HOUSING UNITS IN NEVADA: 1940
Revieed Figureo

#### Abstract

(Thie releeee includee three new itens not presented in the prelininary release of September 9, namely, the number of vacant unite for esle or rent, the number of units in urban and rural oreee, and e comparieon of the number of dwelling unite returned in 1940 with the number of familiee in 1930. The revieed count of all dwelling unite in the State ie elightly lese than the preliminary field count- 36,773 , ee compared with 36,805 .)

#### Abstract

Director William Lane Austin, of the Bureau of the Census, Department of Commerce, today releaoed figuree representing tbe reviced count of dwelling unite in Nevada from the Houeing Census.

Of the 36,773 dwelling unitein Nevade on April1, 1940, 2,613, or 7.1 percent, were vacant and for sale or rent (these representing the comercielly aignificant vecanciee), while 33,294 dwelling unite were occupied by householde enumerated in the Fonuletion Coneus et their ueval place of reoidence. The remeining group of 866 unite (repreennting roughly the remaindar of the units ehown ae vacant in the preliminary releaee) was zode up for the moet part of vacant unite being held for absent householde, though it included elso e few unite temporarily occupied by nonresident houscholds, that ie, by houeeholde which reporzed that tbeir hasee were located elsewhere. Seaeonal oe well as ordinary dwelling unite are included in all or these ifgures.

Of the totel number of dwelling unite in Nevada, 37.8 percont were loceted in urban pleces, that 18, in incorgorated places having 2,500 inhabitante or more; and 62.2 percent were in rural ereas, that ie, in the open country or in placee having lese than 2,500 inhabitente. Only 4.0 percent of the urban dwelling unite were vacsint and for sale or rent, ee compered with 9.0 percent of the dwelling unite in rural oread.

Dwelling unite vacsnt end for eale or rent forned 5.0 percent of ell dwelling units in Renc and 2.6 percent in Lae Vegae.

The number of occupied dwelling units represents opproximately the number of private householde in the respectiva areas and may be compared roughly with the number of private familiee shom in the census reports for 1930, the increase being spproximately 30.7 percent. Thie increase ie coneiderably more than the 21.1 percent increase shown in population between 1930 and 1940, which ie consistent with the general trend throughout the country tovarde sualler everage eize of fanily or household. Ths average number of pereons in the population per occupied dwelling unit in 1940 nae 3.31 for the State eo compared with an average population per fenily of 3.58 in 1930.

Corresponding data for countiee and incorporated placee of 2,500 inhabitante or more ore given in the following table, which shows also the population of the varioue area. These population rigures repreeent mainly the members of the houeeholds living in the dwelling unite reported ae occupied, though they include aleo pereons reported as reeldente of thise conmunity who were enumeroted eleerhere and persone in institutione, hotels, and camps, which wero not covered by the Houeing Censue. Similar onnouncemente are being made for other Statee as the figures becane availeble. While the data herewith presented are practically final, they are subject to poeelble slight further change.

* Hainly vacant dwelling unite held for absent houeeholds, together with a few dvelling unite occupied by nonresident households.
(Thie release includes three new iteme not presented in the preliminary releae of Soptamber io, namely, the number of vacant unite for sale or rent, the number of unite in urban and rural areae, and the mumer of unite in the city of wilmington by warde. The revieed oount of all dwolling unito in the stabe is olightiy pore than the proliminary field eount75,598 , ee oompared vith 75,574 .)

Director Willism Lane Auatin, of the Bureau of the Ceneus, Department of Commerce, today roloased figuree repreenting the revised count of dwalling unite in Delaware from the Houaing censue.
of the 75,598 dwelling unite in Delaware on April $1,1940,3,25 S$ or 4.3 percent, were vacant and for sale or rent (theee repreeenting the comeroialiy elgnificant vacanciea), while 70,572 dwelifng unite were occupied by houeeholde onumerated in the Fopulation Coneue et thoir usual place of reeldence. The rameining group of 1,773 unite (repreoenting roughly the remainder of the unite ohowa as vacant in the preliminary relosoe) wa made up for the moot part of vacant unite belng held for abeent householde, though it included aleo a rew unito temporarily occupied by nonreeldent householde, that ie, by houeeholde which roported that their homes wore located eleewhere, Beasonal ac woll ao ordinary dwelling units are included in all of theee figuree.
of the total number of dwelling unite in Delaware, 50.5 percent were located in urban places, that is, in inoorporated placoe having 2,500 Inhabitante or more; and 49,5 percent wore in rurai areas, that 16, in the open country or . In placee having leee than 2,500 inhabi tante. only 2.7 percent of the urban dwolling unite ware vecant and for sele or rent, de compared with 6.0 peroent of the rural dwelling unite.

Dwelling unite racant and for eale or rent formed 2.6 percent of all dwolling unite in Wileington and 4.2 peraent in Dover.

The number of oocupied dwelling unite repreeente approzimately the number of privato householde in the reopeotive arene and therefore may be oompared roughly with the number of private familiee showm in the Coneus Reporte for 1930. Such a comparison reveale that the number of private houeeholde Inoreaeed approximatoly 19,4 percent, as cantrasted with an 11.8 percent incresee in population between 1930 and 1940. Hence, the average size of the private household in Delaware has cecreaped oinoe 1930, whioh ie coneletent with the general trend throughout the country toverde analler average eize of famfly or household. The average number of pereone in the population por ocoupied dwolling unit in 1940 wee 3.78 for the $s t a t e$, de compered with an arerage population por family of 4.03 1n 1930.

Houeing and population data for oountiea and incorporated plases or 2,500 Inhabitante or more are given in Table 1 . Theee population figurse represent meiniy the membere of the householde living in the diguree represent mainly the unite reported ae "ocoupied, though they also include reeidente of these areas who ware living in institutione, hotele, campe, and other typee of dwellinge not covared by the Housing censue. ©iso and other typee or dwellinge not covered by the Housing censue. aso included in theee population 1 guree are a few pereons reported so
reeldente of the arese vho were enumerated eleewhere. Data by roeldente of theee areae who were enumerated eleewhere. Data by wardo are proeented in Table
100,000 inhabitante or more.

Similar announoemente are being made for othor statee ae the figurea become available. The data herewith preeented may be ohanged olightly when the finel figuree are compiled.

${ }^{1}$ Hainly vacant dwelling unite held for absent houesholde, together with a few dwelling unite occupied by nonreeident housaholde.

TABLES 2. OCCUPIED AND VACANT DNELLIMG UNITE IN WIINTINOTON, BY WARDS: 1940

${ }_{1}$ Mainly vacent dwelling unite held for absent houeeholde, together with a few dwelling unite ocoupiod by nonresident houesholde.

(This release includes thrss now items not presented in the proliminary release of Ootober 25 , namely, the number of vacent units for sale or rent, the number of units in urban and fural arsas, and a comparieon of the number of dwelling unite returned in 1940 With the number of femilies in i930. The revised count of all dwelling units in the state is olightiy more than the preliminary field oount--106,400, as ocmpared with $106,390$. )

Direotor William Lane Austin, of the Bureau of the Census, Department of Oommerce, today released figuree representing the revised count of dwelling units in Vermont from the Housing Census.

Of the 108,400 dwelling unite in Vermont on April 1 , 1940, 7,749 or 7.3 percent, were veant and for sale or rent (theee reproeenting the oommeroially signifioant vacencies), while 92,432 dwelling units were oocupied by housoholds emumerated in the Population Census at their usual place of reeldence. The remaining group of 6,219 unite (representing roughly the remainder of the units shown as vacant in the preliminary release) wae made up for the moet part of vacant unite being held for absent houeeholds, though it induded also a few unite temporarily oooupied by nonresident households, that ie, by households whioh reported that their homes were located eleewhere. Seasonal as well as ordinary dwelling units are included in all of these figuras.
or the total number of dwelling units in Vermont, 31.7 peroent were loaated in urban places, that is, in incorporated places having 2,500 inhabitants or more; and 68.3 peroent were in rural areas, that is, in the open country or in places having lese than 2,500 inhebitants. Only 3.2 percent of the urban dwelling units were vacant and for sale or rent, as compared with 9.2 percent of the rural dwelling unite.

Dwelling units vacant and for sale or rent formed 4.0 percent of all dwelling unita in Burlington and 1.3 percent in Montpelier.

The number of oooupied dwelling units represents approximetely ths number of private households in the respecm tive areas and therefore may be oompared roughly with ths number of private femiliee show in the Census Reporte for 1930. Suoh a comparison reveale that the zumber of private households inoreased approximately 3.6 peroent, as oontrasted with the 0.1 paroent decrease shown in population bstween 1930 and 1940. Hence, the average s1zs of the private hous hold in Vormont is decraasing, whioh is oonsistent with the general trend throughout the country towards smaller average size of family or housohold. The average number of pereons in the population per oooupied dwelling unit in 1940 was 3.89 for the Stato $a e$ compared with an average population per family of 4.03 in 1930 .

Housing and population data for counties and urban places of 2,500 inhabitants or more are given in the following table. Theee population figuree represent mainly the membere of the houeeholds living in the dwelling units reported as ocoupied, though they also include residents of these areas who were living in institutions, hotels, oamps, and other types of dwellings not oovored by the Housing Consus. Also inaluded in these population riguree are a fow persons reported as reaidents of theee areae who were enumerated elsewhere.

Similar announcoments are being made for other States as the figures become available. The data herewith presented mey be ohanged elightly when the final figures are compiled.

HOUSING UNITS IN NEW HAMPSHIREY 1940

## ROvised Pigures

(This release includes three new items not presented in the preliminary release of october 18 , namely, the number of vacant units for sale or rent, the number of unite in urban and rural areae, and a comperison or the number of dwelling units returned in 1940 with the number of families in 1930 . The revieed count of ell dwelling units in the State is slightly more than the preliminery field count--158,165, as compared with $158,008$. )

Director Villiam Lane Austin, of the Bureau of the Census, Dspartment of Commerce, todey released figuree repreeenting the revised count of dwelling units in New Hampshire from the Housing Census.
of the 158,165 dwelling units in New Hamphire on April 1 , 1940, 12,511 , or 7.9 percsnt, were vacant and for sale or rent (these representing the commeroially olgnificant vacancies), while 133,010 dwelling unite were occupled by householde enumerated in the Population consus at their usual place of rseidence. The remaining group of 12,644 unite (representing roughly the remainder of the unite ehown as vacent in the preliminary release) was made up for the moot part or vacant units being held for abeent householde, though it included aleo a rew units temporarily occupiod by nonresident households, that is, by houeeholds which reported that thelr homee were located elsewhere. Seaeonal as well as ordinary dwelling units are included in all of these figures.
of the total number of dwelling units in New Hampshire, 50.2 percent were located in urban places, that is, in incorporated pleces having 2,500 inhebitante or more, or in towns classirled as urban under speciel rule; and 49.8 percent were in rural erees, that ie, in the open country or in places having less than 2,500 inhabitants. only 3.9 percent or the urban dwelling unite were vacant and for sale or rent, as compared with 11.9 percent or the rural dwelling units,

Dwelling untts vacent and for sale or rent formed 4.6 percent of all dwelling units in Manchester and 1.1 peroent in Berlin.

The number of occupied dwelling unite represents approximately the number of private households in the respective arses and therefore may be compared roughly with the number of private familes shown in the Cencue Reporte for 1930. Such a comparieon reveale that the number of private households increased approzimately 11.5 percent, as contrested with a 5.6 percent increase shown in population between 1930 and 1940. Hence, the average size of the privete household in New Hampspire has decreased since 1930, which is consistent with the general trend throughout the country towards smaller average size of ramily or household. The average number or persons in the population per occupied dwolling unit in 1940 was 3.70 for the State ae compared with on everage population per ramlly or 3.00 in 1930.

Housing and population data for countiee and urban places of 2,500 inhabitants or more are given in the following teble. These population figures represent malnly the membere of the households living in the dwelling units reported as occupied, though they also include residents of these areas who were living in institutions, hotels, camps, and other types of dwellings not covered by the Housing census. Also inoluded in these population figuree are a rew persons reported as reeldents or these areas who were enumerated elsewhere.

Similar announcements are being made for other Statea as the rigures become avallable. The data herewlth presented may be changed elightly when the flnal ifgures are compiled.

1 Vainly vacant dwolling units held for absont houssholds, together with a few dwalling units occupied by nonresident households.

* The figures for dwelling unite for Hillsborough County represent a revision of those givsn in releass dated November 9 , 1940 .
(Whis releae includes three new itene not presented in the preliminary release of Soptember 9 , namely, the mumber of vacent units for aale or rent, the number of unite in urban and rural areas, and tha number of unita in the city or Providence by warde. The reviesd oount of all dwelling unite in the State is slightly lees then the prelifinary fleld count203,590 , eo compared with 203,761 .)

Director Wllliam Lane Austin, of the Bureau of the Ceneue, Depertnont of Commarce, today roleaeed flguree represanting the revieed count of dwalling unite in Fhode Island from the Housing censue.
or the 203,590 dwelling units in Rhode Ieland on April 1, 1940, 9,890 , or 4.9 peccent, were vaoant and for eele or rent theee representing the comerciaily of gnificant vacaneiee), while 187,795 awalling unite were occupied by householde snumerated in the population consul at their usuel place of reoidonce. The ramining group of 5,905 units (rapreeenting roughly the renainder of the unite shown as
vacant in the preliminary relasse) was made up for the moet part of racant units being held for absent houeeholds, though it included also a few unite temporarily occupied by nonreeldent houeeholde, that is, by houeeholde wich reported that their homes wore located olsewhere. Soasonal ae well ae ordinary dwelling units are included in all of theen IIguree.
of the total number of dwelling unito in Phode Ioland, 89.0 percont were loasted in urban placee, that 1s, in incorporoted placee having 2,500 inhabitante or more, or in towno claesified ae urban undor opecial rule; and 11.0 percent were in rurel areas, that is, in the open country or in placee having lese than 2,500 inhebitants. Only 3.8 percent of the urban divelling unite were vacant and for sale or rent, as compared with 13.3 percant of the zural dwelling unite.

Dwelling unite vecent and for eale or rent formed 3.1 percent of all dwalling unite in Providence and 14.0 percent in tarwiok.

The number of occupied dwelling units represente approximately the number of privats houeeholds in the rsapsotive area and therefore may be compared roughly with the numbsr of privete fanlifee shown in the Cansue Raporte for 1930. Such a comparieon reveals that the number of private houesholde inoreesed approximately 13.6 percent, ae contrasted with ths 3.8 percent increase shown in population betweon 1930 and 1940. Hence, the averege olze of the private houeehold in Rhodo Ialand hae cocreeeod oine 1930 , which is consistent with the general trond throughout the country towerds smeller average olze of fendly or household. The average mueber of persone in the population per ocoupied dwolling unlt in 1940 was 3,80 for the State ae compared with an average population per fanily of 4.16 in 1930 .

Houefing and population data for counties and urban places of 2,500 inhabitente or more ars given in Table l. Theee population figures represent mainly the membera of the householde living in the dweling unite reported as "oocupied," though they al ao include reaidente of these area who were $11 \overline{\mathrm{v}} \mathrm{ng}$ in inatitutions, hotsis, campe, and other types of dwellinge not oovered by the Youeing censue. Aleo included in thes population figaree are a few persone reported as residents of theee areas who were emumerited eleewtere. Data by wards are prepented in Table 2 for Providence, the only city liaving 100,000 inhabitants or more. Deta by eitiee or towne are preeented in Table 3.

Similer announcementa are baing mads for other states as the figuree become available. The data herewith presented may be changed slighty when the f1nal figures ore complled.

[^4]HOUSING UNITS IN WYOMING: 1940

## Revised Figures

(This release includes three new items not presented in the preliminary releaee of September 23, namely, the number of vacant units for sale or rent, the number of units in urban and rural areas, and a comparison of the number of dwelling unite returned in 1940 with the number of families in 1930. The revieed count of all dwelling units in the State is slightiy more than the preliminary field count--76,855, as compared with 76,689.)

Director William Lane Auetin, of the Bureau of the Consus, Department of Commerce, today released figures representing the revised count of dwelling unite in Wyoming from the Housing Census.
of the 76,855 dwelling units in Wyoming on April 1 , $1940,5,850$, or 7.6 percent, were vacant and for sale or rent (these representing the commercially significant vacancies), while 69,357 dwelling units were oocupied by houeeholds enumerated in the Population Ceneue at their ueual place of residence. The remaining group of 1,648 units (representing roughly the remainder of the units shown as vacant in the preliminary release) was made up for the most part of vacant units being held for absent households, though it included also a few units temporarily occupied by nonreeldent households, that ie, by households which reported that their homes were located elsewhere. Seaeonal ae well ae ordinary dwelling units are included in all of theee figures.

Of the total number of dwelling unite in Wyoming, 37.8 percent were located in urban places, that is, in incorporated places having 2,500 inhabitante or more; and 62.2 percent were in rural areae, that 1s, in the open country or in places having lees than 2,500 in"abitants. Only 5.4 percent of the urban dwelling 'ts were vacant and for sale or rent, ae compared ih 9.0 percent of the rural dwelling units.
Dwelling units vacant and for sele or rent formed 9.8 percent of all dwelling units in Caeper and 5.1 percent in Cheyenne.

The number of occupied dwelling unite represents approximately the number of private households in the reepective areas and may be compared roughly with the number of private families shown in the Census Reports for 1930. Such a comparison reveale that the number of private households inoreased approximately 21.9 percent, as contraeted with the 11.2 percent increase shown in population between 1930 and 1940. Hence, the average eize or the private household in Wyoming has decreased eince 1930. This ie consietent with the general trend throughout the country towarde amaller average size or family or household. The average number of persons per occupied dwelling unit in 1940 was 3.62 for the State as compared with an average population per family of 3.97 in 1930.

Housing and population data for counties and incorporated places of 2,500 inhabitants or more are given in the following table. The population figures represent mainly the members of the households living in the dwelling unite reported ae occupied, though they include also persons reported as residents of these areae who were living in institutions, hotels, camps, and other types of dwellings not covered by the Housing Censue. Also included in the population figures are a few persons reported as residents of these areas who were enumerated. eleewhere.

Similar announcements are being made for other States as the iguree become available. The data herewith presented may be changed slightly when the final figures are compiled.

OCCUPIED AND VACNWI DAELLING UNITS IN WYOWING: 1940

[^5](This releess includeo three nsw itema not presented in the preliminary releese of ootober 8 , namely, the pumber of racant units for sale or rent, the mubor of unite in urben and rural ereas, and the number of units in Balt Lake city by wards. The revised count of sll dwelling units in the State is slightly laee than the preliminary field oount--147,304, es oompered with $147,317$. )

Director William Lane Auetin, of the Bureou of the Caneus, Depertment of Comerce, today releesed figures ropresenting the revieed count of dwelling units in Utah from the Houelng Census.

Of the 147,304 dwelling units in Utah on April 2, 1940, 5,808 or 3.9 percent, were vecant and for eele or rent fthsse representing the commerdelly elgnificant vacanoies), while 139,496 dwolling units vere oocupisd by boueeholde equmeroted in the Populetion Censue et their ueual plece of residence. The remeining group of 2,000 units (representing roughly the remainder of the units ehown es vaont in the preifmingry relesse) wae made up for the most part of vacent units being held for ebsent households, though it inoluded nioo o fow unite tam porerily ocoupied by nonresident householde, thet ie, by houeeholds porerily ocoupied by nonresident householde, that ie, by houeeholds well as ordinery dwelling units ere inoluded in all of these flgures.
of the total number of dwelling units in Utah, 57.9 peroent were looeted in urban pleces, that is, in incorporetod pleoes having 2,500 inhabitente or more; and 42.1 percent were in rural areee, that 10 , In ths open ocuntry or in plooes hoving loes then 2,500 inhabitante. Only 3.6 percont of the urban dwolling units were vecant and for sale or rent, es oompared with 4.4 porcont of the rural dwelling units.

Dwelling units vaoant and for anie or rent formed 3.8 percent or all dwelling units in gelt Lake City and 3.5 percent in Ogden.

The number of ocoupied dwalling units rapresente epproximately the number of private bouseholds in the reapective arsas and thererore may be compared roughly with the number of private families shown in the Census Reports for 1930. Such a comparison reveels thet the mumber of private houesholde increeoed approximately 20.3 percent, as contraetad with the 8.t percent inereese ohom in populetion betweon
1930 and 1940 . Healoe, the averege size of the private household in 1930 and 1940 . Homoe, the averege size of the private household in Utah has deorsessd since 1930, whioh is coneietent with the general trend throughout the country towards smaller average size of family or houeehold. The everazs number of pereons in the populetion per oooupled dwelling unit in 1940 was 3.94 for the 3 tate es compered with en sverage populetion par family of 4,38 in 1930.

Houeing and populstion dete for oountiee and incorporetsd pleces of 2,500 inhabitants or more are given in Teble 1. Ths population ligure rapreaent mainly the mombers of the households inving in the dwelling unite reportad es ocoupied, though thay elso inolude residents of these erees who were living in institutions, hotsle, cenps, end othsr types of dwellings not oovered by the Housing Consus. N100 inoluded in these populetion fisures ard fow pereons roported as rasidents of these ereee who were orumereted elsevhere. Deta by warde ore preesnted in Table 2 for Selt Lake Gity, the only oity having 100,000 inhabitents or more.

Bimilar announcemente ore belng made for other States es the ilguree become eveileble. The deta herewith preesnted may be changed silghtly when the IInal figures ore complled.

${ }^{2}$ Hainiy vacant drelling undte hald for sbaent boursholde, together nith a fow drelling unite ocoupled by nonrealdent householde,

TABLE 2. OCCUPLD AND VICAKT DNELLDNO UITS DI SALT LNEE CIIT, BY WHOO: 2940

${ }^{1}$ yainly vacant dwolling unite held for absent householde, togothar with a $f$ ow dwalling undte occupied by nonresident houssholde. vecant units for sale or rent, the number or unfts in urban and rural areas, and a comparison of the number of dwsiling units returned in 1940 with the mumber of families in 1930 . The revised count of eli dweling units in the 3 tate is slightly more than the preliminary field countr-179,732, es compered with 179,134, )

Director William Lane Austin, of the Bureau of the Censue, Departmont of Comerco, todey relsosed figures representing the revisod oount of dwelling units in South Dakota from-the Housing Consus.
of the 179,732 dwolling units in South Dakota on April 1, 1940, 18,347 or 6.9 psroent were vacent and for sale or rent (these representing the oormercially significant vaoancies), wile 165,430 dwelling units were ocoupied by households enumeroted in the Population Censue at their usual plece or residence. The remaining group of 1,955 units (representing roughly the remainder of the units shown as vacent in the prelininary release) was made up for the moet pert of vacant units being hald for abeent householde, though it insluded also a few units temporerily occupied by nonrssident households, that 1s, by houasholds fhioh roported that thsir homes wors loosted eleswhore. Bsasonal os well as ordinery dwelling unite ere inoluded in ell of these figures.

Of the total number of dwolling units in South Dakote, 25.2 percont wors loceted in urban pleces, that is, in inoorporated places having 2,500 inhabitants or more; and 74.8 percent wore in rural areas, that is, in the open country or in places having lees than 2,500 inhabitanto. Only 3,4 psrcent of the urban dwalling unita were recant end for able or rent, es compared with 8.0 percent of the rurel dwelling unita.

Vwalling units racant and for sale or rent formed 2.4 peroent or all dwelling units in Siour Falls and 6.9 percent in Yankton.

The number of ocoupied dwelling unite repressints approximately the number of private households in the respeotive areas and may be oompered roughiy with the nuwber of private families shown in tho Cenaus deports for 1930. Such a oomparison reveals that the number of privete houssholde inoreased approimately 2.7 percent, ae oontreated with a lose of 7.2 percent in popuietion betwoen 1930 and 1940. Hence, the average size of the private household in South Dakota haa decreased eince 1930, whi oh is oonsistsnt with the general trend throughout she country towards smaller average size of fas$11 y$ or housebold. Ths average number of persone per oocupled divelling unit in 1940 was 3.89 for the state as compared with an averege population per family of 4.30 in 1930.

Housing ond population deta for oountios and inoorporeted places of 2,500 inhabitants or more are given in the following table. The population figures represent mainly ths mambers or the housoholdo ilving in the dwelling unite reported as occupied, though they inolude also psrsons roported as residents of these areas who wert living in institutions, hotels, aamps, and other types of dwelling aot covered by the Housing Census. Also inoluded in the population figures aro a fom peroons reported en residents of these arees who were onumereted olsomhere.

Similar announcements ars being nade for other Statse as ths figures becore evallable. The deta herowith presented may be changed slightly when the final ilgures are oompiled.

## Revisod ifigures

(This release includee three new items not presonted in the proliminery releese of Septecher 10 , namely, the number of veant units for sale or ront, the number of units in urban ano rural areas, and a oomparison of the number of dwelling units returned in 1940 with the mumber of families in 1930 . The revised count of all dwelling units in the Stete is more than the preliminary field count--152,856, as compared with 151,644 .)

Director WIlliam Lans Austin, or the Buroau of the Census, Department of Commerce, today relsaeed figures ropresenting the reviesd oount of dwaling units in Idaho from the Fousing Census.

Of the 152,B56 dwelling unita in Idaho on April 1, 1940, B,361, or 5.5 percent, were vaesint and for salo or rent (theee repreeenting the commercially signifioent vacancios), while 141,765 dwelling units wore occupied by houeeholds onumerated in the Population Ceneue at their usual place of residence. The remaining group of 2,730 unite (repreeanting roughly the remaindar of the unite shown as vacant in the prsliminery release) woe made up for the most part of vacent unite being hsid for absent householde, though it included also a few units tamporarily oocupied by nonreoident housoholds, that is, by households which reported that thair homee were loceted elsewhere. Seasonal eo well as ordinary dwelling unito are inoluded in all of theee ifgures.

Of the total number of dwelling unite in Idaho, 34,7 percent were looated in urban placee, that is, in incorporeted places having 2,500 inhabitants or mare; and 65.3 percent were in rural areas, thet is, in the open country or in places having lees than 2,500 inhabitente. Only 3.6 percent of the urban dwolling unite were veosnt and for sele or rent, a compared with 6.5 percent of the rural dwelling untte.

Dwelling unite vacant and for eale or rent formed 4.3 percent of all dwalling unite in Boise City and 3.1 percent in Poeatello.

The number of ocoupied dwelling unita repreeente epproximately the number of private households in the reepeotive areas ond may be compered roughly with the number of priveto families shown in the Cansua Reporte for 1930. Such e comparison reveals thet the number of priVate houeeholds increased approximately 31.2 percent, es contrested With the $17 . \theta$ percent incroae ohown in population between 1930 and 1940. Henoe, the evarege eize of the privete household in Idaho has decressed ince 1930 , which ie coneistent with the generel trend throughout tha country towards amaller avorage olzs of family or houeehold. The average numbsr of pereone per ocoupied dweling unit in 1240 wee 3.70 for the Stote, as compared with an averege population per family of 4.12 in 1930.

Housing and population data for oountiee and for incorporatad pleoss of 2,500 inhabitente or more are given in the following teble. The population figuree represent mainly the membere of the houeoholds living in the dwelling unite reported es occupied, though they inolude aleo persons reported os residentecf these areee who were 11ving in institutione, hotels, cempe, and other types or dwellings not oovered by the Housing Census. Aleo ineluded in the population figurea ere a few pars ons reported es realdents of these areas who were onumerated olsewhare.

Similer announcemente are being made for other States as the figuree become available. The deta herewith presented may be ohenged elightly when the finel figuree are compiled.

OCOUPIED AND VACANT DWELLIMG UNITS IN THE STATE OF IDAHO: 1940

Viainly vecant dwelling units held for aboont householde, togethor with e fe: dwelling unite ocougag by nonresidant housoholde.
 e reported in Idaho.

## 

#### Abstract

(Thie releeee includee three new itame not presented in the preliminery releee of october 8 , namely, the number of vacant unite for sele or rent, the number of unite in urban and rural ereae, end a comparieon of the number of dwelling units returned in 1940 with the number of familiee in 1930 . The reviead oount of all dwelling unite in the state ie olightiy more then the preliminary fiold oount $-277,529$, ee compared with 176,400, )

Diractor William Lam Auetin, of the Bureau of the coneue, Departcount of dwalling unita in Montana fron the Houeing Censue.
of the 177,529 dwelling unite in Montana on April $1,1940,13,199$ or 7.4 percent, were vacant and for sele or rent (these repreeenting the commorolaliy sigmiflcant vecancies), while 159,977 dwelling unite were occupied by householde enumerated in the Population Cenoue st their usual place of residence. The remaining group of 4,353 unite (representing roughly the remainder of the unite shown ee vaunite (representing roughly the ramainder of the unite shownee vavacant units being hald for abeent houesholde, though it included elso a fow unite temporarily oocupied by nonreeldent householde, elso fow unite tomporarily oocupied by nonreeident householde, that is, by householde which reportod that thoir homeo were located
oleowhere. Seaconal as woll ae ordinary dwolling unite are included in all of these flguree.
of the total number of dwelling unite in Nontana, 37.9 percont were loastod in urban places, that ie, in incorporated places having 2,500 inhabitents or more; and 62.1 percent were in rural areas, that 16 , in the open country or in placee having less than 2,500 inwibitante. Only 4.0 percent of the urban dwelling undta were vecant sna for oale or rent, $8 \theta$ compared with 9.5 percent of the rural dwalling units.

Dwelling unite vacant and for sale or rent formed 8.4 percent of all dwelling unite in Helene, sind 3.4 percent in Butte.

The number of ocoupied dwelling unite represente approximetely the number of private houeeholde in the respeotive areas and may be compared roughly with the number of private familiee ehown in the Ceneus Reporte for 1930. Such a comperison reveale that the number of private houeeholds inoreaeed approximately 19,4 percent, as conraeted Fith the 4.1 percent increase ehown in population between 1930 and 1940. Hence, the average elze of the private houeahold in Lontana hea decreaeed oince 1930, which ie conoistent with the e of ral trend throughout the country towerde emaller averae size of tanily or household. The average number of persono per occupla average population per ramily of 3.95 in 1930 .

Housing and population data for counties and Incorporated places of 2,500 Irhabitante or more are given in the rollowing table. The population figures represent mainly the membere of the households living in the dwelling unite reported se occupied, though thay inolude elso pereong reported ae residents of these arsae who were living in institutione, hotele, campe, and other typee of dwellings ot covered by the Houeing Cenoue. Aleo included in the population figures are a few pereone reported as residente of these areas who were enumerated eleanhere.

Similar annoancement ape being made for othsr Statee as the Iiguree boocpe svailsble. The asta horewith presented way be changed uroo bogoph spallsble. The asts horewlth pr

ITN NORTH DAKOTA

## (This release inoludes three new items not presented in the proliminary release of November 5,

 namely, the number of vaoant units for eale or rent, the number of units in urban and rural areas, and a oomparison of the number of Awelling unite returned in 1940 with the number of families in 1930. The revised oount of all dwelling units in the Sta te 1 s silghtly more then the preliminary field oount--163,009, as oompared with $162,710$. )Direotor William Lane Auatin, of the Bureeu of the Census, Department of Commerce, today released ifguree repreoonting the revised oount of dwelling unita in North Dakota from the Houeing Ceneue.
of the 163,009 dwelling units in North Dakota on April 1, $1940,8,997$ or 5.5 percent, were vacant and for sale or rent (these representing the oomerofally significant vacanolee), while 152,171 dwelling unite were oocupied by households enumerated in the Population Census at their usual place of residenoe. The remaining group of 1,841 units (representing roughly the remainder of the units ehown as raoant in the preliminary release) was made up for the most part of vaoant units being held for absent households, though it inoluded elso a few units temporarily oocupied by nonresident housoholde, that 16, by households whioh reported that their homes were loosted olsowhere. Seqsonel as well es ordinary dwelling units ars inoluded in all of these figures.
of the totel number of dwelling units in North Dakota, 21.6 percent were looated in urban plasee, that is, in inoorporeted places having 2,500 inhabitants or more; and 78.4 percent were in rurel areas, that ie, in the open oountry or in places having less than 2,500 inhabitante. only 2.6 percent of the urban dwelling units were veant and for sele or rent, as oompared with 6.3 percent of the rurel dwelling units.

Dwelling units vaoant and for eale or rent formed 4.4 peroent of all dwelling units in Bismarok, and 2.7 percent in Fargo.

The number of ocoupied dwelling units represents approximately the number of private households in the respeetive areas and may be compered roughly With the number of private families ohown in the Gensus Reports for 1930. Suoh a comparison revesis that the number of private householde inoreased approximately 4.9 peroent, as contrasted. With the 5.7 percent ceoreese ohown in population between 1030 and 1940. Hence, the average size of the private household in North Daicota has deoreased since 1930, whioh is consistent with tha general trend throughout the country towards smaller average $s 120$ of family or household. The average number of persons par cooupled dwelling unit in 1940 was 4.22 for the State ae compared with an average population per family of 4.70 in 1930.

Houeing and population data for oounties and incorporated placee of 2,500 inhebitants or more are Biven in the following table. The population Ifgures represent mainly the members of the householde living in the dwelling unite reported ae oooupied, though they inolude also persone reported ae residents of these areas who were living in institutions, hotels, oamps, end other types of dwellings not oovered by the Housing Census. Aleo inoluded in the population figures are a few persons roported as reeidente of these arese who were onumerated elsowhere.

Similar announcements are being made for other states as the figures beoome aveilable. The deta herewith presented may be ohanged slightly when the final ingures are oompiled.

Housing Units - Ravieed
HOUSINQ UNITS IN ARIZONA:

## 

(This relaase ineludes thrae new iteme not prasented in the praliminary relsasa of saptamber 28 , namely, the number of vacant units for sale or rent, the numbar of unite in urban and rural araas, and a comparison of tha numbar of dwelling units returned in 1940 with the number of familias in 1930. The reviead oount of all dwelling units in the State is largar than the preliminary field oount- $-147,136$, as comparad with $146,078$. )

Dirsotor William Lano Austin, of the Bureau of tha Cenoue, Department of Comenca, today raleased figuree raprasanting tha ravisad count of dwolling units in Arizona from the Housing Coneus.

Of the 147,136 dwelling units in Arizona on April 1, 1940, 9,452 or 6.4 percent, were vacant and for sale or rent (theee representing tha commaroially signifioant vaoano1as), whila 131,189 dwelling unite wara occupled by housaholds amumarated in the Population Consus at thair usual place of residanos. The remeining group of 6,495 units (raprassnting roughly tha rsmainder of tha units ehown as vaoant in the praliminary releasa) was mada up for tha most part of vacant units boing hald for absent houeeholds, though it inoludad aleo a few units tamporarily ocouplsd by nonresident houeaholds, that 10 , by housaholde which reportad that their homee were looatad elsawhare. Seasonal as well ae ordinary dwelling units are inoluded in all of these figuree.

Of the total number of dwelling unite in Arizona, 36.0 percent were located in urban places, that is, in incorporated places having 2,500 inhabitants or more; and 64.0 percent were in rural sreas, that is, in the open country or in places having less than 2,500 inhabitants. $S i x$ and three-tenths percent of the urban dwelling units were vecant and for eale or rent, as compared with 6.5 percent of the rural dvelling units.

Dwelling units vacant and for sale or rant formed 6.0 percent of ell dwelling units in Phoenix, and 5.5 percant a Tucson.

Tha numbar of ocoupiad dwalling units reprasante approximataly the numbar of privata housaholde in the respective araas and may bs comparad roughly with tha number of privata familise ohown in the Coneus Raporte for 1930. Such a comparison ehow that the numbar of privats housaholds incraasad approximatsly 23.8 parcent, as comparad with tha 14.6 paroant inoreaee in population betwean 1930 and 1940. This is explained by ths fact that the avaraga oiza of family in Arizona hae deoreasad considerably sincs 1930, as it hae throughout the country. Tha averags number of parsons par ocoupied dwelling unit in 1940 was 3.81 for tha State as compared with an avarage population par family of 4.11 in 1930.

Housing and population data for oountias and incorporatad places of 2,500 inhabitants or mora ara given in tha following tabla. The population ilguras rapresent mainly the members of the householde living in the dwelling units reportod as oocupied, though they include aleo persons reportad as residents of thesa areas who were living in institutions, hotels, oampe, and othar types of dwellings not covared by the Housing Cansue. Also included in the population figures are a few persons reported as residente of thesa araae who were enumeratad aleawhere.

Similar announcements are being made for other States as the ilgurae become availeble. Tha data herewith preeanted may be changed elightly when the final figures are oompiled.

OCCIPIED AND VACANT DMELLING UNITS IN ARIZONA: 1940

Kainly vacant dwelling unite hold for absent housoholds, together with few dwelling units occupied by aonreaident bouseholds.

HOUSING UNITS IN LOUISIANA: 1940

Rev18ed Figure
(Thie release inoludee three new items not presented in the preliminary releaeo of September 12 , namely, the number or vacant units for sale or rant, the number or units in urban and rural eureas, and the number of units in New Orleane by wnrds. The revieed count of all dwalling units in the State is larger than tha preliminary ileld count--620, 352 ae compared with $618,008$.

Diraotor 亩illiam Lane Auetin, or the Bureau of the Census, Department of comarce, today released flgures representing the revised oount of dwelling unite in Louisiana from the Housing Consus.
of the $620,35 e$ dwelling units in Louielama on April 1, 1940, 24,648 or 4.0 percent, were vacant and for sale or rent (these representing the commerclally eignificant vacanoies), while 592,595 dwalling unite were occupied by houeeholde enumeratsd in the Population Consus at their usual place of residence. The remaining group of 3,109 units (representing roughly the remainder of the unite shown ae vacant in the preliminary releaee) wes made up for the most part of vaoant units being held for absent houeoholds, though it included also a few units temporarily occupled by nonresident households, that is, by housoholds which reported that their homes were loceted elsowhene. Sessonal ae well as orainery dwelling units are inoluded in all of these IIgures.
of the total number of dwelling units in Louisiana, 44.0 percent were located in urban places, that is, in incorporated places having 2,500 inhabitants or more; and 56.0 percent were in rural areas, that 1s, in the open country or in places having lese than 2,500 inhabitante. only 3.1 percent of the urban dwelling units were vacant for sale or rant, as compared with 4.6 percent of the rural alling units.

Dwelling unite vacant and for sale or rent formed 3.3 percent of all dwelling units in Baton Rouge and 3.5 percent in New Orleans.

The number of occupled dwelling unite ropresents approximately the number of private householas in the respective areas and therefore may be compared roughly with the number of private familiee shown in the Consue Reporte ror 1930. Such a comparison shows that the number of private houesholds inoreased approximately 22.1 peroent, ae contrasted with the 12.5 percant increase in population between 1930 and 1940. This is explained by the fact that the average elze of family in Louleiana has decreased conelderably since 1930, as it has throughout the country. The averago number of persons in the population per occupied dwelling unit in 1940, was 3.99 for the State ae compared with an average population per family of 4.33 in 1930.

Housing and population data for parishes and incorporated places of 2,500 inhabitants or more are given in Table l. These population figures represent mainly the members of the households living in the dwelling units reportad ae occupled, though they also include residents of these places who were living in inetitutione, hotels, camps, and other types of dwellinge not covered by the Houeing Census, Also Included in theee population flgures are a few persone reported as rseldante of these places who were onumerated elsewhere. Data by wards are presentad in Table 2 for New orleans, the only of ty having 100,000 inhabl tente or more.

Similar announcemente are being mede for other states as the figures beoome available. The dats herewith presented may be ohanged slightly when the final figures are complied.

HOUSING UNITS IN IOWA

## 

(Thie releaee includse threo new items net preeented in the preliminary release of Septembar 14, namely, the number of vacant unite for sale or rent, the number of units in urbea and rural arsae, and the number of unita in Dea Moinee by wards. Ths revisod count of all dwalling units in the State is nore than the praliminary field count-726,760, as compared with 724,577.)

Director Willian Lane Auetin, of the Bureai of the Census, Department of Comence, today releasod figures representing the revised count of dwelling unita in Iowa from the Housing Census.

Of the 726,760 dwelling unite in Iowa on Aprit 1, 1940, 19,750 or 2.7 percont, were vacant and for eale or rent (these repressanting tha comparcially aignificant vacancisa), while 701,920 dwelling unita were occupiad by householde snumereted in the Fopulation Censua at thoir usual place of reeidence. The remaining group of 5,110 units (ropreaenting roughly the remainder of the units shown as vacant in the preliminary release) was made up for the most part of racant unita being hold for absent households, though it includsd also a few unite temporarily occupied by nonreaident households, that is, by householde which roported that their homes were looated olsewhere. Seasonal as well as ordinary dwolling units are includsd in all of these figuree.

Of the total number of dwelling units in Iowa, 44.2 percont wore located in urban places, that ie, in incorporated places having 2,500 inhabitants or more; and 55.8 percent were in rural areas, that is, in the open country or in placse haring less than 2,500 inhabitants. Only 2.3 percsnt of the urban dwelling units were vacant and for sala or rent, as compared with 3.0 percent of the rural dwelling units.

Dwelling units vacant and for sale or rent formed 9.2 percent of all dwolling units in Des Moines and 3.8 porcent in Siotax City.

The number of ocoupied dwelling units represente approximately the numbsr of private houssholds in the respective areas and therefore may be compared reughly with the number of private familiea shown in the Census Reporte for 1930. Such a comparison reveale that the number of private households inareased approximetoly 10.4 percont, es contrasted with the 2.7 percent increase shown in population between 2990 and 1940. Hence, the average size of the private household in Iowa hes decreased since 1980, which is consistent with the gonoral trond throughout the country towards amallor avorage size of fanily or household. The average number of persons per occupisd divelling unit in 1940 was 3.62 for the Stato ac compared with an averaga population per family of 3,89 in 1980.

Housing and population data for countise and incorporated places of 2,500 inhabitante or more are given in Table 1. The population ifguros ropreasnt mainly the members of the housoholds living in tha dwolling units reportad as occupisd, though they also include residonts of these aroas who were living in institutions, hotels, camps, and other types of drollings not corered by the Housing Census. Also included in these population figuree are few persons reportsd as reeldonte of those areas who wore onumerated slsowhore, Data by wards are pressnted in Table 2 for Dee Koinee, the only city having 100,000 inhabitants or more.

Similar announcementa are being made for other Stetes as the figures become available. The data herewith presented may be changed alightly won the final figures are compiled.

TABLE 1. OCCUPLED AND VACANT DNELLING UNITS IN IOWA: 1940

${ }^{1}$ Hninly vacant dwolling units beld for abeent houeeholds, together with a few dvelling unito occupied by nonresident householde.

DEPARTIERHI OF COMMPRCE
Bureau of the Cenous Weehington

Reviood Figurog

(Thie release includes three new items not preeented in the preliminary release of october ?, namely, the number of vecant unite for asie or rent, the number of unite in urban and rurel areas, and the number of units in Ioulsvilla by werds. The revised count of all drelling units in the State ie amaller than the preliminary field count-729, 279 ae compared with 731,189.)

Director H 1 lliam Lane Austin, of the Bureau of the Censue, Departfient of Comserce, today released figuree reprecenting the revieed count of dwelling unite in Kentucky from the Housing Ceneus.

Of the 729,279 dvolling unite in Kentucky on April 1, 1940, 27,585 or 3.8 percent were vecant and for sale or rent (these representing the conmercielly significant vacanciea), while 698,604 dwelling unite were occupied by hoveeholds enumerated in the Population Censue at the ir usual place of raeidence. The renaining group of 3,090 unite (representing roughly the remainder of the units ohown as vacant in the preliminary roleao) was tada up for ths moet pert of vacant unite being held for abeent householde, though it included aleo a few unite terporarily occupied by nonresident houeeholde, that is, by householde which reported thet their homes were located elsewhere. Seasonal as well as ordinary dwelling unito are incluided in all or these figuree.
of the total mumber of dwelling units in Kentucky, 34.0 percent were located in urben places, that ie, in incorporated places having 2,500 inhebitente or more; and 66.0 percent were in rural areae, that io, in the open country or in places having 1000 than 2,500 inhab1tante. Of the urban dwelling unite 3.7 percent were vacant and for eale or reat, as compared with 3.8 percant of the rural. dwelling unite.

Dvelling units vacant and for sale or rent formed 8.2 percent of all dwelling unite in Frankfort and 4.3 percent in Louisvills.

The number of occupied dwalling unitg repreeente approximately the number of private householde in the reepective ereas and therefore ray be compared roughly with the number of private familiee ehown in the Census Reporte for 1980. Such a cosperison showa that the number of private householde increaeed approximately 14.6 percent, ae contraeted with the 8.8 percent increase in population between 1990 and 1940. This 10 explained by the fact that the average eize of family in Kentucky hae decraased considerably eincs 1930, as it has throughout the country. The average number of pereons per ocoupisd dwelling unit in 1940 wae 4.07 for the State ee compered with an avsrage population per fam11y of 4.29 in 1930.

Houefng and population date for counties and incorporated places of 2,500 inhebitante or nore are given in Table 1 . The population rigures represant mainly the nembers of the households living in the dwelling unito reported ae occupied, though they also include residente of thees areae who were living in inetitutione, hotele, campe, and other typee of dwellings not covered by the Housing Census. Also included in thee population figures are a few porsons roported as recidente of these areas who were enumerated olsewhsre. Data by wardo are presented in Table 2 for Louleville, the only city having 100,000 inhebitante or more.

Similar announcements ere being made for other Stateo as the figures become available. The data herowith presented may be changed elightly when the final figureo are compiled.

TABIS 1. OSCUPTIED AND VACANT DHSLIING UNITS IN KENHUCEY: 1940

MEXCICO: Housing Duite $=$ Rovised

DEPARTMEAT OF COMAGRGB
Bureau of the Coneus Washington
(Thie releae includee three new items not preeented in the preliminary release of Ootober 28, namely, the number of recent unite for sale or rent, the number of unite in urban and rurel aress, and a comperieon of the number of dwelling unite returned in 1940 with the number of familiee in 1990. The revised count of all dwelling unite in the State ie larger than the preliminery field count $=145,685$ so compared with 144,262.)

Direator willian Lane Austin, of the Bureau of the Censue, Departmont of Comerce, todsy released figuree representing the revieed count of dwelling unite in New Mezico from the Housing Censuis.

Of the 145,685 dwelling unite in New Mexioo on April 1, 1940, 11,247 or 7.7 percent, were vacant and for sale or rent (these representing tho commercially eignificant vacancieal, while 129,504 dwelilng unite were occupied by housoholde enumereted in the Population Censue at their usual place of reeidence. The ramaining group of 4,934 units (roproeenting roughly the remainder of the unite ahown as vacant in the proliminary rolesse) was made up for the moet part of vacant unite being held for aboant hougeholde, though it included aleo a few unite temporarily oecupied by nonreeident houeeholde, that ie, by houeeholde which reported that their homeo were located eloawhere. Seasonal as well as ordinary dwelling units are included in all of these figuree.

Of the total number of avelling unite in New Moxico, 34.0 percont were located in urban placee, that i0, in incorporated placee having 2,500 inhabitante or more; and 66.0 percent were in rural areas. Only 5.0 percent of the urban dwelling unite were vacant and for ale or rent, as compared with 9.1 percent of the rural dwelling unite.

Drelling unite vacant and for sale or rent formed 6.8 peroent of all dwelling unite in Santa Fo , and 4.9 percent in Albuquarque.

The number of occupied dwelling unite repreeente approximately the number of private houeeholde in the reepective areas and may be compared roughly with the number of private familiee ahown in the Consus Reporte for 1980. Such a comparieon shows that the number of private householde increased approximately 31.4 percent, as contraeted with the 25.6 peroent increaee in population between 1990 and 1940. Thie ie oxplained by the fact that the average aize of family in New Nexico has decressed einee 1930, as it hae throughout the country. The avorage number of pereons per occupied dwelling unit in 1940 wee 4.11 for the State as compared with an averege population per femily of 4.30 in 1930.

Housing and population date for countioe and incorporeted places of 2,500 inhabitante or more are given in the following table. The population figures represent inaly the membere of the householde living in the dwelling unite reported ao occupied, though thoy include aloo pereons reported as reoidente of these areae who were living in institutions, hotele, cemps, and other typee of dwellinge not covered by the Houeing Census. Aloo included in the population figuree are a fow pereons reported as reeldente of thsse areae who were onumereted eleawhere.

Similar announcemente are being wade for other Statee as the figureo become available. The data herewith preeented may be ohanged ellghtly when the finel figuree are compiled.

## HOUSING UNITS IN MISSISSIPPI: 1940

## Rev18ed T1GUTes

#### Abstract

(This release includss three now itema not presented in the preliminary release of September is, namely, the number of racant units for sals or ront, the number of units in urben and rurel areas, and a comperieon of the numbar of dwelling units returned in 1940 with the number of families in 1990 . The revieed count of all direlling units in the State is elightly smaller than the prelininary field count $-657,148$, ae conpered with 559,457 .)

Director Willian Lane Austin, of the Bureau of the Census, Department of Comnerce, today releaeed figures representing the revieed count of dwelling unite in Missieeippi from the Housing Census.
of the 557,143 dwelling units in Mesiseippi on April 1, 1940, 19,914 or $\mathbf{3 . 6}$ percent, were vacant and for sale or rent (theee representing the comercially elgnificant vacanciea), whils 534,867 dwolling units ware occupied by households enumerated in the Population Csnsus at their usual place of residence. The remaining group of 2,362 units (repreenting roughly the remaindor of the units ohown as vacant in the prolininary releaee) wae made up for the moet part of vaeant units being held for absent households, though it included also a few unite temporarily occupied by nonreeldent houssholde, that is, by households which reported that their hoses were located elsewhore. Seaeonal as woll as ordinary dwelling units are included In all of these IIguree.

Of the total number of dwelling unite in Mseissippi, 22.1 percont were located in urban places, that is, in incorporated places having 2,500 inhabitante or more; and 77.9 percent wore in rurel areae, that is, in the open oountry or in places having lese than 2,500 inhabitante. Only 1.9 percent of the urban dwelling units wore vacant and for sale or rent, as compared with 4.0 percent of the rural welling units.

Dwelling mits vacant and for sels or rent formed 1.1 percont of all dwelling units in Jackson, and $z .1$ percent in Yeridian.

The number of occupied dwelling unite repreeents approcimately the number of private householas in tho reapective areas and may be compared roughly with the number of private fanilies shown in the Census Reports for 1930. Such a comparison shows that the number of private housaholds increased approximately 13.4 percent, as compared With the 8.7 percent increaee in population between 1930 and 1940. Ithle dirference is explained by the fact that the averags size of fanily in Miseiesippi has decreaeed considerably since 1930, as it has throughout the country. Ths average number of persons per occupisd dwelling unit in 1940 was 4.08 for the State as compared with an average population per ramily of 4.25 in 1930 .

Housing and population data for countioe and incorporated places of 2,500 inhabitante or mors are given in the following teble. The population figures repressint mainly the membars of the households living in the dwelling units reported as occupisd, though they include also pereons reported ad reeidente of these aress who were ilving in inatitutione, hotels, campe, and other types or dwellinge not coversd by the Housing Consus. Also included in the population figures are a fem persons reported as residents of thess araas who were enumeratad elawhere.

Sinilar announcements are being nade for othor States ae the figures beccese available. The date horewith presonted may be changed slightly when the finsl figures are compiled.

[^10](This release ingludas three abw itans not presented in the preliminary release of Septenber 10, nenely, the number of vacant unt for sale or reat, the numbsr of unite in urben end rural arese, end tha nuber of units in the city of Beltimore by werde. The reviasd count of ell dweliling unite in the state io larger than the prelininary field count--500,747 as comparad with 496,551.)

Dirsetor William Lans Austin, of the Burosu or the Causus, Department of Commeree, todsy released figuras reprasenting the revieed count of drelling unite in Tarylend from the Howsing Coneug.

Or the 500,747 dwelling unite in Meryland on ApF11 1, 1900, 23,757 or 4.7 per cont, were vecent and for sele or rant (theee representing the ocmoroielly oignifloent vacanciee), while 466,008 dwolling untta were ocoupied by householde enumeratsd in the Fopuletion Censue st their usual place of residence. The robaining group of 10,989 units (regraeenting reughly the romalnder of the ualte thovm as vacent in the prelinifiscr release) was made up for the nost pert of vaceat units being held for absent householde, though it ineluded aleo a fow units tamporarlly occupled by nonresidont houeebolde, that is, by housebolds wh 1 ch reported that their honee wore located elsenhere. Seasonal as well as ordinary dwelling unite are incluted in all of the ee figures.
of the total number of dwelling units in Meryland, 59.5 percent wore locatad In urban places, that 1s, in incorporated plaoes Having 2,500 inhabitants or more; and 40.5 percent were in rural srete, that is, in tha open country or in placs having lees than 2,500 inhabitants. Only 3.5 percent of the urban dwelling unita were vacant and for sals or rent, as compared with 6.6 perosnt of the rursil dmell10g unite.

Dwelling unitg vecant and for sale or rent formed 6.9 percent of ell dwelling unite in Annapolia, and 3.7 percent in Baltinore.

The number of oceupied dwolling units rapreeents apprexinately the number of private househalds in the reopective arsae and may be compared renghly with ths nunber of private fanilise shom in the Censue resports for 1980. Such a conparison mbows thet the nuber of jrivate househalds increased approxinately 21.0 percent, as contraeted with the 11,6 percent increase in pepulation betwean 1980 and 1940 .
 eroased coneiderobly oince 1930, an it has throughout the country. The tivarage number of percono per oceupied dwallitng umit in 1940 was 3.91 for the Stats as eompared with an average poyulation per fanily of 4.24 in 1990.

Housing and populetion date for countias and urban places or 2,500 inbebitante or more are given in Table 1. The population figuree represent peinly the nembera of the houenholde living in the dwelling unite reported es occupled, though they include alse persoan reported ee reeldento of theas areas who were living in institutione, hotela, cempe, and other types of dwellines not covered by the Housing Ceneue. Also included in the population figuree are a few pertons roported as reaidsits of these arbae who were enumerated eleewhere. Data by wards are preeented in rable 2 for Baltinore, the only oity heving 100,000 inhabitente or more.

Siniler announcemonts are being nade for other Statee as the rigures beoono available. The data bereurith preanted nay be changed elightly wtien the final flguree are compled.

I Phinly vacant dwelling units held for absent houeaholds, togother with a few dielling units ocoupled by noeresident householdo.
e chaeelified ae urban under special rule.

Mainly vacant dwelling unite held for abeect houebolds, together odth i fer dmelling units ocoupied by nonresident households.

 1930. The revised count of all dwelling unite in the State is larger than the prolininary field count- 530,616 ea eompered vish 519 , 507 .)
pireotor Fillifan Lang Austin, of the Bureeu of the Geoaue, Departiesnt of Connarce, todey relesed figuree repreeenting the rovieed oount of dweling unite in Arcsasns from the Houstat Census.
or the 520,616 duelling unite in Aricanse om April 1, 1940, 22,359, or 4.3 per eont, ware vacmint and for bale or rent (theee representing the comveroially signife leapt reaneies), Nille 495,861 drolling unfte were occupled by houoeholde eniusereted in the Population Censue at tboir usual place of reaidenee. The remain ing group of 2,416 unite (reprecenting roughly the ramilnter of the units ahom as recant in tho pralininary release) was nade up for the noet part of veesant unit being treld for sbeent hourshold, though it included also a rem unite temporarily ocoupied by aoureoident housabolde, that is, by houeeholde whiah reported that thelf honse wers located olnwhere. Seesonal se well eoordinary dwolling unite are incluced in all of theot rigures.
of the total number of dwoling unite in Arcansas, 24.5 pereent mere located in urhan places, thet ie, in incorporated plecee bavinc 2,500 inhebitante or more; and 75.5 porcent were in rurel aread, thet 10 , in the open country or in plaoee having leet chat 2,500 inhabitente, only 3.1 percent of the urban dwelling unite were vacant and for sale or rent, all compared with 4.7 percent of the rural dwalling undte. bowiling unite recant and for esle or rent formed 2,9 pereent of 911 dweluthg inits in Little Roek, and 2.3 poreent in Yort Saith.

The number of occapled dwelling units repreaente epproxinately tbe number of private housebolle in the raspeetive areae and may be conpared roughly with the maner of private faniliee ahown in the Cecisue Roports for 1930. Such ecorpariano showe that the nuber of private householde inereasod approximntely 13.0 perdent, os oontrasted idtb the 5.1 percent ingrease in populatian betivean 1930 and 1940. Thie is explained by the fnot that the averege efze of fanlly in drikansas as decroesed conoiderably eince 1980 as it has throughout the country. The avern age number of persona per ocoupled aweling unit in 1940 wno 3.93 for the Stete as compared with an average population per fanily of 4.23 in 1950.

Houning end population data for counties and incorporeted pleee of 2,500 inhabitante or more ert eiven in the following teble. The population figures wepreoont mainly the monbors of the housebolde living in the delling unito roported oe ccupied, though ther include aleo pereons reported as residento of there arsea who were living in inatitutions, hotels, canpe, and other iypet of dwollinge not covered不 the Housing Censur. Aloo ineluded in the populetion figures are in fem porsona roprted ae reeldeat of these areas who were onumerated olsentiore.

Similar amounomenta are being rade for other Stotet as the fizuree becono vailoble. The deta bervaith preoented may be ehanged slightly when the fand figree are eompiled.

Inimly thenht dweilime inits thid tror eofent bouseliolde, tocether with e rew dwelline unite occupiod by nonresident householde,

## Reviced Figuteo

(Thie releas includes three new items not preeented in the preliminexy release of Soptember 14 , namely, the number of vacant unite for sale or rent, the number of unite in wrben and rural areas, and the number of unite in Nansas Gity and Wiohita by wards The realsed count of all divelling units in the btate is olightly emaller then the preliminary fiela cotmt-546,105 as ecmpared with 546,217 .)

Direotor Tillian Lan Austin, of the Bursau of the Census, Departmant of Comeree, todey released figuree representing the revised cownt of dwelling unite in Kaneas from the Housing Census.
of the 846,105 dwolling units in Kanseas on April 1, 1940, 30,202 or $\mathrm{S}_{6} \overline{5}$ percant, ware racant and for sale or rent (theae repreeenting the oomareialiy elgaifieant vacanciee), while 511,414 dwelling unite wore oceupied by housholds enumerated in the population Consue at thoir umal plee of reeldence. The remaining eroup of 4,489 unite (representing roughly the remainder of the unite ahown ae rabant in the prolininary raleasel wes made up for the most pert of vacant unite being held for absent hougeholds, though it included sleo efor unite temporerily cocupied by nonreeident householde, that is, by householde which reported that their homee were loeeted elsewhere. Seasonal as will eo ortinary dwelling unite are included in all of these figures.

Of the total number of dwelling unite in Kansae, 48.0 percent were loested in urban plaeee, that ie, in ineorporsted plecee hoving 2,500 iahabitante or morsi and 57.0 percont were in rural aroas, that 10 , in the open sountiry or in placee having leee then 2,500 inhabitante. Only 4.2 persent of the urban dwelling unite were vacent and for eale of reat, as ocopared aith 6.5 peroent or the rural dwelling unite.

Deviling unite reoant and for sele or rent formed 5.8 peroent of all dwelling units in Topelke and 8.1 percent in Kansae City.

The number of ocoupied dwelling unite repreeents opproximately the number of private householde in the reopective oreee and may be oompafed roughly with the number of private familiee shown in the Censue Reporte for 1930. Such a comparison showe thet the number of private householde increesed epproxinately 5 percent as contraeted with o deeresse of 4.8 percent in population between 1980 and 1940. Thie io explained by the fact that the average oize or family in Kanses has deereased considerably eince 1980, ee it has throughout the country. The everage number of pereons por occupied dwolling unit in 1940 was 8.52 for the State as compared with an average population per family of 3.86 in 1980.

Housing and popalation deta for countiee and ineorporated placee of 2,500 inhabitants or more are given in Table 1 . The population figuree repreeent mainly the membere of the households living in the dwelling unito reportod as occupied, though thoy include also pertons reported as reeldente of these areas who were living in inetitutions, hotele, campe, and other typee of dwellinge not covered by the Houeing Census. Alao included in the populetion figuree are a few pereone reported as reeldente of theee arees who wore onumereted eleenhere. Deta by wards are preennted in Table 2 for Kansas City and Wiehite, the only eitiee having 100,000 inhabitante or more.

Similar annoumcemente are being made for other Statee oe the figuree become ovallable. The data herewith presented may be changed elightly when the final figuree are compiled.

${ }^{1}$ Mainly vacant dwolling units held for absent householde, togethsr with a fow dwelling units by nonresident hoinepholds.

Direoter Willien Lane Augtin, of the Buresu of the Ceasus, Depertaent of Com meros, today rtlassed figures representing the revieed count of dwelling units in Tonnssees from the Housing Consua,

Of the 742,587 drelling unite in Toanesese on April 1, 1940, 24,419 or 8.8 percent, wore vacant and tor sale or rent (thsse reparesanting the ecaspereially signifcant racanaies), Whila 715,425 dwolling unite mere oooupled by householde onamareted io the Population Consuas at their uaval place of residemce, The ramining group of 2,743 ualta (ropresonting roughly the pemaindsr of the uaita shom an veoant in the proliminary relensa) mas meds up for the most pert or veoant unite being held for ahsent househalds, thoagh it ineluded aleo a fow unite tempornaily ocoupled hy poaresident householde, thet 15 , hy households whieh reported thet thoir howes wort loested elewhers. Seasosel es mell as ordinary drelling unite are included in ell of thems flgares.

Of the total mambor of dwelling unita in Fennemene, 38.8 pereant were locktod In urben pleces, that in, in incorporeted places having 3,500 inhahitente or more; and 61.8 peroant wore in rural areas, that 15, in the opan oountry or in placse rore rseant and for sale or rent, os occpared with 3.7 porcant of the rurel dwallfy units.

Drelling units waont and for sala or rent formed 3,4 peroent of ell drollisg units in Neativille, and 3.5 peroant in Mouphis.

The mumber of oecupied divelling unite ropreseota epproximately the sumber of privete households in the respectiva arwes and wey be ecompered roughly with the
 nhom that the number of private houesholde inereased eqpiroarinately 19, 1 pervent, as ooatraatad with the 11.4 percont inorease in popaletion botweon 1990 and 1940. Thie ie axplained by the fuet that tho average sise of foully in Tompeoses docreased sinee 1980, sa it hes throughout the acoantry. Ths aversge number of por sons per ocoupised dvelling unit in 1940 wee 4,08 for ths State as ocmpared oith an arerage population per feinily of 4.35 in 1930 .

Housing and population dete for countiee and $i$ oearpontad plaose of 8,500 inlebItants or more are given in Table 1. The popenlation figures represent maicly the meabers of the houneholde living in the drellige unt to reported as oooupled, though they ineluds also persona reported as reatceate of thase arees wo vere living in Isstitutione, hotels, enerpe, and otber typee of dwelling not oovered by the HoukIng Census. Aloe ineluded ia the popolation figares are a fow perwons reported ed residente of these arees who were enuanrated elsewhsre. Date by marde are proseakbaving 100,000 inhabitents or fore.

Binllar ennoumoements are being made for othar States as the figurea beocme svailsble. The date bevewith preeanted may be ohanged elightly whon the final ifgures are ocmp12ed.

${ }^{1}$ Mnizly vacent dwelling unite beld for abssnt houssholde, together with a few dwelling units oceupied hy noaresident bouseholds,

Director Willian Lane 4aotin, of the Bareau of the Censue, Departisent of Commarcs, today relcaesd rigures reprasenting the reviasd oount or drelling unita in Waahington frow the Jousiag Cename.
of the 591,406 dwelling unita in the State of Washington an April 1, 1940, 40,210 or 6,8 parcent, were vacant and for sele or rent (these rapreseating the ecaverofally olgniffcant vacanciss! while 537,968 dwelling unite wore oocupled hy households anuaerated in the Populetion Consus at thair usual plaos of reeldencs. The rounining group of 15,228 ouits (representing roughly ths remsindsr of the unite ahom ea vacant in the prolininary rolease) was nade upfor the nost part of vacant unita being held for sheent hoasaholds, though it inoluded also for units temporarily occupled by nonreoldeat houssholds, thet is, by houssholds which roported porarily occupied by nonresideat housisholds, thet is, by houssholds which roported
that their hones mere loceted sleowhere. Seasonal as well ss ordinary drelling that their honse mere loceted sleowhere.
unite are included in all of these figures.

Of the total nurher of drelling units in the Stete of Weahington, 54.6 percent vere located in urben plecsa, that 1s, in incorporated piecse haring 2,500 inhahitante or more; and 45.4 percent were in rural erone. Only 5.7 percent or the urben dwolling units wrere vacent and for sale or rent, es conjered with 8.1 pereent of the rural divelling unita.

Dealling unite vecant and for sals or ront formed 5,0 percent of all drelling uaits in Olympio and 5.8 percont in Seattla.

The number of occupied dwelling unite repreasate approximately the mumber of private householde in the respective arsea and may he eanparad roughly with the number of privite familisa show in che cansus Roports for 1990. Such a compersm shows that the mumbr of private houeeholds increesed approxizataly 26.9 percent as oontrasted with tha 11.1 perceat increase in population hatwesa 1930 and 1900. This io explained by the fact that the avarage eize of randy in tha State of Weshington has deareased sonsidsrahly sincs 19s0, as it has throughout the country. ington has daaranaed considsrably sincs 19s0, as it has throughout the country.
The avsrege auaber or parsons in the population por oceupied ewelling unit in 1940 The avsrege nubber or parsons in the pogulation por oceupied awelling unit in 1940
was 3.23 for the $8 t a t s$, as eompered with an avarage population per fonily of 5.69 in 1930 .

Houeing and popalation dete for countias and ineorporeted pleoes of 2,500 in= hahitanta or more are given in Thhle i. The population tigaree reprosent minly the members of the householde living in the divelling unite reportod as occupied, though they iaclude also poreons reportod ae reoldents of thoee araas who were living in institutions, hotsis, calaps, and other typee of dwellingenot covered hy the Bousing Ceneue. Aiso inoluded in the population figuree area fer persoas roported as reeldeate of theoe areae who were enuaserated elemuthere. Deta by wurde portedresented 1 n Tahle 2 for Tmconn, the only eity haviag 100,000 inhabitnite or are preeented in lahla 2 for inco
nore thet was roported by verds.

Sinilar ennounoemente are being made for othar Statas as the figuree beoome avallahle. The deta harewth preeented may he changed alightly whea the finel figuree are compilad.

${ }^{2}$ Seattle and spotane, each with a population or 100,000 or more in 1940, wore not reported hy wards.
z minily vecant dwolling unite held for ahsoat housmbolds, together with e fer dwelling unite occupled by nonrasident hounoholde.

Reviead Figures

(Thio releese includes three new items not preeented in the preliminary release of october 25, namely, the number of vacent unita for sele or rent, the mamber of unite in urben and rural areas, end the number of units in Charlotte by warde. The revieed count of all dwolling unita in the State is larger then the preliminary field count-880,752 ac compared with 817,141).

Director Williain Lnne Suetin, of the Bureau of the Censue, Department of Comerse, today releaeed figuree representing the revised count of dwelling unite in Worth Carolina from the Houeing Censue.

Of the 820,752 dwelling unite in North Carolins on April 1, 1940, 25,836 or 3.1 percent were vacent and for sale or rent (theee repressnting the comercially aignificant vacancies), while 789,566 dwelling unite wers occupied by houecholds enumerated in the Fopuletion Census at their usual place of residence. The reveining eroup of 5,350 units (representing roughly the remainder of the unite shown eo vecent in the preliminary releaee) wee made up for the most part of vecent units being hold for aboent hoveeholde, though it included aleo a fer unite temporarily oocupied by nonreeident householde, that 1e, by houeeholde whioh reported that their honss were located elsewhere. Seaconal ao well as ordinary dwalling unite are included in all of these figuree.
of the total number or dwelling unite in North Caroling, 30.0 percent were located in urban places, that ie, in incorporated plecee having 2,500 1 nhabitante or more; and 70.0 percent were in rural areae. Only 2.3 percent of the urben dvelling unite were vocent and for eale or rant, ae compared with 8.5 percent of the rural dwelling unite.

Dwelling unite vacent and for eale or rent forwed 1.7 percent of all dwelling unite in Releigh and in Charlotte.

The nurber of occupied dwelling units represente approximetely the number of private houeoholde in the respective areas and may be compared roughly with the number of private familiee ehown in the Census Reporte for 1930. Such a comparison ohow that the number of private houeeholds increased approximately 22.6 percent, ae contrasted with the 12.7 percent Increace in population betweon 1930 and 1940. Thie io explained by the fact thet the average olzo of fenily in North Carolina hes decreased conelderably aince 1980, se it has throughout the country. The average nurber of persone in the population per occupied dwelling unit in 1940 whe 4.52 for the Stete, as compared with an average population per fami1y of 4.92 in 1930.

Houeing and population data for countiee and incorporated placee of 2, 500 inhabitants or more are given in Table 1. The population figuree represent mainly the membere of the householde living in the dwelling unite reported as occupied, though they include elso persons reported ae reeliente of theee areee who wore living in institutions, hotels, canpe, and other types o: dwallinge not covered by the Houeing Census. Also included in the population figuree are a few persone reported ae reeldente of these ereas who were enumereted elsewhere. Data by wards are preoented in Table 2 for Charlotte, the only elty having 100,000 inhabitents or more.

Sinilar announcemente are being mede for other Statee as the figures become availsble. The data herevith presented nay be changed elightly when the final ilguree are compiled.

${ }^{2}$ Mainly vacent dwolling unite hold for aboent housoholds, together with e fow dwelling unite oceupied by nonresident householde.

SLBLS 2. OCCUPIED AND VACANT DFILTITN UIITS IN CHARLOTIES, BY YARDS: 1940

${ }^{1}$ bainly vecant dwolling units held for abeent householde, together with a few dwelling unite ocoupied by nonreeldent householde.

DEPARTMATH OF COMARRCE

HOUSING UNITS IN SOUTH CAROLINA: 19 OR
R-viaed Figuroo
Thio roleaee includee three new itomb not preaented in the prelieinery releae of September 29, nemely, the nromber or vacant unito for onie or rent, the number of unite in urben and rural arees, and a conparisom of the number of dweling unite retarned in 1940 with the number of fandifes in 1930. The revised count of all dwelling units in the State ie slightly larger than the preliminary field count-45e, 872 ne compared with $458,499$.

Direotor Fillian Lane Auetin, of the Bureau of tbe Census. Depertment of Cormeree, today roleased Ifgureo ropreaenting the revieed count of dwelling units in South Carolina Irom the Housing Census.

Of the 456,872 dwelling unito in South Carolina on April $1,1940,21,016$ or 4. 6 porcent were vacant and for eale or reat (these representing the oumercially elgniflcant vacenciee), while 494,928 dwolling unite were oecupled by housoholdo enumerated in the Population Cemsus at thoir usual place of ree1dence. The romaining group of 2,934 unite (Tepreenting roughly the remainder of tbe untta shown es vacent in the prelirinary release) was mado up for the nost pnat of vacant units being held for absent housebolds, though it included also a few unito tamporerily occupled by nonresident households, thet ie, by households which reportod thet their hanes were located elawhere. Soasonal as woll se ordinery dwalling unite are included in oll or theee figures.
of the total number of dwelling unite in South Carolina, 27.6 percent wera locstad in urben places, that ia, in incorporatad placeo baving 2,500 inhabitenta or more; and 72.4 perce日t wero in rurel areae, only 2.1 percent of the urban dwelline units wore vecant and for sele or rent, es compared with 5.5 percent of the rural dwolling unite,

Derelling unfte vecent and for enlo or rent formsd 2.5 pereent of ell dwoll ins unito in Columbia, and 2.9 percent in Charleaton.

The nunber of oocupied dwelling unite repiooento approximatoly the number of privets houscholds in the respective areas and may be carparod roughly with the number of privato fealifes shown in the Censue Reports for 1930. Such e comperioon ebows that the number of privete housebolde inoreasad approximately 18.9 percent, we oontreated with the 9.3 percent inereeee in populetion between 1930 and 1940 . Thie 18 explainad by the fact that the avarage $81 z 8$ of fanily In South Carolinn has deoresesd oonsidarebly eince 1930, as it hes throughout the country. The average number of peraons per occupied dveling unit in 1940 wes 4.37 for the State, as ocmpared with an averago population per family or 4.75 in 1930.

Housing and population deta for oountios and ineorporated places of 2,500 inhabitants or more awe given in the following table. The population figuren represent minily tho membere of the bouseholde living in the drelling unite reported as occupled, though thoy inolude also pereons reported ae rolldente of thaes areas who were living in institutions, hotele, cenpa, and other typet of drallinge not covered by the Howeing Census, Aleo ineluded in the population IIgures whe fen pereons reported ae reeldents of these aree who wore enumoratad elewabere.

Sinilar announcemants are beling mads for other States as the figures beocne availablo. The data herevith presented may be changed slightly whan the finml ifguree are ocrip1led.

IEST VImODIA: Housing thits - Revieed
HOUSIXG UNITS IX NESTVRGINIA: 1940
(This release inoludes three new itens not presented in the prelininary relense or Ootoher 17, namely, the nurber of vacant units for sale or

Director Fillien Lane Austin, of the Burewa of the Ceneus, Dopertament of Conmorce, todey releaged figures reprosenting the revieed oount of divelling vnite in
lient Finginis frcm the Housing Consus.

Of the 459,806 dwelling unite in Hieet Firginia on April 1, 1940, 13,181, or 3.9 percent, vers vacant and for aale or reat fthese representing the oomereially aignifloant vacanoiee), wile 444,889 dwolling unite wore ocoupied hy households onumarstad in the Popojation Censu at their unial plsco of reolduce. The row maining group of 1,792 unite (representing roughly the remainier of the unite ahom as vacant in the preliminary relenee) whe made upfor the moat part of vacant unite being held for ahsant housabolde, though it included also s fem unite temporarily occupied by monresident households, that is, by housoholds chich reported thot their homse wera locatad elsewhero. Sessonsi ae well as ordinary dwiling units are included in ell of theae figuree.

Of the total number of Awolling unite in West Virginia, 31.4 percent wise locsted In urben places, thet 18, in inoorporsted placee heving 2,500 inhabitants or mors; and 68.6 percent were in rural ereas, thet is, in the open oountry or in plesee aring le9e than 2,500 inhailtents. oniy 2.4 percont of the win sere vecant and for sele or rent, an ocmered with 3.1 percent of the mirel dmell ing unite.

Drelling tuite wacent and for sale or rent formed 3.0 percent of all dwelling
waite in Charlegton, and 2.6 percont in funtington.
Whe number of ocoupied dwelling unite roprenente approsinately the mumber of private housoholda in the respeotive arees and nay be coxpared roughly with the mumber of private fanilies shom in the Census feporte for 1980. Sueh a ounparison ahow that the number of privste householde 1noreased approxirataly 19.0 percent, es oontraeted with the 10.0 percent inerease in population between 1930 and 1940. Thla io oxplained by the fact that the everage aize of fanily in Foet Virginie hes doeraased comaiderably einee 1930, ne it hae throwghout the country. The average aumber of pernons per ocoupied dwelling unit in 1940 wee 4.28 for the state ae compared with an average population par fandiy of 4.62 in 1990.

Housing and population data for oountien and inoorporeted pleoee of 3,500 inhalitarte of more are givan in the following table. The population figuree represent mainly the membere of the honeaholde living in the dwellizg unite reported as oooupied, though they inolude also persons roported as reeldents of these arees Who wore living in inatitutione, hotala, cerpe, and othor types of awollinge not oovered by the Fousing Oenaus. Also inelnded in the popplation flgurbe are a fer persone reported as reeldente of these areas who were onumereted elsevhare.

Sinilar annownosinnte are heing made for other Statas as the figures beoge vvailahle. The data harevith presentad may be ohenged olightiy whon the Inal
figuree are ocmpiled. figuree are compiled.

## HOUSING UNITB IN NEBRASKA: 1940 

- (Thie release Includes three new itens not presented in the prelininary releaee of Saptanber 16 , namely, the number of vacent unite for sele or rent, the numbor of unite in urban and rural areas, and the number of unita in Onehe by wards. The revised eount of ali direlifng units in the Stete is Larger than the preliaitany field oount--387,459 as compered with 386,606).

Diractor Willian Lane Austin, of the Buresu of the Cenaus, Department of Commorce, today released flisuree reprosenting the ravised eount of dwelling unite in Mobrakica froa ths Houaing Ceneus.
of the 887,469 Grelling units in Nabreakn on April 1, 1940, 28,747 or 6.1 percent wers veosnt and for sols orrent these representing the comaercially elgnirioant vacencies), while 360,821 drelling unite wars occupled by households anumerated in the Population Gensus it their usual plece of residence. The romaining croup of 2,911 usits frepresenting roughly the remeinder or the, unitio shown oe vacent in the prelininary release) was made up for the most part of vacant units bsing held for abeant households, though it ineluded elso a fem unita teoporarily occupied by nonranident housoholde, that is, by bouseholds whioh reported that their howes weys loceted slembere. Soasonal as well mardinary drelling unite ars ineluded in all of these figures.

Of the total number of dwalling unite in Nebraske, $\$ 9.6$ porsent were located in urban plaess, thet is, in ineorporated places heving 8,500 iphabitants or mara; and 60.4 pereant wore in rural aress. Only 4.4 pereent of the urban dwelling units wore vecent and for sele or rent, at ecnpared with 7.3 parcent of the rurel dwelling unite,

Dwelling units vacsit end for gale or rent formod 4.7 pereent of all dwelling units in Lineoln and 5.4 percent in Orahe.

The number or oceupied dwolling unite repreeante approximately the number of private householde in the reapeetive areas snd may bs coupared roughly with the mazber of privete fevilias ahown in the Censue Roporte for 1980. Sueh a ooaparison thows that the number of privats houssholds inersaeed spproxinstely 5.2 pereent as oontrented with the doeresae of 4.5 pereant in populetion batwean 1980 and 1940. This is explained by the fect that the overage size of fanily in $\mathrm{Neb}-$ reake bes decressed sonalderably aines 1930 , as it has throughout the country. The evarege number of pereons in the population per oceupled awslifg unit in 1940 was 3.65 for the 8tats, ee ampared with an average popelation par fanily of 4.02 in 1930.

Houaing and population Ante for countisa and incorporeted pleoee of 2,500 1mbabitants or wore ore givan in Table 1 . The population figurea represent mainly the members of the households living in the dwelling units reported as ooeviled, though they inolude olao parsone reported ac rasidants of these acese who ware Iiving in inatitutions, hotals, eampe, and other types of dwallings not eovered by the Housing Cenrus. Alto inoluded in the populition figuras era e far peraone reported as rosidsnts of thass ereet who wers enumereted elembers. Data by wards ore presented in Fabla a for Opahs, the only aity having 100,000 inhabitente or mors.

Bimilar ampouncenonts ars being nade for other statee es the figures beecoe avoilable. The data hervwith presented nay be changed elightly when the final ILgures are ocmpiled.

[^12] Fiaed cotmot of all Gueling units in the State ia lerger than the preliminery field oount-708, 127 as compared with 704,003.)

Direotor William Lans Austin, of the Burseu of the Censua, Deptriment of Comperoe, todey relessed figures reprosenting the rovieod oount of drolling units in hlabese frow the Eousing Consue.
of the 708,187 drolling units in Alabena on April $1,1940,31,502$ or 4.4 peroent vere veosnt and for anle or rent (theae repreaanting the comercially olemifioent recancies), while 573,916 dwelling units wore ooupiod by households enumereted in the Fopriletion Census at their usunl plece of residenoe. The remsining group of 2,911 units (represanting roughly the ramainder of the units ehom as racant in the pres liandry releese) as mide up for the most part of voand unita being he housholds, though it included also a fow unite temporarily sooupiod by acarealdent bousebolde, Seasontil os will os ordinary drelling unita are inoluded in ell of these f1gures.

Of the total number of dwelling units in Nisbepa, 32,8 parcent were loented in urbea plaees, that is, in fnoorponated places having 2,500 inhebitente or nore, and

Duplling undte vacant and for sale or ront forned 1.3 pereent of all drelling taits in Montganery, and 2.4 percont in Birainghes.

The number of occnpied dwelling uniti rapresants approrinately the number of privete households is the reapective areas end nay be ocapered roughly with the number thet the number of privets householde incressed epprexisatsly 19.9 pertent, as controeted with the 7.1 percent inorese in population betveen 1930 and 1240. This is explained by the feet that the avorage size of fanily in dlabama hea deereeeed siace 1930, es It hes throughout the country. The average number of persoas per oeoupied per fandly of 4.47 in 1990 .

Horasing and popoletion dite for oounties and incorporated pleces of 2,500 inhebitanta or more ere givan in the folloning table. The population figures repreasat nainly the wembera of the hounaholds living in the drolling units roported ss oceupied, though they inelude aleo persons reported as residenta of these areas bio ware iving in inatitations, hotels, cmape, and othor sypea of drelilinga Bousing Cansus. Aleo inoluted in the populstion figures ere few jer the only city having 100,000 inhabitants or more, van not reported by werds.

Siutlar wanomenonta are being made for other States as the figureo beecos avellable. The data hervelth preaented zay be changed alightly when the final figures are ecmplied.

HOUSING UNITS IN OKLAHOMA: 1940

(Thie relsaee 2 ncludse three new items not preasnted in the preliminary velease or Ssptember 18, namely, the numbsr of vacant units ror sals or rant, the number of units in urban and rural areae, and the number or unite in Oklahome Gity by werds. The revissd count of all dwelling unite in the Stats is iarger than the praliminary field counto 647,526 as compared with $645,623$. )

Director William Lans Austin, of the Bureau of the Cansus, Depertment or Cormercs, today rsleassd figurse repreeonting the revised count of dwsiling units in Oklahoma from the Housing Cenous.

Of the 647,5id dwelling unite in Oklehome on Apmi 1,1940 , 33,662 or 0.2 percent were vacent and ror sais or rent (thsse repressnting the commeroialiy eignificant vacancise), whils 610,424 dwelilng units wsre occupisd by houssholde snumerated in the Population Csnsus at their usual placs of residance. The remaining group of 3,450 unite frepresenting roughly the remainder of the units ohown as vaeant in the proliminary relasss) was made up for the moot part of vacant unito bsing hsid for absent households, though it included also a few units temporamily oocupisd by nonresidsnt houssholde, that is, by householde which reportsd that their homes were locsted sleewhsre. Ssasonal ae wsll as ordinury dwelling units are includsd in all of these IIgures.

Of the total numbsr or dwailing units in Oklahoma, 41.6 percent were locatsd in urban placss, that ie, in incorporated placse having 2,500 inhabitants or more; and 58,4 percent wsre in rural areas. Five and two-tenths percent of both the urban and the rursl dwelling units were vacant and for eals or rent.

Dwalling unita vacent and for sale or rsnt formed 7.7 percsnt or all dwelling units in Oklahoma City and 5.9 percent in Tulsa.

The number of occupisd dwelling units represente approximately
the number of privats houesholds in the roepective areae and may be comparsd foughly with the number of private faniliss shom in the Cansus Raports for 1930. Such a comparison showe that the number of private houssholde increased approximataly 8.2 percent, as oontrested with ths 2.5 psrcent decreass in population bstween 1930 and 1940. Thie is sxplained by the fact that the avsrage elizs of family in Oklahome has dscreased coneiderably sincs 1930 , as it hes throughout ths country. The averags aumber or persons in the popuLation per ocoupisd dwsliing unit in 1940 wae 3.83 for the Stats, as compared with an avisrage population per ramily of $4: 25$ in 1980.

Housing and population date ror countiss and ineorporated placee of 2,500 inhabitants or more are givan in Tabls 1 . The population figuree represent mainly the membsre of the houssholde living in the dwelling unite reportsd ae occupisd, though they include aleo persons reported as residsnte of thsse areas who were living in inetitutione, hotels, campe, and othsr types of dwsliings not covered by the Housing Census. Alao included in the populetion figures are a few persone reportsd as residente of theee areae who were anumsratsd elsewhsre. Dete by wards are presentad in Table 2 for Oklahomn City, ths only eity having 100,000 Inhabitante or more that was reported by wards.

Similar announcemsnts are being mads for othsr States as the figuree becose availabis. Ths data herewh th prsesnted mey bs ohanged elightly when the finel tigures ars compiled.

${ }^{2}$ Tulsa, with a population of 142,157 in 1940 , was not reportad by wards.
${ }^{2}$ Mainiy vacant dweiling units held for absent houssholds, together with
a few dwelling units occupisd by nonresident households.

DIZPANTEATI OF COLIERCS
Burenu of the Coneva Weshington
(This relasae includes three new items not preasnted in the prelininery relasa of Saptarbar 30, namely, the number of vacent unita for sale or rent, the nuaber of unita in urban and rural oreas, end e cosperiaop of the number of dwelling units roturnad in 1940 with the number of fanilias in 1980. The revised count of all dwalling units in the State is larger than the praliminary field count-R60, 656 as compered with $248,545$. )

Director Willian Lane Austin, of tha Bureeu of the Canaus, Departmant of Connerca, today releoned figures raprosenting the raviaed count of dvaliling units in Nains from the Housing Census.

Of the 260,656 dwelling unith in Maine on April 1, 1940, 20,840 or 8.0 parcent ware vecant and for aale or rent (theae repreanting the oonmercielly signifieant vacanelea), Wbile 218,999 dmalling unita ware oceupiod by houaeholds anumerated in the Populetion Census ot thair usun placs of reaidanoe. The remaining group of 20,817 unita (repreamting roughly the remaindar of the undta ahom es vacent in the preliminary ralesaa) wae mada up for the most part of vacant units being held for abaant householda, though it included also a fow units tamporarily occupiad by ponresident households, that is, by households which reported that their homes were located elsentisre. Seasonnl ae wall es ordinary dimiling wite are inelulod in all of these figures.

Of the totel number of dwelling units in Mainn, 36,4 peroent wero loceted in urben plecea, that 18, in incorporated pleces having 2,500 inhabitants or more, and 63.6 percent were in mural sueas. Only 4.3 percent of the urban dveliling units ware vacent and for sale or rent as comparod with 10.1 percent of the sural dwelling unlts.

Dvelling units vecant and for sele or ront formed 2.2 percent of all durlling units in Augvata, and 8.1 percent in Portisund.

Tho numbar of oceupiad Awolling units roprosenta approximataly tha number of private bouseholds in the respective areas and may be comparad roughly with the number of mivate fantlias shown in the Cansug Reparta for 1980. Sueh a compariacn shova thet the number of privata houaaholds, increasad approximately 10.7 percent, as contrestad with the 6.2 percent increase in population botween 1930 and 1940. This is expleined by tha fact that the avarage size of family In Maina hes deoreased since 1980 , as it has throughat the country. The eversge number of persons per cooupied dwelling unit in 1940 was 3.87 for the Ststs, es compared with on averege population per femily of 4.03 in 1980 .

Housing and population dato for countiea and urban placss of 2,500 inhabitants or nore are given in Table 1. The population figuraa represent mainly the membsrs of the housaholds living in tho dwelling unita reported ea occupied, though they include alao persons reported es residents of thess areas who were living in institutions, hotala, camps, and other typea of dwellinga not covared by the Housing Census. Also incluted in tha populetion figurea ere A faw persons roported ae reaidents of thass areas who were anumerated eleewhare. Data for minor oivil divisions are presented in Tabla 2.

Similar amouncamenta ore belng made for other Stetea ss tha figures becone avallable. The data horewith presonted may ba changed allghtly wben tba fingl IIgurea are conpilad.

(This release includee throe new items not presonted in the preliminary release of October 19, namely, the number of vacant units for sale or rent, the number of unite in urben and rural areas, and the number of units in Milwakes by wards. The rovised count of all dweling units in the State ie larger than the preliminary field count-897, 608 as compared with 892,923.)

Dirsetor William Lene Austin, of the Bureau of the Census, Department of Commerce, today released figures representing the revised count of dwelling units in Fisconsin from the Housing Census.

Of the 897,608 dwelling unite in Wisconsin on April 1, 1940, 44,584 or 5.0 percent were vacant and for sale or rant (these rapresanting the comercially significant vacancies), while 827, 265 dwelling unite were occupied by households enumerated in the Population Cenaus at their usual place of reeidence. The ramaining group of 25,759 units (representing roughly the rasainder of the units shown ae vacant in the preinninary ralease) wos made up for the most part of vacant units being held for absent households, though it included also e few units temporsilly ocoupied by nonresident householda, that 13 , by households which repcrtsd thet their homes were located elsewhere. Seasonal ae well as ordinery dwelling units are included in all of these figures. Future announcemants will give the number of seasonel and ordinsry dwelling units in each vacancy group.

Of the total number of dwelling units in Wisconsin, 53.2 percent were located in urban places, that ie, in incorporeted places having 2,500 inhabitants or more; and 46.8 persent were in rural ereas. Only 2.6 percent of the urban dwelling units were vaoant and for sale or rant, as compared with 7.7 percent of the rurel divelling units.

Dwelling undts vacant and for salo or rent formed 8.2 percentof all dwelling units in Madison and 3.1 peroant in Milwaukes.

The number of occupied dwelling units represents epproximately the number of private householde in the respective areas and mey be compared roughly with the nuaber of private familiee shown in the Census Roporte for 1990. Such a comparieon shows that the number of private houeoholds Increased approximately 16.2 percent, ae contrasted with the 6.8 percent inorease in population betwean 1990 and 1940. This ie explained by the fact that the average aize of family in Wieconein has decreased coneiderably since 1990, as it has throughout the country. The averege number of persons in the populetion per oocupied dwelling unit in 1940 was 8.79 for the State, es ocmpared with an average population per family of 4.18 in 1980.

Housing and population data for counties and ineorporated places of 2,500 inhabitents or more are given in Table 1. The population figuree represent mainly the manbere of the housoholds living in the dwalling units reported as occupied, though they include also persons reported as residents of these aress who were living in institutions, hotels, comps, and other types of dwellings not covered by the Houaing Consus. Also included in the population figares are a fow persone reported as residents of these areas who were enunerated eleewhere. Data by wards are preeented in Table 2 for Milwakee, the only city having 100,000 Inhebitente or more.

Similar announcements are being made for other States as the figurea become erailable. The dete herewith presented eay be changed alightly whan the finel ifgures are compiled.

1 Whinly vacant dwelling units held for absent households, together with a fow dvellinc units occupied by nonreaident houeeholde.
787

TThie releaes ineludee three new itema not presented in the preliminary release of october 18, hemely, the number of vacant unite for eale or rent, the mumber of unite in urban and rural areas, and ths number of unite in Richmond by warde. The reviead count of all dwelling unite in the State io lerger than the prolinimary field countmu559,997 ae eompared with 659, 371.)

Director Villiam Lane fustin, of the Bureau of the Consus, Department of comeree, today relsased figurss repreeenting the revieed count of drolling unite in Virginia from the Housing Census,
or the 659,997 dwolling unite in Virginia on April 1, 1940, 26,581 or 4.0 percent wore vacant and for eals or rent (thees repreeenting the ocmmareially eignificant vacanciee), whila 627,659 dwelling unita wore ocoupled by households onumorated in the Population Censue at their rosuel place of reeidence. The remaining group of 5,957 unite (ropreeenting roughly the remainder of the unite ohom as vacant in the preliminary releaee) wae made up for the most part of vacant units being held for abeent households, though it included also a fow units teaporarily occupied by nonreeident housohalde, thet 1s, by householde which reported thet their howes were located eleswhers. Seteonal as woll ae ordinary dwalling unite are included in ell of these figures. Future announcements will give the nurber of eoaeonal and ordinary dwolling units in sach racancy group.
of the total number of dwelling unite in Virginia, 38.2 percent wart located in urban placee, that ie, in incorporeted plasee beving 2,500 inhabitente or more; and 61.8 peresnt wore in rural areas. Only 2.9 percent of the urben dwelling unite were vacant and for sale or rent, ee ocmpared with 4.7 percent of the rural dwelling units.

Drolling units vacant and for sele or rent fommed 2.7 pereent of all dwelling unite in Rdehmond and 3.0 peresnt in Norfolk.

The number of occupied dwelling units represente apprarimately the number of private householde in the reapective areae and may be compared roughly with the number of private familiee shown in the Censue Roporte for 1930. Such a oomparison shows thet the number of private householde increased approximately 18.6 percent as contreeted with the 10.6 percent increase in population betweon 1980 and 1940. Thie ie explained by the fact that the average oize of femily in Virginia hae decreaeed conalderably eince 1980, as it has throughout the country. The avarage numbar of persone in the population par oocupied dwelling unit in 1940 was 4.27 for the State nil compared withan average population per family of 4.58 in 1930.

Houaing and population data for countiee, independent eitiee, and urban places of 2,500 inhebitanta or more are given in Table 1 . The population ilguree represent mainly the membere of the householde living in the dwolling unite reported as occupied, though they include aleo paraone reported es reoidents of theae areae who woro iiving in institutions, hotole, camps, and other typeo of dwellings not covered by the Housing Cansue. Nleo included in the population figuree are a fow pereons reported ao reeldonte of theee areae who were enumerated sleentere. Date by warde aro presanted in Table 2 for Rickmond, the only eity having 100,000 inhabitants or more thet wee reported by warde.

Similar ennounconents are being made for other States ae the figurea becone available. The dats herewith presented nay be ohenged alightly when the final figures are compiled.

TABLZ 1. COCUPTED AND VACANT DKELETNG UNTIS IN VIRGITIA: 1940

[^14](This release includes thres new itens not preeented in the prsilminary relseee of September 18 , namely, the number of vacant units for sale or rent, the number of units in urban and rural areas, and the number of units in Jacksonville by wards. The revieed count of all dwelling units in the State is lerger than the prelininary field count- 590,910 as compared with $589,307$. )

Director trilliam Lane nustin, of the Bureau of the Census, Departwent of Comerce, today released figures repreeenting tha revissd count of dwelling units in Florida from the Housing Census.
of the 590,910 dwelling units in Florida on April 1, 1940, 52,580 or 8.9 percent were vecant and for sale or rent (thess representing ths comnercially aignificant vecancies), while 520,135 dwelling unite were occupied by houeeholds enumerated in the Fopulation Census at their usual place of reeidence. The remaining group of 18,245 units (representing roughiy the remainder of the unite shown ae vacant in ths preliminery release) wes made up for the most part of vacant units bsing held for absent households, though it included also a few units temporarily occupied by nonresident houeeholds, that is, by households which reported that their hones were located eleewherc. Ssasoral se well as ordinary dwelling units are included in all of these figurea. Futurs announcements will give the number of seasmonl and ordinary dwelling unite in each vecancy group.
of the total number of dvellinc units in Florida, 57.1 percent were located in urban places, that is, in incorporeted places having 2,500 inhabitants or mors; and 42.9 percent were in rurel areas. of the urban dwelling units 9.4 percent were vacant and for sale or rent, as compared with 8.2 percent of the rural dwelling unite.

Dwelling units vacant and for sale or rent formed 3.2 percent of all dwelling units in Jackconville and 10.5 percent in Liani, the eitiee with the largest populations in the Jtate.

The number of ocoupied dwelling unite represente approximately the number of private householde in the respective areas and may be comparsd roughly with the number of private families shown in the Cansus Reports for 1930. Such a comparison shows that the number of privete households increased approzinately 38.2 percent, as contrasted with the 29.2 percent increase in population between 1930 and 1940. Thic is expleined by the fact that the average sizs of farily in Florida has decreaeed since 1980, se it hae throughout the country. The average number of persons in the population per occupied dwelling unit in 1940 was 3.65 for the State, as compared with en average population per family of 3.90 in 1930 .

Housing and population data for countiea and incorporated places of 2,500 inhabitants or more are given in Table 1 . The population figures represent mainly ths members of the households living in the dwelling units reported ae occupled, though they includs also pereons reported as reeidents of these areas who were living in inetitutione, hotels, campe, and other typee of dwellings not covered by the Housing Ceneus. Also included in the population figures are a few pereons reported es reeidente of these arees who were enumerated sisewhers. Data by wards are presented in Table 2 for Jacksonville, the only city having 100,000 inhabitants or more that was reported by wards.

Similer announcements are being made for other States as the figures become availeble. The data herewith preeented may be changed slightly when the final figuree are compiled.

[^16](This release inclutiee thres new items not presented in the preliminary release of september 87 , namely, the number of ofiont fitt for sale or rant, the number of unite in urben and rural srose, end the number of unite in Kansae City and St. Louli by warde. The ravieod goint of sil dwolling unite is the State is larger than the proliminary flald count-1, 140, 729 ae oompared with $1,136,904$.

Director Ifilliem Lane Aletin, of the Buresu of the Conoue, Departront of Commarce, today ralassed figurse reprassnting the reviasd count of dwelling unito in 14 sasourl from the Housing Census.
of the $1,140,729$ dwelling unite in Menour 1 on April 1, 1940, 61,260 or 5.4 porcant, wers vecent and for sale or rent (these reproeanting the comnorcially elgnificent vacancieo), while $1,068,811$ dwalling unite were occupled by houssholde enunoreted in the population Csnsus at their ueusl plaes of residance. The remaining group of 10,658 unite (representing roughly the romainder of the unito abown ae vacant in the preliminary releaso) wno nads up for the noot pert of vacant units boing held for abeent householdo, though it included alao a ferm unite temporerily occupisd by nonrosidant houssholde, that is, by houeoholde whioh reportsd that their honee ware located elembere. Sbssonal as woll as ondinary dwelling unito ere included in all of thess figuree.
of the total number of dwolling unite in Mivsour 1, 53.4 poreant wore located in urban placse, that 10, in inoorporated placse having 2,500 inhabitante or moro; end 46,6 porcent wore in rural arsse. Of the urban dwelling unite, 5.7 percent ware vacant and for ssle or rent, is ecmpared with 5.0 percent of the rural dwalling unite.

Dwelling units vaeant and for eale or rent formed 3.9 paroant of all dwalling unite in Jefforeon City and 6.5 peroant in 5 t, Louio.

The number of oosupied dralling units roprosento upproximately the number of private householde in the reapective areas sud may be compared raughly with the nuaber of private fanllise ehown in the Censue heporte for 1930. Such a couperison thowe that ths number of privato households inaressad approximetsiy 13.8 pesesat, as contreated with the 4.3 percent inerease in populetion bstwasa 1990 and 1940. Thie ie explained by the fact that the averegs ofes of fansiy in weocuri has decreseod aonsidstably since 1930, as it hes throughout the country. The avarege nurber of pareone in the pogulation par ocoupisd dwailing unit in 1940 wes 3,54 for the 8tate se compared with on averege population per femily of 3.86 in 1930.

Houeing and population date for countise and incorporated placee of 2,500 1nbabitante ox more are givan in Table 1. The population figuree represent mainly the senbsre of the houssholds living in the dwelling unite raportod as occupisd, though thay inolude aleo pereons reported ae reeldente or thest arene who were living in institutions, hotale, aempe, and othar typee of dwallinga not covered by the Houelig Conous. Aleo Included in tha population figuree ars of fow percons reported to reoldents of thsoa areas who ware enusareted slaswhare. Date by warde are pressntad in rable 2 for Kansee City and St, Loule, tha only citiee having 100,000 inhabitante or more.

Bimilar annoumcemants are bsing mads for other States se tho figureo becone available. Tho data hererith preeanted may be changed slightly whan tha final figure sie complied.

${ }^{1}$ Mainly vacant dwelling units held for absent households, together with a fev dwelling units occupied by nonresident households.
2 These figures appeared in the release presenting Summary Population and Housing figures for urban places having 10,000 inhabitants or more (Series FH-3, No. 3) and in the Michigen release of revised housing figures (Series H-2, No. 37*).

The above corrections do not affect the figures for the counties or the State totals. Although the population figures are finsl, the housing figures are subject to the possibility of slight revision when final tabulations are complete.
 the numbor of unite in urben and rural arene, and the nuiber of units in Dotreit, Filint, and Grend Rapi

Dirsetar William Lane Austin, of the Burseu of the Cenous, Dopartivent of Connerce, today released figuree repreventing the revieed oount of dwelling unite in litchlignin from the Housing Cencua.
or the $1,519,625$ drolising unito in Mehigan or April 1, $1940,76,716$ or 5.0 percent mare recant and for selle or rent fthee roproconting the carmeroinlly eignifrenit vecensieo), Wille $1,396,206$ drolling unite were oocupied by bousoholde enunereted in the Population Coneus of thoir uaval plece of realdence. The ranaining group of 46,703 unite (repreesanting roughly the renainder of the unite ahown as vicant in the pralininary reivese) wae made up for the nost par uite temporerily oocupied by nonresident hounsholde, that 1s, by houpoholde which roported thet tha1r bomes wire looeted eleswhere. Seasonal as will as ordinary divelling unito are inboluded in all of theee figures. Future amounceanente Fill give the minber of

Of the total number of dvelling unite in Liohigan, 65,9 peroont were locnted in urben pleces, that is, in ineorporeted ploces baring 2,500 inhabiteate or zore; and 37,1 percent wore in rural areas. Only 3.3 percent of the urben drelling unite wers vacant and foc sele or rent, as ocompared with 8.2 percent of the sural dwolling unita.

Drolling unite vaoant and for sale or rent formed 3.5 percent of all dwelling umito in Dotroit, the largaet oity, and 0.6 percent in Ironmod, the eity of 10,000 imhebitants or more with the loveat veonncy ratio in the 3tate.

The number of occupied dwolling units repreanate opproximately the number of private households in the respectivc ereas end nay be ecoupared roughiy with the munber of private ferilise obown in the Censue geporte for 1sso. Such a comparison showo that the number of private housabolds inareased approximitaly 18.3 parcent, so contracted with the 8.5 percent incisaen in population batwan 1850 and 1940. This is explained by the faot that the everage dize of fandly in Kichigan hes decreneed considerably olnce 1950, as it has throughout the country. The ararage number of parsons in the population par cooupied dwelling unit in 1940 wie 3.76 for the State as comparod with an average population per fanily of 4.10 in 1930.

Hovaing and popuintion dota for countioe and Incorporated places of $2,500 \mathrm{in}$ habitante or more ere gival in Table 1. The populetion figurce repreevit mainily the membere of the householde living in the dwelling units reported os oecupied, thowgh they inolude aloo poraons roported ae rosidente of thase areae who ware living in institutions, hotala, canpe, and othar typee of dwellings not coverod by the Bousing Census. Also inoluded in the population figuree are a form portocs reported as residente of these arese who wore anumbrated olsembars. Data by mardo are presented in Table 3 for the following oitias heving 100,000 inhabitante or more: Detroit, Flint, and arand Rapide.

Sirilar announcomente are boing ande for other Statee ae the figures becous avelleble. The data herowith presented rasy be changed olightly when the final fleurse are eomplied.

${ }^{1}$ Mainly vacant dwelling units held for absent households, together with a few dwelling units occupied by nonresident households.
2 These figures appeared in the release presenting Summary Population and Housing figures for urban places having 10,000 inhabitants or more (Series FH-3, No. 3) and in the Michigan release of revised housing figures (Series H-2, No. 37*).

The above corrections do not affect the figures for the counties or the State totals. Although the population figures-are final, the housing figures are subject to the possibility of slight revision when final tabulations are complete.
$\square$

HOUSING UNITS IMOREGON: 1940

## R 8 Ties Tigurs

(This release ineludse thrse new items not proeanted in the praliminary releasa of September 2s, namoly, the number of vaesint units for asle or rant, the number or unite in urban and rural areas, and a eomparison or the numbor of divelling units returned in 1940 with the number of familise in 19s0. The revisse count of all droling unite in the State is larger than the prediminary fisld count-=369,923 ae eompared with 367,435 .)
ilreotor illliam Lane dustin, of the Buretu of the Census, Department of Comerce, today roleaeed figuree repreeenting the revieed sount of drelling units in Oregon, from ths Housing Census.
of the 369,948 dwelifing unite in Oregon on April 1; 1940, 25,263 or 6.8 percant were vacant and for sale or rant (thees representing the conmercielly eignificant vacencie0), while 387,731 dwelling unito mare occupied by housoholds enumerated in the Population Copsus at their usual plaee of reeidence. The remaining eroup of 6,929 units (repreeonting roughly the remaindsr of the unite shown ae vacant in the preliminary releaes) wae mads up for the moet part of vacant units being hold for abeent housenolds, though it ineluded also a fow units temporarily occupled by nonreeldent householde, that is, by householde whioh reported thet their homes were located slaerhere. Seasonal to well te ordinary awelling unito are includod in all or these figures.

Of the total number of awelling units in uregon, 49.8 percent were loeated in urban places, that 15, in incorporated places having 2,500 Inhabitante or more, and 50.2 percent ware in rural areae. Only b.6 percent or the urban drelling unite ware vacant and for sale or rent, as compared with 8.1 percsint of the rural divelling unite.

Uwalling units racent and for sale or rent rormad 5.2 percent or all dwolling units in Salem, and 5.8 percent in Portland.

The number of ocoupied dwelling unite represento approximately the numbar of private households in the reepective arese and may be compared roughiy with the number of private fandiliss shown in the Census Reporte for. 1930. Such a comparison ahows that tho number of private householde inereased approximately 26.8 persent, as oontreeted with the 14.2 percent increase in popalation between 1950 and 1940. Thie ie oxplained by ths fact that the average oize of family in uregon hae dooreaeed coneidarably sinoe 1930, as it has throughont the oountry. The avarage number or persons per occupied dweliling unit in $1 y 40$ mae 3 , $2 s$ for the State, ae compared with an average population per ramily of 3.58 in 1930.

Housing and population data for eountiss and incorporated places of 2,500 inhabitante or more are given in tine rollowing taole. The population figureo repreeent mainly the mombere or the householde living in ths drelling unite reported ao occupied, though they include atso pereons reported $8 e$ reeldenta of theen arbee who were L2ving in institutions, hotels, eamps, and other typee of dwellings not corered by the Hoveing Census. Aloo inciuded in the popusation ngguree are a for persons reported ae reoidenta or these areae who wore enumerated elsewhere. Portland, the only aity heving 100,000 inhaitante or more, wae not reported by werde.

Similar announeemente are being made for other States at the riguree beecme availabla. The data horeurith proeented may be changed elightly when the final figures are oompiled.

OCCUPIED ANI VACANT DWISLITG UNITS IN OREGON: 1940

[^18]Direotor William Lane Austin, of the Bureeu of the Ceraue, Deperinent of Corpnerce, todey releened figures representing the revised, count or dwalling units in New Jorsey from the Housing Census.

Of the $1,224,229$ divelling unite in New Jereey on Apy11 1, 1940, 86,273 or 7.0 peroent were vacent and ror eale or rent (thene representing the coumeraielly enumeroted in the Population Census of thair ueuni plage of reoldsuen. The regaining group of 87.871 units (representing roughly the rensinder of the unite hhown se veanat in the prelteaniry release) was rinde ip for the most part of weoant unite being haid for ebsent housebolde, though it inoluded also fow unite tenporarily acoupied by monresident houseboles, that $1 e$, by househole ehich roported thet their bense were looated elmewhers. Seesconl to well at ordinary drelling unite are inoluded in $a 11$ of these figures. Future amounoamente will give the zumber or esanonel sod ordizary dwelling units in seoh vacuncy group.
of the total number of dwelling unite in New Jeresy, 78,6 peroent were loonted in urban places, that 10 , in incorporated pleose hoving 2,500 inhabitante or more; and 24.4 percent wore in sural aroas. Only 5,8 porceat of the urbas dweliing units were vacant and for bele or rent, es ocapered whith 11.7 peroent of the rurel dweliling unite.

Duelling unite vacent and for sale or rent formed 5.9 percent of all avelling unite in Jorecy City and 3,8 percent in Mewerk, the two ofties unth the lsrgest papaletion in the Stete.

The number of oooupisd dwelling unite reproesnte approximately the number of private hoasabolds in the raspoctive areas and nay be ocapared roughly with the mumber of private fesiliee shom in the Centul Reporte for 1980. Buoh a oumparison sbows thet the number of private houssholde inoreared approxisately 11.7 percest, es contrested with the 2,9 percent increase in population batween 1930 and 1940 , This is explained by the fact that the average size of remily in New Jereyy hee decreased elace 1980, ae it has throughout the eountry. The everege number of persons in the popolation per eocupied dwelling unit in 1940 wee 3.78 for the State es oompered fith en evarage population per fenily of 4.10 in 2950.

Howeing and population data for oountioe and urben places of 2,800 inhabitente or more aro givan in Table 1. The population figures regreseat maloly the maberse of the householde Ifring in the dwelling unite reported ao oooupied, though they include also persono reported as residents of theee areas who wore living in institutions, hotela, empe, and other typee of dwellinga not oovered by the Bouning. Census, Also inoluded in the population figures ere a fem pereons reported as residente of these arees who wre emunareted slsentere. Dats by werds are presented in Teble $\%$, for the following oftiet hoving 100,000 inhabitante or more: Camden, Elisabeth, Jazeey 01ty, Memazk, Pateracn, and Trention,

Sinilar anncunomente are being made for other Statee ss the figures beoome avallable. The date herowlth preoented nay be ohanged eltghtly when the final figaree are oanpiled.

Diroctor Milliam Iame Austin, of tho Bureeu of the Census, Department of Commorce, todey releaeed riguree ropreeenting the reviged count of dwolling unite in Mresechusettis fron the Housing Cenaus.
or the $1,221,022$ dwelling units in Wasachuastio on April 1, 1940, 68,08s or 5.6 peroont were vacent and for ealo or rent (thsee represanting this ooxueralally eignificont vacanoies), whils $1,120,524$ dwelling unite were occupied by households enunereted in the Populetion Ceneus of their uanal place of realdencs. The remaining group of 32,415 units (repreesiting roughly ths remainder of the units shom ao vacant in the preliminery releess) was made up for tho nost part of vacant unita being held for absent households, though it inclided aleo few units temporerily ocoupled by nonreoident housoholde that is by housebolde which reported that thoir howee were located alsewhars. Soseonel oe mell at ondinary dwelling units ore ineluded in 511 of these figures. Future announcsHenta will giva the number of sessonel end ordinary dwelling unite in poch vaasncy group.
or the totel nueber of dwelling units in Masenchusetts, 86.7 peroent ware located in urban placee, thet 10, in incorporated plecee having 2,500 inhabitante or more; and 13.3 percent were in rursi areos. Omly 4,8 percent of the urban dwelling unito wers vecont and for sale or rent, 46 compsored with 12.8 percent of the rural awelling unite.

Dwelling unite vacant end for sela or rent formed 6.4 peroent of all dwellIng unita in Booton and 2.1 porcent in Worceeter, the two eities with the largoot populetion in the Stete.

Tho number of oceupied dwelling unite represents approxinatsiy the number of private housobolde in the reapoctive arees and may ha compered roughly with the number of privets framiliee Ehom in the Cansuo. Fiports for 1980. Such a conparison show that the number of private houeoholde increeesd epprorinately 9.7 percant, oo contraated with the 2.6 percent incresee in population hatwean 1980 and 1940. Thio io oxplained hy the flet that the averege aizo of family in Masschusetts bee decreaeed considerahly sinee 1990, as it hee throughout the country. Thi evarege number of porsone in the population por occupied dwelling
 fertly of 4.16 in 1930 .

Housing and population date for countiee end urben placea of 2,500 inhahitante or more ore given in Table 1. The population figurso represent mainly the menbere of boueaholds ilving in the dwelling unite reported as occupied, though they inalude nloo porsone reported as raeidente of theee aroes who were iving in inatitutions, hotoly, cempa, and othor types of dwellings not covered by the Housing Genaus. Also included in the population figuree are e few peraons reported es residents of these areae who were anureretad aleowhere. Deto by warde are prosented in Tehle $\&$ for the following citiee heying 100,000 inbabitants or more: Booton, Cambridge, Fall River, Lowall, New Bedrord, Somervills, Springfield, end Woroseter. Dete hy oities end towne are prosentod in Tahle 3.

Sinilar amouncamnito are being made for other Stated as the figurao besone oveilable. The data herewith proeontad may be changed slightly whon tho final
figuree are complied.

TABLE 1. OCCUPISD AND FACANTT DWEIJIMN UAITS IM MSGACHUSETS: 1940

[^19]Director Fillliam Lane austin, of the Buresu of the Census, Departanent of Comaree, todsy releneed figures ropreeenting the revised oount of dwelling unite in ohio from the Housing Conaus.

Of the 1,978,575 dwelling unite in Ohio on hpril 1, 1940, 64,319 or 3. 3 percent were vecant and for sele or rent (these repreesiting the cormercialIf eifeificant veomnoies), thile $1,898,212$ dwelling unite were ocoupled by housebolite enumersted in the Population Censua at thair usual plece of residence. The remsining group of 16,144 unsts (representing roughly the rerieinder of the units shown as veount in the proliminary releese) wee mode up for the most part of racent units being held for ahaent households, though it inoluded also ofem unite tenporarily occupied by nonreeldent householes, that 18, by houeeholds whoh reported thet their homes were located eleenhere. Sepsonel as woll as ordinery dwolline units are inoluded in ell of these figures. Puture announcements will give the number of seesonel and ordinary dwolling unita in each veoency eroup.

Of the total nunber of dwelling unite in Ohio, 67.8 percent were loosted In urhan pleces, that is, in incorporated plecee having 2,500 inhebitente or rore; and 38.7 porount wore in rural orve. Only 2.9 pereont of the urbas Arelilue units wore vecant and for sale or rant as compered with 4.1 percent of the rural dwelling unite.

Drelling unite vacant and for ools or rent formed 3.1 percent of all dwelling units in Colurbus and 2,9 parcent in Cleveland.

The munbar of occupied dwolling units repreoente opproximately the murber of privete houeeholide in the respective arean and may be compared roughly -1th the number of privete feniliee shom in the Cenmus Reporte for 1930, Such a comparison ahowe thet tho numher of privete households increased approximately 11,8 percent, as contrasted with the 3.9 percent increaes in populetion between 1930 end 1940. This is explained by the feot that the average size of farily in Ohic hat deoressed aince 1930 , es it hae throughout the country. The average number of persons in the populetion per ocoupied dwolling unit in 1940 vea 3,64 for the Btate oe courpered with an everage populetion per family of 3.91 in 1990.

Housing end populetion dste for countioe and incorporeted pleces of 2,500 inhabitante or more art givec in Tobls 1. The population figuree represent molnly the membsrs of the householde living in the dwelling units reported as oocupisd, though they inolude also persons reported ss reaidents of these arees whowere living in ingtitutione, hotels, cemps, and other tgpee of dvellinge not oovered by the Housing Gensue, hiso included in the popviation figures are a few parsons reported es resifiente of theoe areas who wers anurereted eleenhere. Date hy wards are preeented in Tokle 2 for the following eitieo hoving 100,000 inhabitants or more: Akron, Canton, Cincinnati, Cleveland, Colvabue, Deyton, Toledo, and Youngotown.

Similar ansouncemente are being mede for other Stetos oe the flgureo becone ovailable. The data harealth preeented may he chenged aligitly when the final figuree are comptled.

${ }^{2}$ Mainly vecant drelling units held for ebannt houssholds, togsther with a few dwelling units ofcupied by nonreeldent housoholds.
(This reloces includea three new itors not presented in tha prelininary releses of ootober 17, namely, the numbar of veaant unite for sale or rent, the number of unite in urban and rurel areas, and the number of unite in Fort Wayne, Gary, Indianapolie, and South Bend by wards. The revised count of all dwolling unite in the State is larger than the preliminary fleld count -1 , 005, 995 eae compared with 1,002, 874.)

Director Nilicen Lane Austin, of the Bureau of the Cengus, Departmont of Cormeroe, today released. rigureo repreeenting the revised count of dwelling unite in Indiana from the Housing Cansue.

Of the $1,005,995$ dwelling unite in Indiana on April 1, 1940, 90,785 or 3.1 peroant, riare vacant and for onle or ront (theoe rapresenting the cogmeroially elgnificant vacanoies), while 961,500 dwelling unite were occupled by houeeholde onunoreted in the Population Censue at their umal place of reoidence. The remaining spoup of 18,710 unite (repreeenting roughly the rumainder of the units ohown oo vacant in the pralinianary release) wae mede up for the moot part of racant unite being held for absent houesholde, though it included slso a fow unite temporerily occupied by nonreeident houneholde, that 18 , by houeeholde whioh reported that thoir homse were located slsewharo. Seaeonel as woll ao ordinary dwelling units are included in all of theee figuree. Future ennouncemente will give the numbsr of eaesonsl ond ordinary dwolling units in each vaceacy group.

Of the total number of awelling unite in Indiena, 55.2 percent were 10 coted in urban placee, that io, in incorporeted placee baving 2,500 inhebitante or more; and 44.8 porcent wore in rural areae. Only 2.3 parcont of the urban dvelling units were vecant and for eale or rent, as compared with 4.0 peroent oi the rural dwelling units.

Divelling unite vacant end for sale or rent formad 3.6 percent of all awelling unite in Indianapolio and 2.4 percont in Fort Wayne.

The number of occupied dwolling unite representa approximately ths number of private householde in the reepeotive areas and may be sompared roughly With the number of private Samilioo ohown in the Consue Reporte for 1980. Such a comparison ahowe that the number of private householde ingreased epproximetely 14.0 percent, se contreeted with the 5.8 percont incroase in population betwoen 1990 and 1940. Thie 10 explained by the fact thet the avarage sizs of family in Indapa hae dacreased elnce 1930, ae it hee throughout the sountry. The average number of persons in the population per oocupled dwolling unit in 1940 wae 3.57 for the Steta as corpared with an average population per femily or 3.84 in 1930.

Houeing and population data for countias and inoorporeted pleces of 2,500 inbabitante or nore are given in Table 1. The population figuree reprosent mainly the mestere of the houeebolds living in the dwolling units reported as occuplad, though they inolude also poreons reported as reaidents of these areae who were living in institutione, hotale, canps, and other typee of drellinge not sovered by the Fousing Census. Also incluted in the population figuree are a few persons reported as reeidente of these areae who were enumpreted elseuhere. Date by warde are preeented in Table 2.for the following efties having 100,000 inhebitants or more: Fort Iayne, Gary, Indianapolie, and south Bond.

Sirilar announcemento are being made for other Statee ae the risures become available. Tho date herevith prasented may be changed slightly when the Pinal ilgurea ase compiled.

[^21]Director William Lane sustin, of the Bureau of the Census, Department of Comneres, todey reloased figuree regrosenting the reviosd oount of dwelling units in Georgis from the Housing Gensus.
of ths 796,780 dwelling units ingeorgia on April 1, 1940, 41,071 or 5.2 percent wera vacent and for sale or ront (thees reprssenting tha courperoially significent pecameles), 仙ile 752,286 dwoling unite wers oceupied hy households enumeretod in the Popalation Ceneus it their usul place of reaidence. The remaining group of 8,423 units (repsesanting roughly this remaivder of the unite shown es veeant in the prelinizary relenss) thas made up for the moet gert of vecant unita haing held for ahsont housaholds, though it included also a few unita tempararily ocupied by noureaident housholds, that 13 , hy households whteh reported thet their homen wore located alsenhare. Sesacnal as woll ea ordinngy dwelling units arg ineluded in all of these figures. Future announeements aill give ths aumbir of seesomal and ordinary dwelling unite in soch vaeancy group.
of the total numbry of dwelling unite in deorgia, 37.2 peroant wers loceted in urban plaoes, that is, in ipeorpossted plaess heving 2,500 inhahitents or more, and 62.8 percent were in rural arase. Only 2.4 pereent of the urbse dvelling umite were vacont and for sals or reat, es compered with 6.8 pertent of the rurel dwelling waits.

Deelling unite vacant and for male or rant formed 3.1 percent of all dwalling imits in itlante and 3.0 percent in Sarannah.

The nubber of cocupied dwelling unite reprsesnts approximatsly the number of private housabolds in the reapective areas and may be conpared roughly with tha number of puivsts fanilise shown in the Censua Reports for 1980. Sueh a ecmporison showe that the number of privats householde incressed epproxirats 2 y 15.2 per eent as oontrasted with the 7.4 percent ineroast in population hstween 1980 and 1940. This is expleined hy the fect that the swerage sive of fansly in 0eorgie has decreased considerehly sines 1930 , as it has throughout the country. The aver age number of parsons in the population per occupisd drelling vait in 1940 was 4.15 for the stati, as empared with an average population par frenly of 4.46 in 1980.

Housing and population dota for oauntias and urban pleass of 2,500 inhahitante or move ars given in Tahls 1 . The population Ifgures represent nainly the memher of the houssholds living in the dwelling units reportsdee oecupisd, thouch thay includa also persons roportad as ruadents of thess arsas who tive Ining fa iostitutians, hotsle, campe, end othar types of dwallinge not covered hy the Bousing Gmaus. Also ineludsd in the populetion figures are a fer pertons reportsd as residents of these areas aho wore anuperatad elsombere. Dete by werde are prasentsd in Tahle 2 for Atlanta, the only eity havizg 100,000 inhehtteats or aores.

Sinilar ancoincanents ars hsing mads for other Statas as the figuras becose figures ere ecopiled.

a clessified es urban under speofol rule.

2 yainly vacent dwelling units hold for sboant houeobolds, togethor with of five dilinc unite occupled by nonresident households.
(Thie relesee inoludee three now iteme not presented in the preliminary relouee of Novemhnr 12, nemely, the numer or veoant unite for sale or rant, the numher of unt to in urben end rural araee, and the nuwher of unite in Albany, Duffalo, Booheoter, Syracuee, Utioa, end Yonkere by warde, and Now York City by boroughe and easemhly dietricte. The revised count of all diveliling unite in the state is larger then the prelininery f1eld count--4,033,540 as compared with 4,080,448.)

Dineotor W1111en Lane Nuetin, of the Furean of the Censue, Depertivent of Coraserce, todey released figuree representing the revieed oount of drelling unite in Nent York fron the Houeing Censue.

05 the $4,083,540$ dwelling units in New York on April $1,1940,894,879$ or 9.3 peraent were veoent and for tale or rent (these reprosenting the commoraielly olgniflcent vecmoies), while $3,668,618$ dwalling units were oooupied by householde enumerated in the Population Conse et their ueuel plece of residence, The remaining group of 76,043 unite (representing roughly the remainder of the mite ohown ae vecent in the prelininary release) was made up for the moet pert of vacant unite being held for absant householde, though it inoluded sleo a few unite temporarily oocupied by nonresident householde, that ie, hy houeebolde whioh reported that their hones were loceted elswwhers. Seasonal ae well ae orifnary dwelling unite are included in all of thees figures. Future monounceante will give the number of evesonsl and ordinary dwelling units in sech veoancy group. Dwelling unita that were vacant, uninhabitable, end heyond repeir wore not inoluded in the Houeing Censue. The figuree do include vecent dwelling unite thet were uninhobiteble et the time of the saumeration, but which were not beyond repair.

Of the total number of dwollisg unite in New York, 81.3 peroent were locsted in urban pleces, that 10, in incorporated places having 8,500 inhebitante or more; and 18.7 percent ware in rurel areas. OnIy 6.4 peroont of the urhan dwelling unite were vacant and for eele or rent, as compered with 11.1 percent of the rural dwelling units.

Drelling units vacant and for oale or rent formed 7.3 percent of all dwell-
ing unito in Mew York City and 3.4 percent in Butlalo, the two aitiee with the lergeet population in the Stete.

The mmener of ocoupind dwolling unite repreeente approxinstely the number of privata houenholde in the reepective areae and mey be oompared roughly with the number of privete fantlies ohown in the Cenme Reporta for 1930. Suoh a compari ion showe that the aumber of private houeeholde inoresaed epproximately 16,2 peroent, ss contraetad with the 7.1 perennt inarease in population between 1980 and 1940. Thie ie explained hy the faot that the average alze of fenily in Nev Yorit heo decreased conelderably eince 1930, as it hae throughout the oountry, The ererage number of parsone in the population per occupiod dwelling unit in 1940 was 3.68 for the state of compered with an average population per femily of 3.99 in 1980.

Pousing and populetion date for countien and urhen place of 8,500 inhehitents or more are given in Tahle 1. The populetion figurea repreeent meinly the memhere of the householde living in the dwelling unite reportsd ee oocupied, though they inolude olwo persons raported ae reeldente of thees areas who were ilving in inetitutione; hotele, oanpe, and other types of dwellinge not oovered by the Howoing Censue. Also inoluded in the populetion figures are ofer persons reported se reoldente of theed areas who ware onumerated elvewhere. Date by warde are pretented in Tehle 2, for the following eities having 100,000 inhsidtante or morei Alhany, Buffelo, Rooheoter, Syraouse, Utice, and Yonkers; and by boroughe and aseembly Aletriete in Nen York City.

Sinilar Announcoments are being maie for othor Stetee as the figuree beoome svellehle. Tha deta horowith preeated may be olenged alightly when the final Ilguret are compiled.

# HOUSING UNITS IN THE DISTRICT OF COLUMBIA: 1940 <br> Revised Figures 

(This release includes two new items for the District of Columbia not presented in the preliminary release of October 5, namely, the number of vacant units for sale or rent, and a comparison of the number of dwelling units returned in 1940 with the number of families in 1930. The revised count of all dwelling units in the District of Columbia is larger than the preliminary field count--185,393 as compared with 182,078.)

Director William Lane Austin, of the Bureau of the Census, Department of Commerce, today released figures representing the revised count of dwelling units in the Distriot of Columbia from the Housing Census.

Of the 185,393 dwelling units in the District of Columbia on April 1, 1940, 9,999 or 5.4 percent were vacant and for sale or rent (these representing the camercially significant vacancies), while 173,709 dwelling units were occupied by households enumerated in the Population Census at their usual place of residence. The remaining group of 1,685 units (representing roughly the remainder of the units shown as vacant in the preliminary release) was made up for the most part of vacant units being held for absent households, though it included also a few units temporarily occupied by nonresident households, that is, by households which reported that their homes were located elsewhere. Seasonal as well as ordinary dwelling units are included in all of these figures.

The number of occupied dwelling units represents approximately the number of private households in e area and may be compared roughly with the number of private families shown in the Census Reports or 1930. Such a comparison shows that the number of private households increased approximately 38.4 percent, as contrasted with the 36.2 percent increase in population between 1930 and 1940 . This is explained by the fact that the average size of family in the District of Columbia has decreased since 1930, as it has throughout the country. The average number of persons per occupied dwelling unit in 1940 was 3.82 for the District of Columbia, as compared with an average population per family of 3.88 in 1930.

Housing and population data for the District of Columbia are given in Table l. Data by police precincts are presented in Table 2. The population figures represent mainly the members of the households living in the dwelling units reported as occupied, though they include also persons reported as residents of this area who were living in institutions, hotels, camps, and other types of dwellings not covered by the Housing Census. Also included in the population figures are a few persons reported as residents of this area who were enumerated elsewhere.

Similar announcements are being made for the various States as the figures become available. The data herewith presented may be changed slightly when the final figures are compiled.

TABLE 1. OCCUPIED AND VACANT DNELLING UNITS IN THE DISTRICT OF COLUMBIA: 1940

| Area | Number of dwelling units |  |  |  |  | Population |

${ }^{1}$ Mainly vacent dwelling units held for absent households, together with a few dwelling units oceupied by nonresident households.

## R日vised Figures

(This release includee three new itams not presented in the prelininary release of November 12, namely, the numbar of vacant unite for sale or rent, the nuaber of units in urban and rural orese, and the number of unite in Fort Worth by warde. The revised count of all dwelling units in the Stats ie larger then the preliminery field count- $-1,805,466$ as compared with $1,800,570$.)

Director William Lane Austin, of ths Bureau of the Consus, Department of Commerce, today released figures repreeanting the revissd count of dwelling units in Texee, from the Housing Csneus.
or the 1, 205,466 dwelling unite in Texae on April 1, 1940, 111, 82e6 or 6.2 percent wore vacant and for eale or rant (theee reprasenting the commercially eignificant racanoiee), while $1,678,674$ dwelling unite were occupled by houeeholde enumeratad in the Population Census at their usual place of reeidence. The remaining group of 14,966 unite (repreaanting roughly the remainder of the units shown ae vacent in the preliminary release) was made up for the most pert of vacant unite baing held for aboent householde, though it included also a few unite temporarily occupied by nonreaident houeeholde, that is, by houeeholde which reported that their homee were located eleewhers. Seasonal as well as ordinary dwelling unite are included in all of theee figuree.
or the total nuaber of dwelling unite in Texae, 46.9 percent were located in urben places, that ie, in incorporeted places having 2,500 inhabitante or nore; and 53.1 percent were in rurel areae. Only 4.8 percent of the urban drelling unite wers vacant and for eale or rent, as compared with 7.4 percent of the rural dwelling unite.

Dwelling unite vacent and for exle or rent formed 5.9 percent of all dwelling unite in Dallae and 5.0 percent in Houston, the two eitiee with the largeet population in the State.

The number of occupied dwelling unita represente approximately ths number of private households in the respective arese and may be compared roughly with the number of private familiee shown in the Censue Reporte for 1930. Such a comparieon ehowa that the number of private houeeholde increseed approximately 21.6 percent, as contracted with the 10.1 percent increase in population between 1980 and 1940. This is explained by the fact that the average size of family in Texas has dacreased considerebly eince 1930 , as it has throughout the country. The average number of persons in the population per occupied dwelling unit in 1940 wae 3.82 for the State, as compared with an averege population per family of $4+28$ in 1980.

Housing and population data for countiea and incorporeted placee of 2,500 inhabitante or more are given in Teble 1. The population figures repreesnt mainly the membere of the houeeholde living in the dwelling units reported as occupied, though they include also pereone roportsd se reeidente of these area. who were living in institutione, hotels, campe, and other typee of dwellinge not covered by the Howing Censue. Also included in the population figures are a few pereons reported ae reeidente or theee areas who wrere enumereted eleewhere. Data by wardo are preeented in Table 2 for Fort Worth, the only oity having 100,000 inhabitante or mors that wae reported by wards.

Similar announcements are being made for other Stateo ae the figures besome available. The data herewith presented may be changad slightly when the final figuree are compiled.

TABLE 2. OCCuPIED AND VACANT DMGLLING UNITS IN TEOAS: 1940

#### Abstract

(Thie releace includee thrse new items not presented in the preliminary release of Ootober 7, namely, the number of vaoant unite for sale or ront, the number of unite in urben and rurel erees, and the numberof unite in Chicago and Peoria by wards. The revieed count of all dwelling unite in the State is larger than the preliminary field count--2, 281,302 as compared with $2,275,659$.)

Diractor William Lane Auetin, of the Bursau of the Cenous, Department of Coumerce, today roleased figuree repreeenting the revioed count of dwelling unite in Illinoie from the Housing Coneus.

Of the 2,281,302 dwelling unite in Illtnois on April 1, 1940, 67,494 or 3.0 peroent were vacant and for aale or ront (theee reprosenting the comercially significant vaconcies), while $2,193,114$ dwelling unite wore occupied by householda enumerated in the Populetion Censue at their usual place of reeidence. The remaining group of 20,694 units (ropresenting roughly the remainder of the unite shown ae reant in the preliminary releaee) wae made up for the moet part of vecont units being held for abaent householde, though it included aleo o few units temporarily occupied by nonreeldant householde, thet 1s, by houeeholds which reported that their homes were located eleentere. Seasonal eo well es ordinary dwelling units are included in all of theee figuree, Future announcenente will give the number of eeaeonal and ordinary dwolling units in each vacancy group.

Of the total number of dwelling unite in Illinois, 74.0 percent were located in urban placee, that ie, in incorporated placee having 2,500 inhabitante or more; and 26.0 percent were in rural ereas. Of the urban dwolling units, 3.0 percent were vacent and for eale or ront, ae compared with 2.9 percent of the rural dwolling units.

Dwolling unite vacant and for eale or rent formed 2.0 percent of all dwelling units in Springfield and 3.8 percent in Chicago.

The number of occupied dwelling unite represants approximately the nuaber of private householde in the reepective areae and may be compared roughly with the number of private familiee shown in the Census Roporta for 1980. Such a comparieon show that the number of private households inareased approximately 13.7 percent as contrasted with the 3.5 percent increase in population between 1930 and 1940. This is explained by the fact that the average elze of family in filinois has decreased coneiderably eince 1950, as it hae throughout the coumtry. The everage number of pereons in the population per occupied dwolling unit in 1940 weo 3.60 for the State, as compared with an average population per family of 3.95 in 1930.

Housing and population date for counties and ineorpozated placee of 2,500 inhabitente or more ere given in Table 1. The population figures repreeent mainly the meabers of the houeeholde living in the dwelling units roported ae occupled, though thay. inolude also pereono reported aa reeldente of these aress who were living in institations, hotels, campe, and other types of dwellinge not covered by the Houeling Census. Aleo included in the population figures are a few persons reported as residents of these areas who were enumoreted eleewhere. Deta by warda are presented in Table 2 for Chicago and Peorie, the only citiee having 100,000 inhabitante or more.

Similar announcements are being eade for other Statee as the figuree become available. The data herewith presented may be changed olightly when the final figures are camplied.

TABLS 1. OCCUPIED mND VACRNT DUKLITNG UNITS IN ILTDNOIS: 1940

HOUSING UNITS IN PBHNSYLVANIA： 1940 Revised Figure
（Thie relesee ineludee three new itens not presented in tha proliminary releeoe or November is，namely，the number of vacent unito for asie or rent，the number of unite in urben and rurei areas，and the number of units in Eris，Fhiladelphis，Pittoburgh，Reeding，end Seranton by warde．The revised count of all dwolling unito in the State io larger than the prelininary field count－－2，618， 442 as com－ pared with $2,615,157$. ）

Director Willisan Lane Austin，of the Bureou of the Consus，Department of Comerce，todey released ilgures representing the revieed count or divolling unite in Pennsylvanie fron the Howing Cansus．
or the $2,618,448$ dwelling unito in Penneylvania on April 1，1940，76，151 or 2.9 parcent were vacant and for sale or rant（theoe represonting the com－ mercially significhat vacumeiee）wile $2,515,884$ dwelling units mere occupied by households enumerated in the Populetion Census at their usual place of reeldence：The remaining group of 26,407 unite（representing roughly the remainder of the unite ehown as vacant in the prelinimary reloaoe）wee made up for the moet pert of recent units being held for obeont householde，though it inoluded eleo o few units temporarily occupiad by nonresidant householde， that i\＃，部 housoholde nich reported that their homes were loceted elsenthere． Seaeonal as woll oe ordinary dwelling unita arc inciuded in all of theoe figures．Future announcemente will give the number of seveonal and ordinery drelling units in each vacanoy group．

Of the total nuaber of dwalling unite in Pennsylvania， 67.4 percent wore located in urban plecee，thet i0，in incorporated placec having 2,500 inhab－ itants or more；and 32.6 percent were in rurel arees．of the urban dwolling unite， 2.8 percent woro vecant and for eale or rent，as conpered with 3.1 percent of the rural dwalling unite．

Dwelling unite vacant and for sale or reat rormed 2.4 percent of all dwelling unite in Pittoburgh and $4 * 7$ percent in Philadolphio，the two oitiee with the largeet population in the Stete．

The number of occupied dwelling unite repreeente epproximately the number of private householde in the respeotive arees and miny be compared roughly with the number of privete familiee shown in the Census Reporte for 1980. Such a oomparison shows that the nuaber of private householde increased ep－ proxiastely 12.5 percant，os contrasted with the 2,8 percont increape in populetion between 1930 and 1940．Thie ie explained by the fact that the everage eize of fanily in Pennaylvania has decreased considerably ednce 1950 ， as it has throughout the oountry．The average number of perwona in the pop－ ulation per ocoupied dwelling unit in 1940 was 3.94 for the State，ae oom－ pared with an averaga population per fanily of 4.31 in 1930.

Housing end popaletion dete for oountiee and urben placee of 2，500 inhab－ itante or more are given in Table 1 ．The population figuree represant mainiy the membere of householde living in the dwelling units reported se occupied， though they inelude aleo persons reported as reeidents of theee arees who were ilving in ingtitutions，hotels，canpe，and other types of dwelinge not sovered by the Housing Cenous．Aloo included in the population figuree are a fcw pereans reported as reeidente of thees areae who were enumerated elve－ were．Date by wards are preeented in Table 2 for the following eitiee hev－ ing 100,000 inhabitant or more：Zrio，Philadolphia，Pittoburgh，Reeding， and Scranton．

Similar emoumcements are being made for other Statee as the figuree be－ cone ovailable．The data herevith preeented may be changed elightly when the final riguree are oonptled．

UMNESOTA: Eouoing Units - Revised

HOUSIHG UNITS IN HINYESOTA: 1940
(This release includes three new itams not presented in the prelininary release of Novenber 18, namely, the numer or vecant units for sale or rent, the number or units in urban and rural areas, end the nunber of units in Minneapolis and St. Paul by werds, The revieed count of all dwelling units in the State ie larger than the preliminary field count--773, 775 as compared with 770,222.)

Director William Lane Austin, of the Bureau of the Census, Department of Cormerce, todny roleased figures represanting the revised oount of dwelling units in Mimesota from the Housing Censur.

Of the 778,235 dwelling units in Minnesota on April 1, 1940, 29,114 or 3.8 percent wore vacant and for sale or rent (thees representing the comarcially aiguifiomat vecancies), while 728,513 dwelling units were occupled by households onumerated in the Population Census at their usual place of reaidence. The remining group of 15,608 untts (repreaenting roughly the remainder of the units shown as wacant in the prelininnry release) was mado up for the most part of vecant units being held for absent households, though it included also a few units temporerily ocoupied by nonreaident households, that 1 s , by households which reported that their homes wore located elsewhere. Seazonnl as well as ordinary dwelling unita are included in all or theso figures. Future announcements will give the numar of sessonel and ordinary dwelling units in aach vacaney group.

Of the total number of dwelling units in Minneseta, 51.1 percant were located in urban places, that is, in incorporated places haping 2,500 inhabitants or more; and 48.9 percent were in rurel areas. Only 2.6 percent of the urban dwelling units were raoent and for sale or rent, as compered with 5.0 percent of the rural dwelling units.

Drolling units vacant and for sule or rent formed 3.0 percent of all dvelling units in both Minneapolis and St. Paul.

The numbsr of occupled dwolling unite represents approximately the number of privete households in the reopective areas and may be comparad roughly with the number of private families shom in the Consus Raports for 1980. Such a comperison showa that the number of private householde incroased approximately 20.1 percent, as contrasted idith the 8.9 percant increase in population between 1930 and 1940. This is explained by the fact that the averege aize of femily in Minnosota has decreased considsrably since 1930, as it hes throughout the country. The arerage nurber of persons in the population per ocoupled dwelling unit in 1940 was 3.83 for the State, as compared with en averege population per family of 4. 23 in 1990.

Housing and population data for counties and incorporeted places of 2,500 inhabitants or more are given in Table 1. The population figures represent mainly the membere of the housoholds living in the divelling unite reportod es oooupiod, though they include aleo persons reported as residents of thees areas who were living in institutions, hotele, eamps, and other types of dwallings not covered by the Housing Consus. Aleo included in the population figures are a few persons reported as residants of these areas who were enumerated elsewhere. Data by wards are presented in Table 2 for 14 inneapolis and St, Paul, the only eities having 100,000 inhebitants or more that were reported by wards.

Siniler announcements of the revised count of dwelling units in all othor States have alresdy been released. The divelling unit data heremith presented may be changed slightly when the final figures are conuplied.

## URBAN VACANCY IN THE UNITED STATES BY COUNTY: 1940

#### Abstract

[This release deals with the percent of urban dwelling units vacant and for sale or rent on April 1, 1940, in counties which contain one or more urban places. The text presents summary data for all such counties in the United States, while the map shows, by means of various shadings, the percent vacant for individual counties. Vacancy data for individual urban places may be obtained from releases on occupied and vacant dwelling units, previously issued for each State (Series H-2). For a similar map of the United States, showing urban vacancy by States, see "Summary of Housing Figures for the United States by States: 1940" (Series H-2, No. 50), issued February 8, 1941 ]

Relatively low percentages of urban dwelling units were reported as vacant and for sale or rent in 697 counties in the United States, according to an announcement made today by Acting Director Vergil D. Reed of the Bureau of the Census, Department of Commerce. In these 697 counties, less than 2 percent of the urban dwelling units were vacant and for sale or rent, as indicated on the accompanying map showing, by counties, the distribution of urban vacancy rates in the United States. The map is based on revised data, previously announced separately for each State, from the Census of Housing, and represents conditions an April 1, 1940.

More than one-half of the 697 counties with urban vacancy rates below 2 percent were located in Pennsylvania, Ohio, Indiana, Illinois, Minnesota, Iowa, North Carolina, and Georgia. None of the counties in Massachusetts, Rhode Island, Delaware, and Arizona had an urban vacancy rate of less than two percent.

There were relatively few counties having six percent or more vacancy of urban dwelling units. The majority of the 129 counties with six percent or more vacancy were located in New York, Florida, Oklahoma, Tezas, Arizona, Washington, and California.

No county had an urban vacancy percentage above five percent in the following nine states: Illinois, Iowa, North Dakota, Delaware, South Carolina, Kentucky, Tennessee, Alabame, and Nevada. In no county in Alabama was there an urban vacancy rate of 4 percent or more.

The 1,257 counties which are entirely rural are shown on the map in white. Symbols are used for 1,817 counties to indicate the urban vacancy percentage for all urban places in the county. The remaining 26 counties are independent cities not shown on the map. The following table gives the number of counties (including independent oities) in each vacancy group.

PERCENTT OF URBAN DWELLING UNITS VACANT AND FOR SALE OR RENT, BY COUNTIES: 1940

| Urban vacancy (percent) | Number of counties |
| :---: | :---: |
| Total | 3,100 |

HOUSING HOUSING FIGURES FOR URBAN PLACIS CLASSIFIED BY SIZE OF PLAOE, FOR THE UNITED STATES AND GEOGRAPHIC DIVISIONS: 1940

This release shows the percent of dwelling units vacant and for sale or rent for urban places clasaified according to aize, and for rural areas, in the United States and geographic divisions. Also included are housing figures for urban places in the ontire netion, classified according to the percent of vacant units for sele or rent. A previous release, Series H-2, No. 50, 1saued February 8, 1941, prosented vacancy figures for the United States by States. The figures shown in this release include revisions for the citiea of Baltimore, Maryland; New Orleans, Louisiana; Youngstown, Ohio, and Traverse City, Michigan (see release Seriee Pii-3, No. 3); and for the sural territory or Mohigan (see Series H-2, No. $37^{*}$ )]

Cities of 100,000 population and over had a higher percentage of dwelling units vacant for sale or rent than smaller cities, according to figures from the Housing Census of April 1, 1940, announced today by Director J. C. Capt of the Bureau of the Consus, Department of Commerce. The percentage of dwelling units vacant for sale or rent, frequently referred to as the vacancy ratio, was 4.9 for cities of 100,000 population and over as compared with 4.3 for all urban places, 6.1 for rural areas, and 5.0 for the Nation as a whole. The returns also showed that the majority of the urban places, 61.8 percent, had vacancy ratios of less than 3.0 percent. Urban places, as defined by the Bureau of the Consus, are in general cities and other incorporated places having 2,500 inhabitants or more.

Vacanoy ratio by city size, The percent of dwelling units vacant for sale or rent was 5.8 in ofties of $1,000,000$ population or more. This ratio decreased as the size of the ofty decreased, becoming 4.6 in cities of 500,000 to
$1,000,000,4.4$ in cities of 250,000 to 500,000 , 3.9 in cities of 100,000 to 250,000 and 50,000 to 100,000 , and 3.3 in cities of 25,000 to 50,000 and 10,000 to 25,000 . In the very smallest cities the vacancy ratio increased somewhat, being 3.4 in places of 5,000 to 10,000 population and $4 \cdot 1$ in urvan places of under 5,000 . The increase in the vacancy ratio for the smallest urban places may be attributable to seasonal vacancies.

Both seasonal and ordinary dwelling units are included in the vacancy figures; consequently, summer and winter resort oities are likely to show a large fraction of the total number of seasonal dwelling units as vacant on April 1 when the census was taken, although such units are normally rented during the season. From the data available it appears that vacancies in smaller cities were influenced by the seasonal factor to a relatively greater degree than in larger ofties, although complete corroborative evidence will be obtainable only from later tabulations. Vacancy ratios of urban places classilied according to size are shown in Table 1.

TABLE 1. DWELLING UNITS VACANT FOR SALE OR RINT, IN GROUPS OF URBAN PLACES CLASSIFIED ACCORDING TO SIZE OF PLACE AND IN RURAL TERRRITORY, FOR THE UNITED STATES: 1940

These vacancy figures reflect conditions existing on April 1, 1940, and may not be indicative of current conditions. It is recognized that vacancies have since decreased in many places, particularly in defense areas, and may have increased in others. Nevertheless, the census figures can serve as a basis for subsequent investigation to provide data on current vacancy conditions.

Urban places classified by vacancy ratios. There is no universal agreement as to what con-
stitutes a "normal" vacancy ratio. Moreover, the concept of normality would vary from city to city, depending upon local economio conditions, the distribution of vacant units according to rental levels within the city, etc. Thus, although we cannot say how many urban places have vacancy ratios above and below "normal," we may, for the purposes of comparison and analysis, group the urban places into class intervals according to their vacancy ratios. Table 2 shows the distribution of urban places according to the percent of dwelling units vacant and for sale or rent.

Table 2. URBAN PLACES CLASSIFIED ACCORDING TO PERCENT OF DWBLLTNG UNITS VACANT FOR SALE OR RENT, FOR THE UNITED STATES: 1940

| Percent vacant, for sale or rent | Urban places |  | Number of dwelling units |  |  |  |

| 5.0 to 5.9.. | 219 | 6.3 | 1,988,567 | 9.2 | 109,295 |  |
| 6.0 to 7.4. | 131 | 3.8 | 4,009,709 | 18.5 | 278,797 | 30.2 |
| 7.5 to 9.9. | 71 | 2.0 | 448,998 | 2.1 | 37,890 | 4.1 |
| 10.0 to 14.9 . | 56 | 1.6 | 210,167 | 1.0 | 24,527 | 2.7 |
| 15.0 to 19.9. | 21 | 0.6 | 115,354 | 0.5 | 19,293 | 2.1 |
| 20.0 or more...... | 27 | 0.8 | 77,389 | 0.4 | 30,082 | 3.3 |

Of the 3,464 urban places in the United States, 525 or 15.2 percent, had vacancy ratios of 5 percent or more on April 1, 1940. These urban places had only 31.7 percent of the total number of dwelling units in all urban places, but almost one-half million units, or 54.3 percent of all the urban vacant units for sale or rent. At the other extreme, 2,141 urban places, or 61.8 percent of all urban areas, had vacancy ratios of less than 3 percent. These places had 34.3 percent of all urban dwelling units but only 15.6 percent of all urban vacant units for sale or rent. It will be noted that 3.0 percent of the urban places had vacancy ratios of 10.0 or more, but most of these are apparently of the seasonal resort type and are predominantly small places.

Geographic divisions. Four geographic divisions had vacancy ratios of 5.0 or more in their cities of 100,000 population and more. On the
other hand, three divisions also had vacancy ratios of 5.0 or more for their smallest urban places, 2,500 to 10,000 population, which may be attributable in part to the aforementioned seasonal factor. All other urban place size groups of every geographic division with but one exception had vacancy ratios below 5.0 .

For urban places of all sizes, the Pacific Division had the highest vacancy ratio--5.9--and the East South Central the lowest--2.6. In rural territory the vacancy ratio was highest in the New England Division--10.7--and* lowest in the East South Central--4.3. In every division the percentage of dwelling units vacant for sale or rent was higher in rural than in urban territory.

Statistics from the housing census for urban places classified according to size of place, the United States, and geographic divisions, are presented in Table 3. These data may be changed slightly when final figures are compiled.

TABLE 3. DWETLING UNITS IN GROUPS OF URBAN PLACES CLASSIFIED ACCORDING TO SIZE OF PLACE AND IN RURAL TERRITORY, FOR THE UNITED STATES, BY GEOGRAPHIC DIVISIONS: 1940

[^27]U. S. DEPARTMENT OF COMMERCE

Bureau of the Census
Washington

## Sixteenth Census of the United States: 1940

VALUE OR RENT BY CENSUS TRACTS: 1940

## LOS ANGELES, LONG BEACH, AND ADJACENT AREA

#### Abstract

(This advance release from the Population and Housing Bulletin for Los Angeles, Long Beach, and Adjacent Area presents data on the value or rent of occupied dwelling unita for the census tracts in Los Angeles County. The First Series Population Bulletin for the State gives the population of the census tracts and contains maps showing their boundaries. The average monthly rent of all dwelling units and other housing data are shown for the census tracts of Los Angeles, Long Beach, Glendale, and Pasadena in Series H-6, release No. 41.)

The number of owner-occupied dwelling units in the census tracts of Los Angeles County, classified by value, and the number of tenant-occupied units, classified by monthly rental, are shown in statistics from the 1940 Census of Housing made public today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. The value and rent distributions are presented for Los Angeles city by tracts, for Long Beach city by tracts, and for the tracts outside these cities arranged in numerical order. Figures for rural tracts exclude rural-farm dwelling units.

Census tracts are small areas, having a population usually between 3,000 and 6,000 , into which certain large cities have been permanently subdivided for statistical and local administrative purposes, through cooperation with a local committee in each case.

A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. Dwelling units were classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit was classified as owner-occupied if it was owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit.

The enumerator was instructed to report for each owner-occupied dwelling unit the estimated current value of the home, and for each tenant-occupied unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood. Median values and rents are presented for each census tract. The median value or rent may be defined as that value or rent which divides the whole number of reporting units into two equal groups, one having values or rents higher than the median, and one having lower.

The figures in the accompanying table are taken from material being prepared for the Population and Housing bulletin which will contain statistics for census tracts in Los Angeles, Long Beach, and Adjacent Area. The population items to be presented in the bulletin include sex, age, race, nativity, citizenship, country of birth, highest grade of school completed, employment status, class of worker, and occupation; and the housing items include occupancy status, tenure, value or monthly rent (including estimated rental value of owner-occupied units), type of structure, state of repair and plumbing equipment, size of household, race of head of household, persons per room, radio, refrigeration equipment, and heating fuel by type of heating equipment.

HOUSING

Sixteenth Censue of the United Statee: 1940

Series H-4, No. 49

CHARACTERISTICS OF HOUSING: 1940
NEW YORK

#### Abstract

(Thie edvance release from the Firat Series Housing Bulletin presenta data on tenure, color of occupente, average monthly rent, mortzage atetus, etc., for the dwelling units in New York, by counties, for urban places of 10,000 inhabitante or nore, and for metropoliten districte. Similar atatietice for counties by minor civil divisione, for all urban plecee, for wards of incorporeted places of 10,000 or more, except for New York city wich will be shown by heelth oreas, and for metropolitan diatricte by minor oivil divisions, will be presented in the bulletin. Dwelling unit totale preeented in thie releese are final and replace those in the earlier releese of February 1,2941 , Series H-2, No. 44.)

The proportion of home ownerehip in New York decreased between 1930 and 1940 , according to data from the 1940 Census of Houeing releaeed today by Director J. C. Capt of the Bureau of the Census, Department of Comerce. In 1940, 30.3 percent of all occupied dwelling unite were occupied by their ownere, ae compared with 37.1 percent in 1930. Of the owner-occupied nonfaria dwelling unite in 1940 , 62.2 percent were mortgaged. Censue returne aleo ehowed that nonwhite householde occupied 4.1 percent of all occupied dwelling units. The exsent of overcrowding was indicated by the fact that 3.3 percent of the occupied dwelling units had more than one and one-half persons per rools. Eighty-two and twotenthe percent of the dwelling units had private baths and 90.9 percent were not in need of major repairs. The average monthly rental for all dwelling unite in urban and rural-nonfarm areae was \$39.78.

The final count of the Housing Census showed 4,032,460 dwelling unite 1n New York on April 1, 1940, of which $3,662,113$ were occupied. Since a dwelling unit, as the term ie used in the Ceneue, is the living quartere occupied by one family or household, the number of occupied dwelling unite in a given area is about the eame as the number of familiee and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 16.5 percent in urban areas, 18.9 percent in ruralnonfam areae, 5.7 percent in rural-farm areae, and 16.1 percent in the entire State.

Home ownerehip wae higheet in rural-farm areas, where 74.8 percent of all occupied units were owned by their occupante. Thie, however, represents a decrease from the 80.2 percent reported in 1930. Home ownership decreased in rural-nonferm areae from 65.2 percent in 1930 to 58.4 percent in 1940 and in urban areas from 30.5 percent in 1930 to 23.8 percent in 1940. Data on home ownerehip are ehown in Table 1. The Censue Bureau coneiders all incorporated places of 2,500 inhabitants or more ae urban. 3 3. 93518

In New York, Irondequoit, a densely populated town, ie also classified as urban on the basis of epecial requirements. The remaining territory is claesified ae rural; all dwelling units located on farme in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white householde numbered $3,511,099$, or 95.9 percent of all occupied dwelling unite, while the nonwhite occupied 151,014 , or 4.1 percent. In $1930,96.8$ percent of all private families were white and 3.2 percent nonwhite. Nonwhite householde occupied 4.7 percent of all occupied dwelling unite in the urban areas in 1940 , as compared with 1.3 percent in rural-nonfam areas, and 0.7 percent in rural-1arm areas.

Vacant dwelling units for eale or rent oomprised 6.4 percent of all dwelling units in urban aress, 12.1 percent in rural-nonfarm areas, 7.2 percent in rural-farm areas, and 7.2 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presente data on occupancy etatus.

In urban areas, 3.6 percent of the occupied dwelling units had more than one and one-half pereone per room; in rural-nonfarm areae, 2.0 percent; in rural-farm areas, 1.5 percent; and in the entire state, 3.3 percent. The number of persone per room in occupied dwelling units eerves as a meaeure of crowding, more than one and one-half pereone per room being coneidered ae indicating overcrowding.

It was found that 27.8 peroent of the dwelling unite in the State lacked private bathe, and that 9.1 peroent needed major repairs. Twentytwo and five-tenths percent of the dwelling unite either lacked private bath or needed major repaire. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areae and higheet in ruralfarm areas. Vacant as well ae occupied dwelling units are inoluded in these ifgures.

| Vacant, not for sale or rent ${ }^{2}$. | 78,598 | 13,330 | 58,014 | 7,254 |

${ }^{2}$ Vacant dwelling units held for absent households and units occupied by nonresident households.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 62 counties, the 71 urban places with 10,000 inhabitants or more, and the 7 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 41.00$; of rural-nonfarm units, $\$ 32.42$; and of urban and rural-nonfarm units combined, $\$ 39.78$. The average for New York City was \$43.79; for the metropolitan district of New York-Northeastern New Jersey, $\$ 43.98$. This average is based on contract rent for tenant-ocupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 565,045 , or 62.2 percent, were mortgaged; in the urban areas, 67.1 percent and in the rural-nonfarm areas, 47.5 percent.

## Rural-farm Areas

Forty-three and eight-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 71,106 dwelling units, or 35.2 percent of the number reporting on this 1tem, had toilets in the structure; 137,417 , or 67.9 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements of the oharacteristics of housing in all other States have already been released.

Series H-4, No. 48

HOUSING
CHARACTERISTICS OF HOUSING: 1940
ILLINOIS

#### Abstract

(Thie advance releaee from the Firet Seriee Housing Bulletin presente data on tenure, color of occupants, average monthly rent, mortgage etatue, etc., for the dwelling unite in Illinois, by countiee, for cities of 10,000 inhabitente or more, and for metropolitan districts. Similer statistice for counties by minor civil divisions, for all urban placee, for wards of cities of 10,000 or more, and for metropolitan districte by minor civil divisions, will be presented in the bulletin. Dwelling unit totale presented in thie release are Iinal and replace thoee in the earlier release of February 10,1941, Seriee H-2, No. 47.)

The proportion of home ownership in Illinois decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Comerce. In 1940, 40.3 percent of all occupied dwelling units were occupied by their owners, as compared with 46.5 percent in 1930. Of the owner-occupled nonfarm dwelling units in $1940,44.6$ percent were mortgaged. Census returns also showed that nonwhite households occupied 4.8 percent of all occupied dwelling units. The extent of overcrowding wes indicated by the fact that 5.5 percent of the occupied dwelling units had more than one and one-half persons per room. Sixty-three and eight-tenths percent of the dwelling units had private baths and 84.3 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 30.54$.

The final count of the Housing Census showed 2,280,826 dwelling units in Illinois on April 1 , 1940 , of which $2,192,724$ were occupied. Since a dwelling unit, as the term is used in the census, is the living quarters occupied by one farily or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be conpared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 14.4 percent in urban areas, 16.1 percent in rural-nonfarm areas, 6.4 percent in rural-farn areas, and 13.6 percent in the entire State.

Home ownership was highest in rural-nonfarm areas, where 59.7 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 64.1 percent reported in 1930. Home ownership decreased in ru-ral-farm areas from 51.4 percent in 1930 to 49.9 percent in 1940 , and in urban areas from 42.4
percent in 1930 to 35.1 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Illinois as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, snd all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered $2,086,651$, or 95.2 percent of all occupied dwelling units, while the nonwhite occupied 105,873 , or 4.8 percent. In 1930, 95.9 percent of all private families were white and 4.1 percent nonwhite. Nonwhite households occupied 6.0 percent of all occupied dwelling units in the urban areas in 1940, as compared with 1.8 percent in rural-nonfarm areas, and 0.6 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 3.0 percent of sll dwelling units in urban areas, 2.3 percent in rural-nonfarm areas, 3.2 percent in rural-farm areas, and 2.9 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 5.2 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 7.1 percent; in rural-farm areas, 5.7 percent; and in the entire Stete, 5.5 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 36.2 percent of the dwelling units in the State lacked private baths, and that 15.7 percent needed major repairs. Fortyone percent of the dwelling units either lacked

private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 102 counties, the 59 cities with 10,000 inhabitants or more, and the 5 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 33.30$; or rural-nonfarm units, $\$ 16.45$; and $n f$ urban and rural-nonfarm units combined, $\$ 30.54$. The average for Chicago, the largest city, was $\$ 34.47$; for the metropolitan district of Chicago, $\$ 35.88$. This average is based on
3-33342
contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 314,298 , or 44.6 percent, were mortgaged; in the urban areas, 49.6 percent; and in the rural-nonfarm areas, 28.4 percent.

## Rural-farm Areas

Sixteen percent of the rural-farm dwelling units had running water in the dwelling units; 33,811 dwelling units, or 13.2 percent of the number reporting on this item, had toilets in the structure; 98,525, or 38.5 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

## PENNSYLVANIA

#### Abstract

(This advance release from the Firet Seriee Housing Bulletin presents data on tenure, color of occupante, average monthly rent, mortgage statue, etc., for the dwelling unite in Pennsylvania, by counties, for urban places of 10,000 inhabitante or more, and for matropolitan dietricte. Similar etatistice for countiee by minor civil divisione, for all urban placee, for warde of incorporated places of 10,000 or more, and for metropolitan districts by minor civil divisione, will be presented in the bulletin. Dwblling unit totale presented in this release are final and replace thoee in the sarlier release of February 10, 1941, Serise H-2, No. 48.)

The proportion of home ownership in Pennsylvaria docreased between 1930 and 1940, according to data from the 1940 Census of Housing released +oday by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 45.9 percent of all occupied dwelling units were uccupied by their owners, as compared with 54.4 perwen: in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 40.8 percent were mortgaged. Census returns also showed that nonwhite households occupied 4.7 percent of all occupied dwelling units. The extent of overorowding was indicated by the fact that 4.7 percent of the coupied dwelling units had more than one and re-half persons per room. Sixty-two and eighttenths percent of the dwelling units had private baths and 83.7 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 27.66$.

The final count of the Housing Census showed $2,618,056$ dwelling units in Pennsylvania on April 1, 1940, of which 2,515,524 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that betwsen 1930 and 1940 the number of families increased by 11.3 percent in urban areas, 15.8 percent in rural-nonfarm areas, 13.5 percent in rural-farm areas, and 12.5 percent in the entire State.

Home ownership was highest in rural-farm areas, where 71.4 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 78.4 percent rerted in 1930. Home ownership deoreased in cban areas from 51.5 percent in 1930 to 41.2 percent in 1940, and in rural-nonfarm areas from
54.9 percent in 1930 to 50.7 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more as urban. In Pennsylvania, several densely populated townships are also classified as urban on the basis of special requirements. The remaining territory. is classified as rural; all dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units ocoupied by white households numbered $2,396,773$, or 95.3 percent of all occupied dwelling units, while the nonwhite ocoupied 118,751 , or 4.7 percent. In $1930,95.5$ percent of all private families were white and 4.5 percent nonwhite. Nonwhite households occupied 6.2 percent of all occupied dwelling units in the urban areas in 1940 , as compared with 1.8 percent in rural-nonfarm areas, and 0.6 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.8 percent of all dwelling units in urban areas, 3.0 percent in rural-nonfarm areas, 3.1 percent in rural-farm areas, and 2.9 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 4.2 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 6.5 percent; in rural-farm areas, 4.1 percent; and in the entire State, 4.7 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 37.2 percent of the dwelling units in the State lacked private baths, and

1 Vacant dwelling units held for absent households and units oocupied by nonresident households.
that 16.3 percent needed major repairs. Fortytwo and nine-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as ocoupied dwelling units are included in these figures.

Statistics for the state by urban and rural areas are presented in Table 3, and for each of the 67 counties, the 103 urban places with 10,000 inhabitants or more, and the 11 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was \$30.68; of rural-nonfarm units, \$19.20; and of urban and rural-nonfarm units combined, \$27.66. The average for Philadelphia, the largest city, was $\$ 31.22$; for the metropolitan dis-
trict of Philadelphia, \$33.59. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 384,599 , or 40.8 percent, were mortgaged; in the urban areas, 44.4 percent; and in the rural-nonfarm areas, 32.4 percent.

## Rural-farm Areas

Thirty-seven and eight-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 50,549 dwelling units, or 23.3 percent of the number reporting on this item, had toilets in the structure; 125,281 , or 57.6 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcoments are being made for other States as the figures become available.

#### Abstract

(Thie advancs releae from the Firet Seriee Housing Bulletin preeents data on tenure, color of occupante, average monthly rent, mortgage etatue, etc., for the dwelling unite in Celifornia, by countiee, for urban places of 10,000 inhabitante or more, and for metropolitan districte. Similar etatietice for countiee by minor civil divieione, for all urban placee, for warde of cities of 10,000 or more, and for metropolitan dietricts by minor civil divielone, will be preeented in the bulletin. Dwelling unit totals preeented in thie releaee are final and replace those in the earlier releaee of February 1, 1941, Seriee H-2, No. 35.)

The proportion of home ownership in California decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 43.4 percent of all occupied dwelling units were occupied by their owners, as compared with 46.1 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 51.2 percent were mortgaged. Census returns also showed that nonwhite households occupied 3.7 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 5.6 percent of the occupied dwelling units had more than one and one-half persons per room. Eighty-three and ur-tenths percent of the dweiling units had Ivate baths and 91.5 percent were nct in need or major repairs. The average montily rental for all dwelling units in urban and rural-nonfarm areas was $\$ 31.18$.

The final count of the Housing Census showed 2,340,373 dwelling units in California on April 1, 1940 , of which $2,138,343$ were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters ocoupied by one family or household, the number of oocupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 29.4 percent in urban areas, 55.8 percent in rural-nonfarm areas, 21.3 percent in rural-farm areas, and 32.8 percent in the entire State.

Home ownership was highest in rural-farm areas, where 56.2 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 62.4 percent reported in 1930. Home ownership increased in ru-ral-nonfarm areas from 49.9 percent in 1930 to 7.9 percent in 1940, but the proportion of home rership decreased in urban areas from 43.4 percent in 1930 to 40.1 percent in 1940 . Data on home ownership are shown in Table 1 . The

Census Bureau considers all incorporated places of 2,500 inhabitants or more as urban. In California, Belvedere township, a densely populated town, is also classified as urban on the basis of a special rule. The remaining territory is olassified as rural; all dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units ocoupied by white households numbered $2,059,648$, or 96.3 percent of all oocupied dwelling units, while the nonwhite occupied 78,695 , or 3.7 percent. In $1930,96.5$ percent of all private families were white and 3.5 percent nonwhite. Nonwhite households occupied 3.7 percent of all occupied dwelling units in the urban areas in 1940, as compared with 2.1 percent in rural-nonfarm areas, and 6.8 percent in rural-farm areas.

Vacant dwelling units for sale or rent oomprised 5.9 percent of all dwelling units in urban areas, 8.2 percent in rural-nonfarm areas, 6.3 percent in rural-farm areas, and 6.4 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 3.5 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 10.7 percent; in rural-farm areas, 12.3 percent; and in the entire state, 5.6 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 16.6 percent of the dwelling units in the State lacked private baths, and that 8.5 percent needed major repairs. Twentyone and three-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either

lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these ifgures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 58 counties, the 60 urban places with 10,000 inhabitants or more, and the 7 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 33.44$; of rural-nonfarm units, $\$ 22.98$; and of urban and rural-nonfarm units combined, \$31.18. The average for Los Angeles, the largest city, was $\$ 34.11$; for the metropolitan district of Los Angeles, $\$ 33.09$. This average is based on contract rent for tenant-occupied units and 3. 32663
estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 404,907 , or 51.2 percent, were mortgaged; in the urban arees, 52.2 percent; and in the rural-nonfarm areas, 48.1 percent.

## Rural-farm Areas

Seventy-seven and five-tenths percent of the rural-farm dwelling units had running water in the dwelling unit; 104,770 dwelling units, or 55.3 percent of the number reporting on this item, had toilets in the structure; 153,791 , or 81.2 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made $f$ other States as the figures become available.

Sixteenth Census of the United States: 1940

Series H-4, No. 45

HOUSING

CHARACTERISTICS OF HOUSING: 1940

## MICHIGAN

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the dwelling units in Michigan by counties, for cities of 10,000 inhabitants or more, and for metropolitan districts. Similar statistics for counties by minor civil divisions, for all urban places, for wards of cities of 10,000 or more, and for metropolitan districts, by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of January 25, 1941, Series H-2, No. 37.)

The proportion of home ownership in Michigan decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Comerce. In 1940, 55.4 percent of all occupied dwelling units were occupied by their owners, as compared with 59.0 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 49.6 percent were mortgaged. Census returns also showed that nonwhite households occupied 3.7 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 4.1 percent of the cupied dwelling units had more than one and se-half persons per room. Sixty-two and fivetenths percent of the dwelling units had private baths, and 86.0 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 29.35$.

The final count of the Housing Gensus showed 1,519,378 dwelling units in Michigan on April 1, 1940 , of which $1,396,014$ were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 15.6 percent in urban areas, 27.8 percent in ruralnonfarm areas, 19.6 percent in rural-farm areas, and 18.3 percent in the entire state.

Home ownership was highest in rural-farm areas where 75.8 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 80.0 percent renorted in 1930. Home ownership decreased in urn areas from 52.0 percent in 1930 to 47.4 arcent in 1940, and in rural-nonfarm areas from
68.1 percent in 1930 to 67.1 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Michigan as urban, and the remainder of the State as rural. All dwelling units looated on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered $1,345,011$, or 96.3 percent of all occupied dwelling units, while the nonwhite occupied 51,003 , or 3.7 percent. In 1930, 96.7 percent of all private families were white and 3.3 percent nonwhite. Nonwhite households occupied 5.1 percent of all occupied dwelling units in the urban areas in 1940, as compared with 1.1 percent in rural-nonfarm areas, and 0.7 percent in rural-faril areas.

Vacant dwelling units for sale or rent comprised 3.2 percent of all dwelling units in urban areas, 10.1 percent in rural-nonfarm areas, 5.4 percent in rural-farm areas, and 5.0 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 3.2 percent of the occupled dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 6.4 percent; in rural-farm areas, 5.2 percent; and in the entire State, 4.1 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 37.5 percent of the dwelling units in the State lacked private baths, and that 14.0 percent needed major repairs. Fortyone and seven-tenths percent of the dwelling

| Vacant, for sale or rent...... | 75,703 | 30,294 | 32,567 | 12,842 |
| Percent of all dwelling units........... | 47.5 | 3.2 | 10.1 | 6. 5.4 |
| Vacant, not for sale or rent ${ }^{1}$. . . . . . . . . . . | 47,661 | 3,325 | 38,143 | 6,193 |

[^32]units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as ocoupied dwelling units are included in these figures.

Statistios for the state by urban and rural areas are presented in Table 3, and for each of the 83 counties, the 43 cities with 10,000 inhabitants or more, and the 6 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was \$31.87; of rural-nonfarm units, \$21.80; and of urban and rural-nonfarm units combined, \$29.35. The average for Detroit, the largest city, was $\$ 35.88$; for the metropolitan district of Detroit, $\$ 35.28$. This average is based on
contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 284,829 , or 49.6 percent, were mortgaged; in the urban areas, 53.7 percent were mortgaged; and in the rural-nonfarm areas, 38.5 percent.

## Rural-farm Areas

Twenty-eight and one-tenth percent of the ru-ral-farm dwelling units had running water in the dwelling units; 40,694 dwelling units, or 17.4 percent of the number reporting on this item, had toilets in the structure; 160,622 , or 68.6 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made other states as the figures become available.

## MASSACHUSETTS

(Thie advance releaee from the Figet Sories Housing Bulletin presente data on tenure, color of oecupants, average monthly rent, mortgege otatue, oto., for the dwelling unite in Maeeaohusette, by counties, for urban placee of 10,000 inhabitante or more, and for metropolitan dietriete. Similar etatistice for countiee by minor civil divieions, for all urben places, for warde of oities of 10,000 or more, and for metropolitan dietriote by minor oivil divisions, will be presented in the bulletin. Drelling unit totals presented in thie release are final and replace thoee in the earlier release of Jamuary 30,1941 , Series E-2, Fo. 40.)

The proportion of home ownersh1p in Massachusette decreased between 1930 and 1940, according to data from the 1940 Census of Houeing released today by Director J. C. Capt of the Bureau of the Consus, Department of Coumerce. In 1940, 38.1 percent of all occupied dwelling units were occupied by their owners, as compared with 43.5 percent in 1930. Of the owner-occupied nonfarm dwelling unite in 1940, 62.9 percent were mortgaged. Census returne also showed that nonwhite households oocupied 1.5 percent of all ocoupied dwelling unite. The extent of overorowding was indicated by the fact that 2.7 percent of the occupied dwelling units had more than one and one-half pereons per room. Bighty-two and seventenths percent of the dwelling units had private bathe and 90.8 percent were not in need of major repaire. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 33.34$.

The final count of the Housing Census showed $1,221,252$ dwelling unite in Massachusetts on April 1, 1940, of which 1,120,694 were occupied. Since a dwelling unit, ae the term is used in the Census, is the living quartere occupied by one family or household, the number of occupied dwelling unite in a given area is about the same es the number of families and may be compared with the number of private familiee returned in the 1930 Census. Such a comparieon ehows that between 1930 and 1940 the number of families increased by 9.2 percent in urban areae, 11.6 percent in rural-nonfarm areae, 27.9 percont in rural-farm areas, and 9.7 percent in the ontire State.

Home ownerghip wae highest in rural-farm areae, where 80.2 percent of all occupied units were owned by their ocoupants. This, however, represents a decrease from the 86.7 percent reported in 1930. Home ownership deoreased in ur-3-32470
ban areas from 40.8 percent in 1930 to 35.1 percent in 1940, and in rural-nonfarm areas from 63.3 percent in 1930 to 59.2 peroent in 1940. Deta on home ownership are hown in Table 1. The Census Bureau conelders all inoorporated placee of 2,500 inhabitants or more as urban. In Masaachusetts 83 densely populated towns are also olassiffed as urban on the baeis of epecial requiremente. The remaining territory is olassified as rural; all dwelling units located on farms in rural territory are designated as ru-ral-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units ocoupied, by white householde numbered $1,103,576$, or 98.5 percent of all occupied dwelling units, while the nonwhite occupied 17,118 , or 1.5 percent. In 1930, 98.6 percent of all private families were white and 1.4 percent nonwhite. Nonwhite households ocoupied 1.5 peroent of all occupied dwelling units in the urban areas in 1940, as compared with 1.3 peroent in rural-nonfarm areas, and 2.4 percent in rural-farm areas.

Facant dwelling units for sale or rent comprised 4.5 percent of all dwelling unite in urban areae, 13.9 percent in rural-nonfarm areae, 4.9 percent in rural-farm areas, and 5.5 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all theeo percentages. Table 2 presents data on occupanoy status.

In urban areas, 2.7 percent of the ocoupied dwelling unite had more than one and one-half pereons per room; in rural-nonfarm areas, 2.3 percent; in rural-farm areas, 2.4 percent; and in the entire State, 2.7 percent. The number of pereons per room in ocoupied dwelling units servee as a measure of crowding, more than one and one-hall persons per room being coneldered as indicating overorowding.

TABLE 2. DWELLLING UNITS BY OCCUPANCY STATUS, POR MASSACHUSETTS,
URBAN AND RURAL: 1940

| Subjeot | The State | Urban | Ruralnonfarm | Ruralfarm |
| :---: | :---: | :---: | :---: | :---: |
| 111 dwelling units...................... | 1,221,252 | 1,059,441 | 135,579 | 26,232 |
| Oooupied. | 1,120,694 | 1,002,433 | $\begin{aligned} & 94,541 \\ & 18,881 \end{aligned}$ | $\begin{array}{r} 23,720 \\ 1,290 \end{array}$ |
| Vacant, for eale or rent.................... | $\begin{array}{r} 67,537 \\ 5.5 \end{array}$ | 47,366 4.5 | 18,881 13.9 | 1,4.9 |
| Peroent or all dwelling units.............. | $\begin{array}{r} 5.5 \\ 33,021 \\ \hline \end{array}$ | 0,642 | 22,157 | 1,222 |

${ }^{1}$ Vacant dwelling units held for absent households and units occupied by nonreeldent houeeholds.

It wae found that 82.7 percent of the dwellIng units in the State had private baths, and that 9.2 percent needed major repaire. Iwentythree and one-tenth percent of the dwelling unite either laoked private bath or needed major repairs. The percentage of dwelling units either leoking private bath or needing major repaire was lowest in urban areas and highest in rurelfarm areas. Vacant ae well as ocoupied dwelling unite are included in these ingures.

Statistios for the State by urban and rural areas are presented in Table 3 , and for each of the 14 oountiee, the 78 urban places with 10,000 inhabitante or more, and the 5 metropolitan dietricts, in Table 40

## Urban and Rural-nonfarm Areae

The average monthly rent of urban dwelling unite was 32.95 ; of rural-nonfarm units, $\$ 36.32$; and of urban and rural-nonfarm units combined, \$33.34. The average for Boeton, the largeet
oity, was $\$ 32.74$; for the metropolitan district of Boston, $\$ 37.17$. This average is baesd on oontract rent for tenant-ocoupied units and estimated rentel value for owner-oooupied and vacant unite.
of the reporting owner-ocoupied nonfarm dwelling units, 238,860 , or 62.9 percent, were mortgaged; in the urban areas, 65.0 percent; and in the rural-nonfarm areae, 49.9 percent.

## Rural-farm Areae

Seventy-one and three-tenthe percent of the rural-farm dwelling unite had running water in the dwelling unite; 15,754 dwelling units, or 61.7 percent of the number reporting on this item, had toilets in the structure; 20,965 , or 81.4 percent, had electrio lighting. Statiatioe on rural-farm dwelling units are presented by county in Table 5.

Similar announcemente are being made for other Statee ae the figures become available.

# U. S. DEPARTMENT OF COMMERGE <br> Bureau of the Census Washington 

Sixteenth Census of the United States: 1940

Series H-4, No. 43
HOUSING

## CHARACTERISTICS OF HOUSING: 1940

## NEW JERSEY

#### Abstract

(This advance relsase from the First Series Housing Bulletin presents data on tenure, oolor of occupante, average monthly rent, mortgage status, etc., for the dwelling units in New Jersey, by counties, for urban places of 10,000 inhebitants or more, and for metropolitan districts. Similer statiatics for counties by minor civil divisions, for all urben places, for wards of incorporated places of 10,000 or more, and for metropolitan districts by minor civil divisions will be presented in the builetin. Dwelling unit totals presented in this release are finel and replace those in the earlier release of Jenuary 25, 1941, Series H-2, No. 89.)

Home ownership in New Jersey decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 39.4 percent of all occupied dwelling units were occupied by heir owners, as compared with 48.4 percent in 1930. Of the owner-occupied nonfarm dwelling units in $1940,55.5$ percent were mortgaged. Census returns also showed that nonwhite households occupied 5.1 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 3.1 percent of the oupied dwelling units had more than one and -half persons per room. Eighty-one and fourvenths percent of the dwelling units had private baths and 88.0 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 37.43$.

The final count of the Housing Census showed $1,223,887$ dwelling units in New Jersey on April 1 , 1940, of which $1,100,260$ were occupied. Since Nwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of ocoupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 10.9 percent in urban areas, 14.4 percent in rural-nonfarm areas, 19.7 percent in rural-farm areas, and 11.6 percent in the entire State.

Home ownership was highest in rural-farm areas, where 69.8 percent of all occupied units were owned by their occupants. This, however, resents a decrease from the 76.5 percent reted in 1930. Home ownership decreased in
urban areas from 44.1 percent in 1930 to 35.1 percent in 1940, and in rural-nonfarm areas from 66.6 percent in 1930 to 56.8 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more as urban. In New Jersey, 12 densely populated townships are also classified as urban on the basis of special requirements. The remaining territory is classified as rural; all dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered $1,044,521$, or 94.9 percent of all occupied dwelling units, while the nonwhite occupied 55,739 , or 5.1 percent. In $1930,95.0$ percent of all private families were white and 5.0 percent nonwhite. Nonwhite households occupied 5.3 percent of all occupied dwelling units in the urban areas in 1940, as compared with 4.1 percent in rural-nonfarm areas, and 4.4 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 5.7 percent of all dwelling units in urban areas, 12.4 percent in rural-nonfarm areas, 5.1 percent in rural-farm areas, and 6.9 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 3.2 percent of the ocoupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 2.5 percent; in rural-farm areas, 2.8 percent; and in the entire state, 3.1 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

TABLE 2. DWELLING UNITS BY OCCUPANCY STATUS, FOR NEN JERSEY, URBAN AND RURAL: 1940

| Subject | The State | Urban | Ruralnonfarm | Ruralfarm |
| :---: | :---: | :---: | :---: | :---: |
| All dwelling units. | 1,223,887 | 961,347 | 226,514 | 36,026 |
| Occupisd. | 1,100,260 | 899,637 | 167,675 | 32,948 |
| Vacant, for sale or rent. | 85,031 | 55,126 | 28,073 | 1,832 |
| Psrcsnt of all dwelling units | 6.9 38.596 | 5.7 6.584 | 12.4 30.768 |  |
| Vacant, not for sale or rsnt ${ }^{1}$............. | 38,596 | 6,584 | 30,766 | 1,246 |

1 Vacant dwslling units held for absent houssholds and units occupied by nonresident households.

It wes found that 81.4 percent of the dwsiling units in the state had private baths, and that 12.0 percent needed major repairs. Twentyfive and six-tsnths percent of the dwelling units either lacked private bath or nssdsd major repairs. The psrcentage of dwelling units either lacking privete bath or needing major repairs was lowest in urban areas and highsst in ruralfarm areas. Vacant as well as occupisd dwsling units are included in thsse figures.

Statistics for the State by urban and rural arsas are presented in Table 3, and for each of the 21 counties, the 69 urban placss with 10,000 inhabitants or more, and the 2 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

Ths avsrags monthly rent of urban dwelling units was $\$ 38.39$; of rural-nonfarm units, $\$ 33.37$; and of urban and rural-nonfarm units combined, \$37.43. Ths average for Newark, the largest
city, was \$33.36. This average is based on cond tract rent for tenant-ocoupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupiod nonfarm dwelling units, 212,979 , or 55.5 percent, were mortgaged; in the urban areas, 57.4 percent; and in the rural-nonfarm areas, 49.1 percent.

## Rural-farm Areas

Sixty-one and two-tenths percent of the ruralfarm dwsiling units had running water in the dwslling units; 16,837 dwelling units, or 47.6 percent of the numbsr reporting on this item, had toilets in the structure; 28,471, or 80.2 percent, had electric lighting. Statistios rural-farm dwelling units are presented by cole ty in Table 5.

Similar announcements are being made for other Statss as the figures become available.

[^33]HOUSING
CHARACTERISTICS OF HOUSING:
1940

## MISSOURI

#### Abstract

(This advance relsese from the Firet Series Houeing Bulletin presente data on tenure, color of occupants, average monthly rent, mortgage statue, ete., for the dwelling units in Mieeouri by counties, for eities of 10,000 inhebitante or more, and for metropolitan dietricte. Similar statistice for countiee by minor oivil divisione, for all urban placeo, for wards of citiee of 10,000 or more, and for the metropolitan distriots, by minor civil divisione, will be preeented in the bulletin. Dwelling unit totals presented in this release are final end replace those in the earlier relesee of January 25, 1941, Series H-2, No. 36.)

The proportion of home ownership in Missouri decreased between 1930 and 1940, according to date from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 44.3 percent of all occupied dwelling units were occupled by their owners, as compared with 49.9 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 45.1 percent were mortgaged. Census returns also showed that nonwhite households occupied 6.5 percent of all occupied dwelling units. The extent of overcrowding was
alcated by the fact that 10.5 percent of the oupied dwelling units had more than one and one-half persons per room. Forty-three percent of the dwelling units had private baths, and 80.1 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 22.48$.

The final count of the Housing Census showed 1,140,493 dwelling units in Missouri on April 1, 1940 , of which $1,068,642$ were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one fam1ly or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 16.5 percent in urban areas, 13.9 percent in rural-nonfarm areas, 8.5 percent in the ruralfarm areas, and 13.7 percent in the entire state.

Home ownership was highest in rural-farm areas, where 55.7 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 60.7 percent re-
ted in 1930. Home ownership decreased in an areas from 40.9 percent in 1930 to 35.1 percent in 1940, and in rural-nonfarm areas from 58.6 percent in 1930 to 53.7 percent in 1940 .

Data on home ownership are shown in Table l. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Missouri as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 999,539 , or 93.5 percent of all oooupied dwelling units, while the nonwhite oooupied 69,103 , or 6.5 percent. In $1930,93.7$ percent of all private families were white and 6.3 percent nonwhite. Nonwhite households occupied 9.6 percent of all occupied dwelling unita in the urban areas in 1940, as compared with 3.3 percent in rural-nonfarm areas, and 2.6 peroent in rural-farm areas.

Vacant dwelling units for sale or rent oomprised 5.6 percent of all dwelling units in both the urban and the rural-farm areas, 4.1 percent in rural-nonfarm areas, and 5.4 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on oooupanoy status.

In urban areas, 8.2 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 11.3 percent; in rural-farm areas, 14.6 percent; and In the entire State, 10.5 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 43.0 percent of the dwelling units in the State had private baths, and that 19.9 percent needed major repairs. Fiftynine and two-tenths percent of the dwelling units either lacked private bath or needed major

[^34]repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these ifgures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 114 counties and the independent city of St. Louis, which has the status of a county, the 22 cities with 10,000 inhabitants or more, and the 4 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 25.64$; of rural-nonfarm units, $\$ 13.65$; and of urban and rural-nonfarm units combined, $\$ 22.48$. The average for St. Louis, the largest city, was $\$ 25.75$; for the metropolitan district of St. Louis, $\$ 27.78$. This average is based on
contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 129,805 , or 45.1 percent, were mortgaged; in the urban areas, 49.0 percent were mortgaged; and in the rural-nonfarm areas, 37.6 percent.

## Rural-farm Areas

Six and five-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 14,566 dwelling units, or 4.7 percent of the number reporting on this item, had toilets in the structure; 48,807 , or 15.9 percent, had electric lighting. Statistios on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

# HOUSING <br> CHARACTERISTICS OF HOUSING: 1940 

## TEXAS

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, otc., for the dwelling units in Texas, by counties, for cities of 10,000 inhabitants or more, and for metropolitan districts. Similar statistics for counties by minor civil divisions, for all urban places, for wards of cities of 10,000 or more, and for metropolitan distriets by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of February 10, 1941, Series H-2, No. 46.)

Home ownership in Texas increased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 42.8 percent of all occupied dwelling units were occupied by their wners, as compared with 41.7 percent in 1930. of the owner-occupied nonfarm dwelling units in $1940,33.8$ percent were mortgaged. Census returns also showed that nonwhite households occupied 14.6 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 17.9 percent of the occupied dwelling

Its had more than one and one-half persons per om. Thirty-seven and nine-tenths percent of the dwelling units had private baths and 76.6 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfaril areas was $\$ 18.58$.

The final count of the Housing Census showed 1,804,884 dwelling units in Texas on April 1 , 1940, of which $1,678,396$ were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 33.4 percent in urban areas, 31.6 percent in ruralmonfarm areas, 2.1 percent in rural-farm areas, and 21.6 percent in the entire State.

Home ownership was highest in rural-nonfarm areas, where 49.4 percent of all occupied units were owned by their occupants. This represents an increase over the 46.6 percent reported in 930. The proportion of home ownership decreased urban areas from 43.3 percent in 1930 to 40.7 reent in 1940 , but increased in rural-farm areas from 37.2 percent in 1930 to 41.4 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in

Texas as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered $1,432,775$, or 85.4 percent of all occupied dwelling units, while the nonwhite occupied 245,621 , or 14.6 percent. In $1930,84.7$ percent of all private families were white and 15.3 percent nonwhite. Nonwhite households occupied 15.3 percent of all occupied dwelling units in the urban areas in 1940 , as compared with 11.8 percent in rural-nonfarm areas, and 15.5 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 4.8 percent of all dwelling units in urban areas, 5.0 percent in rural-nonfarm areas, 9.0 percent in rural-farm areas, and 6.2 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 14.9 percent of the ocoupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 19.5 percent; in rural-farm areas, 21.4 percent; and in the entire state, 17.9 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 37.9 percent of the dwelling units in the State had private baths, and that 23.4 percent needed major repairs. Sixtyfour and nine-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

[^36]Statistics for the state by urban and rural areas are presented in Table 3, and for each of the 254 counties, the 44 cities with 10,000 inhabitants or more, and the 11 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 21.74$; of rural-nonfarm units, $\$ 11.59$; and of urban and rural-nonfarm units combined, \$18.58. The average for Houston, the largest oity, was $\$ 30.13$; for the metropolitan district of Houston, $\$ 28.50$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 156,992 , or 33.8 percent, were mortgaged; in urban areas, 38.7 percent were mortgaged; and in rural-nonfarm areas, 24.3 percent.

## Rural-farm Areas

Nineteen and six-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 43,382 dwelling units, or 7.6 percent of the number reporting on this item, had tollets in the structure; 104,323 , or 18.4 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by count in Table 5.

Similar announcements are being made for other States as the flgures become available.

HOUSING
CHARACTERISTICS OF HOUSING: 1940

## OHIO

#### Abstract

(Thie advance relsasa from the First Seriee Housing Bulletin presante data on tenurs, oolor of oceupants, average monthly rent, mortgage statue, etc., for the dwslling unite in ohio by oountiee, for citiee of 10,000 inhabitants or more, and for metropolitan dietricts. Similar statietica for countiee by minor eivil divieione, for all urban places, for warde of citiee of 10,000 or more, and for motropolitan dietricte, by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in thie release ars final and replacs thoee in ths sarliar releass of Jamuary 30,1941 , Sariee H-2, No. 41.)

The proportion of home ownership in Ohio decreased between 1930 and 1940, acording to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 50.0 percent of all occupied dwelling units were ocoupied by their owners, as compared with 54.4 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 49.7 percent were mortgaged. Census returns also showed that nonwhite households occupied 4.7 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 4.2 percent of the oocupied dwelling units had more than one and one-half persons per room. Sixty-one and nine-tenths percent of the dwelling units had private baths, and 84.2 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$27.67.

The final count of the Housing Census showed 1,977,693 dwelling units in Ohio on April 1 , 1940, of which $1,897,796$ were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between $19 B O$ and 1940 the number of families increased by 11.3 percent in urban areas, 13.6 percent in ruralnonfarm areas, 11.9 percent in the rural-farm areas, and 11.8 percent in the entire State.

Home ownership was highest in rural-farm areas where 66.9 percent of all occupied units were owned by their occupants. This, however, represents a dearease from the 69.2 percent reported in 1930. Home ownership decreased in urban areas from 49.0 percent in 1930 to 44.0 percent in 1940, and in rural-nonfarm areas from 64.0 percent in 1930 to 59.4 percent in 1940.

Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Ohio as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonferm.

Dwelling units occupied by white households numbered $1,809,038$, or 95.3 percent of all occupied dwelling units, while the nonwhite occupied 88,758 , or 4.7 percent. In 1930, 95.5 percent of all private families were white and 4.5 percent nonwhite. Nonwhite households ocoupied 6.2 percent of all ocoupied dwelling units in the urben areas in 1940, as compared with 2.1 percent in rural-nonfarm areas, and 0.7 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.8 percent of all dwelling units in urben areas, 4.5 percent in rural-nonfarm areas, 3.4 percent in rural-farm areas, and 3.2 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupanoy status.

In urban areas, 3.8 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 5.7 percent; in rural-farm areas, 4.0 percent; and in the entire State, 4.2 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 61.9 percent of the dwelling units in the State had private baths, and that 15.8 percent needed major repairs. Fortythree percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking

| Occupied........................................ | 1,897,796 | 1,291,248 | 338, 164 | 268,384 |
|  | 63,454 3,2 | $1,27,473$ 2.8 |  | 9,447 3.4 |
| Percent of all dwelling units........... Vacant, not for sale or rent ${ }^{2}$. ${ }^{\text {a }}$. ${ }^{\text {a }}$. | 3,2 16,443 | 2,992 | 10,327 | 3,124 |

1 Vacant dwelling units held for absent households and dwelling units occupied by nonresident households.
private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistios for the State by urban and rural areas are presented in Table 3, and for each of the 88 counties, the 59 cities with 10,000 inhabitants or more, and the 10 metropolitan distriots, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 30.13$; of rural-nonfarm units, $\$ 18.70$; and of urban and rural-nonfarm units combined, \$27.67. The average for Cleveland, the largest city, was $\$ 28.93$; for the metropolitan distriot of Cleveland, $\$ 35.18$. This average is based on contract rent for tenant-ocoupied units and es-
timated rental value for owner-oocupied and vacant units.

Of the reporting owner-oocupied nonfarm dwelling units, 363,523 , or 49.7 percent, were mortgaged; in the urben areas, 53.5 percent were mortgaged; and in the rural-nonfarm areas, 38.3 percent.

## Rural-farm Areas

Twenty-three and one-tenth peroent of the ru-ral-farm dwelling units had running water in the dwelling units; 47,702 dwelling units, or 17.2 peroent of the number reporting on this item, had toilets in the structure; 164,469 , or 59.3 percent, had eleotric lighting. Statistios on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the ifgures become available.

(Ferosate ere based on totnl number reporting on apeoified itena)

Series H-4, No. 39

HOUSING
CHARACTERISTICS OF HOUSING: 1940
INDIANA

#### Abstract

(This advance release from the First Sorioe Housing Bullotin presonts date on tenure, oolor of oceupeats, average monthly rant, mortgage status, etc., for the dwelling units in Indiana, by countios, for elties of 10,000 inhabitante or more, and for motropolitan districte. Similar etatistics for counties by minor oivil divielons, for all urban places, for wards of citios of 10,000 or more, and for matropolitan distriots, by minor civil divisions, will be presented in the bulletin. Dwelling unit totale presented in this release are final and roplace those in the sarlier release of January 80 , 1941, Sories B-2, Ho. 42.)

The proportion of home ownership in Indiana decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 53.1 percent of all occupied dwelling units were occupied by their owners, as compared with 57.3 percent in 1930. Of the owner-occupied nonfarm dwelling units in $1940,47.0$ percent were mortgaged. Census returns also showed that nonwhite households occupied 3.5 percent of all occupied dwelling units. The extent of overcrowding was 'ndicated by the fact that 5.6 percent of the scoupled dwelling units had more than one and one-half persons per room. Forty-five and sixtenths percent of the dwelling units had private baths, and 82.3 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$22.27.

The final count of the Housing Census showed 1,005,952 dwelling units in Indiana on April 1, 1940, of which 961,498 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one fam1ly or household, the number of ocoupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the .mber of families increased by 14.8 percent in urban areas, 20.0 percent in rural-nonfarm areas, 7.1 percent in the ruralfarm areas, and 14.0 percent in the entire State.

Home ownership was highest in rural-farm areas, where 65.4 percent of all ocoupied units were owned by their occupants. This represents ractically no change from the 65.2 percent reorted in 1930. Home ownership decreased in urban areas from 51.5 percent in 1930 to 45.4 percent in 1940, and in rural-nonfarm areas from
63.9 percent in 1930 to 60.6 percent in 1940. Datd on home ownership are shown in Table l. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Indiana as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 927,599 , or 96.5 percent of all occupied dwelling units, while the nonwhite occupied 33,899 , or 3.5 percent. In $1930,96.6$ percent of all private families were white and 3.4 percent nonwhite. Nonwhite households occupied 5.9 percent of all occupied dwelling units in the urban areas in 1940, as compared with 0.7 percent in rural-nonfarm areas and 0.3 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.3 percent of all dwelling units in urban areas, 4.4 percent in rural-nonfarm areas, 3.4 percent in rural-farm areas, and 3.0 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 4.9 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 7.2 percent; in rural-farm areas, 5.8 percent; and in the entire State, 5.6 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 45.6 percent of the dwelling units in the state had private baths, and that 17.7 percent needed major repairs. Fiftyseven and eight-tenths percent of the dwelling

1 Vacant dwelling units held for absent households and units ocoupied by nonresident households.
units either lacked private baths or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistios for the State by urban and rural areas are presented in Table 3, and for each of the 92 counties, the 35 cities with 10,000 inhabitants or more, and the 5 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 24.98$; of rural-nonfarm units, $\$ 15.63$; and of urban and rural-nonfarm units combined, $\$ 22.27$. The average for Indianapolis, the largest oity, was $\$ 28.76$; for the metropolitan distriot of Indianapolis, $\$ 28.36$. This average is based on contract rent for tenant-occupied units
and estimated rental value for owner-occupied and vacant units.
of the reporting owner-ocoupied nonfarm dwelling units, 163,899 , or 47.0 percent, were mortgaged; in the urban areas, 52.4 percent were mortgaged; and in the rural-nonfarm areas, 36.0 percent.

## Rural-farm Areas

Seventeen and nine-tenths percent of the ru-ral-farm dwelling units had running water in the dwelling units; 26,708 dwelling units, or 12.2 percent of the number reporting on this item, had toilets in the structure; 108,000, or 49.2 percent, had eleotric lighting. Statistios on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

## Sixteenth Census of the United. States: 1940

Series $H-4$, No. 38

HOUSING

CHARACTERISTICS OF HOUSING: 1940

## WISCONSIN

#### Abstract

(This advance release from ths First Serisa Housing Bulletin presents data on tenure, color of occupants, averags monthly rent, mortgage status, etc.; for the dwelling units in Wisconsin by counties, for eities of 10,000 inhabitants or more, and for mstropolitan distriots. Sivilar statistics for counties by minor civil divisions, for all urben places, for wards of cities of 10,000 or more, and for mstropolitan districts, by minor civil divisions, will bs prosented in the builetin. Dwsiling unit totals prssinted in this release ars final and rsplace thoss in ths earlier release of January 21, 1941, Ser1ss H-2, No. 32.)

The proportion of home ownership in Wisconsin decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Jirector J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 54.4 percent of all occupied dwelling units were ocoupied by their owners, as compared with 63.2 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 43.6 persent were mortgaged. Census returns also showed that nonwhite households occupied 0.8 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 4.0 percent of the cupied dwelling units had more than one and de-half persons per room. Fifty-one and threetenths percent of the dwelling units had private baths, and 84.0 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 28.39$.

The final count of the Housing Census showed 897,719 dwelling units in Wisconsin on April 1, 1940, of which 827,207 were occupied. Since a dwelling unit, as the term is used in the census, is the living quarters occupied by one fam1ly or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 18.6 percent in urban areas, 21.0 percent in rural-nonfarm areas, 7.8 percent in the ruralfarm areas, and 16.2 percent in the entire State.

Home ownership was highest in rural-farm areas, where 71.6 percent of all occupied units were owned by their occupants. This, however, - apresents a decrease from the 78.7 percent re-
ted in 1930. Home ownership decreased in rban areas from 55.1 percent in 1930 to 44.9 percent in 1940, and in rural-nonfarm areas from
65.5 percent in 1930 to 60.1 percent in 1940. Data on home ownership are shown in Table 1 . The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Wisconsin as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 820,757 , or 99.2 percent of all occupied dwelling units, while the nonwhite occupied 6,450 , or 0.8 percent. In $1930,99.3$ percent of all private families were white and 0.7 percent nonwhite. Nonwhite households occupied 0.8 percent of all occupied dwelling units in the urban areas in 1940 , as compared with 1.2 percent in rural-nonfarm areas, and 0.4 percent in ruralfarm areas.

Vacant dwelling units for sale or rent comprised 2.6 percent of all dwelling units in urban areas, 10.8 percent in rural-nonfarm areas, 4.4 percent in rural-farm areas, and 4.9 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 2.8 percent of the ocoupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 5.4 percent; in rural-farm areas, 5.7 percent; and in the entire State, 4.0 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 51.3 percent of the dwelling units in the state had private baths, and that 16.0 percent needed major repairs. Pifty-two percent of the dwelling

[^39]units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural arcas are presented in Table 3, and for each of the 71 counties, the 33 cities with 10,000 inhabitants or more, and the 3 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 30.91$; of rural-nonfarm units, $\$ 22.47$; and of urban and rural-nonfarm units combined, $\$ 28.39$. The average for Milwaukee, the largest city, was $\$ 33.26$; for the metropolitan district of Milwaukee, $\$ 35.01$. This average is based on
contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 124,432 , or 43.6 percent, were mortgaged; in the urban areas, 47.9 percent were mortgaged; and in the rural-nonfarm areas, 33.9 percent.

## Rural-farm Areas

Nineteen percent of the rural-farm dwelling units had running water in the dwelling units; 25,773 dwelling units, or 12.1 percent of the number reporting on this item, had toilets in the structure; 104,858 , or 49.3 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table

Similar announcements are being made for other States as the figures become available.

## MINNESOTA

#### Abstract

(Thie adrase release fren the Firet Sorise Houeing Bulletin presonte date on tenure, oolor of ocoupants, average monthly rant, mortgage atatus, ete., for the dwelling unite in Minnesota by counties, for oitiee of 10,000 iahabitante or more, and for metropolitan dietriete. Similar atatistice for countiee by Minor oivil divielons, for all urias places, for warde of oities of 10,000 or more, and for metropolitan distrieta, by inor oivil divioione, will be presented in the bulletin. Dwolling unit totale presented in this releasoare final and roplace those in the earlier release of Fobruary 10, 1941, Series H-2, Mo. 49.)

The proportion of home ownership in Minnesota decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 55.2 percent of all occupied dwelling units were rocupied by their owners, as compared with 58.9 percent in 1930. Of the owner-occupied nonfarm dwelling units in $1940,41.0$ percent were mortgaged. Census returns also showed that nonwhite households occupied 0.8 percent of all occupied dwelling 品its. The extent of overcrowding was indicated by the fact that 6.7 percent of the cupied dwelling units had more than one and e-half persons per room. Forty-five and fivejenths percent of the dwelling units had private baths, and 83.6 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 26.80$.

The final count of the Housing Census showed 773,042 dwelling units in Minnesota on April 1 , 1940, of which 728,359 were occupied. Since a welling unit, as the term is used in the census, is the living quarters occupied by one fam1ly or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census: Such a comparison shows that between 1930 and 1940 the number of families increased by 24.6 percent in urban areas, 23.8 percent in rural-nonfarm areas, 10.7 percent in the ruralfarm areas, and 20.1 percent in the entire State.

Home ownership was highest in rural-farm areas, where 64.6 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 66.7 percent rerted in 1930. Home ownership decreased in oan areas from 52.7 percent in 1930 to 48.2 rcent in 1940, and in rural-nonfarm areas from
63.4 percent in 1930 to 60.5 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Minnesota as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 722,319 , or 99.2 percent of all occupied dwelling units, while the nonwhite occupied 6,040 , or 0.8 percent; identical proportions of whites and nonwhites were found in 1930. Nonwhite households occupied 0.9 percent of all occupied dwelling units in the urban areas in 1940, as compared with 1.4 percent in rural-nonfarm areas, and 0.3 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.5 percent of all dwelling units in urban areas, 7.5 percent in rural-nonfarm areas, 3.1 percent in rural-farm areas, and 3.7 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 4.9 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 8.4 percent; in rural-farm areas, 8.9 percent; and in the entire State, 6.7 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overorowding.

It was found that 45.5 percent of the dwelling units in the state had private baths, and that 16.4 percent needed major repairs. Piftyseven and six-tenths percent of the dwelling units either lacked private bath or needed major

TABLE 2. DWELLTNG UNITS BY OCCUPANCY STATUS, FOR MINNESOTA, URBAN AND RURAL: 1940

repairs. The precentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistios for the State by urban and rural areas are presented in Table 3, and for each of the 87 counties, the 15 oities with 10,000 inhabitants or more, and the 2 metropolitan districte, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 30.31$; of rural-nonfarm units, $\$ 18.08$; and of urban and rural-nonfarm units combined, $\$ 26.80$. The average for Minneapolis, the largest city, was $\$ 33.55$; for the metropolitan distriot of Minneapolis-St. Paul, \$32.80. This average is based on contract rent for tenant-oocupied
units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 102,790 , or 41.0 percent, were mortgaged; in the urban areas, 47.3 peroent were mortgaged; and in the rural-nonfarm areas, 26.1 percent.

## Rural-farm Areas

Twelve and one-tenth percent of the rural-farm dwelling units had running water in the dwelling units; 18,307 dwelling units, or $8.5^{\circ}$ percent of the number reporting on this item, had toilets in the structure; 64,273 , or 29.8 peroent, had eleotric lighting. Statistics on rural-farm dwelling units are presented by oounty in Table 5.

Similar announcements are being made for other States as the figures become available.
(Peroente are beeed on total number reporting on spsoifiod itema)

HOUSING

Sixteenth Census of the
United States: 1940
Series H-4, No. 36

# CHARACTERISTICS OF HOUSING: 1940 

## ALABAMA

#### Abstract

(This advance releese from the First Series Houeing Bulletin preeents dete on tenure, color of occupants, everage monthly rent, mortgage etatus, etc., for the dwelling units in Alebana by counties, for cities of 10,000 inhebitents or more, and for metropolitan districts. Similar etetistics for counties by minor oivil divisions, for all urban places, for warde of cities of 10,000 or more, and for metropolitan districte by minor civil divisions, will be presented in the bulletin. Dwelling unit totels presented in thie releese are finel and replece thoee in the eerlier release of January 21, 1941, Series H-2, No. 29.)

The proportion of home ownership in Alabama decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Comerce. In 1940, 33.6 percent of all occupied dwelling units were occupied by their owners, as compared with 34.2 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 33.9 percent were mortgaged. Census returns also showed that nonwhite households occupied 34.7 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 22.9 percent of the oocupied dwelling units had more than one and ne-half persons per room. Nineteen and sevenenths percent of the dwelling units had private baths, and 63.0 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 13.36$.

The final count of the Housing Census showed 708,043 dwelling units in Alabama on April 1, 1740 , of which 673,815 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the iumber of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 24.5 in urban areas, 16.3 percent in rural nonfarm areas, 5.7 percent in the rural-farm

Home ownership was highest in rural-farm areas where 36.1 percent of all occupied units were owned by their occupants. This represents an increase over the 34.5 percent reported in 1930. The proportion of home ownership decreased in urban areas from 35.5 percent in 1930 to 30.9 ercent in 1940, but increased in rural-nonfarm reas from 32.0 percent in 1930 to 33.0 percent in 1940. Data on home ownership are shown in

Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Alabama as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 439,992 , or 65.3 percent of all oocupied dwelling units, while the nonwhite occupied 233,823 , or 34.7 percent. In $1930,62.4$ percent of all private families were white and 37.6 percent nonwhite. Nonwhite households occupied 37.8 percent of all occupied dwelling units in the urban areas in 1940, as compared with 30.3 percent in rural-nonfarm areas, and 34.6 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.0 percent of all dwelling units in urban areas, 3.6 percent in rural-nonfarm areas, 6.7 percent in rural-farm areas, and 4.4 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, $\quad 15.1$ percent of the occupied awelling units had more than one and one-half persons per room; in rural-nonfarm areas, 21.6 percent; in rural-farm areas, 29.7 percent; and in the entire State, 22.9 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 19.7 percent of the dwelling units in the Stete had private baths, and that 37.0 percent needed major repairs. Eightytwo and seven-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs

${ }^{2}$ Vacant dwelling units held for absent households and dwelling units occupied
by nonresident households.
was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are inclided in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 67 counties, the 14 cities with 10,000 inhabitants or more, and the 3 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 16.85$; of rural-nonfarm units, $\$ 8.40$; and of urban and rural-nonfarm units combined, $\$ 13.36$. The average for Birmingham, the largest city, was $\$ 19.16$; for the metropolitan district of Birmingham, $\$ 17.82$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 36,892 , or 33.9 percent, were mortgaged; in the urban areas 40.6 percent were mortgaged and in the rural-nonfarm areas, 23.8 percent.

## Rural-farm Areas

Three and four-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 7,044 dwelling units, or 2.3 percent of the number reporting on this item, had toilets in the structure; 38,869 , or 12.8 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

## MARYLAND

#### Abstract

(This advance release from the First Series Housinj Brlintin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the durelling units in Moryland, by counties, for urban places of 10,000 inhabitants or more, and for the metropolitan district of Baltimore. Similar statistics for counties by minor civil divisions, for all urben places, for wards of incorporated rlaces of 10,000 or more, and for the metropolitan district of Baltimore by minor civil divisions, will be presented in the bulletin. Dwelling unit totels presented in this release are final and replace those in the earlier release of Janusry 7, 1941, Series H-2, No. 18.)

The proportion of home ownership in Maryland decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 47.4 percent of all occupied dwelling units were occupied by their owners, as compared with 55.2 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 43.9 percent were mortgaged. Census returns also showed that nonwhite households occupied 14.6 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 4.5 percent of the occupled dwelling units had more than one and phe-half persons per room. Sixty and five-tenths percent of the dwelling units had private baths and 86.0 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 29.77$.

The final count of the Housing Census showed 500,156 dwelling units in Maryland on April 1, 1940; of which 465,683 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of ocoupied dwelling unit's in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 21.4 percent in urban areas, 25.3 percent in ruralnonfarm areas, 10.1 percent in rural-farm areas, and 20.9 percent in the entire state.

Home ownership was highest in rural-farm areas, where 59.4 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 64.6 percent reported in 1930. Home ownership decreased in urban areas from 50.5 percent in 1930 to 40.7 percent In 1940, and in rural-nonfarm areas from 61.4 percent in 1930 to 57.6 percent in 1940. Data on home ownersinp are shown in Table l. The Census Bureau considers all incorporated places $3-31445$
of 2,500 inhabitants or more as urban. In Maryland, two densely populated election districts are also classified as urban on the basis of special requirements. The remaining territory is classified as rural; all dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 397,705 , or 85.4 percent of all occupied dwelling units, while the nonwhite occupied 67,978 , or 14.6 percent. In $1930,84.0$ percent of all private families were white and 16.0 percent nonwhite. Nonwhite households occupied 15.6 percent of all occupied dwelling units in the urban areas in 1940 , as compared with 12.1 percent in rural-nonfarm areas, and 15.2 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 3.4 percent of all dwelling units in urban areas, 7.2 percent in rural-nonfarm areas, and 4.6 percent in rural-farm areas and in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 3.5 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 5.9 percent; in rural-farm ereas, 7.1 percent; and in the entire state, 4.5 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 60.5 percent of the dwelling units in the state had private baths, and that 14.0 percent needed major repairs. Fortythree and one-tenth percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-

farm areas. Vacant as well as oocupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 23 counties, and 9 urban places with 10,000 inhabitants or more, and the metropolitan district of Baltimore, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 30.03$; of rural-nonfarm units, $\$ 29.22$; and of urban and rural-nonfarm units combined, $\$ 29.77$. The average for Baltimore, the largest city, was $\$ 30.31$; for the metropolitan district of Baltimore, $\$ 30.86$. This average is based on contract rent for tenent-occupied units and estimated rental value for owner-occupied and vacant units.
3-31445

Of the reporting owner-occupied nonfarm dwelling units, 76,250 , or 43.9 percent, were mortgaged; in the urban areas, 42.2 percent were mortgaged; and in the rural-nonfarm areas, 46.9 percent.

## Rural-farm Areas

Twenty-nine and six-tenths percent of the ru-ral-farm dwelling units had running water in the dwelling units; 12,868 dwelling units, or 22.2 percent of the number reporting on this item, had toilets in the structure; 24,719 , or 42.6 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

Bureau of the Census Washington

Series H-4, No. 34
HOUSING
CHARACTERISTICS OF HOUSING: 1940

## WASHINGTON

#### Abstract

(This advance release from the First Series Housing Bulletin presents date on tenure, color of occupents, average monthly rent, mortgage status, etc., for the dwelling units in Washington by counties, for cities of 10,000 inhabitants or more, and for metropolitan districts. Similar statistics for counties by minor civil divisions, for all urban places, for wards of cities of 10,000 or more, and for metronolitan districts, by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of January 11, 1941, Series H-2, No. 22.)

The proportion of home ownership in Washington decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Comerce. In 1940, 57.0 percent of all occupied dwelling units were occupied by their owners, as compared with 59.4 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 44.0 percent were mortgaged. Census returns also showed that nonwhite households occupied 1.8 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 5.3 percent of the occupied dwelling units had more than one and e-half persons per room. Sixty-four and fiveenths percent of the dwelling units had privete baths, and 86.6 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$21.76.

The final count of the Housing Census showed 590,439 dwelling units in Washington on April l, 1940, of which 537,337 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1840 the number of families increased by 23.4 percent in urban areas, 38.3 percent in ruralnonfarm areas, 22.3 percent in the rural-farm areas, and 26.8 percent in the entire State.

Home ownership was highest in rural-farm areas where 72.9 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 76.0 percent reported in 1930. Home ownership decreased in ban areas from 54.8 percent in 1930 to 50.3 cent in 1940, but increased in rural-nonfarm areas from 58.3 percent in 1950 to 60.7 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incor-
porated places of 2,500 inhabitants or more in Washington as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as ruralfarm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 527,408 , or 98.2 percent of all occupied dwelling units, while the nonwhite occupied 9,929 , or 1.8 percent. In $1930,98.0$ percent of all private families were white and 2.0 percent nonwhite. Nonwhite households occupied 2.0 percent of all occupied dwelling units in the urban areas in 1940, as compared with 1.4 percent in rural-nonfarm areas, and 2.1 percent in ruralfarm areas.

Vacant dwelling units for sale or rent comprised 5.7 percent of all dwelling units in urban areas, 8.9 percent in rural-nonfarm areas, 6.7 percent in rural-farm areas, and $\dot{0} .8$ percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 3.0 percent of the occupied dwelling units had more than one end one-he?f persons per room; in rural-nonfarm areas, 7.y percent; in rural-farm areas, 8.5 percent; and in the entire State, 5.3 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found thet 64.5 percent of the dwelling units in the state had private baths, and that 13.4 percent needed major repairs. Forty and three-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentace of dwelling units either lacking private bath or needing major repars was lowest in urban areas and hiphest in rural. farm areus. Vacant as well as occupied dwelling units are included in these fipures.

| Vacant, not for sale or rent ${ }^{1}$ | 13,184 | 1,633 | 9,342 | 2,209 |

Statistics for the State by urban and rural areas are presented in Table 3 , and for each of the 39 counties, the 14 cities with 10,000 inhabitants or more, and the 3 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm areas

The average monthly rent of urban dwelling units was $\$ 24.83$; of rural-nonfarm units, $\$ 15.75$; and of urban and rural-nonfarm units combined, ఖ21.76. The average for Seattle, the largest ci.ty, was $\$ 28.29$; for the metropolitan district of Seattle, 27.40 . This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.
3-31384

Of the reporting owrer-occupied nonfarm dwelling units, 98,275 , or $4 亡 .0$ percent, were mortgaged; in the urban areas, 47.6 percent were mortgaged; and in the rural-nonfarm areas, 37.4 percent.

## Rural-farm Areas

Fifty-five and five-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 34,144 dwelling units, or 33.8 percent of the number reporting on this item had toilets in the structure; 71,681, or 70.9 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

HOUSING

## CHARACTERISTICS OF HOUSING: 1940

## KENTUCKY

#### Abstract

(Thie advance releaee from the Firet Seriee Housing Bulletin presents data on tenure, color of occupante, average monthly rent, mortgage etatus, ete., for the dwelling unite in Kentucky, by counties, for citiee of 10,000 inhabitante or more, and for the metropolitan diatrict of Louisville. Similar statistice for countiee by minor civil divieions, for all urban placee, for wards of aitiee of 10,000 or more, and for the metropolitan dietrict of Louieville, by minor civil divieions, will be preeented in the bulletin. Dwelling unit totals presented in thie release are final and replace thoee in the earlier release of December 31, 1940, Series H-2, No. 15.)

The proportion of home ownership in Kentucky decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 48.0 percent of all occupied dwelling units were occupied by their owners, as compared with 51.3 percent in 1930. Or the owner-occupied nonfarm dwelling units in 1940, 34.9 percent were mortgaged. Census returns also showed that nonwhite households occupied 8.6 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 18.2 percent of the nocupied dwelling units had more than one and
e-half persons per room. Twenty-six and twoonths percent of the dwelling units had private baths, and 70.6 percent were not in need of mafor repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 17.64$.

The final count of the Housing Census showed 729,206 dwelling units in Kentucky on April 1, 1940, of which 698,538 were occupied. Since a welling unit, as the teril is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of familles and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 14.9 percent in urban areas, 19.9 percent in ruralnonfarm areas, 11.3 percent in the rural-farm areas, and 14.6 percent in the entire State.

Home ownership was highest in rural-farm areas, where 60.7 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 61.8 percent meported in 1930. Home ownersh1p decreased in ian areas from 44.4 percent in 1930 to 37.9 scent in 1940, and in rural-nonfarm areas from 43.4 percent in 1930 to 41.6 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places 3-31383
of 2,500 inhabitants or more in Kentucky as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 638,243 , or 91.4 percent of all occupied dwelling units, while the nonwhite occupied 60,295 , or 8.6 percent. In 1930, 90.0 percent of all private families were white and 10.0 percent nonwhite. Nonwhite households occupied 15.2 percent of all occupied dwelling units in the urban areas in 1940, as compared with 8.0 percent in rural-nonfarm areas, and 3.5 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 3.7 percent of all dwelling units in urban areas, 3.4 percent in rural-nonfarm areas, 4.1 percent in rural-farm areas, and 3.8 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on ocoupanoy status.

In urban areas, 10.5 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 19.5 percent; in rural-farm areas, 23.9 percent; and in the entire State, 18.2 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 26.2 percent of the dwelling units in the State had private baths, and that 29.4 percent needed major repairs. Seventyfive and seven-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units e1ther lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

${ }^{1}$ Vacant dwelling units held for absent households and units occupied by nonresident households.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 120 counties, the 13 cities with 10,000 inhabitants or more, and the metropolitan district of Louisville, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 22.28$; of rural-nonfarm units, $\$ 13.26$; and of urban and rural-nonfarm units combined, $\$ 17.64$. The average for Louisville, the largest city, was $\$ 24.57$; for the metropolitan district of Louisville, $\$ 24.46$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied nonfarm dwelling units, 50,842 , or 34.9 percent, were mortgaged; in the urban areas 41.1 percent were mortgaged; and in the rural-nonfarm areas, 26.6 percent.

## Rural-farm Areas

Four and two-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 9,001 dwelling units, or 3.1 percent of the number reporting on this item, had toilets in the structure; 43,349 or 15.0 percent had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5 .

Similar announcements are being made other States as the figures become available.

HOUSING

## CHARACTERISTICS OF HOUSING: 1940

## FLORIDA

#### Abstract

(This edvance release from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the dwelling units in Florida, by coumties, for eities of 10,000 inhabitants or more, and for metropolitan districts. Similar statistics for counties by minor eivil divisions, for all urban places, for wards of cities of 10,000 or more, and for metropolitan diatricts by minor civil diviaions, will be presented in the bulletin. Dweling unit totals presented in this releese are final and replace those in the earlier release of January 21, 1941, Series H-2, Mo. 34.)

Home ownerehip in Plorida increaeed between 1930 and 1940, according to data from the 1940 Ceneus of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 43.6 percent of all occupied dwelling units were occupied by their owners, ae compared with 42.0 percent in 1930. Of the owner-ocupied nonfarm dwelling units in 1940, 11.9 percent were mortgaged. Ceneus returns also showed that nonwhite households occupied 26.1 percent of all occupied dwelling unite. The extent of overcrowding was indicated by the fact that 12.5 percent of the occupied dwelling unite had more than one and one-half ereons per room. Fifty-three and eight-tenths ercent of the dwelling units had private baths and 80.3 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 23.50$.

The final count of the Houeing Census ehowed 590,451 dwelling unite in Florida on April 1 , 1940, of which 519,887 were occupied. Since a dwelling unit, as the term is used in the Ceneus, is the living quartere occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private familiee returned in the 1930 Census. Such a comparison showe that between 1930 and 1940 the number of families increased by 45.6 percent in urban areae, 33.3 percent in ruralnonfarm areas, 21.9 percent in rural-farm areas, and 38.1 percent in the entire State.

Home ownership was highest in rural-farm areas, where 55.4 percent of all occupied units were owned by their occupants. This, however, repreeente a deorease from the 58.1 percent reported in 1930. Home ownership remained eubstantially unchanged in urban areae being 39.1 reent in 1930 and 39.2 percent in 1940 , but creaeed in rural-nonfarm areae from 38.7 percent in 1930 to 46.4 percent in 1940 . Data on home ownership are shown in Table 1 . The Census 3-31369

Bureau coneidere all incorporated placee of 2,500 inhabitants or more in Florida as urban, and the remainder of the State ae rural. All dwelling unite located on farme in rural territory are deeignated ae rural-farm, and all other rural dwelling unite as rural-nonfarm.

Dwelling units occupied by white households numbered 384,120 , or 73.9 percent of all occupied dwelling unite, while the nonwhite occupied 135,767 , or 26.1 percent. In $1930,70.6$ percent of all private familiee were white and 29.4 percent nonwhite. Nonwhite households occupied 25.2 percent of all occupied dwelling units in the urban areas in 1940 , ae compared with 27.7 percent in rural-nonfarm areae, and 26.4 percent in rural-farm areae.

Vacant dwelling units for sale or rent comprised 9.3 percent of all dwelling units in urban areae, 9.2 percent in rural-nonfarm areas, 6.0 percent in rural-farm areas, and 8.8 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 preeente data on occupancy statue.

In urban areae, 8.3 percent of the ocoupied dwelling units had more than one and one-half pereons per room; in rural-nonfarm areas, 16.5 percent; in rural-farm areae, 20.7 percent; and in the entire state, 12.5 percent. The number of persone per room in occupied dwelling units serves ae a meaeure of crowding, more than one and one-half pereone per room being coneldered ae indicating overcrowding.

It wae found that 53.8 percent of the dwelling units in the State had private bathe, and that 19.7 percent needed major repairs. Fortynine and six-tenths percent of the dwelling units either lacked private bath or needed major repaire. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areae and higheet in ruralfarm areae. Vacant ae well ae occupied dwelling unite are included in these iiguree.

[^45]Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 67 counties, the 20 cities with 10,000 inhabitants or more, and the 3 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 28.03$; of rural-nonfarm units, $\$ 14.68$; and of urban and rural-nonfarm units combined, \$23.50. The average for Miami, the city with the largest number of dwelling units, was \$31.99; for the metropolitan district of Miami, $\$ 39.64$. This average is based on contract rent for ten-ant-occupied units and estimated rental value for owner-occupied and vacant units. 3-31369

Of the reporting owner-occupied nonfarm dwelling units, 59.592 , or 11.9 percent, were mortgaged; in urban areas, 13.3 percent were mortgaged; and in rural-nonfarm areas, 9.2 percent.*

## Rural-farm Areas

Nineteen and two-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 11,764 dwelling units, or 15.2 percent of the number reporting on this item, had toilets in the structure; 17,431 , or 22.5 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

HOUSING

## CHARACTERISTICS OF HOUSING: 1940

## OREGON

#### Abstract

(This advance release from the First Seriee Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortigage status, etc., for the dwelling units in Oregon by countiee, for cities of 10,000 inhabitants or more, and for the metropolitan district of Portland. Similar statistics for counties by minor civil divieions, for all urban places, for warde of cities of 10,000 or more, and for the metropolitan district of Portland, by minor civil divisions, will be presented in the bulletia. Dwelling unit totsls presented in this release are final and replace those in the earlier release of January 25, 1941, Seriee H-2, No. 38.)

The proportion of home ownership in Oregon decreased between 1930 and $1^{n}+0$, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Comnerce. In 1940, 55.4 percent of all occupied dwelling units were occupied by their owners, as compared with 59.1 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 42.6 percent were mortgaged. Census returns also showed that nonwhite households occupied 1.1 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 5.8 percent of the occupied dwelling units had more than one and one-half persons per room. Sixty-one and twotenths percent of the dwelling units had private baths, and 83.4 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rure'-nonfarm areas was $\$ 20.88$.

The final count of the Housing Census showed 369,8il dwelling units in Oregon on April 1 , 1940, of which 337,492 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 23.7 percent in urban areas, 33.2 percent in ruralnonfarm areas, 26.3 percent in the rural-farm areas, and 26.7 percent in the entire State.

Home ownership was highest in rural-farm areas, where 70.9 percent of all occupied units were owned by their occupants. This, however, represents e decrease from the 75.7 percent reported in 1930. Home ownership decreased in urban areas from 54.3 percent in 1930 to 48.8 percent in 1940 , but increased slightly in ruralnonfarm areas from 55.2 percent in 1930 to 55.6 percent in 1940. Data on home ownership are shown in Table l. The Census Bureau considers
all incorporated places of 2,500 inhabitants or more in Oregon as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 333,938 , or 98.9 percent of all occupied dwelling units, while the nonwhite occupied 3,554 , or 1.1 percent; identical proportions of whites and nonwhites were found in 1930. Nonwhite households occupied 1.1 percent of all occupied dwelling units in both urban and ruralfarm areas in 1940 , as compared with 0.9 percent in rural-nonfarm areas.

Vacant dwelling units for sale or rent comprised 5.5 percent of all dwelling units in urban areas, 6.8 percent in rural-nonfarm areas, 8.6 percent in rural-farm areas, and 6.6 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 3.0 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 9.2 percent; in rural-farm areas, 8.2 percent; and in the entire State, 5.8 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 61.2 percent of the dwelling units in the State had private baths, and that 16.6 percent needed major repairs. Fortyfour percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

[^47]Stetistics for the State by urban and rural areas are presented in Table 3, and for each of the 36 counties, the 7 cities with 10,000 inhabitents or more, and the metropolitan district of Portland, in Table 4.

## Urben and Rural-nonfarm Areas

The everage monthly rent of urban dwelling units was $\$ 24.28$; of rural-nonfarm units, $\$ 14.86$; and of urban and rural-nonfarm units combined, $\$ 20.88$. The average for Portland, the lareest city, wes $\$ 25.65$; for the metropolitan district of Portland, \$24.68. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and acant units.

Of the reporting owner-occupied nonfarm dwelling units, 53,822 , or 42.6 percent, were mortgaged; in the urban areas, 46.3 percent were mortgaged; and in the rurel-nonfarm areas, 36.4 percent.

## Rural-farm Areas

Fifty and seven-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 23,731 dwelling units, or 29.8 percent of the number reporting on this item, bed toilets in the structure; 47,566 , or 59.7 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made fos other States as the figures become avallable.

## GEORGIA

#### Abstract

(This advance release fron the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the dwelling units in Georgia, by counties, for urban places of 10,000 inhabitants or more, and for metropolitan districts. Similer statistics for counties by minor oivil divisions, for all urban places, for wards of incorporated places of 10,000 or more, and for metropolitan districts by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of Januery 31, 1941, Series H-2, No. 43.)

Home ownership in Georgia increased slightly between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 30.8 percent of all occupied diweliing units were occupied by wheic owners, as compered with 30.6 percent in 1930. Of the owner-occupicd nonfarm dwelling units in 1940, 36.8 percent were mortgaged. Census returns also showed that nonwhite households occupied 34.5 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 19.3 percent of the occupied dwelling units had more than one and one-half puisons per room. Twenty-three and seven-tenths percent of the dwelling units had private baths and 71.6 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 15.53$.

The final count of the Housing Census showed 796,715 dwelling units in Georgia on April 1, 1940, of which 752,241 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given arca is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 28.9 percent in urban areas, 19.5 percent in ruralnonfarm areas, 2.4 percent in rural-farm areas, and 15.2 percent in the entire State.

Home ownership was highest in rural-nonfarm areas, where 35.9 percent of all occupied units were owned by their occupants. This represents a silght increase over the 35.3 percent reported in 1930. Home ownership increased in rural-farm areas from 28.7 percent in 1930 to 31.9 percent In 1940, but the proportion of home ownership in urban areas decreased from 30.1 percent in 1930 to 26.6 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants 3-31277
or more as urban. In Georgia, one densely populated militia district is also classified as urban on the basis of special requirements. The remaining territory is classified as rural; all dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 492,446 , or 65.5 percent of all occupied dwelling units, while the nonwhite occupied 259,795 , or 34.5 percent. In $1930,61.7$ percent of all private families were white and 38.3 percent nonwhite. Nonwhite households occupied 36.4 parcent of all occupled dwelling units in the urban areas in 1940 , as compared with 29.4 percent in rural-nonfarm areas and 35.7 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.4 percent of all dwelling units in urban areas, 3.9 percent in rural-nonfarm areas, 8.4 percent in rural-farm areas, and 5.1 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 15.5 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 17.2 percent; in rural-farm areas, 24.4 percent; and in the entire state, 19.3 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 23.7 percent of the dwelling units in the State had private baths, and that 28.4 percent needed major repairs. Seven-ty-eight and one-tenth percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

TABLE 1. OCCUPIED DWELLING UNITS, BY TENURE, AND BY COLOR OF OCCUPANTS, FOR GEORGIA, URBAN AND RURAL: 1940 AND 1930

| Subject | The State | Urben | Ruralnonfarm | Ruralfarm |
| :---: | :---: | :---: | :---: | :---: |

TABLB 2. DWELLING UNITS BY OCCUPANCY STATUS, FOR GEORGIA, URBAN AND RURAL: 1940

| Subject | The State | Urban | Rural nonfarm | Rural farm |
| :---: | :---: | :---: | :---: | :---: |
| All dwelling units. | 796,715 | 296,325 | 179,371 | 321,019 |
| Occupied. | 752,241 | 288,818 | 170,595 | 292,828 |
| Vacant, for sale or rent..... | 40,990 | 7,131 | 6,947 | 26,912 |
| Percent of all dwelling units | 5.1 | 2.4 | 3.9 | 8.4 |
| Vacant, not for sale or rent ${ }^{1}$. | 3,484 | 376 | 1,829 | 1,279 |

${ }^{1}$ Vacant dwelling units held for absent households and units occupied by nonresident households.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 159 counties, the 20 urban places with 10,000 inhabitants or more, and the 5 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 17.64$; of rural-nonfarm units, $\$ 12.04$; and of urban and rural-nonfarm units combined, \$15.53. The average for Atlanta, the largest oity, was $\$ 23.12$; for the metropolitan district of Atlanta, $\$ 24.90$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.
3-3127?

Of the reporting owner-occupied nonfarm dwelling units, 46,134 , or 36.8 percent, were mortgaged; in the urban areas 42.9 percent were mortgaged, and in the rural-nonfarm areas 28.6 percent.

## Rural-farm Areas

Five percent of the rural-farm dwelling units had running water in the dwelling units; 10,170 dwelling units, or 3.2 percent of the number reporting on this item, had tollets in the structure; 50,502 , or 16.1 percent, had electric lighting. Statistics on rural-farm dwellir units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

HOUSING

## CHARACTIERISTICS OF HOUSING: 1940

## LOUISIANA

#### Abstract

(This advanes release from ths First Ssriss Housing Bullstin prssents data on tenure, color of occupants, average monthly rent, mortgage stetus, otc., for the dwelling units in Louisiana, by parishss, for cities of 10,000 inhabitants or more, and for metropolitan districts. Similar statistios for parishss by minor civil divisions, for all urban placss, for wards of citiss of 10,000 or mors, and for metropolitan districts by minor civil divisions, will be pressitsd in the bullstin. Dwelling unit totels prsssntsd in this rsisass ars final and rsplacs those in the earlisr rslsass of Decsmbsr 23, 1940, Ssries H-2, No. 13.)

Home ownership in Louieiana increased between 1930 and 1940, according to data from the 1940 Ceneue of Housing released today by Director J. C. Capt of the Bureau of the Censue, Department of Commerce. In 1940, 36.9 percent of all occupied dwelling units were occupied by their owners, as compared with 35.0 percent in 1930. of the owner-occupied nonfarm dwelling unite in 1940, 32.6 percent were mortgaged. Censue returns aleo showed that nonwhite houeeholds occupied 36.4 percent of all occupied dwelling unite. The extent of overcrowding wae indicated by the fact that 18.8 percent of the occupied dwelling unite had more than one and one-half persons per room.

Thirty-two and eight-tenths percent of the dwelling unite had private bathe, and 75.8 percent were not in need of major repairs. The average monthly rental for all dwelling unite in urban and rural-nonfarm areae was $\$ 16.61$.

The final count of the Houeing Ceneue ehowed 619,233 dwelling unite in Louisiana on April 1, 1940, of which 592,528 were occupied. Since a dwelling unit, as the term is ueed in the Censue, ie the living quarters occupied by one family or household, the number of ocoupied dwelling units in a given area is about the same as the number of families and may be oompared with the number of private families returned in the 1930 Censue. Such a comparison shows that between 1930 and 1940 the number of families increased by 28.6 percent in urban areas, 29.8 percent in ruralnonfarm areas, 9.9 percent in rural-farm areas and 22.1 percent in the entire State.

Home ownership was highest in rural-nonfarm areae, where 48.3 percent of all ocoupied unite were owned by their occupants. This represente an increase over the 41.9 percent reported in 1930. Home ownership increased in rural-farm areas from 31.8 percent in 1930 to 35.7 percent in 1940, but the proportion of home ownership in urban areas decreaeed from 34.3 percent in 1930 to 31.8 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers 3-31262
all incorporated places of 2,500 inhabitante or more in Louisiana as urban, and the remainder of the state as rural. All dwelling units located on farme in rural territory are deeignated ae rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white houeeholds numbered 376,561 , or 63.6 percent of all ocoupied dwelling units, while the nonwhite ocoupied 215,967 , or 36.4 percent. In $1930,60.6$ percent of all private familiee were white and 39.4 peroent nonwhite. Nonwhite households ocoupied 33.3 percent of all ocoupied dwelling unite in the urban areae in 1940, as compared with 31.1 percent in rural-nonfarm areas, and 44.6 percent in rural-farm areas.

Vacent dwelling unite for eale or rent comprieed 2.8 percent of all dwelling units in urban areas, 3.8 percent in rural-nonfarm areae, 5.1 percent in rural-farm areas, and 3.8 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 preeents data on occupancy etatus.

In urban areas, 13.1 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 19.3 percent; in rural-farm areas, 26.1 percent; and in the entire state, 18.8 percent. The number of persons per room in occupied dwelling units eerves as a meaeure of crowding, more than one and one-half persone per room being coneldered as indicating overcrowding.

It was found that 32.8 percent of the dwelling units in the state had private baths, and that 24.2 percent needed major repairs. Sixtynine and one-tenth percent of the dwelling units either lacked private bath or needed major repaire. The percentage of dwelling unite either lacking private bath or needing major repairs wae lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling unite are included in these figures.

${ }^{1}$ Vacant dwelling units held for absent households and units occupied by nonresident households.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 64 parishes, the 10 cities with 10,000 inhabitants or more, and the 2 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 20.21$; of rural-nonfarm units, $\$ 9.77$; and of urban and rural-nonfarm units combined, \$16.61. The average for New Orleans, the largest city was $\$ 21.96$; for the metropolitan district of New Orleans, $\$ 21.65$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.
3-312.62

Of the reporting owner-occupied nonfarm dwelling units, 44,273 , or 32.6 percent, were mortgaged; in urban areas, 42.2 percent were mortgaged, and in rural-nonfarm areas 19.4 percent.

## Rural-farm Areas

Five and eight-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 8,108 dwelling units, or 4.0 percent of the number reporting on this item, had toilets in the structure; 19,735 , or 9.8 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by parish in Table 5.

Similar announcements are being made for other States as the figures become available.

## HOUSING

## CHARACTERISTICS OF HOUSING: 1940

## VIRGINIA

#### Abstract

(Thie advance releaee from the Firet Series Houeing Bulletin presente data on tenure, color of occupante, average monthly rent, mortgage etatus, etc., for the dwelling units in Virginia, by countiee, for independent cities, urban place of 10,000 inhabitants or more, and for metropolitan districte. Similar etatistics for countiee by minor civil divisions, for independent cities, for all urban placee, for warde of citiee of 10,000 or more, and for metropoliten dietricte by minor civil divisione, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace thoee in the oarlior releaee of January 21, 1941, Seriee H-2, No. 33.)

The proportion of home ownership in Virginia decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 48.9 percent of all occupied dwelling units were occupied by their owners, as compared with 52.4 percent in 1930. Of the owner-occupled nonferm dwelling units in 1940, 38.0 percent were mortgaged. Census returns also showed that nonwhite households occupied 23.3 percent of all occupied 'welling units. The extent of overcrowding was
dicated by the fact that 12.4 percent of the ccupied dwelling units had-more than one and one-half persons per room. Thirty-five and onetenth percent of the dwelling units had private baths and 76.7 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$22.46.

The final oount of the Housing Census showed 659,787 dwelling units in Virginia on April 1, 1940, of which 627,532 were oocupied. Since a dwelling unit, as the term is used in the Census, is the living quarters ocoupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be oompared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 30.4 percent in urben areas, 13.8 percent in ruralnonfarm areas, 10.8 percent in rural-farm areas, and 18.6 percent in the entire State.

Home ownership was highest in rural-farm areas, where 63.3 percent of all occupied units were owned by their occupants. This, however,
presents a decrease from the 66.4 percent re-
rted in 1930. Home ownership decreased in urban areas from 39.5 percent in 1930 to 36.2 percent in 1940, and in rural-nonfarm areas from
51.0 percent in 1930 to 49.4 percent in 1940 . Data on home ownership are shown in Table 1. The Census Bureau considers all inoorporated places of 2,500 inhabitants or more as urban. In Virginia, however, Arlington County is also olassified as urban under special rule. The remaining territory is classified as rural; all dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 481,056 , or 76.7 percent of all occupied dwelling units, while the nonwhite occupied 146,476 , or 23.3 percent. In $1930,73.3$ percent of all private families were white and 26.7 percent nonwhite. Nonwhite households ocoupied 25.3 percent of all occupied dwelling units in the urban areas in 1940, as compared with 20.0 percent in rural-nonfarm areas and 23.8 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.8 percent of all dwelling units in urban areas, 4.1 percent in rural-nonfarm areas, 5.2 percent in rural-farm areas, and 4.0 percent In the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on ocoupancy status.

In urban areas, 6.8 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 14.2 percent; in rural-farm areas, 17.5 percent; and in the entire State, 12.4 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 35.1 percent of the dwelling units in the State had private baths, and that

| Percent of all dwelling units........... Vacant, not for sale or rent ${ }^{2}$. . . . . . | 4.0 6,077 | 2.8 910 | 3,013 | $\begin{array}{r}5.2 \\ 2,154 \\ \hline\end{array}$ |

${ }^{2}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.
23.3 percent needed major repairs. Sixty-seven and two-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 100 counties, the 24 independent cities, the 16 urban places with 10,000 inhabitants or more, and the 3 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 27.07$; of rural-nonfarm units, $\$ 16.14$; and of urban and rural-nonfarm units combined, \$22.46. The average for Richmond, the largest city, was $\$ 28.29$; for the metropolitan district of Richmond, $\$ 30.21$. This average is based on
contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 36,946 , or 44.0 percent, were mortgaged; in rural-nonfarm areas, 31.4 percent; and in urban and rural-nonfarm areas combined, 38.0 percent.

## Fural-farm Areas

Twelve and two-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 19,535 dwelling units, or 8.9 percent of the number reporting on this item, had toilets in the structure; 51,981 , or 23.7 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

HOUSING

## CHARACTERISTICS OP HOUSING: 1940

TENNESSEE

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of occupents, average monthly rent, mortgage status, otc., for the dwelling units in Tennessee, by counties, for oities of 10,000 inhabitants or more, and for matropolitan distriets. Similar statisties for counties by minor civil divisions, for all urben places, for wards of oities of 10,000 or more, and for metropolitan districts by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of January 9, 1941, Series H-2, No. 21.)

The proportion of home ownership in Tennessee decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 44.1 percent of all occupied dwelling units were ocoupied by their owners, as compared with 46.2 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1840, 33.9 percent were mortgaged. Census returns also showed that nonwhite households occupied 18.3 percent of all ocoupied dwelling units. The extent of overorowding was rdicated by the fact that 19.1 percent of the supied dwelling units had more than one and he-half persons per room. Twenty-four and fourtenths percent of the dwelling units had privete bethe and 69.8 percent were not in need of major repaire. The average monthly rent for all dwelling unite in urban and rural-nonfarm aree was 16.89 .

The final oount of the Houaing Censue ohowed 742,030 dwelling unite in Tenneseec on April 1, 1940, of which 714,894 were ocoupied. Sinos a dwelling unit, ae the term io ueed in the Conoue, io the living quartere ocoupied by one family or household, the number of oooupied awelling unite in a given erea is about the same ae the numbar of familiee and mey bs comparsd with the number of private familiss returned in the 1930 Census. Suoh a oomparison shows that between 1930 and 1940 the number of familise increased by 22.6 percent in urban areee, 30.3 peroent in rural-nonfarm areae, 10.9 peroent in rural-farm areae, and 19,0 percent in the ontire State.

Home ownerehip wae higheet in rural-farim areae, where 53.5 percont of all oocupied unita were owaed by their oocupante. Thie repreeente
increae over the 52.1 peroent reported in
30. Home ownerehip deoreaeed in urban areae from 39.9 percent in 1930 to 33.5 percent in

1940, but increased slightly. in rural-nonfarm areas from 45.3 percent in 1930 to 45.7 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Tennessee as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other sural dwelling units as rural-nonfarm.

Dwelling units ocoupied by white householde numbered 585,952, or 81.7 percent of 211 oocupied dwelling units, while the nonwhite ocoupied 130,942 , or 18.3 percent. In $1930,79.9$ percent of all private families were white and 80.1 percent nonwhite. Nonwhite houeeholde ocoupied 28.8 percent of all ocoupled dwelling units in the urban areas in 1240 , a compared with 10.7 peroent in rural-nonfarim arase, and 12.2 parcent in rurel-farm araae.

Vecant dwelling unite for eals or rent somprieed 2.5 percent of all dwelling unite in urbas areae, 8.9 percent in rural-nonfarm ereas, 4. 2 percent in rural-farm ereae, and 3.3 percent in the sntire state. Beasonal as well as ordinary dwolling unite are 1noludsd in all these peroentagee. Table 2 praseate data on oooupanoy stetus.

In urban areae, 13.6 percent of the ocoupied dwelling unite had mors then one and ons-half pereone per room; in rural-nonfarm areee, 19.1 poroent; in sural-farm aress, 84.4 peroentl and in the ontire stets, 19.1 paroont. The number of persons par room in oooupisd dwolling units eerves ae meaeure of orowding, mors than one and one-half person per yoom being oonsidered as indicating overorowding.

It wee found thet 24.4 percent of the dwell= ing units in the State had private bathe, and

| Vacant, for sale or rent | 24,301 | 7,216 | 4,594 | 12,491 |
| Percent of all dwelling units | 3.3 | 2.5 | 2.9 | 4.2 |
| Vacant, not for sale or rent ${ }^{1}$. | 2,835 | 377 | 1,246 | 1,212 |

${ }^{1}$ Vacant dwelling units held for absent households and units occupied by nonresident households.
that 30.1 percent needed major repairs. Seventyseven and four-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in the se figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 95 counties, the 12 cities with 10,000 inhabitiants or more, and the 4 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 19.65$; of rural-nonfarm units, $\$ 11.91$; and of urban and rural-nonfarm units combined, $\$ 16.89$. The average for Memphis, the largest city, was 21.95 ; for the metropolitan district of Memphis, $\$ 21,53$. This average is based on
contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 33,768 , or 38.7 percent, were mortgaged; in rural-nonfarm areas, 26.9 percent; and in urban and rural-nonfarm areas combined, 33.9 percent.

## Rural-farm Areas

Five and eight-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 11,048 dwelling units, or 3.7 percent of the number reporting on this item, had toilets in the structure; 45,248 or 15.3 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made other States as the figures become available.

(Peronata are baead on total aumber raporting on apeoified items)

${ }^{2}$ Repairs needed on parts of atructure such as floore, roof, plaotsr, welle, or foundetion, the continued neglect of which mould fimpeir the eoundness of the atiruoture and ersats a hazard to its asfoty se a plece of residence.

Sixteenth Census of the United States: 1940

Series H-4, No. 26

HOUSING
CHARACTERISTICS OF HOUSING: 1940

## OKLAHOMA

#### Abstract

(This advance release Iram the Firat Series Housing Bulletin presents data on tenure, color of occupents, average monthly rent, mortgage status, etc., for the dwelling units in Oklahoma, by counties, for cities of 10,000 inhabitants or more, and for metropolitan districte. Similar statistics for counties by minor civil divisions, for all urban places, for wards of cities of 10,000 or more, and for metropolitan districts by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of Jenuary 21, 1941, Seriee H-2, No. 30.)

Home ownership in Oklahoma increased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 42.8 percent of all occupied dwelling units were occupied by their owners, as compared with 41.3 percent in 1930. Of the owner-ocoupied nonfarm dwelling units in $1940,36.9$ percent were mortgaged. Census returns also showed that nonwhite households occupied 9.0 percent of all occupied dwelling units. The extent of overcrowing was indicated by the fact that 19.0 percent of the occupied dwelling units had more than one and one-half persons per nom. Thirty-two and eight-tenths percent of - dwelling units had private baths and 65.5 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 16.47$.

The final count of the Housing Census showed 647,485 dwelling units in Oklahoma on April 1, 1940, of which 610,481 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 19.8 percent in urban areas, 2.9 percent in ruralnonfarm areas, 0.1 percent in rural-farm areas and 8.2 percent in the entire State.

Home ownership was highest in rural-nonfarm areas, where 47.1 percent of all occupied units were owned by their ocoupants. This represents an increase over the 45.6 percent reported in 1930. Home ownership increased in rural-farm aress from 36.4 percent in 1930 to 39.8 percent
' $\eta$ 1940, but the proportion of home ownership in
lan areas decreased from 43.5 percent in 1930
42.9 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants
or more in Oklahoma as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 555,307 , or 91.0 percent of all occupied dwelling units, while the nonwhite occupied 55,174 , or 9.0 percent. In $1930,89.9$ percent of all private families were white and 10.1 percent nonwhite. Nonwhite households occupied 9.5 percent of all occupied dwelling units in the urban areas in 1940, as compared with 7.6 percent in rural-nonfarm areas, and 9.4 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 5.1 percent of all dwelling units in urban areas, 3.7 percent in rural-nonfarm areas, 6.2 percent in rural-farm areas, and 5.2 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urben areas, 11.4 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 20.3 percent; in rural-farm areas, 27.1 percent; and in the entire State, 19.0 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 32.8 percent of the dwelling units in the State had private baths, and that 34.5 percent needed major repairs. Seventy and five-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

1 Vacant dwelling units held for absent households and units oceupied by nonresident households.

Statisties for the State by urban and rural areas are presented in Table 3, and for each of the 77 counties, the 21 eities with 10,000 inhabitants or more, and the 2 metropolitan districte, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was 820.70 ; of rural-nonfarm units, $\$ 8.61$; and of urban and rural-nonfarm units combined, \$16.47. The average for Oklahoma City, the largest eity, was $\$ 25.18$; for the metropolitan district of Oklahoma City, \$25.27. This average is based on contract rent for tenant-ocoupied units and estimated rental value for owner-ocoupied and vacant units.

Of the reporting owner-occupied dwelling unita in the urban areas, 47,852 , or 46.7 percent, were mortgaged; in rural-nonfarm areas, 19.1 percent; and in urban and rural-nonfarm aress combined, 56.9 percent.

## Rural-farm Areas

Seven and nine-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 10,516 awolling units, or 4.6 percent of the number reporting on this item, had toilets in the structure; 32,719 , or 14.4 percent, had electric lighting. Statiaties on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made other States as the Ifgures become available.

HOUSING
CHARACTERISTICS OF HOUSING: 1940

## COLORADO

#### Abstract

(This aqvance release from the First Seriea Housing Bulletin presenta data on tenure, color of occupants, avarage monthly rant, mortgage status, ete., for the dwelling units in Colorado, by counties, for cities or 10, wo inhabitants or more, and for metropolitan districts. Similar statiatica for counties oy minor eivil divisions, for all urban places, for wards or aities of 10,000 or more, and for metropolitan districts by minor civil divisions, will be presented in the bulletin. Dwsling unit totals presented in thia release are final and replace thoss in the earlier release of January 18, 1941, Series H-2, No. 26.)

The proportion of home ownership in Colorado decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 46.3 percent of all occupied dwelling units were ocoupied by their owners, as compared with 50.7 percent in 1930. Of the owner-ocoupied nonfarm dwelling units in 1940, 39.9 percent were mortgased. Census returns also showed that nonwhite households occupied 1.7 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 11.9 percent of the upied dwelling units had more than one and he-half persons per room. Forty-six and threetenths percent of the dwelling units had private baths and 74.3 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$22.40.

The final count of the Housing Census showed 354,660 dvelling units in Colorado on April l, 1940 , of which 316,000 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 - Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 23.6 percent in urban areas, 27.4 percent in rural-nonfarm areas, and 18.2 percent in the entire State. In the rural-farm areas, however, the number of private families decreased by 2.3 percent.

Home ownership was highest in rural-farm areas, where 51.3 percent of all occupied units
'e owned by their occupants. This represents,
Uev: 1. a decrease from the 56.4 peroent reported in 1930. Home ovmership decreased in
urban areas from 49.1 percent in 1930 to 43.0 percent in 1940, but increased in rural-nonfarm areas from 48.6 percent in 1930 to 49.9 percent in 1940. Data on home ownership are shown in Table l. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Colorado as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 310,740 , or 98.3 percent of all ocoupied dwelling units, while the nonwhite occupitd 5,260 , or 1.7 percent. Identical proportions of whites and nonwhites were found in 1930. Nonwhite households ocoupied 2.3 percent of all ocoupied dwelling units in the urban areas in 1940 , as compared with 0.7 percent in rural-nonfarm areas, and 1.0 percent in rural-farm areas.

Vacent dwelling units for sale or rent comprised 4.0 percent of all dwelling units in urban areas, 12.5 percent in rural-nonfarm areas, 12.2 percent in rural-farin areas, and 8.1 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 7.7 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 17.5 percent; in rurul-farm areas, 16.7 percent; and in the entire State, 11.9 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overorowding.

It was found that 46.3 percent of the dwelling units in the State had private baths, and

1 Vacant dwelling units held for absent households and units occupied by nonresident households.
that 25.7 percent needed major repairs. Fiftynine and three-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 63 counties, the 8 cities with 10,000 inhabitants or more, and the 2 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 26.07$; of rural-nonfarm units $\$ 15.37$; and of urban and rural-nonfarm units combined, \$22.40. The average for Denver, the largest city, was $\$ 29.99$; for the metropolitan district of Denver, $\$ 28.95$. This average is $t$ sed on
contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 31,903 , or 44.7 percent, were mortgaged; in rural-nonfarm areas, 30.1 percent; and in urban and rural-nonfarm areas combined, 39.9 percent.

## Rural-farm Areas

Twenty-one and two-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 8,689 dwelling units, or 11.7 percent of the number reporting on this item, had toilets in the structure; 25,595, or 34.6 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

United States: 1940
Series H-4, No. 24
HOUSING
CHARACTERISTICS OF HOUSING: 1940

## CONNECTI CUT

#### Abstract

(This advance release from the First Series Houeing Bulletin presents data on tenure, color of occupents, average monthly rent, mortgage status, eto., for the dwelling units in connecticut, by countiee, for urban places of 10,000 inhabitante or more, and for metropolitan districts. Similar statistics for countiee by minor civil divisions, for all urben places, for wards of incorporated places of 10,000 or more, and for metropolitan districts by minor civil divieions, will be preeented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of Jenuary 18 , 1941 , Series H-2, No. 25.)

The proportion of home ownership in Connecticut decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 40.5 percent of all occupied dwelling units were occupied by their owners, as compared with 44.5 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 67.8 percent were mortgaged. Census returns also showed that nonwhite households occupied 1.9 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 3.3 percent of the cupied dwelling units had more than one and -half persons per room. Eighty-one and twoonths percent of the dwelling units had private baths and 90.9 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$36.22.

The final count of the Housing Census showed 488,543 dwelling units in Connecticut on April 1, 1940, of which 448,682 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 11.6 percent in urban areas, 22.9 percent in rural-nonfarm areas, 32.9 percent in rural-farm areas, and 15.4 percent in the entire State.

Home ownership was highest in rural-farm areas, where 78.3 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 85.2 percent reted in 1930. Home ownership decreased in oan areas from 37.2 percent in 1930 to 32.5
percent in 1940, and in rural-nonfarm areas from 57.2 percent in 1930 to 53.1 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more as urban. In Connecticut, four densely populated towns are also classified as urban on the basis of special requirements. The remaining territory is claesified as rural; all dwelling units located on farms in rural territory are designated as ruralfarm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 440,119 , or 98.1 percent of all occupied dwelling units, while the nonwhite occupied 8,563 , or 1.9 percent. Identical proportions of whites and nonwhites were found in 1930. NonWhite households occupied 2.4 percent of all occupied dwelling units in the urban areae in 1940, as compared with 0.8 percent in rural-nonfarm areas and 0.5 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.7 percent or all dwelling units in urban areas, 9.3 percent in rural-nonfarm areas, 4.5 percent in rural-farm areas, and 4.8 percent in the entire State. Seasonal as well ae ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 3.9 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areae, 2.2 percent; in rural-farm areas, 2.4 percent; and in the entire State, 3.3 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 81.2 percent of the dwelling units in the State had private baths, and that

| Percent of all dwelling unfts | 4.8 | 2.7 | 9.3 | 4.5 |
| Vacant, not for sale or rent ${ }^{1}$.. | 16,465 | 1,244 | 13,776 | 1,445 |

${ }^{1}$ Vacant dwelling units held for absent households and units occupied by nonresident households.
9.1 percent needed major repairs. Twenty-three and seven-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 8 counties, the 24 urben places with 10,000 inhabitents or more, and the 4 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 33.29$; of rural-nonfarm units, $\$ 42.53$; and of urban and rural-nonfarm units comblned, $\$ 36.22$. The average for Hartford, the largest ofty, was $\$ 36.39$; for the metropolitan district $3 \cdot 3058 \mathrm{C}$
of Hartford-New Britain, $\$ 36.22$. This average is based on contract rent for tenant-occupied units and estimated rental value for owneroccupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 67,067 , or 72.7 percent, were mortgaged; in rural-nonfarm areas, 60.4 percent; and in urban and rural-nonfarm areas combined, 87.8 percent.

## Rural-farm Areas

Sixty-eight percent of the rural-farm dwelling units had running water in the dwelling units; 14,719 dwelling units, or 56.1 percent of the number reporting on this item, had toilets in the structure; 21,119 , or 80.4 percent, had electric lighting. Statistics on rural-farm dwelling unita are presented by county in Table 5.

Similar announcements are being made other States as the flgures become available.

HOUSING
CHARACTERTSTICS OF HOUSING: 1940

Sirteenth Censue of the United States: 1940

Sories H-4, No. 23
04 : of

NORTH CAROLINA

#### Abstract

(Thie advance release from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, otc., for the dwelling unite in North Carolina, by counties, for cities of 10,000 inhabitants or more, and for metropolitan districts. Similar statietics for countiee by minor cifil diviaions, for all urban places, for wards of citiee of 10,000 or more, and for matropolitan dietricts by minor civil divisions, will be preeented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of Jonuary 17, 1941, Series H-2, No. 23.)

The proportion of homs ownership in North Carolina decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 42.4 percent of all occupied dwelling unite were ocoupied by their owners, as compared with 44.5 percent in 1930. Of the owner-occupied nonfarm dwelling unite in 1940, 37.7 percent were mortgaged. Censue returns also showed that nonwhite householde occupied 25.9 percent of all occupied dwelling units. The extent of over-
owding was indicated by the fact that 17.8 srcent of the occupied dwelling unite had more than one and one-half persone per room. Twentythree and seven-tenthe percent of the dwalling units had private baths end 69.4 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 16.59$.

The final count of the Housing Census showed 820,888 dwelling units in North Carolina on April 1, 1940, of which 789,659 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters ocoupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 33.0 percent in urban areas, 32.2 percent in rural-nonfarm areae, 11.1 percent in rural-faril areas, and 22.6 percent in the entire State.

Home ownerehip was highest in rural-farm reas, where 49.8 percent of all occupied units rs owned by their occupants. This represents slight increaee over the 49.5 percent reported in 1930. Home ownership deoreased in urban areas from 38.1 percent in 1930 to 32.0 percent

In 1940, but increased slightly in rural-nonfaril arsas from 42.4 percent in 1930 to 42.6 percent in 1940. Data on home ownership are shown in Table 1. The Census Bursau considers all incorporated places of 2,500 inhabitants or more in North Carolina as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white houssholds numbered 585,258 , or 74.1 percent of all occupied dwelling units, while the nonwhite occupied 204,401 , or 25.9 percent. In $1930,71.6$ percent of all private families were white and 28.4 percent nonwhite. Nonwhite households ocoupied 30.4 percent of all occupied dwelling units in the urban areas in 1940, as compared with 19.8 percent in rural-nonfarm areas, and 26.6 percent in rural-farm areas.

Vacant dwelling unite for eale or rent comprieed 2.2 percent of all dwelling units in urban areas, 3.0 percent in rural-nonfarm areas, 3.8 percent in rural-farm areas, and 3.1 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 preeente data on occupancy status.

In urban areas, 11.9 percent of ths occupied dwelling units had more than one and one-half persone per room; in rural-nonfarm areae, 16.7 percent; in rural-farm areas, 22.8 percent; and in the entire State, 17.8 percent. The number of persone per room in ocoupied dwelling units eerves as a measure of crowding, more than one and one-half persons per room being considered ae indicating overcrowding.

It wao found that 23.7 percent of the dwelling units in the State had private baths, and that

| Vacant, not for sale or rent ${ }^{1}$.. | 5,630 | 635 | 3,137 | 1,858 |

${ }^{1}$ Vacant dwelling units held for absent households and units occupied by nonresident households.
30.6 percent needed major repairs. Seventy-eight and four-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 100 counties, the 26 cities with 10,000 inhabitants or more, and the 5 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 20.89$; of rural-nonfarm units, \$11.93; and of urban and rural-nonfarm units combined, $\$ 16.59$. The average for Charlotte, the largest city, was $\$ 27.06$; for the metropolitan district of Charlotte, $\$ 26.71$. This average is based on
contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 30,486 , or 43.0 percent, were mortgaged; in rural-nonfarm areas, 32.7 percent; and in urban and rural-nonfarm areas combined, 37.7 percent.

## Rural-farm Areas

Six and eight-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 14,484 dwelling units, or 4.2 percent of the number reporting on this item, had toilets in the structure; 79,881, or 23.4 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made other States as the figures become available.

U. S. DEPARTMENT OF COMIERCE

Bureau of the Census Washington

HOUSING

CHARACTERISTICS OF HOUSING: 1940

NEBRASKA

#### Abstract

(Thie advance releaee from the First Seriee Houeling Bulletin preeente data on tenure, color of oecupants, average monthly rent, mortgage etatue, otc., for the dwelling unite in Nebraske, by counties, for citiee of 10,000 inhabitante or more, and for metropolitan distriots. Similar otatistice for countiee by minor civil divieions, for all urban placee, for warde of citiee of 10,000 or more, and for metropolitan districte by minor civil divisione, will be presented in the bulletin. Dwelling unit totale presented in thie release are final and replace those in the earlier release of Jenuary 18, 1941, Seriee H-2, No. 28.)

Home ownership in Nebraska decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 47.1 percent of all occupied dwelling units were occupied by their owners, as compared with 54.3 percent in 1930. of the owner-occupied nonfarm dwelling units in 1940, 35.3 percent were mortgaged. Census returns also showed that nonwhite households occupied 1.4 percent of all occupied dwelling units. The extent of overcrowding was indicated
the fact that 6.0 percent of the occupied elling units had more than one and one-half persons per room. Porty-two and three-tenths percent of the dwelling units had private baths and 80.4 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 20.09$.

The final count of the Housing Census showed 387,368 dwelling units in Nebraska on April 1, 1940, of which 360,744 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Consus. Such a comparison shows that between 1930 and 1940 the number of families increased by 16.3 percent in urban areas, 4.7 percent in rural-nonfaril areas, and 5.2 percent in the entire State. In the rural-farm areas, however, the number of private families decreased by 5.1 percent.

Home ownership was highest in rural-nonfarm areas, where 52.1 percent of all ocoupied units "ere owned by their occupants. This, however,
presents a decrease from the 61.3 percent sported in 1930. Home ownership decreased in urban areas from 54.1 percent in 1930 to 46.5
percent in 1940, and in rural-farm areas from 49.8 percent in 1930 to 44.3 percent in 1940. Data on home ownership are shown in Table l. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Nebraska as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units es rural-nonfarm.

Dwelling units occupied by white households numbered 355,744 , or 98.6 percent of all occupied dwelling units, while the nonwhite occupied 5,000 , or 1.4 percent. In $1930,98.7$ percent of all private families were white and 1.3 percent nonwhite. Nonwhite households occupied 2.8 percent of all occupied dwelling units in the urban areas in 1940 , as compared with 0.5 percent in rural-nonfarm areas, and 0.3 percent in ruralfarm areas.

Vacant dwelling units for sale or rent comprised 4.4 percent of all dwelling units in both urban and rural-nonfarm areas, 9.2 percent in rural-farm areas, and 6.1 percent in the entire State. Seasonal as well as ordinary dwolling units are included in all these percentages. Table 2 presents data on ocoupaney status.

In urban areas, 6.1 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 6.9 percent; in rural-farm areas, 5.3 percent; and in the entire state, 6.0 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 42.3 percent of the dwelling units in the state had private baths, and that 19.6 percent needed major repairs. sixty and seven-tenths percent of the dwelling units either

${ }^{1}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.
lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistios for the State by urban and rural areas are presented in Table 3, and for each of the 93 counties, the 9 cities with 10,000 inhabitants or more, and the 2 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 24.95$; of rural-nonfarm units, \$12.20; and of urban and rural-nonfarm units combined, $\$ 20.09$. The average for Omaha, the largest city, was $\$ 28.88$; for the metropolitan district of Omaha-Council Bluffs, \$27.29. This average is based on contract rent for tenant-occupied units
and estimated rental value for owner-ocoupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 28,862 , or 44.2 percent, were mortgaged; in rural-nonfarm areas, 22.0 percent; and in urban and rural-nonfarm areas combined, 35.3 percent.

## Rural-farm Areas

Twenty-two and two-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 17,299 dwelling units, or 12.5 percent of the number reporting on this item, had toilets in the structure; 39,201, or 28.5 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made other States as the figures become available.

HOUSING

CHARACTERISTICS OF HOUSING: 1940

DISTRICT OF COLUMBIA

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the dwelling units in the District of Columbia and the Washington, D. C., metropolitan district. Similar statistics for the Washe ington, D. C., matropolitan district by minor civil divisions will be presented in the bulletin. Dwelling unit totals pressnted in this release are final and replace those in the earlier release of February 1, 1941, Series H-2, No. 45.)

The proportion of home ownership in the District of Columbia decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 29.9 percent of all occupied dwelling units were occupied by their owners, as compared with 38.6 percent in 1930. Of the owner-occupied dwelling units in 1940, 64.8 percent were mortgaged. Census returns also showed that nonwhite households occupied 23.0 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 8.5 percent of the occupied dwelling units had more than one and onehalf persons per room. More than fourfifths ( 82.3 percent) of the dwelling units had private baths and 97.3 percent were not in need of major repairs. The average monthly rental for all dwelling units was $\$ 53.00$.

The final count of the Housing Census showed 185,128 dwelling units in the District of Columbia on April 1, 1940, of which 173,445 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a 22484
comparison shows that between 1930 and 1940 the number of families in the District increased by 38.1 percent. (See Table 1.)

Dwelling units occupied by white households numbered 133,528 , or 77.0 percent of all occupied dwelling units, while the nonwhite occupied 39,917 , or 23.0 percent. In 1930, 75.9 percent of all private families were white and 24.1 percent nonwhite.

Vacant dwelling units for sale or rent comprised 5.4 percent of all dwelling units in the District of Columbia. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

The average monthly rent of dwelling units in the District of Columbia was $\$ 53.00$. The average for the Washington, D. C., metropolitan district was $\$ 52.68$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Statistics for the District of Columbia and for the Washington, D. C., metropolitan district are presented in Table 3.

Similar announcements are being made for the various States as the figures become available.

HOUSING

## CHARACTERISTICS OF HOUSING: 1940

## KANSAS

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the dwelling units in Kanses, by counties, for the cities of 10,000 inhabitants or more, and for the metropolitan districts of Topeke and Wichite. Similar statiatics for counties by minor civil divisions, for all urban places, for mards of cities of 10,000 or more, and for the metropolitan districts of Topeka and Wichita by minor civil divisions, will be presented in the builotin. Dwelling init totals presented in this release are final and replace those in the earlier release of January 9, 1941, Series H-2, No. 20.)

Home ownership in Kansas decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 51.0 percent of all occupied dwelling units were occupied by their owners, as compered with 56.0 percent in 1930. of the owner-occupied nonfarm dwelling units in $1940,33.4$ percent were mortgaged. Census returns also showed that nonwhite households occupied 3.7 percent of all occupied dwelling units. The extent of overcrowding was indicated by the
ot that 5.9 percent of the occupied dwelling -ifs had more than one and one-half persons per room. Thirty-nine and nine-tenths percent of the dwelling units had private baths and 72.2 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 17.38$.

The final count of the Housing Census showed 545,721 dwelling units in Kansas on April 1, 1940, of which 511, 109 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and mey be compared with the number of private families returned in the 1930 Census. Suéh a comparison shows that between 1930 and 1940 the number of families increased by 12.9 percent in urben areas, 5.5 percent in ruralnonfaril areas, and 4.9 percent in the entire State. In the rural-farm areas, however, the number of private families decreased by 5.0 percent.

Home ownership was highest in rural-nonfarm eeas, where 56.0 percent of all occupied units - owned by their occupants. This, however, -epresents a decrease from the 60.3 percent reported in 1930. Home ownership decreased in urban areas from 54.4 percent in 1930 to 47.6
percent in 1940, and in rural-farm areas from 54.8 percent in 1930 to 51.7 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Kanses as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white housoholds numbered 491,951 , or 96.3 percent of all occupied dwelling units, while the nonwhite occupied 19,158 , or 3.7 percent. The same proportions of whites and nonwhites were found in 1930 as in 1940. Nonwhite households occupied 7.1 percent of all occupied dwelling units in the urban areas in 1940, as compared with 1.8 percent in rural-nonfarm areas, and 0.6 percent in ruralfarm areas.

Vacant dwelling units for sale or rent comprised 4.2 percent of all dwelling units in urban areas, 4.7 percent in rural-nonfarm areas, 7.8 percent in rural-farm areas, and 5.5 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 5.7 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 6.7 percent; in rural-farm areas, 5.4 percent; and in the entire state, 5.9 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 39.9 percent of the dwelling units in the state had private baths, and that 27.8 percent needed major repairs. Sixty-

four and nine-tenths percent of the dwelling units efther lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as ocoupied dwelling units are included in these ilgures.

Statistics for the state by urban and rural areas are presented in Table 3, and for each of the 105 counties, the twenty cities with 10,000 inhabitants or more, and the metropolitan districts of Topeka and Wichita, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 20.02$; of rural-nonfarm units, \$12.79; and of urban and rural-nonfarm units combined, \$17.38. The average for Wichita, the city with the largest number of dwelling units, was $\$ 24.61$; for the metropolitan district of Wichita, 22250
\$24.46. This average is based on contract rent for tenant-ocoupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units In the urban areas, 38,300 , or 37.7 percent, were mortgaged; in rural-nonfarm areas, 26.9 percent; and in urban and rural-nonfarm areas combined, 33.4 percent.

## Rural-farm Areas

Fifteen and six-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 17,684 dwelling units, or 10.3 percent of the number reporting on this item, had toilets in the structure; 46,646 , or 27.3 percent, had electrio lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the IIgures become available.

HOUSING

## CHARACTERISTICS OF HOUSING: 1940

## RHODE ISLAND

#### Abstract

(This advance release from the Firet Series Housing Bulletin preeente data on tenure, color of ocoupants, average monthly rent, mortgage status, etc., for the dwelling units in Rhode Ieland, by counties, for the urban places of 10,000 inhabitante or more, and for the matropolitan district of Providence. Sinilar otatistice for counties by minor civil divisions, for all urban places, for wards of cities of 10,000 or more, and for the matropolitan district of Providence by minor civil divisions, will be preeented in the bullotin. Dwelling unit totals preeented in this release are final and replace thoee in the earlier release of NovemDer 16, $\mathbf{- 1 9 4 0}$, Series H-2, No. 5.)

The proportion of home ownership in Rhode Island decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 37.4 percent of all occupied dwelling units were occupied by their owners, as compared with 41.2 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 58.7 percent were mortgaged. Census returns also showed that nonwhite households occupied 1.7 percent of all occupied dwelling units. The extent of overcrowing was indicated by the fact that 3.5 percent of the coupied dwelling units had more than one and jne-hale persons per room. More than threefourths (76.2 percent) of the dwelling units had private baths and 92.4 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$28.61.

The final count of the Housing Census showed 203,469 dwelling units in Rhode Island on April 1, 1940 , of which 187,706 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units In a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 12.7 percent in urban areas, 25.9 percent in ruralnonfarm areas, 6.6 percent in rural-farm areas, and 13.5 percent in the entire State.

Home ownership was highest in rural-farm areas, where 73.0 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 77.1 percent reported in 1930. Home ownership decreased in urban areas from 39.7 percent in 1930 to 35.6 jercent in 1940, and in rural-nonfarm areas from 53.3 percent in 1930 to 52.5 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated
places of 2,500 inhabitants or more as urban. In Rhode Island, several densely populated towns are also classified as urban on the basis of special requirements. The remaining territory is classified as rural; all dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 184,473 , or 98.3 percent of all ocoupied dwelling units, while the nonwhite occupied 3,233 , or 1.7 percent. In $1930,98.4$ percent of all private families were white end 1.6 percent nonwhite. Nonwhite households occupied 1.8 percent or all occupied dwelling units in the urban areas in 1940, as compared with 1.5 percent in rural-nonfarm areas, and 0.6 percent in ruralfarm areas.

Vacant dwelling units for sale or rent comprised 3.8 percent of all dwelling units in urban areas, 12.9 percent in rural-nonfarm areas, 5.2 percent in rural-faril areas, and 4.7 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 3.7 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 2.2 percent; in rural-farm areas, 2.4 percent; and in the entire State, 3.5 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 76.2 percent of the dwelling units in the state had private baths, while 23.8 percent had no private bath; and that 7.6 percent needed major repairs. Twenty-seven and one-half percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking

TABLE 2. DWELLTNG UNITS BY OCCUPANCY STATUS, FOR RHODE ISLAND, URBAN AND RURAL: 1940

private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the five counties, the fifteen urban places with 10,000 inhabitants or more, and the metropolitan district of Providence, in Table 4.

## Urban and Fural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 28.74$; of rural-nonfarm units, $\$ 27.31$; and of urban and rural-nonfarm units combined, $\$ 28.61$. The average for Providence, the largest city, was $\$ 28.09$; for the metropolitan district of Providence, $\$ 28.06$. This average is based on contract rent for tenant-occupied units and
estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 34,999 , or 61.1 percent, were mortgaged; in rural-nonfarm areas, 39.5 percent; and in urban and rural-nonfarm areas combined, 58.7 percent.

## Rural-Parm Areas

Fifty-seven and two-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 1,282 dwelling units, or 44.4 percent of the number reporting on this item, had toilets in the structure; 2,240, or 77.7 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as the Ifgures become available.

Sixteenth Census of the United States: 1940

Series H-4, No. 18
HOUSING

## CEARACHERISTICS OF HOUSING: 1940

## WEST VIRGINIA

#### Abstract

(Thie advance releaee from the First Seriee Housing Bulletin preeents data on tenure, color of ocoupants, average monthly rent, mortgage status, etc., for the dwelling units in West Virginia, by counties, for cities and towne of 10,000 inhabitants or more, and for metropolitan distriots. Similar statietics for counties by minor civil divisions, for all urban places, for warde of cities of 10,000 or more, and for metropolitan distriots by minor civil divieions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of January 18, 1941, Series H-2, No. 27.)

The proportion of home ownerehip in Weet Virginia decreased between 1930 and 1940, according to data from the 1940 Census of Housing releaeed today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In $1940,43.7$ percent of all occupied dwelling units were occupied by their owners, as compared with 45.9 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 32.2 percent were mortgaged. Censue returns also ehowed that nonwhite householde occupied 6.3 percent of all occupied dwelling units. The extent of overcrowding wae indicated by the fact that 15.2 percent of the occupied dwelling units had more than one and one-half persons per room. Thirtyfour and four-tenths percent of the dwelling units had private baths and 72.6 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and ruralnonfarm areas was $\$ 18.41$.

The final count of the Housing Census showed 459,725 dwelling units in West Virginia on April 1, 1940, of which 444,815 were occupied. Since a dweliing unit, as the term ie used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of familiee and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 20.4 percent in urban areas, 14.1 percent in rural-nonfarm areas, 26.5 percent in rural-farm areas, and 19.0 percent in the entire State.

Home ownerehip was highest in rural-farm areae, where 68.1 percent of all occupied units were owned by their occupants. This, however, represente a decrease from the 74.7 percent reported in 1930. Home owmership decreased in urban areae from 44.8 percent in 1930 to 40.3 percent in 1940, but increased in rural-nonfarm areas from 31.7 percent in 1930 to 32.1 percent in 1940. Data on home ownerehip are ehown in

Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in West Virginia as urban, and the remainder of the State ae rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling unite occupied by white households numbered 416,675 , or 93.7 percent of all oocupied dwelling unite, while nonwhite households occupied 28,140 , or 6.3 percent. In $1930,93.0$ percent of all private families were white and 7.0 percent nonwhite. Nonwhite houeeholde occupied 6.1 percent of all occupied dwelling unite in the urben areas in 1940, as compared with 9.7 percent in rural-nonfarm areas, and 0.8 percent in rural-farm areas.

Vacant dwelling units for eale or rent comprised 2.3 percent of all dwelling unite in urban areas, 3.0 percent in rural-nonfarm areae, 3.3 percent in rural-farm areas, and 2.9 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 6.9 percent of the occupied dwelling units had more than one and one-half pereons per room; in rural-nonfarm areas, 18.7 percent; in rural-farm areas, 19.5 percent; and in the entire state, 15.2 percent. The number of persone per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per roon being considered ae indicating overcrowding.

It was found that 34.4 percent of the dwelling unite in the state had private baths, and that 27.4 percent needed major repairs. Seventy percent of the dwelling units either lacked private bath or needed major repaire. The percentage of awelling units either lacking private bath or needing major repaire wae lowest in urban areae and higheet in rural-farm areae. Vacant ae well as occupied dwelling units are included in these figuree.

${ }^{1}$ Vacant dwelling units held for absent households and units occupied by nonresident households.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 55 counties, the 12 cities and towns with 10,000 inhabitants or more, and the 3 metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 27.23$; of rural-nonfarm units, $\$ 12.00$; and of urban and rural-nonfarm units combined, $\$ 18.41$. The average for Huntington, the largest city, was $\$ 27.51$; for the metropolitan district of Huntington-Ashland, $\$ 23.21$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, $20 ; 399$, or 39.3 percent, were mortgaged; in rural-nonfarm areas, 25.3 percent; and in urban and rural-nonfarm areas combined, 32.2 percent.

## Rural-farm Areas

Ten and six-tenths percent of the rural-farm dwelling unita had running water in the dwelling units; 7,181 dwelling units, or 6.3 percent of the number reporting on this item, had toilets In the structure; 28,186 , or 24.7 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5

Similar announcements are being made for other States as the figures become available.

CHARACTERISTICS OF HOUSING: 1940

## IOWA

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, ete., for the drelling units in Iowa, by counties, for the cities of 10,000 inhabitants or more, and for the metropolitan districts. Similar statistics for counties by minor civil divisions, for all urban places, for wards of cities of 10,000 or more, and for the metropolitan districts by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of December 26, 1940, Series H-2, No. 14.)

The proportion of home ownership in Iowa decreased between 1930 and 1940 , according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 51.5 percent of all occupied dwelling units were ocoupied by their owners, as compared with 54.7 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 33.3 percent were mortgaged. Census returns also showed that nonwhite households occupied 0.8 percent of all occupied dwelling units. The extent of overcrowding was indicated $y$ the fact that 4.4 percent of the occupied welling units had more than one and one-half persons per room. More than two-fifths (41.8 percent) of the dwelling units had private baths and 80.3 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$20.98.

The final count of the Housing Census showed 726,654 dwelling units in Iowe on April 1, 1940, of which 701,824 were ocoupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 19.1 percent in urban areas, 5.8 percent in ruralnonfarm areas, 3.3 percent in rural-farm areas, and 10.4 percent in the entire State.

Home ownership was highest in rural-nonfarm areas, where 58.6 percent of all occupied units were owned by their occupants. This, however, epresents a decrease from the 62.3 percent reported in 1930. Home ownership decreased in urban areas from 54.9 percent in 1930 to 50.5 percent in 1940, and in rural-farm areas from
49.0 percent in 1930 to 47.9 percent in 1940. Data on home ownership are shown in Table 1 . The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Iowa as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 696,271 , or 99.2 percent of all occupied dwelling units, while the nonwhite occupied 5,553 , or 0.8 percent. Identical proportions of whites and nonwhites were found in 1930. Nonwhite households occupied 1.5 percent of all occupied dwelling units in the urban areas in 1940, as compared with 0.3 percent in ruralnonfarm areas and 0.2 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.3 percent of all dwelling units in urban areas, 3.2 percent in rural-nonfarm areas, 2.9 percent in rural-farm areas, and 2.7 percent n the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas 5.1 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 5.0 percent; in rural-farm areas, 3.1 percent; and in the entire State, 4.4 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 41.8 percent of the dwelling units in the State had private baths, while 58.2 percent had no private bath, and that 19.7 percent needed major repairs. Sixty-one and ninetenths percent of the dwelling units either

lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 99 counties, the 21 cities with 10,000 inhabitants or more, and the five metropolitan districts, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 24.76$; of rural-nonfarm units, $\$ 13.82$; and of urban and rural-nonfarm units combined, $\$ 20.98$. The average for Des Moines, the largest city, was $\$ 29.03$; for the metropolitan district of Des Moines, $\$ 28.06$. This average is based on contract rent for tenant-occupied units and esti-
mated rental value for owner-occupied and vacant units.
of the reporting owner-occupied dwelling units in the urban areas, 60,067 , or 41.0 percent, were mortgaged; in rural-nonfarm areas, 20.1 percent; and in urban and rural-nonfarm areas combined, 33.3 percent.

## Rural-farm areas

Twenty-one and four-tenths percent of the rural-farm dwelling units had running water in the dwelling units; 35,374 dwelling units, or 15.2 percent of the number reporting on this item, had toilets in the structure; 92,166 , or 39.5 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by oounty in Table 5.

Similar announcements are being made for other States as the figures become available.

HOUSING
CHARACTERISTICS OF HOUSING:

## - SOUTH CAROLINA

#### Abstract

(Thie advance releaee from tho Firet Serles Houeing Builetin preeents data on terare, oclor of oecupents, average monthly remt, mortgage status, etc.i for the dwelling units in South Carolina, by countles, for the eities of 10,000 inhabitants or more, and for thometropolitad distriota of Charlaston and Columbla, Similar atatistice for counties by minor civil divisiois, for als; urban plages, for verds of estien of $10,000 \mathrm{~s}$ more, and for the metropolitan districte of Charleston and Columbia by ninor oivil diviaions, will be preeanted in the bulletin. Dwelling unit totale presented, in thio raleaee are final and replaoe thase fio tiearlier release of January 17, 1941, Series $\mathrm{H}-2$, No, 24.)

The proportion of home ownership in South Carolina decreased between 1930 and 1940, according to data from the 1940 censue of Housing releaeed today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 30.6 percent of all ocoupied dwelling units were occupied by their ownere, ae compared with 30.9 percent in 1930. Of the owner-occupied nonfarm dwelling unite in 1940, 35.9 percent were mortgaged. Census retiurne also showed that nonwhite households ocoupied 41.5 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 21.4 percent of the occupied dwelling units had more than one and one-half persone per room. Twentyone and two-tenths percent of the dwelling units had private baths and 77.3 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and ruralnonfarm areas wae $\$ 14.76$.

The final count of the Housing Census showed 458,899 dwelling units in South Carolina on April 1, 1940, of which 434,968 were ocoupied. since a dwelling unit, as the term ie ueed in the Ceneus, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the eame as the number of familiee and may be compared with the number of private families returned in the 1930 Ceneus. Such a comparison shows that between 1930 and 1940 the number of familles increased by 39.4 percent in urban areas, 22.8 percent in rural-nonfarm areas, 6.3 percent in rural-farm areae, and 18.9 percent in the ontire State.

Home ownership was highest in rural-farm areas, where 34.7 percent of all occupled units were owned by their occupants. This represents an increase over the 32.3 percent reported in 1930. Home ownership deareased in urban areas from 32.3 percent in 1930 to 27.0 percent in 1940, but increased in rural-nonfarm areas from
27.5 percent in 1930 to 28.2 percent in 1940. Data on home ownership are showi in Tab? : The Census Bureau considers all incorgc: $16: 4$ placee of 2,500 inhabitents or more $\left\{\begin{array}{l}\text { sinth }\end{array}\right.$ Carolina as urban, and the remainder 7 the Stpte as rural. All dwelling units located on farman in rural territory are designated ae rural-farm, and all other rural dwelling units as ruralnonfarm.

Dwelling units ocoupied by white households numbered 254,407 , or 58.5 percent of all ocaupied dwelling units, while the nonwhite occupied 180,561 , or 41.5 percent. In 1930, 53.9 percent of all private families were white and 46.1 percent nonwhite. Nonwhite households ocoupied 38.5 percent of all occupied dwelling units in the urban areas in 1940, as compared with 30.1 percent in rural-nonfarm areas and 51.3 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.1 percent of all dwelling units in urban areae, 3.4 percent in rural-nonfarm areas, 6.9 percent in rural-farm areas, and 4.6 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupaney status.

In urban areas 17.5 percent of the ocoupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 18.8 percent; in rural-farm areas, 25.7 percent; and in the entire State, 21.4 percent. The number of persons per room in oocupied dwelling units serves as a measure of orowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 21.2 percent of the dwelling units in the State had private baths, and that 22.7 percent needed major repairs. Eighty and one-tenth percent of the dwelling units

${ }^{1}$ Vacent dwelling units held for absent households, and units ocoupied by nonresident households.
either lacked private bath or needed major repairs. The percentage of dwelling units either laking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as oooupied dwelling units are inoluded in these figures.

Statistios for the State by urben and fural areas are presented in Table 3, and for each of the 46 oounties, the ten oitiee with 70,000 inhabitants or more, and the metropolitan dietriots of Charleeton and Columbia, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 18.68$; or rural-nonfarm units, \$11.01; and of urban and rural-nonfarm unite oombined, $\$ 14.76$. The average for Charleeton, the largest oity, was \$21.亡4; for the metropolitan district of Charleston, \$20.84. Thie average is baeed on contract rent for tenant-occupied units and
estimated rental value for owner-ocoupied and vacant units.

01 the reporting owner-oocupied dwelling units in the urban areas, 12,872 , or 41.0 peroent, were mortgaged; in rural-nonfarm areas, 30.7 peroent; and in urban and rural-nonfarm areas combined, 35.9 percent.

## Rural-farm Areas

Five and three-tenths percent of the ruralfarm dwelling unita had running water in the dwelling units; 7,801 dwelling units, or 4.0 peroent of the number reporting on this item, had toilets in the struoture; 32,731 , or 16.7 percent, had eleotrio lighting. Statistioe on rural-farm dwelling units are presented by oounty in Table 5.

Similar announoements are being made for other Statee as the figures beoome available.

(Poreante are beasd on total number reporting on epecified itema)

## HOUSING

CHARACTERISTICS OF HOUSING: 1940

## ARKANSAS

#### Abstract

(This advance release from the First Series Housing Builetin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the dwalling units in Arkanses, by counties, for the cities of 10,000 inhabitants or mors, and for the metropolitan distriot of Little Rock. Similar statistios for oounties by minor oivil divisions, for all urban places, for wards of aities of 10,000 or more, and for the metropolitan district of Little Rock by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of Jenuary 7, 1941, Series H-2, No. 19.)

The proportion of home ownership in Arkansas decreased between 1930 and 1940, according to date from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 39.7 percent of all occupied dwelling units were occupied by their owners, as compared with 40.1 percent in 1930. Of the owner-ocoupied nonfarm dwelling units in $1940,26.5$ percent were mortgaged. Census returns also showed that nonwhite households ocoupied 25.7 percent of all ocoupied iwelling units. The extent of overcrowding was ndicated by the fact that 20.7 percent of the ocoupied dwelling units had more than one and one-half persons per room. Sixteen and one-half percent of the dwelling units had private baths and 60.9 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 12.32$.

The final count of the Housing Census showed 520,613 dwelling units in Arkansas on April 1 , 1940 , of which 495,825 were ocoupied. Since a dwelling unit, as the term is used in the Census, is the living quarters oocupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 24.6 percent in urban areas, 21.6 percent in ruralnonfarm areas, 5.2 percent in rural-farm areas, and 13.0 percent in the entire state.

Home ownership was highest in rural-nonfarm areas, where 42.3 percent of all occupied units were owned by their occupants. This, however, "epresents a deorease from the 44.3 percent reorted in 1930. Home ownership decreased in urban areas from 44.1 percent in 1930 to 38.4 percent in 1940, but inereased in rural-farm areas from 36.9 percent in 1930 to 39.3 percent

In 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 inhabitants or more in Arkansas as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as ruralfarm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 368,246 , or 74.3 percent of all occupied awelling units, while the nonwhite occupied 127,579 , or 25.7 percent. In 1930, 71.9 percent of all private families were white and 28.1 percent nonwhite. Nonwhite households occupied 25.8 percent of all occupied dwelling units in the urban areas in 1940, as compared with 21.6 percent in rural-nonfarm areas, and 27.5 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 3.1 percent of all dwelling units in urban areas, 3.2 percent in rural-nonfarm areas, 5.3 percent in rural-farm areas, and 4.3 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on ocoupaney status.

In urban areas 11.6 peragnt of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 19.1 percent; in rural-farm areas, 25.7 percent; and in the entire state, 20.7 percent. The number of persons per room in occupied dwelling units serves as a measure of crowding, more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 16.5 percent of the dwelling units in the State had private baths, and that 39.1 percent needed major repairs. Eightyfive and four-tenths percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either

| Vacant, for sale or rent................ | 22,323 | 3,917 | 3,743 | 14,663 |
| Percent of all dwelling units......... | 4.3 2.465 | 3.1 | 3.2 | 14.3 |
| Vacant, not for sale or rent ${ }^{1}$. . . . . . . . . | 2,465 | 306 | 846 | 1,313 |

1 Vacant dwelling units held for absent households, and units occupied by nonresident households.
lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 75 counties, the nine oities with 10,000 inhabitants or more, and the metropolitan district of Little Rock, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 16.75$; of rural-nonfarm units, $\$ 7.44$; and of urban and rural-nonfarm units combined, \$12.32. The average for Little Rock, the largest city, was $\$ 23.28$; for the metropolitan district of Little Rock, $\$ 20.92$. This average is based on contract rent for tenant-occupied units and 20575
estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 15,062 , or 34.2 percent, were mortgaged; in rural-nonfarm areas, 17.5 percent; and in urban and rural-nonfarm areas combined, 26.5 percent.

## Rural-farm Areas

Two and seven-tenths percent of the ruralfarm dwelling units had running water in the dwelling units; 5,077 dwelling units, or 1.9 percent of the number reporting on this item, had toilets in the structure; 21,689 , or 8.0 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made other States as the flgures become avallable

HOUSING
CHARACTERISTICS OF HOUSING: 1940

## MISSISSIPPI

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of ocupants, average monthly rent, mortgage status, etc., for the dwelling units in Missisaippi, by counties, for cities of 10,000 inhabitants or more, and for the metropolitan distriet of Jackson. Similar statistics for oounties by minor civil divisions, for all urben places, for wards of cities of 10,000 or more, and for the metropoliten district of Jackson by pinor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of Jamuary 7 , 1941 , Series H-2, No. 17.)

Home ownership in Mississippi increased slightIy between 1930 and 1940, according to data from the 1940 Census of Housing released today by Direotor J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 33.3 percent of all occupied dwelling units were occupied by their owners, as compared with 32.5 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 29.1 percent were mortgaged. Census returns also showed that nonwhite households occupied 49.8 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 21.7 percent of the occupied elling units had more than one and one-half rsons per room. Fourteen ( 14.0 ) percent of the dwelling units had private baths and 66.4 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 12.93$.

The final count of the Housing Census showed 557, 246 dwelling units in Mississippi on April 1, 1940, of which 534,956 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units In a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and $\$ 940$ the number of families increased by 38.0 percent in urban areas, 19.9 percent in ruralnonfarm areas, 4.7 percent in rural-farm areas, and 13.4 percent in the entire state.

Home ownership was highest in rural-nonfarm areas, where 38.4 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 40.0 percent reported in 1930. Home ownership decreased in mban areas from 40.1 percent in 1930 to 34.4 rcent in 1940, but increased in rural-farm areas from 28.4 percent in 1930 to 31.3 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incor-
porated places of 2,500 or more inhabitants in Mississippi as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as ruralfarm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 268,552 , or 50.2 percent of all occupied dwelling units, while the nonwhite occupied 266,404 , or 49.8 percent. In 1930, 46.8 percent of all private families were white and 53.2 percent nonwhite. Nonwhite households occupied 44.6 percent of all occupied dwelling units in the urban areas in 1940, as compared with 37.9 percent in rural-nonfarm areas, and 55.3 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 1.9 percent of all dwelling units in urban areas, 2.3 percent in rural-nonfarm areas, 4.6 percent in rural-farm areas, and 3.6 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas 14.4 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 17.5 percent; in rural-farm areas, 25.6 percent; and in the entire State, 21.7 percent. The average number of persons per room in occupied dwelling units serves as a measure of crowding, an average of more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 14.0 percent of the dwelling units in the state had private baths, and that 33.6 percent needed major repairs. Eighty-seven and three-tenths (87.3) percent of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either laoking private bath or needing major repairs was lowest in urban areas and highest in rural-farm

${ }^{2}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.
areas. Vacant as well as occupied dwelling units are included in these ifgures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 82 counties, the 12 cities with 10,000 inhabitants or more, and the metropolitan district of Jackson, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 16.26$; of rural-nonfarm units, $\$ 8.76$; and of urban and rural-nonfarm units combined, \$12.93. The average for Jackson, the largest city, was $\$ 26.20$; for the metropolitan district of Jackson, $\$ 24.76$. This average is based on contract rent for tenant-ocoupied units and estinated rental value for owner-occupied and vacant units.

Of the reporting owner-ocoupied dwelling units in the urban areas, 14,138 , or 37.0 percent, were mortgaged; in rural-nonfarm areas, 19.1 percent; and in urban and rural-nonfarm areas combined, 29.1 percent.

## Rural-farm Areas

Three and two-tenths (3.2) percent of the rural-farm dwelling units had running water in the dwelling units; 8,063 dwelling units, or 2.4 percent of the number reporting on this item, had toilets in the structure; and 27,889, or 8.5 percent, had electric lighting. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as figures become available.

HOUSING

CHARAGTERISTICS OF HOUSING: 1940

#### Abstract

(Thie advance release from the First Series Housing Bulletin presente data on temure, color of dcoupants, average monthly rent, mortgage otatus, ete., for the dwolling units in Arizona, by counties, for eitias of 10,000 inhabitante or more, and for the metropolitan district of Phoenix. Similar statistice for counties by minor eivil divisions, for all urban placee, for warde of citiee of 10,000 or more, and for the metropolitan dietrict of Phoenix by minor civil divieione, will be presented in the bullotin. Dwelling unit totals preespted in this release are final and replace those in the earlier release of December 21, 1940, Seriee H-2, No. 12.)

Home ownership in Arizona increased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 47.9 percent of all occupied dwelling units were occupied by their owners, as oompared with 44.8 percent in 1930. of the owner-occupied nonfarm dwelling units in 1940, 35.7 percent were mortgaged. Census returns also showed that nonwhite households (largely Indian) occupied 12.5 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 27.2 percent of the occupied dwelling units had more than one and one-half persons per room. More than two-fifths ( 46.5 percent) of the dwelling units had private baths and 84.8 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 19.32$.

The final count of the Housing Census showed 147,079 dwelling units in Arizona on April 1, 1940, of which 131,133 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 28.7 percent in urban areas, 18.7 percent in ruralnonfarm areas, 25.9 percent in rural-farm areas, and 23.7 percent in the entire State.

Home ownership was highest in rural-farm areas, where 63.6 percent of all occupied units were owned by their occupants. This represents about the same proportion reported in 1930, 63.4 vercent. Home ownership increased in urban reas from 37.5 percent in 1930 to 39.2 percent in 1940, and in rural-nonfarm areas from 42.6 percent in 2930 to 48.1 percent in 1940 . Data on home ownership are shown in Table 1. The

Census Bureau considers all incorporated places of 2,500 or more inhabitants inArizona as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 114,786 , or 87.5 percent of all occupied dwelling units, while the nonwhite occupied 16,347, or 12.5 percent. In 1930, 88.2 percent of all private families were white and 11.8 percent nonwhite, the majority of the latter being Indian. Nonwhite households occupied 6.0 percent of all occupied dwelling units in the urban areas in 1940 , as compared with 7.7 percent in rural-nonfarm areas, and 34.5 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 6.3 percent of all dwelling units in urban areas, 6.9 percent in rural-nonfarm areas, 6.0 percent in rural-farm areas, and 6.5 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas 13.8 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 28.2 percent; in rural-farm areas, 50.0 percent; and in the entire State, 27.2 percent. The average number of persons per room in occupied dwelling units serves as a measure of crowding, an average of more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 46.5 percent of the dwelling units in the State had private baths, while 53.5 percent had no private bath, and that 15.2 percent needed major repairs. More than onehalf ( 56.0 percent) of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking

${ }^{1}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.
private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as ocoupied dwelling units are included in these figures.

Statisties for the State by urban and rural areas are presented in Table 3, and for each of the 14 counties, the two oities with 10,000 inhabitants or more, and the metropolitan district of Phoenix, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 24.10$; of rural-nonfarm units, $\$ 15.21$; and of urban and rural-nonfarm units combined, \$19.32. The average for Phoenix, the largest city, was $\$ 27.27$, and for the metropolitan district of Phoenix, $\$ 24.01$. This average is based on contract rent for tenant-ocoupied units and estimated rental value for owner-occupied and vacent units.

Of the reporting owner-occupied dwelling units in the urban areas, 7,692 , or 43.7 percent, were mortgaged; in rural-nonfarm areas, 29.9 percent; and in urban rural-nonfarm areas combined, 35.7 percent.

## Rural-farm Areas

Slightly more than one-fourth (26.8 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving nearly three-fourths ( 73.2 percent) without this convenience; 5,475 dwelling units, or 17.3 percent of the number reporting on this item, had toilets in the structure, while 82.7 percent did not; 9,524 , or 30.2 percent, had electric lighting, while 69.8 percent had none. Statistics on rural-farm dwelling units are presented by count in Table 5.

Similar announcements are being madefor other States as figures become available.

# LIPRARI DEPARTMEITI OF COHMERCR 

## NEW HAMPSHIRE

#### Abstract

(This advance release fram the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage statue, etc., for the dwelling units in New Hampshire, by counties, for cities of 10,000 inhabitants or more, and for the metropolitan dietrict of Nanchester. Similar etatistice for countiee by minor civil divieions, for all urban placee, for wards of citiee of 10,000 or more, and for the metropolitan district of Manchester by minor civil divieions, will be presented in the bulletin. Dwalling unit totals presented in thie releaee are final and replace thoee in the earlier release of November 9 , 1940 , Seriee H-2, No, 4.)

The proportion of home ownership in New Hampshire decreaeed elightly between 1930. and 1940, according to data from the 1940 Census of Housing released today by Direator J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 51.7 percent of all occupied dwelling unite were occupied by their owners, as compared with 55.0 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 40.9 percent were mortgaged. Census returns also showed that nonwhite households occupied 0.2 percent of all occupied dwelling unite. The extent of overorowding was indicated by the fact that 3.3 percent of the occupied dwelling units had more than one and one-half persons per room. More than three-fifths ( 60.8 percent) of the dwelling units had private bathe and 87.7 percent were not in need of major repairs. The average monthly rental for all dwelling unite in urban and rural-nonfarm areas wae \$24.18.

The final count of the Housing Censue showed 158,044 dwelling units in New Hampshire on April 1, 1940, of which 132,936 were occupied. Since a dwelling unit, as the term is used in the Census, ie the living quarters occupied by one family or household, the number of occupied dwelling unite in a given area is about the same ae the number of families and may be compared with the number of private familiee returned in the 1930 Census. Such a comparieon shows that between 1930 and 1940 the number of familiee inoreased by 11.7 percent in urban areas, 9.5 percont in rural-nonfarm areas, 15.1 percont in rural-farm areae, and 11.4 percent in the entire State.

Home ownership wae higheet in rural-farm areas, where 84.7 percent of all ocoupied units were owned by their occupante. This, however, repreeents a decrease from the 89.5 percent reported in 1930. Home ownerehip deereased in arban areas from 44.7 percent in 1930 to 40.8 percent in 1940, and in rural-nonfarm areae from 60.6 percent in 1930 to 58.7 percent in 1940. Data on hame ownership are shown in Table 1.

The Census Bureau considers all incorporated places of 2,500 or more inhabitants in New Hampshire ae urban. In New Hampshire eeveral densely populated towns (townships) are also claseified ae urban on the baeis of special requirements. The remaining territory is claesified as rural; all dwelling unfts located on farms in rural territory are designated ae rural-farm, and all other rural dwelling unite as ruralnonfarm.

Dwelling units occupied by white householde numbered 132,662 , or 99.8 percent of all occupied dwelling units, while the nonwhite occupied 274 , or 0.2 percent. In 1930, 99.9 percent of all private families were white and 0.1 percent nonwhite. Nonwhite households occupied 0.3 percent of all occupied dwelling units in the urban areas in 1940, as compared with 0.2 percent in rural-nonfarm areae, and 0.1 percent in ruralfarm areas.

Vacent dwelling units for sale or rent comprised 3.9 percent of all dwelling unite in urban areas, 12.5 percent in rural-nonfarm areas, 7.9 percent in rural-farm areas, and 7.6 percent in the entire State. Seasonal ae well ae ordinary dwelling unite are included in all these percentages. Table 2 preeents data on occupancy etatus.

In urban areas 2.8 percent of the ocoupied dwelling units had more than one and one-half persone per room; in rural-nonfarm areae, 4.3 peraent; in rural-farm areas, 2.7 percent; and in the entire State, 3.3 percent. The average number of pereons per room in ocoupied dwelling units servee as a meaeure of crowding, an average of more than one and one-half pereons per room being considered as indicating overcrowding.

It wae found that 60.8 percent of the dwelling units in the State had private baths, while 39.2 percent had no private bath, and that 12.3 percent needed major repaire. More than twofifths (43.2 percent) of the dwelling units

1 Vacant dwelling units held for absent households, and units occupied by norresident households.
either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 10 counties, the 10 cities with 10,000 inhabitants or more, and the metropolitan district of Manchester, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 24.30$; of rural-nonfarm units, $\$ 24.01$; and of urban and Iural-nonfarm units combined, $\$ 24.18$. The average for Manchester, the largest city, was $\$ 22.68$; for the metropolitan district of Manchester, $\$ 22.60$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-ocoupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 12,982 , or 47.2 percent, were mortgaged; in rural-nonfarm areas, 33.4 percent; and in urban and rural-nonfarm areas combined 40.9 percent.

## Rural-farm Areas

Nearly three-fifths (57.2 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving slightly more than two-fifths ( 42.8 percent) without this convenience; 9,838 dwelling units, or 52.5 percent of the number reporting on this item, had toilets in the structure, while 47.5 percent did not; 11,911 , or 63.2 percent, had electric lighting, while 36.8 percent had none. Statistics on rural-farm dwelling units are presented by cou in Table 5.

Similar announcements are being made for other States as figures become available.

HOUSING

## DELAWARE

#### Abstract

(Thie advanoe release from the Firet Series Housing Bulletin presente data on tenurs, oolor of ocoupante, average monthly ront, mortgage status, ete., for the dwelling units in Delawere, by counties, for Filmington, the only aity of 10,000 inhabitante or more, and for the metropolitan dietrict of Wilmington. Similar atatistice for countien by minor civil divieions, for all urban pleces, for wards of aitiee of 10,000 or more, and for the metropoliten distriot of Wilmington by minor aivil divieions, will be prosent ed in the bulletin. Drelling unit totale presented in thie release are fimal and replace those in the earlier release of November 9, 1940, Seriee H-2, Ho, 2.)

The proportion of home ownership in Delaware decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 47.1 percent of all occupied dwelling units were occupied by their owners, as compared with 52.1 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 50.9 percent were mortgaged. Census returns also showed that nonwhite households occupied 12.5 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 3.4 percent of the ocoupied dwelling units had more than one and one-half persons per room. Nearly three-fifths (59.7 percent) of the dwelling units had private baths and 86.3 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 33.95$.

The final count of the Housing Census showed 75,567 dwelling units in Delaware on April 1, 1940, of whioh 70,541 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 23.6 percent in urban areas, 18.8 percent in rural-nonfarm areas, 8.6 percent in rural-farm areas, and 19.4 percent in the entire state.

Home ownership was highest in rural-farm areas, where 55.3 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 58.6 percent reported in 1930. Home ownership decreased in urban areas from 47.0 percent in 1930 to 41.2 percent in 1940, and in rural-nonfarm areas from 56.5 percent in 1930 to 52.7 percent in 1940. Data on home ownership are shown in Table 1. The

Census Bureau considers all incorporated places of 2,500 or more inhabitants in Delaware as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 61,730 , or 87.5 percent of all occupied dwelling units, while the nominite occupied 8,811 , or 12.5 percent. In 1930, 87.0 percent of all private families were white and 13.0 percent nonwhite. Nonwhite households occupied 13.1 percent of all occupied dwelling units in the urban areas in 1940 , as coupared with 21.0 percent in rural-nonfarm areas and 23.5 pereent in ruralfarm areas.

Vacant dwelling units for sale or rent comprised 2.7 percent of all dwelling units in urban areas, 6.4 percent in rural-nonfarm areas, 4.9 percent in rural-farm areas, and 4.3 percent in the entire State. Seasonal as well as crdinary dwelling units are included in all these percentages. Table 2 presents data on ocoupancy status.

In urban areas 3.1 percent of the oocupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 3.5 percent; in rural-farm areas, 4.3 percent; and in the entire state, 3.4 percent. The average number of persons per room in occupied dwelling units serves as a measure of crowding, an average of more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 59.7 percent of the dwelling units in the state had private bathe, while 40.3 percent had no private bath, and that 13.7 percent needed major repeirs. More than twofifths ( 43.4 percent) of the dwelling units either lacked private bath or needed major repeirs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urben areas and highest in rural-farm

1 Vacant dwelling units held for absent households, and units occupied by nonresident households.
areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 3 counties, for Wilmington, the only aity with 10,000 inhabitants or more, and the metropolitan district of Wilmington, in Table 4.

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 36.04$; of rural-nonfarm units, $\$ 30.75$; and of urban and rural-nonfarm units combined, $\$ 33.95$. The average for Wilmington, the lafgest oity, was $\$ 37.75$; for the metropolitan district of Wilmington, $\$ 37.46$. This average is based on contract rent for tenant-ocoupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 7,702 , or 54.3 percent, were mortgaged; in rural-nonfarm areas, 46.3 percent; and in urban and rural-nonfarm areas combined, 50.9 percent.

## Rural-farm Areas

Slightly less than one-fourth (24.9 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving about threefourths ( 75.1 percent) without this convenience; 2,209 dwelling units, or 18.1 percent of the number reporting on this item, had toilets in the structure, while 81.9 percent did not; 5,005 , or 41.0 percent, had electric lighting, while 59.0 percent had none. Statisticson rural-farm dwell ing units are presented by county in Table 5.

Similar announcements are being made for other States as the figures become available.

CHARACTERISTICS OF HOUSING: 1940

Sixteenth Census of the United States: 1940

Series H-4, No. 10

## NORTH DAKOTA

#### Abstract

(This advance relesse from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the dwelling units in North Dakota, by counties and for cities of 10,000 inhabitants or more. Similar statisties for counties by minor civil divisions, for all urban places, and for wards of cities of 10,000 or more will be presented in the bulletin. Dweliling unit totals presented in this release are final and replace those in the earlier release of Decomber 19, 1940, Series H-2, No. 11.)

Home ownership in North Dakota decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 49.8 percent of all ocoupied dwelling units were ocoupied by their owners, as compared with 58.6 percent in 1930. Of the owner-occupied nonfarm dwelling units in $1940,27.6$ percent were mortgaged. Census returns also showed that nonwhite households (largely Indian) occupied 1.4 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 13.6 percent of the noupied dwelling units had more than one and s-half persons per room. Almost one-fifth -19.6 percent) of the dwelling units had private baths and 66.3 percent were not in need of major repairs. The average morthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 18.84$.

The final count of the Housing Census showed 162,881 dwelling units in North Dakota on April 1 , 1940, of which 152,043 were ocoupied. Since a dwelling unit, as the term is used in the Census, is the living quarters ocoupied by one family or household, the number of ocoupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 31.4 percent in urban areas, 13.5 percent in rural-nonfarm areas, and 4.9 percent in the entire state. In the rural-farm areas, however, the number of private families decreased by 8.6 percent.

Home ownership was highest in rural-farm areas, where 53.0 percent of all ocoupied units were owned by their occupants. This, however, presents a decrease from the 62.1 percent rerted in 1930. Home ownership decilned in urban ureas from 47.4 percent in 1930 to 39.8 percent in 1940, and in rural-nonfarm areas from 59.4 percent in 2930 to 52.2 percent in 1940. Data on home ownership are shown in Table 1 . The Census Bureau considers all incorporated places
of 2,500 or more inhabitants in North Dakota as urban, and the remainder of the State as rural. All dwelling units looated on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 149,942 , or 98.6 percent of all occupied dwelling units, while the nonwhite ocoupied 2,101 , or 1.4 percent. In $1930,98.8$ percent of all private families were white and 1.2 percent nonwhite, the mafority of the latter being Indian Nonwhite households occupied 0.5 percent of all occupied dwelling units in the urban areas in 1940, as compared with 1.4 percent in ruralnonfarm and 1.8 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 2.6 percent of all dwelling units in urban areas, 3.1 percent in rural-nonfarm areas, 8.2 percent in rural-farm areas, and 5.5 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presenta data on occupaney status.

In urban areas 11.8 percent of the ocoupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 12.8 percent; in rural-farm areas, 15.0 percent; and in the entire state, 13.6 percent. The average number of persons per room in occupied dwelling units serves as a measure of orowding, an average of more than one and one-half persuns per room being congidered as indicating overcrowding

It wes found that 19.6 percent of the dwelling units in the State had private baths, while 80.4 percent had no private bath, and that 33.7 percent needed mejor repairs. More than four-fifths (82.4 percent) of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major ropairs was lowest in urban areas and highest in rural-farm areas. Vaoant as well as occupied dwelling units are included in these figures.

$r$ Vacant dwelling units held for absent households, and units occupied by nonresident households.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 53 counties and the 4 oities with 10,000 inhabitants or more, in Table 4.

## Urban and Rural-Nonfarm Areas

The average monthly rent of urban dwelling units was \$28.17; of sural-nonfarm units, $\$ 12.16$; and of urban and rural-nonfam units oombined, $\$ 18.84$. The average for Fargo, the largest oity, was $\$ 33.97$. This average is based on contraot rent for tenant-occupied units and eatimated rental value for owner-ocoupled and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 5,630 , or 44.6 peroent, were mortgaged; in rural-nonfarm areas, 17.9 percent;
and in urban and rural-nonfarm areas oombined, 27.6 percent.

## Rural-Fary Aroas

Less than one in sixteen (5.9 peroent) of the rural-farm dwelling units had running water in the dwelling units, leaving 94.1 peroent without this convenience; 4,105 dwelling units, or 5.3 percent of the number reporting on this item, had toilets in the struoture, while 94.7 peroent did not; 11,944 , or 15.5 percent, had eleotrio lighting, while 84.5 percent had none. Statistios on rural-fam dwelling units are presented by oounty in Table 5.

Similar announoements are being made for other Stetes as figures beocme available.

## NEW MEXICO

#### Abstract

(Thie advance release from the First Series Houeing Bulletin ie a revieion of an aarlier release (Series E-4, No. 9) which contained a number of minor errors. It preeents data on tenure, color of occupants, average monthly rent, mortgage status, etce, for the dwelling units in New Mexjco, by counties and for cities of 10,000 inhabitents or more. Similar otatietics for countiee by minor oivil divieione, for ell urban places, and for warde of citiee of 10,000 or more will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace thoee in the earlier release of January 7, 1941, Seriee H-2, No. 16.)

The proportion of home ownership in New Mexico remained practically unchanged between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 57.3 percent of all occupied dwelling units were occupied by their owners, as compared with 57.4 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 22.4 percent were mortgaged. Censue returns also showed that nonwhite households (largely Indian) occupied 6.6 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 32.9 percent of the occupied dwelling unite had more than one and one-half persons per room. More than one-fourth ( 27.3 percent) of the dwelling units had private baths and 75.8 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 15.49$.

The final count of the Housing Census showed 145,642 dwelling units in New Mexico on April 1, 1940, of which 129,475 were occupied. Since a dwelling unit, as the term is used in the Censue, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparieon shows that between 1930 and 1940 the number of families increased by 77.4 percent in urban areae, 13.6 percent in rural-nonfarm areas, 15.7 percent in rural-farm areas, and 31.4 percent in the entire State.

Home ownership was highest in rural-farm areas, where 71.8 percent of all occupied units were owned by their occupents. In 1930 almost exactly the same percent--72.0--reported home ownership. Home ownership declined in urban areas from 49.6 percent in 1930 to 46.8 percent in 1940, and increased in rural-nonfarm areae from 49.7 percent in 1930 to 55.3 percent in 1940. Data on home ownership are ehown in Table 1.

The Census Bureau considers all incorporated places of 2,500 or more inhabitants in New Mexico as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as ruralnonfarm.

Dwelling units occupied by white householde numbered 120,924 , or 93.4 percent of all occupied dwelling unite, while the nonwhite occupied 8,551 , or 6.6 percent. In 1930, 92.7 percent of all private familiee were white and 7.3 percent nonwhite, the majority of the latter being Indian. Nonwhite households occupied 2.9 percent of all occupied dwelling units in the urban areas in 1940, as compared with 6.4 percent in ruralnonfarm and 11.2 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprieed 5.0 percent of all dwelling units in urban areas, 10.2 percent in rural-nonfarm areas, 7.6 percent in rural-farm areas, and 7.6 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presente data on occupancy etatus.

In urban areas 22.5 percent of the occupled dwelling units had more than one and one-half persone per room; in rural-nonfarm areas, 36.8 percent; in rural-farm areas, 41.0 percent; and in the entire State, 32.9 percent. The average number of persone per room in occupied dwelling units serves as a measure of crowding, an average of more than one and one-half persons per room being considered ae indicating overorowding.

It was found that 27.3 percent of the dwelling units in the State had private baths, while 72.7 percent had no private bath, and that 24.2 percent needed major repairs. Three-fourths (75.0 percent) of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling unite either lacking private

${ }^{1}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.
bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 31 counties and the 5 cities with 10,000 inhabitants or more in Table 4 .

## Urban and Rural-nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 21.40$; of rural-nonfarm units, $\$ 9.62$; and of urban and rural-nonfarm units combined, $\$ 15.49$. The average for Albuquerque, the largest city, was $\$ 30 \cdot 13$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 6,546 , or 32.6 percent, were mortgaged; in rural-nonfarm areas, 12.4 percent; and in urban and rural-nonfarm areas combined, 22.4 percent.

## Rural-farm Areas

Less than one-seventh ( 13.8 percent) of the rural-farm dwelling units hadrumning water in the dwelling units, leaving more than six-sevenths ( 86.2 percent) without this convenience; 3,661 dwelling units, or 8.1 percent of the number reporting on this item, had toilets in the structure, while 91.9 percent did not; 7,870 , or 17.5 percent, had electric lighting, while 82.5 percent had none. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as figures become available.

## Bureau of the Ceneus

#### Abstract

(Finis advance release from the First Serios Housing Bulletin presents data on temure, color of ocoupants, average monthly rent, wortgege status, ote, for the dwalling units in Maine, by coumties, for oities of 10,000 inhabitants or more, and for the metropolition distriet of Portiend. Similar statistics for counties by minor civil divisions, for all urbas places, for mards of oities of 10,000 or moN, and for the retropolitan distriot of Portiand by wimer aivil divisions, wil be presented in the bullotin. Drelling mit totals presented in this release are final and replace those in the earlier release of January 21, 194, Series H-2, No. 81.)

The proportion of home ownerehip in Maine deereesed elightly between 1930 and 1940, aceording to data from the 1940 Consus of Housing released todey by Direotor J. C. Capt of the Bureau of the Coneut, Department, of Commerce. In 1940, 57.3 percent of all ocoupied dwelling units were ocoupied by their owners, as compared with 61.7 percent in 1930. Of the owner-oecupied nonfarm dwelling units in 1940, 30.1 percent were mortgaged. Census returns also ehowed that nonwhite households oceupied 0.4 percent of all oceupied dwelling unite. The extent of overerowding wee indicated by the fact that 5.1 percont of the oocupied dwelling units had more than one and ne-half persons per room. More than two-fifths 3.0 percent) of the dwolling units had private baths and 77.3 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 23.98$.

The final count of the Houeing Censue showed 260,659 dwelling unite in Maine on April 1, 1940, of which 218,968 were oceupied. Since a dwelling unit, as the terra is ueed in the Census, is the living quartere ocoupied by one family or houeohold, the number of ocoupied dwelling unite in a given area is about the same ae the number of familiee and may be compared with the number of private families returned in the 1930 Consue. Such a comparison ehowe that between 1930 and 1940 the number of familias inereaeed by 12.9 percent in urban areae, 10.6 percent in ruralnonfarm areae, 6.3 percent in rural-farm areae, and 10.7 percent in the entire State.

Home ownership wae highegt in rural-farm areae, where 84.7 percent of all ocoupied unite were owned by their oceupants. This, however, represents a decreaee from the 89.8 percent reported in 1930. Home ownership deereased in rban areas from 47.3 percent in 1930 to 41.8 orcent in 1940, and in rural-nonfarm areae from 62.7 percent in 1930 to 60.1 percent in 1940. Data on home ownerehip are ehown in Table 1.

The Censue Bureau considers all incorporated places of 2,500 or more inhabitante as urban. In Maine, however, several deneely populated towns (townehips) are aleo claeeified as urban on the basis of epecial requiremente. The remaining territory is claeeified as rural; all dwelling unite located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling unite occupied by white houeeholds numbered 218,179 , or 99.6 percent of all oecupied dwelling unite, while the nonwhite oceupied 789 , or 0.4 percent. In $1930,99.7$ percent of all private families were white and 0.3 percent nonwhite. Nonwhite householde occupied 0.4 percent of all occupied dwelling unite in the urban and rural-nonfarm areae in 1940, ae compared with 0.1 percent in rural-farm areae.

Vacant dwelling unite for eale or rent comprised 4.3 percent of all dwelling unite in urben areas, 11.1 percent in rural-nonfarm areas, 6.9 percent in rural-farm areae, and 7.9 percent in the entire State. Seasonal ae well ae ordinary dwelling unite are included in all theee percentages. Table 2 preeents data on oceupaney statue.

In urban areas 3.5 percent of the occupied dwelling unite had more than one and one-half pereone per room; in rural-nonfarm areas, 6.8 percent; in rural-farm areae, 4.8 percent; and in the entire state, 5.1 percent. The average number of persone per room in ocoupied dwelling unite serves ae a meaeure of crowding, an average of more than one and one-half persons per room being coneidered as indicating overcrowding.

It was found that 45.0 percent of the dwelling units in the state had private bathe, while 55.0 percent had no private bath, and that 22.7 percent needed major repaire. Almost three-1fiths ( 59.3 percent) of the dwelling unite ither lacked private bath or needed major repairs. 14093

| Percent of all dwelling units. | 7.9 | $4.3$ | $11.1$ | . 6.9 |
| Vacant, not for sale or rent ${ }^{1}$. .......... | 21,161 | 2,287 | 16,921 | 1,953 |

${ }^{1}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.

The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as ocoupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 16 counties, the ten cities with 10,000 inhabitants or more, and the metropolitan district of Portland, in Table 4.

## Urban and Rural-Nonfarm Areas

The average monthly rent of urban dwelling unite was \$25.51; of rural-nonfarm units, \$22.78; and of urban and rural-nonfarm units combined, \$23.98. The average for Portland, the largest city, was $\$ 28.42$, and for the metropolitan district of Portland, \$29.10. This average is based on contract rent for tenant-ocoupied units and estimated rental value for owner-ocoupied and vacant units.

Of the reporting owner-ocoupied dwelling units In the urban areas, 13,188 , or 39.8 percent, were mortgaged; in rural-nonfarm areas, 23.7 percent; and in urban and rural-nonfarm areas combined, 30.1 percent.

## Rural-Farm Areas

Slightly less than one-third (32.9 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving more than two-thirds ( 67.1 percent) without this oonvenience; 15,816 dwelling units, or 35.5 percent of the number reporting on this item, had toilets in the structure, while 64.5 percent did not; 22,819, or 51.1 percent, had electric lighting, while 48.9 percent had none. Statistios on ru-ral-farm dwelling units are presented by county in Table 5.

Similar announcements are being made other States as figures become available.

HOUSING

Sixteenth Census of the
United States: 1940
Series II-4, No. 7

CHARACTERISTICS OF HOUSING: 1940
MONTANA

#### Abstract

(This advance release from the First Series Housing Bulletin presente dats on tenure, color of occupante, average monthly rent, mortgage otatus, etc., for the dwelling unite in Montana, by countiee and for citiee of 10,000 inhabitante or more. Similar etatietica for countiee by minor civil divielone, for all urban places, and for wards of citiee of 10,000 or more will be presented in the bulletin. Derelling unit totals proeented in this release are final and replace thoee in the earlier release of December 14, 1940, Seriee H-2, No. 10.)

The proportion of home ownership in Montana decreased slightly between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In $1940,52.0$ percent of all occupied dwelling units were occupied by their owners, as compared with 54.5 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 26.4 percent were mortgaged. Census returns also showed that nonwhite households (largely Indian) occupied 2.6 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 13.3 percent of the occupied dwelling units

I more than one and one-half persons per room. fe than one-third ( 37.1 percent) of the dwelling units had private baths and 76.7 percent were not in need of major repairs. The average monthly rental for all dwelling units in urben and rural-nonfarm areas was $\$ 19.87$.

The final count of the Housing Census showed 177,443 dwelling units in Montana on April 1, 1940 , of which 159,963 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and
 - percent in urban areas, 23.4 percent in ruralnonfarm areas, and 17.4 percent in the entire State. In the rural-fam areas, however, the number of private families decreased by 6.0 percent.

Home ownership was highest in rural-farm areas, where 62.6 percent of all occupied units were owned by their occupants. This, however,
resents a decrease from the 69.0 percent re-
'ted in 1930. Home ownership declined in urban areas from 44.7 percent in 1930 to 43.1 percent in 1940, but increased in rural-nonfarm areas
from 48.8 percent in 1930 to 53.6 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 or more inhabitants in Montana as urban, and the remainder of the State as rural. All dwelling units located on, farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units ocoupied by white households numbered 155,867 , or 97.4 percent of all occupied dwelling units, while the nonwhite occupied 4,096 , or 2.6 percent. In 1930, 97.2 percent of all private families were white and 2.8 percent nonwhite, the majority of the latter being Indian. Nonwhite households occupied 1.0 percent of all occupied dwelling units in the urban areas in 1940 , as compared with 4.2 percent in ruralnonfarm and 2.9 percent in rural-fam areas.

Vacant dwelling units for sale or rent comprised 3.9 percent of all dwelling units in urban areas, 8.1 percent in rural-nonfarm areas, 10.9 percent in rural-farm areas, and 7.4 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas 8.2 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 16.1 percent; in rural-farm areas, 17.4 percent; and in the entire State, 13.3 percent. The average number of persons per room in ocoupied dwelling units serves as a measure of crowding, an average of more than one and one-hall persons per room being considered as indicating overcrowding.

It was found that 37.1 percent of the dwelling units in the state had private baths, while 62.9 percent had no private bath, and that 23.3 percent needed major repairs. More than twothirds ( 67.9 percent) of the dwellifg units either lacked private bath or needed major repairs. The percentage of dwelling units either

| Vacant, for sale or rent..................... | 13,071 | 2,638 | 4,540 | 5,893 |
| Percent of all dwelling units.............. | 7.4 | 3.9 | 8.1 | 10.9 |
| Vacant, not for sale or rent ${ }^{2}$. . . . . . . . . . . . . | 4,409 | 435 | 2,024 | 1,950 |

${ }^{1}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.
lacking private bath or needing major repairs was lowest in urban areas and highest in ruralfarm areas. Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 56 counties, the 6 cities with 10,000 inhabitants or more, and part of Yellowstone National Park, in Table 4.

## Urban and Rural-Nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 25.26$; of rural-nonferm units, $\$ 13.41$; and of urban and rural-nonfarm units combined, \$19.87. The average for Butte, the largest city, was 23.38 . This average is based on contract rent for tenant-occupied units and estimated rental value for owner-ocoupied and vacant units.

Of the reporting owner-occupied dwelling units In the urban areas, 8,780 , or 34.4 percent, were mortgaged; in rural-nonfarm areas, 17.7 percent; and in urben and rural-nonfarm areas combined, 26.4 percent.

## Rural-Farm Areas

More than one-seventh ( 14.6 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving less than six-sevenths ( 85.4 percent) without this convenience; 4,618 dwelling units, or 8.7 percent of the number reporting on this item, had toilets in the structure, while 91.3 percent did not; 14,783, or 27.9 percent, had electric lighting, while 72.2 I cent had none. Statistics on rural-farm dwe ing units are presented by county in Table 5.

Similar announcements are being made for other States as figures become available.

U. S. DEPARTMENT OF COMMERES

Bureau of the Census
Washington

Sixteenth Census of the United States: 1940

Series H-4, No. 6
HOUSING
CHARACTERISTICS OF HOUSING: 1940
WYOMING
(This advanee release from the First Series Housing Bulletin presente date on tenure, color of occupants, average monthly rent, mortgage status, ete., for the dwelling unite in Wyoming, by countiee and for eities of 10,000 inhabitente or more. Sinilar statieties for counties by minor eivil divisions, for all urban plaees, and for warde of eltiee of 10,000 or more will be presented in the bulletin. Dwelling unit totals presented in thie release are final and replace thoee in the earlier release of Deeember 7, 1940, Seriee H-2, He. 6.)

Home ownership in Wyoming increased slightly between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the sureau of the Census, Department of Commerce. In 1940, 48.6 percent of all ocoupied dwelling units were ocoupied by their owners, as compared with 48.3 percent in 1930. Of the owner-oceupied nonfarm dwelling units in $1940,39.8$ percent were mortgaged. Census returns also showed that nonwhite households occupied 1.7 percent of all oceupied dwelling units. The extent of overcrowding was indicated $\checkmark$ the fact that 15.0 percent of the occupied slling units had more than one and one-half porscns per room. More than two-fifths 140.9 percent) of the dwelling units had private baths and 75.6 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 20.55$.

The final count of the Housing Census showed 78,868 dwelling units in Wyoming on April 1, 1940, of which 69,374 were occupied. Since a dwelling unit, as the term is used in the Consus, is the living quarters ocoupied by one family or household, the number of ocoupied dwelling units in a givan area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and I940 the number of families increased by 46.4 percent in urban areas, 8.1 percent in ruralnonfarm areas, 12.3 percent in rural-farm areas, and 22.0 percent in the entire State.

Home ownership was highest in rural-faril areas, where 59.0 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 68.9 percent reted in 1930. Home ownership increased in urareas from 43.8 percent in 1930 to 46.3 percent in 1940, and in rural-nonfarm areas from 35.9 percent in 1930 to 42.8 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places
of 2,500 or more inhabitants in Wyoming as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 68,190 , or 98.3 percent of all occupled dwelling units, while the nomwhite occupied 1,184 , or 1.7 percent. In $1930,98.0$ percent of all private families were white and 2.0 percent nonwhite. Nonwhite households occupied 1.6 percent of all occupied dwelling units in the urben areas in 1940, as compared with 1.5 percent in rural-nonfarm and 2.1 percent in rural-farm areas.

Vacent dwelling units for sale or rent comprised 5.4 percent of all dwelling units in urban areas, 7.4 percent in rural-nonfarm areas, 10.6 percent in raral-farm areas, and 7.6 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas 9.4 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 16.7 percent; in rural-fam areas, 21.1 percent; and in the entire State, 15.0 percent. The average number of persons per room in occupied dwelling units serves as a measure of crowing, an average of more than one and onehalf persons per room being considered as indicating overcrowding.

It was found that 40.9 percent of the dwelling units in the State had private baths, while 59.1 percent had no private bath, and that 24.4 percent needed major repairs. Almost two-thirds ( 63.5 percent) of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urben areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

TABIE 2. DNELLING UNITS BY OCCUPANCY STATUS, FOR WYOMING, URBAN AND RURAL: 1940

| Subject | The State | Urban | Ruralnonfarm | Ruralfarm |
| :---: | :---: | :---: | :---: | :---: |
| All dwelling units...................... | 76,868 | 29,024 | 25,365 | 22,479 |
| Ocoupied.................................... . . . . . | 69,374 | 27,332 | 22,842 | 19,200 |
| Vacant, for sale or rent. . . . . . . . . . . . . . . . . . . . <br> Percent of all dwelling units. | 5,825 7.6 | 1,557 5.4 | 1,885 | 2,383 |
| Vacent, not for sele or rent ${ }^{2}$.................. | 7.6 1,669 | 5.4 135 | 7.4 638 | 10.6 896 |

${ }^{2}$ Vacant dwelling units held for absent households, and units ocoupied by nonresident households.

Statistics for the state by urban and rural areas are presented in Table 3, and for each of the 23 counties, the four eities with 10,000 inhabitants or more, and part of Yellowstone National Park, in Table 4.

## Urban and Rural-Nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 26.06$; of rural-nonfarm units, $\$ 14.25$; and of urban and rural-nonfarm units combined, $\$ 20.55$. The average for Cheyenne, the largest city, was $\$ 32.03$. This average is based on contract rent for tenant-ocoupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-ocoupied dwelling units in the urban areas, 5,817 , or 47.5 percent, were 14091
mortgaged; in rural-nonfarm areas, 29.0 percent; and in urban and rural-nonfarm areas combined, 39.9 percent.

## Rural-Farm Areas

Less than one-sixth (16.1 percent) of the rural-farm dwelling unita had running water in the dwelling units, leaving more than fivesixths ( 83.9 percent) without this convenience; 2,233 dwelling units, or 10.1 percent of the number reporting on this item, had toilets in the structure, while 89.9 percent did not; 6,818 , or 31.0 percent, had eleotric lighting, while 69.0 percent had none. Statisties on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as figures become available.

# HOUSING <br> GHARACTERISTICS OF HOUSING: 1940 

## SOUTH DAKOTA

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenuro, color of occupants, average monthly rent, mortgage status, etc., for the dwelling units in South Dekota, by countios and for citios of 10,000 inhabitants or more. Similar statistics for countios by minor civil diviaions, for all urban places, and for wards of eities of 10,000 or more will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of December 10, 1940, Series H-2, No. 8.)

Home ownership in South Dakota decreased between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Consus, Department of Comerce. In $1940,45.0$ percent of all ocoupied dwelling units were occupied by their owners, as compared with 53.1 percent in 1930. of the owner-ocoupied nonfarm dwelling units in 1940 , 29.2 percent were mortgaged. Census retums also showed that nonwhite households (largely Indian) occupied 3.0 percent of all oocupied dwelling units. The extent of overnwding was indicated by the fact that 9.7 perof the occupied dwelling units had more pourth ( 25.4 percent) of the dwelling units had private baths and 74.1 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 16.84$.

The final count of the Housing Census showed 179,744 dwelling units in South Dakota on April 1,1940 , of which 165,428 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 33.0 percent in urban areas, 10.6 percent in rural-nonfarm areas, and 2.7 percent in the entire State. In the rural-farm axeas, however, the number of private families decreased by 13.3 percent.

Home ownership was highest in rural-nonfarm areas, where 47.8 percent of all occupied units ware owned by their occupants. This, however, ssents a deorease from the 56.0 percent read in 1930. Home ownership declined in urban areas from 48.5 percent in 1930 to 41.9 percent in 1940 , and in rurai-farm areas from 53.3 peroent in 1930 to 44.9 ; percent in 1940. Data on home ownership are slown in Table 1. The Census

Bureau considers all incorporated places of 2,500 or more inhabitants in South Dakota as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units oocupied by white households numbered 160,539 , or 97.0 percent, of all occupied dwelling units, while the nonwhite occupied 4,889 , or 3.0 percent. In $1930,97.2$ percent of all private families were white and 2.8 percent nonwhite, the majority of the latter being Indian. Nonwhite households occupied 0.6 percent of all ocoupied dwelling units in urban areas in 1940, as compared with 4.3 percent in rural-nonfarm and 3.5 percent in rural-farm areas.

Vacant dwelling units for sale or rent oomprised 3.4 percent of all dwelling units in urban areas, 5.1 percent in rural-nonfarm areas, 9.9 percent in rural-farm areas, and 6.8 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas, 8.2 percent of the oocupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 10.9 percent; in rural-farm areas, 9.7 percent; and in the entire state, 9.7 percent. The average number of persons per room in occupied dwelling units serves as a measure of crowding, an average of more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 25.4 percent of the dwelling units in the State had private baths, while 74.6 percent had no private bath, and that 25.9 percent needed major repairs. 'Three-fourths ( 76.5 percent) of the dwelling units either lacked private bath or needed major: repairs. The percentage of dwelling units either: lacking private bath or needing major repairs was lowest in urban areas and highest in rurai-farm areas. Vacant as well as occupied dweliling units are included in these figures.

${ }^{1}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 69 counties and the 6 cities with 10,000 inhabitants or more in Table 4.

## Urban and Rural-Nonfarm Areas

The average monthly rent of urban dwelling units was \$23.25; of rural-nonfarm units, \$11.32; and of urban and rural-nonfarm units combined, $\$ 16.84$. The average for Sioux Falls, the largest city, was $\$ 28.34$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 7,018 , or 41.4 percent, were 14095
mortgaged; in rural-nonfarm areas, 19.3 percent; and in urban and rural-nonfarm areas combined, 29.2 percent.

## Rural-Farm Areas

Less than one-eighth ( 11.7 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving more than seveneighths (88.3) without this convenience; 4,361 dwelling units, or 5.4 percent of the number reporting on this item, had toilets in the structure, while 94.6 percent did not; 14,184 , or 17.9 percent, had electric lighting, while 82.1 percent had none. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcerients are being made for other States as figures become available.

HOUSING
CHARACTERISTICS OF HOUSING: 1940

## IDAHO

Sixteenth Census of the United States: 1940

Series H-4, No. 4

## rbsuary

#### Abstract

(This advance release from the Firct Series Housing Bulletin presents data on tenure, color of ocoupante, average monthly rent, mortgage status, etc., for the divelling units in Idaho, by counties and for alties of 10,000 inhabitants or more. Sivilar statistics for counties by minor civil divieions, for all urban places, and for warde of altioe of 10,000 or more will be preeented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of December 14, 1940, Seriee H-2, No. 9.)

Home ownership in Idaho increased slightly between 1930 and 1940, according to data from the 1940 Census of Housing released today by Direator J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 57.9 percent of all occupied dwelling units were occupied by their owners, as compared with 57.0 percent in 1930. Of the owner-occupied nonfarm dwelling units in 1940, 33.3 percent were mortgaged. Census returns also showed that nonwhite households (largely Indian) occupied 1.0 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 16.4 percent I the occupied dwelling units had more than one and one-half persons per room. More than onethird ( 38.4 percent) of the dwelling units had private baths and 75.0 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 18.21$.

The final count of the Housing census showed 152,835 dwelling units in Idaho on April 1, 1940, of which 141,727 were ocoupied. Since a dwelling unit, as the term is used in the census, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 census. Such a comparison shows that between 1930 and 1940 the number of families increased by 53.4 percent in urban areas, 24.8 percent in ruralnonfaril areas, 18.7 percent in rural-farm areas, and 31.2 percent in the entire State.

Home ownership was highest in rural-farm areas, where 65.3 percent of all occupied units were owned by their occupants. This, however, represents a decrease from the 67.8 percent reiorted in 1930. Home ownership increased in arban areas from 51.7 percent in 1930 to 53.3 percent in 1940, and in rural-nonfarm areas from 48.8 percent in 1930 to 54.8 percent in 1940 . Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated
places of 2,500 or more inhabitants in Idaho as urban, and the remainder of the state as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 140,307 , or 99.0 percent of all occupied dwelling units, while the nonwhite occupied 1,420 , or 1.0 percent. In 1930, 98.6 percent of all private families were white and 1.4 percent nonwhite, the majority of the latter being Indian. Nonwhite households occupied 0.7 percent of all occupied dwelling units in the urban areas in 1940, as compared with 0.8 percent in ruralnonfarm and 1.5 percent in rural-farm areas.

Vacant dwelling units for sale or rent oamprised 3.6 percent of all dwelling units in urban areas, 7.1 percent in rural-nonfarim areas, 5.8 percent in rural-farm areas, and 5.4 percent in the entire State. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupancy status.

In urban areas 11.7 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 19.5 percent; in rural-farm areas, 18.6 percent; and in the entire State, 16.4 percent. The average number of persons per room in occupied dwelling units serves as a measure of crowing, an average of more than one and one-half persons per room being considered as indicating overcrowding.

It was found that 38.4 percent of the dwelling units in the state had private baths, while 61.6 percent had no private bath, and that 25.0 percent needed major repairs. More than hall ( 65.4 percent) of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures.

TABLE 1. OCCUPIED DWELLTNG UNITS, BY TENURE, AND BY COLOR OF OCCUPANTS, FOR IDAHO, URBAN AND RURAL: 1940 AND 1930

| Subjeot | The State | Urban | Ruralnonfarm | Furalfarm |

${ }^{1}$ Vaeant dwelling units held for absent households and units oceupied by nonresident households.

Statisties for the state by urban and rural areas are presented in Fable 3, and for each of the 44 eountiea and the 7 oities with 10,000 inhabitants or more in Table 4.

## Urban and Fural-Nonfarm Areas

The average monthly rent of urban dwelling anits was \$22.51; of rural-monfarm units, \$13.28; and of urben and rural-nonfarm units oombined, \$18.21. The average for Boise City, the largest city, was $\$ 29.06$. This average is based on eontract rent for tenant-oceupied units and estimated rental value for owner-ocoupied and vacant units.

Of the roporting owner-oeoupied dwelling units In urban areas, 10,349 , or 41.3 pereent, were 14096
mortgaged; in rural-nonfarm areas, 23.4 pereant; and in urban and rural-nonfarm areas combined, 33.3 percent.

## Rural-Farm Areas

Less than one-third ( 31.3 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving more than two-thirds ( 68.7 pereent) without this convenience; 9,001 dwelling units, or 16.9 percent of the number reporting on this item, had toilets in the struce ture, while 83.1 percent did not; 31,487, or 59.4 percent, had eleotrie lighting, while 40.6 percent had none. Statisties on rural-farn dwelling unitsare presented by county in Table 5.

Similar anouncements are being made for other States as IIgures become available.

(Pereente ere beeed on total number reporting on epecified itens)

U. S. DEPARTMENT OF COMAERCE

Bureau of the Census Washington

Sixteenth Census of the United States: 1940

Series H-4, No. 3
HOUSING
CHARACTERISTICS OF HOUSING: 1940

## NEVADA

#### Abstract

(This advance release from the Firet Seriee Housing Bulletin presente data on tenurs, color of oceupante, average monthly rent, mortgage status, etc. for the dwelling unite in Nevade, by countiee, and for Reno, the only eity of 10,000 inhabitante or more. Similar etatistice ror counties by minor civil divisions, for all urban placee, and for warde of cities of 10,000 or more will be presented in the bullotin. Dweiling unit totals preeented in thie releaee are final and replace thoee in the earlier release of october 15, 1940, Seriee H-2, No. 1.)

The proportion of home ownership in Nevada decreased slightly between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 46.1 percent of all occupied dwelling units were occupied by their owners, as compared with 47.1 percent in 1930. Of the owner-ocoupied nonfarm dwelling units in 1940, 27.3 percent were mortgaged. Census returns also showed that nonwhite households (largely Indian) oocupied .7 percent of all occupied dwelling units. The tent of overcrowding wes indicated by the fact that 12.2 percent of the occupied dwelling units had more than one and one-half persons per room. More than half ( 56.3 percent) of the dwelling units had private baths and 83.4 percent were notin need of major repairs. The average monthly rental for all dwelling units in urban and ruralnonfarm areas was $\$ 25.79$.

The final count of the Housing Census showed 36,770 dwelling units in Nevada on April 1, 1940, of which 33,291 were occupied. Since a dwelling unit, as the term is used in the Consus, is the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census.

- Such a comparison shows that between 1930 and 1940 the number of families increased by 37.0 percent in urban areas, 30.6 percent in ruralnonfarm areas, 14.5 percent in rural-farm areas, and 30.7 percent in the entire State.

Home ownership was highest in rural-farm areas, where 68.1 percent of all occupied units re owned by their occupants. This, however, presents a decrease from the 75.0 percent reported in 1930. Hone ownership declined in urban areas from 43.4 percent in 1930 to 41.9 percent in 1940, but increased in rural-nonfarm areas from 41.9 percent in 1930 to 43.8 percent in

The Census Bureau considers all inoorporated places of 2,500 or more inhabitants in Nevada as urban, and the remainder of the state as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units occupied by white households numbered 31,712 , or 95.3 percent of all ocoupled dwelling units, while the nonwhite ocoupied 1,579 or 4.7 percent. In 1930, 93.7 percent of all private families were white and 6.3 percent nonwhite, the majority of the latter being Indian. Nonwhite households ocoupied 2.4 percent of all ocoupied dwelling units in the urban areas in 1940, as compared with 5.0 percent in rural-nonfaril and 11.1 percent in rural-farm areas.

Vaoant dwelling units for sale or rent comprised 4.0 percent of all dwelling units in urban areas, 9.0 percent in rural-nonfarm areas, 8.6 percent in rural-farm areas, and 7.1 percent in the entire State. Seasonal as well as ordinary dwelling units are inoluded in all these percentages. Table 2 presents data on ocoupaney status.

In urban areas 7.3 percent of the oocupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 15.3 percent; in rural-farm areas, 16.5 percent; and in the entire State, 12.2 percent. The average number of persons per room in oocupied dwelling units serves as a measure of crowding, an average of more than one and one-half persons per room being considered as indicating overorowding.

It was found that 56.3 percent of the dwelling units in the state had private baths, while 43.7 percent had no private bath, and that 16.6 percent needed major repairs. Almost half ( 49.2 percent) of the dwelling units either lacked private bath or needed major repairs. The per-

${ }^{2}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.
bath or needing major repairs was lowest in urban areas and highest in rural-farm areas: Vacant as well as occupied dwelling units are included in these figures.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 17 counties and Reno in Table 4.

## Urban and Rural-Nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 34.04$; of rural-nonfarm units, $\$ 19.40$; and of urban and rural-nonfarm units combined, \$25.79. The average for Reno, the only city of over 10,000 , was $\$ 39.41$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units

In the urban areas, 2,089 , or 41.0 percent, were mortgaged; in rural-nonfarm areas, 15.6 percent; and in urban and rural-nonfarm areas combined, 27.3 percent.

## Rural-Farm Areas

Less than half ( 43.1 percent) of the ruralfarm dwelling units had running water in the dwelling units, leaving more than half 156.9 percent) without this convenience; 1,225 dwelling units, or 26.4 percent of the number reporting on this item, had tollets in the structure, while 73.6 percent did not; 2,320 , or 49.8 percent had electric lighting, while 50.2 percent had none. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as figures become avallable.

HOUSING

## CHARAGTERISTICS OF HOUSING: 1940

## UTAH

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of occupants, average monthly rent, mortgage status, etc., for the dwelling units in Utah, by counties, for cities of 10,000 inhabitants or more, and for the metropolitan district of Salt Lake City. Similar statistics for counties by minor civil divisions, for all urban places, for wards of cities of 10,000 or more, and for the metropolitan district of Selt Lake City by minor civil divisions, will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of December 7 , 1940, Serles H-2, No. 7.)

Home ownership in Utah increased slightly between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 61.1 percent of all occupied dwelling units were occupied by their owmers, as compared with 60.9 percent in 1930. Of the owner-occupied nonfarm dwelling units in $1940,42.2$ percent were mortgaged. Census returns also showed that nonwhite households occupied 1.3 percent of all occupied dwelling units. The extent of overcrowding was indicated by the fact that 13.4 percent of the occupied velling units had more than one and one-half rions per room. More than three-fifths (60.7 percent) of the dwelling units had private baths and 79.0 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was \$22.11.

The final count of the Housing Census showed 147,291 dwelling units in Utah on April 1, 1940, of which 139,487 were occupied. Since a dwelling unit, as the term is used in the Census, is the living quarters occupied by one family or household, the number of oocupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 27.8 percent in urban areas, 20.7 percent in ruralnonfarm areas, and 20.3 percent in the entire State. In the rural-farm areas, however, the number of families decreased by 2.7 percent.

Home ownership was highest in rural-farm areas, where 81.9 percent of all occupied units were owned by their occupants. This, however, represents a slight decrease from 82.8 percent sorted in 1930. The proportion of home ownerp remained practically unchanged in urban areas, being 54.6 percent in 1930 and 54.5 percent in 1940, and increased in rural-nonfarm areas from 59.1 percent in 1930 to 64.0 percent

In 1940. Data on home ownership are shown in Table 1. The Census Bureau considers all incorporated places of 2,500 or more inhabitents in Utah as urban and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as ruralnonfarm.

Dwelling units occupied by white households numbered 137,680 , or 98.7 percent of all occupied dwelling units, while the nonwhite occupied 1,807 , or 1.3 percent. In $1930,98.5$ percent of all private families were white and 1.5 percent nonwhite, the majority of the latter being Indian and Japanese. Nonwhite housebolds occupied 0.8 percent of all ocoupied dwelling units in the urban areas in 1940, as compared with 0.9 percent in rural-nonfarm and 3.9 percent in rural-farm areas.

Vacant dwelling units for sale or rent comprised 3.6 percent of all dwelling units in urban areas, 4.3 percent in rural-nonfarm areas, 4.4 percent in rural-farm areas, and 3.9 percent in the entire state. Seasonal as well as ordinary dwelling units are included in all these percentages. Table 2 presents data on occupanoy status.

In urban areas 8.5 percent of the occupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 18.4 percent; in rural-farm areas, 23.9 percent; and in the entire State, 13.4 percent. The average number of persons per room in occupied dwelling units serves as a measure of crowding, an average of more than one and one-half persons per room being considered as indicating overarowding.

It was found that 60.7 percent of the dwelling units in the state had private baths, while 39.3 percent had no private bath, and that 21.0 percent needed major repairs. Almost half ( 45.2 percent) of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private

${ }^{1}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.
bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Va cant as well as ocoupied dwelling units are included in these figures.

Statistios for the State by urban and rural areas are presented in Table 3, and for each of the 29 counties, the four cities with 10,000 inhabitants or more, and the metropolitan district of Salt Lake City, in Table 4 .

## Urban and Rural-Nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 25.76$; of rural-nonfarm units, $\$ 14.36$; and of urban and rural-nonfarm units combined, \$22.11. The average for Salt Lake City, the largest ofty, was $\$ 29.82$; for the metropolitan district of Salt Lake City, $\$ 27.93$. This average is besed on contract rent for tenant-ocoupied units and estimated rental value for owneroccupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 20,686 , or 49.7 percent, were mortgaged; in rural-nonfarm areas, 28.0 percent; and in urban and rural-nonfarm areas combined, 42.2 percent.

## Rural-Farm Areas

Slightly less than one-half ( 49.7 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving 50.3 percent without this convenience; 6,807 dwelling units, or 30.9 percent of the number reporting on this item, had toilets in the structure, while 69.1 percent did not; 16,408 , or 74.5 percent had electric lighting, while 25.5 percent had none. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made for other States as figures become available.

## VERMONT

#### Abstract

(This advance release from the First Series Housing Bulletin presents data on tenure, color of occupanté? average monthly rent, mortgage status, etc., for the dwelling units in Vermont, by counties and for the three cities of 10,000 inhabitants or more. Similar statistics for counties by minor civil divisions, for all urban places, and for wards of cities of 10,000 or more will be presented in the bulletin. Dwelling unit totals presented in this release are final and replace those in the earlier release of November 9, 1940, Series H-2, No. 3.)

Home ownership in Vermont deoreased slightly between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commeroe. In 1940, 55.9 percent of all ocoupied dwelling units were ocoupied by their owners, as compared with 59.8 percent in 1930. Of the owner-oocupied nonfarm dwelling units in $1940,40.3$ percent were mortgaged. Census returns also showed that nonwhite households ocoupied 0.2 peroent of all occupied dwelling units. The extent of overorowding was indioated by the fact that 2.8 percent of the ocoupied "velling units had more than one and one-half
isons per room. More than half ( 58.6 percent) i the dwelling units had private baths, and 79.0 percent were not in need of major repairs. The average monthly rental for all dwelling units in urban and rural-nonfarm areas was $\$ 24.29$.

The final oount of the Housing Census showed 106,362 dwelling units in Vermont on April 1, 1940, of whioh 92,435 were oooupied. Since a dwelling unit, as the term is used in the Census, is the living quarters oocupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 Census. Such a comparison shows that between 1930 and 1940 the number of families increased by 8.8 peroent in urban areas, 3.1 percent in rural-nonfarm areas, and 3.6 percent in the entire State. In the rural-farm areas, however, the number of private families deoreased by 1.6 peroent.

Home ownership was highest in rural-farm areas, where 80.1 percent of all oooupied units were owned by their occupants. This, however, represents a decrease from the 84.1 peroent reported in 1930. Home ownership decined in an areas from 44.6 peroent in 1930 to 40.7 oent in 1940, and in rural-nonfarm areas from 55.1 percent in 1930 to 53.0 percent in 1940. Data on home ownership are shown in Table 1. The Census Bureau oonsiders all incorporated places
of 2,500 or more inhabitants in Vermont as urban, and the remainder of the State as rural. All dwelling units located on farms in rural territory are designated as rural-farm, and all other rural dwelling units as rural-nonfarm.

Dwelling units ocoupied by white households numbered 92,227 , or 99.8 percent of all ocoupied dwelling units, while the nonwhite occupied 208, or 0.2 peroent. Identioal proportions of whites and nonwhites were found in 1930. Nonwhite households-oocupied 0.3 percent of all oocupied dwelling units in the urban areas in 1940, as compared with 0.2 peroent in rural-nonfarm and rural-farm areas.

Vacant dwelling units for sale or rent oomprised 3.2 peroent of all dwelling units in urban areas, 9.6 percent in rural-nonfarm areas, 7.9 percent in rural-farm areas, and 7.1 percent in the entire State. Seasonal as well as ordinary dwelling units are inoluded in all these percentages. Table 2 presenta data on ocoupanoy status.

In urban areas 2.3 peroent of the oooupied dwelling units had more than one and one-half persons per room; in rural-nonfarm areas, 3.6 percent; in rural-farm areas, 2.3 percent; and in the entire State, 2.8 percent. The average number of persons per room in oocupied dwelling units serves as a measure of orowding, an average of more than one and one-half persons per room being considered as indicating overerowding.

It was found that 58.6 percent of the dwelling units in the State had private baths, while 41.4 percent had no private bath, and that 21.0 peroent needed major repairs. Almost half $(47.4$ percent) of the dwelling units either lacked private bath or needed major repairs. The percentage of dwelling units either lacking private bath or needing major repairs was lowest in urban areas and highest in rural-farm areas. Vaoant as well as occupied dwelling units are inoluded in these figures.

| Vacant, not for sale or rent ${ }^{1}$.. | 6,359 | 198 | 4,645 | 1,516 |

${ }^{1}$ Vacant dwelling units held for absent households, and units occupied by nonresident households.

Statistics for the State by urban and rural areas are presented in Table 3, and for each of the 14 counties and the three cities with 10,000 inhabitants or more in Table 4.

## Urban and Rural-Nonfarm Areas

The average monthly rent of urban dwelling units was $\$ 28.20$; of rural-nonfarm units, $\$ 21.28$; and of urban and rural-nonfarm units combined, \$24.29. The average for Burlington, the largest oity, was $\$ 32.85$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in the urban areas, 5,806 , or 46.5 percent, were 14099
mortgaged; in rural-nonfarm areas, 35.7 percent; and in urban and rural-nonfarm areas combined, 40.3 percent.

## Rural-Farm Areas

Almost three-fourths (72.8 percent) of the rural-farm dwelling units had running water in the dwelling units, leaving over one-fourth (27.2 percent) without this convenience; 12,965 dwelling units, or 46.0 percent of the number reporting on this item, had toilets in the structure, while 54.0 percent did not; 14,947 , or 52.9 percent had electric lighting, while 47.1 percent had none. Statistics on rural-farm dwelling units are presented by county in Table 5.

Similar announcements are being made other States as figures become available.

HOUSING

## CHARACTERISTICS OF HOUSING: 1940

## UNITED STATES SUMMARY

Sixteenth Census of the
United States: 1940

#### Abstract

(This advance release from the United States Sumary of the First Series Housing Bulletins presents selected housing characteristics for the United States in total, the 3 major regions, the 9 geographic divisions, and the various States. Similar statisties for each State by counties, by minor civil divisions, for urban places of 10,000 or more, and for metropolitan districts are presented in the H-4 series of releases. Dwelling unit totals presented here replace those in the earlier release of February 8, 1941, Series H-2, No. 50.)

The proportion of home ownership in the United States decreased between 1930 and 1940 according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In 1940, 43.6 percent of all occupied dwelling units were occupied by their owners, as compared with 47.8 percent in 1930. Of the owner-occupied nonfarm dwelling units in $1940,45.3$ percent were mortgaged. The extent of overcrowding is indicated by the fact that 9.0 percent of the occupied units had more than one and one-half persons per room. More than half ( 54.7 percent) of the dwelling nits had private baths and 81.7 percent were not need of major repairs. The average monthly rent or rental value of all dwelling units in urban and rural-nonfarm areas was $\$ 27.46$.

The Housing Census showed $37,326,682$ dwelling units in the United States on April 1, 1940, of which $34,855,552$ were occupied. Sincea dwelling unit, as the term is used in the Census, consists of the living quarters occupied by one family or household, the number of occupied dwelling units in a given area is about the same as the number of families and may be compared with the number of private families returned in the 1930 census. Such a comparison shows that between 1930 and 1940 the number of families increased by 16.6 percent in the entire United States, 18.6 percent in urban areas, 20.6 percent in rural-nonfarm areas, and 7.6 percent in rural-farm areas.

The proportion of home ownership was highest in rural-farm areas, where 53.2 percent of all occupied units were owned by their occupants, as compared with 51.7 percent home ownership in ru-ral-nonfarm areas and 37.5 percent in urban areas.

In the entire United States, 9.0 percent of he occupied dwelling units had more than one ad one-half persons per room; in urban areas, 5.8 percent; in rural-nonfarm areas, 11.1 percent; and in rural-farm areas, 16.1 percent. Data on home ownersh1p, color, and persons per
room are shown in Table 1 for the United States by States, divisions, and regions.

It was found that 45.3 percent of the dwelling units in the United States lacked private bath and that 18.3 percent needed major repairs. For-ty-nine and two-tenths percent of the dwelling units in the United States as a whole either lacked private bath or needed major repairs; 28.6 percent of the units in urban areas; 63.9 percent in rural-nonfarm areas; and 90.4 percent in rural-farm areas. Vacant as well as occupied dwelling units are included in these figures. Statistics for the United States and for States, divisions and regions are presented in Table 2. Similar data for urban and rural-nonfarm areas of States and divisions are shown in Tables 3 and 4 .

## Urban and Rural-nonfarm Areas

The average monthly rent of all urban dwelling units was $\$ 30.84$; of rural-nonfarm units, $\$ 18.35$; and of urban and rural-nonfarm units combined, $\$ 27.46$. This average is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

Of the reporting owner-occupied dwelling units in urban and rural-nonfarm areas, $4,804,024$, or 45.3 percent, were mortgaged; in urban areas, 50.6 percent; and in rural-nonfarm areas, 33.6 percent.

## Rural-farm Areas

Seventeen and seven-tenths percent of the ru-ral-farm dwelling units had running water in the dwelling units; 11.8 percent had toilets in the structure, and 31.3 percent had electric lighting. Statistics on rural-farm dwelling units are presented in Table 5 .

These housing facts were obtained from the First Series Housing Bulletins now being published by the Bureau of the Census. The bulletins for many of the States are now available and bulletins for the remaining Stites will be issued in the near future.

## HOUSING

HOME RADIOS IN SELECTED STATES: 1940

#### Abstract

(This advance relebee from the Sesond Seriee houeing Bulletins presente deta on radioe in homes for so eelected States and the Dietrict of Columbia, for whioh the tabalations have now been completed. Similar statietics for States, counties, motropolitan distriets, and urban placee will be presented in the Second Series Housing Bulletins by States. Date for additional Stateo will be presented in further releaee in thio series as the figures become available.).

Nearly three-fourths of the homes had radios In a total of 30 selected States and the District of Columbia according to data from the Census of Housing of 1940 released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Radio ownership was highest in Connecticut and Rhode Island where radios were reported in 95.7 percent of the occupied dwelling units. Less than two-fifths of the homes in Mississippi reported radios. The proportion of homes with radios was highest in the urban areas of the selected States, in which 85.1 percent of the occupied dwelling units had radios as compared with 71.5 percent in the rural-nonfam areas and 52.4 percent in the rural-farm areas.

Between 1930 and 1940 tremendous increases have occurred in the number of home radios in all of the selected States. In the total of these States the proportion increased from 26.9 percent in 1930 to 71.1 percent in 1940 . It should be noted that few of the larger states are included in the present list and that the percentages based on the resulting totals are not representative of the United States as a whole. This is indicated by the fact that the United States total for 1930 showed 40.3 percent of the homes with radios, as compared with 26.9 percent in these 30 selected States and the District of Columbia.

OCCUPIED DWELLING UNITS WITH RADIO, FOR SELECTED STATES (URBAN AND RURAL): 1940, AND PERCENT WITH RADIO: 1930
(A dwelling unit was enumerated as having a radio if it contained a ueable radio set or one only temporarily out of repair. Percentagee for 1940 are beeed on the number of units reporting on thie item. Percentagee for 1930 based on all fanllies, including fanilies not reporting on the item.)

HOUSING

HOME OWNERSHIP IN THE UNITED STATES: 1940

Three out of every seven households in the United States own their homes, according to data from the 1940 Census of Housing released today by Director J. C. Ca ${ }_{2}^{+}$, of the Bureau of the Census, Def 4 rtment of Commerce. There were $34,855,552$ occupied dwelling units in the country in 1940, of which $15,196,188$, or 43.6 percent, were occupied by their owners. Rural-farm areas showed the highest percentage of home ownership, with 53.2 percent of the homes occupied by their owners, as mpared with 51.7 percent in the ru-ral-nonfarm areas. The more widespread use of rented quarters by city dwellers is reflected, by the owner-occupancy percentage of only 37.5 in the urban areas.

Home ownership varied considerably among the States. At one extreme were the States of Utah and Idaho, with home ownership percentages of 61.1 and 57.9, respectively. At the other extreme were the District of Columbia and the State of New York, with 29.9 and 30.3 , respectively. In 15 States the number of owner-occupied homes exceeded the number of tenant-occupied dwelling units, while in the remaining 33 States and the District of Columbia an excess of tenant-occupied homes was thown.

While the number of owner-occupied homes increased between 1930 and 1940,
the more rapid increase in the number of tenant-occupied homes resulted in a decline in the home ownership percentage from 47.8 in 1930 to 43.6 in 1940. The number of owner-occupied homes has increased during each decennial period since 1890, when the inquiry on home ownership was first included in the census. The home ownership percentage declined gradually from 1890 to 1920 , then increased in 1930 to the 1890 level and declined again in 1940. The percentage of homes occupied by t'eir owners in the various census yearn was as follows: $1890,47.8 ; 1900,46.7$; 1910, 45.9; 1920, 45.6; 1930, 47.8; 1940, 43.6.

The greatest decline between 1930 and 1940 in the percentage of homes occupied by their owners occurred in the urban areas, from 43.4 to 37.5 . In contrast, the decline in the ruralfarm areas was only from 53.9 percent in 1930 to 53.2 percent in 1940 and in the rural-nonfarm areas from 53.7 percent to 51.7 percent. Increases in the home ownership percentage were registered by 10 States in the South and West, while declines were shown in the remaining 38 States and the District of Columbia.

More detailed statistics on home ownership will appear in the Firct Series Housing Bulletins now being issued by the Bureau of the Census.

# CHARACTERISTICS OF HOUSING FOR CITIES HAVING 50,000 INHABITANTS OR MORE: 1940 

(The statistics on characteristics of housing presented in this release appear in the housing releases for individual Stetes (Series $\mathrm{H}-4$ ), and are brought together here for the convenience of users. Similer data for the United States ere presented in the releese Series H-5, No. 1. Date for smaller urban places, for wards, and for counties by minor civil divisions ere published in the First Series Housing Bulletins for the various States.)

Average rental values were higher in the large oities of the United States than in small cities or in rural areas according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. In comparison with rural areas and smaller urban places, the cities with 50,000 inhabitants or more had a lower percentage of dwelling units in need of major repair; more of the dwelling units had a private bath; fewer of the homes were occupied by their owners; and more of the owned homes were mortgaged. The 199 cities with 50,000 inhabitants or more contained a total of $13,289,498$ dwelling units.

The average monthly rent or rental value of dwelling units in these oities was $\$ 33.19$. This average is 20.9 percent above the corresponding figure for dwelling units in all urban and rural-nonfarm areas. Ten of the 199 cities had an average monthly rent of $\$ 50$ or more while the highest average rent recorded was that of $\$ 67.79$ for Cleveland Heights, Ohio. Among the 10 largest oities in the country, New York City with an average rent of $\$ 43.87$ was the highest. The average monthly rent or rental value as referred to in this release is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.
of the reporting dwelling units in the larger cities, $1,112,510$ or 9.1 percent needed major repairs, while $2,358,049$ or 19.2 percent lacked private bath. Twenty-four percent of the dwelling units either lacked private bath or needed major repairs; the 3. 32954
percentage was less than 10.0 in twelve of the cities.

Less then one out of every three households in these olties owned their homes. The percentage of home ownership, however, varled considerably among individual cities. In 16 of the 199 oities more than half of the homes were occupied by their owners while in 12 other cities less than one-fifth of the homes were owner-occupied. The home ownership percentage of 31.6 for the 199 cities combined was well below that of 43.6 for the entire nation.

Dwelling units oocupied by nonwhite households represented 9.2 percent of all occupied dwelling units in these oities. Of the reporting occupied units, 5.4 percent had more than one and one-half persons per room, as compared with 9.0 percent for the United States as a whole.

The Housing Census also showed that there were mortgages on 56.1 percent of the reporting owner-occupied dwelling units in these cities. For all urban and rural-nonfarm areas in the United States, the comparable figure was 45.3 percent. Cities of 50,000 inhabitants or more have proportionately fewer owned homes and more of the owned homes are mortgaged than in the remainder of the nonfarm areas of the country.

The following table presents housing characteristics for individual urben places of 50,000 inhabitants or more arranged alphabetically. Later releases by the Bureau of the Census will present additional detail on housing characteristics.

HOUSING

## CHARACTERISTICS OF HOUSING FOR METROPOLITAN DISTRICTS: 1940

#### Abstract

(The etetietice on cheracteristice of housing preeented in thie releese eppees in the housing releasee for individual Stetes (Series H-4), end ere brought together here for the convenience of users. Similer dete for the United Stetee by stetes ere presented in the relesse Series H-5, No. 1, end for cities of 50,000 inhabitents or more in Series H-5, No. 4. Date for urben pleces ond for minor civil divisions in metropoliten dietricte ere published in the Firat Seriss Housing Bulletins for the various Stetes.)

The proportion of home ownership in the metropolitan districts of the United States was considerably lower than in the areas outside the metropolitan districts, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. The metropolitan districts, in comparison with the areas outside such districts, showed proportionately fewer dwelling units having more than one and one-half persons per room, a substantially higher average monthly rent for nonfarm units and a much higher proportion of the owner-occupied nonfarm units mortgaged.

Within metropolitan districts, the cities or 50,000 inhabitants or more, when, compared with he parts of metropolitan districts outside such
iles, showed a substantially lower home ownerip ratio, a slightly lower average monthly rental value for nonfarm units and practically the same percentage of owner-occupied nonfarm units mortgaged.

The metropolitan districts of the United States, as established by the Bureau of the Census, contain $18,185,308$ dwelling units or 48.7 percent of the entire netion's housing supply. Only 37.3 percent of the occupied dwelling units in metropolitan distriots are owned by their occupants, as compared with 49.7 percent for areas outside the metropolitan districts and 43.6 percent for the country as a whole. In 23 of the 140 metropolitan iistricts more than half of the homes were occupied by their owners while in 5 others, less than one-fourth of the homes were owner-occupied. Within metropolitan districts, the home ownership ratio for the cities of 50,000 Inhabitants or more was only 31.6 percent, but in the parts of the districts outside such cities the ratio was 52.9 percent.

The dwelling units with more than one and one-half persons per room represented only 5.4 percent of all the occupied units in the metropolitan districts, as compared with 12.4 percent " r r the areas outside the districts. The dwellunits either in need of major repairs or king private baths were 26.3 percent of the total, as contrasted with 70.5 percent for areas outside the metropolitan districts. Dwelling
units occupled by nonwhite households constituted 7.8 percent of all occupied units in metropoliten districts, as compared with 11.0 percent of the areas outside such districts.

The average monthly rent or rental value of nonfarm dwelling units in the metropolitan districts was $\$ 33.40$. This average is 81.8 percent above the corresponding figure for nonfarm areas outside the metropolitan districts. Four of the 140 districts had an average monthly rent of mose than $\$ 40$ while 14 had an average of less than \$20. The highest average monthly rent of $\$ 52.68$ was found to be in the Washington, D. C. metropolitan district. Within metropolitan districts the average monthly rent for the cities of 50,000 or more was $\$ 33.19$, which was slightly below the average for the parts of the metropolitan districts outside such cities. This average monthly rent or rental value is based on contract rent for tenant-occupied units and estimated rental value for owner-occupied and vacant units.

The Housing Census also showed that there were mortgages on 56.2 percent of the reporting owner. occupied nonfarm dwelling units in metropolitan districts. The corresponding figure for nonfarm areas outside the metropolitan districts was only 31.3 percent. More than 70.0 percent of the owner-occupled units were mortgaged in 8 of the 140 metropolitan districts; six of these eight districts are located in the States of Connecticut and Massachusetts. The percent of owner-occupied dwelling units mortgaged was 56.1 for the cities of 50,000 or more and 56.3 for the nonfarm parts of the districts outside such cities.

A metropolitan district has been set up for use in the 1940 Censuses of Population and Housing in connection with each city of 50,000 or more, two or more such cities sometimes being in one district. The general plan is to include in the district, in addition to the central city of cities, all adjacent and contiguous minor civil divisions or incorporated places having a population of 150 or more per square mile.

The following table shows housing characteristics for individual metropolitan districts. Later releases by the Bureau of the Census will present additional details on housing character1stics.

Characteristics of Residential Structures and Dwelling Units: 1940
Series H-10, No. 1-2, 21-49

Series H-10, No. 1
HOUSING

# CHARACTERISTICS OF RESIDENTIAL STRUGTURES AND DWELLING UNITS: 1940 

## WYOMING

#### Abstract

[This relasse from the Second Saries Housing Bulletin for the State shows data on type of structure, exterior material, yesr built, and number of rooms; Similar announcements are being made for other Statas as the figures become svailsble. Other releases on topics covered in the Second Saries Bulletin include data on monthly rent (Series H-8), housing facilities end equipment (Series H-9), and size and race of household (Serias H-11).]

More than three-fourths of the families in Wyoming live in single-family detached structures, according to data from the 1940 Census of Housing released by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than four-fifths of the residential structures in the State. More than two-thirds of all dwelling units contained four rooms or less. Approximately one-fourth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 78.6 percent of all dwelling units in the State, 64.0 percent of those in urban areas, 80.2 percent of those in ruralnonfarm areas, and 95.6 percent of those in rural-farul areas. Of the 33,749 owner-occupied dwelling units in the State, 30,186, or 89.4 percent, were in l-family detached structures, while 67.8 percent of the 35,625 tenant-occupied units were of this type.

One-family attached structures contained 1.2 percent of all dwelling units in the State; 2- to 4 -femily structures, 11.5 percent; 5-family or larger structures, 4.6 percent; l- to 4 -family structures with business, 2.4 percent; and other dwelling places (trailers, tourist cabins, etc.), 1.9 percent.

Eighty-three and nine-tenths of the residential structures had an exterior of wood, while 5.9 percent were stucco, 4.0 percent brick. and 6.2 percent other materials. Structures with an extericr $=:$ wood comprised 87.0 percent of the total in rural-farm areas, 83.9 percent in rural-nonfarm areas, 3-23393
and 80.8 percent in the urban areas of the State.

Less than one-sixth of the dwelling units in Wyoming in April, 1940, were built in the 5 -year period 1935 to 1940, while 8.9 percent were built in the period 1930 to 1934 , and 27.7 percent in the decade 1920 to 1929. Thus, more than one-half of all the dwelling units in Wyoming were built during the period 1920 to 1940. Less than one-fifth of the urban dwelling units were built during the decade 1930 to 1940, while more than onefourth of the rural-nonfarm and rural-farm were built in that period.

The median number of rooms in all dwelling units was 3.65. (The median is the figure which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Four-room units accounted for 21.5 percent of all dwelling units, while those with fewer than four rooms comprised 46.8 percent of the total and those with more than four rooms, 31.8 percent. The medien number of rooms in the owner-occupied units was 4.34 , compared with a median of 3.22 for the tenant-occupied units. As measured by the median number of rooms, the urban homes were slightly larger than the homes in the rural areas.

The figures shown in the accompanying table are taken from the Second Series Housing Bulletin for Wyoming which was issued recently by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.
(over)
(Total figures for each area include vacant units. Percent
not shown where less than 0.1 or where base is less than 100)

## VERMONT

#### Abstract

Thie release from the Second Series Houeing Bulletin for the State shows data an type of etructure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures become avallable. Other releases on topics covered in the second series Bulletin include data an monthly rent (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11).

Nearly two-thirds of the families in Vermont live in single-family detached etructures, according to data from the 1940 Census of Housing released by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than nine-tenths of the residential structures in the State. Almost one-third of all the dwelling units contained eight rooms or more. Less than one-tenth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 66.2 percent of all dwelling units in the State, 40.8 percent of those in urban areas, 72.7 percent of those in ruralnonfarm areas, and 86.2 percent of those in rural-farm areas. Of the 51,709 owner-oocupied dwelling units in the State, 42,007 , or 81.2 percent, were in l-farily detached structures, while 40.7 percent of the 40,726 tenant-occupled units were of this type.

One-family attached struotures contained 3.6 percent of all dwelling unite; 2- to $4^{-}$ family structures, 23.8 percent; 5-family or larger structures, 3.4 percent; and 1 - to 4 family structures with business, 2.7 percent.

Ninety-five and eight-tenths percent of the reeidential structures had an exterior of wood, while 3.0 percent were brick, 0.3 percent etucco, and 0.8 percent other materials. Structures with an exterior of wood comprised 96.0 percent of the total in rural-farm areas, 96.9 percent in rural-nonfarm areas, and 93.8 percent in the urban areas of the State.

Nearly five percent of the dwelling units in Vermont in April, 1940, were built in the 5 -year period 1935 to 1940, while 4.0 percent were built in 1930 to 1934, and 7.6 percent In the decade 1920 to 1929. Thus, less than one-sixth of all dwelling units in Vermont were built during the period 1920 to 1940. About eeven percent of the urban dwelling units were built during the decade 1930 to $1940,12.2$ percent of the rural-nonfarm, and 6.0 percent of the rural-farm.

The median number of rooms in all dwelling units was 6.27. (The median is the figure which divides the total number of reporting units into two equal groupe--one having more rooms than the medien and one having fewer rooms then the median.) Six-room units accounted for 19.1 percent of all dwelling units, while those with fewer than six rooms comprieed 35.3 percent of the total and those with more than six rooms, 45.6 percent. The median number of rooms in the owner-oocupied units was 7.22 , compared with a median of 5.36 for the tenant-occupied units. As meaeured by the median number of rooms, the rural-farm homes were the largest and the urban the smallest, with rural-nonfarm homes in the intermediate position.

The figures ehown in the socompanying table are taken from the second Series Houeing Bulletin for Vermont which was issued recently by the Bureau of the Census. The bulletin also includes statistics on suoh other subjects as monthly rent or value of home, eize of household, and houeing facilitiee and equipment.

HOUSING
CHARAGTERISTICS OF RESIDENTTLAL STRUCTURES AND DWELLING UNITS: 1940

## VIRGINIA

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures become available. Other releases on topies covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities end equipment (Series \#-9), and size and race of househald (Series H-11)]

More than three-fourths of the families in Virginia live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of nearly seven-eighths of the residential structures in the state. About three-eighths of all dwelling units contained six rooms or more. Almost onefifth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 76.3 percent of all dwelling units in the state, 51.4 percent of those in urban areas, 86.2 percent of those in ruralnonfarm areas, and 96.4 percent of those in rural-farm areas. Of the 306,688 owner-occupied dwelling units in the state, 279,025, or 91.0 percent, were in l-family detached structures, while 61.6 percent of the 320,844 tenant-occupied units were of this type.

One-family attached structures contained 2.9 percent of all dwelling units; 2- to 4family structures, 15.8 percent; 5-family or larger structures, 3.1 percent; and 1 - to 4 family structures with business, 1.7 percent.

Nearly seven-eighths ( 86.1 percent) of the residential structures had an exterior of wood, while 10.2 percent were brick, 2.1 percent stucco, and 1.7 percent were of other materials. Structures with an exterior of wood constituted 96.2 percent of the total in rural-farm areas, 89.4 percent in rural-nonfarm areas, and 71.0 percent in the urban areas of the State.

One-eighth (12.2 percent) of the dwelling units in Virginia in April 1940 were built in the 5-year period 1935 to 1940, while 7.4 percent were built in the period 1930 to 1934, and 20.2 percent in the decade 1920 to 1929. Thus, two-fifths of all dwelling units in Virginia were built during the period 1920 to 1940. Three-tenths of the rural-nonfarm dwelling units were built during the decade 1930 to 1940, while one-sixth of the ruralfarm and one-seventh of the urban total were built in that period.

The median number of rooms in all dwelling units was 4.83. (The median is the figure which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Four-room units accounted for 19.6 percent of all dwelling units, while those with fewer than four rooms constituted 24.4 percent of the total and those with more than four rooms, 56.0 percent. The median number of rooms in the owner-occupied units was 5.71, compared with a median of 4.09 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were the largest and the rural-nonfarm the smallest, with the urban in the intermediate position.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Virginia which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing faoilities and equipment.

Sixteenth Census of the United States: 1940

Series H-10, No. 22
HOUSING
CHARACTERISTICS OF RESIDENTIAL STRUCTURES AND DWELLING UNITS: 1940

SOUTH CAROLINA

#### Abstract

[Thie advance release from the Second Seriee Housing Bulletin for the State ehowe data on type of structure, exterior material, year built, and number of rooms. Similar announcemente are being made for other States ae the figures become available. Other releases on topice covered in the Second Seriee Bulletin include dats on monthly rent (Series H-8), housing facilities and equipment (Seriee H-9), and oize and race of household (Series H-11)]

Four-fifths of the families in South Carolina live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of all but 4.1 percent of the residential structures in the State. More than one-fifth of all dwelling units contained six rooms or more. One-fifth of the dwelling units in the state were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 80.5 percent of all dwelling units in the state, 54.6 percent of those in urban areas, 81.2 percent of those in ruralnonfarm areas, and 96.5 percent of those in rural-farm areas. Of the 133,279 owner-ocoupied dwelling units in the state, 122,132, or 91.6 percent, were in l-family detached structures, while 75.0 percent of the 301,689 ten-ant-occupied units were of this type.

One-family attached structures contained 0.8 percent of all dwelling units; 2- to 4 family structures, 15.7 percent; 5 -family or larger structures, 1.7 percent; and 1 - to 4 family structures with business, 0.8 percent.

Ninety-five and nine-tenths percent of the residential structures had an exterior of wood, while 3.4 percent were brick, 0.3 percent stucco, and 0.5 percent were of other materials. Structures with an exterior of wood constituted 99.4 percent of the total in rural-farm areas, 95.7 percent in rural-nonfarm areas, and 88.6 percent in the urban areas of the State.

One-eighth ( 12.2 percent) of the dwelling units in South Carolina in April 1940 were built in the 5-year period 1935 to 1940 , while 7.5 percent were built in the period 1930 to 1934, and 21.2 percent in the decade 1920 to 1929. Thus, two-fifths of all dwelling units in South Carolina were built during the period 1920 to 1940. More than one-fourth of the rural-nonfarm dwelling units were built during the decade 1930 to 1940, while about onesixth of the rural-farm and urban dwelling units were built in that period.

The median number of rooms in all dwelling units was 3.99. (The median is the figure which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Four-room units accounted for 25.4 percent of all dwelling units, while those with fewer than four rooms constituted 37.6 percent of the total and those with more than four rooms, 36.9 percent. The median number of rooms in the owner-occupied units was 5.25 , compared with a median of 3.62 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were the largest and the urban the smallest, with the rural-nonfarm homes in the intermediate position.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for South Carolina which will be issued shortiy by the Bureau of the Census. The bulletin also includes statistics on such ouher subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

#### Abstract

[2hie advance releaee from the Second Seriee Housing Bulletin for the State ahowe atata on type of structure, exterior material, year built, and number of rooms. Similar announcerents are being mede for other Statee as the figuree become available. Other releases on topice covered in the second Seriee Bulletin include data on monthly rent (Series $\mathrm{H}-8$ ), housing facilities and equipment (Series $\mathrm{H}-9$ ), and elze and race of household (Seriee H-11)]

About two-fifths of the families in Connscticut livs in singls-family detached structurss, according to data from the 1940 Census of Housing releassd today by Director J. C. Capt of the Bureau of the Csnsus, Department of Commsres. Wood was the principal exterior matsrial of approximately nine-tenths of the rseidential structurss in the State. More than ons-fifth of all dwslling units containsd seven rooms or mors. More than onesighth of the dwelling units in the state were built in ths dscade betwesn 1930 and 1940.

The single-family detachsd home was the most common typs of rssidential struoture in urban as well as rural arsas. This type accounted for 43.7 percent of all dwelling units in the state, 27.0 psrcent of those in urban areas, 71.4 parcent of those in ruralnonfarm areas, and 86.1 percent of those in rural-farm arsas. Of the 181,629 owner-occupied dwelling units in the state, 126,929 , or 69.9 psrcsnt, ware in l-family detached structures, while of the 267,053 tenant-occupisd units, 30.1 percent were in 2 -family structurse, and 20.5 psrcsint wsers in l-family detachsd etructurss.

Ons-family attachsd structuree contained 1.3 percent of all dwelling units; 2- to 4family structurss, 39.3 paresnt; 5 -family or largsr structures, 12.1 percent; and 1- to 4family structurss with businsss, 3.2 psrcsnt.

About nins-tsnths ( 90.9 percent) of the rasidential structurss had an exterior of wood, while 5.5 percent ware brick, 1.8 percant stucco, and 1.8 psrcent were of other materials. Structurss with an extsrior of wood constitutad 96.1 parcent of the total in rural-farm areas, 94.3 psrcent in rural-non-
farmareas, and 87.5 percent in the urban arsas of the state.

Six and nine-tenths percent of the dwelling units in Connectiout in April 1940 were built in the 5-year period 1935 to 1940, while 6.3 percent ware built in the period 1930 to 1934, and 21.2 percent in the deoade 1920 to 1929. Thue, more than one-third of all dwelling units in Connectiout were built during the period 1920 to 1940. Eight percent of the urban dwelling units were built during the decade 1930 to 1940 , while almoet oneseventh of the rural-fara and ona-fC?n: of the rural-nonfarm dwelling unite were buily in this period.

The median number of rooms in all divelling units was 5.18. (The madian is tho figu: which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Five-room unita acoounted for 26.6 percent of all dwelling unite, while those with fower than five rocms conetituted 32.1 percent of the total and those with more than ifve rooms, 41.4 percent, The median number of rooms in the cwaen-sodu= pisd undts wau $6 .{ }^{3} 5$. comsarsd with 4 macian of 4.72 for the tenant-occupied unite. As meaeured by ths madian number of rooms, the rural-farm homee were the largast and the urban the smallest, with the rural-nonfarm homss in the intermediate poeltion.

The figuree shown in the accompanying table ware taken from the Second Seriee Housing Bulletin for Connecticut which will be issued ehortly by the Bureau of the Consus. The bulletin aleo includes statistics on euch other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

## LOUISIANA

#### Abstract

This advance release from the Second Series Housing Bulletin for the State shows data on type of struoture, exterior material, year built, and number of rooms. Similar announcenents are being made for other States as the ifgures become arailable. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11).a

More than eeven-tenths of the families in Louisiana live in eingle-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood wae the prinoipal exterior material of all but 2.2 percent of the residential etructuree in the State. Almost one-third of all dwelling unite contained five rooms or more. About one-fourth of the dwelling units in the state were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areae. This type accounted for 71.8 percent of all dwelling units in the State, 47.0 percent of those in urban areae, 85.3 percent of those in ruralnonfarm areas, and 95.1 percent of those in rural-farm areas. Of the 218,447 owner-occupied dwelling units in the State, 190,696 , or 87.3 percent, were in l-family detached structures, while 62.5 percent of the 374,081 ten-ant-occupied units were of this type.

One-family attached structuree contained 1.6 percent of all dwelling unite; 2- to $4^{-}$ family etructures, 20.9 percent; 5 -family or larger etructures, 3.6 percent; and 1 - to 4 family structures with bueinese, 1.7 percent.

Ninety-eeven and eight-tenths percent of the residential etructures had an exterior of wood, while 1.1 percent were brick, 0.6 percent stucco, and 0.4 percent were of other materials. Structures with an exterior of wood constituted 99.7 percent of the total in rural-farm areas, 98.2 percent in rural-nonfarm areas, and 95.6 percent in the urban areas of the State.

More than one-eeventh ( 15.3 percent) of the dwelling units in Louieiana in April 1940 were built in the 5 -year period 1935 to 1940 , while 10.4 percent were built in the period 1930 to 1934, and 26.9 percent in the decade 1920 to 1929. Thus, more than one-half of all dwelling units in Louisiana were built during the period 1920 to 1940. Almoet twofifths of the rural-nonfarm dwelling units were built during the decade 1930 to 1940 , while more than one-fourth of the rural-farm and one-sixth of the urban total were built in that period.

The median number of rooms in all dwelling units was 3.74. (The median is the figure which divides the total number of reporting units into two equal groupe--one having more rooms than the median and one having fewer rooms than the median.) Three-room units accounted for 24.2 percent of all dwelling units, while those with fewer than three rooms constituted 20.1 percent of the total and those with more than three rooms, 55.7 percent. The median number of rooms in the own-er-occupied units was 4.66 , compared with a median of 3.33 for the tenant-occupied units. As measured by the median number of rooms, the urban homes were somewhat larger than the homes in the rural areas.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Louisiana whioh will be iseued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjecte ae monthly rent or value of home, slze of household, and housing facilitiee and equipment.

## WASHINGION

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are beling made for other States as the figures become available. Other releases on topics covered in the Second Series Bulletin include atte on monthly rent (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11).

About four-fifths of the familiee in Washington live in single-ffamily detached structuree, according to data from the 1940 Censue of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of nearly all of the residential structures in the State. One-third of all dwelling units contained three roome or less. More than one-fifth of the dwelling unite in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. Thie type accounted for 78.6 percent of all dwelling units in the State, 66.0 percent of those in urban areae, 91.5 percent of those in ruralnonfarm areas, and 97.2 percent of those in rural-farm areas. Of the 306,174 owner-occupied dwelling units in the State, 290,128 , or 94.8 percent, were in l-family detached structures, while 58.7 percent of the 231,163 ten-ant-occupied units were of thie type.

One-family attached structures contained 0.6 percent of all dwelling units; 2- to 4 family structures, 6.0 percent; 5 -family or larger etructures, 12.2 percent; and 1 - to 4 family structures with business, 1.7 percent.

Ninety-five percent of the residential structures had an exterior of wood, while 2.6 percent were brick, 1.3 percent stucco, and 1.0 percent were of other materials. Structures with an exterior of wood constituted 98.1 percent of the total in rural-farm areas, 96.8 percent in rural-nonfarm areae, and 92.6 percent in the urban areas of the state.

One-eighth ( 12.5 percent) of the dwelling units in Waehington in April 1940 were built in the 5 -year period 1935 to 1940, while 10.0 percent were built in the period 1930 to 1934, and 27.6 percent. in the decade 1920 to 1929. Thus, half of all dwelling units in Washington were built during the period 1920 to 1940. One-eighth of the urban dwelling units were built during the decade 1930 to 1940, while almost two-fifths of the rural-nonfarm and more than one-fourth of the rural-farm total were built in that period.

The median number of rooms in all dwelling units wae 4.33. (The median is the figure which divides the total number of reporting units into two equal groups--one having more roome than the median and one having fewer rooms than the median.) Five-room units accounted for 20.5 percent of all dwelling units, while thoee with fewer than five rooms conetituted 53.5. percent of the. totel and those with more than five rooms, 26.1 percent. The median number of rooms in the owner-occupied units was 4.96 , compared with a median of 3.52 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were the largest and the ru-ral-nonfarm the smallest, with the urban homes in the intermediate position.

The figures ehown in the accompanying table were taken from the Second Series Housing Bulletin for Washington which will be issued shortly by the Bureau of the Census. The bulletin also includes statietics on such other eubjecte as monthly rent or value of home, size of household, and housing facilities and equipment.

## KENTUCKY

#### Abstract

[This advance release from the Second Seriee Housing Bulletin for the State showe data on type of etructure, exterior material, year built, and number of roons. Similar announcsmente are bsing made for other Statee as the figures bscome available. Other rsleases on topice covered in the Second Series Builetin include data on monthly rent (Seriee H-B), housing facilitiee and equipment (Series H-9), and eize and race of household (Seriee E-11)]

Four-fifths of the families in Kentucky live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Comerce. Wood was the principal exterior material of almost nine-tenths of the residential structures in the State. More than one-fifth of all dwelling units contained six rooms or more. More than one-sixth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 79.8 percent of all dwelling units in the State, 56.7 percent of those in urban areas, 83.8 percent of those in ruralnonfarm areas, and 96.7 percent of those in rural-farm areas. Of the 335,350 owner-occupied dwelling units in the State, 306,792, or 91.5 percent, were in l-family detached structures, while 69.3 percent of the 363,188 ten-ant-occupied units were of this type.

One-family attached structures contained 1.3 percent of all dwelling units; 2- to 4family structures, 14.1 percent; 5-family or larger structures, 2.6 percent; and 1 - to $4^{-}$ family structures with business, 2.0 percent.

Almost nine-tenths ( 89.2 percent) of the residential structures had an exterior of wood, while 8.8 percent were brick, 0.8 percent stucco, and 1.2 percent were of other materials. Structures with an exterior of wood constituted 97.7 percent of the total in rural-farm areas, 91.5 percent in rural-nonfarm areas, and 73.9 percent in the urban areas of the State.

More than one-tenth (10.7 percent) of the dwelling units in Kentucky in April 1940 were built in the 5 -year period 1935 to 1940, while 7.8 percent were built in the period 1930 to 1934, and 21.6 percent in the decade 1920 to 1929. Thus, two-fifths of all dwelling units in Kentucky were built during the period 1920 to 1940. More than one-fourth ( 26.2 percent) of the rural-nonfarm dwelling units were built during the decade 1930 to 1940, while 21.6 percent of the rural-farm and 8.9 percent of the urban total were built in that period.

The median number of rooms in all dwelling units was 4.05 . (The median is the ifgure which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Four-room units accounted for 24.6 percent of all dwelling units, while those with fewer than four rooms constituted 36.4 percent of the total and those with more than four rooms, 38.9 percent. The median number of rooms in the own-er-occupied units was 4.76 , compared with a median of 3.52 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were slightly larger than the urban and rural-nonfarm homes.

The ilgures shown in the accompanying table were taken from the Second Series Housing Bulletin for Kentucky which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

# GHARACTERISTICS OF RESIDENTIAL STRUCTURES AND DWELLING UNITS: 1940 

## SOUTH DAKOTA

#### Abstract

[This advance release from the Second Series Housing Bulletin for the Stste shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures become avallable. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series H-B), housing facilities and equipment (Series H-9), and size and race of household (Series H-11)]

More than five-sixths of the families in South Dakota live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than nine-tenths of the residential structures in the State. More than one-fourth of all dwelling units contained seven rooms or more. More then onetenth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 85.2 percent of all dwelling units in the State, 64.5 percent of those in urban areas, 82.4 percent of those in ruralnonfarm areas, and 98.6 percent of those in rural-farm areas. Of the 74,388 owner-00cupied dwelling units in the State, 68,604 , or 92.2 percent, were in l-family detached structures, while 78.4 percent of the 91,040 ten-ant-ocoupied units were of this type.

One-family attached structures contained 0.9 percent of all dwelling units; 2- to 4family structures, 7.8 percent; 5-family or larger structures, 2.9 percent; and l- to 4 family structures with business, 2.4 percent.
'ore then nine-tenths ( 93.0 percent) of the residential structures had an exterior of wood, while 3.4 percent were stucco, 1.4 percent brick, and 2.2 percent were of other materials. Structures with an exterior of wood constituted 96.6 percent of the total in rural-farm areas, 90.9 percent in rural-nonfarm areas, and 87.5 percent in the urban areas of the State. 3-34310

Five and nine-tenths percent of the dwelling units in South Dakota in April 1940 were built in the 5 -year period 1935 to 1940 , while 5.3 percent were built in the period 1930 to 1934 , and 16.2 percent in the decade 1920 to 1929. Thus, more than one-fourth of all dwelling units in South Dakota were built during the period 1920 to 1940. Sixteen and three-tenths percent of the urben dwelling units were built during the decade 1930 to 1940, while 13.6 percent of the rural-nonfarm and 6.9 percent of the rural-farm dwelling units were built in this period.

The median number of rooms in all dwelling units was 5.08. (The median is the figure which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Five-room units accounted for 17.7 percent of all dwelling units, while those with fewer than five rooms constituted 39.7 percent of the total and those with more than ilve rooms, 42.6 percent. The median number of rooms in the owner-occupied units was 5.49 , compared with a median of 4.91 for the tenant-ocoupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and rural-nonfarm homes.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for South Dakota which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

DWIMIING UNITS BY TYPE OF STRUCTURE, YEAR EUILT, AND MUMEER OF ROOMS, AND RESIDANITAL STRUCTURES BY EKTERIOR MATERIAL, FOR SOUTH DAKOTA, URBAN AND RURAL: 1940

## HOUSING

CHARACTERISTICS OF RESIDENTIAL STRUCTURES AND DWELLING UNITS: 1940

## MINNESOTA

#### Abstract

This advance release from the Second Series Housing Bullatin for the State shows data on type of structure, exterior material, year built, and number of rooms. Siniler announcements are being made for other States as the figures become available. Other releases on topics covered in the Second Series Bulletin includa data on monthly rent (Series $\mathrm{H}-8$ ), housing facilities and equipment (Series H-9), and size and race of household (Series H-11)]

About seven-tenths of the families in Minnesote live in single-family detached structures, according to data from the 1940 Ceneus of Houeing released today by Director J. C. Capt of the Bureau of the Censue, Department of Commerce. Wood was the principal exterior material of more than four-fifths of the residential etructures in the State. Almoet one-fourth of all dwelling units contained seven rooms ormore. Nearly one-eeventh of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home wae the most common type of reeidential structure in urban as well as rural areas. Thie type aocounted for 71.5 percent of all dwelling unite in the State, 53.5 percent of thoee in urban areae, 81.0 percent of those in ruralnonfarm areae, and 97.0 percent of thoes in rural-farm areas. Of the 402,318 owner-occupied dwelling units in the State, 357,090, or 88.8 percent, were in 1-family detached structures, while 48.8 percent of the 326,041 ten-ant-occupied units were of this type.

One-family attached structuree contained 0.8 percent of all dwelling units; 2- to $4^{-}$ family structures, 16.9 percent; $5-\mathrm{family}$ or larger structuree, 7.8 percent; and 1 - to $4^{-}$ family structures with business, 2.5 percent.

More than four-fifths ( 81.7 percent) of the residential structuree had an exterior of wood, while 10.8 percent were stucco, 4.1 peroent brick, and 3.4 percent were of other materials. Structuree with an exterior of wood constituted 93.5 percent of the total in the rural-farm areas, 87.9 percent in rural-
nonfarm areas, and 69.1 percent in the urban areas of the state.

Eight and three-tenths percent of the dwelling unite in Minnesota in April 1940 were built in the 5-year period 1935 to 1940, while 5.5 percent were built in the period 1930 to 1934, and 19.1 percent in the decade 1920 to 1929. Thus, one-third of all dwelling units in Minneeota were built during the period 1920 to 1940. Nearly one-fourth of the ru-ral-nonfarm dwelling units were built during the decade 1930 to 1940, while more than oneeighth of the rural-farm and one-tenth of the urban total were built in that period.

The median number of rooms in all dwelling units wae 5.03. (The median ie the figure which dividee the total number of reporting unite into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Five-room units accounted for 20.3 percent of all dwelling unite, while those with fewer than five rooms constituted 39.2 percent of the total and those with more than five rooms, 40.6 percent. The median number of rooms in the owner-occupied units was 5.60 , compared with a median of 4.44 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were larger than the homes in the rural-nonfarm and urban areas.

The figures show in the accompanying table were taken from the Second Series Housing Bulletin for Minnesota whioh will be issued shortly by the Bureau of the Census. The bulletin also includes etatistice on such other subjeots as monthly rent or value of home, eize of household, and housing facilitiee and equipment.

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures become available. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series H-8), houging facilities and equipment (Series H-9), and size and race of household (Series H-11).]

More than five-sixths of the families in Kansas live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of nine-tenths of the residential structures in the State. One-fifth of all dwelling units contained seven rooms or more. One-tenth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 84.9 percent of all dwelling units in the State, 72.4 percent of those in urban areas, 89.2 percent of those in ruralnonfarm areas, and 98.5 percent of those in rural-farm areas. Of the 260,495 owner-occupied dwelling units in the State, 242,745 , or 93.2 percent, were in l-family detached structures, while 76.4 percent of the 250,614 ten-ant-occupied units were of this type.

One-family attached structures contained 1.2 percent of all dwelling units; 2- to 4family structures, 9.1 percent; 5-family or larger structures, 2.7 percent; and l- to $4-$ family structures with business, 1.7 percent.

Ninety and four-tenths percent of the residential structures had an exterior of wood, while brick and stucco each accounted for 3.3 percent, and other materials for 3.0 percent. Structures with an exterior of wood constituted 92.6 percent of the total in rural-farm areas, 90.1 percent in rural-nonfarm areas, and 88.7 percent in the urban areas of the State.

Five and one-tenth percent of the dwelling units in Kansas in April 1940 were built in the 5 -year period 1935 to 1940 , while 4.6 percent were built in the period 1930 to 1934 , and 16.6 percent in the decade 1920 to 1929. Thus, more than one-fourth of all dwelling units in Kansas were built during the period 1920 to 1940. Seven and five-tenths percent of the rural-farm dwelling units were built during the decade 1930 to 1940 , while 9.0 percent of the urban and 13.8 percent of the rural-nonfarm dwelling units were built in that period.

The median number of rooms in all dwelling units was 5.00. (The median is the figure which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Five-room units accounted for 25.3 percent of all dwelling units, while those with fewer than five rooms constituted 37.2 percent of the total and those with more than five rooms, 37.4 percent. The median number of rooms in the owner-occupied units was 5.39 , compared with a median of 4.61 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were somewhat larger than the urban and rural-nonfarm homes.

The ilgures shown in the accompanying table were taken from the Second Series Housing Bulletin for Kansas which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment. bI ExUTERIOR MATMRIAL, FOR EANSAS, URBAN AND RURAL: 1940

# U. S. DEPARTMRNT OF COMMERCE Bureau of the Census Washington 

Sixteenth Census of the United States: 1940

Series H-10, No. 30
HOUSING
CHARACTERISTICS OF RESIDENTIAL STRUCTURES AND DWELLING UNITS: 1940

NEW MEXIしO

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures become available. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities and equipment (Series $\mathrm{H}-9$ ), and size and race of household (Series H-11).]

Almost four-fifths of the families in New Mexico live in single-family detached structures, according to data from the 1940 Census of Housing released by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of less than three-eighths of the residential structures in the State. Threefifths of all dwelling units contained three rooms or less. Two-fifths of the dwelling units in the State were built in the decade between 1930 and 1940 .

The single-family detached home was the most coumon type of residential structure in urban as well as rural areas. This type accounted for 79.2 percent of all dwelling units in the State, 66.0 percent of those in urban areas, 79.6 percent of those in ruralnonfarm areas, and 93.1 percent of those in rural-farm areas. Of the 74,150 owner-00cupied dwelling units in the State, 64,583, or 87.1 percent, were in l-family detached structures, while 67.2 percent of the 55,325 tenant-ocoupled units were of this type.

One-family attached structures contained 3.7 percent of all dwelling units; 2- to $4^{-}$ family structures, 11.5 percent; 5-family or larger structures, 2.6 percent; 1 - to 4 - family structures with business, 1.9 percent; and other dwelling places (trailers, tourist cabins, etc.) 1.1 percent.

Less than three-eighths ( 35.4 percent) of the residental structures had an exterior of wood, while 19.3 percent were stucco, 2.7 percent brick, and 42.6 percent were of other materials. Structures with an exterior of wood constituted 37.8 percent of the total in rural-farm areas, 36.6 percent in rural-nonfam areas, and 31.2 percent in the urban areas of the State. Structures with an ex-
terior other than wood, stucco, or brick accounted for 51.8 percent of the rural-farm total, 47.6 percent of the rural-nonfarm, and 26.6 percent of the urban dwelling units.

Nearly one-fourth (24.1 percent) of the dwelling units in New Mexico in April 1940 were built in the 5 -year period 1935 to 1940, while 15.3 percent were built in the period 1930 to 1934, and 21.3 percent in the decade 1920 to 1929. Thus, three-fifths of all dwelling units in New Kexico were built during the period 1920 to 1940. Three-eighths of the urban dwelling units were built during the decade 1930 to 1940, while about twofifths of the rural total were built in this period.

The median number of rooms in all dwelling units was 3.06. (The medtan is the figure which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Two-room units accounted for 24.0 percent of all dwelling units, while those with one room constituted. 14.1 percent of the total, those with three rooms, 21.3 percent, and those with more than three rooms, 40.5 percent. The median number of rooms in the owner-occupied units was 3.42 , compared with a median of 2.78 for the tenantoccupied units. As measured by the median number of rooms, the urban homes were larger than the homes in rural areas.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for New Mexico which was issued recently by the Bureau of the Census. The bulletin also includes statistios on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

IOWA

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures become available. Other relesses on topics covered in the Second Series Bulletin include data on monthly rent (Series H-B), housing facilities and equipment (Series $\mathrm{H}-9$ ), and size and race of household (Series H-11)]

More than four-fifths of the families in Iowa live in single-family detached structures, according to data from the 1940 Census of Housing released today by Direotor J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than nine-tenths of the residential structures in the State. About onethird of all dwelling units contained seven rooms or more. Eight and three-tenths percent of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 82.1 percent of all dwelling units in the State, 68.8 percent of those in urban areas, 85.4 percent of those in ruralnonfarm areas, and 98.0 percent of those in rural-farm areas. Of the 361,477 owner-occupied dwelling units in the State, 331,746, or 91.8 percent, were in l-family detached structures, while 71.9 percent of the 340,347 tenant-occupied units were of this type.

One-ramily attached structures contained 1.1 percent of all dwelling units; 2- to $4^{-}$ family structures, 11.0 percent; 5 -family or larger etructures, 3.4 percent; and 1 - to 4 family etructures with business, 2.1 percent.

More than nine-tenths ( 91.3 percent) of the residential atructures had an exterior of wood, while 4.3 percent were brick, 2.7 percent stucco, and 1.7 percent were of other materials. Structures with an exterior of wood constituted 96.5 percent of the total in rural-farm areas, 91.8 percent in rural-non-
farm areas, and 86.2 percent in the urban areas of the State.

Four and nine-tenths percent of the dwelling units in Iowa in April 1940 were built in the 5 -year period 1935 to 1940, while 3.4 percent were built in the period 1930 to 1934, and 12.8 percent in the decade 1920 to 1929. Thus, more than one-fifth of all dwelling units in Iowa were built during the period 1920 to 1940. Eight and eight-tenths percent of the urban dwelling units were built during the decade 1930 to 1940 , while 9.0 percent of the rural-nonfarm and 7.2 percent of the rural-farm were built in this period.

The median number of rooms in all dwelling units was 5.67. (The median is the ifgure which divides the total number of reporting units into two equal groups--one having more rooms than the median and one having fewer rooms than the median.) Five-room units accounted for 20.2 percent of all dwelling units, while those with fewer than five rooms conetituted 26.5 percent of the total and thoee with more than five rooms, 53.4 percent. The median number of rooms in the owner-occupied units wae 6.07 compared with a median of 5.24 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and rural-nonfarm.

The figures shown in the accompanying table are taken from the Second Series Housing Bulletin for Iowa which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and $\theta$ quipment.

HOUSING

# CHARACTERISTICS OF RESIDENTIAL STRUCTURES AND DWELLING UNITS: 1940 

## NORTH DAKOTA

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being rade for other States as the figures become available. Other releases on topies covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities and equipment (Series $\mathrm{H}-9$ ), and size and race of household (Ser1 es H-11).]

Five-sixths of the families in North Dakota live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Sureau of the Census, Department of Commerce. Wood was the principal exterior material of more than nine-tenths of the residential structures in the State. More than one-fifth of all dwelling units contained seven rooms or more. One-tenth of the dwelling units in the state were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 83.1 percent of all dwelling urits in the State, 53.8 percent of those in urban areas, 79.7 percent of those in ruralnonfarm areas, and 98.2 percent of those in rural-farm areas. Of the 75,710 owner-occupied dwelling units in the State, 69,631, or 92.0 percent, were in l-family detached structures, while 73.1 percent of the 76,333 tenant-occupied units were of this type.

One-family attached structures contained 1.0 percent of all dwelling units; 2- to 4 family structures, 9.3 percent; 5-family or larger structures, 3.6 percent; and l- to 4 family structures with business, 2.7 percent.

Nore than nine-tenths ( 92.5 percent) of the residential structures had an exterior of wood, while 4.0 percent were stucco, 1.3 percent brick, and 2.2 percent were of other materials. Structures with an exterior of wood constituted 96.3 percent of the total in rural-farm areas, 92.6 percent in rural-nonfarm 3. 34585
areas, and 80.5 percent in the urban areas of the State.

Five and four-tenths percent of the dwelling units in North Dakota in April 1940 were built in the 5 -year period 1935 to 1940 , while 4.5 percent were built in 1930 to 1934 , and 14.3 percent in the decade 1920 to 1929. Thus, almost one-fourth of all dwelling units in North Dakota were built during the period 1920 to 1940. Seven and two-tenths percent of the rural-farm dwelling units were built during the decade 1930 to 1940, while 10.7 percent of the rural-nonfarm and 15.1 percent of the urban total were built in that period.

The median number of rooms in all dwelling units was 4.72. Four and five-room units accounted for 17.2 percent and 17.0 percent, respectively, of all dwelling units, while those with fewer then four rooms constituted 29.1 percent of the total and those with more than five rooms 36.7 percent. The median number of rooms in the owner-occupied units was 5.23, compared with a median of 4.33 for the tenent-occupied units. As measured by the median number of rooms, the rural-farm homes were the largest and the urban the smallest, with the rural-nonfarm in the intermediate position.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for North Dakota which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

HOUSING

# CHARACTERISTIGS OF RTSIDENTLAL STRUCTURES AND DWELLING UNLTS: 1940 

## DISTRICT OF COLUMBIA

#### Abstract

[This edvance release from the Socond Series Housing Bulletin for the District of Columbia shows data on type of structure, oxtorior material, yoar built, and number of roons. Similar announcements are belng made for the various States as the figures become evallable. Other releeses on topics covered in the second Seriss Bulletin include deta on monthly reat (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11)]

One-fourth of the families in the District of Columbia live in one-family attached etructures, according to data from the 1940 Census of Housing released today by Director J. G. Capt of the Bureau of the Census, Department of Commerce. Brick was the principal exterior material of nearly four-fifths of the reeidential etructures in the Dietrict. Almost two-thirds of all dwelling unite contained from three to six rooms. More than one-fifth of the dwelling units in the District of Columbia were built in the decade between 1930 and 1940.

Single-family detached etructures accounted for 15.9 percent of the dwelling units in the District; one-family attached structures contained 25.8 percent of all dwelling units; 2- to 4 -femily structures, 23.1 percent;
family or larger structures, $31: 9$ percent; and 1 - to 4 -
nily structures with business, 3.0 percent.
Nearly four-fifthe (78.9 percent) of the residential structuree had an exterior of brick, while 15.9 percent were wood, 3.4 percent etucco, and 1.8 percent were of other materiale.

About one-eeventh ( 14.9 percent) of the dwelling units in the District of Columbia in April 1940 were built in the 5 -year period 1935 to 1940 , While 6.5 percent were built in 1930 to 1934 , and 26.6 percent in the decade 1920 to 1929. Thue, nearly half of all dwelling unite in the District were built đuring the period 1920 to 1940.

The median number of rooms in all dwelling unite was 4.29. Three-room units and six-room units each accounted for 20.7 percent of all dwelling units, while one- and two-room unite constituted 19.0 percent of the total, four- and five-room units, 22.9 percent, and those with more than six room, 16.8 percent. The median number of rooms in the owner-occupied units was 6.26 , compared with a median of 3.37 for the tenant-occupied units.

The figures shown in the accompanying table are taken from the Second Series Housing Bulletin for the District of Columbia which will be iseued shortly by the Bureau of the Censue. The bulletin also includee statistice on euch other subjecte as monthly rent or value of home, size of household, and housing facilities and equipment.

#### Abstract

[This advance release from the Second Series Housinf Bulletin for tha State shows data on type of structura, exterior material, year built, and number of rooms. Similar announcements are beipe -ade for other States as the ficuras becorie available. Othar releases on topics covered in the sec ad Serias Bulletin include data on monthly rant (Series H-8), housine facilities and equipment (Veries $\mathrm{H}-9)$, and size and race of household (Sarias H-11)]

#### Abstract

Two-thirds of the families in Wisconsin live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of approximately seven-eighths of the residential structures in the State. Almost three-tenths of all dwelling units contained seven rooms or more. More than one-eighth of the dwelling units in the state were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 67.7 percent of all dwelling units in the State, 49.1 percent of those in urban areas, 82.6 percent of those in ruralnonfarm areas, and 94.9 percent of those in rural-farm areas. Of the 450,208 owner-occupied dwelling units in the State, 377,904, or 83.9 percent, were in l-family detached structures, while 45.1 percent of the 376,999 tenent-occupied units were of this type.

One-family attached structures contained 0.8 percent of all dwelling units; 2- to 4 family structures, 22.8 percent; 5-family or larger structures, 4.6 percent; and 1 - to 4 family structures with business, 3.7 percent.

Nearly seven-eighths ( 86.0 percent) of the residential structures had an exterior of wood, while 7.4 percent were brick, 2.2 percent stucco, and 4.4 percent were of other materials. Structures with an exterior of wood constituted 90.1 percent of the total in
rural-farm areas, 88.1 percent in rural-nonfarm areas, and 82.4 percent in the urban areas of the State.

Seven and four-tenths percent of the dwellunits in Wisconsin in April 1940 were built in the 5 -year period 1935 to 1940 , while 5.9 percent were built in 1930 to 1934, and 20.0 percent in the decade 1920 to 1929. Thus, one-third of all dwelling units in "ilsconsin were built during the period 192 C to 1940. Twenty-five and eight-tenths percent of the rural-nonfarm dwelling units were built during the decade 1930 to 1940 , while 10.8 percent of the rural-farm and 9.1 percent of the urban were built in this period.

The median number of rooms in all dwelling units was 5.39 . Five-room units accounted for 22.4 percent of all dwelling units, while those with fewer than five rooms constituted 30.1 percent of the total and those with more than five rooms, 47.6 percent. The median number of rooms in the owner-occupied units was 6.03 , compared with a median of 4.92 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and ruralnonfarm.

The figures shown in the accompanying table were taken from the second Series Housing Bulletin for Wisconsin whioh will be issued shortly by the Bureau of the vensus. The bulletln also includes statistics on such othen bubjects as monthly rent or vulue of home, size of household, and housing facilities and equipuent.

## MARYLAND

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of etructure, exterior material, year built, and number of rooms. Similar announcements are being made for other Statee ae the figures become available. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Seriee H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11)]

Approximately half of the families in Maryland live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than half of the residential structures in the State. One-third of all dwelling units contained four rooms or less. Less than one-sixth of the dwelling units in the state were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in rural areas, and the single-family attached in urban areas. Single-family detached homes accounted for 48.2 percent of all dwelling units in the State, 22.0 percent of those in urban areas, 83.2 percent of those in ruralnonfaril areas, and 94.9 percent of those in rural-farm areas. of the 220,765 owner-occupied dwelling units in the State, 134,645 , or 61.0 percent, were in l-family detached structures, while 33.4 percent of the 244,918 tenant-occupied units were of this type.

One-family attached structures contained 21.2 percent of all dwelling units in the State; 2- to 4 -family structures, 22.5 percent; 5-family or larger structures, 4.4 percent; and l- to 4-family structures with business, 3.6 percent.

Fifty-two and two-tenths percent of the residential structures had an exterior of wood, while 42.3 percent were brick, 2.5 percent stucco, and 2.9 peraent were of other materials. Structures with an exterior of wood constituted 89.7 percent of the total in 3. $34: 68$
rural-farm areas, 81.9 percent in rural-nonfarm areas, and 24.5 percent in the urban areas of the state.

One-tenth (9.8 percent) of the dwelling units in Maryland in April 1940 were built in the 5 -year period 1935 to 1940 , while 5.9 percent were built in the period 1930 to 1934, and 19.7 percent in the decade 1920 to 1929. Thus, more than one-third of all the dwelling units in Maryland were built during the period 1920 to 1940. Eight and fourtenths percent of the urban dwelling units were built during the decade 1930 to 1940, while 32.2 percent of the rural-nonfarm and 12.7 percent of the rural-farm units were built in that period.

The median number of rooms in all dwelling units was 5.56. Six-room units accounted for 28.3 percent of all dwelling units, while those with fewer than six rooms constituted 48.5 percent of the total, and those with more than six rooms, 23.2 percent. The median number of rooms in the owner-occupied units was 6.06, compared with a median of 4.64 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and rural-nonfarm.

The figures shown in the accompanying table were taken from the second Series Housing Bulletin for Maryland which will be issued shortly by the Bureau of the Census. The Bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

## ALABAMA

[This advance ralease from the Second Series Housing Bullotin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures become available. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series $\mathrm{H}-\mathrm{B}$ ), housing facilities and equipment (Series H-9), and size and race of household (Series H-11) ]

Four-fifths of the families in Alabama live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of all but three and three-tenths percent of the residential structures in the State. Three-tenths of all dwelling units contained five rooms or more. One-fifth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 80.1 percent of all dwelling units in the State, 57.6 percent of those in urban areas, 81.2 percent of those in rural-nonfarm areas, and 96.4 percent of those in rural-farm areas. Of the 226,460 owner-occupied dwelling units in the state, 206,567 , or 91.2 percent, were in l-family detached structures, while 73.7 percent of the 447,355 tenant-00oupied units were of this type.

One-family attached structures contained 1.6 percent of all dwelling units; 2- to $4^{-}$ family structures, 15.8 percent; 5 -family or larger structures, 1.6 percent; and 1 - to 4 family structures with business, 0.6 percent.

Ninety-six and seven-tenths percent of the residential structures had an exterior of wood, while 2.3 percent were brick, 0.5 percent stucco, and 0.6 percent were of other materials. Structures with an exterior of wood constituted 99.5 percent of the total in
rural-farm areas, 96.7 percent in rural-nonfarm areas, and 91.9 percent in the urban areas of the State.

Approximately one-eighth (12.0 percent) of the dwelling units in Alabama in April 1940 were built in the 5 -year period 1935 to 1940 , while 8.7 percent were built in 1930 to 1934, and 25.9 percent in the decade 1920 to 1929. Thus, almost half of all dwelling units in Alabama were built during the period 1920 to 1940. More than one-fourth of the rural-nonfarm dwelling units were built during the decade 1930 to 1940; more than one-fifth of the rural-farm, and almost one-seventh of the urban total were built in that period.

The median number of rooms in all dwelling units was 3.65. Three-room units accounted for 24.9 percent of all dwelling units, while those with fewer than three rooms constituted 21.7 percent of the total and those with more than three rooms, 53.3 percent. The median number of rooms in the owner-occupied units was 4.79 , compared with a median of 3.22 for the tenant-occupied units. As measured by the median number of rooms, the urban homes were slightly larger than those in the rural areas.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Alabama which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

## MISSOURI

#### Abstract

[This advance release fram the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures become available. Other releases on topics covered in the Seccad Series Bulletin include data on monthly rent (Serios H-8), housing facilities and equipment (Series H-9), and s1ze and race of houschold (Serles H-11).]

Two-thirds of the families in Missouri live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Comerce. Wood was the prinoipel exterior material of three-fourths of the residential structures in the State. Almost one-fourth of all dwelling units contained six rooms or more. More than one-eighth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 67.0 percent of all dwelling units in the State, 45.6 percent of those in urban areas, 83.5 percent of those in ruralnonfarm areas, and 97.2 percent of those in rural-farm areas. Of the 472,950 owner-oocupied dwelling units in the State, 420,389 , or 88.9 percent, were in l-family detached structures, while 50.4 percent of the 595,692 ten-ant-occupied units were of this type.

One-family attached structures contained 1.2 percent of all dwelling units; 2- to $4^{-}$ family structures, 19.7 percent; 5 -family or larger structures, 9.4 percent; and 1 - to $4^{-}$ family structures with business, 2.4 percent.

Three-fourths ( 74.5 percent) of the residential structures had an exterior of wood, while 19.7 percent were brick, 3.0 percent stucco, and 2.8 percent were of other materials. Structures with an exterior of wood constituted 95.9 percent of the total in rural-farm areas, 84.3 percent in rural-
nonfarm areas, and 52.2 percent in the urban areas of the State.

Seven and four-tenths percent of the dwelling units in Missouri in April 1940 were built in the 5-year period 1935 to 1940, while 6.0 percent were built in the period 1930 to 1934 , and 19.8 percent in the decade 1920 to 1929. Thus, one-third of all dwelling units in Missouri were built during the period 1920 to 1940. More than one-fifth (21.9 percent) of the rural-nonfarm dwelling units were built during the decade 1930 to 1940, while 16.8 percent of the rural-farm and 8.6 percent of the urban were built in that period.

The median number of rooms in all dwelling units was 4.25 . Four-room units accounted for 21.3 percent of all dwelling units, while those with fewer than four rooms constituted 34.1 percent of the total and those with more than four rooms, 44.7 percent. The median number of rooms in the owner-occupled units was 4.97, compared with a median of 3.70 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were the largest and the urban the smallest, with the rural-nonfarm homes in the intermediate position.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Missouri which will be issued shortly by the Bureau of the Census. The bulletin also includes statistios on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.
(Fotel figures for each area include vacant units. Percent not ahow where less than 0.1)

U. S. DEPARTIENT OF COMMERCE

Bureau of the Census Washington

Sixteenth Census of the United States: 1940

## MAINE

[This release from the Second Series Housing Bulletin for the State shows data on type of atructure, axterior material, year built, and number of rooms. Similar announcements are being made for other States as the figures becane available. Other releases on topies covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Sories H-11).]

Two-thirds of the families in Maine live in single-femily detached structures, according to dava from the 1940 Census of Housing released by Director J. C. Capt of the Bureau of the Census, Departient of Commerce. Wood was the principal exterior material of all but 2.2 percent of the residential structures in the State. More than one-fifth of all dwelling units contained eight rooms or more. One-eighth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most oommon type of residential structure in urban as well as rural areas. This type accounted for 66.3 percent of all dwelling units in the State, 44.2 percent of those in urban areas, 76.9 percent of those in ruralnonfarm areas, and 84.0 percent of those in rural-farm areas. Of the 125,390 owner-occupied dwelling units in the State, 101,305, or 80.8 parcent, were in l-family detached structures, while 37.8 percent of the 93,578 ten-ant-occupied units were of this type.

One-family attached structures contained 4.3 percent of all dwelling units; 2- to 4 family structures, 21.7 percent; 5 -family or larger structures, 5.0 percent; and 1 - to 4 family structurea inth $^{2}$ business, 2.6 percent.

Ninety-seven and eight-tenths percent of the residential structures had an exterior of wood, while 1.3 percent were brick, 0.3 percent stucco, and 0.6 percent were of other materials. Structures with an exterior of wood constituted 99.1 percent of the total in 3.35655
rural-farm areas, 98.4 percent in rural-nonfarm areas, and 96.0 percent in the urban areas of the State.

Six and five-tenths percent of the dwelling units in Maine in April 1940 were built in the 5 -year period 1935 to 1940, while 5.8 percent were built in the period 1930 to 1934, and 12.8 percent in the decade 1920 to 1929. Thus, one-fourth of all dwelling units in Maine were built during the period 1920 to 1940. Seven and one-tenth percent of the ru-ral-farm dwelling units and 8.4 percent of the urban were built during the decade 1930 to 1940 , while 17.0 percent of the rural-nonfarm total were built in that period.

The median number of rooms in all dwelling units was 5.68. Six-room units accounted for 19.6 percent of all dwelling units, while those with fewer than six rooms constituted 46.4 percent of the total and those with more then six rooms, 33.9 percent. The median number of rooms in the owner-occupied units was 6.38 , compared with a median of 4.99 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and the ru-ral-nonfarm homes.

The figure she: in the accompanying table are taken from the Second Series Housing Bulletin for Maine which was issued recently by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

## UTAH

TThis release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar aniouncements are being made for other Stats $s$ the figures become available. Other releasee on topica covered in the Second Seriee Bullatin include data on monthly rent (Series $\mathrm{H}-8$ ), housing facilities and equipment (Series $\mathrm{H}-9$ ), and size and race of houeehold (Series $\mathrm{H}=11$ ).]

Almost three-fourths of the families in Utah live in single-family detached structuree, acoording to data from the 1940 Census of Housing released by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than half of the residential structures in the State. Three-tenths of all dwelling units contained two or three rooms. More than one-sixth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-faraily detached nome was the most coumon type of residential structure in urban as well as rural areas. This type accounted for 73.6 percent of all dwelling units in the state, 62.7 percent of those in urban areas, 86.2 percent of those in ruralnonfarm sreas, and 93.0 percent of those in rural-fam areas. Of the 85,225 owner-occupled dwelling units in the State, 77,107 , or 90.5 percent, were in i-femily detached structures, wille 48.2 percent of the 54,262 ten-ant-occupied units were of this type.

One-fomily attached structures contained 0.9 percent of all dwelling units; 2- to $4-$ family structuree, 15.1 percent; 5-family or larger structures, 8.4 percent; and 1 - to 4 family structures with business, 1.3 percent.

More than half ( 51.4 percent) of the residential struotures had an exterior of wood, while 36.6 percent were brick, 5.7 percent stuoco, and 6.3 percent were of other materials. Structures with an exterior of wood constituted 67.7 percent of the total in ru-ral-farm areas, 65.3 percent in rural-nonfarm $3-35656$
areas, and 37.9 percent in the urban areas of the State.

More then one-tenth ( 11.3 percent) of the dwelling inits in Utah in April 1940 were built in the 5-year period . 1935 to 1940, while 6.4 percent were built in the period 1930 to 1934, and 20.7 percent in the decade 1920 to 1929. Thus, more then three-eighths of all dwelling units in Utah were built during the period 1920 to 1940. About oneseventh of the urban dwelling units were built during the decade 1930 to 1940 , while approximately one-fourth of the rural-nonfarm and one-firth of the rural-farm total were built in that period.

The median number of rooms in all dwelling units was $4 \cdot 13$. Four-room units accounted for 24.3 percent of all dwelling units, while those with $i$ ewer than four rooms constituted 34.8 percen $o f$ the total and those with more than four rooms, 41.1 percent. The median number of rooms in the owmer-occupied units was 4.66 , compared with a median of 3.38 for the tenant-oocupied unite. As measured by the median number of rooms, the urban homes were the largest and the rural-nonfarm the smallest, with the rural-farm homes in the intermediate position.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Utah which was iseued recently by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facillties and equipment.

## HOUSING

## GHARACTERISTICS OF RESIDENTIAL STRUCTURES AND DWELLING UNITS: 1940

## TEXAS

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of roams. Similar announcements are being made for other States as the figures become available. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11).]

Four-fifths of the families in Texas live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of nine-tenths of the residential structures in the State. More than one-third of all dwelling units contained two or three rooms. More than one-fourth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most conmon type of residential structure in urban as well as rural areas. This type accounted for 79.6 percent of all dwelling units in the State, 65.4 percent of those in urban areas, 85.5 percent of those in ruralnonfarm areas, and 96.6 percent of those in rural-farm areas. Of the 717,682 owner-occupied dwelling units in the State, 648,607 , or 90.4 percent, were inl-fanily detached structures, while 71.9 percent of the 960,714 ten-ant-occupied units were of this type.

One-family attached structures contained 1.4 percent of all dwelling units; 2- to 4 family structures, 13.7 percent; 5 -family or larger structures, 3.2 percent; and 1 - to $4^{-}$ family structures with business, 1.3 percent.

Nine-tenths ( 89.6 percent) of the residential structures had an exterior of wood, while 5.2 percent were brick, 2.4 percent stucco, and 2.7 percent were of other materials. Structures with an exterior of wood constituted 96.2 percent of the total in ru-3-35710
ral-farm areas, 90.4 percent in rural-nonfarm areas, and 83.7 percent in the urban areas of the State.

One-sixth ( 16.4 percent) of the dwelling units in Texas in April 1940 were built in the 5 -year period 1935 to 1940 , while 11.8 percent were built in the period 1930 to 1934 , and 29.8 percent in the deoade 1920 to 1929. Thus, elmost three-fifths of all dwelling units in Texas were built during the period 1920 to 1940. About one-fourth of the urban and rural-farm dwelling units were built during the decade 1930 to 1940 , while two-fifths of the rural-nonfarm were built in that period.

The median number of rooms in all dwelling units was 3.88 . Four-room units accounted for 22.0 percent of all dwelling units, while those with fewer than four rooms constituted 41.6 percent of the total and those with more than four rooms, 36.5 percent. The median number of rooms in the owner-occupied units was 4.72 , compared with a median of 3.42 for the tenant-occupied units. As measured by the median number of rooms, the urban homes were the largest and the rural-nonfarm the smallest, with the rural-farm in the intermediate position.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Texas which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

## OHIO

#### Abstract

[This advance release from the Second Seriss Housing Bulletin for the Stats shows data on type of structure, exterior material, year built, and mumber of rooms. Similar announcemants are being made for other States as the figures becoms available. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11).]

Two-thirds of the families in Ohio live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than five-sixths of the residential structures in the State. Almost three-tenths of all dwelling units contained four rooms or less. Nearly one-tenth of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 66.9 percent of all dwelling units in the State, 55.0 percent of those in urban areas, 87.4 percent of those in rural-nonfarm areas, and 96.4 percent of those in ruralfarm areas. Of the 948,354 owner-occupied dwelling units in the State, 826,880 ; or 87.2 percent, were in l-family detached structures, while 46.6 percent of the 949,442 tenantoccupied units were of this type.

One-family attached structures contained 1.1 percent of all dwelling units; 2- to 4family structures, 22.0 percent; 5-family or larger struotures, 7.0 percent; and l- to 4family structures with business, 2.7 percent.

More than five-sixths ( 85.5 percent) of the residential structures had an exterior of wood, while 11.1 percent were brick, 1.3 percent stucco, and 2.2 percent were of other materials. Structures with an exterior of wood constituted 91.7 percent of the total in
rural-farm areas, 90.0 percent in rural-nonfarm areas, and 82.0 percont in the urban areas of the State.

Five and three-tenths percent of the dwelling units in Ohio in April 1940 were built in the 5 year period 1935 to 1940, while 4.1 percent were built in the period 1930 to 1934, and 21.9 percent in the decade 1920 to 1929. Thus, more than three-tenths of all dwelling units in ohio were built during the period 1920 to 1940. Six and eight-tenths percent of the urban dwelling units were built during the decade 1930 to 1940 , while 19.2 percent of the rural-nonfarm and 8.6 percent of the rural-farm total were built in that period.

The median number of rooms in all dwelling units was 5.44. Six-room units accounted for 24.4 percent of all dwelling units, while those with fewer than $s i x$ rooms constituted 51.3 percent of the total and those with more than six rooms, 24.3 percent. The median number of rooms in the owner-occupied units was 5.99 , compared with a median of 4.80 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and ruralnonfarm homes.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Ohio which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.
(Total figures for each area include vacent units. Percent not show where less than 0.1)

# U. S. DEPARTMIENT OF COMMERCE Bureau of the Census Washington 

Sixteenth Census of the United States: 1940

Series H-10, No. 44

## H OUSING

CHARACTERISTICS OF RESIDENTLAL STRUCTURES AND DWELLING UNITS: 1940

## MICHIGAN

#### Abstract

[Thie advance release from the Second Ssries Housing Bulletin for the State ohows data on typs of structure, exterior material, year built, and number of rooms. Similar announcements are bsing mads for other States ae the figures become availabls. Other relesees on topics covered in the Second Series Builetin includs data on monthly rent (Series H-8), houeing facilitiee and squipment (Seriee H-9), and eize and racs of housshold (Series H-11)]

More than two-thirds of the families in Michigan live in single-family detached etructuree, according to data from the 1940 Ceneus of Housing released today by Director J. C. Capt of the Bureau of the Ceneue, Department of Commeroe. Wood was the principal exterior material of more than four-fifthe of the residential structures in the State. Onefourth of all dwelling units contained seven rooms or more. More than one-eeventh of the dwelling unite in the State were built in the decade between 1930 and 1940.

The single-family detached home was the moet common type of reeidential etructure in urban ae well as rural areas. This type accounted for 68.6 percent of all dwelling units in the State, 54.9 percent of those in urban areas, 89.1 percent of those in ruralnonfarm areas, and 95.7 percent of those in rural-farm areas. Of the 773,755 owner-ocoupied dwelling units in the State, 671,555 , or 86.8 percent, were in l-family detached structures, while 43.3 percent of the 622,259 tenant-ocoupied units were of this type.

One-family attached structures contained 0.9 percent of all dwelling units; $2-$ to $4^{-}$ family structures, 20.5 percent; 5 -family or larger structures 7.3 percent; and l- to 4 family structures with business, 2.3 percent.

More than four-fifthe ( 82.1 percent) of the residential structures had an exterior of wood, while 12.6 percent were brick, 1.5 peroent stucco, and 3.9 percent were of other materials. Structures with an exterior of wood constituted 90.2 percent of the total in
rural-farm areas, 88.9 percent in rural-nonfarm areas, and 76.3 percent in the urban areas of the State.

Nearly one-tenth (9.5 percent) of the dwelling units in Michigan in April 1940 were built in the 5-year period 1935 to 1940, while 6.1 percent were built in the period 1930 to 1934, and 29.6 percent in the decade 1920 to 1929. Thue, almost half of all dwelling units in Michigan were built during the period 1920 to 1940. One-tenth of the urban dwelling unite were built during the . decade 1930 to 1940, while one-eeventh of the rural-farm and more than three-tenths of the rural-nonfarm total were built in that period.

The median number of roome in all dwelling units wae 5.34. Five-room units accounted for 24.1 percent of all dwelling units, while those with fewer than five rooms constituted 29.7 percent of the total and those with more than five rooms, 46.2 percent. The median number of rooms in the owner-occupied units was 5.86 , compared with a median of 4.83 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and ruralnonfarm homes.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Michigan which will be iesued shortly by the Bureau of the Census. The bulletin also includes statistios on such other subjeots as monthly rent or value of home, size of household, and houeing faoilities and equipment.

DUEELLING UNITS BY TYPE OF STRUCTURE, YEAR BUILT, AND NCMBEKR OF ROOMS, AND RESIDENTIAL STRUCTURES BY EXIKRIOR YATERIAL, FOR MICHIGAN, URBAN AND RURAL: 1940
(Total Ifguree for each area include vacant unite. Percent not shown where less then 0.1)

# CHARACTERISTICS OF RESIDENTLAL STRUCTURES AND DWELLING UNITS: 1940 

## PENNSYLVANIA

#### Abstract

[This advance relsass from the Second Seriss Housing Bulletin for ths State shows data on type of structurs, sxterior material, year built, and number of rooms. Similar announcoments are being made for other Statas as the figures become availabls. Othar raleases on topics covarsd in the Second Saries Bulletin include data on monthly rant (Sarias H-8), housing facilitiss and equipment (Series H-9), and size and race of household (Ssriss H-11).]

More than two-fifths of the families in Pennsylvania live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than half of the residential structures in the state. Approximately three-tenths of all dwelling units contained four rooms or less. Seven and nine-tenths percent of the dwelling units in the State were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 45.7 percent of all dwelling units in the State, 31.3 percent of those in urban areas, 70.4 percent of those in ruralnonfarm areas, and 89.6 percent of those in rural-farm areas. Of the $1,154,948$ owneroccupied dwelling units in the State, 713,469 , or 61.8 percent, were in l-family detached structures, while 31.1 percent of the $1,360,576$ tenant-occupied units were of this type.

One-family attached structures contained 18.4 percent of all dwelling units; 2- to 4 family structures, 25.9 percent; 5-family or larger structures, 5.2 percent; and l- to 4 family structures with business, 4.6 percent.

More than half ( 55.2 percent) of the residential structures had an exterior of wood, while 37.2 percent were brick, 2.6 percent stucco, anid 5.1 percent were of other materials. Structures with an exterior of wood comprised 80.6 percent of the total in rural-
farm areas, 80.3 percent in rural-nonfarm areas, and 40.6 percent in the urban areas of the State.

Four and three-tenths percent of the dwelling units in Pennsylvania in April 1940 were built in the 5 year period 1935 to 1940, while 3.6 percent were built in the period 1930 to 1934, and 18.5 percent in the decade 1920 to 1929. Thus, more than one-fourth of all dwelling units in Pennsylvenia were built during the period 1920 to 1940. Five and one-tenth percent of the urban dwelling units were built during the decade 1930 to 1940 , while 7.5 percent of the rural-farm and 15.4 percent of the rural-nonfarm were built in that period.

The median number of rooms in all dwelling units was 5.72. Six-roonf units accounted for 28.9 percent of all dwelling units, while those with fower than six rooms comprised 43.6 percent of the total and those with more than six rooms, 27.4 percent. The median number of rooms in the owner-occupied units was 6.23 , compared with a median of 4.97 for the tenant-occupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and ruralnonfarm homes.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Pennsylvania which will be issued shortly by the Bureau or the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

DAKELIIMG UNITS BY TYPG OF STRUCIURE, FEAR BUILT, AND NOMBER OF ROOMS, AND RESIDENTIAL STRUCTURES BY EXIERIOR MAIERIAL, FOR PENNSYIVANLA, URBAN AND RURAL: 1940
(Total figuree for each area include vacant unite. Percent not ehown where lese than 0.1 )

#### Abstract

Thie advance release from the Second Series Housing Bulletin for the State showe data on type of etructure, exterior material, year built, and number of rooms. Slmilar announcemente are being made for other States as the figuree become available. Other releaees on topice covered in the Second Series Bulletin include data on monthly rent (Seriee H-8), housing facilitiee and equipment (Series H-9), and size and race of household (Seriee H-11)]

Approximately two-thirds of the families in California live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of about seven-tenths of the residential structures in the state. Onethird of all dwelling units contained three rooms or less. One fourth of the dwelling units in the state were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in urban as well as rural areas. This type accounted for 67.6 percent of all dwelling units in the State, 59.1 percent of those in urban areas, 87.0 percent of those in ruralnonfarm areas, and 94.4 percent of those in rural-farm areas. Of the 928,796 owner-oocupied dwelling units in the State, 824,722 , or 88.8 percent, were in l-family detached structures, while 52.1 percent of the $1,209,547$ tenant-occupied units were of this type.

One-family atteohed structures containeç 1.7 percent of all dwelling units in the State; 2- to 4 -family structures, 14.3 percent; 5-family or larger structures, 13.5 percent; 1- to 4 -family structures with business, 1.8 percent, and other dwelling places (trailers, tourist cabins, etc.), l.l percent.

About seven-tenths (70.7 percent) of the residential structures hed an exterior of wood, while 26.6 percent were stucco, 1.1 percent brick, and 1.7 percent were of other materials. Struotures with an exterior of
wood constituted 91.6 percent of the total in rural-farm areas, 80.1 percent in rural-nonfarm areas, and 63.9 percent in the urban areas of the State.

More than one-seventh ( 15.1 percent) of the dwelling units in California in April 1940 were built in the 5 -year period 1935 to 1940, while 10.2 percent were built in the period 1930 to 1934 , and 37.4 percent in the decade 1920 to 1929. Thus, ifve-sighths of all the dwelling units in California were built during the period 1920 to 1940 . More than two-fifths ( 43.4 'percent) of the ruralnonfarm dwelling units were built during the decade 1930 to 1940 , while 28.4 percent of the rural-faril and 20.0 percent of the urban units were built in that period.

The median number of rooms in all dwelling units was 4.35. Five-room units accounted for 25.0 percent of all dwelling units, while those with fewer than five rooms constituted 52.8 percent of the total, and those with more than five rooms, 22.2 percent. The median number of rooms in the owner-occupied units was 5.12 , compared with a median of 3.67 for the tenant-occupied units. As measured by the median number of rooms, the rural-nonfarm homes were smaller than the urban and rural-farm homes.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for California whioh will be issued shortly by the Bureau of the Census. The bulletin also includes statistios on such other subjects as monthly rent or value of home, size of household, and housing racilities and equipment.
(Total ilgures for each erea include vecant unite. Percent not shown where leee than 0.1 )

#### Abstract

[Thie advance release from the Seoond Seriee Housing Bulletin for the Stete ehows date on type of etruoture, oxterior material, year built, and number of rooms. Siailar announoments are boing made for other States as the figures become avallable. Other releases on topios oovered in the seoond Series Bulletin include data on monthly ront (Series H-8), housing faolilitiee and oquipmont (Sories H-9), and size and race of household (Serles H-11).]

Nearly two-fifths of the families in Massachusetts live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of more than nine-tenths of the residential structures in the State. One-fourth of all dwelling units contained seven rooms or more. Seven and nine-tenths percent of the dwelling units in the State ware built in the deaade between 1930 and 1940.

The single-family detached home was the most oommon type of residential structure in urban as well as rural areas. This type accounted for 39.3 percent of all dwelling units in the state, 33.0 percent of those in urban areas, 80.0 percent of those in ruralnonfarm areas, and 85.1 percent of those in rural-farm areas. Of the 426,785 owner-ocoupied dwelling units in the State, 296,563 , or 69.5 percent, were in l-family detached structures, while 17.0 percent of the 693,909 ten-ant-ocoupied units were of this type.

One-family attached structures contained 1.6 percent of all dwelling units; 2- to 4-family structures, 44.1 percent; 5-family or larger struotures, 12.4 percent; and 1 - to 4-family structures with business, 2.2 peroent.

Ninety-two and eight-tenths percent of the residential structures had an exterior of wood, while 5.5 percent were brick, 1.0 percent stucco, and 0.7 percent were of other materials. Struotures with an exterior of wood constituted 97.9 percent of the total in 3-36236
rural-farm areas, 97.8 peroent in rural-nonfarm areas, and 91.6 percent in the urban areas of the State.

Three and six-tenths percent of the dwelling upits in Massachusetts in April 1940 were built in the 5 -year period 1935 to 1940, while 4.3 percent were built in the period 1930 to 1934, and 18.5 percent in the decade 1920 to 1929. Thus, more than one-fourth of all dwelling units in Massachusetts were built during the period 1920 to 1940. Iighteen and eight-tenths percent of the rural-nonfarm dwelling units were built during the deoade 1930 to 1940, while 9.1 percent of the ruralfarm and 6.4 percent of the urban total were built in this period.

The median number of rooms in all dwelling units was 5.37. Five-room units acoounted for 25.0 percent of all dwelling units, while those with fewer than five rooms constituted 28.4 percent of the total and those with more than five rooms, 46.6 percent. The median number of rooms in the owner-oocupied units was 6.31 , compared with a median of 4.90 for the tenant-ocoupied units. As measured by the median number of rooms, the rural-farm homes were larger than the urban and ruralnonfarm homes.

The figures shown in the accompanying table were taken from the Second Series Housing Bulletin for Massachusetts which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on suoh other subjects as monthly rent or value of home, size of hcusehold, and housing facilities and equipment.

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements are being made for other States as the $\mathbb{I q}$ gures become available. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11).]

Half of the families in Illinois live in single-family detached structures, according to data from the 1940 Census of Housing released today by Direator J. C. Capt of the Bureau of the Census, Department of Commeroe. Wood was the prinoipal exterior material of approximately seven-tenths of the residential struotures in the State. Nore than one-fifth of ell dwelling units contained three rooms or lese. Seven and five-tenths percent of the dwelling units in the State were built in the decade between 1930 and 1940.

The eingle-family detaohed home wae the most common type of residential etruature in urban as well as rural areas. This type accounted for 50.3 percent of all dwelling units in the State, 36.0 percent of thoee in urban areae, 85.8 peroent of those in ruralnonfarm areas, and 97.3 percent of those in rural-farm areas. Of the 882,870 owner-000upied dwelling units in the State, 690,570 , or 78.2 percent, were in l-family detached struotures, while 31.5 peroent of the $1,309,854$ tenant-ocoupied units were of thie type.

One-family attached struotures contained 1.3 percent of all dwelling unite; 2- to 4-family etruoturee, 25.3 peraent; 5-family or larger struotures, 19.2 percent; and l- to 4-family struoturee with businese, 3.6 peroent.

About eeven-tenths (70.6 percent) of the residential etruotures had an exterior of wood, while 24.0 percent were briok, 2.6 percent stuoso, and 2.8 percent were of other materials. Struoturee with an exterior of wood oonetituted 95.1 percent of the total in
rural-farm areas, 88.7 percent in rural-nonfarm areas, and 57.9 percent in the urban areas of the State.

Four and two-tenths percent of the dwelling unite in Illinois in April 1940 were built in the 5-year period 1935 to 1940, while 3.3 percent were built in the period 1930 to 1934, and 25.2 peroent in the deoade 1920 to 1929. Thus, nearly one-third of all dwelling units in Illinois were built during the period 1920 to 1940. More than one-sixth (18.7 percent) of the rural-nonfarm dwelling unite were built during the decade 1930 to 1940, while 9.0 percent of the rural-farm and 5.1 peroent of the urben were built in this period.

The median number of rooms in all dwellIng units was 4.83. Five-room unite accounted for 24.1 percent of all dwelling units, while those with fewer than five rooms conetituted 42.1 percent of the total and thoee with more then Ifve roome, 33.8 peroent. The median number of rooms in the owner-oooupied units was 5.44 , compared with a median of 4.34 for the tenant-oocupied units. As meaeured by the median number of rooms, the rural-farm homee were larger than the urban and ruralnonfarm homes.

The ilgures ehown in the accompanying table were taken from the Second Seriee Houeing Bulletin for Illinois whioh will be iseued ehortly by the Bureau of the Ceneue. The bulletin aleo inoludee statistice on such other subjecte ae monthly rent or value of home, eize of houeshold, and houeing facilities and equipment.

## NEW YORK

#### Abstract

[This advance release from the Second Series Housing Bulletin for the State shows data on type of structure, exterior material, year built, and number of rooms. Similar announcements have already been made for all other States. Other releases on topics covered in the Second Series Bulletin include data on monthly rent (Series H-8), housing facilities and equipment (Series H-9), and size and race of household (Series H-11)]

Approximately one-third of the families in New York live in single-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. Wood was the principal exterior material of nearly three-fourths of the residential structures in the state. Three-eighths of all dwelling units contained six rooms or more. One-eighth of the dwelling units in the state were built in the decade between 1930 and 1940.

The single-family detached home was the most common type of residential structure in rural areas, whereas in urban areas structures containing 20 families or more accounted for more dwelling units than any other type. Single-family detached homes accounted for 32.4 percent of all dwelling units in the State, 20.6 percent of those in urban areas, 81.2 percent of those in ruralnonfarm areas, and 90.6 percent of those in rural-farm areas. Of the $1,111,388$ owneroccupied dwelling units in the State, 765,454 , or 68.9 percent, were in l-family detached structures, while only 14.4 percent of the $2,550,725$ tenent-ocoupied units were of this type.

One-pamily attached structures contained 2.2 percent of all dwelling units in the State; 2- to 4 -family structures, 24.6 percent; 5- to 19 -family structures, 15.7 percent; 20-family or larger structures, 21.2 percent; and 1 - to 4 -family structures with business, 3.8 percent.

Almost three-fourths (73.4 percent) of the residential structures had an exterior of wood, while 19.8 percent were brick, 4.7 percent stucco, and 2.1 percent were of other
materials. Structures with an exterior of wood constituted 95.7 percent of the total in rural-farm areas, 89.5 percent in rural-nonfarm areas, and 63.8 percent in the urban areas of the State.

Six and three-tenths percent of the dwelling units in New York in April 1940 were built in the 5-year period 1935 to 1940 , while 6.0 percent were built in the period 1930 to 1934, and 28.1 percent in the decade 1920 to 1929. Thus, two-fifths of all the dwelling units in New York were built during the period 1920 to 1940. Twenty-six and sixtenths percent of the rural-nonfarm dwelling units were built during the decade 1930 to 1940, while 7.4 percent of the rural-farm and 10.0 percent of the urban units were built in that period.

The median number of rooms in all dwelling units was 4.80. Four-room units accounted for 20.2 percent of all dwelling units, while those with fewer than four rooms constituted 24.6 percent of the total, and those with more than four rooms, 55.2 percent. The median number of rooms in the owner-occupied units was 6.33, compared with a median of 4.18 for the tenant-oocupied units. As measured by the median number of rooms, the ru-ral-farm homes were the largest and the urban the smellest, with the rural-nonfarm in the intermediate position.

The ifgures shown in the acoompanying table were taken from the second Series Housing Bulletin for New York which will be issued shortly by the Bureau of the Census. The bulletin also includes statistics on such other subjects as monthly rent or value of home, size of household, and housing facilities and equipment.

HOUSING
HOME RADIOS： 1940

#### Abstract

（This advance release，which presents data on home radios for the 48 States and the District of Columbia，supersedes release H－5，No，2，giving similar data for a selected list of States．The data for counties，for rural－nonfarm and rural－farm perts of counties，and for cities of 25,000 or more，are being issued by States in release Series H－7．）

The number of homes in the United States with a radio more than doubled between 1930 and 1940，accorảing to data from the 1940 Census of Housing released today by Director J．C．Capt of the Bureau of the Census，De－ partment of Commerce．Radios were reported in $28,052,160$ occupied dwelling units in 1940 ，or 82.8 percent of the number reporting on this item，as contrasted with $12,048,762$ ， or 40.3 percent of all homes in 1930．The proportion of homes with a radio in 1940 was highest in the urban areas，in which 91.9 percent of the reporting units had a radio， as compared with 79.0 percent in the rural－ nonfarm areas，and 60.2 percent in the rural－ farm areas．

In the North and West，the proportions having a radio were 91.9 percent and 88.9 percent，respectively．The corresponding fig－ ure for the South was 62.1 percent．

In twenty－five States and the District of Columbia more than 85 percent of the homes had a radio．These States form a continuous band reaching from the North Atlantic coast， along the Canadian border，and down the Pa－ oific coast．In the North the proportion of homes with a radio ranged from 79.9 percent in Missouri to 96.2 percent in Massachusetts． In the block formed by Massachusetts，Connect－ icut，Rhode Island，New York，and New Jersey more than 95 percent of the homes had a radio．The range in the South was from 39.9 percent in Mississippi to 88.1 percent in Maryland and 93.7 percent in the District of Columbia；and in the West，from 53.2 percent in New Mexico to 92.9 percent in California．

In the North，the proportion of urban heses hav＇ n ；a radio ranged from 90.4 percent in Karsas to 96.7 percent in New York；in the South，from 61.5 percent in Mississippi to 93.7 percent in the District of Columbia；and in 3－34355
the West，from 72.5 percent in New Mexico to 95.1 percent in California．Twenty－five States and the District of Columbia ranked above the United States average of 91.9 percent for urban homes．In 14 States 95 percent or more of the urban homes had a radio．With the ex－ ception of Vermont and Jtah，these 14 States are located along the two oceans and the Great Lakes．

In 29 States the proportion of rural－nグー－ farm homes having a radio was above the United States average of 79.0 percent．The greatest deviations from this average were in the West，where the percentages ranged from 47.6 in New Mexico to 90.2 in Utah．In the North the proportion of rural－nonfarm homes with a radio ranged from 76.8 percent in Mis souri to 95.3 percent in Connecticut；and in the south，from 50.9 percent in Mississippi to 86.5 percent in Delaware．

The national average of rural－farm homes having a radio was 60.2 percent．In 32 States the proportion of rural－farm homes with a radio was above this average．Among the northern States radio ownership in the rural－farm areas ranged from 60.5 percent in Missouri to 89.3 percent in Massachusetts；in the South，from 27.3 percent in Louisiana to 71.1 percent in Delaware；and in the West， from 36.7 percent in New Mexico to 86.3 per－ cent in Utah．

The percentage of homes having a radio is shown graphically by states on the accompany－ ing map．The figures shown in the Table were obtained from the Second Series Housing Bul－ letins now being published by the Bureau of the Census．The bulletins for a few States are now available and bulletins for the re－ maining States will be published in the near future．

HOUSING
HOME RADIOS: 1940

#### Abstract

(This advance release, which presenta data on home radios for the 48 States and the District of Columbia, supersedes release H-5, No. 2, giving similar data for a selected list of States. The data for counties, for rurel-nonfarm and rural-farm parts of counties, and for cities of 25,000 or more, are being issued by States in release Series H-7.)

The number of homes in the United States with a radio more than doubled between 1930 and 1940, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commeroe. Radios were reported in $28,052,160$ ocoupied dwelling units in 1940 , or 82.8 percent of the number reporting on this item, as contrasted with $12,048,762$, or 40.3 percent of all homes in 1930. The proportion of homes with a radio in 1940 was highest in the urban areas, in which 91.9 percent of the reporting units had a radio, as compared with 79.0 percent in the ruralnonfarm areas, and 60.2 percent in the ruralfarm areas.

In the North and West, the proportions having a radio were 91.9 percent and 88.9 percent, respectively. The corresponding figure for the South was 62.1 percent.

In twenty-five States and the District of Columbia more than 85 percent of the homes had a radio. These States form a continuous band reaching from the North Atlantic coast, along the Camadian border, and down the Pa cifio coast. In the North the proportion of homes with a radio ranged from 79.9 percent in Missouri to 96.2 percent in Massachusetts. In the block formed by Massachusetts, Connecticut, Rhode Island, New York, and New Jersey more than 95 percent of the homes had a radio. The range in the South was from 39.9 percent in Mississippi to 88.1 percent in Maryland and 93.7 percent in the District of Columbia; and in the West, from 53.2 percent in New Mexico to 92.9 percent in California.
-n the North, the proportion of urban heres hav' $n_{j}$ a radio ranged from 90.4 percent in Kansas to 96.7 percent in New York; in the South, from 61.5 percent in Mississippi to 93.7 percent in the District of Columbia; and in
the West, from 72.5 percent in New Mexico to 95.1 percent in California. Twenty-five States and the District of Columbia ranked above the United States average of 91.9 percent for urban homes. In 14 States 95 percent or more of the urban homes had a radio. With the exception of Vermont and Utah, these 14 States are located along the two oceans and the Great Lakes.

In 29 States the proportion of rural-ronfarm homes having a radio was above the United States average of 79.0 percent. The greatest deviations from this average were in the West, where the percentages ranged from 47.6 in New Mexico to 90.2 in Utah. In the North the proportion of rural-nonfarm homes with a radio ranged from 76.8 percent in Nissouri to 95.3 percent in Connecticut; and in the South, from 50.9 percent in Mississippi to 86.5 percent in Delaware.

The national average of rural-farm homes having a radio was 60.2 percent. In 32 States the proportion of rural-farm homes with a radio was above this average. Among the northern States radio ownership in the rural-farm areas ranged from 60.5 percent in Missouri to 89.3 percent in Massachusetts; in the South, from 27.3 percent in Louisiana to 71.1 percent in Delaware; and in the West, from 36.7 percent in New Mexico to 86.3 percent in Utah.

The percentage of homes having a radio is shown graphically by States on the accompanying map. The figures shown in the Table were obtained from the Second Series Housing Bulletins now being published by the Bureau of the Census. The bulletins for a few States are now available and bulletins for the remaining States. Will be published in the near future.

HOUSING

USE OF PETROLEUM PRODUCTS AS FUEL FOR HOME HRATING: 1940

#### Abstract

(More detalled data on heating fuel and heating equipment for tho United States will be presented in a later release in this series. The detailed data for individual states are presented in the Series H-9 releases now being issued for the various States.)

Fuel oil and other petroleum producte are ueed ae the principal heating fuel for one in every ten of the homee in the United Statee according to data from the 1940 Census of Houeing releaeed today by Director J. C. Capt of the Bureau of the Ceneue, Department of Comerce. Of the $33,867,260$ occupied dwelling unite reporting on thie queetion nearly $3,400,000$ reported the uee of fuel o1l, kerosene or gaeoline as their principal heating fuel.

The Federal Government is restricting the use of fuel ofl and other petroleum productsfor central and epace heating in the Dietrict of Columbia and in all or part of 17 States located on or near the Baetern Seaboard of the United States. ${ }^{1}$ Theee are the Statee that relied mainly on tankers for the transportation of petroleum products from the producing areas. In these eastern areae onesixth, or $2,190,126$ of the $13,333,106$ reporting occupied unite rely on fuel oil, kerosene or gaeoline as their principal heating fuel. In contraet, petroleum products represent the principal heating fuel for lees than onesixteenth, or $1,206,086$ of the $20,534,154$ reporting unite in the remaining 31 statee of the United Statee. Thue, while the reetricted States contain only two-firthe of all occupied unite in the United Statee, they contain two-thirde of the unite that rely on petroloum products for heating fuel.

Among the States in the reetricted area, the range in percentage of homee ueing petroleum products for heating is iram 45.8 in Rhode Island to 0.1 in Weet Virginia. Connecticut ranke eecond, with 42.0 percent of

[^62]the hamee ueing fuel oil, kerosene or gaeoline, and Massachusette third, with 36.9 percent. In Rhode Island, Connecticut, and Maeeachusetts 668,426 homee, or. 39.2 percent, depended on petroleum producte for heating fuel. Although only 18.6 percent of the homee in New York uee petroleum producte ae the principal heating fuel, they total 652,820 homee. In the Statee of New Jersey, Delaware, and Maryland cambined, 24.4 percent, or 389,903 homee, uee petroleum producte for heating purpoeee. Petroleum products are ueed as heating fuel for 28.0 percent of the homes in New Hampehire, 15.5 percent in Vermont, 16.5 percent in Maine, 21.7 percent in Florida, and 23.0 percent in the Dietrict of Columbia.

Although the proportion of homee ueing petroleum producte for heating is fairly high in eome of the States outeide the reetricted area, the total number of such homee ie relatively. small. In Nevada, for example, 30.3 percent of the homes uee fuel oil for heat, but thie represente lese than 10,000 homes. While more than 15 percent of the homee in Minneeota, Waehington, Oregon, and Arizona uee petroleum products for heat, the actual number of homes using theee producte is approximately 90,000 leee than in the state of Massachueette alone. Petroleum producte repreeented the principal heating fuel for lese than 2.0 percent of the homes in ilve of the unrestricted States in the South.

The number and percentage of occupied dwelling, units using fuel oil, kerosene or gaeoline ae the principal heating fuel are ehown for each State in the accompanying table, and the percentagee are ehown graphically by States on the map. Theee flgures were obtained from the Second Series Houeing Bulletine now being published State by State by the Bureau of the Ceneue.

USE OF FETROLEUK PRODUCTS (FUEL OIL, KEROSENE OR GASOLINE) AS THE PRINCIPAL HEATING FUEL IN OCCUPIED DNBLIING UNITS, FOR THE UNIIED STATES BY DIVISIONS AND STATES: 1940

HOUSING

REFRIGIRATION EQUIPMBNT IN THR NORTH, SOUTH, AND WRST, URBAN AND RURAL: 1940

#### Abstract

(This advance release presents data on refrigeration equipment in urban and rural areas in the United States, and in the North, South, and Vest. Similar data are being released by States in Series H-9.)

More than $15,000,000$ homes in the United States have mechanical refrigerators, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Commerce. These homes with mechanical refrigerators represent 44.1 percent of the $34,229,567$ occupied dwelling units reporting. Mechanical refrigerators were more common in urban places then in the rural areas and were reported for 56.0 percent of occupied urban dwelling units as compared with 38.7 percent of the ruralnonfarm homes and only 14.9 percent of the rural-farm units. In the North and West nearly one-half of the dwelling units reporting had a mechanical refrigerator, while such equipment was reported for three-tenths of the units in the South.

Ice refrigerators were reported for $9,269,352$, or 27.1 percent, of the reporting units in the United States. Ioe refrigerators were present in 31.6 percent of the reporting units in urban places and 23.0 percent in rural-nonfarm areas. Ice refrigera-? tors were thus outnumbered by mechanical refrigerators in the totals for urban paces and rural-nonfarm areas. In the rural-farm areas of the Onited States ice refrigerators were reported for 18.1 percent of the units and the number of ice refrigerators exceeded the number of mechanical refrigerators. This excess of ice refrigerators in the entire rural-farm area is due to the relatively large number of ice refrigerators and the
small number of mechanical refrigeratnrs a the rural-rarm areas of the South. Ice refrigerators were more common in the North and South, with 28.9 percent and 27.9 percent, respectively, of the reporting units, than in the West where they represented only 16.0 percent of the total.

Homes with refrigeration equipment other than mechanical or ice refrigerators totaled less than one-half million and represented only 1.4 percent of the occupied units reporting. Such equipment was more common in the rural-farm areas than elsewhere.

In the United States as a whole, $9,371,947$, or more than one-fourth ( 27.4 percent), of the reporting units had no refrigeration equipment. The absence of refrigeration equipment was most common in rural-farm areas, where this situation existed in 63.1 percent of the reporting units as compared with 36.8 percent in rural-nonfarm areas and 11.9 percent in urban places. Nearly two-fifths of the homes in the South reported no refrigeration equipment, as compared with 32.9 percent in the Fest and 20.1 percent in the North.

These figures were taken from the second Series Housing Bulletins which are being issued State by State by the Bureau of the Census. The bulletins also contain statistics relating to type of structure, year built, number of rooms, rent and value, size of household, and housing facilities and equipment.

## HOME RADIOS IN WHITE AND NONWHITE HOUSEHOLDS, BY STATES:

1940

The number of home radios in white and nonwhite households in the United States is shown in statistics released today by Director J. C. Capt of the Bureau or the Census, Department of Commerce. The census 11gures show that 86.8 percent of the $30,721,944$ white households reporting on this item had a radio, as contrasted with 43.3 percent of the $3,168,562$ nomwhite households. In general, the differences between the two groups were largest in the states where the nonwhite population is mainly rural, and smallest in the States where most of the nonwhite population is urban.

This release supplements the release Series H-13, No. 1, which presents data on home radios for States by urben and rural areas. Data for counties, for ru-ral-nonfarm and rural-farm parts or counties, and for cities of 25,000 or more also are presented, by States, in release Series H-7.

The ilgures in the table below were obtained from the United States Summery of the Second Series Housing Bullet1ns.

U. S. DEPARTMENT OF COMMERCS Bureau or the Census Washington

Sixteenth Census of the
United States: 1940
Series H-13, No. 9

## HOUSING

HOME RADIOS IN WHITE AND NONWHITE HOUSEHOLDS, BY STATES: 1940

The number of home radios in white and nonwhite households in the United States is shown in statistics released today by D1rector J, C. Capt of the Bureau or the Census, Department of Commerce. The census $11 \mathrm{~g}-$ ures show that 86.8 percent of the $30,721,944$ white households reporting on this item had a radio, as contrasted with 43.3 percent of the $3,168,562$ nonwhite households. In general, the differences between the two groups were largest in the States where the nonwhite population is mainly rural, and smallest in the States where most of the nonwhite population is urban.

This release supplements the release Series H-13, No. 1, which presents data on home radios for States by urban and rural areas. Data for counties, for ru-ral-nonfarm and rural-farm parts or counties, and for c1t1es of 25,000 or more also are presented, by states, in release Series H-7.

The f1gures in the table below were obtained from the United States Summary of the Second Series Housing Bulletins.

OCCUPLED DWELLINO UNITS VITH RADIO, BY COLOR OF OCCUPANIS, BY STATES: 1940
(A dwelling unit was enumereted as heving a radio if it oontained a usable radio or one only temporarily out of repair. Percanteges are bsesd on number reporting)

Bureau of the Census
Washington

Sixteenth Census of the
United States: 1940

Series \#-13, No. 10

DWELLTNG UNITS BY TYPE OF STRUCIURE IN THR NORTH, SOUTH, AND WEST, URBAN AND RURAL: 1940

#### Abstract

(This release shows the olasification of dwelling units according to type of structure in which located, for urban and rural areas in the United States and in the North, South, and Weat, with separate figures for owner and tenant-ocoupied units. Correaponding figures for each State are available in release Series H-10.)

Nearly two-thirde of all families in the Onited States live in l-family detached etructures, according to data from, the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Ceneus, Department of Commerce. A total of $23,730,637$ dwelling units were reported as eingle-ramily detached etructures; these represented 63.6 percent of the 37,325,470 . awelling unite in the Nation at the time of the censue. Lees than half ( 44.8 percent) of all urban dwelling units were in lfamily detached structures, as contraeted with 83.2 percent of the rural-nonfarm dwelling units and 96.0 percent of the rural-farm units. The percentage of urban dwelling unite in l-family detached structures wae 38.7 in the North, 54.9 in the South, and 61.4 in the West.

One-family attached structures (ohlefly row housee) contained 3.2 percent of all dwelling units; 2-family structures, 13.7 percent; 3- to 4-family structures, 6.0 percent; and 5-family or larger structures, 10.5 percent. Two and one-hall percent of the dwelling unite were located in l- to 4 -family structures that contained a etore or other business establishment, and 0.4 percent were classified as "other dwelling places." The latter include trailers, tourist cabins, boats, etc., that were occupied by persons having no other place of residence. Structures including businese establishments were not classified separately if they contained five or more awelling units.

In each region the 2 -family structure ranked next in importance to the eingle-family detached structure. Two-family structuree were more common in the North and South than in the West, and, of course, were more common in urban than in rural areas. One-fifth of the urban dwelling unite in the North and South, as compared with one-tenth or those in the West, were in 2-family structuree. In urban areas or the North only 3-37017
one-fifth of the 2-family structuree were of the side-by-side type, but in all other areae this type represented about half of the total. The remainder of the 2 -family structures, identified in the accompanying table as "2-family other," includes single-family houses that have been divided into two dwelling units without a full vertical partition between them, as well as the more common form of two-story house with one dwelling unit on the first floor and another on the second floor.

Apartment houees with five or more dwelling units were more common in the urben places of the North and Weet than in the urban places of the South. Such etructures contained 20.7 peroent of the urban dwelling unite in the North and 17.5 percent of thoee in the Weet, as compared with 8.0 percent of the urban dwelling unite in the South.

Leee than half ( 47.6 percent) of all tenantoccupied dwelling units in the United States were in l-family detached structuree, as contrasted with 83.3 percent of the owner-occupied units. This difference between the two tenure groups is more pronounced in figures for the United Statee as a whole than it would be if the comparieon were made for urban and rural areas eeparately, because a larger proportion of the rural than of the urban homes are owner-ocoupied l-family etructures. The more detailed figures by tenure for urban and rural areas eeparately and for cities and metropolitan distriots are preeented in the Second Series Housing Bulletins.

The figures in the accompanying table were obtained from the Second Series Housing Bulletins now being publiehed for each State by the Bureau of the Census. The bulletins also contain statistice relating to year built, number of rooms, slze of houeehold, rent and value, and housing facilitiee and equipment.

# DWELLING UNITS BY TYPE OF STRUCTURE IN THE NORTH, SOUTH, AND WEST, URBAN AND RURAL: 1940 

#### Abstract

(This relesee ehows the oleceification of dwelling unite acoording to type of structure in which loceted, for urban and rural areas in the United States and in the North, South, and Weet, with eeparate figuree for owner and tenant-ocoupied unite. Correoponding figuree for each Stete are available in releaee Seriee H-10.)

Nearly two-thirds of all families in the United States live in l-family detached structures, according to data from the 1940 Census of Housing released today by Director J. C. Capt of the Bureau of the Census, Department of Oommerce. A total of $23,730,637$ dwelling units were reported as single-family detached structures; these represented 63.6 percent of the 37,325,470 dwelling units in the Nation at the time of the census. Leee than half ( 44.8 percent) of all urban dwelling units were in 1family detached structures, as contrasted with 83.2 percent of the rural-nonfarm dwelling units and 96.0 percent of the rural-farm unite. The percentage of urban dwelling units in l-family detached structures was 38.7 in the North, 54.9 in the South, and 61.4 in the West.

One-family attached structures (chiefly row houses) contained 3.2 percent of all awelling units; 2-family structures, 13.7 percent; 3 - to 4-family structures, 6.0 percent; and $5-1$ emily or larger structures, 10.5 percent. Two and one-half percent of the dwelling units were located in l- to 4 -family etructures that contained a store or other business establishment, and 0.4 percent were classified as "other awelling places." The latter include trailers, tourist cabins, boats, etc., that were occupied by persons heving no other place of residence. Structures including business eetablishments were not olassified separately if they contained five or more 'awelling units.

In each region the 2 -family structure ranked next in importance to the single-family detached structure. Two-family structures were more common in the North and South than in the West, and, of course, were more common in urban than in rural areas. One-fifth of the urban dwelling units in the North and South, as compared with one-tenth of those in the West, were in 2-family structures. In urben areas of the North only 3-37017
one-fifth of the 2-family structures were of the side-by-side type, but in all other areas this type repreeented about half of the total. The remainder of the 2 -family structures, identified in the accompanying table as "2-family other," includes single-family houses that have been divided into two dwelling units without a rull vertical partition between them, as well as the more common form of two-story house with one dwelling unit on the first floor and another on the second floor.

Apartment houees with ifve or more dwelling units were more common in the urban places of the North and West then in the urban places of the South. Such etructures contained 20.7 percent of the urban dwelling units in the North and 17.5 percent of those in the West, as compared with 8.0 percent of the urban dwelling units in the South.

Lese than half ( 47.6 percent) of all tenantoccupied dwelling units in the United States were in l-ramily detached structures, as contraeted with 83.3 percent of the owner-occupied units. This difference between the two tenure groups is more pronounced in figures for the United States as a whole than it would be if the comparison were made for urban and rural areae separately, because a larger proportion of the rural than of the urban homes are owner-occupied l-family etructures. The more detalled figuree by tenure for urban and rural areas separately and for cities and metropolitan aistricts are presented in the Second Series Housing Bulletins.

The figures in the accompanying table were obtained from the Second Series Housing Bulletins now being published for each State by the Bureau of the Census. The bulletins also contain statistice relating to year built, number of rooms, size of household, rent and value, and housing facilities and equipment.

U. S. DEPARTMENT OF COMMKRCE

Bureau of the Census
Washingt on

Sixteenth Census of the
United States: 1940

Series H-13, No. 11
HOUSING

MONTHLY RENT AND VALUE OF HOMES IN THE NORTH, SOUTH, AND WEST, URBAN AND RURAI: 1940

#### Abstract

(Thie releaee presente eumary data on monthly rent of homee and value of homee in the urban and rural areas In the United Statee and in the North, South, and Weet, with eeparate figuree for home ownere and tenante. Corresponding figuree for Statee are preeented in releaee Seriee H-8.)

The median monthly rental of homes in the United States was $\$ 27.31$ in urban areas, $\$ 13.20$ in ruralnonfarm areas, and $\$ 5.97$ in rural-farm areas in 1940 according to an analysis of statistios issued by Director J. C. Capt of the Bureau of the Census, Department of Commerce. These figures inolude the monthly contract rent of tenants and the estimated monthly rent of owner-ocoupied and vacant homes.

There was relatively little difference between the North and West in the median monthly rent, but in both of these regions home rentals were substantially higher than in the South. The median rent of urban and rural-nonfarm homes was $\$ 26.69$ in the North, $\$ 24.22$ in the West, and $\$ 13.83$ in the South. The median rent of rural-farm homes
. $\$ 11.26$ in the North, $\$ 9.07$ in the West, and
92 in the South. The lower rent in the South Is a reflection, at least in part, of the higher proportion of households in the South that are nonwhite or are living on farms.

The relative difference between rentals in the North and South was less for urban than for rural homes. The median monthly rent of urban homes in the North (\$29.24) was liz times that of urban homes in the South ( $\$ 18.78$ ). On the other hand, the median rent of rural-nonfarm homes in the North was twice as high as in the South (\$16.27 in the North and $\$ 7.53$ in the South) and the rent of rural-farm homes in the North was three times as high as in the South ( $\$ 11.26$ in the North and \$3.92 in the South).

The median rent of tenant-occupied homes was less than the median rental value of owner-occupied homes in the urban, rural-nonfarm and ruralfarm areas of each region of the country. For the country as a whole the median rent of urban and rural-nonfarm homes was $\$ 21.41$ for tenants and $\$ 27.45$ for owners. The rent of rural-farm homes was $\$ 4.72$ for tenants and $\$ 9.78$ for owners.

Farm tenants in the South paid one-fourth the monthly rental paid by urban tenants in the South. The proportion was higher for the North and West where farm tenants paid about one-third the rental ?1d by urban tenants.

The median rental value for urban white owners the South was about seven-eighths of the median for urban white owners in the North. For urban white tenants in the South, the median rent was
about seven-tenths of that in the North, but for both urban nonwhite owners and tenants in the South, the median rentals were less than half the corresponding medians for urban areas in the North.

Homes ocoupied by white households had a higher median monthly rent than those occupied by nonwhites. The rent differential between white and nonwhite owners was greater than between white and nonwhite tenants, partioularly in the rural-farm areas where the median rental value of homes owned and ocoupied by white households was about four times that of homes owned and ocoupied by nonwhites. The median rental for nonwhite tenants living in urban areas was about half that of white tenants in urban areas (\$12.59 for nonwhites and $\$ 25.98$ for whites). In the urban areas of the South, the median rental for nonwhite tenants was only about two-fifths of the median for white tenants as compared with the corresponding proportion of about three-fourths for the urban areas in the North and West.

Urban and rural-nonfarm vacant dwelling units that were for sale or rent had a median rental of $\$ 24.60$, which was slightly above the median rental of all nonfarm dwelling units in the country (\$23.73). Rural-farm units that were vacant and for sale or rent, had an average rental of $\$ 3.84$, which was substantially below the average of $\$ 5.97$ for all rural-farm units.

There were 118,526 tenant-occupied homes in the country reporting a monthly rental of $\$ 100$ or more. Five-sixths of these homes were located in urban areas of the North. There were 2,337,020 tenant-occupied homes in the country reporting a monthly rental of less than $\$ 5$. Over half of these homes ( $1,255,418$ ) were located in rural-farm areas of the South. A fifth of the homes $(486,301)$ were located in rural-nonfarm areas of the South.

The median monthly rentals by ocoupancy, tenure and color of occupants are presented in Table 1. The numbers and percentages of dwelling units classified by monthly rent are presented in Table 2 , and the number and percentage of owneroccupied units classified by value are presented in Table 3. These figures were obtained from the Second Serieg Housing Bulletins now being published for mach State by the Bureau of the Census.
(Figures besed on contract rent of tement-ocoupled nonfarm unite and the oetinated rental value of other unite. Monthly rent of ormer-occupied rural-farn units 1 os en eotinete bssed on one percent of reported velue)

Sixteenth Census of the United States: 1940

Series H-13, No. 11
HOUSING

MONTHLY RENT AND VALUE OF HOMES IN THE NORTH, SOUTH, AND WEST, URBAN AND RURAL: 1940

#### Abstract

(This reloase presents sumary data on monthly rent of homes and value of homes in the urban and rural areae in the United States and in the North, South, and Weat, with eoparate figures for home ownere and tenants. Corresponding figuree for States are presented in release Series H-8.)

The median monthly rsintal of homes in the United States was $\$ 27.31$ in urban areas, $\$ 13.20$ in ruralnonfarm arsas, and $\$ 5.97$ in rural-farm areas in 1940 according to an analysis of statistics iseued by Dirsctor J. C. Capt of the Bureau of the Census, Department of Commerce. These figuree include the monthly contract rent of tenants and the estimated monthly rent of owner-ocoupled and vacant homes.

There was relatively little difference bstween the North and Weat in the median monthly rent, but in both of thees regions home rentals were substantially higher than in the South. The median rent of urban and rural-nonfarm homes was $\$ 26.69$ in the North, $\$ 24.22$ in the West, and $\$ 13.83$ in ths South. The median rant of rural-iarm homes
, $\$ 11.26$ in the North, $\$ 9.07$ in the West, and
92 in the South. The lowsr rant in the South Is a reflection, at least in part, of the higher proportion of households in ths South that are nonwhite or ars living on farms.

The ralative difference between rentals in the North and South was lass for urban than for rural homes. Ths median monthly rent of urban homes in the North (\$29.24) was lik timss that of urban homss in ths South $(\$ 18.78)$. On the other hand, the median rint of rural-nonfarm homes in the North wae twice as high as in the South ( $\$ 16.27$ in the North and $\$ 7.53$ in the South) and the rent of rural-farm homes in the North was three times as high as in ths South ( $\$ 11.26$ in the North and \$3.92 in the South).

The median rent of tenant-occupisd homss wae less than the median rental value of owner-occupied homes in the urban, rural-nonfarm and ruralfarm areas of each region of the country. For the country ae a whole the median rent of urban and rural-nonfarm homes was $\$ 21.41$ for tenants and $\$ 27.45$ for owners. The rent of rural-farm homes wae $\$ 4.72$ for tenants and $\$ 9.78$ for owners.

Farm tenante in the South paid one-fourth the monthly rental paid by urban tenants in the south. The proportion was higher for the North and West where farm tsnants paid about one-third the rental ~1d by urban tenants.

The median rental value for urban white owners the South was about seven-eighths of the median For urban white owners in the North. For urban white tenants in the South, the median rent was
about seven-tenths of that in the North, but for both urban nonwhite ownere and tenants in the South, the median rentals were less than half the corresponding medians for urban areas in the North.

Homes occupied by white households had a higher median monthly rent than those occupied by nonwhites. The rent diffarential between white and nonwhite owners was greater than between white and nonwhite tenants, partioularly in the rural-farm areae where the median rsntal value of homes owned and ocoupied by white households was about four times that of homes owned and occupied by nonwhites. The median rantal for nonwhite tenants living in urban areas wae about half that of white tenants in urban areas (\$12.59 for nomwhites and $\$ 25.98$ for whitee). In the urban areas of the South, the median rental for nonwhite tenants was only about two-fifths of the median for white tenants as compared with the corresponding proportion of about three-fourths for the urban areas in the North and West.

Urban and rural-nonfarm vacant dwelling units that were for sale or rint had a median rental of $\$ 24.60$, which was slightly above the median rental of all nonfarm dwelling units in the country ( $\$ 23.73$ ). Rural-farm units that were vacant and for sale or rent, had an average rental of $\$ 3.84$, which was substantially below the average of $\$ 5.97$ for all rural-farm units.

There were 118,526 tenant-occupied homes in the country reporting a monthly rental of $\$ 100$ or more. Five-sixths of these homes were located in urban areas of the North. There were 2,337,020 tenant-occupied homes in the country reporting a monthly rental of less than \$5. Over half of these homes (1,255,418) were located in rural-farm areas of the south. A fifth of the homes $(486,301)$ were located in rural-nonfarm areas of the South.

The median monthly rentals by occupancy, tenure and color of occupants are presented in Tablel. The numbers and percentages of dwelling units claseified by monthly rent are presented in Table 2, and the number and percentage of owneroccupied units classified by value are presented in Table 3. These figures were obtained from the Second Seriea Houeing Bulletins now being published for anch State by the Bureau of the Census.
(Figure based on contract rent of tenant-oscupied nonferm unite and the estimatad rentel velue of othor unite. Mouthly roat of owner-ocoupied rural-farn unite 10 an estinate baead on one percent of reported velue)

## STATE OF REPAIR AND PLUMBING EQUIPMENT IN THE NORTH, SOUTH, AND WEST, URBAN AND RURAL: 1940

#### Abstract

(This release presents data on water supply, toilet and bathing fecilities, and state of repair, for urban and rural areas in the United States and in the North, South, and West. Similar date for Stetes ere presented in the Second Series Housing Bulletin for eech Stete.)

Seven out of ten dwelling units in the United States were equipped with running water and six out of ten had a private flush toilet in the structure, according to an analysis of statistics from the 1940 Census of Housing issued by Director J. C. Capt of the Bureau of the Census, Department of Commerce. A private bathtub or shower in the structure was reported for more than $20,000,000$ homes, or 56.2 percent of the reporting units.

Although running water in the dwelling unit was reported for 69.9 percent of the units in the United States, in rural-farm areas, only 17.8 percent of the dwelling units had this convenience. Another 11.2 percent of rural-farm units had a hand pump in the units, and 56.1 percent had running water or other water supply within 50 feet. The remaining 14.8 percent had no water supply within 50 feet. Almost half ( 46.6 percent) of the rural-farm homes in the West had running water in the unit, as compared with 23.0 percent of those in the North and only 8.5 percent of those in the South.

A private flush toilet in the structure was reported for 59.7 percent of the dwelling units in the United States; flush toilets for the joint use of 2 or more families were reported for an additional 5.0 percent; and almost one-third had an outside toilet or privy. Four-fifths of the rural-fam units had an outside toilet or privy and one-tenth reported no toilet or privy. The proportion of homes reporting no toilet or privy was considerably higher in the South than in the North or West.

More than half ( 56.2 percent) of the dwelling units in the United States had a
private bathtub or shower in the structure; 4.7 percent had a shared bathtub or shower; and 39.1 percent had neither type of equipment. Over three-fourths of the urban homes had a private bathtub or shower, but only 11.8 percent of all rural-farm homes were so equipped.

About two of every ten dwelling units in the United States were in need of major repairs; of the remaining eight not in need of major repairs, five had a private bath and a private flush toilet, one had running water in the dwelling unit but no private bath, and two had no running water in the dwelling unit. In urban areas, only one of every ten dwelling units needed major repairs and of the remaining nine, seven had a private bath and a private flush toilet. Two of every ten rural-nonfarm dwelling units and three of every ten rural-farm units needed major repairs.

Of the three regions, the West ranked highest in the proportion of dwelling units which did not need major repairs and had a private bath and a private flush toilet. Among the urban areas of the three regions, the West also ranked highest in this respect, the percentages in the West, North, and South being $79.5,74.7$, and 55.3 , respectively.

Statistics on water supply are shown for the United States and regions in Table l, data on toilet facilities in Table 2, and on bathing facilities in Table 3 . Table 4 presents statistics on state of repair and plumbing equipment. These figures represent summaries of data from the Second Series Housing Bulletin for each State.

## HOUSING

DWELLING UNITS BY YEAR BUILT, IN THE NORTH, SOUTH, AND WEST, URBAN AND RURAL: 1940

#### Abstract

(This release presents summary data on year built for dwelling units in the urban and rural areas of the United States and in the North, South, and West, with separate figures for owner and tenant-occupied units. Corresponding figures have been issued for each State in release Series H-10.)

The median age of dwelling units in the United States was 25 years, according to an analysis of statistics from the 1940 Census of Housing issued by Director J. C. Capt of the Bureau of the Census, Department of Commerce. As measured by medion age, the dwelling units were oldest in the North and newest in the West, with dwelling units in the South occupying an intermediate position. In each region dwelling units were oldest in the rural-farm areas and newest in the rural-nonfarm areas. The median age of owner-occupied units was lower than that of tenent-occupied units in all three regions.

As measured by data on year built, the construction of new dwelling units for the period 1930-1940 showed a considerable deoline as compared with the period 19201929. In the decade 1920-1929, the total number of units constructed was $8,515,264$, the average annual volume being about 850,000 units. The number of dwelling units constructed in the United States in the period 1930-1940 amounted to $5,528,096$, or an annual average of approximately 550,000 units. However, the number of new units constructed in the second half of the decade from 1930-1940 was considerably greater than in the first half of the period. Of the total number of dwelling units reporting year built, 15.9 percent were built between 1930 and 1940, as compared with 24.5 percent in the period 1920-1929. The decline in building from 1920-1929 to

1930-1940 was greatest in the North and least in the South.

In the rural-farm areas of all the regions the number of dwelling units constructed was approximately the same in the 1920-1929 and the 1930-1940 periods; in the rural-nonfarm areas slight increases were shown in the 1930's but in urban areas sharp decreases were registered in the latter period. During the decade 1920-1929 construction in urben areas of the United States was more than three times as great as in the rural-nonfarm areas, but in the 1930-1940 period the volume in these two types of areas was about the same.

The average age of dwelling units in the North, as measured by the median year built, was 30.2 years. In the South the median age was 21.1 years and in the West 18.3 years. The average owner-occupied unit in the United States was newer by 4.2 years than the average tenant-ocoupied unit; the difference in age ranged from 3.5 years in the West to 4.3 years in the North.

The median age may be defined as the age which divides all dwelling units reporting on year built into two equal groups, one group being older and the other younger than the median.

The figures in the accompanying table represent a suramary of data now being published by the Bureau of the Census for each State in the Second Series Housing Bulletins.

## HOUSING

DWELLING UNITS BY YEAR BUILT, IN THE NORTH, SOUTH, AND WEST, URBAN AND RURAL: 1940

#### Abstract

(This release presents summary data on year built for dwelling units in the urban and rural areas of the United States and in the North, South, and West, with separate ifgures for owner and tenant-occupied units. Corresponding figures have been issued for each State in release Series H-10.)

The median age of dwelling units in the United States was 25 years, according to an analysis of statistics from the 1940 Census of Housing issued by Director J. C. Capt of the Bureau of the Census, Department of Commerce. As measured by meaian age, the dwelling units were oldest in the North and newest in the West, with dwelling units in the South occupying an intermediate position. In each region dwelling units were oldest in the rural-farm areas and newest in the rural-nonfarm areas. The median age of owner-occupied units was lower than that of tenant-occupied units in all three regions.

As measured by data on year built, the construction of new dwelling units for the period 1930-1940 showed a considerable decline as compared with the period 19201929. In the decade 1920-1929, the total number of units constructed was $8,515,264$, the average annual volume being about 850,000 units. The number of dwelling units constructed in the United States in the period 1930-1940 amounted to $5,528,096$, or an annual average of approximately 550,000 units. However, the number of new units constructed in the second half of the decade from 1930-1940 was considerably greater than in the first half of the period. Of the total number of dwelling units reporting year built, 15.9 percent were built between 1930 and 1940 , as compared with 24.5 percent in the period 1920-1929. The decline in building from 1920-1929 to

1930-1940 was greatest in the North and least in the South.

In the rural-farm areas of all the regions the number of dwelling units constructed was approximately the same in the 1920-1929 and the 1930-1940 periods; in the rural-nonfarm areas slight increases were shown in the $1930^{\circ}$ s but in urban areas sharp decreases were registered in the latter period. During the decade 1920-1929 construction in urban areas of the United States was more than three times as great as in the rural-nonfarm areas, but in the 1930-1940 period the volume in these two types of areas was about the same.

The average age of dwelling units in the North, as measured by the median year built, was 30.2 years. In the South the median age was 21.1 years and in the West 18.3 years. The average owner-occupied unit in the United States was newer by 4.2 years then the average tenant-occupied unit; the difference in age ranged from 3.5 years in the West to 4.3 years in the North.

The median age may be defined as the age which divides all dwelling units reporting on year built into two equal groups, one group being older and the other younger than the median.

The figures in the accompanying table represent a summary of data now being published by the Bureau of the Census for each State in the Second Series Housing Bulletins.
