12. The influence of these doctrines has been far-reaching. In the various branches of Methodism to-day 'the emphasis is everywhere laid . . . on the calling to the life of entire sanctification which is brought about by the reign of perfect love in the heart' (*A New History of Methodism*, ii. 421). This is especially prominent in the most recent offshoot of Methodism, the Salvation Army. 'Even among our worst enemies it has been admitted that the strength of the Salvation Army lay in its Holiness teaching' (*Holiness Readings* . . . reprinted from the *War Cry*, London, 1883, p. v; see also *S.A. Orders and Regulations for Field Officers*, London, 1886).

13. The rise of modern Holiness Movements in Europe and America, where the work of Pres. C. G. Finney and Oberlin helped to prepare the soil, may be traced largely to the revival of religion through the work of Moody and Sankey in 1875. But it had already begun several years before, first in America and then in England, its pioneer with both word and pen being W. E. Boardman,¹ who together with R. Pearsall Smith held a long series of special meetings for ministers and others in 1873 and 1874. A striking issue of these was a conference held at Broadlands Park, Romsey, in 1874, on the invitation of Lord Mount-Temple, for the purpose of considering 'the Scriptural possibilities of faith in the life of the Christian in the daily walk (a) as to maintained communion with God; and (b) as to victory over all known sin' (C. F. Harford, *The Keswick Convention*, London, 1907, p. 26). In the same year a larger conference, under the leadership of Smith and Boardman, met at Oxford 'for the promotion of Scriptural holiness'; and in 1875, by invitation of Canon Harford-Battersby, the first 'Convention for the Promotion of Practical Holiness' was held at Keswick. Among the chief leaders of the convention have been included Théodore Monod, Andrew Murray, A. T. Pierson, F. B. Meyer, and H. C. G. Moule. 'The Keswick Convention has set up no new school of theology, it has instituted no new sect, it has not even formed a society, but exists for the sole purpose of helping men to be holy' (Harford, *op. cit.* 4).

In 1875, Smith visited Berlin and inaugurated what came to be known as the modern German *Gemeinschaftsbewegung*. His work was earnestly taken up by Schlümbach, Christlieb, Paul, and others, and led to the formation of the *Deutscher Evangelisationsverein* (1884), the *Gnadauer Pfingstkonferenz* (1888), the *Blankenburger Allianzkonferenz* (1905), and similar associations. In some cases these broke away from the Established Church, but for the most part their aim was to cultivate a deeper holiness by means of special organizations in touch with it. The best theological exponents of this school were Jellinghaus and Lepsius, whose views, however, have been regarded as unduly moderate by the more advanced sections. In German Switzerland, O. Stockmayer is its chief representative. In America, apart from more special organizations like A. B. Simpson's 'Christian Alliance,' the *Northfield Convention*, established near Moody's own home in Massachusetts in 1880, has proved most influential. Out of it has sprung the *Student Christian Movement*,

¹ Boardman's *Higher Christian Life*, written before 1860, ran through many editions on both sides of the Atlantic, and quietly prepared many minds for the movement when it began to take more overt form in 1870 in Union Holiness Conventions under his leadership. It is still perhaps the most valuable introduction to the study of the modern Holiness Movement. See his *Life* (London, 1886).

and other similar associations for the deepening of the spiritual life.

Modern Holiness Movements have advocated the privilege and possibility of our attaining, here and now, to the peace, power, and purity of full sanctification, through the surrender in faith.

Keswick sets before men 'a life of faith and victory, of peace and rest as the rightful heritage of the child of God, into which he may step not by the laborious ascent of some "Scala Sancta," not by long prayers and laborious effort, but by a deliberate and decisive act of faith' (Harford, *op. cit.* 5 f.). 'In the blood and death of Jesus there is to be had not only forgiveness but also a direct and immediate breaking of the power of sin, cleansing from sin, and continual victory over sin, in the surrender of faith' (Th. Jellinghaus, *Das völlige gegenwärtige Heil durch Christum*², Basel, 1903, pp. 20, 440).

In more popular statement, a 'higher life' or 'second blessing' of 'full salvation' may be experienced through a single act of perfect consecration to God, who in response completely neutralizes or eradicates the sinful nature so as to grant a present deliverance from the power of sin, on the sole condition of 'abiding' in an attitude of dependent life-union with the exalted Christ. The degree to which this last condition, which involves exercise of the personal will of the believer, is explicitly dwelt on accounts largely for the different types of Holiness teaching. How far some forms of it can go may be judged by the affirmation of pastor Paul, 'I have for a long time now seen nothing of my old nature' (*Gnadau Conference Report*, 1904, p. 298). Such a claim to perfect holiness, however, is to be interpreted in a religious rather than in a moral sense. It admits of moral progress through growing 'light' in the conscience—and this the more rapidly because a new and normal attitude of obedience to God's will as known has been consciously and once for all accepted by faith. 'In reality we are not yet fully holy' (H. Benser, *Das moderne Gemeinschaftschristentum*, Tübingen, 1910, p. 36).

Generally speaking, the modern Holiness Movement seeks to conserve a neglected truth, and in an age of materialism and busy externalism in religion it has incalculably deepened the spiritual life of the Church. Yet its actual forms, apart from the extravagances of human frailty and error, have frequently suffered from narrowness of theological outlook and a lack of both psychological and ethical insight into the deep implications of the gospel. It is plainly unscriptural to suggest that any 'second blessing' can confer on certain Christians a higher kind of sanctification than the holiness that flows essentially from justifying faith, or bestow a new grace of spiritual infilling and deliverance from sin 'distinct from and additional to' the gift of the Holy Ghost granted in conversion and regeneration. 'It is a fatal mistake to think of holiness as a possession which we have distinct from our faith and conferred upon it. That is a Catholic idea, still saturating Protestant pietism' (P. T. Forsyth, *Christian Perfection*², 1910, p. 7). Further weaknesses may be seen in the tendency to identify holiness with quietistic self-abnegation, even to the loss of personality, and with the 'rest of faith,' dis severed from inspired moral effort; to frown on all 'secular' culture and brand as essentially sinful habits and pursuits which are in themselves indifferent; to overstimulate feeling and to confine the grace of God to stereotyped forms of conversion; and to claim with overweening confidence the special sealing of the Holy Spirit and direct inspiration in the details of thought and action. In these respects the modern Holiness Movement is not an advance upon but rather a retrogression from Reformation standards (see P. Gennrich, *Die Lehre von der Wiedergeburt*, Leipzig, 1907, pp. 204-215; and C. R. Erdman, 'Modern Spiritual Movements,' in *Biblical and Theological*

Studies, by members of the Faculty of Princeton Seminary, New York, 1912, pp. 359-392).

There is noticeable at the present day a certain avoidance and dislike of the special advocacy of holiness, even within the Christian Church. This may be due to (a) the trend of modern thought, so far as it seems to have weakened the transcendental claims of theology, and consequently of Christian ethics; (b) absorption in social and economic problems, from which Holiness Movements have too frequently and ostentatiously withdrawn themselves; (c) a reaction against the unscientific and narrowly pietistic interpretation of the Bible; (d) a mistaken identification of holiness with asceticism, morbid introspection, other-worldliness, or professional religion. Hence we have such statements as the following:

'The idea of a holy working man is even grotesque. The virtues which the working classes at their best have recognized have been rather those of integrity, generosity, sincerity, good comradeship, than those of meekness, purity, piety, self-abnegation, and the like' (E. Belfort Bax, *The Ethics of Socialism*, London, 1889, p. 17).

The remedy would seem to lie in a recovered sense of the personality, transcendence, and holy character of God as the ground of all Christian holiness; in a fuller recognition of the social obligations of a holy life; and in a return to the harmonious NT ideal of holiness, with all its comprehensive religious and ethical implications.

'I do feel that holiness consists in hearing Christ and following Him step by step in the minutest part of the minutest duty, and in acknowledging an ordinance of Christ in all the natural and social relations' (T. Erskine of Linlathen, *Letters*, London, 1878, p. 152).

R. H. COATS.

HOLINESS (Roman).—A definition of 'holiness' in relation to the Roman spirit is not easy to frame. Perhaps 'purity under divine sanction' may be taken as a rough explanation for the present purpose. In the earliest religion of the Roman State, ceremonial obligations were minute and exacting, and their relation to conduct is obscure, but the idea that character was in some way dependent on a power unseen and superhuman was not entirely wanting. The conception that moral perfection is pleasing to heaven is embodied in some of the oldest forms of cult—that, for instance, which the Vestal Virgins served. On not a few critical occasions the anger of the gods, bursting upon the community, was traced to their displeasure against an erring Vestal. As time went on, moral abstractions, treated as divinities, were publicly revered—chastity, for instance (*Pudicitia*); and these forms go back to an age when in religious matters Rome had as yet not been very deeply affected by Greece. Indeed, reverence for such abstract powers was always more characteristic of Italy and the West than of Greece and the East. We must ask and, if possible, answer the difficult question, What effect upon the individual life had the belief that morality is under the protection of Heaven? If we regard only the utterances of the Latin satirists who paint the manners of a small clique in the capital as though they were representative of the whole world, or the equally indiscriminate denunciations of Paganism by early Christian writers, we may be tempted to answer 'None.' But a great amount of evidence exists which tells a different tale.

Thus, the vast mass of private memorials unearthed in the Western world by excavation bears testimony to a family life far different from that which is almost exclusively presented in the literature of the Empire. The fact that Vesta was the presiding deity of the family circle, as well as of the State conceived as a larger family, is a sign of a general belief that the ultimate sanction of morality is found in a supernal world, and that moral cleanliness among those of this world is a precept which issues from the other. This idea finds general expression in language, particularly in the use of the words *castus*, *purus*, *sanctus*, *pius*. Of course, these terms sometimes have a hard and somewhat lowly significance. They may be employed in a limited sense, not in reference to character taken as a whole, but to abstinence from some particular class of immoral acts. It is not easy to trace the moral life of a people or an empire. But it is not too bold to say that the history of these words in the Latin language shows a steady elevation of the ideal of morality.

The conviction that, in spite of the many horrible misrepresentations which a long line of pagan poets and philosophers denounced, the gods favour personal purity is exhibited in much Roman ritual besides that connected with Vesta. Priests and priestesses were often subject to severe restrictions. Boys and girls, being innocent, were employed in divine service, as we see in the *Carmen Sæculare* of Horace. This famous hymn may be said to have done homage to the efforts of Augustus, who strove to cure the sickness of the world by the union of moral and religious reform. His policy made an epoch in the social history of the Western Empire. The great Greek tide which had swept the educated classes into scepticism began to turn, and a belief in the divine govern-

ment of the world was renewed and penetrated society. An increased yearning after moral purity manifested itself in many ways. New forms of religion and new applications of philosophy alike show the influence, although then, as after, religion and philosophy were not always on the side of morality. There were Stoic and Cynic antinomians as there have been Christian. And the new divinities, Isis and Mithra and others, who were so ardently accepted, could debase their worshippers. But, on the whole, these new cults were popular, at least in part, because they satisfied to some extent the desire to find a way of escape from the corruption of unregenerate human nature—a way not opened by the older civic faiths. The seeds of Christianity could hardly have thriven as they did in the field of the Roman world if it had been still, morally, the world of the ancient Cato.

Not unnaturally we find purity as a cult more prevalent among women than among men. On the principle of 'corruptio optimi pessima,' satirists specially loved to depict the degradation of women. But an attentive reader, say, of Mayor's notes on Juvenal, will see something of the other side of the shield. And a perusal of the very numerous gravestones of women will leave an impression that there was, even at the worst time of the Empire, a wide range of sound family life, resting on the purity of the matron and mother. The commendations of the untainted lives of mothers of households are, in a multitude of cases, far from being hypocritical or merely conventional. The celebrated eulogy by a consul, Lucretius, on his wife Turia, in the Augustan age, praises her for chastity and religiousness without superstition. It was just this hope of stainlessness, combined with worship cleansed from superstition, that drew women, and in a less degree men, not only to Christianity, but to the cosmopolitan pagan divinities. A common type of inscription praises a wife for her 'old-time sanctity and modesty.' In spite of loose views of the marriage tie, we hear much of marriages which endured through long lifetimes, and the title *univira*, 'wife of one husband,' was prized. This turning away from the superstitious exaggerations of the ancient cults, combined with a recoil from impurity, is well seen in that strange apology for Christians rather than for Christianity, the *Octavius* of Minucius Felix, written in the latter half of the 2nd cent. A.D.

Until the rise of the Neo-Platonic philosophy, which was not a great force until the last Imperial centuries, the tendency of the later philosophers, both in the East and in the West, was to eschew theory and enforce morality. This was characteristic of all the schools alike, by whatever name they were called. It is impossible to mistake the trend in educated circles in the West during the first three centuries of the Empire towards an elevation of morality, whose moving force was a higher view of the relation of the individual to God. There is an ever strengthening vein of puritanism in the later philosophy, which reached its full development in the Neo-Platonic scheme. This vein is especially traceable in Stoicism. The dry logic of earlier Stoicism was softened, so that the moral lessons of the school might reach a large circle of Roman disciples. Every attempt was made to bridge over the gulf between the philosopher and the vulgar. The philosophic missionaries, who wandered about the world preaching to the multitude, though accused, like other teachers, of criminality, found a hearing from the crowd just because of the vague yearning after a better life. There was a gradual approximation to the Christian idea of sin, and the necessity was realized of a divine deliverance from the burden of the flesh,

with its impulse to immorality. Virtue was explained as attainable only by the will of God, and by imitation of the divine; duty, as the outcome of the divine law. 'No man is good without God,' said Seneca. The philosophic teacher was more and more presented as the curer of sick souls. The wide difference between doctrine and practice among the followers of this teaching was the theme of satirists, but there is much reason to doubt whether they were more open to this kind of reproach than the adherents of other religious and moral systems in the past and in the present.

LITERATURE.—Information on the subject is scattered about in works on Roman religion and Philosophy and Social Life. Especially may be mentioned: G. Wissowa, *Religion und Kultus der Römer*² (in Müller's *Handbuch der klassischen Altertumswissenschaft*), Munich, 1912; L. Friedländer, *Darstellungen aus der Sittengeschichte Roms in der Zeit von August bis zum Ausgang der Antonine*⁶, Leipzig, 1881; E. Zeller, *Philosophie der Griechen*⁵, do. 1898, iii. J. S. REID.

HOLINESS (Semitic).—The conception of holiness when traced to its historic origins among Semitic peoples is stripped of all the ethical qualities with which our Christian modern consciousness has invested it. The ethical elements which have become absorbed into its content entered at a much later stage in the evolution of ideas which became attached to the term. This change of connotation will be duly noted in its proper place.

I. **HOLINESS AT THE EARLIER STAGE.**—1. The original meaning of the Semitic word for 'holy,' 'holiness,' *k-d-s* (*s*).—The use of the Assy. Pael *kuddusu*, 'to purify,' and of the corresponding adjective *kuddusu* in the sense of 'pure,' 'bright' (to which the syllabaries give us the synonyms *ellu*^m and *ebbu*, 'clear' or 'bright'), might tempt us to assume that the original connotation of the term was 'brightness,' especially when the Arab. *kadasa* and its derivatives might seem to lend some support to this view. But it would be precarious to build upon the infrequent use in Assyrian of derived forms, and in Arabic of what may be a derived meaning. Our only safe course is to generalize from the use of *k-d-s* both as verb and as substantive in the earliest documentary sources, and of other words, such as *h-r-m*, found in all the Semitic languages possessing a similar meaning. We are thereby led to the conclusion that the term *k-d-s* expresses the separation or reservation of a thing or a person for Divine use or a Divine cult, and the state of an object or person so reserved and brought into close relation with Deity as inaccessible or hardly accessible, and invested with a quasi-Divine character and power.

We are here touching upon the common ground of primitive custom where Semitic and non-Semitic traditions blend. The saying of Statius, quoted with approval by E. Renan (*Hist. d'Israël*, Paris, 1887-94, i. 29), 'Primus in orbe deos fecit timor,' here finds its application. The element of fear, which invests the relations of primitive man (see the 'General' art. above) with the occult personal or quasi-personal agencies with which he appeared to be surrounded, is expressed in the Heb. phrase for religion, *יִרְאָה אֱלֹהִים*. This feeling of awe was extended to all objects which stood in more immediate contact with the gods whom the Semite worshipped.¹

¹ Robertson Smith is dominated by his conception of sacrifice as expressing communion between God and the worshipper. Therefore, when he says (*Rel. Sem.*² 54f.), 'It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are knit to their worshippers by strong bonds of kinship, that religion in the only true sense of the word begins,' he is expressing only a partial truth. S. I. Curtiss, who travelled among the inhabitants of the Hinterland of Syria and Palestine, is probably right in asserting that the worship of the modern primitive Semite is simply the product of fear. The answer of his Arab guide Hamdān to the question what made the Arabs religious might almost as well be given by the primitive

Analogies to the primitive conceptions of holy things may be found in Hebrew religion. The mountain Sinai, Jahweh's abode, was holy and could not be touched without peril to life (Ex 19^{12, 13, 21-24}). Similarly Uzzah's temerity in touching the ark of God (2 S 6^{6a}) led to his death. We have an instructive example of the survival of such magical conceptions regarding holy objects in the ceremony of trial by ordeal of a woman suspected of adultery (Nu 5¹¹⁻²⁸ [P]).

The passage is difficult because it shows, if Baentsch's analysis be correct, that the text has been worked over at different times. After various ceremonies we read in v. 17^{ff}. 'And the priest shall take holy¹ water in an earthenware vessel; and of the dust which is on the floor of the tabernacle shall the priest take and put it into the water.' After further ritual, as unloosing the woman's hair,² the officiating priest takes in his hand the 'baleful water that brings a curse' and makes the woman swear a solemn oath (vv. 19-22). After reciting the words at its close, 'And this water that brings a curse shall enter thy bowels to cause thy womb to swell and thy thigh to fall,' to which the woman replies, 'Amen, Amen,' the priest writes the words of the curse in a book and immediately dissolves the writing³ completely in the baleful curse-bringing water, and, after waving a meal offering before Jahweh and burning it, he causes the suspected woman to drink the 'holy' baleful water.

Robertson Smith holds that the water is here called 'holy' because it is derived from some sacred spring. 'En-Mishpāt at Kadesh, as well as 'En-Meribhah, he would explain as sacred springs whose waters were used in decisions based upon ordeals of this kind. On the other hand, Baudissin, with at least equal probability, explains the 'holiness' of the water as due to the fact that it was kept in a vessel belonging to the sanctuary (Ex 30¹⁸). The example we have cited is instructive as showing that *kodesh* includes a positive as well as a negative element, viz. the positive element of Divine power which may break forth with destructive effect. Baudissin's statement, that 'holy' does not properly designate a quality but a relation as God's property, is scarcely adequate (*Studien zur sem. Religionsgesch.* ii. 45). Moreover, this writer's view, that the materialization of holiness in Ezekiel is late (*ib.* 141), is certainly contrary to fact.

Further illustrative examples will make this clearer. In Is 65⁵ we have primitive conceptions of holiness in respect of persons as a mysterious potency which can pass from one individual to another with whom he comes in contact. The latter is therefore warned: 'Stand apart, for I make thee holy.'⁴ This expression occurs in a passage crowded with obscure references to the cults of Palestine into which the resident Hebrew population in the middle of the 5th cent. had Semite: 'Every misfortune comes from God. Nothing comes except from Him. We fear God and the Welis. We take our vows in order to guard against injury. God receives our vow like a baksheesh. When all goes well, I offer a *fedu* that no misfortune may overtake us' (*Ursem. Rel. im Volksleben des heut. Orients*, Leipzig, 1903, pp. 293, 64 f.).

¹ Some doubt exists as to the validity of the reading of our text קִיִּים קִרְשִׁים, for the LXX have ἕδαρ καθαρὸν ζῶον. This has induced Dillmann, Nowack, and others to substitute for the somewhat unusual קִרְשִׁים the words חַיִּים כְּהוֹרִים חַיִּים only. On the other hand, Robertson Smith (*Rel. Sem.* 2, 181) contends for the validity of the reading 'holy water' as an 'isolated survival of an obsolete expression' in post-Exilic Judaism derived from the old language of Hebrew ritual. In this case 'pure water' and 'living water' would be the later interpretative glosses which came to be substituted in the texts employed by the Greek translator.

² See ICC, *ad loc.* Cf. on unloosing the hair, Wellhausen, *Reste*, 199.

³ Gray (ICC, 'Numbers,' *ib.*) cites the custom practised in Egypt of writing passages from the Qur'an on the inner surface of a howl and using the water that had dissolved the writing for medicinal purposes.

⁴ Here reading, of course, the P'el instead of the impossible Kal of the Heb. text; so Geiger and other recent scholars. Another interpretation than that given above has been suggested to the present writer by Haddon, viz. that the initiated person is anxious not to lose his sacred potency by contact with another. Similarly in Mk 5³⁰ Jesus is well aware (ἐπιγινώσκεις) that a potency (δύναμις) had passed out of Him when touched by the diseased woman.

lapsed. One who had passed through a ceremony of consecration warns another to keep at a distance, because contact with his own consecrated person might infect that other with holiness, and thereby surround him with a circle of tabus or restrictions which would disqualify him from discharging the ordinary duties of life. This becomes evident from a comparison with Ezk 44¹⁹. There special instructions are given to the Zadokite priesthood that, when they pass from the inner to the outer court of the sanctuary, they are to put off their official vestments wherewith they have ministered before Jahweh in the inner court (cf. v. 15^f.) and place them in special holy chambers, lest by their contact the people whom they meet are made *holy*. Other ordinary garments must be substituted by the priesthood in the outer court in order to prevent this contagion of holiness. The same principle of contagious holiness applies to the utensils employed in sacred rites. Since special holiness was ascribed to the sin-offering, it could be eaten only in a holy place, i.e. the court of the tent of meeting (Lv 6¹⁸⁻²³). Contact with the flesh of this most holy sacrifice creates holiness, and every garment on which the blood is sprinkled must be washed in a holy place. In other words, a circle of tabus of a stringent character is set up. Hence the earthenware vessel in which the sacrificial flesh is boiled must be broken, and, if the vessel be bronze, it must be carefully scoured and rinsed. Holiness is treated in every respect as something material (vv. 21-23). We should also compare Lv 11³³⁻³⁵ 15¹². These last passages deal with cases in which something unclean has come into contact with an earthenware vessel. Thus, if a weasel, mouse, or other unclean animal (Lv 11^{29ff.}) fall into an earthenware vessel, or if that vessel be touched by a person who is unclean by reason of a discharge, it shall be broken. Here we see that there is a close analogy between uncleanness and holiness. The effect on the vessel is the same; it has to be broken whether it has contained sacrificial flesh or that of an unclean animal. This close point of contact has been investigated by writers on Semitic religion, e.g. Robertson Smith and Lagrange. The common factor in both impure and holy objects is that a certain element of danger, owing to the action of a superhuman agency, invests the object in both cases (*Rel. Sem.* 2 153, 447-452), and serves to debar it from human use and contact. For contact in both cases involves contagion, and in certain cases uncleanness.¹ Thus in Heb. שָׁנַן the familiar root meaning 'approach' is used in Arabic in the sense 'be impure.' At the same time, the distinction between holy and unclean is a real one, though both are blended in various forms of tabu in savage custom (see the 'General' art.).

Primitive life deals with concrete conceptions. Thus in primitive Semitic religion, holiness might be regarded as the nimbus or outflow of Deity which attached itself to everything that mediates in worship, whether persons or things, between the god and his worshipper. So closely is holiness attached to the Divine personality that Jahweh swears by it (Am 4²) just as He does by His life (Nu 14^{21, 28}, Dt 32⁴⁰, Jer 46¹⁸; cf. 1 S 14^{38, 45}, 2 S 27, etc.), or just as the Divine name became associated with Himself and men swore by it (Lv 19¹², 1 S 20⁴², Zec 5⁴; cf. Jer 44²⁶ etc.). Thus we find 'holy gods' in the inscription of Eshmun'azar (line 9).

The ideas of withdrawal, restriction, and reservation expressed in Heb. by *k-d-s*, applied to objects connected with worship, are in Arabic exhibited by other terms. Chief among them is the

¹ See the reference to the Holy Scriptures 'defiling the hands,' at the close of the present article.

word *ḥaram*, of which the root frequently appears in Canaanite Hebrew, Aramaic, and occasionally in Assyrian. In this case etymology enables us more easily than in that of *k-d-s(s)* to arrive at a definite connotation. Its meaning is 'to seclude,' 'debar,' or 'render inaccessible.' What is sacred and also legally prohibited is called *ḥarām*, and any object or woman who may not be approached is designated *ḥarīm*. Thus *ḥarām*, a substantive, is specially used by a Muslim of the sacred enclosure of the Ka'ba at Mecca. With the Hebrew-Canaanite *ḥērem*, or 'ban,' which was specially connected with war, we shall deal later. The noun-form *ḥaram* also meets us in Aramaic Nabatean inscriptions.¹ In these, *ḥaram* means something inviolable. Thus in an inscription on a tomb in el-Hejra the deities Dūsharā (properly 'owner of Sharā'), Manūthū, and Kaishah are invoked to bring a curse on any one who shall dispose of the tomb in any way or alter the inscription, 'for the sepulchre and its inscription are an inviolable object' (*ḥaram*). The same word is used to express what is sacred and inviolable in the inscription of Petra (*CIS* ii. 350), where the sepulchre and surrounding gardens and purlieus are called 'the consecrated and inviolable possession (חֲרָם) of Dūsharā, the god of our lord.'² Here *ḥaram* approximates the use of the same word in Arabic.

Another Arabic term of closely similar meaning is *ḥimā*, designating something forbidden or reserved, or, more properly, guarded or protected from intrusion.³ Thus we read of the *ḥimā* of Wajj attached to the sanctuary of Al-Lāt at Ṭāif, which was under stringent rules like the Polyneesian tabu. 'If a woodcutter intruded on the *ḥimā* of Wajj, . . . he forfeited his hatchet and his clothes; if a man unlawfully grazed his cattle on the *ḥimā* of Jorash, the cattle were forfeit' (*Rel. Sem.*² 146). We find also that dress which was employed in ordinary life is distinct from dress worn in sacred functions. Accordingly, shoes or sandals soiled by travel were put off when the sacred enclosure, such as a mosque, was entered (cf. Ex 3⁵, Jos 5¹⁵). Clothes were either washed (in case of poor worshippers) or changed (Gn 35², Ex 19¹⁰). Even cattle which had strayed from outside into the *ḥimā* could not be reclaimed.

The opposed term to *kōdesh* in Heb. is *ḥōl*,⁴ properly that which is free or set loose for ordinary human use, in other words, not subject to the restrictions involved in holiness. In Lv 10¹⁰ the distinction is sharply drawn, and priests are exhorted to observe it as they would that between clean and unclean (cf. Ezk 22²⁶ 42²⁰ 44²³). This stringency of distinction became specially emphasized in the days of the Exile (Is 52¹¹), and still more in the days of Ezra, when laxity of usage required stern correction combined with strict rule. Without this the result would not probably have been 'the final extinction of Israel' (Travers Herford, *Pharisaism*, London, 1912, p. 10).

But this was only to accentuate a tradition that

¹ Respecting חֲרָם in Aramaic inscriptions, both as verb and as substantive, see Lidzbarski, *Nord.-sem. Epigraph.*, Berlin, 1898, p. 280. The verb simply means 'to be holy'; the Aphel is used for 'consecrate.'

² See G. A. Cooke, *North Semit. Insc.*, Oxford, 1903, nos. 79 (lines 5-8), 94 (line 3); cf. Lagrange, 183.

³ حَمَى, Heb. חָמַה (root of חָקַה, 'wall'), meaning 'protect,' 'guard,' 'hinder.' Perhaps the fundamental meaning is 'to be hot with anger' (in defence of rights); cf. חָמַם, חָמַח, חָמַח (Lidzbarski).

⁴ Root חָלַל, Arabic حَلَلَ; the latter, being 'applied to the discharge (*lit.* the untying) of a vow, is the same which is regularly used of emergence from a state of taboo (the *iḥrām* . . .) into ordinary life' (*Rel. Sem.*², 482).

had its roots in the past. Theory and prescription, however, have to give way under the presence of practical necessities, and in the pre-Exilic period of Israel's life such cases must have frequently arisen. Originally the right of asylum (*q.v.*), even for stray or stolen cattle that passed within some *ḥimā*, or sacred enclosure, was pretty strictly enforced in primitive usage, as the story told by Wellhausen (*Reste*², 52, taken from the narratives of Ibn al-Kalbi) respecting Saifi, the priest of the deity al-Fals, who had stolen a milch-camel and detained it under the deity's protection, clearly shows. But this right was modified by the Hebrews. Justice could overtake a murderer, even though he took refuge in a sacred enclosure. Such asylum availed only in the case of accidental manslaughter (Ex 21¹⁴), and even in this case the asylum came to be limited to only a few selected spots (Dt 4⁴¹⁻⁴³ 19²⁻¹⁰, Jos 20²⁻⁹, Nu 35¹¹⁻¹⁵). Probably, as Robertson Smith suggests, the community of interest which subsisted between the people and its deity tended to mitigate rules which might otherwise have pressed with excessive severity on his worshippers. Thus the money stored in the sacred precincts of the temple of Ba'al-berith was even employed by Abimelech to hire a company of desperadoes (Jg 9⁴). In the textually difficult passage 1 S 21⁴⁻⁷ (see Driver and Budde, *ad loc.*), we read that in the lack of ordinary unconsecrated bread (לֶחֶם קֹדֶשׁ) the holy bread that stood on the table before the Divine presence (שֶׁלֶם קֹדֶשׁ in v. 6 = קֹדֶשׁ 'ל in v. 7) was distributed among David's starving followers by the priest. The fact that the distinction between *kōdesh* and *ḥōl* is here expressed, and that the priest endeavours to exact conditions of purity, points to the conclusion that we have a departure from ancient and normal custom (cf. Mk 2²⁶).

The distinction between *kōdesh* and *ḥōl* above indicated is obviously different from that between Divine property and human property, for it is the distinction between objects in the use of which there are severe restrictions, and objects which are free for ordinary human use. This idea of sacredness, involving restriction of use and danger accruing from its violation, was far more primitive than the conception and usage of property, though it may be admitted that the latter came afterwards to supervene.

It is not possible within the compass of this article to deal with all the ramifications into which the ancient conception of holiness extended among the Semites. It must suffice to classify their varied departments concisely under the following heads.

2. *Holy things.*—(a) *Places* which are invested with holiness are those in which the supernatural power and presence are supposed to be manifested. These elements of power and presence were often expressed in Semitic by the word *name* (see below under (*k*)). Hence a sanctuary was said in Hebrew parlance to be a spot (*par excellence* Jerusalem) in which God had 'put his name' (Ex 20²⁴, Dt 12⁵ 16⁶ 11 16 26², 1 K 8²⁵). Such a place would in Heb.-Canaanite be called *kōdesh* and be invested with the qualities of holiness and its restrictions. In the primitive life of the Arabian desert, from which it is generally held that the Semitic peoples emerged, the main physical characteristics associated with holy spots would be fertility, the spring arising from the soil and creating a verdant oasis of shading trees in the bare desert. These manifestations of a full vitality were ascribed to the presence of a supernatural Power who took up His abode there; and some portion, or even the whole, would be regarded as His sanctuary, and invested with the restrictions of holiness. Canaan abounded in such holy places. But there were other causes besides fertility which might invest a spot with special

sanctity as manifesting a Divine power and presence. Thus the sacred stone Eben-ezer was erected by Samuel at the place where Jahweh manifested His power in the defeat of the Philistines (1 S 7¹²). In the spot where God appeared in a dream to Jacob, the stone marked the spot, and oil was poured upon it (Gn 28¹¹⁻¹⁸), and the sanctuary was named Bēthēl.

Heaven is properly the abode of Jahweh, though He dwells with Israel in certain spots, especially on mountains. Hence the 'holy mountain' of Zion (Is 11⁹, Ps 15¹ 24³, Wis 9⁸). But from earliest times Jahweh was regarded as the atmospheric deity, and thus in later literature heaven, being His place of abode, is designated holy (Ps 20⁶, Wis 9¹⁰), and even came to be used as a substitute for the Divine name.

(b) As just indicated, any sacred spot separated off and surrounded by restrictions as to access and ordinary use (Ex 3⁵) would be marked by a stone, which served for an altar, on which the blood of the offered animal was sprinkled or smeared, and at the same time also as a symbol for the Divine presence. There can be no doubt that the *numen* of the deity was thought somehow to reside in the stone.¹ Hence the primitive objection to hewing the stone or in any way violating it by the application of a tool (Ex 20²⁵). Moreover, the smearing of the blood, which in the primitive form of worship was shed over the upright stone (Heb. *maš-šēbhah*, Arab. *nošb*), or over the heap of stones or cairn (such as the *gal'ēdh* of Gn 31^{46f.}),² contains in itself a very clear indication that the sacred stone embodied the Divine presence, which was thereby made participator of the sacred meal or offering. Such a conception of sacrifice persisted into post-Exilic times and survives in its legislation (Lv 21^{8, 17}; cf. Mal 1⁷).

(c) The sacred spring was a frequent accompaniment of the sacred place. In fact, as Wellhausen remarks (*Reste*², 104), wherever human beings settled down by a sanctuary there must of necessity be water. Moreover, the fertile spot marked by the stone symbol would naturally possess a flowing spring arising from the mysterious water-depth (הַיְדוּם).

¹Of all inanimate things, that which has the best marked supernatural associations among the Semites is flowing (or, as the Hebrew says, "living") water. In one of the oldest fragments of Hebrew poetry (Nu 21¹⁷) the fountain is addressed as a living being" (*Rel. Sem.*² 135).

Such a manifestation of life around which verdure spread and which was endowed with properties of cleansing, and in many cases with medicinal or healing virtues, sometimes regarded by the Arabs as inhabited by serpent *jinn*, obviously possessed a sacred character (cf. 2 K 5^{10, 14}). An interesting text of Anubanini, King of Lulubi, published by V. Scheil (*Textes élamites-sémitiques* [= vol. ii. of J. de Morgan's *Mémoires de la délégation en Perse*, Paris, 1901 ff.], 1st ser., p. 67, cited by Lagrange, 160), shows how seas and streams were endowed with personality and invoked:

'May the upper and lower sea of the abyss destroy his parents and his offspring.' Here the sea is invoked to work out a curse. In another case the waters of a river have the power to absolve or condemn: 'May the rivers Tigris and Euphrates, the canals Mekalkal, and the canals Ši-kut and Arahtum, dear to Marduk, deliver and absolve thee.' That such streams were regarded as 'holy' is clear from the third tablet of the Šurpu series published by Zimmern. To drink their water in an impure cup (col. i. 21), or to spit into or otherwise pollute the sacred stream (col. ii. 59 f.), was a crime from which priestly absolution through Marduk was needed.

The presence of the sacred spring in many of the holy places of ancient Israel is attested by such names as Be'er-Sheba', 'En-Mishpāt, and the holy stream issuing from the sanctuary in Ezekiel's

¹So Robertson Smith and also Baudissin, in *ZDMG* lvii. (1903) 829; Lagrange, 194; and *HDB* iii. 879b, footnote.

²On the occasion of the covenant-sacrifice between Jacob and Laban, cf. Jos 24²⁷.

vision (47¹⁻¹²). Also somewhere in the Negebh we may picture Hagar's Be'er-laḥai-rōi (Gn 21¹⁴⁻¹⁹).

(d) Another accompaniment of the sacred place was the sacred tree. That trees were endowed with supernatural life may be illustrated by numerous examples of primitive belief. This supernatural life would be suggested by the vitality of the tree itself and its fruit-producing capacity, whereby mankind is supported, or by its medicinal leafage (as in the case of the trees that grow on the banks of the sacred stream flowing from the sanctuary in Ezekiel's vision [47¹²]). In primitive Arab. religion certain trees were believed to be demon-haunted (Wellhausen, *Reste*², 105). The deity 'Uzzā was considered to dwell in one of three Samura trees at al-Naḥla, and on the track between Mecca and Medina there were many Samura and other sacred trees. With the worship of the date-palm at Najrān (*ib.* 104) we may compare the palm-tree of Deborah (Jg 4⁵). This subject is very extensive, and the reader may be referred to the treatment in Barton's *Semitic Origins*, 75-92. The special sanctity ascribed to the palm in Arabia is to be connected with its importance to man as furnishing sustenance both for himself and for his cattle. The traditional sanctity of trees passed into Islām, and Muḥammad was held to have rested and prayed beneath the sacred trees between Mecca and Medina, just as Elijah rested and slept beneath the *rōthem* (Arab. *ratam*) tree and there received an angel visitant (1 K 19⁵). In Arabia and in Palestine such trees become *dhāt anwāt* wherever festivals are celebrated; and the boughs are laden with dedicatory offerings of clothes, weapons, or ostrich eggs. Among the ancient Hebrews, sacredness chiefly belonged to the terebinth. It frequently appears in the Abraham-narratives (Gn 13¹⁸ 14¹⁸ 18¹). By a terebinth tree the angel of Jahweh appeared to Gideon (Jg 6¹¹). We find several allusions to the fact that Divine communications were made in close connexion with terebinths. Thus we have the terebinth of the soothsayer (תְּרֵבִינִי) in Gn 12⁶ (cf. Jg 9⁹⁷, Dt 11³⁰); and in the syncretic worship of the high places incense was burned under its shade (Hos 4¹³), as well as under oaks and poplars.¹

(e) Out of the sacred tree arose the sacred symbol of the stem or pole standing near the altar, regarded as the symbol of the deity *Ashērah*, goddess of fertility and prosperity. The existence of this goddess was formerly doubted by Wellhausen, Robertson Smith, and others, who maintained that *Ashērah* designated only the sacred pole. But Assyriology has clearly demonstrated the existence of this goddess in the proper names Abd-Asratum, Abd-Asrati, and Abd-Asirti (A. Jeremias, *Das AT im Lichte des alten Orients*², Leipzig, 1906, p. 322, n. 1; *KAT*³, 432 f.). We might regard its rude representation in the pole fixed in the ground as a kind of roughly modelled *ḫāvon*, or wooden image, of the goddess (Lagrange, 176), analogous to the *maššēbhah* (perhaps an approximate representation of the human figure).

(f) Holiness was naturally ascribed to the apparatus of worship, such as altar-bowls, cups, and other vessels of the sanctuary (Nu 3⁵¹, 1 K 8⁴ וְכֵל שְׁמֵרָתוֹ). It was also applied to materials with which consecration of persons was affected or with which it was accompanied, e.g. oil, water, the diadem, and, in general, the garments worn by the priest (Ex 28¹⁻⁴),² as well as to the offerings presented by the people, which were hallowed (Ex 28³⁸, Lv 22¹⁴⁻¹⁶). Any act of ritual inadvertence was a sin of pro-

¹In ancient Egypt, on the other hand, the sycamore was regarded as sacred (see Maspero, *Histoire*, Paris, 1894-99, i. 121, and Gressmann, *Altoriental. Texte und Bilder*, Tübingen, 1909, ii. 47).

²In Aramaic we find the word *kedāshā*, ear- or nose-ring, regarded as an amulet with sacred devices or names.

fanation, which had to be borne by the officiating priest. An inevitable condition of the holiness of persons and things was that they must be *pure* or *clean*. We shall afterwards observe purity and holiness taken up into the ethical realm (Ps 24¹). Here all that it is necessary to note is that, though not identical, they come into close connexion.

Just as a woman unclean through child-birth could not enter the sanctuary (Lv 12⁴), so uncleanness in things was incompatible with their presence or employment in worship. According to the conceptions of the ancient Orient, demons and uncleanness, decay, disease, and dirt go together.¹ Over the preservation of the purity of holy things the sons of Levi had to watch (1 Ch 23²⁸). The sins of Israel were considered to affect the holy place and render it unclean. Consequently, on the great Day of Atonement, expiatory blood was sprinkled on the altar horns to cleanse the tent of meeting (Lv 16^{16, 19}). Similarly, in Ex 29³⁶, special sin-offerings of a slaughtered bullock were needed for 'cleansing' (properly 'unsinuing,' Heb. טָהַר; see Driver, *ad loc.*) the altar. Cf. Lv 8¹⁵ 14⁴⁹ (in ref. to a house contaminated with leprosy), Ezk 43^{20, 22, 23} 45¹⁸. A high degree of sanctity belonged to holy vessels, so that any who touched one became affected by its magic circle of tabus, or, in the language of the original, 'became holy' (שָׁבַח). According to Nu 4¹⁸, death might result from such contact. In this connexion we may note also that a special and necessary condition in the manufacture of sweet incense was that it should be pure (Baudissin, *Stud. zur sem. Rel.*, Leipzig, 1875, ii. 46f.; Ex 30^{34, 35} 37²⁹).

(g) The sacredness of *certain animals*, such as the camel, ox, cow, horse, pig, mouse, etc., is an obscure subject discussed by Robertson Smith in *Rel. Sem.*², 271f. Probably not the same element, but varied elements, operated in various cases in determining the sacredness of an animal and the sacrosanct character of its flesh. It is just here that we come to one of those interesting meeting-points between the idea of uncleanness and the ideas of holiness and tabu. The *unclean* animal may not at ordinary times be sacrificed, because it is a *specially sacred animal* (*Rel. Sem.*² 290). It is only on specially solemn occasions—annual public celebrations or special crises—that such a sacrifice can take place. This may partake of the character of a mystic piacular sacrament or ceremony. One operative cause that constitutes an animal sacred was held by Robertson Smith to be the fact that it was originally regarded as the totemic ancestor of the clan. Subsequent writers on this subject are disposed to abandon this view. Other reasons than totem ancestry are assigned by Benzinger.³ In the case of the pig it was holy as belonging to the Adonis-Tammuz legend, or it was sacred to Ninib (Zimmern, in *KAT*³, 409 f.). In other cases, as in that of the hare, magical or demonic powers were ascribed to it. The Arabs used the head and feet as charms (*Rel. Sem.*² 133). On the sacredness of the horse (cf. 2 K 23¹¹ in reference to sun-worship; *Rel. Sem.*² 293), the mouse (Is 66¹⁷), and the swine (65⁴ 66¹⁷), explanations will vary, since the motives are various. One operative element is suggested by Agatharchides (K. Müller, *Geographi graeci minores*, Paris, 1855, i. 153 f.) in his account of the troglodyte polyandrous nomads of E. Africa, who derived their whole sustenance from their flocks and herds. 'They gave the name of parent to no human being, but only to the ox and cow, the ram and ewe, from whom they had their nourishment.' We have already seen that the sacredness of the palm-tree is probably due to a like reason. 'The beasts are sacred and kindred beings, for they are the source of human life and subsistence. They are killed only in time of need, and the butchers are unclean, which implies that the slaughter was an

¹ Hence in Babylonian magic, fire and water are summoned to the magician's aid in expelling demons (see 'Magic,' in *HDB* iii. 209).

² *Heb. Archäol.*², Tübingen, 1907, p. 408 f. See the instructive note by Bertholet on Lv 11 (pp. 37-40), in which the varied motives and traditions of ancient and primitive races are set forth. While due weight is assigned to the theory of totemic ancestors as applied to Israel (p. 40), other causes, especially demonic and magic, are likewise admitted.

impious act' (*Rel. Sem.*² 296 f.). Owing to the polyandrous character of this nomadic people, the cow would be regarded as more sacred, since man is nourished by its milk, and kinship is also reckoned through woman.¹

(h) As certain portions of space were regarded as holy and subject to restrictions of human use, so also were *certain portions of time*. Certain holy seasons were regarded as belonging to or specially related to God, as were certain persons or things. Consequently human actions during these holy seasons were specially limited or conditioned.

Among the Babylonians, special importance belonged to the solemn festival held at the beginning of the year called *Zagmuku*, or in Assyrian *rēs Satti*, 'beginning of the year' (Heb. שָׁמַרָה שָׁמַרָה), which was synonymous with the feast of *Akitu*. It was a festival in which Marduk was carried in procession on a sacred barque, and Nabu proceeded from his temple in Borsippa to salute his father Marduk. On this sacred day—the Babylonian New Year's Day (*i.e.* 1st of Nisan)—the king performed the ceremony of 'taking hold of the hands of Bel (*i.e.* Marduk) and receiving from him royal authority.' In the light of this custom, it is highly significant that we read in the annals of Nabonidus that in the ninth year, one of national disaster, 'the king did not visit Babylon (Tintir-ki) in the month Nisan. Nabu went not to Babylon. Bel came not forth. The Akitu festival ceased' (*ba-til*). See Schrader, *KIB* iii. 130.

Among the early Semites the moon was determinative of the sacred days of the calendar. In the lunar month of 29½ days the sacred days were, as we learn from the pre-Exilic Heb. prophets (Am 8⁵, Hos 2¹⁸ [AV v. 11], Is 1¹³; cf. 2 K 4²³), the New-Moon and the Sabbath. The appearance of the new moon signalized the commencement of the month (cf. Sir 43⁶⁻⁸). Conjoined with the New-Moon, mention is made of the Sabbath. A remarkable list, discovered by Pinches (*PSBA*, 1904, p. 51f.), places the significance of the Hebrew Sabbath in a somewhat new light. In Babylonian, *sapattu* is the name given to the 15th day of the moon, or beginning of the 3rd quarter, *i.e.* full moon. In the days of the Ptolemies, as we learn from an inscription at Narnaka (?)², the days on which the sacrifices were offered in Phœnicia were new-moon and full-moon.³ So also among the Hebrews the festivals of *Maššôth* and *Sukköth* began on 15th Nisan and Tishri respectively.

From these facts Meinhold has drawn a sweeping inference. He holds that in primitive Israel, down to the close of the Judean Kingdom, Sabbath meant only the full-moon celebration. He regards Ezekiel as the originator of the sanctity of the Sabbath as a seventh day celebration (Ezk 46¹; cf. 20^{12, 13, 16, 20, 24} 29²⁸). But, if this be the case, it is difficult to see on what ground Ezekiel is justified in reproaching Israel for the non-observance of a *recent innovation* without the hindering force of old usage. On the other hand, a variety of OT passages conducts us to the inevitable conclusion that the *seventh-day* Sabbath of a seven-days' week was an ancient pre-Exilic institution. For in Israel the sanctity of the number seven was evidently fundamental. We have it in the Niph'al form שָׁבַע, 'swear'; and in derivatives שָׁבַע, 'oath'; and in the name Be'ér-sheba'. Moreover, the seventh day of rest was parallel to the seventh year of release in early legislation for the slave, and also for the field, which was to remain fallow (Ex 21² 23¹⁰; cf. 34²¹).

(i) Various theories have been advanced for

¹ Cf. the statement of Herodotus (iv. 186) that the Libyans would not touch cows' flesh, though they ate that of oxen. Here, as in so many other cases, utility consciously or unconsciously co-operated in enforcing this abstinence from the flesh of so valuable and necessary an animal as the cow to a primitive nomadic race. Respecting sacred animals in ancient Egypt, see art. EGYPTIAN RELIGION, vol. v. p. 244 f., and especially Wiedemann, *Der Tierkult der alten Aegypten*, Leipzig, 1912.

² Von Landau, *Beiträge zur Altertumskunde des Orients*, ii. (Leipzig, 1899), 'Die phöniz. Inschriften', no. 105, p. 46 f., cited in Benzinger, *Heb. Archäol.*², 389. But the reading is doubtful.

³ Special sanctity belonged to the Ethiopian moon-god, who is called significantly *Mahrem* (see Nielsen, in *ZDMG* lxxvi. [1912])

the sacredness of the number seven. Wellhausen (*Proleg.*², Berlin, 1883, p. 117) and others, who base the week or seven-day portions of the month merely on the moon phases, do not indicate a probable origin for the widely prevailing and firmly rooted tradition among the Semitic peoples (cf. *Rel. Sem.*² 181 f.) of the sacredness of the number seven. Without committing ourselves to Winckler's astral theories, we may agree that Schrader, Winckler, Zimmern(?), A. Jeremias, and Benzinger are justified in holding that the sacredness of the number seven is based on the seven planetary deities, including moon and sun. The order of these planetary deities in ancient Babylonia varies. Zimmern (*KAT*³ 623) says that the original order was: Moon (*Sin*), Sun (*Samaš*), Mercury (*Nabu*), Venus (*Istar-Dilbat*), Mars (*Ninip*), Jupiter (*Marduk*), Saturn (*Kaimanu*). Probably the seven-branched golden candlestick in *Zec* 4²⁴, with its seven lamps, which (v.¹⁰) correspond to the seven eyes of Jahweh, is based on the seven planets of the celestial world.

The Hebrew Sabbath signified, according to its Hebrew etymology, that it was a sacred day, i.e. consecrated to Jahweh, in which ordinary human employments ceased (*Gn* 2³, *Ex* 20⁸⁻¹¹, etc.). In this sense the primitive Heb. Sabbath corresponded to the Bab. seventh day, which was more strictly beset with restrictions, like the Jewish post-Exilic Sabbath. The seventh day in Babylonia was sacred to *Kaim(v)anu*, or Saturn, the planet of evil fortune. This character attaches to the 7th, 14th, 21st, and 28th days of the Bab. month. We here cite the following from iv. *Rawl.* 32 respecting the 7th day of the month Elul. This 7th day was dedicated to Marduk and Sarpanitu²⁴:

'Evil day. The shepherd (=ruler) of the great nations shall not eat flesh roasted on coal, food brought into contact with fire (?); shall not change his coat, shall not put on clean garments; shall not pour out a drink offering; the king shall not mount the chariot; shall not . . . shall not announce any decision; in the place of secrecy the soothsayer shall not deliver an oracle. The physician shall not lay his hand on the sick one. For the discharge of business (the day) is not suited.'

Likewise on the day of full-moon Gudea (c. 3000 B.C.), in a tablet to which Winckler refers, makes the statement: 'The work of their (i.e. the workman's) hands ceased . . . no corpse was buried . . . no man who had a suit at law went to the place of the oath' (*Religionsgeschichtlicher und geschichtlicher Orient*, Leipzig, 1906, p. 61, cited by Benzinger in his *Heb. Archäol.*², 390).

In nomadic Arabia the *Hajj* corresponds to the sacred processions of the gods on their barques in the Bab. towns. The original *Hajj*, or pilgrimage to Mecca, was in the month Rajab, which corresponds to the Heb. Nisan. This, with traces of other early customs of Arabic heathendom, became adopted into those of Islām. But Ramaḍān became the most sacred month of the Muslim (Wellhausen, *Reste*², 79). The rule for the *hajjī* is that he must entirely abstain from secular employments and devote himself wholly to his religious duties. Similarly a 'sarakh' in Hebrew is the time when man is under such restrictions' (Martí). Muhammad's rule of conduct is stated in *Qur.* v. 96: 'O ye who believe, slay no game while ye are on a pilgrimage.' In fact, the restrictions as carried out by orthodox believers during this 'truce of God' are grotesque.¹ The thirty days' fast during Ramaḍān involves abstinence from food, drink, and intercourse with women, from sunrise to sunset. It 'kindles in Moslem spirits, even of the wild Arab, a new solemnity of religion' (C. M. Doughty, *Arabia Deserta*, Cambridge, 1888, i. 509). For it was during this month that Muḥammad retired for medita-

¹ See Sell, *Faith of Islam*², London, 1896, p. 291, and citation from *Ṣaḥīḥ ul-Bukhārī*, i. 458. The pilgrims are girded with the *ihram*, or 'pilgrims' loin-cloth, which covers them to the knee; and a lap may be cast over the shoulder. They are henceforth bare-headed and half-naked; and in this guise must every soul enter the sacred precincts' (Doughty, *Ar. Des.* ii. 479).

tion to the cave of Hirā, and the Qur'an was sent down from the Seventh Heaven. Just as Rajab corresponded in time to the month Nisan, so Ramaḍān corresponded to Tishri, the seventh month of the ecclesiastical Bab.-Heb. calendar. We can hardly doubt that Jewish traditions of the great Day of Atonement (the 10th of the month) influenced Muḥammad's institution of the Ramaḍān.

Respecting Muḥarram, or the first month of the Muḥammadan year, and the mourning celebrations of the Shi'ah sect who commemorate the deaths of 'Alī and his two sons, Ḥasan and Ḥusain, see Sell, 306 f. For a graphic description of a Persian Tazi, see Arminius Vambéry, *Life and Adventures*, London, 1834, p. 68 f.

(j) *Certain operations or processes* were also invested with special sanctity. Among these may be mentioned the *sacrificial act*, of which the essential element is the shedding of blood. Without entering into the intricate problem as to the fundamental and primitive meaning of sacrifice (*q.v.*), which appears to have involved the conception of a blood-tie between the Deity and the worshipper,¹ there can be little question that the blood, which embodied life (*Gn* 9⁴, *Lv* 17¹¹⁻¹⁴, *Dt* 12²³), was held to possess a magic potency. Doughty (i. 499) points out that it is the custom of the Arabs to slaughter a young sheep and smear the blood on camels and cattle as a protection. The recent researches of Westermarck in Morocco reveal that the blood of the slaughtered victim was believed to visit a curse on the object for whom the sacrifice was offered.² It is hardly possible to doubt that in the original form of the rite described in Exodus the smearing of the blood on the lintel and doorposts had special reference to the plague-demon (חַמָּתַי, *Ex* 12²³[J]), over whom it possessed a magic power of arrest.³ Among the Greeks the solemn act of sacrifice was attended by the silence of the worshippers enjoined by the word εὐφρανεῖν, *favete linguis*. Iphigeneia, when led to sacrifice, is bound with the 'speechless might of gags' (*Æsch. Ag.* 239).

Respecting *vows*, special note should be taken of the נֶזֶק, of which we have a vivid example in 1 S 14²⁴, where Saul binds his warriors under oaths involving self-imposed curses not to eat or drink until the enemy is wholly destroyed. Another example meets us in *Ac* 23¹²⁻²¹ (cf. *Ps* 132⁹).⁴ The enactments concerning the vows of men and women were strict according to the late legislation in *Nu* 30, even in the case of rash vows (*Lv* 5⁴). The special and extraordinary vows involving abstinence of the Nazirite are codified in *Nu* 6 (see *ICC*).

War presents an interesting example of a sacred mode of activity, based on the conception of the patron-deity of a State who is its war-god. For war, like other State enterprises, was undertaken under the sanction and direction of the patron-deity. Thus Sennacherib begins his description of his fourth campaign in his Prism-inscription, col. iii. 42: 'In my fourth campaign Ašur inspired me with confidence; then I summoned my mighty forces.' Ašurbanipal (in the Rassam cyl.) recites the names not only of Ašur but also of Sin, Samaš, Bel, Nabu, and Istar of Nineveh and also of Arbela. Istar was the Assyrian war-goddess. So also among Canaanites (acc. to Egyptian data) were Anat and Reshef. Similarly, on

¹ Robertson Smith, *Rel. Sem.*², 313f.; Herod. iii. 8. 'The sacrifices eaten in fellowship in the desert . . . are as a calling of the Lord the Allgiver, in his guests, a mystical communion of their bread and salt with Him' (Doughty, i. 452).

² See his paper, 'The Influence of Magic on Social Relationships,' in *Sociological Papers*, ii. (London, 1906) 160.

³ Haddou suggests that the demon in the more primitive form of the rite was supposed to consume the blood, and was thereby arrested or placated or diverted from his quest.

⁴ See art. 'Gelubde,' in *PRE*³.

the Stone of Meshah, it is the god of Moab, Chemosh, who says to Meshah: 'Go take Nebo against Israel' (line 14). Among the Hebrews, Jahveh Šbhāōth, Jahveh of the celestial star-hosts as well as of Israel's armies (cf. Jg 5⁴⁻²⁰), goes before Israel in the ark carried into the battlefield (1 S 4²⁻⁶), and is consulted by the priest-soothsayer with the ephod before every military operation (1 S 14^{18, 19} 23⁹ 30^{7, 8}, 2 S 5²³). The Syrians had the same custom; for we read in the Annal-inscription of Ašurnāširpal (col. iii. 20) that in overcoming a hostile Syrian tribe the *barā*, or soothsayer-priest, who went at the head of their host (*alik pan ummanāšunu*), was captured. Like other Semites, the Hebrews inaugurated war by sacrifices. This was said to 'consecrate' war (קדש, קלקק, Mic 3⁸, Jer 6⁴, cf. Jos 3⁸); hence the burnt-offerings at the opening of a campaign (Jg 6^{20, 26} 20²⁸, 1 S 7⁹ 13¹⁰, cf. 1 S 11⁷). With this conception of holy war and consecrated warriors (Is 13⁹) we must connect the sexual abstinence which was maintained during military expeditions among Hebrews and Arabs (*Rel. Sem.* 2 455; cf. 1 S 21⁵, 2 S 11²²). With this we must also associate the gruesome custom of the 'ban' (בְּרִית), which surrounded all objects, animate and inanimate, captured in war, and forbade their appropriation to human uses. This meant the wholesale destruction of the 'devoted' objects expressed by the denominative Hiph'il of the same root *h-r-m* (see p. 753^a); cf. Jos 6¹⁷ 8^{2, 27}, Jg 21¹², 1 S 15⁷⁻³³, in which v. 18 is a close parallel to the Stone of Meshah, lines 14 f., 32. In the latter case Meshah devotes to Aštar-kemōsh (line 17, הַרְחִיקָה) the entire population of Nebo, both men and women.¹

(k) The sacred name of Deity had a special and awful potency, since in ancient Semitic conceptions it involved the actual presence and personal power of the Deity, which, when the name was uttered, were summoned into active exercise. Thus the tetragrammaton (יהוה) was too awful for pronunciation by ordinary human lips, according to the usage of post-Exilic Judaism. We know that in the 3rd cent. B.C. it was avoided in the public reading of the Hebrew Torah, יהוה, reproduced in the LXX by κύριος, being substituted for it. Even the combinations *h* and *v*, though abbreviations of the sacred name, came to be avoided as numerical signs of 15, 16 (ו and טו being respectively substituted). On the use of the Divine names and those of the Hebrew patriarchs in exorcisms, and generally in magical formulae, see art. 'Exorcism' and 'Sorcery,' in *HDB* i. 812, iv. 604; Conybeare, in *Trans. of the Third Internat. Congress for Hist. of Relig.*, Oxford, 1908, ii. 358 ff. The wide prevalence of the potency of sacred names in Bab. incantations needs only to be mentioned here.

3. Holy persons.—(i.) Chief among these were the *priests*. In Ex 29, Lv 8⁹, elaborate details of the rites of initiation are given whereby priests are installed in their office. In these rites we shall merely note (1) the washing of the person with water (Ex 29⁴; cf. washing the garments in Ex 19^{11, 14} at Sinai); (2) splashing bullocks' and rams' blood on the altar-horns and round about it (vv. 10^{6, 16}), the ram's blood being placed on the right ear, toe, and thumb of the Aaronids (v. 20); (3) special garments and 'holy crown' (v. 8); (4) anointing with oil (v. 7). The fundamental conception underlying these ceremonial cleansing operations (washing and blood-sprinkling) is to remove all contamination which would disqualify the priest for his sacred functions. These functions are defined in Nu 18³⁴ as the keeping of the tent of meeting, the handling of the holy vessels, and the approach to the altar. In the later Heb. legislation, which has just been

quoted, these functions belonged to the sons of Aaron. It is, however, fully recognized that the substance of P's ceremonial legislation is very ancient; and, if we possessed fuller documentary material from ancient Babylonia, we should probably be able to show a larger number of close parallels between the ceremonies of initiation for the Babylonian priesthood and those contained in P than have yet come to light. Several interesting and important analogies may nevertheless be noted.

(a) The *king* (*q.v.*), like the priest, was anointed with oil (משח). Anointing (*q.v.*) doubtless arose from the ancient magical custom of smearing or pouring unguent on the body to endow the subject with certain qualities. Thus the Arabs of E. Africa believe that lion's fat inspires a man with boldness, so that a wild beast flees from him (see *GB*² ii. 364 f.). From the Tell el-Amarna tablets we learn that the custom of anointing kings prevailed in Western Asia in the 15th cent. B.C. In a letter from Adad-nirāri, king of Nuhašši in N. Syria, addressed to the king of Egypt (Schradler, *KTB* v. no. 37), it is stated that a previous Egyptian king had poured oil on the head of the writer's grandfather and established him as king. Frazer's *GB*² i. 137-156, and his *Lectures on the Early History of the Kingship* (London, 1905), have familiarized us with the supernatural endowments attributed to the early king, who was regarded as a deity or quasi-deity. Israel similarly stood in awe of the 'Lord's anointed,' whose person, like that of a priest, was sacrosanct (1 S 24^{6, 10}, 2 S 14⁴). The Assyrian king called himself the offspring or favourite of a god (*bīnutu Ašur, narām Šin*). Moreover, the king assumed priestly functions. This we know to have been done by David (2 S 6¹⁷) and Solomon (1 K 8⁶³). This was also the tradition in Assyria. Tiglath-Pileser I. (1100 B.C.) calls himself *išippu*, or priest, of the god Šamaš. Sargon calls himself the *saknu*, or vicegerent of Bēl, and the *išsaku*, or chief priest, of Ašur.

(b) Physical defects were disqualifications for a Hebrew priest and also for a Bab. soothsayer (cf. Lv 21¹⁷⁻²³). Among the Babylonians, squinting (*saktu ēnā*), lack of teeth (*hepu šinnā*), and a maimed finger (*naḳpi ubanī*) were accounted disqualifications (H. Zimmern, *Beiträge*, Leipzig, 1896-1901, p. 87).

(c) As the Aaronic priesthood was hereditary, similarly the Bab. *barūtū*, or office of soothsayer, belonged to a sacred hereditary caste whose functions involved special mysteries of knowledge (*e.g.* inspection of the liver). This tradition can easily be traced back as far as the time of Ḥammurabi (c. 2100 B.C.; see Zimmern, 82 f., 87).

(d) In the ritual tablets of the *ašipu*, or priest-magician, who dealt in conjurations (*šiptu*) whereby diseases were removed, or in expiations whereby sins were atoned, we read (Zimmern, no. 26, col. iii. 19 f.) that the *mašmašu* (who held an office closely allied to that of the *ašipu*) (Zimmern, p. 93) is to pass forth to the gateway, sacrifice a sheep in the palace-portal, and smear the threshold and posts of the gateway right and left with his blood (cf. Ex 12⁷ [P]). Respecting these incantation-rituals and the multiplicity of the sacred offices, see Zimmern, *Beiträge*, and the art. 'Priest,' in *EB*¹¹. Israel also in pre-Exilic days had the *rō'eh*, *ḳōsem*, *m'ōnēn*, *yidd'ōnēn*, and *ba'al ḳōh*. Others are obscurely mentioned in Dt 18^{10, 11}.

In early times the priest in Israel was essentially soothsayer, who declared the Divine will by *Urim* and *Tummim*, rods, arrows, or other forms of the sacred lot. Carrying the ephod, he gave the answers needed on any expedition. In early Arabia the *kāhin* (Heb. כֹּהֵן) was the soothsayer who employed the divining rods or arrows, denounced by Muḥammad as an abominable work of

¹ A further treatment will be found in art. 'War,' in *EB*¹¹, § 2, and F. Schwally, *Sem. Kriegsaltertümer*, Leipzig, 1901.

Satan (Qur. v. 92; cf. Mic 5¹², Jer 27⁹). Cf. art. 'Soothsayer,' in *HBD* iv. 598.

In later times the priestly function in Israel became chiefly ceremonial and sacrificial, while the function of soothsayer (*kōsēm*, etc.) was separate and specialized. Out of the priest-seer of early times, called *rō'eh*, emerged the prophet (*nābhī*), whose person as 'man of God' was also sacred, whose rod possessed magical power (2 K 4^{29, 31}) as well as his garment (2 K 2¹⁴; cf. Mk 5³⁷⁻³¹), on whom God's spirit rested, and to whom 'the word of the Lord' came. See art. 'Prophet,' in *EBR*¹¹.

One of the most primitive and significant as well as non-ethical among 'holy' persons of the Semitic peoples was the *kādēsh* (sodomite priest attendant) and the *kādēshāh*, or priestess-prostitute, who infested the Canaanite-Hebrew sanctuaries like the corresponding *qadistu* and *harimtu* of Babylonia. The wide prevalence of this phase of ancient Semitic life is attested by Gn 38²¹, 1 K 14²⁴ 15¹² 22⁴⁸, 2 K 23⁷, Am 2⁷, Hos 4¹¹, Dt 23¹⁷ [Heb. 18], and is especially connected with the Istar cult (G. A. Barton, *Sem. Origins*, London, 1902, p. 83; N. Nilsson, *Etudes sur le culte d'Ichtar*, Leipzig, Paris, and St. Petersburg, 1911; see, further, *HIERODOULOI* [Sem. and Egypt.]).

(ii.) We have represented in Israel the conception of a *holy people*. Of this the *locus classicus* is Ex 19⁵⁻⁶ (JĒ), in which the privilege is made conditional on obedience to the terms of the Sinai-covenant. Israel is called a Divine possession above all the peoples of the world. But this was in reality the re-assertion of a long recognized fact. Israel was Jahweh's people, just as the Moabites were 'people of Chemosh' (cf. Jg 5¹¹, Ex 15¹⁶). Israelites as individuals were just as truly sons and daughters of Jahweh. Similarly Palestine, the land occupied by Jahweh's people, was holy also (cf. Wis 12³), and is called Jahweh's house (Hos 8¹ 9¹⁵, cf. 9⁸ and Harper in *ICC*). All sacrifices outside Jahweh's land are, therefore, unclean. The corollary to this conception of Israel as a holy people is found in the prohibition of marriage with foreign races prescribed by later legislation (Dt 7³). This became rigorously applied in the days of Ezra, who sternly repressed such connexions, whereby the 'holy seed' became 'mingled' and thus contaminated (Ezr 9^{2f.}).

II. *THE CONCEPTION OF HOLINESS RAISED TO AN ETHICAL LEVEL.*—We have hitherto traced, though only in outline, the far-reaching dominion of the conception of holiness in its earlier stage, over a wide extent of persons, material objects, and modes of human activity. In all of these holiness appears as a positive quality derived from close contact with a Deity or supernatural power which becomes deterrent and restrictive, circumscribing human activities which are free as to ordinary or non-holy objects. Holiness in primitive religion, like much else, is concrete and quasi-physical, and, moreover, is bound up with magical elements of tabu. We have now to investigate how in its more advanced stage it became gradually and partially emancipated from the material and magical characteristics of primitive religion as it became ethicized.

Holiness, as we have seen, is closely associated with the personality of Deity. That which is brought most closely into contact with Him is most holy of all. Thus the hindermost recess of the Temple (בְּיָרֵךְ, *śābs*), where His presence dwelt and where only the high priest on the most sacred day of the post-Exilic calendar (the Day of Atonement) could enter, was called the Sanctuary *par excellence*, the most holy place (קֹדֶשׁ קֹדֶשִׁים). Accordingly, sanctity, with all its associated elements of restriction and reserve, admitted of degrees until at length we come to the Deity Himself, who in His exalted and inaccessible loneliness and power is called by the thrice repeated and so emphasized

'Holy' in Isaiah 6³. The same principle that applied to things would a *fortiori* apply to God Himself. If eating the remainder of the *shelāmim* (rendered 'peace-offerings'), which should be burnt on the third day, was an act of profanation because it was God's 'holy thing' (Lv 19⁹), it was a far more terrible thing to behold God Himself. No man can behold God and live (Ex 33²⁰; cf. Jg 13²², Is 6⁵). The quality in the Deity which avenged with terrible penalties all violations of His presence, dignity, name, or belongings was called 'jealousy,' and He was accordingly designated 'a jealous God' (אֱלֹהֵינוּ, Ex 20⁵ 34¹⁴).

God's position of inviolable supremacy and power was designated by this term קָדוֹשׁ, and He Himself was קָדוֹשׁ, 'holy.' But in His external self-manifestation He was invested with 'glory' (כְּבוֹד). These two characteristics of Divine personality—'glory' and 'holiness'—are closely combined; but with this distinction, that, while 'holiness' marks out His inaccessible exaltation and power, which are restrictive on human activities, His 'glory' exhibits Him in His earthly and visible self-manifestation (Is 6³; Baudissin, *Stud. zur sem. Religionsgesch.* ii. 82, 104-107).

The prophets, who were the great teachers of Israel, did not in any degree diminish, but rather exalted, these conceptions of Jahweh's unapproachable and terrible power and His manifested grandeur. The universality of His sovereignty and power is emphasized by Amos, by Isaiah, and above all by Deutero-Isaiah (Am 9⁷, Is 6³ 40¹²⁻²⁶). But the teaching of the 8th cent. Judæan prophets did not end here. The stress which Amos and Isaiah placed on the righteousness of Jahweh and His ethical requirements (Am 5⁶⁻¹¹, 21-27, Is 1¹⁰⁻¹⁷, 21-23 5⁸⁻²³) shifted the centre of gravity in religion from ceremonial to conduct. Ceremonial tabus and sacrificial forms count for little. In Jeremiah's teaching the externalities of Israel's formal religion have disappeared with the destruction of the State and the Temple. Jahweh has established a 'new covenant' with His people independent of external ordinances and enactments, for it is internal, spiritual, and personal: 'I will put my law within them, and in their heart will I write it' (Jer 31³¹⁻³³).

The effect of all this was far-reaching, and it gradually brought about an 'Umwertung aller Werte'—a transmutation of all values, which affected the conception of the Divine Holiness and all related thereto. Since God's character and demands were essentially expressed in righteousness, this permeated also the essence of holiness whether in God or man. The fast wherewith a man is to afflict his soul is to set the oppressed free and bestow bread on the hungry (Is 58^{6f.}). 'Rend your heart, and not your garments' (Jl 2¹³). This affected the language, not only of prophecy, but of legislation. Circumcision was to be of the heart (mind), and not of the flesh only (Dt 10¹⁶ 30⁶). It entered even into the priestly legislation of the guilt-offering (Lv 5¹⁻⁷), and in the 'Code of Holiness' finds its due place (25³⁵⁻⁵⁶). This was doubtless a reinforcement of ethical elements which belonged to Israel's old religion, since all religion involves social relations and a social order, and therefore these elements found a place in the older codes of legislation. But prophetic teaching gave them a new and primary importance, and they came to displace the externalities of ceremonial religion. This is manifest in some of the Psalms, e.g. 50⁹⁻¹⁵, where sacrifices are repudiated as irrational; 51^{18, 19}, where the true sacrifices are a broken and contrite heart. Perhaps the most notable expression is to be found in Ps 15 (which reflects the spirit of Mic 6^{7, 8}): 'Who shall dwell in thy holy hill? He that walketh uprightly, and worketh righteousness, and is faithful in his thoughts [and not merely in

external acts.] The following verses expound this fundamental conception. Cf. Ps 24³⁴, Sir 35^{2-8. 12-17}.

We have entered here into a higher realm and atmosphere, and these new conceptions would be fostered by the new conditions of post-Exilic Judaism, when there was a vast Diaspora, and the Synagogue with its worship took the place of the national Temple with its sacrificial ceremonial. Consequently prayer (which in some form accompanied sacrifice) now took the place of sacrificial ceremonial (which was legitimate only in the central Jerusalem sanctuary).

Moreover, we now find a tendency to shift 'holy,' which was ethical, from non-ethical things to personal objects, to which it can more properly apply. God in Deutero-Isaiah is 'Israel's Holy one' *par excellence*. Purity is closely associated with holiness, and has moral values. In Hab 1^{2. 13} 'holy' is applied to Jahweh in His ethical purity, which is so great that He cannot behold evil—an echo of Is 6³⁻⁷. From these ethical conceptions of God's holiness it is but a step to the conception of God's 'Holy Spirit' (Is 63¹⁰, Ps 51¹³, Wis 9¹⁷). Those who form God's retinue, the angels, are called 'holy ones,' since they are the 'sons of God' (Job 5¹ 15¹⁵, cf. Ps 89⁶⁻⁸).

Nevertheless, the old and primitive non-ethical ideas of holiness still held sway and persisted in post-Exilic Judaism. They permeated Ezekiel's ideal scheme (chs. 40-48) of Israel's restored commonwealth, and the subsequent Levitical legislation. We even find them in the Mishna (*Yad*. iii. 2. 4 f., iv. 5. 6; cf. *Eduyyôth* v. 3), where it is stated that the canonical Holy Scriptures 'defile the hands,' according to the teaching of the schools of both Hillel and Shammai. In other words, this holiness thereby becomes contagious (Weber, *Jüd. Theol.*², Leipzig, 1897, § 21. 1). Texts from these inspired Holy Scriptures are still employed by Jews as magical charms and prophylactics, just as verses from the Qur'an are used among Muslims. See artt. 'Demon,' 'Magic,' 'Sorcery,' in *HDB*. In fact, the Arabic language of the Qur'an is sacred, and any translation into another tongue is a violation of that sanctity (Sell, *Faith of Islam*², 265, 301-305). Among peasants in the inland regions of Syria, both Christianity and Islām are but a thin veneer over forms which are essentially those of ancient Canaan. Ethical monotheism is not the dominant religious influence, but a belief in the local *nabī* (whose tomb is sacred), or the local *walī* and *jinn*, who are merely substitutes for the former gods and demons.

What, however, unites the most primitive ideas of holiness to the later and modern conceptions, which are ethical, is the fundamental principle of close union and association with the Divine. This is common to the present and the hoary past. Whatever is deemed incompatible with such association is necessarily excluded. Holiness, therefore, will always be restrictive, and jealously close its doors to all forms of human action which are held not to be in harmony with this fundamental principle. And with holiness so restrictive and secluded there is also involved a positive element of Divine power.

LITERATURE.—The dissertation on 'Holiness' by W. W. Baudissin, in his *Studien zur sem. Religionsgesch.*, pt. ii., Leipzig, 1878, still remains a very valuable treatment, especially from the standpoint of OT usage. A useful list of earlier literature is given on p. 3f. Valuable material respecting Arabic heathendom may be gathered from J. Wellhausen, *Reste arab. Heidentums*, Berlin, 1887 (21897). W. Robertson Smith's *Religion of the Semites*² (London and Edinb., 1894) is still the best contribution to the subject, especially owing to its

* In this face of Bertholet's extremists statement that *kōdesh* and *kadōsh* are nowhere to be found in the Psalter in the special sense of moral holiness (*Bibl. Theol. des AT*, Tübingen, 1912, ii. 249, footnote), it is at least obvious from Ps 15 and 51¹³ that an ethical as well as ceremonial connotation is implied.

full presentations of Arabic illustrative materials as well as those derived from the wider field of the comparative study of religion. M. J. Lagrange's *Études sur les religions sémitiques*², Paris, 1905, esp. chs. iv.-viii., contains a mine of well-sifted material in which the results of Assyriology find their due place. In addition to these, J. Skinner's art. 'Holiness,' in *HDB*, and R. Kittel's 'Heiligkeit Gottes im AT,' in *PRE*³, should be consulted. Among commentaries, see G. Buchanan Gray, 'Numbers' (*ICC*, Edinburgh, 1903), and A. Bertholet, 'Leviticus' (*Kurzer Handkommentar*, Tübingen, 1901) (see esp. on ch. 11); K. Marti, *Geschichte der israelitischen Religion*⁴, Strassburg, 1903, §§ 9-11; B. Stade, *Biblische Theologie des AT*, Tübingen, 1905, i. §§ 46-70. HOME.—The word (see *OED*, *s.v.*) signifies 'a dwelling-place,' regarded from the moral and the social point of view as the *fixed residence* of a family, providing for its members a place of refuge from the labour and turmoil of active life, and cherished as the abode of those to whom a man is bound by the closest and most intimate ties of relationship. The ideas which the word suggests are, accordingly, those of *permanence*, *security*, *familiarity*. To be 'at home' implies that a man has reached, at least for a time, the end of his wanderings (cf. Pr 27⁸); that he is beyond the reach of the perils of wayfaring; that he is no longer a stranger and foreigner, but a member of a household, surrounded by those who understand him and sympathize with him. When, for example, St. Paul speaks of the Gentiles as *οικεῖται τοῦ θεοῦ* (Eph 2¹⁹), he is contrasting their former outcast and alienated condition with the privileges of membership in God's family or household. Under all the aspects mentioned above, death is sometimes spoken of as 'going home' (cf. Ec 12⁵ 'long home,' with Plumptre's note), and the disembodied state is described by St. Paul as the being 'at home with the Lord' (2 Co 5⁸).

There were, doubtless, numerous instances of beautiful domestic life among the Hebrews. The narratives (J and E) of the 9th and 8th centuries B.C. throw much incidental light on the family life of ancient Israel. There was apparently a tendency (except in the case of the monarch) towards monogamy; and, though paternal authority was absolute, and extended to the *jus necis*, we do not find instances of harsh or unjust treatment. The same remark applies to slaves. They were the private property of their masters, but despotic rights do not seem to have been as a rule abused. The duties of hospitality were held in honour, and guests were welcomed with kindness and liberality. The Book of Proverbs illustrates the high esteem in which family life and family duties were held in ancient Israel. As regards the later Judaism it has been said that 'there were no homes like those in Israel,' and two familiar Talmudical sayings are probably the fruit of common experience: 'Marriages are made in heaven,' and 'God dwells in a pure and loving home' (see A. Edersheim, *Life and Times of Jesus the Messiah*, London, 1883, bk. ii. ch. 9, and *JE*, *s.v.* 'Family and Family Life'). To a smaller extent the feeling for 'home' may be traced in classical antiquity (see, for instance, Hom. *Od.*, *passim*; Soph. *Ajax*, 850-860, *Phil.* 492-496; Ovid, *Trist.* iii. 4. 53 ff.; Virg. *Ecl.* i.; Tib. *Eleg.* i. 1; Plin. *Epp.*, etc.); cf. S. Dill, *Roman Society from Nero to M. Aurelius*, London,

1904, p. 188 f.; and, for the witness of Latin inscriptions, etc., see hints in C. Bigg, *The Church's Task under the Roman Empire*, Oxford, 1905, Lect. 4), and also in India (cf. the statement of the *Pañchatantra*, v. 49, that even heaven is not so precious as one's birthplace, however humble it may be; see, further, Böhlingk, *Ind. Sprüche*², Leipzig, 1870-73, nos. 1013, 1943, 6048, 6939); but it has been said with truth that

'home is specially Teutonic, word and thing. . . . The life of home has become the great possession, the great delight, the great social achievement of our race; its refuge from the storms and darkness without, an ample compensation to us for so much that we want of the social brilliancy and enjoyment of our Latin brethren. Reverence for the household and for household life, a high sense of its duties, a keen relish for its pleasures, this has been a strength to German society amid much to unsettle it' (R. W. Church, *The Gifts of Civilisation*, new ed., London, 1880, p. 336 ff.).

In England the new conception of life which Puritanism introduced tended powerfully to raise the standard of family life.

'Home, as we conceive it now, was the creation of the Puritan. . . . The sense of spiritual fellowship gave a new tenderness and refinement to the common family affections' (J. R. Green, *Hist. of the English People*, London, 1880, iii. 19).

So Emerson, writing in 1847, testifies that 'domesticity is the taproot which enables the [English] nation to branch wide and high. The motive and end of their trade and empire is to guard the independence and privacy of their homes' (*English Traits*, London, 1856, ch. vi.).

The special development, then, of the home-forming tendency seems to be characteristic of the Teutonic race; but it is a common human instinct, and, as such, finds its peculiar consecration in the gospel. Naturally, the spread of Christianity in the pagan world was responsible for many tragedies of domestic life. Christ's own words foreshadow the strain upon affection and conscience which would inevitably follow conversion (Mt 10²¹, 34-37), and such a passage as 1 Co 7^{10f.} indicates one class of problems that was bound to arise. In early Christian documents we read of wives embracing Christianity and refusing to live with their husbands (e.g., Just. *Apol.* ii. 2; cf. Eus. *HE* iv. 17); in the persecutions, frequent instances are recorded of parents pleading with their children, and children with their parents; of sons disowned by their fathers, and slaves by their masters; of wives divorced, and children disinherited (see Harnack, *Expansion of Christianity*, Eng. tr., London, 1904, bk iii. ch. 2, for references). But, where the gospel had free course, it issued in the consecration and elevation of family life—a fact of which the Apologists supply ample evidence.

The fundamental weakness of family life in Roman society was the exaggerated idea of the *patria potestas*. Domestic duty, it has been well said, was summed up in a single article—that of absolute submission to the head of the household. It was only by a very gradual process that the wife rose from being the chattel and slave to be the equal of her husband. Filial affection was the rarest of virtues under a system which placed the son at the absolute disposal, and under the despotic control, of his father. In the early centuries of the Empire, various reforms tended to mitigate this state of things. Not only the sons, but the slaves, of the Roman householder found their position improved by a series of legislative reforms (see Lecky, *Hist. of Europ. Morals*, London, 1869, i. 297 ff.). But, as has been pointed out, the moral consecration of family life was the special task of Christianity.

This consecration may be said to begin with our Lord's subjection to the discipline of home life at Nazareth (Lk 2⁵¹) and with His readiness to hallow family life by His presence and blessing (see Jn 2^{1f.}, 11^{1f.}, Lk 10^{38f.}). In his letters to the churches of Asia (Eph., Col., Philem.), St. Paul deals with the leading principles of home life in some detail, possibly because 'in the social traditions of "Asia" a certain prominence appears to have attached to

the family idea' (H. C. G. Moule, *Colossian Studies*, London, 1898, p. 231 f.). Each natural relationship—that of husband and wife, that of parent and child, that of master and servant—is exhibited in the light of the Christian ideal. The teaching of 1 P 2¹⁵⁻³⁷ is similar in its tone, and is addressed to readers of the same race. Perhaps the leading idea of St. Peter is that the gospel confirms and sanctifies the element of order and subordination which lies at the root of stable social life. Both to wives and to servants he preaches the duty of 'subjection.' St. Paul's precepts (Eph. l.c.) seem also to apply, in the region of family life, the general duty of mutual submission (Eph 5²¹); but he lays more stress on the principle of active love which subordinates self to the service of others. Both teachers appear to regard the family or home as the appointed sphere of moral discipline and probation for the great majority of mankind, and St. Paul derives its sanctity from the fact that it reflects the mysterious relationships which subsist within the very being of Deity itself (cf. Eph 3¹⁵ 5^{22f.}). It should also be remembered that to the mind of our Lord Himself the family presents the closest analogy to the new social order which it was His mission to reveal. God is the Father of a family; mankind are His children, and all are 'brethren' (Mt 23⁸⁻¹²); cf. the use of *ἀδελφοί*, *ἀδελφότης* in the Epp., and see Harnack, *op. cit.* bk. iii. ch. 3). In such early documents as Clem. *ad Cor.* 1, Polyc. *ad Phil.* 4, we find echoes of this line of teaching and proofs of its actual influence.

It does not fall within the scope of a short article to deal with the social and economic tendencies, or the moral and scientific theories, which threaten the Christian home. It may suffice to point out that the purity and sanctity of Jewish homes was mainly due to the prevailing regard for the chastity of woman, and that, where there is any lowering of standard in this particular, the institution of home is threatened. In Rome the growth of moral corruption, avarice, the love of ease, and extravagance led directly to the aversion for marriage, the perilous consequences of which Augustus strove to avoid by direct and drastic legislation (see Marquardt, *Das Privatleben der Römer*, Leipzig, 1879, p. 71 ff.). The rise of monachism and the passion for cœnobia and solitary life became the occasion of vehement and one-sided disparagement of family duties and the frequent rupture of family ties (see Lecky, *op. cit.* ii. 125). Nor can it be denied that the institution of family life is threatened in modern times by a spirit of individualistic selfishness which prefers the comparative freedom and ease of a celibate life to the duties and responsibilities involved in marriage. But, apart from considerations of this kind, we may observe that the possibility of home life, as contemplated by the NT writers, depends to some extent upon conditions which can no longer be taken for granted. The problem of the family is closely connected with the modern problem presented by the aggregation of masses of people in large cities; and it is certain that deep-seated industrial causes are tending to undermine and break up family life. To a large proportion of the working classes in Europe and America, anything like home life in its highest form is virtually prohibited by the conditions amid which they pass their lives. A further danger which threatens home life is involved in defective and unspiritual ideas of what constitutes true human well-being. It is the obvious duty of the Christian Church to encourage any corrective tendencies, any social endeavours, which make for the integrity and purity of family life. What has been called 'the battle with the slum' is a real contribution to the family problem; and all Christians are bound to take an interest in any scheme for the better

housing of the poor, multiplication of suburban homes, improved sanitation, etc. (on this subject, see F. G. Peabody, *Jesus Christ and the Social Question*, London, 1901, ch. iii.). Further, family life is threatened by certain socialistic theories, which find in the family an insuperable obstacle to their cherished ideal of a corporate life in which personal interests are to be sacrificed to the welfare of the community. Such theories regard marriage and the family as a stronghold of individualism, hindering the citizen from 'complete devotion to the socialist ideal' (Peabody, *op. cit.* p. 140 ff.). On the other hand, the tendency of anthropological speculation seems to be in the direction of vindicating against socialistic attacks the permanent function of the family, regarded as the highest result of the historic process of social evolution. And, again, if it is true that the individual finds his true self-development in subordination to or co-operation with his fellows, if corporate life is in reality the great instrument for training character, it is obvious that the family has higher social significance than was once perceived. Home life is the fundamental form which life in common can assume. It involves precisely that training in social affections, that discipline in self-sacrifice and mutual service, which corresponds most closely to the Christian conception of worthy human life.

'The family exhibits in the simplest and most unquestionable types the laws of dependence and trust, of authority and obedience, of obligation and helpfulness by which every form of true activity is regulated. . . . In the family we learn to set aside the conception of right and to place in its stead the conception of duty, which alone can give stable peace to peoples or to men' (B. F. Westcott, *Social Aspects of Christianity*, London, 1887, Lect. ii.).

The gospel, then, gives a complete and final sanction to the institution of home. In the home, —'Charity begins at home'—Christianity finds the needful conditions for training men in the highest and most Christ-like of all graces (1 Co 13). In the home, character is trained and ripened for the wider service of man that lies beyond and outside its range. By a round of common duties and mutual services, men and women are educated for the larger ministries of citizenship and churchmanship. Thus the gospel transfigures the home by treating it as the ultimate type of the new society which Christ came to establish on earth. God is a heavenly Father; men are His children, linked to each other by ties of brotherhood; the Church is His household (1 Ti 3¹⁵), in which all have their mutual duties and peculiar calling, and all alike are dependent on the Father's gifts of grace (Mt 23³⁷, 1 Co 12²⁵, Eph 4 and 5). So St. Paul enjoins Timothy to treat those committed to his pastoral charge as relatives of the corresponding age—the aged men as fathers, the elder women as mothers, the young men and women as brothers and sisters (1 Ti 5¹²). Again, it is noticeable that the gospel does not multiply directions in regard to the Christian's conduct in the larger spheres of human life—the world of business, of politics, of professional life. It confines itself to regulating family life with special minuteness and care; nor does it attempt so much to safeguard the rights of individuals as to enforce their duties. Thus, in Eph. and Col., St. Paul gives a summary of the simple but far-reaching rules which should control home life. He addresses in turn husbands, wives, children, and servants—that is, all members of the typical household. Each in his turn is exhorted to bear in mind his or her duties and the rightful claims of others, and thus there emerge the great principles that give to home life its sacredness and importance.

(i.) There must be before all else *the fear of God*, the root and ground of Christian life with all its manifold relationships; the fear of God regulating

the desire for wedded life and controlling the choice of a partner (cf. 1 Co 7³⁹); inspiring the 'nurture and admonition' of children and lending a sanction to their obedience (Eph 6¹²); imparting dignity to the necessary tasks of the household and even to the fulfilment of menial duties (Eph 6⁵, Col 3²²). All is to be planned and fulfilled 'in the Lord,' in union with His mind and under the leading of His Spirit; all duties are to be discharged 'as to the Lord and not unto men,' in the consciousness of His continual presence and in single-hearted desire to serve Him.

(ii.) The home is to exhibit in its perfect beauty the working of *the law of love*. Love is the duty commended to the husband in particular. Men are to love their wives with reverent, tender regard; with them resides the element of authority, but the rightful exercise of authority is not to be allowed to become a 'root of bitterness' or cause of irritation. And love is to be kept true and pure by habitual recollection both of the entire dependence of the wife on her husband, and of the sacred mystery which wedded love symbolizes—the self-sacrificing love of Christ for the Church (Eph 5²⁵). The mutual love of those who are brothers by birth (*φιλadelphία*) is a type and earnest of that larger love of those who are brethren in the family of Christ, the family in the strict sense being an image of the Divine Kingdom, or, as it has been described, 'a State and a Church in little,' in which the binding and inspiring power of affection may be first realized.

(iii.) St. Paul and St. Peter alike lay stress on the law of *dutifulness*. While the gospel recognizes woman's spiritual equality with man, it also guards the rightful responsibility and leadership of the man; on the other hand, nothing is said to favour the assertion of leadership on the part of the husband. On the children is impressed the duty of obedience; nothing is said to them of possible pretexts for resisting parental authority; on the other hand, the parent is warned against the misuse of authority over either children or servants (Eph 6⁴⁻⁹). Finally, servants are exhorted to show diligence and faithfulness; nothing is said to them of 'rights' or 'liberties' or of the 'indignity' of a dependent position. The master, for his part, is urged to keep alive in himself the sense of responsibility towards those who are his equals in the sight of the heavenly King and Judge (Eph 6⁹; see Moule, *Ephesian Studies*, London, 1900, chs. xv., xvi., *Colossian Studies*, ch. xi.).

(iv.) Another principle implied, though not expressly indicated, in the NT treatment of the Christian home is the law of *social service*. Home love is in germ the love which is to fulfil its obligations in every relationship of life. It includes

'Loves filial, loves fraternal, neighbour loves
And civic.'

The home, in fact, lays the foundations of social morality in the wider sense. It is a school of humanity and Christ-like service. It has to be guarded from narrowness and exclusiveness by free intercourse with others, and especially by the fulfilment of the duties of hospitality—a virtue on which great stress is laid in the NT (cf. Ro 12¹³ 16¹, 1 P 4⁹, He 6¹⁰ 13², 3 Jn 6⁵). In the earliest period of the Church's life, circumstances made this duty very urgent. It was the most direct and useful way in which members of the Christian brotherhood could aid the advance of the gospel (Harnack, *Expansion of Christianity*, i. 219). It is implied also in certain sayings of St. Paul that social intercourse is a duty and may minister to mutual edification (Eph 4²⁹). Family life is, in short, intended to be a school of brotherly love in its widest sense, not developing a mere *égoïsme à*

plusieurs, but training men in large-hearted sympathy and wide social affection.

'The closer and warmer the home affection, the larger and stronger should become those social instincts which make life inconceivable except in a community; . . . And if they stop short at the domestic limits, and refuse to open out to their wider office, they sin against the home as much as against the State' (H. S. Holland, in *Lombard Street in Lent*, London, 1894, p. 134 f.; see also J. S. Mackenzie, *Introd. to Social Philosophy*, Glasgow, 1890, p. 315 ff.).

Home life, in a word, fails of its divinely ordained purpose, if it does not educate and fortify the spirit of social service, if it does not awaken compassion, and deepen insight into the social needs of mankind.

In this article we have been concerned with the ideals presented by the NT. But it should not be forgotten that, while the home is an institution which has been evolved by the needs of the race—an institution to which the Christian spirit has added new grace, lustre, and stability—modern conditions have brought us to what may be a period of re-construction, when it will be the task of Christianity to define anew the essential principles of 'family ethics.' Industrial conditions, new phases of religious thought, the movement for the higher education of women and their free admission to independent professions and occupations—these and such-like changes have materially affected the normal features of home life. 'Our democracy is making inroads upon the family, and a claim is being advanced which in a certain sense is larger than the family claim' (J. Addams, *Democracy and Social Ethics*, London, 1902, p. 77).

The position of boys and girls earning an independence at a comparatively early age, the modern revolt against domestic service, the new ideals of social usefulness which have been inspired by a wider outlook and an improved education—these things have raised personal problems in family life, the solution of which depends upon submission to the progressive guidance of the Christian spirit. It must suffice to indicate the circumstances which, apart from the conditions which directly tend towards the decay of home life, render the fulfilment of home duty a less easy task than it was in the first age of Christianity (on this subject the work by J. Addams quoted above is interesting and suggestive). It remains true that the first of Christian social duties is 'to show piety at home' (1 Ti 5⁴), and that home must always continue to be the school of those graces and virtues which men need for effectual service, whether in the State or in the Church.

LITERATURE.—Besides the various hooks mentioned in the body of the article, see the works of Harless, Dörner, Martensen, and Newman Smyth on *Christian Ethics*; C. Gore, *The Epistle to the Ephesians: a Practical Exposition*, London, 1898, pp. 211-236; *HDB*, art. 'Family,' i. 846.

R. L. OTTLEY.

HOMER.—The religion and ethics of Homer—whether they belong to an actual evanescent 'Achæan' period in the history of Greece, or are the result of a combination of older and newer elements effected as part of a general process of evolution and harmonization extending over many centuries—have at least a superficial aspect of consistency. This is, no doubt, partly due to the peculiar quality of Homeric art, its unexampled lucidity and clearness of outline; to the Homeric spirit with its hatred of vagueness and mysticism. But this temper and art are themselves so characteristically Hellenic that we cannot look to them for an explanation of the startling divergence between the religion of the *Iliad* and *Odyssey* and that of historical Greece. For the beliefs of Homer are as distinctive as they are definite, and are now admitted by every one to be the product of historical causes. What those causes were is becoming every day more and more obviously the real

problem at the heart of the 'Homeric question.' Till they have been discovered, we must be content with a statement of the facts really within our knowledge, although it must be admitted that the whole significance of these is altered according as one does, or does not, regard them as representing an actual stage (to which the Homeric poems themselves are our only witnesses) in the development of Greek religious thought.

It will be understood that 'Homer' is used throughout this article as a synonym for the *Iliad* and *Odyssey*, without reference to the question of their authorship. The hooks of the *Iliad* are quoted according to the capital letters of the Greek alphabet, the hooks of the *Odyssey* by the ordinary letters.

I. RELIGION.—1. The gods.—These are, of course, anthropomorphic, as all Greek gods were or tended to become. They are, indeed, taller and more beautiful, wiser and more powerful, than men, and are exempt from old age and death; but otherwise they are scarcely thought of as physically different. They are said to have 'houses on Olympus,' either as actually dwelling upon the Thessalian mountain—and this is certainly the original meaning of the phrase—or, as in the *Odyssey*, inhabiting a kind of heaven which has nothing of Olympus but the name (§ 42 ff.). They form a somewhat insubordinate family-group under the government of Zeus, Olympian society being organized upon the same loosely patriarchal principles as society among Homeric men. They intervene constantly in human affairs, generally in human form, but sometimes in the semblance of birds. They are the sources of good and ill to men; although it is only some special skill or excellence that is regarded as the gift of a particular god, as skill in archery comes from Apollo (B 827; cf. E 51, 61, § 233). They are, theoretically, omnipotent and omniscient; or, at least, Zeus is so. They are subject to human passions and actuated by human motives. All this is quite in accordance with Greek religion in its classical form, although the wealth and vivacity of detail in which the anthropomorphic aspect of the gods is realized are peculiarly Homeric. What is really most important and characteristic in the religion of Homer is the clear perception of a fundamental distinction between the human and the divine. Whatever may have happened in the remote past, as when Ino was made immortal (ε 334 f.), in Homer's world no man is a god or can become a god. This is the poet's special contribution to Greek religion, and, historically considered, it is one of the most important ever made; for the conception of the Divine King was one that died hard in the Ægean world (G. Murray, *Rise of the Greek Epic*, 158 f.).

Andrew Lang makes a distinction between what he calls the ethical religion of Homer and his attitude to mythology (*World of Homer*, 120). So far as they are religious beings, Homer's gods are very grand and imposing figures, worthy of all respect and reverence. They are usually just, kindly, and placable, although their goodwill is often purchased and their wrath appeased, merely, it seems, by sufficient sacrifice. They are bound by their oaths, which they make by the water of Styx (O 38, ε 186). Their relation to Fate (Moira, Aisa) is apparently not consistently stated, no doubt because it has not been clearly thought out. Sometimes the poet uses the language of fatalism (X 5; cf. Z 487 f.); but, speaking generally, Moira coincides with, or is, the will of the gods, more especially the will of Zeus. It is, in fact, in a quite literal way to begin with, his 'portion' (Δὸς αἰῶρα)—the division of the tribe which belongs to him. This conception of Moira invests Zeus with a very real moral grandeur when he subdues his own feelings of love and pity in voluntary obedience to it, as when he allows his son Sarpedon to fall by the hand of Patroklos (II 431 ff.), and is moved by the

tragedy of the war (T 21). It is to Zeus that the poor woman at the millstone prays in the palace in Ithaca, when she calls down his thunder upon her oppressors (v 115 ff.). He is the protector of suppliants and strangers (γ 165; cf. 181, ε 270) and beggars (ξ 57). He punishes those who give crooked judgments in the assembly and drive out Dikē, the Right Way of things, disregarding the anger of the gods (II 387 ff.), who elsewhere are said to wander disguised over the earth observing the lawlessness and righteousness of men (ρ 485 f.). 'Evil deeds do not prosper' (θ 329), for 'the blessed gods love not heartless actions' (ξ 83). The helplessness of man, which is so much in the mind of Homer, makes him dependent upon divine aid: 'All men feel the need of gods' (γ 48).

Such are the gods of Homer when he thinks of them religiously. Even so, they are apt to be vengeful and capricious, while from another point of view they are decidedly unsympathetic, being lifted so far above human needs and weaknesses. But they do move us to a half-unwilling respect and awe. One can understand the emotion evoked by the great statue of Zeus at Olympia which was inspired by a famous passage in the *Iliad*; for, as Lang has remarked (*op. cit.* 117), the Olympians of Homer are the Olympians of Pheidias. But, when the poet comes to deal with the gods of mythology, he adopts a very different tone. In his hands they cease to be moral. The charge of Xenophanes, that Homer attributes to the gods all that is accounted a shame and a reproach among men—theft and adultery and deceiving of one another (fr. 11, Diels)—can be literally justified (*e.g.* τ 396, the 'Lay of Demodokos' in θ, the Deceiving of Zeus in ε; cf. the 'Battle of the Gods' in φ 385 f.—an episode on the verge of burlesque). Yet perhaps the protest of Xenophanes—admirable and tonic at the time it was made—is somewhat beside the mark. Homer is not preaching irreligion; he is trying to solve a very difficult artistic problem. He could not avoid the mythology of his subject, but the gods as actors in that mythology he could not respect. A naive faith can jest at what it holds most sacred, but the religion of which we have quoted some instances was anything rather than naive. Homer simply took the gods of mythology as he found them, much lower in the moral scale than any of his own heroic men and women, and treated them, as it were, decoratively (see Murray, *op. cit.* 280 f.). The truth is that Homer does not sympathize with, scarcely seems to understand, the old folk-religion of Greece which existed so long before and after him. Its leading divinities, Dionysos and the Mother and Maid, Demeter and Persephone, he barely mentions; the various Mysteries, which were so important a feature in it, he does not mention at all. Neither do we find in Homer any certain reference to the belief in heroes in the technical sense of the term, 'the divine race who are called half-gods,' as Hesiod describes them (*Erga*, 159), whose innumerable cults sufficiently prove how ancient and influential their worship was in Greece; for the lines describing the divine honours paid to Erechtheus in Athens occur in the Catalogue of the Ships (B 546 ff.), and even there are perhaps an Athenian interpolation. Herakles, the typical 'hero,' is for Homer 'the man Herakles' (φ 26).

Certain important aspects of the gods who appear in the *Iliad* and *Odyssey*—and these the aspects which counted for most in the popular faith—are completely ignored. Homer will have nothing to do with the gods of the people, and makes light of the 'sacred stories' of which Greek literature is so full from Hesiod to Pausanias and Plutarch. Indeed, it is obvious that a religion like that which we find in the Homeric poems—a

religion of which we are tempted to complain that it makes too much rather than too little of reason and sanity—involves the criticism and ultimate destruction of the simple faith which could accept the myths as a decent account of the life and behaviour of the gods. That this is not due to the personal predilections of a single poet with an eclectic creed follows from the very nature of the Epos. Homer had to deal with the saga or heroic tradition; he had to retell an old tale. The fact that the story involves the prominence of certain gods and beliefs and the exclusion of certain others is ground for concluding that the former must have been prominent and the latter absent at all periods in the life of the saga. Without Zeus and Apollo, for instance, there could be no *Iliad*; without Poseidon and Athena, no *Odyssey*. These, then, were in the saga from the beginning; that is to say, they were gods of the people whose beliefs were enshrined in it. If we apply this criterion to the Homeric poems, it leads to important historical conclusions. For it seems reasonable to hold that the divinities whose action is most vital in the organic structure of the poems were the 'Achaean' gods, while those whom Homer dislikes or disregards were non-Achaean. This conclusion is strengthened by a good deal of evidence from the history of Greek religion. We know now the general spirit and character of the old Cretan and Mycenaean religions—the worship of the Bull-god, the prevalent cult of the Earth-goddess, the careful tendance of the dead; and it is certain that, at a date which can only be conjecturally fixed, the ancient faith was overlaid and, for a time, evidently eclipsed by the worship of certain deities clearly of Northern origin, especially the Father-god Zeus. That this worship was introduced by the tribes who, in the times of the Migrations, pushed down from the North into Greece is the obvious and accepted hypothesis. The Homeric poems clearly reflect a period of Northern ('Achaean') predominance, which implies and includes the predominance of the Northern religion over the native 'Aegean' worship of ghosts and goddesses. That the divinities of the Homeric pantheon are all gods of the invaders is not true; there has demonstrably been some fusion with, and affiliation to, certain divinities of the native peoples. But Homer does preserve more clearly than anything else in Greek literature the memory of a religion more distinctly Northern in character than that of pre-Homeric or classical Greece, and with an observable bias in it against the indigenous agricultural and chthonian cults. This is the historical basis of his 'Olympianism,' the root from which it has grown, although we must not assume that the flower represents the creed of any actual age or people. It grew out of popular religion, but, as it appears full-blown in our *Iliad* and *Odyssey*, it is not itself popular religion. It is too selective for that, too systematic. 'It was Homer and Hesiod,' says Herodotus, 'who composed a "theogony" for the Greeks, and who first gave the gods distinctive titles, and defined their forms and functions' (ii. 53). (For a description of the process by which the Olympian ideal was evolved by gradual differentiation from popular notions of divinity, see J. E. Harrison, *Themis*, ch. x. p. 445 ff.)

Of the Homeric gods, the most prominent in the *Iliad* are (besides Zeus) Apollo, Poseidon, and Ares; Hera, Athena, and Aphrodite; in the *Odyssey* (besides Zeus), Athena, Poseidon, Helios, and Hermes.

(1) Zeus is the supreme god, the 'father of gods and men' (A 544), and, among men, in a special sense of kings, who often have the epithet 'Zeus-born.' He is clearly the deity of a people with patriarchal institutions, and exercises a kind of

patria potestas among the other Olympians. His authority is effective, although not unchallenged, especially by *Hera*, his wife, the ancient goddess of Argos, whose rebelliousness towards him may possibly reflect some earlier conflict between their worshippers. Whether Zeus was a specifically Achaean god from the first is not at all certain. There is evidence which indicates that he was worshipped at Dodona long before the coming of Achaeans there. But it is certain that he became the chief god of the people whom Homer calls Achaeans, and his characteristics in Homer are nearly all 'Northern.' Nor is his earliest home in the far north-west forgotten, for Achilles prays to him as 'Zeus the Lord, God of Dodona, Pelasgian' (II 233). But normally he dwells upon Mount Olympus; he is, indeed, pre-eminently 'the Olympian' (A 508, 583, 589). This also without doubt has its historical justification, taking us back to a time when his worshippers dwelt in North Thessaly, as tradition always maintained. Originally, then, 'the Olympian' meant 'he who dwells on Olympus' in Thessaly, although, as many mountains in Greece were named Olympus, and at least one famous seat of Zeus-worship was called Olympia, the epithet 'Olympian' gradually extended its connotation. Homer, indeed, speaks of the gods generally as 'the Olympians.' What is certain is that Zeus dwells by preference on the summit of a mountain (e.g. Θ 3). He watches the fortunes of the war from Gargaros, a peak of Mount Ida in the Troad, where he has a precinct and altar (Θ 47 f.; cf. X 171, Γ 276, Ω 308). This explains why Zeus seems all through the *Iliad* to favour the Trojans. He is the god of both sides, and the god of Ida is opposed to the god of Olympus (Murray, *op. cit.* 90). He is said to dwell in the upper air (B 41ῤ). This is natural in a divinity who is primarily a Sky-god, lord of the elements, above all of the thunderstorm, from which he derives many epithets (*τροπικέραυνος*, *ἐργυδωντος*, etc.; cf. A 580, Π 298). He is armed with the thunderbolt and the aegis, and is himself a great war-god (*ραμῆς πολέμοιο*, Δ 84). The Homeric Zeus is, in fact, an excellent illustration of the way in which certain primitive traits of a divinity may persist side by side with others which obviously belong to a totally different stage of religious thought. He never loses his original character of a Sky- and Thunder-god, but he is gradually moralized into the Zeus of certain great passages already quoted.

(2) The same process has been at work in the case of *Apollo*; but it has gone much further, and eliminated almost every trace of his original nature. The probability is that he was, to begin with, a Sun-god; but no one could infer that from Homer. He appears in the *Iliad* as a great warrior, strong upon the side of the Trojans and Lycians. Apollo, as his cults testify and Homer well knows (A 37 f.), was the great divinity of the Troad; and his favour towards the Lycians would also be explained if we could accept as proved Wilamowitz's hypothesis of his Lycian origin, and translate his epithet *λυκηνγενής* (Δ 101) by 'Lycian-born.' Outside Troy and the Troad, 'rocky Pytho' is already sacred to him (I 405), and he has a consecrated grove at Ismaros in Thrace (ι 200) and in Ithaca (ν 278). But it is strange to find that one of the greatest of Greek gods in the estimation of Homer himself has so little connexion in the Epos with Greece proper. He is armed with the bow (A 45 f.)—an archaic touch. Hence his commonest epithet is 'the Far-darter' (*ἐκρηβέλος*, etc., A 14, 75, 385, 479, etc.). References to other aspects afterwards prominent in the Apolline religion are neither numerous nor important. But the ideal figure of Apollo in Homer, rising at times to sublimity, exercised an

incalculable influence upon Greek art, and, through Greek art, upon modern notions of what is implied in Hellenism.

(3) Conjoined with Zeus and Apollo in the recurring formula of appeal to the gods (B 371, Δ 288, etc.) is *Athena* (*Ἀθήνη*). The association is evidently significant, and it reappears in Athenian religion (see Harrison, *Themis*, 501 f.). Of all the gods, these are the three most highly honoured, Zeus, of course, in the highest degree (cf. Θ 540). Athena is his daughter and favourite child, although reference is nowhere made to the legend of her birth from his head—not the kind of story likely to appeal to Homer. She carries the aegis, like her father the Thunder-god (B 447, E 738); and the explanation of this seems to be found in her development, as Pallas, from the *palladion* (two round shields placed so as to touch at the rim and form the figure 8), which was regarded as a 'thunder-shield.' Hence she is a great war-goddess—indeed, the chief Achaean divinity of war, and more than a match for Ares. Her other name, 'Athene,' connects her with Attica. Whether Homer thought of her as a specially Athenian goddess is not clear from the poems themselves, although the epithet 'Athenaïe' is evidence enough of her historical association with Athens. Another of her epithets, 'Glaukōpis,' points in the same direction; for, although in Homer it evidently means no more than 'grey-eyed' or 'bright-eyed,' it must be derived from *γλαυξ*, and the owl, as every one remembers, was the sacred bird of the Athenian goddess. So with the title 'Boōpis' applied to Hera, the ancient Cow-goddess of Argos (Δ 551). But these traces of primitive religion are not consciously realized, or are deliberately suppressed, in Homer, who imagines Athena in the form of a woman 'fair and tall and skilled in gleaming crafts' (ν 289)—wise, also, and mighty in war. It is the Athena of Pheidias.

(4) The same idealizing tendency has been at work upon *Poseidon*; and it has been remarked that Apollo, Athena, and Poseidon, who are never made to appear mean or ridiculous like most of the other Olympians on occasion, were the chief deities of the Ionian race. Whatever inference may be drawn from that, the Poseidon of Homer is certainly an impressive creation, with something about him of the turbulence and splendour of the sea. For it is as god of the sea that he is consistently presented in both the *Iliad* and the *Odyssey*; although the *Iliad* seems not unaware of his function as the god of horses (Ψ 307, 584). The epithet 'Earth-shaker' (*ἐννοσίγαιος*, *ἐννοσίθων*) does not help us, for it is at least as applicable to his power of making earthquakes as to his shaking the land with his waves; while the title *γαυροχόος* is of uncertain meaning. For the most part Poseidon is a vehement partisan of the Achæans. But he is wroth with them for building a wall that is like to eclipse the glory of that built for Troy by Apollo and himself when they toiled for Laomedon (H 448 ff.); and Zeus gives him permission to destroy the Greek fortifications after the war. To this there is doubtless some background of fact, and we become sure of it when the god rescues Aeneas from Achilles, that the descendants of the Trojan hero may reign in Troyland (Γ 302 ff.). The persecution of Odysseus by Poseidon finds its poetical motive in the blinding of Polyphemos, the uncouth son of the god. But it, too, perhaps rests on some ground of actuality, since the injunctions of Teiresias seem to point to the foundation of some known cult of Poseidon among a people ignorant of the sea (λ 121 f.).

(5) *Ares* and *Aphrodite* are associated in both the *Iliad* (E 359 ff., Φ 416) and the *Odyssey* (θ 266 f.). They are treated unsympathetically by Homer,

especially Ares. The explanation seems to be that both are 'Thracian' divinities, and the Homeric Thracians are enemies of the Achæans. Ares at least is a Thracian in Homer (N 301, θ 361); while there is ground for thinking that Aphrodite was originally his wife; although in the fabliau-like Lay of Demodokos she is represented as the wife of Hephaistos. On the other hand, the wife of Hephaistos in the *Iliad* is Charis (Σ 382). Aphrodite is called the daughter of Zeus and Dione (E 348, 370). She is named the 'Cyprian' (E 330, etc.), and has a sanctuary at Paphos (θ 363). This recalls her undoubted kinship with the Oriental Love-goddess whom the Greeks called Astarte (*q.v.*); for Cyprus early received a large Semitic element in its population. She is also named the 'Cytherean' (θ 288, σ 193). She intervenes to save her son Æneas from the lance of Diomedes (E 311 ff.)—a reminiscence, perhaps, in the tradition of her original nature as a war-goddess. Homer, however, regards her as simply the goddess of Love, peculiarly unfitted, in fact, for the strife of battle (E 429). She serves for the standard of beauty, the 'golden' Aphrodite, and is already essentially the type embodied in the statue of Praxiteles. Ares, on the other hand, typifies the rage of battle, the war-spirit as a mere explosion of animal ferocity; while Athena represents the same spirit controlled and directed by reason.

(6) *Hermes* and *Iris* are messengers of the gods, more strictly perhaps of Zeus. Hermes provides us with a vivid illustration of the contrast between Homeric and popular Greek religion. There is a whole world of difference between the ithyphallic idol worshipped by the Arcadians and Athenians and the god of Homer 'like a young man in the most gracious season of youth' (κ 278). There is, however, one aspect of the Homeric god which accords with the popular conception of him, namely that in which he is *Psychopompos*, Conductor of the Dead to the under world; for in the cults Hermes has important chthonian functions (*ω ad init.*; the passage, however, is late). His magic golden wand (ε 47) belongs to him in this capacity. The epithets he bears (*ἐριόβλιος, ἀδάκρυτα, διάκτορος, ἀργεῖφοντης*) are all unexplained. It is one of the distinctions between the *Iliad* and the *Odyssey* that in the former it is Iris who is normally the messenger of Zeus, while in the latter it is Hermes.

(7) Of the Olympians, *Hephaistos* is most definitely connected with a special locality—Lemnos (A 593, θ 283 f.). As Fire-god he appears sometimes to be almost identified with the element he controls (*e.g.* φ 342 ff.). His skill as a craftsman is much celebrated (A 608, Θ 195, etc., esp. Σ 478 ff.); but for the most part he is treated in a vein of good-natured comedy.

(8) *Helios* (μ 376 ff.) is even more elemental in his nature, being simply the personified Sun, one of the ancient Nature-gods dwelling in the background of Homeric religion. To this background also belong not only Dionysos and Demeter with certain minor divinities such as Aiolos, Kirke, Proteus, Leukothea, but the great company of nymphs, river-gods, and the like, who have in all ages been very real to the imagination of the Greek people (see J. C. Lawson, *Modern Greek Folklore*, etc., Cambridge, 1910, p. 130 ff.). The essential nature of Dionysos and Demeter as spirits of the changing seasons prevented their becoming Olympians, for these do not suffer age or death, whereas the central fact in the ritual of Dionysos and Demeter was a drama of the death and re-birth of the god.

2. The world of the dead.—The Homeric conception of the soul and its destiny differs as much

from that which seems to have been at all times current in Greece as his Olympians differ from the gods of the people. Yet it is a logical accompaniment, either as cause or effect, of the Homeric practice of cremation, and it can be paralleled from history. In Homer the dead man is habitually burned, and a mound heaped over his ashes. Only in this way can his soul (*ψυχή*) be set free to enter the realm of Hades, from which the ghost of the unburned and unburied is excluded by the dead already there (Ψ 71 f.). It is impossible for a race which burns its dead, consuming flesh and sinews (λ 219) until only the charred bones are left, to have the materialistic conception of the soul natural to a primitive people accustomed to bury its dead entire. So Homer imagines the soul as little more than a vapour exhaling from the pyre, and thereafter leading an apathetic life in the under world, a mere shadow (*σκιά*) now. The essential thing about the Homeric ghost is its futility. It is the sense of this, and not any positive suffering, that calls forth the lament of Achilles, that it is better to be a poor labouring man on earth than king over all the dead (λ 488 ff.). Life has lost colour and intensity for the dead, and their existence is a mere reflexion or parody of their earthly lives. This is most clearly brought out in the latter part of the eleventh book of the *Odyssey* (568 ff.)—a passage which is believed to show the influence of Orphic ideas, and at any rate contains other ideas than the rest of the *Nekyia* (λ). Here we find Minos dealing judgments among the dead as he judged his people once in Knossos, and the phantasm of Herakles with his bow as in life, and Orion hunting the wild creatures as he hunted them on earth. This conception of the life after death was perhaps the normal Greek one (*cf.* Pind. fr. 129), and does not seem inconsistent with the Homeric doctrine of the soul. But in the 'Orphic interpolation' we also find certain great criminals—Tityos, Tantalos, Sisyphos—evidently being punished for their sins. There is probably some misunderstanding here of the original meaning of the myths of Sisyphos and the rest; and there is no mention elsewhere in the *Nekyia* of a separate abode or destiny for the good and the wicked; there is no Heaven and no Hell.

Archæologists have found no evidence of any period in historic or pre-historic Greece when inhumation was not the usual mode of disposing of the dead. We can only infer that, while cremation may have been universal among the Achæans when they entered the Hellenic lands, they quickly learned to bury their dead from the earlier inhabitants, who certainly buried theirs. The Homeric doctrine of the soul, which we may assume to have been the Achæan doctrine, since it goes with cremation, likewise speedily disappeared before the native belief in the effective powers of dead men. And, in fact, the language of Homer is not perfectly consistent (*see* Rohde, *Psyche*, i. 1–67). Odysseus digs a trench and pours into it the blood of a black ram sacrificed to Teiresias (λ 23 ff.; *cf.* Paus. ix. 39. 6). The shade of the prophet drinks of the blood before he speaks. This feeding of the dead was a ritual act performed by the Greeks throughout antiquity. But it has no meaning unless the dead man is there to be fed, that is, unless he is buried and not burned; for the feeding was literal enough, the blood being sometimes conveyed to the corpse through a hole in the tomb. As a matter of fact, Teiresias had a pre-historic tomb in Bœotia, where he was regarded as a prophet still capable of delivering his oracles. The sacrifice, which was properly offered at this tomb, is made in Homer to his shade at the limits of the earth. Again, the descriptions of funerals sometimes surprise us by details which look like survi-

vals from an age of embalming and inhumation (e.g. use of *ταρχύειν* [Ω 413, ω 65]). The exact weight to be assigned to these indications is not easy to judge. They may qualify a little, but they do not alter, the fact that in Homer the dead are always burned, and that their souls exist in separation from their bodies in a world reached at the verge of Oceanus in the extreme West; whereas the normal Greek practice was to inhume the dead, and the normal Greek belief was that the soul after death somehow maintained its connexion with the body, and that the realm of Hades was under the earth—as at least one passage in the *Iliad* implies (Τ 61)—to be reached by certain known caverns or clefts in the ground. The contradiction is radical. Ghost-worship, hero-worship—the whole of that ethnonian religion which meant so much to the Greeks of history—are steadily ignored in Homer; Hades and Persephone are mere names.

3. Ritual and priests.—The gods are approached by men with prayer and burnt-offering. The two things naturally go together; and, when prayer is made to a god without sacrifice, it usually contains a reminder of sacrifices offered on previous occasions (cf. A 40). That is because the attitude of the worshipper is not unfairly expressed as *do ut des*. For the same reason a prayer usually includes a vow to make an offering to the god, if the request be granted. Doubtless there is in Homer some lingering feeling that the sacrifice is more than a mere business transaction, that the god of one's own tribe will be more disposed to accept it than an alien deity, perhaps even that the relation thus established between worshipped and worshipper has a certain mystical force. But he does not think of sacrifice as a sacrament. The ritual is elaborately described for us, most fully in the third book of the *Odyssey*, when Nestor sacrifices an ox or cow to Athena (431 ff.). The victim had to be appropriate, as a bull to Poseidon (A 728, γ 6), a white male lamb to Helios (Γ 103), and so on. The victim was expected to be unblemished, and the sacrificers must be ceremonially clean. Sacrifice offered in confirmation of an oath is exceptional in admitting a mimetic or at least symbolical element: 'whichever side breaks the oath first, may their brains be spilt on the ground like this wine!' (Γ 300); and the flesh of the victim was not eaten (310). Since we have to do in Homer with burnt sacrifice to the heavenly gods, the altars he speaks of are the high *bōmoi*. The low *eschara*, which served as altar in hero-worship, means in the Homeric poems simply a hearth (η 153). Temples are rarely mentioned, and then in passages whose evidential value is questioned (see Caer, *Grundfragen*², Leipzig, 1909, p. 297 f.). There are certainly many reminiscences of a time when temples did not as yet exist, and the altar of the god stood in the open air, in a grove or sacred enclosure (*τέμενος*), or by running water (B 305, 506, I 404, ζ 291, etc.). Only one statue is mentioned—that of Athena in her temple at Troy, which must have represented the goddess as seated (cf. Z 303), although the earliest images of the gods were standing. As to priests, they are always attached to some special sacred place and the service of some special divinity. There is no priestly caste in Homer any more than in historical Greece. Sometimes we meet with a priest of a very primitive type, like Maron who 'dwelt in the grove of Apollo' (ι 200), like Chryses, who is called an *ἀρητήρ*, or cursing-man (A 11), like the Selloi at Dodona, who had unwashed feet and slept on the ground (II 235). These last were perhaps prophets rather than priests; and prophets, as we must expect in every saga, play a considerable part in both the *Iliad* and the *Odyssey*, especially Kalchas in the

former and Teiresias in the latter. Theoklymenos had the gift of second sight (ν 351 ff.).

There were also oracles to consult. Homer mentions two: that of Zeus at Dodona (ξ 327), and that of Apollo at Pytho (Delphi [θ 80]). We hear a great deal of omens, drawn mainly from signs of the weather and the flight of birds, but sometimes also from such things as a chance word (*φήμη*, *κλεθδών* [β 35, σ 117]) or a sneeze (ρ 541). There is no instance, however,—and this can hardly be accidental—of augury from the inspection of entrails or from the behaviour of the sacrifice as the fire consumed it. On the other hand, a dream comes from Zeus (A 63); and we hear of an interpreter of dreams (E 149), which may be false or true (τ 562 f.). Of magic, except in the fairyland of Odysseus' wanderings, where incredible things may allowably happen, there is practically no mention (see, however, E 845, τ 457). Curses were addressed to Hades, Persephone, and the Erinyes (I 454, 569); to make them hear, the mother of Meleagros beat with her hands upon the earth.

II. *ETHICS*.—The morality of Homer has an appearance of even greater uniformity and consistency than his religion. It is, on the whole, that characteristic of a feudal society. The cardinal virtue is, no doubt, Courage. Next to Courage comes Wisdom, the capacity for thought and speech. The praise of Achilles and Agamemnon is that they are the first of the Danaoi in council and in battle (A 258); and again Achilles was taught to be 'a speaker of words and a doer of deeds' (I 443). But it is in Odysseus that both virtues are most justly combined; and that example helps us to remember—what no Greek was likely to forget—that the mere possession of wisdom was not enough without the eloquence necessary to recommend it.

Besides these special qualities, and, as it were, beneath them, we have to take account of a more comprehensive feeling, which, although scarcely conscious enough of itself to be in the full sense ethical, is the basis of nearly all the moral virtues in Homer. The classical Greek writers spoke of it as a feeling for the exact 'limit' or 'measure' to be observed in the quality of a man's actions. But in Homer it is still in what may be called its instinctive stage, and one detects behind it a greater reinforcement of emotion than goes with the Aristotelian doctrine of the Mean. It has both a positive and a negative side. That is to say, the feeling is positive enough, but it tends to take the form of a protest against excess. The positive emotion is called by Homer 'Aidōs'; Aidōs is what impels us to avoid the excess. The emotion stirred in us by the lack of Aidōs he calls 'Nemesis.' Thus Nemesis comes to be, as it were, the sanction of Aidōs. But the good man may feel Aidōs in a case where he need not fear the condemnation of gods or men. Then there enters something like the sentiment of chivalry. Achilles would not despoil the dead Eetion of his armour (Z 417 ff.); chieftains must not be laggards in the fight like a mean man (N 114 f.)—*noblesse oblige*. But Aidōs and Nemesis together include more than the mediæval ideal, although they have not all its heroic quality. They are applicable to pretty nearly all the relations in which human beings can stand to one another, but especially to that relation which forms the standing moral problem in a society in dissolution or frankly based upon physical force—the relation of the stronger to the weaker. Aidōs and Nemesis step between conquered and conqueror, preventing the latter from abusing his advantage, from overstepping a certain limit and so becoming guilty of 'Hybris,' which is the violation of Aidōs and the object of Nemesis. In practice, the limit is roughly defined by what is usual—custom

('Dikē'), to which time has brought the moral authority of Law. To observe Dikē is to be just (*δίκαιος*). For Dikē, the Right Way, we may generally substitute 'Themis,' which is specialized to a slightly more ethical sense. It is the nearest word in Greek to what we mean by the Moral Law, but its roots lie in mere ancient use and wont; the plural *themistes* means pronouncements of what is customary, and therefore right and just, in particular cases. In this way a body of precedents may arise, capable in time of being systematized into a legal code. But in Homer we have not yet reached that stage. Even on a point of tribal law there is room for diversity of private opinion—that judgment is best which obtains the applause of the assembled tribesmen (Σ 503 f.). Here public opinion counts for something. But it is only in an ordered society that public opinion can be brought to bear effectively upon individual conduct. Now, Homeric society is not highly organized; and so in it *Aidōs* and *Nemesis* have a supreme value and importance, because, in the absence of an effective administration of justice, it is to them alone in the last resort that the helpless can appeal with any hope of success. The entirely defenceless in this society consist of the dead, the aged, strangers, and suppliants, every one, in fact, who cannot assert his rights by force and has no one to assert them for him. Such people are *αἰδοῖα*; *Aidōs* is due to them, even belongs to them, almost like an attribute. If a man violates *Aidōs* in dealing with them, they become for the first time dangerous, endowed with some baneful power over his life even in their own death. Homer expresses this by saying that they embody the wrath of the gods (*θεῶν μῆνιμα* [X 358, λ 73]), and often speaks of Zeus as the protector and avenger of the stranger and suppliant. But that is only a more theological way of expressing the more primitive notion that the helpless are charged with a quality which contains in itself some mystic power of punishing its violation. And not only the helpless have this quality, but kings and even, to some extent, old men, the former because of the divinity that hedges them and in primitive communities (not, of course, in Homeric society) guards them by a tabu, the latter because of the sanctity attaching to the male heads of families in a patrilinear tribe. Hence, in Homer, kings and old men are *αἰδοῖα*, the latter for a double reason. *Aidōs* and *Nemesis*, indeed, are found to inspire nearly the whole of Homeric morality: truthfulness, for instance, and the faithful keeping of a pledge or oath (*ἔρκος*).

This morality at its best is singularly pure and noble, humane and at times even tender, in spite of the atmosphere of passion and struggle in which the poems are involved. This may easily be illustrated by quotations, from the ringing 'Hateful to me as the gates of Death is the man who hides one thing in his heart and says another' of Achilles (I 312 f.) to the words of Odysseus towards the end of the *Odyssey*: 'It is an unholy thing to boast over the slain' (χ 412). But individual quotations scarcely show it so well as the general tone of both epics. Nay, the mere working out of their plots reveals a profound ethical sense. No one can follow the tragedy of Achilles to its conclusion in the last book of the *Iliad* without an enrichment of moral experience; and, when in the *Odyssey* the suitors at last meet their doom, we feel that this is more than 'poetic justice'; it is a kind of *théodicée*.

The morality of Homer, however, does not everywhere reach this high level. The declensions are rare, but their very rarity makes them instructive. They may be explained in two ways: as justified by the circumstances under which they occur, or as survivals of an earlier stage in the growth of the *Iliad* and *Odyssey*, these being regarded on this

hypothesis as traditional poems. If, for example, we take the treatment of the dead, we find side by side with the thrilling humanity of the sentiment that it is an unholy thing to boast over the fallen, and with the implied condemnation of the mutilation of Hektor's body, instances of both kinds of brutality (A 146 f., N 202 ff., P 126 ff., Σ 177; boasting over the dead—N 374 ff., 414 ff., 445 ff., etc.). These things, it may be said, are done in hot blood; in his normal moments no warrior would be guilty of them. Perhaps it is because there was a certain deliberateness in the actions that Achilles' treatment of Hektor's body (X 305, Ψ 24) and the sacrifice of twelve Trojan youths on the pyre of Patroklos (Ψ 176) offend the poet. There is only one case of torture in Homer (X 474 ff.), which would be justifiable, if torture were ever justifiable. But it is certain that Homer dislikes and makes as little as possible of these inhumanities of warfare; and, if we do find them here and there, it is because they were inherent in the tradition; for they are not romantic horrors invented by the poet, but relics of barbarism, the battle-customs of the Achæans. It has, in fact, been argued that the Homeric poems contain traces of actual expurgation.

The Expurgation Theory is primarily Gilbert Murray's (*op. cit.* ch. v.). The evidence for this cannot be presented except in detail, since it is in minutia only that expurgation is likely to be detected. It may be, for instance, that the incident of the dragging of Hektor behind the chariot of Achilles has been rehandled so as to make it clear that Hektor was already dead, and not, as another and evidently more primitive version insisted, still alive. There is a line in which it is said that Agamemnon 'drew on,' instead of 'drew off' or some equivalent word, the tunics of certain men whom he had slain; stripping the dead and tearing their tunics being regarded as permissible practices (A 100; cf. B 416, II 841). There has perhaps been expurgation of some outrage to the corpse of Hektor at Ψ 24 ff., where the language is not easily intelligible except on the supposition of an omission after line 25. Again, it is said in one passage that Odysseus obtained poison for his arrows (α 261). But this is repugnant to the general tone of the Epos. Accordingly it has been thought that the mention of poisoned arrows elsewhere has been suppressed, notably in one passage where Menelaos is wounded by a shaft and Machaon sucks the wound (A 218).

But expurgation (it is pointed out) is not always successful: witness the instances given of mutilation and cruelty. At the same time it should not be forgotten that Homer is describing a society disorganized by war and recent conquest—the kind of society in which strangers were asked 'whether they were merchants or pirates' (γ 73 f., ι 252 ff.; cf. Thuc. i. 5). In times like those the morality even of good men is put to a searching test, and the surprise comes to be that the Homeric standard is so high. Moreover, it is what is best in the ethics of Homer that is most characteristic; for, as we have seen, its defects are largely traditional or conventional. It is the same with what may be called the domestic morality of the poems. There is a wonderful tenderness in the relations of Hektor to Andromache, of Odysseus to Penelope, of Achilles to Thetis, of Alkinoos to Arête and Nausikaa. One must, of course, allow a little for deliberate idealization, but the nature of the ideal helps us to understand the atmosphere of the normal Homeric household. Sometimes we catch sight of uglier possibilities. Helen and Paris are scarcely a happy pair. There is the extremely painful and pathetic story of Phoinix related in the ninth book of the *Iliad* (447 ff.). Klytæmnestra figures prominently in the background of the *Odyssey*. Yet here again it is the more favourable picture that gives the truer view. The *Odyssey* might almost be called a celebration of the domestic virtues.

In essentials, Homeric morality is that of the great period of Athenian history, although there are things in Homer which shocked the moral sense, of philosophers at least, in Ionia and Athens, just as, on the other hand, there were certain

practices tolerated by public opinion in Classical Greece with which Homer will have nothing to do. It must be admitted that he has no moral philosophy, in the same way and for the same reason that he has no philosophy of religion. One has but to think of Æschylus or even Pindar to realize how unspeculative he is. But that was inevitable. Apart from the fact that a poet is not a moralist, a poem like the *Iliad* must reflect the national point of view—at any rate the point of view of a dominant class in the nation—and not that of the individual artist. Hence the morality of the Homeric poems is popular morality, raised to a new power in virtue of the new splendour of expression given to it. For this reason they were for centuries regarded, in spite of an occasional protest like that of Plato, as a kind of handbook of ethics; as such they were taught in schools. It is impossible to exaggerate the positive influence of Homeric religion and morals in the ancient world and upon modern ideas concerning paganism. They do, in fact, constitute a great deal of what has hitherto been understood by that elusive word.

LITERATURE.—Since the religion and ethics of Homer form an important chapter in the history of Greek religion and morality as well as one of the central problems of the 'Homeric Question,' the literature is very large. Of the older books, C. F. Nägelsbach, *Homericæ Theologiæ*, Nürnberg, 1861; E. Buchholz, *Die homerischen Realien*, Leipzig, 1871-85 (iii. 'Die homer. Götterlehre,' etc.); and W. E. Gladstone's books on Homer have collected the facts. One may now use T. D. Seymour's *Life in the Homeric Age*, New York, 1907, in its relevant chs., and O. Gruppe's *Griech. Mythol. u. Religionsgesch.* (In Iwan Müller's *Handbuch d. klass. Altertumswissenschaft*), Munich, 1906. The evidence is discussed in L. R. Farnell, *Cults of the Greek States*, Oxford, 1896-1909; in J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Camb. 1903, and *Themis*, do. 1912; in E. Rohde, *Psyche*, Tübingen, 1907; in Gilbert Murray, *Rise of the Greek Epic*, Oxford, 1911, and *Four Stages of Greek Religion*, London, 1912, ch. ii.; and in Andrew Lang, *World of Homer*, London, 1910.

The articles in Roscher and Pauly-Wissowa may also be consulted. Of the historians of Greece, perhaps E. Meyer has treated the subject most suggestively in his *Gesch. des Altertums*, ii., Stuttgart, 1893, p. 42 f.

HOMILETICS.—See PREACHING.

HOMIOUSIA, HOMOOUSIA.—See ARIANISM.

HONESTY.—Honesty, or the quality of being honest, is a virtue which belongs to the ethical genus justice. In common usage, it often approximates in meaning to honour (*q.v.*). As the original *honestas* is the character or repute attaching to the holder of an *honor*, or position of dignity, so honesty may be distinguished from honour as cause from effect, when the latter is used in its objective sense as the respect in which the individual is held by society. If we trace the usage of the word in English literature, we find that it has various shades of meaning, including *chastity*, or virtue in the limited sense (cf. the famous passage in Shakespeare, *Hamlet*, III. i. 107, and also *As You Like It*, III. iii. 30), *generosity*, *uprightness*, *truthfulness*, and *fidelity* in one's relationships with others. Inasmuch as the virtue of honesty involves regard both for moral rights and for rights of property, it may equally well be classified under benevolence and under justice; for Aristotle's definition of justice as the practice of entire virtue towards one's neighbour (*Eth. Nic.* v. 13) is in modern ethics widened out by the concept of benevolence (*q.v.*), which is the principle of seeking the good of the individual as man and not merely as a member of the same *polis*, or community (cf. J. H. Muirhead's classification of the forms of good in *Elements of Ethics*, London, 1910, p. 201). Breaches of the law of justice or benevolence, when these take the form of dishonesty, untruthfulness, or covetousness, are

commonly judged bad on the ground of the harm that they inflict on others. The essence of honesty as an other-regarding virtue consists in conduct based on the conviction that the interest of our neighbours is identical with our own. The Christian conception of 'the Kingdom of heaven' in its social aspect implies a standard of conduct in which the well-being of others is not distinguished from one's own well-being. Hence, in comparing the utilitarian formula, 'every one should count for one and no one for more than one,' with Kant's categorical imperative, T. H. Green (*Proleg. to Ethics*, Oxford, 1890, p. 224f.) pronounces the latter superior as the rule on which the ideally just or honest man acts. Whether the *summum bonum* be defined as self-realization or 'the Kingdom of heaven' in the Christian scheme of life, humanity in the person of every one is always to be treated as an end and never merely as a means. 'Every one has a *sumum* which every one else is bound to render him' (*ib.* 231).

Cicero (*de Offic.* III. xxi. 83) identifies *honestum* (the Latin form of τὸ καλόν) with *utile*, after the manner of the Stoic ethicists (cf. 'honestate dirigenda utilitas est, et quidem sic ut haec duo verbo inter se discrepare, re unum sonare videantur'—a dogma of ancient philosophy which is perpetuated in the maxim 'honesty is the best policy'). The identification of honesty with expediency belongs to an obsolete view of society.

'It is to the duties of Justice and Benevolence taken together that we should ultimately refer the duty of Loyalty to existing social institutions and particularly to the State; the duty of Honesty, which means respect for the existing laws of property so long as they are not capable of immediate improvement by the individual's own action' (H. Rashdall, *Theory of Good and Evil*, Oxford, 1907, ii. 273).

The scrupulous regard for the rights and possessions of others which honesty is commonly held to imply is capable of extension in various directions. There is, for example, the duty of producing (or trading with) nothing which is not what it professes to be. J. S. Mackenzie (*Manual of Ethics*, London, 1900, p. 221) refers to Ruskin's teaching on modes of artistic expression (see ch. 'The Lamp of Truth,' in the *Seven Lamps of Architecture*) and also to the knowledge of the 'crammer.' An 'honest day's work' means no shirking, just as an 'honest' piece of cloth means just length or breadth (see quotation from Bischoff, *Woollen Manuf.*, 1862, ii. 95, in *OED*, s.v. 'Honesty'). There is also the duty of being honest with one's self, the courageous acknowledgment of failure or defect. Many problems of casuistry arise out of the *suppressio veri* or *suggestio falsi* adopted, e.g., by a legal advocate engaged in the attempt to save the guilty (see H. Sidgwick, *Methods of Ethics*, London, 1901, on 'Veracity'); or, again, out of the practice of subscribing to a formula or creed the terms of which can no longer be interpreted in their original sense; or out of the failure of individual members of a trade union to keep the obligation entered into by their leaders. Such cases are, in general, to be determined by the consideration of the effects of our action on the moral world of which we are members (cf. Mackenzie, *op. cit.*, on 'The Commandments,' cxl., with quotations in the footnote, p. 206). The honest life, which includes honesty of speech and deed and motive, is not to be regulated by any outward code of duties; for, if in ethical theory it is based on respect for the social order, from the religious standpoint it owes its sanctions to the Divine ideal of perfection expressed by the Psalmist in the words, 'Thou desirest truth in the inward parts' (Ps 51⁶).

LITERATURE.—See authorities mentioned under art. HONOUR.
R. MARTIN POPE.

HONEY.—I. Honey was highly valued among the ancients, both as a food and on account of the inherent properties which it was supposed to pos-

ness. The esteem in which it was held by the ancient Hebrews is indicated by the insistence upon the character of the Promised Land as a land flowing with milk and honey (Dt 6³ and often), while it is frequently used in simile or metaphor in the OT, especially in the Psalms—e.g. of the word of Jahweh, 'sweeter than honey and the honeycomb' (Ps 19¹⁰). The remembrance of a good man is 'sweet as honey in all mouths' (Sir 49¹). Three different kinds of honey are mentioned in the Bible. Of these, however, the term *d'hash* (very frequent) covers not only the glutinous bee honey or vegetable honey, but a syrup of dates or dates themselves, and the syrup of grapes; the last, under the name of *dibs*, is still common in Arabia, and looks like coarse honey; indeed, since the spread of Islām it has become the principal form in which the grape is used. The other forms of honey mentioned are *ya'ar* (Ca 5¹), the honey of bees only; and *nōpheth* (Pr 5³ 24¹³ 27⁷, Ca 4¹¹), usually associated with the honeycomb. Josephus mentions bees' honey as a natural product of the Plain of Jericho (*BJ* IV. viii. 3), probably referring to the honey of wild bees found in the rocks. Although there is no reference in the OT to the domestication of bees, it was of great antiquity in Syria; it is first mentioned by Philo, who says that the Essenes were fond of honey. The Jews took honey by smoking out the bees, but two combs were left for the winter. It was eaten alone as a delicacy (cf. the use made by Samson of the honey taken from the lion [Jg 14⁹]), or as a relish with other articles, sometimes with curdled milk. It was also used to sweeten cakes (cf. Ex 16²¹, Ps 119¹⁰³). A drink resembling mead was composed of wine, honey, and pepper. Honey also formed an important staple of commerce, being exported in jars through Tyre. With butter and milk it is still one of the favourite foods of the Bedawin.

2. Throughout the whole Mediterranean area, honey was used for *sweetening purposes* until the introduction of sugar under the Roman Empire. The ancient Egyptians made a sweet beer from honey; the Homeric heroes drank a liquor of which honey was an ingredient (cf. *Il.* xi. 630 f.). In later times, honey was used largely by the Greeks in making the many varieties of cakes (*πλακοῦντες, πέμματα*) eaten as dessert, of which they were extremely fond, special varieties being made at Syracuse, Samos, Alexandria, and elsewhere (Athenæus, xiv. 645 f.). The Pythagoreans are said to have lived on a diet of bread and honey (*ib.* ii. 47). The *metheglin* of the ancient Briton and the *mead* of the Teutonic races were compounded of honey; in the Chronicle of Saxo Grammaticus (tr. Elton-Powell, London, 1894, p. 393 ff.), Starkad includes the drinking of mead among the luxurious habits introduced into Scandinavia by the Teutons. A mead or honey ale is mentioned in the Rigveda. The Roman *mulsum*, the Russian *lipetz*, and the *clary* and *bragget* of mediæval England, are beverages in the composition of which honey was used.

3. At one period in Egypt and Assyria, honey was used for *embalming the dead*. The Muhammadan writer 'Abd al-Latif mentions the case of a child whose body was found in a sealed jar of honey. Anointing the dead with fat and honey for purposes of preservation is mentioned in Homer (*Il.* xix. 33, xxiii. 170). The body of Alexander the Great was preserved by this method; and Josephus (*Ant.* XIV. vii. 4) says that the body of king Aristobulus was kept in honey until Antony sent it to the royal cemetery in Judæa.

4. Honey forms an important element in the *diet of many primitive peoples*. In Australia, where food is frequently difficult to obtain, it is in great request.

When the honey has been ladled out with mops from the hollow tree in which the nest is usually situated, it is mixed with water in wooden troughs, and sometimes left to ferment. In a children's game imitating the taking of honey, the piled-up hands are removed one by one to represent the lopping of the boughs; if girls are playing, their arms are supposed to be lopped at the elbow, as women are allowed to touch only the honey from the lower limbs of the tree where the drippings are (N. W. Thomas, *The Natives of Australia*, London, 1906, pp. 111, 133). Honey is also obtained by digging out the nests of the honey ant (Spencer-Gillen, *Across Australia*, London, 1912, i. 122), or direct from flowers by sucking or soaking.

Honey-beer or honey-wine is commonly drunk by most of the tribes of South and East Africa. In Nigeria, honey and millet is a favourite drink (A. J. N. Tremearne, 'Notes on the Kagoro and other Nigerian Head-Hunters,' *JRAI* xlii. [1912] 177).

The honey of the wild black bee, which is used by the Bathonga for purposes of divination in magical horns, is obtained by digging out the nests, which are some two to three feet underground. Although any one may eat the honey, the nests can be found only by members of certain families (H. A. Junod, *The Life of a South African Tribe*, London and Neuchâtel, 1912, i. 303).

The Anyanja of Central Africa, whose only bread is a roll called *mkate* made of maize-flour, bananas, and honey, use honey from the nests of wild bees, found in hollow trees, but the river people hang cylindrical boxes on the trees in which the wild bees build. The cylindrical bee-box is in use as a hive for wild bees among most East African peoples. Rights of property in these boxes are recognized. Among the Atharaka, who cultivate honey in barrels similar to those in use among the Akamba, ownership is established by brands consisting of elaborate arrangements of dots and strokes. Honey is taken by smoking the bees, and is eaten or, more frequently, used for making beer (A. M. Champion, 'The Atharaka,' *JRAI* xliii. 81). Both the Akikuyu and the Akamba regard the theft of honey as a serious offence. The Akikuyu enforce strictly the equitable distribution of a dead man's property, of which honey forms an important part. After the death of a father, none of the sons may go into the woods to take honey from the father's hives until the paternal uncle has done so. Any who break the law become *makua*, and can take honey only when the paternal uncle has provided a sheep to be sacrificed, after due observance of a ritual, by one of the elders.

It has been suggested that the custom has been devised to prevent appropriation of the honey before the estate has been regularly divided up (C. W. Hobley, 'Further Researches into Kikuyu and Kamba Religious Beliefs and Customs,' *JRAI* xli. [1911] 412).

The Rock Veddās of Ceylon recognized the rights of a family group to collect honey over certain lands from which other families were barred. With them, honey was used not only as a staple of diet, but also as the chief article of barter. The importance attached to it is indicated by the elaborate ceremonial preceding the honey-getting to propitiate the spirits and secure a good crop. It is recorded that in olden days a hollow bough containing a wild bees' nest was frequently kept in the rock shelter. The nests are usually found in clefts in the cliffs, and the honey is taken by men who swing down by ladders. Boys are systematically taught to collect honey (C. G. and B. Z. Seligmann, *The Veddās*, Cambridge, 1911, pp. 62, 91, 252 ff., 326 ff.).

Honey is also used as an article of barter among the Suk of East Africa, honey-wine being part of the price for which a stranger may hire land, the other part being two goats. The meat is eaten by the fighting men of the tribe, while the elders drink the wine (M. W. H. Beech, *The Suk*, Cambridge, 1911, p. 17). The Masai youth opens negotiations for his marriage by sending a pot of honey to the parents of his future bride (J. R. L. Macdonald, 'Tribe met with during the Juba Expedition of 1897-99,' *JAI* xxix. [1899] 233).

The custom of reserving the honey-wine for the elders also obtains among the Akikuyu, except at certain festivals, and the Masai. At the Masai circumcision ceremonies, the honey-beer, which forms an important part of the feast, may be drunk only

by the elders (S. Bagge, 'The Circumcision Ceremony among the Naivasha Masai,' *JAI* xxxiv. [1904] 167, 169).

5. Honey was largely used by the ancient Egyptians as an ingredient in medicine, and appears frequently in the formulæ of the Ebers and other medical papyri. Pliny (*HN* xxii. 50) gives a long list of bodily disorders for which it was believed to be an efficacious remedy. The Greeks regarded a diet in which honey was the chief element as especially efficacious in securing longevity; and Democritus was said to have delayed his death some days by its smell or exhalation (*ἀναφωρά*) alone (Athenæus, ii. 47 f.). In Brand's *Popular Antiquities* (1870 ed., iii. 54), old honey is mentioned as a favourite cure for cough or bile, and is said to increase strength and virility.

Medicinal and health-giving properties are attributed to honey by primitive races as well as by the ancients. The Veddas regarded the good health they formerly enjoyed as due to the fact that at one time their diet consisted largely of honey (Seligmann, 326). The Akikuyu medicine-man mixed honey with the decoction of herbs which he administered in cases of illness (H. R. Tate, 'Further Notes on the Kikuyu Tribe of British East Africa,' *JAI* xxxiv. 262).

Possibly the same idea underlies the custom followed by the Wa-Sania of British East Africa which decrees that, after the birth of a child, the mother during the period of seclusion shall eat only honey mixed with hot water. Male children after circumcision, which takes place at the age of three or four years, for seven days eat nothing but honey mixed with a very little water (W. E. H. Barrett, 'Notes on the Customs and Beliefs, etc., of the Wa-Giriama of British East Africa,' *JRAI* xli. 26, 31). Nandi boys, after circumcision, must eat from honey-barrels, and not from their usual hide-platters (A. C. Hollis, *The Nandi*, Cambridge, 1909, p. 55). In Madagascar, before circumcision, a drop of honey is placed on the tongue (J. Siree, *The Great African Island*, London, 1880, p. 314), while in India the Deccan Brâhman drops honey into the mouth of the new-born child; the higher-class Hindus, especially the Brâhmans, do the same, but use a gold spoon or a ring (J. M. Campbell, 'Notes on the Spirit Basis of Belief,' *IA* xxiv. [1895] 259). Honey is sometimes used among the Muhammadans of the Panjâb as the chief ingredient of the *ghuṭṭi* given frequently for a period extending over some days to a new-born child by the most respected matron of the family, as a part of the birth ceremonies, in order that the child may absorb her virtues (H. A. Rose, 'Muhammadan Birth Observances in the Punjab,' *JRAI* xxxvii. [1907] 242).

6. Honey was regarded by the ancients as a substance of great purity, not unnaturally, in view of the supernatural origin and powers attributed to bees in primitive belief. Milk and honey in the early Christian Church was held to suggest consecration, while a portion of milk and honey was placed in the mouth of the newly-baptized, in allusion to the name anciently given to Canaan (Augusti, *Christl. Archæol.*, Leipzig, 1836, ii. 446; cf. also Drews, *PRE³* xii. [1903] 704). On the other hand, in some of the instances cited, honey was administered at critical seasons, namely, at initiation or soon after birth, when evil spirits might be expected to be specially potent. Honey and sweet things were believed to drive evil spirits away. In the ceremonies following birth among the Hindus of the Panjâb, sweetmeats play an important part, and at one stage are passed around the head of the child for the stated purpose of driving away evil spirits (H. A. Rose, 'Hindu Birth Observances in the Punjab,' *JRAI* xxxvii. 231). Marriage is another occasion on which the influence of malignant powers is specially to be feared, and we may attribute the use of honey in marriage ceremonies to its power over spirits, even though another explanation of the custom be offered by the people themselves—usually that it will secure harmony in married life. Among the Deccan Hindus, when the bridegroom comes to the bride's house, honey and curds are given him to sip. In Bengal the bride has certain parts of her body anointed with honey. The gypsies and other peoples of the Balkan Peninsula follow the same custom.

Among the gypsies in Serbia, in the course of the ceremonies which last for several days preceding the marriage, the bridegroom sends the bride skeins of yellow silk, and the next day these are stuck all over her face with honey and purple stain. She then leaves her father's house, and is driven to that of her father-in-law in a cart. On her arrival, there is handed to her by her mother-in-law a sieve of oats and some honey. She scatters the oats from the sieve and smears the honey on the door-post.

In Croatia and Turkey a cup of honey is handed to the bride at the door. The Poles ornament the bride's lips with honey. At Vlach weddings, the bride is given honey and butter with which to anoint the door. It is also the custom among the Balkan peoples mentioned above for the bride and bridegroom to eat together, in the evening, a cake baked some days before, which is dipped in honey as it is eaten (E. O. Winstedt, 'Forms and Ceremonies,' *Journ. Gypsy Lore Soc.*, new ser., ii. [1909] 352 f.). Among the Bathonga, however, who regard honey as a 'mysterious thing,' a man visiting the relatives of his betrothed must avoid honey, and it must not be eaten in the presence of the bride in the first year of married life; if she perceived that her husband had eaten honey, she would return to her parents 'as honey flows' (Junod, *op. cit.* p. 239).

Among the Argives a cake made with honey was sent from the bride to the bridegroom (Athenæus, xiv. 645). In Modern Greece the priest, bride, and groom walk round the altar through the incense fumes while the guests pelt them with sweetmeats, and among the peasantry honey is smeared on the lintel of the young bride's door (K. Rodd, *Customs and Lore of Modern Greece*, London, 1892, pp. 91, 96). In connexion with the power of honey over evil spirits, significance attaches to the belief in its cleansing powers held by the Hindus, who use it to wash their household gods.

7. An explanation of the power of honey as a protection against evil spirits may be sought in its use in connexion with religious ritual. Reference has been made to the belief in its purity. By this quality it was peculiarly fitted to be the food of the gods. In the Rigveda, it was regarded as of divine origin; the *Āsvins* carry it to the bees (cf., further, Macdonell, *Ved. Myth.* p. 49 f. [*GIAP* III. i. A. (1897); Hillebrandt, *Ved. Myth.*, Bonn, 1891-1902, i. 239-241]). It is held to be the food of the gods and of divine origin by the Hindus; and, when they take the honey from the hive, they hold in their hand a plant (*Ocimum nigrum*) sacred to Viṣṇu. Viṣṇu, it will be remembered, was represented as a bee on a lotus leaf, while Kṛṣṇa has a blue bee on his forehead. Honey-mixture was employed in greeting a king, Brâhman, or other guest of honour (Manu, iii. 119 f.; Hillebrandt, *Rit.-Lit.* p. 79 [*GIAP* III. ii. (1897)]), and it is also employed in the Vajapeya sacrifice (*Satapatha Brâhmana*, v. i. 1. 6 f.; *Kâtyâyana* xiv. ii. 9, iv. 15-18; cf. on this Hillebrandt, 141-143). It is one of the substances given a new-born child in the *Āyusya* rite and at its first feeding with solid food at the age of six months, as well as, according to *Kausika Sūtra*, xxiii. 1, at the first meal eaten in a new home; and it is also enjoined as part of the sacrificial food at the *Anvāṣṭakya* in honour of the manes (Hillebrandt, 45, 48, 82, 95; see also Hillebrandt, *Ved. Myth.* i. 238-244). In Finnish mythology the bee is implored to fly over the moon and sun into the dwelling of the creator and to carry health and honey to the good (de Gubernatis, *Zool. Mythology*, London, 1872, ii. 218). In Teutonic mythology, honey was the chief ingredient of the divine drink (Grimm, *Teut. Myth.*, tr. Stallybrass, London, 1882-88, ii. 695 f.), as was nectar among the Greeks. In the Edda a divine fall of honey trickled from the tree Yggdrasil. The Nandi believe that the Thunder-god takes honey from their barrels from time to time (Hollis, 135),

while the Veddas invoke the *yakina* (the female spirits who form one of the chief elements in their religious beliefs) in the ceremony which precedes the taking of honey; they are closely associated with the bees, because they live at the top of high rocks, and some of the honey is poured on the rocks for them when the nests are taken—an ancient custom called 'to charm the drawing of honey' (Seligmann, pp. 162, 252, 291).

Honey thus forms a peculiarly appropriate offering to the gods. It was, however, forbidden to the Jews to offer it on the altar (Lv 24), Maimonides says (J. Townley, *The Reasons of the Laws of Moses: from the 'More Nevochim' of Maimonides*, London, 1827, p. 275), because the heathen nations around offered honey to their gods; according to another suggestion, it was prohibited because it fermented and gave off an unpleasant smell when burnt (Aben Ezra), which was incompatible with a 'fire of sweet savour.' Firstfruits and honey, however, were offered for the support of the high priest (2 Ch 31^b). A papyrus fragment found at Oxyrhynchus, dating from the 2nd cent. A.D., contains a bill for, among other things, '16 cakes, oil, honey, milk, and every spice except frankincense,' supplied to the Strategus of the nome for 'the sacrifice of the most sacred Nile.' The offering of a honey cake is of frequent occurrence in Greek ritual, especially in connexion with chthonian deities, apparently because bees were regarded as the souls of the dead (Gruppe, *Gr. Mythol. und Religionsgesch.*, Munich, 1906, p. 801; cf. 909 f.), and honey was also used in rain-charms (*ib.* 801, 819).

Athenæus (xiv. 645) mentions cakes offered to Artemis when the sun was rising and the moon setting. Though no mention is made of honey in their composition, it may be recalled that a priestess of Artemis and Demeter was known as Melissa. At Lebadea, at the shrine of Trophonios, the suppliant went with an offering of a honey cake in each hand for the prophetic snake. A honey cake was put in a hole for the goddess Ge when a certain medicinal herb was gathered in Attica. Cakes of barley and honey were thrown down a chasm near the sanctuary of Ge in the *temenos* of Zeus Olympios at Athens every year (L. B. Farnell, *CGS* iii. [Oxford, 1907] 10 ff.). Sospiter at Olympia had, like Trophonios and Erechtheus, the snake's service of the honey cake (see Pausanias, vi. xx. 3, 5). The cakes were brought for the serpent, the animal form of the god. Sospiter is apparently the fertility spirit (J. E. Harrison, *Themis*, Cambridge, 1912, p. 232), but the snake is usually associated with the chthonian aspect of Greek belief; and the other chthonian deities mentioned, though connected with fertility, were prominent in their connexion with the underworld.

8. Honey was included in the offerings to the dead. The sweet beer of the Egyptians is mentioned in the Liturgy of Funerary Offerings as well as various kinds of sweetmeats. In view of the fact that the offerings as a whole were intended as food for the dead (*q.v.*), it would be unsafe to lay too much stress upon this custom as evidence for a peculiar connexion of honey with the spirits. There are, however, several customs followed in parts of Africa which suggest a course of development in which an offering, of which honey forms a part, becomes a protection. In Abyssinia, honey-beer is drunk before a solemn conference. Among the Suk, before drinking a fresh brew of honey-wine, the elder entrusted with the wine-jar fills a cup and pours the wine out on each side of the door, invoking the spirits of the dead to keep them in safety. The elders of the Kikuyu of East Africa, at a burial, pour some honey and cooked fat on the grave after it has been filled in, saying: 'We give you this to drink' (Hobley, *JRAI* xli. 419). Further, in the course of the ceremonial by which the *kirume*, or dying curse, is removed, the elders, or rather the members of the special class of elders competent to perform the ceremony, pour fat, milk, honey-beer, etc., into a hole in the ground. From other elements in the ceremony it appears that this is an offering to the spirit of the

departed, but in the underlying ideas propitiation and protection closely approximate. The identification of the two aspects appears to be complete in the folk-stories of the Ekoi of S. Nigeria, in which it frequently happens that the living who have penetrated to the land of ghosts are pursued on their return, and save themselves from further pursuit by spreading food across the entrance to their town (P. A. Talbot, *In the Shadow of the Bush*, London, 1912, p. 36).

LITERATURE.—See references given in the article. For beliefs and practices connected with honey, especially in India, see J. M. Campbell, 'Notes on the Spirit Basis of Belief and Custom,' in *IA* xxiv. (Bombay, 1895) 259. References for the use of honey in Ancient Palestine will be found in *Ebi*, and in McClintock-Strong's *Cyclop. of Bibl. Literature*, New York, 1872, s.v.

E. N. FALLAIZE.

HONOUR.—1. Ethics.—Honour is high regard or esteem, whether felt, given, or received. It implies, like honesty (*q.v.*), a sense of what is due or right, and fidelity to one's obligations; like 'honesty,' it is used from Gover onwards (see *OED*, s.v.) of chastity or purity; and, finally, it takes on a concrete, objective meaning as equivalent to exalted rank or position (or in plur. of marks of regard, distinctions, decorations, and the like). The word has passed into colloquial speech in such phrases as 'on one's honour,' 'honour bright,' etc. (see *OED*). In the phrase 'code of honour,' the word implies 'a certain system of reciprocal rights and obligations . . . and also the individual's recognition of these' (see *DPhP*, s.v.), and in such phrases as 'the honour of an artist' or 'a soldier,' or 'the honour of the army' or 'the church' and other institutions, we have a personal or collective connotation implying recognition of self as a member of this or that community or class or profession. Sometimes the phrase amounts to little more than reputation, e.g. 'the honour of a husband,' when impaired by conjugal infidelity or the failure to observe personal obligations.

The 'code of honour' is a species of etiquette observed by particular classes, trades, professions, etc. It thus belongs to the department of 'minor morals' (see Mackenzie, *Manual of Ethics*², p. 7, who points out the ethical value of 'Mrs. Grundy' and other conventional laws as safeguards against wrong and injustice). Whether honour takes the form of high-mindedness in business or commercial transactions, or of politeness and good-breeding in society, or of loyalty to one's particular class or caste or denomination, it is to be placed among the virtues as a descendant of benevolence ('justice touched with emotion'; see Muirhead, *Elem. of Ethics*², p. 201). The duties imposed by the code of honour in graver matters, or the code of politeness or good-breeding in lighter matters, according to Sidgwick (*Methods of Ethics*, p. 31), are often undistinguished from moral duties by unreflective persons; e.g., there is the practice of duelling (*q.v.*)—a custom which is imposed by an unethical society and which an individual may reject on moral or religious grounds. His conduct would be classed by some as dishonourable, by others as a virtuous act. Thus 'honour' not infrequently involves a conflict with ethical right in certain stages of social development. No discrepancy is felt, e.g., in Hellenic civilization, where the idea of *καλοκράτεια*, the code of honour, and the moral code are not differentiated as they are in mediæval and modern times. See the valuable discussion in *DPhP* already quoted, where the distinction is described as 'a purely sociological distinction quite independent of ethical theory,' and where reference is made to subtle points of casuistry arising out of the distinction, as when a freemason betrays his country rather than a member of his own chapter (honour *versus* honour). We find a similar conflict of duty in the well-known

couplet of the Elizabethan song-writer, Sir Richard Lovelace,

'I could not love thee, dear, so much,
Loved I not honour more,'

where it is implied that the passion of love has to be subordinated to the higher morality.

In Christian ethics the idea of honour is associated with belief in a moral Judge. So v. Haering (*Ethics of the Christian Life*, Eng. tr., p. 256 ff.) remarks that 'in the idea of "honour" there is the implicate of the splendour of the Good as exhibited to a judge, whether this judge is the person himself or another; or, finally, God as the reader of all hearts, and the sole Judge of all.' The same writer proceeds to argue that to strive for recognition by a moral judgment is a task which the Christian cannot forgo, and quotes with approval Luther's saying at Worms: 'They have deprived me of fame and honour, but sufficient for me is my Saviour and Redeemer Jesus Christ.' The honour of man is always subordinated by NT writers to the honour to be hereafter accorded by a Righteous Judge (cf. Ro 2', 'seek for glory and honour and immortality'; and 1 P 1', 'found unto praise and glory and honour,' where the idea of a future life is prominent). But the honour of the Judge perpetuates the honour of this world. The Pauline distinction (2 Ti 2²⁰) of vessels 'unto honour' and 'unto dishonour' implies a destiny belonging to time, whatever may be the final issues; it is the destiny of unselfish service, in which the particular ability of the individual is consecrated to the uses of the Master of the 'great house.' The only scintilla of honour belonging to the sinner is, according to v. Haering, the fact of his eternal destiny—a statement which largely defines the assumption underlying Christ's teaching regarding man; for to Him humanity, even in its most degraded form, is endowed with immortality.

2. Psychology.—We may derive some hint as to the psychological value of honour in Paulsen's definition of honour, social or political, as 'ideal self-preservation' (*System of Ethics*, Eng. tr., ch. vi.); or in v. Haering's remark that 'shame is the guardian of honour' (*op. cit.* p. 257), which implies that there is a connexion between the moral concept involved in honour and an emotion which, according to Macdougall (*Social Psychology*, p. 145), is 'second to none in the extent of its influence upon social behaviour.' The conduct of the man of honour is undoubtedly regulated by social blame and praise. The very idea of 'honour' involves a reference to our social surroundings, the circle in which we move, or the larger world to which our influence inevitably extends. Psychologically, this is an advance on an earlier stage in the development of self-consciousness when natural impulse is regulated by the system of rewards and punishments imposed upon us by external authority, e.g. in the family or the school. It is a distinct advance when character and conduct are alike shaped by regard for the moral approval and disapproval of our fellows. Finally,

'this regard leads on sane men to the higher plane of conduct, conduct regulated by an ideal that may render them capable of acting in the way they believe to be right, regardless of the approval or disapproval of the social environment in which their lives are passed' (Macdougall, *op. cit.* p. 202).

The nobler sense of honour which we associate with the saint or with natures peculiarly sensitive and refined lifts such individuals far above the coarse consideration of the verdicts of the circle to which they belong. R. Browning's Rabbi ben Ezra, with his conviction,

'All I could never be,
All men ignored in me,
This, I was worth to God,'

expresses devotion to a spiritual ideal which is

unaffected by the praise or blame of men. At the same time, no ideal of conduct can be perfect unless it is a synthesis of the self-regarding and altruistic sentiments. The life of honour is one which we aim at realizing for all men, while we seek its perfection for ourselves.

R. MARTIN POPE.

HOOKER. — I. Life and works. — Richard Hooker, author of *Of the Laws of Ecclesiastical Polity*, was born at Heavitree, a suburb of Exeter, probably in March 1535-54. He was the son of Roger Hooker and his wife Joan. Roger and his elder brother John are described as the fifth in descent from Iago Vowell of Pembroke, who married the daughter and heir of Richard Hooker of Hurst Castle, Southampton. Vowell is, therefore, probably the Welsh surname. Roger's father and grandfather, with the name Hooker, filled the position of Mayor of Exeter in the years 1529 and 1490. His brother John, as a result perhaps of his genealogical researches, described himself in early years as Vowell *alias* Hooker, and later in life as Hooker *alias* Vowell. This uncle's influence upon Richard's career was of such importance, and his work as an antiquarian and historian in originality and thoroughness has so much in common with the more famous achievement of his nephew, that some account should be given of him in any description of Richard's life.

John Hooker's father died when he was about ten years old, and John was educated by Dr. Moreman, Vicar of Menheniot, in Cornwall. He proceeded to Oxford, to Corpus Christi or to Exeter College, where he engaged in legal studies, but took no degree. From Oxford he went to Germany, pursuing his legal studies at Cologne and also at Strassburg, where he lodged in the house of Peter Martyr, and acquired a sympathy with his religious position. Further travels on the Continent were stopped by war, and he returned to Exeter to devote himself to 'the reading of histories and seeking of antiquities and somewhat to armory.'¹ He was made first chamberlain of the city in 1555. He has left large collections regarding the history of Exeter; but his chief literary monument is his edition of Holinshed's *Chronicles* in 1586-87, and his own contributions to that compilation. He is the author of a graphic account of the rebellion in the West country in 1549, and of recent Irish history. He went to Ireland as the agent of Sir Peter Carew of Mohun's Ottery, near Exeter, who claimed estates in Ireland, and found John Hooker's skill in deciphering and interpreting old deeds and records very useful in promoting his claims. Hooker's first letter from Ireland, dated May 1568,² urges Sir Peter to come to Ireland, and advises him to engage as his steward, to manage his Irish household, Roger Hooker, the writer's brother and the father of Richard. Roger had been 'sometime servant and steward to Sir Thomas Challoner,' and 'now dwelleth with the old Lady Mountjoy.' It is clear, therefore, that Roger's education and social status were below his brother's. Sir Peter brought Roger to Ireland in 1568, and we find him writing as steward from Leighlin, County Carlow, to ask for protection against rebel raiders. He is stated to have died in 1591. John outlived his more famous nephew, dying in November 1601.

We can now turn to Isaac Walton's *Life of Richard Hooker*, which was undertaken at the request of Archbishop Sheldon, in consequence of the imperfections of the *Life* prefixed by J. Gauden to his edition of Hooker's *Works*, published in 1662. Walton's famous and beautiful biography appeared in 1665, and has become one of the classics of English literature. But in using it one ought to keep in mind that Walton was born in 1593, and was therefore only seven years old when Hooker died, and allowance must be made for the 17th century tone and atmosphere of the biography, which is conveyed with such exquisite literary art. The facts we have given above explain why we hear nothing of Hooker's father in Walton's *Life*;

¹ Harleian, 5827, p. 51, Brit. Mus. Lib.

² John Maclean, *Life and Times of Sir Peter Carew*, London 1857 pp. 202, 222, 223.

they also give a reason why a special effort should have been made to send Richard to college in 1568—because both his father and his uncle were out of England. John Hooker had made the acquaintance of Jewel in 1559, when the Government appointed the latter a commissioner in the West, and it was natural that he should seek the Bishop's help in sending his promising nephew to college. Walton tells us that Richard's exceptional ability was discovered by the schoolmaster of Exeter Grammar School, who declared him a 'little wonder.' But it is Walton rather than the schoolmaster who gives the description:

'At his being a schoolboy he was an early questionist, quietly inquisitive why this was and that was not to be remembered; why this was granted and that denied! This being mixed with a remarkable modesty and a sweet, serene quietness of nature.'¹ Bishop Jewel's patronage obtained for the lad admission to Corpus Christi College, Oxford, probably at first as chorister, and afterwards as clerk; but on Jewel's death in 1571 his pension failed, and Richard's maintenance at college was difficult. His name occurs five times between 1570 and 1575 in the list of poor scholars helped by the London merchant, Robert Nowell.² In 1582 the 'Mayor and Chamber' of Exeter granted him a pension of £4. This last assistance was, no doubt, obtained by the influence of John Hooker, who was not the 'rich uncle' Walton supposes him to have been. But the President of the College, W. Cole, out of regard for Jewel and also from a perception of the unusual gifts of his pupil, befriended him steadily. The appointment of the choristers and the clerks was in Cole's hands. It was not till December 1573 that Hooker was admitted one of the twenty *discipuli*, or scholars, of the College. To help towards his maintenance, pupils were obtained for him. Jewel's friend Sandys, Bishop of London in 1571, interested himself in this matter. His son Edwin, at about the age of twelve, was put under Hooker's charge (the tutor being nineteen), as well as a younger lad, George Cranmer, a great-nephew of Archbishop Cranmer. To the list of those who befriended Hooker in his need we must, no doubt, add his tutor John Reynolds, who came from the village of Pinhoe, close to Exeter.

A full account of the history of Corpus Christi College during Hooker's residence, with a careful treatment of the question of his maintenance, has been written by T. Fowler, and it forms a valuable and important addition to the *Life* by Walton. The latter makes it clear that the chief influences upon the young student were those of the dominant school of evangelical reformers. His patron Jewel remained for Hooker 'the worthiest divine that Christendom hath bred for the space of some hundreds of years';³ while his tutor Reynolds, who became President of the College in 1598 and the leader of the 'doctrinal Puritans' at the end of the century, was Hooker's critic and confidant throughout the composition of the *Ecclesiastical Polity*. It is, therefore, of special interest to find in Fowler's *History* the point established that there existed in Corpus Christi College 'the leaven of secret Romanism . . . long after the Reformation was definitely settled, certainly through the reign of Elizabeth.' This fact may in part explain Hooker's enlightened use of Roman Catholic books and authorities. Among his fellow-collegians were men of ability and scholarship who sympathized with the old religion, but had yet learned of necessity to respect and tolerate the new. Hooker's natural passion for truth and tolerance would make him instinctively appreciate and assimilate this attitude of mind.

¹ Church and Paget, i. 7.

³ Church and Paget, i. 314.

There is extant a short Latin tract,¹ written probably between 1582 and 1585, by a certain Nicholas Morice, one of the Fellows of Corpus Christi College. It is an account of the yearly journey of the President and Fellows to collect the rents of their estates, and is written with amusing vivacity and humour. The writer sympathizes with the old religion: 'A good Papist I love; for an honest Protestant I can die the death; but an aged trimmer, as I live, I abominate.'² He gives us one glimpse of Hooker. A steward has made a foolish speech; 'if Reynolds had been listening,' says Morice, 'he would have averted his eyes at many parts; if Hooker, he would have smiled, with bent head.'³ Walton testifies in famous words to Hooker's hashfulness at the end of his life, when 'his poor parish clerk and he did never talk but with their hats both on or off at the same time'; but his biography does not take into account Hooker's humour which Morice's remark recognizes. William Nutt, for whom Morice wrote his dialogue, was another Fellow of Corpus, obviously of kindred tastes and sympathies. This party in the College was not without its influence on Hooker's development. It ought perhaps also to be remembered that Corpus Christi College was founded in the early part of the century by Bishop Foxe when the 'new learning' of Erasmus and Colet was influencing educational ideals. Foxe appointed a lecturer in Greek, and attempted in theology to replace mediæval schoolmen by the Greek and Latin Fathers of the early centuries. Hooker's rationalism may have been fostered by the traditions of his College and his study of Theodoret and Augustine.

Hooker graduated B.A. in 1574, M.A. in 1577, and was made a full Fellow of his College in 1579. His special work was to lecture in Logic; and from this, according to Wood, 'his fame grew.' His writings, both in their vocabulary and in general form, retain throughout signs of his early pre-occupation with logical terms and logical analysis. In 1579 the Regius Professor of Hebrew was ill from some obscure mental disease, and Hooker was appointed his deputy, and delivered the Hebrew lecture while he remained in Oxford. There is no record when he took orders; but it was before 1581, when he preached in London at St. Paul's Cross. It is probable that his reputation at Oxford was the reason of his being invited to preach this sermon, which was in a true sense the beginning of his career. It contained a distinction between God's 'antecedent' and 'consequent' will, which was supposed to contradict a pronouncement of Calvin (*Inst.* iii. 24, § 16), that 'nothing is less accordant with the nature of God than that He should have a double will.' Hooker was, therefore, branded as a man who refused to treat Calvin as infallible. He had probably no intention of opposing Calvin, but from the first the spirit of his preaching and teaching was free, and acknowledged no master but the truth.

The visit to London resulted also, according to Walton, in Hooker's unfortunate marriage to Joan Churchman. R. W. Church has shown reason for doubting the accuracy of Walton's picture of Hooker's married life. It was not till December 1584 that Hooker was presented to the vicarage of Drayton-Beauchamp in Buckinghamshire, and it seems probable that his decision to give up his Oxford life was come to when he was ordained, and was not forced upon him by Mrs. Churchman, as Walton would have us believe. If Hooker had acted with the ludicrous weakness of Walton's story, his friends could hardly have recommended him to Whitgift⁴ for the position of Master of the Temple. Hooker was not Whitgift's first choice. His candidate was a certain Dr. Bond, whom the Queen considered too old for the post. Lord Burghley supported Walter Travers, already the afternoon lecturer at the Temple. Hooker was ap-

¹ *Dialogus de Illustratione Getonica, qui inscribitur Nuttus*. It is in the Bodleian Library.

² 'Papistam equidem ingenium diligo: pro honesto Protestante emori possum: neutrum seniculum, ita vivam, abominor.'

³ 'Si Hookerus, demisso capite, subrisisset.'

⁴ Whitgift writes to the Queen about the Mastership that 'the living is not great, yet doth it require a learned, discreet, and wise man.'

pointed Master on 17th March 1584–85, perhaps by the support of Archbishop Sandys and Bishop Aylmer; but all the circumstances indicate that he was a man whose ability, learning, and piety were well known, and from whom much might be expected. What immediately followed upon his appointment was a pulpit duel between himself and Walter Travers, the afternoon lecturer, which increased in intensity until, in about a year's time, Travers was inhibited by the Archbishop. Travers at once wrote a 'Supplication' to the Privy Council in defence of his conduct. Hooker replied in an 'Answer,' which he addressed to Whitgift. Besides these documents, there are extant certain sermons in Hooker's *Works* which contain those opinions of Hooker which Travers specially attacked. These are the sermon 'of the Certainty and Perpetuity of Faith in the Elect,'¹ and the 'Learned Discourse of Justification.'² They were printed by Jackson in 1612; and, while the first can be identified satisfactorily with a sermon objected to by Travers, the second is not a sermon, but an amalgamation of several sermons which cannot be quite certainly related to those mentioned by Hooker and Travers. From these documents it is clear that the first cause of difference between the two men was Hooker's refusal to be a party to Travers' attempts to introduce surreptitiously into the congregation his own Presbyterian methods and practices. Travers wished Hooker to submit to some ceremony of 'allowance' by the congregation, because he held that Hooker had been ordained 'by virtue only of a human creature'; he objected to Hooker praying before his sermon instead of after, to his mentioning bishops in his prayer, and to his kneeling at the reception of the Holy Communion. On these points the two rivals conferred together without coming to any result, so that, as Hooker says, quoting from Travers, it was natural enough that 'many of my sermons have tasted of some sour leaven or other.' Travers' complaints against Hooker's preaching deal with three occasions. He brought up again the sermon of 1581 already referred to; he objected to a position of Hooker, 'that the assurance of that we believe by the Word is not so certain as of that we perceive by sense'; but, thirdly, the matter which finally roused Travers to deliver 'three public invectives' against the Master's teaching was a remark about Roman Catholics. The 'mother-sentence whereof I little thought that so much trouble would have grown' was

'I doubt not but God was merciful to save thousands of our fathers living in popish superstitions, inasmuch as they sinned ignorantly.'

Travers understood Hooker to say 'the fathers,' but his outcry caused Hooker to attempt that summary of the good and bad in the Roman Church which is contained for us in the extant 'Discourse of Justification.' He was, no doubt, unaware of the strength of the fanaticism against which he was measuring himself. He was anxious to be fair to his Roman adversaries, and not to 'give them an occasion to say, as commonly they do, that, when we cannot refute their opinions, we propose such instead of theirs as we can refute.'

Hooker therefore outraged the prevailing Puritan views on two crucial points: he declined to accept Calvin's opinion as final, and he insisted on giving even Rome a fair hearing. His originality on these two points has not been justly appreciated. Even to-day his point of view is not fully accepted by controversialists. We must realize upon what broad grounds his practice was based. Travers complained³ that Hooker had said to him 'that his best author was his own reason'; Hooker replied indignantly:

¹ Sermon i., in Church and Paget, iii. 469.

² Sermon ii., *ib.* iii. 483.

³ Travers' 'Supplication,' *ib.* iii. 559.

'I alleged therefore [because Travers had objected to the quotation of authorities] that which might under no pretence in the world be disallowed, namely, reason; not meaning thereby mine own reason, as now it is reported, but true, sound, divine reason; reason whereby those conclusions might be out of St. Paul demonstrated, and not probably discoursed of only; reason proper to that science whereby the things of God are known; theological reason, which out of principles in Scripture that are plain, soundly deduceth more doubtful inferences, in such sort that being heard they neither can be denied, nor anything repugnant unto them received, but whatsoever was before otherwise by miscollecting gathered out of darker places, is thereby forced to yield itself, and the true consonant meaning of sentences not understood is brought to light. This is the reason which I intended.'

Passages like this and many others in the 'Discourse of Justification' reveal to us the ardent enthusiasm which burnt beneath the shy exterior of the lecturer in Logic. And to his passion for truth and for the search after truth a second characteristic has to be added which in all Hooker's writings is felt by the reader:

'I take no joy in striving, I have not been nuzzled or trained up in it. . . . There can come nothing of contention but the mutual waste of the parties contending, till a common enemy dance in the ashes of them both. . . . Things of small moment never disjoin them whom one God, one Lord, one Faith, one Spirit, one Baptism, bands of great force, have linked.'

These are the chief points of the dispute with Travers at the Temple. It is to be noted how important they were for the subsequent Church of England. Without the treatise 'Of the Laws of Ecclesiastical Polity' they might not have effected much; but, enlarged and expounded in the first five books of that work, they made the Church of England neither Rome nor Geneva, but a Church distinct from both. Hooker's treatise did for the Church of England what Calvin's *Institutes* had done for the Genevan Church; it gave it a voice and a character. It is tempting to dwell on the many anticipations of the *Polity* which are to be found in these early writings of Hooker, and it is necessary to insist upon their importance, both as historical documents and as revelations of Hooker's mind and disposition. But there is a difference between his point of view in the dispute with Travers and in the composition of the *Polity*. Hooker distrusted 'extemporal dexterity'; he believed time to be 'the only mother of sound judgment and discreet dealing'; and in this spirit he began to examine the questions that Travers had raised. But he found his position at the Temple incompatible with profound and concentrated study. He wrote to Whitgift that he was 'weary of the noise and oppositions of this place'; his contest with Travers had been

'the more unpleasant to me because I believe him to be a good man; and that belief hath occasioned me to examine mine own conscience concerning his opinions; and to satisfy that I have consulted the Scripture and other laws, both human and divine, whether the conscience of him and others of his judgment ought to be so far complied with as to alter our frame of Church-government, our manner of God's worship, our praising and praying to him, and our established ceremonies, as often as his and others' tender consciences shall require us: and in this examination I have not only satisfied myself, but have begun a Treatise, in which I intend a justification of the Laws of our Ecclesiastical Polity. . . . My meaning is not to provoke any, but rather to satisfy all tender consciences, and I shall never be able to do this, but where I may study, and pray for God's blessing upon my endeavours, and keep myself in peace and privacy and behold God's blessing spring out of my mother earth, and eat my own bread without oppositions.'

He asks Whitgift to appoint him to a country living. Another draft of this letter speaks of his desire 'not to provoke your adversary Mr. Cartwright, nor Mr. Travers, whom I take to be mine (but not mine enemy).' When we read the *Polity*, we find, after the first book, that continually 'T. C.' is quoted as the recognized champion of those opinions for which Travers and his party at the Temple contended. Thomas Cartwright is Hooker's antagonist; Walter Travers is forgotten. This means that Hooker's book is a continuation and review of a controversy that had been going

¹ Hooker's 'Answer,' *ib.* iii. 594.

² *ib.* i. 67.

on since the beginning of Elizabeth's reign. Cartwright returned from Geneva to England in November 1572, probably in time to assist in the writing of 'A Second Admonition to the Parliament'; the first had appeared earlier in the year. In these appeals to Parliament the writers frankly declare their hostility to the English Church as established, and demand a reformation; they insist that the controversy is not 'for a cap, a tippet, or a surplice, but for greater matters concerning a true ministry and regiment of the Church according to the Word.' The tracts made a great impression, and Whitgift, with Archbishop Parker's approval, was called upon to reply to the Admonitioners. Before the end of 1572 he published 'An Answer to a certain Libel entitled An Admonition to the Parliament'; a second edition, augmented, was ready in 1573. Whitgift had been Vice-Chancellor of Cambridge University when Cartwright was deprived of his professorship¹ and his fellowship. T. C. therefore came forward as the champion of the Admonitioners against Whitgift. By the middle of 1573 he issued 'A Reply to An Answer made of M. Doctor Whitgift against the Admonition to the Parliament.' It was a book so much more considerable than the Admonitions that Whitgift could not leave it unanswered. In a folio of 800 pages he went over the whole controversy again, producing the work in 1574 and calling it 'The Defence of the Answer to the Admonition against the Reply of T. C.' The length of the book is partly due to Whitgift's fairness in printing large portions of the arguments of his opponents. Next year (1575)² Cartwright was ready again with 'The Second Reply of Thomas Cartwright,' which he followed up in 1577 with 'The Rest of the Second Reply.' To the 'Second Reply' of Cartwright no answer was made by Whitgift or by any other representative of the Church as established. Whitgift's friends thought that he had written all that was necessary on the controversy, and his appointment in 1577 to the see of Worcester left him no time for literary controversy. He was made Archbishop of Canterbury in 1583, and in his primacy the attempt to introduce a disciplinarian or consistorial system into the English Church was resisted and defeated. It was, therefore, providential for Whitgift that such a champion as Hooker appeared, to remove the reproach that Cartwright's last book had not been answered, and to review the whole controversy with a mastery of logical analysis, a breadth of learning, and a dignity of style beyond the reach of any other disputant. Hooker's book was the last word in the long controversy between Cartwright and Whitgift, but when the first instalment of it appeared in 1594 it was in spirit something altogether new. The sober Hallam declares that Hooker 'mingled in these vulgar controversies like a knight of romance among caitiff brawlers.'³ Because he was by temperament and conviction 'no mere champion,'⁴ he proved himself the judge and umpire of the lists.

Whitgift did not move Hooker from the Temple till 1591, when he appointed him to the parish of Boscombe, six miles from Salisbury, making him in the same year prebendary and sub-dean of Salisbury Cathedral. In 1595 he was presented to the Crown living of Bishopsbourne, near Canterbury, where he remained till his death. A chill 'taken in his passage by water betwixt London

¹ He was made Lady Margaret Professor in 1569.

² In the same year Walter Travers' celebrated treatise was published in both Latin and English, with a letter from Cartwright in its praise. It is called in English, 'A full and plain Declaration of Ecclesiastical Discipline out of the Word of God, and of the Declining of the Church of England from the same.'

³ *History of England*, London, 1850, i. iv. 214.

⁴ F. D. Maurice, *Moral and Metaphysical Philosophy*, London, 1873, ii. 195.

and Gravesend' brought on his last illness. He made his will, 'though sick in body, yet sound in mind,' on 26th October 1600; it was proved on 3rd December. There is, therefore, no reason for doubting the Latin note in Archbishop Laud's copy of one of the books of the *Polity*, which states that Hooker died about 2 o'clock in the afternoon on 2nd Nov. 1600. His will made Joan Hooker, 'my well-beloved wife,' sole executrix, and 'my well-beloved father, Mr. John Churchman and my assured good friend,' Mr. Edwin Sandys, overseers. The inventory was £1092, 9s. 2d. It is probable, therefore, that Isaac Walton's account of Hooker's marriage is a distortion of the facts. That Hooker's faculties were unimpaired at the end of his life is clearly shown by the vigour, acuteness, and erudition of the notes he scribbled upon his copy of 'A Christian Letter,' an anonymous attack, published in 1599, upon bk. v. of the *Polity*.

2. The 'Ecclesiastical Polity.'—Only five books of the work entitled, 'Of the Laws of Ecclesiastical Polity, Eight Books,' were published in the author's lifetime. The Preface 'to them that seek, as they term it, the reformation of laws, and orders ecclesiastical in the Church of England,' and the first four books, without date, were published in 1594.¹ At the end of the Preface there was a short summary of the proposed eight books, indicating that in some form they were nearly complete at that date. It is probable that the defence of the Prayer-Book in bk. v., which is longer than all the others combined, became more elaborate than Hooker at first intended. The final description of the fifth book is different from that in the summary of 1594; Hooker finds he must resist the accusation that there is 'much superstition' in the Prayer-Book, and this necessitates a detailed examination of it. But for the effect which Hooker's book produced upon the public mind it was an advantage that it came out in instalments. The portion published in 1594 was in several respects so counter to popular tendencies, that, if there had been more of it, readers might have found it too much to assimilate. The Preface, just at the time when the infallibility of Geneva was becoming almost a dogma among the reformed Churches, reviewed Calvin's character and career impartially, recognizing him as 'incomparably the wisest man that ever the French Church did enjoy,' and praising 'his exceeding pains in composing the Institutions of Christian religion,' and 'his no less industrious travails for exposition of holy Scripture,' but insisting that 'wise men are men,' and that what Calvin did for the establishment of his discipline was 'more commendable than that which he taught for the countenancing of it established.' The Preface has not received the praise which it deserves as a piece of historical literature. If we compare it with the notes upon Calvin made in 1599 on the margins of the 'Christian Letter,' we shall realize that Hooker's account of Genevan affairs was founded upon a careful reading of Calvin's letters and other documents, and shall appreciate the restraint of its style. It is to be regretted that Hooker did not live to expand his note, 'Remember to make a comparison between Calvin and Beza. . . . For Beza was one whom no man would displease, Calvin one whom no man durst.'² But in the Preface the touch of irony and humour which Hooker allows himself is more effective than direct invective, and runs through his whole exposition of the claims and teaching of the disciplinarian party.

¹ They were entered in the Stationers' Register, 29th Jan 1592-93.

² Church and Paget, i. 134.

The most famous book of the *Polity* is the first. It deals with 'laws and their several kinds in general.' It shows that man is subject not to one law, but to many, and insists that the welfare of society depends upon the proper adjustment and correlation of these kinds of law. The inquiry is impressive in its scope and in the range of authorities upon which it is founded. There is a true imaginative grandeur in Hooker's vision of the whole universe of angels and men subordinated under God to the reign of law, which is in all its various forms essentially an expression of the Divine reason. Aristotle and the philosophy of Greece, the Greek and Latin Fathers, and, finally, St. Thomas and the schoolmen, are co-ordinated with the teaching of the Bible in support of an analysis which leads up to the position that 'to measure by any one kind of law all the actions of men were to confound the admirable order, wherein God hath disposed all laws, each as in nature, so in degree, distinct from other.' Hallam has pointed out that Suarez, writing on the Continent about the same time as Hooker, arrived at nearly identical conclusions.¹ Raleigh, in his *History of the World*, starts from Hooker, as an authority already recognized, and the famous passage on law is re-echoed on the stage² before 1611. In the latter half of the century, Locke's theories of civil government are founded upon quotations from 'the judicious Hooker.'³

The second book resists the Puritan assertion 'that Scripture is the only rule of all things which in this life may be done by men.' Hooker, admitting that Scripture is an infallible guide, denies that it is the only guide by which men are led, and carries the war into the enemies' camp in the remarkable passage which describes the results which would follow from the extreme Puritan position:

'For in every action of common life to find out some sentence clearly and infallibly setting before our eyes what we ought to do (seem we in Scripture never so expert) would trouble us more than we are aware. In weak and tender minds we little know what misery this strict opinion would breed, besides the stops it would make in the whole course of all men's lives and actions.'

The third book deals with the view 'that in Scripture there must be of necessity contained a form of Church polity, the laws whereof may in nowise be altered.' Hooker does not insist that the polity of the Church he is defending is contained in Scripture; the special point and merit of his argument is that he refuses to allow Scripture to be made a code strangling growth and reasonable freedom. Although he believes episcopal government to be Scriptural, he does not refuse to the Scottish and the French Reformed communions the title of Churches. He argues from the controversy on re-baptism in the African Church, in the time of Cyprian, that 'heretics are not utterly cut off from the visible Church of Christ.' All visible Churches, being human, have their blemishes and failures.

The fourth book concludes the general argument by considering the allegation that the English Church 'is corrupted with Popish orders, rites, and ceremonies, banished out of certain reformed Churches.' It therefore treats generally what the fifth book considers in detail.

The fifth book was published in 1597. It contains 81 chapters. The question of the manner of the ordination of ministers is not reached till ch. 76. The first 75 chapters review public worship as it was regulated by the Elizabethan Book of Common Prayer. In the dedication of the book

¹ H. Hallam, *Literature of Europe*, London, 1837-39, III. iv. 20.

² In Lodowick Barry's *Ram Alley*, London, 1611; W. C. Hazlitt's *Dodsley* 4, do. 1874-76, x. 288.

³ H. Hallam, *op. cit.* II. iv. 40.

to Whitgift, Hooker complains that the controversies concerning 'complements, rites, and ceremonies of church actions are in truth for the greatest part such silly things that very easiness doth make them hard to be disputed of in serious manner.' His treatise, therefore, at every point—whether he is discussing the use of the apocryphal books, or set prayers, or the use of the psalms, or the celebration of matrimony—strives to discover the first principles upon which practice is founded, and can never lose its interest while public worship is a part of religion. But the most important and masterly chapters are those in which he discusses sacraments and the Lord's Supper (chs. 50-57, and ch. 67). He rejects as discredited the extreme view that the bread and the wine are 'bare signs,' and claims that the 'Sacramentarian' or Reformed Churches have reached a 'general agreement concerning that which alone is material, namely, the real participation of Christ and of life in His body and blood by means of this sacrament.' The Lutherans and Papists also accept this 'general agreement'; and the only matter of dispute is 'about the subject where Christ is.' As to this, 'no side denieth but that the soul of man is the receptacle of Christ's presence.' Lutherans and Papists agree so far, but insist further that 'His body and blood be also externally in the very consecrated elements themselves,' either by consubstantiation or by transubstantiation. Hooker, therefore, makes the proposal, which is still too broad in its toleration to be accepted by the Churches: 'Let it be sufficient for me presenting myself at the Lord's table to know what there I receive from Him, without searching or enquiring of the manner how Christ performeth His promise.'

It can hardly be doubted that Hooker left the last three books of his treatise finished at his death, but the finished copies were lost or made away with, and the books as printed have not received final revision. The sixth book as we have it is not the examination of lay eldership promised in 1594, but a quite different treatise on penance. The genuine sixth book has disappeared. Books vii. and viii. are the rough copies of the promised discussions of episcopacy and the relations of Church and State. Books vi. and viii. were printed in 1648, book vii. in 1662.

LITERATURE.—The standard edition of Hooker's *Life and Works* is the revision by R. W. Church and F. Paget (7th ed., 3 vols., Oxford, 1888) of Keble's ed. of 1836, in 4 vols. Bk. i. of the *Polity* has been edited with notes and introduction by R. W. Church, 2nd ed., Oxford, 1876; bk. v. by R. Bayne, with notes and prolegomena, including a life of Hooker, in the *English Theological Library*, London, 1902. F. Paget prepared for the Clarendon Press an Introduction to bk. v. (Oxford, 1899). The first five books with two sermons are reprinted, with an Introduction by R. Bayne, in *Everyman's Library* (London, 1907). A careful Bibliography of early editions, Lives, general criticism, and literature is given in the *Cambridge History of English Literature* (Cambridge, 1909), III, 547. Consult the Life in *DNB*, and the art. 'Richard Hooker,' in *EB*. The latest criticism of Hooker's style is in G. Saintsbury, *History of English Prose Rhythm*, London, 1912, ch. v.

RONALD BAYNE.

HOOLIGANISM.—The word is derived from 'hooligan,' a street rough. Subjectively, it is a spirit or temper; objectively, an outbreak of lawlessness. It is usually applied to lads, sometimes to men and women, and always as a term of opprobrium for lawless behaviour.

1. **Origin of the name.**—Various origins have been suggested, some of them fanciful. (1) It is said to be due to the blunder of a policeman in describing a gang of young roughs as 'Hooly's gang'; (2) it is traced to a fictitious Irish character called 'Hooligan' (Irish for 'Hoolihan'), who figured weekly in a comic paper called *Nuggets* (*NQ*, ser. ix., vol. ii. [1898] pp. 227, 316). His German counterpart appeared in the *Garland* as

'Schneider.' According to *NQ* (15th Oct. 1898), 'Hooligan' and 'Schneider' had then been familiar personages for about five years. (3) It has been derived from a popular music-hall song which (about 1890) described the doings of a family named Hooligan. A writer in the *Evening News* of 21st Nov. 1900 said he had often heard the song sung, and quoted the following:

'There's a family living near us—
The Hooligans!
Always in some terrible fuss
Are the Hooligans.
Never known to tell a lie,
They'd sneak yer teeth, and say "Goodbye,"
They could drink the Carlton Brew'ry dry,
Could the Hooligans.'

Hooliganism is an international phenomenon. Witness the 'hoodlum' of California, the 'larrikin' of Australia, the 'khuligani' of St. Petersburg, the 'Hooligane' of Germany, and the 'Apaches' of France and Italy.

2. **Characteristics.**—Lack of self-control, love of malicious mischief, indifference to the comfort or suffering of others, idleness passing into dishonesty and crime, horseplay passing into violence—mark the hooligan. In one sense, hooliganism is no new thing. We read of it in the *Fortunes of Nigel*, and in the accounts of the street fights which took place between the apprentices for the 'crown o' the causey.' University students have always given themselves over periodically to a form of hooliganism—smashing lamps, breaking seats, and turning the Graduation ceremony into pandemonium. In Norman Macleod's day the Glasgow students were declared to be a 'disgrace to the High Street,' and yet a well-marked distinction is always drawn between them and, say, the Govan rivetters who are out to 'paint the town red.'

3. **Classification.**—Modern hooliganism may be classified under various heads.

(1) *Mob hooliganism*, the conduct of the population on occasions of public rejoicing and national victory, as on 'Mafeking' nights. Then the people seem to lose their heads altogether and become disorderly and reckless. Viewed as a symptom of growing instability in the national character, such conduct is serious. Mob mind is a malady of our time (Ross, *The Foundations of Sociology*, New York, 1905, p. 113). Mob hooliganism varies with the density of the crowd. 'The way in which hooliganism asserts itself all depends upon the atmosphere in which the hooligan finds himself' (*Westminster Gazette*, 6th April 1900, p. 2).

(2) *Political hooliganism*, the glaring illustration of which is the conduct of the militant suffragettes. Smashing shop-windows, defacing monuments, setting fire to theatres, throwing hatchets, and assaulting Cabinet Ministers cannot be described as anything but hooliganism of a very bad type. There is manifest lack of self-control, love of malicious mischief, and callous indifference to the sufferings of others. It is only fair to say, however, that militants are in a minority in the Suffrage movement, and that their tactics are strongly disapproved by many as unworthy and unwise, and calculated to hinder rather than help their cause.

(3) *Industrial hooliganism*, seen during strikes in assaults upon fellow-workmen, over-zealous picketing, and the destruction of goods, rolling-stock, and property. The workers, as a whole, are not lacking in self-respect or self-control, and the vast majority condemn violence. They showed the most exemplary patience and self-control during the big strikes in Great Britain amongst the miners and dockers (1911-12). When workmen indulge in hooliganism, it is due either to a passionate sense of wrong or to the sinister influence

of the baser sort who mingle with the workers and exploit them for their own nefarious ends.

(4) *Literary hooliganism*, manifested in savage criticism of books, of policies, and of parties. The classic examples of the first are the *Quarterly's* attack on Tennyson, Macaulay's attack on Robert Montgomery, and *Blackwood's* attack on John Keats. The reviews in those days frequently led to duels, such as that between Jeffrey and Tom Moore. For sufficiently savage and hooliganesque attacks on policies and parties one has only to read the popular magazines and newspapers—especially religious—of the present day.

(5) *Criminal hooliganism.*—This is the most serious phase. In all great cities there are gangs of hooligans with sensational names, such as the 'Forty Thieves,' the 'Pontoons,' 'Velvet Caps,' 'Tim Malloys,' 'San Toys,' 'Crush Boys,' 'Plug Uglies,' 'Cop Beaters,' 'Tough Kids,' and 'Crook Gang.' Jacob Riis, writing of New York, says that 'a bare enunciation of the names of the best-known gangs would occupy the pages of this book' (*How the Other Half Lives*, 229). Every street-corner has its gang, with a programme of defiance of law and order. In the United Kingdom things are not quite so bad, and Charles Booth thinks that in London there is a decided improvement (*Life and Labour of the People in London*, final vol., London, 1902, p. 201).

4. **Causes of hooliganism.**—The great root-cause is the undisciplined life, revolt against all authority, human and Divine, which characterizes the lower orders to-day, Roman Catholic as well as Protestant. The present writer's experience as a Prison Chaplain enables him to say that, contrary to a prevailing impression, hooliganism is as rife in Roman Catholic circles as in Protestant. This undisciplined life, however, is itself an effect, the resultant of many causes, some of which may be here indicated.

(1) *Defective education.*—Street lads have, as a general rule, managed to slip through the meshes of our educational system with the minimum of instruction. Reading remains for them an irksome task. They find no pleasure in it, and so are cut off from one of the greatest helps to a good life, one of the strongest safeguards against temptation. But their education is defective on the moral side as well as on the literary. Character has not been developed and strengthened, the will has not been cultured, self-control has not been taught. They are children of impulse and passion, and ill fitted to stand amidst the complex conditions of modern civilization.

(2) *Wretched housing* is another potent cause of hooliganism. Growing lads and girls in the poorer parts of our big cities are shamefully overcrowded. They have literally no room to live a decent human life, no opportunity of self-realization, no home life to speak of, and so they are driven out to the streets. Home to them means simply a place to eat in and sleep in, and not a place for social recreation or happy fellowship, still less for mental or spiritual culture. The loss is infinite, and tragic in its results upon character.

(3) *Lack of playgrounds and open spaces for wholesome recreation.*—When the children are sent out of doors to make more room in the house, they are turned into the street or back-alley. The slum is their playground, and there is no finer breeding-place for young hooligans and criminals. Everything there, the whole environment, conspires to degrade and ruin the boy and girl. The process is sure, and the waste of young life and capacity is awful.

(4) *Misdirected energy* follows naturally. There is nothing wrong with the energy, any more than there is with steam or electricity. What it needs

is guidance into proper channels—not repression, but proper expression. It is easily misguided, misdirected; and the result is hooliganism.

(5) *Parental inefficiency* must also be named as a cause. The home is to blame as well as the school. Home training is at a discount. Obedience is a lost habit. The parental example is often bad. The parents themselves are largely the creatures of circumstances, the resultant of our social, educational, and industrial system. The children take after their parents, follow the only example they know, and so the vicious circle continues to be trod.

(6) *Mental and moral defect.*—A very moderate first-hand knowledge of hooligans will convince any one that many of them are mentally and morally weak. They are defectives; and experience shows that defectives soon become delinquents. Mental instability is frequently found associated with hooliganism and crime. As already hinted, hooliganism may fairly be described as a by-product of our civilization. Our social system is largely responsible for it. It is, therefore, a social problem. We must cease to manufacture hooligans.

5. *Cure of hooliganism.*—The first serious attempt to deal with it was made in 1788, when the Philanthropic Society was formed in England by Robert Young. In 1806 the Dalston Refuge was founded, and in 1815 the Prison Discipline Society. Parliament began to tackle the subject in 1793, when Pitt brought in a Bill which, however, proved abortive. In 1811 and again in 1819 Parliament condemned the imprisonment of children for lawless conduct. Royal Commissions dealt with the matter in 1834 and 1837. The *Edinburgh Review* for Oct. 1851 said:

'The young offender gains ground upon us, the plague of the policeman, the difficulty of the magistrate, a problem to the statesman, and a sorrow to the philanthropist.'

That same year a Committee of the House of Commons recommended the establishment of Reformatory Schools, and in 1857 the Industrial Schools Act was passed. Its results were remarkable. In 1856, no fewer than 13,981 children under seventeen years of age had been committed to prison. In 1897, thanks to Industrial Schools, the number had fallen to 1688. Up to 1901 (according to figures given by John Trevarthen, Secretary of Redhill Farm School, in an article in the *Nineteenth Century* for Jan. 1901), out of 3511 reported on by Reformatories, 2666 were in regular employment, 123 in casual employment, 541 had been convicted, and 181 were unknown. Of 8233 reported on by Industrial Schools, 6379 were in regular employment, 430 in casual employment, 460 had been convicted, and 964 were unknown; *i.e.* nearly 80 per cent were doing well, and only some 15 per cent had been convicted—a very satisfactory record. The charge, then, that 'Reformatories are hooligan manufactories,' is singularly unjust and ill-informed. Considering the material supplied, the proportion of failures is surprisingly small, and a good many of the failures are caught up and reclaimed by the Borstal system. One-third of our burglars are boys from 16 to 21, and 20 per cent of crimes against morals are committed by those under 21. In 1852, Dickens visited the Philanthropic Society's Farm School, Redhill, and wrote an interesting article about it in *Household Words*, ending as follows:

'The system must be devised, the administration must be reared, the preventable young criminals must be prevented, the State must put its Industrial and Farm Schools first, and its prisons last—and to this complexion you must come. You may put the time off a little, and destroy (not irresponsibly) a few odd thousands of immortal souls in the meantime, but the change must come.'

These words were prophetic. The change has come. We are now putting our schools first, and our

prisons last, that is, educative methods are displacing punitive methods. Hence the new treatment of juvenile offenders, wise and firm, known as the 'Borstal.'

6. *Preventive measures.*—Reformatory and reclamationary treatment, however necessary and valuable, does not go to the root of the matter, and will not eradicate hooliganism. Therefore preventive measures must more and more be adopted. Generally, whatever makes for social amelioration makes for the extinction of hooliganism, and the production of a law-abiding, well-behaved, self-respecting population. The following reforms, however, have a special bearing upon the social phenomenon which we have been considering. Hooliganism will never disappear until we have—

(1) *An improved system of education which will aim deliberately at moral training, the disciplining of the will, the formation of character.*—To secure this we could well afford to drop much with which the curriculum is at present overloaded. Boys especially are ruled by ideals, and we must instil into them higher ideals than that of the robber knight and the pirate chief.

(2) *Industrial training.*—Much of our hooliganism is due to casual labour, blind-alley occupations, unemployment, and consequent street-loitering and larking. H. Dyer, a leading educational expert, truly says that

'one of the most important problems of the day is the deliberate and complete organization of the whole field of boy labour, as it is recognized that many of the most serious social problems have their origin in the degeneration which takes place in the years of adolescence' (*Education and National Life*, London, 1912, p. 77).

(3) *Better housing.*—The nation is waking up to the need for the better housing of the poorer classes. So long as the children of the poor are deprived of the advantages of a true home life and home comforts, so long will hooliganism be a blot upon our civilization. That is part of the price we must inevitably pay for our folly.

(4) *Sufficient playgrounds.*—Next in importance to a good home is a good playground. It is here that the modern city, in its shortsightedness and parsimony, has sinned most grievously against the child. All over the city, and especially in the poorer districts, there should be ample open spaces, well-lit at night, where the abounding energy of adolescence may find safe and legitimate outlet. Let us not forget that 'Waterloo was won on the playing fields of Eton.'

(5) *Helpful agencies.*—Boys' Brigades, Life Brigades, Boy Scouts, and Lads' Clubs, with their educative, social, and recreative departments, are invaluable for the suppression of hooliganism. They fill the empty life with wholesome interests, and provide centres of fellowship and intercourse, where pure and uplifting friendships are formed. They furnish stimulating ideals, and appeal to what is high and chivalrous, the best side of the boy's nature. They also satisfy the gregarious instinct of youth. It has been well said that we never see one boy, but always two or three. The gang spirit is deep and strong, and we must utilize it for the redemption of youth. Physical training is also of the utmost value, and many social reformers believe that universal military training would act as a powerful corrective to hooliganism. Finally, all efforts will stop short of the highest and best which do not bring our youth under the sway of religious faith. That is the work of the churches. It is for them to see that our growing boys and girls are won to the service of Christ, who is the supreme maker of manhood and womanhood.

DAVID WATSON.

HOPE (Christian).—Hope is the name of a grace which is characteristic of the religion of the Bible. St. Paul sums up the misery of the Gentile world in a single sentence, when he speaks of them as *ἐλπίδα μὴ ἔχοντες καὶ ἄθεοι ἐν τῷ κόσμῳ* (Eph 2¹²). The Bible, on the other hand, is the book of hope. One strange book (Ecclesiastes) reflects the deep melancholy which was a pervading note of ancient literature; but hope cherished in the darkest times, hope continually kept alive by the labours of the prophets, hope of a future never abandoned and ever shining out anew in spite of every conceivable discouragement—this is the dominant note of the OT. Whatever is written therein was ‘written for our learning, that through patience and through comfort of the scriptures we might have hope’ (Ro 15⁴). The God whom the OT presupposes is ‘the God of hope’—the Author and Giver of hope (Ro 15¹³). The ‘hope of Israel’ (Ac 28²⁰; cf. 26⁶) might be understood in widely different senses. For St. Paul at least it included not only the complete fulfilment of the Messianic expectation in its widest sense, but the fulfilment of the true destiny of the individual in the glory of the resurrection life. To many modern Jews it may mean little more than the expectation of a brighter day for their oppressed and down-trodden nation—an expectation based on faith in God’s justice and His unique relation to Israel. But in any case, hope—the boundless expectation of good—is the deepest note in the poetry and prophecy of the OT; in a transfigured form, corresponding to the light shed upon the purpose and character of God by the Gospel, it re-appears in the NT. (For the meaning and use of the word in the OT and NT it may suffice to refer to *HDB*, *s.v.*; and *JE*, *s.v.*).

Hope, like faith and love, is a Scriptural virtue. It cannot be said to have a place in heathen ethics. There are isolated passages in praise of hope. A fragment of Menander is quoted by Jeremy Taylor, *Life of Christ*, pt. 3, § 15:

ἄθροπος ἀτυχῶν σώζεθ' ὑπὸ τῆς ἐλπίδος,

and Eurip. *Herc. Fur.* 105 may be compared:

οἶτος δ' ἄνθρωπος ἄριστος, ὅστις ἐλπίσει
πέποιθεν αἰεὶ, τὸ δ' ἀπορεῖν ἀνθρώπος κακοῦ.

But heathen hope was low or aimless. ‘Thou dost not hope,’ says Augustine to the Christian, ‘as the Gentiles hope.’ ‘Sperant illi inania saeculi, speres tu aeternam vitam cum Christo’ (*Serm.* cxviii. 2). In both Testaments, indeed, the duty of hope is based on the revealed character of God: (a) as omnipotent and therefore able to fulfil His purposes, even against human expectation (Ro 4¹⁸); (b) as specially pledged to be the Saviour and Sanctifier of His elect people (Jer 14⁸ 17¹³ 50⁷, Ps 46⁵, etc.); (c) as the righteous moral Governor and Judge of mankind, whose ways are destined to be finally vindicated in spite of all the enigmas which burden the just man with a sense of unfathomable mystery.

The exact objects of hope differ to some extent in the two Testaments. The Anglican article (VII.) expressly denies that ‘the old fathers did look only for transitory promises.’ The hopes of merely temporal good, which were characteristic of primitive men, were doubtless chastened and purified by the discipline of calamity, so that hope itself became spiritualized (cf. Ps 63³ 17¹⁵ etc.). On the other hand, the gospel is the religion of the ‘better hope’ (He 7¹⁹), because it is the religion ‘through which men for the first time enter into intimate fellowship

with God’ (see Bruce, *Ep. to the Hebrews*, Edinburgh, 1899, p. 271 f.). Thus the hope of the Christian is a ‘good hope’ (2 Th 2¹³), a ‘blessed hope’ (Tit 2¹³), a ‘hope of glory’ (Col 1⁷); a ‘hope of righteousness’ (Gal 5⁵), of ‘salvation’ (1 Th 5⁸), of ‘eternal life’ (Tit 3⁷). It is an expectation of spiritual blessings already realized and potentially conveyed to man in Christ. Nay, Christ Himself is ‘our hope’ (1 Ti 1¹), the living pledge that the divine promises of life, immortality, and glory will find their fulfilment for all who are lovingly united to Him. His resurrection is the ground of hope because it is an earnest of the fulfilment of man’s destiny (1 P 1³ 2¹). So Aug. (*c. Faust.* xi. 8) strikingly says that the Christian expectation of future bliss and immortality ‘in Christo iam non spes sed res erat.’ The believer, he adds, ‘in Christo iam habet quod in se sperat.’ The present article will deal with the function of hope in the moral life of the Christian.

1. The *object of hope* is, of course, some form of future good, the true blessedness of which man is capable. The object of hope is the highest good—‘bonum futurum, arduum, possibile haberi’ (Aquinas, *Sum.* ii. 2. xvii. resp.). This is described in various ways in the NT. In the Synoptic Gospels the *summum bonum* is the Kingdom of God or of Heaven; in the Fourth Gospel, eternal life; in St. Paul’s Epistles, the righteousness of God; in Hebrews, access to God and unrestricted fellowship with Him. All these are simply different descriptions of one supreme blessing, viz. that spiritual state which results from the very presence of God in the human spirit. In a true sense, then, God Himself is the supreme object of hope; ‘bonorum summa Deus nobis est’ (Aug. *de mor. Eccl.* 13; cf. *de Trin.* viii. 4. 6). God, says T. H. Green, ‘is all which the human spirit is capable of becoming’ (*Proleg. to Ethics*, Oxford, 1883, § 187). The final ‘beatitude’ for which we look is the reign of God in man, i.e. that perfection of our nature which results from His indwelling presence in man. ‘Non aliud aliud a Domino Deo tuo speres, sed ipse Dominus tuus sit spes tua’ (Aug. *Enarr. in Ps.* 39 [40]⁷). So Aquinas, *Sum.* ii. 2. qu. xvii. art. 2, says: ‘Proprium ac principale spei objectum est ipsa aeterna beatitudo.’

2. We may next discuss the *claim of hope to be a Christian virtue*. We must remember that man’s nature, being disordered by the Fall, can be restored only by an act of Divine power. The revelation of God in Christ, making known His character, purpose, and requirement, necessarily affects the normal springs of human action. Thus, for a Christian the primary springs of action—the affections, appetites, passions, sentiments—yield to certain higher principles directly resulting from man’s changed relation to God. These are the ‘theological virtues,’ Faith, Hope, and Love, so called because they bring man into a right relation to God and are Divinely communicated to him.¹ The Gospel revelation of God is, in fact, a new inspiration; it develops in man a new attitude towards God, and, consequently, a new disposition or character. It sets before him a new end or aim of action, viz. union with God. Hence the necessity of *faith*, which appropriates the revealed facts—the good-will and Fatherly love of God, the Divine victory over sin, the possibility of blessedness; of *love*, which responds to the goodness of God, and embraces in union with God the Divine aim of creation—an end which is wider than any merely personal good, and includes the well-being of others; and, finally, of *hope*, which, in reliance on the revealed character of God, looks forward with confidence to the fulfilment of the Divine

¹ Aquinas, *Sum.* i. 2. qu. lxii. art. 1 resp.

purpose; which waits for the 'coming' of the Kingdom, for the perfection of which man's nature is capable, and for the complete manifestation of God (Ro 5²).

These three principles are inseparably connected (see Aug. *Enchir.* 8, on this point), and hope not less than the other two is a principle of moral action, acting directly upon the will (Aquinas, *Sum.* ii. 2. qu. xⁱⁱⁱ. art 1 concl. '[Spes] in voluntate est ut in suo proprio subjecto'). It inspires endurance and self-control, stability and firmness. It colours man's intellectual outlook upon life. It hits the due mean between shallow optimism and pessimism. It fortifies the will and nerves it for the task of self-conquest, and for that 'patience' which, according to NT conceptions, is itself a form of moral energy, demanding the output of strength (Col 1¹¹). It is the chief element in perseverance. 'Spes facit Deo adhaerere . . . in quantum scilicet per spem divino auxilio innitimur ad beatitudinem obtinendam' (*Sum.* ii. 2. qu. xvii. art. 6).

Thus hope forms a great part of heroic virtue. It is related to faith 'as the energetic activity of life is related to life . . . Hope gives distinctness to the objects of faith' (Westcott on He 3⁹). Hence the heroes of faith in the Bible are also patterns of hope: Abraham (Ro 4¹⁸), the Psalmists, the Prophets, the Apostles, the martyrs and saints of the OT and NT (He 11; cf. Wis 3⁴, 2 Mac 7¹⁴, 2 Es 7⁵⁰, Bar 4²²). And, being a virtue, hope is accordingly a duty, and is a frequent topic of exhortation in both Testaments. (See esp. the First Epistle of St. Peter, 'the Apostle of hope,' and note the frequency of the word in the Pauline Epp. and Hebrews.)

3. The *moral fruits of hope* may be summarized as follows. (1) The joyous temper which St. Paul describes as 'joy and peace in believing' (Ro 15¹³), the confidence which springs from the assurance that God controls and overrules for good all that dismays or perplexes the soul, and that 'all things work together for good to them that love God' (Ro 8^{28, 35ff.} 12¹², 1 Th 5¹⁶, Ph 1²⁰ 4⁴, He 3⁹).—(2) Perseverance in prayer. 'Without hope it is impossible to pray; but hope makes our prayers reasonable, passionate, and religious; for it relies upon God's promise, or experience, or providence, and story. Prayer is always in proportion to our hope zealous and affectionate' (J. Taylor, *Holy Living*, ch. iv. § 2).—(3) Patience and endurance in the duties and trials of common life. 'Patience worketh experience, and experience hope' (Ro 5^{3a}). The Bible is the book of hope, because it is a record of sufferings endured, surmounted, and overruled for good. The special value of the OT lies in the fact that throughout its pages the Hebrew mind is, as it were, being prepared for the appearance on the stage of human life of the Man of Sorrows. The Bible shows us the various methods by which man is disciplined for the service of God and humanity; it discloses in repeated instances 'the end of the Lord; that the Lord is very pitiful, and of tender mercy' (Ja 5¹¹). In all these, hope finds its unflinching encouragement and support.

4. It remains to say something of the *chief vices opposed to hope*. The excess of hope, ill-grounded or immoderate confidence, is presumption. The promises of God, which constitute the ground of hope, are not unconditional. He has not, for example, promised forgiveness to those who persevere in sin or who cease from well-doing. Presumption may spring from pride—inordinate trust in one's own powers or in the mercy of God, that is to say, from an exaggerated estimate of self, or from a defective sense of the difficulty of goodness, or from that self-ignorance which induces us to forsake without necessity the ordinary path of duty, and so involve ourselves in self-induced difficulties.

Such conduct is contrary to the spirit of the petition, 'Lead us not into temptation' (see W. H. Mill, *Five Sermons on the Temptation*, Cambridge, 1844, no. 5; Bernard, *in Ps.* 'Qui habitat,' Serm. xiv.). The remedy against presumption is the spirit of humility and holy fear, and attention to the warning implied in 1 Co 9²⁶ 10¹², He 3¹⁶⁻⁴¹ 6^{4a}, Jude³ (see Taylor, *Holy Dying*, ch. v. § 6; and Aquinas, *Sum.* ii. 2. qu. xxi.).

The defect of hope, on the other hand, is *despair*, which springs not necessarily from infidelity but from lack of confidence in God and servile fear. The Heb. verb for 'despair' (שָׁחַח) is an uncommon one (Ec 2²⁰; see also 1 S 27¹, Job 6²⁶, Is 57¹⁰, Jer 2²² 18¹²). The conception occurs in the NT only to be negated (2 Co 4⁸; the exception in 2 Co 1⁸ is, as the context shows, only apparent). Despair is, in fact, incompatible with the spirit of faith (2 Co 4¹⁸). It is, as Aquinas points out, a principle of sin (cf. Eph 4¹⁹), and that for three reasons. (1) Just as hope is based on a true conception of God's character, so despair results from a false and unworthy one, by which God is robbed of His due honour. (2) Despair acts on the will and leads to recklessness of living. 'Sublata spe irrefrenate homines labuntur in vitia et a bonis laboribus retrahuntur.' (3) Further, despair implies that 'a version from the unchangeable good' which is the very essence of sin. 'If sin is the death of the soul, despair is its descent into hell' (Isidore, quoted by Aquinas, *Sum.* ii. 2. qu. xx. art. 3; cf. Aug. *Enarr. in Ps.* 144¹¹).

The causes of despair are various. Moralists specially mention two sins: luxury and 'accidie' (*q.v.*)—that spiritual sloth which robs a man of hope and so casts him down that he thinks the good unattainable. To these may be added the lack of gratitude for God's benefits, impatience, and culpable 'weakness of spirit' (Taylor, *Holy Living*, ch. iv. § 2).

The remedies suggested for despair are at the same time means for sustaining or augmenting hope. Taylor advises (*loc. cit.*): (1) Soberness and moderation in our expectations, and consequent indifference to the changes and chances of human life. (2) Reflexion upon the character of God 'in whom there are all those glorious attributes and excellences which in the nature of things can possibly create or confirm hope'; the soul must contemplate the power of God and His fidelity to His promises. (3) Recollection of Christ's travail for our redemption, as witnessing to the infinite willingness of God to save and pardon. In this connection Augustine (*in Joan. Evang. tract.* xxxiii. 8) refers to Ezk 18²⁷ as a text of comfort for the despairing. (4) Remembrance of the past mercies of God, and of His providential care for the soul. This is implied in St. Paul's words, 'experience worketh hope' (Ro 5⁴). To these may be added (5) the abiding and continuous spirit of penitence—contrition for sins already forgiven and often-repeated acts of repentance. 'Spes sua cuique est in conscientia propria, quemadmodum se sentit ad dilectionem Dei et proximi cognitionemque proficere' (Aug. *de Doct.* iii. 14).

R. L. OTTLEY.

HOPE (Greek and Roman).—The etymological association of *ἐλπίς* with *voluptas*, 'pleasure,' 'will,' 'desire,' is perhaps illustrated by Pindar, *Pyth.* ii. 49; but the neutral meaning 'expectation,' whether of good or evil, common from Homer to

Herodotus, is still for Plato the normal one (*Laws*, 644 C [which Liddell and Scott, s.v. *ἔλπις*, II., misunderstand] and *Philebus*, 39 E). The verb throughout Homer seems to mean 'expect' or 'deem'; the noun occurs twice in the *Odyssey* (xvi. 101 and xix. 84), in a formula, in the sense of 'hope.' There is no personification of hope in Homer.

In the myth of Pandora (Hesiod, *Works and Days*, 96), Hope remains in the jar when other evils have flown forth and been dispersed among men. The natural and traditional interpretation of this is that hope stays with man as his sole consolation (Campbell, *Pleasures of Hope*, i. 30-40; Shelley, *Masque of Anarchy*, xxii.-xxiv.; Cowley, *The Mistress*). On this view the jar contained a mixture of good and evil, corresponding vaguely to the two jars in the Homeric apologue (*Il.* xxiv. 527-533). Further confirmation is found in a fable of Babrius (58), in which the jar contains only blessings, hope remaining when the others are dispersed and lost. But, if we may press the logic of a myth, it can be plausibly argued from the phrase 'other evils' that hope too is an evil.¹ It is the delusion which, in Cowper's words (*Hope*, 153), 'sets the stamp of vanity on all, That men have deemed substantial since the fall,' and there is abundant confirmation of this view in the many passages of the moralizing poets which warn the too easily elated Greek against the special danger of his temperament, 'the chase of a cheating prey with hopes that shall never be fulfilled' (Pind. *Pyth.* iii. 23). Another ingenious mediating interpretation makes the blessing to consist in the absence of hope in the sense of foreknowledge of fate. This would do for humanity what the Prometheus of Æschylus (*Prom. Vincit.* 250) boasts that he did by implanting in them 'blind hopes that they might hide with thin and rainbow wings the shape of death' (Shelley, *Prom.* ii. iv. 62). (O. Gruppe [*Gr. Mythol. und Religionsgesch.*, Munich, 1906, p. 1025 n. 1] is inexact in saying that *ἔλπις* is an evil in Æschylus; and Walz's citation of *Persæ*, 803, is equally irrelevant. So in Pindar, *Isth.* ii. 43, *φθονερά . . . ἐλπίδες*, which means merely the hopes of envious enemies, is misunderstood by Schmidt and many others.) The question has been much debated of late, but there is little prospect of agreement (see Paul Girard, 'Le Mythe de Pandore,' *REG* xxii. [1909] 217 ff., and Walz, 'A propos de l'Elpis hésiodique,' *ib.* xxiii. [1910] 49-57). There is no interpretation of the myth that will satisfy all requirements of a captious logic. Why, for example, should Zeus in the accomplishment of his revenge wish to console mankind? And how, on the other hand, can in the one case the escape from the jar and in the other the remaining behind in it consistently symbolize the presence with mankind of a blessing or a bane?

In post-Hesiodic literature we may distinguish, though we cannot keep apart, (1) the idea already glanced at that hope is an illusion and an evil; (2) the topic of the better hope of the initiated or the good; (3) the anticipation of such modern ideas as the duty of hopefulness; (4) the personification of hope.

(1) 'Creatures of a day,' says Simonides of Amorgos (i. 3-7),

'They live like cattle, knowing not how God
Shall bring each thing to its appointed end.
But Hope and suasive confidence maintain
The agitation of their vain desires.'

(See on this Wilamowitz, *Sappho und Simonides*, Berlin, 1913, p. 272 ff.)

¹ By the Sanskrit poets hope was classed among the evils which the true sage must renounce to secure perfect tranquillity of mind (cf. Böhlingk, *Ind. Sprache*², St. Petersburg, 1870-73, nos. 1046-62, 1477, 2445, 2609).

Solon re-echoes the thought (xii. (iv.) 33 ff.):

'We mortals think alike, the good and had:
Anticipation maketh all men glad,
Till evil strikes, then we deplore our fate
Who gaped on airy hopes in vain elate.'

This general moral he applies to every trade and vocation in turn, in illustration of 'the ample proposition that hope makes in all designs begun on earth below' (Shakespeare, *Troilus and Cressida*, i. iii. 3). In similar vein, Theognis writes (637):

'Hazard and Hope, two cruel gods are they,
Who equally on all mankind do prey.
Men's fortunes prosper oft beyond their thought,
And hope, and oft good counsel comes to naught.'

After Theognis, Pindar (*Nem.* xi. 46) and the dramatists (Soph. *Antig.* 616; Eurip. *Sup.* 479) take up the parable. Thucydides incorporates it in his cynical philosophy of human motives (see P. Shorey, *Transactions of Amer. Phil. Assoc.*, vol. xxiv. [1893] p. 71; F. M. Cornford, *Thucydides Mythistoricus*, London, 1907, p. 167 f.). 'Hope easily led astray' is one of the elements of which the mortal soul is compounded by the divinities that came to the making of man in Plato's *Timæus*, 69 D, and hope is a motive of crime in Antiphon (fr. 58, Diels) and Democritus (fr. 221).

This is the prevailing tone. But, of course, hope is also described as a blessing and a consoler, and there are parallels with most familiar quotations, from Pope's 'Hopesprings eternal' (Theognis, 1135) to Gay's 'While there is life there is hope' (Theoc. iv. 42), and Prior's 'For Hope is but a dream of those that wake' (Pindar, *ap. Stob. Flor.* 111. 12). Æschylus' 'Exiles feed on hope' (*Ag.* 1668) became a proverb. (For a collection of commonplaces, see *Stob. Flor.* 110 ff.; C. F. Nägelsbach, *Nachhomer. Theol.*, Nüremberg, 1857, p. 383 f.; L. Schmidt, *Ethik der alten Griechen*, Berlin, 1882, ii. 70-75.)

(2) The better or fairer hope is almost a technical term for the assurance of a blessed immortality which the mysteries brought to the initiated (see C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, i. sect. 11, pp. 69-73; Pindar, in Plato, *Rep.* 331A, and Plato, *Phædo* 63 C, where Burnet comments, 'Elpis is Orphic for faith'). This better hope extends to worldly prosperity also, and is sometimes the reward of moral and not merely ceremonial purity (cf. Isocr. iv. 28 with viii. 34-35, i. 39, and xv. 322). In Antiphon, vi. 5, it is a sanction of the oath and of the righteous administration of justice.

(3) The friendly exhortation not to despair but to cling to hope (Soph. *Trach.* 125) passes by insensible transition into the affirmation of the duty of hopefulness (Pind. *Isth.* vii. [viii.] 16; Eur. *Herc. Fur.* 105; Horace, *Od.* ii. x. 13). The transition and the blending of the idea with the better hope of the righteous appears in a notable passage of Plato's *Laws* (732 C). More simply Demosthenes (*de Cor.* 97), in an often imitated passage, declares to the Athenians:

'Good men should attempt all honourable things, casting before them good hope as a shield and hearing bravely what God gives.'

Similarly Menander (fr. 572, Kock):

'When thou dost well, thrust forth to cover thee
Good hope a shield, in confidence that God
To righteous boldness lends a helping hand.'

But there is a wide gap between these sayings and Emerson's optimistic Americanism: 'We judge of a man's wisdom by his hope.' To Epictetus (fr. cxlv., Didot) and Democritus (fr. 185, Diels) is attributed the saying that 'The hopes of the educated are better than the wealth of the ignorant.' The saying, 'The hopes of right-thinking men are attainable, those of the foolish not' (Democr. fr. 58, Diels), may be ultimately derived from Plato's *Philebus*, 40 A-B.

(4) Hope is freely personified in Greek poetry, and Clytemnestra's 'My hope shall never tread

the halls of fear' (*Æsch. Ag.* 1434) is as bold as Lady Macbeth's 'Was the hope drunk, wherein you dressed yourself?' Hope is represented on a marble vase in Rome and on coins, holding a branch in the left hand and a pomegranate flower in the thumb and first finger of the right, the symbolism of which is doubtful (see Roscher, *s.v.* 'Nemesis,' and Müller-Wieseler, *Denkmäler der alten Kunst*, Göttingen, 1835-81, ii. fig. 670). But there is no evidence of an actual cult in Greece. Theognis' admonition to pray to Hope first and last (1146) proves as little as the association, in *Anth. Pal.* ix. 146, of Elpis with Nemesis, or with Tyche in *Anth. Pal.* ix. 49 (cf. *Roman Sepulchral Inscriptions*, xi. 6433) and 134, or the plural Elpides in *Anth. Pal.* x. 70 and vii. 420. Any half-personified abstraction may be a 'god' in Greek poetical rhetoric from Euripides down.

It is otherwise with the Roman Spes, to whom a temple was erected in the *forum holitorium* in 258 B.C., and who perhaps had a still earlier worship indicated by the term *Spes Vetus*, referred to a district near the Porta Labicana. She first appears in literature in Plautus (*Cist.* 670, 'Spes sancta'; cf. *Bacch.* 893, *Pseud.* 709, *Merc.* 867, *Rud.* 231). The theory of Preller that she was originally a garden-goddess, the farmer's hope of harvest, is rejected by Wissowa and Axtell (*Deification of Abstract Ideas in Roman Literature*, Chicago, 1907, p. 18). Whether the more specific Bona Spes is an essential part of the conception, or a later development, or a mere literary epithet, is open to debate. She was worshipped at Ostia and Aricia by the Emperors, and appears once in the prayers of the Arval Brothers. The Romans made more of the cult of personified abstractions than the Greeks, but even in Latin literature the line is hard to draw. In Horace (*Odes*, i. xxxv. 21) and Tibullus (i. i. 9, and ii. vi. 20-28), there is little to choose between poetic personification and cult. The insistent repetition of the name at the beginning of the line in the Tibullus passage may be nothing more than a literary *motif* common in Latin elegy, and traceable as far back as the speech of Nestor in *Il.* xxiii. 315 f.

The relation between these Greek and Roman ideas and the Christian virtue of hope does not seem to have been adequately studied. It is sometimes stated that the symbolism of the anchor of hope is classic. But the anchor on Greek coins does not appear to be associated with hope, and the association in Greek poetry is rare. In Aristophanes, *Knights*, 1244, 'the frail hope on which we ride' is apparently a raft.

In *Æschylus, Ag.* 505, 'when many hopes are broken' or torn away, the scholiast says that the metaphor is from an anchor. Epictetus said (fr. xxx., Schenkl), 'We should not moor a ship from one anchor, or life from one hope.'

LITERATURE.—This is given in the article.

PAUL SHOREY.

HOPI.—A body of American Indians, numbering 2218 in 1912 (as compared with 1839 in 1896 and 1878 in 1904) and occupying, within a reservation of 2,472,320 acres in N.E. Arizona, the six pueblos of Walpi and Sichumovi on the 'East Mesa,' Shongopovi, Mishongnovi, and Shipaulovi on the 'Middle Mesa,' and Oraibi on the 'West Mesa,' to which must also be added the Tewan pueblo of Hano, a little N. of Sichumovi. Practically the sole map of the region is the one herewith reproduced from *JAEA*¹ iv.

The language of the Hopi belongs to the Shoshonean stock; yet in their ritual many Keresan words occur, and Zuñian influence is potent, while

¹ Special abbreviations employed in this art.: *AmAn* = *American Anthropologist*; *FCMAS* = *Field Columbian Museum, Anthropological Series*; *JAEA* = *Journal of American Ethnology and Archaeology*.

there are marked analogues with Nahuatl culture. The composite character of the Hopi is also substantiated by their legendary history, which

represents different portions as coming from widely separated parts of the country.

The term 'Hopi,' which these people prefer, and which alone should be applied to them, is a contraction of *Hópitáh*, 'peaceful ones,' or *Hópitáh-shnumáh*, 'peaceful all people'; and the common appellation of *Moqui* (with many variant spellings), which means 'dead' in Hopi, is an offensive misnomer.

As a tribal name *Moqui* 'is seemingly of alien origin and of undetermined signification—perhaps from the Keresan language (Mótscha in Laguna, Mo-ts in Acoma, Mótsf in Sia, Cochiti, and San Felipe), whence Espejo's "Mohace" and "Moboce" (1583) and Oriate's "Moboqui" (1598) (Fewkes, *HAI* i. 560). They are known to the Apache also as Earke ('live high up on the mesas'), and the Zuñi sometimes derisively call them Amukwikwe ('smallpox people') and Hapeka ('excrement people'). The name for their country is Tusayan (Apache, 'place of isolated buttes'; for further synonyms, see Fewkes, *op. cit.* 567 f.).

1. History.—The districts from which the phratries came were, according to Fewkes (*19 RBEW*, 582): Tokonabi (S. Utah)—Chua, Ala; Palatkwabi² (S. Arizona) and the Little Colorado—Patung, Lengya (?), Patki, Kukuch, Piba, Tuwa, Tabo; the Muñibi (Rio Grande valley) and New Mexican pueblos (Zuñi, Acoma, Jemez, etc.)—Honau, Kokop, Pakab, Asa, Buli,³ Honani. The order in which these clans reached Tusayan is very uncertain (Fewkes, *19 RBEW*, 585 f.; for the native traditions, cf. the very full account by Stephen, *ap. Mindeleff*, *8 RBEW*, 18 ff.; also Voth, *FCMAS* viii. 22 ff.), but perhaps the most reliable summary is that of Fewkes (*AmAn*, new series, ii. 694 f.).

Of the existing Hopi pueblos, Walpi, Shongopovi, Mishongnovi, and Oraibi (the Oraibi colonized from Shongopovi) were established before 1629; Sichumovi (colonized from Walpi) and Shipaulovi (colonized from Walpi and Mishongnovi) were founded about 1750; and Hano was built early in the 18th cent. (Fewkes, *AmAn* vii. 414, and *19 RBEW*, 581 f.; see, further, *HAI* ii. 901, 553 f., i. 871, ii. 142 f., 564, 551, i. 531). The inhabited pueblos are elaborately described by Mindeleff (*8 RBEW*, 61-79), who also describes the ruins of Old Walpi, Old Mishongnovi, Shitaimu, Awatobi, Kokopki (called by him 'Horn House'), Chackpahu (called by him 'Bat House'), Kawaika (called by him Mishiptonga), Moen-kapi, Kwaituki, Tebugkihu, Chukubi, and Payupki (*op. cit.* 45-60; for the tradition regarding Payupki, see Stephen, *ap. Mindeleff*, 40 f.).

These are only a few of the ruined sites, and to them may be added Chubkwichalobi, Honanki, Kachimba, Kisakobi, Kukuch-

¹ The spelling of Hopi names is by no means uniform; in the present art. the vowels have their Continental value; *u*=*u* in 'but'; *p* and *b*, and *t* and *d*, are indistinguishable; *tc*=*ch* in 'chink'; *ñ*=*n* in 'finger'; *e*=*sh* in 'shall'; *g*=German *ch*.

² For the Hopi tradition of the destruction of Palatkwabi, see Voth, *FCMAS* viii. 48-63.

³ On this clan, traditionally said to be Tewan in origin, and to have migrated to Zuñi and thence to the Hopi, being one of the components of the population of Awatobi, see Fewkes, *AmAn*, new ser., xii. 576-594.

homo, Lengyanobi, Lululongturkwi, Tukinobi, Wukoki, and Wukopakabi; as well as the legendary sites of Etipiskya and Hushkovi, and villages mentioned by the early Spanish writers, such as Guanrabi and Quiana (cf. *HAI* i. 293, 559, 638, 703, 733, 764, 778, ii. 834, 976, i. 442, 501, 369, ii. 359, and the references there given). Mindeleff (*19 RBEW*, 644) doubts whether any of the ruins of Tusayan are more than 400 years old.

In 1774 or 1775 the Hopi population numbered, according to Fr. Escalante, 7494, of whom two-thirds were at Oraibi; in 1780 they had been reduced by famine to 798. In 1850, M'Call estimated their number at 2450 (Bancroft, *Hist.* 261, 266, 462, note 28). The first visit after the American occupation of Arizona was by Ives in 1858, and in 1869 an Indian Agency was established for the Hopi. See Fewkes, in *HAI* i. 560-562; Bancroft, *Hist.*, esp. 46 f., 87 f., 154, 173, 201, 221 f., 225-230, 234, 239, 246, 256, 349, 363-367, 391-398, 547 f.

2. Culture and organization.—The Hopi are essentially agricultural, and, at least in its present form, their religion centres in the need for rain and in ceremonies designed to promote the growth of the harvest. It is maintained by Fewkes (*AmAn* ix. 172) that, the further back they are traced, the closer is their resemblance to the general culture of the so-called cliff-dwellers (cf. *ERE* i. 685^a), and their history indeed suggests, in its stories of the moving of pueblos from low ground to the tops of the mesas (as after the massacre of the Spanish priests in 1680), the way in which the cliff-dwellings came to be constructed. The pueblos themselves (on which cf. *ERE*, *loc. cit.*) are, as Mindeleff points out (*19 RBEW*, 639 ff.), essentially a product of the plateau country into which the migrations of the Hopi led them. They learned the custom of storing grain to provide both against drought and against the forays of hostile tribes, such as the Apache and the Ute, and this forced the small villages to amalgamate, at first on the foothills, and later on the summits of the mesas. Yet the necessities of continued agriculture—or, rather, horticulture—obliged them to construct summer villages near their fields, a notable example being the present village of Moen-kapi, about 40 miles N. W. of Oraibi (see Mindeleff, *8 RBEW*, 77-79).

Within the villages the Hopi are divided into 'clans,' or *winguru*, these being descendants of sisters; and into groups of *winguru* from the same female ancestor and possessed of a common totem, or *myimvu* (Stephen, *op. Mindeleff*, *8 RBEW*, 16). The whole Hopi system is, as will be seen (below, § 4), matriarchal, and the form of the Hopi pueblo is materially affected by this fact. Accordingly, as Mindeleff notes (*19 RBEW*, 647),

'as the men who are adopted into it by marriage take up their quarters in the family home and children are born to them, more space is required. But additional rooms, which are still the family property, must be built in the family quarter, and by a long-established rule they must be built adjoining and connected with those already occupied. Therefore in each village there are constant changes in the plan; new rooms are added here, old rooms abandoned there. . . . It is not unusual to find in an inhabited village a number of rooms under construction, while within a few steps or perhaps in the same row there are rooms vacant and going to decay.' Since, moreover, care is taken, when first laying out the pueblo, to secure sunny exposures for entrances and terraces, as well as protection against cold and wind, the general growth of the pueblos has been N. W. or S. E. (Fewkes, *AmAn*, new series, viii. 88 ff.).

In the building of the houses all the heaviest work is done by the men, but the women normally do the plastering and all else that their physical strength allows, both in the houses and in the kivas, or chambers for ceremonial gatherings and the general purposes of a club-house (Mindeleff, *8 RBEW*, 100 ff., 111 ff., where the simple rites connected with building are also given).

An instrument peculiar to the Hopi among the American Indians is the *putshkohu*, or 'rabbit stick' (represented in the accompanying cut from a specimen in the collection of the U. S. Government), which

'is delivered in the same way as the Australian [boomerang], and its course after it strikes the ground often brings it to the right or left of the thrower and nearer to him than the farthest point reached in its flight. It makes one or more revolutions in its flight toward a rabbit, and if it does not strike the animal directly, its rapid gyration when it touches the

ground makes probable the hitting of any object within several feet. So far as is known this is the only aeroplane club used in America. The material is Gambell's oak (*Quercus gambelii*), and a branch of the proper curve is selected for its manufacture. One end is cut to form a handle, and the club is usually varnished with resin and painted with an invariable design in black, red, and green. Of late years a rabbit figure is frequently painted thereon. The weapon has a religious significance, probably arising from its use in ceremonial rabbit hunts' (Hough, *HAI* ii. 348). The *putshkohu* constitutes part of the equipment of the Makto and Teilikomato kachinas¹ (Fewkes, *21 RBEW*, 113, 116, plates xlix., li.).

3. Birth, naming, and initiation.—The parturient mother is usually attended by her mother (or, if her mother is dead, by her aunt or other female relative), who is not, however, generally present during actual parturition, except in a case of difficult labour or the like. The father likewise remains away under ordinary circumstances. After the child has been born, its head and the head of the mother are washed with amole suds, and the infant's body is rubbed with ashes, after which an ear of maize is placed in its cradle to guard it. The care of the new-born child devolves mainly upon the paternal grandmother (or, if she is dead, upon her sister or other female relative on the father's side), and until the 5th day the mother must not see the sun or receive any solar light. On the 5th day the washing is repeated, as well as on the 10th, 15th, and 20th. During this period the mother may eat no meat or salted food, and all sustenance must be prepared, at least in part, with a decoction of juniper leaves; and for these 20 days the mother is, furthermore, forbidden to be barefoot. Shortly after birth four horizontal lines are drawn upon the wall of the room, these being called the child's 'house,' and on each of the days of washing one of these lines is solemnly effaced—a ceremony whose real meaning is still unknown²—and is offered to the rising sun with a prayer for old age.

The 20th day marks the purification of the mother, the naming of the child, and its presentation to the sun. On this day both mother and child are again solemnly washed, the former also being obliged to stand over a steaming vessel into which juniper is thrown, thus receiving the final purification. The bowl with its contents, together with sweepings and everything connected with the mother during her ritual impurity, is then thrown away without ceremony. The after-birth, which has been kept until this time, is sprinkled with sacred meal, a feather is added, and the whole is rolled together, waved over the mother's head, and carried away to be shaken out or buried by the paternal godmother. When the latter returns, she rubs the mother's arms, neck, and face, and the child's face (on the Middle Mesa she takes ears of maize and makes four passes over the front of the child, without touching it, from head to foot), and with prayer-meal and ears of maize she makes some such prayer as, 'May you live to be old, may you have good maize, may you keep well, and now I name you N.' All the other

¹ On kachinas see artt. CALENDAR (American), vol. iii. p. 67, and DRAMA (American), vol. iv. p. 871 f.

² It may be queried whether these lines do not represent the four 'houses,' or stages, of the Hopi creation legends. On the child's 'house,' see Voth, *FCMAS* vi. ii. 49.

women belonging to the father's clan do likewise, one of the many names thus given being finally selected to be borne until initiation into one of the fraternities. The child is now placed in its cradle, and, when the father (whose presence or absence during these ceremonies has been immaterial), announces sunrise, the infant is carried by the godmother, escorted by the mother, bearing prayer-meal. The face of the child is uncovered, and the godmother and mother pray over the meal and cast it towards the rising sun (on the Middle Mesa the godmother plants two *bahos* [on which see below, § 11]—one for the mother and one for the child).

Meanwhile, provision has been made for a feast, in which *nufkuibi* (stew of mutton and shelled maize) and *pikami* (sweet mush) are indispensable. The first morsel of each food is given in sacrifice to the sun, and the child then receives a small bit. After the feast, when the mother has returned a larger portion of maize meal than was given her for her child, the guests return to their own homes.

About the age of eight or ten, children undergo what may be the survival of an initiation rite. In the course of the Powamú ceremony the children are led into the presence of the two Tuñwupkachinas either by their mothers or by their godfathers (godmothers in the case of girls). The children, who carry ears of maize, a handful of prayer-meal, etc., are then flogged by the kachinas with yucca whips, the boys severely, the girls more gently. After them the godfathers (but not the godmothers) are whipped, and then men with various ailments. Previous to this whipping the children have believed that the kachinas are real; after it they know that they are in reality only personations (Fewkes, 15 *RBEW*, 233-235, 21 *RBEW*, 36, 69; Voth, *FCMAS* III. ii. 103 f.).

Children are initiated into the various fraternities at about the age of fifteen or eighteen, and they then receive the names by which they are permanently known (for the initiation rites of the Antelope fraternity, see Fewkes, Stephen, and Owens, *JAEA* iv. 62-65). 'All Hópi proper names have some reference to the name of the Name Giver, never, unless coincidentally, to the clan totem of the Bearer of the name' (Voth, *FCMAS* VI. iii. 68). The real meaning of these names varies according to the clans which give them; and, even when the meaning of the individual components of proper names is known, grammatical vagueness often renders precise determination of the meaning of the whole very doubtful.

4. **Marriage.**—The matriarchy of the Hopi comes strongly to the fore in their marriage customs. The choice of partner usually depends upon the youth and maiden concerned, but the actual proposal is generally broached by the girl or by her representatives. Gifts are exchanged, but there is no marriage by purchase. Marriage is rare in summer or late spring, but is common in autumn or winter, when agriculture is at a standstill. Escorted by her mother (or, if she is dead, by her aunt), the girl goes to her future husband's house, where she grinds maize for three days, during which time she is expected to talk as little as possible. On the morning of the fourth day the heads of the pair are washed by their respective future mothers-in-law,¹ after which they pray, casting the sacred meal towards the dawn. After a wedding breakfast a mixture of lime, black stuff, etc., is thrown

¹ At Oraibi, after this first washing separately, 'usually the hair of the young couple is then washed thoroughly together in each bowl, and this hair washing, and especially the washing of the two heads in the same bowl, is said to be the "crucial moment" in which the two are supposed to "become one"' (Voth, *FCMAS* XI. ii. 143; in one instance observed by Voth the groom refused to have his head washed, this fact giving rise to jocular doubts whether he could be regarded as really married).

at one another by the older female relatives of the pair, especially of the bride, and by the father of the groom, this solitary representative of the sterner sex soon having the worst of the encounter. A few days later it is announced that the cotton for the bride's garments is to be spun. This work is performed by the men in the kivas, their food being cooked by the women in the bride's house. Her costume itself is made by the groom, assisted by his male relatives, especially the father. After it is completed—a task that may require several weeks—the bride, whose hair has meanwhile been dressed in the married women's style of two coils hanging down in front instead of the girls' side whorls in imitation of squash blossoms, returns to her mother's house, whither she is followed, during the day, by her husband. She is required to give his family a large compensation, usually in ground maize. The newly wedded pair live with the bride's mother until they can provide a home of their own. When sick, the groom returns to his mother's house, and he is even frequently regarded as an outsider in his wife's home. Among the Hopi pre-nuptial life is usually chaste, but, though unchastity is disapproved, it is condoned if marriage follows. If, however, illegitimate children are born, they enjoy the same legal status as others, in consequence of the matriarchal system in vogue among the Hopi.

The average Hopi family consists of 5.5 persons, and the population is gradually increasing; sterility is somewhat rare; cases of voluntary abortion are not unknown (A. Hrdlička, *Physiological and Medical Observations* [= *Bull.* 34 *BE*], Washington, 1903, pp. 42 f., 6, 52, 164). A remarkable pathological feature is the prevalence of albinism, which is restricted almost entirely to the Hopi and the Zuñi, the proportion among the former being 5.5 per 1000, and no marked increase or decrease being perceptible. Although albinos are not despised, and may marry those of normal colour, they themselves are very sensitive. Their marriages are frequently barren or their families are unusually small (*ib.* 191 ff.); and it is believed that albinism may be a punishment for the mother's violation of some tabu (54). According to the report of Dr. Jacob Breid, dated 4th Feb. 1905 (reproduced by Hrdlička, Table 9), out of a Hopi population of 1878, there were then 5 cases of complete albinism for each sex (2 each of children and 3 each of adults), 4 of goitre (female adults), 2 of epilepsy (1 child of each sex), 4 of idiocy for each sex (3 each of children and 1 each of adults), 1 deaf and dumb female child, 5 cases of spinal curvature (3 males and 2 females), and 67 of tuberculosis—24 pulmonary (males: children 3, adults 9; females: children 4, adults 8); 26 of bones and joints (males: children 10, adults 5; females: children 8, adults 3); 17 glandular (males: children 4, adults 1; females: children 8, adults 4).

5. **Burial.**—The hair of the corpse is washed and dressed; the chin and the lower cheeks are painted black; the brow is bound with a cotton cord; the face is covered with a rain-cloud maske; the body is bent together, tied, and wrapped; and prayer-sticks are placed in the hand. There is crying and mourning after death, but no screaming or loud lamenting, although there is wailing during the washing of the body and on anniversaries of the death, professional mourners being not unknown (A. C. Fletcher, in *HAI* i. 952). The adult dead are buried at night or early morning in a sitting posture, facing the east, in graveyards on the slope of the mesas or of hills near them, or they may simply be laid in crevices in the rock; the former is the normal practice at Mishongnovi and Oraibi, the latter at Shongopovi. The soul is afforded communication with the outer world by a

stick touching the body and projecting above the ground; and dishes, often filled with food, as well as a few petty ornaments, are placed by the grave, which usually has some mark indicating to what fraternity its occupant belonged. The graveyards are utterly neglected. The faces of children dying before initiation into any of the fraternities are not painted, nor do their foreheads have the cotton cord. Their bodies are thrust into rock-crevices.

On the 3rd day after death the last food- and prayer-offerings are prepared for the dead. The latter consist of a double green *baho*, a single black *baho* (the *chochokpi*, or 'seat'), an eagle breath-feather (the *püku*, or 'road'), and about six *nakvakvosis* (a sort of prayer-bearer). The 'road' the father, brother, or uncle of the deceased

'places on the ground west of the grave, the thin string pointing westward. From this road he sprinkles a meal line westward denoting the continuation of the road. According to a belief of the Hopi, the hikvisi (breath or soul [on which see below, § 15]) of the deceased ascends early the next morning from the grave, partakes of the hikvisi of the food, mounts the hikvisi of the seat, and then travels along the road to the masski (skeleton house), taking the hikvisi of the double *baho* along as an offering. In the case of the death of a small child that has not yet been initiated into any societies, the road is made from the grave towards the home of the child, because it is believed that the soul of that child returns to the house of its parents and is reincarnated in the next child that is born in that family. Until that time the little soul is believed to hover over the house. It is said that when an unusual noise is heard in the house, for instance a crackling in the roof, they think the little soul is moving about, and the mother then often secretly deposits a pinch of food on the floor in some part of the house for her departed child. When I asked one time what became of that child-soul in case no further birth took place in the family, I was told that in such a case the soul remained near the house until its mother died, who then took the little soul with her to the other world' (Voth, *FCMAS* xi. ii. 103).

6. Religion: general character; ancestor-worship.—Hopi religion is broadly characterized by Fewkes (*JAFI* xi. 180 ff., 19 *RBEW*, 625) as based on a composite totemism overlaid with rites for rain and corn, the two prime necessities of the arid environment. There is also some trace of a form of ancestor-worship in so far as the dead are apparently represented by the *gneliupki*, or crooks, placed about the altar of the Antelope fraternity—the shortest being for the oldest, since old age is most bowed—and the use of the *gneliupki* by the supervisor of snake-racers may have a similar implication (Fewkes, Stephen, and Owens, *JAEA* iv. 23, 75; Voth, *FCMAS* iii. iv. 311). Again, at the feast connected with the Humiskachina and Nimankachina one of the kachinas, who are also connected with the ancestor-cult, collects from the bowls of food given by each woman a pinch of every sort, this being placed in a shrine in a rock-crevice 'as food for the "early dead"' (Fewkes, *JAEA* ii. 43); while during the building of a house the future owner takes some food and places it in a niche of the unfinished wall (Fewkes, *JAFI* x. 198 f.).

7. Sympathetic magic.—All Hopi ritual is permeated with the concept of sympathetic magic. Fewkes observes (*AmAn*, new series, iii. 211) that every Hopi clan owns sacred objects which 'are thought to possess magical powers by the use of which the priests can obtain sacred results, are almost universally totemic, and are intimately connected with the ancients, the worship of whom runs through all Hopi ritual.' He happily compares these objects—called *wimi*—with the Australian *churinga* (on which see *ERE* ii. 244b). When the clans combined, the *wimi* passed into the possession of priest fraternities, and are revered by several clans, although still owned by the descendants of the clans which introduced them.

Fewkes also suggests that in the dramatic attack upon the bearers of the sun-shield in the Soyaluñiya rite there is a representation of an onslaught on the sun by hostile powers, and that the purpose of the dramatization is to draw back the luminary from its threatened disappearance (15 *RBEW*,

271 f., *AmAn* xi. 102). In like manner the drenching with water and filth in the course of the Wüwüchimi ceremony is probably a rain-charm (Fewkes, *Proc. Boston Soc. of Nat. Hist.* xxvi. 436, 448). Again, smoking is

'a ceremonial religious custom; the pipe is the *O-mow-uh* (cloud-god), and the smoke the rain cloud.' 'The smoke carries the prayer from the chief; it transfers the wish of the smoker to the object; moreover, it is a cloud, and is symbolically efficacious in bringing that which clouds produce—rain' (Fewkes, *JAEA* ii. 124; *AmAn*, new series, iv. 504, note 2; cf. iii. 222, 445). Moreover, as Fewkes says (*AmAn* x. 144), 'the most prominent symbols and figurines on several Tusayan altars of widely different societies refer to the sun, rain-clouds, and the fertilization, growth, and maturity of corn. Masked performers represent supernaturals connected with the production of the latter. The ceremonial acts about the altars or in the public exhibitions have one intent, to affect the gods who control these necessities. In their complicated rites the priests believe they can do this by reproducing ancestral ceremonies, and are guided in their presentation by current legends. Personifications, masked or unmasked, are therefore introduced that the performance may be more realistic—a more accurate reproduction of the ancient.' The whole principle of the Hopi 'altar' is based upon this concept of sympathetic magic (see *ERE* i. 336). Women do not enter the kivas except to renovate them annually at the Powamö, and in the course of some of the other festivals when their presence is necessary (Mindeleff, 8 *RBEW*, 129, 134).

8. Mythology.—It is scarcely possible, in our present state of knowledge, to give any list of the worshipful beings of the Hopi. We have, for instance, Cotokinuñwü ('Sky-heart'), this being also the Hopi name for the Christian God (Fewkes, *JAFI* xv. 24, note 2; on the possible influence of Christianity upon the concept of Cotokinuñwü, see Fewkes, *Proc. Boston Soc. Nat. Hist.* xxvi. 445); Müyiwü, the god of growth; Omowü, the rain-god of the cardinal points; Palülükoñ, the Plumed Serpent; the war-gods Püükoñhoya and Paluñahoya; Masaut, the god of the under world; Kokyänwüqti, the Spider-Woman; Huzrüwüqti, the 'Woman of Hard Substances'; Hahaiwüqti, the Old Woman, etc. Yet, as Fewkes declares (*AmAn*, new series, iii. 214),

'although apparently very complicated, Hopi mythology in reality is simple, as most of the names of the gods are attributive. Especially is this true of the Sky- and Earth-gods, the names of which are numerous and perplexing. It would, in fact, seem that every clan had its own name for each of these gods, and it is this multiplicity of names which makes a proper identification very difficult. Every clan had a great Sky-god and an Earth-god or -goddess, the former being the father, the latter the mother of all minor gods. Each clan also had its totemic ancestral members—the ancients, male and female—resembling each other in type but not in name. Three supernaturals, differing in name and personation, appear in connection with most Hopi altars. These three are (a) Sky-god, (b) Earth-god, and (c) Cultus hero or heroine. They are personated symbolically and may be represented by a human being, a graven image, or a picture, or by all these combined.'

An important feature of Hopi mythology is the pairing of divinities into male and female, so that Stephen (*ap.* Fewkes, *JAEA* ii. 153, note) could observe that

'there are numerous dual gods. These are not good and bad, but male and female, as expressing essential completeness. There is no male deity without a corresponding female counterpart, but there are one or two which would seem to indicate that the two were united in one being. . . . In one or two instances two male deities are associated, but each of these has also a corresponding female deity known by the termination *mā-nā* ['maid']. . . . *Dā-wā*, the sun, and his male relative, *Tai-o-wā*, divide the task of bearing the shining shield across the sky, each carrying it four days alternately.' Furthermore, Fewkes suggests (*AmAn* v. 17, note 3) that the Plumed Serpent (Palülükoñ) is the dualistic counterpart to the Earth.

9. Totemism.—It has already been observed (above, § 6) that the basis of the Hopi religion is totemistic—a totemism which

'has become the worship of anthropomorphic parents, male and female, a reverence which amounts to worship of the souls of the dead; of beasts or animals as sharing in part a supernatural element possibly due to metempsychosis; and of the great elements foreign to simple totemism' (Fewkes, *JAFI* xi. 194).

The principle of totemism comes conspicuously to the fore in the famous snake ceremony, where, according to Fewkes (19 *RBEW*, 1008 f.), the presence of snakes

'is generally supposed to show that this rite is a form of snake worship. It is rather a worship of the ancestors of the Snake clans, which are anthropo-zoöomorphic beings, called the Snake youth and the Snake maid; but neither of these represents the Great Snake, nor has their worship anything to do with that of this personage, who was introduced into Hopi mythology and ritual by the Rain-cloud clans.'

This totemism is also the keynote of the ceremonial washing of the snakes in the kivas before the public celebrations (on this see Fewkes, *AmAn* xi. 313-318).

10. Nature-worship.—Like Hopi mythology in general, and like their altars, their conception of the Sky-god is, at least in its present form, composite. The general system of 'Sky-God Personations in Hopi Worship' has been discussed in detail by Fewkes (*JAF* xv. 14-32). The sun is his shield or masque, 'a visible symbol of the magic power of the Sky-god conceived of as an anthropomorphic being' (14). Ahüla, the Sun-god of the kachina clans, returns in the Powamü; and, when Eototo, the Germ-god and the ruler of the under world, leads these clan-ancestors in their westward departure at the Ninankachina, he can only be deemed the same deity under another aspect (19, 24). Indeed, the kachinas in general are connected with the solar cult. In the bird-men represented in the Soyaluña we again see a personation of the Sky-god (26 f.); and, when feather designs are found on almost three-quarters of all ancient Hopi decorated ware, while over two-thirds of the animal pictographs on pottery represent avian forms, we are here to find yet another mode of representation of the same deity (Fewkes, *AmAn* xi. 1-14), and it is for this reason that turkeys and, next to them in importance, eagles (in ancient times probably parrots as well) are kept for their feathers, which are used in the preparation of *bahos* (on which see below, § 11) and in countless ceremonies (Fewkes, *AmAn*, new series, ii. 690-707).¹ The Plumed Snake (Palülükoñi), which in the Palülükoñi religious ceremony emerges from sun-symbols and knocks over a symbolic field of maize, is a representation of the Sky-god wielding the lightning (Fewkes, *JAF* xv. 29); and the Bird-Snake personation in the Soyaluña at Walpi represents the return of the Sun-god (28), for

'the serpent represents the lightning, one attribute of the Sky-god, and the bird, another; combined we have the Bird-Serpent, the great Sky-god of those Hopi clans whose ancestors once lived in the "far south" [i. e. Palatkwabi]' (31).

An extremely interesting cult in this connexion is that of the Alosaka, the ancestors of the Aaltü ('Horn-Men'), who, in their personations—especially at Mishongnovi, where the cult was introduced by the Patuñ, the founders of the pueblo—wear close-fitting wicker caps bearing large curved projections of buckskin, painted white, and resembling the horns of the mountain sheep, which the Aaltü imitate in some of their actions. In Walpi the cult survives in the ceremonies of the Leñkapi, Wüwüchimi, and Soyaluña (see Fewkes, *AmAn*, new series, i. 524). Like the other horned gods—Ahüla, Calako, Tuñwup, and the Natackas—the Alosaka are intimately connected with the sun. At the same time, they represent the mountain sheep, and their cult is a highly modified form of animal totemism, while the purpose of the rites performed in this cult is the germination and growth of seeds—particularly maize—and the bringing of rain.

11. Sacrifice and prayer.—Reference has been made above (§ 6) to cases of sacrifice to the dead; but the most important form of Hopi sacrifice is that to the deities. At many feasts the first morsel is taken by the head priest and set on one

¹ All the full-grown eagles in the pueblos are killed, by choking only, on the day after the Nimankachina, and whistles of eagle bone are used in many ceremonies (Voth, *FCMAS* xi. ii. 105 f.).

side, probably as a sacrifice (Fewkes, *JAEA* ii. 29 f.; cf. above, §§ 3, 6). When departing from or returning to the pueblo, a stick or stone is thrown on a pile of such objects, especially at shrines of Masauü, the god of the under world (Fewkes, *JAF* x. 195, *JAEA* iv. 41, note 1), for whom bits of food are placed in the rafters of the house, that he may not hasten the departure of any of the family to the under world (Mindeleff, *RBEW*, 102); the 'prayer-meal,' which is so important throughout Hopi ritual, is also to be considered a form of sacrifice, as is the *baho*, which is presently to be noted (Fewkes, *JAF* x. 196-200). In 1892, Fewkes witnessed a dog sacrifice at Sichumovi; and certain details in the treatment of rabbits after their death in the ceremonial rabbit-hunts may point to a former system of animal sacrifice. At the present time such sacrifice is rare; and, if it does occur, its type is highly modified (*ib.* 189). It is also noteworthy that the Hopi have a tradition of human sacrifice in connexion with their deluge legend.

An interesting object, which seems to be the medium between sacrifice and prayer, is the *baho*, or 'prayer-stick,' which bears the prayers to the deities. These 'prayer-sticks' are not confined to the Hopi, but are found also among the Navaho and Apache, with analogues among many other stocks (Hough, *HAI* ii. 304; Solberg, *AA* xxxii. 73). These *bahos*, which range from a few cm. to $\frac{1}{2}$ m. in length, are ordinarily double, 'male' and 'female,' bound together, and are made of sprigs of various sorts of willow and cottonwood trees, being adorned with pine needles, eagle feathers, etc., and painted in various colours.¹ They are prepared with fasting and other purifications, but are seldom made for the personal advantage of their manufacturer, being rather for others (cf., for an example, above, § 3), the personal prayer-bearer, or *nakwakwoosi*, being somewhat similar; after they have been used, their sanctity is at an end. The *bahos* are placed in clefts in the rocks, in sacred spots and shrines, etc., usually in honour of specific deities or by special societies, and on certain ceremonial occasions. While they are being made or set in place, prayers are murmured over them, and, in their symbolism of colour, components, etc., the Hopi see a medium between him who prays and his god, so that they are a strengthening of the verbal prayer and the bearer of the petition in permanent form (Solberg, 56-59).

Like the prayer-meal, the *bahos* are regarded by Fewkes (*RBEW*, 297; cf. *JAEA* ii. 30, note 3) as 'sacrifice by symbolic substitution'; and he continues:

'Offerings of corn or meal would be natural among an agricultural people like the Hopi. Substitutes for human sacrifice to the gods were sometimes made by the Aztecs in the form of dough images, so that the method of substitution, common in Europe, was not unknown in America [see, further, *ERE* iii. 60b]. . . . In these days sacrifice has come to be a symbolic substitute of products of the field—corn, flour, or *pahos*—still retaining, however, the names "male" and "female," and with a human face painted on one end of the prayer-stick.' The snake-whips are also to be regarded, according to Fewkes (*loc. cit.*), as true *bahos*.

Yet another form of substitutional sacrifice is seen by Fewkes (*JAF* x. 193) in the *tihus*, or dolls, which, carved especially at the Powamü, Palülükoñi, and Nimankachina, and presented to the little girls, are 'simulacra of the gods,'

¹ The pine needles are brought from the San Francisco Mountains; certain seeds from the region south of Holbrook, Arizona (100-110 miles from Walpi); ochre from Tefka (several days distant); and the colouring materials—red hematite and green malachite—often from the Havasupai (N.W. Arizona), etc. On the sites of Homolobi, Shakwabaiyaki, and Chubkwichalobi, Fewkes (*AmAn* ix. 359-367) found Pacific coast shells, such as *Petunculus giganteus*, *Conus princeps*, *Haliotis fulgens*, *Olivia hitula*, and *O. biplicata*, which he believes to have been brought by the Hopi in their migrations from the south.

and are analogous to the dough images of the Aztecs.

As a single example of the many verbal Hopi prayers may be cited the following, used at the Snake and Flute ceremonies and recorded by Dorsey, *FCMAS* iii. 213:

'Now we joyfully and encouraged are going to perform a ceremony here. May these clouds from the four world quarters have pity on us! May the rain-water meander through our fields and our crops! And then the corn, quickly having seeds, our children will eat; and they being satisfied, we shall also eat and be satisfied. And then after that it shall mature and we shall gather it in and put it up in our houses, and after that we shall eat and live on it. Therefore we are happy, and being strong shall perform this ceremony.'

12. Purification.—Ritual purity is as necessary to the Hopi as to any other people. Before many ceremonies continence is obligatory. At the conclusion of some ceremonies, particularly the Snake ceremony, before there can be a return to the ordinary mode of life, it is requisite to remove all that has been associated with the individual during the sacred period, this being accomplished by the taking of a strong emetic. It must also be noted that expectoration forms a portion of a number of rites, apparently with a religious signification (Fewkes, *JAEA* ii. 76, 93, 98, 103).

13. Symbolism and sinistrism.—Symbolism, here a side of sympathetic magic (see above, § 7), runs through all Hopi ritual. The connexion of feathers with the sun has already been noted (above, § 10). Passing mention may be made of the representation of lightning by the snake (see above, § 10), as well as of the numerous rain-cloud symbols, such as the terraced forms found on many of the kachina masques, and the rich symbolism of the altars. To give a full account of Hopi symbolism would practically be synonymous with detailing the entire ceremonial system of this people (cf. Fewkes, *AmAn* v. 9-26).

As a single concrete example of Hopi symbolism we may cite that of the *sipapuh*, the representation, in the floor of the kiva, of the aperture through which mankind reached the surface of the earth.¹ According to Mindeleff (*RBEW*, 135),

'The *sipapuh*, with its cavity beneath the floor, is certainly regarded as indicating the place of beginning, the lowest house under the earth, the abode of Myungwa, the Creator; the main or lower floor represents the second stage; and the elevated section of the floor is made to denote the third stage, where animals were created. Mr. Stephen observed, at the New Year festivals, that animal fetiches were set in groups upon this platform. It is also to be noted that the ladder leading to the surface is invariably made of pine, and always rests upon the platform, never upon the lower floor, and in their traditional genesis it is stated that the people climbed up from the third house (stage) by a ladder of pine, and through such an opening as the kiva hatchway; only most of the stories indicate that the opening was round. The outer world is the fourth world, or that now occupied.'

Symbolism likewise attaches to the cardinal points, of which the Hopi recognize six: north, west, south, east (in the order named), above, and below. The north really lies between the true north and west, being determined at Tusayan

'by the notch on the horizon from which the sun sets in the summer solstice; the second (west) by its setting in the winter; the third by its rising in winter; the fourth by its rising in summer' (Fewkes, *JAFI* vi. 270, note). Each of these cardinal points has its own symbolic colour: north, yellow; west, blue or green; south, red; east, white; above, all colour; below, black (*HAI* i. 325).

A remarkable feature of Hopi ceremonial is the fact that circumambulation (*q.v.*) is performed sinistrally—north, west, south, east. This extremely curious phenomenon has been studied by Fewkes (*JAFI* v. 33-42), his conclusion being that the north forms the initial point because, according to Hopi tradition, the *sipapuh* of the creation legend is far away to the north, whence even those

¹The *sipapuh* is associated, in the Indian mind, with the orifice through which individuals are born (Fewkes, *JAEA* ii. 26).

aces which, according to tradition, came from the south originally emerged.¹

If this be so, it may perhaps be suggested that the reason why the west was taken as the next point, instead of the customary east, was because the legends of the cult-heroes—notably the Snake—represent them as journeying toward the west, the region associated with the dead (Voth, *FCMAS* iii. iv. 311, note 5).

14. Fire, bull-roarer, games.—The ritual preparation of fire among the Hopi, as at the Wüwüchinti and Sumaikoli, is by the drill method, and, as in India, the sticks are 'male' and 'female' (Fewkes, *AmAn*, new series, iii. 445; cf. *ERE* vi. 26^b, 29^a).

The bull-roarer (*q.v.*) is an important feature of Hopi ceremonies. It is regarded

'as a prayer-stick of the thunder and its whizzing noise as representing the wind that accompanies thunderstorms.' The Hopi 'make the tablet portion from a piece of lightning-riven wood, and measure the length of the string from the heart to

the tips of the fingers of the outstretched hand' (Hough, in *HAI* i. 170 f.). As is shown by the accompanying cut of the bull-roarer from a Hopi painting of the Teolawitze kachina, the Hopi bull-roarer is, in many cases, markedly of the rain-charm type, having a terraced top to represent rain-clouds and bearing the lightning-snake (see Fewkes, *RBEW*, plates iii., xxx., xxxv., xlvi., xlviii., lviii.).

The games of the Hopi have been fully considered by Culin, in his 'Games of the N. Amer. Indians' (= *RBEW* [1907]), among these games being archery (390), ball race (666, 678 f.), bean shooter (760), buzz (755), cat's cradle (774; said by the Zuffi to have been taught by the Spider Woman to her children, the twin War Gods [761, 779]), dice (160-165), double ball (649), hidden ball (337-339, 357-364), hoop and pole (495-498), races (807), shinny (633-635), stilts (731), tops (743 f.). At least some of these games are regarded by Culin as possessing a religious connotation, as ball race (666), double ball (649), hidden ball (337-339), and hoop and pole (424-426; cf. also 34, 433, 441).

Among the Hopi games, mention should also be made of a children's dance, called *wahikwinemo*, or 'we-go-throwing dance,' from the fact that pifion knots are tossed to the spectators at its close. It is a secular imitation of the kachina dance, and, when observed by Fewkes on 16 Jan. 1900 (*AmAn*, new series, iv. 509 f.; cf. *RBEW*, 30), was performed by about 15 boys and girls, wearing ceremonial kilts and blankets, with painted bodies and with feathers in their hair, but without masques. The little girls play with *tihus*, or dolls, which are generally made by the participants in the Powamü, Palülüköñti, and Nimankachina, but which possess no religious significance of value (Fewkes, *AE* vii. 45-74).

15. Anthropology and eschatology.—The theological anthropology of the Hopi is thus described by Fewkes (*AmAn* ix. 161 f.):

'The modern Hopi recognize in man a double nature, corresponding to body and soul, and to the latter they are said to give the expressive name breath-body. This breath-body man shares with organic and inorganic nature, and it likewise forms an essential part of objects of human manufacture. The figures which are so constant and prominent on altars have breath-bodies, and it is this essence, not the idol, which is worshipped. The prayer-bearer, or paho, has likewise a breath-body, and this is the essential part of the offering taken from the shrine by the god to whom it is addressed. The material stick remains in the shrine; the supernatural is taken by the god.

It is the breath-body or shade of man which passes at death through the *sipapuh*, or gateway, to the under-world, the place of its genesis before it was embodied as well as the post-mortem home. In this future abode, in their cultus of the dead, these shades or spirits live, engaged in the same pursuits they followed on earth. Even the different religious sodalities perform there much the same rites as in the upper-world, but

¹The place of emergence was the Grand Cañon of the Colorado, whence also came the white men, who went to the east (Fewkes, *AmAn*, new series, i. 535, note 3).

with more resplendent paraphernalia, the magnificence of which is correlated with the imagination of the priest who may tell you of them.'

The best summary of Hopi concepts of the future life is that of Voth (*FCMAS* XI. ii. 99):

'The belief in a future state and in a continued existence after death is well defined in the religious conception and in many rites and ceremonies of the Hopi. That part of man which they believe to be immortal they call hikvsi. . . . In its practical application the hikvsi is to the Hopi what to us is the soul in its ethical sense. At death the hikvsi leaves the body. When asked whether it is this hikvsi or the deceased person that continues to live in the skeleton house, the average Hopi may get confused. He knows that the body of the dead decays, and believes that it is by virtue or through the part that escapes from the body through the mouth at death, that the dead continue their existence in the future world. The details, with regard to this fact, are more or less vague in the mind of the Hopi, and vary considerably in the different traditions, clans and villages.' Ten Broeck (*ap. Schoolcraft, Ind. Tribes, iv.* [Philadelphia, 1854] 86) reports a belief of the Hopi that at death they would be changed into animals, plants, or things.

With regard to the under world (*masski*, or 'skeleton house'), it is believed by the Hopi that the seasons are reversed—when it is summer above, it is winter below. On asking why the five summer 'moons' are named like those of the winter 'moons,' Fewkes (*15 RBEW*, 258) received

'this interesting hint, dropped by one of the priests: "When we of the upper world," he said, "are celebrating the winter Pa moon the people of the under world are engaged in the observance of the Snake or Flute, and vice versa." The ceremonials in the two worlds are synchronous. "That is the reason," said my informant, "that we make the Snake or Flute pahos during the winter season, although the dance is not celebrated until the corresponding month of the following summer."

From their many stories of the under world I am led to believe that the Hopi consider it a counterpart of the earth's surface, and a region inhabited by sentient beings. In this under world the seasons alternate with those in the upper world, and when it is summer in the above it is winter in the world below, and vice versa. Moreover, ceremonies are said to be performed there as here, and frequent references are made to their character. It is believed that these ceremonies somewhat resemble each other and are complementary. In their cultus of the dead the under world is also regarded as the abode of the "breath-body" of the deceased, who enter it through a sipapu, often spoken of as a lake. I have not detected that they differentiate this world into two regions, the abode of the blessed and that of the damned.'

16. Sources of culture and religion.—As has been stated above, both the culture and the religion of the Hopi are composite. That the Hopi are ultimately connected with the peoples of Mexico is energetically maintained by Fewkes, who writes (*AmAn* vii. 51 f.):

'The pueblos are frontier towns of house-builders, not of nomads, and are peopled by the descendants of colonists from Mexico, mingled with other stocks, by which they have been more or less modified and changed; hence, while comparatively low in the stage of culture, there is still enough to indicate that there are relationships to Central America. It is not improbable that both Mexican and Pueblo cultures originated from a region in northern Mexico, developing, as environment permitted, in its northern and southern homes. The refugees to the province of Tusayan lived under adverse conditions to reach any high degree of culture. They have, no doubt, much in their religious ceremonials, their arts, and their language in common with the nomads; they have intermarried to a limited degree with those of a hostile stock, and symbolism similar to theirs, and stories of like import may be repeated in tribes of widely different modes of life. These were not only the agriculturists; the Indians of the north-west coast were likewise house-builders, but in a very different way; yet with all the similarities which may be pointed out, the Pueblos are still a distinct people among the aborigines of the United States, and their closest affinities are with the peoples of the Salado, those of Casas Grandes, and those of Central America, including Mexico. There is need of further observation to demonstrate the truth of this theory, for such only can it be considered at present; but it can hardly be doubted that new researches must lead to important discoveries in this direction.'

In this connexion it must be borne in mind that the Nahuatl languages are well known by such Americanists as Brinton, Chamberlain, and Kroeber, following the researches of J. C. E. Buschmann ('Spuren der aztek. Sprache im nördl. Mexiko und amerikan. Norden,' in *ABAW*, 1859), to be cognate with the Shoshonean, to which Hopi belongs (cf. Henshaw, in *HAI* ii. 556; for a meagre account of the Hopi language, see *NR* iii. 671-674). Moreover, it is generally agreed that the Aztecs, in

their invasion of Mexico, moved southward, dislodging the Huastecans, and driving them to Guatemala and Yucatan (cf. Keane, *Man Past and Present*, Cambridge, 1900, p. 411; Seler, in *23 Bull. BE* [1904] 541 f.). It would seem, accordingly, that from some common point certain clans of Shoshones who, in virtue of their environment, or through some other cause, had attained a certain degree of civilization, migrated, the one part southward into Mexico, the other northward to Tusayan. Just as the Aztec branch showed their receptivity of Huastecan culture, the Hopi branch were affected by their new surroundings, and accepted Navaho, Apache, Tewan, Keresan, and Zuñi elements of culture and religion.

LITERATURE.—The only general summaries of the Hopi of any value are the art. on them by J. W. Fewkes, in *HAI* i. [1907] 560-568, and by J. Mooney, in *Cath. Encyc.* vii. [1910] 468 f. Much older material is summarized in T. Waitz, *Anthropol. der Naturvölker*, iv. [Leipzig, 1864] 207-209, and H. H. Bancroft, *NR* i. 526-556 (on all the Puebloan peoples), 600 f., and especially *Hist. of Arizona and New Mexico* (San Francisco, 1889 = *Works*, xvii.). On the early Spanish references, besides Bancroft's *Hist.*, see especially A. F. A. Baudelier, in *Papers of the Archeolog. Inst. of Am.*, Am. Series, iii. i. [1890] 114-117, 135, ii. [1892] 366 ff. Among the chief early sources accessible in edited form are Pedro de Castañeda de Nagera, *Relation du voyage de Cibola*, tr. H. Ternaux-Compans, *Voyages . . . pour servir à l'histoire de la découverte de l'Amérique*, t. ix. (Paris, 1838); Antonio de Espejo, *Viaje en el año de 1583*, ed. and tr. in Hakluyt, *Voyages*, London, 1598-1600, iii. 383-396 (= Glasgow reprint, ix. [1904] 169-204), and *Relación del viaje*, ed. in *Colección de doc. inéd. rel. al descubrimiento . . . de las poses. españ. en América y Oceanía*, xv. [Madrid, 1871] 163-189; Juan de Oñate, *Memorial*, ed. in *Colec.* xvi. [1871] 183-227; Francisco Garcés, *Diario*, ed. in *Doc. para la hist. de Méjico*, Mexico, 1853-57, ii. i. 309-337 (cf. E. Coues, *On the Trail of a Spanish Pioneer: The Diary and Itin. of F. G.*, 2 vols., New York, 1900). See also 'Moqui Pueblo Indians of Arizona and Pueblo Indians of New Mexico,' *Extra Census Bulletin*, Washington, 1893, and P. G. S. Ten Broeck, in H. R. Schoolcraft, *Ind. Tribes*, iv. [Philadelphia, 1854] 81-88.

The first modern study of the Hopi is by J. G. Bourke, *Snake-Dance of the Moquis* (New York, 1884). The most important literature is as follows: Nathalie Curtis, *The Indians' Book* (London, 1907), 473-532 (especially for Hopi songs, with music); J. W. Fewkes, 'A Few Tusayan Photographs,' *AmAn* v. [1892] 9-26; J. W. Fewkes and J. G. Owens, 'The Lá-la-kón-ta: A Tusayan Dance,' *ib.* 105-129; J. W. Fewkes and A. M. Stephen, 'The Mam-zrau-ti: A Tusayan Ceremony,' *ib.* 217-245; J. W. Fewkes, 'A Central Amer. Ceremony which suggests the Snake Dance of the Tusayan Villagers,' *ib.* vi. [1893] 285-306, 'A-wa-to-bi: An Archaeolog. Verification of a Tusayan Legend,' *ib.* 363-375, 'On Certain Personages who appear in a Tusayan Ceremony,' *ib.* vii. [1894] 32-52, 'The Kinship of a Tanoan-Speaking Community in Tusayan,' *ib.* 162-167, 'The Kinship of the Tusayan Villagers,' *ib.* 394-417, 'Prehistoric Culture of Tusayan,' *ib.* ix. [1896] 151-173, 'Pacific Coast Shells from Prehistoric Tusayan Pueblos,' *ib.* 350-367, 'Tusayan Totemic Signatures,' *ib.* x. [1897] 1-11, 'Morphology of Tusayan Altars,' *ib.* 129-145, 'The Feather Symbol in Ancient Hopi Designs,' *ib.* xi. LOUIS H. GRAY.

HORACE.—In the lifetime of Horace (65-8 B.C.) a great change came over the Roman world. If he had been in Rome at the time—but he was at Athens—he might have listened to the *Philippics* of Cicero, as a young man of twenty-one or twenty-two. In his later years, it had become obvious that Augustus had not only secured his own monarchical power, but was determined to provide for the succession to what was virtually a throne. In Horace's boyhood, it is fairly clear that the prevailing creed of educated Romans was Epicureanism. Lucretius had expounded with force and fervour the theory which denied all intervention of the gods in human affairs, and construed the universe as an aggregate of material atoms acting under mechanical laws; and, long before, a speaker in a tragedy of Ennius had put it in an epigrammatic form: 'That the gods exist I hold and shall continue to hold, but I deny that they are concerned with the doings of men; if they were, it would go well with the good, ill with the wicked,—but it is not so in the world I know' (*Telamo*, frag. 1, Ribbeck). In a time of disintegration and civil conflict, when the Republic seemed to be drifting to utter shipwreck, it was natural for men to think that the gods were careless of the welfare of Rome; just as, in a later day, the mob of the city is said to have stoned their temples when the news came of the death of Germanicus (Suet. *Calig.* 5). When Augustus restored peace and prosperity, it was possible to believe in Providence once more, and the new government made a deliberate attempt to revive the old religion of Rome; temples were rebuilt, and old ceremonies revived with unheard of splendour. According to Dio Cassius (lii. 36), Maecenas advised Augustus to practise and encourage religion, but to set his face against foreign superstition. The advice is characteristic of Horace's friend and patron, and of the strange contrasts in his nature. An indolent voluptuary at most times, he could on occasion display the greatest energy and tact; somewhat eccentric in his own literary tastes, he made no error in selecting for encouragement the really great writers of the time; interested in astrology, and perhaps ascribing his recovery from an illness to the benign influence of the planet Jupiter (Hor. *Odes*, II. xvii. 22 f.), he

dissuaded Augustus from showing any favour to the Oriental creeds and rites which had already made considerable inroads at Rome. The revival of the old religion was undoubtedly a sound policy. The new government had to seek stability in continuity with the past, and political institutions at Rome were closely bound up with ancient rites and ceremonies. Maecenas made no slight contribution to the success of the design when he conciliated the ablest of the rising poets; and he must have been specially gratified by the accession of Horace, who had fought at Philippi under Brutus and Cassius. Horace was a later and more reluctant convert than Virgil.

Epicureanism still had its disciples, though it was no longer, perhaps, professed quite so openly. It has been remarked that the Augustan poets show a reluctance to name Lucretius or extol him directly. Virgil, exalting the knowledge of nature and the defiance of death that it brings, uses a phrase which shows us that he is thinking of Lucretius (*Georg.* ii. 492, 'strepitumque Acherontis avari'—Lucretius had spoken of the 'metus Acheruntis'). Horace, on his journey to Brundisium with Maecenas, is asked to believe that incense takes fire spontaneously on the threshold of a shrine; he refuses to do so, and uses words that belong to Lucretius, 'deos didici securum agere ævum' (*Sat.* I. v. 101). In saying 'didici,' Horace almost professes himself a disciple of the earlier poet; and it can hardly be doubted that Epicureanism was his prevailing belief, though he interested himself at times in other views. Probably Maecenas and he were as free from superstition as any two men of their time. Their ideal of life was progress towards the tranquillity and quiet good sense of Epicurus. 'You are free from avarice, you say. Well, but have all the other vices taken their departure too? Meaningless ambition? The fear of death? Anger? Dreams, the terrors of magic, miracles, witches, ghosts by night, and Thessalian portents,—have you a smile for them all? Do you count up your birthdays with a grateful heart? Are you forgiving to your friends? Do you grow kindlier and better with advancing years?' (*Epp.* II. ii. 205 ff.). Horace had dealt scathingly with the sorceries of Canidia in the *Epodes* (v. and xvii.) and in an early *Satire* (I. viii.). Spiritual or unseen powers seem to have little place in his creed. He is a man of the world, who has arrived at some measure of mental tranquillity by the help of Epicurus.

In the *Satires* and *Epistles*, Horace speaks in a familiar tone, as to a friend or friends. He does so, too, in many of the *Odes*; but some of the latter are much more public and formal in character. He is addressing his countrymen generally, as the lyric poet of Rome (*Odes*, IV. iii. 23); and here we find him lending his support to the revival of the old religion. It was neglect of the gods that brought trouble upon Italy (*Odes*, III. vi.), and only the restoration of the temples would avert its continuance. He goes far in the direction of deifying Augustus,—he imagines him seated among the gods and 'quaffing the cup of nectar with glowing lips' (*Odes*, III. iii. 11 f.),—further, perhaps, than Augustus himself would quite approve; for, as far as Rome itself was concerned, he does not appear to have consented to more than the association of his *genius* with the twin *Lares* of the crossroads. In the *Carmen Saeculare*, Horace is the official poet of the State: that he was definitely commissioned to write a choric hymn has been confirmed by the record of the celebration found on stone: CARMEN COMPOSVIT HORATIVS FLACCVS. Here in carefully chosen phrase he exalts the deities of the festival and the deities in whom Augustus professed a special interest. Apollo was

his chosen guardian, who appears with his bow in Virgil's picture of the battle of Actium (*Aen.* viii. 704 f.), and to whom the Palatine temple with its libraries had been dedicated ten years before. Diana is, of course, associated with Apollo. Diana as Ilithyia, the Parcae (l. 25), and Tellus (l. 29) had received special homage during one of the nights of the festival. Venus *genetrix*, the ancestress of the Julian house, is not forgotten (l. 50), and Jupiter Capitolinus appears as sovereign of the gods in the closing stanza (l. 73). It seems a curious anticipation of the future that special honour is paid to the sun (l. 9 f.), when we recall the importance which the worship of Mithra was to assume in the third century of the Empire. Poetry was not the only art enlisted in the service of the new government. The ideas of the *Carmen Saeculare* are found also expressed in stone: on the breastplate of the great statue of Augustus, found on the site of Livia's Villa, we again meet with Apollo and Artemis, the rising sun climbing the sky in his chariot and the recumbent figure of the fruitful earth.

There is, no doubt, a considerable difference between the familiar writings of Horace and his more formal lyric compositions. In the former we have seen him deny the activity of the gods; in one of the latter he professes to have been converted from this 'insaniens sapientia' when he heard the thunder roll and saw the lightning flash in a cloudless sky (*Odes*, l. xxxiv.). Some such declaration may have been expected from the lyric poet of the new age. But, as far as the old religion of Rome is concerned, we must beware of charging Horace with gross inconsistency or hypocrisy; to do so is to some extent to misunderstand the nature of that religion. The religion of Numa was not dogmatic; it made but small claim upon the belief or faith of its votary; it asked for no deep spiritual change in his life. It was largely a system of ceremonies intended to propitiate certain unseen powers, whatever their precise nature might be. If they existed, they might influence the fortunes of Rome for good or evil; to continue their rites was at least prudent, and it was prompted by patriotism and veneration for ancient institutions. Such a religion probably had not lost its hold upon Italy to the extent we are apt to suppose; to revive it was not so very artificial and unreal an effort, nor did it involve any great mental or spiritual change in those who promoted the revival or acquiesced in it. See art. ROMAN RELIGION (Fourth Period).

Hist. of Rome*, London, 1909, pp. 503f., 513f.; E. S. Shackburgh, *Augustus*, do. 1908, pp. 222f., 235 f. For references to dissertations on Horace's religious and philosophical views see M. Schanz, *Gesch. der röm. Lit.*, n. i. (Munich, 1901) § 263.

W. R. HARDIE.

HORÆ ('Ἠραί, 'seasons').—In the development of Greek religion man's interests and emotions were focused first upon the earth as the source of his food, and then upon the heavenly bodies as the controllers of earth's fertility and seasonal changes. 'In analysing a god we must look for traits from earth, from "weather," from moon, from sun' (J. E. Harrison, *Themis*, p. 392). So the Horæ as weather-deities were preceded by a form or aspect in which they were the seasons of earth's fertility. In the decay and mutual shiftings of these primitive ideas and types, partly also from the very nature of religious conceptions, over-emphasis and over-precision are hard to avoid, and the analysis here made for the sake of clearness must not be mistaken for a historical evolution.

1. The Horæ as Nature-deities.—Primarily the Horæ were Nature-powers, controlling earth's fer-

tility through the weather¹—'warders of the gates of Olympus, whether to throw open the thick cloud, or set it to' (*Il.* v. 749 ff.), i.e. they send or withhold rain and dew—at first doubtless as autonomous powers, but later doing the will of Zeus, so that they tend to sink to the position of menial adjuncts of Olympian state.²

In Attica (a dry land with few streams) the dew was a precious thing (see Neumann-Partsch, *Physikal. Geog. v. Griech.*, Breslau, 1885, p. 30 f.), and the Horæ were there worshipped along with Pandrosos (Dew-maiden).³ Philochoros (in Athenæus, xiv. 656a) says that the Athenians offered boiled, not roast, meat to the Horæ, praying them to avert drought and excessive heat, and to send kindly warmth and timely rains⁴—'an interesting example of the admixture of religion with sorcery, of sacrifice with magic' (J. G. Frazer, 'The Magic Art' [= *GB*], pt. i., 1912], i. 310). The wreaths of mist and cloud which they spin are their own raiment, and in art their long flowing garb distinguishes them from the Graces (Charites [*q. v.*]), who finally put off all clothing (Paus. ix. 35. 6). The Horæ are always draped, and even partially veiled (see the beautiful Sosias cylix, Berlin, no. 2278, reproduced in J. E. Harrison's *Mythol. and Mon. of Anc. Athens*, London, 1890, p. 384).

Flowers and fruit were the gift of the Horæ; this was symbolized in art by their basket⁵ or laden bosom, and expressed in the local Athenian cult by their names—Thallo (Sprouting) and Karpo (Fruit). It was natural to associate them especially with the season of Nature's awakening, the spring-time (*Anth. Pal.* v. 70: *ελαφρών ἄρῶν*; and cf. Meleagros, *ib.* ix. 363; in Hesiod [*Works and Days*, 75] they crown Pandora with flowers of spring, while the Charites bedeck her with jewellery). Thus identified with youthful grace and beauty in Nature,⁶ the Horæ appear in art as fair maidens, and there is hardly any attempt to differentiate the figures by means of attributes before Græco-Roman times (see P. Herrmann, *De Horarum apud veteres figuris*, Berlin, 1887). On the other hand, they were also closely connected with the gifts of harvest-tide, as is shown by the Procession of the Eiresione (*ειρεσιώνη*) at the Thargelia and Pyanopsia festivals (about May and October respectively), in honour of Helios (Apollo) and the Horæ; branches twined with figs and other fruits (*τὰ ὄραια πάντα*) were carried in procession, and finally set up before the house-door.⁷ Their noblest gift was the grape (*Od.* xxiv. 343 f.: *ἔνθα δ' ἀνά σταφυλαί παντοῖαι ἔασιν, | ὅππότε δὴ Διὸς ὄρα ἐπιβρῆσειαν ὑπερθεύ*—where *edd.* should write ὄρα; Athen. ii. 38c: *αἰταὶ γὰρ τὸν τῆς ἀμπέλου καρπὸν ἐκτρέφουσι*).

The naturalistic significance of the Horæ explains their association with other deities, e.g. Hera (Paus. v. 17. 1 and ii. 17. 4), Aphrodite (Paus. v. 15. 3), Dionysos (Athen. ii. 38c), Demeter (*Homer. Hym. Dem.* 54), Apollo ('Pind. Pæan,' in *Oxyrh. Pap.* v. p. 25: Ἠραὶ τε Θεμύλωνι φίλῳπον ἄστυ Θήβας ἐπήλθον Ἀπόλλωνι δαῖτα φιλοστέφανον ἄγοντες), Pan (*Orph. Hym.* x. 10: *σύνθρονος Ὠραις*).

2. The Horæ as seasons of the year.—The regular recurrence of the gifts of the Horæ is the primary mark of the recurring seasons, and so the Horæ

¹ The word ὄρα seems at first to have been almost equivalent to 'weather' (O. Gruppe, *Gr. Myth.*, Munich, 1906, ii. 1063, note 3).

² Paus. v. 11. 7: *καθ' ἑκάστην τινὰς φύλακας βασιλέως αὐτῆς*. Cf. *Il.* viii. 433, where they tend the horses and chariot of Hera.

³ Paus. ix. 35. 2: *τῇ δὲ ἑτέρα τῶν Ὠρῶν νέμοισιν ὁμοῦ τῇ Πανδρόσω τιμὰς οἱ Ἀθηναῖοι θαλάττῃ τὴν θεὸν ἠνομάζοντες*.

⁴ *μετὰ δέστων ὄραίων ἐκτελεῖν τὰ φέμενα*.

⁵ Euseb. *Præp. Evang.* iii. 11. 38: *κάλυθον ἔχουσι, τὸν μὲν τῶν ἀνθρώπων σὺμβολον τοῦ καιροῦ, τὸν δὲ τῶν σταχυῶν τοῦ θέρου*.

⁶ Pind. *Nem.* viii. 11: *ὄρα πότνια, κάρνη Ἀφροδίτας . . . ἀτε παρθενῆος παίδων ἴ' ἐδίξισα γλεφάρους*.

⁷ Schol. in Aristoph. *Knights*, 729: *Ἡλίω καὶ Ὠραις εὐραζούσιν οἱ Ἀθηναῖοι. φέρουσι δὲ οἱ παῖδες τὸν τε θαλάττῃ ἐρίοις περιελημίνους*. See A. Mommsen, *Feste d. Stadt Athen*, Leipzig, 1898, p. 279, and J. E. Harrison, *Prolegomena*, p. 79.

come to be identified with periods of time in the abstract; but they 'are not abstractions, divisions of time; they are the substance, the content of time' (J. E. Harrison, *Themis*, p. 185). The original dual¹ Horæ (mother and maid?) brought to men the gifts of Spring and early Summer (the flowers), and those of late Summer and Autumn (the fruits). Their number thus coincided with the obvious division of the year into the fruitful and unfruitful seasons (*θέρος* and *χειμών*); but it is not to this bipartition that the duality of the Horæ must be traced, for Winter is no true Hora. Later came the distinction of *three* seasons,² perhaps connected with the observation of the lunar phases (cf. Servius on Verg. *Æn.* iii. 284: 'magnum sol circumvolvitur annum. Magnum, ne putemus lunarem esse . . . antiqui . . . dixerunt primo lunarem annum triginta dierum').

The Moon is the true mother of the triple Horæ, who are themselves Moiræ; and the Moiræ, as Orpheus tells us, are but the three *μοιραὶ* or divisions (*μέρη*) of the Moon herself, the three divisions of the old Year. And these three Moiræ or Horæ are also Charites' (*Themis*, p. 189f.).

But the development of divine dualities into trinites is probably not to be explained by any single formula; and the heraldic groupings beloved by archaic art had some influence here (see J. E. Harrison, *Prolegomena*, p. 288).

In function, and originally perhaps in name also, Horæ and Charites are hardly to be distinguished; the popular consciousness, at any rate, was not quite clear on this point (Paus. ix. 35. 2: *τιμῶσι γὰρ εἰς παλαιῶν Ἀθηναίων Χάριτας Ἀφροδίτην καὶ Ἥγεμόνην τὸ γὰρ τῆς Κερπύρας ἱστῶν οὐ Χάριτος ἀλλὰ Ὁρας ὀνομαζομένης*). Two Charites and two Horæ supported the front and the back of Apollo's throne at Amyklai (*ib.* iii. 18. 10); three of each surmounted that of Zeus at Olympia (v. 11. 7); Horæ and Charites together decorated Hera's crown at the Herasion (ii. 17. 4). The Borghese Altar (Louvre), an archaic work freely reproducing types of the 5th cent. B.C., shows three groups of Moiræ, Charites, and Horæ (see Friederichs-Wolters, *Gipsabgüsse*, Berlin, 1885, no. 422).

The earliest representation of the triple Horæ is that on the François vase (in Florence; *Mon. d. Inst.* iv. 54-57, early 6th cent. B.C.); in literature Hesiod first makes Horæ (as well as Moiræ) three, and names them (*Theog.* 902). Homer has no definite number for either Horæ, Moiræ, or Charites. The notion of *four* Horæ is, however, attained very early, for it occurs in Alkman³ (7th cent. B.C.)—'three Seasons set he, summer and winter, and autumn third, and fourth the spring, when trees burgeon, but man may not (yet) eat his fill.' Athenæus preserves a fragment of Kallixenos describing a pageant at Alexandria (time of Ptolemy II. Philadelphos [235-246 B.C.]), in which walked four Horæ dressed in character, each carrying her own fruits.⁴ In Roman art the type of the Horæ was modified as four allegorical figures with conventional emblems (for description, see Nonnos, xi. 488-519; the order of the figures and the interpretation of attributes are not always easy). The extension of their functions to embrace the hours as divisions of the day, and the consequent increase of their number to twelve, is a late and frigid conceit, of no religious or artistic significance (cf. Ovid, *Met.* ii. 26).

3. The Horæ as deities of Fate.—The Moiræ in Hesiod are sisters of the Horæ, and both are children of Zeus and Themis (Hes. *Theog.* 901 ff.: *Θέμυν, ἣ τέκεν Ὁρας, . . . αἰτ' ἔργ' ὠρεῖουσι καταθηροῖσι βροτοῖσι, Μοίρας τε*). Themis is Social Order. Both

¹ Two Horæ at Megalopolis (Paus. viii. 31. 3); cf. Amyklai, iii. 18. 10. At Athens they are grouped with Pandrosos to form a triad, just as the Charites are grouped with Hegemone (Artemis). Two Moiræ at Delphi (Paus. x. 24. 4).

² Cf. Homer, *Hym. Dem.* 398 f.: *οἰκίσεις ὠρέων τρίτατον μέρος εἰς ἐνιαυτὸν | τὰς δὲ δύο παρ' ἐμοῖ τε καὶ ἀλλοῖς ἀθανάτοισιν*; and Aristoph. *Birds*, 708.

³ Fr. 76, Bergk:

Ὁρας δ' ἔσθηκε τρεῖς, θέρος
καὶ χεῖμων κτώων τριτάν,
καὶ τέτρατον τὸ ἦρ, ὅσα
σάλλει μὲν, ἐσθίεν δ' ἀδαν
οὐκ ἔστιν.

⁴ Athen. v. 198b: Ὁραι τεσσαρες διεσκευασμενα και ἐκάστη φερονσα τους ιδιους καρπους.

Horæ and Moiræ are agents of the will of Zeus¹ (Paus. i. 40. 4: *ὑπὲρ δὲ τῆς κεφαλῆς τοῦ Διὸς εἰσιν Ὁραι καὶ Μοίραι· δῆλα δὲ πᾶσι τὴν Πεπρωμένην μόνῃ οὐ πείθεσθαι, καὶ τὰς ὥρας τὸν θεὸν τοῦτον νέμεν ἐς τὸ δέον*—which illustrates the way in which the sense of personality had gradually faded out of these figures). Cf. Theocritus (*Id.* xv. 104 f.: *βάρδιστα μακάρων Ὁραι φίλαι, ἀλλὰ ποθεῖναι | ἔρχονται πάντεσσι βροτοῖσι αἰεὶ τι φορεῖσαι*)—'Nor is there any God so slow as they; Yet longing eyes to them all mortals lift, For each Hour brings a gift' (J. W. Mackail, in *CLR* xxvi. [1912] 36). This aspect perhaps grew out of the perception of the recurrence of the seasons ever coming round with unvarying cor- tent (cf. *Od.* xi. 295: *ἄψ περιτελλομένου ἔτεος κα. ἐπῆλυθον ὥραι, ἀ κα. 469: ἀλλ' ὅτε δὴ ῥ' ἐνιαυτὸς ἔην, περὶ δ' ἔτραπον ὥραι*).²

4. The Horæ as ethical powers.—Closely akin to the foregoing is the conception of the Horæ as guardians of the moral order. To this idea Hesiod gave first and final expression, and named the triad Eunoia,³ Dike, Eirene—Order, Justice, Peace (*Theog.* 902). In Pindar the two conceptions of the Horæ, as Nature-deities, and as invested with moral attributes, find their noblest expression, e.g. *Ol.* xiii. 6 ff.: 'Therein [in Corinth]⁴ dwell Order and her sisters, sure foundations of cities, even Justice and like-minded Peace, dispensers of wealth to men, golden daughters of wise Themis.' Bacchylides has the same sentiment (xii. 186)—'Eunomia, who keeps the cities of righteous men in peace.' 'As in the natural sphere the Horæ represent a fixed order, so as ethical powers they are Loyalty, Justice, and Peace' (Jebb).⁵

In this connexion we must refer to the Hymn of the Kouretes found (1904) at Palaikastro in Crete (R. C. Bosanquet, in *BSA* xv. [1908-09] 339 ff.; and J. E. Harrison, *Themis*, p. 1 ff.). One of its verses⁶ describes 'the blessings which flowed from the rule of Zeus,—order in the universe, the regular succession of the seasons, the beginnings of justice and peace on earth' (Bosanquet, *loc. cit.*)—'And the Horæ began to teem with blessings year by year (?), and Justice to possess mankind, and all wild living things were held about by wealth-loving Peace.' The date of this Hymn is perhaps about 300 B.C. (but the actual inscription belongs to about A.D. 200; we have to do with a 'revival').

LITERATURE.—W. Rapp, in Roscher, collects most of the literary references, and gives the monuments, which hardly concern us here; published in 1890, his article is somewhat obsolete in method. J. E. Harrison's *Proleg.* to the *Study of Gr. Rel.*² Cambridge, 1908, is now supplemented and often corrected by her *Themis: a Study of the Social Origins of Greek Religion*, do. 1912; both of these are important.

W. J. WOODHOUSE.

HORNS.—Horns play an important part both in religious symbolism and cult and in magic, and this for reasons which go back to a comparatively primitive stage of thought, as well as to early observations made by man regarding the use of horns

¹ Hence figures of both were seen together at Amyklai (Paus. iii. 19. 4), and above the head of Zeus at Megara (i. 40. 4).

² Here must be mentioned the erroneous idea that there was a festival called Ὁραία, explained by Hesych. as = νεκρῶσια, a festival for the dead. The word here is a mere epithet meaning 'what is seasonable,' sc. for the sacrifice (see Dittenberger, *Syll. inscr. Gr.*², Leipzig, 1900, no. 630: *ἐπάργματα ὧν αἱ ὥραι φέρονσιν*; and 616. 38: *Ζηνὸς ἐνιαυτῆς Ὁραία*); it has nothing whatever to do with the cult of the Horæ (see Stengel, *Opfergebr. d. Gr.*, Leipzig and Berlin, 1910, p. 163).

³ The name Eunoia was used in several Cretan towns as a collective title for the college of magistrates (Xanthoudides, in *Eph. Arch.*, 1908, p. 208).

⁴ *ἱερὸν* of the Horæ in Corinth (Paus. ii. 20. 5).

⁵ Cf. Diodorus, v. 73: Ὁρῶν ἐκάστη δόθηται τὴν ἐπιώνυμοι τάξιν τε καὶ τοῦ βίου διακόσμησιν, alluding to the names given by Hesiod.

⁶ Text restored by G. Murray (*BSA* xv. 357)—

Ὁραι δὲ βροντὴν κατῆτος
καὶ βροτοῦς Δίκα κατῆτε
πάντα τ' ἄγρι' ἀμφεπέσθη
ἀ φιλόλοβος Εἰρήνη.

by animals possessing them. These reasons will appear more clearly after certain facts regarding the place which horns hold in representations of divinities have been reviewed.

1. Divinities with horns.—In many religions, especially in those of antiquity, divinities are frequently represented in statue or image or picture wearing the horns of an animal on the head, or this characteristic is referred to in myths. In Babylonia the higher gods and genii often wear a head-dress with a double pair of horns surrounding the sides and front. Nin-tu, a form of the goddess Mah, is depicted with a horn on her head. Ramman is represented with four horns (see CROWN, vol. iv. p. 341¹). Hittite deities also wore caps ornamented with several pairs of horns, probably those of a bull, as in the sculptures found at Ibriz, Carchemish, and elsewhere. Melkarth of Tyre was represented as an almost bestial god with two short horns on his head, and the Syrian Hadad has similar horns.² Phœnician goddesses usually have the horns of a cow, like Ashtaroth-Qarnaim, 'of the two horns,' but these may be borrowed from the Egyptian Hathor, identified with 'Ashtart.'³ Hathor, with whom the cow was identified, is depicted with a cow's head and horns, or merely with horns. Isis was assimilated to her, and cows were sacred to this goddess. Her usual ornament was a pair of horns with the solar or lunar disk between, but sometimes, as the female counterpart of the Ram of Mendes, she wore ram's horns. Ra has sometimes the disk with ram's horns, Osiris sometimes a crown with horns, and Nephthys has also the horns and disk. Kneph has a ram's head with horns, curving or long and projecting. The goddess Seti wears the crown of Upper Egypt, and from it project the horns of a cow.⁴ In Greece, Dionysos, one of whose forms was that of the bull, was called the 'horned,' or 'bull-horned'; and myth told how Persephone bore him as Zagreus, a horned infant.⁵ Pan and the satyrs showed traces of their goat origin in the goat horns with which they were depicted. Rivers were personified by divinities with horns or a bull's head, e.g. Achelous (g.v.) and others on coins. Ocean also had a bull's head.⁶ Some horned divinities may have been represented with horns through Egyptian influence, e.g. Io (equated with Isis), whom myth declared to have been changed into a cow by Hera, and with whom Hera was sometimes identified. Both goddesses had horns.⁷ The Gauls had a god of the under world with horns, called Cernunnos (perhaps = 'the horned,' from *cerna*, 'horn'); and a group of nameless gods, some with stags' horns, have affinities with him. Some goddesses also have horns.⁸ In India the sharp horns of Brâhmanaspati are referred to in a hymn, and the horns of Agni, who is sometimes characterized as a bull, are also mentioned.⁹ Yama, in Buddhist mythology, has horns. Northern Buddhism (Tibet) has also images of horned divinities in temples, and Mañjuśri (= Yama) wears a pair of horns.¹⁰ In the lower culture, gods sometimes have horns. A carving from a temple in Fiji shows such a god,

and many examples are also found among the American Indians.¹

In many of these instances there can be no doubt that the horns worn by the gods are the relic of their earlier animal forms. Earlier worshipful animals became anthropomorphic; or, again, a worshipful animal was blended with a god. Myth and art retained for the god some part of the animal—head, or pelt, or hoofs, or limbs, or, in this case, the horns. But these last were also a symbol of power, naturally retained for the powerful god. In other cases, however, such symbols of strength may have been given to a god who had no animal past. One of the most obvious things about horned animals noted by man was the use made of their horns as instruments of destructive force. Animals butted with their horns, or tossed men or other animals with them, or ripped open their bodies. There was also a period in man's history when he made use of horns as weapons or tools. During the Stone Age, and also surviving into the Bronze Age, weapons and tools—harpoons, picks, wedges, chisels, punches, hammers, etc.—were made of reindeer's or stag's horn, and the same material sometimes served as hafts or sockets for axes.² The Columbia Indians of N. America still use axes, etc., of horn.³ This use of horns by man was transferred to the gods; e.g. in Teutonic mythology, Freyr, for want of a sword, slew Beli with a buck's horn.⁴

Thus the horn or the horned animal became a natural symbol of strength. Early religious poetry, art, and myth frequently compare gods or heroes to powerful horned animals. Balaam describes God as having towering horns like a wild ox.⁵ The tribe of Joseph is said to have horns like those of the unicorn, with which he will push the peoples.⁶ Early Egyptian monuments depict a huge bull destroying the walls of town or fortress, or piercing enemies with his horn; he represents the animal-god, or a god, or the king his descendant.⁷ In *Iliad*, ii. 480 f., Agamemnon is compared to a bull, the most conspicuous animal in the herd. Celtic heroes and kings bear such titles as *Brogi-taros* or *tarb in chóicid*, 'bull of the province'; or they are called 'bull-phantom,' 'prince bull of combat'; or their personal names—Donnotaurus, Deiotarus—show that they were named after the Divine bull.⁸ The Vedic god Indra is likened to a horned bull which will repel all peoples, and Soma and other divinities are described in the same way.⁹ Mythical animal-gods are also said to destroy demoniac enemies by means of their horns.¹⁰ Hence the word 'horn' is sometimes used figuratively as the equivalent of power or strength. So, in Hebrew usage, raising the horn of a people or an individual signifies victory or pride, 'breaking' it signifies defeat;¹¹ and God is called 'horn of salvation,' or He raises up for His people 'a horn of salvation.'¹² The Latin usage is similar, *cornu* being used metaphorically for strength and courage.¹³ In Dn 7²⁴ and Rev 17¹² horns signify

gians and their power, and in En. 90^{9a} a lamb with horns signifies Judas Maccabæus, and other horned lambs the Maccabees.

It is thus obvious that the addition of horns to the image or representation of a god might symbolize his divine power apart from his being related to any earlier animal-god. This is analogous to the addition of a third horn to the pair already possessed by horned animal-gods—the triple-horned divine bull or boar of the Celts, or the three-antlered stag of a Fionn story,¹ or the giving of a horn to an animal which naturally does not possess it, e.g. the serpent, as in the case of a horned serpent on a Gaulish altar, the Thracian horned snake Zagreus, and a similar horned snake in American Indian legend.²

Some moon divinities were represented with a crescent moon on their heads or were symbolized by it. This crescent bears a certain resemblance to a pair of horns, the likeness being occasionally emphasized, and there was a tendency to confuse the crescent moon on the divinity's head with horns. This is seen, e.g., in the case of the Bab. moon-god Sin, the Greek Io, and the Egyptian Isis. But there is no clear reason for supposing that the crescent moon is the origin of all horns as applied to divinities.³

2. Semi-divine and demoniac beings with horns.—Nothing is more usual than to find various beings of a semi-divine, but more usually of a demoniac, character invested with horns. The fauns and satyrs of Greek mythology are an example of this, and more or less corresponding to these are the Russian wood-spirits, or *lyesyy*, with goat-horns. These may be regarded as later anthropomorphic forms of earlier woodland spirits conceived as goats. Bab. demonology attributed to many of its monstrous demoniac beings animal heads or horns, e.g. a sea-monster with the ears of a basilisk and horns twisted into three curls, while the demon of the S.W. wind had the horns of a goat. It should be noted that Ea-bani has goat-horns as well as other animal features.⁴ In ancient Persia the conglomerate animal representations of evil powers were often horned, though here the figure of a good genius is also horned.⁵ Hebrew and later Jewish demonology had similar creatures—in some instances, perhaps, the semi-divine beings of the surrounding paganism transformed into demons, e.g. the *ś'irîm* of Lv 17⁷, 2 Ch 11¹⁵, Is 13²¹ 34¹⁴, probably horned beings akin to the Greek satyrs and, like them, of goat origin. There was a demon called Keteb Merîri with the head of a calf and a revolving horn; and an ox-like demon dwelling in desolate places.⁶ Hindu and Buddhist mythology and belief also know horned demons; and the Japanese *oni* are frequently seen in human form but with bulls' horns.⁷ Demons in later Slav belief often have horns; but this is a conception which is common to Christian demonology in general, as a glance at mediæval and later pictures of hell or of demoniac or witch orgies will show.⁸ Invariably also the devil presented himself to popular imagination with horns, goat-like face, hoofs, and tail. In both cases we have here a reminiscence of horned demi-gods—Pan, the satyrs and fauns, the Celtic *dusii*⁹—to all of whom, as far

as they existed in folk-memory, a demoniac form was given. Grimm, however, connects the goat-like form of the devil with the goat which was the sacred animal of Donar, 'whom the modern notions of the Devil so often have in the background.'¹ Thus, while, in some instances, horned spirits or demons derive from earlier animal-gods or are earlier anthropomorphic horned gods transformed to demoniac shape through the influence of a new religion, in others, horns seem to have been deliberately assigned them along with other bizarre attributes, in order to intensify their monstrous and awe-inspiring aspect.

3. Horned men.—Horned head-dresses were frequently worn by certain persons. Kings sometimes wore such head-dresses, probably because they were regarded as incarnations or representatives of horned gods, or simply as an emblem of their power. Part of the head-dress of an Egyptian king consisted of horns, like those attributed to Osiris.² Bab. and Assyr. kings wore rounded caps with parallel horns encircling them from behind, and curving upwards towards the front without meeting. These resembled the head-dresses of the gods.

Ovid relates a curious story which shows how horns were regarded as a symbol of kingship. Cippus the prator, looking at his reflexion in water, saw that horns were on his forehead and then found that they were actually there. Anxious to know what this portent meant, he offered sacrifice, and the augur, after inspecting the entrails and seeing the horns, addressed him as future king. Rather than consent to be king, he desired sentence of banishment; but, though this was agreed to, his head with the horns attached to it was engraved on the posts of the gate (*Metam.* xv. 565 ff.). This is not unlike the legend of Alexander the Great, who is referred to in the Qur'an (xviii. 82) as horned. The origin of this is probably to be found in the fact that he identified himself with the god Ammon, and was represented on some of his coins with ram's horns, like the god himself.

In painting and statuary, Moses was often represented with horns. This is usually referred to the text of Ex 34²⁹, where it is said 'the skin of his face shone,' lit. 'sent forth horns,' 'Horns' is here taken to mean 'beams of light,' but not improbably there is a textual error (see *EBI*, s.v. 'Horn'). Aquila and the Vulgate translated the text 'quod cornuta esset facies sua,' and thus the legend grew. But it may have been influenced by that of Alexander as well as by the Bab. and Egypt. representations of horned gods.³

Among some savage peoples, horns occasionally form part of the insignia of chiefs. This custom is found among the American Indians, the horns being sometimes still attached to the animal's skin, which covers the head, or they may be made of metal.⁴ Priests and medicine-men sometimes wear horns—either as identifying them with some horned god, or because of some magical power attributed to the horns, or as a symbol of office. This is found among savage tribes, and it was also customary with the priests of Babylonia.⁵ Again, the horn decoration may be worn by the men of a tribe or by its warriors, as among the Alundu, where the men wear horns as part of their headgear.⁶

The wearing of horned helmets may have been derived from an earlier custom of wearing a head-dress composed of the skin of the head with the horns of an animal, but the horns on the helmet were probably also intended to have some apotropaic force in face of danger. The Sardinians are represented on Egyptian monuments wearing horned casques.⁷ Such helmets were also in use among the Etruscans, Romans, and Greeks, as is

shown by examples which have been discovered as well as by designs on coins. They were also worn by Celtic warriors, and some specimens which have been found have large curving horns elaborately ornamented.¹ Similar horned helmets are figured on the Gundestrup vase, and some Anglo-Saxon helmets were horned.

Mimetic dances, usually for the purpose of securing luck in hunting, are found among savages, e.g. the American Indians; men disguise themselves with the skin and horns of the animal to be hunted.² In Germany and in Gaul, during the Kalends of January, riotous processions of men masquerading in a similar manner took place, and, continuing in Christian times, were vigorously combated by the Church. These had probably some connexion with the earlier animal-cults of Celts and Germans.³ In different parts of England, e.g. in Staffordshire, and sporadically elsewhere, masquerade dances of men wearing deer-horns, etc., occur periodically. Thus at Bromley six men carry reindeer-horns, and dance through the town. The horns are kept in the church tower. Whether these are connected with the older practice just referred to, or whether, as is alleged, they represent a custom connected with an ancient privilege of the *custodes silvarum*, is uncertain.⁴ In Bulgaria at carnival time the actors in a masquerade wear masks combining, e.g., a man's head and an animal's horns.⁵ Elsewhere—in Hungary, Bohemia, Sweden—the human representative of the corn-spirit in animal form wears a goat's or cow's horns;⁶ and the grotesque masks worn by savages on ceremonial occasions often have horns attached to them.

The expression, used of a husband whose wife has been unfaithful to him, 'to give horns to' or 'to graft or plant horns on' (Fr. *porter les cornes*, *cornifier*; Germ. *einem Hörner aufsetzen*; Ital. *portar le corna*), occurs with great frequency in popular literature from at least the 15th cent. onwards.⁷ Caricature also commonly represented the husband wearing horns. But the phrase is of much earlier occurrence and was known to the Greeks, as Artemidorus cites it, *κέραρα αὐτῷ ποιήσαι*.⁸ With this is also connected the gesture of reproach, either reproach generally or for this particular misfortune, which consists of pointing with the index and little fingers outstretched like horns—to make or point horns at' (Fr. *faire les cornes à*; Ital. *far le corna a*). It was an old custom, when a wife was wrongfully accused, for the husband to be dragged in procession wearing antlers, or for the wife to carry his horned effigy. Brand⁹ cites many suggested explanations of the phrase 'to give horns to', none of them satisfactory. Dunder¹⁰ finds the origin in the old practice of engraving the spurs of a castrated cock on the roof of the excised comb, which caused them to grow like horns, and adds that Germ. *Hahnrei*, *Hahnreh*, 'cuckold', was originally 'capon'. If, however, the gesture of contempt (originating in the similar gesture against persons suspected of the evil eye, who would therefore be held in contempt), the *mano cornuta*,¹¹ was made commonly to wronged husbands, who have been the subject of popular jest in all ages, it might easily give rise to the other phrase 'to give horns to'. Jorio¹² speaks of the gesture as being used by the ancient Greeks. It should be noticed also that in Spain it is an insult to put up horns against a neighbour's house.

4. **Magical aspects of horns.**—Any part of a sacred or sacrificial animal tends to be regarded as containing the virtues of the whole. This is especially true of the horns, a comparatively indestructible part; and, as they are an adjunct of the skull or head, which is peculiarly regarded as possessing virtue, the spirit of the animal acting through it.¹³

the power attributed to them is thus intensified. Hence the horns of any animal, whether sacred or not, are thought to have special virtues.

(a) **Horns on houses.**—As the heads of horned animals are sometimes placed over doors as protectives, so occasionally the horns, alone or attached to the frontal part of the skull, are thus used. The Greek and Roman custom of placing the head of the sacrificial ox over the door of a house to ward off evils—*βουκράνιον*, *bucranium*—is a case in point.¹ Cows' horns were hung up on the temple of Diana on the Aventine, and deer-horns on other temples of Diana, while horns were a common adjunct of shrines and altars.² Cows' horns are frequently placed over doorways of dwellings, stables, or cowhouses in Italy and Germany; and in Asia Minor, India, Persia, and Afghanistan the horns of stags, oxen, wild goats, or rams are often seen in a similar position.³ The custom is not unknown in England, but at Horn Church, Essex, the horns fastened over the east part of the church are of lead.⁴ Horns of oxen are placed on gables of houses in Sumatra; and in Tibet a ram's skull and horns protect doorways.⁵ Horns may have been similarly used in pre-historic times.⁶

(b) **Horns of the altar.**—Hebrew altars had projections at each corner called 'horns of the altar,' and upon these the blood of sacrifices at the consecration of priests and at the sin-offering was sprinkled. The altar being a sanctuary for the criminal, it was customary for him to take hold of the horns.⁷ The Cretan and Mycenaean 'horns of consecration,' found as models, or depicted in cult scenes, consist of a base from which rise two horn-like uprights, curving outwards. They are found on shrines, altars, etc., and in some cases the sacred pillar or the double axe rises out of them. These 'horns' are now generally recognized to be conventional representations of an earlier *βουκράνιον*: a vase-painting actually shows the two forms together, and from both rises the double axe.⁸ The *βουκράνιον* may have been affixed to the altar as a protective or as representing the animal-god, and would tend to become more and more conventional or symbolic. Similar horns have been found crowning models of shrines, and in connexion with pillars, at the sanctuary of Aphrodite at Paphos,⁹ and they have also been discovered in Malta.¹⁰ On Greek and on Arabian altars, heads of oxen are depicted—a surrogate for the actual *βουκράνιον*.¹¹ Although various theories have been proposed for the origin of the horns of the altar in Hebrew usage, this probably explains their presence, as W. R. Smith suggested.¹² The same usage of affixing wild sheep's horns to altars is found in Tibet.¹³ In Greece, altars made of horns, as at Delos, were not unknown.¹⁴

(c) **Horns as amulets.**—It has been seen that horns are used as protectives for houses, etc. Actual or artificial horns are also worn as a defence against the evil eye, and this custom is one of great antiquity, as Jorio has shown.¹⁵ Artificial horns are made of the precious metals, coral, amber, etc.,

and they are carried on the person or attached to the harness of horses, and the like. Such amulets have been found in Crete, in Etruscan graves, etc., and their use is wide-spread in the southern lands of Europe—Spain, Portugal, Italy.¹ The *mano cornuta*, or horned hand—a gesture in which the index and little finger are pointed outwards, the others being folded under the thumb—is extensively used, and is found also in early Roman, early Christian, and Hindu art, while it was formerly known in Great Britain. It is sometimes enough to utter the word *cornu* to repel an evil influence.² Artificial amulets representing horns or horned heads were used in ancient Egypt.³ In India the horns of gazelle, antelope, etc., either in whole or in part, repel sicknesses, and horned amulets are in use against demonic influences, while pieces of horn are still effective as ghost-scarers.⁴ Horn amulets are also much used in Further India, China, and Japan.⁵ Among the lower races similar uses of horns are found. In Africa and among the American Indians they are worn as amulets, either in the hair or suspended from the neck, as protectives against sickness or witchcraft.⁶ In Sierra Leone they are attached to a fetish.⁷

Horns are placed on graves to protect the dead from evil influences, e.g. in ancient Peru, in Flores, and among the Nuba of the Upper Nile.⁸ Among the Bari, on the occasion of a death, ox-horns are suspended from a pole above the spot.⁹

Horns ground to powder form an occasional folk-medicine. Among the Wajagga, warriors drink a potion of horn-shavings and rhinoceros-hide in order to obtain the animal's strength.¹⁰ In Egypt an antidote for poison is to drink out of a rhinoceros' horn and to rub in the draught a piece of the horn.¹¹ In Spain, horn-shavings are drunk as a panacea against the evil eye.¹² In Cyprus, Cos, etc., a so-called snake's horn (perhaps that of the *cerastes cornutus*) is used for medico-magical purposes. It must be obtained when two snakes are coupling. Something is thrown over them, whereupon one of them gives up the horn.¹³

(d) *The cornucopia*, 'horn of plenty,' a horn filled to overflowing with fruits, etc., was an emblem of gods of plenty. Thus it was associated with the goddess Fortuna ('Fortuna cum cornu, pomis, ficis, aut frugibus autumnalibus pleno';¹⁴ 'mundanam cornucopiam Fortuna gestans'),¹⁵ and with Copia ('aurea fruges Italiae pleno diffudit Copia cornu').¹⁶ But it was also given to the Tria Fata, to Diana, and to the Lares. The Earth-goddess emerging from the earth on Greek vase-paintings has a horn of plenty, from which sometimes rises a child.¹⁷ The *cornucopia*, as the symbol of fruitfulness, could be associated with any god or personage who aided fertility, e.g. Herakles (whose *cornucopia* sometimes contains φάλλοι), or any form of the Agathos Dæmon, e.g. the hero, in the representations of whose ritual feasts it appears, and also the person who represented the Year in processions, the *Eniautos*. Thus, in the Dionysos procession arranged by Ptolemy Philadelphos, *Eniautos* is

said to carry 'the gold horn of Amaltheia.'¹ The *cornucopia* was, in fact, connected (1) with Amaltheia, the goat from whose horn fruits were presented to the infant Zeus, or the nymph possessed of a bull's horn which provided food and drink; and (2) with Achelous, from whose head Herakles had broken it off. Later mythology combined these two myths.² Probably a horn became symbolic of fruitfulness because it belonged to an animal associated with fertility—bull or goat—and perhaps also because it was a drinking vessel not only among primitive but among civilized peoples.³ Gods are mythically represented as drinking from horns, or they or other supernatural beings offer their guests drink from a horn.⁴ But other things besides drink are carried in such horns, e.g. anointing oil,⁵ medicine or fetish stuff (a general practice in Africa, and found in India in Vedic times),⁶ articles used in charms, incantations, etc.⁷ Saxo Grammaticus⁸ relates that the image of the god Svantovit in Rügen held a horn; and from the diminution or non-diminution of wine poured into it by the priest an augury was drawn regarding the scantiness or abundance of the crops. Medicine or healing water is often efficacious only when drunk out of a horn, especially one taken from a living animal.⁹

For all these reasons it was easy for the horn to become a magical property, owned by gods, fairies, etc., which it was desirable for men to obtain. Hence many tales of robberies of drinking-horns from fairyland, which attach themselves to various celebrated horns, e.g. that of Oldenburg. These horns may at one time have been used as archaic vessels in pagan rites, in preference to more recent vessels; and a supernatural origin would later tend to be given to them. The stolen horn is sometimes a source of luck, a veritable *cornucopia*.¹⁰ The *cornucopia* itself, represented on gem amulets, is said to have magic potency.¹¹ But, in whatever ways such rich productive power was assigned to horns, this primarily depended on the fact that such power was first attributed to the animals possessing them, the power often working, however, through their horns. This conception was sometimes mythically represented, as in the case of the stag Eikþyrnir, from whose horns water continually trickles down to feed the rivers of the under world,¹² and the Iranian primal ox Gayōmart, from whose horns spring fruits.

A parallel to the horn of Amaltheia is found in a Kafr tale, in which a boy has a wonderful ox which produces food from its right horn when that is struck. The ox tells him to remove its horns for safety, but this power still continues. Horned cattle are cherished possessions of the Kafirs.¹³ In many Cinderella tales the dead mother, transformed to an animal, produces riches or food from her horn.¹⁴ Cf. an American Indian tale in which a sorcerer produces marvels with the aid of a reindeer horn.¹⁵

(e) *Horns as musical instruments*.—The horn was widely used as a wind instrument among primitive as well as more advanced peoples, and from it the trumpet, often shaped like a horn, had its origin.¹⁶ Such horns are blown not only for

ordinary but for ritual purposes. But, partly from the powers ascribed to horns in general, partly from the custom of scaring noxious beings by noise, the blowing of horns became a common method of driving off demons, or of producing magical results. It is a common method of frightening away evil spirits in British Guiana.¹ In cases of sickness the Garo blow horns to drive out the demon which is causing it.² Blowing of horns, as well as other forms of noise, is used among many peoples as a method of driving off the monster who is supposed to swallow sun or moon at an eclipse. Among the Jews it is thought that the blowing of the *shôphâr* is effective in scaring evil spirits or Satan.³ It was also through the blowing of rams' horns (*keren*) that the walls of Jericho are said to have fallen down.⁴

Gods are sometimes said to possess horns, e.g. Triton who blows 'his wreathed horn'; and Heimdall, warder of the gods, who possesses a powerful horn, *Giallarhorn*, kept under a sacred tree, and who blows it at the approach of Surtr.⁵

5. Horns in sacrificial and other rites.—Horns are sometimes presented as sacrificial offerings. In Baluchistan ibex or moufflon horns are placed on the shrines of saints as offerings, or to do honour to the saints.⁶ In Ladakh rams' horns are fixed on fruit trees at an eclipse, as a propitiatory offering. Such trees are very fruitful.⁷ Horns of stags were also sometimes offered to Diana, and votive horns were hung on trees.⁸ Where oxen, etc., were sacrificed, their horns were often gilded, and their necks were garlanded. This was the case in Roman sacrifices, and notices in the Edda and other mythical or legendary sources show that it was usual in Teutonic sacrifices.⁹ In later survivals on festal occasions the horns of oxen are gilded, or adorned with gilded apples or with ribbons and flowers; and on the 'cattle-days' of the Pongol festival in India the animals are led about with painted horns.¹⁰

HOROSCOPE.—See DIVINATION, STARS.

HORROR.—Although, both in its subjective aspect and in its external expression, horror is usually regarded as an extreme form of fear (*q.v.*), there are certain features which almost amount to a difference of kind. It has two forms, which may be called the acute and the diffuse. The latter is felt mainly in regard to the sufferings or disasters of others rather than one's own. The report of an earthquake with great loss of life, a famine, the sinking of a great ship such as the Titanic (1912) with so many of its passengers and crew, any sudden, unforeseen disaster causing wide-spread havoc, excite in the hearers an emotion which is usually called horror. The actual hearing of the cries of pain, the sight of the sufferings or tortures of another, especially of a child, the sight of a mutilation or cruel death, whether by the hands of man or by the resistless forces of Nature, cause a more intense form of the same feeling. Horror is therefore pre-eminently a social emotion; to the individual it is a shock, followed, almost as in cases of physical shock, by prolonged depression and to a certain extent a lowering of the mental and physical tone. It is most marked where the cause of the disaster or suffering is human cruelty, greed, ambition, or even careless-

ness and thoughtlessness, as the Congo and Putumayo (1912) atrocities, cruelty to children, the 'horrors' of modern war, etc. In these cases there is not only sympathy with the actual sufferers, but also a feeling of outrage done to the human ideal in the sin of the agent. The same feeling stands out strongly in another set of cases, the so-called 'unnatural' crimes—matricide and parricide, incest, sexual perversity, cannibalism; the feeling is that of violence done to the human type, the ideal of humanity which each of us, consciously or unconsciously, carries about with him. Probably the same sort of feeling was at the root of the horror, once universally felt, towards the insane, towards witches and sorcerers, etc. When the ideal of humanity includes saintliness amongst its elements, the same attitude is taken towards atheism, blasphemy, and, to a less extent, towards heresy. A lower form is the instinctive repulsion felt among the uneducated towards human deformities—hunchback, club-foot, dumbness, etc. Thus the diffuse form of horror may be characterized as a humanist emotion, its object being mainly actions, features, traits which outrage or violate the ideal of humanity so far as it is developed in the mind of the individual.

The acute form of horror is more intense, more egoistic, and concerns situations of imminent danger to oneself. The rush of a wild beast of prey, the sudden fall of a support upon which one is standing at a great height, the outbreak of fire from which there is no escape—in these cases the danger, or it may be the certainty, of death is the exciting motive of the emotion; but there must also be the element of suddenness, of surprise; where the issue has been foreseen, emotion follows quite a different course. A special cause of horror of this type is being suddenly brought into the presence of the supernatural. *Horripilatio*, the hair standing on end, has from time immemorial been associated with the sight of the risen dead, the hearing of a supernatural voice, the believed presence of a god, especially an evil god, a devil, demon, hobgoblin, or a human being who has acquired some of their powers, and takes some unnatural shape. Common to all these cases is the real or supposed powerlessness of the individual, whether because of the suddenness of the onset, the conditions of the situation, or the immensity of the force which he has to face—the invulnerability and unlimited power, for example, and unlimited desire to injure, on the part of the evil spirits. The sense of sin, and of the imminence or vastness of the corresponding penalty, or, in more refined natures, the sense of isolation from man or from God which the consciousness of sin brings with it, has, as is well known, stirred up in many souls a sense of horror which has been the motive to religious conversion in some cases, to self-destruction in others. This instance suggests another distinction from fear proper; fear is a shrinking, a relaxing of energy; while horror, as Bell has said (*Anatomy of Expression*⁶, p. 169), 'is full of energy; the body is in the utmost tension, not unnerved (as) by fear.' In fact the expression of horror looks like a spasm of action, an effort so supreme as to throw the mechanism out of gear; sometimes the effort recovers itself, and strenuous resistance to the danger is made; at other times the paralysis extends to a merciful loss of consciousness. In animals, Verworn¹ has shown that the so-called hypnosis or cataleptic state into which frogs, snakes, birds, guinea-pigs, rabbits, and other animals fall, when held down in an unusual position, is mainly a spasm of the muscles, arising from the excessive irrita-

effort they exert to recover their upright position, and which they are prevented from renewing by fear and excitement. The 'shamming dead,' which many animals adopt in situations of imminent danger, is probably due to the same cause, and is the analogue in animals of the paralysis of horror in man.

In the expression of horror (cf. art. FEAR), the phenomena may be classified partly as those of shock, and partly as those of fear proper. As Hack Tuke points out (i. 222), in slight fear there is a rapid muscular action preparatory to flight, while other parts of the body are fixed and contracted in what Darwin regarded as the instinctive effort to conceal or diminish their size; but, when fear is more extreme, amounting to terror (and still more to horror), instead of flight there is spasm both of the movement muscles and of those of the breathing; the voice is husky and the general facial expression is that of one struggling for breath. The high shriek, or even squeal, of horror may be referred in the same way to the spasm of muscles under a great effort. The cold sweat, the rising hair, the arrest of the secretions—dryness of mouth, etc.—and the failure of control over many reflex actions may be set down, as in Darwin's second explanation, to the action of shock, with its immediate lowering of the nervous and therefore of the muscular tone; the extreme pallor of the skin—'grey with horror'—may be due in the same way to the paralysis of the dilator muscles of the small blood-vessels. A prolonged period of horror may—there are quite well authenticated cases (see Tuke, ii. 79)—blanch the hair even of a young man in a few hours. The trembling of the body and the perspiration are probably directly due to the same intense and violent effort, so violent as to defeat itself; animals show the same feature in intense fear.

A traveller in India, while sleeping on the verandah of a bungalow, with his European dog beside him, was awakened by the sound of some large animal moving about in the neighbourhood; his dog was making no sign, but, on putting his hand down to touch it, he found it was shivering, and bathed in perspiration; a tiger was found to have visited the village in the night.

The characteristic staring eyes, with widely dilated pupils, and the rapid but shallow breathing—'panting with horror'—have probably a similar origin. Spencer, Bain, Féré, and others regard these phenomena as the result of an association, formed between the expression of actual pain on the one hand and the conditions or accompaniments of pain on the other; but a more likely explanation

is that both pain and the intense emotion of horror involve a violent struggle of the whole system, of which these so-called expressions are secondary results. In neither case can the expression be explained as a useful adaptation to the situation, or as inherited action, ancestrally useful, if now no longer so.

In horror the mental powers are affected similarly with the bodily; the senses are confused or defective, and among others the sensibility to pain seems mercifully lowered, as it is in animals also: a S. American fox, when surprised and 'shamming dead,' will endure without moving the severest blows of the whip, without a sign of life, yet will start up and run the moment its persecutor is out of reach. In the same way, in great disasters, as earthquakes, etc., human beings are unconscious of injuries which normally would cause the most intense pain; in the earthquake of Messina (1908) a woman walked many miles with one eye torn out, of which she was unaware; and in the burning of the Juno several of the men climbed up some iron plates without noticing that the skin of their hands was being flayed off. Here, again, it is probably the concentration of psychic energy on the horrible situation that inhibits impressions, however intense in themselves, from reaching consciousness. There is a spasm of the mind as well as of the muscles: horror blunts the perceptions, paralyzes the judgment and critical faculty, while the will, as Féré has said (p. 197), is blocked as a door is jammed in a too violent effort to open it.

Like physical shock, horror may cause death, when too extreme; and in predisposed natures it may cause insanity, whether of the obsessional or of the depressive, melancholic type. Burton collected a number of instances from the earlier literature; naturally such cases were more familiar in the Middle Ages, when superstition was more wide-spread.

Probably the sympathetic form of horror is more frequent to-day than the egoistic; it certainly is aroused by sights and sounds which a century ago would have left men unmoved; what excites horror in a people might well be taken as a criterion of its degree of civilization.

HOSPITALITY (Arabian).—The notion suggested by 'hospitality' with the Arabs, as indeed with all other nations (Pindar, *Pyth.* iv. 30), is the bestowal of food; to 'entertain' and to 'give food' are used in the Qur'an (xviii. 76) as synonyms. The usual word for 'hospitality' (*diyā'ah*) seems to be connected etymologically with a word *qafaf*, 'crowd of persons sharing a meal'; one that is slightly less common (*qirā*) is thought to be connected with *qaryah*, 'village,' and perhaps is to be explained from the Heb. *qārā*, 'to meet.' Partaking of food makes the guest a temporary member

of the family, and so confers certain rights and duties: when Abraham, immediately on the arrival of the Divine guests, offered them a boiled calf, but found that their hands did not reach to it, he became terrified (Qur'an xi. 73). The partaking of food, therefore, proves that the intentions of the guest are not hostile, while it also lays on the host the duty of protecting the guest as though he were a member of his own family; ordinarily this relationship is established by the partaking of bread and salt (Doughty, *Arabia Deserta*, Cambridge, 1888, i. 228). In the case of an ordinary guest the

relationship so established lasts two days and the intervening night, called by the Arabs three days (*ib.*), supposed to be the period during which the food remains in the body.

The entertainment of guests is thought to have been started by Abraham (Tha'ālībī, *Latā'if al-Ma'ārif*, 1867, p. 4). Both ancient and modern descriptions of Arabia usually dwell on the hospitality of the Bedawin. In early or ostensibly early Arabic poetry the subject is a commonplace; a good collection of verses dealing with it is to be found in the *Ḥamāsa* (pp. 685-722). The bards boast that in the dead of night their fires attract wayfarers; their dogs welcome these arrivals; without inquiring who they are, or even when the stranger is known to be an enemy, they immediately slaughter a camel and bid the womankind cook it for the stranger's benefit. They clothe him and talk him to sleep; however gentle they may be, they are ferocious in defence of a guest; however ferocious, they will endure anything from one who is partaking of their hospitality. The entertainment of a stranger is a prize which each owner of a tent hurries to secure before the others. Sometimes he is admitted to the family circle, at other times a special tent is erected for him.

The temporary truce which this hospitality involves seems to be an institution which has survived in the desert from remote antiquity, and has helped to render life there possible. Nevertheless, the poets quoted would not boast so loudly of their exercising it, were it exercised by every one; and indeed, where the hospitality involves the harbouring of a hunted man, it is clear that the serious consequences attaching to the act would render many unwilling to perform it. In the Qur'an (xi. 80), Lot appeals to the people of Sodom not to disgrace him in the matter of his guests; he is apparently ready, if compelled, to yield to *force majeure*. In the biography of the Prophet we find more than one occasion on which such harbouring is refused, or at any rate made dependent on the pleasure of the chieftain.

In spite, therefore, of the fame of Arab hospitality, and the sanctity which is supposed to attach to it, an invitation to a meal would seem to have been a mode of entrapping an enemy common in Arabia as in other Eastern countries. In the legends which explain how the Jews of Medina became clients, this expedient is twice employed (D. S. Margoliouth, *Mohammed and the Rise of Islam*, London, 1907, p. 187). It became a recognized principle of Islamic statecraft, and as late as 1st March 1811 was employed by Muhammad Ali in dealing with the Mamluks: 'all the principal men of Cairo flocked to the citadel; coffee was then served,' and immediately afterwards a massacre took place (A. A. Paton, *Hist. of the Egypt. Revolution*, London, 1863, ii. 30). Hospitality offered by one chieftain to another is, therefore, apt to be suspected. The Arabic romances not infrequently depict violations of hospitality of another sort. In the *Maqāma* of Ḥariri the hero invites a number of guests to a mock wedding, where he treats them to sweetmeats containing a narcotic; when they are unconscious he strips them of everything and makes off. In the *Maqāmas* of Hamadhāni (Beirut, 1889, p. 190) the travellers ask for food at a village; they are refused bread except for a price, but are given milk, which, however, they afterwards discover to have been polluted. The use of poison for disposing of enemies was also common at many periods of the Khalifate. Sometimes the outrage proceeded from the guests: Osman, founder of the Ottoman empire, according to his biographers, got possession of some important fortresses by accepting an

invitation to a wedding-feast, and bringing armed men dressed up as women.

The definition of hospitality in the Qur'an appears to be 'feeding on a hungry day [*i.e.* a day of famine] an orphan who is also a kinsman, or a poor man who is in need' (xc. 14). The latter act is assigned so high a value that, where the code admits expiation, feeding a certain number of mendicants serves this purpose; the food is to be normal, and the amount specified as a *mudd*.

The value set in the Qur'an on hospitality has naturally been exaggerated by the Muslim theologians, and in homiletic works some remarkable views are formulated. 'An account will be demanded on the Day of Judgment of all expenditure except of that on the entertainment of guests: God will be ashamed to demand any account thereof' (*Qūt al-Qulūb*, 1310, ii. 182, after Ḥasan al-Baṣrī, † 110 A.H.); 'to refuse an invitation is to disobey God' (*ib.* 187); provided that the place where the hospitality is offered fulfils certain conditions, *e.g.* is not adorned with silk or satin, gold or silver vessels, etc. (*ib.* 190). Sayings attributed to the Prophet are: 'Hospitality is a right'; 'Hospitality for a night may be claimed'; 'Any area or village wherein a Muslim is allowed to pass a night hungry is out of the pale of Islām'; 'Hospitality is three [days]; all above that is charity' (probably meaning 'cannot be demanded as a right,' but ingeniously interpreted by some Sūfis as charity bestowed on the entertainer, who thereby earns heavenly reward [*ib.* 206 f.]).

In spite of such exhortations, the desire to entertain was by no means universal among Muslims, and a whole literature exists in illustration of stinginess; the classical treatise is that by Jāhiz of Baṣra († 255 A.H.; ed. van Vloten, 1900).

The formulæ wherewith guests are greeted, *aḥlan wa-saḥlan, wa-marḥaban*, probably go back to remote antiquity: the last of these words is the 'wide room' of the Psalms (18⁹ 31⁸ etc.). The first is said to mean 'you are among your family'; the second is probably a jingle matching the first, but means 'easy.' In modern times the phrases *ānastanā*, 'you have rendered us at home,' and *awḥashtanā*, 'you have rendered us lonely,' are often heard besides. We sometimes hear of gifts given to guests in connexion with the word *nuzl*; but the practice does not appear to have been widespread.

D. S. MARGOLIOUTH.

HOSPITALITY (Buddhist).—This may best be considered under three heads: (1) hospitality of laymen one to the other, (2) hospitality of the laity to members of the religious Orders, and (3) hospitality of the latter to each other.

1. Hospitality among laymen.—In passages in the canonical books dealing with the lower morality and addressed to unconverted laymen we find references to this subject. So in the *Digha* (iii. 190) the ideal wife is said to be hospitable to her husband's family; in *ib.* i. 117 it is stated to be the duty of a good citizen to treat guests with honour and respect; in *Jātaka*, iv. 32 (in the canonical verses), one of the heroes of the tale boasts of the friendly and hospitable reception he always accorded to guests; and in *ib.* v. 388 (again in the canonical verses) it is laid down that his sacrifice is vain who leaves a guest there seated unfed. These injunctions, or expressions of opinion, are not represented as exclusively Buddhist. In the first passage they are put into the mouth of the Buddha, in the others into the mouths of good men not belonging to the Buddhist community. It is evident that the Buddhists adopted current views on the subject, omitting only any reference

to superstitious customs, connected with conceptions of tabu or animistic views.

2. Hospitality of the laity to the religious Orders.—When Buddhism arose, there were quite a number of wandering teachers (*pabbajitā*, 'wanderers') who propagated doctrines as varied as those of the Greek sophists. They belonged to all social grades, though most of them were men of noble birth. It was considered a virtue and a privilege to provide these unorthodox teachers with the few simple necessities of their wandering life—especially lodging, food, and clothing. Many of the 'wanderers' were organized into communities, with such rules as seemed suitable to their founders for the regulation of such bodies of co-religionists. The people supported all alike, though they had their special favourites. The Buddhists adopted this system, and those among the laity who followed them carried out very willingly the current views as to such hospitality to the 'wanderers.' It was enjoined upon them to give to all. Thus, when Siha, a nobleman who had hitherto followed the Jain doctrine, became a Buddhist, it is specially mentioned that the Buddha urged him to continue, as before, his hospitalities to the members of the Jain Order.¹ So in the Edicts of the Buddhist emperor Asoka frequent mention is made of the duty of hospitality to teachers of all the different sects (not only one's own).

3. Hospitality within the Order.—The Buddhist 'wanderers' were accustomed on their journeyings to stay with one another, and a set of rules was drawn up for their guidance when guests of this kind arrived, prescribing the etiquette to be observed both by the incoming *bhikkhus* (the *āgantukā*) and by their hosts. These regulations are of a simple character, such as might be drawn up now under similar circumstances. They are too long to quote, but have been translated in full by the present writer and Oldenberg in vol. iii. of the *Vinaya Texts* (*SBE* xx. [1885]) 273-282.

It should be pointed out that all this is considered to belong to the lower morality of the unconverted; it is taken for granted, and never even referred to in those passages of the books in which the essential doctrines of Buddhism are expounded to the converted. It is really Indian (see HOSPITALITY [Hindu]) rather than Buddhist; though a detailed comparison of the Buddhist doctrine of hospitality with that of other Indian sects would, no doubt, show that the Buddhists laid more stress than the others did on certain details, e.g. on the importance, in such matters, of disregarding, or paying but little attention to, any difference of sectarian opinion.

LITERATURE.—The authorities are quoted in the article.

T. W. RHYS DAVIDS.

HOSPITALITY (Celtic).—I. Gauls.—It has already been noted in art. ETHICS AND MORALITY (Celtic), vol. v. p. 455, that the Gauls manifested a great desire for knowledge of the habits and customs of foreign peoples, and it is in this eagerness for information that we find the source of the hospitality for which they are so often praised. They welcomed the bards not only because they loved to hear them sing of the deeds of heroes, but also because they delighted in the stories of distant nations related by these travellers. They never refused hospitality to a stranger; and, after having done him the honour of their table, they pressed him with endless questions regarding their neighbours; as Cæsar says (*de Bell. Gall.* iv. 5):

'Est enim hoc Gallicæ consuetudinis, uti et viatores etiam invitos consistere cogant et, quid quisque eorum de quoque re audierit aut cognoverit, quaerant, et mercatores in oppidis vulgus circumstans quibusque ex regionibus veniant quasque ibi res cognoverint, pronuntiare cogant.'

Every traveller found a cordial welcome among

¹ *Vinaya Texts*, ii. (*SBE* xvii. [1882]) 115.

the Celto-Iberians, because they considered those who were in the company of strangers as beloved by the gods (G. Dottin, *Manuel pour servir à l'étude de l'antiquité celtique*, Paris, 1906, p. 117). It is needless to observe, therefore, that the statement of Diodorus (iv. 19, v. 24), that the Celts were accustomed to put strangers to death, is merely a fiction.

2. Irish.—The Irish terminology for the relations of hospitality is as follows:

óige, gen. *óiged*, 'guest'; *oeged-chaire*, 'guest-friendship,' 'hospitality' (Windisch, *Die altir. Heldensage, Tain Bó Cuainge*, Leipzig, 1905, line 1837); *taige óiged*, 'guest-house' (ib. p. liii); *bruiden*, 'guest-house, a palace with seven doors' (ib. line 2625), cognate with Goth. *baird*, 'board' (*Acallamh na Senorach*, ed. Windisch, *Irische Texte*, iv. 1, Leipzig, 1900, p. 39, line 1378; p. 77, line 2731); *áigedecha*, 'guesting,' 'hospitality' (ib. p. 1, line 12); *brugaid*, 'host' (Windisch, i. [1880] 405); *enech* or *ainech-ruice*, 'face-blush' (Stokes and O'Donovan, *Cormac's Glossary*, Calcutta, 1868, p. 66); *bruighfer* (lit. 'land-man'), 'public hospitaller,' etc.

In Ireland, hospitality was not only practised as a virtue, but enjoined by law from the earliest times, and references to this subject are equally numerous in religious and in secular literature. In the account of the second battle of Moyrath, we find the following statement concerning Ireland in the reign of King Domhnall: 'Her habitations were hospitable, spacious, and open for company and entertainment, to remove the hunger and gloom of guests' (J. O'Donovan, 'The Battle of Magh Rath,' *Irish Archæol. Soc.*, Dublin, 1842, p. 105). Bede (*HE* iii. 27), in writing of the plague of 664, states that many English, both of the nobility and of the lower ranks, had repaired to Ireland at that time either for the sake of study or of continence. The Irish, continues the historian, 'willingly received them all, and took care to supply them with food, as also to furnish them with books to read, and their teaching, all without any charge.'

From what is contained in the *Ancient Laws of Ireland* (London, 1869-73, iv. 237) as well as in the saga, we may conclude that from the very earliest times a king or a chieftain was obliged to entertain any passing stranger or any other person who might seek his hospitality without asking any questions regarding himself or the purpose of his visit. One who neglected to discharge these duties incurred without fail the hostility of his people. For example, in the account of the second battle of Moytura, the people, we are told, complained bitterly of the poor hospitality of King Bres:

'The knives of his people were not greased at his table, nor did their breath smell of ale at the banquet. Neither their poets, nor their bards, nor their satirists, nor their harpers, nor their pipers, nor their trumpeters, nor their jugglers, nor their buffoons, were ever seen engaged in amusing them in the assembly at his court' (P. W. Joyce, *Soc. Hist. of Anc. Ireland*, London, 1903, i. 58).

The poet Coirpré, son of Etan, once presented himself at the castle of this king seeking hospitality. 'He was shown into a small, dark, sombre house where there was neither fire nor furniture nor bed. He was given three small dry rolls of bread on a little plate. Arising the next morning, he was not grateful.' Then Coirpré pronounced against Bres the first magic malediction ever composed in Ireland, and the outcome of all this was that Bres was driven from the throne (H. d'Arbois de Jubainville, *Cours de littérature celtique*, Paris, 1883-1902, v. 414).

Probably the most unique account of hospitality among the Celts is that of Gúaire, king of Connaught, in the 7th cent., who was so constantly giving away that his right hand grew longer than his left.

When Senchán Torpeist became chief of the *file* in Ireland, after the death of Eochaid Dallan Forgaill in 658, he sought hospitality of Gúaire, accompanied by a retinue of 150 *file*, or poets, 'as many pupils, as many valets, as many women,' and others besides. Though Gúaire had a building purposely constructed for the reception of Senchán and his companions, he was not prepared for such a multitude. The women especially were most exacting in their demands; 'at first the widow and the daughter of Eochaid Dallan, then the wife of Senchán, and, finally, Senchán himself exceeded all the bounds of hospitality.'

The first maintained that she would die unless she obtained a bowl of beer made with milk, and in addition to this she demanded the marrow from the ankle of a wild boar. Between Christmas and Epiphany, she wished to have beside her, on a yew tree, a small freshly hatched cuckoo. As a belt it was necessary to supply her with a strip of bacon taken from a perfectly white pig. The only kind of mount with which she could be satisfied was a horse with purple mane and white legs. Her dress must be a spider's web of many colours. Marbán, the brother and swineherd of Guaire, was able to secure for her all that she had asked, and to satisfy the equally exacting requests of the two other women.

But Senchán was a still more embarrassing guest than they. He declared that he would die unless Guaire could regale him and his retinue, and also the nobility of Connaught, with an ample repast, consisting of the bacon of pigs not born of sows and of beer produced from a single grain of barley. In case of refusal Guaire was threatened with an incantation. Marbán again came to his rescue. He possessed nine pigs from a sow which was killed by a wolf before they were born; and eleven years previous to this date, he had sown a grain of barley which gave him an ear the following year. The grains of this ear produced seventeen ears the next year, and so on until the end of the eleventh year, when he reaped seven large piles of barley, all coming from the original grain. Consequently Guaire was able to satisfy the demands of Senchán.

The latter, however, not expecting to be gratified, was displeased, and refused to eat. Guaire, though irritated by the behaviour of his guest, sent a servant to Senchán bearing a goose prepared expressly for him. Senchán refused to accept the gift, and addressed the servant as follows: 'I knew your grandfather, who had round and ill-kempt nails. Consequently, I will receive nothing from your hands.' A young girl was then dispatched by Guaire to prepare, in the presence of Senchán, a mixture of flour and salmon eggs, which was then offered to the poet. But he again refused, saying to her: 'I knew your grandmother. One day, from the top of a rock, she showed the way to some passing lepers. Consequently, I can receive nothing from your hands.'

Guaire lodged and fed these incommensurable guests for a year, a season, and a month, but finally he lost his patience. Marbán recalled to his brother that, though Senchán and his companions had the right to be lodged and fed, they were obliged in return to make music and relate stories. He therefore asked of Guaire permission to order them to recite the *Táin*, or the *Cattle Raid of Cooley*, from beginning to end. Senchán was unable to comply with his command and asked his companions for help, but of this vast epic they only knew *blogs*, or selections. Then Marbán, by an incantation, forbade them from passing two nights in succession in the same house as long as they had not found the complete text of this famous story. They were obliged then to set forth in search of the epic (*Book of Leinster*, 245; *Transactions of the Ossianic Society*, Dublin, 1854-61, v. 102-105; d'Arbois de Jubainville, vi. 140-143).

Further instances of the hospitality of the early Irish are the following:

First, in the *Feast of Bricriu* it is stated that Conchobar, king of Ulster, established the law that each chieftain should feast the Ulstermen one night in the year. The wife of the hero who did the entertaining was obliged to furnish the wives of the Ulstermen with seven oxen, seven pigs, seven casks, seven barrels, seven mugs, seven pots, seven cups, and seven glasses of beer, seven services of fish, birds, and vegetables (d'Arbois de Jubainville, v. 150). While the three heroes, Conall, Lógaire, and Cúchulainn, are making their long expedition, they are received on all sides with marked attention. In one place a repast sufficient for one hundred persons is served to them, and they are permitted to have their choice of the daughters of the king (*ib.* 161). When they reach the house of Curoi, they learn that his wife has received orders from her absent husband to grant them the hospitality of his home. Hence, she prepares for them a bath, intoxicating drinks, and superb beds (*ib.* 136).

In the story of the *Birth and Reign of Conchobar*, we are told that each Ulsterman gave him hospitality for one night, and allowed him to pass it with his wife—a right that this despotic king pretended to exercise ever afterwards (*ib.* 7 f.). In the *Murder of Conchobar*, it is stated that the kings of Munster, Leinster, etc., permitted the poet Aitherné to pass the night with their wives during his sojourn in their countries, for fear of the protection of the Ulstermen which had been granted to him (*ib.* 366 f.).

The regular period for which a guest could claim hospitality was three days and three nights, after which the host could refuse to continue to entertain his guest, if he so wished (cf. *Acallamh na Senórach*, in Windisch, iv. 1, lines 436, 1601, 1823, 2797, 3531, 7352, 7652; *RCel* ix. [1888] 495, note 3). Mael Duin and his fellow-pilgrims are received everywhere with the greatest cordiality, but, at the end of three nights and three days, their host or hostess usually vanishes (d'Arbois de Jubainville, v. 474, 479 f.). The attentions shown them in the 'Island of the Queen and her seventeen daughters' rival those of Guaire given above (*ib.* 486 ff.). If the lord thought his reception unworthy of his guests

because of his being taken unawares, he usually attempted to atone for his inhospitality during the course of the following days. When Mac Dáthó was surprised by the heroes of Ulster and of Connaught and their retinues, he killed his immense hog, the wonder of his kingdom, in honour of his guests. Fearing that they might still be displeased with their reception, he apologized for his lack of preparations, saying: 'If anything is lacking to-day, I will kill it to-morrow' ('*Scél mucu Mic Dáthó*,' in Windisch, i. 98).

In historical times we find the same esteem for hospitality as in the more legendary periods. Of Owen O'Madden, a Connaught chief, it is stated in the *Tribes and Customs of Hy-many* (ed. O'Donovan, *Irish Archaeol. Soc.* v. [1843] 141) that 'he does not refuse any one gold or horses, food or kine, and he is the wealthiest of the race of Gaedhal for bestowing them'; while St. Patrick, in blessing the district of Moy Rein, is reported to have said: 'I leave prosperity to the place so that it shall provide for all [requiring help] even though every cleric should be poor,' which is interpreted by Hennessy to mean that, if the clergy were too poor, the laity should be rich enough to provide for all (Hennessy and Kelly, *The Book of Fenagh*, Dublin, 1875, p. 273).

Among the different classes of society, we find first that the king was expected to keep his house always open to visitors.

'A prince,' says Cormac Mac Art, 'should light his lamps on Sambain Day [the celebration of the beginning of winter on 1 Nov.] and welcome his guests with clapping of hands and comfortable seats, and the cup-bearers should be active in distributing meat and drink' (Joyce, i. 58).

Once a guest had partaken of food in a house, whether of king or of subject, the host was not allowed thereafter to offer him violence or even to show him disrespect.

In A.D. 598, Branduff, king of Leinster, offended at the licentious conduct of Prince Cummascach, set fire to the building in which the latter and his suite were feasting. Glasdam, the prince's jester, who had been entertained a few days before as a guest by the king, exclaimed: 'Lo, I have eaten thy meat! Let not this deed of shame be now wrought on me!' To this Branduff answered: 'By no means shall this be done! Climb up to the ridge-pole and leap out over the flames to the ground. We will let thee pass, and thus shalt thou escape!' But the jester refused to be saved without his master, and gave his mantle and cap to the prince, who escaped from the burning building (S. H. O'Grady, *Síva Gaelica*, London, 1892, ii. xxviii; Joyce, ii. 483).

During the time that the guest was under the roof of his host, the latter was bound by law to protect him. A gloss on the *Ancient Laws* explains the words *t'aurgaire*, 'thy defence,' by the statement that no one—not even an officer of the law—should be allowed to enter one's house and lay hold of his guest (*i.e.* for debts or crime) before the end of the third night. In such an event the host could lay claim to damages against those who had violated the privacy of his home (d'Arbois de Jubainville, 'Introduction et commentaire du Senchus-Mór,' in *Cours de litt. celt.* viii. 145).

When the king or his subject found himself unable to discharge the duties of a host, he suffered the 'blush of honourable shame' or 'face-blush' (*enech-ruice*). In order to 'break or prevent the face-blush' of a king, the *Ancient Laws* (iv. 311) say that the *bruighfer*, or 'public hospitaller,' had the 'snout of a rooting hog'—in other words, he had plenty. If, however, the king or his subject should lack the necessary provisions at the arrival of his guests, through default of another, the defaulter was obliged to pay him the compensation known as the 'blush-fine' (*Ancient Laws of Ireland*, i. 123. 11; 129, note 1; iv. 345, 347, 13; *Cormac's Glossary*, 103, *s.v.* 'Leos').

Though, according to the *Ancient Laws* (iv. 237), chieftains were held 'bound to entertain without asking any questions,' the *féine*, or farmers, it seems, were given permission to make suitable

inquiries of their guests, in order, without doubt, to afford them better protection in case of necessity (Joyce, ii. 168). As the *Ancient Laws* (iv. 337) specify cases wherein a king might be excused for deficiency of provisions if the number of guests should exceed expectation, it is obvious that a subject was not expected to exceed the limits of his means in order to provide for a number of guests.

As stated above, there was a 'public hospitaller' (*bruighfer*, *brugaid*, *brüga*), who had, as a gift from the king, to assist him in fulfilling the functions of his charge, appanage lands of various kinds. He seems to have had, for example, the temporary usufruct of escheated lands, and of such lands as fell into the public domain through failure of heirs, or pending the decision of the courts as to the rightful succession to them. In return for these immunities and lands, he was bound to maintain his establishment in a proper condition. His was a position of high honour, and all who laid claim to his hospitality were bound to show him due respect. Though his revenues came principally from the land, he had other allowances. The extent of his house and premises, the character of the furniture, and the amount of supplies of provisions he was bound to have always in store are minutely given in the *Crith Gablach*, a MS published by E. O'Curry (*Manners and Customs of the Anc. Irish*, London, 1873, ii., App. p. 485). He was specially protected by law from trespass and from wanton or malicious damage to his furniture or premises. In the tract mentioned above, the fines for such trespasses and damages are set down with great minuteness. These fines were heavy, and were evidently intended to restrain within the limits of order and decorum those who were entitled to hospitality (O'Curry, i. p. cexlix). Among the privileges extended to the *brugaid* or *bruighfer* was that of brewing, for his house should never be found lacking the ale necessary for the refreshment of a king, bishop, poet, judge, or other person, and their respective suites entitled to such entertainment (*ib.* p. cccxxvi). He was also the only man under the rank of a *flaith* ('ruler, prince') entitled to the privilege of having his house over a spring of water.

There were two classes of *bruguids*. According to Stokes (*RCel* xv. [1894] 431), the inferior and more common grade was that of the *brugaid cedach*, or 'hundred hospitaller,' who was required to have one hundred of each kind of cattle, one hundred labourers, and corresponding provision for feeding and lodging guests. The higher and more exceptional grade was that of the *brugaid lethech*, or 'hospitaller of the kneading trough' (*lethech* = 'kneading trough'), who was not only obliged to have two hundred of each kind of cattle, but who had to supply his house with all the necessary furniture and utensils, including one hundred beds for guests. The *Ancient Laws* (i. 47) deny the *brugaid* the right to borrow, stating, on the contrary (iv. 311), that he is 'a man of three snouts, the snout of a live hog rooting in the fields to break the blushes of his face, the snout of a dead hog cooking on the hooks, and the pointed snout of a plough'; *i.e.*, he should have plenty of live animals, meat cooked and uncooked—usually of three kinds—and a plough, with all other tilling appliances. He is also called the man of three sacks; *i.e.*, his house was always to be provided with a sack of malt for brewing ale, a sack of salt for curing cattle-joints, and a sack of *guail*, or charcoal, 'for forging the irons,' in case of accident to the horses or vehicles of travellers (O'Curry, i. p. cccxxii). The *Ancient Laws* (iv. 310 f.) prescribe, further, that his kitchen fire should never be permitted to go out, and that his cauldron should always remain on the fire, full

of joints boiling for any guest who might chance to arrive.

In addition to the foregoing, the *Brehon Laws* (v. 17. 7, 79. 22) provide that a number of open roads should lead to the *brugaid's* hostel, so that it might be within access of all; and a man should be stationed at each road to allow no traveller to pass without seeking the hospitality of the *brugaid*. From the account of the destruction of Da Derga's hostel, we are able to ascertain that at night a light was kept burning on the lawn (*faithche*), to serve as a guide to travellers. In fact, Da Derga never closed any of the doors of his house, day or night, with the exception of those to the windward side (Stokes, 'Togail Bruden Da Derga,' in *RCel* xxii. [1901]).

According to Keating (*History of Ireland*, tr. O'Mahony, London, 1866; see Joyce, ii. 170), there were 90 *bruguids* in Connaught, 90 in Ulster, 93 in Leinster, and 130 in Munster. Though these figures are far from being accurate, they indicate how very numerous these houses of hospitality were.

There were a few *bruguids* of a still higher class than those already mentioned, who, it seems, entertained kings, chiefs, and their retinues, and were on very intimate terms with them. With the exception of this fact, their duties were in every way similar to those of the other two classes.

With the creation of the position of *brugaid* arose the necessity of public hostels of which he might be placed in charge. These hostels were called *brudin* or *bruden*—meaning houses of public or State-endowed hospitality. According to the Story of the Pig of Mac Dáthó ('Scél mucci Mic Dáthó,' in Windisch, i. 96), there were in the Red Branch period, about the beginning of the Christian era, six of these royal hostels in Ireland: 'the hostel of Da Derga in the province of Cualann, and the hostel of Forgaill Manach [father-in-law of Cúchulainn] which was located at Lusca [now Lusk, to the north of Dublin], and the hostel of Mic Dareo in Brefney, and the hostel of Da Choca in West Meath, and the hostel of Blai the farmer (*brüga*) in Ulster,' as well as that of Mac Dáthó, who was king of Leinster. In regard to the hostel of Mac Dáthó, it is said that 'there were seven doors in the hostel, and seven ways through it, and seven hearths in it, and seven cauldrons, and an ox and a salted pig in each cauldron. The man who came into the house thrust his fork into the cauldron, and what he obtained at the first thrust, that he ate. If, however, he did not obtain anything at the first thrust, he did not make another' (cf. also Stokes, 'Togail Bruden Da Choca, the Destruction of the Hostel of Da Choca,' in *RCel* xxi. [1900] 397).

The *bruden* of Da Derga was the most important of these hostels. The account of the destruction (*togail*) of it was published by Stokes in *RCel* xxii. [1901], and it relates how Conari I., king of Ireland, and his retinue, who were staying there at the time, were destroyed by a band of Irish and British marauders in the 1st cent. A.D. This hostel was situated on the river Dodder, where excavations were made and remains were discovered by Frazer (*Proc. Roy. Ir. Acad.*, 1879-86, p. 29). The *bruden* of Da Choca, in the destruction of which Cormac Conlingeas, son of Conchobar, king of Ulster, perished, was the next in importance, and was, as stated above, situated in West Meath, a few miles from Athlone. The account of its destruction contains the statement also that 'every *bruden* is an asylum of the red hand,' *i.e.* for all criminals guilty of murder (*RCel* xxi. 315).

There was still another kind of public hospitaller, called the *biatach* or *biadhach*, though the difference between him and the *brugaid* is not very clear. The Book of the Dun Cow (*Leabhar na hUidhre*, p. 123, line 4f. from bottom) mentions them together, apparently making no distinction whatever between them. The *biatach* was obliged

to entertain travellers and the chief's soldiers whenever they sought his hospitality. In order to enable him to discharge his functions, he was granted a tract of arable land called the *baile-biadhtaigh*, which was equivalent to about 1000 English acres. Besides this, he was entitled to a much larger amount of waste land.

According to Cormac's *Glossary* (p. 130), there were several female *bruguids* during the time of Finn who entertained chieftains and warriors on their hunting expeditions.

In addition to these, we find in Christian times that every monastery contained a *tech-óiged*, or guest-house, for the reception of travellers. These houses, which were constructed at some distance from the monks' cells, dated from the time of St. Patrick (Joyce, i. 330). According to the Lives of the Saints (Stokes, *Lives of the Saints from the Book of Lismore*, Oxford, 1890), it was enjoined upon some of the inmates to receive the stranger, take off his shoes, wash his feet in warm water, and prepare supper and bed for him. This was done in accordance with the *Ancient Laws* (v. 121. 27), which state that 'hospitality is incumbent on every servant of the Church.'

An old Irish sermon on Doomsday contains the following: 'The Lord will say to the just, "I was in need of a guest-house (*tech-óiged*), and ye gave me hospitality"' (Stokes, 'Tidings of Doomsday: a Sermon on Doomsday from the *Leabar na hUidhre*, in *RCel* iv. (1879-80)). Once, when St. Columba expected a guest at Iona, he told the brethren to prepare the *hospitium*, or guest-house, and to have water ready to wash the stranger's feet (Reeves, *Adamnan's Life of St. Columba*, Dublin, 1857, p. 27). When St. Ciaran of Clonmacnois arrived at Saigir (now Seirkieran in King's County), to visit the other Ciaran, abbot of Saigir, the latter, learning that the fire had unexpectedly gone out, said to him with a tone of apology: 'The first thing that ye [the saint and his followers] need is water to wash your feet, but just now we have no means of heating water for you' (Stokes, *Lives of the Saints*, 277). Mac Conglinne, displeased at the poor reception accorded him in the monastery at Cork, complains that on his arrival no one came to the guest-house to wash his feet, so that he was obliged to wash them himself (Meyer and Hennessy, *The Vision of Mac Conglinne*, London, 1892, p. 10). As in secular life, so in monastic life there was no obligation to entertain guests after the third day.

Guest-houses with men-servants (*timthirig*) in charge were also established in the most important nunneries of the country. In the *Féilire*, or Calendar, of Oengus the Culdee (*Trans. Roy. Ir. Acad.*, 1880, p. 72f.), it is related that a chief named Coirfre or Carbery arrived at St. Brigit's Convent in Kildare with a child in his arms, and was conducted to the guest-house. Guest-houses are also found attached to the houses of chiefs and even of persons not so high in the social scale who might be able to bear the expense. They consisted usually of one large apartment, which was always kept prepared for the reception of travellers, and which was in charge of a handmaid who washed the guests' feet (*ib.* 48).

If a monastery was situated on the banks of a river where there was no bridge, the monks usually had a *curragh* ready to ferry any traveller across free of charge (Healy, *Insula Sanctorum et Doctorum: Ireland's Ancient Schools and Scholars*, Dublin, 1890, p. 427). Irish missionaries on the Continent established *hospitalia* for the use of pilgrims on the way to Rome, some of which were in Germany, although they were mostly in France (cf. *Cambrensis Eversus*, ed. for the Celtic Society by M. Kelly, Dublin, 1850, ii. 244f.).

The public hostels began to diminish in number at the time of the Anglo-Norman invasion, and finally they disappeared altogether. After this the monasteries and some of the wealthier chiefs continued to keep up the custom for some time, but Henry VIII. finally ordered the suppression of all monasteries, and the last vestige of this custom disappeared with them. In 1539, Lord Leonard Gray, the Irish lord deputy, and the Dublin council petitioned the king in vain to exempt six

monasteries from the order, and among their reasons they cite the following:

'For in those houses commonly, and other such like, in default of comen innes, which are not in this land, the King's Deputie, and all other his Grace's Counsaell and Officers, also Irishmen, and others resorting to the King's Deputie in their quarters, is and hath hene most comenlie lodged at the costes of the said houses. . . . Also at every hosting, rode, and jorney, the said houses in ther [own] propre costes fyndethe [entertainment for] as many men of warr, as they are apoynted by the King's Deputie and Counsaell for the same' (*State Papers, Henry VIII.*, Ireland, iii. 130; see also *Register of All Hallows*, xxv., and Joyce, i. 333).

3. Welsh.—Among the Welsh the same admiration for hospitality and liberality was shown as among the Irish. The house of the Cymro was always open to the traveller. When he came within a district and presented himself at a house, he first delivered up his arms, which signified that he placed himself under the *navd* (peace) of the *pentulu* (head of the household). If he expressed the desire of seeking a lodging, for the first two nights he was treated as a guest of the householder with whom he stayed, but on the third night he was deemed an *agenhine*, or member of the man's household, for whom such man was answerable (Hubert Lewis, *The Ancient Laws of Wales*, ed. J. E. Lloyd, London, 1889, p. 281). The guest's way of manifesting his intention of staying overnight was to allow his feet to be washed. But, if he refused the proffered service, it was apparent that he desired only morning refreshments, and not lodging for the night.

'The young men,' says Giraldus Cambrensis (*Opera*, ed. J. F. Dimock, London, 1861-91, i. 10, p. 182f.), 'move about in troops and families under the direction of a chosen leader. Attached only to arms and ease, and ever ready to stand forth in defence of their country, they have free admittance into every house as if it were their own.'

As each house had its young women and its harps allotted to the purpose of entertaining visitors, those who arrived early in the day were entertained either with conversation or music until evening, when the principal meal of the day was served. Though, as Giraldus says (*Descrip. Kambria*, i. 10, p. 182f.; cf. ETHICS AND MORALITY [Celtic], vol. v. p. 463), this varied according to the number and dignity of the persons assembled and the degrees of wealth of different households, it was almost always a simple repast, for 'the kitchen does not supply many dishes nor high-seasoned incitements to eating.'

The houses of the Welsh were not furnished with tables, cloths, or napkins. The guests were seated in messes of three, instead of couples as elsewhere. All the dishes were at once set before them in large platters on rushes or grass spread on the floor (*ib.*), and the food consisted of milk, cheese, butter, and plainly-cooked meat (Rhys and Brynmor-Jones, *The Welsh People*, London, 1900, p. 250f.). The bread that they served was a thin and broad cake fresh baked every day, which, Giraldus says (*loc. cit.*), was called *lagana* in the old writings, but which was probably very much the same as the 'griddle-bread' or 'bake-stone bread'—*bara llech* or *bara plane*—of modern times (Rhys and Brynmor-Jones, *loc. cit.*; T. Wright, *The Hist. Works of Giraldus Cambrensis*, London, 1863, p. 493, note 2). To this was usually added broth with chopped-up meat. 'Such a repast,' adds Giraldus, 'was formerly used by the noble youth from whom this nation boasts its descent, and whose manners it still partly imitates.' The family waited on the guests, the host and hostess standing up and taking no food until the needs of their visitors were satisfied. The evening was then passed by the guests in listening to the songs or recitations of the bard of the household, or of minstrels who in their wandering had joined the company. Often all united in choral singing (Rhys and Brynmor-Jones, *loc. cit.*). A bed made of rushes, and covered with a coarse

kind of cloth manufactured in the country, called *brychan*, was then placed along the side of the hall, and the family and guests lay down to sleep in common (Giraldus, *loc. cit.*). The fire on the hearth in the centre of this hall continued to burn all night, and the people were so arranged that it was at their feet.

'But when the under side begins to be tired with the hardness of the bed,' adds Giraldus (*loc. cit.*), 'or the upper one to suffer from the cold, they immediately leap up and go to the fire, which soon relieves them from both inconveniences; and then, returning to their couch, they alternately expose their sides to the cold and to the hardness of the bed.'

Until the end of the third night the host and the people of the house were responsible for the safety of the guest. According to the *Ancient Laws of Wales*, one of the cases where guardians are appropriate is to guard lawful guests (*Dimetian Code*, III. v. p. 300; *Gwentian Code*, II. xxxviii. p. 377; *Anomalous Welsh Laws*, iv. p. 714, in Aneurin Owen, *Ancient Laws and Institutes of Wales*, London, 1841). If during the period of his visit recognized by law—*i.e.* before the end of three days—the guest was accused of theft, the testimony of his host could clear him only of theft committed by night (*Anomalous Laws*, xiv. p. 739, § 2); and, if the host failed to clear his guest, he himself was obliged to pay three pounds to his lord and to surrender his property to the complainant, *i.e.* sufficient, no doubt, to relieve his guest of the punishment he might suffer (*ib.*; also ch. xii. p. 705; and ch. xv. p. 709).

'There are three privileged progressive visits,' say the *Triads of Dyonaal Moelmu* (W. Probert, *The Ancient Laws of Cambria*, London, 1823, p. 9, no. 24), 'guaranteed by the honour of the tribe of the Cambrians, and no person must presume to hinder them: the visit of an ambassador from a bordering kingdom; the visit of bards from the bordering kingdom in the convention, according to the privilege and institute of the bards of the Isle of Britain; and the visit of foreigners in the peace and protection of God and His tranquillity.'

To illustrate further the attitude of the Welsh towards hospitality, it is stated elsewhere in the same work (§ 12) that 'there are three progressions that, wherever they go, are entitled to their support and maintenance: those who have the privilege of distinction; those who have the privilege of bards; and those who have the privilege of orphans.' Among the 'three progressions that require assistance' are 'bards in their circuit of minstrelsy and foreigners under the protection of the tribe of Cambrians.' Finally, the 'three renowned progressions' are the chief of the tribe and his retinue, bards and their disciples, and a judge with the retainers of his court. 'Wherever they are,' continue the *Triads*, 'they are entitled to their liberty and free maintenance' (*ib.* § 30).

This goes to show how greatly a violation of the laws of hospitality was condemned among the Welsh; and we are not surprised, therefore, to discover that severe punishments were meted out to the guilty. If it happened, for example, that a guest was seen to arrive and enter a house in good health, and in the morning was found dead, and the host and his family had raised no alarm and exhibited no marks of wounds received in his defence, the host and his family could not escape capital punishment, 'unless perhaps they were liberated *per patriam*, if the King's justices should deem that the truth could be ascertained *per patriam*' (Lewis, *op. cit.* 379). It was on this account that laws were made about receiving and parting with guests by daylight. If, on the contrary, the master of the house was found dead in the morning, and his servant or a stranger had passed the night in it, such stranger or servant could scarcely escape danger by the inquisition of the country because of the grave suspicion. 'But if the *patria* could not say the truth as to such *secret* deed, the man was sufficiently acquitted by their not finding him guilty' (*ib.*).

The *Ancient Laws* provide further (*Anomalous Laws*, iv. iv. 402, § 14, ed. Aneurin Owen) that, 'if a person come as an inmate to another person, having an animal or other property with him, when he departs, he is not to take with him the offspring, or dung, or crop, or any piece of furniture; nor anything but what he brought with him to the house, if it remain, unless an agreement assign it to him; as to which it is said: an agreement is stronger than justice.'

As in Ireland, no stranger was to remain beyond three days without 'commendation,' *i.e.* without being commended to some lord, who should take him under his protection, and answer for him, or without being admitted to some *borh*, or fellowship of mutual responsibility (*Leges Hen. 1.*, cviii. in Lewis, 281). In Ireland this was called 'binding the lord's protection,' and was necessary to every stranger to safeguard him through a country (J. Strachan, *Stories from the Táin*, Dublin, 1908, p. 4). Cúchulainn not only accepts the protection of King Conchobar of Ulster on his first visit to Emain Macha, but even requires the Ulstermen to accept protection from himself (*ib.*).

Of the king's guest the *Venedotian Code* (I. ix. 10, § 18, ed. Aneurin Owen) states that he is one of the six persons to be served with food and liquor by the royal steward. The other five who are the recipients of this honour are the king himself, his *henaw*, his *edeling*, his chief falconer, and his foot-holder. And, finally, one of the four persons for whom there is no protection against the king is 'a person to whom the king is a supper guest, who ought to supply him with food that night, and who does not supply him' (*Dimetian Code*, II. viii. p. 214, ed. Aneurin Owen).

LITERATURE.—This is sufficiently indicated in the article.

HOSPITALITY (Chinese).—The Chinese are a hospitable people; they enjoy social intercourse; they love to chat together. Notwithstanding the hard struggle for existence which many of them have to carry on, they enjoy life to the full, and extract well-nigh all the pleasure which can be got out of it. One of the first sentences in the Confucian *Analects*¹ runs thus: 'How pleasant it is to have friends come from a distance!' The commentators amplify the wording of this so that it reads: 'How pleasant to have friends come to you from a distance, attracted by your learning!' There is no doubt that the context gives them reason to paraphrase the passage in this way. At the same time, although the attractive power that draws the friends together is learning, it opens the way to hospitality. This is not the only instance in the Classics; others are even more to the point, and in them we find hospitality enjoined as a duty. Now, these Classics are the standard which the Chinese have applied to their conduct, and they contain, according to them, the principles which are to guide them in all affairs.

It might be thought that the etiquette of this Eastern people, with its stiff formality, like a coat-of-mail, would so hamper intercourse that it would act as a kill-joy on all attempts at the offering of hospitality; but under the rigid forms of outward ceremonial there beats a human heart warm with all the elements that foster the exhibition of it. A good corrective to formality of intercourse, lest it should dull the edge of hospitality, is found in a saying of the philosopher Tsang, one of the principal disciples of Confucius: 'I daily examine myself . . . whether in intercourse with friends I may not have been sincere.'² Another disciple of the Sage also gives utterance to much the same idea when he states it as one of the leading principles in the conduct of a man to whom the term 'learned' might be applied: 'If, in his intercourse with his friends, his words are sincere.'³ We thus see that these followers of the Master were carrying out the principles he laid down of 'Hold faithfulness and sincerity as first principles.'⁴

In the compilation of memorials known as 'The Book of History,' extending over about 1700 years from the most ancient times before the day of Confucius, we have, in the portion known as 'The

⁴ *ib.* bk. i. ch. viii. ver. 2.

Great Plan' (2205-2198 B.C.), one of the oldest parts of this ancient work, 'the entertainment of guests'¹ laid down as one of the eight objects of government. This would seem to include in its purview 'all festive ceremonies, all the intercourses of society.' In an agreement entered into by an assembly of princes in 650 B.C., one of the injunctions was: 'Be not forgetful of strangers and travellers.'² This was taken to include officers from other countries. 'The Doctrine of the Mean'—one of the Chinese Classics—in a description of the duties of a ruler of a country, says that 'by indulgent treatment of men from a distance they are brought to resort to him from all quarters.'³ The commentators differ as to the meaning of 'men from a distance.' One thinks it includes 'guests or envoys and travellers, or travelling merchants.' The learned translator of the 'Chinese Classics' (J. Legge) doubts whether any others but travelling merchants are intended by it. Another commentator would apply it to 'the princes of surrounding kingdoms.'

Confucius considered that the study of 'The Book of Poetry' taught the art of sociability. This book is a collection of 305 pieces selected by Confucius from more than 3000. They may almost be described as folk-songs, thus collected thousands of years before the vogue for such things in the West. These short poems represent the life of the Chinese some 3000 years ago. Some of them were sung at festive gatherings. In one 'admirable guests' are spoken of.⁴ Merry gatherings they seem to have been, for in one we read: 'As we feast, we laugh and talk.'⁵ In another we have a general returning from all his toils and feasting happily with his friends on roast turtle and minced carp.⁶ Another is descriptive of a feast given by a king.⁷ The hospitality thus sung in these songs seems to have been appreciated to the full.⁸

The clan system brings in its train, among its good features, the development of hospitality on a far more liberal scale than might be expected. Should a European, in adopting a Chinese surname for his cognomen while among the inhabitants of the 'Middle Kingdom,' come across a Chinese gentleman bearing the same name, he will find the most genuine interest taken in him by his newly-discovered clansman, and the utmost hospitality shown to him. The clansman in trouble or distress finds a refuge in his ancestral home in the heart of his clan in this land where poorhouses are unknown. Not only so, but a clansman, when out of work, can, and often does, go and live for days and weeks with one of the same clan as himself. Bed and board are given to him freely, and he is hospitably entertained until work again comes his way; and he, in his turn, is able to offer the same entertainment to a brother clansman in need.

The teapot in China is always ready to be produced on the advent of a stranger; nor is the Chinaman content with a single teapot, for often each cup serves for one, and each guest has a brew made specially for him, and replenished with boiling water as often as he likes. These cups are slowly sipped while the host does his best to entertain his visitor. Sweetmeats and pipes are also offered. A phrase in the Chinese language which is constantly heard is 'Come and sit down,' being an invitation to the house of those who utter it.

The low status of woman in China, her supposed inferior position in contrast to man, and the false prudery of the Chinese, have hitherto prevented the mingling of the sexes in entertainments, such as dinners, parties, and social gatherings.

Respectable women were excluded from participation in all such functions except when all present were of the same sex as themselves. But with the revolution in manners, customs, and education, as well as in government, which is now taking place in China, a different position is being taken by woman, and she has begun to share with her husband in both the dispensing and the receiving of hospitality.

Gray, *China*, do. 1878; J. Dyer Ball, *Things Chinese*, Shanghai and Hongkong, 1903; R. K. Douglas, *China*, London, 1887; S. Kidd, *China*, do. 1884.

J. DYER BALL.

HOSPITALITY (Christian).—The foundation of the first hospitals and hospices by the Christian Church shows the practical way in which the principle of hospitality was applied by Christian charity to invalids and weary travellers. Hospitality is proverbial in the East (cf. the story of Abraham, Gn 18⁸⁻⁹). The guest was sacred and inviolable, even although discovered to be an enemy (Jg 19²³). Before the time of caravanserais, which were unknown until the end of the 7th cent. B.C. (cf. Jer 9²), the stranger, when travelling, was dependent upon the hospitality of private individuals. Hospitality was practised among the Greeks and Romans also, but it was a private rather than a civic virtue. Christianity transformed it into a public virtue, by demanding as a formal duty from members of the Church, and especially bishops, a more merciful and beneficent spirit. In fact, the earliest Christians interpreted Christ's words, 'I was a stranger, and ye took me in' (Mt 25³⁵), in their broadest sense (Mt 10¹², Lk 10⁶ 14¹²⁻¹⁴), and showed hospitality towards pagans as well as Christians.

St. Paul followed in Christ's footsteps: 'In love of the brethren be tenderly affectioned one to another; . . . communicating to the necessities of the saints; given to hospitality' (Ro 12¹⁰⁻¹⁴, cf. 1 Ti 5¹⁰). A 'saint,' i.e. a Christian, provided with a letter of recommendation from his church, could travel from one end of the Roman empire to the other without having any anxiety about a home. Wherever there was a Christian church he was sure of receiving food and shelter, and attention in case of illness. The Christians showed hospitality towards all poor travellers.

i. Hospitality in the East.—Naturally it was travellers attacked by illness that called forth the greatest pity and anxiety. This was the origin of hospitals (*ξεροδοξια*, *hospitia*), the first of which was founded in the last quarter of the 4th cent. A.D., on account of a famine which had caused a deadly epidemic.

The historian Sozomen (*HE*, iii. 16) relates the foundation in A.D. 370 of the hospital of Edessa in Syria thus: 'The town of Edessa, being afflicted by famine, the hermit Ephraim came forth from his seclusion to upbraid the rich with their hard-heartedness in allowing the poor to die instead of devoting a part of their superfluous wealth to their relief. "That wealth which you are so carefully amassing," he said to them, "will only serve to condemn you, while you are losing your own souls, which are worth more than all the treasures on earth!" Persuaded by these words, the rich people of Edessa informed him of their inability to decide upon the person to be entrusted with the distribution of their wealth, as the people of their acquaintance were all covetous and might put it to a wrong use. "And," Ephraim asked them, "what is your opinion of me?" "You are an honest man," they replied, "and we shall gladly give you charge of the distribution of our alms." He thereupon received large sums of money from them, and immediately ordered about three hundred beds to be fitted up in the public porches, and there attention was devoted to all those suffering from the effects of the famine—strangers and inhabitants alike.'

Basil, bishop of Cæsarea (in Cappadocia), had also opened a hospital in 375, not far from this town, consisting of several separate houses (see Greg. Naz. *Orat.* xlii. 'In laudem Basilii Magni,' 35).

If Osrhoene and Cappadocia can boast of having had the first hospitals, it was Constantinople that first specified the different classes of those requiring relief. Between A.D. 400 and 403 Chrysostom built several hospitals with the surplus of his income from the archbishopric. Each of these he placed under the charge of two faithful priests, to assist whom he engaged physicians, cooks, and capable workmen (Palladius, *Dial. de vita S. Joan. Chrysos.*, p. 19, ed. Montfaucon [PG xlvii. 20]). There were seven different hospitals: (1) the *Xenodochium*, inn for stranger travellers; (2) the *Nosocomium*, home for the treatment of acute complaints; (3) the *Lobotrophium*, shelter for cripples and chronic invalids; (4) the *Orphanotrophium*, home for the reception of orphans; (5) the *Gerontotrophium*, home for old people; (6) the *Ptochotrophium*, home for the reception of the poor; and (7) the *Pandochium*, a refuge for all kinds of destitutes.

Jerome is reputed to have founded the first orphanage in Bethlehem; and John the almoner, who was elected patriarch of Alexandria in 608, organized assistance to the poor and sick of that town.

The Council of Chalcedon (451) recommended the *parabolani*, i.e. 'clerks' employed in the hospitals, to remain in the service of the bishop. Widows were placed at the head of the list of those maintained at the expense of the Church, and in return they and the deaconesses attended to the sick women. Among the qualifications required from a widow in order to receive the Church's bounty St. Paul mentions: 'if she hath used hospitality to strangers, if she hath washed the saints' feet, if she hath relieved the afflicted' (1 Ti 5¹⁰).

2. Hospitality in the West.—Christian hospitality in the West gave rise to two kinds of institutions: (1) *hospitals*, intended for invalids, lepers, and other sufferers, and generally placed under the control of the bishops; and (2) *hospices* or almshouses, adjoining most of the monasteries, situated along the chief roads and in dangerous mountain passes; these extended a welcome to travellers overcome by fatigue or benumbed with cold.

Hospitality was the chief virtue enjoined upon the bishop. 'The bishop,' says St. Paul, 'must be given to hospitality' (1 Ti 3², Tit 1⁸), and the Apostolic precept was confirmed by the most famous Fathers of the Church. Jerome in his *Ep. lii.* ('To Nepotian'), and Chrysostom in his *Second Sermon on Genesis*, advise bishops to keep their houses open to strangers and sufferers in the cause of truth, and their table at the service of the poor, for, in doing so, they are sure to be entertaining Christ in disguise. St. Augustine had started a hospital in his own house, and often sat down at the same table with his guests. The Councils adopted this principle, and entrusted the bishops with the assistance of the poor and the sick (Council of Chalcedon, can. viii.).

In the decrees of the Councils of the Gallican Church are found the earliest regulations concerning the relief of the poor and the sick. The First Council, held at Orleans under Childebert in 511, devoted two canons to them. The fifth decreed that 'of the proceeds of offerings or lands granted to the Church by the king two-thirds shall be employed in the maintenance of the clergy and the poor and one-third in the redemption of prisoners.' The sixteenth adds: 'The bishop shall provide food and clothing, so far as his means will allow, to the poor and the sick who on account of their infirmities are unable to work for themselves.' The Fifth Council of Orleans (549) is quite as formal. After forbidding the unlawful use of any part of the alms bequeathed to the hospitals,

it enjoins upon the bishops (can. xxi.) the care particularly of lepers, and the duty of supplying them to the best of their ability with food and clothing, 'so that Christian mercy might not fail even in the case of victims of that most loathsome disease.' The fifteenth canon mentions the earliest hospital as being in France, and founded at Lyons in 542 by King Childebert and his wife Ultrogotha at the instigation of the bishop. Paris does not seem to have had one until the middle of the 7th cent., when Bishop Landry established (650) a home for invalids and poor travellers near his church—whence the name *Hôtel-Dieu*. It is to Lanfranc, its archbishop, that Canterbury owes its hospital (1070), and the first London hospital was called St. Bartholomew's (1102). In these semi-barbarian ages hospitals were often dedicated to the Holy Spirit, whose emblem, a dove, is found on the frontal of several, e.g. the hospital built by Pope Symmachus in Rome (498).

At first the bishops had the management of the hospitals, but gradually, as the duties increased, they were passed over to the chapters, who delegated this work to a few priests called *provisores* or *præfecti nosocomii*. The *Capitularies* of Charlemagne decreed that the secular and regular clergy should, as one of their first duties, relieve the sick; and, to guard against neglect of duty, they placed the *xenodochia* under the control of royal authority (*Capit.* 183). The Council of Meaux (845) refers to the *Hospitia Sctorum*, complaining that these had been diverted from their original purpose of hospitality, and imploring their reinstatement as almshouses for travellers and invalids.

3. Hospices of the monasteries in the Middle Ages.—While the bishops were the first to establish hospitals for the care of the sick, it was the monks who created a special form of Christian hospitality—the almshouse, or so-called *xenodochium*. Its foundation is generally attributed to St. Benedict of Nursia; this, however, is not correct, as it can be traced back as far as the very beginnings of Eastern monasticism.

The custom of washing the feet of the guests which was in vogue in the Irish convents of the 6th cent. came from the East. Johannes Cassianus, founder of the monastery of St. Victor near Marseilles (410), in his *Collationes* (chapter xvi. 'Magister hospitium'), describes the ceremony performed at the reception of a guest. After the customary salutations the traveller was introduced into the *hospitium*, a wing of the building apart from the rest of the cloister, and taken to his room. After having been shown into the dining-room (*cœnaculum*), he had his feet washed by one of the monks. The whole company then shared in the joy caused by the arrival of a guest, breaking their fast and eating cooked food.

When Columban, at the end of the 6th cent., brought Christian principles, along with the elements of civilization, into Gaul, which had been laid waste by the barbarians, he founded monasteries at Anegray, Luxeuil, Fontaine, Bobbio, etc., and urged upon his monks the duty of hospitality towards strangers and poor pilgrims. His disciples, St. Ouen, St. Faron, St. Gall, etc., practised this virtue to such an extent that in the 9th cent. the fame of Scottish hospitality was wide-spread. These are the hospitable monasteries referred to by Charlemagne in his *Capitularies*, by the members of the Council of Meaux (845), and the Council of Quierzy (858), when they speak of the decline of the *hospitia peregrinorum*. The bishops assembled at the first of these Councils implored the Emperor Louis le Débonnaire to restore these *hospitia*, help them by endowments, and place them under their control.

'It is our duty,' they said (can. 40), 'to inform your Majesty concerning the homes established and equipped in the time of your predecessors, and to-day almost annihilated. The Scottish *hospitia* especially, which the kindly people of that nation had built there, and endowed from their wealth acquired because of their goodness, have been completely diverted from their real purpose. Not only are those who ask for hospitality refused

admittance, but even those who, bound by the tie of religion, have served the Lord from their childhood, are being driven from them, and compelled to go begging from door to door.'

Besides Johannes Cassianus and Columban, who imitated the practices of the Eastern Church, Benedict of Nursia also imposed the duty of hospitality upon the monks of the West. The 53rd chapter of his *Regula* is entitled 'de Hospitibus suscipiendis,' and reads as follows: 'Let all visitors who chance to arrive be welcomed as if it were Christ Himself, who will one day say to us, "I was a stranger, and ye took me in." Let due honour be shown to all, especially to servants of the faith and pilgrims' (*PL* lxvi. 750; cf. E. Martène, *Commentarius in regulam Sancti Benedicti*, Paris, 1690).

There was practically no monastery in the Middle Ages without its *xenodochium*, and many had a *nosocomium* as well. These hospices rendered valuable service at a time when the roads were infested by robbers, or exposed to frost and snow, e.g. those leading through the passes of high mountains, and subject to thick fogs or snowstorms. Such were the hospices adjoining the cloisters on the three chief Alpine passes leading from Switzerland to Italy and France. The hospice of St. Gothard has been almost abandoned since the completion of the railway from Lucerne to Lugano (1882). That of Simplon is greatly affected by the new road leading from Brieg to Domo d'Ossola. The hospice of the Great St. Bernard still exists, and is prepared to render service to travellers on the road from Martigny to Aosta. The monks living there belong to the Augustinian Order, and their lay brothers are called 'Maroniers.' The adventures of those brave men and their famous dogs are well known. They have rescued from certain death thousands of travellers lost in the snow and almost frozen. For this purpose the monastery of the Great St. Bernard received an annual grant from the kings of France (1760). The grant was confirmed and increased by Napoleon Bonaparte, after the famous crossing of his army through this pass (15th to 21st May 1800).

4. Orders of Hospitallers.—The epidemics which frequently raged among the pilgrims travelling from the West to the Holy Land, and among the soldiers of the Crusades, led to the foundation of hospitals and Orders of Hospitallers in Palestine. The first hospitals were founded at the end of the 6th cent. by Pope Gregory I., and afterwards restored by Charlemagne, who took a great interest in the Christians of the East. The hospice of St. John, established at Jerusalem before the first Crusade by a few Amalfi citizens, gave rise to the first Order of Hospitallers called 'Hospitallers of St. John of Jerusalem,' or 'Joannites,' whose rules were drawn up by Brother Gerard (or Gerhard) (d. 1120). This Order, composed of three classes, priests, knights, and attendants, was of a semi-charitable, semi-military nature. As a consequence of the services it rendered, it spread throughout the whole of Europe, and was divided into eight provinces or 'languages.' After the conquest of Palestine by the Turks, the Joannites transferred the seat of their Order to Rhodes and subsequently to Malta, whence the names 'Knights of Rhodes' and 'Knights of Malta,' by which they are also known. The French branch disappeared at the Revolution of 1789. The German branch was restored by Frederick William IV., king of Prussia, about 1850, and still exists under the name of 'Johanniter-Orden.' The English branch, which was abolished and had its wealth confiscated by Henry VIII., was reorganized in 1826. Its special work is the supervision of convalescent homes and small country hospitals, and the training of sick nurses for the poor. The English Joannites were of invaluable service to the wounded in the Trans-

vaal war. In imitation of the Joannites the 'Hospitallers of the Holy Spirit,' the 'Hospitallers of St. Lazarus' to tend lepers, the 'Hospitallers of St. John of God,' an Order founded in Granada (Spain) by a Portuguese of that name (d. 1550), etc., were formed.

In the Christian Church the care of the sick has never been confined solely to men, but both in the primitive Church and during the Middle Ages was largely participated in by women; so that the number of Orders of Hospital Sisters exceeds that of the Brethren. Among the oldest and most famous, mention is due to the society of 'Hospital Sisters of the Hôtel-Dieu' (of Paris), known as 'Augustine Sisters' (beginning of the 13th cent.), the 'Haudriettes,' the 'Ladies of the Hôtel-Dieu' of Beaume, the 'Filles-Dieu' of Orleans, the 'Sisters of St. Thomas' of Villeneuve, and especially the 'Sisters of Charity,' organized by St. Vincent de Paul to assist the 'Dames de Charité' in the nursing of the sick, and obliged to remain free from monastic fetters.

Hospices and almshouses were also established near the famous pilgrimage places, to afford shelter to the numerous pilgrims visiting them, e.g. at St. Jacques de Compostella in Spain, Our Lady of Loretto in Italy, and Our Lady of the Hermits in Switzerland (Einsiedeln).

The 'Maladeries,' 'Mozelleries,' or 'Hospitals of St. Lazarus,' special homes for lepers, constituting a branch apart from hospitals, do not demand attention here.

5. Hospitality in modern times.—It may be said that individual hospitality has decreased practically in direct proportion to the advances achieved in the means of transport and the number of hotels.¹ It is, however, still practised to a considerable extent in Eastern countries and in the north of Europe, e.g. Scotland. But, if private hospitality has diminished as a result of civilization, public hospitality, on the other hand, has advanced with rapid strides not only by developing existing charitable institutions, but by creating new and very ingenious methods of relieving the sick and destitute.

This leads us to subdivide the remaining discussion into two parts: (1) the development of ancient institutions; and (2) the formation of new methods of relief.

(1) The ancient *xenodochium* has been transformed into various kinds of night refuges. As early as the 12th cent. the Hospital Sisters of St. Augustine in Paris were in a position to provide three hundred vagrants with three nights' lodging in their convent of 'Blancs-Manteaux.'² Destitute women were received in St. Catherine's Home in Lombard Street. In 1872 Massabo founded the first night refuge at Marseilles, and his example was followed by Lamaze and the Philanthropic Society, who opened large night shelters for men and others for women in Paris (1878). The municipal board of Paris, the municipalities of London, and most of the European capitals, following in their train, opened various night shelters. The Salvation Army has distinguished itself in this respect.

As a result of the reforms started in England by John Howard and Florence Nightingale, and in France by La Rochefoucauld-Liancourt, Tenon, etc., the ancient *nosocomium* has developed into the modern hospital with all its hygienic improvements. Before these reforms the best organized hospitals were military or *lazaretto* hospitals. At the end of the 18th cent. the public hospitals in

¹ The Swiss hold the first rank in the management of hotels. At Ouchy, near Lausanne, they have built a normal school for hotel managers, which is admirably organized, and is attended by young people from all countries.

² There is still a street of 'Blancs-Manteaux' in the Temple quarter of Paris.

France had reached such a depth of decay that they were dreaded by the poor, and deservedly called forth the censure of philanthropists and the complaints of medical men.

'You have in Paris,' wrote Voltaire to Paulet on 22nd April 1768, 'a hospital (Hôtel-Dieu) where perpetual contagion reigns, where poor invalids huddled closely together infect their neighbours with the plague and death.' Michelet, the distinguished historian of ancient France, is equally hitter. 'Ancient hospitals,' he says, 'were exactly like reformatories. The sick poor and prisoners confined in them were generally regarded as culprits struck by the hand of God, whose first duty was to atone for their sins, and they were subjected to cruel treatment. Charity of such a dreadful kind arouses our horror. An attempt was made to dispel the terrors of the hospitals by adorning them with enticing names, such as "Hôtel-Dieu," "La Charité," "La Pitié," "Le bon Pasteur," but that did not succeed in imposing upon poor invalids who hid themselves to die at home, so terrified were they at the thought of being forcibly dragged into these places.'

At that time the insane were chained in their cells, and such was the terror inspired by these victims of insanity that they were believed to be 'possessed by the devil.' Dr. Pinel showed great courage in breaking the chains (1792-94).

In England John Howard (d. 1790), who is well known on account of his remarkable zeal, took the initiative towards reforming hospitals, and in France that step was taken by the Academy of Sciences. The fire which took place in the Hôtel-Dieu in 1784, and burned to death several hundreds of the inmates, roused a wide-spread feeling of pity and indignation.¹ £80,000, a large sum at that time, was collected by public subscription for the reconstruction and improved sanitary arrangements of this hospital. The committee appointed by the Academy of Sciences for the reform of public hospitals numbered in its ranks such philanthropists as Bailly, the Duke of La Rochefoucauld-Liancourt, Tenon, etc. The memoir written by Tenon (1787) is a master-piece of technical knowledge and courage, denouncing the horrors referred to by Voltaire. The 'Convention' appointed a committee to carry out the proposed reforms, but the Revolution and the wars of the Empire prevented the realization of Tenon's scheme. Nothing more was achieved until Louis Philippe's reign. Then the Count of Rambuteau, prefect of the Seine department, ordered preparatory investigations concerning the rebuilding of the Hôtel-Dieu, which, however, was not actually achieved until the reign of Napoleon III. (about 1866-68). We would call special attention to the most recent improvements, especially in the maternity and surgical wards of hospitals, resulting from Pasteur's discoveries and Lister's antiseptic method.

Institutions for the maintenance of widows and orphans are as old as the Church. Wherever there was a Christian community it regarded the assistance of those unfortunates as its first duty. But there are several ingenious modern methods of this kind of aid, which we shall merely mention. Having noticed the disadvantages of a widow having to live alone while her children were sent to an orphanage, some philanthropists gave her pecuniary assistance, enabling her thereby to keep her children at home,² and to preserve the family tie intact—a state of affairs beneficial to both mother and children. It was this idea that gave rise to the 'Œuvre des petites Familles' founded in Paris in 1891. Its aim is to bring together orphans of both sexes and all ages in a house where they are under the care of a Christian matron, who treats them as if they were her own children. Here they receive manual instruction, one of the regulations being that every orphanage must have a workshop connected with it.

¹ The Hôtel-Dieu in Paris had become a sort of *caravanseirai*, open to all poverty-stricken, aged, disabled, and vagrants of both sexes, whether they were ill or not. No fewer than 6000 people took refuge there, and it was quite an ordinary occurrence to have three or even four invalids lying in one bed.

² Cf. the 'Œuvre des Veuves' founded by Ed. Vaucher in Paris, 1893.

Ever since the Middle Ages the monasteries have hospitably opened their doors to such fallen women as have repented, and, endeavouring to hide their shame, are making a fresh start. Robert d'Arbrissel, the celebrated preacher of repentance, founded the Order of Fontevrault. One of the convents of this order, St. Magdalene's, was specially set apart for fallen women. In more recent times this admirable work of hospitality and moral aid has been carried on by the Roman Catholic 'Good Shepherd's Nuns,' the Anglican and Protestant deaconesses of Kaiserswerth, and the female officers of the Salvation Army; and to-day it is being done by the rescue-work of the 'Home of Fantine,' founded by Madame d'Avril de St. Croix, and by R. Béranger's 'League for the Suppression of the Trade in White Women.'

The aged also, afflicted by poverty and infirmities, have at all times aroused the compassion of the faithful. At one time they were received in certain of the monasteries; nowadays there is no town of any size which does not possess its home for the aged. A new feature introduced into these homes in the 19th cent. was the keeping together of old couples, and the association of widows and widowers with young children, so that the melancholy of their old age might be brightened by the happiness of youth. We may mention as examples of the former kind the 'Asile des petits Ménages' at Issy, near Paris, built on the site of the ancient 'Hospital for Lepers' of St. Germain (founded in 1100) and the 'Home of Sainte Péline' in Paris, and as a type of the latter the 'Asile protestant de Nanterre' for old women and little girls.

(2) Among modern forms of hospitality the most noteworthy is what is known as the workshop—a combination of refuge and workshop. The idea, however, is not quite new, for, even before the French Revolution, workshops had been opened in times of poverty to enable the poor to earn a livelihood.

'But,' says Louis Rivière (*L'Assistance par le travail à Paris*, 1895), 'the characteristic feature of our time consists of a new element, the effort to impart a systematic organization to this method of relief, so that the poor man may obtain something more than pecuniary assistance. All these institutions have a common aim: in the case of an able-bodied pauper, instead of alms, which are degrading and encourage idleness, they substitute ennobling work—provisionally, however; for, although sufficiently remunerative to ensure a livelihood, it also stimulates the desire to obtain something better. The work is compensated either by food and lodgings or by wages.'

This method of aid, hospitality in return for work, has been applied on a very large scale by F. von Bodelschwing in his admirable settlement near Bielefeld in Westphalia and by J. Rostand at Marseilles; and in Paris large workshops for women have been founded by Mesdames Suchard de Pressensé¹ and Risler² and Léon Lefebvre, and for men by A. Robin and the Earl and Countess of Laubépin.³

Connected with these institutions there are homes for convalescents and for worn-out working men. To the former class belong the 'Villa Helvetia' at Meutone and the National Shelters at Vincennes and Vésinet founded by Napoleon III., and, in the second, mention is due to the Sailors' Homes established in Great Britain and other countries, and maintained in order to provide a home for homeless sailors returning from long and perilous voyages. There, under the care of a matron, they find comfort for body and soul.

The care of children is a characteristic feature of our times, especially of the French nation, which has shown its ingenuity in inventing, in addition to orphanages, other new methods of hospitality to children. In the first rank stands the institution of 'Crèches' (infant asylums), founded

¹ 'Œuvre du Travail,' as it is called, in the Rue de Berlin, 1855.

² 'Asile temporaire pour des Femmes' (1838).

³ 'Œuvre de l'Hospitalité par le travail à Belleville et à Passy.'

in Paris in 1844 by Firmin Marbeau, and now extending their privileges to the children of more than two hundred European towns. Their aim is to nurse and feed young infants whose mothers have to go out to work. To this class belong the 'Crèche Furtado-Heine' and the 'Asile Léo Delibes' in Paris, the 'Pouponnière' in Versailles, etc. The children's shelters established at St. Maur-les-Fossés (near Vincennes) differ from infant asylums in receiving children from two to seven years of age, and not only by the day, but for several years, as long as their parents are unable to attend to them.

The services done by the 'Colonies de Vacances,' started by L. Bion at Zürich and imitated in Paris, Berlin, etc., and by the 'Enfants à la Montagne' organized by Louis Comte, a St. Etienne clergyman, which aim at enabling the delicate and weakly children of large manufacturing towns to get the benefit of country air and good food, are also worthy of the greatest praise. But still more to be pitied than the children of the working-class poor are those wretched little ones whom Jules Simon called 'orphans whose parents are still alive.' Homes for such children were founded in London by Dr. Barnardo, in Liverpool by James Nugent, and at Ashley Down, near Bristol, by George Müller; and in Paris Mesdames A. de Barrau and Kergomard established homes and proffered hospitality and education to the poor creatures who were the victims of unnatural parents.¹ Thousands of these children have by this means been prevented from becoming thieves and criminals.

Children whose defective instincts or undisciplined nature resisted both physical and mental instruction used to be sent to 'Reformatories,' where they often became more corrupted than before by bad company. Attempts have been made to improve this state of affairs by founding agricultural schools at Metray (at the junction of the Indre and the Loire) and at La Force (on the Dordogne), where military discipline and agricultural work have succeeded in taming the most ungovernable natures.

But more important than all these ways in which modern hospitality has displayed its excellent spirit is its solicitude for young women and girls in search of employment. Many associations, differing in name but having in common this spirit of charity, vie with each other in the enthusiasm with which they not only provide homes for lonely girls, servants, or governesses in search of work in Paris, but also give them valuable advice and secure situations for them in shops and good families. Such are the 'Union internationale des Amies de la jeune Fille,' which has branches in all the European capitals as well as in Paris, the 'Amicitia' club, the 'Adelphi,' and the 'Restaurant pour Dames seules.'

And, lastly, it is an almost incredible fact that charity has not given up hopes of curing what was thought to be an absolutely incurable vice, drunkenness. Establishments have been opened in Switzerland, France, England, Sweden, etc. for the cure of inebriates, and in spite of great difficulties they are beginning to obtain encouraging results.

HOSPITALITY (Greek and Roman).—Hospitality is the name of a relation and of a quality. In Greek the relation is expressed by *ξενία*, the quality by *φιλοξενία*; in Latin the corresponding words are *hospitium* and *hospitalitas*. It is with hospitality as a relation that we shall first be concerned. In both Greece and Rome the relation was one between members of different States, and it held between families rather than individuals, or, it might be, between a family or individual and a State. This gives us a division of hospitality into private and public. In relation to private persons a man was called in Greek *ξένος*, in relation to a State *πρόξενος*; and the like distinction held between *ξενία* and *προξενία*.¹ In Latin the one word *hospitium*, with its concrete *hospes*, was used for both private and public hospitality. There are some relations, like that between father and son, in which, the relation not being the same on both sides, a different word is required to express each of the terms. But, as the relation of hospitality was reciprocal, he who was host becoming guest in his turn, the Greeks and Romans were content with one word (*ξένος*, *hospes*) to cover both sides of the relation, like our words 'brother,' 'cousin.'² We, however, have differentiated the two words, 'host' and 'guest,' which come ultimately from the same root, in order to distinguish the two sides of a relation which is not with us so necessarily convertible as it was with the ancients. When the Greeks found it convenient to distinguish, they expressed the entertainer by the word *ξενόδοκος*, leaving *ξένος* for the person entertained.³

The word *ξένος*, dialectic forms of which are *ξείνος*, *ξένος*, is probably connected etymologically with Lat. *hostis*, being for **gzhenvos*, **ghs-en-uos*;⁴ and, like *hostis*, it means originally an outsider or foreigner of some sort. Herodotus twice notices the Lacedæmonian use of the word in this its primary sense, as equivalent to *βάρβαρος*. When Amompharetus plumped down a big stone before the feet of Pausanias, he exclaimed: 'With this pebble I give my vote not to run away from the foreigners' (*τοῖς ξείνοις*).⁵

Cicero tells us⁶ that the word *hostis* meant originally nothing more than *peregrinus*, quoting the Twelve Tables in support of his assertion, which philology sanctions by connecting the Latin *hostis* with the German *Gast*. Cicero draws a conclusion as to the mildness of the early Romans, who called their enemies nothing worse than 'strangers,' though they might have called them *perduelles*. Others, however, might argue from the same philological fact that the Romans failed to distinguish between strangers and enemies.

Hospit-, the stem of *hospes*, is regarded by philologists as a contraction for *hosti-pet*; but as

¹ Athen. xiii. 81, p. 608 f.: Ἐρησιίλω δὲ, ξένου οἱ εόντος καὶ προξένου Ἀθηναίων.

² The feminine of *ξένος* was *ξένη*, of *hospes*, *hospita* (Plato, *Laos*, xii. 953 D: ὑποδέχασθαι τε χρὴ πάντας ξένους τε καὶ ξένας ἐξ ἄλλης χώρας; Cic. *Verr.* ii. 24: 'femina primaria Servilia veteris Dionis hospita').

³ *Od.* viii. 642 f.: ἵ' ὁμοῦς τερωόμεθα πάντες ξεινοδοκοὶ καὶ ξείνοις. Cf. *Il.* iii. 354; *Od.* viii. 210, xv. 54 f. In Homer *ξένος* and its derivatives always appear in the Ionic forms *ξείνους*, etc.

⁴ K. Brugmann, *Gr. Grammatik*, Munich, 1913, p. 112.

⁵ Herod. ix. 55: ξείνους λέγων τοὺς βαρβάρους. Cf. ix. 11.

⁶ ξείνους γὰρ ἐκάλεον τοὺς βαρβάρους. Cf. Plut. *Aristides*, 10.

⁶ *De Off.* i. 37.

to the meaning of the latter element there is a difference of opinion. According to some, it is from *pa-*, the root of *pasco*; according to others, it is connected with *pot-*, as seen in the Latin *potens*. On the former assumption the word would mean 'feeder of guests or strangers,' on the latter 'guest-master,' i.e. master of the house in which guests are entertained (see below, p. 818 f.). In early society, when there was not an Imperial Hotel in every big town, hospitality was one of the most important of the relations of life.¹

The first point to notice about this relation is that it was extra-political. It carried a man beyond the bounds of his own State, and so was the beginning of the brotherhood of man. While all around was hostility or indifference, it was something to feel that there was one foreign city where one's warmest welcome would not be at an inn.

Secondly, the relation was reciprocal, which led one to do as he would be done by. If one were host to-day, he would be guest to-morrow, or, let us say, next year, and dependent for his comfort and well-being on the man whom he was now entertaining. 'And I myself,' says Admetus, 'find in him a most excellent host, whenever I come to the thirsty land of Argos.'² Odysseus in the *Odyssey* is made to utter a shrewd remark about the stupidity of contending in games with one's host.³

Thirdly, the relation was hereditary, descending from father to son. When Glaucus in the *Iliad* had declared his pedigree, Diomedes recognized that the tie of hospitality had been contracted between his own grandfather, Ceneus, and Bellerophon, the grandfather of Glaucus.⁴ 'Why, you are my old hereditary guest-friend!' he exclaims; and so, amid the war of nations, the two heroes conclude a private peace, agreeing to avoid each other's weapons. The beautiful episode of Glaucus and Diomedes, while from the poet's point of view it serves the purpose of filling up the time until Hector returns to the field, having discharged his mission to Troy, has from our point of view the recommendation of throwing a vivid light on the early importance of the tie of which we are speaking. Again, in the *Odyssey* when Athene, under the guise of Mentès, wishes to gain the confidence of Telemachus, she tells him that they are hereditary guest-friends, adding that he can go and ask his grandfather Laertes about the matter.⁵ As a matter of fact, this assertion is untrue, as is that in *Od.* xvii. 522, where Odysseus, disguised as a beggar, claims to be an hereditary guest-friend to himself, but it is illustrative of the fact without which it would lose its meaning. In *Od.* xv. 195-198 we see how the consciousness of hereditary affection makes the hearts of the young Telemachus and of Nestor's son Pisistratus warm to one another.

A fourth point to notice about the relation of hospitality is that it was inaugurated and accompanied by an interchange of gifts. On the discovery that they are guest-friends, Glaucus and Diomedes exchange armour on the field of battle, which gives occasion to the canny saying of Homer:

'Then Glaucus of his judgment Jove deprived,
His armour interchanging, gold for brass,
A hundred oxen's worth for that of nine.'⁶

¹ In Græco-Roman times the accommodation for travellers does not seem to have been very good—partly perhaps on account of the very system of *ξενία*, or *hospitium*, of which we are speaking. The various words in Greek and Latin for a place of entertainment do not connote more than our word 'inn'—*πανδοκεῖον* (Aristoph. *Ran.* 550), *κατανώγιον* (Thuc. iii. 68), *κατάλυσις* (Herod. v. 52), *κατάλυμα* (NT); *hospitium*, *devisorium* (Cic. *Cat. Mai.* 84), *caupona* (Hor. *Epist.* i. xi. 12), *taberna* (Cic. *Inn.* ii. 14).

² Eurip. *Alc.* 559.

³ *Od.* viii. 210.

⁴ *Il.* vi. 215.

⁵ *Od.* i. 187.

⁶ Lord Derby's tr. of the *Iliad* (vi. 276 ff.).

In the *Odyssey* the first thought of Telemachus, on being told that Mentès is an hereditary guest-friend, is to press some keepsake upon his acceptance.¹

Fifthly, the parties to the relation secured themselves against impostors by the device of tickets, which were broken between them, one part being retained on either side. *σύμβολον* was the Greek word for a ticket of this kind, and we find Plautus speaking of it as *hospitalis tessera*.² Probably this custom grew up in post-Homeric times. If so, Euripides is guilty of an anachronism when he makes Jason offer such hospitality-tickets to Medea, for her to present to his guest-friends.³ Crito, the contemporary of the poet, might have adopted this method of securing the welfare of Socrates, had that philosopher availed himself of the means provided for his escape into Thessaly.⁴

Lastly, the relation of which we are speaking was no light expression of casual goodwill, but a solemn engagement which had the sanction of religion. The Supreme God in one of his aspects presided over it, so that we hear of *Ζεὺς Ξένιος* and *Jupiter hospitalis*.⁵ What made the offence of Paris so rank, in carrying off Helen, was that it was a violation of the rights of hospitality; and what added a darker horror to the crime of Ægisthus was that he first gave a banquet to Agamemnon and then slew him as one slays an ox in the stall.⁶ It is worth noting that Herakles, who ended by being the greatest saint in the Stoic calendar, started on his career by being a bad man, who slew a guest in his own house.⁷

Besides indicating the special relation of which we have been speaking, the word *ξένος* signifies also any stranger or foreigner as opposed to *ἄστρος*, *πόλιτης*, *ἐπιχώριος*. Hence the address *ὦ ξένη* was used like the American 'stranger.' Men did not travel much for pleasure in early times, for that was to cut themselves off from the social organism, of which they were part, and expose themselves to the mercy of strangers. If a man were found wandering about in another country, he had generally some very good reason for having left his own. Perhaps he had killed some one, whether by accident or design, or had in some way made himself obnoxious at home. At all events, he was helpless now, and to the credit of human nature be it said that the appeal to pity is seldom ineffectual. In early Greece, as among the Jews, there was a strong sentiment in favour of the protection of strangers. Any wanderer or refugee was regarded as being under the protection of *Ζεὺς Ξένιος*; nay more, the helper of the helpless, *Ζεὺς Ἰκέσιος*, extended his care over him. This sentiment finds strong and frequent expression in the *Odyssey*.⁸ It is remarked, indeed, of the Phæacians that they have no fondness for strangers,⁹ but even they treat their unknown visitor royally, when once they have accepted him as a suppliant. Had we not the authority of Athene for the statement, we might be surprised that the Phæacians, of all people, should display an aversion from strangers, considering how fond they were of visiting foreign lands. The Cyclopes are a gruesome exception in the Homeric world to the general regard displayed for strangers, but then they are not men but monsters. The inhospitality of the Tauric Chersonese is beyond the ken of Homer. Human sentiment, when it lacks

efficiency, clothes itself in a religious sanction, and appeals to the powers of heaven in favour of what is not, but ought to be. There are many stories which point the moral how the God of Hospitality and the God of Supplication (Zeus *Ἐπιεὺς* and Zeus *Ἰκέτιος*) cannot be flouted with impunity. Folklore also declared that the gods assumed the likeness of strangers, and went up and down in the world to keep watch upon the ways of men. The outrageousness of the offence committed by Antinous, when he hurled a stool at the wandering beggar who asked for alms, stands out in high relief when we find that even the unruly suitors were shocked at this conduct, and that it is one of them who expostulates with him thus:

'Antinous, thou hast not done well to hit the unhappy wayfarer, accursed man, if indeed there be a god in heaven! And gods in the likeness of strangers from other lands, taking all sorts of forms, roam about among the cities, keeping watch upon the violence or good behaviour of men.'¹

Thus, in the Hellenic as in the Hebrew world, one might in exercising hospitality be 'entertaining angels unawares' (He 13^d). Even in St. Paul's time, in the cities of Lycaonia, there was vitality enough in the idea of 'gods coming down in the likeness of men' to lead to practical expression in the way of sacrifice (Ac 14¹¹). It was the same district which was the scene of the story of Baucis and Philemon, who entertained at table Jupiter and Mercury.²

That there is more about hospitality in the *Odyssey* than in the *Iliad* is probably due to the nature of the subject-matter—the one dealing with peace, and the other with war. When the envoys from Agamemnon come to Achilles in *Iliad*, bk. ix., the first thought of that hero is to call to Patroclus for a bigger bowl and a stronger mixture,³ together with a cup for each. Patroclus' own forethought supplies such trifling accessories to the feast as the chine of a sheep, a goat, and a fat hog. The carnivorousness of the Achaean heroes, we may note in passing, stands in strong contrast with the temperate, and almost vegetarian, diet of the Athenians. When Priam comes as a suppliant to Achilles, in bk. xxiv., he is met with the same prompt and sheep-slaying hospitality; but the hero, aware of the uncertainties of his own temper, has to warn the old man to avoid irritating him, lest he should forget, even in his own hut, that he is dealing with a suppliant, and might thereby transgress the commands of Zeus.⁴

The politeness of an Homeric host required that he should feed his guest before he asked who he was. This is an excellent rule. For, in the first place, it is a tax upon one who is tired and hungry to have to talk at all; secondly, the host makes it plain that his kindness has no respect of persons; and, thirdly, if it should be an enemy that he is entertaining, he will find it more difficult to hate him after doing so.⁵

Gifts, as has been said already, were usual between the parties who entered into a formal relation of hospitality. But, besides this, some dole or gift seems to have been regarded as the right of any stranger as such. The value would, of course, vary with the importance of the stranger and the disposition of the donor. Odysseus at first expects to get some such gift even out of the Cyclops.⁶ As a beggar he does get meat and drink from Nausicaa, with the remark on her part that 'all strangers and poor are from Zeus, and a gift, though small, is welcome';⁷ but, when his name and fame have become known to the Phæacians, he receives

parting gifts from them which show their appreciation of his dignity. Menelaus also on his travels picked up much wealth from presents.¹ In fact, we derive from the *Odyssey* the impression that in those days (but then, *when* were they?) travelling on the part of a distinguished man was a source of gain, instead of expenditure.

Among the Romans, as among the Greeks, the formal relation of hospitality was inaugurated by the interchange of gifts, either in person or by proxy. So Servius tells us;² and the poet himself illustrates his commentator when he makes Evander ready to receive overtures of alliance from Æneas, on the ground of the gifts which he had received as a lad from the hero's father, Anchises.³ As among the Greeks, also, the relation was kept up from father to son, and might be contracted with the most distant potentates; for instance, we find that Pompey was on terms of hospitality with King Juba;⁴ and Marcus Metius, an obscure person, with Ariovistus.⁵

The words of Ovid descriptive of the Iron Age—'non hospes ab hospite tutus'⁶—are eloquent of the sanctity which in Roman opinion attached to the tie. There is an interesting discussion in Aulus Gellius as to whether *hospitium* or *clientela* came next after one's obligations to parents and to wards. He cites Massurius Sabinus, a writer on civil law, as giving the preference to *hospitium* over *clientela*;⁷ and we find Cornificius, in his treatise addressed to Herennius, putting the duties of life in the same order.⁸ The generally accepted order of claimants, however, was this: parents, wards, clients, guest-friends, kinsmen, connexions. As the relation of hospitality was one which, from the nature of the case, came into operation only at intervals, it was naturally sometimes of a ceremonious character, not implying personal intimacy.⁹

Herodotus tells us that no States were ever so closely connected by ties of hospitality as Sybaris and Miletus,¹⁰ and some language of Plato in the *Laws*¹¹ would lead us to think that there were sometimes formal relations of hospitality between State and State, so that the children of one were taught to look upon the other as their second country; but the public hospitality of which we hear most was an unequal relation—between a State or tyrant on the one side, and a family or individual on the other. A *πρόξενος* was a person who undertook to look after the interests of a foreign State in his own. He thus differed from the modern 'consul,' who, as a rule, is a person who looks after the interests of his own State in a foreign one. The *πρόξενος* was sometimes appointed by the State; sometimes he appointed himself, in which case he was an *ἑθελόπρόξενος*,¹² or honorary consul. At Athens the people appointed their *πρόξενoi*;¹³ at Sparta the appointment was one of the privileges of the kings.¹⁴ Sometimes

there was a salary attached to the position, as we know from the Corcyrean inscription,¹ which contains an account of lands purchased by the State for the use of its *πρόξενοι*. But in most cases the office seems to have been assumed voluntarily by men of wealth and station, the attraction of international importance being reward enough in itself for the honour-loving Greek. Thus we find Alcibiades resuming the hereditary *πρόξενα* with the Lacedæmonians which his grandfather had for some reason renounced.² As the *πρόξενος* would naturally be a *persona grata* with the State whose interests he espoused, delicate negotiations were often conducted through him. Thus, when Mardonius wished to detach the Athenians from the cause of Hellas, it was Alexander of Macedon that he sent to them as being their *πρόξενος*.³ When, in the time of the Four Hundred, the Athenians were near coming to blows with one another while the foe was without the gates, it was mainly through the good offices of one of their *πρόξενοι*, Thucydides of Pharsalus, who happened to be present, that their rage was checked.⁴ But the action of *πρόξενοι* was not always advantageous to the State to which they belonged. Thus we learn from Thucydides⁵ that the revolt of Lesbos broke out prematurely owing to information being supplied to Athens by the *πρόξενοι* of what was going on in the island. The institution of *πρόξενοι* was a wide-spread and important feature of Greek life. Even the barbarous tribe of the Mossynœci had their *πρόξενος* in Timesitheus of Trapezus, through whom they were approached when Xenophon wished to pass through their country.⁶ The connexion of this institution with hospitality in the modern sense lies in the fact that it was at the house of the *πρόξενος* that foreign ambassadors would naturally be entertained.⁷

Among the Romans we find from the earliest times the same distinction as among the Greeks between public and private hospitality. Livy speaks of Servius Tullius as having linked himself in both ways with the leading men among the Latins.⁸ We read, too, how in the time of Camillus one Timasitheus persuaded his Liparensian countrymen, despite their piratical instincts, to let a Roman offering, which fell into their hands, get safely to Delphi; and how, in return for this service, hospitality was voted to him by decree of the Senate, and gifts were presented by the State.⁹ There is also a picturesque tale told by Livy, which reminds us of the episode of Glaucus and Diomedæ. The moral is the same, though the treatment is different. In 212 B.C., at the siege of Capua, there was a Roman named Crispinus and a Capuan named Badius, who were connected by ties of hospitality, inasmuch that Badius had been nursed through an illness in the house of Crispinus. What, then, was the surprise of the worthy Roman to find himself challenged to single combat by his Capuan guest-friend! No taunts could make him fight, until Badius renounced the tie of hospitality. Then, by permission of his commanders, he took the field on horseback—to the shameful overthrow of his adversary.¹⁰

The year 173 B.C. is noted by Livy as marking a turning-point in the treatment of the allies in the matter of hospitality. One of the consuls of that year having previously had occasion as a private person to visit Præneste, in order to sacri-

fice in the temple of Fortune, had been mortified by receiving no marks of honour there, either in public or in private. So, when sent on a public mission with regard to the State-lands in Campania, he prefaced his coming by a letter to the Prænestines, ordering that the magistrates should come out to meet him, that quarters should be prepared for him at the public expense, and that baggage-animals should be ready for his departure. Up to this time, Livy tells us, the highest magistrates had been content with *privata hospitium* when they visited the allies, but this action served as a precedent for ever-growing demands of the same nature.¹

Turning now to hospitality as a good quality or virtue, it is obvious to remark that it is a form of good-will to men which finds most scope for its exercise, and is consequently most highly valued, in a comparatively rude state of society. The Homeric outlook upon the world makes this the criterion of praise or condemnation—

ἡ μὲν ὅσοι χαλεποὶ τε καὶ ἄγριοι, οὐδὲ δίκαιοι,
οἱ τε φιλόξενοι, καὶ σφὴν νῶος ἐστὶ θεουδής.²

In classical times it was the backward country of Thessaly that was most noted for hospitality. Xenophon³ speaks of Polydamas of Pharsalus as being 'magnificent in his hospitality after the Thessalian fashion.' Admetus, we may remember, whose virtues in other respects were not conspicuous, had this redeeming feature in his character. His house could be addressed as—

ὦ πολίξενος καὶ ἐλευθέρου ἀνδρὸς δέει ποτ' οἶκος.⁴

When Crito, in Plato's dialogue of that name, wishes to get Socrates out of prison, and to send him to his friends in Thessaly, the philosopher is made to reply with some disparaging remarks about feasting in Thessaly,⁵ implying that he was of the same opinion as that afterwards expressed by the historian Theopompus, that the Thessalians were more anxious about a well-laid table than a well-ordered life.⁶ In other parts of Greece the practice of hospitality must have been rarer, if we may judge from the story of how Miltiades in the time of Pisistratus became tyrant of the Chersonese. Some Dolonkian envoys to Delphi had been instructed by the oracle to take as a new founder of their State the first man who offered them hospitality after they left the temple, and they traversed the whole of the Sacred Road through Phocis and Bœotia without receiving an invitation; it was not till they turned aside to Athens that Miltiades, seeing them as he sat in his doorway, shouted to them to come in; and, after he had entertained them, they communicated to him the oracle, and pressed their leadership upon his acceptance.⁷ The importance attached to hospitality in uncivilized communities is due to that instinctive perception of the needs of men which underlies ethics. In a more developed society it becomes a rich man's virtue, a kind of moral luxury, rather than a necessity. By Aristotle it is brought under the head of 'magnificence,' which displays itself, among other things, in the reception and dismissal of strangers.⁸ Magnificence is a civic virtue, and the entertainment of illustrious guests is a glory to the State, on which grounds Cicero remarks: 'recte etiam a Theophrasto est laudata hospitalitas.'⁹ In the *Œconomicus* of Xenophon, where the burdens upon the rich at Athens are being discussed, special mention is made of the social necessity of entertaining many foreign guests, and that too magnificently.¹⁰ The obligations of nobility in this respect were so well recognized at Athens that Solon includes a foreign guest among the

appanages of the rich and happy man, on a level with his children, horses, and hounds—

*Ἰαβίος, ὃ παῖδες τε φίλοι, καὶ μῶνυχες ἵπποι
καὶ κύνες ἀργενναί, καὶ ξένος ἀλλόδατος.*¹

In the *Meno* of Plato also 'to know how to receive and dismiss fellow-countrymen and strangers in a manner worthy of a good man'² is reckoned among the accomplishments of an aspirant to public life. Callias, the son of Hipponicus, was celebrated at Athens for his princely hospitality; and at Sparta, Lichas, who was *πρόξενος* to the Argives, but extended his welcome to all strangers who were present in Sparta at the *Gymnopædia*.³

LITERATURE.—In addition to the sources cited in the article, see the treatment of the subject in Smith's *Dict. of Gr. and Rom. Ant.*, by W. Wayte, L. Schmitz, and H. Hager; and in R. von Ihering's 'Gastfreundschaft im Altertum,' in *Deutsche Rundschau*, 1887. ST. GEORGE STOCK.

HOSPITALITY (Hindu).—Under the conditions of Hindu law and social usage the exercise of hospitality in the ordinary sense of the term, when the host shares with his guest a meal or provision which he has himself furnished, is necessarily precluded. A rigorous and minutely divisive law of caste has long forbidden in India that the stranger, or one not born within the inviolable and usually narrow limits of the caste (*jāti*, 'birth'), should be welcomed to a place at the family meal. In this aspect of the subject, eating in common is entirely repugnant to Hindu feeling and thought; it is inconceivable and impossible that members of different castes should partake together of the same food. And the rule or prejudice, together with that against intermarriage, will be among the last to yield to the solvent of European practice and example.

In all other respects the duty of hospitality is fully recognized, and, subject to this important limitation, adequately discharged by all Hindus. Probably in no country in the world may the passing wayfarer be so confident that his needs will be met in whatever village he may find himself, although the provision will not go beyond the minimum of his requirements. Consideration for a guest is enjoined in the sacred Law-Books of India as an important part of the duty of a householder. It is true that it is generally assumed that the guest will be a Brāhman. In practice, however, the interpretation which has been given by the people themselves to their obligation has not limited it to one caste or group of castes to the exclusion of all others. The Brāhman has always had the prior claim for the supply of his needs, whether in respect of food or of aught else; but the demands of hospitality are not repudiated by whomsoever they may be presented, though these others will be entertained with less satisfaction and with considerable abatement of ceremony.

A further condition which impedes the free intercourse and social communion which the dispensing of hospitality in the European sense of the term involves is that to the Hindu eating is a solemn and sacred religious act. Hence both the preparation and the partaking of food are hedged about with restrictions designed, in the first instance, to secure the ceremonial purity both of the food itself and of him for whom it is provided. To admit a stranger to a share in the meal, or even to allow the motions and acts of eating to be seen by another, would involve an almost certain risk of pollution. No strict Hindu will voluntarily and under ordinary circumstances eat otherwise than in private. A free and open hospitality, therefore, such as obtains in many countries, which invites the guest to an honoured place at the board, is, from this point of view, precluded by religious sentiment no less than by social custom.

¹ Frag. iii., Gaisford.

² 91 A.

³ Thuc. v. 76. 3; Xen. *Mem.* i. 2. 61.

Apart, therefore, from anniversaries and festivals, and from private occasions for rejoicing, as a wedding or the birth of a son and heir, the lavish entertainment of guests on the part of wealthy natives of India, and of others according to their means, is limited to the feasting of Brāhmins, and the making provision for the poor at an open meal at which all comers may receive a share without question asked. In the latter case the distribution frequently takes the form of a money dole in place of or in addition to the food prepared. All such acts and gifts secure for the donor religious merit, and are often thank-offerings for public or private good fortune or success. They are evidently also more of the nature of alms or charity, the recipients being in poverty and real need of the benefaction, than of true hospitality (see art. CHARITY [Hindu]). The most recent instance of such donations has been the generous gifts for the poor placed at the disposal of Lord Hardinge, the Viceroy of India, in token of thanksgiving for his recovery from the attempt made upon his life at the Delhi Durbar of 1912.

In the formal and elaborate feasting of Brāhmins also the relation of host and guest is of a different nature. The sacred character of the Brāhman places him on a level socially and religiously above that of his host; and the latter may not, and does not, eat until his guests have been satisfied; nor would it be in accordance with usage or social right that he should sit down with them to a common meal. Thus to provide for the wants of members of the higher caste is a sacred duty incumbent upon the Hindu householder which is repeatedly enjoined in the Law-books.¹ The obligation has often pressed hard upon the less wealthy members of Hindu society, and has been a not inappreciable or ineffective cause of the wide-spread indebtedness which has overtaken in the past so many classes of the Indian people. Usage and custom, fortified by religious sanction, has demanded an expenditure in the entertainment of guests at festivals or important events in the family life which has left the householder permanently and hopelessly impoverished; nor can real benefit be said to have accrued to any one from the practice, least of all to those members of the higher castes whom it has encouraged in a life of slothfulness and dependency. Nevertheless, the obligation has been generously recognized throughout the whole course of Indian life and history. And, if in part during recent years the responsibility has been somewhat less scrupulously interpreted and acted upon, the result is due to the general loosening of the bonds of a social system which is found to be out of harmony with European conceptions, and incompatible with the relations of a world-wide Empire.

LITERATURE.—There is no special or distinctive literature. See the works cited in artt. ASCETICISM (Hindu), CHARITY (Hindu), HINDUISM. A. S. GEDEN.

HOSPITALITY (Iranian).—The obligation and the duties of hospitality appear to be taken for granted in the Avesta and Pahlavi writings, and no word for 'hospitality' is recorded.² At the

¹ Cf. Manu, iii. 72: 'He who does not feed these five, the gods, his guests, those whom he is bound to maintain, the manes, and himself, lives not, though he breathes'; *ib.* 99 f.: 'Let him offer, in accordance with the rule, to a guest who has come a seat and water, as well as food, garnished according to his ability. A Brāhmana who stays unhonoured (in the house) takes away all the spiritual merit [of the householder]'. The Brāhman guest was always to be held in higher esteem, and given precedence in the entertainment of a member of a lower caste; the latter also was to be fed, but in this case hospitality was not obligatory, although apparently it was always recognized to be meritorious, and an indication of the good-will and virtue of the giver. See Manu, iii. 102-117 and iv. 29, on the duties of a householder.

² Kanga (*Eng.-Av. Dict.*, Bombay, 1909, col. 260) gives as equivalents of 'hospitality,' *vasē-iti* and *vasē-yāiti* (occurring

same time, it is indicated that, when one friend visited another, he brought a gift to his host (*Yasna* lxii. 8). The duty of giving not merely contentment, reward, and thanks (*zšnūti*, *aretī*, *vyādā*), but also welcome (*paīti-zantī*), to a righteous man is declared, in *Pursišnīhā*, xxxix. (ed. J. Darmesteter, in *Zend-Avesta*, Paris, 1892-93, iii. 70), to be one of the three earthly things best for Ahura Mazda; and the duties of friendship—which is scarcely possible without some form of hospitality—are mentioned in the *Avesta* (*Yasna* xliii. 14, xlv. 1, xlvi. 2; *Vendīdād*, iv. 44-46), with special reference to the obligation of friend to succour friend. In a like spirit, generosity (*frārātī*, *rātī*) is lauded (*Yasna* lv. 3, lviii. 4, lx. 5; *Visparad*, xxi. 3; *Pursišnīhā*, xxvi.), and is the greatest of good works (*Dīnā-ī Mainōg-ī Xrat*, iv. 4, xxxvii. 4, tr. West, *SBE* xxiv. [1885] 26, 73), while illiberality is a sin (*Vendīdād*, xviii. 34; cf. *Artā-ī Virāf Nāmāk*, xciii., ed. and tr. Haug and West, Bombay, 1872). More than this, the spirit in which the gift is made is of the utmost moment. Accordingly, *Nirangistan*, lxxxiv. (ed. Sanjana, Bombay, 1894, fol. 161, l. 10-fol. 162, l. 27; Darmesteter, *Zend-Avesta*, iii. 133 f.), declares:

'Woe to him, Spitama Zarathuštra, who gives alms when his soul is not joyful over almsgiving; for in alms lies for all the corporeal world the decision for good thoughts and good words and good deeds' (tr. C. Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, cols. 1544, 733), adding that the best of all libations (*zaōhra*) is to the teacher of religious truth.

Of the actual forms of Zoroastrian hospitality we may have a glimpse in *Yast* xxiv. 62-64 (expanded in *Dīnā-ī Mainōg-ī Xrat*, ii. 147-156), which states that, when the soul of the righteous man arrives in the heaven of Endless Light, it is met by the righteous dead (and by 'angels and archangels of every description'), who begin to ask it various questions, whereupon Ahura Mazda bids that it have food and repose after its journey, and a seat on a richly adorned throne. Even in hell the soul of the wicked receives food of filth before it is permitted to answer the questions of the older denizens (*Dīnā-ī Mainōg-ī Xrat*, ii. 183-192). Similarly, *Artā-ī Virāf* declares (iii. 16 f.):

'To give the hungry and thirsty food, is the first thing, and afterwards to make enquiry of him, and appoint his task.'

It was customary for the host to rise when greeting a guest (*ib.* xi. 1; *Vendīdād*, xix. 31).

The Greek authors add practically nothing to our knowledge of hospitality in ancient Persia, although there are repeated indications that wine was drunk to excess at banquets, and even that courtesans were admitted to them (Herod. i. 133, v. 18; Xenophon, *Cyrop.* viii. viii. 10; Est 17^a. 5⁶ 7² 7⁴); for abundant classical references to Persian banquets, see G. Rawlinson, *Fifth Orient. Monarchy*, London, 1862, ch. iii.; A. Rapp, *ZDMG* xx. [1866] 101 ff.; cf. also B. Brissou, *de regio Persarum principatu*, ed. Lederlin, Strassburg, 1710, pp. 104, 223, 311, 465 ff., 797 f.; B. W. Leist, *Alt-arisches Jus civile*, Jena, 1892-96, i. 52).¹

By far the best source for the details of Iranian hospitality is the *Sāh-nāmāk* of Firdausi (tr. Mohl, Paris, 1876-78). The great majority of the instances describe, it is true, the scenes in royal circles and the receptions accorded to ambassadors, but there are also accounts which show that the hospitality of the humbler classes differed in degree rather than in kind.

In general, if the guest was in rank inferior to his host, he respectfully saluted him (i. 234, 257), whereas, if the two were of equal rank, the host respectively in *Yasna* liii. 9 and xii. 3); but both words mean simply 'going as one wishes,' 'freedom of motion.'

¹ The statement of Kohler (*ZVRW* v. [1884] 336, note 2), that the Massagetæ, who were an Iranian people (J. Marquart, *Eränsāhr*, Berlin, 1901, p. 158), showed hospitality by lending their wives to their guests, is based on an erroneous interpretation of Herod. i. 216 (cf. Strabo, p. 513), who says merely that these Iranians practised communal marriage.

went to meet his guest (ii. 12, 58). It was a disgrace for the guest of honour to be seated at the left of his host (iv. 492). The host drank first if he was older and wiser than his guest, but the latter had precedence if he was of higher rank (v. 358). Intoxication at banquets, to which reference has already been made, is repeatedly mentioned by Firdausi (*e.g.* ii. 60, iii. 249, iv. 505).

The mode of procedure in royal hospitality may be illustrated by Firdausi's description of Rustam's return to the court of Kai Xusrau (iii. 211-214; cf. also i. 234-237, 257-267, ii. 59-64, 232 f., 423-428, iii. 229-231, 323-326, iv. 474-480, vi. 50-54; and, for a description of the hospitality shown ambassadors from a foreign potentate, v. 291 f.).

When the king learns that Rustam is approaching, he leaves the palace, while the people prepare feasts, adorned by wine, music, and singers. The monarch, with a great retinue, proceeds, scattering largess to the populace, until he reaches Rustam, who dismounts and salutes him. Xusrau embraces him and causes him to remount, and they return, conversing, to the palace. There Rustam is seated beside the king, who converses with him and his companions. Next follows the banquet, with wine and music. For a month the festivities continue (in other cases hunting and games add to the enjoyment), and at the end of that time Rustam announces his wish to depart. Thereupon, Xusrau bestows rich presents upon him, and accompanies him a two days' journey, when Rustam again dismounts, and takes formal leave of the king, who returns to his palace.

Among the middle classes the usages were not dissimilar. Bahrām Gūr, in disguise, knocks at the door of a jeweller. He is at once admitted most hospitably, and is entertained at an impromptu feast, after which come wine and music, the cup-bearer and lutist being the host's beautiful daughter, whom the guest, whose identity is known only on the following day, promptly espouses (v. 506-511).

In the Persian stratum of *The Thousand Nights and One Night* (tr. Payne, London, 1882-84) are a number of descriptions of hospitality as exercised at Baghdād under the 'Abbasid dynasty (*e.g.* i. 74-83, ix. 3 L., 47-49). These throw a welcome sidelight on the descriptions in the *Sāh-nāmāk*, and, though both works were composed in Muhammadan surroundings, it is probable that they contain in their accounts a considerable amount of genuine Iranian material.

The humblest classes were equally hospitable, as is illustrated by the adventure of Bahrām Gūr with Lanbak, the poor water-carrier, and the rich Jew, Baraham (*Sāh-nāmāk*, v. 450-459).

It was the habit of Lanbak to devote half the day to his calling, and then to seek a guest; and it was his principle to have nothing left over for the next day. Having discouraged the people from purchasing from Lanbak, the king rides in disguise to his house, where he is warmly welcomed, and, after a game of chess, is entertained at table, the meal being followed by wine. Bahrām passes the night as Lanbak's guest, and is hesitating to remain another day. Since Lanbak is still unable to sell water, he parts with some belongings and purchases food, which he himself prepares for his guest. The third day he urges Bahrām to remain, and pawns his water-bags for the meal which the two prepare; and it is with reluctance that he permits his unknown guest to depart on the fourth day, after having urged him to remain two weeks longer. Bahrām next tries the hospitality of the rich Jew, only to be received with niggardliness and indignity; and he therefore bestows on Lanbak the wealth of Baraham (for other instances, see v. 357-360, 488-493 [where the hospitality of the wife is contrasted with the inhospitality of the husband], vii. 140 f.).

On the other hand, the vice of inhospitalableness also existed, not only among the poor (v. 489 f.), but also among the miserly rich (v. 519-23).

In Dailam (corresponding roughly to the modern Gilan), it was customary for all the household to withdraw excepting one, who, at a distance, waited upon the guest, who could thus assuage his hunger and thirst, the host scarcely venturing to appear even at the conclusion of the meal (*Qābūs-nāmāk* [11th cent.], xii., tr. Querry, Paris, 1886, p. 125 f.). To this al-Makdisi adds that it was not the usage in Dailam to sell bread, but that any stranger might enter a house and get what food he needed; while Ibn Fadlān records similar customs in Xvārizm, and in Arabic anthologies the Persian word for 'guest' is rendered as 'master of the whole house' (Inostrancev, *Sasanidskiye Yetyudy*, St.

Petersburg, 1909, p. 132 f., and the references there given).

Modern Irān is so thoroughly Muhammadanized that it is difficult to distinguish between Iranian and Islāmic elements. Nevertheless, the following account of hospitality as shown by a relatively primitive Iranian people—the Kurds—may be cited from Soane's *To Mesopotamia and Kurdistan in Disguise* (Boston, 1913, p. 40 ff.):

'They told me that the best room in the place was at my disposal. . . . They possessed little enough of the world's goods, but their best fowl was sacrificed to the occasion, eggs in numbers sufficient for ten men were produced. Every one of them except the headman, who sat by as host, busied himself about something. . . . Surplus eggs they hard-boiled and put up for my journey next day.' Somewhat disconcerted by the evident intention of a young tradesman and his wife to pass the night in the same room, Soane was informed that this was necessary since the whole village possessed but two rooms fit to sleep in; and since he passed for a Kurd 'and a guest, I must excuse their presumption in occupying the room, which was my exclusive property.' Early in the morning he was awakened by his host's wife, who 'herself carried out the small luggage to the carriage, and then two or three villagers turned out and loaded up the heavy things. Last of all, the headman appeared, and, as we drove away, the sound of his hearty, rough farewells rang in my ears.'

LITERATURE.—This has been cited in the course of the article. There seems to be no special treatise on the subject.

LOUIS H. GRAY.

HOSPITALITY (Japanese and Korean).—I. **JAPAN**.—I. **Primitive and mythological period**.—The Japanese are a very hospitable people. This spirit is already apparent in their mythology, which reflects the customs of primitive times. One of the earliest cosmogonic myths tells of the great hospitality offered by Uke-mochi-no-kami, the goddess of Food, to Tsuki-yomi-no-mikoto, the Moon-god (see art. **COSMOGONY AND COSMOLOGY** [Japanese], vol. iv. p. 165*).

It may be noticed in this story that the rice, fish, and game which the goddess 'prepared and set out on one hundred tables for his entertainment' had all come out of her own mouth. This may be a reminiscence of the early times when it was the custom among certain tribes which can claim some connexion with Japanese origins to chew the food of guests in order to soften it (cf. the Polynesian custom [A. Réville, *Religions des peuples non-civilisés*, Paris, 1883, ii. 106])—a hypothesis strongly supported by the existence, even in the 8th cent., of a body of *ihikami*, or 'chewers of boiled rice,' mentioned in the *Nihongi* (i. 104, Aston's tr., London, 1896) among the various groups of women who looked after the little princes of the Imperial house.

The same spirit of unlimited hospitality appears in many passages of the most ancient sources. When Ōho-yama-tsu-mi-no-kami, god of the Great Mountain, was visited by the divine prince Ninigi, the grandson of the gods, he offered him 'merchandise carried on tables holding an hundred' (*Kojiki*, tr. Chamberlain, new ed., Tokyo, 1906, p. 141); and, when the god of the Ocean, Ōho-wata-tsu-mi-no-kami, saw Ho-wori-no-mikoto (His Augustness Fire-Subside) at his door, he immediately 'led him into the interior [of his submarine palace], and spreading eight layers of rugs of sea-asses' [*michi*, perhaps the sealion, or a species of seal] skins, and spreading on the top other eight layers of silk rugs, and setting him on the top of them, arranged merchandise on tables holding an hundred, made an august banquet,' etc. (*ib.* 148).

In these two texts, the reception is preliminary to a marriage, and it has been thought that the presents thus offered were a sort of dowry given by the father; but we see from a variant of the first account, which says that the god of the Great Mountain 'sent his two daughters with one hundred tables of food and drink to offer them respectfully' (*Nihongi*, i. 84), that it was, in the first instance, a question of presents of welcome and the classical meal of hospitality.

Another legend, which is peculiarly significant, shows us Susa-no-wo, the Storm-god, after he has been expelled from heaven because of his crimes against the Sun-goddess, wandering about the earth under a huge hat and a cloak of green grass in search of a shelter for the night (cf. *Nihongi*, i. 50). In his distress he asks a rich miser, Kyotan Shorai, for hospitality, which he refuses; but the

miser's elder brother, Somin Shorai, though a poor man, makes a bed of millet-straw for the traveller and gives him some cooked millet to eat. The god goes away. Some years afterwards he reappears. 'Are your children at home?' he asks Somin. 'There are here,' he answered, 'myself, my daughter, and my wife.' The god replied: 'Encircle your loins with a belt of rushes.' And that very night the god exterminated all mankind except Somin Shorai and his family. Then he said to Somin: 'I am the god Susa-no-wo. If any infectious disease should break out, let your descendants tell their name and girdle their loins, and they will be spared.' Hence, it is said, the New Year custom of hanging a cord of straw (*shime*) over the doors of houses in order to prevent disease from crossing the threshold. This tradition, which is found in a very ancient work, the *Bingo Fudoki*, 'Topography of the province of Bingo' (see Florenz, *Nihongi, Zeitalter der Götter*, Tokyo, 1901, p. 302), and exists to this day in the locality (see Murray's *Handbook for Japan*, ed. 1884, p. 177), shows clearly to what an extent hospitality was considered a sacred duty.

2. **Historical period**.—Passing now from the primitive period and its legends to the historical period, we find the same hospitable customs in the dealings of the Japanese with strangers in their archipelago. No doubt, following a universal habit (Frazer, *GB*² i. 150), they took certain steps to secure themselves from the demons, *i.e.* epidemics, which the strangers might bring with them; thus, two days before the arrival of foreign envoys in their capital, the Japanese performed a ceremony in honour of the Sahe-no-kami, 'preventive deities' of a phallic description, to ward off evil influences (*Engishiki* [10th cent.], *norito* 13). Nevertheless, the Japanese attitude towards strangers was by no means hostile; it was with a kindly curiosity that they saw strangers come among them, and they offered them a home. All ancient Japanese history is full of stories of how the court gladly welcomed the Koreans, who brought interesting innovations with them—to enumerate the instances would be to relate the whole development of Chinese civilization in Japan, from the introduction of writing (*Kojiki*, 313) down to the introduction of Buddhism itself (*Nihongi*, ii. 66 f.). Even the national gods exhibited a hospitality to foreign gods, and even before the introduction of Buddhism more than one Korean deity had been admitted to the Japanese pantheon (see *Kojiki*, 324; *Nihongi*, i. 169).

The same welcome was accorded the Europeans when they in their turn presented themselves to these distant islands. The Portuguese who landed in Japan, first at Jinguji-uri in 1541, then at Tanegashima in 1542, were received with kindness (see H. Nagaoka, *Histoire des relations du Japon avec l'Europe aux xv^e et xvii^e siècles*, Paris, 1905, pp. 33, 36, etc.). St. Francis Xavier, who landed at Kagoshima in 1549, was very courteously received by the prince of Satsuma, even although he was the bearer of a foreign religion. At their very first interview, the prince gave him permission to preach the Christian faith in his territory, and, a few days later, sent out letters-patent in virtue of which all his subjects were at liberty to become Christians if they so desired. As a matter of fact, this local prince was not entirely disinterested: he was anxious to enter into relations with the Portuguese and to win over their vessels with a view to commerce, as was clearly shown by the fact that his attitude entirely changed when the saint wished to leave his territory. It cannot be denied, however, that the prince's first welcome was a really generous one—especially if we remember all the difficulties he might have had to

face with regard to the bonzes. The prince of Hirado afterwards received St. Francis Xavier 'with much affection and a good grace,' to use the saint's own words (Letter of 1551). Then at Yamaguchi, the prince made the saint come to him, questioned him graciously before his whole court, asked him where he came from and what he wanted, listened to his doctrine for a whole hour, and allowed him thereafter to preach the gospel with absolute freedom; a little later he presented the saint with a vacant monastery, and published it abroad throughout the town that he had authorized him to propagate his faith. Even in Kyōto, the capital, though St. Francis and his companions could not get an audience of the Emperor, the *shōgun*, or even the chief of the Buddhist Church, yet they were never molested. Finally, the prince of Bungo, the last of the federal princes that Francis had occasion to visit before leaving Japan, wrote letters to the saint saying such things as:

'I beseech you to come immediately, before the sun rises, and knock at the door of my palace where I shall await you with impatience. . . . Give me news of your health so that I may sleep well throughout the night, until the cocks awake me announcing your arrival' (D. Bouhours, *Vie de S. François-Xavier*, Paris, 1682, ii. 64).

In short, during the two and a half years which the first apostle of Christianity passed in Japan, he was treated with a tolerance and good-will which would have astounded Europe; and this explains the delusion which sprang up in his mind 'that a nation so polite and judicious would easily be won to Christianity' (Bouhours, ii. 58).

The persecutions which Christian missionaries had to suffer later do not prove anything against the hospitable spirit of the Japanese. In 1565 the Jesuit Fathers Froez and Viela were received with honour by the *shōgun* Yoshiteru himself. In 1568, when Father Organtini arrived at Nagasaki, the powerful Nobunaga put a Buddhist temple at his disposal to stay in, and offered him banquets for three days. Why did this same Nobunaga afterwards regret giving this protection to the new religion? And why did Hideyoshi, his successor as dictator of Japan, after first taking the Christians under his protection at Osaka, finish by harshly proscribing Christianity? Because the missionaries made the mistake of involving themselves in the local politics of the feudal princes, causing trouble among the people as a consequence, and finally disturbing the central government. But, in the same edict of 1587 which ordered all the missionaries to leave Japan within twenty days, Hideyoshi decreed that the 'black ships' (*i.e.* the Portuguese) which came for purely commercial purposes might continue their traffic, and, in another edict of the following year, he recommended his subjects to continue to receive them well (see Suganuma, *Daï Nihon Shōgyō-shi, History of the Commerce of Japan*, pp. 324-326). Finally, Hideyoshi's successor, the great *shōgun* Iyeyasu, who had also begun by showing himself favourable to the Christians, was forced, by new intrigues of the Portuguese Jesuits and Spanish Franciscans and Dominicans, to withdraw his good-will and to decree, in a proclamation of 1614, that 'these must be instantly swept out, so that not an inch of soil remains to them in Japan on which to plant their feet' (see J. H. Gubbins, 'Review of the Introduction of Christianity into China and Japan,' in *TASJ* vi. pt. i. [1888] p. 48). These measures culminated finally when Iyemitsu, the third Tokugawa *shōgun*, by his notorious edicts of 1633 and 1636, laid Christianity under the ban.

Thus, if the religious politics of the Japanese seem to have been an exception to their proverbial hospitality, it was only so from the time when the Roman Catholic missionaries, forgetting discretion

in their zeal, abused this hospitality. The Japanese were willing to be converted; they would not be conquered. The necessity of defending themselves against this religious invasion had the additional effect of calling forth, in the above-mentioned edicts of Iyemitsu, a limitation of the commercial relations which seemed indispensable for the general tranquillity of the country and the solidity of its political system. But this limitation, inspired by legitimate considerations of public safety, did not prevent the Japanese from offering hospitable treatment to the foreigners who came for the single purpose of peaceable commerce; this explains why Holland had almost the monopoly of foreign commerce at Nagasaki till the Revolution of 1868.

3. Modern period.—In the modern period the same spirit may be observed. The Japanese Government employed every means of protection against dangers from America and Europe; it confined the residence and commerce of foreigners to certain open ports and required passports for journeying to the interior, in order both to keep a watch over their movements and to obtain from the foreign powers, in exchange for a more complete freedom for their subjects, the abnegation of the unjust treaties that had been imposed upon them since 1854. When this diplomatic end was attained, *i.e.* at the end of the year 1899, Japan was opened up anew to foreigners under ordinary conditions. As for the ancient prohibitions against Christianity, they had long fallen into desuetude, the Japanese continuing, as of old, to welcome all religious novelties, provided they do not cloak political schemes. The history of Japan, then, exhibits a remarkable spirit of hospitality among its inhabitants, in spite of the opposite impression made by a superficial observation of the anti-Christian persecutions; a knowledge of the causes of these persecutions reduces their significance to vanishing point, and shows the Japanese character in its true light.

To-day a foreigner travelling in the interior of the country may still find the ancient hospitality, which was never eclipsed except by the fault of those who were the first to profit by it. The present writer can bring his personal experience to witness. One night in 1896, when travelling in Yamato, he found himself lost in the open country. After walking for a long time in the dark and in drenching rain in search of a village where he might find a means of transport, he arrived at a peasant's hut and knocked at the door. Imagine a Japanese travelling in the country in Europe and arriving at midnight at a peasant's house: there would be furious barking from the watch-dog, hostile suspicion of the unknown wanderer on the part of the master of the house, and, to put things at their best, a poor shelter offered at last, with no good grace, in some outhouse. The Japanese cottage, on the other hand, was opened immediately; the father and his family all got up to receive the stranger on their knees; they were very pressing in their offers of a bath and a friendly meal. After this came the classic questions in Homeric style: 'Honourable stranger, whence comest thou? Whither goest thou? What is thy country?' and so on. Finally, when the guest was ready to depart, the father sent two of his sons several miles distant to bring a *jirikisha* and runners to carry him to Kyōto. It is hardly necessary to add that these poor peasants would not take any remuneration, and the only way in which their guest was able to repay them at all was by discreetly making presents to the youngest members of the family.

II. KOREA.—Korea, on the other hand, is quite different. This country, so inaccessible to the foreigner, has been well named 'the hermit nation.' The accounts of missionaries, from the *Relation de*

l'établissement du christianisme dans le royaume de Corée, éd. by de Gouvea, bishop of Peking, in 1797 (in *Nouvelles lettres édifiantes*, v. [1820]), to the *Annales de la propagation de la foi* (from vol. vi. [1833] to the present day), speak of nothing but persecutions which, like those of 1839 and 1866, were accompanied by terrible massacres; and show us also how different their reception was from their first welcome in Japan, the missionaries having had all sorts of difficulties in getting into Korea and being forced to live a secluded life in order to escape being put to death. It is only in virtue of comparatively recent treaties that the diplomatic relations drawn up with the Koreans have led to the opening up of their country (1887). A Japanese traveller, who risked his life in Korea in 1875, gives a picturesque account of his journey. Though dressed in Korean mourning-costume, the broad hat of which covered his face, he had to take the greatest precautions in order to escape recognition as a stranger when going about the interior. In order to escape notice he had bravely to eat the most repugnant rancid food in inns, to sleep on a sort of stable litter in peasants' huts of the most filthy description, while the idea of having a bath was simply out of the question (see W. J. Kenny, 'Account of a Secret Trip in the Interior of Korea,' in *TASF* xi. [1883] pt. ii.). It is only necessary to compare this account, of the end of the 19th cent., with those of the missionaries who visited Japan in the 16th, in order to measure the gulf which, from the point of view of hospitality, separates these two civilizations.

LITERATURE.—This is given throughout the article.

MICHEL REVON.

HOSPITALITY (Semitic).—Hospitality among the Semites and Eastern peoples in general rests upon religious sanctions (see *ERE* v. 725). 'To be inhospitable was not only to be despicable, it was also to be irreligious. Hospitality was a sacred duty' (Day, *Social Life of the Hebrews*, p. 170).

I. IN BABYLONIA AND EGYPT.—**1. Religious aspects.**—Hospitality was practised by the gods themselves. According to the myth of Adapa, food and water of life, garments, and oil were brought to the hero when he arrived before Anu. Acting on the advice of his father Ea, who feared that the food and water might tend to death instead of life, Adapa refused these, but accepted the garments and oil (R. W. Rogers, *Cuneiform Parallels to the OT*, New York, 1912, pp. 63, 74, 76). It was inculcated by that part of the ritual which was concerned with the offering of gifts to the gods, and by the cult of the dead, which at the outset required that hospitality should be rendered to the corpse in the form of decent burial, and was continued in the supply of food and drink to the deceased. According to the Book of the Dead, the heart which is righteous and sinless addresses the gods of the under world thus:

'I have given bread to the hungry man, and water to the thirsty man, and apparel to the naked man, and a boat to the [shipwrecked] mariner. I have made holy offerings to the gods, and sepulchral meals to the *ekhs*' (E. A. W. Budge, *Book of the Dead*, London, 1901, ii. 372 f.).

A Bab. didactic poem enjoins:

'Give food to eat, give wine to drink. . . . With him who thus acts his god is pleased, he is pleasing to Shamash, he will requite him with good' (Rogers, p. 175 f.).

2. Social aspects.—Hospitality was practised by the community, among those who dwelt together within the walls of the same city. The Egyptians were a pleasure-loving people, and scenes of feasting and banqueting figure in their pictorial remains. The Babylonians and Assyrians, while more staid, also held festive assemblies. As early as the days of Hammurabi (c. 2000 B.C.) we read of laws for regulating wine-shops (Code, §§ 108-111), with evidence that conviviality might be carried to excess (§ 109). The penalty of exile from the city

(§ 154) implies that the fugitive was placed out with the laws of hospitality as well as the laws of the State (cf. Gn 4¹⁴). The curses attached to the *kudurru*, or boundary-stone inscriptions, reveal the same disability in one who has been guilty of violating such landmarks, even while he continues to live within the city:

'Like a dog (may he) pass the night in the streets of his city'; 'seeing angry faces and holding out his hand, without being fed, may he wander through the streets of his city' (W. J. Hinke, *A New Boundary Stone of Nebuchadrezzar I.*, Philadelphia, 1907, p. 60).

3. International aspects.—We are indebted to the Tell el-Amarna Letters for a life-like picture of international relations in the middle of the second millennium B.C., with numerous indications of hospitality, or rather its opposite.

(a) Kings did not themselves travel into the countries with which they held intercourse, but sent their *ambassadors*, and gave *hostages*, the hospitable reception and treatment of whom was essential to the maintenance of friendly relations. There is clear evidence that considerable strain was put upon the patience of one of the parties by detention of messengers, lack of information regarding those given in marriage, and especially shortcoming in the matter of presents. Burra-buriash, king of Babylon, apologizes to the king of Egypt for not having received his envoy at his own table, and given him food to eat and wine to drink, on the ground that his health was not good at the time. He further reproaches his brother, the king of Egypt, because he had not comforted him in sickness, nor sent an envoy to inquire after his condition (*Tell el-Amarna Letters*, Berlin, 7; cf. 2 K 20¹²). A striking accompaniment of national intercourse is the *transit of images* of the gods, that of the goddess Ishtar travelling into Egypt (*ib.*, London, 10), while some time later (13th cent.) that of the Egyptian god Khonsu travelled to the land of the Hittites to effect the cure of the king's daughter. It goes without saying that the images were to be honoured, and that those who attended them were to be hospitably treated. The image of the great Amen himself journeyed with Unamon to Phœnicia (c. 1100 B.C.), but in the decay of Egypt's power failed to win respect as aforesaid and a favourable reception for the envoy. Probably the first *State visit* on the part of a king is that chronicled of Khattusil II., king of the Hittites, who journeyed to Egypt (c. 1266 B.C.) to attend the marriage of his daughter to Rameses II. (H. R. Hall, *The Ancient History of the Near East*, London, 1913, p. 371 f.).

(b) The *petty rulers* of Palestine and Syria represent their discharge of the obligations placed upon them by the king of Egypt as hospitality. Akizzi of Katna gave to the king's soldiers food, drink, oxen, sheep, honey, and oil (*Tell el-Amarna Letters*, London, 36). Aziru, the rebel son of Abd-Ashirta, professes to have treated Hani, the envoy of Egypt, with due respect, lending him horses and asses for his journey, while his brethren supplied him with cattle, sheep, fowls, food, and drink (*ib.*, London, 35). The faithful Rib-Addi of Byblos reports that upon returning from Berytus to his own house he found it barred against him (*ib.*, London, 16).

(c) To *traders* a measure of hospitality was extended. After the conquests of Thothmes III. there were good roads made throughout Syria, 'furnished with post-houses where food and lodging could be procured' (A. H. Sayce, *Patriarchal Palestine*, London, 1912, p. 180). Traders availed themselves of these routes, and travelled securely. Later, when the land became disturbed, caravans were plundered and merchants robbed and slain (*Tell el-Amarna Letters*, Berlin, 7 and 8).

(d) Akiya, a king's messenger, on the way to Egypt, bears a passport (*ib.*, London, 58; cf. Neh

27). A postscript to one of the cuneiform letters found at Taanach (dated 14th cent. B.C.) reads *maš-ru maš-ru*, 'Highway, Highway' (i.e. for the messenger) (Rogers, 283; cf. L. B. Paton, *Syria and Palestine*, London, 1902, p. 56 f.).

4. Hospitality towards tribes and peoples.—In the prologue to Hammurabi's Code of Laws the king claims to have sheltered the people of Malgi in misfortune (col. iv. 11-13). Such royal hospitality is seldom disinterested. Thus, Sennacherib exalts Padi, king of Ekron, over the townsfolk who had committed wickedness, but at the same time exacts tribute from him (Taylor Cylinder, iii. 4-11). The Cylinder of Cyrus represents this king as a benefactor to Babylon and its people (l. 25 f.).

5. Hospitality to nomads.—The desert tribes, who in later times afford the most evident instances of the virtue of hospitality, at this epoch appear rather as marauders, a scourge to settled communities and to traders (especially in the Tell el-Amarna Letters). Yet the Egyptian government was at times tolerant to them, as appears in the permission given to the *Mentiu*, or nomads, to settle in a prescribed district (reign of Horemheb, XVIIIth dyn.), and to the *Shasu*, or Bedawin, to pass within the eastern borders of the land of the Pharaoh, Menephtah II., 'to feed themselves and to feed their herds' (Sayce, *The Higher Criticism and the Monuments*, London, 1894, p. 240 f.).

6. Hospitality to exiles and emigrants.—The extent to which hospitality was shown to fugitives and emigrants may be judged from the letter addressed by Amenhotep IV. to Aziru (*Tell el-Amarna Letters*, London, 72), in which whole families are mentioned, and also from the terms of the Hittite-Egyptian Treaty (Hall, 350, 365 f.).

7. Hospitality to individuals.—Three outstanding instances of hospitality (with elements of inhospitality) accorded to travellers, real or fancied, are furnished by Egyptian tales.

(1) The most instructive instance is that of the noble Sanehat or Sinuhe (XIIth dyn.; c. 2000 B.C.). A fugitive from Egypt, he was preserved from death by the hospitality of a Bedawī, who gave to him water and boiled milk. For a time he sojourned with the nomads. Thereafter he was received by a prince of the Upper Tenu (perhaps Syria), Ammuanshi by name, who made him tutor to his children, and gave him his eldest daughter in marriage. He appointed him to rule over part of his territory, and made him commander of the army. He had daily rations of bread, wine, boiled meat, and roast goose, as well as the privilege of hunting game. This kindness reacted on his own practice:

'The messenger who came from the court or went thither stayed with me, I gave hospitality to every one, and I gave water to the thirsty'; 'I set on his journey the traveller who had been hindered from passing by' (A. Erman, *Life in Ancient Egypt*, tr. Tirard, London, 1894, p. 370 ff.; Sayce, *Patriarchal Palestine*², 173).

Towards the end of his life he was permitted to return to Egypt, and was graciously received at court.

'The coarse garments of the Beduin were exchanged for fine linen; his body was bathed with water and scented essences; he lay once more on a couch and enjoyed the luxurious cookery of the Egyptians. A house and pyramid were built for him; a garden was laid out for him with a lake and a kiosk, and a golden statue with a robe of electrum was set up in it' (Sayce, 173; cf. Hall, 157 f.).

(2) The *Travels of a Mohar* is a narrative relating to Syria and Palestine in the reign of Rameses II. (XIXth dyn.; 13th cent. B.C.). Our interest is in the evidence of inhospitality (the hospitality being doubtful) disclosed by this supposed satire. At every stage Nature shows herself inhospitable; and terror, from wild beasts and from man, always seems to oppress the traveller. His clothing is stolen by thieves in the night, and his groom deserts him and joins the robbers. Some time

later, when he comes to Joppa, the maiden who keeps the garden proves his undoing. Here his bow and sword are stolen, his quiver and armour destroyed.

'Prayer does not avail thee; even when thy mouth says, "Give food in addition to water, that I may reach my goal in safety," they are deaf and will not hear. They say not yes to thy words' (for a translation of the whole, see Sayce, 180 ff.; cf. Erman, 380 ff.).

(3) The adventures of Unamon belong to the close of the 12th cent. B.C., and relate to Palestine and Phœnicia. At Dor, near Mt. Carmel, Unamon landed to purchase timber, and was received by Prince Badiel, who sent him bread, wine, and beef. During the night he was robbed by a sailor, who deserted, of the money needed to effect the purchase of the timber. When he arrived at his destination, Gebal (or Byblos), he could accomplish nothing, and was ordered to depart by Zakarbaal, prince of Byblos. After serious delay, however, diplomacy gained the day, and the timber was cut and loaded. Then hostile ships lying outside the harbour hindered Unamon from sailing. The hero sat down upon the beach, and bewailed his fate even with tears. By way of consolation, the prince sent him two measures of wine, a ram, and an Egyptian singing-girl, saying, 'Sing to him that he may not grieve.' His troubles were not yet ended, for in Alashiya the natives would have killed him, but the queen Hatibi intervened. The conclusion is not known (Paton, 168 ff.; A. E. P. Weigall, *Treasury of Ancient Egypt*, London, 1911, p. 112 ff.). This tale is instructive, as showing that hospitality to strangers was largely dependent on the respect entertained for the authority of the land from which they hailed.

On a review of the whole literature, we receive the impression that hospitality had not, as a rule, risen to the level of the virtuous; it was enforced rather than voluntary.

8. Behaviour of guest.—Noteworthy among the precepts of Ptalhetep (Vth dyn.) is the rule for guests:

'If thou art among a company of men and women in the abode of a man who is greater than thyself, take whatsoever he giveth thee, making obeisance gratefully. Speak not oftener than he requireth, for one knoweth not what may displease him; speak when he speaketh to thee, and thy words shall be pleasing unto him' (Budge, *History of Egypt*, London, 1902, ii. 149; cf. Pr 23rd, Sir 31st, 1 Co 10th).

II. BIBLICAL (OT).—So far as the externals of hospitality are concerned, the Biblical data fit in well with the record from other sources. It will be convenient to observe the distinction between *nokhrî* and *gér*, the former the stranger who is merely passing by, the latter the stranger who acquires a settlement, with certain civil and religious rights, in the land of adoption. It is with the *nokhrî* rather than the *gér* that we are here concerned. While all the categories named above might be repeated for the OT, the clearest examples of hospitality are afforded by private and individual instances. The hospitality of the tent and of the city are found in proximity to each other (Gn 18¹⁻³ 19¹⁻³). With the help of allied passages (Jg 19, 1 S 28²⁴, 2 S 12⁴, 1 K 17^{5th} etc.) the various stages may be clearly realized. They include: reception (meeting and obeisance), offering of water for washing feet, invitation to rest and to tarry all night, provision of food and drink, and in certain circumstances a feast (an animal, e.g. a calf or a kid, being killed and dressed; bread, butter, milk, and wine also being set before the guests), feeding and housing of animals (asses and camels). Guests were kept inviolate, even at the sacrifice of the honour of daughters (Gn 19⁸, Jg 19²²⁻²⁴). No remuneration was taken, although, when a visit was of set purpose, presents were brought (Gn 24⁸³ 43¹¹, Job 42¹¹). Abraham even went with his guests to bring them on the way (Gn 18¹⁶).

While hospitality was accorded as a rule, there were departures from it (Jg 19¹⁸). Evidently the open space about the city gate was the only 'inn' available in the event of no private house being offered. It was against the laws of hospitality to leave the stranger in such case (Job 31³²), although there was probably little hardship entailed in having to pass the night in the open. Travellers took their own provisions and provender (Jg 19¹⁹), which were husbanded in the event of a host being found (v. 21). On the road to Egypt were halting-stages (inn or lodging place, Gn 42²⁷ 43²¹, Ex 4²⁴), where shelter, and perhaps water, but no food, were to be found (cf. Jer 9²). The instances in Nu 20¹⁹ and Dt 2²⁷ show that even water was paid for. This, however, is an extreme case.

Even among those who are blood-relations the ordinary procedure in respect of hospitality is observed, as, e.g., when Abraham's servant journeyed to the home of Rebekah (Gn 24^{11ff.}). The meeting is like that of strangers, the narrative working up to the disclosure of relationship, which, of course, produces a great change (vv. 31-33; cf. Gn 29¹²⁻¹⁴). Even in such circumstances hospitality is not accepted till the errand has been told (Gn 24³³).

A unique instance is the stated hospitality extended to the prophet Elisha by the great woman of Shunem (2 K 4^{6ff.}). As often as he passed by he turned in to eat bread, and in the end had a furnished chamber reserved for his use. This instance is further instructive for the lead taken by the hostess, which recalls the more public part played by women in early times as contrasted with later (Gn 18⁶ 24⁴⁶ 29¹², Ex 2²⁰, Job 1⁴). The act of Jael (Jg 4^{17ff.}) is to be put by itself as a gross breach of hospitality, notwithstanding the fact that it is justified upon national grounds by the writer of the Song of Deborah and Barak (Jg 5^{24ff.}). In the eyes of the later Semites such a deed would have been reprobated, and such advantage would not have been taken even of an enemy, once the food-bond had been established (W. Robertson Smith, *Kinship and Marriage*², London, 1903, p. 176 f., *Rel. Sem.*², do. 1894, p. 269 ff.). This instance may be set over against Rahab's kindness to the spies (Jos 2), who, in virtue of their hostile mission, could lay no claim to hospitality (cf. Gn 42^{9ff.}).

We are reminded of the tale of Sanehat in the experience of Moses (Ex 2^{20ff.}), who, coming as a stranger, tarried with the priest of Midian as one of the family. Like Lot in Sodom, he represents the *gér* at an undeveloped stage.

In the OT the instances of kindness to individual strangers completely overshadow the national and kingly aspects of hospitality. But examples of each are found. The sons of Jacob participated in the hospitality of the Egyptians, although national prejudice required that they should eat bread by themselves (Gn 43³²) and dwell by themselves (46³⁴). In the wilderness the Israelites were denied the minimum of hospitality by the kings of Edom (Nu 20^{17ff.}) and of the Amorites (21^{22ff.}). David, as an outlaw, was the recipient of kindness from Abigail (1 S 25), the king of Moab (22^{3ff.}), and Achish, king of Gath (27^{3ff.}); and, as a fugitive before Absalom, from certain prominent men dwelling on the east side of Jordan (2 S 17^{27ff.}). On the other hand, his envoys, sent with hospitable intent to the court of Hanun of Ammon, were shamefully treated (10⁴), which led to a dire revenge (12³¹). The visit of the queen of Sheba to Solomon (1 K 10¹⁻¹³) is an example of sovereigns standing towards each other as guest and host. A king's kindness to a refugee prince is seen in the Pharaoh's reception of Hadad (III.) of Edom (1 K 11¹⁷⁻²²)—a very close parallel to the story of Sanehat. Hezekiah's hospitable treatment of the envoys of

Merodach-Baladan is shorn of its glory by the prophetic censure following (2 K 20¹²⁻¹⁹).

Hospitality is but rarely marred by deceit in host (2 S 12⁴, 1 K 13^{11ff.}, Pr 23^{1ff.}) or guest (Jos 9²²), or required by ingratitude (Ps 41⁹; contrast 2 S 9, 19^{24ff.}). By rule, its tendency was elevating (Pr 9¹⁻⁶), but there was the possibility of debasement (Pr 9^{13ff.}), especially when luxury was in fashion (Am 6⁴⁻⁶), and feasting was carried to excess (Pr 23²⁰, 29^{ff.}, Dn 5, Est 1).

Some code of hospitality necessarily underlies the political alliances during the monarchy, while trade and commerce imply toleration of, and fair dealing towards, foreigners, and perhaps some measure of kindness.

LITERATURE.—HDB ii. 427 ff., v. 375^b; *Ebi*, col. 212s f.; I. Benzinger, *Heb. Archäol.*², Tübingen, 1907, pp. 131-133; W. Nowack, *Heb. Archäol.*, Freiburg and Leipzig, 1894, p. 186 f.; A. Bertholet, *Die Stellung der Israeliten und der Juden zu den Fremden*, do. 1896; E. Day, *Social Life of the Hebrews*, London, 1901; R. A. S. Macalister, *Sidelights from the Mound of Gezer*, do. 1906, pp. 83-106. Most recent works of travel in the Near East contain references to hospitality, illustrated by modern usage; typical of such is H. Clay Trumbull, *Studies in Oriental Social Life*, Philadelphia, 1894, pp. 73-142.

WILLIAM CRUICKSHANK.

HOSPITALITY (Teutonic and Balto-Slavic).—The ancient records furnish the clearest indications of a widely diffused practice of hospitality both among the Teutons and among the Slavs. As regards the Germans, Cæsar (*de Bell. Gall.* vi. 23) writes:

'Hospitem violare fas non putant; qui quaque de causa ad eos venerint ab iniuria prohibent, sanctos habent, hisque omnium domus patent victisque communicatur'; while Tacitus (*Germ.* 21) says:

'Convictibus et hospitibus non alia gens effusius indulget. Quemcunque mortalium arcere tecto nefas habetur; pro fortuna quisque apparatus epulis excipit. Cum defecerit, qui modo hospes fuerat, monstrator hospitii et comes proximam domum non invitati adeunt. Nec interest; pari humanitate accipiuntur.'

Of the Slavs, Mauricius (*Strateg.* xi. 5) speaks as follows:

εἰσὶ δὲ τοῖς ἐπιερευνομένοις αὐτοῖς ἦτοι, καὶ φιλοφρονούμενοι αὐτοὺς διασώζουσι ἐκ τόπου εἰς τόπον, οὐ ἂν δύνανται, ὡς εἶπε δι' ἀμέλειαν τοῦ υποδεχομένου συμβῆναι τὸν ξένον βλαβήναι, πόλεμον κινεῖ κατ' αὐτὸν ὁ τοῦτον παραθέμενος, σέβας ἡγούμενος τὴν τοῦ ξένου ἐκδίκησιν.

The Letts had even a special god of hospitality, called Ceroklis ('ille hospitalitatis deus cui ex omnibus esculentis primas buccas, primos ex poculentis haustus stulta libabat plebes'; cf. H. Usener, *Götternamen*, Bonn, 1896, p. 106).

Teutons and Slavs have another point of contact in the fact that they have a common term for 'guest,' the Goth. *gasts*, ξένος (*gastigóds*, φίλοςξένος; *gasti-gódei*, φιλοξενία), corresponding exactly to the O. Slav. *gosti*, 'guest,' and both being etymologically equivalent to the Latin *hostis*, 'stranger,' 'enemy.' The Lithu-Letts use a different term: Lith. *wieszėti*, 'to be one's guest,' *wieszne*, 'guest' (fem.), Lett. *wisis*, 'guest,' which are all connected with the Lith. *wiesz-* (cf. Gr. *oikos*, Lat. *vicus*). Should the question be asked how, as in the case of the Goth. *gasts*, O. Slav. *gosti*, a word meaning originally 'stranger' or 'enemy' (cf. Lat. *hostis*) should gradually acquire the sense of 'guest,' the answer will be found in the practice of *exchanging gifts*, met with everywhere (see ARYAN RELIGION, vol. ii. p. 51^a; and GIFTS, vol. vi. p. 197), and, in particular, on Teutonic and Slavic soil, in the closest connexion with the practice of hospitality, and which, as the mutual gifts had to be in some degree commensurate with each other, has been aptly called 'trading by gift,' or 'interchange of presents.' Tacitus, in the chapter already cited, expressly says: 'Abenti si quid poposcit, concedere moris, et poscendi invicem eadem facilitas'; and the *Havamál* puts it still more clearly:

'No one is so hospitable or ready to give

That he despises presents;

Nor so little mindful of gain

That he hates return-gifts.'

Here, too, we have the reason why in Old Russian *gosti* is quite commonly used for 'merchant' (*kupecii*), while *gostiti* means 'to trade,' and *gostiĭba*, 'business.'

While the stranger thus literally found an open door because of the wares he carried, we are able to derive from the facts of language a still more precise idea of the way in which the relation between the visitor and his host attained its further development. In the Slavic languages the word *gospodĭ* (from **gosti-poti-s*)—corresponding exactly to the Lat. *hospes* (from **hosti-pets*)—is now for the most part used for 'God,' but originally meant, quite generally, 'master' or 'lord.' The second element of this primitive compound is the Aryan **poti-s* (Skr. *pāti*, Gr. *πάσις*, Goth. *-faps*), 'head of the house.' The Slav. *gospodĭ*, Lat. *hospes*, accordingly mean 'master of the stranger'; and this implies that the guest, during his stay in the house of his entertainer, enjoyed equal privileges with the members of the family. In order to enable us to realize what such friendly treatment meant for a traveller in those days of general insecurity, we quote here a statement regarding Albanian hospitality, taken from a work entitled *Eine Reise durch die Hochländergawe Oberalbaniens* (*Zur Kunde der Balkanhalbinsel*, ed. C. Patsch, pt. i., Vienna and Leipzig, 1904), by K. Steinmetz:

'Their hospitality, which is unrivalled, may be extolled as the finest characteristic of the North Albanian people,—the South Albanians do not have it in the same degree,—and is of itself sufficient to mitigate considerably the harsh opinions regarding the Albanians often expressed by other travellers. It is not confined to their universal practice of entertaining the stranger, and of regarding a payment as an insult; it goes much further than that. If I eat a morsel of bread in a house, drink a cup of coffee or even but a glass of wine, I at once become a friend (*mik*, i.e. Lat. *amicus*) of the house, and if on my further journey I am robbed or killed before I arrive at another house, the family as a whole will not rest till they have avenged the deed, i.e. shot the perpetrator. . . . If, as happens but seldom, a house does not assume responsibility for a person killed within its precinct, it becomes liable to the blood-revenge of the murdered man's family. This explains why I, though almost always accompanied by only one man, was able to pass through the rudest tribes without danger; for any possible assailant who might think of robbing or killing me knew that he would thereby be exposing himself to the most determined vengeance on the part of the household with which I had last sojourned.'

It thus appears that the family of the host, and especially, of course, the host himself, accept responsibility for the safety of the guest, and, further, that this responsibility is not limited to the time during which the stranger sojourns with the family, but lasts while he is on his way to other quarters. This is exactly what finds expression in the above-quoted references to the hospitality of the Slavs and Germans, as, e.g., when Mauricius, speaking of the former, says that the host is united to the guest by the laws of blood-revenge; when Cæsar states regarding the Germans that they consider themselves to be under obligation to protect the stranger, and look upon it as a crime to injure a guest; and when Tacitus, referring to the same people, asserts that, if provisions give out in the house of the host, the latter must act as the 'guide and companion' of his guest on the way to the hospitality of other houses.

In the Teutonic dialects, however, we do not actually find the form **gasti-faps* (Slav. *gospodĭ*, Lat. *hospes*) which we might have expected. In the oldest extant forms of the primitive Teutonic speech, its place had already been taken by the Goth. *wairdus*, O.H.G. *wirt*, O. Sax. *werd*, O. Fris. *hāswerda*. The earliest occurrence of this stem is in Ulfilas, Ro 16²³, *gōleip izwis Gaius, wairdus meins jah allairōs aiklēsjōns* (ἀσπάζεται ὑμᾶς Γάϊος | ὁ ξένος μου καὶ ὅλης τῆς ἐκκλησίας). The Goth. *wairdus*, accordingly, has precisely the same meaning as the Lat. *hospes* (from **hosti-pets*, 'lord of the stranger') in its original sense, i.e. as applied to the host, not the guest. The words *ξένος μου καὶ ὅλης τῆς ἐκκλησίας*

may be taken to imply, as expositors (e.g. Jülicher, B. Weiss) think, that the Christian assembly met in the house of Gaius, or else that the latter had afforded willing hospitality to numerous visitors from the Corinthian community. This original sense of *wairdus* will then quite readily explain other meanings still traceable elsewhere, as, e.g., 'lord of the house' (*paterfamilias*), 'husband,' etc.

On the purely linguistic side, the present writer would trace this Teutonic form to a primitive Teutonic abstract noun, viz. **wer-tu*, which, as being cognate with O.H.G. *werēn*, O. Fris. *wera*, M.L.G. *weren*, 'to give security,' originally meant 'security,' 'guarantee.' From the abstract **wer-tu*, again, by the common philological process of personification, was developed the sense in which it was applied to the person making himself responsible for another, i.e. the 'surety' or 'guarantor' himself, precisely as, e.g., the Goth. *hliftus* (Lat. *clepere*, 'to steal') meant originally 'theft,' and then came to mean 'thief.' That the legal idea of 'security' existed among the Teutons at a very early period is shown by the fact that the Romance forms—Ital. *quarento* and Fr. *garant*, 'guarantor,' 'surety' (Ital. *quarentire*, Fr. *garantir*, 'to guarantee')—are derived from the O.H.G. participle *werēnto* ('one acting as security,' Med. Lat. *warens*, *warantus*, etc.). Thus the Goth. *wairdus*, in complete conformity with the historical references quoted above, denotes the man who became security for the safety of his guest.

Mention should be made, finally, of a Lithuanian term for 'guest' which has not been referred to in the foregoing, viz. *svėčias*, i.e. **svetjas*, which is cognate with the Greek *ἑρῆς*, *ἔρῆς*, 'kinsman,' 'clansman.' This term expresses the idea that, as soon as the incomer, who is elsewhere designated as *gasts*, *gosti* (= Latin *hostis*), was granted the privilege of hospitality, he was looked upon as an inmate of the house (cf. the Lithu-Lettish stem *wiesz-*, noted above). The head of the house, as we have seen, had to become security for the members of his household, as also for his guests, whenever it was necessary to protect them or to take vengeance on their account. But he was held responsible also when a member of his household or a guest committed an act of injustice. This finds emphatic expression in the Anglo-Saxon code:

'If any one shelters a guest (a merchant, or other person who has come across the boundary) for three nights in his own dwelling, and also feeds him with his own food, and he [the guest] does an injury to another person, let that head of the house bring the other to account at law, or in his stead discharge what is legally due' (cf. F. Liebermann, *Die Gesetze der Angelsachsen*, i. 1, Halle, 1898, p. 11).

From all this it is clear that the practice of hospitality—as a designation of which the Russ. *chlebū-solĭ*, 'bread-salt,' derived from the ceremonial presentation of these articles of food at the reception of a guest, ought to be referred to—was of immense significance for the development of intercourse, and, in particular, of commerce. It was likewise the starting-point of the entire hostelry system of Northern Europe, special quarters for travellers being provided in the larger houses much visited by strangers, and more especially in the monasteries; and, while this was done at first for hospitality's sake, it came in time to be done for payment. All the Teutonic languages have a term for 'guest-house': O.N. *gesta-hūs*, O.H.G. *gast-hūs*, A.S. *gesthūs*; and there is also the O.N. *inni*, A.S. *inn*, a word of obscure origin. In the Slavic tongues we find O. Slav. *gospoda*, Czech *hospoda*, etc., 'lodging,' which are derived from **gosti-potĭ* (cf. *gospodĭ* above), and meant originally 'protection of and lordship over guests.'

On the traces of the practice of lending a wife to a guest, see art. CHASTITY (Teutonic and Balto-Slavic), vol. iii. p. 499^b.

LITERATURE.—This is given in the article. Cf. also O. Schrader, *Linguistisch-historische Forschungen zur Handelsgesch. und Warenkunde*, i., Jena, 1886, ch. i., and *Reallexikon der indogerman. Altertumskunde*, Strassburg, 1901, s.v. 'Gastfreundschaft.'

O. SCHRADER.

HOTTENTOTS.—1. **Origin and migrations.**—At the time of the discovery of the Cape of Good Hope and its colonization by Europeans, the S.W. corner of the African continent was found to be in the occupation of two distinct peoples, known to us as the Bushmen and the Hottentots. Of these the Hottentots were the dominant race. They were almost everywhere engaged in desultory hostilities with the Bushmen, who were doubtless the aborigines of the country, and who were usually treated by the Hottentots as the savage inhabitants of a colony are too often treated by the white colonists: they were to be exterminated, or at least reduced to servitude. For the Hottentots were an intrusive people. Their origin has been the subject of considerable discussion. Their traditions point back to a time when they dwelt in 'a well-watered region somewhere in the centre of the continent, from which they were driven by a more powerful people, of a black colour, who came down from the north or north-east' (Theal, 59). An examination of their language by philologists has led to the discovery that it was a highly organized tongue, akin to the ancient Egyptian and other languages of the northern and north-eastern part of the continent. It was inflected and sex-denoting. Its roots were monosyllabic, each ending with a vowel; and the meaning of the word frequently depended upon the tone. The Bushman language was of a much more primitive type. It was not sex-denoting; it was hardly inflected at all; and it abounded in the uncouth sounds known to philologists as 'clicks.' Of these sounds, however, four—and those the most easily pronounced—were in use among the Hottentots; or five, if we reckon a guttural peculiar to a few dialects of the Hottentots and Bushmen. The discovery of these linguistic facts threw unexpected light on Hottentot origins; and it is now generally accepted that the Hottentots are of mixed descent, probably due to the intermarriage of men of North African—that is, Hamitic—lineage with women of Bushman race. This mixture may have begun in the N.E. of the continent. The suggestion has been made that the primitive ancestors of the Hottentots were a band of Egyptian soldiers said by Herodotus (ii. 30) to have deserted in the reign of Psammetichus, and to have taken service in Ethiopia, where the king gave them a tract of land in the occupation of his enemies, on condition that they conquered and settled it. They would necessarily, it is argued, have taken the women of the country, if they had none of their own. The hypothesis is, of course, no more than a guess, and a guess which gives rise to a number of difficulties; but to dismiss it leaves the main theory untouched. The mixed race, thus constituted, for some reason—possibly the irruption of Bantu on their ancestral seats—left those seats and fled to the south. As they were a pastoral people with flocks of long-haired sheep and herds of cattle, they were compelled to turn westwards, so far as to avoid the zone of the tsetse-fly. Continually journeying, impelled by causes which we do not know, but among which the pressure of Bantu on their rear may not have been the least, they came at length down the western side of the continent to the Cape. A series of straggling tribes, they kept continually in the zone of the best pasture between the sea and the mountains or deserts of the far interior. Finally they settled, since they could go no farther, in a wide territory from Great Namaqualand to the shores of the Southern Sea, from Walfish Bay

to the mouth of the Umtamvuna River, the present boundary between Natal and Cape Colony. Their immigration seems to have taken place at a period not long before the discovery of the Cape, and to have been contemporaneous with the advance of the Bantu down the Eastern side of the continent. It was the latter advance that stayed the progress of the Hottentots to the shores of the Indian Ocean.

The Hottentots of Cape Colony have, for the most part, been exterminated or driven northward by wars with the colonists and servile oppression; or they have suffered from the mingling of European blood, have learned to speak a European language, and adopted Christianity. Beyond the Orange River the Korana (who are emigrants from Cape Colony) and the Namaqua have been somewhat more successful in preserving their racial purity, such as it was, from white contamination. But they have not been able to resist the disastrous pressure of European culture any more than of European arms. They are a dwindling folk; and—more rapidly than themselves—their language, their traditions, and their ancient institutions are disappearing. Their language was investigated more than thirty years ago by Bleek; but their traditions and their institutions have never been the subject of any searching scientific inquiry on the spot. Hence the attempt to produce an intelligible outline of them is attended with some difficulty.

2. **Characteristics, organization, and culture.**—The name 'Hottentots' is of doubtful origin; probably it was a contemptuous term bestowed by the Boers. The Hottentots proudly called themselves *Khoi-Khoi*, 'Men of men.' They were, like the Bushmen, of a dirty-yellowish colour, frequently described as olive, with crinkled hair growing in small tufts, and with pointed chins. The women were distinguished by an extraordinary deposit of fat on the haunches, known scientifically as 'steatopygy.' But the Hottentots were not, like the Bushmen, a diminutive race, though by no means tall as compared with Europeans. Their wealth, as already intimated, consisted in flocks and herds. Hence their settlements were never permanently attached to one spot, and they were separated from one another by the spaces necessary for pasturage. The huts were of hemispherical shape; they were made of rush mats on a light framework of wood, and were easily removed and transported from place to place. Of agriculture the Hottentots knew nothing, though they seem to have taken kindly to it under European masters (Theal, 173; Stow, 240; Kolben, 38; Fritsch, 320).

This nomadic mode of life was, of course, compatible with only a very loose organization. There were a number of independent tribes, the chiefs of which were assisted, or sometimes controlled, by the elders of the various families. Between these tribes, and indeed between the smaller social units of which the tribes were composed, there was little cohesion; frequent, if desultory, feuds were engaged in. Hence they easily fell a prey to the colonists. Our information as to the internal relations of the kindred is very incomplete. Neither the old travellers nor the modern writers on the people have understood them. Their reports, therefore, present contradictory features difficult to reconcile. The time for fruitful inquiry among the people themselves has now passed for ever; and any opinion about the family organization can be expressed only with much hesitation. That the rule was patriarchal and that inheritance was from father to son, or, failing sons, to the nearest male relative, to the exclusion of women, affords a presumption that the organization was by clans reckoning descent only in the male line. On the

other hand, in spite of polygamy, the women appear to have taken a high position. The wife was the ruler of the house, to such an extent that a man could not venture without her permission to take from the vat so much as a mouthful of sour milk produced by the family cows. His nearest female relatives, we are told, punished a violation of this rule by a fine of cows and sheep 'to be added to the stock of the wife.' Contrary to the Bantu rule, the eldest daughter milked the cows. A man's most sacred oath was by his eldest sister; 'and if he should abuse this name, the sister will walk into his flock and take his finest cows and sheep; and no law could prevent her from doing so.' Moreover, she might inflict punishment on him, though adult, for an infringement of the rules of courtesy and the code of etiquette. A woman might even become chief of the tribe, if of energetic character and the widow of a chief who left a son not yet of age. From these and other customs we infer that, if the organization was patrilineal, the opposite or matrilineal organization had left abundant traces on it (Hahn, *Tsunigam*, 18-21).

When discovered, most of the Hottentots already possessed iron and copper weapons and tools. They had probably brought the knowledge of smelting from their original seats. Such weapons and tools, however, were valuable, and the Hottentots were not entirely emancipated from the Stone Age. They were a brave and independent people, as filthy and irresponsible as savages usually are, sensual, and easily provoked to anger, but kindly and hospitable.

3. Witchcraft and witch-doctors.—Like all peoples in the lower culture, the Hottentots were believers in witchcraft. To this cause they attributed sudden accidents or pain, and all serious sickness. Our authorities have left us no account of the process of bewitching. It was doubtless founded, as everywhere else, on sympathetic magic. For corpses were believed to be used for this purpose; and other practices point to the same order of ideas. Among them may be mentioned the ceremony, at crossing a rapid river, of first sprinkling some of the water over the body and daubing the forehead with a little of the mud, muttering the while a charm and dancing (a ceremony repeated on coming out of the water); and the requirement that a woman had to watch the fire carefully and keep it alive, or else sprinkle the ground with water without rest or cessation, so long as her husband was absent hunting. Old women especially, as in Europe, fell under the suspicion of witchcraft. What, if any, punishment was inflicted we do not know. Nor does our information extend to the practice, so common among the Bantu, of 'smelling out' a witch. Witch-doctors, however, as might be expected, were an institution. That their labours were not always beneficent we gather from the jealousy with which corpses were prevented by the relatives of the deceased from falling into their hands. Similar precautions were taken, for the same reason, at a birth, with respect to the placenta and the *kaross* (or skin-mantle) on which delivery had taken place. The witch-doctors were exorcists employed to lay troublesome ghosts. They were called in to treat the sick. For this purpose a sheep was flayed alive. If it moved away from the spot after the revolting operation, it was a sure prognostic that the patient would recover; if not, he would die. In the latter case no further trouble was taken concerning him. Otherwise the caul was minutely examined by the witch-doctor and sprinkled with *buchu*, the powder of a species of spiræa. He then, twisting it into a cord, hung it round the patient's neck as an amulet, there to remain until it rotted

off. The sheep was eaten by the men, women, or children of the kraal, according to the sex and age of the patient. If the treatment failed, the witch-doctor resorted to simples, of which these practitioners are said to have had a good knowledge. They were also skilful surgeons, performing the operation of blood-letting, curing snake-bites, and setting dislocations. It was they probably who shaved the heads of mourners and of persons suffering from headache, and on solemn occasions slew the animals described as sacrifices. It was they who at a wedding performed the extraordinary but well-attested rite of micturating over the bride and bridegroom; but they are not definitely identified by Kolben, our principal witness, with the old men who accomplished a similar ceremony at puberty rites, at funerals, and on receiving home a warrior who had encountered and slain single-handed a lion, an elephant, or some such formidable beast. They were the rain-makers; and as such their art was founded on the processes of sympathetic magic. Thus they formed an influential class closely corresponding to the witch-doctors or medicine-men of the south-eastern Bantu.

4. Future life and cult of the dead.—The Hottentots held that the individual, in some sense at any rate, survived death. As we have seen, they were at times haunted by spirits of the dead, who were deemed mischievous or malicious. Happily there was one way of preventing this. The spirit did not usually travel far from the place where the man had died. It seems that, as is widely believed in the lower culture, it was attached to the body and dwelt at or in the grave. Consequently, when a death occurred, the kraal was removed to a distance; care being taken, however, to abandon to the ghost the hut in which death had taken place, together with the apparel and implements of the deceased; otherwise removal would have been of no avail, for the ghost would follow them. We are not told that there was any organized ancestor-worship; nor does it appear that sacrifices were offered to ancestors as such. But it was the custom for a Hottentot, when in trouble, to go and pray at the graves of his ancestors (Hahn, 112); and, seeing that burials often took place in clefts and holes of the rocks, it is possible that the wild ceremonies described by an old writer as performed in caverns may have been invocations of the departed (Kolben, 96, quoting Vogel). Certain spots, moreover, were held sacred to famous men of the past. In going by them it was usual to stop, to muffle the head in the mantle, and offer prayers to the dead man for protection of the worshipper and his cattle, and sometimes to dance round the place with singing and clapping of hands. The legends of many of these heroes were known and told. From an anecdote related by Kolben, however, it would appear that the spot often became sacred from a vague belief, arising it may be from purely accidental coincidences, that there was something uncanny about it, such as led the ancient Greeks to hallow the shrine of a hero unknown, or the Indians of British Guiana to ascribe to rocks and other inanimate objects a powerful spirit who must be honoured and mollified. There is no trace of a belief in future retribution. Rebirth, not always in human form, and shape-shifting, or transformation during life, appear in the stories; for the Hottentots were in nowise different from other savage and barbarous peoples who recognized no impassable chasm between mankind and the lower animals.

5. Food prohibitions.—The Hottentots abstained from eating fish that have no scales. The Bantu also abstain from fish, alleging as the reason their similarity to snakes—a form in which their dead frequently show themselves to the survivors. It

may be that some such reason caused the Hottentots to abstain; but this is a mere conjecture. Swine's flesh was likewise forbidden to them—on what ground we do not know. Another food prohibited, at all events to the Namaqua, was the flesh of the hare. The reason usually assigned for this was the part taken by the hare in the saga of the origin of death (cf. *ERE*, vol. iv. p. 412*, and vol. v. p. 706*), common in one form or other to all the South African peoples.

There is, however, another and a deeper reason for abstention from hare's flesh. The Namaqua share with the rest of the uncivilized world the belief that he who eats the flesh of an animal absorbs that animal's qualities and becomes like it. To eat the flesh of the lion or to drink the blood of the leopard or the lion is to acquire the courage and strength of those beasts. In like manner to eat hare's flesh is to become as faint-hearted as a hare (Hahn, 106).

6. Moon and stars.—In connexion with the tale of the origin of death it may be observed that there is some ground for thinking that the moon was invoked by the Hottentots. At new moon and at full moon they spent the night in dancing, singing, and merrymaking. One old writer also speaks of their sitting at new moon on the banks of a river and throwing balls of clay into the water. It is by no means clear what was the exact meaning of these proceedings. It is possible that they were a rain-charm. The older writers may be roughly divided into two classes—those who denied that the Hottentots had any religion, and those who attributed to them an idea of God as lofty as their own. Both these representations may safely be discounted. The ceremonies at new and full moon, which, we are told, no inclemency of weather prevented, may be, as Kolben (p. 96) emphatically asserts, 'religious honours and invocations to the moon,' and yet his conclusion, that she was an 'inferior visible god, the subject and representative of the High and Invisible,' may be altogether beyond the mark. Since she was held to influence the weather, the rites were probably intended to induce or magically compel her aid. More than that cannot safely be said. Certain of the constellations also were known and named. At the first rising of the Pleiades after sunset a religious dance was held, with prayers to Tsuni-goab for rain. Stars were said to be the eyes or souls of the deceased—which points to a belief in the *post-mortem* transformation of the dead into stars, not unlike that entertained by some of the Australian tribes.

7. Omens.—Many animals were observed for omens. If a hare crossed the hunter's path, he would return home; on the contrary, if it ran in the same direction as he was going, it was a good sign. The korhaan (*otis kori*) brought luck if it did not fly far from the hunter and soon again sat down. A certain kind of chameleon creeping on a hunter or his weapons or belongings, while he rested on the road, prognosticated success. This, rather than any worship directed to the insect, is the probable explanation of the rites so graphically described by Kolben and in general terms confirmed by Hahn as performed when the mantis appeared. It was, for some reason unknown to us, regarded as a favourable omen of the highest significance. If it went so far as to alight on man or woman, the fattest ox belonging to the kraal was killed. The lucky person received the entrails and fat, and wore the caul twisted about his neck until it rotted off, or until some other person was honoured by the mantis in a similar way. The flesh of the ox was boiled, and the men or the women feasted on it according to the sex of the person on whom the mantis had alighted. The

mantis, of course, was never killed or injured, for to do this would turn the omen into disaster and destruction (Kolben, 98).

8. Mythology.—Hottentot mythology, so far as it has descended to us, is meagre. Setting aside stories relating to the lower animals (many of them, as might be anticipated, ætiological), it is concentrated chiefly on the adventures of two mythical beings, who were the subjects of tradition and the object of worship—Tsuni-goab and Heitsi-eibib. The latter was a sort of culture-hero among the Namaqua and their neighbouring tribes. The traditions concerning him can only be summarized here. He was born, according to one tale, of a young girl who had chewed a kind of grass and swallowed the juice. The boy was as remarkable as his birth. He committed incest with his mother. He killed monsters. He fought and conquered great lions, and put enmity between the lion's seed and mankind. He cursed the lion and the vulture. To his commands are ascribed the habits of these creatures, as well as certain human observances. He died from eating the fruit of a raisin-tree, which is consequently prohibited; in fact, it causes dysentery. He returned to life. He was an adept in shape-shifting. Another legend represents him as being born again as a young bull from a cow pregnant from eating grass. He appears finally to have died, for his graves are found all over the country, usually in mountain passes. Natives who go by throw pieces of clothing or other articles of no value on them for luck—a common practice also among Bushmen and indeed at wayside shrines in all parts of the world. Sometimes more substantial offerings of honey or honey-beer are made. He is glad when men thus honour him. He still gives the Khoi-Khoi good advice, tells them how to kill the lion's children and other wild animals, and prevents danger from befalling them, if they honour him. These stories present few traits not common to those of mythical heroes elsewhere.

The other personage is more important. He seems to have been known to all the Hottentots. His name, Tsuni-goab, also written Tsui-goab, and in other ways, is usually translated 'sore (or wounded) knee.' The story told by an aged witch-doctor in explanation to Moffat was

'that Tsui'kuap was a notable warrior of great physical strength, that in a desperate struggle with another chieftain he received a wound in the knee, but having vanquished his enemy his name was lost in the mighty combat which rendered his nation independent, for no one could conquer the Tsui'kuap (wounded knee)' (R. Moffat, *Missionary Labours . . . in S. Africa*, London, 1842, p. 258).

This derivation, however, is discredited by Hahn, who interprets it as 'the Red Dawn.' His reasons are chiefly philological, elaborated under the influence of the mythological theories current in the middle of last century. But he adduces two other considerations—that the Korana believe Tsui-goab to live in the Red Heaven or Red Sky, and that another mythological personage whom he equates with him, called 'The man whose body has a brass-coloured backbone,' was addressed as 'Thou who paintest thyself with red ochre.' These reasons are obviously insufficient. Another account of Korana belief makes Tsuni-goab dwell beyond the blue sky, in a light sky. Red ochre is a substance commonly used by savages to paint themselves and the objects of their reverence; and it was so used by the Hottentots. When praying for rain at the rising of the Pleiades, some of the tribes, when Hahn wrote, still addressed Tsui-goab in a traditional song as 'Father of the Fathers.' The question of his true character depends largely on the way in which we are to construe this phrase. A Korana tradition declares that he

'made two persons, a man, Kanima (Ostrich Feather) and a woman, Hau na Maos (Yellow Copper). He gave them cows,

whose milk they should drink, a jackal-tail to wipe the perspiration off the brow, a staff with a cluh (*kiri*), a quiver with arrows, a bow, and a shield. From Tsui-goah they expect all good things' (Hahn, 105).

Hahn, who found this statement among his notes, is uncertain of its source, but attributes it 'very likely' to a missionary, Wuras. The last sentence, it is to be noted, seems a summary of what the reporter understood to be the mental attitude of the Korana towards Tsuni-goab. It may mean no more than what we have already learned concerning the Namaqua and their hero. The general import of the tradition has been interpreted as affirming that Tsuni-goab was the Creator of mankind. A careful consideration, however, will hardly endorse this construction.

'The obvious and natural inference,' remarks A. Lang on the whole evidence, 'is that Heitsi Eibih and Tsui Goah were and are regarded by their worshippers as departed but still helpful ancestral warriors or medicine-men. We need not hold that they ever were actual living men; they may be merely idealised figures of Khoi-Khoi wisdom and valour. But that in the opinion of their worshippers they are but dead men, there seems no doubt at all' (*Myth, Ritual, and Religion*, London, 1887, ii. 20; cf. 2nd ed., 1899, ii. 44).

Statements by Kolben pointing to monotheism, or rather dualism, are now generally recognized as due to a misunderstanding usual in the age in which he wrote. Accurate investigation of savage beliefs was then hardly known. Investigators were obsessed by the desire to identify the objects of heathen worships with those known to them in Christianity. Such information as they obtained was dragged out of reluctant savages, who themselves had probably no definite ideas on the subject, and were, moreover, confused by the interrogations, or only too willing to mystify the inquisitive white man; and it was hastily misinterpreted in accordance with the inquirer's prejudices.

g. Bodily mutilations.—On the other hand, when Kolben speaks of his own knowledge as eye-witness, he is generally to be depended on. His account of the custom of excision of the left testicle from every youth at or before puberty (p. 112) has been rejected by other writers, notably by Fritsch, who argues that he was deceived, in spite of his minute description of the rite and repeated personal examination of the victims themselves (p. 335). But it has been accepted by Theal, who states that

'it is practised at the present day by people [probably the Berg-Damara] who are certainly not of Hottentot blood, but who must have derived their language and many of their customs from Hottentot conquerors in bygone times' (p. 87).

It is, in fact, one of many species of sexual mutilation, more or less cruel and senseless, practised in various parts of the world, of which it can only be said that, while they are probably due to some superstition, their exact origin and purpose are still unknown. Many Hottentot women were mutilated by the amputation of one or more of the joints of the little finger. Kolben asserts that the custom was confined to those who married more than once, a fresh joint being cut off before every fresh marriage (pp. 153, 306). It has been found, however, practised upon children of Bushmen, Berg-Damara, and Kaffirs, as well as of Hottentots (Hahn, 87). Kolben's experiences were confined to the tribes of the Colony, and it seems probable that the custom and the motive varied. Such a sacrifice by a widow before a second marriage may have been to elude the vengeance or to mollify the ghost of her deceased husband. Inflicted on a child (usually a girl), it may have been intended to ward off some misfortune, feared perhaps from the action of ancestral spirits (Fritsch, 332). But our data are not sufficient to enable us to determine the motive with accuracy.

It may be added that many Hottentot beliefs and rites seem to have been shared with the Bushmen, or, at all events, to have been influenced

by them. Such (to take only a single example in addition to the mutilation of the fingers) is the reverence for the mantis, which among the Bushmen is connected in some way, to us obscure, with Cagn, their hero or divinity. At present, however, our knowledge of Bushman is as meagre as that of Hottentot institutions. This fact is sufficient to indicate the essentially provisional character of many of the conclusions expressed (not without diffidence) above.

LITERATURE.—Notices and accounts more or less fragmentary are to be found scattered through the writings of the older travellers and missionaries. The fullest and most accurate information is given in P. Kolben, *The Present State of the Cape of Good Hope*, tr. Medley, 2 vols., London, 1731 (vol. i. alone relates to the Hottentots and has been alone cited above); and of more recent works in G. Fritsch, *Die Eingeborenen Süd-Afrika's*, with an atlas of portraits, Breslau, 1872; W. H. L. Bleek, *Reynard the Fox in South Africa*, London, 1864 (a collection of Hottentot folk-tales chiefly from MSS in Sir George Grey's library at Cape Town); T. Hahn, *Tsuni-goam, The Supreme Being of the Khoi-Khoi*, London, 1881; G. W. Stow, *The Native Races of South Africa*, ed. Theal, London, 1905 (a painstaking but incomplete work, the author having died before half his task was finished); and G. McCall Theal, *The Yellow and Dark-skinned People of Africa south of the Zambesi*, London, 1910. E. SIDNEY HARTLAND.

HUGUENOTS.—French Protestantism was a native product of 1512–59. It had no roots in the past, for the Albigenes (*q.v.*) had been exterminated, the Waldenses (*q.v.*) had emigrated, the university of Paris was the centre of Scholasticism, and the reforms of Gerson contemplated no breach with mediæval theology. Except for the encouragement given by the sight of other successful revolts from Rome, it owed little to foreign influences. On the other hand, the system of doctrine thought out by Calvin, and the organization elaborated in Paris, have been adopted to some extent in every Protestant country except Scandinavia; while French Protestant exiles have enriched, not north Europe alone, but America and South Africa.

Jacques Lefèvre was the Erasmus of the French reform, laying billets he feared to kindle. By 1512, following the example of Colet, he published a new annotated Latin version of Paul's Epistles, recognizing his doctrine of justification. In 1523 he began to revise the classical French version of the Vulgate. But the group of Humanists, protected at Meaux by the bishop, did little more than reform that diocese and leaven it with evangelical preaching. The political situation was dominated by the fact that Francis I. in 1516 made a Concordat with Rome, whereby he recognized the Papal rights of canonical institution and of exacting annates, and secured for himself all valuable ecclesiastical patronage. With the clergy thus rendered subservient, no motive remained for the Crown to desire reform. The Council of Sens (1528–29) showed that the clergy were equally content, now that all French sees and abbeys were reserved for them. The nobility, however, found their feudal rights and their material resources rapidly diminishing, and were accessible to new ideas. And in the Third Estate, craftsmen and retailers suffered by the influx of precious metals, and they also provided a receptive soil.

The leader was John Calvin (1509–64), a Picard, trained in theology and law (see CALVINISM, vol. iii. p. 146 ff.); but in 1534 he had to flee owing to his friend Nicolas Cop advocating evangelical views in his rectorial address at Paris. Finding that the movement was imperilled by the supposed anarchism of the Anabaptists and by some of their

tenets, he published in 1536 the *Institutes of the Christian Religion*, casting the purified metal into the old moulds, but adding two sections dealing with the current slanders, and dedicating the work to Francis. The book was the first valuable dogmatic treatise, and soon was enlarged and translated widely. A revision of Lefèvre's Bible version in 1535 by another Picard, Olivétan, and the appearance of Clément Marot's metrical version of the Psalms, were other treasured aids.

Some adherents were exasperated by the refusal of the clergy to reform, and their placarding of handbills attacking the old doctrines and usages irritated the Catholics. Francis had wavered for a time, but, when he found one of these broadsheets on his bedroom door, he adopted a policy of extermination, announced in 1535, and seldom abandoned during the century. An organized congregation discovered at Meaux in 1546 was stamped out, but the movement spread. Henry II. (1547-59) created a special committee of the Paris Parliament—the chief organ of justice—to systematize the prosecutions. They proved ineffective, and by 1555 a congregation was formed even in Paris, while four years later a synod of twelve congregations met and organized a National Evangelical Church. A confession was adopted, reflecting the influence of Calvin. His plan of governing each congregation by minister and elders was followed, and a system was begun of linking the congregations by synods of ministers and elders, much as the South German Anabaptists had arranged a generation earlier. As the movement extended, local synods grouped naturally by the civil provinces and the provincial synods were finally merged in one National Synod. The plan was rapidly adopted by Presbyterians everywhere.

The Synod of 1559 is a landmark, inaugurating a period of seventy years when the Reformed Church was an important political factor. Its appearance contributed to bring about peace with Spain, and an agreement between Henry and Philip to root out heresy. The discovery of this intention by William the Silent led to a certain interweaving of Netherland and French politics, and to the constant interest of the House of Orange in the French Protestants, for whom William's little Principality on the Rhone often served as a refuge.

With the accession of Francis II. a few weeks after the Synod, the family of the Guises came to power, and steadily opposed the new religion. But the illegal execution of Anne du Bourg and other sympathizers in the Parliament called attention to previous armed resistance by persecuted evangelicals, Zwinglians, Anabaptists, and Lutherans. By this time several nobles had declared themselves, including Admiral Coligny and two princes of the blood, the Dukes of Bourbon and Condé. The latter was charged by the Guises with plotting, but they dared not grant his demand for a trial, contenting themselves with massacres of the humbler conspirators. Henceforward the evangelicals met openly in armed conventicles, and the 'Hugonots' were suddenly recognized as a power in the land. The name, originally thus spelt, seems to have been bestowed first at Tours, where the favourite place of meeting was near the gate of St. Hugon.

With the accession of Charles IX. (1560-74), the queen-mother, Catherine de' Medici, brushed aside Bourbon, the first prince of the blood, and became regent. For a year there seemed a chance that she would belie Knox's fears as to 'the Monstrous Regiment of Women,' and imitate the revolution just carried through by Elizabeth in England. The second period of the Council of Trent had closed, but its decisions were not allowed

to be published officially in France. The States-General assembled in 1561 reflected the division of the nation: the clergy, of course, wanted no change; the nobles were unable to draft any unanimous requests, while many called for toleration; the Third Estate demanded religious liberty for all, and lay control over ecclesiastical matters. Coligny brought up a definite programme: biennial assemblies, free election of the higher clergy, nationalization of much property in ecclesiastical hands, and a national council under the king to settle religion. All that he gained was a suspension of persecution, and a religious conference.

The Huguenot spokesman at Poissy was Théodore de Bèze, a close friend of Calvin, but no Knox. He made, however, such a deep impression that the clergy saw it was politic to offer large funds for the public needs; and, by reserving the right to fix the quota themselves, they ensured the frequent convoking of their Estate, even if the States-General lapsed. Therefore the Edict that issued in 1562 conceded nothing more to the Reformed than the right to private worship within doors, or public worship outside walled cities. Hereupon both parties prepared for civil war.

For more than sixty years France was rent by the struggle, though it was suspended so often that nine successive wars are reckoned. The outbreak was at Vassy, where a congregation meeting publicly within a walled town, and therefore illegally, was massacred by the Guises without ceremony. In the intervals of fighting, it became clear that a Counter-Reformation had begun, and that the zeal of the preachers trained at Geneva was offset by the subtlety of the Jesuits. The movement was much transformed in 1572, when Catherine was hurried by Italian advisers into authorizing a general massacre of all Huguenots, beginning with the royal guests. The princes of the blood were saved by a forced conversion, but every other leader of note fell, with thousands of humbler adherents. The survivors perfected their organization on quite representative lines, till there appeared a State within the State, independent of the feudal nobility and of the Crown.

With the accession of Henry III. (1574-89), two other parties defined themselves: the League of thoroughgoing Catholics, who copied the Huguenot organization, and the Politicals, who aimed at internal peace and the exclusion of foreign influence, as of the Guises and Catherine. The States-General of 1576, packed by the League, declared for unity of religion. When Henry of Navarre, who had retracted his forced conversion, became heir-presumptive in 1584, the League was driven to a policy of exclusion. Four years later, the States-General declared against even toleration; but the arrogance of the Guises led to their assassination by order of the king, and, with the death of Catherine and the counter-assassination of the king, Navarre succeeded as Henry IV. (1589-1610).

The League was so strong that Henry found it politic to become a Catholic in 1593; he was able to banish the Jesuits next year, and in 1598 to grant the Edict of Nantes, destined to continue for 87 years, in great contrast to its many ephemeral predecessors. This declared Catholicism to be the established religion, maintaining the obligation of tithes and of the marriage laws; but it stopped persecution and recognized freedom of conscience, with the right of private worship anywhere. The 'so-called reformed' public worship was legalized in every place where it was then actually practised—about 200 towns, with five chief cities excepted; also in many thousand castles of the nobles, and in two places within every bailiwick. All synods were authorized to meet. On the civil side, not only were full civic rights guaranteed, and for

ministers such treatment as the clergy received, but committees of Parliament dealing with cases involving Protestants were to have Protestant members. As a temporary measure, about 200 towns were left in their military possession, the garrisons being paid by the State. Rapid development ensued; schools and 'temples' arose in numbers, with theological colleges at Nîmes, Saumur, Die, Sedan, Montauban, etc., while domestic piety was nurtured by the Genevan revision in 1588 of Olivétan's Bible.

With the assassination of Henry IV. and the accession of his son, Louis XIII. (1610-43), the tendency to absolute royal power increased, as was shown by no States-General being convoked after 1614. During the minority, the Jesuits quietly returned, and won many of the clergy to Ultramontane views. The rise of Richelieu in 1624 frightened the Huguenots into revolt, and, when La Rochelle fell after four years, their separate political existence ended, and their fortifications were demolished everywhere. The Peace of Alais in 1629 inaugurated a third period, when they were merely tolerated as inferiors, without any guarantee that the Edict of Nantes would be observed. Henceforth the nobles dropped off, as with the English Puritans after 1660, and the party became chiefly middle-class.

Richelieu and Mazarin, however, gave the Protestants fair play, so that in the troublous days of the Fronde they were loyal. Devoting themselves to manufacture and trade, and not being handicapped by cessation of work on saints' days, they gained nearly a monopoly of weaving wool, linen, and silk. Though they can hardly have mustered more than one million people out of fifteen millions, their importance was far greater. The Edict of Nantes was construed liberally, and public worship was actually maintained in 631 principal places, with 231 others subordinate. The synods met freely, though the National Synod needed special authorization, and a royal commissioner presided. Thought ripened apace under these conditions, and, while in Britain the doctrine of the Divine Right of Presbyterianism was hardening, the Huguenots preserved a more open mind. Dailly's *Traité de l'emploi des saints pères*, written in 1632 and translated by 1651, did much to break down the authority of the Fathers and exalt the Bible. At Saumur also were sown the seeds which, transplanted to England, were to produce the Deists, though the later emigrants, such as Mauduit, Gailhard, de Luzancy, took the field against Socinianism.

At this time the Huguenots were important enough even to influence foreign affairs. The Synod of Charenton in 1644 condemned the Independents as a sect prejudicing the Church of God. On the execution of Charles I., Amyraut and Bochart published books on the Divine Right of Kings, two others translated at The Hague and at Orange the *Eikon Basilike*, while de Saumaise and Pierre du Moulin, rector of St. John in Chester, put forth royalist Latin pamphlets. William Dugard, Master of Merchant Taylors', translated de Saumaise into English and printed it on his own press. He was soon converted, rather forcibly, and not only did he publish Milton's response, but he became 'Printer to the Council of State' and actually issued from 1650-57 a weekly French paper in London, manifestly designed to win the Huguenots to sympathy with the new régime. Louis du Moulin, Pierre's brother, son of James's friend, accepted the chair of history at Oxford in 1648, and in 1680 published a work on the Conformity of the Discipline and Government of the Independents to that of the Ancient Primitive Christians. The libraries of Arundel, Sancroft, and Charles II. were

in charge of Huguenots, and the court of this king even had an official Huguenot ambassador.

These halcyon days ended soon after the collapse of the English Commonwealth withdrew the only possible external protector. When Mazarin died in 1661, Louis XIV. (1643-1715) assumed power, and declined to receive a deputation of pastors come to congratulate him. Local self-government and constitutional methods were rapidly vanishing. Nobles and gentry were invited to court and led into extravagance, or were ignored at home. Even the provincial governors were practically superseded by obscure lawyers (*intendants*) wielding powers as absolute and as illegal as Cromwell's Major-generals, like whom they were backed by an irresistible army. As the States-General never met, National Synods also ceased after 1660; provincial States and Parliaments declined in importance; and arbitrary Edicts became the only laws. When, therefore, an aggressive Company of the Holy Sacrament set itself against toleration, and the one survival of the old times was the Estate of the Clergy, often convoked to tax itself, the danger was obvious, and there was no constitutional protection.

Troubles began at Montauban when a quarrel between Protestant and Jesuit students served as a pretext to banish the college, to confiscate the premises, and to impose a garrison on the town. Commissioners now started to seek for buildings, etc., not authorized by the Edict of Nantes. Systematic repression began with the walling up of the temples in the Pays de Gex, a recent addition to the kingdom. In 1666, hundreds of local decisions were codified as a guide, but an emigration began, and on remonstrance from the Grand Elector the code was revoked. Foreign wars further distracted attention, and for a time the chief evils were displacement from civil and municipal office, or confiscation of corporate property.

After the peace of Nijmegen in 1678, the remaining steps were few and effective. Children of seven were declared capable of conversion, and inquiries were set on foot as to age; a bench had to be provided in every temple for opponents, who were at liberty to interrupt the services and argue; ministers were forbidden to remain more than three years in any place. At length dragoons were quartered on the Protestants, with no restraint on their behaviour, and with orders to arrest prominent men, to batter down the temples, to seize the pastors. Emigration revived in 1681, and there was a temporary check; but, when England received a Catholic king in James II., the last external protector seemed gone, and every imaginable wrong to person and property was now inflicted broadcast. Half the Protestants were thus coerced, and so large was the supposed number of New Converts, that on 17th October 1685 the Edict of Nantes was revoked as no longer necessary. All Reformed worship was to cease at once, and all pastors were to quit the realm in a fortnight. Within a few weeks 800 temples were demolished, and all corporate property was lost.

Emigration was forbidden, and all refugees caught were sent, men to the galleys, women to prison, their property being confiscated; but, though every frontier was patrolled, the exodus was general. Paris alone lost 1200 Huguenot families out of 1933; the *intendant* of Normandy soon reported 20,000 people missing from Rouen, 184,000 from his province; Nantes bewailed the loss of her workmen, Lyons had 14,000 looms silent and only 4000 working, Tours only 1200 instead of 80,000; woven goods were in future imported instead of being exported. The number of emigrants at this time alone seems to have exceeded 300,000, peasants, traders, manufacturers, nobles.

The ambassador in London sent word that 960,000 louis d'ors had been brought to the Mint for conversion into English coins; the total loss in mere gold was soon estimated at 20,000,000 livres. Marshal Vauban indeed trebled this figure, but was more in his element when saying that France had lost 8000 sailors, 10,000 soldiers, and 500 officers.

These exiles rallied round the prince of Orange, and for a generation cherished the hope of compelling some restoration and even of reforming the whole Gallican Church. New Huguenot regiments were soon embodied in Dutch pay. When William went to the rescue of England in 1688, his aides-de-camp were all French, the second in command was Marshal Schomberg, and the engineers and artillery were under other Huguenots. When the war was transferred to Ireland, every band of the exiles sent recruits; Schomberg fell fighting at the Boyne; Ruvigny saw the fall of Limerick, which ended the war. On the sea the exiled sailors had their share in the victories of La Hogue. But on the Continent, Louis was almost uniformly successful, and the peace of Rijswijk in 1697 depressed the hopes of the emigrants.

A second opportunity came with the war of the Spanish Succession. The prince of Orange was indeed dead, his principality was overrun by Louis and its Protestant population fled, but the Camisards (*q.v.*) made a serious diversion in the Cevennes while Louis was losing in Bavaria and the Netherlands. The Huguenot exiles this time fought in Portugal, and at Almanza in 1707 a new regiment of Camisards, commanded by Jean Cavalier, bayoneted a whole regiment that had figured in the Cevennes atrocities. The treaty of Utrecht in 1713 destroyed all hope of repatriation, and Louis could at last pretend to believe that Protestantism was extinct in France.

Huguenot influence was diverted in its flow from the main stream into many other channels. This began far back in its history; as early as 1536 some preferred England to France; thirty years later many silk-weavers set up their looms in the crypt of the metropolitan church of England, where Coligny's brother is buried and where their descendants worship to-day; Southampton has a 'God's House' whose records begin with 1567. Shakespeare lodged in London with Montjoy of Creçy, and his *Venus and Adonis* was printed by the successor of Vautrollier. James I. had two Huguenot doctors, Chamberlen and Mayerne, and invited to court Casaubon and du Moulin. When Germany had been ravaged by the Thirty Years' War, a French church arose in Berlin in 1661. And the outflow from 1680 onwards was so great that the bulk of the stream was drawn off from France to enrich other lands. This may be noted specially for Brandenburg, Holland, and England.

The Great Elector replied at once to the revocation of the Edict of Nantes by the Edict of Potsdam, offering free transport from Frankfort, Cologne, or Amsterdam, free farms or houses, new churches, freedom from taxes for ten years, State support for ministers, their own judges. Waste lands soon blossomed with unknown vegetables, hemp, flax, and tobacco. The site of Magdeburg, desolate for fifty years, became a home of weaving and trade; Halle rose to rival Leipzig; Berlin gained all manner of manufactures; metal-workers fashioned tin, iron, and copper; to the West Indies and West Africa sprang up a brisk maritime trade, which, however, passed to Holland in 1720. French doctors revolutionized medicine, the gentry remodelled the army, scholars popularized Cartesianism, a college arose in Berlin, and a university at Frankfort-on-Oder. Society was created at the capital by them; the second and third kings of Prussia were brought up by a refugee.

The immigration to Brandenburg down the Rhine left many settlers by the way. Geneva gained 3000 inhabitants and the watch-trade as some recompense for boundless hospitality; a score of colonies arose in Württemberg, where French synods met until 1822; Homburg still maintains a French service; a village in Fulda yet keeps up the speech and customs of its founders. But the ravaging of the Palatinate hastened the steps of most of the exiles on to the Mark or the Netherlands.

The Calvinists of Holland gave an abundant welcome to their brethren. Collections were organized and loans granted, with support for the pastors; the craftsmen were allowed to practise and even welcomed into the guilds; and taxes were not levied for a term of years. Soon a synod of 202 exiled ministers met in Rotterdam, which visitors declared to be well-nigh French. Richly did the Huguenots repay their hosts. Some went to the colonies; in 1664 other exiles occupied Staten Island; and a New Rochelle arose on the banks of the Hudson. Under another flag all received naturalization in 1703. In Guiana, Huguenots filled Paramaribo; to the Cape went out a large contingent; and, though by 1739 the French tongue was compulsorily displaced, so that La Perle became Paarl, yet the Jouberts and Villiers are no small asset in South Africa to-day.

In the Netherlands themselves, Bayle and Jurieu brought the traditions of Sedan to Rotterdam; Claude, rival of Bossuet, whose influence was so dreaded that he was escorted from France at a day's notice, wrote at William's request a story of the persecution so effective that James burned it publicly; Saurin, after fighting in Savoy, studying at Geneva, preaching in England, added to the lustre of The Hague for a quarter of a century; Martin at Utrecht devoted himself to revising the Genevan Bible, and by 1707 completed a work that is still standard. For a century fine literary magazines in French streamed into France, Britain, and Germany; some of the editors also founded the first English magazines in London. Friesland settled her wastes, Utrecht gained a new silk and velvet trade at the expense of Amiens, Amsterdam added to her maritime trade 13,000 makers of silk, wool, linen, paper, and books. And, when it became clear that there could be no return, a general act of naturalization in 1715 encouraged the immigrants to melt into the general stock of burghers.

It might have been expected that Scotland would have rivalled Holland in its welcome, but only a few cambric-workers settled in Edinburgh. England kept up its Tudor traditions; Charles II. granted letters of denization freely from 1681, and appointed the archbishop of Canterbury with the bishop of London to aid the immigrants. In fourteen years £125,000 was subscribed, and doubled by public grants, whose interest went one-fifth to the pastors and four-fifths to start the others in business. Ipswich began to produce linen and sails; Norwich renewed its weaving, adding cutlery and clocks; Kent and Hampshire saw paper mills, Sussex glass factories; Wandsworth replaced Rouen as the source for hats, supplying even cardinals.

London attracted most of the settlers, especially when William of Orange became king, and a proclamation trebled the inflow. In 1701, Defoe (*The True Born Englishman*, pt. i. line 361 ff.) could point to the new leaven:

'Your Houblons, Papillons, and Lethuliers
Pass now for true-born English knights and squires,
And make good senate-members, or lord-mayors.'

Papillon and Dubois, indeed, were the sheriffs on whom Shaftesbury relied in the agitation on the Exclusion Bill twenty years earlier. Separate

services were maintained at first; thirty new churches arose, especially in Spitalfields, where the silk industry soon increased 2000 per cent, and in the new quarter of Soho. Some of the pastors, however, threw themselves into English life; de l'Aigle from the great temple of Charenton entered the Established Church, du Veil passed through it to the Baptists, Capel of Saumur taught in an Independent academy.

A club arose at the Rainbow Coffee House in Fleet Street, under Daudé of the Exchequer. Here met Rapin Thoyras, Le Moivre, La Croze, Coste, friend and translator of Locke, and Bayle; such men of science and letters soon created a new public feeling which embittered the popular English mind against the France of Louis XIV. Bayle's *Dictionnaire* was translated in 1709 by La Roche and others, and had no small share in the Deist movement; against that may be set Jurieu's *Treatise of Devotion*, and Drelincourt on Death. A new political doctrine, the Social Contract, was opposed to the Divine Right of Kings, by Jurieu and Abbadie; and, though they may have inherited it from the English Commonwealth men, it was destined to be taken from the Club by Voltaire and to work wonders in France by the pen of Rousseau. Scores of less known pamphleteers were the mainstay of the Whig cause for a generation; and in the rebellion of 1745, when the London merchants addressed King George, 99 out of 542 names were Huguenot, showing how large a proportion of commerce had fallen to them. This devotion to the land of their adoption was of old standing; as early as 1685 a society was formed to further true religion in England, and, fired by the new spirit of Methodism, the Christian Community labours still in Bethnal Green. No attempt was made to train new pastors in England, and the descendants of the immigrants learned not only to speak but to worship in English. Before 1760 most of the French services were discontinued; fifty years later there remained only four congregations in London, with others at Norwich, Canterbury, Southampton, Plymouth, and Bristol; to-day there are two chapels in Soho, one using the English liturgy in French. The absorption was quickened by a grant of general naturalization in 1774, and the gain in all departments of national life is suggested by such names as Chamberlain, de la Rue, Dollond, Dumaresq, Gambier, Hanbury, Labouchere, Layard, Martineau, Portal, Pusey, Rapin, Romilly.

In Ireland the great family of Ruvigny earned a new title as Earls of Galway, and laid out a model town at Portarlington, whose school turned out such men as the Duke of Wellington; not till 1817 did its French service cease. Fontaine and Latrobe introduced manufactures at Cork; and, though these were ruined by English legislation, Crommelin was more fortunate with the thousand wheels and looms for linen and cambrie wherewith he refounded Lisburn; the French church here lasted till 1798. Waterford received manufactures and a wine trade, while its abbey resounded with French eloquence till 1819.

Tillers of the soil passed on to America, some to Oxford in Massachusetts, thousands through New York to Pennsylvania, the home of liberty. The new and balmy Carolinas attracted most; French Santee was laid out with vines and olives, and began to weave silk and wool. For a while the settlers looked wistfully to Louisiana, but when repulsed they gladly accepted the privileges freely tendered in the English colonies, strengthening not only the Carolinas, but Virginia and Maryland.

The Huguenots of the Dispersion thus carried with them to many a Protestant land a wealth of

probity, industry, gallantry, history, scholarship, science. Calvinism had too often become unlovely by transplantation; now it was invigorated and sweetened by this crossing from the parent stock. But the France which thus impoverished itself paid dearly; it was hard to believe in priests who hounded on persecution, and by 1790 the typical ecclesiastic was no longer Fénelon, but Talleyrand. Through the insipid and putrescent 18th cent. the Huguenots of the home land not only existed, but proved the very salt of the earth.

For a generation after 1685 they had, indeed, been deprived of all public worship and of pastors. Those who ventured back by stealth were often kidnapped into secret prisons, and their sober work was ill replaced by the ministry of the Prophets. But, with the new situation created by failure in war, a new species of pastor arose to minister to the Church in the Desert, men able to inspire and to reorganize. Leading preachers were told off to conduct peripatetic schools, and synods began again whose minutes were recorded.

Even in March 1715 the aged Grand Monarch had to admit that there were many Frenchmen who on their death-beds declined the rites of Holy Church; and the revival dated from that very year. The whole reign of Louis XV. (1715-74) certainly saw the persecuting laws maintained, and often executed, and the declaration of 1724, in codifying them, even added the touch that no marriage was valid outside the Established Church. But it proved as vain to fine people for absence from service as when Elizabeth tried it; and James VII.'s plan of levying on every village where the Covenanters met broke down as badly in France. Antoine Court began a seminary at Lausanne to supply trained pastors. Paul Rabaut proved himself a true Apostle of the Desert. Such huge gatherings came to hear him and other leaders that in 1745 the Assembly of the clergy pressed for a rigid persecution, which for seven years sent a large stream of emigrants abroad. By 1755 the Protestants of Saintonge even dared to build Houses of Prayer. A national Synod next year showed that there were again 10 ecclesiastical provinces with 48 pastors; and seven years later another showed 14, with 26 pastors and 35 licentiate.

By this time Catholic fervour had died down, and the soldiery did not like to enforce the laws. A crisis came after the execution of a pastor merely for preaching, marrying, and giving the sacraments; an atrocious miscarriage of justice caught Voltaire's attention, and in 1763 he issued a treatise on Toleration. With the accession of Louis XVI. in 1774, there came to power Turgot, who even earlier had published on the same theme. When a circular letter was ordered to be sent to all bishops, he sent it also to all the Protestant pastors of the south, thus acknowledging their existence, their status, their weight. Protestant records of birth and baptism were admitted as evidence.

Lafayette returned from America with fresh ideas on freedom, and in 1787 induced the Assembly of Notables to petition for the removal of Protestant disabilities: despite clerical opposition, civil registration of birth, marriage, and death was made valid that year. With the gathering of the States-General in 1789, public worship was conducted with open doors in Paris. By March 1790 the National Assembly was presided over by a young pastor, Rabaut St. Etienne, and it decreed that all property in royal hands confiscated a century and more ago from Protestant emigrants should be restored to their heirs, who might return and take up citizenship.

During the Reign of Terror, the aged Rabaut was silenced, and his brilliant descendant was

guillotined,—fates shared by other pastors,—while all buildings for worship were closed. But, when Napoleon was settling affairs in 1802, he grasped at the request of the Paris Protestants for concurrent endowment, and secured in return a control over their Church. The State dictated the constitution, with the sessions of synods, the control of the seminary, and even the number of pastors; a veto on all appointments was reserved also. It proved that there were about 430,000 Protestants in 171 churches, with 121 pastors. There was no property except the places of worship and the seminary, which was in 1809 transferred to Montauban and annexed to the university as a faculty of theology.

When the hand of Napoleon was removed, and the Catholic Terror was over, the Church began to grow. First Scottish theology quickened native thinking, then German. Even under the Legitimists there arose a Bible Society, a Tract Society, a Foreign Mission, and an Education Society. Leave was withheld for a National Synod to assemble, but an informal meeting in 1848 resulted in a division. A minority seceded, regaining freedom, adopted an evangelical confession, and arranged for biennial synods. The moderates clung to State pay, but drafted a scheme of re-organization on the historic lines, which the State refused to sanction.

In 1872 a National Synod met, the first since 1660, and the division was perpetuated. The general law of 1905, which separated all Churches from the State and abolished all State pay, has given rise to a third section aiming at reconciliation. There are nearly 800,000 of the Reformed, meeting in 900 churches, ministered to by 1000 pastors, with good organization and equipment. The influence on the national life is so important that it is only too easy to raise an outcry against the domination of the Protestants. International reputations have been won by Janet, Sabatier, and Scherer in theology, by Cuvier and de Quatrefores in science, by Guizot and Waddington in politics. The religious strength may be gauged by the honourable share taken in evangelizing the world. A mission to the Cape in 1829 extended to the Basutos four years later, and has met with much success, while the Zambesi was occupied in 1884; within French possessions, the Tahitian and Malagasy work was taken over from the London Missionary Society soon after annexation; in north Africa there are missions at Senegal and the Gabon, to the Kabyles, and on the French Congo.

W. T. WHITLEY.

HUICHOLS.—This tribe, numbering to-day about 4000 souls, lives in a mountainous country, difficult of access, in the N.W. part of the Mexican State of Jalisco, on the spur of the great Sierra Madre. They are the eastern neighbours of the Coras, or Nayarits, to whom they are related by language, religion, and customs. Both tribes in the 18th cent. had been Christianized. The Coras still retain a priest and call themselves Christians, though their Christianity is to a large extent mixed up with pagan customs. But the Huichols, since the departure of the monks, have completely fallen back into their ancient religious practice, and represent a very curious survival of ancient Mexican religious faith and idolatry.

The principal god of the Huichols is *Tatevali*, 'our grandfather,' the fire-god. He is the god of life and health, and the particular god of the shamans, especially of those who heal and prophesy. He was the first who sat down on a chair, and is held to be more ancient even than the sun. Sometimes he is represented not by one, but by two images. One stands above ground, and the other in a cavity beneath it. The latter is invariably the smaller and the older of the two, and is regarded as closely associated with the sun after it has set, or the sun of the under world, while the upper image is supposed to be associated with the sun of the day-time, or of the upper world. There exists another form of the ancient fire-god, called *Tatotsi Mára Kwári*, 'our great grandfather deer-tail.' He is considered to be the spark produced by striking flint, and is the chief deer-god.

The sun is called by the Huichols *Tayaú* or *Taú*, 'our father,' or *Tavérika*, 'our eagle.' It is related that the ancient shamans made Father Sun by throwing the young son of the Corn-Mother (or, according to others, the young son of young Mother-Eagle, the goddess of the Sky) into an oven, arrayed in full attire, with sandals, pouches, and tobacco gourds, and carrying his bow and arrows. From the oven the boy travelled underneath the ground, and rose as the sun in the East. The assistant of Father Sun is *Tayaú Sakaimóka*, an image of whom stands on the high mesa of the Nayarits, above the Cora pueblo of Sierra del Nayarit, where the Coras and Huichols deposit ceremonial arrows and other offerings in a cave. This god is considered to be the 'serpent-god,' represented by a zigzag line of blue colour, and was in former times 'the Sun's arrow.'

The great god of the Coras and Huichols is *Tabátzi* (Cora) or *Tamáts* (Huichol), 'our elder brother,' the god of the morning star. He is the messenger of the gods; and, when the shamans sing, he communicates their songs and whistles to the other gods. He himself is called *tonóami*, the 'singer,' by the Huichols. He is, at the same time, declared to be the god of wind or air. He is the shooting god, who made the first arrows for the gods, the god of the hunter, and is himself represented by a gigantic deer.

The growth of maize and other vegetables is ascribed to a goddess, called *Takótsi Nákwé*, 'our grandmother growth.' She is the mother of the gods, especially of Grandfather Fire. All the earth belongs to her, and she lives in the under world. People implore her for long life, because she is very old. The goddess called *Táté Tulirikita*, 'our mother, house of the little ones,' the goddess of conception and birth, and *Táté Ikú Oteganáka*, 'our mother the Corn,' the special goddess of maize and other vegetables, seem to be other forms of the same mythological notion.

Táté Naaliwámi, the red serpent, the red cloud, is mainly a water- and rain-serpent who brings rain from the East. She is the creator of squashes and of all flowers, and takes special care of children. Her complementary deities are *Táté Kyewimóka*, a white serpent whose dwelling is in the West, and who brings rain from the West; *Táté Rapariviyáma*, a blue serpent, living in the Laguna de la Magdalena, four days' journey south of the Huichol country, who brings rain from the South; and *Táté Haúitse Kupirí*, a yellow serpent, living in a lagoon to the north of the Huichol country, who brings rain from the North. Finally, the goddess of the heavens, *Táté Vélika Uimáli*, 'our mother, the maiden eagle,' is the mother of Father Sun; she holds the world in her talons, and guards everything from above, where she dwells. The stars are her dress. All these gods and goddesses are clearly recognizable counterparts of well-known Mexican divine types.

The cult of the Huichols consists in libations, in offerings of food and drink, and in preparing cakes of the ground seeds of *Amaranthus leucocarpus*, called *wave* by the Huichols (=Mex. *uauhtli*). Besides sacrifices of this kind, they offer to their gods remarkable symbolic objects. They are embodiments of prayers, or charms intended to produce the object of the prayer, and are mainly found in the god-houses and sacred caves. Ceremonial arrows (*ulu*), sometimes in great numbers, are stuck into the inner side of the thatched roofs of the god-houses, or into the seats of ceremonial chairs. A great many symbolic objects of various colours and shapes are attached to the arrows, and others hang from the roof, while on the altar may be seen rudely carved and decorated wooden images of the animals dedicated to the god.

Another kind of symbolic object is called *nealíka*, 'face.' These are shields, round in shape, made by interweaving pieces of split bamboo with cotton cord, or variously coloured crewels, symbolic and mythological figures being represented in the weaving. They are mostly prepared for *Tayaú*, 'Father Sun,' and *Táté Naaliwámi*, 'Mother East-water.' The central part, always defined by a ring, represents the hole through which the god sees. Compare the ancient Mexican ceremonial object, called *tlachieloni*, 'instrument for seeing,' the special outfit of the Mexican god of fire and of Tezcatlipoca. The objects called *nama*, 'mat,' of rectangular shape, seem to be representative of a cloth hanging over the back of the gods. Very curious ceremonial objects are those called *sikuli*, 'eye'—crosses of split bamboo, interwoven with crewel or yarn, and resembling in the most striking way objects that are met with in Peruvian graves stuck in the soil at the foot of the mummy packet. According to the interpretation given by the explorer Charles Lumholtz, the prayer expressed by this symbolic object is that the eye of the god may rest on the supplicant.

From May to August, there are frequent feasts for making rain. During the wet season, if it stops raining only for two or three days, the principal men gather in the temple and decide to sacrifice an ox or two for the propitiation of the gods. Two children called *ákelí* (from Spanish *ángeles*) play an important part at these feasts. One of them belongs to *Tayaú*, 'Father Sun,' and the other to *Tátévali*, 'Grandfather Fire.' Toasted maize-cakes, made in the form of an S (symbols of the lightning, according to the symbolism of the ancient Mexicans), and others made in the form of 'eyes,' of feathered snakes, flowers, and dogs are tied to a twine of bark fibre and offered to the gods. They are called *kóka*, 'bead,' 'necklace,' as they are looked upon as the necklaces of the gods to whom they are dedicated. In October the feast of green squashes is held, called *wimá kwári*, 'to beat the drum,' the squashes representing the gourd-rattle (*kaítsa*)—the rattling noise which the dry seeds make inside the squash when shaken. The children are brought to the god-house, wearing on the head a *sikuli*, or 'eye' (which in this ceremony seems to represent the squash-flowers), and carrying rattles in their hands. For this feast is held in honour of *Táté Naaliwámi*, the creator of squashes and all flowers, the special patroness of children. It is a great prayer for growth, health, luck, and plenty to eat.

All priests and shamans use tobacco, which the Huichols, like the ancient Mexican priests, carry about with them in a gourd hanging over the back, this tobacco-gourd being the essential and most necessary outfit of priests of every class. Besides tobacco, there is another intoxicating plant which plays a very important part in the life of the modern Huichols and other living tribes of the Mexicans, as it did, according to the chroniclers, with the Chichimeks, the nomadic tribes of the northern parts of Mexico in ancient pre-Hispanic times. This plant, called in the Mexican language *peyotl* (by the Huichols, Tarahumares, and other tribes of the Sierra, *hikuli*), is a small species of cactus (= *Anhalonium Lewinii*, Hennings), which grows abundantly in the central mesa, especially in a country which the Huichols call Paliátsia, not far from the mining town Real Catorce, in the State of San Luis Potosí. It is thought to be necessary to procure it every year, to ensure the country against drought; and, therefore, in October parties of from two to twelve start on a pilgrimage to Paliátsia; the journey, which is accompanied by much fasting and praying, requires 43 days. The leader of the party and the second in order

carry a *nealtka* ('face,' front-shield) of *Tatévali*, 'Grandfather Fire,' while the rest carry those of other gods. The *peyotl*-seekers are supposed to be accompanied on this journey and guided by the grey squirrel. If one of them sees a *peyotl*, he shoots towards it, not quite hitting it, but lodging one arrow to the right, and one to the left over it. In this way every one shoots five *peyotls*. The plants are strung on long strings to dry. When the feast comes on, the dry plant is mixed with water and has invariably to be ground on the *metate*, or grinding-stone. A thick kind of drink, rather brown in colour, is produced from it, which is offered in small quantities, but at frequent intervals, to those present. This feast occurs in the month of January. It forms an integral part of the feast for eating roasted maize (*raki*), and is, accordingly, named *Karikira*. But it cannot take place until a certain number of deer have been killed, or until the field has been cleared and made ready for the harvest of the coming year.

The greatest feast of all is that for eating maize-cakes made from ground maize baked in an oven (*tamales de maiz crudo*). Like that of roasted maize, this feast can be held only after successful deer-hunts. The heaps of tamales are dedicated by the priest to all gods. When this occurs, some of the people are appointed to blow into sea-shells five times in the day-time and five times at night. Connected with this feast is a ceremonial race performed by young men and women in separate groups. The feast is held for the under world.

LITERATURE.—C. Lumholtz, 'Symbolism of the Huichol Indians,' in *Mem. Amer. Mus. of Nat. Hist.*, New York, 1900, also *Unknown Mexico*, London, 1903. ED. SELER.

HUMANISM.—'Humanism' in philosophy is opposed to Naturalism and Absolutism (*q.v.*); it designates the philosophic attitude which regards the interpretation of human experience as the primary concern of all philosophizing, and asserts the adequacy of human knowledge for this purpose. By thus putting man into the centre of the intellectual universe and giving to all science and literature a reference to human life and its purposes, philosophic connects itself with literary Humanism (see following article). The literary Humanism of the Renaissance, which was essentially an attempt to emancipate thought and education from what it considered the narrow scholastic routine of the mediæval Church by appealing to the civilizing mission of the 'humaner letters' (*i.e.* of classical, and more particularly Greek, literature), thus appears to be included in philosophic Humanism as one of its manifestations. The intellectual movement of the 5th cent. B.C. in Greece, which was initiated by the Sophists and continued by Socrates, is also to be cited as such an era of human revolt against the domination of pedantic, abstruse, and sterile speculation—in this case the systems of the metaphysical 'physiologers.' In fact, modern Humanism is so largely and avowedly a conscious revival of the critical relativism of Protagoras and appeals so explicitly to his maxim that 'man is the measure of all things' that it may without injustice be described as Neo-Protagoreanism. But, though Humanism is confessedly a relativism, and as such is a denial of the *transcendence* of the real and the true, and is opposed to every form of Absolutism (whether in metaphysics or in epistemology) which ignores or destroys their relation to man, it denies on behalf both of itself and of its forerunners that its relativism is to be identified with scepticism. It holds, on the contrary, that the truth and reality for man which are attainable by man are also sufficient for man, and that scepticism is the inevitable outcome of Absolutism so soon as it is

perceived that 'absolute' truth and reality can only be so defined as to be (in fact) unattainable by man. It thus differs from Positivism (*q.v.*) in being willing to assume the adequacy of human knowledge to human needs and in contenting itself with this, in being critical, rather than dogmatically disdainful, of metaphysics, and, above all, in admitting every hypothesis as worth trying which has a human interest and appeals to any side of human nature. It is this open-mindedness that may bring it into conflict with Naturalism, as it may reconcile it even with Absolutism, in so far as the latter can be exhibited as really containing an answer to genuine human demands. But at present it is in dispute whether any 'absolutist' doctrine of knowledge, truth, and reality can really establish any relation between its ideals and the human uses of these terms.

To Pragmatism (*q.v.*), Humanism is closely related. But Pragmatism, though it sends its roots down into a number of sciences, is intrinsically a theory of knowledge, while Humanism is a more general philosophic attitude. William James calls it 'a ferment that has come to stay,' and a 'shifting in the philosophic perspective, making things appear as from a new centre of interest' (*Meaning of Truth*, p. 121). It may be regarded as a natural and logical development of the Pragmatic method of testing knowledge by its human value, when it is extended beyond the problem of testing truths and applied to the other sciences. For the doctrine that all truths are useful implicitly requires that all truth should be related to human purposes, and that this reference should be traced explicitly throughout all the sciences. If truths are useful, they are valuable for man, and the specific character of this value in every science can be stated. Conversely, in proportion as a science can be viewed in its relation to man, it can be utilized for human purposes. Thus, the discovery of the usefulness of knowledge undermines the 'independence' of the sciences and humanizes them; their claim to absoluteness cannot survive the discovery of their man-made character and of the artificial and methodological nature of their principles, even when they seem most abstract and unhuman. Humanism, therefore, like Pragmatism, is primarily the name for a method, and not for a system of philosophy; it is more particularly a protest against the dehumanizing of logic which results from assuming that the personal antecedents, context, and purpose of judgments may be abstracted from in considering their cognitive purport. The humanist criticism of logic (see, *e.g.*, the writer's *Formal Logic*, London, 1912) therefore aims at showing that the attempt to abstract from this human side of thinking reduces the traditional logic to mere verbiage. The humanist attitude implies also a *critical* method of estimating the value of the claims to truth put forward by the various systems of metaphysics. This necessarily renders it very destructive to what is called 'metaphysics.' For metaphysical systems have usually been put forward dogmatically, with claims resting on self-evident 'intuitions' or an alleged completeness, and with pretensions to absolute and exclusive truth. To their humanist critic, however, no claims are valid merely as such; all must be validated by the value of their consequences. The claim to an exclusive possession of absolute truth he takes to be sufficiently refuted by the existence of conflicting claims and by the historic impossibility of finding any two philosophers whose systems are really in agreement. Hence he infers that metaphysical systems are essentially individual creations and relative to the idiosyncrasies of their authors, and justifies this view by the fact that the materials for the construction are naturally individual, and

so to some extent different in each case. It follows that it is not so much the right to construct metaphysics that is called in question as the claim to infallibility and the coerciveness for others of any philosopher's personal system. Thus Humanism makes for toleration and abolishes the right to persecute which is implied in the belief in an absolute and immutable truth which is the same for all, but substitutes for this the notion of a common truth which rests upon social agreement and is being continuously elaborated and improved in the growth of human knowledge. The general effect of this, again, is to diminish the philosophic importance of dialectical subtleties which appeal only to a few, and of merely intellectual reasonings as such, and to enhance that of the common-sense notions which have long ago been evolved by man for the guidance of his actions.

LITERATURE.—Historically the philosophic usage of the word 'Humanism' is of very recent origin. It seems first to occur incidentally as a tentative descriptive term equivalent to 'anthropocentric' and opposed to 'naturalistic' in A. Seth Pringle-Pattison's *Man's Place in the Cosmos*, London, 1897, p. 61; also in *Mind*, new ser. ix. [1900] 436 (used by W. Caldwell of Eucken's 'ethicalism') and xi. [1902] 406. The present writer first proposed (in 1903) to appropriate it technically for the more extended forms of Pragmatism, as held by William James and himself and expressed in James's *Will to Believe* (New York and London, 1896; cf. Preface). He defined it as above, in conscious opposition also to Absolutism, in the Preface to his *Humanism* (London, 1903); cf. his *Studies in Humanism* (do. 1907). This usage was sanctioned by William James in an article on 'The Essence of Humanism' (*Journal of Philosophy*, 1905, ii. 5, reprinted in *The Meaning of Truth* [London, 1910]) and in his *Pragmatism* (do. 1907, Lectures vi. and vii.). Cf. also D. L. Murray's *Pragmatism*, London, 1912, p. 71f. The word has been used, in a too vague sense, merely connoting 'interest in man,' by J. S. Mackenzie in his *Lectures on Humanism*, London, 1907 (cf. the review in *Mind*, xvi. 606). It is also used, in religious contexts, by secularists as the opposite of 'supernaturalism.' F. C. S. SCHILLER.

HUMANISTS.—I. *GENERAL.*—The transition from the mediæval to the modern world seems one of the most abrupt in the pages of history. Certainly it did not take place even in the same century in the different lands,—the harvest in Italy was over before the seed was sown in Scotland,—nor did the various fields of human life quicken to the new impulse with a simultaneous response, but the emergence of the new order followed hard on the thrill of expectation. The whole complex movement which wrought the transformation in the outlook of men we call the Renaissance (*q.v.*). Humanism was the intellectual centre of the movement: in the Humanists we find its conscious pioneers and promoters.

The name 'Humanist' itself indicates the nature of the movement. Just as in the Scottish Universities the term 'Humanity' is still used as a designation for the Latin language and literature, and as in wider circles classical studies in general are summed up as 'the Humanities'—*litteræ humanæ*, or *litteræ humaniores*,—so the Humanist is the student of humane letters, the languages and the literatures of Greece and Rome. The work of the Humanists was to disinter the buried classics, to restore a lost means of culture, to recapture an ancient charm of style, and a broader humanity of spirit.

But the change was not so sudden as it seemed. There were signs of the approaching dissolution of Mediævalism before the Renaissance proper began. From the 11th cent. there were traces of the dawn.

A. Bartoli (*I Precursori del rinascimento*, Florence, 1877, p. 19f.) would date it from the reaction from terrorism which took place when the year 1000 passed and left the world undestroyed. But both the preceding darkness and the succeeding light have to be exaggerated to make this plausible. There was also a partial revival of learning in the 12th cent., due in great measure to the discovery of works of Aristotle of which all trace had been lost; but, since Aristotle as understood or misunderstood was one of the cramping forces from which Humanism set men free, it is vain to seek any real connexion. The 13th cent., however, certainly saw precursors of the Renaissance, and men whom we may call, with but little over-estimation of their significance,

'Humanists before Humanism.' In men like Robert Grosseteste (1175–1253), whose interest in the origins of Christianity led him to give to the world, through the help of others, Latin versions of Greek works then attributed to primitive times, and Roger Bacon (1214–94), who toiled so unweariedly at the 'original tongues,' and who felt so keenly the blanks in the extant writings of the Fathers, we see genuine, though isolated, foregleams of the coming revival. The 13th cent. saw also Universities founded in various countries of Western Europe, particularly in Italy, England, and Spain, bearing witness to a new and widespread zeal for education, a fresh kindling of enthusiasm for things intellectual. But these Universities soon fell into the hands of the dominant Scholasticism, and became strongholds of mediæval tradition.

The Humanist movement proper begins in Italy in the 14th cent., and its first great name is Petrarch. The contrast between the new era and the old is very clearly seen in two interesting passages from the works of Erasmus. In 1518, when the false news of the death of the greatest of the Humanists from the plague at Louvain spread throughout Europe, the monks of Cologne are said to have rejoiced that he died the death of a heretic 'sine lux, sine crux, sine Deus.' Here the narrow intensity of the spirit and the barbarity of the language testify to the double pit from which the Humanists sought to deliver Europe. In the preface to his edition of Jerome, Erasmus writes:

'We kiss the old shoes and dirty handkerchiefs of the saints, and we neglect their hooks, which are the more holy and valuable relics. We lock up their shirts and clothes in jewelled cabinets; but as to their writings on which they spent so much pains, and which are still extant for our benefit, we abandon them to mouldiness and vermin.'

The homage which had been lavished on the relics of saints ancient and modern was turned by the Humanists into a new channel. Men began to revere the works of the great minds of the ancient world, at times with all the old blind devotion. When Petrarch received the MSS of Homer and Plato from Nicolaus Sycoerus of Constantinople, he kissed them, and sighed over them; and, though he had not Greek enough to read them, he declared that thus to look upon the Greeks was an inspiration.

The Humanists were one and all scholars, with a great love for learning, and a genuine appreciation of beauty of form and thought, 'with the generous belief,' to use the phrase of Pater (*The Renaissance*, popular ed., London, 1912, p. 37), 'that nothing which had ever interested the human mind could wholly lose its vitality'—scholars who, despite their manifold differences, were alike in this, that they rebelled against the barrenness and dogmatism of Mediævalism. Into a world where all thought was ordered by the Church, and all secular activity moulded by the Feudal system, there came through them a breath from the distant past, resulting in a re-discovery of the world and of man.

It is only the revolt from Mediævalism as an enclosed and final scheme of thought that concerns us here; the political, social, artistic, and scientific revivals belong to the wider term Renaissance, and the ecclesiastical and religious to the Reformation.

This revolt from Mediævalism was more complete in some circles than in others. The extent of it was the cause of a short but sharp disagreement between two of the most kindred spirits among the Humanists, John Colet and Erasmus. In a conversation on the Schoolmen and their limitations, Erasmus more than once tried to make an exception of Thomas Aquinas, on the ground that he had at least studied the Scriptures and some ancient literature; but Colet would have none of it:

'Why do you extol him to me? If he had not been exceedingly arrogant, he would not with such rashness and such pride have defined everything; and unless his spirit had been somewhat worldly, he would not so have contaminated the whole teaching of Christ with his profane philosophy' (Erasmus, *Opera*, Leyden, 1703–06, iii. 458).

Further study of Aquinas brought Erasmus round to Colet's way of thinking. But the kind of disagreement which came to sharp expression in

this conversation was more fundamental and more permanent in other quarters.

The common characteristic of the Humanists is this escape, more or less thorough, from the fetters in which human thought had been confined—an escape into a wider, freer world where all facts were relevant, where all theories had to be tested by relating them to their discoveries, and all formulæ recast in accordance with their new-old light—an escape whose prime cause was the new enthusiasm for the poets, historians, and philosophers of Greece and Rome, the Fathers of the Church, and the Scriptures of the OT and NT in their original tongues, regarded no longer through the distorting medium of allegorical interpretation, but reverently, patiently, and critically studied.

It is when we attempt to find any common characteristic of the wider, freer world into which they escaped that anything like exact definition becomes impossible. To some minds, coming into direct contact for the first time with certain parts of that ancient literature, the most potent thrill was a sense of relief at entering a region where there seemed to be unqualified liberty and no restraining authority. They absorbed with avidity the vices as well as the virtues of Paganism. The *Facetiarum Liber* of Poggio—a Papal secretary—showed the length to which this tendency might go uncondemned by the Church. The *Hermaphroditus* of Beccadelli—the extreme example of this type—fortunately met with a different reception. Hailed with delight by many of the Humanists, it was unsparingly denounced by the better sort of Churchmen. To others, Humanism meant chiefly the escape from the arid desert of a fragmentary Aristotle to the fertile fields of Platonic speculation, and there arose an enthusiasm for Plato and the Neo-Platonists whose most prominent devotees were Marsiglio Ficino and Pico della Mirandola—an enthusiasm which spread from Florence throughout Europe. To still a third group, and it was the most permanently influential, the Fathers of the Church and the New Testament itself gave the first glimpse of religion in an older and purer form, and their energy was directed to a Renaissance or Restitution of Christianity. Erasmus, who declared that ‘the highest object of the revival of philosophical studies will be to become acquainted with simple and pure Christianity in the Bible’ (quoted in M. Dods, *Erasmus and other Essays*², London, 1892, p. 24), is the most prominent member of this group. So the Humanist movement, so positive in its discoveries, so enduring in its effects, can be defined only negatively. It was a revolt more or less complete with a new sense of freedom and individuality, a deliverance from bondage into a world of no restraints, but to many of new and high constraints. Every shade of free activity, from one end of the spectrum to the other, from the unblushing libertinism of the newly emancipated to the reforming zeal of those who had found the highest and final standard, is to be found within the ranks of the Humanists.

II. *HUMANISM IN THE VARIOUS COUNTRIES.*—Although Humanism had its distinguished representatives over most of Europe, and although the movement in one nation or group of nations naturally affected its neighbours, yet the history of the movement in each nation is so distinct that it will conduce to clearness to take them separately.

I. *Italy.*—It was natural that the revival of learning should take its rise in Italy, partly because of its proximity to the Eastern Empire, but mainly on account of its local and hereditary connexion with the glory of the past of Rome. A revival which was patriotic in spirit, antiquarian in its interests, but sporadic in its manifestations, prepared the way for Petrarch.

Francesco Petrarca (1304–74) has been rightly acclaimed as the first of the Humanists. His great predecessor, Dante (1265–1321), is a citizen of two worlds, mediæval and modern; Petrarch is the first true modern. It is noteworthy that the decisive impulse came to him from Cicero, in slavish imitation of whom the Humanism of Italy, almost two centuries later, first showed the fatal symptoms of decay. He loved Cicero from his school-days and read him eagerly, not with a view to advancement in his profession of the law, but because of his delight in his majestic swing and balanced periods. It was the style that fascinated him from the beginning. Another impulse came from the sight of Rome (1336) deserted by the Popes, yet full of monuments eloquent of past grandeur. Cicero and the other neglected Classics were to him the gateway into the understanding of this ruined splendour. So, despite many an early discouragement, he pursued his studies in the literature of Rome. In his correspondence and in most of his writings he used a Latin moulded on the Classics. He was prouder of his *Africa* and *de Viris Illustribus* than of the Italian *Rime* or *Canzoniere* on which his fame now rests. To seek out MSS, particularly of Cicero, was perhaps his most absorbing pursuit. His letters are full of the delight of discovery and the chagrin of loss. He made an attempt to master Greek. It failed because of the early departure of his teacher, and, he confesses, the strangeness of the foreign tongue. But he never ceased to exhort younger men to acquire it. Along these lines lay the activity of the first of the Humanists, and, as J. A. Symonds says (*Renaissance in Italy*, vol. on ‘The Revival of Learning,’ new ed., London, 1902, p. 54):

‘In this susceptibility to the melodies of rhetorical prose, in this special cult of Cicero, in the passion for collecting manuscripts, and in the intuition that the future of scholarship depended upon the resuscitation of Greek studies, Petrarch initiated the four most important momenta of the classical Renaissance.’

Petrarch’s devotion to the Classics led to no breach with the Church. He criticized some of its abuses, though belonging himself to its priesthood, and conspicuously avoiding all ecclesiastical duties. His learning did not tend to Paganism; the ancient culture was to him a handmaid to Christianity. Of the law and philosophy of his day, however, he spoke with open scorn. It was mere empty sophistry, unprofitable mental gyrations. In these things, and in other less admirable respects—in his irritability under criticism, his prodigious appetite for flattery, his overweening desire for personal fame, and his inveterate habit of posing—he foreshadowed the activities and failings of his successors. His labours served to inspire others with similar ideals, and they created the atmosphere necessary for their development.

Giovanni Boccaccio (1313–75), a younger contemporary of Petrarch, was his most distinguished disciple. If Petrarch has the honour of being the first of the Humanists, to Boccaccio belongs that of being the first to acquire anything like a working knowledge of Greek. His teacher was the pretentious Leontius Pilatus, and the knowledge he acquired was not very profound, but still it was a beginning. Devoted to Petrarch, he followed his guidance. He had sound ideas about collating MSS, and a genuine reverence for every ancient writing, however unworthy. His main departure from the ideas of his contemporary and master was in his bitter hatred of the monks, as the opponents of learning, and hypocritical pretenders to sanctity. With Boccaccio, Florence becomes the headquarters of the Humanists. The brightest stars in its galaxy were Luigi Marsiglio (1342–94), the soul and leader of the Florentine club of Humanists, which was the true University of the

time; and Coluccio Salutati (1330-1406), the Chancellor of State, whose official letters were copied and treasured for their style. Gian Galeazzo Visconti of Milan declared that one letter of Salutati's could do him more harm by its style than a troop of paid mercenaries.

It was through the influence of Salutati and his circle, particularly Palla degli Strozzi, that the first competent teacher of Greek was brought to the West. This was Manuel Chrysoloras, who taught in Florence from 1397 to 1400, and until 1415 in other parts of Italy, and whose *Erotemata* was the earliest Greek grammar of the revival. 'Through seven hundred years,' wrote one of his earliest and most distinguished pupils, Leonardo Bruni (1369-1444), 'no one in all Italy has been master of Greek letters.' 'Chrysoloras of Byzantium . . . brought to us Greek learning.' Among his successors in the teaching of Greek in Italy were George of Trebizond, who taught in Venice and Rome as well as in Florence; Theodorus Gaza, teacher in Ferrara (1441-50) and afterwards in Rome, whose Greek grammar, fuller and more scientific than that of Chrysoloras, Erasmus used in his classes in England; John Argyropoulos, in Florence (1456-71), afterwards in Rome, the teacher of Lorenzo de' Medici, Politian, and Reuchlin; Demetrius Chalcondylas of Rome and Perugia; and John Lascaris who, by his residence in Paris, left his mark on the Humanism of France. Greek learning was therefore not brought to Italy by scholars fleeing with their precious MSS from Constantinople at the fall of the Eastern Empire; it was during the half century which preceded its fall that, on the earnest request of the Italians themselves, the earliest Greek scholars settled in Italy. Vergerius, writing probably in 1404, in his *de Ingeniis Moribus*, expressed the mind of many: 'It is hard that no slight portion of the history of Rome is to be known only through the labours of one writing in the Greek language: it is still worse that this same noble tongue, once well nigh the daily speech of our race, as familiar as the Latin language itself, is on the point of perishing even amongst its own sons, and to us Italians is already utterly lost, unless we except one or two who in our time are tardily endeavouring to rescue something—if it be only a mere echo of it—from oblivion.' The impulse to Greek study came not from the supply of teachers, but from the demand thus evidenced in the longing of Italian scholars, and their sense that the time might be short.

One other agent in the revival of Greek deserves to be named apart. This was Gemisthos Pletho (1355-1450), whose presence at the Council of Florence in 1438 turned many of the Humanists to the special study of Plato and the Neo-Platonists. Pletho's aim seems to have been to supersede the Christian Church and the religions of the world by a Neo-Platonic Mysticism. Cosimo de' Medici (1389-1464), carried away by his eloquence and his 'indiscriminate erudition,' founded the Florentine Academy and resolved to train up the youthful Marsiglio Ficino (1433-99) to be the expositor of Platonic philosophy to the West. In 1482 appeared Ficino's translation of Plato, and, four years later, that of Plotinus. But his spirit was far different from that of Pletho. There was no thought in his mind of superseding Christianity. Plato and Christ were colleagues rather than rivals. Whether the practice ascribed to him of keeping two candles burning in his room, one before a bust of Plato, and the other before an image of the Virgin, be true or not, it was certainly a fit symbol of the point of view of his circle. He preached Plato from the pulpit of the Duomo. He did much to revive the study of Plato, but it must be confessed that he was drawn more to his poetic excrescences than to the great fundamental ideas. He was profoundly moved by Savonarola, but it seems to have been only for a time. Savonarola saw too clearly the danger threatened by the whole movement to the uniqueness of revealed religion, and Ficino is recorded later to have lamented his temporary devotion to the 'hypocrite of Ferrara.' More even than Ficino, Giovanni Pico della Mirandola (1463-94) was the object of a hero-worship which extended far beyond the confines of Italy. His theses in favour of Platonism brought him under the ban of the Church, but he was the most profoundly religious of all the disciples of Plato. This, combined with the charm of manner, wealth, generosity and early death of this 'great lord of Italy,' gave him an extraordinary influence in Humanist circles throughout

Europe. And it was his *Heptaplus*, with its mistaken zeal for the Kabbala, that started Reuchlin on the study of Hebrew.

This Florentine Academy was only one of many institutions of the kind. Of the others, the most significant were those of Rome, founded by Julius Pomponius Laetus (1425-98) about 1460, antiquarian in its interests, openly pagan in its tone; Naples, founded by Jovianus Pontanus (1426-1503) from the remaining members of the Humanist protégés of Alfonso the Magnanimous, devoting itself mainly to the cultivation of style; and Venice, the latest of all, which centred in the Aldine Press and the founder, Aldus Manutius (1449-1515). Its discussions were conducted in Greek, and its main concerns were the choice of books to be published and the accuracy of their texts.

The great patrons of learning ought not to be passed over without remark. Mention has already been made of Cosimo de' Medici; but his grandson, Lorenzo the Magnificent (1449-92), was the Mæcenas of an even more brilliant circle. His son again, Giovanni, as Pope Leo x. (from 1513 to 1521), conferred high ecclesiastical office on very unchurchly Humanists. He was not the only Roman Pontiff, however, to show them favour. Nicholas v. (elected 1447) was the first of them. A Humanist himself of the earlier type, he gathered round him a notable band of scholars. Under him Rome became a 'workshop of erudition.' Pius II. (1458-64), who as Enea Sylvio had gained no mean reputation as a Humanist, grievously disappointed his expectant friends. Artists, not scholars, won his patronage.

During the whole of the 15th cent. the work of collection was zealously pursued by men like Niccolò Niccoli (1364-1437), who bequeathed 800 MSS to Florence, and Vespasiano da Bisticci (1421-98), multiplier of MSS, bookseller, and biographer of his patrons; libraries had been formed; and in the latter half of the century the Humanism of Italy reached its highest level in Angelo Ambrogini (Politian) (1454-94). Professor of Greek and Latin in Florence, he wrote poetry in three languages, showing an extraordinary fluency in Latin verse. His aim was independence, not imitation, and in his hands Latin had all the flexibility of a living language. His influence was extensive and profound. Somewhat before his time, and somewhat beneath his level of attainment, but with the same aims and ambitions was Francesco Filelfo (1398-1481). These two were the leading Humanist Professors in the high noon of Humanism.

A marked feature of the Humanist movement in Italy was the number and ferocity of its literary duels. The most truculent of these duellists was Poggio Bracciolini (1380-1459), the explorer of neglected libraries. His controversies with Filelfo over the standing of Florence, with Guarino da Verona (1370-1460) upon the comparative merits of Scipio and Julius Cæsar, and with Lorenzo Valla (1405-57), occasioned by some marginal annotations of one of Valla's pupils, and developing into an onslaught on each other's Latinity, were conducted with an unparalleled scurrility, venom, and foulness. Valla's contributions, though decidedly more temperate, were disfigured by the same kind of venomous invective. Some of Valla's other work was epoch-making, though the manner of it was far from his intention. His exposure of the 'Donation of Constantine,' and his *Collatio Novi Testamenti*, in which and in his *Annotationes* the discrepancies between the Vulgate and the Greek first came to the light, helped materially the cause of the Reformation.

By the end of the 15th cent. the Humanism of Italy had entered on its final stage. In Pietro Bembo (1470-1547) we see the old enthusiasm for letters, but, dominating everything, a conscious aping of the elegancies of Ciceronian diction. With the sack of Rome in 1527 and the compact between Emperor and Pope in 1530, the Italian revival of learning comes to an end. The age of Spanish tyranny succeeds, and the glowing fire burns low. By the middle of the 16th cent. Greek was disappearing. Even to the erudite Cæsar Baronius (1538-1607) it was an unknown tongue. But the flame which had been thus kindled and nourished in Italy had already spread to other lands.

2. France.—Though there are early signs of the passage of the New Learning into France, it was long kept in the background through the prestige of the University of Paris and its Sorbonne. Jean de Montreuil (1354-1418), disciple of Petrarch and correspondent of Salutati, probably deserves the

credit of having led the way. His friend, **Nicholas de Clémanges** (1367[?]-1437), through diligent reading of the Classics, attained a considerable repute for Ciceronian eloquence. He was influenced purely by the classic style, and not by the classic spirit. To the end he remained a true son of the mediæval Church. There are records of Greek in Paris from 1430; in 1458 came the first recognized teacher; but there can hardly be said to be a Humanist movement until 1494, when the expedition of Charles VIII. to Naples began the closer connexion between France and Italy. The French kings became patrons of learning. **John Lascaris** from 1495 taught Greek in the University of Paris, and **Jerome Aleander** (1480-1542) from 1508 added the study of Hebrew. **Guillaume Budé** (Budæus) (1467-1540), whose dream of the establishment of a great Humanist College in Paris by Francis I. took shape in 1530 in the Royal College, was, 'beyond question, the best Greek scholar of his day in Europe' (*Cambridge Modern History*, i. [1902] 576). **Lefevre d'Étaples** (Faber Stapulensis) (1455-1536), until 1507 earning distinction as a teacher of the Classics in Paris, then turned his attention to the exegesis and translation of the Bible. Condemned by the Sorbonne, he was protected by **Bricconnet**, bishop of Meaux (1470-1534). But the 'group of Meaux' belongs rather to the history of the Reformation. **Guillaume Farel** (1489-1565), his favourite pupil, connects him with **Calvin**. **Estienne Dolet** (1509-46), for six years in Italy during the last stages of Italian Humanism, was the champion of Ciceronianism against **Erasmus**, and became 'the martyr of the Renaissance,' being burned to death in Paris on a charge of heresy. **Adrien Turnèbe** (Turnebus) (1512-65), professor of Greek and king's printer, did much to advance Greek scholarship; and **Julius Cæsar Scaliger** (1484[?]-1558), erudite and irascible, rivalled **Poggio** in virulence of invective, in his attack on **Erasmus**. The **Estiannes**, **Robert** (1503-59) and his son **Henri** (1528-98), rendered most effective service to the Humanist cause by their numerous classical publications.

The Humanists of France, perhaps more through having felt the general stir of the Renaissance before their attention was turned to the Classics than through any natural predisposition, had little of the blind reverence for all things classical that we find in Italy. Their scholarship was thorough, but more detached and critical. In **Joseph Justus Scaliger** (1540-1609) and **Isaac Casaubon** (1559-1614) it reached its highest level.

3. **Germany**.—In 1514 there was issued from the press at Tübingen a volume entitled 'Clarorum Virorum Epistolæ, Latinae, Græcæ et Hebraicæ variis temporibus missæ ad Joannem Reuchlin,' in support of **Reuchlin** in his fight for Hebrew learning. In the same year there appeared an apparent counterblast with the title 'Epistolæ obscurorum virorum ad venerabilem virum M. Ortuinum Gratium variis et locis et temporibus missæ ac demum in volumen coactæ.' **Gratius** was Professor in Cologne, the headquarters of Mediævalism, and in this book he and his class were put to ridicule in a wild parody of their own dog-Latin. Several of the Humanists are known to have had their share in it; and, though frowned on by **Reuchlin** for its coarseness, it did more than anything else to make Humanism a natural movement in Germany, as it had been in Italy, and as it never really became in any other country. Humanism found in Germany a second home.

It had made its appearance long before this. Its way had been prepared by the schools of the 'Brethren of the Common Life' (*g.v.*). Schools like **Schlettstadt**, where **Reuchlin** began his education, and **Deventer**, whose most famous master,

Alexander Hegius (1433-99), had **Erasmus** as a pupil, were far beyond anything in pre-Humanist Italy. It had its forerunners in men like **Gregor von Heimburg** (1410-72), who were half fascinated and half repelled by the Italian Humanists. Through German students like **Peter Luder** (1415-74), whom the national *Wanderlust* drove across the Alps, through the great Councils, where the Humanist secretaries of Italian prelates impressed their German brethren, and through the frequent commercial intercourse, the revival spread. Corresponding to the Academies of Italy were informal associations in the towns and cities. In **Erasmus's** account of his German journeys there is frequent reference to reception and escort by the *sodalitium* or *confraternitas*—the local group of scholars united in the comradeship of learning. The Humanist Universities were naturally centres of such fraternities. The circle in Erfurt was called 'the Mutianic host,' from **Mutianus Rufus** (1471-1526), one of the many who had come under the spell of **Pico**. The centre of the Heidelberg group was **Rudolf Agricola** (1443-85), 'the first,' **Erasmus** declared, 'to bring us out of Italy a breath of higher culture.' At Ingolstadt, **Johann Eck** (1486-1543), who became the opponent of **Luther**, and **Urbanus Rhegius** (1489-1541), who became a zealous supporter, were the dominant forces. At **Basel**, **Glareanus** (1488-1563) ruled, save during the residence of **Erasmus**.

But independently of the Universities, the Humanists had their groups in the great cities. At **Nürnberg** they gathered round **Wilibald Pirckheimer** (1470-1528), who combined in his own person the versatility of the Italian Renaissance and the more earnest spirit of his own land; at **Augsburg** round **Conrad Peutinger** (1465-1547), keeper of the city archives, diplomatist, and antiquarian; at **Strassburg**, round **Jacob Wimpfeling** (1450-1528), 'the schoolmaster of Germany,' and **Sebastian Brant** (1457-1521), satirist and author of the *Narrenschiff*.

Three names stand out from all the others in importance and significance. **Johann Reuchlin** (1455-1522), with attainments in Greek which gave cause for astonishment to **Argyropoulos**, was the effective promoter of Hebrew studies. Though **Conrad Pellicanus** (1478-1556) had in 1504 published a creditable Hebrew Grammar, it was **Reuchlin's Rudimenta Hebraicæ** that became the foundation of Hebrew scholarship. Attacked as a traitor to the Church for opposing **Pfefferkorn's** proposed holocaust of Hebrew books, he was at first acquitted (1514 and 1516) and then condemned on appeal (1520). It was the stand which he made that united the forces of German Humanism. **Ulrich von Hutten** (1488-1523), the son of an impoverished Franconian noble, was designed for the Church, and sent at the age of 11 to the Monastery of Fulda. Fleeing thence, he studied at one Humanist University after another, crossed into Italy, and lived the life of the wandering scholar. In him we see the New Learning devoted to political and social ends. His great aim was 'a united Germany under a reformed Emperor.' He was drawn into passionate attachment to the Lutheran movement by its patriotic possibilities. **Philip Melancthon** (1497-1560), in virtue of his work on **Virgil** and **Terence**, was called at the age of 21 to the chair of Greek at **Wittenberg**. Amid all his multifarious labours on behalf of the Reformation, he found time and opportunity to foster education and to furnish it himself with indispensable aids to classical study.

Though there were a few, like **Peter Luder** and **Conrad Celtes** (1459-1509), who may be said to represent the Neo-paganism which was so prominent in Italy, and though most of the older Humanists

refused to join the Reformers when the actual breach came, it was their work that had prepared the way for it, and their pupils gathered round Luther and Zwingli. The main stream of German Humanism had from the beginning been flowing steadily towards Reformation in some shape or form.

4. **England.**—Through his kinship of spirit with Petrarch, Chaucer (1340[?]-1400) has been hailed as the morning star of the Renaissance. But his kinship is not with the distinctively Humanist side of Petrarch's activity. Humphry, Duke of Gloucester (1391-1447), patron of scholars, collector, and correspondent of Italian Humanists, did much to hasten the new era. But it is with two friends, Thomas Linacre (1460[?]-1524) and William Grocyn (1446[?]-1519), who had studied in Italy under Politian, and on their return taught Greek in Oxford, that Humanism began really to establish itself in England. John Colet (1467[?]-1519) gave the movement its strongest impulse and its direction. He returned from Italy, well equipped in scholarship, and with a thorough contempt both for the whole scholastic dialectic and for the Neopagan Humanism. In his lectures in Oxford on St. Paul's Epistles he broke fresh ground. 'He was the first to apply the critical methods of the New Learning to discover the exact meaning of the books of the Holy Scriptures' (T. M. Lindsay, *A History of the Reformation*, Edinburgh, 1906-07, i. 165). In 1510, Colet, now Dean of St. Paul's, devoted his patrimony to the founding of St. Paul's school, where 'children should be taught good literature, both Latin and Greek.' Its first master, William Lily (1466[?]-1522), gave his name to the Latin grammar prepared for the school, and subsequently widely used. In reality it was a composite production. The foundation was Colet's, but it was revised by Erasmus, Lily, and others. Colet's friend, Sir Thomas More (1478-1535), was a hero-worshipper of Pico della Mirandola, whose life, which he translated, showed him the possibility of combining the new culture with a fervent yet uncloistered Christianity. In his *Utopia* (1516) he gave evidence of his open-mindedness to all the better influences, not only of Humanism but of the whole Renaissance movement. Among other names worthy of mention are Sir Thomas Smith (1512-77) and Sir John Cheke (1514-57), through whom Greek studies were established in Cambridge; Roger Ascham (1515-68), Greek enthusiast and educational reformer; and William Tyndale (1484[?]-1536), who, from the preparatory school of Erasmus, passed into that of Luther. The Humanism of England produced no prodigies of erudition, but it did produce great popularizers—translators of the Classics whose translations themselves became classics. North's *Plutarch* and Chapman's *Homer* are conspicuous examples. Through such translations, Humanism profoundly influenced and helped Elizabethan literature. And it must ever be remembered that in its springtime the Humanism of England had its own definite ideals to which Erasmus owed more than a little. These ideals find fit expression in the statutes of Colet's school: 'My intent is by this school specially to increase knowledge, and worshipping of God and Our Lord Jesus Christ, and good Christian life and manners' (F. Seebohm, *The Oxford Reformers*², London, 1869, p. 208 f.).

5. **The other countries.**—The New Learning passed to Spain through scholars who had been to Italy. Of these the foremost, though not the first, was Antonio Lebrixa (1442[?]-1522), who, after ten years in Italy, taught in the Universities of Seville, Salamanca, and Alcalá. The University of Alcalá was the headquarters of Spanish Humanism; Cardinal Ximenes (1436-1517) was its

Mæcenas, the *Complutensian Polyglot* (1522) its outstanding product. The revival, short but brilliant, came to an end, like that of Italy, through the compact between Charles v. and Clement vii. in 1530.

To Scotland the New Learning came late. Passing over earlier students who came under its spell abroad, men like Patrick Hamilton (1504[?]-1528), who belong rather to the Reformation, the one outstanding name is that of George Buchanan (1506-82). Trained in France and a teacher there, he was one of the leaders in the ill-fated attempt to plant the New Learning in Portugal. His Latin Paraphrases of the Psalms and his other Latin poetry had a tremendous vogue. Joseph Justus Scaliger declared that Latin literature had reached its climax in Buchanan's verse. To Andrew Melville (1545-1622) belongs the credit of re-organizing Scottish University education on Humanist lines.

We have left to the last the greatest of the Humanists, Desiderius Erasmus. Born in Rotterdam in 1466 or 1467, he belongs by birth to 'the other countries.' In spirit he was a true cosmopolitan. He is to be found, first in France, then in England, France again, Italy, England again, and finally at Basel. And this list does not include the shorter visits of this born wanderer. He was the friend and correspondent of the contemporary leaders of Humanism in all the countries. He became almost a dictator of learning for Europe north of the Alps, without ever assuming the manner of the despot. In the field of classical studies his *Adagia*, *de Copia Verborum*, and *Aphthegmata* were much-prized aids to study. The second went through sixty editions in his lifetime. In Greek he was perhaps second to Budæus, but in Latin he had no real rival. Jealous Italians might call him 'Porrochaval' (in allusion to his fondness for the word *porro*), but, as his *Ciceronianus* showed, his ideals were not theirs, and his Latin, if not so imitative of Cicero, was a much more flexible and powerful instrument. Works like the *Encomium Moriae* and the *Colloquia* showed the world the necessity of reform. His aim throughout was a Christian Renaissance, the source of which was not to be found in Plato, but in a return to the New Testament and the older Fathers of the Church. His Greek Testament of 1516, his numerous editions of the Fathers, and indeed the great bulk of his very numerous works were designed to help in such a Christian Renaissance. In the midst of his labours the Reformation came. He died at Basel in 1536, committed to neither party, but amid an admiring circle of friends who were all on the Reformed side.

Though his attempted neutrality in the decisive struggle and certain obvious faults in his character have caused him to be looked upon as a petty-minded man, he did more than any other to extend the influence of Humanism, and that of the very highest type, thereby earning fairly the name of the greatest of the Humanists. Half-hearted Reformer he may have been, but he was neither half-hearted Humanist nor half-hearted Christian.

III. **RESULTS.**—In dealing with the general results of the Humanist movement thus sketched, the difficulty is to disentangle it from the Renaissance as a whole. We are apt to ascribe to it influences which, strictly speaking, do not belong to it at all. The defects of the movement are evident—(1) in its tendency to exalt erudition above true intellectual development, and to degenerate into mere pedantry; (2) in its open resuscitation of pagan vices; and (3) in the insincerity induced by a too exclusive devotion to style. Panegyric and abuse in some quarters became fine arts. The sale of eulogies by the Humanists has been fitly compared to the sale of Indulgences by the Church.

On the other hand, there were many distinct gains. (1) The buried Classics were disinterred and preserved; they were diffused by the printing-press; they were made available by Grammar and Lexicon. (2) Education was set free from narrow Scholastic limits and clerical monopoly. Culture was for the citizen as well as for the 'clerk.' (For men and methods, see EDUCATION, vol. v. p. 175*.) (3) The contact thus established with the great minds of antiquity led to the general revival of thought. The reaction from the fragmentary Aristotle and his mediæval commentators led at first to uncritical enthusiasm for even the wildest vagaries that could be called Platonic or even Neo-Platonic, but later, through controversy and study, to a reasoned understanding of both, thus preparing the way for modern philosophy. (4) Art and literature received a fresh impulse through the abundance of new material of which it did not fail to make extensive use. (5) Acquaintance with the literatures of Greece and Rome led to a rapid evolution of literary forms in the national languages. Most of the Humanists looked with contempt on the uncouthness of their vernaculars. Petrarch's preference for his Latin writings, his regret that Dante had not written in Latin, and Hutten's confession that he did not think the German language a fit instrument of literature till he had seen Luther's use of it, are outstanding examples. The futile experiments which almost every European literature witnessed of torturing the vernacular into classical moulds had yet their result in a new variety of form, and a new power over language. (6) The critical methods of the Humanists swept away such obscurations as the four-fold sense, and, applied by Northern scholars to the Fathers and the Scriptures, gave a great impetus to the Reformation. The broad result is summed up by Jebb:

'The historical importance of the Classical Revival in Italy depends ultimately on the fact that it broadened out into this diffusion of a general capacity for liberal culture, taking various forms under various local and national conditions. That capacity, once restored to the civilised world, became a part of the higher life of the race, an energy which, though it might be temporarily retarded here and there by reactionary forces, could not again be lost. Not in literature or in art alone, but in every form of intellectual activity, the Renaissance opened a new era for mankind' (*Cambridge Modern History*, i. 584).

Hudson, *The Story of the Renaissance*, London, 1912; J. D. Symon and S. L. Bensusan, *The Renaissance and its Makers*, London, 1913.

HUGH WATT.

HUMANITARIANISM.—Humanitarianism in the ethical sense—wholly distinct from the theological—is the deliberate and systematic study of humane principles, the attempt to show that humaneness is an integral part, if not the actual basis, of morals. In estimating the value of compassion as a moral force, it is not necessary to discuss the different theories as to its origin, propounded by the two schools of intuitive and of utili-

tarian ethics, as represented, on the one hand, by Butler, who holds (in his Sermon on 'Compassion' [*Sermons*, ed. Bernard, London, 1900, p. 74]) that it is an 'original, distinct, particular affection in human nature,' and, on the other hand, by Hobbes, who maintains (*Human Nature*, ix. 10) that it is 'imagination, or fiction of future calamity to ourselves, proceeding from the sense of another man's calamity'; for, however this may be, it is evident that compassion is closely allied to that imaginative sympathy by which we identify ourselves with others. In the words of W. Wollaston (*Religion of Nature*, 1759), 'there is something in human nature, resulting from our very make and constitution, which renders us obnoxious to the pains of others, causes us to sympathise with them, and almost comprehends us in their case. It is grievous to see or hear, and almost to hear of, any man, or even any animal whatever, in torture.'

For example, when a man turns aside to avoid crushing an insect, why does he do so? Certainly not because of any reasoned conviction as to the sufferings of 'the poor beetle that we tread upon,' but for the simple fact that, consciously or unconsciously, he is humane; the sight of suffering, however slight, is distasteful to him as being human. Of all mistaken notions concerning humanitarianism, the most mistaken is that which regards it as some extraneous artificial cult, forced on human nature from without; whereas in truth it is founded on an instinctive conviction from within, a very part of human development. When we talk of a man 'becoming a humanitarian,' what we really mean is that he has recognized a fact that was already within his consciousness,—the kinship of all sentient life—of which humanitarianism is the avowed and definite proclamation.

But, if it be true that compassion is 'an undeniable fact of human consciousness,' residing 'in human nature itself' (Schopenhauer, *Basis of Mor.*, ch. vi.), it is also true that this compassionate instinct, before it can be put to practical service in a complex social state, must be tested by experience and reason. Unmistakable as are our humane promptings, they cannot in all cases be realized; for self-preservation, that other great natural impulse, has first to be consulted, and we are trammelled by a host of traditional customs and obligations which often render it difficult or impossible to give our humanity due effect. Here, again, it is the function of humanitarianism to reconcile the ideal with the actual, to unite compassion with judgment, and to discover not only how we feel, or ought to feel, towards our fellow-beings, but also to what extent and with what limitations we can, at the present time, and under present conditions, put those feelings into practice.

An attempt is sometimes made to disparage humanitarianism by setting it in contrast to humaneness: 'I would be humane,' some one will say, 'but not humanitarian.' But as a matter of fact there is no sort of contradiction between the two terms; for humanitarianism is nothing more than conscious and organized humaneness. There is a vast amount of compassionate sentiment that is at present scattered and isolated, and therefore to a great extent ineffective; it is the business of humanitarianism to collect and focus this feeling into an energetic whole.

It must be noted, at the outset, that humanitarianism in this sense, as a branch of ethical science, is a modern product, for it was not until the 18th cent.—the age of 'sensibility'—that there began to be any wide-spread recognition of humaneness as a force in civilized society. No doubt the duty of love and gentleness to sentient life had been inculcated, all down the ages, as part of the higher teaching—in the doctrines of Buddha, in

the system of Pythagoras, in the practice of the Essenes, in the pagan philosophy of Plutarch and Porphyry, and with less consistency, perhaps, so far as our duties towards the lower animals are concerned, in the Christian Scriptures. For, though the gospel of 'peace and goodwill' led its early followers to a belief in the sacredness of all human life and the natural equality of men, and this belief led in its turn to the abolition or curtailment of many cruel practices, such as the gladiatorial shows, there is also truth in the statement (A. Jameson, *Commonplace Book of Thoughts, Memories, and Fancies*, London, 1854, p. 209) that 'the primitive Christians, by laying so much stress upon a future life in contradistinction to this life, and placing the lower creatures out of the pale of hope, placed them at the same time out of the pale of sympathy, and thus laid the foundation for this utter disregard of animals in the light of our fellow creatures.'

It is certain that during the Middle Ages, when the Roman Catholic Church was dominant, there was, in this respect, little or no progress in humanitarian feeling, the indifference of Roman Catholicism to the claims of animals being broken only by the splendid example of St. Francis of Assisi, whose profound sense of brotherhood with beast and bird is the more remarkable owing to its contrast with the general callousness of his contemporaries. It was this lack of sympathy which, surviving in large measure even to modern times, caused Buddhists to speak of Christendom as 'the hell of animals.'

When we come to the Renaissance, however, we find, with the revival of learning, a revival also of the humanitarian spirit, many humane sentiments, for example, being observable in the writings of More and Erasmus, Montaigne, Shakespeare, and Bacon; and this renewed appeal to the instinct of compassion paved the way for that advanced 18th cent. sentiment which found its fullest expression in the saying of Voltaire, that 'without humanity, the virtue which comprehends all virtues, the name of philosopher would be little deserved.' Philosophers and poets vied with one another, through this era of awakening, in a recognition of the claims of common life on the heart of human-kind, and the post-revolutionary writers have continued to develop more and more the ethic of humaneness; it is sufficient to mention such names as those of Thomson, Pope, Goldsmith, Cowper, Burns, Shelley, and Wordsworth, to show how largely our modern poets have been concerned in this humanizing process. It is to the last hundred and fifty years, in fact, that Western humanitarianism, in the sense in which we use the word, owes its origin; and it is of Western humanitarianism only that we here propose to speak.

The first point which needs to be emphasized is this—that the principle of humaneness is based on the broad ground of universal sympathy, not with mankind only, but with all sentient beings, such sympathy being, of course, duly proportioned to the sensibility of its object. Humanitarianism is not to be confused with philanthropy—love of mankind—on the one side, or with zoophily—kindness to animals—on the other; it includes and comprehends them both.

'It is abundantly evident,' says Lecky (*European Morals*, London, 1883, i. 278, 101), 'both from history and from present experience, that the instinctive shock, or natural feeling of disgust, caused by the sight of the sufferings of men is not generically different from that which is caused by the sight of the sufferings of animals. . . . At one time the benevolent affections embrace merely the family, soon the circle expanding includes first a class, then a nation, then a coalition of nations, then all humanity, and finally, its influence is felt in the dealings of man with the animal world.'

Humanitarianism, then, is the application of an evolutionary doctrine founded on the kinship of life, which unites the sentiment of East and West in the growing perception of fellowship and

brotherhood between all living creatures; and a humanitarian is he who has substituted this wider sympathy for the partial benevolence which is restricted to the narrower circle of one's own countrymen or kin. 'The time will come,' wrote Bentham (*Principles of Penal Law*, ch. 16), 'when humanity will extend its mantle over everything which breathes. We have begun by attending to the condition of slaves; we shall finish by softening that of all the animals which assist our labours or supply our wants.'

But, before we proceed further, it may be well to clear away certain common misapprehensions by a short statement not only of what humanitarianism is, but also of what it is not. For example, it is not Brāhmanism. What it condemns is not the taking of life, as such; but the unnecessary or wanton taking of life through callousness, ignorance, or force of habit; and there is no point whatever in applying to humanitarianism the trite story of the Hindu whose principles forbade him to drink water when the microscope had revealed to him the infinitesimal creatures that inhabit it.

Nor are humanitarian doctrines, as Nietzsche and his school would have us suppose, an offshoot of Christianity; for, as has already been shown, they go far beyond the Christian ethics in all that relates to the lower animals, and they number among their professors many well-known names that lie altogether outside the Christian sphere of thought. Nor, again, is humanitarianism altogether identical with 'altruism,' the due regard for the interests of others, for it is to satisfy his own needs and instincts—involved in those of the sufferer—that the humanitarian takes action; it is self-fulfilment rather than self-sacrifice that he desires.

Finally, humanitarianism is not, as is often assumed by its critics, a merely negative, prohibitive, and ascetic view of life by which we are constrained to desist from certain practices in which we might otherwise take pleasure; on the contrary, by discovering for us a freshness of relation towards vast numbers of our fellow-creatures, it opens out new fields of pleasurable friendship which have hitherto been neglected, and points the way to a fuller and better realization of what is beautiful and true. Contrast, for instance, the wholesale destruction of sea-fowl for their feathers, or for mere amusement, that disgraces many parts of our coast, with the scene that may be daily witnessed in winter time on the Thames Embankment—the feeding of scores of gulls by their human friends and protectors under terms of perfect amity and trustfulness. Can it be doubted which of these two attitudes towards animals brings the greater pleasure to mankind?

Dismissing, therefore, these false ideas of humanitarianism, we shall try to grasp its true purport and significance as part of the modern democratic movement; for there is no more essential mark of democracy than the fostering of kinship and understanding in place of division and distrust. In holding that the difference between human and sub-human is one of degree only, and not of kind, the humanitarian has the support not of sentiment alone, but of science. 'The trend of investigation,' says Wesley Mills in his work on *The Nature and Development of Animal Intelligence* (London, 1898, p. 21), 'thus far goes to show that at least the germ of every human faculty does exist in some species of animal. . . . Formerly the line was drawn at reason. It was said that the "brutes" cannot reason. Only persons who do not themselves reason about the subject with facts before them, can any longer occupy such a position.' In

like manner E. P. Evans points out, in his *Evolutional Ethics and Animal Psychology* (London, 1898, p. 99 f.) that 'man is as truly a part and product of nature as any other animal, and the attempt to set him up as an isolated point outside of it is philosophically false and morally pernicious.' Thus the old 'anthropocentric' position is being more and more abandoned, and it is no longer possible to draw an absolute line of demarcation between men, as 'persons' and 'ends,' and animals, as mere 'things,' such distinctions being a thoroughly unsound basis for any ethical structure, inasmuch as the more highly organized animals possess, though, of course, in a lower degree, the qualities of true personality. Even the expression 'man and the animals,' though unavoidable in common speech, is philosophically incorrect, for man is himself a part of the great animal kingdom, and cannot disown the relationship. We have from science itself the clearest assurance that man is an animal, and that the great gulf which was supposed to exist between human and non-human has existed only in imagination.

For this reason humanitarianism claims for animals, as for men, a measure of individuality and freedom, a space in which to lead their own lives—in a word, 'rights.' It is unnecessary here to enter into the wide field of discussion as to the fitness of this term; for, if objection be taken to it, it is possible to consider the question from the other, the correlative, side, and to arrive at the same conclusion by the use of the term 'duties.' The essential part of the humanitarian contention is that there is no absolute difference between mankind and 'the animals'; that, if man has reason, animals have the germ of reason; that, if man has 'rights,' animals have the same in due degree.

With regard to human rights, it is sometimes said that 'men can take care of themselves.' This, however, is not always the case; for (to refer to two classes only, the pauper and the criminal) it is evident that the unfortunate inmates of workhouse and prison are *not* able to take care of themselves, but are as helpless in the hands of others as any animals could be. The rights of men are admitted in theory, but often violated in practice. We speak of all men as brothers; but, when it comes to giving practical proof of our brotherhood with paupers and criminals, we too frequently show by our treatment of them that we really regard them as a wholly alien class. The same is true of the usage accorded to subject races, aborigines, and all who, in the aggrandizement of one nation at the expense of another, are liable to find themselves at the mercy of their brother man.

Again, when we turn to the protection of animals, we sometimes hear it said that we ought to help men first and animals afterwards. But, if the principle which prompts the humane treatment of men is the same essentially as that which prompts the humane treatment of animals, how can we successfully safeguard it in one direction while we violate it in another? By condoning cruelty to animals, we perpetuate the very spirit which condones cruelty to men. Humanitarians do not say that the lower forms of life must be treated in the same way as the higher forms, but that in both cases alike we must be careful to inflict no unnecessary, no avoidable, suffering. This is briefly expressed in the manifesto of the Humanitarian League, which enforces the principle that 'it is iniquitous to inflict avoidable suffering on any sentient being.'

Of the societies which work for humane purposes the only one which directly concerns itself with this fuller principle—the just treatment alike of the human and non-human races—is the Humanitarian League, which, while recognizing that there is need of concentration in efforts of this kind, and that it is desirable that special cruelties should be dealt with by special

organizations, is nevertheless designed to supplement these labours by showing that all such efforts, however divergent in practice, spring in reality from a common source and converge to a common end—the establishment of concord and fellowship where there is now misunderstanding and strife. How wide a scope there is for humanitarian propaganda, even in this 20th century, may be judged from the number of societies now in existence for the redress of some particular evil—*e.g.* (to mention but a few out of many) those that aim at a mitigation of the horrors of war, and the extension of the appeal to international arbitration; those that inculcate a more considerate treatment of subject races and aborigines; and those that plead for the humanizing of the Poor Law, and a less harsh administration of the criminal code and prison system. The societies for the prevention of human wrongs, and the promotion of human happiness, are legion; but it is, of course, impossible to determine precisely which of the many questions thus agitated are to be called 'humanitarian.' The term 'humanitarianism' is a wide one, and may be used to cover the whole field of benevolence; but, owing to the action of the Humanitarian League, it is more commonly associated in this country with the reformation of prison treatment and the protest against capital and corporal punishments. Of late years no humanitarian issue has been so largely discussed as the continuance or abandonment of flogging; which may be taken, perhaps, as a test question between humanitarians and their opponents.

Thus, to take a salient example, an attempt was made in the year 1900 to extend the use of the lash for a number of offences in the case of adult criminals, but the Bill was opposed by the Humanitarian League and defeated in the House of Commons by a large majority; and in like manner the League was instrumental in securing the withdrawal of the 'whipping clauses' from the Youthful Offenders' Bill, introduced in the same year. On the other hand, the power of judges to order flogging in the case of certain offences has recently been increased under the Criminal Law Amendment (White Slave Traffic) Act of 1912. The infliction in the Royal Navy of very severe scourgings on boys and young men up to the age of eighteen is another matter on which humanitarian opinion has of late been powerfully moved, with the result that the use of the birch has been discontinued.

Nor is the list of controversial subjects any shorter where the interests of the lower animals are at stake. In this connexion it is necessary to bear in mind the legal distinction between 'domestic' animals and those that are classified, however arbitrarily, as 'wild.' Since the passing of 'Martin's Act' in 1822, a modicum of legal protection has been secured for such animals as are recognized under the title 'domestic,' and to 'cruelly beat, ill-treat, over-drive, abuse, or torture' any such animal is an offence against the law; but there are, of course, innumerable cases which no law can reach, and the general treatment of domestic animals in Great Britain, though far better than that which obtains in some other countries, is still greatly below the standard to which a civilized nation should aspire. It must be admitted, too, that the protection afforded is but partial and incomplete, when we remember that the vivisector, by special licence, and the cattle-drover and slaughterman, by tolerated custom, are permitted to inflict very severe suffering on highly-organized domestic animals under English law.

In the case of the *feræ nature*—a term which includes even the semi-domesticated park-deer hunted by so-called sportsmen, and the bagged rabbit used in the horrible pastime of rabbit-coursing—not even these limited rights exist, the only protection being that given under the Wild Animals in Captivity Act (1900), which forbids the ill-usage of any 'wild' animal while in actual confinement, but does not take cognizance of any injury done in course of sport, or vivisection, or the destruction of animals for food—a limitation which almost entirely cripples the usefulness of the Act. A wild animal, while in a state of nominal freedom, has no rights. 'Everywhere,' it has been said, 'it is a capital crime to be an unowned creature.'

Taking the animal question as a whole, we find that the subjects of paramount humanitarian interest are (1) the protection of domestic animals, and (2) the protests raised against vivisection, blood-sports, the slaughter of animals for food, and the wholesale destruction of birds for purposes of millinery—in other words, the enforcement of the present Acts, and the demand for further legislation. The work of the Royal Society for the Prevention of Cruelty to Animals is mainly confined to prosecuting for breaches of the existing law; and it is left to the Anti-Vivisection Societies, the Vegetarian Societies, the Royal Society for the Protection of Birds, the Humanitarian League, and others, to agitate against the cruelties of the laboratory, the slaughter-house, the feather-fashion, and 'sport.' There is no organization which concerns itself especially with blood-sports, except the Sports Department of the Humanitarian League, which was successful in obtaining the abolition of the Royal Buckhounds, and has since promoted a Bill in Parliament for the prohibition of certain spurious sports, such as tame stag-hunting, rabbit-coursing, and the shooting of pigeons from traps. It is deserving of notice that there is no matter in which an enlightened public opinion has more signally outrun the letter of the law than that of blood-sports, where there has been no humane legislation since the abolition of bill and bear baiting more than half a century ago, the Bill which condemned pigeon-shooting, passed in the House of Commons in 1884, having been thrown out by the Lords.

All these cruelties, according to the humanitarian view, spring from a common origin—the lack of any real conception that the lower animals are intelligent and rational beings.

Given a race of so-called 'brute-beasts' (and it is open to remark that the harshness of the common nomenclature reacts in its turn on the common treatment of animals), which are assumed to exist for the sole object of ministering to human convenience, it is inevitable that they should be used or ill-used in various ways according to the whims and inclinations of their masters. Thus, regarded from the several standpoints of the human temperament—the impulse of hunger, of recreation, of curiosity—an animal is something to eat, something to hunt, something to experiment on; and we are brought face to face with the questions of flesh-eating, sport, and vivisection.

It does not, however, fall within the scope of this article to do more than indicate the general aspects of humanitarianism, and we pass on to speak of some of the common objections that are urged against humanitarian principles. The first and most prevalent of these arguments is that drawn from the poet's picture of 'Nature red in tooth and claw,' which represents humanitarianism as in conflict with the stern facts of existence. It is said that the animals themselves prey on one another, and that the law of nature is founded on internecine conflict and sacrifice. But this, though true in part, is not the whole truth; for, while appealing to the law of competition, it leaves out of sight the not less important law of 'mutual aid,' and evades the fact that, while some animals are mainly predacious, others are mainly social in their habits, and that there is no reason why mankind, whose instincts are of the social order, should violate its own nature in order to imitate the beasts of prey. Nor is it true that an analogy can be established between the suffering inflicted in nature and the artificial and unjustifiable, because unnecessary, cruelties of man; for the best naturalists are of opinion that

"Nature red in tooth and claw
With ravine"

is a picture the evil of which is read into it by our imaginations, the reality being made up of full and happy lives, usually terminated by the quickest and least painful of deaths' (A. R. Wallace, *Darwinism*, London, 1889, p. 40). All these conditions are wanting in the unnatural cruelties against which humanitarianism protests.

Then, again, we are confronted with the argument drawn from that much misapprehended term, 'consistency.' 'Where will you draw the line?' is a question frequently put to the humanitarian, who is reminded that, if he be 'consistent,' he will be precluded from defending his crops against the ravages of wild animals, and even from cultivating the ground, because of the injury done by the plough to earth-worms and to the lowliest forms of life. But here there is, of course, a complete perversion of the humanitarian doctrine, which, as has already been stated, asserts that rights are the same in kind but not in degree, and that we owe to all sentient creatures a universal, but not an absolute, justice. We are not bound to starve our own race by abstaining from agriculture on account of the injury done to earth-worms, but we may all remember what Cowper (*The Task*, bk. vi.) says of the man 'who needlessly sets foot upon a worm.' The true consistency is that which has regard to the *direction* of one's course; and, because the whole journey cannot be accomplished at once, it does not follow that no step should be taken.

Equally pointless is the cry that is raised against the 'sentimentality' of humanitarians, 'sentiment' being one of those vague, indefinite terms which are used as a substitute for argument. That there is much that is ultra-sentimental in the present age—as, for instance, in its spasmodic and partial benevolence and ill-adjusted 'charities'—will not be denied; nor are humanitarians more exempt than other persons from the danger of falling into excess in the advocacy of their views. But, though the charge of sentimentality may be fairly urged, e.g. against the anti-vivisectioner who,

while denouncing the cruel experiments of physiologists, is himself an advocate of vivisectioning convicts with the cat-o'-nine-tails, it cannot lie against the all-round humanitarian who pleads for the adoption of some rational and comprehensive principle. It is, in fact, not on mere sentimentality, but on a wider and more philosophic view of the subject, that humanitarianism relies. 'As long,' it has been said, 'as certain favoured aspects of humaneness are exclusively insisted on, as long as pity is felt and expressed for this or that particular form of human suffering, while others of equal or greater importance are neglected or ridiculed; as long as the compassion which is claimed for men is denied to animals, or extended only to certain classes of animals—so long will it be difficult to appeal successfully from the narrow selfishness of personal interests to the higher and nobler sentiment of universal brotherhood.'

Perhaps no more effective proof can be produced of the inevitable further growth of humanitarian principles than a consideration of the alternative that must be faced by society if humanitarianism is to be disowned. Whether wisely or unwisely, we have now reached a certain transitional stage of humane development, both in our manners and in our laws, and those who would dissuade us from continued advance on the same lines are bound to frame some other policy for our guidance. If we are not to go forward, are we to turn back? Or are we to remain at the precise point to which we have now attained? It will hardly be argued that the present very confused state of English law and feeling on humanitarian subjects represents the golden mean which is incapable of further improvement; it follows, then, that, if progress is to be barred, we must henceforth return to that 'old brutality' which certain writers affect to regret that we have 'allowed to die out too much.' To state this alternative is sufficient to show that the future lies with humanitarianism. It is obvious that we shall continue to advance in the same direction as in the past, and that a gradually expanding sense of sympathy and kinship will bring with it a gradual but certain increase in the humanity of the treatment which we shall accord to every living creature.

Herein, then, lies the strength of the humanitarian position, that its principle is a consolidation of the countless humane impulses that spring up everywhere in the human heart, and that on an instinct so simple as to be intelligible to a child it builds a progressive ethical system that can satisfy the intellect of a philosopher. It is an amusing comment on the prevalent ignorance of humanitarianism that those who hold a faith which so profound a thinker as Schopenhauer cherished as 'the basis of morals' are often lightly dismissed with the remark that 'their hearts are better than their heads.' It is impossible, with strict regard to truth, to return this compliment by saying that the heads of such foolish jesters are better than their hearts, for head and heart alike must be in an evil case when the great duty of compassion does not make itself respected. We have advisedly spoken of this principle as a 'faith,' for it is indeed the ethical belief of the future—the faith of universal kinship—and no infidelity can be so grievous as that which hinders men from recognizing their own kindred, and makes them deny that *oneness* in life which wisdom sees everywhere, and to which folly is everywhere blind. 'Far as custom has carried man from man,' says Edward Carpenter (*Civilization*, London, 1889, p. 156), 'yet, when at last in the ever-branching series the complete human being is produced, it knows at once its kinship with all the other forms. More, it knows its kinship with the animals. It sees

that it is only habit, an illusion of difference, that divides; and it perceives after all that it is the same human creature that flies in the air, and swims in the sea, or walks biped upon the land.'

By no surer course can we attain to that 'natural piety' of which poets have sung than by the study and practice of this humane belief—which is humanitarianism.

LITERATURE.—The reader is referred to the following works for a fuller statement of some of the points touched on in the

foregoing article; but it should be noted that, while there are many books dealing with certain aspects of humanitarianism, there are very few that treat of the subject as a whole.

Jeremy Bentham, *Introduction to the Principles of Morals and Legislation*, London, 1789; W. E. H. Lecky, *History of European Morals*², do. 1888; Arthur Schopenhauer, *The Basis of Morality*, tr. A. B. Bullock, do. 1903; Howard Williams, *The Ethics of Diet*, do. 1907; E. Westermarck, *M*, ch. xlv.; *Publications of the Humanitarian League*, London, including J. Howard Moore, *The Universal Kinship*, 1906, and Henry S. Salt, *Animals' Rights considered in relation to Social Progress*, 1905.

HUMAN SACRIFICE (Introductory and Primitive).—There are few races and few religions which can show a history free from the stain of human sacrifice. But, when the practice is examined without prejudice (though few practices have caused greater moral detestation), it will be found that such phrases as 'stain' are metaphors not always deserved, and that technically the term 'sacrifice' itself is rarely appropriate. The practice, or custom, or rite has extensive adhesions and numerous applications; its meaning in any particular instance is not always easy to disclose; but its very seriousness makes an analysis of it deeply instructive for the study of social psychology.

The fascination which human sacrifice has exercised over various peoples at a relatively high stage of culture at once suggests that it must be a social reaction to some deep-seated social sentiment. The subject, as Westermarck's analysis shows, cannot be treated any longer as a mere antiquarian horror. On the contrary, it goes to the very heart of the permanent principles of social life and organization. Scientific ethics has to admit that the causes which produced human sacrifice still exist, and that they produce results identical in substance, though differing in name. Yet even here popular language preserves the ancient name in metaphor, when it speaks of one man being 'sacrificed' for others, or of a hero 'sacrificing' his life to save many. The modern consciousness reverts to the form of the primitive by omitting, as a rule, the 'middle age' metaphorical *terminus ad quem*, as expressed by the word 'to.' But it shows a true insight in affixing to the preposition various social emotions and prejudices which may have ultimately inspired the 'sacrifice,' such as fear, vanity, lust, or shame.

It is hardly necessary to examine, or to revise, the current theory of sacrifice (*q.v.*) in general, for human sacrifice is only incidentally a sacrifice proper; that is, its essence is not, as a rule, either a gift or a communion. The practice, again, however 'brutal,' is hardly developed among the lower races. It is only when a relatively high culture has been achieved, with its resulting sense of power, that the practice grows. As Westermarck says,

'the practice of human sacrifice cannot be regarded as a characteristic of savage races. On the contrary, it is found much more frequently among barbarians and semi-civilized peoples than among genuine savages, and at the lowest stages of culture known to us it is hardly heard of.'¹

For instance, it was known in ancient India,

¹ *MI* i. 436f.

Greece, and Italy, among the Celts, Teutons, and Slavs, the Semites and Egyptians, the early Japanese, many African tribes, South Sea Islanders, some American tribes, and particularly the Mayas and Aztecs. Further, it was rarer in Vedic than in Brāhmanic India.¹ Among the Africans it has been observed that 'the more powerful the nation the grander the sacrifice.'² The Aztecs themselves did not adopt the practice until the 14th cent., two hundred years before the conquest; the sacrifices 'rare at first, became more frequent with the wider extent of their empire; till, at length, almost every festival was closed with this cruel abomination.'³

From the legal point of view every human sacrifice is a *ceremonial murder*. As such, cases which are technically sacrifices cannot be treated differently from those which are not. The tendency, not only in historical writing but in the thought and language of contemporary periods, is to class all ceremonial murder as sacrifice. Another qualification of human sacrifice is that, like the majority of all sacrificial acts, it is generally a collective undertaking; when an individual executes it, he is, as a rule, the representative of the community or at least of a class within it. This fact serves to throw into relief the close connexion that is maintained from the earliest to the latest instances between human sacrifice and the retributive functions of the community. Capital punishment in its simplest and most primitive form is a more or less unconscious act of social revenge. The essence of all punishment is the satisfaction of resentment. The principle of *talis* is the result of the organization of this fundamental moral impulse. But before it is organized, and even in civilization on occasions when the crowd is master, and justice yields to mob-law or lynch-law, the passion of resentment is rarely satisfied by any atonement save that of death. There is such a phenomenon as a collective lust for blood, and, sociologically speaking, we have a right to class together the behaviour of the Commune in the Revolution of 1789, and of the Aztecs in their systematized orgies of human sacrifice. Cases like these show moral resentment as a perversion, but there seems to be little distinction between them and the cases of primitive social revenge. Lastly, it was to be expected, and is

¹ *MI* i. 435 f. quoting authorities.

² W. Winwood Reade, *Savage Africa*, London, 1863, p. 52. Westermarck enumerates the areas in which human sacrifice has been practised (i. 435 f.).

³ W. H. Prescott, *History of the Conquest of Mexico*, London 1843, i. 65.

proved by the facts, that the history of society up to quite recent times is characterized by a special sense of collective responsibility. The belief that national or tribal distress or failure is due to national or tribal sin is very real. It is a question whether the source of this powerful idea is to be found in the sum of individual selfish or self-regarding impulses, the sum of individual desires to shirk individual responsibilities, or in the mutual imitation of elementary instincts of co-operation. However that may be, the whole history of human sacrifice is linked together by ideas of vicarious suffering, substitution, and representation, no less than by its form of collective murder. Throughout, we realize the extensive and normal application of the biologic-social law that the individual is inferior to the race, and, as against the race or community, has no rights; 'it is expedient that one man should die for the people' (Jn 11⁵⁰).

In that stage of culture when all social organization is religious, justice and worship are apt to be confused. Some cases, however, still show collective retribution. Von Kotzebue with great insight observes of the Sandwich Islanders that they 'sacrifice culprits to their gods, as we sacrifice them in Europe to justice.'¹ The ancient Romans are said to have put corn-thieves to death, as a sacrifice to Ceres. Among the Hebrews the ban, or *hērem*, was placed upon malefactors as enemies of Jahveh. It was

'properly dedication to Jahveh. . . . The persons who were "dedicated," generally by a solemn vow, to Jahveh, were put to death, frequently by fire, whereby the resemblance to an ordinary burnt-offering was rendered still more apparent; their dwellings and property were also consumed by fire; their lands were left uncultivated for ever.' 'Such punishments were very common in the ancient world. But in Israel, as elsewhere, they were at the same time religious acts.'²

For the human sacrifices annually offered to Baal in Rhodes, criminals took the place of the innocent victims who were previously sacrificed. Here, no doubt, as Frazer notes,³ there is an actual substitution of individuals who are worthless, and therefore suitable for destruction. Such cases may thus be accidental revivals, as it were, of an original punishment of offenders, an organized cultus having intervened.

The Mexicans included among the victims for their systematized human sacrifices criminals 'who were condemned to expiate their crimes by the sacrifice of their lives.'⁴ In Tahiti the victims were 'either captives taken in war, or individuals who had rendered themselves obnoxious to the chiefs or the priests.'⁵ Conversely, the Mexicans seem to have given all capital punishment the form of a sacrifice to their gods. This at least is stated in connexion with the punishment of sorcerers whose practices were injurious to the community or individuals.⁶

Westermarck recognizes the persistence of penal sacrifice:

'There is one form of human sacrifice which has outlived all others, namely, the penal sacrifice of offenders. . . . This kind of human sacrifice is even found where the offering of animals or lifeless things has fallen out of use or become a mere symbol. For this is the only sacrifice which is intended to propitiate the deity by the mere death of the victim; and gods are believed to be capable of feeling anger and revenge long after they have ceased to have material needs. The last trace of human sacrifice has disappeared only when men no longer punish offenders capitally with a view to appeasing resentful gods.'⁷

This form of human sacrifice, it has already been

⁷ *MI* i. 471 f.

suggested, is on the normal lines of the evolution of the custom, and is the final development of the original inception of the social habit. It is not sacrifice, except in a large metaphorical sense. One might urge that, even after the administration of justice has become altogether separated from religion, there is no break of continuity—that in effect a new religion shows itself in the interval, and that capital punishment, or any punishment, is still a sacrifice to justice. The difference is that no superstitious ideas cluster round the destruction of the criminal life, and that the justice thus satisfied is not a personalized power. Westermarck's statement lays stress on the death of the victim as propitiating the deity. The deity thus being the personification of the moral feelings of the community repeats the moral, retributive impulses of the community. He requires not a sacrifice, but a just penalty. Westermarck notes¹ that 'there can be no moral scruples in regard to a rite which involves a punishment regarded as just.' But it would be a mistake to accuse of moral scruples the early offerers of any form of human sacrifice. All religious acts, however horrible, are *ex hypothesi* sincere, and therefore untouched by moral scruple. Pity and tenderness may, of course, attempt to inhibit the impulse, but this, being identical with the feeling of duty, is self-sufficient, whether in the individual or in the community.

The penal aspect of human sacrifice has been emphasized by the fact that semi-civilized and even civilized societies have, for various reasons, been in the habit of practising 'a severity which far surpasses the rigour of the *lex talionis*.'² Till quite recent times the penalty of death was prescribed for the majority of offences in all civilized communities.³ There can be no doubt that the spectacle of capital punishment offered to the public in England, for example, till the last century, satisfied the same instincts as did the gladiatorial games of Rome and the sacrificial massacres of Mexico. This severity is connected with despotism or religion.⁴ In either case, acts which may arouse the anger of semi-divine or divine beings are punished with more severity, because the community fears that the divine wrath may be turned against itself.⁵ This has actually been made an argument for applying the death-penalty to all offences. Thus, the Peruvians held that 'a culprit was not punished for the delinquencies he had committed, but for having broken the commandment of the Ynca, who was respected as God,' and that, therefore, the slightest offence deserved death.⁶ Every crime, in Hebrew theory, involves a breach of God's law, and no punishment is too severe for the ungodly. 'These ideas were adopted by the Christian Church and by Christian governments.'⁷

A link between the conception of the god and his offended holiness and the penal aspect of human sacrifice may be found in the reason given for the sacrifice of criminals—that they are already hateful to the god.⁸ Any such convenient inferior persons may, again, almost suggest the principle of preventive sacrifice or penalty. On the Slave Coast

'the object of human sacrifice seems to be to gratify or satiate the malignity of the gods at the expense of chosen individuals, instead of leaving it to chance—the victims are, in fact, slain for the benefit of the community at large.'⁹

A considerable proportion of cases may be regarded as founded on a nervous collective 'sense of sin,' which should perhaps be explained as the sense of responsibility in the making. These form

the central feature in the panorama of human sacrifice, and therefore require illustration.

The Chippewas, suffering from an epidemic, regarded it as a divine punishment for their wickedness. The most beautiful girl of the tribe was set adrift in the river and allowed to drown, as a means of staying the plague.¹ Similarly the Bœotians sacrificed a boy to stay a pestilence.² Referring to the Hebrews, Philo of Byblus says :

'It was the custom among the ancients, in cases of great danger, that the rulers of a city or a nation, in order to avert universal destruction, should give the dearest of their children to be killed as a ransom offered to avenging demons.'³

In the Niger country, a young woman is sacrificed to take away the iniquities of the land. As her body is dragged along 'in a merciless manner, as if the weight of all their wickedness were thus carried away,' the people cry, 'Wickedness! wickedness!' She is drowned in the river.⁴ Another account speaks of two sacrifices, one for the land, the other for the river.

'Thus two human beings were offered as sacrifices, to propitiate their heathen deities, thinking that they would thus atone for the individual sins of those who had broken God's laws during the past year. . . . Those who had fallen into gross sins during the past year—such as incendiarisms, thefts, fornications, adulteries, witchcrafts, incests, slanders, etc.—were expected to pay in twenty-eight *ngugas*, or £2, 0s. 7½d., as a fine; and this money was taken into the interior, to purchase two sickly persons, to be offered as a sacrifice for all these abominable crimes.'⁵

The Chukchi in 1814 sacrificed a respected chief to stay an epidemic which was destroying both men and reindeer.⁶ The sacrifice of every living creature born in the following spring, which constituted the ancient Italian rite of the *Ver Sacrum*, was performed in times of peril or pestilence.⁷ Human sacrifice in cases of drought and famine is frequent.⁸ When unseasonable weather threatened the crops, the Peruvians sacrificed children.⁹ The people of Great Benin, in case of excessive rain, asked the king

'to make juju, and sacrifice to stop the rain. Accordingly a woman was taken, a prayer made over her, and a message saluting the Rain God put in her mouth; then she was clubbed to death and put up in the execution tree so that the rain might see. In the same way, if there is too much sun, so that there is a danger of the crops spoiling, Overami [the king] can sacrifice to the Sun God.'¹⁰

This instance is instructive. It includes a plain connexion with the penal aspect of sacrifice, and also the later notion that the slain person acts as a messenger to the god. The possibility of using sacrifice, not merely as an expiation, but as an expiation in advance—in other words, as a preventive—is also suggested. How such rites may easily become positive is well shown by another case from Great Benin. Sir Richard Burton saw a young woman

'fasted to a scaffolding upon the summit of a tall blasted tree, and being devoured by the turkey-buzzards. The people declared it to be a "fetish," or charm for bringing rain.'¹¹

Such agricultural sacrifices are common enough;¹² they tend to become annual and seasonal. Westermarck shows good reason for supposing that the victim is by no means always regarded as a representative of the corn-spirit, as is argued in Frazer's hypothesis.¹³

Ancient Greeks, Gauls, Semites, and Hindus sacrificed human beings in war, either to guard against ill-success or to propitiate the divine being

who had brought it about.¹ How far the principle may be carried is illustrated by the Carthaginian sacrifice of two hundred children, when the city was in the last stage of siege.

The transition from the idea of securing the lives of the community by sacrificing the life of one man to the idea of propitiating a malignant supernatural power is naturally easy in such circumstances. The people of Jaipur propitiated their god of battle by human sacrifice.

'On the eve of a battle, or when a new fort or even an important village is to be built, or when danger of any kind is to be averted, this sanguinary being must be propitiated with human blood.'²

Sacrifice after victory may, when the ideas of sacrifice proper have fully coloured the rite, be regarded as a thank-offering. But revenge on the enemy, the fulfilment of a vow (itself connected with the impulse of resentment), or, further, propitiation, may in many cases inspire the custom.³

An important feature of this vicarious atonement, whether expiatory or preventive, is that the victim is not chosen at random. He may be a worthless person, a criminal or outcast, diseased, a slave, or a young child; he may also be the choicest of youth, or even the king of the people. The precise character of the person slain generally qualifies the meaning of the rite; a child, for instance, may be a substitute for his father; a king for his people; a criminal, similarly, represents the guilty soul of the community. Westermarck has rightly argued that the victim

'is a representative of the community which has incurred the anger of the god, and is accepted as a substitute on the principle of social solidarity.'⁴

The atonement of Christ is conceived of as a sacrifice, and His personality as fully representative.

'According to the Western Church, Christ discharged the punishment due to the sins of mankind, and propitiated the justice of his Father, in his capacity of a man, as a representative of the human race; whereas in the East, where it was maintained that the deity suffered (though he suffered through the human nature which he had made his own), the idea of substitution could hardly take root, since, as Harnack (*Hist. of Dogma*, iii. 312 f.) remarks, "the dying God-man really represented no one." The Greek Church regarded the death of Christ as a ransom for mankind paid to the devil, and this doctrine was also accepted by the most important of the Western Fathers, although it flatly contradicted their own theory of atonement.'⁵

'When men offer the lives of their fellow-men in sacrifice to their gods, they do so, as a rule, in the hopes of thereby saving their own. Human sacrifice is essentially a method of life-insurance—absurd, no doubt, according to our ideas, but not an act of wanton cruelty. When practised for the benefit of the community, or in a case of national distress, it is hardly more cruel than to advocate the infliction of capital punishment on the ground of social expediency, or to compel thousands of men to suffer death on the battle-field on behalf of their country. The custom of human sacrifice admits that the life of one is taken to save the lives of many, or that an inferior individual is put to death for the purpose of preventing the death of somebody who has a bigger right to live. Sometimes the king or chief is sacrificed in times of scarcity or pestilence, but then he is probably held personally responsible for the calamity. Very frequently the victims are prisoners of war or other aliens, or slaves, or criminals, that is, persons whose lives are held in little regard. And in many cases these are the only victims allowed by custom.'⁶

The execution of heretics, as such, is a culmination of the social principle that the Godhead is deeply interested in the loyalty of the believing people. The *auto da fé* is a true human sacrifice of the penal species; it might readily take on the character of sacrifice proper, as it probably has done in the analogous cases of Hebrew extermination of the heathen and Muhammadan destruction of unbelievers, though in Europe this character has not been emphasized.

When the principle that the death of one may save the lives of the community has become part of

the popular creed, voluntary sacrifice may be undertaken. Ancient Rome owed victories in battle to the *devotio* of heroes, such as Decius Mus. This devotional suicide was a religious act, and had a prescribed ritual. The *harakiri* of the Japanese is certainly a sacrifice; when committed at the funeral of a Mikado or of any dead person it is of the nature of an offering to the soul of the dead, in that form which ensures that the dead shall have companions and attendants. The Chukchi and Samoyeds are curiously addicted to suicide; in fact, there is a suicidal belt across Northern Asia, including the Japanese. The Samoyed holds that the act is in itself 'pleasing to God, who looks upon it as a voluntary sacrifice, which deserves reward.' The Chukchi sacrifice their own lives in times of national danger or epidemic.¹ The *sati* of Hindu widows on the pyres of their dead husbands is repeated elsewhere, as in Uganda, the East Indies, Fiji, and the New Hebrides.² Such sacrifice is analogous to acts of asceticism, and, like these, is often connected with the desire for betterment in the world beyond the grave.

Human sacrifice was performed, also, to save the life of some particular individual. The Guatemalans resorted to it when all other means of curing a sick person failed.³ To-day in Morocco, if a child dies, the custom is to congratulate the parents—'Your child took away your misfortune.'⁴ The practice of sacrificing the first-born child seems to have been an article of ancient Semitic religion; the origin of the Passover is most probably to be traced to it.⁵ The practice is found, more or less systematized, in Australia, China, America, Africa, and Russia.⁶ Infanticide, at a stage of culture when all social custom is religious, naturally assumes the character of a 'sacrifice.' There may be various motives for the act, but only cases where there is a real substitution for the life of another person can be included under human sacrifice. Substitutional sacrifice for individual benefit occurs in Central America, Peru, Tonga, Tahiti, the Philippines, India, the Dayak countries, West Africa, and Scandinavia. It was frequent in ancient Italy, and both Nero and Hadrian were beneficiaries of the rite.⁷

There is a curious practice, connected with the doctrine of the soul, of sacrificing an individual, generally a child, to remove barrenness from women. As Westermarck explains it, the failure to bear children 'is attributed to some god keeping back the children which would otherwise be born in the due course of nature.' The victim is a substitute.⁸

Certain cases of child-sacrifice seem to suggest that the child, being in a sense a duplicate of the father, places the life of the father in danger.⁹

When the idea is arrived at that the person sacrificed is a gift to the deity, we are in the sphere of sacrifice proper. But this is clearly later than the penal conception and even the substitutional conception of the rite. The gods of the Gold Coast require attendants:

'The ghosts of the human victims sacrificed to them are believed to pass at once into a condition of ghostly servitude to them, just as those sacrificed at the funerals of chiefs are believed to pass into a ghostly attendance.'¹⁰

The belief is rare, but, as applied to the service

of the dead, is frequent. The type of it is the Hindu *sati*. Men require both wives and servants in the other world. India, probably even in Vedic times, and Central America are the chief areas of the practice of immolating wives and slaves or friends for the dead, but it is found all over the world.¹ Blood-revenge in many cases is really a human sacrifice to the spirit of the murdered man.² The completed revenge is frequently believed also to safeguard the avenger from the malignancy of the unavenged dead. Such ideas are merely superimposed upon a practice originally inspired by the impulse of resentment.

Other ideas, probably later than the institution of the rite, are the conception that the man sacrificed is a messenger to the gods; and that he becomes, when sacrificed at or in a new building, a protecting demon of the place. Probably the original intention was to protect the living from the risks incurred by occupying a site belonging to supernatural powers. This is seen in the case of sacrifices made at the building of bridges (*q.v.*). Human sacrifices to the powers of water, sea- or river-demons, are common enough, and folklore is full of stories of them.³

Cannibalism (*q.v.*) is probably not to be regarded, as Letourneau regards it, as the original sin of mankind.

'The cannibalism of modern savages,' Westermarck concludes, is not 'a survival from the first infancy of mankind,' nor is it representative of 'a stage through which the whole human race has passed.'⁴

But there can be little doubt that primitive peoples, like barbarous and even civilized peoples on occasion, practised cannibalism as an infrequent habit. Now, according to one theory of sacrifice, the essence of this central act of worship is the provision of a common meal for the god and his worshippers. *A priori* there is every reason to expect that the idea of cannibalism should be found in many cases of human sacrifice. The Central Americans, especially the Mexicans, offered the blood and the heart of the victim to the god. The priest cut open the breast, and tore out the heart. This was 'waved' as an offering to the Sun; frequently it was placed with a golden spoon in the mouth of the image.⁵ The Iroquois, the Khonds and Ooryahs of India, the Fijians, and peoples of the Gold Coast, had similar ritual and belief.⁶ Cannibal meals, which possess a magical or religious character, satisfy the above definition of sacrifice, if the victim is slain for the purpose. The most inveterate followers of the cult of human sacrifice, as it may truly be called in this case—the Mexicans—ate portions of the human victims slain on their altars. The Mayas, Nicaraguans, and Peruvians did the same. In Nigeria, human sacrifice offered to appease the gods, or to avert misfortune, is not 'considered to be complete unless either the priests or the people eat the bodies of the victims.'⁷ In some parts the flesh is distributed among the entire population.⁷ The practice is found in the Solomon Islands, Hawaii, and ancient India, always in connexion with a sacrifice. Two species of cannibalism are distinguished in Western Africa, the one a luxury, *gourmandise*, the other sacrificial, and in the latter the priests are the chief partakers.⁸

'The sacrificial form of cannibalism,' says Westermarck, 'obviously springs from the idea that a victim offered to a supernatural being participates in his sanctity and from the wish of the worshipper to transfer to himself something of its benign virtue. So also the divine qualities of a man-god are supposed to be assimilated by the person who eats his flesh or drinks his blood. This was the idea of the early Christians concerning the Eucharist.'¹

Similarly, the eating of human flesh is in various cases supposed to have a magical and supernatural effect. The circle of these ideas is completed by the remarkable helief, found in the majority of races, that the flesh and blood of executed offenders have magical power. The mere fact of a violent death, when imposed on a victim by corporate action, is always impressive. It is possible that we have here the psychological explanation of the magical virtues with which such human sacrifices are credited. They are the sign and seal of the sacred force of the community in action.

Westermarck finds, in criticism of Frazer's hypothesis, 'no instance of an expiatory sacrifice being connected with a ceremony of sin-transference.'² The *meriah* sacrifice of the Khonds is a notable example of human sacrifice. Its meaning is interpreted by Frazer to be that the victim was a representative of the corn-spirit and was sacrificed in order to ensure good crops, on the principle chiefly of the resurrection of the spirit.³ The interpretation involves the assumption that the view of the *meriah* as a victim offered to deity, the Earth-goddess, Tari Pennu, is a late sophistication. Macpherson notes that the *meriah* was sacrificed

'upon the occurrence of an extraordinary number of deaths by disease; or should very many die in childbirth; or should the flocks or herds suffer largely from disease, or from wild beasts; or should the greater crops threaten to fail'; also whenever any calamity occurred to the chiefs or their families.⁴

From this and other evidence, Westermarck concludes that the theory of substitution accounts fully for the rite, and that the hypothesis of the identification with the corn-spirit is arbitrary.⁵ See, further, the 'Indian' article, § 4.

Magical efficacy is universally attributed to human blood, probably because it is human, that is, the blood of the lord of creation, who, as such, is not normally an article of food. Human sacrifice to the dead is sometimes for the purpose of supplying them with food.⁶ But this is obviously exceptional, just as the dead are themselves in an exceptional state. They are now supernatural, and supernatural (in the literal meaning) should be their sustenance. There is no relic of cannibalism in the *meriah* sacrifice, but the principles of religious cannibalism are latent in it.

Ancestor-worship, it is possible, may often have led to the idea that a supernatural source of magical power may be secured by slaying ceremonially a human, or indeed any living, victim. If the dead are divine, new additions to the list of the divine can be made by death. The murderer has an option on the spirit of him he slays. Blood-thirsty priests and despots may at times have worked their murderous wills according to some such principle. It is necessary to insist on this, as also on the satisfaction of the social lust for blood. The latter certainly is to be seen in the *meriah* sacrifice; both the latter and the former are as evident in the Mexican holocausts as they were in the *auto da fé*.

The gods of Mexico were enhaloed with horror; but the human sacrifices almost daily consummated to glut their malignancy were appreciated by the congregation as intensely as the gladiatorial combats were by the populace of Rome. In some cases

the sacrifice was actually preceded by a combat, the victim having a chance of escape if he succeeded in slaying all comers who cared to fight him on the pavement of the altar.

'Scarcely any author pretends to estimate the yearly sacrifices throughout the empire at less than twenty thousand, and some carry the number as high as fifty thousand.'¹

Both Mayas and Mexicans prosecuted endless wars, with the principal object of obtaining victims to serve as sacrifices to their gods.² A typical picture of such a sacrifice is supplied by that in honour of Tezcatlipoca, though the figure of this deity is usually mild and venerable.

'The man chosen to represent him [Tezcatlipoca] and die in his stead was a young captive of handsome person and illustrious birth. During his captivity the youth thus doomed to play the fatal part of divinity was allowed to range the streets of Mexico freely, escorted by a distinguished train, who paid him as much respect as if he had been indeed the god himself instead of only his living image. Twenty days before the festival at which the tragic mockery was to end, that he might taste all the joys of this transient world to which he must soon bid farewell, he received in marriage four women, from whom he parted only when he took his place in the last solemn procession. Arrived at the foot of the sacred pyramid on the top of which he was to die, the sacrificers saluted him and led him up the long staircase. On the summit five of them seized him and held him down on his back upon the sacrificial stone, while the high priest, after bowing to the god he was about to kill, cut open his breast and tore out the throbbing heart with the accustomed rites. But, instead of being kicked down the staircase and sent rolling from step to step like the corpses of common victims, the body of the dead god was carried respectfully down, and his flesh, chopped up small, was distributed among the priests and nobles as a blessed food.'³

The details, however, are too numerous to add to the account. The problem chiefly considered hitherto has been that of the dying god. Certainly, in the case of the victims to Tezcatlipoca, Huitzilopochtli, Huixtocihuatl, and Centeotl, there was representation of the deity. Whether Frazer's explanation can be accepted is, however, doubtful. It is noteworthy that of the Nicaraguan human victims it is stated that 'they were supposed to become deified after death, and to exercise great influence over the affairs of life.'⁴ The Mexicans, again, sacrificed men with white hair and white faces during eclipses of the sun; the Tlascaltecs sacrificed albinos during eclipses of the moon.⁵ Bancroft conjectures, whatever the original significance of the human sacrifice, that finally the body, whose essence regaled the god, and whose accidents were participated in by priests and people, was regarded as the remains of a divine feast, and therefore sacred food; that religious anthropophagy degenerated into an unnatural appetite for human flesh.⁶ He is desirous of explaining the extraordinary popularity of these sacrifices. They certainly may be regarded as including a recrudescence of cannibalism. More significance, however, is to be attached to the holiness acquired after death. Apart from the factor of substitution and penal sacrifice, this appears to be most important. Accordingly, the sacrifice may be said to have the character of a rite intended to make gods by slaying men. All men, animals, and things 'offered up' become *ipso facto* endued with magic energy.⁷ But this character is itself not primary. Hindu theory speculated on the nature of the essence of sacrifice. Some of the conclusions throw light on the present subject.

According to the *Aitareya Brāhmana*, the gods killed a man for sacrifice. But the part fit for an offering, the *medha*, passed into a horse, which thus became meet for sacrifice. The gods killed the horse, but the *medha* passed into an ox, and subsequently in the same way into a sheep, a goat, and the earth. The *medha* stayed longest in the goat. All those animals from which it passed are

⁷ See *MI* i. 68.

unfit for sacrifice, and therefore their flesh is not to be eaten. When the *medha* entered the earth, the gods surrounded it to prevent its escape. There it turned into rice, and therefore rice is now sacrificed.¹

According to the *Kālikā Purāna*, slaying at a sacrifice, even of a man, is *ipso facto* no murder.²

The *Taittirīya* states that the institutor of the sacrifice, when slaying a man, immolates Virāj. Virāj was the first male created by Prajāpati, and was the father of mankind. From him is produced the male for every sacrifice.

¹The form of a man is like that of Virāj, the type of the animated creation. By the immolation of the man is Virāj immolated. Now Virāj is food, and therefore through Virāj is food obtained.³

With regard to the difficult problem of 'representing' the god, a case in point is given by the *Taittirīya*. For the *puruṣamedha*, human sacrifice, the *Taittirīya* enjoins that to a deity of the Brāhman caste a Brāhmana must be sacrificed; to a deity of the Kṣatriya, a Kṣatriya.⁴ Possibly the clue to representation is in the practice of periodic god-making. A man, and a particular kind of man, being made by sacrifice into a deity, it is natural that his attributes should be repeated at the next sacrifice. Thus a particular god is re-created periodically. When, later, his incarnation is regarded as a victim, the victim retains the characters of the god. See, further, the 'Indian' article.

Often the choicest specimens of humanity are required for human sacrifice. 'The death of the righteous makes atonement';⁵ here moral worth is required. The *Kālikā Purāna* enjoins that the victim must be free from physical defects and unstained by crime; nor may it be a female.⁶ The case of slaves, malefactors, and diseased persons has already been noted.

Vicarious atonement becomes vicarious in a secondary sense, when another person is sacrificed instead of the original victim. In Eastern Africa, a freeman guilty of causing a conflagration close to the 'chosen abode of the deity' is liable to be offered as a sacrifice to the god who has been annoyed, but he may redeem his life by giving up one of his slaves to be offered in his stead.⁷ Animals, again, certainly have figured largely as substitutes for human victims.

⁴According to the Israelite's notion, Jahveh in his clemency permits the soul of the animal sacrificed to take the place of that of the sacrificer. No transfer of guilt to the animal sacrificed takes place; the blood of the latter is clean, and remains so, as is evident from the very fact that this blood is put upon the altar; it is a token of mercy on Jahveh's part, that he accepts it. . . . Nor can it be asserted that the animal sacrificed undergoes the punishment in the place of the transgressor.⁸

Effigies, lastly, may take the place even of bread and fruits of the earth as substitutes for the human victim. In Malaysia, dough models of human beings, actually called 'the substitutes,' are offered to the spirits.⁹ Such substitutes occur in all parts of the world, and in the majority of its organized religions.

LITERATURE.—Ch. xix. in E. Westermarck's *Origin and Development of the Moral Ideas*, London, 1906-08 (i. 434-476), is the standard account of the subject. The art. mentions the chief sources of facts.

A. E. CRAWLEY.

HUMAN SACRIFICE (Chinese).—Unlike many nations of ancient or even modern times, such as the Aztecs, or Dahomans, the Chinese have had no regular system of human sacrifices, offered to the deity or forming a part of their idolatrous worship. Their altars have never reeked with the blood of

the brute creation, much less with that of their fellow-man. We have no record of holocausts of victims being offered up at the shrines of their deities. Flesh is no doubt offered in the rites of worship, but the animal or fowl is already slaughtered and dressed before being brought to the altar, and is offered as food might be to a man—it partakes of the character of an oblation, instead of that of a sacrifice. The type of deities, *i.e.* of deified human beings, is more that of mild or benevolent gods or goddesses. There is no equivalent of the Indian Kāli; there is nothing like the ponderous car of Jagannāth leaving mangled remains of crushed humanity in its course. The fierceness of the Chinese gods is developed in the direction of the destruction of demons; they do not thirst for human blood and do not require to be appeased by the offering of it.

Notwithstanding all this, there are indications to be found in Chinese history of a feeling in the Chinese mind that High Heaven may be propitiated by the shedding of human blood; for several instances occur of human sacrifice being suggested at least. One of the most noteworthy was in the time of T'ang (1766-1753 B.C.), the founder of the Shang dynasty. We are told by the great historian Ssu-ma Ch'ien and by others that, as in the land of Egypt in the time of Joseph, seven years of drought prevailed in the Empire, leading to a terrible famine. To such extremities did matters come that it was suggested that a human victim should be offered as a sacrifice to appease Heaven and bring down the showers of much-needed rain. The Emperor T'ang said: 'If a man must be a victim, I will be he,' and prepared himself for the sacrifice. Ere the prayer he offered was finished, the rain fell in heavy showers on the parched land for hundreds of miles.¹

The Scythian custom of slaying the wives and attendants of deceased chieftains and others high in rank or social position was in vogue in ancient China. A time-honoured custom of burying wealth and valuables—gold, silver, precious stones, silks and embroideries, etc.—with the deceased lasted long. Wives, concubines, and slaves were also looked upon as the property of their lords and masters, and shared the same fate as the other possessions thus interred; for, with the anthropological conceptions of the Chinese with regard to a future state of existence, the life beyond the grave was supposed to be almost a counterpart of this life; and, since such articles and persons were necessary for the happiness and comfort of the living, it was thought that they were equally necessary for the dead, and that those who had passed into another state of existence would suffer and harbour resentment unless freely supplied with them. The drain upon the resources of the people, owing to the enormous expenses entailed by the grand funerals, was such that a gradual process ensued of substituting less costly articles for the rich wares and precious things, so that articles of no real value took the place of the original offerings in most cases; and, in the same way, the substituting of imitation men and women has replaced the immolation of human beings at the obsequies of the great and wealthy.² We have in the Book of Mencius³ a passage which shows that wooden images, 'the semblances of men,' were used to bury with the dead. We are told that in ancient times bundles of straw imperfectly representing men were taken to the grave and interred with the deceased to serve in the next world as his attendants. Later on, after the advent of the Chow dynasty (1122-249 B.C.), wooden images were substituted for

them. These had springs which caused them to move, probably in imitation of the movements of men.¹ It is stated that later on came the practice of burying living persons with the dead. Confucius ascribed this to the invention of the wooden images; but it is more probable that the human sacrifice to the *manes* of the deceased was the original form, and the straw and wooden images were substituted for the more cruel custom, as was the case in Japan, where clay images were substituted about the time of the Christian era for the human victims.² Images are now made of a bamboo framework and covered with coloured paper to represent human beings, clothed in accordance with the station in life of those they are supposed to represent. These are carried, as in the case of the late Empress Dowager, in the funeral procession and burned. It is believed that they are thus transmitted to the spirit world and there wait upon their supposed lords and masters.

This practice of sacrificing living human beings to the *manes* of the departed who occupied high positions when alive was common, as may be gathered from the occasional references to it in Chinese literature. The silences concerning it have also been considered as corroborative of the practice; for, being common, it is supposed that reference was made to it only under exceptional circumstances.³ The custom appears to have been indigenous among the Chinese and not imported from Tatar sources, as Biot⁴ and even some Chinese have thought to be the case.

The Chinese Herodotus, Ssü-ma Ch'ien, mentions the first instance we have on record, when a ruler, Wu, of the Ts'ing State made 66 people 'follow the dead [Duke Ch'ing] into the next world.'⁵ A nephew [Duke Muh] of this prince had 177 sacrificed at his death. Among these were three brothers put into the grave with the coffin of the Duke.⁶ Their fate is deplored in the songs of the State included in the ancient Chinese Classic, the *Shi King*, or 'Book of Poetry.' This was in 620 B.C.⁷ Hundreds perished at the royal funerals, and scores at those of officers and nobles, in antiquity. The philosopher Micius, who lived about the 3rd cent. B.C., inveighing against extravagant funerals, informs us of this.⁸ At the death of the Great Ts'ing Shi Hwang, the builder of the Great Wall and the destroyer of the books, all the women in his harim who had borne him no sons were shut up in his tomb (209 B.C.).⁹ 'There is some reason for believing that human sacrifices occurred at the construction of the Great Wall.'¹⁰

In the *Ch'un Ch'iu*, or 'Spring and Autumn Annals,' of Confucius and in the two Commentaries on them, the *Tso Chuan* and *Ku Liang*, mention is made of some cases. Two instances were in 639 and 529 B.C. respectively, and in neither case was it at funeral rites that the immolation took place. In the first the Viscount of Tsang was sacrificed instead of an animal¹¹ by the people of Chu, to awe some wild tribes in the east. The Minister of War inveighed against this sacrifice of a man, a ruler of a State, to 'an unlicensed and irregular spirit.' In the second case the heir of the State of Ts'ai, after the destruction of that State, was carried by the victors to their own State of Tso and sacrificed on a

mountain—one would suppose as a thank-offering for the victory gained¹—again instead of an animal. In the *Tso Chuan* it is stated that living persons were interred with the dead ruler Duke Wan of Sung (587 B.C.).² Another case is mentioned in the same work where, out of gratitude to a king for his clemency to his father, a son buried two daughters with the sovereign.³ Another, a servant, dreamed that he carried his ruler up to heaven and later in the day he lifted the dead body of this same ruler out of a privy and was buried with him (580 B.C.).⁴ Again, in 502 B.C. we read of five men being buried alive at the death of a feudal ruler of the State of Chu.⁵ It is stated in the 'Annals of Wu and Yueh'⁶ (ch. 2) that a crowd of men were, by a trick, pressed alive into the mausoleum of a princess in 510 B.C. In a number of cases these entombments were disapproved of by the people.

In another of the Chinese Classics, the *Li Ki*, or 'Book of Rites,' accounts are given of two proposals to bury the living with the dead. In one case the widow and steward of the deceased, a grandee of the State of Ts'ai, proposed that, to provide for the dead man when ill in the next world, some persons should be sent to minister to him. His younger brother, who was a disciple of Confucius, said that it was not proper to do so, but suggested that, if it must be done, the widow and steward should be the persons to be sent. This pronouncement settled the matter, and no one was sacrificed.⁷ The other case was that of a son who refused to carry out his father's injunctions to bury his two concubines with him in the same coffin.⁸ There is a similar case where directions were given by a dying man that a favourite concubine should be buried with him, though he had previously directed that she should be married again.⁹ The son obeyed the earlier order. A Queen Dowager, who loved a minion, commanded that he should be buried with her; but, being reasoned with, yielded to persuasion and gave up the idea (309 B.C.).¹⁰ The Prince of Wu (514-496 B.C.) sacrificed a large number of men and women at the death of a favourite daughter in order that they might accompany her.¹¹ In the Han dynasty (206 B.C.-A.D. 25), certain tombs of princes of the Wei State (334-286 B.C.) were opened. In one a hundred dead bodies were found—all women with one exception—probably intended for the deceased's harim in the spirit world.¹² In another grave two bodies were found. To come later down in history, we find that this practice was specially maintained by the Tatar Liao dynasty which ruled over Northern China (A.D. 927-1125).¹³

It will thus be seen that throughout Chinese history there are indications of the prevalence of this custom. One instance was in A.D. 954, when the first Emperor of the After Chow dynasty (A.D. 951-960) gave orders for a simple funeral for himself, and on no account was any one to be injured in connexion with it.¹⁴

We find notices also of sacrifices to the spirits of Nature, as, for instance, in A.D. 1130-31 at the siege of a city in the North of China when the Kin invaders tore out the hearts of twelve prisoners and offered them as a sacrifice for a change of

wind;¹ or, again, we read of a maiden being sacrificed to a river-god.²

In the Yuan dynasty (A.D. 1280-1367), women were buried with the Mongols who ruled the empire then.³ In the Ming dynasty (A.D. 1368-1644) the custom was extensively practised during the first hundred years, the first, third, fourth, and fifth Emperors being honoured in this way with 38, 16, 4, and 7 victims respectively. It was also the rule in the case of princes. This went on until the Emperor Ying Tsung († A.D. 1464) abolished it for his own funeral, though he sacrificed several women at his brother's death.⁴ The late Manchu dynasty (A.D. 1644-1911) at first also practised this, at all events during the reign of the first Emperor Shun Chi (A.D. 1644-61). There is no evidence to show whether the later sovereigns sanctioned it.⁵

It has been thought that the Chinese practice of placing figures of men in an avenue leading to the tomb, as at the Imperial tombs, had its origin in human sacrifice.⁶ Isolated cases occur in which the Chinese offer to the *manes* of a man killed or murdered the killer or the murderer or a portion of his body.⁷ 'Human sacrifices are said to have taken place in the building of a silk-filature at Soochow.'⁸ It was also and may still be the custom for new furnaces in potteries in the Kiang-si Province to be consecrated with the shedding of a child's blood. This sacrifice is done secretly, and it is supposed to prevent accidents or evil influences. One of the aboriginal tribes in China is said to offer one of their own number every year as a sacrifice to their dog-idol.⁹

Closely akin to the sacrifices of the living to the dead is a species of *sati* sometimes practised in China, when the widow publicly commits suicide to follow her dead husband to the grave.

Even in recent times, prisoners or slaves have been buried under bridges, city-gates, and public buildings. A case occurred in 1900, when one of the leading officials sacrificed a gaol-bird to his drum when starting for the wars.

LITERATURE.—This is cited in the footnotes.

J. DYER BALL.

HUMAN SACRIFICE (Greek).—It has often been observed that the Homeric poems contain hardly any allusions to human sacrifice. A remarkable exception occurs in *Il.* xxiii. 175, where, after sacrificing four horses and two dogs on the funeral pyre of Patroclus, Achilles crowns the ceremony by slaying twelve Trojans, doubtless to serve as the thralls of Patroclus in the world below, just as the horses and dogs were required to minister to other needs. The sacrifice in question is one of a class which is often represented in early civilizations (Tylor, *PC*⁴ i. 458 ff.), and is best illustrated by the account in Herodotus (iv. 71) of the funeral of the Scythian kings, when cooks, grooms, butlers, and others of the royal household were strangled and buried in their master's tomb. The rite was, of course, based upon the belief that the dead continue in the world of spirits the same course of living as they have followed on earth; but, though the belief itself prevailed extensively

in the Homeric age, the proceeding of Achilles was such as to provoke from the poet the unusual comment, 'evil was the deed that he contrived.' Some critics have laid it down that the Homeric religion was succeeded by a period of joyless and gloomy superstition, in which piacular offerings first became customary. Although there is some measure of truth in this view, it is equally important to observe that, so far as human sacrifices are concerned, the Homeric poems stand upon the same level as the rest of Greek literature, which is representative of an advanced stage of ethical development, and consequently condemns as unworthy of Hellenic enlightenment the offering up of human lives to appease the wrath of an offended deity. The sacrifice of human victims on stated occasions is regarded as a barbarian practice (*Soph.* fr. 122), evidenced by the cruel exposure of Andromeda and Hesione, who were rescued by Greek heroes, and the savage rites of the Tauric priesthood (*Eur. Iph. Taur.* 465). The Phœnician Molech, who was honoured by the sacrifice of children (*Plut. de Ser. num. vind.* 6, p. 552 A), was regularly identified with Cronos, whose primitive tyranny was overthrown by the milder dominion of Zeus (*M. Mayer, in Roscher, ii.* 1501 ff.). Æschylus (*Ag.* 156) calls the sacrifice of Iphigenia lawless; Pausanias (vii. 19. 8) records that the Delphic oracle referred to the recurring sacrifice of a youth and a maiden at the precinct of Artemis Triclaria in Achaia as strange or foreign; and Pelopidas (*Plut. Pelop.* 21), when ordered to sacrifice a maiden as a condition of success in battle, shrank from so horrible and barbarous an expedient.

Yet, although literary sentiment professes to repudiate human sacrifice as incompatible with the spread of Greek civilization, the prevalence of the custom in the pre-historic age is attested by the persistence of its appearance in the heroic legends which poetic tradition has preserved. These legends provide material which enables us to survey the conditions applicable to human sacrifices. It is generally admitted that many of them were piacular in character; that is to say, they arose from a conviction that the anger of a divine power had been incurred by some act of impiety, that the well-being of the community was imperilled in consequence, and that the life of one of its members must be surrendered in expiation of the guilt. Recent investigations support the conclusion that no single formula is adequate to cover the varying circumstances in which recourse was had to human sacrifice. Thus, the rites connected with the periodical expulsion of evil, where the victim assumes the character of a scapegoat, have not yet been traced to a single source; and it must be recognized that in many cases it is impossible to discover precisely how the worshippers believed that their offering would be gratifying. Yet the desire to appease an enraged deity or to prevent his jealousy by timely precautions, when there may be a risk of infringing his prerogatives, is frequently indicated as an impelling motive.

It might happen that the wrath of heaven was declared by some special manifestation of displeasure, such as the occurrence of a drought or a pestilence, or the interposition of some unusual obstacle to the successful issue of an undertaking. Thus the sacrifice of Iphigenia was demanded because the detention of the Greek fleet at Aulis by contrary winds was a sign of divine anger (*Æsch. Ag.* 198 ff.). Similarly, the sacrifice of Polyxena on the tomb of Achilles was urged by Neoptolemus as a means of obtaining favourable winds for the return from Troy (*Eur. Hec.* 536 ff.).¹ Both of these incidents belonged to the tradition of the

¹ The developed story shows a conflation of two motives—the duty of offering a preliminary sacrifice to a sea-god (see art

Epic Cycle, the sacrifice of Iphigenia being related in the *Cypria*, and that of Polyxena in the *Iliupersis*; but authority is scarcely needed to convince us that these and similar legends are handed down from time immemorial, and testify to the primitive beliefs of the race. An echo of the legend of Aulis, possibly combined with an attempt to ascribe an Oriental character to the practice, is preserved in the story recorded by Herodotus (ii. 119), that Menelaus, when detained in Egypt by adverse weather-conditions, sacrificed two Egyptian boys as expiatory victims. Yet another illustration may be found in the story of Sinon (Verg. *Æn.* ii. 116 ff.), and an example taken from historical times shows how deeply-rooted was the superstition which required extraordinary sacrifices before a departure on an important voyage. Agesilaus, about to embark at Aulis on his expedition against Persia, dreamed that a human sacrifice was required from him; but, since such an act would have been abhorrent to the spirit of the times, he was content to offer up a hind in memory of Agamemnon's sacrifice (Plut. *Ages.* 6). When the subjects of Athamas were afflicted with a drought, the king received information that an oracle required him to sacrifice his children Phrixus and Helle; and he was about to comply with this command when the children were miraculously rescued by their immortal mother Nephele, and dispatched on their famous journey over the sea on the back of the ram with the golden fleece (Apollod. i. ix. 1). When attacked by famine and pestilence, the Athenians, in obedience to the command of an old oracle, slew the daughters of Hyacinthus on the tomb of Geræstus the Cyclops (*ib.* iii. xv. 8).

Usually, however, the danger which calls for so exceptional a remedy is an approaching conflict with a foreign foe. In the *Heraclicæ* of Euripides (404 ff.), Demophon, preparing to resist an Argive invasion, after he had refused to surrender the children of Heracles, was warned by the soothsayers that it was essential for him to sacrifice to Persephone a maiden of noble birth. Similarly, when Thebes was beleaguered by the army of Adrastus and Polynices, Tiresias demanded of Creon that he should sacrifice his son Menœceus in order to placate the hostility of Ares, which Cadmus had incurred by slaying the dragon (Eur. *Phœn.* 911 ff.). Other instances are taken from the legendary history of Athens. Erechtheus, when at war with Eleusis, was promised success, if he would sacrifice one of his daughters (Apollod. iii. xv. 4). A similar story was related concerning the three daughters of Leos (*Ælian, Var. Hist.* xii. 28), and the devotion of King Codrus saved Athens when he learnt that his death was a necessary condition of the defeat of the Lacedæmonian invaders (Lycurg. 84 ff.).

The general impression which we receive from Greek literature is that in historical times human sacrifice was obsolete, and it comes as a surprise to read in Plutarch that Themistocles, before the battle of Salamis, was driven by the pressure of public opinion to consent to the sacrifice of three Persian captives in honour of Dionysus Omestes (Plut. *Themist.* 13). Grote, it is true, dismisses the story as a fiction (iv. 479), and it is obviously of such a kind as a later age might have invented by way of scandalous embellishment for a famous chapter in the annals of the past. But, whether it is credible or not, we are at least entitled to draw from it the inference that there were not wanting in the classical age those who still cherished a belief in the efficacy of human sacrifice, and were prepared to advocate a resort to it in seasons of

ACHILLES) before embarkation, and that of providing a deceased hero with the appropriate mortuary gifts.

supreme danger. The conclusion is in agreement with the other available evidence. Before the battle of Leuctra, Pelopidas dreamed that he was warned by a spirit in a vision to sacrifice a fair-haired maiden, if he wished for victory in the approaching battle (Plut. *Pelop.* 21). A serious contention ensued between the friends of enlightenment and those who would have him obey the warning. But a fortunate accident released the general from his dilemma; for a quick-witted seer, catching sight of a chestnut filly, which had separated from the herd and charged into the ranks of the army, cried out that here was the very victim which the infernal powers required. Equally characteristic is the account given by Pausanias (iv. 9. 3-10) of a similar incident in the First Messenian War, which makes it clear that even at that early date Greek sentiment, while fearing to disobey the express injunction of an oracle, was only too ready to take advantage of any pretext for declaring that the sacred command had been fulfilled.

But there is incontrovertible evidence that, under stress of calamity, religious fears were too strong to be held entirely in check by the growing hatred of superstitious barbarities. Thus we read that, in the course of his famous purification of Athens, Epimenides the Cretan caused one or two youths to be sacrificed (Athen. 602 C; Diog. Laert. i. 110). Moreover, several authorities state (*e.g.* schol. Aristoph. *Eq.* 1136) that certain outcasts were maintained by the Athenians at the public expense, in order that, if a plague or a famine attacked the city, some of them might be sacrificed as scapegoats (*καθάρματα, φαρμακοί*), and so the taint of pollution might be removed. Nor was the practice confined to occasions of extraordinary calamity, for there are other examples, which establish that in certain cults human victims were sacrificed annually or at regular intervals. It has been inferred with reason from a statement of Pausanias (viii. 38. 7) that a rite of this kind was celebrated in honour of Zeus Lycæus on the summit of Mt. Lycæus in Arcadia as late as the 2nd cent. A.D. (*cf.* Porphy. *de Abst.* ii. 27; [Plat.] *Minos*, 315 C). At Halos in Thessaly, Xerxes was informed that the eldest son of the royal stock, which traced its origin to Athamas, was under a tabu to keep away from the town-hall, or, if he was caught attempting to enter it, he must be sacrificed at the altar, and that many had perished in this way (Herod. vii. 197). Every year in Rhodes, at the festival of Cronos, a condemned criminal, who had been kept back for this purpose, was led outside the gates of the city, and put to death; and something of the same kind took place at Salamis in Cyprus, in honour of Aglauros, the daughter of Cecrops (Porphy. *de Abst.* ii. 54). At the temple of Apollo in Leucas, a criminal was thrown over the cliff into the sea every year as a scapegoat; but the severity of his fall was mitigated by attaching live birds or feathers to his body, and men waited in small boats for his descent so as to rescue him and convey him away from the island (Strabo, 453). The festival of the *Thargelia*, which was celebrated at Athens in the middle of the summer, was the occasion of the performance of a similar rite. Although the evidence is not altogether free from doubt, it seems that two victims, one representing the male citizens and the other the female, were led out of the city as scapegoats and stoned to death (Harpocr. *s.v.* *φάρμακος*). The sacrifice of a scapegoat at the same festival is also attributed to the Ionians of Asia Minor (Hipponax, fr. 37).

The question of origins is too intricate and obscure to be discussed here, and cannot profitably be examined, much less solved, by the light of

the Greek evidence alone. Moreover, the Greek examples, whether ritual or mythical, have been contaminated and disturbed by successive accretions of advancing thought, and do not usually supply typical illustrations of primitive belief. While the extraordinary sacrifices show clear traces of the piacular motive, those which occurred at regular intervals are less clearly outlined, and can perhaps be satisfactorily explained only by being brought into comparison with the religious observances of the most backward races. Thus, it has been contended that the ceremony on Mt. Lycaeus was originally the cannibal feast of a wolf-tribe, and that, whenever the human victim is a captive or a foreigner, the origin of the ritual may be looked for in the feast of a totem group (W. R. Smith, in *EBR*² xxi. 138).

It will have been observed that there is very scanty evidence for the continued existence of human sacrifice as an ordinary practice of the most civilized communities of ancient Greece. If we put aside the conservatism of remote and rural districts, and the influences likely to have been exerted by Oriental cults, the survival of these cruel rites was hardly tolerated by public opinion; and, where it was not entirely suppressed, it was mitigated by the selection of victims from the lowest class of criminals. Thus, humanitarian scruples were soothed with the reflexion that divine justice required the extinction of those who were no longer worthy to live. But, wherever it was found practicable, the rigour of primitive superstition was softened by the substitution of a symbolical blood-shedding or of a non-human victim. It may be that in some cases, as has recently been maintained (Farnell, *CGS* i. 93), human sacrifice was not the primitive fact, but a development from the sacrifice of the theanthropic animal, when the significance of the latter was misunderstood. Nevertheless, it is certain that the Greeks themselves believed in the substitution of an animal surrogate, and the evidence relating to the fact of such substitution is too strong to be neglected entirely.

The flagellation of Spartan boys at the altar of Artemis Orthia is declared by Pausanias (iii. 16. 10; see, however, Frazer, *in loc.*) to have been instituted by Lyeurgus in place of the older custom of killing a man who was selected by lot. A curious passage in Euripides (*Iph. Taur.* 1458 ff.) proves that in the temple of Artemis Tauropolos at Halæ on the S.E. coast of Attica it was customary at the annual ceremony of the *Tauropolia* to lead a man in the guise of a victim to the altar, and to scratch his neck with a sword sufficiently to let the blood flow. The substitution of an animal for a human victim is familiar to every one from the legend of Iphigenia, and many analogous cases might be quoted (Plut. *Parallela* 35, p. 314 C; Pausan. ix. 8. 1, etc.). When the sacrifice of an Athenian maiden was required to stay a famine, a certain Embaros promised to give his daughter, but dressed up a goat in her place and sacrificed it at the altar (*Paræm.* i. 402). Ælian (*Nat. An.* xii. 34) records an extraordinary ceremony which took place at Tenedos in honour of Dionysus the Man-slayer. A cow which had recently calved was tended like a woman in child-bed, and her calf was shod in buskins (κόβροποι) and then struck down before the altar. But the man who had used the axe was publicly stoned and forced to make his escape to the sea, where presumably he was ceremonially cleansed. Some of the details recall the well-known rite of the *Bouphonia* (Frazer, *GB*³, pt. v. vol. ii. p. 4ff.); but that the calf was the substitute for a human victim seems to be established by the statement of Porphyry (*de Abst.* ii. 55).

A. C. PEARSON.

HUMAN SACRIFICE (Indian).—In this article the expression 'human sacrifice' is used to include not only propitiatory offerings to a god, but also all cases of the immolation of human beings, whether voluntary or otherwise, in furtherance of religious or superstitious objects.

1. References to the subject in Hindu religious books.—The *Aitareya Brāhmaṇa* to the *Rigveda* describes (vii. 13-18) how a certain king vowed that he would sacrifice his first-born to the water-god Varuna, if that deity would bless him with a son. One was born in due course, but the king hesitated to fulfil his vow—until the boy had grown up, when he ran away from home to escape the fate in store for him. The king was afflicted with dropsy as a punishment for not sacrificing him. At last a Brāhman was persuaded to sell his son as a substitute. This youth was tied to a stake, and was on the point of being immolated to appease Varuna when he recited certain sacred verses, whereupon some other deities intervened, and he was released.

It has been argued that, as the victim escaped, this story does not prove that the custom of offering human sacrifices actually existed, and that the rite was merely symbolical. But the whole story loses its point unless a real sacrifice had been intended. It is, moreover, in accordance with a custom which was put a stop to by the British Government only a century ago in Bengal, where Hindu women were in the habit of consigning their first-born babes to the Ganges in fulfilment of similar vows.

The above story is an instance of the sacrifice of children in the fulfilment of vows. Another form of human sacrifice was the *puruṣamedha*, which was celebrated for the attainment of supremacy over all created beings, and at which eleven human beings and eleven barren cows were offered up. The ceremony is described in the White *Yajur Veda*, of which the *Vājasaneyā Samhitā* opens with verses intended to serve as *mantras* (charms or incantations) for offering of human sacrifices. Various gods are enumerated, with the kind of victim suitable for each, such as a priest for Brahmā, a musician for the divinity of music, and a fisherman for the gods of rivers (i.-xii.). Further details are contained in the *Taittiriya* (iii. 4) and *Śatapatha Brāhmaṇas* (xiii. 6),¹ as well as in the *Sāṅkhāyana* (xvi. 10-16) and *Vaitāna Śrauta Sūtras* (xxxvii. f.).

In the *Śatapatha Brāhmaṇa* it is stated that the victims are to be let loose after being consecrated; but this work is of a much later date. The earlier records clearly contemplate the actual slaughter of the victims; and the account of the rite given in the *Śatapatha Brāhmaṇa* itself can be explained only on the hypothesis that it was a modification of a prior rite in which human beings were immolated.

The *āsvamedha*, or horse-sacrifice for the attainment of wealth, also required the immolation of a human being (*Śatapatha Brāhmaṇa*, XIII. iii. 6, § 5, etc.; see Eggeling, *SBE* xlv. p. xxxix f.); and human sacrifice, though reprobated, is mentioned in the *Mahābhārata* (e.g., ii. 626 ff., 861 ff.).

The *Purānas* and *Tantras*, which were compiled in very early mediæval times, contain frequent references to another rite requiring the immolation of a human victim. This was the *narabali*, or human sacrifice to the goddess Chandikā, a dark, fierce, sanguinary divinity, who is represented in the most awful forms, garlanded with a string of

¹ These passages are quoted at length by R. Mitra in his paper 'On Human Sacrifices in Ancient India,' *JASBe* vol. xlv. (1876) pt. I. p. 76.

human skulls, besmeared with human blood, and holding a skull in one hand and an uplifted sabre in the other. In the *Kālikā Purāna*¹ it is said that 'by a human sacrifice attended by the rites laid down, Devi (the goddess, i.e. Chandikā) remains gratified for a thousand years; and by the sacrifice of three men, one hundred thousand years. By human flesh the goddess Kāmākhya's consort Bhairava, who assumes my shape, remains pleased three thousand years. Blood consecrated immediately becomes ambrosia, and, since the head and flesh are gratifying, therefore should the head and flesh be offered at the worship of the goddess. The wise should add the flesh free from hair, among food offerings.' Minute details are added regarding the ways in which, the times when, and the places where, the rite should be celebrated.

'Having placed the victim before the goddess, the worshipper should adore her by offering flowers, sandal paste, and bark, frequently repeating the *mantra* appropriate for sacrifice. Then, facing the north and placing the victim to face east, he should look backward and repeat this *mantra*: "O man, through my good fortune thou hast appeared as a victim; therefore I salute thee; thou multiform and of the form of a victim. Thou, by gratifying Chandikā, destroyest all evil incidents to the giver. Thou, a victim, who appearest as a sacrifice meet for the Vaisnavi, hast my salutations. Victims were created by the self-born himself for sacrificial rites; I shall slaughter thee to-day, and slaughter as a sacrifice is no murder." Thus meditating on that human-formed victim, a flower should be thrown on the top of its head with the *mantra*: "Om, Aih, Hrih, Srih." Then, thinking of one's own wishes, and referring to the goddess, water should be sprinkled on the victim. Thereafter the sword should be consecrated with the *mantra*: "O sword, thou art the tongue of Chandikā and bestower of the region of the gods. Black and holding the trident, thou art like the last dreadful night of creation; born fierce, of bloody eyes and mouth, wearing a blood-red garland . . . salutations be to thee." The sword, having thus been consecrated, should be taken up while repeating the *mantra*: "Aih huñ phat," and the excellent victim slaughtered with it. Thereafter, carefully sprinkling on the blood of the victim, water, rock-salt, honey, aromatics, and flowers, it should be placed before the goddess, and the skull also, with a lamp burning over it, should be placed before her with the *mantra*: "Om, Aih, Hrih, Srih, Kauṣiki, thou art gratified with the blood." Thus, having completed the sacrifice, the worshipper attains rich reward.'

In the fifth act of the *Mālatīmādhava*, by the dramatist Bhavabhūti (fl. c. A. D. 690), is a vivid description of the attempt of an Aghori (q. v.) to sacrifice the heroine to Chāmuṇḍā, a form of Kālī.

2. Former prevalence of sacrifices to Kālī.—These *tāntrik* sacrifices to Kālī or Chandikā were formerly common. They were freely offered in the days of Marāthā rule; and in Western India there are many temples at which such sacrifices were common only a century ago. The victim was taken to the temple in the evening and shut up; and in the morning he was found dead, the dread goddess having 'shown her power by coming in the night and sucking his blood.'

The great Saiva temple at Tanjore contains a shrine of Kālī where a human victim (a male child purchased for the purpose) was sacrificed every Friday evening, until the advent of British rule led to the substitution of a sheep. There are other temples in Southern India where similar sacrifices were formerly common. At the famous shrine of Dāntesvari in Bastar it is said that in A. D. 1830 upwards of twenty-five men were immolated by the Rājā on a single occasion. Sleeman, writing in 1844, says that a certain chief in the Central Provinces once a year sacrificed a Brāhman to the goddess.² The Brāhmins of the Deccan used to sacrifice an old woman on the occasion of the Rājā of Sātara's annual visit to the fort of Partābgarh. According to Sir John Malcolm, the Karādi Brāhmins annually sacrificed a young Brāhman at Poona. This class of Brāhmins long remained under the suspicion of being addicted to human sacrifices, using poison to effect their ends when an open sacrifice would have been too dangerous. In N. Chevers' Report on Medical Jurisprudence, written in 1854, it is said that

'there are strong reasons for believing that there is scarcely a district in India in which human sacrifice is not still practised occasionally as a religious rite.'

W. Ward, writing in the early part of the 19th

- A translation of the whole chapter on the subject was published by Blaquiére in *Asiatic Researches*, v. [1797] 871 ff.

² *Rambles and Recollections*, London, 1844, i. 61.

cent., mentions various places in Bengal at which human sacrifices were offered:

'The discovery of these murders in the name of religion is made by finding the bodies with the beads cut off near their images [of Kālī]; and, though no one acknowledges the act, yet the natives well know that these persons have been offered in sacrifice.'¹

In the north-east of India, human sacrifices to Kālī were very common. The Koch king, Nar Nārāyan, who ruled in the 16th cent., is said to have immolated 150 men on a single occasion; and some of his descendants carried on the practice until the early part of last century. It appears from the *Haft Iqlim* that in Koch Bihār persons, called *bhogīs*, sometimes offered themselves as victims. From the time when they announced that the goddess had called them, they were treated as privileged persons. They were allowed to do whatever they liked, and every woman was at their command until the annual festival came round, when they were sacrificed to the goddess.² More frequently, however, the victim was either a person kidnapped from a distance, or a traveller, or some person found abroad after midnight.

In the Jaintiā *parganas*, human sacrifices to Kālī were offered annually. As in Koch Bihār, persons frequently volunteered themselves as victims. If the would-be victim, or *bhoge khāora*, were deemed suitable, the Rājā would present him with a golden anklet and allow him to live as he chose, compensation for any damage done by him being paid from the royal treasury. But his enjoyment of these privileges was very short. On the *Navami* day of the *Durgā Pujā*, the victim, after bathing and purifying himself, was dressed in new attire, daubed with red sandalwood and vermilion, and bedecked with garlands. Thus arrayed, he sat on a raised dais in front of the goddess, and spent some time in meditation and the repetition of *mantras*. He then made a sign with his finger, whereupon the executioner, after uttering the prescribed sacrificial *mantras*, cut off his head, which was placed before the goddess on a golden plate. The lungs were cooked and eaten by such *Kāndrā Yogis* as were present, and the royal family partook of a small quantity of rice cooked in the blood. When voluntary victims were not forthcoming, persons were kidnapped from outside the State. In 1832 four persons were thus taken from British territory, one of whom escaped and gave information. As the Rājā refused to deliver up the culprits, and as this was not the first offence, his dominions were annexed.

In the *Tikka Kalpa*, a MS work found in the Manipur State library, it is said:

'Human sacrifices are to be made, after the royal consent has been obtained, on the occasion of public calamities such as war, or for the purpose of obtaining great wealth. . . . A Brāhman or a woman should never be sacrificed. Neither should one sacrifice his own body, as then he will be guilty of the sin of suicide. A brother, a father, a son, a wife's brother, a sister's son, a maternal uncle, none of these should be sacrificed; nor any one who is acquainted with the Vedas, or has renounced the world, or is a student, or belongs to the royal family. An enemy, a sick person, an eunuch, one who is infirm or has defects or scars should not be offered. The victim should be bathed, and properly decorated, and then brought before the goddess. The person offering the sacrifice should turn his face towards the north, and the victim should face the east. Water should be sprinkled on the victim, and the following *mantra* uttered: "O goddess, living on the golden mountain, I offer this sacrifice to thee! He is good and stout and without blemish. I bind him to a post! I offer this sacrifice to remove my misfortune. O goddess, accept him! Although I kill him, I give him salvation!"'

This is clearly another version of the rite prescribed in the *Kālikā Purāna*.

In modern times the sacrifice of human beings has been replaced by that of animals—chiefly

¹ *History, Literature, and Religion of the Hindoos*², London, 1815, ii. 261.

² Similar liberties were allowed to prospective victims in ancient Babylon and in Mexico (*GB*³, pt. iii. [London, 1911] p. 113 f., pt. v. [1912] vol. i. p. 238, vol. ii. p. 92 f.).

buffaloes and goats—but some families, whose ancestors offered human victims at the *Durgā* and *Kālī Pujās*, now sacrifice, in lieu of a living man, an effigy, about a foot long, made of dried milk (*khīra*).

3. Sacrifices by aboriginal tribes in north-east of India.—The gods whose favour it was desired to obtain in the rites ordained in the *Vedas* were genuine Aryan deities, and their worship, with the attendant sacrifices, was probably brought by the Aryans from their earlier settlements beyond the confines of India. The terrible goddess whose cult is described in the *Purānas* and *Tantras* is, however, a comparatively recent addition to the Hindu pantheon. It is believed that her worship and the bloody orgies with which it was attended were adopted from the religion of non-Aryan tribes, with whom the Hindus came into contact on the north-east frontier of India. It is, therefore, not surprising to find the immolation of human beings common in that locality, not only among Hinduized tribes like the Manipuris, Kochs, and Jaintiās, whose practices have already been described, but also amongst those that had only partially, if at all, come under its influence. The Kachāri kings offered annual sacrifices to their sacred sword, taking as victims Hindus of any caste but the Brāhman, who were kidnapped for the purpose from other parts. Brāhmins officiated at the ceremony, and the heads of the victims were thrown down a masonry well. In the *Rājmalā*, or chronicles of the kings of Tippera, it is related that a king who ruled in the first half of the 16th cent. offered up some slaves as a sacrifice to the 'fourteen gods,'¹ but the offering was not accepted, and the *chontai*, or high priest, announced that Mahādeb, or Śiva, had ordered the immolation of the best commanders of the army. The king accordingly sacrificed eight of his chief captains. His successor, it is said, on two occasions defeated the Muhammadans, and sacrificed the prisoners to the 'fourteen gods.' Mention is also made of a king sacrificing three human victims to Śiva, when praying for a son, and of another, when defeated by the Muhammadans, offering a Chaudāl boy to Bhābhāhāri. Among the wild tribes of Hill Tippera and the Chittagong Hill Tracts, such sacrifices probably still occur, though it is naturally very difficult to obtain definite information regarding them.

The Chutiya's were still more addicted to human sacrifices, the object of their worship being Kesāi Khāti, the eater of raw (human) flesh, whom they now identify with Kālī. The officiating priests, or *deoris*, were members of the tribe and not Brāhmins. The sacrifices were offered on regular occasions, and also to avert special calamities, such as cholera, smallpox, and drought. After the subjugation of the Chutiya's by the Āhoms, some four centuries ago, they were permitted to continue their ghastly rites. They were usually given for the purpose criminals who had been sentenced to capital punishment; but, when none such were available, a particular clan was expected to produce a victim, and in return certain privileges were granted to it. When a woman of this clan became pregnant, the astrologers were called on to ascertain the sex of the child. If they predicted that it would be a boy, the mother was carefully tended, and the child was anointed, as soon as it was born, with a paste made of turmeric and a kind of pulse. When necessity arose, a volunteer was called for, and (it is said) was usually forthcoming; if not, a victim was taken by force. For some time he was kept at the temple and fed sumptuously, until in sufficiently plump condition to suit the supposed

¹ Most of these gods are now identified with regular Hindu deities.

taste of the goddess. He was then shaved, anointed with the same paste as at birth and adorned with gold and silver ornaments, and was conducted before the image of the goddess. Here he prostrated himself and was promptly decapitated by the *bar deori*, or high priest. The head was added to a heap of skulls that were piled in view of the shrine. Victims were taken only from amongst the juvenile members of the clan. As in other cases, persons who were deformed, or bore any scar or blemish, were regarded as unfit to be victims.

The offering of human sacrifices to Kesāi Khāti was common also in Nowgong, where the victim was usually some stranger who had come for purposes of trade. He was kept in close custody for about a fortnight, and was then led out, decked with flowers and jewels, and decapitated. As soon as this had been done, the spectators fled headlong down the hill on which the shrine stood, to avoid being devoured by the hungry gods and goddesses. The sacrifice seems here to have been offered, not in order to obtain some imaginary benefit for the worshippers, but rather with a view to providing food for the sanguinary goddess and so escaping her unwelcome attentions themselves.

The same idea of gods requiring human blood is found among the Khāsīs, who believe in the existence of snake-gods called *thlen*. When a *thlen* takes up its abode in a family, there is no means of getting rid of it. So long as it is supplied at intervals with its favourite food, the family prospers and grows rich; but, when it feels the want of blood, sickness breaks out and misfortunes become frequent. Some human being is then murdered, and the hair, the tips of the fingers, and a little blood from the nostrils are taken and offered to the *thlen*. The belief is that the demon appears in the form of a snake and devours the body of the victim, which is materialized from the portions thus offered. Murders due to the prevalence of this superstition still occasionally come to light.

This idea of a family-spirit that needs human blood and afflicts the family with misfortune if its craving is not satisfied exists also in other parts of India, and is believed to have been the cause of a murder committed in the year 1908 in Chotā Nāgpur. The victim, a boy of 12, was found lying with his throat cut, and some grains of uncooked rice were seen in the wound, showing that he, like animals destined for sacrifice, had been made to swallow rice immediately before he was killed. The murder had apparently been committed at a shrine of Kālī, where the body was found. If so, the case may mark a transition stage between the entirely non-Aryan practice of the Khāsīs and the rites laid down in the *Kālīkā Purāna*.

4. Sacrifices by Dravidian tribes.—Human sacrifices were once very common among the Dravidian tribes of the Chotā Nāgpur plateau. With the Khonds they were so frequent and notorious in the early days of British rule that officers were deputed by Government to investigate the facts with a view to preventive action, and we have in their reports a full account of the practice as it obtained among the members of this tribe. Human beings were offered up by them to Tari Pennu, the earth-goddess, to avert misfortune and disease, to obtain success in war, and especially to ensure good crops. The victim, or *meriah*, was acceptable to the goddess only if he had been purchased (usually from the Pāns, a weaving and criminal tribe, who procured children for the purpose from the plains), or was the son of a victim, or had been dedicated as a child by his father. Khonds in distress sometimes sold their children for victims, 'considering the beatification of their souls certain, and their death, for the beatification of mankind, the most honourable possible.' The victims were often kept for years before they were sacrificed. They were regarded as consecrated beings, and were treated with extreme affection and deference. They were commonly sacrificed about the time when the chief crop was sown. On

the day before the ceremony, the victim was dressed in a new garment and led with music and dancing to the sacred grove, where he was tied to a post, anointed with oil, *ghī* (clarified butter), and turmeric, and adorned with flowers. 'A species of reverence which it is not easy to distinguish from adoration' was paid to him throughout the day. The crowd danced round the post to music, and, addressing the earth, said: 'O goddess, we offer this sacrifice to you; give us good crops, seasons, and health.' The orgies were kept up till noon next day, when the victim was again anointed and taken in procession round the village. On this occasion, as on the previous day, there was a great struggle to get some relic from his person, such as a lock of his hair, a particle of the turmeric paste, or a drop of his spittle. He was then usually strangled in the cleft of a green branch, or tied to the trunk of a wooden elephant which was made to revolve. The officiating priest (a Khond) first wounded the victim slightly with an axe, and the crowd then rushed at him and cut the flesh from the bones, leaving the head and bowels untouched. The flesh was carried off to the different villages, where part was offered to the earth-goddess, buried, and a libation of water poured over it, and the rest was divided among the householders. Each man buried his piece in his favourite field. The remains (head, bowels, and bones) were burned next day, with a sheep, on a funeral pyre. The ashes were scattered over the fields, laid as paste on the houses and granaries, or mixed with the new corn to preserve it from insects.

Our authorities represent the *meriahs* as victims offered to propitiate the earth-goddess; but Frazer points out that the flesh and ashes of the victim were evidently thought to possess 'a direct or intrinsic power of making the crops to grow, quite independent of the indirect efficacy which it [the sacrifice] might have as an offering to secure the good-will of the deity.'¹

Practices very similar to those of the Khonds have been noticed by Davis and Needham among various Mongoloid tribes in the Nāgā Hills and on the Pātāl. Sometimes the flesh is buried in the fields to ensure good crops, and sometimes the victim is tied up and burnt to death in the jungle which is to be cleared for the next year's crops. The same tribes also regard a human sacrifice as very efficacious in warding off disease or ensuring victory in battle. The victim may be a slave, a prisoner of war, or some one purchased for the purpose. Both sexes are equally suitable. In the North of the Upper Chindwin district in Burma it was formerly the custom to sacrifice boys and girls at a big festival in August in order to get good rice crops. The victims, who were usually small children, were purchased from the unadministered territory. A rope having been placed round his neck, the victim was taken to the houses of all the relatives of the purchaser. At each house a finger joint was cut off, and all persons in the house were smeared with the blood. They also licked the joint and rubbed it on the cooking tripod. The victim was then tied to a post in the middle of the village and killed by repeated stabs of a spear, the blood from each stab being caught in a hollow bamboo, to be used afterwards for smearing on the bodies of the purchaser's relatives. The entrails were then taken out and the flesh removed from the bones, and the whole was put in a basket and set on a platform near by as an offering to the god. After the blood had been smeared on the purchaser and his relatives, who danced and wept meanwhile, the basket and its contents were thrown into the jungle.²

Among other Dravidian tribes who immolated human beings may be mentioned the Bhumij, who kidnapped children and sacrificed them at the shrine of their goddess Rankini. The Bhuiyās had a goddess named Thākurañi Māi, to whom similar sacrifices were offered; in 1868 an obnoxious official was slain by them, and his head offered to this deity. During the rising of the Mundās in 1900 a constable was killed, and it is said that his head was cut off, and his brains offered as a sacrifice to the local demons. The Bhogtās of Bhāuñrphār formerly offered up a human being, at stated intervals, to the bees which infest the rocks there,

¹ *GB*, pt. v. vol. i. p. 250.

² G. E. R. Grant Brown, 'Human Sacrifices near the Upper Chindwin,' in *Journal of the Burma Research Society*, vol. i.

and to which supernatural powers are attributed. To this day the local aborigines will not pass the palace of a certain Rājā at night, owing to the survival of the belief that travellers are liable to be caught for sacrifice. The Banjāras, or pack bullock drivers, were once much addicted to human sacrifices. Before starting on a journey they used to bury a child in the ground up to the shoulders, and then drive their bullocks over it. Sometimes, in order to cure an illness or obtain some desired end, they decapitated a victim with one stroke of a sword and sprinkled its blood over an idol.

5. Head-hunting.—Like the Dayaks of Borneo, the Gāros and many tribes of Nāgas were formerly head-hunters; and they often made raids on each other solely in order to obtain heads, which were brought home in triumph to the village and hung up on a tree there. Among the Angāmi Nāgas a man was not allowed to put on the full insignia of a warrior until he had taken a life. It was not necessary for the victim to be a man killed in battle; a child or an old woman speared from an ambush served the purpose equally well. The practice has been put down in British territory, but it is still in vogue among the independent tribes on the frontier. Its origin is perhaps due to the belief that persons whose heads are taken become slaves of the captor in his future life.

The Āhoms often piled up in a heap the heads of enemies killed in or after a battle, or buried them under the steps of their king's palace. But in their case no religious motive appears to have been involved; it was merely a barbarous method of exulting over their defeated enemies.

6. Sacrifices to earth- and river-demons, etc.—There is a superstition current throughout India that buried treasure becomes the property of demons, and that it is most hazardous to search for or remove it unless the demons have first been mollified with blood. In Southern India human sacrifices are deemed most suitable for this purpose, and the demons are believed to have a special partiality for the blood of a pregnant woman; but nowadays they have to be satisfied with that of a buffalo, a goat, or even a fowl. Rivers also are often thought to be inhabited by demons. It is commonly believed that a bridge over a big or fast-flowing river will not stand until the river-spirit has been appeased by the offering of human blood. Captain Clive, writing in 1828, says that the Rāna of Mewār, before crossing the Mahi river, invariably caused an individual from a particular tribe to be sacrificed, his throat being cut and his body thrown into the river. There is a wide-spread superstition that large buildings require the burial of human beings in the foundations to make them safe. When important public works are in progress, rumours are still frequently spread and widely believed that lives are needed for this purpose, and that persons found wandering abroad at night are in danger of being taken as victims. A few years ago a girl was killed under the orders of a local landholder, and buried under an embankment which had given way several times, in order to render it immune from further injury by gods or demons. About the year 1780, when the gates of the city of Tavoy in Burma were erected, a criminal was put into each post-hole, and the post was thrust down upon him, so that his blood gushed up at the sides. He was supposed to become a spirit that would hover about the place, inflicting evil on all who came near, thereby contributing to the defence of the town.

There is a very general belief in the efficacy of human blood to produce any desired result. In Sibsāgar in 1854 a man decapitated the young son of a neighbour and drank his blood, in order to effect the recovery of his own child, who was ill

with fever. A similar act was committed in Muzaffarnagar in 1870 by a childless woman, who hoped thereby to obtain a son. In the same year, at the instigation of a Hindu conjuror, a Musalmān butcher, who had lost his child, killed a neighbour's child, and washed his wife in its blood, in order that her future children might be healthy. Three similar cases occurred in 1909, one in the United Provinces and two in the Nāsik district of Bombay.

7. Killing the king.—In *The Golden Bough* it is shown that primitive races in different parts of the world have a practice of killing their king. Among these races the king was believed by his subjects to be endowed with supernatural powers, and their welfare was dependent on his preserving these powers unimpaired. It was therefore the custom to kill him, or make him commit suicide, so that his soul might be transferred to a vigorous successor before he grew feeble from old age. A custom of this kind once existed in Calicut, where the *zamorin*, or king, was formerly obliged to cut his throat in public at the end of a twelve years' reign. But by the 17th cent. the rule had been modified. At the end of the twelve years a great feast was given, at which any guest who was so minded was at liberty to endeavour to kill the king. If he succeeded, the crown would be his reward; but, as the king was surrounded by his guards, the chances of success were very small.¹ The old Āhom custom which required the king at his coronation to slay a man was possibly a survival of the same class of ideas, the victim being taken as a substitute for the previous monarch.

8. Religious suicide.—The idea of religious suicide, i.e. of sacrificing oneself, is by no means unknown to the Hindus. We have already seen how, in the north-east of India, people sometimes offered themselves as victims at the shrine of Kālī. There is an island in the Narbada river in the Central Provinces where annually, until 1824, devotees were induced to throw themselves from a height on to some rocks which were thought to be the abode of Kāl Bhairava, the consort of Kālī Devī, who fed on human flesh.² Expressions occur in various religious books which countenance the practice of suicide, and rules are laid down for the rite. It was still quite common in the early part of last century. It was resorted to mainly by persons who suffered from great poverty or painful and incurable disease. It was thought that, if a man drowned himself in a sacred river, such as the Ganges, especially at some peculiarly sacred spot, such as Allāhābād, Tribeni, or Sāgar Island, he would thereby acquire merit that would redound to his advantage in his next birth. The rite used to be performed with much ceremony. The man who was tired of life made the prescribed ablutions and repeated certain *mantras*, and then sprang from a boat, or waded out of his depth, with earthen vessels tied to his limbs, which dragged him down when they filled with water. It was considered auspicious if a crocodile carried him off before he died from drowning. Another favourite method of ending life was by throwing oneself beneath the wheels of the huge car on which the image Jagannāth at Purī is dragged once a year from the temple in which it is usually kept to a garden house about a mile away. Sick people, if the astrologer has predicted their death, are often taken to die on the banks of a sacred river. In former times, if death were long in coming, they frequently starved or drowned themselves; and, if at the last their resolution failed them, their relatives took care that they did not draw back.

¹ *A New Account of the East Indies*, by Captain Alex. Hamilton, who travelled in India from 1688 to 1723, reprinted in Pinkerton's *Voyages and Travels* (London, 1811), viii. 374.

² *PNQ* ii. 118.

9. Sati.—But the most common and best known form of religious suicide was that, commonly known as *sati*, of widows who allowed themselves to be burnt to death on the funeral pyres of their husbands. Such suicides were frequent among all the high castes, and were especially common in the families of Rājput chiefs. In many cases the act was entirely voluntary, but sometimes the unfortunate widow was subjected to a good deal of pressure before she could be induced to ascend the pyre. *Sati* was prohibited by law in British territory in the year 1829; and the example thus set was followed some years later by the rulers of the Native States. Isolated cases, however, still sometimes occur. In the year 1911 a Hindu lady, whose husband was on the point of death, soaked her clothes in kerosene oil and, setting light to them, burnt herself to death.¹ Her act was applauded as that of a devoted wife by many Hindus, even among the educated classes. How this practice came into vogue it is difficult to say. There is no mention of it in the Vedas; but, from the belief that the wife who thus immolated herself accompanied her husband to the other world, it may have arisen from the same class of ideas which led the Āhoms to bury their slaves alive in the tombs of their kings and great nobles, and the Khongi Nāgās to decapitate a man and inter his head with that of a deceased chief. Certain Central India chiefs used to slay men at their predecessors' obsequies. In the southern kingdom of Vijayanagar, royal funerals were the occasion for wholesale holocausts of women.

10. Offering one's own blood.—In conclusion, mention may be made of the practice of offering one's own blood to Kālī. This is referred to in the *Kālīkā Purāna* as an acceptable way of propitiating the goddess, and it is still common among Hindu women. When a husband or a son is dangerously ill, a vow is made that, on the recovery of the patient, the goddess will be propitiated with human blood. The vow is fulfilled either at the next *Durgā Pujā*, or at once in some temple of Kālī. The wife or mother, after performing certain ceremonies, draws a few drops of blood from her breast with a nail-cutter, and offers them to the goddess.

HUMAN SACRIFICE (Iranian).—I. Early Iranians and Avestan people.—The prevalence of the custom of sacrificing human beings to the gods is so fully and incontrovertibly attested among practically all the other Indo-European peoples, as it is in the case of most ancient nations, that we are naturally predisposed to look for clear and unmistakable indications of its existence among the Iranians. In point of fact, however, these indications are so few and inconclusive that the practice of human sacrifice has been confidently declared² never to have been in vogue among the Persians. Whether the possession of earlier records would have exhibited the Iranians in line

¹ Several more similar cases have occurred since this article was written.

² The Persians were perhaps the only nation in ancient times who did not indulge in human sacrifices' (Rājendralāla Mitra, 'On Human Sacrifices in Ancient India,' *JASBe* xlv. [Calcutta, 1876] 88.

with the other Indo-European races in this matter is a question that does not admit of a categorical answer. Schrader,¹ speaking of the Aryans (*i.e.* Indo-Europeans) generally, says:

'If, as is little likely to be doubted, offerings were made to heaven in the primitive period . . . then human sacrifice must have taken a prominent place amongst them.'

Others, with much historical justification, maintain that no general principle can be laid down as to the point of time and the order in which human and animal sacrifices occur in the religious development of nations (see art. ANIMALS, vol. i. p. 498 f.; also art. 'Sacrifice,' in *EBr*¹¹, by the same author). Moreover, among the Hindus, the nearest ethnological relations of the Iranians, the prevalence of human sacrifices is in inverse ratio to the antiquity of the period we may be considering. Of its vogue in the earliest Vedic times we possess only the indications contained in the *Sunah-sepa* hymns of the *Rig Samhitā* (i. 24-30), which, in all probability, are to be regarded as pointing to a real and not a merely symbolical sacrifice (see Rājendralāla Mitra, *op. cit.*). The Avesta, on the other hand—even its earliest portions—contains no suggestion of that custom as having been practised at any time. What little bearing on this subject the evidence of the Avesta possesses tends to confirm our surmise that human sacrifices were unknown to the Avestan and pre-Avestan people of Iran. The most usual victims in the human sacrifices of most nations were prisoners of war. But these, we have reason to believe, were treated with great clemency by the Avestan people.

As Geiger² says:

'Captives taken in war were kept by their conquerors as servants and slaves. As such, they formed, I believe, part of the household of the Mazdayasnians, where they seem to have been treated kindly and humanely.' And again, 'Slaves were evidently regarded as members of the family, and their possession very highly valued.'

It should, perhaps, be remembered that the above is a description of the social life of the eastern Iranians in particular, whose practices as well as their creed may have differed somewhat from those of their more westerly kinsmen.

2. The Achæmenians and the custom of human sacrifice.—Herodotus and some later writers attribute isolated instances of human sacrifice to at least three of the Achæmenian kings. Each of these cases must be considered separately. In the first place, when Sardis, the capital of the kingdom of Lydia, fell (in 546 B.C.) into the hands of the Persians, Cyrus, according to the account of Herodotus,³ issued orders to erect a great pyre and to place Cræsus, the captive king, with fourteen youths, on the pile to be burnt. Later, however, he relented, and a shower of rain extinguished the flames, and thus Cræsus was spared. This version of the story had always presented two great difficulties to its acceptance. The first and more formidable was that of reconciling this incident with Cyrus's otherwise justly enjoyed fame for clemency to his prisoners in war, and no adequate reason seemed to have been present for any departure on this occasion from his usual attitude and practice. Further, there was the less formidable, perhaps, yet real objection that Cyrus, as a Zoroastrian or true Persian, could not have ordered the burning of Cræsus. The light which recent researches have thrown upon Cyrus's religious attitude has tended to some extent to remove the latter difficulty. Nevertheless, the story as told by Herodotus did not easily commend itself to

the general acceptance. The recently discovered poems of Bacchylides (born 507 B.C.)⁴ yielded another version of the story of Cræsus, earlier in date than that of the historian and also free from its objections. In the poem, instead of being condemned to die by his conqueror, Cræsus elects to perish in the flames of a pyre of his own erection, rather than submit to the indignity of enslavement to a foreign foe. The version of Bacchylides receives striking corroboration from a red-figured Greek vase² of the late 6th or early 5th cent. B.C. preserved in the Louvre. The vase shows Cræsus enthroned and crowned, clad in his kingly robes, holding his sceptre with his left hand, and solemnly pouring a libation with his right. It is agreed by all that his attitude is in every way suggestive of the voluntariness of the act of self-immolation, and confirms Bacchylides' version of the story. It seems, therefore, that the charge of human sacrifice in the case of Cyrus must be waived. Nor does it seem possible to regard the instance given by Herodotus³ of the action of Cambyses as an example of human sacrifice.

'At another time,' says the historian, 'he took twelve of the noblest Persians, and, without bringing any charge worthy of death against them, buried them all up to the neck.'

Even Herodotus himself adduces this incident as an example of the king's mad ferocity. The act is in no way religiously motivated.

Only two more instances are recorded by Herodotus, one of which is attributed to Xerxes, the other to his wife Amestris (vii. 114).

'When they learnt that the name of the place was "The Nine Ways," they took nine youths of the land and as many of their maidens and buried them alive on the spot. Burying alive is a Persian custom. I have heard that Amestris, the wife of Xerxes, in her old age buried alive seven pairs of Persian youths, sons of illustrious men, as a thank-offering to the god who is supposed to dwell underneath the earth.'

The latter statement does not easily fit into the scheme of Persian cosmogony, and probably, as Rawlinson (*ad loc.*) says, Herodotus here speaks as a Greek. Now, although the religious motive is not quite so remote in these two instances as in the case of Cambyses, it will probably still be felt that we have here but slender basis upon which to found our belief in the Persian custom of human sacrifice (see art. ACHÆMENIANS). Even granting that we are dealing with true history, it seems more probable that these older instances of 'tree-planting' were prompted by human vindictiveness rather than by a desire to observe a religious custom and propitiate a god; for the custom of burying alive remained to modern times in Persia as one of the most cruel forms of torture (see Niebuhr, *Vorträge*, Berlin, 1847, i. 155).

3. Human sacrifice as practised by the Scythians.—Although all the other branches of the Iranian race, so far as our records show, were singularly free from the habit of sacrificing human beings, the Scythians, who were perhaps only mainly Iranian, practised that custom in very extreme forms.

It was their custom to sacrifice one out of every hundred prisoners of war. The method of immolation, according to Herodotus,⁴ was as follows. A large platform made of brushwork was erected, upon the top of which was set a sword or scimitar, the image of Ares. Libations of wine were poured over the victims' heads, after which they were slaughtered over a vessel. Then the blood was taken to the top of the pile and poured upon the scimitar. While this was proceeding at the top of the platform, below, by its side, the right hands and arms of the slaughtered men were cut off and tossed up into the air, the whole being left to disintegrate and decay where they might chance to have fallen. Another

³ iii. 35.

⁴ iv. 62.

instance, in which, perhaps, the religious motive is more remote, is the method by which false diviners were immolated. A waggon is loaded with brushwood, and oxen are yoked to it. Then the soothsayers, with their feet tied together, their hands bound behind their backs, and their mouths gagged, are thrust into the midst of the brushwood. Finally the wood is ignited and the oxen are made to rush off with their burning load until they themselves are caught in the conflagration and all are consumed together.¹

The only other instance that need be mentioned here bears more clearly the character of a religious sacrifice, namely, the ceremonies associated with a king's funeral. After the long march of the procession from tribe to tribe, as described by Herodotus,² and the arrival at the royal tombs, the body of the dead king, stretched on a mattress, is laid in the grave prepared for it. In the open space around the body of the king they bury one of his concubines, first killing her by strangling, and also his cupbearer, his cook, his groom, his laquay, his messenger, as well as some horses and other possessions. When a year is gone, further ceremonies take place. Fifty of the best of the late king's attendants—all native Scythians—are taken and strangled. Then as many of the king's finest horses are slain. After a somewhat barbarous process of preparation, the strangled youths are mounted upon the slaughtered horses and arranged in a circle around the king's tomb. These are the most important instances of the forms of human sacrifice as practised by the Scythians.

LITERATURE.—The works dealing most fully and directly with the various parts of our subject have already been indicated. On the Croesus story, see also J. G. Frazer, *Adonis, Attis, Osiris*, London, 1907, pp. 141 ff., 146 ff.; see also p. 402 f. on the custom of burying alive. E. EDWARDS.

HUMAN SACRIFICE (Japanese and Korean).

—I. Japanese.—The most ancient Japanese documents that have come down to us were written at a time (8th cent.) when the memory of human sacrifices was still green. One of the most important myths of the *Kojiki* is conceived as follows:

Having been expelled [from Heaven, after his crimes against the Sun-goddess], Susa-no-wo-no-mikoto [His-Swift-Impetuous-Male-Augustness, the god of the Ocean and the Storm, who appears here in the aspect of a human hero] descended to a place called Tori-kami at the head-waters of the River Hi in the land of Idzumo. At this time some chopsticks came floating down the stream. So His-Swift-Impetuous-Male-Augustness, thinking that there must be people at the head-waters of the river, went up to it in quest of them, when he came upon an old man and an old woman,—two of them,—who had a young girl between them, and were weeping. Then he deigned to ask: "Who are ye?" So the old man replied, saying: "I am an Earthly Deity, child of Oho-yama-tsu-mi-no-kami [the Great-Mountain's God]. I am called by the name of Ashi-nadzu-uchi, my wife is called by the name of Te-nadzu-chi, and my daughter is called by the name of Kushi-nada-hime [*himé*, 'princess'; *nada*, no doubt for *Inada*, a place-name meaning 'rice-field'; *kushi*, in the sense of 'comb' here, as the story that follows shows]." Again he asked: "What is the cause of your crying?" The old man answered, saying: "I had originally eight young girls as daughters. But the eight-forked serpent of Koshi [a name of the north-west district occupied by the Ainus] has come every year and devoured one, and it is now its time to come, wherefore we weep." Then he asked him: "What is its form like?" The old man answered, saying: "Its eyes are like *akakagachi* [the winter-cherry]; it has one body with eight heads and eight tails. Moreover, on its body grows moss, and also *chamacyparis* and *cryptomerias*. Its length extends over eight valleys and eight hills, and if one looks at its belly, it is all constantly bloody and inflamed." Then His-Swift-Impetuous-Male-Augustness said to the old man: "If this be thy daughter, wilt thou offer her to me?" He replied, saying: "With reverence, but I know not thine august name." Then he replied, saying: "I am elder brother to the Heaven-Shining-Great-August-Deity. So I have now descended from Heaven." Then the Deities Ashi-nadzu-uchi and Te-nadzu-chi said: "If that be so, with reverence will we offer her to thee." So His-Swift-Impetuous-Male-Augustness, at once taking and changing the young girl into a multitudinous and close-toothed comb which he stuck into his august hair-bunch, said to the Deities Ashi-nadzu-uchi and Te-nadzu-chi: "Do you distil some eight-fold refined liquor [*sake*]. Also make a fence round about, in that

fence make eight gates, at each gate tie together eight platforms, on each platform put a liquor-vat, and into each vat pour the eight-fold refined liquor, and wait." So, as they waited after having thus prepared everything in accordance with his bidding, the eight-forked serpent came truly as the old man had said, and immediately dipped a head into each vat, and drank the liquor. Thereupon it was intoxicated with drinking, and all the heads lay down and slept. Then His-Swift-Impetuous-Male-Augustness drew the ten-grasp sabre that was augustly girded on him, and cut the serpent in pieces, so that the River Hi flowed on changed into a river of blood. So when he cut the middle tail, the edge of his august sword broke. Then, thinking it strange, he thrust into and split the flesh with the point of his august sword and looked, and there was a great sword within. So he took this great sword, and, thinking it a strange thing, he respectfully informed the Heaven-Shining-Great-August-Deity. This is the Kusa-nagi-no-tachi [Herb-Quelling-Great-Sword] (*Kojiki*, tr. Chamberlain, 2nd ed., Tokyo, 1906, pp. 71-73; cf. *Nihongi*, tr. Aston, London, 1896, i. 52-58).

This is clearly analogous to the legend of Perseus rescuing Andromeda from a sea-monster who was about to devour her. It seems to have lost, at the time of its redaction, what was probably its original meaning, and, before becoming a simple epic narrative, to have been meant to recall the abolition of human sacrifices offered to theriomorphic deities, especially water-spirits conceived in animal form (see E. S. Hartland, *LP* iii. ch. xviii.; Marillier, in *RHR* xxxiv. [1896] 401 f.). The description of the monster of Koshi, in fact, seems, as already observed by Aston (*Shinto*, London, 1905, p. 105), to be really a poetical representation of the river itself, with its serpentine course, its numerous tributaries, its wooded banks, and its deep waters, devourers of human beings. Even to-day popular superstition believes in the existence of monsters called *kappa* which haunt the mouths of rivers by preference, and kill human beings, just as the inhabitants of the thick mountain-forests fear the *wabami* (legendary boas believed to devour women and children). It was much more natural for such ideas to be prevalent among the primitive Japanese, who, like so other peoples (see Waitz-Gerland, *Anthropologie der Naturvölker*, Leipzig, 1860-77, iii. 198; A. Réville, *Religions des peuples non-civilisés*, Paris, 1883, i. 175 f., 225, 247, etc.), endowed the spirit of the waters with serpent form, serpents often having aquatic habits, and attributed to its poisonous breath the deadly influences manifested in certain epidemics. Hence the conception of the *mizu-chi*, 'water-elder,' i.e. 'water-god,' of which the terrible dragon of Koshi is only a representation enlarged upon by the imagination of myth-makers.

Another story helps to confirm this interpretation by giving us a positive example of these sacrifices to the river-deities. It is telling of an event which happened, according to the *Nihongi*, in the year A. D. 323:

"In order to prevent the overflowing of the Northern river, the Mamuta embankment was constructed. At this time there were two parts of the construction which gave way and could not be stopped up. Then the Emperor had a dream, in which he was admonished by a God, saying: "There is a man of Musashi named Koha-kubi, and a man of Kahachi named Koromo-no-ko, the Muraji of Mamuta. Let these two men be sacrificed to the River-God, and thou wilt surely be enabled to close the gaps." So he sought for these two men, and, having found them, sacrificed them to the River-God. Hereupon Koha-kubi wept and lamented, and, plunging into the water, died. So that embankment was completed. Koromo-no-ko, however, took two whole calabashes, and, standing over the water which could not be dammed, plunged the two calabashes into the mid-stream and prayed, saying: "O thou River-God, who hast sent the curse, to remove which I have now come hither as a sacrifice! If thou dost persist in thy desire to have me, sink these calabashes and let them not rise to the surface. Then shall I know that thou art a true God, and will enter the water of my own accord. But if thou canst not sink the calabashes, I shall, of course, know that thou art a false God, for whom why should I spend my life in vain?" Hereupon a whirlpool arose suddenly which drew with it the calabashes and tried to submerge them in the water. But the calabashes, dancing on the waves, would not sink, and floated far away over the wide waters. In this way that embankment was completed, although Koromo-no-ko did not die. Accordingly, Koromo-no-ko's cleverness saved his life. Therefore the men of that time gave a name to these two places, calling them "Koha-kubi's Gap" and "Koromo-no-ko's Gap" (*Nihongi*, i. 281 f.).

¹ Herod. iv. 89.

² iv. 71.

What is the significance of the calabashes employed here? Is it a simple test, cleverly based on the difficulty that the god would have in sinking the light floating gourds? Or may we have at the same time the idea of the magic virtue attributed to calabashes, which were used in ancient India as an antidote to serpent-bites? (see V. Henry, *La Magie dans l'Inde antique*, Paris, 1904, p. 203; and cf. the willow-tree gourds used as amulets in China [J. J. M. de Groot, *Les Fêtes annuelles à Emoui*, Paris, 1887, p. 323 f.]). Whatever may be the answer to these questions, we have in this story a case of human sacrifice, fully accomplished for one of the victims, and escaped by the other only through his personal ingenuity. With this story we may connect the following, given under A. D. 379 by the *Nihongi*:

'This year, at a fork of the River Kahashima, in the central division of the Province of Kibi, there was a great water-snake which harassed the people. Now when travellers were passing that place on their journey, they were surely affected by its poison, so that many died. Herupon Agata-mori [District-warden], the ancestor of the Omi of Kasa, a man of fierce temper and of great bodily strength, stood over the pool of the river-fork and flung into the water three whole calabashes, saying: "Thou art continually belching up poison and therewithal plaguing travellers. I will kill thee, thou water-snake. If thou canst sink these calabashes, then will I take myself away; but if thou canst not sink them, then will I cut up thy body." Now the water-snake changed itself into a deer and tried to draw down the calabashes, but the calabashes would not sink. So with upraised sword he entered the water and slew the water-snake. He further sought out the water-snake's fellows. Now the tribe of all the water-snakes filled a cave in the bottom of the pool. He slew them every one, and the water of the river became changed to blood. Therefore that water was called "The pool of Agata-mori"' (*Nihongi*, i. 298 f.).

These two stories, which the *Nihongi* places, rightly or wrongly, in the 4th cent., but which in any case are of a much later date than the myth of the serpent of Koshi, already display a certain scepticism in regard to the river-gods and the utility of appeasing them by the sacrifice of human life. They establish, nevertheless, the early existence of the custom of whose abolition the legend of the Japanese Perseus gives us a symbolical account—a custom probably replaced later by animal sacrifices and finally falling into complete disuse under the influence of Buddhism. A later text, referring to A. D. 642, when there was a great drought, says:

'The Ministers conversed with one another, saying: "In accordance with the teachings of the village *hafuri* ['sacrificers,' priests of an inferior grade], there have been in some places horses and cattle killed as a sacrifice to the Gods of the various (Shintō) shrines, in others . . . prayers to the River-Gods. None of these practices have had hitherto any good result"; and consequently it is decided, on the motion of Soga no Oho-omi, to have recourse to nothing else than Buddhist prayers in order to get rain' (*Nihongi*, ii. 174 f.).

The substitution of animal victims for human victims is confirmed by a curious myth in a work of the beginning of the 13th cent., the *Uji Shui Monogatari* ('Tales forming a sequel to the Uji Collection,' a similar collection which appeared in the 11th century). Here we find a local survival, in the circuit of Sanyōdō (on the Inland Sea), of a serpent-god and a monkey-god to whom a maiden was sacrificed every year; then, thanks to the mythical intervention of a noble hero, 'the Knight of Azuma,' the suppression of this custom, and the decision made by the priests of the temple that in future they would sacrifice only boars and deer (see 'Some Tales from the Uji Shui Monogatari,' in *TASJ* xxviii. [1900] 41-45). Similar substitutions might be cited among other peoples, from the time of ancient Greece, where the annual immolation of a youth to Dionysos was replaced by the sacrifice of a goat at the request of the inhabitants of Potniæ (Pausanias, ix. 8. 1), to the 19th cent., when the British Government intervened to substitute a goat for the child immolated every year by the Khonds; cf. also the pretended, and very characteristic, immolation, in Sweden, of

a man clothed in boar's skin (see Goblet d'Alviella, 'Les Rites de la moisson,' in *RHR* xxxviii. [1898] 15). In Japan itself we see subsisting, on the one hand, the actual *hostiæ animales* (e.g. in the temple of Suwamyōjin, in Shinano, frequent offerings of about seventy-five boars and deer), and, on the other hand, the old human sacrifice kept up in the form of a ritual imitation (e.g. in the temple of Sakatomyōjin, in Kazusa, after drawing lots among the faithful, the chosen victim is placed on a large stall, and the priest, armed with a great chopping-knife, makes a pretence of cutting him up with three blows; see Katō Setsudō, in the *Chuō Kōron* [*Japan Mail*] for 4th July 1903).

In one of the stories from the *Nihongi* (i. 281) we have seen human sacrifice employed to expedite the construction of an embankment. Men were also sometimes buried alive in the foundations of a castle, a bridge, or an artificial island. They were called *hito-bashira* ('human pillars'). But the most interesting example of this order of customs is the burying alive of human beings in the graves of Emperors and princes—a custom which took its rise, according to the *Nihongi* (i. 213), at the funeral of prince Yamato-hiko, but which is certainly more ancient and becomes particularly connected with this funeral only, as Motoori very plausibly holds, by an unprecedented exaggeration of the number of victims which brought this abuse to a head, and led to its suppression at subsequent Imperial funerals. This important custom, its significance, and its abolition are treated in art. ANCESTOR-WORSHIP (Japanese). As far as we know at the present day, the *haniwa* (clay rings), circles of effigies of baked earth, which, according to the account of the *Nihongi* (i. 178 f.), took the place round the tomb of the row of men and horses originally buried alive, seem to have originated in Japan. The archaeological discoveries of recent years have revealed them also in China (cf. 'Chinese' art.), in tombs of the Han dynasty (E. Chavannes, *Mission archéologique dans la Chine septentrionale*, Paris, 1910), and, in a rougher form, in tombs in Manchuria and the neighbourhood of Port Arthur (see artt. by Hamada Kosaku and Torii Ryuzō, in *Kokka*, Tokyo, 1910, 1911). It may be asked, then, Are the Japanese effigies not of continental origin, and has not the *Nihongi*, as often happens, borrowed its account from some Chinese work? On the other side, however, we must not lose sight of the fact that the account of the *Nihongi* agrees with a passage of the *Kojiki* which is certainly genuine and authentic, saying that 'in the time of the Great Empress Her Augustness Princess Hibasu [the same empress whose funeral, according to the *Nihongi*, put an end to human sacrifices] the *Ishi-ki-tsukuri* (Stone-Coffin-Makers) were established, and also the *Hanishi-be* (Earthenware-Masters' Clan) was established' (*Kojiki*, 247). The fact that human sacrifice, which had been suppressed, according to the *Nihongi*, in A. D. 3, must have been revived, according to a Chinese work (see *TASJ* xvi. [1888] pt. i. p. 59), at the death of the Empress Himeko in A. D. 247, only exemplifies the well-known inaccuracy of the concocted chronology of the *Nihongi*, and does not prove that the reform was never accomplished—the redactors of the *Nihongi* simply placed it too early, as is the invariable custom of the Easterns, more concerned as they are with antiquity than with truth. Moreover, it is difficult to see from what Chinese work they could have drawn the account of a transformation which is exactly the opposite of the Chinese conception in this connexion, viz. that the offering of straw or wooden effigies at funerals led to the substitution of living victims (J. Legge, *Chinese Classics*, Hongkong, 1861-72, 'Mencius,' p. 9). On the other hand, the

account of the *Nihongi* is in entire agreement with all that we have noticed in Japan as regards the substitution of effigies for actual victims.

These substitutions appear in various forms. Sometimes, as we have seen above, animal victims take the place of human victims; sometimes, instead of the 'earth dolls' (*tsuchi-ningyō*) of the tombs, there are other effigies of human form, such as the *kane-hito-gata* ('metal-human-form'), often mentioned in the *Engishiki* (10th cent.) among the regular offerings of Shintoism, and specially offered to river-gods (*mikumari*, 'gods of water distribution')—a fact which goes to support a historical substitution of these effigies for actual victims, the occurrence of which is proved by a positive text of the *Nihongi* (i. 281). Similar human effigies, gilded or silvered, also took the place of offerings in the ceremony of the Great Purification (*Oho-harahi*). The hereditary Corporation of scholars of Yamato and Kahaichi, who pronounced an invocation before this ceremony (*norito* 11), offered a silver man and a sword of gold, or rather of gilded wood, to the gods, in order that all kinds of calamity might be warded off from the Emperor, and that he might enjoy a long reign. The gilded sword (called *harahi-tsu-tachi*, 'sword of purification') first received the breath of the Emperor; he blew over it in order to communicate his own uncleanness to it, since the uncleanness was bound to disappear along with the object to which it was thus attached. The silver man was also employed as an *aga-mono* ('ransom-thing'), i.e. as a means of expiating ritual uncleanness.

These human effigies substituted for victims persisted down to modern times. As witness of this there is a curious custom related by Aston (*Shinto*, 220) from the *Shinto Miōmoku* (1699):

'At the festival of Nawoye, held at the shrine of Kokubu in the province of Owari on the 11th day of the 1st month, the Shinto priests go out to the highway with banners and seize a passer-by. They wash and purify him, and make him put on pure clothing. He is then brought before the god. A block, a wooden butcher's knife, and chopsticks for eating flesh are provided. Separately a figure is made to represent the captive. It is placed on the block with the captured man beside it, and both are offered before the god. They are left there for one night. The next morning the priests come and remove the man and the effigy. Then they take clay, and, making it into the shape of a rice-cake, place it on the captive's back, hang a string of copper cash about his neck, and drive him away. As he runs off, he is sure to fall down in a faint. But he soon comes to his senses. A mound is erected at the place where he falls down, and the clay rice-cake deposited on it with ceremonies which are kept a profound mystery by the priestly house. Of late years, couriers have been caught and subjected to purification. This was put a stop to. The custom is celebrated yearly, so that nowadays everybody is aware of it, and there are no passers-by. Therefore the priests go to a neighbouring village and seize a man. If they catch nobody on the 11th, they bring in a man on the 12th.'

Aston (p. 221) thinks that 'there is some difficulty in applying the principle of substitution for an actual human sacrifice to a custom which was in force so recently.' But, if we have seen offerings of live animals, as substitutes for human victims, continuing even to our own day (as observed in 1903, and quoted above), why should offerings of dead effigies not have had, with the same evolution, the same permanence? This would be in complete accord with the profoundly traditionalistic spirit of the religious customs.

There is one other custom that deserves notice in the domain of human sacrifices, if we regard liberty as almost as precious as life, viz. the offerings of slaves (*kami-tsu-ko*) sometimes made formerly for service in the temples. Even in the mythological period we see the famous hero Yamato-daké, the Brave of Japan, handing over some Emishi (i.e. Ainus), whom he had taken captive, for service in a temple (*Nihongi*, i. 209). Many cases of the same kind could be quoted from the historical period, e.g. in the year 562 (*Nihongi*, ii. 82 f.).

Human sacrifice properly so called exists, even in our own day, under the form of voluntary death in order to follow a master or a husband into the other world. This voluntary sacrifice, which is in evidence even in the earliest documents (see *Kojiki*, 293, 384; *Nihongi*, i. 331, ii. 183, 234, 383), and which so many rulers vainly endeavoured to suppress, from the Emperor Kōtoku in 646 (*Nihongi*, ii. 220) to the great *shōgun* Iyeyasu in the 17th cent., has continued down to the 20th century. Cases might be cited during the Revolution of 1868, and again during the Chino-Japanese War, when, in 1895, the wife of an officer, Lieutenant Asada, hearing of her husband's death in China, made it her duty to cut her throat in cold blood before her husband's portrait, with a dagger which, in anticipation of some such situation as this, had been one of her wedding-presents. The modern Japanese admired this suicide, exactly as the ancient admired that of the Imperial Princess Yamanobe, who, in 686, when her young husband had been accused of treason and executed, 'hastened thither with her hair dishevelled and her feet bare, and joined him in death,' so that, adds the narrator, 'all who witnessed sighed and sobbed' (*Nihongi*, ii. 383).

A recent example shows the extent to which these ideas still survive—the suicide of General Count Nogi, the hero of Port Arthur, who, on 13th Sept. 1912, at the very time of the funeral of the Emperor Mutsu-Hito, put himself to death so that he might follow his sovereign to the other world. Countess Nogi also killed herself in order to accompany her husband; and thus we see united in a single example, the two chief kinds of voluntary suicide mentioned above. On this occasion Japanese opinion was by no means unanimous with regard to the social utility of this act, which, though putting a harmonious completion to the life of a warrior of the old school, deeply imbued with the ancient traditions of loyalty, deprived the Japanese nation of a man of experience on whose services it could have depended should new dangers arise from outside. The police of Tokyo, however, had to take measures to prevent this suicide being imitated by contagion; and even in the United States, in a house at Grand Junction, Colorado, two Japanese had to be arrested who had met to decide by drawing lots which of them should perform *harakiri*. Thus, just as General Nogi's will, offering his body to the Faculty of Medicine, with the reservation that his teeth, hair, and nails should be buried, shows the survival in him of a conception belonging to primitive magic (see M. Revon, *Le Shinntoisme*, Paris, 1907, pp. 30, 70, 256), similarly his dramatic suicide takes us back to the ancient belief in the virtue of human sacrifices made for a dead chief. The Japanese, indeed, make no distinction between forced and voluntary sacrifice, as is clearly indicated by the fact that the one word *jun-shi*, i.e. 'following in death,' is used to denote the two indifferently.

2. Korean.—In Korea we may observe an analogous evolution to that which occurred in Japan, to this extent that the custom of human sacrifice, forced or voluntary, died hard and only by the personal efforts of reasonable rulers. In Japan, a humane Emperor (Suinin, according to *Nihongi*, i. 178), already showing that progressive spirit which is so common to the Japanese, said to his ministers: 'Though it be an ancient custom, why follow it, if it is bad?' Similarly in Korea, when a king of the country of Kokuryo, famed for his virtues, died, his successor forbade his admirers to kill themselves on his tomb, saying that it was not a becoming custom; but still many persisted in following their master in death (*Tongkam*, iii. 20). In the same way, in 502, several men and women had

already been sacrificed at the tomb of a king of Silla when the custom of burying live victims was prohibited in this kingdom (*ib.* v. 5).

LITERATURE.—This is cited in the article.

MICHEL REVON.

HUMAN SACRIFICE (Roman).—Human sacrifice implies the killing of a human being in honour of a deity, as an act prescribed by religion and performed with due ceremonial. The religious requirement is based upon the idea that an enraged deity craves for human life. The anger of the deity, according to the beliefs of many peoples, is to be discerned in his sending war or pestilence involving great loss of life; thus the pestilence in the Greek camp before Troy was caused by the arrows of Apollo (*Il.* i. 51). In such cases the community in ancient times tried to save itself by sacrificing one or more human beings (Verg. *Æn.* v. 815: 'unum pro multis dabitur caput'), and thus propitiating the divine wrath (propitiatory sacrifice). In the case where a particular individual was known to have sinned against, and thus to have brought upon himself the resentment of, a deity, he was sacrificed as an atonement, so that the deity's wrath should not fall upon others (expiatory sacrifice); thus the plague in Thebes was stayed as soon as the murderer of Laius was banished (Soph. *Œd. Rea.* 96 ff.). At a later stage we meet with more merciful rites, usually spoken of as commutations of human sacrifice; the community, partly because it stands in need of men, and partly because it has become more humane in sentiment, endeavours to avoid the killing of men by changing either the mode or the victim of the oblation; it allows the victim to live, but exiles him (Œdipus), or, instead of making the offering originally demanded, it offers figures of men or animals; thus animals were sacrificed by the Greeks to Apollo (*Il.* i. 447 f.). When in the expiatory sacrifice the act of killing is still retained, it loses its religious character, and becomes capital punishment in the secular sense. Thus human sacrifice may at length entirely disappear from the practice of a religion, and, as we must not summarily assign to all religions the same course of development, the modern investigator is confronted with the question whether a religion from which human sacrifice is absent may formerly have had the practice or not.

This doubt affects also the Roman religion. G. Wissowa (*Religion u. Kultus d. Römer*², p. 420 f.) denies that the Roman religion ever required human sacrifice, while others (cited by Wissowa, *loc. cit.*) assert that it did. It is certainly true that in the State religion, so far as history attests it to have been officially Roman, there is no evidence of the practice. From Cicero, *pro Font.* 31, and Cæsar, *de Bell. Gall.* vi. 16, where human sacrifice is referred to as something repulsive or abnormal, we may infer that it did not exist in the 1st cent. B.C., and the words of Livy (xxii. 57. 6), 'hostiis humanis, minime Romano sacro,' point in the same direction. Livy's reference certainly seems to clash with the fact that, according to a number of Christian writers in the Imperial period (Tatian, *Or. ad Græcos*, 129; Minucius Felix, 30. 4; and others; cf. J. Marquardt, *Röm. Staatsverwaltung*, iii.², Leipzig, 1885, p. 297. 4), a man ('bestiarius' [Tert. *Apol.* 9]) was sacrificed to Jupiter Latiaris at the festival of the latter. W. Warde Fowler (*The Religious Experience of the Roman People*, London, 1911, p. 112. 31) is of opinion that this points to a practice of actual human sacrifice which had grown up under the influence of Oriental immolation and of the brutalizing slaughter in the arena. But, as this reference is an isolated one, it rather arouses suspicion, the more so because profane writers make no mention of the incident; J. Geffcken (*Zwei*

griech. Apologeten, Leipzig and Berlin, 1907, p. 66) and Wissowa (*op. cit.* 124) reject it as apocryphal. But it would be a mistake to regard it simply as a biased fabrication of Christian authors. The present writer is inclined rather to suppose that the celebrations of the Latiaris festival included the baiting of animals; that some writer whose works are now lost ironically described the hardly avoidable deaths of *bestiarii* as sacrifices to Jupiter; and that then the Christian writers mentioned above not unwillingly accepted the statement as fact.

The alleged human sacrifice at the Latiaris festival must, therefore, not be appealed to as proving the existence of the practice of human immolation in the Roman religion. But, on the other hand, the references of Cicero, Cæsar, and Livy, as cited above, furnish no evidence as to primitive times; and, in order to decide the question in relation to that earlier age, such rites and beliefs as may possibly be survivals of an ancient practice of human sacrifice (Wissowa, *op. cit.* 420) must be examined in detail.

The Compitalia are a theme of particularly vigorous discussion (Samter, in *ARW* x. [1907] 374 ff.; Wissowa, *op. cit.* 167); the present writer's own view will be given in what follows. It was the custom at that festival to hang up in the chapels of the Lares as many human figures and as many balls respectively as there were freemen and slaves present—'ut vivis parcerent [Lares]' (Paul.-Fest. 239). Even if we regard the purpose of the ceremony as being correctly indicated in that ancient phrase, yet it would not be pertinent to apply the term 'commuted human sacrifice' to the rite. For this would imply that originally the whole household were actually sacrificed—an idea that cannot be entertained. All that the custom in question has in common with human sacrifice is its basis, viz. the belief that the gods have a desire for human life. Men seek to satisfy that desire in the easiest possible way; they present the deity with objects of no great value, which nevertheless, on some ground or other, are regarded as equivalent to a man's life, as, e.g., his image (which primitive belief identified with the original; cf. O. Weinreich, *Antike Heilungswunder* [= *Religionsgeschichtl. Versuche u. Vorarbeiten*, viii. 1], Giessen, 1909, p. 144), or a ball (a crude representation of the head, the seat of life). By a similar gift, viz. beans (on the relation of which to human life, cf. R. Wünsch, *Das Frühlingfest der Insel Malta*, Leipzig, 1902, p. 31), the *paterfamilias*, at the festival of the Lemuria, purchased deliverance from the attacks of the spirits of the dead (Ovid, *Fasti*, v. 438: 'his redimo meque meosque fabis'). In the ceremony of the Compitalia, therefore, the essential element was the offering of a vicarious gift to the Lares—who need not, however, be regarded on that account as ancestral spirits; the suspending of the sacrificial objects is not a residuum of a primitive practice of sacrificing men, but simply an indication that the gift now belongs to the recipient. The votive images were, in fact, suspended in the chapels of the Lares for the same reason as the shepherd suspends his dedicated flute from the sacred tree. What is true of the Compitalia holds good with respect to other two customs which have also been interpreted as cases of commuted human sacrifice. At the Saturnalia, people might buy clay figures (*sigilla, sigillaria*; Wissowa, *op. cit.* 206), 'quae homines pro se atque suis piaculum pro Dite Saturno facerent' (Macr. *Sat.* i. 11. 49); and at the Volcanalia the Romans observed the custom of throwing living fishes into the fire (Wissowa, 229), likewise 'pro se' (Varro, *de Ling. Lat.* vi. 20; Fest. 238; on the connexion of the fish with the belief in the soul, cf. F. Böhm, *de Symbolis*

Pythagoreis, Berlin, 1905, p. 19). These two were vicarious gifts, and do not imply an ancient practice of human sacrifice.

The custom of the *Caterva*, again, has been connected by H. Usener (*Kleine Schriften*, iv. [Leipzig and Berlin, 1913] 252) with commuted human sacrifice. 'Caterva' was the name given to regular encounters between two quarters of the city (Usener, 435), and the blood spilt in them is supposed by Usener to have been a surrogate for a primitive practice of immolating men. But here, too, another interpretation lies closer to our hands. The best-known instance of these conflicts is the annual battle between the *Subura* and the *Via Sacra* for possession of the skull of a horse that was sacrificed on the 15th of October (Festus, 178); the real purpose of the fight was to secure for a particular community a sacred object and the benefits associated with it. Other divisional battles, similarly, would be contests for possession of a sacred object; and here and there these conflicts were still kept up, even when a change in religious observance had deprived them of their proper motive.

On the other hand, it is probable that among the Romans the death penalty was originally an expiatory sacrifice performed with due ceremony. Plutarch (*Rom.* 22) makes mention of an old law enjoining *τὸν ἀποδόμενον γυναικᾶ θύεσθαι χθονίους θεούς*. The vestal virgin who had broken her vow of chastity was buried alive; the Pontifex Maximus accompanied her to the side of the grave, and uttered special prayers (Plut. *Numa*, 10); here we have a ritual sacrifice of the offender to the deity. The harvest-thief 'Cereri necatur' (Pliny, *HN* xviii. 12). In later times, again, the sentence upon the criminal involved also his deliverance to the offended deity (Festus, 318: 'homo sacer is est quem populus iudicavit ob maleficium'; cf. also 'consecratio capitis' [Cic. *pro Balbo*, 33]; and the penal formula, 'sacer esto,' as, e.g., in Festus, 33, and Serv. *Æn.* vi. 609). Wissowa (*op. cit.* 338 f.) is of opinion that at first the State simply delivered this judgment, and left the transgressor to the vengeance of the deity, and that the law itself administered the actual penalty only in later times; in which case, of course, the penalty would have no connexion with human sacrifice. But it seems to the present writer—and it is also Mommsen's view (*Röm. Strafrecht*, Leipzig, 1899, p. 900 ff.)—more likely that the public execution of the death penalty is old, and implies a sacrifice. No one would venture to kill a creature which had become the property of a deity by *consecratio*, unless he thought that he was thereby conveying it to its possessor. But, if the State conveys a living creature to a god by killing it, it performs virtually an act of sacrifice. Wissowa's objection that the sacrificial object must be without blemish—as an offender, of course, could not be—applies not to the expiatory, but only to the propitiatory, sacrifice; nor, indeed, does it apply everywhere even to the latter, for we find that the Greeks offered criminals in propitiatory sacrifice (Samter, *loc. cit.* 375; A. Thomson, *ARW* ix. [1906] 400).

A survival of human sacrifice among the Romans has also been found, and in all probability rightly, in the *Ver sacrum*. Like other Italian peoples, as, e.g., the Sabines (Strabo, v. 250) and the Rutuli (Serv. *Æn.* vii. 796), in times of great distress, the Romans, when at war with Hannibal, sought to procure a happy deliverance from trouble by promising to a deity all the domestic animals born in a single spring (Livy, xxii. 9. 7 ff., xxxiii. 44. 1, xxxiv. 44. 1), and these were then duly sacrificed in fulfilment of the pledge. The form of the Italic *Ver sacrum* which, as we thus learn, obtained among the Romans was not the most ancient form.

Originally the dedication embraced also the human progeny; the children were allowed to grow up, and were then driven beyond the confines of their country (Strabo, *loc. cit.*; Festus, 321; Dion. Hal. *Ant. Rom.* i. 16). The ancients themselves interpreted this act of banishment as a mitigated form of the older practice of immolation (Paul.-Fest. 379)—a view rejected by Wissowa (p. 420. 5), who says: 'This expulsion or abandonment is rather the recognized method of performing the *consecratio* of living beings'; and he refers to Suet. *Cæs.* 81, where he finds an instance corroborative of his opinion. The passage in question, however, merely shows that the *consecratio* of the living likewise prevailed in later times; it was not the natural form, else the Romans would have availed themselves of it in the *Ver sacrum* as well (Samter, *loc. cit.* 378). We must rather assume that originally, as the vow was a unity, so its fulfilment was also uniform. Originally, that is to say, human beings and animals alike were either sacrificed or else expelled from the country. But, as in the ritual of blood-offerings the tendency is usually towards a mitigation rather than towards an intensification of their severity (E. Mogk, *ASG* xxvii. [1909] 605), we must regard the immolation of human beings (as of other creatures) as the primordial form; and it was, therefore, probably in this form that the Romans observed the general practice of Italic tribes in ancient times. We cannot, indeed, trace the observance of the Sacred Spring in Rome before 217 B.C.; nevertheless, it is possible that about that time the Romans adopted it from their neighbours as something out of the common (it was settled after consulting the *Sibylline Books* [Livy, xxii. 9. 8]), and at once modified it to suit their own circumstances.

In any case, it is attested by other data that the fundamental idea of propitiatory sacrifice—'unum pro multis dabitur caput'—prevailed among the Romans of the earlier age. The present writer would certainly not lay much stress upon the testimony of Livy, iv. 12. 11, according to which large numbers of people, with heads veiled, threw themselves into the Tiber during a time of famine; perhaps they did so without, as Stoll supposes (Roscher, i. 499), thinking of their act as a propitiation, and simply committed suicide in sheer despair. The case of M. Curtius (362 B.C.; cf. F. Münzer, art. 'Curtius,' no. 7, in Pauly-Wissowa), however, is a different one. When a chasm had opened in the Forum, and was to be filled up only by receiving the most precious treasure of Rome, Curtius presented himself on horseback and in full armour, and, having prayed ('*manus . . . ad deos manes porrigentem se devovisse*' [Livy, vii. 6. 4]), leaped into the abyss. This is unmistakably a propitiation, designed to avert the wrath of the gods, which had manifested itself in the *portentum* of the chasm, but it differs from human sacrifice in the fact of its having been a voluntary act. That in ancient times a human being was ever sacrificed to the gods by the Roman State on like grounds but *against his own will* is possible, but is incapable of proof.

Livy, in applying the word *devovere* to the sacrificial death of Curtius, shows us that he construed it as a *devotio* (Wissowa, 384 f.; Bouché-Leclercq, in Daremberg-Saglio, ii. 113 ff.; and esp. L. Deubner, in *ARW* viii. [1905], Beiheft, 66 ff., 79). Now the Roman general, in the stress of battle, 'devoted' himself, or else—what seems to be a commutation—a legionary (Livy, viii. 10. 11), to the gods in order to induce them to destroy the enemy's army. Deubner recognizes that the essential implication of this act was the devoting of the hostile army to the deities of the under world, the act being rendered all the more effective by the

fact that the *devotio* involved the sacrifice of the general himself; by his prayer he linked the enemy with his own fate, so that, if he fell, the enemy would share his doom. But the general, in thus offering his own person, really proceeded upon the same motive as actuated M. Curtius. Hence the idea which gave rise to human sacrifice operates here too; even the religious form is not wanting—the rubric of the *devotio* is given by Livy (viii. 9. 4 ff.; on his sources, cf. E. Kornemann, *Der Priestercodez in der Regia*, Tübingen, 1912, p. 23 ff.). Nevertheless, the sacrifice in this case too is quite voluntary, and there is nothing to warrant the hypothesis that at an earlier period the general was actually sacrificed by priests. In the case where a legionary was devoted, and did not fall in battle, he was required to bury a figure in the earth (Livy, viii. 10. 11); and here again the image serves as a substitute for the living man (Deubner, *loc. cit.* 81). This substitution may have been allowed even when the custom of devoting a legionary was first introduced; certainly that custom seems to be of later origin than the *devotio* of the general (see above), so that it is not necessary to assume that originally the legionary was ever actually sacrificed at all.

Thus the *Ver sacrum* and the death-penalty seem to indicate that human sacrifice had a place in the primitive Roman religion, while the *devotio* shows that self-immolation was not unknown in it. But, apart from such national institutions, we find in Rome actual cases of human sacrifice—or of indubitable substitutes therefor—only in so far as they had been introduced under foreign influence. These cases, moreover, are so numerous that we can hardly help thinking that the practice could never have gained so firm a footing if it had been radically obnoxious to Roman sentiment.

The first people known to have exercised a vast influence upon the religious rites of the Romans were the Etruscans. It was that people who furnished the Romans with, *inter alia*, the art of divining by lightning in a highly developed form (C. O. Thulin, *Die etruskische Disciplin*, i. *Blitzlehre*, Göteborg [Göteborg. Högsk. Aarsk. xi., 1906], esp. p. 99). Now, Plutarch (*Numa*, 15) speaks of a Roman propitiation of lightning, which was performed with onions, hair, and fishes, and which both he and Ovid (*Fasti*, iii. 333 ff.) interpret as a commuted human sacrifice. It is natural to suppose that this rite, together with other details of divination by lightning, was borrowed from the Etruscans. Then, again, in the triumphs of Roman generals, it was customary to put to death the captured commanders of the enemy (Cic. *Verr.* v. 77). This practice is regarded by G. Beseler (*Hermes*, xlv. [1909] 352) as originally a human sacrifice: the victorious general, on his return home, sacrifices the best thing among his spoils. Beseler also suggests that the triumph itself, as an institution, may possibly have been derived from the Etruscans (cf. Aust, in Roscher, ii. 633). From Etruria also, according to Nicolaus of Damascus (*Ath. iv.* 153 f., in *FHG* iii. 417), came the gladiatorial shows (Preller, *Röm. Mythologie*, ii.³, Berlin, 1883, p. 97), which Varro (*ap. Serv. Æn.* iii. 67; cf. Wissowa, *op. cit.* 466, n. 3) believed to be commutations of human sacrifice. Originally the departed were supposed to need attendance in the other world; hence Achilles slew twelve Trojan youths at the funeral pyre of Patroclus (*Il.* xxiii. 175). A later age substituted combat for slaughter, and thus at the same time did something to gratify the popular liking for funeral processions. Gladiatorial shows on a large scale were first celebrated in Rome in 264 B.C. (Val. Max. ii. 4. 7; Wissowa, *loc. cit.*).

But the Etruscan influence upon the Romans

was less profound than the influence of the Greeks. Plutarch (*Rom.* 21) states that at the festival of the Luperalia it was the custom to streak the brows of two youths with blood-covered knives, and then to wipe them with wool, the youths being required thereupon to laugh. In this act of streaking the brow with blood many scholars have recognized a residuum of an ancient Roman practice of human sacrifice. But it will be better not to lay stress upon this. Deubner (*ARW* xiii. [1910] 502) recognizes here a cathartic custom of Greek origin. To a Greek source is certainly to be assigned the ceremony of the *Argei*, of which Wissowa, following Diels (*Sibyllinische Blätter*, Berlin, 1890, p. 43 f.), has given the right explanation (Pauly-Wissowa, ii. 697 f.). Every year, on the 14th of May (Ovid, *Fasti*, v. 621), twenty-seven human-like figures, constructed of bulrushes, were thrown into the Tiber from the *Pons sublicius* (Varro, *de Ling. Lat.* vii. 44) with religious ceremonies at which the Pontifices, the Vestal Virgins (Dion. Hal. i. 38), and the Flaminica Dialis (Gell. *Noct. Att.* x. 15. 30; Samter, 377) were present. *Argei*, the name given to these figures, is the Gr. Ἀργείοι. This term, which in Greek is found only in the epic poets, was certainly introduced into the Roman religion from Greek oracular verse. In the sore stress of war the oracle guaranteed relief on condition that twenty-seven of the enemy's people—the number has chthonic associations (Diels, 39 ff.)—were cast into the river. In the language of the oracle the Roman was designated 'Troianus'; the enemy, 'Argivus' (Diels, 44, note). Probably the condition laid down by the oracle was fulfilled on the first occasion by an actual immolation of human beings, but thereafter in the milder form of an offering of bulrush figures (Wissowa, in Pauly-Wissowa, ii. 700). On the assumption that the ceremony was derived from Greek ideas, the participation of the Roman priesthood certainly strikes us as strange. We may perhaps suppose that the guild of bridge-builders, the Pontifices, were in reality performing expiations for the observance of a foreign rite at the *Pons sublicius*, which was under their charge, and that in these they associated with themselves the Vestal Virgins and the Flaminica—unless, indeed, the ceremony was originally a Roman festival upon which the *Grævus ritus* was subsequently grafted (Deubner, *ARW* xiv. [1911] 306).

With the *Argei* sacrifice learned men of antiquity associated a Roman proverbial phrase, viz. *sexagenarios de ponte*. Festus refers to this in a passage (p. 334), the lacuna of which are filled up with certainty: 'Sexagenarios [de ponte olim decibant], cuius causam Manilius hanc refert, quod Romani qui incoluerint [primi Aborigines, aliquem hominem, sexaginta [annorum qui caset, immolare] Diti Patri quot[annis] soliti fuerint'; this sacrifice, he says, was subsequently changed by Hercules into that of throwing bulrush figures from the bridge (cf. also Ovid, *Fasti*, v. 623 f.; Otto, *Sprichwörter d. Römer*, Leipzig, 1890, p. 320 f.). Varro (*ap. Non. p.* 842 [Lindsay]) gives a different explanation, asserting that the old men, who were no longer allowed to vote in public assemblies, were summoned by this old proverb to abandon the *pons* ('voting-bridge'). But this cannot be the true explanation, as it does not accord with what we know otherwise of voting among the Romans (Mommsen, *Röm. Staatsrecht*, Leipzig, 1899, ii. 408). We must therefore assume that the proverb points to an ancient custom of throwing people from the bridge. Nevertheless, this cannot be regarded as human sacrifice; it was in reality a secular act of doing away with burdensome old people whom the State would no longer maintain (E. Schmidt, 'Der Selbstmord d. Greise von Keos,' in *Neue Jahrb. f. d. klass. Altert.* vi. [1903] 617 ff.). It is quite probable that the Romans of primitive times treated the aged in this harsh way; thus, on the advance of the Gauls, they left their old people behind them without means of self-defence—it was only in later writings that these old people were said to have remained behind of their own accord (Livy, v. 41. 1). Viewing the matter purely by itself, we might think that the Romans would be willing enough to sacrifice the aged as *Argei* by throwing them from the bridge. But the aged, after all, were Romans, not *Argei*; and W. Warde Fowler (*The Roman Festivals*, 116 f.) rightly says that the occasional killing of an individual could not well develop into the annual practice of putting considerable numbers to death. What we have in the case of the *Sexagenarii* is their

fore a secular act of dispatching them on grounds of public utility. We have an exactly similar case in the slaying of the *Rez Nemorensis*, and this likewise was not a human sacrifice. A run-away slave might save himself from his pursuers by killing the priest of Diana of Nemi. He assumed the position of priest, and held it till he met a like fate at the hands of another fugitive (Strabo, v. 239). This is an instance of a practice found among many peoples; they kill their king or priest before he becomes sick or feeble, believing that the welfare of the tribe is dependent upon his remaining strong. They appoint betimes a vigorous successor, who at once displays his strength by overthrowing the man whose place he takes (Frazer, *GB*, pt. iii. 'Dying God,' London, 1911, p. 141 ff.).

With the sacrifice of Argive enemies, however, it is probably correct to associate the rite of burying alive a man and a woman belonging to a hostile nation (Wissowa, 421). In 216 B.C.—the most trying period of the war with Hannibal—Livius (xxii. 57. 6) informs us that 'ex fatalibus libris sacrificia aliquot extraordinaria facta: inter quae Gallus et Galla, Graecus et Graeca in foro bovario sub terra vivi demissi sunt in locum saxo consaepitum, iam ante hostiis humanis . . . imbutum.' The *Sibylline Books* (Plut. *Marc. 3, Quaest. Rom.* 83), that is to say, prescribed at that juncture special means of allaying the anger of the gods, among these means being the previously tried expedient of burying a man and a woman of the enemy's people. The strict rule was evidently that the two victims should belong to the nationality with which the Romans were actually at war at the time (Pliny, *HN* xxviii. 12: 'gentium cum quibus tum res esset'). Now the hostile peoples had at one time been the Greeks and the Gauls, and subjects of these nationalities, by an erroneous conservatism, were sacrificed also during the war with Carthage (Diels, 85 ff.). That this custom was suggested by Greek oracular writings is shown also by the fact that the prescribed prayers were uttered by the president of the *Quindecimviri* (Pliny, *loc. cit.*), whose principal function was to guard the *Libri Sibyllini*. The import of the rite was that of a sacrifice to the gods, who thus received the life of a man and a woman as *pars pro toto*; with the lives of the two victims the lives of all the men and women of the same tribe were magically bound up ('obligamentum magicum,' Orosius, iv. 13. 4); and, if the gods accepted the one pair, the rest of the nation would necessarily follow them. Pliny indicates that he had himself witnessed a sacrifice of this kind ('etiam nostra aetas vidit')—'in the vicarious ceremony,' says Wissowa (421); but the present writer is not certain as to the latter point, as the Emperor Aurelian (see *Vita Hist. Aug.* 20), when organizing the consultation of the *Sibylline Books*, ordered 'cuiuslibet gentis captos' to be reserved for sacrifice in case of need.

Finally, in the reign of Augustus, another foreign people, the Iberians, introduced into Rome a new type of human sacrifice, viz. a *devotio*. Dio Cassius (liii. 20) states that S. Pacuvius consecrated himself to Augustus in the manner of the Iberians (cf. Val. Max. ii. 6. 11). This clearly means that the tribune, invoking the gods, vowed that, if they demanded the life of the Emperor, they should take his instead. Vows of this kind are met with also in later times. When the Emperor Caligula was sick (Suet. *Cal.* 27; Dio Cass. lix. 8; Bouché-Leclercq, *loc. cit.* 119), two Romans pledged themselves to die that thereby the Emperor might recover; and the latter took them at their word. The *devotio* on the Emperor's behalf is mentioned also by Fronto, p. 6 (Naber).

These last-mentioned examples show that outside the official religion of Rome the idea of human sacrifice was very powerful in private circles. How far the persons concerned were influenced by conceptions inherited from ancient Roman life, or by foreign ideas, or were actuated by their own thoughts, is in most cases difficult to decide.

The most outstanding instances may be briefly indicated as follows (cf. v. Lasaulx, *Studien d. classischen Altertums*, Regensburg, 1854, p. 248 ff.). Those who took part in the conspiracy of Catiline are said to have drunk the blood of a slain man mixed with wine (Sall. *Cat.* 22), and to have bound themselves by dreadful oaths; this action was already classed among human sacrifices by Minucius Felix (30. 5). In 46 B.C., Cæsar, as a penalty for mutiny, caused two soldiers to be sacrificed in the Campus Martius by the priest of Mars (Dio Cass. xliii. 24), evidently in the belief that that god, who had been roused to anger by the mutiny, would be propitiated by the oblation. S. Pompeius threw men into the sea, doubtless as an offering to Poseidon (*ib.* xlvi. 48). In 41 B.C., on the Ides of March (Suet. *Aug.* 15), Octavian is reported to have sacrificed three hundred men at the altar of the Divus Julius (*ἐρόθῆσαν*, Dio Cass. xlviii. 14), his intention being to propitiate the *manes* of the murdered dictator. Perhaps Vergil, when speaking of the captives 'quos mitteret umbris inferias' (*Æn.* xi. 81), had this sacrifice in his mind; in other passages he certainly creates ancient precedents for the religious acts of Augustus. In a time of threatened calamity, Nero consulted his astrologers, and received the response: 'solere reges talia ostenta caede aliqua illustri expiare' (Suet. *Nero*, 36). This was probably a notion of Eastern origin, and such an Oriental superstition explains also the self-immolation of Antinous on Hadrian's behalf (Dio Cass. lix. 11; cf. art. HEROES AND HERO-GODS [Egypt.], p. 651^b). The Emperor Commodus put a man to death in the worship of Mithra (*Vita Hist. Aug.* 9); but the fact that this action is spoken of as an enormity shows that the records of habitual human sacrifices by the priests of Mithra are false (F. Cumont, *Textes et monuments relatifs aux mystères de Mithra*, Brussels, 1899, i. 69). Particularly in the practice of magic, which prevailed widely in the imperial period—a period profoundly affected by Oriental superstition (Pliny *HN* xxx. 16)—human beings were frequently put to death, either because the bodily parts of men were believed to be peculiarly potent, or because—what specially concerns us here—the spirits of the under world would not give their aid unless they received a human being in sacrifice. It is not always easy to say which of these two motives prompted the killing of men in this connexion. The best-known source of information regarding the practice is Horace's poem *Canidia* (*Æpod.* 5). Cicero (*in Vatini.* 14) charges Vatinius with the crime 'inferorum animas elicere, puerorum extis deos manes mactare.' Didius Julianus sacrificed children in order to learn the future (Dio Cass. lxxiii. 16), and Elagabalus 'slew children and practised magic' (*ib.* lxxx. 11).

These numerous instances of human sacrifice in the non-official religious sphere explain why the laws, the Senate, and the more humane Emperors frequently made a stand against the practice. Pliny (*HN* xxx. 12 f.) refers to a *senatusconsultum* of 97 B.C. directed against it, and to the injunction by which Tiberius prohibited the immolations of the Druids. Tiberius also forbade the sacrifice of human beings in the worship of Saturn in Africa (Tert. *Apol.* 9). Claudius re-enacted the decree against the Druids (Suet. *Claud.* 25), and Hadrian put an end to human sacrifice in the cult of the Cyprian Juppiter (Lact. *Inst.* i. 21. 1; Wissowa, 85). The jurist Paulus (v. 23. 16) writes: 'qui hominem immolaverint exve eius sanguine litaverint, fanum templumve polluerint, bestiis obiciuntur, vel, si honestiores sint, capite puniuntur' (cf. Mommsen, *Strafrecht*, 639 ff.).

We may sum up our investigation as follows. The primitive ideas which underlie the practice of

human sacrifice obtained also among the Romans, as appears, above all, from the *devotio*. In particular cases the Romans of an earlier age seem to have deduced from these ideas certain consequences affecting their religious ritual, as is indicated by the *Ver sacrum* and the religious formula of capital punishment. On practical grounds or from motives of humanity, however, human sacrifice was abolished from the official religion at an early stage. Under foreign influences, and especially under the influence of the *Sibylline Oracles*, it again gained a footing. It survived in sacrificial transactions outside the State religion till the close of the Imperial period, and legal measures did not succeed in entirely abolishing it.

LITERATURE.—See the authorities cited in the article. The older literature is given in J. Beckers, *De Hostiis humanis apud Graecos*, Münster, 1867, p. 2; W. Warde Fowler, *The Roman Festivals*, London, 1899, p. 116, note 3; and J. Toutain, 'Sacrificium,' in Daremberg-Saglio, iv. 2. 976. The most recent works are cited in G. Wissowa, *Religion u. Kultus d. Römer*², Munich, 1912, at the passages noted in the Index, p. 607, under 'Menschenopfer.' See also J. S. Reid, 'Human Sacrifices at Rome,' *Journ. of Roman Studies*, ii. [1912] 34.

R. WÜNSCH.

HUMAN SACRIFICE (Semitic).—The discussion of this subject falls naturally into two parts: (1) a marshalling of the evidence for the existence of the rite, and (2) an attempt to deduce the purposes and ideas underlying it.

I. EVIDENCE FOR THE EXISTENCE OF SEMITIC HUMAN SACRIFICE.—1. Egypt.—That the Egyptians were an offshoot from the original Semitic stock, separated from the parent stem in early pre-historic times, is a favoured theory of their origin (see, e.g., G. A. Barton, *Semitic Origins*, London, 1902, where the theory is well worked out). They are, therefore, naturally to be included in an analysis of the evidence on the subject. But it should not be forgotten that in any case the cleavage of the Egyptians from the rest of the Semitic family must have taken place at a date so remote that the existence of the rite of human sacrifice among them in common with the Semites proper does not necessarily prove its existence in the primeval times before the Egyptian secession. It might have developed in Egypt independently, or under the influence of the ideas and practices of later surrounding tribes.

The existence of human sacrifices among the Egyptians has often been denied (E. Meyer, *Gesch. des alten Ägyptens*, Berlin, 1887, p. 42, denies the evidence from native documents, while admitting the possibility of the Classical testimony being founded on true traditions; see also Dillmann, *Handb. der AT Theol.*, Leipzig, 1895, p. 98). But the testimony of certain Greek and Latin authors, based apparently on tradition, and corroborated by obscure passages in certain Egyptian writings and by scenes represented in tomb wall-paintings, seems to indicate that this practice was observed, at least in a modified or symbolic form, down to late historic times.

Thus, Diodorus Siculus (i. 88) speaks of the king of Egypt as having formerly sacrificed men of red colour—the colour of Set or Typhon—at the grave of Osiris; and he adds the important detail that, as red men were rare in Egypt, the victims were always foreigners. Manetho (*cap.* Porphyrius, ed. Müller, *FHG* ii. 615, no. 83) speaks of human sacrifices to Hera in Heliopolis, and of the modification of the rite by Amosis, who substituted waxen images for the victims. From another fragment (*ib.* ii. 616, no. 84) it appears that in these or similar sacrifices the victims were 'Typhonic' (= red) men, and were burnt alive; that the sacrifices took place in the dog-days, and were therefore probably prophylactic against drought or pestilence; and that the ashes of the victims were collected and scattered

against the wind. Procopius (*de Bell. Pers.* i. 19) states that in the temple of Philæ the Blemmyes offered human victims to the sun. Ruffinus (*HE* ii. 24) relates, with horror, that in the holy place, or *adytum*, of the temple of Serapis at Alexandria there were preserved the heads of infants with the lips gilded. Seleucus is said by Athenæus to have written a book which treated of the subject (*περὶ τῆς παρ' Αἰγυπτίους ἀνθρωποθυσίας*, Müller, iii. 500, footnote). On the other hand, Herodotus (ii. 45) denies the existence of the practice in Egyptian religion; but that intelligent tourist reports only what his 'dragomans' thought fit to tell him, and his evidence on a subject which necessarily belongs to the *arcana* of religion is therefore not conclusive. Besides these ritual sacrifices, there is evidence for foundation sacrifices, modified, after the primitive period, by the substitution of an animal victim (see Lefébure, 'Rites égyptiens,' in *Publications de l'école des lettres d'Alger*, 1890, pp. 4, 19, 36), and, further, the special circumstances of Egypt, dependent for its life on the Nile inundations, demanded a Nile sacrifice, which the Arab historian Murtaadhā describes as lasting down to the Muslim occupation of Egypt (A. D. 642)—a young girl being annually cast into the river to ensure a sufficient rise in the water (Eng. tr., 1672, p. 143). A survival of this custom is described by E. W. Lane (*Manners and Customs of the Modern Egyptians*⁵, London, 1860, ch. xxvi.). A conical pillar of earth was erected in front of the dam at Cairo, and sown with millet. It was called 'arūsah' ('bride'), and no doubt represented the human victim of the original rite.

It is not to be expected that the native Egyptian monuments themselves should necessarily corroborate these statements of the Classical writers, even if the latter be strictly trustworthy. For, in general, the native is not so likely to record facts and practices which for him are commonplace as is the foreigner to whom they are less familiar. But some passages in inscriptions and some pictured scenes have been collected, which appear to show that the statements quoted are at any rate approximately correct. Amon-Hotep II., returning from his expedition to Syria, clubbed seven of his chief captives before the god Amon (see E. Naville, *The Old Egypt. Faith*, Eng. tr., 1909, p. 299). In the inscription on the tomb of Seti I. (*ib.* p. 298) the tale is told of the attempt of men to revolt against the sovereignty of Rā; of the resolution in the assembly of the gods to destroy the human race; of the partial carrying out of this resolve by Hathor; of the appeasement of the wrath of Rā by a draught mixed with human blood; and of his resolve to substitute animal for human sacrifice in the future. Some such substitution is perhaps hinted at in the dark saying of the *Book of the Dead* (ch. xviii.):

'When the fiends of Set come and change themselves into heasts, the great sovereign princes, on the festival of the breaking and turning up of the earth in Taṭṭu [Busiris], slay them in the presence of the gods therein, and their blood floweth among them as they are smitten down.'

This seems to refer to a ploughing festival, wherein the 'Typhonic men' of the Classical writers were replaced by animals.

Among scenes on Egyptian monuments suggestive of human sacrifice, the memorial of Mentuherhepesef (Maspero, in *Mém. de la mission archéol. française au Caire*, v. [1893] 435) has an important place. One of the scenes in this tomb represents a person called a *tekennu*, dragged face downwards on a sledge; another shows the (fictitious) strangling of this person. A fictitious sacrifice, of course, implies an actual sacrifice in an earlier age.

2. Babylonia and Assyria.—If traces of human sacrifice are obscure and ambiguous in Egypt, they are yet more so in the remains of the civilization of Mesopotamia. This is surprising, for people

with a highly developed pantheon and a complex ritual system, and notoriously ferocious in warfare, might be expected to include human sacrifices among their regular religious practices. A bilingual text (IV. Rawl. 26, no. 6) directing that 'the father shall give the life of his child for the sins of his own life, the head of his child for his own head,' and so forth, would certainly be a proof of the existence of vicarious human sacrifice if the translation were sound; but, according to Zimmern (*KAT*³, 1903, p. 597) and Jeremias (*AT im Lichte des alt. Orients*², Leipzig, 1906, p. 368), the word rendered 'child' should properly be translated 'lamb.' Another obscure inscription (III. Rawl. 61) contains a passage which has been rendered 'the son is burnt on the high places' [when the crops fail], but it seems more probably to mean 'the grain [of a certain species] is burnt in the heat of the sun.'

Less questionable evidence, however, is not wanting. The first comes from that most important chapter 2 K 17, which describes the practices of the deported tribes which were substituted for the captive Israelites. There (v. ³¹) the Sepharvites (apparently the people of Sippar) are stated to have burnt their children in the fire to Adramelech and Anammelech, the gods of Sepharvaim [= *Adar-Malik* (cf. Adramelech, the name of Sennacherib's parricide son, 2 K 19³⁷) and *Anu-Malik*]. This rite obviously was carried by the Sepharvites from their old to their new home; and if, as seems to be most probable, these were really the men of Sippar, then such sacrifices must have taken place in the town of Sippar. The chief god of Sippar was Samsa, the sun, who was also called *Amna*; it is interesting that Cod. A of the LXX in this passage presents the form *Ἀμνημελέχ*. A human sacrifice seems to be actually figured in a seal published by Ball (*PSBA* xiv. [1892] 149, where the passages already quoted are discussed). In this scene the following figures are represented: (1) a priest standing, holding a sceptre in both hands, facing (2) a divinity, standing on the top of a *ziquurat*, and holding in his right hand a curved sword, in his left a sceptre. Flames burst from his shoulders; behind him is an altar, with vegetable offerings upon it. (3) Behind the divinity are two standing figures, clothed in leopard skins, with their right arms raised in the attitude of striking. Between them is (4) a kneeling man, wearing only a loin-cloth and a head-dress. Above him is a representation of flames, and flying towards him is a bird of prey. One of the standing skin-clad figures holds back his head, and the other pulls aside his beard, as though to expose his throat conveniently for the sacrificial blow.

Less certain evidence is the prescription that a son or a daughter shall be burnt on the altar of a divinity as a penalty for a breach of contract (Johns, *Assyr. Deeds*, Cambridge, 1898-1901, iii. 345), which may simply be a penal provision; and such passages as 'I burnt their boys and girls in the fire,' in Assurnasir-pal's triumphal inscriptions over conquered cities, which merely record a barbarity consonant with the rest of the acts of that abominable savage. There is, however, a magical text (quoted in Zimmern, *KAT*³, 599) which mentions the sacrifice of a slave along with an ox or a sheep.

3. **Canaan.**—Here we are on firmer ground. The practice of human sacrifice in the religion of the Semitic predecessors of the Hebrews is amply proved by certain OT passages (Dt 12³¹ 18¹⁰, and by inference in such prohibitions as Lv 18²¹), and has been corroborated by the results of recent excavations. In the High Place at Gezer, and in connexion with what appears to have been a rock-cut altar at Taanach, the skeletons of new-born infants have been found buried in jars. Similar discoveries

were made in the corners of houses, under or close by the foundation. Two burnt skeletons of children about six years of age were also found in the Gezer sanctuary, and near it was a cistern which had apparently been adapted as a receptacle for the refuse of sacrifices. Large numbers of animal bones, and many human bones of both sexes and all ages, were found in it. The excavator at Gezer was careful to get an expert medical opinion that some at least of the infants found buried had actually lived a separate existence, and that they were not merely still-born or untimely births thus disposed of (with or without the recalcitrant notions of inducing a re-birth and second chance of life, as suggested in Frazer, *Adonis, Attis, Osiris*², London, 1907, p. 83).¹ At Tell Mutesellim (Megiddo) a girl of about fifteen had been slaughtered at the foundation of a large building, and her skeleton was found built into the wall. In two cases at Gezer the skeletons of young persons (a youth about eighteen, and a girl a year or two younger) were found, which had evidently been sawn in two. There was nothing to indicate clearly the circumstances under which so exceptional a form of execution had been adopted.

4. **Arab tribes, ancient and modern.**—Under this head we include the various tribes of the trans-Jordanic provinces, the Sinaitic peninsula, and North Arabia—known as the Midianites, Ammonites, Moabites, etc.—as well as the Arabs before they adopted the teaching of Muhammad. These tribes were all so closely related that evidence of the practice under discussion among one or two will probably be sufficient proof of its prevalence among them all. Direct evidence is afforded by the incident of the sacrifice of Meshah, who immolated his heir to Chemōsh, when hard pressed by the Israelites (2 K 3²⁷)—an act which seems to have struck terror into the victors, who fled from the wrath of Chemōsh whose land they were invading. Wellhausen (*Reste arab. Heidentums*², Berlin, 1897, pp. 42, 43, 115) and other scholars have collected the indications of human sacrifice which remain among the Arabs, in spite of the efforts of post-Islamic authors and copyists to efface the traces of the rites and beliefs of the 'times of ignorance.' These show clearly that the Arabs offered prisoners of war to the stellar and other divinities, and also sacrificed boys to Dusares and al-'Uzzā, the morning star. The best-known example is that related by Nilus (*Narrat.* vi.) of his own son Theodulus, who narrowly escaped being a victim. He was stolen by the Saracens, c. A.D. 400, and was to have been sacrificed to the planet. The ritual time for the offering lay between the appearance of Venus above the horizon and her disappearance in the rays of the rising sun. In answer to the boy's prayer, his captors awoke, and the time had already passed when they awoke; he was therefore brought instead to the slave-market of Elusa, of which place he lived to become bishop.

5. **Hebrews.**—This member of the Semitic family was no less prone than the rest to human sacrifices, and required the special instruction of lawgivers and prophets to eradicate the practice. Their great ancestor was moved to offer his son Isaac (Gn 22). Jephthah offered his daughter (Jg 11^{30ff.}) under circumstances differing only in detail from the case of Meshah—in the one the vow preceded, and the act followed, the victory; in the other the act itself was prior to the issue of the battle. The underlying ideas, however, were identical, and, notwithstanding all attempts to

¹ It is said that in some parts of Egypt untimely births are buried in the corners of the houses of the *fellahin*, not in the graveyard of the village. This may conceivably be a survival of the practice of immolating a child or other person at the foundation of a house, and laying the corner-stone on the body

explain away or to modify the Hebrew instance, there can be no reasonable doubt that it involved the death of the victim. Samuel 'hewed Agag in pieces before the Lord' (1 S 15³³), but this is a doubtful case, in view of his deprecation of Saul's intent to sacrifice immediately before (v. 22^{ff.}). It seems more probably to have been an act of judicial punishment (see Baethgen, *Beiträge*, Berlin, 1888, p. 221). Hiel re-built Jericho 'upon' two of his sons (1 K 16³⁴), i.e. sacrificed them at certain stages of the work, as we have seen to have been done at Megiddo and elsewhere. After the partition of the kingdom, the northern branch (2 K 17¹⁷) as well as the southern, especially under Ahaz (16⁹) and Manasseh (21⁹), sacrificed children in fire; by the time of Jeremiah a special place, the *Gē Ben-Hinnōm*, had been set aside especially for this rite. On the other hand, Isaiah (57⁹), Micah (6⁷), Jeremiah (19⁵), and Ezekiel (20²¹) added their fulminations to the direct prohibitions of Leviticus (18²¹) and other passages in the law of the Pentateuch. It does not fall within the scope of this article to discuss the question to what deity these various sacrifices were offered, or to inquire into the relationship between Jahweh and Molech (see *ERE* i. 390). The legitimate cases quoted above are sufficient to prove the existence of human sacrifices among the Hebrews, without calling in more doubtful instances, such as the murder of Abel (Gn 4), the death of Uzzah (2 S 6⁷), the massacre of the priests of Baal (1 K 18⁴⁰), and other events, where critics have traced ritual acts with more or less improbability.

6. Phœnicians and Carthaginians.—Here, as in the case of the Egyptians, we have to trust very largely to the testimony of Classical writers. Of the Phœnicians, who loomed so largely in the works of the antiquarian charlatans of a hundred years ago, we really know next to nothing; and the banal inscriptions of Carthage are not illuminating. Three or four Numidian votive tablets have been supposed to state that A has offered his son B, but neither reading nor interpretation can be considered trustworthy (see Gesenius, *Scripturæ linguæque Phœn. monumenta*, Leipzig, 1837, pp. 446 ff., 453: these inscriptions are not yet [1913] included in *CIS*). Eusebius, however (*Præp. Evang.* iv. 16), following Sanchuniathon (*apud Philo*), speaks of the Phœnicians offering their dearest to Kronos; and other writers ascribe the same custom to the Phœnician colonies of Cyprus, Carthage, and Massilia.

For Cyprus, see Euseb. *loc. cit.*; for Carthage, Porphyrius (*de Abst.* ii. 56), Diodorus Siculus (xx. 14), and Pliny (*HN* xxxvi. v. 4); for Massilia, Servius (*in Æn.* iii. 57).

7. Southern Semites.—The Semitic-speaking people of Abyssinia appear to have been originally a colony from S. Arabia, and presumably carried with them from their former home all the rites of their religion, including that of which this article treats. No direct evidence, however, bearing on the subject is to be found in the unsatisfactory literature relating to that little known country.

II. THE PURPOSE OF HUMAN SACRIFICE.—Human sacrifice is the offering of a human individual to a divine power. It is generally understood to involve the slaughter of the victim, but that is not absolutely necessary; the life of a mediæval anchorite, walled up in a narrow cell, was sacrificed no less literally than was that of the son of Meshah. But in the Semitic world, with some exceptions and modifications presently to be noted, the victim was actually put to death. It is of the highest importance to distinguish true cases of sacrifice from the following acts, which are sometimes confused with them: (1) *murder* for political or criminal causes, such as the satisfaction of private grudge or greed; (2) *execution* of criminals and

prisoners of war; (3) *blood-revenge*; (4) *infanticide*, as organized among the Arab tribes; (5) *slaughter* for medical purposes, e.g. to procure the baths of children's blood supposed to cure leprosy (on which see Pliny, *HN* xxvi. i. 5). Biblical cases of the first three of these, all of which have been called 'sacrifices,' are the stories of Abel (Gn 4), Agag (1 S 15³³), and the sons of Saul (2 S 21). The last of these cannot have been a sacrifice in any case, as the victims were *hanged* (see Dt 21²³, and cf. the executions in Nu 25⁴, which have also been erroneously taken as a sacrifice). The fourth (on which see the gruesome 'Additional Note C' in W. R. Smith's *Kinship and Marriage*², London, 1903, p. 291 ff.) is merely a practical device to reduce the non-combatant members of a tribe.

In a true human sacrifice, the victim may be (a) a young infant, the first-born of the family; (b) a criminal or prisoner of war; or (c) a person of special importance in the eyes of the person or tribe offering the sacrifice. In the first case we have, in the majority of instances, a sacrifice of *primitiæ*, whereby the firstfruits of the field, of domestic animals, and of the human family were sacrificed to the deity. In the second case the victim has offended against the divine majesty, either by his crimes or by fighting against the people of the divinity; the god has triumphed over his enemies, and their blood is poured out before him in celebration of the triumph. The third case is rather different: the god has to be appeased by his own people; a calamity or plague has to be averted, or some such prize as victory in battle has to be obtained; the most valuable gift that the tribe can offer has, therefore, to be presented in payment for the boon; the king's eldest son must be offered as a burnt-offering that there may be 'great wrath' against his enemies (2 K 3²⁷).

By way of appendix to this article, two points must be considered briefly: (a) the modifications and substitutes offered for human sacrifices; and (b) the strange superstition, not yet wholly extinguished, that the mediæval Jews practised a form of ritual murder.

(a) *Modifications and substitutes for human sacrifice.*—Although, as the notorious case of the Aztecs shows, the practice of human sacrifice is not inconsistent with a high standard of culture, it is natural that the advance of civilization should develop a repugnance against the rite in its crudest form, and that various devices should be invented to satisfy the demands of the gods without actually taking life. There are four such devices that call for mention. (1) The *substitution of a model* of wax or straw, as we have already seen, was early introduced into Egypt. Small figures of men cut from laminæ of bronze and silver were found under the foundation of a house at Gezer, evidently representing actual human victims. The occasional cases of the sacrifice of vile, worthless, or crippled members of the community may also in a sense be a substitution for lives more valuable. Although the dogmatic statements of folk-lorists on such a point cannot be accepted without reserve, it is possible that some children's games (see *ERE* ii. 352^a) are the pale reflexion of rites that once involved the immolation of human victims. (2) By *redemption* the eldest son of the Hebrew family was rescued from the doom that doubtless was literally carried out at first (Ex 13¹³). (3) Probably *mutilation* and similar irreparable injuries—especially those involving the loss of male virility or female chastity—were devices to preserve life while sacrificing its joy. (4) *Substitutionary acts* were also performed, in which all semblance of the victim disappeared. Thus, under the foundations of many houses in Palestinian excavations have been discovered groups of lamps and bowls (usually

the lamp inside one bowl, with another bowl inverted over it), one case of which was found at Gezer associated with a sacrificed infant. It is highly probable that these deposits were typical of an earlier rite in which there was the slaughter of a victim.

(b) *Mediæval superstitions regarding the Jews.*—In the Middle Ages an extraordinary idea was prevalent that the Jews practised secret rites for which the blood of Christians, especially of Christian children, was essential. This wild notion was, and in some quarters has been in quite recent years, fostered by politically interested persons in order to inflame anti-Semitic passions. For the superstition there seems to be a certain basis of fact. The mutual hatred of Jew and Christian, and the oppressions of which the latter were guilty, would naturally lead to reprisals when opportunity offered for them; and we need not be surprised to find that such a reprisal should take the form of a grim parody of the Crucifixion, the event to which the Jews ascribed their misfortunes. Accordingly it appears that some drunken Jews at a feast—no doubt that of Purim—crucified a Christian child in the Syrian town Inmestar (Socrates, *HE* vii. 16) in A.D. 416. About 600 years later this seems to have been followed by the similar murder of St. William of Norwich. Other alleged cases followed thick and fast, especially in England and Germany; even so late as 1900 a mysterious murder in West Prussia was made the lever for an anti-Semitic demonstration.¹ All the recorded cases, from that of William of Norwich to the last mentioned, have been analyzed by H. L. Strack (*The Jew and Human Sacrifice*, Eng. tr., London, 1909 [cf. his art. ANTI-SEMITISM, in vol. i., esp. p. 597]), and the results of his investigation are: (1) as just mentioned, that there may have been individual cases of murder by Jews, but that these are a very small minority of the alleged examples recorded, and in any case were simply acts of revenge for personal or national wrongs; (2) that in no Jewish rite is human blood in any circumstance required or utilized; (3) that there may be a few cases of slaughter to procure blood for medicinal purposes, which, as we have already seen, must not be confused with sacrifice proper, but that there is no real evidence of this; (4) that in the vast majority of cases the Jews were simply made scapegoats for mysterious murders, or even sometimes for accidental deaths, the evidence being generally doubtful, and the so-called 'confessions' being extracted by torture.

LITERATURE.—In addition to the authorities cited in the body of this article, see D. Chwolsohn, *Die Sjabier und der Seabisimus*, Leipzig, 1856, vol. ii. (references in index, s.v. 'Menschenopfer'); W. R. Smith, *Rel. Sem.*², London, 1894; M. J. Lagrange, *Études sur les religions sémit.*², Paris, 1905; G. F. Moore, 'Judges,' in *ICC*, 1895 (for the Jephthah incident); H. Vincent, *Canaan, d'après l'exploration récente*, Paris, 1907; C. Mommert, *Menschenopfer bei den alten Hebräern*, Leipzig, 1905, also *Der Ritualmord bei den Talmud-Juden*, Leipzig, 1905 (both rather wild); F. C. Movers, *Untersuch. über die Religion und die Gottheiten der Phönizier*, Berlin, 1841-56; R. A. S. Macalister, *The Excavation of Gezer*, London, 1912; G. Schumacher, *Tell el-Mutesellim*, Leipzig, 1908; E. Sellin, *Tell Ta'annek*, Vienna, 1904; E. Mader, 'Die Menschenopfer der alten Hebräer u. der benachbarten Völker,' in *Bardenheuer's Bibl. Studien*, xiv., Freiburg, 1909 (very useful, but references, etc., require verification).

R. A. S. MACALISTER.

HUMAN SACRIFICE (Slavic).—The Baltic Slavs were fanatics and sacrificed Christians to their gods. Every year a Christian was chosen by lot and offered to the god Svantovit in his temple (Helmold, *Chronica Slavorum*, Frankfurt, 1581, *passim*). The head of Bishop John of Mecklenburg was fixed on a lance and offered to the god Radigast (*ib.*). In Russia the so-called *Chronicle of Nestor*, under the year 983, i.e. a

short time before Vladimir's conversion to Christianity, tells that this prince sacrificed human victims to the gods. The lot fell upon the son of a Christian Vargue, who refused to give him up. The Russians forced an entrance into his house and slaughtered him and all his family.

L. LEGER.

HUMAN SACRIFICE (Teutonic).—What Cæsar says regarding human sacrifice among the Gauls (*de Bell. Gall.* vi. 16: 'homines immolant, . . . quod pro vita hominis nisi hominis vita reddatur, non posse aliter deorum immortalium numen placari arbitrantur, publiceque eiusdem generis habent instituta sacrificia') holds good also in the case of the Teutons. As late as the historical period, the latter people, when their own lives were imperilled, or when some threatened disaster was to be averted, offered human beings in sacrifice. They believed that the demons and gods who had a desire for human lives would be satisfied, or their anger appeased, by such immolations. The human victims of these rites were not as a rule fully privileged members of the particular community; they were prisoners of war, slaves, outlaws, or children under age. At times when the community had no such persons at its disposal, and, in particular, in military campaigns or expeditions by sea, the victims were selected by lot. Like all other sacrifices among the Teutons, human sacrifices were regulated by the principle *do ut des*. Either they were of a prophylactic character—and from this class sprang the periodic immolations of human lives—or they were performed in fulfilment of vows. They were offered to the demons who caused death, or to the man-stealing souls of the departed, or to the god of death and of the dead; sometimes, however, the sacrifice was paid to the god of war, as also to the deities of fruitfulness, who were to be thus induced to prevent failure of crops and consequent famine. In process of time human sacrifice was superseded by the sacrifice of animals, or of objects regarded as substitutes for human life.

According to Tacitus (*Germ.* 9), all the German tribes offered human sacrifices to Wodan-Mercury on certain days. These immolations, however, were accorded not to Wodan as the supreme god, but to Wodan as the god of death, and were designed to avert a wholesale loss of life. Thus from other references of Tacitus we learn that the Hermunduri, after their victory over the Chatti, offered human lives to the god of death and Mars-Tiu, the god of war (*Ann.* xiii. 57). This is confirmed by the Norse records. When King Aunn of Upsala was growing old, he sacrificed nine of his sons to Óðinn in order that his own life might be prolonged in return (*Heimskringla*, ed. F. Jónsson, Copenhagen, 1900, i. 45 f.). In the same way, according to the *Vikars Saga*, Óðinn bestowed upon his protégé, Starkad, a life of three human generations only on condition that Starkad should sacrifice King Vikar to him; and the god himself put into Starkad's hand the spear with which he was to slay the king (Saxo Grammaticus, i. 276). While these examples belong to the sphere of myth, yet they witness to the people's belief that Óðinn accepted life in exchange for life.

Death holds his harvest in time of war. Hence the Teutons immolated the lives of enemies, especially after a victory. The South Teutonic sources do not usually indicate to whom such sacrifices were offered. Thus, e.g., the women of the Cimbri, after a victory, sacrificed their captives (Strabo, vii. 2. 3); after the battle of Arausio (105 B.C.) the captured Romans were hanged upon trees (Orosius, *Hist.* v. 16); the Teutons of West Germany treated their prisoners in the same way after the battle in the Teutoburger Forest (Tac.

¹ At the moment of going to press the trial is proceeding at Kieff of a Jew, Mendel Beiliss, on a charge of ritual murder.

Ann. i. 61); and similar sacrifices were performed by the Heruli (Procop. *de Bell. Got.* ii. 14), the army of Ariovistus (Cæs. *de Bell. Gall.* i. 53), and others. Sometimes we find that a vow of human sacrifice was made before a battle. Thus Radagaisus, the leader of the Teutons, on the occasion of his expedition into Italy, took a vow that, if he conquered, he would sacrifice the captured Christians (Orosius, vii. 37). In the Northern sources the vow and the oblation alike are paid to Óðinn, whose cult, as the god of war and of battles, had found its way into the Scandinavian region from N. Germany. Procopius (*de Bell. Got.* ii. 15) tells us that the Thulites had sacrificed human beings to 'Apps. When Jarl Einar of Orkney conquered Halfdan, the son of Harald, he devoted his adversaries to Óðinn in return for his victory (*Icelandic Sagas*, i. p. 8: 'gaf hann Óðni til sigrs sér'). When a Norse general came face to face with the enemy, he cried out: 'Óðinn á yör alla' ('Óðinn has you all').

But Óðinn was at the same time the leader, and thus also the god, of the dead, and his dominion was increased by the addition of fallen warriors (*valr*) to the company of the *Einherjar*. Hence he not seldom selected his own victims. He sent forth his battle-maidens, the Valkyrs, to bring to his kingdom the heroes who fell in the field of battle. We sometimes even meet with the belief that Óðinn himself took part in the battle, and secured his destined victims. Thus, e.g., he was present at the great battle of Bravalla, in which King Harald of Denmark fought against Hring of Sweden, and the god himself struck King Harald down (Saxo Gram. i. 390; *Fornaldarsögur*, i. 380 f.). Or he gives the adversary of his destined victim a spear with which to slay the latter (*Gautreks Saga*, ed. Ranisch, p. 18 ff.). Sometimes, again, men devoted their own lives to the gods. When Eirikr the Victorious, King of Sweden, met his nephew Stýrbjörn in battle near Fyrisvellir, he dedicated his life to Óðinn, before the onset, promising that he would die ten years afterwards (*Fornmannasögur*, v. 250). But the Northern Teutons of ancient times, in order to gain a victory over their enemies, sometimes offered sacrifices also to their tutelary deities. When Jarl Hákon of Norway joined battle with the Jómsvikings in the bay of Hjörungun (986), and the victory inclined to the side of the latter, he sacrificed his youngest son, Erling, to his protective goddess Thorgerð Holgabrúð, and so won the day (*Jómsvikinga Saga*, cod. A.M. 510, p. 79 f.).

Besides war, expeditions by sea were another great source of danger to life. In the sea there lived a man-stealing demon whom the North Teutons called Rán ('robber'). Rán, with her nine daughters—personifications of the waves—laid hold of her victims in storms at sea. Those who were drowned passed into her kingdom, and were there regaled with lobsters and fish. Hence dwellers by the North Sea, or the ocean, before setting out upon a voyage, offered a human sacrifice, hoping thereby to protect themselves against the rapacity of the sea-demon. The heathen Saxons, before taking ship for home after their marauding and predatory incursions, killed a tenth of all their captives upon the beach, in order that a safe voyage might be granted to them (C. von Richthofen, *Zur Lex Saxonum*, Berlin, 1868, p. 204). Likewise the Normans, when embarking upon their Viking raids by sea, sacrificed human beings to the sea-god (*Mém. de la société des antiq. de la Normandie*, xxii. [1869] 129 f.). These sacrifices were performed upon the seashore with special frequency when the ships were unable to put forth because of storms or unfavourable winds. In such emergencies, and especially if other victims

were not available, the individuals to be sacrificed were often chosen by lot from among those who were about to take part in the voyage (Saxo Gram. i. 422). Here should be mentioned also the sacrifices offered by the Frisians to their supreme god Fosite. In Fosite's Land, an island in the North Sea, was situated, not far from a sacred spring, his sanctuary, violation of which was punished by the sacrifice of life after the god had announced by lot that he desired such an expiation (Alcuin, *Vita Willibrordi*, ch. 10; *Friesische Rechtsquellen*, ed. von Richthofen, Berlin, 1840, p. xliii). These immolations were performed upon the seashore; and as far down as Mediæval and Christian times it was a prevalent Frisian belief that the sea demanded the sacrifice of those who had been guilty of robbery (Adam of Bremen, *Hist. Eccl. Hamb.* iv. 3). Here, therefore, the sacrifice was originally offered to the sea-demon, and was transferred to Fosite, and brought into connexion with the violation of his sanctuary only after he had become the supreme object of worship.

But human sacrifices connected with seafaring were not so decidedly of a prophylactic character as those connected with failure of crops. Failure of crops meant famine, and famine meant great loss of life, and here we have the explanation of the human sacrifices performed in times of threatened scarcity. Thus, during a famine, King Heiðrekr, instead of offering up his own son, upon whom the lot had fallen, sacrificed King Harald of Reigötaland and his retinue (*Hervarar Saga*, ed. S. Bugge, Christiania, 1865, p. 227 f.). Like other races, the Teutons regarded the king as chiefly responsible for a bad harvest. It is recorded that the Swedes attributed both abundance and scarcity of crops to their kings (*Heimskr.* i. 75: 'Sviar eru vanir at kenna konungi bæði ár ok hallæri'). Even as late as 1527, we find Gustavus Vasa, at the parliament of Westerås, complaining that the people blamed the king for the lack of rain or sunshine (E. G. Geijer, *Svenska Folkets Hist.*, Örebro, 1837, ii. 71). From heathen times comes the statement that the Swedes sacrificed King Domaldi 'pro fertilitate frugum deae Cereri' (*Mon. Hist. Nor.*, Christiania, 1880, p. 98), when neither the immolation of animals nor that of ordinary men had been able to arrest the blight (*Heimskr.* i. 30 f.). When the immolation of kings, which among the Teutons gradually disappeared within historic times, was at length finally abandoned, the king who was held accountable for famine was dethroned, or even expelled from the country, as was the practice, e.g., among the Burgundians (Amm. Marcell. xviii. 5. 14).

The practice of periodical human sacrifice, offered in spring to the deities of fertility, arose from the dread of possible dearth. Such a periodical rite was the sacrifice at the festival of Nerthus, which was celebrated every spring by seven tribes on the Baltic Sea (Tac. *Germ.* 40). At this festival the priest drove the car of Nerthus—the divine *Terra Mater*—through the various cantons of the confederacy, in order to secure the fertility of the whole country. Then, when the procession was over, the slaves who had accompanied the car were sacrificed to the goddess in her sacred lake. Another immolation on a large scale took place every ninth year in the ancient and highly venerated sanctuary of Lethra in Zealand, where the residence of the Danish kings was also situated. At this festival likewise the members of the confederation assembled for a joint celebration in order that, along with their feast, they might perform the great immolation in which ninety-nine human beings, and an equal number of horses, dogs, and cocks, respectively, were sacrificed. This celebra-

tion took place in winter—the season in which elsewhere the ancient Teutonic festival of the dead was held—and was designed to benefit the souls of the under world (*inferos*) and to expiate the sins that they had committed, as the Christian chronicler (Thietmar of Merseburg, *Chronicle*, i. 9) puts it. A similar sacrifice was performed in ancient Upsala. The season of the year at which it took place is not noted in our sources, but was in all probability the early spring. The sacrifice was offered to the god of fertility, Frö or Frey, in whose honour, indeed, Saxo Grammaticus (i. 120), with his euhemeristic mode of explanation, says it was instituted. As in the festival of Nerthus, there was a procession here also, the image of Frey being borne through the district by a young priestess (*Flateyjarbók*, i. 337 ff.). Frey, too, received human sacrifices, at least in the later period of heathenism. These sacrifices, like the great immolation at Lethra, were performed every nine years, and were offered in the sacred grove at Upsala, their object being to propitiate the god, *i.e.* to secure his favour for the people, and fertility for the land. The victims here were not only human beings, but also horses and dogs, nine of each kind being sacrificed. The bodies of the human victims were hung upon trees in the sacred grove, and the informant of Adam of Bremen (iv. 26–27) says that he had seen seventy-two bodies suspended there.

The Teutons practised these immolations with a view to protecting human life and keeping malignant demons at bay. They had a similar purpose in the sacrifice associated with buildings—a practice met with among all races. It is true that the ancient sources supply no evidence of this observance among the Teutons, but the discovery of skeletons under ancient structures, and the still prevalent belief that great edifices can be made stable by means of sacrifice, indicate that this type of human immolation too existed among the Teutons of heathen times. In order to give stability to a building—to prevent its fall, and the calamity which this would involve—it was the practice to enclose a living person in the masonry under the main supports of the work. As a rule the victims in this case were children. In this particular sacrifice, however, the place of human beings was at an early date supplied by animals (especially cats), or by certain parts of animals (heads of horses, oxen, etc.), and at length by inanimate things (images, coins, etc.). The modern practice of putting in certain objects at the laying of foundation stones is a survival of the ancient rite. In the ancient sacrifices the victims were placed under the threshold of buildings, under the gateways of city walls, and under the pillars of bridges. Then the dikes upon the seacoast, as being specially exposed to the waves, were also protected by human sacrifices. In Oldenburg, children are said to have been thus inhumed as far down as the 17th cent., by way of making the dikes secure (L. Strackerjan, *Aberglaube aus dem Herzogtum Oldenburg*², Oldenburg, 1908, i. 127 ff.). And even at the present day we meet in many districts with the popular belief that certain structures of huge size could never have come into existence at all unless the builder had buried a human being under their supports. HUME.—1. Life.—David Hume, best known for his philosophical writings, but a student of history and economics also, was born in Edinburgh on 26th April 1711. As he himself tells us in his autobiography, he came of a family of distinction but of small estate. He was the youngest of three children, who were early left fatherless, but had the care of a devoted mother. Little is known of his early education. He entered the University of Edinburgh in 1723. His philosophical and literary bent showed itself early in life and grew steadily, triumphing in the end over all other interests. He tried business, but found it unsuitable. In 1734 he went to Paris, and there wrote his *Treatise of Human Nature*, the first and second volumes of which were published in 1739, when he was only twenty-eight years old. He expected much from this his first work, but suffered a great disappointment. It 'fell dead-born from the press.' He was not discouraged, however, but proceeded to write in a more popular form. In 1741 the first volume of his *Essays* appeared, and gained for him almost immediately the notice he courted. A second volume of *Essays* followed the next year. In 1744 he had hopes of securing the chair of Moral Philosophy in the University of Edinburgh, but failed. He then secured the post of tutor to the Marquis of Annandale. In 1746 he became secretary to General St. Clair, with whom he remained, with a slight interruption, for two years, continuing his writing. After some time spent at Ninewells, in Berwickshire, he returned to Edinburgh in 1751, where he remained for twelve years. These were the years of his greatest literary activity, in which most of his political, economic, and religious studies were written, together with his *History of England*. In 1763, in company with Lord Hertford, he again visited Paris, and was received there with gratifying distinction. He was under-secretary to General Conway in 1767, and spent two years in London. He returned to Edinburgh in 1769, to remain for the rest of his life, enjoying a wide reputation and a substantial income. He died on 25th August 1776. His own description of himself as 'a man of mild dispositions, of command of temper, of an open, social, and cheerful humour, capable of attachment, but little susceptible of enmity, and of great moderation in all my passions,' is likewise the description of him given by those who knew him well. His friendship for Rousseau, which was poorly requited, was characteristic of him. There was in his disposition a mixture of cynicism and kindness, a scepticism, half serious and half playful, which prevented for a time a just estimate of his ability. But his reputation has grown with the years, and he ranks among the most acute and penetrating students of human nature.

2. Writings.—

1739–40, *Treatise of Human Nature*: 'Of the Understanding'; 'Of the Passions'; 'Of Morals,' Edinburgh.

1741–42, *Essays Moral and Political*, do.

1748, *An Enquiry concerning Human Understanding*, London.

1751, *An Enquiry concerning the Principles of Morals*, do.

1752, *Political Discourses*, Edinburgh.

1754–61, *Four Dissertations*: 'Of the Natural History of Religion'; 'Of the Passions'; 'Of Tragedy'; 'Of the Standard of Taste,' do.

1777, *My Own Life*, London.

1779, *Dialogues concerning Natural Religion*, do.

3. Philosophy.—Hume's philosophy is usually regarded as the culmination of the line of thought begun by Locke and continued by Berkeley. There is no doubt that he wrote with the ideas of these predecessors in mind, and fully conscious that he was carrying them forward to their ultimate issue. His philosophy, however, is much more than a development of this issue. The turn given to the result, the conception of human nature arising in the course of reaching it, and the consequent

method of conducting inquiry are the really significant things in the work of this Scotsman, who delighted in calling himself a sceptic. His scepticism is not only a suspicion of his predecessors' philosophy; it is also the recommendation of a positive attitude towards life.

In its logical relation to the philosophy of Locke and Berkeley, the philosophy of Hume appears to be the natural and inevitable conclusion of the position they defended in regard to the objects and method of knowledge. Locke (*q.v.*) had reduced his inquiry into the 'original, certainty, and extent of human knowledge' to three fundamental tenets which may be stated as follows: (1) the only immediate objects of knowledge are ideas; (2) all ideas are acquired; and (3) knowledge is a synthesis of ideas, 'the perception of the agreement or disagreement' of them as they are compared and related. Ideas, with Locke, were definitely distinguished from things, on the one hand, and from the mind, on the other hand; they constituted a series of intermediate existences between the mind and the things to which knowledge is supposed to refer. Berkeley (*q.v.*) had questioned the validity of the distinction between ideas and things, if Locke's fundamental theses are to be maintained. If, that is, knowledge is concerned immediately with ideas, their comparisons and relations; if in both object and method it never passes beyond them, then the distinction between ideas and things becomes unintelligible. Knowledge deals directly with its objects; and, if it is a perception of them and their relations, it is evident that objects *are* what they are in perception; their *esse* is *percipi*. Hume pushes this analysis of Locke's position still farther, attacking the distinction between ideas and the mind, just as Berkeley had attacked the distinction between ideas and things. Nothing is given in perception, he urges, except that which is perceived, namely, perceptions. A mind *distinct* from perceptions is not given; it is not a datum of experience, an object to be identified among the sum-total of objects perceived. At best it is a group or 'bundle of perceptions' which expands or contracts as perceptions are added or subtracted. In other words, Hume contends that, if we take Locke's fundamental positions rigorously, then we must admit that perceptions—that is, the content immediately given in perception—are our only objects, and knowledge can deal only with relations between perceptions. To pass beyond perceptions, either to the objects which they are supposed to represent or to a mind which is supposed to perceive them, is to take a step which experience does not warrant. Knowledge, as knowledge, is thus rigorously limited to the immediate data of experience, and that means, with Hume, to our perceptions.

These data of experience Hume divides into two classes—impressions and ideas—and rests the distinction between them squarely on experience. The clearest statement of the distinction is found in the second section of the *Enquiry concerning Human Understanding*, entitled, 'Of the Origin of Ideas':

'By the term *impression*, I mean all our more lively perceptions, when we hear, or see, or feel, or love, or hate, or desire, or will. And impressions are distinguished from ideas, which are the less lively perceptions, of which we are conscious, when we reflect on any of those sensations or movements above mentioned.'

Furthermore, all ideas are derived from impressions, but impressions are themselves originals without any discoverable derivation. Ideas are copies, faint reproductions of impressions; and this fact gives us a rule by which to test the soundness of our ideas:

'When we entertain any suspicion that a philosophical term is employed without any meaning or idea (as is but too frequent), we need but enquire, *from what impression is that supposed*

idea derived? And if it be impossible to assign any, this will serve to confirm our suspicion. By bringing ideas into so clear a light we may reasonably hope to remove all disputes, which may arise, concerning their nature and reality' (*ib.*).

To this test Hume subjects such principal philosophical ideas as those of space, time, cause, necessary connexion, substance, mind, to find in each case that there is no single distinct impression as the source of the idea. Such ideas must be referred to the grouping of impressions or ideas, or to the passage from one impression to another, or from one idea to another. For instance, the idea of substance is not derived from any distinct impression, but

'is nothing but a collection of simple ideas, that are united by the imagination, and have a particular name assigned them, by which we are able to recall, either to ourselves or others, that collection' (*A Treatise of Human Nature*, bk. i. pt. i. sec. vi.).

The idea of necessary connexion is not derived from any necessary connexion discoverable among our impressions, but from the *feeling* attending 'the customary transition of the imagination from one object to its usual attendant.' And the idea of cause and effect is to be understood, not in terms of any discoverable power by which one thing works a change in some other thing, but in terms of the persistent habit of human nature to expect similar facts to be followed by similar experience.

Thus Hume attempted to abolish the leading ideas of the philosophy which preceded him, by pushing to the extreme the doctrine that, so far as knowledge is concerned, we deal only with perceptions and their relations. Since we *perceive* no power, no necessary connexion, no substance in which qualities inhere, and no mind which itself perceives, but only perceptions, impressions, and the ideas derived from them, we must interpret mind, power, substance, and necessary connexion solely in terms of impressions and ideas. When so interpreted, they lose the force and significance usually assigned to them. They cease to be principles applicable to things, and become rather principles for the grouping and associating of ideas. Thus Hume gave a great impetus to associationist psychology, to the view that knowledge is concerned only with original mental elements and their associations.

The result thus reached by Hume he presents to the reader as a recommendation for scepticism. He points out that we naturally tend to repose faith in our senses and to believe that we perceive external objects, whereas philosophy convinces us that we perceive only perceptions which *we suppose* refer to objects or represent them. Of this supposition we can have no proof, for our perceptions, being perceptions and nothing more, never give any indication of external objects. Confined thus to our perceptions, reason can never pass beyond them, and we are forced to doubt the rational soundness of any conclusions which attempt to carry us beyond (see *Human Nature*, bk. i. pt. iv., particularly sections i., ii., vi., and vii.).

Hume's reasoning here is so manifestly based upon the assumption that perceptions are not objects—one of Locke's fundamental assumptions, which he has himself declared to be really unintelligible—that it is difficult to follow him seriously. He appears to be playing with the issue to which he has reduced the philosophy of his predecessor. But in another connexion he gives a decidedly serious and important turn to his 'scepticism,' namely, in his doctrine of belief. 'We may well ask,' he states, '*What causes induce us to believe in the existence of body?*, but 'tis in vain to ask, *Whether there be body or not?*' (*ib.* bk. i. pt. iv. sec. ii.). This statement may be generalized to indicate how with Hume the problem of belief is more important than the problem of knowledge. To his mind philosophers had busied themselves

too much with the question whether the things in which we naturally believe, such as an external world, power, God, providence, exist—a question which cannot be answered, because, in order to answer it, we should have to pass beyond the limitations which experience puts upon the problem of existence. There is no way of proving that that which we have not experienced exists. It is, therefore, idle to try. But, since we believe in spite of this fact, the grounds of our belief may be investigated. In every case, Hume reduces belief to some principle of human nature, to some habit or propensity of mind, just as he reduces the belief in necessary connexion to the feeling attending the inevitable expectation of similar consequences from similar events. He defines belief generally as 'a lively idea related to or associated with a present impression.' His comment on this definition is not only a clarification of it, but a good illustration of his philosophical position generally.

'When we infer the existence of an object from that of others, some object must always be present either to the memory or senses, in order to be the foundation of our reasoning; since the mind cannot run up with its inferences in *infinitem*. Reason can never satisfy us that the existence of any one object does ever imply that of another; so that when we pass from the impression of one to the idea or belief of another, we are not determin'd by reason, but by custom or a principle of association. But belief is somewhat more than a simple idea. 'Tis a particular manner of forming an idea: And as the same idea can only be vary'd by a variation of its degrees of force and vivacity; it follows upon the whole, that belief is a lively idea produc'd by a relation to a present impression, according to the foregoing definition' (*ib.* bk. i. pt. iii. sec. vii.).

Then there is a kind of inevitableness about belief; it is the necessary result of putting the mind in certain circumstances. That is why scepticism, although it triumphs over reason and every attempt to establish by reason the objects of belief, is relatively impotent in the face of belief itself. 'Nature'—and here Hume means human nature—'will always maintain her rights, and prevail in the end over any abstract reasoning whatsoever.'

To ground belief on principles of human nature rather than on proved conclusions of reason, however, was for Hume not the end of philosophy. It suggested to him a science of human nature which should set forth in detail the ways in which men act and in which they come to believe in any matter of fact. Such things are with him the proper objects of philosophical inquiry. Only the method applicable to them should be carefully noted. The sub-title to his *Treatise of Human Nature* indicated what he conceived that method to be: 'an attempt to introduce the experimental method of reasoning into moral subjects.' That is, problems concerning man's beliefs and conduct are to be handled by observing how men behave under given conditions, and what actuates and moves them. Above all, the effects of *probable* conclusions based on observed uniformities, sequences, and expectations are to be emphasized. For probability rather than certain conclusions is the great guide in human life. This method has already been illustrated in the foregoing exposition. A further and significant illustration of it is found in Hume's theory of morals.

'Those who affirm,' he says, 'that virtue is nothing but a conformity to reason; that there are eternal fitnesses and unfitnesses of things, which are the same to every rational being that considers them; that the immutable measures of right and wrong impose an obligation, not only on human creatures, but also on the Deity himself: All these systems concur in the opinion, that morality, like truth, is discern'd merely by ideas, and by their juxta-position and comparison. In order, therefore, to judge of these systems, we need only consider, whether it be possible, from reason alone, to distinguish betwixt moral good and evil, or whether there must concur some other principles to enable us to make that distinction' (*ib.* bk. iii. pt. i. sec. i.).

His own opinion is that, tested by experience, it is not reason alone that enables us to make the distinction. 'Morals excite passions, and produce or prevent actions. Reason of itself is utterly im-

potent in this particular. The rules of morality, therefore, are not the conclusions of our reason.' They are conclusions from feeling and sentiment. 'Morality is more properly felt than judg'd of.' Again:

'Virtue is distinguished by the pleasure, and vice by the pain, that any action, sentiment, or character gives us by the mere view and contemplation. This decision is very commodious; because it reduces us to this simple question, *Why any action or sentiment upon the general view or survey gives a certain satisfaction or uneasiness*, in order to shew the origin of its moral rectitude or depravity, without looking for any incomprehensible relations and qualities, which never did exist in nature, nor even in our imagination, by any clear and distinct conception. I flatter myself I have executed a great part of my present design by a statement of the question, which appears to me so free from ambiguity and obscurity' (*ib.* bk. iii. pt. i. sec. ii.).

Thus we are brought to look for the springs of moral action, not in reason, but in a natural quality or disposition of human nature—the disposition to approve or disapprove actions as they affect us with a favourable or unfavourable view of the person acting, as they lead us to sympathize with him and his motives. Hume's theory of morals is thus neither hedonistic nor egoistic primarily. It is not essentially utilitarian, although considerations of utility are important for him. It is rather an attempt to show that morals are pre-rational, finding their origin in the emotions rather than in calculation. His theory is introduced by an elaborate and interesting study of the emotions themselves.

Hume's method of dealing with religion is the same as his method of dealing with morals. His 'Natural History of Religion' opens with these words: 'As every enquiry, which regards religion, is of the utmost importance, there are two questions in particular, which challenge our attention, to wit, that concerning its foundation in reason, and that concerning its origin in human nature.' Here, again, is the sharp contrast between reason and human nature. Hume, indeed, admits that there is rational ground for the 'primary principles of genuine theism,' such as an intelligent author of the whole frame of Nature, but insists that what the majority of men believe about God is not founded on reason. The latter has a natural history which he attempts, with very insufficient data, to trace. Religion, according to him, began as polytheism, and arose 'not from a contemplation of the works of nature, but from a concern with regard to the events of life, and from the incessant hopes and fears which actuate the human mind.' These hopes and fears led men to believe in many corresponding deities. The passage from polytheism to theism was brought about, not so much by any train of philosophical reasoning, as by a tendency to idealize the conception of Deity. There thus results a 'kind of flux and reflux in the human mind,' and 'men have a natural tendency to rise from idolatry to theism, and to sink again from theism into idolatry.' If religion had its origin in reason, such a flux and reflux would be impossible. Throughout this discussion of the natural history of religion, Hume lays little stress on the validity of religious belief. It is with him a characteristic belief of human nature, like belief in causation or in an external world.

The problem of validity is, however, discussed in his *Dialogues concerning Natural Religion*. A supernaturalist, a deist, and a sceptic are the protagonists in the discussion. The argument proceeds with much acuteness. The principal point in dispute is not the existence of God, but how far we can, by reasoning from the character of the world, the events of history, and the good and evil fortunes of men, reach sound conclusions about God's nature and attributes. Are we entitled to infer any greater goodness and perfections in the author of the world than we find exhibited in the

world? Can we infer a providential guidance of the course of events, in face of the fact that a special care for one man's good is bound up with another man's evil? The outcome is inconclusive, befitting, doubtless, the literary demands of the dialogue rather than illustrating Hume's own convictions. He does not hesitate, however, to betray his own preference for the sceptic's position. The subject passes the power of human reason to decide. Arguments balance one another. His closing statement is perhaps the expression of his own attitude:

'If the whole of Natural Theology, as some people seem to maintain, resolves itself into one simple, though somewhat ambiguous, at least undefined proposition, *That the cause or causes of order in the universe probably bear some remote analogy to human intelligence*: If this proposition be not capable of extension, variation, or more particular explication: If it affords no inference that affects human life, or can be the source of any action or forbearance: And if the analogy, imperfect as it is, can be carried no farther than to the human intelligence; and cannot be transferred, with any appearance of probability, to the qualities of the mind: If this really be the case, what can the most inquisitive, contemplative, and religious man do more than give a plain, philosophical assent to the proposition, as often as it occurs; and believe that the arguments, on which it is established, exceed the objections, which lie against it? Some astonishment indeed will naturally arise from the greatness of the object: Some melancholy from its obscurity: Some contempt of human reason, that it can give no solution more satisfactory with regard to so extraordinary and magnificent a question. But believe me, Cleanthes, the most natural sentiment, which a well-disposed mind will feel on this occasion, is a longing desire and expectation, that heaven would be pleased to dissipate, at least alleviate this profound ignorance, by affording some particular revelation to mankind, and making discoveries of the nature, attributes, and operations of the divine object of our faith. A person, seasoned with a just sense of the imperfections of natural reason, will fly to revealed truth with the greatest avidity: While the haughty Dogmatist, persuaded that he can erect a complete system of Theology by the mere help of philosophy, disdains any farther aid, and rejects this adventitious instructor. To be a philosophical Sceptic is, in a man of letters, the first and most essential step towards being a sound, believing Christian; a proposition which I would willingly recommend to the attention of Pamphilus: And I hope Cleanthes will forgive me for interposing so far in the education and instruction of his pupil.'

It should be noted, in conclusion, that Hume wrote many suggestive essays on social and political topics, which, however, have little historical importance. His *History of England* was a partisan document, based on an inadequate knowledge of the facts. It is significant, however, for its emphasis upon the social and literary interests of the nation as of equal importance with its political affairs.

LITERATURE.—The best modern ed. of Hume's works is that by T. H. Green and T. H. Grose, in 4 vols., London, 1874-75. L. A. Selby-Bigge has issued an ed. of the *Enquiries* (Oxford, 1894), and the *Treatise* (2nd ed., do. 1896), with an excellent topical index and critical apparatus. For his life, the principal writings are: J. H. Burton, *Life and Correspondence of David Hume*, Edinburgh, 1846; G. B. Hill, *Letters of Hume to William Strahan*, Oxford, 1888; and C. J. W. Francke, *David Hume*, Haarlem, 1907. Among the many philosophical studies of his work, T. H. Huxley's 'Hume,' in the *English Men of Letters* series (London, 1879), and W. Knight's 'Hume,' in *Philosophical Classics* (Edinburgh, 1886), deserve special mention. The Green-Grose ed. contains an elaborate critical introduction.

FREDERICK J. E. WOODBRIDGE.

HUMILITY.—The Greek word *ταπεινός* is one of those which, like *ἀρεσκεία*, have been rescued and ennobled by Christian ethics (see Trench, *Synonyms of the NT*, Cambridge, 1854, § xlii.; T. K. Abbott, in *ICC* [Edin. 1897] on Eph 4²; cf. art. 'Humility,' in *HDB*).

Humility is an essential Christian grace, and distinguishes the religion of Christ from that of paganism. For Christians to walk 'worthy' of their vocation is to walk 'in lowliness and meekness' (Eph 4²).

'Paganism was not humble, because to paganism the true God was hut a name. The whole life and thought of the pagan world was therefore very naturally based on pride. Its literature, its governments, its religious institutions, its social organisation and hierarchy, its doctrines about human life and human duty—all alike were based on the principle of a houndless self-assertion' (Liddon, *BL*, p. 500).

In the later Stoicism, self-reliance reaches its climax

in 'the deification of human virtue, the total absence of all sense of sin, the proud stubborn will that deemed humiliation the worst of stains' (Lecky, *Hist. of Europ. Morals*, London, 1869, i. 223; cf. Seneca, *Ep.* lxxvii. 8, where humility appears as a consciousness of weakness, disqualifying a man for the higher spiritual rank). It is true that even in Aristotle's conception of the *μεγαλόψυχος* may possibly be discerned some elements of good: truthfulness of character and speech, magnanimity in overlooking offences, self-respect, and indifference to death (*Eth. Nic.* iv. 3, § 24 ff.). But it remains true on the whole that the highest and most inclusive¹ type of heathen virtue is essentially an exalted form of self-esteem, implying contempt of others. The *μεγαλόψυχος* is *ὁ μεγάλων αὐτὸν ἀξίων ἀξιος ὢν*. In the classical conception of virtue there is, in fact, 'an element of worldly wisdom which does not exclude self-righteousness.' To a heathen the only check upon pride was the prudential consideration that the gods were envious of undue prosperity and hostile to insolence (*ὑβρις*) and self-exaltation. This is, of course, a commonplace of the Greek tragedians. A Greek might have assented to the maxim laid down by St. Paul in Ro 12³ (*φρονεῖν εἰς τὸ σωφρονεῖν*), but he laboured under a real confusion of mind, a real ignorance, as to the actual condition and true possibilities of human nature. In the gospel, humility is the natural fruit of the deepened insight which resulted from Christ's revelation of God, and of the personal example exhibited in the incarnate life. 'The sceptre of God's majesty,' says an early writer (Clem. *ad Cor.* i. xvi.), 'our Lord Jesus Christ came not in the pomp of arrogance or pride, though He might have done so, but in lowliness of mind (*ταπεινοφρονῶν*).' Here we have the keynote of the change which Christianity produced in man's estimate of himself. It may be added that 'magnanimity' ranks as a genuine Christian virtue; it is not, however, identical with humility, though quite compatible with it. Aquinas regards it as a species of fortitude (*Sum.* ii. 2. qu. cxxix.).

1. In the NT, humility seems to be considered under two main aspects.

(1) *As a personal virtue.*—From this point of view humility is that fundamental quality which places man in the only right relation to God. 'Humility,' says Aquinas, 'strictly speaking, implies the reverence whereby man subjects himself to God' (*Sum.* ii. 2. qu. clxi. art. 3 resp.). Humility is the victory of truth in character; that just self-estimate which, while not depreciating personal gifts or excellences, always refers them to God as their true and only source. This just self-estimate includes both the sense of creaturely limitations and the consciousness of personal weakness and sinfulness. 'Humilitas facit quod homo seipsum parvipendat, secundum considerationem proprii defectus' (*Sum.* ii. 2. qu. cxxix. art. 3 ad 4).

Humility is thus the initial grace of the Christian life. Its fundamental place in character is taught by Christ in the first Beatitude (Mt 5³); and also in the injunction of Mt 18³, Mk 10¹⁵, Lk 18¹⁷. It implies 'the acknowledgment of God' and of what man really is in His sight, and thus includes: (a) the spirit of *creaturely dependence and service*. Our Lord's great humility was manifested in His assumption of the 'form of a servant,' as contrasted with the glory and sovereignty of His original and essential state as Son of God (Ph 2⁷; see Corn. à Lap. *ad loc.*, and cf. Joh. Damasc. *de Orth. Fid.* iii. 21). Further, in virtue of the union of His human nature with Deity, He who is one

¹ Aristotle says (iv. 3. 16): *ἔοικεν ἡ μεγαλοψυχία οἷον κόσμος τις εἶναι τῶν ἀρετῶν*.

with the Author and Giver of all spiritual blessings became Himself a receiver, inferior to the Father 'as touching his manhood' and dependent on Him for all that was needed to sustain His manhood, to equip it for its redemptive work, and to advance its condition (see Hooker, *Ecol. Pol.*, bk. v. ch. 54; Aquin. *Sum.* iii. qu. viii.). The unique characteristic of the Christian faith is the mystery of this self-humiliation; the fact that the pattern of humility is nothing lower or less than the incarnate life of the Son of God. Humility, then, in its primary sense is the spirit of perfect dependence on God.

'By humility I understand such a spirit or gracious property in the soul of man or any intellectual creature as that hereby he does sensibly and affectionately attribute all that he has or can do to God, the Author and Giver of every good and perfect gift' (H. More, 'Of the Divine Life,' ch. xii., *Theol. Works*, London, 1708, p. 37).

(b) *Holy fear or the sense of sin.*—'The poor in spirit,' says Augustine, 'are the humble and those who fear God. Nor can beatitude have any other beginning' (*Serm. Dom. in monte*, i. 3). Pride or self-assertion is the root of sin; the beginning of wisdom is the fear which springs from the sense of personal unworthiness. Thus Bernard calls self-knowledge and the humility which it produces 'mater salutis' (*in Cant.* xxxvii. 1). Humility is the essence of a true conversion; it is the indispensable secret of progress; it is the pledge of security, since even the grace already bestowed on the soul may be lost by pride.

This has never been more forcibly expressed than in a famous passage of Augustine (*Ep.* 113 'ad Diosc.' 22). He bids Dioscorus submit himself wholly and without reserve to the yoke of Christ, and tread no other road to the attainment of truth than that which was trodden by Him who, as God, saw the infirmity of our steps. 'And that road is first humility, secondly humility, thirdly humility. . . . And as often as I was asked about the precepts of Christian religion, I should choose to answer nothing else than "Humility," though perhaps necessity would compel me to say other things.'

(2) *As a social virtue.*—On the other hand, humility is commended in the NT as a social virtue, as, for instance, in Ph 2¹⁻¹¹. Humility is a form of moderation (cf. *Sum.* ii. 2. qu. cxxi. art. 4). The point enforced by Christ's example in Ph 2 is that He did not insist upon rights which He might in strict justice have claimed. St. Paul implies that the desire for superiority, vainglory, and the spirit of partisanship are fatal to Christian unity and concord. The humility which honours all men and defers to them in *quantum in eis aliquid inspicit de donis Dei* tends to promote the well-being of the community (Ro 12¹⁰, Eph 4¹⁻³, Ph 2³). It excludes the envy which springs from comparing self with others (2 Co 10¹²); it encourages the spirit of contentment and mutual serviceableness. The humble man will constantly recognize that any gift which gives him superiority over his fellows is in a measure due to the good influence of others—parents, friends, teachers, even enemies who have dealt candidly with his defects; and, further, 'so far from wishing to keep his virtues to himself he will wish that they were common as the air of heaven, that "all the Lord's people were prophets." Thus humility is a social virtue and may be regarded as an aspect of benevolence' (Rashdall, *The Theory of Good and Evil*, i. 206). Hence in the interests of peace, whether in the family or in the Church, the NT frequently insists on the duty of mutual subjection (e.g. Eph 5²¹, 1 P 5⁵). Further, as one great secret of effective social service is patient study of the conditions of each problem that needs solution, the teachable or humble temper is essential—the spirit which is willing to learn and observe before taking action. Bernard's observation is here in point, that the Church needs reservoirs rather than pipes ('Canales hodie in Ecclesia multos habemus, conchas vero perpaucas'). 'Men,' he complains, 'are nowa-

days so full of charity that they wish to pour out before they are full; they are more ready to speak than to hear, and eager to teach what they have not learned' (*in Cant.* xviii. 3). The scientific spirit needed in dealing with modern social problems is a spirit of humility, willing to put itself to school with facts, and mindful of Bacon's maxim, *artem inveniendi cum inventis adolescere posse*.¹

2. The acts or offices of humility must necessarily vary with the particular states and conditions of men. The Benedictine rule, with its 'twelve grades' of humility, is briefly discussed by Aquinas (*Sum.* ii. 2. qu. cxxi. art. 6; see also the last book of Cassian's *Inst.*, 'de Superbia'). In ordinary life the grace of humility takes such forms as are described by Jeremy Taylor (*Holy Living*, ch. ii. § 4). It is specially tested in a man's life with his equals.

'The hardest trial of humility must be not towards a person to whom you are superior, and who acknowledges that superiority, but towards a person with whom you are on equal footing of competition. . . . The relations to equals are thus the more real trial of humility than the relations to inferiors' (Mozley, *Univ. Sermon*, London, 1876, ix. 'Our Duty to Equals,' p. 220).

3. It may be noticed, in conclusion, that some clear principles connected with our subject emerge in our Lord's teaching, and find an echo in common human experience.—(1) *Docility or receptiveness*—the temper of the child is a necessary condition of spiritual as of mental growth (see PASSIVITY).—(2) *The spirit of dependence* is the condition of spiritual fruitfulness (Jn 15⁵). The Christian ideal is not self-reliance, but unlimited confidence in the goodwill and co-operating grace of God at every stage of moral and spiritual progress. The Christian echoes St. Paul's confession: *ἐνικουπίας ὄν τυχών τῆς ἀπὸ τοῦ θεοῦ ἀχρη τῆς ἡμέρας ταύτης ἔστηκα* (Ac 26²²). The sense of personal insufficiency is never diminished in the true Christian. In proportion to his growth in grace he realizes more perfectly his 'universal need' of God—his complete dependence on Christ, his all-sufficiency in Christ (Ph 4¹³; cf. 2 Co 12⁹). We may contrast the boast of the Stoic: 'Sapiens cum Diis ex pari vivit, Deorum socius, non supplex' (Seneca, quoted by J. Smith, *Select Discourses*, London, 1660, p. 390). Again: 'Dicam quomodo intelligas sanum; si se ipse contentus est, si confidit sibi' (Sen. *Ep.* 72).—(3) *Humility is the way of exaltation* (Lk 14¹¹ 18¹⁴). This is a saying of very wide scope. The supreme illustration of its meaning is seen in the Passion and Resurrection of Christ Himself. The condition of all real excellence is a just estimate by man of his own capacity, and of the greatness of the object at which he aims. The condition of acquiring the capacity to rule is service (Mt 20²⁶). The hope of progress lies in that self-dissatisfaction and habit of aspiration which is the negation of pride (Ph 3⁷⁻¹⁴). Christianity, in fact, as Pascal points out (*Pensées*, pt. ii. art. 4), combines what had hitherto seemed contrary: greatness of character and humility.—(4) The principle implied in Lk 16¹³ and in 1 Co 4³⁻⁵—the principle that *what a man is in God's sight, that and nothing else he is*. Humility implies a constant sense of the possible reversal of all human judgment. Hence humility is closely allied to Christian simplicity or single-mindedness, which aims simply at pleasing God (Ro 8³, 1 Co 7³², 1 Th 4¹), which strives after a goodness such as He can accept (2 Co 5⁹), and which recognizes everywhere the presence of an unseen Lord who searches the heart. So Augustine describes the ideal righteous man as being one who 'Deum ubique praesentem ita cognoscat sicut sancti postea

¹ Cf. Huxley's maxim: 'Science seems to me to teach in the highest and strongest manner the great truth which is embodied in the Christian conception of entire surrender to the will of God. Sit down before facts as a little child, follow humbly wherever nature leads, or you shall learn nothing' ('Letter to G. Kingsley,' *Life and Letters*, ed. L. Huxley, London, 1900, i. 219).

cognituri sunt' (*de Spir. et Litt.* 66; cf. Cassian, *Inst.* xii. 32).

Taylor, *Holy Living*, ch. ii. § 4; W. Law, *Serious Call*, London, 1723, chs. 17, 18, 19; H. Rashdall, *The Theory of Good and Evil*, Oxford, 1907, bk. i. ch. vii. § 5; J. Iverach, *The Other Side of Greatness*, London, 1906, p. 1 ff. R. L. OTTLEY.

HUMOUR.—The quality of humour shares in the mystery which attaches to all forms of human emotion. In its genuine manifestations it is as spontaneous as laughter, and as inexplicable. It mocks all attempts at definition. We can 'see' it, and possess it, and enjoy it, but cannot say with definiteness what it is.

The word itself has had a changeful history. Starting with the significance of moisture or fluid, it was employed in pre-scientific medicine to describe what were regarded as the four principal humours or fluids of the human body, viz. blood, choler, phlegm, and melancholy. It then came to denote a passing disposition, a transient mood or temper, because these were supposed to originate from the condition of the humours. When the mood was permanent or characteristic, it indicated what we call an eccentricity. To Dr. Johnson a humorist was 'a man with odd conceits,' and to Goldsmith 'an eccentric fellow.' In modern usage, humour is generally restricted to the sense of the ludicrous, or that power in man which enables him to see and enjoy what is amusing. (There are some grounds for suspecting that some of the dumb animals are not entirely destitute of it.)

The common opinion among modern psychologists is that the perception of the incongruous and the inconsistent is the cause or source of humour. It is invariably associated with alertness and breadth of mind, a keen sense of proportion, and faculties of quick observation and comparison. It involves a certain detachment from or superiority to the disturbing experiences of life. It appreciates the whimsicalities and contradictions of life, recognizes the existence of what is unexpected and absurd, and extracts joy out of what might be a cause of sadness. It acts as a check to one-sided views of life, and champions the ideas of 'common sense' against the visionary aims of the idealist. It is complex in its character and action. It is 'essentially the gift of rising above the interest with which we [and others] may be engaged and reducing it to its limited importance, or even to its proper insignificance, in the great whole of things in which it is a part' (E. Caird, *CR* lxx. [1896] 318). Again, it sometimes exaggerates one special feature, or characteristic (as in caricature), so that it appears absurd, because out of relation to the whole to which it belongs; or it creates amusement by bringing into a temporary union ideas and things which do not belong to the same category. Bergson finds the source of the incongruity in the rigidity, automatism, or distraction to which we are liable, and which hinders us from adapting ourselves quickly to different situations, or from moulding our actions in swift accordance with the varying demands of changeful life. The contrasts between the ideal and the real, between the apparent dignity of man and the situations in which he sometimes finds himself, between the high aims which he sets before him and the poor measure of his attainment, the linking together of things and ideas which are essentially different—these are the perennial founts of humour. The sharper the contrast, and the more sudden the perception of it, the more intense is the emotion which is produced. Humour then relieves itself in an explosion of laughter. The element of sur-

prise is an almost necessary adjunct of humour. Not infrequently the contrast involves a moral incongruity. It is this fact that places humour as a weapon in the hands of the reformer.

Humour and wit are closely allied. In general they find their subjects in the same sphere, but they use them differently. Humour is kindly, and in its genuine forms includes the quality of sympathy; wit is sharper and more apt to wound. Wit is a flash, humour is a genial glow; wit is intensive, humour is relaxing. Qualities of feeling predominate in humour, in wit qualities of intellect. The boundaries of the two are somewhat indeterminate. The pleasure which humour evokes is more genial than that to which wit gives rise.

Humour assumes many forms: verbal humour, the humour of the situation, the burlesque, the practical joke, satiric humour, sardonic humour, and so on.

The sense of humour is universally desired, and is highly valued. No one will readily acknowledge that he does not have it. Without it man is scarcely human. It is a means of self-criticism, and saves from the folly of self-importance and the sin of self-righteousness. Personal vanity or pride cannot survive the possession of this self-corrector. It is a protection against excess; it fosters humility, and yet lessens the bitterness of failure and blundering. It softens the angularities of individual character and social life, and introduces a welcome charity into social judgments. It carries with it a tolerance which makes it a foundation of good fellowship. It is essentially a social quality, and postulates an absorbing interest in life. The cynic may live alone; the humorist delights in company. The cynic may be a pessimist, but pessimism is impossible to the humorist. In spite of his tendency to poke fun at the ideal, belittle the 'strenuous life,' and laugh at failure, he yet believes in the ideal. Humour tends to keep the heart young. As a criticism of social life and character it is invincible and invaluable. Humour is the inveterate foe of convention, and loves to make fun of Mrs. Grundy and all who follow in her train. It keeps social life from falling into ruts or from staying there when it does so. Many abuses which resist the combined assaults of reason, argument, and denunciation yield to the genial onslaught of humour, and fly before its shouts of laughter. Humour is an almost necessary quality in the reformer. Luther owed much of his success to his possession of it. It was also a prominent characteristic of Lincoln. The fanatic is destitute of it, and this may account for the fact that he generally fails. Humour of itself does not reform; it is only a force that weakens the strength of what is to be changed, and prepares the way for the reform.

But, apart from its practical influences on conduct and society, it adds a joy to life without which life would be dull and poor. It is a relaxation and a delight to step aside for a moment from the sober, grey, and solemn world, where reason and order rule, into a realm where the whimsical, the incongruous, and the absurd hold sway, and summon us to laughter or play. These also are part and parcel of the life of the world. Some of the world's greatest benefactors have been its humorists. They brighten with a touch of fun the horizon of life, which is often dark and dismal. They help us to see and to make life a glad some thing. Even Dante named his great work the *Divine Comedy*, because he believed in a happy ending to the story of the world's life. In the closing paragraph of Plato's *Symposium*, Aristodemus reports that, when only half-awake, he heard Socrates say that the genius of tragedy was the same as the genius of comedy,

and that a true artist in the one was also a true artist in the other.

But humour, like many of the powers and qualities of man, is capable of evil as well as of good. It has a tendency to coarseness and even obscenity. Many of the humorous stories of the world cannot be repeated in decent society. Humour is often irreverent, and hurtful to the finer aspects of the emotional and spiritual life. The dreams which men cherish of higher and better things wither away under its mocking touch. They may be called 'quixotic,' but 'by these things men live, and wholly therein is the life of (the) spirit' (Is 38¹⁶). It may weaken the pursuit of a high ideal, because it sees the apparent futility of effort towards it. It may lead to the neglect of the more serious and noble side of life, and in its degradation treat the most solemn facts and experiences as subjects for laughter. Those who possess the sense of humour in a high degree are always in danger of being carried away by it. Their tendency to exaggeration makes us think that the humorist is not always to be taken seriously. We cannot accept the characterizations of Aristophanes as true representations of the men and women of Athens in his day, nor can we regard Rabelais as a trustworthy exponent of human nature. Although humour is a basis of good-fellowship, when unrestrained it tends to destroy friendship. It may develop heartlessness and ally itself with cruelty. No one likes to be laughed at, but the humorist not infrequently enjoys the misery which his 'fun' creates. Over-indulgence in humour leads to levity, flippancy, and shallowness. It is a quality which needs to be rigorously restrained. Humour for humour's sake is depressing; it adds a burden to life. The buffoon and the clown are out of place as permanent features of this work-a-day world.

It is a curious fact that humour differs widely at different periods of the individual life and among different people. The humour of the schoolboy is an annoyance to him when he is grown up. One of the gulfs which separate the races of the world is their differing conceptions of the humorous. A series of books dealing with the humour of different nations of Europe has been published by the Walter Scott Company, London—French, German, Italian, 1892; American, Dutch, 1893; Irish, Spanish, 1894; Russian, 1895. Outside of the particular nations to which the books refer, they are found to be dull.

JOHN REID.

HUNGARIANS.—There is not much of a distinctive kind that can be said about the religion of the ancient Hungarians. They worshipped the usual objects of Nature. Their religion, like that of many other nomadic peoples, was a very low polytheism. Their gods were personifications of natural phenomena or of natural forces. The personification did not reach a high grade of evolu-

tion, and the gods did not differ much from the phenomena, and possessed very little that could be called spiritual. There was a little more of a spiritual character attributed to their highest god, whom they called Isten (or Ishten), the conception of whom overshadowed that of the polytheistic 'little' gods. There were many 'little' gods; and the heathen Hungarians believed that the gods of the rain, the winds, life, death, winter, summer, the trees, the water, the day and the night, had a better and greater influence on human life and all its events than the highest god; and therefore they offered burnt-offerings to the 'little' gods, and thought that they were the counsellors of the highest god. They sacrificed especially white horses.

As to other religious tenets of the Hungarians, we know very little indeed. They had no elaborate system of theology, and the triumphant Christianity of the 11th cent. passed severe laws for the abolition of their rites, their hymns, and even their places of worship. But we know that they had a belief in a life beyond the grave. At the burial of their warriors they took care that their horses and dogs should be interred with them. They also thought that the enemy slain in a battle by a Hungarian was bound to serve the Hungarian hero after his death. They held firmly that the highest god loved the brave, and the greatest virtue with which he could endow a man was bravery.

The priests of the Hungarians were called *tátós* (or *tahtosh*), 'wise man.' They performed the sacrifices, said the simple prayers, sang of the great deeds of heroes. They resembled the Welsh bards somewhat; but they had less religious strength than the bards, and accordingly Christianity not only vanquished but almost extirpated the old heathen religion of the Hungarians.

Among the modern Hungarians, fairies (*tűnder*, 'apparitions') are, in older tradition, subject to a goddess named Furuzsina, and live in a far-away land of matchless beauty, though they still have mansions in this world (especially mountain castles) till vexed by mankind. They often entice away mortals whom they love. Fate-telling fairies (usually three, but also seven or nine in number) are also prominent figures in Hungarian folk-belief, dwelling near a spring, well, or brook. These fates are usually considered beneficent. Other fairies dwell in lakes and rivers, and there are, besides, mermen (*vízi emberek*) and mermaids, who often form love-unions with human beings. Many springs are regarded as holy, and drought follows if stones are thrown into them, while folk-customs often retain traces of the wide-spread belief in the magic properties of water. Giants and dwarfs figure in popular belief; the former are, in general, kindly, and in their wonderfully beautiful palaces they live lives of model bliss and propriety. Unlike giants generally, the Hungarian giants are wise, and are particularly distinguished by the fact that they keep their strength in a vat in the seventh cellar of their palaces, taking with them only what they may require. The chief function of dwarfs is to guard treasure; but they take their third owner (they can be sold by one man to another) to hell. Obvious traces of an early fire-cult have survived, especially about the time of the summer solstice. The winds are the children of the 'wind-mother' (Szélanya) or the subjects of the 'wind-king' (Szélkirály); and apoplexy is often called 'wind-stroke' (*szélütés*). Generally speaking, however, the belief in disease-demons is rather attenuated among the modern Hungarians. In regard to Hungarian ideas concerning fate, it is noteworthy that the old term for casting lots is *nyilazni*, 'to shoot an arrow.'

Before the fates have decided the future of a child, witches may decree it an evil destiny, though this may sometimes be ameliorated. The life of each man is predestined, but, if at midnight one throws gold coins away at a cross-road, he who picks them up surrenders to the other as many years as he takes coins. Traces of foundation sacrifice still persist, the heads of horses or dogs, or the bones of a raven or black cock, being buried in the foundation of the building.

The dog and the wolf were sacred animals to the ancient Hungarians, who made oath by them. After death shepherds and horse-keepers who have suffered wrong during life, as well as those who have been brought to harm by perjury of others, are transformed into wolves, horses, and dogs respectively; and in these forms they obtain requital for the injustice done them.

Folk-charms are numerous, and whatsoever has appertained to, or come in contact with, the dead has magic potency, which may be used either for beneficent or for maleficent purposes; while the hair, blood, etc. of another gives him or her who secretly obtains it power over its original owner. There is a firm belief in witches, change-lings, etc., part of which may be borrowed from neighbouring peoples, but much of which may equally well be an inheritance from the pagan period.

HUNTING AND FISHING.—In the history of culture the hunter as a representative of a stage of development in human progress stands between the collector who depends entirely upon the provision of Nature for the roots, fruits, eggs, insects, etc., which he gathers while making no effort to ensure his food supply in the future, and the herdsman whose means of livelihood are his flocks or herds of domesticated animals. By a hunting community must be understood one in which the principal source of food supply is the flesh of wild animals killed or taken in the chase. In an early stage of social development, such a community will continue to employ the methods of the collector for vegetable food. The Tasmanians did not practise agriculture, nor did the aborigines of Australia, except in the west, where the cultivation of purslane is recorded and the heads of the yams were re-inserted in the ground after the plants had been dug up.¹ Some races, however, while still in the hunting stage, have cultivated the ground, even though by such primitive methods as those of the Bushmen. The Indians of North America, excepting the Pueblo Indians, at the time of their discovery were hunters, but practised agriculture to a certain extent, the cultivation of the ground being left to the women. Further, although hunting and fishing may no longer constitute the characteristic industry of a community, and may come to be regarded as a sport, as in dynastic Egypt and other countries of high civilization such as Persia and India, the methods of the primitive hunter survive, and in many cases are the principal or only means of providing a supply of animal food. Throughout the greater part of Africa the peoples, according to the character of their environment, are either agriculturists or herdsmen; but, as they do not, as a rule, eat their cattle,

¹ A. C. Gregory, *JAI* xvi. (1886) 131.

they are compelled to rely upon the chase for fresh meat. It is not uncommon in such cases for the hunters to be a class apart, as, for instance, on the Congo, where men are chosen to lead hunting expeditions on account of their special skill, or in Uganda, where there are professionals, the sons of hunters, trained to the chase from an early age, who do nothing else.

In a hunting community, the conditions of life are not such as to favour either a high standard of, or progress in, culture. Climatic conditions, as a rule, are such as either to absorb the whole time and energy of the people in the provision of the bare necessities of existence, as in Australia, the Tundra region of Asia, and in the extreme north and south of America, or so little effort is required to secure a livelihood, as in the tropics, that it affords no stimulus to advancement. An almost equally effective check on progress is the migratory character of the hunting community, necessitated either by the seasonal movement of the game or by its scarcity. As a consequence, habitations are usually of a flimsy and temporary character, except where the rigour of the climate demands protection against cold and storm; the number of individuals forming the group is comparatively small, because a wide extent of country is required for the support of each member; and social organization is loose, because the solitary hunter has not yet learnt to appreciate the advantage of co-operation and subordination. Authority, in so far as it exists at all, rests with the old men or tends to centre in the skilled hunter.

The natives of Australia, when on their hunting expeditions, erected shelters of interwoven boughs, and, although it is not correct to say of all the tribes that they erected no permanent habitations, some of them, especially in the south and west, lived in huts which were little more than windbreaks. The Bushmen wandered about in small groups; they had no chiefs, and their habitations were screens made from the boughs of trees. Among the Andaman Islanders the sites of the encampments were determined largely by their fitness for the pursuit of game and fishing;¹ of their three types of habitations, the temporary shelter, consisting of a lean-to roof of palm-leaves affixed to two posts, was probably at one time the only form in use; the authority of their chiefs was very restricted; and the group numbered from fifty to eighty individuals. The Negrillos of Central Africa, the rock Veddas, the wilder Semang of the Malay Peninsula, and the nomadic Aetas (Philippines) may be mentioned as further examples of the primitive culture and social organization of the small hunting group. In North America the tribes were all hunters or fishers, with the exception of the tribes of the south-west, but exhibited considerable variety in culture and social organization. Many practised agriculture, especially in latitudes where the maize ripens. The Shoshones had a very loose social organization and an almost entire absence of ceremonial. The Yuma and Seri of California were both at a very low stage in culture; the latter ate their food for the most part raw, had no domestic animals except dogs, and did not practise agriculture. On the plains the buffalo was the chief staple of food and material of industry. Here the social organization was of a more stable and closely woven character, and the chieftainship was acquired by merit; this was no doubt to some extent due to the fact that the methods pursued in hunting the buffalo required concerted action and subordination. The Algonquins and Iroquois of the northern woodlands practised agriculture, and had evolved a highly organized machinery of government. In South America, the Arawak of Guiana, the Botocudo and Bororo of Brazil, the Tehuelche, and the Fuegians—to mention instances only—are nomads with a loose tribal organization and a low type of culture, and are, for the most part, ignorant of agriculture. The Eskimos afford a typical example of a nomadic hunting community which draws its means of existence almost entirely from the animal world, and varies its location, methods, and objects of pursuit in accordance with the changes of season. In Africa, however, where hunting and fishing are universal, even the tribes which may be described as hunters have to a large extent abandoned nomadic habits through the additional means of livelihood afforded by the cultivation of the ground by their women. To the nomad herdsmen and the agriculturists of East Africa, hunting is merely an additional means of subsistence, followed, as by the peasant population of Uganda, partly as a sport, partly through the desire for meat as a supplement to the ordinary diet.

Although the culture of the hunter is, speaking generally, of a rude type, the implements and weapons which he has devised to meet his needs

¹ E. H. Man, *Aboriginal Inhabitants of the Andaman Islands*, London, 1883, p. 126.

indicate a remarkable capacity to adapt himself to his environment, and, within the limits of the available material, to provide himself with the means most suitable for the attainment of his end.

The use of the bow and arrow is almost universal, the blunt arrow being employed in many localities for killing birds. This weapon, however, is not found in Australia or in most parts of the Pacific, except occasionally as a toy. Knives occur in a variety of forms as well as spears. It is, however, in the weapons of a more restricted distribution, devised to meet special circumstances, that the ingenuity and adaptability of the primitive hunter have been most strikingly displayed; as, for instance, in the case of the harpoon, of which the essential feature is that the head should come apart from, but continue to be attached to, the shaft when it strikes the quarry, to mark its position in water, or hamper its escape on land. The blowpipe, used with light poisoned darts, which is found in South Eastern Asia—the Malay Peninsula and adjacent islands—and in the forest regions of South America, and was at one time used in parts of the southern United States, is another example of a weapon admirably adapted to meet special conditions, and especially fitted for use in killing small birds and monkeys in a dense forest country.

It is not merely in devising weapons that primitive man shows this peculiarly acute quality of mind. The methods and devices used in hunting, trapping, and fishing show a capacity for close observation of the habits and psychology of wild animals which, with ready ability, has been turned to full advantage.

Hunting, when considered from the point of view of methods and apparatus, resolves itself into a question of the means by which man seeks to overcome the strength, fleetness of foot, capacity for flight, cunning, timidity, or aptitude for concealment of the animal world. In its simplest form the acquisition of animal food does not differ materially from the earliest method by which a primitive community procures its supplies of vegetable food: in each case, the process is one of simple collection.

In Australia and the Andaman Islands, mussels and shell-fish are gathered at low tide by hand. The 'kitchen middens' of the Neolithic age in Denmark, the shell-mounds of Patagonia, of the Western coasts of both South and North America—to mention instances only—are relics of a population which at some time existed wholly or for the greater part by this means. The collection of insects, grubs, or birds' eggs, especially sea birds' eggs, involved as a rule no special measures. Sometimes the birds themselves were taken from the nest by hand, as the natives of Gippsland took the cockatoo. In California, in Tasmania, and in Australia on Lake Alexandrina, shell-fish were obtained by women by diving. The Eskimos of Alaska have been known to catch a seal simply with the hands as it tried to escape across the ice. The Australian women catch flounders, mud fish, and the like under the soles of the feet while wading. The beginning of the use of appliances in fishing may be seen in the branch of a tree employed by tribes of the north-west coast of America to dip up fish spawn from the water, and in the gunny bag held in the water by the Australian women, when the river is in flood, to catch small fry as they swim down stream. In these cases, no pursuit of the prey is involved, and this is also the case when, either by accident or as the result of observation, the prey is found in its lair. In California, the Indians used to cut down trees, sometimes as many as nine or ten, one after the other, in the hope of finding a squirrel in its nest. In Australia, the bark of the tree was examined for marks of the opossum's claws; when its nest was found, the animal was dragged out and killed.

Failing the discovery of the lair, the hunter stationed himself at some spot which, to his knowledge, was frequented by the animal, either a water-hole or a track leading to the water-hole, or some spot at which it came to feed. In the Torres Straits, the native, having observed the invariable route by which pigeons return from their feeding-grounds day by day, stations himself in a tree near their line of flight, and with a long slender stick attached to his wrist knocks the birds down as they pass. In Hinchinbrook Island, fires were built under the trees in which the birds roosted, while on the Tully river cockatoos were knocked off their roosting-places at night with a long cane.¹ In the winter the Eskimo takes advantage of the habits of the seal and waits by the holes at which it comes out to breathe, or, later in the year, spears it as it hasks in the

sun. The Ekoi build platforms on the trees visited by the hush beasts, from which they kill the animals as they eat the fruit on the ground below.² It was, however, in running down animals that the savage hunter displayed the greatest endurance. The Australian hunter captured the kangaroo by pursuit only, following it until it was exhausted. The Tasmanians ran down the emu, and the natives of Hawaii the goat.³ The Wailaki Indians of California hunted the deer on foot, men posted at intervals along its trail taking up the following in relays.

The pursuit of wild animals with the object of securing the prey by tiring it out demanded exceptional speed and endurance, while the result must, not infrequently, have been disappointing. Primitive man has, therefore, preferred, as a rule, to rely upon other means of approaching sufficiently near to his prey to enable him to disable and kill it. Both tracking and stalking require highly trained powers of observation combined with great skill to avoid attracting the attention of the quarry through its senses of smell, sight, or hearing. Record has frequently been made of the ability with which primitive peoples move noiselessly through jungle and forest without disturbing a twig.⁴

Most hunting races, however, do not rely entirely upon their own skill in tracking; they have utilized the natural instincts, speed and scenting powers, of the dog.

The Australians employ the dingo in hunting the opossum, emu, and kangaroo. In hunting the musk ox, the Eskimo dogs outstripped their masters and held the animals at bay until the latter came up. In the Malay Peninsula only the wild tribes use the dog. The Benua-Jakun, while floating down a stream in his canoe, sends his dog through the woods along the bank to hunt the mouse-deer. In Southern Nigeria the Ekoi also train their dogs to hunt by themselves. Both the Boloki (Congo) and the Ekoi perform certain rites over the dogs before they are free of the hush, to make them courageous and of keen scent.⁴ The hunting leopard of India and Persia and the hawk in Europe and in Tartary, as recorded by Marco Polo, are other instances in which the natural instincts of animals have been utilized by man in hunting. In fishing, the employment of the remora, or sucker-fish, by the natives of the Antilles and the Australians to hunt the turtle or dugong is a curious analogue.

In approaching the quarry, advantage is taken of shelter, both natural and artificial. The Australian, when hunting duck, swims beneath the surface of the water, while breathing through a reed. On the Nile, the ancient Egyptians hunted duck in much the same manner, covering their heads with a calabash; while in China it used to be the custom to catch swans by placing a basket containing bait on the head of the swimmer. Convenient trees, shrubs, or tufts of grass were used to cover the approach of the hunter; sometimes branches, small bushes, or bunches of grass were carried in the hand. The Bushman crept up behind a grass screen to the herds of antelopes, ostriches, or other game; the Australian used a screen of bushes, or in some districts a collar-like head-dress, when stalking the emu.

The appearance of the animal to be caught is frequently imitated.

The Bushman hunted the quagga, which grazes with the ostrich, by covering himself with the skin of one of these birds, imitating their action in feeding by means of a stick thrust up through the neck. Among the Dogrib Indians, two hunters covered themselves with the skin of a reindeer, the first holding in his hands hushes against which he rubbed the head of the animal in imitation of its action in feeding. In North America, in driving the buffalo one of the hunters, dressed up in a buffalo skin, enticed the herd to the edge of the precipice towards which it was desired to drive them.⁵

Various forms of decoy were employed.

A method frequently used in Australia was to fasten a wounded bird to a tree. It then attracted others by its cries.

¹ N. W. Thomas, *Natives of Australia*, London, 1906, p. 98.

Sometimes the cry of the bird was imitated by the hunter. The Botocondo attracted the crocodile to the bank by rubbing its eggs one against the other. Another form of decoy was an imitation of the action of the prey of the bird or animal. The Australians attracted pelicans by throwing shells into the water, imitating the splashes made by small fish.

The use of snares, usually set in a path frequented by game or at the approach to a water-hole, is wide-spread. The initial stage in the use of bait, snare, and trap is seen in a method adopted in New South Wales to catch birds of prey by attracting them with a piece of fish held in the hand of a man who pretends to be asleep, and in the practice of catching cormorants by posts set in the water upon which the birds alight and are noosed by the hunter who swims out to them.¹ A somewhat similar method is employed by the Eskimos in catching gulls: a hunter stationed inside a snow hut with a transparent slab of ice in the roof catches the birds by the feet as they alight on the top. The noose appears in its most highly developed form in America as the lasso of the American Indian; another appliance similar in its action of entangling but with the addition of the action of stunning is the bolas, a weapon found among the Eskimos and in South America, which consists of a number of ropes fastened together at one end and each having a weight at the other end. The noose anticipates the use of the snare, whether it is used in the hand, as in the capture of the crocodile in Northern Australia or in taking the turkey bustard in Queensland, or attached to fixed posts—a method followed, also in Australia, in catching duck—or fastened to a pole held in the hand, as the Californian Indians caught birds and the Panamint Indians the lizard, after its attention had been attracted by a grasshopper at the end of a line on a rod. The use of bird-lime, though hardly falling within the category of a trap (a term which usually connotes some hidden mechanism), represents a simple form of self-capture. On the Tully river in Australia, the natives catch cockatoos by placing bird-lime on the roosting branches. The Semang, the Berembun, and the Jakun use bird-lime; the Besisi fix rattans smeared with bird-lime on notches cut in trees for the purpose, while the Sakai catch large numbers of gregarious birds, such as the padi bird, by limed strips of rattan spread on the ground. An analogous device employed by the Semang consisted of strips of bamboo smeared with poison and spread in the paths.²

In the Malay Peninsula and in Borneo, advantage is taken of the argus pheasant's habit of rooting up grass to clear its dancing ground, by fixing sharp-edged strips of bamboo in the ground, which cut the throat of the bird when it tries to pull them up.³

In Australia, advantage was taken of the wallaby's habit of running with its head down, to stretch nets across its path. It was also caught in pits designed to break its legs. The pit with sloping sides is frequently employed, especially in taking big game, a common practice, as in the case of the pits of the Boloki on the Congo, being to put prongs or spikes of wood at the bottom to injure or kill the animal.⁴ The pits are concealed by rushes, boughs of trees, grass, or leaves, or sometimes a board, which the weight of the animal breaks down or tilts. In Central Africa, in the case of buck, fences, sometimes miles in extent, were built to guide the animal to the pit.⁵

A 'foot-trap' used by elephant hunters in Uganda was a deep hole slightly greater in circumference than the elephant's leg, at the bottom of which was a sharpened stake in which a deep notch had been cut. This spike was broken off by the animal's

struggles to free its leg, and rendered it lame. A form of trap or snare used in Tibet, Uganda, and other parts of Africa, was a ring made of creper or other material in which were set sharp thorns, spikes, or pieces of wood or bone pointing inwards. This was fastened to a stake and then placed in or above a small hole.¹ Another common form of trap is that in which a catch is released by an animal passing along a path. The guillotine trap, of frequent occurrence in Africa, is a heavy log with a sharp spear-head, sometimes poisoned, set in one end, suspended from a tree. This was commonly used for big game, e.g. in the Bulemezi district of Uganda, for elephants,² and by the Anjanga for leopards and lions.³ Closely allied to this form is the spring trap, the spring usually being a sapling bent down over or near the path and fastened with a twig, which, on release, tightens a noose around some part, usually the leg, of the animal. Among the Anjanga, the release was a gate-like arrangement designed to catch a buck by the leg or a small animal by the neck.

In another form of release trap, the spring may set in action a bow and arrow, as among the Gilyaks, who use a crossbow or a spear, and in the Malay Peninsula by the Sakai and Semang. The Mantra placed a poisoned spike at the end of the sapling which formed the spring. An effective combination, consisting of a fence with spear-traps set in openings at regular intervals, is used by the Johor Benua and Berembun tribes.⁴ Snares and traps have at all times been much used in North America. Among the Dénés, the beaver is caught by a net let down into its run under the ice. The traps in which the tribes caught martens, lynxes, foxes, and even bears, are mostly variants of the figure-of-four release, in which, on the animal taking the bait, a cross-bar or other appliance falls and causes death.⁵ The net may be used simply as a snare or fence, being stretched across the path which an animal is expected to take, or it may be manipulated by hand. The Eualhayi tribes of Queensland in catching pigeons employ a net, one side of which is pegged to the ground, the other fastened to a rod, throwing it over the birds as they settle on their water holes.⁶ In ancient Egypt the clap net was used in catching duck.

In some of the cases mentioned above, pits and other forms of traps are used in conjunction with a fence intended to make the capture of the animal more certain by guiding it to the trap. Fences of nets or stakes are frequently used with this object in view, but, instead of success being dependent upon the chance wanderings of the animal into the enclosure, it is made to depend upon the efforts of the hunters themselves, who entice or drive single animals or herds into the snares or between the fences. The operation of driving is one of the most frequent methods of organized hunting employed among primitive peoples, when once the advantages of co-operation have been appreciated. The numbers employed may vary from two, three, or four, the number required for duck-driving in Australia, to the 60,000 mentioned as engaged in the great hunting expeditions of the Incas, when 30,000 head of game would be taken.⁷

In Western Australia, at the moulting time of the black swan the natives lay in ambush, and, when the birds were sufficiently far from the water, they cut them off. A more elaborate method was used in driving duck. A net was stretched across the river or stream, the ends being fixed to posts. Some of the party went up stream and drove the birds down. When the ducks approached the net, they were frightened and caused to rise, while one man whistled like a duck hawk and threw a piece of bark in the air in such a way as to imitate the flight of that bird. The flock dipped, and many were caught in the net.

Fire was not infrequently used to assist the hunter either by driving or by confusing the game. The Seneca hunted deer by night in canoes in the bows of which lights were fixed. At Puget Sound, elk-deer and water-fowl were hunted by torch-light, while the Plains Indians drove the buffalo to the corral by fire. Fire was used in Australia and Tasmania for driving the kangaroo.⁸

The Eskimos and other peoples of the northern parts of North America used sometimes in hunting deer to draw a cordon across a peninsula and drive the animals into the water, where they were easily dispatched by hunters in canoes. Permanent stone

fences for driving the deer were erected near the track usually followed by them in the annual autumn migration from their northern feeding-ground.

The Selangor Sakai make frequent use of game-fences, which they build of sticks placed in rows with palm leaves across. These are sometimes as much as 500 yards in length.¹ In Uganda, hunts on a large scale were sometimes organized among the peasantry. Nets stretching over a considerable extent were set up, towards which game was driven with the aid of dogs and then killed by men stationed at the nets.² The Ekoi of South Nigeria, in driving game, use nets which, when joined together, extend for half a mile. These are stretched across the land between the rivers which join to form an angle.³ In Africa the drive was frequently made without net or fence: the hunters surrounded the piece of scrub or hush in which the game lay, and advanced upon it with shouts at a given signal. This was the method followed by the Central African tribes, the leader, carrying the 'medicines' for luck, being in the middle of the line,⁴ and in Uganda in the lion hunts organized by order of the king.

In North America the drive was the most favoured method of hunting the bison. Herds of bison were driven over crags and precipices, but the method more commonly employed was to erect a huge corral, such as was and is still used in Burma in hunting elephants. The buffalo corral was circular. A whole tribe would take part in these drives, and, as soon as the herd had been driven into and shut in the enclosure, women and children climbed on the palisading and speared the animals as they galloped round in their endeavours to escape. After the introduction of the horse, the Indians, among whom the Comanches excelled as horsemen, not infrequently abandoned the corral. Dividing their band into two divisions, they galloped round the herd upon which they closed at a given signal, or else pursued it as it tried to get away.

In ancient Egypt the king frequently took part in hunting wild cattle. The herd was surrounded by troops and people of the neighbouring villages and driven into enclosures. Amen-hotep III. records with pride his achievements in this form of sport, and mentions that, on one occasion, he himself slew seventy-six cattle in one expedition.⁵

In fishing, so far as circumstances allow, the same methods are applied *mutatis mutandis* as in hunting. The collection of shell and other fish and the simple operations of catching fish with the feet or hands have already been described. The use of bait, or bow and arrow, spear and harpoon, the devices of attracting fish by the reflexion of fire, by splashing, capture by the net, trap, and the drive—all present analogies to the means employed in hunting animals on land.

One of the most primitive appliances used in fishing, probably representing the earliest dip-net, is the bough of a tree, covered with leaves, which is used to dip up fish spawn on the North Pacific Coast. Most primitive races use some form of dip-net, either to take small fry or to catch fish driven into shallows by other means. At Nutka Sound, sardines were driven into shallows and scooped up with troughs and wicker baskets. A special form of hand-net was used by the Anjanga on Lake Nyasa, which had two handles working scissors-fashion. The ordinary form of hand-net occurs in Australia and in the Malay Peninsula. A very simple form consisted of a basket of bamboo strips used by the Kedah Semang to catch small fish in pools.⁶ At Cook's Inlet, the Kenai used the dip-net to scoop up salmon from stages built in the river. Some doubt was expressed as to its occurrence in America before the advent of the white man, but Cushing dug up a dip-net at San Marco, Florida, while there is little doubt that in Washington it antedates European influence.⁷

The net, in its various forms, is the means upon which primitive man most commonly relies to supply himself with food from sea and river.

The Andaman Islanders at one time used nets eighty feet in length and fifteen feet in depth, with stone sinkers and stick-floats, to each of which was attached a cane-leaf. The fish were driven to the net by splashing the water, and speared. In Australia, on the Diamantina, the natives use nets some twenty feet long fastened to two poles. Twenty or thirty of these nets

are used together, each being worked by two men, who swim out into the river. As a rule the net in Australia had no floats or sinkers, although the use of them is recorded on the Darling.¹ The Indians at the mouth of the Fraser River used reef-nets with stone sinkers and cedar-wood floats to catch salmon. On the flats they used the seine net, dragging it over the shoals between two canoes.² In pre-conquest days in South America the net was used both on Lake Titicaca and among the coast tribes. The immigrant strangers, who, according to tradition, landed on the coast of Peru, used nets for fishing.³

The fish trap is distributed almost as widely as the net.

A primitive form of trap in use among the Australians is a hollow log which is put down in a stream for some hours. Baskets and cages are also used.⁴ On Lake Kioja on the upper reaches of the Nile, among the Bakeni, who make their living entirely by fishing, exchanging the fish they do not eat for grain, the men use the fish trap only, while the women use the rod and line.⁵

On the upper reaches of the Fraser and Thompson rivers the Dénés and Carrier Indians use fish traps, among the former hottle-shaped baskets in connexion with a weir; if it is not possible to build a weir across the stream, a pen or corral is built, into which the fish are driven by splashing the water. Basket traps are fixed at one side of the weir, into which the fish swim in trying to escape. An ingenious form of trap is a pot-hanger basket, a screen-like erection at the top of a fall; as the fish in ascending the river leaps the fall, it strikes the screen and falls into the curved pocket at the bottom.⁶

Catching fish by means of a weir, whether in a trap or otherwise, is of frequent occurrence. In Australia, dams and weirs were built across streams, in which nets were fixed, or upon which platforms were built. The platforms were covered with houghs in which the fish became entangled. One of the most famous weirs is that at Brewarina on the Darling, sixty-five miles above Bourke. It is eighty to a hundred yards wide, and extends for over a hundred yards along the course of the river. It is built of stone, is three to four feet high, and consists of a labyrinth of circles and passages in which the fish become entangled and are caught by hand. Stake or bush fences were also built. Movable bush fences were sometimes extended across a water-hole, to which the women drove the fish with bunches of grass and leafy boughs.⁷

Poison is often used either to stupefy the fish, making it possible to take them by hand, or to drive them from their places of refuge.⁸ It was employed by the Australians; and in North America it was used throughout the Southern States. The Californian Indian used soap root after cutting off the water. The use of some kind of vegetable poison is recorded among the Pima, the Tarahumara, the Payas of Honduras, the Moguexes of Columbia, the Peruvians, and the tribes of Brazil and the Amazon.⁹ The Gan on the Upper Nile use poison after the rains when the rivers are full.¹⁰

Many peoples took advantage of the fact that fish are attracted by the reflexion of fire, to fish by night, as did the Californian Indians.¹¹ In Australia (Victoria) a torch is fixed in the bow of the canoe. While it is paddled up stream, a man sitting with his back to the light spears the fish as they swim past him.¹²

The rod, though recorded among a number of peoples, is not very frequently employed. It is in use among the Kedah Semang. Among the Benua-Jakun and the Besisi (who, like the Anjanga, attract the fish by striking the water with the top of the rod), angling is left to the women and children; sometimes its use is confined to women, as among the Nilotic tribes¹³ and on the Murray in Australia.¹⁴

The hook used in Africa is usually a piece of bent wire. The Australians used many different materials. A thorn probably represents the earliest form of hook, and is still used with a line in the Malay Peninsula, but the Australian native used vine tendrils, eagle-hawk talons, tortoise-shell carefully moulded by hot stones, etc. The material requiring most care was shell; the beautifully made hooks of this material were the result of a long process of patient grinding, piercing, and polishing.¹⁵

When the game has been taken or killed, the disposal of the carcass is, as a rule, dependent upon a generally recognized custom; usually it becomes the property of the man who first wounded the animal, but the distribution of the various parts

of the body is not always in his control, and frequently must also be in accordance with custom.

For example, in Australia among the Kurnai, a catch of eels was distributed among a man's relatives, a large eel each being given to his mother and brother, and a small eel to his brother's children and to his married daughter. The Ngarago man, in cutting up a bear, was allowed to keep the left ribs for himself, but the remainder was distributed among his parents and relatives, certain joints being allotted to each, and the head being given to the bachelors' camp. Other animals were treated in the same way.¹ The same principle is followed among the Ekoi, except that one leg belongs to the townsfolk—no doubt a survival of a communal division.² In Uganda, certain joints were allotted to the men striking the first and second blows, the owner of the land on which the animal was killed, and of the dog which pulled it down. The bones of an animal were given to the god of the chase, while the head was eaten on the field, as it could not be taken into a garden or house because the ghost of the animal was believed to be attached to it.³

Rights of ownership of the land or hunting rights over the land are important in the hunting community and clearly recognized. In New Guinea, at Waga-Waga and Tube-Tube, the reefs near a hamlet are regarded as its special property; when the old men of the hamlet have placed a tabu on them, no member of another community will use them for fishing. If there should be no sign on the reefs, any one may fish from them, but the hamlet shares in any fish taken.⁴ Among the various Naga tribes of Manipur and among the jungle tribes of the Malay Peninsula, the sites of fishing weirs are held to be the property of the village near which they are situated. In Manipur, if an animal is killed on ground regarded as the property of another tribe, it is usual to send a portion of the kill to that community.⁵ On the Congo, the Boloki usually send the head of the animal to the headman of the town on whose ground they kill.⁶

Among many hunting peoples certain animals or certain parts of animals are not eaten, either by custom, for which various reasons are assigned, or by an express tabu. The most familiar instance is the very general prohibition against eating the flesh of the totem animal. Some peoples do not as a rule eat the flesh of wild animals, e.g., the agricultural Akikuyu of West Africa, although under the influence of the Akamba they are beginning to do so; fish they still avoid as making them unclean.⁷

Among the Nandi, most of the clans have some prohibition laid upon them in connexion with animals. The Kipolis clan may not make traps, and, although its members may hunt, they may not wear the skins of wild animals except the hyrax. The Kepumwi clan, which lives by the chase, may not eat the duiker or the rhinoceros; other clans may not eat game at all, and so forth throughout.⁸ Although fish is the chief staple of diet of some of the Déné tribes, others despise it as food; while among the southern tribes, e.g. the Navahos, even contact with fish is regarded with horror.⁹ The Ekoi will not eat the flesh of a certain white spotted antelope, except after an elaborate ceremony to make the flesh fit for consumption; a woman is bound to give her husband part of the catch, but certain fish he must not eat or he will be killed in the hush; nor must a woman eat an animal caught in her husband's new trap.¹⁰ The Eskimos will eat the flesh of the musk ox only in the last resort.¹¹ In Australia, a complicated body of rules limited the parts and species which might be eaten by boys, young men, girls, married women, and so on. Among the Wotjoballuk, for instance, boys might not eat the kangaroo, while men under forty might not taste the flesh of the emu or bustard. The penalties for transgression varied from grey hairs to death while uttering the cry of the animal eaten, the spirit of which had entered the body of the transgressor.¹²

The belief that an animal possessed a ghost or spirit was also responsible for the Baganda custom of drawing the nerve from the tusk of the elephant, in which it was believed the ghost resided. This was buried and the place of burial marked with stones; because, if any hunter stepped over the place, the ghost would cause him to be killed by an elephant in the next hunt.¹³

Reluctance to kill a certain species is not always explained as due to religious feeling or to a tabu. It may be the result of a transference to animals of modes of thought proper to man. This may be

illustrated by the primitive attitude of mind towards such of them as might be able, if animated by human motive, to avenge the death of a member of the group. Hence the reluctance shown by the Dayaks and Malagasy, for instance, to kill the crocodile except in a blood-feud and with special observances.¹

In Sumatra the Menangkabauers follow the same custom in relation to the tiger. Animism and sympathetic magic play a large part in the practices followed before and during the hunt. Some, however, may be due to a chance collocation of circumstances, as the Déné's preference for an old net or other appliance with which he has previously been successful;² or they may form part of a general complex of religious beliefs without any special meaning in relation to hunting or fishing, as in the case of the various abstentions, such as that from sexual intercourse or the avoidance of menstruating women as unclean, practised by these and many other peoples before a hunting expedition or while making their traps.

Where the food supply is precarious or may be easily affected by chance agencies, as it is in both hunting and fishing, it is not surprising to find a primitive people relying upon magic both to increase and to ensure the provision for their needs. The Arunta and other tribes of Central Australia, for instance, perform an elaborate series of magical ceremonies with imitative dances, and make drawings of animals, to increase the food supply.³ A case has been recorded from the Congo of drawings of fish made on the ground by the river, possibly intended to secure a plentiful supply of fish,⁴ while it has been conjectured that the drawings and paintings in the caves of France and Spain were the result of an attempt to secure power by magical means over animals used for food.

A more obvious method is followed by the Nutka wizard. If the fish do not arrive in due time, he makes an image of a swimming fish and places it in the water in the direction from which the fish are expected to come, and utters a prayer for the arrival.⁵ The Cambodian, when unsuccessful in netting, strips and, simulating the action of an animal, runs into and rolls himself up in his net, saying, 'Hallo, I am afraid I am caught.' When an Aleut struck a whale with a charmed spear, he did not throw again, but returned home and lived apart in seclusion for three days, snorting in imitation of a dying whale, in order to prevent it from leaving the coast.⁶ Seligmann⁷ gives significant and instructive accounts of ceremonies preceding hunting expeditions in New Guinea and among the Veddas. The object of the ceremonies is not only to increase the supply of game, but to ensure its capture by anticipatory imitation.

Precautions are frequently taken to secure the efficacy of weapons and hunting methods both by charms and by 'medicine' of various kinds.

The sea-otter hunter of Alaska attached great value to the wooden hat which was held to attract the game. The Déné's hang 'medicine' on their nets.⁸ Among the Baganda, when game was being driven into nets, charms were hung at regular intervals to prevent it from breaking through. The elephant-hunter, after sharpening his spear, deposited it overnight in the temple of the god of the chase.⁹ The Boloki, before an elephant hunt, used to summon the medicine-man, who spent two or three days making medicine to catch the spirits who divert the game from the traps; every one who was to take part in the hunt chewed red pepper and the fruit of a certain plant. If any one refused or did not spit the mixture out in the proper way, the hunt was abandoned. Several of the Ekoi *juju* are specially connected with hunting. Before an expedition each member sacrifices to his *juju*; and, if a leopard has been killed recently, its skin is rubbed with *juju* leaves, while a prayer is offered to its spirit that it may go on the left hand to drive the game to the hunter and help him to kill a leopard should one be met.¹⁰ In New Guinea a great variety of hunting and

fishng charms are in use. The Koita, for instance, in hunting the pig, wear a tarsal bone of that animal on the arm to compel other pigs to come to them; in hunting the wallaby they blacken part of the face with the burnt bark of an odoriferous tree; they rub stones taken from the stomachs of alligators, pigs, etc., on the teeth of their dogs, and, before hunting, give them the bark of certain odoriferous trees boiled with sago. The last-named charm is especially efficacious if pieces of mullet are added, because these fish jump 'quick and strong'.¹ Charms of quartz crystals, highly polished pebbles, etc., after being heated with a fire-stick, are applied by the Koita to a corner of a fishing net to make it smoke before it is taken to the beach, while in the case of a dugong or turtle net the claw of a raptorial bird is placed under the net for a few minutes, or the fumes of gum resin on hot embers are made to rise through the net.²

On the other hand, there are certain actions that must be avoided, as they may affect the supply of game in the future, or may defeat the hunter's efforts in a particular instance. The animal which is slain must be treated with respect, and it may be even necessary to offer it apologies. Those of the Nandi who are prohibited from killing rhinoceros are not so strict as they once were in regarding the prohibition, but, when they kill the animal, they apologize.³

Among the Laos, the hunter must not wash for fear the wounds he gives may not be mortal.⁴ In Alaska, during the whaling season, the women must remain in comparative idleness, as it is not good for them to sew while the men are in boats. Any repairs to garments which are absolutely necessary must be done out of sight of the shore. The conduct of those who stay at home is believed seriously to affect the success of the hunter. The Bushmen attributed bad shooting to the children playing on the men's beds.⁵ In East Africa, elephant hunters believe that the husband of a woman unfaithful during his absence will be killed.⁶ In Toaripi, or Motumotu, New Guinea, during a hunting expedition the fire must not be allowed to go out, and the inmates of the men's club-house must abstain from certain foods and from taking anything that belongs to others.⁷ The Blackfoot Indian would not eat rosebuds when trapping the eagle; for, when it alighted near the trap, the rosebuds in his stomach would make it itch, and it would scratch itself instead of taking the bait. Nor in putting up the trap would he use an awl, as the claws might then scratch him.⁸ Any failure to treat the animal slain with proper respect, it was believed, would offend its relatives and lead to a scarcity of game. Among the Thompson Indians, precautions were taken to butcher the deer carefully and cleanly; the blood and offal were buried. If this were not done, the other deer would not present themselves to be killed. Deer meat was never taken through the common doorway of the lodge, because it was open to women who were ceremonially unclean. If the father of a pubescent girl went out to hunt, it was believed that the deer would evade him.⁹

Among many tribes, especially in North America, precautions are taken that the bones of the animals they kill may not be defiled through being eaten by dogs, or in some other way. Sometimes they are burned, sometimes thrown into a river, sometimes preserved in or before the house. Neglect of these precautions would make it impossible to catch other animals of the same species. Both in North Western Canada and in North Eastern Asia the bear is treated with peculiar respect, as is not unnatural in view of its value and strength. Indeed, in the latter region, the ceremonial which attends the bear sacrifice suggests that it is looked upon as an object of worship, if not as a deity. When hunting the bear, the Dénés begged the animal to come to be shot; it was petitioned not to be angry and not to fight. Sometimes the bear was thanked for allowing itself to be killed. When the flesh of the head had been eaten, the skull was placed on a high pole as a mark of respect, and, if this was omitted, it was believed, the other bears would not allow themselves to be killed. This custom of placing the skull on a pole, usually situated at one end of the hunter's house, is found throughout the two regions mentioned above. Among the Ainu, bear hunting was the chief occupation. It supplied the staple of their food

and the material for their clothes, and was the central object in their ritual (see AINUS).

Apart from the question of whether in these and other cases the animal is worshipped and regarded as a god, it is clear that the ceremonial slaughter, in which the custom of shooting the victim with arrows is peculiarly suggestive, falls into line with the seasonal ritual which is, as a rule, intimately connected with food supply. Primitive races do not recognize a close season in hunting, but climatic, social, or religious conditions, or conditions connected with the natural history of the animal, sometimes enforce a period of rest from the pursuit of a particular species. In Central Africa the growth of vegetation, in the Arctic and sub-Arctic regions the rigour of the winter and the migration of species, make a change in methods and objects of pursuit imperative. Among the Nāgas, a *genna*, or tabu, forbids all hunting during the agricultural season. Where such causes as these are operative, the primitive mode of thought requires the hunting season to be inaugurated by a special ceremony to obviate the risk which attaches to a spiritually dangerous operation, as well as secure by a due observance of ritual that the future supply of food will not be endangered by an oversight or mistake.

HUNTINGDON'S (COUNTESS OF) CONNEXION.—The Countess of Huntingdon's Connexion is a loose confederation of about 45 urban congregations, akin by origin to the Calvinistic Methodists, making some use of the Anglican liturgy and the Thirty-Nine Articles, worshipping in buildings held by trustees with nominally absolute powers, assisted now by a conference of representatives. The founder, the Countess of Huntingdon, Selina Shirley (1707-91), daughter of the second Earl Ferrers, was attracted in 1739 into the first Methodist Society by George Whitefield. John Newton declared that at this time he was not sure that there was in the whole kingdom a single parish minister publicly known as a gospel preacher. She, therefore, approved Whitefield's plan of lay preaching, and her seat of Donnington Park became a centre of itinerancy over the Midlands. The death of her husband (1746) left her in the prime of life free and rich. On the return of Whitefield from Georgia she relieved him of his money difficulties and appointed him her chaplain. In this capacity he conducted frequent meetings in her drawing-room, and introduced Methodist influence to society circles, while his Moorfields congregation invited her to lead the movement. She now faced two revival problems—how to secure evangelical preachers, and how to ensure that given places might have continuity of evangelical preaching. The universities could by no means be relied upon for the former; the system of patronage endangered the latter; while the system of lecture-ships, previously devised to ensure it, had been declared illegal.

The latter problem was the easier, and she solved it not by buying up livings, but by developing her rights as a peeress. The Calvinistic evangelicals in the Church of England rallied round her, and she appointed many clergy to be her chaplains; as pluralities were common, several of them continued to hold livings while often travelling in her service. On the theory that she might have a private chapel exempt from episcopal jurisdiction attached to each of her residences, she acquired property in fashionable resorts like Cheltenham, Brighton, Bath, and Tunbridge Wells, and erected chapels. These were frequented by people who declined to countenance the Methodist field preaching, but who found no help in the official churches

and chapels of ease; many were of the leisured classes. So successful was the experiment that other towns were similarly treated, from York to Lewes, from Norwich to Swansea; and the Countess moved her chaplains about as she deemed best. Her influence was at its height in 1768, when, after a vain remonstrance with Archbishop Cornwallis on the bad example of his wife, she brought on him a severe rebuke from the king. This naturally did not increase the friendliness of the bishops, and in her desire for evangelical clergy she adopted a still more independent attitude, resembling that of the Old Dissent.

Howell Harris, the Calvinistic Methodist, had acquired large premises at Trevecca, whither a number of Welsh evangelists had migrated. On this place she fixed for a Seminary, and on her 61st birthday (24th Aug. 1768) Whitefield opened it, for training at her expense young preachers who should be free to work within or without the Established Church. She appointed as President John Fletcher, who often came across from Madeley to take his duties seriously. A resident master was sought, whose prime qualifications were to be faith and power from above, devotedness to God's cause, and Christian experience. Greek, Latin, Divinity, and the Sciences were to be taught. From 1768 onwards the Seminary not only sent forth earnest recruits for work in Britain, Ireland, and America, but was the Keswick of its day, whither huge crowds resorted every August.

In 1770 the Wesleyan Conference passed resolutions which led to a falling asunder of the Arminian and Calvinistic wings of the revival army. The Countess decided to establish a great London centre for the Calvinists, and bought fine premises in Spa Fields, which had been first a pleasure resort, and then a proprietary chapel. Retaining, as usual, a small part as her technical residence, she evidently destined the main building to be her cathedral. A neighbouring clergyman, therefore, successfully tested the legality of her proceedings by actions in the consistory court of the Bishop of London (1779). This crisis considerably altered the character of the movement. Some of her sixty chaplains severed all official relations with her; others broke with the Establishment, and took licences under the Toleration Act. She guarded these by registering her buildings for Dissenting worship. This, however, was hardly more than a technicality, for the liturgy was used almost unchanged, and the Thirty-Nine Articles were taken as the basis of a new Confession. The gaps caused by the defection of some chaplains were partly filled by students from Trevecca. As the bishops grew more reluctant to ordain these, the final breach occurred in 1783, when two of her clergy openly ordained six students in Spa Fields. This emboldened Wesley to follow suit next year.

The Countess proposed to consolidate the movement by forming an Association of ministers and laymen, somewhat on the lines of the Old Dissent, but was persuaded to bequeath all her chapels absolutely to four trustees. The Seminary was at once transferred to Cheshunt, and became the centre of gravity. The foreign missionary movement inaugurated by Carey was taken up enthusiastically, the London Missionary Society being formed at Spa Fields (1795), and the college supplying numerous volunteers.

The itinerant system inherited from the Countess has given place to comparative fixity of tenure, and the Congregationalists have shown themselves ready to disregard all differences and to welcome into fellowship; but the disintegration was checked in 1899 by Chancery. The college is now at Cambridge, while the trusts encourage continuous service within the Connexion.

HUPA.—The Hupa Indians in N. W. California, linguistically classified with the Pacific Coast division of the Athapascan stock, represent in matters of religious belief and practice a culture area which includes W. Oregon and N. W. California. As regards particular ceremonies even, Indians of other linguistic stocks, the Karok and Yurok on the lower Klamath river, join with the Hupa in their celebrations, and seem to feel that these ceremonies are common possessions.

1. Rites and ceremonies.—Three ceremonies of importance used to be held annually for the benefit of the entire community.

(1) One of these, called *Haitciddilye*, 'Winter Dance,' is held late in spring, at the close of the rainy season. Its purpose is to drive away and prevent epidemics, and to preserve the good health of the people. The first half consists of ten nights devoted to singing and dancing round a fire in the sacred house. This house differs from the other primitive dwellings only in the traditions connected with it, and in the restriction that persons of illegitimate birth are excluded from it. The dancing is done by several individuals, who circle about the fire, with their hands on the shoulders of the persons in front of them. A dance, which is a test of endurance, about a very hot fire, takes place at the conclusion of the last five nights of this part of the ceremony. No clothing is worn, and, because of the limited size of the room, the dancers are exposed to the fierce flames. The songs sung during the dancing are looked upon as the chief means of frightening away disease. The concluding portion of the ceremony occupies ten days, and is similar to the autumn dance described below, except that it is held in another place.

(2) The second ceremony takes place in August or September, and is usually called *Honsittciddilye*, 'Summer Dance.' It is held out of doors, at certain places near the river, and lasts ten days. The costumes and sacred objects used in the dance are transported in canoes. The faces of the dancers are painted in horizontal lines with black obtained from the charcoal of the fire. A robe of deer-skin is worn either about the waist or from the left shoulder. A band of fur is bound round the head, and a net falls over the hair and neck. Eagle feathers or feathered darts are inserted at the back of the head. Two men, who are to carry the sacred obsidians, have closely knitted head-dresses, which hang nearly to the waist, and a row of sealion teeth about the forehead, instead of the band of fur. When the twelve or fourteen dancers are in line, it is noticeable that they are arranged symmetrically, from the middle, where the chief singer stands; to the wings, where boys are usually found. Not only are they graded as to stature, but the decoration and arrangement of the costumes of those equally distant from the centre are similar. Each dancer in the line holds a pole, on which a dressed and decorated deer-skin is draped. These skins all show peculiar natural markings, the most valued ones being those of albino deer, which have been killed in past generations and the skins faithfully preserved as the property of the community. The singing is led by one who has received the songs in a supernatural experience, and is accompanied by the men in the line, both by the voice and by moving the body and the horizontally held deer-skins backwards and forwards, and stamping with the left foot. Men from different localities compete in this singing and dancing, in alternate series of movements. During the first of each

series two men, each carrying a large, beautifully flaked black or red obsidian, move towards each other in front of the line of dancers, who elevate their poles with the deer-skins to let them pass. Afterwards these men take their places in the line, and join in the dancing.

There are two interesting variations in the celebration. One of these takes place on the river, which, because of its swiftness, is difficult of navigation for the 'dug-out' canoes. Two or more of these canoes are filled with standing dancers, who by concerted movements impart considerable motion to the canoes, which are made to move down stream abreast. They approach and recede from the shore ten times before the final landing is made. The song sung is an old traditional one, instead of a new and specially revealed one. On the last afternoon of the ceremony many dancers form a long line on a hill somewhat back from the river and stand facing the south-west, from which direction the immortal first inhabitants of the world are supposed, ceasing their own dancing, to watch that of mortals.

One or two priests prepare the ground at each of the places where dancing occurs, by removing vegetation and objects which would annoy the dancers, and by scattering a sacred powdered root where they are to stand. They then build a small fire a short distance in front of the line, into which they throw the sacred root and tobacco, as they pray for the welfare of the people. During the intervals of the dancing, the priests, or other old men, address the spectators on ethical and religious subjects.

Nothing in the myths or folklore or in the present consciousness of the Hupa seems to give this ceremony a particular purpose. In a general way it is supposed to bring health and prosperity. The positions and movements of the dancers in relation to the deer-skins are strongly suggestive of sympathetic magic, to promote the annual mating of the deer.

(3) In two or three weeks after the completion of this ceremony a third one is begun. It is called *Tunkcitdilye*, 'Autumn Dance,' and is held at the village of Takimmitding. A high fence is erected, in front of which the dancers are to stand. They wear on their foreheads broad bands of buckskin, covered with the scarlet crests of woodpeckers, relieved with white fur above and below. Many strings of shells are worn about the neck. An object of twined fibre is held in the hand while dancing. This resembles in shape the box of elk-horn used in this region to contain the *dentalium* currency. The men stand in line, with a man of exceptional physique in the middle, and a singer on each side of him. The basketry objects held in the right hand are swung forwards and upwards, and then brought down with a stamping of the left foot. One of the singers leads with a song, and the dancers accompany him, with vocables loudly uttered. When each of the singers has sung, the deer-skin robes are dropped from the waist to the ground, the baskets are placed on them, the dancers join hands and jump, raising both feet from the ground. Occasional rests are taken, the dancers squatting on their heels. As in the ceremony described above, groups of men from the two geographical divisions of the tribe compete in the alternate performances. The celebration lasts ten days, the last afternoon being the most important and the most largely attended. Its object is said to be to maintain the health of the people. A myth indicates that the first intention of the originator of the ceremony was that it should renew the youth of the aged who were to participate in its benefits. Being unjustly attacked, he took the dance, regalia, participants, and all to another world. The present human celebration of it is a less potent copy.

None of these dances or general ceremonies can be held until a valuable present has been made to the next relative of all persons who have died since the last similar settlement.

In the autumn, when the acorns have fallen in considerable quantities, a feast is held. Fresh acorns are ground, leached with tepid water, and made into mush by women designated for the office. When the people have gathered about noon, the priest leaves the sacred house and goes to the feast-ground. No one is allowed to look at him as he passes, for he impersonates the god of vegetation. He builds a fire ceremonially, and places stones in it, which are to be used by the women to cook the mush by dropping them hot into the baskets in which it is contained. First the priest and then the other men go to the river for a bath. The women wash their hands and faces only. The mush is served to the people in baskets, as they sit on stones, which remain from year to year in a circle about the fireplace. Fish, cured and fresh, are served in addition to the acorn mush. When the people have eaten, the priest places in the fire all the food that remains, and prays that the new crop may not be stolen by the birds and rodents, and that even in small quantities it may nourish and sustain the people. The stones used in cooking are deposited with those of previous years, and are never used again, or touched, except by the priest who keeps them in an orderly pile.

There are priests in whose families it is the traditional duty to catch the first lamprey eels and first salmon of the season, and perform a ceremony that shall ensure an annual run of these in large numbers and of excellent quality. A long formula is repeated by the priest, the object of which is to prevent certain evil supernatural beings at the mouths of the rivers from stopping the migrations, and to guard against the offending of the fish by the breaking of tabus. The eels and salmon caught are eaten by people who gather for the purpose, but the number so caught is usually insufficient for a considerable feast.

There are several ceremonies of a public character, the benefits of which are for particular individuals. The breaking of one of the many tabus connected with deer results in the enslavement of the offender's soul by the beings who are believed to own and care for the deer. When this has happened, the unfortunate man loses his health, and, upon ascertaining the cause, calls in a priest learned in this particular. A night is spent in song and prayer, in which several laymen participate, the object being the recovery of the soul. Because of certain offences on the part of the parents, or as the result of several deaths in the family, the souls of children, while they are still living, are supposed to have gone to the world of the dead. They are recalled by prayer, songs, and dancing, which continue during the first half of the first night, and during the whole of the third night. The ceremony is in charge of a priest or priestess, who spends the preceding days with a young girl in the forest, securing the necessary herbs and pitchwood used in the ceremony.

A ten days' ceremony is held for the benefit of each girl at the first appearance of menstruation. During this time she is under the guardianship of an old female relative, who makes sure that she keeps the tabus in regard to food and water, which are allowed her but once a day in combination as acorn gruel, and prevents her contact with people. The girl bathes in a ceremonial way at prescribed places each morning, and afterwards brings wood for the house-fire. Especial care must be exercised in regard to the language and conduct of the girl during this time. Not only will whatever she says happen, but whatever she does will become a fixed habit during her future life. The nights are spent in song. Several times during the night the men come into the house, where the girl is com-

pletely covered with a blanket, and sing over her, shaking rattling wands as an accompaniment. After the men withdraw, the women, who remain, sing songs of their own. This ceremony and the keeping of the tabus are supposed to procure long life and a desirable disposition for the girl.

A shaman, or medicine-man, first undergoes training during several months under the care of an older shaman. He is required to restrict his supply of water and food, and engage much in bathing and in smoking of tobacco. The nights, especially towards the close of his training, are spent in dancing about a fire in a large sudatory. Men and women join in the songs, and keep time with their feet as they sit about the sides of the room. The candidate must show his ability to control certain imagined semi-material objects, called 'pains,' injecting them and removing them from himself and others at will.

Besides these shamans with supernatural power, the singers at the greater ceremonies with supernatural gifts, and the priests charged by inheritance with the celebration of the dances and feasts, nearly every adult knows several formulæ for some particular object, such as hunting, fishing, gambling, love-making, and the cure of ailments. These formulæ are generally repeated over some fragrant herb, which is applied to the body, internally or externally, or to the weapons and implements concerned. The formulæ recite the discovery of the remedy or power by a supernatural person, its first application, and the wonderful results which followed. A prayer is addressed to this being, and an offering of tobacco made by blowing it in a powdered form from the hand. One may secure from another the benefit of one of these formulæ by the payment of a reasonable fee. Care is taken, in reciting them in the presence of others, to chant them in such a manner that they are not understood. Many formulæ have songs used in connexion with them, particularly those relating to hunting, fighting, gambling, and love-making. Hunting parties usually spend the night preceding a hunt in continued song and prayer.

The elderly men and the religiously inclined younger ones follow the daily habit of bringing sweat-house wood during the afternoon, taking a plunge into the river after the sweat bath, and spending some time in prayer, sitting naked after the bath. When a particular boon is desired, the men go to some high, wooded point, trim the branches from near the top of a large Douglas spruce, and stand naked in the acrid smoke of the green brush throughout the night. Bathing in certain pools, believed to be dangerous because they are the haunts of water-monsters, is productive of good luck. Whenever occasion suggests, extempore prayers are resorted to, accompanied by burning the sacred root.

2. Religious beliefs.—The Hupa believe that they sprang spontaneously into being from the ground, in the same locality in which they have lived since they have been known by white men. They claim to have been preceded by a race of similar origin—immortals, who, by their correct behaviour, fixed for the mortals destined to follow them the traditional conduct for all situations in life. Their chief, *Yimantuwingyai*, gave shape to the world according to his whims, provided some of the ceremonies, and rid the world of the monsters that preyed upon men. His wives, to whom he had been unfaithful, brought death into the world, and frightened the immortals from it. The latter fled to worlds beyond the Pacific Ocean and above the sky, where they still practise the perfect ways and celebrate the dances. *Yimantuwingyai* presides over one community of them, and his son over another. They observe the condition of the

earth and its inhabitants during the celebrations of the dances by immortals. *Yimantuwingyai's* conduct was often not above reproach; and the evils in the world, including death, are the results of his uncontrolled passion. He is seldom addressed in prayer.

A god of vegetation, *Yinukatsisdai*, 'he lives south,' was the originator of vegetable food, and still controls its supply by making annual provision according to the care or abuse of the previous crops by the people. He is generally invisible, is small of stature, and always carries a sack of seed.

The deer on the several ridges or mountains are under the care of local gods, called *Tans*. They keep the deer in the interior of their special hills, and let out only those destined as the reward of the hunter who keeps the tabus and sings the required songs. They have the owls for servants. The Hupa seldom mention them, but fear them greatly and direct many of their prayers to them.

The two thunders, at the north and the south, control the weather, sending that which is unseasonable when they are offended by the presence in sacred localities of those who have been beheaded, and are therefore in a measure unclean. They are appeased by a ceremony conducted near a rock in which the thunders are interested. The particular sort of weather desired is indicated by sprinkling the rock with water, or by carrying coals of fire round it.

There are numerous spirits believed to occupy the interior of mountains, deep pools in the streams, and certain places by the trails. These are not unkind to mortals, with whom they have become acquainted through worship, but are hostile to strangers and the uninitiated young members of the tribe.

The lower world, the abode of the dead, is under the control of a person seldom named. All except shamans and singers at the dances go to this common home regardless of their conduct in life. They appear there in the exact condition in which they have been buried. For this reason the Hupa hold that burials should be conducted with great care. The personal property of the dead is either buried with him or destroyed, apparently to prevent his return for it. Great care is exercised to avoid the reappearance of the ghost, especially in dreams. A five days' ceremony is necessary to free the grave-digger and the family of the deceased from uncleanness.

The heavenly bodies are considered to be persons. The sun is feared as one who consents to all natural deaths, but seems not to be worshipped. The morning star aids the warrior who knows and sings his songs. The white first dawn is worshipped as a maiden, who wishes to behold the faces of her worshippers as many days as possible, and therefore prolongs their lives. Early rising is practised in her honour. Prayers in general are said to be addressed to *Ninisan*, which usually means the earth, but seems capable of a wider meaning, including the universe as known to the Hupa. The conception, which seems to be vague, is decidedly animistic, but seldom personal. The deities mentioned above are perhaps only localizations, specializations of the one pervading soul of the world.

3. Ethics.—Social behaviour is very fully prescribed by tradition. The disregard of the rules of conduct is followed by material and temporal misfortune, but is not directly displeasing to the supernatural personalities and is not punished after death. The divine ones are offended rather by uncleanness, resulting from anything sexual or connected with death. Generosity is followed by blessing of the food supply. Unsanctioned sexual alliances are avoided, as likely to result in off

spring lacking by nature in moral character, and so little esteemed in the eyes of his fellows that his death cannot be avenged. Injuring other persons by word or deed is avoided from fear of retaliation. The avenging of wrongs or insults to oneself or one's relatives is a sacred duty which may be discharged with honour at night from the brush as well as in open fight. In accordance with the same principles and by the same methods, the group, whether the single village against a neighbouring one, or the allied villages against those of another river-valley and of another speech, defend their land and rights, and avenge injury and insults. The final settlement of difficulties, internal and external, is by the payment of money.

P. E. GODDARD.

HURON.—The Huron were a confederation whose principal members were four Iroquoian tribes—Attignawantan ('Bear People'), Arendahronon ('Rock People'), Attigneenongnahac ('Cord People'), and Tohontaenrat ('White-eared or Deer People')—that, from about 1589 to 1650, occupied a district known as Huronia, lying in the peninsula formed by Nottawasaga and Matchedash Bays, the River Severn, and Lake Simcoe, in what is now known as Simcoe Co., Ontario (see the maps of the region in the Huron period, in Parkman, *Jesuits in N. Amer.*, by A. F. Hunter, in *Jesuit Relations*, x, [ed. Thwaites], and by A. E. Jones, *ib.* xxxiv.). The earliest members of the confederation were the Attignawantan and Attigneenongnahac, who ceremonially termed each other 'brother' and 'sister,' and who had received the Arendahronon and Tohontaenrat about fifty and thirty years respectively previous to 1639 (Lalemant, in *Le Jeune*, *Jes. Rel.* xvi. 227, 229). Among the minor members of the confederacy were the Iroquoian Wenrohonon and the Algonquian Totontaratonhonon, who joined the Huron in 1639 and 1644 respectively.

The term by which this confederacy is known is not Indian, but French, *huron* being a pejorative of O. Fr. *hure*, 'rough, bristling hair,' and having been applied to the peasants of the *Jaquerie* in 1358. According to Lalemant (*op. cit.* 229-231), the term was applied to these Indians by a Frenchman about 1600, because of their style of head-dress. Their native name was *Wendat* (probably meaning 'islanders' or 'peninsula-dwellers'), which appears in a number of variants, and which has been corrupted into their modern designation *Wyandot*.

The Huron were, as Lalemant said (in *Le Jeune*, *Jes. Rel.* xvii. 195), 'only an assemblage of various families and petty nations, which are associated together for the purpose of maintaining themselves against their common enemies'; and hence their religious system was composite, a case in point being the borrowing of the Algonquian rite of marriage to the fishing-net (see below, p. 884^b).

The governmental system of the Huron has been studied exhaustively by J. W. Powell (*1 RBEW* [1881], 59-69), who shows that it was based on a gentile organization 'of consanguineal kindred in the female line,' and that each gens bore the name of some animal, the ancient of this animal being the tutelary deity of the gens concerned. The gentes in the Wyandot period have been Big Turtle, Little Turtle, Mud Turtle, Wolf, Bear, Beaver, Deer, Porcupine, Striped Turtle, Highland Turtle, Snake, Hawk. Of these, the Mud Turtle, Beaver, Striped Turtle, Highland Turtle, and Hawk are now extinct. The Wolf exercise the functions of umpire, mediator, and executive between the two divisions—the first including the Bear, Deer, Hawk, and Snake, and the second comprising all the rest (W. E. Connelley, *Archæol. Report Ontario*, 1899, pp. 100 f., 105 f.; according to him, the Wyandot represent chiefly the Tionon-

tati, or Tobacco Nation [on which see Mooney, *HAI* ii. 755 f.; for a different enumeration of Wyandot gentes, see Powell, *loc. cit.*]). Each gens possessed a tract of land, which it could change only with the permission of the tribe; and at intervals of two years the women councillors re-partitioned the land. The property, consisting of the wigwam and household articles, was inherited by the eldest daughter or by the nearest female kin; and the personal belongings of the husband, such as clothing, hunting and fishing implements, and a small canoe—large canoes were gentile property—by his brother or by his sister's son. Each phratry had the right to certain religious ceremonies and to the preparation of certain medicines; each gens to the worship of its tutelary deity; and each individual to the possession and use of his particular amulet or charm.

The general picture of the Huron, as given by the early Recollets and Jesuits, is attractive. We are introduced to a people, grave, patient, courteous, and hospitable, modest in demeanour, brave, and, on the whole, industrious. Their faults were those of primitive peoples generally. They were cruel to the enemy, they would beg or steal from the alien, pre-nuptial chastity was lightly esteemed, and their religious rites contained much that was abhorrent to the zealously religious. Their criminal code has been summarized by Powell (*1 RBEW* [1881], 66-68). A girl guilty of fornication was punished by her mother or female guardian; but, if the case was flagrant or neglected, it might be taken up by the council women of the gens. An adulteress had her hair cropped for the first offence, and her left ear cut off for the second. Theft was punished by twofold restitution, and treason was a capital crime. Murder and maiming were compounded (cf. the elaborate accounts given by Ragueneau, in Lalemant, *Jes. Rel.* xxxiii. 235-249, and by Brébeuf, in *Le Jeune*, *ib.* x. 215-223). A secret sorcerer might be killed by any one (Brébeuf, 223; Ragueneau, 219, and in Lalemant, *Jes. Rel.* xxx. 21). If, however, a sorcerer was placed on trial and found guilty, he might appeal to ordeal by fire. Outlawry was of two degrees: if the outlaw continued to commit crimes, he might be killed without fear of clan vengeance; or it might be the duty of whomsoever met with him to kill him (Powell, 67 f.). Suicide was not infrequent; and mere children, if harshly treated by their parents, were apt to hang or poison themselves (Le Mercier, *Jes. Rel.* xiv. 37; Chaumonot, *ib.* xviii. 27-29; *Le Jeune*, *ib.* xviii. 165-167, xix. 171-173).

A trait of the Huron and other Iroquois, as well as of the Algonquin and other eastern tribes, which has always shocked the general reader was their savage cruelty toward prisoners taken in war. No tortures were too terrible to be applied; and the bare recital of them as recorded in the *Jesuit Relations* and similar documents is, it must be confessed, somewhat unpleasant reading. It would appear that to some degree there was a delight in torture for its own sake—a sentiment which appears often in children of the higher races, and of which traces are found among even the most cultured adults. In many instances, further, the idea of personal revenge for the loss of a relative must have played a part. Yet there was also another side, in which, apparently, must be sought the real explanation of this trait. In a case recorded by Charlevoix, *Hist. of New France*, tr. J. G. Shea, New York, 1866-72, ii. 105-110 (repeated by *Le Jeune*, *Jes. Rel.* xiii. 37-79), a Seneca captive was conducted to a Huron village to take the place of the captured nephew of a chief, if the latter so desired. The prisoner was given a bride, was clothed in a new beaver robe, and, feasted in every cabin,

was treated with all kindness. The chief received him with affection, and the captive Huron's sister gave him food as if he were her own brother. With regret, however, the old chief informed the prisoner that his wounds were so severe that he must die, and the captive was accordingly tortured to death. Generally speaking—although exceptions frequently occurred—a captive was treated as well as possible until he reached the village where his fate was to be decided. There he might be adopted in the stead of a kinsman captured or slain; and such adoption was, in reality, based on a belief that the person so adopted was actually the person whom he represented. If tortured, he was expected to show defiance to his tormentors, and to bear every pain with the utmost stoicism. In the midst of his tortures, caressing words were addressed to him, and he would be honoured with delicate touches of firebrands or red-hot hatchets. To the horrified observers of all this, such caresses seemed, with good reason, the irony of demons incarnate; but it may be suggested that these were both intended and received as genuine. The substitute for a hero must die like a hero; if he was a poltroon, he dishonoured both himself and the dead. In him were curiously blended, to the Indian mind, both the enemy and the friend. He must suffer all night until the dawn (Lalemant, in Le Jeune, *Jes. Rel.* xvii. 75; cf. lxi. 65), doubtless in honour of the war-god, who seems to have been another form of the sun-god. After his death, if he had borne himself bravely, portions of his body were eaten (see art. CANNIBALISM, ii. § 6); and in some cases a Huron would make an incision in his own neck, and permit the blood of his tortured enemy to flow into it; for,

'since they have mingled his blood with their own, they can never be surprised by the enemy, and have always knowledge of their approach, however secret it may be' (Brébeuf, in Le Jeune, *Jes. Rel.* x. 227-229). It should be noted that, whereas in feasts on bear, dog, deer, or fish, the head was the most important part, in cannibalistic feasts the head was given to the lowest individual present (*ib.* 229).

The trophy usually carried off from a slain enemy during war was the head, and the cabin of the war-chief was called 'the house of cut-off heads' (Le Mercier, in Le Jeune, *Jes. Rel.* xiii. 59). If, however, their burden of heads proved too heavy, 'they were content with taking the scalp with its hair, which they call *onsteira* . . . to make trophies of them, and to put them, in time of war, on the palisades or walls of their town, fastened to the end of a long pole' (Sagard, *Voyage*, 203, *Hist.* 443 f.; cf. 455).

The Huron possessed a form of fellowship, by which 'two young men agree to be perpetual friends to each other, or more than brothers. Each reveals to the other the secrets of his life, and counsels with him on matters of importance, and defends him from wrong and violence, and at his death is chief mourner' (Powell, 68).

The sexual morality of the Huron appears to have been rather low. Pre-nuptial chastity was rare, and the young men frequently kept mistresses. Even after marriage, husband and wife are described as permitted to seek other temporary partners, without manifestation of jealousy by their lawful spouses (Sagard, *Voyage*, 160, 165, *Hist.* 315 f., 420); and Sagard even declares that the favours of girls were sold for a small price by themselves and by their fathers—and of wives by their husbands—and that panders were not unknown (*Voyage*, 177). In a proposal of marriage, the man asked the girl of her parents. If she then accepted his presents, he was privileged to pass two or three nights by her side before consummating the marriage; but, if she had little liking for him at the end of that time, the matter was closed. If she felt affection for her lover, the formal marriage took place by the simple announcement of their wedlock in the presence of relatives and friends, and a wedding feast followed (*Voyage*, 161-163, *Hist.* 316 f.). Marriage within the gens

was forbidden, though it must be contracted within the tribe; so that, if a person outside the tribe was chosen as a mate, he or she must first be adopted into some other gens than that of the prospective bride or groom. Polygamy was permitted; but the brides—unless sisters, who must be married within each other's lifetime, or else the second would be reckoned the husband's niece, so that she could not be married by her brother-in-law without reproach (Le Jeune, *Jes. Rel.* xvi. 207)—must be from different gentes. The husband retained the rights of his gens, but lived with the gens of his wife. Polyandry was unknown (Powell, 63). The descendants of brothers and sisters were regarded as 'brothers' and 'sisters,' and could never intermarry 'if they follow the good customs of their nation'; nor was a widower or widow expected to re-marry within three years (Le Jeune, 203-205). The principle of matriarchy is also obvious in case of death, for,

'in the event of the death of the mother, the children belong to her sister or to her nearest female kin, the matter being settled by the council women of the gens. As the children belong to the mother, on the death of the father the mother and children are cared for by her nearest male relative until subsequent marriage' (Powell, 64).

Divorce was extremely facile (Lalemant, in Vimont, *Jes. Rel.* xxviii. 51-53; Sagard, *Hist.* 298 f.); but, if there were children, only a grave cause could dissolve the marriage. In this case the children went with the father; but children were not the heirs of their father, whose property went to the children of their sisters (Sagard, *Voyage*, 164-166, 173).

The cult of the Huron, as has already been noted, was largely composite in character. Thus it is stated by Lalemant (in Le Jeune, *Jes. Rel.* xvii. 197-199) that the Huron rite of marrying two girls of tender age to the fishing-net had been borrowed from the Algonquins, because, 'some years ago,' the *oki* of the net had declared himself angry at the loss of his wife, and hence had prevented the Huron from catching fish until he had a sponse; whereupon, to make him the more contented, they gave him two (cf. Brébeuf, in Le Jeune, *Jes. Rel.* x. 167, where it is added that fish fear the dead).

As among so many other peoples, beliefs were relatively fluid among the Huron, whereas customs and rites were firmly established. This is brought out by Le Jeune (*Jes. Rel.* xvi. 199):

'The belief and superstitions of the savages are not very deeply rooted in their minds; for, as all these idle fancies are only founded upon lies, they fall of themselves, and suddenly disappear, or are dissipated by the rays of the truths, entirely conformable to reason, that are proposed to them. . . . As for what relates to their customs, that is a longer story. It is easier to banish errors of the understanding than to remove the bad habits of the will.'

The traditional history of the Huron was kept alive by being recited at assemblies for the election of chiefs (Ragueneau, in Lalemant, *Jes. Rel.* xxix. 61), and they believed that they came originally from a mountain side between Quebec and the sea, or at all events from the northern shores of the lower St. Lawrence (Wilson, *Trans. Roy. Soc. Can.* ii. pt. i. p. 59).

Their cosmogony is elaborately described by Brébeuf (in Le Jeune, *Jes. Rel.* x. 127-139).

The Hurons are declared to have recognized a first principle of all things, and to have worshipped the sky and the sun. On this Ragueneau (in Lalemant, *Jes. Rel.* xxxiii. 325) says:

'There remained in their hearts a secret idea of the Divinity and of a first Principle, the author of all things, whom they invoked without knowing him. In the forests and during the chase, on the waters, and when in danger of shipwreck, they name him *Aireskouy Soutandienr*, and call him to their aid. In war, and in the midst of their battles, they give him the name of *Ondoutaeté*, and believe that he alone awards the

¹ This deity, who is probably identical with the sun (cf. preceding col.), had the form of a dwarf. If he appeared to a warrior and caressed him, he would be victorious; but, if he

victory. Very frequently, they address themselves to the sky, paying it homage; and they call upon the sun to be witness of their courage, of their misery, or of their innocence. But, above all, in the treaties of peace and alliance with foreign nations they invoke, as witnesses of their sincerity, the sun and the sky, which see into the depths of their hearts, and will wreak vengeance on the treachery of those who betray their trust and do not keep their word.'

We are also informed by the same authority (*ib.* 217) that a principle of evil was acknowledged.

The Hurons believe that there is a kind of monstrous serpent which they call *Angont*, which brings with it disease, death, and almost every misfortune in the world. They say that that monster lives in subterranean places, in caverns, under a rock, in the woods, or in the mountains, but generally in the lakes and rivers. They say that the sorcerers use the flesh of that frightful serpent to cause the deaths of those upon whom they cast their spells.'

If a man died by drowning or freezing, the sky was angry, and must be propitiated by cutting up the corpse and throwing the entrails and choicest portions into a fire as an offering to the offended deity (Brébeuf, in Le Jeune, *Jes. Rel.* x. 163). The wide-spread belief in the thunder-bird (cf. *ERE* i. 529) was found among the Huron (Sagard, *Voyage*, 251, *Hist.* 500; Brébeuf, 45); during eclipses they shot arrows at the sky to deliver the moon from danger, and uttered imprecations on their enemies (Brébeuf, 59); and they held that at night the sun went through a hole in the earth, emerging from the other end of his hiding-place at dawn (Sagard, *Voyage*, 251, *Hist.* 494, 537). They maintained that not only men and animals, but also inanimate things, had souls, to which prayer must be offered (Sagard, *Voyage*, 258, *Hist.* 493, 642), and that spirits ruled over rivers, journeys, treaties, wars, feasts, and maladies; even a rock of human shape, on the road to Quebec, was believed to have been originally a man, and sacrifice was offered to it, just as tobacco was cast into the dangerous Sault de la Chaudière after the Huron had safely passed it (Sagard, *Voyage*, 231 f., *Hist.* 495 f., 822; Brébeuf, 165-167). To secure good fishing, tobacco was often burned in honour of the water-spirit; but, if any portion of fish or game fell into the fire, no more would be caught, especially as the nets would tell the fish if such a thing occurred, or even if a child was harshly reproved; but, on the other hand, a good catch might be secured by the services of a fishing preacher (*prédicateur de poisson*) in each cabin, who told the fish of the Indians' devotion to them, and urged them to help the Huron, who honoured them and did not burn their bones (Sagard, *Voyage*, 255-258, *Hist.* 639-642, 494). Human sacrifice was unknown among the Huron (Sagard, *Hist.* 499). Prayer was constantly employed, a specimen being thus recorded by Lalemant (in Vimont, *Jes. Rel.* xxxiii. 55):

'Each one should go every day to his field, throw some tobacco on the fire, and burn it in honour of the demon whom he worshipped, calling aloud this form of prayer: "Listen, O sky! Taste my tobacco; have pity on us!"'

The general attitude of the Huron towards the unusual and their faith in charms are summarized by Bressani (*Jes. Rel.* xxxix. 25-27; cf. Ragueneau, in Lalemant, *Jes. Rel.* xxxiii. 211-213):

'They had a superstitious regard for everything which savoured a little of the uncommon. If, for instance, in their hunt they had difficulty in killing a bear or a stag, and on opening it they found in its head or in the entrails a bone, or a stone, or a serpent, etc., they said that such object was an *oki*, that is, an enchantment which gave strength and vigor to the animal, so that it could not be killed; . . . if they found in a tree, or beneath the soil, some stone of an uncommon shape, like a plate, or spoon, or any vessel, they esteemed this encounter fortunate; because certain demons (they said), which live in the woods, forget these things, which make any person who finds them again successful in fishing, hunting, trade, and gaming. These objects they called *aaskuandi*, and believed that they often changed form, transforming themselves, for instance, into a serpent, or a raven's beak, or an eagle's claw, etc.—changes which none had seen, but which all believed.'

The system of fraternities was developed among smote him on the forehead, he would be killed (Brébeuf, in Le Jeune, *Jes. Rel.* x. 183).

the Huron. The members of one of these, in endeavouring to expel the disease demon *Aoutaerohi*, carried hot stones and firebrands in their mouths, rubbed the sick with the glowing embers, and growled like bears in their ears (Le Mercier, in Le Jeune, *Jes. Rel.* xiv. 59-65). In general, Lalemant (*ib.* xvii. 197) says:

'For several of these superstitions there are organized fraternities, to which, and especially to the masters of which, one must address himself. All those who have once been the object and occasion of the dance or the feast belong to the fraternity, to which, after their death, one of their children succeeds; some have, besides, a secret or a charm which has been declared to them in a dream, with the song to be used before going, for example, to the fire feast, after which they can handle the fire without hurting themselves' (cf. also Ragueneau, in Lalemant, *Jes. Rel.* xxx. 23).

The 'medicine-man' flourished among the Huron, and some of them were not sincere, although the baser members of the profession were doubtless those unofficial sorcerers who, as noted above (p. 883^b), might be killed as outlaws. On this subject Brébeuf (in Le Jeune, *Jes. Rel.* viii. 123) writes:

'They say that the sorcerers ruin them; for if any one has succeeded in an enterprise, if his trading or hunting is successful, immediately these wicked men bewitch him, or some member of his family, so that they have to spend it all in doctors and medicines. Hence, to cure those and other diseases, there are a large number of doctors whom they call *Arendiouane*. . . . Some only judge of the evil, and that in divers ways, namely, by pyromancy, by hydromancy, necromancy, by feasts, dances, and songs; the others endeavor to cure the disease by blowing, by potions, and by other ridiculous tricks. . . . But neither class do anything without generous presents and good pay.'

There are here some soothsayers, whom they call also *Arendiouane*, and who undertake to cause the rain to fall or to cease, and to predict future events' (cf. also Brébeuf, in Le Jeune, *Jes. Rel.* x. 197-199; Ragueneau, in Lalemant, *ib.* xxxiii. 193-195, 221; Sagard, *Hist.* 534).

The Huron maintained the doctrine of the multiple soul. According to Le Jeune (*Jes. Rel.* xvi. 191), the belief in souls profoundly affected the Huron theories of dreams, *ondonoc* ('wishes of the soul'), disease, and medicine. Failure to dream was one of the signs that the soul had departed (Le Jeune, *Jes. Rel.* xvi. 193). The whole theory is set forth by Ragueneau (in Lalemant, *ib.* xxxiii. 189-191); on the importance of dreams, see also Brébeuf, in Le Jeune, *ib.* x. 169-173; du Peron, *ib.* xv. 177-179; on the *ondonoc*, du Peron, 179-181; Lalemant, in Le Jeune, *ib.* xvii. 147-149, 153-159, 165-187; Chastelain, in Le Jeune, *ib.* xix. 193.

Parents dreamed on behalf of their sick children (Brébeuf, 173). On one occasion a man dreamed that he was burned by the Iroquois. To avert this fate, he was somewhat severely burned as a fictitious captive by his compatriots at the regular burning place, after which he offered a dog to be killed, roasted, and eaten (Lalemant, in Vimont, *Jes. Rel.* xxiii. 171-173; cf. also Bressani, *ib.* xxxix. 19). Sometimes the dream led to obscene rites (Sagard, *Hist.* 308 f.). After a propitious dream a feast was often given, for, according to Ragueneau (in Lalemant, *ib.* xxxiii. 195),

'they say that these gifts are given to compel the soul to keep its word, because they believe that it is pleased at seeing this expression of satisfaction for the propitious dream, and that, consequently, it will set to work sooner to accomplish it. And, if they failed to do so, they think that that might be sufficient to prevent such a result, as if the indignant soul withdrew its words' (on feasts among the Huron, see especially Brébeuf, in Le Jeune, *ib.* x. 175-185).

The Huron theory of medicine was based on the belief that 'all remedies always infallibly have their effect; if, then, the patient did not recover with a natural remedy, the malady was supernatural, and there was need of a supernatural and superstitious remedy' (Bressani, *Jes. Rel.* xxxix. 25). According to Ragueneau (in Le Jeune, *ib.* xxxiii. 199),

'the Hurons recognize three kinds of diseases. Some are natural, and they cure these with natural remedies. Others, they believe, are caused by the soul of the sick person, which

desires something; these they cure by obtaining for the soul what it desires. Finally, the others are diseases caused by a spell that some sorcerer has cast upon the sick person; these diseases are cured by withdrawing from the patient's body the spell that causes his sickness. This spell may be a knot of hair; a piece of a man's nail, or of an animal's claw; a piece of leather, or of bone; a leaf of a tree, some grains of sand, or other similar things.¹

Most sicknesses arose from unsatisfied soul-desires or from witchcraft (Ragueneau, 201-209, with the general procedure in such cases). The Huron sought baptism at first 'almost entirely as an aid to health' (Brébeuf, 13). A curious custom is recorded by Sagard (*Hist.* 313), who states that sometimes, either in consequence of a dream or at the bidding of the *loki* (medicine-man), the girls chose young men with whom they passed the night. In some instances stench was used to drive away demons of disease (Le Jeune, *Jes. Rel.* xix. 71). If all else failed, and there were many sick in the village, recourse was had to the *loncuoyroya* or *ononharoia* ('turning the brain upside down'), when the villagers turned everything topsyturvy, shouted, and ran about all night, seeking to expel the demons. They then thought of the first object that came into their minds and went from cabin to cabin demanding something, and receiving gifts until they obtained that of which they thought. All other presents were returned after a feast, ordinarily lasting three days; but, if they failed to secure the object desired, the persons thus disappointed thought that their death was near (Sagard, *Voyage*, 279-282, *Hist.* 674f.; cf. Brébeuf, 175-177). This feast was also celebrated every winter in honour of all the deities together (Lalemant, in Vimont, *Jes. Rel.* xxiii. 53). Frequently the games of *crose* and 'dish' (a dish containing six plum-stones, white on one side and black on the other, being dashed on the ground so as to cause the stones to jump out, the object being to throw all of one colour) were played as a cure for sickness (Brébeuf, 185-189).

Of ceremonial dances we have scant information, but we are told that children were not allowed to imitate them (Lalemant, in Le Jeune, *Jes. Rel.* xvii. 163).

The Huron believed in re-incarnation. This is in evidence in a case in which a sorcerer claimed to have been a demon living under the ground who, wishing to become a man, had entered the womb of a woman who, knowing she had not conceived in the normal way, caused herself to give birth prematurely (Le Mercier, in Le Jeune, *Jes. Rel.* xiii. 105-107). This belief seems also to have been extended to animals, for a Huron who lost a favourite dog during a bear-hunt lamented that a small bear had not been brought him to get the dog's name and take its place (*ib.* xiv. 35). In their views regarding the future life the Huron 'make no mention either of punishment or reward. And so they do not make any distinction between the good and the bad, the virtuous and the vicious; and they honor equally the interment of both' (Brébeuf, in Le Jeune, *Jes. Rel.* viii. 121).

The Milky Way was called by the Huron 'the way of souls,' and the souls of dogs were also immortal, a group of stars near the Milky Way being known as 'the path of dogs' (Sagard, *Voyage*, 233, *Dict.* 21). It was possible, under certain circumstances, for the souls of the dead to be brought to the world of the living, and Huron folklore had at least one specimen of the Orpheus and Eurydice cycle (Brébeuf, in Le Jeune, *Jes. Rel.* x. 149-153).

LITERATURE.—This art. has intentionally been restricted to the purely pagan period of the Huron. For their history in the later epoch, see J. N. B. Hewitt, 'Huron,' in *HAI* (=30 *Bull. BE.* 1907-10) i. 584-591; for the history of Christian missions, A. E. Jones, 'Huron Indians,' in *Cath. Encyc.* vii. [1910] 665-683; a general sketch is given by A. Featherman, *Aoneo-Maranomians* (=Social Hist. of the Races of Mankind, n. i.), London, 1889, pp. 61-65; the most important sources are G. Sagard-Théodat, *Grand Voyage du pays des Hurons*, Paris,

1632, new ed., do. 1865, and *Hist. du Canada*, do. 1636, new ed., do. 1866 (in this art. citations from both works of Sagard are according to the first editions); *Jesuit Relations and Allied Documents*, ed. R. G. Thwaites, 73 vols., Cleveland, 1896-1901 (especially vols. viii., x., xvi., xxxiii., xxxix.). See also P. D. Clarke, *Origin and Traditional Hist. of the Wyandotts*, Toronto, 1870; F. Martin, *Hurons et Iroquois*, Paris, 1877; F. Parkman, *Jesuits in N. Amer. in the Seventeenth Cent.*, Boston, 1867, especially pp. xxiv-xlii (Parkman endeavours painfully to be just, but is handicapped by utter inability to share either the Indian or the Catholic point of view, or even the mental attitude of the period which he discusses); J. W. Powell, 'Wyandot Government,' in 1 *RBEW* (1881), 59-69; D. Wilson, 'Huron-Iroquois of Canada,' in *Trans. Royal Soc. of Canada*, ii. pt. i. (1884) 65-106; W. E. Connelley, 'Wyandots,' in *Archæol. Report of Ontario, 1899* (1900), pp. 92-123, and *Wyandot Folk-Lore*, Topeka, 1899; C. C. James, 'Downfall of the Huron Nation,' in *Trans. Royal Soc. of Canada*, n. xii. pt. i. (1906) 311-346; E. Schlup, 'The Wyandot Mission,' in *Ohio Archæol. and Hist. Publications*, xv. [1906] 163-181; H. Hale, 'Huron Folk-Lore,' in *JAFI* i. [1888] 177-183 (cosmogony, collected in 1872-74). For linguistic work in Huron, see J. Pilling, *Bibliog. of the Iroquoian Languages* (=6 *Bull. BE.* 1888), p. 87 f.; Sagard-Théodat, *Dict. de la langue hur.*, Paris, 1632 (new ed., do. 1866); J. M. Chaumonot, *Grammar*, tr. J. Wilkie, in *Quebec Lit. and Hist. Soc. Trans.* ii. [1831] 94-198. LOUIS H. GRAY.

HUSSITES.—The Hussites were the followers of John Hus, who, after the death of their leader, sought by force of arms to secure toleration for themselves in Bohemia. Thereafter, in the 15th and 16th centuries, they were divided into two sections, the one, as the Utraquists or Calixtines, forming a party within the Roman Catholic Church; the other, as the Bohemian Brethren, becoming an independent religious community.

1. **John Hus.**—Jan Hus, the reformer of Bohemia, was born in the second half of the 14th cent. in the Bohemian village of Hussinecz. The year and day of his birth are unknown. As family names were not then in common use among the rural population of Bohemia, he styled himself, from the name of his native place, John of Hussinecz, subsequently (from 1396) abbreviating the name to John Hus. The poverty of his parents compelled him to earn his livelihood as a chorister and sacristan. About 1385, having resolved to devote himself to a clerical career, he began his studies at Prague. In 1393 he graduated B.A.; in 1394, B.D.; and in 1396 M.A. In academical circles, moreover, he won a position of high respect and influence; in 1401 he became dean of the philosophical faculty, and in 1402-03 was rector of the University. From the time of his ordination to the priesthood in 1400 he also acted as preacher in the Bethlehem Church of Prague.

As a result of the marriage of Anne, the sister of Wenceslaus, King of Bohemia, with Richard II. of England (1382), an active intercourse sprang up between the two countries, and one result of this was that the works of Wyclif (*q.v.*) became known in Bohemia. Even as a student, Hus had become acquainted with Wyclif's philosophical writings, and had assimilated his doctrine of realism. Wyclif's theological writings, however, first reached Prague in 1401-02; they made a profound impression upon Hus, and incited him to work actively for the reforms demanded by the English writer. By his moral diatribes against the vices of the clergy, Hus incurred the hostility of Archbishop Shinko, though, on the other hand, he still retained the favour of King Wenceslaus, and the more so as in the University the Bohemian 'nation,' through Hus's influence, maintained the neutrality enjoined by the king in the Papal schism (between Pope Gregory XII. and Pope Alexander V.), while the other nations, as also the Archbishop, remained faithful to Gregory XII. Hus, availing himself of the king's favour, induced him to alter the conditions of voting in the University in favour of the Bohemian nation, with the result that the latter

secured three votes, and the other nations, combined, only one. This caused a large number of German teachers and students to withdraw from Prague and found a new University at Leipzig (1409). In this matter Hus acted not so much from racial antipathy to the Germans as from resentment against their fierce opposition to the Wycliffite doctrines which he advocated and regarded as truth. Thereafter Pope Alexander V., to whom Archbishop Sbinko had now made his submission, issued, at the instance of Hus's enemies, a bull against Wyclif, enjoining that his writings should be burnt (1410). Hus protested, and, in spite of the Archbishop's prohibition, actually defended Wyclif in public discussions. The consequence was that Hus was excommunicated, and Prague laid under a Papal interdict—measures which failed, however, to achieve their object.

Then Pope John XXIII.'s bull of indulgence for a crusade against Ladislaus of Naples, the champion of Gregory XII. (1411), led to a division among Hus's own followers. Hus assailed the bull in trenchant sermons and disputations, while the theological faculty of the University, including many of his former adherents, defended it. The breach became wider and wider, and led to popular riots in Prague, so that at length the king, who was still on Hus's side, found it necessary to induce him, for the sake of peace, to leave Prague (1411). Hus did so; but the desired result did not ensue, for his continued activity in Southern Bohemia, where he devoted himself partly to composing polemical tractates in the castle of a patron, and partly to preaching to the people of the district, soon put him at the head of the popular movement.

In order to effect an adjustment between the contending parties, the Emperor Sigismund, as heir to the Bohemian throne, resolved to bring the matters at issue before the General Council summoned to meet at Constance on the 1st of November 1414. Hus was quite prepared to attend the Council, but only as one who should be permitted in free discussion to try to win the fathers to the side of the Wycliffite teaching, and not as an accused person requiring to vindicate his actions. After prolonged negotiations with Sigismund the latter promised to use his Imperial authority to obtain for Hus this free and secure position in the Council. It was as bearing this sense that Hus and the entire Bohemian people regarded the Emperor's safe-conduct, which in its actual terms, however, was no more than a passport. Sigismund himself certainly intended it as a real safe-conduct; for, when by a base betrayal Hus was apprehended in Constance on the 28th November, the Emperor was so enraged that he threatened to leave the Council. Nevertheless, he at length allowed the Council to institute a prosecution for heresy against Hus, and was able to secure only a single mitigation in the latter's favour, viz. that—contrary to Canon Law—the accused heretic should be permitted to defend himself in open court. In all other respects the case took the usual course. As the prosecution did not undertake to confute the alleged errors which Hus had taken from Wyclif's writings, and as Hus therefore unconditionally refused to recant, he was condemned to death by burning. He died at the stake on the 6th of July 1415, steadfast under long-protracted agony, and in true greatness of soul praying to the last.

Hus was a follower of Wyclif, and made no higher claim. His ideas of Church reform are all derived from Wyclif, whose writings he often reproduces verbally in his own tractates. His position is a distinct one only in so far as his proposals were less drastic than those of the English reformer; and he still adhered to many doctrines and practices of the Church which the latter rejected, as,

e.g., the Seven Sacraments, Transubstantiation, Masses for the Dead, Intercession of the Saints, Purgatory, the Merit of Works, and others. From Wyclif he received, above all, the principle that Holy Scripture is the supreme standard in matters of faith, and that the authority of the Church must be subordinate thereto. For Hus, Christ was the Head of the Church, and the Church was not the hierarchy, but the community of the elect. These principles he proclaimed to the people with glowing eloquence, and so prepared them to put forward resolute demands for the abolition of various ecclesiastical abuses long felt to be tyrannical.

LITERATURE.—The sources for the life of Hus are collected in *Documenta Magistri Joannis Hus*, ed. F. Palacky, Prague, 1899. His writings—(a) Latin: *Joannis Hus et Hieronymi Pragensis historia et monumenta*, Nuremberg, 1558, and Frankfurt, 1715 (unsatisfactory, containing much that was not written by Hus); (b) Czech: K. J. Erben, *M. Jana Husi sebrané spisy České*, 5 vols., Prague, 1865-68. A new ed. of the Lat. and Czech works, by W. Flajshans, is in course of publication (Prague, 1903 ff.). Books dealing with the subject: G. V. Lechler, *Joh. Hus*, Halle, 1890; K. Müller, 'König Sigismunds Geleit für Hus' (*Hist. Vierteljahrsschrift*, 1898); J. Loserth, *Wyclif and Hus*, Eng. tr., London, 1884; F. H. H. V. Lützow, *The Life and Times of Master John Hus*, do. 1909.

2. The Hussites.—The treacherous arrest of Hus, his condemnation as a heretic, and his execution were felt by the Bohemians as an indignity to their nation, and, when Sigismund began a savage persecution of Hus's followers in Bohemia, the people rose in revolt (1419). It is worthy of note that from the first the device under which the Hussites fought and conquered was the chalice, though Hus himself had never demanded that the laity should partake of the cup in the Lord's Supper, but had at most acquiesced when his friends in Prague made that demand during his imprisonment in Constance. In point of fact, as the earlier Waldenses frequently joined hands with the Hussites, inspiring them with fresh vitality, the claims of a large section of Hus's followers went far beyond what he himself had asked for. This is true especially of the more extreme party, the Taborites—so called from Tabor, the name of the town which they founded in the district of Southern Bohemia where Hus had preached to the people during his absence from Prague. The Taborites were the people's party among the Hussites—the most uncompromising Wycliffites, whose position was at first defined in part by certain eschatological beliefs. Their leader was the brilliant general, Jan Trocznov of Zizka.

The more moderate party were designated **Calixtines** or **Utraquists**, their chief demand being that the laity should have the cup (*calix*)—'communio sub utraque specie.' They were sometimes called 'Praguers,' from the fact that they were drawn mainly from the academical and civilian circles of Prague. Their leader and counsellor was Jan Rokyczana, a Magister of Prague University, who was made a bishop by his party in 1435, though his appointment never received Papal ratification. The Utraquists put forward their distinctive claims in the Four Articles of Prague, as follows: (1) unrestricted preaching of God's word; (2) communion in both kinds; (3) the apostolic poverty and moral purity of the clergy; and (4) Church discipline. In spite of the numerous differences between the two sections, they always combined in making war upon their common enemy. Having repulsed several German crusading armies (1420-27), they took the aggressive, and, by ravaging the districts adjacent to Bohemia, sought to compel the German princes to abandon their Pro-Roman policy of oppressing and exterminating the Hussites. They were so far successful in these tactics that the Council of Basel entered into negotiations with them, and at length, in the Compactata of Basel (1433), granted them the four conditions just noted. But by taking

this step the Council managed at the same time to bring about an irreconcilable antagonism between the two Hussite parties, as the Taborites absolutely refused to be satisfied with such trifling concessions. War now broke out between the two sections, and the united forces of the Calixtines and the Catholics gained a decisive victory over the Taborites at Lipan on 30th May 1434. It soon became apparent, however, that Rome was bent upon revoking the concessions it had made. It did not adhere to the Compactata; in fact, Pope Pius II. formally cancelled them in 1462. Still, they remained actually in force, for the Bohemian Diet had made them the law of the land, and the Bohemian throne was pledged to maintain them. But in 1567 the Diet itself repealed them, as Utraquism was by that time in a state of utter dissolution. From the time of Luther's entrance upon the scene they had in ever-increasing numbers allied themselves with the reforming movement directed by him. The Taborites as a party were never of any consequence after the defeat of 1434; a section of what still remained of them attached itself to the Bohemian Brethren.

LITERATURE.—C. Höfler, *Geschichtsschreiber der hussitischen Bewegung*, i.-iii. (*Fontes rerum austriacarum*, 'Scriptores,' ii. vi. and vii. [Vienna, 1856-66]); J. Goll, *Fontes rerum bohemicarum*, v. (Prague, 1893); J. Loserth, *Beiträge zur Gesch. d. hussit. Bewegung*, i.-v. (Vienna, 1877 ff.); F. Palacky, *Gesch. Böhmens*, iii.-v. (Prague, 1845-67).

3. The Bohemian and Moravian Brethren.—The Hussite wars, with their meagre results, left behind in Bohemia a general dissolution of ecclesiastical order and a spirit of pessimism. In all parts of the country there arose small communities, attaching themselves to individual priests, and the more bigoted circles of these communities often sought to effect reforms in strange ways, while their members, like the older Taborites, spoke of one another as brothers and sisters. But Rokyczana, the leader of the Utraquists, and the Archbishop chosen by themselves, was dissatisfied with what had been won, and in his sermons vigorously denounced the moral and religious defects of the Roman Church, as well as of his own party, and made a powerful impression upon a little circle of religiously disposed persons whose leader and head was Brother Gregory. When, however, this circle called upon Rokyczana to translate his strictures into action, he declined to do so. Then, after appealing also to Peter of Chelteschic—a thoroughgoing partisan of Wyclif, and the leader of one of the small communities above mentioned—for practical support of their designs, but again in vain, they withdrew, about 1457, to the east of Bohemia, to the solitudes of Kunwald, and there formed, not another monastic order, but a community like the Waldenses (*q.v.*) or the Friends of God (*q.v.*). Their practice was to send out itinerant preachers in pairs, they had a communal organization and communal law, they divided their members into beginners, proficient, and the perfect, as in the *Theologia Germanica* (ed. Pfeiffer, tr. S. Winkworth, 2nd ed., London, 1854, ch. 14). In 1467 this community, which meanwhile had gained accessions in several other districts of Bohemia and Moravia, dissociated itself completely from the Utraquist Church by adopting the policy of selecting and ordaining its priests from its own ranks, subsequently procuring for them a second ordination at the hands of a Waldensian bishop named Stephen, resident in Austria. They assumed the name *jednota bratrská* (Czech 'society of brethren'), afterwards Latinized as *Unitas Fratrum*; their opponents, however, called them Waldenses, or, more frequently, Pikhards (Beghards). As they had now broken off relations with the Church, they proceeded to withdraw from the world. Military service, the taking of oaths, the

delivering of penal judgments, and, accordingly, all participation in the administration of State or Church, were forbidden to their members. They likewise loathed science, the sole function of which, they said, was to justify every error by Scripture. But their supreme concern was practical Christianity—purity of conduct, the permeation of social life in their communities by a disinterested and self-denying love to one's neighbour, the fulfilling of the law of Christ according to Gal 6²; hence, too, they sometimes called themselves 'Fratres legis Christi.' In the succeeding decades their estrangement from worldly interests became gradually less rigorous—a development which was not effected without some internal conflicts, and resulted in the severance of the 'Little Sect' (also called Amosites, after their leader, Amos of Wodnian).

Hitherto the Brethren had found their standard of doctrine in the writings of Brother Gregory (*Seven Letters to Rokyczana*, 1468-70, *Tractate on the Holy Church*, 1470, *Treatise on the Narrow Way of Christ*, 1470, *Of Two Kinds of Work—that founded on the Sand and on the Rock*, probably 1471, and others); but from about the year 1490 the spiritual leadership of the sect was assumed by Brother Lucas, a B.A. of Prague University, who, with a reverent regard for traditional usage, finally settled its constitution, its order of worship, its social organization, and its doctrine. His numerous works include, besides theological treatises, the first hymn-book of the Brethren, the first catechism for the various grades of the community, full official instructions for their priests, an order of ritual, etc. It was this effective organization that enabled the community to survive the numerous persecutions directed against them, and even to emerge therefrom with renewed strength. Their adversaries had been successful in having a decree adopted in the national statute-book, and thus made a law of the land, to the effect that the *Unitas Fratrum*, with its congregations and assemblies, should not be tolerated in Bohemia (1508). This law nominally remained in force for a century (till 1609), but the nobles had sufficient power to be able for the most part to protect the communities on their own estates.

Very soon after the rise of Luther, the Utraquist Church in Bohemia entered into negotiations with him, and upon both sides there was a desire for closer union. This fact induced the Brethren also to send ambassadors to Luther; but it was only after the death of Lucas (1528) that the relations between them and the German reformer became really intimate, and that their leading men, such as Johann Horn and Johann Augusta, sought to meet him half-way by adopting his doctrines in their Confession. (Their 'Statement of Faith,' with a preface by Luther, appeared in 1533.)

In consequence of the defeat suffered by the Bohemian nobles in their revolt against Ferdinand I. in 1547, the latter became powerful enough to set in operation once more the old laws against the Brethren. The large majority of the Brethren were thus forced to withdraw from Bohemia, and sought refuge in Poland. They were, however, permitted to remain in Moravia, where, indeed, they had their chief settlements, as also the administrative centre of their Church. The need of a legally secure position, such as the German Protestants had attained in 1555 by the 'Religious Peace' of Augsburg, led the Brethren—under the guidance of Blahoslav—and also the Utraquists, who in ever larger numbers had become Lutherans, to engage in prolonged ecclesiastical negotiations with Maximilian II. In the course of these negotiations, in 1575, the evangelical States adopted the *Confessio Bohemica*, in the framing of which the representa-

tives of the Brethren had taken part. But it was not till 1609, when the Emperor Rudolf II. issued an Imperial charter granting religious liberty to the adherents of that Confession, that the Brethren in Bohemia united with the evangelicals, stipulating, however, that their own constitution and order of worship should remain as before. In Moravia and Poland, on the other hand, they retained their existing Confession. Further simplification of this necessarily transitional state of affairs was prevented by the unfortunate issue of the Bohemian revolt in 1618, as, in consequence of the defeat of the evangelicals in the battle at the White Mountain, not only the Unity, but the entire evangelical Church in Bohemia and Moravia, was destroyed. Numbers of the defeated party fled to Hungary, Poland, and the neighbouring districts of Saxony; others remained where they were, became Catholics in external things, and, in hope of better days, tried to support one another secretly in the evangelical faith. But, as the Catholic reaction developed more and more vigorously in Moravia, many of their descendants migrated to Saxony about the beginning of the 18th cent., and there founded the settlement of Herrnhut. The Unity of the Brethren, which they reconstituted in alliance with Count Zinzendorf (see MORAVIANS), was joined by numerous exiles from Bohemia. The remnants of the Unity in Poland—their principal community was at Lissa, from which as a centre their bishop, John Amos Comenius (Comenius), developed his varied activities—also yielded to the ever-expanding power of Catholicism.

LITERATURE.—A. Gindely, *Gesch. der böhmischen Brüder*, 2 vols., Prague, 1857-58; E. de Schweinitz, *The History of the Church known as the Unitas Fratrum*, Bethlehem, Pa., 1835; J. E. Hutton, *A History of the Moravian Church*, 2 vols., London, 1909, bk. i. J. T. MÜLLER.

HUTCHINSONIANS.—1. Followers of John Hutchinson (1674-1737), in his reconciliation of science with the OT. Thomas Burnet had published geologic theories, relating them to Genesis; Woodward had followed with a *Natural History of the Earth*, identifying fossils as remains of living plants and animals, insisting on the earth's strata having been deposited from water, at the Noachian Deluge; and Samuel Clarke then had translated a treatise on Physics by a Cartesian, to pave the way for the study of Newton's *Principia*. Hutchinson was one of many correspondents with Woodward, and in his capacity as land-steward had great opportunities of augmenting Woodward's collection of fossils, ultimately bequeathed to Cambridge. Hutchinson hoped that Woodward intended to publish a book elucidating Genesis; and, when disappointed, he decided to do so himself, and so began the study of Hebrew. He followed Simon in discarding everything but the consonants, and wrote on the perfection of the Hebrew text when freed from Jewish forgeries. His first publication was an attack on the scientists named, entitled *Moses' Principia* (1724); a second part turned on Clarke and his doctrine of the Trinity, expounding a rival theory of the three natural agents—air or fire, light, spirit. He had now adopted Bampfield's view, that all useful sciences and profitable arts were implicit in the Bible, and he deduced the true doctrine of gravity from the cherubim, the true doctrine of the natural agents and the Trinity from Jachin and Boaz. Other topics dealt with were human physiology, the nature of body and soul, instinct. When, however, Hutchinson found Tindal arguing from the same premisses that Christianity is as old as the Creation, he changed front and stigmatized Natural Religion as the religion of Satan, claiming that the use of reason was recovered only by the data of Christianity.

His teachings attracted attention in educated circles; Lord Advocate Forbes adopted his principles at once. Parkhurst followed him in emphasizing the consonantal Hebrew text, as his Lexicon attests. George Horne for the same reason opposed Kennicott's scheme of collating Hebrew MSS. He also believed that Hutchinson had excelled Newton in his understanding of the physical causes moving the world, and he aided William Jones of Nayland in a reply to Clayton's Essay on Spirit. Jones twice elaborated a theory of the Trinity, and to the end of the century developed his physical teachings. No later adherent made any mark.

LITERATURE.—*Works*, complete ed. R. Spearman and J. Bate, 12 vols., London, 1878; *Abstract of these*, do. 1753; *Supplement*, with *Life*, ed. Spearman, do. 1765.

2. The name 'Hutchinsonians' is sometimes applied to the followers of Anne Hutchinson (1590-1643), in her pleas for experimental religion and freedom of conscience. Reaching Boston in 1634, she found the civil suffrage limited to church members, with an oligarchy of ministers and elders in power; most of the settlers were Puritans, so intolerant that they shipped back a few who desired to use the Prayer-Book. She herself, though an admirer of John Cotton, was not at first admitted to membership in his church, which also silenced all women members; she therefore began teaching in meetings of her own. These were soon attended by men, the most prominent being young Henry Vane, son of a Privy Councillor. The Company forbade the organization of new churches without the consent of the magistrates and of the elders in existing churches; the democrats replied by putting forward Mrs. Hutchinson's brother-in-law to be assistant to Cotton, and electing Vane governor (1636). She then attacked the oligarchy as being under a covenant of works, whereas she and Cotton and most of the Boston church were under a covenant of grace, enjoying the peculiar indwelling of the Spirit. This led to all the elders in the colony assembling and condemning 82 opinions which they attributed to her or derived from her teaching; these they afterwards published in England to justify themselves, labelling them Antinomian, Familist, and Libertine. Cotton recanted, and at the next elections (1637) Vane was defeated, and returned to wage a better fight in England for toleration. His voluminous and obscure religious works are indebted to Boehme as much as to Mrs. Hutchinson. Other sympathizers migrated to the Connecticut River, and discarded all religious tests for civil membership. She and other adherents were banished; they settled in what they re-named the Isle of Rhodes (now Rhode Island), where her follower William Coddington and her husband were the earliest rulers, and the island was soon famed as the home of religious liberty.

W. T. WHITLEY.

HYKSOS.—'Hyksos' is the title given to a race of invaders, apparently of Semitic origin, who conquered Egypt during the time of confusion and weak rule which followed the close of the XIIth and ended with the rise of the XVIIIth dynasty. The chief authority for the facts of the Hyksos conquest and domination is a fragment of the history of Manetho quoted by Josephus (*c. Apion*, i. 14). Its statements may be summarized as follows:

In the reign of a king named Timaos the gods were angry with Egypt, and there came up from the East a race of ignoble men who conquered the country without a battle. They treated the native population with great cruelty, burned the cities, and demolished the temples. Thereafter they made one Salatis their king, and he established a great fortified camp at a place called Avaris (Hêt-ûrt) on an arm of the Nile near Bubastis. Here he kept a garrison of 240,000 men. The Hyksos domina-

tion lasted for 511 years. Six kings are named—Salatis, 19 years; Beon, 44; Apakhnas, 36+; Apophis, 61; Iannas, 50+; Assis, 49+.¹ Eventually the kings of the Thebaid made insurrection against the oppressors, and under a king named Misragmouthis drove them into Avaris, and blockaded them there. Finally an arrangement was reached whereby the Hyksos were allowed to depart from Egypt into Syria, where they built the fortress called Jerusalem. They were called *Hyksos*, or 'Shepherd Kings,' because *Hyk* in the sacred language of Egypt signifies a 'king,' and *sos* in the vulgar dialect a 'shepherd.' Some say that they were Arabians.

This is history of a somewhat curious type, and it is difficult to say how much reliance is to be placed on it. However, it is certain from native records that there was such an invasion and domination. An inscription of Queen Hatshepsut, dating from only two generations after the expulsion of the invaders, says:

'I have restored that which was ruins,
I have raised up that which was unfinished,
Since the Asiatics were in the midst of Avaris of the North-land,

And the barbarians were in the midst of them,
Overthrowing that which had been made,
While they ruled in ignorance of Râ.'

The inscription of Aahmes, son of Abana, a naval officer of El-Kab under Aahmes I., mentions the prolonged siege of Avaris. Further, a folk-tale, preserved in the First Sallier Papyrus, records how one of the Hyksos kings, Apepa, desired to impose the worship of Sutekh, his god, upon king Seqenen-Râ of Thebes. He therefore sent a message to him complaining that his sleep at Tanis was broken by the plunging of the hippopotami in the sacred lake at Thebes, and requesting that the offending animals should be exterminated. If Seqenen-Râ could make no answer to this amazing request, he was to give up his own god and worship Sutekh. If, on the other hand, he did what Apepa desired, the latter would worship Amen-Râ. This narrative, which shows Apepa most barefacedly manufacturing a *casus belli*, is obviously a romance fabricated to account for the outbreak of war between the Hyksos and the princes of the Thebaid. The fact, however, of Hyksos dominance is manifest in the whole tone of the story.

As to the duration of the period of oppression there is no certainty. Manetho's six named kings account for 260 years, and he states that these were the first kings, leaving others unnamed to fill up the 511 years. Petrie accepts the estimate of Manetho, allowing a century for the period of invasion and gradual conquest—260 years of more or less stable rule under the named kings, and the remaining century and a half for the struggle ending in the expulsion of the invaders. Breasted, on the other hand, who, following Meyer, allows only 208 years for the dynasties from the XIIth to the XVIIIth, maintains that 100 years is ample for the whole Hyksos period. This seems a hard saying in face of the precise and not at all impossible figures given by Manetho

¹ For these names Syncellus (p. 104) and Africanus (*apud* Syncellus, p. 61) present the following variants: Silités or Saités; Baïon or Bnôn; Pakhnan; Aphôphis or Aphôbis; Setbôs; Kértôs; and Asêth. Africanus omits the last two names given by Josephus, and inserts after Apakhnas the kings Staân and Arkhlês, with reigns of 50 and 49 years respectively. For the same last two names Syncellus substitutes Sethôs (50 years), Kértôs (29 years), and Asêth (20 years). Budge (*Hist.* iii. 146, n. 1) plausibly suggests that the Silités of Josephus represents Heb. שִׁלְטָן, 'governor.'

for the reigns of his six kings. Material relics of the Hyksos kings are scanty, as was to be expected. Two Apepas can be identified, the first of whom has left an inscription relating to the dedication of pillars and doors at the temple of Bubastis, while the Rhind Mathematical Papyrus claims to have been written in the thirty-third year of his reign.

The second Apepa has left an altar, now at Cairo, dedicated as follows: 'He made it as his monument for his father Sutekh, Lord of Avaris, when Sutekh set all lands under the king's feet.' One or other of these Apepas may be the 'Apophis' of the Manethonian fragment. More important are the relics of Khyan, who may, perhaps, be identified with the 'Iannas' of the fragment. Traces of his rule have been found in both Upper and Lower Egypt, while a granite lion bearing his cartouche was found at Bagdad, and an alabastron with his name was discovered by Evans at Knossos. One of the titles used by Khyan upon his scarabs and cylinders is *ang adebu*, 'embracer of the lands.' These facts have inspired Breasted's imagination to the reconstruction of a vanished Hyksos empire, embracing all the territory from the Euphrates to the first cataract of the Nile, and governed during part of its history by a ruler of the Jacob tribes of Israel in the person of that Pharaoh whose scarabs give his name as Jacob-her or Jacob-el. The foundation seems rather slight for such a superstructure.

As to the name of the invaders, the first syllable is obviously the Egyptian *Heq*, 'ruler,' the second may conceivably be *Shasu*, which was the generic Egyptian title for the pastoral races of the Eastern deserts. Khyan names himself *Heq Setu*, 'chief of the deserts,' and perhaps the derivation may lie here. But, on the whole, Manetho's derivation seems to be not far astray. There is no portrait evidence existing as to their race-type, the sphinxes and other statues exhibiting a peculiar type of face which were formerly assigned to them being now considered to be older; but there is no reason to doubt the tradition that they were of Arabian, or at least of Semitic, origin. Their existing relics suggest that, while the beginning of their rule may have been marked by harshness and oppression, the tradition of their unbounded cruelty and destructiveness is exaggerated. As in so many other cases, the land conquered its conquerors, and the Apepas and Khyans became in all essentials Egyptian Pharaohs. Their influence upon the native Egyptian race was probably beneficial, and its results may be traced in the wider outlook and renewed vigour of the nation under the XVIIIth dynasty. In all probability the introduction of the horse and chariot as instruments of warfare was due to them, and may have been the chief cause of their easy conquest of the land.

LITERATURE.—W. M. Flinders Petrie, *A History of Egypt*, London, 1894-1905, i. 233 ff.; E. A. W. Budge, *A History of Egypt*, do. 1902, iii. 133 ff.; J. H. Breasted, *History of Egypt*, do. 1906, p. 211 ff.; G. Maspero, *The Struggle of the Nations*, Eng. tr., do. 1896, p. 51 ff.; *RP*, 1st ser., vols. vi. and viii., and 2nd ser., vol. ii., do. various dates; Josephus, *c. Apion.* i. 14; *FHG* ii. [1848] 566-572; H. Brugsch, *Histoire d'Égypte*, Leipzig, 1859. JAMES BAIRIE.
