringing a Term or Proposition, which before was opposite to some other, to be equivalent thereto.

*Reductio* is effected by the Addition or Retrenchment of a Negative Particle. Thus to reduce this Proposition: *No Man is an Animal*, to be equivalent to its opposite, *Every Man is an Animal*; I drop the Negative, and say, *Man is an Animal*.—After the like manner might the Term, *every Man*, be reduced, by adding the Negative, and saying, *there is no Man*.

**REDUCTION of Propositions**, is used in a more general Sense, for any Expression of a Proposition, by another Proposition equivalent thereto. See *PROPOSITION*.

To a *Reductio*, therefore, there are two Propositions requir'd; the *reduced* and *reducing*; which are considered as the Extremes thereof; and to be connect'd in the *Reductio*, by means of the Particle *that* is, which here has the effect of a Copula.

As here, *Only Animals think; that is, Animals think, and nothing beside Animals think*.—Where the Proposition preceding the Particle, is *reduced*, and the Subject of the *Reductio*; that following the Particle, *reduces*, and has the Effect of the Predicate of the *Reductio*: And the Particle *that* is, acts as a Copula, importing, not bare that the Proposition is express'd by another, but by another equivalent one, or as it were the same.

**REDUCTION of Syllogisms**, is a regular changing or transforming of an imperfect Syllogism into a perfect one: Or it is a change of a Syllogism in respect of form, whereby the Necessity of the Illation or Inference is made more evident. See *SYLLOGISM*.

*Reductio* obtains in Syllogisms of the second and third Figure; as also in the indirect Modes of the first.—By it these are all brought to the first. See *MOOD* and *FIGURE*.

There are two Kinds of this *Reductio*, the one *Direct* or *Of Sense*, perform'd merely by a Conversion of one or both the Premises, or by a Transposition thereof; as when *CAMELSTRES* is reduced to *CLAIRENT*.

The other *Indirect*, call'd *per Impossible*, or *ad Absurdum*, whereby the Person who denies the Goodness and Legitimacy of an imperfect Syllogism, is reduced to assert or grant something absurd and impossible; or contradictory to some other thing maintained by him.

Suppose *E. gr.* a Person granting the Premises of the following Syllogism, denies the Conclusion.—*All Fraud is prohibited, but some Trading is not prohibited, therefore some Trading is not Fraud*.—We thus proceed against him: If the Syllogism be not good, the Antecedent is just, but the Consequent false; and therefore the contrary of the Conclusion must be true: Now, I take the contrary of the Conclusion which you thus give, viz. all Trading is Fraud; and of that with the other Premise of the former Syllogism, viz. the Major, which you likewise grant, make a new Syllogism; thus, *All Fraud is prohibited; all Trading is Fraud; therefore all Trading is prohibited*. But this Proposition, *all Trading is prohibited*; and the other, *some Trading is prohibited*, which you granted me in the first Syllogism, are Contradictories.

**REDUCTION**, in Arithmetick, is the converting of Monies, Weights and Measures into the same Value in other Denominations; *e. gr.* Pounds into Shillings and Pence; or Shillings and Pence into Pounds.

The *Reductio* of the principal Monies, Coins, Weights, and Measures, Ancient and Modern, Foreign and Domestic, are found under the respective Articles, *MONEY*, *COIN*, *WEIGHT*, *MEASURE*, *POUND*, *FOOT*, &c.

*Reductio* is of two Kinds: 1<sup>o</sup>. *Defending*; when a Quantity is to be brought from a higher Denomination to a lower.

This is done by considering how many of the next less Denomination are contained in the next greater before, and by that Number multiplying the greater. See *MULTIPLICATION*.

Thus Pounds are reduced into Shillings by multiplying by 20; Shillings, into Pence, by multiplying by 12; and Pence into Farthings, by multiplying by 4. See *POUND*, &c.

*Troy* Pounds are reduced into Grains, by multiplying by 12, 20, and 24. And *Avoirdupois* Hundreds into Ounces, by 4, 28, and 16. See *OUNCE*, &c.

The 2<sup>o</sup>. *Attacking*; when a lower Denomination is to be reduced to an higher.

In order to this, divide the leaf by as many of its Denominations as are contained in the next greater: Thus 2473 Pence, divided by 12, and the Quotient by 20, give 103 Pounds. See DIVISION. If there remain any things in each Division, 'tis respectively either odd Pence, or Shillings: Thus 6713 Pence reduced, gives 27l. 19s. 5d. cut off the last, the rest is the Pounds required.

To expedite the Practice, several compendious Ways of Reduction have been invented. See PRACTICE.

Thus Ells are turn'd into Yards, by adding a fourth to the Number of Yards; and into Ells Flemish by adding a fifth.—Ells Flemish are reduced into Yards, by subtracting a Quarter.—Ells Flemish reduced to Ells English by multiplying by six, and cutting off the right hand Figure. See ELL, &c.

Great Pounds of Silk of 24 Ounces, are reduced to Pounds of 16 Ounces, by adding one Half. Pounds of 16 Ounces into Pounds of 24, by subtracting three Quarters.

REDUCTION of Fractions. See FRACTION.

REDUCTION of Equations, in Algebra, is the clearing them from all superfluous Quantities, bringing down the Quantities to their lowest Terms, and separating the known Quantities from the unknown; till, at length, only the unknown Quantity is found on one Side, and unknown ones on the other. See EQUATION.

The Resolution of an Equation is the last Part of the Resolution of the Problem. See RESOLUTION.

The end of all Algebraical Operations, is to have the unknown Letter alone in one Member of the Equation; and in the other, all the known Letters, without any mixture of unknown; for, in this Case, 'tis evident the Value of the unknown Quantity is found.

This Resolution is effected by adding the Quantities subtracted, subtracting those added; multiplying those divided, and dividing those multiplied; extracting the Roots out of Powers, and raising Roots to Powers; so as still to preserve an Equality. See EQUALITY.

This suffices for the Resolution of simple Equations; but for higher Equations, the Process is less obvious.

From the manner wherein Powers are form'd, 'tis evident, that as the unknown Letter is rais'd to a higher Power, it will be found, in its lower Powers, mix'd and combined so many more times with known Quantities, and of consequence will be so much the more difficult to be disengag'd therefrom. And the difficulty is the same, where there are several unknown Letters multiplied singly one against another, and again multiplied by known Letters. See PROBLEM.

The Resolution of the Equation being made; from the last Quantity thus gain'd, the Geometrical Construction is to be deduced. See CONSTRUCTION.

REDUCTION of a Figure, a Design, or Draught, is the making a Copy thereof either larger or smaller than the Original; still preserving the Form and Proportion. See FIGURE.

The grand use of the proportional Compasses is in the Resolution of Figures, &c. whence they are also call'd *Compasses of Reduction*. See COMPASSES.

There are various Methods of reducing Figures, &c. The most easy is by means of the Pentagraph or Parallelogram; but this has its Defects. See PENTAGRAPH.

The best and most usual Methods of Reduction, are as follow.

To reduce a Figure: As ABCDE, *Tab. Geometry, Fig. 64.* into a less Compass: about the middle of the Figure, as *e*; pitch on a Point; and from this Point draw Lines to its several Angles A, B, C, &c. Then drawing the Line *ab* Parallel to AB, *bc* Parallel to BC, &c. you will have the Figure *abcde* similar to ABCDE.

If the Figure *abcde* had been required to be enlarged, there needed nothing but to produce the Lines from the Point beyond the Angles, as *zd*, *zc*, &c. and to draw Lines, *viz.* DC, DB, &c. Parallel to the Sides *ac*, *ab*, &c.

To reduce a Figure by the Angle of Proportion.

Suppose the Figure ABCDE (*Fig. 65.*) required to be diminished in the Proportion of the Line AB, to *ab* (*Fig. 66.*) draw the indefinite Line GH, (*Fig. 67.*) and from G to H set off the Line AB: On G describe the Arch HI. Set off the Line *ab* as a Chord on HI, and draw GI. Then with the Angle IGH, you have all the Measures of the Figure to be drawn.

Thus, to lay down the Point *e*, take the Interval BC, and upon the Point G describe the Arch KL; also, on the Point G describe MN; and upon A with the Distance MN describe an Arch cutting the preceding one in *e*, which will determine the Side *bc*. And after the same manner are all the other Sides and Angles to be described.—The same Process will serve to enlarge the Figure.

To reduce a Figure by a Scale.

Measure all the Sides of the Figure, *e. g.* ABCDE, by a Scale; and lay down the same Measures, respectively, from a smaller Scale in the Proportion required. See SCALE.

To reduce a Map, Design, or Figure, by Squares.

Divide the Original into little Squares, and divide a fresh Paper

of the Dimensions required, into the same Number of Squares; which will be larger, or less than the former, as the Map is to be enlarged or diminished.

This done in every Square of the second Figure, draw what you find in its Correspondent one in the first. See MAP, &c.

REDUCTION to the Ecliptic, in Astronomy, is the difference between the Argument of Latitude, as NP, (*Tab. Astronomy, Fig. 26.*) and an Arch of the Ecliptic NR, intercepted between the Plane of a Planet, and the Node N. See ECLIPTIC.

To find the Reduction: The Angle of Inclination PNR, and the Argument of Latitude NP being given; find, by the Doctrine of Sphericks, the Arch NR: Subtract NR and NP from each other, the Remainder is the Reduction.

REDUCTION into the first Matter, a Term which the Alchemists use when they find their Substances putrify, and grow black.

Or rather Reduction is the converting of a dry Matter into a Liquid, particularly Water; which they hold the Principle of all things. See WATER, PRINCIPLE, &c.

The Reduction of Metals into their first Matter or Principles, they teach, can only be effected by Mercury; nothing else being able to loosen the fix'd Sulphur of metallic Bodies, which binds them together. See METAL and MERCURY.

REDUCTION, in Chirurgery, is an Operation whereby a dislocated, luxated, or fractured Bone, is restored to its former Place. See BONE, LUXATION, DISLOCATION, FRACTURE.

The Reduction is always performed ere any Remedy be applied.

REDUNDANCE, or REDUNDANCY, a fault in Discourse, arising from a superfluity of Words. See PLEONASM.

Words, perfectly synonymous, are Redundant, and ought to be retained.—Redundancy makes the style weak and languid.

REDUNDANT Hyperbola, is a Curve of the higher Kind, thus call'd because it exceeds the Conic Section of that Name in the Number of its Hyperbolic Legs; being a Triple Hyperbola, with six Hyperbolic Legs. See CURVE and HYPERBOLA.

REDUPLICATION, in Rhetoric, a Figure wherein a Verbe begins with the same Word as the preceding one ends. See VERB.

REDUPLICATION, in Logic, is a Kind of Condition express'd in a Proposition, indicating or assigning the Manner wherein the Predicate is attributed to the Subject.

The usual Reduplicating Words are *quatenus, ut, so far as, cum, sicut, ad, inquantum, &c.* Hence,

REDUPLICATIVE Propositions, are such wherein the Subject is repeated, with some Circumstance or Condition: Thus, Men, as Men, are Rational; Kings, as Kings, are subject to none but God.

REE, a Portuguese Coin. See COIN and MILLREE.

REED, an ancient French Measure. See MEASURE.

Answerable to this is the *Canna* or *Cane* of some modern Nations. See CANE.

REEF, a Term in Navigation.—When there is a great Gale of Wind, they commonly roll up Part of the Sail below, that by this means it may become the narrower, and not draw so much Wind; which contracting or taking up of the Sail, they call a Reef, or Reefing the Sail.

So also when a Top-Mast is sprung, as they call it, that is, crack'd, or almost broken in the Cap; they cut off the lower Piece that was near broken off, and setting the other Part, now much shorter, in the Step again, call it a Reef'd Top-Mast.

REEL, in the Manufactures, a Machine serving for the Office of Reeling. See REELING.

There are various Kinds of Reels; some very simple, others very complex; of the former Kind, those most in use are,

1<sup>o</sup>. A little Reel held in the Hand, consisting of three Pieces of Wood; the biggest and longest whereof (which does not exceed a Foot and a half in length, and  $\frac{3}{4}$  of an Inch in Diameter) is traversed by two other Pieces disposed different Ways.

2<sup>o</sup>. The Common Reel, or Windmill, which turns upon a Pivot, and has four Wings, travers'd by long Pins or Sticks, whereon the Skin to be reel'd is put, and which are drawn closer, or open'd wider, according to the Skin.

Other Reels used in particular Arts, are explain'd under their particular Articles; as the Reel used in the milling of Silk, under the Article MILLING: And that in the Reeling or Winding of Silks, under the Article SILK, &c.

REELING, in the Manufactories, the winding of Thread, Silk, Cotton, or the like, into a Skain, or upon a Bottom; to prevent its intangling. See SILK, &c.

'Tis also used for the charging or discharging of Bobins or Quills, to use them in the Manufacture of different Stuffs, as Thread, Silk, Cotton, &c.

Reeling is perform'd different Ways, and by different Engines. See REEL.

RE-ENTERING Angle, in Fortification. See ANGLE.

RE-ENTRY, in Law, the refusing or retaking that Possession which we had lately fore-gone. See ENTRY.

As, if I make a Lease of Land, or Tenement, I do therefore forego the Possession; and if I do condition with the Lessee, That for Non-payment of the Rent at the Day, it shall be lawful for me to Re-enter; this is as much as if I conditioned to take again

again the Lands, &c. into my own Hands, and to recover the Possession by my own act, without the Assistance of Judge, or other Process.

**RE-EXTENT**, in Law, a second Extent made upon Lands or Tenements, on Complaint made, that the former Extent was partially executed. See **EXTENT**.

**REEVE** of a Church, is the Guardian of it; or the Church-Warden. See **CHURCH-WARDEN**.

So, **Shire- Reeve** is the Sheriff, or Guardian of a County. See **SHERIFF**.

And **Port- Reeve**, the Warden of a Port or Haven. See **PORT**.

**REEVING**, in the Sea Language, is the putting a Rope through a Block.—Hence, to pull a Rope out of a Block, is call'd *reeving it*.

**REFECTION**, among Monks and Ecclesiasticks, a Repast or spare Meal; merely satisfying for the support of Life. See **MEAL** and **REPAST**.

*Refectio* is also used in ancient Authors for a Duty or Service incumbent on any Person to provide Meals, for Ecclesiasticks, or even Princes. See **PROCURATOR**.

**REFECTORY**, or **REFECTUARY**, a spacious Hall in Convents, and other Communities, where the Monks, Nuns, &c. take their Refections or Meals in common.

The *Refectory of the Benedictines of St. George at Venice*, designed by *Palladio*, is one of the finest in the World. *Deviler*.

**REFERENDARIUS**, in ancient Customs, an Officer who exhibited the Petitions of the People to the King; and acquainted the Judges with his Commands.

An Officer of this Kind, *Speelman* observes, we had in *England*, in the time of the *Saxons*.

**REFERENCE**, in Writing, &c. a Mark, relative to another similar one in the Margin, or at the Bottom of the Page; where something omitted in the Text, is added; and which is to be inserted either in Reading or Copying. See **CHARACTER**.

A Copist must be very expert at taking *References*.—*References* are also used in Books; where, things being but imperfectly handled, the Reader is directed to some other Part or Place where they are more amply explained.

Dictionarys are full of References; denoted by *See*, or *Vide*.—By means of these *References*, the *Dictionarist* settles a Correspondence between the several Parts of his Work; and gives his Dictionary most of the Advantages of a regular continued Treasury. See **DICTIONARY**.

Indices or Tables are only *References* to the several Parts of the Work, where the several Matters are handled. See **INDEX**.

**REFINING**, the Art or Act of purifying a thing; or of rendering it finer, clearer, and purer. See **PURIFYING**, and **CLARIFYING**.

*Refining* is chiefly understood of Metals, Sugar, and Salts. See **METAL**, &c.

#### REFINING of Gold.

The *Refining of Gold* is perform'd three Ways: Either with *Aurum*, with *Sublimate*, or with *Aqua-Fortis*; which last Method, much the most usual and least dangerous of the three, is call'd *Depart*, or *parting*; the Process whereof see under the Article **GOLD** and **DEPART**.

#### Method of Refining Gold with Antimony.

They here use a Wind-Furnace; (a Description whereof may be seen under the Article **FURNACE**.) with an ordinary Crucible, of a Size answerable to the Quantity of Gold to be refined; observing that the Gold and Antimony together don't above half fill it.

The Gold being melted in the Crucible, the Antimony is thrown in, in Powder.—The Proportion of the Mineral to the Metals, is eight Ounces to a Pound, if the Gold be between 22 and 16 Carats fine: If it be beneath 16 Carats, they use about five Quarters of a Pound to eight Ounces: The coarser the Gold, still the more Antimony is required.

As soon as the Antimony is in the Crucible, 'tis cover'd up; and after charging the Furnace with Charcoal, they put on its Capital; which stands till such time as the Crucible be left quite bare; then, the Capital being taken off, and the Crucible set to cool in the Furnace at ease, till such time as it may be taken out by the Hand, they break it, to get out the *Battou* or *Cake*, which is a Mass of fine Gold remaining at the Bottom with the Feces of the Antimony the Silver and Copper alloy and sometimes little Particles of Gold it self over it.

Though the Gold thus prepared be very pure, yet the Antimony gives it such a harsh brittle Quality, that it ceases to be Ductile; and must be soft'n'd by the Fire with Salt-petre and Borax, to bring it to itself.

For this Operation they prepare what they call a *Dry-Coppel*; that is, a Coppel made of Crucible Earth, which does not imbrue like the Coppels made of Althes. See **COPPEL**.

The Coppel being sufficiently heated in the *refining* Furnace, they put the Gold in it, and cover it up with Charcoal.

As soon as the Gold is dissolved, which is very soon, by reason of the remains of the Antimony, they blow it with the Bellows to drive the Mineral entirely away, which now goes off in Smoke; adding to it, as soon as the Fumes cease, a little Salt-petre and Borax, in Powder; which collect the Impurities remaining upon the Dissolution, and fix the Gold in the Coppel, in form of a Plate.

The Gold being taken out of the Coppel, and melted a-fresh in a Crucible, with an Addition of two Ounces of Salt-petre and as much Borax, in Powder to each eight Ounces of Gold, as soon as it ceases to fume, they cast it into an Ingot; which upon trial is found 23 Carats, 26 thirty seconds fine.

As to the Particles of Gold which may have been left behind with the Alloy in the Feces of the Antimony, they get them out by a dry Coppel, with the same Mixings and Ingredients as are used in softening the former.—And when they are assured, by the Essay, of the Share of Gold that Matter contains, they refine it to separate the Copper; and afterwards make the *Depart*.

As to the Gold which may be left sticking to the dry Coppels, they get it out by breaking, and pulverizing the Crucibles, and by repeated Lotions of the Powder thereof in several Waters; much after the manner of the *Lavadore's*. See **LAVADERO**.

#### Refining of Gold by means of Sublimate.

The Process is begun like that with Antimony; *i. e.* in the same Furnace, with the same Coal, the same Fire, and the same Crucibles.

The Gold being melted in the Crucible, they cast in the Sublimate, not pulveriz'd, but only broke in Pieces.—As to the Proportion; to 8 Ounces of Gold to be refined, they put an Ounce, or Ounce and a half, or even two Ounces, if the Gold be of 22 Carats; three Ounces, if 20 Carats; and 5 or 6 Ounces, if it only be from 18 to 12 Carats. In which last Case they part the Sublimate into two; putting half at a time, with the Gold, into a new Crucible; which, when the Operation is over, leaves the Gold of 18 or 20 Carats, according to its fineness before.—After this, they raise it by the Fire, as follows;

The broken Sublimate being put into the Crucible with the melted Gold, the Crucible is immediately cover'd up, to smother the Mineral: Which done, the Furnace is fill'd with Charcoal, and the Capital put on.—A quarter of an Hour afterwards they take off the Capital, lay the Crucible bare, and give the Gold Air, *i. e.* blow off all the Althes and other Impurities that may be floating on the liquid Gold, with a Pair of Bellows, the Nozzle whereof is crooked.

This they repeat again and again, till all the Impurities of the Gold being carried off, by virtue of the Sublimate, it be found of a bright glittering Colour: After which 'tis taken out of the Crucible, and the Gold cast into an Ingot.

The Method of *Refining by Sublimate* is both more complete and cheaper than that by Antimony; but they are both exceedingly dangerous, by reason of their sulphurous and arsenical Exhalations: The only difference in their Malignity consisting in this, that the Poison of the Antimony is slower than that of the Sublimate. See **SUBLIMATE**, &c.

Gold may also be refined with Lead and Althes; but this is a Method seldom used, excepting in Essays. See **ESSAY**.

#### REFINING of Silver.

There are two Ways of *refining Silver*: The one with Lead; the other with Salt-petre. The best and cheapest is that with Lead; though that with Salt-petre still obtains in many Places, for want of Workmen who understand the Process of the latter.

We shall here only give that with Salt-petre; referring for the other to the Article **SILVER**.

*Refining with Salt-petre* is perform'd in a Wind-Furnace.—The Silver to be refined having been reduced into Grains, of the Size of a little Pea, by pouring it, when melted, into a Tub of common Water; 'tis heated over again in a Boiler. After this they put it in a Crucible, and along with it, to every eight Ounces of Metal, two of Salt-petre.

The Crucible is now covered up with an Earthen lid, in form of a Dome, exactly luted; which lid, however, is to have a little Aperture in the middle.

The Crucible being put in the Furnace, and cover'd with Charcoal, which is only to be lighted by Degrees, at length, they give it the full force of the Fire to put the Metal into a perfect Fusion. Thus they repeat three times successively, at an Interval of a Quarter of an Hour.

After the third Fire they uncover the Furnace, and let the Crucible cool; and at length break it, to get out the Silver, which is found in a *Battou* or *Cake*; the Bottom whereof is very fine Silver; and the top mix'd with the Feces of the Salt-petre, and the Alloy of the Silver, and even some Particles of fine Silver.

The *Cake* being separated from the Impurities, is melted in a new Crucible, and into the Dissolution is thrown Charcoal Dust, and the whole briskly work'd together. Then, the Crucible being cover'd up again, and the Furnace charged with Coal, a second Fire is given it.

This done, the Ashes and other Impurities are blown from off the Top of the Metal, till it appear as clear as a Looking-Glass; and then an Ounce of Borax broke in Pieces is thrown in. Lastly, the Crucible being cover'd up again, they give it the last Fire; after which 'tis cast into Ingots; which are found eleven Penny-Weights, and sixteen Grains fine.

To recover the Silver that may be left in the *Forces*, or Scorria, they pound them, and give them repeated Lotions in fresh Waters. See **LAVADERO**.

**REFINING of Copper**, is only perform'd by giving the mineral Matter several LOONS before the melting it; and then giving it several repeated Fusions. See **COPPER**.

**REFINING of Tin** is perform'd much after the same Manner as that of Copper. See **TIN**.

Though, we may distinguish two Kinds of fineness of this Metal: The one arising from its Fusion; that Tin taken first out of the Coppers wherein it is melted, being always purer than that towards the Bottom.

The other Kind of fineness is that given the Tin by adding some other Metal or Mineral to it, to render it more sounding, as well as more bright: Such is Tin of Antimony, Pewter, &c. See **PEWTER**, &c.

**REFINING of Iron**, begins likewise by the melting it. See **IRON** and **IRON-WORKS**.

The greater Degree of Fusion the Mineral has, the more the Metal is purified: But this first Fusion is not sufficient.—To render the Iron malleable, and fit to endure the File, it must be heated a second time; then forged or beaten a long time with huge heavy Hammers, wrought by the Water; then beaten in the Fire, and at last reduced on the Anvil, into Bars of several Thicknesses. See **FORGING**.

The more the Iron is heated in the Fire; and the more 'tis beaten, whether hot or cold, the finer it becomes. See **IRON**.

*Steel* is only Iron refined to a great Degree by heating it, with some other Ingredients which close up the Pores, and soften the Grain thereof. See **STEEL**.

**REFINING of Lead** is perform'd like that of most other imperfect Metals, by frequent Meltings, still scamming it ere it be cold, and casting in Tallow, and other Kinds of Fat.

They also make Alloys of Lead; not to refine it, but to see if it be pure, and without Mixture of any other Metal. See **LEAD**.

**REFINING of Sugar**.—The Operation is begun by several strong Lixiviums or Lyes of Lime-Water and Eggs, Shells and all, mix'd and beaten together.

This first *Refining* is perform'd in the *Caribees* and other Places where the Sugar-Canes are cultivated; and only serves for the brown or coarser Sugars.

When these are imported into Europe, the Sugar-Bakers take them up, and refine them further, by a second Operation, or rather a Repetition of the first.

To render the Sugar very fine, fit for Confections, they usually give it a third *Refining*; wherein they only use the Whites of Eggs, and their Shells beaten together, and thrown into the melted Sugar; which is call'd *clarifying the Sugar*. See **SUGAR**.

**REFINING of Salt-petre**.—The Salt being put in an Earthen or Iron Vessel, as much Spring-Water is pour'd on it as suffices to dissolve it. The Vessel is then put over a gentle Fire; and as soon as the Water begins to boil, Alum-Powder is thrown into it: The Proportion is, one Pound of Alum to 128 Pound of Salt-petre; and a little Vinegar is added. As it boils, the Scum is to be taken off; and thus it is *refined*. See **SALT-PETRE**.

For the **REFINING of other Matters**, as Camphor, Vermillion, Sulphur, Lapis, Salt, Borax, &c. See **CAMPHOR**, **VERMILLION**, **SULPHUR**, **SALT**, &c.

REFLECTING Telescope,	} See	TELESCOPE.	
REFLECTING Microscope,			MICROSCOPE.
REFLECTING Dial,			DIAL.

**REFLECTION, or REFLEXION**, in Mechanics, the return, or regressive Motion of a Moveable occasion'd by the Resistance of a Body, which hinder'd its pursuing its former Direction. See **MOTION**, **RESISTENCE**, &c.

'Tis controverted, whether there be any Moments Rest or Interval between the Incidence and the Reflection? For the Affirmative, stand the *Peripateticks*, and all who conceive the reflected Motion to be different from the Incident one of the same Body.—The Motion of Incidence, according to these Authors, is wholly lost and destroyed by the Resistance of the Obstacle struck against; and the moveable is thus render'd absolutely quiescent in the Point of Contact; till a new Motion of Reflection is produc'd therein, from a contrary Cause.

The Cartesian assert the Negative; absolutely denying any Rest at all between the Incidence and Reflection: Urging, that if the Motion were once destroyed, though but for a Moment, there would be nothing to excite it again; but the Body would persevere in that new State, as much as if it had been at Rest a thousand Years. See **REST** and **Law of NATURE**.

Accordingly, *Rebounds*, and others, define Reflection to be no other than a Change of Determination; or a Continuation of the former Motion in a new Direction. See **DETERMINATION**, &c.

As, say they, a Pendulum, when arriv'd at its greatest Sweep, does not stop; so a hard Body, striking on another hard one, does not rest, but pursues its Motion the contrary Way, according to the established Law of Nature; and this from the immediate Influence or Impulse of the Cause that first mov'd it.—But this Doctrine is now generally set aside.

*Reflection* is conceiv'd by the latest and best Authors, as a Motion peculiar to elastic Bodies, whereby, after striking on others which they cannot remove, they recede, or turn back, by their elastic Power. See **ELASTIC Bodies**.

On this Principle it is asserted, that there may be, and is a Period of Rest between the Incidence and Reflection; since the reflected Motion is not a Continuation of the other, but a new Motion, arising from a new Cause or Principle, viz. the Power of Elasticity. See **ELASTICITY**.

'Tis one of the great Laws of Reflection, that the Angle a reflected Body makes with the Plane of the reflecting Obstacle, is equal to that wherein it struck on that Obstacle. See **ANGLE** and **INCIDENCE**.

For the several Laws of Motion observed in the REFLECTION of Bodies, see the Article **PERCUSSION**.

**REFLECTION of Rays of Light**, in Opticks, is a Motion of the Rays, whereby, after impinging on the solid Parts of Bodies, or rather, after a very near approach thereto, they recede or are driven therefrom. See **REFLEXIBILITY**.

The Reflection of the Rays of Light from the Surfaces of Bodies, is the means whereby they become Visible. See **VISION**.

And the Disposition of Bodies to reflect this or that Kind of Rays most copiously, is the Cause of their being of this or that Colour. See **COLOUR**.

The Reflection of Light from the Surfaces of Mirrors, makes the Subject of CATOPTICKS. See **CATOPTICKS**.

The Reflexion of Light, *Siue Isaac* has shewn, is not effected by the Rays striking on the very Parts of the Bodies; but by some Power of the Body equally diffus'd throughout its whole Surface, whereby it acts upon the Ray, by attracting or repelling it without any immediate Contact. See **RAY**.

This Power he shews to be the same whereby, in other Circumstances, the Rays are refracted; and whereby they are at first emitted from the lucid Body. See **LIGHT**.

The Arguments he produces to this Purpose are as follow.

1<sup>o</sup>. Because the Surfaces of polished Glasses, which to the Eye appear smooth, are yet in reality very ragged and uneven; (polling being nothing but the grating, scratching, and breaking of the coarser Protuberances, by means of Sand, Glass, Putty, or Tripoly). If the Rays of Light, therefore, were reflected by striking on the solid Parts of the Glass, the Reflexion would never be so accurate as we find they are; but the Rays would even be as much scatter'd by the most polish'd Glass, as by the roughest.—It remains, therefore, a Problem, how Glass polished by fretting Substances, can reflect Light so regularly as it does; which Problem is scarce otherwise to be solved than by saying, that the Reflexion of a Ray is effected, not by a single Point of the reflecting Body, but by some Power of the whole Body, evenly diffus'd all over its Surface, and by which it acts on a Ray without immediate Contact: For that the Parts of Bodies do act upon Light at a Distance, is already shewn under the Article **INFLECTION**.

2<sup>o</sup>. If the Colours separated by a Prism placed at the Entrance of a Beam of Light into a darkened Room, be successively cast on a second Prism placed at a greater Distance from the former, in such manner as that they all fall alike, or with an equal obliquity upon it; the second Prism may be so inclined to the incident Rays, that those which are of a blue Colour shall be all reflected by it, and yet those of a red Colour partly copiously transmitted.—Now, if the Reflexion were caus'd by the Parts of the Air or Glass, we would see, why, at the same Obliquity of Incidence, the blue should wholly impinge on these Parts so as to be all reflected; and yet the red find Pores enough to be in a great Measure transmitted?

3<sup>o</sup>. Where two Glasses touch one another, there is no sensible Reflexion, and yet we see no Reason why the Rays should not impinge on the Parts of the Glass, as much when contiguous to other Glass, as when contiguous to Air.

4<sup>o</sup>. When the top of a Water-Bubble, by the continual subsiding and exhaling of the Water, grows very thin, there is such a little, and almost insensible Quantity of Light reflected from it, that it appears intensely black; whereas round about that black Spoke, where the Water is thicker, the Reflexion is so strong as to make the Water seem very white.—Nor is it only at the least thickness of thin Plates or Bubbles, that there is no manifest Reflection; but at many other thicknesses, gradually greater and greater. For in one of our Author's Observations the Rays of the same Colour were by turns transmitted at one thickness, and reflected at another thickness, for an indeterminate Number of Successions: And yet in the Superficies of the thinnest Body, where it is of one thickness, there are as many other Parts for Rays to impinge one, as where it is of any other thickness.

5<sup>o</sup>. If red and blue Rays, separated by a Prism, fall successively on a thin Plate of any pellucid Matter, whose thickness increases in continual Proportion, (such as a Plate of Air between two Glasses, the one Plane and the other a little Convex) the same

same Plate will, in the same Part, *reflect* all the Rays of one Colour, and transmit all those of the other; but in different Parts, will *reflect* the Rays of one and the same Colour, at one thickness, and transmit them at another; and thus alternately, and in infinitum.—Now it can never be imagined that at one Place the Rays which, for Instance, exhibit a blue Colour, should have the Force to strike on the solid Parts, and those which exhibit a Red to hit on the void Parts of the Body; and at another Place, where the Body is either a little thicker, or a little thinner, than on the contrary the Blue should hit on the Pores, and the Red upon the solid Parts.

6°. In the Passage of Light out of Glass into Air, there is a *Reflexion* as strong as in its Passage out of Air into Glass, or rather a little stronger, and by many Degrees stronger than in its Passage out of Glass into Water.

Now it seems improbable that Air should have more *reflecting* Parts than Water or Glass: But if that should be supposed, yet it will avail nothing; for the *Reflexion* is as strong or stronger when the Air is drawn from the Glass by the Air-Pump, as when it is adjacent to it.—If any should here object, on *Des Cartes's* Hypothesis, that though the Air be drawn out, there is a subtle Matter remaining to supply its Place, which being of a denser Kind, is better fitted for the *Reflexion* of Light than any other Body: Beside that we have elsewhere shewn such subtle Matter to be *effluvia*; and that supposing its Existence, and its *reflecting* Power, no Light could ever have been propagated, but must have been all *reflected* back to the lucid Body, immediately after it was first emitted: The following Experiment does evidently convict it of falsity.

7°. If Light in its Passage out of Glass into Air strike more obliquely than at an Angle of 40 or 45 Degrees, it is wholly *reflected*, if less obliquely it is in great Measure transmitted.—Now it is not to be imagined, that Light at one Degree of obliquity should meet with Pores enough in the Air to transmit the greater Part of it, and at another Degree should meet with nothing but Parts to *reflect* it wholly; especially considering that in its Passage out of Air into Glass, how oblique soever be its Incidence, it finds Pores enough in the Glass to transmit a great Part of it.—If any suppose that it is not *reflected* by the Air, but by the utmost superficial Parts of the Glass, there is still the same Difficulty: Besides, that such a Supposition is unintelligible, and will also appear to be false by applying Water behind some Part of the Glass instead of Air: For so, in a convenient obliquity of the Rays, suppose of 45 or 46 Degrees, at which they are all *reflected* where the Air is adjacent to the Glass; they shall be in great Measure transmitted where the Water is adjacent to it: Which argues, that their *Reflexion* or Transmission depends on the Constitution of the Air and Water behind the Glass, and not on the striking of the Rays upon the Parts of the Glass; the Rays not being *reflected* till they have reached the last Part of the Surface, and are begun to go out. For if in going out they fall upon the Surface of Oil or Water, they proceed; the Attraction of the Glass being balanced by an equal Force the contrary Way; and prevented from having its effect by the Attraction of the Liquor adhering to it: But if the Rays in passing out of this last Surface fall into a Vacuum which has no Attraction, or into Air which has but little, not enough to counter-balance the effect of the Glass; in this Case the Attraction of the Glass draws them back, and *refracts* them.

This will appear still more evident, by laying two Glass Prisms, or the object Glasses of two Telescopes, the one Plane and the other a little Convex, upon each other, so as they may neither touch, nor yet be too far a-part. For that Light which falls on the hind Surface of the first Glass, where the Glasses are not above  $\frac{1}{2}$  or  $\frac{3}{4}$  Part of an Inch a-part, will be transmitted through the Surface, and through the Air or Vacuum between the Glasses, and pass into the second Glass: But if the second Glass be taken away, then the Light passing out of the second Surface of the first Glass into the Air or Vacuum, will not proceed but return into the first Glass, and be *reflected*.

Whence it follows, that the Rays are drawn back again by some Force in the first Glass; there being nothing else to occasion their return.—And hence too, it follows, that the *Reflexion* is not effected by means of any subtle Matter, contiguous to the hind Surface, according to the Principles of *Des Cartes*; since that Matter ought to *reflect* them when the Glasses were nearly contiguous, as well as when the second Glass is quite removed.

Lastly, If it be said how some of the Rays come to be *reflected*, and others transmitted: And why they are not all alike *reflected*; supposing the *Reflexion* owing to the Action of the whole Surface? The same great Author shews, that there are both in the Rays of Light, and in the Bodies themselves, certain Vibrations, (or some such Property) impressed on the Rays, by the Action either of the Luminary that emits them, or of the Bodies that *refracts* them; by means whereof it happens that those Rays in that Part of their Vibration which confpires with the Motion of the Part of the Body, enter the Body, are refracted and transmitted; but those in a contrary Part of their Vibration reflected. See VIBRATION and MEDIUM. See also REFRACTION and TRANSMISSION.

Add, that every Ray of Light, in its Passage through any refracting Surface, is put into a certain transient Constitution or State, which

in the Progress of the Ray returns at equal Intervals, and disposes the Ray at each return to be easily transmitted through the next *refracting* Surface; and between each Return to be easily *reflected* by it.

Their alternate Dispositions, which Sir Isaac Newton calls first of *easy Reflexion*, and of *easy Transmissio*, he accounts for by supposing that the Rays of Light, in impinging on Bodies, excite Vibrations therein, which happen to move faster than the Rays, when a Ray is in that Part of the Vibration which confpires with its Motion, it passes through; but when in the contrary Part of the Vibration, is best back again: Whence every Ray is successively disposed to be easily *reflected*, or easily transmitted, by every Vibration which overtakes it. See TRANSMISSION.

REFLECTION, in Catoptricks, is the return of a Ray of Light from the polished Surface of a Speculum or Mirror, driven thence by some Power residing therein. See MIRROR and CATOPTRICKS.

The Ray thus returned is called a *Reflex*, or *reflected Ray*, or *Ray of Reflexion*; and the Point of the Speculum whence the return commences, the *Point of Reflexion*.

Thus the Ray AB (*Tab. Opticks*, Fig. 26.) proceeding from the Radiant A, and striking on the Point of the Speculum B; being returned thence to C; BC represents the *reflected Ray*, and B the *Point of Reflexion*: In respect whereof AB represents the *Incident Ray*, or *Ray of Incidence*, and B the *Point of Incidence*. See POINT and RAY.

Again, a Line as CG drawn from any Point as C of the *reflected* Ray BC, perpendicular to the Speculum, is call'd the *Cathetus of Reflexion*, or *Cathetus of the Eye*: As a Line AF, drawn from the Radiant Perpendicular to the Speculum, is call'd the *Cathetus of Incidence*. See CATHEBUS.

Of the two Angles which the *reflected Ray* BC makes with the Mirror, the smallest, CBE, is called the *Angle of Reflexion*: As, of the two Angles the incident Ray makes with the Speculum, the smallest ABD is called the *Angle of Incidence*. See ANGLE.

If the Mirror be either Concave, or Convex, the smallest Angles the Ray makes with a Tangent to the Point of *Reflexion* and Incidence, are the *Angles of Reflexion* and Incidence.

The Angle CBE which the *reflected Ray* makes with a Perpendicular to the Point of *Reflexion*, is call'd the *Inclination of the reflected Ray*; as the Angle ABH is called the *Inclination of the Incident Ray*.

#### The General Laws of REFLECTION.

1°. If a Ray of Light be *reflected* from a Speculum of any form; the Angle of Incidence is ever equal to the Angle of Reflexion.—This Law obtains in Perfections of all Kinds of Bodies, and consequently must do so in those of Light. See LAWS of REFRACTION.

It might therefore be here assumed as an Axiom: But 'tis of that Importance, and its Demonstration so beautiful, that we cannot omit it.—Suppose, then, DC (Fig. 54.) an incident Ray, propagated from the Radiant A: Here, though the Motion of the Ray be simple, yet its Determination in the Line DC being oblique with respect to the Obstacle, is really compounded of two Determinations; the one along DE, the other along DG. See COMPOUND MOTION.

The Force along DC, therefore is equal to the two Forces along DG and DH. But the Obstacle GF only opposes one of the Determinations; viz. that along DG, (for it cannot oppose a Determination Parallel to it self, as DE); therefore only the Force along DG will be lost by the stroke; that along DH or GC remaining entire.—But a Body perfectly Elastic, (such as we suppose the Ray of Light) will recover by its Elasticity, the force it lost by the Shock. See ELASTICITY.

The Ray, therefore, will recover the Force DG or CH. Thus, retaining both its Forces, and both its former Determinations HC and CF; after Percussion; it will be impell'd along CF and CH, by the same Forces as before along DH and DG. By its compound Motion, therefore, it will describe the right Line CE, and that in the same time as DC; and HE and DH will be equal, as being described by the same Force. Now, the two Triangles DCF and CHE are equal, and consequently their similar Angles equal. Since then, HCA=HCF; DCA the Angle of Incidence, is equal to ECF the Angle of Reflexion. Q. E. D.

This Law is confirmed in Light by so easy Experiment. For a Ray of the Sun falling on a Mirror, in a dark Room, through a little Hole; you'd have the Pleasure to see it rebound, so as to make the Angle of Reflexion equal to that of Incidence. See CAMERA Obscura.

The same may be shewn various other Ways: Thus, e. gr. Placing a Semicircle FIG (*Tab. Opticks*, Fig. 26.) on a Mirror DE, its Centre on B, and its Limb Perpendicular to the Speculum; and assuming equal Arches, Fa and Gc; place an Object in A, and the Eye in C: Then will the Object be seen by a Ray *reflected* from the Point B. And if B be cover'd, the Object will cease to be seen.

Hence, 1°. If a Ray of Light, as HB, fall Perpendicularly on the Surface of a Speculum DE, it will be *reflected* back upon it self. 2°. From

29. From the same Point of a Speculum, several Rays cannot be reflected to the same Point; for in that Case all the several Angles of Reflection would be equal to the same Angle of Incidence; which is absurd.

30. One Ray as AB cannot be reflected to two or more Points; for in that Case all its Angles of Reflection would be equal to the same Angle of Incidence; which is as absurd as before. See RADIANT.

II. Each Point of a Speculum reflects Rays falling on it, from each Part of an Object.

Hence, since several Rays coming from several Parts of a radiant Object, cannot be reflected from the same Point of a Speculum to the same Point; the Rays that flow from different Points of the Object, are separate after Reflection: And hence each Ray shows the Point whence it proceeded. See VISION.

On this Principle it is that the Rays reflected from Mirrors or Looking-Glasses, exhibit the Appearances of Objects placed before them. See LOOKING-GLASS.

And hence we easily conceive why rough Bodies exhibit no Images; in regard they reflect the Light in such Manner as to confound Rays which proceed from different Points, by means of their Eminences and Cavities, their alternate Rillings and Fallings.—But for this, all hard Bodies would be Mirrors.

III. If the Eye C, and the radiant Point A change Places; the Point will continue to radiate upon the Eye, in the same Course or Part as before.

For if the Object be removed from A to C, it will still radiate on its former Point of Reflection B; but there can be but one right Line drawn between the two Points G and D; and the Rays are right Lines. Therefore that which was before the Ray of Reflection, will now be the Ray of Incidence; and since it will be reflected under the same Angle as that under which it fell, that which was before the Ray of Incidence, will now be the Ray of Reflection. So that the Object removed to C, will radiate on the Eye placed in A, by the right Lines CB and BA. *Q. e. d.*

Hence, an Object is seen by the reflected Ray AB, with the Eye placed in A, the same, as if the Eye were in AC, and the Object in A.

The Truth of this Theorem is so easily confirm'd by Experiment, that some, with *Euclid*, assume it as a Principle; and demonstrate the great Law of Reflection therefrom.—Thus: Suppose the Angle of Incidence a little greater than the Angle of Reflection; then will the Angle ABF be greater than that CBE. Wherefore, changing the Places of the Eye and the Object, the Angle CBE will become the Angle of Incidence; and therefore CBE greater than ABF, by the Supposition. So that the same Angle ABF will be both greater and smaller than the other CBE; which being absurd, ABE cannot be greater than CBE.—The same Absurdity will follow, if you suppose the Angle of Incidence less than the Angle of Reflection.—Since then the Angle of Incidence can neither be greater nor less than that of Reflection, it must be equal to it.

IV. The Plane of Reflection, that is, the Plane wherein the Incident and reflected Ray are found, is perpendicular to the Surface of the Speculum; and in spherical Specula passes through the Centre.

Hence the Cathetus both of Incidence and Reflection is in the Plane of Reflection.

That the Plane of Reflection is perpendicular to the Speculum, is shew'd by *Euclid*, *Alhazan*, and others, as a Principle, without any Demonstration; as being evident from all Observation and Experiment.

V. The Image of an Object seen in a Mirror, is in the Cathetus of Incidence.

This the Antients assumed as a Principle: And, hence, since the Image is certainly in the reflected Ray, they infer'd it must appear in the Point of Concurrence of the reflected Ray with the Cathetus of Incidence; which indeed holds universally in plane and spherical Mirrors, and usually in concave ones; a few Cases only excepted, as is shew'd by *Kepler*.

For the particular Locus of REFLECTION, arising from the Circumstances of the several Kinds of Specula, or Mirrors, Plane, Concave, Convex, &c. see, *infra* laid down under the Article MIRROR.

REFLECTION of the Moon, is a Term used by some Authors, for what we otherwise call her Variation; being the third Inequality in her Motion, whereby her true Place out of the Quadratures, differs from her Place twice equated. See MOON.

REFLECTION is also used in the Copernican System, for the Distance of the Pole from the Horizon of the Disk; which is the same thing as the Sun's Declination in the Ptolemaick System. See DECLINATION.

REFLECTION is also figuratively used for an Operation of the Mind, whereby, turning as it were back upon it self, it makes it self and its own Operations its Object; and considers or contemplates the Manner, Order, and Laws, which it observes in Perceiving, Reasoning, Willing, Judging, Doubting, Believing, &c. and frames it self new Ideas of the Relations discover'd therein. See SOUL, FACULTY, PERCEPTION, IDEA, &c.

REFLEX, REFLECT, in Painting, is understood of those Places in a Picture which are supposed to be illumined by a Light reflected from some other Body represented in the same Piece. See LIGHT.

Or Reflexes may be defined those Places which beside the general Light that illumines the whole Piece, receive some particular Light, from their Situation with respect to some more illumined polished Body that reflects Part of the Rays it receives upon them. See COLOUR.

Reflexes are scarce sensible except in the shadowed Parts.—The Management of the Reflexes requires a world of Accuracy and Skill.—All reflected Light is supposed to carry with it Part of the Colour of the Body which reflects it; so that those Places which receive this Light, must have their Colours mix'd or tinged with that Colour. But the same Place may receive Reflexes from different Objects, differently colour'd, and those again receive Reflexes from others.—The Painter therefore must have a View to every Circumstance of the Colour, Light and Position of each Figure; must consider what effect each has on other, and pursue Nature through all the Variety of Mixtures. See CLAIR-OBSCURE.

REFLEX VISION, or REFLECTED VISION, is that performed by means of Rays reflected from the polish'd Surfaces of Objects to the Eye. See VISION and REFLECTION.

Reflex Vision is the Subject of CATOPTRICKS. See CATOPTRICKS.

Under Reflex Vision come all the Phenomena of Specula or Mirrors of all Kinds. See MIRROR.

REFLEXIBILITY of the Rays of Light, is that Property whereby they are disposed to be reflected. See REFLECTION.

Or it is their Disposition to be turned back in the same Medium, from any other Medium on whose Surface they fall.—Hence those Rays are said to be more or less Reflexible, which are returned back more or less easily under the same Incidence. See RAY.

Thus if Light pass out of Glass into Air, and by being inclined more and more to the common Surface of the Glass into Air, begins at length to be totally reflected by that Surface; those Sorts of Rays which at like Incidences are reflected most copiously; or the Rays which by inclining begin soonest to be totally reflected, are most Reflexible.

That the Rays of Light are endued with different Degrees of Reflexibility, was first discovered by Sir Isaac Newton; and is shew'd by the following Experiment.—Applying a Prism DFE, (*Tab. Opticks*, Fig. 55.) whose Angles are each 45°. to the Aperture C of a darkened Room, in such manner as that the Light is reflected from the Base in G: The Violet Rays are seen first reflected in HG; the other Ray continuing still refracted in IK.—After the Violet, the Blue are all refracted, then the Green, &c. See PRISM.

Hence it appears, that the differently colour'd Rays, differ in Degree of Reflexibility. See COLOUR.

From other Experiments it appears, that those Rays which are most reflexible, are also most refrangible. See REFRACTIBILITY.

REFLUX of the Sea, the Ebbing of the Water; or its return from the Shore. See EBB.

It is thus call'd, as being the opposite Motion to the Flood, or Flux. See FLUX and TIDE.

REFORM, a Re-establishment or Revival of a former neglected Discipline; or a Correction of reigning Abuses. See REFORMATION.

The Term is much used in a Monastic Sense, for the reducing an Order or Congregation of Religious to the ancient Severity of the Rule, from which it had gradually swerved; or even for the improving on the ancient Rule and Institution; itself, and voluntarily making it more severe. See ORDER and RELIGIOUS.

In the like Sense the Order of St. Bernard is said to be only a Reform of that of St. Benedict. See BERNARDINE and BENEDICTINE.

To REFORM, in a military Sense, is to reduce a Company, Regiment, or other Body of Men, either by disbanding the whole, or only breaking a Part, and retaining the rest; or sometimes by incorporating them in other Regiments.

Hence REFORMADO, a Reformed Officer, or one whose Troop or Company is suppress'd in a Reform, and he continued either in whole or half Pay, doing Duty in the Regiment.

A Reformed Captain on Foot follows the Company, and attends the standing Officer as a second; but still maintains his Degree and Precedence. See CAPTAIN.

REFORMATION, the Act of Reforming, or Correcting an Error or Abuse in Religion, Discipline, &c.

The Reformation of the Roman Calendar by Pope Gregory, was effected in the Year 1582. chiefly by the Advice of *Aloysius Lilius*, and *Claudian*. See CALENDAR.

The Reformation of Religion, call'd by Way of Eminence, the Reformation, was begun by the Elector of Saxony, at the Solicitation of *Luther*, about the middle of the sixteenth Century. See LUTHERANISM.

King Henry VIII. of England, happening to have then a Pique against Pope Clement VII. by reason of his persisting in not allowing of his Divorce from Queen Catherine of Aragon, fell in with the Torment, abolished the Pope's Supremacy, seiz'd the Monasteries, and other Religious Houses; and divided their Lands among the Nobility and Gentry.

In every thing else he persevered a Papist.—So that the Reformation went on but lamely in his time.—Under his Son Edward VI it went much further; but was all undone again by his Successor Queen Mary, who re-established the ancient Superstitions.

But the Executions of above 500 People, who were burnt for the Protestant Faith in the five Years of her Reign, so accused the People from Popery, that Queen Elizabeth, her Sister, found it no hard Matter to carry the Reformation to its full Length; and to settle it on the Foot where it now stands among us. See PROTESTANT, CALVINIST, &c.

Right of REFORMATION, *Jus Reformationis*, is a Right which the Princes of Germany claim to reform the Church in their respective Territories; as being invested with the spiritual as well as the temporal Power.

The *Jus Reformationis* is understood to the Principality; by this they have the Power of Confiscation, the Disposition of Ecclesiastical Revenues, &c. as they enjoy'd the same at the Treaty of Munster in 1644.

REFRACTED Ray, or Ray of REFRACTION. See RAY and REFRACTION.

REFRACTED Rays, are such as shew the Hour by means of some refracting transparent Fluid. See DIAL.

If a Pin or Stick be set up, or any Point be assign'd in a concave Bowl or Dish, for the Centre of the Dial; and a horizontal Dial be applied over the same; aligning the meridian Line on the Edges of the Bowl; and marking out the rest of the Hour Lines also on the Edges of the Bowl: Then taking away the horizontal Dial, and cleaving a String or Thread from the End of the said Pin over the meridian Line, as much as is the Latitude or Elevation of the Pole of the Place.—Then, by bringing the Thread to cast a Shadow on any Hour-Point formerly mark'd out on the Edges of the Bowl, by a Candle or the like; that Shade in the Bowl is the true Hour-Line: And if the Bowl be full of Water, &c. when this is done; it will never shew the true Hour by the Shadow of the Top of the Pin, but when filled again with the same Liquor.

REFRACTION, in Mechanics, the Deviation of a moving Body from its direct Course, by reason of the different Density of the Medium it moves in; or a Flexion and Change of Determination, occasioned by a Body's falling obliquely out of one Medium into another of a different Density. See MEDIUM.

Thus a Ball A, (*Tab. Mechanicæ*, Fig. 52.) moving in the Air in the Line AB, and falling obliquely on the Surface of the Water CD, does not proceed straight to E, but deviates or is inflected to B.—Again, if the Ball moving in Water in the same Line AB should fall obliquely on a Surface of Air CD; it will not proceed straight to E, nor yet deflect to F, but to G.

Now the Deflection in each Case is call'd the *Refraction*; and the two Cases are distinguished by means of the Perpendicular MI; that, BG being call'd *Refraction towards the Perpendicular*, or to the Axis of Refraction; and the other BF, *Refraction from the Perpendicular*, or from the Axis of Refraction.

These *Refractions* are supposed to arise hence, that the Ball arriving at B, in the first Case, finds more Resistance from the Side O, i. e. from the Side of the Water, than from the Side P, or that of the Air; and in the latter more Resistance from the Side P, which is now the Side of the Water, than the Side O which is that of the Air.

In effect the great Law of Refraction which holds in all Bodies, and all Mediums, is, That a Body passing obliquely out of a less into a more resisting Medium, is refracted from the Perpendicular; and in passing out of a more into a less resisting Medium, is refracted towards the Perpendicular.

Hence the Rays of Light falling out of Air into Water are refracted towards the Perpendicular; whereas a Ball thrown into the Water is refracted from it; by reason Water, which resists the Motion of Light less than Air, resists that of the Ball more: Or, to speak more justly, by reason Water, by its greater Attraction, accelerates the Motion of the Rays of Light more than Air does: For that this is the true Cause of Refraction, at least in Light, shall be shewn under REFRACTION of Light.

To have a Body refracted, 'tis necessary it fall obliquely on the second Medium.—In perpendicular Incidences there is no Refraction.

Physicists, indeed, and Swallows imagined they had observed a perpendicular Ray of Light undergo a Refraction; a perpendicular Object appearing in the Water nearer than in reality it was: But this was to attribute that to a Refraction of the perpendicular Rays, which was owing to the divergency of the oblique Rays after Refraction, from a nearer Point.

Yet is there a manifest Refraction even of perpendicular Rays found in *Iceland Crystal*. See *ISLAND CRYSTAL*.

Robust acids, that though an oblique Incidence be necessary in all other Mediums we know of; yet the Obliquity must not exceed a certain Degree.—If it do, the Body will not penetrate the Medium, but be reflected, instead of refracted.—Thus Cannon Balls in Sea Engagements, falling very obliquely on the Surface of the Water, are observed to mount a-loft again, and frequently to sweep the Men from off the opposite Decks: And the like happens to the little Stones wherewith Children make their Ducks and Drakes.

The Antients confounded Refraction with Reflection; and 'twas

Sir Isaac Newton, who first taught us the Difference between them.—He shews withall, that there is a good deal of Analogy between them; and particularly in the Case of Light. See REFLECTION and REFRACTION of Light.

The Laws of Refraction of the Rays of Light in Mediums differently terminated, i. e. whose Surfaces are Plain, Concave, Convex, &c. make the Subject of Dioptricks. See DIOPTRICKS.

By Refraction it is that Convex Glasses, or Lens's collect the Rays, magnify Objects, Burn, &c. and that concave Lens's disperse the Rays, diminish Objects, &c. See LENS's, CONVEX, and CONCAVE.

Hence the Foundation of Microscopes, Telescopes, &c. See MICROSCOPE and TELESCOPE, &c.

By Refraction it is, that all remote Objects are seen out of their real Places; particularly, that the heavenly Bodies are apparently higher than they are in reality, &c. See APPARENT and PLACE. See also REFRACTION Astronomical.

REFRACTION of Light, in Opticks, is an inflexion or deviation of the Rays from their rectilinear Course upon falling obliquely out of one Medium into another, of a different Density. See RAY.

The Refraction of Light Sir Isaac Newton shews is not perform'd by the Rays falling on the very Surface of Bodies; but without any Contact, by the Action of some Power of the Bodies equally diffus'd throughout their Surfaces; by which same Power acting in other Circumstances, they are also emitted and reflected. See LIGHT.

The same Arguments whereby we have proved that Refraction is perform'd without immediate Contact, go a great way towards demonstrating the same of Reflection: To which may be added the following ones.

1<sup>o</sup>. Because if when Light falls out of Glass into Air, with the utmost Obliquity it will be transmitted at, it be then made to fall a little more obliquely, it becomes wholly reflected.—For, the Power of the Glass after it have refracted Light emerging as obliquely as possible, supposing the Rays to fall still more obliquely, will be too strong to let any of the Rays pass; consequently, instead of being refracted they will be all reflected.

2<sup>o</sup>. Because in thin Lenses, or Plates of Glass, Light is reflected and refracted several times alternately, as the thickness of the Lenses increases in arithmetical Progression.—For here it depends on the thickness of the Lamina which of the two it shall do; whether reflect it, or let it be transmitted.

3<sup>o</sup>. Because whereas the Powers of other Bodies both to reflect and refract Light are very nearly Proportional to their Densities; yet unctuous and sulphurous Bodies are found to reflect more strongly than according to their Densities.—For as the Rays act more strongly on those Bodies to kindle them, than on others; so do they, again, by their mutual Attraction, act more strongly on the Rays to refract them.

Lastly, because not only those Rays transmitted through Glass are found to be refracted, but also those falling in the Air, or in a Vacuum near its Extremities, or even near the Extremities of many Opake Bodies, e. g. the Edge of a Knife, undergo a similar Inflexion, from the Attraction of the Body. See INFLECTION.

The manner wherein Refraction is perform'd by meer Attraction, without Contact, may be thus accounted for.—Suppose HI (*Tab. Opticæ*, Fig. 56.) the Boundary of two Mediums, N and O; the first the Rarer, e. g. Air; the second the Denser, e. g. Glass; the Attraction of the Medium here will be as their Densities.—Suppose PS to be the Distance to which the attracting Force of the denser Medium extends itself within the Rarer.

Let now a Ray of Light AS fall obliquely on the Surface which separates the Mediums; or rather, on the Surface PS, where the Action of the second and more resisting Medium commences. All Attraction being perform'd in Lines perpendicular to the attractive Body, as the Ray arrives at *a*, it will begin to be turned out of its rectilinear Course; by a superior Force where-with it is attracted by the Medium O, more than by the Medium N, i. e. by a Force wherewith it is drawn towards it in a Direction perpendicular to its Surface.—Hence the Ray is bent out of its right Line, in every Point of its Passage between PS and RT, within which the Attraction acts. Between those Lines, therefore it describes a Curve *abB*. But beyond RT, being out of the Sphere of Attraction of the Medium N, it will proceed uniformly in a right Line, according to the Direction of the Curve in the Point *b*.

Again, suppose N the denser and more resisting Medium, O the Rarer; and HI the Boundary, as before; and let RT be the Distance to which the denser Medium exerts its attractive Force within the Rarer: Even when the Ray has pass'd the Point B, it will be within the Sphere of superior Attraction of the denser Medium; but that Attraction acting in Lines perpendicular to its Surface, the Ray will be continually drawn from its straight Course BM perpendicularly towards HI: Thus having two Forces or Directions, it will have a compound Motion, whereby instead of BM it will describe *Bm*, which *Bm*, will in its thickness be a Curve.

Lastly, After it has arrived in *m*, being out of the Influence of the Medium N, it will persist uniformly in a right Line, in the Direction wherein the Extreme of the Curve leaves it.

Thus we see how Refraction is performed, both toward the Perpendicular, and from it.

But Note, the Attraction of the denser Medium, *e. gr.* N, is continually diminishing as the Ray proceeds from B, towards the limit of Attraction RT; in regard fewer and fewer Parts still come to act: as IH, *e. gr.* all the Parts between that and PS attract, but at RT, none but those in the Line HI.—Note also, that the Distance between PS and RT being small, when we consider *Refractions*, no Notice is taken of the Curve Part of the Ray; but we consider it as consisting of two straight Lines, CB, AB, or m B, AB.

**REFRACTION**, in Dioptricks, is the Inflection or bending of the Rays of Light, in passing the Surfaces of Glasses, Lenses, and other transparent Bodies of different Densities.

That a Ray, as AB, (*Tab. Opticks, Fig. 56.*) falling obliquely from the Radiant A, upon a Point B, in a diaphanous Surface, HI rarer or denser than the Medium along which it was propagated from the Radiant; has its Direction there alter'd by the Action of the new Medium, and instead of proceeding to M deviates, *e. gr.* to C.

This Deviation is called the *Refraction of the Ray*: BC the *Refracted Ray*, or *Line of Refraction*; and B the *Point of Refraction*. See **RAY**, **LINE**, and **POINT**.

The Line AB is call'd the *Law of Incidence*, or *Ray of Incidence*; and in respect hereto B is also call'd the *Point of Incidence*. See **INCIDENCE**.

The Plane wherein both the incident and *reflected* Rays are found, is call'd the *Plane of Refraction*; a right Line BE drawn in the *refracting* Medium perpendicular to the *refracting* Surface in the *Point of Refraction* B, is call'd the *Axis of Refraction*.—And a right Line DB drawn perpendicular to the *refracting* Surface, in the *Point of Incidence* B, along the Medium through which the Ray fell, is call'd the *Axis of Incidence*. See **PLANE**, **AXIS**, &c.

The Angle ABH included between the incident Ray, and the *refracting* Surface, is call'd the *Angle of Incidence*; and the Angle ABD included between the incident Ray, and the *Axis of Incidence*, is call'd the *Angle of Inclination*.—The Angle MDC which the *refracted* Ray makes with the Incident, is call'd the *Angle of Refraction*; and the Angle CBE which the *refracted* Ray makes with the *Axis of Refraction*, is call'd the *refracted Angle*. See **ANGLE**.

#### General Law of REFRACTION.

I. A Ray of Light in its Passage out of a rarer, into a denser Medium, *e. gr.* out of Air into Glass, is refracted towards the Perpendicular, *i. e.* towards the *Axis of Refraction*.

Hence, the *refracted Angle* is less than the *Angle of Inclination*; and the *Angle of Refraction* less than that of *Incidence*; as they would be equal, were the Ray to proceed straight from A to M.

Hence, also a Ray perpendicular to the *refracting* Surface, will pass through without being *refracted*; as it cannot be *refracted* to the Perpendicular. The physical Cause thereof is, that the Attraction of the denser Medium, which in *Incidences* oblique to its Surface acting perpendicular to that Surface, draws the Ray out of its Course: This Attraction, we say, in a perpendicular *Incidence*, acts in the Direction of the Ray.

II. The Ratio of the Sine of the *Angle of Inclination*, to the Sine of the *refracted Angle*, is fix'd and constant; *viz.* if the *Refraction* be out of Air into Glass, it is found greater than as 114 to 76; but less than 115 to 76; that is, nearly as 3 to 2.

This Ratio, assign'd by *Huygens*, agrees with another of *Sir Isaac Newton*, who makes the Sine of the *Angle of Inclination* to the Sine of the *refracted Angle*, as 31 to 20; which is, likewise, nearly as 3 to 2.—Indeed there is some Difference in the Quantity of *Refraction*, in different Kinds of Glass; but in physical Matters, Preciseness is not necessary.—In Rain Water, *Des Cartes* found, the Ratio of the Sine of the *Angle of Inclination*, to the Sine of the *refracted Angle*, as 250 to 187, that is, nearly as 4 to 3; which agrees with *Sir Isaac Newton's* Observation, who makes it as 529 to 396.—In Spirit of Wine, the same great Author makes the Ratio as 100 to 73; which is not far from the sesquialterian Ratio.—In Air he makes it as 3851 to 3850.

Whence the different *refractive* Power in different Fluids arises, is not determin'd.—Clear Water, of all others, *refracts* the least; and if impregnated with Salts, its *Refraction* is increased in Proportion to the Quantity of Salt. *Sir Isaac Newton* shews, that in many Bodies, *e. gr.* Glass, Crystal, a Seolinite, Pseudo-Topaz, &c. the *refractive* Power is proportionable to their Densities; only in sulphurous Bodies, as Camphire, Oil Olive, Amber, Spirit of Turpentine, &c. the Power is two or three times greater than in other Bodies of equal Density; yet they have the *Refract.* Power with respect to each other, nearly as their Densities.—As to Air, he shews that a Ray of Light in traversing quite thro' the Atmosphere, is *refracted* the same it would be were it to pass with the same Obliquity out of a Vacuum into Air of equal Density with that in the lowest Part of the Atmosphere. See **AIR**.

From the Law just laid down, it follows that one *Angle of Inclination*, and its corresponding *refracted Angle* being found by Observation; the *refracted Angles* corresponding to the several other *Angles of Inclination*, are easily computed.—Now, *Zacharias and Kneiber* have found, that if the *Angle of Inclination* be 70°, the

*refracted Angle* will be 38° 50'; on which Principle *Zacharias* has constructed a Table of *Refractions* out of Air into Glass, for the several Degrees of the *Angle of Inclination*; a Specimen whereof follows.

Ang. of Incl.	Refracted Angle	Angle of Refraction	Ang. of Incl.	Refracted Angle	Angle of Refraction
1°	0° 40' 5"	0° 19' 55"	10°	0° 39' 10"	3° 20' 44"
2	1 20 6	0 13 54	20	13 11 35	6 48 25
3	2 0 3	0 9 56	30	19 29 29	10 30 31
4	2 40 5	1 19 55	45	28 9 19	16 50 41
5	3 20 3	1 39 57	60	41 51 40	28 8 20

Hence it appears that at an *Angle of Inclination* less than 20° the *Angle of Refraction* out of Air into Glass, is almost  $\frac{1}{2}$  of the *Angle of Inclination*: And therefore a Ray is *refracted* to the *Axis of Refraction*, by almost a third Part of the Quantity of its *Angle of Inclination*.—And on this Principle it is that *Kepler* and most other dioptrical Writers, demonstrate the *Refraction* in Glasses.

The constant Ratio of the Sines of the *Angles of Inclination*, and the *refracted Angles* was first discovered by *Willeb. Snellius*.—'Tis vulgarly attributed to *Des Cartes*; who having seen it in *Snellius's* MS. first published it in his *Dioptricks*, without naming *Snellius*; as we are inform'd by *Huygens*.

Indeed, as the Rays of Light are not all of the same Degree of *Refrangibility*; this constant Ratio must be different in different Kinds.—The Ratio therefore observed by *Auruer* is to be understood of Rays of the mean *Refrangibility*, *i. e.* of green Rays. The Difference of *Refraction* between the least and most *refrangible* Rays, that is between Violet and red Rays, *Sir Isaac Newton* shews is about  $\frac{1}{4}$  Part of the whole *Refraction* of the mean *Refrangible*; which Difference he owns is so small, that there seldom needs to be any regard had to it. See **REFRANGIBILITY**.

III. When a Ray passes out of a denser into a rarer Medium, *e. gr.* out of Glass into Air, it is *refracted* from the Perpendicular, or from the *Axis of Refraction*.—And hence the *Angle of Refraction* is greater than the *Angle of Inclination*.

Hence, also, if the *Angle of Inclination* be less than 30°, *MBC* is nearly equal to  $\frac{1}{4}$  of *MBE*.—Therefore *MBC* is one half of *CBE*: Consequently, if the *Refraction* be out of Glass into Air; and the *Angle of Inclination* less than 30°; the Ray is *refracted* from the *Axis of Refraction* by almost one half Part of the *Angle of Inclination*.—And thus is the other dioptrical Principle used by most Authors after *Kepler*, to demonstrate the *Refractions* of Glasses.

If the *Refraction* be out of Air into Glass, the Ratio of the Sine of *Inclination* to the Sine of the *refracted Angle* is as 2 to 3; if out of Air into Water, as 4 to 3: Therefore, if the *Refraction* be the contrary way, *viz.* out of Glass or Water into Air; the Ratio of the Sines in the former Case, will be as 2 to 3, in the latter as 4 to 3.

IV. A Ray falling on a Curve Surface, whether Concave or Convex; is *refracted* after the same Manner as if it fell on a Plane which is Tangent to the Curve in the *Point of Incidence*.

For the Curve and plain Surface touching it, have an infinitely small Part common to them both, (each being originally generated by the Flux of a Point). But a Ray is *refracted* in such a little Part; therefore 'tis the same as if it were *refracted* in such a Plane.

V. If a right Line EF (*Fig. 57. and 58.*) cut a *refracting* Surface GH at right Angles; and if from any Point in the denser Medium as D be drawn DC Parallel to the incident Ray AB: This will meet the *refracted* Ray in C; and will be to it as the Sine of the *refracted Angle* to the Sine of the *Angle of Inclination*.

Hence, if BC pass out of Glass into Air, it is in a subsecularterate Ratio to CD; if out of Air into Glass, in a sesquialterate Ratio to CD.

Hence, also, if Light pass out of Water into Air; CB is in a subsecularterate Ratio to CD; if out of Air into Water in a Sesquialterate.

#### Law of REFRACTION in Plane Surface.

1°. If parallel Rays be *refracted* out of one transparent Body into another of different Density, they will continue Parallel after *Refraction*.

The physical Reason is, that being parallel, their Obliquity, or *Angle of Incidence* is the same: But at equal Obliquities we have shewn the *Refraction* is equal; consequently the Parallelism which they had before the *Refraction*, will be retain'd after it.

But this may be also demonstrated Geometrically, thus: If the Rays be perpendicular to the *refracting* Surface, they will pass without any *Refraction*; consequently being parallel before their Passage, they will be so after it. If they fall Obliquely, as AB and DC; the *Angles of Incidence*  $\alpha$  and  $\alpha_1$ ; and consequently, also the *Angles of Inclination*  $\alpha$  and  $\alpha_1$ , will be equal. But the Sines of the *Angles of Inclination*  $\alpha$  and  $\alpha_1$ , have the same Ratio to the Sines of the *refracted Angles*  $\alpha$  and  $\alpha_1$ ; therefore the *refracted Angles*  $\alpha$  and  $\alpha_1$  are also equal; consequently the *refracted* Rays parallel.

Hence a Glass, plain on both Sides, being turn'd directly to the Sun; the Light passing through it will be propagated after the same

same manner as if the Glafs were away: For the Rays being Perpendicular will pass without Refraction.—If the Glafs be turn'd obliquely to the Sun, the Light after Refraction will be of the same Intensity as before; the Intensity depending on the Spiffitude or Closeness of the Rays, and on the Angle wherein they strike the Object, or the Eye, both which are here unvaried. See RAY.

2. If two Rays CD and CP, (Fig. 59.) proceeding from the same Radiant C, and falling on a Plane Surface of a different Density, so as the Points of Refraction D and P are equally distant from the Cathetus of Incidence GK; the refracted Rays DF and PQ have the same virtual Focus, or Point of Dispersion G. See VIRTUAL.

Hence, 1°. Since in Rays very near each other, the Distance from the Cathetus is the same as to Senſe; very near Rays will diverge from the same Point G, i. e. have the same virtual Focus G.—And hence, 2°. When refracted Rays falling on the Eye placed out of the Cathetus of Incidence, are either equally distant from the Cathetus, or very near each other; they will flow upon the Eye, as if they came to it from the Point G; consequently the Point C will be seen by the refracted Rays as in G.

3. If a Ray CD fall obliquely out of a thinner into a denser Medium, having a plane Surface; the Distance of the Radiant Point CK has a less Ratio to the Point of Dispersion, or virtual Focus KG, than the Sine of the refracted Angle to the Sine of the Angle of Incidence.—But if the Distance of the Point of Refraction from the Cathetus of Incidence KD be less than the eleventh or nineteenth Part of the Distance of the radiant Point CK; and if in the former Case the tenth, in the latter the hundredth Part thereof be so small that it can't be assign'd or need not be minded, then will CK be to KG, as to Senſe: In the Ratio of the Sine of the refracted Angle, to the Sine of the Angle of Incidence.

Hence, 1°. If the Refraction be out of Air into Glass, the Distance of the Point of Dispersion of Rays near the Cathetus, is Sesquialterate, of the radiant Point; of more remote Rays, greater than Sesquialterate.

Hence, 2°. If the Eye be placed in a denser Medium, Objects in a Rarer will appear more remote than they are; and the Place of the Image in any given Case, may be determined from the Ratio of the Refraction.—Thus to Fishes swimming under Water, Objects out of the Water will appear further distant than in reality they are.

4. If a Ray OD fall obliquely out of a denser, into a rarer Medium AB; the Distance of the radiant Point GK, has a greater Ratio to the Distance of the Point of Dispersion KC, than the Sine of the refracted Angle has to the Sine of the Angle of Incidence.—In the other Case of the preceding Theorem, KG will be to KC, as to Senſe, in the Ratio of the Sine of refracted Angle, to the Sine of the Angle of Incidence.

Hence, 1°. If the Refraction be out of Glass into Air, the Distance of the Point of Dispersion of Rays near the Cathetus of Incidence, is Subsesquialterate of the Distance of the radiant Point. That of the more remote Rays is less than the Subsesquialterate.

Bar, 2°. If the Refraction be out of Water into Air; the Distance of the Point of Dispersion of Rays near the Cathetus, is Subsesquialterate; of those more remote, less than Subsesquialterate.

And 3°. The Eye therefore being in a rarer Medium, Objects placed in a Denser appear nearer than they are; and the Place of the Image may be determined in any given Case by the Ratio of Refraction.—Hence the Bottom of a Vessel full of Water, is rais'd by Refraction, to a third Part of its Height, with respect to an Eye perpendicularly over the refracting Surface; and hence Fishes, and other Bodies under Water, appear nearer than they really are.

5. If the Eye be placed in a rarer Medium, an Object seen in a denser Medium, by a Ray refracted in a plane Surface, will appear larger than it really is.—If the Object be in a rarer, and the Eye in a denser Medium, the Object will appear less than it is.—And in each Case the apparent Magnitude is to the real one in a Ratio compounded of the Distance of the Point to which the Rays tend before Refraction, from the refracting Surface FL (Fig. 60.) to the Distance of the Eye GL, from the same, and of the Distance of the Object from the Eye GM, to its Distance from a Point to which the Rays FL tend before Refraction.

Hence, 1°. If the Object AB be very remote; FM will be physically equal to GM; and therefore the real Magnitude MB to its apparent one MH, as GL to FL, or the Distance of the Eye G from the refracting Plane to the Distance of the Point of Convergence F from the same Plane.

Hence, 2°. Objects under Water, to an Eye in the Air, appear larger than they are; and to Fishes under Water, Objects in the Air appear less than they are.

LEWS of REFRACTION in Spherical Surfaces, both Concave and Convex.

1. A Ray of Light DE (Fig. 61.) Parallel to the Axis of a denser Sphere, after a single Refraction in E, falls in with the Axis in the Point F, beyond the Centre C.

For the Semidiameter CE drawn to the Point of Refraction E, is perpendicular to the Surface KL, and is therefore the Axis of Refraction; but a Ray out of a rarer into a denser Medium, we have shewn, is refracted towards the Perpendicular, or the Axis of Refraction; therefore the Ray DE will converge to the Axis of the Sphere AF; and will therefore at length concur with it; and that beyond the Centre C, in F; because the Angle of Refraction FEH is less than the Angle of Incidence CEH.

2. If a Ray DE fall on a spherically Convex Surface of a denser Medium, parallel to its Axis AF; the Semidiameter CE will be to the refracted Ray EF in the Ratio of the Sine of the refracted Angle to the Sine of the Angle of Incidence; But the Distance of the Focus or Point of Concurrency to the refracted Ray FE is in the Ratio of the Sine of the refracted Angle to the Sine of the Angle of Incidence.

3. If a Ray DE fall on a denser spherically Convex Surface KL, Parallel to the Axis AF; the Distance of the Focus from the refracting Surface FB, is to its Distance from the Centre FC; in a Ratio greater than that of the Sine of the Angle of Incidence to the Sine of the refracted Angle.—But if the Rays be very near the Axis, and the Angle of Incidence BCE of a few Degrees; the Distances of the Focus from the Surface, and the Centre FB and FC, will be, nearly, in the Ratio of the Sine of the Angle of Incidence, to the Sine of the refracted Angle.

Hence, 1°. If the Refraction be out of Air into Glass; in the Case of Rays near the Axis, BF : FC :: 3 : 2. And in the Case of the Rays remoter from the Axis, BF : FC > 3 : 2. Consequently in the former Case, BC : BF :: 1 : 3; and in the latter BC : BF < 1 : 3.

And 2°. If the Refraction be out of Air into Water; in the former Case, BF : FC :: 4 : 3; and in the latter, BF : FC > 4 : 3. Consequently in the former BC : BF :: 1 : 4; and on the latter BC : BF < 1 : 4.

Hence, 3°. Since the Sun's Rays are Parallel, as to Senſe; if they fall on the Surface of a solid Glass Sphere, or of a Sphere full of Water, they will not concur with the Axis within the Sphere. So that *Viſallo* was mistaken when he imagined that the Sun's Rays falling on the Surface of a Crystallin Sphere, were refracted to the Centre. See Focus.

4. If a Ray DE (Fig. 62.) fall out of a denser into a rarer spherically Medium; after Refraction it will diverge from the Axis; and the Distance of the Point of Dispersion, or the virtual Focus from the Centre of the Sphere, FC, will be to its Semidiameter CE in the Ratio of the Sine of the refracted Angle to the Angle of Refraction; but to the Portion of the refracted Ray drawn back, FE, in the Ratio of the Sine of the refracted Angle to the Sine of the Angle of Incidence.

5. If a Ray ED fall Parallel to the Axis AF on the spherically Convex Surface KL, of a rarer Medium, out of a denser; the Distance of the Point of Dispersion from the Centre, FC, is to its Distance from the Surface FB: In a Ratio greater than that of the Sine of the refracted Angle to the Sine of the Angle of Incidence.—But if the Rays DE be very near the Axis FA, the Ratio will be very nearly the same with that of the refracted Angle to the Sine of the Angle of Incidence.

Hence, 1°. If the Refraction be out of Glass into Air; in the Case of Rays near the Axis, FC : FB :: 3 : 2. Consequently BC : FB :: 1 : 2. Therefore in the Case of Rays more remote from the Axis, BC : FB < 1 : 2.

2°. If the Refraction be out of Water into Air; in the former Case FC : FB :: 4 : 3. Consequently BC : FB :: 1 : 3; in the latter Case, therefore, BC : FB < 1 : 3.

3°. Since then the Point of Dispersion F is more remote from the refracting Surface KL, if the Rays proceed out of Water, than out of Glass, into Air; Parallel Rays are less dispersed in the former Case than in the latter.

6. If a Ray HE (Fig. 61.) fall parallel to the Axis FA, out of a rarer, on the Surface of a spherically concave denser Medium; the refracted Ray EN will be made to recede from the Point of the Axis F; so as FE will be to FC, in the Ratio of the Sine of the Angle of Incidence, to the Sine of the refracted Angle.

7. If a Ray EH fall parallel to the Axis FB on the Concave Surface KL of a spherically denser Medium, from a rarer; the Distance of the Point of Dispersion from the refracting Surface FB; is to Distance from the Centre, FC, in a Ratio greater than that of the Sine of the Angle of Incidence, to the Sine of the refracted Angle. But if the Rays be very near the Axis, and the Angle BCE very small; FH will be to BC very nearly in the Ratio of the Sine of the Angle of Incidence, to the Sine of the refracted Angle.

Hence, 1°. If the Refraction be out of Air into Glass; in the Case of the Rays near the Axis, FB : FC :: 3 : 2; in the Case of Rays more remote from the Axis FB : FC > 3 : 2; consequently in the former, BC : FC :: 1 : 2; And hence, in the latter, BC : FC < 1 : 2.

Hence also 2°. If the Refraction be out of Air into Water; in the Case of the Rays near the Axis, FB : FC :: 4 : 3. In the Case of Rays more remote from the Axis FB : FC > 4 : 3. Consequently in the first Case BC : FC :: 1 : 3. And hence, in the latter, BC : FC > 1 : 3.

And hence, 3<sup>o</sup>. Since the Point of Dispersion F, is further from the Centre C, if the Refraction be in Water than in Air; the Rays will be less dispersed in the latter Case than in the former.

8. If the Ray HE (Fig. 62.) fall parallel to the Axis AF, from a denser, upon the Surface of a spherically Concave rarer Medium; the refracted Ray will concur with the Axis AF, in the Point F; so as the Distance of the Point of Concourse from the Centre CF, may be to the refracted Ray FE, in the Ratio of the Sine of the refracted Angle, to the Sine of the Angle of Incidence.

*Doctrine of REFRACTION in Glasses, Lenses, &c.*

1<sup>o</sup>. *Refraction in a Glass Prism*.—If a Ray of Light DE (Fig. 62.) fall obliquely out of Air on a Prism ABC; being refracted towards the Perpendicular, instead of proceeding to F it will decline to G, i. e. towards a Line HI, drawn Perpendicular to the Surface AB in the Point of Refraction E.—Again, since the Ray EG passing out of the Glass into Air falls obliquely on CB; it will be refracted to M; so as to recede from the Perpendicular NGO. And hence the various Phenomena of the Prism. See PRISM.

2<sup>o</sup>. *Refraction in a Convex Lens*.—If Parallel Rays AB, CD, and EF, (Fig. 63.) fall on the Surface of a Lens AB 3K; the perpendicular Ray AB will pass unrefracted to K, where emerging into Air perpendiculars, as before, it will proceed straight to G. But the Rays CD and EF falling obliquely out of Air into Glass, in D and E, will be refracted towards the Axis of Refraction, (i. e. towards Lines HI and LM drawn perpendicular to the refracting Surface in the Points of Refraction F and D;) and decline to R and Q.—Again, emerging obliquely out of the Glass into the Surface of the Air, they will be refracted from the Perpendicular; and therefore DQ will not proceed to X but to G; and FP, not to V but to G: Thus likewise might all the other Rays falling on the Surface of the Glass, be shewn to be refracted so as to meet the others about the Point G. See FOCUS.

Hence the great Property of Convex Glasses; viz. *That they collect Parallel Rays, or make them converge into a Point.* See CONVEXITY.

3<sup>o</sup>. *Refraction in a Concave Lens*.—Parallel Rays AB, CD, EF, (Fig. 64.) falling on a Concave Lens GBHMK; the Ray AB falling perpendicular on the Glass at B, will pass unrefracted to M; where being still perpendicular, it will pass into the Air, without Refraction to L. But the Ray CD falling obliquely on the Surface of the Glass, will be refracted towards the Perpendicular NDO, and proceed to Q; and the Ray DQ, again, falling obliquely out of the Glass upon the Surface of Air, will be refracted from the Perpendicular RQS, and proceed to V. After the same manner might the Ray EF be shewn to be refracted to Y, and thence to G.

Hence the great Property of Concave Glasses, viz. *That they disperse Parallel Rays, or make them diverge.* See CONVEXITY.

4<sup>o</sup>. *Refraction in a plain Glass*.—If Parallel Rays EF, GH, IL, (Fig. 65.) fall obliquely on a plain Glass ABCD; the Obliquity being the same in all, by reason of their Parallelism, they will be all equally refracted towards the Perpendicular; and accordingly being still parallel at M, O, and Q, will pass out into the Air equally refracted, again, from the Perpendicular, and still Parallel. See PARALLEL, and LOOKING-Glass.

Thus will the Rays EF, GH, and IL, at their entering the Glass, be inflected towards the right; and in their going out as much inflected to the left; so that the first Refraction is here undoes by the second: Indeed, not so as that the Object is seen in its true Place.—For the Ray BQ being produced back again, will not coincide with the Ray LI; but will fall to the right thereof; and this the more as the Glass is thicker: However, as to the Point of Colour, the second Refraction does really undo the first. See COLOUR.

5<sup>o</sup>. *Refraction in Island Crystal*.—The Laws of Refraction in Island Crystal differ very much from those laid down in other Substances; for here is a double Refraction, contrary ways, where by not only oblique Rays are split or divided into two, and refracted to opposite Parts, but even perpendicular Rays are also split, and one half of them refracted.

For the Theory hereof, see Island CRYSTAL.

The particular Laws of Refraction in the several Kinds of Lenses, see under the Article LENS.

REFRACTION, in Astronomy, or REFRACTION of the Stars, is an Inflection of the Rays of those Luminaries, in passing through our Atmosphere; whereby the Altitudes of the heavenly Bodies are apparently increased. See STAR and ALTITUDE, &c.

This Refraction arises hence, that the Atmosphere is unequally dense in different Stages or Regions; rarest of all at-top, and densest at bottom; which Inequality in the same Medium, makes it equivalent to several unequal Mediums. See AIR and ATMOSPHERE.

Sir Isaac Newton has shewn that a Ray of Light in passing from the highest and rarest Part of the Atmosphere, down to the lowest and densest, undergoes the same Refraction it would do in passing immediately, at the same Obliquity, out of a Vacuum into Air of equal Density with that in the lowest Part of the Atmosphere.

The effect of this Refraction may be thus conceived. Suppose ZV (Tab. Astronomy, pag. 57.) a Quadrant of a vertical Circle, described from the Centre of the Earth T, under which is AB; a Quadrant of the Circumference of the Earth; and GH a Quadrant of the Surface of the Atmosphere: And suppose SE a Ray of Light emitted by a Star at S, and falling on the Atmosphere at E.—This Ray coming out of the Etherial Medium, which is much rarer than our Air, or perhaps out of a perfect Vacuum, and falling on the Surface of the Atmosphere, will be refracted towards the Perpendicular: And since the upper Air, again, is rarer than that near the Earth, and grows still denser as it approaches us: The Ray, in its Progress will be continually refracted, so as to arrive at the Eye in the Curve Line EA.

Supposing, then the right Line AF to be a Tangent to the Arch in A, the Ray will enter the Eye A, according to the Direction of AF.—And since Objects are always seen in that Line, according to the Direction whereof the Rays enter the Eye, the Star will appear in AF; that is, in the Heavens at Q, which is nearer the Zenith than the Star really is.

Hence arise the Phenomena of the *Crepusculum*, or *Twilight*. See CREPUSCULUM.

And hence also it is that the Moon is sometimes seen eclipsed, when she is below the Horizon, and the Sun above it. See ECLIPSE.

That there is a real Refraction of the Stars, &c. is deduced not only from physical Considerations, and from Arguments a priori, and a Smeatruade; but also from precise Astronomical Observations: Thus,

The Distance of the two Stars, *Spica Virginis*, and the *Lynx's-Tail*, when near the Meridian, or even over the Well, is constantly found 33° 2'. But when the *Lynx's-Tail* is risen in the East 34° 30' high, *Spica Virginis* is observ'd to be almost the same vertical Circle.—Add to this, an Observation of the Dutch, who winter'd at Nova Zembla in 1597, from whom the Sun totally disappeared on the 12th of November; and again began to appear on the 24th of January, which was six Days sooner than he should have return'd, according to Astronomical Calculations; as is observ'd in the *Alia Eruditionum*, A. 1697.—Nor must it be omitted that Charles XI. King of Sweden, being in 1694, at Torow, in *Wist-Botania*, in the Latitude of 69° 33', observ'd that the Sun never set between the 14th and 15th Day of June; but was visible in the middle of the Night: The following Year he appointed two Mathematicians, *Bidenbergius* and *Spolius*, to observe the same more accurately; who accordingly found that at Torow in the middle of the Night, between the 10th and 11th of June, the Sun was  $\frac{1}{2}$  of his Diameter above the Horizon; and on the 12th of June at *Kanga*, in the Latitude of 66° 15', they found the Sun at Midnight, two Diameters above the Horizon.

Hence 'tis argued, That as all Light is propagated in right Lines, no Rays could reach the Eye from a Luminary below the Horizon, unless they were deflected out of their Course at their Entrance into the Atmosphere: 'Tis evident, therefore, the Rays are refracted in passing through the Atmosphere.

Hence the Stars appear higher by Refraction than they really are; so that to bring the observ'd or apparent Altitudes to the true ones, the Quantity of Refraction must be subtracted. See ALTITUDE.

And hence, as the Antients were unacquainted with the Refraction; reckoning upon too great Altitudes, 'tis no Wonder they sometimes committed considerable Errors.

From the Doctrine of Refraction it appears that we never see the real Sun rising or setting, but only a Phantom, or Image thereof; the Sun himself being at that time had below the Horizon.

And from the Observations just mentioned, it follows, that the Refractions are greater near the Pole, than at a less Latitude; doublet than the greater Density of the Atmosphere, and the greater Obliquity of the Zenith.

M. de la Hire, assures us, he could never find any Differences in the Meridian Altitudes of the Stars; so that the Refractions remain always the same.—Though he owns, near the Horizon the different Constitution of the Air, &c. may occasion some Variations in the Refractions.

Stars in the Zenith are not subject to any Refraction.—Those in the Horizon have the greatest.—From the Horizon the Refraction continually decreases to the Zenith: All which follows hence, that in the first Case the Rays are perpendicular; in the second their Obliquity is greatest; in the third, 'tis continually increasing.

At the same Altitudes the Sun and Stars all undergo the same Refraction; for at equal Altitudes the incident Rays have the same Inclinations; but the Sines of the refracted Angles are as the Sines of the Angles of Inclination, &c.

Indeed Tycho Brahe, who first deduced the Refractions of the Sun, Moon, and fix'd Stars from Observation; makes the Solar Refractions greater than those of the fix'd Stars; and the Lunar Refractions sometimes greater than those of the Stars, sometimes less.—But the Theory of Refractions (which we have observ'd is owing to Snellius) was not fully understood in his Age.—De la Hire and Cassini, find the Refraction the same in all.

M. de la Hire gives us a Table of the Refractions of the Stars, in their several Degrees of Altitude; deduced from the surest and most accurate Observations; as follows.

Table

Table of REFRACTIONS of the Heavenly Bodies, at the several Degrees of Altitude.

Alt.	Refract.	Alt.	Refract.	Alt.	Refract.	Alt.	Refract.	Alt.	Refract.	Alt.	Refract.
0	32' 0"	16	3' 26"	30	1' 51"	46	1' 9"	62	0' 49"	77	0' 17"
1	26 35	17	3 23	31	1 47	47	1 7	61	30 78	78	15
2	20 43	18	3 12	32	1 43	48	1 6	63	37 79	79	14
3	15 44	19	3 1	33	1 40	49	1 4	64	35 80	80	12
4	12 26	20	2 51	34	1 36	50	1 2	65	33 81	81	11
5	10 26	21	2 44	35	1 33	51	1 0	66	32 82	82	10
6	9 8	22	2 38	36	1 30	52	0 58	67	31 83	83	8
7	8 8	23	2 31	37	1 27	53	56	68	30 84	84	7
8	7 1	24	2 24	38	1 24	54	54	69	28 85	85	6
9	6 17	25	2 18	39	1 22	55	52	70	26 86	86	4
10	5 41	26	2 12	40	1 19	56	50	71	25 87	87	3
11	5 11	27	2 7	41	1 17	57	48	72	24 88	88	2
12	4 46	28	2 3	42	1 15	58	46	73	23 89	89	1
13	4 25	29	1 59	43	1 13	59	44	74	21 90	90	0
14	4 7	30	1 55	44	1 11	60	42	75	20		
15	3 51			45	1			76	18		

*Tycho Brahe* will have the Refractions of the Sun to vanish at the Altitude of  $46^{\circ}$ ; those of the Moon at  $45^{\circ}$ , and those of the fixed Stars at  $20^{\circ}$ : But *Cassini* has found that they reach even to the Zenith.—I looked *Tycho* represented all the Refractions less than they are; except the horizontal one, which he made too big; For he makes the horizontal Refraction in the Sun  $34'$ ; in the Moon  $33'$ ; in the fixed Stars  $30'$ . *De la Hire* and *Cassini* make it  $32'$  in all the heavenly Bodies. *Tycho*, again, makes the Refraction of the Sun at  $33^{\circ}$  Altitude, to be  $55''$ ; but *Cassini*  $1'$ ,  $43''$ .

*Fa. Laval* in 1710,  $22^{\circ}$  Zen. observ'd the meridian Altitude of the Sun to be  $70^{\circ} 25' 0''$ ; and on the 23 of June, observ'd the same to be  $70^{\circ} 26' 0''$ , which is  $10''$  more, that should be less.—Having met with some like Observations before, he takes occasion to suspect the Refractions to be varied according to the different Winds which blow from the different Quarters.—When the North-West Wind blows, he thinks the Refraction is the greatest; and adds, from Observations made at *St. Bavoer*, and *St. Pilsen*, that the Refraction at 24 Fathoms above the Surface of the Sea, is double that at 600 Fathoms. See HORIZON.—*Huygens* long ago observ'd the Refraction to be chang'd every Hour; tho' his Experiments were made at very little Altitudes, and in Terrestrial Objects.

The Refraction diminishes the right and oblique Ascensions of a Star; and increases the Descensions: It increases the Northern Declination; diminishes the Southern. See ASCENSION, DESCENSION, &c.

Refraction, in the Eastern Part of the Heavens, diminishes the Longitude of a Star; but increases the same in the Western Part of the Heavens: It diminishes the Southern Latitude, and increases the Northern. See LONGITUDE and LATITUDE.

The Refraction therefore, is by no means to be overlook'd in Astronomy.—It's absolutely necessary to the determining of the Phenomena of the heavenly Motions, to a Degree of Accuracy; so that the ancient Astronomy, where no regard was had to it, must of necessity have been exceedingly defective on this very account. See ASTRONOMY.

#### To observe the REFRACTION of a Star, &c.

1<sup>o</sup>. Observe the meridian Altitude of a Star near the Zenith; whence the Latitude of the Place being known, the true Declination of the Star is easily had, the Star being now void of any sensible Refraction. See DECLINATION.

2<sup>o</sup>. Observe the Altitude of the same Star in any other Degree, and note the Time by a Pendulum. 3<sup>o</sup>. For the given Time of Observation, from the Declination of the Star, compute its true Altitude. See ALTITUDE.

This being thus found less than the Altitude observ'd; subtract the one from the other; the Remainder is the Refraction for that Moment, in that Degree.

REFRACTION of Altitude, is an Arch of a vertical Circle, as *SF*; (*Tab. Astronomy*, Fig. 28.) whereby the Altitude of a Star *SE*, is increased by the Refraction. See ALTITUDE.

REFRACTION of Declination, is an Arch of a Circle of Declination, as *fl*, whereby the Declination of a Star *f DS* is increased or diminished by the Refraction. See DECLINATION.

REFRACTION of Ascension and Descension, is an Arch of the Equator, *DA*, whereby the Ascension and Descension of a Star, whether right or oblique, is increased or diminished; by means of the Refraction. See ASCENSION, &c.

REFRACTION of Longitude, is an Arch of the Ecliptic, *Tz*, whereby the Longitude of a Star is increased or diminished by means of the Refraction. See LONGITUDE, &c.

REFRACTION of Latitude, is an Arch of a Circle of Latitude *fl*, whereby the Latitude of a Star, *Tf*, is increased or diminished by means of Refraction. See LATITUDE.

REFRANGIBILITY of Light, the Disposition of the Rays to be refracted. See REFRACTION.

A greater or less Refrangibility is a Disposition to be more or less refracted, in passing at equal Angles of Incidence, into the same Medium. See LIGHT, MEDIUM, &c.

That the Rays of Light are differently refrangible, is the Foundation of Sir *Izaak Newton's* whole Theory of Light and Colours.—The Truth of the Principle will appear from the following Experiments.

1<sup>o</sup>. A Ray of Light being received through a little round Hole into a dark Room, upon a Glass Prism, *ABC*, (*Tab. Opticks*, Fig. 55.) in such manner as to pass through it near the Angle *C*; the various Colours of the Rainbow will be seen pointed in all their Splendor on a white Paper, *EF*; viz. the Red in *E*, then the Yellow, then Green, Blue, and at last Purple, or Violet; and on whatever Body you receive the Light, still the Colours will be the same.

Yet this colour'd Light is still propagated, like other Light, in right Lines; 'tis reflected, too, like other Light, from a Mirror, and refracted through a Lens; yet retains its Colours both after Refraction and Reflection.—When collected into a Focus, the Rays degenerate into a very bright White; but upon diverging again from the Focus, resume their former Colours.

Hence, 1<sup>o</sup>. Since nothing here happens to the Rays in passing the Prism, but that they are refracted, both in entering, and in quitting it: (See PRISM.) Light is converted into those Colours by mere Refraction.

2<sup>o</sup>. Since the colour'd Rays are still propagated in right Lines, and refracted from Mirrors, or refracted to Lenses; they still retain all the Properties of Light, and therefore are still Light.

3<sup>o</sup>. Since the several colour'd Rays decussated and mix'd together in the Focus, appear White; but after Separation, beyond the Focus, recover their former Colours; therefore Red, Yellow, Green, Blue, and Purple Rays mix'd together in a convenient Proportion, continue a Replenient white. See WHITE.

Note. The Experiment will succeed if the Room be not dark, only the Colours will be the less vivid.

1. A Prism *DEF* (*Fig. 66.*) being so disposed as that the Refractions of the Rays both at their Entrance and Exit, are equal; (which is obtain'd, by turning it slowly round its Axis, till the colour'd Light, which now rises, and now falls, appear stationary between the two.) In the middle Space between the Prism and the colour'd Light painted on the Wall, place another Prism *GH* to receive the colour'd Light *LM*. After a second Refraction in this second Prism the colour'd Light painted on the Wall, *IK*, will be inclined to a line Light *NO*, seen there, even when the Prism *GH* is removed; so as the blue Extremities *N* and *I* will be further a-part than the red ones *K* and *O*.

Hence, 1<sup>o</sup>. The blue Rays must of Necessity be more refracted than the red ones; and there is, likewise, an unequal Refraction in the intermediate Rays.

Hence, therefore, the Sun's Rays are not all of the same Refrangibility; consequently, not of the same Nature. See RAY.

3. Those Rays are most Refrangible, which are most Reflexible. See this proved under REFLEXIBILITY.

The Difference between Refrangibility and Reflexibility was first discover'd and publish'd by Sir *Izaak Newton* in 1675, in the *Phil. Transact.* and from that time vindicated by him, from the Objections of several Authors; particularly *F. Pardies*, *M. Mariotte*, *Fr. Linnæus*, or *Linn*, and other Gentlemen of the *English College at Liege*: At length it was more fully laid down, illustrated, and confirm'd by great variety of Experiments in his immortal *Opticks*.

But, further, as not only those Colours of Light produced by Refraction in a Prism, but also those reflected from Opake Bodies have their different Degrees of Refrangibility and Reflexibility; and as a white Light arises from a Mixture of the several colour'd Rays; the same great Author concluded all homogeneous Light to have its proper Colour, corresponding to its Degree of Refrangibility, and not capable of being chang'd by any Reflexions, or any Refractions; that the Sun's Light is composed of all the primary Colours; that all compound Colours arise from a mixture of the primary ones, &c. See COLOUR.

The different Degrees of Refrangibility, he conjectures to arise from the different Magnitude of the Particles whereof the disse-

rent Rays consist—Thus the most refrangible Rays, *i. e.* the red ones, he supposes to consist of the largest Particles; the least Refrangible, *i. e.* the Violet Rays, of the smallest Particles; and the intermediate Rays, Yellow, Green, and Blue, of Particles, of intermediate Sizes. See RED, GREEN, VIOLET, &c.

REFRACTION, in Commerce, a Term sometimes used by Merchants, where there has been an oversight in an Account, to the Prejudice of a Person, who thereupon demands Restitution of so much, added or omitted by Mistake.

You must make me a *Refraction* of five Pound forgot in your Account.—I'll Deduct or make you *Refraction* of 30s. charged inadvertently in my Bill.

REFRET, in Music. See RITORNELLO.

REFRIGERATIVE, in Medicine, a Remedy or Diet which refreshes the inner Parts by cooling them.

Such, usually, are Pissams, Clysters, Potions, &c. See PISAM, &c.

REFRIGERATORY, in Chymistry, a Cooler; or a Vessel, filled with cold Water, placed about the Head of an Alembic, to cool and condense the Vapours rais'd thither by the Fire, and to convert them into a Liquor, to be discharged thence through the Beak. See DISTILLATION, ALEMBIC, SPIRIT, WATER, &c.

The Water in the *Refrigeratory* is to be changed from time to time, as it begins to grow warm.

Sometimes they content themselves with wrapping a wet Cloth about the Head of the Alembic, instead of a *Refrigeratory*: But the more usual Method now used to supply the Place of the *Refrigeratory*, is by a Worm, or spiral Pipe running through a Tub of cold Water.—Distillation is perform'd by Evaporation and *Refrigeration*. See EVAPORATION, &c.

REFUGE, REFUGIUM, in our old Customs, a Sanctuary or Asylum. See SANCTUARY and ASYLUM.

At Paris is a Hospital called the *Refuge*, wherein dissolute Women are shut up. See MAGDALEN.

REFUGEE, *French-Cavaliers*, who by the Revocation of the Edict of Nantes, in 1685, have been constrain'd to quit their Country, and retire for Refuge into Holland, Germany, England, &c. to save themselves from the necessity of abandoning their Religion. See EDICT.

REGAL, something belonging to a King. See KING.

*Regal* is of the same import with *Royal*; the former being form'd of the Latin *Rex*; the other of the *French*, *Roy*, King. See ROYAL.

REGAL *Prives*. See ROYAL *Prives*.

REGALIE, in the *French*, *Jurisdiction*, is a Right belonging to the King over all Benefices. See BENEFICE.

The *Regale* consists in enjoying the Revenues of Bishopsricks during the vacancy of their Sees; and of presenting to the Benefices dependant thereon, which become vacant during that time, and 'till a Successor have taken the Oath of Fidelity, and have procured Letters Patentes, to secure him from the *Regale*.

The Enjoyment of the Fruits of the See is called the *Temporal Regale*; that of presenting to Benefices the *spiritual Regale*.

Some refer the Origin of the *Regale* to the time of Clovis, and say the Clergy granted this Privilege to the King, upon his defeating the *Pisigths*; others say, Pope Adrian granted *Charlemagne* with it, in a Council held at *Rome*.—'Tis observ'd by others, that the *Regale* was originally no more than a Ward, or Administration; and that the Kings were only Depositories of the Fruits of the vacant Bishopsricks, and appointed *Oeconomus* to look to them during the Vacancy. See OECONOMY.

'Tis added, that the Kings of the first and second Race never enjoy'd any such Privilege, and that it was only introduced in the twelfth Century, in favour of Investitures. See INVESTITURE.

REGALE, REGALIO, a magnificent Treat or Entertainment, given Embassadors, or other Persons of Distinction, to divert or do them Honour.

In Italy 'tis usual at the Arrival of any Traveller of Eminence, to send him a *Regale*; that is, a Present of Fruits, Sweet-Meats, &c. by way of Refreshment.

REGALIA, in Law, the Rights or Prerogatives of a King. See KING.

These are reckon'd by Civilians to be six; 1<sup>o</sup>. Power of Jurisdiction. 2<sup>o</sup>. Power of Life and Death. 3<sup>o</sup>. Power of War and Peace. 4<sup>o</sup>. Masterless Goods. 5<sup>o</sup>. Admissions. 6<sup>o</sup>. Minting of Money. See ROYALTIES.

REGALIA is also used for the several Parts of the Apparatus of a Coronation; as the *Sceptre* with the *Cross*; *Sceptre* with the *Dove*; *St. Edward's Staff*; four several *Swords*; the *Globe*; the *Orb* with the *Cross*, &c. used at the Coronation of our Kings. See CORONATION.

REGALIA, of the Church, are those Rights and Privileges which Cathedrals, &c. enjoy by Grants, and other Concessions of Kings. See CHURCH, CATHEDRAL, &c.

Sometimes the Term is used for the Patrimony of the Church; as *Regalia Sancti Petri*, &c. and particularly for such Lands and Hereditaments as have been given by King's to the Church.—*Cyprianus in Manum nostram Baroniis & Regalia que Archiepiscopus Eboracum de nobis tenet*. Pryn. Lib. Ang.

These *Regalia* while in Possession of the Church, were subject to the same Services as all other temporal Inheritances; and after

the Death of the Bishop reverted to the King, 'till he invested another with them; which in the Reigns of *William the Conqueror*, and some of his immediate Successors, was frequently delay'd; and as oft did the Bishops make Complaint thereof, as appears from *Malmesbury*, *Neurivigiliis*, &c. See BISHOP.

This last Author says, that great Complaint was made against *Henry II.* *Quod Episcopatus Vacantes, & provenientia perspetere commodas, ad vacare voluit, & Ecclesiasticis potius sibi applicanda in sibi non redidit*. See TEMPORALITY, BENEFICE, &c.

REGALIA sacra, is used for a Bishop's doing Homage or Fealty to the King, when he is invested with the *Regalia*.

Thus *Malmesbury*, in *Anglia*. *Regalia pro more istius temporis faciens principi 7 Kalend. Octobris, Cantuarie affudit*.

REGALIS Aqua, or AQUA REGIA, an Acid corrosive Spirit or Water, serving, as a Menstruum, to dissolve Gold. See DISSOLUTION.

The Basis or essential Ingredient of *Aqua Regia*, is common or Sea Salt; which is the only Salt in Nature that will operate on Gold. See GOLD and SALT.

There are divers Ways of preparing it; for, in effect, the Salt will not fail of its End, in what form soever applied.—The common Way is by mixing common Salt, or Sal Armoniac, with Spirit of Nitre; or with common Aqua Fortis, which is made of Nitre and Vitriol. See AQUA FORTIS.

It has its Name from its dissolving Gold, reputed among Chymists, the King of Metals.

*Aqua Regalis* dissolves Gold, but not Silver; *Aqua Fortis* Silver, but not Gold.—For the reason hereof see MENSTRUUM.

REGARD, of the Forest, the oversight or inspection thereof; or the Office or Province of the *Regarder*; which is to go through the whole Forest, and every Bailiwick thereof, before the holding of the Sessions of the Forest, or Justice Seat; to see and enquire of the Trespases therein. See FOREST.

*Ad videndum, ad Inquirendum, ad Interveniendum, ad certificandum, &c.* See REGARDER.

REGARD is also used for the Extent of the *Regarder's* Charge, *i. e.* for the whole Forest; or all the Ground that is Parcel thereof. See PURLIEU.

REGARDANT, in Heraldry, is understood of a Lion, or other Beast of Prey, bore in a Posture of looking behind him, with his Face towards his Tail.

Others apply it to a Beast which only shews the Head, and some Part of the Neck, as moving from out of some Division of the Coat into another.—He bears *Azure* three Bends, Or, in a chief Argent, charg'd with a Lion regardant Gules.

*Villans* REGARDANT, or *Regardant* to the *Mansour*, is an ancient Officer, or Retainer to the Lord; thus called because charged to do all his base Services within the Manour, to see the same freed of all filthy and loathsome things that might annoy it. *Cole on Littleton*, Fol. 120.

REGARDER, REGARDATOR *Forestis*, an ancient Officer of the King's Forest, whose Business was every Year, upon Oath, to make a *Regard*, *i. e.* take a View of the Forest Limits; also to enquire of all Offences and Defaults committed by the Foresters within the Forest, and of all the Concealments of them, and whether all the other Officers did execute their respective Duties or not. See FOREST.

*Mansour* refers this Institution to King *Henry II.* but *Sprems* thinks the Name, at least, was given since, and that they were the same with those Officers called *Custodes Venationis*. See REGARD.

REGEL, or RIGEL, a fix'd Star of the first Magnitude, in Orion's Left Foot.—In Longitude, Latitude, &c. see among the rest of the Constellation ORION.

REGENERATION, in Theology, the Act of being born again by a spiritual Birth, or of becoming a Child of God. See CONVERSION.

*Regeneration* is perform'd by the washing of the Holy Spirit, whereof Baptism is the Sign. See BAPTISM.

When an Infidel is converted, Baptism is administered as a Sign of *Regeneration*.

REGENT, a Person who governs a Kingdom during the Minority, or the Absence of the King. See VICE ROY.

In France, the Queen Mother has the Regency of the Kingdom, under the Title of *Queen Regent*, while the King is a Minor.—Some have urg'd that Women being incapable of succeeding to that Crown, were incapable of the *Regency*; but Custom has declared in their favour. See SALT.

REGENT is also used for a Professor of Arts or Sciences, who holds a Class, or set of Pupils, in a College. See COLLEGE.

The Foreign Universities are generally composed of Doctors, Professors and *Regents*. *Regent* and *Scholar* are Relative Terms. See TUTOR.

*Regent* is generally restrain'd to the lower Classes, as *Regent* of Rhetoric, *Regent* of Logic, &c. those of Philosophy are rather call'd Professors. See PROFESSOR.

REGIFUGE, REGIFUGIUM, a Feast held in ancient *Rome* on the sixth of the Calends of *March*, *i. e.* on our 24th of February, in Memory of the Expulsion of their Kings, particularly of *Tarquinius's* flying out of *Rome* on that Day. See FEAST.

Some will have this Feast to bear the Name from the *Rex Sacrorum*, King of the Sacrifices, flying out of the Comitium, or the Place

place of Assembly, as soon as the Sacrifice was over; in Imitation of the Flight of *Targuis the Proud*.

Some Critics and Antiquaries will have *Regifugium*, the same with *Palatia*; others hold them to be different. See *FUGALIA*.

**REGICIDE**, a *King-Killer*.—The Term is also used for the Act itself of murdering of a King; of *Rex and Casus*, I lay.

*Regis* is chiefly used in speaking of the Person concern'd in the Trial, Condemnation, and Execution of King *Charles the First*.

**REGIMEN**, in Medicine, a Rule or Course of living, with regard to eating, drinking, clothing, and the like; accommodated to some Disease, and to the particular Course of Medicine the Patient is under. See *DIET*.

'Tis doubted whether the hot or cold *Regimen* be most convenient in Fevers.—The hot *Regimen* which antiently obtained in the Small-Pox, begins to be disused.—The *Regimen* is very different in different Countries: *Bertholin* says, a Slice of Bacon, in Denmark, is an usual Dish for a Person in a high Fever. The Word is pure Latin, and signifies Government and Rule.

**REGIMEN**, in Chymistry and Alchymy, is the Method of ordering and conducting any thing, that it may answer its Intention.

Thus, *Regimen of the Fire*, is the manner of making and ordering a Fire, and the Degrees thereof. See *FIRE* and *DEGREE*.

*Regimen of the Work*, that is, of the *Philosopher's Stone*, call'd the *Work of Patience*, is the Rule and Conduct to be observ'd to attain Profecion. See *PHILOSOPHER'S STONE*, and *PROFECTION*.

There are three things to be chiefly regarded in the *Regimen of the Work*—The first to administer a gentle, easy Heat, at the beginning of the Coction.

The second to continue this external Heat according to the Season of the Work; always observing four Seasons, as in the common and astronomical Year; The beginning being the Winter, the Progress the Spring, then Summer, and lastly Autumn, which is the time of Maturity and Perfection of the Stone: In all which the Heat is to be augmented in Proportion to the Augmentation observ'd in Nature.

It is to be added, that the Work may not be begun in any Season, but regard is to be had to the Seasons of Nature; least the Winter of the Work be found in the Summer of the Year, &c. Which, however, is to be understood of the Day wherein the Mercury is put in the *Ovens Philosophicam*; not of that when it is begun to be set at Liberty from the Prisons Nature had includ'd it in.

The third is that in augmenting the Fire, the Augmentation be not of a whole Degree at once; the Spirits being unable to bear such Violence; but a Degree is to be divided into four Parts, and one Part to be taken at a time. See *DEGREE*.

All the Operations of the first *Regimen*, are occult and invisible: In the second *Regimen* comes Putrifaction, which is the first sensible Change; shewing it self by its black Colour. See *PUTRIFACTION*, &c.

**REGIMEN**, or GOVERNMENT, in Grammars, is that Part of Syntax or Construction which regulates the Dependancy of Words; and the Alterations which one occasions in another. See *SYNTAX* and *CONSTRUCTION*.

Thus we say, the *Regimen* of a Verb active, is an Accusative, i. e. a Verb active governs an Accusative; or requires that the Noun which receives its Action be in the Accusative Case. See *VERB*, *ACCUSATIVE*, &c.

Propositions have some *Regimes*, i. e. they require certain Cases in the Nouns they are prefix'd to; by which they are distinguished from Adverbs which have none. See *PREPOSITION* and *ADVERB*.

The *Regimen*, or Construction of Government, is entirely arbitrary; and differs in all Languages; one Language forming its *Regimen* by Cases, as the *Latin* and *Greek*; others by Particles, in lieu thereof, as the *English*, by *of, to, &c.* the *French*, *Spanish*, and *Italian*, by *de, a, da, &c.* See *CASE*.

There are, however, some general Maxims which hold in all Languages—as 1<sup>o</sup>. That there is no Nominative Case in any Sentence but has a Reference to some Verb either express'd or understood. See *NOMINATIVE*.

2<sup>o</sup>. That there is no Verb but has its Nominative Case, either express'd or understood.—Indeed in Languages which have proper Accusatives, as the *Latin*, before Infinitives there is an Accusative, not a Nominative Case; as *Sciis petrum esse delictum*.

3<sup>o</sup>. There is no Adjective but has a Relation to some Substantive. See *ADJECTIVE*, &c.

4<sup>o</sup>. That there is no Genitive Case but is govern'd by some other Noun; inasmuch as that Case always expresses the Possessor, which must be governed by the possid'd.—This Rule does not hold so apparently in the modern as the antient Languages; in regard the Particles *of, de, &c.* which are the proper Signs of the Genitive Cases, are frequently used as Prepositions. See *GENITIVE*.

5<sup>o</sup>. That the *Regimen* of Verbs is frequently laid on different Kinds of Relations, according to Custom or Usage; which yet does not change the specific Relation of each Case, but only shews that Custom has made Choice of this or that, according to Fancy.—Thus the *Latin* say, *Jurare aliquem, & optulari ali-*

*ent*, to help one.—Thus the *French* say, *servir quelqu'un & servir a quelqu'un*, to serve one.—Thus the *English* say, *Fight one, or Fight with one*.—And thus in *Spanish* most of the Verbs active govern indifferently either a Dative or an Accusative. Sometimes, also, the Verb admits of several *Regimes*; as, *prestare aliquem, or aliam, Esperare mortem aliquem, or aliquem a morte*.

Indeed the different *Regimen* sometimes makes an Alteration in the Sense; in which, particular regard is to be had to the usage of the Language.—Thus the *Latin*, *curare aliam*, signifies to watch, or be careful of the preservation of any one: *Cavere aliquem*, to beware of him.

There is one very common Fault in *Regimen*, which our accurate Writers should be careful to avoid; viz. the using of two Verbs that require different Cases, together, as only governing one Case: As in this Example; *after embracing and giving his Blessing to his Son*; where, *embracing* requiring an Accusative, and *giving* a Dative Case, the *Regimen*, or Construction of the first Verb with the Noun is irregular; *embrace to a Son*.

The same may be observ'd in Nouns; as I conjured him by the Memory and the Friendship he bore my Father; where *Memory* does not agree with the Verb *to love*.

**REGIMENT**, in War, a Body of Troops of Horse, or Companies of Foot, commanded by a Colonel. See *COLONEL*.

The Number of Men in a *Regiment* is as undetermined as that of the Men in a Troop or Company. See *TROOP* and *COMPANY*.

There are *Regiments* of Horse, that are not above 300 Men; and there are some in *Germany* of 2000; and the *Regiment of Picardy* in *France* consists of 120 Companies, or 6000 Men.

The *French Regiments* of Horse are not commanded by a Colonel, as the *Foot* are, but by a *Mestre de Camp*. See *MASTRE DE CAMP*.

Some observe, that there were no *Regiments* of Horse before the Year 1637. 'Till then the Troops were loose, and independent of each other, not incorporated into a Body or *Regiment*. See *GUARD*.

**REGIO Affectus**, is a Writ whereby the King gives his Royal Assent to the Election of a Bishop. See *BISHOP*.

**REGION**, **REGIO**, in Geography, a Country; or a particular Division of the Earth; or a Tract of Land inhabited by People of the same Nation. See *EARTH*, *NATION*, &c.

The modern Astronomers divide the Moon into several *Regions* or Provinces, to each whereof they give its Name. See *MOON*.

**REGION** in Physico.—Authors divide the Atmosphere into three Stages, call'd the *upper, middle, and lower Region*. See *ATMOSPHERE*.

The lowest is that wherein we breath; and is bounded by the Reflexion of the Sun's Rays; that is, by the Height to which they rebound from the Earth. See *RAY*.

The *middle* is that wherein the Clouds reside, Meteors are form'd, &c. extending from the Extremity of the *lowest*, to the tops of the highest Mountains. See *METEOR*, *CLOUD*, *MOUNTAIN*, &c.

The *upper* commences from the Tops of the Mountains, and reaches to the utmost Limits of the Atmosphere.—In this reigns a perpetual, equable Calmness, Clearness, and Serenity. See *AIR*.

Some Authors use the Term *Elementary Region*, for the Space of the whole Atmosphere, from the Earth to the Sphere or Heaven of the Moon; because within this are contained the four Elements, and all Elementary Bodies. See *ELEMENT* and *ELEMENTARY*.

*Eternal Region* is used for the whole extent of the Universe, including the Orb of the six'd Stars, &c. See *UNIVERSE*.

**REGION**, in Anatomy, is a Division of the human Body. See *BODY*.

Anatomists divide the Body into three *Regions*, or *Venters*. See *VENTER*.

The *upper Region* is that of the Head; reaching as low as the first *Ventricle*; and comprehending the animal Organs, the Brain, &c. See *HEAD*, &c.

The *middle Region* is that of the Thorax or Breast, which *Hippocrates* calls the upper *Venter*, and which reaches from the Clavicles to the Diaphragm; wherein are contained the vital Parts, as the Heart, Lungs, &c. See *HEART*, *LUNGS*, &c.

The third or *lower Region* is the Abdomen or Belly, &c. containing the natural Parts, destin'd for Digestion, Purgation, and Generation. See *ABDOMEN*.

**REGIONARY**, **REGIONARIUS**, in Ecclesiastical History, a Title given from the fifth Century, to Persons who had the Charge and Administration of the Church Affairs within a certain District or *Region*.

At Rome there were antiently seven *Regionary Deacons*, who presided over a kind of Hospitals, and look'd to the Distribution of Alms. See *DEACON*.

There were also *Regionary Subdeacons*, and *Regionary Notaries*, *Regionary Bishops*, &c. See *NOTARY*.

A *Regionary Bishop* was properly a Missionary invested with an Episcopal Character, but without being attach'd to any particular See; that he might be at Liberty to go abroad, and perform other Functions of his Ministry, whether however the Spirit of God, and the Wants of the People should call him. See *MISSIONARY*. RE-

REGISTER, REGISTRUM, a publick Book, serving to enter and record Memoirs, Acts, and Minutes, to be had recourse to, occasionally, for the justifying of Matters of Fact. &c. See RECORD.

*Menage* derives the Word, by Corruption, from *Registum*, a Book containing Extracts of several Books, &c. collected together: *Dicitur registrum quasi iterum regium*.—Others derive it from the old French, *gister*, to lie down in a Bed, &c.

The Law of Scotland is rendered very easy and regular, by means of the great Number of publick Registers, for the recording of the Conveyances of Lands, &c. of private Persons.—Of these there are two Kinds: The one *Generals*, fix'd at Edinburgh, under the Direction of the *Lord Register*, who before the Union was the fifth Officer of State, and besides the Registry, was Clerk of the Parliament, Treasury, Exchequer, and Session.

The other is particularly kept in the several Shires, Stewartries, and Regalities.—The Clerks thereof are oblig'd to transmit the Registers of their respective Courts, to the general Register; and the Notaries their Protocols: And here they are so dispos'd, that on demand the Lieges can have a view of any Writs which the Law requires to be register'd, or which Parties for their Security have thought fit to record.

The Registers were first set on Foot by Act of Parliament under King James VI. to the unspeakable Advantage of the Subject.

No Man can have a right to any Estate, but it must be register'd within forty Days of his becoming seiz'd of it, otherwise 'tis null: By this means all secret Conveyances are cut off.

REGISTER is also us'd for the Clerk or Keeper of a Register, or Registry. See CLERK.

Of these we have several, denominated from the Registers they keep—as Register of the High Court of Delegates; Register of the Arches Court of Canterbury; Register of the Court of Admiralty; Register of the Prerogative Court; Register of the Garter, who is always Dean of Windsor. See DELEGATE, ARCHES, ADMIRALTY, PREROGATIVE, GARTER, &c.

REGISTER of a Parish-Church, is a Book wherein the yearly Baptisms, Marriages, and Burials of each Parish, are orderly register'd. See PARISH, &c.

This Practice was humbly instituted by that great, but unfortunate Person, Thomas Cromwell, Earl of Essex, Anno 1538. while he was Vice-General to King Henry VIII. See BILL of Mortality.

REGISTER is also the Title of a Book, containing the Forms of most of the Writs us'd in Common Law; call'd the Register of Writs. See WRIT.

This Register, *Cabe on Littles* observes, is one of the most ancient Books of the Common Law.

REGISTER-SHIPS, or SHIPS of REGISTER, in Commerce, are Vessels to which the King of Spain, or the Council of the Indies, grant Permissions to go and traffick in the Parts of the Spanish West-Indies. See COMMERCE.

They are thus call'd because the Ships are to be register'd before they set sail from Cadix, which is the Place where they usually load for Buenos Ayres.

These Vessels, by the Tenor of the Permit, are not to exceed three hundred Tuns: But there is that good understanding between the Merchants and the Council of the Indies, that Ships of five or six hundred Tun frequently pass un-noted.

The Permissions cost thirty thousand Pieces of Eight, each: But were they cost an hundred thousand the Merchants would be Gainers, and the King of Spain a Loser.—For though the Quantity and Quality of the Merchandises on-board, be always express'd; yet, by Force of Presents, the Officers here and in the Indies, allow them to load and unload vastly more than the Permission express'd.—Vessels whose Certificate only mentions twelve thousand Skins, and an hundred thousand Pieces of Eight, have been known to have on-board above four Millions in Gold and Silver; twenty six thousand Skins, &c. So that the King of Spain's Fifth, and his other Dues, were almost nothing to what they should be.

Add to this that in the Years 1702, 1703, &c. these Register Vessels, countermancing and backing each other, sold their Commodities for above three hundred per Cent. Profit.—A Hat was sold for 18 Pieces of Eight; an Ell of ordinary Cloth for 12 Pieces of Eight, &c.

Among the Register Vessels may be reckon'd a Ship of five hundred Tuns, which the King of Spain allows the English South-Sea Company to send each Year to the Fairs held at Porto Belle, Cartagena, &c. See COMPANY.

REGISTER, among Letter-Founders, is one of the inner Parts of the Mould wherein the Printing-Types are cast. See LETTER.

Its use is to direct the joining them justly together again, after opening them to take out the new-cast Letter. See LETTER-FOUNDRY.

REGISTERS, in Chymistry, are Holes, or Chinks, with Stopples to them, contriv'd in the Sides of Furnaces, to regulate the Fire, &c. to make the Heat immediately more intense, or remiss; by opening them to let in the Air, or keeping them close, to exclude it. See FURNACE, FIRE, HEAT, DEGREE, &c.

REGULATING, in Printing, the disposing of the Press so as that the Lines and Pages printed on one Side of the Sheet, meet exactly against those on the other; which is done by means

of two Points in the greater or outward Tympan. See PRINTING; REGISTRY, comprehends the Office, Books, and Rolls wherein the Proceedings of Chancery, or any spiritual Court, are register'd or recorded. See REGISTER, RECORD, ROLL, &c.

REGIUS-PROFESSOR.—King Henry VIII. found five Lectures in each of our Universities; viz. of Divinity, Hebrew, Greek, Law, and Physick; the Readers of which Lectures are in the University Statutes, call'd *Regii Professores*. See PROFESSOR.

REGUS MORBUS. See JAUNDICE.

REGLET, or RIOLET, in Architecture, a little flat narrow Moulding, us'd chiefly in Compartments, and Panells, to separate the Parts or Members from one another, and to form KNOPS, Frets, and other Ornaments. See MOULDING, FRET, &c.

The *Reglet*, according to *Descartes*, differs from the Fillet and Lintel, in that it projects equally, like a Ruler. See FILLET and LIST.

The Word is a diminutive of the French, *Regle*, Rule.

REGLETS, or RIOLETS, in Printing, are thin Rules, or slips of Wood of different Dimensions, placed in the Chase, between the Pages, and at the extremes thereof, to keep them asunder, and hold them tight. See PRINTING.

The *Reglets* make the chief Part of what they call the Furniture of the Chase. See CHASE.

They are particularly denominated from the Place they are in, in respect of the Pages, Head-Sticks, Foot-Sticks, Gutter-Sticks, &c.

The Term is also us'd abroad for a Ruler of Metal,  $\frac{1}{2}$  of an Inch long, but which may be lengthen'd out by joining several together; us'd to separate the Columns, in Books that have several in the same Page; as also for Lines to Place the Notes on in Printing of Music.

Lastly, *Reglet*, is also a little thin slip of Wood us'd by some Compositors to take off the Lines from the Composing-stick, and Place them on the Galleys, as fast as compos'd. See COMPOSITOR, GALLET, &c.

REGULATOR, a Law Word, formerly us'd for one that bought Wholesale, or by the Great, and sold again by Retail.

The Term is now chiefly us'd to denote one that Buys and Sells again any Wares, or Victuals in the same Market or Fair, or within five Miles of it.

REGULATOR is also us'd for a Person who furnishes up old Moveables, to make them pass for new. See FURBISHER.

Among Masons, &c. to regulate a Stone, is to take off the outer Surface of an old Hewn Stone, with the Hammer and Ripe, in order to whiten and make it look fresh again. See STONE and MASONRY.

REGRESSION, or Retrogradation of Curves, &c. See RETROGRADATION, &c.

REGULA. See RULE.

REGULA, in Architecture. See ORLO.

REGULAR denotes the Relation of any thing that is agreeable or conformable to the Rules of Art. See RULE.

Thus we say, a Regular Proceeding.—A Regular Building.—A Regular Poem, &c. Regular Verb, &c. See VERB, POEM, &c.

In this Sense the Word stands oppos'd to Irregular, or Anomalous. See ANOMALOUS, &c.

REGULAR FIGURE, in Geometry, is a Figure which is both equilateral, and equiangular; i. e. whose Sides, and consequently, Angles, are all equal. See FIGURE.

The Equilateral Triangle and Square are regular Figures. See SQUARE and TRIANGLE.

All other regular Figures consisting of more than four Sides, are call'd Regular Polygons. See POLYGON.

Every regular Figure may be inscrib'd in a Circle. See CIRCLE.

For the Dimensions, Properties, &c. of Regular Figures, see POLYGON.

REGULAR BODY, call'd also Platonic Body, is a Solid terminat'd on all Sides by regular and equal Planes, and whose solid Angles are all equal. See BODY and PLANE.

The Regular Bodies are five in Number; viz.—The Cube, which consists of six equal Squares; the Pyramid or Tetrahedron of four equal Triangles; the Octahedron of eight; the Dodecahedron of 12; and the Icosahedron of twenty; see each under its proper Article, CUBE, TETRAHEDRON, OCTAHEDRON, &c.

Beside these five there can be no other Regular Bodies in Nature.

To measure the Surface and Solidity of the five regular Bodies.

The Solidity, &c. of the Cube is shewn under the Article CUBE.

The Tetrahedron being a Pyramid, and the Octahedron a double Pyramid; and the Icosahedron consisting of twenty triangular Pyramids; and the Dodecahedron of twelve Quincunquangular ones, whose Bases are in the Surface of the Icosahedron and Dodecahedron, and their Vertices meeting in a Centre: The Solidities of these Bodies are all found from what we have shewn under the Article PYRAMID.

Their Surface is had by finding the Area of one of the Planes, from the Lines that bounds it; (see TRIANGLE); and multiplying the Area thus found by the Number from which the Body is denominated; e. g. for the Tetrahedron by 4; for the Hexahedron or Cube, by six; for the Octahedron by 8; for the Dodecahedron by

13; and for the *Isosphaeres* by 20.—The Product is the superficial Area. See AREA and SUPERFICIES.

*Proportions of the Spheres, and of the five Regular Bodies inscribed therein: The Diameter of the Sphere being 2.*

The Circumference of a great Circle is,	6.	28378
Surface of a great Circle,	3.	14159
Surface of the Sphere,	12.	56637
Solidity of the Sphere,	4.	18859
Side of the Tetrahedron,	1.	62299
Surface of a Tetrahedron,	4.	6188
Solidity of a Tetrahedron,	0.	15132
Side of a Cube or Hexahedron,	1.	1547
Surface of the Hexahedron,	8.	
Solidity of the Hexahedron,	1.	5396
Side of an Octahedron,	1.	41421
Surface of the Octahedron,	6.	9282
Solidity of the Octahedron,	1.	33333
Side of the Dodecahedron,	0.	71364
Surface of the Dodecahedron,	10.	51462
Solidity of the Dodecahedron,	2.	78576
Side of the Icosahedron,	1.	05146
Surface of the Icosahedron,	9.	57454
Solidity of the Icosahedron,	2.	53616

If one of these Bodies be required to be cut out of the Sphere of any other Diameter; say, as the Diameter of the Sphere 2, is to the Side of any one Solid, inscribed in the same, (suppose the Cube 1. 1547.) so is the Diameter of any other Sphere (suppose 8.) to 9. 2376, the Side of the Cube inscribed in this latter Sphere.

Let *dr*, then, (Tab. Geometry, Fig. 81.) be the Diameter of any Sphere, and *de* 3 of it. — *ab* = *dr*. Erect the Perpendiculars *ag*, *gf*, and *hg*; and draw *de*, *df*, *er*, *fr*, and *gr*; then will (1.) *re* be as the Side of the Tetrahedron; (2.) *df* is the Side of the Hexahedron; (3.) *de* is the Side of the Octahedron. (4.) And *cm* and *cn* in extreme and mean Proportion in *de*, *ab* will be the Side of the Dodecahedron. (5.) Setting the Diameter *dr* up perpendicularly at *r*; from the Centre *r*, to its Top, draw the Line *eg*, cutting the Circle in *g*.—Let fall the Perpendicular *gb*; so is *br* the Side of the Icosahedron.

REGULAR CURVES, are such whose Curvature proceeds continually in the same uniform Geometrical Manner.—Such are the Perimeters of the Conic Sections. See CURVE, CONIC SECTIONS, &c. Such as have a Point of Inflection, or Regression; and which being continued to a certain Point, turn themselves a contrary Way, are call'd *Irregular Curves*.—Such are the Conchoid, and the solid Parabola, which has a Square for its Parameter. See FLEXION and RETROGRESSION.

REGULAR ARCHITECTURE, Fortification, &c. See ARCHITECTURE and FORTIFICATION.

REGULAR, in the Monastic Sense, is a Person who has made the Vows in some Religious House. See RELIGIOUS and VOW.

Under *Regulars* are comprehended the whole Body of Monks. See MONK.

The Denominations of *Regular*, in this Case, arises hence, that they are bound to observe the Rule of the Order they are confin'd into. See RULE and ORDER.

Hence, *Regular Priest* is used for a Priest who is in some Religious Order; in opposition to a Secular Priest, who lives in the World, or at large. See SECULAR.

A Cardinal is reputed both *Regular* and *Secular*, and is entitled to the Rights of both. See CARDINAL.

*Regulars* may be promoted to Bishopsricks and Archbishopsricks, as well as Seculars; but their Promotion secularizes them; the Episcopal Dignity dispensing them from the Observation of the Rule whereof they have made Profession. See SECULARISATION.

REGULAR CANON. See CANON.

REGULAR BENEFICES, are such as can only be held by Monks or Religious; or at least, *per capitationem profertur*, a Person desirous to embrace the Monastic Life. See BENEFICE.

'Tis a Maxim in the Romish Canon Law.—*Regularia Regularibus*, i. e. *Regular Benefices* are to be conferr'd on *Regular Priests*.—The Abbies that are Chiefs of their respective Orders are all *Regular*, and can only be served by Monks or Cardinals. See ABBEY.

All Benefices are preferr'd Secular, unless they be prov'd *Regular*.

Antiently, the *Regular Benefices* were almost all conferr'd by way of Administrations or Curacies; the Religious Incumbents being always ad *Mansum* of their Superiours, who displaced them at Pleasure.—Hence the common Maxim among the Canonists, *omne Beneficium regulare mansum*.

The Benefices allotted to *Regulars* are Abbies, Conventual Priors, Simple Priors, and Claudral Offices.—They may be conferr'd on Seculars in *Commendam*. See COMMENDAM.

REGULAR PLACES, are those within the Boundary or Inclosure of the Convent; as the Cloister, Dormitory, Chapter, and Refectory.—In opposition to those destined for Guests, and for

the Necessaries of the House, which are reputed without the Inclosure.

REGULATION, a Rule or Order prescribed by a Superior, for the uniform and orderly Management of some Branch of Policy, Justice, or the like. See LAW and STATUTE, ORDINANCE, &c.

REGULATOR, of a Watch, is a small Spring belonging to the Balance; serving to adjust the going, and make it either proceed faster or slower. See WATCH, &c.

REGULO, a Title given to the Sons of the Emperors of China.

The Emperor's eldest Son, whom we call the *first Regulo*, was the only one of all his Children in favour; 'till, of a sudden, Matters took a new Face. From some new Intelligences, the Emperor learnt the Innocence of the hereditary Prince whom he had deposed, and the Artifices that had been used to ruin him: Particularly, that the *Regulo*, to succeed therein, had had recourse to Magick, and at the Intigation of certain *Lamas*, or *Tartar Priests*, had procur'd a Statue to be buried in *Tartary*; accompanying the Ceremony with several Magical Operations. Upon this, Orders were instantly sent to seize the *Lama*, and to dig up the Statue: The *Regulo* had his Palace assign'd him for a Prison. *Let. Edif. & Cur.*

REGULUS, petty King, in our antient Customs, a Term frequent in the Saxon Councils, signifying a *Case* or *Court*. See COUNT and EARL.

Hence, *Subregulus*, was used for a *Vic-comes*, or *Vicount*: Tho' in many Places the two seem us'd indifferently for the same Dignity.

This in the Archives of the Cathedral of *Worcester, Ulstredun*, sometimes files himself *Regulus*, and sometimes *Sub-regulus* of the City of *Worcester*.

But in other Places we find *Offi. Rex Merciorum; Ulstredun, Regulus; Aldredus, Subregulus, &c.*

REGULUS, in Chymistry, is the finest and purest Part of a Metal or Mineral, which sinks or precipitates to the bottom of the Crucible or Furnace, in melting a Mineral, or metallic Ore. See METAL, MINERAL, FUSION, &c.

To procure the *Regulus* of Metals, &c. Flux Powders are commonly us'd; as Nitre, Tartar, &c. which purge the sulphurous Part adhering to the Metal, by attracting and absorbing it to themselves. See FLUX POWDER.

*Regulus* is principally us'd for that of Antimony, which is a puerous metallic Powder, that upon fusing some of that Mineral in its crude State, sinks to the bottom, leaving the Scoria or Impurities a-top. See ANTIMONY.

The Alchemists will have this Matter call'd *Regulus*, i. e. little King, as being the first born of the Royal metallic Body, which is really a Son, but not a perfect Man, i. e. not yet a perfect Metal for want of Time and proper Nurturement.

Antimony purified by simple Fusion, is call'd *Regulus of Antimony*; or *Regulus Antimonii stellatus Philopoparanum*.

But the more common way of reducing it into a *Regulus* is with the Addition of Flux Powders, as Tartar and Nitre. See FLUX POWDER.

The Scoria found at the top of this *Regulus* is violently emetic, as well as the *Regulus* itself, whereof if Caps or drinking Vessels be call'd, the Wine put into them will become vomitive.

Of this *Regulus* cast in Moulds are made those commonly call'd the *Antimonial Pills*, weighing about eight or ten Grains each, one of which being swallow'd, will operate considerably both by Vomit and Stool.

These Pills having thus performed their Office, and being discharged the Body, will serve the same Purpose again and again; whence they have obtained the Name of *perpetual Pills*.—The Virtue of this *Regulus* is not however inexhaustible, as has been imagin'd; for by repeated Infusions in Wine, though the Liqueur be made violently Emetic at first, yet by Degrees it loses its Force, and at length ceases to be Vomitive.

*Marial REGULUS of Antimony* is a Mixture of the Nails of Hoef's Shoes, melted with the *Regulus*.

In this Operation the Iron dissolving and absorbing the sulphurous Parts of the Antimony, more strongly than the Fluxes in the former Case; and turning it into a Crocus; the Antimony is hereby brought to a greater Degree of Purity, and render'd more efficacious than in the common *Regulus*. See IRON, SULPHUR, &c.

This *Regulus* is sometimes further purified by repeated Fusions and Detonations, with the Addition of fresh Antimony, and more Nitre, alternately.

REGULUS, in Astronomy, is a Star of the first Magnitude, in the Constellation *Leo*; call'd also from its Situation, *Cor Leonis*, or the Lion's Heart; and by the *Chaldeans, Kalbeved, or Kalbeved*, from an Opinion of its influencing the Affairs of the Heavens: as is observ'd by *Thom*. See STAR.

The Longitude of *Regulus*, as fix'd by Mr. *Fleming*, is 29° 31' 20"; and its Latitude 0°. 26' 33" North. See LEO.

REHABILITATION, in the Civil and Canon Law, an Action whereby a Prince or Pope, by Dispensations or Lettres Patents, restore a Delinquent to the Condition he was in before his Delinquency. See DEGRADATION, &c.

The King alone can *Rehabilitate* an Officer noted, condemned and degraded; or a Gentleman who has derogated from his Degree. See **NOBILITY**.

The Pope alone pretends to *Rehabilitate*, i. e. to render capable of Benefices, and Orders, such as had fallen into Heresy, or other Irregularities.

In *Rambol* Countries, an Ecclesiastick who attests at the Execution of a Sentence of Death, is to be *rehabilitated*, by an Absolution called a *Servis*. See **ANATHEMA**.

**REHEARSAL**, in Music and the Drama, an Essay or Experiment of some Composition, made in private, previous to the Representation or Performance thereof in publick; to habituate the Actors or Performers, and make them more ready and perfect in their Parts.

There is a new Tragedy in *Rehearsal*.—The *Rehearsal* of the Anthem, &c.

**REIMBURSEMENT**, in Commerce, the Action of repaying, or returning what Mooves a Person had received, by way of advance, &c. or what another has disbursed or paid for us.

A Person who gives a Bill of Exchange in Payment, is to *reimburse* it; if it come to be protested, for want of being accepted or paid. See **BILL**, **PROTEST**, &c.

**REIMBURSE** is also used for the paying the Price a Commodity costs its Owner.—Thus he has *reimbursed* me the Lot of Merchandise adjudged to him at the Sale at London, by the Directors of the *East-India Company*; on Condition of *reimbursing* the Price of the Purchase, with the Expences of Carriage, and a Profit of 5 per Cent.

**REINFORCED Ring**, of a Canon, is that next after the Tunions, betwixt them and the Vent. See **ORDNANCE**.

**REINFORCEMENT**, in War, a supply, or new Provision of Men, Arms, Ammunition, &c.

**REINS**, in Anatomy, the *Kidney*; or that Part of an Animal whereby the Urine is separated from the Blood. See **KIDNEYS**. See also **URINE**.

The Word, according to *Varro*, is form'd from the Greek, *μενίσσας*, *Quasi Rivo stygiori botanis ab eis orientur*.—The Greeks call the *Rein*, *σπίς*, from the Verb, *σπίζω*, to Snow, Rain. See **NEPHRITIC**.

The Word, we say, a Horse should have *double Reins*; which is when he has them a little more elevated on each Side of the Back-bone, than upon its; so that passing your Hand along it, you find it large, well furnished and double, by the Hollow that goes all along the Back-bone.—The Back should be firm, and not Hollow, or bending from the Withers to the Croup, but straight. See **HORSE**.

The **REINS** of Horses, are also two straps of Leather meeting in the Bit-Head of the Horseman, in order to make the Bit bear, and keep the Horse under Subjection. See **BRIDLE**.

A *Falls Rew* is a Lath of Leather, pulled sometimes through the Arch of the Binquet, to bend the Horse's Neck.

**REINSTATING**, the restoring of a Person or Thing to its former State or Condition, from whence it had been disturbed or displaced.

**REINTEGRATION**. See **REINTEGRATION**.

**REIS**, or **RES**, or **RES**, a little Portuguese Copper Coin, nearly equal to the *French Denier tournois*, or to a third Part of the English Farthing. See **COIN**.

The *Reis* is both a Current and an imaginary Money; the Portuguese usually reckoning by *Reis*, as the Spaniards by *Maravedis*. See **MARAVEDIS**.

Strangers in treating with them, are frequently surprized with Demands of several thousand *Reis*, when the Matter betwixt them is only of a few Pieces of Eight; the *Milreis*, or thousand *Reis*, only making 6 s. 3 d. *sterl.*—750 of them are equal to the Piece of Eight. See **MILREIS**.

**REITERS**, an ancient Title given the German Cavalry.—The Word is originally *German*, and signifies a horseman, or Cavalier.

**REJOYNDER**, in Law, an Answer or Exception to a Replication. See **REPLICATION**.

The Order in the Court of Chancery is thus.—First, the Defendant puts in an Answer to the Plaintiff's Bill, which is sometimes call'd an Exception: The Plaintiff's Answer to this is call'd a *Replication*; and the Defendant's Answer to that, a *Rejoinder*. See **BILL** and **CHANCERY**.

The Civilians call it *Duplicatio*. See **DUPLICATION**.

**REJOYNTING**, in Architecture, the filling up the Joints of the Stones in old Buildings, &c. when woe Hollow by Course of Time, or Water.

*Rejoynting* is perform'd with the best Mortar; as that of Lime, and Cement; sometimes, also with Plaster, as in the Joints of Vault, &c. See **MORTAR**, &c.

**REITERATION**, the Act of repeating a thing, or doing it a second time. See **REPETITION**.

The Church does not allow of the *Reiteration* of Baptism. See **BAPTISM**.

St. Gregory observes, that 'tis no *Reiteration*, when there are wanting Proofs of the thing's being regularly done before. See **REBAPTIZANTS**.

In Pleasuries, the Physicians order the bleeding to be *reiterated* six or seven times. See **PLEURISY**.

**REITERATING**, in Printing. See **PRINTING**.

**RELAPSE**, a return or back-sliding into a Danger, or Evil; out of which a Person had escaped.

Fevers, Dropsies, &c. are Diseases into which *Relapses* are very frequent and dangerous.—Such a Person is *relaps'd* into a Heresy he had abjured.

**RELATION**, in Philosophy, the mutual *Respect* of two things; or what each is, with regard to the other.

The Word *Relation* is form'd a *referendo*; as confining in this, that one thing is *refer'd* to another: Whence it is also call'd *Respect*, *Habitudo*, *Comparisio*, &c. See **COMPARISON** and **HABITUDE**.

The Idea of *Relation* we acquire, when the Mind *lo* considers any thing, that it doth, as it were, bring it to, and set it by, another; and carry its view from the one to the other.—Hence the Denominations given to things intimating this *Respect*, are call'd *Relatives*; and the things so brought together, are said to be *Related*.

Thus when I call *Cains*, *Harsh*; or this Wall *whiter*; I intimate some other Person or Thing in both Cases, with which I compare him or it.—Hence, the Wall is call'd by the Schoolmen, the *Subiect*; the thing it exceeds in whiteness, the *Terms*; and the whiteness the *Foundation* of the Relation.

*Relation* may be consider'd two Ways; either on the Part of the Mind referring one thing to another; in which Sense *Relation* is only a Mode or Affection of the Mind, whereby we make such Comparison: Or on the Part of the things refer'd, which being no other than Ideas, *Relation*, in this Sense, is only a new Idea resulting or arising in the Mind, upon considering of two other Ideas.—So that *Relation*, take it which way you will, is only the Mind; and has nothing to do with the things themselves. See **IDEA**.

Any of our Ideas, Mr. Lock observes, may be the Foundation of *Relation*.—Though where Languages have failed to give correlative Names, the *Relation* is not so easily taken Notice of: As in Cocubine, which is a *Relative* Name, as well as Wife.

There is, in effect, no Idea but is capable of an infinite Number of *Relatives*: Thus one single Man may at once sustain the *Relations* of Father, Brother, Son, Husband, Friend, Subject, General, European, Englishman, Islander, Master, Servant, Bigger, Less, &c. to an almost infinite Number; he being capable of as many *Relations*, as there can be occasions of comparing him to other things, in any manner of Agreement or Disagreement, or any respect whatsoever.

The Ideas of *Relation* are much clearer and more distinct, than of the things *related*; because the Knowledge of one simple Idea is oftentimes sufficient to give the Notion of a *Relation*: But to the knowing of any substantial Being, an accurate Collection of sundry Ideas is necessary. See **SUBSTANCE**.

The Perceptions we have of the *Relations* betwixt various Ideas whereof the Mind acquiesces, makes what we call *Judgment*.—Thus, when I judge 2 times 2 make 4, or does not make 5; I only perceive the Equality between a times 2 and 4; and the inequality between a times 2 and 5. See **JUDGMENT**.

The Perceptions we have of the *Relations* between the *Relations* of various things, continues what we call *Reasoning*.—Thus when from this, that 4 is a smaller Number than 6; and that twice 2 is equal to 4; I gather that twice 2 is a less Number than 6; I only perceive the *Relation* of the Numbers twice 2 and 4, and the *Relation* of 4 and 6. See **REASONING**.

The Ideas of Cause and Effect, we get from our Observation of the Vicissitude of Things, while we perceive some Qualities or Substances begin to exist, and that they receive their Existence from the due Application and Operation of other Beings.—That which produceth, is the Cause; that which is produced, the Effect. See **CAUSE** and **EFFECT**.

Thus Fluidity in Wax is the Effect of a certain Degree of Heat, which we observe to be constantly produced by the Application of such Heat.

The Denomination of Things taken from time, are for the most part only *Relatives*.—Thus when it is said, that Queen Elizabeth lived sixty-nine, and reigned forty-five Years, no more is meant, than that the Duration of her Existence was equal to sixty-nine, and of her Government to forty-five annual Revolutions of the Sun: And so are all Words answering to how long.

Young and Old, and other Words of Time, that are thought to stand for positive Ideas, are indeed *Relative*; and intimate a *Relation* to a certain length of Duration, whereof we have the Idea in our Minds.—Thus we call a Man young or old, that hath lived little or much of that Time, which Men usually attain to: And thus a Man is called young at twenty, but an Horse old, &c.

There are other Ideas, that are truly *Relative*, which we signify by Names that are thought positive and absolute; such as great and little, strong and weak.—The things thus denominated, are refer'd to some Standards with which we compare them: Thus we call an Apple Great, which is bigger than the ordinary Sort of those we have been used to; and a Man weak, that has not so much Strength or Power to move, as Men usually have, or those of his own Size.

Authors give various Divisions of *Relations*.—The School Philosophers commonly divide them into those of *Originations*, under which are comprehended the *Relation* of Cause and Effect: Those

of *Negation*, which are between opposite things; And those of *Affirmation*, which are *Relations* of Agreement between Whole and Part, the Sign and Thing signified, the Adjunct and Subject.—This Division is founded upon this, that the Mind can only compare things three Ways, *viz.* by inferring, denying, and affirming.

Others divide *Relations* into those of *Origination*; those of *Agreement*, *e. gr.* Similitude, Parity, &c. those of *Diversity*; and those of *Order*, as Priority, Posteriority, &c.

Others divide them into *Prædicamental*, *Transfædential*, and *Prædicamental*.—Under the first come those *Relations* between things that belong to the same Prædicament; *e. gr.* between Father and Son. To the latter belong those which are more general than the Prædicaments, or are of different Prædicaments; as the *Relation* of Substance and Accident; of Cause and Effect; of Creator, *e. gr.* and Creature. See TRANSCENDENTAL, &c.

Mr. Lock gives us a Distribution of *Relations* on a different Bottom.—All simple Ideas, he observes, wherein are Parts or Degrees, afford an occasion of comparing the Subjects wherein they are, to one another, in respect of those simple Ideas: As, whiter, sweeter, more, less, &c.—These, depending on the Equality and Excess of the same simple Idea, in several Subjects, may be call'd *proportional Relations*.

Another occasion of comparing things being taken from the Circumstances of their Origin, as Father, Son, Brother, &c. These may be call'd *natural Relations*.

Sometimes, the Foundation of considering things, is some Act whereby any one comes by a moral Right, Power, or Obligation to do something: Such are General, Captain, Bougher; these are inflicted and *voluntary Relations*, and may be distinguished from the natural, in that they are alterable and separable from the Persons to whom they sometimes belong, though neither of the Substances so related be destroyed. But *natural Relations* are not alterable, but are as lasting as their Subjects.

Another *Relation* is the Conformity or Disagreement of Men's voluntary Actions to a Rule, to which they are refer'd, and by which they are judged of: These may be call'd *Moral Relations*.

It is this Conformity or Disagreement of our Actions to some Law (whereby Good or Evil is drawn on us from the Will and Power of the Law-maker, and is what we call *Reward* or *Punishment*) that renders our Actions morally Good or Evil. See GOOD and EVIL.

Of these moral Rules or Laws, there seem to be three sorts, with their different Enforcements. First, the Divine Law: Secondly, Civil Law: Thirdly, the Law of Opinion or Reputation. By their *Relation* to the first, our Actions are either Sins or Duties. To the second, Criminal or Innocent; to the third, Virtues or Vices. See SIN, VIRTUE, VICE, &c.

*RELATION*, in Logic, is an Accident of Substance: account of one of the ten Categories or Prædicaments. See PRÆDICAMENT and CATEGORY.

Each Substance admits of an Infinity of *Relations*.—Thus the same Peter, considered with regard to Henry, is in the *Relation* of a Master with regard to John, in that of a Tenant; with regard to Mary, in that of a Husband, &c. Again, with regard to one Person, he is rich, with regard to another poor; with regard to another, he is fat, near, tall, short, a Neighbour, Stranger, learned, unlearned, good, bad, equal, &c.

'Tis disputed among the School Philosophers, whether or no the *Relation* be a thing formally and really distinct from the Foundation of the Substance. See SUBSTANCE.

*RELATION*, is also used in the School Theology, to denote certain of the divine Perfections, call'd *personal ones*; in regard by these, one Divine Person is refer'd to another, and distinguished from it. See PERSON.

Hence they teach, that in God there is one Nature, two Persons, three Persons, and four *Relations*. See TRINITY.

These *Relations* are Paternity, Filiation, active Spiritation, and passive Spiritation. See PATERNITY, &c. See also FATHER, SON, SPIRIT, &c.

*RELATION*, in Geometry, Arithmetic, &c. is the Habitude, or Respect of two Quantities to one another, with regard to their Magnitude.—Thus we more usually call *Ratio*, *Reason*. See RATIO.

The Equality or Sameness of two such *Relations*, we call *Proportion*. See PROPORTION.

*RELATION*, in Grammar, is the Correspondence which Words have to one another in Construction. See CONSTRUCTION.

Regular and irregular *Relations* are the things chiefly to be guarded against, in writing correctly; they make the Sense obscure, frequently equivocal.—Thus: The Orator was attended to with a Colours, which was the more remarkable, as the Audience were under some Emotion ere he began.—Here, *Caldesi* being put indifferently, the Relative *whom*, can have no just and regular *Relation* thereto. See RELATIVE.

*RELATION* is also frequently used for *Analogy*, or what several things have in common. See ANALOGY.

In Painting, Architecture, &c. a certain *Relation* of the several Parts and Members of the Building or Picture, constitutes what we call *Symmetry*. See SYMMETRY.

*RELATION Inharmonical*, is a Term in musical Composition,

signifying a harsh Reflection of Flat against Sharp, in a cross Form; *viz.* When some harsh and displeasing Discord is produced, in comparing the present Note of another Part.—*Harris*.

*RELATION*, in Law, is where two things, as Times, &c. are considered, as if they were one, the thing subsequent being considered as taking effect, by *Relation*, at the time preceding.

As if A deliver a Writing to B, to be delivered to C, as the Deed of A; the Writing shall be deem'd to be deliver'd to C, at the time when it was given to B.

So Bills in Parliament to which the King assents on the last Day of Parliament, shall relate, and be of Force from the first Day thereof. Coke calls it *factio Juris*. See DAY, TIME, &c.

*RELATIVE Propositions*, are such as include some Relation and Comparison. See PROPOSITION.

Thus, where the Treasure is, there will the Heart be.—As much as thou hast, so much thou art worth, &c. are *Relative Propositions*.

RELATIVE Place,	} See {	PLACE.
RELATIVE Time,		TIME.
RELATIVE Gravity,		GRAVITY.
RELATIVE Levity, &c.		LEVITY, &c.

*RELATIVE Terms*, in Logic, are Words which imply a *Relation*, or a thing considered as compared to another. See RELATION.

*Relative Terms* include a Kind of Opposition between them; yet so, as that the one cannot be without the other.

Such are *Father* and *Son*, *Husband* and *Wife*, *King* and *Subjects*, &c.

*RELATIVE*, in Grammar, is a Word or Term which in the Construction answers to some Word fore-going, called the *Antecedent*. See ANTECEDENT.

*PRONOUN RELATIVE*, which *Buffer* chuses rather to call *Modificative* or *Determinative*, is a Particle added after a Noun, or personal Pronoun, with which it has an Affinity, so that without them it signifies nothing; its only use being to express in what view they are considered. See PRONOUN.

Of this Kind, in the *Latin*, are *qui, quæ, quod*, &c. in the *English*, who, which, whom, &c. as in the Book *whom* you are reading; the Man *whom* you seek; he *whom* told it, &c.—Where *whom, whom, and who* only follow the Noun or Pronoun, to refer or determine them to some particular thing; as to seeking, reading, &c.

Frequently, the Noun or Pronoun wherewith the *Relative* or Pronoun is join'd, is understood; As, I know *whom* did that. Where 'tis evident 't mean, I know the Person who did, &c.

*RELAY*, a fresh Equipage, Horses, &c. sent before, or appointed to be ready, for a Traveller to change; to make the greater Expedition; as in riding Post.

The Term is borrow'd from the *French Relais*, which signifies the same thing.—In *France*, the General of the Posts entitles himself, Superintendent of the *Relays*.

*RELAYS*, in Hunting, are fresh Sets of Dogs, or Horses, or both, disposed here and there, for readiness, in Case the Game come that way, to be call'd off, or to mount the Hunters; in lieu of the former, which are supposed to want respite. See HUNTING.

*RELAY*, in Tapistry, is an opening left in a Piece of Tapistry, where the Colours or Figures are to be chang'd; because on those Occasions the Workmen are chang'd; or else, the Places are left to be filled up 'till the rest of the Work is done. See TAPISTRY.

*RELAXATION*, in Medicine, &c. the loosening or slackening of the Tone or Tension of the Fibres, Nerves, Muscles, &c. See TENSION, TONE, &c. See also FIBRE.

The *Relaxation* of a Muscle is supposed to be effected, either by the Perpiration of the nervous Spirits, or the Regress of the Spirits, Blood, &c. which inflated its Fibres; or by the contraction of the Air, in the Globules of Blood before expanded by the sudden influx and admixture of the Spirits, &c. See MUSCLE, and MUSCULAR MASSA.

*RELAXATION*, in Chirurgery, is a preternatural Extension, or straining of a Nerve, Tendon, Muscle, or the like; either thro' Violence or Weakness.

*Hernæ* are Defecits or *Relaxations* of the Intestines, &c. See HERNIA.

From the same Cause arise Defecits or Prolapsions of the Anus, &c. See PROCDENTIA and PROLAPSUS.

*RELAXATION*, in Law, is said for *Releasing*. See RELEASE. In this Sense we say the *Relaxation* of an Attachment, in the Court of Admiralty.

The Tenor of Indulgences is a *Relaxation*, or Diminution of the Pains of Purgatory. See INDULGENGE.

*RELEASE*, in Law, an Instrument, whereby Estates, Rights, Titles, Entries, Actions, and other things are sometimes extinguished and annul'd, sometimes transfer'd, sometimes abridg'd, and sometimes enlarged.

A *Release* is either in *Fact*, or in *Law*.—A *Release* in *Fact*, is that which the very Words expressly declare.—A *Release* in *Law*, is that which doth acquit by way of Consequence, or Intendment of Law.

**RELEGATION**, a kind of Exile, or Banishment, wherein the obnoxious Person is commanded to retire to a certain Place prescribed, and to continue there 'till he be recalled. See **EXILE**.

My Lord Coke calls *Religation* a Banishment for a time only: *Courts* more adequately defines *Religatio* a Banishment to a certain Place for a certain Term.

In *Rome* *Religatio* was a less severe Punishment than *Deportatio*, in that the *religatus* Person did not thereby lose the Rights of a *Roman* Citizen, nor those of his Family, as the Authority of a Father over his Children, &c. See **BANISHMENT**.

**RELICKS**, **RELIQUE**, in the *Roussé* Church, certain Remains of the Bodies or Cloaths of some *Saint* or *Martyr*, devoutly preserved in Honour to his Memory, carried at Processions, kiss'd, rever'd, &c. See **SAINTE**, **MARTYR**, **PROCESSION**, &c.

The Abuses in Points of *Relicks* are most flagrant: *F. Mahillon*, a Benedictine, complains of the great Number of suspected *Relicks* exposed on *Altars*: He owns that were there to be a strict Inquisition into the *Relicks*, vast Numbers of spurious ones would be found offer'd every where to the Piety and Devotion of the Faithful: And adds, that Bones are frequently consecrated, so far from belonging to *Saints*, that in all probability they don't belong to *Christians*.

The *Catacombs* are an inexhaustible Fund of *Relicks*; yet 'tis still disput'd who were the Persons interr'd here. See **CATACOMBS**.

In the eleventh Century a Method was introduced of trying supposed *Relicks* by Fire.—Those which did not consume in the Fire were reputed genuine; the rest not. See **PURGATION**, &c.

'Tis an ancient Custom, which still obtains, to preserve the *Relicks* in the *Altars* whereon *Mass* is celebrated.—To this purpose, a square Hole is made in the middle of the *Altar*, big enough to receive the Hand; and herein is the *Relick* deposited, wrap'd in red Silk, and inclosed in a leaden Box. See **ALTAR**.

The *Rossanists* allege a good deal of Antiquity in behalf of their *Relicks*.—The *Adamites*, it seems out of hatred to the Flesh, which they held an evil Principle, are recorded as refusing to honour the *Relicks* of *Saints*; which is esteem'd a kind of Proof that the *Catholicks* did it in the first Ages. See **MANICHEE**.

Indeed Folly and Superstition got into Religion but too early.—Even the touching of *Linnen Cloaths* on *Relicks*, from an Opinion of some extraordinary Virtue deriv'd therefrom, appears to be as ancient as the first Ages; there being a Hole made in the Coffins of the forty *Martyrs* at *Constantinople*, expressly for this Purpose.

**RELICTA** *Verfignatio*, in Law, is when a Defendant relinquishes his Proof or Plea; and thereupon Judgement is entered for the Plaintiff.

**RELICT**. See **WIDOW**.

**RELIEF**, **RELIEVIUM**, *Locumum*, in Law, a Fine paid to the chief Lord, by a Person at his coming to the Inheritance of Land held in Capite, or Military Service. See **FINE**, **LORD**, **TENURE**, &c.

*Relief* is usually to the value of a Years Rent or Revenue.

The Origin of the Custom is thus.—A Feudatory or beneficiary Estate in Lands, being at first only granted for Life; after the Death of the Vassal it return'd to the Chief Lord, and was hence call'd *Feudum Caducum*, q. d. fallen to the Lord by the Death of the Tenant. See **FEU**.

In Course of Time these feudatory Estates being converted into Inheritances by the Continuance and Consent of the Lord; when the Possessor of such Estate died it was call'd *Hereditas Caduca*, q. d. an Inheritance fallen to the Lord; from whom it was to be recover'd, by the Heirs paying a certain Sum of Money.

This was said *Reliever hereditatum caducarum*, and the Money thus paid was call'd *Relievum, Rebovum, or Relief*.

This *Relief* was established after the Conquest.—For 'till that time *Herits* were paid the Lord, at the Death of his Tenant; consisting of Horses, Arms, &c. See **HERIT**.

But upon the Conquest, the poor People being deprived of all such things by the *Normans*, a Sum of Money was substituted in lieu thereof, which was call'd a *Relief*; and continues in some Places to this Day.—However, 'tis true, *Relief* and *Heriot* are frequently confounded in ancient Writers.

**RELIEF** *Reasonabile*, call'd also *Laufal*, and *antient Relief*, is that enjoined by some Law, or fix'd by ancient Custom; and which does not depend on the Will of the Lord.—Thus in a Charter of King *Johas*, mentioned by *Matt. Paris*.—*Si quis Comes vel Baro in Nostrorum five aliorum tenentium de nobis in Capite per servitium militare, mortuus fuerit & cum decesserit heres suus plene astatu fuerit, & relevium debeat, habeat hereditatem suam per Antiquum Relevium.*

What this was may be seen in the Laws of *William the Conqueror*, &c. *Bracton* says, this Fine was call'd a *Relief* quia hereditas que jactum fuit per Antecessoris decessum relevatur in manus heredis, &c.

A *Relief* is also paid in *Spocage Tenure*, or *poise Serjeanty*;

where a Rent or other thing is paid by rendering as much as the Rent or Payment reserved.

By the Custom of *Normandy*, *Relief* is due for Lands held in Villenage, as well as in *Fee*.—By the Custom of *Paris*, *Relief* is not due upon Successions in the direct Line.

The Quantity of the *Relief* is very different: There are *single Reliefs*, *double Reliefs*, &c. The Quality, too, is diverse: There are *Reliefs of Property*, paid by the Heir: *Reliefs of Bail*, or *Towerage*, paid by a Guardian for his Minor, or by the Husband for the Eids of his Wife, &c. *Relief of Hofs* and *Arms*, &c.

By the Laws of King *Canutus*, the *Relief* of an Earl, paid the King, was eight War-Horses with their Bridles and Saddles, four Loricas, four Helmets, four Swords, four Hunting-Horses, and a Paltry.—The *Relief* of a Baron or Thane was four Horses, &c.

**RELIEF**, in Chancery, is an Order sued out for the dissolving of Contracts and other Acts, on account of their being unreasonable, prejudicial, grievous, or from some other Nullity, either de *Jure*, or de *Facto*. See **CHANCERY** and **EQUITY**.

Minors obtain *Relief* against Acts pass'd in their Minority.—Majors have *Relief* in cases of enormous Damage, Deceit, Violence, over-reaching, extravagant Bargains, &c.

Among the *Romanists* 'tis a Rule, that the Church obtains *Relief* any time, and against all Acts pass'd in its Prejudice: No Prescription prevailing against it. See **PRESCRIPTION**.

**RELIEF**, of a *Piase*, among Hunters, is the Place where the goes to feed in the Evening. See **HUNTING**.

**RELIEF**, in Sculpture. See **RELIEVO**.

**RELIEVE**, in the Military Sense.—To *Relieve* is to take the Post of another Body.

Hence, to *Relieve* the Guard, to *Relieve* the Trenches, &c. is to bring fresh Men upon the Guard, or the Trenches, and to send those to rest who have been upon Duty before. See **GUARD**, **TRENCH**, &c.

They also say, *Relieve* a Sentinell, *Relieve* the Steers-Man, &c.

**RELIEVO**, or **RELIEF**, *Imbossment*, in Sculpture, is applied to a Figure which projects, or stands out, prominent, from the Ground or Plain whereon it is form'd; whether that Figure be cut with the Chisell, moulded, or cast. There are three Kinds of *Relievo*; viz. *Alto*, *Basso*, and *Demis-Relievo*.

The *Alto Relievo*, *Haut Relief*, or, *high Relievo*, is when the Figure is form'd after Nature, and projects as much as the Life.

*Basso-Relievo*, *Bass-Relief*, or *low Relievo*, is when the Work is but rais'd a little from its Ground; as we see in Medals, and in the Frontispieces of Buildings; particularly the *Chisstones*, *Festoons*, *Foliages*, and other Ornaments in *Friezes*.

*Demis-Relievo* is when one half of the Figure rises from the Plain, i. e. when the Body of the Figure seems cut in two, and one half is clapp'd on a Ground.—When in a *Basso Relievo* there are some Parts that stand clear out, detach'd from the rest, the Work is call'd a *Demis-Basso*.

**RELIEVO**, in Architecture, is the Projection of any Ornament. See **PROJECTURE**.

This *Davidis* observes, is always to be proportioned to the Magnitude of the Building it adorns; and the Distance at which it is to be viewed. If the Work be isolated and terminated on all Sides, it is call'd a *Figure in Relievo*, or a *round Imbossment*, such are Statues, Arcoborders, &c.

**RELIEVO**, in Painting, is the Degree of Force or Boldness wherewith the Figures seem, at a due Distance, to stand out from the Ground of the Painting, as if really imbosc'd.

The *Relievo* depends much on the Depth of the Shadow, and the Strength of the Light; or on the Height of the different Colours bordering on one another; particularly on the difference of the Colour of the Figure from that of the Ground. See **SHADOW**, **COLOURING**, &c.

When the Light is well chosen, to make the nearest Parts or Figures advance; and well diffus'd on the Masses, still diminishing insensibly, and terminating in a large spacious Shadow, brought off insensibly, the *Relievo* is said to be bold, and the *Clair-obscur*, well understood. See **CLAIR-OBSCURE**.

They also say *Embossures* or *Relievos*; in opposition to those that are flat.

**RELIGION**, that Worship or Homage due to God, considered as Creator, Preserver, Redeemer, &c. See **GOD**, **THEOLOGY**, &c.

The Foundation of all *Religion* is, that there is a God, and that he requires some Service at the Hands of his Creatures.—From the different Manners wherein we arrive at the Knowledge of this Service; *Religion* is divided into *natural* and *revealed*.

*Natural Religion* is whatever we desire to be due and meet by the meer Dictates of *natural Reason*; as, to love, and honour God, not to abuse his CREATURES, &c. See **NATURAL**, **REASON**, &c.

*Revealed Religion* is what we learn to be due from some supernatural Means; as by an express Declaration of God himself, by the Mouths of Prophets, &c. See **PROPHECY**.

The first flows immediately from the Relation between the Creature and the Creator: The latter does not follow from such

a Relation, but is super-added from the mere Will and Pleasure of the Creator.

The first we ordinarily call *Morality*, or *Ethicks*; because immediately conversant about the Manners and Duties of Men towards one another; and towards themselves, considered as Creatures of that Being. See *MORALITY*, *ETHICKS*, &c.

The latter we call, by way of Eminence, *Religion*, as being the Rule of our Duty immediately to God himself. See *REVELATION*.

The first supposes a God, a Providence, a future State, Rewards and Punishments; the latter likewise supposes an immediate Mission from God himself, attested by Miracles, &c. See *MIRACLE*.

RELIGION is particularly used for the special System of Faith and Worship, which obtains in this or that Country; in this or that Sex; in this or that Age, &c.

In this Sense we say the *Roman Religion*, the *Reform'd Religion*, the *Religion of the Greeks*, the *Mahometan Religion*, *Jewish Religion*, &c. See *JEWIS*, *MAHOMETANS*, &c. under their proper Heads.

The *Siamois* hold the Diversity of *Religions*, i. e. the different Manners of honouring God, to be pleasing to him; inasmuch as they have all the same Object, all tend to the same End, though by different Means. *Classe*.

The Sentiment of these Idolaters is doubtless more just than that of our Zealots, who hold all but those of their own Religion odious to God.

The several Sects in Religion, see under their proper Articles: See also *SECT*.

RELIGION, again, is applied to a military Order, consisting of Knights who live under some certain Rule, &c. See *KNIGHT*, *MILITARY ORDER*, &c.

In this Sense we say the *Religion of Malta*, &c. See *MALTA*.

The Term is sometimes also used for a Convent.—Thus we say, there are *Religions of Men*, i. e. *Monks*; *Religions of Women*, i. e. *Nuns*.—There are new *Religions* established every Day, i. e. new Monasteries built. See *MONK*, &c.

The *Religion* is used absolutely for the reform'd in France; thus we say, *à l'Abbaye*, and *Duist*, were of the *Religion*.

RELIGIOUS, a Person engaged by a solemn Vow to the monastic Life; or a Person that up in a Monastery, to lead a Life of Devotion and Austerity; under some Rule or Institution. See *VOW* and *RELIGIOUS ORDER*.

The Male *Religious* we popularly call *Monks*; the Females, *Nuns*. See *MONK*, &c.

M. *Nisus* observes, that some Domestick Chagrins, and a certain Pride, which leads People to abscond when they cannot make a Figure to their Mind, makes as many *Religious* as real Priests.—He adds, that a Girl must be made *Religious* for no other reason, but because she can't be married answerable to her Condition.

A *Religious* can't make any Will.—By the Council of Trent, a *Religious* may reclaim his Vows within five Years. See *RESCIND*.

Antiently the *Religious* were all Laymen, and it was even prohibited them to take up Orders.—In 1557 the Parliament of Paris made a difficulty of receiving a Bishop of *Lyon* to the Oath of a Duke and Peer, by reason of his being a *Religious*: Yet a *Religious* being promoted to a Bishoprick, is thenceforth secularized or dispensed from the Observation of his Rule. See *REGULAR*.

In antient Deeds and Conveyances of Lands, we often find the Seller restrain'd from giving or alienating it, *Viris Religiosis vel Jureis*, or *Religiosis*, or *to Jureis*; to the end the Land might not fall into Mortmain. See *JUDAISM* and *MORTMAIN*.

In a Memorial directed by King *John* to his Viscounts, they are order'd to proclaim through their respective Counties, that no Body, as they love their Bodies and Cattel, injure the *Religious* or Clerks, either in Word or Deed; on Penalty of being hang'd up on the next Oak.—*Nullo furo dignum Corpora & Cattle sua violenter faciant vel dicant viris Religiosis vel Clericis.—Si quem sine atrocitate possit ad proximum Spectum cum suspensa faciemus.*

RELIGIOUS ORDER, See *ORDER*.

Most military Orders pretend, likewise, to be *Religious*; as those of *Malta*, who make *Vows*, &c. See *MALTA*.

RELICUA, the Remainder or Debt, which a Person finds himself a Debtor in, upon the balancing and liquidating an Account.

Hence, *Reliquitarius*, the Debtor of a *Reliqua*; as also a Person who only pays piece-meal.—The Term *Reliqua* is pure Latin.

RELICUARY, a Shrine or Casket, in which the Relicks of a dead Saint are kept. See *SHRINE*, *RELICKS*, &c.

RELICULÆ, RELICKS, in Antiquity, the Ashes and Bones of the Dead, that remained after the burning of their Bodies; and which they very religiously kept in Urns, and afterwards laid them up in Tombs. See *FUNERAL*.

REMAINDER, in Law, an Estate in Lands, Tenements, or Rents, given to a Person at second Hand, to be enjoy'd after the Decesse of another, to whom the same is given immediately, or at first Hand.

A Man grants Lands to one for Term of Life, the Remainder to another for the Term of his Life; which Remainder may be either for a certain Time, or in Fee Simple, or Fee Tail.

*Spelman* makes the difference between a *Remainder* and *Reversion* to consist in this; that by a *Reversion*, after the appointed Term, the Estate returns to the Donor, or his Heirs, as the proper Fountain; whereas by *Remainder* it goes to some third Person, or Stranger. See *REVERSION*.

*Glawville* observes, that Bishops and Abbots, in regard their Baronies are the King's Alms, cannot give any Part thereof by way of *Remainder*. See *BISHOP*.

REMAINDER, in Mathematics, is the difference; or that which is left after the taking of a lesser Number, or Quantity, from a greater. See *SUBTRACTION*.

REMARRYING, the repeating of a Marriage; or the going through the Solemnities of a second Marriage. See *MARRIAGE*.

Condoctine and uncanonical Marriages are deem'd null; and the Parties are to be re-married in form; at least to avoid Disputes.

It was antiently expressly forbid to re-marry in the first Year of Viduity.—M. *Bayle* observes, that a Person who does not re-marry is answerable to the Publick for all the Time lost in his Viduity, or Widower-hood. See *WIDOW*, *VIDUITY*, &c.

REMEDY, REMEDIUM, in Physick, a Medicine, or Preparation applied either internally or externally, for the Cure of a Disease. See *MEDICINE*.

Emplastors, Unguents, Cataplasms, &c. are *Topical Remedies*. See *TOPICAL*.

Mercury and the Bark are Specific Remedies. See *SPECIFIC*. Mineral Waters, and Alie's Milk, and Country-Air, are usually the last Remedies.

Salivation is sometimes call'd by way of Eminence, the *Remedy*. See *SALIVATION*.

When *Remedies* are stuff'd with too many Ingredients, they load the Stomach with a stinky Mucilage, which swelling does more hurt than good.

REMEMBRANCE, is when the Idea of something formerly known, recurs again into the Mind, without the Operation of the like Object, or the external Sensory. See *MEMORY* and *REMINSICENCE*.

REMEMBRANCERS of the Exchequer, are three Officers, or Clerks therein. See *EXCHEQUER*.

Those are the *King's Remembrancer*; the *Lord Treasurer's Remembrancer*; and the *Remembrancer of the First-Fruits*.

The *King's Remembrancer* enters into his Office all Recognizances taken before the Barons, for any of the King's Debts, for Appearance, or for observing Orders; and makes out Process against the Collectors of Customs, Subsidies, and Fifteenths, for their Accounts.—All Informations upon penal Statutes are entered in this Office, and there all Matters upon *English Bills* in the Exchequer-Chamber remain.—He makes the Bills of Composition upon penal Laws, takes the Settlement of Debts; has delivered into his Office all manner of Indentures, Fines, and other Evidences whatsoever that concern the settling of any Lands to the Crown: He every Year, in *crastino antoniarum*, reads in open Court, the Statute for Election of Sheriffs, and gives them their Oath, and reads the Oath of all the Officers of the same, when they are admitted.

The *Lord Treasurer's Remembrancer*, is charged to put the Treasurer and the rest of the Judges of that Court, in remembrance of such things as are to be called on, and dealt in for the King's Behoof.—He makes Process against all Sheriffs, Echeators, Receivers, and Bailiffs, for their Account: Process of *Fieri facias*, &c. Extent for any Debts due to the King, either in the Pipe, or with the Auditors, makes Process for all such Revenues as are due to the King, by reason of its Tenures.—He also makes Record, whereby it appears whether Sheriffs, or other Accomptants, pay their Profers due at *Escheq* and *Michaelmas*.—He makes another Record, whether Sheriffs or other Accomptants keep their Days of Profession: All Estates of Fines, Issues, and Amerciaments, set in any of the Courts of *Westminster*, or at the *Almshouses*, are certified into this Office, and are by him delivered to the Clerk of the *Exchequer* to write Process upon them, &c.

The *Remembrancer of the First-Fruits*, takes all Compositions and Boods for First-Fruits and Tenths; and makes Process against such as do not pay the same. See *FIRST-FRUITS*.

REMINSICENCE, is that Power of the Humane Mind, whereby it recollects itself, or calls again to its Remembrance such Ideas or Notions as it had really forgot; In which it differs from Memory, which is a treasuring up of things in the Mind, and keeping them there, without forgetting them. See *MEMORY*.

Hence Memory may be considered as a continual *Remembrance*; and *Remembrance*, as an interrupted Memory. See *MEMORY*.

How near it kin soever the two Faculties may seem, yet they are generally found separated; so that they who excel in the one, are defective in the other. See *RECOLLECTION*, *RETENTION*, &c.

The antient *Platonists* were of Opinion, that all Learning and Knowledge consisted in the *Remembrance* or Recollection of Notions which had been in the Soul before its Union with the Body. See *PLATONISM*.

REMINSICERERE, the second Sunday in Lent; antiently thus called from the first Word of the *Intraid* of the Mass said for that Day, *Remissere Misericordiam tuam*.

**REMISSION**, in *Physicks*, the Abatement of the Power or Efficacy of any Quality; in opposition to the Increase of the same, which is call'd its *Intension*. See **INTENSION**.

In all Qualities capable of Intension and Remission, the Intension decreases as the Squares of the Distance from the Centre of Action reciprocally. See **QUALITY**.

**REMISSION**, in *Medicine*, is when a Distemper abates, but does not go quite off, before it returns again; as it is common in Fevers which do not quite intermit. See **FEVER**.

**REMISSION**, in *Law*, &c. the Pardon of a Crime, or the giving up the Punishment due thereto. See **PARDON**.

**REMIT**, in *Commerce*.—To remit a Sum of Money, Bill, or the like, is to send a Sum of Money, &c. See **REMITTANCE**.

To remit is also used among Bankers for what is accustomed to be given a Banker, or as it were, discounted with him, for his giving a Bill of Exchange. See **EXCHANGE**.

To remit is also to give up Part of his Due to a Debtor; as, I would remit you a fourth of what you owe on Condition of paying me the rest in Hand.

**REMITTANCE**, in *Commerce*, the Traffic or Return of Money from one Place to another, in Bills of Exchange, Orders, or the like. See **COMMERCE**, **EXCHANGE**, &c.

The Remittance is properly a Bill of Exchange, or the like, sent to a Correspondent, and the Content thereof to be receiv'd by him, of some other Person on whom it is drawn.

Such a Merchant has remitted, or made a Remittance of five thousand Pounds in Bank Notes, to his Correspondent at London.—I will remit you, or make you a Remittance of five hundred Crowns in three Bills of Exchange, drawn on N. Banker in your City, and payable at Sight.

By means of these Remittances, large Sums of Money are return'd from one City to another, without Danger, without Carriage, &c.

In London 'tis easy getting Remittances upon any City in the World: In the Country 'tis more difficult. Remittances are not easily had upon *Copenhagen*. See **BILL OF EXCHANGE**.

**REMITTANCE**, is also used in speaking of the Payment of a Bill of Exchange.—Thus, I have receiv'd an hundred Pistoles on your Remittance.—Mr. N. Banker in your City, should have paid you two hundred Crowns on my Remittance.

**REMITTANCE**, is also the Due or Fee allow'd the Banker, both for his Wages, the Tare of Money, and the different Value of the Species, in the Place where you pay the Money, and where he remits it.

The Remittance at London is very high.—This Remittance is more usually call'd **CHANGE** and **RECHANGE**, which see.

**REMITTER**, in *Law*.—Where a Man has two Titles to Land, and is seized by the latter; and that proving Defective, he is remitted or restored to the former more ancient Title: This is call'd a Remitter, from the Latin, *remittere*, to send back.

If Land descend to him that had Right to it before, he shall be remitted to his better Title if he please. *Dollar* and *Student*.

**REMONSTRANCE**, an Expostulation or humble Supplication address'd to a King, or other Superior; to beseech him to reflect on the Inconveniences, or ill Consequences of some Order, Edict, &c.

The Parliament is gone in a Body to make humble Remonstrances to the King, on the subject of such a Declaration.

**REMONSTRANCE**, is also used for an expostulatory Council or Advice; or a gentle, handsome Reproof, made either in general or particular, to spritz or to correct some Fault.—A Mother makes Remonstrance to her Daughter, &c.

**REMONSTRANTS**, **REMONSTRANTES**, was a Title given the *Armenians*, by reason of the Remonstrances they made in 1610, against the Synod of *Dort*, wherein they were condemn'd. See **ARMENIAN**.

*Episcopus* and *Grævus* were at the Head of the Remonstrants. See **CONTRA-REMONSTRANTS**.

**REMORA**, in *Natural History*, a little Fish, resembling a Herring, with Crest and Fins; call'd by the *Greeks*, *Echinos*.

'Tis much talk'd of by the Antients; who, as we find from *Pliny*, lib. 33, unanimously believ'd it had the force to stop a Vessel in full Sail; and hence call'd it *Remora*, a remorand.—But the Moderns hold it a Fiction; inasmuch as in all their Navigations, which are much more considerable than those of the Antients, they have never met with any thing like it.

**REMORA**, among Surgeons, is also an Instrument to set broken Bones withal. See **FRACTURE**.

**REMOUNT**, in *War*.—To remount the Cavalry, is to furnish Troopers or Dragoons with fresh Horses, in lieu of such as have been kill'd or disabled in the Service.

**REMPLY**, in *Heraldry*, something filled up. The Term is chiefly used to denote that the Chief is quite filled up with a square Piece of another Colour, leaving only Border for the proper Colour of the Chief about the said Piece.

**RENAL**, something belonging to the Reins, or Kidneys. See **REIN** and **KIDNEY**.

**RENALS Glandule**, in *Anatomy*, are Glands thus call'd, because situate near the Reins or Kidneys; first discovered by *Bar. Eustachio*, Native of *Savo Serrino*, in *Italy*. See **GLAND**.

They are also call'd *Capfulæ Arteriales*; in regard the Cavity

is always found full of a blackish Liquor; and by others, *Reas Succenturiatæ*, because resembling the Reins in form. See **RENES Succenturiatæ**.

**RENCONTRE**, the Encounter of two little Bodies or Parties of Forces; in which Sense it is used in opposition to *Battel*.—'Twas no Battel; 'twas only a Rencontre.

In single Combats, *Rencontre* is used in opposition to *Duel*.—When two Persons fall out, and fight on the Spot, without having premeditated the Combat, 'tis call'd a Rencontre.—'Tis no Duel, 'tis a Rencontre. See **DUEL**.

The Word is form'd from the *French*, *Rencontre*, meeting. **RENCONTRE**, or **RENCONTRE**, in *Heraldry*, is applied to Animals when they show the Head in Front, with both Eyes, &c. or the Face stands right forward; as if they came to meet the Person before them.

Indeed in the Deers, this is call'd *Maffare*, and in the Leopard 'tis the natural Situation.—He bears Saible, in *Rencontre*, a Golden Fleece.

**RENDER**, in *Law*, a Term used in levying a Fine. A Fine is either single, whereby nothing is granted; or with *Rescuer*, whereby something is render'd back again, by the Cognisee to the Cognifor; or double, which containeth a Grant, or render back again of some Rent, Common, or other thing out of the Land it self, to the Cognifor. See **FINE**.

We also say, there are certain things in a Manor which lie in *Preceder*, i. e. may be taken by the Lord or his Officers when they please, without the Tenants leave: And others which lie in *Render*, that is, must be render'd or answer'd by the Tenant; as Rents, Reliefs, Heriots, and other Services. See **PRECEDER**.

Some Service consist in Seafance; some in *Render*. *Perkins*.

**RENDERING**, in *Building*. See **PARGETTING**.

**RENDEZ-VOUS**, a Place appointed to meet to at a certain Day and Hour.

The Word is *French*; and is found to handy, that most Nations use it in its Purity, for want of a Word of equal import in their respective Languages.

A general Rendezvous of the Army.—The Regiments have their particular Rendezvous, call'd *Quarters of Assembly*. See **QUARTER**.

The Virtue of a Woman is already shaken when she gives a *Rendezvous*. *St. Evremont*.

**RENEGATE**, **RENEGADO**, a Person who has apostatized or renounced the Christian Faith, to embrace some other Religion; particularly Mahometanism. See **APOSTATE**.

'Tis the *Renegade's* who prove the most barbarous to the Christians when they fall into their Hands.

The *Renegade* is thus call'd, *quasi re-negat-Christum*.—*Hoveden* mentions it in the Year 1192, under the Name of *Reser*, from the *French*, *re-nier*, to deny again.

**RENES Succenturiatæ**, in *Ana Omy*, are Glands thus call'd as resembling the Figure of the Reins; and hence accounted a kind of *fronsary Reins*; *Succenturiatæ* signifying something in the Place of another. See **SUCCENTURIATÆ**.

They are also call'd *Capfulæ Renales*, and *Glandule Renales*. See **RENALES**.

**RENEWING of Leases and Lives**. See **REVERSION**, **ANNUITY**, **POLITICAL ARITHMETIC**, &c.

**RENTENCY**, **RENTENTIAL**, among Philologists, that Force in solid Bodies, whereby they resist the Impulse of other Bodies; or resist as much as they are acted on. See **REACTION**. See also **RESISTANCE**.

**RENT**, in *Law*, a Sum of Money, or other Consideration issuing yearly out of Lands and Tenements, alienated on that Condition. See **REVENUE**.

It is thus call'd from the corrupt Latin, *Redditus*, for *reddite of redditus*; because, as *Elia* tells us, *restitit & quotannis reddit*.

The Rents of all the Lands of *England* and *Wales* appear by the Computations of *Dr. Davantant*, and *Mr. Kings*, from the late Land-Tax, to be nearly 10 Millions per Annum; those of the Houses not let with the Lands, to be two Millions more; and those of all other Hereditaments, to be two Millions more; in all 14 Millions. See **REVENUE**.

The Lawyers ordinarily reckon three sorts of Rent; viz. *Rent-Service*, *Rent-charge*, and *Rent-fick*.

*Rent-Service*, is where a Man holds his Lands of his Lord by Fealty, and certain Rent; or by Fealty-Service, and certain Rent; or that which a Man making a Lease to another for Term of Years, reserveth yearly to be paid for them. See **SERVICE FEALTY**, **RESERVE**, &c.

*Rent-charge*, is where a Man makes over his Estate to another by Deed indentured, either in Fee, or Fee-tail, or for Term of Life; yet reserves to himself, by the same Indenture, a Sum of Money yearly to be paid to him, with Cause of Distress for Non-payment.

*Rent-fick*, or *Dry-Rent*, is that which a Man making over his Estate by Deed indentured, reserveth yearly to be paid to him, without Cause of Distress mentioned in the Indenture. See **METEGAVEL**.

**RENDS of Office**, are the certain Rents of Freeholders, and ancient Copyholders; thus call'd because alized and certain: In opposition to *redditus mobilis*.

**RENTS** *Reffites*, are reckoned among the Farm *Rents* to be paid by the *Stat. 22 Car. II.* and are such *Rents* or *Tenants* as were anciently payable to the Crown from the Lands of Abbies and other Religious Houses; Which Lands, upon the Dissolution of Abbies, being demised to others, the said *Rents* were still retained and made payable to the Crown.

**RENTIER** *Reffaire*, an Officer in most of the Companies of *London*; whose Business is to receive the *Rents* or Profit belonging to the Company. See **TREASURER**.

**RENTIERING**, in the Manufactories, the sewing of two Pieces of Cloth, edge to edge, without doubling them; so as that the Seam scarce appears at all; hence also called *Fin-drawing*.

*Serges, &c.* are sewed; Cloths *renter'd*.—To *renter* in Tapitry, is to work new Warp into a piece of Tapitry damaged, eaten by the Rats, &c. and on this Warp to reticore the antient Pattern, or Design.—The Warp is to be of Woollen, not Linnen.—Among the Titles of the Tapitry-makers, is included that of *Renterer*.

The Author of one of the *Lett. Edif. & Cur.* speaking of the great Dexterity of the *Renterers* in the *East-Indies*, assures us, that if you tear a Piece of fine Mullin, and give it one of them to mend, it shall be impossible for you to discover the Place where 'tis rejoined, even though you had make a Mist to know it.

The Dexterity of our own *Renterers* is such, as puts them in a Condition to defraud the Kings, by fowling a Head or Slip of English Cloth, on a Piece of Dutch, Spanish, or other Foreign Cloth; or a Slip of Foreign Cloth on a Piece of English, so as to mis the whole, as of a Piece; and by that means avoid the Duties, Penalties, &c.

The Trick was first discovered in France, by M. *Servary*, Author of *Diction. de Commerce*.

The Word is form'd from the French, *rent-naire*, which signifies the same thing; and which *Ménage* after *Salmofian*, derives from the *Lat. textura*; as if it were making a Tissue or Web, instead of a *Stram*.

**RENTIERING** is particularly used for a Rent, or Hole, happening in the dressing or preparing of a Piece of Cloth, artfully sew'd up or mended with Silk.

All *Renterings* are reputed Defects or Blemishes; and ought to be allow'd for in the Price of the Piece.—Hence, M. *Servary* establishes it as a Rule, which is certainly founded on natural Equity, that every Manufacturer mark the *Renterings* of his Cloths with a Piece of Packthread tied to the Lint; to direct the Draper to the Spot: And that the Draper appraise the Taylor or other Person, to whom he sells it, of the same; that he mayn't come to Damage in the cutting; there being Instances of Drapers condemn'd to take back their Cloths, when cut to Pieces, for omitting to mention the *Renterings*, and other Flaws.

On this occasion M. *Servary* extolls the Procedure of an English Merchant, who sending a Piece of Cloth damaged in one Spot, to his Correspondent at Paris, put a Piece of Gold in the damaged Place, to make up the Damage.—But as this Example is perhaps the only one of its Kind, that Author recommends it to the Merchant or Draper to unfold all the Pieces entirely, as they come to him; to discover the *Renterings* and other Flaws, in order to make the Clothier accountable for them.

**RENUENTES**, in Anatomy, a pair of Muscles of the Head, thus called as being Antagonists to the *Annentes*; and serving to throw the Head backwards, with an Air of Refusal. See **HEAD**.

From their Situation they are also called *Rellex Capitis Minor*. See **REVERTUS Capitis**.

**RENUNCIATION**, the Act of renouncing, abdicating, or relinquishing any Right, real or pretended. See **ABDIICATION**, &c. *Renunciations* are sometimes express; as by Contracts, &c. sometimes tacit, as by contrary Acts.

To *renounce* a Succession, a Community, &c. is to pass a solemn Act before a Notary, or other publick Officer, whereby a Person declares he will not intermeddle in a Succession, or Profit in a Company; but surrenders his Part, and quits all Pretensions.

*Donatus* renounced the Empire to live as a Philosopher.—The late King Philip of Spain, by the Treaty of *Utrecht*, was obliged to *renounce* the Succession of the Crown of France; to which he was heir Presumptive: And has since by a voluntary Act *renounced* his own Crown, in favour of his Son.—*Renunciations* of Keys are always suspected. See **RESIGNATION**.

**RENVERSE**, inverted, in Heraldry, is when any thing is set with the Head downwards, or contrary to its natural Way of Being.—Thus a Chevron *renverse* is a Chevron with the Point downwards.—The same Term we use when a Beast is laid on its Back.

**REORDINATION**, the Act of conferring Orders a second time. See **ORDINATION**.

The Ceremony of Ordination impresses what the Divines call an indelible Character; and cannot, therefore, be repeated: Yet is *Renunciatio* practiced in England, with regard to the Dissenting Ministers, who conform to the Church; The Bishops pretending that they alone have Right to confer Holy Orders, and that every Priest or Minister who does not receive them at their Hands, has no lawful, regular Vocation.

This proves a great Obstacle to the Re-union of those Ministers to the Church of England; many of whom, otherwise disposed to conform, have scrupled to be *Re-ordain'd*; inasmuch as *Re-ordination* implies their former Vocation to be null; that they had administer'd the Sacraments without any Right thereto; and that all their ministerial Acts were invalid. See **PRESBYTERIAN**.

In the eleventh Century, the Crime of Simony having been very flagrant; many People fell into the Error to believe that the Simoniacal Bishops could not Ordain validly; and that those who had received Orders at their Hands should be *re-ordain'd*.

The People of this Sentiment made a Party of themselves; and were distinguished by the Title of *Re-ordinators*.

**REPSILVER**, was Money anciently paid by Servile Tenants to their Lords; to be used of the Service of reaping his Corn. See **SERVICE**.

**REPAIRING**, in Building, &c. See **REPARATION**.

The *Repairing* of large Walls, Doors, Ceilings, Coverings, &c. belongs to the Proprietor or Landlord.

The Locutory or Tenant is only charged with *small Repairs*, as Glafs-Windows, Locks, &c. call'd **LOCATIVE Repairs**.

To *repair* a Statue, or other Piece of Sculpture, is to touch up a Statue, &c. (cast in a Mould) with a Chisell, Graver, or other Instrument; to finish the Places which have not come well off.

To *repair* a cast Figure or Statue, they clear off the Barb, and what is redundant in the Joints and Projectures. See **STATUE**. See also **FOUNDREY**.

To *repair* a Medal, is to retouch it; so as rusty and defaced as it was, to render it clean, neat, and perfect.—In order to this they take off the Rust with a Graver, touch up the Letters, polish the Ground, and raise and restore the Figures which before were scarce seen.

When the Figures are gnaw'd or broke, they fit a Piece of Marble, or Cement on the Spot; and on this cur with a Graver so dextrously that the Figures appear entire and well kept.—Yet nothing spoils Medals so much as *repairing* them. See **MEDAL**.

**REPAIRS**, in Hunting, are the Haunts or Places that the Hare runs to. See **HUNTING**.

**REPAIRERS**, Artificers who chafe Figures, and beautify Sword-Hills, &c. See **CHASING**.

**REPARATION**, the Act of repairing, re-establishing, retrieving, or mending a Building, or other Work, damaged or gone to decay. See **REPAIRING**.

The Enemy *repairs* the Breach as soon as 'twas made.—The Establishment of Turn-pikes is for *repairing* of the Roads.

An Ecclesiastical Patron is by ancient Customs obliged to *repair* the Choir or Chancel of a Church, and the Parsonages the Nave. See **RESTAURATION**.

**REPARATIONE factenda**, is a Writ which lies in divers Cases; e. g. where three are Tenants in Common, or joint Tenants *pro indiviso*, of an House, &c. fallen to decay, and the one being willing to *repair* it, the other two will not; in this Case the Party willing shall have this Writ against the other two.

**REPARTITION**, a dividing or sharing a thing a second time. See **PARTITION**.

There are too many Deficiencies found this Year in the Taxes of this Parish, that there must be a *Repartition* on the Inhabitants; or a new Imposition.

**REPARTY**, a ready, smart Reply; especially in Matters of Wit, Humour, or Raillery.—'Tis dangerous attacking this Lady, her *Reparties* are so keen.

*Wingsport* observes a World of difference between a free sprightly *Reparty*; and an offensive Sarcasm. See **SARCASM**.

The Word, in the Original French, *Repartie*, has the same Signification.

**REPAST**, **REPASTUM**, a Meal, or Refection, taken at a stated Hour. See **REFECTION**.

In old Law Books, *Repos* is particularly used for a Meals-meat given to servile Tenants, while at Work for their Lord.

The French call their Meal, *Repos*; the *Latins*, *Pastus*; the *Italians* and *Spaniards*, *Pasta*. See **MEAL**.

The *Repos* whereof the Scripture has preserved the Memory, shew that the ancient Hebrews were not very delicate in their Eating.—*Abraham*, a Man of Wealth and Eminence, entertaining the Angels, serves them with Cakes baked under the Ashes, a fatted Calf hastily dress'd, and Milk and Butter.—But the Quantity makes amends for the Quality: Three Measures of Flower, and a whole Calf, for three Persons.

*Joseph* to shew his respect to his Brother *Benjamin*, order'd him a Portion of Meat five times as big as that of his other Brothers.

In Antiquity the *Repos* were frequently Sacrifices; for which Reason we find them often prepared by Kings themselves. See **SACRIFICE**.

**REPEALING**, in Law, the revoking or annulling of a Statute by Authority of Parliament. See **PARLIAMENT**.

No Act of Parliament shall be *repealed* in the same Session it was made in. See **SESSION**.

*Brake* uses the Word *Repellente* in the same Sense.

REPEAT, in Musick, a Character shewing that what was last play'd or sung, must be repeated, or gone over again. See REPETITION.

The *Repeat* serves instead of writing the same thing twice over.—There are two Kinds of *Repeats*; the *great* and the *small*.

The first is only a *double Bar*, dotted on each Side; or two parallel Lines drawn perpendicular a-cross the Staff; with Dots on either Hand: See its Form under CHARACTERS of *Musick*.

This Mark shows that the preceding Strain is to be repeated; that is, if it be near the Beginning of the Piece, all hitherto sung, or play'd, is to be repeated; or if towards the End of a Piece, all from such another Mark.

In Gavots, we usually find the *Repeat*, at about the third Part of the Piece.—In Minuets, Bores, Corantos, &c. towards the End.

Some make this a Rule, that if there be Dots on each Side the Bar, they direct to a *Repetition* both of the preceding and the following Strain; if there be only Dots on one Side then, only the Strain on that Side to be repeated.

The *small Repeat* is where only some of the last Measures of a Strain are to be repeated.—This is denoted by a Character set over the Place where the *Repetition* begins. (See CHARACTERS in *Musick*) and continues to the End of the Strain.

When the Song ends with a *Repetition* of the first Strain, or Part of it, instead of a *Repeat*, they use the Words *da Capo*, i. e. from the beginning.

REPELLENT, REPELLENS, in Medicine, a Remedy which repels or drives back a morbid Humour into the Mass of Blood, from which it was unduly secreted. See HUMOR and MEDICINE.

Or, *Repellents* are Medicines which prevent such an afflux of the Fluids to any particular Part, as will raise it into a Tumor; or drive them back when they are collected. See TUMOR.

To form an Idea of the Manner of their Operation, it may be observ'd, that all Tumors arise either from an increase in the Velocity or Quantity of the Fluids, or a Weakness in some particular Part; though sometimes both concur.—Now an increase in the Velocity of the Fluids makes them more forcibly push against, and distend all the Parts in their Circuit; if therefore any Part be unequally prest or relaxed by external Injuries, that will be more elevated than any other; and for want of equal Resistance with the rest of the Body, will at length receive such a Quantity of Fluid, as will raise it into a Tumor, especially if any of its Vessels be obstructed: Because the Protrusion of fresh Matter, *a tergo*, will continue to add thereunto, till the Part is on the utmost stretch, and can hold no more. See BLOOD.

In this Case, all those Means are said to be *repellent*, which check the growth of the Tumor, and assist the reflux Blood in taking up the obstructed Matter, and washing it again into the common Stream.

This Intention is chiefly favoured by Evacuation and Revulsion; for whatsoever lessens the Quantity of the Fluid, will diminish the force upon the tumefied Part.—But it concerns us most to know how external Application to the Part itself, helps this Affair.

Herein a Medicine comes to be *repellent*, by consisting of such subtle Parts, as may transmit some of them through the Pores, and help to render the obstructed Matter more fluid, so that it comes the more easy to be loosened, and fall again into the circulating Current.—But in this Case there is a Hazard of such things likewise putting the obstructed Humour into a Ferment, whereby it sooner turns into Pus, and then they come under the Denomination of Suppuratives or Ripeners. See SUPPURATIVE.

What, therefore, in the most strict Sense, is to be reputed a *Repeller*, is that which attracts and strengthens the Part, so as to make it resist any such Lodgment. See ASTRINGENT and STRENGTHENER.

These are such whose Qualities are most manifest in their Coldness, and drying Properties: But there are so few Instances wherein Bandage is not better than such Application, that very little comes to be used for that purpose. In Hemorrhages, and Oozings out of Serum, so as to deform the Skin; Simplices of this Nature mostly take place; which answer their Ends in astringing the Fibres, whereby those Apertures are so closed, as not to admit through them afterwards any such fluid.

Some things also answer this End only by stimulating the Fibres of the tumefied Part, so as to give them sudden and forcible Twitches, whereby the obstruction is sometimes loosened and shook away, as it were, into the reflux Current.—Such a sort of Motion will be occasioned by the sudden Application of any thing extremely cold, as common Water; but the Practice is seldom safe, because if the first Efforts which the Fibres are put upon by those means, do not succeed in breaking away the inclosed Matter, they will be strained, and not able afterwards to repeat their natural Vibrations: the Consequence of which is weakening the Part, which will render the Tumor more obstinate.

REPELLING POWER, VIZ REPELLENS, in Physicks, is a certain Power or Faculty residing in the minute Particles of natural Bodies, whereby they mutually fly from each other. See POWER and PARTICLE.

This Power is the reverse of the *Attractive Power*. See ATTRACTIVE.

Sir *Isaac Newton* having established the attractive Power of Matter from Observation and Experiment; argues, that as in Algebra, where positive Quantities cease, there Negative ones commence; so in Physicks, where the attractive Force ceases, there a *repelling Force* must begin.

But that there is such a Force does likewise appear from Observation. See REPULSION.

As the *repelling Power* seems to arise from the same Principle as the attractive, only exercised in different Circumstances; 'tis govern'd by the same Laws: Now the attractive we find is stronger in small Bodies than in great ones, in Proportion to the Masses.—Therefore the *repelling* is so too. But the Rays of Light are of all others the most minute Bodies we know of; therefore of all others their *repelling Force* must be the greatest. See RAY.

Sir *Isaac Newton* computes that the attractive Force of the Rays of Light is above 1000000000000000 times as strong as the Force of Gravity on the Surface of the Earth: Hence arises that inconceivable Velocity wherewith Light must move, to reach from the Sun to our Earth in seven Minutes. For the Rays emitted from the Body of the Sun by the vibrating Motion of its Parts, are no sooner got without the Sphere of Attraction of the Sun, than they come within the Action of the *repelling Power*. See LIGHT.

The Elasticity, or springiness of Bodies, or that Property whereby after having their Figure alter'd by any external Force, they return to their former Figure, follows from the *repelling Power*. See ELASTICITY, AIR, &c.

REPERCUSSION, in Mechanics. See REFLECTION.

REPERCUSSION, in Musick, a frequent Repetition of the same Sounds. See REPETITION.

This frequently happens in the Modulation; where the essential Chords of each Mode, or of the harmonical Triad, are to be beat oftener than the rest; and of these three Chords the two Extremes, i. e. the final and the predominant one, (which are properly the *Repercussion* of each Mode) oftener than the middle one.

REPERTORY, REPERTORIUM, a Place wherein things are orderly disposed, so as to be easily found when wanted.

The Indices of Books are *Repertories*, shewing where the Matters sought for are handled. See INDEX.

Common Places are a kind of *Repertories*, very useful to the learned. See COMMON PLACE.

*Repertorium Anatomicum*, is a large Hall near an Amphitheatre of Dissections, where Skeletons both human and brutal, are orderly preserv'd.—Such is the *Repertory* of the French King's Garden at Paris.

REPETITION, REPETITIO, the re-iterating of an Action. See REITERATION.

Habitudes are acquired by the frequent *Repetition* of Actions. See HABIT.

Musicians and Comedians make several *Repetitions* of their Concerts and Comedies, e'er they perform for good. See REHEARSAL.

The School Philosophers call the *Repetition* of the same numerical Effect in another Place, the *Repetition* of that Effect. See REPLICATION.

REPETITION, in Musick, a re-iterating or playing over again of the same Part of a Composition; whether it be a whole Strain, a Part of a Strain, or a double Strain.

The *Repetition* is denoted by a Character, called a *Repeat*, which is varied so as to express the various Circumstances of the *Repetition*. See REPEAT.

When the Song ends with a *Repetition* of the last Strain, or a part of it; the *Repetition* is denoted by *da Capo*; that is, from the Beginning.

REPETITION, *Reply*, is also used in Musick, when after a little Silence, one Part repeats or runs over the same Notes, the same Intervals, the same Motions, in a word, the same Song, which a first Part had already gone over during the Silence of this.

REPETITION, *Reply* is also a doubling, or trebling, &c. of an Interval; or a Reiteration of some Consonance or Dissonance: Thus a fifteenth is a *Repetition* of the Octave, i. e. a double Octave or second Octave. See OCTAVE.

REPETITION, in Rhetoric, a Figure whereby the Orator repeats the same Word or Phrase over again.

Of this there are two Kinds.—In the first, the Word is repeated precisely in the same Sense: As, *Oh, Jerusalem, Jerusalem, who killest the Prophets, &c. my God, my God, why hast thou forsaken me.*

Such *Repetitions* have the same effect in Discourse, with second strokes of the Pencil in Painting; they render the Colours more strong and lively.

Sometimes the Orator begins again and again with the same Word; of which we have an Instance in the beginning of *Cicero's* first Oration against *Cataline*: *Nihil ne te Nocturnum praesidium palatium, nihil urbis Vigiliae, nihil timor populi, nihil Consensus bonorum omnium, nihil hic Munitissimus balneus Senatus levari, nihil barum ora vulgare!* Where the Word *nihil* is often re-iterated gives an admirable Force and Vehemence to the Discourse.—

Again,

Again, the same Author: *Quem finatus danmarit, quem Populus R. danmarit, quem omnium christianis danmarit, cum vos finatissis regere abisistis?* Again, *Non feram, non pario, non finam.*

The second Kind of *Repetition*, call'd *rhomb*, *Place*, is a *Repetition* of the same Word, in the same Phrase; but in such manner as that some new Idea or Character is added to the Word, in the second, which it had not in the first: As *Corydus* is always *Corydus*: *Ex illo Corydus, Corydus est tempore subis*; by which we signify that *Corydus* is no ordinary Person; and that nothing can distinguish him but the *Repetition* of his own Name: As if we should say, *He is Corydus; that is enough*.—By the same Figure our Saviour speaks, when he says, *Let your Language be Yes, yes, and Nay, nay.*

**RE-PLANTING**, in Gardening, the Action of planting a second time. See **PLANTING**.

The Gardeners use to displant their Tulips every Year, and replant them.—Letices must be displanted and replanted yearly, to make them head and knit.—If Strawberries, &c. be not displanted, and replanted once in a few Years, they degenerate.

The Gardeners have a Proverb, that if the Devil were to replant his Wife, he'd cut off her Head.

**REPLEADER**, in Law, is to plead over again what was once pleaded before. See **PLEA** and **PLEADING**.

**REPLEGIARE** *De Accusis*, a Writ brought by one whole Court are distrain'd, and put in the Pound by another, upon Security given the Sheriff to pursue, or answer the Action at Law against the Distrainer. See **REPLEVY**.

**REPLETION**, in Medicine, a Pleasitude, or Plethora. See **PLENTITUDE** and **PLETHORA**.

*Repletio* is more dangerous than Inanition.—Bleeding and Diet are the great Resources when a Person is incommoded with a *Repletio*. See **DIET**, &c.

*Repletio* is sometimes also used where the Stomach is over laden, with too much eating or drinking.—The Physicians hold all *Repletions* prejudicial; but that of Bread the worst. See **BREAD** and **SUBREPT**.

**REPLETION**, in the Canon Law, is where the Revenue of a Benefice or Benefices is sufficient to fill or occupy the whole Right or Title of the Graduate who holds them. See **BENEFICE**, **GRADUATE**, &c.

When there is a *Repletio*, the Party can demand no more by Virtue of his Degrees.—In *England*, where Benefices are not affected to Degrees, *Repletio*, strictly speaking, has no Place. See **PLEURALITY**.

In *France*, 600 Livres, or 45 l. Sterl. per Annum, make a *Repletio*, when the Benefice is obtain'd otherwise than by his Degree; and 30 l. per Annum, when it is obtain'd by virtue of a Degree.

**REPLEVY**, **REPLEVIE**, or **REPLEVIN**, in Law, from the *Latin replere*, to re-deliver to the Owner upon Pledges of Surety; is the bringing of a Writ call'd *Replegiari facias*, by him whose Cattel or Goods are distrain'd by another upon any Cause; and giving Security to the Sheriff, that on delivery of the thing distrain'd, he will prosecute the Action against the Person who made the Distrain. See **DISTRESS**.

In the Stat. 24 of *Henry III.* we read of *Camerreplegiari*, Hounds reserved, in a Case between the Abbot of *St. Albans*, and *Geoffrey Chabouch*.

Goods may be *replevied* two ways; viz. by *Writ*, which is that used by the common Law.—And by *Plain*; which is that by Statute Law, for the more speedy having again the Cattel and Goods.

**REPLEVISH**, in Law, is to let one to Mainprise, upon Surety. See **MAINPRISE**.

**REPLICATION**, **REPLICATIO**, in Logic, the affirming or using the same Term twice in the same Proposition.

In the like Sense they say *Reduplicatio*.

Some Philosophers use the Phrase *Repliatio Mundi*, *Replication* of the World for its Conversion, or turning round.

The human Soul is also said to be in a Place *repliativus*, *repliativus*, when conceived to be all in the whole, and all in every Part thereof. See **Soul**.

**REPLICATION**, in Law, is an Exception of the second Degree, made by the Plaintiff to the first Answer of the Defendant. See **REJOINDER**.

The *Replicatio* is particularly that which the Plaintiff replies to the Defendant's Answer in Chancery, and which is either *general* or *special*. The *special* is grounded upon Matter arising out of the Defendant's Answer, &c. The *general* is so called from the general Words therein used.

**REPORT**, the Relation made upon Oath, by Officers or Persons appointed to visit, examine, state, or estimate, any thing.

Damages, Repairs, &c. are judged from the Reports of experienced Persons.—Provisions for Persons wounded are only granted on the Reports of Chirurgeons, &c. In Cases of Rapes a Report of Matrons is had. See **JURY**.

**REPORT**, in Law, is a publick Relation of Causes judiciously argued, debated, resolved, or adjudged in any of the King's Courts of Justice, with the Cause and Reason of the same, delivered by the Judges.

When the Chancery, or any other Court, refers the stating of some Case, or comparing an Account, &c. to a Master in Chancery, or other Referee, his Certificate therein is call'd a *Report*.

**REPOSITORY**, **REPOSITORIUM**, a Store-house or Place where things are laid up and kept.—In this Sense we say the *Repository* of the Royal Society, &c. See **MUSEUM**.

**REPOSE**, in Poetry, &c. See **REST**.

**REPOSE**, in Painting, is used for certain Masses or large Systems, or Assemblages of Light and Shade; which being well conducted, prevent the Confusion of Objects and Figures; by engaging and taking up the Eye so it can't attend to the other Parts of the Painting, for some time: And thus leading it to consider the several Groups gradually, and as it were to proceed from Stage to Stage.—See **LIGHT**, **SHADOW**, **CLAIR-obscure**, &c.

**REPOSITION** of the Person, an Act whereby certain Grounds made *parties*, upon a second view are laid to the Foret again. See **FOREST**, and **PURLEVY**.

The Word is form'd from the *Latin re* and *ponere*, to lay again.

**REPRESENTATION**, in the Drama, the Exhibition or Action of a theatrical Piece; including the Scenes, Machines, the Recitation, &c. See **SCENE**, **MACHINE**, **RECITATION**, &c.

Sir *Richard Steele's* Principle is, that the Design of a Play is not to be read but *represented*; so that 'tis on the Stage, not in the Press it is to be judged of: And the Pic. not the Publick, are the Judges. See **THEATRE**.

**REPRESENTATIVE**, one that personates, or supplies the Place of another; and is invested with his Right and Authority. The Word *Representative* is equivalent to a *Procurator* or *Proxy*. See **PROCURATOR** and **PROXY**.

Thus we say the King is the *Representative* of God on Earth: Magistrates, *Representatives* of the King. See **KING**, **MAGISTRATE**, &c.

The Commons are the People's *Representatives* in Parliament. See **COMMONS**, **PARLIAMENT**, &c.

There is this defect in the Constitution of our Parliament; that whereas all *Englishmen* who have considerable Estates, ought not to be tax'd without their own Consent, in Parliament by themselves, or their *Representatives*: Copy-holders, whereof some have a thousand Pounds a Year, have no Voice in the Election of Knights of the Shire. *Chamberl.*

**REPRISAL**, in Law, a suspending or deferring the Progress and Execution of the Law upon a Prisoner, for the present time.

A *Reprisal* is properly a Warrant from the King, for suspending the Execution of a Person condemn'd.—The King cannot pardon a condemn'd Person without the Concurrence of Parliament, but he frequently *repriseth* him for 99 Years.

**REPRIMAND**, a sharp authoritative Reproof. Such a Person was *reprimandus* in Court, by the Bench, &c.

**REP-SILVER**, Money anciently paid by servile Tenants to their Lord, to be quit of the Duty of reaping his Corn. See **SILVER**.

**REAR-WARD**, *arrieregarde*, the Rear of an Army. See **REAR**.

**REPRIZALS**, **REPRISALIA**, in the Civil Law, a Right which Princes have to retake from their Enemies, such things as they unjustly detain from them; or things equivalent thereto.

When a Place is taken or held from a Prince, he seizes another by way of *Reprisal*.—Sometimes he takes Men of the opposite Party, by Right of *Reprisals*.—The *Romans* call'd it *Clarigatio*. See **CLARIGATIO**.

**REPRISALS** is also used for a Letter or Permission which a Prince sometimes gives a Subject, upon a full Cognizance of the Cause; authorizing him to retake from the first Persons he meets withal of the opposite Party, as many Effects as make an Equivalent to what have been violently forced from him; and for which the opposite Prince has refused to do him Justice.

These Permissions are also call'd *Letters of Mark*, and in the Stat. 27 *Edw. III.* *Law of Marque*; in regard, a Person denied Justice in another Man's Territory; redresses himself by Goods belonging to Men in that Territory. This Merchant has seiz'd the Effects of the *Spaniard* Don — because the *Spaniards* had seiz'd his; and no redress could be had at the Court of *Madrid*.

The Word is form'd from the *Italian*, *Reprisaglia*, which signifies the same thing.

**REPRISAL**, or **REPRIZAL**, in the Commerce by Sea, a Merchant Ship which having been taken by a Corsair, Privateer, or other Enemy, is retook or recover'd by a Vessel of the contrary Party.

When a Vessel thus retaken has been 24 Hours in the Hands of the Enemy, 'tis deem'd a lawful Prize. See **PRIZE**.

If the *Reprisal* have been made within the 24 Hours, the Vessel is to be restor'd to the Proprietor, with every thing therein, upon his allowing one third to the Vessel who made the *Reprisal*.

If the *Reprisal* have been abandon'd by the Enemy, either in a Tempest, or from any other Cause, before it have been led into any Port, it is to be restor'd to the Proprietor.

The Word is *French*, and signifies a *re-sumption* or *re-taking*.  
**REPRISES**, in *Law*, are Deductions, Draw-backs, or Duties paid yearly out of a Manor, or Lands.—Such are Rent-charges, Penions, Fees of Stewards or Bailiffs, &c.

Thus we say, the Manor of *Doll* yields 40 *l.* per Annum, *ultra Reprises*, besides all *Reprises*.

**REPROBATION**, in *Theology*, a Decree or Resolve which God has taken from all Eternity, to punish Sinners, who shall dye in Impenitence. See **DEGREE**.

*Reprobation* stands in *Polemical Divinity* in direct opposition to *Predestination*. See **PREDESTINATION**.

The Divines hold it a Symptom of *Reprobation*, when a Sinner is harder'd so as not to feel any further Remorse or Misgivings of Conscience. See **CONSCIENCE**, **REMORSE**, &c.

The *Caluists* distinguish *positive* and *negative Reprobation*.

*Positive Reprobation* is that whereby God is supposed to create Men with a positive and absolute Decree to damn them eternally.

This Opinion of *Reprobation*, is countenanc'd by St. *Augustin*, and others of the *Fathers*, and strongly maintained by *Calvin*, and most of his Followers.—Something like it is also found in the 39 Articles of the Church of *England*, but 'tis now generally exploded as injurious to God. See **CALVINIST**, &c.

*Negative*, or *Conditional Reprobation*, is that whereby God, though he create all Men with a sincere desire to save them, and furnishes them with the necessary Means thereto, so as all may be saved if they will; yet, sees, there are several who will not do it, with the Aids he shall afford them, how powerful soever: And sees, at the same time, they would do it with certain other Aids, which he sees, but will not give them.—*O Altitudo! &c.* See **GRACE**.

**REPRODUCTION**, the Action whereby a thing is produced a-new, or grows a second time. See **PRODUCTION**.

When the Stock of an Oak, Fruit-Tree, &c. is cut off short, it reproduces an infinity of young Shoots. See **STOCK**.

By *Reproduction* is usually understood the Restoration of a thing before existing, and since destroyed. See **RESTAURATION**.

The *Reproduction* of several Parts of Lobsters, Crabs, &c. makes one of the great Curiosities of natural History.—That in lieu of an organical Part of an Animal cut off, another should arise perfectly like it, may seem inconsistent with the modern System of Generation; where the Animal is supposed to be wholly form'd in the Egg. See **GENERATION** and **EGG**.

Yet has the matter of Fact been well attested by the Fishermen, and even by several Virtuoso's who have taken the Point into Examination.—The Legs of Lobsters, &c. consist each of five Articulations; now when any of the Legs happen to break by any Accident, as in walking, &c. which frequently happens, the Fracture is always found to be at a Suture near the fourth Articulation; and what they thus lose is precisely reproduced in some time afterwards: That is, a part of a Leg shoots out, consisting of four Articulations; the first whereof has two Claws as before; so that the loss is entirely repaired.

If a Lobster's Leg be broke off by design at the fourth or fifth Articulation, what is thus broke off always comes again.—But 'tis not so if the Fracture be made in the first, second, or third Articulation. In those Cases the *Reproduction* is very rare, if things continue as they are.—But what is exceedingly surprising, is, that they don't: For upon visiting the Lobster main'd in these barren and unhappy Articulations, at the end of two or three Days, all the other Articulations are found broke off, to the fourth; and 'tis suspected they have performed the Operation on themselves, to make the *Reproduction* of a Leg certain.

The Part reproduced is not only perfectly like that retrench'd, but also in a certain space of time equal to it.—Hence it is, that we frequently see Lobsters, which have their two big Legs unequal; and that in all Proportions.—This shews the Youth of the legs.

A Part thus reproduced being broke, there is a second *Reproduction*.—The Summer, which is the only Season of the Year when the Lobsters eat, is the most favourable time to the *Reproduction*. 'Tis then perform'd in four or five Weeks; whereas it takes up eight or nine Months in any other Season.

The small Legs are reproduced, but more rarely, as well as more slowly than the great ones: The Horns do the same. See **CRAWLERS**, **EYES**.

**REPTILES**, in natural History, a kind of Animals, denominated from their *creeping* or *advancing* on the Belly; or a Genus of Animals and Insects which instead of Feet, rest on one Part of the Body, while they advance forward with the rest. See **ANIMAL**, **INSECT**, &c.

Such are Earth-Worms, Snakes, Caterpillars, &c.

Indeed, most of the Class of *Reptiles* have Feet; only those very small, and the Legs short in Proportion to the Bulk of the Body. See **FEET** and **LEGS**.

The Naturalists observe a World of artful Continuance for the Motion of *Reptiles*.—Thus, particularly, in the Earth-worm, Dr. *Willis* tells us, the whole Body is only a Chain of acetular Muscles; or, as Mr. *Derham* says, 'tis only one continued fibril Muscles, the orbicular Fibres whereof by being contracted, render each Ring narrower and longer than before: By which

means it is cobbled, like the Worm of an Auger, to bore its Passage into the Earth.—Its reptile Motion may also be explained by a Wire wound on a Cylinder, which when slip'd off, and one end extended and held fast, will bring the other nearer it. So the Earth-worm having thor out or extended its Body, (which is with a wreathing) it takes hold by those small Feet it hath, and so contracts the hinder Part of its Body.—Dr. *Tyson* adds, that when the fore-part of the Body is stretch'd out, and applied to a Plane at a Distance, the Hind-part relaxing and shortning, is easily drawn towards it as a Centre.

Its Feet are disposed in a quadruple Row, the whole length of the Worm; with which, as with so many Hooks, it fastens down sometimes this, and sometimes that Part of the Body to the Plane, and at the same stretches out, or drags after it another.

The creeping of Serpents is effected after a somewhat different Manner; there being a difference in their Structure; in that these last have a Compages of Bones articulated together. The Body here is not drawn together, but as it were complicated; Part of it being applied on the rough Ground, and the rest ejaculated and shot from it; which being let to the Ground in its turn, brings the other after it.—The Spine of the Back, variously wreath'd, has the same effect in leaping, as the Joints of the Feet in other Animals; they making their Leaps by means of Muscles that extend the Piece or Fold.

The Word **REPTILE** is likewise used, abusively, for Plants and Fruits which creep on the Earth, or on other Plants, as wanting Strength of Stalk to sustain themselves.

Such are Cucumbers, Melons, &c. such also are Ivy, the Vine, &c.

The Word is form'd from the *Latin*, *repto*, I creep.

**REPUBLIC**, *RES PUBLICA*, *Commonwealth*, a popular State or Government; or a Nation governed by a Democracy. See **DEMOCRACY**.

The celebrated *Republics* of Antiquity, are those of *Athens*, *Sparta*, *Rome*, and *Carthage*.

At present there is scarce any such thing as a real *Republic*, i. e. as a strictly popular State.—Indeed the *Venetians* and *Genevois* call their States *Republics*, but their Government is apparently *oligarchic*. See **OLIGARCHY**.

The *Dutch* come the nearest to the Character of a *Republic*; yet are they very defective, at least in the Sense and Severity wherewith *Rome*, *Carthage*, &c. were *Republics*. See **STATES-GENERAL**, **PENSIONARY**, &c.

'Tis a Remark of M. St. *Evremont*, that if the *Dutch* love the *Republican* Form, 'tis more for the sake of their Trade, than of their being free.

**REPUBLIC of Letters**, or of Learning, is a Phrase used in speaking collectively of the whole Body of the People of Study.

There is a Journal begun in *Holland* by M. *Bayle*, and continued by M. *Bernard*, consisting of Extracts of Books printed in the Couric of the Year; called, *Nouvelles de la Republique des Lettres*; News from the *Republick of Letters*. See **JOURNAL**.

**REPUDIATION**, in the Civil Law, the Act of Diving. See **DIVORCE**.

**REPULSION**, **REPULSIO**, in *Physics*, the Action of a repelling Power, whereby natural Bodies, under certain Circumstances, mutually fly each other. See **REPELLING-POWER**.

*Repulsion* is the Counter-Part to *Attraction*.—Attraction only reaches to a little Distance; where that terminates there *Repulsion* commences. See **ATTRACTION**.

Indeed we meet with many obvious Instances of *Repulsion* among Bodies, as between Water and Oil; and in general between Water and all unctuous Bodies: Between Mercury and Iron; as also between the Particles of Dulcis, &c.

Thus, if a far Body lighter than Water, be laid on the Surface thereof, or if a Piece of Iron be laid on Mercury; the Surface of the Fluid will be depressed about the Bodies laid on it: A plain Indication of *Repulsion*; as the rising up of the Fluid about the Surfaces of other incumbent Bodies is of *Attraction*.

In the latter Case the Fluid is suspended by an attractive Power, above the Level, and kept from falling by its Gravity: In the former a Depression is made by the repelling Power, which the Liquor, notwithstanding its Gravity, cannot run down into and fill up.

Upon this depend all the Phenomena of very light Glass Bubbles floating on Water; about which, when clem, the Water rises; but when gross'd, the Water sinks into a Channel all round them.—Hence also it is that in a Glass Vessel of Water the Fluid stands higher all about the Edges near the Glass, than towards the Middle: But when the Glass is filled till the Water run down on all Sides, then, it stands higher at the middle than at the Sides;—Hence, also in a Glass not full of Water, a clean Glass Bubble always runs to the Side, by reason the Pressure which is upon it towards the Middle, is partly taken off by the attractive Force wherewith the Water is rais'd near the Edge. If the Glass be so full as to be ready to run over, the Bubble returns from the Side towards the Middle; the Force wherewith the Water is rais'd in the Middle, taking off Part of the Pressure.

Just the reverse happens, if the Bubble be gross; in regard, there, the Force whereby the Water and the Bubble repel each other, is greatest where the Water is highest. Two clean Bubbles,

bles, and two greasy ones always run towards each other; as being attracted: A greasy and a clean one always fly each other, as being repell'd.

**REQUEST**, in Law, a Supplication, or Petition prefer'd to a Prince, or a Court of Justice; begging Relief in some Conscienceable Cause where the Common Law granted no immediate Redress. See **EQUITY**.

The Term *Request* is now, since the Institution of Chancery, much disus'd; together with the Court of *Requests*, where *Requests* were cognizable.

The Court of **REQUESTS**, was an ancient Court of Equity, instituted about the 9th Henry VII. of like Nature, though inferior Authority, to the Court of Chancery; being appointed chiefly for the Relief of Petitioners who in conscienceable Causes should address themselves by way of *Request* to his Majesty.

The Chief Judge of this Court was the Lord Privy Seal, assisted by the *Masters of Requests*, who corresponded to our *Masters of Chancery*. See **MASTER**.

40 and 41 *Edw.* it was adjudg'd, upon solemn Argument in the Court of Common-Pleas, that the Court of *Requests* was then no Court of Equity. See **COURT**, **CHANCERY**, &c.

In France the *Requettes Civiles*, Civil Requests, still obtain for the annulling of Contracts, &c. made by Surprise. See **PLAINET**.

They have eighty *Masters of Requests*, to take Cognizance of Causes between the Officers of the Crown, the Servants of the Household, &c.

**REQUEST**, in Hunting, is when the Dogs have lost the Quest or Track of the Beast, and must *Request*, or *Quest* it again. See **QUEST**.

Thus they say, to call to the *Request*, come to the *Request*. See **HUNTING**.

To *Request the Game*, is chiefly used when after having run it down the Night before, they seek it again the next Morn'g with the Blood-Hound, or the like. See **BLOOD-HOUND**.

**REQUIEM**, a Mass sung in the Roman Church for the rest of the Soul of a Person deceas'd. See **MASS**.

It is thus call'd, because the *Introit* begins with, *Requiem eternam dona eis Domine*, &c.

**RES**, thing. See **REALITY**, **ENS**, **ESSE**, **SUBSTANCE**, &c.

**RES Naturalis**,

**RES Nati Naturalis**,

**RES Prater Naturalis**,

See { **NATURALIS**  
NON **NATURALIS**  
PRATER **NATURALIS**.

**RESCUIT**, **RESCUTO**, an Admission or Receiving of a third Person to plead his Right, in a Cause formerly commenced between other two.

As, if a Tenant for Life or Years, brings an Action, he in the Reversion comes in and prays to be received, to defend the Land, and to plead with the Demandant.

**RESCUIT** is also apply'd to an admittance of Plea, though the Controversy be only between two.

**RESCUIT of Homage**, *Rescuto Homagii*, denotes the Lord's receiving Homage of his Tenant at his Admission to the Lands. See **HOMAGE**.

**RESCISION**, **RESCISSIO**, in the Civil Law, an Action instituted for the annulling or setting aside of an AG. Contract, or the like.

A Thing's being found damag'd or sold at above double the just Value, is a good Cause of *Rescissio*. See **REDIMPTION**.

An Act or Contract thus annull'd, or rescind'd, is call'd a *Rescissio*.

The Word is form'd from the *Latin*, *re* and *scindo*, q. d. I cut or divide again.

**RESCOUS**, or **RESCUE**, in Law, an illegal taking away and setting at Liberty of a Distress taken, or a Person arrested, by Process or Course of Law.

This is properly a *Rescous in Fact*.—If one Distress Beasts for Damage feasant in his Ground, and as he drives them in the Highway towards the Pound, they enter into the Owner's House, and he witholds them there, and will not deliver them upon Demand; this Detainer is a *Rescous in Law*.

*Rescous*, in Matters relating to Treason, is deem'd Treason; and in Matters concerning Felony, is Felony. See **TREASON**, &c.

He that commits such a *Rescous* or *Rescous*, is call'd *Rescouser*. **RESCOUS** is also us'd for a Writ which lies for this Fact; call'd *Brevé de Rescous*.

**RESCIBENDARY**, an Officer in the Court of *Ross*, who sets a Value upon Indulgences and Supplications. See **INDULGENCE**.

**RESCRIPT**, an Answer delivered by an Emperor, or a Pope, when consulted by particular Persons, on some difficult Question or Point of Law; to *leave* as a Decision thereof.

The Civil and Canon Laws are full of such *Rescripts*.—When the *Rescript* was made in Answer to the Inquiry of a Community, it was call'd a *pragmatic Sanction*. See **PRAGMATIC**.

The *Papal Rescripts* are a kind of Bulls or Monitions, beginning with these Words, *Significavit nobis antea filius*, &c. They never obtained either in England or France, when contrary to the Liberties of the English and Gallican Churches; but were declared abusive. See **BULL**.

Among the Romans the contending Parties, and even the Ma-

gistrates themselves, frequently consulted the Emperor on the Measures they were to take in certain nice and difficult Cases; and the Answer return'd by the Emperors on such Consultations, were call'd *Rescripts*.—These had not, indeed, the full force of Laws, but were deem'd a strong Prejudice or Presumption.

*Justinian* has insert'd a great Number of them in the Code; and by that means given them the Authority they before wanted. See **CODE**.

The Author of the Life of the Emperor *Marcus* observes of that Prince that he would have his Officers judge by Laws, not by *Rescripts*; as esteeming it absurd to admit the Wills of ignorant Men, such as *Commodus*, and *Caracalla*, for Rules of Judging; and because *Trojan* never gave any *Rescripts* at all, as being loath to countenance a Custom, where what is frequently granted as a favour, in particular Cases, might be afterwards pleaded as a Precedent.—'Tis added, that *Marcus* had a Design to strip the *Rescripts* of all their Authority.

*M. Schulting*, in his *Dissertations*, does not at all approve of this Design; and to the Emperor's Reason's Answers, that indeed all *Rescripts* are not to be admitted; that those which appear dictat'd out of favour, are to be thrown aside; but those which appear founded in Reason, and natural Equity are, with *Justinian*, to be allow'd.—He adds, that it can't be denied but the worst Emperors have frequently made good Laws, and useful *Rescripts*.

As to what is us'd of the Emperor *Trojan's* never giving any *Rescripts*; it appears but ill supported.—For what is it but a *Rescript* that he deliver'd to *Pliny* on the Subject of the Christians, *Lib. 2. Epist. 28*? Or that on the *Isflavici*, *Lib. 10. Epist. 120*? The *Dignity*, and *Pliny's Exile*, need only to be open'd and compar'd, to find *Rescripts* of *Trojan*.

**RESEANTISSA**, in Law. See **ESSOIN**.

**RESEARCH**, a diligent Search or Inquiry into any thing.—The Word is form'd of the French, *Rechercher*, and literally denotes a *found Search*.

**RESEARCH**, in Music, is a Kind of Prelude or Voluntary, play'd on the Organ, Harpsichord, Theorbo, &c. Wherein the Composer seems to *search*, or look out for the Strains, and Touches of Harmony, which he is to use in the regular Piece to be play'd afterwards. See **PRELUDE**.

This is usually done off-hand, and consequently requires a Master's Skill.—When in a Motet the Composer takes the Liberty to use any thing that comes in his Head, without applying any Words to it, or subjecting himself to express the Sense or Passion thereof; the *Italians* call it *Pantasia Ricercata*; the *French*, *Recherche*; and our Musicians, *Research*.

**RESEARCHING**, in Sculpture, the Repairing of a cast Figure, &c. with proper Tools; or the finishing it with Art and Exactness, so as the minutest Parts may be well defined. See **FIGURE**, **STATUE**, **FOUNDERY**, &c.

**RESEISER**, in Law, a taking again of Lands into the King's Hands, whereof a general Livory, or *Ouster de Droit*, was formerly misus'd; contrary to Order of Law. See **RESUMPTION**.

**RESEMBLANCE**. See **SIMILITUDE**.

**RESERVATION**, in Law, an Action or Clause whereby something is reserv'd, i. e. retain'd, kept, or secur'd to one's self. See **RESERVE**.

Thus, when a Man lets his Land, he *reserves* a Rent to be paid to himself for his Maintenance, &c. See **LEASE**, **TENANT**, **RENT**, &c.

*William the Conqueror* getting all the Lands of England, except those belonging to the Church and Religious Houses, into his Hands by Right of Conquest; bestow'd a great Part thereof among his Followers, *reserving* some Retribution of Rents and Services to him and his Heirs; which *Reservations* is now, as it was before the Conquest, call'd the Tenure of the Lands. See **TENURE**, **SERVICE**, &c.

Sometimes *Reservation* signifies as much as an *Exception*; as when a Man lets an House, and *reserves* to himself one Room, that Room is excepted out of the Demise. See **EXCEPTION**.

*Mental RESERVATION* is a Proposition, which strictly taken, and according to the natural Import of the Terms, is false; but if qualified with something *reserv'd* in the Mind, becomes true. *Mental Reservations* are the great Refuge of Religious Hypocrites; who use them to accommodate their Consciences with their Interests: The *Jesuits* are zealous Advocates for *mental Reservations*; yet are they real Lyes, as including an Intention to deceive.

**RESERVE**, in Law, the same with *Reservation*. See **RESERVATION**.

He has settled the whole Estate on his Son, and has not made any *Reserve*.—Benefices are sometimes reserv'd with *Reserve* of a Pension.—By the Canon Law, no Person may *reserve* to himself a Pension out of a Benefice, unless he have serv'd it ten Years. See **RESIGNATION**.

In the Roman Church, the ordinary Priests have only a Power to absolve, in *reserve* of certain Cases; hence call'd *reserved Cases*, as being *reserv'd* to the Bishop. See **ABSOLUTION** and **CASE**.

The Court *reserves* the Cognizance of such an Affair to itself.—The Lawyers say, that no Prince ever grants such a Power by his Letters or Patents, but he *reserves* to himself a greater.

*Body of RESERVE, or Corps de RESERVE, in War, the Force disposed in the third or last Line of an Army drawn up for Battle.* See LINE and BATTLE.

They are thus called because *referv'd*, or destined to sustain the rest as occasion requires; and not to engage but in Case of Necessity.

**RÉSÉROIR, RECEPTACLE,** a Place where Water is collected and *reserv'd*, to be convey'd occasionally, through Pipes, &c. or to be spouted up, &c. See WATER, FLUID, &c.

The *Reservoir* in a Building is a large Basin, usually of Wood, lined with Lead, where Water is kept to supply the Occasions of the House.—At *Caen*, the noble Seat of the Duke of Chandor, is a very large *Reservoir* a-top of the Hoarf; to which the Water is rais'd by a very curious Engine contriv'd for the Purpose.—This *Reservoir* is of such Capacity, as that besides supplying all Parts of the Hoarf by means of Pipes and Cocks, it likewise turns a Mill.

The *Reservoir* is sometimes also a large Basin of strong Masonry, glazed or paved at the Bottom; where the Water is reserved to feed *fiss & Eau*, or spouting Fountains. See FOUNTAINS, &c.

Such is that huge one on the top of *Marly*, call'd *Trou d'Enfer*, Hell-Mouth, whose Surface, *Davaier* tells us, contains fifty Acres, and its Depth fath, as under that Superficies to contain a hundred thousand Cubick Fathom of Water.

**RESERVOIR, in Anatomy.** See RECEPTACLE  
**RESET, in Law,** the receiving or harbouring an outlawed Person. See OUTLAW.

Hence a Receiver of an Out-lawed Person, is call'd a *Receiver*.

**RESIANCE, in Law,** a Man's Abode or Continuance in a Place.—The Word has the same Signification with regard to Lay-Men, as *Residence* with regard to Ecclesiasticks. See RESIDENCE.

*Glauville* observes, that in the antient Law, *Resiance* properly signified a Disheal, whereby the Person was disabled from stirring out of Doors.—Whence their *Esseau de Resiance*, was the same as our *Esseau de Malo Letta*. See ESSOIN.

**RESIDENCE, in Canon and Common Law,** the Abode of a Parson or Incumbent upon his Benefice; and his Assiduity in attending on the same. See PARSON, BENEFICE, &c.

The *Default of Residence*, call'd *Non-Residence*, unless where the Party have a Dispensation for the same, with us, is the Forfeiture of ten Pounds for each Month. See NON-RESIDENCE.

By the Canon Law, Beneficiaries are obliged to *Residence*, under Pain of Deprivation of their Benefices.—The Original Reason is, that in the primitive Church none were promoted to holy Orders, but such as had a Benefice *in promptu*; which they were obliged to serve; so that this Service was necessarily attach'd to the Order; and whoever was booured therewith, at the same time was obliged to personal Service. See ORDER and ORINATION.

But this strict Discipline was not observed long.—The Beneficiaries by Degrees got Dispensations from serving their Benefices themselves; and thus Pluralities got footing. See PLURALITY.

*France*, of all other Countries, seems to be that where *Residence* is the most strictly regarded.—All their *Cures*, or Vicarages which have Cares of Souls, are obliged to a dual *Residence*; and the Parliaments have declared all the Dispensations granted by Popes, &c. abusive; as attempting the Obligation of *Residence* to be *jure Divino*.

Under *Charles IX.* there was even a Design to re-establish the primitive Discipline in all its Severity; and in 1561, a Declaration was registr'd, appointing all Bishops to *reside*, conformably to the antient Canons, in their Bishopricks.—The same Parliament also forbid the Bishops to assume the Quality of Councillors of the King; in regard such a Quality was deem'd inconsistent with the indispensable Obligation they were under to reside in their Bishopricks.

*Du Pis* adds, that the *Procureur General*, Attorney General *Boards*, even seiz'd the Temporalities of such Bishops as continued in *Paris* fifteen Days after this Declaration; having first certified them, that if they had any Business there, he'd undertake the Management thereof.

**RESIDENCE, in Chymistry, &c.** the setting; or what remains of a Liquor, or other Substance in the Vessel, after Part of it has been pour'd or taken out; to change the Manner of the Operation on what is left.

**RESIDENT, a publick Minister,** who manages the Affairs of a King in the Court of a Prince, or petty State; or the Affairs of a Prince, or petty State, in the Court of a Prince. See MINISTER.

Thus the King of England has *Residents* in the Courts of the Electors, and other Princes of Germany and Italy; at the Republicks of *Genoa* and *Lucca*; and they reciprocally have *Residents* in the Court of Great-Britain.

*Residents* are a Class of publick Ministers inferior to Embassadors and Envoys; but like them are under the Protection of the Law of Nations. See EMBASSADOR and ENVOY.

**RESIDENT, in our antient Customs,** was a Tenant who was obliged to *reside* on his Lord's Land, and not to depart from the same; call'd also, *Honore levans* and *Couchant*; and in Normandy, *Resident de Fief*.

*Quantumvis; de alio tenent ei magis obveniat est, & ejus retidens esse debet ejus legis est Leg. H. 1.*

**RESIDENTIARY, a Canon** install'd to the Privileges and Profits of Residence. See CANON.

**RESIDUAL Figure, in Geometry,** the Figure remaining after Subtraction of a lesser from a greater. See FIGURE.

**RESIDUAL Root, is a Root** compos'd of two Parts or Members, only connected together with the Sign —.

Thus,  $a - b$ , or  $5 - 3$ , is a *Residual Root*; and is so call'd, because its true Value is no more than its *Residue*, or Difference between the Parts  $a$  and  $b$ , or  $5$  and  $3$ . See ROOT.

**RESIDUE, the Remainder or Reliqua** of an Account, Debt, or Obligation. See REMAINDER and RELIQUA.

*St. Paul*, in his Epistle to the *Romans*, speaks of a *Residue* according to the Election of Grace; meaning a Remnant or little Number of People preserv'd from Idolatry by an effect of the Grace of God.

**RESIGNATION, or RENUNCIATION, in the Canon Law,** the Surrender, or giving up of a Benefice into the Hands of the Collator. See BENEFICE and COLLATOR.

*Resignation* is of equal Import with *Surrender*; only the former is restrain'd to spiritual Benefices, and the latter to temporal Offices or Employments. See SURRENDER.

*Resignations* are either Simple or Conditional.

*Simple, or pure Resignations,* are those whereby the Incumbent strips himself of all his Right, absolutely, and without any Conditions or Relieve of Protest.—These are made to the Bishop, or Collator.

*Resignations in favour, or Conditional Resignations,* are such as are only made on Condition that such other Persons shall be invested therewith; so that the *Resignations* are null, unless the Conditions be punctually executed.

The *Resignations in favour* are not of above 200 Years standing.—Strong Opposition was at first made to them; they being esteem'd a kind of Succession or transmission of Benefices, as of Patrimonies belonging to a Family. Accordingly, these *Resignations* are not made into the Hands of the Ordinary, or Collator, as pure *Resignations* are; but to the Collator paramount, who in the *Romish Church* is the Pope: There being a suspicion of Simony, or other unlawful Paction therein; where admitted of in Prejudice to the Lay-Patron.

**RESIGNEE, in Law,** the Party to whom a thing is resign'd. See RESIGNATION.

**RESIN, RESINA, a fat, viscid, sulphurous Juice,** oozing either spontaneously, or by Incision, from several kinds of Trees, particularly the Pine, Fir, &c. See JUICE, PLANT, &c.

Mastic is the *Resin* of the Lentisk. See MASTIC.

Camphor is also a kind of *Resin*. See CAMPHOR.

The best of all the Class of *Resins* is Turpentine. See TURPENTINE.

The *Coarff* is what we commonly call *Resin*. See ROSIN.

*Resin* is properly a Juice of the Bark only. See BARK.

*Beech-harve* will have it to be the Oil of the Bark further inspissated by the Heat of the Sun, &c. so as to become friable. He adds, that it may be produc'd from any vegetable Oil, by boiling it much and long. See OIL.

If Turpentine be set over a gentle Fire, it first dissolves and becomes an Oil, then a Balsam, then Pitch, and then *Resin*; in which State it is friable in the Cold, fusible by Fire, and with inflammable and combustible, and dissoluble in Spirit of Wine, but not in Water, which are the Characters of a *Resin*. See WATER, &c.

There are two kinds of *Resins*, the one liquid, the other dry and hard.

The first is the natural *Resin* as it flows from the Tree.—The second only differs from the first in that it is condensed by the Heat of the Sun, or by that of a calinary Fire.

*Resin* will incorporate with Oil, or rectified Spirits, but not with an aqueous Menstruum. See PRECIPITATION.

The Difference between *Resins* and Gums, consists in this, that *Resins* are more sulphurous, and Gums more aqueous; so that the first dissolve in Spirit of Wine, and the last in Water. See GUM.

*M. Tournfort* makes a kind of intermediate Class of vegetable Juices which he calls *Gum-Resins*; which dissolve partly in Spirit of Wine, partly in Water. See GUM-RESIN.

Such are *Galbanum, Balilium, Opopanax, Sarcopanax, &c.*

The *Resin* of several Vegetables which abound with *Resinous Particles*, but not so as to yield any by Incision, as *Jalap, Benjamin, Scammony, Turbith, &c.* is thus obtain'd.—The Vegetable being grossly powder'd, is put into a *Matras*, and rectified Spirit of Wine pour'd on it, to the height of four Fingers above the Matter. Then the Neck of another *Matras* being luted into the former to make a double Vessel, the Matter is digested 3 or four Days in a Sand Heat, till it have given a good Tincture to the Spirit of Wine. Then the Diffolution is filtrated, and two thirds of the clear Liquor evaporated off, and the remainder pour'd into a large Vessel of Water, where it turns into a kind of Milk; whence, the *Resin*, in Time precipitates to the Bottom in a white Powder. This when wash'd and dried in the Sun, grows into the ordinary Consistence of a *Resin*.

**RESISTENCE**, or **RESISTING-POWER**, in **PHYSICS**, any Force which acts contrarily to another, so as to destroy or diminish its Effect. See **FORCE**.

Of **Resistance**, there are various Kinds, arising from the various Natures and Properties of the resisting Bodies; and govern'd by various Laws: As the **Resistance of Solids**, the **Resistance of Fluids**, the **Resistance of the Air**, &c. The Doctrine of each whereof will be seen under the following Articles.

**Resistance of Solids**, in **Mechanicks**, is the force wherewith the quiescent Parts of solid Bodies oppose the Motion of others contiguous therewith. See **SOLIDITY**, &c.

Of this there are two Kinds.—The first, where the resisting and resisted Parts, i. e. the moving and quiescent Parts, are only contiguous, and don't cohere; i. e. where they constitute separate Bodies or Masses.

This **Resistance** is what **M. Leibnitz** calls **Resistance of the Surface**; and we, properly, **Friction**; the Consideration whereof, being of the last Importance in the Doctrine of Machines, see its Laws under the Article **FRICTION**.

The second Case of **Resistance** is where the resisting and resisted Parts are not only contiguous but cohere, i. e. are Parts of the same continued Body or Mass.—This **Resistance** is what we may properly call **Resistancy**; and was first considered by **Galileo**.

*Theory of the RESISTANCE or RESISTENCY of the Fibres of solid Bodies.*

To conceive an Idea of this **Resistance** or Resistancy of the Parts, suppose a cylindrical Body suspended vertically by one End.—Here, all its Parts being heavy, draw downwards; and tend to separate the two contiguous Planes, where the Body is the weakest: But all the Planes resist this Separation by the Force wherewith they adhere, or are bound together: Here then are two opposite Powers, the Weight of the Cylinder which tends to break it, and the Force of Cohesion of the Parts which resists the Fracture.

If the Base of the Cylinder be increas'd, without increasing its Length; 'tis evident the Fracture will be increas'd in the same Ratio as the Base: but the Weight also increases in the same Ratio; whence it is evident that all Cylinders of the same Matter and Length, whatever their Bases be, have an equal **Resistance**, when vertically suspended.

If the Length of the Cylinder be increas'd without increasing the Base, its Weight is increased without increasing its **Resistance**; consequently the lengthening it weakens it.—To find the greatest Length a Cylinder of any Matter may have without breaking, there needs nothing but to take any Cylinder of the same Matter, and fasten to it the greatest Weight it will sustain 'till it breaks; and then see how much it must be lengthen'd by the Addition of its Weight, till it equals its former Weight with the Addition of the foreign Weight.—By this means **Galileo** found a Copper-Wire, and of consequence any other Cylinder of Copper, might be lengthen'd to 4801 Braccios, or Fathoms of six Foot each.

If one end of the Cylinder were fix'd horizontally into a Wall, and the rest suspended thence, its Weight and **Resistance** would then act in a different Manner; and it is broke by the Action of its Weight, the Rupture would be at the End fix'd into the Wall. A Circle or Plane contiguous to the Wall, and parallel to the Base, and consequently vertical, would be detach'd from the contiguous Circle within the Plane of the Wall, and would descend. All the Motion is made on the lowest extremity of the Diameter, which remains immovable, while the upper extremity describes a quadrant of a Circle, and till the Circle (which before was vertical is now horizontal; i. e. till the Cylinder be entirely broken.

In this Fracture of the Cylinder 'tis visible two Forces have acted, and the one has overcome the other: The Weight of the Cylinder, which arose from its whole Mass, has overcome the **Resistance** which arose from the largeness of the Base; and as the Centres of Gravity are Points wherein all the Forces arising from the Weights of the several Parts of the same Bodies, are conceiv'd to be united, one may conceive the Weight of the whole Cylinder applied in the Centre of Gravity of its Mass, i. e. in a Point in the Middle of its Axis; and the **Resistance** of the Cylinder applied in the Centre of Gravity of its Base, i. e. in the Centre of the Base: It being the Base which resists the Fracture.

When the Cylinder breaks by its own Weight, all the Motion is on an immovable Extremity of a Diameter of the Base.—This Extremity, therefore is the fix'd Point of a Lever, whose two Arms are the Radius of the Base, and half the Axis; and of consequence the two opposite Forces don't only act of themselves, and by their absolute Force, but also by the relative Force they derive from their Distance with regard to the fixed Point of the Lever.

Hence it evidently follows, that a Cylinder, e. gr. of Copper, which, vertically suspended, will not break by its own Weight if less than 480 Fathom long, will break with a less Length in a horizontal Situation; in regard the Length in this latter Case contributes two Ways to the Fracture; both as it makes it of such

a Weight, and as it is an Arm of a Lever to which the Weight is applied.—Hence, also, the smaller the Base is, the less Length or Weight will suffice to break it; both because the **Resistance** is really less, and because it acts by a less Arm of a Lever.

If two Cylinders of the same Matter, having their Bases and Lengths in the same Proportion, be suspended horizontally; 'tis evident that the greater has more Weight than the lesser, both on Account of its Length, and of its Base. But it has less **Resistance** on Account of its Length, considered as a longer Arm of a Lever, and has only more **Resistance** on Account of its Base.—Therefore it exceeds the lesser in its Bulk and Weight, more than in **Resistance**; and consequently must break more easily.

Hence, we see why upon making Models of Machines in small, People are apt to be mistaken as to the **Resistance** and Strength of certain horizontal Pieces, when they come to execute their Designs in large; by observing the same Proportion as in the small.—**Galileo's** Doctrine of **Resistance** therefore is no idle Speculation, but becomes applicable in Architecture and other Arts.

The Weight required to break a Body placed horizontally, being always less than that required to break it in a vertical Situation; and this Weight being to be greater or less according to the Ratio of the two Arms of the Lever: The whole Theory is always reducible to this; viz. to find what Part of the absolute Weight the relative Weight is to be, supposing the Figure of the Body known; which indeed is necessary, because 'tis the Figure that determines the two Centres of Gravity, or the two Arms of the Lever.—For if the Body, e. gr. were a Cone, its Centre of Gravity would not be in the Middle of its Axis, as in the Cylinder; and if it were a Semi-parabola Solid, neither its Centre of Gravity would be in the Middle of its Length or Axis; nor the Centre of Gravity of its Base in the Middle of the Axis of its Base. But still, wheresoever these Centres fall in the several Figures, 'tis these that regulate the two Arms of the Lever.

It may be here observed, that if the Base whereby the Body is fasten'd into the Wall be not circular, but, e. gr. parabolic, and the Vertex of the Parabola a-top, the Motion of the Fracture will not be on an immovable Point, but on a whole immovable Line; which may be call'd the Axis of Equilibrium, and 'tis with regard to this, that the Distances of the Centres of Gravity are to be determined.

Now a Body horizontally suspended, being supposed such, as that the smallest addition of Weight would break it; there is an Equilibrium between its positive and relative Weight; and of Consequence those two opposite Powers are to each other reciprocally as the Arms of the Lever to which they are applied.—On the other Hand, the **Resistance** of a Body is always equal to the greatest Weight which it will sustain in a vertical Situation, without breaking, i. e. is equal to its absolute Weight. Therefore, facilitating the absolute Weight for the **Resistance**, it appears that the absolute Weight of a Body suspended horizontally, is to its relative Weight as the Distance of its Centre of Gravity from the Axis of Equilibrium, is to the Distance of the Centre of Gravity of its Base from the same Axis.

The Discovery of this important Truth, at least of an equivalent hereto, and to which this is reducible, we owe to **Galileo**.—From this fundamental Proposition are easily deduced several Consequences.—As, for Instance, that if the Distance of the Centre of Gravity of the Base from the Axis of Equilibrium, be half the Distance of the Centre of Gravity of the Body; the relative Weight will only be half the absolute Weight: And that a Cylinder of Copper horizontally suspended, whose Length is double the Diameter, will break, provided it weigh half what a Cylinder of the same Base, 4801 Fathoms long, weighs. See **WEIGHT**.

On this System of **Resistance** of **Galileo**, **M. Mariotte** made a very subtle Remark, which gave Birth to a new System.—**Galileo** supposes that where the Body breaks, all the Fibres break at once; so that the Body always resists with its whole absolute Force; i. e. with the whole Force all its Fibres have in the Place where it is to be broke.—But **M. Mariotte** finding that all Bodies, even Glass if fell, bends before it breaks, shews that Fibres are to be considered as so many little bent Springs, which never exert their whole Force till stretch'd to a certain Point; and never break till entirely unbent. Hence, those nearest the Axis of Equilibrium, which is an immovable Line, are stretch'd less than those further off; and of Consequence employ a less Part of their Force.

This Consideration only takes Place in the horizontal Situation of the Body: In the vertical the Fibres of the Base all break at once; so that the absolute Weight of the Body must exceed the united **Resistance** of all its Fibres: A greater Weight is therefore required here, than in the horizontal Situation; i. e. a greater Weight is required to overcome their united **Resistance**, than to overcome their several **Resistances** one after another.—The Difference between the two Situations arises hence, that in the Horizontal there is an immovable Point or Line, a Centre of Motion, which is not in the Horizontal.

**M. Varignon** has improv'd on the System of **M. Mariotte**, and shewn that to **Galileo's** System, it adds the Consideration of the Centre of Percussion.—The Comparison of the Centres of

Gravity, with the Centres of Percussion, afford a fine view; and set the whole Doctrine in the most agreeable Light. See CENTRE.

In each System, the Base whereby the Body breaks, moves on the Axis of Equilibrium, which is an immovable Line in the same Base; but in the second, the Fibres of this Base are continually stretching more and more; and that in the same Ratio as they recede further and further from the Axis of Equilibrium, and of Consequence see fill exerting a greater and greater Part of their whole Force.

These unequal Extensions, like all other Forces, must have some common Centre where they all meet; and with regard to which they make equal Efforts on each Side; And as they are precisely in the same Proportion as the Velocities which the several Points of a Rod moved circularly would have to one another; and the Centre of Extension of the Base whereby the Body breaks, or tends to break, must be the same with its Centre of Percussion.—*Galileo's Hypothesis*, where Fibres stretch equally, and break all at once, corresponds to the Case of a Rod moving parallel to itself; where the Centre of Extension or Percussion does not appear, as being confounded with the Centre of Gravity.

The Base of Friction being a Surface whose particular Nature determines its Centre of Percussion; 'tis necessary it be first known to find on what Point of the vertical Axis of that Base it is placed; and how far it is from the Axis of Equilibrium.—Indeed, we know, in the general, that it always acts with so much more Advantage as it is further from it, in regard to a longer Arm of a Lever; and of Consequence 'tis the unequal Resistance of the Fibres in *M. Mariotte's Hypothesis*, which produces that Centre of Percussion; but this unequal Resistance is greater or less, according as the Centre of Percussion is plac'd more or less high on the vertical Axis of the Base, in the different Surfaces of the Base of the Fracture.

To express this unequal Resistance, accompanied with all the Variations it is capable of, regard must be had to the Ratio between the Distance of the Centre of Percussion from the Axis of Equilibrium, and the Length of the vertical Axis of the Base.—In which Ratio, the first Term, or the Numerator, is always less than the second or the Denominator: So that the Ratio is always a Fraction less than Unity; and the unequal Resistance of the Fibres in *M. Mariotte's Hypothesis* is so much the greater, or which amounts to the same, approaches so much nearer to the equal Resistance in *Galileo's Hypothesis*, as the two Terms of the Ratio are nearer to an Equality.

Hence it follows, that the Resistance of Bodies, in *M. Mariotte's System* is to that in *Galileo's*, as the least of the Terms in the Ratio is to the greatest.—Hence, also, the Resistance being less than what *Galileo* imagined, the relative Weight must also be less; so that the Proportion already mentioned between the absolute and relative Weight, cannot subsist in the new System, without an Augmentation of the relative Weight, or a Diminution of the absolute Weight: Which Diminution is had by multiplying the Weight by the Ratio, which is always less than Unity. This done, we find that the absolute Weight multiplied by the Ratio, is to the relative Weight, as the Distance of the Centre of Gravity of the Body from the Axis of Equilibrium, is to the Distance of the Centre of Gravity of the Base of Fracture, from the same Axis. Which is precisely the same thing with the general Formula given by *M. Varignon*, for the System of *M. Mariotte*. In effect, after conceiving the relative Weight of a Body, and its Resistance equal to its absolute Weight, as the two contrary Forces applied to the two Arms of a Lever, in the Hypothesis of *Galileo*; there needs nothing to convert it into that of *M. Mariotte*, but to imagine that the Resistance, or the absolute Weight is become less; every thing else remaining the same.

We have here only considered Bodies as to be broke by their own Weight.—It will amount to the same, if we suppose them void of Weight themselves, and to be broken by a Weight applied to their Extremities: Only it is to be observed, that a foreign Weight acts by an Arm of a Lever equal to the whole Length of the Body; whereas their own Weight being all united in their Centre of Gravity, is only the Distance of that Centre from the Axis of Equilibrium.

One of the most curious, and perhaps the most useful Questions in this Research, is to find what Figure a Body must have, that its Resistance may be equal in all its Parts; whether it be conceived as chang'd with a foreign Weight; or as only sustaining its own Weight.—We shall, here, only consider the latter Case, from which the former will be easily determined.

For a Body, then, suspended horizontally, to resist equally in all its Parts; 'tis necessary some Part of it being conceived as cut off in a Plane parallel to the Base of Fracture of the Body; the Weight of the Part retain'd be to its Resistance, in the same Ratio, as the Weight of the whole to its Resistance; these four Powers acting by Arms of Levers proper to themselves.—Now the Weight of any Body thus conceived, is its whole Weight multiplied by the Distance of the Centre of Gravity of the Body, from the Axis of Equilibrium; and the Resistance is the Plane of the Base of Fracture multiplied by the Distance of the Centre of Gravity of the Base from the same Axis: Consequently these

four Quantities are to be proportional in the whole, and in each Part of a Solid of equal Resistance.

From this Proportion *M. Varignon* easily deduces two Solids, which shall resist equally in all their Parts. *Galileo* had found one before: That discovered by *M. Varignon*, is in form of a Trumpet, and is to be fix'd into the Wall at its greater End; so that its Bigness and Weight is always diminish'd in Proportion as its Length, or the Arm of the Lever whereby its Weight acts, increases. 'Tis added, (which seems very remarkable) that howsoever different the two Systems may be, the Solids of equal Resistance are the same in both.

For the RESISTENCE of a Solid supported at each Extreme; as of a Beam between two Walls. See ISLAM.

RESISTENCE of Fluids, in Hydrostatics, is the Force whereby Bodies immov'd in fluid Mediums, are impeded and retarded in their Motions. See FLUID and MEDIUM.

#### Laws of the RESISTENCE of fluid Mediums.

A Body moving in a Fluid, is resist'd from two Causes; the first, the Cohesion of the Parts of the Fluid.—For a Body in its Motion separating the Parts of a Liquid, must overcome the Force with which those Parts cohere. See COHESION.

The second is the Inertia, or inactivity of Matter, whereby a certain Force is required to move the Particles from their Places, in order to let the Body pass. See VIS INERTIALIS.

The Retardation from the first Cause, is always the same in the same Space, the same Body remaining; be the Velocity what it will.—Hence, the Resistance increases as the Space run through; in which Ratio, the Velocity also increases; therefore the Resistance is as the Velocity is squar'd. See VELOCITY.

The Resistance from the second Cause, when the same Body moves through different Liquids, with the same Velocity, follows the Proportion of Matter to be removed in the same time; which is as the Density of the Liquid. See DENSITY.

When the same Body moves through the same Liquid with different Velocities, this Resistance increases in Proportion to the Number of Particles struck in an equal Time; which Number is as the Space run through in that Time, that is, as the Velocity. But farther it increases in Proportion to the Force with which the Body strikes against every Part; which Force is also as the Velocity of the Body. And therefore if the Velocity be Triple, the Resistance is Triple, from a triple Number of Parts to be removed.—It is also triple from a stroke three times stronger against every Particle; therefore the whole Resistance is ninefold, that is, as the Square of the Velocity. Hence a Body mov'd in a Liquid, is resist'd partly in a Ratio of the Velocity, and partly in a duplicate Ratio of it.

The Resistance from the Cohesion of Parts in Liquids, except glutinous ones, is not very sensible in respect of the other Resistance; which, increases in a Ratio of the Square of the Velocities, but the first in a Ratio of the Velocity itself. By how much the Velocity increases, by so much more do these Resistances differ; whereas in swifter Motions the Resistance alone is to be considered, which is as the Square of the Velocity.

If a Liquid be included in a Vessel of a prismatical Figure, and there be mov'd along in it with equal Velocity, and in a Direction parallel to the Sides of the Prism, two Bodies, one spherical, the other cylindrical; so that the Diameter of the Base of the latter be equal to the Diameter of the Sphere; and the Cylinder be mov'd in the Direction of its Axis; these Bodies will suffer the same Resistance.

To demonstrate this, suppose the Bodies at rest, and that the Liquid moves in the Vessel, with the same Velocity that the Bodies had; by this the relative Motion of the Bodies, and the Liquid is not chang'd: Consequently the Actions of the Bodies on the Liquid, and of the Liquid on the Bodies, are not chang'd.—The Retardation which the Liquid suffers in passing by the Body, arises only from this, that in that Place it is reduced to a narrower Space; but the Capacity of the Vessel is equally diminish'd by each Body; therefore each Body produces an equal Retardation. And because Action and Reaction are equal to one another, the Liquid acts equally upon each Body; wherefore also each Body will be equally retard'd, when the Bodies are mov'd, and the Liquid is at rest.

Resistance and Retardation are used indifferently for each other, as being both in the same Proportion; and the same Resistance always generating the same Retardation.—But with regard to different Bodies, the same Resistance frequently generates different Retardations; the Resistance being the Quantity of Motion, and the Retardation the Celerity.—For the Difference and Measure of the two, see RETARDATION.

The Retardations from this Resistance may be compar'd together, by comparing the Resistance with the Gravity.—It is demonstrated that the Resistance of a Cylinder, which moves in the Direction of its Axis, (to which the Resistance of a Sphere of the same Diameter is equal) is equal to the Weight of a Cylinder of that Liquid through which the Body moves, having its Base equal to the Body's Base, and its Height equal to half the Height, from which a Body falling in water, may acquire the Velocity with which the Cylinder is mov'd through the Liquid.

From the given Celerity of the Body moved, the Height of the Liquid Cylinder is found, as also the Weight of it from the known Specific Gravity of the Liquid, and Diameter of the Body.—Let a Ball, for Instance, of three Inches Diameter be moved in Water with a Celerity wherewith it would go sixteen Foot in a Second: From Experiments on falling Bodies, and others made on Pendulums, it has been found that this is the Celerity which a Body acquires in falling from a Height of four Foot; therefore the Weight of a Cylinder of Water, of three Inches Diameter, and two Foot high, that is, a Weight of about six Pound and three Ounces, is equal to the *Resistance* of the aforesaid Ball. See DESCENT.

Let the *Resistance* be discovered be divided by the Weight of the Body, which determines its Quantity of Matter, and you will have the Recordation.

#### RESISTENCE of fluid Mediums to the Motion of Pendulums.

The Arch described by a Pendulum oscillating in *vacuo*, with the Celerity it has acquired in descending, is equal to the Arch described by the Defacent; but the same does not happen in a Fluid, and there is a greater Difference between those Arches the greater the *Resistance* is; that is, the greater the Arch is which is describ'd in the Defacent.

Let the *Resistance* of the Liquid be in Proportion to the Velocity; and let two Pendulums, entirely alike, oscillating in a Cycloid, perform unequal Vibrations, and begin to fall the same Moment; they here begin to move by Forces that are as the Arches to be described. If those Impulses alone, which are made the first Moment, be considered; after a given Time the Celerities will be in the same Ratio, as in the Beginning; for the Retardations which are as the Velocities themselves, cannot change their Proportions, the Ratio between Quantities not being changed by the Addition and Subtraction of Quantities in the same Ratio. Therefore in equal Times, however the Celerities of Bodies are changed in their Motion by the *Resistance*, the Spaces gone through, are as the Forces in the Beginning; that is, as the Arches to be described by the Defacent; therefore after any time the Bodies are in the correspondent Point of those Arches. But in these Points the Forces generated are in the same Ratio as in the Beginning, and the Proportion of the Celerities, which is not varied by the *Resistance*, suffers no Change from the Gravity. In the Ascent, Gravity retards the Motion of the Body; but in correspondent Points, its Actions are in the same Ratio as in Descents. And therefore every where in correspondent Points, the Celerities are in the same Ratio. But as in the same Moments the Bodies are in their correspondent Points, it follows that the Motion of both is destroy'd in the same Moment, that is, they finish their Vibrations in the same Time. The Spaces run through in the Time of one Vibration, are as the Forces by which they are run thro'; that is, the Arches of the whole Vibrations are as the Arches described by the Defacent, the doubles whereof are the Arches to be described in *Vacuo*. The Defects of the Arches to be described in Liquids from the Arches to be described in *Vacuo*, are the Differences of Quantities in the same Ratio, and are as the Arches describ'd by the Defacent. See PENDULUM.

#### RESISTENCE of Fluid Mediums to the Motion of falling Bodies.

The *Resistances* are as the Squares of the Celerities, and therefore every where in correspondent Points, as the Squares of the Arches described by the Defacent, in which Ratio also, the Retardations are; but as each of them keep the same Proportion in corresponding Points, the Sums of them all will be in the same Proportion; that is, the whole Retardations, which are the Defects of the Arches described in the Liquid, from the Arches to be described in *Vacuo*, or which is the same, the Difference between the Arches described in the Defacent, and the next Ascent. Therefore these Differences, if the Vibrations are not very unequal, are nearly as the Squares of the Arches described by the Defacent: Which is also confirm'd by Experiments in greater Vibrations; for in these the Proportion of *Resistance*, here considered, obtains.

A Body freely descending in a Fluid is accelerated by the respective Gravity of the Body, which continually acts upon it, yet not equally, as in a *Vacuum*: the *Resistance* of the Liquid occasions a Retardation, that is, a Diminution of Acceleration, which Diminution increases with the Velocity of the Body. Now there is a certain Velocity, which is the greatest a Body can acquire by falling; for if its Velocity be such that the *Resistance* arising from it becomes equal to the respective Weight of the Body, its Motion can be no longer accelerated; for the Motion here continually generated by the respective Gravity, will be destroy'd by the *Resistance*, and the Body forced to go on equally. A Body continually comes nearer and nearer to this greatest Celerity, but can never attain to it.

When the Densities of a Liquid Body are given, the respective Weight of the Body may be known; and by knowing the Diameter of the Body, it may be found from what Height a Body falling in *Vacuo*, can acquire such a Velocity, as that the *Resistance* in a Liquid shall be equal to that respective Weight,

which will be that greatest Velocity above mentioned.—If the Body be a Sphere, it is known that a Sphere is equal to a Cylinder of the same Diameter, whose Height is two third Parts of that Diameter; which Height is to be increased in the Ratio wherein the respective weight of the Body exceeds the weight of the Liquid, in order to have the Height of a Cylinder of the Liquid, whose weight is equal to the respective weight of the Body; but if you double this Height, you will have a Height from which a Body falling in *Vacuo*, acquires such a Velocity as generates a *Resistance* equal to this respective weight, and which therefore is the greatest Velocity which a Body can acquire falling in a Liquid from an infinite Height. Lead is eleven times heavier than Water, wherefore its respective weight is as to the weight of Water as 10 to 1; therefore a leaden Ball, as it appears from what has been said, cannot acquire a greater Velocity in falling in Water, than it would acquire in falling in *Vacuo*, from an Height of  $11\frac{1}{2}$  of its Diameters.

A Body lighter than a Liquid, and ascending in it by the Action of the Liquid, is moved exactly by the same Laws as a heavier Body falling in the Liquid. Wherever you place the Body, it is sustained by the Liquid, and carried up with a Force equal to the Difference of the weight of the Quantity of the Liquid of the same Bulk as the Body, from the weight of the Body. Therefore you have a Force that continually acts equally upon the Body, by which not only the Action of the Gravity of the Body is destroyed so as that it is not to be considered in this Case, but the Body is also carried upwards by a Motion equally accelerated, in the same manner as a Body heavier than a Liquid descends by its respective Gravity; but the equality of the Acceleration is destroyed in the same Manner by the *Resistance*, in the Ascent of a Body lighter than the Liquid, as it is destroyed in the Defacent of a Body heavier.

When a Body specifically heavier than a Fluid is thrown up in it, it is retarded upon a double Account; on Account of the Gravity of the Body, and on Account of the *Resistance* of the Liquid; consequently, a Body rises to a less Height than it would rise in *Vacuo* with the same Celerity. But the Defects of the Height in a Liquid from the Heights to which a Body would rise in *Vacuo* with the same Celerities, have a greater Proportion to each other than the Heights themselves; and in less Heights the Defects are nearly as the Squares of the Heights in *Vacuo*.

RESISTENCE of the Air, in Pneumatics, is the Force wherewith the Motion of Bodies, particularly Projectiles, is retarded by the *Resistance* of the Air or Atmosphere. See AIR and PROJECTILE.

The Air being a Fluid, the general Laws of the *Resistance* of Fluids obtain therein; only the different Degrees of Density in the different Stages or Regions of the Atmosphere, occasion some irregularity. See ATMOSPHERE.

#### The different RESISTENCE of the same Mediums to Bodies of different Figures.

Sir Isaac Newton shews, That if a Globe and a Cylinder of equal Diameters, be moved with equal Velocity in a thin Medium, consisting of equal Particles, disposed at equal Distances, according to the Direction of the Axis of the Cylinder; the *Resistance* of the Globe will be less by half than that of the Cylinder.

Solid of the least RESISTENCE.—From the last Proposition the same Author deduces the Figure of a Solid, which shall have the least *Resistance* of any containing the same Quantity of Matter and Surface. See SOLID.

The Figure is this.—Suppose DNFB (Tab. *Mechanics*, Fig. 57.) to be such a Curve, as, that if from any Point N, be let fall a Perpendicular NM, to the Axis AB; and from a given Point G, be drawn a right Line GR, parallel to a Tangent to the Figure in N, and cut the Axis when continued, in R: A Solid described by the Revolution of this Figure about its Axis AB, moving in a Medium from A towards B, is less resist'd than in any other circular Solid of the same Area, &c. *Newt. Princ.* p. 327.

The *Resistance* of a Globe, perfectly hard and in a Medium, whose Particles are so too; is to the Force wherewith the whole Motion may be either destroy'd or generated which it has when at the time, when it has described four thirds of its Diameter; as the Density of the Medium to the Density of the Globe.—Hence also, the same Author infers that the *Resistance* of a Globe, is, *ceteris paribus*, in a duplicate Ratio of its Velocity. Or its *Resistance* is *ceteris paribus*, in a duplicate Ratio of its Diameter. Or, *ceteris paribus*, as the Density of the Medium. Lastly, that the actual *Resistance* of a Globe is in a Ratio compounded of the duplicate Ratio of the Velocity, and of the duplicate Ratio of the Diameter, and of the Ratio of the Density of the Medium.

In these Articles the Medium is supposed to be discontinuous, as Air probably is; if the Medium be continuous, as Water, Mercury, &c. where the Globe does not strike immediately on all the Particles of the Fluid generating the *Resistance*, but only on those next it, and those again on others, &c. the *Resistance* will be less by half. And a Globe in such a Medium undergoes a *Resistance* which is to the Force wherewith

wherewith the whole Motion it has after describing eight thirds of its Diameter might be generated or taken away, as the Density of the Medium to the Density of the Globe.

The *Resistance of a Cylinder* moving in the Direction of its Axis is not alter'd by any Augmentation or Diminution of its Length: And therefore is the same with that of a Circle of the same Diameter moving with the same Velocity in a right Line perpendicular to its Plane.

The *Resistance of a Cylinder* moving in an infinite unelastic Fluid, arising from the Magnitude of a transverse Section; is to the Force wherewith its whole Motion while it describes four times its Length may be taken away or generated; as the Density of the Medium to that of the Cylinder, very nearly.

Hence, the *Resistances of Cylinders* moving Length-wise, in infinitely continued Mediums, are in a Ratio compounded of the duplicate Ratio of their Diameters, and the duplicate Ratio of their Velocities; and the Ratio of the Density of the Mediums.

The *Resistance of a Globe* in an infinite unelastic Medium is to the Force wherewith its whole Motion while it describes eight thirds of its Diameter, might be either generated or taken away; as the Density of the Fluid to the Density of the Globe, *quoad proximum*.

Mr. James Bernoulli demonstrates the following Theorems.

*Resistance of a Triangle*.—If an Isosceles Triangle be moved in a Fluid according to the Direction of a Line perpendicular to its Base; first, with the Vertex foremost, and then with its Base; and the Resistances will be as the Legs, and as the Square of the Base, and as the Sum of the Legs.

The *Resistance of a Square* moved according to the Direction of its Side, and of its Diagonal, is as the Diagonal to the Side.

The *Resistance of a Circular Segment*, less than a Semicircle carried in a Direction perpendicular to its Basis, when it goes with the Base foremost, and when with its Vertex foremost, (the same Direction and Velocity continuing;) is as the Square of the Diameter, to the same, less  $\frac{1}{2}$  of the Square of the Base of the Segment. Hence the *Resistances of a Semicircle* when its Base and when its Vertex go foremost, are to one another in a sesquialterate Ratio.

*Resistance of a Parabola*.—A Parabola moving in the Direction of its Axis first with its Basis, and then its Vertex foremost, has its *Resistances* as the Tangent to an Arch of a Circle, whose Diameter is equal to the Parameter, and the Tangent equal to half the Basis of the Parabola.

The *Resistance* if Vertex goes foremost, may be thus computed: Say, as the Sum (or Difference) of the Transverse Axis, and *Latus Rectum*, is to the transverse Axis; so is the Square of the *Latus Rectum* to the Square of the Diameter of a certain Circle, in which Circle apply a Tangent equal to half the Basis of the Hyperbola or Ellipse.—Then say again, as the Sum and Difference of the Axis and Parameter, is to the Parameter; so is the aforesaid Tangent to another right Line. And further as the Sum (or Difference) of the Axis and Parameter, is to the Axis: So is the circular Arch corresponding to the aforesaid Tangent, to another Arch. This done, the *Resistances* will be as the Tangent to the Sum (or Difference) of the right Line thus found, and that Arch last mentioned.

In the general, the *Resistances of any Figure* whatever going now with its Base foremost, and then with its Vertex, are as the Figures of the Base to the Sum of all the Cubes of the Elements of the Base divided by the Squares of the Element of the Curve Line.

All which Rules may be of use in the Construction of Ships, and in perfecting the Art of Navigation universally: As also for determining the Figures of the Bobs of Pendulums for Clocks, &c. See SHIP, NAVIGATION, PENDULUM, &c.

RESOLUTION, RESOLUTIO, Solutio, in Physics, the Reduction of a Body into its original or natural State, by a Dissolution or Separation of its aggregated Parts. See DISSOLUTION.

Thus, Snow and Ice are said to be resolved into Water; a compound is resolved into its Ingredients, &c. See SNOW, COMPOUND, &c.

Water resolves into Vapour by Heat; and Vapour is again resolved into Water by Cold. See VAPOUR, HEAT, &c.

Some of the modern Philosophers, particularly, Mr. Boyle, M. Mariotte, Boerhaave, &c. maintain that the natural State of Water is to be congel'd, or be in Ice; inasmuch as a certain Degree of Heat, which is a foreign and violent Agent, is required to make it fluid; so that near the Pole, where this foreign Force is wanting, it constantly retains its fix'd or icy-State. See WATER.

On this Principle, the *Resolution of Ice into Water*, must be an improper Phrase. See FREEZING.

RESOLUTION, in Chymistry, is the Reduction of a Mass or mix'd Body into its component Parts, or first Principles; by a proper Analysis. See PRINCIPLE, ANALYSIS, &c.

The *Resolution of Bodies* is perform'd variously; by Distillation, Sublimation, Dissolution, Fermentation, &c. See each Operation under its proper Article, DISTILLATION, &c.

RESOLUTION, in Logic, is a Branch of Method, call'd also Analysis. See METHOD and ANALYSIS.

The *Business of the Resolution* is to investigate or examine the Truth or Falshood of a Proposition, by ascending from some particular known Truth, as a Principle, by a Chain of Consequences, to another more general one, in Question. See PROPOSITION, TRUTH, &c.

*Resolution*, or the analytic Method, stands in direct opposition to *Composition*, or the synthetic Method; in which last we descend from some general known Truths, to a particular one in Question. See COMPOSITION.

For an Instance of the Method of *Resolution*.—Suppose the Question this: Whether on the Supposition of Man's Existence, we can prove that God exists?

To resolve this, our Method is thus.—'Tis Mankind did not always exist: 'Tis evident from a thousand Considerations, the Species had a Beginning; and that, according to all History, not 6000 Years ago: But if it had a Beginning, there must be some Cause of its Beginning; something to induce it to exist then more than it did before; in effect there must be a Cause or Author of its Existence, for from nothing, nothing arises: This Cause, whatever it is, must at least have all the Faculties we find in ourselves; for none can give more than he has: Nay, he must have others which we have not, since he could do what we cannot do, i. e. Create, make Man exist, &c.—'Now, this Cause either exists still, or has ceas'd to do so: If the former, he did not exist from Eternity; for what is from Eternity is necessary, and can neither by it self nor any other Cause be reduced to nothing: If the latter, it must have been produced from some other; and then the same Question will return upon the Producer.—I here is then some first Cause; and this Cause has all the Properties and Faculties we have; nay more, existed from Eternity, &c. Therefore, from the Supposition of Man's Existence, it follows there is a God, &c.

RESOLUTION, or SOLUTION, in Mathematics, is an orderly Enumeration of the several things to be done, to obtain what is required by a Problem. See PROBLEM.

*Resolution* makes a Problem to consist of three Parts.—The Proposition (which is what we properly call the Problem) the Resolution, and the Demonstration. See PROPOSITION, &c.

The general Tenor of all Problems is, Those things being done which are enjoy'd by the Resolvent; the thing is done which was to be done.

As soon as a Problem is demonstrated, it is converted into a Theorem; whereof the Resolution is the Hypothesis; and the Proposition the Thesis. See THEOREM, THESIS, &c.

For an Idea of the Process of a Mathematical Resolution, see RESOLUTION ALGEBRAICAL.

RESOLUTION, in Algebra, or Algebraical, is of two Kinds; the one practis'd in numerical Problems, the other in Geometrical ones. See ALGEBRA.

To resolve a given numerical Problem algebraically, the Method is thus: 1<sup>o</sup>. Distinguish the given Quantities from the Quantities sought; and Note the former with the first Letters of the Alphabet, and the latter with the last. See QUANTITY.

2<sup>o</sup>. Find as many Equations as there are unknown Quantities; if that can't be, the Problem is indeterminate; and one or more of the sought Quantities may be assumed at Pleasure.—The Equations, unless they be contain'd in the Problem it self, are found by Theorems relating to the Equality of Quantities. See EQUATION and EQUALITY.

3<sup>o</sup>. Since in an Equation the unknown Quantities are mix'd with the known; it must be reduced in such manner as that only one unknown Quantity be found on one Side, and none but known Quantities on the other.—This Reduction is perform'd by adding the subtracted Quantities, dividing the multiplied Quantities, and multiplying the divided ones, extracting the Roots out of Powers, raising Roots to their Powers, &c. so as that the Equality may be still preserved. See REDUCTION.

To resolve a Geometrical Problem Algebraically.

The Process in the former Article is to be observed throughout: But as it rarely happens we come at an Equation in geometrical Problems by the same means as in numerical ones; there are some further things to be noted: First then, Suppose the thing done which was proposed to be done.—2<sup>o</sup>. Examine the Relations of all the Lines in the Diagram, without any regard to known or unknown; in order to find which depend on which; and from which being had, what others are had, whether by similar Triangles, or Rectangles, &c.—3<sup>o</sup>. To obtain the similar Triangles or Rectangles, the Lines are to be frequently produced, 'till they become either directly or indirectly equal to given ones, or intersect others, &c. Parallels and Perpendiculars to be frequently drawn: Points to be frequently connected; and Angles to be made equal to others.

If thus you don't arrive at a new Equation; examine the Relations of the Lines in another Manner.—Sometimes 'tis not enough to seek the thing directly, but another thing must be sought, whence the first may be found.

The Equation being reduced, the Geometrical Construction to be deduced therefrom, which is done in various Manners, in the

the various Kinds of Equations. See CONSTRUCTION of Equations.

**RESOLUTION**, in Medicine, the Coction or Alteration of the Crude peccant Matter of any Disease, either by the natural Strength of the Patient, or of its own action, or by the Application of Remedies; whereby its Bulk, Figure, Cohesion, &c. are so far chang'd as that it ceases to be Morbid, and becomes laudible. See COCTION, DISEASE, &c.

This, the learned *Boerhaave* observes, is of all others the most perfect Cure, where 'tis effected without any Evacuation; as supposing the Matter favourable, the Constitution excellent, and the Medicines good. See CRISIS, &c.

**RESOLUTION**, in Musick, is when a Canon, or perpetual Fugue is not wrote all on the same Line, or in one Part; but all the Voices that are to follow the Guide, or first Voice, are wrote separately, either in *Sops*, i. e. in separate Lines, or in separate Parts, with the Passes each is to observe, in the Beginning, and in the Tone proper to each.

**RESOLUTION**, in Grammar. See REDUCTION.

**RESONANCE**, **REOUNDING**, in Musick, &c. a sound return'd by the Air inclosed in the Bodies of String-Musical-Instruments; as Lutes, &c. or even in the Bodies of Wind-Instruments, as Flutes, &c. See SOUND, MUSICK, INSTRUMENT, &c.

We also say, Elliptic, and parabolic Vaults, *resound* strongly, i. e. reflect or return the Sound. See ECHHO.

The Mouth, and the Parts thereof, as the Palate, Tongue, Teeth, Nose, and Lips, *Monf. Duport* observes, contribute nothing to the Tone of the Voice; but their effect is very great as to the *Resonance*. See VOICE.

Of this we have a very sensible Instance in that vulgar Instrument called the *Jesu-Harp*, or *Trompe de Beare*: For, if you hold it in your Hand, and strike the Tongue or Spring thereof, which makes all the Sound of the Instrument, it scarce yields any Noise at all. But, holding the Body of the Instrument between the Teeth, and striking the Spring as before, it makes a musical Buzz, which is heard to a good Distance, and especially the lower Notes.

So also in the Haut-bois, the Tone of the Reed is always the same; being a sort of a Drone: The Chief variety is in the Tone of the *Resonance*, produced in the Mouth by the greater or less Aperture, and the divers Motions of the Lips. See HAUTOBOY.

**RESOLVENTS**, **RESOLVENTIA**, in Medicine, Remedies proper to resolve and dissipate Tumors and Gatherings; to loosen Hardnesses; and by their Tenuity and Warmth, evacuate redundant or peccant Humours through the Pores. See RESOLUTION.

Under this Class come various Unguents, Emplastres, &c. See DISCUTIENT.

**RESPECTU computi vice comitis habendus**, a Writ for the refusing a Sheriff's Account, upon just Occasion. See SHERIFF.

It is directed to the Treasurer and Barons of the Exchequer.

**RESPIRATION**, **RESPIRATIO**, the Act of *Respiring*, or Breathing. See AIR and BREATH.

*Respiration* is an involuntary Motion of the Breast, whereby the Air is alternately taken in and thrown out: It therefore includes two contrary Motions; the one call'd *Inspiration*, whereby the Fluid is received into the Cavity of the Lungs. See INSPIRATION.

And the other *Expiration*, whereby it is again expell'd. See EXPIRATION.

The principal Organs of *Respiration* are the Lungs, Trachea, Larynx, &c. the Description whereof see under their proper Articles, LUNGS, TRACHEA, LARYNX, &c.

For the manner wherein *Respiration* is performed.—'Tis to be observed, that the Lungs, when suspended in the open Air, by the contractive Power of the muscular Fibres which tie together the spongy Parts of the Bronchia, are reduced to less Space than that they possess'd while in the Cavity of the Thorax: And when thus contracted, if a Quantity of new Air is injected through the Glottis; they again become distended, so as to possess an equal, nay a greater Space than that assign'd them in the Thorax. See MUSCLE.

Hence it appears, that the Lungs, by their proper Force, are always endeavouring to contract themselves into less Comps than they possess when inclosed in the Thorax, and that therefore they are always in a State of violent Distention while the Man lives.—For the Air that encompasses them in the Thorax, shut up between their external Membrane and the Pleura, is not of equal Density with common Air.

In effect, the ingress of the Air through the Glottis into the Lungs, is always free, but that on the outside wherewith they are compress'd, is impeded by the Diaphragm, so as it cannot enter the Thorax in Quantity sufficient to make an Equilibrium.

Since then, in *Inspiration*, the Air enters the Lungs in greater Quantity than it was before; it will dilate them more, and will overcome their natural Force.—The Lungs therefore are wholly Passive in the Matter: What it is that acts must be learnt from the Phenomena.

1<sup>o</sup>. Then, it is observ'd, that in *Inspiration*, the nine upper Ribs articulated to the Vertebrae and the Sternum, rise Archwise towards the Clavicles; and the three lower are turn'd downwards,

and the eighth, ninth, and tenth, are drawn inwards. 2<sup>o</sup>. that the Abdomen is distend'd; and 3<sup>o</sup>. the Thorax enlarg'd. 4<sup>o</sup>. the Diaphragm is brought from its convex and sinuous Position to a flat Figure.

Now, as these are the only visible Actions in *Inspiration*, the Cause thereof must be refer'd to them; or rather to the Muscles of these Parts, which are the Intercostals, the Subclavian, &c.

The Capacity of the Thorax being enlarg'd by the Action of these Muscles on the Ribs, &c. a Space is left between the Pleura and the Surface of the Lungs; so that the Air entering the Glottis insinuates them all such time as they become contiguous to the Pleura and Diaphragm.—In this Case, now, the Air presses the Lungs as much as the Thorax resists them. And hence, the Lungs become at rest; the Blood passes less freely, and is forced in less Quantity into the left Ventricle of the Heart, and so less comes into the Cerebellum, and its Nerves, and the arterial Blood acts less on the intercostal Muscles and Diaphragm.

The Causes, therefore, which at first dilated the Thorax, grow weaker, consequently the Ribs become depress'd; the distended Fibres of the Muscles of the Abdomen restore themselves; the Viscera thrust the Diaphragm up again into the Thorax, the Space wherof being thus contracted, the Air is drove out of the Lungs; and thus is *Expiration* perform'd.

Immediately, the Blood being quicken'd in its Motion, begins to flow stronger and more plentifully to the Cerebellum and Muscles; and thus the Causes of the Contraction of the Intercostals and Diaphragm, being renew'd, *Inspiration* is repeated.

Such is the true, immediate, adequate Manner of vital *Respiration*. See HEART.

For the uses and effects of *Respiration*, they are greatly disputed among Anatomists.—The learned *Boerhaave* takes the principal uses thereof to be the further Preparation of the Chyle, its more accurate Mixture with the Blood, and its Conversion into a nutritious Juice proper to repair the Decays of the Body. See NUTRITION.

*Borelli* takes the great use of *Respiration* to be the admission and mixture of Air, with the Blood, in the Lungen, in order to form those elastic Globules it consists of; to give it its red fiolet Colour; and to prepare it for many of the uses of the Oeconomy: but how such Admission should be effected is hard to say.—'Tis impossible it should be done in the pulmonary Arteries; nor can it be proved in the pulmonary Veins.—In effect, such a Communication must be hindered and obstructed by the Aids distending the Vascular, and compressing the Veins, in *Inspiration*; by the slimy Humor that lubricates the Membrane lining the inside of the *Trachea*. Add to this, the difficult Passage of Air through such small Pores as will admit Water; and the ill Effect Air ordinarily has when admitted into the Blood. See PORE and WATER.

As to the Arguments for such Communication, *viz.* the fiolet Colour the Blood here first assumes, and the absolute Necessity of *Respiration* to Life; they are both well accounted for otherwise. See BLOOD.

Other Authors, as *Sylvius*, *Etmuller*, &c. take a great use of *Respiration* to be, by the Neighbourhood of the cold stercor Air, to cool the Blood coming reeking hot out of the right Ventricle of the Heart, through the Lungs; and to act as a Refrigeratory. See REFRIGERATORY.

*Mayer*, and others, assert one grand use of *Expiration* to be to throw off the fuliginous Vapours of the Blood along with the expell'd Air; and for *Inspiration*, he asserts that it conveys a nutritious Ferment to the Blood, to which the animal Spirits and all muscular Motion are owing.

But *Dr. Thomson* rejects all these from being principal uses of *Respiration*, which he shews to be to move or pass the Blood from the right to the left Ventricle of the Heart, and so to effect the Circulation. See CIRCULATION.

Whence it is that Persons hang'd, drown'd, or strangled, so suddenly dye, *viz.* because the Circulation of the Blood is stop'd; and for the same Reason it is that Animals dye so speedily in the Air-Pump. See DROWNING, VACUUM, &c.

He instances an Experiment by *Dr. Osse*, before the Royal Society, who, by strangling a Puppy, so as not the least Sign of Life appeared; yet by blowing into the Lungs through the *Trachea*, and so letting the Lungs a playing, he brought the Dead to Life again.—Another Experiment of the same Kind is that of *Dr. Hook*, who after hanging a Dog, cut away the Ribs, Diaphragm, and Pericardium, as also the Top of the Wind-Pipe, that he might tie it on to the Nose of a pair of Bellows; and thus by blowing into the Lungs he restored the Dog to Life, and then ceasing to blow, the Dog would soon fall into dying Fits, but recover again by blowing; and thus alternately as long as he pleas'd.

This use of *Respiration* *Dr. Drake* not only confirms, but carries further; making it the true Cause of the Distole of the Heart; which neither *Borelli*, *Dr. Lower*, nor *Mr. Couper* had well accounted for. See DIASTOLE.

The Weight of the incumbent Atmosphere he shews to be the true Antagonist to all the Muscles, serving both for ordinary *Inspiration*, and the Contraction of the Heart.—As in the Elevation of the Ribs, that Author observes, the Blood by the Passage opened for it, is in a Manner solicited into the Lungs; so in the Depression thereof by the Subsidence of the Lungs, and the contraction of the Blood Vessels, consequent thereon, the Blood is

forcibly driven through the pulmonary Vein into the left Ventricle of the Heart. And this, together with the general Compression of the Body by the Weight of the Atmosphere, is that Power which causes the Blood to mount in the Veins, after the Force impress'd on it by the Heart, is spent; and which forces the Heart itself, from its natural State of Contraction, to that of Distention. See HEART.

The reciprocal Distention and Contraction of the superficial Dimensions of the Body consequent on Respiration, are so necessary to animal Life, that there is no Animal how imperfect (never as to want it.

Though most Kinds of Fishes and Insects want both Lungs and moveable Ribs, and consequently have no distensible Thorax, yet that Want is made up to them by an analogous Mechanism. Fishes, for Instance, have Gills which do the Office of Lungs, receiving and expelling alternately the Water, whereby the blood Vessels suffer the same Alteration of Dimensions as they do in the Lungs of more perfect Animals. See GILLS.

Insects having no Thorax, or separate Cavity for the Heart and Lungs or Air-Vessels, have the latter distributed through the whole Trunk of their Bodies; by which they communicate with the external Air through several Spiracles or Vent-Holes, to which are fastened so many little Trachee or Wind-Pipes, which send their Branches to all the Muscles and Viscera, and seem to accompany the Blood-Vessels all over the Body, as they do in the Lungs only, of the more perfect Animals.—By this Disposition, in every Inspiration, the whole Body of these little Animals is inflated, and in every Expiration compress'd; consequently the Blood-Vessels must suffer a Vicissitude of Extension and Compression.

The only Animal exempted from this necessity of Breathing, is a Ferus: But this, while included in the Womb, seems to have little more than a vegetative Life, and ought scarce to be reckoned among the Number of Animals: 'Tis rather a Graft on, or Branch of the Mother. See FERUS.

The Laws of Respiration, are of the last Importance to a right understanding of the animal OEconomy; for which reason a Computation of the Force of the *respiring Organs*, and of the force and pressure of the Air upon the same, will not be unacceptable.—It may therefore be observed, that by blowing into a Bladder, a considerable Weight will be rais'd by the mere Force of the Breath: For with a Bladder that is oblong, nearly of a cylindrical Figure, and tied at both Ends, if a Pipe be fixed at one End, and a Weight at the other, and the Pipe fasten'd at such a Distance from the Ground, as just allows the Weight to rest upon the Ground; the Bladder by an easy Inspiration will raise 1000 Pound Weight, and by the greatest Inspiration of a pretty strong Man, twenty eight Pound Weight.

Now, the Force by which the Air enters this Pipe, is that Force by which it is driven out of the Lungs; if therefore the Force by which the Air enters the Pipe can be determin'd, we shall have the Force by which the Air is drove into the Trachea.—But the Pressure of Air upon the Bladder is equal to twice the Weight it can raise; because the upper Part of the Bladder being fixed, it resists the Force of the Air, just as much as the Weight at the other End. And again, since the Air presses every way equally, the whole Pressure will be to that Part of it which presses on the Orifice of the Pipe, as the whole Surface of the Bladder is to the Orifice of the Pipe; that is, as the Surface of a Cylinder, whose Diameter, for Instance, is four Inches, and Axis seven, is to the Orifice of the Pipe.

Thus, if the Diameter of the Pipe be 0. 28, and its Orifice 0. 616; the Surface of the Cylinder will be 88. Therefore, as 88 : 0. 616 :: 14. double the least Weight rais'd, to 0. 098, which is almost 2 Ounces; and in raising the greatest Weight it is near 7 Ounces.

These therefore are the Forces by which the Air is drove through the Trachea, in an easy and a strong Expiration.—Now if we consider the Lungs as a Bladder, and the Larynx as a Pipe; the Pressure upon the Orifice of the Trachea, when the Air is drove out, will be to the Pressure upon the Lungs, as the whole Surface of the Lungs to the Orifice of the Trachea.

Suppose, e. g. the Diameter of the Larynx to be 5; the Orifice of the Larynx will be 0. 19. And suppose the two Lobes of the Lungs to be two Bladders, or Spheres, whose Diameters are each 6 Inches; their Surfaces are each 113 Inches, and the Pressure on the Larynx will be to the Pressure upon the whole external Surface, as 0. 19 to 226, which is as 1 Pound 1189; and therefore if the Pressure upon the Larynx in an ordinary Breathing be two Ounces, the Pressure upon the whole external Surface of the Lungs will be 148 Pounds; and the utmost Force, when the Pressure upon the Larynx is seven Ounces, will be equal to 520 Pound.—But the Lungs are not like an empty Bladder, where the Air presses only upon the Surface; for they are full of Vessels, upon the Surface of each of which the Air presses as it would upon the Surface of an empty Bladder; and therefore to know the whole Pressure of the Air, we must determine the internal Surfaces of the Lungs.

To do this, suppose that 1 Part of the Lungs is taken up with the Branches of the Trachea, that another third Part the Blood-Vessels fill, and the remainder is Vessels, where we suppose the chief Pressure upon the Blood-Vessels to be made: Now,

both Lobes of the Lungs contain 226 solid Inches, of which one third, or 75 Inches, are full of Vessels.—Let the Diameter of each Vein be  $\frac{1}{16}$  Part of an Inch, the Surface of a Vein will be .001256, and the Solidity .000043, by which Sum if we divide 75 (the Space fill'd by the Vein) the Quotient gives us 17441860 for the Number of Veinicles in both Lobes of the Lungs.—This Number multiplied by .001256, the Surface of a Vein gives the Sum of the Surfaces of all the Veinicles, to wit, 21906976 Inches.—And therefore the Pressure upon the Larynx will be to the Pressure upon the whole Surface of the Lungs, as 0. 19 to 21906976; and consequently, when in an ordinary Expiration the Pressure upon the Larynx is two Ounces, the Pressure on the whole internal Surfaces of the Lungs will be 14412 Pound Weight; and the utmost Force of the Air is Breathing, when the Pressure upon the Larynx is seven Ounces, will be 50443 Pound Weight.

Though these seem to be prodigious Weights, yet it must it be understood, that the Pressure upon each Part of the Surface of the Lungs equal to the Orifice of the Larynx, is not greater than it is at the Larynx; and that these vast Weights arise from the vast Extent of the Surfaces of the Veinicles upon which it was necessary that the Blood should be spread in the smallest capillary Vessels, that each Globule of Blood might, as it were, immediately receive the whole Force and Energy of the Air, and by that be broke into smaller Parts fit for Secretion and Circulation.

And hence we may learn the mechanical Reason of the Structure of the Lungs: For, being the whole Blood of the Body was to pass through them in order to receive the Effect of the Air, and that this could not be unless the Blood were diffus'd in small capillary Vessels; it was necessary that the Surfaces upon which they were to be spread, should be proportioned to their Number: Which is admirably well provided for by the wonderful Fabric of the Lungs.

If the Gravity of the Air was always the same, and if the Diameter of the Trachea, and the time of every Expiration were equal in all; this Weight upon the Lungs would be always the same. But since we find by the Barometer, that there is three Inches difference between the greatest and the least Gravity of the Air, which is a tenth Part of its greatest Gravity; there must be likewise the Difference of a tenth Part of its Pressure upon the Lungs at one time and another: For the Momenta of all Bodies, moved with the same Velocity, are as their Gravities. See BAROMETER.

This is a Difference which such as are asthmatic must be very sensible of; especially if we consider that they likewise breathe thicker, that is, every Expiration is performed in less time; if in half the time, and the same Quantity of Air drawn be 10, then the Weight of the Air upon the Lungs must be 57648 Pounds, of which a tenth Part is 5764 Pounds: And consequently asthmatic People upon the greatest rise or fall of the Barometer, feel a difference of the Air, equal to above one third of its Pressure in ordinary Breathing. See ASTHMA, WEATHER, &c.

Again, if the Trachea be small, and its Aperture narrow, the Pressure of the Air increases in the same Proportion as if the time of Expiration were shorter; and therefore a shrill Voice is always reckon'd amongst the prognostick Signs of a Consumption, inasmuch as that proceeds from the narrowness of the Larynx or Trachea; and consequently increases the Pressure of the Air upon the Lungs, which upon every Expiration heats the Vessels so thin, that at last they break, and a spitting of Blood comes on apace. See PHTHISIS.

RESPIRE, RESPIRARIUS, in Law, &c. a Delay, Forbearance, or Prolongation of Time, granted any one for the Payment of a Debt, or the like.

Respite derives the Word *Respite* from the Latin, *respiectus*; as *despite* from *despellat*.—*De Causa* will rather have it come from *respiere*, to breathe; *Respite* being in effect, a breathing-while, granted a Debtor, &c.

Letters of RESPIRE, or CREDIT, are Instruments antiently granted by Sovereign Princes to honest, but unfortunate Debtors, to screen them from their too rigorous Creditors.

These fall obtain in France.—They were first introduced by Pope Urban II. in favour of the *Cristis*, i. e. of Persons who went to the Holy War. See CROISES.

S. Louis granted three Years *Respite* to all who made the Voyage of the Holy Land with him.—In the Customary of Normandy, *Respite* is a judicial Delay, or Demur, given to Proceedings.

RESPIRE of Homage, is a forbearance of the Homage due from the Vassal or Tenant holding by Homage, or by Knight-Service to his Lord. See HOMAGE, &c.

Antiently those who held by their Tenures, paid a small Sum every fifth Year into the Exchequer, to be *respit* doing their Homage or Service.

By Stat. 12 Car. II. this *Respite* of Homage is taken away, as a Charge arising from Knight-Service; which is thereby likewise annul'd. See TENURE, &c.

RESPONDEAT Superior, a Law Phrase.—Where the Sheriffs are removable, as in London, for Inefficiency; *Respondet ad Superiorem*, that is, the Mayor and Aldermen are to answer for them. See SHERIFF, &c.

For the Insufficiency of a Bailiff of a Franchise, *Respondet Superior*, that is, the Lord of the Franchise is to answer.  
RESPONSALIS, in Law, he who appears for another in Court at a Day assign'd.

*Resista* makes this Difference between *Respondens*, and *Attornatus*: That the *Respondens* came only to alledge the Cause of the Parties Absence, be he Demandant or Tenant; and *Respondens* come for the Tenuis, not only to excuse his Absence, but to signify what Trial he meant to undergo, the Combat or the Country. See ATTORNEY.

RESPONDENT, in the Schools, a Person who maintains a Thesis in any Art of Science. See THESIS.

He is thus call'd as being to answer all Objections proposed by the Opponent or Impugner, &c. See OPPONENT.

The *Respondens* Balicini is to see whether the Opposition made by the contrary Party be just and Legitimate; or whether some of the Laws and Conditions of Opposition be not broke, which is call'd *Ignorantia Elenchi*.—He is also to examine the Moods and Figures of the Syllogisms, to see whether the Premises be just, &c. And through the whole to answer rather by Distinguo's than by direct Negation. See SYLLOGISM, MOOD, FIGURE, DISTINGUO, &c.

RESPONDENT, in Law, a Person who undertakes to answer for another; or binds himself as Security for the good Behaviour of another. See STRUTY.

The *Respondent* is to answer for the Damages done by the Person for whom he responds.—There are four Ordinances of the Kings of France, whereby the Citizens are expressly forbid to take Servants without *Respondents*, bound in Writing.

The Word is form'd from the *Latin*, *respondere*, to answer; q. d. *pro alio spondere*, to promise for another.

RESPONSARY SONG, an Anthem in which the Quiresters sing by turns. See ANTHEM.

RESPONSE, RESPONSAL, RESPONSIUM, an Answer, Reply, or Reply.

The Word is but little used, except for the Answers made to the Priest, by the People, in the Litany, the Psalms, and other Parts of the Office.

It has its use too in speaking of the Opinions or Answers of the ancient *Jurisperiti*; when consulted on Points of Law. See CIVIL LAW and JURISCONSULTI.

The fifty Books of the *Digest* are compos'd of *Responsa prudentum*, the *Responsa* of Papinian, Ulpian, Servolus, &c. collected by Justinian, who afterwards gave them the Force of Laws. See DIGEST.

The *Responso* of the Emperors were properly call'd *Rescripts*. See RESCRIPT.

RESPONSIONS, RESPONSIONES, a Term used in the military Orders, for certain Pensions or Charges which the Knights, or the Commandaries they held, paid to the Order.

Such a Knight-Templer paid a *Responso* of fifty Pounds per Annum to his Order, on Account of such a Commandary. See COMMANDERY and CONVENTUAL.—In *Est. Parl. 9 Richard II.* it is written *Responso*.

RESSAUT, in Architecture, the effect of a Body which either Projects or Sinks; i. e. stands either more out, or in, than another; so as to be out of the Line or Level therewith.

Such is a Socle, an Intablature, a Cornice, &c. upon an Avare Corps, arriere Corps, or the like.

The Term is *French*; and but little used in *English*; though the want of a Word of equal Import, pleads for its Naturalization.

RESSORT, a Term purely *French*; yet frequently used by our late Writers.

The Word in its popular meaning signifies Spring, or the Force of Elasticity.—Hence it is also used for a Jurisdiction, and the Extent or District thereof; as, when we say such a thing belongs to his *Resort*; a Judge out of his *Resort* has no Authority.

But its chief use among us is for a Court or Tribunal, where Appeals are judg'd; or for a Court or Person who judges finally and ultimately, and whence there is no Appeal. See COURT, APPEAL, &c.

The House of Lords judge *en dernier Ressort*, i. e. in the last *Resort*.—Prelidials judge in the last *Resort*, of all Criminals prosecuted by the Provoets of the Marshals.

RESSORT, is also used in a Writ of Tayle or Coufensage, in the same Sense as *Defens* in a Writ of Right. See DESCENT, TAYLE, COUSENAGE, RIGHT, &c.

RESSOURCE, a Term purely *French*, yet used by our *English* Writers.

It signifies a Means or Foundation of Man's recovering himself from his Fall or Ruin; or an after-Game for the repairing his Damages.

This Merchant has Credit and Friends still left; he has great *Resources*.—His last *Resource* was to throw himself into a Convent.—The Jargon of a Distinction, is the ordinary *Resource* of a Divine at a Pinch.

*Resolver* derives the Word from the *French*, *resoudre*, to resolve: A *Resource* strictly and literally, expresses a Means which prevents it *Resolvendo*.

REST, QUIES, in Physics, the Continuance of a Body in the same Place: Or its continual Application or Contiguity to

the same Parts of the ambient and contiguous Bodies. See SPACE.

*Rest* is either absolute or relative; as Place is. See PLACE.

Some define *Rest* by the State of a thing without Motion; and hence, again, *Rest* becomes either absolute or relative, as Motion is. See MOTION.

Sir Isaac Newton defines true or absolute *Rest* to be the Continuance of a Body in the same Part of absolute and immovable Space: And relative *Rest* to be the Continuance of a Body in the same Part of relative Space.

Thus, in a Ship under Sail, relative *Rest* is the Continuance of a Body in the same Region of the Ship, or the same Part of its Cavity.—True, or absolute *Rest* is its Continuance in the same Part of universal Space, wherein the Ship with its Cavity and Contents are all contain'd.

Hence, if the Earth be really and absolutely at rest, the Body relatively at rest in the Ship, will really and absolutely move; and that with that Velocity wherewith the Vessel moves.—But if the Earth do likewise move, there will then arise a real and absolute Motion of the Body at rest, partly from the real Motion of the Earth in absolute Space; and partly from the relative Motion of the Ship on the Sea.—Lastly, if the Body be likewise relatively moved in the Ship, its real Motion will arise partly from the real Motion of the Earth in immovable Space, and partly from the relative Motions of the Ship on the Sea, and of the Body in the Ship.

Thus, if that Part of the Earth where the Ship is, move Eastward with a Velocity of 10000 Parts; and the Vessel be carried by the Winds Westward 10 Parts; and at the same time a Seaman aboard walk with a Velocity 1 Part; The Seaman will be moved really and absolutely in immovable Space Eastwards, with 10001 Parts of Velocity; and relatively on the Earth, with nine Parts of Velocity Westwards. See EARTH.

'Tis an Axiom in Philosophy, that Matter is indifferent as to Rest, or Motion. See MATTER and BODY.

Hence, See Isaac Newton lays it down as a Law of Nature, that every Body perseveres in its State either of Rest or uniform Motion; except so far as it is disturbed by external Causes. See NATURE.

The Caretens will have Firmness, Hardness, or Solidity of Bodies to consist in this, that their Parts are at Rest, with regard to each other: And this Rest they establish as the great Nexus, or Principle of Cohesion, whereby the Parts are conected together. See FIRMNESS, HARDNESS, &c.

Fluidity, they add, consists in a perpetual Motion of the Parts; &c.—But the Newtonian Philosophy furnishes us with much better Solutions. See SOLIDITY, FLUIDITY, and COHESION.

REST, REPOSE, in Poetry, is used for the *Cesura*, which, in *Alexandrian Verse*, falls on the sixth Syllable; and in *Verbs* of ten or eleven Syllables, on the fourth. See CESURA.

This Verse is sought, there wants a Rest in it.—The Rest shou'd never fall on a Monosyllable, whereon the Voice may not dwell: 'Tis call'd Rest because the Ear, and the Pronunciation have both a repose or respite.

REST, in Music, is a Pause or Interval of Time, during which there is an Intermittion of the Voice or Sound. See PAUSE and TIME.

*Rests* are sometimes used in *Musick*, that is in Music of a single Part, to express some simple Passion, or even for Variety sake; but more usually in *Harmony*, or in Compositions of several Parts, for the sake of the Pleasure of bearing one Part move on while another rests; and this interchangeably. See MELODY and HARMONY.

*Rests* are either for a whole Bar, or more than a Bar, or but for the Part of a Bar.—When the Rest is for a part, it's express'd by certain Signs corresponding to the Quantity of certain Notes of Time; as Minims, Crotchets, &c. and is accordingly call'd *Minim-rest*, *Crotchet-rest*, &c.

The Characters or Figures whereof, see under CHARACTERS of Music; where the Note and corresponding Rest are found together.

When any of those Characters occur either on Line or Space; that Part is always silent for the Time of a Minim, or Crotchet, &c.—Sometimes a Rest is for a Crotchet and Quaver together; or for other Quantities of Time, for which there is no particular Note: In which Case the Signs of Silence are not multiplied; but such Silence is express'd by placing together as many Rests of different Time, as make up the designed Rest.

When the Rest is for a whole Bar, the Semibreve Rest is always used.—If the Rest be for two Measures, 'tis mark'd by a Line drawn a-cross a whole Space.—For three Measures 'tis drawn a-cross a Space and a half; and for four Measures a-cross two Spaces. But to prevent Ambiguity, the Number of Bars is usually writ over the Sign.

Some of the more ancient Writers in Music, make these Rests of different Value in different Species of Time.—E. gr. The Character of a Minim-Rest, in common Time, say they, expresses the Rest of three Crotchets in triple Time; in that the Triples  $\frac{1}{2}$ ,  $\frac{1}{3}$ ,  $\frac{1}{6}$ , it always marks an half Measure, how different former they may be among themselves.

They add that the Rest of a Crotchet in common Time is a Rest of three Quavers in the Triple  $\frac{3}{4}$ ; and that the Quaver Rest of

of common Time is to equal to three Semi-quavers in the Triple  $\frac{1}{2}$ . But this variety in the Use of the same Characters, is now laid aside.

**RESTAUR, RESTOR**, in ancient Customs, the Remedy or Recourse which Assurers have against each other, according to the Date of their Assurances; or against the Masters, if the Average arise through his Default, as through ill loading, want of caulking, or want of having the Vessel tight. See ASSURANCE.

The Word is also used for the Remedy or Recourse a Person has against his Guarantee or other Person, who is to indemnify him from any Damage sustain'd.—It hence *Restaurant* and *Restoration*.—In the lower *Latus* they also use the Words, *Restor* and *Restour*.

**RESTAURATION, RESTORATION**, the Act of re-establishing, or setting a thing in its former good Estate.

Thus we say, the *Restoration* of a Minor to the Possession of his Effects, alienated in the Time of his Minority. In the *French Laws* is an ancient *Formula*, used for the *restoring* a Person to his good Name, after he has been wrongfully accused and condemned.

Sour and decay'd Beer and Ale are *restored* various Ways.—By a handful of Wheat thrown into the Vessel, or by Salt made of the Ashes of Barley-Straw, put into the Vessel and stir'd.

*Glaster* commends three or four handfuls of Beech Ashes applied in the same manner.—Chalk scraped into it, renders it drinkable immediately. The same effect is produced by calcined Oyster-Shells, burnt Egg-Shells, Sea-Shells, or Crab's Eyes. See BEER, ALE, BREWING, &c.

In England we say, the *Restoration*, by way of Eminence, for the return of King Charles II. in 1660; after the Interregnum. See INTERREGNUM.

The 29th of May is an Anniversary Festival held in Commemoration of the *Restoration*: The *Restoration* of Regal and Episcopal Government. See CIVIL-WAR.

**RESTAURATIONS**, in Architecture, the Repairing of all the Parts of a Building gone to decay, either through the Course of Time, or other Injuries; in such manner as that it is not only re-established in its first Form, but considerably augmented. See REPAIR and REPARATION.

'Tis evident from the Plinths of the Corinthian Columns of the Pantheon, which are almost wholly under Ground, that the Pavement of this Temple is only a *Restoration* made in the Time of *Septimius Severus*. *Daviler*.

The Temple of Concord, behind the Capitol at Rome, having been burnt long after it was built, and having angular Bases different from the rest; seems to have been *restored* from the Ruins of several ancient Buildings. *Id.*

**RESTAURATION**, in Sculpture, is the repairing of a mutilated Statue, &c. See MUTILATION, &c.

Most of the Antique Statues have undergone the *Restoration*; as the *Farnese Hercules*, the *Favos* in the *Villa Borgese* at Rome, The *Wrestlers* in the Gallery of the Great Duke of Florence; the *Venus of Arles* in the Gallery at Versailles.—But their *Restorations* have only been made by the ablest Sculptors. *Daviler*.

**RESTINCTION**, in Chymistry, the quenching of a Metal or Mineral in some Liquor; in order either to correct, or give it some new Quality, Power, &c. See EXTINGUISHING, &c.

**RESTITUTION**, in Physicks, the returning of elastic Bodies forcibly bent, to their natural State; properly call'd, the *Abolition* of *Restitutum*. See ELASTICITY.

Contraction being the proper and natural Action of muscular Fibres, some Authors ascribe Dilatation to a Motion of *Restitutio*; but the Expression, as well as the Idea, are very faulty. See FIBRE, MUSCULAR, &c. See also HEART, &c.

**RESTITUTION**, in a moral and legal Sense, is the Act of restoring a Person to his Right; or of retaining something unjustly taken or detain'd from him. See RESTAURATION.

*Restitutio* is reducible to commutative Justice; and till it be made, the Casuists determine the Party all the while guilty of Theft. See JUSTICE, INJURY, &c.

The illegal Incumbency of Benefices are condemn'd to a *Restitutio* of the Fruits of the Benefices.—In the *Roman* Church Affairs, &c. are oblig'd to a *Restitutio* of their ill-gotten Goods, otherwise the Priest has no Authority to give him Absolution. See USURY.

*Restitutio in Integrum*, is used for what is otherwise call'd *Rescissio*. See RESCISSION.

Religious obtain *Restitutio* against their Vows, &c. are freed from their Obligations, when they protest against them within five Years of their Profession. See VOW, &c.

In the History of Germany for the XVIIth Century, the first Day of January 1624, is call'd the *Term of Restitutio*: Because by the Peace of *Westphalia*, then concluded, the *Lutheran* and *Calvinist* Princes were oblig'd to *restitute*, restore what they had taken from the *Roman* Catholic Churches in their Territories, till that Day.

**RESTITUTIONS of Medals**, or **RESTITUTED Medals**, is a Phrase used by Antiquaries, for such Medals as were struck by the Emperors, to renew or retrieve the Memory of their Predecessors. See MEDAL.

Hence it is that in several Medals we find the Letters R.E.S.T.—*Claudian* was the first who began this Practice, by striking a

fresh several Medals of Augustus. *Nero* did the same; and *Tiberius*, after the Example of his Father, struck *Restitutus* of most of his Predecessors.

*Galbas* struck a general *Restitutio* of all the preceding Emperors in two Medals, the one bearing an Altar, the other an Eagle, without the R.E.S.T. *F. Joherst* chus't rather to call them *Consecrations* than *Restitutio*; as being done quite a-new.

**RESTITUTIONE Temporalium**, a *Writ* which lies where a Man is elected and confirmed Bishop of a Diocese; for the Recovery of the Temporalities or Baryony of the said Bishoprick. See BISHOP, TEMPORALITIES, &c.

It is directed from the King to the Elector of the County. **RESTITUTIONE ecclesiæ ad Ecclesia**, a *Writ* antiently granted for the restoring a Man to the Church or Sanctuary from which he had been forced away. See SANCTUARY.

**RESTIVE**, a Term applied to a Horie, &c. that stops, or runs back, instead of advancing forwards.

In the Mamage, a *restive* Horie is a rebellious, refractory, ill broken Horie; which only goes where it will, and when it will.—The Word is form'd from the *Latin*, *restivus*, which signifies the same thing.

**RESTORATIVE**, in Medicine, a Remedy proper for the restoring and retrieving of Strength and Vigour. See REMEDY. *Restoratives* belong to the Class of Balausticks. See BALIA; MICK.

The Medicines that come under this Denomination are of an excellent, softening Nature, but nutritive withal; and are rather admir'd to repair the *Waistes* of the Constitution, than to alter and rectify its Disorders. See NUTRITION.

Such are the Leaves of white Maiden-hair, Adiantum Nigrum; black Helibore; Rocket, Erucæ; Scabious; Tusilage; Colts-Foot; Boleus-Tea; Chick-peas; Hops; Choculacæ; Pistach-Nuts; Balsom of *Tolu*; Boleium; Benzoin; Storax; Eryngo; Iris; Saryptin, &c. See HELIBORE, TEA, PISTACHE, CHOCOLATE, BALSOM, BODELLUM, STORAX, &c.

**RESTRAINT**, is when an Action is hindered or stop'd, contrary to Volition, or the Preference of the Mind. See LIBERTY, NECESSITY, WILL, VOLITION, VOLUNTARY, &c.

**RESTRICTION**, the Act of modifying, limiting, or restraining a thing to narrower Bounds.

General Laws always bear some *Restriction*.—In Contracts 'tis usual to have *restrictive Clauses*, which bind the Dispositions down to certain Bounds. See CLAUSES, CONDITION, &c.

**Mental RESTRICTION**, See RESERVATION.

Among Logicians, *Restrictio* is understood of the limiting a Term, so as to make it signify less than it usually does.—In this Sense the Name *Philosophus* is restrain'd to *Aristotle*; *Great* to *Alexander*; *City* to *Rome*, &c.

'Tis observ'd to be good arguing affirmatively from a non-restrain'd to a restrain'd Term, but not contrarily: And negatively, from restrain'd to a non-restrain'd Term; but not contrarily.

**RESTRICTING**, in Medicine. See ASTRINGENT.

**RESULT**, what is gathered from a Conference, an Examen, Meditation, Discourse, or the like; or the Conclusion and Effect thereof.

The Assembly was so tumultuous that there was no knowing the *Result*.—The usual *Result* of Disputes, Mr. *Bayle* observes, is that each Person remains more attach'd to his own Opinion.

**RESUMMONS**, a second Summons; or calling a Man to answer an Action where the first Summons is defeated, or suspended by any Occasion; as the Death of a Party, &c. See SUMMONS.

**RESUMPTION**, in a large Sense, signifies the taking again into the King's Hands such Lands or Tenements as before, upon false Suggestion, or other Error, he had delivered to the Heir, or granted by Letters Patent to any Man.

**RESUMPTION**, in the Schools, a sumery Repetition, or running over of an Argument; or of the Substance thereof, in order to refute it.

The Respondent *resum'd* all the Points of the Objection, and answers them one by one. See RECAPITULATION, &c.

**RESUMPTION** is also used by Logicians for the reduction of some figurative or quaint Proposition, to a more intelligible and significant one.—As, *Peter* is half-fair; that is, he is half fuddled.—The *Meadows* smile; that is, look pleasant.

**RESUMPTIVE**, in Pharmacy, an Epithet given to a kind of Unguent, used to recruit and restore and lengthning Constitutions, and to dispose the dry Body to receive Nourishment.—'Tis call'd in *Latin*, *Unguentum resumptivum*. See RESTORATIVE and UNGUENT.

**RESURRECTION, RESUSCITATION**, the Act of returning to a new, or second Life, after having been dead. See LIFE and DEATH.

The great Argument for the Truth of Christianity, and that urged with the most Force and Conviction for the same; is drawn from the *Resurrection* of our Saviour.—The Circumstances thereof are such as almost admit of a Demonstration; which has accordingly been attempt'd on the first Principles of the Geometricians. See *Discours on the Resurrection*.

The Christians generally believe the *Resurrection* of the same identic Body, the very same Flesh and Bones at the Day of Judgment.—The two principal philosophical Objects against it are these.

1°. The same Piece of Matter or Substance may happen to be a Part of two or more Bodies.—Thus a Fish feeding on a Man, and a Man afterwards feeding on the Fish; Part of the Body of the first Man becomes first incorporated with the Fish, and afterwards in the Fish, with the last Man. Again, Instances have been known of one Man's feeding immediately on another; and among the Cannibals of the *West Indies* the Practice is frequent.

Now, where the Substance of one is thus converted into the Substance of another, each can't arise with his whole Body; and to which shall the common Part be allotted?

To this Objection some answer, that as all Matter is not fit or disposed to be assimilated to the Body, and incorporated with it: Human Flesh may very probably be of this Kind, and therefore what is thus eaten, may be again excreted and carried off.—But Mr. *Leibnitz's* Answer seems the more solid.—All that is essential to the Body, he urges, is the original Stamen, which existed in the Semen of the Father; nay, and on the footing of the modern Theory of Generation, which existed in the Semen of the first Man. This we may conceive as the most minute Speck or Point imaginable, and therefore not to be separated, or torn asunder, and any Part of it united with the Stamen of any other Man. All this Bulk we see in the Body, is only an Accretion to the original Stamen; an Addition of foreign Matter, of new Juices to the primary, solid Stamen. There is therefore no reciprocation of the proper Matter of the human Body. See STAMEN, SOLID, &c.

The second Objection is this.—The human Body, we know by the late Discoveries in the Animal Oeconomy, is continually changing: a Man has not entirely the same Body to Day as he had Yesterday; and it is even computed, that in less than seven Years time, his whole Body undergoes a change, and not a Particle of the same Body remains.—Which of these many Bodies, then, which the same Person has in the Course of his Life, is it that shall rise? Or does all the Matter that has ever belonged to him, rise again? Or does only some particular System thereof? The Body, e. g. be had at 20, at 30, or at 60 Years old? If only this or that Body arise, how shall it be rewarded or punished for what was done by the other? With what Justice does one Person suffer, &c. for another?

To this it may be answered, on Mr. *Lock's* Principles, that personal Identity, or the sameness of a rational Being, consists in Self-consciousness; in the Power of considering it self the same thing in different Times and Places.—By this every one is to himself what he calls self; without considering whether that self be continued in the same or divers Substances. So far reaches the Identity of that Person. 'Tis the same self now it was then; and 'twas by the same self which now reflects on an Action, that Action was performed.

Now, 'tis this personal Identity is the Object of Rewards and Punishments, which we have observed may exist in different Successions of Matter; so that to render the Rewards and Punishments just and pertinent, nothing needs but that we rise again with such a Body as that we retain the Consciousness of our past Actions. See IDENTITY.

RESUSCITATION. See RESURRECTION and REVIVIFICATION.

RETAINER, or RETEINER, in Law. See RETEINER.

TO RETAIN, spoken of Marcs, signifies to hold, i. e. to Conceive after Covering.

RETAINING-FEE, is the first Fee given to a Serjeant or Counsellor at Law, whereby to make him sure, that he shall not be on the contrary Side. See FEE.

RETAIL, in Commerce, &c. the buying of Goods in the Great, or by Wholesale, and selling them out again in small Parcels.—*Qui rem integram emens, per minutiores eam partes distribuit.* See COMMERCE.

RETALIATION, the Act of returning like for like. See TALIONIS Lex.

RETARDATION, in Physicks, the Act of retarding, that is, of delaying the Motion or Progress of a Body, or of diminishing its Velocity. See MOTION.

The Retardation of moving Bodies arises from two great Causes: The Resistance of the Medium, and the Force of Gravity.

The Retardation from the Resistance is frequently confounded with the Resistance it self; because with respect to the same moving Body, they are in the same Proportion. See RESISTANCE.

With respect to different Bodies, however, the same Resistance often generates different Retardations.—For if Bodies of equal Bulk, but different Densities, be moved through the same Fluid, with equal Velocity, the Fluid will act equally on each; so that they will have equal Resistances, but different Retardations. And the Retardations will be to each other as the Velocities which might be generated by the same Forces in the Bodies proposed: That is, they are inversely as the Quantities of Matter in the Bodies, or inversely as the Densities.

Suppose, then, Bodies of equal Density, but of unequal Bulk, to move equally fast through the same Fluid; the Resistances increase according to their Superficies, that is, as the Squares of their Diameters; but the Quantities are increased in Proportion to the Cubes of the Diameters: the Resistances are the Quanti-

ties of Motion, the Retardations are the Celesties arising from them; and dividing the Quantities of Motion, by the Quantities of Matter, you will have the Celesties; therefore the Retardations are directly as the Squares of the Diameters, and inversely as the Cubes of the Diameters, that is, inversely, as the Diameters themselves.

If the Bodies be equal, move equally swift, and are of the same Density, but moved through different Liquids; their Retardations are as the Densities of those Fluids. See FLUID.

When Bodies equally dense, and of Bulk equal, are carried through the same Liquid with different Velocities, the Retardations are as the Squares of the Velocities. See DENSITY, &c.

The Retardation from Gravity is peculiar to Bodies projected upwards.—A Body thrown upwards is retarded after the same Manner as a falling Body is accelerated; only in the one Case the Force of Gravity concurs with the Motion acquired; and in the others acts contrary to it. See ACCELERATION.

As the Force of Gravity is uniform, the Retardation from that Cause will be equal in equal times. See GRAVITY.

Hence, as 'tis the same Force which generates Motion in the falling, and diminishes it in the rising Body, a Body rises till it has lost all its Motion; which it does in the same time wherein a Body falling would have acquired a Velocity equal to that wherewith the Body was thrown up. See PROJECTILE.

Thus also, a Body thrown up will rise to the same Height from which falling it would acquire the Velocity wherewith it is thrown up: Therefore the Heights which Bodies thrown up with different Velocities can rise to, are to each other as the Squares of the Velocities. See PROJECTILE and DESCENT.

Hence the Retardations of Motions may be compared together: For they are first, as the Squares of the Velocities; secondly, as the Densities of the Liquids, through which the Bodies are moved; thirdly, inversely as the Diameters of those Bodies; lastly, inversely, as the Densities of the Bodies themselves.

The Numbers in the Ratio compounded of those Ratio's, express the Proportion of the Retardations; multiplying the Square of the Velocity by the Density of the Liquid, and dividing the Product by the Product of the Diameter of the Body, multiplied into its Density, and working thus for several Motions; the Quotients of the Divisions will have the same compound Ratio to one another.

#### General Laws of RETARDATION of Motion.

1°. If the Motion of a Body be uniformly retarded; that is, if its Celerity be diminished equally in equal Times, the Space it passes over is one half of that it would pass over in the same time by a uniform Motion.

2°. The Spaces described in equal times by a uniformly retarded Motion; decrease according to the uneven Number, 9, 7, 5, 3, &c.—See farther under ACCELERATION.

RETCHING, or REACHING, the Effort of Endeavour to Vomit. See NAUSEA and VOMITING.

RETE Mirabile, in ANATOMY, a small Plexus, or Net-work of Vessels in the Brain. See PLEXUS and BRAIN.

It surrounds the *Glandula Pituitaria*, and is very conspicuous in Brutes, but either not existent in Man, or so very minute that its Existence is fairly doubted.

*Willis* will have it to consist of Arteries, Veins, and Nerves; *Vivianus* of Arteries only; and others, of Arteries and small Veins.—*Vivianus* asserts, with many other Anatomists, that there is no Rete Mirabile in Man, in the Horse, Dog, &c. 'Tis found in the Calf, Sheep, Goat, &c.

It was first observed, and described by *Galen*; who upon finding it in some Brutes, concluded it to be likewise in Man: but all we see like it in Man, is that on the Sides of the Pituitary Gland, where its Place should be, the Carotid Arteries make a double Flexure, in Form of  $\infty$ , before they penetrate the *Dura Mater*.

The use of the Rete Mirabile, *Galen* takes to be for concocting and elaborating the animal Spirits; as that of the *Epididymus* is for elaborating the Seed. See SPIRIT and SEED.

Dr. *Willis* thinks, with more probability, it may serve to bridle the too rapid Incursions of the Blood into the Brain of those Creatures whose Head hangs down much; to separate some of the superfluous serous Parts of the Blood, and send them to the Salivary Glands as the Blood enters the Brain; and to obviate Obstructions which may happen in the Arteries.

RETE PARRY, in ancient Records, a customary Due of one Penny for every Person, to the Parish-Priest.

RETEINER, or RETAINER, in Law, a Servant not meretrix nor Domestic; that is, not continually dwelling in the House of his Lord or Master; but only wearing his Livery, and attending on special Occasions. See SERVANT.

'Tis Livery was anciently given by great Men, and frequently for the Maintenance of Quarrels; whence it was justly prohibited by several Statutes; as, 1 *Richard II.* on Pain of Imprisonment, and grievous Forfeiture to the King. See LIVERY, YEOMAN, &c.

It was further prohibited by other Statutes of the succeeding Kings, whereby the Delinquents were subjected to make Ransom at the King's Pleasure; and Knights and Esquires thereof du-

ly attainted, were to lose their said Liveries, and forfeit their Fees for ever.

**Edward IV.** added a special Penalty of five Pounds per Month on every Man that gave such Livery, and as much on every Person for retaining it, either by Writing, Word, or Oath.—But most of the Statutes are repealed by a Statute 3 Car. I.

**RETENTIO, RETINENTIA**, in our Law Books, is sometimes used to signify *Retinere*. See **RETINERE**.

**RETENTION, RETENTIO**, a Faculty of the human Mind, whereby in order to a further Progress in Knowledge, it keeps or retains those simple Ideas which it before received by Sensation or Reflection. See **FACULTY, IDEA, &c.**

This is done two ways.—First, by keeping the Idea which is brought into the Mind for some time actually in view; called *Contemplation*. See **CONTEMPLATION**.

Secondly, By reviving those Ideas in our Minds, which have disappeared, and have been, as it were, laid out of sight: this is *Memory*, which is, as it were the Repository of our Ideas. See **MEMORY**.

Our Ideas being nothing but actual Perceptions in the Mind, which cease to be any thing, when there is no Perception of them; this lying up of our Ideas in the Repository of the Memory, amounts to no more than this, that the Mind has a Power in many Cases to revive Perceptions it once had; with this additional Perception annexed to them, that it has had them before. See **PERCEPTION**.

It is by the Assistance of this Faculty, that we are said to have all those Ideas in our Understanding which we can bring in sight, and make the Objects of our Thoughts, without the help of those sensible Qualities, which first imprinted them there. See **UNDERSTANDING**.

Attention and Repetition help much to the fixing Ideas in our Memory; but those which make the deepest and most lasting Impressions, are such as come accompanied with Pleasure and Pain.—Ideas but once taken in, and never again repeated, are soon lost; as those of Colours, in such as lose their Sight when very young.

The Memory in some Men is tenacious, even to a Miracle; but yet there seems to be a constant Decay of all our Ideas, even of those which are struck deepest; and in Minds the most *Retentive*: So that if they be not sometimes renewed, the Print wears out, and at last there remains nothing to be seen. See **TRACE**.

Those Ideas which are often renewed by a frequent Return of the Objects or Actions that produce them, fix themselves best in the Memory, and remain longest there: Such are the original Qualities of Bodies; viz. Solidity, Extension, Figure, Motion, &c. and those that almost constantly affect us, as Heat and Cold; and those that are the Affections of all kinds of Beings, as Existence, Duration, Number; which are seldom quite lost, while the Mind retains any Ideas at all. See **QUALITY, HABITUDE, &c.**

**RETENTION**, is also used in Medicine, &c. for that State of Contraction in the Solids, or vascular Parts of the Body, which makes them hold fast their proper Contents. See **SOLID, VESSEL, &c.**

In this Sense *Retention* stands opposed to *Evacuation*, or *Excretion*. See **EVACUATION** and **EXCRETION**.

*Retention* and *Excretion* make one of the six Non-Naturals. See **NON-NATURAL**.

**RETENTION** is frequently considered as a Disorder; and defined the Act of retaining the Excrements, Humours, &c. so as they cannot be voided out of the Body. See **EXCREMENT**.

A *Retention* of Urine is very painful and dangerous. See **URINE**.

This a *Retention* of peccant Humours which causes such a Disease. **RETIARIJ**, in Antiquity, a kind of Gladiators. See **GLADIATOR**.

The *Retiarii* were denominated from *Retes*, a Net which they made use of against their Antagonist, who was call'd *Secutor*, Follower. See **SECUTORIS**.

This Net they carried under their Buckler, and when opportunity serv'd, cast it on the Head of their Antagonist, and in this condition kill'd him with a Trident which they bore in the other Hand.

**Ligures**, Sec. observe that they fought in Tunics, and were furnished with Sponges to wipe off the Sweat, Blood, &c. and to stop their Wounds.—The Word is form'd from the Latin, *Retes*, Nets; or, perhaps from *Retesculum*, for they call'd their Nets, *Jaculum*, and sometimes in one Word, *Retesculum*.

**RETICENCY, RETICENCE, RETICENTIAL**, a Figure in Rhetoric, whereby we make oblique mention of a thing, in pretending to pass it over unmentioned. See **FIGURE**.

Thus: To say nothing of the Nobility of his Ancestors: I forbear to speak of his Courage, and pass over the Severity of his Morals. See **PRETERITION**.

**RETICULA, RETICULE**, in Astronomy, a Contrivance for the exact measuring of the Quantity of Eclipses; introduced about fifty Years ago by the Royal Academy of Paris. See **ECLIPSE**.

The *Reticule* is a little Frame, consisting of thirteen fine like Threads, equidistant from each other, and Parallel; placed in the Focus of object Glasses of Telescopes; that is, in the Place where the Image of the Luminary is painted, in its full Extent.—Of Con-

sequence, therefore, the Diameter of the Sun or Moon is hereby seen divided into twelve equal Parts or Digges; so that to find the Quantity of the Eclipse, there is nothing to do but to Number the luminous and the dark Parts. See **DIGIT**.

As a Square *Reticule* is only proper for the Diameter, not for the Circumference of the Luminary. 'Tis sometimes made Circular, by drawing six concentric equi-distant Circles, which represent the Phases of the Eclipse perfectly.

But 'tis visible that the *Reticule*, whether figure or circular, ought to be perfectly equal to the Diameter or Circumference of the Star, such as it appears in the Focus of the Glass; otherwise the Division cannot be just.

Now this is no easy Matter to effect, by reason the apparent Diameter of the Sun and Moon differ in each Eclipse; nay that of the Moon differs from it itself in the Progress of the same Eclipse.

Another Imperfection in the *Reticule* is, that its Figure is determined by that of the Image in the Focus; and of consequence will only fit one certain Magnitude.

But M. de Hire has found a Remedy for all these Inconveniences; and contrived that the same *Reticule* shall serve for all Telescopes, and all Altitudes of the Luminary in the same Eclipse.—The Principle whereon his Invention stands, is, that two Object-Glasses applied against each other, having a common Focus, and there forming an Image of a certain Magnitude; this Image will increase in Proportion as the Distance between the two Glasses is increased, as far as a certain Limit.

If then a *Reticule* be taken of such Magnitude as is just to comprehend the greatest Diameter the Sun or Moon can ever have in the common Focus of two Object-Glasses applied to each other; there needs nothing but to remove them from each other, as the Star comes to have a less Diameter, to have the Image still exactly comprehended in the same *Reticule*.

Another Improvement is, that whereas the silver Threads are subject to swerve from the Parallelism, &c. by the different temperature of the Air; a *Reticule* may be made of a thin Looking-Glass, by drawing Lines or Circles thereon, with the fine Point of a Diamond; which shall be safe from any Alteration of the Air.

**RETICULAR Body, Corpus RETICULARE**, in Anatomy, a Body of Vessels lying immediately under the Cuticle or Scarf-Skin. See **CUTICLE, &c.**

These Vessels contain a mucous Liquor, from the Tincture whereof Malpighi imagines the Colour of the Skin to be derived; founding his Conjecture on this, that the Cutis as well as Cuticle of Backs, is white; and that they differ in no other Circumstance from those of *Europæum*, but in this particular. See **NEURO**. See also **CUTIS** and **PAPILLA**.

**RETICULARIS Plexus**, in Anatomy, the Choroides. See **CHOROIDES**.

'Tis thus call'd because the Fibres are interwoven like a Net.

**RETICULUM**, the Caul, or Omentum; a Name sometimes given to its Net-like Structure. See **OMENTUM**.

**RETIIFORMIS Lacus**, in Anatomy, the same with *Retes Membrabile*. See **RETES**.

**RETINA**, in Anatomy, and Opticks, one of the Tunics of the Eye; call'd also *Amphiblastroica, retiformis, and reticularis*, as being wove in manner of a Net. See **TUNIC** and **EYE**.

The *Retina* is the last or innermost of the Coats of the Eye, lying immediately under the Choroides. See **CHOROIDES**.

'Tis form'd of an Expansion of the medullary Part of the Optic Nerve; whence, it is found very thin, soft, white, &c. resembling the Substance of the Brain, with the transparency of the Horn of a Lantern. See **OPTIC NERVE**.—When separated from the Choroides, it runs into a mucous Mass, or Lump.

The *Retina* is usually supposed to be the great Organ of Vision, which is effected by means of the Rays of Light reflected from each Point of Objects, refracted in their Passage through the aqueous vitreous and crystallin Humours, and thus thrown on the *Retina*; where they paint the Image of the Object; and where they make an Impression, which is continued thence, by the fine Capillaries of the Optic Nerves, to the Sensory. See **VISION**.

Indeed, whether the *Retina* or the Choroides be the principal Organ of Vision, and that whereon the Images of Objects are represented; has been much controverted between several Members of the French Academy, particularly Mess. *Mariotte, Pecquet, Perrault, Mery*, and *de la Hire*.

*Mariotte* first stood up for the Choroides, and was seconded by *Mery*; the rest asserted the Rights of the *Retina*.

The *Retina* was always judg'd to have all the Characters of the principal Organ.—'Tis situate in the Focus of the Refractions of the Humours of the Eye; and of consequence receives the Vertices of the Cones of Rays, proceeding from the several Points of Objects. It is very thin, and consequently very sensible. It has its Origin from the Optic Nerve; and is itself wholly nervous, and 'tis the common Opinion that the Nerves are the Vehicles of all Sensations. Lastly, It communicates with the Substance of the Brain, where all Sensations terminate. See **BRAIN, SENSATION, &c.**

As to the Choroides, its use was supposed to be to stop the Rays, which the extreme tenacity of the *Retina* should let pass; and

and to do the same Office to the *Retina* which the Quicksilver does to a Looking-Glass; especially in Animals wherein it is black. See CHOROIDES.

But from an Experiment of a Cat plunged in Water, *M. Mery* conceiv'd a different Opinion.—He observ'd the *Retina* to disappear on that Occasion, as well as all the other Humours of the Eye; but the Choroides still to appear distinctly, and even with all the lively Colours it has in that Animal.—Hence he concluded, that the *Retina* was as transparent as the Humours, but the Choroides, opaque: Consequently the *Retina* was not a proper Instrument to terminate and stop the Cones of Rays, or to receive the Images of Objects; but that the Light must pass through it, and could only be stop'd on the Choroides; which therefore would be the principal Organ of Vision.

The black Colour of the Choroides in Man is extremely favourable to this Sentiment: The principal Organ should seem to require that the Action of the Light should terminate on it, as it arrives; which 'tis certain it here does in the black that absorbs all the Rays, and reflects none; and it should also seem necessary that the Action of the Light should be stronger on the Organ of Sight than any where else: Now, 'tis certain that the Light being received and absorbed in a black Body, must excite a greater Vibration there than any where else; and hence it is that black Bodies are inflamed by a burning Glass much sooner than white ones. See BLACKNESS, &c.

The Situation of the Choroides behind the *Retina* is another Circumstance on its Side; *M. Mery* having observed the same Position of the principal Organ behind a mediate Organ in the other Senses; which makes a happy Analogy.—Thus the Cuticle extended over the Skin, is the mean Organ of feeling; but the Cutis underneath is the principal Organ. The like is observed in the Ear, Nose, &c.

The *Retina*, therefore, should seem, a kind of mediate or secondary Organ, serving to break the too strong Impression of the Light on the Choroides, or to preserve it; which is the use ascribed to the Cuticle.—Add to all this, that the *Retina* is insensible, as having its Origin from the medullary Substance of the Brain, which is so too; and the Choroides, on the contrary, very sensible, as arising from the *Pia Mater*, which is certainly so in a great Degree. See NERVE, MEDULLA, MENINGE.

This last Argument being doubted of, *M. Mery* was engaged to prove it; which he did before the Royal Academy, where he shew'd that the Optic Nerve is not composed like the other Nerves, of Fibres; that 'tis only a Train of the Medulla inclosed in a Canal, out of which it is easily separable. See OPTIC NERVE.

This Structure of the Optic Nerve, hitherto unknown, shews that the *Retina* can be no Membrane; 'tis only a Dilatation of the Medulla, inclosed under two Membranes, and a Medulla is no proper Substance to be the Seat of a Sensation.—It can scarce serve for any thing but to filtrate the Spirits necessary for the Action of Vision.—The Vibration whereby the Sensation it self is effected, must be made on a Part more solid, more firm, and more susceptible of a brisk Impression.

RETINUE, the Attendants or Followers of a Prince, or Person of Quality; chiefly in a Journey.

In Law, those Persons are said to be of a Nobleman's *Retinue* who belong to him in Quality either of Servants or *Retainers*. See RETAINER.

RETRADE, in Fortification, a kind of Retrenchment made in the Body of a Bastion, or other Work, which is to be dismounted Inch by Inch, after the first Defences are dismantled. See RETRENCHMENT, &c.

It usually consists of two Faces, which make a re-entering Angle. See RE-ENTERING.

When a Breach is made in a Bastion, the Enemy may also make a *Retrade*, or a new Fortification behind it. See BASTION.

RETIRED Flank, in Fortification. See FLANK.

RETORT, in Chymistry, a kind of crooked Matras, or a round, bellied Vessel, either of Earth or Glass, with a slender crooked Neck, or Nose, to which the Recipient is to be fastened. See MATRAS.

When the *Retort* is of Glass, 'tis usually lin'd with a Lute or Palt an Inch thick; to enable it to bear the Fire the better. See FIRE and HEAT.

The *Retort* serves to draw Spirits and Oils from Woods, Gums, Minerals, Earths, and other Matters which require a strong Fire. See SPIRIT, &c.

The *Retort* is a kind of Compendium or Improvement of the Cucurbit and Bole-head; answering all the Purposes of both, without the Assistance of a Capital or Head, which the other frequently require. See DISTILLATION, &c.

RETRACTION, the Act of unsaying what a Person had said, or WROTE. See RECALLATION.

*Galileo* made a public *Retraction* of his *Doctrine of the World*, & *Mundo*, after its being censured and condemned by the Pope.

Among St. *Augustine's* Works is a Book of *Retractions*; where, however, the Word is to be understood in a new Sense; not as if he recanted or unsaid any thing he had taught, but only treated of the same Matter, or handled the same Subject a second Time. This Sense the Word will very well bear; being a compound of *re* and *tracto*, I handle, treat of.

RETRACTION, in Anatomy, the Contraction or shortening of a Part. See CONTRACTION.

The *Retraction* of the Nervus takes away the Use of the Limbs. See NERVE.

The Word is form'd from the *Latine*, *retrohere*, to draw back.

RETRACTS, among Horsemen, pricks in the Horse's Feet, arising from the Fault of the Farrier in driving Nails that are weak, ill-pointed, or are driven awry. See SADDLE.

These, unless timely prevented, fester, and prove very dangerous.—When the Farrier, in shoeing, perceives the Horse to shrink at every blow on the Nail; 'tis a sign of a *Retract*, and the Nail is to be pull'd out again, which is done without any harm.

When the Horse halts immediately after he is shod, 'tis concluded some of the Nails press the Veins, or touch him in the Quick.

To find where the Grievance lies, they knock the Nails round with a Hammer, till the Horse's shrinking upon hitting a particular Nail, discovers the Place.

Some Farriers give this as a Rule, that throwing Water on the Hoof, the Place where he is hurt will be dry sooner than any of the rest. The Places where the Horses are most usually *prick'd*, are the Heel in the Fore-foot, and the Toe in the Hind-foot. See HOOF.

RETRACTOR, *Ala Nasi*, in Anatomy, a pair of Muscles, call'd also *Elevator Labii superioris*. See ELEVATOR.

RETRAHENS Auriculæ, in Anatomy, a pair of Muscles of the external Ear; consisting of a Parcel of fleshy Fibres, which in some Bodies are divided into three distinct Muscles, arising from the Os *Temporale*, and fix'd to the hard Part of the *Cochlea*. See AURICLE.

But these Muscles are so small in Men, that the Auricle is seldom moveable at all. See EAR.

RETRAXIT, in Law, is where the Plaintiff comes into Court in Person, alone, or with the Defendant; and declares he will proceed no further.

A *Retract* is peremptory, and a perpetual Bar; and may be pleaded as such to the Plaintiff in the same Action for ever.

RETREAT, in War, a retiring or moving back again of an Army, or Part thereof.

What they call a *Retreat* in the Armies is really a Flight; only a Flight made by Design, and with Conduct.

The Skill and Ability of the General, is known by his *Retreats*, more than his Engagements.—The *Retreat* of ten thousand *Greeks* under the Command of *Xenophon*, has been admir'd in all Antiquity.

To found a *Retreat*, secure a *Retreat*, &c.

RETREAT, or RELAY, in Masonry, a little Recess or Diminution of the thickness of a Wall, Rampart, &c. in Proportion as 'tis rais'd. See WALL, &c.

The *Retreat* is properly the Diminution of a Wall, without Side; or the Contraction of its upper Course more than the Foundation.—Where the Foundation is very large, they usually make two or three *Retreats*.—Parapets are always built with *Retreats*.

RETRENCHMENT, literally signifies something cut off a thing, and taken from it; in which Sense it coincides with Subtraction, Diminution, &c.—The Word is *French*, *Retranchement*, form'd of *re* and *trancher*, to cut.

RETRENCHMENT, in Architecture, Carpentry, &c. is us'd not only for what is cut off from a Piece when too large, in order to a better proportioning it, or some other Convenience; but also for the Projections taken out of Streets, publick Ways, &c. to render them more even, and in a Line.

By a gradual *Retrenchment* of the ordinary Quantity of Food, a Man may bring himself to a great Degree of Abstinence. See ABSTINENCE, FASTING, FOOD, &c.

The Reformation of the Calendar in 1582, occasioned a *Retrenchment* of ten Days which had crept into the Account more than there should have been. See CALENDAR.

The Fugality so much boasted of among the ancient *Romans*, St. *Eusebius* observes, did not so much consist in a voluntary Abstinence or *Retrenchment* of things superfluous, as a coarse and sordid Way of employing or using them.

RETRENCHMENT, in War, the Fortification of a Camp; or any Kind of Work cast up to strengthen or defend a Post against the Enemy. See FORTIFICATION, DEFENCE, WORK.

Such are Ditches, with Parapets, Gabions, Fascines, &c. for a covering, &c. See DITCH, &c.

The Enemy came with Design to oblige them to raise the Siege, but could not force the *Retrenchments*.

RETRENCHMENT is particularly us'd for a simple *Retrade* made on a Horn-work or Bastion; when 'tis intended to Dispute the Ground Inch by Inch.

'Tis usually a re-entering Angle, whose Faces flank each other; and fortified with Ditches, Parapets, Gabions, &c. See RETRADE.

RETRIBUTION, a handsome Present, Gratuity, or Acknowledgment, given in lieu of a formal Salary or Hire, to Persons employ'd in Affairs that do not so immediately fall under Estimation, nor within the common Commerce, of Money.

Those who minister'd at the Altar antiently lived of *Retribution*, which they received for the Services they did the Church. But these *Retributions* were afterwards judg'd proper to be fix'd to pecuniary Sums. See *TITH*.

**RETRIEVE, RETROUVER**, to recover, get again, or repair a thing lost or damaged. See *RECOVERY, REPARATION, &c.*

To **RETRIEVE**, in Falconry, signifies to spring or find Partridges again, which have been once sprung before. See *HAWKING*.

**RETROACTIVE**, in Law—New Laws and Statutes, we say, have no *retroactive* Effect; that is, they have no Force or Effect as to what is already paid; nor can be alleg'd as Rules for any thing done before their Promulgation.—Their Authority is wholly as to what is to come.

Indeed we have some Instances of Laws that have a *Retrospect*, or *Retrospection*, i. e. were made with express Design to extend to things already paid;—These we usually call *Laws ex post facto*. See *LAW, &c.*

The Word is compounded of the Latin, *retro*, backwards; and *ago*, I act.

**RETROCESSION**, the Act of going backwards; more usually express'd by *Retrospection* or *Retrospection*. See *RETROGRADATION, &c.*

**RETROCESSION of the Equinox**. See *PRECESSION*.

**RETROCESSION of Curves, &c.** See *RETROGRADATION, CONTRARY FLEXURE, &c.*

**RETROGRADE, RETROGRADUS**, something that goes backwards, or in a Direction contrary to its natural one. Such is the Motion of the Lobster, the Crab, &c.

The Word is form'd from the Latin, *retro*, backwards; and *gradus*, I go.

If the Eye and the Object move both the same way, but the Eye much faster than the Object; the Object will appear to be *Retrograde*, i. e. to go back, or to advance the contrary Way from what it really does. See *VISION of Astris*.

Hence, the Planets in some Parts of their Orbits appear to be *Retrograde*. See *PLANET and RETROGRADATION*.

**RETROGRADE Order**, in Matters of Numeration, is when in lieu of accounting 1, 2, 3, 4, we count 4, 3, 2, 1. See *PROGRESSION, SERIES, NUMBER, &c.*

**RETROGRADE Verbs** are such as give the same Words, whether read backwards or forwards; call'd also *reciprocal Verbs*, and *Recurrenents*; such is,

*Signa te Signa tenentur ne tangis et Angis.*

**RETROGRADATION, or RETROGRESSION**, the Act or Effect of a thing moving backwards. See *RETROGRADE*.

**RETROGRADATION**, in Astronomy, is an apparent Motion of the Planets, wherein they seem to go backwards in the Eclipse, and to move contrary to the Order or Succession of the Signs. See *PLANET, ECLIPSE, &c.*

When a Planet moves in *conspicentia*, i. e. towards the following Signs, or according to the Order of the Signs, as from Aries to Taurus, from Taurus to Gemini, &c. that is, from West to East, it is said to be *direct*. See *DIRECT*.

When it appears for some Days in the same Point of the Heavens, it is said to be *Stationary*. See *STATIONARY*.

And when it goes in *antecedentia*, i. e. towards the antecedent Signs, or contrary to the Order of the Signs, viz. from East to West, it is said to be *Retrograde*. See *ANTECEDENTIA, SIGN, &c.*

The Sun and Moon always appear *direct*.—*Saturnus, Jupiter, Mars, Venus, and Mercury*, sometimes *direct*, sometimes *Stationary*, and sometimes *Retrograde*. See *SATURN, JUPITER, VENUS, &c.*

The superior Planets are *Retrograde* about their Opposition with the Sun; the inferior ones about their Conjunction. See *OPPOSITION and CONJUNCTION*.

The Intervals of Time between two *Retrogradations* of the several Planets, are unequal.—In *Saturnus* 'tis a Year and 13 Days; in *Jupiter* a Year and 43 Days; in *Mars* two Years 50 Days; in *Venus* one Year 220 Days; in *Mercury* 115 Days.

Again, *Saturnus* continues *Retrograde* 140 Days, *Jupiter* 120, *Mars* 73, *Venus* 42, *Mercury* 22. Yet are not the several *Retrogradations* of the same Planet constantly equal.

These Changes of the Courses and Motions of the Planets are not real; but apparent, when view'd from the Centre of the System, i. e. from the Sun, they appear always uniform and regular.—The Inequalities arise from the Motion and Position of the Earth whence they are view'd, and are thus accounted for.

Suppose PQO (*Tab. Astronomy, Fig. 58.*) a Portion of the Zodiac ABCD the Earth's Orbit, and EMGHZ the Orbit of a superior Planet, e. g. Saturn. And suppose the Earth in A, and Saturn in E; in which Case he will be seen in the Zodiac at the Point O.—If now Saturn remain'd without any Motion, when the Earth arrives at B, he would be seen in the Point of the Zodiac L, and would appear to have described the Arch OL, and to have moved according to the Order of the Signs from West to East. But because while the Earth is passing from A to B, Saturn likewise moves from E to M, where he is seen in Conjunction

with the Sun, he will appear to have described the Arch OQ greater than that OL.

In this State, now, the Planet is *direct*, and its Motion, from West to East, or according to the Order of the Signs. And its Motion, now that it is in Conjunction with the Sun and most remote from us, is quicker than at any other time. See *DIRECTION*.

The Earth arriving at C, while Saturn describes the Arch MG, he will be observed in the Zodiac at R. But the Earth being advanced to K, and Saturn to H, so as the Line KH joining the Earth and Saturn, be for some time Parallel to itself, or nearly so; Saturn will be seen all that time in the same Point of the Zodiac at P, and with the same fix'd Stars, and is therefore *Stationary*. See *STATION*.

But the Earth being come to D, and Saturn arrived in opposition to the Sun in X, he will appear in the Zodiac in V, and will seem to have been *Retrograde*, or to have gone backwards through the Arch PV.—Thus the superior Planets, on Optical Considerations, are always *Retrograde*, when in Opposition to the Sun. See *SUN, OPPOSITION, &c.*

The Arch which the Planet describes while thus *Retrograde*, is call'd the *Arch of Retrospection*. See *ARCH*.

The Arches of *Retrospection* of the several Planets are not equal.—That of Saturn is greater than that of Jupiter; that of Jupiter than that of Mars, &c.

**RETROGRADATION of the Nodes**, is a Motion of the Line of the Nodes, whereby it continually shifts its Situation from East to West, contrary to the Order of the Signs; completing its *Retrograde* Circulation in the Compass of about 19 Years: After which Time either of the Nodes having receded from any Point of the Ecliptic returns to the same again. See *NODE*.

**RETROGRADATION of the Sun**.—When the Sun is in the torrid Zone, and has his Declination, AN, (*Tab. Astronomy, Fig. 9.*) greater than the Latitude of the Place AZ, but either Northern or Southern as that is; the Sun will appear to go backwards, or to be *Retrograde* both before and after Noon. See *SUN and ZONE*.

For, draw the vertical Circle ZGN to be a Tangent to the Sun's Diurnal Circle in G, and another ZON, through the Sun in O.—'Tis evident all the intermediate vertical Circles cut the Sun's diurnal Circle twice: First, in the Arch GO, and the second time in the Arch GL.—Wherefore, as the Sun ascends thro' the Arch GO, it continually arises at further and further Verticals. But as it continues its Ascent through the Arch GL, it descends to its former Verticals; and therefore is seen *Retrograde* for some time before Noon.

The same, it may be shewn after the same manner, it does for some time after Noon.

Hence, as the Shadow always tends the opposite Way to that of the Sun, the Shadow will be *Retrograde* twice every Day in all Places of the Torrid Zone, where the Sun's Declination exceeds the Latitude. See *SHADOW*.

**RETROGRADATION, or RETROGRESSION**, in the higher Geometry, is the same with what we otherwise call *contrary Flexion*. See *CONTRARY FLEXION*.

The *Retrospection* of Curves may be thus conceived.—Suppose a Curve Line AFK, (*Tab. Geometry, Fig. 81.*) to be partly Concave, partly Convex, in respect of the Right Line AB, or in respect of the determinate Point B; the Point F which separates the Concave Part of the Curve from the Convex, or which makes the end of one, and the beginning of the other, is call'd the *Point of contrary Flexion*, when the Curve is continued from F towards the same Side as before.—When the Curve is continued backwards towards A, then is F the Point of *Retrospection*. See *POINT and CURVE*.

**RETROGRESSION, or RETROCESSION**, the same with *Retrospection*. See *RETROGRADATION*.

**RETROMINGENTS**, in natural History, a Class or Division of Animals, whose Characteristic is, that they stale or piss backwards; as Cows, &c. See *ANIMAL*.

The Word is compounded of the Latin, *retro*, backwards, and *mingo*, I make Water.

**RETROPANNAGIUM, RETROPANNAGE**, in our antient Law-Books, *afterpannage*; or what is left when the Beasts have doct. See *PANNAGE*.

*Et debent habere Retropannagium a Fisco Sancti Martini usque ad Festum Pur. Beate Marie. Fectis in Parl. temp. Edui. III.*

**RETROSPECT**, a look or view backwards. See *RETROACTIVE*.

**RETURN**, in Law, hath two several Acceptations.

The one is the Return of Writs by Sheriffs and Bailiffs; which is only a Certificate made to the Court by the Sheriff, Bailiff, &c. of what is done with regard to the Execution of the Writ directed to them. See *WRIT*.

Such also is the Return of a Commission, which is a Certificate, or Answer of what is done by the Commissioners, to whom such Commissions, Precepts, Mandates, or the like, are directed.

The other Application of the Word return, is in Case of a Replevin; for if a Man distrain Cattle for Rent, &c. and afterwards justify or avow his Act, so as it is found lawful, the Cattle be-  
fore

fore delivered unto him that was detain'd, upon Security given to prosecute the Action, shall now be returned to him that detain'd them. See DISTRESS, REPLEVY, &c.

RETURNS are also certain Days in each Term, peculiarly set apart for the several Kinds of Proceedings, in any Cause to be determined. See TERM, &c.

They are also call'd *Days in Bank*. See DAY.

*Hilary Term* has four such Returns; viz. *Oblatus Hillarū*, eight Days after *Hilary Day*; 2. *Undatus Hillarū*, fifteen Days; *Crasina Purificatiōis*, the Day after the Purification; and *Oblatus Purificatiōis*, eight Days after, inclusive.

*Easter Term* has five Returns; viz. *Quindena Pasche*, fifteen Days after *Easter*; *Tres Pasche*, three Weeks after; *Mense Pasche*, the Day-Month after *Easter*; *Quinq̄ Pasche*, the Day five Weeks from *Easter*; and *Crasina Ascensionis Domini*, the Day after *Ascension-Day*.

*Trinity Term* has four Returns; viz. *Crasina Trinitatis*, the Day after *Trinity*; *Oblatus Trinitatis*, eight Days after, inclusive; *Quindena Trinitatis*, fifteen Days after; and *Tres Trinitatis*, three Weeks after.

*Michaelmas Term* has six Returns; viz. *Tres Michaelis*, three Weeks after *Michaelmas*; *Mense Michaelis*, the Day-Month after *Michaelmas*; *Crasina Ascensionis*, the Day after *All-Souls*; *Crasina Martini*, the Day after *Martinmas Day*; *Oblatus Martini*, eight Days after, inclusive; and *Quindena Martini*, fifteen Days. See TERM.

RETURN, in Building, A Side or Part that falls away from the Fore-side of any straight Work, is call'd the Return.

RETURNS of a Trench, in Fortification, are the turnings and windings which run from the Lines of a Trench. See TRENCH.

RETURNO habendo, or RETURNUM Averiorum, a Writ which lies for him who has avow'd a Distress made of Cattle, and proved his Distress to be lawfully taken; for the Return of the Cattle detain'd unto him, which before were replevied by the Party detain'd, upon Surety given to pursue the Action. See DISTRESS, &c.

The same Writ is granted when the Plaintiff or Action is removed by *Recoverture*, or *Actio ad Curiam*, into the Court of Common-Pleas; and by whose Cattle were detain'd, makes Default, and does not prosecute his Action. See

RETURNUM Irreplegiabile, a Writ Judicial, sent out of the Common-Pleas to the Sheriff, for the final Restitution or Return of Cattle to the Owners, unjustly detain'd as Damage-tenants, and so found by the Jury before Justices of Assize in the County, or otherwise, through Default of Prosecution. See RETURN, DISTRESS, REPLEVY, &c.

REVE, or GREVE, in ancient Customs, the Bailiff of a Franchise or Manor; thus call'd, especially in the Western Parts. See GREVE.

Hence *Stir-erro*, *Sheriff*, *Port-erro*, *Church-erro*, &c. See SHERIFF, PORTGREVE, &c.

REVE is also used in ancient Customs for a Duty or Imposition on Merchandises imported or exported. See DUTY and CUSTOM.

*M. de Gange* derives the Word from the *Latin*, *regere*, to ask; as being a Tribute anciently granted Princes at their Request, as a Free-Gift.

REVEILLE, a Beat of the Drum, intended to give Notice that it is Day-break; and that the Soldiers are to rise, and the Centries forbear challenging. See DRUM.

The Word is *French*, form'd of the Verb *reveller*, to awake.

REVELATION, the Act of revealing, or making a thing publick which before was a secret, or unknown.

The Revelation of a Confession made by the Confessor, is adjudg'd in the *Romish Church*, to deserve the most exemplary Punishment. See CONFESSION.

The Word *Revelation* is used, by way of Eminence, for the Discoveries made by God to his Prophets, &c. and by them to the World. See PROPHECY.

The *Romans* have two huge Volumes of the *Revelations of St. Bridget*. See LEGEND, VISION, &c.

The Word is form'd from the *Latin*, *revolv*, of *re* and *volv*, q. d. unroll.

REVELATION, in Religion, is the Discovery which God has made to the World by the Mouths of his Prophets; of certain Points of Faith and Duty, which they could not learn from natural Reason. See NATURE, REASON, FAITH, &c.

Religion is divid'd into natural Religion; and *Revelation*, or revealed Religion. See RELIGION.

The Christian Revelation is that made by Christ, and his Apostles, in the New Testament. See TESTAMENT.

The Jewish Revelation is that made by *Moses* and the Prophets, in the Old Testament. See BIBLE, PROPHECY, &c.

A late Author observes, somewhat ironically, that 'tis the common Method of all new Revelations, to be built on Precedent ones.—Thus, the Mission of *Moses* to the *Israelites*, supposes a former Revelation to *Abraham*, &c. The Mission of Christ supposes that of *Moses*; and the pretended Mission of *Mahomet*, supposes the Mission of Christ. The Mission of *Zoroaster* to the *Perfians*, supposes the Religion of the *Mg*, &c.

The general Foundation of all Revelations is this, That God is pleas'd Mankind should know something relating to himself, his own Nature, Dispenfations, &c. which the natural Faculties he was pleas'd to create him withal, could not attain to; and that he requires some Duty or Service at our Hands, more than what necessarily follows from the Relation we are under to him as our Creator, Preserver, &c.

Particular or occasional Revelations have their particular Genius, Characteristics, and Designs.—That made by *Moses* and the Prophets, chiefly related to the Nation of the Jews, considered as the Descendants of *Abraham*: Its Design seems to have been to rescue that People from their Slavery; to settle them in a new Plantation; to give them a set of Laws; to new form their Manners; to support them under Difficulties and Dangers of their Enemies, from an Opinion of their being under the immediate Direction and Appointment of God; to keep them from intermingling again with their Neighbours, from an Opinion of their being a chosen People, and of a Messiah to be born among them; and to lay a Foundation of a Restoration, in case of their being oppress'd, from the Opinion of a Deliverer.—To some or other of these Ends do all the Old Testament Prophecies seem to tend.

The Christian Revelation is founded on a Part of the Jewish.—The Messiah promis'd in the one, is reveal'd in the other. All the rest of the Jewish Revelation, which related peculiarly to the Jewish People, is here set a-side; and only that Part of it which was to affect the World in general, we mean that relating to the coming of the Messiah, is here built upon. See MESSIAH.

Indeed it must be own'd the Jesus ever look'd on this Part as peculiar to themselves, as any of the rest: The Messiah was promis'd to them; he was to be their Deliverer, their Restorer, &c.—But upon the taking Place of this new Revelation, a new Scene was open'd.—This Part of the old Revelation, it was shew'd, was all Typical, or Allegorical; and the Prophecies relating hereto, not to be understood in their primary or literal Sense. The Messiah was not to be the Restorer of the Jewish Sovereignty and Liberties, which were now fallen into the Hands of the *Romans*, but to restore and re-establish the World, who had lost their original Righteousness, and were become Slaves of Sin; to preach Repentance and Remission, and at last to suffer Death, that all who believ'd in him, might not die, but have everlasting Life.

Such is the Tenor and Design of the Christian Revelation, which is the Event, was so far from being what it had been apprehended to be, by the People to whom it was first promis'd; that it proved the very Reverse; and instead of re-establishing and confirming the other Branches of their Revelation, superseded, and set them all a-side.—The Pale was now broken down, and the being of the Seed of *Abraham*, ceas'd to be a Privilege; all the World being invited on the same Terms with the Jews.

The Consequence was, that the Jew denying this to be the Messiah that had been promis'd to them, as not able to see the Prophecies fulfilled in him, for want of the typical Meanings thereof, were generally excluded from the Privileges of that Mission which had been suppos'd wholly intended for them; And had their Ruin completed from the very means whence they expected their Redemption. See TYPE, PROPHECY, &c.

REVELS, Entertainments of Dancing, Masking, Gaming, Acting of Comedies, Farces, &c. antiently very frequent in Inns of Courts, at certain Seasons, and in Noblemen's, &c. but now much disus'd.

The Officer who has the Direction or ordering hereof, was call'd the *Master of the Revell*.

The Word is form'd from the *French*, *reveller*, to awake.

REVNUE, the yearly Rent or Profits arising to a Man from his Lands, Possessions, &c. See RENT.

The Revenue of this Manor consists in Tiths, Rents, &c. See MANOR, &c.

The Revenue of the English Clergy were first fix'd by King *Ethelstanus*, Anno 855; who granted them for ever, the Tith of all Goods, and the tenth Part of all the Lands of England, free from all Secular Service, Taxes, Impositions, &c. See TITH and CLERGY.

The certain Revenues of the King of England were antiently greater than those of any King in Europe; and 'till the time of the Civil War they enjoy'd in Domains and Fee-Farm Rents almost enough to discharge all the ordinary Expences of the Crown, without any Tax or Imposition on the Subject.

Upon the Restoration, the Crown Revenues being found much alienated, and the Crown Charges increas'd; the Parliament settle'd a yearly Revenue of 1,000,000*l.* upon the King; so much as the former Crown Revenues fell short of that Sum, to be rais'd on Goods exported and imported, upon Liquors, and Fire-Heards. See DUTY, &c.

At the Death of King *Charles II.* the Revenue amounted to 1,800,000*l.* per Ann.—In King *James II's* Time, it was rais'd to 2,000,000*l.* which was compos'd to be one tenth of the Revenues of the whole Kingdom.

At the same time the Revenues of the King of France were computed at seven Millions Sterling; and those of the States of Holland,

Holland, at three Millions.—For more Particulars of this Kind, see *POLITICAL ARITHMETIC*.

**REVENUE**, in Hunting, a Mef of Flefh, formed chiefly of a Clufter of whitif Worms on the Heads of Deer, and occafioning them to eat their Horns, by gnawing the Roots thereof. See **HEAD, HORN, &c.**

The *Revenue* diftill'd, is laid to help Women in Travel. **REVENUE** is alfo ufed for a new Tail of a Partridge, growing out after the lofs of a former.—The *Revenue* is meafured by Fingers. Thus we fay, a Partridge of two, three, four Fingers *Revenue*.

The Word *Revenue* is French, form'd from *revenir*, to return.—Whence *Revenue* is fometimes ufed in ancient Authors for a Return: As the *Revenue of Eafter*. See **RETURN**.

**REVERBERATION**, in Physics, the Act of a Body repelling or reflecting another, after its unpinging thereon. See **REFLECTION**.

In the Glass-Men's Furnaces, the Flame *reverberates*, or bends back again, to fcorch the Matter on all Sides.

Echo's are occafion'd by the *Reverberation* of Sounds from arch'd Obftacles. See **ECHO**.

The Word is form'd from the Latin, *re* and *verbero*, I beat again.

*Reverberation* and *Reflection* refer to the fame Action; only the one to the Agent, the other to the Patient.—A polished Body *reverberates* the Rays all around: The *Reflection* of the Rays does not arife from their striking againft the folid Parts of Bodies. See **RESOLUTION** and **REFLECTION**.

**REVERBERATION**, in Chymiftry, a kind of Circulation of the Flame, by means of a *Reverberatory*; or the return of the Flame from the top of the Furnace, back to the Bottom. See **REVERBERATORY**.

*Reverberation* is of two Kinds.—The firft with a clofe Fire; that is, in a *Reverberatory Furnace*, where the Flame has no Vent a-top; being cover'd with a Dome, or Capital, which repels its Action back on the Matter, or the Veffel that contains it, with increas'd Vehemence.

After this Manner are Refining, the Diftillation of acid Spirits, &c. perform'd. See **DISTILLATION** and **REFINING**.

*Reverberation* with an open Fire, is that perform'd in a Furnace or *Reverberatory* whose Registers are all open; chiefly ufed in Calcination. See **CALCINATION**, **AIR**, &c.

**REVERBERATORY**, or **REVERBERATING FURNACE**, is a Chymical Furnace built clofe all around, and cover'd a-top with a Capital of Bricks or Tiles, fo as not to give any Vent to the Heat or Flame, but to determine it to *Reverberate* or turn back from the Brick Work with new Force, upon the Matters plac'd at Bottom. See **REVERBERATION**.

When the Fire has no Vent or Passage a-top, 'tis a *whole Reverberatory*; when the middle of the Capital is open, and only the Sides clofe, fo that there is only a half Circulation of the Flame, 'tis call'd a *half Reverberatory*.

The *reverberating Furnace* is chiefly ufed for the Fusion of Metals, and Minerals, and other Occafions where the moft intense Heat is required, as in *Alloying*, &c. Whence it is alfo call'd the *Melting Furnace*, and *Assaying Furnace*. See **FURNACE**, **FUSION**, **ASSAY, &c.**

**REVEREND**, a Title of Refpect given to Ecclefiafticks. See **TITLE** and **QUALITY**.

The Religious Abroad are call'd *Reverend Fathers*; Abbeftes, Prioresses, &c. are call'd *Reverend Mothers*. See **ABBOT**, **RELIGIOUS**, &c.

With us, Bifhops are *Right Reverend*, and Archbifhops *Moft Reverend*.—In France their Bifhops, Archbifhops, and Abbots, are all alike *Reverendiffimif*, *moft Reverend*. See **BISHOP**, &c.

**REVERIE**, a Term purely French, yet now frequently ufed in *Englif*.

It fignifies, literally, a Delirium, Raving, or Diftraction. See **DELIRIUM**.

Thus we fay, 'tis an ill Sign when the Patient falls into a *Reverie*.

Hence it comes, likewife, to be ufed for a ridiculous, extravagant Imagination, Action, or Propofition; a Chimera or Vifion.—Thus we fay, Authors obtrude abundance of their *Reveries* upon us for folid Truths.

But its moft ordinary ufe among *Englif* Writers is for a deep, diforderly Mufing, or Meditation; equivalent to what we popularly call a *Brown-ftudy*.—Thus: A little Diftraction I would allow; but for that continued Series of *Reveries* fome People are guilty of, who are ever abfent from the Place where you fee them, and are never prefent any where, 'tis inexcuifible.

**REVERSE**, in Law, &c.—To *Reverse*, *reverfer*, fignifies to undo, repeal, or make void. See **REPEAL**, **ANNUL**, &c.

The Word is form'd of the Latin, *re*, again, and *verfus*, turn'd.

**REVERSE**, of a Metal Coin, &c. is the fecond, or back-fide; in Oppofition to the Head or principal Figure. See **COIN**, **MEDAL**, &c.

F. Chamillart, a Jefuit, has an exprefs Difertation on this Point, whether or no the *Reverfes* of Metals have always a Regard to the Emperor's or Emperrefs's whose Heads are reprefented on the Front Side of the Medal? He fays, that till of late the

Antiquaries have made no doubt of it; but that there are now feveral Authors of another Opinion.

**REVERSE**, in Fencing, a Back-ftroke. See **GUARD**, **FENCING**, &c.

**REVERSED**, in Heraldry, a thing turned backwards, or up-fide-down.

**REVERSED TALON**, in Architecture. See **TALON**.

**REVERSING**, or **REVERSEING**, in Music, the inverting of the Order of the Parts; that is, the placing of the higher Part or Treble, in the room of the lower Part or Bass. See **PART**, **BASS**, **TREBLE**, &c.

*Reversing* is frequently practis'd in figurative Counterpoint, where the Bass ferves as Treble; and the Treble, at the fame time, as Bass; and all this, in fuch manner, as that the Harmony, though very different, is yet as correct as before the *reversing*, when the Parts were in their natural Order.

To know how to difpofe the Parts, fo as the *reversing* mayn't do any Damage, is a feeret, whereon M. *Beuffard* has promis'd a Treatife exprefs.

A *revers'd Figure*, or *Counterfigure*, call'd by the *Italians*, *per contrarij movimenti*, is when the Guida falls; and the other inftead of imitating in falling, imitates in rifing; or a Figure *per Arfen* and *Thofin*. See **ARSEN**.

**REVERSION**, in Law, is defin'd by *Coke*, a returning of Lands, &c. into the Poffeffion of the Donor, or his Heirs, after the Expiration of the Term for which they were given or granted. See **DONATION**, &c.

The Word has a double Acceptation.—The firft is, *Tuo revertendi cum ftatu Poffeffionis defertur*, which is no more than an Intereft in the Land, when the Occupation or Poffeffion of it fhall fall.

The fecond is, when the Poffeffion and Eftate, which was parted with for a time, ceafeth, and is determin'd in the Perfons of the Alienees, Alienees, Grantees, or their Heirs; or effentially returns to the Donor, his Heirs or Affigns; whence it was deriv'd.

This is the moft proper Signification of the Word, which is deriv'd from *Revertor*: *Est apte dici non potest Reversio Antequam revertatur in facta*. Little.

The Difference between a *Reverfion* and a Remainder confifts in this, that a Remainder is general, and may remain or belong to any Man but him that granteth or conveyeth the Land, &c. See **REMAINDER**.

Whereby a *Reverfion* is to himfelf, from whom the Conveyance of the Land, &c. proceedeth, and is commonly perpetual, as to his Heirs alfo.—And yet fometimes *Reverfion* is confound'd with Remainder.

For the Values of *Reverfions*, or Eftates in *Reverfion*, the little Book of Tables for renewing and purchafing Colledge, and Church Leafes, printed at Cambridge in 1700, and recommended by Sir *Ifaac Newton*, furnifhes us with a very ufeful Table, which fhewes what one Pound due at the end of any Number of Years to come, not exceeding 40, is worth in ready Money, at 5, 6, 7, 8, 10, and 12 per Cent. per Ann.

Suppos'd, it required, what 1*l.* due a Year hence, is worth in ready Money: To find this by the common Operations, the Method is this.—Let 100 *l.* with the Intereft of a Year add'd to it, be the firft Term in the Rule of Three; 100*l.* the fecond, and 1*l.* the third; (for 100 *l.* with its Intereft going on to the end of the Year, is to a bare 100 *l.* then due: So mult 1*l.* worth its growing Intereft, be to the Decreafe of 1*l.* at the Years end) thus, at 6*l.* *o.* *gr.* and 10 *l.* per Cent. the Work will ftand thus:

$$\text{As, } 106 \cdot 100 :: 1 \cdot \cdot 94339, \text{ or } 18 \cdot 10 \frac{1}{2} \\ 110 \cdot 100 :: 1 \cdot \cdot 90909, \text{ or } 18 \cdot 2 \frac{1}{2}$$

Whence it appears, that 1*l.* due a Year hence, at 6 *l.* per Cent. is worth 18*l.* 10*s.*  $\frac{1}{2}$ ; and at 10 per Cent. to 18*l.* 2*d.* So that 18*l.* 10*s.*  $\frac{1}{2}$  ready Money, is worth 20*s.* to be paid a Year hence at 6 per Cent.; and 18*l.* 2*d.* ready Money, is worth 20*s.* to be paid a Year hence at 10 per Cent. See **INTEREST**.

But this Table fhortens the Work.—To find by it how to renew a Leaf of 27 Years, that hath but one Year left, at the Rate of 10 per Cent; look into the fame, and under the Rate of Intereft mention'd, and right againft 27 Years, in the common Angle of meeting, you have 2*l.* 8*s.*  $\frac{1}{2}$ , which is the Fine to be paid to renew one Year left in the faid Leaf; fuppofing the Rent to be 1*l.* per Annum. For it is 27 Years ere the Leaf is complet'd, in which time the Fine of 2*l.* 8*s.*  $\frac{1}{2}$ , will amount to 20*s.* and therefore by paying that Fine, the Leaf may fairly be made up again.

Suppos'd again, an Eftate in Fee-fimple, whose real Value is 100 *l.* but mortgag'd, or Leas'd out for 20 Years; what is the *Reverfion* of it now worth at 6*l.* per Cent. Intereft?—By the Table you find, that 1*l.* to be paid 20 Years hence, is worth but 6*s.* 2*d.*  $\frac{1}{2}$ , and multiplying that by 100, you'll find 100 times 6*s.* is 30*l.* 0*s.* 0*d.* 100 times 2*d.* or 20*s.* makes 00*l.* 16*s.* 8*d.* and 100 times  $\frac{1}{2}$ , or 30 makes 00*l.* 6*s.* 3*d.* the Sum is 31*l.* 2*s.* 11*d.* which is the prefent Value of 100 *l.* to be paid 20 Years hence.

A TABLE of *Reversions* shewing what *l. duc* any Number of Years hence, under 41, is worth in ready Money at 5, 6, 7, 8, 10, and 12 *l. per Cent.*

Years.	5 per Cent.	6 per Cent.	7 per Cent.	8 per Cent.	10 p. Cent.	12 p. Cent.

REVERSION of *Series*, in Algebra, is a Method finding of a natural Number from its Logarithm given; or the Sine from its Ark; or the ordinate of an Ellipsis from an Area given to be cut off from any Point in the Axis. See SERIES. See also LOGARITHM, SINE, ORDINATE, &c.

REVERT, in Law; a thing is said to *revert* when it returns or falls back to its first Owner. See REVERSION.

All Honours, and Royal Fees, alienated, *revert* to the Crown; or are *reversible*.—Apparages, or Portions of younger Sons of Kings, are granted on Condition of *Reversion*. See APPANAGE.

REVESTIARY, or REVESTRY. See VESTRY.

REVIEW, in War, the view or Appearance of a Body of Soldiers ranged in form of Battle; and afterwards made to file off; to see if the Companies be complete, or to receive their Pay, &c.

The General always *Reviews* his Troops before they go into Winter-Quarters, &c. See QUARTER.

REVIEW, in Chancery.—A *Bill of Review* is, where the Cause has been heard, and the Decree sign'd and entail'd; but some Error in Law appears in the Body of the Decree; or some new Matter discovered in Time after the Decree made. See DECREE.

This Bill is not exhibited but by Leave of the Court. See BILL, CHANCERY, &c.

REVIVOR, in Law.—A *Bill of Revivor* is where a Bill has been exhibited in Chancery against one who answers; but be-

fore the Cause is heard, or at least before the Decree is enrolled, one of the Parties dies.

In this Case, a *Bill of Revivor* must be brought, to the End the former Proceedings may stand *reviv'd*; and the Cause be finally determined. See BILL.

REVISE, among Printers, a second Proof of a printed Sheet. See PRINTING.

REVIVIFICATION, or RESUSCITATION, in Chymistry, the Art of restoring a mix'd Body to its first State, after it had been alter'd and dispos'd by Distillation, Calcination, or the like.

Thus Cinnabar and other Preparations of Mercury, are *reviv'd*, or *revivified* into fluid Mercury.—*Olaus Borrichius* affires us, that having tormented Mercury with several Fires, for the Space of a whole Year; having rejuic'd it into Water, Turbith, into Althes, &c. it *revivified*, and resumed its first Form in the middle of the Flames, by the Attraction of Salt of Tartar. See MERCURY.

Gold, and other Metals, 'tis said, may be recovered or *revivified* into running Mercury, by the use of certain Salts, which penetrating the Substance of the Metals, absorb the fixing Sulphur or Cement by which the Mercury was before bound into a malleable Mass. See METAL, GOLD, &c.

REVIVING, in Law, a renewing of Rents and Actions, after they had been extinguish'd. See RENT, EXTINGUISHMENT, &c.

REVOCATION, in Law, the Act of *revoking*, calling back, or annulling a Power, Grant, &c. made before.

The *Revocability* of an Offer after it is accepted, is invalid.—All preceding Wills or Testaments are *revoked* by the last.—A Prior Clauſtral is *revocable* at Pleaſure.—The *Revocation* of the Edict of Nantes was fatal to the French Proteſtants. See EDICT-REVOLUT. See REBELLION.

REVOLUTION, in Politics, is a grand Turn or Change of Government.

There are no States in the World but have undergone frequent *Revolutions*.—The Abbot de Vertot has furniſh'd us with two or three good Hiſtories, of the *Revolutions* of Sweden, the *Revolutions* of Rome, &c.

The *Revolution*, is uſed by Way of Eminence, for the great Turn of Affairs in England in 1688; when King James II. abdicating, the Prince and Princeſs of Orange were declared King and Queen of England, &c. See ABDEICATION.

The Word is form'd from the Latin, *re-voles*, to roll backwards.

REVOLUTION, in Geometry. The Motion of any Figure quite round a fix'd Line, as an Axis, is call'd the *Revolution* of that Figure; and the Figure fo moving is ſaid to *Revolve*. See AXIS.

Thus a right angled Triangle revolving round one of its Legs as an Axis, generates by that *Revolution*, a Cone. See CONE.

REVOLUTION, in Astronomy, is the Period of a Star, Planet, Comet, or other Phenomenon; or its Courſe from any Point of its Orbit, till it return to the ſame. See PLANET, PERIOD, &c.

The Planets have a twofold *Revolution*; the one about their own Axis, uſually call'd their *Diurnal Rotation*, which conſtitutes what we call their *Day*. See DIURNAL and DAY.

The other about the Sun, call'd their *Annual Revolution*, or *Period*; conſtituting their *Year*. See ANNUAL and YEAR.

Saturn, according to Kepler, makes his *annual Revolution* in the Space of 29 Years, 174 Days, 4 Hours, 58' 25" 30". Jupiter in 11 Years, 317 Days, 14 Hours, 49' 31" 56". Mars 1 Year, 321 Days, 23 Hours, 31' 56" 49". Venus in 224 Days, 17 Hours, 41' 55" 14". Mercury in 87 Days, 23 Hours, 14' 24". See SATURN, JUPITER, MARS, &c.

REVULSION, in Medicine, the turning of a violent Flux of Humours, from one Part of the Body to another, either neighbouring or oppoſite. Part. See HUMOUR, DERIVATION, &c.

In very dangerous Wounds, where the loſs of Blood is great, and the ſtopping it ſpeedily enough, impracticable; 'tis uſual to open a Vein in ſome remote Part, to cauſe a *Revulſion*; that is, to turn the Courſe of the Blood from the former Part. See PHLEBOTOMY.

*Revulſion* are alſo cauſed by Cupping, Friction, &c. See CUPPING and FRICTION.

The Term *Revulſion* is alſo uſed for a great Turn or Revulſion of Humours in the Body.—Sudden Diſeaſes are occaſioned by great *Revulſions* of Humours, which fall all at once on certain Parts.

RHABDOIDES, in Anatomy, a Name given the ſecond true Suture of the Skull; call'd alſo the *Sagittal Suture*. See SUTURE.

The Word is form'd from the Greek, *ῥαβδος*, Rod, or Staff, and *ειδος*, form.

RHABDOLOGY, in Arithmetick, a Name ſometimes given to the Method of performing the two moſt difficult and operoſe Rules, *viz.* Multiplication and Division, by the two eaſieſt, *viz.* Addition and Subtraction; by means of two little Rods or Lamine, whereon are inſcribed the ſimple Numbers, and which are to be ſhifted according to certain Rules.

Theſe Rods are what we popularly call *Naper Bones*, from their Inventor, a Swiſs Baron, who likewiſe invented Logarithms.

For their Deſcription and Uſe, ſee NEPAPERS-BONES.

RHABDOMANCY, an ancient Method of Divination, perform'd by means of Rods, or Staves; whence its Name, from the Greek *ῥαβδος*, Rod, and *μαντις*, Divination. See DIVINATION.

St. Jerome makes mention of this Kind of Divination, in his Commentary on *Hiſai*, Chap. iv. 12. where the Prophet ſays in the Name of God, My People ask Council at their Sticks; and their Staff declare unto them: Which Paſſage that Father underſtands of the Grecian *Rhabdomancy*.

The ſame he finds over again in *Ezekiel* xli. 21, 22. where the Prophet ſays, For the King of Babylon ſtood at the parting of the Ways, at the Head of the two Ways, to aſk Divination; he made his Arrows bright: Or as St. Jerome renders it, he mix'd his Arrows, he conſulted with Images, he hold'd in the Liver.

If it be the ſame Kind of Divination that is mention'd in the two Paſſages; *Rhabdomancy* muſt have been the ſame Superſtition with *Belomancy*. See BELOMANCY.

In effect the two are ordinarily confounded.—The Seventy themſelves Tranſlate the *ῥαβδος* of *Ezekiel* by *ῥαβδος*, a Rod; though in Britiſh it ſignify Arrows.

This, however, is certain, the Inſtruments of Divination mention'd by *Hiſai*, are different from thoſe of *Ezekiel*. In the former, 'tis *ῥαβ, εἶς, ἵππος, ἵππος*, make, his Wood, his Staff: In the

latter *ῥαβδος, ἵππος, ἵππος*, Arrows. Though 'tis poſſible they might uſe Rods or Arrows indifferently; the military Men Arrows, and the reſt Rods.

It appears by the Laws of the *Friſones*, that the ancient Inhabitants of Germany practis'd *Rhabdomancy*.—The *Sophians* were likewiſe acquainted with the uſe thereof; and *Herodotus* obſerves, lib. iv. That the Women among the *Alani* fought and gather'd together ſix ſtraight Rods or Wands, and uſed them in the like Superſtition.

RHAGADES, in Medicine, a Greek Term uſed for the Chaps or Clefts in the Lips. See LIPS.

RHAGADES, are alſo a fort of little chap'd Ulcers of the Oedematous Kind; form'd of a ſluggiſh ſaline Humour, and occaſioning a great Contraction, and ſtrengthening of the Part, which is by this means ſhrivell'd up like a wet Parchment when held to the Fire. See OEDEMATOUS.

They ariſe chiefly on the Fundament, the Neck of the Womb, the Preputium, and even the Mouth; in which laſt Caſe the Patient is not able to ſpeak, chew, or the like.

They are ſometimes moiſt, and of a cancerous Nature, eating deep, and difficult of Cure; but are more commonly of a leſs malignant tendency, being the Conſequences of a Diarrhea, Dyſentery, or the like. See TUMOR, ULCER, &c.

RHAGOIDES, in Anatomy, the ſecond Coat, or Tunic of the Eye; more uſually call'd the *Uvea*. See UVEA.

It has its Name *Rhagades* as reſembling a Grape-ſtone.

In this is the Hole call'd the *Pupil*. See PUPIL.

RHAPONTICUM, a medicinal Root, in form reſembling Rhabarb; and nearly of the ſame Virtues.—'Tis frequently mix'd with Rhabarb by thoſe who ſend that Drug into Europe: They are diſtinguiſh'd by this, that the Rhabarb is uſually in roundiſh Pieces, the internal Stricks or Lines whereof run tranſverſe: And *Rhaponiticum* in longiſh Pieces, having its Stricks running length-wiſe.—Beſides, that *Rhaponiticum* chew'd in the Mouth, leaves a Viſcidum behind it, which Rhabarb does not. See RHOBARR.

The ſcarcity of the *Rhaponiticum* of the Levant, occaſions the *Mountain Rhaponiticum*, or *Monk's Rhabarb*, to be frequently ſubſtituted for it, which is a wild *Hyſſogathum*.—They are diſtinguiſh'd by this, that the former is yellow without, and reddiſh within; but the latter blackiſh without and yellow within.

Dr. Quincy, however, confounds the two, when he ſays, the *Rhaponiticum* grows plentifully in England; and that 'tis only uſed as an Alterative, and does not come up to a Cathartic.

'Tis certain, what now obtains in the Shops, under the Name of *Rhaponiticum*, is no other than the *Mountain Rhaponiticum*, or Monk's Rhabarb; and is much inferior in Virtue to the *Rhaponiticum Verum*.

The *Rhaponiticum* was thus call'd, *q. d.* Root of *Pentus*, in *Aſia*; becauſe chiefly produced in the Country of *Pentus*, in *Aſia*.

RHAPSODI, RHAPSODISTS, in Antiquity, Perſons who made a Buſineſs of ſinging Pieces of *Homer's* Poems.

*Caſper* informs us, that the *Rhaphodi* were cloath'd in red when they ſung the *Iliad*; and in blue, when they ſung the *Odyſſey*.

They perform'd it on the Theatres; and ſometimes for Prizes, in Conſults of Poetry, Singing, &c.

After the two Antagoſts had finiſh'd their Parts, the two Pieces, or Papers they were wrote in, were join'd together again; whence the Name, *viz.* from *ῥαβδος*, ſto, I join together; and *ὄδῃ*, Ode, Song.

But there muſt have been other *Rhaphodi* of more Antiquity than theſe; People who compos'd Heroic Poems, or Pieces in Praise of Heroes and Great Men, and ſung their own Compoſitions from Town to Town for a Livelihood: Of which Profeſſion was *Homer* himſelf.

Hence, ſome Critics inſtead of the former Derivation, fetch *Rhaphodiſt* from *ῥαβδος*, to ſing with a Laurel Rod in the Hand, which it ſeems was the Badge of the Primitive *Rhaphodi*.

*Philochorus*, again, derives the Word from *ῥαβδος ἴδιος*, to proſe Pieces of Poetry to be compos'd, as if they were not the Authors of the Poems they ſung. This Opinion, to which *Scaliger* inclines, reduces theſe *Rhaphodi* to the firſt Kind.—In effect, 'tis probable that they were all of the ſame Claſs, whatever Diſtinction ſome Authors may Imagine; and that their Buſineſs was to ſing or rehearſe Poems, either of their own, or other People's Compoſition, as might beſt ſerve their Purpoſe, the getting of a Penny. So that we don't apprehend it any Injury to them, to ſet them on the Foot of our *Ballad-fingers*; many of whom, no doubt, Pen their own Diries. After *Homer's* Time, 'tis no wonder they confin'd themſelves together to his Pieces, for which the People had the moſt Veneration: Nor is it ſurpriſing they ſhould recite Stages, &c. and Diſpute the Point of Recitation in Fairs and Markets.

RHAPSODOMANCY, an ancient Kind of Divination perform'd by picking on a Paſſage of a Poet at hazard, and reckoning on it as a Prediction of what was to befall. See DIVINATION and CHANCE.

There were various Methods of practicing *Rhaphodomancy*.—Sometimes they wrote ſeveral Verſes or Sentences of a Poet, on ſo many Pieces of Wood, Paper, or the like; ſhook them together in an Urn, and drew out one, which was accounted the Lot.

Sometimes

Sometimes they cast Dice on a Table, whereon Verses were wrote; and that whereon the Dye lodg'd, contain'd the Prediction.

A third Manner was by opening a Book, and pitching on some Verse, at first Sight. This Method they particularly call'd the *Sortes Præfœtinæ*; and, afterwards, according to the Poet thus made use of, *Sortes Hæmericæ*, *Sortes Virgilianæ*, &c. See SORTES.

RHAPSODY, in Antiquity, a Discourse in Verse, sung or recited by a *Rhapsodist*. See RHAPSODI.

Others will have *Rhapsody* properly to signify a Collection of Verses, especially those of *Homer*; which having been a long time dispersed in Pieces and Fragments, were at length by *Pylætratus*'s Order, digested into Books, call'd *Rhapsodes*: From the Greek *ῥαψωδία*, *ῥαψω*, I sew; and *ὄδῳ*, Verse, Song.

Hence, among the Moderns, *Rhapsody* is used for an Assemblage of Passages, Thoughts, and Authorities, raked together from divers Authors, to compose some new Piece.—*Lafleur*'s Poeticks make such a *Rhapsody*, wherein there is nothing of the Author's own; but Conjunctions and Particles.

RHETORICIANS, a Sort of Heretics in Egypt, denominated from their Leader *Rhetorus*.

The distinguishing Doctrine of this Heresarch, as represented by *Philostrophus*, was, that he approved of all the Heresies before him; and taught that they were all in the right. What *Philostrophus* mentions of him appears so absurd and ridiculous that *St. Augustinus*, *Heret.* 7. could not persuade himself it was true.

RHETORIC, RHETORICA, the Art of speaking copiously on any Subject, with all the Advantages of Beauty and Force. See SPEAKING.

My Loeb *Bæmon* defines *Rhetoric*, very Philosophically, the Art of applying and addressing the Dictates of Reason to the Fancy, and of recommending them there, so as to affect the Will and Desires.—The End of *Rhetoric*, the same Author observes, is to fill the Imagination with Ideas and Images which may assist Nature, without oppressing it.

*Vossius* defines *Rhetoric* the Faculty of discovering what every Subject affords of use for Persuasion.—Hence, as every Author must invent Arguments to make his Subject prevail; dispose those Arguments thus found out in their proper Places; and give them the Embellishments of Language proper to the Subject; and, if his Discourse be to be delivered in Publick, utter them with that Decency and Force which may strike the Reader: *Rhetoric* becomes divided into four Parts, *Invention*, *Dispositio*, *Elocutio*, and *Promissiatio*; each whereof lies under its proper Head, *INVENTION*, *DISPOSITION*, *ELOCUTION*, and *PROMISSIATION*.

The Word is form'd from the Greek *ῥήω*, *dicō*, I speak; whence *ῥήτωρ*, Speaker, Orator, and *ῥητορική*.

*Rhetoric* and *Oratory* differ from each other as the Theory from the Practice; the *Rhetorician* being he who prescribes the Rules of Eloquence; and the Orator he who uses them to Advantage; and speaks Elegantly, &c.—Ordinarily, however, the two are used indifferently for each other. See ORATORY.

RHEUM, a thin serous Humour, occasionally oozing out of the Glands about the Mouth and Throat. See HUMOUR.

A Fluxion of *Rheum*, usually happening after taking Cold, occasions Excoriations and Inflammations of the Fauces, Lungs, &c. See FLUXION and DEFLUXION.

RHEUM is also used for a *Catarrh*, or a Defluxion of such Humours on the Trachea, and the neighbouring Parts; occasioning a Coughing, Spitting, Hoarseness, Running at the Nose. See CATARRH, COUGH, HOARSENESS, &c.

The *Rheum* is not caus'd by a Pleuritis falling from the Brain on these Parts, as the Antients imagined, there being no Passage from the Brain thither; but from a thin, sharp, serous Humour, oozing out of the Extremities of the Glands of these Parts.

The most ordinary Occasion of *Rheum*, is external Cold; especially the being exposed to it when the Body is much heated.—And hence the Disorder it self is popularly call'd a Cold. See COLD.

*Rheum* falling on the Breast, Lungs, &c. are dangerous; others, not very violent, serve to clear the Head, &c. The usual Remedies are Astringents, Astringents, and Absorbents. See ASTRINGENT, &c.

The Word is form'd from the Greek, *ῥήω*, *ῥήω*, I flow.

RHEUMATISM, in Medicine, a painful Disorder felt in various Parts of the external Body, accompanied with Heaviness, Difficulty of Motion, and frequently a Fever.

Or, a *Rheumatism* is a Pain usually wandering, but sometimes fix'd in the muscular and membranous Parts of the Body; happening chiefly in Autumn.

The proper Seat of the *Rheumatism* is supposed to be in the Membrana Communis of the Muscles; which it renders rigid and unfit for Motion without great Pain. See MEMBRANE.

This Disease is either universal or particular.—*Universal Rheumatism* is that which attacks all the Parts of the Body, even the internal ones.

Particular *Rheumatism* is that which is confined to particular Parts: In which Case the Pains are usually erratic, passing from one Side to another; but sometimes fix'd, call'd also a *sturdy* and *forlorn* *Rheumatism*.

The *Rheumatism* bears a great Analogy to the Gout; whence some call it the *universal Gout*.—The Difference between them consists in this, that the *Rheumatism* attacks not only the Joints, as the Gout does, but also the Muscles and Membranes between the Joints. See GOUT.

A Fit of the *Rheumatism* is frequently preceded by a Fever of two or three Days; and sometimes by a Shivering.—The Attack happens in various Parts of the Body, as the Hands, Arms, Thighs, Legs, Feet, &c. a Redness, Swelling, and Lameness often succeeding.

The Pain sometimes fixing on the Loins, and reaching as far as the *Os Sacrum*, the Disorder is call'd *Lumbago*; and bears a near resemblance to the *Nephritis*; being only distinguishable therefrom by this, that the latter is attended with a Vomiting, which the former is not.

The *Rheumatism* is supposed to arise from a sharp serous Humour thrown on the sensible Parts, and occasioning a Pain by its Vexation.—*Dr. Quincy* says, it proceeds from the same Cause, as that whereby the mucilaginous Glands become stiff and gritty in the Gout. See GOUT.

*Dr. Mejerus* takes it to be occasioned by a sharp alkaline Salt, rather than an acid one; from this Consideration, that the Urine of *Rheumatic* People does not afford above a third Part of the Alkaline Salt found in that of healthful People.

Hence, he conjectures, that the Salt is retain'd in the Blood, imputed and embarrass'd in the Pleuritis; by which means it forms a Viscidity which occasions all the Pains and Tumours of the *Rheumatism*.

The expelling of the Body too suddenly to the cold Air, after having heated it to a great Degree; is the most usual remote Cause.—The Cure is by Evacuation, chiefly, according to *Sydenham*, by repeated Phlebotomy, with a plentiful Use of Volatiles and Diluters.

*Schwinow* recommends Sudorifics; and *Mysgraves*, Catharticks, and Emetics.

It usually proves a tedious, lasting Disease; holding for several Months, sometimes Years; not continually but by Paroxysms.

In aged Persons, and those of weak Constitutions, and decay'd Viscera, it sometimes seizes the Head.

RHEXIS, or RHÉOMA, among Occultists, a Rupture of the Cornes of the Eye. See CORNEA.

The Word is form'd from the Greek *ῥήω*, rupture, of *ῥήω*, *frango*, I break.

RHIME, RIME, or RHYME, in Poetry. See RHYME.

RHINE-Lamb-Root, in Fortification, &c. a Measure of ten Foot, call'd also *Decempeda*, &c. See MEASURE, FOOT, and DECEMPEDA.

RHINE-Grass, in Germany, a Count Palatine of the Rhine. See GRAVE and PALATINE.

RHODIUM Lignum, Rhodius-Wood. See ASPALATHUM. RHODON, in Pharmacy, from *ῥόδον*, *Rosa*; a Name given to some Compositions wherein the Rose is the chief Ingredient; as *Diarrhædia*. See DIARRHÆDION, &c.

Hence also *Rhodofitularium*, q. d. *Sugar of Rose*, &c. See ROSE.

RHOMBOIDES, in Geometry, a quadrilateral Figure, whose Sides and Angles are unequal; but the opposite ones equal. See FIGURE.

Or, *Rhomboides* is a quadrilateral Figure, whose opposite Sides and Angles are equal; but is neither equilateral nor equiangular.

Such is the Figure NOPQ, (*Tab. Geometry, Fig. 24.*)

For the Method of finding the Area of a *Rhomboides*, see RHOMBUS.

RHOMBOIDES, in Anatomy, a Muscle, thus called from its Figure. See MUSCLE.

It lies under the *Capitulum*, and arises from the two inferior Spines of the Neck, and four superior of the Back; and is inserted fleshy into the whole Brain of the Scapula, which it draws backwards, and a little upwards.

RHOMBUS, in Geometry, an obliquangular Parallelogram; or a quadrilateral Figure, whose Sides are equal and parallel; but the Angles unequal, two of the opposite ones being obtuse, the other two acute. See FIGURE.

Such is the Figure ABCD, *Tab. Geometry, Fig. 83.*

To find the Area of a *Rhombus*, or *Rhomboides*.—Upon CD, which is here assumed as a Base, let fall a perpendicular AE; which will be the Altitude of the Parallelogram; Multiply the Base by the Altitude, the Product is the Area.

Thus, if CD be = 456, and ADE = 234; the Area will be found 106704.

For it is demonstrated that an oblique angular Parallelogram is equal to a Rectangle upon the same Base CD, and of the same Altitude CE. (See PARALLELOGRAM.) But the Area of a Rectangle is equal to the Product of the Base into the Altitude. Therefore the Area of an obliquangular Triangle is equal to the same. See RECTANGLE.

The Word is form'd of the Greek *ῥήω*, of *ῥήω*, to encompass.

RHOMBUS, among Surgeons, is a sort of Bandage of a *Rhomboidal* Figure. See BANDAGE.

RHOPALIC Verses, among the Ancients, a kind of Verses which

which begin with Moosyllables, and were continued in Words growing gradually longer and longer to the left, which was the longest of all. See *VERSE*.

They had their Name from the *Greek* γενεα, a Clab, which, like them begins with a slender tip, and grows bigger and bigger to the Head.—Such is that *Verse* of *Homer*,

Ἐ πάρος Ἀργίης παρρησίας, ἐκδιδόχοισιν.

And this *Latin* one,

*Spei Deus aeternæ est fationis Conciliator.*

**RHOPOGRAPHI**, in Antiquity, a Name given to certain Painters, who confined themselves to low Subjects; such as Animals, Plants, Landscapes, &c.

The Title was also given to such as cut Figures of Men, &c. in Box, Phaleria, Yew, &c. in Gardens.

The Word is form'd from the *Greek* ρηος, Toys, or odd Ware, and γραφειν, I write, I paint.

**RHUBARB**, a medicinal Root, large, compact, and heavy; yellow without, of a Nutmeg Colour within; an astringent, bitterish Taste; and an agreeable, aromatic Smell: Of great use in Medicine, as a Purgative. See *ROOT* and *PURGATIVE*.

Considering the mighty Use of this Drug, 'tis surprizing we should know so little of the Place where the Plant grows that produces it.—Some say it comes from the Kingdom of *Bastan*, in the Extremities of *India*; others, that 'tis found in the Provinces of *Scythia* and *Siberia* in *China*. Others will have it only grow in *Persia*; and others on the Confines of *Moscovy*; deriving its Name from *Rhos*, the River among us call'd *Volga*, and *Barbarus*, q. d. Root found by the Barbarians on the River *Rhos*.

*Rhubarb*, in *Latin*, *Rhabarbarum Officinarium*, was not known of the Ancients; and their *Rhabarbarum*, which indeed resembles it, is not the real *Rhubarb*. See *RHAPONTICUM*.

Good *Rhubarb* steep'd in Water gives it a Saffron Colour; and when broke, looks bright, with somewhat of a Vermilion Cast.—Some *Druggists* have the Art of renewing their old Roots, by giving them a yellow hue; but the Cheat is easily known by handling them; the Powder wherewith they colour them sticking to the Fingers.

*Rhubarb* is esteem'd an excellent Cathartic; proper for a Diarrhea, to fortify the Stomach, and to create an Appetite.

*M. Bontius* informs us, in the Memoirs of the *French Academy*, that he drew Extracts from *Rhubarb* both with Water and Spirit of Wine; but the purgative Virtue, he says, was much more visible in the former than the latter; which shews that it consists more in a Salt than an Oil.—He observes, however, that *Rhubarb* taken in Substance, has a still better effect; and adds, that of all the Operations he could make with it, none gave any Credit to the common Opinion, which ascribes an astringent Quality to it.

*Merks* RHUBARB. See *RHAPONTICUM*.

*White* RHUBARB. See *MICHOAGAN*.

**RHUMB**, or **RUMB**, or **RUM**, or **RHOMBUS**, in Navigation, a vertical Circle, of any given Place; or the Intersection of a Part of such a Circle with the Horizon. See *COURSE*.

*Rhumbs* therefore coincide with *Points* of the World, or of the Horizon. See *POINT* and *HORIZON*.

And hence the Mariners distinguish the *Rhumbs* by the same Names as the *Points*, and *Winds*. See *WIND*.

They usually reckon 32 *Rhumbs*; which are represented by the 32 Lines in the *Rose*, or Card of the *Compass*. See *COMPASS*.

*Ashu* defines a *Rhumb* by a Line on the terrestrial Globe, Sea-Compass, or Sea-Chart, representing one of the 32 Winds which serve to conduct a Vessel.—So that the *Rhumb* a Vessel pursues is conceiv'd as its *Route* or *Course*. See *COURSE*.

*Rhumbs* are divided, and subdivided like *Points*.—Thus, the whole *Rhumb* answers to the Cardinal Point.—The half *Rhumb*, to a collateral Point, or makes an Angle of 45° Degrees with the former.—The Quarter *Rhumb* makes an Angle of 22° 30' therewith.—And the half-quarter *Rhumb* makes an Angle of 11° 15'. See *CARDINAL*, *COLLATERAL*, *QUARTER*, &c.

A Table of the *Rhumbs*, or *Points*, and their Distances from the Meridian, see under the Article *WIND*.

**RHUMB-LINE**, or **LOXODROMIA**, in Navigation, is the Line which a Ship keeping in the same collateral Point or *Rhumb*, describes, throughout its whole Course. See *LOXODROMIA*.

The great Property of the *Rhumb Line*, or *Loxodromia*, and that from which some Authors define it, is, that it cuts all the Meridians under the same Angle. See *MERIDIAN*.

This Angle is call'd the *Angle of the Rhumb*, or *Loxodromic Angle*. See *ANGLE*.

The Angle which the *Rhumb Line* makes with any Parallel to the Equator is call'd the *Complement of the Rhumb*. See *COMPLEMENT*.

*Nature and Origin of the RHUMB-LINES.*

An Idea of the Origin and Properties of the *Rhumb-Line*, the great Foundation of Navigation, may be conceiv'd thus.—A

Vessel beginning its Course, the Wind wherewith it is driven makes a certain Angle with the Meridian of the Place; and as 'tis suppos'd the Vessel runs exactly in the Direction of the Wind, it makes the same Angle with the Meridian which the Wind makes.

Supposing, then, the Wind to continue the same, as each Point or Instant of the Progress, may be esteem'd the Beginning; the Vessel always makes the same Angle with the Meridian of the Place where it is each Moment, or in each Point of its Course, which the Wind makes.

Now, a Wind, e. gr. that is North-East, and which of Consequence makes an Angle of 45°, with the Meridian, is equally North-East wherever it blows; and makes the same Angle of 45° with all the Meridians it meets.—A Vessel therefore driven by the same Wind, always makes the same Angle with all the Meridians it meets withal on the Surface of the Earth.

If the Vessel sail North and South, it makes an Angle infinitely acute with the Meridian, i. e. 'tis parallel to it, or rather falls in it.—If it run East and West, it cuts all the Meridians at right Angles.

In the first Case it describes a great Circle; in the second, either a great Circle, viz. the Equator, or a Parallel to it.—If in Course be between the two, it does not then describe a Circle; since a Circle drawn in such a manner would cut all the Meridians at unequal Angles, which the Vessel cannot do.

It describes, therefore, another Curve, the essential Property whereof is, that it cuts all the Meridians under the same Angle.—This Curve is what we call the *Loxodromic Curve*, *Rhumb-Line*, or *Loxodromy*. See *CURVE*.

'Tis a kind of Spiral, which, like the Logarithmic Spiral, makes an Infinity of Circumvolutions without ever arriving at a certain Point to which it still tends, and towards which it approaches every step. See *SPIRAL*.

This asymptotic Point of the *Rhumb-Line* is the Pole; to which were it possible for it to arrive, it would find all the Meridians conjoint, and be lost in them. See *POLE*.

The Course of a Vessel, then, except in the two first Cases, is always a *Rhumb-Line*; which Line is the Hypothenuse of a Right-Angle-Triangle, whose two other Sides are the Ships Way or Distance run in Longitude and Latitude. Now the Latitude is usually had by Observation, (See *LATITUDE*); and the Angle of the *Rhumb*, with one or other of the two Sides, by the Compass. See *COMPASS*.

All therefore that is required by Calculation in Sailing, is the Value of the length of the *Rhumb-Line*, or Ships Course. See *COURSE*.

But as such Curve Line would prove very perplexing in the Calculation; it was necessary to have the Ships Way in a right Line; which right Line however must have the essential Property of the Curve Line, viz. to cut all the Meridians at right Angles.—The Method of effecting which see under the Article *CHART* and *MERCATOR*.

If PA, PF, PG, &c. (Tab. Navigation, Fig. 19.) be suppos'd Meridians, AI the Equator, and AE another great Circle of the Sphere; AO will represent a *Rhumb-Line*, the Angles whereof with the several Meridians, being less than those of the great Circle; it follows, that the *Rhumb* is not a great Circle of the Sphere.—If a Ship therefore be at first directed towards E, and constantly persist in the same *Rhumb*, it will never arrive at the Place E, but at the Place O which is further from the Equator.

Hence, as on the Surface of a Sphere, the shortest Way between A and O is an Arch of a great Circle between A and O; the *Rhumb-Line* is not the shortest Way, or least Distance from one Place to another. See *CIRCLE*, *SPHERE*, *DISTANCE*, &c.

*Application of RHUMB-LINES in Navigation.*

1°. If the Meridians PA, PC, PD, &c. be not very far apart, the *Rhumb-Line* AIHG is divided by the equidistant Parallels BI, KH, FG, &c. into equal Parts.

Hence, 1°. The Parts of the *Rhumb* AI, and AG, see as the Latitudes AL and AN of the Places I and G.—2°. Since the Arches AB, IK, HF, are equal in Magnitude, and therefore unequal in Number of Degrees; the Sum of the Arches, call'd the *Latus Menodynamicum*, or *Miles of Longitude*, is not equal to the Difference of Longitude AB of the Places A and G. See *MECODYNAMICUM*.

2°. The Length of the *Rhumb-Line* AG is to the Change or Difference of Latitude GD, in the same Ratio, as the whole Sine to the Co-sine of the Angle of the *Rhumb*.

Hence, 1°. The *Rhumb* fall'd on being given, together with the Difference or Change of Latitude, turn'd into Miles; the length of the *Rhumb-Line*, or the Distance from the Place A to the Place G upon the same *Rhumb*, is had by the Rule of Three.—2°. The *Rhumb* being given, together with the Quantity of the Ship's Way on the same *Rhumb*, i. e. the length of the *Rhumb* AC; the Difference of Latitude DG, is had by the Rule of Three, in Miles to be converted into Degrees of a great Circle.—3°. The Difference of Latitude DG being given in Miles; as also the Length of the *Rhumb-Line* AG; the Angle of the *Rhumb*, and

consequently the *Rhomb* fail'd on is had by the Rule of Three.—4°. Since the *Cofine* is to the whole *Sine* as the whole *Sine* to the *Secant*; the *Difference* of *Latitude* GD, is to the *Length* of the *Rhomb-Line* AG, as the whole *Sine* to the *Secant* of the *Angle* of the *Rhomb*.

3°. The *Length* of the *Rhomb-Line*, or of the *Ship's Way* in the *same Rhomb* AG, is to the *Latit. Meodynamicum*, or *Meodynamic Side* AB+IK+HF, as the whole *Sine* to the *Sine* of the *Lexonomic Angle* GAP.

Hence, 1°. The *Rhomb*, or *Angle* of the *Rhomb*, being given, as also the *Ship's Way* in the *same Rhomb-Line* AG; the *Meodynamic Side* is had by the *Rule of Three*, in *Miles*; *i. e.* in the *same Measure* wherein the *Length* of the *Rhomb* is given.—2°. In like manner, the *Meodynamic Side* AB+IK+HF being given; as also the *Rhomb-Line*, or *Ship's Way* AG; the *Rhomb* fail'd in is found by the *Rule of Three*.

4°. The *Change* of *Latitude* GD, is to the *Meodynamic Side* AB+IK+HF; as the whole *Sine*, to the *Tangent* of the *Lexonomic Angle* PAG or AIB.

Hence, the *Rhomb*, or *Lexonomic Angle* PAG, and the *change* of *Latitude* CD, being given; the *Meodynamic Side* is found by the *Rule of Three*.

5°. The *Meodynamic Side* AB+IK+HF is a mean Proportional between the *Aggregate* of the *Rhomb* AG, and the *Change* of *Latitude* GD and their *Difference*.

Hence, the *Change* of *Latitude* GD, and the *Rhomb-Line* AG, being given in *Miles*; the *Meodynamic Side* is found in the *same Measure*.

6°. The *Meodynamic Side* AB+IK+HF being given; to find the *Longitude* AD.

Multiply the *Change* or *Difference* of *Latitude* GD by six, which reduces it into *Parts*, of ten *Minutes* each: Divide the *Product* by the *Meodynamic Side*; the *Quotient* gives the *Miles* of *Longitude* answering to the *Difference* of *Latitude* in ten *Minutes*. Reduce these *Miles* of *Longitude* in each *Parallel* into *Differences* of *Longitude*, from a *Lexonomic Table*. The *Sum* of these is the *Longitude* required. See *LONGITUDE*.

7°. If a *Ship* sail on a *North* or *South Rhomb*, it describes a *Meridian*; if on an *East* or *West Rhomb*, it describes either the *Equinoctial*, or a *Parallel* thereto. See *SAILING*.

8°. To find the *Rhomb* between two *Places*, by *Calculation*, or *Geometrically*. We have two *Canons*, or *Proportions*: The first, —As the *Radius*, is to the *Co-fine* of the *middle Latitude*; so is the *Difference* of *Longitude* to the *whole Departure* from the *Meridian*, in the *Course* between the two *Places* proposed.

The second, —As the *Radius* is to the *half Sum* of the *Co-fines* of both *Latitudes*; or (rather for *Geometrical Schemes*) as the *Diameter*, is to the *Sum* of the *Co-fines* of both *Latitudes*; so is the *Difference* of *Longitude*, to the *Departure* from the *Meridian*.

For an *Example* of the former *Proportion*.—Let the *Rhomb* be required between *Cape Finlay*, *Latitude* 43°, *Longitude* 7° 20'; and *St. Naelus Isle*, *Latitude* 38°, *Longitude* 35°. The *middle Latitude* is 40° 30', the *Complement* 49° Degrees 30'; and the *Difference* of *Longitude* 15° 20'. Out of these lesser equal *Parts*, prick down 15° from C to L, (Fig. 20.) and describe the *Arch* BD with 60° of the *Circle*, and make it equal to 49° 30', and draw CD continued farther to A.—From L, take the nearest *Distance* to AC which is equal to LM, and make it one *Leg* of a *Right-angled Triangle*; make the other *Leg* the *Difference* of *Latitude* 5°, which prick from the equal *Parts* from L to F.—Then, the extent MF measured on the *half* *Parts*, shews the *Distance* to be 13° 24'; which, allowing 20 Leagues to a *Degree*, is almost 268 Leagues.—Then, with the *Radius* CB setting one *Foot* at M, cross the *Rhomb Triangle* at GH; which extent measured on the *greater Chord* is almost 22°, the *Complement* whereof is 68°; and so much is the *Rhomb* from the *Meridian* between the two *Places*, amounting to 6 *Points*, and upwards of 30 *Minutes*.

For an *Instance* of the latter *Proportion*.—Let it be required to find the *Rhomb* and *Distance* between the *Lizard* and *Bermudas*. The *Latitude* of the *Lizard* being 56°, and that of *Bermudas* 32° 20'; or 32°, 41 Centenas, and their *Difference* of *Longitude*, 55° Degrees; draw the *Lines* AC and CD (Fig. 21.) at *Right Angles*, and with 60° of the lesser *Circle* describe the *Quadrant* HI, and prick the *Radius* from I to D; so is CD the *Diameter*, then count both *Latitudes* from H to F and G, the nearest *Distance* from F to CI, is the *Co-fine* of *Bermudas* *Latitude*, which prick from C to E; Again, the nearest *Distance* from G to CI, is the *Co-fine* of the *Lizard's* *Latitude*, which place from C to S, so is CS the *Sum* of both *Co-fines*; draw DS, and prick down 55 Degrees, the *Difference* of *Longitude* from C to V, out of the greatest equal *Parts*, and draw VB *Parallel* to DS, so is CB the *Departure* from the *Meridian* in the *Course* between both *Places*.—Making that, therefore, one *Leg* of a *Right-angled Triangle*, prick down 17°, 59 Centenas, the *Difference* of *Latitude* between those *Places*, out of the same equal *Parts* from C to L, and draw BL.—This represents the *Course* and *Distance* between the *Lizard* and *Bermudas*; and the extent LB measured on the *same* equal *Parts*, shews the *Distance* to be 44°, 31 Centenas, which allowing 20 Leagues to a *Degree*, is 886 Leagues.

Then, to find the *Course*.—With 60° of the *Circle*, setting one *Foot* in L, with the other *make* *Marks* at Y and Z; then the *Extent* ZY, measured on the *Circle*, shews the *Rhomb* to be 66°, 37' *Minutes* from the *Meridian*. This *Proportion* in the present *Example*, holds very just, according to *Natural's* *Chart*; whereas the former *Proportion*, by the *middle Latitude*, would have given the *Rhomb* 67°, 2', from the *Meridian*, and the *Distance* 902 Leagues.

Again, making CA equal to CV, a *Line* joining LA would be the *Course* and *Distance* according to the *same* *Longitudes* and *Latitudes* laid down on the *Plain Chart*; whereby the *Course* should be 72 Degrees 17 *Minutes* from the *Meridian*, and the *Distance* 1155 Leagues. See *SAILING, CHART, &c.*

RHYAS, in *Medicine*, a *Diminution* or *Conjuncture* of the *Caruncula Lacrymalis*, situate in the great *Canthus* or *Angle* of the *Eye*. See *CARUNCULA*.

The *Rhyas* is used in opposition to the *Emacanthis*, which is an excessive *Augmentation* of the *same* *Caruncle*. See *EMACANTHIS*.

The *Cause* of the *Rhyas* is a sharp *Humour* falling on this *Part*; and growing and continuing it by *Degrees*; though it is sometimes also produced by the too great *Use* of *Catharticks* in the *Fibula Lacrymalis*.—It is cured by *Incarnatives*.

The *Word* is form'd from the *Greek* *ῥῆσ*, to flow.

RHYME, RYME, RYME, or RIME, in *Poetry*, &c. the *similar Sound*, or *Cadence* and *Termination* of two *Words* which end two *Verses*, &c. See *VERSE*.

Or *Rhyme* is a *Similitude* of *Sound* between the *last Syllable* or *Syllables* of one *Verse*, and the *last Syllable* or *Syllables* of a *Verse* succeeding either *immediately* or at the *Distance* of two or three *Lines*.

*Rhyme* is a modern *Invention*, the *Product* of a *Gothick Age*: *Milton* calls it the *Modern Bondage*. Yet some *Authors* will have it the *English*, *French*, &c. borrow their *Rhyme* from the *Greeks* and *Latins*.—The *Greek* *Orators*, say they, who endeavour'd to tickle the *Ears* of the *People*, affected a certain *Cadence* of *Periods*, ending in a *Consonance*, and call'd them *ῥυθμίαι*. The *Latins*, who imitated them, call'd these *measur'd Phrases*, *ῥυθμίαι distincta*.

This *Affection* increas'd at the *Latin* *Tongue* declin'd; so that in the *later Latin* *Writers*, scarce any thing is more common than *rhyming* *Periods*.

The *French*, and from them the *English*, &c. retain'd this *Cadence* of *Rhyme*, which seem'd to them more *pretty*, and even more agreeable than the *measur'd Verses* of the *Greek* and *Roman* *Poets*.—This kind of *Latin* *Poetry* in *Rhyme* was much in *Vogue* in the *XIIIth* *Century*; and the *Verses* thus *running* were call'd *Leones Verses*; for what *Reason* *Cambden* owns he does not know; (for a *Lion's* *Tail*, says he, does not answer to the *middle Parts* as the *Verses* do) but doubtless they had their *Name* from a *Canon* call'd *Leoninus*, who first compos'd them with *Success*, and of whom we have several *Pieces* remaining, address'd to *Pope Adrian IV.* and *Alexander III.* See *LEONINE* *Verses*.

*Cambden* has given us a *Collection* of *Latin Rhymes* of our *antient* *English* *Writers*; among whom *Walter de Mapes* *Archdeacon* of *Oxford*, in the *Time* of *King Henry II.* makes a *principal* *Figure*: Especially for two *Pieces*, the one in *Praise* of *Wine*, beginning,

Mibi est propositum in Taberna vini,  
Vivam si appropius mortuus erit;  
Ut abeat, cum Peccatis, Angelorum Chori,  
Deus sit propitius huic potatori.

The other against the *Pope*, for forbidding the *Clergy* their *Wives*, beginning,

Præfatus Regula prius castitas,  
Sacerdos per hic & hinc alius dicitur;  
Sed per hic solenniter, non articulator,  
Cum per Nefarius præfatus hinc amovetur.

Since the *Restoration* of *Learning* in the *16th* *Century*, *Attempts* have made to banish *Rhyme* out of the *modern* *Poetry*, and to settle the *English* and *French* *Verses* on the  *footing* of the *antient* *Greek* and *Latin* ones; by fixing the *Quantity* of the *Syllables*, and tuning wholly to those, and the *Number* or *Measure*. See *QUANTITY, NUMBERS, &c.*

This, *Milton* has done with great *Success*, in his *Paradise Lost*, and other *Pieces*; and after him *Philips*, *Addison*, and some others.

—*Verses* of this *Kind* we call *Blank Verses*. See *BLANK*.  
The *French* have attempted the *same*, but not with the *same* *Success*.—*Jodelle* made the *first* *Essay*; and after him *Posquier*; but they fail'd. *Pafferat* and *Ragis* follow'd them, and fail'd like them. Their *Hexameter* and *Sapphic Verses* were neither imitated nor approved; and the *Cadence* of *Rhyme* was prefer'd to *Quantity*, or to long and short *Syllables*. *Des Peres* likewise made some *Essays* of *Verses* construct'd of long and short *Verses* without *Rhyme*, but the *Attempt* only serv'd to convince the *World* that this *Kind* of *Measure* is inconsistent with the *Genus* of the *French* *Tongue*.

To succeed in such kind of Verses there must be a Liberty of varying the Arrangement of the Words, or of changing their Situation as may best suit the Occasions of the Poet; of making the Substantive either go before, or follow after the Verb, as the Verse requires, &c. Now none of the modern Tongues admit of such an arbitrary Situation of the Words, equally with the Ancient; yet none more than the English, nor less than the French. See CONSTRUCTION.

Rhymes are either single, or double, or triple; but the two last are now disused.

Single Rhymes are divided into perfect or whole Rhymes; and imperfect or half Rhymes.

A whole or perfect Rhyme is where there is a Similitude of Sound, without any Difference; or where a thorough Identity of Sound appears in the Pronunciation of the two Syllables, notwithstanding that there may be some Difference in the Orthography.

An imperfect or half Rhyme is where there is a Similitude with a Difference, either in respect of the Pronunciation or the Orthography; but chiefly the former.

In the time of S. Louis, the French began to be more exact in their Verification; and to distinguish their Rhymes into Masculine and Feminine; and to observe a regular Mixture of the two, in their Verses.

The Invention of this Mixture is usually attributed to Marot; however 'twas Ronsard who first practiced it with Success.—The Feminine Rhyme is that where the last Syllable of the Rhyme ends with an *e* Mute or Quiescent: As in *Doux, Belle, &c.*—Masculine Rhymes are those of all other Words. Menage observes that Masculine Rhymes close the Periods better: But that Feminines, being the softer and more languishing, end more agreeably, especially in mournful Subjects.

They also distinguish further between rich Rhymes, which are those where the two Words terminate alike, through the whole two last Syllables, as *spasible and rable, &c.*—Plain Rhymes are those where the two rhyming Verses succeed immediately to each other.—Crass Rhymes, those where the Verses are so disposed as that the first rhymes with the third, and the second with the fourth, &c.

They also distinguish Normand Rhymes, Parisian Rhymes, Equivocal Rhymes, &c.

RHYPTICKS, or RYPTICKS, RHYPTICA, in Medicine. See RYPTICKS.

RHYTHM, RHYTHMUS, in Musick, the Variety in the Movements, as to the quickness or slowness, length and shortness of the Notes. See NOTE.

Or, the *Rhythmus* may be defined more generally, the Proportion which the Parts of a Motion have to each other. See RHYTHMICA.

*Arifides* among the antient Musicians, applies the Word *Rhythmus* three Ways; viz. either to immovable Bodies, when their Parts are rightly proportioned to each other; as a well-made Statue, &c. or to things that move regularly, as in handsome Walking, in Dancing, in the dumb Shews of the Phantomimes, &c. or thirdly, to the Motion of Sound, or the Voice; in which, the *Rhythmus* consists of long and short Syllables or Notes, join'd together in Succession in some kind of order, so as their Cadence on the Ear may be agreeable.

This, in Oratory constitutes what we call a *sumorous Style*, and when the Tones of the Voice are well chosen, a harmonious Style. See STYLE and NUMBERS.

In effect, *Rhythmus* in the general is perceiv'd either by the Eye or Ear; and may either be with or without Metre: But the strict musical *Rhythm* is only perceiv'd by the Ear, and cannot exist without it.—The first exists without Sound, as in Dancing; in which Case it may be either without any Difference of Note and Grave, as in a *Dance*, or with a Variety of these as in a *Song*.

The *Rhythmus* of the Antients, Mr. *Melolin* observes, was very different from the Moderns.—The former was only that of the long and short Syllables of the Words and Verses; It depended altogether on the Poetry, and had no other Forms or Varieties than what the metrical Art afforded. The Changes therein are none but those made from one Kind of Metrum to another, as from Jambic to Choric, &c.

In the modern Musicks, the Constitution of the *Rhythmus* differs from that of the Verse, so far, that in setting Musick to Words, the thing chiefly regarded is to accommodate the long and short Notes to the Syllables in such manner, as that the Words be well expressed; and the accented Syllable of each Word so conspicuous, that what is sung may be distinctly understood. See M-LODY.

*Polivius* in his Book de *Personarum Cantu & viribus Rhythmis*, extols the antient *Rhythmus*.—Though he owns 'twas confined to the metrical Feet; yet, so well did they cultivate their Language, especially in what relates to the *Rhythmus*; that the whole effect of the Musick was ascribed to it, as appears, says he, by that saying of theirs, *vo visus est personis et propriis*. See MUSIC, PANTOMIME, &c. See also ODE, &c.

RHYTHM, RHYTHMUS, or RHYME, in the antient Poetry, was the Measure of the Feet, or the Number and Combination of long and short Syllables; call'd also *Quantitas*. See QUANTITY.

*Polivius* attributes the whole Force of the antient Musick to their

happy *Rhythmus*. But this is somewhat inconceivable; Mr. *Malcolm* rather takes it that the Words and Sense of what was sung had the chief effect: Hence it was that in all the antient Musick the greatest Care was taken that not a Syllable of the Words should be lost, lest the Musick should be spoil'd.

*Pasivobius* seems of this Opinion; and the Reason he gives why the modern Musick is less perfect than the Antient, is, that we hear Sounds without Words. See MUSIC.

*Polivius* says, that *Rhythmus* which does not express the very Forms and Figures of things, can have no effect; and that the antient poetical Numbers alone were justly contriv'd for this End.—He adds, that the modern Languages and Verse is altogether unfit for Musick; and that we shall never have any right Vocal Musick till our Poets learn to make Verses capable to be sung, i. e. till we new model our Languages, restore the antient Quantities and Metrical Feet, and banish our barbarous Rhimes.

Our Verses, says he, run all as it were on one Foot; so that we have not any real *Rhythmus* at all in our Poetry: He adds, that we mind nothing further than to have such a Number of Syllables in a Verse, of whatever Nature, and in whatever Order. But this is an unjust Exaggeration. See VERSE.

RHYTHMICA, RYTHMICE, in the antient Musick, that Branch of Musick which regulated the *Rhythmus*. See RHYTHMUS.

The *Rhythmica* consider'd the Motions; regulated their Measure, Order, Mixture, &c. so as to excite the Passions, keep them up, augment, diminish, or allay them.

*Arifides* and other antient Musical Writers, divided artificial Musick into *Harmonica, Rhythmica, and Metrica*. See MUSIC.

But the *Rhythmica* with them likewise comprehends dumb Motions, and, in effect, all *Rhythmical*, i. e. regular, Motion.

*Porphyry* divides Musick into *Harmonica, Rhythmica, Metrica, Organica, Poetica, and Hypocritica*. See each under its proper Article.

The Antients seem to have had no *Rhythm* in their Musick beside the long and short Syllables of their Words and Verses, which were sung, and always made a Part of their Musick; so that the *Rhythmus* with them was only the Application of the Metrical-Foot, and the various kinds of Verses used by them.—The Modern goes much further. See RHYTHM.

RYTHMOPŒIA one of the Musical Faculties, as they are call'd; which prescribes Rules for the Motions, or *Rhythm*.

The antient *Rhythmopœia* is very defective.—We find nothing of it in the Books of the Antients but some general Hints; which can scarce be call'd Rules. In their Explications there appears nothing but what belongs to the Words and Verses of their Songs, which is a strong Presumption they had no other. See RHYTHM.

RIAL, or RYAL, or REAL, a Coin regular, and Current in Spain. See REAL and COIN.

RIAL is also a Piece of Gold, antiently Current among us for ten Shillings.

In 1 Henry VI. by Indenture of the Mint, a Pound Weight of Gold of the old Standard was coined into 45 *Rials*, going for ten Shillings a-piece, or a proportionable Number of half *Rials*, going at five Shillings a-piece: Or *Rial Farthings*, which went at 2 s and 6 d.

In 1 Henry VIII. the Gold *Rial* was ordered to go at 11 s. 3 d.—In 2 Edw. Golden *Rials* were coined at 15 s. a-piece, when a Pound Weight of old Standard Gold was to be coined into 48 *Rials*.—In 3 Jac. I. the Rose *Rials* of Gold were coined at 30 s. a-piece, and the Spurr-*Rials* at 15 s. See MONEY.

RIBBAND, or RIBBON, a narrow sort of Silk, chiefly used for Head Ornaments, Badges of Chivalry, &c. See SILK.

The Knights of the Garter wear a Blue *Ribbon*, those of the Thistle, a Green *Ribbon*. See COLLAR, GARTER, &c.

RIBBON, in Heraldry, is the eighth Part of a Bend.

See BEND.

It is born a little cut off from the out-edges of the Escutcheon; thus; He beareth Or, a *Ribbon* Gules.

RIBS, COSTÆ, in Anatomy, long, strid' Bones; serving to form, or sustain the inner-sides of the Thorax, or Breast. See BONE and THORAX.

The *Ribs* are in Number 24; twelve on each Side.—Their Figure is an imperfect Segment of a Circle, harder, rounder, and more incurvated towards their Articulation with the *Vertebrae*, than at the other Extremity towards the *Sternum*, which is thinner, broader, and more spungy.

The *Ribs* are divided into *trac*, or genuine, and *spurious*.

The *trac* are the seven upper Pair, which are thus distinguished, as forming the most perfect Arches, and as having a strong Articulation with the *Sternum*. See STERNUM.

The five lower are call'd *Natæ*, or *Spurious*, as being smaller, shorter, and more cartilaginous than the rest, and not reaching so far as the *Sternum*, which makes their Articulation very lax; in regard they terminate in long, soft Cartilages, which bending upwards are join'd to the upper *Ribs*.

On the inside of the true *Ribs*, except the lowest, and sometimes the next to it, runs a pretty deep *Sinus*, reaching from the end towards the Spine, almost to its Junction with the Cartilage.

All the *Ribs*, together with the *Sternum*, are said by the respiratory Muscles, in the Action of Inspiration; by which means, and the Descent of the Diaphragm in that Action, the Cavity of the Thorax is enlarged for the more commodious Expansion of the Lungs. See RESPIRATION.

*Ribs of a Ship*, are the Timbers of the Puttocks, when the Planks are off; so called because they are bent like the *Ribs* of a Carcase or Skeleton.

RICE, a Grain or Seed of a leguminous Plant of the same Name; frequent in the *East-Indies*, in *Greece*, and *Italy*. See LEGUMINOS.

The Grains, which grow in Clusters each terminated with a Spica or Beard, are inclosed severally in yellow rough Capsule, or Cafes. When stript off its Skin the Grain is almost oval; of a shining white Colour, and as it were transparent. It grows in moist marshy Places.

Throughout the *East*, and a great Part of the *Levant*, Rice is the principal Food, and serves for Bread. See BREAD.

In the *Indies*, the Women thrash and dress all the Rice, which is a very painful Office, that the Men leave them either out of Idleness, or Disrespect.

Rice is a great Food in the *Roman Catholic* Countries in time of Lent.—The ordinary Preparation is by first steeping it in Water, then boiling it in Milk.—Some make it into a sort of Farina, or Flouer, by pounding it in a Mortar, after having first put it in hot Water, and again wash'd it out in cold.

Rice is of some use in Medicine, being esteem'd proper to lessen and thicken sharp Humours, to moderate the Flux of the Belly.—The Northern Nations eat their Fowls and other Meats with Rice and Saffron.—The *Chinese* make a Wine of Rice, which is of an Amber Colour, tastes like Spanish Wine, and serves them for their common Drink.

In some Parts of *Europe* they also draw a very strong Brandy or Spirit from Rice. See BRANDY and SPIRIT.

RICKETS, RHACHITIS, in Medicine, a Disorder affecting the Bones of Children, and causing a considerable Protrusion, Incurvature, or Distortion thereof. See CHILDREN, BONES, &c.

It sometimes arises from a fault in swathing the Child; rolling him too tight in some Places, and too loose in others; placing him in an inconvenient, or too often in the same Posture, or fastening him to be long wet.—'Tis likewise attributed to the want of proper Motion, and the using of the Child to one Arm only; whereas the Legs and Knees remain too long in the same incurvated Situation.

Or it may be occasioned by some Fault in the Digestion occasioning the Aliment to be unequally apply'd to the Body, by which some Parts of the Bones increase in Bulk more than the rest.

The *Rickets* usually appear between the first eight Months, and the sixth Year of the Child's Age: The Part it affects grows lax, flaccid, and weak; and if it be the Legs, they become unable to support the Body.—All the Parts subservient to voluntary Motion are likewise debilitated and enfeebled; and the Child grows pale, fickle, fleshful, and cannot sit erect.

His Head generally becomes too large for the Trunk, and cannot be supported or managed by the Muscles of the Neck, which gradually wear away. Swellings, and knotty Excretions appear in the Wrists, Anckles, and Tops of the Ribs; and the Bones of the Legs and Thighs grow bowed or crooked.—The like Disorder sometimes seizes the Bones of the Arms.

If the Symptoms continue long, the Thorax becomes strait, a difficulty of Respiration comes on, as also a Cough, and a heclick Fever; the Abdomen swells, the Pulse grows weak and small, and the Symptoms increasing, at length prove mortal.

When the Child is able to walk before he can make use of his Legs, he is suppos'd to have the *Rickets*.

When the Disorder is taken early, it may be remedied by proper Balsters and Bandages, fastid to the Parts affected: But when the Bones are grown rigid and inflexible, other mechanical Contrivances, as Padding, strait Boots, and several sorts of Machines or Engines, made of Platboard, Whalebone, Tin, &c. are made use of; to restore the distorted Bones to their natural straightness.

Cold Bathing is also found of Service in the *Rickets*, before the Distemper comes to be confirmed, during *May* and *June*; containing him in the Water two or three Seconds at each Plunge.

Others chuse a Liniment of Rum and Palm Oil; and others a Plaster of Jerusalem and Oxyrocceum, applied along the Back, to cover the whole Spine.—Dry Frictions over the whole Body, with a warm Linnen Cloth before the Fire, especially on the Parts affected, are found of Service. The Oil of Snails is famous for the same Intention, being what Drops from them, after bruising and suspending them in a Flannel Bag. With this the Limbs and spinal Bone, are anointed.

RIDDLE. See ENIGMA.

RIDDLE, or RUDDLE, is also a mineral Stone. See RUD-DE.

RIDE, of *Hauls*, or other Wood, is a Group or Plump of Springs shooting out of the same Root, or Foot.

RIDE, in the Mamage.—To ride signifies to learn to ride.—Thus, He rides under a good Master. See HORSE.

RIDE, in the Sea Language, is a Term variously applied.—Thus, a Ship is said to Ride when her Anchors hold her fast, so that she drives not away by the Force of the Wind or Tide.

A Ship is said to Ride well, when she is built so as not to over-bear herself into an Head Sea, as that the Waves overturn her (that is, overwash her) from Stern to Stern.

A Ship Rides a-crofs, when she rides with her Main-Yards and Fore-Yards boited up to the Hounds; and both Yards and Arms topped alike.

She is said to Ride a Preek when one End of the Yard is pecked up, and the other hangs down: This is also said of a Ship when in weighing, she is brought directly over her Anchor.

She is said to Ride astwards, when her Side is to the Tide.—And to Ride between Wind and Tide, when the Wind hath equal force over her one Way and the Tide another.—If the Wind have more Power over her than the Tide, she is said to Ride Wind-Road.—She is said to Ride Heavy-fail, when in a Streets of Weather she falls to deep, that Water runs in at her Hawes.—She is said to Ride Portajiff, when her Yards are struck upon the Deck, or when they are down Aportajiff.

RIDEAU, in Fortification, a small Elevation of Earth, extending itself lengthways on a Plain; serving to cover a Camp, or give an Advantage to a Post.—It is also convenient for those who would besiege a Place at a near Distance, and to secure the Workmen in their Approaches to the Foot of a Fortrefs.

RIDEAU, is sometimes also used for a Ditch, the Earth whereof is thrown upon its Side. See DITCH.

The Word in its original French signifies a Curtain or Cover; form'd from the Latin, *Ridellum*.—Borel derives it from *ridere*.

RIDERS, in a Ship, are great Timbers both in the Hold and Aloft, which are bolted on to other Timbers to strengthen them, when the Ship is discovered to be too weakly built.

The Word RIDER is also used for after-Closets, added to Bills, whilst they are depending in Parliament. See BILL.

RIDGE, in Building, the highest Part of the Roof or Covering of a House. See ROOF.

Ridge is particularly used for the Piece of Wood wherein the Rafters meet. See RAFTER.

RIDGE-TYLE. See TYLE.

RIDGES of a Horse's Mouth, are Wrinkles or Rifings of the Flesh in the Roof of the Mouth, running a-crofs from one Side of the Jaw to the other, with interjacent Furrows. See HORSE.

It is commonly in the third or fourth Ridge that the Farriers strike, in order to bleed a Horse whose Mouth is over heated.

RIDLING, or RIDGLE, among Farriers, &c. the Mide of any Beak that has been but half Gilt. See GELDING.

RIDICULE. See LAUGHTER, RIBBILITY, &c.

RIDING, a Division of *Turkish*, whereof there are three, viz. the *East-Riding*, *West-Riding*, and *North-Riding*.

In Indictments in that County, 'tis necessary the Town and Riding be express'd.

RIDING-Clerk, one of the fit Clerks in Chancery, who, in his turn, for one Year, keeps the Controllment Books of all Graces that pass the Great Seal that Year. See CLERK, GRANT, &c.

RIENS *Arrear*, in Law, a kind of Plea used to an Action of Debt, upon Arrangements of Accounts, whereby the Defendant alleges that there is nothing in *Arrear*.

*Rien passé par le fait*, nothing passes by the Deed, is the Form of an Exception taken in some Cases to an Action. See EXCEPTION, and DEED.

*Rien par Defect*, nothing by Defect, is the Plea of an Heir, where sued for his Ancestor's Debt; though he had no Lands from him by Defect. See DESCENT.

RIER, or REER-County, *Retro Comitatus*, is used in our Law Books in opposition to open County.

This appears to be some publick Place, which the Sheriff appoints for the Receipt of the King's Moneys, after the end of his County. See SHERIFF, &c.—*Flata* says it is *Dies Crasimus*, *post comitatum*.

RIGADOON, a kind of Dance, borrowed originally from *Provence*; perform'd in Figure, by a Man and a Woman.—The *Rigadon* is gay, pleasant, &c. The Word is form'd from the *French Rigodon*, which signifies the same thing.

RIGGING, of a Ship, includes her whole Cordage; or all the Ropes belonging to her Masts, and Yards, &c. See CORDAGE, ROPE, &c.

A Ship is said to be well-rigg'd when all her Ropes are of their fit Size, in Proportion to her Burden.—She is over-rigg'd, when her Ropes are too big for her; which wrongs her masts in her Sailing, and is apt to make her Heel. See SETT.

RIGHT, in Geometry, something that lies evenly, and without inclining or bending one way or another.

Thus, a Right Line is that whose several Points all tend the same way. See LINE.

In this Sense Right signifies as much as straight, and stands oppos'd to curved or crooked. See CURVE.

Right Angle is that form'd by two Lines falling perpendicularly on one another. See PERPENDICULAR.

The Quantity or Measure of a *Right Angle* is a Quadrant of a Circle, or 90°.—All *Right Angles* therefore are equal. See *ANGLE*.

In this Sense the Word *Right* stands opposed to *Oblique*. See *OBLIQUE*.

*Right-Angled*, is understood of a Figure when its Sides are at Right Angles, or stand perpendicularly one upon another. See *FIGURE*.

This sometimes holds in all the Angles of the Figure, as in Squares and Rectangles; Sometimes, only in Part, as in *Right-angled Triangles*.

*Right Side* See *SIDE*.

The Word here stands contradictingly to *versus*. See *VERSED*.

*Right Sphere*, is that where the Equator cuts the Horizon at Right Angles. See *SPHERE*.

Or, *Right, or Direct Sphere*, is that wherein the Poles are in the Horizon, and the Equator in the Zenith. See *SPHERE*.

Such is the Position of the Sphere with regard to those who live directly under the Equator.—The Consequences hereof are, that they have no Latitude nor Elevation of the Pole.—They can see nearly both Poles of the World; all the Stars rise, culminate, and set with them, and the Sun always rises and descends at right Angles to their Horizon, and makes their Days and Nights equal. See *LATITUDE*, *STAR*, *RISE*, *DAY*, *NIGHT*, &c.

In a *Right Sphere* the Horizon is a Meridian; and if the Sphere be supposed to revolve, all the Meridians successively become Horizons, one after another. See *HORIZON*, &c.

*Right Ascension*, of the Sun, or a Star, is that Degree of the Equinoctial, accounted from the beginning of Aries, which rises with it in a *Right Sphere*. See *ASCENSION*.

Or, *Right Ascension*, is that Degree and Minute of the Equinoctial, counted as before, which comes to the Meridian with the Sun or Star, or other Point of the Heavens. See *SUN*, *STAR*.

The Reason of thus referring it to the Meridian, is, because that is always at Right Angles to the Equinoctial, whereas the Horizon is only so in a *Right* or direct Sphere. See *SPHERE*.

Two fixed Stars which have the same *Right Ascension*, i. e. are at the same Distance from the first Point of Aries in a *Right Sphere*; or, which amounts to the same, are in the same Meridian, rise at the same time: If they be not in the same Meridian, the Difference between the time when they rise is the precise Difference of their *Right Ascension*.—In an oblique Sphere, where the Horizon cuts all the Meridians obliquely, different Points of the Meridian never rise or set together; so that two Stars on the same Meridian never rise or set at the same time; and the more Oblique this Sphere, the greater is the interval of time between them. See *RISE*, *SETTING*, *HIGHT*, &c.

*Right Sailing*, is when a Voyage is perform'd on some one of the four Cardinal Points. See *SAILING* and *CARDINAL Point*.

If a Ship sail under the Meridian; that is, on the North or South Points, the varies not in Longitude at all; but only changes the Latitude, and that just so much as the Number of Degrees the hath run. See *LATITUDE*.

If a Ship sail under the Equinoctial, upon the very East or West Points, she alters not her Latitude at all; but only changes the Longitude, and that just so much as the Number of Degrees she hath run. See *LONGITUDE*.

If she Sail directly East or West, under any Parallel, she there all altereth not her Latitude, but only the Longitude; yet not according to the Number of Degrees of the great Circle she hath sail'd in, as under the Equinoctial, but more according as the Parallel is remoter from the Equinoctial towards the Pole. For the less any Parallel is, the greater is the Difference of Longitude. See *RHUMB*.

*Right Circles*, in the Stereographical Projection of the Sphere, is a Circle at Right Angles, to the Plane of Projection, or that which pass'd through the Eye. See *CIRCLE*, *PROJECTION* and *STEREOGRAPHIC*.

*Right, Rectum*, in Logicks, Edicks, &c. See *RECTITUDE*.

In this Sense the Word stands opposed to *Wrong*, *Erroneous*, *Faulty*, &c. See *ERROR*, *FALSHOOD*, &c.

*Right, Jus*, in Law, signifies not only a Property, for which a Writ of *Right* lies; but also any Title or Claim, either by Virtue of a Condition, Mortgage, or the like, for which no Action is given by Law, but only an Entry. See *PROPERTY*.

This is *Jus Proprietatis*, a Right of Propriety: *Jus Possessionis*, a Right of Possession: And *Jus Proprietatis & Possessionis*, a Right both of Property and Possession. See *POSSESSION*, &c.

This was formerly called *Jus duplicatum*.—As, if a Man be divided of an Acre of Land, the Distictee hath *Jus Proprietatis*; the Distictee hath *Jus Possessionis*, and if the Distictee release to the Distictee, he hath *Jus Proprietatis & Possessionis*.

*Writ of Right*. See *RECTUM*.

*Right in Court*. See *RECTUS in Curia*.

*Right the Helm*, a Sea Phrase, ordering to keep the Helm even with the middle of the Ship. See *HELM*.

*RIGIDITY*, among Philosophers, a brittle-hardness; or that kind of hardness suppos'd to arise from the mutual Indentation of the component Particles within one another. See *HARDNESS*.

*Rigidity* is opposed to *Ductility*, *Malleability*, &c. See *DUCTILITY*.

*RIGOL*, a kind of musical Instrument, consisting of several Sticks bound together, only separated by Bands.—It makes a tolerable Harmony, being well struck with a Ball at the End of a Stick.

*RIGOR*, in Medicine, a convulsive Shuddering, from Cold, or an Ague Fit. See *HORROR*, *FEVER*, *AGUE*, &c.

*RILL*, or *RIVULET*. See *RIVER*.

*RIM*, in a Watch or Clock, the Circumference, or circular Part of a Wheel. See *WHEEL*, *WATCH*, *CLOCK*, &c.

*RIMA*, literally denotes a Fissure or Chink.—Hence it is applied to several Parts of the Body, that bear a Resemblance thereto; as the *Rima Palpebræ*, or *Fissura Magna*, the same with the *Falva*; *Rima Laryngis*, is the Aperture of the *Larynx*, call'd the *Glottis*. See *GLOTTIS*, &c.

*RIMA*, is also used for a narrow Aperture of a small Cavity under the *Foveæ*, opening into the *Infratentorium*; call'd also the third Ventricle of the Brain. See *BRAIN* and *VENTRICLE*.

*RIME*, *RHIME*, or *RHYME*. See *RHYME*.

*RIND*, the Skin of any Fruit that may be cut off, or pared. See *SKIN*, *FRUIT*, &c.

The outer Coat of the Chestnut, set with prickles, is particularly call'd the *Urchin-like Rind*.

*RIND*, is also used for the Bile, or inner Bark of Trees; or that soft, whitish, juicy Substance, adhering immediately to the Wood. See *TREE* and *WOOD*.

Through this it is that the Sap, in the modern Theory of Vegetation, is suppos'd to return from the Extremities of the Branches to the Root; the Vessels hereof being suppos'd to do the Office of Arteries; whence Mr. Bradley calls them *Arterial Vessels*. See *BARK*. See also *PLANT* and *VEGETATION*.

*RING*, *Anulus*, a little moveable, put on the Finger, either by way of Ceremony, or of Ornament.

The Bishops Ring makes a Part of the Pontifical Apparatus; and is esteem'd a Pledge of the spiritual Marriage between the Bishop and his Church. See *BISHOP*.

The Episcopal Ring is of very ancient standing.—The fourth Council of Toledo, held in 633, appoints, that a Bishop condemn'd by one Council, and found afterwards innocent by a second, shall be restored, by giving him the Ring, Staff, &c.

From Bishops, the Custom of the Ring has pass'd to Cardinals, who are to pay, I know not what Sum, *pro Jure annuli Cardinalis*. See *CARDINAL*.

As to the Origin of Rings.—Pliny, lib. xxxviii. Chap. 2. observes, that we are in the dark as to the Person who first invented, or wore the Ring; for that what is said of Prometheus, as also of Midas's Ring, are Fables. The first among whom we find the Ring in use, are the Hebrews, Gen. xxviii. where Jacob, Jacob's Son, gives Thomas his Ring or Signet, as a Pledge of his Promise: But the Ring appears to have been in use at the issue time among the Egyptians, from Gen. xli. when Pharaoh puts his Ring upon Joseph's Hand as a Mark of the Power he gave him. And in the third Book of Kings, Chap. xxi. Jeroboam steals the Warrant sent for the killing of Naboth, with the King's Ring.

The ancient Colchians, Babylonians, Persians and Greeks, had likewise the use of the Ring; as appears from several Passages in Scripture, and from Quintus Curtius, who tells us, that Alexander leav'd the Letters he wrote into Europe, with his own Seal; and those into Asia with Darius's Ring.

The Persians will have Gaius Julius the fourth King of their first Race, to have first introduced the Ring, to seal his Letters and other Acts withal.—The Greeks, Pliny thinks, knew nothing of the Ring in the time of the Trojan War: The Reason he gives is, that we find no mention thereof in Homer, but that when Letters, &c. were to be sent away, they were tied up, and the Strings knotted.

The Sabins had Rings in Romulus's time; and 'tis to them, probably, the Practice first came from the Greeks; and from them pass'd to the Romans; though 'twas some time ere it got footing there.—Pliny cannot learn which of the Kings of Rome first adopt'd it; but there are no Signs of it in any of their Statues, before those of Numa, and Servius Tullius. He adds, that it was in use among the ancient Gauls and Britons. See *SEAL*.

As to the Matter of Rings.—There were some of one single Metal, and others of a Mixture, or of two. For the Iron and Silver were frequently join'd; or at least the Gold was included within the Iron, as appears from Arimondus, lib. ii. cap. 5.—The Romans were contented with Iron Rings a long time; and Pliny assures us, that Marcus first wore a Gold one in his third Consulship, which was in the Year of Rome 650. Sometimes the Ring was Iron, and the Seal Gold; sometimes 'twas hollow, and sometimes solid; sometimes the Stone was engraven, and sometimes plain; and the Graving sometimes in Relief, and sometimes in Creux: The last call'd *Genovea Ellipse*; the first, *Genovea Sculptura prominent*.

As to the Manner of wearing the Ring.—It has been various: From Jeremy, Chap. xlii. it appears that the Hebrew wore it on the right

Right-Hand. Among the *Romans*, e're they came to be adorned with Stones, and while the Graving was yet on the Metal, every body wore them at Pleasure, on what Hand and Finger he liked.—When Stones came to be added, they wore them altogether on the Left-Hand; and it would have been held an excessive Foppery to have put them on the Right.

*Pliny* says, they were at first wore on the fourth Fingers, then on the second, or Index; then on the little Finger; and at last on all the Fingers, excepting the middle one.—The *Greeks* wore it altogether on the fourth Finger of the Left-Hand, and we are informed by *Aul. Gellius*, lib. x. and the Reason he gives for it is, that having found from Anatomy, that this Finger had a little Nerve that went straight to the Heart, they esteem'd it the most honorable, by reason of this Communication with that noble Part.—*Pliny* says, the *Gauls* and ancient *Britains* wore it on the middle Finger.

At first they only wore a single Ring; then one on each Finger; and at length several on each Finger, *Marshall*, lib. xi. Epig. 60. At last one on each Joint of each Finger, *Aristoph.* in *Nub.* &c.—Their Delicacy, at length went to that pitch, that they had their Weekly Rings. *Journals Sat.* VII. speaks of *Annuli Semestres*; as also of Winter and Summer Rings. But of all others *Lampadius*, cap. 32. observes, *Heliojabah* carried the Point furthest, who never wore the same Ring, or the same Shoe, twice.

Rings have been also wore in the Nose, as Pendants in the Ears.—*Bartolinus* has an express Treatise, de *Annulis Narium*, of Rings of the Nostrils. *Sc. Augustin* assures us, 'twas the Fashion of the *Moor*; and *Pedro delle Valle* observes the same of the modern *Oriental*.

In effect, there is no Part of the Body where it has not been wore.—Several *East-India* Travellers assure, that the Natives commonly wear them in their Nose, Lips, Cheeks, and Chin. *Ramusius* tells us, that the *Indians* of *Narjunga* in the *Lowery*, and *Dandras Sicalis*, lib. 3. that those of *Etchipas*, used to adorn their Lips with Iron Rings.

As to the Ears, the Custom still obtains of wearing Rings there, both for Men and Women, all over the World. See PENDANT.

The *Indians*, particularly the *Guineanets*, have wore Rings on their Feet.—And when *Peter Abouren* had his first Audience of the King of *Cahoon*, he found him all covered with Stones set in Rings; Brocets and Rings both on the Hands and Fingers, and even the Feet and Toes. *Louis Barthelemy* represents a King of *Pepes*, as still more extravagant, having Rings set with precious Stones on every Toe.

With regard to the Use of Rings.—The Antients had three different Kinds: The first serv'd to distinguish Conditions or Qualities. *Pliny* assures us, that the Senators at first were not allowed to wear the Gold Ring, unless they had been Ambassadors at some foreign Court. Nor was it even allowed them to wear the Gold Ring which was given them, in Publick; except on publick Occasions. At other times they wore an Iron one. And those who had had a Triumph, observed the same Rules.

At length the Senators and Knights were allow'd the common Use of the Gold Ring; but *Aerov* on *Horns*, Lib. 2. Sat. VII. observes, they could not do it unless it were given them by the *Proctor*.

In after Days the Gold Ring became the Badge of the Knights; the People wearing Silver Rings, and the Slaves Iron ones. Tho' the Gold Ring was sometimes allow'd the People, and *Severus* granted it his common Soldiers. *Augustus* allow'd it the *Liberals*, or Freedmen; and though *Nero* made a Regulation to the contrary, yet it was soon set aside.

A second Kind of Rings were the *Annuli Sponsalium*, Wedding Rings. Some carry the Origin of this Custom as far back as the *Hebrews*, on the Authority of a Text in *Exodus xxxv. 22.*—*Leon de Mevins*, however, maintains that the ancient *Hebrews* did not use any Nuptial Ring. *Selden*, in his *Uxor Ebraica*, Lib. II. Chap. 14. owns, that they gave a Ring in the Marriage, but that it was only in lieu of a Piece of Money of the same Value, which had used to have been given before.—The *Greeks* and *Romans* did the same; and from them the Christians took it up very early, as appears from *Tertullian*; and in some ancient Liturgies, where we find the Form of Blessing the Nuptial Ring. See MARRIAGE.

The third Kind of Rings were those used as Seals, call'd *Crographi*, or *Circographi*, an Account whereof see under the Article SEAL.

*Richard* Bishop of *Salisbury*, in his Constitutions, Anno 1217. forbids the putting of *Rings*, or any the like Matter, on Women's Fingers; in order to the debauching of them more readily: And he infatuates the Reason of his Prohibition, that there were some People weak enough to believe, that what was thus done in jest was a real Marriage.

*De Beroil* in his *Antiquities of Paris*, says, 'twas an ancient Custom to use a *Ring* in the Marriage of such as had had an Affair together before Marriage. See CONJURANT, &c.

RING, in Astronomy.—The Ring of *Saturn* is a thin, luminous Circle, encompassing the Body of that Planet, but without touching the same. See SATURN.

The Discovery hereof is owing to *M. Huygens*, who after frequent Observations of *Saturn*, perceiv'd two lucid Points, or *Asses*, arising out from the Body, in a right Line. See ANALE.

Hence, as in subsequent Observations, he always found the same Appearance, he concluded that *Saturn* was encompass'd with a permanent Ring; and accordingly produced his new System in 1659.

The Plane of the Ring is inclined to the Plane of the Ecliptic in an Angle of  $23^{\circ} 30'$ .—It sometimes appears Oval; and according to *Campani*, its greatest Diameter is double its least. See PLANET.

RING, is also an Instrument used in Navigation, for taking the Altitudes of the Sun, &c. See ALTYRUS.

'Tis usually of Brass, about 9 Inches Diameter, perforated by a little Swivel,  $45^{\circ}$  from the Point whereof is a Perforation, which is the Centre of a Quadrant of  $90^{\circ}$  divided in the inner Concave Surface.

To use it, they hold it up by the Swivel, and turn it to the Sun, till the Sun-Beams falling through the Hole, make a Spot among the Degrees, which is the Altitude required.

This Instrument is prefer'd to the *Astrabile* by reason the Divisions are here larger than on the *Astrabile*. See ASTROLABE.

RING-DIAL, is a kind of Dial, usually small, and portable; consisting of a Brass Ring, or Rim, seldom exceeding two Inches in Diameter, and one third of an Inch in Breadth. See DIAL.

In a Point of this Rim, is a Hole, through which the Sun-Beams being received, make a lucid Spot on the Concavity of the opposite hemisphere, which gives the Hour of the Day in the Division mark'd thereon.

But it only holds good about the Times of the Equinox.—To have the Dial perform throughout the whole Year, the Hole is made moveable; and the Signs of the Zodiac, or the Days of the Month are mark'd on the Convex Side of the Ring; by means whereof the Dial is rectified for the Time.

To use it, put the moveable Hole to the Day of the Month, or the Degree of the Zodiac the Sun is in; then suspending it by the little Ring, turn it towards the Sun, till his Rays, as before, point out the Hour among the Divisions on the Inside.

UNIVERSAL, or ASTRONOMICAL RING-DIAL, is a Ring-Dial which serves to find the Hour of the Day in any Part of the Earth; whereas the former is confined to a certain Latitude. See DIAL.

Its Figure see represented in *Tables*, *Dialling*, Fig. 7.

It consists of two Rings, or flat Circles, from two to six Inches in Diameter; and its Breadth, &c. proportionable.—The outward Ring A represents the Meridian of any Place you are at; and contains two Divisions of  $90^{\circ}$  each, diametrically opposite to one another; serving, the one from the Equator to the North, the other to the South Pole.—The inner Ring represents the Equator, and turns exactly within the outer, by means of two Points in each Ring at the Hour of 12.

A-*cross* the two Circles goes a thin Reglet or Bridge, with a Cursor C, that Slides along the middle of the Bridge. In the Cursor is a little Hole for the Sun to shine through.

The middle of this Bridge is concav'd as the Axis of the World, and the Extremities as the Poles; and on the one Side are drawn the Signs of the Zodiac, and on the other the Days of the Month. On the Edge of the Meridian slides a Piece, to which is fitted a Ring to suspend the Instrument by.

#### Use of the universal RING-DIAL.

Place the Line a (on the middle of the sliding Piece) over the Degree of Latitude of the Place (e. gr.  $51^{\circ}$  for *London*) put the Line which crosses the Hole of the Cursor to the Degree of the Sign, or Day of the Month. Open the Instrument so as the two Rings be at right Angles to each other, and suspend it by the Ring H, that the Axis of the Dial, represented by the middle of the Bridge, be Parallel to the Axis of the World. Then turn the flat Side of the Bridge towards the Sun, so as his Rays striking through the little Hole in the middle of the Cursor, fall exactly on a Line drawn round the middle of the Concave Surface of the inner Ring; in which Case the bright Spot shows the Hour of the Day in the said Concave Surface of the Ring.

Note, The Hour of 12 is not shown by this Dial; by reason the outer Circle, being then in the Plane of the Meridian, hinders the Sun's Rays from falling on the inner: Nor will this Dial show the Hour when the Sun is in the Equinoctial; by reason his Rays, then, fall Parallel to the Plane of the inner Circle.

RING is also used for the Sound or Tone of a Bell. See BELL-SOUND, &c.

RING-BONE, among Farriers, &c. a hard callous Substance, growing in the hollow Circle of the little Pastern of a Horse, above the Coronet. See HORSE.

It sometimes goes quite round, like a Ring; whence its Name.

It is sometimes hereditary, derived from the Stallion, or Mare, but oftener comes by Accident, as a Strain, blow of a Horse, &c.

RING-WALK, among Hunters, a round Walk. See HUNTING. RING-WORM, in Medicine, &c. See TETTER.

**RIOT**, in Law, the forcible doing of an unlawful thing, by three or more Persons assembled together for that Purpose.

The Word is form'd from the *Latin*, *risa*, of *aristare*, to run at each other as Rams do. Though, from an ancient *Gambril* Version of the Bible, quoted by *Séamus*, *Rist* shou'd rather seem originally to signify *Luxury* and *Excess*; whence our *Rist* might proceed; in regard these are frequently attended with Quarrels.

For the Difference between a *Riot*, *Rout*, and unlawful Assembly, see *ROUT*, and *UNLAWFUL ASSEMBLY*.

*Kitchin* gives us the following Cases of *Rists*.—viz. The Breach of Inclosures, Banks, Conduits, Parks, Pounds, Batts, the burning of Stacks of Corn, &c. *Leonard* adds, the beating a Man, and entering on a Possession forcibly.

By a late Act of Parliament, made on occasion of the frequent pulling down of Meeting-Houses, &c. by Mobs, or Riotous Assemblies, about the time of the late Rebellion; a *Riot* was made Felony, if the *Risters* did not disperse after reading a Proclamation made for that Purpose.

**RIPENERS**, in Medicine, a sort of topical Remedies, call'd *Digestives*, *Maturants*, &c. See *DRAWERS*, *DIGESTIVES*, *MATURANTS*, &c.

**RIPENING**. See *MATURATION* and *DIGESTION*.

**RISING**, in Astronomy, the appearance of the Sun, a Star, or other Luminary above the Horizon, which before was hid beneath it. See *HORIZON*, *SUN*, *STAR*, &c.

By reason of the Refraction of the Atmosphere, the heavenly Bodies always rise before their time, i. e. are seen above the Horizon, while they really are below it. See *REFRACTION*.

There are three *Poetical* Kinds of *Rising of the Stars*.—The *Cosmical Rising*, when a Star rises at the same time with the Sun. See *COSMICAL*.

*Acrimical Rising* is when the Star rises at the same time that the Sun sets. See *ACRITICAL*.

*Horacal*, *Solar*, or *Apparent Rising*, is when the Star emerges out of the Sun's Rays near the Horizon, and is no longer hid in his Brightness; which happens about 20 Days after the Conjunction of such Star with the Sun; more or less, according to the Magnitude of the Star, its Distance, &c.

*Histol* long ago observ'd, that *Sirius* was hid 40 Days; viz. 20 Days before his *Cosmical Rising*, and 20 after.—Some Nations of *America*, and among others the Savages of *Cayenne*, regulate their Civil Year by the Course of *Sirius*; beginning it with the *histol* Rising of that Star.

To find the *Rising*, &c. of the Sun and Stars by the Globe. See *GLOBE*.

**RISIBILITY**, the Faculty of Laughing. See *LAUGHING*.

*Risibility* is commonly supposed an Attribute peculiar to Man; as being the only Creature capable of judging of what is ridiculous.—Some Philosophers go so far as to assert, that the Degree of Judgment is always less in that of Laughter; Fools either have too little or too much.

Authors do not agree as to the peculiar Mechanism in Man, whereby Laughter is rais'd.—'Tis usually attributed to the Communication between the *Plexus Nervosus*, and the *Diaphragmatic Nerve*. See *CONSENT of Parts*.

**RISK**, *RISQUE*, the Hazard or Chance of a Loss, Damage, &c. See *CHANGE*.

There is a great *Risk* run in letting Goods go upon Credit to great Lords, Wives not authorized by their Husbands, and young People not yet arriv'd at the Age of Majority.

*Skinner* derives the Word from the Spanish, *Risga*, sleep: *Cavortation*, from *risga*. In the barbarous Greek, they say, *εργαστα*, for *Periclitari*, I hazard; and *εργαστα*, for *Lot*, Chance; which Words, as well as *Risique*, *Skinner* thinks, may be deduced from *εργαστα*, for *εργαστα* *επι* *νοση*, to cast the Dice.

To prevent any *Risk* in Policies of Merchandizes by Sea, 'tis usual to insure them. See *POLICY of Insurance*.

The *Risk* of Merchandizes commences from the Time they are carried aboard.—In Matters of Insurance, 'tis a Maxim, that all is never to be *ris'd* on one Bottom, or in the same Vessel; to denote, that Assurers must act with Discretion in the signing of Policies, and not hazard too much on each Vessel; there being more to be expected from several than from one.

**RISUS**. See *LAUGHTER*.

*Risus Sardanicus*, *Sardanicus Laughter* is a forced, spiteful Laughter; or a Laughter that does not go beyond the Teeth.—The Phrase is founded on this, that in *Sardinia* there is a venomous Plant, which occasions such a Contraction of the Muscles of the Face in Persons it kills, that they seem to dye Laughing.

*Risus Caninus* is a kind of Laughter wherein the Lips are contracted, so as to show all the Teeth.

**RITE**, in the School Divinity, the particular Manner or Form of celebrating or performing the Religious Ceremonies, which obtains in that or that Place. See *CEREMONY*.

The Eastern People, *Armenians*, &c. celebrate Divine Service according to the *Greek Rite*.—The Western World follow the *Latin Rite*; or that of the *Roman Church*.

The English observe the *Rite* of the Church of England, prescribed in the Book of Common-Prayer, &c. See *RITUAL*.

**RITORNELLO**, or *REFRACT*, in Musick, the Burthen of

a Song, or a Repetition of the first Verses of the Song, at the end of each Stanza or Couplet. See *REPETITION*.

The Word is *Italian*, and signifies properly a *little Return*, or a short Repetition, such as that of an *Écho*; or of the last Words of a Song; especially when the Repetition is made after a Voice by one or more Instruments.

But *Caibon* has extended the use of the Word to all Symphonies, play'd before the Voices begin, and which serve by way of Prelude or Introduction to what follows.

In the Partitions or Score of the *Italian Musick*, we frequently find the *Ritornello*'s signified by the Words *fi sono*; to shew that the Organ, Spinnet, or the like, are to repeat what the Voice has been singing. See *REPEAT*.

**RITUAL**, a Church-Book, directing the Order and Manner of the Ceremonies to be observ'd in celebrating Divine Service, in a particular Church, Diocese, Religious Order, or the like. See *RITE*.

The ancient Heathens had, likewise, their *Rituals*; call'd *Rituals Liberi*; whereof those of the *Hetrurians* were famed.

These Books contain'd the Rites and Ceremonies to be observ'd in the building a City, in the consecrating a Temple or an Altar, in Sacrificing, Dedicating, in dividing the Curia, Tribes, Centuries, and in general, all their Religious Ceremonies. See *SACRIFICE*, *APOTHEOSIS*, *ALTAR*, &c.

There are several *Pallages* in *Cato's Books*, *De re rustica*, which may give us some Idea of the *Rituals* of the Antients.

**RIVAL**, *RIVALES*, a Term of Relation, applied to two Persons who have the same Pretensions. See *CORRIVAL*.

'Tis properly us'd for a Competitor in Love; and figuratively for an Antagonist in any other Pursuit.—The Intrigues of Comedies and Romances usually turn on the Jealousies of *Rivals*, who dispute for the same Mistress.

The Lawyers derive the Word from the *Latin*, *Rivus*, Stream, *quod ab eodem rivu aquam hauriant*. *Donatus* supposes it to have taken its Name hence, that Beasts coming to drink at the same Brook, or Fountain, frequently quarrel.

*Cæsar* says, that *Rivales* were originally such whose Fields were parted by a Brook or Rivalet; the Course whereof being liable to be varied several Ways, occasion frequent Disputes and Law-Suits.

**RIVAGE**, a Toll antiently paid to the King in some Rivers, for the Passage of Boats therein. See *FERRY*.

**RIVER**, *FLUVIUS*, *FLUMEN*, in Geography, a Stream or Current of fresh Water, flowing in a Bed or Channel, from a Source or Spring, into the Sea. See *WATER*, &c.

If the Stream be not large enough to bear Boats, or small Vessels, loaden; it is properly call'd in English, by the Diminutive, *Rivulet*, or *Brook*; by the *Latin*, *Rivus*; and the *French*, *Riviere*.—If it will only bear fish Vessels, the *Latin* call it *Amnis*.—If it be considerable enough to carry larger Vessels, 'tis call'd by the general Name *River*; by the *Latin*, *Fluvius*, and *Flumen*; and by the *French*, *Fluve*.—In all which, the Difference is only as to greater and less.

Some will have none to be properly *Rivers*, except those which bear the same Name from their Source to their Mouth.—Others, none but those which empty themselves immediately into the Sea; and not into any other River. See *SEA*.

*Rivulets* have their Rise, sometimes, from great Rains, or great Quantities of thaw'd Snow; especially in mountainous Places; as in the long *Ridges* in *Africa*, *India*, *Siam*, &c. But the generality of *Rivulets* arise from Springs. See *SPRING*.

*Rivers* themselves all arise either from the Confluence of several *Rivulets*, or from Lakes: Nor is there any great *River*, such as the *Rhine*, *Elbe*, &c. known to flow from a single Spring.—The *Volga*, e. g. consists of above two hundred *Rivulets*, all flowing into it, before it reach the *Caspian*: And the *Danube* receives as many. *Phry*, indeed, and *Cardan*, say, that the *Nile* receives none; but the later Travellers into *Abyssia* assure us of the contrary.

The *Rhine*, *Rohan*, *Danube*, *Borysthenis*, &c. arise originally from Springs in the Mountains; the *Nile*, *Volga*, the great *Rygor*, of *St. Lawrence*, &c. from Lakes. See *LAKE*.

#### Phænomena and Kind of RIVERS.

*Rivers* are found subject to great Alterations, at different Seasons of the Year, Day, &c. from frequent Rains, and melted Snow.—Thus in *Peru* and *Chil* many of the *Rivers* are almost insensible in the Night-time; and only flow by Day; as being then augmented by the Refolution of the Snow on the Mountains, *Andes*.

—Thus the *Volga* abounds in Water in *May* and *June*; so as to cover the Sand-Banks, &c. which all the rest of the Year lie bare, so as scarce to allow a Passage to the loaden Ships.—Thus also the *Nile*, *Ganges*, *Indus*, &c. are frequently so increased as to overflow; and that either in the Winter, from Rain, or in the Summer, from the melting of the Snow.

Some *Rivers* bury themselves under Ground in the middle of their Course, and break out again in other Places, like new *Rivers*.—Thus the *Niger*, which some Cosmographers derive by a subterraneous Channel from the *Nile*, because it swells at the same time with the *Nile* without any other apparent Cause of it.

is swelling: The Niger it self meeting the Mountains of *Nubia*, is hid under them, and rises again on the Western Side of the Mountains. Thus also the *Tigris* is lost in the Mountain *Zaurus*, &c.

*Arifotle*, and the Poets, mention several such Rivers about *Aradia*: *Alphos*, a River of *Aradia*, is particularly famed.—This, being swallowed up in the Ground, is supposed by the *Greek* Authors to continue its Progress under Earth and Sea, into *Sicily*; where breaking up near *Syracuse*, it forms the River *Arctophis*. The great Reason of this Opinion is, that every fifth Summer the River *Arctophis* in *Sicily*, calls up the Dung of Cattel about the time of the Celebration of the Olympic Games, in *Achaia*, when the Dung of Victims was used to be cast into the *Alphos*.

Some Rivers empty themselves into the Sea by one Mouth, some by several.—Thus the *Danube* opens into the *Euasine* Sea by seven Mouths, the Nile by seven, and the *Volga* by at least seventy. The Cause of this variety of Mouths *Varrinus* attributes principally to Banks of Sand, &c. form'd therein; which gradually increasing, form Islands, whereby the Channel is divided into several Branches.—Indeed, the Antients tell us that the Nile formerly only empti'd it self at one Mouth, call'd the *Ostium Caspense*; and add, that the other six are Artificial.

The Channels of Rivers, except such as were form'd at the Creation, *Varrinus* endeavours to prove to beall Artificial, and dug by Men.—His Reasons are, that when a new Spring breaks forth, the Water does not make it self a Channel, but spreads over the adjacent Land; so that the People have been necessitated to cut it a Channel to secure their Grounds; and that a great Number of Channels of Rivers are certainly known, from History, to have been dug by Men, &c.

As to the Question, whether those Rivers which run into others, have made themselves that way by their own Motion, or have been turn'd thicker in Canals cut by Men? He takes the latter to be the more probable; and concludes the fame of the Arms or Branches of Rivers; and of the Turns whereby Islands are form'd in the *Tanais*, *Volga*, &c.

To the Question, why we have no Salt-Rivers, when as there are many Salt Springs? He answers, that 'tis because Men having no Occasion for Salt Water, have not dug Channels to conduct the Water of Salt Springs; Salt being procurable at less expence. See SALT.

The Water of most Rivers flows impregnated with Particles of Metals, Minerals, Sands, oily and fat Bodies, &c.—Thus some Rivers bring Sands intermix'd with Grains of Gold; of which kind is, 1<sup>o</sup>, a River in *Japan*; a Gold in the Islands *Leques*, near *Japan*; 2<sup>o</sup>, a Rivulet in *Africa*, call'd *Arve*, breaking out of the Roots of the Mountains of the Moon, wherein are Gold Mines: 3<sup>o</sup>, a River in *Guiana*, where the Negroes separate the Gold Dull from the Sand, and sell it to the *Europeans*, who Traffick higher for that very purpose. 4<sup>o</sup>, In some Rivulets near the City of *Mexico*, are Grains of Gold taken up; especially after Rain; which is to be understood of all the other Rivers; none of which yield any thing considerable, except in rainy Seasons. 6<sup>o</sup>, In *Persia*, *Siam*, *Cuba*, *Hispaniola*, and *Guiana*. Lastly, there are several Brooks in the Countries about the *Alps*, especially *Tirel*, out of whose Waters Gold is drawn, though there be no Grains conspicuous therein. Add to this, that the *Rhine* in many Places brings a Golden Mud. See GOLD.

As to Rivers that bring Grains of Silver, Iron, Copper, Lead, &c. we find no mention of them in Authors; though doubtless there are great Numbers of each; and many of the medicinal Effects of mineral Waters are doubtless owing thereto.

We must not here omit a River in *Germany*, which is ordinarily supposed to change Iron into Copper.—The Truth is, there is no real Conversion of the Metal; all that is done is, that the Copper, and Vitriolic Particles in the Water, corrode the Iron, and detaching Parts thereof, by means of the Motion of the Water succeed in their room.

From this variety in the Mixture of the River Water, result various Qualities, different specific Gravities, different Colours, &c. See MINERAL-WATER.

Some Rivers, at certain Seasons of the Year, swell, so as to overflow their Banks, and drown the neighbouring Lands.—Of these the most eminent is the Nile, which rises so as to cover all *Egypt*, except the Hills. The Inundation begins about the 17th Day of *June*, and increases for the space of forty Days; and ceases to be so many: During which Period the Cities of *Egypt*, which are all built on Hills, appear as so many Islands.

To these Inundations *Egypt* owes all its Fertility; the Heavens there affording no Rain, or at least none in any respect considerable.—Hence as the Inundation is great or small, *Egypt*, for that Year is fruitful or barren.

The Antient *Greeks*, &c. were mistaken as to the Cause of this Inundation; no body in those Days having travelled up to its Source: But the modern *English* and *Portuguese* Traders into *Congo*, *Angola*, *Monomotapa*, &c. have let us into the Secret.—From them we learn that the Spring or Source of the Nile is in a large Lake call'd *Zaire*, round which are a great Number of huge Mountains, call'd the Mountains of the Moon. Now as these lie in the Southern Hemisphere, their Winter will be at the time

of our Summer: But by reason of their nearness to the Equator; (being only 10<sup>o</sup> distant from it) they never feel any notable Cold: Hence it is, that instead of Snow in the Winter, they have Rain every Day, at least two Hours before, and two after Noon. In effect, the Tops of these Mountains are always cover'd with Clouds, and the Rains almost continual. Hence Torrents are constantly gushing down from the Mountains; all ending in the Lake of *Zaire*; whence they flow into the Channel of the Nile, and other Rivers arising from the same Lakes, as the *Casava*, *Zaire*, &c. Hence the Inundation of the Nile.

The other Rivers, which have any notable fixed Inundations, are; the Niger, which overflows at the same Time with the Nile. *Leo Africanus* says, it begins on the 15th Day of *June*, increases for 40 Days, and decreases as long.—The *Zaire*, a River of *Congo*, proceeding from the same Lake with the Nile, and therefore affected in the same Manner: The *Rio de la Plata* of *Brazil*, which *Maffius* observes, overflows at the same time with the Nile: The *Ganges*; The *Indus*; both which left overflow in *June*, *July*, and *August*; at which Times the Natives have great Quantities of the Water in Ponds, to serve them the rest of the Year: Several Rivers flowing out of the Lake *Chiamay*, into the Bay of *Beugal*, which overflow in *September*, *October*, and *November*. These all bring a very great Fertility with them to the Ground: The River *Mama* in *Cambodia*: The River *Parana*, or *Paraguay*, which some will have to be the same with the *Silver River*: Several Rivers in *Coccoland*, a Part of *India*, overflowing in the rainy Months from the great Quantity of Water issuing off the Mountain *Gatis*: The *Exopates*, which overflows *Megethinia*, certain Days in the Year. Lastly, the River *Sas* in *Namadia*.

The Rivers most celebrated for their Length, Breadth, Swiftness of Current, &c. are.—The Nile, which runs almost in a straight Course 5200 Geographical Miles. The Niger, which runs 2400 Miles. The *Ganges*, 1200 Miles. The *Ob*, 1600 Miles. The *Jensera* in *Asia*, about the same Length with the *Ob*. The River *Orellana* in *America*, 60 Miles broad at its Mouth, and 5000 Miles long. The *Rio de la Plata*, 80 Miles broad at the Mouth. The *Owarrauo*, another River of *Brazil*: And the great River of *St. Lawrence*, near 2500 Miles long.

Rivers, in *Phyicks*, a Water running by its own Gravity, in a Channel open above.—Such is *AE Tab. Hydrostatics*, Fig. 34

#### Causes of the Motion of RIVERS.

The modern Philosophers endeavour to bring the Motion and Flux of Rivers to precise Laws; and with this View have applied Geometry and Mechanics thereto: So that the Doctrine of Rivers is become a Part of the new Philosophy.

The *Italian* Authors have distinguished themselves herein, and 'tis chiefly to them we are indebted for the Improvements; particularly *S. Guglielmo*, who in his Treatise, *De la Natura de Rivis*, his abundance of new Observations and Discoveries relating thereto.

Rivers, he observes, usually have their Sources in Mountains or Elevations of Ground; and 'tis in their Descent from these, that they acquire the Velocity or Acceleration which maintains their future Current.—In Proportion as they advance further, this Velocity diminishes; by reason of the continual Friction of the Water against the Bottom and Sides of the Channel, of the various Obstacles they meet with in their Progress; and of their arriving at length in Plains, where the Descent is less, and their Inclination to the Horizon, of consequence, greater.—Thus the *Reno*, a River of *Italy*, which gave Occasion in some Measure to these Speculations, is found near its Mouth, to have scarce a Descent of 52 Seconds.

If the acquired Velocity be quite spent through the many Obstacles; so that the Current becomes horizontal; there will then nothing remain to propagate the Motion, and continue the Stream, but the Height, or the perpendicular Pressure of the Water which is always Proportional to the Height.—And, happily for us, this Resource increases as the Occasion for it increases: For in Proportion as the Water loses of the Velocity acquired by the Descent, it rises and augments in Depth.

The upper Parts of the Water of a River, and those at a Distance from the Banks, may continue to flow from the single Cause or Principle of Decivity, how small soever it be; for not being detain'd by any Obstacle, the minutest Difference of Level will have its Effect: But the lower Parts, which roll along the Bottom, will scarce be sensible of so small a Decivity, and will only owe what Motion they receive from the Pressure of the superincumbent Waters.

The natural Viscosity and Cohesion of the Particles of Water, and that Implication, as it were, which they seem to have with one another, makes the lower, which are moved by means of the Depth, carry along with them the upper, which in a horizontal Channel would have no Motion at all, or in a Channel very little inclined, next to none. So that the lower, in this Case, communicate to the upper, a Part of the Motion they have receiv'd from it. Hence it frequently happens that the greatest Velocity of a River is about the middle of its Depth; such middle

Parts having the Advantage of being prevail'd with half the Depth of the River, and of being free, at the same Time, from the Friction of the Bottom.

To find whether the Water of a River almost Horizontal, flows by means of the Velocity acquired in its Descent, or by the Pressure of its Depth; set up an Obstacle Perpendicular thereto; and if the Water rise and swell immediately against such Obstacle, it runs in Virtue of its fall; or if it stop a little while, in Virtue of its Pressure.

Rivers, according to this Author, almost always make their own Beds.—If the Bottom have originally been a large Declivity; the Water in Consequence hereof falling with a great deal of Force, will have sweep away the most elevated Parts of the Soil, and carrying them lower down, will gradually make the Bottom horizontal; where the Stream is swiftest, there will the Earth be most dug up, and consequently there the greatest Cavity will be made.

The Water having made its Bed horizontal, becomes for it self, and consequently takes with the less Force against the Bottom; till at length that Force is only equal to the Resistance of the Bottom. The Bottom is now arrived at a State of Permanency, at least for a considerable Time; and the longer, according to the Quality of the Soil; Clay and Chalk resisting longer than Sand or Mud.

On the other Hand, the Water is continually gnawing and eating off the Brims of its Channel; and this with the more Force as by the Direction of its Stream it strikes more perpendicularly against them. By this means it has a continual Tendency to render them parallel to its own Course; and when it has arrived as near that as possible, it ceases to have any Effect in that Way. At the same time that it has thus redress'd its Edges, it has enlarged its own Bed; that is, has lost of its Height, and consequently of its Force and Pressure: This it continues to do till there is an Equilibrium between the Force of the Water and the Resistance of its Banks, upon which they will remain fix'd.—And it is evident from Experience, that these Equilibriums are all real; inasmuch as we find that Rivers only dig and widen to a certain Pitch.

The very reverse of all these things does also happen.—Rivers whose Waters are thick and muddy, raise their Bed by letting Part of the heterogeneous Matters contain'd in them fall to the Bottom: They also contract their Banks by a continual Apposition of the same Matter in brushing over them. This Matter being thrown aside far from the Stream of Water, might even serve, by reason of the obscurity of the Motion, to form new Banks.

Now, these opposite Effects almost always seem to meet together, and are differently combined, according to the Circumstances; whence 'tis very difficult judging of the Result. Yet must this Combination be known very accurately, ere any Measures can be taken about Rivers, especially as to the diverting their Courses.—The *Lavagna*, which emptied it self into the *Pa*, being turn'd another Way to make it discharge it self into the *Adriatic*, was so alter'd, and its Force so far diminish'd, now that its Waters were left to themselves, that it rais'd its Bed a great Height, by continual Depositions of Mud; till it became much higher than the *Pa*, in its utmost Accretions, and needed very high Banks or Dykes to keep it from overflowing. See ALLUVION.

A little River may be receiv'd into a large one, without either augmenting its Width or Depth.—This seeming Paradox arises hence, that the Addition of the little River may only go to move the Water before at rest near the Banks of the large one, and thus augment the Velocity of the Stream, in the same Proportion as it does that of the Quantity of Water.—Thus the *Proserna* Branch of the *Pa* swallow'd up the *Ferrarese* Branch, and that of *Passara*, without any enlargement of its own Dimensions. And the same may be concluded proportionably of all other Accessions to Rivers; and in the general, of all new Augmentations of Water.

A River offering to enter into another, either perpendicularly, or in an opposite Direction, will be diverted by Degrees from that Direction, and oblig'd to make it self a new and more favourable Bed next the Mouth.

The Union of two Rivers into one, makes it flow the swifter, by reason in lieu of the Friction of four Shores, they have only two to surmount; and that the Stream being further distant from the Banks, goes on with the less Interruption; beside that a greater Quantity of Water moving with a greater Velocity digs deeper in the Bed, and of Course retrenches of its former Width.—Hence also it is that Rivers, by being united, take up less Space on the Surface of the Earth are more advantageous to low Grounds; which discharge their superfluous Moisture into them, and have less Occasion for Dykes to prevent their overflowing.

These Advantages are so considerable, that *S. Guglielmus* thinks them worthy of Nature's having had a View to them in her contriving to make the Confluence of Rivers so frequent as we find it.

To determine more precisely the general Laws of the Motion of Rivers, it may be observed that a River is said to remain in the same State, or to be in a permanent State, when it flows uniformly, so as to be always at the same Height in the same

Place.  $\alpha^{\circ}$ . That a Plane, which cutting a River is perpendicular to the Bottom, as  $p \ o \ s \ g$ , is call'd the Section of a River.

Hence, when a River is terminated by flat Sides, parallel to each other, and perpendicular to the Horizon, and the Bottom also is a Plane, either horizontal, or inclined, the Section of the River with these three Planes makes Right Angles, and is a Parallelogram.

Now in every River that is in a permanent State, the same Quantity of Water flows in the same Time through every Section; for unless there be in every Place as great a Supply of Water, as what runs from it, the River will not remain in the same State. This will hold good, whatever be the Irregularity of the Bed, or Channel, from which in another respect several Changes in the Motion of the River may arise: For Example, a greater Friction, in Proportion to the Inequality of the Channel.

The Irregularities in the Motion of a River may be infinitely varied, nor can any Rules be given to settle them. All Irregularities must be set aside; and only the general Tendency or Flux be considered to examine the general Course of Rivers.

Suppose, then, the Water to run in a regular Channel, without any sensible Friction, and that the Channel is terminated with Plane Sides, parallel to one another, and Vertical; and also that the Bottom is a Plane, and inclined to the Horizon.—Let *AE* be the Channel, into which the Water runs from a greater Reservoir or Head; and let the Water always remain in the same Height at the Head, so that the River may be in a permanent State: The Water here descends along an inclined Plane, and is accelerated; whereby, because the same Quantity of Water flows through every Section, the Height of the Water, as you recede from the Head of the River, is continually diminished, and its Surface will acquire the Figure, *1 \ g*.

To determine the Velocity of the Water in different Places; suppose the hollow of the Channel *ADCB* to be shut up with a Plane; if there be an Hole made in the Plane, the Water will issue the faster through the Hole, as the Hole is more distant from the Surface of the Water *HI*; and the Water will have the same Celerity that a Body falling from the Surface of the Water to the Depth of the Hole below it, would acquire: All which arises from the Pressure of the superincumbent Water.—There is the same Pressure, that is, the same moving Force, when the Obstacle at *AC* is taken away, upon which every Particle of Water enters into the Channel with the Celerity a Body would acquire in falling from the Surface of the Water to the Depth of that Particle. This Particle is moved along in an inclined Plane in the Channel, with an accelerated Motion; and that in the same manner, as if in falling vertically, it had continued its Motion to the same Depth below the Surface of the Water in the Head of the River.

So, if you draw the horizontal Line *is*, the Particle at *r* will have the same Celerity as a Body falling the length *i \ C*, and running down *rs*, can acquire; which is the Celerity acquired by the Body in falling down *rs*. Therefore the Celerity of a Particle may be every where measured, by drawing from it a Perpendicular to the horizontal Plane, which is conceived to run along the Surface of the Water in the Head of the River; and the Velocity which a Body acquires in falling down that Perpendicular, will be the Celerity of the Particle; which is greater, the longer the Perpendicular is. From any Point, as *r*, draw *RS* perpendicular to the Bottom of the River, this will measure the Height or Depth of the River. Since *rs* is inclined to the Horizon, if from the several Points of that Line, you draw Perpendiculars to *is*, they will be shorter, the more distant they are from *r*, and the shortest of them also will be *fv*: Therefore the Celerities of the Particles in the Line *rs*, are so much the less, the nearer they are to the Surface of the River, and the lower Water is moved faster than the upper Water.

Yet the Celerities of those Waters, as the River runs on, continually acquire nearer and nearer to an Equality: For the Squares of those Celerities are as *rs* to *rs*, the Difference of which Lines, as you recede from the Head of the River is continually lessened, because of the Height *rs*, which is also continually diminished as the Lines themselves are lengthened. Now as this obtains in the Squares, it will much more obtain in the Celerities themselves, whose Difference therefore is diminished as they increase.

If the Inclination of the Bottom be changed up to the Head of the River, so as to become *rs*, and a greater Quantity of Water flow into the Channel, it will be higher every where in the River, but the Celerity of the Water will not be changed.—For this Celerity does not depend on the Height of the Water in the River, but, on the Distance of the moved Particle from the horizontal Plane of the Surface at the Head continued over the said Particle; which Distance is measured by the Perpendicular *rs*, or *fv*; but these Lines, are not changed by the Afflux of Water, provided the Water remain at the same Height in the Basin or Head.

Suppose the upper Part of the Channel stop'd by an Obstacle, as *X*, which descends a little way below the Surface of the Water; here, the whole Water which comes cannot run through, therefore it must rise: But the Celerity of the Water below this Cause is not increased; and the Water that comes on, is continually

mally heaped up, so that at last it must rise so as to flow over the Obstacle, or the Banks of the River. If the Banks be raised, and the Obstacle be continued; the Heights of the Water would rise above the Line *11*; but before that, the Celerity of the Water cannot be increased: In which Case the Height of all the Water in the Head will be increased; for, as we suppose the River in a permanent State, there must continually be as great a Supply of Water to the Head, as there runs from it down the Channel; but if less Water runs down, the Height must necessarily be increased in the Head, till the Celerity of the Water flowing under the Obstacle be increased to such Degree, that the same Quantity of Water shall run under the Obstacle, as used to run in the open Channel before.

**RIVULET**, a Diminutive of River. See RIVER.  
**RIXDOLLAR**, a Silver Coin, struck in several States and free Cities of Germany; as also in Flanders, Poland, Denmark, Sweden, &c. See COIN.

There is but very little Difference between the *Rixdollar* and the *Dollar*, another Silver Coin struck in Germany; each being equal to the French Crown of three Livres, the Spanish Piece of Eight, or 4. 6. d. Sterling. See CROWN, &c.

The *Rixdollar* is one of the most Current and universal Coins in the World.—It is used equally in the Commerce of the Levant, the North, Moscow, and the East-Indies.

**ROAD**, *Vta*, an open Way or Passage, which makes a commodious Communication between one Place and another. See WAY.

The *Romans*, of all other People, took the most pains in their Roads: The Labour and Expences they were at to render them spacious, straight, smooth, and agreeable to the very Extracities of their Empire, are incredible. See *Bergh's* History of the great Roads of the Roman Empire.

Usually, they strengthened the Ground by ramming it, laying it with Flints, Pebbles, or Sand; sometimes by a Lining of Masonry, Rubbish, Bricks, Potsherds, &c. bound together with Lime.

*F. Menestrier* observes, that in some Places in the *Lyonnois* he has found huge Chalkers of Flints cemented with Lime, reaching 10 or 12 Foot deep, and making a Mass as hard and compact as Marble itself; and which, after resisting the Injuries of Time for 1600 Years, is still scarce penetrable by all the Force of Hammers, Mattocks, &c. and yet the Flints it consists of don't exceed the bigness of an Egg.

Sometimes they even paved their Roads regularly, with large square Free-Stones; such as the *Appian* and *Flemish* Way, &c. See PAVING.

The Roads paved of very hard Stones they usually call'd *Vie Ferrée*, either because they resembled Iron, or because they resisted the Iron of the Horse's Feet, Chariots, &c.

Roads are either *Natural*, or *Artificial*; *Terrrestrial*, or *Aquatic*, *Publick*, or *Private*.

A *natural Road* is that which has been frequented for a long succession of Time, and subsists with little Expence, by reason of its Disposition, &c.

*Artificial Road* is that made by Labour of the Hand, either of Earth, or Masonry; and wherein there were several Difficulties to be surmounted: Such are most of those along the Banks of Rivers, through Marshes, Lakes, &c.

*Terrrestrial*, or *Land Roads*, are not only those made upon the Ground, but also those form'd of Earth heaped up in Manner of a Bank, and sustained by Spurs, Buttresses, and Counter-Forts.

*Aquatic Road* is a Road made in the Waters, whether Current, as over Rivers, &c. or Stagnant, as Banks and Causeways over Morasses, Ponds, &c. See CAUSEWAY.

Under this Denomination are also comprehended navigable Rivers, and artificial Canals; as those in *Italy*, *Holland*, &c.

*Publick Road*, or *Grand Road*, is any common Road, whether straight, or a-cross, Military or Royal, &c.—*Private Road* is that made for the Convenience of some particular House, &c.

*Military Roads*, so call'd among the *Romans*, were grand Roads appointed for the marching of their Armies into the Provinces of the Empire, or for the Assistance of their Allies. See MILITARY.

The principal of these Roads in England, are *Walling-street*, *Henrich-street*, *Fish-way*, and *Ermining-street*; which see under the Article WAY.

*Dweller-Roads*, among the *Romans*, were Roads for Chariots, &c. having two Pavements, or Causeways; the one for those going one way, the other for those returning the other; to prevent clashing, stopping, and confusion.

These two Ways were separated from each other by a Bank raised in the Middle, paved with Bricks, for the Convenience of Foot-People, with Borders, mounding Stones from Space to Space, and military Columns to mark the Distance.—Such was the Road from Rome to Ostia; call'd *Via Portuensis*. See MILITARY.

*Subterraneous-Road*, is that dug in a Rock, with the Chisel, &c. and left vaulted.—Such is that of *Pezzano* near *Naples*, which is near half a League long, fifteen Foot broad, and as many high. See SUBTERRANEAN.

*Strabo* says it was made by one *Coccius*, a Relation, probably, of *Nerva's*; but it has since been widened by *Aphobus* King of

*Aragoa* and *Naples*, and made straight by the Viceroy.—There is another of the same Kind in the same Kingdom, between *Basia* and *Cama*, call'd the *Grato* of *Virgil*, because mentioned by the Poet in the sixth Book of his *Æneid*. See GNATTO.

**ROAD**, in Navigation; a Place of Anchorage, at some Distance from Shore, and shelter'd from the Winds; where Vessels usually moor, to wait for a Wind or Tide proper to carry them into Harbour, or to set Sail. See HARBOUR, MOORING, ANCHORS, &c.

When the Bottom is clear of Rocks, and the Hold firm, and the Place well cover'd from a certain Wind; the Road is said to be good.

A *good ROAD*, among Sailors, is one which has but a little Land on any Side.

The Roads within his Majesty's Dominions are free to all Merchant Vessels, either of his Subjects or Allies.—Captains and Masters of Ships who are forced by Storms, &c. to cut their Cables, and leave their Anchors in the Roads, are obliged to fix up Marks or Buoy, on Pain of a Forfeiture of their Anchors, &c. See BUOY.

The Masters of Ships coming to Moor in a Road, must cast Anchor as such Distance as that the Cables, &c. mayn't mix, on Pain of answering the Damages: When there are several Vessels in the same Road, the clearemost to the Sea-ward, is obliged to keep a Light in his Lantern in the Night-time, to apprise Vessels coming in from Sea.

**ROADER**, among Sailors, a Ship that Rides at Anchor in a Road. See ROAD and ANCHOR.

**ROB**, in Pharmacy, a Preparation antiently much used, consisting of the Juices of Fruits, purified, and bottl'd to a Consumption of two thirds of their Moisture. See MUCICUS, &c.

There are *Robs* made of Quinces, Mulberries, Elderberries, Aloes, Acacia, Liquorice, Barberries, Gooseberries, and other Fruits, for various Diseases.—The Juice of Grapes thus prepared, is particularly call'd *Sapa*; which *Sapa* is almost of the Consistence of a Syrup. See SAPA.

When only one third of the Humidity is hold'd away, 'tis call'd *Defrutum*; and when only bottl'd to the Consistence of a soft Electuary, a *Resin*. See DEFUTUM and RESIN.

The Word *Rob* is pure *Arabic*; and signifies, originally, a Juice dried in the Sun, or over the Fire; that it may keep the longer without Damage.

Sometimes it also denotes a Composition of some Juice made up with Honey or Sugar; in which Sense it is confounded with *Loche* or *Lobse*. See LOTICE.

The *Rob* is a Form now much out of use; though there are several directed in the College Dispensary; as *Rob* of black Cherries, of Sloes, of Quinces, &c.

**ROBBERY**, in Law, a felonious taking away another Man's Goods, from his Person, Presence, or Estate, against his Will; putting him in Fear, &c.—This is sometimes call'd *violens Theft*. See THEFT.

The Word is said to have taken its rise hence, that antiently Robbers only took away the Robes or Cloaths from Travellers. Though my Lord *Coke* in the third of his *Institutes*, takes the Name to have had its rise from *Robin Hood*, who lived under *Richard I.* in the Borders of *England* and *Scotland*; by Robbery, burning Hoaves, Rape, and Spoil.

Hence also *Robbery-Men*, or *Robberies-Men*, mentioned in several Statutes for mighty Thieves.

**ROBE**, a Gown or Garment worn by Lawyers, Divines, and other Graduates; who are hence call'd *Gentlemen of the long Robe*. See GOWN.

The *Robe* is an ample Garment bore over the ordinary Cloaths, hanging down to the Feet.—It is fashion'd differently for Ecclesiasticks, and for Laymen.

At Rome, they gave the Name *Virile Robe*, *Toga Virilis*, to a plain kind of Gown which their Youth assumed when arrived at Puberty. This, they particularly denominated, *Prætexta*. See TOGA, PRÆTEXTA, VIRILE, PUBERTY, &c.

In some Universities, Physicians wear the red *Rob*.—In the *Sarkness* the Doctors are always in *Robes* and Caps. Beadles, &c. wear *Robes* of two Colours.

Among the French Officers, &c. they distinguish those of the *short Robe*; which are such as have not been regularly examined.—They have also *Barbes* of the *short Robe*, who are such as are obliged to Practice in an inferior Way to those of the long *Robe*.

**ROBE**, is also taken in the general for, Civil Magistrature, or the Profession opposite to that of Arms. See MAGISTRATE.

In this Sense it was that *Cicero* said, *Orator Arma Toge*.

*Master of the ROBES*, is an Officer of the Household, who has the ordering of all his Majesty's *Robes*; as those of the Coronation, those of St. George's Feast, of Parliament, &c. as also of his wearing Apparel, Collar of SS's, &c.

He has several Officers under him, as a *Clerk of the Robes*, a Yeoman, three Grooms, a Page, a Brafter, Sempstress, Laundress, Starcher; a Keeper of the Wardrobe at *Whitehall*, &c. See WARDROBE.

**ROBEVALLIAN Lines**, a Name given to certain Lines, used for the Transformation of Figures; thus call'd from their Inventor *M. de Roberval*. See TRANSFORMATION, &c.

The Abbot Galloys, in the Memoirs of the French Academy, An. 1693. observes, that the Method of transforming Figures, explain'd at the latter end of M. de Roberval's Treatise of Indivisibles, is the same with that since published by Mr. James Gregory, in his Universal Geometry; and that, by a Letter of Torricelli's, it appears that Roberval had invented this manner of transforming Figures, by means of certain Lines which Torricelli called *Robervallian Lines*.

He adds, that 'tis highly probable that J. Gregory first learned the Method in the Journey he made to Padua in 1668; the Method it self having been known in Italy from the Year 1646; though the Book was not published till the Year 1692.

This Account Dr. David Gregory has endeavour'd to refute, in Vindication of his Brother.—His Answer is inserted in the *Phil. Transact.* An. 1694. and the Abbot has rejoind in the French Memoirs of the Academy, An. 1703.

ROBIGALIA, or RUBIGALIA, in Antiquity. See RUSTALIA.

ROBORANTIA, in Medicine, *Strengtheners*; or such Medicines as strengthen the Parts, and give new Vigour to the Constitution. See STRENGTHENER.

ROCAMBOLES, a mild, pleasing Sort of Garlick, by some call'd Spanish Garlick; being such of the Nature of Shallot, and well known in Cookery, in Quality of a Sauce.

ROCHET, a Lawn Garment, wore by Bishops and Abbots; resembling a Surplice, except in this, that the Sleeves are gathered at the Wrist; whereas the Surplice is quite open. See SURPLICE.

The Regular Canons of St. Augustin do also wear Rochets under their Copes.—*Message* derives the Word from the Latin *Rochetta*, a Diminutive of *Rochus*, used in the Writers of the lower Latin for *Tunic*, and formed originally from the German, *Rock*.

ROCHETS are also the Mantles wore on Days of Ceremony, by the Peers sitting in the English Parliament. See PEER and PARLIAMENT.

Those of Viscounts have two Bands or Borders and a half; those of Earls three; those of Marquises three and a half; and those of Dukes four. See LARRY.

ROCK, RUPES, a large Mass or Block of hard Stone, rooted in the Ground. See STONE.

There are various Ways of breaking Rocks with Wood, Gunpowder, &c. See QUARRY, WOOD, &c.

We have Rocks, Grotto's, Labyrinths, &c. dug through Rocks. See ROAD, GROTTOS, LABYRINTH, &c.

The Word is form'd of the Greek *ῥοκ*, *Roca*, Cleft, Chink; and *ῥο* from *ῥοσπασ*, I break; whence *ρουν*, a stony River.

ROCK-Work, ROCALLE. See SHELL-Work.

ROCK-Crystal, or Crystal of the Rock, is that form'd by a Congelation of the lapidific Juices which trickles down in Rocks and Caverns. See CRYSTAL.

ROCK-ALUM, } See { ALUMN.  
ROCK-SALT, }     { SALT.

ROCKET, in Pyrotechnia, an artificial Fire-work, consisting of a cylindrical Case of Paper, filled with a Composition of certain combustible Ingredients; which being tied to a Stick, mounts in the Air to a considerable Height, and there bursts. See PYROTECHNIA and FIRE-WORKS.

The Rocket has a great Part in all Fire-Works of Entertainment, being not only used singly, but sometimes, also, as an ingredient in others.

Besides the Rocket here defined, which is properly call'd the Sky-Rocket, there is another, which from the Sphere it moves in, the Water, is denominat'd *Water-Rocket*.—The Mechanism, Preparation, &c. of each whereof, we shall here describe.

Method of making a Sky-ROCKET.

1<sup>o</sup>. A Concave cylindrical Mould; or Frame, AB, Tab. *Miscellan.* Fig. 7. is turn'd of hard Wood, with a Base BD, and a Capital HC, usually adorned with architectonical Mouldings.—The Cylinder is to be open at both Ends, and its Dimensions, for Rockets of various Sizes, as in the following Article.—When large, they are sometimes also made of Brass or Tin; and when small, of Bone.

2<sup>o</sup>. Of the same Matter with the Cylinder, is prepared a Quadra, or Foot E; in the middle whereof is turn'd a Hemisphere G, considerably less than that of the Cavity of the Frame; making the Cap or Head of another Cylinder IK, and reaching up within the Case; where 'tis kept steady by a Pin LM.

Authors don't agree about the Proportions.—Some write describes those that follow. If the Diameter of the Aperture FIN be equal to that of a Leaden-Ball of a Pound, or at most two Pound Weight; the Height of the Cylinder, with the Base and Capital HC, are to be seven Diameters of the Height of the Quadra FE 1  $\frac{1}{2}$ . The Altitude of the Cylinder KI, 1. The Diameter IN  $\frac{1}{2}$ . The Diameter of the Hemisphere G,  $\frac{3}{4}$ . The Height of the Capital AC, 1.—The same Author adds, that he finds by abundant Experience, that if the Diameter of the Aperture be divid'd into 100 Parts, according to the different Weight

of the Leaden-Balls to whose Diameter 'tis equal, the following Numbers being multiplied by 7 give the Height HE.

Weight of Leaden-Ball	Subseptuple of Altitude HE.	Weight of Leaden-Ball	Subseptuple of Altitude HE.
1	100	20	86
2	98	30	82
4	26	40	78
6	94	50	75
10	91	70	67
15	88	100	57

The Frame being ready, a wooden Cylinder or Mould AB (Fig. 8.) is provided, whose Diameter is  $\frac{1}{2}$  of the Aperture of the Frame, and its Length equal to the Height of the fame; to which is affix'd a Haft or Handle AD. About this Mould is a thick strong Paper roll'd, till such time as it fill the Cavity of the Frame. This done, where the Haft is join'd to the Cylinder, as at A, 'tis clos'd w<sup>th</sup> i. e. firmly bound round with fine Pack-thread, so as to contraine or straighten the Cavity thereof.—The Part thus clos'd or bound up FG, (Fig. 9.) to be equal to the Hemisphere G.

The Case is now taken off the Mould, and put into the Cavity of the Frame, Fig. 7. the Case GP upon the Hemisphere; and in this Disposition is fill'd with a Composition described in the following Article, ram'd strongly in by means of a wooden Cylinder or Rammer fitting the Cavity, and a Mallet.

When fill'd, a Paper Cap of a conical Form is glued over the End of the Case fill'd last; and the Space left a-top fill'd with whole Gun-powder, to the Height of about one Diameter; then the Rocket bound, or clos'd at an E, as before in G.

Lastly, the Rocket is bored, as is represented in A, Fig. 9. care being taken to do it in the middle.—Some, indeed, bore the Rocket as they fill it, by thrusting a long, sharp Spike through the lower Basis, and drawing it out again when the Rocket is full; But 'tis best not to bore till the Rocket be to be used.

The boring is to go two thirds of the Height of the Rocket, abating one Diameter of the Cavity. The Diameter of the Bore in G is to be  $\frac{1}{2}$  of the Diameter of the Cylinder; and in L  $\frac{1}{4}$  of the lower Diameter.

To make the Rocket mount straight up, it is tied fast to the End of a long slender Stick, MN, eight times as long as the Rocket; so high manner as that when put w<sup>th</sup> on the Finger near the Touch-hole F, the Stick (which is usually made biggest at this End, and flopping gently to the other) may preponderate, tho' very little.—The Rocket thus equip'd, is hung at freedom, and lighted with Port-Fire.

Note, Some instead of a Stick to make the Rocket mount, furnish it with two Wings, as MN, (Fig. 10.) which have the same Effect; And instead of Paper some make the Cases of Wood, cover'd with Leather; others of a thin Iron Plate. And some, instead of a wooden Stick use an Iron Wire, with a Plummet at the end of it.

The Composition wherewith Rockets are fill'd, consist of the three following Ingredients, viz. Salt-petre, Charcoal, and Sulphur; all well ground; But the Proportions of these are various for Rockets of various Sizes; as in the following Table. Noting, that in small Rockets Gun-powder Dust is added.

Compositions for ROCKETS of various Sizes.

Weight of Rocket.	Salt- petre.		Sul- phur.	Char- coal.	Gun-powder Dust.
	lb	lb	lb	lb	
100, or 60	30	10	20		
50	30	30	7	18	
20	18	42	12	26	
15	12	23	8	16	
10	9	62	9	20	
9	6	35	5	10	
5	4	64	8	16	
3	2	60	2	15	

	1	2	6	32
Ounces.	Oun.	Oun.	Ounce.	Ounce.
9	4	1	2	9
6	12	1 $\frac{1}{2}$	4	15
3	2	$\frac{1}{2}$	1 $\frac{1}{2}$	12
1			2	15

Note, several Rockets being dispos'd round the Circumference of a Wheel, whether Circular or Polygonous, the Head of the one apply'd to the Tail of another, and the Wheel put in Motion; as one Rocket is spent another will take Fire. And the Wheel be continued in its Rotation.

As an additional Ornement to Rockets, 'tis usual to furnish them either with Stars or with Serpents, or Sporks, which take Fire when the Rockets burst: And sometimes little Rockets are includ'd in

in great ones, to take Fire when the great one is at its greatest Height.

To make Stars for ROCKETS.

Mix 3 Pound of Salt-petre, with 11 Ounces of Sulphur, 3 Ounces of beaten Gun-powder, and 10 of Antimony. Mix them with Gum-Water, and form it into little Balls of the Size of Filiberts; drying them well, either in the Sun or an Oven. When dry inclose a Number of them in the Conical Cap of the Rocket.

Method of making a Water-ROCKET.

Make a Rocket AB after the usual Manner, excepting in the Number of Cloaks, express'd in Fig. 11.—Let its Diameter be equal to that of a Leaden-Ball of two or three Inches Diameter, and let it be bored to a third Part of its Height. Inclose the Rocket in a hollow Paper Cylinder, which smear over with melted Pitch or Wax, that it may resist the Moisture.

Notes, The Weight of the Rocket is to be so proportioned to that of the Water, that the whole Cylinder may be immerg'd.—Some instead of a Cylinder use a truncated Cone, or even a Spheroid; and some hang a Weight to the End at which 'tis lighted.

Theory of the Flight of Sky-ROCKETS.

Mariotte takes the rise of Rockets to be owing to the Impulse or Resistance of the Air against the Flame: Dr. Desaguliers accounts for it otherwise.

Conceive the Rocket to have no vent at the Chok, and to be fix'd on Fire in the conical Bore; the consequence wou'd be, either that the Rocket wou'd burst in the weakest Place, or that, if all its Parts were equally strong and able to sustain the Impulse of the Flame, the Rocket wou'd burn out immovable.—Now, as the Force of the Flame is equable, suppose its Action downwards, or that upwards sufficient to lift 40 Pounds. As these Forces are equal, but their Directions contrary, they will destroy each other's Action. See ACTION and REACTION.

Imagine, then, the Rocket open'd at the Chok; by this means the Action of the Flame downwards is taken away, and there remains a Force equal to 40 Pounds acting upwards, to carry up the Rocket, and the Stick it is tied to.—Accordingly, we find that if the Composition of the Rocket be very weak, so as not to give an Impulse greater than the Weight of the Rocket and Stick, it does not rise at all: Or if the Composition be slow, so that a small Part of it only kindles at first, the Rocket will not rise.

The Stick serves to keep it perpendicular: For if the Rocket should begin to tumble, moving round a Point in the Chok, as being the common Centre of Gravity of Rocket and Stick, there wou'd be so much Friction against the Air, by the Stick between the Centre and the Point, and the Point wou'd bear against the Air with so much Velocity, that the Reaction of the Medium wou'd restore it to its perpendicularity.

When the Composition is burnt out, and the Impulse upwards is ceas'd, the common Centre of Gravity is brought lower, towards the middle of the Stick; by which means the Velocity of the Point of the Stick is decreased, and that of the Point of the Rocket increas'd: So that the whole will tumble down, with the Rocket-end foremost.

All the while a Rocket burns, the common Centre of Gravity is shifting and getting downwards, and still the faster and the lower as the Stick is the lighter: So that it sometimes begins to tumble, ere it be burnt out: But, when the Stick being a little too heavy, the Weight of the Rocket bears a less Proportion to that of the Stick, the common Centre of Gravity will not get so low, but that the Rocket will rise freely, though not so fast.

ROD, VIRGA, VERGE, a Wand, or long slender Stick or Staff. See VERGE, STAFF, &c.

ROD, is also a Land-Measure of 16 Foot  $\frac{1}{2}$ , the same with PERCH and POLE. See PERCH and POLE.

ROD, in Gauging. See GAUGING-Rod.

ROD-Knives, an ancient Customs. See REDMANS.

BLACK-ROD. See BLACK-ROD.

ROE, of a Fish, is that Part which contains the Sperm or Seed thereof. See FISH, SEED &c.

That of Male-Fishes is usually distinguished by soft Roe, or Milt; and that of the Female by hard Roe.

The soft Roe when squeeze'd, yields a Liquor resembling Milt; whence its Name Milt: The French call it expressly *Milt, laite*. See MILK.

That of Carps is esteem'd an excellent Food.—M. Leuwenhoek upon examining the Milt of a Cod-Fish with a Microscope, found it contain'd more living Animals than there are Men in the whole Earth. See EGG, ANIMALCULE, MICROSCOPE, &c.

ROE, one of the Beasts of Chase. See BEAST and GAME.

ROE-Back. See HUNTING.

ROE-Back, a Beast of Chase or Forc'd. See BEAST, GAME, &c.

The Roe-Back is called an *Hind* the first Year; *Gyril* the second; *Hemys* the third; *Roe-Back* at the first Head the fourth; and a *four Roe-Back* the fifth.

The Roe-Back is a Deer well known in Germany; and seems to have also been formerly known in England, though now the Race be extinct. See HUNTING.

ROGA, in Antiquity, Donatives, or Presents which the Augusti or Emperors made to the Senators, Magistrates, and even the People; and the Popes or Patriarchs to their Clergy. See DONATIVE.

The Emperors used to distribute these Rogas on the first Day of the Year, or on their Birth Day; or on the Nativitas Day of the Cities.—The Popes and Patriarchs in Passion Week.

This Custom of Rogas, or Lazzels, was first introduced by the Tribunes of the People, to gain the Populace more effectually over to their Interest. The Emperors at length took it up, and made such Distributions to the People, and even the Soldiery, call'd by the Greek Writers in the middle Age *FOCATOZAS*.

Rogas is also found us'd for the ordinary Pay of the Soldiery.

The Word is derived by some from the Latin *erogare*, to give, distribute; according to others from *rogas*, I ask; hence, say they, it is that St. Gregory the Great calls such Distributions *Precarias*; as being to be demand'd, in order to be had. See PRECARIUM.

Others, again, derive it from the Greek *ροζος*, Corn; because it antiently consisted in Corn distributed among the Populace, the Soldiery, &c.

ROGATIO, in the Roman Jurisprudence, a Demand made by the Confess, or the Tribunes, or the Roman People, when a Law was propos'd to be pass'd. See LAW.

The Demand was made in these Terms; *Do you will and appoint that (for Instance) War be declared against Philip?* This was the Rogatio; and what the People return'd in answer, *no*, The Roman People do appoint War to be made against Philip, was the *Decretum, Decree*.

However, the Word Rogatio is frequently us'd for the Decree it self; to distinguish it from a Decree of the Senate. See DECREE.

Frequently, also, Rogatio is us'd in the same Sense with Law; because there never was any Law established among the Romans, but what was done by this kind of Rogation.—Otherwise it had been null. See LAW.

ROGATION-WEEK, the Week immediately preceding Whitsunday; thus call'd from three Fasts therein, *viz.* on the Monday, Tuesday, and Wednesday, call'd Rogations, or Rogation Days, because of the extraordinary Prayers and Processions then made for the Fruits of the Earth. See PROCESSION.

The first who appointed these Rogations was St. Manuervus, Bishop of Verona, who in 474 assembled several Bishops, to implore the Mercy of God by a Fast of three Days; on occasion of an Incurtion then made upon the Country by a great Number of wild Beasts.—Others say, 'twas first set on Foot by Manuervus in 463, on occasion of some publick Calamities.

ROGUE, in Law, an idle and sturdy Beggar; who for the first Offence is call'd a *Rogue of the first Degree*; and punish'd by whipping, and boring through the Grille of the Right Ear with a hot Iron, an Inch in Compass; And for the second Offence is call'd a *Rogue of the second Degree*, and put to Death as a Felon, if he be above eighteen Years of Age. See FELON, &c.

ROLL, in the Manufactories, something wound or folded in a Circle. See ROLLING.

Few Stuffs are made up in Rolls, but Satins, Gravies, and Cneps, which are apt to break, and take Plaits not easy to be got out if folded otherwise.—Ribbons, however, and Laces, Gallions, and Produas of all Kinds, are thus roll'd.

To Roll hot.—By an Act of Council in 1698, Fullers, Shearmen, &c. in *Woolen*, are prohibited to Roll any Stuff hot, either by having Fire over or under it, or by heating the Rollers, or otherwise, on Forfeiture of 100 Livres for the first Offence; or of being degraded from the Privileges of Maittanship in Case of a Relapse.

The Antients made all their Books up in Form of Rolls, or little Columns; and in Cicero's Time, the Libraries consisted wholly of such Rolls.—The dearness of Parchment, and the cheapness of Paper, whereof the Rolls were made, were the Reason that scarce any but Paper Rolls were us'd. See PAPER, PARCIMENT, &c.

Posinus says, they pasted several Sheets end to end, when fill'd on one Side, and roll'd them up together; beginning with the last, which they call'd *Umbilicus*, and to which they fasten'd an Ivory or boxen Snick, to sustain the Roll.—To the other Extremity they pasted a Piece of Parchment, to cover and preserve it. See VOLUME, UMBILICUS, &c.

These Rolls were placed in the Libraries, perpendiculary, to the Horizon.—The Jews still preserve the ancient usage of Rolls for the Books they read in their Synagogues. See BOOK-BINDING.

ROLL of Tobacco, is Tobacco in the Leaf, twist'd on the Mill, and wound Twill over Twill, about a Stick or Roller.

The generality of Tobacco in America is there sold in Rolls, of various Weights: And 'tis not till after its Arrival in England,

*Spain, France, and Holland*, that it is cut.—*Roll Tobacco* is what is used both for chewing and rasing. See **TOBACCO**.

**ROLLS**, in *Law*, a Schedule of Paper or Parchment, which may be wound up by the Hand into the fashion of a Pipe. See **SCHEDULE**, &c.

Of these there are in the Exchequer several Kinds, viz. the great *Wardrobe-Roll*, the *Cofferer's-Roll*, the *Subsidy-Roll*, &c. See **PIPE**, &c.

The Word is form'd from the *Latin Rotulus*, or *Rotulus*, because most Instruments and Expeditions in Law were antiently wrote on Papers, or Parchments lew'd or glaz'd together: Whence the Words *enroll*, *control*. See **ENROLL**, **CONTROL**, &c.

**ROLLS of Parliament**, are the Manuscript Registers or Rolls of the Proceedings of our antient Parliaments. See **PARLIAMENT**, **REGISTER**, &c.

Before the use of Printing, and till the Reign of *Henry VII.* our Statutes were all engraven in Parchment, (and by virtue of the King's Writ for that purpose) proclaimed openly in every County. See **ACT**.

In these *Rolls* we have a great many Decisions of difficult Points of Law, which were frequently in former Times refer'd to the Decision of that high Court. See **STATUTE**, **COMMON-LAW**, &c.

*Rider-ROLL*, a Schedule, or small Piece of Parchment, frequently lew'd or added to some Part of a *Roll*, or Record.

Now observes that the Court *ex officio*, may award a *certiorari ad Informandum Conseruatam*; and that which is certified shall be added to the Record, and call'd a *Rider-Roll*.

**ROLL**, in the Customs, is a List of the Names of several Persons of the same Condition, or enter'd in the same Engagement.—**THIS**,

*Court Roll*, in a Manor, is that wherein the Names, Rents, and Services of each Tenant are copied and enrolled. See **COURT**, **MANOR**, **TENANT**, **RENT**, **SERVICE**, &c.

*Myfter-Roll*, that wherein are enter'd the Soldiers of every Troop, Company, Regiment, &c. See **MUSTER**.

As soon as a Soldier's Name is wrote down on the *Roll*, 'tis Death for him to desert. See **DESSERTION**.

*Calves-Head-ROLL*, is a *Roll* in the two Temples, wherein every Bencher is tax'd yearly at 2s. every Barrister at 1s. 6d. and every Gentleman under the Bar, at 1s. to the Cook, and other Officers of the House, in Consideration of a Dinner of Calves-Heads, provided in *Easter Term*. See **TEMPLE**.

*Rogian's-ROLL*, or *Rogian's-ROLL*, is a *Roll* denominat'd from *Rogianus* a Legate in Scotland, who calling before him all the People who held Benefices to that Kingdom, caus'd them upon Oath to give in the Value of their Estates; according to which they were afterwards tax'd in the Court of Rome.

**ROLLS**, or Office of the *Rolls*, in *Chancery-Laws*, London, is an Office appointed for the Custody of the *Rolls* and Records in Chancery. See **CHANCERY**, **RECORD**, &c.

The Master of this Office is the second Person in that Court; and in the Absence of the Lord Chancellor, sits as Judge. See **MASTER of the Rolls**.

This House or Office was antiently call'd *Domus Converterorum*; as being appointed by King *Henry III.* for the use of converted Jews; but their Irregularities occasion'd King *Edward III.* to expell them thence; upon which the Place was depar'd for the Custody of the *Rolls*. See **CONVERTORUM**.

A *ROLL of Parliament*, is the Quantity of sixty Skins. See **PARCHMENT**.

**ROLL**, in Antiquity.—From the Time of *Anastases*, we find in the Heads of the Emperors, on Medals, a kind of narrow long *Roll*, or Sashell, the meaning whereof has puzzled the Antiquaries.

Some imagine it to be a *Roll* or Bundle of Papers, Memoirs, Petitions, &c. presented occasionally to Princes and Consuls.—Others take it to be a plaited Handkerchief, which the Persons who presided at the Games, cast forth as a Signal for their beginning.—Others will have it a Bag of Dust and Ashes, presented the Emperor at the Ceremony of his Coronation, and call'd *AKAKIA*, *q. d.* a Means of preserving Innocence, by the remembrance of Dust, &c. See **ACACIA**.

**ROLL**, or **ROLLER**, is also a Piece of Wood, of a cylindrical Form, used in the Construction of several Machines, and in several Works and Manufactures; though sometimes under other Names. See **ROLLING**, **CYLINDER**, &c.

'Tis on such *Rolls* that the Woollen, Silken, and other Threads are wound, whereof the Weaver's Works consist.—For which end each Loom has usually two, that of the *Gawfe*-Weavers, three. See **LOOM**.

In the Glass Manufacture they have a running *Roll*, being a thick Cylinder of cast Brass, serving to conduct the melted Glass to the end of the Table whereon large Looking-Glasses, &c. are to be cast. See **GLASS**-**WORK**.

The Founders use a *Roller* to work the Sand which they use in making their Moulds. See **FOUNDER**.

The Prefixer call'd *Calenders*, is serving to Calender Stuffs withal, consist, among other essential Parts, of two *Rollers*. See **CALENDER**.

'Tis also between two *Rollers* that the Waves are given to Silks, Mohairs, and other Stuffs proper to be tab'd. See **TABBY**.

Prints, or Impressions from Copper-Plates, are also taken by pulling the Plate in the Paper between two *Rollers*. See **PRINT**, and **ROLLING-Press-Printing**.

**ROLLS**, in Coining, are two Iron Instruments of a cylindrical Figure, which serve to draw or stretch out the Plates of Gold, Silver, and other Metal; whereof the Planks or Pieces are to be form'd for the Species. See **COINING**.

**ROLLS**, in Printing, are two large Cylinders or Barrels of Wood, fasten'd in the middle of what they call the Cradle or Gallows of the Press; and which by means of a Cord, or Girt, passing over each, and a Handle, which gives Motion to one of them, draws the Carriage of the Press backwards and forwards. See **PRINTING**.

**ROLLS**, in the Sugar-Works, are two large Iron Barrels which serve to bruise the Canes, and express the Juice.

They are cast hollow, and their Cavities fill'd up with Wood; the Cylinders of which are properly the *Rollers*. See **SUGAR-WORKS**.

**ROLLS**, or **ROLLERS**, among Carpenters, Joiners, &c. are plain Cylinders of Wood, seven or eight Inches in Diameter, and three or four Foot long; used for the removing of Beams, huge Stones, and other like Burthens, which are cumbersome, but not exceeding heavy.

These *Rollers* are placed successively under the Fore-part of the Massives to be removed; which, at the same time, are pull'd forwards by Levers, &c. applied behind. See **LEVER**.

*Rolls-ROLLS*.—When Blocks of Marble, or other excessive heavy Loads are to be removed; they use what they call *Rolls-ROLLS*.

These, to give them the greater Force, and prevent their hurling, are made of Wood jointed together by Cross-Quarres, are about double the length and thickness of the common *Roller*; and besides, are girt with several large Iron Hoops at each end.—At a Foot's Distance from the Ends are four Mortaises, or rather only two, but pierced through and through; into which are put the Ends of long Levers, which the Workmen draw by Ropes fasten'd to the Ends; still changing the Mortaise, as the *Roll* has made, a Quarter of a Turn.

*ROLL-Rich-Stones*, in Antiquity, a Series of huge Stones, ranged in a Circle, near *Merton in-Bath*, in *Oxfordshire*.

There are a World of fabulous Traditions about them.—Among the Antiquaries, some take them to be a Monument of a Victory; others a Burying-Place; and others a Place for the Coronation of the *Danish Kings*.

**ROLLER**, See **ROLL**.

**ROLLING**, REVOLVING, in Mechanics, a kind of circular Motion, wherein the Moveable turns round its own Axis, or Centre, and continually applies new Parts of its Surface to the Body it moves upon. See **MOTION**, **REVOLUTION**, **AXIS**, &c.

Such is that of a Wheel, a Sphere, or the like.—Such, particularly, are the Motions of the Earth, the Planets, &c. See **WHEEL**, **PLANET**, **EARTH**, &c.

The Motion of *Rolling* is oppos'd to that of *Sliding*, wherein the same Surface is continually applied to the Plane it moves along. See **SLIDING**.

It must be noted, that in a Wheel, 'tis only the Circumference that properly *Rolls*; the rest proceeds in a compound, singular Kind of Motion, and partly *Rolls*, partly *Slides*.—The not distinguishing between which two, occasioned the difficulty of that celebrated Problem the *Rota Aristotelica*, *Aristotle's Wheel*. See **ROTA**, *Aristotelica*, and **ANGLAR-MOTION**.

The Friction of a Body in *rolling*, or the Resistance made to it by the roughness of the Plane it moves on, is found to be much less than the Friction in *Sliding*. See **FRICTION**.

Hence the great use of Wheels, *Rolls*, &c. in Machines; as much of the Action as possible being laid thereon, to make the Resistance the lesser. See **WHEEL**, **MACHINE**, &c.

For the Laws of Bodies rolling on inclined Planes, see **Inclined-PLANE**, **DECENT**, &c.

**ROLLING-Press-Printing**. See **PRINTING**.

**ROMAN**, something belonging to the City of Rome.

The *Roman Commonwealth* lasted from the Expulsion of the *Targons*, to the Battle of *Pharsalia*, 460 Years.—The *Roman Empire*, from *Julius Caesar* and the Battle of *Pharsalia* to *Constantine*, and the taking of *Constantinople* by the *Turks* in 330. lasted 378 Years. See **COMMONWEALTH**, **EMPIRE**, &c.

A *Roman Citizen*, at first, was only a Citizen of Rome; at length the Right of Citizenship was given to other Cities and People, both in Italy and the Provinces.—**THIS** was St. Paul was a *Roman Citizen*, *Acts* xvi. 21. 37. 38. xxii. 25. 26. 27. xxxiii. 27. The City of *Tarpsus* in *Cilicia*, a Native of which he was, having the Right of *Roman Citizens*. See **CITIZEN**.

For the *Roman Senate*, their *Magistracy*, *Consuls*, *Soldiers*, *Trikes*, *Courts*, *Names*, *Weights*, *Measures*, *Census*, and other Matters relating to the Antiquities of that People, their *Policy*, *Religion*, *Laws*, *Customs*, &c. See the respective Articles in this Work.

The *Roman Purple* is the Dignity of a Cardinal. See **CARDINAL**.

The *Roman*, or *Romish Church*, that whereof the Pope is Head; in opposition to the reformed Churches. See **CHURCH**, **POPE**, &c.

The *Roman Law* is the Civil Law, or the written Law, as compiled by the Emperor *Justinian*. See *CIVIL LAW*.

A *Roman Clarity*, among Painters, is a Picture of a Woman suckling an old Man.—*Roman Knight*, &c. See *KNIGHT*, &c.

*King of the Romans*, in our Age, is a Prince elected, and design'd Successor to the German Empire. See *KING*, *EMPIRE*, and *ELECTOR*.

*ROMAN GAMES*, *Ludi Romani*, were solemn Games held in ancient Rome. See *GAME*.

They were thus call'd by way of Eminence, and on Account of their Antiquity; as having been instituted by *Romulus*.—They were also call'd, sometimes, *Magni Ludi*, from the great Pomp and Expense thereof; sometimes *Consuales*, because perform'd in Honour of the God *Neptune*, who was also call'd *Consus*, in his Quality of God of secret Councils. See *CONSUALIA*.

They also bore the Denomination of *Ludi Cereales*, because held in the Circus. See *CEREALIS LUDI*, &c.

This Solemnity, *Halicarnassensis* observes, was originally instituted by *Evander*, in Honour of *Neptune* under the Name of *Isurus*; whence the Festival itself was call'd *isuraria*; and was afterwards renew'd by *Romulus* in Honour of the same Deity, only under another Name.

For *Romulus* needing the Advice of a God to council him in the Design he had to furnish his new Citizens with Wives, apply'd to the God of secret Council himself, *Consus*; proclaimed the *Consuales*, and invited his Neighbours all a-round to the first Celebration thereof.—The Consequence was, the Rape of the *Sabine Women*, who came to be Spectators thereof.

The great Ceremony in these Games consisted in the Cavalcade of Horses and Allies, adorn'd with Garlands; *Neptune* being repaired the first Author of Horse-riding.

Their Horses, here, were of two Kinds, viz. *romani*, or such as were merely led up and down for State; and *spemini*, which were for Race and Exercise.

The other Divisions were Fencing, and that till one of the Combatants were kill'd on the Spot, fighting with Beasts, and at *Coloss*, or Whirls; Wrestling, Running, Leaping, Sea-Fights, Horse-Races, Chariot-Races, &c. See *CIRCUS*, *GLADIATOR*, &c.

These Games, *Livy* tells us, were improved, and render'd much more magnificent by *Terquinius Priscus*.—*Manlius* says, they were held on the Eve of the Nones of September, i. e. on the 14th Day of the Month.

*ROMAN ORDER*, in Architecture, is the more usually called the *Composite*. See *COMPOSITE*.

*ROMAN BALANCE*, or *Statera Romana*, the *Steel-Tord*. See *BALANCE* and *STEEL-YARD*.

ROMAN Indiction,	} See {	INDICTION.
ROMAN Year, &c.		YEAR, &c.
ROMAN Language, &c.		LATIN, &c.

*ROMANCE*, antiently *ROMAUNT*, and *ROMANT*, a fabulous Relation of certain Intrigues and Adventures in the Way of Love and Gallantry; invented to entertain and instruct the Readers. See *FABLE*, *NOVEL*, &c.

*M. Fournelle*, calls *Romanes*, Poems in Prose; and the great *Buffs* is not averse to their being admitted as poetical Pieces. See *POEM* and *POETRY*.

Setting aside the Verification, 'tis certain an Epic Poem, and a *Romanse* are almost the same thing.—The just Notion, therefore, of a *Romanse*, is, that it is a Discourse invented with Art to please and improve the Mind and to form or mend the Manners, by Instructions disguis'd under the Allegory of an Action or Series of Actions, related in Prose, in a delightful possible, yet surprising Manner. See *EPIC*.

A just *Romanse* consists of two Parts, viz. a Moral, as its Foundation and End; and a Fable, or Action, as the Superstructure and Means. See *ACTION*, &c.

It must have the *Manners*; that is, the Characters must be distinguished, and the Manners must be necessary, and have all the other Qualities of Poetical Manners. See *MANNERS*.

The Incidents must be delightful, and to that end rightly disposed and surprising.—The Sentiments fall under the same Rules as in the Drama. See *SENTIMENT*.

But the *Diction* is allow'd to be more lofty and figurative; as being a Narration; and not having Terror or Pity, but Admiration for its End. See *NARRATION*, *PASSION*, &c.

As these Kinds of Compositions have a long Time been little else but Histories of amorous Adventures, and Feats of Knight-Errantry: The Origin of *Romanes* is refer'd to that of Love-Histories: And accordingly *Dionysius*, a Disciple of *Aristotle*, who first wrote of those Matters, is usually esteem'd the Author of them.—Though *Phostus* is of Opinion that *Antonius Diogenes's* Book on the Errors and Amours of *Dionis* and *Dionysius*, gave Birth to most of the Works of this Kind.

Be this as it will, 'tis certain the Ancients have had their *Romanes* as well as we.—Such are the Amours of *Rhodanus* and *Semionis*, described in *Jambies*: Such is the *Romanse* of *Leopold* and *Christophan*, compos'd by *Achilles Tatius*, a Greek Writer, afterwards a Bishop: Such are the four Books of incredible things,

wrote by *Damasius*: Such are the *Ethiopicks* of *Heliandus*, wherein he relates the Amours of *Theagenis* and *Choricia*.—Lastly, under the same Class may be rank'd the Fables of *Parthenius*, *Nessus*, of *Athenagoras*, *Theodorus Prodrimus*, *Euphantius*, and *Longus*.

Indeed Antiquity could scarce be reconciled to such Pieces and always look'd on them as absurd.—*Phostus*, in his *Bibliotheca Cod. LXXXVII* gives a frightful Account of that of *Tatius*; and the *Ethiopicks* of *Heliandus*, though one of the modestest and most relieved Pieces of the Kind, met with very severe Treatment.—That Author was Bishop of *Trives* in the fourth Century. *Nicéphorus* tells us, that a Synod, considering the Danger which might accrue to Youth from reading of his *Romanes*, authoriz'd as it was by the Dignity of its Author, propos'd it to him, either to suppress his Book, or renounce his Bishoprick; and that he chose the latter.—But this History is a little doubtful.

Be this as it will, *Heliandus* has serv'd as a Model to all the *Romanes* wrote since; the Marriage of *Theagenis* and *Choricia*, has produced a very numerous Issue; even all the *Romanes* now extant in the World.

In Imitation of the Archbishop *Turpinus*, who serv'd for Author of the *Romanes* of the Feats of *Charlemain* and *Orlando*, a great Number of Histories of the like Kind were wrote in France, in the Time of *Philip the Fair*; the Authors whereof seem'd to improve on each other, contending who should go furthest in the *Mercuriennes*.—These Books, being intended for the polite People, were wrote in the Court Language of that Age; which was call'd the *Romans*, *Romans*, or *Roisins*; whence the Books themselves were call'd by these Names: And thus by Degrees *Romanes*, &c. became the general Name of all Books of this Kind; whence at length our *Romanes*. See *ROMANS*.

Others derive the Word from the Spanish *Romanesca*, I invent, as intimating *Romanes* to be mere Fictions.—And hence it is that the ancient Poets of France, who were the first great Dealers in *Romanes*, are call'd *Troubadours*, q. d. Finders or Inventors. See *TROUBADOUR*.

The French, above all other Nations, have applied themselves to this kind of Writing; whether it be from the natural Taste and Genius of the People, or from the freedom, &c. wherewith they converse with the Women.—They began chiefly with *Romanes* of Chivalry; hence their *Amadis*, in 24 Volumes; *Palmerin de Olives* of England, King *Arthur*, &c. whereof we have an agreeable Critique in *Don Quixote*. See *CHIVALRY*, &c.

The latter are much more polite; the best of which are the *Asses* of *D'Urfé*; the *Cyrus* and *Clélie* of *Madamoiselle de Scuderi*; the *Cassandre* and *Chlopatra* of *la Calprenede*; *Artax*, *Francion*; and the *Adventures* of *Télémaque*, of the late Archbishop of *Cambray*, a Work never enough to be applauded.

The Germans, too, have their *Romanes*; especially *Hercules* and *Hercules*; the *Syriaca Armena*, *Armenica*, and *Theofielda*, *Otbert*, &c.

The *Italians* have their *Erromena*, by *Biondo*; the Works of *Loredano*, *Martino*, &c.—The Spaniards, their *Diseno*, and *Don Quixot*.—The English their *Armadis*, &c. The *Argenis* of *Basil* is rather a *Satyr* than a *Romanse*. See *NOVEL*.

*ROMAN-CATHOLICK CHURCH*. See *PAPIST*, *RECUSANT*, &c.

*ROMANS*, or *ROMANT*, the polite Language formerly spoke at the Court of France; in contradistinction to the *Wallow* spoke by the common People. See *LANGUAGE*.

The *Romans* having subdued the *Gauls*, infus'd Part of their Language among them; a mixture then of half *Latin*, half *Gaulish*, constituted the *Romans*; whereof the modern *French* is only an Improvement. See *FRENCH*.

The vulgar Language was the *Wallow*, which was the original *Gaulish*. See *GAULISH*.

Hence, to *Erromant*, was to write in *Romans*, &c. See *ROMANCE*.

ROME-Seat,	} See {	PETER-PENCE.
ROME-Penny,		

*ROMPEE*, or *ROMPU*, in Heraldry, is applied to Arms, or other Ordinaries, that are represented broken; and to Chevrins whole upper Points are cut: As in the adjoining Figure.—He beareth a Chevron rompee, between three Mulletts, Or, by the Name of *Sault*.

*RONDEL*, in Fortification, a round Tower, sometimes erected at the Foot of a Bastion. See *TOWER*, *BASTION*, &c.

*ROOD*, a Quantity of Land, equal to the fourth Part of an Acre; and containing 40 square Perches or Poles. See *ACRE*, *PERCH*, &c.

*ROOF*, in Architecture, the uppermost Part of a Building. See *BUILDING*.

The *Roof* contains the Timber-Work, and its Furniture of Slate or Tile, wherewith a House is cover'd, or that which serves it as a Cover.—Though Carpenters usually restrain *Roof* to the Timber-Work only. See *COVERING* and *RIDGE*.

The Form of the *Roof* is various; sometimes 'tis painted, in which Case the most beautiful Proportion is to have its Profile an equilateral Triangle.

Sometimes *Square*, that is, the Angle of the Ridge, is a Right Angle; which, therefore, is a mean Proportional between the pointed and

*Flat-Roof*, which is in the same Proportion as a triangular Pediment. See *PEDIMENT*.—This is chiefly practiced in *Italy*, and the hot Countries, where little Snow falls.

Sometimes the *Roof* is in the *Pinnacle Form*. See *PINNACLE*. Sometimes it has a *double Ridge*.—Sometimes 'tis cut, or mutilated, that is, consists of a *true* and a *false Roof*, which is laid over the former: This last is particularly call'd a *Manifold*, from its Inventor *M. Mansard*, a famous *French Architect*.

Sometimes 'tis in Form of a *Platform*; as in most of the Eastern Buildings. See *PLATFORM*.

Sometimes 'tis *truncated*; that is, instead of terminating in a Ridge or Angle, 'tis cut square off at a certain Height, and cover'd with a *Terrass*, and sometimes incompass'd with *Balustrade*. See *TERRASS*.

Sometimes 'tis in Manner of a *Dome*, that is, its Plan Square, and the Contour Circular. See *DOME*, *CUPOLA*, &c.

Sometimes it is *round*, that is, the Plan is Round or Oval, and the Profile a direct *Diocent*.—Sometimes the Base being very large, 'tis cut off to diminish its Height, and cover'd with a *Terrass* of Lead, rais'd a little in the middle, with *Sky-Lights* from Space to Space, to give Light to some Corridor, or other intermediate Pieces, which without such an Expedient would be too dark. See *HOUSE*, &c.

*Roof-Trees*, or *Ruff-Trees*, are the Timbers in a Ship which go from the *Helf-Deck* to the *Fore Castle*.

The Term is also us'd for the upper Timbers of any Building; whence in the Northern Countries, it is common to signify a whole Family, by saying, all under such a one's *Roof-Tree*.

*ROOM*, in Building.—See *BUILDING*, *HOUSE*, *PARTITION*, *APARTMENT*, *DISTRIBUTION*, *CHAMBER*, &c.

*ROOMER*, in the Sea Language, a Ship is said to be a *Roomer*, when she is larger than ordinary. See *SHIP*, *VESSEL*, &c.

*ROOT*, *RADIX*, in Botany, that Part of a Plant which immediately imbrakes the Juices of the Earth, and transmits them to the other Parts, for their Nutrition. See *NUTRITION*, *PLANT*, *VEGETABLE*, &c.

The *Root* consists of woody Fibres, cover'd with a Bark, more or less thick.—It arises from a little Point in the Seed, call'd the *Radicel*. See *RADICEL*.

'Tis no small difficulty to conceive how the *Root* should always get downwards, and turn up the Stem perpendicularly; considering that in the sowing of Plants the *Radicel* must frequently happen to be upwards, and the Plumule downwards. See *SEED*, *SEMINATION*, *PERPENDICULARITY*, &c.

'Tis always found in the Ground in terrestrial Plants, except in a very few Cases: The *Ivy* and *Cucurbit*, being perhaps the only Plants where Part of the *Root* lies bare.

The *Root* in Plants has been observ'd to do the Office of the Stomach in Animals; that is, to make the first and principal Preparation of the nutritious Matter.—*M. Boreau* shows that the *Root* does the Office of all the Parts in the Belly of Animals destined for Nutrition; it being the *Root* that receives the Nourishment, that prepares it, digests it, steers and changes it into Sap, to be afterwards distributed to all the Parts. See *SAP*.

The small Colour, and even Taste, shew how considerable an Alteration the Juices undergo in the *Root*; so that the *Root* may be laid down as the Principle of Vegetation. See *VEGETATION*.

Plants growing at the Bottom of the Sea have this peculiar to them, that they have no *Roots*; at least the Parts which do the Office of *Roots* have nothing of the usual Figure thereof.—These Plants are usually fasten'd to some solid Body; adhering to it by a very smooth polish'd Lamina, which does not send forth any Fibre. Add to this, that the Body to which they adhere, being frequently a Rock or Flint, appears very unfit to feed them, in Case they had *Roots*. *M. Tarnisfort*, therefore, conjectures that they are fed by a Juice afforded them by the thick oily Mud at the Bottom of the Sea, which they receive by the Pores of the exterior Surface of the Lamina.

*Borlæus* observes, that the *Root* may have any Situation at Pleasure, with respect to the Body of the Plant, nor needs to be either lowest or highest.—Accordingly in *Aloes*, *Coral*, *Mosses*, *Fungus's*, &c. the *Root* is frequently uppermost, and its Growth downwards. See *CORAL*, *MOSS*, *FUNGUS*, &c.

*Roots* are divided by Botanists into 1<sup>o</sup>. *Fibrous*, which send out only small Strings from the Bottom of the Plant, distinct from each other.

2<sup>o</sup>. *More thick and gross*, which have a Body Thick and Gross, either branched out into Subdivision or Arms; or else sending out Fibres from it all along.

Their last are either *Carnous*, which again are either,

1. Broad and Swelling, or
2. Long and Slender, which are commonly harder and more woody.

The Broad and Swelling are,

1. *Bulbous*, which consist but of one Globe or Head, and send out Fibres from the Bottom, and are either,
  - { *Squamosif*, or Scaly, as *Lillies* or *Martins*,
  - { *Ciliated*, which are involved in Skins or Coats, as *Cipsa*, *Hyaeristion*, *Allium*, &c.
2. *Tuberosus*, which are of a carnosus, solid, and continued Consistence, and these either,
  - { 1<sup>o</sup>. *Simple*, with but one Globe or Head, as *Rapae*, *Craus*, &c.
  - { 2<sup>o</sup>. *Manifold*, as *Asphodelus*, *Pennis*, &c.

Long *Roots* are either,

- (1) *Sarmentous*, i. e. twiggy, or branching, which shoot or creep out Transverse or in Breadth: Of these some are *Grovelate*, knotty or jointy; as *Cassia*, *Graff*, *Alnus*, &c.
- (2) *Cauliferous*, i. e. *Stemmy* or *Stalky*, which shoot down deep directly, though often sending out Fibres and Strings from the great Stem; which also it self is sometimes divided or branching.

*ROOTS*, in Medicine.—The principal *Roots* us'd in the Practice of Medicine, are, *Rhubarb*, *Rhoponticon*, *Sarsaparilla*, *Ipecacuanba*, *Jalap*, *Zedary*, *Galangal*, *Cassumner*, *Gentian*, *Turmeric*, *Liquorice*, *Madder*, &c. See each described under its proper Article *RHUBARB*, *RHAPONTIC*, *SARSAPARILLA*, *IPECACUANHA*, &c.

*ROOT*, in Mathematics, a Quantity which is multiplied by it self; or a Quantity consider'd as the Basis or Foundation of a higher Power. See *QUANTITY*, *POWER*, &c.

Thus if any Number, as 2, be multiplied by it self, the Product 4 is call'd the *Square*, or second Power of 2; and 2 it self, with regard to that Power, is call'd the *Root*; or particularly the *square Root* of 4. See *SQUARE-ROOT*.

Since, as Unity is to the *square Root*, so is the *Root* to the *Square*; the *Root* is a mean Proportional between Unity and the *Square*.—Thus 1 : 2 :: 4.

If a square Number, as 4, be multiplied by its *Root* 2, the Product 8 is call'd the *Cube*, or third Power of 2; and with respect to this *Cubic Number* 8, the Number 2 is call'd *Root*; or particularly the *Cube-Root*. See *CUBE-ROOT*.

Since as Unity is to the *Root*, so is the *Root* to the *Square*; and as Unity is to the *Root*, so is the *Square* to the *Cube*; the *Root* will be to the *Square*, as the *Square* to the *Cube*, i. e. Unity, the *Root*, the *Square*, and the *Cube*, are in continual Proportion: Thus 1 : 2 :: 4 : 8. And the *Cube-Root* is the first of the two mean Proportionals between Unity and the *Cube*.

To extract the *Root* out of a given Number, or Power, as 8, is the same thing as to find a Number, as 2, which being multiplied into it self a certain Number of Times, v. g. twice, produces the given Number, as 8.

To extract the *Square ROOT*, }  
To extract the *Cube ROOT*, } See } EXTRACTION.

A *Root*, whether *Square* or *Cubic*, or of any higher Power; if it consist of two Parts, is call'd a *Binomial Root*, or simply *Binomial*; as 24, or 20 + 4. See *BINOMIAL*.

If it consist of three, a *Trinomial*; as 245, or 240 + 5: Or 200 + 140 + 5.—If of more than three, a *Algebraic*; as 2456, or 2450 + 6, or 2400 + 56, or 2000 + 456, or 2000 + 400 + 50 + 6. See *MULTINOMIAL*.

*ROOT* of an Equation, in Algebra, is the Value of an unknown Quantity in an Equation. See *EQUATION*.

Thus, if the Equation be  $a^2 + b^2 = x^2$ , the *Root* of the Equation is the *Square Root* of  $a^2$  and of  $b^2$ ; express'd thus,  $\sqrt{a^2 + b^2}$ .

*Real Root*.—If the Value of  $x$  be positive, i. e. if  $x$  be a positive Quantity; e. g.  $x = r$ . the *Root* is call'd a *real* or *true Root*. See *POSITIVE*.

*Falsè Root*.—If the Value of  $x$  be Negative, e. g.  $x = -5$ . The *Root* is said to be *falsè*. See *NEGATIVE*.

*Imaginary Root*.—If the Value of  $x$  be the *Root* of a negative Quantity, e. g.  $\sqrt{-5}$ ; 'tis said to be *imaginary*.

The great use of Algebra is to bring Problems to Equations; then to reduce those Equations, or to exhibit them in the most simple Terms. See *REDUCTION*.

What remains after this to the Solution of the Problems, is to extract the *Roots* of the Equations thus reduced, be they *Lices* or *Numbers*. See *RESOLUTION*.

Extraction of the *ROOTS* of Equations. See *EXTRACTION*.  
*ROOTS*, *RADICES*, in GRAMMAR, are the primitive Words of a Language, whence others are compounded or derived. See *PRIMITIVE*, *COMPOUND*, and *DERIVATIVE*.

Thus, the *Latin Flus* is the *Root* of *fluctus*, *fluxus*, *flumen*, *flustrum*, *inflatus*, *refusus*, *fulcifer*, *fulciturus*, *fulcrum*, &c.—Thus also the *Greek Dia*, is the *Root* of *dia*, *diadema*, *diaperis*, &c.

And thus also, though in a less proper Sense, the *Danish* *raad* is the *Root* of the *English Root*: The *Latin Radix* the *Root* of the

the *French Racine*, as *radix* is the *Root of Radix*; and perhaps *radix* the *Root of radix*.

The *Greek* and *Hebrew* Tongues are learnt by *Rosters*.—Of Dictionaries, some are in Alphabetical Order, others are disposed by *Rosters*; as *Scapula*, and the first Edition of the Dictionary of the *French Academy*: In the Edition 1718, it is thrown into the usual Alphabetical Order. See DICTIONARY.

ROPE, an Assemblage of several Twists or Strings of Hemp, twisted together by means of a Wheel; Of various uses, as in binding, staying, drawing, suspending, &c. See HEMP and CORDAGE.

When the *Rope* is made very thick, 'tis call'd a *Cable*, and when very small, a *Cord*. See CABLE and CORD.

The greatest Consumption of *Ropes* is in Navigation, for the tackling of Ships; where, though *Ropes* include the whole Cordage. See TACKLE and SHIP.

Yet there are several *Ropes* particularly so denominated: As, the *entering Rope*, hung at the Ladder to help People up.—The *Top-Rope*.—A *Bolt-Rope*, wherein the Sail is fowled.—*Booy-Rope*, to which the *Booy* of the Anchor hangs.—*Guy-Rope*, to tow the *Long-Boat*.—The *Keel-Rope*.—The *Backer-Rope*.—*Rudder-Rope*, to save the Rudder if it should chance to be beat off.—*Preventer-Rope*, to save the Yard in Case any Part of the Tyes should be broke.—*Breech-Rope*, to lash the Panels to the Masts.—*Guy-Rope*, to keep the Foremast forwards, directly over the Hatchway. And *Boat-Rope*, by which the *Rope* hangs, or is fastened astern of the Ship.

ROPE, CORD, or STRAP, in the Manage, is any of these tied round a Pillar to which the Horse is fastened when they begin to quicken and fuddle and teach him to flee from the Shambler, and not gallop faintly or incompletely. See PILLAR.

In those Manages where there is no Pillar, a Man stands in the Centre of the Ground, and holds the end of the *Rope*.

ROPEs of two Pillars, are the *Ropes* or Reins of a Cavesson, used to a Horse that works between two Pillars. See PILLAR.

ROPE-YARN, is the Yarn of any *Rope* untwisted. See YARN.

It commonly consists of Cable-Ends, which are worn out; and are called *Junks* of the Cable.—It serves for many Purposes among the Sailors.

RORIFEROUS-Duct, q. d. Dew-dropping Pipe; a Name given the Thoracic Duct, from its slow Manner of conveying, and as it were, infilling, the Chyle into the common Stream of Blood. See THORACIC-Duct, &c.

ROS, Dew. See DEW.

ROS Vitrioli, among Chymists, is sometimes used for the first Phlegm distilled from Vitriol in *Balneo Marie*. See VITRIOL.

ROSADE, a kind of Liqueur, prepared of pounded Almonds and Milk, mix'd with clarified Sugar.

ROSARY, in the *Roman* Church, a Chaplet, consisting of five or fifteen Decads or Tens of Beads, to direct the Recitation of so many *Ave Maria's*, in Honour of the Virgin. See CHAPLET.

ROSARY, is also a particular Mass or Form of Devotion addressed to the Virgin, to which the Chaplet of that Name is accommodated. See VIRGIN.

Some attribute the Institution of the *Rosary* to St. *Dominick*; but *F. d' Aubery* shews it was in use in the Year 1100; so that St. *Dominick* could only make it more celebrated.—Others attribute it to *Paulus Libycus*, and others to St. *Benedict*; others to the *Chartreux*; others to venerable *Bede*; and others to *Peter* the Hermit.

Those who attribute it to St. *Dominick*, differ as to the particular Time of its Institution; some referring it to the Year 1208, when he preach'd against the *Albigenses*; others will have him to have set it on foot in the Course of his Missions in *Spain*, 'ere he pass'd into *France*.

Order of the ROSARY, or of our Lady of the ROSARY, is an Order or Knights, supposed by *Scassbeck*, and the *Jesuit* *Begons* to have been instituted by St. *Dominick*; but by *Milshke*; in that Saint never instituted any Order under that Name; and the Authors apparently make a military Order of an Army of Croixes, who under the Command of the Count de *Monsfort*, fought against the *Albigenses*. See CROMAEO and ALBIGENES.

The Abbot *Julianiani*, and M. *Hormant*, will have this Order to have been established by an Archbishop of *Trois*, named *Fredrick*, after St. *Dominick's* Death; and to have bore for a Badge, a black and white Cross, in the middle whereof was represented our Lady, holding her little Son in one Hand, and in the other a *Rosary*.—F. *Mendo* adds, that they were obliged to rehearse the *Rosary* on certain Days.

After all, F. *Helyot* doubts whether or no such an Order ever existed. See ORDER.

ROSE, ROSA, a medicinal Flower, produced by a Shrub of the same Name; which gives the Denomination to several Preparations in Pharmacy. See FLOWER.

The Kinds of *Roses* are various: Those used in Medicine are the Red and Damask *Rose*.—The *Damask* are a good and safe purgative, administered in infusion, or by way of Syrup.—The *Red* are astringent; and the Conserve thereof used with success against Distempers of the Breast and Lungs, and Disorders of the Eyes. See CONSERVE.

Sugar of ROSES, is made of Red-*Rose* Leaves, dried in an Oven,

pulverized, and put into a proper Quantity of Sugar dissolved with a little Water in a Chining-dish, over the Fire.

This Tradition among the Ancients, that the God of Love made a present to *Hippocrates* the God of Silence, of a beautiful *Rose*, the first that had been known; to engage him not to discover any of the private Practices of his *Master* *Prota*.—And hence it became a Custom to have a *Rose* placed in their Rooms of Mirth and Entertainment, that under the Assurance thereof they might be induced to lay aside all Constraint, and speak what they pleased.—Thus did the *Rose* become a Symbol of Silence; so that to be *sub rosa*, under the *Rose*, denotes as much as to be out of danger of having any Conversation divulged.

ROSE-WATER, a Water drawn by Distillation from Red or Damask-*Roses*. See WATER.

It is a good Cordial, and was formerly highly esteemed; but is since fallen from its Reputation, and is little used but in Diseases of the Eyes, and in Perfumes and Washes.

'Tis, however, in great esteem in the *East*, particularly in *China* and *Perfia*, where the Trade thereof is very considerable. The *Rose* Leaves remaining at the Bottom of the Still, have the natural cathartic Quality; and are also kept for a Perfume.

Golden-ROSE, is a *Rose* which the Pope blesses at Mass on the first Sunday in *June*, while they sing *Late are Jerusalem*; and which, after Mass, he carries in Procession, and then sends it as a Present to some Sovereign Prince.

The Flowers of the red and white ROSE, are famous in our English Histories.—They had their Rise in 1254, under Henry VI. between the Houses of *York* and *Lancaster*, and ended in Henry VII. who united the two Branches.—The House of *Lancaster* had for its Badge a white *Rose*; that of *York* a red one. See FACTION.

ROSE-WOOD, *Lignum Rhodium*, or *Aspalathum*. See ASPALATHUM.

ROSE, in Architecture and Sculpture, an Ornament cut in resemblance of a *Rose*. See ORNAMENT.

It is chiefly used in Frizes, Corniches, Vaults of Churches; and particularly in the Middle of each Face of the Corinthian Abacus. See ABACUS.

And in the Spaces between the Modillions; under the Platons of Corniches. See MODILLION.

ROSE-Noble, an ancient English Gold Coin, first struck in the Reign of *Edward III.* and then call'd the *Penny of Gold*; since call'd *Rose-Noble*, because stamp'd with a *Rose*. See MONEY.

It was Current at 6s. 3d. See NOBLE and COIN.

ROSEMARY, ROSMARINUS, a medicinal Plant, whose

Flowers are of considerable use in the present Practice. They are esteem'd the principal Aromatick of our Growth.—*Dr. Quincy* speaks of them as good in most nervous Complaints, especially such as arise from too great Moisture and Cold, as they are hot and drying.—In Epilepsies, Apoplexies, *Falacia*, &c. they are rarely omitted in Prescription, under one Form or other. See AROMATICK.

They abound with a subtle detergent Oil, which makes them deobstruent and opening, whence their use in uterine Obstructions, the Jaundice, &c.

They are the Basis of the celebrated *Hungary Water*; with a small Quantity of which, diluted in common Water, the Confessors make Conserve of *Rosmary* Flowers, Essence of *Rosmary*, *Rosmary-Water*, &c. See HUNGARY-WATER.

ROSICRUCIANS. See ROSYCRUCIANS.

ROSIN, RESINA, in Pharmacy. See RESINA.

ROSIN, is particularly used for a resinous Matter, prepared from the Juice of the *Pine-Tree*; in ordinary use for the making of Wax, &c.

Mr. *Bent* in the *Phil. Transf.* gives us the Preparation of this coarse Drug, in the Southern Parts of *France*; thus.—The Bark being pared off the *Pine*, to make the Sap run down into a Hole made at Bottom to receive it; as the Juice runs it leaves a Cream or Crust a-top; which being temper'd with Water, is sold, by a Cheat, for white *Bee's-Wax*. See WAX.

When they have got a Quantity of the Juice they strain it through a Basket, and what runs through it is the common *Turpentine*. See TURPENTINE.

What stays behind, they mix with Water, and distilling it in an Alembic, the Matter that rises is the Oil of *Turpentine*; and the Calk that remains is the common *Rosin*.

ROSOLIS, popularly, ROSA-solis, *Sans-Dieu*, an agreeable spirituous Liqueur, chiefly taken after Meals, by way of Dram, to aid Digestion.

'Tis composed of burnt Brandy, Sugar, Cinnamon, and Milk-Water, and is sometimes perfum'd with a little Musk.

It had its Name because anciently prepared wholly of the Juice of the *Plant* *Ros solis*; but that Plant is no longer any Ingredient therein.

The best is that of *Turin*.—The *French* have a particular Kind not called *Ros solis*, but *de Roy*; because used with good Effect by the late King *Louis XIV.*—'Tis composed of Spanish Wine, wherein are infused Anis, Fennel, Aneth, Coriander, &c. for three Weeks.

ROSTING, See DRESSING, FOOD, &c.

ROSTRA, in Antiquity, a Part of the *Roman Forum*, wherein Orations, Pleadings, Funeral Harangues, &c. were deliver'd. See FORUM.

The *Rotrum* was a Kind of Chapel, taken out of the *Forum*, and furnished with a Suggellum, or Eminence, call'd also the *Rotra*, where the Orators spoke.

It was adorn'd, or, as *Livy* says, built, with the Beaks of Ships taken from the People of *Athens*, in a Naval Engagement; whence the Name. See *ROSTRUM*.

*ROSTRALIS Corona*, *ROSTRAL Crown*, in Antiquity. See *CROWN*.

*ROSTRALIS Columna*, *ROSTRAL Column*. See *COLUMN*.  
*ROSTRIFORMIS Processus*, in Anatomy, the same as *Coracoides*. See *CORACOIDES*.

*ROSTRUM*, in Chymistry, signifies the Nose, or Beak which conveys the Liquor distill'd, into its Receiver; in the common Alembicks. See *ALEMBIK*, *RECEIVER*, *DISTILLATION*, &c.

*ROSTRUM*, is also a crooked Scissars, which the Surgeons in some Cases make use of for the Dilatation of Wounds.

*ROSTRAUM* literally denotes the Beak or Bill of a Bird. See *BILL*.

Hence the Word is also figuratively understood of the Beak, or Fore-part of the Head of a Ship. See *HEAD*, *SHIP*, &c. See also *ROSTRA*.

*ROSYCRUCIANS*, *ROSBUCIANS*, or, *Brothers of the ROSE-CROSS*, a Name assumed by a Sect or Cabal of hermetical Philosophers; who rose, or at least became first taken Notice of in *Germany*, in the Beginning of the last Century. See *HERMETICAL*.

They bound themselves together by a solemn Secret, which they swore inviolably to preserve; and oblig'd themselves at their admission into the Order, to a strict Observance of certain establish'd Rules.

They pretended to know all Sciences, and chiefly *Medicine*; whereof they published themselves the *Restorers*.—They pretended to be Masters of abundance of important Secrets; and among others, that of the Philosopher's Stone; all which they affirm'd to have received by Tradition from the ancient *Egyptians*, *Chaldeans*, the *Magi*, and *Gymnosophists*. See *PHILOSOPHER'S-STONE*.

Their Chief was a *German* Gentleman, educated in a Monastery, where he learnt the Languages.—In 1378 he went to the Holy-Land, where falling Sick at *Damascus*, he consult'd the *Arabs*, and other *Eastern* Philosophers, by whom he was supposed to be initiated into this wonderful Art.—At his return into *Germany*, he form'd a Society, to whom he communicated the Secrets he had brought with him out of the *East*, and died in 1484.

They have been distinguish'd by several Names, accommodated to the several Branches of their Doctrine.—Because they pretended to prolong the Period of human Life, by means of certain *Magicks*, and even to restore Youth; they were call'd *Immortals*.

As they pretended to know all things, they have been call'd *Aluminists*; and because they have made no appearance for several Years, they have kept altogether *smg*, they have been call'd the *Invisible Brothers*.

Their Society is frequently signified by the Letters *F. R. C.* which some among them interpret *Frater rotis cœli*, it being pretended that the Matter of the Philosopher's Stone is Dew condensed, exhaled, &c.

Some, who are no Friends to Free-Masonry, make the present flourishing Society of Free-Masons a Branch of *Rosicrucians*; or rather the *Rosicrucians* themselves under a new Name, or Relation; viz. as Retainers to Building.—And 'tis certain, there are some Free-Masons who have all the Characters of *Rosicrucians*; but how the *Æra* and Original of Masonry, as traced by *Mr. Anderson*, and that of *Rosicrucianism*, here fix'd from *Nassau*, who has wrote expressly on the Subject, consist, we leave others to judge. See *MASONRY*.

*ROT*, a Disease, which in moist Years is incident to Sheep, in the same Ground, where in drier Years they are free from it; which, yet, arises, not only from the Moisture, but from a certain Principle of Putrefaction, both in the Air and the Grass. See *ROTTENNESS*.

*ROTA*, in Mechanics. See *WHEEL*.

*ROTA Aristotelica*, *Aristotle's Wheel*, is a celebrated Problem in Mechanics, founded on the Motion of a Wheel about its Axis; thus call'd, because first, that we know of, taken Notice of by *Aristotle*.

The Difficulty is this.—While a Circle makes a Revolution on its Centre, advancing at the same time in a Right Line along a Plane; it describes, on that Plane, a Right Line equal to its Circumference. Now if this Circle, which we may call the *describer*, carry with it another smaller Circle concentric with it, and which has no Motion but what it receives from the describer; which is the Case of the Nave of a Coach-Wheel carried along by the Wheel; this little Circle, or Nave, will describe a Line in the time of the Revolution, equal, not to its own Circumference, but to that of the Wheel: For that its Centre advances in a Right Line, as fast as that of the Wheel does; as being in reality the same therewith.

The Matter of Fact is certain.—But how it should be seems a Mystery.—'Tis obvious, that the Wheel advancing during the Revolution, must describe a Right Line equal to its Circum-

ference; but how should the Nave, which revolves like the Wheel, describe a Right Line so much greater than its Circumference?

The Solution *Aristotle* gives is no more than a good Explication of the Difficulty.

*Galileo*, who attempted it, has recourse to an Infinity of infinitely little Vacuities in the Right Line described by the two Circles; and imagines that the little Circle never applies its Circumference to these Vacuities; but in reality only applies it to a Line equal to its own Circumference; though it appears to have applied it to a much larger.

But 'tis evident this is all *gratis dictum*.—The Vacuities are imaginary; and why does not the great Circle apply its Circumference to them? Lastly, the Magnitude of these Vacuities must be augmented or diminished according to the different Proportion of the two Circles.

*F. Taquet* will have it that the little Circle making its Rotations more slowly than the great one, does on that Account describe a Line longer than its Circumference; yet without applying any Point of its Circumference to more than one Point of its Beak.—But this is no more allowable than the former.

The Attempts of so many great Men proving vain; *M. d'Orleans de Mazarin*, a French Gentleman, had the good Fortune to hit on a Solution, which he sent to the Royal Academy of Sciences; where being examined by *Messrs de Lamoignon* and *Sauvassen*, appointed for that purpose, they made their Report that it was Satisfactory.—The Solution is to this effect.

The Wheel of a Coach is only acted on, or drawn in a Right Line: Its circular Motion, or Rotation, arises purely from the Resistance of the Ground whereon it is applied. Now this Resistance is equal to the Force wherewith the Wheel is drawn in the Right Line; inasmuch as it defies that Direction: Of consequence the Causes of the two Motions, the one Right, the other Circular, are equal, and therefore their Effects, i. e. the Motions are equal. And hence, the Wheel describes a Right Line on the Ground, equal to its Circumference.

For the Nave of the Wheel, the Case is otherwise.—'Tis drawn in a Right Line by the same Force as the Wheel, but it only turns round because the Wheel turns, and can only turn with it, and at the same time therewith. Hence it follows that its Circular Velocity is less than that of the Wheel, in the Ratio of the two Circumferences; and therefore its circular Motion is less than its Rectilinear one.

Since then it necessarily describes a Right Line equal to that of the Wheel, it can only do it by sliding, or what they call the Motion of *Rafson*.—That is, a Part of the circular Nave cannot be applied to a Part of a Right Line greater than it self, but by sliding along that Part; and that more or less, as the Part of the Nave is less than that of the Circle. See *ROLLING* and *SLIDING*.

*ROTA*, is also used for a particular Court or Jurisdiction in *Rome*, established for taking Cognizance of Beneficiary Matters, &c. See *BENEFICE*, &c.

The *Rota* consists of twelve Doctors, chosen out of the four Nations of *Italy*, *France*, *Spain*, and *Germany*; three of them being *Romans*, one a *Florentine*, one a *Napolitan*, one of *Bologna*, one of *Ferrara*, one a *Venetian*, one a *Frenchman*, two *Spaniards*, and one a *German*; each having four Clerks or Notaries under him.

Their Office is to judge of all Beneficiary Causes, both in *Rome*, and the State of the Church, in Case of Appeal; and of all Civil Processes, of above 500 Crowns.

They are also called *Chaplains* of the Pope, as succeeding the ancient Judges of the Sacred Palace, who held their Court in his Chapel.

The Name *Rota*, *Wheel*, some will have derived hence, that they officiate each in his Turn; others, because the most important Affairs of the Christian World turn upon them.—*Du Gasse* derives it from *Rota Porphyretica*, because the Pavement of the Chamber where they formerly sat was of *Porphyry*; and fashioned like a Wheel.

*ROTATION*, *ROLLING*, in Mechanics. See *ROLLING*, *ROTA*, &c.

*ROTATION*, in Geometry, the Circumvolution of a Surface round an immovable Line, call'd the *Axis of Rotation*. See *AXIS*.

By such *Rotation* of Planes, Solids are form'd or generated. See *GENESIS*, *SOLID*, &c.

The Method of cubing Solids, generated by such *Rotation*, is well laid down by *M. de Moivre*, in his Specimens of the use of the Doctrine of Fluxions.—For the Fluxions of such Solids take the Product of the Fluxion of the Abscissa, multiplied by the circular Base; and suppose the Ratio of a Square to the Circle inscribed, be as  $\frac{n}{1}$ . The Equation expressing the Nature or Property of any Circle, whose Diameter is  $d$ ; is  $yy = dx - xx$ . Therefore  $\frac{4dx - x^2}{n}$  is the Fluxion of a Portion of the Sphere, and consequently, the Portion it self  $\frac{4x^2dx - \frac{1}{2}x^3}{n}$ , and the circumscribed Cylinder is  $\frac{4dx - x^2}{n}$  therefore the Portion of the

Sphere is to the circumscribed Cylinder, as  $\frac{1}{2}d - \frac{1}{2}x$  to  $d - x$ .  
*Philosoph. Transact.*

ROTATION, or REVOLUTION, in Astronomy. See REVOLUTION.

Diurnal ROTATION. See DIURNAL Rotation and EARTH.

ROTATION, in Anatomy, the Action of the *Musculi Rotatores*; or the Motion they give to the Parts they are fix'd to. See ROTATOR.

There are two Muscles, the great and the little *Obligatus*, to perform the Rotation of the Eye.—The *Obligator Internus* and *Externus*, effect the Rotation of the Thighs. See EYE, &c.

ROTATOR, in Anatomy, a Name given the oblique Muscles of the Eye; call'd also *Circulares* and *Amatorii*. See OBLIQUE and EYE.

ROTHER-Beasts, a Word us'd in the old Statutes, and still in the Northern Parts of England, for horned Beasts, as Oxen, Cows, Steers, Heifers, &c.

Whence, *Rother-Sail*, in *Hersfordshire*, is taken for the Dung or Soil of such Cattle. See MANURE.

ROTHER-Nails, are such as have a very fall Head, and are us'd to fasten the Rudder Irons in Ships. See NAIL.

ROTONDO, ROTUNDO, in Architecture, a popular Term for any Building that is round both within and without-side; whether it be a Church, a Salon, a Vestible, or the like. See BUILDING, &c.

The most celebrated *Rotundo* of Antiquity is the Pantheon at Rome, dedicated to *Cybele*, and all the Gods, by *Agrippa*, *Scantilaw of Augustus*; but since consecrated by Pope *Boniface IV.* to the Virgin, and all the Saints, under the Title of *Sta. Maria della Rotonda*. See PANTHEON.

The Chapel of the *Escurial*, which is the Burying-Place of the Kings of Spain, is also a *Rotundo*; and in Imitation of that at Rome, is also call'd *Pantheon*. See ESCURIAL.

ROTTENNESS, PUTREDO, See PUTRIFICATION, &c.

ROTULA, in ASTRONOMY. See PATELLA.

ROTULUS, a Roll. See ROLL.

ROTULUS *contrarietatum*.—The Earl of *Leicester* taking Part with the Barons against King *Edward II.* it was not thought fit, in respect of their Power, to call them Rebels or Traytors, but only *Contrarietis*: Accordingly, we have a Record of those Times call'd *Rotulis-Contrarietatum*.

ROTULUS *Wintonie*, an exact Survey of all England, by Countess, Hundreds, and Tithings; made by King *Alfred*; not unlike that of *Down-Day*. See DIMES-DAY.

It was thus call'd because anciently kept at *Winchester*, among other Records of the Kingdom.

ROTUNDUS, in Anatomy, a Name given to several Muscles, from the roundness of their Body. See MUSCLE.

Such are the *Rotundus Major*, call'd also *Teres Major*; and the *Rotundus Minor*, call'd also *Teres Minor*, and *Transversarius*; which see under their proper Articles.

ROUGE-Crois, q. d. Red Cross, }  
ROUGE-Dragon, q. d. Red Dragon, } See } PURSUIVANTS.

ROUGH, ROUGHNESS, in Mechanicks. See FRICTION and RESISTANCE.

ROUGH-Taste. See TASTE.

ROUGH-Casting. See PLAISTERING.

ROUL, or ROLL, in the military Term.—Officers of equal Quality, who mount the same Guards, and take their turns in relieving one another, are said to *Roul*. See GUARD, &c.

ROULADE, in Music, a trilling or quavering. See QUAVERING.

ROUND, ROTUNDUS, in Geometry. See CIRCLE, GLOBE, SPHERE, &c.

ROUND, in Anatomy. See ROTUNDUS.

ROUND, in Music.—The *Italians* call b round, what we call b flat, and the *French* b *Mol*; and b square, what we call b sharp. See FLAT and SHARP, &c.

ROUND, is also a military Term, signifying a Walk or Turn which an Officer, attended with some Soldiers, takes in a Garrison or fortified Place, around the Ramparts, in the Night-time; to listen if any thing be stirring without the Works, and to see that the Centries are Watchful, and do their Duty, and all things in good Order.

In strict Garrison, the *Rounds* go every Quarter of an Hour, that the Rampart may be furnished.—The Centries are to Challenge at a Distance; and to Reit their Arms as the *Rounds* pass, and let no one come near them.

When the *Round* is near the *Corps de Garde*, the Centry calls aloud, *Who comes there?* And when the Answer is, *the Rounds*, he says, *stand*; then calls for the Corporal of the Guard, who draws his Sword, and calls also, *Who comes there?* And when it is answered, *the Rounds*, he that has the Word advances and delivers it to the Corporal, who receives it with his Sword pointed at the Giver's Breast. See WORD.

Among Masons, *Rounds* are the broken Pieces of Statues.

ROUND-Head, in a Ship, is the uppermost Room or Cabin on the Stern of a Ship, where the Master lies. See SHIP and STERN.

ROUND-Head is also a kind of Prison, for the Nightly-Watch to secure Persons in, till they can be carried before a Magistrate. See WATCH.

ROUND-Head. See WHO and TORY.  
A ROUND, in the Academies, is a circular Pistle or Tread. See PISTLE.

To ROUND a Horse, is a general Term for all sorts of Manages upon a Round.—Hence, to round a Horse upon a Trot, Gallop, &c. is to make him carry his Shoulders and Haunches roundly or compactly, upon a larger or smaller Circle, without traversing or bearing to a Side.

ROUNDDELAY, or ROUND, a kind of antient Poem, thus call'd, according to *Metsuys*, from its form; and because it still turns back again to the first Verse, and thus goes round.

The common *Roundelay* consists of thirteen Verses, eight whereof are in one Rhime, and five in another.—It is divided into Couplets; at the end of the second and third whereof, the beginning of the *Roundelay* is repeated; if possible, in an equivocal or punning Sense.

The *Roundelay* is a popular Poem among the *French*, but little known among us.—*Morat* and *Pature* have succeeded the best in it.

*Rapin* observes, that if the *Roundelay* be not very exquisite, 'tis stark nought.—In all the antient *Roundelays*, *Metsuys* observes, the Verse preceding has a finish'd Sense; and yet joins agreeably with that of the Close; without depending necessarily thereon. This Rule well observ'd makes the *Roundelay* more ingenious; and is one of the Finicels of the Poem.

The Word is form'd from *Round* and *Lay*. See LAY.—The *French* call it *Rondeau*. See SPANISH GLOSS.

ROUNDLET. See RUNLET.

ROUNDNESS, ROTUNDITY, in Physicks. See SPHERICITY.

ROUND, or ROUNDLAY, in Music, a kind of Barthen or Rhornello; where the beginning of each Couplet is repeated at the end thereof. See RITORNELLO.

ROUPIA, or ROUPIAS, or RUPEE, a Coin very current in the Territories of the Great Mogul, and several other Parts of the East-Indies. See COIN.

*Roupia* are struck both of Gold and Silver; and both the one and the other have their Diminutions; as *Half-Roupia*, *Quarter-Roupia*, &c.

The Gold *Roupia* is worth 1 s. 6 d. Sterl. The value of the Silver *Roupia* is various, according to its Quality, and the Place where 'tis coin'd. A general Observation is, that the *Roupias* are always Current for more; at the Place where they are struck, than else-where; and the new *Roupias* for more than the old ones.—The reason of this last difference is, that the *Indians* being very fond of Silver, to save it, use, as soon as they have got a few *Roupias* together, to hide them under Ground. To prevent which Inconvenience, tending to drain the Store of Current Monies, the Princes and Rajsas strike new *Roupias* every Year, still augmenting the Value thereof without any augmentation of the Weight.

Besides this difference of new and old *Roupias*, the *Indians* make three other Classes.—The first call'd *Roupia Sotas*, which at *Bengal* are worth 2 s. 11 d. Sterl.—The second, *Roupias of Surat*, worth 2 s. 6 d. Sterl.—The third *Roupias of Madras*, worth 2 s. 5 d. Sterl. All which is to be understood of the new *Roupias*.

As to the old ones, those of *Madras* are only Current at 1 s. 11 d. Sterl. Those of *Surat* at 2 s. and the *Sotas* at 2 s. 4 d. Yet at other Places, the Order and Prices vary: At *Surat*, those struck there have the first Place; the *Sotas* the second; and those of *Madras* the third. Along the Coast of *Cornwallis*, the *Madras* have the first Place, and the *Sotas* the second, &c.

ROUSE up a Hart, among Hunters. See HUNTING.

To ROUSE, among Falconers, is when a Hawk lifts up and shakes himself. See HAWK and HAWKING.

To ROUSE a Hweeler, or Cable, in the Sea Phrase, signifies to hale in Part of the Hawler or Cable, which lies slack in the Water. See CABLE, &c.

ROUT, a publick Road, Highway, or Course; especially that which military Forces take. See ROAD.

*Sanson* and *Ogby* have made Maps of the *Roads* and Post-Roads of France and England: Soldiers are prohibited going out of their *Roads*.—*Roads* are frequently cut in Parks, Forests, &c. both for Ornament and the Conveniences of Hunting. See HUNTING.

Some use *Row* for a Path cut across a Wood; in opposition to *Way*, which is a great Road. See WAY.

ROUT, in Navigation. See COURSE.

ROUT is also us'd for the Defeat and Flight of an Army. See DEFEAT.

The Sergeants endeavour to rally the Soldiers in a *Row*. See RALLY.

The Word is form'd from the *Latin*, *rupa*, or *ruta*; or the *French*, *roux*, an old Word for Horie; or rather from the old *Celtic*, *Rout*, Road; figuratively us'd to signify Example.—*Itinérance* has a lessened Derivation on the Word.

ROUT, in Law, is an Assembly or Combination of three, or more Persons, going forcibly to commit an unlawful Act; tho' they do not perform it. See ASSEMBLY.

If they go, ride, or move forwards, after their Meeting, 'tis a *Road*, though they don't put their Purpose in Execution; if they do, 'tis a *Riot*. See RIOT.

A *Rout*, therefore, seems to be an unlawful Assembly; and a *Rice* the disorderly Fact committed thereby. See *RIOU*.

Two things, however, there are in common to *Rout*, *Riot*, and *unlawful Assembly*: The one, that there be at least three Persons together; the other, that, being together, they disturb the Peace, either by Words, shew of Arms, turbulent Gesture, or actual Violence. See *UNLAWFUL-Assembly*.

*ROUT of Wolves*, among Hunters, a Herd of their wild Beasts. See *HUNTING*.

*ROUTIER*, in Navigation. See *RUTTER*.

*ROWEL*, among Farriers, a kind of Issue, made by drawing a Skin of Silk, Thread, Hair, or the like, through the Nape of the Neck, or other Part of an Horse; answering to what in Chirurgery is called a *Seton*. See *SETON*.

The *ROWELLING of Horses* is a Method of Cure frequently had recourse to in inward Strains; especially about the Shoulders or Hips, as also for hard Swellings not easy to be resolved.

The Operation is thus.—A little flax being made through the Skin, about a handful below the Part aggrieved, high enough to put a Swan's Quill in; the Skin is rais'd from the Flesh, the end of the Quill put in, and the Skin blow'd from the Flesh upwards, and all over the Shoulder.—Then the Hole being stop'd with the Finger, the Place blown is beaten with a Hazel-stick, and the Wind spread with the Hand all over; then let go.

This done, Horle-hair, or red Surfenet, half the thickness of the little Finger, is put in a *Rowelling Needle* seven or eight Inches long; the Needle is put into the Hole, and drawn through again six or seven Inches higher; then the Needle is drawn off, and the two ends of the *Rowel* tied together: Anointing it every Day, as well as before the putting in, with sweet Butter and Hog's Grease, and drawing it backwards and forwards in the Skin, to make the purged Matter discharge it self more plentifully.

Others, distilling their *Rowels*, as making too great a Sore and Scar, use the *French Rowel*, which is a round Piece of stiff Leather, with a Hole in the middle; laying it flat between the Flesh and Skin, the Hole of the *Rowel* just against that in the Skin; sewing it in with a Needle and Thread; draws through the Hole and the Skin; cleaning it ooco in two or three Days, and anointing it fresh.

*ROWING*. See *OAR*, *BOAT*, &c.

*ROWING of Chaises*, is the smoothing of them with a Roller, &c. See *ROLL*.

*ROYAL Fort*. See *FORT*.

*ROYAL Antler*, among Hunters, expresses the third Branch of the Horn of a Hart or Buck, that shoots out from the rest or main Horn above the Bayander. See *ANTLER*, *HEAD*, *HUNTING*.

*ROYAL, REGAL*, something relating to a King. See *KING*.

In this Sense we say, the *Royal Family*, the *Royal Blood*, &c. See *BLOOD*, &c.

In England, the Prince and Princess of Wales, the King's Brothers, &c. are address'd under the Title of *Royal Highness*. See *PRINCE* and *HIGHNESS*.

The Duchesse of Savoy is called *Madama Royal*.

The Word is form'd from the Latin, *Regalis*, of *Rex*, King. See *REGAL*.

*ROYAL Crown*, is that worn by Kings. See *CROWN*.

This they also call *Imperial Crown*, being closed a-top. See *IMPERIAL*.

The *English Crown* is closed by Semicircles of Gold meeting at the Monde or Globe, on which the Cross stands; and those Semicircles adorned with Crosses and Fleurs-de-lis: The whole embellish'd with precious Stones.

A *Royal Abby* is an Abby founded by a King, or by a Prince who is succeeded by a King. See *ABBY*.

*ROYAL Army* is an Army marching with heavy Canon, capable of besieging a strong, well fortified City.—'Tis usual to hang up a Governor who has the assurance to hold out a petty Place against a *Royal Army*.

The *Royal Oak* is a fair spreading Tree at *Boisobert* in the Parish of *Donnington* in *Staffordshire*, the Boughs whereof were all cover'd with Ivy; in the thick of which King *Charles II.* fit in the Day time with Colonel *Careless*, and in the Night lodg'd in *Boisobert-House*: So that they are mistaken who speak of it as an old hollow Oak; it being then a gay flourishing Tree, surrounded with many more.—The poor remains hereof are now fenced in with a handsome Wall, with this Inscription over the Gate in Gold Letters.—*Felicissimum Arborem quam in Aghon patetissimum Regi Carolo II. Deus op. max. per quos Reges regnasset, hic crevit visum, &c. Philosph. Transact. N<sup>o</sup>. 310.*

*ROYAL Assent*, is that Assent which the King gives to a thing formerly done by others; as the Election of a Bishop by Dean and Chapter; or a Bill pass'd in both Houses of Parliament. See *BISHOP*, &c.

The *Royal Assent* in Parliament being given, the Bill is endor'd with these Words, *Le Roy le veult*; that is, it pleases the King.—If he refuses it, thus; *Le Roy s'avisera*, q. d. the King will advise upon it. See *BILL*, *PARLIAMENT*, &c.

*ROYAL FISHES*, are Whales and Sturgeons, and some add, Porpoises too, which the King, by his Prerogative, is to have whenever cast on Shore, or wreck'd, in all Places of the Realm, unless granted to Subjects by express Words. See *FISHES*,

The King to have the Head and Body of the Whale to make Oils &c. and the Queen the Tail to make Whalebone for her Garments. Stat. 1. Edw. I.

*ROYAL-Exchange*, the Butie or Meeting-place of the Merchants in *Lombard*. See *EXCHANGE*.

It was first built in 1566, at the Charge of Sir *Thomas Gresham*; and in a solemn Manner, by Herald with sound of Trumpet, in Presence of Queen *Elizabeth*, proclaimed the *Royal Exchange*.—Till that time the Merchants met in *Lombard-street*.

'Twas built of Brick; yet then esteem'd the most splendid Burse in Europe.—An hundred Years after its Building, at the great Fire, it was burnt down; but soon rais'd again, in a still more magnificent Manner; the Expence thereof amounting to 50000 l.

One half of this Sum was disburs'd by the Chamber of *LONDON*, the other by the Company of *Mercers*; who, to reimburse themselves, let to Hire 190 Shops above *Stains*, at 20 l. each; which with other Shops, &c. on the Grounds, yield a yearly Rent of above 4000 l. yet the Ground it stands on does not exceed  $\frac{1}{2}$  of an Acre: Whence 'tis observ'd to be much the richest Spot of Ground in the World.

'Tis built Quadrangular, with Walks 2-round, wherein the Merchants of the respective Countries associate themselves. In the middle of the Area or Court, is a fine marble Statue of King *Charles II.* in the Habit of a *Roman Caesar*; erected by the Society of Merchant Adventurers; the Workmanship of *Griulov Gibbons*. Around are the Statues of the several Kings since the *Norman Conquest*, ranged.

*ROYAL Society*, is an Academy, or Body of Persons of eminent Learning; instituted by King *Charles II.* for the promoting of Natural Knowledge. See *ACADEMY*.

This illustrious Body had its original in an Assembly of ingenious Men, who before the Restoration met weekly in *Wadens-College*, in *Oxford*; at the Lodgings of Dr. *Wicks*.

Afterwards, from about the Year 1658, many of them living in *LONDON*, held Meetings at *Gresham-College*; till they were at length taken Notice of by the King, who was pleas'd to grant them an ample Charter, dated 22d of April, 1663; whereby they were erected into a Corporation, consisting of a President, Council, and Fellows, for promoting the Knowledge of Natural Things, and useful Experiments.

Their Manner of electing Fellows is by Balloting. Their Council are in Number 21, eleven of which are continued for the next Year, and ten more added to them, all chosen on St. *Andrew's Day*.

Each Member at his Admission subscribes an Engagement, that he will endeavour to promote the Good of the Society; from which he may be freed at any Time, by signifying to the President, that he desires to withdraw.

The Charges are 40 s. paid to the Treasurer at admission; and 12 s. per Quarter, so long as the Person continues a Member.—Their Design is to "make faithful Records of all the Works of Nature or Art, which come within their reach; so that the present as well as later Ages may be enabled to put a Mark on Errors which have been strengthened by long Prescription, to restore Truths that have been neglected; to push those already known to more various uses; to make the Way more passible to what remains unexplored, &c.

To this purpose they have made a great Number of Experiments and Observations, in most of the Works of Nature; Eclipses, Comets, Meteors, Mines, Plants, Earthquakes, Inundations, Springs, Damps, Subterraneous Fires, Tides, Currents, the Magnet, &c.

Numbers of short Histories of Nature, Arts, Manufactures, useful Engines, Contrivances.

The Services they have been of to the Publick are very great.—They have improved Naval, Civil, and Military Architecture; advanced the Security and Perfection of Navigation; improved Agriculture; and put not only this Kingdom, but also *Ireland*, the Plantations, &c. upon Planting.

They have register'd Experiments, Histories, Relations, Observations, &c. reduced them into one common Stock; have from time to time publish'd some of the most immediate Use, under the Title of *Philosophical Transactions*, &c. and laid the rest up in publick Registers, to be makingly transmitted to Posterity, as a solid Ground-work for future Systems. See *TRANSACTIONS*.

They have a Library adapted to their Institution; towards which the late Earl *Marshall* contributed the *Norfolkian Library*; and a Museum, or Repository of natural and artificial Rarities, given them by *Daniel Cuvial*, Esq.—THEIR MOTTO, *Nihil in Verbo*.

*ROYAL Academy of Sciences*, &c. See *ACADEMY*, &c.

*ROYAL Rampart*, or *Parapet of the Rampart*, in Fortification, is a Bank about three Fathoms broad, and six Foot high, placed upon the Brink of the Rampart, towards the Country; to cover those who defend the Rampart. See *RAMPART* and *PARAPET*.

*ROYALTIES, REGALTIES*, the Rights of the King; otherwise call'd the *King's Prerogative*, and the *Regalia*. See *PREROGATIVE* and *REGALIA*.

Of these, some the King may grant to common Persons; others

others are inseparable from the Crown. See KING, CROWN, GRANT, &c.

RUBARB, RHABBARUM, in Medicine. See RHUBARB. RUBBING. See FRICTION.

RUBIA *Tinctorum*, a Root or Drug popularly call'd *Madder*. See Madder.

RUBIFYING, in Chymistry, &c. the act of turning a thing Red by Force of Fire, &c. See RED. See also RUBY.

Red Arsenick is supposed to be no more than the common yellow Arsenick ruddy by Fire, with the Addition of Nut or Olive-Oil. See ARSENICK.

The Word is form'd of the Latin, *rubens*, ruddy, and *fo*, I become.

RUBIGALIA, or ROBIGALIA, in Antiquity, a Feast celebrated by the Romans in Honour of the God *Rubigus*, or the Goddess *Rubigo*; and so engage those Deities to preserve the Corn from blasting. See FEAST.

The *Rubigalia* were instituted by *Numa* in the eleventh Year of his Reign; and were held on the 7th of the Calends of May, which is our 15th of April; being the Time when the blight or Mildew, call'd by the Latins *Rubigo*, fits to attack the Corn. See RUBIGO.

*Varro* fixes it to the Time when the Sun enters the 16th Degree of *Taurus*.—Indeed the true Time seems rather to have been on the 18th Day before the Equinox; viz. the 28th of April; and the true Reason, because then Canicula, or the little Dog, sets; which is esteem'd a malicious Constellation.

Hence they sacrificed a Dog to *Rubigo*: *Ovid* says, the Entrails of a Dog, and those of a Sheep: *Calanella*, only a sucking Pappy. *Pythagoras* intimates, that the Victim must be red.

RUBIGO, a Disease incident to Corn, popularly call'd the *Sow*, and sometimes *Mildew*. See SMUT and MILDEW.

The *Rubigo* is a Species of Blight. See BRIGHT.

RUBRICK, the Rules and Directions given at the Beginning, and in the Course of the Liturgy; for the Order and Manner wherein the several Parts of the Office are to be perform'd. See LITURGY.

There are *General Rubricks*, and *special Rubricks*, a *Rubrick for the Commonweal*, &c.—In the *Ross* Missal and Breviary are *Rubricks* for Matins, for Lauds, for Translations, Benedictions, Commemorations, &c.

They are call'd *Rubricks* from the Latin, *ruber*, red; because formerly printed in Red-ink, to distinguish them from the rest of the Office, which was in black; as they still are in the *Ross* Missal, &c.

The great *Rubrick* for the Celebration of *Easter*, prescribed by the Nicene Council, is to this Purpose.—*Easter-Day* to be the Sunday which falls upon, or next after, the first full Moon which immediately succeeds the Vernal Equinox. See EASTER.—*Dr Wallis* has a particular Discourse on the ancient *Rubricks* for the Seat of *Easter*; in the *Philosoph. Transactions*.

RUBRICK, in the Canon Law, is a Title or Article in certain ancient Law-Books; thus call'd, because wrote, as the Titles of the Chapters in our ancient Bibles are, in red Letters. See TITLE.—You'll find such a Law under such a *Rubrick*.

RUBY, a red, sparkling Gem of the first Rank among precious Stones. See GEM and STONE.

There are but two Places in the East where the *Ruby* is found: The Kingdom of *Pegu*, and the Isle of *Ceylon*.

The Mine in *Pegu*, where 'tis found in greatest Plenty, is in the Mountain *Copelan*, 12 Days Journey from *Sireu*, the Residence of that Prince.—The finest *Rubies* brought hence don't exceed three or four Carats; the King reserving all the larger to himself.

In *Ceylon*, the *Rubies* are found in a River which descends from the Mountains towards the middle of the Island: Some few are also found in the Ground.—The *Rubies* of *Ceylon* are usually brighter and more beautiful than those of *Pegu*; but they are rare; the King of *Ceylon* prohibiting his People to gather them, or Traffic with them.

There are *Rubies* also found in *Europe*, particularly *Bohemia* and *Hungary*; especially the former, wherein is a Mine of Flints of divers Sizes, which upon breaking, see sometimes found to contain *Rubies* as fine and hard as any of the *Eastern* ones.

*Salmafius* will have the *Ruby* to be the Hyacinth of the Ancients. See HYACINTH.

The Greeks call it *ἀσπερον*, q. d. Refining of the Fire. The Ancients out of their Credulity and Superstition have attributed many Virtues to the *Ruby*; so, that it expels Poisons, cures the Plague, abates Luxury and Incontinence, banishes Sorrow, &c. See GEM.

They usually only distinguish two Kinds of *Rubies*; the *Balasi* and *Spinelle*. Some Authors, however, make four Kinds; the *Ruby*, *Rebecelle*, *Balasi* and *Spinelle*.

'Tis the different Degree of Colour which makes their different Value and Beauty.—The *Balasi-Ruby* is of a Vermil-Red Colour; the *Spinelle* of a Flame Colour. 'Tis said the Inhabitants of *Pegu* have the Art of heightening the redness and brilliant of *Rubies*, by laying them in the Fire, and giving them a proper Degree of Heat.

The *Ruby* is form'd in a stony Substance or Marcassite of a Roco-Colour, call'd *Mother of Ruby*; it has not all its Colour and Lustre at once; but comes to it by Degrees.—At first it grows whitish, and as it approaches to Maturity, becomes red. Hence we have white *Rubies*; others, half white, half red; and others blue and red, call'd *Sapphir-Rubies*.

When a *Ruby* exceeds twenty Carats, it may be call'd a *Car-*

*uncle*, the Name of an imaginary Stone, whereof the Ancients and Moderns have given us so many Descriptions. See CARUNCLE.—They have several manners of counterfeiting *Rubies*; and have carried the Imitation to that length, that the most able Lapidaries are sometimes over-lead.

*Forsterius* assures us, though the thing surpasses all belief, that there have been *Rubies* in *France* of 240 Carats.—*Tavernier* tells us, he saw one in the *Indies* of fifty Carats, which he had a Mind to have bought. He adds, that the King of *France* has finer and larger *Rubies* than any of the Great *Mogul*.

The Value of *Rubies* from one Carat, or four Grains, to ten Carats, is given us in the *Dictionnaire de Commerce*, by a good Hand.

A Ruby of one Carat, is worth,	l.	s.	d.
Of two C.	1	15	0
Of three C.	9	00	0
Of four C.	22	10	0
Of five C.	33	15	0
Of six C.	45	00	0
Of seven C.	67	10	0
Of eight C.	84	00	0
Of nine C.	106	00	0
Of ten C.	150	00	0
Of ten C.	216	00	0

RUBY, in Chymistry, is a Name given to several Preparations of natural Bodies, because of their red Colour; as, *Ruby of arsenick*, &c. See RUBIFYING.

RUBY, in Heraldry, is the red Colour wherewith the Arms of Noblemen are blazord; being the same which in the Arms of others not Noble, is call'd *Gules*. See COLOUR, GULES, &c.

RUCTATION, BELCHING, a Ventosity arising from Indigestion, and discharging it self at the Mouth with a disagreeable Noise. See FLATULENCY.

There are Belches owing to Repletion, and others to Inanition, or Emptiness.

*Dr Sydenham* says, Hypochondriac and Hysteric People are particularly liable to this Disorder.—They are rather to be cured with proper Stomachicks, than Carminatives and hot Liquors.—*Barnes* recommends the fine Pills of *Rubis* against *Ructation*.

RUDENTURE, in Architecture, the Figure of a Rope or Staff, sometimes plain sometimes curv'd, wherewith a third Part of the Flutings of Columns are frequently filled up. See FLUTING.

It is thus call'd from the Latin, *rudent*, Cable; whence some call it a *Cabling*; and the Columns whose Flutings are thus fill'd, *rudentes*, or *cabled Columns*. See COLUMN, CABLING, &c.

There are also *Rudentes* in *Relievo*, laid on the naked of *St. Sappientia* at *Rome*.

RUDERATION, in Building, a Term us'd by *Vitruvius* for the laying of a Pavement with Pebbles or little Stones. See PAVEMENT.

To perform the *Ruderation*, 'tis necessary the Ground be first well beaten, to make it firm, and prevent its cracking.—Then a Stratum of little Stones are laid, to be afterwards bound together with Mortar made of Lime and Sand, call'd by *Vitruvius*, *Stauramentum*.

If the Sand be new, its Proportion to the Lime may be as 3 to 1; if dug out of old Pavements or Walls, as 5 to 2. See MORTAR, &c.

RUDERATION, *Daviler* observes, is also us'd by *Vitruvius*, Lib. 7. Cap. 1. for the clearest and most artful Kind of Masonry; where a Wall is, as it were, cabled up. See MASONRY.

RUDDER, in Navigation, a Piece of Timber turning on Hinges in the Stern of a Ship, and which opposing sometimes one Side to the Water, and sometimes another, turns or directs the Vessel this Way or that. See SHIP.

The *Rudder* of a Ship is a Piece of Timber hung on the Stern-Posts, by four or five Iron Hooks call'd *Postes*; serving, as it were, for the Bridle of a Ship; to turn her about at the Pleasure of the Steers-man. See STEERING.

The *Rudder* being perpendicular, and without-side the Ship, another Piece of Timber is fitted into it at Right Angles, which comes into the Ship; by which the *Rudder* is managed and directed.—This latter is properly call'd the *Helms*, though the two are sometimes conjoined together. See HELM.

The Power of the *Rudder* is reducible to that of the Lever. See LEVER.

As to the Angle the *Rudder* should make with the Keel; the Author of a late Book on the Working of Ships, shews, that in order to stay or bear up the sooner possible, the Tiller of the *Rudder* ought to make an Angle of near 55° with the Keel. See SAILING.

A narrow *Rudder* is best for a Ship's sailing, provided she can feel it, that is, be guided and turned by it; see a broad *Rudder* will hold much Water when the Helm is put over to any Side; Yet if a Ship have a fair Quarter, so that the Water cannot come quick and strong to her *Rudder*, she will require a broad *Rudder*. The aftermost Part of the *Rudder* is call'd, the *Kate* of the *Rudder*.

RUDDLE, or REDDLE, a sort of red Chalk, found in divers Parts of England. See CHALK.

This name take for the *Lapis Hematites*. See HEMATITES. RUDIARIUS, in Antiquity, a Veteran Gladiator, who had got a Discharge from the Service. See GLADIATOR.

He was thus called, because, as a Mark of Dismission a Rod was put into his Hand call'd *Ruda*. See RUDA.

The *Rudarii* were also call'd *Speclatores*. See SPECTATOR.

**RUDIMENTS, RUDIMENTA**, the first Principles or Grounds of any Art or Science; call'd also the *Elements* thereof. See **ELEMENTS**.

**RUDIS**, a knotty rough Stick, which the Prætor among the *Romans*, gave the Gladiators, as a Mark of their Freedom and Diffinition. See **GLADIATOR**.

Hence the *Latin Phrase*, *Rudis æmulo*, to make a Gladiator free, to discharge him from fighting any more.—They were hence call'd *Rudarii*. See **RUDIARI**.

**RUE, RUTA**, a medicinal Plant, much us'd in the present Practice.—*Sæbæus* commends it as an Astringent, and Cephalic; says it resists Poisons and Malignities, and is therefore to be us'd in Fevers; and that it is good in all convulsive Cases.

It is replete with a fat viscid Juice, and by that means yields little to any Purpose in Distillation, unless where first digested in a spirituous Menstrum.—Hence its simple Water in the Shops, according to Dr. *Sney*, is noising worth. It ought to be rais'd with a spirituous Liquor, or us'd in Conserve; or, which is best of all, eat alone fresh gathered, with Bread and Butter. It is of Service in nervous Cases, particularly such as arise from the Womb, as it detaches the Glands, and by its Viscidity, bridges those inordinate Motions, which frequently begin there, and affect the whole Constitution. See **HYSTERIC**, **UTERINE**, &c.

**RUELLE**, a French Term, lately introduced into our Language.—*Ruelle* is a diminutive of *Rue*, Street; and signifies, literally, a *Little Street*.

Its use among us, for an Alcove, or other genteel Apartment, where the Ladies receive Visits either in Bed or up.—The Poets go reading their Woes from *Ruelle* to *Ruelle*, to bespeak the Approbation and Interest of the Ladies.

**RUFER-HOOD**, among Falconers, a plain Leather-Hood, large and open behind, to be worn by an Hawk, when the is first drawn. See **HOOD**, **HAWK**, **HAWKING**, &c.

**RUINS**, a Term particularly us'd for magnificent Buildings fallen to decay by length of Time; and whereof there only remains a confused Heap of Materials.

Such are the *Remains* of the Tower of *Babel*, or Tower of *Babel*, two Days Journey from *Bagdad*, in *Syria*, on the Banks of the *Euphrates*; which are now no more than a Heap of Bricks, cemented with Bitumen; and whereof we only perceive the Plan to have been Square.

Such, also, are the *Remains* of a famous Temple or Palace near *Scheras* in *Perfia*; which the Antiquaries will have to have been built by *Abasverus*; and which the *Perfians* now call *Tebrianus*, or *Cebrianus*, q. d. the forty Columns; because there are so many Columns remaining pretty entire, with the Traces of others; a great Quantity of *Basso Relievos*, and unknown Characters, sufficient to shew the Magnificence of the Antient Architecture. See **CHELMINAR**.

**RULE, REGULA, or RULER**, a very simple Instrument, ordinarily of hard Wood, thin, narrow, and straight; serving to draw right Lines withal. See **LINE**.

The *Rule* is of principal use in all the mechanical Arts.—To prove whether or no it be just; draw a Line by it on a Paper; then turn the *Rule* about, the Right end to the Left; and apply the same Edge this way to the Line: If the Edge now agree exactly with the Line, the *Rule* is true.

*Descartes* has a fine Poem on the Amours of the *Rule* and *Compass*.—The *Stone-Cutters-Rule* is usually four Foot long; and divided into Feet and Inches.

The *Major's-Rule* is 12 or 15 Foot long, and is apply'd under the Level, to regulate the Courses, to make the *Piedroits* equal, &c.

**RULE** is also us'd for certain Instruments which have other considerable Uses beside that of drawing Lines.—Such are the Carpenters *Joint-Rule*, *Everard's*, and *Cogswell's Sliding-Rules*, &c.

**Carpenter's-JOINT-RULE**, is an Instrument usually of Box, 24 Inches long, and one and a half broad; each Inch being subdivided into eight Parts.—On the same Side with these Divisions, is usually added *Gunter's* Line of Numbers.

On the other Side are the Lines of *Timber and Board-Measure*; the first beginning at 82, and continued to 36, near the other End: The latter is numbered from 7 to 36, four Inches from the other End.

*Use of the Carpenter's Joint-Rule.*

The Application of the Inches in measuring Lengths, Breadths, &c. is obvious.—That of the *Gunter's* Line, see under **LINE** of NUMBERS.—The use of the other Side is all we need here mention.

1. *The Breadth of any Surface, as Boards, Glass, &c. being gi-ving; to find how much in Length makes a Square Foot.*—Find the Number of Inches the Surface is broad, in the Line of Board Measure; and right against it is the Number of Inches required.

Thus if the Surface were 8 Inches broad, 18 Inches will be found to make a superficial Foot.

Or, more readily thus:—Apply the *Rule* to the Breadth of the Board or Glass; that End mark'd 36 being even with the Edge; the other Edge of the Surface will shew the Inches and Quarters of Inches which go to a square Foot.

2. *Use of the Table at the end of the Board Measure.*—If a Surface be one Inch broad, how many Inches long will make a superficial Foot? Look in the upper Row of Figures for 1 Inch, and under it in the second Row is 12 Inches, the answer to the Question.

3. *Use of the Line of Timber Measure.*—This resembles the former; for having learnt how much the Piece is Square, look for that Number on the Line of Timber-Measure: The Space

thence to the End of the *Rule* is the Length, which at that Breadth makes a Foot of Timber.—Thus, if the Piece be 9 Inches Square, the Length necessary to make a solid Foot of Timber, is 22  $\frac{1}{2}$  Inches.—If the Timber be small, and under 9 Inches Square, seek the Square in the upper Rank of the Table; and immediately under it is the Feet and Inches that make a solid Foot.—Thus, if it be 7 Inches Square, 2 Foot 11 Inches will be found to make a solid Foot.

If the Piece be not exactly Square, but broader at one End than another; the Method is to add the two together, and take half the Sum for the Side of the Square.—For round Timber, the Method is to girt it round with a String, and to allow the fourth Part for the Side of the Square.—But this Method is erroneous; for hereby you lose above  $\frac{1}{4}$  of the true Solidity. See **TIMBER-MEASURE**.

*Everard's Sliding-RULE,* } See **SLIDING-RULE**.  
*Cogswell's Sliding-RULE,* }

**RULE, REGULA**, is also a certain Maxim, Canon, or Precept, to be observed in any Art or Science. See **CANON**, **MAXIM**, &c.—Thus we say, the *Rules* of Grammar, of Logic, of Philosophizing, &c. See **GRAMMAR**, **LOGIC**, **PHILOSOPHIZING**, &c.

The School Philosophers distinguish two Kinds of *Rules*; viz. *Theoretical*, which relate to the Understanding; being of use in the Discovery of Truth. See **UNDERSTANDING**, **CRITERION**, and **TRUTH**.—And *Practical*, which relate to the Will, and serve to direct it to what is good and right. See **GOOD** and **RECTITUDE**.

For the Management and Application of these two *Rules*, there are two distinct Arts; viz. *Logic*, and *Ethicks*. See **LOGIC** and **ETHICKS**.

The *Rules of Knowing, Regule scientiæ*, are such as direct and assist the Mind in perceiving, judging, and reasoning. See **PERCEPTION**, **JUDGEMENT**, and **REASONING**.

*Rules of Acting, Regule agendi*, are those whereby the Mind is guided in her Desires, Pursuits, &c. See **WILL**.

Authors are extremely divided about the regard to be had to the *Rules of Poetry* fix'd by the Antients *Aristotle*, *Horace*, *Longinus*, &c. and admitted by the modern Critics, as *Boiss*, &c. some contending that they be inviolably observ'd; others pleading for Liberty to set them aside on occasion.—*Rules*, 'tis complain'd, set Fetters; rank Enemies to Genius; and never religiously observ'd by any, but those who have nothing of themselves to depend on. *Vossius* frequently neglected all the *Rules* of Poetry; as a Master who scorn'd to be confined by them. See **POETRY**.

The Theatre has its particular *Rules*; the *Rule* of 24 Hours; the *unities* of Action, Time, and Place, &c. See **UNITY**. See also **THEATRE**.

If it be true, says *Moliere*, that Plays conducted according to the *Rules*, don't please; but those which are not, do: The *Rules* must be nought.—For my self, when a thing hits and diverts me, I don't enquire if I have deceas'd amiss; nor whether *Aristotle's* *Rules* forbid me to laugh. See **LAW**.

**RULE**, in Arithmetick, is a certain Operation with Figures, to find Sums or Numbers unknown. See **ARITHMETICK**, **OPERATION**, &c.

Each *Rule* in Arithmetick has its particular Name, according to the use for which it is intended.—The four first, which serve as the Foundation of the whole Art, are call'd *Addition*, *Subtraction*, *Multiplication*, and *Division*; each whereof see under its proper Article.

From these arise several other *Rules*; as the *Rule of Three*, or of *Proportion*; call'd also, the *Golden Rule*; and distinguished into *direct*, and *inverse*, *single*, and *compound*, *Rule of five Numbers*—*Rule* of Fellowship, *single*, and *with Time*—*Rule* of Alignment, *medial* and *alternate*.—*Rule* of Exchange—*Rule* of just Position, *single* and *double*. See **FELLOWSHIP**, **ALLIGATION**, **EXCHANGE**, and **POSITION**.

**RULE of Three** or of *Proportion*, commonly call'd the *Golden Rule*, is a *Rule* which teaches how to find a fourth proportional Number, to three others given. See **PROPORTION**.

As if 3 Degrees of the Equator contain 70 Leagues, how many do 360 Degrees, the Circumference of the Earth, contain?

The *Rule* is this.—Multiply the second Term 70, by the third 360; divide the Product 25200, by the first Term 3: the Quotient 8400 is the fourth Term required.

The use of this *Rule* is of vast extent, both in common Life, and the Sciences; but has no Place, except where the Proportion of the given Numbers is known.—Suppose, a. g. a large Vessel full of Water to empty it self by a little Aperture; and suppose 3 Gallons to flow out in 2 Minutes; and it were required to know in what Time 100 Gallons would be thus evacuated?—Here indeed see three Terms given, and a fourth required: But as 'tis evident from Experience, that Water flows faster at first than afterwards, the Quantity of flowing Water is not proportional to the Time; and therefore the Question does not come under the *Rule of Three*.

The things which come under Commerce are proportionable to their Prices; twice as much of any Commodity coining twice as much Money, &c. The Price, therefore, of any Quantity of a Commodity being given, the Price of any other Quantity of the same, or the Quantity of the Commodity answering to any other given Sum, is found by the *Rule of Three*.—E. g. If 3 Pounds cost 17 s. what will 30 Pounds cost? Since, as 3 Pounds are to 30 Pounds, so is the Value of the former 17 s. to the Value of the latter. The Question stands thus:

$$3 \text{ £} \text{ --- } 17 \text{ s.} \\ 30 \text{ £} \text{ --- } 17 \text{ s.}$$

17

$$3) 510 (170 \text{ s.} \text{ --- } 8 \text{ £. } 10 \text{ s.}$$

Again; if 3 Pounds be bought for 17s. how many will 170s. buy? Since as 17s. is to 3 Pounds. so are 3 Pounds to the Pounds required. The Number will be found thus:

$$\begin{array}{r} 17s. \longdiv{170s.} \quad 3 \text{ lb.} \\ 3 \\ \hline 17) 510 \text{ (30 lb)} \\ 51 \\ \hline 00 \end{array}$$

If the given Terms be heterogeneous, *i. e.* have broken Numbers among them, they don't bear the same Proportion to each other, which the things they express, bear.—They must therefore be reduced to homogeneous ones; or to the same Denomination as Pounds into Shillings, Shillings into Pence, &c. Hours into Minutes, &c. See REDUCTION.

*E. gr.* If 3 Pounds and 4 Ounces cost 2s. 4d. what will 2 Pounds cost? The Operation will be thus:

$$\begin{array}{r} 3 \text{ lb. } 4 \text{ } \overline{\hspace{1.5cm}} 2 \text{ lb. } \overline{\hspace{1.5cm}} 2 \text{ s. } 4 \text{ d.} \\ \underline{16} \qquad \qquad \underline{16} \qquad \qquad \underline{12} \\ 52 \qquad \qquad 32 \qquad \qquad 28 \\ \hline 256 \\ 64 \\ \hline 52) 896 \text{ (17 d. } \frac{1}{2} \text{ of a Penny.} \\ 52 \\ \hline 376 \\ 64 \\ \hline 12 \end{array}$$

In many Cafes of Commerce and Accounts, we have more compendious Ways of working Questions that come under the Rule of Three, than by the Rule it self; which, by reason of their expeditious Practice, are call'd *Practick*; and constitute a particular Rule of themselves. See PRACTICE.

RULE of Three *inverse*, is where the natural Order of the Terms is inverted.—As, if 100 Workmen build a House in 2 Years, in how long time will 200 Workmen build the same?

This is usually consider'd by the Writers of Arithmetick, and taught in the Schools, as a particular Rule: Being wrought by multiplying the first Term 100 by the second 2, and dividing the Product 200 by the third Term 200; the Quotient 1 is the Number required.

But there is no necessity for making a particular Rule for the Matter; this coming naturally enough under the former, by only ranging the Terms as the Nature of the Question requires.

Thus 'tis evident, that as the Number of Men 200, is to 100, so is the Space 2 Years, wherein 100 build the House, to the Space wherein 200 will build the same.—For the less Time, the more Hands are required. The Question then will stand thus:

$$\begin{array}{r} 200 \text{ M.} \longdiv{100 \text{ M.}} \quad 2 \text{ Y.} \\ 2 \\ \hline 200) 200 \text{ (1 Year.} \end{array}$$

RULE of five Numbers, or Compound Rule of Three, is where two Rules of three are required to be wrought, ere the Number sought be found.—As if 300 l. in 2 Years yield 30 l. Interest, how much will 1000 l. yield in 10 Years?

Here the first thing to be done is to find by the Rule of Three, what Interest 1000 l. will give in a Year; and then by the same Rule what it will give in 10 Years.

This is consider'd by the Writers, &c. of Arithmetick, as a particular Rule, but without any Necessity; a double Operation having it better, as in this Example:

$$\begin{array}{r} 300 \text{ l. } \longdiv{1000 \text{ l.}} \quad 30 \text{ Int.} \\ 30 \\ \hline 3100) 30000 \text{ (100 Int.} \\ \underline{12} \qquad \qquad \underline{100.} \\ 12 \end{array}$$

But in Questions of this Kind a single Rule of Three may do the Business: For 300 l. give the same Interest in two Years, which twice 300 give in one Year; and twelve times 1000 l. give the same Interest in one Year that 1000 gives in 12: Omitting therefore the Circumstances of Time, say, if twice 300 (that is, 600) give 36 l. Interest (in one Year) what will 12 times 1000 (that is, 12000) give (in one Year)?

$$\begin{array}{r} 600 \longdiv{12000} \quad 36 \\ 36 \\ \hline 72000 \\ 36000 \\ \hline 6100) 432000 \text{ (720 l. Int.} \end{array}$$

RULE, in a monastic Sense, is a System of Laws or Constitutions, whereby Religious Houses are established and regulated; and which the Religious make a Vow to observe at their Entrance. See RELIGIOUS, MONASTERY, VOW, &c.

The monastic Rules are all to be approved of by the Pope, to make them valid.—The Rule of St. Benedict, is by some Authors call'd the Holy Rule. See BENELECTIN.

Those of St. Bruno, and St. Francis, are of all others the most austere. See CARTHUSIAN and FRANCISCAN.

When a Religious cannot support the Austerities of his Rule, he seeks for a Dispensation. See DISPENSATION.

RULE, in the Canon Law.—The Rule, or *verifimili Notitia*, of probable Notice, renders all Provisions to a Benefice Vacant by Death, to be null; if it appear that from the Day of the Decese, to the Day of the Date of the Provisions, or to the Day when the Courier arrives from Rome, there has not been Time sufficient for regular Notice of the Person's Decese to be convey'd to the Pope. See PROVISION.

The Provisions are even null if it be proved the Courier set out ere the Person was deces'd.—This Rule is strictly observ'd in France; in other Countries the Pope finds frequent Occasions to dispense with it.

Rule of twenty Days, *Regula viginti dierum*. By this Rule, if an Ecclesiastic resign his Benefice; to make the Resignation valid, the Resigner must survive its Admission in the Court of Rome twenty Days.—If he dye before the Expiration of the twenty Days, the Resignation is void; and the Benefice becomes Vacant by Death.

This Rule does not hold of the Provisions of ordinary Collators, nor of simple and pure Resignations into the Hands of the Ordinary; but only in Case of Provisions of the Pope, dispers'd on Resignations in Favorem. See RESIGNATION.

This Rule antiently extended to such as resign'd in Health as well as Sickness.—Pope Boniface restrain'd it to the latter; whence it is commonly call'd, *Regula de Infirmitate resignantis*.

Regula de publicandis. By this Rule the Resignee of a Benefice, if he have a Provision from the Court of Rome, is obliged to publish the Resignation and take Possession within six Months; or if he have it from the ordinary Collator, within one Month. Otherwise, if the Resigner dye, the Resignation becomes null.

RUM, a Species of Brandy, or Spirit, drawn by Distillation, from Sugar Cans. See SUGAR, SPIRIT, DISTILLATION, &c.

Rum is very hot and inflammable; and is in the same use among the Natives of the Sugar Countries, as Brandy among us. See BRANDY.

The Word Rum is the Name it bears among the Barbians.

RUMB, RUMB, or RHUMB, in Navigation. See RUMM.

RUMB-Line, or LATISSIMA. See RHUMB-Line.

RUMEN, the first Stomach of Animals which Chew the Cud; hence call'd *Ruminans*. See STOMACH and RUMINANT.

The Food is transmitted into the Rumex without any other Alteration in the Mouth, than being a little row'd and wrap'd up together. See FOOD.

The Rumens is of all others much the largest Stomach; as being to contain both the Drink, and the whole crude Mass of Aliments, which there lie and macerate together; to be thence remitted to the Mouth, to be chewed and continu'd, in order to their farther Digestion in the other Ventricles. See DIGESTION.

In the Rumens, or first Ventricle of Camels, are found divers Sacculi, which contain a considerable Quantity of Water: Which is an admirable Contrivance for the Necessities of that Animal, which living in dry Countries, and feeding on dry hard Food, would be in danger of perishing, but for their reservoirs of Water. See DRINK, THIRST, &c.

RUMINANT, in natural History, an Animal which chews over again what it has eat before; popularly call'd *chewing the Cud*. See RUMINATION.

Juan Cav. Peyer has an express Treatise de *Ruminantibus & Ruminatione*, where he shews, that there are some Animals which do really *ruminare*; such are Oxen, Sheep, Deer, Goats, Camels, Hares, and Squirrels: Whereas others only appear to *Ruminare*; which he calls *Ruminantibus jans*; of which Number are Mole, Crickets, Bees, Beetles, Crabs, Molluscs, and several other Fishes.

This latter Class, he adds, have their Stomachs composed of muscular Fibres, by means whereof the Food is ground up and down, much as in real Ruminants.

Ruminants, Mr. Ray observes, are all Quadruped, Hairy, and Viviparous; some with hollow and perpetual Horns, others with deciduous ones. See QUADRUPED, HAIR, HORN, &c.

The horned Ruminants have all four Stomachs, appropriated to the Office; viz. the *Basia Mysis* of Aristotick, the *Venter Magnus*, or what we call the *Panach* or *Invard*, which receives the Meat slightly chewed, retains it a-while, and then delivers it back again into the Mouth, which is what we call the *Cud*, to be re-chewed.—2<sup>o</sup>. The *Kocypis*, or *Reticulum*, which we call the *Henry-Cud*, from its internal Coat being divided fo into Cells, like *Henry-Combs*.—3<sup>o</sup>. The *Esius*, which Mr. Ray thinks hath been wrong translated, *Omasus*; and which he chuses to call the *Esius*: This being difficult to clear, our People throw it away, and call it the *Maulfold*.—4<sup>o</sup>. The *Hoven* of Aristotick, by Gana call'd the *Abomasus*. See OMASUS, ABOMASUS, &c.

Again, all horned Ruminant Animals want the *Dentes Primores*, or broad Teeth in the upper Jaw; and have that kind of Fet, call'd *Sues*, *Sebum*, *Erius*, which is harder and firmer, and less acquiescent in them, than the *Adeps* of other Animals. See FAT, SERUM, ADEPS, &c.

RUMINATION, an Action peculiar to a Class of Animals call'd *Ruminans*; whereby they return the Food they have formerly swallow'd, to be chew'd over again, and render'd more fit for Chyle. See RUMINANT.

Peyer defines *Rumination* a natural Motion of the Stomach, Mouth, and other Parts; By means of which the Food

Food eaten, at first, hastily, is return'd back again to the Mouth; where 'tis re-chew'd and swallowed a second time; and that much to the Benefit of the Animal. See FOOD, CHYLE, MASTICATION, &c.

**Runet**, in his *Theſaur. Med.* gives several Instances of Men that *runneth*, from *Salvaticis, Rhodias, &c.*—*Dr. Slare* in the *Poſt. Traſact.* gives us a further Instance in one of our own Countrymen, living at *Bristol*. His account, as 'tis curious, and may let us for a little how it fares with *runneth* Animals; we ſhall here add.

“ He begins to chew his Meat over again within a Quarter of an Hour after Meals, if he drink with it; if not, ſomewhat later. His chewing after a full Meal laſts about an Hour and a half: And if he go to Bed preſently after Meals, he cannot ſleep till the uſual time of chewing be over. The Victuals, upon the return, taſte ſomewhat more pleaſantly than at firſt. Bread, Meat, Cheefe, and Drink, return much of ſuch Courſes as they wou'd be of were they mix'd together in a Mortar. Liquids, as Spoon-Meat, return to his Mouth all one as dry and ſolid Food. The Victuals ſeem to him to lye heavy till they have paſs'd the ſecond chewing; after that it paſſes clean away. If he eat variety of things, that which paſſes down firſt comes up again firſt. If the *runneth* Faculty chance to leave him, it ſignifies Sickneſs; and 'tis never well with him till it returns. He is about twenty Years of Age, and was always thus ſince he can remember. His Father does the like, ſometimes; but in ſmall Quantities.

**RUMMAGE**, in the Sea Language, ſignifies to clear a Ship's Hold, or remove Goods or Luggage from one Place to another. See HOLD.

The Word is probably derived from the *Saxon rann*, Room, or Space.

**RUN** of a Ship, ſo much of her Hull as is always under Water; growing thinner and ſanker by Degrees, from the Floor-Timbers to the Stern-Poſts. See STERN.

This is alſo call'd her *Way aſtward* &c.—A Ship is ſaid to have a good Run, when it is long, and the Water paſſes cleverly to her Rudder, her Tack not lying too low, which is of great Importance to her Sailing. If the Water do not come ſtrongly to her Rudder, by reaſon of her being built too broad below, the cannot ſteer well; and a Ship that can't ſteer well, cannot keep a good Wind, nor will have any freſh Way through the Sea, but will fill be falling to Leeward. See RUNNER, STEERING, &c.

And yet a Ship with a large and good Run, loſes much Stowage, becauſe made narrow below. See HOLD, BURYHEN, &c.

**RUNDLES**, or **ROUNDLES**, in Heraldry, the ſame as Balls or Pellets. See BALL and PELLET.

**RUNDELET**, or **ROUNDLET**, a ſmall Veſſel, containing an uncertain Quantity of any Liquor, from three to twenty Gallons. See MEASURE, &c.

**RUNIC**, a Term apply'd to the Language and Letters of the antient *Goths, Danes*, and other Northern Nations.

Some have been of Opinion that *Guthilas*, or *Uphilas*, a *Danish* Biſhop about the Year 370 was the firſt Inventor of the *Runic Character*: But *Olaus Wormius* ſhews at large that *Uphilas* could only be the firſt who taught them to Foreigners; for that the Characters themſelves were older than he. See CHARACTER.

'Tis ſuppoſed they were call'd *Runic*, as being myſterious and ſcientific, like the *Egyptian Hieroglyphicks*.

The *Runic Language* is more frequently call'd *ſclavonic*. See *ſclavonic*. See alſo *Warman* & *Literatura Runicæ*; and *Hick's* *Theſaurus* of the antient Northern Languages.

There are ſome *Runic Medals* in the Cloſets of the Curious; and ſome more Modern *Danish* and *Engliſh* Medals, the Inſcriptions whereof are *Latin*, and the Character *Runic*. See TALISMAN.

**RUNNER**, in the Sea Language, a Rope with a Block or Pulley at one End, and a Hook at the other; for hoifting of Goods. See ROPE.

To *overhaul the Runner*, is to pull down the hooked End, and hitch it into the Sling.

**RUNNET**, or **RENNET**, an acid Juice, found in the Stomachs of Calves that have ſed on nothing but Milk, and are kill'd before the Diſtillation be perfected. See MILK.

'Tis this *Rennet* is chiefly uſed to curdle or turn Milk for Cheefe. See CURDLING, CHEESE, &c.

Its proper Place is the *Abomasæ*.—The like Matter is alſo ſaid to be found in Goats and Hares. See ABOMASUS.

The longer the *Rennet* is kept, the better it is.—Though it readily coagulates Milk; yet if put into it when already coagulated, it diſſolves it. See COAGULATION and DISSOLUTION.

If Salt be put in the Milk, &c the *Rennet* be apply'd, it prevents its Coagulation.—If Salt be put in afterwards, it hardens the Coagulum. See SALT.

*Arſenick* will have the *Rennet* to be the proper Subſtance of the Milk; but he is miſtaken when he ſays 'tis found in all Animals which give Milk, eſpecially all Ruminants. See RUMINANT.

**RUNNING** of Goods, a clandestine landing of Goods without paying the legal Cuſtoms or Duties for the ſame. See SMUGLING, OWLER, DUTY, CUSTOM, &c.

**RUPEE**, or **ROUPIA**. See ROUPIA.

**RUPTURE**, in Medicine, call'd alſo *Hernia*, and popularly *Burſting*; is when the Rim or thin Film or Caſe, which holds up the Intestines, is broken or over-ſtrained or ſtretch'd, ſo as the Guts fall down either into the Groin, Cod, or Flank. See HERNIA.

According as the *Rupture* happens in the *Abdomen, Inguen*, or *Scrotum*, it is call'd *Exomphalus, Hernia Inguinalis*, or *Hernia Scrotalis*. See EXOMPHALUS, &c.

**RURAL**, or **RUSTIC**, ſomething that relates to the Country. See RUSTIC.

The Word is form'd of the *Latin Rat, Reris*, Country.

**RURAL Dean**, in the antient Church, was a Temporary Dean, appointed by the Biſhop or Archbiſhop, for ſome particular Ministry, without Canonical Inſtitution. See DEAN.

The *Rural Dean* is the ſame with what in the *Laws of Edward* the Confeſſor, was call'd *Decanus Episcopali, the Biſhop's Dean*.

*Helyus* obſerves that each Dioceſe has in it one or more Arch-deaconries for diſpatch of Eccleſiaſtical Buſineſs; and each Arch-deaconry is ſubdivided into *Rural Deaneries*, fewer or more according to the extent thereof; the *Deans* whereof were alſo call'd *Archiprebyteri*, and *Decani Chriſtianitati*. See ARCHIPREBYTER, &c.

The *Rural Deans* ſeem to have been the ſame with what in other Parts were call'd *Choreſcopi*. See CHORESCOPUS, &c.

**RUST** of a Metal, the Flowers or Calx thereof; procur'd by corroding and diſſolving its ſuperficial Parts by ſome menſtruous Fluid. See METAL, CALX, FLOWER, MENSTRUUM, &c.

Water is the great Inſtrument or Agent in producing *Ruſt*; the Air apparently *ruſts* Bodies, but 'tis only in Virtue of the Water it contains. See AIR.

Hence, in a dry Air, Metals remain a long time without contracting *Ruſt*; and hence Oils and other ſticky Bodies ſecure Metals from *Ruſt*; Water being no Menſtruum to Oils, &c. And therefore not able to make its Way through it. See WATER, &c.

All Metals are liable to *Ruſt*; even Gold it ſelf, though generally held incapable thereof, grows *Ruſty* if expoſed to the Fumes of Sea-Salt. See GOLD.

The reaſon why it is ſo rarely found to *ruſt*, is that Sea-Salt, which is the only Salt that will prey upon it, is of a very fiſh'd Nature, and therefore little of its *Eſuvia* or *Exhalations* are found floating in the Air. See GOLD, *Aqua REGIA*, VOLATILISATION, &c.

*Ruſt* is uſually ſuppoſed a Corruption of the Metal, but without much Foundation: 'Tis the very Metal itſelf, only under another Form; and accordingly we find that *Ruſt* of Copper may be again turn'd into Copper.

The *Ruſt* of Copper, call'd *Verdigris*, makes what we call *Verdigris*. See VERDIGREASE.

*Ceruſs* is made of Lead converted into *Ruſt* by Vinegar. See CERUSS.—Iron, in time, turns wholly into *Ruſt*, unleſs preſerv'd from the Air by Paint or Varniſh. See IRON, PAINTING, &c.

**RUSTIC Gods**, in Antiquity, *Di Ruſtici*, were the Gods of the Country; or thoſe who preſided over Agriculture, &c. See GOD, &c.

*Varro* invokes the twelve *Di Conſentes*, as the principal among the *Ruſtic Gods*; viz. *Jupiter, Tellus, the Sun, Moon, Ceres, Bacchus, Rubeige, Flora, Mercury, Venus, Juno, and Good Luck*.—Beſides theſe twelve *Arch-Ruſtic Gods*, there were an Infinity of leſſer ones. As *Pales, Vertumnus, Tutela, Falcor, Stercorius, Mellus, Jugatinus, Collinus, Vallonia, Tormonus, Silvianus, and Præpax*.—*Strabo* adds, the Satyrs, Fauns, Silent, Nymphs, and even Titans; and gives the Empire over all the *Ruſtic Gods* to the God *FAUN*. See SATYR, FAUN, SYLVAN, NYMPHS, DRYADES, PANES, &c.

**RUSTIC**, in Architecture, a Manner of building in Imitation of Nature, rather than according to the Rules of Art. See BUILDING and ARCHITECTURE.

**RUSTIC Work**, is where the Stones in the Face, &c. of a Building, inſtead of being ſmooth, are hatch'd or pick'd with the Point of a Hammer.

**RUSTIC QUAINS**, by *Petravivus* call'd *Lapides Bimbrætes*; See *RUSTIC QUOIN*.

**RUSTIC Order**, is an Order with *Ruſtic Quoins, Ruſtic Work*, &c. See ORDER.—*Friſchen* ſays, 'tis properly where the ſeveral Parts of the five Orders are not exactly obſerv'd; but this confounds *Ruſtic* with *Gothic*. See GOTHIC.

**RUT**, in Hunting, &c. a Term uſed for the Venery, or Copulation of Deer.—*For the Terms which obtain in reſpect of other Beaſts of Game, ſee the Noſe they make during the Act*, ſee HUNTING.

The *Running-time* with the Hart begins about the middle of September, and holds two Months; the older they are, the better, and the more beloved by the Hinds; and the earlier do they go to *Rat*.—At this Time they will turn Head, and furiously make at any living Creature. 'Tis eaſy killing them oow; their whole Buſineſs being to ſcent and purſue the Track of the Females; ſcarce feeding at all. The young Herd are forced to fly with great Precipitancy when the Hart comes in Sight of his Mate. If there be any other of Bulk, they will diſpute it very hotly with their Horns.—As the Seafon expires, they withdraw and dig themſelves Holes wherein to lye to aſſuage the ſtrong Savour of their Luſt: When become a little twear, they return to their Paſture, and live in Herds. See HART-HUNTING.

The *Running* or *Tourning-time* of the Roe-buck begins in October, and only laſts 12 or 15 Days. This over, he caſts his Horns. See HEAD.—After the Hind it fill'd, the keeps no more Company with the Male till ſhe be deliver'd.—But the Doe always accompanies her Paramour till her time approaches, when ſhe retires, for the ſafety of her young, which he wou'd otherwiſe kill. See ROE-BUCK HUNTING.

**RYPTICKS**, in Medicine, detergent Remedies. See DE-TERGENT.—The Word is form'd of the *Greek rypno*, to wipe, cleanſe.

## S.

**S**, A Consonant, and the Eighteenth Letter of the Alphabet. 'Tis accounted one of the four hissing Consonants; the other three being Z, J, and CH. 'Tis also held a Semi-vowel, as forming a kind of imperfect Sound without the Assistance of any Vowel. Some of the Ancients avoided all Use of the S very studiously; particularly *Pindar*, who scarce has it once in all his Verses. And hence also in *Plautus*, and some others of the *Latin* Poets, we find it cut abruptly off, as in *signis*, *omnibus*, &c. Others, on the contrary, affected the Use of it every where, inserting it where 'twas not wanted; as *Celsus* for *Celsene*, *dulcose* for *dumose*, *celna* for *cena*, &c. Of all others, 'tis the nearest a-kin to the r; whence it was frequently changed, by reason of its disagreeable Sound, into r. Thus the *Valerii*, *Furii*, &c. were at first call'd *Valgii*, *Fugii*, &c. and what we now call *ars*, *arsena*, *carmen*, *seris*, *lares*, &c. were anciently wrote *alra*, *alvna*, *calvnen*, *seria*, *lata*, &c. Add to this, that the *Latin* Nouns now terminated in *or*, as *arbor*, *labor*, &c. anciently ended in *s*, as *arbois*, *labois*, &c. In the Inflections, 'tis variously changed: Sometimes into *rs*, as *sis*, *foctis*, sometimes into *n*, as *sanguis* *sanguinis*, sometimes into *d*, as *pes* *pedis*; sometimes into *r*, as *Nepos* *Nepotis*. On the contrary, in Verbs, 'tis frequently put for other Letters, for *b*, as in *jubeo* *jussi*; for *c*, as in *parco* *parvi*; for *f*, as in *ludo* *lusi*; for *g*, as in *spargo* *sparsi*, &c. The *Latins* frequently changed the Greek *l* into *s*, as *Arctas* *Arctibis*; into *d*, as *opus* *medicum*, &c. The double *s* was frequently changed into *x*, as *arsena* *fix*; and sometimes even the single one, as *Asas* *Ajax*. The old and the new Orthography of the *French*, differ chiefly on the Use of the *s*; the latter omitting it in writing where 'tis not heard in the Pronunciation, and the former retaining it; thus the Followers of the one, particularly the Academy in their Dictionary, write *tempete*, *knistre*, *juste*; those of the other, *tempette*, *knistrer*, *juste*, &c.

The S was a Numerical Letter among the Ancients, signifying Seven; according to the Verse,

*S Vera septenus numeratus significabit.*

In Books of Navigation, &c. S. signifies *South*, S. E. *South-East*, S. W. *South-West*, S. S. E. *South-South-East*, &c. See WIND. S. A. is frequently used in Medicinal Prescription as an Abbreviation of *Somnifera Artem*, According to the Rules of Art. Sometimes it also stands for *Socius*, Fellow, Member, and sometimes for *Societas*, as R. S. S. *Regie Societatis Socius*, Fellow of the Royal Society.

SABEANS, a Sect of Idolaters, much ancienter than *Moses* and the *Jewish* Law, call'd also *Sabians*, *Sabaites*, *Zabeans*, *Tjabeans*, &c. See SABAEUM. The *Sabeans* were very numerous throughout the East. In later Times they have mix'd something of Christianity with their Superstition. They set a great Value on the Baptism of St. *John*; whence they have been also denominated *Christians* of St. *John*. Some, indeed, doubt whether the *Sabeans* be the same with the *Christians* of St. *John*; but *Father Angelo de St. Joseph*, a *Carmelite* Missionary, and *Maraci*, in his Notes on the *Meoran*, assert it expressly. Be this as it will, *Mabomet*, in his *Meoran*, and the *Arabian* Authors since him, make frequent mention of them. *Beidoloins*, in his Comment on the *Meoran*, makes them a kind of Mean between the *Christians* and the *Magicians*, who are the Followers of the *Magi*, among the *Perfians*. He adds, that they pretend to be of the Religion of *Noah*, and *Keffrus*: That they pretend to be in Possession of the Books of *Seth* and *Enoch*; though they own none of the Books of Scripture. Some charge them with worshipping the Stars, and others the Angels, or *Demons*. *Maimonides* attributes both to them; as is observ'd under the Article *Sabaism*.

*Abu Joseph Asbevi*, and *Keffrus* place the *Sabeans* about *Choran*, or *Charris*, and *Gheira* in *Mesopotamia*; which Opinion is confirm'd by this that their Books are in the *Chaldean* Tongue, tho' in a Character very different from the *Chaldean*. *Huntinger* sets aside the common Derivation of *Sabeans* from *Abis* *Militia*, *Hof*; and will not have it the Name of a Sect of Religion, but of a People in *Arabia Felix*, the Descendants of *Saba*, Grand-son of *Cham*. But the Critics, to a Man, conspire against this Opinion.

SABAISM, a Kind of Idoltry very ancient; the first that ever entered into the World. *Sabaism* consisted in the Worship and Adoration of the Stars, as the Scriptures call *שבתים* *Tjeba Schamains*, or *Saba Saba*.

*Sabaism*, *Hof* or *Militia* of the Heavens; whence kind of the Moderns have formed the Word *Sabaism* for the Worship of the heavenly Bodies, and *Sabeans* for the Worshipers. But as the *Hebrew* Word, whence these are form'd, is wrote with a *y* *Tjade*, which some express in the modern Tongues by an *s*, some by a *z*, others by *r*, and others by *to*; hence arises a great many different Manners of writing the Word, among different Authors. Some writing it *Sabeans*, others *Zabeans*, or *Zabeans*, or *Zabazis*, as *Buxtorf*; others *Tjabeans*, and others *Tjabeans*. *Maimonides* makes frequent mention of this Idolatry in his *Mora Nebulim*: 'twas very general, he observes, in the Time of *Moses*. The Retainers hereto taught, That God was the Spirit of the Sphere, that is the Soul of the World; *Abraham*, he adds, was brought up in the Doctrine of the *Sabeans*, who admitted no other Gods but the Stars, and who in their Books, many of which have been translated into *Arabic*, maintain expressly, That the fixed Stars and Planets, are inferior Gods, and the Sun and Moon the superior ones. *Abraham* at length, he tells us, opposing these Errors, first asserted the Existence of a Creator distinct from the Sun. The King of the *Chaldeans* clapt him up in Prison; but he still persisting, that France, from an Apprehension of his disturbing the State by teaching a new Religion; confiscated his Goods, and banish'd him to the Extremities of the East. This Relation, he tells us, is found in a Book intitled, *תורה ומושק*, *The Religion of the Nabathazans*. And adds further, That the *Sabeans*, to the Adoration of the Stars, joined a great Respect for Agriculture; set a great Value on Cattle and Sheep; and taught, That it was unlawful to kill them. He even adds, That they worshipp'd *Demons*, under the Form of Goats, and eat the Blood of Animals, (tho' they judg'd it unclean,) merely because they imagin'd it was the Food of *Demons*. This is an Abridgment of what that *Rabbin* gives us of *Sabaism*; from whence, 'tis easy judg'd of what some People tell us, that *Sabaism* is a Mixture of *Judaism*, *Christianity*, *Mohametanism*, and *Paganism*. The Truth is, The Worship of the Stars was established long before not only Christianity, but even before the Law of *Moses*. Indeed some of the latter *Sabeans* have given into some Articles of almost all Religions. See SABAEANS.

SABATHIANS, a Sect of Heretics thus call'd from *Sabatians*, their Leader, who lived under *Zoscelan*, was first a Jew, then converted, and made a Priest by *Marcian*; but afterwards left the Sect of *Marcionites*, on Account of the Celebration of *Easter*, which he would have on the Fourteenth Day of the Moon; whence he, and his Adherents were call'd *Quartodecimans*; Which see. The *Sabatians* are recorded by Ecclesiastical Historians, as having a great Abhorrence of the Left hand; so as to make it a Point of Religion, not to receive any Thing therewith. This Custom, which is now become a Piece of Manners among us, was then esteem'd so singular, that the *Sabatians* were thence denominated *Avileri*, *q. d. Sinistri*, left-handed.

SABBATARIANS, a Sect of Anabaptists, in the XVIIth Century; thus call'd, because they held the *Jewish* or *Saturday*-Sabbath; from a Persuasion that it was never abrogated in the New Testament by the Institution of any other. See ANABAPTIST.

SABBATH, the Seventh Day of the Week, held as a Feast among the *Jews*, in Memory of God's resting on the Seventh Day of the Creation. See WEEK. The Word is pure *Hebrew*, and signifies *Cessation* or *Rest*. *Philo* calls it, *Τὸ ἄργον γέννησον*, The World's Birth-day. 'Twas appointed from the Beginning by God himself, *Gen. ii. 2, 3.* and by him set apart for the Commemoration of the great Work of the Creation; and when it had fallen into Neglect after the Flood, was re-established by him, upon his settling the *Jewish* Polity after the Return out of *Egypt*. The *Christians* also apply it, by Extension, to the first Day of the Week, popularly call'd *Sunday*, or *Lord's-Day*; as instituted by the Apostles to take Place of the *Jewish* Sabbath, and by us observ'd in Remembrance, not of the Creation, but of the Work of Redemption, being completed by our Saviour's Resurrection on that Day. The *Jews* had also their *Sabatick*-Year, which was every Seventh Year; wherein they were oblig'd to set their Slaves at Liberty, and to let their Lands lie idle.

Those who dispute the Divine Appointment of a *Christian Sabbath*, yet allow the Moral Necessity thereof, as a wise Designation of Time for the recruiting of our Bodies, and at the same Time, keeping up a Sense of the great

Benefits we have received from God, and a spiritual Temper of Mind. By allowing Six Days to labour, the Poor hath Time to earn his Bread, and the Man of Business Time to dispatch his Affairs. Had more Time been allotted to Labour and Business, and none to Rest; our Bodies would have been too much fatigued and wasted, and our Minds too long engaged about worldly Matters, so as to have forgotten Divine Things. Greedy People, without such an Injunction, would scarce have favoured their own Bodies, much less their Servants, Slaves, Cattle, &c. The Creation therefore, would have suffered, had it not been provided for by the Institution of a *Sabbath*. See SUNDAY.

**SABBATH**, is also used for a nocturnal Assembly which are supposed to hold on *Saturdays*, where the Devil appears in Form of a Goat, around whom they make several Dances, and magick Ceremonies, amply described in their Books of *Democritiana*. To prepare themselves for this Meeting, they take certain soporific Drugs; after which they are fancied to fly up the Chimney, and to be spirited through the Air to the *Sabbath* on a Switch.

**SABBATH-days-journey**, is fixed by the Critics, to a Space of 729 English Paces and 3 Feet; or of 2000 Cubits, or 3648 Feet. See MEASURE.

**SABELLIANS**, a Sect of ancient Hereticks in the East, who reduced the Three Persons in the Trinity, to Three States or Relations; or rather reduced the whole Trinity to the One Person of the Father; making the Word and the Holy Spirit to be Virtues, Emanations, or Functions thereof. *Sabellius*, their Chief, first broached this Doctrine, in the third Century, in a City of *Lybia*, called *Protenais*. He taught, That he, who in Heaven is the Father of all Things, descended into the Virgin, became a Child, and was born of her as a *Son*; and that having accomplished the Mystery of our Salvation, he diffused himself on the Apostles, in Tongues of Fire; and was then denominated the *Holy Ghost*. *Epiphanius* tells us, That the God of the *Sabellians*, whom they called the *Father*, resembled the *Sun*, and was a mere *Substratum*; whereof the *Son* was the illuminative Virtue or Quality, and the Holy Spirit the warming Virtue. *The Word*, they taught, was darted, like a Divine Ray, to accomplish the Work of Redemption; and that, being re-ascended to Heaven, as the Ray returns to its Source, the Warmth of the Father was communicated, after a like Manner, to the Apostles. The Council of *Antioch*, held by the *Eusebians* in 345, tells us, That, at *Rome*, they were called *Patrispassians*, who, in the East, were called *Sabellians*. See PATRIPASSIAN.

**SABLE**, in Heraldry, a black Colour, in the Arms of Gentlemen; in those of Nobility, it is called *Diamond*; and in the Coats of Sovereign Princes, *Sable*. It is expressed in Engraving by Strokes drawn perpendicularly across each other, as in the adjoining Figure. The Name is borrowed from the little Animal called *Sable*, because of its black Colour.

**SABRE**, a Kind of Cutting-sword, or Cimeterre, having a very broad, heavy Blade; thick at the Back, and a little crooked towards the Point. See SWORD. The *Turks* are very expert in the Use of the *Sabre*, which is the Weapon they ordinarily wear by their Side, &c. With this, 'tis said, they'll cleave a Man quite down, at a single Stroke. The Word is formed from the *German Sabel*, of the *Silvacia Sabla Cretola*.

**SAC**, or *Sacca*, in Law, a royal Privilege which a Lord of a Manor claims to have in his Court, of holding Plea in Causes of Debate arising among his Tenants and Vassals, and of imposing and levying Fines and Amercements touching the same. *Royal* and some others, designe *Sac* to be a Forfeiture or Amercement itself, pay'd him who denies that which is proved against him, to be true, or affirms that to be true which is not so. The Word is *Sacca*, and literally signifies, Cause, Contest, &c.

**SACÆA**, in Antiquity, a Feast which the ancient *Babylonians*, and other *Oriental*s, held annually in Honour of the God *Anaitides*. The *Sacææ* were in the East what the *Saturalia* were at *Rome*, viz. a Feast for the Slaves. One of the Ceremonies hereof, was to chuse a Prisoner condemned to Death, and allow him all the Pleasures and Gratifications he would wish, e'er he were carried to Execution. See SATURNALIA.

**SACCADE**, in the Manage, a violent Check the Cavalier gives his Horse, by drawing both the Reins very suddenly; used when the Horse bears too heavy on the Hand. *The Saccade* is a kind of Correction rarely to be used; for fear of spoiling the Horse's Mouth.

**SACCHARUM**. See SUGAR.

**SACCOPHORI**, a Sect of ancient Hereticks, thus called from the *Greek*, *sakkos* a Sack, and *phoros* I bear, be-

cause they clothed themselves continually in Sackcloth, and affected a world of Austerity and Penance. We know but little of their Tenets: In all Probability they were the same with the *Massilians*; Which see. The Emperor *Theodosius*, made a Law against the *Saccophori* and *Manichees*.

**SACCO BENEDITTO**, or *Sac-beni*, a Kind of linnen Garment given to Persons condemned by the Inquisition, to be wore at their Execution. 'Tis in Form of a Scapulary, of a yellow Colour, with two Crosses on it; and painted over with Devils and Flames. The *Latins* call it *Habitillo*, and the *Spaniards*, *Scrivenito*, and *Zamarreta*. 'Twas likewise in Use for public Penitents in the primitive Church, and called also *Sannara*, *Sus benito*, &c.

**SACCULUS**, a Diminutive of *Saccus*, a Bag; used in Anatomy, to express several Parts of the Body, bearing some Resemblance thereto; as *Sacculus Cystiferus*, or *Rosiferus*, a Passage which makes the beginning of the *Theoracic Duct*. See THORAX.

**SACCULUS Coriis**, the *Pericardium*. Which see.  
**SACCULUS Lacrymalis**, a little membranous Bag, into which the *Puncta Lacrymalis* of the Eye open; and which is, itself, the Entrance of a Canal, by which the Liquor separated in the *Glandula Lacrymalis*, is discharged into the Cavity of the Nose. 'Tis the Ulceration of this *Sacculus*, that makes the *Fistula Lacrymalis*. See FISTULA.

**SACCULI Adiposi**, little Cells or Vesicles, in the *Membrana adiposa*, wherein the Fat of the Body is contained. See FAT.

**SACCULUS Medicinalis**, a topical Medicine, applied to some painful Part; consisting of Herbs or Drugs inclosed in a Linnen Bag.

**SACCULI Medicinales**, are also Bags of Ingredients, infused in Liqueurs, in making Diet drinks.

**SACER**, in Anatomy, a Muscle arising from the Hind-Part of the *Os Sacrum*, and running along under the *Longissimus Dorsi*. With its several Tendons, it lays hold on the Spine, and every Transverse Process of the Loins, and the lowest of the Back. It assists in erecting the Trunk. See MUSCLE.

SACER *Levis*, } See HERPES ERECTUS,  
SACER *Mirbus*, } { EPILEPSY.

**SACERDOTAL**, something belonging to the Priesthood. See PRIEST. *Sacerdotal* Benefices are such as can't be legally held by any but Persons in Holy Orders: such are all Cures of Souls, Bishopricks, &c. *The sacerdotal* Ornaments, are those wherewith the Priests are clothed, when they officiate, &c. The Word is formed from the *Latin*, *Sacerdos* Priest, of *Sacer* Holy.

**SACK OF WOOL**, is a determinate Quantity, containing just 26 Stone, and every Stone is 14 Pounds, by 14 E. 3. Stat. 1. c. 2. But in *Scotland*, a *Sack* is 24 Stone, and each Stone contains 16 Pounds. A *Sack of Cotton Wool*, is a Quantity from an hundred and half to 400 Weight. See WOOL.

**SACKS of Earth**, used in Fortification, are large Bags full of Earth, made of coarse Cloth, the largest of about a Cubick-foot wide, and the lesser somewhat more than half a Foot. They are used on several Occasions; particularly for making Retrenchments in haste, to place on Parapets, or the Head of the Breaches, &c. or to repair them when beaten down. They are of good Use also, when the Ground is rocky, and affords no Earth to carry on the Approaches, because they can easily be brought on, and carried off; the same Bags, on Occasion, are used to carry Powder in, of which, they hold about Fifty Pounds a piece.

**SACKBUT**, a musical Instrument of the Wind Kind; being a kind of Trumpet, tho' different from the common Trumpet both in Form and Size. 'Tis very fit to play *Bass*, and is contrived so as to be drawn out or shorten'd according to the Gravity or Acuteness of the Tones. The *Italians* call it *Trombone*, the *Latins*, *Tuba Distincta*. It takes a slender into Four Pieces, or Branches; and hat's frequently a Wreath in the middle; which is the same Tube, only twisted twice, or making two Circles in the middle of the Instrument; by which Means, it is brought down one fourth lower than its natural Tone. It has also two Pieces or Branches on the Inside, which don't appear, except when drawn out by means of an Iron Bar, and which, lengthen it to the Degree requisite to hit the Tune required. The *Sackbut* is usually Eight Foot long, without being drawn out, or without reckoning the Circles. When extended to its full Length, 'tis usually Fifteen Foot. The Wreath is Two Foot Nine Inches in Circumference. It serves as *Bass* in all Concerts of Wind Music.

There are *Sackbuts* of different Sizes, serving to execute different Parts; particularly a small one, called by the *Italians*, *Trombone piccolo*, and the *Germans*, *Cleins alt*.

*alt-pofume*, proper for a Counter-Tenor. The Part assigned it, is usually called *Trombone primo*, or 1°. There is another larger, called *Trombone maggiore*, which may serve as a Tenor: Its Part is usually called *Trombone fecundo*, or 11°, or 2°. There is a third still bigger, called *Trombone greffo*; its Part is called *Trombone terzo*, or 111°, or 3°. Lastly, there is another which exceeds all the rest, and which is much heard in the Music, especially in the Bass; its Part is called *Trombone quarto*, or 1V°, or 4°. or simply *Trombone*. It has usually the Key of *F*, as *fa* on the fourth Line; tho' frequently also on the fifth Line from the Top, by Reason of the Gravity or Depth of the Sounds.

**SACRAMENT**, in Theology, is defined, in the general, A Sign of a holy or sacred Thing. In which Sense, the Word includes both the Sacraments of the Law of Nature, as sound Morality, the Manner of offering the Bread and Wine practised by *Melchisedech*, &c. and those of the Law of *Moses*, as the *Circumcision*, the *Pafchal Lamb*, *Purifications*, *Order of Priesthood*, &c. But with Regard to the Christian Church **Sacrament** is defined, A visible Sign of a spiritual Grace annexed to the Use thereof. There are Two Objects in a *Sacrament*; the one a material Sign, the Object of the Senses; the other the Thing signified, which is the Object of Faith. Thus it has pleased God to give a Body or Substance to spiritual Myfteries, that our Faith might have the Assistance of sensible Signs. The *Roman Catholics* own Seven *Sacraments*, viz. *Baptism*, *Confirmation*, the *Eucharist*, *Penance*, *Extreme Unction*, *Ordination* and *Marriage*. See each under its proper Article. The *Protestants* admit of only Two, viz. *Baptism* and the *Eucharist*.

The *Romanists*, however, call the *Eucharist*, by way of Eminence, *H. Sacrament*, the *Holy Sacrament*. Thus to expose the *H. Sacrament*, is to lay a consecrated Host on the Altar to be adored. The Procession of the *H. Sacrament*, that wherein 'tis carried about the Church, or the Town. See *PROCESSION*. The *Fest of the H. Sacrament*; the *Congregation of the Sacrament*, &c.

The Word is formed from the *Latin*, *Sacramentum*, which signified an *Oath*, particularly that which the Soldiers took to be true to their Commanders. The Words whereof, according to *Polibius*, were, *Obtemperaturus sum & fallurus quicquid mandabitur ab Imperatoribus, iuxta Vires*.

**SACRAMENT**, was also used in the *Roman Law*, for a Pledge or Gage of Money, which both the Plaintiff and Defendant, in any real Action, laid down in Court, to be forfeited by him who should lose the Cause.

**SACRAMENTARIANS**, a general Name given to all such as have published, or held erroneous Doctrines of the Sacrament of the Supper. The Term is chiefly applied by the *Roman Catholics*, by Way of Reproach, to the *Lutherans*, *Calvinists*, and other *Protestants*.—*Sacramentarius*, was an ancient Church-Book, comprehending all the Prayers and Ceremonies practised at the Celebration of the Sacrament. Pope *Gelasius* was the first Author of the *Sacramentarius*. It was afterwards revised, corrected and abridged by *Sz. Gregory*. It was the same with what the *Greeks* now call *Euchology*; Which see.

**SACRED**, something *holy*, or that is solemnly offered, and consecrated to God with Ceremonies, Benedictions, Unctions, &c. See *CONSECRATION*. Kings, Prelates, and Priests are held *sacred Persons*, Abbots are only *bleffed*. The Deaconhood, Sub deaconhood, and Priesthood, are *sacred Orders*, and impress a *sacred*, indelible Character. The Custom of consecrating Kings with Holy Oil, is derived, according to *Gubingius*, from the *Hebrews*; among whom, he agrees with *Grotius*, it was never used but to Kings who had not an evident Right by Succession. He adds, That the Christian Emperors never used it before *Justin* the younger; from whom he takes it to have passed to the *Goths*, &c.

**SACRED**, is also applied to Things belonging to God and the Church; Church Lands, Ornaments, &c. are held *sacred*.—The *Sacred College* is that of the Cardinals. See *CARDINAL*. *Sacred Majesty*, is applied to the Emperor and the King of *England*; yet *Louisy* says 'tis *Blasphemy*.

The Ancients held a Place struck with a Thunder-bolt, as a *sacred Thing*. In the Civil-Law, a *Sacred Place* is that, where a Person deceased, has been interr'd.

**SACRIFICE**, an Offering made to God on an Altar, by Means of a regular Minister, as an Acknowledgement of his Power, and a Payment of Homage. *Sacrifices* differ from mere *Oblations*, in that in a *Sacrifice* there is a real Destruction or Change of the Thing offered; whereas an *Oblation* is only a simple Offering or Gift, without any such Change at all. See *OBELATION*. Divines divide *Sacrifices* into *Bloody*, such as those of the Old Law; and *Bloodless*, such as those of the New Law. They divide them again into *Imperatory*, which are those offered, to obtain some Favour of God, or to thank

him for some already received; and *Propitiatory*, which are those offered to obtain Forgiveness of Sins.

The *Phenicians* are usually held the first Authors of *Sacrifices*. *Porphyry*, indeed, attributes the Invention to the *Egyptians*; who, he says, first offered the First Fruits of their Grounds, to the Gods; burning them upon an Altar of Turfe. At length they came to burn Perfumes, and at last sacrificed Animals; observing that they first eat some Herbs, or Fruits, regularly offered on the Altars. He adds, that *Liberians* were very frequent 'er *Sacrifices* of Beasts got Footing. See *LIBERATION*. *Ovid* observes, That the very Names *Victim* and *Hostia* import, that they were not slain, till such Time as Victories were obtained over Enemies. Indeed, while Men lived on Herbs and Pulse, 'tis no Wonder they abstained from *Sacrifices* of Beasts; since the Law of *Sacrifices* required, that they eat some Part thereof. In Effect, 'tis supposed to be this that first introduced Flesh as a Food, and made Man a carnivorous Animal. See *CARNIVOROUS*. The Truth is, in all Antiquity, both sacred and profane, *Sacrifices* were ordinarily nothing else but Holy Banquets.

The Scriptures furnish us with a somewhat different Account. *Noah* certainly sacrificed Animals at his coming out of the Ark, and 'tis even suggested, that *Abel* himself sacrificed the best and fattest of his Flocks: But *Grotius* thinks, 'tis much more probable, he contented himself with making a mere *Oblation* of his Lambs, &c. to God without sacrificing them.

*Macrobius* tells us, That the *Egyptians*, long accustomed to bloodless *Sacrifices*, being at length obliged to admit the Worship of *Serapis* and *Sarapis*, to whom *Vitilins* were to be sacrificed; would not allow their Temples to be built in the Cities. These *Vitilins*, however, or *Bloody Sacrifices*, at length obtained, in Exclusion of almost all the rest. The most usual *Vitilins* among the Ancients, were Bulls, Oxen, Cows, Sheep and Lambs, in regard these were the most ordinary Food of Man.

The Manner of *Sacrificing* among the ancient *Hebrews*, is amply described in the Books of *Moses*. That in Use among the *Romans*, is as follows: In the Choice of the *Vitilins*, Care was taken it were without Blemish or Imperfection, his Tail not too small at the End; the Tongue not black, nor Ears cleft, and the Bulls such as had never been yoked. The *Vitilim* pitched upon, they gilt his Forehead and Horns, especially if a Bull, Heifer, or Cow. The Head they also adorned with a wollen *Isfals*, whence hung two Rows of *Chaplets* with twisted Ribbons; and in the middle of the Body a kind of *Stole*, pretty large, hung down on both Sides: The left *Vitilins* were only adorned with Bundles of Flowers and Garlands, together with white Tufts or Garlands. The *Vitilins* thus made ready, were brought before the Altar; the lesser were not led in a String, but driven to the Place; the greater were conducted in an Halter; if they made any Struggle, or refused to go, the Resistance was taken for an ill Augury, and the *Sacrifice* set aside. The *Vitilim* thus brought before the Altar, was examined very circumspically, to see if there were no Defect in it. Then the Priest, being clad in his sacerdotal Habit, and accompanied with the Sacrificers and other Attendants, and being washed and purified according to the Ceremonies prescribed, began the *Sacrifice*, with making a loud Confession of his Unworthiness, acknowledging himself guilty of divers Sins; for which he begged Pardon of the Gods, hoping they would be pleased to grant his Requests.

These Confessions were like those of the *Hebrews*; with this Difference, that the *Pagans* confess'd the Frailty of Mankind, and owned their Faults; the *Jews* confessed chiefly the Greatness of God, accompanying it with Hymns and musical Instruments. The Confession over, the Priest cry'd aloud, *Compote your selves, and mind your Sacrifice*; and presently an Usher, holding a Rod in his Hand, called *Comastantianum*, went through the Temple, and made all those withdraw, who were not instructed in the Myfteries of Religion, or such as were excommunicated. The Custom of the *Greeks*, from whom the *Romans* borrowed theirs, was, That the Priest coming to the Altar, should ask aloud *Tis tis est? Who is here?* The People answer'd, *Παλαις εσθιεντις*. Many good Persons: Then the Usher went through the Temple, crying, *Εσθι, εσθι, εσθι εσθιεντις*; that is, Away with the Wicked. The *Romans* commonly used the Words, *Nocentes, Profani abscidite*. All those who were driven out of the Temples among the *Greeks*, were comprehended under these general Words, *εσθιεντις, αμωτοις, εσθιεντις*. The *Prophane* withdrawn, they cry'd, *Favere linguam, or animis, and Pafcite linguam*, to require Silence, and Attention during the *Sacrifice*. These Ceremonies ended, the chief Sacrificer being set down, and the rest of them standing, the Magistrates or private Persons, who offered *Sacrifices*, came before him, and presented him with the First Fruits and
