8. **Washing of hands.**—(a) The obvious effect of water in removing dirt from the body, as well as the universal ideas regarding the sacredness of water or its being the seat of a spirit or divinity, suggested that other kinds of uncleanness—that of a tabu state, of guilt, and the like—might also be removed by washing. And, as the hands were the main parts of the body by which uncleanness through contact arose, or were a possible entry to the body for demons (as in the Hindu belief regarding *bhūts* ⁸), their ceremonial washing has everywhere had great importance. Indeed, with many peoples all washing of hands is more or less ceremonial.

Contact of the hands with any thing or person unclean or dangerous produces a tabu state, and no food must be touched with the hands while it lasts, because the uncleanness or contagion would pass over to the food, and so into the body. This is common in the lower culture, e.g. in Polynesia; and it is illustrated by a Yoruba story of a son who went to Hades to see his dead mother and would have touched her had she not forbidden him, saying that, if he did, the road to the upper world would be closed to him.⁹

Among the Greeks the danger of unwashed hands is illustrated by the story of Asterius, who, having approached the altar of Zeus with unclean hands, was struck dead; while no one could go beyond the *περιβαντήριον* until he had washed his hands.¹⁰ The Romans had a similar belief, and no one with hands stained with crime would touch sacred things. They must be washed first in a living stream.¹¹ The Jewish belief that to touch eye, nose, ear, etc.,

with unwashed hands was highly dangerous (these being the openings by which a demon might enter) also illustrates this.

In Babylonia, washing the hands, besides the rest of the body in pure spring water is specially mentioned as a symbolic ceremony for ridding one of the power of evil spirits.¹

(b) Ceremonial washing of hands takes place before religious or magical acts. It is frequently used before prayer, and this is best illustrated from Muhammadan usage. The Muslim must wash his hands before prayer or before touching the Qur'ān: 'When ye prepare yourselves for prayer, wash your faces and hands up to the elbows' (v. 8, lvi. 78). This washing is done three times—first the right, then the left hand and arm. When washing the right hand, he says these words: 'O my God, on the day of judgment, place the book of my actions in my right hand, and examine my account with favour'; and, while washing the left: 'Place not at the resurrection the book of my actions in my left hand.'² The Jews are also careful to wash their hands before prayer, the custom being deduced by the Rabbis from various passages in the OT, where there is no direct reference to the custom. The Hindu usage at the *Brahmā-Yajña* service may be referred to, though here there is rather an offering of water to the *Pitris*, that they may be refreshed and their hands washed. Water is taken in the right hand and poured over the straightened fingers, and at a later stage it is offered so as to pour over the side of the palm between the root of the thumb and forefinger, the 'father's space' (*Pitriūrtha*), and again so as to pour over the opposite side of the palm.³

(c) Washing of the hands before sacrifice is also a very wide-spread practice. In Egypt the ritual washing of the priests before offering sacrifice included the whole body, though stress was laid upon the hands. Hence the name of the priests—*ūbū*, 'the washed,' or *ūbū totūi*, 'the clean of both hands.' In heaven the gods washed their hands in the laver before the door in heaven; and this act was performed on their images.⁴ Similar customs prevailed in Babylonia, where the *barū* must wash and be ritually pure before approaching the gods. Here also this was reflected back upon the gods, who, as well as worshippers, must cleanse their hands before taking part in the sacrificial banquet.⁵

In Greek and Roman sacrificial ritual the purity of the hands by washing in lustral water was insisted on, and a vase of water for this purpose stood at the entrance of the temples.⁶ Among the Hebrews the ritual law is quite explicit regarding the custom of washing hands before sacrificing (cf. Ex 30¹⁹ 40³¹). The ecclesiastical usage of ablution of hands in the Christian Church before or during the celebration of the Eucharist may also be referred to in this connexion. It is ordered in the early liturgies and has remained a constant custom since.⁷

(d) Before many rites of a magical kind the washing of hands is also customary. In Greece at the *ἀμφιδρόμια* the midwives had to wash their hands before running round the fire with the infant.⁸ Before touching seeds at planting, women of the Lower Congo region must wash their hands lest the crop be destroyed.⁹ Among the Romans, at the

⁹ J. H. Weeks, *FL* xx. [1909] 311.

Lemuria, the paterfamilias had to wash his hands thrice in spring water as part of the ritual against the ghosts.¹ Among the Assyrians and Babylonians unwashed hands in magic rites were unlucky.² In modern folk-custom the practice has survived.³ A curious custom is that of washing the hands in the water of a river before crossing a ford. This is found among various savage tribes, and is already referred to by Hesiod.⁴ It may be regarded as a species of inoculation against the dangers of the river or the spirits dwelling in it.

(e) Washing the hands is also a recognized method of *carrying away evil* of all kinds. Thus in Assyria a spell runs: 'May evil be carried off with the washings of his hands!'⁵ Among the Hebrews and modern Jews the same idea is also found, and the hands must be washed after all 'unclean' bodily functions or after touching any one who is unclean, or to remove the contagion of death or murder (see, e.g., Lv 15¹¹, Dt 21⁶).⁶ Washing has also the effect of averting misfortune.⁷

Not only impure but sacred objects, i.e. objects which must be approached carefully, cause uncleanness. Thus a Jewish belief is that the hands must be washed after touching the Scriptures—the sacredness or danger cleaving to the hands being thus removed.⁸ See art. BIBLE, vol. ii, p. 571^a.

(f) Washing the hands, or clean hands, thus became a *sign of innocence*, meaning that one had thus washed off all possibility of guilt; and the custom gave rise to the metaphor of 'clean hands' as signifying innocence (cf. Ps 18²⁰ 24⁴, Mt 27²⁴). In Cornwall, washing the hands was used as a token of innocence with regard to any crime.⁹ Cf. the common phrase used with regard to responsibility towards another person, 'I wash my hands of you'; or the metaphor about a person's hands not being clean, as meaning his dishonesty, etc.

A curious superstition in Scotland, England, and Ireland was that a child's right arm and hand should be kept unchristened, so that it might strike a more deadly blow; or unwashed immediately after birth, so that its luck might not be washed away.¹⁰

9. **Veiling the hands.**—Probably because of possible danger from unclean hands they are sometimes veiled in the performance of ritual or as a token of respect. During the Roman sacrifices to Fides in the Capitol the flames' hands were wrapped, up to the fingers, in white.¹¹ A fillet was also worn on the right hand by the Eleusinian *mystæ*.¹² As a mark of respect, hands were veiled before a superior. Traces of this are found in early Christian art. St. Peter receives his mission, or the keys, with his hands covered with the skirt of his cloak; and martyrs hold their crowns of glory on veiled hands. In the Roman Catholic Church, when Cardinals approach the Pope to do homage or receive the hat, their hands are veiled with part of their cape.¹³ Among Muhammadans it is usual to cover the hands in presence of a person of higher rank or when making a visit.¹⁴

10. **Clapping the hands** is a method of calling a servant in the East.¹⁵ Hence it also passes into a method of inviting a god or a spirit.¹⁶ It is also a method of salutation, especially among African tribes, or of expressing joy; or it may be used as a rhythmic accompaniment of song or music.¹⁷

Grimm also mentions it as a powerful charm in enchantments,¹ while it is often used as a means of scaring off demons by noise,² as it was to frighten away serpents in the sacred cavern at the *Thesmophoria*.

LITERATURE.—There is no special work on the whole subject. See the works referred to throughout the article.

J. A. MACCULLOCH.

HANDICRAFT.—1. **Definition.**—The term 'handicraft' may be defined as the constructive adaptation by man to his needs of the material presented by the environment. It will thus include, on the one hand, the provision of implements, weapons, utensils, clothing, shelter, the preparation of food, and the like, but will exclude, on the other hand, activities such as those by which food and raw material are provided—gathering of fruits and roots, the processes of agriculture, hunting, fishing, etc.—as well as self-defence and war, and other activities in which, although manual dexterity and co-ordination of bodily powers are requisite, the result is either not material or, if it is, is not produced by a structural or formal modification. A simple adaptation, such as the use of stones as missiles by apes or by man, will not come within this definition, while it is doubtful whether the psychological processes which underlie the operation of nest-building, even in the higher apes, would justify the application of the term to this form of activity. The case of the orang which applied a piece of iron or other material as a lever and utilized strands of wire-netting, which it untwisted, as a saw to break out of captivity (*Times*, 4th Nov. 1912) may possibly be described as on the psychological threshold of handicraft.

2. **Implements of stone, bone, and shell.**—The earliest undoubted examples of the products of man's technical skill are the stone implements of the Pleistocene period. Whether the implements known as eoliths are actual specimens of man's early attempts to produce a tool to meet his requirements or are the results of natural forces is immaterial. It may be assumed that the earliest process of manufacture consisted of a rough chipping to increase the utility of a stone naturally suited in form to some particular purpose.

Implements as simple in form and showing in themselves as little signs of human workmanship as eoliths have been recorded among primitive races in modern times. The Seri Indians use stones which have undergone no process of preparation as hammers or as weapons in hand-to-hand fighting (W J McGee, 'The Seri Indians,' *17 RBEW*, pt. i. [1898] p. 9 ff.), while the Andaman Islanders use whetstones, chips, and flakes which have been split by simple pressure after heating in the fire (E. H. Man, 'On the Aboriginal Inhabitants of the Andaman Islands,' *JAI* xii. [1883] 380).

The implements of the river-drift gravels of Europe belong to a stage when man had already acquired considerable technical skill, while a marked increase in dexterity is shown in the smaller but more carefully formed, as well as more highly specialized, implements of the cave-dwellers. The favourable conditions of archaeological study in France and the employment of a detailed method of analysis and classification have made it possible to follow closely, in a series of known relations in time, this advance in skill, as well as in the process of specialization. The civilization of the Stone Ages in Europe thus offers material of the greatest value in tracing the gradual development of man's technical ability.

The Palæolithic Age has been divided into three stages—Lower, Middle, and Upper. In these stages the Mesvinian, Strepyan, Chellean, and Acheulean implements, so called from characteristic sites in France, belong to the Lower Palæolithic; Mousterian implements to the Middle; and Aignignacian, Solutrian, and Magdalenian to the Upper. Each group is still further subdivided by

¹ P. 1026 and note 1.

² Crooke, *PR* 2. 168.

French archaeologists. Through all the stages, from the simple flake of the Mesvinian gravels to the highly elaborate examples of the flint worker's art in the leaf-shaped implements of Solutré, there is a steady progression in specialization and adaptation to a particular purpose. In the Strepian stage the forms include coarsely flaked scrapers, knives, and the *boucher*, a pointed implement which has been described as 'not unlike in size and form two hands opposed palm to palm.' This implement—a natural form, a nodule of flint which has been worked, but not essentially modified—is still more characteristic of the Chellean stage, which also includes scrapers and a dagger form. In these implements the flaking was apparently produced by oblique blows with a pebble. The Chellean industry is of world-wide distribution, occurring in the river-gravels of France, England, and Belgium, in Italy, Spain, and Portugal, and throughout Africa, Arabia, Palestine, in the valleys of the Tigris and Euphrates, in India, and in some parts of Canada and the United States. In the Acheulean stage—a direct development of the Chellean—the chipping of the flint becomes finer, and the implements, especially the *boucher*, show a better edge. In the Mousterian age there is an increase in the variety of implements employed, as well as a marked improvement in the methods of workmanship. The *boucher* disappears, but its place is taken by the Levallois flake, a large implement with a rounded point, dressed on one side and then struck from the nodule with a single blow. Side-scrapers, end-scrapers, notched scrapers, and awls are characteristic of this period, in which man began to make use of caves for dwelling-places. In the Aurignacian stage of the Upper Palaeolithic period, the improvement in the working of flint continued. New types of implements were made, including curved pointed flakes with secondary chippings, carinated scrapers and gravers' tools to meet the requirements of artistic development, which now found expression in ivory and bone carvings and engravings. The distinguishing feature of implements of this period is the secondary flaking known as the Aurignacian retouch. At this time a new material was introduced; awls of bone and ivory, and other implements, such as spear-heads and rods of ivory, appear. The working of flint reached the highest stage of development in the Solutrian age. Primitive arrow-heads of the earliest phase were succeeded by the implements known as willow-leaf and laurel-leaf points—flat and very thin implements with remarkably delicate secondary flakings of great regularity, probably produced, not by blows as in the earlier types, but by pressure.

The Australian aborigines produced extremely delicately flaked spear-heads, latterly made of bottle glass, by means of pressure, the implement used being a gouge-shaped tool made of a bone from the hind leg of a sheep (H. Balfour, 'On the Method employed by the Natives of N.W. Australia in the Manufacture of Glass Spear-heads,' *Man*, iii. [1903] 65). The Fijians and the Eskimos also produced fine flaking by pressure with a bone. The Apaches, after breaking a boulder by means of a pebble set in a withy handle, wrought the implement into shape with a sperm-whale tooth; Torquemada describes the making of obsidian knives by pressure with wood, the flakes being split off a block held between the feet (see J. Evans, *Ancient Stone Implements of Great Britain*², p. 23).

The Magdalenian period witnesses a decline in skill in flint-working. The implements become less elaborate, and are often lacking in finish. This is due largely to the employment of bone and horn, which, being easier to work, allow greater diversity of form and consequently a wider application in use. The simple spear-point develops into the harpoon with one barb, and later with two or more; arrow-heads and spear-heads show great variety in basal form, to permit of different methods of attachment to the shaft. Spear-throwers of bone or ivory are used, as well as the

bâton de commandement, an implement conjectured, on Eskimo analogy, to be an arrow-straightener. Bone pins, needles, and bodkins found in large numbers suggest an increased elaboration in dress. The culture of this period is frequently compared with that of the Eskimos, especially in view of the use of bone implements by the latter for both hunting and domestic purposes.

In the Neolithic Age in Europe, the great variety in the forms of implements and the purposes for which they were employed bear witness to a profound change in the mode of life by which this period of human development is broadly distinguished from that which preceded it. Although the rude stone implements of the kitchen middens of Denmark and elsewhere argue a civilization and a technical skill certainly below that of the cave-dweller in the later Palaeolithic period, a knowledge of agriculture, the domestication of animals, weaving, and the use of clay vessels, for which evidence appears at a comparatively early stage in Neolithic civilization, demonstrate that a rapid multiplication of human needs was accompanied by a parallel increase in effective means to satisfy them. The characteristic industry of the period—the making of implements and weapons of stone—in essentials remains unaltered; progress is marked mainly by a greater variety in form and by specialization. An important development in technique, however,—the process of grinding and polishing—permitted the use of stones other than flint and chert.

In the earlier stages of the Palaeolithic period, it is not possible always to classify any given implement as a weapon or tool. The same uncertainty exists in the case of the neoliths. Some of the rough axe-like tools may be either unfinished weapons or implements possibly for agricultural purposes. Nor does the lack of finish argue an early origin. The mauls and hammer-stones which were used to shape the great blocks of stone at Stonehenge were of the roughest description, although this monument was erected at the beginning of the Bronze Age. Arrow-heads and spear-heads admit of no doubt as to their purpose. In the case of the former, the method of attachment can be followed, as it develops, from the form with a square butt, through the barbed form fitting into a notch, to the fully developed tang which was fastened to the shaft. The stone celt or axe, perhaps the most characteristic of all stone implements of the period, can also be followed through a sequence of forms, from the coarsely chipped and roughly shaped implement to the well-balanced weapon, carefully ground all over and brought to an edge, which exhibits the highest point of development in this branch of Neolithic technique.

The usual method of hafting the celt was not by fastening it to a handle with sennit sinew or other form of string, as is done by most modern primitive races among whom stone implements are, or recently have been, in use, but by fixing the celt in a transverse hole in the handle. The tendency to split the handle was ingeniously overcome by the peoples of the Swiss Lake Villages, who fitted into the handle a socket of horn which took the force of the blow. At a later stage, perforated axe-heads appear, into the hole of which the handle was fitted. In Great Britain this implement may be referred to the Bronze Age. The hole was bored by a cylindrical drill, or in some cases by a hollow tube, possibly of elder wood.

The greater skill in technique and the multiplication in form and uses of stone implements which took place in the Neolithic Age are only one phase of a general advance in culture. But in the case of these implements the limits of development were fixed by the nature of the material; and neither among modern primitive races nor in pre-historic times was the technique of the Scandinavian daggers or the translucent blades of the Egyptian knives surpassed.

The Australians, like many other primitive races, when first encountered by Europeans, were in the Stone Age. The uses to which they put their implements and weapons and the methods of manufacture they employed, serve to throw light on the general character of the culture of pre-historic Europe, as well as on special points where the purpose of a particular implement is not clearly deducible from its form and character.

One of their most useful implements, principally as a tool, rarely as a weapon, was the axe, which was the product of a long process of chipping with a lump of quartz and pecking with a rounded pebble, and then of grinding upon the nardoo mills, the stones used for grinding seeds. It was mounted in a twisted withy, either as an axe or as an adze, and fixed in position with porcupine-grass resin. As an axe it was used for notching trees for climbing, cutting open trees, catching the opossum or taking honey, taking off sheets of bark from trees, shaping wood for shields, and the like. As an adze it hollowed out wooden vessels. A knife set in a haft was used as a pick; fragments of stone set in a handle of gum made a saw; stone hammers were made of unflaked pebbles set in a handle; pounders were employed for breaking hard seeds; stone drills were sometimes, though rarely, employed; and all kinds of flakes were used as scrapers. The last-named implements were sometimes made of teeth, which also furnished knives and drills. The Australian native made a considerable use of shells. They were employed in cutting hair or bark, for making adzes, in cicatrization, in working the opossum skin, and as drills; a kind of spoke-shave of shell was used for slicing nuts or any other fruit which had to be cut thin. Shells were also used to make fish hooks.

Their implements of bone included awls made from the leg-bone of the kangaroo, a stiletto or needle used by the women to pierce skins or the edges of the bark which they sewed into canoes, and for piercing the septum of the nose for the reception of ornaments (N. W. Thomas, *Natives of Australia*, London, 1906, p. 48 ff.).

Adzes of both shell and stone were used in Melanesia, the area of distribution being well-defined in each case. Stone was used in the Solomon Islands (except Rennell and Bellona) and the New Hebrides. Shell was used by the Santa Cruz people, Torres Islanders, and Banks Islanders. For cutting threads, shaving, and fine carving, obsidian, chert, and shark's teeth were used (Codrington, *The Melanesians*, Oxford, 1891, p. 313 ff.).

3. Metal-working.—The introduction of a new material on the discovery of metals (probably in Asia Minor, or in Egypt, whence their use spread to the Mediterranean and the rest of Europe) was necessary to render possible further development in this department of human activities. It has been assumed that the use of metals was first discovered by the accidental inclusion of copper ore among the stones used to build up the primitive hearth. While this theory, on the ground of its strong probability, holds the field, it is generally conceded that, in localities where circumstances were favourable, the Bronze Age was preceded by a Chalcolithic Age in which native copper was employed very much in the same way as stone, and adapted to use by being hammered into the shape required. The Indians of Lake Superior, where native copper abounded, and possibly the early inhabitants of the Mediterranean area, passed through such a stage of development. That a Copper Age generally preceded the Bronze Age proper is a matter upon which it is more difficult to obtain conclusive evidence. Not only would copper implements be melted down for use in making bronze, but, in most regions where copper is found, it is not sufficiently pure to produce anything but a bronze without a special process. In Ireland, and again in the Mediterranean area, implements occur which are sufficiently pure to warrant their being called copper.

Apart from the link afforded by the Chalcolithic period where it occurs, the connexion between the civilization of the Neolithic and early Bronze Ages is sufficiently apparent in the form of the implements themselves, especially of the celt. The early metal celt, notwithstanding the greater refinement and economy made possible by the

qualities of the material, is practically identical in form with the stone celts. The development from the flat celt, based upon the stone form, can be followed in all its stages—through the flanged and stopped forms, in which the flanges were made to fit over the curved handle, to the socketed form into which the handle fitted, and to which it was fastened by a string passed through the ring of the celt. The same essential identity in form can be traced in knives, spear-heads, daggers, and other implements in which stone was superseded by bronze. By the end of the Bronze Age, the art of working metal had attained a comparatively high degree of excellence; gold and, more rarely, silver were employed for ornament, and the adaptability of bronze for purposes other than those of implements and weapons had been discovered. It is probable that iron was first worked in the region south-east of the Euxine. In Europe it was possibly in the first instance disseminated from the Balkan peninsula, as a costly, almost a precious, metal to be used sparingly, later as the staple material for a wide variety of articles. When its use became general, the art of metal-working in Europe, especially as shown in the bronze mirrors, articles and ornaments for personal use, horse trappings, etc., frequently enriched with beautiful combinations of coloured enamel, began to pass from the stage when it could be classed as a primitive industry and to take its place as an element in a higher plane of culture. In Africa the Iron Age probably began at a very early date, owing to the abundance of the raw material, but the metal is still produced among the natives by smelting in a primitive form of low blast furnace, such as must have been in use in pre-historic Europe, of which the product is practically a wrought iron. This primitive form of furnace, consisting of a shaft or trough of clay with holes for the introduction of the blast, is still found in India, Borneo, Japan, and, in Europe, in Catalonia and Finland.

Over the larger part of Africa the production of iron is of great importance. It is worked in the Upper Nile valley among the Nilotic tribes (the Ja-Luo being noted smiths), among the Bantu tribes of East Africa, and the negro tribes of West Africa, where the swords and knives, which show great diversity of form, are especially remarkable as examples of native workmanship. The Mashona and other Makalanga tribes have been noted from time immemorial as workers of iron; the Zulus, however, do not appear to have practised the art to any great degree. In the Shire Highlands at one time every village had its smelting-house, and smiths who made axes, spears, needles, arrow-heads, bracelets, anklets, hoes, two-edged and one-edged knives, and the like (A. Werner, *Natives of British Central Africa*, London, 1906, p. 201 ff.).

Before leaving the subject of metallurgy, reference should be made to the famous bronze castings of Benin. Casts, though of an inferior quality, are still made in this district, the *cire perdue* process being employed. Wax is modelled on a clay core and covered with a clay mould; when the mould is hard, the wax is melted and drained through a hole, and molten metal poured in (H. Balfour, 'Modern Brass-casting in West Africa,' *JRAI* xl. [1910] 525-528). The Malays use this method in making hollow vessels of copper and white metal (W. Rosenhain, 'Notes on Malay Metal-work,' *JAI* xxxi. [1901] 165 f.).

4. Basketry.—Basketry and the making of pottery are, psychologically considered, the two most important arts in early primitive handicraft, as they both involve a distinct creative act, not merely an adaptation, as in the case of the early stages of making a stone implement. Basket-work, including in the term plait-work and matting, fulfils many functions in primitive culture; it furnishes, next to the skins of animals, one of the most primitive forms of clothing, as, for instance, the plaited mats worn in the Caroline Islands; it provides the sails of the Polynesian and Melanesian canoes; it is used to form a shelter against wind and rain, as in the interlaced boughs of the temporary hut of the Australian hunter, and the wattle and daub huts used in the lake-villages of Glastonbury, and it provides vessels for the collection, storage, and cooking of food, as well as mats,

cushions, and other furniture of the house. In Somaliland and Abyssinia, where the pottery is of poor quality, baskets are used as milk-vessels. Basket-work, whether as a receptacle or as a wrapping, was largely used for mortuary purposes by the Indians of N. America and the ancient Peruvians. Bodies wrapped in matting of alfalfa grass stems have been found in excavations in Nubia (D. E. Derry, 'The Red Coloration on Ancient Bones from Nubia,' *Rep. Brit. Assoc., Dundee*, London, 1912, p. 618). A simple variety of basket of the plaited type is that common in the Pacific, which consists simply of a palm-leaf split down the middle, the midrib being coiled round to make the rim. The pinnules are then plaited together to make the body of the basket. The inhabitants of the Swiss lake-dwellings in the Neolithic and Bronze Ages were expert in the making of baskets—checkered, twined, and coiled. Specimens of coiled basketry have been found on the pre-historic site of el-Amrah, south of Abydos—so far the oldest to be discovered. Baskets of the same type are still found up the Nile.

In America basketry was of especial importance (cf. ART [American], vol. i. p. 827 f.).

While the vegetable kingdom supplied the Indians with the greater part of the material for making their baskets, they also drew upon the animal kingdom; sinew, skins of the smaller mammals, feathers, and split porcupine quills were employed. The texture of the basket-hottles and boiling-baskets, in which water was heated by throwing in hot stones, was almost sufficiently close in many instances to enable them to hold water, but gum or clay was used to give a waterproof lining. Among the Havasupai Indians of the Shoshonean stock baskets were rendered fireproof for cooking purposes by a lining of clay. One form of basket-work, made of narrow slats of wood, rods of hardwood, and twine, was used as armour on the Pacific coast of America, from the Tlingit coast as far south as the Hupa Indians of California. Captain Smith speaks of the Massawomekes of Chesapeake Bay as using similar armour. Wicker shields are used in many parts of Africa.

5. Pottery.—The art of the potter follows close upon that of the basket-maker in the development of culture. That precedence must be given to the latter in order of time, in most regions of the world, must be conceded from the fact that the earliest pottery forms follow closely those of basket-work, and in some regions the use of clay vessels for purposes of storing liquids or for cooking utensils would appear to have grown out of the devices employed for rendering basket-work more suitable for these purposes. A simple form of cooking-vessel in use among the Havasupai is a flat tray of basket-work, on which seeds, crickets, or pieces of meat were roasted by hot coals. The charring of the basket-work led to the employment of a clay lining. This was turned by the heat into a flat plate, which was, in its turn, used as a brazier. The origin of the parching pot of the Zuñis is indicated by the native name, which means a roasting tray of twigs. By the obvious process of raising the edges of the tray, whether of basket-work or clay, it becomes a bowl. It has been held that pottery generally was moulded in basketry in the eastern United States. It has also been suggested that the method of building up a pot by means of a clay coil is based upon the technique of coiled basket-work. It is possible, however, that in some cases the moulded forms of basket-work on early fragments of pottery both in America and elsewhere may be due to the use of this material to produce ornament by impression, or it may be derived in some cases from the common practice, which occurs, for instance, in the Andaman Islands, of covering the pottery with basket-work. The style of ornament of the pre-historic pottery of Europe, and especially the banded form, suggests a derivation from, or at least the strong influence of, a basket-work prototype, the appearance of regularity in the structure of which has been preserved by the con-

servative primitive mind by a corresponding regularity in ornament. Before the introduction of the potter's wheel, for which the earliest evidence has been found in de Morgan's excavations in Susa, and which appears in the Mediterranean in the Middle Minoan period of Crete, symmetry in form is usually obtained by moulding the pot on a base or in a shallow tray, which is frequently made of basket-work, as among the American Indians, in pre-dynastic Egypt, and in the Mediterranean in the Neolithic and early Bronze Ages. The Nicobarese women, who are noted for their skill in making pottery, employ a board on which is a ring of coco-nut leaves sewn together. In some cases the base of another pot was used, as in New Caledonia. In Papua, for the early stage of pot-manufacture, a gourd was used as a mould. The base was slowly turned as the pot was built up. The Kabyle woman uses her foot for this purpose, while squatting on the ground. The use of a slip in primitive pottery is not uncommon before the introduction of glazework. The Pueblos used a slip, usually white, made of carefully prepared clay, and it occurs in certain classes of pottery in the Mediterranean area. Ornament is usually effected by impression, for which the fingers, pieces of wood or basket-work, or stamps may be used, or by incision (the method commonly employed in the geometric designs of the European pottery of the late Neolithic and Bronze Ages in northern Europe and in the Mediterranean; where a slip is employed, the incision sometimes goes down to the fabric). Pigments may also be used. In Tunisia, in the hand-made fabrics the pigment is smeared on with the fingers. Most elaborate and artistic examples of painted ware are to be found in the Mediterranean Kamareos pottery, while, in a more primitive type, the Pueblo painted pottery shows some highly effective designs, the ornament being derived and adapted from the motives of textile prototypes.

Pottery might be hardened simply by placing it in the sun to dry, but various methods of firing were more commonly employed. The Choctaw of the Mississippi in the middle of the 16th cent. are said to have fired their pots by simply placing them in the middle of a fire and covering them with charcoal. The defects of this method, which produced a discoloration of the pottery, were utilized in the South-Western States to produce a black ware, the embers being raked off and fresh fuel added to the fire. A method more nearly approaching the use of a primitive kiln is found in the Nicobars, where the pots are placed mouth down over ashes, firewood, coco-nut shells, etc., and firewood is piled against a wheel-like object which rests on the upturned pot. See, further, ART (American), vol. i. p. 828 f.

6. Weaving.—Weaving is technically closely allied to basketry, especially the woven variety, the essential operation in each case being the intertwining of two sets of strands of material. Weaving is, however, differentiated from its technical relative by the employment of machinery—the loom—and still further by the character of the product, which is essentially flat. The primitive loom consists of a cross-bar fixed on poles, which are usually, but not always, upright; or laid across convenient boughs of a tree. The warp, long strands of the material to be woven, is fixed upon the cross-bar, upon which the cloth is wound as the work progresses. The women of Bahah in Palestine use a loom of the rudest type, consisting merely of a stout stick at either end of the warp, which is stretched on the ground. The threads are passed through with the hand and pressed back with a wooden comb. The Ibans, who alone of the pagan tribes of Borneo attain any great

degree of proficiency in weaving, as the majority of those tribes use bark-cloth, employ a simple form of horizontal loom, on which the ends of the warp are fastened to a light cane. They are kept taut by a string which is fastened to the cane and passed round the body of the weaver as she sits on the ground (Hose-McDougall, *Pagan Tribes of Borneo*, London, 1912, i. 223). More usually the warp is kept in position by stone or clay weights.

The large number of stone weights and of spindle whorls found in Britain and other parts of Europe with remains of Neolithic or Bronze Age date shows the importance of the industry and the extent to which it was practised in pre-historic times. The place of the weights may be taken by a lower cross-beam. When this is used, the weaving usually proceeds from the bottom, and the cloth as it is made is rolled on the lower beam. The weft is passed between the threads of the warp by means of a shuttle. In a still more highly developed form of loom, a bar fastened below the upper cross-beam to the threads of the warp is used to raise or depress alternate threads, the shuttle being thrown or passed through the aperture thus made. A stick is used to push up the weft and secure the proper consistency of the fabric.

In the simple form of weaving, the weft is passed over and under the threads of the warp alternately, but variety in the pattern may be introduced by varying the number of threads over or under which the weft is passed. Further variation may be introduced by the use of different coloured threads. In the manufacture of the silk sarong at Sitiawan in Perak the pattern is produced by binding a number of threads, which are then dyed. After dyeing, the binding, which has preserved the original colour of the material, is removed (L. Wray, 'Notes on Dyeing and Weaving as practised at Sitiawan in Perak,' *JAI* xxvii. [1902] 153-155). The same method is followed by the Ithans in Borneo (Hose-McDougall, i. 221 f.).

Considerable skill in weaving was attained by the ancient tribes of both Mexico and Peru, while among the modern tribes of America, Pueblos and others, weaving formed one of the important industries (see ART [American], vol. i. p. 827).

The Navahos, who with the Apaches were an intrusion into the Pueblo country, apparently had not practised weaving before the conquest, and their earliest attempts at the industry are said to have been made with threads unravelled from Spanish cloth. No specialized form of spindle was used, the weft being fastened to any conveniently shaped piece of wood. The loom is not found in Polynesia or Melanesia except at Santa Cruz. A primitive form of loom was used by the Maoris to spin flax.

7. String, thread, etc.—Forms of thread were made from the fibres of the bark of such trees as the cotton-wood, the willow, the linden, and the cedar. Hemp was used in the United States and Canada, being treated by maceration to remove the rough fibres. Further south, in Central and South America, cotton was picked from the seed. Among other materials employed was the fur of animals, such as goats and rabbits; the latter was used with cotton in Mexico, where cotton was also used in conjunction with feathers. Maguey fibre was another material frequently employed.

Various devices were employed for the twisting process. A primitive method is to roll the material on the thigh with the flat of the hand. The Eskimos and the Zuni employed two pieces of wood, bone, or ivory, one revolving on the other, the fibre being attached to the revolving part. Raw-hide rope and stout twine among the Eskimos are made with a fly-wheel arrangement. In Palestine at Bakah a primitive form of spinning is recorded, in which goat's hair was spun by fastening the strands to a stone which was turned until they were sufficiently twisted, when the yarn was wound on the stone and the process repeated. In Polynesia sennit was braided from coco-nut fibre. In the most primitive form of thread- or string-making the material was usually held in the left hand without a distaff, while the operator spun with the right hand; before the introduction of the spindle, the material was either twisted by hand, usually on the thigh, as in New Britain and Samoa, or with the assistance of the whorl. In

Australia hair twine was spun with a spindle, but vegetable twine was twisted on the thigh (Thomas, p. 56 f.). The use of the primitive spindle of the Navahos, without a hook at the top, has already been described (§ 6). There is considerable variation in the manner in which the distaff is used among primitive peoples. The Hopis twirl the distaff on the leg with the flat of the hand; the Peruvians and ancient Egyptians threw it in the air.

8. Cloth other than textile, and preparation of skins.—Weaving, owing to climatic and material conditions, was the method of cloth-making practised by the peoples from whose culture modern civilization has developed. There are, however, two other industries whereby man has provided himself with clothing, which in primitive culture are of almost equal importance. These are the preparation of bark-cloth and of skins.

The use of bark-cloth, which is obtained by beating out the bark of certain trees, for clothing is of wide distribution. It is found in Mexico, in Central America, in S. America as far as the tropic of Capricorn, throughout equatorial Africa, and throughout the Southern Seas, where, speaking generally, the loom is not in use. In the Australasian area it is stamped with patterns, while the Andean tribes decorate the costumes which they make from this cloth with shells, seeds, and feathers. The bark-cloth of Hawaii was extremely thin and delicate—an almost lace-like fabric. *Tapa*-cloth is manufactured by beating the bark on the smooth top of a hard log with a variety of hand clubs or hammers having criss-cross faces, with the assistance of water or some mucilaginous fluid. Practically the process is one of felting. Polynesia produced better *tapa*-cloth than any other region in the world.

The use of skins for clothing is naturally of greater importance in high latitudes; but, owing to the many uses to which dressed hide may be put, skill in its preparation is by no means confined to the cold regions of the world. The skin of an animal—usually a goat, with its natural shape preserved—is a primitive, and in warmer climates at the present day still a common, receptacle for carrying water or other liquid. The Australians used the skin of the opossum for this purpose. Among other uses to which skin or leather was put was the making of skin boats by the Eskimos, of shields, bags, and *parfleches*, or meal-bags, by the North American Indians, while the skin of the buffalo or bison furnished the material for the wigwam or tipi as well as the well-known buffalo robe. In Patagonia the tents were made of the skin of the guanaco. Hides are used for the walls of huts among the pastoral tribes of the Upper Nile.

The skins of the thinner-skinned animals and of birds were used chiefly for ornament, but the Eskimo women made close-fitting under-coats of bird-skins, sewn together with sinew, with the feathers next the person; the skins were prepared by chewing. The skins of the smaller mammals—squirrels, foxes, and the like—were simply dried before use. A slightly more elaborate process was used for the hides of larger mammals, such as the moose, seal, elk, ox, or bear, which were to be worn with the fur adhering to the skin. The inside skin or dermis was removed with special tools, a piece of walrus ivory or an antler being used to remove the fat, and a stone being used to plane down the skin to an equal thickness. The shape of certain classes of Palæolithic flint implements justifies the assumption that they were scrapers used for the same purpose. The American Indian women used three tools—a stone knife to cut away the flesh, a hoe-shaped scraper to cut away the skin, and a hoe- or chisel-like tool with serrated edge to roughen up the inner side of the skin and render it flexible. The skins were dried on frames, and sometimes treated with a solution made from the brains of the animal.

A third process employed by the Indians, but not found among the Eskimos, is the preparation of a material analogous to buckskin or chamois

leather, which involves the removal of the hair after gradual putrefaction by heating, the dressing of the skin with a preparation of brains, and a careful manipulation and softening of the skin while drying. The Athapascan Indians were especially adept in the employment of this process.

In utilizing the skins in the making of garments, both Eskimos and Indians displayed great skill. The difficulty experienced by the furrier in cutting the skin without damaging the hair was cleverly overcome, the implement used being the woman's knife, a chert- or flint-blade, crescent-shaped on the outer edge. Among the garments made by the Eskimos may be mentioned the shoes with soles of raw hide and uppers of dressed skin, the hooded upper and the under coat, breeches, deer-skin stockings, and outer boots reaching above the knee, for the men, and for the women two frocks, two pairs of deerskin boots, of which the upper is worn with the hair outside and is shod with soles of sealskin. Much care is shown in cutting, to secure that pretty fur and fringes of hair should show as an ornament at the wrists, shoulders, and borders, sometimes varied with inserted material. Tacitus (*Germ.* 17) records that the German women ornamented their skin dress in much the same manner. The buckskin garments of the North American Indians, and especially the Algonquins, were ornamented with fringes, wampum beads, and paint. Among the Mandans the deerskin tunic was strung with scalp-locks, beads, and ermine, and the deerskin leggings were ornamented with porcupine quills and fringed with scalps.

9. Wood-working.—Our knowledge of the stage of culture attained by the peoples of the Stone Age in Europe—even of the Neolithic period—outside certain well-defined limits, is largely based upon analogies afforded by modern primitive peoples who are, or were at the time they were first described, themselves in the Stone Age. It is only in a few instances, where circumstances were peculiarly favourable, that any relic has survived which was composed of any material less durable than stone, ivory, bone, or pottery. No evidence has survived of the skill in the use of wood possessed by Palæolithic man; but the now extinct Tasmanians attained a considerable degree of dexterity in working this material with stone implements identical in character with some of the earlier forms of palæoliths.

The Tasmanians, who habitually went naked, except in winter, when kangaroo skins were sometimes worn, had as their only shelter a rude screen made by fixing strips of bark to wooden stakes; their weapons both for the chase and for war were made of wood; the spear was a product of much skill and care, the shaft, if not perfectly straight, being heated by fire, and then straightened by the aid of the teeth; it was then scraped to a point, and, after the bark had been removed with a stone scraper, it was hardened in the fire. The notched stone scrapers of Palæolithic and Neolithic times argue the use of similar weapons.

The Australians, whose culture has been compared with that of the Palæolithic Mousterian period, show a decided advance on the Tasmanians; their spear is frequently provided with barbs, and the head is a separate piece of hard wood or stone; they do not possess the bow, but use a throwing stick for hurling the spear; their best-known weapon is the boomerang, returning and non-returning, the former being a striking example of mechanical and technical skill. Their stone axes, adzes, and knives were provided with wooden handles. They used two kinds of wooden shields, one to ward off spears and one to ward off the blows of clubs. Bone was used for awls and gouges. The Bushmen also possessed a Stone Age culture of a primitive type comparable with the Palæolithic culture of Europe. They used the bow; their arrows were made of reeds unfeathered, bound with sinew, and tipped with a splinter of an ostrich or giraffe leg-bone which had been shaped with a stone spoke-shave. This bone was sharpened to form the head, or a separate flake of quartz or other hard stone was used.

Where the pottery is poor, as in Abyssinia and amongst the pastoral tribes of E. Africa, or non-existent, as in Melanesia and Polynesia, wood or horn is usually employed for vessels for carrying liquids. In S.E. Asia the internodes of the bamboos are used as water-vessels; in Melanesia and Polynesia gourds or hambo or wooden vessels are used as a substitute for pottery.

10. House-building.—The most primitive form of artificial shelter is the screen of boughs resting against stakes, such as is used by the Tasmanians and the screen of interlaced boughs used by the Australian hunter as a temporary shelter for the night, already mentioned. The Neolithic pit-dwellings of Britain were holes in the ground, with a central pole to which a roof of boughs stretched from the edge of the pit. Californian tribes lived in dwellings made on the same plan. The Bushmen's hut consisted of a few boughs brought together and covered with mats of reed sewn together at the edges. In the Egyptian Sudan, Abyssinia, and Somaliland, the hut is circular and made of hide or mats; among the more settled peoples, of branches or clay. The hut of the Bantus is a durable structure, usually circular, and conical or beehive-shaped. In Uganda, substantial huts are made by fastening screens of reeds, carefully sewn together, to a circle of posts, the whole being thatched with reeds. In the case of the king's house the walls are built by peasants, but the roof is built by professional thatchers. Among the forest peoples of Africa, the house is a rectangular structure built of poles with a thatched roof with a pitch. The rectangular house with mud walls, a composite structure, is found among the Wa-Nyamwezi and a few other related tribes of E. Africa. The habitations of the Indians of America exhibit all stages of development—from the simplest form of windbreak used by the Hopis for temporary purposes, through the tipi of hide and the adobe building, to the massive stone architecture of ancient Mexico and Peru. Where manufactured wood was used, considerable skill and ingenuity in its preparation were displayed. The Iroquois used posts covered with bark for the three kinds of houses they inhabited, including the long-house, which was sometimes as much as a hundred feet long, and was divided internally into compartments. On the N.W. coast of America, cedar slabs were employed in house-building. These were split out of the centre of wide trees and fastened upright in a frame about ten feet high, on which rested split bark or boards laid on rafters, supported in the middle by long beams running the length of the house, and themselves supported on four posts with totemic emblems. The Iroquois long-house finds a parallel in the communal house of New Guinea and the club-house of Melanesia (which are not, however, divided into compartments, though each family group or, in the latter case, individual, has a separate hearth), and the houses of the Kenyahs, Kayans, and Ibans of Borneo. The Kayan and Kenyah houses are divided into compartments—one for each family. Considerable architectural skill is required in their construction; some of them are four hundred yards long; they are raised on piles, and a verandah runs down the whole of one side. Probably the best-known examples of pile-dwellings are those of the Swiss Lakes, of the Neolithic and Bronze Ages, and the pile-dwellings of New Guinea, erected on platforms built out into the water. Pile-dwellings also occur in Africa—in the Nile Valley among the Nuer, on Lake Nyassa, among the Ba Kuena, and on the West coast—and in various parts of North and South America.

The construction of the house in Samoa is a matter of considerable skill. It is sometimes thirty feet in diameter, and is supported in the middle by three or four posts. The sides are composed of a number of small posts four or five feet apart; the rafters are adzed from bread-fruit or other trees, the space between being filled with small ribs, ingeniously joined until the requisite length is attained. The rafters at the end of the house are circular, the adzing and joining of these being considered the supreme test of a workman's ability. The thatch is made from the leaves of the sugar-cane turned over small reeds.

Before leaving the subject of building, the Pueblo stone dwellings of the S.E. United States may be mentioned. They

consist of a number of rooms built adjoining or on top of one another. One or two single-room houses are first built, and then additions are made from time to time horizontally and vertically step-fashion, the lower series projecting before the upper, till the pile grows to a height of three or four stories. The entrance of the lowest story is not from the ground, but from the roof, through a hatchway, while the upper houses or rooms are entered from the roofs of the lower. The walls are of stons laid in adobe mortar, beams of small tree-trunks forming the basis of the roof.

11. Rafts, canoes, boats.—Among the most primitive means of conveyance by water is the raft made of a hurdle of reeds or papyrus (used on the Nile), or made of the leaf-stalks of the ambatch-tree (Lake Nyanza). Similar rafts are used in parts of Melanesia. The Tasmanians were not acquainted with either boats or canoes, but used as a substitute a kind of half-float, half-boat, made of the bark of various kinds of trees, but usually some species of eucalyptus made up into three cigar-like rolls. It was about nine feet in length and three feet broad in the middle, tapering to each end (H. Ling Roth, *Aborigines of Tasmania*², London, 1899, p. 154 ff.) The *balsa* of the Seri Indians (California) closely resembled the Tasmanian raft, but was of greater dimensions, sometimes as much as thirty feet in length, and was made of reeds (W J McGee, *17 REBEW*, pt. i. p. 215* ff.). In Australia, where navigation was but little known, the means of conveyance were of the frailest description. The simplest form of raft used was a single log paddled by the legs of a man sitting astride; a stage only slightly more advanced was the raft of several logs. A raft-like canoe of bark, resembling the Tasmanian raft, is recorded from Adelaide River. The commonest form of canoe was a sheet of bark, carefully removed from the tree and shaped over the fire, with the ends sewn together and caulked with mud. The usual length was ten or twelve feet. The canoe of sewn bark was also in use—two, three, seven, or even more pieces of bark being used. The gunwale was strengthened by a mangrove pole, and the body kept distended by cross pieces and ribs. The dug-out canoe, which in most parts of the world is a characteristic form of the primitive boat, was also found in North Queensland, and at Port Essington an outrigger was employed. At Cape York the double canoe was used, in length some fifty feet, and propelled with both paddles and sails. While the outrigger canoe is clearly an introduction from New Guinea, it has also been suggested that the sewn bark-canoe may be of Melanesian origin (Thomas, 83 ff.). The commonest form of canoe in the Melanesian area is the dug-out with the single outrigger. In Fiji, New Caledonia, and New Guinea, large double canoes propelled by sails were also found. In parts of the Solomon Isles finely made plank-built canoes occur. What seems to be a stage in the development of the plank-built canoe occurs in Borneo, where the freeboard of a Kayan dug-out is increased by planks along the gunwale (Hose-McDougall, 1. 201). The Polynesians, who were born navigators, carried the art of canoe-making to a high degree of excellence, especially in Hawaii and in New Zealand. In Tahiti, where there were regular war-fleets, the canoes were both single and double, with an elevated prow and stern, the stern-post being sometimes as much as eighteen feet high, and ornamented with the carved figures of the gods. The elaborately carved prow- and stern-posts are characteristic throughout this region.

The Tahitian war-canoes were capable of carrying fifty fighting men. The Tahitian coasting canoe was a dug-out with a gunwale sewn on with sennit. The large double canoes were built up from the keel, the planks being carefully adzed and then polished with coral and sewn together. Religious ceremonies were performed when the keel was laid down and when the canoe was launched. In Hawaii a special deity presided over the builders of canoes. In New Zealand, canoes sixty or eighty feet long were built of huge planks cut from

the solid tree and lashed together. The figure-heads and stern-posts were painted as well as elaborately carved. Sails of rushes were used, but not outriggers.

In the Melanesian canoes various *tindalo* charms were hung up at the stern to secure calm seas and prosperous voyages. The important canoes had names, and rejoicings followed their completion. A human life was required for their inauguration. In the Eastern Solomon Islands, if no life was taken on the first voyage, arrangements were made with a neighbouring chief that a victim should be forthcoming. Further west, captives were kept with a view to taking their heads when the canoes were finished (Codrington, 290 ff.).

12. Specialization.—An important factor in the development of an industry is the tendency towards specialization. This tendency appears at an early stage in human culture, mainly in three forms: specialization of locality, specialization of sex, and specialization of workers as a class.

The localization of an industry may arise from a variety of causes, but usually is to be attributed to a plentiful or peculiarly well-adapted supply of material in a given locality. In the Palæolithic period in Europe flint implements were imported to the Channel Islands, for instance, probably from the adjacent French mainland, owing to local scarcity of suitable material. The large number of Neolithic implements of marked characteristics found at Pressigny in France, where the flint is specially suitable for making flakes of large size, suggests a localized industry, while both at Cissbury and Grime's Graves in England, where flint was mined, it is evident that there was a factory, from which partially manufactured implements were probably exported to localities which possessed either no local flint supplies or supplies of an inferior quality. Spiennes near Mons, and Caddington and Stoke Newington in England, may be mentioned among a number of sites where the character of the finds has suggested that they are the workshops of the craftsmen of the Stone Age.

In the Bronze Age, the distribution of material had a much less marked effect in promoting local efficiency in manufacture. In the earlier stages, it is true, favourable circumstances, *e.g.* an easily accessible supply of native copper, such as occurred in Egypt, Cyprus, and Western Asia, would determine the relative date of its utilization, and give these localities an advantage in experience. But the rapid advance in the civilization of southern Europe and the improvement in transport led to the exploitation of copper- and tin-producing localities, such as Cornwall and Spain, and the transport of the ores from these districts to the place of manufacture. The same course of development occurred in the Iron Age, where favourable circumstances for a time produced an early localized iron culture, of which evidence is found at Hallstatt.

Modern primitive races also afford examples of localized industries. The Nicobar Islands, for instance, are noted for their manufacture of clay pots. In Melanesia, canoe building was often the special work of certain towns because suitable timber was found near; other towns were celebrated for their fish-traps; the Samoans were famous for their mats (Brown, *Melanesians and Polynesians*, London, 1910, pp. 300 f., 304).

Owing to various causes—natural, economic, and religious—an early form of specialization in industry has been determined on sexual lines: *i.e.* certain spheres of activity have been customarily assigned to each sex. To man has fallen the provision of animal food, the care of cattle, the fashioning of weapons and most implements from stone and metal. Women, on the other hand, have been responsible for most of the useful arts in their early stages. The making of baskets, pottery, spinning, weaving, the preparation of skins, the making of clothes from cloth and skin, and the preparation of food, including the grind-

ing of corn, are among woman's duties, while agriculture was and still is among primitive races largely or exclusively woman's work, especially in Africa. On that continent, however, spinning, weaving, sewing, and the making of clothes not infrequently are the duty of the man (see E. Torday, 'The Bushongo of the Congo Free State,' *Rep. Brit. Assoc., Sheffield*, London, 1910, p. 735; and A. Werner, 195). Among the Indians of N. America, the provision of shelter, whether in the form of the skin tipi or the adobe buildings of the South-West, falls to the woman. In Borneo, among the pagan tribes, while the men build the house, the women assist in providing and bringing up the material.

In the case of most of the useful arts, it may be said that in the early stages they fall within the province of woman, and pass to man only when the machinery, even in such rudimentary form as the potter's wheel, is introduced. In Tunisia, in the country, the pottery, which is hand-made, is manufactured by women; in the towns, where wheel-made pottery is in use, it is made by men (Bertholon-Myres, 'Note on the Modern Pot Fabrics of Tunisia,' *Man*, iii. [1903] 86).

In the third form of specialization—that of manufacture by a family, class, or caste—religious and social influences predominate. Although no system of industrial organization so highly developed throughout as that of India is found among primitive races, something of an analogous character on a smaller scale is not uncommon. It is found in Polynesia, where the making of canoes was confined to a particular family. In Tikopia and Tonga, canoe-making was hereditary in certain families. In Tahiti the building of double canoes was confined to a privileged class attached to the household of the king; in Hawaii, to members of the royal family. In N. America, in many tribes only a particular class was allowed to make stone implements (Schoolcraft, *Indian Tribes*, Philad. 1853-57, iii. 81). In Tibet, occupations are hereditary. Among the Masai, to whom, as a tribe living by raiding, weapons were of supreme importance, but who held manual labour to be degrading, the smith's work was done by a servile tribe, the Elgunos.

A curious result followed from the practice of specialization in making canoes. In the Torres Islands the canoe-makers died out, with the consequence that the people were reduced to using catamarans of bamboo (Codrington, 293). It has been suggested that the present absence of pottery in Polynesia and in Melanesia, except in New Caledonia and Espritu Santo, and to the north of these islands in Shortlands, Bougainville, and Buka, and again after an interval in New Guinea, and to the west in Fiji, is due to the dying-out of the people or caste who made the pottery of which remains have been found in Malicolo and Pentecost, Lepers Island, and Ambrym (W. H. R. Rivers, 'The Disappearance of Useful Arts,' in *Festskrift tillägnad Edvard Westermarck*, Helsingfors, 1912, pp. 109-130) The art of making stone adzes disappeared in Woodlark Island in like manner, through the dying out of skilled craftsmen (Seligmann-Strong, 'Anthropological Investigations in British New Guinea,' *Geog. Journ.*, 1906, p. 247).

An interesting example of primitive industrial organization existed in Samoa, where the trades of boat- and house-building, tattooing, etc., though not strictly hereditary, were carried on for generations by certain families, who thus acquired prestige. The trade was, however, open to any man who cared to attach himself to any craftsman until he had acquired sufficient skill to begin work on his own account. Each particular trade had its presiding god, and was governed by well-known regulations. The times of payment at different stages of the work were prescribed. In the case of building a house, a mat was presented to the master-builder, and its acceptance signified agreement to do the work. The members of the family for whom the house was being built did the unskilled labour, such as

falling trees, carting them from the bush, and the like. They also had to supply the carpenters' food, and these absented themselves from work if it was insufficient or of inferior quality. As the house progressed, payment was made for certain definite portions of the work, the principal payment being made when the two sides and one of the rounded ends were finished. It was considered a great honour to be lavish in payment. If the builders were dissatisfied with the payment, they left the work unfinished, and no other builder would complete it. If any one did, he was visited with severe punishment at the hands of other members of the craft. The regulations in trades other than building were practically the same (G. Brown, p. 305 ff.).

LITERATURE.—J. Evans, *Ancient Stone Implements of Great Britain*, London, 1897; W. J. Sollas, *Ancient Hunters and their Modern Representatives*, do. 1911; W. HANGING.—See CRIMES AND PUNISHMENTS.

ḤANĪFA.—See LAW (Muhammadan).

HAOMA.—1. Derivation of the word.—The word *haoma* (Skr. *soma*, Pahl. and Pers. *hom*) comes from an old Aryan root *hu* = Skr. *su*, 'to pound,' 'to squeeze.' *Havana*, the utensil in which the twigs of the *haoma* plant are pounded, *havan*, the *gāh*, or the part of the day when this plant is pounded, and *havanāna*, the priest who pounds it, come from the same root.

2. *Haoma* in the Avesta.—In the Avesta we meet with four *Haomas*:—(1) *Haoma*, whom for convenience' sake we may call *Haoma* the prophet. Chs. 9, 10, and 11 of the *Yasna* speak of him as well as of the plant *haoma* discovered by him. Further allusions are found in *Ys*. lvii. (19 and 20) and *Yashts* x. 88-90 and *Ashi* xvii. 5.—(2) *Haoma*, the plant; see esp. chs. 9, 10, and 11 of the *Yasna*. (3) *Haoma*, who may be called *Haoma* the hero (*Ys*. xi. 7; *Yt*. ix. 17, xvii. 37, 38).—(4) *Haoma Khvarenangha* (*Yt*. xiii. 116). In the *Fravardīn Yasht* we have a long list of the departed worthies of ancient Irān who had rendered some service to the community. The group in which *Haoma Khvarenangha* is mentioned seems to be a list of the names of some of the immediate successors of Zoroaster. It appears, therefore, that this *Haoma Khvarenangha*, whose *fravashī* is invoked, was a great man of Irān, who had done some good deeds that commemorated his name.

These four different *Haomas* have one or more special names in the Avesta. *Haoma* the prophet is called *Haoma Dūraosha*. The plant *haoma* is spoken of as *haoma zairi* (e.g. *Ys*. ix. 17, 30, 32). *Haoma* the hero is known as *Haoma Frāshmi* (so repeatedly in the *Yashts*). The fourth *Haoma*, as we have said above, is named *Haoma Khvarenangha*.

Haoma the prophet is called *Frāshmi* as well as *Dūraosha*. The *Haoma Frāshmi* of the *Gōsh* and *Ashi Yashts* is quite different from the *Haoma Frāshmi* of the *Yasna* and of *Yashts* x. and xi. The reason why these two *Haomas*, who lived at different times—one in the time of the Peshdādian dynasty, and the other in that of the Kaiānian—are called *Frāshmi* seems to be that they both belonged to the same family stock.

Just as *Haoma* the prophet had, besides his special designation of *Dūraosha*, that of *Frāshmi*, so *haoma* the plant had, besides the special appellation of *zairi*, also that of *dūraosha* and *frāshmi* (*Ys*. x. 21, xlii. 5). It was called *zairi*, on account of its yellow or gold-like colour. The other appellations were due to the fact of its being discovered by *Haoma Dūraosha*, who was also known as *Haoma Frāshmi*.

3. *Haoma* the prophet.—It appears from the Avesta that there lived in ancient Irān a pious man named *Haoma*. He belonged to the early

times of the Peshdadian dynasty, before the time of Vivanghant (*Vivasvat* of the Vedas), the father of Yima (*Yama* of the Vedas). He was a very learned man (*vaēdhyā-paiti*),¹ versed in the old religious literature. He had passed a good deal of his time in divine meditation on the Hukairya peak of the lonely mountains of the Elburz.² Before Zoroaster, he was the first man or prophet to proclaim to the world the Mazdayasnian religion.³ As Zoroaster had his own religious compositions, so had Haoma.⁴ He had his Gāthas⁵ (*imāosē tē haoma gāthāo*), and had as an opponent one Keresāni.⁶

It was this Haoma who gave his name to the plant, which he seems to have discovered, and to the Haoma ceremony, which he is said to have introduced. According to *Yasht* x.,⁷ he was the first man who produced the juice in a mortar (*hāvana*) on the Elburz mountain. It appears that, while absorbed in deep divine meditation in his retreat in the mountains, he discovered this plant growing on the heights, and found it to be nutritious, health-giving, and invigorating. He introduced it to the world as such; but, in order to make it doubly efficacious, he instituted a form of ritual, designed to absorb the mind of the people in holy and religious thoughts. A plant, in itself health-giving and vigorous, when partaken of under a partial inspiration of divine thoughts, was likely to be beneficial to the mind as well as to the body.

4. **The Haoma plant.**—*Haoma* is a medicinal plant which grows in Persia and in Afghanistan. It is a species of *Ephedra* (Nat. Ord. *Gnetaceæ*).

(1) *The Avestan description of the plant.*—Mountains and mountain-valleys are mentioned as places where the plant grows luxuriantly. In some passages, Mount Elburz (called in the Avesta *Hara Berezaiti*) is specially mentioned as its habitat. But it must be borne in mind that the name Elburz not only denoted the present Mount Elburz, a peak of the Caucasus, but was applied to the whole range of mountains extending from the Hindu Kush in the East to the Caucasus in the West. The *haoma* is described as a plant with branches and sprigs,⁸ as possessing medicinal properties, and as 'golden-coloured.'⁹

(2) *The properties of haoma.*—The religious or spiritual properties attributed to the *haoma* plant are described in a rich poetical style, and in a tone overflowing with heartfelt admiration and praise. *Haoma*, prepared and drunk in a state of pious, spiritual inspiration, is believed to give wisdom, courage, success, health, increase, and greatness.¹⁰ In such a state the devotee becomes as powerful as an independent monarch, and is able to withstand many dangers coming from ill-disposed persons.¹¹ Heaven, health, long life, power to contend against evils, victory against enemies, and fore-warnings against coming dangers from thieves, murderers, and plunderers are the six gifts bestowed by *haoma* when adequately praised and prepared.¹² *Haoma* is specially sought for by young maidens in search of good husbands, by married women desirous of being mothers, and by students striving after knowledge.¹³ It affords special protection against the jealous, the evil-minded, and the spiteful.¹⁴ It is a check upon the influence of women of loose char-

acter, who change their affections as frequently as the wind changes the direction of the clouds.¹ For all these reasons, *haoma* is called *nmāna-paiti*, *vis-paiti*, *zantu-paiti*, *danghu-paiti*, i.e. 'Lord of the house, the village, the district, and the country.'²

(3) *Qualifications required of the man who would drink haoma with advantage.*—These are: good thoughts, good words, good deeds, obedience to God, and righteousness.³ On the other hand, *Haoma* curses those who are sinful and evil-disposed. 'I, *Haoma*, who am holy and keeper away of death, am not a protector of the sinful.'⁴ 'May thou be childless, and may evil be spoken of thee.'⁵

5. **Antiquity of the Haoma ceremony.**—It appears from the Avesta that the *Haoma* ceremony was in existence as early as the time of the Peshdadian dynasty. It is as old as the time when the ancestors of the Parsis and the Hindus, and even of the ancient Romans, dwelt together. It seems to have been always accompanied by the Barsom (*g.v.*) ceremony, as it is even at the present day. Now, it appears that the ancient *flamines*, who were the Roman fire-priests, and many of whose practices resembled those of the *āthravans*, or Iranian fire-priests, used twigs of a particular tree, whenever they went before the sacred fire. This practice resembles that of the Parsi priests, who also use twigs of a particular tree when performing the *Yasna* ceremony before the fire. The twigs are now replaced to a certain extent by metallic wires.

6. **The plant used after purification.**—We said above that the twigs of the plant are brought from Persia. They are not used directly in the ceremony. On being taken to a temple, or *dar-i-mehar*, they are washed and purified, and then laid aside for a period of at least thirteen months. A qualified priest takes a quantity of these twigs, and washes and purifies them with water, reciting the formula of *Khshnaoθra Ahurahē Mazdaō, Ashem Vohu*, etc., which means: 'Pleased be Ahura Mazda. Piety is the best good and happiness. Happiness to him who is pious for the best piety.' After being thus purified with water, the twigs are kept in a metallic box, similarly washed and purified, for at least thirteen months and thirteen days before being used in the ceremony. When so prepared and purified, they can be used several years afterwards. This ceremony has no direct connexion with the *Yasna* ceremony.

The *Vendīdād* (vi. 42, 43) enjoins the purification of those *haoma* twigs which have come into actual contact with filth and impurities; but present custom, which is designed to make assurance doubly sure, demands the purification of all *haoma* twigs intended for use in religious ceremonies. Again, the *Vendīdād* requires the twigs to be laid aside for one year; but present custom prescribes a period of thirteen months and thirteen days.

7. **Description of the Haoma ceremony.**—This falls under four heads: (1) the preliminary preparations; (2) the ceremony of purifying or consecrating the *haoma* twigs; (3) the ceremony of preparing and straining the *haoma* juice; (4) the ceremony of drinking the *haoma* juice.

(1) *Preliminary preparations.*—Two priests take part at this stage, as in the whole of the *Yasna* ceremony. One of them with the *khud* (i.e. ritual for qualification), either small or great, duly observed, first prepares the *aiwyaōnghana* (strips of date-palm), the *urvarām* (twigs of a pomegranate tree), and the *jivām* (fresh goat's milk). All the *ālāt* (the necessary sacred utensils) are emptied, washed, and put into the *kundi* (the large water vessel on the stone slab supplied for it). The fire is kindled in the vase, and the *āesam* (fragrant wood) and *bui* (frankincense) are placed on the adjoining stone. Two water-pots—one small and the other

⁷ *Yt.* x. 90.

⁸ The Avesta word for this is *frasperega*, in which *fra* is a prefix, and *sperega* is the same as English 'sprig.'

⁹ The Avesta word is *zāiri-gaona*, which some Orientalists take to mean 'green-coloured.' But, as green is the usual colour of vegetation, there was no apparent necessity to say so. The writer seems to mean 'yellow' or 'gold-coloured,' in which sense the word is also used elsewhere.

large—are placed on the *khwān*, or stone slab for the *ālāt*. The cup containing the *aiwyaōnghana* and the *urvarām* is placed on a small stone by the side of the stone slab on which the priest sits. The *haoma* twigs are also ready by his side in a cup. The officiating priest (*zōtā*) now takes his seat on his stone slab, which is covered with a carpet. He makes *pāv* (ceremonially pure) the smaller of the two water-pots, and with the water of that pot makes the *kundi* containing all the utensils *pāv*. He then prepares the *zaothra* water and ties the *barsom* wires. Having done all this, he next proceeds to make the *haoma* twigs *pāv*.

(2) *The ritual of purifying the haoma twigs.*—The priest takes a few pieces or twigs of the *haoma* plant out of a cup, and, holding them between the fingers of his right hand, washes them thrice with the *pāv* water. While doing so, he recites the *Khshnaōthra* formula three times. He then commences the *bāj* and the *khshnuman* of *Haoma asha-vazangha*, wherein he says that he does this for the homage, glory, pleasure, and praise of Haoma, the giver of the strength of purity. Then, reciting the *Ashem* four times, he dips both his hands, together with the twigs, in the *kundi* on his right hand. He dips them four times into the water—thrice in the direction pointing from his position to the opposite side (*i.e.* from north to south), and once in the opposite direction. Having thus made the twigs *pāv*, he finishes the *bāj*, and dips the purified twigs in the *zaothra* water. Then, drawing the *hāvana* before him, he inverts it and places on it three pieces of the consecrated *haoma* twig; the rest are placed over the foot of the *māh-rui* ('moon-faced'; two crescent-like stands). He next places a piece of the *urvarām* beside the *haoma* twigs.

(3) *The ceremony of preparing and straining the haoma juice.*—The priest begins by saying: 'I invoke all the belongings (*i.e.* the requisites for the performance of the ceremony) of the Haoma, for the sake of Ahura Mazda.' Then he enumerates some of the important requisites which lie before him on the stone slab. While reciting their names, he looks at them. The requisites which he enumerates are: *haoma*, *myazda* (*i.e.* the *darun*, or sacred bread, which is spoken of as *kharethem myazdem*, 'appropriate or sacred food'), the consecrated water (*zaothra*), the twigs (*baresma*), some product of the cow such as fresh milk (*goshudō* or *gēush hudhāo*), a twig of the pomegranate tree (*urvarām hadhānaēpatām*), pure good water (*aiwyo vanguhibyō*), mortar for pounding the *haoma* (*hāvana*), fragrant wood (*aesam*) and frankincense (*baōdhi* or *bui*), and fire (*āthra*). The prayer, in which he invokes or enumerates the requisites, and, while reciting their names, looks at each of them as they lie before him on the stone slab, forms a part of the 24th chapter of the *Yasna*. He recites that chapter from section 1 to section 12, omitting therefrom, in sections 1 and 6, the words, *imāmcha jivyām ashaya uzdatām* ('this *jivām*, or fresh milk, held up with righteousness'), because, at the time when he recites this prayer, the *jivām* is not yet placed on the stone slab. Sections 9 to 12 of this 24th chapter are the same as sections 4 to 7 of the fourth chapter.

The Haoma ceremony may be performed either in the *hāvan-gāh* or in the *hushain-gāh*, *i.e.* during the morning or the midnight hours. So, after reciting the first 12 sections of the 24th chapter, the priest recites the 13th section if he prepares the *haoma* juice in the *hāvan-gāh*, or the 17th section, if he prepares it in the *hushain-gāh*. Having thus recited the *khshnuman* of the particular *gāh* during which the ceremony is performed, he recites the *khshnuman* formula of the particular day of the month and the particular month of the year on which he performs the ceremony. Then he proceeds

to recite the prayers contained in the 4th chapter of the *Yasna* from section 17 to 25 up to the word *vahishtad*, omitting the portions which refer to *rathwō berezato* and *sraoshahē ashvehē* (in sections 22 and 23). Next he recites the prayers contained in the 25th chapter of the *Yasna*, from section 1 to 3, omitting the reference to *gām jivyām* (fresh milk) in section 1. On reciting the words *Ameshā spentā* (ch. xxv. sect. 1 of Spiegel), the priest holds between the thumb and the forefinger of his left hand the twigs of the *haoma* and pomegranate plants which were on the foot of the inverted *havanā* and, lifting the latter with his right hand, knocks it thrice in its inverted position on the stone slab, and places it in its proper position. Then, reciting the words *imām Haomem*, etc. (*ib.* sect. 2, Spiegel), and taking the *haoma* twigs into his right hand from his left hand, he places them in the *hāvana*, or mortar. Next, reciting the words *imāmcha urvarām*, etc. (*ib.* sect. 4), he similarly places the *urvarām*, or pomegranate twigs, in the mortar. Reciting the words *aiwyo vanguhibyō*, etc. (*ib.* sects. 5 to 11, Spiegel), he pours into the mortar, with his right hand, a few drops of the *zaothra* water which lies before him. He now invokes the *Fravashī*, or Guardian Spirit, of Zoroaster by reciting *Yasna* xxvi. 11 (Spiegel). Then, reciting the words *iristanām urvānō* (*ib.* 35) and the *yēnghē hātām* prayers, he takes out of the *kundi* the *surākhdār tashā* (*i.e.* the plate with holes which serves as a strainer) and places it on the *haoma* cup at the foot of the *māh-rui*. Reciting *athā ratush ashātchāt hachā*, etc., he removes the *lālā*, or pestle, from the *kundi*, passing it round in a circle within the vessel, touching its rim from within. The circle begins from the north and passes in the direction of west, south, and east. Then, reciting the words *aētāt dim*, etc. (*Ys.* xxvii. 1, Spiegel), he lets the lower end of the pestle, and, while reciting the words *ratūmcha yim*, etc. (*ib.* sect. 1), the upper end of the pestle, touch the stone slab. As he recites the words *snathāi*, etc. (*ib.* sect. 2, Spiegel), which signify that the *Dævas*, or evil influences, may be beaten or struck, he strikes the metallic mortar with the pestle, making sonorous sounds. At first he strikes it from without, *i.e.* strikes the pestle on the outer rim of the mortar. The sonorous blows are given in the order of east, south, west, north. When striking on the north side, he gives three more strokes. Then both the priests say, *Shekaste Ganāminō*, etc., in *bāj*, *i.e.* 'May the Evil Spirit be broken! May 100,000 curses be on Ahriman!' The priest then recites *Frudathāi Ahurahē Mazdāo* (*Ys.* xxvii. 3-7, Spiegel). Next he recites four *Yathā ahū vairyōs*. While reciting the first three, he pounds the *haoma* and the *urvarām* twigs in the mortar; and, while reciting the fourth, he strikes the *hāvana* on the outside with the pestle. In like manner he recites *Mazdā af mōi* (*ib.* 8, Spiegel; or *Ys.* xxxiv. 15) four times, to the accompaniment of a similar pounding during the first three recitals and a striking of the *hāvanim* during the fourth. This is followed by a recital of *A Airyamā ishyō* (*ib.* 9, Spiegel; or *liv.* 1) with like pounding and striking. Next comes the recital of three *Ashem vohus*, during which the priest pours a little of the *zaothra* water into the mortar three times. Then, while reciting the words *Haoma pairi-hareshyante* (*Ys.* xxvii. 10, Spiegel), he gives a little push to the pestle which is within the mortar, and causes it to turn a circle in the direction of north, west, south, east.¹ While reciting the words *atha, zimē, humayō, tara*, which

¹ This part of the ritual is a relic of the old practice, when, after being pounded, the *haoma* twigs were regularly rubbed in the mortar with the pestle to extract the juice further—a process now known as *gūntū*.

form the last part of this passage, he takes up the twigs of the *haoma* and the *urvarām* from the mortar between his thumb and fingers; and, holding the pestle also, he touches or brings these in contact with the *barsom*, the plate of *jivām*, the *haoma* cup at the foot of the *māh-rui*, and the stone slab. At the last word *anghen* he places the twigs and the pestle in the mortar again. He then recites four *Yathā ahū vairyōs*, during the recital of the first three of which he pounds the twigs. He strikes the *hāvana* during the recital of the fourth. During each of the first three recitals and poundings, he pours a little of the *zaothra* water into the mortar with his left hand at the recital of the words *athā*, *ashāt*, and *hachā*. At the end of each *Yathā ahū vairyō*, he pours the *haoma* juice so pounded over the pestle, which is held with the left hand over the strainer. From the strainer the juice passes into the *haoma* cup below. The recital of the fourth *Yathā ahū vairyō* is accompanied by the striking of the mortar. At the end of this, the whole of the *haoma* juice is passed into the cup, as described above. If any particles of the twigs still remain unpounded, they are removed from the mortar and placed in the strainer, where they are rubbed with the hand to make all the extract pass into the cup below. During this process of rubbing, the priest recites thrice *yē sevīštō*, etc. (xxvii. 11, Spiegel, or xxxiii. 11). The strainer is then washed and placed over the mortar. The particles of the twigs still left unpounded or undissolved are removed and placed in an adjoining clean corner. The pestle is washed and placed in the *kundī*.

The next ceremonial process is that of straining the *haoma* juice again with the help of the *varas nī viti*, i.e. the ring entwined with the hair of the sacred bull. The *varas* is put over the strainer (*surākhdār tashta*, 'perforated plate'). The priest holds the cup containing the *zaothra* water in his left hand, and places his right hand over the knotty part of the *varas* in the strainer. He recites *us mōi uzāreshvā*, etc. (*Ys.* xxxiii. 12-14), at the same time pouring the *zaothra* water over the *varas*, and rubbing the knots of the *varas*. He recites two *Ashem vohūs*, the second of which is in *bāy*. He then holds the strainer with the *varas* in his right hand, and the cup containing the *haoma* juice in his left hand; and, repeating *Humata*, *hūkhta*, *hvarshata* thrice, pours the *haoma* juice into the strainer, which is held in different positions over the *khvān*, or stone slab, as the different words of the triad are repeated. While reciting the word *Humata* each time, he holds the strainer over the right hand of the stone slab, so that the *haoma* juice falls over it through the strainer. On each recital of the word *Hūkhta*, the *haoma* juice is similarly dropped into the cup of the *zaothra* water, which has just been emptied into the mortar through the strainer, and the *varas* with it. At each recital of the word *Hvarshata*, the *haoma* water is allowed to drop into the mortar. The *haoma* juice-cup is now put back in its proper place on the stone slab, and the strainer with the *varas* is placed over it. Then all the juice in the mortar—a mixture of the *zaothra* water and the *haoma* juice, or, more properly speaking, the juice of the *haoma* and the *urvarām* twigs—is poured into the strainer, through which it passes into the *haoma* cup below. After its contents have been thus emptied, the mortar is once more put in its proper place. The milk-plate (*jivām no tashtō*) is placed at the foot of the *māh-rui*. The priest also sets the other cups and plates in their proper places. He deposits in their proper place some of the spare twigs of the *haoma* and the *urvarām* which are at the foot of the *māh-rui*. He places some of these in a spare cup and lets fall over them

a few drops of the *haoma* juice prepared and collected in the cup, as described above.

It is at this stage that the other priest who is to join him in the recital of the *Yasna*, and who is now to act as the *zaota*, enters the *yazashna-gāh*. Reciting an *Ashem vohū* and a certain number of *Yathā ahū vairyōs*, the number of which depends on the particular kind of *Yasna* to be performed, he goes before the *khvān* of fire and purifies or consecrates the fire. The priest who has performed the ceremony of straining the *haoma* now takes the *zaothra* wire of the *barsom* in his left hand, and the *varas* ring in his right hand, and finishes the *bāy* of the *varas* which he had commenced some time before. To do this he recites two *Yathā ahū vairyōs* and the *Yasnemcha* with the *khshnuman* of the *Fravashī* of Zoroaster. He next dips the *varas* ring in the *zaothra* water cup and places it in its own cup. He then rises from his seat, and, taking the *haoma* cup which contains the juice prepared and strained, as above, places it in an adjoining niche of the wall. He brings the *jivām* and pours it into its plate (*jivām no tashtō*). In a plate on the stone slab he now places the *darun*, or sacred bread, which was up till now in another vessel in the *yazashna-gāh*. He then recites an *Ashem vohū* and *Ahmāi raēshchā*, etc., finishes the *bāy*, and performs the *kushti*.

This closes the ceremony of preparing the *haoma* juice, more properly spoken of as the ceremony of straining the *haoma* (*Hom gālvō*). With its completion terminates the *paragnā*, i.e. the first or the preliminary preparatory ceremony of the *Yasna*. The second priest, who has now entered the *yazashna-gāh* and who is to recite the whole of the *Yasna*, mounts the stone slab or platform which serves as a seat. As he does so, he recites two *Yathā ahū vairyōs*. While uttering the word *shyaothnanām* of one *yathā* he places his right foot over it, and, while reciting the same word of the second, his left foot.

The *Dādīstān-i Dinik* (xlviii. 30-33) tries to explain part of the symbolism of the ceremony for preparing and straining the *haoma* juice. For example, the *haoma* twigs are pounded during the recital of four *Ahunvars*. These four poundings symbolize the coming of Zoroaster and his three future apostles. 'The pure *Hom*, which is squeezed out by four applications of holy water (*zōrīh*) with religious formulas, is noted even as a similitude of the understanding and birth of the four apostles bringing the good religion, who are he who was the blessed Zaratūst and they who are to be Hūshēdar, Hūshēdar-māh, and Sōshāns.¹ The striking of the metallic *hāvana* while pounding and straining the *haoma* reminds one of the triad of thought, word, and deed on which the ethics of Zoroastrianism rests. The *Dādīstān* says on this point: 'The metal mortar (*hāvan*) which is struck during the squeezing of the *Hom*, and its sound is evoked along with the words of the Avesta, which becomes a reminder of the thoughts, words, and deeds on the coming of those true apostles into the world.'²

The three ceremonial processes of pouring the *zaothra* water into the *haoma* mortar for the preparation of the juice are symbolical of the three processes of the formation of rain in Nature, viz. (1) evaporation, (2) formation of clouds, and (3) condensation as rain.³

The juice, prepared as above, by pounding the *haoma* twigs together with the *urvarām* in the *zaothra* water, is called *para-haoma*.

(4) *The ceremony of drinking the haoma.*—The last ceremony in connexion with *haoma* is that of drinking it. We saw above that its preparation and straining formed a part of *paragnā*, i.e. the ceremony preparatory to the performance of the *Yasna*. The ceremony of drinking it forms a part of the *Yasna* itself. It begins with the recital of the 9th chapter, and finishes with the recital of the 11th. In these three chapters the priest sings the praises of *haoma*. The *zaota* describes in a highly poetical strain the good qualities of the *haoma* juice which lies before him. On his finishing the description and the praises of *haoma*, at the 8th section of the 11th chapter, his colleague, the *rāspi*

¹ *SBE* xviii. 170.

² *Id.*

³ *Id.* 170 f.

or *ātravakshī*, makes his hand *pāv*, and, coming to the *zaota*, lifts the cup containing the *haoma* juice from the stone slab, carries it round the sacred fire in the vase on the slab opposite, at the same time taking the *aśam bui* (sandalwood and frankincense) from their stone slabs, and placing them on the fire. He then comes back to the *zaota*, and, holding the cup over the *barsom-dān*, says to the *zaota*: 'May the *haoma* juice be of twofold, threefold . . . ninefold efficacy to you.' Next he hands the juice-cup to the *zaota*, who, holding it in his hand, looks into it, again addresses a few words of praise, and prays that the drinking of it may bring spiritual happiness to him. Finally, he holds up his *padān*, or cloth veil, to his mouth and drinks the *haoma*. He does not drink the whole quantity at once, but in three draughts. In the interval between each of the three draughts the *rāthvi* recites an *Ashem vohū*.

During the recital of the *Yasna*, the *haoma* juice is prepared and strained twice. As described above, at first it is prepared and strained by one priest in the preparatory *paragnā* ceremony. It is drunk by another priest during the recital of the 11th chapter of the *Yasna*. Then the priest who drank it prepares it a second time during the recital of the three chapters of the *Yasna* from the 25th to the 27th. The process of pounding the *haoma* twigs and striking the mortar continues during the recital of the 32nd, 33rd, and 34th chapters, with which the second preparation terminates. Though the ceremony proper commences for the second time during the recital of the 25th chapter, it may be said to begin with the 22nd chapter, because all the requisites of the ceremony are enumerated and invoked at its commencement. These two preparations and poundings are spoken of in the *Āvesta* (*Ys.* x. 2) as *fratarem hāvanem* and *uparem hāvanem*, i.e. the first and the second squeezing of the *haoma*.

LITERATURE.—For an analysis of the three chapters of the *Yasna* on *Haoma*, etc., see *Journal of the Bombay Anthropological Society*, vol. vii. no. 3 (1904), p. 203.

JIVANJI JAMSHEJJI MODI.

HAPPINESS.—This term belongs to the ethical rather than to the psychological sphere, though referring to a condition of mental life. In ethics its use has been almost universal, yet in such varying senses that the substitution for it of its more definite equivalents is much to be desired. A formal and a material meaning may be distinguished, the latter subject to a threefold division.

1. **Formal meaning.**—The practical human good, the ultimate end of action. In this sense 'happiness' is a mere abstract term for the desirable in life, implying nothing as to its concrete constituents.

Thus Zeller: 'This conception is in itself a purely formal one, admitting of any desired material interpretation' (*Vorträge*, 1865-84, iii. 209). Also Sorley: 'To say that the ethical end is happiness, is, to use Locke's terminology, "a trifling proposition"; for in so doing we merely give it a name' (*Ethics of Naturalism*, 1885, p. 7).

Aristotle (*Nic. Ethics*, i.) assumes that all men agree in calling the good 'happiness,' but differ widely as to what constitutes it. This was true for the ancient world, and for some modern thinkers of the Greek type, but is no longer universally the case. Happiness has come to include various specific concrete meanings which are particular and debatable interpretations of the good, and not merely equivalent names for it, though the latter is sometimes claimed by Hedonists for their own interpretation (J. S. Mill, *Utilitarianism*, ch. iv.). Kant and his successors, especially, deny the possibility of happiness being either the only or the supreme good, though it is an element in the complete good. This formal use of the term

should therefore be abandoned in favour of the more abstract term 'good' or 'ultimate end of action.'

2. **Material meaning.**—(a) *Pleasure, or the absence of pain.*—This is the meaning which has been given to the term by Utilitarians since Gay, and which has been advocated by Sidgwick (*Methods of Ethics*, p. 120) as the only legitimate and unambiguous interpretation. Pleasure is to be taken in this definition in its psychological sense, as pleasurable feeling, not as pleasant object. J. S. Mill, by his assertion of qualitative differences in pleasure, and hence in happiness, forms an exception to the Utilitarian tradition, using the term 'happiness' in its second (material) meaning as the pleasure of an objectively higher order of activity (*Utilitarianism*, ch. ii.). Kant's usage agrees with that of the orthodox Utilitarians, although he puts an opposite ethical value upon the idea (*Werke*, ed. Rosenkranz, 1838-40).

'The notion of happiness . . . is only a general name for the subjective determining principles' (viii. 137). 'A rational being's consciousness of the pleasantness of life uninterruptedly accompanying his whole existence is happiness' (*ib.* 129).

This happiness, as merely the feeling accompanying the satisfaction of desires, is qualitatively alike, irrespective of the nature of the objects causing the satisfaction. As such, it furnishes no objective and necessary law for conduct, but is only a name for the satisfaction of any and every desire.

(b) *The feeling accompanying the systematic activity of the whole self, the feeling of self-activity or self-realization.*—In this sense, 'happiness' is distinguished from 'pleasure,' which is limited to the feeling accompanying partial or limited activities.

'It is the form of feeling which accompanies the harmonious adjustment of the various elements in our lives within an ideal unity' (J. S. Mackenzie, *Man. of Ethics* 4, 1900, bk. ii. ch. v. § 14). 'Happiness is not the sum or aggregate of pleasures; it is their harmony or system—or rather, the feeling of this harmony' (J. Seth, *Ethical Principles*¹⁰, p. 203). 'Pleasure is transitory and relative, enduring only while some special activity endures, and having reference only to that activity. Happiness is permanent and universal. . . . Happiness is the feeling of the whole self, as opposed to the feeling of some one aspect of self' (J. Dewey, *Psychology*, 1887, p. 293). Mill's conception of happiness as consisting in the pleasures of the exercise of the peculiarly human or higher faculties belongs to the same category.

This distinction between happiness and pleasure has been criticized by Kant (viii. 130) and others, on the ground that it is based upon the nature of the objects causing the feeling rather than upon the nature of the feeling itself, and, therefore, that happiness does not differ qualitatively from pleasure, inasmuch as it allows no end of action other than that of pleasure. As Ladd puts it (*Philosophy of Conduct*, p. 479):

'Ethics can divide pleasures into higher and lower, noble and ignoble, or difference [*sic*] pleasure from happiness or even from blessedness, only by introducing into the psychological conception of pleasure-pains something from the outside. That something is a standard of moral values.'

While this criticism is valid psychologically against the attempt to distinguish qualities in pleasure, and is also valid ethically against the attempt to make happiness, as a distinct kind of feeling, the moral end, it does not necessarily invalidate this use of the term in the authors criticized. Although the pleasure of partial and that of systematic activity may be alike in kind, it may still be convenient to use the term 'happiness' to denote the latter, even though its moral significance be derived wholly from the character of the activities which condition it. Happiness would thus denote the affective side of the virtuous life. So Spinoza: 'Happiness is not the reward of virtue, but virtue itself' (*Ethics*, bk. v. prop. 42). This use of the term, however, while justifiable, is too susceptible of misinterpretation to be retained.

(c) *Welfare, the right condition of activity, the harmonious life itself.*—'The good of man [or happiness] is an activity of the soul in accordance with excellence, or, if there are more excellences than one, in accordance with the best and most perfect excellence' (Aristotle, *Nic. Ethics*, i. ch. vi.). The emphasis here is upon the complete life rather than upon any one aspect of it, such as pleasure. The doing perfectly what one is fitted to do constitutes happiness, which will be accompanied by pleasure though not constituted by it. This use of the term is becoming infrequent, save as the translation of Aristotle's *eὐδαιμονία*, and even here the term 'welfare' (*q.v.*) is being recognized as more appropriate.

3. The moral significance ascribed to happiness furnishes a principle for the classification of ethical systems. Kant's division is the basis for most modern classifications: (a) *autonomous* (end as self-given); (b) *heteronomous* (end as given from without), subdivided into (1) *empirical*, including all systems which make happiness the end, and (2) *rational*, including all which make perfection the end. Happiness and perfection thus constitute the two material ends as opposed to a formal conception which places the good in the bare form of will rather than in any end to be attained by it. The idea of happiness as an end carries with it all the ambiguities of its definition, and systems which propose this end receive different names accordingly.

(i.) 'Hedonism' (*q.v.*) is the term applied to systems which propose happiness in the first sense as the end. It may be *universalistic* or *egoistic*. (ii.) 'Hedonism' should also be the term applied to systems in which the second meaning of happiness is taken as the end, since a kind of pleasure is still pleasure. Such systems, however, are few. J. S. Mill is representative in that professedly, at least, he takes a special kind of feeling as the end. Those who use the term 'happiness' in this sense are usually careful not to assert it as the ultimate end, but to make it only an aspect or concomitant of the end (Mackenzie, Seth). (iii.) 'Eudæmonism' (*q.v.*) is a name adopted by some who posit happiness in the sense of welfare as the end. 'Complete Eudæmonism is the doctrine that the Good is found in the complete rationalisation of desire' (J. Seth, *op. cit.* 233). 'Self-realization' states the same position from a more Hegelian point of view. 'Energism' is Paulsen's title for his revived Greek position. In this third use of the term it includes, rather than excludes, perfection as an end. It is equivalent to the complete enjoyment of perfection as well as perfection itself. It is the bloom of perfection. It is only in its first two meanings that happiness excludes perfection as an end. Zeller (*op. cit.* 210) defines the term as the equivalent of 'Hedonism'; so also Wundt (*Ethics*, 1897–1901, ii. ch. iv.).

NORMAN WILDE.

HAPPINESS (Buddhist).—The word *sukha* in Buddhism covers, in extension, both the relatively static state which we name happiness or felicity, and the conscious moments of such a state, to which our psychology refers as pleasurable or pleasant feeling. There are other terms of happy import, but none so broadly comprehensive. *Sukha*

is applied alike to physical health, material well-being, and spiritual beatitude. Etymologically the word has no connexion with hap, happening, or luck. Grammarians assume that the second syllable, *-kha*, is a substantival affix to *su*, 'well' (= Greek *εὖ*). The word would then be equivalent to the original meaning of our 'wealth.'

In Buddhist psychological analysis, feeling, or emotional sentience (*vedanā*), is resolved into three phases: *sukha*, *dukkha* (pain), and *adukkhamasukha* (neutral feeling). The last of these, to which modern psychology in the main ascribes a mere zero point between positive degrees of the first and second phases, is in Buddhism ranked as an equally distinguishable constituent of consciousness (*Majjhima*, i. 302; *Saṃyutta*, iv. 223 f.). We do, indeed, meet with a layman who pronounces a twofold division of feeling more orthodox (*Maj.* i. 59; *Saṃ.*, *loc. cit.*). But the Buddha, when appealed to, explained that he divided feeling variously, according to the aspect under which he was treating of it in his teaching (cf. his method in another connexion, *Maj.* iii. 62). When, e.g., he distinguished feeling under two heads, he was treating of sensuous feeling and spiritual emotion, to both of which the term *sukha* was applicable.

We may pause, before considering the teaching attributed to the Buddha on *sukha*, to note the way in which, in one of the canonical dialogues, the psychological analysis of feeling is applied to ethical training. The teacher is the noted woman apostle Dhammadinnā. (She finally refers her interlocutor—her husband—to the Buddha, who endorses all she has said.) She first gives the orthodox division (as stated above), and then adds a dictionary definition of each kind. She is then asked: 'In happy feeling, what is happy, what is unhappy? In unhappy feeling, what is unhappy, what is happy? In neutral feeling, what is happy, what is unhappy?' She replies: 'In happy feeling, the static (element) is happy, change is unhappy; the inverse for unhappy feeling. In neutral feeling, knowledge is happy, want of knowledge is unhappy feeling'—an answer that reveals the weakness of the threefold division as an analysis of bare feeling. She is then asked: 'What is our latent bias (*anusaya*) when experiencing each of these three modes?' The answer is: passion (or lust, *rāga*), aversion (or resentment, *paṭigha*), and ignorance (*avijjā*) respectively. But, she adds, when questioned further, not all feeling, of any of the three kinds, is thus tainted. Ethically, she goes on, it is these three forms of bias that we have severally to eliminate from the three modes of feeling. This may be accomplished by the practice of *jhāna* (see *DHYĀNA*). In the first stage, sensuous desires and immoral or wrong ideas are banished, the intellect being engaged with happy zest about a certain selected object. In the second and third stages, through the strong yearning to attain the blissful serenity of the saints (*ariyā*), all resentment and opposed feeling melt away. And in the fourth stage, wherein all positive feeling fades into indifference and perfect clarity of mind is attained, ignorance is banished. She is finally asked: 'What is comparable to happy feeling, to painful, to neutral feeling?' She replies: '(1) Happy and painful feeling are mutually comparable; (2) neutral feeling is comparable with ignorance; (3) ignorance again is comparable with knowledge; (4) knowledge with spiritual emancipation, and this again with Nibbāna. Nibbāna alone is incomparable, as being *sui generis*.' Hereon Buddhaghosa comments that the comparison (*paṭibhāga*, cf. *Milinda*, ii. 186) in (1) and (3) is of opposites, but in (2), because of the vagueness of neutral feeling, and again in (4), the comparison is of similars.¹

Bearing this archaic but authoritative analysis in mind, we may proceed to consider the explanation which the Buddha is said to have given concerning his treatment of feeling under a twofold aspect of pleasure or happy emotion. The dissenting layman, mentioned above, had alleged that 'neutral feeling' was identical with happiness, namely, with happiness of a loftier kind. Warning his two interlocutors that discords might arise, if the mere framework of his various discourses on feeling—two heads, three, five, six, eighteen—was taken as essential, Gotama briefly stated the sources and kinds of sensuous pleasure and desire. 'The pleasure and happiness arising from these five senses we call happiness of worldly desire' (*kāmasukha*; see *DESIRE* [Buddhist]). He then proceeded to soothe and elevate his two disputants by affirmations of the loftier joys arising in con-

¹ Neumann, in his tr. of the Sutta, has mistaken the meaning of *paṭibhāga*.

nexion with the practice of *jhāna*. The brief discourse has been set down by the compilers with the rhythmic progress and iteration of the Suttanta refrains, suitable for oral teaching. He commences with this refrain :

‘With him who should say : “This is the supreme happiness and pleasure (or joy, *somanassa* = mental happiness) that brings experience,” I do not agree. And why? Than such happiness there is another happiness sweeter and more excellent. And what is that?’

In successive replies it is pointed out that the stages of *jhāna*, four of *rūpajhāna*, five of *arūpajhāna*, are each of them a sweeter and loftier happiness than *kāmasukha* and each preceding mode of *sukha*. The last stage of *arūpajhāna* was the attainment of catalepsy or trance, described in the usual formula, elsewhere amplified, as ‘the cessation of perception and sensation.’ Nevertheless, of this also ‘happiness sweeter and more excellent’ is predicated. Then, to defend the position and to withdraw the original bone of dissent, Gotama concluded :

‘Other teachers may say : “The Samaṇa Gotama predicates happiness of the trance-stage : what and how is that?” Thus are they to be answered : “Friend, the Exalted One does not predicate happiness only where there is happy (pleasurable) feeling ; he also predicates happiness wherever and whereinsomewhat happiness is found to exist.”’

These observations, referring his hearers, as always, to the spirit rather than to the letter, were the Buddha’s method of teaching that the word *sukha* could represent concrete states of being, activities, ideas, memories associated with happy consciousness and genuine ‘well-being,’ no less than the pleasurable feeling discerned by analysis. He might have extended his final remark to most of the preceding stages of *jhāna* ; for whereas, in the first three stages, the happy feeling, accompanied in the first two by that zest of pursuit known as *pīti*, is the prevailing factor, the fourth *jhāna* is explicitly defined as a state wherein all positive feeling, joyous or melancholy, is merged in neutral feeling, so that the consciousness is one of complete equanimity and clarity of mind.

A unique compound may here be adduced—*upekkhāsukha*—occurring in *Aṅguttara*, iv. 412, as the conscious state which was to cease when the fourth *jhāna* was attained, and which can, therefore, only be taken to mean the happy feeling of, or belonging to, or accompanying equanimity.

Sukha was, moreover, the predominating nature of celestial existence, so far at least as the six realms of *devas* in the Kāmaloka extended. To re-birth in these heavens the moral average layman aspired, believing that he would there enjoy pleasures of a sensuous sort, but intenser, more numerous, and less fleeting than those of earth (cf. Rhys Davids, *Dialogues of the Buddha*, ii. 353 ff., 242 ff., 265). Nor would he, as *deva* or *devaputto* (son of the gods), be incapable of loftier emotions and satisfactions to which the term *sukha* might equally apply ; witness the behaviour, in many Buddhist legends told in *Nikāya* and *Jātaka*, of the sentiments of Sakka, god of a Kāma-realm, and of those of the many *devas* who flocked to earth to hear the Buddha and his saints preach, or to commune with and admonish here and there a saint *in spe*.

Sukha, then, we repeat, is of very wide import, covering all three : pleasure, pleasurable feeling, and happiness ; and it is equally applicable to the lowest and loftiest kinds of experience so designated. We have also seen that the neutral feeling accompanying vague intellection merges into positively happy feeling when the vagueness passes ; and, again, that absorbed reverie and abstract contemplation, if rightly induced and persisted in, lead to emotionless quasi-ecstatic states which can also be described as *sukha*, because they are a means whereby the saintly life is nourished and advanced.

In the next place, the natural desire of mankind

to attain happiness and avoid pain and sorrow is fully recognized, believed in, justified, and exploited by Buddhism. As a system of ethical philosophy, it may be classed as frankly eudæmonistic or hedonist, *i.e.* neither egoistically nor altruistically so, but of the kind termed by H. Sidgwick ‘Universalistic Hedonism.’ It recognizes in happiness an ultimate to which every human aspiration is in the last resort reducible. Accepting the current proverbs of the day, it sees in happiness the crowning result of mundane wisdom (*Theragāthā*, 293). Happy re-birth, as a *deva* or as a fortunate human being, is the legitimate quest urged on the laity and the simpler-minded, less saintly *bhikkhu* (*Dīgha*, iii. 181, 185, 191 f.; *Āṅg.* i. 58, ii. 192, iii. 76 ff.). Meritorious acts are justified as happiness-bringing (*sukhāvahāni*) for self and others, and the latter is the ultimate test of the worth of a practical doctrine (*Āṅg.* i. 190 f.; tr. in *Buddhist Review*, April 1911). Again, it is only the quest of the highest good that gives adequate opportunity for ending sorrow (*Maj.* iii. 245 ; *Āṅg.* i. 249). The mission of a Buddha is frequently declared to have as its object not only, in negative terms, the revealing of how ill (*dukkha*) may be overcome, but also, in positive terms, the attainment of the good, or weal, and the happiness (*hitāya sukhāya*) of all beings. In the wrestling and toil of mind for the enlightenment (*bodhi*) whereby he could qualify for that high mission, Gotama admits that the quest of *sukha* was the ground wave that bore him along (*Maj.* i. 246 f.), and in the midst of his self-devoted career he claims that this quest is won for good and all :

‘Ay, young sir, I verily am of those who fare happily, even though you see me exposed in this hut to the chilly nights of winter. Your well-housed citizen, happy after his kind, nay, the king himself with all his pleasures, is not so happily at ease as I. They may be smitten with torments through greedy desire, enmity, or blunders. But one who has cut off at the root all those sources of suffering dwells at ease, for he has won peace’ (*Āṅg.* i. 136-8 ; *Maj.* i. 93 f.).

A *fortiori*, happiness is commended not only for the babes in religion, but also for earnest disciples as a reasonable and sufficient aim of the religious life (e.g. *Maj.* i. 140 f.). And, adopting as a name for their *summum bonum* a word which would seem to have been applied to the easeful *cool* organic consciousness of physical well-being (*ib.* 75th Sutta), the Buddhists qualified Nibbāna as supreme happiness (*paramasukha*) :

‘These things to know e’en as they really are :

This is Nibbāna, crown of happiness’ (*Dhammapāda*, 203).

The happiness thus commended and extolled for and by saints and those qualifying for sainthood was, of course, neither the *kāmasukha* referred to under *vedanā*, or feeling on occasion of sense, nor the *sukha* associated with ideas of the same. The attitude enjoined with regard to such feeling was very uncompromising :

‘Pleasant (*sukha*) feeling, *bhikkhus*, is to be considered as (equivalent to) pain (or ill) ; painful feeling is to be considered as a javelin ; neutral feeling is to be considered as the impermanent. A brother by whom these are thus considered is an Ariyan of supreme vision ; he hath cut through craving ; he hath rolled back his bonds ; through supreme grasp of vain conceits he hath put an end to sorrow’ (*Iti-vuttaka*, § 53 ; *Sah.* iv. 207).

Coming next to ideal emotion, or the three modes of feeling when associated with ideas (*somanassa*, *domanassa*, *upekkhā*), we find the admission that, for spiritual health, these three modes of feeling are not at all condemned as such, but are preferable when unaccompanied by *such thought as is engaged upon sense-experience* (*vitakka-vichāra*). (Such is the implication of the phrase translated ‘pre-occupation and travail of mind’ in Rhys Davids, *Dialogues*, ii. 312 f., the terms *vitakka*, *vichāra* being essentially terms of sense-cognition, and used only in the first stage of *jhāna*, when the mind is not yet abstracted from such cognition.)

Finally, the most general affirmations as to that happiness which the candidate for saintship and the saint or *arahant* might legitimately aspire to and feel may best be sought in the body of testimony ascribed to such men and women. For them, as for all the earnestly religious, holiness meant a radical alteration of values. The forms of *kāmasukha*, which had once excited and pleased, were become nauseous and pestilential, terrible, or merely devoid of all attractive power. The Christian saint's 'I do count them but dung' (Ph 3^d) has many a prototype in the poems of the Buddhist *theras* and *theris* (cf. *Sutta-Nipāta*, 59-61, 762). The zest (*pīti*) of pursuit and advance, the relaxation, ease, exultation, and peace of vantage-points and mastery won (*sukha*, *somanassa*), are now transferred to and associated with the religio-philosophical ideal of *arahant*-ship and *Nibbāna*, the spiritual supramundane *summum bonum* (*sadatttha*) of oneself and all beings. Into this new objective of happiness, the prospect of celestial joys did not enter.

'The very heavens delight them not; how then
Should aught that's merely earthly please?'
(*Therag.* 397; *Dhamm.* 187).

'... I want no heaven of gods—
Heart's pain, heart's pining have I trained away'
(*Therig.* 32).

But the happiness actually attained is claimed as very positive and not as 'neutral feeling':

'Not music's fivefold wedded sounds can yield
Such charm (*ratī*) as comes o'er him who with a heart
Intent and calm rightly beholds the Norm'
(*Therag.* 398; cf. *Dhamm.* 35, 36).

'This never-ageing, never-dying Path—
No sorrow cometh here, no enemies,
Nor is there any crowd; none faint or fail,
No fear cometh, nor aught that doth torment. . . .'
(*Therig.* 512).

'Now have they prospered all my highest aims. . . .
The holy love and liberty, my quest. . . .
I what 'twas well to do have done, and what
Is verily delectable, therein
Was my delight; and thus through happiness
Has happiness been sought after and won (*sukhen' anvā-
gatañ sukhañ*)'
(*Therag.* 60, 63; cf. 211 f., 386, 513 ff.).

That the 'seeking' or pursuit of the goal was itself happy as contrasted with the ascetic practices of many Indian religionists was claimed by Buddhists from the first (*Maj.* i. 93 f.). 'This happiness by happy ways is won,' exclaims another saint, once a faqir (*Therag.* 220). This was naturally the experience of those who were unhampered by a sensual or sluggish temperament, e.g. the younger brother of the chief disciple Sāriputta:

'The will to learn bringeth of learning growth;
Learning makes insight grow, and by insight
We know the Good; known Good brings bliss along'
(*Therag.* 141).

With many others the training and the transference involved great toil and travail of spirit. The poems quoted from above often reveal this, and the later *Milinda*, while it calls *Nibbāna* 'entirely happy' (*ekanta-sukhañ*), speaks of the *quest* as 'alloyed with pain' (ii. 181 ff.).

In connexion with the use attributed to the Buddha of the term 'entire (or absolute) happiness,' two remarks may be added in conclusion. Consulted by Mahāli the Licchavi about the anti-causationist doctrine of a rival teacher, Gotama affirmed causation. There was a cause, and a sufficient cause, for the wickedness, as for the regeneration, of the world. Were sense-experience, he went on, productive of absolute happiness, no one would ever be converted from it to purer ideals. Were it absolutely painful, no one would be engrossed by it, as are the majority. It was the mixture of pleasure and pain in human life that constituted at once the hindrance to, and the guarantee of, spiritual progress (*Sam.* iii. 68 ff.; cf. ii. 172 ff.).

But, when pressed by Udāyin the Jain to de-

scribe what he considered to be the sphere of absolute happiness and the way thereto, the Buddha first repeats the current belief that practice in the fourfold *jhāna* may bring about re-birth among *devas* in entirely pleasurable conditions. He then repudiates such aspirations for his Rule, and enumerates the attainments in self-mastery and intuitive vision won by the *arahant* as far loftier and more excellent than such a hedonistic ideal (*Maj.* ii. 79). The moral of this, confirmed by the general context of the *Nikāyas*, seems to be that he also held the ethical view that happiness may best be secured when not it, but its cause, is aimed at.

LITERATURE.—This is quoted in the article; references are to the *PTS* editions; the *SBE* (*Milinda, Dhammapada, Sutta Nipāta*); the *Sacred Books of the Buddhists* (*Dialogues*). See also the present writer's *Buddhism* (Home Univ. Library), London, 1912, chs. vi.-viii., *Psalms of the Early Buddhists*, do. 1909, 1913. Modern psychology on 'neutral feeling' is concisely represented in H. Höfding's *Psychology*, Eng. tr., London, 1891, p. 287. On Universalistic Hedonism and happiness as end, cf. H. Sidgwick's *Methods of Ethics*, London, 1901.

C. A. F. RHYS DAVIDS.

HAPPINESS (Greek and Roman).—I. GENERAL.—1. Greek teleology: happiness attends fulfilment of function.—*εὐδαιμονία*, when critically appraised, could not mean to the Greeks 'a happy temperament,' to which a genius was propitious. This might be very well, but it was not of *knowledge* (as Socrates and Plato would say) or of *faith* (as St. Paul). The term was applied to well-being judged from outside by a certain agreed standard of perfection. The Greeks, however serious their practical doubts, never showed any hesitation, save in the Atomic School, in accepting teleology: everything was made for some end and found its satisfaction in fulfilling its function, in realizing its idea or its notion; only in so far as it did this was it real, good, and therefore happy. Man was contrasted, as a single type, with the rest of creatures; never (oddly enough) with other and different members of his own species; his *differētia* lay in reason, implying self-consciousness and self-criticism, above all, recognition of a law—and that a universal one, beyond the private and the particular. Thus, the only state deserving the title 'happy' in the truest sense was that of the philosopher, who alone used *formative* or *speculative* reason aright, and so fulfilled the end for which he was made. It is clear that, like Kant's categorical imperative, this vague axiom can give no special guidance for individual cases, no help to men of different character, aim, and station. In the end, then, Greek ethics set up in the various schools an ideal of life singularly alike, a purely typical excellence which was bound to end in a negation rather than in any positive content. Except the early Cynic model, which soon passed out of favour, there is little to choose, in essential detail, between the 'sage' of Plato and Aristotle and that of the Stoic and Epicurean schools; indeed, the Cyrenaic model, significantly enough, tended later to approach this common standard. Happiness, then, in every Greek system of religion or philosophy, is singleness of aim, uprightness of heart, and the undisturbed peace of one who rests in ultimate truth, and has hold of reality. It is always set in contrast with the aims of the worldly-wise, cumbered with much serving or the pursuit of many ends. Not within the limits of our period do the modern features appear, which direct human activity towards the conquest and enjoyment of the world, and complexity of life; or towards social service, 'the love of mankind,' 'the greatest happiness of the greatest number,' multi-form legislation to secure better conditions for the poor.

2. Enemies of happiness: impulse and convention.—Happiness, then, as above described, lay in

reason (as private judgment, which mirrored an external order and laid hold of objective truth), not in impulse or custom. The body and conventional society were the two great enemies of wisdom and, therefore, of happiness. The ascetic and anti-civic tendency of Hellenic morals is now well-established, in spite of some feeble protests. The dualism between the soul's true welfare and all earthly concerns begins in Pythagoras and Heraclitus, and only increases in intensity down to Aristotle and the later Stoics. The conventional order, *vómos*, the State, was never really the true home of the sage who desired to be perfect and therefore happy. Happiness lay 'in understanding and accepting the world-order,' not in average honesty or public life in a small city. It was, then, directly dependent upon knowledge, as wide as that postulated by Plato in his 'Idea of Good.' Upon this Epicurus, the anti-teleologist, insists as strongly as the rest; his last advice was 'to remember the *dogmata*,' which explained the physical world by science. The Atomic theory, which put accident above providence, had existed from early times as a heresy defying the orthodox belief in a rational world-order. But, if the axioms of Democritus and Epicurus sound startlingly unlike the rest, there is substantive agreement in actual life and in their portrait of the wise and happy man; he, too, 'understood and accepted' the world-order, by taking his proper place in it; and, it need scarcely be said, even this accidental system assumed a half-personal look. Nature was even deified in Lucretius (*q. v.*), to the loss of all logic and consistency, and to the gain of that moral unction and earnestness without which ethical theory is dry bones.

3. Happiness in knowledge of Nature or the world-order (*κατὰ φύσιν = κατὰ λόγον*).—Happiness therefore lay merely in living according to Nature, in finding the wider law which was higher and more imperious than the customs of a city, or the edict of a tyrant. Except some sophist, perhaps, in empty theory, or Aristippus for a short time, none believed that the individual could stand alone, or be safe in following impulse and running counter to convention. There has never been much disagreement in the whole of history on the virtues, on what makes a 'gentleman,' and the like; the indecency of the Cynic was reprobated by all, and Epicurus soon turned aside from pleasures to find a unique satisfaction in the simple life, in a temper permanently cheerful. But the sanction demanded was from the Universe itself, not from any local or partial authority; the happy wise man was the cosmopolitan. And here we meet two questions: Does Nature, after all, recognize the goodness and respect the happiness of the 'sage'? And, if not, is the consciousness of duty done and right defended at the cost of life sufficient for happiness? It is clear that these doubts were at the root of the movement which gave a welcome to Christianity, turned the self-poised independence of the Stoic into pious resignation to the Heavenly will, and brought back in countless forms the cult of various tutelary beings.

4. Virtue to be self-sufficing or found in union with God.—When the Porch became a practical guide instead of an academic paradox, men like Posidonius and Panætius had to come to terms with average men; like Aristotle and the Peripatetics, they postulated for happiness not bare virtue but a moderate equipment of external goods. Where Zeus had shut the door on everything but the 'good will,' they let in the (uncertain) elements (Diog. Laert. vii. 65) of health, competence, and strength. So Adam Smith admits as constituents of happiness health, a good conscience,

and freedom from debt; Lucian makes equally merry over those who demand a good deal from the world and fortune and those who pretend to despise any such alliance and to deem virtue self-sufficing. With the collapse of the city-State system, the correspondence between merit and receipt was disputed and explicitly denied. The Stoics, professing to 'rationalize' the world-order (see Bussell, *The School of Plato*, 1896, *Marcus Aurelius*, 1909), ended in pronouncing it unknowable and incommensurable with man's specific ideals of right and wrong. They still adhered to the axiom that the *Λόγος* spoke in everything; the cruelty of lion and tyrant was quite in place, like death or disease; but there was no real interrelation between these several units, each displaying its nature. The sage could help feeling dissatisfied only by steeling his heart with a few maxims to be kept ready against doubt. Nature, whether as the actual system around us or as its ideal perfection conceived by the thinker, made no allowance for the virtues of the good: the world lay in the 'Evil One,' as St. John said (1 Jn 5¹⁹), or, as Seneca preferred to say, under Fortune. *Flight from the world*, instead of the Platonic attempt to embody the ideas in the actual, became the text. The self-sufficingness of virtue was an article of faith, because it was the last and only certain possession of the wise man (*ὄσιον καὶ ἀναφαιρέτον*), and he could not stoop to make terms with an alien and immoral power. Hence pious resignation and religious prayerfulness and ecstasy, or self-loss, became the distinguishing marks of the School which ended all free development of the classical mind. It was a quite legitimate evolution: it is needless to suppose a conscious borrowing from Eastern sources; and there is nothing explicit in the final form which was not implicit in the earliest utterances of Greek wisdom. Every school prepossessed with the belief that the soul is prior to and alien from the body rejected any sort of external aid. The modern aim, to improve by better environment and early physical and mental training, would have been abhorrent. The old self-reliance was gone, and only in surrender to a divine order or to a tutelary god, as with Apuleius, were safety and happiness to be found.

II. DETAILS.—I. All Greek philosophy sought the permanent in the fleeting and changeable; and, in human life emerging into self-consciousness and purposive intent, called the end *εὐδαιμονία*, from which pure subjective feeling and impulse was ruled out as self-defeating. All schools were agreed (as soon as the question was once posed) that (a) well-being is the aim of all effort and all inquiry; and (b) wisdom, or knowledge of the good, can alone give security and guidance; that (c) 'none can sin against the light' or his own good if he knows it; that (d) ethical conduct, already personal and un-social, is a pure matter of insight; and that (e) to know good is to follow it, and to attain it is the highest happiness or satisfaction known to man.

2. It is noteworthy that no Greek school placed the ideal of perfection (and, therefore, of happiness) in active social service; the end was always self-realization, and everything was regarded from the individual's standpoint, though the subject was conceived objectively; the very frequency of classical protest that 'man is a social being' bears witness to their profound doubts on the subject.

3. Side by side with a purely rational, non-transcendental belief in virtue as self-poised independence and consistency, went from the first a vein of mysticism which issued, as we saw, in the pietism and resignation of the Roman age. Man, to be truly himself, must 'live the life of the gods,' however conceived—from the crude demonology of Empedocles and perhaps of Heraclitus to the Aris-

totelian text ἐφ' ὅσον ἐνδέχεται ἀθανατίζειν and the curious paradox νοῦς ἕκαστος, while νοῦς is at the same time God Himself.

4. Roman 'virtue' was very early conscious that reflexion was dangerous to the ethics of custom, the traditions of a proud ruling class, inured to hardship and State-service, with no keen desire to distinguish private from public life. The Senate expelled the philosophers, as they expelled the Bacchanals—both symptoms of unruly or sceptical subjectivity. They had all Hegel's distrust of the man who sets up his ideal of perfection (*Moralität*) against the slow-growing fabric of social convention (*Sittlichkeit*). Both in religion and in ethics they were content to follow their fathers. How subversive reflexion might prove is seen in Cicero. Where he is perhaps most original and sincere, he is still, of course, under heavy debt to his Greek master; but he speaks with conviction in the *Somnium Scipionis*, when he makes politics and State-service not an end in itself but a means to future blessedness—a hard but divinely appointed condition and discipline, work in the vineyard in the burden and heat of the day. When Rome was overrun by rich men and cosmopolitans, when tribal and ancestral sanctions broke down, no guide for conduct was left except private sectarian religion, and, in practical matters, obedience to law issued by an autocrat.

III. SUMMARY.—We may sum up the doctrine and practice of the ancient Greeks thus: happiness or well-being as the avowed object of our human activity is *twofold*—higher and lower, positive and negative. Man is the 'instrument of a Divine reason'; but, owing to the complex and accidental character of his body, he is hindered in the pursuit of goodness and truth. The first stage is, therefore, to order the passions. Plato saw happiness to consist in a harmony between the three parts of the soul (reason, spirit, and appetite); Aristotle was equally clear that moral virtue (or human excellence) involves a control of those desires, of that which all thinkers and teachers have called 'our lower nature.' Above this negative victory over the disorderly elements in our self, which gave a certain domestic peace, was a far higher realm of truest happiness. Every one is familiar with Plato's portraits of the soul, freed from earth and sense and communing in heaven with eternal forms. Aristotle only gave definite shape and object to this ideal yearning. However far he diverged from Platonic supernaturalism, he never swerved from the doctrine of highest happiness in contemplation alone. He passed from the docetic and mystical stage of his Eudemus (quoting Silenus' maxims, 'Best of all not to be born,' and calling death 'going home'), from the devout theological attitude of the *Eudemian Ethics*, to a cooler tone in his praise of *θεωρία*, and of a god who is the last term in science rather than in religion; to a far more sympathetic attitude to the actual world of men and things. But, though he changed the highest ideal from devotion to inquiry, he always placed happiness in intellect, saw in social life a *δευτερος πλοῦς*. In his admiration for virtue, as excellence won by endeavour, he was quite as sincere as Kant in his reverence for Duty: witness his poem, Ἄρετὰ πολύμοχθε γένει βροτείῳ | θήραμα κάλλιστον βίῳ; but, as with an absolutist like Bradley, this dualism and striving denoted an imperfect sphere, and had to be transcended by that which alone gave freedom—science. He believed the best to be within the grasp of a few only whom Fortune had equipped with competence, health, and leisure. In his Platonizing *Protreptic*, he calls worldly goods (strength, beauty, and honours) mere semblances or shadow-pictures (*σκιαγραφία*); and compares the soul in the body to a living prisoner yoked with a corpse. How far

he transcended the ascetic dualism of principles is known to every reader of the *de Anima*. Quite clear is the negative (or cathartic) character of moral as distinct from intellectual 'virtue'; it prepares the way for the chief good, but is not to be identified with it. Aristotle reverences Eudemus, *ὅς μόνος ἢ πρῶτος θνητῶν κατέδειξεν ἐναργῶς | οἰκέω τε βίῳ καὶ μεθόδοισι λόγων | ὡς ἀγαθός τε καὶ εὐδαίμων ἅμα γίνεται ἀνὴρ*. In his earlier and more devout phase, this happiness was a divine gift or recompense; later, the sage became independent and worked out his own salvation; only afterwards did the precarious tenure and uncertain title come to light, throwing a man back on his own inner resources and reviving the old Platonic asceticism. Peripateticism was throughout a compromise with the worldly and social spirit. Aristotle was quite sincere, for instance, in holding that human good is specific and attainable in this life by an activity of the soul, not needing a comprehensive knowledge of the universal good which is in Plato supernatural. But how imperfect and provisional is his portrait of the natural man, and with what unctio he speaks of the highest life of God and of man! For the average man in the world neither Aristotle nor his school gave any real guidance in the management of conduct or the pursuit of happiness. When Theophrastus stoutly defended the value of external good (leisure, security, and affluence), he was speaking on behalf of a privileged aristocracy, the elect of wisdom.

The weakness, then, of ethical appeal in the Greek world was due to (1) the small number who could reach the ideal; (2) the ascetic and transcendental character of the happiness promised to them; (3) the increasing sense of the instability of fortune, the submerged props on which rested that joy which should be man's surest and most unchanging possession; (4) the confusion of moral and intellectual good (to the detriment of the former), and the permanent entanglement of right action with 'knowledge of the good.' Impulse and custom still regulated the life of ordinary men. Philosophers taught no striking novelties in ethics, and merely laid stress on a negative goodness, aloof and remote, which could have no public influence. The lower happiness was allowed by Plato in the *Republic* to those who implicitly obeyed authority; it was clear that they were outside the pale of truly reasonable beings, of those who thought for themselves. This (socialist) belief, that happiness for the mass can come by regimentation from above, prevented the spread of private judgment or any sense of responsibility. The Hellenic conception of happiness gave way, therefore, before the new religious personal faith of which Christianity was the chief, but by no means the only, symptom; and it was the belief in 'regimentation' that helped to arm the Roman Emperor with such ample powers.

HARDWĀR.—An ancient historical town, and one of the most famous places of pilgrimage in N. India; situated on the right bank of the Ganges, close to the point at which the river debouches into the plains through a gorge of the Siwālik or sub-Himalayan range; lat. 29° 58' N.; long. 78° 10' E. It is claimed as a sacred site by the

followers of the two great Hindu sects, the followers of Śiva giving the name as *Haradvāra* ('gate of Hara,' or Śiva, the destroyer), those of Viṣṇu calling it *Haridvāra*, after Hari, 'the tawny one,' a title of Viṣṇu Kṛṣṇa. The place was also at one time known as *Kapila*, after the saint Kapila Muni, the scene of whose devotions and austerities at the Śaiva shrine of Kapileśvara, 'Lord of Kapila,' is shown at Kapilasthāna in the hills adjoining Hardwār (Atkinson, *Himalayan Gazetteer*, Allahabad, 1884, ii. 806). Hiuen Tsiang, the greatest of the Chinese Buddhist pilgrims (A.D. 629-645), visited a place called Mo-yu-lo, or Mayūra, which Cunningham identifies with the neighbouring village of Māyāpur, which now forms part of the sacred town. But the distances from fixed points do not agree, and this identification, like others made by the same archæologist, which necessitate a revision of the Chinese text, must be accepted with caution (S. Julien, *Hiouen Tsiang*, Paris, 1851, ii. 330; Beal, *Si-yu-ki*, London, 1906, i. 197 f.; Cunningham, *Arch. Rep.* ii. [1871] 231). Hiuen Tsiang calls the Ganges at this point *mahā-bhadra*, 'very propitious'; and even in his time vast numbers of pilgrims used to bathe in the sacred stream. It seems also to have been the scene of a cult of Buddha, because, among the broken sculptures at the Nārāyaṇaśila or Nārāyaṇabali temple, Cunningham identifies one small figure of Buddha the ascetic, surrounded by smaller images of ascetic attendants. Doubtless this is only one survival above ground of many images of the Master. Hiuen Tsiang speaks also of a neighbouring site, known as Gaṅgādvāra, 'gate of the Ganges'; and here undoubtedly a cult of the river-goddess prevailed from a very early period.

'There is mention,' says Cunningham (*loc. cit.*), 'of Haridvāra, which, indeed, would seem to have risen on the decay of Māyāpur. Both Abū Rihān and Rashid-ud-din mention only Gaṅgādvāra (Elliot, *Hist. of India*, London, 1867-77, i. 52). Kālidās also in his *Meghadūta* says nothing of Haridvāra, although he mentions Kankhal; but, as his contemporary, Amarasiṅha, gives Vishnupadi as one of the synonyms of the Ganges, it is certain that the legend of its rise from Vishṇu's foot is as old as the 5th century. I infer, however, that no temple of the Vishnupada has been erected down to the time of Abū Rihān. The first allusion to it of which I am aware is by Sharf-ud-din, the historian of Timūr, who says that the Ganges issues from the hills by the pass of Coupele, which I take to be the same as Koh-pairi, or "the hill of the feet" of Vishṇu.'

At any rate, the place was well known in the time of Akbar, because Abū 'l-Fazl speaks of 'Māyā, known as Haridvāra' on the Ganges. It is held sacred for 18 *kos* in length (about 27 miles). Large numbers of pilgrims assemble on the 10th of Chaitra (March-April) (*Ain-i-Akbari*, tr. Blochmann and Jarrett, Calcutta, 1873-94, iii. 306).

Both Śaiva and Vaiṣṇava sectarics are thus agreed upon the sanctity of this place. In fact, as is generally the case in India, the most famous sacred places are those whose sanctity dates from a period antecedent to the rise of the present religions. Hardwār, as the place where the great river issues from the hills, was naturally regarded as sacred from the very earliest times, and thus became a fitting abode of the deities who in succession acquired the devotion of the people. The first was the river-goddess; then Buddha; then the Hindu gods of the later period. Besides this, in the *Mahābhārata* we have a hint that a serpent-cult prevailed. Arjuna, one of the Pāṇḍava princes, is said to have come here to bathe, and met Ulūpi, daughter of the Nāgā king, who besought him to marry her (*Mahābh.* i. 214). Both Śaivas and Vaiṣṇavas rest their belief in the holiness of the place on rival legends describing the birth of the river. The former allege that the rivers springs from Kailāsa, the paradise of Śiva; the latter, that it falls from the toe of Viṣṇu—in support of

which they point to the impression of the foot-prints of the god, the *Hari kā charan*, or *Hari kī pairi*, which they display to pilgrims. The *Viṣṇu Purāna* tells of the holiness of the place as follows:

'The offences of any man who bathes in this river are immediately expiated, and unprecedented virtue is engendered. Its waters, offered by sons to their ancestors, in faith, for three years, yield to the latter rarely attainable gratification. Men of the twice-born orders who offer sacrifice in this river to the lord of sacrifice, Purushottama [Viṣṇu-Kṛṣṇa] obtain whatever they desire, either here or in heaven. Saints who are purified from all soil by bathing in its waters, and whose minds are intent on Keśava ["the long-haired one," Viṣṇu-Kṛṣṇa], acquire thereby final liberation. This sacred stream, heard of, desired, seen, touched, bathed in, or hymned, day by day, sanctifies all beings; and those who, even at a distance of a hundred leagues, exclaim, "Gaṅgā! Gaṅgā!" atone for the sins committed during three previous lives. The place whence this river proceeds, for the purification of the three worlds, is the third division of the celestial region, the seat of Vishṇu' (tr. Wilson, London, 1864-77, ii. 272 f.).

A remarkable legend, told in connexion with Kankhal, a town close to Hardwār, has been interpreted to represent a conflict between the rival cults of Viṣṇu and Śiva, in which first the former, but finally the latter, acquired the ascendancy. The story as told in the Purānas (Wilson, *Viṣṇu Purāna*, i. 120 ff.; Dowson, *Classical Dict. of Hindu Mythology*, London, 1879, p. 76 ff.) relates that Dakṣa made a great sacrifice here, and invited all the gods except Śiva. But his consort, Satī or Umā, jealous for the honour of her lord, induced him to create a monster, Virabhadra, who was ordered to mar the sacrifice. Accompanied by the terrible goddess Rudrakālī and her train, Virabhadra attacked the assembled gods, with the result that Yama, god of death, had his staff broken, and Sarasvatī, goddess of learning, and the Mātṛi, or mother-goddesses, had their noses cut off. Yajña, lord of sacrifice, was decapitated, and he now forms the constellation Mṛigaśiras, the antelope's head. A variant of the tale makes Satī in her wrath destroy herself on the scene of sacrifice by leaping into the sacrificial fire. An ancient temple, dedicated to Śiva as *Dakṣeśvara*, 'Lord of Dakṣa,' marks the scene of the tragedy.

Hardwār, from its vicinity to Delhi, naturally attracted the attention of the Muhammadans; and Timūr, in his Memoirs (Elliot, *Hist. of India*, iii. 458 ff.), describes a terrible massacre of Hindus in the neighbourhood. In the course of this and later raids the ancient temples were probably destroyed. The present town and the ruins of Māyāpur, to the sanctity of which it seems to have succeeded, lie on the right bank of the river, which is here divided into several channels. One of those, which now possesses the greatest sanctity, flows past the town, and from it the Ganges Canal is supplied. The Brāhmins at the time of its construction declared that the waters of the holy river would never enter the canal or serve the utilitarian purposes of irrigation. The prediction was not fulfilled, and the benefits resulting from the project have induced the Brāhmins to accept the inevitable.

Cunningham supposes that he has identified the remains of the older sacred town, *Māyāpur*, 'city of illusion'; and this site contains three old temples. That of Māyā Devi he believes to date from the 10th or 11th cent. A.D. The principal image is a three-headed and four-handed deity, which is probably Durgā. Close by is a nude male image which probably belongs to the Jain sect. In Hardwār itself all the temples are modern, and none of them displays any architectural beauty. The chief shrine is the Gaṅgādvāra, or 'gate of the Ganges,' near the present sacred bathing-place. This temple is small, and the idol, dressed in tawdry robes, is surrounded by a number of attendant images of other gods. The

original stone marked with the footprints of Viṣṇu is said to have disappeared under water some time ago; but a substitute has been provided.

The bathing steps have been the scene of more than one tragedy. In 1819, in the early days of British rule, before the method of regulating these enormous gatherings of pilgrims had been discovered, the rush of bathers was so great that no fewer than 430 lives were lost. These dangers have now been removed by widening the steps and regulating the numbers which enter the sacred pool. The chief risk at these crowded fairs is an outbreak of infectious disease. In 1892 a sudden epidemic of cholera made it necessary to disperse the pilgrims before the end of the fair. This led to much local agitation, and an inquiry was held, the result of which was that the charges made against the officials were found to be without foundation. The pilgrim priests (*paṇḍa*) are an ignorant, extortionate class. It was only a selfish regard for their own interests that led to this agitation, and at a later period they were active opponents of the plague regulations enforced by the Government. The chief fair occurs when the sun enters Aries. Every twelfth year, when Jupiter is in the sign Aquarius, the Kumbh Melā (Skr. *kumbha*, Aquarius), a specially large fair, takes place. Hardwicke estimated the attendance in 1796 at 2½ millions; Raper in 1808 at 2 millions. In more recent years the attendance has diminished, chiefly because railway facilities allow of pilgrimage throughout the year, and local devotees are able to visit other and more distant holy places. The fair has sometimes been the scene of conflicts between rival bodies of ascetics. In 1760 a fierce battle occurred between the Bairāgi or Vaiṣṇava ascetics and the Gosāin, or followers of Śiva, in which the former were defeated, with a loss, it is said, of some 1800 lives. After the close of the Hardwār fair some pilgrims make their way by the difficult route to the Himalayan shrines of Kedārnāth and Badarināth (*qq.v.*).

LITERATURE.—The above account is largely based on personal observation. The report by Cunningham (*Arch. Rep.* ii. (1871) 231 ff.) is valuable, and has been to some extent summarized by A. Führer in his *Monumental Antiquities and Inscriptions*, Allahabad, 1891, p. 15 f. Early accounts are those of T. Bacon, *First Impressions . . . in Hindostan*, London, 1836, ii. 152 ff.; T. Skinner, *Excursions in India*², do. 1853, i. 128 ff., 180 ff. Some of the temples and images are illustrated in W. Crooke, *PR*², London, 1896.

HAREM, HARĪM.—See WOMAN (Muslim).

HARISCHANDĪS.—The Hariśchandīs are a sect of Indian Vaiṣṇava ascetics. Their name is derived from that of an ancient king entitled Hariśchandra, who is said to have lived in the *Tretā Yuga*, or Silver Age. Many legends are recorded concerning him. In the *Āitareya Brāhmaṇa* (vii. 13–18) it is told how he purchased Sunahśepha to be offered in vicarious sacrifice instead of his own son.¹ This is the oldest reference to him. In later literature he is best known for his piety and his sufferings. He was a sort of Indian Job, who passed through inconceivable and undeserved woe, and had to sell even his wife and child in order to pay the dues of the rapacious saint Viśvāmītra. He finally sank to be the servant of a Dōm, his duties being to collect the clothes that covered the corpses at the Benares place of cremation, and to deliver them to his master. At the climax of his sufferings in this degrading occupation, he had to steal the clothes from the corpse of his own son, which was brought thither for cremation by his mother, Hariśchandra's long-parted wife. The parents resolved to end their sorrows by dying on the son's funeral pyre. The

gods then intervened. His Dōm master, who was really the god Dharma, or Virtue, taking human form on purpose to test Hariśchandra's sense of duty, expressed himself satisfied. Hariśchandra and his wife were translated to heaven, and his son was resuscitated and restored to his kingdom, where he reigned in his father's stead. The whole story is told with much pathos in the seventh and following chapters of the *Mārkaṇḍeya Purāṇa*,¹ and is a favourite subject of modern vernacular literature.

The Hariśchandīs are nearly all of very low caste, mostly Dōms. They claim to practise the tenets handed down to them from Hariśchandra's Dōm master, who was taught piety by his servant in the intervals of his employment. They worship Viṣṇu as the Creator of the universe; and, if they have any other definite doctrines, they are those of the *Bhakti-mārga* (see *ERE* ii. 539 ff.).

HARMONY SOCIETY.—See COMMUNISTIC SOCIETIES, vol. iii. p. 780 f.

HARPIES.—Rarely does a mythological figure express so unmistakably its nature by its name. The Harpies are Ἀρπυιαί, 'Snatchers,' creatures of rapine, and rapidity. On a black-figured vase in the Berlin Museum (Cat. 1682, *Arch. Zeitung*, 1882, pl. 9) two Harpies are figured, and against them their name in the dual, Ἀρπυια, 'the two Snatchers' (see fig. 1). From this vase we are certain that in the 6th cent. B.C. the Greeks conceived of the Harpy as a winged *daimon* of human female form. The vase is of special interest because, though the two winged figures are inscribed as 'Harpies,' the scene of which they form part is the slaying of Medusa. This shows that Harpies were apt to be confused with another type of monster, the Gorgon. The Gorgon is always differentiated from the Harpy by the mask-like face with tusks and protruding tongue (see GORGON), but the Gorgon is sometimes figured in Greek art as performing the functions of a Harpy, *i.e.* snatching away human beings.

The function of the Harpies as Snatchers comes out clearly in Homer (*Od.* xx. 77 f.):

τόφρα δὲ τὰς κοῦρας Ἀρπυιαὶ ἀντρεΐλαντο,
καὶ ῥ' ἔθοσαν στυγερῆσιν Ἐρινύσιν ἀμφιπολεῖν.

Penelope is telling the old Lycian story of how the daughters of Pandareos waited in their father's hall while Aphrodite planned for them in Olympus a goodly marriage; but they never came to marriageable age, for

'Meantime the Snatchers snatched away the maids, and gave them o'er

To the hateful ones, the Erinyes, to serve them evermore.'

The Harpies here are little more than ministers of untimely death; they are only half-way towards impersonation; and to give them a capital letter is really to crystallize their personality prematurely. It must always be remembered that to the Greek, even when the Harpies became fully personalized, their name carried its adjectival sense of 'snatchers' in a way lost to us.

To Homer, in the passage cited, they are death-demons near akin to the Erinyes, the angry ghosts. But here, as so often, Homer has moved somewhat away from primitive conceptions, of which, however, in this very passage he betrays a haunting remembrance. The Snatchers were originally not death-demons but simply winds. Penelope, just before the passage cited, prays in her desolation that the 'storm' (θύελλα) may 'snatch her away'

¹ F. Pargiter's tr., p. 32 ff. The story also occurs in the *Padma Purāṇa*.

¹ Cf. Max Müller, *Hist. of Anc. Skr. Literature*, London, 1859, p. 408 ff.

(ἀναρπάσσα), just as the 'storm-winds' (θύελλαι) snatched away the daughters of Pandareos :

ὡς δ' ὅτε Πανδάρου κόυρας ἀνέλογο θύελλαι (Od. xx. 66).

Clearly the Harpies are equated with the storm-winds. It is only incidentally as Snatchers that they perform the functions of death-demons.

cylix (fig. 2) in the Würzburg Museum (*Inu.* 354). Phineus, to the right, reclines at his banquet, attended by the women of his family, one of whom holds a large flower in token of plenty and fertility. The Harpies, the sirocco-snatchers, have been at their work fouling the feast, but for the last time

FIG. 1. Painting on Berlin vase.

As winds the Harpies have a double function : they not only snatch away to destruction ; they give life. Homer (*Il.* xvi. 150) tells us that a Harpy, Podarge ('Swift-foot'), was the mother of the horses of Achilles by Zephyros the West Wind. Both parents are winds ; but, as was natural in a mare-breeding country, the Harpy was conceived of not as a woman, but as the creature who was swiftness embodied—a fleet horse. The notion that winds could impregnate was wide-spread in antiquity. Vergil (*Georg.* iii. 274 f.) says of mares : '... saepe sine ullis conjugis vento gravidae, mirabile dictu.' The winds are breaths and souls (πνεύματα) ; and, when breezes are spoken of as 'life-begetting' (ζωογόνοι) and 'soul-rearing' (ψυχοτρόφοι), this was not to the ancients a mere metaphor. Winds, says the author of the *Geoponica* (ix. 3), 'give life not only to plants but to all things.'

It depends, however, on what quarter of the world one lives in which wind will be beneficent

they are chased away seawards by the two sons of Boreas the clean North Wind, Zetes ('Life Blower') and Kalais ('Fair Prosperity'). North Winds (beneficent) and South Winds (maleficent) have alike four great curved wings. The sea towards which the North Winds are blowing—the topography is Thracian—is clearly indicated by dolphins. No one who has felt the blight of a sirocco will fail to understand the pestilential wind-demons.

Unquestionably in the nature and function of the Harpy the maleficent element prevailed. For this reason 'Harpy-tomb' is probably a misnomer for the famous monument in the British Museum. The bird-demons figured on it are too gentle in nature. At the same time it must be remembered that the monument comes from Lycia, the home of the myth of the daughters of Pandareos and the 'Snatchers.'

LITERATURE.—Roscher, s.v. 'Harpyia' ; Cecil Smith, 'Harpies in Greek Art,' in *JHS* xiii. [1892-93] 103 (esp. for the vexed

FIG. 2. Würzburg cylix.

and which maleficent. The principal myth in which the Harpies are concerned was a Thracian one—that of the feast of Phineus ; and here the Harpies clearly stand for pestilential winds which come from the South—in a word, for the sirocco, which blights man, beast, and vegetation. The feast of Phineus is clearly depicted on the famous

question of the 'Harpy-tomb' and for the interpretation of the Cyrene cup with supposed figures of Harpies) ; J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Cambridge, 1903, pp. 176-225 (on the almost inextricable confusion between Keres, Gorgons, Harpies, and Sirens, and for the various artemonuments). Among the modern Greeks some functions of the Harpies, but not their name, are exercised by the Nereids (*q.v.*) ; but, as the Nereids perform all the functions of Nymphs in general, to discuss them here would only cause confusion.

For Nereids as active in whirlwinds, see J. C. Lawson, *Modern Greek Folklore and Ancient Greek Religion*, Cambridge, 1910, p. 142. J. E. HARRISON.

HARRANIANS.—The Harranians were a Syrian religious community named after their headquarters, Ḥarrān (the Ḥaran of the OT, and Carrhae of the classical geographers). The first mention of them as a sect seems to be in the Chronicle of Dionysius of Tell-Mahré (ed. Chabot, Paris, 1895, p. 69), composed about A.D. 840; he confuses them with the Manichæans, and records an occurrence of the year 764 in which they were concerned. Owing to the fame acquired by various professional men and writers belonging to this community, they attracted the attention of Muslim authors, who composed numerous monographs about them and their tenets. Some of these are preserved, at any rate in part, in the *Fihrist*, or Bibliography, of Ibn al-Nadīm, composed A.H. 377 (A.D. 987); and accounts of them are given in the *Murūj al-Dhahab* of Maṣūdi, composed A.H. 332 (A.D. 943), and in his later work, the *Tamīh*, composed A.H. 345 (A.D. 956). Much is also heard about them in the 6th cent. of Islām, especially in the treatise on Sects by Shahrastāni († A.H. 548 [A.D. 1153]) and the 'Guide of the Perplexed' of Moses Maimonides († A.H. 601 [A.D. 1204]). The community seems to have disappeared during the devastation of Mesopotamia by the Mongols in the 7th cent. of Islām.

Islāmic writers usually call them Sabians (*Ṣābi'ah*)—a name which occurs in the Qur'an, where those who bear it are treated with some respect; and, according to some of the Muslim authorities, the Harranians adopted it in A.H. 218 (A.D. 833), in order to obtain recognition as a tolerated cult. The name itself, it is thought, really belonged to quite a different community, viz. the Mandæans. This account of the appellation, which was first enucleated by Chwolsohn in his monumental treatise on the *Ssabier* (St. Petersburg, 1856), has ordinarily been accepted; but it is not free from difficulty, for Ṭabarī († A.H. 310 [A.D. 922]), in his Commentary on the Qur'an (i. 243, Cairo, 1321), after Yūnus b. 'Abd al-'Alā († 264 [877]) after Abdallah b. Wahb († 197 [812]) after Usāmah b. Zaid († 153 [770]), locates the Ṣābi'ah in the Jazīrah of Maṣīl, which, though somewhat vague, is a correct location of Ḥarrān, but would not suit the Mandæans. If these authorities are correctly given, the connexion between Ḥarrān and the Ṣābi'ah must have been three-quarters of a century earlier than the date given in the *Fihrist*; and the earliest geographer Iṣṭakhri (c. A.H. 300 [A.D. 912]) mentions Ḥarrān as the city of the Ṣābi'in (p. 76, ed. de Goeje, 1870), without any suspicion that the connexion was less than a century old. 'There,' he says, 'are their seventeen sacristans (*sadanah*).' Neither of these authorities was accessible to Chwolsohn. Further, it would appear from good traditions that the followers of Muhammad were known by their enemies, and even to some extent among themselves, as *Ṣābi'ah*, and this seems to bear some relation to the title which Muhammad connects with Abraham, *Ḥanīf*, and which he gave his own community. For Christian writers frequently speak of the Harranians as pagans, *hanpē*, and Abraham is connected with the city of Ḥarrān in Ac 7^a rather more decidedly than in the narrative of Genesis. The controversial but decidedly learned writer, Ibn Ḥazm († 456 [1063]), in his *Fiṣal wa-Mīlāl* (Cairo, 1317, i. 35), has no hesitation in identifying the Harranians with the *Ṣābi'ans* of the Qur'an, and supposes that Abraham was sent to convert them, and that during his time they took the name *Ḥanīf*. According to him, they believe,

like the Mazdæans, in two eternal elements; they honour the seven planets and the twelve constellations, and paint them in their temples; they offer sacrifice and incense; but they have five prayers similar to the Muslim ceremony, they fast in Ramaḍān, turn to the Ka'ba in prayer, and regard the same meats as unlawful as are so regarded by the Muslims; their religion was then identical with that afterwards restored by Muhammad, except that they had introduced the worship of the stars and of idols, which Abraham endeavoured ineffectively to abolish.

Although this account has many inaccuracies of detail, it is confirmed in some important matters by the others; and it seems to solve one of the puzzles of Islāmic history, viz. the adoption by Muhammad of the name *ḥanīf*, while he himself was called *ṣābi'* by his contemporaries. But this would imply that the latter name was used either by or for this community in his time, whence we should suppose that the story adopted by Chwolsohn was a fiction invented by its enemies—a supposition which is by no means unlikely. The origin of the appellation *Ṣābi'ah* is obscure. Ṭabarī in his history (i. 178) derives it from one Ṣābi', a son of Methuselah, but in his Commentary (i. 243), like the lexicographers, he supposes it to come from a verb *saba'a*, 'he changed his religion,' which appears to be an inference from the application of the name to Muhammad and his followers. A rather better etymology seems to be that put into the mouth of a Ṣābi'an by Shahrastāni (p. 203), from *ṣabā*, 'to desire,' since that verb is also found in Syriac, and would have an exact analogue in the name *muridān*, 'aspirants after the knowledge of God,' which is taken by Ṣūfi novices, and has even been used as the title of a sect.

The accounts of the Harranian system preserved by the Muslims purport to come either from members of the sect with whom the authors came in contact, or from Arabic translations of their sacred books. One of the latter was made by order of a *qādī* of Ḥarrān, and, according to the author of the *Fihrist*, was widely read; of another, called the 'Book of the Five Mysteries,' he had come across a mutilated copy. A Harranian calendar was composed by Abū Sa'id Wahb b. Ibrāhīm, the Christian contemporary of Ibn al-Nadīm, who gives it *in extenso*; and another is embodied by al-Birūnī in his *Chronology of ancient Nations* (A.H. 390 [A.D. 999], tr. Sachau, London, 1879, pp. 314–320). The *Fihrist* also embodies a list of Harranian gods, and some other matter of an analogous kind. A magical treatise called *Ghāyat al-Ḥakīm*, of about A.H. 440 (A.D. 1048), also contains what is ostensibly a lengthy extract from a Ṣābi'an book. Finally, Shahrastāni reproduces a lengthy dialogue between the Ṣābi'ans and the Ḥanīfs.

From a comparison of these documents, Chwolsohn inferred that the Harranians were, as the Christians called them, pagans, *i.e.* a community who had retained a mixture of Babylonian and Hellenic religion, over which there had been superimposed a coating of Neo-Platonic philosophy (chiefly among the educated), while certain features had also been adopted from one of the monotheistic cults, possibly through the influence of the surrounding Muslims. This view perhaps harmonizes the evidence before us as well as it is possible to harmonize it; yet the Muslim authors seem to call attention with justice to certain features which Ṣābi'ism shares with Islām, especially three daily prayers measured by inclinations and prostrations, which imply that they were a real sect, *i.e.* followers of a system founded by some person or persons, rather than that their worship was a survival modified by unconscious syncretism. The 'prophets

whom they professed to follow were Hermes and Agathodæmon, whom they identified in Shahrastānī's time with Seth and Idris (Enoch); these names appear to belong to the Hermetic period of Hellenic religion (G. Murray, *Four Stages in Greek Religion*, 1912, p. 95).

Of the documents mentioned above, the most authentic appears to be the list of gods, which, however, is so seriously corrupted or mistranslated that little can be made of it; in another account the Ḥarranians are said to sacrifice to the gods of the seven week-days, whose names are partly Babylonian, partly Greek. To these the sacrificial calendar adds 'demons, *jinn*, spirits, the god of the *jinn*, the lord of the hour, the god who makes arrows fly; the god Tawūz [or Tammūz], who was slain by his master, who then ground his bones in a mill, and scattered them to the winds; Haman the prince, father of the gods, the prince of the *jinn*, the greatest god, the god North, the lord of fortune,' etc. The account of their sacrifices contains much that is incredible; the sacrificial animals were, according to it, in many cases burned alive; and on one day they would sacrifice a child, whose flesh was thoroughly boiled and made into cakes, which were then eaten by a certain class of the worshippers. On a particular day they prayed for the destruction of the Mosque of Ḥarrān, the Christian Church, and the Women's Market; to be followed by the restoration of their kingdom. It seems clear that the calendar is the work of an enemy of the sect. The story, however, of the human sacrifice appears to have been brought up as frequently as the modern accusation of the same kind against the Jews. Dionysius (*loc. cit.*) asserts that they annually entrapped a victim, whom, after keeping for a year, they decapitated with a view to divining by his head; and this story is separately told in the *Fihrist*, where, in lieu of decapitation, they are said to have boiled the body so long that the head came off. The victim, according to this account, was a person who displayed 'mercurial' qualities, which are explained in the *Ghāyat al-Ḥakim*. In the story of Dionysius, one of their victims succeeded in escaping and invoking the Muslim authorities, who severely fined the delinquents; we may, however, be sure that the practices described in this calendar would never have been tolerated by the Muslim rulers. Al-Bīrūnī's calendar agrees in some respects with that of the *Fihrist*, but contains many more names. The chief accounts agree in making the Ḥarranians pray towards the north, and fast for thirty days, distributed between December, February, and March. They had a law of purity resembling in several respects that of the Jews, and they had a table of unlawful meats, wrongly identified by Ibn Ḥazm with that of the Qur'ān, since they tabued the camel.

Most of the accounts make star-worship a chief characteristic of the Ṣābi'an system, and in the magical treatise published by Dozy they are credited with an elaborate astrological theology. As, however, the author gives reasons why no Ṣābi'an can ever divulge the mysteries of his faith, the authenticity of this document is self-condemned. The 'Book of the Five Mysteries,' from which extracts are reproduced by the author of the *Fihrist*, appears to be a service-book, in which there are versicles and responses repeated by the *kāhin* (priest) and a congregation of youths, apparently identified with the *bughdārī* (an uncertain word, which may be Persian). The matter of this service-book is so poor that the author of the *Fihrist* suggests that the translator was either a bad scholar or translated too literally.

Mas'ūdī and Shahrastānī treat the Ṣābi'ans as philosophers rather than as pagans; besides temples

to the planets, which, according to Mas'ūdī, were in a variety of geometrical figures, they had temples of the First Cause and the Reason, of the Chain, Matter, and the Soul. In Mas'ūdī's time only one temple remained—that of *μεγάλη θεά*, 'the great goddess,' which, however, the Muslims supposed to be dedicated to Abraham's father, called in the Qur'ān Azar. The knocker of the door bore an inscription in Syriac characters which Mas'ūdī was told meant 'Whoso knows himself is religious,' supposed to come from Plato. He also tells of a ceremony of initiation undergone by the Ṣābi'an youths in the vaults of this temple, similar to one described in the magical treatise. Shahrastānī's 'Debate' makes the Ṣābi'ans defend by metaphysical arguments their practice of approaching the First Cause indirectly by sacrifices and prayers to the intermediaries, who are the powers attached to the celestial spheres.

Many works by Ṣābi'an authors are still extant, but they appear to throw no light upon their tenets. Their most famous man of science was Thābit b. Qurrah (A.H. 211–238 [A.D. 826–900]), who translated various Greek scientific works into Syriac and Arabic. Equally distinguished as a secretary of state was Ibrāhīm b. Hilāl (313–384 [925–994]), many of whose letters and poems are preserved. We learn from his biography (*Yāqūt, Dict. of Learned Men*, ed. Margoliouth, 1910, i. 324–358) that the family profession was medicine, as was the case with other Ṣābi'ans of note. Ibrāhīm was famous for his accurate acquaintance with the Qur'ān—a qualification indispensable in his vocation. The private letters of this personage do not appear to differ in their religious expressions from those of professed monotheists.

Until some discovery is made of genuine works belonging to the sect, their origin and tenets must remain obscure. A certain amount of veracity is attested for the Muslim accounts by the number of Syriac words which they contain; and it is noticeable that some Muslims call them 'Chaldeans' and others 'Chasdeans' (so Fakhr al-din Rāzī, † 606 [1209]), which perhaps was a title that they assumed. The polemic put in the Qur'ān (vi. 74–83) into the mouth of Abraham, who endeavours to convert his father from the worship of idols, and himself repudiates the worship of the heavenly bodies, bears a curious likeness to that which Shahrastānī ascribes to the 'Ḥanifs' in their reply to the Ḥarranian Ṣābi'ans.

LITERATURE.—Besides Chwolsohn's work mentioned above, there is text and tr. of the extract from *Ghāyat al-Ḥakim* by Dozy and de Goeje, in the *Actes du sixième Congrès des Orientalistes*, Leyden, 1888, ii. 285 ff.

HARTMANN.—See PESSIMISM AND OPTIMISM.

HARVEST.—The ceremonies and observances of primitive races before, during, or after harvest belong to a group of customs which have gathered round the critical seasons of the year. The exact date at which such celebrations or ritualistic observances are carried out varies according to the character of the community. Among tribes whose chief occupation is hunting, the opening of the hunting season will, as a rule, be found to be marked by a ceremony which has for its object to secure a plentiful supply of game and the success of the hunters. In agriculture, the most critical season to the primitive mind is the time of sowing. This period of the year is marked by magical rites and practices intended to ensure the growth and fertility of the crop. As the year goes on, various means are employed to influence the course of natural phenomena or avert the evil consequences of untoward conditions, such as an inadequate

rainfall. Harvest observances, though in their most obvious aspect in a civilized community they celebrate only the turn of the year and the fruition of the labours of the preceding months, depend, to the primitive mind, upon the same principles as the rites of the earlier stages; and consequently the harvest is not simply an occasion for rejoicing, but a time at which natural forces have still to be propitiated.

Taking harvest rites as a whole, the essential elements resolve themselves into three: (1) propitiatory rites; (2) observances to secure fertility; (3) communion, and the offering of firstfruits, usually accompanied or followed closely by a feast, a period of licence or rejoicing, which in the course of development tends to become simply a celebration of the end of the labours of the year. These elements do not necessarily all appear in all harvest practices, nor are they always clearly distinguishable. A rite may exhibit features which would justify its classification under more than one head.

I. Propitiatory and cognate rites antecedent to the harvest.—At a stage of belief which attributes a soul or spirit to objects both animate and inanimate, the act of destruction involved in plucking fruit or killing an animal for human consumption is one of peculiar danger. In both cases the spirits of the animal or vegetable world must be propitiated to avert the evil which would otherwise inevitably follow assimilation. In the case of corn, which impresses the mind merely by the regularity of its growth and the effect of space it gives, the feeling of danger is intensified by the fact of human interference with the course of Nature in cultural operations, as well as by the organized and prolonged effort required to secure the crop. This deduction from the general character of religious beliefs among primitive people is fully borne out by their practices at the opening of the harvest.

Among the ancient Egyptians, the reaper, after cutting the first few blades of corn, atoned for the impiety of his act by heaving his breast and uttering the lament which the Greeks called *Μαρέπωρ* (Herod. ii. 79); in Greece, just as the death of vegetation was bewailed in the Linus song, a song was sung over the corn-stack (*Ιωλωρ*), and in Bablylonia the death of Tammuz (obviously, from the legend, a personification of the corn) was bewailed by the women. The feast of Demeter Chloe, which was held at Athens on the sixth of Thargelion, at about the time when the corn was ripe, was a solemn feast of purification and of mortification, and probably was originally the feast of atonement and propitiation before the gathering of the harvest (L. R. Farnell, *CGS*, Oxford, 1896-1900, iii. 84). The Nandi woman, when she goes with her daughters to pluck the first ears of eleusine grain in her plantation, is actuated by the same motive: the plucking is a solemn function with a regular ritual, and the crop as a whole can be gathered only when the corn has been accepted by the spirits (A. C. Hollis, *The Nandi*, Oxford, 1909, p. 45).

Among the Thangkuls of Manipur, no work other than that of attending the crop is done from the time of the first *genna*, or tahu period, which follows the sowing. Among the Mao group of the same district, a *genna* lasting for four days is observed at the beginning of the harvest (T. C. Hodson, *The Naga Tribes of Manipur*, London, 1911, p. 167 ff.). Any action which might prove prejudicial to the crops is thus prevented. A ritual must be observed at the time of plucking the first fruit or seed, before the real harvest begins, to secure a plentiful crop and to avoid offence to the spirits (see art. *FIRSTFRUITS*).

Another indication of the sacrosanct character of the crop is that the first sheaf is sometimes cut by some one specially designated. In Ceylon, among the Burghers, the first sheaf is cut by a Kurumba, a man belonging to a tribe whose members are looked upon as magicians. Among the Kurgs of Southern India, the man who has to cut the first blades of corn is chosen by an astrologer, and in the ceremony which follows he is not allowed to mix with other members of the tribe until the loaf made from the grain of the blades he has cut has been eaten. In one part of Yorkshire, the first corn was cut by the vicar, and from this corn the bread for the communion was made.

(1) *The 'corn-spirit'*.—Customs connected with the gathering of the harvest and the threshing of the corn which are practised, or were practised until recently, among the European peasantry point to the survival of a belief in a spirit immanent in the corn, or closely connected with its fertility. The existence of this belief is affirmed by the epithets 'corn-mother,' 'pea-mother,' and 'rye-

mother,' according to the nature of the crops. In Lithuania it was believed that an old woman sat among the corn; both in Germany and in Poland, children were warned against entering the cornfields or treading down the corn because of the 'corn-mother.' The 'corn-mother' is sometimes identified with Death, and the children are warned against entering the cornfield because 'Death sits among the corn'; the last sheaf is sometimes known as 'the Dead One,' and in a children's game played in Transylvania Death is represented by a child dressed in maize leaves. At Dinkelsbühl in Bavaria, the corn-mother was said to punish the farmer for his sins by giving him a bad harvest.

The precise character of the beliefs is still more clearly indicated by customs followed at various stages of the work. The spirit is supposed to reside in the last sheaf of corn, the object of the reapers or threshers being to drive it away or catch it. In Hanover, the reapers beat the last corn with sticks until all the grain has fallen from the stalks, when the corn-spirit is said to have gone. A more common practice is to make the last blades of corn into a doll—the 'corn-mother.' At Dantzig, the doll is brought home in the last waggon. Frequently the doll is dressed in women's clothes, as in Holstein. When the 'corn-spirit' is conceived as an old woman, the doll is made by one of the elder women, but when the corn-spirit is thought to be young, a 'maiden,' the task usually falls to the lot of a young girl. This presents an analogy to the Mexican belief that the corn-spirit aged as the crops grew and approached maturity: victims of appropriate age were offered at different seasons, varying from young children at the first growth to old men sacrificed at harvest time.

At Bruck in Styria, the ideas of youth and age were combined. The doll was appropriately bound, usually by the oldest married woman under fifty-five in the village, but the finest ears of this sheaf were plucked out to make a wreath for the prettiest girl, who carried it to the farmer. The 'corn-mother' was either placed in the barn at once or carried on a pole behind the girl who took the wreath to the farmer, and then placed on a pile of wood to form the centre of the harvest supper and dance; it was afterwards hung up in the barn until the threshing was over. Sometimes the man who cut the last blades of corn from which the doll was made was wrapped up in the corn-mother and carried round the village by the other reapers. The wreath was dedicated in church on the following Sunday, and at Easter the grain was rubbed out by a seven year old girl and scattered among the young corn, while the straw was given to the cattle at Christmas to make them thrive.

The customs described present, on analysis, several elements which are closely akin to the animistic beliefs of more primitive races. Briefly, these elements may be stated to be: (a) the immanence of a spirit in the crop and especially in the last corn cut, to which material expression is frequently given by an emblem or figure, usually human; (b) the conception of maturity in the corn-spirit, accompanied, however, by a parallel conception of youth; (c) the idea of sympathetic connexion in the performers of certain rites, shown, for instance, by the age of the binder of the doll and the wearer of the wreath; (d) the sacrosanct character of the act of cutting the last blades of corn, the reaper being sometimes identified with the corn, sometimes treated as though guilty of a crime; (e) the vitality of the corn-spirit, as signified by the preservation of its material representation, which ensures fertility in the future when given in part to the cattle and in part mixed with the crop of the following year.

The ritual of Osiris and Isis in ancient Egypt and the myth on which it was based, as well as the epithets *Μάκαιρα*, *Τελεσφόρος*, *Καρποφόρος*, applied in Greece to Gaia, and *Καρποφόρος*, *Μεγάλαρτος* ('goddess of the great loaf'), and *Χλόη* ('the verdure'), to Demeter, whose name, it is suggested, means 'barley- or spelt-mother' ($\Delta\eta = \Gamma\eta$ or *Zeid*), and the legends and ritual of worship of Gaia, Demeter, and Kore, seem to point to an earlier belief, in which these deities were identified with the corn in the same manner as the 'corn-spirit' of more primitive races—a phase in a general belief in a vegetation-spirit out of which grew the worship of Adonis, Attis, and Dionysus, as well as of the deities more specifically connected with the corn (see *GB* 2 ii.; and *CGS* iii. chs. i.-ii.).

(2) *Various forms in which the corn-spirit is conceived.*—

Among the Slavs, the last sheaf is known as the 'Wheat-mother,' the 'Rye-mother,' the 'Oats-mother,' the 'Barley-mother,' etc. At Westerhüsen in Saxony, the last corn cut is made into the shape of a woman and decked in ribbons and cloth. In the district of Tarnow in Galicia, while known by the same name, it is made into the form of a wreath. In Auxerre in France, the last sheaf is known as the 'Mother of the Wheat,' etc., and is left standing in the field until the last waggon is about to go home. It is then made into a doll and dressed in clothes belonging to the farmer, a branch is stuck in its breast, and it is set in the middle of the floor at the dance in the evening. At Osnabrück, the last sheaf is known as the 'Harvest Mother.' In Erturt, a very heavy sheaf, but not necessarily the last, is known as the 'Great Mother.' In East Prussia, the sheaf is known as the 'Grandmother.' Near Belfast, the last sheaf is known as the 'Granny,' its special character being shown, as is not infrequently the case, not merely by a name being given to it, but also by a special manner of cutting: the reapers stand a little distance away, and cut the corn by throwing their hooks at it. In Pembrokeshire, the same method of cutting is followed. At Altisheim in Swabia, all the reapers stand before the last strip of corn and all cut together.

In some parts of England, the last sheaf was known as the 'Kern baby.' The name given to it in the North Riding of Yorkshire was the 'Mell sheaf,' while in Kent it was known as the 'Ivy Girl.' In many places in Scotland it was known as the 'Maiden,' and was usually decked with ribbons; it was also known as the 'Carlin' or 'Carline,' i.e. the 'old woman,' especially where it was cut after Halloween. If cut before sunset, it was more usually known as the 'maiden'; while, if cut after, it was called the 'witch.' Another name commonly used both in Scotland and in Germany is the 'Oats-brid' or 'Wheat-brid.' In Germany, an 'Oats-bridgroom' and 'Oats-brid' are sometimes fashioned with garments of straw; these garments are then plucked from them straw by straw 'till they stand as bare as a stubble field' (Frazer, *GB* 2 ii. 186). In Silesia, the male and female puppets were conducted to the farm house with all the ceremony of a wedding procession.

This method of personification of the crop was not confined to the European peasantry. It is recorded of the ancient Peruvians that they took a portion of the most fruitful of the maize and put it in their granaries. This was dressed up in new garments and known as the 'mother of the maize' (Acosta, *Nat. and Moral Hist. of the Indies* (Hakluyt Soc., 1880), ii. 374). In the Panjāb, a specially fine cotton plant is selected, which is known as the 'mother-cotton,' and anointed with buttermilk and rice-water. The Malays, the Dayaks, and the Karens of Burma, at harvest time, perform rites to secure the 'soul of the rice,' and thus ensure the fertility of the crops. Among the Dayaks, the chief priest goes through a performance with a bundle of charms in his hand; while gazing in the air, he makes a rush at some invisible object; and then, when he shakes his charms over a cloth, a few grains of rice fall into it which are carefully folded up and placed on an altar specially prepared. Among the Minangkabau of Sumatra, Saning Sari, the goddess of the rice, is represented by stalks known as the 'mother of the rice,' grown from special grain, which has been planted and harvested with special ceremonies, and cut only after the first fruits have been eaten in a festal meal. The rice-mother is fetched home in a neatly worked bag and under an umbrella by persons in gay attire, and placed in the barn. In the Malay Peninsula, the 'rice-mother' and her 'child' are represented by sheaves or bundles of ears in the harvest field (W. W. Skeat, *Malay Magic*, London, 1900, p. 225 f.). The 'bride' and 'bridegroom' of Silesia find their parallel in Java, where the priest picks out a number of ears, ties them together, smears them with ointment, and adorns them with flowers. When the harvest is being carried in, they are provided with a bridal chamber in the barn.

In these customs the last sheaf has appeared as a human being. It is not infrequently described as an animal.

In Germany, when the wind makes the corn wave, it is said to be a 'wolf in the corn.' The children are told that the 'rye-wolf' will eat them up. The wolf is also said to be in the last

sheaf. Near Cologne, the last sheaf was made up in the form of a wolf, and was kept in the barn until the whole crop had been threshed. At Wanzenleben, the wolf was driven out of the corn with the last strokes of the flail. Both in Austria and in Germany a cock was sometimes hidden under the last sheaf, and the man who caught it could keep it. In Hungary and Poland, a live cock was sometimes buried in the ground, and its head struck off with the scythe. In Galloway, 'the hare' was cut by the reapers throwing their hooks. In Prussia, Sweden, Holland, and France, the reaper who cut the last sheaf was said to kill the hare, while near Kiel the animal was the cat, or, near Grünberg, the tom cat. At Straubing, horns were stuck in the sheaf to represent a 'horned goat,' while sometimes a live goat was brought on the field, chased by the reapers, and killed by the farmer, as at Grenoble. In the district of Bunzlau, the last sheaf was made up in the form of an ox or cow, stuffed with tow, and wrapped in corn ears. In Bohemia, a sheaf in human form was called the 'huffalo bull.' So also the name 'cow' is given to the last sheaf in Swabia and in Switzerland. An ox is killed on the field in parts of France, and on the threshing-floor the last stroke of the flail 'kills the hull.' Among other animal forms taken by the last sheaf, or connected with harvest beliefs, may be mentioned the horse or mare, which appears at Stuttgart and in Shropshire; the quail, in Normandy; the fox, in Poitou; and the pig and sow, in Swabia, Upper Bavaria, and other parts of Germany.

(3) *Connexion between the last sheaf and the reaper.*—Reference has already been made to the custom whereby the last sheaf is bound or made into the form of a puppet by a woman of an age appropriate to the conception that it represents an old or young woman. By an extension of the custom, the person who performs the office is frequently known by the same name as the doll, or is specially identified with it.

In East Prussia, the reaper who cuts the last blades is said to 'get the grandmother.' In Swabia at Altisheim the man who makes the last stroke when the last strip of corn is cut by all together is said to 'have the old woman.' The same assimilation of the sheaf and the reaper takes place where the sheaf is known by the name of an animal, and in numerous instances the reaper is said to 'have the dog,' the 'pig,' etc. At Neusaass (West Prussia), both the last sheaf and the reaper who cuts it are called the 'old woman.' At Hornkampe (West Prussia), on the other hand, the last sheaf is known by the name of any one who lagged behind in his or her work. At Coburg it is believed that to cut the last sheaf entails marrying an old woman or old man within the year. Where the last sheaf is thought to embody youth, it is sometimes believed that the woman who cuts it will have a child within the year. Brand records (*Pop. Ant.*, ed. W. C. Hazlitt, London, 1905, s. v. 'Harvest') that in the north of England both the girl who cuts the last sheaf and the sheaf itself, which is decked out with ribbons and carried home with great rejoicing on the last waggon, are called the 'Harvest Queen.' The 'wheat bride' of Müglitz in Moravia cuts the last sheaf and wears the ears; it is said that she will be married within the year. In the ceremonies of the Mandans and Hidatsa of North America, at the maize harvest, the 'old woman' who looks after the crops is represented by old women who dance with ears of maize in their hands.

The identification is made still more complete when a man or woman, usually the reaper or binder of the last sheaf, is not only made the subject of derision, but is wrapped up in the last sheaf. The explanation of this may be found in the belief that, when the spirit is beaten out of the last standing blades of corn, it enters into one of the bystanders. The rough horse-play of the harvest field thus embodies one of the most primitive forms of belief, viz. that anything coming into contact with what is filled with a mysterious 'power' and is therefore tabu will itself be filled with that 'power' and likewise become tabu.

At Neusaass, the 'old woman,' which is dressed up with hat, ribbons, and jacket, and the woman who gets it, i.e. the binder of the last sheaf, are carried home together; so also at Hermsdorf in Silesia. In Poland, the woman who bound the last sheaf was wrapped up in it and carried home; she sat in the sheaf throughout the supper and dance, and, as was common in many districts, was known by the name given to the sheaf—in this case *baba*—throughout the following year.

Similar customs appear in the practices attendant on threshing the corn.

In Bavaria, the last sheaf threshed was known as the 'old woman,' and some person was dressed up in the last straw carted, and carried through the village. The practice of La Vendée shows the almost complete identification of a person and the corn. There, the farmer's wife was tied up in a sheet with the last sheaf and carried to the threshing machine, under which she was pushed with the corn. She was then pulled out and tossed in the sheet—an obvious simulation of winnowing. Sometimes, in Lithuania, corn is threshed on the back of a man who lies down under the last sheaf. At Wanzenleben, after the

wolf has been driven out by the last stroke of the flail, a man is led through the village with a chain round his neck, as though he were the wolf caught in escaping. In Poland, a man in a wolf's skin is led about in a similar manner at Christmas.

The practice of carrying a live cock, pig, or ox on the harvest field is another phase of the transference of the spirit of the corn to a material object.

2. Fertility charms.—The importance of an adequate rainfall for the proper growth and nourishment of the crops being so great, it is not surprising to find that many of the customs connected with the harvest should appear to have as their object the securing of such a rainfall by means of sympathetic magic. The custom of drenching the corn-mother with water as it was carried home is an instance of such a rain charm.

In Neusaass, both the sheaf and the reaper who cut it, when brought home together, were drenched with water. In Poland, the woman known as the *baba* was drenched as she was carried home. Sometimes men were stationed behind the farm-gates with pails of water ready for the home-coming. In Rutlandshire, where children were carried on the last cartload of the bean harvest, a regular pitched battle with water and apples was fought between the maidservants and the men, from the gates of the farm until the waggon came to rest in the bean-yard (Brand, *loc. cit.*). In Bulgaria, the corn effigy was thrown into the river after it had been carried round the village. In Carinthia, the man who has been wrapped in straw to personate the corn-mother on the threshing-floor is rolled in a brook. The 'gardens of Adonis,' the small bowls of sprouting grain which the Athenian women planted and tended with special care for eight days at the time of the springing of the corn—a practice intended to secure the fertility of the crop by sympathetic magic—were thrown into the river to ensure rain.

Frazer (*GB*² ii. 225) suggests that the throwing of the corn-mother into the river may be a survival of the practice of throwing the body of a human victim into a river, just as the custom of burning the 'Ceres' at Auxerre after the harvest dance and of burning the corn-mother in Bulgaria and scattering the ashes recalls the practice in Egypt of burning a human victim and scattering his ashes on the fields to secure the fertility of the crops.

Many customs are intended to secure a plentiful crop in the following year.

In Westphalia, the 'harvest-mother' sheaf is made heavy with stones, in the hope that all the sheaves in the next year will be equally heavy. At Alt-Pillau, eight or nine sheaves are bound together to make one huge sheaf. In Scotland, in the Isle of Lewis, the 'old wife' is dressed up, her dress including an apron tucked up to make a pocket, which is stuffed with bread and cheese and a sickle.

Frequently it is believed that the same object will be attained by preserving the material embodiment of the corn-spirit—the 'hag,' 'old woman,' or 'corn-baby'—throughout the year.

In Pembrokeshire, the 'hag' is carried home by one of the reapers; the other reapers handle him roughly, throwing water at him. If he is successful in carrying the 'hag' to the farm dry, the farmer pays a small fine, and the 'hag' is kept in the farm until the next year. The 'Kern-baby' in England is kept in the farm-parlour for the rest of the year. At Balquhiddier, in Scotland, the 'maiden' is kept in the house until the next 'maiden' is brought in. Near Cologne, where the last sheaf is known as the 'wolf,' the wolf is supposed to be at the farm throughout the year.

The corn-spirit is supposed to live throughout the year; and the practice of mixing part of the grain from the 'corn-maiden' with the seed ensures the presence of the spirit in the crop of the following year.

On the Styrian farm, the wreath which formed part of the last sheaf and has been kept through the winter is scattered among the springing crops in the following year; its influence on the wellbeing of all forms of life is shown by the straw being placed in the manger of the cattle at Christmas. In Tarnow, in Galicia, the wreath is mixed with the seed corn. In the north of Scotland, the 'maiden' was given to the cattle on Christmas morning, at Balquhiddier to a mare in foal, or the oldest cow. On Islay, the 'old wife' is kept throughout the winter. When the men first go out to plough in the spring, they carry the grain taken from her in their pockets, and give it to their horses to eat, in order to secure a good harvest. The marriage procession in Silesia is obviously intended to bear on future fertility. The Zapotecs, after keeping the maize sheaf through the winter, buried it in the fields from seed time to harvest to quicken growth. The old Prussians suspended a goat skin in the field from sowing time to harvest to superintend the

growing of the corn; in Upper Bavaria the last sheaf is called the 'goat.' In the course of the maize harvest dance of the Akikuyu, in which all the performers were dressed in maize leaves, a small image of dried clay was unwrapped from banana leaves and held at the level of the face by an old man for adoration. It was then put away in its usual resting-place—a store of flour (W. S. and K. Routledge, *With a Prehistoric People*, London, 1910, p. 188). At the close of the Nandi harvest ceremony, after the old men have eaten a pregnant goat, the women take two pebbles from the nearest water, one of which is kept throughout the year in the water jars and the other in the granaries. In the Malay Peninsula, where the 'rice-child' and the 'rice-mother' appear together, the 'child' is kept to be mixed with the seed in the following year. The Chams of Binh-Thuan, Indo-China, keep three ears of corn to form three furrows in the 'field of secret tillage' in the following year. A custom which bears some analogy to the 'child' or 'rice-mother' of the Malays appears in Normandy, where a small sheaf is wrapped up inside the big one. In West Prussia, a simulated birth takes place on the field. With this may be compared the legend in Greek mythology of the intercourse of Demeter and Iasion in a corn-field, which resulted in the birth of Ploutos. At Dijon, where 'Death' cuts the last ears of corn and slaughters an ox, part of the ox is eaten at the harvest supper, and part is pickled to be eaten on the first day of spring. In Berry, the corn-spirit is born on the field as a cow-calf.

On the other hand, the 'hag' is sometimes passed to other farms. In some parts of Pembrokeshire, after the 'hag' had been cut by the reapers throwing their sickles at it, it was taken, usually by the ploughman, to the field of a neighbour, where the work was still in progress, and thrown at the foreman from behind a hedge. The ploughman immediately ran away, pursued by the reapers working in the field. In parts of Scotland both an 'old wife' and a 'maiden' were cut. According to one account, this was the result of a competition between two sets of reapers, those who finished first getting the 'maiden,' while the others got the 'cailleach' or 'hag.' According to another account, the competition was between neighbouring crofters, the 'cailleach' being passed on from farm to farm and retained by the farmer whose harvest was completed last. In North Uist the 'cailleach' was put overnight among the standing corn of lazy crofters. The same custom was followed in threshing; e.g., in Thuringia, when the corn had been threshed, the last sheaf was taken to a farm where the threshing was still unfinished.

Sacrifice and fertility.—It appears that cutting or binding the last sheaf entails certain penalties, while the farmer who finishes his harvest later than his neighbours is in some districts penalized with the custody of the 'hag.' The obvious explanation is that the consequences are decreed by rustic wit for lack of dexterity. On the other hand, the close identification of the last sheaf and the reaper, when viewed in the light of other practices, suggests a less obvious reason. In the Romsdal and in other parts of Norway, when all the hay has been cut, the 'old hay-man' is said to have been killed. In Bavaria, the reaper who cuts the last sheaf is said to have killed the 'old man.' In Lithuania, 'Boba's head is cut off.' Sometimes a straw pygmy is put under the last sheaf, and the 'old woman is struck dead.' A stranger who crosses the field is pursued and tied with straw-bands, and must pay a ransom before he is released, or the farmer himself may be bound when he enters the field. In Mecklenburg, the reapers advance in a body towards the farmer, shouting and sharpening their scythes as if preparing for a sacrifice; and so also on the threshing-floor. At Wiedingharde, in Schleswig, any stranger on the threshing-floor is nearly throttled with the flail, which is put round his neck as if he were a sheaf of corn.

The custom of human sacrifice to secure the fertility of the crops appears to have been widespread. In the earlier stages of the practice the victim appears to have been regarded as the embodiment of the corn-spirit. This must be held to be the reason for scattering his ashes on the field, or throwing his body in the river; while the solemn feasts at which the victim's body was eaten by the ancient Mexicans lend support to the view that they also believed that by partaking of the body of the corn-spirit they ensured a good harvest. It has been conjectured that the head-hunting practices of the Nāgas of Manipur, and their custom of setting up a straw figure at which they

shoot with arrows at certain times, may be connected with agriculture. When the figure is hit, the one who hits it in the head, it is said, will take a head, but the one who hits it in the stomach will have good crops (T. C. Hodson, 119). The connexion between human sacrifice and fertility is also shown in the custom of the Indians of Guayaquil of scattering human blood on the fields at the time of sowing, while at the Mexican harvest a criminal was crushed between two falling stones when the firstfruits were offered. The Mexicans, as already stated, offered a series of sacrifices to make the maize thrive, culminating in the sacrifice of an old man at harvest time. Among the Pawnees and Sioux, human sacrifice was offered in the spring; and, in one case described among the latter, after the heart of the victim had been eaten, the flesh was cut in small pieces and scattered on the fields.

Instances of human sacrifice to secure good crops are recorded in West Africa, at Benin, and among the Bechuanas and other races, usually in connexion with the sowing of the crops, or at the time of their early growth, to promote fertility. Among the Khonds, part of the victim was buried as an offering to the earth-goddess; if the victim wept copiously, it was a sign of a plentiful fall of rain (S. C. Macpherson, *Memorials of Service in India*, London, 1865, p. 113). Among an agricultural tribe in Uganda, the sacrifices took place at about the time of the harvest. The Tshi offered a human victim at the yam harvest, pouring his blood into a hole in the ground (A. B. Ellis, *The Tshi-speaking Peoples*, London, 1887, p. 230).

Greek ritual and helief preserve traces of human sacrifice in connexion with fertility. The legend of Aglauros casting herself down the precipice of the Acropolis, it has been suggested, may have arisen out of a misrepresentation of a primitive custom of casting an effigy of the vegetation spirit down a steep place. In a rite of Aglauros, later consecrated to Diomedea, a human victim was sacrificed at the altar by the *ephebi*. A legend at Haliartus of the type of the story of Jephthah's daughter (Jg 11^{24ff.}) speaks of water springing up wherever the blood of the victim dripped (CGS iii. 19, 21). The ceremonial of the Bouphonia suggests the substitution of an ox for a human victim at a 'firstfruits' ceremony.

Frazer (*GB*² ii. 222 ff.) suggests that, when the European customs are considered in the light of the practices followed by primitive races, we are justified in concluding that it was the practice at one time in Europe to offer a human sacrifice on the harvest field, the victim being identified with the corn-spirit. The penalty paid by the last reaper was death, as, he being nearest at the time the spirit was driven from the corn, it would be natural to conclude that it had entered into his body.

3. Communion, harvest supper, firstfruits, and the seasonal festival.—It remains to consider the question of the harvest supper and the offering of firstfruits, which are closely connected, although by no means identical. Attention has already been called to the custom that the 'harvest maiden,' in which a man or woman is sometimes wrapped, should be present at the dance or supper which usually follows the taking of the harvest.

In La Vendée, the 'Ceres,' before being torn to pieces and burnt, was the centre of the dance. In the North Riding of Yorkshire, the 'mell doll' was present at the mell supper. In Lewis, the farmers and reapers drink to 'the one that helped us with the harvest.' At Dantzic, the 'old man' was carried to the supper, and a portion of everything was given to him; but this was eaten by the woman who bound the sheaf, had it as her partner at the supper and dance, and was known by the same name for the remainder of the year.

The presence of the harvest figure at the supper, and the importance attached to it, suggest something more than a mere feast of rejoicing at the successful completion of the year's work. Instances have already been quoted of the killing of an animal, such as a cock, a pig, or a bull, on the harvest field as an embodiment of the corn-spirit. The bodies of these animals were sometimes given to the reaper who killed or caught them; sometimes, especially in the case of a larger animal, its flesh was eaten at the harvest supper, as in the case of the goat killed at Grenoble.

At Dijon, the ox killed on the harvest field was partly eaten at the supper, and partly pickled and kept until the spring. In Bavaria, the man who made the last stroke in threshing had to

carry the pig to a neighbouring barn where the threshing was still going on. He ran the risk of being heated, but at the harvest supper he received a number of dumplings in the form of pigs.

From the numerous instances of eating the body of the slaughtered animal, bearing in mind their special relation to the harvest and the significance of other customs, it would not be unreasonable to conclude that the harvest supper is a survival of a form of solemn feast, of which the great festivals in Greece connected with the worship of Demeter and Kore, the Haloo (the threshing-floor festival), and the Eleusinia were probably a development. Hippolytus (*Philosoph.* v. 3) says that in the Mysteries the Epoptæ were shown the mystery of perfect revelation—a cut corn-stalk.

The animistic beliefs which give rise to the conception of a corn-spirit are evident when the corn of the last sheaf provides the material for a cake in human form to be distributed among the members of the household or the harvesters, or when, as among the Aztecs, a human victim was identified with the god. When, however, special ceremony attaches to the eating of the new corn, either in fact or in symbol, the ritual, in the course of development, tends rather to be concerned mainly with averting the danger of breaking the tabu involved in cutting or eating the corn for the first time, or in propitiating or offering thanks to the spirits which might affect the crops adversely (see art. FIRSTFRUITS).

The ritual and beliefs serve to bring out several points of interest in connexion with the harvest supper. (1) It is a survival or descendant of a solemn meal, (*a*) at which the spirit of the crops was present, or (*b*) for which the material representation of the corn-spirit furnished the food, or (*c*) with which human sacrifice was connected. (2) It is not merely a feast of rejoicing after the harvest, but it is either a necessary antecedent to the harvest, or, when it follows or accompanies the harvest, it must precede the general use of the crops for ordinary consumption. (3) By a logical extension of idea the sacramental feast grows into an offering of firstfruits to the powers that preside over the crops. (4) The solemn ritual of the harvest meal is frequently accompanied or followed by a period of licence, in which the ordinary rules of conduct and respect for superiors are disregarded, or in which an inferior may even take the place and usurp the authority of his superiors. On this point it may be recalled that these changes of personality and irregular conduct are frequently adopted for purposes of disguise, and that, even when such saturnalia are not the concomitants of ceremonies held at harvest time to drive away the spirits of the dead—as, for instance, is the case after the harvest among the Hos of Assam, and in the 'devil driving' of the Hindu Kush tribes, when the evil spirits are expelled from the granaries—the harvest is a critical period of the year when malign influences may be expected to be especially powerful.

The harvest supper observances as a whole, taken in conjunction with the beliefs which underlie other harvest customs, point to an origin in a belief that the crop is tabu, and that to cut it or eat it is a dangerous act, of which the risk can be averted only by the process—familiar in the practices of magic—of a solemn covenant based upon a communion in which that which is feared is brought into the closest relation with the one who is afraid. In this case, by eating the material manifestation of the dangerous element after special precautions, the primitive mind of the savage believes that he becomes one with it and immune from its influence.

HASAN 'ABDĀL.—A village and ruins in the Attock District of the Panjāb; lat. 33° 48' N.; long. 72° 44' E.; forming part of the great city known to Greek and Roman authors as Taxila (Táξιλα), a close transcription of the Pāli or Prakrit name *Takhasilā*, Skr. *Takṣaśilā*, 'hewn rock or stone' (McCrimble, *India as described by Ptolemy*, London, 1885, p. 118 ff.). It takes its present name from that of a Muhammadan saint, Bābā Ḥasan 'Abdāl, who lived under Mirzā Shāhrukh, son of Timūr (Elliot, *Hist. of India*, London, 1867-77, i. 239; *Āin-i-Akbarī*, tr. Blochmann and Jarrett, Calcutta, 1873-94, i. 515). The sanctity of the place—still a resort of considerable numbers of pilgrims—dates from early times. Hiuen Tsiang, the Buddhist pilgrim of the 7th cent. A. D., describes the tank of the Nāga Rājā, or snake-king, Elāpatra, to which, when the people wanted rain or fine weather, they used to go in company with some Buddhist ascetics (*samāna*), and, snapping their fingers, invoked the aid of the Nāga, and at once obtained their wishes (Beal, *Sī-yu-ki*, London, 1906, i. 137). The place seems originally to have owed its sanctity to a holy spring which gushes into the fountain of the modern saint. Round this, as is common in India, a serpent-cult grew up, the Nāga, or dragon, being supposed in particular to have control of the weather (Crooke, *PR*², 1896, ii. 128 ff.). The Buddhist legend was succeeded by a Brāhmanical version; and that again by a Muhammadan story, of which the saint Bābāwālī is the hero; finally, the Sikhs connected the site with a miracle of their *guru*, Nānak, who, coming to the place fatigued and thirsty, invoked Bābāwālī for a cup of water. The saint, indignant at the presumption of an unbeliever, flung at him a stone several tons in weight, which the *guru* caught in the air, leaving the impression of his fingers on it, which are visible to this day. The whole series of legends is an interesting example of the manner in which a place, owing its sanctity to some natural feature, is adopted in turn by the followers of rival faiths. The importance of the place in Buddhist times is shown by a *stūpa* and the remains of a temple discovered by Cunningham.

W. CROOKE.

HASAN AL-BASRĪ.—Ḥasan al-Basrī (Abū Sa'īd) was born at Wādī 'l-Qurā near Medina in A. H. 21 (A. D. 641-642), two years before the end of Omar's khalifate, and died at Baṣra in the month of Rajab, A. H. 110 (October-November, A. D. 728). Ibn al-Athīr says that his age was then eighty-seven, in which case the date of his birth would be A. H. 23. Both his parents were originally slaves. His father, Yasār, was a native of Maisān in the neighbourhood of Baṣra, was taken prisoner in A. H. 12, during the conquest of 'Irāq by Khālid ibn Walīd, and became a freedman of one of the inhabitants of Medina—of Zaid ibn Thābit, the Prophet's amanuensis, according to some authorities. Tabarī (i. 2029, 1) states that the name of Ḥasan's father was Ḥabīb, and that he was a Christian, while al-Sha'rānī (*Ṭabaqāt al-kubrā*, i. 51. 13) declares that he was of Nubian extraction. These statements are significant, in view of the great influence which Ḥasan and his pupils exerted on the early development of Muslim theology; and it may be recalled that the famous Egyptian mystic, Dhu 'l-Nūn, who died in A. H. 245 (A. D. 859-860), is said to have been the son of a Nubian slave. Ḥasan's high reputation for orthodoxy was possibly gained, as Dozy has suggested,

at the expense of his pupils, who gave currency to his speculations. At any rate, he was in touch with all the religious movements of the period, and must have taken a leading part in the theological controversies which were then agitating the Muhammadan world. We are expressly told that he disputed on the subject of free will (*qadar*), but afterwards returned to the more orthodox doctrine (Ibn Qutaiba, *Kitāb al-ma'arif*, ed. Wüstenfeld, 1850, p. 225. 12). A commentary on the Qur'ān is ascribed to him (Brockelmann, *Gesch. der arab. Litteratur*, Leipzig, 1901, i. 67), and he is said to have explained the meaning of Apostolic Traditions, whereas the older generation were content with reciting them (*Qūt al-qulūb*, Cairo, A. H. 1310, i. 147, line 6 from foot).

Whatever may be thought of the well-known story which attributes the origin of the Mu'tazilite school to a difference of opinion between the master and one of his pupils—Wāṣil ibn 'Aṭā or 'Amr ibn 'Ubaid—there can be little doubt that in Ḥasan's circle the dogmas of Islām were freely discussed and expounded; it was this freedom that caused his activity as a teacher to have such fruitful results. But if, in fostering the spirit of inquiry, he overstepped the limits of traditional authority, the sayings and anecdotes recorded by his biographers show that his religion was intensely real. His ordinary demeanour was that of a man under sentence of death, and he looked as though hell had been created for him alone. Like many of his fellow-Muslims, both men and women, he found in asceticism the only means of escape from the wrath to come. No man, in his opinion, deserved the name of theologian (*faqīh*) unless he had renounced the present world and fixed all his desires upon the future life. Muslim asceticism soon developed mystical tendencies, and Ḥasan seems to have gone some distance in this direction. It is asserted that he was the first pioneer of mystical science in Islām, and that he made it a subject of discussion, and explained its ideas in terms that were not used by any of his contemporaries (*Qūt al-qulūb*, i. 150. 2). He was the founder of the Baṣrite school of mystics, who maintained that the knowledge which, according to a maxim of the Prophet, it behoves every Muslim to seek consists in knowledge of the heart, and in a scrupulous examination of the thoughts that enter it, so as to discern whether they are spiritual or sensual, intuitive or intellectual (*ib.* i. 129. 16). Prayer-meetings (*majālis al-dhikr*) were held in his house at Baṣra (*ib.* i. 148. 18). Those who attended them were persons inclined to quietism, interested in communicating to one another their spiritual experiences, in studying the Qur'ān together, and in conversing about religious questions. While it is easy to believe that Ḥasan, as Qushairī and other Sūfī writers mention, attached more value to inward piety and humility than to outward acts of devotion, like fasting and prayer, there is no evidence that he was a Sūfī in the full sense of the word. He was driven to righteousness by the goad of fear, not drawn, as the true mystic always is, by a spontaneous and irresistible rapture of Divine love. His character appears in a legend told by 'Aṭṭār in the *Tadhkirat al-Awliyā* (ed. Nicholson, 1905-07, i. 57. 17). 'Utba al-Ghulām, one of his disciples, had crossed a river on foot, while Ḥasan himself remained on dry land, amazed and powerless to follow. Ḥasan asked him how he was able to work such miracles. 'For thirty years,' 'Utba replied, 'thou hast done what God commands, but I have done what He desires.'

REYNOLD A. NICHOLSON.

HASIDÆANS, HASIDISM.—The Hasidæans (*Χασιδαῖοι* or *Ἀσιδαῖοι*, from Heb. חַסִּדִּים, *hāsīdīm*, plur. of חַסִּד, *hāsīd*, 'pious') were the precursors of the Pharisees. The names of the two religious parties have practically the same meaning: *hāsīd* = 'pietist,' and 'Pharisee' (פָּרִישֵׁי, *pārīsh*, 'separated') means 'separatist.' During the period of the Seleucidæ in Palestine the Hasidæans were the enemies of Hellenism, and opposed the introduction of Greek ideas and manners into Israel. As shown by the name they bear, they were an exclusively religious party; they were rigid zealots; they formed an association, a company of rigorists. In reality they were the descendants of Ezra and Nehemiah, who expelled the foreign wives; they continued the tradition of the Scribes.

As far as the meagre information we possess concerning them enables us to judge, the Hasidæans did not differ essentially from the Scribes. They were men completely devoted to the Law (*πᾶς ὁ ἐκουσιαζόμενος τῷ νόμῳ*), even so far as to take up arms in its defence when it was threatened by sinners and lawless men (1 Mac 2⁴²⁻⁴⁴); but, as soon as peace was restored, they threw aside their weapons, as their hands were better suited to handle the sacred scrolls than to fight with the sword.

According to 1 Mac., the Hasidæans played only a very minor part in the Maccabæan wars. The events which took place in Palestine at the beginning of the national revolt against the Seleucidæ show this very plainly. The high priest Menelaus, who had been put to death in 163 B.C. by command of Antiochus v. Eupator, was succeeded by Alcimus (*Ἀλκιμος*, *Ἰάκιμος*, *Ἰάκιμος*, *Ἰᾶγίμ*), who was of priestly stock, but did not belong to the ruling branch of the Onias family. Josephus (*Ant.* xx. x.) tells us that Antiochus Eupator nominated Alcimus chief priest in 162. According to 1 Mac., when Demetrius Soter de-throned Antiochus Eupator, Alcimus came to him offering his services against the patriotic Jews who were trying to shake off the Syrian yoke. The king, we are told, entrusted him, along with his general Bacchides, with the pacification of Judæa, and at the same time raised him to the high priesthood (1 Mac 7⁵⁻⁹). It is at the time of this mission that the part taken by the Hasidæans appears clearly. The comparative study of parallel fragments from the first and second Books of Maccabees sheds clear light on their attitude in the national revolt.

If we had only the account in 2 Mac., we should be left in no doubt that the Hasidæans took part in the national war, in spite of the obvious errors contained in the narrative. It is there stated that 'being called by Demetrius [Soter] into a meeting of his council and asked how the Jews stood affected and what they purposed, he [Alcimus] answered thereunto: "Those of the Jews that be called Hasidæans, whose leader is Judas Maccabæus, keep up war, and are seditious, not suffering the kingdom to find tranquillity"' (2 Mac 14^{5c}).

Thus, according to this account, the Hasidæans were under the command of Judas Maccabæus, and are represented as the promoters of the war.

In 1 Mac., on the other hand, the Hasidæans are the peace party; it was to obtain peace that they sought Bacchides and Alcimus, the deputies of King Demetrius. This is how the author describes that mission:

'And there were gathered together unto Alcimus and Bacchides a company of scribes to seek for justice (*ἐκζητῆσαι δίκαια*). And the Hasidæans were the first among the children of Israel that sought peace of them; for they said, "One that is a priest of the seed of Aaron is come with the forces, and he will do us no wrong"' (1 Mac 7¹²⁻¹⁴).

The Hasidæans, then, were not the instigators of the war. In reply to their request for peace, the

royal envoys, thinking they would make an example, had sixty of them put to death. Thus, according to 1 Mac., the Hasidæans, grouped round the Scribes (from whom the Pharisees also spring), form an independent party, acting in opposition to Judas Maccabæus and his followers, as they acknowledge Alcimus not only as high priest but as the lawful representative of Syrian authority.

From the seemingly contradictory texts which we have just quoted it is easy to understand the rôle of the Hasidæans. At the outset the Maccabæan war was essentially and exclusively religious: the Jews were fighting with the Syrians to defend the Law endangered by the persecutions of Antiochus iv. Epiphanes. Hence the participation of the Hasidæans, a very rigid and exclusively religious party, in the national revolt. The religious aim pursued by the patriots was attained on 25th Chislew 165, when Judas Maccabæus purified the temple defiled by Antiochus Epiphanes, and restored the Jewish religion. The treaty of Lysias (162), which ensured the religious liberty of the Jews, thus gave full satisfaction to the Hasidæans, who are not again mentioned among the belligerents. Henceforth the Maccabæans alone and their soldiers continued the struggle against the Syrians for the political liberty of the country. We hear nothing more of the Hasidæans, and we have every reason to believe that those forerunners of the Pharisees became blended with them.

In any case an incident which happened during the reign of John Hyrcanus i. (135-105 B.C.), and which exhibits Pharisaism and Sadduceism at that time fully developed and in direct opposition, proves that the Pharisees of that period, engrossed solely with religion and its immediate interests, were indeed the heirs of the Hasidæans. John Hyrcanus was entertaining the Pharisees at a feast, when one of the guests named Eleazar demanded that the royal high priest should lay down the priesthood and rest content with the civil and military power (*Jos. Ant.* xiii. x. 5). That is precisely the position which the Hasidæans took up at the beginning of the national revolt—the absolute separation of the religious from the political domain.

HASTINĀPUR (Skr. *Hastināpura*, 'elephant city'; or, according to other authorities, named after a mythical Rājā Hastin).—An ancient city in the Meerut District of the United Provinces of India, situated on the Būrh Gangā, or 'old Ganges,' an old course of the river; lat. 29° 9' N.; long. 78° E. The legendary account of Hastin will be found in the *Viṣṇu Purāna* (tr. Wilson, London, 1864-77, iv. 139 f.), which states that the old city was washed away by the Ganges. This, the capital of the Kaurava tribe, figures largely in the epic of the *Mahābhārata*. The buildings, which were probably built of clay and wood, have now disappeared; and nothing remains to mark this famous site but some shapeless mounds.

HATRED.—1. Psychological analysis.—The term 'hatred' designates a mental state of revulsion from something that offends us—a dislike or feeling of ill-will, intensified by the desire to harm or injure or make a speedy end of the object hated. This applies in chief to hatred of persons by persons, at the root of which lies the desire to

destroy. 'Hates any man the thing he would not kill?' asks Shylock (*Merch. of Ven.* IV. i. 67); 'whosoever hateth his brother,' says St. John (1 Jn 3¹⁵), 'is a murderer.' But it applies also to hatred of things (including in that term not only inanimate objects, but opinions, beliefs, and the like). Even when a schoolboy says that he 'hates lessons,' he means to express, not merely his feeling of aversion to them, but also his wish to make a summary end of lessons, if only he could; and, likely enough, he gives embodiment to his wish by tossing his books to the other end of the room.

The intensity and duration of hatred in general bear no definite or fixed proportion to the amount of injury received. Much depends upon the nature and temperament of the individual hating; and, especially, upon his private estimate of himself, and his sensitiveness to any affront to his dignity.

The outward corporeal expressions of hatred are clearly marked and well known: biologist, psychologist, and poet alike have duly recognized them; and how they show themselves in the lower animals, as well as in man, has been strikingly brought out by Darwin in his book on *The Expression of the Emotions in Man and Animals*. The menacing attitude of the body, the lowering countenance, the suspicious and unsympathetic look, the leer, and the coldness of behaviour are some of the modes of its objective embodiment; and these objective signs (it is important to observe) have much psychological significance, inasmuch as they react on the emotion proper, intensify it, and tend to keep it alive.

Hatred is not designative of a mere passing mood (like some forms of anger), but of a settled attitude or disposition, which cherishes ill-will and can bide its time and plan means for the injury or discomfiture of its object. It must be distinguished from *antipathy*, which is a merely sentimental or constitutional dislike (for the most part irrational) of an object, leading to shrinking from or avoidance of the object but not to its destruction—as we see, for example, in the antipathy to inoffensive crawling creatures which affects many people.

Hatred attaches itself to the malevolent side of human nature, and is to be classed along with such reprehensible emotions and settled dispositions as envy (*q.v.*), jealousy, revenge. It is essentially anti-social and self-centred.

The great antithetic emotion is love (*q.v.*), and the characteristics of the one are best seen in contrast with those of the other. If, then, (1) we view the two *in themselves*, we find that love is a conserving and attractive force, while hatred is destructive and repellent. Again, (2) regarded *from the side of the subject*, love is a feeling of pleasure or satisfaction with the person loved, together with the desire to do him good or to promote his welfare; hatred is a feeling of dissatisfaction with the object of it, mixed with pain but frequently intensely pleasurable, together with the desire to harm or to secure his ill-fare. Hence, love clothes its object with all amiable qualities and is apt to be blind to faults and defects; hatred clothes its object with all detestable qualities, and refuses to see any good in it. Further, love to a person is prone to make him who entertains it well disposed towards all with whom (or with which) that person associates—even towards his status in society, or the nationality to which he belongs; while hatred produces the exactly opposite effect. Next, (3) *taken in connexion with the object*, love is one great means of turning an enemy into a friend (hence the supreme wisdom of the injunction, 'Love your enemies, bless them that curse you, do good to them that hate you' [Mt 5⁴⁴]);

hatred is prone to turn a friend into an enemy. Love begets love, but hatred breeds hate. Once more, (4) *viewed as successive states*, the two show psychological peculiarities of a very interesting kind. (a) If, from whatever cause, we come to hate a person whom we have greatly loved, our hatred will be intensified by the fact of our previous love, and greater than it would have been if we had not loved before. This, no doubt, arises in part from the fact that we have lost a source of pleasure and are pained; but it involves also the fact that we feel ourselves injured by unrequited affection, and the further fact that we are chagrined at having expended our affection on an unworthy object. On the other hand, when we come to love a person whom we previously hated, our love will be proportionate to our previous hate, and all the greater that hatred has preceded it. One reason for this is that, in the circumstances supposed, we are conscious of having got rid of a source of pain; but two other things have to be taken into account, viz. the newly-aroused feeling that by formerly hating the person we have done him an injury or an injustice, and the consequent desire to make amends for this injustice. Again, (b) our love for a person is apt to be diminished, and even, perhaps, turned to dislike of him, if he does not love, much more if he actually hates, the things and persons that delight us; while community of likings or of interests goes some way towards making us well disposed towards one whom we hate.

All these are psychological facts, revealed in our actual experience of life, which must be taken into account by the ethicist in determining the value of hatred, and by the legislator, who cannot with impunity ignore the working of any human emotion as it shows itself either in the individual or in the community.

2. *Ethical and religious aspects.*—As a source of pleasure, hatred has undoubted potency. But this does not necessarily mean that it is to be ethically commended and the development and growth of it encouraged. On the contrary, character is one thing, pleasure is another; and it is the function both of ethics and of religion to emphasize the fact that 'the life is more than meat,' and that the higher aspirations of man and his spiritual ideals count for most. Hence, the psychological fact that the intensity of love may be increased by the circumstance that we have been previously hating does not justify the conclusion that *therefore* we ought to hate. For, if hatred is in itself deleterious to character, it must both restrict the power of loving and lower the kind of love. The increase of love that is dependent on hate is an increase on the level of a being to whom hate seems in itself desirable; but, if perfect love ruled as between man and man, such a conception would be impossible. Love would then be greatest of all, because it implied the abolition of hate and, therefore, substituted the higher pleasure for the lower, or the highest pleasure of all, from which the lower, having degradation in it, is excluded. It is a matter of quality, then, not of quantity or degree. Psychological experience is not an infallible guide to ethical and religious estimate.

(1) From the ethical standpoint, it is easy to see why hatred, in so far as it is expended by persons on persons (or even on the lower animals) is condemned. Its pleasure may be intense, but it is too dearly bought. The consequences it entails are far-reaching and disastrous. It lets loose many of the most malignant of the human passions, such as retaliation and revenge—hence, we apply to hatred such epithets as 'cruel,' 'deadly,' 'fierce,' 'vindictive'; it aims at injuring or even destroying the object hated; and it cramps and distorts the

nature of the person harbouring it, blunting his sympathy and perverting his judgment. Above all, it is the mark of deep-seated alienation of one man from another, ignoring the fact of the universal brotherhood of mankind, and transgressing the fundamental law of love, or mutual affection and mutual helpfulness, on which the existence of society depends. As its object is destruction, it repels instead of binding together, it dissolves instead of cementing.

That there is such a thing in man as a natural and legitimate resentment of injury received, ethics fully allows; and this, when rationalized, becomes the powerful thing we know as 'moral indignation'—which is the spontaneous protest of the conscience against wrong inflicted. But it demands more than a conscientious protest: it requires hatred—hatred, however, not of one man by another, but of everything that would interfere with the proper and higher development of a man's nature or of human nature in general; hatred, therefore, of vice or wickedness or wrong. But even then, while it enjoins hatred of vice, it will not allow hatred of the man who practises vice: it is the transgression, not the transgressor, that is to be abhorred. Hence the condemnation by ethics of misanthropy. 'Hatred of mankind' is selfish and abnormal, and destructive of the very idea of 'mankind,' which presupposes *society* and, therefore, unity among the members; otherwise, it would be meaningless. In like manner, ethics condemns war, taken in itself: war is man's hatred of man, with the lust of blood. Carried out to its full extent, it would become a state of universal hostility, which would speedily mean the extinction of the race. Once more, vindictive punishment is condemned by ethics because it is founded on hate, and is meant only to gratify the malignant nature of him who inflicts it. Men—private individuals or legislators—who punish because they hate stand self-condemned.

(2) All this, which is enforced by ethics, is accentuated and strengthened by religion; for, to the ethical reprobation of vice as destructive of the higher moral qualities in man, and the insistence on our loving the evil-doer while condemning his deeds, religion adds the ennobling and vivifying conception of man—of *every* man—as made in the image of God, and thereby sets him forth as an object of reverence, not of hatred, even in his degradation. Thus viewed, he is to be loved for the *possibilities* that are in him, and encouraged to have his potentialities actualized. This at once raises the notion of personality to a higher level than ethics attains. The idea of the individual as a spiritual being, akin to the Divine, invests him with a greater dignity and worth than that of the individual simply regarded as a moral person. And, while the religious consideration thus raises the estimate of the value of the individual, it also intensifies the hatred of everything that would lower the estimate; and so it goes beyond the mere ethical concept of 'vice' or 'evil' as the thing to be hated, and substitutes for it that of 'sin' or 'guilt,' thus bringing out man's essential relationship to God as the supreme fact. In this way the consequences of transgression are presented on their most serious and impressive side. Evil-doing is to be hated, strenuously opposed, and, if possible, exterminated, because it blurs the Divine image in man, and because it severs man from God, the rational creature from his Creator, the son from his heavenly Father. The full meaning of this is to be seen only in the light of the work and death of Christ—which is at once the revelation of the Father's love and the manifestation of the 'exceeding sinfulness of sin.' This is the Scripture view of hatred; and it goes even farther, and clinches

the injunction about brotherly love by excluding the hater from communion with the Divine altogether; for, 'If a man say, I love God, and hateth his brother, he is a liar: for he that loveth not his brother whom he hath seen, cannot love God whom he hath not seen' (1 Jn 4²⁰).

3. *Diverse views.*—On all sides, then—psychological, ethical, and religious—hatred of persons is seen to be irrational. But there are somewhat different views among philosophers as to whether it should be recognized to any extent and, if so, how far. Some have refused to give it any legitimate foothold at all. Spinoza, for instance, roundly declares: 'Hatred can never be good' (*Ethica*, iv. 45); and he goes farther and maintains that 'everything which we desire because we are affected by hatred is base and unjust in the State.' This is how it appears in the light of pure reason. Others, like Butler, have allowed sudden and instinctive resentment of an injury to be natural and, therefore, not reprehensible, but have refused to accord the same privilege to deliberate or calculated resentment. In this Butler is followed by the Scottish School of philosophy generally. Others, again, have maintained that what we find in actual fact to be a source of pleasure to men must be taken account of and allowed its place in estimating human happiness, according to the utilitarian standard. Bentham led the way here. While condemning vindictive punishment, on the principle that the pain outweighs the pleasure, and urging that the legislator should not punish from revenge (on the same principle), he yet urged the necessity of allowing something, in the apportioning of punishment to a criminal, to the personal pleasure or gratification that such punishment gives to the individual injured. This is vindictive satisfaction, or the pleasure of vengeance, of which he says:

'This pleasure is a gain: it recalls the riddle of Samson; it is the sweet which comes out of the strong; it is the honey gathered from the carcase of the lion. Produced without expense, net result of an operation necessary on other accounts, it is an enjoyment to be cultivated as well as any other; for the pleasure of vengeance, considered abstractedly, is, like every other pleasure, only good in itself. It is innocent so long as it is confined within the limits of the laws; it becomes criminal at the moment it breaks them' (*Principle of Penal Law*, pt. i. ch. xvi.).

In like manner, A. Bain strongly maintained the existence of malevolent affections as native to human nature, and the need of reckoning with them in ethics. His doctrine was best brought out in his famous controversy with F. H. Bradley in *Mind* (reproduced in his *Dissertations on Leading Philosophical Topics*)—a sufficient account of which has already been given in art. ANGER. In that article also will be seen the bearings of evolution on malevolence.

There is still a position to be noted, midway between the extremes. As its representative may be taken Thomas Brown.

'We are formed to be malevolent in certain circumstances,' he says (*Philosophy of the Human Mind*, Lect. lx.), 'as in other circumstances we are formed to be benevolent; but we are not formed to have equal enjoyment in both. . . . The moral affections which lead to the infliction of evil are occasionally as necessary as the benevolent affections. If vice exist, it must be loathed by us, or we may learn to imitate it. If an individual has injured another individual, there must be indignation to feel the wrong which has been done, and a zeal to avenge it. The malevolent affections, then, are evidently a part of virtue as long as vice exists; but they are necessary only for the occasional purposes of nature, not for her general and permanent interest in our welfare. . . . We are made capable of a malevolence that may be said to be virtuous when it operates for the terror of injustice, that otherwise would walk, not in darkness, through the world, but in open light, perpetrating its iniquities without shame or remorse, and perpetrating them with impunity. But, that even this virtuous malevolence may not outlast the necessity for it, it is made painful for us to be malevolent even in this best sense.'

What must determine as between these different views are clearly (1) consideration of what actually

obtains in our experience of human nature; (2) how this stands related to the ideal, which must test its value; and (3) determination of consequences, based on the fact of the solidarity of mankind.

LITERATURE.—All the books specified under 'Literature' in the art. ANGER. In addition: Descartes, *The Passions of the Soul* (tr. E. S. Haldane and G. R. T. Ross, vol. i. pt. 2, Cambridge, 1911); Spinoza, *Ethica*, esp. pt. iii., which is really a striking treatise on the Emotions (tr. W. H. White and A. H. Stirling, 3rd ed., London, 1899); Jeremy Bentham, *Works*, ed. J. Bowring, Edinburgh, 1859, i. 83, 382, and x. 69; James McCosh, *Psychology: the Motive Powers, Emotions, Conscience, Will*, London, 1887; James Martineau, *Types of Ethical Theory*, Oxford, 1885, ii. 160, etc.; Th. Ribot, *The Psychology of the Emotions*, London, 1897, p. 268, etc.; William L. Davidson, *Christian Ethics*, London and Edinburgh, 1907, pp. 53, 79-85; W. McDougall, *Introd. to Social Psychology*, London, 1908, p. 164.

WILLIAM L. DAVIDSON.

HAWAII.—The Hawaiian group of islands lies in the Pacific Ocean between lat. 18° 54' and 22° 15' N., and long. 154° 50' and 160° 30' W., and is of purely volcanic origin. On the Island of Hawaii the twin volcanoes Mauna Loa and Kilauea are in constant activity, while the extinct crater of Haleakala, on the Island of Maui, is one of the largest in the world. The natives are of pure Polynesian type, and constitute the extreme north-western outpost of this family, the Islands having been colonized in three great migrations from the Samoan group. The language has undergone little change, a native of Hawaii being able to converse with a Tahitian, New Zealander, or Samoan with little difficulty.

On this, A. H. Keane writes as follows (*Man, Past and Present*, Cambridge, 1899, p. 563 f.; cf. also Waitz-Gerland, *Anthropol. der Naturvölker*, v. 202 ff.): "Migrating at an unknown date eastwards from Malaysia (for further details, see art. ЕТНОЛОГИЯ, vol. v. p. 531), the Indonesians appear to have first formed permanent settlements in Samoa, and more particularly in the island of *Savaii*, originally *Savaiki*, which name, under divers forms and still more divers meanings, accompanied all their subsequent migrations over the Pacific waters. Thus we have, in Tahiti, *Havaii*, the "universe," and the old capital of Raiatea; in Rarotonga, *Avaiiki*, "the land under the wind"; in New Zealand, *Hawaiki*, "the land whence came the Maori"; in the Marquesas, *Hawaiki*, "the lower regions of the dead," as in *to fenua Hawaiki*, "return to the land of thy forefathers," the words with which the victims in human sacrifices were speeded to the other world; lastly, in *Hawaii*, the name of the chief island of the Sandwich group."

In conformity with this, the native belief obtains that the soul of a Hawaiian leaves the Island of Kauai from the promontory looking towards Samoa, and in Samoa a similar story turns the soul towards New Zealand. In Hawaii, oral tradition itself clearly gives the details of the first landing of the Samoans on the shores of Kauai; and, while no accurate dates can possibly be given, this migration is supposed to have taken place as early as the 2nd cent. A.D. A Samoan chieftain, having been defeated in battle, refused to submit to his victorious rival, and, embarking his followers in his remaining war-canoes, set his matting sails for the unknown ocean. The Polynesian knowledge of astronomy is remarkable, and it enabled them to steer a straight course; but it has been surmised that a chain of islands existed which have since been submerged by volcanic disturbances, and that the fugitives were thus able to obtain fresh water and supplies; otherwise, the journey seems well-nigh a miracle.

The Hawaiians counted time by the generations of their principal chieftains, beginning with Wakea, who was the semi-mythical progenitor of all the royal families (cf., further, CALENDAR [Polynesian]). Events were counted thus: 'So it was in the time of . . .,' giving the name of the *alii nui*, or high chief. The length of a generation was roughly approximated at thirty years. Fifteen generations from Wakea is the time of Nauauulu, and fifteen generations more brings the chief Maweke (A.D. 1030).

The native Hawaiian is tall, well formed, very

strong, and possessed of great endurance. He is an expert cliff-climber, swimmer, and sailor. His national sports are sledging and surf-riding, while the dance is considered the necessary accomplishment of both sexes. In colour he is a dark reddish-brown. The nose is clear-cut and wide of nostril, the lips large, but well chiselled, the hair straight, abundant, and black, and there is a marked tendency toward brachycephaly. Tattooing was general, and survives at present in ring-marks on the finger. All inheritance came through the female line, ancestry being traced through the mother only.

In the families of very high chiefs (*alii nui*), the practice of incestuous marriage was common, and was regarded as sacred, the offspring of brother and sister being treated with more than royal honours. The sun was never allowed to shine upon them; and, if the shadow of a low-born vassal fell across their threshold, the offence was punishable by death. The tabu stick—a staff surmounted by a ball wrapped in white tapa cloth—was placed by the hut, and warned the passer-by that the ground was the possession of kings or priests, and must not be profaned upon pain of death. The tabu was strictly enforced by the chiefs, and is one of the most widely-known institutions of the Islands. The royal colour was yellow; the next in rank was red. The king's badge of office was a feather cloak, made from yellow feathers found under the wings of the *oo*, and woven with infinite skill and care into a web of coco-nut fibre. The *lei*, or wreath, was also of the precious yellow feathers. The red feathers of the *iwili* made wreaths and decorations for the nobility of the second order, though kings by no means disdained them. A few scarlet feather helmets are still preserved, which have almost the shape of the Greek helmet, but are larger and without the nose-guard. The *kahili*, or royal staff, was of wood, or wood and bone, topped by a tuft of bright-coloured feathers. It was carried as a standard, or like the mace of European royalty. At a royal funeral, the *kahili* bearers never left the corpse until it was finally given in charge of the friend designated to give the final rites and concealment.

The greatest importance was attached to aristocratic birth, Kauai, the island where the first migration landed, claiming the greatest purity of blood. Upon coming of age, the children of a chief, boys and girls alike, were required to appear before the elders assembled in solemn conclave, there to recite their genealogy and the deeds of their ancestors. In this oral fashion, the history of each great family and the history of the race were preserved with surprising accuracy and wealth of detail. The neophyte's recitation often took two whole days to repeat; and, if he failed to be letter-perfect, he was remanded, to appear the following year before the historians to the tribe. Such a disgrace seldom occurred, for the child began his lesson in earliest infancy, and pride of race induced ardent study. At the close of the ceremony a feast was held; and the youth, now supposed to have reached maturity, received gifts, was permitted to enter the councils of the elders and to give advice, and was released from many of the irksome services devolving upon children. At this time the novice selected his own *hamakua*, or household god, or was permitted to wear sacred relics.

The natives were never cannibals, as has been erroneously believed. Tradition tells of the coming of a tribe of exiles, probably negritos, in war-canoes, who took possession of a promontory in Ohau; when the inhabitants discovered their custom of eating human flesh, they fell upon the little colony and exterminated it.

There being no metals in the Islands, wood was

used for weapons—clubs, spears, shields, etc.—and for such simple implements as were used in cultivating the ‘taro’ (a lily root), their chief food staple.

Tradition tells of the wrecking of a junk upon one of the Islands, probably in the 16th cent., and the rescue of a man and woman, evidently Japanese. The one possession the captain saved from the ship was a sword, which won him great renown in the metalless land. The mere touching of the blade was supposed to ensure victory, and the sword became the hereditary treasure of the tribe into which the castaway was adopted. It was traceable in legend for several generations, when it disappeared, having been buried with the chief who possessed it at the time.

When, upon Captain Cook's first voyage, the natives learned the possibilities and powers of metal, it became the one object of desire; and it was owing to the theft of nails from the long-boat, upon Cook's return journey, that a sailor killed a native, bringing about the fight in which the explorer lost his life.

The moral code of the community was remarkable, owing to the importance of the woman. Marriage was dissolvable by mutual consent. In the families of chiefs, if the wife insisted upon a separation, the husband was bound to return her in all honour to her nearest of kin, together with the marriage portion she had brought, or its equivalent. Except for its aristocratic value, marriage apparently had no sacred aspect; but a wedding was, of course, an excuse for prolonged revels. The *kava*, the only fermented drink of the primitive people, was but slightly intoxicating; but of this they drank large quantities, further excitement being supplied by *hulas* and the music of wooden drums and gourd rattles. Funerals were always attended by feasts and prolonged ceremonies. The natives differ as to the promiscuity attending these feasts—some admitting that the utmost licence formerly existed, others denying the tradition. It is, therefore, probable that the customs varied in the different tribes. The body of a chief must on no account fall into the hands of his enemies, the possession even of a bone or a lock of hair ensuring power over the soul; hence extraordinary precautions were taken. The flesh was cut from the skeleton and destroyed. The remains were then wrapped in matting, a few of the choicest treasures of the deceased were added, and the whole, packed in a wooden calabash, or hidden in a canoe bow, was carefully concealed by the closest surviving friend. Tradition tells of one devoted follower entrusted with his chief's body, who ground the bones to powder, which he mixed with the *poi* served at the funeral feast to the assembled warriors, thus ensuring his master's future safety. To make fish-hooks of the bones of a rival chieftain was the greatest insult one tribe could offer another; hence, between enemies every effort was made to learn the whereabouts of a grave, and put its contents to base use. Among the people it was, and still is, the custom to place the dead man, wrapped in tapa and matting, in the bow of his canoe, which is cut in half, and carried to one of the numerous cliff-caves. At present the custom is falling into disuse, owing to the desecration of graves by foreigners, who seem unable to feel respect for the dead, unless they are interred after their own fashion.

With the exception of the *heiau*, lava-built temples, the Hawaiians erected no permanent structures. Their houses were of palm or grass bound to poles, with finely woven matting for floors and curtains, the Island of Niihau being famous for its weavers. The door must face no other opening, the belief being that, if such be the case, ‘what goes in must immediately depart,’ meaning that no rest or permanent residence is possible in a dwelling thus constructed. A raised platform, covered by a mat, served as the bed.

Very little privacy was maintained. The house was preferably built over or near a beneficent *hamakua*, or household divinity, which might be personified by a stone, a tree, a bush, or any natural object. Any one might thus be under the protection of a spirit. Chiefs owned their own *hamakua*, sometimes curiously painted logs, in which some resemblance to an animal or man could be traced; though sometimes these *hamakua* were bits of stone or wooden tokens. These the chief took with him always, and they were part of his family insignia.

The favour of the sea being most necessary to the community, it was invoked through Ukupanipo, the shark-god, who, with his followers, could drive the fish to or from the shores, giving or withholding the daily food of the native. The red fish were the perquisite of royalty; but, if they ran within the reefs in great numbers, it was considered an omen of death in the family of the chief. The last recorded run preceded the death of Kalakaua, which occurred in San Francisco, 20th Jan. 1891, and which had been predicted by the natives upon the appearance of the fish several weeks before the event. Ukupanipo is credited with occasionally adopting a human child, to whom he gives the favour of the sea, and who has the ability to change into a shark at will. These sea-children possess the ravenous mien and dangerous temper of the god. The mark which Ukupanipo places upon them is a mouth-like orifice below the shoulder-blades, garnished with teeth. The phenomenon is said to have appeared recently. Algaloa, the sky-god, received little attention except among the cloud-diviners.

In ancient times the sick and aged were made away with. This fact has often been denied; but statements continually occurring in the native folk-lore make it more than probable, though the Hawaiian is kindly, gentle, hospitable, and given to generosity and self-sacrifice. Great importance is attached to friendship. A chief gave his closest friend the privilege of wearing his *malo*, or matting loin-cloth, woven as beautifully as linen. Gifts of hair were highly considered, and were plaited fine and worn with the whale-tooth charm, shaped like an inverted question-mark, called *puloo*. There is implicit belief that articles closely associated with a person retain something of the spirit of their owner.

The soul after death was supposed to journey to Kauai, and to leap from a cliff into the sea, descending until it fell into the under world, whose sky is the bottom of the ocean, there to lead an aimless and shadowy existence under the supervision of Milu—god of the under world. But spirits, particularly those of chiefs and *kahunas*, or witch doctors, continued to haunt the earth, and the Hawaiians lived in terror of these visitations. Victims slain in human sacrifice reappeared and haunted the site of any temple fallen into ruins. These apparitions were always heralded by the rolling of *pahus*, or temple drums. The ghosts set upon and immolated any man who chanced to cross their path. Evil spirits play a far greater part in the religion of the people than beneficent influences, good fortune and happiness being the direct gift of some particular local or household deity. The chief gods (*akua*) actually take a secondary rank to the *hamakua*, or household gods, with the exception of *Péle*, the goddess of volcanoes, who completely overmasters all others with her fiery presence.

The legends concerning her are very numerous. She shows herself now as a girl, beautiful and young, who, suddenly appearing at a feast, dances so divinely that her identity is guessed; now as a hag, demanding impossible services of the wayfarer. The most famous story is of her defeat in sledging, when, furious at being beaten in her favourite sport, she turned

Puaanui, the literally pig-headed demi-god with whom she was contending, into a lava pillar, together with all the onlookers. Strangely shaped lava-heaps in the district of Puna are pointed out by the natives as the ill-fated members of that coasting party. The sport resembles *skiing*, the skate boards being long, narrow, up-turned, and highly polished; the smooth incline of a steep hill is all the surface required.

Pélé always resented the penetration of any of her numerous disguises, and dealt out volcanic vengeance with savage impartiality. Fine spun lava, shredded from the molten throat of Kilauea, is known as Pélé's hair, and three small, extinct craters, leading from the ocean to the lake of fire, are known as Pélé's footsteps. When she rose, like Aphrodite, from the sea, she sought a permanent resting-place, but her first three steps sank deep into the earth, and the sea entered, forming a pool. At last, when the fourth footstep formed Kilauea, fire sprang about her feet, and the goddess had found her home.

Pélé was supposed to be partial to the house of Kamehameha I. (born A.D. 1736), the first chieftain to bring all the Islands under one rule. When, in 1881, the town of Hilo was threatened by a vast lava-flow from Mauna Loa, the Princess Ruth, great-granddaughter of Kamehameha the Great, made a pilgrimage to the devastated district, cast gifts into the fiery river, and implored Pélé, in the name of the ancient friendship of her race, to withhold her vengeance; within an hour the lava ceased to flow, the city was saved, and multitudes of natives who had embraced Christianity returned to the ancient beliefs.

The temples, or *heiaus*, were seldom dedicated to any one particular deity (they were temples where any one of the gods might publicly be invoked), two groves, sacred to the Poison-goddess, and a *heiau* to Ukupanipo, being the exceptions. The *heiau* was an enclosure, usually oblong, formed by walls of lava rock. At the side, facing the entrance, was the altar. The house of the priests occupied one corner. Between the two, but situated in the centre of the square, was the *anu*, or place of oracles, from which the prophecies were issued. Only the *alii*, or high-born, might converse thus directly with the gods after suitable gifts had been made to the temple. The people had to fall back upon the intermediation of the *kahunas*, who exercised a power only second to the chief. They claimed the power, known as *anana*, of praying to death any one who offended them. They could blight crops, cause storms, bring down pestilence, and interpret the will of the gods. They could cure all forms of sickness, hold communication with the dead, invoke the favour of the sea, and interpret the omens. The earliest traditions show that these omens were taken chiefly from the clouds, the flight of birds, and the actions of fish. In later times, after the introduction of foreign animals, a black pig became indispensable to the diviner, both the condition of the vital organs when killed and his instinctive selection of some symbolic food being indications from which the future was predicted. Much also was to be learned of impending events by dissecting a fowl.

Bits of coloured cloth, or *tapa*, were supposed to concentrate influences. A *kahunas* employed to torment an enemy first sought to gain entrance to his hut, and there to hide some malefic charm. The next move was to obtain some portion of the victim—a nail-paring, a lock of hair, spittle, or anything intimately connected with his physical being. In praying to death, the *kahunas* retired to some isolated place, and there remained in continuous prayer and incantation, until the victim languished and died. In this case the doomed person suffered no pain. If it was desired to inflict agony, a piece of cloth, containing earth from the doorstep and various charms, was beaten, stabbed, burned, etc. *Kahunas* effected their cures by reversing the method, though occasionally they administered some nostrums. Their influence continues to be strong among the natives,

though every effort has been made to stamp out the *kahunas* and his practices.

The Poison-goddess inhabited the two groves set aside for her; and her images, carved from the sacred trees, are supposed to have cost the life of their sculptors. Naturally all sacred groves and temples were protected by *tabu*.

The first attempt to collect and translate the more popular legends was made by King Kalakaua himself (*Legends and Myths of Hawaii*, New York, 1888), with the aid of one of the American missionaries. It has been claimed that in order to poetize the stories, he departed from the traditional texts; but they are sufficiently close to the originals, in spite of their strange resemblance to the Greek hero-stories, to be seriously considered. The epic of the Hawaiian Helen is undoubtedly authentic, notwithstanding its analogy to the Trojan myth, carried out even to the taking of the city on the cliff by the rescuing party, according to the oracle that told them to besiege with moving walls. This was accomplished by the advance of the besiegers bearing wooden shields that touched each other, enabling them to approach under protection, and cleated within to enable their bearers to scale the ramparts by their aid.

The first Europeans to visit the Islands were shipwrecked Spaniards in 1527. In 1555 the group was officially discovered by Juan de Gaytan, on a voyage from the Moluccas to New Spain, and received the name of Los Majos. In 1736, Kamehameha the Great was born on the Island of Hawaii. During this period continual intestinal wars distressed the people of the various Islands, until Kamehameha brought them under one government.

In 1778, Captain James Cook, commander of H.B.M. ships *Resolution* and *Discovery*, landed at Waimea, Kauai, whence he proceeded to Niihau, departing thence for the north. Upon his return in November, Cook sighted Maui, and, off Kona, entertained the chief on board the *Discovery*. On 11th Feb. 1779, Captain Cook was killed by the natives, in reprisal, the Hawaiian tradition tells, for an attempt to take an idol from a neighbouring *heiau*. On 26th May 1786 the English ships *King George* and *Queen Charlotte* touched Kona, and, in May of the same year, a French exploring expedition, under La Perouse, reached Maui. In 1787, Kaiana-a-Ahunla accompanied an English captain on the ship *Nootka* to China. The relations with foreigners remained friendly until the wilful massacre of the natives at Olowalu, Maui, by the American, Captain Metcalf, of the *Eleanore*, resulted in a reprisal by the chieftain, Kamuiamoku, in the capture of the tender of the *Eleanore* and the killing of all the crew, except an Englishman, Isaac Davis, and John Young, boatswain of the *Eleanore*. Davis became councillor, and received great consideration. In 1791, Kamehameha was proclaimed king of all the Islands. In 1792, Captain Vancouver, with the *Discovery* and the *Chatham*, cast anchor at Kealakekua Bay, on his way north. On his return he presented the first live stock ever landed in Hawaii. He was well received by the natives upon his third visit in 1794; but in Jan. 1795, Captain Brown, of the *Jackal*, and Captain Gardner, of the *Prince Leboo*, with some of their men, were killed in Honolulu harbour.

Several revolts against the power of Kamehameha were suppressed. In 1815 the Russians arrived, entrenching themselves in the forts at Haualei and Waimea, and in 1816 they erected a stronghold at Honolulu. The *Rurick*, commanded by Captain Kotzebue, the first battleship to enter that harbour, brought reinforcements to them

there. In the same year the national flag, designed by an Englishman, was adopted. In May 1819, Kamehameha I. died and was succeeded by his son Kamehameha II., who broke away from traditions, and, in Oct. of that year, openly proclaimed the abolition of the tabu. This departure, angering many of the lesser chiefs, resulted in a revolt, which, though at first successful, was suppressed by Liholiho. Several chieftains having received baptism, a reaction set in against the old religion, and, in 1820, a general destruction of idols and temples took place at the instigation of the American missionaries, who arrived on the brig *Shaddens*, in company with four Hawaiians, who had been sent to Cornwall Institute—Honolu, Hopu, Kanui, and George Humehume, son of the Kanaian chieftain.

Though the Hawaiians are now avowedly Christianized, the old beliefs persist. It is difficult, however, to obtain access to any of the secret ceremonies, though traces of the *kahuna* are to be found in every walk of life. Their gods they take lightly, but the priests are a serious matter. Evil ghosts take the place of devils, and are under the control of the witch-doctor, who may direct their destructive influence upon whom he will. Health, happiness, and even life itself can be given or taken at the will of the *kahuna*.

LITERATURE.—Many of the older explorers and missionaries in Polynesia refer to Hawaii, notably J. Cook, *Voyages*, London, 1773-84, and W. Ellis, *Polynesian Researches*, do. 1853; the most important of this material is collected in T. Waitz and G. Gerland, *Anthropol. der Naturvölker*, Leipzig, 1860-77, v., vi. See, further, J. J. Jarves, *Hist. of the Hawaiian Islands*, London, 1843; S. S. Hill, *Travels in the Sandwich and Society Islands*, do. 1856; J. ĤAZM.—See IBN ĤAZM.

HEAD.—I. Importance of the head.—Innumerable rites performed on or in connexion with the head show the importance which is universally attached to it. As the uppermost member of the body, that which contains the organs of sight, hearing, taste, and smell, it is naturally much honoured; while, as containing such a vital organ as the brain, which, however, is connected with the process of thought mainly at comparatively late stages of civilization, it is regarded as a seat of life or of the soul. The head, with its many apertures—nose, mouth, ears, sutures of skull—is a chief spirit-entry, either for a divine spirit or a god (as in the process of inspiration)¹ or for evil spirits. In either case it must be carefully guarded. Hence among many savages and also in the higher culture the head is regarded as peculiarly sacred, and is the subject of many tabus. When a Maori touched his head, he at once put his fingers to his nose and sniffed up the sanctity adhering to them from the touch.² In Tahiti, Burma, Melanesia, etc., this sacredness of the head makes it tabu to

¹ Cf. Crooke, *PR*² i. 158.

² R. Taylor, *Te Ika a Mawi*², London, 1870, p. 165.

the touch of woman, or it must never be below any place where a woman is.¹ Hence also the head must be covered, veiled, or protected,² lest evil should fall on it (see § 7 (d)). For the same reason heads are treasured relics, or sometimes, in the case of an enemy, are treated with contempt (see § 5 (a); and cf. Egyptian representations of enemies' heads as a footstool).³ In many cases the head is thought to be a seat of the soul or life, or, where a plurality of souls is believed in, of one of the souls, as, e.g., in Indonesia, where the soul material of man resides partly in the head, and, when it has left the body, it may be restored to it by a sorcerer through an invisible aperture in the skull.⁴

This belief is also found among the Caribs, Nutkas, Malays, Batakas, people of Celebes, Papuans, the Ga of W. Africa, the Maoris, etc.⁵ The soul can therefore be drawn out of the head, e.g. through the sutures of the skull, or it departs thence at death; hence the cracking of the skull at cremation in India (see *ERE* iv. 480*). So, too, the soul returns after absence through the head, or is introduced into it by the medicine-man.

More usually, such a particular part of the head as the eye is the seat of the soul, because of the tiny reflexion seen in it by any one looking at it.⁶ The presence of the soul in the head is illustrated by the statement in *Satapatha Brāhmaṇa*, vi. i. 1, 2-6, that the life-sap or excellence (*śrī*) of the seven males (*puruṣa*) out of whom Prajāpati was created became his head, *śras*.⁷ In modern Hindu beliefs different gods reside in different parts of the body, and the top of the head is the seat of the Supreme Being.⁸ The Persians dedicated the head to Haoma, that at death he might receive the immortal part.⁹ Similar ideas are seen among the Hebrews. Achish says to David, 'I will make thee keeper of mine head for ever' (1 S 23²); cf. Ps 140⁷ 'Thou hast covered my head in the day of battle,' and the custom of swearing by the head (Mt 5³⁶). Such beliefs as these explain the value placed upon the head, whether of friend or enemy. The head, as a very important part of the body, may also come to represent it, as, e.g., where heads of gods or mortals appear on monuments; or, as in Christian baptism, the earlier rite of more or less complete immersion was later limited to affusion on the head. The importance of the head has also given rise to metaphors signifying supremacy, beginning, and the like.

Before discussing wider groups of customs connected with the head, some references to sporadic ceremonies performed on it and showing its importance may be cited. In many healing rites the head of the patient is touched with various objects, generally of a sacred kind,¹⁰ or charms and the like are bound upon the head,¹¹ or the hand of the healer is laid on it.¹² Among the Peruvians, at the ceremony for the expulsion of evils, a paste mixed with blood from the forehead of a child was rubbed on the head of each member of the family.¹³ Smearing the head with earth and water is a firstfruit rite among the Hos;¹⁴ and among the Nandi new grain is rubbed on the forehead.¹⁵ The ashes of a dead person mixed with gum are smeared

on the head to absorb his virtues, by the Digger Indians;¹ and rubbing the head with the brains of a dead man who was wise gives success in business, according to the Matabele.² Smearing the head with the blood of a sacrifice, probably to identify oneself with it, is found, e.g., in Palestine,³ among the Arabs of Mubammad's time,⁴ the Romans at the Lupercalia,⁵ and the Lendu.⁶ The same application of sacrificial blood is also used as a cure for disease in Palestine and among the Jews of Algiers.⁷ The so-called 'Eucharist' of Lamaism is poured out into the hands of the worshippers by the Lama, and each person anoints his head with it, after which the Lama places the 'Vase of Life' on the bowed head of each, repeating a spell. The head is then touched with other sacred objects.⁸ Where blood is shed on the grave as a mourning custom, it is sometimes drawn from cuts on the head (see *ERE* iv. 431^a). Similarly, in Samoa, if a man found a dead owl, or if he committed transgression, he beat his forehead till it bled; and at ritual combats where the heads were beaten with clubs, the blood was an offering to the deity.⁹

2. **Heads of deities, etc., with nimbus.**—Here, again, as illustrating the importance of the head as the chief member of a god as of a man, it is often represented with rays shooting out in all directions, or with a circular disk behind or surrounding it. These were undoubtedly suggested by the sun and its rays, and were intended to typify the Divine power shining and radiating from the head. Hindu divinities have often such a nimbus, of a more or less elaborately shaped form. In Greek and Roman art it is also given to divinities, especially those representing sun and moon, and Teutonic and Slavic deities have often rays or stars around their heads. Mithra has a circular nimbus with pointed rays. It was also given to emperors and kings, to Oriental heroes or saints, etc. Buddhist art in India and Tibet shows Gautama as well as the saints with a nimbus.¹⁰ But it is in Christian art that the nimbus is most wide-spread. It is of different forms, usually circular, but occasionally triangular, bi-triangular, or square, and in some cases a series of rays emanates from the head. The field of the nimbus is ornamental or plain; and it surrounds the heads of the three Persons of the Trinity, the Virgin, angels, saints, prophets, living persons, allegorical figures, etc. In the case of the Divine Persons, the nimbus is usually cruciform, this being properly distinctive of them.¹¹

3. **Many-headed gods, etc.**—The custom of representing gods with several heads, like that of representing them with several hands, is probably the result of the current conception of the importance of these members. It was natural that in a god they should be multiplied. Nowhere is this more common in art and myth than in India. Siva is said to have a thousand heads, or sometimes three, and is thus represented.¹² Brahmā has four heads. Among the Egyptians and Semites this is not found, but a male Phœnician deity is occasionally two-headed.¹³ In Greek and Roman art and myth it is again merely sporadic. Hecate is three-headed, possibly representing Artemis, Selene, and Hecate; Hermes at cross-roads (*q.v.*) had two, three, or four heads, like the Roman Janus. The Celtic god of the under world is sometimes represented as a triple head, and some Slavic deities have four or five heads.¹⁴

¹⁴ J. A. MacCulloch, *Rel. of Ancient Celts*, Edinburgh, 1911, p. 34; Grimm, 322.

Tibetan Buddhist divinities are occasionally many-headed, like Padmapāni with eleven heads—probably a borrowing from Indian art.¹ Such monstrous forms do not occur among Teutonic deities, though they are sometimes given to heroes.² Monsters, giants, dwarfs, and dragons in myth and *Märchen* often possess many heads, which cause considerable trouble to the heroes who fight them. The Greek Geryon had three heads, Hydra nine, Briareus fifty, and the giants of Norse mythology have three, six, or even nine hundred heads.³ In *Märchen* the usual numbers are three and seven.

In Christian representations of the Trinity the Godhead is often depicted as a being with three blended heads, or three faces appearing on one head with four, three, or two eyes.⁴ Satan is also occasionally depicted with three faces—the trinity of evil—and with heads on chest, stomach, and knees.⁵

4. **Men and deities with animals' heads.**—In various acts of ritual men often wear the heads of animals, usually those of sacrificial victims. Among savages these are often worn at sacred dances, e.g. before hunting. Thus, at the Mandan buffalo dance, each dancer wears the skin of a buffalo's head with the horns attached, and imitates the movements of the animal, in order to procure good hunting.⁶ Similar customs were followed among the Celts and Teutons. At the New Year festival, riotous processions of men dressed in the heads and skins of animals took place, and these continued in Christian times, though forbidden by the Church.⁷ Figures of horse-headed men appear on old Gaulish coins, and these, as well as numerous Irish legends of cat-, dog-, or goat-headed men, doubtless reflect actual custom.⁸ In modern European folk-festivals, dances are sometimes performed by men wearing antlers or skulls of deer, etc., and these may be traced to older rites resembling those of the Mandans.⁹ In all such customs there had originally been some idea of assimilating the wearer of the head to the animal, and in some instances this was connected with totemism. The same purpose was served where a mask representing an animal's head was worn, as among many savage tribes.

Where earlier worshipful animals tended to become anthropomorphic, or where a divinity was blended with a worshipful animal, there was often a fusion of the two in myth or artistic representation. The god had some part of him in animal form, and very often possessed an animal's head. Probably in all religions this has existed to a greater or less extent. Some, however, were able to shake themselves entirely free of such monstrous forms, though they may still be found associated with demoniac beings; in others they continued to play an important part, as, e.g., in the Egyptian religion.

In India, Gaṇeśa has an elephant's head, and in China a god called the 'Divine Husbandman' has a human body with a bull's head. In Greece, where such compound forms generally came to be disliked, traces of them were still to be found. The Phigaleian Demeter had a horse's head, and in Arcadia excavations have revealed representations of female figures with heads of sheep or cows.¹⁰ Figures of Pan with a goat's head, of Apollo(?) with a ram's head, and others are also known. But it is in Egypt that this method of representing the gods was most conserved from pre-historic times onwards. Some of them invariably have animals' heads, others only occasionally (see *EGYPTIAN RELIGION*, vol. v. p. 245b).¹¹

In some instances a divinity is represented wearing an animal head-dress, and sometimes also the skin of the animal—a custom perhaps connected with the practice of placing the head and skin of a sacrificial victim on the image of a god,

as well as with the assimilation of a god and a worshipful animal.

Conversely, human-headed divinities or genii with animal bodies occur sporadically—*e.g.*, in Babylon the fish-god Oannes (Ea), winged bulls with human heads, etc.; in Egypt the Sphinx; while there also the soul was represented as a hawk with a human head.

5. The head as trophy or cult-object.—(a) *Trophy*.—As the head is the most prominent part of the body, the seat of several of the senses and, in the belief of some peoples, of the soul, life, wisdom, etc., and as it is severed from the trunk with comparative ease, it has almost universally been taken as a trophy in war. The victor thus triumphs over his enemy; at the same time he is able to bring back a proof of his prowess, and, as a result, the greater number of heads he can show, the more is he honoured as a valiant man, and the higher respect and status does he obtain. The practice is thus analogous to the cutting off of an enemy's hands (see HAND, § 5 (c)).

The Babylonians and Assyrians not only left dead enemies unburied, but, as a further method of insult and hurt to their ghosts, cut off their heads; and this practice is frequently referred to in the inscriptions or is portrayed on monuments; *e.g.*, vultures fly off with heads of the slain. The god Ningirsu is shown clubbing such heads collected in a net.¹ In Egypt a similar custom prevailed, and kings are represented holding a bunch of heads, or headless corpses are shown lying before a god. So also in the other world one of the punishments of the enemies of Ra and Osiris was beheading by Shesmu.² Among the Hebrews the practice was also followed. The heads of Oreb and Zeeb were brought to Gideon (Jg 7²⁵); David cut off Goliath's head and brought it before Saul; the Philistines cut off Saul's head, and the sons of Rimmon that of Ish-bosheth, bringing it to David (1 S 17⁵⁴⁻⁵⁷ 31⁹, 2 S 4⁷; cf. 20²¹). The heads of Ahab's 70 sons were struck off and piled in two heaps (2 K 10⁶). In later times the head of Nicanor was brought by Judas Maccabæus to Jerusalem as a trophy (2 Mac 15³⁰). The Scythians presented their king with heads of slain enemies, those having none to show receiving none of the booty. The scalp was hung on the bride.³ Among the Karmanians no one might marry until he had brought a head to the king, which was hung up in his house.⁴ Among the Celts, heads were cut off and carried to the saddle-bow or on spears, or strung on a withy and brought home. After a battle a pile of heads was made, and the number of the slain counted.⁵ Among American Indians, heads were sometimes placed on poles and carried as trophies through the village, or, as among the Abipones, were tied to the saddle.⁶ The taking of the scalp, which was brought home in triumph, the number of scalps possessed being proof of a warrior's prowess, was universal among the tribes. Among the Polynesians, heads of enemies were also struck off and used as trophies. The heads were piled before the chiefs, those of slain chiefs being placed on the top. The Tshi preserved the heads of hostile chiefs slain in battle.⁷ Head-hunting among the Dayaks and in Formosa has also for one of its purposes the taking of heads as trophies, to show bravery and manliness and to please the women of the tribe.⁸ Among modern Oriental nations—Persians, Turks—slain enemies were often decapitated and sent to the king to make a show.¹⁰ Timur erected a pyramid of 90,000 heads on the ruins of Baghdad.¹¹ This was a common Oriental custom. Salmanassar made pyramids of the heads of the slain,¹² and the practice has probably given rise to the *Märchen* incident of a tower built of men's skulls.¹³ The triumphant placing of aristocratic victims' heads on pikes was common during the French Revolution.

(b) Various parts of the head sometimes take its

place as trophies, *e.g.* the ears; thus after the battle of Liegnitz nine sacks were filled with the right ears of the slain.¹ Jaw-bones or even mouths were also used as trophies, and generally the more a man possessed the more valorous was he deemed, as among the Papuans of Boigu,² the Tahitians,³ the Tshis and Ashantis,⁴ and the Chinese.⁵ The Tupis wore the mouth of the slain as a bracelet.⁶ Noses served the same purpose, and were worn with ears as necklets among the Arabs.⁷ Montenegrin soldiers presented noses to their chiefs as a sign of bravery as late as 1876;⁸ and of a Christian emperor, Constantine v., Gibbon relates (v. 220) that 'a plate of noses was accepted as a grateful offering.' Again, teeth were pulled out and triumphantly worn as necklets, bracelets, or anklets. This was common among many S. American tribes,⁹ the people of the New Hebrides, Ashantis, and other African tribes.¹⁰

In most of these cases the heads or parts of the head are sent to the chief or king or displayed before him as a sign of prowess, or as a symbol of victory. But they are occasionally dedicated to a divinity. This is suggested by the Bab. and Egp. instances cited above, and it is also found among the Celts, who in cutting off a head saluted the gods and offered it to them or to ancestral spirits.¹¹ Skulls have also been found under an altar devoted to a Celtic Mars; and in Ireland heads were called 'the mast of Macha,' a war-goddess embodied in the scald-crow haunting the battlefield, just as in the Bab. stele birds fly off with heads.¹²

(c) *Preservation of trophies*.—These trophies serve a more permanent purpose than that of immediate tokens of victory, as some care is taken to preserve them, and they are usually placed on the walls of houses, on stakes, or on trees, or kept in some more or less sacred place. Thus they are a standing witness to the prowess of individual or tribe.

Herodotus (iv. 103) relates of the Tauri that they impaled the heads of shipwrecked persons and fixed those of enemies on a long pole above the roofs of their houses. Among the Celts, townships and palaces were filled with these ghastly trophies, over doors, on walls, or on stakes, to such an extent that Posidonius tells how he grew sick at the sight. A room in the palace was kept as a store for heads, and those of slain chiefs were preserved in cedar-wood oil or in coffers, and proudly shown as a record of conquest, large sums of money being refused for them.¹³ Up to a comparatively late time heads of private foes were placed on stakes in front of doorways,¹⁴ and Malcolm II. built into the walls of the church of St. Mortlach, at Keith, heads of Danes after their defeat. Among modern savages such customs are also found. In the Congo district heads are cleaned and placed on poles at the entrance to a town or on a hill.¹⁵ Among the Niam-Niam they are kept on posts round the houses.¹⁶ In Dahomey they were placed on roofs or gates of the king's palace, or paved the floor of his sleeping-place; and, when war was ordered, it was said that the king's house wanted thatch.¹⁷ The Maoris kept skulls in houses as trophies, or fixed them on poles; and in Tahiti walls were made up of human skulls.¹⁸ In the Solomon Islands there were set up two skulls of enemies on a post at the launching of a canoe, the canoe-houses being also decked with them, while the scalp and

hair were put on a coco-nut and hung in the common hall.¹ In N. Guinea among the Wagawaga the *potuna* was decorated with skulls taken by the men to whom it belonged. In Bahaka they were hung on platforms outside the villages.² In S. America the same customs were followed, e.g. among the Mundrucus, who placed skulls on their rude huts, and among the Ahipones.³ Among the Nāgas the chief's house is hung round with skulls;⁴ and, among the Bontoc of Luzon, heads obtained at the period of planting and sowing are exposed on trees in the villages, and kept as relics once the flesh has decayed.⁵ The Wa of Upper Burma take heads for the benefit of the crops, place them in the 'spirit house,' and, after they are bleached, set them on posts in an avenue of trees. Thousands of skulls may thus be seen.⁶ In Formosa, Celebes, and Sumatra, and in other classic regions of the head-hunter, heads are dried and hung up in the huts or on chiefs' houses, and often ornamented with carved designs. Among the Land Dayaks, special houses are built for them, which form the bachelors' quarters and council chambers.⁷

In some instances, heads or skulls are treasured in a sacred building; e.g., in Mexico the head of the captive sacrificed to Tezcatlipoca was cut off and preserved along with heads of earlier victims in the sacred place.⁸ Again, heads are offered to dead ancestors (see below). Many of the instances cited above are connected with cannibalism, the body or brains being devoured; and the taking of a head is always the occasion for feasting, the head itself being fed and propitiated.⁹

(d) *Purpose of the preservation.*—Among actual head-hunting tribes and with some other peoples also who preserve heads of enemies, the reasons alleged for the practice show that they are something more than mere trophies, and that they are preserved primarily for animistic reasons, and in order to obtain the helpful presence and power of the spirit-owner of the head, whose soul-substance was stronger in the head than in any other part of the body. The Dayaks feast at each head-taking, lavish terms of endearment upon the head, and thrust food into its mouth. Its spirit-owner is told that he is now adopted into the captor's tribe, and must hate his old friends. By this means the ghost, which might otherwise have been dangerous, is supposed to be rendered not only harmless, but helpful. By the spirit's power, acting through the head, rice will grow abundantly, the forests will teem with game which will be easily taken, women will be fruitful, and health and happiness will abound.¹⁰ This influence of the head, or, rather, of the spirit acting through the head, is also seen in the case of the Bontoc, who obtain a head for every farm at planting and sowing; the Wa of Burma, who hunt for heads to promote the welfare of the crop; and the Lhota Nāga of N.E. India, who place head and feet in the fields for the same purpose.¹¹ Similarly, in New Caledonia, heads of old women are set up on poles as charms for a good crop,¹² and a like idea is seen in the Teutonic folk-belief that a skull buried in the stable makes the horses thrive.¹³ The spirit whose good wishes are invited is expected to become the guardian, friend, and benefactor of the tribe or family, and to be always with them.¹⁴ This is precisely the reason given by the Tauri for placing heads over their roofs.¹⁵ Other reasons are

alleged, but these also show the animistic basis of the custom.

The Dayaks believe that those whose heads are taken will be the slaves of their captors in the next world—an idea which is shared by the Lhoosai of India, who cut heads off after a battle.¹ Again, heads are taken by the Dayaks after a death, because it is supposed that a man of consequence cannot be buried or that a dead relative will not rest until this is done in his name; or by the Formosans, because the spirits of ancestors are pleased to see the huts adorned with heads.² The Kukis also take heads at the death of a chief, and in Celebes a chief's tomb is supplied with two heads of enemies or of slaves.³ This custom also obtained among the Celts, since skulls have been found buried with the dead.⁴ Sometimes in Borneo the spirit of the head is expected to persuade its former friends to come and be slain, and a prayer to this effect is addressed to it nightly,⁵ while in the Congo district the spirit of the head cut off in war is believed to haunt members of its family.⁶

(e) There can be no doubt that, whether in conjunction with preserving the skull or not, where the custom of eating the brain is found (e.g. among the Dayaks, in Luzon, in New Guinea, in New Ireland, in the Torres Straits Islands⁷), or of eating a mass of food in which a head has been cooked (as among the Batonga and the Garos⁸), this has also an animistic basis. It is usually expressly stated that it is done to acquire the courage or wisdom of the dead man. In some cases it is enough to eat some part of the head—the eye (Sandwich Islands, N. Zealand, Marquesas Islands) or the tongue (Torres Straits, ancient Karmanians)⁹—to acquire these qualities. The same purpose underlies the practice of using the skull of an enemy as an occasional or usual drinking-vessel. The liquid is the medium through which the powers of the owner of the skull or his spirit are transferred.

This was done by the Gauls,¹⁰ Irish (milk drunk from a skull restores to warriors their pristine strength),¹¹ Scythians,¹² the ancient Arahs,¹³ Fijians, peoples of the Congo,¹⁴ Uganda (priest drinks beer from skull of king to be possessed by his spirit),¹⁵ Muskhogeos (because good faculties of mind come from the brain),¹⁶ A similar custom occurs sporadically in folk-medicine and magic. In Germany other people's pigeons will come to your cot if you give your pigeons drink from a human skull.¹⁷ In the W. Highlands to drink from the skull of a suicide is a potent cure for certain ailments.¹⁸

(f) A distinction must be made between the practices already referred to, where an enemy's skull is concerned, and those connected with the *heads of relatives or ancestors*. Here also, however, the animistic basis is obvious, and it appears quite clearly from the Calabar custom of cutting off the head of a great chief at burial and keeping it secretly lest it and therefore the spirit of the chief should be stolen from the town,¹⁹ and from

¹⁹ M. H. Kingsley, *Travels in W. Africa*, London, 1897, p. 449 f.

the Polynesian idea that the spirit acts from the skull and is a guardian of the family.¹ Whatever the method of burial, the preservation of the head or skull of dead relatives out of affection, or in order to obtain communion with them, or to gain their good offices because of their pleasure at the respect shown to them, or for actual cult purposes, was probably an early custom, and is found in many parts of the world. It is met with mainly among the Melanesians and Polynesians, but it exists also in Africa and sporadically in America, chiefly in the southern part of the continent.

Bodies buried without heads were found at Cranbourne Chase, dating from Neolithic times, and these suggest separate preservation of the head. Elsewhere skulls have been found buried alone.² Herodotus reports that the Issedones made bare and cleansed the head, and, having gilded it, treated it as sacred and sacrificed to it (iv. 26). In Egypt the myth of Osiris told how, after the dismemberment of his body, his head was buried at Abydos or at Memphis. The sanctuary at Abydos was therefore holiest of all, and the symbol of the city was the coffer containing the head. This may point to some separate treatment of the head in early Egypt, especially if Egyptian civilization and religion were indigenous in Africa, where the head is often venerated. Before the rise of the custom of extracting the brain through the nose in mummification, the head was cut off for this purpose and filled with spices, and a formula was used to prevent the head of one man being confused with that of another.³ Among some African tribes a chief is buried with his head above ground. After the flesh has decayed, the skull is either buried or kept for magical purposes.⁴ Such skulls are usually preserved out of sight. Heads of distinguished men among the Mpongwe are hung up, and the decomposed matter is allowed to drip on a piece of chalk. The brain is the seat of wisdom, and this is absorbed by the chalk, which is then applied to the heads of the living that they may obtain wisdom.⁵ Among the Baganda a part of the head, the jaw-bone, especially of the kings, was carefully preserved because the ghost clung to it, and hence could be worshipped or its help obtained through the jaw-bone as long as that was honoured. Those of kings were preserved in the temples of the kings, and some jaw-bones were a thousand years old.⁶ Among the Taveta, E. Africa, the preservation of a skull preserves the spirit of the dead, and the accumulated skulls of a family or tribe thus guarantee future reunion.⁷

The custom of the widow carrying the husband's skull or jaw as a memento or amulet is found among some Australian tribes, Andaman Islanders, and in New Guinea.⁸ In New Caledonia the head was twisted off ten days after death, and the skull preserved, offerings of food being made to it during sickness.⁹ In various parts of Melanesia it is believed that the dead man's *mana* can be obtained, through his skull, for the benefit of the survivors. These skulls are carefully kept, and food-offerings are made to them.¹⁰ In the Solomon Islands the skull is preserved in a sanctuary, and is usually enclosed in a piece of wood fashioned in the form of a fish, or in a miniature hut. Here also the skull is full of *mana*, and through it the help of the spirit can be obtained, mainly by means of offerings.¹¹ In Tahiti the skull was preserved separately from the body, and was usually hung from the roof of the house.¹² In Nanumanga it was believed that the soul, when called on, came back to the place where the skull was kept to drive away disease, etc. Here the head was exhumed after burial. In Netherland

Island and in Onoatua the skulls of relatives were hung up in houses.¹

Among the Celts a custom of preserving and offering some cult to heads of ancestors and a belief in their powers may have existed. This is suggested by various tales, based on earlier myths which must have originated out of some actual practice.

Thus in the *Mabinogi* of Branwen, Bran, a Brythonic god, directs his friends to cut off his head after his death and bury it in the White Hill at London, facing France. This is done, and in the long delay on their journey thither the head affords them entertainment. Finally, the head—the *Urdaul Ben*, or 'Noble Head'—is interred and protects the land from invasion until Arthur disinters it. This appears to reflect actual belief and custom. There are also tales of heads which, when cut off, went on speaking.² This recalls the myth of Orpheus, whose head sang; and its burial-place became a sacred precinct.³ In Scandinavian mythology the Vanir cut off Mimir's head; but Odin spoke spells over it so that it could not decay, and still uttered speech.⁴ Lane⁵ refers to popular Muhammadan beliefs of the heads of saints talking after decapitation. The possibility of the consciousness of the brain after beheading, and even of the head speaking, was much discussed during and after the French Revolution; and there are stories of Charlotte Corday's head speaking, and, at an earlier time, that of Sir Everard Digby.⁶

In the Christian Church, among the relics of saints or martyrs the head or skull has frequently been singled out for adoration or as possessing great miraculous power. Thus 'the head of St. Marnan, preserved at Aberchirder, was ceremonially washed every Sunday, and the water carried to the sick and diseased, who derived benefit and recovered health from its sanative properties.'⁷ Among Muhammadans a similar reverence is paid; e.g., the burial-place of the head of al-Husain in Cairo is much visited by worshippers.⁸

(g) Many of the instances cited above imply a *cult of the head*, or of the spirit of whom the head is the medium or habitation. Through the head or skull the living obtain *mana* or help of various kinds, and the head is a powerful protective. But the mere representation of a head would be thought to give similar if not equal results. This may be the reason why human heads are a frequent *motif* in savage art. Such sculptured heads were also common in Celtic art, and among the Celts, as has been seen, there was a cult of human heads. Further, as the skull or head of an ancestor was the means by which *rapport* with himself was gained wherever there was a cult of heads, so it may later have been thought enough to represent the head of a divinity as a means of gaining communion with him. This may explain the existence of images of Divine heads among the Celts, often represented in triple form (see CELTS, § XIII. 2).⁹ Celtic myth has also much to tell of the power of Divine or heroic heads. It is not impossible that the Roman representations of the head of Janus may be due to similar ideas.

(h) *The representation of a monstrous and hideous face and head*, probably connected with grotesque masks used by savage peoples, has everywhere been regarded as an effective amulet against demonic powers or, more particularly, the evil eye (*q.v.*). In antiquity, hideous masks were sometimes worn for this purpose, and monstrous heads were much in vogue in Greece. To these is doubtless due the myth of the Gorgon's head cut off by Perseus, which still retained its evil powers after decapitation.¹⁰ Cf. art. GORGON.

(i) One source of the formation of images is to be traced in the custom, found in W. Africa, Indonesia, and Melanesia, of surmounting the rough wooden figure representing the body of an ancestor with his skull. The image is thus animated by his spirit. This custom has an analogy in the Melanesian method of representing ancestors by a human performer wearing a mask in which part of a skull is inserted. With these also may be compared the Sumatran magic staffs, in the head of the uppermost figure of which is enclosed the brain of a boy. A similar custom is followed in the case of the war idol made at the opening of hostilities by the Bataks of Sumatra, with a boy's brain inserted in a hole within the navel. In this way the image obtains a soul.¹

(j) A pre-historic method of burial was that of cutting off the head and placing it between the knees of the corpse. To judge by later analogies, this was probably done to prevent the deceased or his ghost from returning, but possibly only in the case of dangerous persons or enemies. In Egypt a sculptured plaque of the IIInd dynasty shows ten corpses of enemies decapitated with their heads between their legs. The custom existed in Albania in the 4th and 5th centuries of our era,² and was not uncommon in other parts of Europe in mediæval times. It has also occurred sporadically in modern folk-custom. In West Prussia, to prevent a dead member of the family from inflicting disease on the living, his coffin was opened and his head cut off.³ In England, in the case of the doer of some atrocious deed, his head was severed from the body and placed between the legs or under the arm.⁴ For a similar Lithuanian practice to prevent annoyance from the deceased, see *ERE* iv. 433^a. The practice probably had a very wide range, if we may connect with it the many stories of headless ghosts, found not only in Europe but in India.⁵

In Gloucester a headless ghost was believed to haunt a field, and here an actual interment with head beside thigh was found.⁶ Such ghosts appear with the head tucked under the arm; and it is a German superstition that the unblest spirit or the ghost of a malefactor whose crime was not divulged before his death must wander in this way. The headless ghost is often on horseback.

(k) In human sacrifice, etc., the head is often ritually cut off and receives separate treatment. This appears in the myth of Lityerses, where a stranger was taken to a corn-field to reap, and then wrapped in a sheaf, his head cut off with a sickle and his body cast into the river—a myth illustrating actual custom.⁷ The Mexican custom of preserving the heads of victims sacrificed as representing Tezcatlipoca has already been referred to (§ 5 (c)), and a similar custom of cutting off the heads of dough images prevailed.⁸ In Ashanti, at the yam 'custom,' the head of a sacrificed slave was placed in the hole whence the new yams were taken.⁹ In Bab. ritual the sacrificer speaks of giving the head of the child for his own head.¹⁰ On Raratonga the reeking human head was offered to Tangaroa, and the body consumed by the worshippers.¹¹

In some *Märchen* the vitality of the head is shown by the fact that a human head reduced to ashes, and swallowed by a

woman, or an animal's head eaten by an animal, causes conception. In an Eskimo tale a girl is changed into a seal and cut in pieces by the hunter, but the head slips into the womb of his wife and the girl is re-born.¹ An occasional remedy for sterility is for a woman to tread on a human skull.² Reference may also be made to the power which the decapitated heads of monsters have of growing on again. Birth from the head is sporadically found, e.g., in the Greek myth of Athene born from the head of Zeus, and in Hindu stories.³

In Polynesian myths the coco-nut tree is supposed to have originated from a human head or from that of an eel.⁴ In numerous *Märchen* the incident of a tree springing from a buried human head occurs. In a Samoan myth, pigs originate from human heads hung into a cave by a cannibal chief.⁵ Various creation myths tell how part of the universe was made from this or that part of the head of a vast being or giant;⁶ while in a Chaldean cosmogony preserved by Berosus the head of Bēlos is cut off, the blood is mixed with earth, and from this men and animals are made.⁷

6. Heads of animals.—These also have a distinctive place in custom and ritual, and frequently special attention is paid to the head of a sacrificial animal. Among the Veddas, when game is obtained, the head and a portion of the flesh of each deer taken is cooked as an offering to Kande Yaka, and afterwards eaten by the community.⁸ The Wanzamwezi of W. Africa place the head of the killed beast before the huts of the *mizimu* along with a little flesh.⁹ When the Dayaks offer fowls to the water-goddess, they cut off the heads and throw them into the stream.¹⁰ Herodotus reports of sacrifices in Egypt that imprecations (averting evils) were pronounced upon the head after it was cut off and then it was either sold to strangers or thrown into the river. No Egyptian would eat the head of any animal.¹¹ But this is not confirmed by monumental evidence, and the head appears as an offering quite as often as any other part of the animal.¹² Probably some particular sacrifice only is referred to by Herodotus. Among the Hebrew sacrifices occasional directions are given for the treatment of the head. That of the Passover lamb was to be eaten along with the flesh (Ex 12^a). In the case of the burnt-offering the head is mentioned as one of the parts which must be laid on the altar and burnt (Lv 1^a. 12. 15). In the case of the sin-offering of ignorance, the head is one of the parts which are not sacrificed but taken outside the camp and burnt (Lv 4¹¹; cf. 8¹⁷). Among the Teutons and Scandinavians, heads of sacrificed animals were sometimes the important part of the offering assigned to the gods; but, again, they were sometimes suspended on trees in the sacred grove and thus 'consecrated by way of eminence to the god.'¹³ Similar customs obtained among the Celts, and are referred to in Acts of Saints, who tried to combat the popular pagan cults of Gaul.¹⁴

Among those peoples with whom the bear is an object of reverence—Ainus (*q.v.*), tribes of northern Asia, some American Indian tribes—when one is killed in the hunt, its head has particular care bestowed upon it.

Thus among the Gilyaks (*q.v.*) the head and skin are borne solemnly through a smoke opening into the *yurta*. Women receive it with solemn music, and the head is set on a platform

adorned with pine branches. Offerings are set before it, and on the next day, called 'the foddering of the head,' it is fed from every dish served at the feast.¹

The Ainus set skulls of slain bears in the place of honour in their huts, or fix them on poles and sacrifice to them, believing that the spirits of animals dwell in the skulls.² The Ostiaks hang the head on a tree and worship it.³ Among those American Indian tribes who venerate the bear, the head is tied to a tree as a mark of respect, or hung on a post after being painted. Homage is paid to it, and it is expected to bring good luck to the hunters.⁴ Analogous customs are found elsewhere.

In Timorlaut, skulls of turtles are hung under the house, and prayer and sacrifice are offered them in expectation of their assistance during turtle-fishing.⁵ The Koryaks of Siberia place heads of whales or seals on their roofs and then on the hearth where offerings are made to them, and their souls go forth to sea to induce other animals to be caught.⁶ Among the Kurnai of S.E. Australia the native bear, when slain, is duly divided, and the head, as the most honourable part, goes to the camp of the young men.⁷ In various parts of British New Guinea, skulls of animals are preserved in the *poturna* or presented to the chief and fixed on his house.⁸ In Tibet the house is guarded against demons by a ram's skull and other objects fixed above the door.⁹ Among the Greeks and Romans it was customary to nail the head of sacrificial victims, especially of the ox, above the door of the house in order to ward off evils. Such heads were called *βουκράνιον*, *bucranium*.¹⁰ The head of the October horse was cut off and decked, and, after a fight for its possession, it was fixed on the wall of the Regia or on the *turris Mamilia*.¹¹ Among the Scandinavians, Teutons, and Slavs the heads of sacrificial animals, especially those of horses, were set upon poles or on houses in order to keep off evil influences, while the significance of this custom is found in many practices recently surviving. To these actual beads fixed on houses must be traced the carved horses' or other animals' heads on gables of mediæval houses in Germany, Russia, England, etc., regarding which occasional legends are told. Where an actual skull was fixed on the building, it may have been that of an animal killed as a foundation sacrifice.¹²

It is thus obvious that the animal's head serves an analogous purpose to that of the human head, and that the similar customs with respect to both have their origin in similar ideas respecting the spirit acting through or from the head. This is apparent in the Baganda belief that ghosts of slain buffaloes are dangerous. Hence the head is never brought into a garden of plantains, but eaten in the open country, and the skull placed in a specially built hut, where offerings are made to it, to induce the ghost to do no harm.¹³

In many cases magical rites are performed with animals' heads for different purposes, e.g. to cause a large supply of the animal in question to fall to the hunter,¹⁴ to prevent disease spreading by burying the head in the grave of the deceased,¹⁵ or charms are made from animals' brains,¹⁶ or they are worn dried as amulets.¹⁷

7. Rites connected with the head.—The importance of the head is further seen in the number of rites connected with it or performed upon it. In the article HAND (§ 3) it has been seen how the laying on of hands takes place upon the head, while it is also upon the head that anointing and the affusion of sacred liquids usually take place (see ANOINTING).

(a) The head is often *shaved* at different occasions in life; and, whatever secondary purposes this or

hair-cutting (see HAIR AND NAILS) may serve, the primary purpose seems to be the removal of evil influences and impurity from the head. The hair being removed, such evils cannot cling to the head. Some of the following examples will make this clear.

The ceremonies of the Kaffirs, after lightning had struck any thing or person, included shaving the head.¹ Soon after *birth* the head of the child is shaved in China, though here the belief now is that evil spirits which might attack the child will be deluded into thinking he is a despised Buddhist priest.² The early Arabs shaved the child's head and then daubed it with sacrificial blood—a purification.³ Shaving the child's head is also a Hindu rite,⁴ and it is used in modern Egypt.⁵ Similarly, before *circumcision*, *name-giving rites*, *tattooing*, and the like, shaving of the head takes place.⁶ In some regions it is also a customary rite before *marriage* in the case of the bride.⁷ In the case of the *priesthood*, shaving the head is a rite of initiation, or the head must be kept shaved as one of a series of rites to avoid impurity. This was the case with the priests of Melkart.⁸ In Egypt the priests shaved their heads every third day,⁹ and in the case of initiation to the Isis mysteries shaving the head was a necessary preliminary.¹⁰ It is also a Brâhmic rite of initiation,¹¹ and the Buddhist rite of 'ordination' includes complete shaving of the head.¹² In order to mark off the Hebrew from pagan priesthods, shaving the head of the priest was forbidden (*Lv* 21⁵, *Ezk* 44²⁰).

The tonsure in the Christian Church is doubtless connected with these ideas of purity and removal of evil influences. In connexion with *pilgrimages*, shaving the head is also a necessary rite either before or during the journey.¹³ The idea of removing impurity and danger is clearly seen in the Hebrew injunction to shave the head of the female captive before taking her to wife (*Dt* 21¹²), and of the leper as part of the ritual of his purification (*Lv* 14⁹), in the Arab custom of the offender appearing at the door of the injured person with shaven head as part of the ritual of reconciliation,¹⁴ and in the Chinese custom of shaving the head of the child who has fallen into a sewer, in order to let out the evil influence.¹⁵

Shaving the head as a *mourning* rite has also been a very general custom; and, although this, like cutting the hair, may have come to be regarded as an offering of the hair to the dead, which thus established a bond of union between them and the living, it originated in a desire to rid oneself of the evil contagion of death which might be clinging to the hair.

This rite was common in antiquity, but was not practised by the Egyptians, whose hair was habitually shaved,¹⁶ although in the mourning for Osiris the worshippers appeared with shorn heads, i.e. probably without their wigs, which were generally worn.¹⁷ In the mourning for Adonis at Byblus the people shaved their heads, mourning for the dead god, thus following the custom of mourning for dead relatives.¹⁸ The custom was also followed by the Hebrews, but was forbidden by the legal codes (*Lv* 19²⁷ 21⁵, *Ezk* 7¹⁸, *Jer* 16⁸, *Dt* 14¹; cf. *Am* 8¹⁰). It is also found among many savage tribes.¹⁹

(b) The ritual *washing* of the head is a usual accompaniment of purificatory ceremonies in many regions, and already in the Bab. Epic of Gilgamesh it is referred to as part of the outward procedure by which inward grief may be put away: 'Thy head be washed, bathe in water!' But probably with most peoples this is a very occasional proceeding on account of the sanctity of the head and the danger of detaching any of the hair from it in the process.²⁰

²⁰ See W. R. Smith³, 485; Warde Fowler, 201.

(c) The placing of ashes, dust, or earth on the head has been frequently recognized as a sign of abasement or of grief and mourning. Many African tribes adopt it as the proper method of an inferior in approaching a superior.¹ It is similarly used among Oriental peoples,² and among the Hebrews it was commonly adopted either as a method of approaching God or a conqueror in humiliation, or as a token of excessive grief, and of mourning for the dead (Jos 7⁶, 1 S 4¹², 2 S 1² 13¹⁹; cf. Is 61³).³ The Egyptians also used it as a sign of mourning.⁴

While this action shows humility, it thus helps to propitiate either deity or superior; and, though in mourning it is a natural act on the part of those who believe that indifference to cleanliness, neatness, etc., is a concomitant of grief, there may be some idea also of thereby propitiating the ghost. The suggestion that the dust was taken from the grave or ashes from the funeral fire in the case of mourning is ingenious but uncertain.⁵

(d) The covering of the head by certain persons at certain times, or habitually, is a matter of obligation, to omit which would be to incur ill-luck and danger. As things sacred are dangerous, and as the head is regarded as sacred, there are occasions when it might be harmful to the ritual act which is being performed or disrespectful to the divinity, to uncover it. And, conversely, dangerous influences might fall on the sacred head at that particular moment. Shamans and priests frequently cover the head when performing magical or religious rites.

Among the Veddas the cloth which is held over a shaman's head, when his hair is being cut, also covers his head in the sacred dances.⁶ In Borneo, while engaged in the magic ritual of healing, the shaman has his head veiled.⁷ The priests of the Goths, according to Jordanes, were called *pileati*, because they covered the head with a hat while sacrificing.⁸ The Roman priests while performing sacrifice covered the neck and back of the head with the *toga (velato capite)*.⁹ The custom was traced to the advice given by Helenus to Æneas,¹⁰ but Plutarch suggests other reasons—humility, the avoidance of hearing ill-omened words, or a symbol of the soul hidden by the body.¹¹ The Greeks, on the other hand, sacrificed with the head uncovered (*aperto capite*), and this was followed when the sacrifice at Rome was performed according to the Greek rite. There were also exceptions, as when the prætor sacrificed with head uncovered during the rites of the *ara maxima* and the *ades Herculis*.¹² Muhammadans regard it as abominable to pray with the head uncovered.¹³ Jews also cover the head at prayer out of reverence (cf. Ex 38¹). Moses hid his face, for he was afraid to look upon God,¹⁴ and the mantle, or *tallith*, is placed over the head at the name of God. Among Christians the head is uncovered at prayer and in church, but women have the head covered, following St. Paul's injunction (1 Co 11⁴⁻⁵), and at certain parts of the service the priest wears a biretta, and the bishop a mitre.

(e) The veiling of the bride, which takes place among so many peoples, savage and civilized, may be traced to the idea of danger to the head, which would be regarded as greater at the time of marriage.¹⁵ The ecclesiastical rite of the veiling of virgins who dedicated themselves to the religious life ('taking the veil') was connected with the idea of a mystical marriage with Christ.¹⁶ Many in the early Church held that all unmarried women or virgins should wear a veil.¹⁷ Muhammadan women must always be veiled, as it would be immodest to let any one see the head or face, especially the former.¹⁸ Among Jews, though not now in Western countries, it was considered indecorous for a woman to be bare-headed. The custom of covering the face or head with a veil or with

the mantle on occasion existed among the early Hebrews, with the same idea of indecorum (Gn 24^{6b}). The same rule has been followed in the Christian Church with regard to women since the earliest times, but it is dishonouring to his head for a man to pray covered, according to St. Paul (1 Co 11⁴⁻⁵). On the other hand, uncovering the head is often regarded as a token of respect, whether to divinities or superiors, just as it is an act of etiquette in the modern world.¹ It is not easy to reconcile this with the former practice, unless the idea was that of exposing a part regarded as sacred before those who were sacred or superior.

Van Gennepe (p. 240) regards covering the head as an act of separation from what is profane. This is undoubtedly one aspect of the custom, emphasized, e.g., in the Church ritual of marriage, where, at the benediction of the pair, a veil is held over their heads.² Covering the head is also an occasional token of grief, or mourning.³ In some instances wreaths, chaplets, and crowns are worn as protectives of the head from evil influences. See art. CROWN, vol. iv. p. 338s.

(f) Distinctive marks are often made on the forehead by branding or painting, or they are symbolically signed with the hand. In India such marks are painted on the forehead; and, according to their form, they denote the sect to which a man belongs—Saivites have a horizontal and Vaisnavites a vertical sign.⁴ Among the Buddhists of Eastern Tibet, Lāmas pass through an ordeal of initiation in which six marks are seared in their crown with an iron lamp.⁵ A similar custom must have existed among the Semites, for in Ezk 9⁴⁻⁶ there is reference to a sacred sign, the *Tau*, placed on the foreheads of those who had not given themselves over to pagan cults, and who would thus be saved from slaughter in the day of destruction. Similarly in the Apocalypse the worshippers of the beast have his mark on their foreheads (or their hands), and they are doomed to drink of the wrath of the wine of God (Rev 13¹⁶ 14⁸⁻¹⁰; cf. 20⁴). On the other hand, the servants of God are 'sealed in their foreheads' with the names of the Lamb and His Father (7² 14¹).

In the *Psalms of Solomon* 'the mark of the Lord is on the righteous to their salvation'—probably on their foreheads, since 'the mark of destruction' is placed thereon (15⁸ 10⁸).⁶ Hebrew prophets apparently bore some distinctive mark on the face or hand (see 1 K 20⁴¹). In Christian baptism, from comparatively early times, the candidates were signed with the Cross on their foreheads at various stages of the service, e.g. in connexion with exorcism, and at confirmation the same sign was made with the thumb dipped in the consecrated oil.⁷ The whole conception of baptism as supplying a 'seal' or mark by which the faithful were known to God—baptism conferring a spiritual character—is connected with these ideas of an actual mark made on the forehead, as is obvious from the language used regarding it in early writings (see EKE ii. 385^b, 393^a). In signing oneself with the protective sign of the Cross, sometimes called 'sealing,' it was usually traced on the forehead.⁸ Many passages in the Apocryphal Acts show that by this invisible 'seal' demons were repelled. But a later method was to make the sign by touching first the forehead, then the region of the heart, the left, and afterwards the right shoulder. In Christian usage the symbolic marking took the place of actual marking or branding. Such marks were, however, still made by some Gnostic sects—e.g. the Carpocratians (branding or marking on the lobe of

⁸ Tert. de Cor. 3; adv. Marc. iii. 18.

the right ear)¹—and they were also used in Mithraism (branding the initiate on the forehead).² These marks secured the recognition of the initiate by the divinity.

8. Postures of the head.—Almost universally, at worship, before a sacred object, or in presence of a superior, the head is reverently bowed, or the person bends down or prostrates himself to the ground, touching it with the forehead. These postures are found among many savages and in all of the higher religions. But sometimes also the head is uplifted, the petitioner looking upwards to heaven—a posture which usually accompanies the lifting of the hands in prayer. In many semi-religious or magical rites the head is directed to be averted, as it is considered dangerous to see supernatural personages, sacred objects, and all that belongs to a supernatural plane (Gn 19¹⁷⁻²⁶; *ERE* iv. 654).³ Various gestures of the head have definite significations among most peoples. The head is hung in shame, or raised in pride, or moved up and down or from side to side in token of assent or negation, or wagged in token of contempt (La 2¹⁶, Mt 27³⁹), etc. As a sign of their complete subjection a conqueror placed his foot on the head of his enemies (Ps 110¹, 1 Co 15²⁵).⁴ Hence among savages it is often a sign of respectful submission to place a superior's foot on one's neck or head.⁵

9. Of all parts of the body the skull tends to exhibit the largest proportion of clearly defined variations. As related to the brain as well as to the organs of mastication, and because of its differences in dimensions and in form, it affords an excellent index of racial affinities. Hence the science of craniology, the measurements and characteristics of the skull, has thrown great light not only upon the races of pre-historic times as revealed by their remains, and their relation to existing races, but also upon the affinities of present-day peoples⁶ (see ANTHROPOLOGY).

10. Deformation of the head in various ways, of which four principal types are distinguished, is practised by many peoples. The infant's head is submitted to the continued application of boards, bandages, stiff caps, and the like, until the deformation is finally attained. This practice is common among American Indian tribes, in the South Sea Islands, in Asia Minor, and sporadically in Europe, e.g. the 'Toulousaine' head of different parts of France.⁷

HEALTH AND GODS OF HEALING

(Greek).—I. *THE RELATIONS BETWEEN SACRED AND PROFANE MEDICINE IN ANTIQUITY*.—As long as religion maintains an inherent connexion with the entire intellectual development of the age, so long does medicine continue to bear the impress of the religious factor. In the absence of the occult element from the surgical practice of the *Iliad*, we shall therefore hardly venture, with Gomperz (*Gr.*

Denker, i. 224 [Leipzig, 1896]), to describe a 'morning-blush of the Illumination.' For one thing, the significance of that absence is discounted by the fact that in the *Odyssey*, a product of the same stage of culture as the *Iliad*, the magic word is employed in the treatment of wounds (*Od.* xix. 457); and for another, the surgical art, just because the injuries it deals with are patent to the eye, and may be healed by the skilled hand, occupied a distinct position within the sphere of medicine. This is seen even in the legal enactments of ancient Babylonia, in which the healer of wounds is put alongside of the veterinary surgeon, the architect, and other artisans, while internal medicine is not mentioned at all (see below). The absence of exorcism from the surgical practice of the *Iliad* could be regarded as a symptom of the Ionic 'spirit of light' only if that epic, in its references to disease, made no mention of magic remedies at all. In point of fact, however, the warriors who deal so rationally with wounds are completely at a loss when confronted with the pestilence sent by Apollo, and have recourse to supernatural means of healing—the consultation of priests, seers, and dream-readers (*Il.* i. 63), purifications, prayers, and sacrifices (442 ff.). In the *Odyssey* likewise the illness of individuals is regarded as sent by the gods (v. 396, ix. 411), and from the gods alone is the remedy to be procured (v. 397). The prevalence of theurgic medicine in the Homeric age must thus be recognized as a fact beyond question.

Then the ever-recurring employment of religious expedients against the onset of epidemics in later times, and the vogue enjoyed for centuries by temples of healing, show us how long the power of magic held its ground in the sphere of therapeutics. It is also a significant fact that Pindar, when enumerating the subjects which Asklepios learned from Cheiron (see below, II. A. 6), does not shrink from co-ordinating exorcism with external and internal medicine. Even Sophocles, whose view of *ἐπιφάλα*, as expressed by Ajax (*Aj.* 582), is read by J. Hirschberg as a condemnation of them (*Gesch. d. Augenheilkunde*, Leipzig, 1905, p. 55; he might also have adduced *Trachin.* 1001), was actually the priest of the healing hero Amaryn (II. B. 11), and, as such, successfully strove to secure the naturalization of Asklepios, the bestower of dream-oracles, in Athens.

A very different problem is raised when we ask whether the predominance of the supranaturalistic element did not act as an obstacle to practical progress in religious medicine, or whether genuine medical knowledge might not develop even under such conditions. In order to answer this question, we must turn to the two civilized peoples who practised the healing art prior to the Greeks.

(a) To the *Babylonians* a science of medicine free from the occult was always a thing unknown. At the first glance, indeed, it might seem as if at a remote period popular beliefs were assailed as mere superstition by certain outstanding rulers, but on a closer inspection this view proves to be fallacious. The ancient Sumerian *patesi* (city-king) of Lagash, Gudea, whose reign is now dated c. 2450 (A. Ungnad) or 2350 B.C. (E. Meyer), certainly says, in his report about the building of the temple of Ningirsu, that he has 'expelled the dreadful sorcerers, the [what follows is unintelligible] . . . from the city' (Statue B 3, 15 ff., as in Thureau-Dangin, *Die sumer. u. akkad. Königsinschr.*, Leipzig, 1907, p. 69; cf. Cylinder A, 13 f., p. 103). But to speak of him as on that account the earliest champion of civilization in history (J. Jeremias, *Moses u. Hammurabi*, Leipzig, 1903, p. 40, n. 3) is a misapprehension. Gudea was, in fact, anything but a rationalist. The inscriptions of his statues and cylinders record little else than his exertions in

connexion with the temples of the gods, and reveal him as a true priest-king. For the building of the aforesaid temple of Ningirsu, he asks that goddess for a special revelation (cf. his dream, on Cyl. A, 27 ff., Thureau-Dangin, p. 91 ff.), while for his administrative proceedings he resorts to omens of various kinds, as also, according to Jastrow (*Die Religion der Bab. u. Assy.*, Giessen, 1902-05, ii, 273), to hepatoscopy. When a ruler of this type makes war upon sorcerers, it will hardly be in the interests of enlightenment.

The same holds good of Hammurabi of Babylon, who reigned some centuries later. By § 2 of his code of laws, a charge of having practised sorcery is to be submitted to a divine ordeal which involves the death of either the accuser or the accused (cf. Ungnad's tr. in Gressmann, *Altorient. Texte*, Tübingen, 1909, p. 143). Here again Jeremias recognizes the measures of an enlightened monarch against the superstitions of his day. But, while religion has indeed no place in the legislation itself, it is certainly prominent enough in the epilogue, where the king calls upon the gods to chastise the transgressors with various calamities, such as serious illness, evil Ashakku (the demon of consumption or fever), painful injury, *the nature of which is unknown to the doctor*, and which he cannot relieve with bandages. In §§ 215-221 the code applies the strictest provisions of the *ius talionis* to the doctor; but here the doctor is in reality the surgeon, and is not concerned with internal diseases, which, according to Hammurabi's ideas, are induced by demons, and can be combated only by religious means. Contemporary inscriptions show that by the time of Hammurabi the divining priests (*bârû*) had been formed into an organized gild; and this was presumably the case also with the exorcizing priests (*ashipu*), whose function it was to dislodge the demons of disease (cf. Weber, 'Dämonenbeschwörung bei d. Bab. u. Assy.', in *Der alte Orient*, vii, [1905] 4, pp. 5 and 7).¹

Thus, as sorcery and exorcism were recognized elements in the official religion of Mesopotamia, the repressive measures of Gudea and Hammurabi could apply only to those illegal practices by which persons endowed with occult powers—sorcerers and witches—caused injury to others, and against which the priesthood in its official capacity fought with magic devices of its own (as found in the 'Maklu' inscriptions). What the priests thus did by magic, the two monarchs sought to do by law, and, accordingly, the object of their attack is not superstition as such, but what was known in the Middle Ages as 'black magic.' Hence, as the belief that disease was caused by demons was an essential feature of Babylonian religion, Babylonian therapeutics must also have borne a supranaturalistic character.

(b) The *Egyptians*, even by the period of the *Odyssey* (iv. 227 ff.), had carried the fame of their medical proficiency beyond the confines of their own country; and this fame is justified by the relevant portions of their extant literature. It would seem, however, as if an error had recently crept into the critical investigation of this literature. Thus, from the fact that two documents of the Middle Empire—fragments respectively of a gynæcological and a veterinary papyrus, and both from Kahun—deal only with symptoms, diagnosis, and therapeutics (F. v. Oefele, in Neuburger-Pagel, *Gesch. d. Medicin*, i, [Jena, 1901] 75), while

the Ebers Papyrus, compiled from older writings during the XVIIIth dynasty, and its nearly contemporary counterpart, the Hearst Medical Papyrus (ed. Reisner, 1905), frequently supplement the medical recipes by magic formulæ, von Oefele (*Der alte Orient*, iv, [1902] 2, p. 25) and H. Schneider (*Kultur u. Denken d. alten Aegypter*, Leipzig, 1907, p. 317 ff.) infer that Egyptian medicine was at first purely empirical, and resorted to magic only in the period of the New Empire and under Babylonian influence. But is this not too bold a conclusion to draw from such scanty data? The gynæcological text in question consists of only three columns, while the Ebers Papyrus comprises one hundred and ten pages; in the latter, moreover, the incantations are met with sporadically, and large portions of the text have none at all. Thus the absence of incantations from the Kahun fragment may be merely fortuitous. In a word, that a people with so intense a belief in the supernatural as the Egyptians—a people whose cult of the dead was completely permeated by magic even in the Ancient Empire—cultivated a purely rational medicine the present writer finds it impossible to believe.

We turn now to the question how far those two civilized peoples of antiquity, with their marked leaning towards the occult, succeeded in making progress in the science and art of healing. Modern writers on medicine have shown that the Egyptian doctrine of the vessels (*metu*) was a real contribution to science, and that the Egyptian pharmacy furnishes materials of considerable value. But the Babylonian medicine likewise, debased by the ritual of exorcism and dependent upon oracles though it was, recognizes, as has been shown by F. Küchler in his valuable *Beiträge zur Kenntnis d. assyr.-bab. Medizin* (Leipzig, 1904), the use of rational remedies, employs the injection (Küchler, p. 39, l. 44) and the cataplasm (*ib.* 39, 36, etc.), and gives directions as to diet (*ib.* 7, 30, 69); and, according to Oefele (in Küchler, p. 65), the squatting position it prescribes for colic (*ib.* 3, 11, 13) does in reality afford great relief.

Alike in the Nile valley and in Mesopotamia, therefore, the healing art was a combination of the occult and the rational, and this peculiar system of medicine exercised an influence upon the Greeks at a very early period. The Egyptian doctrine of *metu* survives in the Greek theory of 'humours' (Schneider, *op. cit.* 325), the Egyptian pharmacy in that of Greece; and a striking illustration of such survival is found in the fact that, as demonstrated by Le Page Renouf (*ZÄ xi*, [1873] 123), the diagnosis of pregnancy in the 'Hippocratic' treatise *περί ἀφόρων*—probably written by a Cnidian—is identical with that found in the Brugsch Papyrus. How this Egyptian diagnosis made its way to the Cnidians may be explained by the fact that, according to Diogenes Laertius (viii. 87), the Cnidian mathematician and physician Eudoxos spent fifteen months with the medical priests of Heliopolis in the reign of Nektanebos (382-364 B.C.); and Eudoxos would certainly not be the first of the Greeks to avail himself of such an experience. The avenues by which Babylonian medicine reached the Greeks have not yet been definitely ascertained; but the present writer is convinced that the practice of *incubation*, i.e. sleeping in a temple as a means of healing, which is of great importance in the religious medicine of the Greeks, was an importation from Babylonia. H. Magnus (*Abh. zur Gesch. d. Medicin*, i, [Breslau, 1902] 6 ff.) maintains, it is true, that incubation was common in Egypt from the earliest times; but the present writer has never succeeded in finding any mention of it in ancient Egyptian sources. In all probability, the practice was introduced into Egypt through the medium of the Sarapis worship

¹ A parallel to Gudea and Hammurabi in this respect may be found in Saul, king of Israel, who, in conformity with Ex 22¹⁸ and Lv 19¹, expelled wizards and diviners from the country, but in his own hour of need sought counsel of the forbidden craft (the witch of En-dor, 1 S 28⁷; cf. v. 9). Divination, however, was forbidden among the Israelites, not as a harmful superstition, but as a Canaanite practice (cf. E. Meyer, *Gesch. d. Altertums*, Stuttgart, 1834-1901, i, § 313).

founded by Ptolemy I., and was shortly thereafter transferred to the cult of Isis. Sarapis—the subject of much discussion—is, however, as C. F. Lehmann-Haupt has shown (II. A. 18), simply the god Ea of Eridu under his customary by-name of *sar apsi* ('king of the watery deep'), the supreme healing god of the Babylonians (Jastrow, *op. cit.* i. 294 ff.). In the sanctuary of Ea at Babylon—the edifice which Greek sources call *Σαραπίειον*—the rite of incubation was performed on behalf of the dying Alexander by several of his generals. The theory that Mesopotamia was the cradle of incubation is warranted also by the fact that in that region dream-oracles were sought after for all emergencies, and especially for disease (Jastrow, i. 367 ff.), from the earliest times. Unfortunately, we have as yet no work dealing with the ritual prescribed; and this is all the more to be regretted in view of the important rôle played by *dream-reading*. Jastrow's work has so far only reached the discussion of the oil-oracle; the still unpublished matter relating to dream-oracles for healing purposes is noted in Bezold's Catalogue of the Kouyunjik Collection, v. (1899) nos. 2140 ('omens, including medical prescriptions') and 2143 ('omens derived from events which seem to occur in dreams'). That incubation among the Babylonians and Assyrians was an institution with well-defined rites is shown by an incidental reference in the annals of Assurbanipal (ed. Jensen, *KIB* ii. [1890]187), where a dreamer is said to have lain down towards the end of the night, in order to obtain an oracle on the king's behalf (cf. *ib.* 201). The Greek practice of incubation, however, also exhibits the two features here indicated, viz. *incubation on behalf of another* (cf. II. A. 15 and 17, below), and the *preference for a time towards morning*—'as the soul is then free from the effects of material sustenance' (Philostr. *Vita Apollon.* ii. 36; cf. Artemidor. i. 7). Plutarch (*Septem sap. conv.* 15) tells us that incubation was an ancient Greek practice, and the reference of the *Iliad* (xvi. 235) to the Dodonian Selloi, the *ὑποφῆται χαμαιεῖνοι* of Zeus, may be regarded as the earliest witness to it (so Welcker, *Kleine Schriften*, iii. [1850] 90, and Dümmler, *Philol.* lvi. [1897] 6). The naturalization of a Bab. practice in Greece at so early a period is not inconceivable, as another passage of the *Iliad* (xiv. 201, 246), in its striking representation of Okeanos and Tethys as primitive forces (cf. the early Orphic theogony, in Plat. *Cratyl.* 402 B), shows dependence on Bab. cosmogony (P. Jensen, *Kosmologie der Babylonier*, Strassburg, 1890, p. 244). Incubation would seem to have reached the Greeks by way of Lydia; thus, in Assurbanipal's annals (*KIB* ii. 173), a dream vouchsafed by the god Assur to Gyges is mentioned (cf. Jensen, in Thrämer, *Pergamos*, Leipzig, 1888, p. 413), while in the valley of the Mæander there were several incubation-shrines of the subterranean gods, one of them being the Plutonium, near Nysa, the ceremonies of which were a reflexion of the Bab. practice (II. A. 17, below). Mention should also be made of the curious affinity between the Bab. haruspicy (Jastrow, ii. 213 ff.) and the Etruscan—a correspondence dealt with most recently by G. Körte (*Röm. Mitt.* xx. [1905] 348 ff.) in connexion with the bronze liver of Piacenza (see ETRUSCAN RELIGION, vol. v. pp. 533, 537). Here, again, we learn that we are but beginning to realize the remarkable religious influences which streamed from Mesopotamia to the West.

If the religious medicine of the older civilized peoples thus made its influence felt among the Greeks, the question arises whether its further development, after its settlement upon Greek soil, was essentially upon the same lines as before, i. e. whether the fusion of religion and medical em-

piricism can be traced also in the therapeutic practice of the Greek sanctuaries. While this, notwithstanding the ridicule poured upon incubation-shrines by Aristophanes in the *Plutos*, and obviously also in the *Amphiaraios*, might have been confidently taken for granted until lately, the discovery of the Epidaurian stela recording the miraculous cures (*ιάματα*) of Asklepios (as redacted about the end of the 4th cent. B.C.) has brought about a defection from this view, and the majority of modern investigators stigmatize these sanctuaries as hives of priestly chicanery and senile superstition. The latest discussion of the question (S. Herrlich, 'Antike Wunderkuren,' in *Progr. des Humboldt-Gymnas. zu Berlin*, 1911) comes eventually to the same negative result. The present writer, however, after renewed consideration of the subject, cannot but adhere, in essentials, to the earlier standpoint, as set forth in Pauly-Wissowa, ii. 1686 ff.

Arguing from the difference between the contents of the Epidaurian *ιάματα*-stela and the condition of medical practice in the Imperial period, P. Kavvadias (in his *Fouilles d'Épidaure*, Athens, 1893, p. 115, in the *Ἱερὸν τοῦ Ἀσκληπιοῦ*, 1900, p. 267 ff., in the *Mélanges Perrot*, 1902, p. 42, and, finally, at the Archæological Congress in Athens, *Comptes Rendus*, 1905, p. 278 ff.) has come to the conclusion that in the Greek period the curative procedure of the Asklepieia consisted entirely of miraculous acts of the god, after the style of the *ιάματα*, while in the Roman period, in consequence of the institution of dream-shrines, and the therapeutic methods based thereon, it received an infusion of rationality. But the inference is by no means beyond dispute. To begin with, it would be strange indeed that the Asklepieia of the most flourishing period of the Greek world should successfully resist the intrusion of rational procedure, while, in a period of growing superstition and craving for the miraculous, they should open their doors to natural remedies.¹ Kavvadias bases his theory on the Epidaurian *ιάματα*, but exaggerates their importance. In Pauly-Wissowa (*loc. cit.*) the present writer had pointed out that the *ιάματα*—according to which, e.g., persons with a vacant eye-socket incubate, and leave the shrine with a seeing eye—are not historical documents, but merely a compilation for the gratification of credulous minds, and that none of the individuals said to have been cured by the god can be historically traced. Wilhelm (*Jahrb. d. österr. archäol. Instit.* iii. [1900] 40) has certainly sought to identify Arybbas, an Epirot named in stela ii. no. 31, with a Molossian chief of the period in which the *ιάματα* were redacted, but in that case this particular *ιάματα* would be severed from the group as a whole. The Greeks had, in point of fact, a great store of legends about the cures and resuscitations of Asklepios in the mythical age (cf. Pauly-Wissowa, ii. 1653 f.), and one of these miracles—the raising of Hippolytus to life—was extolled upon a stela bearing an epigram in the Epidaurian *hieron* (Paus. ii. 27. 4). Our redaction of the *ιάματα*, then, really preserves the substance of these tales of the marvellous in a pseudo-historical form, its object being to convince the credulous that the immediate miraculous action of the god had not ceased with the mythical age. A frequently recurring feature of the *ιάματα* is the statement that, when the sleeper awoke, his dream was found to have been already fulfilled; and here again the record follows a mythical pattern, as seen in Bellerophon's dream (Pindar, *Olymp.* xiii. 56). If, accordingly, the

¹ This argument is advanced in opposition to Kavvadias also by S. Herrlich (*loc. cit.* 33), though only by way of supporting the contention that the occult element maintained its ascendancy also in the Roman period; otherwise Welcker, *Kleine Schr.* iii. 75.

Epidaurian *iamata* belong to the class of miraculous stories designed for edification, such as are met with in all religions, we cannot regard them as documents drawn up from the actual practice of the Asklepieia.¹

The hypothesis of Kavvadias ignores the *man-
tic* aspect of incubation; and so O. Rubensohn (*Festschr. für Vahlen*, Berlin, 1900, p. 13) takes the further step of asserting that in the Greek period the cult of Asklepios was not concerned with dream-oracles, but that these were introduced at first by the Sarapis-Isis cult. In point of fact, however, *ἐγκοιμησις* was known to the Greeks long before the worship of Sarapis reached them, and was based precisely on the prophetic significance of dreams (see below, II. A. 11, 14, 15, 17-20; and above, the reference to the Dodonian Selloi; cf. II. B. 1 and 8). A distinction was made between *δνειροι θείοι* (or *θεόεμ-
τοι*), 'divine oracles given in dreams,' and *δνειροι
φυσικοί*, 'oracles of the soul itself in dreaming.' The author of the *περί διατρῆς* in the *Corpus Hippokr.*, probably a Cnidian physician, believes in both kinds, but does not treat of the former class (ch. 87 [vi. 540, Litttré]), as these had already been dealt with by experts,² confining himself to the 'natural' class, in which the soul reveals what will benefit the body. Both kinds of dreams are recognized by the post-Hippocratic physician Herophilos, the anatomist (Plut. *de Placit. Philos.* v. 2). Even Democritus believed in demons who reveal themselves to the dreamer in forms (*εἰδῶλα*) emanating from themselves (Plut. *ib.*; Sext. *Empir., adv. Math.* 394), and Aristotle acknowledged the *man-
tic* efficacy of 'natural' dreams (*περί τῆς καθ' ἑπνοῦ
μαντικῆς*, p. 462 ff.), while the Stoics, again, regarded dreams of healing as manifestations of divine providence. In view of such favourable recognition on the part of physicians and philosophers, it was, of course, incumbent upon the official directors of the practice of incubation to do all they could to ascertain the divine will as indicated in the dreams. Everything turned, therefore, on the correct interpretation. The special literature of the subject formulates two classes of revelations (Artemid. i. 2): (1) *δνειροι θεωρηματικοί*, 'dreams to be followed literally'—even there, however, interpretation had to be resorted to whenever the literal application of the prescription threatened the patient's life³—and (2) *δνειροι ἀλληγορικοί*, 'dreams which indicate the remedy indirectly.' As regards the latter, Artemidorus (iv. 22) deprecates all perversity of interpretation, and asserts that the *συνταγαί* of the gods, when given in enigmatic form, are nevertheless quite clear; thus the dream of a lamb sucking the breast of an invalid signifies an application of *ἀρνόγλωσσον*. Preposterous interpretations were a characteristic feature of the Imperial period—*e.g.* a vision of the Athene Parthenos of Phidias was fantastically interpreted as signifying the application of an injection of Attic honey (Aristid. ii. 403 [Keil]).

Again, *interpretation of dreams* and a therapeutic practice founded thereon are met with—to leave Asklepios out of account meanwhile—in the Plutonion near Nysa (II. A. 17, below), in the Dionysian dream-shrine at Amphikleia (15), in the cult of the Dioscouroi at Byzantium (14), and in the Amphiareion at Oropos (19). Now, it is quite impossible to understand why incubation, the characteristic feature of which, from its

earliest infancy in Babylonia, was always the dream-oracle, should retain its character among the Greeks generally, and yet in particular should degenerate in the Asklepieia into a mere ornamental adjunct. Those who, in view of the Epidaurian *iamata*, accept the theory of Kavvadias overlook the fact that we have positive testimony to the dream-oracles of Asklepios during the Greek period, viz. in the *περί θεῶν* of Apollodorus, who in that work speaks of the god as 'praeses divinationum et auguriorum' (Macrob. *Sat.* i. 20). Apollodorus must therefore have known of the *συνταγαί* given by Asklepios in dreams, and thus also of remedies applied in accordance with them. Nor are traces of this combination wanting elsewhere. In *Ælian*, frag. 100 (Suid. *s.v.* Παύσων) the god, *ἐπιστάς* (the technical term for appearing in a dream; cf. Deubner, *de Incubatione*, Leipzig, 1900, p. 11), is said to have prescribed a salve of swine's fat and vinegar for diseased eyes, and the anaæsthetic measure of the words shows, as Fritzsche (on *Thesmoph.* 949) has noted, that they are taken from a comedy. The three-months' course of healing undergone by *Æschines* the rhetor, in Epidauros (*Anthol. Gr.* iv. 330), might be appositely cited as additional evidence, if we were certain that the patient was *Æschines* the Eleusinian (cf. Pauly-Wissowa, ii. 1688); the fact that the epigram speaks of him as an Athenian forbids us, at all events, to identify him with *Æschines* the Milesian, a contemporary of Pompey. Finally, an indirect testimony to the curative operations of the Asklepieia is furnished by a current tradition which is rejected solely on account of the foolish assertion with which it concludes, but which contains the quite defensible statement that the profane medicine of the Greeks was derived from their religious medicine, and, above all, from that of Asklepios. Artemidorus (iv. 22) states that many persons in Pergamos (Asklepieion), Alexandria (Serapeion), and elsewhere were treated according to prescriptions given in dreams: *εἰσι δὲ ὁ καὶ τὴν
λατρικὴν ἐκ τοιούτων συνταγῶν λέγουσι εὐρῆσθαι*. Similarly, Iamblichus (*de Myst.* iii. 3) says that the healing art had its origin in the *θείοι δνειροι* of Asklepios. What is here affirmed of profane medicine in general is referred to by Strabo (xiv., of which Apollodorus is the principal source) as a current tradition regarding Hippokrates in particular: *φασὶ δὲ Ἰπποκράτην μάλιστα ἐκ τῶν ἐνταῦθα* [in the Coan Asklepieion] *ἀρακεμένων θεραπειῶν
γυμνάσασθαι τὰ περὶ τὰς διατράς* (p. 657. 19). But, if the medical praxis of the Coan temple embraced such miraculous proceedings as are found in the Epidaurian *iamata*, no sober-minded man could have regarded them as providing instruction for scientific medicine. We must accordingly assume that records of the medical procedure of temples were preserved in the Asklepieion of Cos, and that these provided a footing for the current opinion regarding Hippokrates. That opinion was first brought into discredit by the allegation—not found in Strabo's source—that the great Coan physician was an incendiary.

It is singular that Hippokrates, the supreme genius of ancient medicine, has left so few positive traces of his personality. For his descent from the Coan Asklepiadæ, and for his rapid advance to renown, we have the explicit testimony of his younger contemporary, Plato (*Prot.* 311 B, *Phædr.* 270 C), but, as Friedrich (*Hippokratische Untersuchungen*, Berlin, 1899, p. 1) says, 'he was for Aristotle already an almost mythical personality.' The *Corpus Hippokr.* contains over seventy treatises, but none of them can be with absolute confidence ascribed to the master, while many are not even products of his school. The *Vita* compiled from Soranos and other sources (A.

¹ A very significant circumstance is that the supposed original votive inscription belonging to stele I. no. 15 (Hermodikos) proves to be a fabrication in a pseudo-archaic script.

² The sources used by Artemidorus are of much later date than the special literature indicated here, which, unfortunately, has not survived.

³ As, *e.g.*, the prescribed bleeding to the amount of 120 pounds (Aristides, ii. 405 [Keil]).

Westermann, *Biographi Gr.*, Brunswick, 1845, p. 450) is a blend of fact and fancy. His birthday is attested by a reliable source—a Coan archive; while we may probably rely also upon the statement that, on the completion of his early studies, he was induced by the death of his parents to migrate to Thessaly, that he lived at Larissa, and eventually died and was buried there (cf. *Anth. Gr.* vii. 55). The name of his eldest son, Thessalos, likewise points to that country, as it is not met with in any previous generation of the Asklepiadæ. There is nothing to show that he ever returned to his native place, and Herzog's untiring researches in Cos have not yielded a single fact regarding him. It would thus seem certain that he left the island for ever at an early age. The ancients of a later day were manifestly at a loss to account for this. The *Vita* gives three distinct reasons, viz. (1) an injunction intimated in a dream (Soranos); (2) his desire to widen the horizon of his medical knowledge; and (3) his being accused of burning the Cnidian library (so Andreas, perhaps physician in ordinary to Ptolemy IV., whom Galen [xi. 795, Kühn] stigmatizes as a wind-bag). The charge implied in the last-mentioned explanation is attributed by S. Reinach (art. 'Medicus,' in Daremberg-Saglio, 1670) to the jealousy of the priests of Asklepios, but erroneously, as the relations between these and the Asklepiadæ (on which cf. Lefort, *Mus. belge de philol.* ix. [1905] 197 ff.) were always of a friendly character. The accusation could have arisen only from the antagonism between the Cnidian and the Coan schools of medicine, as it was in reality meant to brand the head of the latter as a plagiarist who availed himself of the professional literature of the former—a point which Tzetzes obliterates by transferring the burning to the Coan library, though he too makes it a question of non-religious medical literature (*ἐν Κῶ βιβλιοφύλαξ δειχθεὶς τὰ παλαιὰ τῶν ἰατρῶν ἐνέπηρσε βιβλία καὶ τὸ βιβλιοφύλακιον*). The statement of Andreas makes no mention whatever of the votive tablets of an Asklepieion; the earliest suggestion of these occurs in Varro, according to whom (*ap. Plin.* xxix. 4) Hippokrates first copied the records of cures deposited in the Coan sanctuary by those restored to health, and then burned the temple. This is obviously nothing but an abortive attempt to interweave the anti-Coan version of Andreas with the view of the origin of scientific medicine just noted. That the latter hypothesis, however, was not put forward wholly at a venture, but might find some support in a genuine practice of healing in the Asklepieia, is shown by the testimony of Apollodoros to the mantic functions of Asklepios, and the recipe prescribed by the god in the fragment of a comedy in Aelian, fr. 100 (above, p. 543^b). The present writer would add a reference to an Athenian votive relief of the 4th cent. B.C. published by Ziehen (*Ath. Mitt.* xvii. [1892] 232, fig. 3), representing a patient stretched upon a κλινῆ, and a surgeon engaged in treating him, while Asklepios, figured on a much larger scale than either, stands passively by (in the statuary type in Roscher, i. 634, schema i.). Here, then, we have monumental evidence of the fact that the personnel of the temple engaged in therapeutic practice under the sanction of the god.

It is thus impossible to deny that genuine medical treatment—directed, it is true, by oracles of healing—was practised in the Asklepieia of the Greek age. As regards the therapeutic value of such treatment, we are not able meanwhile to judge, for investigation of the Greek period has so far yielded no original votive tablets dedicated by restored patients and containing records of the prescribed remedies, such as are supplied for the Roman period in the pathological narratives of P. Granius (Lebena) and Jul. Apellas (Epidauros), but it is at

least an allowable hypothesis that the curative methods of the earlier age, in keeping with the higher state of its medical knowledge and the less debased character of its religion, were superior to those of the later. The prestige of dream-shrines would then be at its height, while practical medicine still maintained a close connexion with the occult, as in the Cnidian medical school (cf. Gomperz, *Gr. Denker*, i. 250), and probably even more in that of Rhodes—the first to become extinct (Galen, x. 5 [Kühn]). The (Cnidian) author of the *περὶ διατρῆς* (iv. [περὶ ἐνυπνίων] ch. 87) lays down the following principle: 'Prayer is certainly very good, but one who calls upon the gods must himself also do his part' (δεῖ δὲ καὶ αὐτὸν ξυλλαμβάνοντα τοὺς θεοὺς ἐπικαλέσθαι). Some of his interpretations of dreams are such as we might ascribe to an Asklepiian priest, as, e.g., ch. 88 (abbreviated): 'If in a dream one fights in opposition to the doings of the day, it signifies some bodily disaster, and this is to be counteracted by emetics, dieting, bodily movements, exerting the voice, and [last, though not least] by prayer.' We seldom meet with the case where the priestly function is discharged by a physician. Three instances are given in Pauly-Wissowa, ii. 1685; a fourth is probably to be found in Kalliphon, the father of Demokedes; he was a priest of Asklepios in Cnidus (Suid. s.v. Δημόκδητος), and, as the healing art was then hereditary in families, probably also, like his son, a physician. But we cannot say whether the priestly office as such embraced the vocation of interpreting dreams. In the Plutonion near Nysa dream-reading was the function of the *ἐμπειροὶ τῶν ἱερέων* (below, II. A. 17), and we may doubtless assume that persons specially versed in this art were to be found in all dream-shrines. It was only natural that these adepts should have tried to discover a practical meaning in the dreams vouchsafed by their god. And in finding these meanings they were in no way guilty of a 'pious fraud' (Herrlich, *op. cit.* 13), but were rather the victims of self-delusion, as, in a related sphere, were also the Delphic priests in their task of moulding the incoherent utterances of the Pythia into intelligible sentences (cf. the critical estimate of this function in Schömann, *Griech. Alterth.*⁴, Berlin, 1897, ii. 318).

The facts thus adduced seem to the present writer to justify the view that among the Greeks, as among the Babylonians and Egyptians of an earlier age, religious medicine did not dispense with rational remedies. That practical modes of treatment were associated with miracle, 'faith's favourite child,' is shown not only by the craving for marvels which ran riot in the Epidaurian *iamata*, but also by the legend narrating the founding of the Asklepieia of Naupaktos (Paus. x. 38. 13) and the Insula Tiberina (Ovid, *Metam.* xv. 660 ff., etc.). We may also suppose that, alike in the waking state and during incubation, cures were not infrequently wrought quite apart from the oracular adjunct and solely by means of *suggestion*, and then extolled as the miraculous works of the deity. We shall not pursue the subject further here, as we are meanwhile concerned only to follow the traces of rational therapeutics within the sphere of religious medicine. From the former alone is there any real passage to the altogether rational conception of *Hygieia* in the Asklepiian cult, with regard to whom the reader is referred to the section dealing with 'Asklepios' in II. A. 20, ii. (2) below. Her radiant figure appears as something out of keeping with the mystical and, in essence, non-Hellenic dusk that surrounds the practice of incubation.

II. HEALING GODS AND HEROES.¹—A. GODS.—

¹ The following list touches only incidentally on the deities of childbirth.

The belief in gods implies also belief in their sway over health and disease; and, accordingly, in all manner of troubles, but especially in the case of loss of health, appeal is made for divine help. Originally, however, there existed no belief in special deities of healing. In *Od.* v. 397 the reference is quite general: 'the gods loosed him graciously from his trouble.' Every deity could properly exercise this power, so far at least as he was thought of as a deliverer, or as a protector against evil; though epithets like *σωτήρ*, *ἀλεξίκακος*, etc., are not to be interpreted off-hand in a medical sense, for, as will appear from the following synopsis, they have usually quite a different meaning and reference. It may, in general, be taken for granted that at the outset the sufferer appealed simply to his family or tribal deity. It might seem to have been the most natural course to regard Apollo, the ancient god of pestilence, as a healing deity in the specific sense, but, in consequence of his extensive range of action, this did not take place—a circumstance due in part to the early incorporation of Asklepios in the Apolline group. The gods associated with incubation have a special affinity for the medical sphere (see 14, 15, 17-20 below), doubtless because of the mantic significance generally ascribed to dreams. Here also, however, other and for us mostly untraceable factors have operated towards specialization. Thus, e.g., Trophonios was never more than an oracle-deity in a general sense, while Amphiaraos, for reasons which we cannot discover, became, more specifically, a giver of healing oracles. In the case of Asklepios, the Gr. god of healing *κατ' ἐξοχήν*, we may probably find an explanation of his special function in his having become a son of Apollo, the god of oracles. But the contraction of his sphere of action was gradually arrested in the conflict of heathenism with the Nazarenes, and he becomes eventually the *σωτήρ τῶν ἰδίων* (Aristides, Julian), and the centre of the universe (*CIL* vi. 1). Nevertheless, his principal emblem, the snake-coiled rod, remains to this day the specific symbol of medicine.

1. Zeus.—Zeus, the sovereign of the Greek pantheon, though early regarded as the sender of sickness (*Od.* ix. 411), seldom appears as a healing god. His common epithet, *Σωτήρ* (Preller-Robert, *Gr. Mythol.*⁴, Berlin, 1887-94, i. 151. 3, and O. Gruppe, in I. Müller, *Handbuch*, v. [Munich, 1897] 1108. 3), signifies the 'deliverer,' and has no traceable reference to disease—as, e.g., on the statue in the agora at Athens, dedicated to him as the 'deliverer' in the Persian troubles, and on the images with emblems of battle and victory, erected to him and Athena Soteira in the Piræus, to celebrate the restoration of Athens under Conon (H. Brunn, *Gesch. d. gr. Künstler*², Stuttgart, 1888 f., i. 270), just as the Zeus Soter and Artemis Soteira of Megalopolis signalize the achievement of Epaminondas (Paus. viii. 30. 10). The like holds good of the titles 'Ἀλεξίκακος, 'Αποτροπαίος, 'Απήμιος, 'Υπερδέσιος (cf. O. Weinreich, *Antike Heilungswunder*, Giessen, 1909, p. 41), and 'Επήκοος (*Ath. Mitt.* xxvii. [1912] 23). Whether the title *Παιάν* (in Rhodes [Hesych.]) bears a particular reference to Zeus as the queller of plague is a moot point (see below, 7). The stone on which Orestes was delivered from his madness was called *Ζεὺς καπιώτας*, i.e. *καταπαύτης* (Paus. iii. 22. 1); and we light at length upon the physician-deity in *Ζεὺς Ἐξαλεκστήρ* (Solon, *ap.* Pollux, viii. 142),¹ and in the *Ζεὺς Ὑψίστος* to whom were dedicated the models of limbs in the Pnyx (*CIA* iii. 150-156), and those in Melos (?) (Panofka, 'Heilgötter d. Griechen, in *BAW*, 1843, p. 258), though we cannot definitely

identify the *θεὸς Ὑψίστος* to whom similar dedications were made in Cyprus (*BCH* xx. [1896] 361). The fact that Zeus was assigned a 'lot' in the altar at Oropos (19 below) brings him within the scope of such healing activities. Evidence of the existence of incubation in the primitive cult of Zeus may possibly be recognized in the Dodonian *Σελλοί* of Homer (*Il.* xvi. 235; see above, p. 542^a).

2. Athena.—Athena, 'the best beloved and most congenial child of the heavenly father,' shares with him his somewhat vague relation to the healing function. Such of her epithets as some seek to interpret in a medical sense are in but few cases to the point. Thus the Zeus Soter and the Athena Soteira above referred to have to do with political matters, and the same is probably true of the oblation to these two deities and the children of Leto mentioned in Delian inscriptions (*BCH* vi. [1882] 22), as the Delians offered *soteria* also in Athens (*BCH* iv. [1880] 327). A *ναὸς κοινὸς* of Athena Soteira and Poseidon near Asea (Paus. viii. 44. 4) was associated with the auspicious home-coming of Odysseus. The application of the epithet in Mytilene (*IG* ii. 111) has not been explained, nor the 'Ἀθηνα' *Αποτροπαία* (with Zeus *Αποτροπαίος*) in Erythræ (G. Dittenberger, *Sylloge*, Leipzig, 1883, no. 370, 70); but the Attic 'Ἀθηνα' *Παιωνία* in the inner (Paus. i. 2. 4) and outer (Plut. *Decem orat.* vit. 7) Kerameikos, and at the Oropian altar as a guest (19 below), bring her within the medical sphere. The Athena Hygieia worshipped on the Akropolis even before the Persian wars is also distinctively Attic (votive inscriptions of Euphronios and Callis, *CIA* i. suppl. 362, and *Ath. Mitt.* xvi. [1891] 154). Her altar and statue by Pyrrhos stood beside the Propylæa, and were ascribed by tradition to Pericles, to whom the goddess had in a dream revealed the remedy (the wall-herb *περδίκιον*) for a workman injured by a fall (Plut. *Pericl.* 13; Plin. xxii. 43). The votive inscription on the base, however, says that the work was dedicated, not by Pericles, but by the Athenians; and, as both the base of the statue and the altar are in some way related to the Propylæa, Wolters (*Ath. Mitt.* xvi. [1891] 153 ff.) believes that the occasion of their erection was the cessation of the great pestilence. All attempts to find the Hygieia of Pyrrhos among the extant statuary types of Athena, as, e.g., in the snake-twined Athena on the base of the Barberini candelabrum (*Mus. P. Clement.* iv. pl. 16), have failed (Wolters, *op. cit.* 163). The 'Athena Hygieia' erected in the Epidaurian *hieron* by an Athenian of the Imperial period ('Εφημ. ἀρχαιολ., 1886, pl. 12), representing her—strangely enough—as rushing to battle, is no blunder of some ignorant donor (Staës, 'Εφημ. ἀρχαιολ., 1886, p. 253), but is really a derivative of the form assigned to Athena Hygieia, i.e. that which depicts her as the ancient Athena Polias brandishing her weapon. This form, as seen on prize vases for the Panathenaia (Springer, *Handb. der Kunstgesch.* i.², ed. Michaelis, 1907, fig. 320b), has been manifestly used by Callis for his votive offering to Athena Hygieia (cf. *Ath. Mitt.* xvi. 154), and it seems to have been as far as possible adhered to in the statue of Pyrrhos. The Attic Athena Hygieia, accordingly, had no distinct type of its own, but simply reproduces the Athena Polias, who, on the occasion of an earlier pestilence, probably that of 500 B.C. (*CIA* i. 475), had hurried to the help of her city. If the Arcadian Athena *Alea* is connected philologically, not with 'heat' (O. Müller), but with 'protection' (Rückert), it would serve admirably as evidence for the right of sanctuary in her temple at Tegea, but would afford no proof of her being regarded as a goddess of healing. The ancient idol of Endoios is certainly flanked by statues of Asklepios and Hygieia executed by Skopas (Paus. viii. 47. 1), but this

¹ The *Ζεὺς Λευκαίος* at Lepreum (Paus. v. 5. 5), which Gruppe, *op. cit.* 1269. 3, connects with *Λευκή*, 'leprosy,' is ruled out by the obvious emendation *Λύκακος* (Curtius, *Peloponn.* ii. [1852] 117).

joint cult need not be earlier than the time of Skopas himself (Dümmeler, in Pauly-Wissowa, ii. 1975). Nor, finally, does the statue of the Eileithyia—in the position of a parturient woman—in the temple of Eileithyia at Tegea, and popularly known as *Ἀθήνη ἐν γέννασιν* (Welcker, *op. cit.* iii. 185), afford any evidence for the Tegean cult of Athena. The title *Ἐπερώξια* under which Athena (together with Zeus *Ἐπερώξιος*) was worshipped, according to Steph. Byz., *s.v.* *Ἐπερώξιον*, in Lesbos may be understood quite generally as referring to the divine hand held protectively over one. A like uncertainty attaches to the *σώπεια ἐπήκοος* in a Cappadocian inscription (*BCH* xxxiii. [1909] 131; cf. Weinreich, in *Ath. Mitt.* xxxvii. [1912] 11). The title *Optiletis* met with in Sparta and said to refer to a cult founded as *ἀκέσεως χαριστήριον* by Lycurgus (Plut. *Lyc.* xi.; Paus. iii. 18. 2) has undoubtedly a medical connotation. Gruppe (*op. cit.* 1204) quite unwarrantably infers the existence of incubation in the cult of Athena from Pind. *Ol.* xiii. 56 (Belleophon) and Paus. ix. 34. 1 (Iodama).

3. Helios.—The links which connect Helios with health and medicine are fewer than the affinity between the ideas of light and life might lead us to expect. As he punishes by inflicting blindness (Soph. *Œd. Col.* 868), so he restores sight to Orion (Hesiod, *ap. pseudo-Eratosth. Kataster.* 32), and is therefore invoked by Polymestor (Eur. *Hekub.* 1067). His cult yields no evidence here; the invocation *Ἰεραίων* in Timoth. fr. 13 (Bergk) comes from a battle-song, while his title Soter in Megalopolis belongs to the age of syncretism (Paus. viii. 31. 4). It is worthy of note that Hermippos (schol. Aristoph. *Plout.* 701) speaks of the Heliad Lampetia as the wife of Asklepios—a detail which, as the present writer thinks (Roscher, iii. 1489), goes back to a Rhodian (in reality a Sicynian) source. Circe, the daughter of Helios, and Agamede and Medea, his grand-daughters, are sorceresses skilled in herbs; and the Heliad Pasiphaë likewise was proficient in magic (Apollod. iii. 15. 1). For the herb-lore of the wise women, cf. Welcker, *op. cit.* iii. 20 ff.

4. Poseidon.—Poseidon's only link with healing is his having been worshipped as *Ἰατρός* among the Tenians (Clem. Alex. *Protrept.* 26). It is very curious that in the *Ἰαλου πόρθησις* the warrior-physicians Machaon and Podaleirios, who are everywhere else regarded as Asklepiads, are spoken of as sons of Poseidon. The verse in question is in a corrupt state—*αὐτὸς γὰρ σφιν ἔδωκε πατὴρ ἐνοσιγαιῶς περὶν*—and Welcker (*Ep. Cycl.* ii. [Bonn, 1849] 525) proposes the emendation . . . *πατὴρ νοσητῶν παισίν*. Wilamowitz (*Isyllos*, Berlin, 1886, p. 47), however, in view of the local cult of Poseidon at Tenos, maintains the view of their descent from that deity, and the present writer expressed agreement therewith in Pauly-Wissowa, ii. 1658. But the question has meanwhile been discussed afresh by Lefort (*Musée belge de Phil.* ix. [1905] 215 ff.), who decides against Wilamowitz and in favour of Welcker; and rightly so, as the scholia to *Il.* xi. 515 cite the *Porthisis*, not with reference to the genealogy of the two warriors, but in order to establish the medical proficiency of each. Moreover, a corruptly transmitted verse does not warrant us in rejecting the constant tradition of their descent from Asklepios. To Lefort's arguments might be added the testimony of Aristides (i. 78 D): 'Their connexion with Asklepios is affirmed throughout the whole world.'

5. Aristaios.—Aristaios was an ancient Thesalian deity akin in character to Zeus and Apollo (Pind. *Pyth.* ix. 64), and was worshipped in Ceos as Zeus Aristaios and Apollo Nomios (schol. Apoll. Rhod. ii. 498). Having been reduced to the rank of hero by the poetry (*Ἐῶæ*), he becomes the son of Apollo and Cyrene the Lapith nymph, and the

pupil of Cheiron (Apoll. Rhod. ii. 510). Various benefits in the sphere of husbandry, and also—as a gift of the Muses—the arts of medicine and divination, were ascribed to him (*ib.* 512). He was said to have taught the Ceians how to ward off the baneful influence of Sirius by expiatory sacrifices and the clashing of weapons (Theophr. *de Vent.* 14). Pherecydes calls him the son of Paion (schol. Apoll. Rhod. iii. 467), but this name is to be understood here as a designation of Apollo, and not as the eponym of the Pæones (Gruppe).

6. Cheiron.—A signal contrast to Aristaios, the representative of magic healing, is found in the local deity of the herbiferous Mt. Pelion, viz. the Cronid Cheiron, the representative of pharmacognosis, which forms a transition from the sphere of the occult to rational therapeutics. His name has been traced to *χελρ*, either as the 'hand' skilled in art (Welcker, *Kl. Schr.* iii. 1; H. Usener, *Götternamen*, Bonn, 1896, p. 157; Escher, in Pauly-Wissowa, iii. 2302), or as the 'hand' applied to the sick with magic effect (Weinrich, *op. cit.* 16). Tradition speaks more distinctly of his pharmaceutical than of his surgical achievements; in *Il.* iv. 219 and xi. 832, Asklepios and Achilles respectively receive from him *ἤπια φάρμακα* efficacious for relieving pain or staunching blood, and, on the whole, the art of the warrior-surgeons in the *Iliad*, as being free from the accessories of magic, is an inheritance from Cheiron. In a tribe dwelling near Mt. Pelion, and claiming descent from Cheiron, herb-lore was handed down from father to son as a mystery (Dicæarch. fr. 60. 12), and the Magnesians sacrificed to him, as the divine physician, the first-fruits of herbs and plants (Plut. *Quest. conviv.* iii. 1. 3). In the Pelethronion, a district near Mt. Pelion, grew the far-famed *χειρώνειον* (Theophr. *Hist. Plant.* ix. 7), or *κενταύρειον* (schol. Nicand. *Ther.* 565), the miraculous virtues of which, when applied by a deity, are indicated by its having been called *πάνακες*. Such panaceas were ascribed also to Asklepios and Herakles, and were even adopted by non-religious medicine, though in the form of actual plants with curative properties. The Egyptian physicians likewise were acquainted with panaceas (*Pap. Ebers*, p. 173, ed. Joachim), but, in keeping with their liking for mixtures, compounded them of various ingredients. Cheiron's medical functions, as handed down by tradition (collected in Pauly-Wissowa,¹ iii. 2304), are summarized in the curriculum of his pupil Asklepios given by Pindar (*Pyth.* iii. 45), as surgery, internal medicine, and incantations (*ἐρασιδαί*). The last-named were not, of course, used by themselves alone, but were simply a magical adjunct (cf. *Od.* xix. 457), as in Bab. and Egyp. medicine.

7. Paieon.—Paieon, the Homeric physician of the gods, heals the wounds of Hades and Ares by *φάρμακα ὀδυνήφατα* in *Il.* v. 401 and 900 respectively, but in *Od.* iv. 232 he comes into touch with the human race as the ancestor of the Egyptian physicians. He is not to be confused with Apollo.² The two deities are explicitly distinguished by Hesiod (fr. 194 [Rzach]) and Solon (fr. 13. 45). Usener (*op. cit.* 153) is thus certainly justified in recognizing Paieon as an ancient and independent god of healing, but he has not succeeded in finding any trace of this deity in Greek religion, as the 'signum Paeanis' in the Asklepeion at Syracuse (Cic. *in Verr.* ii. iv. 128) is a figure of Apollo (Eisele, in Roscher, iii. 1246). The votive inscription *Παιᾶνος ἐν Ἀσσει* found by Herzog in Cos (*Archäol. Anz.*, 1903, p. 198) refers either to Asklepios or to Apollo, who likewise was worshipped there.

¹ Hereafter referred to as *RE*.

² This identification was wrongly read into *Od.* iv. 232 by Crates and Zenodotus, whose view was impugned by Aristarchus; cf. Lehrs, *Aristarch.*² Leipzig, 1865, p. 179; Ludwich, *Aristarchs homer. Textkritik*, do. 1884-85, i. 541.

8. **Apollo.**—Apollo is a very intricate figure, and the various explanations of his name have not as yet furnished the key to his original character. This is true even of the most recent attempt—that of Usener (*op. cit.* 309), who recognizes the ‘depulsor malorum’ in an assumed primary form **Ἀππελλος*. In Homer, Apollo has as yet no connexion with medicine, though he is certainly the sender and stayer of pestilence (*Il.* i. 43 ff.), and the chant of entreaty addressed to him is called a *παῖων* (i. 473), which is simply the name of the physician of the gods just dealt with. This may be formally accounted for by the fact that the refrain of the chant was *ὦ παῖον*, but the uncertain meaning of the word renders it difficult to discover the material ground of the usage. If the word signifies ‘cleanser’ (Skr. *panjanan*; Pictet, in Kuhn’s *Zeitschr.* v. [1856] 40), its employment as an invocation to the queller of pestilence would be satisfactorily explained. As an epithet of Apollo it occurs also in the *Hymn to Apollo Pythian*. 94 (*Ἰηπαιθων*); subsequently the form used was simply (*Παιών*) *Παιών*, or *Παιῶν*. At first, and for centuries, the expedients used to counteract pestilence were purely theurgical—consultation of a *μῦστος*, *λερεὺς*, or *δνειροπόδος* (*Il.* i. 62), sacrifice, and *paean* (i. 447 ff.); instances for a later period are given by Welcker (*Kl. Schr.* iii. 33 ff., ‘Seuchen von Apoll’). The device of Empedokles in directing the river Hypsas into a half-dried lake is notable as an early example of a rational remedy (Diog. Laert. viii. 2, § 70, and coins of Selinus in B. V. Head, *Historia Numorum*, Oxford, 1911, p. 168). The conception of Apollo as the god of pestilence probably rests on the solar aspect of his character. He was worshipped at Lindos specifically as *Δολμῖος* (Macr. *Sat.* i. 17. 15). In this relation he is the one who punishes—the death-god; and here his sister Artemis is associated with him (Niobids, Coronis). On the other hand, his benignity as the stayer of plagues finds expression in such epithets as *ὄσλιος* (also at Lindos [Ross, *Inscr. gr. ined.*, iii., Berlin, 1845, no. 272], in Delos, and at Miletos [Strabo, 635]), which G. Curtius connects with *salus*; *Ἐπικούριος* (in Bassæ [Paus. viii. 30. 4]); *Ἀλέξικακος* (in Athens [statue by Calamis, Paus. i. 3. 4], where, instead of the great plague, we should think of some earlier epidemic); *Ἀέσιος* (in Elis, Paus. vi. 24. 6), and *Ἰπσοειαντήρ* (in a Clarian oracle [Weinreich, *op. cit.* p. 150]). But the Paian was also a chant of battle and victory (*Il.* xxii. 391; *Hymn to Ap. Pyth.* 339; Thucyd. vi. 32, etc.), and thus Apollo acquires a sphere of action far transcending the domain of pestilence—that, namely, of the averter of evil in general, as implied in the titles *Ἀποτροπαῖος* (Aristoph. *Vesp.* 161; *CIG* 464) and *Σωτήρ* (refs. in *RE* ii. 69). The epithet *Ἰήσιος* (Soph. *Œd. Tyr.* 1095) is not, as the Stoics thought, a derivative of *ἰάσθαι*, but is taken from the refrain of the Paian in its longer form, *ἴησιος Παιών* (*ib.* 154), and has therefore as wide a connotation as the latter. Now, though the more extensive sphere of ‘deliverer’ might very readily have been contracted to the narrower one of ‘physician,’ our available evidence of the process is but scanty. The Delphic god, it is true, delivers oracles for arresting pestilence, but, as regards his being consulted in any particular case of disease, the present writer can recall only the instance of Alyattes (Herod. i. 19), and the curious prescription (an amulet of worms from a she-goat’s head) given by the Pythia for epilepsy (Alex. of Tralles, 569 [Puschmann]). The reason why Apollo did not become the physician is to be found in the fact that Asklepios was joined with him at a relatively early period (cf. 20 below), and the healing function could accordingly be delegated to the latter. Thus, in the heading of the Epidaurian *iamata*, Apollo, as the sovereign authority, is named

first—though he does not intervene in the actual cures; while Asklepios—as a departmental chief, so to speak—occupies the second place; so also in the ‘Hippocratic’ oath: *ὄμνυμι Ἀπόλλωνα ἰητρὸν καὶ Ἀσκληπιόν, κτλ.*

A cult confined to *Ἀπόλλων Ἰατρός* is found only in the Milesian colonies of the Scythian region (*RE* ii. 54; Farnell, *CGS* iv. 325 and 409), and here the worship of Asklepios sank completely into the background, the only Asklepieion known to the present writer being that of *Pantikapaion* (Strabo, 74). Apollo is sometimes called *Ἰατρός* in the poets (Aristoph. *Aves*, 584; *Plout.* 11). His title *ιατρώμαντις* in *Æsch. Eum.* 62 relates to the case of Orestes, and thus denotes, not the physician, but the *καθάριστος*. Late writers speak of Apollo as the founder of medicine, but as having handed it over to Asklepios for its further development (Diod. Sic. v. 74; Philostr. *Vit. Ap.* iii. 44). Isolated indications of his medical activity are found in the cults of the *Κόρυδος* (Paus. iv. 34. 7; cf. *RE* ii. 57), *Ἰππερτελεάτης* (Laconia; cf. *Ἐφρημ. ἀρχαιολ.*, 1884, p. 81 ff.; *BCH* ix. [1885] 243), and *Ἰτακός* (Cyprus; *Comment. in hon. Mommseni*, Berlin, 1877, p. 682). As a guest at the Oropian altar (19 below), *Ἀπόλλων Παιών* was likewise regarded as a god of healing.

8a. **Maleatas.**—The name ‘Maleatas’ is, as regards its form, a geographical or ethnological adjective, and needs to be supplemented by a *nomen proprium*. Farnell (*op. cit.* iv. 236 f.) would accordingly supply the name ‘Apollo’ in all cases where ‘Maleatas’ is used by itself to designate the deity invoked, as, e.g., in two archaic votive inscriptions from Laconia (*IGA* 57, 89). This view, however, is in conflict with the fact that Maleatas and Apollo are mentioned side by side in the sacrificial rubric found in the Piræus (*CIA* ii. 1651), of which Farnell gives a somewhat forced explanation. It will therefore be more in accordance with the data to recognize, as Wilamowitz (*Isyll.* 98 ff.) does, in Maleatas a deity originally distinct from Apollo. The identification of the two is attested as regards Sparta (Paus. iii. 12. 8: *Ἀπόλλων Μαλεάτης*), the Epidaurian *hieron* (*ib.* ii. 27. 7, and several inscriptions, *IG* iv. 932, etc.), and the Asklepieion of Triikka (*IG* iv. 950. 29). If this identification was a later development, it was probably effected in Epidaurus, where Asklepios would form the connecting link. Gruppe (*op. cit.* 189. 3) is hardly successful in explaining (on the ground of Hesych.: *μάλιαν . . . ἡσυχον, πραεῖαν*) Apollo Maleatas as the ‘gentle Apollo,’ or in locating his place of origin, as also that of Asklepios, at Gortyna in Crete.

9. **Artemis.**—For the function of Artemis as a death-goddess associated with Apollo, cf. the preceding; in this capacity her special victims are females (*Il.* xxi. 483, vi. 205, 428; etc.). Gruppe (*op. cit.* 1269, 1273. 4) regards her as having been the source of psychical and nervous disorders. The other aspect of this activity is her having been the restorer of those so afflicted, as, e.g., Orestes (Pherec. fr. 97), and the Prætidæ (Bacchyl. x. 98) In gratitude for the cure of the latter, their father erected in her honour, as *Ἡμέρα* and as *Κερία*, temples in Lusi (Callim. *hymn. Art.* 234)—a point so far borne out by the ordinary myth of the Prætidæ (Pausanias), which relates that the maidens were cured by Melampous (B. 5, below) in the Artemision of Lusi. Lusi is the only healing-shrine assigned by tradition to the goddess (cf. the Report of excavations in *Oesterr. Jahreshften*, iv. [1901] 1 ff., which includes several dedications to *Ἡμέρα*, p. 83 f.). Her connexion with healing fountains, however, is attested by the epithet *Θερμαία* (Mitylene [*CIG* 2172, etc.], *Cyzicos* [Aristid. i. 503D], and Rhodos [*IGIns* i. 24. 4]). The panelling of the ancient Artemision of Ephesus

contained votive models of limbs in gold, silver, and ivory (Hogarth, *Eccav. at Ephesus*, London, 1908, pp. 232, 238). Cf. also her title Ἐπήκοος (*Ath. Mitt.* xxxvii. [1912] 7 ff.). Her obstetric function is indicated by the titles Λοχέα (Gambreion, *CIG* 3562), Σωδῖνα (Chæronea, *IGS* i. 3407), and Εἰλεῖθνα (especially in Bœotia); cf. Wernicke, in *RE* ii. 1347. 10, who, however, wrongly regards Εἰλεῖθνα as the hypostasis of Artemis, while it was really an epithet of Hera, and, as personified (Preller-Robert, i. 511 ff.), still remains closely connected with her. Similarly, Μυλίττα (Bab. *Mu'allidtu*, 'she who brings about childbirth') is an epithet of Ištar (cf. Schrader, *KAT* 3, p. 423. 7). The Heb. *yblcedeth* (Oefele, in Neuburger-Pagel, i. 70) is merely an artificial form designed to explain Εἰλεῖθνα.

10. Healing Nymphs.—(a) As presiding over medicinal springs: (1) the Ἴωνίδες (Paus. vi. 22. 7), Ἴωνίδες (Nicand. *ap.* Athenæus, 683), or Ἴωνιάδες (Strabo, 356)—connected with ἰασθαί—nymphs of a healing fountain in Elis, and forming a tetrad, viz. Pegaia, Kalliphæia, Synallaxis (probably a personification of the change towards recovery), and Iasis (cf. Hesych. *s.v.* ἰασπός); (2) the Anigridian nymphs, so named from the warm sulphur-springs on the lower Anigrus in Triphylia (Strabo, 346; Paus. v. 5. 10; Curtius, *Peloponn.* ii. 80), and having to do especially with skin-troubles—here we should note the combination of theurgy (prayer and vow) with rational remedies (bathing in a mineral spring); and (3) the nymphs of the alkali springs of Ischia (*IG Sic. et Ital.* 892 f., the votive offering of a physician).

(b) We have more numerous instances of the case where the refreshing properties of ordinary natural springs gave rise to the cult of local nymphs, generally in connexion with the worship of Acheloos as the father of all fresh-water springs. In their hygienic capacity these nymphs appear, together with Acheloos, as guests at the altar of Oropos (19 below).

11. Pan.—Pan, the Arcadian mountain and forest spirit, like his Italic counterpart Faunus, possessed mantic powers. He had an oracle in the Lykaion (schol. Theocr. i. 121), and another in the Akakesion, with the nymph Erato as his προφήτις (Paus. viii. 37. 12). He received the title Δυστήριος in Troezen, because he stayed a pestilence by means of dream-oracles (*ib.* ii. 32. 6), but he healed men also in the waking state (Kaibel, *Epigr. gr.*, Berlin, 1878, p. 802). In the Asklepieion at Sicyon, the porch was flanked by figures of Pan and Artemis (Paus. ii. 10. 2). With reference to the healing powers of Pan Ephialtes (in the mid-day sleep), see Roscher, iii. 1400. The epithet Παιάν is applied to him only in *Orph. hymn.* xi. 1. In conjunction with nymphs, Acheloos, and Kephisos, he represents the hygiene of Nature at the altar of Oropos (19 below).

12. Hermes.—In the case of Hermes definite traces of the healing function are scanty. The titles Soter (Amorgos; *Ath. Mitt.* i. [1876] 332) and Alexikakos (Aristoph. *Pax.* 422) are applied to him in quite a general sense. The meaning of Ἀκάκηρα (*Il.* xvi. 185, *Od.* xxiv. 10, Hes. fr. 23 [Rzach]) is disputed (cf. *Etym. Magn.*, *s.v.*); if derived from ἀκείρθαι (schol. L to *Il.* xvi. 185 explains it by θεραπευτικός), it would be a specifically medical epithet, but this is scarcely conceivable with so ancient a designation; perhaps the word means 'the averter of evil' (ἀ-κάκ-ηρα). Hermes Kriophoros was worshipped in Tanagra as the queller of pestilence, and in commemoration of his good services a youth carried a ram round the walls at his festival there (Paus. ix. 22. 1). The propitiatory action of Hermes survives in this custom, and accordingly the beautiful conception of the 'good

shepherd' derives its origin from a cathartic rite. Hermes is the Ἡγήτωρ ὄνειρων in Hom. *Hymn to Hermes*, 14, and the god of sleep in general (Preller-Robert, i. 404), though it cannot be proved that incubation had a place in his cult. As the god of the palaestra and the gymnasium, he was the guardian of health; and it was perhaps on this account that Hygieia was in some source represented as his wife—a detail which Cornut. 16 too artificially explains by reference to his eloquence.

13. Herakles.—'Born to avert the curse from gods and men' (Hes. *Scut.* 27), Herakles is pre-eminently the Alexikakos. In schol. Arist. *Ran.* 501 the image of Alexikakos, by Ageladas, in the demos of Melite is associated with the great plague, instead of with the pestilence of 500 B.C. (Robert, *Arch. Märchen*, Berlin, 1856, p. 39) or the Persian invasion (Studniczka, *Röm. Mitt.* ii. [1887] 91. 21). The shorter form Ἀλεξίς was current in Cos (Aristid. i. 60); in Delos and Amorgos he was worshipped as Ἀπαλλαξικακός (*BCH* vi. [1882] 342, xvi. [1891] 671). Herakles Soter is found in tetradrachmæ in Thasos (Head, *Hist. Num.* 2, p. 266, fig. 164). Herakles acts specifically as a healing deity in Hyettos (Paus. ix. 24. 3), Erythræ (*ib.* vii. 5. 5), and Messana (Aristid. i. 59 D); he is the guardian-spirit of warm springs (as, e.g., at Thermopylæ, Herod. vii. 176), and has a share in the Oropian altar (19 below). The πάγκακος Ἡράκλειον was named after him (Theophr. *Hist. Plant.* ix. 7; schol. Nic. *Ther.* 626; *Diosc.* iii. 48).

14. The Dioscourioi.—The widely diffused cult of the Dioscourioi as Soteres is sometimes connected with navigation (Hom. *hymn.* 33, Theocr. xxii. 6), sometimes with succour in war (as, e.g., to the Locri on the Sagra [Justin, xx. 2 f.]), and even with the restoration of freedom (the device Σωτήρες on coins of Tyndaris is so explained by Head, *op. cit.* p. 189). They saved their protégé Simonides when the palace at Crannon collapsed (Callim. *ap.* Suid. *s.v.* Σιμωνίδης). The healing of Phormio the Crotonian at Sparta by one of the Dioscourioi (Theopompus *ap.* Suid. *s.v.* Φορμιών) is a replica of the cure of Telephus by Achilles. The Dioscourioi engaged in a regular practice of healing in their temple at Byzantium (*FGH* iv. 149, 15). The means adopted seems to be incubation combined with interpretation of dreams. Deubner (*de Incub.* 76 ff.) concludes from schol. Pers. ii. 56 that this was the case both in their sanctuary at Rome and in that at Byzantium, and, further, that in both localities their function was inherited by Kosmas and Damian, physicians and martyrs. Cf., however, below, p. 555^a, note 4.

15. Dionysos.—Apart from the epithets of general signification (Σωτήρ or Σωτήρης, Paus. ii. 31. 5, 37. 2; *IG* iv. 1277; and Παιάν, Eur. *Lik.* fr. 480, Dindorf; 'Pæan of Philodamus,' *BCH* xix. [1895] 391, xxii. [1898] 513) applied to Dionysos, he was worshipped specially as Ἰατρός and Ἐγιάτης by command of the Pythia (Athenæus, 22 and 36; Plut. *Quæst. conv.* iii. 2). As Βοηθὸς νόσων he presided over the dream-oracle at Amphikleia, where his priest, as πρόμαντις, χρᾶ ἔκ θεοῦ κάτοχος, i.e. just as the Pythia did (Paus. x. 33. 11). It is thus clear that in this sanctuary the priests were concerned with incubation and dream-reading, as in the Plutonion near Nysa (cf. 17 below). As regards the healing power of Dionysos conveyed by touching (Διόνυσος Ἐπάφιος in *Orph. hymn.*, 50. 7), see Weinreich, *op. cit.* p. 27.

16. Demeter.—Demeter, worshipped as κουργοτρόφος, was proficient in the magic of the nursery (*Hom. hymn.* iv. 227 ff.; οὐδοτόμοιοι, v. 229, a brilliant emendation by Th. Bergk, *Gr. Literaturgesch.* Berlin, 1872–84, i. 801. 35), and in the fire-baptism which imparted eternal youth (v. 235 ff.), but the indications of her healing function are few.

In Patræ she had a *hydromanteion*, in which, however, she did not prescribe remedies, but simply revealed whether the sick would die or recover (Paus. vii. 21. 12). To cite Artemid. ii. 39 as a proof of her iatric activity (Preller-Robert, i. 764. 2) is unwarranted, as this passage deals only with rules for dream-reading, while in *Orph. hymn.* 40, she is in a quite general sense the original donor of peace, law, riches, and health. To connect the device *Ἦγεια* found beside the beautiful head on Metapontine coins (reproduced in Roscher, i. 2780, from the *Cat. of the Brit. Mus.*) with Demeter (Sallet), again, is precluded by the youthfulness of the head. In the medical domain, accordingly, all that we can concede to her is the function of Ophthalmitis; the three references to this are dealt with by Rubensohn, *Ath. Mitt.* xx. [1895] 360 ff., and on p. 365 her connexion with Asklepios in Epidauros, Athens, and Eleusis is correctly adjudicated. For the female breasts upon marble blocks from her temple in Cnidus, see C. T. Newton and R. P. Pullan, *Discoveries at Halicarnassus*, London, 1862-63, i. pl. 58.

17. Hades-Pluto.—The dream-oracle in the Plutonium near Nysa on the upper Mæander (Strabo, 649; Eustath. *ad Dionys. Periegetem*, 1153) is of great importance in the history of Gr. religious medicine. Here *οἱ ἔμπειροι τῶν λεπτῶν* incubated on behalf of the sick in a cave filled with earthy vapour—the *Χαρῶνειον*—and regulated their curative treatment by the dreams received in the ecstatic trance. In many cases they let the patients themselves sleep in the cave for a few days without food, but, even if an invalid was favoured with a dream, the priests still acted as *σύμβουλοι* and *μυσταγωγοί*. In the Plutonium, therefore, the task of interpreting dreams devolved exclusively, and that of incubation generally, upon the priests. Such, however, was exactly the characteristic feature of the Bab. dream-shrine, which, as we saw above (p. 542^a), was the prototype of the Gr. institution. Higher up the Mæander valley, near Hierapolis, was another Plutonium, having a cave pervaded by even more potent exhalations, which only the Galloi could safely approach (Strabo, 630). Whether incubation was resorted to here as well Strabo does not definitely say, but Pausanias (x. 32. 13) states that dream-shrines of the subterranean deities were to be found in several cities of the Mæander valley. From an inscription of the Imperial period (in Henzey, *Miss. archéol. de Macédo.* ii. [1876], Inser. 120) we may assume that incubation was practised in a Plutonium at Eana in Macedonia. A miraculous cure wrought by water from the altar of Dis and Proserpina is related by Valerius Maximus (ii. 4. 5).

18. Sarapis and Isis.—Sarapis was a syncretistic creation of Ptolemy I.—a fusion of Hades-Pluto with Osiris and a Bab. deity whom Arrian and Plutarch designate *Σάραπισ*, and in whom Lehmann-Haupt (most recently, 1910, in Roscher, iv. 340) recognizes Ea, 'king of the ocean-depths' (*sar apsi*), the early Bab. god of oracles and healing. The Bab. name was adopted by the Egyptians in the form *Serapis*, in which they discerned their own *wesir hapi* (Osiris-Apis), i.e. the dead Apis who had been zealously worshipped from the time of Psammetichus. The distinctive feature of the Ea-cult—the healing oracle obtained by incubation—was retained by the new Alexandrian deity, who thus became a powerful rival of the similarly endowed Asklepios. This rivalry he shared with Isis, who became closely allied with him, and who in the Egyptian period had been a healing goddess, though without incubation—an institution unknown among the Egyptians (see above, p. 541 f.). Sarapis and Isis then spread their conquests over the entire Hellenistic and Roman

world, carrying with them the assiduous cultivation of the dream-oracle. The sources used by Artemidorus (ii. 44) preferred before all other oracles the dreams vouchsafed by these two deities. Here the essential thing was the interpretation of the prescriptions so given (*συνταγαί*), though, as we might expect, miracles of direct healing (*θεραπείαι*) were not wanting; the Greek words are the technical terms used in the aretalogical literature. For the healing functions of Sarapis and Isis, see Weinreich, *op. cit.* 117 ff., with Excursus iii. on Artemid. iv. 22. Of the much-frequented Serapeion in Canopus, Strabo (801) writes that persons incubated there not only on their own behalf, but also on behalf of others, and that records were kept both of the *θεραπείαι* and of the *ἀρεταὶ τῶν ἐνταῦθα λογίων* (i.e. *συνταγῶν*); the redactors of the Epidaurian *ἱάματα*, as we saw, had eyes only for the former. Models of restored limbs offered to Sarapis and Isis (cf. Tibull. i. 327) are of frequent occurrence (cf. Drexler, in Roscher, ii. 526 ff.). A relief from Thebes (Rangabé, *Ant. Hellén.* ii. [1855] 778, no. 1213) with the inscription *Εὐνοία Εἰσιδὲ εὐχὴν* depicts a youth on a *κλίνη*, three nymphs dancing beside it, and, in the background, a bearded head on a larger scale (Acheloos)—probably a thank-offering for a water-cure prescribed by Isis (cf. 10).

The three chthonic gods, Amphiaraos, Trophonios, and Asklepios—the incubation-deities *par excellence*—are all closely related to Hades. Of these, however, Trophonios may be passed over here, as he shows no special development on the medical side. Amphiaraos and Asklepios, on the other hand, became healing gods in a specific sense—both, it is true, being reduced in epic poetry to the level of heroes, but maintaining their divine dignity in the cultus. Amphiaraos, as a result of his being confined to a locality, never gained any extensive sphere of influence, while the beneficent hand of Asklepios reached as far as did the influence of Greek and Roman culture.

19. Amphiaraos.—The Greek epic makes Amphiaraos a hero of Theban-Argive legend, and a descendant of the seer Melampous (below, B. 5), but even as such his originally divine (chthonic) nature finds expression in the circumstance that he was at death translated to the under world (Pind. *Nem.* ix. 24). He presided over the sanctuary of Oropos. The high regard accorded to this dream-shrine is shown by its having been consulted by Cræsus and Mardonius (Herod. i. 46, 52, viii. 134). The curative procedure of this Amphiaraion, which, it is true, was as bitterly satirized by Aristophanes in his *Amphiaraos* (presented 414 B.C.) as was that of the Asklepieion in his *Ploutos* (408 and 388 B.C.), formed the central feature in the activities of the sanctuary. The code of regulations (*IG* vii. 235) fixes the client's fee at one and a half drachmæ, and makes mention of a *koimeterion* with two separate apartments beside the altar. An incubation-hall of later date, situated at the theatre (P in Dürrbach's map, reproduced in *RE* i. 1895) was similar in design to the *ἔβασον* of Epidauros. The visitor, after a period of fasting—in order to receive the oracle with a clear soul' (Philostr. *Vit. Apoll.* ii. 37)—and the sacrifice of a ram, prepared himself for the intimation of the god by sleeping on the hide of the animal sacrificed (Paus. i. 34. 4, 5). We thus see that Amphiaraos performed his cures, not by direct miracles during incubation (as in the redaction of the Epidaurian *ἱάματα*), but by means of dream-oracles, which were, of course, submitted to the judgment of the dream-reader. An important factor in the treatment was the *λουτρῶν*, with separate compartments for men and women (*IG* vii. 4255)—which is often referred to from the days of Aristophanes and Xenophon (*λουτρά* 'Δμφ.). The fountain of Amphiaraos, to the south of the altar

(F in map), was investigated by the physicians Erasistratos and Euenos (Athenæus, 46)—a fact which indicates that it was used for therapeutic purposes, and not, as Pausanias says, only as a receptacle for thank-offerings of gold and silver coins. Models of restored limbs are mentioned in *IG* vii. 303, 67 ff., and 3498.

The great altar (D), according to Pausanias, contained five *μοῖραι*, by which almost everything connected with healing in Attic religion was brought into relation with Amphiaraos. The third *μοῖρα*—the principal division—belonged to the god himself, to his son Amphilochos, together with Hermes (as *ἡγήτωρ δνείρων* [?]) and Hestia (probably as the domestic goddess of Amphiaraos). The *σύμβωμοι* were associated as guests with the other parts as follows: Herakles, Zeus, and Apollo Paion (cf. the Delphic oracle in Demosth. *Mid.* 53) with the first; heroes and heroines with the second; Aphrodite (*CLA* iii. 136; *εὐάντηρος ἱατρῆν*), Panakeia-Iaso-Hygieia (representing the Athenian Asklepieion), and Athena Paionia (Kerameikos), with the fourth; and nymphs, Pan, Acheloos, and Kephisos (cf. 10 (b) above) with the fifth. It is quite certain that Iaso was here regarded as a guest (cf. the present writer's observations [Roscher, iii. 1486] in opposition to Usener). Aristophanes, in the *Amphiaraos*, speaks of her as a daughter of the Oropian deity, but in the *Ploutos* as the daughter of Asklepios; and as such she appears also upon a relief from the Asklepieion (*Ath. Mitt.* xvii. [1892] 243). Hygieia is first found in connexion with Amphiaraos in inscriptions of the 1st cent. B.C. (*IG* vii. 372. 412), and was therefore at that period no longer a mere guest, but a joint-possessor of the sanctuary. The healing god of Oropos had a subsidiary institution at Rhamnous (Mela, ii. 3. 6; and excavations [*Δελφίων*, 1891, p. 116], which have yielded a relief representing Amphiaraos attending upon the sick).

Alexida, the daughter of Amphiaraos, is associated with the medical function by her very name. In Argos, her descendants, the *Ἐλάσιοι* ('expellers'), were regarded as healers of epilepsy (Plut. *Quæst. Gr.* 23).

20. Asklepios.—Considerations of space render it impossible here to treat of Asklepios in such detail as is due to the chief god of healing among the Greeks. The writer must, therefore, be content to emphasize some of the more salient points, and for the rest to refer to his more exhaustive art. in Roscher, 'Asklepios' (1884), 'Hygieia' (1889), and 'Panakeia' (1902), and also the art. 'Asklepios,' in *RE* ii. [1896] 1642 ff., and 'Epione,' *ib.* vi. [1906] 186 ff. The 181 localities connected with the cult of Asklepios (*ib.* ii. 1662 ff.) are only a selection from among the 410 which the writer had at his disposal, and which form a still more effective testimony to the enormous expansion of the cult.

i. *The origin and earliest spread of the cult, and the intrusion of Apollo.*—The earliest history of the cult has been distorted under Delphic influence, but may be reconstructed from the extant fragments. The name 'Asklepios' was traced by the Epidaurian writer Isyllos (3rd cent. B.C.) to *Αἰγλή* ('*Asglē*') (*IG* iv. 950, line 51). Von Wilamowitz (*Isyll.* 93), combining this word with the Apollo *Ἀσγελάρας* of Anaphe, proposes the primitive form *Ἀσγλαπίος*. Gruppe (*op. cit.* 1442 ff.) agrees with this, but believes that we have in Asklepios a confluence of two distinct personages—the one a light-god, *Asgl-arios* ('mild radiance'), connected with Apollo, and belonging originally to Gortyn, in Crete, the other an earth-god in the form of a snake (this is Welcker's explanation of the name, from *ἀσκάλαβος*), who became fused with the light-god in Bœotia and Phokis. The present

writer cannot accept these theories, and, refraining from etymological experiments, would only emphasize the originally chthonic character of Asklepios. This is indicated, indeed, by the facts that the leading symbol of Asklepios was the snake, that incubation was a characteristic feature of his worship, that a residue of the chthonic ritual (*ὀλόκωντα*) survived at Titane, an ancient centre of his cult, and, finally, that he had a double in Trophonios, the cave- and oracle-deity of Lebadeia, who was once identical with Asklepios, but was detached from him at an early date, when the physician deity had not yet been individualized. According to the thoroughgoing investigations of O. Müller (*Orchomenos*², Breslau, 1844, p. 183 ff.), the original home of Asklepios was Thessaly, the devotees of his cult being the Minyæ. The tradition handed down by the separating theologians (Cic. *de Nat. Deor.* iii. 22 [57]; Joh. Lydus, *de Mens.* 4, 90), according to which his parents were Ischys, the son of Elatos, and Koronis, the daughter of Phlegyas, is of great importance, as it points to a period when Asklepios had no connexion with Apollo. His surrender to a divine for a heroic rank was effected by epic poetry. Thus in Homer he is merely the 'blameless physician' (*Il.* iv. 194), the disciple of Cheiron (219), and the father of the warrior-surgeon Machaon, *Τρίκκης ἐξ ἱπποβότῳ* (202), with whom passages of later origin associate a brother named Podaleirios (ii. 732, xi. 833). On Homer's authority the Asklepieion of Triikka was regarded as the most ancient of all (Apollod. *ap.* Strabo, 437), and the river Lethaios as the birthplace of Asklepios (oracle in Euseb. *Præp. Evang.* iii. 14. 6). But Phthiotis and Magnesia were also counted among his primitive habitations, as his education under Cheiron was associated with that region, while his place of birth was located by an *Eæe* in the Dotian campaign near Mt. Pelion. His earliest migration from Thessaly was southwards to the Minyean Northern Bœotia, and here Trophonios was worshipped in Lebadeia, and Asklepios in Orchomenos, Hyettos, Thespiæ, and Thisbe (*RE* ii. 1663). He was still a stranger to Southern and Western Bœotia, as also to Attica, to which his cult came from Epidauros only in 420 B.C. On the other hand, he had at an early date gained a permanent footing in Phokis, which honoured him universally as its archagetē (Paus. x. 32. 12). It was in Phokis, indeed, that the worshippers of Asklepios came into collision with the Apollinian circle at a period when, in consequence of the Dorian migration, the cult of Apollo had forcibly established itself in Delphi. The traditional implacable hostility of the Phlegyans towards the Delphic sanctuary indicates the violence of the conflict, which, however, ended in the triumph of Apollo.

A sweeping transformation of Minyean beliefs now ensued in favour of the intruder. Apollo becomes the father of Asklepios, Koronis the god's faithless mistress, Ischys the violator of his rights, but the offspring is taken into favour, so that he may henceforth act as the benignant physician of mankind under the patronage of the Delphic god; then, as he made bold to infringe the cosmic order by restoring the dead to life, he fell a victim to the bolt of Zeus. Such is the substance of an *Eæe* (Hes. fr. 122-125 [Rzach]) which dominated the mind of Pindar (*Ol.* iii.) and the succeeding age (cf. *RE* ii. 1646) until the rising prestige of the Epidaurian *hieron* led to a revision of the Asklepiian myth which had the sanction of Delphi. In this new form of the saga the connexion of Asklepios with Thessaly, and the guilt and punishment of his mother—a feature obnoxious to his worshippers—were dropped, while Apollo is no longer the Delphic god, but the Epidaurian Maleatas

(8 (a) above). In the *hieron* the latter begets Asklepios by Aigle, daughter of an 'Epidaurian' Phlegyas, and surnamed Koronis, from her beauty, and makes him joint-possessor of the sanctuary. Such is the version given in the poems of Isyllon in the first half of the 3rd cent. B.C. (Wilamowitz, *Isyll.* 18 ff.; Kavvadias, *Fouill.* no. 7; *IG* iv. 950). A somewhat closer correspondence with the *Eae* is shown by the Epidaurian form of the myth in Pausanias (ii. 26. 7); here Koronis, being with child by Apollo, comes with Phlegyas from Thessaly to Epidaurus, and upon the 'myrtle-mountain' brings forth in secret the son who fills the world with his fame as soon as he reaches maturity (cf. *RE* ii. 667, s.v. 'Aresthanas'). This version likewise won the sanction of Delphi.

Asklepios, however, notwithstanding his having been thus forcibly grafted upon the Apollinian circle, maintained his independence in his own cult. This appears most distinctly from the type assigned to him in art, which, in contrast to the representation of the son of Leto, exhibits him as the fatherly friend of men, the *πατήρ Πατῶν* (Herondas); hence the flippant jest of the sacrilegious Dionysius in Cic. *de Nat. Deor.* iii. 83 (on which cf. *RE* ii. 1679. 31 ff.). The cult of Koronis in Titane (Paus. ii. 11. 7)—a worship in conflict with the standpoint of the *Eae*—should also be noted.

ii. *The family of Asklepios.*—This comprises two groups, which must be kept distinct. (1) *His iatric retinue.*—Here we have his consort *Epione*, a personification of the 'mildness' which popular etymology found in his name (*Ἀσκλη-ἡπίος*). According to schol. *Il.* iv. 195 (*ἡ Μέροπος*), she was of Coan origin, but, on grounds of mythical chronology, we should probably read *ἡ Μεροπῆς* here. *Epione* is fully dealt with in *RE* vi. 186–190.¹ The first of his descendants are the two 'excellent surgeons' affiliated to him by epic poetry, viz. *Machaon* and *Podaleirios*, leaders of the men of Trikka, Ithome, and Echalía (*Il.* iv. 202, ii. 729 ff.; for their worship in Trikka, see *RE* ii. 1662). *Machaon* had a separate cult only in Gerenia (Messenia), but in conjunction with his father was worshipped in several Greek Asklepieia, as, e.g., in Cos, at Pergamos, and doubtless also at Mitylene (cf. *RE* ii. 1660). *Podaleirios* is almost unknown in European Greece, but in Caria he is the ancestor of a famous family of Asklepiadae, and, according to v. Wilamowitz (*Isyll.* 51), was originally a Carian hero. In the West his cult reached Apulia (dream and healing oracles among the Daunians). The assertion that the two brothers were the sons of Poseidon (frag. of the *Porthesis*) was negatived above (4); the fragment in question is nevertheless of interest as the earliest Greek record of the separation of surgery (*Machaon*) and internal medicine (*Podaleirios*). A legend of Syrna (Steph. Byz. s.v. *Σύρνα*) relates that, when the king's daughter had fallen headlong, *Podaleirios* restored her by bleeding.

The outstanding iatric figure of the group is *Panakeia*, a personification of the popular notion of the miraculous all-healing herbs already mentioned in connexion with Cheiron and Herakles. As the daughter of Asklepios, she represents his omnipotence in the sphere of healing (on the centres of her cult, and her presumably Rhodian origin, cf. Roscher, iii. 1484 ff.). In the ancient oath of the physicians she alone—as a healer—is contrasted with *Hygieia*; subsequently she was associated with a sister named *Iaso* (Hermipp., Aristoph. *Plout.* 701), and, at length, with the addition of *Akeso*, we find a triad of female healers (Athenian relief, reproduced in Roscher, iii. 1490;

inscr. from Piræus, *CIA* ii. 1651; the Pæans of Ptolemais and Athens). The medical retinue of Asklepios is completed by the dæmons *Ianiskos* (schol. *Plut.* 701), *Akesis* (Epidaurus; Paus. ii. 11. 7), and *Telesphoros* (Pergamos): the last-named is viewed in very different lights (Welcker, *Götterlehre*, ii. [1860] 740; Wroth, *JHS* iii. [1882] 283 ff.)—most recently as an incubation spirit by Ziehen (*Ath. Mitt.* xvii. [1892] 241). The hymn in *CIA* iii. 171 identifies him with *Akesis*; Pausanias (ii. 11. 7) does likewise, but at the same time identifies him also with *Euamerion* (see below, under (2)). Incubation is represented by *Hypnos* in Sicyon (Paus. ii. 10. 2), Athens (*Ath. Mitt.* ii. [1877] 242. 4), and Epidaurus (Blinkenberg, *ib.* xiv. [1889] 390).

(2) *The personifications of health and eueḗia.*—The leader of this group is the maiden *Hygieia*, who by many recent writers is wrongly regarded as a healing goddess. The name has a history in part independent of the Asklepiian cult. It is found c. 500 B.C. as an epithet of the goddess of the Athenian citadel (cf. above, 2). The hymn of Licymnios (*Frag. Lyr. Gr.* iii. 599) makes reference to a maternal *Hygieia*, extolling her as 'the Queen of the august thrones of Apollo,' but does not connect her with Asklepios. It is clear also, from Cornut. 16, that in some places a *Hygieia* was associated with *Hermes* (cf. 12, above). Finally, a maidenly figure designated *Hygieia* is found among the personifications of *Euexia* (*Eudaimonie*, *Harmonia*, *Tyche*) on vase-paintings (Jahn, *Archäol. Beiträge*, 215; *AZ*, 1879, p. 95), and beside a youth named *Klytios* on the vase of Meidias (Inghirami, *Mon. Etrusc.*, Fiesole, 1824–27, v. 2, pl. xii.). But, while the representation of an abstract conception might be employed in many ways, the creation of a figure in the cultus is a different matter. Usener (*Götternamen*, 169) supposes, however, that an independent goddess designated *Hygieia* was known in Athens long before the settlement of Asklepios there (420 B.C.)—a theory which the present writer refutes in Roscher, iii. 1486. If the point in question be the medium in which the worship of the goddess of health first emerged, there are good reasons for believing that this was the Asklepiian cult. That *Hygieia* reached Athens in company with Asklepios in 420 B.C. is an assured fact (cf. the final revision of the relative inscription, *Ἐφημ. ἀρχαῖολ.*, 1901, p. 98). If she did not come from Epidaurus (where her connexion with the *hieron* in the 4th cent. B.C. is now attested by *IG* iv. 1329), she must have been brought from some other Asklepieion in the Peloponnesus—Titane perhaps; her ancient worship there is discussed in Roscher, i. 2776. As the guardian of health, she forms a real contrast to the medical retinue of Asklepios, and accordingly she does not appear in the healing scene of the *Ploutos*; while, again, in the well-known *Paian*, a recension of which (4th cent. B.C.) was recently discovered in Erythræ, she is, for the sake of emphasis, put last of all. The sick might approach her with petitions, the restored with thanksgiving; her name in itself signifies the stewardess of the supreme blessing of life. But this blessing was not merely a thing to be regained by healing, but rather—what was of more importance for national life—a thing to be safeguarded and strengthened by rational conduct. Now, such an idea had a natural attraction for the race that instituted the athletic contest and the gymnasium. That it was familiar also to the followers of Asklepios is shown by a saying which Plato puts into the mouth of the physician Eryximachos, viz. that Asklepios, taking account of the two tendencies of the animal body—*ἐπι τῷ ὑγιεινῷ* and *ἐπι τῷ νοσῶδει*—presides over the whole art of medicine on the one hand and over gymnastics and agriculture

¹ *Lampetia*, who is named as the wife of Asklepios by Hermippus, would fall rather into the second group. See below, p. 552a.

on the other (*Symp.* 186 B, and cf. Jüthner, in his ed. of Philostr. *περὶ γυμναστικῆς*, p. 37 ff.). This agrees with the fact that at Olympia on the table of Kolotes, upon which the wreaths of the victors were laid, Asklepios and Hygieia are seen confronting Agon and Ares, *i.e.* are honoured as patrons of athletic and martial contests. What artistic type, then, would be chosen to represent the patroness of the Olympic games? That, surely, of a maidenly figure, at once lithe and tense. Moreover, in all other cases where we can with certainty identify her figure, she appears as a maiden. Modern archæology has given rise to a certain vacillation between the matronly and the maidenly form, but to the Greeks themselves 'the world under her escort bloomed in the vernal radiance of the Charites' (Hymn of Ariphron, *Poet. Lyr. Gr.* iii. 597). In the Athenian Asklepieion, the inscriptions of which speak of Hygieia as the only other partner in the sanctuary, she is sometimes (*Ath. Mitt.* ii. [1877] plates 16 and 17; Roscher, i. 2782) depicted beside her father—who is seated—as leaning against a tree and without a symbol; in other cases she is usually represented as waiting upon the sacred snake, to which she offers food, or more frequently a bowl. The statement that a bowl (of gold) was bequeathed by Olympias to the image of Hygieia worshipped in Athens (Hyperid. *pro Euæen.* § 19) prompts the conjecture that that figure exhibited her in the act of giving the serpent drink. In Epidauros, again, Blinkenberg has discovered the figure of a snake drinking from a bowl as an accessory symbol upon an offering (altar or base) dedicated to Hygieia (*JG* iv. 1329). Hygieia is the only member of the Asklepiæan circle who shares his exaltation as the *Σωτήρ* of the world (Roscher, i. 2784).

The fact that *Aigle* becomes a daughter of Asklepios seems to be due to the affinity between the ideas of health and light (cf. the Laconian epithets of Asklepios: 'Αγλαδότης, Αἰγλαήρ), and it is worthy of note that in this capacity she makes her first appearance in the curious genealogy of Hermippos, in which also her mother is not Epione, but the Heliad *Lampetia*. The children of Asklepios, according to Hermippos, are the two physicians of the *Iliad*, Iaso, Panakaia, and Aigle: Hygieia is not named, *Aigle* probably taking her place. In the recently discovered *Paian* of Erythræ (v. Wilamowitz, 'Nord-ionische Steine,' *ABAW*, 1909, p. 37), *Aigle* has been substituted, not very happily, for the Attic *Akeso* in the triad of female healing goddesses. In a painting by Nikophanes of Sicyon (Plin. xxxv. 137) Hygieia and Aigle, Panakaia and Iaso, were grouped about Asklepios.

A male counterpart to the goddess of health is found in *Euamerion*, the Titanian spirit 'of good days' (Paus. ii. 11. 7), and, if Telesphoros be identical with him, as Pausanias says, he too would, of course, be assigned to the second Asklepiæan group (cf. ii. (1), at the end).

iii. *The therapeutics of the Asklepieia.*—The connexion between the therapeutics of the Asklepieia and secular medicine, as also the practice of incubation, and the alleged difference between the procedure of the Greek and that of the Roman period, were dealt with in our first section. Suffice it now to refer briefly to the three records of healing which still survive, wholly or partly, in redacted forms. (1) The Epidaurian *iamata*, consisting entirely of miraculous stories, are vitiated by the cardinal defect of making incubation a mere external accessory. In this respect, however, they find a precedent in the *Ploutos* of Aristophanes. (2) The Maffean inscriptions of the Insula Tiberina retain the mantic nature of incubation, recording the bestowal and practical application of dream-oracles. Here, however, the remedies prescribed

are wholly of a magical kind, and medicine in the proper sense is entirely absent (cf. Deubner, *de Incub.* p. 44 ff.). (3) A fragment of a redaction of pathological narratives from Lebena has been discussed to good purpose by Zingerle (*Ath. Mitt.* xxi. [1896] 67 ff.), who errs, however, in classing this redaction with the Epidaurian *iamata*, for the extant fragment records prescriptions given by the god in dreams, and the cures due to their application. This work, therefore, like the surviving originals of Granius and Apellas, would fall within the category of genuine therapeutics.

B. *HEROES.*—The heroes of Greek mythology fall into two groups, according as they derive their origin from the cult of the dead or from the worship of gods. In the former case they tend to acquire a malicious character, and need to be propitiated by acts of worship; such are, *e.g.*, the heroes who, according to Hippokratēs, *περὶ λεπίης νόσου*, 1 (vi. 362, Littré), were supposed to cause epilepsy. The second class, embracing deities whom the poets reduced to the status of heroes, are, on the other hand, disposed to be helpful to man, especially in the healing of disease; and hence, in pseudo-Hippokr. *περὶ διατρῆς*, 89 (vi. 652, Littré), they are invoked together with the apotropæic gods and Ge. Those of this group who retained their place in the cultus as deities were dealt with in the preceding section (A. 13, 15, 19, 20); but Achilles, though originally a water-demon (Usener, *Göttern.* p. 14), was there omitted, because he was worshipped exclusively as the hero of the Trojan legend.

1. Achilles.—The attempt to interpret his name in a medical sense (Gruppe, *op. cit.* 71. 616) has proved futile. His sanctuary in Brasæ is mentioned by Pausanias (iii. 24. 5), not as having any real connexion with the Asklepieion situated there, but merely as being in its vicinity. His dream-shrine in the island of Leuce, opposite the delta of the Istros (Arrian, *Peripl.* 23), was specially concerned with the coasting traffic. He appears as a healing hero only in Tertull. *de Anima*, 46, where he heals Leonymus the boxer. In the Trojan legend he is a pupil of Cheiron (*Il.* xi. 832), cures Telephos with the rust of his spear (*ὁ τρώσας ἰάσεται*), and bandages Patroklos upon the Sosias bowl (Müller-Wieseler, *Ant. Denkmäler*, Göttingen, 1854, i. pl. 45, no. 210).

2. Protesilaos, a healing hero in the Thracian Chersonese (Philostr. *Heroc.* ii. 15).

3. Hektor, according to a Delphic utterance (Lykophron, 1205, and schol. 1194), was an ἀρωγὸς λοιμικῶν τοξενμάτων in Thebes.

4. Antikyreus, the eponym founder of Antikyra in Phokis, and the discoverer of the ἐλλέβορος μέλας, with which he cured Herakles of madness (Ptol. *Chenn.* 2, p. 14 [Roulez]; Steph. Byz. s.v. Ἀντικυρεύς). The hellebore decoction was said to have been discovered by the Phokians, and was used for both cathartic and therapeutic purposes (schol. Nic. *Alexiph.* 483; Strabo, 418).

5. Melampous.—The Æolid Melampous was the founder of a famous family of seers, upon which Amphiaraos (A. 19)—as his grandson—was grafted (*Od.* xv. 225 ff.). In Pherekyd. fr. 75 he is the hero of an interesting popular legend, which tells how, in consequence of having his ears cleansed by snakes, he became proficient in prophecy and the language of animals, and by a magic remedy (*ὁ τρώσας ἰάσεται*) enabled Iphiklos to regain his lost virility. He delivers the Prætidæ from their madness—either supernaturally, *θυσίας ἀπορήτρους καὶ καθαρμούς*, in the Artemision at Lusi (Paus. viii. 18. 7), or by rational means, viz. a bath in the fountain of the Anigradian nymphs (A. 10 (α) (2)), the waters of which acted powerfully against skin-eruptions and herpes. On the latter alternative, the Prætidæ must really have suffered from an affection of the skin, as is actually said, indeed,

in the version given in the Hesiodic *Catalogue*, fr. 28. 29 (Rzach). According to Theophr. *Hist. Plant.* ix. 10. 4, Melampous treated their case with the ἑλλέβορος μέλας, which was in consequence also called *melampodium*. Rohde (*Psyche*, Freiburg, 1894, p. 339. 3) holds that this remedy was purely cathartic; but it may quite well be regarded as therapeutic, and, therefore, as a counterpart to the *panakes* of Cheiron and others. There was a cult of Melampous at Ægosthena, but there was no practice of divination connected with it (Paus. i. 44. 5). According to Imhoof, Blumer, and Gardner ('Numismatic Commentary on Paus.,' *JHS* vi. [1885] 58), the circular building upon a coin of that locality may be a representation of his shrine (ἡρώον).

6. Apis.—According to Æsch. *Suppl.* 261 ff., Apis, the eponym founder of Apia (Argolis), and the *ιατρόμαντις παῖς Ἀπόλλωνος*, came from Naupaktos, and freed the land from monsters *ἀκρεῖα τομαῖος* (cathartic *pharmaka*). He was subsequently (Porphyr. *de Abst.* iii. 15) identified with the Egyptian Apis (cf. Wernicke, *RE* i. 2810).

7. The descendants of the Asklepiad Machaon (A. 20, ii. (1)).—This group is composed partly of originally local spirits or heroes, as, e.g., his sons Nikomachos and Gorgasos, who in the time of Pausanias (iv. 30. 3) were still active as healing heroes—especially for paralysis—at Phare in Messenia (cf. Roscher, i. 625; *RE* ii. 1668), and partly of those whose sole function it was to found Asklepieia, such as Sphyros in Argos, Polemokrates in the Thyreatis, and Alexanor in Titane (Paus.), though in the last-named locality the founder, according to schol. Arist. *Plout.* 701, was Alexenor, the son of Asklepios. On the family of Asklepiads which traced its descent from Nikomachos—and to which Aristotle belonged—and on the Asklepiads of Rhodes, Cnidus, and Cos who sprang from Podaleirios, see *RE* ii. 1684.

8. Molpadia Hemithea, daughter of Staphylus, and, after her death, heroine of a dream-oracle at Kastabos (Thracian Chersonese) much frequented by invalids; she had also an obstetric function (Diod. Sic. v. 62, 63).

9. Darron, ὃ ὑπὲρ τῶν νοσοῦντων εἴχονται among the Macedonians (Hesych. s. v. Δάρρων). G. Curtius (*Greek Etym.*, 1897, no. 315) connects the name with *θαρρεῖν*. Usener (*op. cit.* 171) refers it to the Thracian tribe of the Δερραῖοι. To the latter pertains also the interesting Macedonian large silver coin with the legend Δερρονικός(ν), which denotes, not a king (Head, *op. cit.* 180¹), but a nationality (Gäbler, *Zeitschr. für Numismat.* xx. [1897] 289).

10. Eurostos: Τέμενος ἡρώος Εὐρόστων on the Bosphorus (reference in Usener, *op. cit.* 171. 64, to Dionys. *Peripl.* 111).

Copious examples are furnished by Attica:

11. Amynos.—The 'healing hero Alkon,' whose existence had been assumed solely upon the ground of a textual emendation in *Vit. Sophocl.* 11, proposed by Meineke, may now, in view of the findings of A. Körte in *Ath. Mitt.* xxi. (1896) 311 ff., be set aside, and his place given to Amynos, a hero who had a sanctuary on the western declivity of the Akropolis even before the cult of Asklepios came to Athens, and in whose service Sophokles acted as priest. In this capacity the poet gave the Epidaurian deity a hospitable reception, and was in consequence surnamed Δεξιῶν, and honoured with a hero-cult. On the objects discovered in the sanctuary of Amynos, cf. Körte's earlier art. 'Bezirk eines Heilgottes,' in *Ath. Mitt.* xviii. (1893) 231 ff., with pl. xi. (a large leg with prominently marked varicose vein, and held in the arms of a bearded man on a smaller scale—probably the person healed).

12. The ἡρώος λατρός in the vicinity of the Theseion

¹ But cf. the remarks of Head in his 2nd ed., p. 201.

(Demosth. *Or.* xix. 249, xviii. 129; *CIA* ii. 1, nos. 403, 404 (ὁ ἐν ἄσσει).

13. Toxaris, as a ἡρώος ξένος, specially concerned with fever (Lucian, *Scyth.* 1). He is not a fabrication of Lucian (Sybel), but the object of an actual hero-cult (Deneken, in Roscher, i. 2483 f.).

14. Aristomachos, ἡρώος λατρός, in the Dionysion at Marathon (Bekker, *Anecd. Græc.*, Berlin, 1814, i. 262).

15. A ἡρώος λατρός ὄνομα Ὀρεσίβιος (Oresibios?) ἐν Ἐλευσίῳ (Bekker, *op. cit.* i. 263).

Reference may be made, by way of appendix, to healing statues and figures representing persons who in their lifetime had nothing to do with medicine, and yet were invested by popular belief with miraculous powers, as, e.g., the statue of the Olympic victor Theagenes in Thasos (Paus. vi. 11. 3; Lucian, *Deor. Conc.* 12), that of the pancratiast Pulydamas at Olympia (Paus. vi. 5; Lucian, *loc. cit.*), that of a ἡρώος Νερυλλῖνος in the Troad (Athenag. 26), those of Alexander (Paris) and Peregrinos Proteus in Parium (Athenag. 26), and that of the Corinthian general Pelichus in the private possession of Eukrates (Lucian, *Philopseud.* 18 ff.). On these, see Weinreich, *op. cit.* 137 ff.

LITERATURE.—This is indicated in the article.

E. THRÄMER.

HEALTH AND GODS OF HEALING

(Roman).—I. IN THE INDIGENOUS RELIGION.—

In the sphere of medicine the vitally religious element in the Roman character manifested itself in a partiality for supernatural, and a disparagement of rational, modes of healing. The fact that, in spite of the Roman tendency to deify special and unique occurrences and conditions, we find no distinctive gods of disease among the deities of the *Indigitamenta* (see the alphabetical list by R. Peter, in Roscher, ii. 188 ff.) is in reality an indication of the favourable conditions of health prevailing in the ancient agricultural State. Moreover, there were originally no special deities of healing among the *Di indigetes*, the gods of the State religion; and the Romans, like the Greeks of primitive times, were content to rely upon the evil-averting powers of the indigenous deities generally. Thus *Mars*, the god of war, is entreated in the *Carmen Arvale* (*CIL* i. 28) to avert pestilence: 'Let no plague come upon the people; be content, O fierce Mars!', and in the ancient prayer in Cato, *de Agri Cult.* 141 (the diction of which, however, according to R. Reitzenstein, in *Strassburger Festschrift*, 1901, p. 152, has been modified by the redactor), the same deity is implored not only to prevent bad weather, failure of crops, etc., but, in particular, 'uti tu morbos visos in visosque defendas averruncesque; uti tu . . . pastores pecuaque salva servassis disque bonam salutem valetudinemque mihi domo familiaeque nostrae.' With these prayers should be compared the shorter supplication in *de Agri Cult.* 134 (to Janus and Juppiter) and 139 (addressed quite generally to all the gods: 'si deus, si dea es'). The ancient Italian *Salus*, again, is not a goddess of health or healing, but the personification of the general welfare (cf. G. Wissowa, *Religion u. Kultus d. Römer*², Munich, 1912, p. 132 ff.). She was, no doubt, confounded with the Greek *Hygieia* in later linguistic usage, but this can hardly have been the case in the official religion. In the frequently mentioned 'augurium salutis' (the leading reference is Dio Cass. xxxvii. 24, where *salutis* is improperly rendered as *ὕγιαιας*, instead of *σωτηρίας*), the word is not a proper name at all, but simply an appellative. The attempt of Böttiger ('Medicinische Schlangengaukelei,' in *Kleine Schriften*, i. [1837] 127 ff.) to connect the 'augurium salutis' with the snake-feeding *Hygieia* is altogether fallacious. The ancient Latin goddess *Strenia* is regarded by Preller (*Röm. Myth.*³,

Berlin, 1883, i. 234) as a deity of healing, but only on the ground of an untenable etymology in Augustine, *de Civ. Dei*, iv. 11. 6: 'strenuum facere'); the *strenæ* ('twigs of trees') given as New Year's presents, however, were made use of, quite generally, as symbols of prosperity (cf. Plaut. *Stich.* iii. 2. 8).

On the other hand, the ancient *Carna*, shown by Wissowa (*op. cit.* 236) to have been a goddess of the under world, has a distinct connexion with matters of health. According to Macrob. *Sat.* i. 12. 31, she presides over *vitalibus humanis*, and she is entreated 'ut icinora et corda quaeque sunt intrinsecus viscera laeva conservet.' From the free poetic treatment of *Carna* by Ovid (*Fasti*, vi. 101-196) it would appear at least that she practised the beneficent magic arts of which the presumptive *τροφός* prides herself in the *Hymn to Demeter* (see above, p. 548 f.). The *Striges* who thirst for children's blood she exorcizes by touching the doorposts three times with a twig of arbutus, sprinkling the threshold with water, holding the entrails of a pig two months old (*Fasti*, vi. 161: 'cor pro corde, pro fibris fibras'—a representative spell; cf. Riess, 'Aberglaube,' in Pauly-Wissowa, i. 33 (c)), and, finally, placing a hawthorn-branch in the window as a prophylactic. The particular deities of woman's life—Juno as *Lucina*, *Diana Opifera* in Nemi, and the host of special goddesses (*Mene*, *Alemona*, etc.) named in the *Indigitamenta*—can only be alluded to here.

A specific goddess of disease is found in *Febris*, whose personification bears forcible witness to the antiquity of the fever-plague in the plains of the Tiber. Belief in disease-demons was, no doubt, quite common among the Babylonians (see above, p. 541^a), and the Egyptians seem to have had a 'special god of fever' (*Pap. Ebers*, ed. Joachim, pp. 87, 93—unless the reference be rather to a god of 'inflammations'); these, however, were hostile beings, whom the people sought to exorcize by spells. The Roman *Febris*, on the other hand, was well disposed towards man, and prospered the remedies used for the disease. That these remedies were magical in their nature is shown by the 'remedia quae corporibus aegrorum adnexa fuerant' (Valerius Maximus, ii. 5. 6), obviously amulets for reducing fever, which after use were dedicated to *Febris*. There was an ancient sanctuary of *Febris* on the Palatine Hill, and two of later origin on the Quirinal and the Esquiline respectively. In later times she assumed the specialized forms of *Febris Tertiana* and *Febris Quariana* (*CIL* vii. 999, xii. 3129). Magic remedies for both kinds of fever are given in Plin. *HN* xxviii. 46.

Among the *Dii Novensides* of Italian origin there were two who are clearly associated with healing. (1) One of these was *Fortuna*, an ancient Latin goddess whose cult is said to have been established in Rome by Servius Tullius. The chief seats of her worship were Antium and Praeneste, in the latter of which she had, as *Primigenia*, an ancient oracle for sortilege. The cult of *Primigenia* did not reach Rome till 199 B.C. She was not, like the Greek *Tyche*, the goddess of fate who rules over all things, but was personified in innumerable special forms, as, e.g., 'Fortuna huiusce diei,' 'Fortuna equestris,' 'Fortuna publica' and 'privata,' 'Fortuna Collegii Fabrum,' 'Fortuna balnearum,' and the like (Wissowa, *op. cit.* 262), including 'Fortuna salutaris' (*CIL* vi. 184, 201, 202), which may have quite a general reference, but as found in the votive inscription of Godesberg (*CIL* xiii. 2, no. 7994) is certainly connected with healing: 'Fortunis salutaribus [note the pl.] Aesculapio Hygiae.'—(2) The Etruscan, originally Falerian, *Minerva* (Wissowa, *op. cit.* 247 ff.) had a temple on the Capitoline Hill even prior to the institution of the Capitoline triad (Festus,

p. 257, s.v. 'Quinquatrus'). As the goddess of the handicrafts and the arts she was, in particular, the patroness of physicians (L. Preller, *Regionen der Stadt Rom*, Jena, 1846, p. 133), with which fact, it is true, the remark of Cicero in *de Div.* ii. 123 ('sine medico medicinam dabit Minerva') is strangely at variance. There was a temple of *Minerva Medica* upon the Esquiline (Wissowa, 255, n. 1). A sanctuary of *Minerva Memor et Medica Cabardiensis* (near Placentia) is often referred to in inscriptions (*CIL* xi. 1292-1310); here she prescribed medicines, healed diseases of the ear, and even condescended to restore the growth of the hair.

So much for the indigenous gods and those taken from the neighbouring peoples—deities who were worshipped in old-fashioned Roman or, it might be, in Italian forms, and, above all, in forms borrowed from the Etruscan religion.

II. GREEK INFLUENCES.—These in the end effected the Hellenization of the Roman religion. Of the gods thus borrowed from the Greeks, however, only a few are connected with our subject.

1. Apollo.—The *Sibylline Books*, which cannot be dissociated from the worship of Apollo, began, so far as we know, to make their influence felt in Rome in 496 B.C. It is certain that these books, as also the Roman worship of Apollo, came from Cumæ, as is confirmed by the fact that on special occasions the Senate caused sacrifices to be offered to Apollo in his temple there (cf. Wissowa, *op. cit.* 293 f.). The first Roman temple of the god was erected, 'pro valetudine Populi Romani,' at the Porta Carmentalis in 431 B.C., on the occasion of a plague (Livy, iv. 25). Here, accordingly, the Greek god of pestilence (see above, p. 547^a) found a footing in Rome; the Romans worshipped him as *Apollo Medicus*, and in the prayer of the Vestal Virgins (Macrob. *Sat.* i. 17. 15) he is actually invoked as *Apollo Paean*. His worship in Rome, as among the Greeks, consisted of expiations and ceremonies—supplication and procession (Livy, xxvii. 37), *lectisternium* and the appointment (by Etruscan rites) of a 'dictator clavi fingendi causa' (Livy, vii. 2, viii. 18). A Roman dedication to *Apollo Salutaris et Medicinalis* occurs in *CIL* vi. 39. According to Pliny, *HN* xxvi. 93, a remedy for abscess, compounded of seven ingredients, was given to the naked patient by a naked virgin—each of them spitting the while—with the words: 'negat Apollo pestem posse crescere cui nuda virgo restingat.' Nakedness was believed to be a magic preventive (cf. Riess, *loc. cit.* i. 35). It is probable that the vogue of Apollo as a healing god began to decline when the cult of *Aesculapius* was adopted in Rome (291 B.C.), but in conjunction with the latter and *Salus* (*Hygieia*) he received votive gifts as far down as the pestilence of 180 B.C. (Livy, xl. 37).

2. *Aesculapius* and *Hygia*.—The reception of *Asklepios*,¹ the Greek god of the healing art, into the Roman pantheon is worthy of note as the first instance of the Romans having adopted a cult from the Greek mother-country. The occasion was the pestilence of 293 B.C., the *Sibylline Books* having recommended that *Asklepios* should be brought from Epidaurus to arrest it. The Romans did not at first go beyond a three-days' *supplicatio* (Livy, x. 47), but in 291 they sent an embassy, headed by G. Ogulnius (Valer. Vict. *Vir. Ill.* 22), to Epidaurus, whence it brought back 'anguem in quo

¹ The Latin form *Aesculapius* (*Aisculapius*, *CIL* vi. 2, from the *Insula Tiberina*) goes back to *Aesclapius* (*CIL* iii. 1766, from *Narona*) or *Aisculapius* (*ib.* xi. 6708), which corresponds exactly with the older Epidaurian form *Αἰσκαπιός*. The intrusive vowel between *c* and *l* in the common Lat. form has a Gr. counterpart in the Thessalian **Ασκαλαπιός*, which is to be inferred from certain proper names (Pauly-Wissowa, ii. 1642).

ipsum numen esse constabat.¹ A temple was erected to the god on the Insula Tiberina at the place where the serpent, quitting the ship, reached land (Livy, *Epit.* xi.). So ran the primitive, artless legend, of which we are still reminded to this day by its monumental counterpart in the boat-shaped outline of the island (cf. the ancient engraving in B. Gamucci, *Antichità di Roma*, Venice, 1580, p. 173; M. Besnier [*L'Île Tibérine dans l'antiquité*, Paris, 1902, p. 42 = *Bibl. des écoles françaises*, lxxxvii.] dates the artificial shape of the island from the end of the Republic). In the diffuse account given by Ovid (*Metam.* xv. 622 ff.), and also in Val. Max. i. 8. 2, the founding of the temple is extolled as an event of great importance, but in point of fact the cult seems to have played a very modest part in the Republican period.²

As regards the internal activities of the Roman branch of the Epidaurian cult, our information is scanty. That they corresponded very closely with those of the parent institution appears from the reference of Festus (p. 110) to the sacred snakes and dogs kept in the island;³ and, in view of the fact that the Epidaurian *iamata* (see above, p. 542^b) were compiled shortly before the adoption of the cult in Rome, we may perhaps infer that here too the craving for the miraculous had asserted itself with considerable force. But there is nothing to show that incubation, which was certainly taken over with the cult itself,⁴ had lost its mantic character (as in the *iamata*). In the *Curculio* of Plautus, the scene of which is laid in Epidaurus, but which is full of allusions to Roman conditions, the procurer to whom the god has paid no attention in his dream is supplied with an improvised interpretation of it (246 ff.). This goes to prove that there were professional 'conjectores' in the Roman Aesclepeum in the time of Plautus, but direct evidence of incubation is not found until the Flavian epoch (*CIL* vi. 8: 'Flavius Antyllus *ex viso Aesclepio aram consecravit*'; cf. *ib.* 14, 'Sancto Aesculapio *ex jussu numinis dei*'). A dedication (discovered in front of the *Porta Appia*) by a

¹This was the specific mode of founding branches of the Epidaurian cult; cf. Paus. ii. 10. 3 (Sicyon), iii. 23. 6 (a consignment of sacred snakes intended for Cos, but retained in Epidaurus Limera)

²It certainly comes but little into notice: see dedications to Apollo, Æsculapius, and Salus (*i.e.* Hygia), in 180 B.C. (Livy, xi. 37); head of Æsculapius on denarii of Acilius the mint-master (E. Babelon, *Monnaies de la République rom.*, Paris, 1885, i. 107, no. 11); figure of 'Valetudo' (*i.e.* Hygia) feeding the snake (*ib.* 106, no. 8); mural paintings in 'Aesculapii aede vetere' (Varro, *de Ling. Lat.* vii. 57; 'vetere' here in contradistinction to the later sanctuaries in the iv. and v. *regiones* of the city); the Naples marble statue of Æsculapius (illustration in Roscher, i. 634) is said to have been found in the Insula Tiberina; probably, too, the group of Asklepios and Hygieia executed by Nikeratos (who flourished in the period of the Attalids), and afterwards transported to Rome (Plin. *HN* xxxiv. 80), had found its place in the temple of the island (the charming group in the Vatican [illustr. in Roscher, i. 2779] is in all likelihood a copy of this); the architectural work of two aediles 'de stipe Aesculapi' (*CIL* vi. 7). The statue of Antonius Musa, physician to Augustus, was set up 'juxta signum Aesculapi' (Suet. *Aug.* lix.), perhaps on the Insula Tiberina.

³The statement of Festus that the sacred dogs were kept 'quod is [Æsculapius] uberibus canis sit nutritus' is a distortion of the Epidaurian legend, and is probably due to Tarquinius (cf. Lact. *Div. Inst.* i. 10. 1).

⁴From the dream-oracles of Faunus, as described in Verg. *Æn.* vii. 71 ff., and, in imitation of them, in Ovid, *Fasti*, iv. 644 ff., Preller (*Röm. Myth.*³ i. 382) argues that incubation was practised in Rome long before the cult of Asklepios was established there, but in n. 2 Jordan refers to the Hellenizing spirit of Roman poetry, while R. Heinze (*Vergils epische Technik*, Leipzig, 1903, p. 172, n. 2), on the ground that the alleged Faunus oracles would be an isolated phenomenon in early Italian religion, denies that the descriptions in question had any foundation in fact. The present writer is of the same opinion. The earlier oracular system of the Romans depended upon Etruscan influences, and incubation was unknown in Etruria. What is said of dream-oracles in Hellenized Rome outside the Æsculapian cult—the oracular statues of the Danaïds in the temple of the Palatine Apollo (founded 28 B.C.), and the healing oracles of the Roman Dioscuri (schol. on Pers. *Sat.* ii. 56)—is open to doubt (Wissowa, *op. cit.* 270, n. 2).

certain M. Ulpus Honoratus to Æsculapius and Hygia, 'pro salute sua suorumque et L. Juli Helicis medici, qui curam mei diligenter egit secundum deos,' is of special interest as showing the co-operation of physician and deity. A Greek parallel to this is found in a dedication to Asklepios in Kibyra: here the person healed gives thanks to the god, to the Tyche of the city, and to Dionysios, the doctor who had treated him (*Wiener Akademie, Anzeiger*, xxx. [1893] 104). The 'Mafesian inscriptions' of the Insula Tiberina date from the age of the Antonines, and are a redaction of four narratives of healing (*CIG* 5980); an interpretation will be found in L. Deubner, *de Incub.* Leipzig, 1900, p. 44 ff. We read in these that oracles were bestowed in dreams, and practically applied, but the directions given are of a purely theurgic character. A revival of interest in the cult of the god of healing in the reign of Antoninus Pius is indicated by the latter's memorial coin bearing a representation of the legendary foundation of his temple (H. Cohen, *Méd. impér.*² Paris, 1880-85, ii. 271, fig. 17; cf. also the reliefs in *Röm. Mitt.* i. [1886], plates 6 and 7).

Of the diversified figures in the retinue of the Epidaurian god (see above, p. 551), 'Hygia' alone appears in Rome. She was there also called 'Valetudo,' and is first mentioned in connexion with the year 180 B.C. (Livy, xl. 37, where the 'Salus' conjoined with Æsculapius must, of course, be meant for Hygia); while she is referred to as Salus also in Ter. *Hecyra*, 338. Conversely, the temple of the early Roman Salus is erroneously called *vaδs rῆs* 'Ἐγείας by Plutarch (*Cato Major*, 19). The confusion is explained by the affinity of the terms *salus* and *valetudo*. From the Roman Salus, however, the daughter of Æsculapius is explicitly distinguished in *CIL* vii. 164 (Chester) as 'Salus ejus'; other inscriptions usually call the latter 'Hygia' (*CIL* vi. 17-19, and 20234—the last dating from the reign of Antoninus Pius). It is true that in the temple erected by Marcus Aurelius and L. Verus in honour of the divine father and daughter in Lambæsa (Numidia) we again find the dedication 'Aesculapio et Saluti' (*CIL* vii. 2579a). But the proper Latin designation of the daughter of Æsculapius, as regards both her name and her character, is *Valetudo* (*CIL* iii. 7279), and the goddess is so designated on a denarius of Acilius (see *preced. col.*, note 2), as the name 'Valetudo' which is there attached to a female figure attending to a serpent can refer only to Hygia. Compare also *CIL* v. 6415 (Pavia): 'Aesculapio Bonam Valetudinem Martem'; and viii. 9610 (Mauretania): 'Bonae Valetudinis sacrum.'¹ A pre-Hellenic goddess 'Valetudo' occurs (*CIL* ix. 3812 [Marsi]).

The diffusion of the Æsculapian cult through the vast Roman Empire cannot be traced here, but reference may be made to a remarkable representation of the god in a military type. He appears thus on several reliefs from Syria (Jalabert, in *Mélanges de la faculté orientale*, Beirut, i. [1906], pl. i. 1 and 2, pl. ii. 3-5: 'Aesculap en officier romain'). This is to be explained by reference to the worship of the emperors. The Cameo St. Albans (C. W. King, *Antique Gems and Rings*³, London, 1872, ii. 9) depicts an emperor (probably Constantine) in warlike attire, and bearing the eagle of Jupiter

¹Hygia had a rival in *Bona Dea*, a Greek goddess worshipped in Argolis, Sparta, and Tarentum, under the name of Damia, and in Rome identified with Fauna—*Bona Dea* (Wissowa, *op. cit.* 216). *Bona Dea*, in her temple on the Aventine, which was restored by Livia, seems to have exercised the function of a healing goddess, inasmuch as her devotees stored in this temple 'omne genus herbarum ex quibus antistites dant plerumque medicinas' (Macrob. *Sat.* i. 12. 26). Wissowa (218, u. 1) associates with her the inscriptions *CIL* vi. 72: 'Bonae Deae Hygiae,' and viii. 20747: 'Dea [Bona] Valetudo'; but, on the other hand, the *Bona Dea* there referred to may be an epithet of the daughter of Æsculapius.

and the snake-entwined *hasta*. King wrongly interprets the latter symbol in a Christian sense ('the old serpent' overcome by Constantine). But in reality we find here a transference of the regular symbol of Asklepios to the deified emperor as the incarnation of the Ζωή. This is the type used in the Syrian reliefs, and these accordingly portray the face in all cases as headless.

Concluding note on Cato the Censor.—Did the Romans, who, as we know, assumed at first a suspicious and adverse attitude towards Greek rational medicine, frame a popular medicine of their own for ordinary needs, in addition to their general supplications to the gods? And was Cato, the opponent of Greek culture, and especially of the Greek physicians (Plin. *HN* xxix. 14; Plut. *Cato Major*, 23), a champion of such indigenous medicine? That he was versed in medical matters is shown by his having inserted rules of health in his *Præcepta ad M. filium* (Plin. vii. 171, xxviii. 260; Plut. *loc. cit.* 23; Priscian, vi. 84), and by the portions of his extant work *de Agri Cult.* which deal with medical dietetics. It is a common opinion that he derived his knowledge of such things from the medical practice of the Italian peasantry (W. S. Teuffel, *Gesch. der röm. Litteratur*⁴, Leipzig, 1882, § 55; Jordan, in Preller, i. 243, n. 3; F. Münzer, *Beiträge zur Quellenkritik der Naturgesch. des Plinius*, Berlin, 1897, p. 68: 'Die primitive Heilkunst des sabinischen Bauern'), and the curious spells recommended for dislocations (*de Agri Cult.* 160) possibly come from a similar source. But the 'apsinthium Ponticum' prescribed as an amulet against footsoreness (159) is an exotic feature. To what source, again, shall we trace the long excursus (156-7) dealing with the dietetic and therapeutic merits of the various kinds of cabbage? The *Brassica Pythagorea* (157. 1) cannot well have belonged to the pharmacopœia of the Sabine peasantry, and the Greek name *Silphion* is used only in this section (157. 7), while in ch. 116 Cato employs the Lat. term *lasericum*. Finally, his remark that the assimilation of food tends to prevent perspiration of the veins has a distinctly professional ring. Now, we know that the Cnidian physician Chrysippus (M. Wellmann, in Pauly-Wissowa, iii. 2510, no. 15), who accompanied Eudoxus (see above, p. 541^b) on his Egyptian journey of research wrote a monograph on the various kinds of cabbage, and showed in that work the great importance of the species for therapeutics and dietetics (Plin. *HN* xx. 78). And that this Cnidian work was, directly or indirectly, Cato's source for chs. 156-8¹ appears not only from Cato's partiality for the cabbage tribe, but also from the curious prescription (157. 14) recommending *Brassica 'erratica'* with water for fistula, and with honey for sores—precisely the same directions having been given by Chrysippus (in Plin. *HN* xx. 93). It is quite possible, too, that the *Commentarius* (Plin. *loc. cit.*), or the *γερραμείων ὑπόβρυχια* (Plut. *Cato Major*, 23), according to which Cato was wont to treat himself and his family in sickness, may have been simply that work of Chrysippus. The Cnidian school of physicians fostered the relations between medicine and τὸ θεῖον (see above, p. 544^b), and was on that account more acceptable to the religious sentiment of the Roman people than were the Hippocraticus with their purely scientific methods. But it is certainly a curious circumstance that the chief opponent of Hellenism in Rome should thus turn out to have been the adherent of a mere *Græculus*.

LITERATURE.—This is given in the article. Cf. also the authorities cited in the 'Greek' article. E. THÄMER.

¹ The purgative prescribed in 158—a mixture which with its numerous ingredients reminds us of Egyptian pharmacy—belongs also to the excursus, as it includes *Brassica*.

HEART.—1. Heart, soul, and life.—In primitive thought the liver was probably regarded as a primary seat of life, but the heart generally came to be looked upon in this way, as its physiological functions were better understood. The beating of the heart, as well as the cessation of that beating at death, may well have prompted man to associate life itself with it or to regard it as the seat of the soul, or, where several souls are assigned to man—a not uncommon belief—as the seat of one, usually the chief of them. The result has generally been that 'heart' signifies not only the physical organ, but also soul, life, intellect, emotion, will, and the like; and it is not always easy to say whether or not a metaphorical use of the word is intended. This is illustrated in the common phrase 'died of a broken heart,' which goes back to a time when grief of itself was supposed to act injuriously upon the physical heart.

The Ahts believe that the soul, a sort of mannikin, lives in the heart and head.¹ The Caribs, who believed in several souls, assigned one to the heart, or regarded it as the chief soul.² The Tongans thought that the soul extended through the body, but was mainly manifested in the heart, the pulsations of which were the power of the soul. The right auricle of the heart was the seat of life.³ Among the natives of Nias a belief in three souls exists, and the third and most important of these is *nosododo*, 'the soul of the heart.' The heart is the source of all feeling, understanding, and emotion.⁴ The Bataks sometimes assign souls to each place in the body where pulsation is observed, one of these being the heart.⁵ In Celebes the Gorontaloese believe in four souls, two of which are in the heart.⁶ Examples may also be cited from Africa, where generally the heart is looked upon as a vital centre, and the seat of emotion, passion, etc., of the intellect, or of the soul. 'Soul' and 'heart' are expressed by one name among the Ba-huana.⁷ Where several souls are believed in, the heart is the seat of the life-soul, and it may be drawn thence by sorcery, whereupon the body dies. The Baluba of S. Congo think that death is caused by a messenger of Kahezza-Mpungu compressing the heart until it stops beating.⁸

Among peoples of a higher culture, similar beliefs prevailed. The Egyptian word *ab*, in its narrower sense of 'heart,' signified longing, desire, will, wisdom, courage, etc.; and the heart was regarded as the seat of life, and of all its activities. There was also a soul connected with the heart, the *hâti*, or 'heart soul,' or 'the state, or quality, or mental condition of the heart.' Both of these, the *ab* and the *hâti*, could be stolen, with the result of death, and the deceased is represented adorning the *hâti*, which may also have been that which was weighed in the judgment. Five chapters of the Book of the Dead concern the preservation of the heart, without which the deceased was helpless, but with which his soul would not be 'fettered at the gates of Tuat.' But it was liable to be stolen by various 'stealers of hearts'; hence the greatest precautions were taken to prevent this; e.g., a scarab amulet was often placed over the region of the heart.⁹

With the early Babylonians the liver had been regarded as the seat of the soul or life, and it was only at a later period that a knowledge of the part played by the heart was arrived at. Many traces of the earlier idea survived, 'liver' being used instead of, or along with, 'heart' to signify the seat of life; and hepatoscopy was constantly practised. A frequent refrain in the hymns is, 'May thy heart be at rest, thy liver be appeased.'¹⁰

Among the Hebrews, traces of the same idea of the liver being the seat of life and emotion are to be found (Pr 7³, La 2¹¹, Ps 16⁹ [read 'liver' for 'glory']). But an advance had been made, and generally in the OT the heart is at once the source and the symbol of life in its various aspects. This is well seen in Pr 4²³, 'keep thy heart with all diligence, for out of it are the sources of life.' The heart is the seat of both intellectual (to the exclusion of the head) and emotional life, including thought, memory, perception, will, imagination, joy, sorrow, anger, etc. (Ps 33¹¹, Gn 8²¹, Dt 29⁴ 4⁹, Ex 14⁵, Ps 104¹⁸, Dt 19⁸, 1 K 8³³, Is 30²⁹ 66¹⁴). Hence such phrases as 'men of heart' (=men of understanding, Job 34¹⁰, 34, Three⁶⁵; cf. Pr 10¹³, 'void of heart'), 'out of heart' (=forgotten, Ps 31¹²). The heart is also the seat of religious feeling (2 Ch 17⁸, Ps 37³¹, Jer 24⁷ 32⁴⁰, Dt 11¹⁸, 1 K 8⁶¹, etc.); hence change of heart, a clean heart, or a heart of flesh instead of a heart of stone (Ezk 18³¹ 11¹⁹, Ps 51¹⁰) signifies newness of life and character, and purity of conscience. Most of these usages are found in the NT (cf. Mt 5⁸ 12³⁴ 15¹⁹, Lk 24³², Jn 14¹, Ac 5³³ 8^{21a}); but St. Paul has particularly developed some of them, and with him the heart is the organ of belief as well as of disobedience and impenitence (Ro 2⁵ 10¹⁰), and the immediate receptacle in human life of God's light and knowledge and love (2 Co 4⁶, Ro 5⁶; cf. Eph 1¹⁸, 'the eyes of your heart being opened'). There also is the indwelling Christ (Eph 3¹⁷). These various usages, whether literal or metaphorical, have passed into religious speech, while in the majority of languages the word 'heart' has most of the meanings ascribed to it in Hebrew.

For the Arab meaning of 'heart' as = 'life,' see ARABS, vol. i. p. 671^b.

Among the Greeks and Romans the heart took the place of the liver as the seat of life, soul, intellect, and emotion. Even Aristotle regards the heart as the centre to which all sensory impressions were transmitted, though Plato assigns the mortal soul which governs the intellect and emotions to the heart, making the brain the seat of the immortal soul, and the liver the seat of the lowest soul and source of sensual desires.¹

Similarly, with the ancient Mexicans the word for 'soul' denoted primarily 'heart.' The heart survived death—not the actual heart, but something within, which caused life and quitted the body at death by the mouth.² The complex psychology of the Chinese assigns many *shen*, or souls, to the various parts of the body; that of the heart is supposed to be in the shape of a red bird.³

The importance of the heart as the seat of life is well illustrated by numerous *Märchen*, like the Norse tale of 'The giant who had no heart in his body,' in which a giant or some other personage secretes his heart, or, in other tales, his life or soul, in some exterior object, and until it is found and destroyed he is deathless.⁴ But it is also illustrated by other tales in which the heart, restored to a dead body, resuscitates it. The oldest of these is the Egyptian story of 'The Two Brothers,' in which Bata hides his heart in a tree. His wife causes the tree to be cut down, and he dies; but his brother, having discovered the heart, makes him swallow it in water, and he revives.⁵ Similar tales are found among the Basutos, Hottentots, Australians, Samoyeds, Hindus, and others; but in the Hottentot instance the heart of the dead

girl increases in size and takes her form.¹ In other folk-tales the heart of a dead person or animal, if eaten or even smelt by a woman, causes conception.

Thus in a S. Slavic tale a youth burns himself. A maiden discovers his heart, smells it, and bears a son.² In a Lithuanian story a hunter finds the heart of a hermit who has burned himself alive, and gives it to his daughter to cook for supper. She eats it herself, and has a son in two hours.³ In another instance it is the heart of a sea-dragon which causes conception.⁴ These stories recall the myth of Zeus, who, having swallowed the heart of Dionysos, begot him again by Semele. In another version the heart was pounded up and drunk by Semele in a potion, whereupon she conceived.⁵

Such a view of the heart as makes it the seat of religious experience, emotion, enlightenment, or Divine indwelling is common to most of the higher religions; while they also regard it as capable, in wicked persons, of being the seat of quite opposite desires and resultant effects. Here, of course, what is a metaphorical use of the word is based on earlier views regarding the physical heart itself. The mingling of the two conceptions is perhaps seen best in Egyptian religion, where the weighing of the heart before the judgment-seat of Osiris decided the fate of the deceased. While it was the heart of the deceased that was weighed, it represented his conduct or his conscience, or his whole ethical outlook and the result of his life. The words of the appeal to the heart not to witness against its owner show clearly the physical basis of the conception (see *ERE* iii. 432^a, v. 478). This twofold view is also seen in the Brahmanic discussions on the heart as the seat of Brahman. The city of Brahman is the body; in it is the palace, the small lotus of the heart, and in that palace is the 'small ether.' What exists within that ether is to be sought for, meditated, and understood. This 'ether' is sometimes held to be the soul or the individual self, but the general conclusion is that it is Brahman, present there for the benefit of his devotees. This view is not unlike the Christian conception of the indwelling Christ.⁶

Here also some reference must be made to the Roman Catholic cult of the Sacred Heart of Jesus. This cult, which has stimulated some of the highest devotion of Roman Catholicism, is directed not merely to the physical Heart of Jesus, but to that Heart as representing His whole Person, and symbolizing His infinite love for mankind. The Heart suggests the Love; the Love is centred in the Heart. This form of devotion was at first occasional and sporadic, and passages in the works of St. Bernard and St. Bonaventura point to it as one which they favoured. St. Gertrude († 1302) had a vision in which she seemed to rest her head on the Saviour's wounded side and heard the beating of His heart. This occurred on St. John's day, and she inquired of the saint whether he had experienced this. His reply was that he had, but that the revelation had been held over for later ages.⁷ In the 17th cent. Margaret Mary Alacoque had a similar vision by which Jesus revealed to her the wonders of His love and bade her make them known. Other visions followed, and, being published in the journal of Father de la Colombière in 1684, these experiences became widely known. Meanwhile the devotion had become popular, and in 1693 certain indulgences were granted by the Holy See to Confraternities of the Sacred Heart. In 1765, Clement XIII. permitted the Church in

France to have a Feast with a special Mass and Offices. But it was not till 1856 that this was permitted to the Church as a whole. In 1889 this Feast was made a 'double of the first class.' It is held on the Friday after the octave of Corpus Christi. Many confraternities and even States are devoted to the Sacred Heart, and innumerable churches have been specially dedicated under this title.

The devotion to the Sacred Heart of Mary is of an analogous kind, though in her case the love which is symbolized by the heart is her love to God and to her Son, which this devotion seeks to make the faithful imitate. The cult may also be traced back to the 12th cent., but Papal recognition in a partial form did not occur until 1799. In 1855 an office and mass were appointed by the Congregation of Rites, but these were not imposed on the whole Church, nor has any universal Feast yet been granted.¹

2. **Eating the heart.**—Since the heart is regarded as the seat of life, soul, and wisdom, as well as of courage and of similar virtues desired by the savage, the heart of a slain man, usually an enemy, is often eaten in order that his life, soul, courage, etc., may pass over into the eater and benefit him. This custom, which is a form of cannibalism (*q. v.*), exists not only where the actual eating of bodies takes place, but also where this wider form of cannibalism does not exist. It is conjoined sometimes with the eating of other parts which are also supposed to contain similar virtues, *e. g.* the liver.

In order to obtain courage the Kamilaroi ate the heart and liver of a brave man.² Among the tribes of N.W. Australia the fat of the heart of great hunters or warriors was eaten in order to acquire their cunning or courage.³ Young men among the Eskimos of Bering Strait, when they kill an enemy for the first time, eat a portion of his heart.⁴ In Africa the custom is universal among the tribes, and always with the same intention, *viz.* to acquire courage or whatever other qualities may be ascribed to the heart. It is unnecessary to give references, since every work on native customs mentions this practice, but a few particular instances of it may be cited (see also *ERE* iii. 198b). Ashanti medicine-men cut out the hearts of several of the enemy; and these, being mixed with blood and consecrated herbs, were eaten by all who had never killed an enemy before. If they did not eat them, their vigour would be sapped by the ghosts of the slain.⁵ Here, besides the purpose of acquiring courage, referred to by other writers, it is obvious that the eating of the heart, like the possession of an enemy's head (see *HEAD*), gave the eater power over the ghost. A similar reason underlies certain Eskimo customs of eating the heart (see *CANNIBALISM*, vol. iii. p. 200c). Among the Yoruba the priest of the war-god Ogun took out the hearts of sacrificial victims, dried them, reduced them to powder, and mixed them with rum, and sold them to those who desired courage.⁶ The custom was also wide-spread among the American Indians, and was sometimes associated with sacrifice of a human victim. When the Pawnees made the periodic sacrifice of a Sioux girl, the chief tore out her heart and devoured it.⁷ Here there was doubtless the intention of assimilating whatever peculiar properties the victim was supposed to possess.

Traces of these customs occur in folk-lore. In the *Mabinogion*, Gwyn forced Kyledi to eat his own father's heart; this resulted in the latter's madness.⁸ The Wends believe that the heart of a maiden or infant brewed in herbs will cure disease or inspire love. Hence graves are often violated to obtain the heart of a corpse.⁹ Possibly the old German belief that 'a dying man's heart could pass into a living man, who would then show

twice as much pluck,' is derived from this savage custom.¹ The belief that witches removed and ate the hearts of men while still living, thereby causing their death soon after, may also be traced to the same custom.²

The hearts of certain animals are often eaten in order to acquire their strength, courage, cunning, wisdom, etc. Among these the lion, the bear, the leopard, the wolf, and certain birds are the most usual. On the other hand, the hearts of such animals as are timid or slow are carefully avoided, though they may be given unawares to some one whom it is desired to injure. In Africa the heart of the lion is eaten by hunters or given to children so that they may acquire its courage.³ Among the Ainu and other tribes of Northern Asia who sacrifice the bear, its heart is eaten, but the Gilyaks will not allow a woman to taste it.⁴ In ancient times the hearts of such animals or birds as were believed to possess prophetic powers—mole, hawk, crow—were eaten by those who wished to obtain such powers or to have their power of divination increased.⁵ Traces of these customs are also found in Norse saga. Ingjald, until then timid, became very fierce through eating a wolf's heart. Siegfried, having eaten the heart of the dragon Fafnir, understood the language of birds. Wise-women are said to have eaten, as their special food, the hearts of all animals slain.⁶ In Syria and Asia Minor, eating the heart of a live pigeon is a remedy for heart-disease.⁷

3. **The heart in sacrificial rites.**—The heart, as a vital centre, is often the object of special care in sacrifice, whether of animal or human victims. It is either offered separately, or, having been removed from the body, is offered with it or with selected parts of it. The Ainu, at the sacrifice of the sacred bear, sometimes placed its heart before it to assure it that it was still alive.⁸ Among some of the Veddas, when an animal is killed, its heart is removed, roasted, and offered on a stick to Vedi Yaka, the spirit who is supposed to help them in killing game.⁹ In the island of Sumba the hearts and livers of victims are offered with rice to the ghosts of the dead, and then eaten by the offerers.¹⁰ The ancient Mexicans, when a human victim was offered, usually cut open the breast and tore out the palpitating heart, which was offered either separately or with the body, on the altar of the gods. Among the Egyptians, when the animal victim was slain and cut up, its heart was offered on the altar with the other parts, and the heart as an offering is often depicted on the monuments.¹¹ At the rite of 'Opening the Mouth' in connexion with the ritual of death, a bull was sacrificed, its heart was torn out and offered to the deceased, and then the relatives ate it raw.¹² A curious custom is referred to in a Bab. atonement rite for a sick man. The body of a sucking pig was placed at the patient's head, its heart removed and placed above his heart, apparently as a substitute for it as containing the life—'Give the pig in his stead. . . . Let the heart be as

his heart.¹ With regard to sacrificial offerings among the Teutons, Grimm is of opinion that among the nobler parts assigned to the gods the heart was one.² This was also the case among the Romans, with whom the *exta*, the parts burned in fire as an offering to the gods, included the heart.³

Analogous to the separate treatment of the heart in sacrifice is the custom of giving it separate treatment in death and burial rites. The myths of the relics of Osiris—one of these being his heart—buried at different places, the heart at Athribis, may point to some earlier custom of separate heart-burial in Egypt. But the usual custom was to remove the heart and embalm it, placing it in a Canopic vase under the charge of Tuamutef, or binding it on the leg. In order to renew the heart in the future life and provide the *ka* with it, the four chapters of the Book of the Dead were recited and written on amulets, some in the shape of a heart. The 30th chapter was written on a scarab, which was placed over the place of the heart, its words being recited by the deceased at the weighing of the heart. There were also formulæ for recalling the heart or preventing its being stolen.

In Christian custom the separate burial of the heart, sometimes in sacred ground, has now and then occurred. Bruce's heart was intended to be buried in Jerusalem; that of Livingstone was interred under a tree near where he died.

4. The heart in magic.—Like other important parts of the human body, the heart, as a seat of life, gave its form to heart-shaped amulets, which were worn to repel evil influences. This custom already existed among the Etruscans and Romans, many of the *bullæ* having the form of a heart,⁴ and heart amulets are often found in Egyptian graves. Such amulets are still worn in Southern Europe—in Spain, Italy, and Portugal—usually as a charm against the evil eye; and they were also known in Scotland as 'witch-brooches.' Here also the custom of 'casting the heart' was known. On the head of a sick person was placed a sieve with a comb and a pair of scissors set in the form of a cross. On this rested a wooden cup of water, into which molten lead was poured. Search was then made for a heart-shaped fragment, and this, sewn in a piece of cloth, was worn by the patient.⁵ An animal's heart was sometimes carried as an amulet for luck or to ward off evil influences. In Germany it was thought that an owl's heart gave luck in play, while to have a wolf's heart about the person would prevent one's being eaten by a wolf.⁶ In Mossul it was thought that 'the heart of a black cat dried and steeped in honey, and worn either at the beginning of the month or with the waning moon,' would cause the wearer to become invisible.⁷ The famous instance of Tobit (8²⁴) shows that the smoke of the heart and liver of a fish with the ashes of perfumes drives away the evil spirit. In W. Africa, fetishes often contain the heart of an ancestor.⁸

The heart of an animal was also useful to counteract disease or repel the evil influences of witches. In the Highlands, during cattle disease, the heart and part of the liver and lungs of one of the stricken animals were cut out and hung over the fireplace or boiled.⁹ Sometimes, as in Sussex and Germany, the heart of an animal overlooked by a witch was stuck full of pins and roasted. The witch was then visited with misfortune, or, being tortured in the heart, came and confessed.¹⁰ In Dorset a bullock's heart hung in the chimney was supposed to keep off fairies,¹¹ and in Lincoln an

animal's heart full of pins concealed within the fabric or walls had great protective virtue.¹ In these and similar instances elsewhere, when the heart is stuck full of pins, there is probably also an intention of hurting witches.²

In cases where the image of a victim is made by an evilly-disposed person with a view to causing his hurt or death, the region of the heart is often pierced with a pin, and the victim then feels intense pain at the heart, of which he often dies.³

LITERATURE.—This is cited in the footnotes.

J. A. MACCULLOCH.

HEARTH, HEARTH-GODS.—I. Evolution of the hearth.—A hearth is, technically, 'a piece of floor prepared to receive a fire.'⁴ The Eng. word 'hearth' and its synonyms in other languages are reminiscent of an early stage of culture, of one-roomed houses, in which one fire served for cooking and for warmth. Central in the primitive round-hut, as in the neolithic huts of Italy, it was merely a part of the beaten-earth floor, a depression, or small, shallow pit. In this form the fire-place is an oven, such as is made in camping-grounds to-day by wild peoples. The use of pottery tended to replace this depressed hearth by a level or raised area. Meanwhile the original oven was lined with stone, brick, or tiles. In another development a movable receptacle or firepan was placed in the pit. From this came the brazier or chafing-dish, the portable grate employed for heating purposes, and the stationary grate itself. In early times the sieve-form is often modified for either use. Sieve and grate are ventilated fire-pans, and as such differ from the closed oven. A third development, also denoted by the term 'hearth,' is the plate of tiles or of iron, originally the level area round the fire.⁵ The evolution of heating- and of cooking-apparatus and methods follows these three lines. The closed receptacle has such forms as the porcelain heating-stoves of northern Europe. This method is also that of the plate, and the modern radiator is an extension of the same principle to hot water. Similar was the Roman system of hot air circulating in the hollow brick wall. Cooking follows the two chief methods of the oven and the grill. One of the first developments of domestic architecture involved the removal of the fire to the side-wall or a corner of the room. Later, the multiplication of rooms split up the hearth; the original combined cooking and heating centre remained as the kitchen-fire and oven, a mere 'office,' the social sentiment of the 'fireside' being transferred to the chief of the living-rooms, and later vaguely distributed over the house as a whole.

At that stage of early culture which was marked by the organization of religion, the methods and sentiments of the domestic system were applied to the houses of the gods. The altar of burnt-offering is a magnified kitchen-hearth, the fire-altar a magnified heating brazier, luxury being shown in the scented fumes rather than in the comfort of its warmth.

Among primitive peoples who have not developed the permanent hut, and in their camping-grounds, continually changed, employ a mere shelter or *wurley* (Australian) of brushwood, the pit-oven

⁵ The hearth includes properly the entire floor from the back lining of the fireplace to the outermost edge of the incombustible material. . . . In builder's language the hearth is a slab of stone . . . which is outside the fireplace proper.' On this rest the supports of the mantel (which is derivable from the louver [see below]), the fender, and the fire-irons. This latter meaning is the popular modern connotation of 'hearth,' as distinguished from fireplace (Sturgis, s. v.).

and the camp-fire are distinct. The camp-fire here has the associations of the 'fireside'; the natives sleep close to it, and spend hours talking together in the warm sphere of its influence. The embers are carefully guarded from extinction during the day. But, as the civilized hearth was for ages a combination of cooking-stove and heating-apparatus, and its form is evolved from the primitive oven, it is necessary to describe the latter.

To make his cooking-oven, the Australian native digs a hole in the ground, and makes in it a fire of wood. When this is burning well, stones are placed on it. The moment these are red-hot, the food to be cooked is placed on them; green leaves are used to prevent scorching. Grass is spread over the food, and water sprinkled. The mass is then tightly covered with earth.¹ Throughout the South Seas this method is universal; in many cases the oven is permanent, and generally is of a more elaborate character than the Australian. The pit is about 2 feet in diameter, and varies from 6 inches to a foot in depth. Its walls and floor are beaten hard; in clay soil the texture soon becomes that of burnt brick. Charcoal as well as wood is used for the fire. Stones of the size of the fist are placed in a layer above the fire. When they are red-hot, the woman-cook removes them and clears the embers out of the oven, in which the stones are now placed. A layer of green leaves on the stones is sprinkled with water; green leaves are also placed round the sides of the oven. The food being put in, mats are laid upon it; earth covers these, and is well pressed and beaten to prevent any escape of steam.² The principle is a sort of dry boiling.

The stage at which a fire-receptacle is placed in the hearth-pit may be illustrated by the modern Bedawin. The oven is a vessel sunk in the ground, above which is an iron plate, the *tajen*, 'hearth.' This is specially employed for baking bread. The hot-stone method also is used for cooking various food-stuffs. Both methods are common throughout the East.³

The ancient Hebrews used the hearth-pit both for cooking and for warmth. Like the fire-place still used by many of the poor in Eastern Asia, it was in the centre of the one-roomed house, and its smoke escaped through an opening in the roof. This method may be regarded as practically universal at a certain stage of culture. Early Greece and early Italy possessed it. The *atrium* of the Italians was originally dining-room and kitchen in one; it was developed from the neolithic round-hut. The early Greek *μέγαρον*, or one-roomed house, which later was the hall, had the *έστία* or *έσχάρα* in the centre of the floor. When the *παράδος* took the place of the *μέγαρον*, the *έστία* was possibly retained there, or may have been transferred to the dining-room, *άνδρών*, since food-offerings were placed in it before meals.⁴ In the same way the Italian *atrium* lost both of its functions: the kitchen, *culina*, received the cooking-fire; the living-rooms were warmed by braziers, *foculi*,⁵ until the hypocaust system was introduced. The sacred associations of the *focus* were preserved in the lamp which always burned before the Lares, whose original place was on the hearth. A niche

⁴ L. Whibley, *Companion to Greek Studies*, London, 1905, p. 553.

⁵ The modern four-legged dishes for keeping food warm on the table reproduce in form the ancient *foculus*, which was also used for the purpose. Bronze *foculi* were found in great numbers at Pompeii.

was often retained for them by the side of the kitchen hearth. Both Greek and Latin houses of the well-to-do in the most highly developed periods possessed private chapels. Possibly this was, in some Greek instances, a room of the *θόλος* type. This was not the case with the Roman *lararium*. The developed kitchen fire-place was a structure of masonry or brick, a foot above the floor. But it still retained the primitive fire-pit character, since a rim of masonry converted it into a receptacle. An arched opening at one side served as a 'tender' for fuel.¹

In Teutonic lands the central hearth of the one-roomed house lasted among the poor into the later Middle Ages. Its previous universal employment cannot be understood unless we take into account the large size of the central hall in the houses of the well-to-do. The differentiation of the one house-fire into hall-fire and kitchen-fire was here of early date. The introduction of the chimney involved the change of position to the side-wall of the room. Till the 16th cent. the fire-place was built without a recess; a hood, or louver, above the hearth and containing the entrance of the flue, solved the problem of smoke.² The large recess admitted of a semi-circular gathering round the fire (the primitive gathering round the central hearth was circular), and such pieces of furniture as the 'settle' assisted the 'fireside' sentiment, as they ministered to the comfort of the hearth.

The evolution of the fire-place among the Hebrews was similar to that among the Greeks and Latins. The fire proper was relegated to the kitchen. In the houses of the rich the brazier or chafing dish was used for warmth.³

The Hindus have preserved longest the combination of kitchen and dining-room⁴—a fact ultimately not unconnected with the climatic conditions of India. The portable clay fire-pan is the eastern brazier. The kitchen is divided into two unequal parts, the smaller serving for the culinary operations.⁵

2. The hearth in religion.—The conception of the hearth as the centre of the house and home lends itself to metaphor. A remarkable case is the employment in the modern science of optics of the Latin word for a 'hearth,' *focus*, to denote the central point at which rays of light converge. The use of the term as a verbal 'focus' for sentiments of domesticity and family solidarity is notable in the Latin phrase *pro aris et focis*. In English 'hearth and home' is representative of what is perhaps the strongest example of the association. 'Hearth' was also a synonym for 'home.'

Hearth-cults emphasize in some cases the combination of fire-place and fire, in others the fire, in others again the figures of divine beings brought into connexion with the hearth. Among the latter, the sacredness of both components is derived from ideas of family life. They thus appropriately meet at its material centre.

The original connotation of the Greek term *έστία* seems to have been the hearth with its fire. (See the 'Greek' article below.)

The worship of Vesta by the Romans was purely public. It has the look of a revival from a Græco-Italic cult, if the goddess was not actually borrowed from Greece. (See the 'Roman' article below.)

The Scythians honoured Hestia, whom they called *Ταβηρί*, as chief of all deities (Herod. iv. 59).

In Indo-Iranian cultus the sacred fire assumes greater importance than the hearth or altar, so far as personalization is concerned. But the receptacle is sacred. Sacredness also attaches to the house-fire and cooking-apparatus of the modern Hindu

(see FOOD), whose kitchen is usually his dining-room. Orthodox Brāhmins still maintain a special room for fire-sacrifices, the *homa-sālā*, on the ground-floor. Ancient custom distinguished two degrees of piety, the one being represented by the *homa-sālā*. In ordinary circumstances the 'householder' was satisfied with a single hearth of burnt clay for his sacrifices. This was the *grihyāgni*, 'household fire.' Its close connexion with family sentiment is shown by the important part it played in marriage-ceremonial. The details show its connexion with the preparation of food, and, generally, with the well-being of the future family. The sacred fire was kindled for the marriage-ceremony by friction of the sacred *arāni* wood. West of it were placed the millstones for corn-grinding, and a set of the indispensable condiments. At its north-east was a water-jar. The groom led the bride round the fire and the water, saying, 'I am male, thou art female; come, let us marry.' At each circuit she stepped upon the stones. *Ghī* was offered in the fire. Various ceremonial 'steps' for various forms of well-being were taken by the bride, in auspicious directions. The fire was taken by the young couple to their new home, and installed in a special room. No one might breathe upon it; nothing impure was thrown into it; and it was never used for warming the feet. This fire and room were sufficient for ordinary domestic ceremonies during life. The Vedic ceremonies, *śrauta-karman*, called for the *homa-sālā*. Three differently shaped hearths or fire-pans, *ukhā*, were here required. The erection of any fire-altar was *Agni-karman*. The three hearths were the *gārhapatya*, the *āhavanīya*, and the *dakṣiṇa*, the fire in each having a different name. The primitive pit appears here; in it the *ukhā* was placed. The *gārhapatya* is a term applied to the ordinary householder's single hearth. It was built of bricks, laid according to the way of the sun, the *deasil* of Celtic custom. Eight bricks were laid in a cruciform formation within a circle. The *Satapatha-Brāhmaṇa* gives elaborate details. The clay was bound together with resin and goat's hair. A lotus leaf was a frequent ornament of the centre of the *ukhā*. The symbolism was equally recondite, and curiously echoes that of the fire-sticks. The receptacle is female, the fire male. The *ukhā* is a womb. *Prajāpati* was poured into it, as seed. The *gārhapatya* corresponds to the world; it is the hearth of the ordinary man. The *āhavanīya* corresponds to the sky, the *dakṣiṇa* to the air. The sacred fire was a symbol of present divinity, of 'God with us,' the 'brilliant guest' in the heart of the family. Morning and evening the household worshipped round it, feeding it with consecrated chips of *samidh*, sacred wood, from the *palāśa* tree, and sharing a ceremonial meal of rice and *ghī* with it. This is the *homa*-sacrifice. The fire had to be kept burning always. The theory was that the flames which witnessed the union of man and wife should also light the pyre for the burning of their bodies after death.¹

The Zoroastrian religion consecrated both the public fire-altar and the domestic hearth. Still, wherever Parsis are found, an everlasting fire, the Bahrām fire, is maintained 'by a more than Vestal care.' It is fed with perfumes and perfumed wood. To extinguish it is a mortal sin. The spreading of its flames slays thousands of demons, as Bahrām slays them in Heaven. If it should be put to profane uses, it must be taken for rehabilitation to 'the Right Place of the Fire,' *dāityō gātu*.²

If in Zoroastrianism fire overshadowed in development the hearth, in Teutonic belief and custom religion has been overshadowed by domestic sentiment. In early times the roof-tree had almost the sacred characteristics of Vesta's laurel at Rome. Grimm compares with the *lar* and *penas* the *hūsing* or *stetigot*, a sprite that dwells beneath the hearth, and is seen issuing thence by the peasants' imagination.¹ The repeatedly recurring notion that the spirits of the dead dwell beneath the hearth may be attributed to its central position in the primitive dwelling, and to its being sunk in the ground. In Homeric religion, communication is made with the under world by digging pits, as with the upper world by raising altars. Thus the two forms of hearth, the fire-pit and the raised fire-place, not only serve as centres of family worship and of public cultus, but bring together the gods above and the gods below, after differentiating them.

Among the Damaras (Ovaherero) of South Africa there was a remarkable cult of the hearth.

'The chief's daughter,' says Andersson, 'is to the Damaras what the Vestal was amongst the ancient Romans, for, besides attending to the sacrifices, it is her duty to keep up "the holy fire." Outside the chief's hut, where he is accustomed to sit in the daytime, a fire is always kept burning; but, in case of rain or bad weather, it is transferred to the hut of the priestess [sic; this is the chief's hut], who, should it be deemed advisable to change the site of the village, precedes the oxen with a portion of this consecrated fire, every possible care being taken to prevent it being extinguished. . . . A portion of such fire is also given to the headman of a kraal when about to remove from that of the chief. The duties of a Vestal then devolve on the daughter of the emigrant.'²

The girl is probably the daughter of the chief's favourite wife. Later accounts supplement this, while correcting it. The residence of the chief is the *otyizero*, the 'holy house,' corresponding to the fetish-houses of West Africa. In front of this is kept perpetually burning the *okuruo*, 'holy fire.' A usual phrase, corresponding to the Greek *εστία*, is 'the place of the holy fire.' The fire is made by means of two sticks (see art. FIRE, FIRE-GODS), the one of which is the *ondume*, and the other the *otyiza*. The *ondume* represents the *omkuru*, 'ancestor deity'; the *otyiza* his wife. The symbolism of male and female is as marked here as in the Aryan *arāni* sticks. When a death has occurred, the soul of the dead is vaguely identified with 'the ancestor deity.' We might put it that his personality is merged in the *omkuru*; thus a series of ancestors may be regarded as one individual. The 'embodiment' of the dead man's soul in the fire-stick is equally vague, but really believed, just as is the embodiment in snakes which belongs to the creed of the Kaffirs. The *otyizero* is technically the principal house of the chief. The chief's eldest unmarried daughter, *omuatye ondangere*, has charge of the sacred fire, which must never be allowed to go out. She officiates in certain social ceremonies like a priestess. The chief himself is similarly a priest for his people. Her popular name is 'the big girl'; another title is 'Favourite.' With the ashes of the sacred fire she or her mother, 'the big woman,' paints the faces of the warriors before they set out on expeditions. Near the sacred fire is a stone seat for the use of the chief and the medicine-man. Often there is more than one holy fire in a village. Every head of a household also possesses one, at which he performs the ceremony of naming his children. This may also be performed at the *otyizero*. The child is perhaps 'introduced' to the *omkuru*. The father takes it in his arms and announces the name. For the ceremony of circumcision, performed between the ages of 4 and 7, the meat (which is holy, *zera*) is cooked at 'the place of the holy fire.' A portion of it is kept in the holy house for some weeks. Ap-

parently this is an offering to the *omkuru*; at the end it is eaten by the chief ceremonially. All the meat at the circumcision ceremony is presented to the *ozondume*, the fire-sticks representing the ancestor and his wife, that they may 'consecrate it without tasting'—the ceremony of *tova*. The ceremony of mutilation of the teeth, which is performed when a boy is 8 or 10, takes place in front of the holy hearth. The ceremony of anointing and dressing the bride for the bridal feast is also performed here, and the meat to be eaten is consecrated, as before, at the place of the holy fire. When the husband has brought his bride to his own village, he and she go through ceremonies at his native *okuruo*. Sick persons are carried to the *okuruo*. A prayer is chanted to the *omkuru*: 'See, Father, we have come here, with this sick man to you, that he may soon recover.' Meanwhile meat cooked on the holy fire is carried round and round the patient. When death occurs in a *werft*, the inmates desert it for a time, after burying the dead within it. When they return in due time to rebuild on the old site, the ceremony of 'approaching the ancestor deities' is performed, as is also the case with the place of the holy fire belonging to the chief, in times of drought, or war, or pestilence. The holy fire of the *werft* which they have now deserted is extinguished. No brand of it is taken; the fire in the new *werft* on the old site must be made 'from the *omkuru*,' i.e. with the *ondume* and the *otyiza*. On arriving they make the lamentation for the dead, and exclaim: 'See, Father, we are here!' The dead man is now the *omkuru*. New fire is then made on the holy place, and a sheep is slaughtered near it. This is termed 'the sheep of the holy fire,' and persons of all ages and of both sexes are allowed to eat of it. Meat is consecrated and placed on the grave. The medicine-men take the opportunity of knocking on the floor to elicit information as to the future from the *omkuru*. The ceremony is termed *ondyamberero* or *okuyambara*, 'approach to the deities.'¹

The connexion of the hearth with ancestor-worship is natural and inevitable. It is found in China.² According to the Taoist books, there is a Spirit of the Hearth, who periodically reports to Heaven all ill deeds of the household. Here, too, is found the tabu against stepping over sacred objects. To stride over food or the hearth is a sin.³ The figure of an ancestor is carved on the pillar of the Maori fire-place.⁴ It is suggested that the Latin male divinity of the hearth may have been an ancestor.⁵ In Borneo the hearth of the Bahau chief is 'sacred to spirits.' From it each householder takes a morsel of earth to build his own hearth, and lights from its flames the first fire in his new home.⁶ In Russian folklore the hearth has its connexion with the family ancestors.⁷ The Southern Slavs believe that the extinction of the fire on the hearth means the extinction of the family.⁸ This people, like the Hindus, make the family-hearth play a conspicuous part in such family ceremonies as marriage.⁹ The Lithuanians possessed a 'domestic god,' *Dinstipan*, who directed the smoke up the chimney.¹⁰

The common family-rite of flinging portions of the family-meal into the hearth-fire is probably an act of ancestor-worship. This 'worship' may

exist without ever being formulated into a cult; it is a testimony, in all its stages, to the central importance of the family in human life and society. The connexion of the hearth with both sentiment and cult is to be regarded as an irreducible psychological association. To name a few cases of the offering to the hearth—it is found among the ancient Greeks, Latins, and Slavs, the Mexicans, and the Hindus.¹ The principle followed by the last-mentioned people is

'that before a man begins eating he ought to consecrate and purify his food by making offerings of small portions of cooked rice and other food to all the deities through whose favour he is himself fed, and more especially to Fire, who is the bearer of the offering to heaven. . . . the whole ceremony resolves itself into a form of homage offered to the gods who give the food, and to the god of fire without whose aid this food could not be prepared for cooking.'

In this Vaisvadeva ceremony, Vedic gods are worshipped, chief among them being Agni, the fire-god. The cooked food, *siddhanna*, is cast into the fire, as the worshipper prays, 'for the purification of that food and for my own purification, and to make expiation for the five destructive domestic implements (*pañchashamā*), and to obtain the reward prescribed by the Śruti, Smṛti, and Purānas.' The movable fire-pan, *ukhā*, is employed, and a particular form of sacred fire, viz. *rukma* (bright as gold), is placed in it. Consecrated fuel is put on, and the fire is fanned. Then the fragrant sandal, *vilepana*, is flung into the fire, also flowers, as offerings to Agni. A portion of cooked rice, about a mouthful, is next offered to all the gods in turn. Lastly, ashes from the fire, *vibhūti-grahana*, are taken in a deep-bowled spoon, *darvi*, and are applied with the finger to various parts of the body, with a prayer to Siva; and, with the prayer, 'May I enjoy the triple life, *tryāyusam*, of Jama-dagni, of Kaśyapa, of Agastya, of the gods; may I altogether live for a hundred years, the ashes are applied to the neck, navel, shoulders, and head.'² The Hindu cult has followed a special line of development: ancestor-worship is merged in polytheism; hearth-worship is differentiated into polytheistic burnt-offering and fire-worship. But the idea of a central family-rite remains.

In the theory of sacrifice, enough has not been made of the fact that the altar is technically and in principle a hearth. This was recognized clearly by the Greeks (*ἑστία* = *ἑστῆς*) and the Hebrews. The top of the Hebrew altar of burnt-offering was its 'hearth.'³ The altar, in short, is the combined fire and cooking-place of the people's representatives. There was thus brought into the great sacrificial religions the idea that the people, and later the human race, are one great family. The Greek notion of a hearth centrally placed in the universe has been referred to. The Hebrews applied to Jerusalem the mystical title of *Ariel*, 'the hearth of God.'⁴ The Hindus represented the fire-altar as symbolical of the Universe.⁵

LITERATURE.—This is fully given in the footnotes.

A. E. CRAWLEY.

HEARTH, HEARTH-GODS (Greek).—The reverence paid by the Greeks to the hearth (*ἑστία*) appears from its personification in the goddess Hestia, who is first mentioned in Hesiod (*Theog.* 454) and the Homeric hymns (*Aphr.* 21 f., and Hymns xxiv. and xxix.). In each Greek city the town-hall, or *prytaneum* (originally the king's house), was sacred to Hestia, and a perpetual fire was maintained on the 'common hearth.' The custom of preserving a sacred fire in a chief's house is wide-spread (see Frazer, in *JPh* xiv. 145 f., and *GB*³, 'Magic Art,' vol. ii. ch. 17); and in Greece,

as at Rome and elsewhere, it probably originated from the practical difficulty of re-kindling fire by the primitive method of rubbing two sticks together (see FIRE). It has also been suggested that the maintenance of the sun's heat was associated with the upkeep of a perpetual fire on earth; if the flame was extinguished, the sun might fail (A. B. Cook, in *FL* xv. [1904] 308 f.). In any case the custom must have become a religious duty at an early period. At Athens and Delphi, if the sacred fire was extinguished, it was re-kindled from the sun's rays (Plut. *Numa*, 9). The fires on the common hearths of these two cities were tended by widows, who corresponded to the Vestals at Rome; but there was never a religious order of Vestals in Greece, and the great importance of these virgins has no analogy in Greek religion. The virginity of Hestia herself is, however, a noticeable feature in ritual and myth. The goddess took a vow of perpetual chastity (Homer, *Hymn to Aphr.* 21 f.), and sexual intercourse was forbidden in front of the hearth in private houses (Hes. *Op.* 733). At Sparta there was a priestess called Ἑστία πόλιως after the goddess (*CIG* i. 1253, etc.); but generally the public worship of Hestia was in the hands of men (cf. Aristotle, *Pol.* 1322b). In some cities the hearth-fire in the *prytaneum* seems to have given place to a lamp (Theocr. xxi. 36; Athenæus 700 D); otherwise (as at Elis [Paus. v. 15. 9]) the ancient form of the hearth was retained. Certain hearths were of importance beyond the limits of the particular State, e.g. at Delphi and Delos. After the battle of Plataea the Delphic oracle commanded that all fires, as being polluted by barbarians, should be extinguished in the country, and new fire brought from the common hearth at Delphi (Plut. *Arist.* 20). From Delos sacred fire was brought every year to Lemnos, all fires in that island being extinguished for nine days during the voyage of the vessel (Preller-Robert, i. 179, 426). When a colony was founded, it was supplied with fire from the common hearth of its mother-city (Herod. i. 146; schol. on Aristides, iii. 48. 8 [Dindorf]; *Et. Magn.* p. 694. 28 [Gaisford]; Aristoph. *Av.* 43, where fire for a new city is carried in earthen vessels). The custom has savage parallels (see Frazer, *op. cit.* 215 f.). It is probable that, in imitation of this practice, the fire of a new house was lighted by the mother of a bride from the parental hearth; but this is only a conjecture (see Gomperz, *Greek Thinkers*, Eng. tr., London, 1901, i. 117).

While the maintenance of perpetual fire on the public hearth is proved, it is doubtful whether the same custom prevailed in private Greek houses. Frazer admits that direct proofs are wanting for ancient Greece, but quotes many instances, both in Europe and in other parts of the world, in which private householders keep a fire always burning on their hearths. In modern Greek houses the lamps before the sacred icons are never allowed to be extinguished; and this may well be a survival from pre-Christian times. Artemidorus (*Oneirocr.* ii. 10) considers it a bad omen to dream of putting out the hearth-fires; but this need not imply that the fire was never suffered to die of its own accord. A Homeric hymn to Hestia (xxix.) addresses the goddess as one who has an eternal seat in the houses of god and men; but this passage must not be pressed too far. Preuner (in Roscher, i. 2609) thinks the custom improbable, owing to the lack of evidence which would probably have been forthcoming, as for the public hearth. In any case, great sanctity was attached to the private hearth from the earliest times. Even in Homer (although the personification of the Hearth-goddess is later) an oath taken in the name of the hearth was of peculiar force (cf. *Od.* xiv. 159, etc.). In

later times such an oath was common, especially when the interests of the family were concerned (see Jebb on Soph. *El.* 881; Roscher, i. 2623). Prayer was also offered to the hearth (or to Hestia) on solemn occasions, as on returning home after long absence (cf. Eur. *Herc. Fur.* 599), or when death was imminent (Eur. *Alc.* 162 f.). The Orphics prayed to Hestia for health and wealth, and for all moral or material well-being (*Orph. Hymn* lxxxiv.). The first libation of wine was regularly offered to Hestia in public and private feasts; hence the proverb ἀφ' Ἑστίας ἀρχεσθαι. So, at Olympia, the first sacrifice was in honour of Hestia, who took precedence even of Olympian Zeus (Paus. v. 14. 5). In public sacrificial feasts the last as well as the first libation seems to have been poured to the goddess (Homer, *Hymn* xxix. 4; Cornutus, *de Nat. Deor.* 28). For other details of sacrifice, see Preuner, in Roscher, i. 2617.

In private life the hearth was the centre of the family. In Attica, a child when five days old was carried by persons who ran round the hearth. At this festival, which was called Amphidromia, the child received its name (see Aristoph. *Lys.* 757; schol. on Plato, *Theat.* 160 E; S. Reinach, *Cultes, mythes, et religions*, i. [Paris, 1905] 137; *ERE* ii. 648^b). On the meaning of παῖς ὁ ἀφ' Ἑστίας in the Eleusinian Mysteries, see Farnell, *CGS* iii. [1907] 164.

Perhaps the chief importance of the hearth, both public and private, lay in the fact that it was an asylum of refuge. A suppliant who entered the house of another and sat at his hearth could claim protection (cf. Herod. i. 35; *Æsch. Ag.* 1587; Pind. fr. 49; Soph. *Oed. Col.* 633; Eur. *Herc. Fur.* 715; and Thuc. i. 136, where Themistocles obtained protection, even from an enemy, by sitting at the hearth of Admetus, king of the Molossians, and taking the child of Admetus in his arms). Sometimes, however, the rights of asylum were violated; Theramenes was dragged from the hearth in the Athenian senate-house, at which he had taken refuge (Xen. *Hellen.* ii. 3. 52).

As the earth was commonly held to be the centre of the universe, we find that poets and philosophers identified the Earth-goddess with Hestia, the centre of the home (Preller-Robert, i. 427; J. E. Harrison, in *JHS* xix. [1899] 243). Just as there was no statue of Vesta in the temple at Rome, even in the time of Augustus, so in early times the Greeks had no image of Hestia; the hearth, with its fire, was itself worshipped. Later, at Athens, there was an image of Hestia in the *prytaneum* (Paus. i. 18. 3), but evidence for other cities is lacking. Pausanias notes (ii. 35. 1) that there was no image of Hestia in her temple at Hermione; sacrifice was made on an altar. Temples of the goddess were rare, as her chief sanctuary was the *prytaneum* of a Greek city.

In general art the Hearth-goddess was represented under the form of a woman either seated or standing in a restful position, appropriate to a deity who, in Plato's myth, alone never leaves the house of the gods (*Phaedr.* 246). The Greeks themselves derived her name from ἔσθαι ('sit'), though it is certainly cognate with *Vesta*, and may mean the 'bright' or 'shining' fire (Skr. *vas*).

E. E. SIKES.

HEARTH, HEARTH-GODS (Roman).—The fire-place, hearth, or *focus* was originally the centre of the Roman dwelling-house, both in a literal and in a figurative sense, and was situated in the pos-

terior portion of the *atrium*,¹ which served generally as a parlour and a public room,² and was so named because its roof was blackened by the smoke rising from the hearth-fire.³ In this chamber the inmates of the house took their meals, sitting at long tables,⁴ as was the practice also in rural districts at a later period,⁵ and portions of the food were cast upon the fire as oblations.⁶ In later times the scraps that fell to the floor were similarly disposed of,⁷ or were set in little pans (*patellæ*) upon the hearth.⁸ In the house, accordingly, the hearth supplied in every respect the place of the altar, and the frequently recurring phrase *aræ focique*⁹ embraces the whole sphere of *sacra publica privataque*. The importance of the hearth as the religious centre of the house appears very prominently in the ceremonial of marriage. Thus the bridal torch was kindled at the hearth-fire of the bride's home,¹⁰ and the bride herself was received by the bridegroom with a torch lit at his own hearth,¹¹ while, again, the young wife had to lay an *as* upon her husband's hearth as a sacrificial gift,¹² thereby, so to speak, purchasing a share in the religious fellowship of her new home.¹³ As mistress of the house it was her special task to keep the hearth clean, and to deck it with garlands at the Kalends, Nones, and Ides—duties which in her absence devolved upon the stewardess (*vilica*) as her representative.¹⁴

The fact that the hearth was the shrine of the household gods, ancient and modern writers, proceeding upon the assumed identity of these with the ancestral spirits, have sought to explain by the hypothesis that in primitive times the dead were interred within the house, just beside the hearth.¹⁵ We have, however, no evidence that this was ever the practice in Rome; the reference of Serv. *Æn.* v. 64, vi. 152, 'apud maiores . . . omnes in suis domibus sepeliebantur,' is intended simply to justify the worship of the household Lares and Penates, and is thus obviously a mere theory, which the laying open of the ancient cemeteries in the Forum and on the Esquiline has in no way confirmed.

The household deities worshipped at the hearth all bear in common the name *di penates*.¹⁶ The term *penates* is derived from *penus*, the store-room off the *atrium* and close to the hearth;¹⁷ the contents of this chamber were guarded by the Penates, who in this way guaranteed the continued existence of the house. Among the Penates the chief place is held by Vesta, who is simply a divine personification of the hearth-fire,¹⁸ and, in fact, her

name is actually used metonymically as equivalent to *focus* or *ignis*.¹ But, in addition to Vesta, all the deities regarded by a particular household as the special guardians of its fortunes were worshipped as Penates; and the wall-paintings and bronze figurines of Pompeian domestic chapels show that in later times such homage was very frequently accorded to Juppiter, Fortuna, Hercules, Mercury, etc. Originally, however, the term *Penates* was not used with reference to particular divine personages at all, but was applied quite generally to all the tutelary *numina* of the household. This more primitive conception still survived in the State worship of the gods at a later day; thus the circular temple of 'Vesta publica populi Romani Quiritium' in the Forum did not contain images of the gods, but enclosed only the sacred fire of the national *focus*, and the *penus* attached to it; here, in fact, the national worship of Vesta and the Penates always remained an imageless cult.

Like the national worship in the temple of Vesta, the cult associated with the domestic hearth was at the outset also confined to Vesta and the Penates. It was only at a later period that the worship of the Lares became incorporated with the domestic hearth-cult. The worship of the *Lar familiaris*, originally localized at the *compita* (cf. art. CROSS-ROADS [Rom.], vol. iv. p. 335 f.), was gradually—and in reality for the sake of the household slaves, who had a strong interest in the cult of the Lares²—allowed a place beside that of Vesta and the Penates at the domestic hearth. Hence in Plautus³ the treasure entrusted to the keeping of the *Lar familiaris* is buried 'in medio foco'; and, later, people even spoke of the 'focus Larum,'⁴ while the food that was formerly presented to the Penates came at length to be offered to the Lares.⁵ In the re-organization of the Lar-cult by Augustus⁶ the tutelary spirit (*Genius*) of the master of the house was also added to this group, and in the wall-paintings of Pompeii we see the figure of the *Genius* standing between the two Lares and conjoined with Vesta and the Penates.⁷ By this time, however, the hearth had long been removed from the *atrium* and placed in a separate room for cooking in the rear portion of the house;⁸ the shrine of the household deities (often called *lararium*)⁹ was in some cases transferred with it to the kitchen,¹⁰ while sometimes it was still retained in the *atrium*,¹¹ or else placed in other rooms of the house,¹² so that its connexion with the hearth was now for the most part a thing of the past.¹³

Just as in the private house the hearth supplied the place of the altar, so we occasionally find *foci* or *foculi*, either in addition to, or as substitutes for, the altar, in the sacrificial ritual of the State religion.¹⁴ These were sometimes used as *aræ temporales*, i.e. altars for temporary occasions¹⁵, some-

times in circumstances where a portable apparatus was employed for the introductory libations of wine and incense,¹ or for the burning of the entrails.² Hence the occasional use of the phrase 'foculo posito' as designating an accompanying sacrificial act.³ The assertion that the use of *foci* was confined to the worship of particular classes of deities⁴ rests upon an arbitrary hypothesis of Roman writers. On monuments showing representations of sacrificial ceremonies we find the *foculus* in the form of a collapsible metal tripod supporting a vessel for holding the fire.⁵

HEAVEN.—See COSMOGONY, STATE OF THE DEAD.

HEBREWS.—See ISRAEL.

HECATE'S SUPPERS.—'Hecate's suppers' (δέιπνα Ἐκάτης, or, as they were sometimes called, Ἐκαταῖα,⁷ or Ἐκατήσια⁶) were the offerings laid at the cross-roads every month for Hecate. Their purpose was to placate not only this dread goddess of the under world, but also, as we learn from Plutarch (*Moralia*, 709 A), the ἀποροπαῖοι, i.e. the ghosts of those who for some reason cannot rest easy in their graves, and come back to earth in search of vengeance.⁹ An army of these invisible and maleficent beings follows in the wake of its leader and queen as she roams at large through the midnight world.¹⁰

In reality, then, these offerings are a specific variation of the primitive cult of the dead. And to a certain extent this specific variation is due to the well-known fact that the Hecate with whom we have to deal is a composite deity. She was a moon-goddess, and possibly even a goddess of the roadways,¹¹ as well as a goddess of the under world; and which of the three was her original function is a matter of dispute. This, however, need not concern us here, inasmuch as the amalgamation had evidently taken place long before the *Plutus* (594 ff.) of Aristophanes, in which occurs the first surviving reference to our subject.

Hecate's suppers were naturally deposited at the cross-roads. The triple goddess is so clearly identified with the place where three roads meet that

she is often known as Τροδίτις, Trivia. The cross-roads, too, have always been haunted by ghosts of the unquiet dead (see CROSS-ROADS).

As regards the day of the month upon which these offerings were made, the testimony appears at first sight to disagree, and the result has been a certain amount of confusion in the statements of modern investigators. We are told, on the one hand, that the date was 'at the new moon,'¹ or, as stated more exactly by the scholiast on Aristophanes (*Plutus*, 594), κατὰ τὴν νοῦμηνίαν . . . ἐσπέρας, which, in this connexion, ought to mean 'on the eve of the new moon.' The statement is entirely in accordance with the character and functions of the goddess. Beyond a doubt, the date of this sacrifice was determined, at least originally, by the first appearance of the new moon: that is, by the first appearance of Hecate herself as she comes up again from Hades. Offerings to the dead were also made on this day.² On the other hand, we are told that the sacrifices to Hecate and the ἀποροπαῖοι fall on 'the thirtieth,'³ i.e. on the last day of the month according to Greek reckoning. This day was also given up to the service of the dead.⁴ Indeed, at Athens the last three days of the month were sacred to the powers of the under world, and hence were counted ἀποφράδες, nefasti. Δείπνα were given to Hecate and the ἀποροπαῖοι; libations were offered to the dead, etc.

The discrepancy of dates, however, is only apparent. So long as the Greeks reckoned time by lunar years, which was the case during the earlier history of these sacrifices, the eve of the new moon always fell on the thirtieth of the month as a matter of course. The reformed calendar took no account of the phases of the moon. Nevertheless, the old habit of calling the first of the month νοῦμηνία, 'new moon day,' still persisted for an indefinite time, and to an indefinite extent. Hence, when the scholiast quoted above said 'on the eve of the νοῦμηνία,' he doubtless had in mind the thirtieth of the month according to the new calendar. It seems certain then, partly no doubt because 'three' and all its multiples are peculiarly sacred to Hecate, that the sacrifice still clung to the thirtieth, despite the fact that, when the calendar was reformed, the original reason for selecting that date ceased to exist. It is possible, of course, that the rite was also performed at the actual appearance of the new moon as well as on the traditional thirtieth, but this cannot be proved on the basis of evidence now available.

A reference in the *Hecate* of Diphilus and a passage from Philochorus—both quoted by Athenæus, 645—show that on the eve also of the full moon (the 13th of the month Menechion [cf. C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, p. 1062]) Hecate was remembered at the cross-roads⁵ with a cake surrounded by lighted torches, and known as an ἀμφιφῶν. This striking prototype of our birthday cake was also a regular article of diet.⁶ It seems likely, however, that this observance at the full moon came over to Hecate from Artemis at a later date.

As is usually the case with offerings to the dead, the regular Ἐκάτης δείπνον on the thirtieth of the month consisted of food. The specific articles, so far as they are mentioned, were: (1) μαγίδες,⁷ a kind

of loaf or cake, the shape and ingredients of which are not clear; (2) the *μαύλις*,¹ or sprat; (3) *σκόροδα*,² or garlic; (4) the *πρίγλη*,³ or mullet; (5) *ψάμμητα*,⁴ a sacrificial cake described by Harpocration as 'somewhat like the *ψαιστά*'; (6) eggs;⁵ (7) cheese;⁶ (8) possibly the *βασάνιας*, a kind of cake, for which Semus, in Athenæus, xiv. 545 B, gives the recipe.

Certainly some, perhaps all, of the articles in this ceremonial bill of fare were thought to possess some peculiar virtue or association commending them to Hecate and her crew. Ancient and widespread, for example, is the belief that the cock is the herald of the sun, and that all vagrant ghosts must obey his summons and return to their place.⁷ Possibly this is one of the reasons why eggs are so regularly associated with the cult of the dead.⁸ In most cases, however, it is likely that the choice of a given article for a given sacrifice is the cause, not the result, of the properties and associations ascribed to it. The belief, for instance, that garlic was sovereign against vampires⁹ was probably the result of, instead of the original reason for, its use in this service. So, too, the evident fact that the *πρίγλη*, or mullet, was sacred to Hecate is sufficiently explained by religious conservatism. Various authorities quoted by Athenæus give reasons for it, but these were evidently second thoughts, and due to later theorizing.

However that may be, the food thus offered was meant to be prophylactic—to avert the *ἐνθύμιον*, the easily roused wrath of Hecate and the ghosts. Hence, if Roscher is correct, the title of Eucoline given her by Callimachus¹⁰ really embodies the worshipper's fervent prayer on these occasions that 'good digestion wait on appetite.'

With the regular *Ἐκάτης δείπνον* just described should be included the so-called *καθάρματα*, *καθάρσια*, and *δξυθύμια*. All three were connected with the purificatory and expiatory sacrifices to Hecate that were performed at regular intervals for the house and household. They were, therefore, left at the cross-roads for Hecate, and, as was usually the case with offerings made to spirits present and easily angered but invisible, the worshipper retired *ἀμεταστρεπτι*, 'without looking back.'¹¹ Finally, all three, as Rohde suggests (*Psyche*, ii. 79, n. 1), were doubtless more or less confused with each other and with the *Ἐκάτης δείπνον* at an early date.

In its general sense *καθάρματα* means garbage, trash, offscourings of any kind. In this connexion, to judge from a passage in Ammonius (p. 79, Valckenaer), *καθάρματα* (*καθάρματα καὶ ἀπολύματα*), as Didymus says in Harpocration, *s.v. δξυθύμια*) means all those portions of the sacrifices for the house which were not actually used in the ceremonial. Such, for instance, would be the *ἀπόνιμια* (Athenæus, ix. 49 E), the waste blood and water. Though merely *καθάρματα*, they were sacred to Hecate, and were deposited at the cross-roads.

The *καθάρσια*, on the other hand, appear to have been whatever was left of the sacrifices themselves after the ceremonial in and about the house had been completed. Among the articles probably belonging to this class are eggs, and especially the body of the dog used in the sacrifice.¹ Dogs, as is well known, were peculiarly sacred to Hecate, and played a very important part in these ceremonial house-cleanings among both the Greeks and the Romans. Before they were sacrificed, for example, they appear to have been touched by every member of the family. This process, the *περισκυλακισμός*, seems to indicate that on such occasions this oldest of the domestic animals acted as the *φαρμακός*, the scapegoat of the entire household.

Another important detail in this ritual, as in all similar rituals the world over, is evidently alluded to by Plutarch (*Moralia*, 709 A), but it is described only by the scholiast on Æschylus, *Choeph.* 98 (Kirchhoff). This was the fumigation of the house. After this was done, the censer, which was always of baked clay, was deposited at the cross-roads. In other words, in this particular ceremony the *καθάρσιον*, the only thing surviving, was the censer itself, and it was therefore treated accordingly.

We have called this ceremony 'fumigation,' because of the scholiast's own words: *καθαίροντες τὴν οἰκίαν ὄστρακινῳ θυμιατρίῳ*, 'purifying the house with a censer of baked clay.' No mention is made of what was actually burned in the censer—the operation was too familiar to require it. A somewhat different interpretation of these words, however, has had a considerable influence upon the modern discussion of the *δξυθύμια*. It has been assumed that what was burned in the censer was not the ordinary fumigating materials, but the actual *καθάρματα* or *καθάρσια* themselves, as the case may be; that this process was itself the *δξυθύμια*; and that, in fact, it was reflected in the derivation of the word (*i.e.* *θύμιον*, 'thyme'). If this is true, the best ancient authorities were at fault. The majority of them identify the *δξυθύμια* with the *καθάρματα*, or, less often, with the *καθάρσια*.² So far as we know, none of these were burned. Irrespective of the *ἀπόνιμια*, which could not be burned, we know that after the dog was sacrificed his body was taken to the cross-roads. We are also told not only that the eggs used were raw (schol. on Lucian, *Dial. Mort.* i. 1, p. 251, Rabe), but also, if we may believe that Clemens Alexandrinus (*Strom.* vii. 844) is referring to this sacrifice, that they sometimes proved to be *ζωογονούμενα*, able to fulfil the function for which nature had originally designed them. Certainly, too, the theory that *δξυθύμια* is connected with *θύμιον* serves to confuse rather than to explain. The idea usually connoted by *δξυθύμιος* is a high temper, a disposition easily roused to wrath. The present writer prefers, therefore, to adopt the suggestion of Rohde (i. 276 n.) that *δξυθύμιον* would really be a more emphatic statement of the idea contained in *ἐνθύμιον*—a word which, as we saw above, is quasi-technical in this particular sphere; *δξυθύμια*, then, would be 'ceremonies to avert the wrath' of Hecate and the ghosts. As such, it would naturally be a generic term for either *καθάρματα* or *καθάρσια*, and we see why the old lexicographers identified it now with the one, now with the other.³

Any interference with offerings to gods is naturally counted as sacrilegious, and renders the culprit liable to the punishment for sacrilege. This

¹ Roscher, 1889; Heckenbach, 2781; Rohde, ii. 79, n. 1.

² Harpocration, Photius, *Lex.*, and Suidas, *s.v.*; Bekker, *Anecdota Græca*, 288, 7, and 287, 24; Pollux, ii. 231; *Etymol. Magnum*, 626, 44.

³ The *ὄρχες ἐκ τῶν χοίρων* used in the expiatory sacrifice prior to a public assembly (Demosthenes, liv. 19) are generally included among the *καθάρσια* regularly deposited at the cross-roads (cf. Sandy's note on Demosth. *ad loc.*).

was especially dreaded in the case of all offerings to the dead.¹ For example, as we saw above, the worshipper retired ἀμετασπέρρι. This was because he was afraid that the spirits would be angry if he appeared to be looking at them. Hecate was supposed to 'fasten at the cross-roads upon the guilty wretch who had gone after her foul supper,'² and to punish him with madness,³ or with some similar affliction, of all which she was popularly supposed to be the primary cause. Indeed, a curious passage in Petronius, 134, shows that merely stepping accidentally upon the καθάρματα (purgamentum) at the cross-roads was considered dangerous. The superstitious man, says Theophrastus (*Char.* xvi.), 'if he ever observes any one feasting on the garlic at the cross-roads, will go away, pour water over his head, and, summoning the priestesses, bid them carry a squill or a puppy round him for purification.'

In spite, however, of the supposed peril involved, as well as of the fact that they were proverbially foul and unpalatable,⁴ Hecate's suppers were frequently eaten by some one else. The most common motive, of course, was poverty. Our first reference to it is found in Aristophanes, *Plutus*, 594, where Penia claims that wealth always has the best of it. Chremylus counters with the statement that 'Hecate can tell us whether it isn't better to be poor or hungry. She says that well-to-do or rich people send her a supper every month; whereas poor people snatch it away when it has hardly been put down.' A truly Aristophanic argument! But it was taken literally by the scholiast, and hence apparently the quite impossible statement, still to be found occasionally in modern commentaries and handbooks, that Hecate's suppers were 'meals set out at the cross-roads every month by the rich for the benefit of the poor.' The Cynic philosophers frequently replenished their wallets from Hecate's suppers, or pretended to have done so, and reference to the practice was evidently a literary commonplace especially characteristic of their writings.⁵ We should expect it of a school whose doctrine of a return to nature led them to scoff at all conventionalities—religious or otherwise—and to ape the life and manners of the lowest stratum of society. Sometimes Hecate's suppers were taken merely in a spirit of bravado. Such was the case with the gang of Athenian 'Apaches' whom Demosthenes attacks in his speech against Conon (liv. 19).

Nevertheless, Hecate was deeply rooted in the hearts of the people. Of all the ancient cults, none has exhibited a greater vitality. As late as the 11th cent. the Church was still trying to break up the practice of leaving offerings at the cross-roads.⁶ Even now, not all have forgotten that the cross-roads are uncanny, and that dogs can see things invisible to human eyes. Hecate herself led the famous witch ride of the Middle Ages, while in Germany the Wild Huntsman, and in Touraine the heroic figure of Foulques Nerra, that great ancestor of the Plantagenets who still roams through the darkness with his immaterial host, are a clear indication that Hecate and her goblin crew are only disguised, not outworn.

LITERATURE.—This is fully given in the article, esp. in the footnotes.

KIRBY FLOWER SMITH.

HEDONISM.—Hedonism (from Gr. ἡδονή, 'pleasure') properly denotes the creed or theory that pleasure is or should be the sole end and aim of human action or conduct, and that to

it all good or well-being is ultimately reducible. The theory may be, and historically has been, held in a variety of forms. In the first place, we must distinguish what is known as *Psychological Hedonism* (the theory that every man either always or normally and regularly acts with a view to attainment of pleasure) from *Ethical Hedonism* (the doctrine that it is right and reasonable for men so to act, and that every man 'ought' to aim at securing for himself or for mankind the greatest possible sum of pleasure or balance of pleasures over pains). It is possible to be a psychological hedonist without adopting hedonism as an ethical maxim; indeed, as has frequently been urged, unqualified psychological hedonism leaves no room for ethical injunctions; for, if everybody always in fact aims at his own greatest pleasure, it is superfluous and meaningless to tell him that he ought to do so. On the other hand, ethical hedonism may be held by persons who do not accept psychological hedonism; which, in truth, is now either abandoned by hedonistic moralists or maintained with drastic reservations.

1. Historically, ethical is older than psychological hedonism, and was first explicitly propounded by Aristippus of Cyrene, a disciple of Socrates and founder of the Cyrenaic School (see CYRENAICS), who held that pleasure is the highest good, and that it should be one's aim to secure at every moment as much of it as possible. It is this simple and unaffected form of hedonism which is combated by the Platonic Socrates in Plato's *Philebus*. A more discriminating theory, formulated by Eudoxus (who introduced the observation that all creatures, rational and irrational, aim at pleasure), is criticized and rejected by Aristotle (*Eth. Nic.* x. ii.). A generation later, the doctrine that pleasure is not only the highest, but the only, good 'for gods and men' was preached by Epicurus who, however, unlike the Cyrenaics, insisted (a) that pleasures of the mind and of friendship and intercourse are greater and of more value than bodily pleasures; and (b) that the perfection of pleasure and the most desirable state is 'freedom from pain and care' (ἀταραξία). This negative type or conception of pleasure, though never formally repudiated by the disciples of Epicurus, was, as their critics were not slow to remark, very far from being retained in practice as a standard of conduct by adherents of the School; nor was it easily reconciled with other sayings of the founder. The Roman poet Lucretius expounded the Epicurean philosophy with extraordinary earnestness and literary power; and it became very popular in the Græco-Roman world. But it naturally found no favour with the Christian Fathers or the Schoolmen. It was alien to the spirit of the New Testament (cf. ETHICS [Christian]).

2. In the 17th cent., hedonism was revived by Hobbes (*q.v.*), who, identifying pleasure with desire, was apparently the first to combine the view that there is no good other than pleasure with the psychological position that men in fact always seek it. Locke (*q.v.*), while adopting and defending the latter, *i.e.* the psychological tenet, rejected hedonism as an ethical method, and founded his standard of conduct in obedience to the commandments of God—an obedience motivated by prospect of 'the different state of perfect happiness or misery that attends all men after this life, depending on their behaviour here' (*Essay*, ii. 21, § 60). A hundred years later, Paley expresses the same view in even more uncompromising terms: 'Private happiness is our motive, the Will of God our rule' (*Mor. Phil.* ii. ch. 3). In the 18th cent. the main opposition to the 'selfish' philosophy came from the school of Shaftesbury, Hutcheson, and Hume,

⁵ Lucian, *Tyrannus*, vii., *Dial. Mort.* i. 1, xxii. 3.

⁶ Rohde, *li.* 84, n. 2, and references.

who asserted the naturalness and pleasure-bringing power of 'sympathy.' Here it may be well also to note that from the days of Plato and Aristotle onwards, side by side with 'pleasure' as an object of pursuit, the somewhat vaguely related concept of 'the profitable' or 'advantageous' (*τὸ συμφέρον, utile*) had been recognized—often by English moralists under the name of 'interest.' That in a general way it signified deferred, or diffused, pleasure had been taken for granted by many writers; otherwise it stood apart.

3. A new chapter in the history of hedonism opens with Jeremy Bentham (1748–1832), the apostle of purely mundane hedonistic utilitarianism. Discarding the support of theological sanctions and denying all qualitative differences in pleasure, he furthermore blended in one panegyric the praises of 'pleasure' and 'utility,' and made it clear that the latter consists wholly in balances of the former after deduction of necessary 'pains.' But he at the same time universalized his hedonism by importing into it the non-hedonistic axiom, 'everybody to count for one and nobody for more than one' (see UTILITARIANISM). Since the days of Bentham, the doctrine and the axiom have frequently parted company. It could hardly be otherwise. Pleasure-seeking and equitable distribution are apt to pull contrary ways. If one tries to spread pleasure everywhere, the layer of delight becomes so thin that nobody is delighted. Practically, under hedonism, not everybody, but a certain fraction of the community, gets the pleasure. It may be one class, or 'the classes,' to the exclusion of the masses; or, in a democratic age, it may be numerous masterful individuals, or groups of individuals, who 'like' one another, to the exclusion of those who fail, or do not try, to ingratiate themselves with the dominant type. Hedonism, it is true, would seek to remedy or obviate this unsatisfactory result by promoting a perpetual multiplication of means and opportunities of pleasure. And in this undertaking the philosophers have the enthusiastic support of the unphilosophic populace, no enterprise being more popular than discovery or invention of a new or improved source of pleasure. But, although pleasure is doubtless more widely distributed as a result of increased production, there is little or no evidence of its being more evenly distributed. As a matter of fact, Bentham's successors have not concerned themselves greatly about the axiom of equality. Rather they have endeavoured, by accepting and developing the doctrine of 'sympathy,' to magnify the value of social and altruistic pleasure. Moreover, J. S. Mill (*q.v.*) (1806–73), by recognizing qualitative differences in pleasure, further ennobled the ethics of hedonism, but at the cost of its fundamental hypothesis; for, if some pleasures are higher, and therefore better, than others, there must be something good besides pleasure to constitute the difference. Mill was no psychologist; and, while his eloquent advocacy of 'utilitarianism' did much to propagate a hedonistic view of ethics, his attempted inference of ethical from psychological hedonism has been often and effectually refuted. The psychology of hedonism found an abler and a thoroughgoing exponent in A. Bain (*q.v.*) (1818–1903), who held that pleasure or avoidance of pain is always the object of desire and the aim of action, excepting in so far as men are abnormally under the influence of a 'fixed idea.' This important exception virtually concedes all that is commonly urged by opponents of psychological hedonism.

Refutation of ethical hedonism is a larger matter. Nor is it practicable to summarize the arguments that have been advanced against it. They all rest ultimately on a conviction, of which (it would

appear) some men are, and others are not, conscious—that good, or 'what ought to be,' is something *sui generis*, and not the same as what is pleasurable to me or to anybody; in other words, that the ethical value of what I like, or of what anybody or everybody likes, is to be determined by, and does not determine, what is good or right. The hedonist accounts this belief, or utterance of consciousness, an illusion. To the intuitionist it is a fact, real and ultimate, and a disproof of hedonism.

Within the camp of the hedonists, egoism may be said to be now discredited—on paper, at all events. This already appears in H. Sidgwick's *Methods of Ethics* (6th ed., London, 1901), where Egoism, Utilitarianism (Universalistic Hedonism), and Intuitionism are severally examined and compared, an endeavour being made, in conclusion, to transcend the antithesis between the two last.

It would be out of place here to discuss the effects of the wide and increasing acceptance of hedonism as a philosophy of life. But it is permissible to remark that observation of those effects tends entirely to controvert the view, once prevalent, that the conflict of theories is mainly academic, and that there is practical agreement among intelligent persons as to what conduct is good and admirable. There is not and cannot be any such agreement. The victory of hedonism means a transmutation of all ethical judgments.

The incompatibility of hedonism with the biological principle of evolution is convincingly shown in W. Sorley, *Ethics of Naturalism*, London, 1904.

LITERATURE.—See ETHICS and the literature there cited.

J. M. SCHULHOF.

HEGEL. — 1. Life. — Within Hegel's dates (1770–1831) fell the most eventful epoch in modern history since the Reformation. In literature, philosophy, and politics, humanity was enriched and adorned with a galaxy of men of brilliant and daring genius. While Hegel occupies a foremost place amongst the men of this period, his own personal life was quite uneventful. He gave himself exclusively to the task of the philosopher—that of severe concentrated reflexion on ideas and historical movements. The mental aloofness which this required left neither time nor place for practical participation in the changes that were occurring around him; and he never sought directly to influence the current of events. The rapid succession of political and social crises only interrupted the even tenor of his way by slight personal inconvenience. The quiet waters of academic life were perhaps less affected by the revolutionary storms than any other region; and Hegel was from first to last an academic man.

Georg Wilhelm Friedrich Hegel was born in Stuttgart on 27th Aug. 1770. His ancestors had long been connected with Swabia, and Swabian in mind and character Hegel always remained—naïve and simple in nature, genial in temperament, with a strong vein of good sense embedded in sardonic caustic humour. Various members of the family had been craftsmen, officials, scholars, and pastors; one of the latter is said to have baptized Schiller the poet. Hegel's father, Georg Ludwig Hegel, was an under-official in the service of the Duke of Württemberg; of him or of his wife, Maria Magdalena Fromme, nothing seems to be known. Hegel was the oldest son; a brother, Ludwig, entered the army, took part in an expedition to Russia, and died unmarried; a sister, Christiane, to whom, as to his mother, Hegel was greatly attached, also died unmarried. Hegel, after attendance at a 'Latin School,' entered the usual Gymnasium at seven years of age, was the model industrious pupil who took prizes in every class, read methodically and intelligently in many direc-

tions, and left school with a sound classical training and considerable miscellaneous knowledge. His mind developed very slowly, and his achievements were always the result of hard work and inexhaustible patience. To the end of his life the path from thought to expression, whether in speech or writing, was more or less blocked; his utterance was always awkward, and even his gestures were clumsy and angular. These peculiarities were not overcome with advance of years; on the contrary, the advance in his mental development seemed to increase the difficulty in finding the appropriate expression for his ideas.

At eighteen (1788), he entered the theological seminary at Tübingen as a ducal bursar, and here he remained till 1793. He graduated master of philosophy in 1790 with a scholastic dissertation 'On the limits of human duties, assuming that the soul is immortal'; and passed the examination for clerical orders in 1793 by an academic thesis on what seems an insignificant topic in Church history—the calamities affecting the Church of Württemberg. At Tübingen his abilities seem to have made no great impression on his teachers or on his fellow-students. He spent the next seven years as a private tutor, partly in Switzerland (1793–96), and partly at Frankfurt (1797–1800). From the fragments of his early writings collected by his biographer Rosenkranz, and from his early letters, there can be little doubt that this was the formative period in his intellectual life. His tutorships left him apparently plenty of time for his own work; he read widely, made himself master of the new philosophy, and through his friend Schelling came directly into touch with the leaders of the new movement. By the time his apprenticeship ended, he emerged from obscurity with an unusually well equipped intellect, re-entered academic life at Jena in October 1801 as lecturer, and at once took his place as a leader in philosophy. After a brief adherence to the views of Fichte, he came into line with the early philosophy of Schelling, with whom he edited the *Journal für Philosophie* (1802–03). He definitely broke away from Schelling about 1803 and took up his own independent position in his first work, the *Phänomenologie des Geistes*, which was given as a course of lectures to his students in 1806 and appeared in published form in 1807. He was appointed 'extraordinary' professor in February 1805, and received his first and last salary of 100 thalers in July 1806. Hegel began to feel life at Jena University too narrow, and his eyes turned to Heidelberg. For a few years after 1806 he drifted from university circles. He took up the editorship of the *Bamberger Zeitung* in 1807 and remained there till 1808. In the autumn of 1808 he was appointed Rector of Nürnberg Gymnasium, where he remained till 1816. In the autumn of 1811 he married Marie von Tucher. While in Nürnberg he drew up for his pupils his first draft of his philosophical system, afterwards published as the *Propädeutik*; here, too, he composed and published his *Logik*, which occupied him from 1812 until 1816, when he moved to Heidelberg as Professor of Philosophy. In 1817 appeared the first edition of his *Encyclopädie* which was published for the students attending his lectures. In December 1817, at the instigation of Solger, overtures were made to him by the Prussian minister of Education, Altenstein, which led to his migration to Berlin in Jan. 1818 to occupy the chair of Philosophy. Hegel was liberally treated by the Prussian minister, was given a salary of 2000 thalers and 1000 thalers for removal expenses, and anything further he might require to make him comfortable in his new post. Here Hegel remained till his death in 1831. The chair in Berlin was the summit of his academic career, and constituted

him the acknowledged leader of philosophical thought in Germany. His work prospered, his influence with his students steadily grew, as a spiritual force he became predominant, and his circle of friends made life happy and complete. He was appointed Rector of the University in 1830; otherwise the record of his life in Berlin is the record of the successive courses of lectures on the different parts of his system, as this gradually grew and took shape under his unremitting reflection. He published *Naturrecht und Staatswissenschaft im Grundriss*, otherwise called *Philosophie des Rechts*, in 1820, the 2nd edition of the *Encyclopädie* in 1827, and the third edition in 1830. None of his other lectures in Berlin were published till after his death, when the courses on History, Religion, and Art were edited and produced by his pupils. His death took place on 14th Nov. 1831. He was seized with cholera in one of its subtlest and most dangerous forms, and died very suddenly after a day's illness. He was buried, at his own request, beside Fichte and close to the grave of Solger, his friend.

Throughout his life Hegel showed no outstanding distinction of personality of any kind. He never seems to have gone through any intense spiritual conflict, he had no period of storm and stress, and had no quarrel with persons, passions, or principles. His was a life without misfortune, without adventure, without a great friendship, without the elevation of a great love or the tyranny of a great ambition. Science was the consuming occupation of the whole energy of his mind. He had in an unusual degree that supreme intellectual detachment, combined with complete and intense concentration, which marks the philosopher *pur sang*. In private life he was sociable, and on terms of friendship with a few simple and genial people—a natural being without personal affectations, despising all pose, and with none of the self-consciousness which makes a man a prey to the flattery of success or to the morbidity of failure. He was always reconciled to life as he found it, accepting without demur the institutions and even the fashions of his social environment, meeting the serious demands of the day with sober good sense, and the trivialities with good-humoured irony; a good citizen, a good patriot, a good churchman, a man of unbending rectitude and unswerving consistency of purpose.

2. The historical sources of Hegel's philosophy.—It is characteristic of most philosophers to support their own theory by assuming a hostile attitude towards their predecessors, more especially their immediate precursors in the common task. Sometimes the hostility is open, sometimes veiled in indifference; at times the attitude is critical, at other times neglectful or even grudging; but the more comprehensive the new system, the more does it usually claim acceptance at the expense of those who have gone before. This reluctance to acknowledge intellectual ancestors creates a self-conscious independence, which may be necessary to maintain complete freedom of thought, and devotion to objective truth, but contrasts curiously with the trust in tradition and respect for the past so characteristic of religion and social life. It makes every philosopher an intellectual Melchizedek, and the company of philosophers a pure democracy contemptuous of forefathers and genealogies.

Hegel was one of the few who recognized that such a negative attitude towards the past was not necessary in the interests of either speculative freedom or philosophical truth. He was the first philosopher in modern times to treat the history of philosophy as a specific philosophical problem, and to offer a clue to interpret and connect the different philosophical systems which the history of human culture had brought to light. He sought to show

that all philosophers had a single purpose in view and were dealing with a single principle, and again that each expression of that principle, being incomplete or one-sided, demanded and gave rise to a further interpretation of its meaning. The different systems were thus essentially connected in two ways: on the one hand, all were endeavouring to unfold the meaning of a single object or 'idea,' as Hegel called it; on the other hand, each successive system was a progressive advance on its predecessor. Each fresh attempt to grasp the fundamental 'idea' required and made possible the speculative freedom of each thinker, his detachment from his predecessors, immediate and remote; the progressive evolution of philosophical truth involved and ensured the intimate unity between past and present systems.

This conception of the history of philosophy throws direct light on the sources of Hegel's own philosophy. It is, indeed, the only assistance he gives to those who wish to know what those sources are. Hegel's development was almost entirely internal; he apparently made no attempt to work out tentatively philosophical ideas which must have occurred to him at the various stages of initiation. If he did make any bridges over the various currents of thought which he encountered on the way to his system, he must have burnt them; but the chances are that he waded across in silence and did not pause for intellectual experiments. In his earliest philosophical essays published in *Das kritische Journal der Philosophie*, edited by himself and Schelling, his mind is already made up on the main points at issue; and, when his first philosophical treatise (the *Phänomenologie des Geistes*) appeared in 1807, his system was already formed and henceforth remained unchanged in principle and method. The only indications we have of the course of his ideas in the preparatory years are a few isolated fragments and remarks on different topics, political, religious, and philosophical, which in part were first published in Rosenkranz's 'Life of Hegel,' and which have recently been published in complete form. From these scattered sources, taken along with the conception of the history of philosophy above described, we are able, however, to specify some of the more important influences which helped to determine the form of Hegel's philosophy.

(a) Hegel was a student of theology, and for some time seriously contemplated a clerical career. This of itself would have turned his mind to the study of religion, but in any case the subject of religion was one of absorbing interest throughout his whole life. His mind was, so to say, constitutionally of a deeply religious cast. This affected his attitude towards philosophy from the first, and helped very largely to shape the philosophical problem as he understood it. There is no topic to which he so constantly recurs as that of the intimate relation of religion, especially the higher types of religion, to philosophy; and in no part of his analysis of ideas is he more happy than when he illustrates the community of thought between the two. The religious aspect of experience was, then, one of the most important factors determining the form and principle of his philosophy.

(b) A second and hardly less important influence was derived from his study of history, the history of ideas, and the history of social and political institutions. There seems little doubt that he early realized the importance of a study of the history of philosophy, both for the due appreciation of the form and content of speculative thought and for the comprehension of its purpose and place in the history of mankind. This furnished him with a knowledge of philosophical problems and conceptions unrivalled and indeed unap-

proached by any of his contemporaries or predecessors in modern philosophy. It gave him perspective and breadth of view in the construction of his own system, and thus at least tended to counteract the one-sidedness which is the danger of all abstract thinking, and which so often arises from too exclusive concentration on the pressing problems of the moment. It enabled him to see whether a new form of philosophy was justifiably required in his own time, having in view all that had already been done, and, if so, what form that philosophy should assume. It showed him the vital relation between philosophy and general history, and so revealed the inner connexion of philosophy and human life, in a way hardly realized before and only imperfectly conveyed by historians, and philosophies of history such as that of his contemporary Herder in the *Ideen zur Geschichte der Menschheit* (1784). Above all, it led him 'back to Greece' with its wells of undefiled philosophy; and there he found an abiding fount of inspiration, to which he constantly returned and from which he drew a great part of what was best and most valuable in his own philosophy. If there is one element more than another in Hegel's study of history which gave him a unique place amongst his contemporaries and led him to take a distinctive line and make an independent contribution to philosophy, it is his intimate knowledge at first hand of the mind and thought of the Greeks. Just as from one point of view his philosophical aim may be said to be to harmonize the apparently conflicting attitudes of religion and philosophy, so from another point of view it may also be described as an attempt to recast Greek ideas in the mould of modern thought, and reconcile the contrasted human ideals of Greek civilization and of Western Europe in modern times.

(c) Another very important influence which guided the direction of Hegel's philosophical development was derived from the peculiar forces which were at work in all departments of human life at the time when he lived. Not only in the domain of literature, but in social and political life, traditions, conventions, the accepted principles of order, were set aside in favour of the spontaneous tendencies of the individual as a 'naturally' distinct and separate unit of humanity. The supreme outcome of this movement in the sphere of politics was the French Revolution, and in the sphere of letters Romanticism. On its negative side we have civilized society dissolved into its ultimate constituents and rejecting its ancestral ideas and organized institutions; on its positive side we have the attempt made to carry out the purpose of human life under the guidance of individual freedom. It was impossible for any man of insight, endowed with a sympathetic appreciation of the higher ideals of humanity, to remain unaffected by such a highly electrified spiritual atmosphere. Hegel as a son of his time was closely in touch with and profoundly influenced by the forces which were changing the features of modern civilization and creating new worlds for old. His unique contribution to the movement was derived from a reflective understanding of its governing ideas, as the result of which he sought to place it in its proper setting within the drama of human history, to correct its one-sided intensity, and to reveal it as a phase of the general life of the human spirit. Here once again his study of history came to his assistance, and his knowledge of the philosophical ideas of the past enabled him to grasp the inwardness of the thought of his own time in a way impossible to those who were completely under the control of its immediate influences.

(d) Finally, there can be no doubt that the Kantian

philosophy, with its succeeding development under the hands of Fichte and Schelling, was the immediate philosophical source of Hegel's own system. This was due partly perhaps to Hegel's conception of what development of philosophy involved, but much more to the fact that there was no escape from the influence of a scheme of thought which had taken complete possession of the philosophical minds of his time, which in its principle was profoundly important and in its full significance was not understood, much less exhausted, by those who had as yet undertaken to expound it. It was thus natural and inevitable, if Hegel was to take his place amongst the philosophers of his time, that he should fall into line with the Kantian movement, and in the first instance make himself thoroughly acquainted with its principle, with the development of that principle at the hands of his immediate predecessors and contemporaries, and with the latent philosophical possibilities of the principle unrealized by its originator or by any of the exponents who had as yet adopted or adapted it.

Other influences there may have been in the final shaping of Hegel's system, but those enumerated seem the most prominent and the most effective. All of them have to be borne in mind if we are to give an approximate explanation of the sources of his philosophy; for it seems superficial and inaccurate to describe his system as 'Spinozism recast in the mould of the principle of Kant,' or 'systematized Romanticism,' or again as a revised form of the philosophy of Schelling.

3. *Hegel's view of philosophy.*—Hegel differs from other philosophers in nothing more than the care which he bestowed on the consideration of the place of philosophy in the plan of human experience. In this he reminds us of Plato and Aristotle rather than of any modern thinker. Hence no statement of Hegel's system is satisfactory which does not at the outset explain his view of the object and method of philosophy. In a sense one might say that his conception of philosophy contains a kind of epitome of his whole system. He constantly recurs to the topic whenever a relevant opportunity arises, and had no doubt as to what precisely he meant by philosophy.

The distinctive character of his conception of philosophy may conveniently be brought out, to begin with, in relation to Kant's theory of knowledge. On Kant's view, metaphysics was a failure and a futility. It failed in the sense that the knowledge it pretended to give was not, and apparently could not be, verified by experience, did not secure common assent even from those who cultivated it, and showed no signs of any progressive advance in the comprehension of the object or objects with which it professed to deal. It was futile in the sense that it was a mere formal manipulation of the most general concepts *in abstracto*, the connexion of which was merely analytical and was secured by the purely logical principle of consistency or non-contradiction, the origin and validity of which were accepted without criticism or challenge, with the result that such a system of concepts, being in no way subjected to the only criterion of truth—agreement with experience—could not be regarded as either true or false, as anything more than an intellectual castle in the air without any serious claim to be called knowledge. The pretence of metaphysical knowledge stood in glaring contrast to ordinary scientific knowledge; and this would be admitted were it not for the apparently ineradicable instinct which induces reason ceaselessly to undertake the task of supplying such knowledge. Kant therefore sets himself to examine the nature and conditions of true knowledge in order (1) to show the limits within which knowledge is valid and successful; (2) to account for both the failure

and the apparent inevitableness of the task of metaphysics. Kant's theory of knowledge in its scope and its outcome was controlled by the purpose which determined it: true knowledge, he maintained, was concerned solely with experience which always involved the content of sensibility; metaphysics was the result of the operation of reason untrammelled by experience.

Hegel regarded Kant's whole undertaking as logically impossible from the start, for Kant's own theory is meaningless if his view of knowledge is correct. Kant's theory is itself a kind of knowledge; it is the knowledge which philosophy supplies; but it finds no place or explanation in his theory. It does not start from nor deal with experience in Kant's sense. But it is not permissible to have a standard of knowledge by which to judge metaphysics, without equally demanding a standard by reference to which the criticism of the validity of knowledge is itself made possible. The criticism of *all* knowledge implies a criterion, just as much as the criticism of a part of it. The philosophy of the limits of knowledge must in some way be unconditioned by those limits; and hence either such a philosophy is not knowledge, or else knowledge must have a meaning beyond that implied by such a philosophy. Kant as the guardian of the limits of knowledge overlooked the inevitable question, 'Quis custodiet ipsos custodes?' Logically, then, Hegel's criticism of Kant is unanswerable from Kant's point of view. There is only one way of determining what knowledge can or cannot do, and that is by following knowledge wherever it leads: as Hegel frequently remarked apropos of Kant's theory, we can learn to swim only by entering the water.

But it is clear that we cannot swim in any kind of water, and we must have some preliminary general idea of our own strength. Hegel rejects Kant's conception of knowledge, virtually because it is too restricted in scope, and because it does not give any explanation of that kind of knowledge involved in constructing his own theory, viz. philosophical knowledge. But Hegel, too, starts from a conception of knowledge, and also takes a certain type of knowledge as a standard by which to determine the value of other kinds of knowledge. His general conception of knowledge is wide enough to embrace all forms of knowledge: his standard type of knowledge is that by which all forms of knowledge must be interpreted, the ideal of all knowledge; and this is the idea of knowledge as realized and developed in philosophy. Thus he dismisses Kant's arbitrary limitation of knowledge to 'scientific' knowledge; he regards philosophical knowledge as a necessary and definite type of knowledge with a distinctive character of its own, but at the same time intimately related to all other forms of knowledge. Being that type by which all kinds of knowledge are interpreted, it must in some sense be a higher embodiment of the nature of knowledge than any other. But it cannot be obtained from an empirical examination of other types given in experience: it is not a mere aggregate of the other types, nor a generalization from them. It has a unique function to perform, which must be capable of precise definition as a preliminary to carrying out the task of philosophy: without this we shall not know how to proceed. And in so far as it requires justification, this must somehow be supplied by philosophy itself.

The essential elements in Hegel's conception of philosophy are determined by reference to (1) the object with which philosophy deals, (2) the medium in which it works, (3) the method by which it carries on its process to a final result. These factors are closely connected, but each is distinct from the other.

On Hegel's view the object of philosophy is described in general terms as the Whole, the Absolute, or God. This is reality without qualification, and hence, abstractly considered, can only be described as what is simply, or what is not finite, not a part. The specific meaning assigned to this object varies with each philosophy, but it is one and the same object with which all philosophies deal. Even when a philosophy denies that any definite meaning can be attached to such an object, it is just the reference to this object which makes such a denial a contribution to philosophy. Whatever philosophy may or may not achieve, it has always been concerned with what is ultimate. This does not require demonstration; it is so much historical fact.

Again, the medium in which philosophy moves is that of the supreme achievement of thought—a notion. This has certain characteristics, negative and positive. Negatively, it is not derived from nor dependent on sensation or perception, and hence is not a mere general concept: it is not a purely formal abstract universal, and hence a notion has no rigid fixity of outline, empty of all specific content and applicable to any, and does not exclude all relationship with other notions. Positively characterized, a notion operates freely and independently within itself and under its own conditions. It is the ultimate principle controlling and penetrating all thought wherever it appears, whether in sensation, perception, or abstract reflexion; it is universal, but is a concrete universal, that is, holds within itself the particular and is the organic unity of universality and particularity; it is a single identity in and through difference, is, in fact, thought as an operative individual unity; and each notion directly refers to and connects itself intimately with other notions, so as to form an organically articulated system, a self-contained structure of notions.

The method by which philosophy proceeds is that of development of the notion. Development here does not mean development in time, but development in expression and coherence of the elements involved in the notion; it is a development in terms of and for the purposes of complete thought. The notion is an operative individual unity, and thus is a process which can be realized with more or less completeness. The unity of the elements in the notion may be implicitly asserted or explicitly affirmed; it may be immanent or fully unfolded. The elements in the notion may be taken by themselves, and each may in turn be said to be the whole notion; but each inevitably calls for the other as soon as the one-sided affirmation is clearly made and seen, because nothing short of the whole notion can express its meaning, and its unity is indissoluble. One partial affirmation, therefore, gives rise to another, till the notion is fully unfolded and installed as an explicit unity of all its elements. The partial affirmation of the notion is, relatively to the whole, an abstract affirmation; the complete explicit co-ordination of all the elements within the unity of the whole notion makes impossible any abstract isolation of elements, and so cancels all one-sided affirmations; relatively to these abstract affirmations, the whole notion, as explicitly containing and co-ordinating all its elements, is concrete. From this point of view the development of the notion is described by Hegel as a process of the notion from abstract to concrete.¹ The notion itself determines these stages; it is these stages, and it is the process of removing the one-sidedness of each till the unity of the whole is completely realized. Looking at the process as a growth from a lower to a higher degree of articulation of the nature of the whole,

¹ See *Gesch. der Philos.* xiii. 54.

it is spoken of as a process from 'potentiality' to 'actuality.' Looking at the notion as an individual concentration of the highest activity of mind, which is essentially self-consciousness, the process is described as the notion gradually 'coming to consciousness of itself.' Taking the stages of the notion as stages in a self-distinguishing and self-relating principle, the identity as such of the notion is spoken of as the notion 'in itself,' the notion 'implicit'; the diversity as such, which the notion contains, is described as the notion 'for itself,' the notion 'explicit'; while the union of these two aspects in a single articulate totality is the notion 'in and for itself,' the notion completely 'realized.' These different ways of regarding the process in the life of the notion are closely connected, and are, in fact, alternative expressions for the process which are employed according to the context and to suit the convenience of the exposition.

The conception of philosophy above delineated marks off philosophy as a form of knowledge from all other forms in which knowledge exists, and is from first to last the region within which philosophy in Hegel's sense lives and moves and has its being. It no doubt requires justification, and Hegel gives a justification of this conception; but it is a justification in terms of and satisfactory to philosophy itself, not one that any other form of knowledge would accept or give. And indeed no other form of knowledge except philosophy requires or is able to guarantee the point of view of philosophy. Each form of knowledge takes its own way and keeps within its own conditions and limits, without giving any other justification of itself except the success with which it accomplishes its aim. Philosophy alone must try to justify its own conception, because it is and claims to be the most comprehensive type of knowledge; and without such a justification from itself it would require a still higher form of knowledge to justify it, and so on *ad infinitum*. The only way it can prove that it is the final or 'absolute' form of knowledge is by showing that it can account for its own conception; and if it can do so there is no further form of knowledge possible or required. In that sense philosophy is without presuppositions (*ἀνεπιπέδω*), because it leaves nothing, not even itself, unexplained and external to the control of its own principle. What this justification is, we shall presently see.

The conception of philosophy is of importance not merely to make clear from the outset what Hegel means by philosophy, but also to understand his manner of treating the different parts that fall within his scheme of philosophy. The treatment is throughout uniform in character. The Absolute is the fundamental object from first to last. The Absolute is one and is apprehended in the form of the notion: it is the notion *par excellence*. But the Absolute expresses itself in different ways, each of which is an embodiment of the notion. And conversely, wherever we have a notion, there in some way we have an expression of the Absolute, the ultimately real. The process of revealing what the notion contains is, as just indicated, that of development. Hence in every part of philosophy the same mode of exposition is adopted. This principle of development has to deal sometimes with material which has no temporal nature at all, sometimes with material which has a temporal character, or only exists in a temporal sequence. In all cases the development is a logical sequence, for only so is the content of the notion coherently and systematically connected in the way demanded by philosophy. In the case where the content is bound up with temporal conditions, the development of that content in logical form consists either

in adopting the content which time offers and arranging it to meet the requirements of the logical development of the notion considered, or in regarding the temporal sequence of the content as in essence following the same course as the logical sequence of the notion. An illustration of the former appears in the treatment of the various historical forms assumed by the idea of freedom in human history; the course of the history of philosophy in Europe is an illustration of the latter.

Following this clue of the inseparable connexion of the notion with the principle of logical development, we can see how it comes about that in every part of Hegel's scheme of philosophy there are only two questions to be considered: What is the notion dealt with in the part in question, and how is the development of the content of that notion to be expressed in terms of the peculiar character of the notion in question?

Thus we have (1) the notion of philosophy itself as a factor in the life-history of the human experience of the individual mind. The development of this notion in and through the various forms of concrete human experience gives us the philosophical interpretation and vindication of the place of philosophy in experience. This part of the system of philosophy is worked out in the 'Phenomenology of Mind.'

(2) Philosophy, as a human effort to express the ultimate notion of the Absolute, is subject to the conditions of race, culture, and civilization in the midst of which it appears. The one notion is, as already said, dealt with all along, but it expresses itself differently owing to the variety of conditions just mentioned. It is thus one philosophy which works itself out under these conditions; the different expressions of this one philosophy constitute a variety of philosophical systems. These systems appear at different times, and necessarily make philosophy take on a historical character. Taken together, they constitute the history of philosophy; and these systems are but forms of one philosophy, being the work of the one notion which animates them all. The logical development of the expressions of this one system through all its historical conditions constitutes what Hegel understands by the 'History of Philosophy.' The logical development here is inseparable from the direct historical sequence in which the different systems have appeared. The historical direction is the logical direction, because there is one notion or one absolute system working through all and animating the various minds concerned; and the way in which its content actually appears is a historical sequence. Thus Hegel's 'History of Philosophy' is not a mere narrative of theories succeeding each other in time, but an integral part of his own philosophy; it is a philosophical interpretation of the history of philosophical theories.

(3) The notion of the Absolute, which is the ultimate object of philosophy, has, like every other notion, its own moments or aspects, each of which is the Absolute, but is capable of distinction from the others, and capable of separate logical development. Its very concreteness makes it necessary for philosophy to take it in detachments, so to say, in order exhaustively to express its content. But its single concrete reality cannot be broken up into separate components. It remains in its concreteness as the all-comprehensive and supreme principle operating in each of its aspects, and containing all the results of the development of each in turn. It is the presupposition and final result of that development. The aspects are themselves, therefore, but stages in the evolution of its concrete single reality, and must be so treated; and the development of the different stages forms a

continuous development of the entire content of the notion of the Absolute. This comprehensive development of the notion of the Absolute is the entire system of the philosophy of the Absolute. It forms a single body of philosophical science, with distinct members. This constitutes what Hegel calls the 'Encyclopædia of the Philosophical Sciences.' It is thus not a mere collection of sciences, or a dictionary of philosophical knowledge; it is a philosophically connected whole of Science.

(4) It has just been said that each of the aspects of the notion of the Absolute can be treated by itself, but that each must be looked on as a specific embodiment of that notion. The first aspect logically is that of the notion in its bare concentrated universality, the notion 'in itself,' the notion as self-identical. This aspect must cover the whole domain of the Absolute, but must do so always with this character of universality, and formal self-identity. Whatever the Absolute contains must be expressible from this point of view; and, since the Absolute is the totality of all reality, there will be a multiplicity of universals within it. The notion as self-identical, in short, is capable of logical development in terms of its universality alone; such development will unite all its universals into an organized whole or Science of all the ultimate universal elements of the Absolute as it is or was 'in itself before the creation (*i.e.* differentiation) of nature and finite spirit.' This is carried out in the science of 'Logic'—the science of the merely universal principles by which the Absolute lives and moves in a uniformly coherent intelligible system. Such a system is the ground-plan of the whole of reality, the network of notions which holds together and constitutes the essence of all that is.

(5) The second aspect of the notion of the Absolute is the sheer opposite of the first, is the aspect of pure dispersion, the notion 'for itself' (*i.e.* out of itself), the notion as self-differentiated. This again covers the whole domain of the Absolute, is the Absolute in this peculiar form. The fundamental oneness of the Absolute must not therefore be lost sight of when viewing this phase of its differentiation; it is a differentiation *within* the one, or the one resolved into pure self-externality. Without this implication of the oneness of the Absolute, it would be impossible to have a science or intelligible system of the Absolute in this form of pure difference. The Absolute in its aspect of self-dispersion is the world of Nature, inorganic and organic, as realized in space and time, the universal media of thoroughgoing externalization, whose very essence consists in keeping its contents apart from one another down to the minutest particular detail. Nature, however, makes a whole by itself, and that wholeness of Nature is once more the unity of the Absolute as such expressed in and through the form of Nature. This makes possible an intelligible system of Nature, and such a system is the 'Philosophy of Nature'—the philosophical development of the notion in the form of self-externalization.

(6) The third aspect of the notion of the Absolute is the explicit union of the first (pure universality) and the second (pure difference) in a synthesis which avoids these abstract extremes and expresses the concreteness of the Absolute in its highest possible form. It contains the principle that gives rise to each of the preceding extremes. It is, therefore, a principle of universality, and also a principle of self-differentiation. The term combining these two functions in one reality is that of mind or spirit, which, being essentially self-conscious, is at once a conscious unity in all its processes and the conscious source of endless

differences and distinctions within itself. It is supremely an identity which maintains itself through its differences and refers them to itself. It is thus the realized embodiment of the concrete form of the notion, and the type of all such concreteness. The notion of the Absolute fully realized, 'in and for itself,' is thus 'Mind,' and the logical evolution of the notion as mind is the 'Philosophy of mind.' This completes and exhausts the notion of the Absolute; it contains all that fell within the content of the other stages of that notion, for mind is the source of universals, and mind as the soul of an organized body sums up in its organic embodiment the processes of nature. In the logical evolution of mind, therefore, the philosophy of the Absolute comes full circle; and the crowning stage in the development of mind is the philosophy of the Absolute itself; the final outcome and expression of Absolute Mind is the truth of the Absolute revealed in and through philosophy.

(7) Since the notion of the Absolute is embodied with varying degrees of completeness throughout all the system, any part may be taken by itself and worked out into systematic form in exactly the same way that reality as a whole is developed. Each part forms a realm by itself, and its detailed contents can be logically evolved from it. Hegel dealt with four parts or stages in the philosophy of mind in this way. One of these has already been mentioned—the 'Phenomenology of Mind,' mind as creating 'experience.' The other three are (a) mind as 'objective,' as the source of social and moral activity, (b) mind as expressing itself in the realm of art, (c) mind as realized in the life of religion. These are respectively worked out as subforms of his comprehensive system, under the titles 'Philosophy of Law,' 'Æsthetic,' and 'Philosophy of Religion.' In each case exactly the same plan is pursued: we have the notion of 'social mind' delineated and then logically developed through all its forms and stages; and similarly of art and religion.

Whether these minor systems are capable of giving rise to still further systems, Hegel gives no indication. He seems to make an independent treatise of human history, though this is undoubtedly a subject which falls within the scope of the logical development of objective mind, for objective mind, society, is essentially a historical reality. But the separate treatment of history, apart from the treatise on the logical development of social life, is of no real significance, and was probably due to the exigencies of academic work. Strictly speaking, the 'Philosophy of History' occupies the same relation and position in the philosophy of objective mind as the philosophical treatment of the various historical aspects of art and religion occupies in the 'Æsthetic' and 'Philosophy of Religion.' The 'Philosophy of History' must be regarded as a continuation of the 'Philosophy of Law,' as the logical evolution of the notion of freedom (which is the principle of objective mind) in the various historical forms assumed by objective mind in the life of mankind.

4. The nature and meaning of Hegel's 'notion.'—It is evident that for the proper understanding of Hegel's system it is essential to make clear what the notion means, for the notion is the root-principle from which the whole system springs. Hegel no doubt expounds the principle repeatedly, but always in terms of his own theory, and thus takes for granted precisely what the interpreter of the system wishes to have explained. Nowhere does he trace how he personally arrived at this principle, and nowhere does he show how it is derivable from thought as commonly accepted. On the contrary, he proceeds in the opposite way; he recasts the meaning of

ordinary thought by reference to the notion previously accepted as true and as having a specific significance from the outset. Yet there can be no question that this principle was not arrived at without a struggle, and did not arise out of his head, like Minerva from the head of Jupiter. The principle is not self-evident, and needs both explanation and justification.

In default of any historical evidence of how Hegel reached this principle, we must fall back on the epistemological grounds for adopting it. These are mainly two, and are not strictly separable. In the first place, Hegel regarded the world as a single unified whole, which maintained its unity through endless multiplicity of real individuals, and in a certain sense could itself be looked upon as the supreme form of individuality. The world was not a mere process, nor a static reality; for the former makes unity or singleness impossible, and the latter is in contradiction with the plain facts of life in Nature and man. The world is a process that is self-contained, and so as a whole is at rest with itself: it is a process *sub specie temporis*, but a unified whole *sub specie æternitatis*. Its unity is all-pervading, and is maintained in and through the process of its finite parts. The question for philosophy is how best to conceive the principle which thus constitutes the nature of the Absolute a self-complete and self-contained single whole. This resolves itself into the further question what form of finite reality furnishes the most adequate homologue, is nearest in structure, composition, and process to this supreme individual. For man the solution must be found in the highest individuality known to him. But for man the central individuality in all finitude, that which supplies him with the very standard for determining the nature and degree of individuality among finite beings, is the human individual as a realized self-conscious mind. This must be the clue and the basis for the comprehension of the Absolute, as it is the final source of the interpretation of all that is finite.

But self-conscious mind (or spirit) reveals its activity in many ways, through sensation and perception as well as through ideas. To make use of mind as a working principle of explanation we must therefore find the highest and at the same time the most universal function of its activity, that which is the controlling essence of its individuality, dominating all its modes of expression, making them what they are, and holding them together as phases of its own individuality. This is nothing other than its supreme function of consciously uniting its own differences in a single focus of self-hood: not 'referring its content to the unity of the self,' but realizing singleness of being or self-hood through the function of combining differences in a unity. The conscious operation of that function is the reality of the self; the self of the individual mind is at once the unity and the differences, is a concrete function, and is single from first to last. As Hegel puts it (*Gesch. der Philos.* xiii. 45), 'the being of mind is its act, and its act is to be aware of itself.' This supreme function is not an abstract operation; it is the essential principle operating throughout all the processes and expressions of the life of mind, and such an essence is in no way and in no sense separate from its expressions. The statement of this essence is no doubt formal; but the essence itself is only a form in the sense that form is inseparable from content. We never have the form 'by itself' in experience, and hence can never treat it as abstract when making use of it for purposes of explanation. It is not admissible, therefore, to start from it as an abstract form and try to deduce out of it analytically further principles or forms of unity. For, if we take it as abstract

at all, we can extract nothing out of it; at best we can only repeat it; and, if we seem to derive further principles from it, we have not, to begin with, taken it as abstract.

It is by the use of this supreme function of mind, then, that we have to proceed when we employ self-conscious mind as the clue to interpret reality, finite and absolute. This highest function Hegel, following the traditional usage of philosophers, calls 'reason.' Since in it the self always operates in a conscious way (it is the conscious unifying of differences), reason is essentially cognitive in character, but 'cognitive' only in the general sense of full awareness. Reason does not here mean simply reflective activity, nor merely intuitive activity; it is both at once in an indivisible act. It can be called reflective when we consider the aspect of distinguishing and relating the elements involved; and intuitive when we consider the aspect of uniting these differences into a single whole. But these are, after all, aspects; the function is one and individual. Reason is therefore 'mediate' and 'immediate' in its operation, and wherever it operates this holds true. This means, however, that as a function it is self-complete, directing itself and determining itself according to its own law or method of procedure: it is its own world and the law of its world. It is the realized limit of knowing. In other forms of knowledge, something is 'given' as an 'immediate,' and 'received' by reflexion as material to be worked upon or 'thought about'; and these factors in the process are assigned to distinct sources. Both factors must exist if knowledge in any sense is to take place; and the aim of knowledge is to transform and permeate the 'given' by the process of reflexion. The limiting case of such a process is when the immediate and the mediating activity are merely aspects of a single operation. Such a limit is reason. But it is an actual limit, not an imaginary or 'ideal' limit; for reason is but the highest function of mind, and mind is through and through actual. Reason is thus not a point of view, but an active function, not external to its contents, but holding its contents (its immediate) within itself. It is in this sense that reason is described as 'concrete' and not abstract. It is concrete, as the essential function of mind must be; and mind is, as already indicated, the very type and standard of what is concrete and individual.

But a further stage is required before we can make effective use of this principle. So far we have treated reason as a function. Now that function operates within a certain range and for an end. It is a function which operates in an individual way, grasps a whole in its singleness, as a unity in and through differences. The end is its product, the outcome and summary of its operation. In a sense this product may be described as the function itself, the function in its single completeness. The distinction between them, such as it is, consists in the product being regarded as the function brought to rest, while the function is the product in course of being brought about. This product Hegel calls a 'notion' (*Begriff*). A notion may be called the object of reason, but only if the connexion between reason and its object be considered as close as that between function and product just mentioned. A specific notion is reason in one of the manifestations of its function; and, if we look at reason simply as the most general function of self-conscious mind, we can speak of reason itself as 'the notion' (*der Begriff*) *par excellence*. Hence we often find Hegel using precisely the same expressions in describing the operation of 'the notion' as when describing the function of reason. The notion is spoken of as 'conscious of itself,' and 'determining itself,' and as 'uniting its differences,' etc.—expressions which

seem to create difficulty until we see that for Hegel 'the notion' is reason, in the sense just described. He does not mean that the notion, like an abstract shade of substantial self-conscious mind, works independently of the vital energy of mind; for the notion in his sense is not a shadowy ghost of mind at all. The notion is reason in the full plenitude of its power, and is indistinguishable from it except as function and end are distinguishable in the operation of reason. The notion is thus not 'endowed' with energy by reason, nor again is the notion the 'expression' of reason, if this implies that the expression is separable from the source or force from which it proceeds. And what is true of 'the notion' *par excellence* holds good of any notion in which reason is embodied.

This step is highly important for Hegel's view. For now it becomes possible to link his theory with the language in which philosophy from its inception has clothed its thoughts in detail. For philosophy has itself created and creates that language, because it is the function of grasping a unity with its differences. That language is animated throughout by the activity of reason; and the results of its activity appear in the manifold 'categories' with which philosophy deals. Wherever we have a function of thought-unity in and through differences, there we have a category, and there we have the operation of reason. Hence we can treat a category as a specific realization of the operation of reason, and can trace its source to the one supreme function of self-conscious mind. Hegel does not require to create the world of reason out of his own mind, nor to dictate to experience the kind or number of categories which constitute reality. The work has been already done in the course of the history of philosophy, and he has but to put the results together; while experience alone can let us see what the categories are which constitute reality. The complicated culture of European life is, so to say, strewn with categories, some having names derived from one language, some with names derived from another. Again, he does not require to be constantly appealing to the nature of reason to verify or justify his categories; he is sure that reason is present wherever this function of unity in and through difference is exercised and concentrated into the summary form of a category. And, finally, reason, while the supreme essential function of mind, must articulate itself into a plurality of categories, because mind is the absolutely concrete with an endless variety of content due to the fact that it gathers up into itself the entire realm of finitude. It is, as already said, the standard of all individuality, and is the standard because it contains all that the other types of individuality contain, and more than is contained by any other single type.

The plurality of categories referred to, being all in the long run expressions of the one supreme activity of reason, are necessarily connected with one another through their common derivation from a single source. Together they form a system so organically connected that any one category involves all the others, and can be clearly interpreted only in the light of the entire system. Each mirrors the whole system in itself; and the whole system can be said to be the unfolding of 'the notion' *par excellence*. This supreme notion gathers up into itself all the plurality of the various categories, and in this respect assumes a distinct name—'the Idea.' Such a system is, again, self-complete and self-contained, because, as we saw, reason is a self-complete and self-determined function carrying its own 'immediate' within itself. Such a system can thus constitute an organic whole of 'knowledge,' the knowledge which reason has of itself in its character of the essence of mind. This

does not mean that the system defies or is independent of experience and reality; for the notions are the controlling principles of experience and reality. It means simply that, since the notions are concrete in the sense explained, they can and do form a distinctive subject-matter for systematic treatment.

Recurring to our starting-point, we can now see how Hegel proceeds to work in interpreting the Absolute. Self-conscious mind is the clue, and the activity of reason is its essence and supreme function. The Absolute is interpretable only in terms of mind, for mind is the highest type of individuality with which we have any acquaintance. It is useless to ask what the Absolute may be over and above mind; for over and above mind there is nothing higher to which to appeal in an intelligible way. To be intelligible is to be mentally constituted, and intelligibility is the presupposition and result of philosophy in the sense of complete knowledge. Moreover, mind *qua* mind is homogeneous with itself, whether mind be finite or absolute. This is especially so if we take the essence of mind, for that essence is identical in all the shapes and forms of mind. The essence of mind is, as said, reason. The operation of reason is thus the same in finite and absolute mind; it is the function that grasps individuality in its concrete singleness. If the Absolute is the supreme individual, reason *qua* reason is adequate to its comprehension. But not only is reason adequate to the comprehension of the Absolute, in the sense of being able to undertake this task. It might make this claim and still be a mere unrealized point of view, or at best enunciate merely abstract propositions identical in significance. But we are not left in darkness regarding the detailed content of the Absolute. For we are able to evolve coherently and in terms of reason the varied content of finite mind. And, if we accomplish this, we *ipso facto* have expressed the content of the Absolute, for the result so realized is the articulation of the one supreme function of reason, which constitutes finite and absolute mind alike. The evolution of such a result is made possible because mind, and therefore reason, is the spokesman and interpreter of the totality of finite individual things, the whole realm of *natura naturata*. Mind supplies the standard of their individuality in each case, and brings to the consciousness of its own individuality the constitutive principle of each. All individuals, so to say, come to light in finite self-conscious mind. But *natura naturata* is the Absolute itself expressed in terms of the whole of finitude; and, when the Absolute is viewed as mind, its expression is not merely inseparable from but is identical with itself, for mind is conscious self-expression. Hence, if reason is adequate to the comprehension of the totality of finitude, and accomplishes this result in coherent systematic form, the result so achieved can be taken as the evolved and connected content of absolute reality. And this is just what Hegel means by comprehending the Absolute. Thus it is through the notion and in terms of the notion—which is the form with which reason works, the language of its activity—that the Absolute is expressed. The notion, as above explained, is the beginning and end of Hegel's system. Wherever reason grasps individuality in its singleness, there we have a notion; and, since its function is to grasp in this and in no other way, the totality of finitude is for it a realm or system of notions; while again the system of notions is the comprehension and indeed the self-comprehension of the Absolute.

The second line of thought by which Hegel reaches his notion, and secures its validity as a

principle of interpretation, is equally important. The distinction of subject and object, within which human conscious experience exists, is held to be a distinction within a single unity, and the form in which this unity in difference reaches its highest expression is self-consciousness. In this form the distinction in question becomes a self-distinction, and the unity is the single self functioning in and through both factors alike and at once; while, as already indicated, the essential nature of self-consciousness is the activity of reason. By this line of thought Hegel seeks, on the one hand, to avoid the dangers of subjective idealism to which his principle is liable, and into which certain of his immediate predecessors, notably Fichte, fell when developing the implications of Kant's theory; and, on the other, to steer clear of the abstractness of the bare unity of subject and object propounded by Schelling, which possessed objectivity at the price of being inarticulate.

The argument by which he establishes this position is contained in the first half of the *Phänomenologie des Geistes*. Briefly stated, it consists in showing that, wherever subject and object stand in the relation which constitutes experience, the unifying principle is that of thought. This is at once a function of the subject and the controlling centre of the reality of the object; and these are inseparable in the life of experience. This unity is not apparent, but is only implicit at the lower levels of experience, where subject and object seem more opposed than united, as, for example, in such levels as those of sensation and perception. But analysis of these types of experience brings to light the underlying principle of unity. The very process of experience from the lower to the higher forms is necessitated by the demand for the explicit in place of the implicit unity, and is at once the gradual evolution of the essential unity of subject and object and the growing awareness of the universality of thought which permeates the component factors constituting experience. We cannot say that the subject dominates the object any more than that the object directs the activity of the subject: they are inseparable elements and develop *pari passu*. It follows that the process reaches its goal, and experience its truest type, when subject and object are transparent to each other, when the subject is aware of itself in its object, and the object responds and corresponds to the functions of the subject. The distinction between the two is as real as ever, but the unity now contains them as factors of one conscious process. This stage is that of consciousness of self. From this point of view, so attained in the course of experience, the levels below this stage are now seen to be not merely preparatory steps to the attainment of self-consciousness, but are themselves implicitly constituted by self-consciousness, which was operative in them from the first, and from which, in fact, by abstraction they obtained their place as forms of experience and as stages in the evolution of experience. Experience is thus constituted and permeated by self-consciousness; indeed its significance consists in its being the process of manifesting or evolving consciousness of self, in the subject's becoming gradually aware of or finding itself in its object, and so coming to be 'at home' in its world.

In this way the principle of reason, which, as we saw, was taken to be the essential activity of self-consciousness, is liberated from all one-sidedness, especially the one-sidedness of finite subjectivity, and is adequate to meet the mind's demands for unity with its object, whatever the object may be. There is no need for distrust or hesitation on the part of reason in dealing with the world; it

has but to 'let itself go,' and the whole domain of concrete individuality in all its manifold forms will straightway give up its essential meaning without reserve, and without retaining the least part of the only secret worth knowing, the secret of the 'thing itself.' Reason is the open secret of the world, because it opens all secrets. It makes the world after its own image, because it finds its own likeness in the face of the world.

'The fast-bound substance of the universe has no power within it capable of withstanding the courage of man's knowledge: it must give way before him, and lay bare before his eyes, and for his enjoyment, its riches and its depths' (Hegel's Address to his Students in Berlin, 22nd Oct. 1818).

In the light of the foregoing we can see at once the central position which Hegel's logic holds in his theory. For logic, as he understands it, is the science of the notions which constitute the sole and only outcome of the activity of reason. The totality of all the notions is the totality of the constitutive principles of reality in all its forms of individuation; and the science of this totality thus must cover the whole of reality, finite and absolute. And, since these notions so systematized exhaustively reveal all that reason can obtain in the way of complete knowledge, the science of logic is straightway identical with metaphysic.

If such a view is called 'Panlogism,' there can be no objection to the term as long as it is understood to imply no objection to the theory. Those who apply the term, however, often speak as if there were some other way of comprehending the Absolute than that which reason affords. What other way there is of 'comprehending' except by and in terms of reason is not clear from their statements. There seems, on the face of it, no other way of being rational except by exercising reason; and, if reason does work in the form of notions, it seems useless to object that the outcome of its work is only a system of notions. One may object to Hegel's way of rationalizing; but no one can maintain both that the universe must be intelligible in terms of reason, and also that the outcome of rational thinking is an illegitimate interpretation of reality. The only valid objection to 'Panlogism,' properly understood, is to insist that there is some other and better way than reason for approaching the Absolute. But this objection is equivalent to philosophical nescience, which, indeed, is the only alternative to rational interpretation. Some critics of Hegel's system frankly adopt this position. Their position is clearly consistent as against Hegel, but it involves the abandonment of the philosopher's task, as Hegel understands it.

Much more serious and important objections can be urged against Hegel's scheme of notions than the accusation of 'Panlogism.' A few may be mentioned at the present stage. It may be readily granted that the function of reason is the supreme central operation of self-conscious mind, and that reason seeks to grasp the individual in its singleness. It is quite another matter to admit that any finite mind is capable of exercising this function with unflinching accuracy and success throughout the whole domain of reality. Hegel seems to proceed as if, having extracted the essence of mind, the essence could be left to itself and would straightway work with inevitable certainty and necessity wherever and whenever it might be set in operation. But this is to identify the finality of the function with finality in its exercise, the finality of a claim with finality of every assertion of the claim, the finality of a point of view with absolute accuracy of vision. The two are evidently distinct in fact, at least in the case of every mind short of omniscience. The essence of a finite mind is never exercised except under the complex conditions and in the complex setting

of a finite individuality; and these conditions are both obstacles to the perfectly free exercise of reason, and constant sources of failure or error throughout the whole operation of its activity. To maintain anything else is to ignore the plain facts of human frailty which are found in every other phase of man's experience. If illusion and imperfection haunt the efforts of man in the minor matters of everyday concern, it can hardly be expected that they will suddenly disappear when he undertakes the unique and supreme task which strains the consummate powers of his mind to the uttermost. Hegel in describing the working out of the notions of reason frequently uses the expression that in the development of the operation of the notion the individual thinker has merely to 'look on' (*zuschauen*). But the individual cannot be regarded as merely a still mirror reflecting with infallible accuracy a process in which he does not actively participate. Even to 'look on' he must concentrate his vision, and to see correctly his sight must be clear and uninterrupted. The point need not be laboured here. When we examine Hegel's way of carrying out his ideal of rational thought, we find that he constantly starts from the conventional terms embodied in ordinary speech and science, takes their meanings as he finds them, and proceeds to invest them with the dignity of the notion. At times he appeals to etymology to help out the operation of reason, and constantly makes use of the varied applications and *nuances* of a term to give vitality and movement to the notion. His procedure may be described in some cases as an attempt to infuse the spirit of the notion into the terms of ordinary thought, in other cases as the sublimation of ordinary thought into the ethereal realm of the notion, in much the same way as, in the hands of the pure mathematician, the ideas of measurable quantities of physical phenomena are volatilized into elements of a rational ordered manifold held together by their purely logical connexion.

Another criticism of considerable importance is that which challenges Hegel's attempt to identify the rational coherence of the whole realm of finite individuality with the system of absolute truth, the whole truth as it is for the Absolute Mind. The former is the reasoned system of *natura naturata*; the latter is the reasoned system of *natura naturans*. It may be that the former is all we can know of the Absolute; but, so long as the distinction remains between the Absolute and its manifestations in the total realm of finitude, it cannot be all that the Absolute can know of itself. To confound the two is to adopt the attitude of what may be called metaphysical positivism; and, whether positivism be scientific or metaphysical, it is open to the charge of affirming as an absolute truth what can never be more than a system of truth which is relative in every sense of the term. If, on the other hand, the distinction between the Absolute and its appearances is insisted on, the rational system of finitude may indeed bear the image and superscription of the Absolute, but it must always be regarded as at best but an approximation to, never a substitute for, the final truth, as the medium of exchange used by mortals in order to handle conveniently and profitably the wealth of absolute knowledge. Hegel never explicitly draws the distinction just referred to; the tenor of his argument is against admitting that the distinction is vital for philosophical thought; and he constantly claims that the system of truth revealed through the free activity of reason is the same truth and the whole truth for finite mind and Absolute Mind alike.

The third charge against Hegel's view is that, while, as we have seen, he approaches his position

by the avenue of human individuality, he claims to have eliminated all traces of anthropomorphism from his system. The explanation of such a claim is simple, but the justification of the claim is unwarranted. He finds his foothold in the reality of human individuality, and from this he extracts the essential principle of activity and movement—reason. He then takes this essence by itself, regards it as a self-contained agency working itself out by its own laws and conditions, and lets it loose, so to say, to accomplish its end, viz. the grasping of reality, in all forms, in terms of the constitutive nature of reason. The individuality from which it comes to begin with is thenceforward eliminated: the individual only 'looks on' while it works. The function is hypostatized, and operates as if it were itself the concrete individual. Hence all the limitations, which in every other aspect qualify the action of the human individual, are held to apply no longer to the function itself. The very success with which the function is exercised is unaffected by the conditions of human individuality: it always works correctly and without interference. Reason is in this way deanthropomorphized. But it seems plain that such a contention overshoots its mark. The essence of finite self-consciousness does not cease to be finite because it is the essence; an essence must, if it is really the essence, still be characterized by the limitations which encompass and permeate all finitude. Finite limitations are not an accident of finitude; they are of the essence of it. It is paradox to regard the essence of finitude as something other than a finite essence; and mere assumption to treat the essence of finitude as infinite in nature and function. If this assumption is correct, it is impossible to account for error; and the assumption gives place to presumption if it is maintained that the working out of the essence makes the system faultless, final, and unalterable. Moreover, the whole value of the principle, as a way to interpreting reality, is lost, if the essence is thus hypostatized. For reason is the same, whether it be realized in a tree or a tadpole or a philosopher. It is, however, just the peculiar significance of the essence in man's individuality which is the source of its value as a clue to the interpretation of reality: the peculiar nature of human individuality in all its concreteness cannot, therefore, be eliminated without endangering its importance as a clue. This means that the essence cannot be taken in abstraction from its source, if it is to be of value. But, if it is taken *with* all the qualities and qualifications of human individuality, the limitations of an anthropomorphic point of view must necessarily affect its whole operation and characterize the result obtained. In short, its value depends on its being anthropomorphic; the elimination of this point of view, however much we may gain in generality and abstractness, lessens the value of the result.

5. Hegel's method.—Equally important with the fundamental principle of the 'notion' in Hegel's system is his view of the nature of the method by which the system is constructed. The peculiar characteristic of all philosophical thinking lies, no doubt, in the consistent operation of a single method of procedure, and most of the great thinkers have recognized this. To Hegel, method was of the essence of system, not merely in the sense that the two were inseparable, but in the sense that the system was nothing but the successful operation of a method clearly conceived from the outset and consistently applied at every step throughout it. He maintains that the value of his own system stands or falls with its method, and not so much by the perfect accuracy in detail with which the system is wrought out. In the introduction to the 'Logic' (*Werke*, iii. [1841]) he says:

'I cannot presume that the method . . . is incapable of being worked out with still greater completeness and elaboration in detail, but I do know that it is the only true method.'

In his first piece of constructive work (the *Phänomenologie*) he pointed out the fundamental necessity of having a carefully formed idea of the method by which philosophy should proceed; and to the last he looked on the method as the soul of a philosophical system. His method, quite as much as its principle, differentiated his own position from that of his predecessors.

Hegel always insisted that the nature of the method was to be found by an analysis of the nature of the notion. The method was not imposed externally on the notion, but was the vital nature of its process. No doubt the formal character of the method was suggested by certain aspects of the work of Kant and of Fichte; much also was due to Plato. But the historical aspect is altogether subordinate to the specific meaning and procedure assigned by Hegel to his method.

Stated in general terms, the method is the way by which the notion, through its own activity as above described, gradually articulates and coherently connects into a single explicit system the component differences involved in its nature as a concrete function of self-conscious mind. A notion, being the essence of self-conscious mind, is a self-closed whole. This is true, whether we take the supreme notion or any notion of a lower grade of significance. In its procedure, therefore, it is self-directed, and not externally determined. Its procedure is immanent and constitutive of its own activity. It unfolds itself because it is a function of a self.

But, again, a notion so completely permeates its own content that its component elements are its own differentiations, are its own expressions, or, as Hegel calls them, its own 'moments.' In each, therefore, we have in a sense the notion in a specific form; and the notion asserts itself in each in turn, as truly as it is the synthesized whole of all the parts. In some cases, *e.g.* the higher notions in the 'Logic,' the parts are themselves notions of a subordinate significance which again contain 'moments' within themselves. In the limiting cases, a notion, on the one hand, is a bare self-identity, and the attempt to assert itself in its content merely brings out the fact that it is incapable of differentiation and so has no content specifically to assert, its content is indistinguishable from absence of content—the assertion of pure being is equivalent to the assertion of pure nothingness: on the other hand, at the other extreme, the notion is so concrete, so replete with content, that it is incapable of asserting itself specifically and at the same time truly; every differentiation is a self-limitation and so incomplete and inadequate to itself; its full meaning is realized only as a comprehensive intuition which gathers into itself the totality of its differentiations, or the 'absolute idea' melts into the organizing process, in and through which its varied content rounds itself into a single self-complete system incapable of further development.

Now, the source of the method lies in this self-regulative character of the activity of the notion in its organic relation to its moments. The procedure is positive in its beginning and positive in its outcome, for a notion is a positive principle from first to last: it loses nothing by the process and gives up nothing in the result. The purpose of the process is to make the notion consciously realize the totality of its content as an articulated individual whole; the necessity of the process lies in the nature of reason, which, being self-consciousness, must become explicitly aware of what its unity contains and controls. This necessity is the

same whether the reason be embodied in the finite human mind or in an absolute mind; and the connexion of content established is the same for both alike so far as it is valid at all. Hence the question of time does not enter into the nature of the process and is indifferent to the process, even if time be required to carry it out, as is obviously the case when a finite mind engaged with the process passes from one stage to another. In contradistinction from the process of time, this process of establishing connexion between the moments of the notion may be described as a cognitive or logical process pure and simple. So far as time as such is concerned, it must itself be handled by the same logical process, if it is to have a place in the compass of the absolute notion, the notion of absolute individuality.¹

A notion, then, aims at realizing all its content as controlled by its own unity. It seeks to affirm its differences separately and together as its own. Its differences are for it ultimate, otherwise it would really be a bare self-identity. The differences are thus, *within the compass of a given notion*, extreme opposites to one another: what the one is the other is not. *Per se* the differences are absolutely opposed; but, being differences within the same notion, they are for the notion only relative differences, no matter how strongly they appear opposed. It is only such differences that the notion is concerned with, for it is such differences that above all challenge the unity of reason, the singleness of self-consciousness. And, further, only in the case of such differences do we have the type of that opposition in which self-consciousness itself consists, the opposition of subject to object within the unity of the same self. As reason is the essence of self-consciousness, each notion of reason must carry within it elements as opposite as subject and object. A notion, then, being concerned with differences which are thus ultimate for one another, there can be only two such differences within the same notion: the opposites within a notion are *per se* contrary the one to the other. And indeed it seems a matter of indifference whether we say that contrary opposites constitute a single notion or that a notion is a function of uniting contrary opposites; whether we start from the one or the other is of no importance for purposes of explaining a notion. A notion is called for wherever there is this contrary opposition, and a notion consists in the unity of such opposites; for both unity and such differences constitute the individuality of a notion.

An illustration from the 'Philosophy of Law' will help to make this clear. The notion of property is that of will expressed in a more or less permanent outer form, in an object of nature over which, by some means or another, will has exercised its force and so embodied its act. It means, therefore, identification of will with a natural object. A will is always a personal will, and property is thus essentially personal property. The ultimate factors composing this notion are thus active personal will in relation to an external object, and passive external object in relation to a personal will. The first appears as ownership of a thing, the second as the use of a thing. Those differences *per se* are diametrically opposite to one another: ownership is not use, for the thing in being used up passes from the owner; left to themselves the opposition between them is absolute. Yet they have such an opposition only because and in so far as they fall within the notion of property. But for this they would be merely outside one another, and could not be even intelligibly contrasted and compared with each other. The very fact of their opposition being a real and reciprocal opposition

implies the singleness of the notion containing them; the singleness of the notion creates the contrariety existing between the different elements taken *per se*. But in virtue of the unity of the notion the differences are, from the point of view of the concrete notion, relative: they are both moments of the same notion, and are related on that account. However absolute, therefore, the difference is between the moments taken *per se*, these differences are, in the light of the one notion, merely relative.

The first step in the process of the notion is, then, the recognition that the differences within it are *per se* contrary and ultimate, and that, because of the unity of the containing notion, the differences are related to the same notion and so are relative to one another.

From this follows the important aspect of the process, on which Hegel constantly lays stress—the function of negation. In a sense this is the vitalizing power in the process, its driving force, so to say. Each difference is the contrary of the other, and is 'negative' of it. But this negative relation is not bare or 'infinite' negation, but *specific* negation, negation within a certain field, and negation in a certain definite direction. Thus the 'use' of a thing is not simply 'not-ownership'; if so, it would have no qualities in itself at all, and not to have qualities is equivalent to being in fact nothing. Or again, if it were merely 'not-ownership,' it might well be a fiction, for a fiction is 'not-an-owner.' It is 'use' of a thing within the field of property; and 'use' is not ownership in the sense that whatever within this field is involved in 'ownership' is not found in 'use.' An owner, *e.g.*, has a will, a thing used cannot have a will; hence a slave is not, *qua* slave, a personal will. So a thing as used can be alienated because it is an external object, a personal will as owner is not used and cannot be alienated. In short, the negative relation between the two component differences is a negation with a specific content peculiar to each side of the opposition in question. And it is this definite and positive content which at once makes the negation possible, and constitutes the particular kind of opposition in which they stand to each other. The positive content of each difference enters into and shapes the character of the negative relation of the one to the other. Hence it is that, while in every notion the differences are negative of each other, the precise character of the negation and of its procedure varies with each notion.

Now, this positive content which makes the negative relation definite is derived from the notion itself, which is altogether positive. The notion affirms itself in each moment, and this makes the moment what it is. Moreover, the notion finds itself in each moment, and, so to say, endeavours to concentrate its entire meaning into each moment. For that reason each takes its stand with all the weight of the notion behind it, and in the name of the notion denies the right of the other to be itself, or even to be the notion. The negation is thus not a passive but an active relation, not a condition of quiescence but of conflict between the moments. But this active opposition presupposes and requires a common basis, and that is found in the positive content which each possesses. The positive content which makes the negation definite in character is the source of the union between the opposing moments of the notion. Or, in other words, the conflict is not so much between the moments *per se* as between moments each of which claims to embody the one whole notion. The tension between the moments is a tension within the unity of the notion which is articulate in each. It is this tension which sets up the process of interrelating

¹ It is treated as part of the 'Philosophy of Nature' (*Naturphilosophie*, §§ 257–259).

the moments in such a way as to break down the opposition and connect the one with the other, and establish an explicit union between them—a union which was implicit from the first and becomes articulate in the organic connexion of the moments. This process of interrelation is what Hegel calls thinking, or rationally unifying, 'contradiction.' To think, or rather think out, contradiction, he says, is the very nature of reason: true thinking can do nothing else, and has nothing else to do. By 'thinking contradiction,' he obviously does not mean thinking 'logical contradictories' in the formal sense; but thinking into a harmonious unity the real contrariety of moments in a notion which are negatively opposed to each other. Since this way of thinking is in a sense the core of the whole process, he rightly regards the procedure as the consciousness of contradiction and the removal of contradiction. The term usually employed to designate this process—dialectic—Hegel adopts from his predecessors, more especially Kant and Plato; though Hegel constantly points out that the dialectic method was imperfectly understood and imperfectly applied in every system but his own, and mainly because the nature of negation, on which the process turns, was not properly grasped.

When we ask how the opposite elements are brought into harmony, the answer is—by the ordinary operations of analysis and synthesis characteristic of all thought and indeed of mind itself. These two operations are inseparable, and are inherent in the function of reason. Starting from an implicit synthesis, we find by analysis the moments of the notion; we discover in the same way the positive content of each moment, and by continuing the analysis far enough we come to a point where the very content of each moment suggests its relation to the other, and the further analysis gradually passes over into the explicit synthesis of the separate moments.

So far we have regarded the moments as if they had the same value for the notion. In a certain sense this is true. Each is essential to the notion; and from this point of view the affirmation of one moment, the 'thesis,' cannot be regarded as higher than the affirmation of the other, the 'antithesis.' But the process of interrelating these two brings out a result which contains more truth than either moment separately, and issues in a stage which is higher than both taken together. In the final stage in which the process culminates, the explicit synthesis of the two separate moments, we have a form of the notion which combines the two and at the same time removes the one-sidedness in which each subsists. It is not a mere amalgam of the two preceding moments; it is a transformation of them, and is thus a further stage in the process of the notion, and is in that sense a new 'moment' in that process. Since it unites in itself the positive substance of the two preceding moments, and since these were the ultimate differences contained in the notion, this third moment completes the process of the notion, and brings into prominence the reality of the unity underlying those differences from the start. It reveals this unity in explicit form as the controlling principle of the differences, and reveals the differences explicitly as factors in the same single unity. In this third 'moment,' therefore, the notion has completely expressed itself, it has 'come to itself,' it has 'become conscious of itself.' In that sense the third moment is on a higher level than the preceding moments, and its truth is a higher truth regarding the nature of the notion. But it is not higher at the expense of the preceding stages; it is higher only by containing their truth, and, indeed, because it contains their truth. It cancels their isolation from each other, and also

their consequent opposition to each other. These, the isolation and opposition, are certainly removed; for, in the final stage or moment, the two preceding elements are so completely interwoven that their opposition has no longer any significance for the notion. Each so permeates the other that only a regressive process of analysis can even distinguish them. In so far, then, as their negative relation to each other was the result of their fundamental opposition, this negation, essential as it is to the process of the notion, is the transitional aspect of the process, and disappears in the resulting final moment. Contradiction, then, which is vital to the process, exists only in order to be removed; it is not final but transitional: to think out contradiction is to abolish it. Hence it is that the final or absolute notion is entirely free from and entirely cancels all the contradictions involved in and incident to the lower 'finite' notions. Hence Hegel's view, that contradiction is of the essence of finitude. The complete removal of contradiction is identical with 'true' infinitude, the self-closed and self-contained whole or absolute notion; conversely, wherever there is finitude there is process, and wherever there is process there is contradiction. The contradiction is thus not accidental to the nature of finitude, but inherent in it, and is, in fact, the very reason of its connexion with infinitude, the presence of which, again, in the finite may be said to be the source of the negative movement, the contradiction, in finitude as such. If the process were endless, if infinitude were an infinite progress or regress, there could be no contradiction and so no removal of it: we should have indefinite process in time, and not process in thought. Hence he names such a process the 'false' infinite, 'false' because it makes the attainment of a rounded system of truth, or indeed truth at all, meaningless and impossible.

How the 'higher unity' or 'higher truth' is arrived at, it is not difficult to see. We may best bring this out by recurring to the illustration previously referred to. The notion of property, we saw, is resolvable into the two ultimate factors of 'ownership' of a thing and the 'use' of the thing, these being opposed to each other. They are opposed because the ownership means the detention of the thing as the correlate of exercising a permanent or identical personal will in regard to the natural object, while the use of the thing means the dissipation of the thing, the evanescence of it, and hence the gradual loosening of the hold of the personal will over it. In the former element the notion of property is expressed in terms of the nature of personal will, in the latter it is expressed in terms of the nature of a thing or natural object. Personal will provides the aspect of identity or universality in the situation, the thing provides the aspect of diversity or particularity. Sharply opposed as these are, the analysis of the first, which is logically the prior element—since will must be exerted before a natural object can become a thing and enter into a self-conscious situation as property—brings out the second. For ownership to be effective, will must be repeatedly and continuously exerted over it, and the continuous exertion of will over a thing is precisely what is meant by 'using' it. But the continuous use of a thing means that, since the thing is particular and the will universal, the thing destructible and the will indestructible, ultimately the thing is exhaustible and therefore our hold over it is terminable. The termination of property in a thing is thus involved in the very nature of property. In fact, the complete termination of property in a thing is the very highest expression of what property means for a will. This termination may be brought about in two ways, either by exhausting it so that it is no longer of

'use' and so no longer our property, or by openly giving it up as our property. The capacity to do either is involved in complete ownership, 'complete ownership involves complete use'; the explicit surrender of ownership is the highest proof of complete ownership, the complete exhaustion of our interest in the thing is the complete surrender of its significance as our property and the return of the thing once more to the sphere of nature from which it was taken to begin with. This, the final stage in the process of the notion of property, is, in legal phraseology, the moment of 'relinquishment' of property. This moment therefore contains the positive substance of ownership in its purest and completest form, for we cannot relinquish what we do not own completely; and, on the other hand, it contains the positive substance of what is involved in 'use' in its completest form, for we cannot truly use a thing unless we can make it independent of ourselves at choice, unless we are completely free to 'do as we like with our own'; otherwise the thing determines our will and not our will the thing. Thus in relinquishment of a thing the will most clearly reveals its complete freedom in relation to the thing, and most clearly manifests that the thing has no will of its own but is absolutely subordinate to a personal will. Relinquishment in that way is the 'higher unity' of the separate elements involved in the notion of property. Yet it does not destroy their positive significance, for this is retained in the result; it removes their antagonism in a form in which that antagonism can no longer exist, because both the elements go to constitute what that form itself is, and are inseparably interwoven in this highest moment. This moment is the culmination of the process, or 'dialectic,' of property, for the notion of property is exhaustively expressed in this moment; and the notion of property can have further significance only as a part of a wider notion altogether, *i.e.* a notion expressing more fully the nature of self-conscious will which is at the basis of property. This further notion, as Hegel interprets the matter, is that of contract.

Such then in outline is the nature of the process, or 'method,' of the notion. Only one further question seems to be worth raising: How does Hegel know where to start the process, what element in the notion to place first? The answer to the question is obtained if we bear in mind that the aim of the process is the complete explicit realization of the whole of what a notion contains. The complete truth is the most concrete and systematic, the most or the highest individual. We cannot learn this all at once, and by mere intuition. It is a result. The result of the process determines the aim of the process, and the aim regulates the procedure. The procedure is thus from the simplest, most abstract, to the most articulated and complex, the most concrete. Hence the first moment is always the logically simpler, more ultimate, and more abstract. It is that without which no other stage in the process would be possible at all, and no advance capable of being made to the concrete result. What this is in the case of a given notion can be revealed only to logical analysis, exercised in the light of the result to be achieved. In general it may be said that the notion in its aspect of identity as such is taken as logically prior to and the condition of all further development of the notion; the aspect of diversity is then directly suggested and gives the second abstract moment. This holds good whether the notion we are seeking to unfold be such a comprehensive notion as that of the State, or a minor subordinate notion, like that of property.

The method of procedure above analyzed is precisely the same in essentials throughout the whole

of Hegel's system. It governs the process of evolving notions wherever they appear and whatever they be. The process of connecting all the content of the notion of the State, for example, is essentially the same as that of connecting the aspects of contract, or conscience, or a free constitution. And the process of connecting the constituents of the whole Absolute notion, the notion of Absolute Individuality, is precisely the same as that required to connect the content of any part of the system—Religion, the State, or Nature. No doubt the method varies with the notions considered, but only in the sense that form varies with content, and yet is inseparable from content. Doubtless, again, Hegel may have been more successful in carrying out his method in the case of certain notions and certain departments of philosophy than in others. Sometimes he may have failed altogether, and often his analysis is obviously strained, artificial, and forced. But these are necessary incidents of the inevitable fallibility of genius, and must be so regarded. It seems a mistake to treat, as McTaggart does, the variations in success of Hegel's use of his method as so-called 'changes of method' in the system. Misapplications are not deliberate changes; and the assumption that alterations were deliberate either convicts Hegel of insincerity in the construction of his system, or regards him as working out his system with mechanical and infallible success.

In the light of the method as above explained there is no difficulty in accounting for the fact that the process of connecting the elements of a given notion is the same in character as that which connects the variety of notions involved in a given sphere of the system and the totality of notions required to unfold the content of the whole system. For, just as from the point of view of a given notion its elements are 'moments' in the realization of that notion, so any given notion, short of the notion of Absolute Individuality, is a 'moment' in a wider notion, and is thus a stage in the realization of a completer truth. Property, for example, is a notion with subordinate 'moments,' but property itself is a moment in the realization of the notion of 'contract,' just as contract again is a moment which helps to unfold the complete content of 'abstract Right' as an expression of free personal will which is the basis of the notion of the State; and so throughout the whole system.

It is impossible to go over the ground covered by the operation of the dialectic throughout all the notions which emanate from reason in its interpretation or reconstruction of individuality in all its forms. To do this would require a re-statement of the whole system, and if given in outline would convey little concrete information. The whole value of the argument lies in its close association with the actual substance of reality; the vitality of the dialectic draws its energy from each concrete form of individuality in turn, and works with its content as the indwelling organizing agency. There is nothing formal in the procedure; the form of the method in fact takes on the colour and quality of the content. The principle that the notion of reason is the core of things being once for all adopted, it is henceforward throughout the system accepted as the truth of things, and reality is simply asked, so to say, to render up its meaning in terms of the notion and its method of procedure. The individual mind of the philosopher merely 'looks on,' as Hegel puts it, and records the result in the various spheres of truth into which reality naturally, or rather according to historically accepted divisions, falls.

6. Hegel's view of ethics.—The ethical life in its most comprehensive sense is a particular aspect

of a more general reality, that of finite mind. It is not the highest expression of finite mind, nor is it the lowest level at which mind exists. It arises at that stage in the process of mind's activity where, having reached consciousness of itself as a concrete reality, finite mind utters its substance in an objective form. It presupposes the conscious continuity of itself with nature, and freely commits the ends of its own being to the objective processes of nature, and finds nature supporting its own purposes. It determines nature by its own ends; it 'acts,' and does not in so doing feel any sense of loss, but, on the contrary, feels enlarged and enriched. Similarly, it presupposes the conscious continuity of finite mind with finite mind, the identity of self with self, the acknowledgment of self by other selves, and the open, concrete recognition of intercommunion of self with other selves, so that one self shares the life of another in definite ways, and is expanded in so doing. It presupposes, in short, the conscious universalization of mind, brought about and sustained through intersubjective intercourse which is carried on by all the means at the disposal of each mind—desire, emotion, end, etc. Of these forms of objectification—that through conscious union with nature, and through conscious communion of finite mind with finite mind—the latter is infinitely the more important, because of the more explicit and complete identity of the component factors in the situation, and because the first form is involved as a necessary means to the complete attainment of the second. Without 'nature' intercommunion of conscious selves would be impossible; without other selves mind would never rise above the limits and limitations of 'animated nature.'

When the resources of finite mind have been evolved to this level where it finds and accepts mind (finite mind) as its own object, an object responding to the call of the subject and evoking its potentialities, then mind is in a condition where the open and free interrelation of self with self is possible; and in this interrelation consist essentially the ethical process and the ethical life of man. It thus forms a level of the life of mind quite by itself. Compared with the previous stages of mind, it may be justly spoken of as 'objective'—explicitly universal and permanently embodied finite mind; the previous stages by contrast being spoken of as 'subjective' mind. And further, because this level of mind is its own creation and product, using nature, but not itself the outcome of nature, it is self-constituted and self-determined, and therefore free.

Thus the region of the life of mind where ethical life exists is that of free objective finite mind. This is the form of reality, the type of 'notion,' which has to be evolved by the science of ethics, and its parts logically connected by its inherent dialectic.

In the order of reality the whole comes before the parts, the complete before the incomplete; and in the whole we see most clearly the nature of that individuality with which we are dealing. The whole where finite mind is expanded and objectified in its completest way is historically the State. This is the most concrete phase of objective mind; this, in fact, is the concrete reality to which the notion of objective mind primarily refers, and which contains all other ways in which that notion is expressed. But in the order of exposition we must begin with the most elementary way in which this notion of objective mind is embodied, the simplest form in which the notion of free objectified mind is expressed. In every form, from the simplest and most abstract to the most complex and concrete, essentially the same principle is realized, but the fullness of its content, or its

'realization,' varies in degree of 'truth' or adequacy to the nature of the notion in question. What this simplest phase of the notion is can again be found only by experience; but this means no more than that the philosopher, observing the nature of the notion considered, is in touch with all the appearances of its reality.

The primary subordinate notions into which the concrete notion of objective mind falls are arrived at by a logical analysis of its content. Objective mind, free will, may sustain itself directly (a) through the external relation of will to will, (b) through the inner life of each self-conscious individual will being aware of itself as a self-contained unit of objective mind, and, (c) finally, through the free and unreserved intercommunion of mind with mind, an intercommunion which avails itself of both external and internal attitudes of will, but is a fuller realization of the objective mind than either. In each case we have the same factors, mind conscious of itself through explicit relation to other finite selves, and realizing itself in this relationship. The first is the sphere of the legal relationships of wills; the second, that of inner moral sentiment, purpose, all that is summed up in the term 'moral conscience'; the third is that of social institutions. These are stages in the fulfilment of the same end, and are only logically separable moments of that one end. Thus legal relations are impossible by themselves; no social order, no objective mind, could subsist by them alone, for the obvious reason that in them the notion of mind is not fully realized. The inner side of mind—what the individual is 'for himself'—is ignored in law, or considered only as relatively subordinate, as having significance only in so far as it throws light on 'acts,' on the external expressions of will which are alone the sphere and interest of law properly understood. Yet the inner side is of supreme importance to the individual, and also of supreme importance to the complete life of society. It is at least of equal importance with law as a realization of mind, and is in any case as necessary for the complete expression of the mind's nature. The fullness of intercommunion of mind with mind demands that the powers of response within the individual shall reflect and correspond to the demands made upon it by others. The third stage is equally necessary, and cannot subsist apart from the two preceding; for the complete intercommunion involved in social institutions is as impossible and incomplete without legal relations as it is without the inner adjustments of the individual mind to the inner life of others.

Taking these primary elements in the constitution of the complete notion of objective mind, Hegel analyzes them as successive stages, and under the general designations of (1) abstract law, (2) morality (*Moralität*), and (3) the social order (*Sittlichkeit*). Each of these is a notion, a subordinate notion in the whole, but a notion none the less, because each has an individuality all its own, is a unity in difference.

(1) The forms assumed by the external relation of mind to mind constituting the sphere of law are easily stated, and are more or less familiar in every historical code of laws. Individual wills may be legally related and combined indirectly or directly, positively and negatively. (i.) They are related externally and in an indirect manner when some external, 'natural' object is the common centre of their interest and of the activity of their separate wills; this is the sphere of property, essentially an objective realization of mind and a relation of one mind to another, *meum* and *tuum* being correlative and inseparable terms; it is primarily positive and only in a secondary sense negative. (ii.) They are directly related when two or more wills have

a mutual hold over each other as regards certain actions of their respective wills, and on certain explicit conditions mutually and freely arranged between the separate wills so related; this is the notion of contract. Only a limited range of the activity of an individual will can be contracted away; hence, no matter how close the contract, the individual wills as such still retain their independence; a will cannot contract itself entirely away without self-contradiction and without contradicting the notion of a contract. It is a fuller realization of objective mind than property, because contract enters more deeply than property into the structure of the individual will; the very powers of a will, as such, are made the basis of the contract. It is both positive and negative in explicit terms, for a contract explicitly limits as well as unites the contracting wills. (iii.) The third form in which wills are related externally is primarily negative, and only in a secondary way positive. One will may, of itself and without the acknowledgment of another will, invade the domain of individuality of another, and to some extent curtail the activity of this will. The invading will may do so to any extent, even to the destruction of the existence of the invaded will, and may do so unconsciously or deliberately. The relation is here primarily negative, because one of the wills thrusts the other aside and does not admit its reality, while the other (invaded) will in its turn reacts on the first and denies the reality of the invading will as regards the specific action of that will. This is the notion of wrong-doing in all its forms, 'civil' and 'criminal.' It is obviously an external relationship; still it is a relation, and a relation of an objective kind, for each acts and expresses his will before the eyes of the other.

The above notions exhaust the possible external relations of wills to one another, and the last stage enters even more deeply into the substance of will than either of the others, more especially when the wrong-doing is deliberate. For in wrong-doing the agent and the sufferer call upon the inmost claims and resources of their personality in order to assert and defend their respective positions; and the process of removing the wrong makes further demands on the concrete nature of their individuality in order to reinstate their true relations to each other. Their value in their own eyes and their significance for the society to which they belong are called in question, and force them to bring out more explicitly their real nature as wills, and establish as the result a concord which has an inner side as well as an outer. This appears very clearly, for example, in the effect of punishment on the wrong-doer.

It is probably because of this effect of the process of wrong-doing and of its removal that Hegel finds the logical connexion between 'law' and 'morality' at the point where wrong is righted. The logical transition seems indeed forced and artificial, as so many of his transitions from one fundamental notion to another can be shown to be; and certainly it is by no means so convincing as that between the successive stages of the analysis of law.

(2) Morality, or the inner side of realized mind, likewise has its various modes of expression. The analysis of morality is one of Hegel's richest and most subtle contributions to the interpretation of the moral life, even if we add that its value lies less in the framework of its logical order than in its insight into concrete moral experience. An individual's morality is the working plan through which the inner processes of his mind are brought into the service of an objective life with other individual minds. It is not therefore a private preserve of individuality, within which he shuts him-

self off from society; it can be so applied, no doubt, but when so applied it becomes the source of evil and not of good for the individual. The true conscious good of the individual lies in the subordination and regulation of the functions of his inner life in the interests of a systematic unity with his fellows. The conception of such a unity, consciously operating upon the inner conditions of his activity, relative to his peculiar place in the objective system, and growing into definiteness and clearness with the success of his efforts to attain it—this is the good of and for the individual as a specific centre of finite mind. This region of morality may therefore be described as the individual's conscious perspective of his objective life with his fellows, and is the process of realizing and reflecting in his inner life the objective system of social well-being with which he, as a special centre, is bound up. It covers such facts as intention, conscious purpose, happiness, duty, emotion, and, highest of all expressions of this attitude, the individual 'conscience' with its possibilities for good and for evil to the individual. The whole inner life of the individual is in this way a moral microcosm of the objective self-contained macrocosm of a historical society, and is realized directly on its own account, indirectly as an embodiment of complete objective mind.

(3) The third stage of objective mind—the social order—covers all that we mean by the institutional aspect of the life of a society. Here we have the free unreserved interaction of individual mind with individual mind, the interweaving of interests and purposes within and without the conditions of universal law, with and without the sanctions and guidance of individual conscience. Institutions are the utmost individuals can achieve in the relations they establish with one another; and they contain all the human interests of which their finite individualities, so far as intercommunicating, are capable. From one point of view they are expressions of finite mind, from another point of view finite minds are the living particular foci of the objective concrete spirit embodied in institutions. More than all else in objective mind, therefore, institutions are 'ends in themselves.' They are in no sense creations of 'nature,' because institutions use nature as instrumental for the continuous intercommunion of finite spirits. They are, however, created by self-conscious mind at its highest level, created as universal embodiments of mind, and created for the maintenance of universal and constant relations between individuals. They are always 'instituted,' set up by deliberate resolve; and, once established, are maintained rather by the universality of the ends they embody than by the clear conscious resolution of their component individuals. They have a kind of life of their own once they are set going; and they continue in being by their own single reality, whose complete significance any given individual may be only partially aware of, and as a rule only partially shares. Much of the life of institutions is for the component individuals unknown, much is carried on by conscious automatism, and in some cases, *e.g.* the State, the institution is maintained even against the judgment of the individual regarding his conscious interests. Still this unconsciousness in the life of institutions is at most a mere matter of degree, and rather a psychological condition of carrying on the institution than a logical aspect of its structure. Consent and intelligence are always presupposed, and the self-consciousness in which the institution is rooted may break out at any time into criticism and lead to further initiative and progress in the life of the institution.

In a word, then, the institutional stage of ob-

jective mind is the direct and conscious operation of a definitely realized collective unity of individual minds upon the individual components sharing in its life; a unity maintained through each, but more concrete than any; a unity secured on certain expressed formulated conditions and therefore implying 'law'; a unity permeating the inner processes and well-being of its components, and therefore involving what the stage of 'morality' contains. It is logically higher in value than the preceding stage, and ethically higher in authority and significance. It is historically prior in existence to the component individuals, and prior therefore to both 'law' and individual morality. In its earliest forms its mode of regulation is that of 'custom,' and custom is at first the source of law and the ruler of conscience. In its highest forms the social order is a blend of custom and self-conscious regulation, the former acting as the conserving, quasi-unconscious method of procedure, the latter as the principle of criticism, initiative, and progress.

The institutional condition is capable of indefinite development, and there is, strictly speaking, no practical limit to the number of institutions. But historically and in principle some institutions are more rooted in the natural conditions of man, more lasting in character, and more universal in their purpose than others, and so more fundamental in the structure of objective mind. Such are the institutions of the family, the city, and the State, and these again are in the order of their ethical importance. The first is based on the natural organic fact of sex; provides the sphere for intercommunion of particular minds in terms of natural affection, sympathy, and direct personal helpfulness; and has its larger ethical significance in the rearing and moulding of new individuals for the wider life of the whole community. The second rests on the natural need of varied organic sustenance; gives rise to and makes possible the complex interdependence of co-operating individuals each and all engaged in obtaining a livelihood; and finds its larger ethical significance in the organization of economic relations in such a way as to give free opportunity of self-expansion to all and protection to each in the fulfilment of his function. The third rests on the need of forceful security from interference from without the community, of regulated security from interference as between individuals and minor institutions within the society, and of concentrating the whole resources of objective mind in a single all-comprehensive dominating unity, which is capable of acting on every part and giving rounded completeness to the ethical life of finite objective mind.

The State is thus the culmination of the reality of objective mind as an organized ethical whole of human purpose consciously acting on the individuals and fulfilled by them. As an ethical whole each State is or should be a single individuality, self-contained, and therefore sufficient for the ethical life of its component individuals. The finitude of any given State is inseparable from it, and is a limitation as regards its capacity to exhaust the life of humanity as such. Each State is but one State amongst other States, all expressive of humanity. The ethical life is therefore a restricted area of reality, and not an exhaustive expression of the Absolute, or, for that matter, even of humanity. When, however, we pass beyond the State and consider the life of humanity as embodied in all States, we pass from the ethical life proper to the drama of human history. This is inseparable from the course of the world in all its aspects. The treatment of States from this point of view is undertaken by the more comprehensive part of Hegel's system, the 'Philosophy of History,' an interpretation of States as realizing

in various degrees the idea of freedom of will embodied in each State.

7. Hegel's view of religion.—Religion occupies a peculiar position in Hegel's philosophy. Philosophy as a whole and in its parts is determined by its object; it always has a definite form of individuality to deal with. Reality as the absolutely individual whole is the supreme object of philosophy; the evolution of its content is the systematic development of the Absolute Idea, the reason-constituted essence of Absolute Spirit. The various divisions and subdivisions of the philosophical system, nature, finite mind, etc., are dealt with as specific individuations of this ultimate reality; their content is evolved in detail as 'moments' of the supreme truth, and thus gives rise to the various parts of the absolute philosophy, the various 'philosophical sciences.' Beyond the one complete absolute science and the various subordinate 'sciences' in that system, beyond reality as a whole and reality in its parts, there is nothing for philosophy to deal with. A philosophical science is the systematic evolution of the real in terms of its fundamental essence or notion; and the real is a whole of parts, a unity of diverse elements.

Now religion is not an object in the sense of a sphere of reality: it is an attitude towards an object. The only form of object possible is either the Absolute or some specific sphere of the Absolute. As Hegel continually asserts, the object of the religious attitude is the Absolute in its unity, in its completeness, in its 'truth.' But this reality is also the peculiar domain of philosophy, or speculative science; and speculation in Hegel's view is alone necessary and sufficient to give the complete truth about the Absolute. Here then lies an obvious difficulty. It cannot be met by saying that the Absolute in philosophy is not the same as the Absolute in religion. The latter, as well as the spirit, of Hegel's system is against such a view: the Absolute in philosophy is emphatically identified with God in religion, and in the highest religion there is not even the semblance of contrast. Nor are there two truths about the Absolute; the Absolute is the supreme truth and the supreme truth is one. Hegel's solution of the difficulty is found in drawing a distinction between the 'form' in which the Absolute is grasped in the case of religion and of philosophy, and the 'content' which they both deal with. The 'form' is different in the two cases, the 'content' is precisely the same. The same Absolute is present in both and in the same sense, viz. as Spirit, self-conscious and rational; and its mode of realization is the same, viz. it is 'conscious of itself' in the religious mind as well as in speculative philosophy. But the medium through which its realization is effected, the 'form' in which the 'content' is expressed, is in religion that of feeling, of sensuous intuition, and of significant sensuously symbolical general ideas, whereas in philosophy the 'form' is that of the notion *quod* notion (as above explained, p. 572 ff.).

This solution, however, only raises a further difficulty. The notion, as we have seen, is the final form in which truth appears, and the notion alone is entirely adequate to convey absolute truth. Is the 'form' used by religion an approximation to the notion, or is it co-equal in value with it for the Absolute which expresses itself in the religious life? There is no doubt that Hegel's view is that the religious 'form' is not in itself completely adequate to the essential nature of Absolute Spirit, and that the religious 'form' calls for and is compelled by its own 'dialectic' to pass to the supreme form in which truth is embodied—the 'notion.' Hence it is that on his view philosophy, and not religion, is the highest expression

of self-conscious spirit; and that speculation is the final stage and 'crown' of the life of spirit.

It is difficult to resist drawing an obvious inference. If it is possible, as Hegel maintains, to convey the truth about the Absolute in the form which is the essence of the Absolute (self-conscious reason), and thus perfectly adequate to the nature of the Absolute, then religion is simply the way of error; if, on the other hand, religion is not the way of error, the claim of philosophy to express the final truth about the Absolute is untenable, since the Absolute requires to express *itself* in the sphere of feeling, intuition, and representative ideas, *as well as* through the notion. On the former alternative, religion is in strictness unnecessary, and philosophy is all that God requires to convey His truth to finite spirit; on the latter alternative, religion is necessary and philosophy has no claim to priority of value over religion, since the Absolute is its own standard of value and one form of self-expression is as needful as the other. Either philosophy fulfils a purpose altogether different from religion, or else philosophy is not by itself the highest and completely concrete expression of the Absolute.

The ambiguity involved in Hegel's position was not merely a source of great perplexity to his followers, and led to diametrically opposite interpretations of the religious significance of his doctrine, but it was clearly a source of trouble to himself when he came to define the boundaries of religion and philosophy. It is easy to see how the difficulty arose. Hegel claims that it is possible in virtue of the principle of his system to take up a theocentric position, and to express not simply what the finite spirit thinks of the Absolute Spirit, but how the Absolute Spirit must itself think. Thought, in the sense of the 'notion,' is absolute thought, thought as it is *for* the Absolute. In religion and pure speculation we have before us what the Absolute Spirit is in and for itself and how it articulates itself. Religion is the 'self-consciousness of God,' not simply how finite spirit is conscious of God, but how the Absolute Spirit is conscious of itself in finite spirit: the Absolute Spirit 'manifests itself' in man, and the manifestation does not conceal but openly reveals its very nature. The revelation of God to man in religion and God's revelation of Himself to Himself in finite spirit are one and the same revelation, much in the same sense as Spinoza maintained that the 'intellectual love of God' was at once 'God's love of Himself' and 'man's love of God.' Similarly, with the necessary change of 'form,' speculative philosophy is the 'self-consciousness of the Absolute Spirit,' the notion of Absolute Mind articulating itself to itself and to finite mind at the same time, since finite mind adds nothing and detracts nothing in the process, but merely 'looks on' at the process of self-articulation. In the result, therefore, the system of notions constituting the substance of the Absolute Reason is the thought of God, as He was or is in the beginning 'before the creation of nature and finite spirit.' Self-manifestation in religion, self-articulation in speculative science—both proceed from the same Spirit; both are therefore necessary to it, as indeed both are commonly considered inevitable in the life-history of finite experience. How then can the two be distinguished? More especially how can the two be distinguished in terms of and by the necessity of the 'notion,' so as to satisfy the demands of a philosophy which lives and moves within the sphere of the 'notion'? How can the notion dialectically exhibit the necessity of two separate self-revelations of the Absolute Spirit? How can the notion justify by its own procedure an 'inferior' and less adequate expression of the

nature of the Absolute than that supplied by the notion? How, in short, can the notion find a place within its own form for a non-notional representation of the absolute truth?

It is not surprising, when we view the matter in the light of the above, that Hegel's efforts to draw the line between religion and philosophy should show considerable vacillation. Thus we find at one time art treated as a part of religion, at another time religion treated as separate from art; at one time art and religion are distinguished as regards their form of expression, at another the form adopted by art is used as a means to give substantiality to the religious attitude. Again, religion is regarded as independent of philosophy and as a vitally necessary moment of expression; at another time religion is treated as a prelude to philosophical truth, yielding up its claims to be truth when the higher point of view of philosophy is reached; at one time religion is a phase of philosophy, at another philosophy is a phase of religion, since philosophy is 'also the service of God'; at one point 'feeling,' 'intuition,' and 'symbolic representation' of God are cancelled and superseded in the 'notion,' as indeed in a sense they must be since they are lower levels of conscious life; at another time these forms are treated as individual forms embodying in themselves the notion like any other individual mode of reality, and so capable of being interpreted and dialectically developed in terms of the notion.

This uncertainty of treatment seems almost inevitable in a system which claims as philosophy to interpret the Divine mind and also to give a philosophical interpretation of a religious, or non-philosophical, apprehension of the same reality, which seeks to be a religious philosophy and yet to find an independent place in its scheme for a philosophical religion, which asserts that the 'Logic,' or general ground-plan of the system, is 'theology,' and at the same time tries to justify the claims of historical theology. Religion was accepted as a fact of history, and its nature had to be traced to its source in the Absolute. In the religious life, finite spirit claims to be in communion with Absolute Spirit. Hegel's view of philosophy required him to prove that such communion arises from the necessary procedure of Absolute Spirit, and that it was thus a stage in the evolution of the Absolute Idea as expounded by philosophy.

Enough has perhaps been said to indicate that whatever value attaches to Hegel's analysis of religion, his attempt to fit religion into the dialectical construction of his system cannot be regarded as either successful or logically satisfactory. However we interpret his position, it appears unconvincing. On the face of the matter, it seems as unaccountable that the Absolute should adopt the confessedly imperfect media of 'feeling' and 'symbolic ideas'¹ to convey its truth *to itself* as it is for finite spirit, when, so to say, it always has in its grasp for the same purpose the perfect medium of self-expression, the 'notion.' On the other hand, the elimination of all personal qualities in the logical coherence of the notion is a consummation of the religious life which is attained at the cost of the intimately personal communion of finite spirit with Absolute Spirit, in which, as Hegel asserts, religious experience is rooted; and, if the choice has to be made at all, there is little doubt that the religious mind, even in the highest form of religion, will not regard Logic as an adequate substitute for Love. When, again, we consider the endless varieties in mood and expression assumed by religious life in the course of the

¹ This symbolic character of religious ideas is never transcended; it is found in the highest or 'absolute religion' as well as in the 'religion of nature.'

history of mankind, it seems nothing else than grotesque to treat all the creations of the religious attitude, from the phantoms of primitive fear to the aspirations of the saints, as expressions of the self-consciousness of God in the soul of man. Dialectical necessity of that kind does more than justice to the folly of man at the price of doing less than justice to the wisdom of God. In the history of religion, as in history generally, it may be true to insist that the '*Weltgeschichte ist das Weltgericht*'; but a judgment of the world is not a justification of it.

Setting aside, then, the difficulties presented by Hegel's attempt to build religion into the logical structure of his system, the success of his analysis of religious experience is not seriously affected by its somewhat artificial association with the exigencies of his method. Religion in his view is a conscious relation of finite spirit to the Absolute as spirit, and from this fundamental principle everything else follows. The relation is double-sided, and is maintained through spiritual activity of both the terms involved. God as the supreme spiritual unity of man's world (nature and finite spirit) communes with man as spirit, and this communion takes the form essentially of 'manifestation,' 'revelation.' The activity of spirit is necessarily self-manifestation, manifestation to a self, and manifestation of a self. This manifestation constitutes the truth, the substance, the reality of religion. Being not merely truth about God, but truth of God, God as truth, this manifestation is at once God's consciousness of Himself in man, and man's consciousness of God in himself. The truth is one and the same on both sides, and both are aware of the same truth. The peculiarity of the religious life just consists in this essential unity of man's spirit with God's spirit, a unity that defies separation. The imperturbable 'certainty' in the religious mind of its direct intimacy with Absolute Spirit is the psychological effect of this fundamental unity. This certainty is found in all religious experience, and is so complete that it can and does take the form of mere 'feeling,' as well as the form of thought. Its 'beliefs' are often a blend of feeling and idea, and its beliefs are always immediate to the religious consciousness.

In maintaining this attitude, however, man never confuses the position of God in the relation with that of man. God is the self-revealer, man is the recipient of the manifestation. Man does not create the reality, the truth, revealed to him; he accepts it. His attitude is that of 'submission,' 'worship,' 'acquiescence,' 'expectancy'; God's attitude is that of the 'all-giver,' the 'all-wise,' the 'all-powerful,' the 'deliverer.' The immediacy of the communion never cancels the distinction of the terms related, finite spirit and Absolute Spirit.

The relation, again, is that of the concrete human spirit to the Absolute. The union may be effected through any element of nature or finite spirit; and the manifestation may adopt as its vehicle of communication with man's spirit any level or function of conscious life, whether in the sphere of feeling, ideas or volition, theoretical or practical. These together—the feature of nature or finite spirit by which God is expressed, and the mode of conscious life which constitutes the form of conscious communion with God—determine the different kinds of religious attitude which can be assumed, and the different types of religions which historically appear. Thus God 'appears' in and is identified with the realm of sense, with objects and powers of nature inorganic or organic, with the purposes of man's moral life, with the purposes that keep man and nature together, and with self-consciousness in its purest expression. Similarly God communicates with man's mind through pure feeling,

through 'intuition,' through symbolic general ideas, through the 'notion' of reason. And, just as it is not the part of nature, or of man's life as a part, that is the objective reality for the religious mind, but the one Absolute Spirit as focused in the part, so the mere feeling or idea is not looked upon as conveying an impersonal systematic truth about God, but as a channel of communication with God, and indeed as a *consciously* imperfect medium of conscious communion, a symbolic language of human apprehension, a figurative human suggestion used to make vivid and personal the concrete consciousness of the Divine presence in man's soul. If the idea used is taken as literal systematic truth, it is not merely on critical analysis found to be untrue, but it loses its religious significance: it becomes an attempt at speculative impersonal interpretation, not a channel of spiritual personal communion.¹ This can be illustrated from the ideas found in any religion, viz. the 'wrath' of God, God as 'Creator,' God as 'Father,' and even more abstract ideas, such as God as 'First Cause.'

In the religious life there is a constant process taking place in the soul of man by which the communion is effectively realized and sustained, an activity by which that union is kept up, or restored when interrupted. In contrast to the way in which God is presented to the soul, which Hegel describes in one passage as the 'theoretical' aspect of religion, this process of supporting the union and restoring an interrupted union is called the 'practical' aspect of religion. This practical aspect is the cult; it constitutes an inseparable element in every religion, and varies with each religion as the idea of God varies.

The foregoing is in brief Hegel's general notion of religion with the essential elements found in one form or another in every religion. It will be seen at once that this notion owes quite as much of its contents to psychological analysis of religious experience as to logical analysis of the nature of Absolute Spirit. Still more close is the connexion between the history of religion and his 'notion' of religion, when we consider the further development of the argument in the 'Philosophy of Religion.' While no doubt Hegel intended to portray the logical evolution of the stages required to realize the above notion of religion in its completeness, the evolution owes as much to psychology and history as to logic; and it is not easy to say which is the most important. The notion of religion is realized; i.e., man is conscious of God or God becomes conscious in man, at all the levels at which finite consciousness exists—sense, understanding, reason, spirit. These levels form together a succession of stages in the fulfilment of the life of human consciousness, the connexion and evolution of which constitute in part the 'Phenomenology of Mind.' The evolution of the notion of religion follows the course taken in the development of the stages of consciousness. Again, by what seems to the student of Hegel's system a piece of good fortune, but which is doubtless the background of Hegel's own thought, there is a historical type and form of religion corresponding to each of these stages in the morphological development of consciousness. This historical material is drawn from the history of mankind in general and the history of religions in particular. Each specific religion has its place determined in the evolution of religion in general by the stage in the evolution of consciousness to which it corresponds and at which it is realized. Thus the evolution of consciousness mediates the connexion between the general notion of religion and the general history of religious experience in mankind. By this means Hegel's development of

¹ This confusion is precisely the source of the 'conflict between science and religion,' or between philosophy and theology.

the notion of religion is at once a statement of the way in which the notion of religion is gradually evolved and exhaustively realized in finite spirit, and also a genetically constructed system of the historical forms in which religion has appeared. In a word, his notion of religion is evolved in its concreteness by giving a morphogenetic construction of the forms assumed by religious experience in human history. It is 'logical' in the sense that the forms are arranged so as to show an ever-increasing advance in the notion from abstract to concrete; it is 'historical' in the sense that specific religions are extracted from human history because they typify in actual form and reveal to analysis the stages in this advance.

We have therefore in the working out of Hegel's 'Philosophy of Religion' a plan adopted which is the same in principle as that followed in his 'History of Philosophy,' or again in his 'Philosophy of History.' Just as the 'History of Philosophy' may be described as philosophy itself 'taking its time,' or at least taking time for its unfolding, and history in general as human 'freedom' in the making, so we may describe the history of religion as the notion of religion working itself out under the conditions of time and human limitations. It is altogether in the spirit of Hegel's system to demonstrate the inseparable unity of notion and reality, to establish the notion as the essence of the real. In the case of religion the real is cast in the mould of history, and bound up with the course of time. Hence the evolution of the notion of religion must necessarily be the evolution of an historical reality.

We need not trace here in detail the analysis Hegel gives of the various historical religions. Suffice it to say that he finds the simplest forms of religion to be the religions of Nature, *i.e.* with natural objects of sense as their media; the middle forms of religion to be those of Greece and Rome; the highest or absolute form of religion to be Christianity. The outcome of his argument would thus seem to be the philosophical defence of the place claimed for Christianity amongst the peoples of Western Europe. The critical student may suspect such a result of savouring of predilection and partisanship rather than of abstract impersonal logic, and may find more than traces, in such an argument, of the spirit of all theodicies. But on the first count Hegel claims that to be a sound Lutheran is to be on the side of reason, and on the second he does not hesitate to maintain that all philosophy is in the long run a theodicy.

J. B. BAILLIE.

HEINE.—I. Life and writings.—Heine was born on the eve of the 19th cent.; whether the year was 1797 or 1799 has been a matter of dispute which can never be finally settled, since all the records have been destroyed by fire. He himself insisted that 13th Dec. 1799 was the correct date, and, erroneously regarding 1st Jan. 1800 as commencing the new century, spoke of himself as the first man of the 19th century. He was born at a time when the despotism which had tyrannized Europe was rapidly breaking up and yielding before the approaching forces of democratic freedom. He was a supreme illustration of that close alliance between tragedy and comedy which stamps all periods in which new wine is fermenting in old bottles. Düsseldorf was his native place, and this circumstance partially accounts for the spell which France cast over him, and for his satiric attitude towards the Teuton peoples; for the French were dominant in the Rhenish provinces during his earliest years. Yet he was in a sense without nationality. His parents were Jewish. The father, Samson Heine, was easy-going and unintellectual, unlike his brother Solomon, who became one of the richest men in Germany, but he was fond of art and music, and gained the deep affection of his son; the mother, who came of a cultured, originally Dutch family, was full of energy, well-educated, an admirer of Goethe and Rousseau, and had the greater influence on the mind of Heine. Harry, as he was christened, was their eldest child; his nature seemed to embrace the most contradictory of traits, for 'in soul he was an early Hebrew; in spirit, an ancient Greek; in mind a republican of the nineteenth century' (Sharp's *Life*, 12). He

was a quick boy, an energetic and appreciative lover of books, and he availed himself of opportunities for study which were given him by an uncle who was a studious physician and minor author.

From his early attempts at verse Heine was sent to the drudgery of a bank at Frankfort. After a period of business life in Hamburg with his uncle Solomon Heine, an unsuccessful venture on his own account, and the disappointment of a rejected proposal to his cousin Amalie, he left Hamburg to study law at Bonn in 1819, his maintenance being provided by his rich uncle. Thence he moved to Göttingen, and then to Berlin, where his first volume of poems appeared in 1821. Hitherto he had paid little attention to law, being engrossed in German history, literature, and aesthetics, but under Ed. Gans he eagerly studied the history and theory of jurisprudence, and even began a treatise on the *Constitutional Law of the Middle Ages*. Here, also, he came under the influence of Hegel, and he was admitted into literary coteries which gave him opportunities of meeting the most eminent men of letters. He formed a friendship, which became very intimate and lasted all his life, with Moses Moser, a man possessing a wide knowledge of men and affairs, and well versed in literature and philosophy. After a period of ill-health, he returned to Göttingen in 1824 and resumed the study of law. In that year he took a walking tour through the Harz Mountains and wrote an attractive account of his journey, partly in verse and partly in prose. The journey included a brief visit to Goethe, which he describes in one of his letters to Moser.

In 1825, with the sole view of being promoted to legal office, Heine was baptized into the Christian Church, much to his regret in later years, for his action served only to render him suspect among Christians and Jews alike. Shortly afterwards he took his degree of Doctor of Laws, and in that year and the following Julius Campe published his *Reisebilder* (*Travel Pictures*) in two volumes, an autobiographical sketch called *Ideen: Das Buch le Grand*, and more poems. Heine now visited England (from April to August 1827), but formed only a poor impression of London. 'Send a philosopher to London, but on your life not a poet,' he wrote in his *Englische Fragmente*. On returning to Germany he found that his *Reisebilder* had created a very favourable impression, and that the official ban, placed on the books in Prussia and North Germany on account of his freedom of expression in treating current religious and political questions, had served as a valuable advertisement. He now confined his attention to journalistic work in Munich, and had great hopes of an academic position of importance from King Ludwig I., who was reorganizing Bavaria. Indeed, considering himself certain of his appointment, he left for a tour in Italy, which supplied materials for a further volume of *Reisebilder*, conceived after the same plan, or absence of plan, as the earlier volumes, but even more bold in criticism, directed against all conventions which he regarded as antagonistic to human liberty. He failed to obtain the professorship on which he had set his hopes, and the disappointment coincided with the news of his father's death.

Heine now engaged in literary work, but was interrupted in 1830 by the news of the July Revolution in Paris, which raised extravagant hopes among the German Liberals. Heine gave forcible expression to these hopes, and, when the effect of the Revolution in Germany proved disappointing to the Liberals, he was singled out and given the hint that he would be well advised to leave Germany. In May 1831 he arrived in Paris.

He received a generous allowance from his uncle, and his health greatly improved. He found himself admitted into circles of celebrities which included Mendelssohn, Chopin, Balzac, Hugo, Sainte-Beuve, and Michelet. He set before himself the aim of promoting greater sympathy and closer understanding between Germany and France, and wrote letters to a German periodical which gave a vivid description of the movements of thought in Paris. He attached himself for a time to the school of Saint-Simon, finding its 'Religion of Humanity' extremely congenial, and he dedicated to *Enfantin*, then head of the school, his essay, *Zur Geschichte der Religion und Philosophie*. In its German form it was mutilated by the censor, but it had previously appeared in the *Revue des Deux Mondes* under the title, 'De l'Allemagne depuis Luther.' Turning to literature, he critically described for the French people, in *Die Romantische Schule*, the origins and aims of German Romanticism. These works rank among his best contributions to literature, but they were not very successful when first published. *Der Salon* (which included *Florentinische Nächte*), in four volumes, the last of which appeared in 1840, consisted of ten pictures and sketches on a variety of topics of current interest, varying greatly in merit. In 1835, however, Heine's works had been banned in Germany and Austria by a decree of the German Parliament, along with all the productions of a group of writers referred to as 'das junge Deutschland.' The decree was afterwards repealed, but the works of these authors were subjected to a rigid censorship.

Some time after his arrival in Paris, Heine entered into intimate relations with a simple, illiterate shop-girl, who was never able to read a word of his writings. Legal marriage did not follow till some years had passed, and then only to secure a comfortable position for Mathilde Mirat if Heine should fall in a duel which followed his personal attack upon the deceased Ludwig Börne, which was resented by one of the latter's admirers. But Mathilde filled a large place in Heine's life, and in his last years was a most devoted and indispensable nurse. He secretly accepted a small pension from the French Government as one of those 'who had compromised themselves in the cause of liberty.' When the Government changed on the abdication of Louis-Philippe and, the pension being discontinued, the names of the beneficiaries under the secret funds were made public, Heine's opponents openly charged him with bartering his patriotism for 4800 francs per annum. Further financial difficulties faced Heine, for his uncle Solomon died and his cousin Karl refused to continue the annual allowance of 4000 francs which his uncle had given him. Not long before, he had paid an extended visit to Hamburg, taking his wife with him, in order to persuade his uncle to continue the allowance to his wife after his death. This blow, mitigated though it was two years later by the renewal of the allowance, so excited him that a disease which had for some time threatened him came on apace. Paralysis soon gave him all the appearance of a dying man; and, though he lived for two years, with his mind undimmed and his keen critical interest unimpaired, he endured intense agony as he lay on a pile of mattresses—his mattress-grave he called it—and needed all the soothing power of morphia. The loss of his savings by a bank-failure, his anxiety for his wife's future, and the difficulty of concealing his condition from his mother never overwhelmed his eager spirit; his literary work maintained its virility, though it was necessarily less constant

He died on 16th Feb. 1856, and was buried silently in Montmartre.

The character of Heine defies analysis. Of himself he said: 'I am a Jew, I am a Christian; I am tragedy, I am comedy; a Greek, a Hebrew; an adorer of despotism in Napoleon, an admirer of communism in Proudhon; a Latin, a Teuton; a beast, a devil, a god.' His friend Gérard de Nerval extended this antithetical by-play by saying that he was 'at once cruel and tender, naïf and perfidious, sceptical and credulous, lyrical and prosaic, a sentimentalist and a mocker at sentiment, impassioned and reserved, *spirituel et pittoresque*, an ancient and a modern, *moyen-âge et révolutionnaire*.' His letters reveal a poet sceptical of poetry itself, an infidel haunted by the conviction of the spiritual. 'I am positive I have a soul,' he says, quoting Sterne's words with approval. Matthew Arnold it is who has best defined the master of irony (in *Heine's Grave*):

'The Spirit of the world,
Beholding the absurdity of men—
Their vaunts, their feasts—let a sardonic smile,
For one short moment, wander o'er his lips.
That smile was Heine!'

We are here concerned with Heine not as a poet but as a personality who left a marked impression on the religious life and political practice of his age. As such, if we take Heine's own words seriously, he is, indeed, nearer to us than to the purely literary critic. He says:

'Poetry, however much I love her, was to me but a divine play-thing, or a consecrated means for a heavenly end. I have never attached great value to a poet's fame, and whether my songs be praised or blamed, that troubles me little. But a sword shall ye lay upon my coffin, for I was a brave soldier in the war of the liberation of humanity' (*Faust, Heine's Prose*, p. xlvi).

2. Religious interests.—Kingsley once referred to Heine as 'a bad man, my dear, a had man' and Carlyle spoke of him as 'that poor blackguard Heine.' True, he hated priestcraft in all its shapes and forms, and he held in abhorrence 'State-Religion, that monster born of the intrigue between temporal and spiritual power,' but he was the friend of all sincere religion. 'I may not be over partial to anthropomorphism, but I believe in the Glory of God.' In his last will he humbly asks pardon of God and men for any offences against good manners or morals in his writings.

Despite all the attempts to attribute to cynical irony his allusions to the matter, it remains true that in his later days he became aware of a 'heavenly homesickness.' He himself has something to say of this in his preface to the second German edition of *Religion und Philosophie* (1852): 'In my latest book, *Romancero*, I have explained the transformation which took place within me regarding sacred things. Since its publication many inquiries have been made as to the manner in which the true light dawned upon me. Pious souls, thirsting after a miracle, have desired to know whether, like Saul on his way to Damascus, I had seen a light from heaven; or whether, like Balaam, the son of Beor, I was riding on a restive ass that suddenly opened its mouth and began to speak as a man. No, ye credulous believers, I never journeyed to Damascus; nor have I ever seen an ass, at least any four-footed one, which spake as a man, though I have often enough met men who, whenever they opened their mouths, spake as asses. In truth, it was neither a vision, nor a seraphic revelation, nor a voice from heaven, nor any strange dream or other mystery that brought me into the way of salvation, and I owe my conversion simply to the reading of a book. A book? Yes, and it is an old, homely-looking book, modest as nature and natural as it is; a book that has a work-a-day and unassuming look, like the sun that warms us, like the bread that nourishes us; a book that seems to us as familiar and as full of kindly blessing as the old grandmother who reads daily in it with dear, trembling lips, and spectacles on her nose. And the book is called quite shortly—the Book, the Bible. Rightly do men also call it the Holy Scriptures; for he that has lost God can find Him again in this book, and towards him that has never known God it sends forth the breath of the Divine Word.'

In his *Essay on Religion und Philosophie in Deutschland*—the first edition of which appeared in French in 1833, when Heine was in the full vigour of early manhood—it is his aim 'to explain what Christianity is, how it became Roman Catholicism, how from this it became Protestantism, and how German Philosophy is the offspring

of Protestantism.' The Christian idea he takes to be the eternal conflict of the perverse Satan and the good Christ, of the body and the soul. He looks forward to a day in which happier and fairer generations, nurtured in a religion of joy, will smile with pity when thinking of their poor ancestors, whose lives were spent in melancholy self-mortification. But he declares that Christianity has been a blessing for suffering humanity during eighteen centuries; 'it has been providential, divine, holy.'

'All that it has done in the interests of civilization, curbing the strong and strengthening the weak, binding together the nations through a common sympathy and a common tongue, and all else that its apologists have urged in its praise—all this has been as nothing compared with that great consolation it has bestowed on man. Eternal praise is due to the symbol of that suffering God, the Saviour with the crown of thorns, the crucified Christ, whose blood was as a healing balm that flowed into the wounds of humanity. . . . The whole system of symbolism imposed on the art and life of the Middle Ages must awaken the admiration of poets in all times.'

He deals in an illuminating way with the real significance of the Reformation in Germany. It was not merely a war against Roman Catholicism, and its motive was essentially different from that of the conflict in France. In Germany the Reformation was a war begun by Spiritualism when it was perceived that Roman Catholicism possessed merely the title of authority and ruled only *de jure*, whilst Sensualism, by means of a long-established fraud, was exercising actual sovereignty and ruled *de facto*. The retailers of indulgences were expelled, and a Puritanism utterly hostile to the pleasures of the senses swept over the land. In France, however, the conflict of the 17th and 18th centuries was opened by Sensualism 'when, though *de facto* sovereign, it beheld every act of its authority derided as illegitimate by a Spiritualism that existed only *de jure*. In Germany the conflict took place in theological discussion; in France it proceeded in wanton jests and merry satire.' This statement as to the Reformation in Germany applies only to the commencement of the conflict; for, when Spiritualism had made its breach in the edifice of the Church, Germany became the arena of combatants intoxicated with liberty. Heine's irony is often delicious and salutary. After declaring that, since the great progress of the natural sciences, miracles have ceased, he proceeds:

'Perhaps the new religions that God may henceforth establish on earth are to be based solely on reason, which indeed will be much more reasonable. At least in the case of Saint-Simonianism, which is the newest religion, no miracle has occurred, with this exception, perhaps, that an old tailor's bill owing by Saint-Simon himself was paid by his disciples ten years after his death. Young grocers were amazed at such supernatural testimony, but the tailors began at once to believe.'

In the second part of the book, Heine deals with the philosophical revolution which, as the offspring of the religious revolution, is nothing else than the last consequences of Protestantism. While he has in his first part spoken of Spiritualism and Sensualism—regarded as the rival social systems—he now refers to Idealism and Materialism, taking account of the corresponding philosophical systems. He refers to his own religious convictions as embodying 'not indeed the dogmatism, but the spirit of Protestantism.'

The French edition amplifies this statement: 'Protestantism was for me more than a religion, it was a mission; and for fourteen years I have been fighting in its interests against the machinations of the German Jesuits. My sympathy for dogma has, it is true, of late become extinguished, and I have frankly declared in my writings that my whole Protestantism consists in the fact that I was inscribed as an evangelical Christian in the church registers of the Lutheran communion. But a secret predilection for the cause in which we have formerly fought and suffered always continues to nestle in our hearts, and my present religious convictions are still animated by the spirit of Protestantism' (*Rel. and Phil. in Germany*, tr. J. Snodgrass, p. 86).

Heine at one point becomes enthusiastic in proclaiming the theoretical overthrow of Deism and the rise of Pantheism among all Germany's

greatest thinkers and best artists. Germany has outgrown Deism; Pantheism is her open secret. Deism is the religion for slaves, for children, for Genevese, for watchmakers. Kant's *Critique of Pure Reason* is the sword that slew Deism in Germany. But in the preface to the second German edition of *Religion und Philosophie*, Heine exercises 'the inalienable right of openly acknowledging his error.' He confesses that everything in this book referring to the existence of God is as false as it is ill-advised.

'No, it is not true that the Critique of Reason, which has destroyed the arguments for the existence of God, familiar to mankind since the time of Anselm of Canterbury, has likewise made an end of God Himself. . . . The fine-spun Berlin dialectic is incapable of enticing a dog from the fireside, it has not the power to kill a cat, much less a God.'

The *Romantische Schule*, which also first appeared in French, contains many interesting passages more relevant to our interest in Heine than to that of the literary critic. Not denying that Christian-Catholic discipline, as a wholesome reaction against the colossal materialism of the Roman Empire, conferred benefits on Europe—a hunger-cure he calls it—he sees in it the origin of a wide-spread hypocrisy; men praised what had become but a pretence of asceticism. This discipline had taught the renunciation of all worldly pleasures, branding as sin the most innocent gratification of the senses; Heine would now replace it by a vindication of our inalienable heritage, by the 'rehabilitation of the flesh.' The book abounds in acute analyses of the relations between German literature on the one hand and Roman Catholicism and Protestantism on the other.

'Alas! we must confess that Pantheism has often led men into indifferentism. They reasoned thus: if everything is God, if everything is divine, then it is indifferent whether man occupies himself with clouds or ancient gems, with folk-songs or the anatomy of apes, with real human beings or play-actors. But that is just the mistake. Everything is not God, but God is everything. He does not manifest Himself equally in all things, but He shows Himself in different degrees according to the various matters. Everything bears within itself an impulse to strive after a higher degree of divinity, and that is the great law of progress throughout all nature. The recognition of this law, which has been most profoundly revealed by the disciples of St. Simon, now makes pantheism a cosmic, universal theory, which not only does not lead to indifferentism, but, on the contrary, induces the most self-sacrificing endeavours. No, God does not manifest Himself in all things equally, as Wolfgang Goethe believed, who through such a belief became an indifferentist, and, instead of devoting himself to the highest interests of humanity, occupied himself with art, anatomy, theories of colour, botanical studies, and observations of the clouds. No, God is manifest in some things to a greater degree than in others. He lives in motion, in action, in time. His holy breath is wafted through the pages of history, which is God's true book of record' (Heine's *Prose Writings*, ed. H. H. Ellis, 108 f.).

The subject of Goethe's *Faust* (*Der Doktor Faust: ein Tanzpoem*) gives Heine an opportunity for preaching the gospel of his own earlier life—the rehabilitation of the flesh.

'Knowledge, science, the comprehension of nature through reason, eventually gives us the enjoyment of which faith, that is, Catholic Christianity, has so long defrauded us; we now recognize the truth that mankind is destined to an earthly as well as to a heavenly equality. The political brotherhood which philosophy inculcates is more beneficial to us than the purely spiritual brotherhood, for which we are indebted to Christianity.

. . . The German people had, for a long time, felt a profound presentiment of this, for the Germans themselves are that learned Doctor Faust; they themselves are that spiritualist, who, having at last comprehended the inadequateness of the spiritual life alone, reinstates the flesh in its rights. But still biased by the symbolism of Catholic poetry, in which God is pictured as the representative of the spirit, and the devil as that of the flesh, the rehabilitation of the flesh was characterized as an apostasy from God, and a compact with the devil. But some time must yet elapse ere the deeply significant prophecy of that poem will be fulfilled as regards the German people, and the spirit itself, comprehending the usurpation of spiritualism, become the champion of the rights of the flesh. That will be the Revolution, the great daughter of the Reformation' (*Die romantische Schule*, bk. i.; Leland, v. 306 f.).

3. Political aims and influence.—Heine's aims in his political journalism and in his personal influence are plainly expressed in his will: 'La

grande affaire de ma vie était de travailler à l'entente cordiale entre l'Allemagne et la France, et à déjouer les artifices des ennemis de la démocratie, qui exploitent à leur profit les préjugés et les amosités internationales.' The result at which he aimed was not the forced equality desired in France 'by the decapitation of the tallest stalks,' but active freedom. The Romantic School rested on the foundation of an active slavery; Goethe had preached and lived a passive freedom. Opposed to these was Heine's ideal of active freedom, of emancipation—

Emancipation 'not only of Irishmen, Greeks, Frankfort Jews, West Indian blacks, and such like oppressed peoples, but the emancipation of the whole world, especially of Europe, which has attained its majority, and is now breaking loose from the iron leading-strings of Privilege, of Aristocracy' (cf. L. A. Montefiore, in *Fornightly Review*, new ser., xxii. [1877] 338).

Cosmopolitan Heine was, but patriotic too, for he believed in the mission of individual nations; he could not, however, view patriotism and national spirit as based on racial suspicion and international hatred. He was much attracted to communism, saying of it that its propaganda 'boasts a language universally intelligible. The alphabet of this international dialect is simple as hunger, envy, and death; it is readily learned, and will develop into a world-revolution, the great struggle between the possessionless and the oligarchies of possession.' His treatment of political questions reveals most clearly his strange combination of traits. His critical perspicacity is most sure when his wit is most sharp. Much of his self-contradiction, which is, after all, but the outward aspect of this rare combination, springs from the circumstance that he was essentially a poet, whose song was interrupted by the distant rumblings of a fast-approaching storm. 'The world-wide conflict between the powers that be and those that are to be' awakened a conflict within himself which found expression when he came into contact in Paris with the school of Saint-Simon.

'Yes! I declare it with full conviction: our descendants will be a happier and fairer race than we are. For I believe in progress; I believe that happiness is the goal of humanity. . . . Even here on earth I would strive, through the blessings of free political and industrial institutions, to bring about that reign of felicity which, in the opinion of the pious, is to be postponed till heaven is reached after the day of judgment.'

Much credit that belongs by right to men of prophetic insight and incisive expression is given to men of action. The latter are 'nothing but unconscious hod-men of the men of thought who, often in humblest stillness,' have appointed them their inevitable task. Heine has appointed to modern Europe, and to Germany in particular, several 'inevitable tasks.' Among the direct fruits of the ideals which he cherished and fearlessly advocated are the greater freedom of political expression and action, through parliamentary institutions and by personal influence, the religious emancipation, and the national unity which Germany to-day enjoys.

HELL.—See COSMOGONY, STATE OF THE DEAD.

HEMACHANDRA.—A prominent Jain author of the Svetāmbaras who is popularly called 'the Omniscient one of the Iron Age' (*Kalikālasarvajña*). He is famous in the history of his sect because he induced Jayasīnha Siddharāja, one of the most powerful kings of Gujarāt (A.D. 1094-1143), to favour the Jains, and actually converted his successor Kumārāpāla, the consequence being that Gujarāt has ever since been a stronghold of Jainism. Born in Dhandhūka, Almadābād collectorate, in 1088 or 1089, he early became a Jain novice under Devachandra, and was ordained as *sūri* in 1110. For the greater part of his life he lived in Anhilvād Pātan, the capital of Gujarāt. There he won the king's favour in 1125, and became an influential person at court, especially after the conversion of Kumārāpāla. Through his exertions the ethical ideals of Jainism were brought to bear on the government of the State, at least for a time. In order to consolidate the Jain influence he revised the Indian system of politics (*nītiśāstrā*) according to the Jain principles of ethics and the political conditions of his time, and wrote the *Arhannūti*, or Jain Politics. Hemachandra's very busy career ended in 1173.

In his literary activity also he seems to have had practical aims in view. He provided his sect with text-books of the principal Indian sciences, so that the Jains were enabled to compete successfully with their Brāhmanical rivals. He wrote a complete Sanskrit and a Prakrit Grammar (the latter ed. and tr. Pischel, Halle, 1877-80), two Sanskrit Dictionaries (*Abhidhānachintāmaṇi* and *Anekārthakośa*, ed. respectively by Böhtlingk and Rieu, St. Petersburg, 1847, and by Zachariae, Vienna, 1893), a Dictionary of peculiar Prakrit idioms (*Deśināmamālā*, ed. Pischel, Bombay, 1880), manuals of Poetics and Metrics, an exposition of ethics and asceticism (*Yogaśāstrā*, ed. and tr. of first 4 sections by E. Windisch, *ZDMG* xxviii. [1874] 185-262), a work on Philosophy (*Pramāṇachintāmaṇi*), and a number of minor treatises. In addition, he composed detailed commentaries on most of these works, and illustrated his theoretical rules in two poems, a Sanskrit and a Prakrit one, both called *Dvyāśraya Kāvya*. He also composed a long epic poem in Sanskrit, the *Trisastīśalākāpuruṣaśarīta*, in which he sets forth the mythical and legendary history of the world as conceived by the Jains.

Hemachandra has a very extensive, and at the same time accurate, knowledge of many branches of Hindu and Jain learning, combined with great literary skill, and an easy style. His strength lies in encyclopaedic work rather than in original research, but the enormous mass of varied information which he gathered from original sources, mostly lost to us, makes his works an inestimable mine for philological and historical research.

LITERATURE.—G. Bühler, 'Über das Leben des Jaina-Mönches Hemachandra, des Schülers des Devachandra aus der Vajrasākhā,' *DWAW*, philos.-histor. Classe, Vienna, 1889; T. Zachariae, *Die ind. Wörterbücher* (=GIAP i. 3b [1897]), pp. 30-35. HERMANN JACOBI.

HENOTHEISM.—See MONOTHEISM.

HERACLITUS.—1. Life.—The well-accredited facts of the life of Heraclitus are very few. He was the son of Blyson or Blosson, and was descended from the most aristocratic family in Ephesus. In his family the patriarchal kingship, which was traced back to Androclus the son of Codrus, continued in the priestly rank of the *basileus*; the office of priest to the Eleusinian Demeter was also connected with it. The tradition that he persuaded the tyrant Melankomas to abdicate his rule, and returned a point-blank refusal to an invitation from Darius, is doubtful. It is certain that he was dissatisfied with the democratic government in his native city, and that he violently attacked his countrymen on account of their moral (fr. 125a [Diels, *Fragmente der Vorsokratiker*, i.³ 102]) and political (104, 121) conduct. He especially censured the banishment of his friend Hermodorus, whom later writers have connected (perhaps wrongly) with the Hermodorus who had a share in the Decemviral legislation of the Romans (450 B.C.). Ancient chronology gives Ol. 69 (504-501 B.C.) as the period when he flourished, which seems to depend on his traditional connexion with Darius. He is said to have lived to the age of sixty, and (fabulously) to have died of dropsy. His date is more certainly ascertained from the fragments of his writings. For, on the one hand, he rejects the multifarious learning of his Ionic countrymen, Pythagoras, Xenophanes, and Hecataeus, who were all at the height of their influence when the 6th cent. was passing into the 5th; on the other hand, he says nothing of his bitterest opponent, Parmenides. Now, since the latter, as most modern scholars agree, clearly combats the antithetical method of Heraclitus in his verses (fr. 6, 6-9 [*Vorsok.* i.³ 153]), and the period of his chief influence is to be fixed somewhere about 480 B.C., it follows that the work of Heraclitus should be dated about 490 B.C. The obvious parody of the Heraclitic philosophy in Epicharmus (fr. 2 [*Vorsok.* i.³ 118]) is of no use as a clue to his date, as under the name of the latter were collected not only later forgeries, but also old Sicilian comedies of different periods.

2. Writings.—Heraclitus's work, of which 130 genuine fragments are preserved to us, is composed in the Ionic dialect, and is archaic, often poetic, in character. Its aphoristic form is borrowed from the Gnostic writings which were widely circulated in the 6th cent., and which, composed partly in poetry and partly in prose (e.g. the sayings of the Seven Sages), gave pithy expression to their experience of life.

In Heraclitus there is added, on the one side, an intense bitterness springing from his tone of mind and experience of life, and, on the other, an intentional obscurity taken over from the religious poetry (oracular and prophetic) of the 6th century. There is, lastly, a modern regard for rhetorical effect in the antithetic form of composition, which shows itself also in his contemporary Simonides, and was further developed in the writings of the Sophists. The division of his work into three books, treating of Nature, Politics, and Theology, either is due to later recensions, or gives the main heads of his philosophy. In the time of Heraclitus books were neither divided into chapters nor possessed titles. His successors referred to his work, as they did to those of all the pre-Socratic philosophers, under the title 'Concerning Nature.'

3. Philosophy.—Heraclitus is the profoundest thinker before Plato, and is a joint-founder with him of the Idealism which under the influence of Plato and Christianity has prevailed over other systems. It is to the profundity of his thoughts that the misunderstanding of them is due, both in his own times and later, down to the present!

day. The positive character of 19th cent. thought especially has shown itself incapable of grasping the daring transcendency of his view of the Cosmos. At the very beginning of his work (fr. 1), Heraclitus complains, with bitter dejection, that, in spite of his revelation, men make themselves insensible, both before and after hearing it, to the apprehension of a homogeneous, eternal, omnipotent, invisible, spiritual Power which with the swiftness and force of lightning rules the world, the inner world of man as the outer world of nature, from one end to the other. The philosopher's system has a 'husk' and a 'kernel.' In the 'husk' he condescends to depict the world, as men are wont to fashion it for themselves from their ephemeral experiences; he portrays the mutable, inconsistent, unconscious, and childish world of change. He rejects the polymathy of his contemporaries, *i.e.* the conclusions of the Milesian physicists and mathematicians since Thales, which were deepened and expanded by Xenophanes and Pythagoras; for they led to a knowledge of contradictory details, not to a homogeneous conception of the world.

Therefore he demands, in place of the method of natural science and mathematics prevalent hitherto, a psychological one, proceeding not from without but from within, not from Nature but from the soul of man. 'I have inquired of myself' (fr. 101)—'To all men it is given to know themselves, and to direct their thoughts accordingly' (fr. 116). Thus it is the task of philosophy, as Socrates taught later, to obey the Delphic precept *Γινώθι σεαυτόν*. Both Socrates and Heraclitus turned away from the superficial interpretation of Nature represented by the Ionians. But, while ethical problems chiefly attracted Socrates, the more comprehensive mind of the Ephesian directed itself vigorously to metaphysics, to 'the Invisible,' which represents the kernel of his philosophy. 'Wisdom consists in one duty and only one—to understand the Intelligence (*γνώμη*) which governs all things' (fr. 41). 'Of what profit to men is the knowledge of Nature? The fairest Cosmos is merely a rubbish-heap poured out at random' (fr. 124). Time, which drives onward everything earthly in ceaseless change, is 'like a child who plays at draughts and moves them hither and thither—a child's government' (fr. 52).

The philosopher's business, therefore, is to discern the Eternal. For 'the human mind (*ἦθος*, *i.e.* that portion of intellectual being which falls to man's share) has no clear understanding or aims, but the Divine has' (fr. 78). Inasmuch as Heraclitus is the first thinker to grasp the idea of the transcendental, he is, before Parmenides, Anaxagoras, and Plato, the founder of Idealism in philosophy. He is himself conscious of the far-reaching importance of his discovery. For he makes the statement (which Positivists cannot understand): 'None of all those whose words I have heard attains to recognize that Wisdom is something separated (*κεχωρισμένον*) from all' (fr. 108). What this Wisdom (*τὸ σοφόν*) is he explains (fr. 32): 'One, the only Wisdom, does not wish, and yet again does wish, to be called by the name of Zeus' (fr. 32). The new concept may be called by the old and venerable divine name, provided the latter carries with it the idea of absolute mind in the Heraclitic sense. On the other hand, to think of the Homeric Zeus in this connexion is blasphemy against the divine nature. For, in consequence of the thoroughgoing religious reformation of the 6th cent., which is represented by the names Xenophanes, Pythagoras, Orphicism, the traditional conception of religion can no longer be maintained.

But, while poets like Pindar and Æschylus,

imbued with that spirit of reform, tacitly introduce the new conception of Zeus into the ancient popular legends, contemporary philosophers like Xenophanes and Heraclitus set themselves dead against popular beliefs. Like the Colophonian, Heraclitus scornfully attacks the demoralizing aspects of the ancient Epos (fr. 42). But he also attacks the pietism of the Mysteries which had sprung up luxuriantly in the 6th century. The cult of Dionysus and of Demeter, with its ceremonial purification and coarse symbolism, is utterly repugnant to him (fr. 5, 14). It is, therefore, quite credible that, as reported (*Vorsok.* i.³ 68, 24), he resigned his hereditary office of King-priest, or *basileus*, after his breach with the orthodox religion. He went even so far as to reject prayer altogether, as something childish—a step which no Greek philosopher after him ventured to take. 'They pray to the images of the gods, as though they wished to converse with buildings; just because they are ignorant of the true being of the gods and supernal powers' (fr. 5).

All religious names and notions, which occur frequently in his work, are not to be interpreted in the popular religious sense, but as symbols of the higher idea of the divine nature, of which he is full. His eternal and universal God is not confined to temples or temple-rites, but is omnipresent. 'How can one escape that which never goes down?' (fr. 16). His notion of God also is not split up, as in the Homeric Olympus, into countless individual deities. 'He who perceives the law of the world, the Logos, must confess that all things form one unity' (fr. 50). This universal spirit 'unites conflicting opposites, just as one harmony is formed from various tones' (fr. 8). Here he expresses his monistic belief, in one of the figures familiar to the Pythagorean school. He speaks still more clearly in fr. 67: 'God is day and night, winter and summer, war and peace, plenty and want.'

On another occasion he seeks to render intelligible the universally operative energy of the divine Logos by a hylozoistic figure especially congenial to the science of his time. As Jeremiah had said a hundred years earlier (Jer 23²⁸), 'Is not my word as a fire? saith the Lord,' so the prophet of Ephesus proclaims (fr. 30): 'This system of the world (*κόσμος*), the same for all, neither any of the gods nor any man has made, but it always was and is and shall be an ever-living fire, kindled in due measure, and in due measure extinguished.' This conception of 'the due measure' is essential for the interpretation of Heraclitus. The modern physical theory assumes that different forces (heat, electricity, magnetism, chemical force, etc.) are convertible into each other. They are all connected by the invariable law that exactly as much force of one kind (*e.g.* heat) disappears as force of another kind (*e.g.* electricity) comes on the scene. In a similar manner Heraclitus conceives of the divine cosmic force. Just as our modern physicists assume the æther as a common substratum whence forces proceed, so Heraclitus speaks of the divine cosmic fire which is always confined within the same limits. 'The sun will not overstep his bounds; for, if he does, the Erinyes, helpers of justice, will find him out' (fr. 94). And, although the sun is kindled every day anew (fr. 6), he observes his limits.

So also the changes of fire into water and earth always take place in fixed proportions. At first the ætherial vapour is condensed into sea-water, from which the solid earth is precipitated. This is 'the way down.' In the same proportion the transformations of the solid, liquid, and gaseous states proceed upwards. Earth deliquesces into water at a time of deluge, water exhales skyward as ætherial vapour.

Of course the periods occupied by these changes are not always alike. On the contrary, the great pendulum describes smaller and greater arcs. The rotations of day and night, of seasons, of years, of great cosmic periods between a general flood and a general conflagration, vary in length, but not in quality and proportion. Opposites must always be resolved into 'the invisible harmony' (fr. 54). All that men can see is the war between them. Thus with Heraclitus war is 'the father of all things' (fr. 53), and the one thing clear and worth taking into account is change. He never becomes tired of illustrating this popular way of conceiving the flux of things by ever fresh examples. 'To him who enters the same river, other and still other waters flow' (fr. 12). 'One cannot twice descend into the same river' (fr. 91). 'Into the same river we descend, and we do not descend; we are, and we are not' (fr. 49 A).

So, for later thinkers the uniform light of the Heraclitic system appears broken up into the brilliant colour-play of relativism, the prismatic ambiguity of a materialistic scepticism (*παλιτροπος ἀριωτην*, fr. 51) which threatens to turn into nihilism. 'Sea-water is very pure and very foul, for, while to fishes it is drinkable and healthful, to men it is unfit to drink and deadly' (fr. 61). Of course, in the empirical region of sense-perception everything is inconsistent and relative; on the contrary, in the realm of pure thought the Absolute is enthroned. 'To God all things are beautiful and right and good; but men suppose that some are right and others wrong' (fr. 102).

Thus Heraclitus comprehends, as exactly as his opponent Parmenides, who indeed only partially understood him, *noumena* and *phenomena*, truth and illusion (*ἀλήθεια, δόξα*), in his system. The sad fact with both is that the dull-witted world has comprehended their illusion better than their truth. But so it fares with all prophets.

It is necessary, after the monistic doctrine of the Logos and its counterpart, terrestrial dualism, have been made clear as the kernel and husk of his system, to expound briefly how Heraclitus applies his theory, in its metaphysical and material aspects, to the doctrine of man's constitution.

The human soul, with which the hitherto prevailing Ionian and Pythagorean philosophy had but little concerned itself, is of cardinal importance to the prophet of the *Ἐνῶπι σσανρόν*. At first, indeed, it seems a very materialistic view that the soul should be involved in the elemental changes of the twofold way upward and downward. 'For the soul it is death to become water, and for water it is death to become earth. But from earth comes water; and from water, soul' (fr. 36).

As might be expected, the acme of human existence is identical with the physical fire-æther. As fire descends, the soul passes through the intermediate stage of water into earth, *i.e.* into flesh, and this way signifies joy and life. Conversely, when flesh again dissolves into water (hence the legend before mentioned of Heraclitus's dropsy) and from thence returns to the cosmic æther, death takes place. 'For souls it is joy or death to become wet' (fr. 77 A). Thus, just as in the Orphic-Christian theory, soul and body are already conceived of as contraries, which stand in direct opposition to each other. 'We live in the death of souls, and again they (*i.e.* souls) live in our death' (fr. 77 B).

But neither in the macrocosm nor in our microcosm is a complete extinction of the primordial fire possible. In the living body also a spark of ætherial fire is preserved (Macrob. *in Somn. Scip.* i. 14, 'scintillam stellaris essentia'; *Vorsok.* 12 A, 15, p. 74), and the freer from moisture this ingredient is kept, the wiser and the better is the

man. 'The dry beam is the wisest and best soul' (fr. 118). Of course, this divine spark is identical in essence with the God who governs, illuminates, and warms the universe. Therefore the soul rests on the deepest foundation of the Divine Logos. 'The limits of the soul thou canst not discover, though thou shouldst traverse every way; so profoundly is it rooted in the Logos' (fr. 45).

This identification of the spiritual and essential characteristic of man (to which the Greeks give the hardly translatable name *ζῆθος*) with the essence of Deity interprets for us the fine saying of Heraclitus, 'A man's character is his *dæmon*' (fr. 119) — a saying repeated by Democritus and Menander. Therefore it follows that man's happiness cannot consist in sensual enjoyment. 'Oxen are happy when they have peas to eat' (fr. 4). 'For the best men choose one thing above all else; immortal glory above transient things. But the masses stuff themselves like cattle' (fr. 29). 'To the soul,' on the contrary, 'belongs the self-multiplying Logos' (fr. 115). The Logos, however, is not merely the special characteristic of man alone; it is at the same time the universal cosmic law, which energizes and controls everything. 'Therefore it is a duty to follow the common law. But although the Logos is common to all, the majority of people live as though they had an understanding of their own' (fr. 2). 'All human laws are dependent upon one divine law. For this rules as far as it wills, and suffices for all, and overcomes all' (fr. 114).

Thus, not only physical but moral science also is closely connected with metaphysics. The divine law (as later among the Stoics) is identical with the conscience of the individual. Men who obey this inner law, however, are extremely rare. That is a matter of course for the aristocrat of Ephesus: 'One is to me worth ten thousand, provided he be the best' (fr. 49).

From these premisses it is easy to understand the way in which Heraclitus undertakes to remodel the Greek belief in immortality. 'Gods and men honour those who have fallen in war' (fr. 24). This principle of the popular hero-worship he applies to his heroes, the heroes of the Logos. The body, as such, deserves no honour. 'Corpses should be thrown away sooner than excrement' (fr. 96). But just in proportion to the degree of purity with which a man has guarded and intensified the inner flame in his life is the fierceness of the attack on him from the terrestrial sphere, and at the same time the greater is the prize beyond. This seems to be the meaning of the saying in fr. 25 which has been torn from its context: 'Greater fates gain greater rewards,' for 'man kindles a light in the night when he is dead' (fr. 26).

To explain this better, we add a remark of G. T. Fechner, whose 'panpsychism' contains much Heraclitic doctrine: 'At the moment of death, when everlasting night seals up the eye of man's body, the dawn awakens in his spirit. Then the focal centre of the inner man will blaze out to a sun which will illuminate all that is spiritual in him, and at the same time, like an inner eye, look through things with unearthly clearness' (*Leben nach dem Tode*², Leipzig, 1866, p. 42). So Heraclitus also appears to have conceived of the *new* light which the spiritual man kindles for himself after the death of the body. 'There awaits men after death what they neither hope nor think' (fr. 27). Thus, starting from an idea of Hesiod, he suggests a deliverance of elect heroes of the spirit from the night of death, who now, as he believes, lead a higher life as 'watchers of the living and the dead' (fr. 63). In this sense he could say, with antithetical point: 'Immortals become mortals, and mortals immortals' (fr. 62).

For there awaits the spirit of fire, which has fallen down from ætherial heights, and appears doomed to mortality in an earthly frame, an ascension after death. This doctrine reminds us of the prophetic utterances of Empedocles, and of the Stoic doctrine of continued existence for the virtuous. Of course, even to these elect heavenly guests an endless life is not allotted. For when, finally, all things pass into fire, and the 'Great Year' of 30 x 360 years has completed its revolution, a universal conflagration will usher in Doomsday. 'For the fire which comes on all things will judge and condemn them' (fr. 66).

This doctrine of the 'last things' has been doubted, because, at the arrival of this *dies iræ*, the constant interchange between the two poles of existence disappears. This is wrong, however; for this moment, when everything melts in the universal conflagration (*i.e.* when God ceases to work), is only the extreme point to which the cosmic pendulum swings on one side, to which, on the other side, the Deluge, or rather a universal torpor, corresponds. That a final amalgamation of the other two elements (earth and water) is not implied in the reports of his doctrine which we possess, and probably was not taught by Heraclitus himself, is shown by the fact that the form of the fire is conceived of as the normal and primitive one, so that the end of the Cosmos, like the beginning, is linked on to the primordial principle. 'For in rotation the beginning and the end are common' (fr. 103).

4. Posthumous influence.—Heraclitus, one of the most original writers and profoundest thinkers of antiquity, has had a powerful influence on all succeeding times, from Alcmaeon and Parmenides, past the time of Democritus, Protagoras, Euripides, and the authors of the *Corpus Hippocraticum*, to the Stoics, whose popular version of his philosophy conquered the cultured Greek and Roman world. Especially important is the direct or indirect influence of Heraclitus on Philo, the Johannine Gospel, and the theology of the early Fathers (Clement of Alexandria and Hippolytus). Among the moderns, Hegel and Nietzsche in particular, the latter especially in the aphoristic form of his writing, show the deep influence of the sage of Ephesus.

LITERATURE.—I. EDITIONS.—*Heracliti reliquæ*, Bywater, Oxf. 1877 [the most complete collection of the fragments]; H. Diels, *Heraclitus von Ephesos*² (Greek and German), Berlin, 1909, also *Fragmente der Vorsokratiker* (Greek and German), i.³, Berlin, 1912, pp. 67-113 (ch. 12) [quotations are made from this collection].

II. SYSTEM OF HERACLITUS: F. Lassalle, *Die Philos. Heraclitus des Dunklen v. Ephesos*, 2 vols., Berlin, 1853; P. Schuster, 'Heraklit von Ephesus,' in *Acta Soc. philol.*, iii. (Leipzig, 1873); E. Zeller, *Philos. der Griechen*, i.⁵, do. 1892, pp. 623-750; J. Burnet, *Early Greek Philos.*², London, 1908, pp. 129-179; T. Gomperz, *Griech. Denker*³, Leipzig, 1911 (tr. of 1st ed. by Magnus, London, 1901), i. 49.

H. DIELS.

HERDER.—I. Life and times.—The century of enlightenment, the century of Locke and Hume in England, of Voltaire and Rousseau in France, re-enacted that turning of thought towards its own nature, that desertion of metaphysical subtleties, that development of empirical interest in human life and enthusiastic discussion of the problems of society, which characterized the Greek Sophistic movement. But, whilst in England the current of thought lost itself in the stagnant backwaters of a theoretical scepticism, and in France transformed itself into the motive power of political agitation, in Germany it maintained its course with little distraction, refreshed by the influx of a new stream of influences. In the interests of individual culture, without application to social revolution, the philosophical principles of Leibniz and Wolff were carried into the realms of psycho-

logy, epistemology, morality, political science, and even religion. But it was due to the assertion of the claims of poetry and a whole new world of literature that the intellectual life was re-vitalized. Lessing (*q.v.*) and Herder were the heralds who announced these claims.

Johann Gottfried von Herder was born at Mohrungen, East Prussia, on 24th Aug. 1744, the third child of humble parents. The father, who was sexton and master of a small school, was an earnest, strict, upright man of undoubting piety. Herder's paternal grandfather had been an immigrant from Silesia, a refugee from Roman Catholic rule, and it was no doubt from him that the boy derived his warm, imaginative spirit. As a boy, Herder was 'always grave and always alone'; he never enjoyed very good health, suffering to the end of his life from a fistula in one eye. He became even more quiet and shy during his school-years under the severe old rector of the town school, and devoted himself to reading. After a miserable period in the house of a young pastor, Trescho by name, who was blind to the boy's ability and unsympathetic towards his inclination for a clerical career—a period during which he became excessively reserved and subject to nervous depression—Herder succeeded in making his way to Königsberg. He welcomed an opportunity of studying medicine which came in his way, simply because it took him away from his cramped and wretched life as amanuensis and message-boy to a man whom he loathed. After fainting at a dissection in the hospital, he abandoned medicine, and by means of the help of a few friends and his own earnings he was able to enter the University (1762) with a view to a clerical training. He had already written some poems, and one he had surreptitiously introduced into a parcel sent by Trescho to a Königsberg publisher, who had recognized its merit and taken pains to discover the identity of its author.

Attending Kant's lectures, he was stimulated to critical inquiry and read widely; Plato, Hume, Leibniz, Diderot, and Rousseau he studied with special care and enthusiasm. But a greater influence on his mind was the friendship of J. G. Hamann, who aroused in him a deep appreciation of poetry and early national literature. He contributed poems and reviews to the *Königsberger Zeitung*. Then we find him at Riga, first as assistant-master at the Cathedral School, and later as 'additional curate'; while he was there, in 1767, he published *Fragmente über die neuere deutsche Literatur*, which rapidly reached a wide and sympathetic public and attracted Lessing's attention. Various writings followed, but their advanced views on literary and artistic topics aroused a storm of opposition, and such suspicions were rife as to his orthodoxy that he left Riga. Anxious to make certain experiments in social reform which were to rest on a reform of educational methods, he commenced a tour. With a view to investigating educational systems in different countries, he made his way to Holland and France, but his intention of visiting England and Italy was not carried out. In order to secure an independent position, he accepted a post as travelling tutor to the son of the Prince-Bishop of Lübeck, and abandoned his social schemes. He found himself in the course of his duties at Darmstadt, where he met Caroline Flachsland and became betrothed to her. In that year and the following, 1770-1771, he was in close contact at Strassburg with Goethe, who was then revelling in the exuberance of early manhood. The friendship that sprang up between the two is of great importance for the history of German literature, for Goethe frequently acknowledged, in the most definite lan-

guage, that a great change passed over him during those days.

'New vistas opened to my sight every day, nay, every hour. . . . The more I swallowed, the more Herder had to give. . . . He imparted to me the germs of all that he carried out in after life.' 'It was he who set me in the right way. No utterance of his ever failed of its effect. I do not remember ever having torn up a single paper on which his magical handwriting was to be found.'

In 1771, Herder threw up his tutorship, and for five years was Court-Precacher at Bückeberg. Opposition on the part of the orthodox clergy, renewed and severe eye-trouble, financial straits, and the consequent delay of marriage combined to depress him abnormally. He continued his literary studies, however, and was so much affected by his reading of 'Ossian,' Percy's *Reliques*, and Shakespeare that he openly deserted the classical school and took a prominent place in the *Sturm und Drang* reaction. He and Goethe, with some others at Darmstadt and Frankfurt, issued a journal which was to be the organ of their revolt. He was able to marry in 1773, and in 1776 was appointed Court-Precacher and Superintendent of the Clergy in the duchy of Weimar.

In Weimar he spent the rest of his life in close proximity to Goethe, Wieland, and Jean Paul Richter, but suffering much loneliness of spirit. The conventional atmosphere was far from congenial, and the six other members of the Weimar Consistory opposed every reform that he projected. The story of his later years—the strained relations with Goethe, his disappointment as those whom he had influenced gradually outgrew their discipleship, illness overpowering his bodily strength—is not a pleasant one; it is relieved by his wife's devotion and his popularity among the scholars of the Gymnasium at Weimar. Some of his most powerful—though also many of his less valuable—works belong to the Weimar period. His collection of folk-songs (*Stimmen der Völker in Liedern*) appeared in 1778-79, and his famous work *On the Spirit of Hebrew Poetry (Vom Geist der ebräischen Poesie)* in 1782-83. Then came his most important achievement, *Ideen zur Philosophie der Geschichte der Menschheit (Ideas on the Philosophy of the History of Human Life)* from 1784-91. His closing years he devoted to speculations on theological and philosophical subjects, but he went to what were regarded as extremes by such friends as Jacobi, Lavater, and even his early friend Hamann, who became alienated from him. When he died on 18th Dec. 1803, aged only fifty-nine, he was planning fresh literary ventures.

Herder's influence lay in two main directions. Lessing had stimulated independence of French literature and art, but himself remained loyal to the classical canons. Herder championed the revolt against classicism, or, in other words, led the Romantic movement. But he further provided the Romantic movement with its theoretical justification. He was the founder of the genetic method of explanation, though it is somewhat misleading to speak of him as a pre-Darwinian evolutionist. This was the great achievement of his life, the fruit of his keen, synthetic imagination and equally ready appreciation of inductively important characteristics.

2. *Writings.*—Herder's chief writings may best be indicated by considering them in relation to the special subjects which he investigated, and as leading up to his great synthetic work, which had for its thesis the whole of human development treated as the subject of purely natural history.

(1) *Poetry.*—In the *Fragmente über die neuere deutsche Literatur*, published in Riga in 1767, he endeavours to demonstrate the relation of poetry to circumstances, environment, and national in-

dividuality. He illustrates his theme by sympathetic and original studies of Homer, Hebrew poetry, Shakespeare, and 'Ossian.'

(2) *Art.*—Here again his thesis is the importance of natural character; Gothic art is shown to have its own peculiar merit and significance. His chief works in this category are *Kritische Wälder* (1769), and *Plastik* (1778).

(3) *Language.*—Herder was an eighteenth-century Max Müller, and to him is due the credit of founding the comparative study of language especially in regard to its nature and origin. His treatise, *Über den Ursprung der Sprache* (1772)—an argument directed against the theory that language was divinely communicated to man—demonstrates the inevitability of language, given the complex of powers we find in man.

'If it is incomprehensible to others how a human mind could invent language, it is as incomprehensible to me how a human mind could be what it is without discovering language for itself.'

In matters of fact this treatise, like several others which he wrote, is open to the charge of inaccuracy and crudeness, but the important feature is the consistent use of the comparative method of investigation. Herder's view is that 'language arose with the first spark of consciousness,' and, like every other production, gradually became more perfectly developed. Language is not the mere sound of words, for every sign and action is language. Language, indeed, relates us closely to the whole of sentient Nature.

'It seems that the last maternal touch from the modelling hand of Nature infused the following law into all, at their entrance into the world, "Feel not for thyself alone, but let thy feeling resound." As this last creative touch was the same to the same species, the following law became a blessing: "Let thy feeling resound in unison with thine own race, and be heard with sympathy by one and all."'

(4) *Religion.*—The comparative method of study was applied also to religion, and Herder wrote under the conviction that religion in its historical development has been closely related to man's wants and impulses. His studies in religion are found in his volumes entitled *Vom Geist der ebräischen Poesie, Briefe über das Studium der Theologie, and Christliche Schriften*. In the second of these works he laid down the principle that the Bible must be read 'in a human way,' as we should read the Greek historians and dramatists, with constant effort to interpret its contents in relation to their temporal and local setting. He made bold attempts to occupy a middle position in regard to certain doctrinal questions, having for his reward only the hatred of dogmatists and the suspicion of extreme rationalists. But he clearly distinguished religion from the realm of dogmatic into which his published opinions carried him.

'Religion is that which binds our conscience; it is an inner certainty, incapable of mathematical demonstration; religion is the awareness of what we are as parts of the world, what we ought to be as men, and what we have to do. We strive over opinions, but opinions are not religion, for there is but one religion, though it appears under many forms.'

In *Vom Geist der ebräischen Poesie*, Herder investigates the earliest opinions of mankind concerning the Deity, Creation, Providence, etc. Among other things he exposes the absurdity of those who have represented religion as originally derived from the apprehensions and terrors of mankind.

Atlephron: Philosophers have explained the strong emotion occasioned by that religious veneration of which you speak. It was ignorance, say they, that gave existence to the gods; stupid and servile astonishment produced the first oblations to them, whom terrified fancy represented as powerful beings, as invisible demons, from whom mankind had everything to fear.

Eutyphron: On the contrary, it is the essential and distinctive character of man, and that which places him above all classes of beings merely animal, that he is susceptible of religion. The propensity to worship one or more superior beings is known to have been present among men in all nations

and periods of the world, and why must this be derived only from anxiety and fear? Our existence, surely, is an act of beneficence and not a punishment, otherwise the love of life and the ardent desire for its duration would be unaccountable. The Great Being, therefore, to whom we are indebted for it, and by whom we subsist, must be considered as good. Daily experience must convince us of His benignity. . . . At the same time, I am willing to admit that the religion of many ancient nations was mixed with painful feelings of apprehension and terror. This was more especially the case with those who had their dwelling in rude climates, in dark caverns, amidst burning mountains, or on barren shores of unfrequented and tempestuous seas, or of such as were accustomed to frequent views of dismal objects, and of revolution accompanied by inhuman scenes of devastation and carnage.

The primitive religions, which Herder refused to attribute to the sentiment of fear, were based, he suggested, on the need for explanation; hence, for example, among the primitive peoples whose dæmon-worship is revealed in Genesis, from the observance of 'the works and beauties of Nature,' from the sight of 'energy, wisdom, and self-renewed power of production and reproduction in all things' (seen in particular objects, however, and not connected 'in a general point of view') the inference was made that there existed 'separate and particular causes of particular objects, distinct creating spirits, of which each produced a particular object and contributed to its preservation with intelligence and care.' The higher, later religions Herder attributes to the persistence of deep-seated moral feeling. But his treatment of the history of religions derives its importance from his application to it of the genetic method of study rather than from his own data or conclusions.

Herder's sermons were only occasionally printed, but we have evidence to show that he preached in a manner 'straightforward, popular, and natural'—to borrow Schiller's description; and in his farewell sermon at Riga, where he had filled a church whenever he preached, he stated his own aims:

'Most of my own sermons, all my best, have been human. I have tried to show that our only happiness is to remain true to the foundations of our nature, and to follow no guide but reason and conscience. Humanity, therefore, in its widest circle, with all its noblest ideas of God, its self, and Nature, with all its feelings of brotherhood and sympathy, with all its charming duties, and high dispositions and capacities for happiness—humanity in this wide scope was always the main theme of my sermons, instruction, and exhortation.'

(5) *Human culture*.—Herder went further still in the application of his central idea, so far indeed that, had it not been for essential differences in the general level of scientific culture and in the accuracy of observation, a short step on his part would have led him to the pinnacle later occupied by Darwin. We might, indeed, have spoken today of Herderism rather than Darwinism. A volume has been written by Bärenbach under the significant title, *Herder als Vorgänger Darwins*. His *Ideen zur Phil. der Gesch. der Menschheit* applies the genetic method to the whole of human development. Whereas Kant had opposed to Nature an absolute free will, rational and independent, Herder placed human life in a natural setting; history he regarded as a natural science, investigating and describing the human powers, impulses, and activities. His work is the foundation-stone of the modern study of primitive culture, which now receives support from the sciences of anthropology, archaeology, philology, and comparative psychology. It is simple in style and impartial in tone.

(a) The first part—the science of man's place in the universe—discusses the earth's position in the stellar system, its crust as influenced by the atmosphere, and the various forms of life produced on it. The motto of the whole is the unity of creation; and with ample illustration, in which the whole field of natural science as then known is laid under contribution, we are shown how closely we are bound by nature from our earliest hour to our possessions, our country, and its language and

customs. Several passages are remarkably suggestive of nineteenth-century evolutionist theory.

'The less a nation is pressed upon, and the more truly it is obliged to abide by its simple and savage way of life, the more exactly does it also maintain its original conformation or type' (bk. vi. ch. 1). But 'nothing in Nature stands still; everything strives and struggles onward. Could we only see into the first periods of creation—how one realm of Nature is built up on another—what a procession of forces ever struggling onward would be displayed in early development' (bk. v. ch. 3). Before ever the earth took its present form, 'millions of creatures were of necessity overwhelmed; what could maintain itself has remained, and has been standing now for thousands of years in the great harmonious order' (bk. xv. ch. 2).

Herder even makes a deduction which sounds essentially modern. He sees that advance in organization means a differentiation of parts in the organism. 'The higher we go, the more various and distinct do the parts become' (bk. iii. ch. 1). This principle, accepted to-day in its application to physiology, he applies even to society. He was gifted with a penetrating, imaginative insight that would undoubtedly have led him to the far-reaching hypothesis of 'evolution' in the modern sense had the greater range of fact been accessible to him as it was to Darwin. But his emphasis was upon things as they have been, and necessarily have been, rather than upon things as they are, interpreted by the past.

(b) In the second part of the work, the science of history—of man's development in time—is the subject. We have here an account of primitive peoples. China, Tibet, Hindustan, then Babylon, the Medes and Persians, the Hebrews, and the Egyptians, are amongst the topics to which chapters are devoted. Greek life and history and Rome and its decline are next discussed. We then retrace our steps and reflect upon the growth of the human mind and of human customs. The Northern peoples are passed under review, and we are led to a whole book, brilliant but unsympathetic, on Christianity and its propagation. We return to the Northern kingdoms of mediæval Europe, the Romish hierarchy, and the influence of the Arabs; the discussion is closed by chapters on Commerce in Europe, the Crusades, and the Cultivation of Reason in Europe. Thus we have a comprehensive series of studies in Comparative Mythology, Sociology, Ethics, and Education.

The work had a mixed reception; Goethe was one of those who gave high praise to its aims and spirit, Kant one of the scoffers who stigmatized it as 'a collection of hints,' a book of travellers' tales. The boldness of the scheme, apart from its actual achievement, was in itself a powerful stimulus which is not even yet exhausted. But in a purely theoretical direction the work exercised a great influence. It emphasized the living unity of human life, spiritual and mental, and showed that reason (or understanding) and feeling (or sensibility) are not two distinct sources of knowledge, but different stages of that one activity in which the individual lives the life of the whole. One influence—negative, perhaps, but vital—exercised by this work is seen in Kant's theory of history, which was formed in view of the opposition between Herder and Rousseau. To Rousseau, history depicts the departure of mankind from an original 'natural' state of perfection. To Herder, history lays bare the necessary, natural, and self-explanatory development of an original constitution. Kant steered between the Scylla and Charybdis, carried through by a philosophical conception of the 'Fall' which explained how natural inclination, once ethically neutral, became an enemy of the Good Will. It may be noted here that in his insistence on the completion of human life through its development, Herder was probably influenced by the works of the English philosopher Shaftesbury, to whom the ethical is

the flower of human life, the natural and complete development of man's natural endowment.

(6) *Metaphysics*.—Herder's late metaphysical speculations are of less interest. In *Vom Erkennen und Empfinden der menschlichen Seele* (1778), and *Verstand und Vernunft, eine Metakritik zur Kritik der reinen Vernunft* (1799), he attacks the critical philosophy of Kant. The first of these was written under the influence of Shaftesbury, whose poetic glorification of the universe as it is and æsthetic appreciation of the artist's master-hand in Nature influenced Schiller as well as Herder. These works aim at a reinstatement of 'sensibility,' at an overthrow of the analytic tendency of Kantianism, with its apparent rather than real 'dissection' of human life. *Kalligone* (1800) opposed the theory of Kant's *Kritik der Urteilskraft*, arguing the close connexion of Beauty and Good. In opposition to Kant's theory and to the practical worship of form and style among the Weimar poets, Herder urged that the content of art is more real than its form.

LITERATURE.—i. *WORKS*.—*Sämmtliche Werke*, 45 vols., ed. J. G. Müller, Tübingen, 1805-20, 2nd ed., 60 vols., Stuttgart and Tübingen, 1827-30; *Herders Werke*, ed. H. Düntzer, 24 vols., Berlin and Leipzig, 1869-79; critical and best edition, *Herders Werke*, ed. B. Suphan, 32 vols., Berlin, 1877-99.

HAROLD E. B. SPEIGHT.

HEREDITY.—Exact knowledge of the process by which one generation comes into being from another and of the relations between them is essentially a growth of the 19th century. A precise knowledge of heredity was not possible as long as the respective parts played by the sexes remained obscure. It was not until the 19th cent. that the nature of the sexual cells and of the process of fertilization was established beyond a doubt, and a sure foundation provided upon which the student of heredity could build. The earlier history of heredity is the history of attempts made to unravel the nature of the sexual process, for the account of which the reader is referred to the art. **SEX**.

1. The experimental study of heredity may be said to have begun with Kölreuter, who published the results of his researches on the hybridization of plants in a series of papers between 1761 and 1766. In spite of the earlier discoveries of Camerarius, the theory of the sexuality of plants was at this time still an open question, and Kölreuter's experiments were designed chiefly to establish this theory. He crossed different species of plants which differed from one another in definite characters, and used the fact that the hybrids so produced resembled the pollen parent in some respects and the seed parent in others as an argument for regarding both parents as making a definite contribution to their offspring. In this

he clearly succeeded, though it was not for some years that his contributions received proper recognition.

2. Much hybridization work in plants was done during the earlier half of the 19th century. Among the workers of that time the names of Knight, Herbert, Wichura, and Gärtner are specially prominent. But their efforts were not directed primarily to the discovery of laws of heredity. The problems of the nature of species, of their possible fixity or transmutability, were much in the air about this time, and it was towards these problems that the efforts of this group of hybridizers were chiefly directed. Many interesting and curious facts were brought to light, but that they were never followed up was due to an event which seemed to solve the problem they had set out to investigate.

3. This was the publication of the *Origin of Species* in 1859. The views as to the interrelation of species there put forward by Darwin rapidly gained the support of the great majority of biologists. The problem of species appeared to have been solved, and the work of the hybridizers came to a sudden standstill. Heredity and variation were the corner-stones upon which Darwin erected his edifice. Yet Darwin himself deplored the prevailing ignorance both of the one phenomenon and of the other. Had a Darwinian been challenged for a definition of heredity, he would probably have replied to the effect that it is an innate force in virtue of which offspring tend to resemble their parents more than other individuals of the species. That offspring also differ from their parents was set down, where such differences are relatively small, to an innate tendency to variation, whether induced by the environment or in some other manner. By unduly favouring the action of either of these two forces—heredity and variation—selection, whether natural or artificial, was held to be able gradually to mould the race to a different form. Where the difference between parent and offspring was very marked, as, for instance, in the production of a white animal from two coloured ones or *vice versa*, a new principle was invoked, and the appearance of the unusual progeny was explained by the law of reversion. This phenomenon was regarded as due to the crossing of distinct varieties, whereby the descendants, even after a number of generations, tend to exhibit characters found in one or other of the original parents, but not evident in the intermediate generations.

The observation of such cases depends upon a continuity of records over several generations; and for this reason the most striking cases of the phenomenon were confined to domesticated animals and plants. Hence arose the belief that the process of heredity in domesticated creatures is essentially different from that operating in wild races—a belief which is not without supporters even at the present day. For Darwin himself this hypothetical difference between the wild and the domesticated did not exist. Indeed, he used the facts of variation among domesticated forms as an argument for his views as to the nature of the process of evolution in the non-domesticated. Heredity and variation, whatever their exact nature, were throughout living things held to be phenomena of essentially the same character. This view Darwin sought to express in his well-known hypothesis of Pangenesis. He suggested that in the cells of an organism there exist particles or 'gemmules' corresponding to the individual cells, each of the different cells having its own peculiar form of gemmules. Of the gemmules it could only be said that they were larger than chemical molecules but smaller than

any known living unit. Like the latter, however, they were capable of multiplication through the normal process of growth and division. During cell-division they were distributed to the daughter-cells. Normally certain gemmules only were active in the cells of a given tissue, but under exceptional conditions other gemmules might be present in these cells, and on becoming excited lead the cell to take on other characters. Generally speaking, these abnormal gemmules would have been present in some ancestor, and would have remained latent for a variable, often a very great, number of generations. By means of this capacity for remaining latent on the part of the gemmules, Darwin sought to explain the phenomena of reversion and atavism.

The gemmules derived from some remote ancestor might remain dormant for many generations, until, under the influence of some stimulus, whether of a cross or otherwise, they were re-awakened into fresh activity, and the organism exhibited ancestral characteristics. The germ-cells Darwin supposed to contain representations of all the various gemmules corresponding to the different cells of an individual, while at the same time they might also contain gemmules derived from ancestors more or less remote. Further, in order to explain the inherited effects of use and disuse in which he firmly believed (cf. art. ENVIRONMENT), Darwin supposed that gemmules were capable of transportation from one cell to another. In this way the cells of the germ-plasm were continually receiving gemmules from the cells of the different tissues of the body. Stimuli, more especially those resulting from increased use and disuse, altered the character of the cell and also of its contained gemmules. Some of these were transported to the germ-cells, and so the altered character was transmitted to a further generation.

4. Darwin's hypothesis of Pangenesis failed to carry conviction among biologists, who regarded the assumption of the transportation of gemmules as resting upon no firm basis of fact. Nevertheless, the idea of material particles for a basis of heredity was felt to be sound and was revived a few years later by de Vries (cf. below, p. 599^a). Meanwhile, however, the attention of naturalists was being diverted elsewhere. Darwin's great achievement in the promulgation of Natural Selection was not only a landmark in biological thought; it inaugurated a new era in biological work. Thenceforward the efforts of the biologist, whether botanist or zoologist, were devoted almost entirely to inquiring whether the doctrine of community of descent would serve to explain the existing forms of animals and plants.

The study of morphology became the keynote of biological thought during the last third of the 19th cent., and its students directed their efforts to the construction of elaborate schemes which should demonstrate the genetic relationship between the various groups into which the systematist had divided the existing forms of life (cf. art. EVOLUTION). Experimental work upon the living organism practically ceased; and, where the phenomenon of heredity came up for discussion, it usually received the perfunctory treatment accorded to a subject in which there is little or nothing fresh to be discovered. It has been well called the period of the essayists, chief among whom was August Weismann. In his work on *The Germ-Plasm* (1892), Weismann elaborated a complicated system to explain the hereditary transmission of characters. He insisted upon the sharp distinction between germ-plasm, or reproductive tissue, and somato-plasm, or body tissue. Hitherto it had been considered that the germinal gland was formed from the body, and, of course, separately formed for each indi-

vidual. The body of the individual intervened between the germ-plasms from which that individual arose and the germ-plasm to which it itself gave rise. Weismann, however, regarded the germ-plasm as the essential tissue, from which the somato-plasm was derived during the process of embryological development. The individual at first existed as germ-plasm derived from the commingling of parts of the two parental germ-plasms. As development proceeded, part of this germ-plasm was sacrificed to the formation of the somato-plasm, undergoing various modifications resulting in the formation of the various body tissues. But part of the germ-plasm remained undifferentiated in the sexual gland, until its turn came to produce germ-cells. The essential feature of Weismann's views was that the continuity between successive generations was provided by continuous germ-plasms mingling at intervals with one another. Wherever these germ-plasms mingled—wherever two fragments of the germ-plasm of opposite sexes came fruitfully together—the shock of their union led to the detachment of a portion of the combined germ-plasm, which became differentiated into the various body tissues and served as a carrier of the rest of the germ-plasm which had not undergone differentiation. The main current of the species lay along the track of the germ-plasm; the body was merely a side-track from that germ-plasm, arising under special conditions from time to time, whose destiny was to carry and protect that from which it itself had sprung.

5. At the time when Weismann promulgated his views, the majority of naturalists, following Darwin, believed that the effects of use or disuse of particular structures in the organism were transmitted to the direct descendants of that organism. The changes wrought in the body tissues by stimuli from the outside world in some way or other so affected the reproductive tissues that the organisms developing from them bore the impress, in a more or less marked degree, of the changes which had occurred in the parental body. It was in order to provide a basis for this possibility that Darwin had framed his hypothesis of Pangenesis. Underlying this hypothesis was a definite conception of the relation in which the germinal and body tissues stood to one another. They were imagined as alternating with one another, the body tissues being formed from germinal tissues and these again from body tissues. Since the germinal tissue was continually being derived from the body, it was not difficult to understand why definite changes in the body should have their counterpart in definite changes in the germinal tissue, and that these changes in the germinal tissue should in their turn become impressed upon the body tissues of the next generation. In this way changes induced in the body by some modification of external conditions—'acquired characters,' as they are often termed—might be supposed to be transmitted through the germ-cells to the next generation (cf. art. ENVIRONMENT). It is evident, however, that such a conception of the relation of the germinal tissue to the organism was opposed to the view which Weismann had put forward, and this led him to challenge the evidence for the transmission of 'acquired characters.' From experiments of his own, and from a critical examination of the evidence adduced by others, he came to the conclusion that 'acquired characters' are not transmitted, and the result of more recent work may, on the whole, be said to have confirmed Weismann in the position which he then took up. It is true that cases are on record in which a change induced in an organism was evidently followed by corresponding changes in the offspring produced by that organism. But it is not improbable that in such

cases the stimulus which acted upon the parental organism acted at the same time upon the germ-plasm contained in that organism, and that the cause of the corresponding change in the offspring was not the change in the parental organism, but a change in the constitution of the germ-plasm which occurred at the same time and under the same stimulus as that in the parent.

This conception of the relation between germ-plasm and somato-plasm may be regarded as Weismann's most important contribution to the study of heredity. In the exceedingly elaborate theory which he put forward in *The Germ-Plasm*, Weismann attempted to formulate a theory of heredity which should be in accordance with recent discoveries on the minute structure of cells and their contained nuclei. He regarded the nucleus of the germ-cells as the bearer of hereditary characters, and more especially that portion of the nucleus which, from its reaction to certain dyes, is known as *chromatin*. The chromatin was held to be a heterogeneous substance composed of numbers of minute entities, or groups of entities—the determinants. Upon the number and variety of the determinants depended the variety of the characters exhibited by the organism which arose from the fusion of two sexual cells derived from two germ-plasms. Moreover, it was supposed that the union of two dissimilar germ-plasms with different sets of determinants could bring about a state of affairs under which some form of natural selection within the cells decided whether certain determinants should be eliminated.

To follow Weismann's theory in detail would be hardly profitable. More modern work has demonstrated that his conception of a heterogeneous germ-plasm and of discrete determinants in the germ-plasm corresponding to characters in the developed organism probably approximates to the truth. Nevertheless, his theory lacked compulsion because it was not based upon the facts of heredity—the one class of facts upon which such a theory could have rested firmly.

6. To the essayist period belongs one other work of some importance. In 1889, Hugo de Vries formulated his views in a work on *Intracellular Pangenesis*. He accepted Darwin's view that the individual hereditary qualities are dependent on individual material bearers in the living substance of cells, but he differed from Darwin in refusing to believe that these material bearers, or pangens, could be transported in the blood stream about the body. According to de Vries, the nucleus of every cell in an individual contains the sum-total of the pangens found in that individual, but only some of them occur in the extra-nuclear protoplasm of the cell. The nature and properties of the cell, whether muscular, nervous, glandular, etc., were held to depend upon the nature and variety of the pangens which were to be found in the extra-nuclear protoplasm. This stimulating essay may be regarded as marking the close of a period in the study of heredity, for but a few years were to elapse from its publication before a new light was suddenly flashed upon the whole subject, and heredity took its place among the experimental sciences.

7. While biologists and philosophers who were interested in these matters had been busily weaving new theories, an Austrian monk had turned aside and quietly experimented for himself. The results of his investigations were communicated by Gregor Mendel to a Natural History Society in Brünn, in the *Proceedings* of which they were published in 1865. In 1900, nearly twenty years after Mendel's death, his paper was discovered, and the remarkable nature of his achievement was rapidly appreciated. Mendel's success was largely

due to the fact that he planned his experiments on lines different from those of any of his predecessors. Instead of making numbers of somewhat random and haphazard crosses among the plants studied by him, he concentrated his attention on certain characters in which allied varieties differed from one another, and persistently followed their distribution over a succession of generations. He was careful also in his selection of a plant with which to work, choosing the edible pea (*Pisum sativum*) on account of its hardiness, its annual habit, its faculty of self-fertilization, and the number of sharply differentiated characters found in it.

The nature of Mendel's discovery may best be explained by considering some of his own results. In one set of his experiments with the pea he chose length of internode as the character with which to work. In some peas the internodes are long, and such plants reach an average height of 5-6 feet. In others, again, the internodes are short, and the plants average but 1½-2 feet. Having obtained true breeding strains of each of these varieties, Mendel proceeded to cross them, and in this case it made no difference whether the tall was used as the pollen parent or *vice versa*. In either case the result was the same; only tall plants, at least as tall as the original tall parent, resulted from the cross.¹ The seeds of these plants, which are normally self-fertilized, were collected and sown in the following year. The generation so produced (F₁) consisted of both tall and dwarfs, but no intermediates. Careful counts on large numbers showed that the proportion of tall to dwarfs was 3:1. The dwarf character receded in the F₁ generation, but reappeared in a definite proportion in the F₂ generation following. For this reason Mendel termed the dwarf character *recessive* and the tall *dominant*.

The experiment was continued into a further generation, the seeds of a number of F₂ plants being sown and special care taken to keep those from each individual entirely separate. The nature of the resulting F₃ generation showed that the dwarfs all bred true, but that the tall belonged to two classes, viz. those which bred true and those which gave tall and dwarfs in the ratio 3:1 (cf. fig. 1), behaving like the F₁ plants. Of these two classes that which threw dwarfs was found to be twice as numerous as that which bred true.

Throughout these and further generations, Mendel encountered only three classes of plants in so far as the pair of differentiating characters, tallness and dwarfness, were concerned, viz. (1) pure tall plants breeding true to tallness; (2) impure tall plants throwing tall and dwarfs in the ratio 3:1; (3) dwarfs which always breed true. Moreover, the relation worked out for this pair of characters was found to hold good for other pairs. Thus the yellow colour of the cotyledons of the ripe seed was found to be dominant to green, round seed shape to wrinkled, tough parchment-like pod to soft pod, etc.

By looking at the pea in this way it was possible to express much of the variety of forms under which they occur in terms of alternative characters, each pair of which taken separately followed the scheme of inheritance outlined above. Mendel not only provided the scheme; he also suggested the explanation. He supposed that the various characters shown by his peas existed in alternative pairs. The pea could be either tall or dwarf; the seed could be either yellow or green; the flower could be either coloured or white; and so on. The characters belonging to such alternative pairs were mutually exclusive. Every pair of characters was represented by something in the germ-cells, but any given germ-cell could carry only the representative of either one or the other of a given pair of characters. To these representatives of the characters in the germ-cells it is now usual to apply the term *factor*. On Mendel's idea there was a factor corresponding to tallness, and another corresponding to dwarfness, but a given germ-cell could carry only either the factor for tallness or

¹ It is customary to denote the result of a first cross as the F₁ = first filial generation. Similarly the offspring from the F₁ individuals form the F₂ (second filial generation), the offspring of these last the F₃ generation, and so on.

that for dwarfness—but not both. All the germ-cells of the pure tall carried the factor for tallness, and all the germ-cells of a dwarf carried that for dwarfness. The cross between the tall and the dwarf meant the union between a tall-bearing germ-cell, or *gamete*, and a dwarf-bearing *gamete*, so that the individual, or *zygote*, produced by the yoking together of these gametes contained both the factor for tallness and that for dwarfness.

Such a zygote, which is produced by the union of two unlike gametes, is termed a *heterozygote*, as distinguished from a *homozygote*, which is produced by the union of two like gametes. In the case of the peas the tall factor is completely dominant over the dwarf factor, and the heterozygous tall is in appearance indistinguishable from a homozygous tall. But the difference comes in when it forms its gametes. Its own cells must be supposed to contain both of the factors for tallness and dwarfness. But, as Mendel assumed that these cannot enter into the same gamete, a separation then occurs so that half the gametes contain the tall, and half the dwarf factor. In other words, a *segregation* of the factors occurs during the production of the gametes, and the gametes themselves are pure for either the one factor or the other (see fig. 2).

The F_1 heterozygous pea, therefore, is producing equal numbers of tall-bearing and of dwarf-bearing gametes, and this is true for both the male and the female gametes. Self-fertilization of the F_1 plant means the bringing together of two such series of gametes.

Let us suppose that the number of ova is $4x$, $2x$ of which are 'tall' and $2x$ 'dwarf.' Any 'tall' ovum has an equal chance of being fertilized by a 'tall' or a 'dwarf' pollen-grain. Of the $2x$ tall ova, therefore, x will give rise to homozygous tall, and x to heterozygous tall. Again, any dwarf ovum has also an equal chance of being fertilized by a 'tall' or a 'dwarf' pollen-grain.

found by actual experiment. The nature of the gametes given off by the F_1 plant may, as Mendel showed, be further tested by crossing such plants with the pure recessive. If the F_1 tall plants are producing equal numbers of 'tall' and 'dwarf' gametes, they ought, when crossed with dwarf plants, to give both tall and dwarfs in equal numbers, and of the tall so produced all should throw dwarfs. Here, again, the hypothesis was confirmed by the experimental results.

More recently these experiments of Mendel have been confirmed many times over, and it has been shown that the same scheme applies generally to animals as well as plants.

8. One modification of Mendel's view was suggested a few years ago, and has since been generally accepted by students of this subject. This is the so-called 'Presence and Absence' hypothesis. Mendel had shown that the characters of his peas could be arranged in alternative pairs, and recent work has proved that this is general for the characters of both plants and animals. Of all the many cases now worked out there is none in which there is a clear reason for supposing the existence of series of three or more characters each of which is alternative to any other. This remarkable fact has led to a modification of Mendel's original view. According to Mendel, there is a factor for tallness and one for dwarfness, and the relation between them is such that it is impossible for them to enter the same gamete. According to the 'Presence and Absence' hypothesis, there is also a factor for tallness and one for dwarfness, but there is no reason why they should not enter into the same gamete. It is supposed that every pea at present known is homozygous for the factor for dwarfness, D , and that the difference between the dwarf and the tall is that the latter possesses an additional factor, T , in virtue of which it becomes tall. If the factor T is brought in by both the gametes which make a tall plant, the result is a homozygous tall; if only by one gamete, then a heterozygous

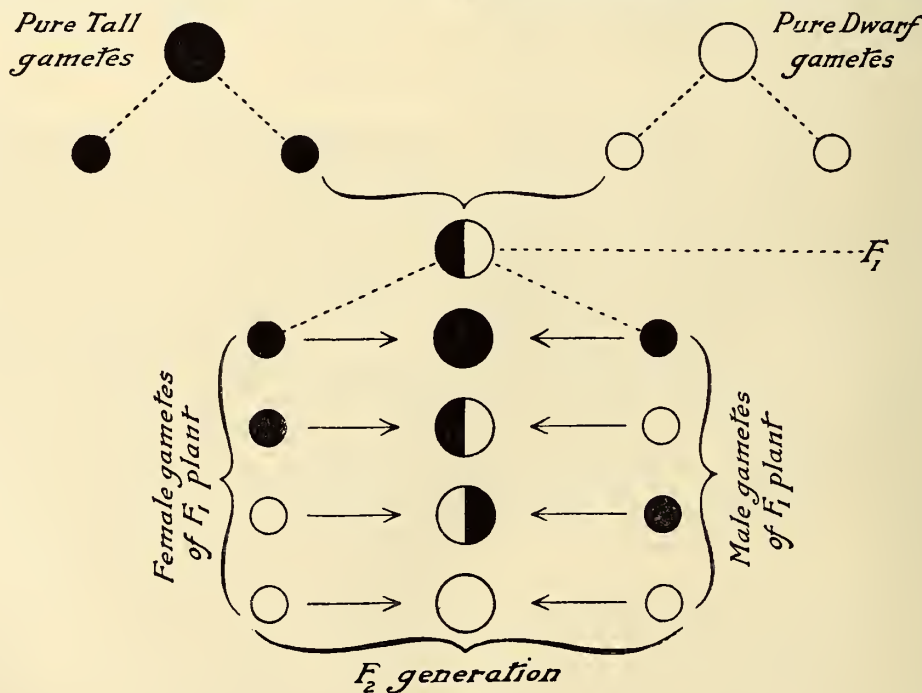

FIG. 2.

Of the $2x$ dwarf ova, therefore, x will give rise to heterozygous tall, and x to homozygous dwarfs. Hence, on this hypothesis of the relation of characters and factors in plant and germ cell, the F_2 generation should consist of x homozygous tall, $2x$ heterozygous tall, and x dwarfs—proportions which Mendel

tall results. The essential difference between the two views may perhaps be rendered more clear by the help of the accompanying diagrams (fig. 3).

In this way the Presence and Absence hypothesis

offers a simple explanation of the remarkable fact that experimental analysis has shown, that the characters of plants and animals may be expressed in terms of alternative pairs. This apparent

tween a plant containing both of these factors and a plant containing neither. Since one of the plants is homozygous for both *A* and *B*, we may represent it as *AABB*, and all its gametes as *AB*. The other plant contains neither *A* nor *B*, and for convenience we will express such a condition as *aabb*, the small

Mendel's Original View

'Presence & Absence' View

Fig. 3.—A black square represents the factor for tallness and a dotted square that for dwarfness. The unshaded portion represents the rest of the characters comprised in 'peaness.'

alternativeness is due to the fact that a given factor can enter into relation with a gamete in two ways only—it may be present or it may be absent. Mendel's own results can be explained equally well on either hypothesis. It was only when more complicated cases came to be worked out, and more especially cases where several factors affected the same structure, that the difficulty of affording an explanation on his original view became evident.

9. So far the only type of case considered is that in which the two original parents entering into the cross differ by a single character. Mendel, however, worked out instances in which several characters are concerned, and found the transmission of each character to be independent of any other, but always on the same scheme. For example, in the case where the characters round seed as opposed to wrinkled and yellow cotyledon as opposed to green were involved, a cross between a yellow round and a green wrinkled gave an *F*₁ generation composed entirely of yellow rounds.

Self-fertilization of these plants resulted in the formation of four classes of seeds, viz. yellow round, yellow wrinkled, green round, and green wrinkled; and the relative proportions in which these four classes appeared were as 9 : 3 : 3 : 1. The yellows are to the greens as 3 : 1, and the rounds are to the wrinkled as 3 : 1 with the factor for yellowness and the factor for roundness each being transmitted according to the same scheme, but quite independently of one another. The analysis of such cases as these is perhaps rendered more simple by regarding it in the following way:

Let *A* stand for one of the two factors brought into the cross, and let *B* stand for the other, and let the cross be made be-

letter in each case being used as a symbol denoting the absence of the particular factor in question. The *F*₁ individual resulting from the cross, being heterozygous in both factors, must be represented as *AaBb*. Every one of the gametes formed by such a plant has an equal chance of containing *A* or of not containing it, and each of these two kinds of gamete has an equal chance of containing or of not containing *B*. Such an individual will therefore form the four sorts of gamete *AB*, *Ab*, *aB*, *ab* in equal numbers. The *F*₂ generation results from the meeting together of two such series of gametes, and the result can be simply expressed by writing the series horizontally and vertically in the same order in a system of 16 divisions, as is shown in fig. 4. In this way is shown not only the nature

<i>AB</i>	<i>AB</i>	<i>AB</i>	<i>AB</i>
<i>AB</i>	<i>Ab</i>	<i>aB</i>	<i>ab</i>
<i>Ab</i>	<i>Ab</i>	<i>Ab</i>	<i>Ab</i>
<i>AB</i>	<i>Ab</i>	<i>aB</i>	<i>ab</i>
<i>aB</i>	<i>aB</i>	<i>aB</i>	<i>aB</i>

FIG. 4.

of the *F*₂ generation, but also the zygotic constitution of the various individuals. A point of some interest is that 4 individuals lying along the diagonal drawn from the left top to the right bottom corner are homozygous either for the presence or for the absence of both factors. In other words, of the four visible zygotic classes there will be a definite proportion in each case breeding true subsequently, viz. 1 in 9 of the class containing both dominants, 1 in 3 of the two classes containing one dominant, and, of course, all of those containing neither dominant. The point is of considerable economic importance in connexion with the building up and fixing of new varieties of domesticated plants and animals.

This method of analysis for cases involving the presence or absence of two distinct factors is, of course, applicable to cases involving a larger number of factors, and many such cases have now

been worked out for various characters in plants and animals and shown to accord with the theoretical scheme. The nature of the F_2 generation, the number of forms which appear with it, and their numerical proportions form the first stage in the determination of the number of factors involved in a given cross, and so of the experimental analysis of the constitution of living things.

There are, however, cases in which the same scheme of heredity holds good, but in which a fresh complication is introduced by the fact that the factors concerned may interact upon one another. The factors A and B may in conjunction produce an effect which is absent when only one or other alone is present. Instances of this have been shown to occur among plants where two strains of whites, each breeding perfectly true to white, will nevertheless, when crossed, give rise only to plants with red flowers. The colour in such cases is due to the interaction of two things A and B , and colour can be produced only when they are simultaneously present in a plant. The crossing of the two whites brings together the two constituents necessary for the production of colour, and the F_1 plant is consequently coloured, being heterozygous for both A and B . Reference to fig. 4 shows that the F_2 generation from such a zygote should contain 9 individuals out of every 16 in which both A and B are present. The remaining 7 have either A or B alone or neither. Hence, from such coloured F_1 plants hypothesis would lead us to expect an F_2 generation consisting of coloured and whites in the ratio 9:7. And this is what experiment has shown actually to occur. Moreover, chemical evidence quite independent of breeding tests is gradually accumulating, suggesting that in such cases as this we are dealing with two definite substances—a ferment, and a colourless chromogen which can give rise to colour when acted upon by the ferment. One of the original whites must be regarded as carrying the chromogen and the other the ferment; whether the gametes actually carry these substances is uncertain, but in any case they carry something which is capable of developing them.

10. Analysis of these cases, which are to be interpreted by the interaction of factors, has thrown an interesting light upon what was formerly the puzzling phenomenon of reversion or crossing. Two white sweet peas may, on being crossed, give rise to a purple which is practically identical with the wild purple as it grows to-day in Sicily. The offspring of a chocolate brown and a yellow rabbit may be all of the wild grey colour. In such cases each of the two parents lacked one or more from the sum-total of the factors which go to make up the wild form. Together, however, they can make up that sum-total with the consequence that reversion at once occurs. Reversion is due to the coming together again of factors which had become lost at some point or other in the history of the species. The study of reversion opens up interesting questions in connexion with the relation between domesticated forms and their wild prototypes. It is only in some cases, of course, that we are certainly acquainted with the wild species which was the ancestor of domesticated races. Where such is the case, genetic analysis has shown that these domesticated varieties must be supposed to have arisen through the loss of one or more factors. Such is the case with almost all the many colour varieties of the rabbit and the mouse. Such is the case with all the colour and structural varieties of the sweet pea. It is probable that the change originated somewhere in the cell-division, giving rise to the germ-cells.

Asymmetrical divisions occurred such that some germ-cells obtained less than their full quota of

factors, and from these germ-cells sprang the recessive varieties. The sequence of such new 'sports' or mutations has been observed with some care in certain instances, such as that of the primula (cf. art. EVOLUTION), but at present we are without definite evidence as to the original seat of the change. There are other instances where the domesticated form possesses a character which is dominant over the wild form. The English pattern in the rabbit, the yellow coat colour in the mouse, and the rose comb of poultry are all dominant to the condition found in the wild form. The gain of a new factor is a more difficult conception to formulate than the loss of one old one, but it is not improbable that it may eventually be expressed in terms of some rearrangement of the elements already present. But, in whatever way they may eventually be interpreted, there seems no reason to doubt that new dominant characters may arise from time to time.

11. One further complication sometimes occurring in cases where the factors are concerned may be mentioned here. We may have a pair of characters due to the presence or absence of a factor A , and it may be that neither character can show itself except in the presence of a second factor B .

As an example we may take a case relating to coat colour in some rodents. The wild grey or agouti colour in mice is dominant to black, and depends upon an additional factor A which is not found in the black mouse. Animals heterozygous for A , when mated together, will produce offspring consisting of agoutis and blacks in the ratio of 3:1. Now, albinism is recessive to colour, and coloured mice must, therefore, be regarded as possessing a general colour factor B which is absent from the albino. When animals which are heterozygous for these two factors are mated together, the scheme of distribution of the factors A and B will be that already shown in Fig. 4. Of the 16 possibilities there are 12 containing A and 4 without A —the expected ratio 3:1. But 3 of the 12 containing A lack the factor B , as also does one of those which is without A . Since they lack a factor which is necessary for the production of colour of any sort, these four mice will be albinos. Judging, therefore, by visible attributes, three classes of mice should appear from this mating, viz. agoutis, blacks, and albinos in the ratio of 9:3:4. And these are the proportions actually found by experiment. The albinos are really of two different sorts, viz. those containing A and those without A —'agouti' albinos, and 'black' albinos in the proportion 3:1. That this is so can also be tested experimentally by crossing these F_2 albinos with pure black, i.e. blacks which are homozygous for the factor B . Some of the albinos, i.e. those homozygous for A , give only agouti offspring; others, which are heterozygous for A , give agoutis and blacks in approximately equal numbers; while the 'black' albinos which lack A give nothing but blacks. The 9:3:4 ratio obtained in the F_2 generation is really a 9:3:3:1 ratio, but it is not possible to distinguish the four classes by the eye, owing to the fact that the agouti factor produces no visible effect unless the factor B is also present.

That the above four classes exist is evident from appropriate breeding tests, and cases of this nature are in no way different from those already considered with regard to the complete independence in transmission of the different factors concerned. Nevertheless, there are cases in which factors must be supposed to influence one another in their distribution among the germ-cells. Cases of this nature have further been worked out most fully in the sweet pea, and it is from this plant that the following illustrative examples are taken:

Two kinds of pollen are to be found in the sweet pea, an oval or 'long' pollen which has 3 pores, and a smaller 'round' pollen which has only two pores. Only one sort, of course, occurs on any given plant. In heredity, long pollen (L) behaves as a simple dominant to round (l). Again, with regard to colour, sweet peas may be arranged in two main groups, purples and reds. To each red there is a corresponding purple, the difference between the two being that the purple contains an extra factor (B) as compared with its corresponding red. When a long pollened purple (BLL) is crossed with a round pollened red ($bbll$), the F_1 plants are all long purples; and, were the case similar to those that have already been considered, we should look for an F_2 generation consisting of long purples, round purples, long reds, and round reds in the ratio 9:3:3:1. Such, however, is not the nature of the F_2 generation. The four expected classes appear, it is true, but they appear in proportions very different from those expected. The long purples are about 12 times as numerous as the round purples, while the round reds are rather more than 3 times as many as the long reds. The 3:1 ratio of purples to reds and of longs to rounds

is undisturbed, but the distribution is peculiar in that there is a great deficiency of rounds among the purples and a great excess of rounds among the reds. This, then, is the nature of the F_2 generation when the cross is so made that both the factors L and B are brought into the cross by the same parent. When, however, one of these factors is brought in by each parent, a round purple being crossed with a long red, the nature of the F_2 generation is quite different. The reds are now almost all long pollened, while the round pollened plants are almost all purples. This case, as well as others in the sweet pea, is explicable on the hypothesis that two of the four classes of gametes are produced by such plants in greater numbers than the other two classes. In the special instance just considered the experimental numbers are in accordance with the view that the F_1 plant made by bringing both factors from one side ($BL \times bl$) produces its four kinds of gametes in the ratio $7BL : 1Bl : 1bL : 7bl$, whereas the F_1 plant made by bringing both factors from one side ($Bb \times bL$) produces its four kinds of gametes in the ratio $1BL : 7Bl : 7bL : 1bl$. In the former case B is said to be 'coupled' with L , while in the latter case there is said to be repulsion between B and L . In both cases the two kinds of gametes representative of the original parents are produced in excess. Several other cases recently worked out in the sweet pea and other plants suggest that this excess of certain gametes is part of an orderly scheme, the nature of which may be best indicated by the following table.

consists only of singles, and these when bred from behave alike, all throwing doubles as well as singles. When, however, the double-thrower is used as the female parent, the F_1 generation as before consists only of singles; but whereas some of these singles throw doubles when subsequently bred from, others of them breed perfectly true. From this and other facts of kindred nature it has been inferred that the female and male reproductive cells on the same hermaphrodite plant differ in their hereditary properties, one set being, as it were, associated with certain factors which are not found in the other set. It is not inconceivable that different portions of the germ-gland of an animal may differ in hereditary properties, but at present there is no definite ground for supposing this to be so. The solution of such problems as these depends largely upon whether it is possible to determine the exact stage at which segregation occurs. Perhaps the view most widely accepted at present is that it

No. of Gametes in Series.	Classes of Gametes.				No. of Zygotes in Series.	Classes of Zygotes.

In the table n is half the total number of gametes in the series. (Thus, in the case just considered the number of gametes in the series $7BL : 1Bl : 1bL : 7bl$ is 16, and n here = 8.) The right-hand side of the table indicates the nature of the F_2 generation arising from the cross. In the table n is represented throughout as some power of 2 (*i.e.* 2, 2², 2³, etc.). Where there is coupling in F_2 , the 2 forms of gamete AB and ab are $(n-1)$ times as numerous as the 2 forms Ab and aB ; where there is repulsion in F_2 , the reverse is the case. There is reason for supposing that for the same pair of factors the value of n for both the repulsion and coupling series is the same. Most of the cases hitherto discovered in plants may be regarded as belonging to one or other of the series shown in the table, and those already discovered are marked with an asterisk. It is not improbable that other series may exist, but not enough is yet known to justify any definite statement as to their exact nature. What is clear, however, is that, in the process of cell-division which leads to the formation of the gametes, factors may become linked together, or the reverse, according as the cross is made, and that the resulting 'coupling' or 'repulsion' is part of the same orderly process.

Phenomena of apparently similar nature have been witnessed in a few instances among animals, and there is little doubt that, when they come to be fully worked out, these processes will be found to play an important part in heredity. More especially is this likely to be the case where we are concerned with characters which are, as a rule, peculiar to one or other sex, for it is not improbable that the so-called secondary sexual characters are linked in this way with a sex factor. For further discussion of these matters the reader is referred to the article SEX.

12. A phenomenon of some interest in this connexion is exhibited by certain hermaphrodite plants. It has been known for many years that some strains of single stocks throw doubles as well as singles, and that, as the doubles are sterile, the only way to get them is to breed from such singles. When crossed with ordinary pure breeding singles, these double-throwing singles give a different result according to the way in which the cross was made, *i.e.* whether the double-thrower was used as the male or as the female parent. The F_1 generation

occurs at that stage in the formation of gametes which is termed the 'reduction division'—a phenomenon peculiar to the vast majority of plants and animals. The nuclei of the cells composing the tissues of animals are characterized by the presence of small bodies which stain deeply with certain dyes and are consequently termed *chromosomes*. It has been found that, as a rule, the number of chromosomes in any given species is constant or nearly so, though differing for different species. Were the gametes to contain the same number, the total number of chromosomes would be doubled each time two gametes fused to form a fresh generation. This is avoided by a complex process leading up to the 'reduction division,' by which the number of the chromosomes in the gametes is reduced to one half of that found in the nuclei of the body tissues. It is plausible to suppose that the segregation of factors occurs at this stage, though it cannot be said at present that the evidence in favour of this view is sufficiently strong to put other possibilities out of court. Indeed, there are certain classes of evidence which tell markedly against it, more especially the phenomena of coupling and repulsion, and the fact that in certain heterozygous plants the ova and spermatozoa may differ in the factors which they bear. It is not altogether impossible that in these matters there may be a difference between plants and animals, but at present the question must be left open.

13. At this point mention should be made of a phenomenon which may serve to complicate the process of genetic analysis. It has been assumed in the foregoing account that any given gamete of one sex is capable of being fertilized by any gamete of the other sex, and of giving rise to a fresh individual. There is, however, some evidence to show that in certain cases fertilization may occur, but that some of the zygotes formed are incapable of developing very far.

In the mouse, yellow is dominant to the wild agouti colour, but heterozygous yellows when bred together produce yellows and agoutis in the ratio 2 : 1 instead of the expected 3 : 1 ratio. On further testing these yellows it has been found that none of them is ever homozygous for the dominant yellow factor. One of two things must therefore occur: either there is repulsion between a 'yellow' ovum and a 'yellow' sperm, so that they refuse to unite; or else they unite to form a zygote which is incapable of development. On the former hypothesis there is nothing to prevent all the 'yellow' ova from being fertilized by agouti spermatozoa; and, since there is an equal chance of an 'agouti' ovum being fertilized by a 'yellow' or an 'agouti' sperm, the expectation, on this hypothesis, of mating yellows together would be 3 yellows : 1 agouti—all the yellows being heterozygous. But in many hundreds of mice so bred the ratio of yellow to agouti is definitely 2 : 1. Hence it must be supposed that the 'yellow' sperm can unite with the 'yellow' ovum, but that the resulting zygote is incapable of developing, at any rate beyond a comparatively early embryological stage.

This peculiar case in the mouse has recently been paralleled by an interesting one in the snapdragon (*Antirrhinum*). A form is known with light green foliage which will not breed true when self-fertilized, but always produces light green and normal green plants in the ratio 2 : 1. Careful examination, however, showed that three different kinds of seedling made their appearance among the progeny of such plants, viz. normal green, light green, and white in the ratio 1 : 2 : 1. The white, however, being without chlorophyll, were incapable of development and perished almost as soon as they raised their heads above the ground. The 'white' gametes fertilized one another, but the resulting zygote, though capable of a certain amount of development, was unable to attain any size owing to the absence of the chlorophyll upon which the plant depends for its nutrition. The case of the snapdragon, even more than that of the yellow mouse, points to the non-viability of certain zygotic combinations, and it is not impossible that such cases may eventually help to throw light upon some of the phenomena of sterility.

14. The opinion is held among many breeders that, in certain cases at any rate, a character may be intensified or diminished by a process of long-continued selection—in other words, that the effect of this process is a cumulative one. On the other hand, it is well recognized that there is a definite limit to the effects produced by the process of selection. There is no reason for supposing that the last half-century of careful breeding has materially increased the speed of the racehorse, or that the yield of any food-plant can be indefinitely augmented merely by saving and growing on the seed from the best plants. However the theorist may regard the matter, the practical breeder realizes that there is a limit to improvement, and that in most cases this limit is reached after comparatively few years' work.

Some confusion has been introduced into discussion on the effect of selection owing to the fact that the word conveys a somewhat different meaning to the biologist and to the practical breeder. The aim of the breeder is to obtain some more profitable type of animal or plant, and his first step is to cross two strains possessing desirable qualities, usually with the idea of uniting these qualities in a single strain. He then breeds on the individuals resulting from the cross for several generations, or else crosses them back with one or other of the parents, and from the mixed lot so obtained he picks out those he wants for subsequent breeding from. Having found a useful type, he goes on breeding from it until it breeds true, or becomes 'fixed.' The result of this combined process is generally termed 'improvement through selection.' Translated into modern terms, it means recombination of characters by means of a cross, and subsequently establishing a homozygous strain of the combination required. Neither part of this process is strictly comparable with what the biologist understands by the term 'selection.' For him the word has been coloured by the invention of the term 'natural selection'; and, as natural selection was originally conceived of as the gradual accumulation of very small variations leading slowly to a change of type (cf. art. EVOLUTION), so the term 'selection,' even when applied to alteration of type among domesticated animals and plants, was more or less unconsciously

assumed to be a similar process. Hence, when the breeder spoke of a given result having been achieved by selection, the biologist was often apt to put his own interpretation upon the process, and to attribute to the gradual accumulation of minute variations a result which was certainly not brought about in that way.

Nevertheless, there is evidence that, in certain cases at any rate, a character may be to some extent intensified through crossing, and subsequently choosing for further breeding such individuals as exhibit the character in the most marked degree; but, as has been pointed out, more especially by Nilsson-Ehle, such cases may also be interpreted in terms of factors.

Working with wheat, this observer showed that red colour in the grain is dominant to white. But in different families three distinct proportions of reds and whites may occur. The reds may be to the whites as 3 : 1, as 15 : 1, or as 63 : 1. The inference is that in the first case we are dealing with the presence or absence of one factor, in the second of two, and in the third of three factors. And since each of these factors produces what is apparently precisely the same effect singly, it is probable that we are concerned with a single factor throughout. It must be supposed that a gamete can bear either one, two, or three doses of this factor, and that each dose behaves in heredity independently of the others, segregating in every case in the normal way. Thus, for example, a plant may be triply heterozygous for the factor R which turns white into red, and of the constitution $R_1 r_1 R_2 r_2 R_3 r_3$. Such a plant produces equal numbers of eight sorts of gametes, $R_1 R_2 R_3$, $R_1 R_2 r_3$, $R_1 r_2 R_3$, $r_1 R_2 R_3$, $r_1 R_2 r_3$, $r_1 r_2 R_3$, $r_1 r_2 r_3$. Hence, when such plants are self-fertilized, only one in 64 will be without any red factors; and this plant ($r_1 r_1 r_2 r_2 r_3 r_3$) is, of course, a white. The reds, however, differ considerably in the number of doses of the red factor which they may contain. Among them will be such forms as $R_1 R_1 R_2 R_2 R_3 R_3$, $R_1 R_1 R_2 R_2 R_3 r_3$, $R_1 R_1 R_2 R_2 r_3 r_3$, $R_1 R_1 R_2 r_2 r_2 R_3 R_3$, $R_1 R_1 R_2 r_2 r_2 r_3 r_3$, etc. A red plant may have from one to six doses of the reddening factor, and Nilsson-Ehle found by further breeding that the red colour was deeper in those plants which contained the greater number of doses of the reddening factor ($R_1 = R_2 = R_3$). The differences, however, were not sufficiently sharp to permit of accurate sorting. Now, selection of the reddest grains from such a family would mean the picking out of those grains with perhaps 6, 5 or 4 doses of R to the exclusion of those with less. Were these reddest grains sown indiscriminately and the reddest again sorted from them, there would result a higher and higher proportion of the 6 dose grains in the sample. Repetition of this process would in a few generations eliminate the 5 and 4 dose grains; and, as the 6 dose grains are homozygous, the intense red colour would be fixed.

At first sight it seems not unnatural to attribute this result to the action of selection taking effect much in the same way as the biologist conceives the operation of natural selection on minute variations. But it must be carefully noted here that, although the variations are small so that the various classes of reds grade into one another, yet each class has a specific constitution depending upon the number of doses of the factor R which it contains. Each class can be analyzed and identified by crossing with the white and subsequently breeding from the crosses. The net result is the intensification of the red; nevertheless, what has happened in such a case is merely the picking out of what had already come into existence as the result of the cross, and the intensification of the colour owes nothing whatever to the so-called selective process. There is no reason for supposing that such cases as these lie outside the scope of analysis, or that they cannot be expressed in terms of genetic factors.

15. From all the various investigations that have been carried out since the re-discovery of Mendel's work, there emerges one fact of cardinal importance. So far as these investigations have proceeded, it is possible to express the results in terms of definite factors segregating sharply from one another in the way that Mendel first disclosed. A new science has been brought into being—a science of which the aim is to express the composition of living things in terms of factors, just as chemistry expresses the composition of dead things in terms of molecules. How complete that expression may ultimately become it is not as yet

possible to say. Fresh data may any day make their appearance which will present the old phenomena in a new light. For the present, however, there is every reason to suppose that the properties of animals and plants depend upon the presence or absence of definite factors which in transmission follow definite and ascertained laws. Moreover, these factors are, so far as we can see to-day, clear-cut entities which the creature either has or has not. Its nature depends upon the nature of the factors which were in the two gametes that went to its making, and at the act of fertilization are decided, once for all, not only the attributes of the creature that is subsequently to develop, but also the nature and proportions of the gametes to which it itself must eventually give rise. That the nature of the environment influences the living thing is beyond doubt. Better soil, more moisture, more stimulating manure may sometimes effect a striking alteration in the habit of a plant. Better hygiene and education may largely influence the nature of a human being. But to the supposition that by such means a radical change can be brought about in the living organism the facts of heredity as we know them to-day certainly lend no countenance. Within limits the organism is plastic, and upon that plasticity alterations in the environment may play, producing changes within those limits. But there is no unequivocal evidence for supposing that those changes can be transmitted, or that a beneficent change brought about in the organism through altered circumstances can in any way alter the constitution of the germ-cells which that organism contains. It is true that strong, healthy plants generally produce better seed than those which are poorly nourished. But this is because the seed is really a larval form parasitic upon the mother plant. The parent plant not only produces the gametes from which the seed develops, but is for some time part of the environment of the developing seed; and it is in this capacity that the better nourishment of the parent is apt to lead to better formed and more vigorous seeds. Better nutrition of the mother plant has not affected the constitution of its gametes; it has only afforded a better chance to the developing embryo in the seed.

16. Another effect which must be carefully distinguished from that of heredity is that of *tradition*. Where the young of animals live for some time with their parents, they profit during early life by their parents' experience. There is little doubt that in this way modifications in behaviour may be gradually brought about, and the species become gradually adapted in certain respects to changed conditions. Rooks will avoid a man with a gun, though perhaps they have never been shot at. So also it is said that the behaviour of many wild animals differs according as they are in the presence of a white or a brown man. But of all animals the effect of tradition is strongest in man, where the intelligence and means of communication are most highly developed, and the young remain longest with their parents. Moreover, man alone has devised methods of storing up his experience. With each generation the store is added to, revised, and improved; and each generation comes into the world endowed, through the efforts of its forbears, with greater control over the conditions under which it has to live. This is sometimes spoken of as 'the inheritance which one generation receives from another.' The expression is in some respects misleading, for it cannot be too strongly emphasized that this passing on of accumulated tradition has nothing whatever to do with heredity in the strict biological sense. What may or may not be inherited is the brain capacity to take advantage of the accumulated

store of experience. Without such capacity the store becomes of no account.

In discussing questions involving evolution and progress in man, it is of the first importance to disentangle the effects of tradition from those of heredity proper. That heredity in man is of the same nature as in other animals and in plants there is no reason to doubt. Mendelian inheritance in its simplest form has already been demonstrated for a number of characters. These, it is true, are mostly of abnormal nature, because the student of genetics is at present largely dependent on the medical man for his data, and must deal with such characters as have been adequately investigated, whatever their nature. Among such characters may be mentioned congenital cataract, brachydactyls, *tylosis palmæ*, and others, while of so-called normal characters brown eye is dominant to blue; and, in certain cases at any rate, red hair is recessive to black. A peculiar feature in human heredity would appear to be the large number of characters showing sex-limited inheritance (cf. art. SEX). Though for the present man is too imperfectly known to be of much service in the elucidation of problems in heredity, there are yet two cases in the species of the highest interest, because the records in either case extend over several centuries. One of these is the well-known Hapsburg lip so characteristic of certain royal houses. The eminence of those affected has ensured a succession of portraits and documentary evidence, and there is little doubt that this character has behaved throughout as a simple Mendelian dominant over the normal form. To-day, after more than four centuries, it is as well marked as ever in the House of Spain. The other example is a case of night-blindness near Montpellier, which began to excite interest two centuries ago, and of which there exists to-day one of the most complete of human pedigrees, a pedigree numbering more than 2000 individuals and extending over ten generations. During all this time the affection has behaved as a simple dominant, and, like the Hapsburg lip, it has persisted in its full intensity in spite of continual crossing with the normal type.

17. Heredity is a new science, and its students are well aware of the magnitude of the labours in front of them. Yet enough is clear to force upon us the question whether our attitude towards many social problems is in accordance with facts. Many of those who to-day are anxious to reconstruct society lay it down as an axiom that men are all born potentially equal, and that the differences between them are due to differences in upbringing and opportunity. To this doctrine the biologist must offer an unqualified denial. The developing human body is no mere plastic thing which can be moulded by treatment to give it this or that desired character. Even from its earliest stages each embryo is endowed, by the germ-cells that made it, with a collection of factors which must inevitably develop in a given way. Hygiene and education are influences which can in some measure check the operation of one factor or encourage the operation of another. But that they can add a factor for a good quality or take away the factor for an evil one is utterly opposed to all that is known of the facts of heredity. Men are in some measure what circumstances have made them, but in far higher degree they are what they were born. Moreover, as regards parents, circumstances count for nothing in the inherent qualities of their offspring. Two things there are that go to mould society, of which the one is tradition that is handed on from one generation to another, ever changing and gathering as the generations flow, while the other is the genetic constitution of man—that collection of factors given him at his making, differing from in

dividual to individual, essentially independent of circumstances, inevitably passing on to posterity according to immutable and orderly law. Which of these two influences is the stronger there can be little question, nor can it be doubted that a social system based upon the inherent nature of man would have greater stability and a better chance of surviving than one resting upon religious or ethical tradition alone, however high the source whence that tradition sprang. The best type of social system is doubtless that combining the two, but the question of how far the one or the other is to predominate must be left for the future to decide. Before it can be settled, the inherent nature of man must be probed by deeper and more searching analysis. Cf., further, the following article.

LITERATURE.—The most important works are: W. Bateson, *Mendel's Principles of Heredity*, Cambridge, 1909 (contains a full bibliography and a translation of Mendel's original paper); E. Baur, *Einführung in die experimentelle Vererbungslehre*, Berlin, 1911 (contains a clear account of Nilsson-Ehle's researches); C. Darwin, *The Variation of Animals and Plants under Domestication*, London, 1869 (in vol. ii. will be found Darwin's statement of the theory of Pangenesis); L. Doncaster, *Heredity in the Light of Recent Research*, Cambridge, 1910; R. H. Lock, *Recent Progress in the Study of Variation, Heredity, and Evolution*², London, 1909; G. Mendel, 'Versuche über Pflanzen-Hybriden', *Verh. Naturf. Ver. in Brünn*, vol. x., 1865 (Eng. tr. in Bateson); R. C. Punnett, *Mendelism*⁴, London, 1911; H. de Vries, *Intracelluläre Pangenesis*, Jena, 1889 (Eng. tr. by C. S. Gager, Chicago, 1910), also *Die Mutationstheorie*, Leipzig, 1901-03 (Eng. tr. by Farmer and Darbishire, London, 1910); A. Weismann, *The Germ-Plasm*, tr. Parker and Rönnefeldt, London, 1893, *Essays upon Heredity and Kindred Subjects*, Eng. tr.², Oxford, 1891-92. R. C. PUNNETT.

HEREDITY (Ethics and Religion).—The purpose of this article is to select, from the great array of facts and considerations connected with heredity (cf. preceding art.), some which may prove of present importance to ethics and religion. Race penetrates the whole of life; it influences powerfully nations, families, individuals. It is a counterpoise or partial complement of that manifold environment whose influence was mainly regarded by Buckle and the great naturalistic historians. The known facts are not yet marshalled by a science which, though growing fast, is young; and recent more rapid increase of knowledge indicates that there is much more to know than we thought. Sometimes it seems almost certain that *race* is the most powerful force in history. At other times we are inclined to follow the writers who, like Bernard Shaw, think race unimportant and environment (climatic, political, social) all-controlling. Probably the relative importance of these factors varies in different parts of the field. There are races, like the Jewish, which by a more subtle elasticity rather than a greater stiffness remain unchanged in all lands. There are countries, like North America, which bring many races to a common appearance. But all that environment effects is effected in and by the responding power of an inherited organism.

Moreover, ideas about heredity touch morals and religion at many points. The wide range of these ideas—many of them familiar through all ages—is not yet viewed as a whole, and misconceptions are mixed with traditional and popular, and even with instructed and critical, opinion. The time, therefore, for definite conclusions has not yet come; but none the less some decided opinions and resolutions are possible and necessary. For the modern attention to heredity has produced a movement, and may produce results; and the results will be welcome or unwelcome to Christian moralists in so far as they foster or discourage responsibility, prudence, and unselfishness. But of these results the most important will be primarily in the sphere of thought, and will illustrate the truth that opinion may be

more effective than material fact, and a change of ideals of greater consequence to a race than a change of blood.

In view of the vigour and merit of the new movement, some opinions familiar to tradition and common sense acquire a new importance; and some decisions negative in form become positive for morals. Recognizing the great difficulty for thought in our subject, we recognize in it also a burden of sorrow, a difficulty for courage. If the problem of race is dark, the influence of race plainly includes menacing elements; and the facts of inheritance, like the rest of the world of force, put a strain upon the conviction of freedom from which there is no ready escape. That conviction must here, as everywhere, rest upon the experience or the contemplation of virtue; for the good will is the free will. The Christian student approaches that part of the frame of things which we call blood, believing in the freedom which morals require. His business is to take care that new knowledge may lead to a conception of duty at once more extended and more intense; never to the relaxation of moral effort either in self or in others; never to a lower appreciation of the value and power of ideals.

(1) *Distinctive elements in present thought.*—We have learned to look beyond the succession of individuals in a race to the changes of a race as such. Organisms change from age to age, and man as a species is changing; he can, it is alleged, control his own change. The general principles of transformism include him; the special machinery of natural selection is valid for his case; the methods of Mendelian inquiry ought to yield results in human life; the hopes of selective breeding should have a version about man and human society. The moral question about the science of heredity is, in fact, the question of the application to man of its conclusions and methods. Can we and may we use for man the investigations and the methods by which the process of improving subject-breeds is shortened through the application of a relatively certain knowledge of the sequences of variation and the exclusion of useless steps? We can do better with our sheep than by a crude elimination. May we not do better with man than leave him to 'chance'? This is the moral problem on the practical side. But behind it is a problem of knowledge. Do we know what is improvement for man? And, if we could secure this improvement, should we in the process lose something of the truly moral life, for the sake of which alone it is worth while that man, improved or unimproved, should survive? Is the knowledge that races change a ground for humility and for hope? Or is it a warrant for self-reliance and a new ambition?

And then, besides the social or political question, there is a question for the individual. Does our knowledge of the behaviour of race tend to rob a man of the conviction and the responsibilities of freedom? What scope is there in a fixed constitution for the action of that personal choice which on other grounds he has come to believe in?

(2) *Causes of the present interest.*—The existing interest in problems of heredity is (a) part of what at its highest is an interest in the 'Reign of Law,' and at its lowest an abandonment of the essential task of man in life and thought, in face of the mechanical conception of the universe. It is worth noting that all the interest of a materialistic sort exists in our society side by side with a great development of psychical studies, a belief in new continuous influences other than blood, and a greatly extended conception of the powers of personality. In this 'New Thought,' the patent facts of heredity are accounted for by re-incarnation. All this speculation, so remote from naturalism, has not in any way been co-ordinated with the

thought movements called scientific in the biological sense.

(b) In the second place, the interest is due to recoil from the exaggerated equalitarianism of the immediately preceding age. In that age, so practical and so sentimental, silk purses were to be made out of a variety of materials; and a sort of moral transformism expected the Ethiopian to change or not to need to change his skin. A just criticism of the quite imaginary superiority of some strains led to the conviction that all strains were alike in potentiality; and, when destroying a fictitious aristocracy of accident, Britain forgot that there might be a real aristocracy of health, brain, and disposition.

(c) A third cause is the reaction from an almost exclusive reliance upon the environment, physical, intellectual, and moral, which we thought we knew how, and had means, to improve indefinitely. This confidence has been destroyed, partly by the critical activity of thought, and partly by our too manifest failures in practice. The results confidently promised are not forthcoming. There is now a contrasted belief, equally dangerous when it is held exclusively, that the improvement of the environment (housing, health, air, education, training, travel) has been carried as far as possible; that the best has been done with and for the existing human material; and that for further improvement we must look not to nurture but to nature, not to education in its widest sense, but to selective breeding, by which we may get rid altogether of some mischievous features, and obtain progressively more of the best types and fewer of the worse. There is a recoil from an unreasonable reliance upon the environment alone. The value of influence is discredited, and men look to elimination instead.

(d) Fourthly—and this cause alone will be further examined—the movement in religious and popular educated thought has received its direction from the emphasis upon the subject in biology; and has been animated by the advances of biological knowledge and practice, sometimes well, but more frequently not very well, understood. In illustration of the last sentence it may be remembered that some educated persons still believe that heredity means (even exclusively) the direct inheritance of acquired characters—an occurrence denied by most biologists; or they set inherited qualities in contrast with 'innate' ones; or speak of 'cases of heredity' as if among the children of men there were some who escaped the operation of the influences of descent. All cases of human life are cases of heredity. And we may take it as certain that, at least in respect of the body, men are not born with any but inherited properties and powers. What seems and is original in a human physique is the original result of a mingling of inherited influences. Reference will be made again to the innumerable surprises of descent—the unlikeness between children and parents; the re-emergence of a remote ancestral type, recognized only in families of celebrity or enduring possessions; the incalculable appearance of genius in an ordinary stock—which are sometimes accepted as disproving the general truth of heredity. One of our interests is to escape from unbalanced studies, which exhibit the case of the Bachs or the case of the Jukes, to establish heredity as a sufficient explanation of human life; or reject it as unimportant on the evidence of genetically isolated genius and heroism—the prophetic art of Beethoven sprung of unmusical stock, the military power of men born of subject and unwarlike races. On the one hand, we must remember that what is uncalculated and uncalculable by our present means is not therefore in actual fact irregular; and, on the other, that, though race and circumstance are undoubtedly factors in the pro-

duction of a person, it does not follow that they are the only factors concerned.

If it is impossible to deny the place of nature, it is unwise to deny the force of nurture because the tremendous power of nature is recognized. Well-born must no doubt be well-bred if he is to take his place in succession to worthy forbears. But the breeding requires a fit nature for its subject; and there must be many different forms of good training, to fit the many varieties of good race. Moreover, for training, there must be—as a factor growing in importance with advance—the consent and co-operation of the subject. 'I have,' says the Countess, of the gentlewoman Helena,¹ 'those hopes of her good that her education promises; her dispositions she inherits, which makes fair gifts fairer; . . . she derives her honesty and achieves her goodness.'

It must be remembered, besides, as correction, that distinctions originated by racial difference are maintained by other causes when the racial difference has ceased to act. A county, a district, gets character from the race that inhabits it. Other races entering the region take by association a varying share of the regional character. In England, say (for we have not much certain knowledge), the ancient stock was first driven from the seaboard. The coast, and especially the East coast, was inhabited by Teutons—Saxons, Normans, Danes. At present there are dark-haired men of the older race in some coast-places. But they have acquired the social characteristics of the seafarers who once drove out their dark forefathers. Aristocracy still has some of the features of Norman society. The country gentleman still exhibits what is probably the Saxon type. And yet no blood-relationship is concerned here. The old Universities of Oxford and Cambridge—as has been shown or suggested by W. C. D. and C. D. Whetham—though now drawing almost equally from the same mixture of stocks, still exhibit divergent characteristics which in their origin may have been determined by the different races on which they respectively drew.

General reflexions of this sort are practically required before turning to some particular heads of discussion. The moral and religious problems will fall under the heads 'individual' and 'social'; and we must in each case consider the bearing both of speculative ethics and natural religion on the one hand, and on the other of the statements and precepts of Christianity considered as based upon an accepted revelation of truth and duty. These divisions must be related to existing biological knowledge in general, to Mendelian work in particular, and to the proposals as well as the propositions of Eugenic Reform.

1. The individual. — With respect to the individual, it will be convenient to ask first what we may think of him in view of the general doctrine of heredity, and then to examine the effect, upon our provisional conclusion, of Mendelian work.

(1) *General doctrine of heredity.* — Of Original Sin (see SIN) it is impossible here to say more than that, whatever was the change or failure indicated by that doctrine, it was not an acquired character in the sense of biology. What is indicated is a fall, or failure to rise, in the relation between the spirit of man and God. The doctrine itself is not a gratuitous accusation of the race of man. It is the utterance of optimism under pressure of the experience of moral paralysis and temporal suffering. Its positive equivalent is the statement that we cannot measure either the dignity of man's origin or the splendour of his destiny by his present position and his present moral accomplishment. A will better than the will he exhibits is the

¹ *All's Well that Ends Well*, Act I. Sc. i.

origin of his being, and a virtue beyond his own present power is the end of his calling. It is not the Christian who declares the misery of man. What all men acknowledge the Christian interprets as the eclipse of a dignity which, through the moral effort made possible by Divine gift, man is invited to regain.

It is now necessary to exhibit the influence of biological thought; and to inquire (a) what is its bearing for morals upon the question of the individual, his responsibility, and his opportunity; and (b) what is its bearing upon the control or influence of individuals in small or large groups, in the education of the child, the management of the family, the organizing of the nation, and so forth. Under both these heads it is desirable to distinguish between the *general* influence of the study of heredity and the *particular* influence or bearing of the Mendelian researches which constitute at present its most active and promising department. Finally, turning to practice, we must ask what is the effect and what are the credentials of the eugenic proposals with which quite lately we have become more or less clearly familiar.

In speaking of the *general* effect or influence of biology, we refer not to the carefully acquired generalizations of Pearson, or Galton, or the writers in *Biometrika*, but to the strong general impression left by these studies on the minds of thinking men—that the qualities of a man are, in some sense, certainly fixed by inheritance. His ultimate character, we all admit, is a function of at least two variables, disposition and circumstance; but his disposition, it is contended, is the result of inheritance and is fixed at his birth. Moreover, at his birth it is the result of facts in his ancestry. We can no longer suppose that, while the physical frame, the diathesis in respect of disease and health, and so forth, are fixed by inheritance, the mental qualities and the personal temperament are excluded from the influence of blood. At any rate for our purpose we are content to allow—what certainly has not yet been proved—that throughout his whole complex organization a man is, in a certain sense, the result of natural inheritance. He is born what he is. *Poeta nascitur*, but not less the man who cannot enjoy the poetry is *born* with that incapacity.

If we do not seek, then, to exclude from the range of hereditary influence any part of the complex constitution of man, what room can be found for the freedom that is required for morals? May not a man conclude that, his character being fixed by inheritance, he has no responsibility for its improvement or for his actions? A doubt of the reality of responsibility on such grounds may have practical bad consequences for a man or for a generation after the doubt has passed away. It is certain that moral effort is gravely hindered in some men by the suspicion of its uselessness, and that thus—through the channel of an idea—more hindrance to improvement comes than from unfavourable inheritance. There are subjects in which a theoretical mistake when corrected leaves the life undamaged; for the apparent waste of time in unprofitable reflexion may be actually necessary to the process of discovery. But, when the theoretic mistake refers to the very possibility of 'conduct' in the real sense, then the escape from error may leave a man with diminished power of self-control to correct an increased force of unfavourable habit. And the loss which may not appear in the individual will become evident in the generation or the society.

It must be noted, however, that it is not only an abstract determinism that is unfavourable to moral effort. There is also a thoughtless libertarianism which, regarding moral events as un-

caused and without result, pursues a bad course in the belief—if the great word may be used in such a connexion—that it may be retraced whenever the agent chooses. But, when we allow this, it must be said that the despondency and irresponsibility arising from the idea of racial determination are very real; and not less real in quarters where determinism as a philosophic system is unfamiliar and unexamined. What can be said in answer to these impressions or suspicions?

(i.) First, there is an *argument from ignorance* (reduced in force, as will be presently pointed out by Mendelian research), which may be stated thus. The facts of heredity are grave enough. The drawbacks of evil inheritance are real. But, in the first place, the exact state of a man through inheritance is unknown. Older thinkers, relying principally upon the male line, and reckoning that as indicated by the patronymic, relying also upon knowledge of nearer ancestors alone, thought that the hereditary predisposition might be easily known. *Fortes creantur fortibus et bonis*. 'Like father, like son.' But the modern conception of parenthood—and it is a true one—recognizes the two parents as equally important, and knows that there are as many males in the female as in the male line. The patronymical stock, therefore, may or may not be important. To the excuse of the father-beater in Aristotle, *συγγενὲς γὰρ ἦν*, 'It runs in our family' (*Nic. Eth.* vii. 6, 1149b, 11), the answer would be, 'In which family?' The stock is almost infinitely mixed. The emergence of a given ancestral strain is incalculable. The immediate forbears and the more remote are but collaterally related to the descendant. It is the stock, the germ, that matters. Little of importance can be learned by the study of father and mother alone. If you have bad qualities by inheritance from bad ancestors, you have many good ones in the same entail; your great-great-grandfather, like almost every one's great-great-grandfather, was by modern standards intemperate; but his wife was by modern standards a recluse and an ascetic. You cannot tell which influence is strongest in you; at any rate the result is mixed. And since you cannot tell that you have not the most favourable inheritance, it is your duty to act as if you had, and not to run the risk of debasing, under the cloak of a bad strain which you do not possess, fine qualities which may actually be yours.

This argument from ignorance is at any rate inadequate to meet a reasoned determinism. It does not touch the facts, whatever they are. But the argument is strong forensically and practically. And, whatever the facts are, the duty indicated is plain. Fate may defeat the righteous man from without; it may defeat him from within. But his effort will still have been righteous; and, if we turn for a moment to the language of positive religion, we must add that the 'judgment' upon the man will not be determined by his achievement measured on an external standard without regard to heredity, any more than by such achievement measured without regard to circumstance.

(ii.) But further—and still in spite of what will presently be advanced as resulting from Mendelian work—the inherited qualities are certainly *too numerous all to find expression in a single life-history*. They are too numerous, and, besides, they are practically incompatible *inter se*. A man inherits capacities for a dozen different lines of life. One among these is realized by suitable training. The power of training is such that it appears at first sight to originate the whole character formed. We cannot doubt that it really effects what it does by acting upon an innate capacity. Nurture develops and 'brings out'

faculties which without nurture remain not only hidden but incomplete. But nurture can only develop what is there; and it draws out one or more of a multitude of capacities. And, if this is true of the broad and definite capacities which are required by certain modes of life and livelihood, it is also true of the very numerous and subtle capacities which are used or left unused in the cultivation of virtuous or evil character. For character is not the same thing as temperament. Character is both defined and realized by the manner in which a given temperament is managed in given circumstances. The vast excess of heritable qualities affords the field for such a choice. The relatively fixed external scene does not preclude a certain limited freedom of action, because the scene, though fixed, is greater than can be used or occupied by the life confronting it. Choice must be made. In the same way a relatively fixed internal constitution does not preclude a limited freedom of choice. For the possibilities are too numerous for realization. The potentialities cannot all find room on the narrow scene of one life-history. A man is capable of refinement and of bonhomie, of luxury and of self-denial. He cannot in the same life principally exhibit good-nature and principally exhibit an exclusive sensitiveness. He encourages one of the sets of qualities, and this partly by a direct fostering of them through thought and desire, guided by ideals; and partly, and in a more important degree, by carrying out, on account of the same ideals, the actions which are the natural outcome of these qualities and which nourish the qualities as the leaves of a plant nourish the root. The results of training in armies and various professions of men drawn from a stock fairly evenly mixed show both by the contrast of different professional types and by relative uniformity within a profession that life is the result of the development by action of one or other set of qualities out of many such sets present in the subjects of training. The contrasted set of qualities, left without expression or result, is inoperative for the man, and is quite possibly *pro tanto* atrophied for the stock; for the orthodox denial of the inheritance of acquired characters does not quite for certain apply to the specific case of starvation.

Again, besides the want of room—to use a figure—for all the inherited qualities in one life, there are some qualities that are mutually exclusive of one another. A man may be both extravagant and niggardly, both shy and boastful, both arrogant and servile, both rash and cowardly. But he cannot be both proud and humble, both predominantly devoted to self and predominantly forgetful of self. Many of those inheritances which are in our view not moral, but the raw materials of morals, are in their own nature ambiguous, and can be turned to virtue or to vice. Such are irascibility, caution, self-regard, the power of admiration. But even of these some are incompatible, in exercise and cultivation, with other qualities inherited by the same person. Life is the story not only of the management of circumstance but of the management also of these interior equipments. It is the abandonment of anti-impulsive management that constitutes moral failure. Moral failure is the failure to be moral.

Using once more at this point the language of positive religion, we may say that sinful action is not always action having any moral character in itself. Sleeping, eating, striking, speaking, are morally neutral; and their wrong occurrence is the result of impulse only. Sin in such cases, and probably in all, consists in the declining of free and moral action and lapsing into the un-moral plane where action is the resultant of impulses.

A suggestion may be useful of some inheritances which are markedly disadvantageous, but which are best known as such precisely by those men who, having them, are overcoming them.

(a) The inheritance of qualities which are in themselves distinctly unfavourable, such as the tendency to deceit or cowardice. These may be correlated with helpful qualities, but in themselves they appear unfavourable. There are some others which it is difficult to believe correlated with any compensative quality.

(b) The inheritance of qualities in themselves favourable in circumstances which render them practically unfavourable; for example, the inheritance by a courtier of an indifference to unpleasant contacts, which is useful to a person born in more primitive circumstances; the inheritance in humble life of what is roughly the aristocratic temperament—pride, fierceness, the rapid concentration of attention, the expectation of swift obedience. A most practical moral disadvantage is the inheritance of warrior blood or of pleasure-seeking tendencies in persons born to dependence. It may be seen on a large scale in South Africa, where whole nations inheriting magnificent qualities for primitive war are born into an alleged civilization under which the warrior temper leads a man to the indignities of a gaol; or a whole race, as at Thaba N'Chu, to disinheritance. The adventurous spirit which was once noble wears among subject races the squalid face of 'I.D.B.,'¹ evasion of taxes, or aggravated assault.

(c) The inheritance in combination of qualities all or some of which might separately be favourable. This is probably the commonest cause, if we take the physiological calculus, of all our moral defects; the discordance of impulses within, the discordance of a generous impulse with a saving impulse, of the parental impulse with the economic one. In fact, to take a large view, it might be said that of the moral difficulties of a nation, or indeed of man as a race, the largest single part arises from the discordance between the inherited impulses which make us men and the inherited prudential qualities which make some rich and others in consequence poor.

(d) Possibly also—and indeed experience seems to indicate it—there is in some cases a successive emergence in the course of one life-history of violently contrasted ancestral strains; so that, besides that conflict of impulses which at any one time occupies the conscience of the man, there may also be a *succession* of different types of prevailing impulse; and this results in the baffling of an acquired prudence, a destruction of what seemed a man's self-knowledge, and also in the disturbance of external conditions or social obligations which were fit for the earlier train of impulses, but unfit for the later.

Every one is familiar with the fact that what is undertaken in youth is not always easy to bear in old age, and that 'tasks in hours of insight willed' are only with extreme difficulty and many groans 'in days of gloom fulfilled.' But this does not adequately account for the difficulties which beset at least some individuals inheriting markedly diverse strains. A man who in youth and early manhood shares the prudent and industrious temperament of a Puritan ancestry seems to experience in middle life the sudden emergence of another set of relatives, hard-riding and money-scattering squires. It will be remembered, of course, in contrast with this, that such dislocated inheritance may be practically very favourable and act as a store of energy in societies which need explosions.

¹ Illicit diamond-buying, a crime of white men in which the native labourer is an accomplice.

Unfavourable conditions may in some cases practically eliminate a quality by refusing it sufficient expression—as the root is starved by the cutting off of the leaf. Sometimes, viz. when the quality is very robust, the conditions appear rather to concentrate energies which might have been exhausted had they received betimes their full exhibition. Thus, the influence of religious Puritanism spread so widely in the England of the 17th cent. as to cover with its sombre and austere habit of life much of the rough fighting blood of an older England, which, thus confined by the circumstances of what we now call the middle class, was released in the irresistible fierceness of the New Model Army.

The circumstances which thus strikingly alter the practical effect of an unchanged heredity may be local, national, economic, ethical, religious; depending on fashion, station, vocation.

Sometimes it seems very probable that half the surprises of public life and of private encounter arise from the introduction of rare or exotic elements of race into the familiar lines of society—a Lambton in Parliament; a Carlyle in Chelsea; the French descendants of Henri IV. through Charles II. found in the Whig aristocracy; the Cromwellian soldiers who are to this day boycotted as Catholic squires in Tipperary; Disraeli the Castilian, living in the circumstances of the lawyer son of a literary man. A man inheriting qualities unfavourable in themselves, in their combination, or their situation, nevertheless may, and often actually does, carefully avoid the occasions which give opportunity for their unfavourable effect; and they are weakened by the refusal of expression. And, though it would appear that he cannot hand down by blood to his son the improvement thus secured, and the son inherits by blood not the gain but the heirloom—not his father's acquisitions but a share of his father's patrimony—yet the father can and does leave to his son even by blood greater general strength, and he may leave, besides, better surroundings, and better ideals; thus he sets about his son the influences of a good man's home.

With some of these, indeed with all, the struggle may be lifelong. For the Christian this is a foreseen difficulty, for he has been led to put no trust in 'the flesh'; and to believe that high conduct must come not from the absence of difficulty there or from removing such difficulty, but in being delivered from the sphere of those influences. The consideration of these higher counsels does not belong to the present article. But it falls to us here to mention that the existence even of immeasurable difficulties in the blood ought not to daunt Christian thought any more than it defeats, however much it harasses, the Christian life.

(2) *Effect of Mendelian researches.*—The effect of these upon ethics is not so great as it is supposed to be in some quarters, but the impression made is prodigious and the legitimate effect is very considerable. In speaking of the impression one must confess that it has sometimes been exaggerated in the common conception of biology as well as in the common conception of morals. In respect of biology, non-naturalists believe that naturalists have deserted Darwin in a body, and have found in Mendelism a new theory of the origin of species. The real fact is that naturalists still, on the whole, follow the line that Darwin traced, but at present are engaged not in reconstructing the past history of species but in observing the present behaviour of hybrids.

With regard to morals and sociology, it is supposed that Mendelism itself is a new method of procedure, promising better results than religious conduct; or else that Mendelists have cleared up to a very large extent the facts of human inherit-

ance. These opinions are not shared by biologists. But the impressions made, first by regular results capable of tabulation, and secondly by the exhibition of a practical method of inquiry, are legitimately very great; and the actual acquisitions for anthropological thought are considerable. They can only be enumerated here.

(a) Mendelian research has reduced the force of the argument for practical freedom which was based on the fact of our ignorance—the argument in which we criticize the naive confidence or the naive despondency based upon the consideration of one line of ancestry alone, or upon the somatic life-history of immediate ancestors. This argument from ignorance retains great force, and it is certain that we have no such knowledge as can dissipate the obligation of effort for every individual. But the regular distribution through descent of such qualities as are Mendelian (that is, so unitary as to answer to the Mendelian analysis) certainly tends to a prospect of knowing one day much more of the order in which human qualities are reproduced in descent. Certain supposed laws of that reproduction had long been familiar. The repeated falsification of these laws tended to encourage those who had been daunted by their confident assertion. It was observed again and again that ancestral features, and even a complete assemblage of such features, reappeared in a family at intervals which defied all calculation and disconcerted all expectation. When the knowledge of the stock's history was small, as in ordinary private families, there was the appearance of total originality in the offspring—a strangeness of feature and temper which was only quite gratuitously traced to a forgotten ancestor; and the phenomena of a mixed race in this matter are so irregular that they appear subject to no law at all. It is certain that they really exhibit a law, which is perfectly strict and regular, if only we knew it; and the Mendelian short steps to discovery (taken within a short gamut of variation within a species) give hope of advance towards the finding of that law. To this extent the argument from total ignorance and from the impossibility of discovering the facts loses force—an argument which was practically effective for moral encouragement. For that ignorance depended upon the proposal of a law to which the exceptions were too numerous and too obvious to be ignored. Mendelian work has shown that the distribution of qualities is more complex than was supposed, and this gives promise of discerning a regular sequence in appearances which were formerly the most evidently incalculable.

In the interest aroused by the still recent re-discovery of Mendel the work of Weismann is partly forgotten. By his description of the continuous germ-plasm he showed that comparison with immediate forbears is an insufficient method for estimating the force of heredity in an individual, those forbears being in Weismannic thought collateral relations, like the leaf on a twig next above the leaf under consideration. The widening of our outlook in this matter and the more complex sequences shown by Mendelian study give a fresh hope of discovering regular sequences in inheritance, and so far lessen the appearance of physical originality in individual human lives. We have learned how a pure racial life may be found in some offspring of a mixed race; how some features may be completely eliminated by breeding; and how original heterozygotes may arise from the interbreeding of two contrasted varieties.

(b) Secondly, and more particularly, Mendelian research has upset the doctrine of the average or proportional representation of ancestral qualities in the offspring. This is perhaps the most important difference for ethics. Under the guidance of

Galton we looked for a quasi-mathematical representation of different stocks in a given descendant. A man whose great-grandmother was Swiss was eighth-part Swiss. We now know that the system of proportions within the individual does not hold; that, given a Mendelian human character, it ought, whether as dominant or recessive, to reappear uncombined in a certain proportion of the descendants of a stock. If virtue or any particular virtue could be conceived of as a Mendelian feature (which by reason of its complexity it cannot be), its non-appearance in a particular individual might be due to its recessive character. And, besides, we could no longer argue as confidently as before from the enormous excess of moral qualities inherited by every individual from his mixed ancestry. If we could distinguish the Mendelian units of a moral temperament, we might expect to find those displayed in the course of an ancestry to be manifested in an individual not in combination but pure, as a result of the process of sorting. But how far we are from such discoveries is plain when we remember the actual existence of great saintliness, great heroism, or great genius, as these appear in every variety of stock.

Major Leonard Darwin, in considering this question of the appearance of genius in the midst of families otherwise at a disadvantage physiologically, says with reference to the students of genetics:

'If you credit us with the power of being able to predict . . . sickly children, may we not also be credited with at least some power of prophesying the appearance of rare ability?'

The answer is in the negative. How perilous for practice may be such ill-founded expectation is illustrated when the same writer says:

'Surely segregation for life with kindly treatment must in the interests of posterity be the fate of all who both fall in life in consequence of some signal heritable defect and have no redeeming qualities to compensate for such a defect.'

In our present state of information such language is no doubt used by a thoughtful man only in irony or challenge. But irony needs a trained audience. The subject is very serious, very delicate, and very new to the public. And it is better to say simply and directly with Punnett:

'Except in very few cases, our knowledge of heredity in man is at present far too slight and too uncertain to base legislation upon.'

Who foresaw, and who would now foresee, with all the materials for judgment and with all the assistance of Mendelian observation, the emergence—to take no saint or hero—of Voltaire, 'si vif, si malingre, et si peu masculin'? To look at Houdon's bust in the Louvre is to recognize a mystery of personality which stands undiminished by the generalizations of science. Art, with its power to represent now and again a mixed effect of epoch, race, profession, and personality, corrects the narrow conception which rightly and, within its sphere, usefully arises from the rigid attitude and selective contemplation of science.

By Mendelian work, then, the argument from ignorance and the argument from excess of equipment are alike reduced in force. But virtue and vice are not allelomorphs, and the moral agent is not as such a heterozygote. The qualities which are the raw material of morals are not unitary in the Mendelian sense. And, in spite of the reducing process which is exhibited in Mendelian observation, and which possibly corresponds to a certain stage in karyokinesis, every man finds in himself a large excess range of possibilities; so that, even if the materials for morals are inherited as such, the life-history is the scene of an enforced exercise of a real selection, often carried out under the influence

¹ 'First Steps towards Eugenic Reform,' in *Eugenics Review*, Apr. 1912, p. 31.

² *Ib.*

³ 'Genetics and Eugenics,' *ib.*, Oct. 1912, p. 138.

of ideals which found their first strength in people of another blood. Both 'blood' and circumstance closely condition the moral effort, but they do not determine it. A man cannot choose whether he will be a Teuton or a Slav. If he is born Arab, he cannot reach the excellence of the Celt, or the Celt his. But he can choose between being the best Arab he can be and the worst Arab he may be. A man cannot choose whether he will be trained at a Public School or not; but he chooses between doing there as well as he can or as badly as he dares.

Religiously, we should say that a man is called upon to make the best of inherited qualities as of circumstance. He can make the worst. To surrender to temptation is to decline to the plane of the natural impulses so that behaviour becomes the resultant of their contest. The life of grace is a life in which the will declines to re-enter the sphere of necessity and is capable of an anti-impulsive effort. And, if we use the language of dogma, we must say that a man will be judged not according to his moral accomplishment, measured on an external scale but according to the degree of his fidelity under conditions moral and material, external and internal.

2. Society.—From the case of the individual we turn to the case of influence exercised by man on man, by education, and government, in the family and larger groups. Here we shall discuss (1) the non-inheritance of acquired characters, and (2) eugenic proposals.

(1) *Non-inheritance of acquired characters.*—At first sight it seems that our judgment must be greatly affected by belief in the inheritance or non-inheritance of acquired characters. Something is still said on behalf of their inheritance on *a priori* grounds. Popular thought and the thought of practical breeders still affirm this inheritance. But we have to take account here of the biological denial of such inheritance or of its occurrence in a sufficient number of cases to affect the course of variation. The importance of this difference of opinion is not so great as it may appear, for there is certainly another nexus of moral and mental inheritance besides that of the blood. Tradition and the current of ideals, religion, education, public opinion—in one word, institutions—form a link between man and man and between generation and generation, by means of which the moral ideals of one are inherited by another; and here, more securely than in the germ-plasm, we can accept the analogy between memory and heredity which has been taught by Samuel Butler and by Dr. James Ward.¹ Those ideals may find their best opportunities in a given race, but they also pass from race to race. Formed in one racial soil, they may be carried on in another.

The results of character in different races seem to show that, while race remains a factor of real importance, the divergencies of society in mental standing are to be accounted for in the main by the differences of culture. When the stock is fairly mixed, as in Britain, the results of a given culture appear to an external observation startlingly regular and uniform. It is only when viewed from within, by a member of the cultured class, that the differences of race within the class appear important.

The other bond, the bond of ideals, is the one in which the acquisitions of culture are passed on. The task of education is the same whether or not there be any such inheritance in the physiological sense. If improvement can be passed on by blood, then we must improve each generation as far as we can; and we must equally do this if every generation starts with a clean sheet, uninfluenced by the

¹ James Ward, *Heredity and Memory*, Cambridge, 1913.

behaviour or the experience of ancestors. Weismann has shown, even in the case of musical ability, that it is capacity and not accomplishment which is handed on hereditarily.

The case for care in its wider sense remains unshaken—care for the progressive improvement of the environment, in such matters as food, water, air, housing, medicine; care for the elimination of disease; above and beyond all, for the securing of greater liberty, greater justice, more equal opportunity, less unequal rewards. And here it may be remarked that in a recent volume of *The Practitioner*, exhibiting very fully the present condition of the study of tuberculosis, hardly anything is said of inheritance. Physicians, and indeed physiologists like Starling, assert that the future of the race depends mainly upon our care of the rising generation.

(2) *Eugenic proposals.*—Two rival schemes are in existence for supplementing or even replacing the work which we may generalize under the names of education and influence.

(a) The first, which may be associated with the name of Archdall Reid, and which suggests affinities with the thought of Nietzsche, is that of giving free play to the forces of elimination so as to secure improvement by means analogous to those of natural selection. The consideration of this need not be expanded, for it is not at present prominent. All that need be said is that we have no security that the natural forces which are dangerous or inconvenient tend by their eliminating energy towards the survival of those human forms which are fittest to promote the essential aims of human life. To invite a man, for the sake of improving the race, to diminish the force of pity within himself by lessening the action dictated by pity, is like inviting a breeder of racehorses to seek their improvement by refusing to cultivate the character of swiftness. It is an attempt to improve the race of man at the cost of those elements of character, individual and social, for the sake of which alone it is worth while that the race of man should survive.

(b) In broad contrast with this is the movement of Eugenic Reform which is animated by the desire to find some method more merciful than that of the dog-breeder, who said in explanation of his success: 'I breed a great many, and I kill a great many.' The Eugenic Movement has for its base the idea that we have done our best with the existing human material; that the improvement of environment is no longer the hopeful path; that we cannot face the alternative of allowing the free play of any destructive forces; and that the line of improvement is to be found in getting better lives as the material for nurture—more of the best and less of the worst.

This movement is both educative and legislative, both restrictive and positive; and its different aspects engage the attention of different persons. From our point of view the merits of the movement differ in its different parts. Its educational work, supposing guidance can be relied upon, must be almost entirely good. But any efforts in the direction of legislation must be surrounded with peril. While education is safe and legislation at present dangerous, it must be remembered that the educators and the moderates give the opportunity of influence to the legislative and extremest elements of the movement. It is unsafe to suppose that this movement, because of its academic character, is practically unimportant. All revolutions are prepared in studies, and carried out by minorities. Majorities always suffer.

In order to reach the more difficult consideration that is part of our subject, the case of the feeble-minded may be briefly dismissed. The control of the really and permanently feeble-minded is morally

justifiable because they are not at present free. They lack the self-control which freedom requires, and they are also open to the mischievous control of other persons. There is a strong case for their segregation, if a safe judgment can be reached in defining their condition. But it is not certain that segregation must be by legal action. It would be best at the present stage to extend very largely the voluntary help that is being given to such persons, and to supplement it by public funds. And, if further steps must be taken, they must only be taken: (i.) not at the cost of a general extension in the community of suspicion and fear, especially in the more dependent classes; (ii.) not at the cost of human dignity as such; (iii.) not as an introduction to what are known as positive movements in the improvement of the race. If by a general improvement of the environment (in which we include a general rise in wages) a greater actual freedom was given to all classes, it is probable that in the majority of cases families would take due care of their own feeble-minded members. When the whole family is feeble-minded, a case for compulsion arises; and the legislation which met this case could be framed so as to meet also the case of criminal neglect by natural guardians. The weak point in all suggested legislation so far is that it is in effect a legislation providing for the poor to be controlled by the rich.

The point for calling a halt, even in cases concerning the feeble-minded, is reached when we come in sight of a lowering of public *morals* by action giving offence even to the ill-instructed conscience; and, if the conscience is ill-instructed, it is for the educational section of the Eugenic Movement to remedy this. When we turn to the positive reformer, the moral and practical difficulties which confront us are many and grave. The reformers would have to seek the cultivation of *different kinds* of excellence. A general or average improvement would destroy the work of society. If we have only sinewy men to drive the car, where shall we find the heavy man for navy work? Different breeds would have to be formed along widely different lines of specialization. This would check the interchange of life; for, if there were free interchange, the enterprise would be defeated by 'panmixia.' We should impair still further the social unity of the human race. Instead of nations differentiated by history we should have races, as in Wells's horrible dream of the Time Machine, differentiated for menacing work and helpless pleasure. Certainly all Christian effort should be in a direction diametrically opposed to this. Moreover, in eliminating this or that bad factor we know not what good one is correlated with it; and physiological correlation is not yet exploded by Mendelism.

Further, even if eugenic methods were certainly applicable to man, even if we could count on knowing what is good for him, and could shorten the process of evolution by avoiding unprofitable variation, yet every such application of method would carry with it a diminution of that unconscious or spontaneous element in life which has undoubtedly great gains attached to it. To marry for health—in itself a nobler enterprise than marrying for money—would even more directly militate against spontaneity, because the considerations involved come nearer to the heart of the matter. In a curious and interesting study of the higher forms of affection, von Hartmann shows that their action is not to be accounted for on mechanical or consciously rational grounds. They owe nothing to calculation of benefit, nothing to mechanical or physiological necessity. It seemed to von Hartmann that a cosmic reason, not apprehended by the personal mind, produced results which are in the true interests of the race and of the mass of

individuals. Whether this speculation be true or not, there can be no doubt of the loss to human life involved in anything which unnecessarily replaces uncalculating affection by calculations extraneous to the personal attraction. It may conceivably be necessary to make such a substitution. In any case it must carry this loss. And the interest of true progress seems to be in securing the good—supposed provisionally to be certainly recognizable and securely aimed at—by means which reduce as little as possible the spontaneous element.

Such means are found when definite encouragements and prohibitions are discarded, and we have instead some system that puts on good unions a small, hardly perceptible, but constantly repeated, premium. Is not such a system found precisely in a good social code which requires in all the cultivation of what is best; not avowedly for the sake of offspring, but for the sake of social life itself in its general aspects? Is it not precisely the better environment in its truest sense—better ideals, more liberty, more self-respect, more respect for every citizen—that secures more surely even those special ends to which eugenists recall us? And is not a particular part of this really good society, and the part that most surely reacts upon parenthood, the institution of marriage itself? Where marriage is rare, or late, or mercenary, or hindered by the prejudices of caste, fashion, display, there it is least likely to be real. Where the true nature of marriage is well taught and firmly believed in, where the rule of marriage is faithfully obeyed, there, in constantly increasing effect, it tends powerfully to set a premium upon the best lives.

It is probable that monogamy made its way by reason of its genetic worth, giving an advantage in the competition of races and nations to the monogamous. Christian marriage, if only it were entirely true to its definition, would give this advantage in a much higher measure. The business of exchange, in the proportion in which it is true to its definition, steadily produces a society of men marked by industry, honesty, mutual consideration. Christian marriage, true to its definition, requires high degrees of self-government, respect for the partner of marriage, respect for other marriages, industry, sacrifice for offspring. And the qualities thus fostered are in point of fact found to be correlated, on the whole and in the long run, not only with moral excellence of all sorts, but with the other human qualities coveted, including intellectual excellence.

For Christians, in this connexion as in all others, the task undoubtedly is to guard the ideal view of life against every advance of materialistic conceptions, and to preserve in activity the spiritual forces of life, against every application of methods which are, in a bad sense, mechanical. But the difficulty is to determine what conceptions are materialistic, and what methods mechanical in the bad sense; or, rather, what use of the methods which must in every human activity involve mechanical elements falls under the reproach of being unspiritual. It is easy to declare that, when once we admit that human life is to be improved from outside—either, as in older plans, by management, or, as is now proposed, by improving, directly and physiologically, 'the pig which makes the sty'—we abandon our own peculiar quest, in which has actually been found all former real advance. But such a statement cannot pass, as it stands, among Christians who are pledged, by the doctrine of the Incarnation, to the faith that it is the business of the spiritual forces, with respect to the material, to redeem the latter from fruitlessness, and make them serve the purpose of the spiritual adventure.

It has been said, again, that the ends which

eugenists set before them may be altogether moral, and that the most powerful advocacy of the movement is animated by motives the most honourable and unselfish; but that the method recommended is in its nature mechanical and, therefore, undesirable. And it might be added that the method is undesirable on two grounds; first, as being in itself mechanical, and, secondly, as being unlikely to enlist for long the services of those whose interests are distinctly idealistic; and that it must at least tend to put ideal and spiritual methods out of sight. But such a statement as this, again, will not bear the closer criticism of a Christian philosophy. Nearly all the methods of social reform involve a mechanical element; and Christians will be the last to admit that sanitation is unworthy of Christian effort because it involves the direction of water currents, or that the healing arts are less Christian because they lay under contribution the treasures of the mine and of the field.

How can we then better define the causes of the distrust which Christians certainly, and rightly, feel in the presence of the adventurous practical proposals connected with the study of heredity? We must say, in the first instance, that we are pledged to the protection of liberty. We have to declare that society has no moral right to invade personal liberty for the ends proposed. It has already been stated that, in the case of the feeble-minded, where such moral liberty is absent, or its slender vestiges endangered, the case is different. But we are pledged against all real invasion of personal liberty; and we have to guard against all disrespect for human nature, and all that tends to lessen the sense of responsibility even in those least richly endowed. Taking this as a basis, we add that the methods of instruction and persuasion are, in an indefinite degree, more removed from the peril of invading responsibility than are external or physiological methods. Let the duties connected with race be preached; let us endeavour to extend in that direction the range of a felt responsibility, in so far as this can be done without disturbing the invaluable, unconscious element of life. But let us not provide by external restraint for an advance which might be obtained by an appeal to the mind and to the spirit.

In the second place, we have to say that in all employment of the phenomenal it is the order that is of most consequence—the order in which the spiritual and the phenomenal forces are brought into play. If the material is used in consequence of an inward change of will, then the sacramental redemption of the phenomenal is in progress; but the case is otherwise when material means are employed for the purpose of saving the cost of a truly moral change. Moreover, in a state of society in which the spiritual ambitions are faint, and the spiritual forces neglected, every addition of mechanical method to our armoury must be watched with suspicion, and with the anxious question whether we have spiritual energy to afford the use of a new weapon. Now, in the case of heredity-reform, we have the proposal to apply a method which is in its nature physical, just where hitherto persuasion and influence alone have been supposed legitimate. And we have need of a much fuller supply of spiritual force and light in our society, before we can venture on such a change. Again, we have to ask ourselves many times whether the authority is available to which such powers can rightly be trusted.

A few days before this page was written a new Mental Deficiency Bill (55. 3, Geo. v.) was brought into Parliament, and with it a Bill (no. 60 of the same year) relating to the Education of Defective Children. A careful study of the measures shows that it is impossible in such an article as this

to express a reasoned judgment on their general effect. Controversy upon them has already begun, and will secure as it proceeds an examination of the actually possible results of the proposed laws in concrete cases.¹ On the one hand, urgency is pleaded by those who are convinced of the danger to the race of leaving defective persons in freedom; and who are sure that large powers of detention will always be prudently used. On the other hand, men not less well acquainted with the facts point to the danger of including under the compulsory powers children who are merely backward; and Sir James Crichton-Browne, one of the Visitors in Lunacy, says: 'The tendency seems to be at the present moment, in England at any rate, to concentrate attention far too exclusively on heredity as the cause of degeneracy, and to look to segregation too hopefully as the one sure means of its prevention.'

The opinion of Dr. Auden, the School Medical Officer for Birmingham, is also worthy of attention, especially in view of what Sir J. Crichton-Browne calls 'almost a scare' on the subject of feeble-mindedness. Dr. Auden says that of 159 children presented to him as mentally deficient, 64.8 per cent made such progress as to fit them for the ordinary schools; and adds: 'In view of the social disabilities likely to accrue to a child under this Act (*sic*), it is of the utmost importance to determine whether the intellectual retardation is temporary'; and he speaks of the difficulty of diagnosis (*Report for 1912 to the Birmingham Education Committee*, pp. 54-71).

To conclude, while it is with hesitation that Christians may oppose reforms which have much of good in their motive, they must present a direct and unhesitating resistance, even at the cost (could it be proved) of grave delays in physical improvement and immense national expense and suffering, to all methods which can be justly described as offending the instinct of reverence which has become natural to Christians, or as inconsistent with the method of salvation we have received to believe—a method which seeks good not by the forcible elimination of evil, but by the long road of a sacrifice in which the Highest is involved.

LITERATURE.—The literature directly concerned with this part of the subject is not extensive; while, from another point of view, there is hardly a production of genius which is not concerned in some part with problems of race and conduct, and the general range of biography and history may be read with special attention to those problems. The works of Weismann and the other biological works upon which the ethical study depends are given in the preceding article. A few are named here as especially interesting to the general student.

The *Journals of the American Breeders' Association*, Washington, 1904 ff., are a convenient means for acquaintance with the current of publications and researches.

Out of many handbooks on Genetics may be named: W. E. Castle, *Heredity in Relation to Evolution and Animal Breeding*, London and New York, 1912. A student of Ethics inclined to believe the biological work unimportant or inexact might look through one of the monographs of the Eugenics Laboratory, e.g. 'Hæmophilia,' by Bulloch and Fildes, London, 1911; H. E. Walter, *Genetics*, New York, 1913; W. Bateson, *The Methods and Scope of Genetics*, Cambridge, 1908; R. H. Lock, *Recent Progress in the Study of Variation, Heredity, and Evolution*, London, 1906. [This book treats (p. 137) of the application of Genetics to human affairs. 'Education and training, however beneficial they may be to individuals, have no material effect upon the stock itself.' Lock quotes Bernard Shaw (*Man and Superman*, p. xxiii) as saying first that 'the bubble of heredity has been pricked,' and then (with an obscure consistency), 'we must either breed political capacity or be ruined by democracy.']

Under the head of Eugenics, the following are important: *Heredity and Eugenics*, a course of lectures, etc., by Castle, Coulter, Davenport, East, and Tower, Chicago, 1912; two series edited by Karl Pearson, *Questions of the Day and of the Day*, London, 1911 ff., and *Eugenics Laboratory Lectures*, do. 1909 ff.; *Problems in Eugenics*, papers communicated to the First International Eugenics Congress, held in London, July 24-30, 1912, published by the Eugenics Education Society, London,

1912; W. C. D. and C. D. Whetham, *Heredity and Society*, do. 1912, also *The Family and the Nation: A Study in Natural Inheritance and Social Responsibility*, do. 1909, and *An Introduction to Eugenics*, do. 1912; E. Schuster, *Eugenics*, do. 1913. Dr. Archdall Reid's books illustrate a different view: *Alcoholism: A Study in Heredity*, London, 1901, and *The Principles of Heredity with some Applications*, do. 1905. The thought of Sir Francis Galton, the founder of Eugenics, may be studied in his *Natural Inheritance*, London, 1889, *Hereditary Genius*, new ed., do. 1892, and *The Possible Improvement of the Human Breed under the Existing Conditions of Law and Sentiment* (Huxley Lect. 1901). C. W. Saleeby, *Parenthood and Race Culture*, London, 1909, should also be consulted. For criticism of the extreme Genetical view of mental infirmity the following publications are useful: J. Crichton-Browne, 'Child Study and School Hygiene,' in *The Child*, iii. (1912) no. 2, p. 113; and B. Hart, *The Psychology of Insanity*, Cambridge, 1912, p. 170 ff. [Speaking of the hypothesis that a vast group of insanities is founded on a repression of herd instinct, Hart says that the 'tendency to dissociation' may be an inherent factor and capable of elimination by selective breeding; but adds: 'It is equally possible . . . that the fault is not in the tendency to dissociation, but in the nature of the conflict which has produced it. The only remedy would then lie in altering one or other of the antagonists so that incompatibilities no longer existed' (p. 171)].

References to other papers in the Medical Press and elsewhere will be found in *School Hygiene*, ed. M. D. Eder and R. Elmslie, London, 1910 ff. The full synthesis of biological considerations with the principles of ethics and society, though briefly treated in books of a more general scope, has still to be attempted. Three books by Dr. F. R. Tennant, although theologically open to criticism, are of high value for the disentanglement of the idea of sin from the associated idea of ethical imperfection: *The Origin and Propagation of Sin* (Hulsean Lectures, 1901-02), Cambridge, 1902, new ed. 1906, *The Sources of the Doctrines of the Fall and Original Sin*, do. 1903, and *The Concept of Sin*, do. 1912. *Heredity and Memory*, by James Ward, Cambridge, 1913, is also an important book.

P. N. WAGGETT.

HERESIES AND HERETICS.—See SECTS AND HERESIES.

HERESY (Christian).—I. **DEFINITION AND USAGE.**—The term 'heresy' is an English transliteration of the Gr. *hairesis*, which meant an act of choosing, choice or attachment, then a course of action or thought, and finally denoted a philosophical principle or principles or those who professed them, i.e. a school or sect.¹ In the LXX (Gn 49⁹, Lv 22^{18, 21}, Neh 12⁴⁰, 1 Mac 8³⁰) it relates to choices good or bad. In Josephus² it means a party or sect, without disparagement. It has a similar force in Acts (5¹⁷ 15⁵ 26⁵), except, perhaps, 24⁵⁻¹⁴. Elsewhere in the NT it is used in a condemnatory sense, as *partyism* (1 Co 11¹⁹, Gal 5²⁰, 2 P 2¹; see Tit 3¹⁰, and cf. 1 Co 1¹⁰ 11¹⁸ 12²⁵, Ro 16¹⁷). Among the Apostolic Fathers it occurs first in Ignatius.³ He reckons it alien to Christianity because it violates the unity of the Church. Justin⁴ calls the heretics 'godless,' 'impious,' 'blasphemous,' etc. Notwithstanding the milder view of Origen,⁵ Irenæus,⁶ and Tertullian,⁷ it refers to a doctrine or system that falsely claims the Christian name but perverts the traditional teaching. The late origin of heresy is held to be evidence of its spirit of self-will. As late as Hippolytus⁸ it was used even of doctrines of pre-Christian times that contradicted the Christian faith. But its connotation became narrowed by controversy, and its evil character was finally fixed in the struggle with Arianism. Its meaning for Catholicism⁹ is a doctrine that is maintained within the Church but is disruptive of its unity. It is more serious than schism, since, while the latter refers to ecclesiastical cleavage, the former refers to spiritual alienation.

The growth of the idea of heresy is parallel with the development of the view that the Church is the Divine institute of salvation and depository of

¹ The first of these two measures (the Mental Deficiency Bill) has become an Act; and the operation of the Law as now provisionally defined is expected with very general confidence and approval.

saving truth.¹ In the long struggle to preserve the distinctive character of the Christian faith the emphasis fell on doctrine, and it became necessary to the Church's existence that there should be a duly accredited channel of the tradition. The claim of Apostolic succession in the episcopate and the creed were the outcome. When Constantine gave the Church Imperial standing, the bitterness of the contest was vastly increased. Heresy became criminal. In the reign of Theodosius II. (382) it was made a capital offence. The effect is seen to this day in the common dread of the epithet even among Protestants.

II. SKETCH OF THE HISTORY OF HERESY.—I. Its rise in Apostolic times.²—Almost from the very beginning of the Christian faith divergences of belief arose. These were more serious than the temporary partyism that sprang from attachment to favourite leaders (1 Co 1¹²). They represent real differences in the point of view from which the new faith was apprehended. Some of the ancient writers³ place Jewish sects and Greek schools among Christian heresies. This error points to the fact that the dangers of division arose mainly from influences emanating from these two quarters. Many of the early converts found difficulty in detaching themselves from their inherited Judaism,⁴ while Græco-Roman converts naturally clung to the ideas connected with those religious aspirations which had found fulfilment in the Christian message. Thus, while Judaism threatened to re-absorb Christianity and obliterate its distinctiveness by requiring conformity with its legal and ceremonial forms and by interpreting its richer religious spirit in the terms of an abstract monotheism, the Greek spirit threatened to engulf the faith in a speculative philosophy. From the outset Jesus Himself was the theme of central interest. The conservative, unprogressive Jewish believers would have made Him a mere man; the speculative Greek would have made Him no man in reality but a God. The former tendency produced the party later known as Ebionites, the latter the so-called Docetæ who held that Jesus' manhood was only seeming. Ebionism (*g.v.*) is the antecedent of the later non-speculative Adoptianism (*g.v.*). Docetism (*g.v.*) appears in varying forms in all mystical speculative Christology.

It is the second of these that chiefly alarms the NT writers.⁵ The danger was increased through the combination of Oriental forms of imagery with Greek Christian thought. The attractive profession of a secret knowledge of the unseen world tended to connect Christ (distinguished from Jesus) with a hierarchy of heavenly beings, and make Him a cosmic force, and thus to introduce a cultus with secret mystic rites and their associated moral results of asceticism or licence.⁶ Naturally, there was also the denial of the early Christian eschatology,⁷ especially the physical resurrection. The struggle with this movement called forth a considerable portion of the NT writings. There appears to have been no organization holding these views. Like the later Gnosticism, of which this was the beginning⁸ in Christianity, it represents merely a tendency. The Nicolaitans⁹ are the only party named in the NT. They are charged with anti-

Judaism and loose morals. A guess of later writers¹ traces them to the deacon Nicolas² at Antioch. It is evident that before the end of the 1st cent. the speculative movement that produced the great Nicene controversies had already begun.

2. Heresies of the Nicene Age.—i. ANTE-NICENE HERESY.³—(a) *Gnosticism*.—The greater part of the Christian literature of the 2nd and 3rd centuries arose out of the effort to preserve the early Christian traditions in the face of philosophic and fantastic attempts to combine them with Greek speculation and Oriental mythology. The long lists of heretics given by the Church writers represent in many instances only variants of a common type. The term 'Gnosticism' may be allowed to stand for the whole movement that threatened the unity of the Church. For Gnosticism is not the name of a separate body of people or system of doctrines, but rather a trend of thought and practice. Attempted classifications of the phenomena of Gnosticism are unsatisfactory. They are too variegated and complex. Syncretism in religion was a characteristic of the times. The advent of the Christian faith gave fresh inspiration to the hope of attaining to a final and perfect knowledge of all being. Christianity came as faith (*pistis*); it must be elevated into knowledge (*gnosis*). The prevailing Neo-Platonism of Alexandria, shot through with Oriental imagery, was the instrument for the accomplishment of this task. See, further, art. GNOSTICISM.

(b) *Origenism*.—By way of reaction a Christian Gnosticism appeared. Its centre was the catechetical school at Alexandria founded by Pantænus. Here Philo the Jew had taught his Christian successors how to marry Hebrew tradition to Platonic philosophy by means of allegorism; and Clement, by a series of speculations supported by the fiction of a secret Apostolic tradition, and Origen,⁴ in a systematic way, built up a body of greatly reduced and simplified Gnostic doctrines that mostly passed for Christian. It was able to do so by maintaining the appearance of preserving the Scriptures, the common traditions, and the Rule of Faith. We are here concerned only with those features of Origenic speculation on account of which he was later regarded as a heretic.⁵ First, in his attempt to identify the Logos with the Son of God without compromising the unity and supremacy of God or denying the reality of the sonship, he postulated the real generation, in eternity, of the Son from the essence or nature of the Father. While this set the Son within the Godhead, it subordinated Him to the Father. From the standpoint of a later orthodoxy the latter was heresy. Second, in accordance with his scheme of the origin of all things from the highest being and its return thither, he seemed⁶ to affirm the ultimate restoration of all, even of devils, to God. This too became heresy. Inasmuch, however, as Origen's speculations became the source of the later doctrines of the Trinity and the two natures of Christ, we can say that the Gnostic heresy reproduced in Origen prepared the way for orthodoxy. See, further, Origen in art. ALEXANDRIAN THEOLOGY.

⁹ Rev 26.15.

(c) *Marcionism*.—A powerful reaction against the prevailing tendency of speculation was headed by a merchant named Marcion, who came from Pontus to Rome about A.D. 140 and propagated an anti-Jewish, apparently Pauline, ascetic form of Christianity, with such success that there sprang up hundreds of churches which maintained his views.¹ Holding that the Gospel was the revelation of the God of grace in Christ—the good God in contrast with the Jewish God of righteousness and vengeance—and carrying the Pauline antithesis of law and grace to the end, he denied that Jahweh could be identified with the God of love who suddenly revealed Himself when Jesus came to Capernaum. Hence the world created by the Jewish God was evil, and the true Christian life was the ascetical. Marriage was forbidden in his churches. In accordance with these views he framed a canon of Christian Scriptures that included, along with only ten genuinely Pauline Epistles, Luke's Gospel and Acts with the Jewish portions expurgated. Marcion's identification of Jesus with the good God gave an impulse to orthodoxy to place Him on an equality with God, and his canon of new scriptures gave an impulse to the delimitation of a true canon. Marcionism was inevitably repudiated because of its two Gods and its rejection of the OT,² but its moral vigour was great enough to perpetuate its churches in Italy, Egypt, Palestine, Arabia, Syria, and elsewhere, for a long time. See, further, art. MARCIONISM.

(d) *Monarchianism*.—Other reactions³ against speculation took the opposite direction of a return towards the simple early Christian view of Jesus and a rationalistic Judaism. As time passed, it was powerfully supported by the critico-historical school of exegesis which grew up at Antioch in opposition to the speculative, allegorizing school of Alexandria. Monarchianism and Montanism are the principal forms of this reaction. Monarchianism may be contrasted with what we may now call Catholicism by saying that in it the *intellectual and moral interest of guarding the monotheistic government of the universe* prevailed over that emotional-religious interest of guaranteeing the finality and perfection of salvation which became the motive of Catholic theology. Hence they fell apart in their views of Jesus Christ. Monarchianism (*q.v.*) emphasized the reality of the events of His human life (though at times tending to Docetism), yet sought to preserve the high place assigned to Him by faith, without yielding to the prevailing tendency to polytheism. Its Christology was either Adoptianist, that is: Jesus was a man elevated to Divine sonship for His obedience; or Pneumatic, *i.e.*, Jesus Christ was more than a mere man in that He was indwelt by the pre-existent Divine Spirit and thereby empowered to save. The former perpetuated Ebionism, while the latter tended toward the prevalent speculative trend. The so-called Alogi⁴ of Asia Minor, appearing about 170, are the principal of these later Adoptianists. They opposed Montanism, were interested in Jesus' human life, repudiated the Logos speculation, and, possibly for this reason, rejected the Johannine authorship of the Fourth Gospel which they ascribed to the Gnostic Cerinthus. Paul of Samosata represented a high type of Adoptianism at a later date. See, further, art. ADOPTIANISM.

The pneumatic Christology branched in two directions according as it excluded Christ from

participation in Deity or not—the modalistic and the dynamistic Christology. The death of Christ was a great difficulty for both. The Dynamists were forced to separate Him from God in His death, while the Modalists identified Him with God, and received from Tertullian¹ the nickname of Patripassianists. See, further, art. MON-ARCHIANISM and SABELLIANISM.

(e) *Montanism*.—The Kataphrygian, or Montanist, heresy, which is the second principal reaction against the speculative tendency, got its name from Montanus, a Christian prophet of Phrygia. This man sought (c. A.D. 156) to combine the Phrygian tendency to frenzy or ecstasy with the inspirationism, simplicity, and non-worldly morality of the early Church, and, at the same time, to announce the fulfilment of the promise of the Paraclete (in himself, it was charged),² the imminence of Christ's return, and the near establishment of the Kingdom at Pepuza in Phrygia. All who received the Spirit were to be prophets; they were 'perfect,' able henceforth to live sinlessly, and would follow the ascetic life. Marriage was forbidden. Yet, recognizing the impracticability of his ideals for some, he allowed a lower grade of believers, and acknowledged two grades of sin—mortal and venial.

Montanism (*q.v.*) was doubtless highly moral and spiritual in aim. It sought to correct the prevailing laxity by denying a second repentance, and the prevalent formalism by substituting for ecclesiastical or episcopal authority the authority of immediate inspiration. The conversion of Tertullian, late in life, to Montanism is an evidence of its great moral power. The movement made great headway, and only after long controversy, lasting into the 5th cent., was it pronounced³—with hesitancy and misgiving—heresy. By its rejection the churchly trend was strengthened, the episcopal power confirmed, and the formation of the canon hastened; but, in order to win, Catholicism had to adopt its idea of two classes of Christians and two grades of sins.

There are two other forms of ancient heresy that stand somewhat apart from all the types mentioned above—Paulicianism and Manichæism.

(f) *Paulicianism*.—Paul of Samosata,⁴ bp. of Antioch and high dignitary at the court of Zenobia, Queen of Palmyra, combined Adoptianism and Origenism with an anti-metaphysical view of the relation of Christ to God. Christ, born of a virgin, and inspired by the impersonal Logos, bore a personal, moral relation to God. The perfect unity of His will with God's in His earthly life of obedience became indissoluble. At the Resurrection He was raised to eternal Divine dignity. Though Paul was condemned at a synod at Antioch in 268 or 269, his views, upheld for a time by Lucian the martyr (who recanted), never died out. Disciples were numerous in Persia and Armenia. Immigrants from Armenia carried his doctrines into Thrace and Bulgaria, where under the name of Paulicians (*q.v.*) they became a root of the great mediæval revolt against the Roman Church. In Spain during the 8th cent. their views produced a tremendous controversy, in which the famous Alcuin took part. There is reason to believe that sects holding their doctrines persisted to the Reformation. 'The Key of Truth,'⁵ discovered in recent times among the Armenians at Thonrak, attests their evangelic character mixed with asceticism.

¹ The strength of Marcionism is shown in Tertullian's elaborate refutation in a work of five books—*adv. Marcionem*. Note Harnack's high estimate of Marcion (*Dogmengesch.* i. 268 ff.).

² Apelles, his greatest follower, tended to Monarchianism (*Euseb. H.E.* v. 13. 2-7).

³ Harnack, *Dogmengesch.* i. 648-754.

⁴ *Epiph. Hær.* ii.; *Iren. adv. Hær.* iii. 11. 9 (?); Harnack, i. 660 ff. and footnotes.

⁴ See *Epiph. Hær.* lxxv.; *Euseb. H.E.* vii. 30. 11, 19; Leontius, in *PG* lxxvii. 1392, 1393.

⁵ See the text, translation, and historical account of the Paulicians, in *The Key of Truth*, ed. F. C. Conybeare, Oxford, 1898.

(g) *Manichæism*.—It is said that a certain Mesopotamian named Mani, a traveller in many lands, reached the Persian capital in the year 245 and forthwith began the propaganda of a new faith. His success was so great that he won the royal favour; but through the opposition of the Magi lost it in the reign of a later king, and was crucified in 279. His doctrines were too deeply rooted to perish, and spread rapidly. They won many followers in Italy and N. Africa (the great Augustine was for a time one of them), and ultimately developed, through the Cathari of France, Spain, and neighbouring lands, a powerful anti-Roman religious organization in alliance with a culture that promised for a time to anticipate the Renaissance and the Reformation.

At first sight, Manichæism appears as revived Gnosticism. It united to a Christian terminology a combination of Jewish, Babylonian, Zoroastrian, and Buddhist religious beliefs and cosmological speculations. It recognized two grades of adherents—*auditors*, and *elect* or *perfect*. It offered a fantastic cosmogony, a theory of cosmic redemption, and a dualistic morality. In the last particular it went further than Neo-Platonism, since it affirmed the reality and eternity of evil matter. The physical and ethical are at bottom one. The two kingdoms of Light and Darkness, ruled respectively by Satan and God, include all things and are in conflict. God creates Primeval Man (not the earthly human being) to resist Satan, but he is defeated. Though rescued by God and the angels, he has lost meanwhile some particles of light. By the mixture of these with the darkness the present evil world comes into being. The demons now create man (proper), seeking thereby to imprison and preserve a portion of the light. But God provided a means of redemption by creating a system of heavenly bodies—sun, moon, and stars—to attract the particles of light and become reservoirs of it till the redemption is complete. Jesus—not the historical—and the elect assist men. The process goes on even after death (purgatory). At the end of the world the unredeemed souls fall to the prince of darkness.

The moral earnestness underlying this imposing philosophy, its strict asceticism—marriage, lust, impure talk, animal food, and physical violence were equally forbidden—and a simple cultus were attractive to many noble souls. It was weakened by a doctrine of indulgences. The influence of Manichæism is probably found in the Euchites, Enthusiasts, Bogomils (*q.v.*), Beghards, etc., of mediæval times.¹ See, further, art. MANICHÆISM.

ii. NICENE AND POST-NICENE HERESY.—(a) *Arianism*.²—The long battle between Monarchianism, the Antiochene historico-critical school of interpretation, and rationalism, on the one side, and Catholicism, with its realistic view of salvation, its allegorical interpretation, and its metaphysic of deity, on the other side, came to a head in the bitter conflict between the Arians and Athanasians at the Council of Nice (325). The prize to be won was not only the vindication of an interpretation of Christianity, but the Imperial support. Arius gave his name to the defeated party. Athanasius (*q.v.*) became the apologist of the Council's decision.

The immediate occasion of the conflict was the affirmation, by Bp. Alexander³ of Alexandria, that

¹ For an account of Manichæism, see the seven books of Augustine, *contra Manichæos*, translated into English with introductory essay in 'Nicene and Post-Nicene Fathers,' 2nd series, by A. H. Newman, and the extensive bibliography there given.

² See art. ARIANISM in vol. i. pp. 775-786. For an elaborate, though prejudiced, account of early Arianism, see John Henry Newman, *The Arians of the Fourth Century*, Oxford, 1871. The literature on the subject is very extensive.

³ See PG xvii. 563-568.

the pre-existent Son of God had a separate hypostasis (*ὑπόστασις*), and that the sonship was by the very nature of God, and not by His will. Arius, one of his presbyters, controverted this position, and urged that *ingenerateness* constituted the essence (*οὐσία*) of the Father alone, and *generatedness* the essence of the Son, since He was truly son. This is to say that He, like all things, came from the non-existent by the creative will of the Father, and in order to the creation of the world. There was (a time) when He was not. He was God—but by impartation; only-begotten God, the Logos. Christ had a human body, but the place of the human soul was taken by the Logos. The issue¹ was whether the Son was *homoousios* (*ὁμοούσιος*=of the same nature) with the Father. A compromise term (*ὁμοιούσιος*=of similar nature), offered by the mediating Eusebians, having been rejected, and the support of Constantine having been secured, the Council anathematized Arianism as heresy. The Council went so far as to posit in the Godhead three hypostases²—Father, Son, and Holy Spirit. Christ was thus definitely transferred from the side of man to the side of God.

The controversy was not hereby settled. Not only did victory alternate for a time as the two parties strove for the political mastery, not only did the Arian view reappear in the violent controversies that rent the Eastern Church for three centuries and left it a prey to Muhammadanism, but Arianism, carried to the nations of the Goths by Ulfilas, became the faith of many German tribes. Under the Gothic rule in Italy it became the dominant faith there, and its final political overthrow in Europe was accomplished only by the Papal alliance with the Franks and the conquest of the non-Catholics. Even so, it was not extinguished, but has had its defenders down to modern times in England.

The decision at Nice, so far from settling the Arian controversy, provoked fresh controversy,³ and raised up new bodies of heretics. The numerous deniers of the *homoousios*, under the leadership of such men as Ætius, Asterius, and Eunomius, bore the general name of Anomeans. But the most noted was Apollinaris,⁴ bp. of Laodicea.

(b) *Apollinarism*.—At first a defender of the Nicene doctrine, Apollinaris began to recoil from the common use by the Athanasians of the term *Theotokos* ('Mother of God') to describe Mary, and also from the danger of positing in Christ two persons, a human person and a Divine. Attracted by the suggestions of Gregory of Nazianzen,⁵ that the human and Divine were mingled, and of Gregory of Nyssa,⁶ that the human lost its distinctive qualities by absorption in the Divine, he sought to escape the dualism of person and will by affirming that in Christ the Logos took the place of the rational soul or spirit, and that His animal soul and body were alone human. This implicit denial of the metaphysical redemption was condemned at an Alexandrian synod⁷ in 362, and more formally at the first Council of Constantinople⁸ in 381. See, further, art. APOLLINARISM.

(c) *Nestorianism*.—The vindication of Christ's perfect manhood by the Antiochene theologians, such as Diodorus of Tarsus, Theodore of Mopuestia, and the great Theodoret, aroused Nestorius, bp. of Constantinople (428), to protest

⁷ Mansi, iii. 461.

⁸ Schaff, ii. 57.

against the growing Mariolatry. He contended¹ that, since there could be no transfer of human attributes to the Divine Logos, the Divine and human substances co-existed and co-operated in Christ, but were not made one, nor were their attributes mutually shared. Mary was the mother of the man only. Cyril² of Alexandria, supported by the Bishop of Rome, affirmed the opposite view, and was supported by the Council of Ephesus (431), which formally anathematized his opponent. The Nestorian school at Edessa was broken up and the party scattered. It found an asylum in Persia, whence it spread into India, China, Tartary, and Arabia. It still continues in Kurdistan, and a branch was found on the Malabar coast. Its ritual is simpler than that of the Greek or Roman Churches, and its organization less sacerdotal. See, further, art. NESTORIANISM.

(d) *Monophysitism and Monothelitism.*—Cyril's opposition to Nestorianism was carried so far by the monk Eutyches as to say that the two natures became one at the Incarnation, that Mary was in this full sense the Mother of God, and that Christ's body was not consubstantial with man's. Another bitter party struggle arose. The attempt of the Council of Chalcedon³ to settle the dispute by adopting the formula of two natures in one person, prescribed by Pope Leo I., increased the strife. Political interests were involved. Rome and Constantinople were at loggerheads; armed encounters became common; the Byzantine Emperors became the tool of either party by turn; and in the 6th cent. the separation became permanent. Monophysite Churches were formed in Armenia, Syria, Egypt, and Abyssinia. Notwithstanding persecution and division, they have survived in the Coptic, Ethiopic, and Armenian Churches of the present.

Monothelitism (the doctrine of one will in Christ) was a corollary of Monophysitism. It became the name of a distinct party in the 7th cent., through the attempt of the Emperor Heraclius to secure the aid of his Monophysite subjects against Persia by a compromise statement: there were two natures in Christ, but only one energy.

Another bitter feud followed. Bishops of Rome were now on this side, now on that. A succession of Eastern Emperors and patriarchs upheld the new view, but it was at last formally condemned at the Sixth Ecumenical Council, held at Constantinople⁴ in 680. The dogma of two wills was announced. Monothelitism, however, long survived. See, further, artt. MONOPHYSITISM and MONOTHELITISM.

This survey of ancient heresy shows that it was no mere product of disintegrating arbitrariness, but an essential force in the development of Christianity and an indispensable influence in the formation of orthodoxy.

3. Mediæval heresy.⁵—Heresy in the Middle

⁴ Schaff, ii. 72 f.

⁵ The most important original sources of information are the Epistles of Popes Innocent iii. and Honorius iii., and of Bernard of Clairvaux and Peter the Venerable; chronicles, partly contemporary; decrees of Councils and Synods; 'Rescrip. Heres. Lomb. ad Leonistas in Alamannia,' ed. Preger, *Abhand. Münch. Akad.*, dritte Classe, xiii. (1875) 234 ff.; writings against heretics, as by Rainerius Sacco against the Waldenses (middle of 13th cent.); Moneta against Cathari and Waldenses; Salvus Burca, an Italian, who wrote *Supra Stella* against the 'Poor Men'; David of Augsburg and the 'Passau Anonymous' against the Waldenses. The works of Wyclif and Hus are well known. There are also many Waldensian MSS, as *La Nobla Leyczon*; J. J. I. v. Döllinger, *Beiträge zur Sektengesch. des Mittelalters*, i., ii., Munich, 1890; C. U. Hahn, *Gesch. der Ketzer im Mittelalt.*, Stuttgart, 1845; W. Preger, *Gesch. der deutschen Mystik*, Leipzig, 1874; *Beiträge z. Gesch. d. Waldesier im Mittelalt.*, Munich, 1875; H. Reuter, *Gesch. d. relig. Aufkl. im Mittelalt.*, i., ii., Berlin, 1875–77; H. C. Lea, *Hist. of the Inquisition of the Middle Ages*, 3 vols., New York, 1887; A. H. Newman, *Hist. of*

Ages differs from ancient heresy mainly in that its interest was ecclesiastical and practical rather than doctrinal, though doctrinal it was. That is to say, it was the protest of individualism against an established order, rather than a rival movement of thought. Consequently it took the direction of an effort to secure a higher moral life in the individual and the community, and culminated at length in the establishment of rival ecclesiastical organizations. We do not concern ourselves here, of course, with the individual modifications or denials of particular doctrines—for these have always occurred—but with spiritual movements, common to many people, that threatened the very foundations of the Catholic Church.

The growth of the Papal power in the West, the conversion of the Franks, and the conquest of Oriental Christendom by the Muhammadans had shifted the centre of gravity for Christianity to Western Europe. Mediæval heresy is European. The striking thing about it is its rapid spread. It suddenly came into notice in the 11th cent., and in a short time the whole country, from Bulgaria in the East to Spain in the West, and from England in the North to the centre of Italy, was penetrated by its influence. Heretics were especially numerous in S. France, Switzerland, and N. Italy; but they were found in good numbers in Paris, Orleans, and Rheims; in Arras and Cambrai of the Netherlands; in the German cities of Goslar, Köln, Trier, Metz, and Strassburg; in Hungary; in the S.E. counties of England; and in Catalonia and Aragon. The fabric of the Papal Church threatened to collapse, and only by the most violent measures, in co-operation with the secular authorities, were the heretics finally overthrown—not finally, for the Reformation revived the movement in many respects and gave it permanence. It seems plain, though clear proof is wanting, that it must have been quietly spreading among the common people and portions of the priesthood for a long time before the hierarchy, preoccupied with the politics of the Church, awoke to the danger.

The sources of mediæval heresy are fairly traceable. The older heresies had not been obliterated; Arian, Paulician, and Manichæan doctrines had been carried into Europe. The early non-sacerdotal type of faith had lingered. The schools of Charlemagne and the schools of the monks had stimulated the European mind to an active interest in scientific knowledge, and universities were coming into existence. The great revival of religion that marked the growth of monastic orders of the Clugniac type permeated the life of the common people increasingly, and the growing certainty of the possession of a religious and moral life that was not dependent on priestly sacraments and was fostered by the reading of the Scriptures, now becoming accessible in the vernacular, set the individual in a position of relative independence. Moreover, the Crusades, which grew out of that very revival, ultimately revolutionized economic and social conditions in Europe, shook the feudal system, emancipated mind and body from serfdom, brought in the influence of Saracenic learning by way of Spain, the Adriatic, and the Danube, and at the same time put the Greek and Latin classics into the hands of students, and thereby broke for many the spell of the Church's authority.

Passing by individual heresies, such as the Predestinarianism of Gottschalk (9th cent.), Berengarius' opposition to Transubstantiationism (11th cent.), and the scepticism of Abelard (12th cent.), we may group those heresies that produced separate religious communities as follows: (i.) Speculative

Anti-pædobaptism, Philadelphia, 1897; P. van Limborch, *Historia Inquisitionis, cui subiungitur Liber Sententiarum Inquisitionis Pholosance*, Amsterdam, 1692.

heresies, or heresies based on a philosophical view of God and the world. These are akin to Gnosticism and Manichæism and, in their asceticism, to Catholicism itself. (ii.) Heresies of Mysticism and 'Enthusiasm.' These arise out of supreme regard for the ecstatic experience and prophetism, and tend to pantheism. (iii.) Anti-sacerdotal evangelical heresies, characterized, on the one side, by radical opposition to the hierarchy and the sacraments, and, on the other side, by a democratic Biblicism. (iv.) Churchly evangelical heresies, which sought to reform the Church from within without destroying its unity and continuity. These divisions are only relative in some cases, for in many instances heresies with a fundamental difference have much in common.

i. SPECULATIVE HERESIES.—The most important of these are the dualistic heresies of the Cathari and the Bogomils, and the pantheistic heresies of the Amalricians, Beghards and Beguines, and Brethren of the Free Spirit. The first named is the most important heresy of this class.

(a) *The Cathari* ('Pure').¹—These Puritans of the Middle Ages first attracted the attention of the Church authorities early in the 11th cent. by their activities in Aquitaine and Orleans. In the latter place ten of the canonical clergy were burned in 1012 for adherence to their views. But already the heresy was firmly rooted, and soon spread through S.E. France and adjacent regions. The city of Toulouse was their stronghold. So numerous did they become, and so prosperous was the fine form of civilization that grew up through their intelligence, industry, and noble living that the Popes found it impossible to uproot the heresy except by summoning the neighbouring princes to a military crusade against these domains, which left the whole country of the Albigeois a smoking ruin (1229).

The Cathari (also known as Albigensians, Poplicani or Publicani, Patarins, and Bougri or Bulgari) were divided into Albanenses (Albi in France), or absolute dualists, and Concorrici (Concorrezo in Italy), or relative dualists. The former were more numerous. They represented the influence of Manichæism mediated through the Paulicians of Thrace and Bulgaria and the Arabian and Jewish philosophy that spread into France through Spain and Italy. There was also a reaction against the Church's degraded state. Catharism was an attempt to naturalize in Europe Oriental dualistic philosophy and strict asceticism joined to a ritual and organization that offered a contrast to the Roman establishment and a substitute for it. Its high morality and its power to satisfy the spiritual longings to which the Catholic system itself ministered were what made it so dangerous to the Church's supremacy and demanded the sternest measures for its suppression. The Cathari traced the origin of matter and spirit to two opposed beings (the Concorrici regarded Satan as a subordinate being, permitted to create), rejected those Scriptures that presented a favourable view of matter, held a fantastic view of the origin of the human race, of the Fall, and the redemption, and a docetic view of Jesus. The Holy Spirit was threefold—*sanctus*, *paracletus*, and *principalis*. Those in whom the Spiritus Principalis dwelt were the 'perfect' and sinless. The lower grade of Christians were simply *credentes*. The strictest asceticism was required of the former—prohibition of marriage, animal food, use of physical force, etc. As to 'last things,' they held that at death there was no resurrection, but a transmigration.

¹ Cf. Ital. *Gazaro*, Germ. *Ketzer*. The principal contemporary sources are: Moneta, *adv. Cath. et Wald.*; Rainerius Sacco, *Summa* (ed. Martène and Durand, *Thesaur. nov. anect. v.*, Paris, 1717); Limborch, *Lib. Sent.*; Documents in Döllinger, *Beiträge*, etc., ii.; Salvus Buce, *Supra Stella*

It was the Catharist rival ecclesiastical and ceremonial system that especially drew the anathemas of the Church. To them the Roman system seemed to be of the devil. For the Catholic priesthood they substituted the 'perfect' in four grades—bishop, *filivus major*, *filivus minor*, and deacon. Ordination was by the bishop. In place of the seven sacraments were four others: the *consolamentum*, for adults only, consisting of a ceremonial laying on of hands through which the Spirit was given. Thereby the subject was 'hereticated.' This was for the 'perfect,' and its validity depended on the purity of the administrator. By an arrangement known as *convenencia* the *credentes* postponed the *consolamentum* till near death. On receiving it the *endura* had to be sustained—a smothering or stabbing that might produce death. In the ceremony named *melioramentum* a *credens*, kneeling, received the blessing of the 'perfect.' They observed the blessing of bread at the daily meal, but denied transubstantiation. They practised ordination, but refused an oath. Their lives were blameless, and they were indomitable in enduring persecution. They managed to exist until the 14th century. See, further, art. ALBIGENSES.

(b) *The Bogomils* ('Friends of God') were a sect among the Slavs of Thrace and adjoining lands, also of Paulician origin, with a cosmology and a ceremonial system like the Catharist, but less developed. They held a view of the Trinity similar to the Sabellian, repudiated image-worship, used a baptism as an initiatory ceremony, but spiritualized the Supper, rejected parts of the OT, and employed allegorical interpretation. The Emperor Alexius Comnenus (1081–1118) secured, by a treacherous profession of conversion, a knowledge of their practices and their haunts, and then massacred them. They survived for some time in the region of Philippopolis. See, further, art. BOGOMILS.

(c) *The Amalricians* were the followers of Amalric, a professor of the University of Paris, who was condemned for heresy in 1204. They held a speculative view of the world's history, dividing it into three stages: the incarnation of God in Abraham, the incarnation of God in Mary, and, finally, the age of the Spirit beginning with the incarnation of God in the Amalricians. External ordinances were then to be annulled. The resurrection, heaven, and hell were spiritualized. The *Beghards* and *Beguines* were pious brotherhoods of men and women (said to have been first instituted by a priest named Begué), who gave themselves to prayer and ministry to the needy. They never intended to separate from the Church, but represent the growing spirit of lay piety. They gravitated towards pantheism. They flourished in the 13th cent. in many parts of Europe, but especially in the Netherlands. The *Brethren of the Free Spirit* (q.v.) were similar, and became numerous a little later, lasting into the 16th century.

ii. HERESIES OF MYSTICISM AND ENTHUSIASM.—The conflict between the Papacy and the Empire from the 10th cent. onwards, the degradation of ecclesiastical religion and morals, the apparently hopeless brutality of the times, and the long and bloody wars of the Crusades, with the inevitable economic and social confusion that followed, produced a wide-spread feeling of hopelessness, which took the form of a longing for retirement from the world, on the one hand, and an expectation of the immediate end of the present order of things, on the other. The former led to the cultivation of mystic piety and a rapid increase of monastic orders, while the latter issued in the formation of sects which cherished millenarian expectations and cultivated the gift of prophecy.

Individualism, which is the root of heresy, is of

the essence of these tendencies. Either, if widespread, would threaten existing political and ecclesiastical organizations. The Church was able to find a place for Mysticism within the established order—and, indeed, the impossibility of a universal adoption of the mystic habit favoured the dependence of the masses on the Church—but the communion-forming power of Enthusiasm and its thorough radicalism rendered it uncontrollable and demanded its suppression.

The Mystics remained in the Church; and Bernard, the great mystic of Clairvaux, was one of the bitterest foes of the heretics. Nevertheless, the great German mystics—Eckart († 1327), John Tauler († 1361), his pupil, Henry Suso († 1366), John Ruysbroek († 1381), and Thomas à Kempis († 1471)—undoubtedly laid the foundation of much of that successful outbreak of heresy which we call Protestantism (cf. MYSTICISM [Christian]).

Among the 'Enthusiastic' bodies two are especially worthy of mention, the *Joachimites* and the *Spiritual Franciscans*. The first were the followers of Joachim of Floris (1145-1202), a Sicilian, who developed an anti-Papal apocalypticism which greatly stimulated the production of this type of literature, and disseminated chiliastic expectations widely among the common people. He viewed the history of the world as divided into three periods—the epoch of the Father reaching to Christ, the epoch of the Son reaching to 1260, and the epoch of the Spirit thence to follow. The overthrow of the Catholic Church and the Empire was soon to occur, and the new age to begin. These revolutionary ideas appealed powerfully to the restless spirit of the times, and remained unextinguished at the Reformation. They revived in the teaching of Thomas Münzer, Melchior Hoffmann, and Nicholas Storeh; they were represented in a wing of the powerful Anabaptist movement, and helped to produce the Peasants' War and the Münster uproar.

The so-called Spiritual Franciscans appear in the middle of the 13th cent. as a protest against the Papal secularization of the Franciscan order of monks. The influence of Joachim is seen in the 'Everlasting Gospel' which was edited by Gherardo, a professor of the University of Paris, and consists of Joachim's prophecies, with annotations and additions. They are strongly anti-Papal. Gherardo was imprisoned, and the Spirituales were severely persecuted through the Inquisition. There is no doubt that they deeply influenced Wyclif, Hus, the Taborites, and the Anabaptists. See, further, artt. ENTUSIASTS (Religious) and MYSTICISM.

iii. THE ANTI-SACERDOTAL EVANGELICALS. — Differing from both of the foregoing, though like them in their simple democratic character, was the anti-pædobaptist heresy which named Peter de Bruys and Henry of Lausanne among its chief leaders. Its beginnings are found as far back as the 4th cent.,¹ when Arius in Pontus, Jovinian in Milan, and Vigilantius in Southern Gaul vigorously opposed the growing hierarchical tendencies, asceticism, and paganized ritual of the Church. Despite persecution, the followers of the last two seem to have succeeded in maintaining themselves for centuries in the deep Alpine valleys. The reforming movement of Claude² of Turin perhaps helped them. In the stirring times of the 11th and 12th centuries, when the Clugniac revival was affecting so mightily the religious life of Southern France and Northern Italy, these Evangelicals became aggressive, and grew in numbers greatly.

² See Lit. on WALDENSES.

Peter¹ was formerly a priest. His active career lasted from 1104 to 1124. Henry¹ was a monk, coming later (1116-48). The former was burnt to death; the latter was imprisoned, but seems to have escaped. Their work consisted of an attempt to restore the democratic simplicity and pure morality of primitive Christianity by reiterating the teaching of the NT, especially of the Gospels. They laid small stress on the OT. Their great opponent, Peter the Venerable, charges them with opposing the baptism of infants, the erection of holy temples, veneration of crosses, transubstantiation, and offerings and prayers for the dead. On the positive side this means emphasis on personal faith, spirituality, a rational view of things, simplicity, immediacy of human relation with God, and the all-importance of the present life for final destiny.

Contemporary² with them was Tanchelm, who led (1115-46) a similar movement in the Rhenish provinces, and Eudo de Stella († 1147) of Brittany. Their work was more limited in extent. Extremely important was the reform instituted by Arnold³ of Brescia. He fought the secularization of the Church, and sought to simplify and purify the lives of the clergy and the monks, to separate them from secular concerns, and to make them dependent on popular contributions. After a career of great success he was handed over by the Emperor Barbarossa to Pope Alexander III. and hanged. The Arnoldists and the Humiliati, or 'Poor Men' of Lombardy,⁴ strong anti-sacerdotalists, were to some extent fruits of his work. We find them as late as the 14th century.

The Waldenses.—The Waldenses⁵ were the most influential of the mediæval heretical bodies, and have received the most attention from students of history. There is some uncertainty as to the origin of the name. Advocates of a very early, perhaps Apostolic, source of the movement derive it from the character of the country, the valley region (*Vaur, Vallée, Val*) of the Alps where they first appear; they are often connected with the reformatory work of Claude, bp. of Turin⁶ (9th cent.); but it is altogether probable that the name arose from the work of Peter Waldo. He was a wealthy Lyonese merchant, who came under the influence of the deep religious movement that affected France in the 12th cent., and, stimulated by the familiarity with the NT among dissenters, devoted his wealth to the procuring of translations of the Scriptures into the vernacular, and their circulation among the common people. It was thus at the first a layman's propaganda, but with no thought of separating from the Catholic Church. Ere long these advocates of Bible-reading found themselves opposed by the Church officials; and, when two Popes (Alexander III. [1179] and Lucius III. [1183]) in succession refused their petition for the right to teach and preach, and even excommunicated them, they were driven into opposition. Their zeal surmounted all obstacles, and their messengers were soon found in the whole of Central and Western Europe.

They adopted the ideal of poverty, at that time regarded as the chief mark of religiousness, and became known for a time as the 'Poor Men of Lyons.' Their spread into Italy brought them into contact with the more radical body of the 'Poor

Men of Lombardy,' with whom they were able to come to partial agreement (1217). In that country there were similar bodies known as Runcarians¹ (from John Ronco). The Waldensians of France held for a time to the Catholic view of the saving value of Baptism and the Supper, and believed in transubstantiation; but, as their cause prospered and greater opposition was met with, they drew nearer to the modern 'Evangelical' position. By the middle of the 13th cent. they had become directly opposed to sacerdotalism and ecclesiastical morality. Their pure lives attracted attention, and even became a mark of heresy. They repudiated the Church's miracles, festivals, prayers for the dead, intercession of 'saints,' and doctrine of Purgatory, and eschewed its public gatherings. They also refused oaths. Though, like the Cathari, they retained a distinction between the 'perfect' and 'disciples,' in nearly all respects they seem to have accepted at length the general views of the Petrobruscians and Henricians.

They developed a strong organization and propaganda, resembling the Franciscan, that had immense success. Their itinerant preachers found access to the numerous artisans' guilds in the cities and towns of Germany, and succeeded in imparting a deep religious feeling to the new democratic social and economic movement which overspread Central Europe. The Inquisition was on their track, but they showed great skill in evading its attacks, at times outwardly conforming. The Waldensian heresy could not be extirpated. It took a radical form in Austria, Bohemia, and Moravia, and had a large share in producing Hussitism and Anabaptism on the Continent, and Wyclifianism in England. The vast circulation that they gave to the Bible must have been one of the chief causes of the Reformation. As a distinct body they exist in considerable numbers in Italy at the present time. See, further, art. WALDENSES.

iv. CHURCHLY EVANGELICAL HERESIES.—Deeply influenced by the heresies just described are those which grew out of the recognition of the Church's corruptions and the imperative need of a moral and religious reform, but, through a realism in philosophy or an inability to admit a non-churchly Christianity, strove against separatism. The chief instances are the Wyclifian reform in England and the Hussite in Bohemia. Both of these had a political bearing, for they owed much of their vigour to the national spirit which had grown up in those countries in opposition to Papal claims or to alien authorities. Of these the Wyclifian reform is the earlier, and to some extent also the source of the Hussite, but the latter more deeply stirred the ecclesiastical world.

(a) *Wyclifianism*.²—The old English national feeling, subjected for a time to the Norman power, revived, and by a blending of the interests of the yeomanry and the nobility was able to assert itself powerfully against both King and Pope in the times of Magna Charta. Quarrels with the Pope over rights in Scotland, taxation of the clergy by royal authority, anger at the dominant influence of the French kings over the Popes at Avignon, the war with France, and the enactment of the statutes of *Provisors* and *Præmunire* to prevent the Popes from deriving a revenue from England—all these tended to sharpen the national antipathy to the Papacy. The reforming work of Robert

Grosseteste, bishop of Lincoln, who sought to purify the clergy and to encourage preaching by the mendicant monks, Langland's *Piers Plowman*, and Chaucer's *Canterbury Tales* show the manner in which the common people were becoming contemptuous of a dissolute clergy and in sympathy with a simpler form of religious life than was established. At this time (reign of Edward III.) John Wyclif (*q.v.*), professor at Oxford University, began a series of sharp attacks upon the Papal claims until he developed a view which regarded the Pope as the Antichrist foretold in the Apocalypse, advocated a kind of Presbyterian system of government for the Church, and repudiated the monastic orders. He sought to instruct the people by extensive writing in Latin and English, by translating the Bible into English (1380), and by sending out his 'poor priests' (cf. the Waldenses) two by two throughout the land, circulating his Bible and preaching. The sentiment of the country, the upward movement of the English peasantry at the time, and the access to the working men's guilds obtained by his preachers gave wide success to the propaganda. Doubtless at this time there was laid the foundation of English Protestantism, especially Puritanism. Wyclif was attacked by the ecclesiastical authorities, but up to the end of the reign of Edward the political authorities protected him. The accession of the weak Richard II. left him without support. He was driven from Oxford and retired to the parish of Lutterworth in Yorkshire, where he died in 1384.

While Wyclif's realism kept him in the Catholic Church, it also led him to a rigid predestinationism in theology which annulled the Church's prerogative in salvation. This led him in the direction of a doctrine of justification by faith, though it was never elaborated by him as excluding the necessity of good works. He held to baptismal regeneration, but did not exclude unbaptized infants from salvation. He rejected transubstantiation, and in the closing years of life apparently rejected purgatory.¹ The Council of Constance in 1428 pronounced him a heretic, and had his body exhumed and burned, and the ashes thrown into the Severn.

Wyclifianism blended with the work of the Lollards from the Continent and passed into English life as a permanent influence. It became an element in the great struggle by the peasants for social betterment. During the reign of the House of Lancaster, the Church was able to persuade the authorities partially to suppress it. The first English Act of Parliament (*de Comburendo Heretico*) sentencing heretics to death by burning was passed in 1401, and the death of a priest, William Sautre, for heresy was followed by the burning of many others. During the Wars of the Roses the religious movement was mostly overlooked, but it worked silently until it broke out again in the Reformation.

(b) *Hussitism*.²—The Bohemian people were Slavs by race, and were converted to the faith of the Greek Church. Hence, when they came under the Empire and the Roman Church, they retained some religious and political antipathy to the established condition of things. The doctrines of the Bogomils and of the Waldenses were hospitably received in many places. Through the influence of men like Conrad of Waldhausen, Militsch of Kremsier, Mathias of Jagow, and Thomas of

Stitny, both the learned and the masses became roused to the demand for a national-religious reform. The University of Prague became the stronghold of opposition to the Papacy. Large numbers of English students were there. John Hus and Jerome of Prague had imbibed Wyclif's ideas. When, as a result of disputes, the German students abandoned Prague in 1409, the Wyclif-Bohemian influence became supreme.

John Hus (*q.v.*) became rector in 1403, and, with the aid of Jerome and the support of King Wenceslaus, attacked the Roman clergy. After the failure of other attempts to suppress the revolt, the Pope proclaimed a crusade against Bohemia. Hus was excommunicated in 1413 and cited to appear before the Council of Constance. Notwithstanding that he came under the safe-conduct of the Emperor Sigismund, he was imprisoned, and, after some months, was burned for heresy in July 1415. Shortly after Jerome suffered the same death.

Hus followed Wyclif in his doctrine of predestination and the view of Christ's sole headship of the Church, but he was less thorough, and held to transubstantiation. His nationalism was the chief cause of his execution. After his death the Bohemian and Moravian people were roused to fury against priestism. Under John Zizka and Nicholas of Hussinecz as leaders they assembled on Mount Tabor (whence the name Taborites), and manifested their democratic spirit by claiming the communion for the people in the Cup (whence the name 'Calixtines,' from *calix*) as well as in the bread. Military success, at first, was followed later by a division into two parties—the Calixtines, who sought to remain in the Roman Church while claiming the Cup for the laity; and the Taborites, who followed the Waldenses in their hostility to the Roman Church. The latter founded a theocracy and gravitated to Millenarianism, but after a long struggle they were conquered in 1453. Many of those who survived united with the Evangelicals of a peaceable, somewhat Pietist, type known as the Bohemian Brethren, *Unitas Fratrum*, and by other names. These attached themselves to the Reformation. They became blended with a similar body of Moravians, known to history as the Moravian Brethren (*q.v.*), and through them have persisted to the present day.

The story of mediæval heresy shows that the heretics were repressed but not destroyed. The Protestant Reformation sprang largely out of these movements of the spirit of dissent, and was their natural and inevitable fruit. The positions of the various Protestant bodies, including the Anabaptists, show the varying degrees in which the 'heretical' spirit found access to European spiritual life.

The story of Christian heresy properly closes with the Reformation. From the Catholic point of view, Protestantism is identical with heresy. And correctly so; for Protestantism stands for the prerogative of the individual. This is the root of all 'heresy.' But the absurdity of designating the whole of the most powerful portion of Christendom heretics in a derogatory sense is too evident to need proof. It is true that from the point of view of the Protestant confessional Churches, as well as of the Catholic Church, the Anabaptists (*q.v.*) were heretics, and were so treated. Yet they, like the mediæval dissenters, were simply radical Protestants. It is true, also, that from time to time individual thinkers who have disputed the Protestant creeds have been adjudged heretics by courts of their respective communions, but in this there is no thought that the so-called heretic has been excluded from salvation and the fellowship of the true invisible Church. The charge of heresy is rapidly becoming meaningless.

HERESY (Jewish).—The conception of heresy has always been vague in the Synagogue; for freedom of thought, though often denied by fanatics, has been a recurrent characteristic of Judaism. Conduct, moreover, is easier to observe and judge than opinion; and, though, under stress of pressing controversies, attempts were made to define the opinions which would exclude men from sharing the communal rights, it may be said that for long periods conformity to practice, both ritual and moral, would be held to cover a good deal of eccentricity in theory. In recent times there has been so great a modification and relaxation in conduct on ritual matters that the tendency is growing to judge of men's fidelity to Judaism by tests of faith. But, as there exists no central or even local authority to apply or enforce such tests, the question is decided by public opinion rather than by expert or technical judgment. Public opinion is always apt to move spasmodically; it soon becomes accustomed to theories which, when first enunciated, it abhors; and in the result the Synagogue may be said to be free, on the one hand, from rigidity, and, on the other, destitute of clarity as to the ideas on which a charge of heresy could be based.

Historically considered, the problem of heresy in Judaism may be said to have been for the most part dependent on contemporary exigencies. When certain fundamental dogmas or practices were being assailed, the Synagogue would feel called upon to re-assert them; and, in order to emphasize this re-assertion, it might declare that the doubters 'had no part in the world to come.' When in the 1st cent. the Sadducee disputed the doctrine of the resurrection, the Pharisee would declare the doctrine a fundamental. So in the 19th cent., when the German reformer denied the validity of the traditional law, the orthodox would demand allegiance to its every word as the mark of the Jew. In between, when mysticism threatened to become antinomian in the 18th cent., or when, in the 17th cent., the Messianic claims of a popular hero like Sabbatai Zebi well-nigh shook the Jewish world to its foundations and gave rise to all sorts of vagaries in act and thought; or when, in the 13th cent., as a result of the great work of Maimonides, the Hellenizing of Jewish thought under scholastic influences seemed likely to undermine a simple acceptance of the Scriptures; or when, earlier still, in the 7th cent., under Anan ben David, such movements as Karaism proposed a new *halakha* (or practical code of life) on the basis of a deliberate departure from the current (Gaonic) theories of exegesis—in such cases controversies more or less virulent broke out, and the litigants

would freely hurl at each other charges of heresy and threats of excommunication. The efficacy of the charge would be determined only after considerable discussion, and the practical good sense of the community would in the end prevail to soften asperities and so enlarge the place of the tent as to find room for all, if not with cordiality, at least without churlishness.

In the earlier period it is characteristic that the Synagogue never naturalized the word 'heresy.' It readily admitted, to denote 'heretic,' the Greek word *Epicurean* (אֵפִיקוּרָיִם, e.g. Mishn. *Aboth*, ii. 14); but, though Josephus freely employs *αἵρεσις*, he uses it to mean 'sect' or 'party,' and applies it equally to the Pharisees, Sadducees, and Essenes. It may be, however, that it was Greek influence that determined the selection of the commonest Hebrew word for 'heresy,' *minūth*. The Heb. word *min* (מִן) signifies in Biblical Hebrew 'kind' or 'species'; the LXX renders *min* by *γένος* in Gn 1⁴. The latter word is applied by Josephus (*Ant.* XIII. x. 6) to the Sadducees (τὸ τῶν Σαδδουκαίων γένος). Further, in Christian-Palestinian Aramaic, *min* corresponds to *ἔθνος* (cf. Schürer, *ThLZ*, 8th March 1899, and Bacher, *REJ* xxxviii. [1899] 45). This equivalence may have led to the predominance of the word *min* for 'heretic' in general. Just as the word 'people' (עַם) came to mean 'non-Jew,' so *min* came to signify 'heretic.' If Bacher's view be accepted, the *min* was originally the Sadducee (regarded from the Pharisaic standpoint). There has been much controversy as to the connotation of the term in the Rabbinic records. The general trend of opinion is in favour of the conclusion that, whereas the term *min* sometimes refers in those records to sectarians in general, and to the Gnostics in particular, yet it often describes specifically the Judæo-Christians (for particulars as to the controversy, see M. Friedländer, who, in his *Der vorchristliche jüdische Gnosticismus* [Göttingen, 1898], identifies the *min* with the Gnostic; and Travers Herford, who, in his *Christianity in Talmud and Midrash* [London, 1903], maintains that under the term *min* the Jewish Christians are at all events included). One thing is quite certain: the *min* was one who was, or who professed to be, a Jew; the Synagogue's concern was to deal with its own adherents, not to assail those who belonged to other religious systems. The liturgical paragraph in the Eighteen Benedictions refers not to Gentile but to Jewish Christianity; and, when the latter ceased to be a menace to the unity of the Synagogue, the formula was modified to apply to other varieties of sectarians within the Synagogue. Probably this is true of all religions. Christian law does not seem to have treated the Jew as a heretic; the Inquisition, for instance, applied its tests of heresy rather to those who, after accepting Christianity, were suspected of relapse to Judaism. So, too, in England, the Jews in the mediæval period were not subject to the heresy laws, though a Christian convert to Judaism was so subject (cf. F. W. Maitland, *Roman Canon Law in the Church of Eng.*, London, 1898, p. 158; H. S. Q. Henriques, *The Jews and the Eng. Law*, Oxford, 1908, p. 66). No doubt a Jew who publicly assailed the dogmas of the Church was liable to the laws against blasphemy (such a charge is recorded in Bristol in the year 1589; see Abrahams, *Transactions of the Jewish Historical Society of England*, iv. [1903] 99). At all events, the early Synagogue made no attack on Gentile Christianity; it merely tried to eliminate from its midst the Judæo-Christians who, in the language of Jerome (*Ep.* 89 *ad August.*), claiming to be both Jews and Christians, were neither.

Besides the two terms *Epicurean* and *min*, the Rabbis made use of another word for 'heretic.' This was the word *kôphér*, 'denier.' The full expression is 'denier of the root,' i.e. of the fundamental principles (בַּתַּר קִפְּהָרָא, *Sifrá*, 111b; *Baba bathra*, 16b, etc.). What the fundamental principles are is never defined; in one famous passage the definition of Judaism is negative, and any one who rejects idolatry is called a Jew (*Megillah*, 13a). The term *kôphér* is vaguely applied. Sometimes the Rabbis ascribed sin to the lack of belief in the fundamentals. Thus Adam's sin was preceded by his denial of the root principle, the belief in God's omnipresence (*Sanh.* 38b). Cain, again, before he slew his brother, had reached the state of mind in which he asserted that 'there is no judgment, no judge, no reward, no punishment' (Targ. Jer. on Gn 4²; cf. Schechter, *Studies in Judaism*, 1st series, London, 1896, p. 189). There is, however, no definition in the older sources of these various terms for 'heresy.' The *locus classicus* is the Mishn. *Sanh.* x. 1 (to which, be it remarked, the Tosefta *Sanh.* xii. xiii. adds further details). In the quoted Mishna certain classes are pronounced beyond the pale of future bliss: 'These have no part in the world to come: he who asserts that there is no Resurrection of the dead, that the Law was not from heaven, and the Epicurean. R. Aqiba says: also he who reads in outside books, and he who applies incantations to wounds. Abba Saul said: also he who pronounces the Name as it is written.' Some texts make the first clause run: 'he who denies that the Scripture teaches the doctrine of Resurrection'; but the best authorities read as in our translation. The phrase 'outside books' has been variously interpreted to mean extra-canonical, Judæo-Christian, or, in general, heretical books. *Epicurean* is not defined, but in after centuries it became a term generally applied to a sceptic or unbeliever, especially where the scepticism or infidelity was associated with a frivolous attitude towards the problems of religion.

In the 12th cent., Maimonides attempted to summarize the Talmudic statement as to the terms *min*, *Epicurean*, and *kôphér* more closely. There are five classes, he says (*Code*, 'Laws on Repentance,' iii. 7-8), included under *min*: (1) he who denies God, (2) he who asserts that the world is subject to more than one power, (3) he who ascribes corporeality to God, (4) he who denies that God was the first Creator, and (5) he who worships a star as a mediator between himself and God. The *Epicurean* includes three classes: (1) he who denies prophecy, (2) he who disputes the inspiration of Moses, and (3) he who denies that God regards the doings of men (cf. *Jos. Ant.* bk. x. at the end). The *kôphérim* also consist of three types: (1) he who denies the complete verbal inspiration of the Torah, (2) he who denies the tradition, and (3) he who asserts (this would point to both Christian and Muhammadan polemics) that the Law has been superseded by a new dispensation. In addition, Maimonides specifies others as not belonging to the three categories just defined. In all cases, Maimonides refers to Jews who join the various categories; for, as he plainly asserts (on the basis of the Tosefta, *loc. cit.*), 'the pious of the nations of the world have a share in the world to come.' It is only Jewish sectarians who are excluded by him. And against them Maimonides expresses himself elsewhere (in his Commentary on the Mishna on *Sanh.* x. 1) with uncompromising vigour. He formulated thirteen articles of faith as fundamentals (these are given in detail above, vol. iv. p. 246, where Hirschfeld points out that Maimonides had in his mind certain theories and heresies of his own

time). Maimonides then declared as a heretic whoever departed from any of these; such a one had 'gone out of the general body of Israel.'

But it may confidently be stated that no proceedings were ever instituted before a Jewish Court on the ground of refusal to accept the Maimunistic articles. On the contrary, for a long time their author was himself charged with heresy (see H. Graetz, *History of the Jews*, Eng. tr., London, 1891-92, iii. ch. xvi.). More than that, from the very first there were great authorities who disputed the right of Maimonides to declare heretical the denier of even so fundamental a principle as the incorporeality of God. In his criticism of the Maimunistic Code ('Laws of Repentance,' *loc. cit.*), Abraham ben David of Posquières, while himself far from denying this dogma, refused to admit that, if any one chose to interpret the Scriptural and Haggadic statements on the subject literally, he could be termed a heretic, even if he went so far as to ascribe a body to Deity. The fact that in 1656 Spinoza was excommunicated for, among other things, holding that God was 'extended' is liable to misunderstanding. The Amsterdam Synagogue was not then strong enough to be tolerant of scandal in its midst, having too recently acquired its right to exist (cf. ACOSTA, vol. i. p. 74). Even so, had Spinoza consented to conform outwardly, he would not only have been safe, but even pensioned. 'The ban against Spinoza,' as A. Wolf concludes (*Spinoza's Short Treatise*, London, 1911, Introduction, p. lviii), was the due paid to Cæsar, rather than to the God of Israel.' Half a century later, when an attempt was made in London to attack Neto on the suspicion of his Spinozist leanings, nothing came of it but a good deal of heated discussion (see M. Gaster, *History of the Ancient Synagogue of the Spanish and Portuguese Jews*, London, 1901, p. 106). Moses Mendelssohn, in his *Jerusalem*, published in Berlin in 1783, most emphatically repudiated the suggestion that the Jews under emancipation should have conferred upon them the legal power to excommunicate heretics. Not unbelief or false doctrine, he held, was punishable under the ancient Jewish régime; but only contumacious rebellion against the civil law. Various sections of the Synagogue have, however, during the past century occasionally shown themselves inclined to excommunicate reformers; but they have come to regret such action, and no longer avail themselves of this, in modern times, most ineffectual expression of disapproval. So, too, the legal disabilities of the heretic prevalent in the Middle Ages under Jewish law have nowadays little validity. These disabilities are sometimes severely expressed in the Jewish Codes (see *JE* i. 666, vi. 353).

The feeling against heresy has always been weaker than the dislike of separatism. In fact, it was maintained in the Talmud that the rule held: once a Jew always a Jew (T. B. *Sanh.* 44); the Israelite on this view could not alienate himself from the community. As noted by Kohler (*JE* vi. 353), the law (Dt 14'), 'Ye shall not cut yourselves,' is interpreted by the Rabbis (*Sifre, ad loc.*) to mean, 'Ye shall not make yourselves into sections, but shall all form one united band.' The same idea goes back to Hillel (Mishn. *Aboth*, ii. 5; cf. He 10²¹): 'Separate not thyself from the Congregation.' Here the appeal is for participation in the communal tribulations rather than in communal beliefs (cf. Talmud, *Taanith*, 306). A similar phrase, however, 'one who separates from the ways of the congregation,' occurs in the Tosefta (*Sanh.* xiii. 5) in a context which is occupied with questions of faith. Undoubtedly the two ideas stand close together. But in the

main the Synagogue has throughout its history been desirous of retaining within its fold those united by common ideals, experiences, and hopes rather than of driving out those whose opinions diverged from the conventions generally accepted.

LITERATURE.—To the works indicated in the article, add those given in literature of art. CREED (Jewish), vol. iv. p. 246.

I. ABRAHAM.

HERMESIANISM.—Hermes was the chief exponent of a movement for defending the Catholic faith by pure intellectualism, adopting the ideas of Kant, which passed over Germany during the first half of the 19th century. His system (Hermesianism) had a great vogue for a time, was condemned at Rome, and is now almost forgotten.

1. **Life of Hermes.**—Georg Hermes (= Hermannssohn) was born in 1775 at Dreyerwalde in Westphalia, of Catholic peasants. In 1788 he went to the Gymnasium of Rheine (under Franciscans), and soon became first in the school. In 1792 he entered the philosophical faculty at the University of Münster. Here he studied Kant and Fichte, and for a short time wavered in his faith. He recovered it, however, but retained a great admiration for Kant. The work of his life was to convince Kantists of the truth of Catholicism by their own weapons. In 1794 he joined the Theological Faculty, gaining a free horse at the bishop's seminary. In 1798 he accepted a post as teacher in a Gymnasium at Münster. He was ordained priest in 1799. He now devoted himself to the study of philosophy, seeking a solid basis for the Catholic system on purely philosophical and rational lines. Besides Kant and Fichte, he was influenced at this time by Staller.¹ In 1805, Hermes published his first work, *Untersuchungen über die innere Wahrheit des Christenthums*. In 1807 he accepted the chair of Dogmatic theology at Münster. Here he elaborated his principles, wrote a number of smaller works on the relation between philosophy and theology, gathered around him a body of devoted disciples, and became known throughout Germany as a leading Catholic philosopher. In 1820 he went to Bonn and became professor of theology there. From that time till the end of his life his reputation steadily increased. Nearly the whole University of Bonn accepted his ideas with enthusiasm. The only opposition came from Seher. In 1825, Seher was forced to yield to the general feeling and left the University. Hermes had by now founded a definite school; under him Bonn became the centre of a movement which was to justify Catholicism by a solid philosophical basis and to reconcile Protestants. In 1829 he published his chief work, *Einführung in die christkatholische Theologie*, pt. 1, which contains the philosophic introduction. This is the complete exposition of his ideas. Reusch describes it as his only original and characteristic work (*Allgemeine deutsche Biographie*, xii. [1830] 192-196). His disciples applied his principles to each branch of theology. C. A. von Droste-Hülshoff wrote a *Lehrbuch des Naturrechtes* (Bonn, 1823), on Hermesian lines; W. Esser, at Münster (*Moralphilosophie*, Münster, 1827), and P. J. Elvenich, at Breslau (*Moralphilosophie*, 2 vols., Bonn, 1830), applied his ideas to ethics. J. B. Baltzer (at Breslau) wrote a work, *Ueber die Entstehung der in neuerer Zeit im Protestantismus und im Katholicismus hervorgetretenen Gegensätze, mit bes. Rücksicht auf Hermes u. seine Gegner* (Bonn, 1833), in which he proclaims Hermes' system as the hope of reunion between Catholics and Protestants. Baltzer was the most independent of the Hermesians; later he and Elvenich became supporters of Günther. Towards the end of his life, Hermes was the most famous Catholic theologian in Germany. His school captured nearly all centres; Bonn, Köln, Trier, Münster, Breslau, Braunsberg were full of ardent Hermesians. There was some opposition. Hast at Münster, A. von Sieger at Munich, the *Aschaffenburger Kirchenzeitung*, H. Klee and C. H. Windischmann at Bonn itself already began combating the new philosophy. But during its author's lifetime the opposition did not exceed the limits of normal discussion. His bishop (F. von Spiegel, Archbishop of Köln) was always his friend and protector, sending pacifying accounts of his views to Rome. It was not till after Hermes' death that the storm burst. He died attacked by no censure, but rather applauded almost universally, on 26th May 1831. He is buried in the cemetery at Bonn. After his death, one of his chief disciples, J. H. Achterfeldt, edited a work which Hermes had prepared under the title *Christkatholische Dogmatik* (2 vols. and pt. 1. of vol. iii., Bonn, 1834-35).

2. **System.**—The fundamental ideas of Hermes are: (1) an adaptation of Kant (and Fichte) to Catholic dogma, (2) a purely intellectual or rational basis for faith, (3) opposition against Lamennais' traditionalism (hence the Hermesians constantly accuse their opponents of sharing Lamennais' errors). He begins with the famous 'positive doubt.' We must have the courage to doubt

¹ Benedict Staller, professor of theology at Ingolstadt (1797), was a forerunner of Hermes in the idea of a purely intellectualist basis for theology. His *Demonstratio catholica* was condemned by the Congregation of the Index in 1780 (the decree was not published till 1796). Many of his ideas reappear in Hermes' system.

everything, even faith, till we can establish an intellectually convincing reason for it. Three questions now occur: (1) Is there any truth? (2) Is there a God, and of what nature is He? (3) Is a supernatural revelation possible, and under what conditions? Certitude of truth may be either necessary (*angethan*; this certitude he calls *Fürwahrhalten*) or freely accepted (*frei angenommen*; this is *Fürwahrnehmen*). Necessary certitude may be from sense-impressions (*Vorstellungen*)—unsafe; or from reasoning (*Verstandeswissen*)—also unsafe, because it leads to a process in *infinitum*; or from immediate necessity—this last is safe.

*We find, when we seem to know something necessarily, that our consciousness is not only that we know, but also that the known thing exists. This consciousness occurs without our voluntary co-operation; it is therefore a necessary conviction, not a freely accepted one' (*Einleitung*, 1841).

Freely accepted certitude arrives at the same end. The practical reason tells us that we cannot obey the highest moral obligation of which we are conscious (which is the preservation of our own human dignity—*die reine Darstellung und Erhaltung der Menschenwürde*) without using all means to that end which are at our disposal. Among these means is the use of the experience of others. So practical reason would command us to accept this experience, to admit the truth of history, even if theoretic reason still had doubts. Hence both sources of certitude (*Fürwahrhalten* and *Fürwahrnehmen*) bring us to the same result. From the acceptance of the truth of history, Hermes leads to that of the historical basis of Christianity. He denies that the existence of God can be sufficiently based on practical reason (this against Kant). He seeks to establish it by theoretic reason. It is necessarily, not freely, accepted truth. He proposes the cosmological argument for God very well; he rejects the ontological, physical, and moral arguments, also that from universal consent.

In explaining the errors of which Hermes was accused, we are met by the difficulty that his followers, while admitting that these are errors, deny that he held them. Hermesians declare that what was condemned at Rome was not Hermes' teaching, but a libellous caricature of it. He himself always protested that his system did not touch any point of the Catholic faith. This he accepted entirely, in the usual sense, as does every other Catholic. He is concerned only to establish a purely philosophical basis on which the faith may be accepted. However it may be with the points urged against him by his opponents, the errors which brought about his condemnation are these: Besides his 'positive doubt' as the starting-point of all apologetic (from which it would follow that a Christian should explicitly doubt the truth of his faith, of even the existence of God, till he has proved it intellectually), the general fault found with his system is that it is a shallow and narrow rationalizing of faith. Hermes conceives revelation as made only to the intellect; faith is mere intellectual conviction. Our other faculties have no part in our acceptance of Christianity. So, if Lamennais denied reason in favour of faith imposed from without, Hermes, falling into the other extreme, debases faith in favour of natural reason. All the particular errors of which he is accused come from this root—a tendency to lower the truths of revelation towards naturalism, to minimize mysteries, to meet the rationalist half-way. Even his concept of God is said to suffer from this tendency. God in Hermesianism is not the one absolute Being who fills all, in whom all being exists, source of all reality; but merely the highest individual among many who exist apart from Him, and have power and activity independently of Him. The end of creatures is not God, but their own perfec-

tion. Sanctifying grace is no real quality, but the permanent disposition on God's part to help us. Justification is an external imputation (as with Luther). Original sin is our inherited concupiscence. There was no supernatural state of primitive innocence. The death of Christ is an atonement only in the sense that God by it makes us understand how grievous sin is. Hell exists as a threat to frighten us; God is, however, compelled to fulfil this threat, in spite of His goodness, because of His truthfulness.

3. Condemnation of Hermesianism.—When Hermes died, no fewer than thirty chairs of theology were held by his disciples. On the other hand, the opposition to his ideas grew rapidly. Windischmann, F. X. Werner, and others began to denounce them and to demand their condemnation at Rome. Archbishop von Spiegel, Hermes' protector, died in 1835. The Inquisition collected reports from a number of German theologians (on both sides); at last, on 26th Sept. 1835, Gregory XVI. published a brief, *Dum acerbissimas*, condemning Hermes' system and putting his works on the Index (Denzinger, 1618-21). A further decree of 7th Jan. 1836 added the condemnation of the later work edited by Achterfeldt. Hereupon arose a great disturbance in Catholic Germany. The Hermesians agitated against the condemnation, declaring that their master was not guilty of the errors imputed to him. Two of them, Braun and Elvenich, went to Rome in 1837 and spent a year there, vainly trying to procure a repeal. Then Hermesianism, after having been the dominant influence in German Catholic theology, was banned. The Hermesians were called upon by the bishops to signify their adherence to the Papal decision. Gradually most of them did so. But, when Pius IX. became Pope (1846), those of the school who remained hoped for a reversal of the situation. They acclaimed his brief *Qui pluribus* (9th Nov. 1846, recommending philosophy and explaining its relation to theology) as practically an adherence to Hermes' idea. There was then a certain revival of the discussion. About the same time Günther began to spread his ideas.¹ They were to a great extent founded on the same line of thought as those of Hermes; so that several of the old Hermesians attached themselves to him. Pius IX., on 25th July 1847, published a decree renewing his predecessor's condemnation of Hermes' system. This is the end of Hermesianism. The political upheaval of 1848 destroyed the last remnant of general interest in it; then came a great revival of Catholic life in Germany along quite other lines, and the whole question was forgotten. Only here and there an old disciple of the once great man was faithful to his teaching, almost in secret, remaining (like the Jansenists in France after the Revolution) as a relic of a bygone age. Achterfeldt and Braun were recalcitrant for a long time. Either the powerlessness of their cause, which made it harmless, or a dim memory of Hermes' ancient fame made their bishop treat them very leniently. The worst that ever happened to them was suspension from public offices, with leave to say Low Mass; this was removed when they offered a declaration of general adherence to Papal decrees. Achterfeldt, the last Hermesian, died in 1877. The subject has now only a historical interest.

ADRIAN FORTESCUE.

HERMES TRISMEGISTUS.—The name of Hermes Trismegistus stands, like that of Homer, for a whole literature. But this literature is philosophical and religious, not poetical. It presents a curious phase of human thought emanating from Egypt, and might roughly be described as 'Plato according to the Egyptians.' Only roughly, indeed, for the matter is far more complex than this. Take Plato, the Stoics, Philo, Catholic Christianity, Gnosticism, Neo-Platonism, and Neo-Pythagoreanism, mix them well up together, throwing in a strong flavour of ancient Egypt, and the result of the brew will be something like Hermes Trismegistus as we have him.

1. **The assumed author.**—Plato in two passages (*Phileb.* 18 B; *Phædr.* 274 C) mentions an Egyptian god or divine man, named Theuth, to whom were attributed many inventions—arithmetic, algebra, geometry, astronomy, draughts, dicing, but especially the alphabet and writing—which Thamus, the then King of Thebes, is said to have condemned as being destructive to the memory, instead of an aid to it. Now, according to Cicero (*de Nat. Deor.* iii. 56), the fifth Mercury, who was the slayer of Argus, was obliged on that account to flee into Egypt, where he gave laws and letters to the Egyptians. 'Him the Egyptians called Theuth, and the first month of the year among them (September) is called by his name.' Here we find the equation Hermes=Theuth. Lactantius (*Div. Inst.* i. 6) quotes this passage of Cicero, and goes on to say that this same person founded Hermopolis, and was worshipped by the Saitæ, and, though a man, was so honoured for his learning that he received the name of *Trismegistus*,¹ adding in another place (*de Ira Dei*, 11) that Hermes Trismegistus was far older, not only than Plato, but also than Pythagoras and the famous Seven Sages. Lactantius thus accepts the antiquity of Hermes, which makes for his purpose, with the same naïveté as Tertullian accepts the antediluvian authorship of the Book of Enoch, which must, it would appear, have formed part of the library of Noah in the Ark.

Among early modern scholars there was the same readiness to accept Hermes at his own valuation. Vergicius puts him before Moses; Patricius makes him an elder contemporary of that legislator; Flussas Candalla is inclined to put him back as far as the time of Abraham. Isaac Casaubon, Isaac Voss, and the great Fabricius stand out as exceptions to this general credulity. Fabricius begins by intimating his own opinion that the books which went under the name of Hermes were not earlier than Homer, not to speak of Moses; and ends by acquiescing in the judgment of 'certain most learned men,' who put them down as the work of a Jew or of some half-Platonic, half-Christian author about the beginning of the 2nd cent. A. D.

One of the first results of examining these works themselves is to make us deny the equation Hermes=Theuth. Hermes is represented as the father of Tat, who appears to be the same as Theuth or Thoth. In the *Asclepius* (ch. 37), Hermes is made

to claim that he is the grandson of the god Hermes, who was worshipped at Hermopolis. Hence this person has been called 'the younger Hermes.' Similarly the Asclepius whom he is instructing is declared to be the grandson of the inventor of medicine. On the other hand, the Hermes of the 'Holy Book' (Stob. *Ecl.* i. 926) is himself one of the greatest of deities, and the instructor of Isis and Osiris. In the *Poemander* (ch. 10), Tat claims descent from Uranus and Cronus, of whom it is said that they have already attained to the beatific vision. Asclepius, who is called in the Holy Book ὁ Ἱμοῦθης, or simply Ἱμοῦθης (Stob. *Ecl.* i. 932, 1092), is the son of Hephæstus,¹ not, as in Greek mythology, of Apollo, and is credited with the patronage of poetry as well as of medicine.

2. **Works.**—From the assumed author we now turn to his supposed works. We are told by Iamblichus, or whoever wrote the *de Mysteriis* (viii. 1), that Manetho (an Egyptian priest who lived in the time of Ptolemy I.) said that Hermes wrote 36,525 books. Such a number, as Fabricius remarks, has deservedly seemed incredible to many. Especially is this the case if another statement is true, namely, that this is the precise number of years assigned by Manetho to the thirty dynasties of Egypt. Let us therefore descend at once to a somewhat lower estimate. We are told by the same Iamblichus (fl. A. D. 300), this time on the authority of an author named Seleucus, that the number of books written by Hermes was 20,000—a statement which is confirmed, or echoed, by Julius Firmicus (A. D. 340). Lactantius, whose death is placed between A. D. 325 and 330, confines himself to saying that Hermes Trismegistus wrote many books.

From Clement of Alexandria (A. D. 200) we learn that books of Hermes were associated with the Egyptian religion. He describes (*Strom.* vi. 4, p. 757, Potter) a religious procession, headed by the minstrel bearing some symbol of music. Of him it is said that he must have learnt by rote two of the books of Hermes, one of them containing hymns to the gods, and the other an Ἐκλογισμὸς βασιλικῆ βίβλου. After the minstrel comes the ὤροσκόπος with a horologe in his hand, and a palm, as symbols of astronomy. He must have ever on his lips the four books of Hermes which treat of this subject, dealing severally with the orderly arrangement of the fixed stars, with the conjunctions and light of the sun and moon, and with their risings. Next in order comes the sacred scribe wearing feathers on his head, and carrying in his hand a book and a ruler (κανόνα), containing ink and the reed with which they write. It is his business to know what are called the hieroglyphic books, dealing with cosmography, geography, the order of the sun and moon, the five planets, the topography of Egypt, and many other things. Then follows the warder of the sacred vestments, with the cubit of justice and the libation-cup. He has to know all the educational and what are called the moschosphragistic (not *moschosphagistic*; cf. Herod. ii. 39: τὸ σεσημασμένον κτήνος) books; and there are ten that relate to the worship of their gods, embracing the religion of the Egyptians, as, for instance, concerning sacrifices, firstfruits, hymns, prayers, processions, festivals, and the like. All these comes the prophet with the water-clock visible in his bosom, who is followed by the bearers of the processional loaves. He, as being the president of the temple, learns by heart the ten books that are called hieratic, comprising the laws and the gods and the whole education of the priests; for the prophet among the Egyptians is also master of the distribution of the revenues. The quite necessary books, then, of Hermes are

¹ On the bilingual Rosetta stone, 196 B. C., Ἐρμῆς ὁ μέγας καὶ μέγας occurs as a rendering of the Egyptian 'Thoth the great-great' or 'twice-great' (Mahaffy, *Emp. Ptol.*, London, 1895, p. 320).

¹ In Egyptian, Imhotep, son of Ptah.

two and forty,¹ thirty-six of which, containing the whole philosophy of the Egyptians, are learnt off by the before-mentioned persons, and the remaining six by the shrine-bearers. These six are medical, and have to do with the bodily constitution, diseases, organs, medicines, ophthalmology, and gynaecology.

These books of Hermes, which were connected with the religion of the Egyptians, have been mentioned here in order to be excluded. Such books would naturally be purely Egyptian in both language and thought, whereas the books which have come down to us under the name of Hermes—those, at all events, which we are about to consider—are Greek in language and mainly indebted to Plato for their thought. Iamblichus, indeed, states that the works of Hermes were translated from the Egyptian by men acquainted with Greek philosophy, but the works now in question present every appearance of having been composed in Greek. Patricius, starting from the assumption of the hoary antiquity of Hermes, drew the conclusion that all the philosophical systems of the Greeks, the mystical mathematics of the Pythagoreans, the ethics and theology of Plato, the physics of Aristotle and the Stoics, were derived from the works of Hermes, whence he advocated the substitution of these works in the public schools and monasteries for the philosophy of Aristotle, which was far less Christian than they. This contention is logical enough on his premisses. For certainly, if the Hermetic writings are not derived from Greek philosophy, Greek philosophy must be derived from them.

The earliest author who shows acquaintance with our Hermes is Lactantius. He has frequent allusions to and quotations from Hermes Trismegistus, some of which we are able to verify by comparison with the extant works.² Plutarch (fl. A. D. 80) has a hearsay reference to the books of Hermes,³ but there is nothing to show that they are those known to us.

The most important of the works attributed to Hermes Trismegistus is the *Poemander* (ὁ Ποιμάνδρης). The name looks as if it meant 'Shepherd of men'—a derivation which is indicated by the writer (xiii. 19), and which has led to perhaps fanciful surmises of some connexion with the *Shepherd* (Ποιμήν) of Hermas. It has been thought, on the other hand, that the word is really Egyptian, though Fabricius points out that Ποιμάνδρης occurs as the proper name of a mythological person in Plut. *Mor.* 299 C, D, *Graeca Quaest.* 37. In the work before us, ὁ Ποιμάνδρης is the name of a mysterious being, characterized as ὁ τῆς ἀθηνῆρας νοῦς, who figures as the guide and instructor of Hermes. He stands for the higher mind of Hermes himself, in accordance with what Plato says in the *Timæus* (90 A), that a man's δαίμων is his own νοῦς. The *Poemander* gives his name to the whole work, but he is mentioned only in the first and in the thirteenth out of the fourteen chapters which constituted the work as published by Marsilius Ficinus. Outside the first chapter, Hermes is rather the instructor of others. We are given to understand that, on the basis supplied by the *Poemander*, Hermes is competent to arrive at all truth for himself (*Poem.* xiii. 15).

The *Poemander* was first given to the modern world in a Latin translation made by Ficinus from a Greek MS, which was brought from Macedonia to Florence by a monk named Leonhardus of Pistonia, and put into the hands of Cosmo de Medici. According to the statement of Fabricius, it was first published

at Venice in 1483,¹ when it appeared along with other small works translated by Ficinus. Its first title was *Mercurii Trismegisti Liber de Potestate et Sapientia Dei*. This Latin version was often reprinted at Venice, Paris, Leyden, and Basel; and it still appears at the bottom of the page in Parthey's edition, after having been touched up by successive editors—Flussas, Patricius, and Parthey himself. Vergicius is presumably alluding to the work of Ficinus when he says that a Latin translation, not very carefully done, was published at Venice by Aldus, from which an Italian translation was afterwards made, and printed at Florence. A French translation was made by Gabriel Prateolus (du Préau), Paris, 1557; another by Flussas, Bordeaux, 1579; and a recent one by Louis Ménard, Paris, 1866. The work was translated into Dutch, from the Latin of Patricius, by Nicolaus van Ravenstein, Amsterdam, 1643. It was translated into German by one Alethophilus, Hamburg, 1706; afterwards, by Dieterich Tiedemann, Berlin and Stettin, 1781. In English we have had, firstly, *The Divine Pymander of Hermes Trismegistus*, translated into English by Everard, London, 1650, professedly from the Arabic—a work which has been reprinted in many quarters, and in particular in the *Journal of Speculative Philosophy*, July 1866; secondly, *The Theological and Philosophical Works of Hermes Trismegistus, Christian Neoplatonist*, by J. D. Chambers, Edinburgh, 1882; thirdly, the large work, in 3 volumes, entitled *Thrice-Greatest Hermes*, by G. R. S. Mead, London, 1906.

The first Greek ed. of the *Poemander* was that of Adrianus Turnebus, Paris, 1554. This contains a preface in Greek by Ἄγγελος ὁ Βεργίκιος; also a minor work of Hermes, called Ὅροι Ἀσκληπίου πρὸς Ἀμμωνα Βασιλέα (*Asclepii Definitiones ad Ammonem Regem*), and the Lat. tr. of Ficinus. The next edition was that of D. Franciscus Flussas Candalla, in both Greek and Latin, Bordeaux, 1574. The editor in his preface acknowledges obligations to Joseph Scaliger, who was then a young man.

The remains of Hermes, including fragments, formed part of a great work by Franciscus Patricius (Cardinal Francesco Patrizzi), entitled *Nova de universis philosophia*, which was published at Ferrara in 1591 and at Venice in 1593. Patricius changed the order of the pieces in the *Poemander*, with a view to improving the sequence of thought. The edition of Hannibal Rossellius appeared, according to Fabricius, at Cracow, in 1586, and was reprinted at Cologne in 1620.² In it Candalla's text of Hermes is accompanied with what Fabricius describes as a vast and foolish commentary. After this there was no edition of the *Poemander* until that of Gustavus Parthey, Berlin, 1854, which, as the editor remarks, was brought out at a time when the researches of Egyptologists were having the twofold effect of establishing, on the one hand, the vast antiquity of Egyptian history, and, on the other, degrading works for which that antiquity was claimed to the times of the Ptolemies or the Romans.

Next in importance to the *Poemander* is the *Asclepius*, which exists only in a Latin tr. attributed to Apuleius. It may be read in the Teubner edition of that author by Paul Thomas, Leipzig, 1908. This dialogue was designedly excluded by Flussas from his edition of Hermes, on the ground that the work of a divine philosopher had here been tampered with by an impious pagan. The *Asclepius* in its Latin form was known to St. Augustine, who, in his *de Civitate Dei* (viii. 23–26), has long quotations from it which are verbally exact. St. Augustine does not say that this translation is the work of Apuleius, though he has occasion to mention that writer in the immediate context, which may have suggested the idea. The *Asclepius* bears on the face of it unmistakable marks of being a translation from the Greek. A few fragments of the original have been preserved to us by Lactantius, which show that the *Asclepius* is identical, so far at least as these fragments go, with the treatise mentioned under the name of λόγος τέλειος.³

Besides the fragments of Hermes preserved by Lactantius, there are others given by Cyril in his writings against Julian (A. D. 433), and some in Suidas, including a remarkable passage on the Trinity—which is nowhere else to be found. But by far the most important contribution to our knowledge of Hermes is that made by Stobæus, whose own date is uncertain, but who quotes no

¹ Mead puts the *editio princeps* in 1471, Reitzenstein in 1463, Leonhard Schmitz in 1473 at Treviso.

² Mead says (l. 12): 'This was printed at Cracow by Lazarus, in 6 volumes in folio, from 1585 to 1590,' adding that the reprint was made in 1630.

³ Lact. *Div. Inst.* iv. 6: 'Hermes in eo libro qui λόγος τέλειος inscribitur his usus est verbis'—then follows a Greek passage which will be found in Latin in *Asclepius*, 8. Again, *ib.* vii. 18: 'quod Hermes tamen non dissimulavit: in eo enim libro, qui λόγος τέλειος inscribitur, post enumerationem malorum de quibus diximus, subiicit haec' (cf. *Asclepius*, 26).

¹ We get this number by reckoning the hieroglyphic books as 10, to which the enumeration easily lends itself.

² The following are the passages in Lactantius bearing on Hermes Trismegistus: *Div. Inst.* i. 6, li. 10, 14, 15, iv. 6, 7, 8, 9, 13, 27, vi. 4, 9, 13, 18; *de Ira Dei*, 11; *Div. Inst. Epit.* 11.

³ *De Is. et Ostr.* 61, p. 375 f.: ἐν δὲ ταῖς Ἐρμῶδ λεγομέναις Σειλοῖς ἱστοροῦται γεγραφῆαι περὶ τῶν ἱερῶν ὀνομάτων.

author later than Hierocles (fl. A.D. 450). The titles of the extracts in Stobæus are as follows:

Ἐρμοῦ, Ἐρμοῦ πρὸς τὸν υἱόν, Ἐρμοῦ ἐκ τοῦ πρὸς Τάτ, Ἐρμοῦ ἐκ τῶν πρὸς Τάτ, Ἐρμοῦ ἐκ τοῦ πρὸς Ἀσκληπιόν, Ἐρμοῦ ἐκ τῶν πρὸς Ἀσκληπιόν, Ἐρμοῦ ἐκ τῶν πρὸς Ἀμοῦν, Ἐρμοῦ ἐκ τῶν πρὸς Ἀμωνα, Ἐρμοῦ ἐκ τῶν πρὸς Ἀμωνα πρὸς Τάτ, Ἐρμοῦ ἐκ τῆς Ἀφροδίτης, Ἐρμοῦ τρισημεγίστου ἐκ τῆς ἱερᾶς βιβλοῦ τῆς ἐπικαλουμένης Κόρης κόσμου, Ἐρμοῦ Λόγος Ἰσιδος πρὸς Ὀρον.

Under some of the titles, especially the first and most indefinite, many extracts are given. The longest are those from 'The Holy Book which is entitled Κόρη¹ κόσμου,' and that called Λόγος Ἰσιδος πρὸς Ὀρον, which seems to be another name for the same work, part of which was found by Patricius in the monastery of Enclistra, in Cyprus.

The name of Hermes Trismegistus was one to conjure with, and many works on alchemy and all kinds of subjects were attributed to him later; but those which have now been mentioned are all that concern us. Before leaving the subject, however, we must inquire whether there is anything in these works themselves to indicate their date and authorship. No one would now dispute that they are later than Plato. Neither can it be denied that they are later than Stoicism, since, without holding the materialism of the Stoics, they show familiarity with the terminology of that school. Further, they display an acquaintance with the OT, and are, therefore, presumably later than the Septuagint. In the first chapter of the *Poemander* we encounter the phrase λόγος κυρίου; further on in the same chapter we come across a manifest but unacknowledged debt to Genesis (1²² 28): ὁ δὲ θεὸς εὐθὺς εἶπεν ἀγίῳ λόγῳ, αὐξάνεσθε ἐν αὐξήσει καὶ πληθύνεσθε ἐν πλήθει, which is repeated in iii. 3. The third chapter has also the words: ἦν γὰρ σκότος ἀπειρον ἐν ἀβύσσῳ καὶ ὕδωρ καὶ πνεῦμα λεπτὸν νεορὸν. In the 'Holy Book' (Stob. *Ecl.* i. 936) we read: εἶπεν ὁ θεὸς καὶ ἦν. In v. 6 of the *Poemander* there is a passage which might be thought suggestive of Ps 139¹³⁻¹⁶.

Let us pass on now to the NT. The statement in *Poemander*, i. 12, that 'God begat a man equal to himself' would be an extraordinary anticipation of Christianity, if it were penned before its appearance; and the words with which the same chapter ends, ὁ σὸς ἄνθρωπος συναγαγείν σοι βούλεται, καθὼς παρέδωκας αὐτῷ τὴν πᾶσαν ἐξουσίαν, cannot but recall to us Mt 28¹⁸. In *Poemander*, ix. 3, we are reminded of Mt 13²⁵ in what is said of δαίμων (who, we are told, is separated from God): ὅστις ὑπείσθλων ἔσπειρε τῆς ἰδίας ἐνεργείας τὸ σπέρμα, καὶ ἐκύθησεν ὁ νοῦς τὸ σπαρέν, μοιχείλας, φόνους, πατρονυτίας, ἱεροσυτίας, ἀσεβείας, ἀγγόνιας, κατὰ κρημῶν καταφορὰς καὶ ἄλλα πάντα ὅσα κακῶν δαμόνων ἔργα. The last words, from ἀγχόνας onwards, look like a reference to the herd of swine (Mk 5¹³), but are only a specification of different forms of suicide. The doctrine that there is none good but God in *Poem.* ii. 14 and vi. recalls to us Mk 10¹⁸, as the definition of religion in xii. 23—θρησκεία δὲ τοῦ θεοῦ μία ἐστὶ, μὴ εἶναι κακόν—does that in Ja 1²⁷, while the frequent insistence in *Poem.* i. on φῶς καὶ ζωή as being the nature of God naturally carries our thoughts to the Fourth Gospel. Many more such affinities with the NT might be added, but this line of argument is really superfluous. For, when in *Poem.* i. 10 we come across the word ὁμοούσιος—the great bone of contention between Arian and Trinitarian—which was first used, as far as we know, by Plotinus, the suspicion suggests itself that we are not in the first or second cent., but in the third or fourth. This impression is confirmed when we consider the subject-matter of the *Asclepius*. The lament over the decay of Egyptian religion and its prohibition as though by law,² unless we allow that this

¹ Probably κόρη here means 'the pupil of the eye'; cf.

² I am the eye with which the Universe

Beholds itself and knows itself divine.

³ *Ascl.* 24: 'quasi de legibus a religione, pietate cultuque divino statuetur praescripta poena prohibitio.'

passage is really prophetic, must have been written at a time when the Galilæan had already conquered. The complaint that the most holy land, which was once the seat of shrines and temples, will be full of dead men's sepulchres is accepted by St. Augustine as directed against Christianity, and as being an allusion to the martyrs' memorials (*de Civ. Dei*, viii. 26 *ad fin.*). But, if Christianity is thus in the ascendant, the *Asclepius* can hardly have been written before the Edict of Milan in A.D. 313. Now the *Poemander* (ix. 1) refers to the τέλειος λόγος, which appears to be the same as the *Asclepius*, and therefore the *Poemander* must have been written at least a little later. But Lactantius was familiar with the works of Hermes, and his death is put not later than A.D. 330. It seems, therefore, reasonable to conclude that these works were composed between A.D. 313 and 330.

That the author or authors were Egyptian does not require proof. That is evident from the respect shown to the Egyptian religion, and from the naïve national vanity which, not content with making Egypt 'the temple of the whole universe' (*Ascl.* 24), confines true intelligence to its inhabitants (Stob. *Ecl.* i. 990). The acquaintance displayed with Greek philosophy is no argument against this. Philo was saturated with that philosophy, and yet remained a devout Jew. Despite the many points of resemblance in the Hermetic literature to Christianity, there is no sign of love for that religion. It is Hermes who is the preacher of repentance; it is Hermes who is the guide of human kind; it is Hermes who teaches the way of salvation. In fact, in the Hermetic writings, Egypt is bidding against Judæa for the honour of supplying the world with a religion, just as Samaria did in the Great Declaration of Simon of Gitta, who has been confused with Simon Magus.

3. Doctrines.—The doctrines of Hermes are so many and so various as to make us doubt whether they all emanate from the same mind, notwithstanding the family likeness which runs through the works. But we must not be too rigorous in our demand for consistency. Such a contradiction as that God makes all things and yet does not make evil (*Poem.* xiv. 7, 8) is so familiar to ourselves as not to call for comment in Hermes. But there are others which court attention. We are repeatedly told that the Cosmos is the Son of God (*Poem.* viii. 2, ix. 8, x. 14), and yet we read that it is πλήρωμα τῆς κακίας (*Poem.* vi. 4). This, it may be said, is a matter of comparison. But here at all events is a direct contradiction. In *Poem.* ii. 4 we have the words: δώματος οὐδὲν ὁ τόπος; in xi. 18, ὁ μὲν γὰρ τόπος καὶ σῶμα ἐστὶ καὶ ἀκίνητον. Again, the statement in x. 19, that it is not lawful for a human soul to pass into that of an irrational animal, is irreconcilable with that in x. 8, that, if a human soul continues to be evil, it retraces the way by which it had ascended from reptiles. Nor yet does the ascetic principle that one must hate one's body if one would love oneself (iv. 6) seem to consort very well with the denunciation of celibacy and the glorification of parentage (ii. 17).

The resemblance of the Hermetic teaching to Christianity is no more than skin-deep. There is, indeed, much talk about the Son of God. But, then, who is the Son of God? Sometimes he is Logos, as proceeding from Nous (*Poem.* i. 6). Anon he is Man (i. 12), not man as we know him, but an æonian Man (like that of the Valentinians), who takes after the Nous that begat him in being bi-sexual, though it is hard to understand how there can be sex in Nous. Yet again, the Son of God is the sensible universe (ix. 8), as in the *Timæus* of Plato (31 B, 92 B). The Sun is not actually called by Hermes the Son of God, but he is called 'a second God' (*Ascl.* 29; cf. Plat. *Rep.* 517 B). Instead

of comparing the Hermetic writings with Christianity, it would perhaps be more fitting to describe them as pagan Gnosticism, or Gnosticism minus Christianity.

If we were asked what are the views of Hermes as to the problem of evil, a variety of answers would have to be given. In one place (*Poem.* xii. 3) we have the Cynic answer that every disease of the soul arises from pleasure; in another (vii. 2) the body is denounced as the source of evil; and love of the body, we are told, is the cause of death (i. 18). Then, again, it appears that good and passion (*πάθος*) are mutually exclusive, like day and night (vi. 2), and that passion is inseparable from *γένεσις*, gathering on it, like rust on iron or dirt on the body (xiv. 7). All these answers perhaps come in the end to the same thing; but we seem to be entering on a different range of thought when we are told that evil thoughts are prompted by demons (ix. 3, 5), or, as they are called in *Ascl.* 25, 'nocent angels.' It is the voice of Persia, not of Greece, that speaks here. But, however evil comes about, one thing is taken for granted, that God did not make it (*Poem.* xiv. 7). Moreover, evil is confined to earth; it is blasphemous to say that it attaches to the whole cosmos (ix. 4). Further, the religious man (*θεοσεβής άνθρωπος*) turns evil into good, so that the things which are evils to others are good to him (ix. 4).

What are the views of Hermes about God? They are polytheistic, pantheistic, and monotheistic. The stars in heaven are manifest gods, and most manifest among them is the Sun, who is larger than land and sea (*Poem.* v. 3). But besides these there are *δαίμονες*, who are of an immortal nature, to which man can attain. By a bold doctrine room is left by Hermes even for the popular religion. Man, he says, has made gods in his own image, even as the Father and Lord made the heavenly gods in His (*Ascl.* 23). 'You mean statues, I suppose,' says his auditor Asclepius, who is rebuked for his want of faith.

'Statues,' Hermes goes on, 'endowed with life and sense and spirit, statues that foreknow the future, and that declare it by divination, prophecy, dreams, and in many other ways, statues that cause and cure sicknesses in men, and dispense sorrow or joy according to desert' (*Ascl.* 24).

The reason why statues possess these marvellous powers is because the souls of demons or angels have been invoked into them. In support of his doctrine, Hermes appeals to the benefits that Isis bestows when she is propitious and the harm she does when she is angry. The passion of anger, he remarks, is natural to such terrene and mundane gods, who have been made and composed by men out of the two natures of matter and spirit (*Ascl.* 37). This theory, that statues were the abode of demons, was eagerly accepted by the Christians, subject to the proviso that they were bad ones—demons, in fact, not *δαίμονες*.

Side by side with this polytheism runs a pantheistic strain. When we read, 'Thou art whatever I am, thou art whatever I do, thou art whatever I say' (*Poem.* v. 11), we might fancy that we have in our hands the book of some Indian philosopher. Again, we have the declaration, 'God is himself what he makes.' All things, we are told, are living beings (*ζῶα*), and He is the one life (*ἡ ζωή*) of all (xi. 14). In xii. 22 we have the explicit declaration—*καὶ τοῦτό ἐστιν ὁ θεός, τὸ πᾶν*. Under this pantheistic monism there breaks out a dualism, which is again resolved into a unity. Search the whole world through, says Hermes, in the height and depth thereof, and you will find but two things: (1) the maker (*ὁ ποιητής*); (2) the product (*τὸ γενόμενον*). And yet these two are in a manner one. Each is relative to the other. The maker can no more exist without the product than the product can exist without the maker. This doc-

trine has recently made its appearance in modern theology. Did Hermes owe it to ancient Egypt?

Many and various are the attempts in Hermes to define the essence of God; but there is no real inconsistency between them. Thus in one place we are told that 'the essence of God is *τὸ καλόν*.' But, then, *τὸ καλόν* is identified with *τὸ ἀγαθόν* (*Poem.* vi. 4), so that we can pass to the equation God = goodness—*τὸ ἀγαθὸν αὐτὸς ἐστὶν ὁ θεὸς αἰεὶ* (vi. 1). But, further, *τὸ ἀγαθόν* is identified with *τὸ ποιητικόν* (x. 3), which builds us a bridge to another definition: 'The essence of God is to engender and make all things' (v. 9), in agreement with which we are told in another place that 'His one glory is to make all things, and this is, as it were, the body of God, to wit, making' (*ἡ πύσις* [xiv. 7]). But, again, we are told that to will and to do are one with God (*Ascl.* 8), which enables us to pass on to another definition: 'The essence of God is to will all things to be' (*Poem.* x. 2). This, then, is how Hermes at his highest would have us think of God, as an ever-operative good will, bringing all things into being. Goodness is the only positive attribute of God.

'God is not mind (*νοῦς*), but the cause of there being mind; he is not spirit, but the cause of there being spirit; he is not light, but the cause of there being light' (*Poem.* ii. 14).

Hermes even hesitates to predicate being of God, since He is something behind and beyond being (ii. 5, vi. 4, xii. 1; cf. *Plat. Rep.* 509 B).

LITERATURE.—The successive editions and translations of Hermes have been mentioned in the article. The following works may be added: J. A. Fabricius, *Bibliotheca Græca*, Hamburg, 1790-1809, lib. i. cc. 7-12, vol. i. pp. 46-85; L. F. O. Baumgarten-Crusius, *de Librorum Hermeticorum origine atque indole*, Jena, 1827; L. Ménard, *Étude sur l'origine des livres hermétiques*, being the introd. to his tr. of *Hermès Trismégiste*, Paris, 1866; R. Pietschmann, *Hermès Trismégistos, nach ägypt., griech., und orient. Überlieferungen*, Leipzig, 1875; R. Reitzenstein, *Potmandres*, Leipzig, 1904; G. R. S. Mead, *Thrice-Greatest Hermes*, 3 vols., London, 1906; W. Kroll, in Pauly-Wissowa, viii. [1913] 792-823.

HERODOTUS.—Among the great works of genius produced in Athens during the age of Pericles, the *History* of Herodotus holds a place beside the creations of Phidias and the dramas of Sophocles. Even in antiquity it earned for its author the title of 'the father of history' (*Cic. de Leg.* i. 1). Previous writers of history, the so-called logographers, approximated in their descriptive methods to the Epic. They recorded the founding of cities, the genealogies of eminent families, the customs and institutions of particular peoples, and the geographical curiosities of foreign countries, but they essayed no deeper inquiry into the inner relations of things and events. Herodotus was really the first to undertake the task of portraying a historical movement of far-reaching importance upon a uniform plan, into which at the same time he might work the results of his own investigations over a wide field.

1. Life.—Of the historian's life we know but little. Suidas gives the names of his parents as Lyxis and Dryo (or Rhoio). He was born, probably c. 484 B.C. (*Plin.* xii. 18; *Aul. Gell. Noct. Att.* xv. 23; *Diels, Rhein. Mus.* xxxi. [1876] 48), at Halicarnassus, a town in Caria which previously belonged to the Dorian Hexapolis (*Herod.* i. 144, ii. 178; cf. vii. 99); here, however, as the inscriptions show, the prevailing dialect was not Doric but Ionic. He came of a distinguished (*τῶν ἐπιφανῶν*) and noble family, as appears from his having a *γενεαλογία* (ii. 143; cf. *Ed. Meyer, Forschungen zur alten Gesch.*, Halle, 1892-99, i. 193, n. 1). He was a cousin or nephew of the epic poet Panyasis (Suidas, s.v. Πανύσιος), with whom he resided for a long time in the island of Samos, and who probably exercised an influence upon his education and his mode of

thought. At the time of the Persian campaign under Xerxes, Halicarnassus, with the islands of Cos, Nisyros, and Calydna, formed a small tributary State, ruled by a queen named Artemisia, of whom Herodotus writes in terms of high admiration (vii. 99, viii. 68 f., 93, 101–103). Under Lygdamis, her son or grandson, however, the city became involved in turmoils, in the course of which Panyasis was murdered by the tyrant.

That the residence of Herodotus in Samos extended over several years appears from certain features in his work—his familiarity with the topography, the monuments (iii. 60, ii. 182), and the history (iii. 39 ff., 120 ff., 139 ff.), of what was in his day a powerful naval State. It is doubtful whether he had any share in the overthrow of Lygdamis, which took place prior to 454 B.C. Thereafter he proceeded to Athens, and, as a distinguished citizen of an important federal city, came into intimate relations with Pericles, at that time the guiding spirit in Athenian politics, and with Sophocles. It is true that we have no express record of these friendships, but the historian's own pages bear unmistakable evidence of them. His intimacy with Pericles is to be inferred from his conviction of the importance of Athens for the Hellenic world, and his appreciation of its constitution, as well as from the manner in which he defends the Alcmaeonidæ, the family of Pericles, and disparages their assailant, Themistocles, the greatest of Athenian statesmen. Pericles himself, indeed, is mentioned but once in the *History*, but the graceful reference is significant enough. Herodotus, by way of extolling the maternal line of Pericles, narrates the wooing of Agarista, the daughter of Cleisthenes, tyrant of Sicyon (vi. 126 ff.); he tells that her granddaughter and namesake was married to Xanthippus, the victor of Mycale, and that 'when she was with child she had a dream in which she fancied that she was delivered of a lion, and a few days afterwards she gave birth to Pericles' (vi. 131). The historian's friendship with Sophocles may be inferred from the fact that the latter incorporated in his dramas several narratives which he had learned from Herodotus (cf. ii. 35 with *Æd. Col.* 337 ff.; iii. 119 with *Antig.* 905 ff.; i. 32 with *Æd. Rez.* 1528 ff. and *Trach.* 1 ff.); and there is, moreover, a profound affinity between the views of the two writers. It should be noted, however, that the elegy on Herodotus, the opening words of which have come down to us (Plut. *An seni res publica gerenda sit*, ch. iii. p. 785 B),

Ὀιδῶν Ἡροδότῳ τειχέεν Σοφοκλῆς ἑτέων ὦν
πέντ' ἐπὶ πεντήκοντ' <ἐξάκις ἐξάτει>.

was not composed by Sophocles.

It is probable that Herodotus, like many other prominent men of his time, took part in the founding of Thurii in 445 B.C.—a scheme set on foot by Pericles; he must, at least, have proceeded thither shortly afterwards. But he did not remain long in the new colony, as the ideals which the founders hoped to realize were shattered by dissensions among the settlers themselves. Certain scholars (e.g. Meyer, *Forschungen*, i. 196) are of opinion that Herodotus called himself a Thurian, and that Aristotle's version (*Rhet.* iii. 9) of the opening words of his book ('Ἡροδότου Θ[ου]ριῶν ἡδ' Ἱστορίας ἀπ' ἀρχαίων) is correct; but others dispute this view, and rightly so, especially as the words in question have been transposed—against the MS tradition—so as to form a hexameter (Stein, 'Introduction,' p. liv). Suidas also informs us that Herodotus was buried in the market-place of Thurii. The inscription commemorating him is given by Steph. Byz. (s. v. Θούριοι) as follows:

Ἡρόδοτος Δύξω κρύπτει κόμης ἡδε θανόντα
ἴαδος ἀρχαίης ἱστορίας πρῦτανιν,
Δωριέων βλαστόντα πατρὸς ἀπο' τῶν γὰρ ἀλλήλων
μῦθον ὑπεκπροφύγων Θούριον εἶχε πατριν.

Suidas is also our authority for the report that he fled from Halicarnassus on account of the jealousy of his fellow-citizens; but this does not agree with the facts. According to another report, Herodotus travelled from Thurii to the Macedonian court, and died at Pella (Suid. s. v. Ἡρόδοτος and Ἑλλάδικος). As a matter of fact, we cannot say when and where he died. All that we can definitely ascertain from his own pages is that he returned from Thurii to Athens, and that the latter city was his home till the outbreak of the Peloponnesian War (A. Kirchhoff, 'Ueber die Abfassungszeit des herodotischen Geschichtswerkes,' in *ABAW*, 1868, p. 16 ff.). His travels in Asia and Egypt, and the composition of his *History*, fall in the interval between his return from Thurii (c. 440) and his death (c. 425).

2. Travels.—The narrative of Herodotus is occupied to a considerable extent with what he had learned in the course of his travels, upon which he may have started when comparatively young. Just as he explored Samos, so he may, with that island, as also the city of his birth, as a centre, have become familiar with the adjacent districts, and, in course of time, with the Ægean Islands and the coast of Asia Minor. We know for certain that he visited the hallowed places on the mainland of Greece, as, e.g., Thermopylæ (vii. 193 ff.) and Plataea (ix. 25, 49 ff.). He sought information from the priests at Dodona (ii. 52), and in Delphi he heard about the fall of rock that saved the temple from being plundered by the Persians (viii. 39); here, too, he was shown the numerous and magnificent votive gifts belonging to the sanctuary (i. 20, 51 f., iii. 57), and gained a knowledge of both Greek and Lydian history as read by the Delphic priesthood. In Sparta he made investigations regarding the earlier history of Lacedaemonia, and with reference to the Spartan expedition against Samos he names as his informant the grandson of one who had taken part in it (iii. 55). In his further travels northwards he was initiated into the mysteries of the Cabiri in Samothrace (ii. 51), and inspected the mines of Thasos (vi. 47). He seems to have visited the Macedonian court, as he speaks repeatedly of the royal family, and supports its claim to be of Hellenic descent (v. 22). He then made his way towards the Black Sea through the Hellespont, the Propontis, and the Bosphorus, gaining some knowledge of the more important cities on the route (iv. 14). Proceeding by way of Istria (ii. 33), he reached Olbia, visiting the fertile plains in the immediate neighbourhood (iv. 52 f., 81), and gathering information regarding the formidable peoples of Scythia. The Sea of Azov (iv. 86), the Crimea (iv. 99), Colchis (ii. 104), and—on the south coast of the Euxine—the city of Themiscyra (iv. 86) are also known to him. He likewise made a journey to Sardis, probably from Ephesus (ii. 148), and describes from his own observation the monument of Alyattes in the former city (i. 93). His account of the royal road between Sardis and Susa, on the other hand, is not based upon personal knowledge (v. 52). Susa and Babylon were probably visited by way of Syria. He writes of Babylon in considerable detail (i. 178 ff.), and his having been in Susa is shown by the narrative (vi. 119) regarding Ardericca; but his description of the royal castle of Agbatana, the capital of Media, makes it evident that he had not been there (i. 98).

In his visit to Egypt, Herodotus travelled from Canopus to Elephantine, and then back again to Pelusium. It is a very singular fact that he should say nothing of the great temples of Thebes; he refers only incidentally to the temple of Amon there (ii. 42, 143). Whether he passed from Egypt to Syria cannot be determined, but at all events he describes the route from Kadytis (Gaza) by way

of Lake Serbonis as one who had traversed it (iii. 5). He must also have visited Cyrenaica, for he speaks of its capital from personal observation (ii. 181), and gives an apt description of the terrace-like configuration of the country (iv. 199). It was here probably that he obtained his information regarding the Libyans and the interior of Africa. But his accounts of the peoples inhabiting the region between Egypt and the Greater Syrtis are more to the point than what he says of those living further to the West. He may have gained a knowledge of Southern Italy and Sicily while in Thurii. He writes also of the Etruscans, the Ligurians, and the Venetians, but makes no mention of Rome or the Latins.

There has been much discussion as to the period of his life in which Herodotus undertook these journeys. But a slight consideration of the political circumstances affords us a definite clue. As a citizen of an insurgent Persian city, he could not well have travelled in Persian territory before the opposing parties came to terms. This was brought about by the so-called Cimonian peace (448-447 B.C.). At that time, however, the interest of Herodotus was fixed upon Thurii, and it was only after he had left the colony and returned to Athens that he was in a position to begin his extensiv pilgrimages. Nor, again, could he have travelled in Egypt before the conclusion of peace. Athens, however, was still lending assistance to Amyrtæus in 449 B.C. But it is clear from Herodotus' account of Egypt that the days of commotions and conflicts were long past. For these reasons Meyer would assign the longer journeys to the years between 440 and 430 B.C. (*Forschungen*, i. 156 f.; in ii. 222, more definitely, 438-432 B.C.).

3. His sources.—On these numerous and extensive journeys, Herodotus was constantly adding to his store of knowledge. From the most likely persons, as, e.g., the learned men (λόγιοι) of Persia and the priests of Egypt, he sought information regarding the history of their several countries. In many parts he found interpreters (δύλωσσοι) who acted as intermediaries between Greeks and non-Greeks. The numerous 'tales' which he incorporates in his work were derived from professional story-tellers (λογιστοί), who were to be found plentifully in Greek-speaking lands; such are, e.g., the stories of the marriage of Agarista (vi. 126 ff.), of the fortunes of the Cypselid dynasty (iii. 48 ff., v. 92), of Croesus, and of Atys and Adrastus (i. 34 ff.). To the principles on which he judged what he heard he refers in two passages as follows: ii. 123, ἐμοὶ δὲ παρὰ πάντα τὸν λόγον ὑπέκειται, οὗτι τὰ λεγόμενα ὑπ' ἐκάστων ἀκοῆ γράφω; vii. 152, ἐγὼ δὲ ὀφείλω λέγειν τὰ λεγόμενα, πειθεσθαι γὰρ μὲν οὐ παντάπασι ὀφείλω. But he also availed himself of documents, precisely as do the historians of the present day. He twice makes reference to Hecataeus of Miletus—the most eminent of the logographers—as his authority (ii. 143, vi. 137). In other passages he challenges his statements, especially as regards geography, though without naming him; or else he simply reproduces his narratives (Diels, 'Herodot u. Hekataios,' *Hermes*, xxii. [1887]; Meyer, *Forschungen*, i. 183 f.). Of his indebtedness to other logographers we have no clear proof; it would probably be confined to a few dates and memoranda, inasmuch as such sources, and notably the *γεννηλογία*, contained little but legendary history. The story of Democedes (iii. 129 ff.) is probably based upon a written narrative. In the account of the Persian expedition under Xerxes, moreover, Meyer (*Forschungen*, ii. 231 f.) recognizes a documentary original in the section extending from the massing of the army and its departure from Celanæ to its arrival in Therma, but admits that Herodotus has here made many additions from his own knowledge. With the list of peoples given in this section are closely connected the list of satrapies (iii. 90 ff.), and the account of the royal road from Sardis to Susa (v. 52 f.); and they are presumably all derived from the same source.

4. The purpose of his history.—That Herodotus delivered lectures on history may be inferred from

references in his own pages (i. 193, iii. 80, vi. 43), and also from Thuc. i. 21 f. Plutarch (*de Herodoti Malignitate*, xxvi.) says that, according to Diyllus, he received ten talents as a remuneration from the Athenian State, and later writers assert that this was given as a honorarium for a public recitation of his *History*. Meyer (*Forschungen*, i. 200 f., ii. 229), however, is of opinion that this large sum was granted him in recognition of his eminent services on behalf of Athens. Certainly he composed his work with the one object of giving prominence to what Athens had accomplished for Greece; and he did this, moreover, at a time when that city's policy was exposed to the fiercest criticism. He wrote at the beginning of the decisive conflict between Athens and Sparta. Only a knowledge of the past could furnish the criterion for a true judgment of the present. But at the same time the writer's verdicts and descriptions are coloured by the conditions of his own day. Thus, the conduct of Thebes and Corinth at the time of the Persian wars is set in a very unfavourable light; that of Thessaly and Argus is palliated; Sparta is treated with a touch of irony; the Alcæonidæ are, for Pericles' sake, exonerated from censure. It is in all respects the Athenian point of view that finds expression in his account of the wars, and yet it would be wrong to charge him with intentional misrepresentation. He regarded it as his duty to relate what was reported to him (vii. 152). His impression of the actors in the drama he seeks to exhibit in their speeches and colloquies. But these, again, afford him an opportunity of giving utterance to the ideas of his day, and of discussing the best type of government. In military matters he does not speak as an expert, but, without any real comprehension of things, simply reproduces popular tradition. Hence his incredible figures, the purely imaginary character of which was first demonstrated by H. Delbrück (*Die Perserkriege u. die Burgunderkriege*, Berlin, 1887).

It has been frequently asserted that Herodotus did not carry his work to its intended conclusion, but there is nothing to show that this was the case. His purpose was to write the history of the Persian wars, and these ended with the battle of Mycale and the capture of Sestus in 479 B.C.; the aggressive wars of the Greeks against the Persians began in 478 B.C., and are not to be reckoned among the *Μηδικά*. He certainly begins somewhat further back; he depicts the conflicts between Greeks and Barbarians; and within these bounds he finds it possible to incorporate the abundant results of his own inquiries and researches (iv. 30: προσθήκας γὰρ δὴ μοι ὁ λόγος ἐξ ἀρχῆς εἰδίζητο). It is unnecessary to suppose that he had published these results in previous books, and tradition does not lend the slightest support to the idea. The only separate work of which he speaks is the projected *Ἀσσυριοὶ λόγοι* (i. 184); but this was almost certainly never written.

5. His 'Weltanschauung.'—Herodotus knows nothing of historical criticism, nor does he think of tracing out the ultimate forces from which historical phenomena spring. He proposes simply to relate what he saw and heard, and to do so with a mind clear of preconceptions. But he regards as true only what he had learned from experience or witnessed with his own eyes. Thus he refuses to believe in the Hyperboreans (*g.v.*), as there is no credible evidence for their existence; if they did exist, there would also be Hyperbottians (iv. 36). Similarly, he will not accept the report that the Phœnicians in their circumnavigation of Africa had the sun upon their right hand (iv. 42). He rejects the idea that there is a race of men with but one eye (iii. 116), though he speaks else-

where of the one-eyed Arimaspi without offering any objection (iv. 13, 27). He repudiates the hypothesis of an ocean flowing all round the world, saying that the name was invented by Homer or some other poet (ii. 23, iv. 8, 36), and he utters a similar verdict regarding the river Eridanus and the Cassiteride Islands (iii. 115).

He surveys the affairs of the world and the institutions of mankind with an impartial eye, though he adheres to many traditional errors and misconceptions. He does not take it ill that men should regard their own customs and practices as the best, and says that none but a madman would make sport of foreign usages (iii. 38). But experience had also taught him that the destinies of men are influenced by a supernatural power. The gods exist, and they intervene decisively in the affairs alike of individuals and of nations. It was the Divine wrath that pursued the sons of Sperthias and Bulis to the death, so that the crime of slaying heralds should be duly expiated (vii. 137). It was Demeter herself who, at the battle of Platæa, prevented the fleeing Persians from taking refuge in her sacred grove, thus punishing them for their having burned her sanctuary in Eleusis (ix. 65). 'For great crimes great penalties are inflicted by the gods' (ii. 120). But, even where there is no crime at all, the gods ordain evil for mortal men: *χρῆν γὰρ Καρδαύλη γενέσθαι κακῶς* (i. 8). The higher powers keep jealous watch lest man should too proudly exalt himself, and they bring him low even when he is free from guilt (vii. 10e). Xerxes was impelled by a vision of the night to make war upon the Greeks, even against his will, and was thus driven to destruction (vii. 12 ff.). Amasis fears the envy of the gods (iii. 40). And not in dreams only, but also by oracles, do the gods manifest their unalterable designs. As the oracle of Delphi declared (i. 13), Croesus atoned for the offence of his fifth ancestor (i. 91). It was decreed by the oracle that the whole of Attica should fall into the hands of the Persians (viii. 53). The gods are lords of all; even the innocent must undergo the severest afflictions, and thus no one should be called happy till he is dead, and death is better than life. This interpretation of life is precisely what we find in Sophocles; a profound and sincere piety animates both the historian and the poet (cf. H. Fohl, *Tragische Kunst bei Herodot*, Borna-Leipzig, 1913).

With philosophy as such Herodotus had no direct concern. He refers to the philosophers only in so far as their ideas fall within the circle of ordinary knowledge. Thus he mentions the Orphic-Pythagorean doctrine of metempsychosis merely because that belief is met with among other peoples, and he traces it to Egypt. He refers to the eclipse predicted by Thales, and to the gnomon and Anaximander's map of the world. He mentions and discusses the various theories regarding the inundation of the Nile. Further, in his pages we may recognize the influence of the criticisms directed against the popular religion by Xenophanes and Heraclitus. His conception of history likewise is rationalistic, though not always to the point; here he follows his forerunner Hecataeus. Faith and criticism commingle in him ('mélange de scepticisme et de foi' [Hauvette,

Hérodote, historien des guerres médiques, Paris, 1894, p. 35]); and he prays that he may not on that account incur the displeasure of gods or heroes (ii. 45). In such rationalistic criticism we may distinctly trace the effects of the Sophistic philosophy of the time, and these effects may also be discerned elsewhere. It is altogether likely that Herodotus was personally acquainted with the more prominent Sophists; Protagoras, too, had gone to Thurii in 445 B.C.; and Herodotus wrote his book in Athens between 432 and 425 B.C.—at a time, that is to say, when the leading Sophists were resident there. Even the style shows signs of Sophistic influence. Herodotus has a liking for pointed antithesis, and in his hands dialogue has already become an art. This has been demonstrated in detail by W. Nestle (*Beilage zum Programm des evangelisch-theologischen Seminars in Schöntal*, 1908), who also shows that the Sophistic theories of the nature and origin of civilization, of language, and of religious and political institutions were matters of eager interest to Herodotus, and have left their mark upon the composition of his work. Nestle asserts further that Herodotus had assimilated certain specific ideas from Protagoras, Prodicus, and Hippias, and defends his view in *Philol.* lxx. (new ser. xxiv. [1911]) 242-273, where he repels objections and criticizes other theories.

The outstanding quality of Herodotus as a writer consists in his marvellous gift of narrative, and reveals itself in his delight in all the curious and interesting lore which he had accumulated and so deftly reproduces; hence his work has never lost the charm which it exercised from the very first.

6. His dialect.—Herodotus wrote his *History* in the Ionic dialect, the prevailing literary language of his time. The knowledge of this particular type of Greek soon died out, and many spurious forms were introduced into his text by the copyists. This 'Hyperionism' made its effects felt to a remarkable extent, and has been fostered by modern editors. The inscriptions and the poets furnish us with the authentic forms. The older literature relating to this question is given in R. Meister, *Die Mimiamben des Herodas*, Leipzig, 1893, p. 771 f.; cf. also H. W. Smyth, *The Sounds and Inflections of the Greek Dialects: Ionic*, Oxford, 1894; O. Hoffmann, *Die griech. Dialekte*, iii., 'Der ionische Dialekt,' Göttingen, 1898; A. Fritsch, in *Verhandlungen der deutschen Philologen u. Schulmänner in Bremen*, Leipzig, 1900, p. 158 ff.

HEROES AND HERO-GODS (General and primitive).—In dealing with hero-cults, one must distinguish between a *manes*- or ancestor-cult arising out of beliefs in ghosts and spirits and the worship which in course of time may come to be offered to the personages of astral and other myths. It is with the latter that the present article is concerned, and not with mythology as such.

The term 'hero' is usually applied to one who stands out from among ordinary mortals by his superior quality or qualities, conspicuous bravery or sustained power of endurance being the distinguishing features. But there is a large class of persons in oral tradition and literature who stand out from their fellows by reason of their inventiveness, or moral or intellectual qualities, by the introduction of new cults, and, above all, by what they have done to improve the various conditions of human existence—these are usually spoken of as 'culture-heroes.' Amongst the renowned dead there are all gradations in oral tradition—from the men who are recognized as mere mortals to those of such transcendent powers that they may be classed as demi-gods or godlings; indeed, it is often impossible to say where the possession of true godship begins. Literary records, however, have been so thoroughly worked over in many cases that a more precise classification is here generally possible.

A hero is nearly always regarded as the spirit of a dead man. His origin may be unknown; his mortal birth may be recorded; or he may have had an equivocal begetting, being the son of a virgin, or of partly divine and partly human parentage; or, again, he may be the son of supernatural parents; but in all cases he is supposed to have lived as a mortal amongst mortals and died as they do.

The belief in the continuity of life may be taken as universal, death being merely an episode between two phases of continuous existence. Under normal conditions the individual possesses the same character after as before death; and, since most persons are friendly to their kinsmen and willing to help them, so spirits, though theoretically resident in a land of their own, are ready to assist those who have not passed through the intermediate state of death. The practice of appealing, especially when danger is imminent, to the spirits or ghosts of men is very widely spread among various peoples. This appeal may take the form of an invocation or of a prayer, or simple rites may be performed, generally at stated times; thus an incipient worship may be performed which could readily pass into a definite cult. At what stage this process is interrupted depends largely upon the social and religious institutions of the people in question; and the extent to which the recognition of heroes attains may vary from time to time, as is shown by the progressive vulgarization of hero-cults by the Ancient Greeks. The hero-cult of Ancient Greece resembled that of the chthonian divinities and of the dead, and was quite distinct from that of the later Olympians. A blending of the two is seen in the case of Herakles:

'So then my inquiries show clearly that Heracles is an ancient god, and those of the Hellenes seem to me to act most rightly who have two temples of Heracles set up, and who sacrifice to the one as an immortal god and with the title of Olympian, and make offerings of the dead to the other as a hero' (Herodotus, ii. 44 [Macaulay]). 'The Teutonic heroes are, in the main, historical personages, never gods; though, like the Greek heroes, they are sometimes endowed with semi-divine attributes or interpreted as symbolical representations of natural forces' (*EBr*¹¹ xiii. 376).

The question more immediately before us is to determine as far as possible some of the ways in which hero-cults may have arisen among savage communities, but the evidence is by no means so extensive as might have been surmised. Personages who may be described as heroes are plentiful, but their worship, or a cult in connexion with them, is rare.

A people in a purely totemic stage of culture, e.g. the Australian natives, can scarcely originate a *manes*-cult, still less a hero-cult; and, whatever may have been the extraneous cultural influences that have penetrated into Australia, there has not been a development of either of these cults. The case is, however, different for Torres Straits; and what occurs there is given in some detail, as it seems to bring out some suggestive points. Further information will be found in vols. v. and vi. of the *Reports of the Cambridge Exped. to Torres Straits*.

Among the characters in the folk-tales of the Torres Straits Islanders all grades of individuals are found, from men to demi-gods. About some who were spoken of as men, nothing, or very little, is narrated that is miraculous, they being simple warriors, or people who had adventures. There are others who could transform themselves into animals, or to whom something supernatural happened. Many were transformed into stars, stones, animals, or other objects. None of these individuals affect the social or religious life of the natives to any great extent; they merely serve to point a moral or to explain certain objects or events. These more especially were relegated to a remote past, and some of them were spoken of by the Western Islanders as *ad* or *adi*. This word, according to S. H. Ray (*Reports*, iii. [1907] 89), now signifies a legend or honorific title; but probably it had the same significance as the term *ad* of the Murray Islanders (of the eastern group), which implies anything old and traditional, with the idea of a sanctity that is associated with ancient wont—thus certain of their folk-tales are *ad*, and all sacred and magical stones or objects are *ad*.

This idea of sanctity is also connected in varying degree with the culture-heroes. These belong to different categories. Some introduced improved methods of horticulture or fishing, and it is in this group that the marvellous begins to be prominent. The superior fertility of Murray Island is accounted for by the introduction of garden plants from Badu and Moa by two heroes—which at the same time explains the impoverishment of those two western islands. Two other heroes of the Murray Islands built the local fish-weirs, and taught variations in speech to certain other islanders, and they were

said by some to have instituted the shrine that makes coco-nuts abundant (*u zogo*). A great culture-hero for vegetable food came from New Guinea, whither he returned after visiting the western and eastern islands of Torres Straits; he instructed some islanders in language, stocked several reefs with the much-prized cone shell, and notably introduced plants useful to man. He was a very amatory person, and valuable economic plants sprang up as the result of his amours—one of the many examples of the close association in the mind of savage peoples of the sexual act with agricultural fertility. In the islands he was generally called Sido, but there appears to have been some confusion between Sido and Soido. Sido, as Landtman informs us (*Festskrift til Ed. Westermarck*, p. 59), was a great and highly praised hero in his lifetime, though he became a mischievous character during his wanderings after death. His was the first death, which was also a murder, and all men must die and follow the route of his wanderings; eventually he seems to have become the chief of the after-world. Soido is essentially an agricultural hero.

Certain death-ceremonies were introduced from the neighbouring mainland of New Guinea into some of the islands by two culture-heroes, Naga and Waiat, the relative importance of whom differs according to the island from which the information was obtained. Naga knew how to make masks in the form of animals, and instructed men in singing and dancing and in everything relating to the *kwod*, or ceremonial ground; he is stated to have lived on Nagir. Waiat, who, according to one legend, lived on Mabuia, stole a famous fish-mask from Naga. Waiat was represented by a rude and imperfect wooden image which was lodged in a square house on the neighbouring islet of Widal. Only old men had anything to do with the shrine, and whenever the house was rebuilt they held a special death- or spirit-dance, *zarar markai*, which was also danced by them after the usual death-dances. Waiat was described as the head or chief of the *tai*, the great funeral ceremony or death-dance, during which the people 'thought about what Waiat did.' We are told that Naga went to Uga, one of the eastern islands, where he taught the people how to perform the death-dance, and that Waiat went to the Murray Islands. According to the Murray Islanders, Waiat (as they call Waiat) introduced the *zera markai* and other death-dances. In Waier, the smallest of the three Murray Islands, Waiat was represented by a turtle-shell image of a man, which rested against the railings of a model of the platform of a canoe. No women were allowed to see these sacred objects, which were kept in a cave. There was an annual pilgrimage of all the people of Mer and Dauar, the other two islands, to the shrine; the men and novitiates were segregated on one side of the island, and the women and children on the other, this being the occasion for an elaborate initiation ceremony. The essential cult of Waiat on Waier, so far as our information goes, was of an erotic character.

Kwoiam, the warrior hero of Mabuia, who fought natives of various islands, and even successfully and single-handedly attacked a village in New Guinea, lived with his mother, her brothers and sisters, and his sister's son. This family-group constituted what may be termed the 'social unit' of a matrilineal community, the father being so unimportant that his name has not been handed down. Kwoiam is said to have had the shovel-nosed skate for his totem (*augud*), which, amongst other circumstances, points to the Kwoiam cult as being later than totemism. Kwoiam made two crescentic objects of turtle-shell, which blazed with light when he wore them at night, and which

he nourished with the savour of cooked fish. These objects were called *augud* (presumably because the natives did not know by what other sacred name to call them), and they became the insignia of the two phratries into which the totem clans of Mabuia were formerly grouped. In this island Kwoiam was designated as *adi*, and occasionally he himself was spoken of as *augud*. In the Muralug group of islands he was regarded as the 'big *augud*,' and the '*augud* of every one in the island.' Connected with the cult of Kwoiam were two heaps of shells, called navels of the *augud*, which were constructed to show that the two *augud*-emblems originated there; and, when it was deemed necessary to fortify the latter, they were placed upon their respective navel-shrines. The cult of Kwoiam was associated with warfare, and when attacking an enemy the warriors formed in two columns, each of which was led by a headman who wore the Kwoiam emblem to which he was entitled. The moral value of the *augud* in war must have been very great, and the natives themselves recognized the fact; as one man said: 'Suppose we have not got an *augud*, how can we fight?' It is recorded that on one occasion the victorious Mabuia men refused to continue fighting the Moa men on account of the temporary absence of the two *augud*-men. The Moa men also had magical emblems associated with Kwoiam, but these were less potent than those of Mabuia, 'because Kwoiam belongs to Mabuia and not to Moa.' The *augud* had to be treated with respect: in one foray a warrior in excess of zeal ran on in front of the column, but he stumbled and nearly broke his leg because he went in front of the relics, which should always go first, as Kwoiam was wont to do. Kwoiam's mother originally came from an island near Cape York. There are very consistent accounts that in his physical appearance and psychical characteristics he resembled Australians and not Papuans. He fought with an Australian javelin and spear-thrower, indeed, 'all he did was Mainland fashion'; he, his mother, and his nephew 'always kept to themselves, and were like Mainlanders.' It is said that the natives of Cape York Peninsula also talk of Kwoiam.

As Kwoiam was an inspiring feature in the life of the inhabitants of the western islands, so a group of brethren played a similar part for the natives of the central and eastern islands. The migrations and adventures of these heroes are enshrined in various legends which are current in several islands, though there is much obscurity and contradiction. The more probable version brings them from New Guinea, the other from Australia or some island to the south. According to the former version, the hero Bomai went to several islands, and during his journeyings he temporarily changed himself into various animals. On approaching Yam, he gave birth to his brothers Sigar (Sigai) and Kulka. Sigar remained on Yam, Kulka went to Aurid, and Bomai to the Murray Islands. Some versions mention a brother named Seo, who went to Masig.

According to one tale, Sigai and Maiau were the two brothers who went to Yam, and each became associated, in his animal form, with one of the two phratries. A shrine was erected to each, which consisted of a long low hut containing a turtle-shell model representing respectively a hammer-headed shark and a crocodile, and under each of these was a stone in which the spirit, the so-called *augud*, resided, and to them were attached human skulls and jaws. Outside the enclosure which screened the shrines from profane gaze were two heaps of shells which, as in the cult of Kwoiam, had a mystical connexion with the shrines, and were similarly termed 'navels of the *augud*.' The

shrines were so sacred that no uninitiated persons might visit them, nor did they know what they contained; they were aware of the existence of Sigai and Maiau, but they did not know that the former was a hammer-headed shark and the latter a crocodile; this mystery was too sacred to be imparted to the uninitiated. When the heroes were addressed, it was always by their human names, and not by their animal or totem names. Warriors would be enabled to go immune whither they liked if they sang certain songs at the shrines. They prayed as follows: 'O *Augud* Sigai and *Augud* Maiau, both of you close the eyes of these men so that they cannot see us.' There was also a navel-shrine of Sigai on Tutu (Yam and Tutu were inhabited at different seasons by the same people). Before going to fight, the men stood around it, or around those on Yam, and thrust their bows and arrows into it so that they might not miss their aim; and during the fight they called upon the names of the heroes.

Judging from the human face-mask decorated with human skulls from Aurid, which almost certainly represents Kulka, we may surmise that there was a cult of that hero there, which was probably a war-cult.

So far as the Murray Islands are concerned, it appears that Bomai, who was often spoken of as Malu, came first and was recognized as a *zogo*, i.e. something sacred; he was represented by a human face-mask, with a beard of human jaw-bones. Later, Malu arrived with a fleet of canoes from various western islands in search of Bomai. Malu also became a *zogo*, and was represented by a mask in the form of a hammer-headed shark. The foreigners exhibited certain dances in order to please their hosts, and then returned home. The Bomai-Malu cult predominated in the Murray Islands over all other cults, and the sacred men in connexion with it attained a considerable power, which they often used for their private ends. This cult had elaborate and prolonged initiation ceremonies, and appears to have been a secret society or religious fraternity which took upon itself disciplinary functions; indeed, it was very similar to some of the secret societies that are found in Melanesia.

The western and central islands are not particularly fertile, so the natives spend a good deal of their time in fishing, and there is considerable intercourse between the various islands, due to trade or warfare. Here the hero-cults developed into war-cults. The isolated Murray Islands are fertile, and the people are much given to horticulture; thus there was little inducement for the hero-cult to develop into a war-cult, and it concerned itself more with the social life of the people, and the three temporary sacred men were on the way to become priests.

Totemism was still in force in the western and central islands at the time of the arrival of the hero-cults, but it had probably already disappeared in the Murray Islands. Everywhere, but perhaps more particularly in the eastern islands, there were numerous small family or local rituals, most of which were concerned with improving the food supply. A religion then appeared which replaced in the west the indefinite communal association of a totem with its clan by a definite personal relation with a superhuman being, and it is no wonder that it spread, being carried from island to island. These cults also provided both the Western and the Eastern Islanders with a synthesis which had hitherto been lacking, as the men could now meet as members of a common brotherhood, and a feeling of intense pride in new cults was engendered.

An interesting parallel to these hero-cults of Torres Straits occurs in Fiji. The people of Viti-

Levu are divided into two groups, the Kai Veisina and the Kai Rukuruku, which trace their descent from Veisina and Rukuruku, who drifted across the big ocean and taught the people the cult associated with the large stone enclosures, *nanga*. Veisina arrived first, and where he landed the turmeric plant sprang up; where Rukuruku first placed his foot the candle-nut grew. Their followers paint themselves respectively with the yellow or black pigment obtained from these plants. When the two heroes landed, they said: 'Let us go to the Chief of Vitongo and ask him to divide his men between us that we may teach them the *nanga*, for which purpose we have come to Fiji' (Joske, *Internat. Arch. für Ethnogr.* ii. 258). The last clause points to a definite propaganda, and it is possible that a similar movement may have taken place in Torres Straits, since there is not the slightest trace in tradition or elsewhere of secular aggression.

The great mythological personages of southern Melanesia are Qat of the Banks Group, Tagaro of the New Hebrides, and certain of their brothers. Qat, who had a mother but no father, is usually regarded as a spirit (*vui*) that never was a man, though in some places he is said to have been a great man of old times. Codrington (*Melanesians*, p. 155) says:

'It is impossible to take Qat very seriously or to allow him divine rank. . . . When he is said to create, he is adding only to the furniture of the world in which he was born.'

It is related of him that he made men, pigs, trees, rocks, as the fancy took him, and also night. He was always ready to play tricks on his envious brothers, but not in malice. He disappeared by his canoe (in which were his wife, brothers, and all living creatures) being washed out to sea in a deluge. At the legendary home of Qat,

'there is still the stump of a tree which Qat cut down for his canoe; . . . men who are cutting a canoe make sacrifices at this stump, throwing down money there that their canoe may be swift and strong and never wrecked' (p. 141 f.). 'The *tataro* of the Banks Islands, which may be called a prayer, is strictly an invocation of the dead. . . . The Banks Islanders are clear that *tataro* is properly made only to the dead; yet the spirits, *vui*, Qat and Marawa [the spider, a friend of his] are addressed in the same way' (p. 146).

They were prayed to for success, riches, safety when at sea, and other blessings. In the New Hebrides Tagaro takes the place of Qat. In the Banks Islands and northern New Hebrides there is an institution called *Qat*, into which a rigorous secret initiation is necessary, the *Qat* itself being a very elaborate and difficult dance in which the performers wear lofty hats or masks. Codrington says that 'the name *Qat* refers to the hats and not to the *vui*' (p. 85), and he does not allude to any connexion between the dance and the spirit. It is obvious that there is yet a great deal to learn about Qat and Tagaro, and what has been stated above probably holds good for various mythical personages in Melanesia. Qat (Tagaro) apparently represents a human ghost in process of being sublimated into a pure spirit.

The case of the Polynesian cosmic hero, Maui, is a good example of the difficulty with which a hero can become an actual and worshipped deity. The Maui legends, in a complete or fragmentary form, are found all over Polynesia and in parts of Melanesia and Micronesia; they are undoubtedly of remote antiquity, and certainly can be traced to the pre-historic Polynesians; indeed, several hints of Hindu influence have been detected in them. Maui is generally spoken of as the youngest of four brothers bearing the same name. There is much diversity of opinion as to his ancestry, though it is generally stated that his parents were supernatural beings. Although he lived a thoroughly human life, he was possessed of supernatural powers in addition to an inventive mind and a very tricky

and mischievous disposition. He was 'the fisherman who pulls up islands,' and he improved fish-traps and rendered fish-hooks and fish-spears more efficacious by adding barbs. According to different Polynesian legends, Maui raised the sky, which till then had not been separated from the earth, and thus rendered the earth habitable for his fellow-men. He was also 'the ensnarer of the sun,' permitting him to pursue his course only on the condition that he went more slowly in order to increase the length of the day. Maui, by the aid of his cunning and magical powers, gave fire to mankind, and some legends make him the fire-teacher as well as the fire-finder, as he taught men how to make fire by the friction of two sticks. In seeking immortality for man Maui lost his life. There is a native saying: 'If Maui had not died, he could have restored to life all who had gone before him, and thus succeeded in destroying death.' 'Maui's death by his ancestor the Night fitly ends his solar career' (Tylor, *PC* i. 345).

Westervelt, from whom some of the foregoing information has been borrowed, remarks: 'It is a little curious that around the different homes of Maui, there is so little record of temples and priests and altars. He lived too far back for priestly customs. His story is the rude mythical survival of the days when of church and civil government there was none, and worship of the gods was practically unknown' (*Legends of Maui*, p. 11). R. Taylor says: 'Though regarded [in New Zealand] as a god, he does not appear to have been generally prayed to as one; yet he was invoked for their *kumara* [sweet potato] crops and success in fishing' (*Te Ika a Maui*², p. 133).

If any hero deserved worship it was Maui, and yet even he does not appear to have achieved it. Tylor points out that

'Tangaroa and Maui are found blending in Polynesia even to full identification. It is neither easy nor safe to fix to definite origin the Protean shapes of South Sea mythology, but on the whole the native myths are apt to embody cosmic ideas, and as the idea of the Sun preponderates in Maui, so the idea of the Heaven in Taaroa' (*op. cit.* ii. 346).

The Polynesian Creator is called Kanaroa in Hawaii, Taaroa in Tahiti, Tangaroa in Mangaia and New Zealand, Tangaloa in Samoa and Tonga. In Tahiti some maintained that 'Taaroa was only a man who was deified after death' (Ellis, *Polyn. Researches*, i. 323), though by others he was spoken of as the progenitor of the other gods. Tangaroa was not a very important personage in Mangaia, for he had only one *marae*, or altar, and that was almost neglected, the only offering ever presented being the firstfruits of newly planted coco-nut palms (Gill, *Myths and Songs*, p. 19). He can be linked up with Tagaro of the New Hebrides and with Qat of the Banks Islands, whose brothers were Tangaro the Wise, Tangaro the Fool, etc. It would be tedious to detail the various heroic figures that appear in the legendary lore of Oceania, but the samples selected will suffice to indicate their general character, which finds parallels all the world over.

The majority of tales about heroes belong to those classed as myths, since their object is essentially aetiological. The residue are more correctly termed legends, being narratives of what is believed to have happened, though these hero-tales in many cases may be degraded myths. It has often been stated that mythology is the source neither of religion nor of morality, but of science, philosophy, poetry, and history. The tale or myth about a hero may serve to explain natural phenomena, may be in itself an interesting and amusing narrative, may inculcate social observances or illustrate the danger of neglecting them, may stimulate the listener to high endeavour, or may evoke the feeling of mystery and awe. All this may be accomplished without the hero being worshipped; e.g., no worship is accorded to the culture-heroes—often 'transformers' and even tricksters—of the North American Indians, more especially those of the north-west coast, which fact may well be due to the absence of any *manes*-

cult and to the existence of the belief in *manitu*. It is probably very rare for all the myths of a given people to be indigenous, but many have been borrowed along with other cultural elements at various times. With the myth comes the hero, and, whoever he was in his place of origin, he speedily becomes naturalized, and in his new home places where certain incidents took place are pointed out, and many rocks or other natural objects testify to the truth of the tale, nor does it matter though these should be reduplicated in various localities. The vitality of the myth depends less upon its explanatory significance than upon the personality of the hero, but the development of a cult of the hero would seem to depend upon the socio-religious condition of the recipients.

From an examination of the evidence from Torres Straits, it would seem that, though several men of olden time may fairly be termed culture-heroes, yet no practical notice is taken of them—another illustration of the remark that a prophet has no honour in his own country. Those who have attained such recognition are Kwoiam the Australian, Waiat, and Bomai and his companions, who came from New Guinea. For what causes may we assume that they were honoured? The answer here seems to be that it was the introduction of a new religious cult that reacted socially. The introduction of fearsome masks and new death-dances stimulated the imagination and the religious feelings of the recipients. The valorous deeds and evident supernatural power of the Australian berserker not unnaturally gave rise to a war-cult. The following testimony from a native indicates how patriotism may be engendered in a savage:

'The fame of Kwoiam caused the name of Mahuing to be feared for many a long day, and, although the island was rocky and comparatively infertile, Kwoiam covered it with honour and glory, thus showing how the deeds of a single man can glorify a place in itself of little worth' (*Reports*, v. 83).

The cult of the mysterious brethren is more difficult to explain. It is obvious that, whatever it was originally, it developed into a war-cult in the western and central islands, but the bellicose aspect died of inanition in the Murray Islands. It probably would not matter whether totemism were flourishing or waning when the new cultural influences came in from New Guinea; they introduced new religious ideas, and were not hampered by local totemic restrictions. Thus a wider social grouping became possible, the members of which were united by a common religious sentiment and cult. Additional strength would be given to the movement were it originally or ultimately connected with warfare. We are justified in concluding that here, and probably elsewhere, totemism did not develop into a hero-cult, but rather that this was grafted on to the existing totemism and eventually more or less supplanted it. It has not yet been determined whether these hero-cults originated in New Guinea, or, as is more probable, wandered from further afield, gathering mystery in their progress. What were the heroes in their home country? The problems of the Torres Straits heroes are simple compared with those of Melanesia and Polynesia. The hero, apart from the ancestor, has slight chance of being worshipped while he is still recognized as a human ghost. Time, distance, or forgetfulness may transform him into a spirit that never was a man, and a cult may begin; the same agencies may continue the process, aided perhaps by other cultural influences; and a worshipful godling or even god may have developed. *Omne ignotum pro magnifico*.

HEROES AND HERO-GODS (American).—

1. Extent and distribution.—Primitive America is, in a sense, the land *par excellence* of heroes and hero-gods, and its most characteristic myths and legends are those which deal with the birth, growth from infancy up to manhood, exploits, and achievements of such more or less divine or wonderful personages. Nor is the rôle of hero-god confined to man or superman alone, for the whole animal world, in its most remarkable diversities of kinds and of species, finds representatives also in the numerous divinities and semi-divinities on record—in the mythologies, national legends, etc., of the American Indian tribes from Alaska to Tierra del Fuego, and over the broad expanse of the double continent from the Pacific to the Atlantic Ocean. D. G. Brinton, the first ethnologist to devote to this interesting topic a special monograph, says, in his *American Hero-Myths* (p. 27):

'The native tribes of this Continent had many myths, and among them there was one which was so prominent, and recurred with such strangely similar features in localities widely asunder, that it has for years attracted my attention, and I have been led to present it as it occurs among several nations far apart, both geographically and in point of culture. This myth is that of the national hero, their mythical civilizer and teacher of the tribe, who, at the same time, was often identified with the supreme deity and the creator of the world. It is the fundamental myth of a very large number of American tribes, and on its recognition and interpretation depends the correct understanding of most of their mythology and religious life.'

James Mooney expresses himself thus on the same subject (*14 RB&W*, pt. ii. p. 658):

'Probably every Indian tribe, north and south, had its early hero god, the great doer or teacher of all first things, from the Iuskeha and Manabozho of the ruler Iroquoian and Algonquian to the Quetzalcoatl, the Bochica, and the Viracocha of the more cultivated Aztecs, Muyscas, and Quichuas of the milder southland.'

The range of the culture-hero and hero-god among the American Indians is very great:

'Among the roving tribes of the north this hero is hardly more than an expert magician, frequently degraded to the level of a common trickster, who, after ridding the world of giants and monsters, and teaching his people a few simple arts, retires to the upper world to rest and smoke until some urgent necessity again requires his presence below. Under softer southern skies the myth takes more poetic form, and the hero becomes a person of dignified presence, a father and teacher of his children, a very Christ, worthy of all love and reverence, who gathers together the wandering nomads and leads them to their destined country, where he instructs them in agriculture, housebuilding, and the art of government, regulates authority, and inculcates peaceful modes of life. . . . When at last his work is well accomplished, he bids farewell to his sorrowing subjects, whom he consoles with the sacred promise that he will one day return and resume his kingdom, steps into his magic boat by the seashore, and sails away out of their sight to the distant land of sunrise' (*ib.*).

Such a figure, e.g., was the Mexican Quetzalcoatl, for whom the Indians mistook Cortez, the destroyer of their native culture, thinking that he was their hero returning. Elsewhere in primitive America the white man (but very briefly, since his acts soon betrayed him) has been thought a returning hero or divinity. With these ancient hero-gods of theirs some of the Indian peoples were prone to identify the Christ of the European religions.

The culture-hero idea is often more typically American than that of deity. After pointing out that 'gods are a conception that does not flourish among the American Indians,' in his sketch of 'Types of Indian Culture in California,' A. L. Kroeber says (p. 91 f.):

'The Indian substitute for the deity is the culture-hero. The god creates; by the introduction of character he can be differentiated, and the interaction of distinct deities makes god myths. The culture hero is a man; he is always alone. Where he occurs in several personages in one mythology, these are

only repetitions of one another. In North and South America he is the same. Now he is more heroic, dignified, even pathetic, a benefactor and teacher; now more inquisitive, enterprising, obscene, and ridiculous. It is a commonplace that his character varies between these qualities from episode to episode in the same mythology. But he is always a man in spirit, and he always stands alone in his world. He makes the world or re-makes it from existing earth brought him by an assistant animal; he does not create it. He changes individual men, co-existent with him, to animals; he does not create the world's animals and plants. He does not create man, but finds and helps him. He is the one and the only possible character of American mythology; he is the Indian himself in his nakedness.'

Of course, there are exceptions to this general statement, but Kroeber remarks that 'even those specific cases that are exceptions usually rest on a wider basis that conforms with the conditions here described' (p. 92).

2. Human heroes.—The child as hero and hero-god among the American Indians has already been touched upon (see art. CHILDREN [American], vol. iii. p. 525). Much valuable information concerning human heroes in the mythology of the N. American Indians will be found in Lowie's monograph on 'The Test-Theme' (*JAF* l. xxi. [1908] 97-148), where the conclusion is reached that 'a majority of North American test-tales have human heroes and a human setting' (p. 132). He remarks further (p. 134):

'So far as the tales related of sun and moon are concerned, far-reaching similarities distinguishing them as a group from human folk-tales cannot be detected. Solar and lunar heroes are human beings named after, or somehow identified with, sun and moon.' Again (p. 132): 'The test-theme, in its fundamental ideas, the imposition of a difficult or dangerous task and a mutual or competitive trial of strength, is evidently derived from human experience.'

Among the test-themes noted by Lowie in N. American Indian tales are the following:

Flight to the sky, snapping-door, tests by cruel relatives spine-seat, wedge test, capture of animals, fights with animals, striking trees, *vagina dentata*, sweat-house, fire ordeal, trials of strength, trip to the under world, pushing hero down a precipice, attempt to drown hero, falling trees, hero swallowed by clam, fish, etc., hero sent to get berries in winter and like errands, imitation of host, killing monsters, etc.

Lowie discusses briefly, under the head of hero-tales, these types:

Western 'transformer' myths, myths of the Californian Maidu, 'lodge-boy' and 'thrown-away' cycle (Plains Indians, etc.), Pueblo twin myths, rabbit-cycle (Ponka, Menomini), blood-clot cycle (Blackfoot, Pawnee, Dakota, Arapaho, Gros Ventre), star-boy (Crow, Pawnee, Dakota, Arapaho, Kiowa, Gros Ventre, Blackfoot).

Details concerning some of these heroes will be found in Grinnell's *Blackfoot Lodge Tales* (1903) and *Pawnee Hero Stories and Folk-Tales* (1895); G. A. Dorsey's *Pawnee Mythology* (1906), *Mythology of the Wichita* (1904), *Traditions of the Arikara* (1904); G. A. Dorsey and A. L. Kroeber's *Traditions of the Arapaho* (1903).

Among the Plains tribes the 'poor boy' seems to be a common and favourite hero in folk-tales. With the Arikara, as with the Skidi Pawnee, according to Dorsey (*Trad. of Arikara*, p. 6), 'the poor boy . . . is the culture-hero, while Coyote, the great transformer of the Northwest, takes a very inferior part.' The chief heroes of this sort among the Caddo are Star-Boy, Sun-Boy, and Burnt-Hands—the last the Burnt-Belly of the Skidi Pawnee. Similar heroes are the following, in one way or another: the Wintun (California) Boy-dug-out-of-the-ground, Micmac Spring-Boy, Gros Ventre Found-in-the-grass, Bellacoola and Chilcotin Salmon-Boy, Cherokee Boy-with-scrofula, Ponka and Menomini Rabbit, etc.

According to Boas (*JAF* l. xvii. [1904] 2), 'the most striking feature of Eskimo folk-lore is its thoroughly human character,' and 'with the exception of a number of trifling tales and of a small number of longer tales, the events which form the subject of their traditions occur in human society as it exists now.' Stories telling of the feats of animals are rare, and animal-stories proper may have been borrowed from the Indians by the Eskimos. This opinion as to the rarity of animal stories among the Eskimos is not, however, shared

by Radin (see art. ESKIMOS, vol. v. p. 393), who assigns a larger rôle to animal actors in Eskimo legends. Bogoras, who has made a comparative study of the folk-lore of north-eastern Asia and that of north-western America, informs us (*Amer. Anthropol.*, new ser., iv. [1902] 605) that 'the general character of the Chukchee and Eskimo tales is quite alike, and the chief topics on both sides of Bering Sea are about the same.' Hero-children and human heroes are common in both. The prevalence of human heroes in the folk-tales of the South American Indians (see art. CHILDREN [American]) will doubtless appear when we know more about this rather neglected field of primitive mythology, and the characters interpreted as personifications of sun and moon are revealed in their true nature, as has been the case with so many figures in the mythology of the northern continent.

3. Typical heroes and culture-heroes.—The Aztec Quetzalcoatl, the Mayan Itzamna, the Chibchan Bochica, and the Quechuan Viracocha have been discussed at considerable length by Brinton in his *American Hero-Myths, Myths of the New World*, etc., and by more recent authorities. They are fairly comparable with some of the great culture-heroes of the Old World. The deeds that they accomplished include the cleaning up of the monster-ridden world, the establishment of society and human civilization—all things, from making the earth fit for mankind to making mankind fit for the new earth. As in the Old World, so in the New, their memory is connected alike with the Paradise that once was and with that which is some time again to come. Besides such great figures as these there are scores of others less majestic and less attractive.

Concerning the culture-heroes of some of the tribes of the North-west Pacific Coast, F. Boas says (*Indianische Sagen*, p. 339):

'What gives the traveller (or wanderer)-tale its character, in this region, is the sharp distinction of the culture-deity from the "Eulenspiegel." Neither the Cikla of the Chinook, nor the Qals of the Coast Salish, the Kumsnootl of the Comox, the two Travellers of the Nutka, nor the K'äniŋ yilak' of the Newwettee play, in connection with their culture-mission, such tricks as do the Raven in northern British Columbia, the Glooscap of the Micmacs, the Manabozho of the Ojibwa, the Napi of the Blackfeet, the Coyote of the tribes of the southern Rocky Mountains, or the "Boatman" of the northern Athapascans.

Such tricks are not entirely lacking, but are transferred to different animals or other beings, such as the Bluejay among the Chinook, the Mink and the Raven among the Coast Salish, Comox, and Newwettee, as Kwotiat, the Mink, and the Raven among the Nutkas. The Shuswap have not made so sharp a distinction, and, through their influence, the separation is not so clear among the Fraser River tribes as among the other Coast peoples. The separation is clearest among the Coast Salish and the Bilqula. The Coast Salish of Puget Sound have likewise not carried out the distinction.'

Boas has also discussed the question of the hero and the transformer in his Introduction to Teit's 'Traditions of the Thompson River Indians of Brit. Col.' (*Mem. Amer. Folk-Lore Soc.* vi. [1898] 1-12).

The general character of the hero-myth of the Californian aborigines is briefly sketched by A. L. Kroeber in his art. on 'The Religion of the Indians of California.' The primary feature of the mythologies of the Indians of the north-western part of the State is 'a very deeply impressed conception of a previous, now vanished, race, who, by first living the life and performing the actions of mankind, were the producers of all human institutions and arts as well as of some of the phenomena of nature'; while second in importance are 'myths dealing with culture heroes more or less of the trickster type familiar from so many other parts of North America' (p. 343). In central California, where there 'is always a true creation of the world, of mankind, and of its institutions,' the creator seldom has 'tricky exploits or defeats' attributed to him—such things belong to an antithetic secondary creature, usually the Coyote. In the

northern half of the central area, however, 'the creator is generally anthropomorphic; if not, he is merged into one personage with the more or less tricky Coyote.' In southern California appears the long origin-myth of a thoroughly south-western and Pueblo character. The mythology of the southern part of California resembles that of the south-west rather than that of the rest of the State. As Kroeber notes (p. 344), the mythology of the north-western region of California 'shows affinities to the North Pacific Coast in its prevalence of the culture-hero and trickster over the creator.'

The Maidu of northern central California furnish us with Kodoyanpe (Earth-Namer, or Earth-Maker), a transformer-creator type; also Onkoito, 'a supernaturally born destroyer, conqueror, and avenger.' The northern Wintun conception of Olelbis 'shows a developed and a lofty conception of a creator,' while among the southern Wintun 'there is little antithesis between creator and Coyote in the creation myth.' In the mythology of the Shasta, Coyote is both creator and trickster, although the resemblance to the mythology of the north-western area is not very great. The Klamath (or Lutuami) K'mukamtech, or Old Man, 'is not the "good creator" of the Maidu Wintun, Yuki, and Wishosk; he is deceitful, with the character of the typical culture-hero trickster.' In many things, indeed, he suggests the Algonkian Manabozho.

The Ojibwa Nanibozhu or Nanabozhu, the Mississaga Nanibozhu or Wanibozhu, the Sautaux Ojibwa Nenaboj or Nanabush, the Ottawa Nenabozhu, the Menomini Manabozho or Manabush, the Nipissing Nenabojo, all correspond to the Cree Wisaketchak, and, more or less, to the Blackfoot Napi or Napiu, the Micmac Glooscap, etc. The stories of the deeds and exploits of this hero-god, who figures in the creation-myth and the deluge-legends of these Indians, who taught them many of the arts and inventions, and who sometimes deceived as well as helped them, have been correlated and discussed by Chamberlain (*JAFI* iv. [1891] 193-213). The most detailed account of some of the deeds of this Algonkian culture-hero is given in W. J. Hoffmann's article and monograph on the Menomini Indians (*14 RBEW*, pt. i. pp. 3-328). The culture-hero of the Sacs and Foxes (also Algonkian) is Wisa'kä. A contest with the manitous appears in the story of Wisa'kä recorded by Jones (*Fox Texts*, pp. 336-379), which includes the flood-legend:

'The theme of the following story is the struggle of the culture-hero to subdue the manitous and make the world ready for the people who are to come after. It is the most sacred myth of the Foxes; and with the Saks it is the myth on which rests the *midewiwin*, a religious society which preserves the most sacred forms of religious worship. It is in two parts: first, the struggle of the culture-hero with the manitous, in which the death of his brother, the flood, and the defeat of the manitous are the leading events; second, the pacification of the culture-hero by the manitous, and the restoration of peace, preliminary to setting the world in order for a home for the people' (p. 336).

This subjugation of the manitous is also one of the labours of Manabozho or Nanabozhu among the Ojibwas, etc. The culture-hero myth of the Sacs and Foxes has been recorded by Jones (*JAFI* xiv. [1901] 225-239). After preparing the earth for mankind and driving off the manitous, who had sought to destroy him, Wisa'kä proceeded as follows (p. 237):

'Wisa'kaha then created the people, making the first men and the first women out of clay, that was as red as the reddest blood (hence the Indian name of the Foxes, Meskwa' K'ägi, 'Red-Earths'). And he made them after the race of his mother. He taught them how to hunt, and he taught them how to grow food in the fields; he taught them all kinds of sports, and he taught them how to live peacefully with one another; he taught them how to sing and dance and pray, and he taught them all manner of other good things.'

Then he left the people, going away to live in

the north, but promising to return one day to take them to their new home in the west, where they were to dwell for ever with their kindred who had gone before them. Wisa'kä is represented as being ever youthful. The culture-myth relates in detail 'the divinity's benevolent acts toward men, his teaching the people the way to live, and his preparation for them of a home after death in the spirit world.'

In his *Fox Texts* (1907) Jones published (pp. 228-379) a number of stories of the culture-hero Wisa'kä, concerning whom he observes (p. 228):

'The stories to follow are typical of that mass of narrative in which the culture-hero moves, now as a huffoon doing tricks to others and having them done to him, and now as a benefactor and as an altruistic character. Sometimes he is peevish and whimpering, like a spoiled child, and stoops to acts most degrading for the accomplishment of an end; and again he rises to the dignity of a wise, all-powerful deity. He is almost always represented as dwelling with his grandmother, whom the Foxes symbolize as the Earth.'

In one instance only is Wisa'kä referred to as having wife or children. In some of his difficulties his grandmother comes to his aid. He comes to grief often in trying to imitate his host (e.g. skunk or duck); he accepts challenges, and thereby becomes a victim of his own foolishness.

Of Glooscap, the culture-hero of the Micmac and closely related Algonkian Indians of Maine, New Brunswick, and Nova Scotia, Charles G. Leland says, in *The Algonquin Legends of New England* (p. 2), that, while he is an appalling giant in his contests with huge monsters and other creatures,

'in the family circle he is the most benevolent of gentle heroes, and has his oft-repeated little standard jokes. Yet he never, like the Manahozho-Hiwatha of the Chippewas, becomes silly, cruel, or fantastic. He has his roaring revel with a brother giant, even as Thor went fishing in fierce fun with the frost god, but he is never low or feeble.'

He informs us further (p. 13) that 'Glooscap is always a gentleman.'

Edward Sapir ('Wishram Texts,' *Publ. Amer. Ethnol. Soc.* ii. [1909] p. xi) says of one of his Indian informants, who is 'theoretically a Methodist,' but in mind-content 'to all intents and purposes an unadulterated Indian,' that

'he implicitly believes in the truth of all the myths he narrated, no matter how puerile or ribald they might seem. Coyote he considers as worthy of the highest respect, despite the ridiculous and lascivious sides of his character; and with him he is strongly inclined to identify the Christ of the whites, for both he and Coyote lived many generations ago, and appeared in this world in order to better the lot of mankind.'

Other culture-heroes are recorded from the various American Indian tribes, besides the 'transformers' of the North Pacific coast region treated of by Boas, in his *Indianische Sagen* (1895), and in the mythological data of the Jesup Expedition, published by the American Museum of Natural History (New York), and besides the cycle of animal and bird heroes and semi-heroes of the Pacific slope, such as Raven, Blue-Jay, Coyote, and Mink. The following may be mentioned:

Klamath K'mukamitch; the 'Old Man' of many western tribes of North America; the Hidatsa Itamapisa; the Mandan Numuckmuckenah; the Arapaho Nihançan; the Cherokee Wasi; the Cheyenne Vihuk; the Tarascan Curicaheris; the Central American Kukulkan and Votan; the Moxo Arama; the Guarayo Ahaangui; the Tupian Caruhug and Maire Monan; the Paressi Uasale; the Guaycuro Karakara; the Bakairi Kamushini; the Carayan Kahoi; the Arawakan Kamu; the Guarani Tamoi; the Izi of the tribes on the Uaupes; the Guaranan Ahoje.

Some brief details concerning many of the South American heroes and culture-heroes will be found in Ehrenreich's *Die Mythen und Legenden der südamerikanischen Urvölker* (Berlin, 1905).

4. Culture-hero, clown, deceiver.—In an article on 'The Hero-God of the Algonkians as a Cheat and a Liar,' published first in the *American Antiquarian* in 1885 and then again in his *Essays of an Americanist* (1890, pp. 130-134), D. G. Brinton called attention to the curious fact of the attribution to certain culture-heroes of the Algonkian

Indians of the characteristics of trickery, deceit, lying, and clownishness of various sorts. This was illustrated from the name of the culture-hero of the Micmacs, Glooscap (*Glus-gahbe*, 'juggler with words,' 'word-breaker,' 'deceiver'); and a similar meaning was said to attach to the Cree *Wisaketchak*, the analogue of Glooscap with this western Algonkian tribe. Speaking of Michabo, to whom innumerable tricks are attributed, Brinton says (*Essays of an Americanist*, p. 133):

'Michabo does not conquer his enemies by brute force, nor by superior strength, but by craft and ruses, by transforming himself into unexpected shapes, by cunning and strategy. He thus comes to be represented as the arch-deceiver; but in a good sense, as his enemies on whom he practises these wiles are also those of the human race, and he exercises his powers with a benevolent intention.'

'Thus it comes to pass that this highest divinity of these nations, their chief god and culture-hero, hears in familiar narrative the surprising titles—"the liar," "the cheat," and "the deceiver."'

In *The Myths of the New World*, however, Brinton gives another view of the matter, as follows (p. 194):

'In many of the tales which the whites have preserved of Michabo he seems half a wizard, half a simpleton. He is full of pranks and wiles, but often at a loss for a meal of victuals; ever itching to try his magic arts on great feasts and often meeting ludicrous failures therein; envious of the powers of others, and constantly striving to outdo them in what they do best; in short, little more than a malicious huffoon, delighting in practical jokes, and abusing his superhuman powers for selfish and ignoble ends.'

'But this is a low, modern, and corrupt version of the character of Michabo, bearing no more resemblance to his real and ancient one than the language and acts of our Saviour and the Apostles in the coarse Mystery Plays of the Middle Ages do to those recorded by the Evangelists.'

That some of the Indians under Christian influence may have turned to ridicule their old gods is quite possible. J. A. Cuoq (*Lex. Algonq.*, Montreal, 1886, s.v. 'Wisakedjak,' p. 443), e.g., says:

'The word *Wisakedjak* is now employed only derisively by Christian peoples. With them, *Wisakedjak*, like *Nenaboj*, is about synonymous with monkey (*singe*) in a figurative sense. Thus, it is said of anybody who imitates what he sees done, "He is a *Wisakedjak*."'

J. D. Prince, in his introduction to *Kulóskap, the Master*, says concerning *Kulóskap* (Glooscap), the culture-hero of the Micmacs, Passamaquoddies, and Penobscots (p. 33):

'Kulóskap (Klókáhe) is a god-man of truly Indian type who undoubtedly represents the principle of good, and particularly good nature, as opposed to his twin brother Malsum the Wolf, who may be called the Ahrimán of the Wahanaki, although this is almost too dignified a term.'

He remarks further (p. 34):

'The tendency of Kulóskap, in spite of his name, was essentially benevolent. Oddly enough, Kulóskap means "the liar," from a stem *klásk*, "lie" + *ap*, "a man, person, one who stands." . . . This appellation, uncomplimentary as it sounds to our ears, was not really meant in this sense by the Indians. Kulóskap is called "the deceiver" not because he deceives or injures man, but because he is clever enough to lead his enemies astray, the highest possible virtue to the early American mind.'

This explanation is much the same as one put forward by Brinton; but, even if it did explain (it hardly does so satisfactorily) the name of the culture-hero, in his capacity of 'deceiver,' it fails to account for the clownish actions, ridiculous escapades, and mean and despicable things attributed to him. Nor does it take fully into account the rather numerous occasions on which he is completely outwitted, e.g., in the contest with the baby, with certain animals, and even with trees.

Clark Wissler, in his 'Mythol. of the Blackfoot Indians' (pp. 6-12), discusses the character of the culture-hero of these Indians and his relations to the other figures of their mythology. Of Old Man, or Napiw* (the Napi of various other writers), we are informed (p. 9):

'That the Blackfoot formerly had a well-defined creation-myth, in which the Old Man took the initiative in producing and transforming the world, is indicated by several writers. Those noted above give more or less in detail a running account of the peopling of the earth and the instruction of mankind in the art of living. While these incidents do not occur in detail

In the Old Man myths recorded in this paper, they are occasionally implied. Such origins are at present often assigned to the Old Man without the formality of a myth.

It will be noted that the greater part of the tales collected by us recite the absurd, humorous, obscene, and brutal incidents in the Old Man's career. No ritualistic or ceremonial practices appear to be based upon any of these narratives, though it may have been otherwise in the past. On the other hand, connected with them are the suggestions of origins for many aspects of material culture, such as the buffalo-drive, the making of weapons, methods of dressing skins, etc. A considerable number of places and topographical features were associated with his adventures; as Old Man's River, Tongue Flag River, Old Man's Gambling-Place, Old Man's Sliding-Place, Rolling-Stone Creek, etc. In fact there seems a tendency to give all of his adventures a definite location in Alberta.

Wissler says further (p. 9):

'For several decades at least, the Blackfoot have considered the Old Man as an evil character, in most respects trivial, who long ago passed on to other countries. Whenever the writer asked if the Old Man was ever prayed to, the absurdity of the question provoked merriment. The usual reply was, that no one had enough confidence in him to make such an appeal. In daily conversation his name is often used as a synonym for immorality. However, it must not be implied that he is regarded as an evil spirit. His name is especially associated with things obscene, and pertaining to sexual immorality. I have heard the Piegan say that So-and-so "must be trying to be like the Old Man; he cannot be trusted with women."

It is quite probable that here, as with other Indian tribes, the culture-hero has suffered from the same disposition seen among civilized peoples of the present day to attribute actions of a certain character to their heroes and great historical figures. Wissler, therefore, seems quite justified in his statement (p. 10):

'We have occasionally noted a tendency to assign modern obscene anecdotes to this character, and it may well be that many of the tales long attributed to him have been accumulated by the laws of association. The unfortunate human tendency to appreciate keenly the humour in such anecdotes seems sufficient to account for their survival and accumulation long after belief in and respect for the Old Man as a creator, teacher, and transformer has passed the verge of extinction.'

Taking everything into consideration, Wissler inclines to the opinion that certain Old Man myths 'are survivals from a much larger group constituting the ancient basic beliefs of the Blackfoot,' and that 'there has been a disintegration of the creative and cultural origin myths concerning Old Man.' To-day the Blackfoot make Napiw^a (the Old Man) and Natos (the Sun) different characters, the former secondary. According to Wissler, the Blackfoot and the Crow 'culture-heroes' are closer together than the Blackfoot and those of the Arapaho and Gros Ventre. Those of the Blackfoot, Crow, and Arapaho seem all, however, to be 'entirely human,' with no traces of any normal qualities. W. McClintock, in his *The Old North Trail*, gives much space to Old Man and the myths about him (pp. 337-348). He says concerning his character (p. 337 f.):

'The character of Old Man, as revealed, even in the more serious of these myths, is a strange composite of opposing attributes, of power and weakness, of wisdom and passion, of benevolence and malevolence. He associated intimately with the birds and animals. He conversed with them and understood their thoughts and language, and they understood him. Although believed to be the creator of all things, and as having omnipotent power, he was often helpless and in trouble and compelled to seek the aid of his animal friends. He was, in fact, like an animal in his instincts and desires, which, strange to say, were exercised in conjunction with his supernatural power.'

The power of Old Man was 'uncontrolled by reason, and wanton in its exercise,' and 'he was a deceiver and a trickster and his name was a synonym among the Blackfeet, at least in later years, for mischievous and immoral adventure' (p. 338). Of some of the Old Man myths, McClintock remarks (p. 337) that they 'are samples of Indian humour, told as we tell fairy tales and using Old Man for their central figure.'

Many of the myths relating to Old Man among the southern Piegans of Montana have been published by C. C. Uhlenbeck in his *Original Blackfoot Texts* (1911) and *A New Series of Blackfoot Texts* (1912). Uhlenbeck styles Napiw^a (or Napi) 'a trickster-hero.'

Robert H. Lowie, who was among the Chipewyan Indians (of Athapascan stock) about Lake Atha-

basca in 1908, reports ('Chipewyan Tales,' 1912, p. 173) that 'the Wisáketcak myths were becoming part and parcel of Chipewyan folk-lore.' He remarks further:

'While the Cree name of the hero was the only one used by my informants [Chipewyan Indians, or Indians of partly Chipewyan and partly Cree extraction] and was said to have no Chipewyan equivalent, there were indications that Wisáketcak was being brought into close relation with other Chipewyan characters of older standing. Thus, Francis Fortin regarded Wisáketcak as one of three brothers, the others being Crow-Head and Spread-Wings. While the other two always remained with the Chipewyan, Wisáketcak lived alternately among the Cree and the Chipewyan. However this may be, the Wisáketcak cycle of the Cree was certainly very well known among the Chipewyan and part Chipewyan at the time of my visit.'

The Wisáketcak myths obtained from the Chipewyan Indians are given on pp. 195-200, and are of the 'Wisáketcak was travelling' type. This passing over of an Algonkian cycle of myths into the mythological *fond* of the Athapascan Chipewyan is a most important fact in comparative folklore; it suggests the possibility of similar occurrences elsewhere in primitive America.

The correspondents of the Algonkian Nanabozhu and similar characters in the mythology of the Siouan stock have been discussed by J. O. Dorsey (*JAFI* v. [1892] 293-304). These are Mactcingé (the Rabbit), Ictinike, his great enemy, and Haxige (nearer to Ictinike than to the Rabbit). Other minor figures of like import are 'The Orphan,' 'Wears-a-plume-in-his-hair,' and 'Badger's Son.' In character and in exploits Ictinike and Haxige both resemble Nanabozhu very much, many of the incidents in the legends about them being identical.

Of the Iroquoian Tawiskaron, J. N. B. Hewitt (*HAI* ii. [1910] 709) says:

'In concept Tawiskaron is so closely identical with the mythic personage called Chakekenapok in Algonkian mythology, a younger brother of Nanabozho, that they may be treated together.'

And of Ioskeha, or Teharonhiawagon, the brother of Tawiskaron, and the great Iroquoian culture-hero, corresponding to the Algonkian Manabozho or Nanabozho, he says (*op. cit.* p. 719) that, in everything but minor details, he is identical with the conception of Nanabozho. According to Hewitt (*op. cit.* p. 19),

'Nanabozho is apparently the impersonation of life, the active quickening power of life—of life manifested and embodied in the myriad forms of sentient and physical nature. He is therefore reputed to possess not only the power to live, but also the correlative power of renewing his own life and of quickening and therefore of creating life in others. He impersonates life in an unlimited series of diverse personalities which represent various phases and conditions of life, and the histories of the life and acts of these separate individualities form an entire cycle of traditions and myths which, when compared one with another, are sometimes apparently contradictory and incongruous, relating, as these stories do, to the unrelated objects and subjects in nature. The conception named Nanabozho exercises the diverse functions of many persons, and he likewise suffers their pains and needs. He is this life struggling with the many forms of want, misfortune, and death that come to the bodies and beings of nature.'

Teharonhiawagon has by some been erroneously identified with Hiawatha, who seems to have been a real human being, a famous Iroquois lawgiver of the 16th cent. (see *HAI* i. [1907] 546); and Longfellow's so-called 'American epic,' which bears the title *Hiawatha*, is really concerned with the story of the Ojibwa hero-god Manabozho, whom the poet confused with the Iroquoian Hiawatha, believing both to be the same mythical being, following in this the mistaken ideas of Schoolcraft and others of his informants.

5. Twin-heroes and culture-heroes.—The appearance of heroes and hero-gods as twins, older and younger brothers, or a group of brothers (varying from three to seven) is common in primitive America—and the twins are often said to be born of a virgin-mother. Some of the most important culture-heroes appear at first as one of twins, etc., but soon the minor brother or brothers vanish from the story, lose their lives, or in some way become

of little or no account henceforth. Sometimes the twins or two brothers represent a conflict, one standing for good, peace, and the like, the other for evil, war, etc.; sometimes also this fraternal strife begins in the womb of the mother before birth (as with the Iroquoian Good Mind and Bad Mind), and the eagerness of the stronger and more impetuous to be born kills her. A characteristic Algonkian culture-hero, Wisa'ká, of the Sacs and Foxes, is represented to have been the eldest son of Gishá Mun'etōa, the greatest of all manitous, who lived in the days when the earth was peopled with manitous. Jones (*JAF* xiv. [1901] 225) says:

'Now the elder of the two sons [the great manitou had four] was Wisa'ká, and the younger Kujá'pa'taha. They were different from all children before them, for, even when very young and small, they were mightier manitous than those who were older than they. And, the older they grew, the stronger they walked in their might as manitous. The manitous beheld the growing might of the two boys, and became jealous.'

But it is the elder brother who becomes the culture-hero and friend of mankind. The pre-dominance of the elder brother characterizes many other Indian myths.

The twin hero-gods of the Zuñi are Ahaiyuta and Mátsailéma, spoken of as older and younger brothers, and 'accounted immortal twin youths of small size.' Their deeds are detailed by Cushing in his 'Zuñi Creation Myths' (*13 BBW*, 1896) and *Zuñi Folk-Tales* (1901). They are also styled 'the twin gods of war,' and are looked upon as the 'right-hand' and 'left-hand' beings of the sun. A. L. Kroeber found 'the myth of the miraculous twins and war leaders' among the Uinta Utes of the Shoshonean stock in north-eastern Utah (*JAF* xiv. [1901] 252). A characteristic South American twin myth is the Bakairi story of Keri and Kame; the former, wiser and more powerful than the latter, is, according to K. von den Steinen (*Die Bakairi-Sprache*, Leipzig, 1892), the chief hero in the legends of these Indians. The names now borne by these heroes are those of the sun and moon, and, curiously enough, it is the weaker, and not the stronger one, who has the name of the sun.

Among North American twins, brother-pairs, etc., may be mentioned the following:

Noakana and Masmasalanik among the Wíkeno of British Columbia; the Two Brothers of the Déné (Athapascan); the Thunder Twins of the Californian Tachi Yokuts, and Miwok (much elaborated by the Yuki); the Klamath or Lutuamian Marten and Weasel; the Pemsanto and Onkoito of the Californian Maidu; the Algonkian Manabozho and Chokanipok (also Micmac Gloscap and Malsum); the Iroquoian Ioskeha and Tawiskaron; the Navaho Tobadizini and Nayenezgani; the Zuñi Abaiyuta and Mátsailéma.

From Mexico and Central America may be cited:

Quetzalcoatl and his three brothers, among the Aztecs; the Hun-Hun-Ahpu and Yukub Hun-Ahpu and Hun-Ahpu and Xbalanque of the Mayas; the Two Brothers (Twins) of the Guaymí of Costa Rica.

From South America the following:

Amalivaca and Vochi among the Tamanacos of Venezuela; Tamendonare and Arikute among the Brazilian Tupis; Karu and Rairu among the Mundurucus; Tiri and Karu among the Yuracare; the two sons of Abuang ul among the Guarayos; Pachacamac and Vichama among the Yunkas; Apocatequil and Figueras among the Guamacucos; Keri and Kame among the Cariban Bakairi.

The legends concerning these heroes embody a great variety of incidents—co-operation, opposition, adventure, strife.

6. Re-incarnations of the hero-gods.—In the literature relating to the conflict of the Indian peoples of America with the white man, the 'Messiah movements,' the 'Ghost-Dance religion,' etc., we meet with references to beliefs in the return of the ancient divinities and culture-heroes, for the purpose of driving out the white intruders and restoring the land to the red man, in all its pristine beauty and fertility. This is sometimes a feature of the 'new religions' of the American Indians, recently discussed by Chamberlain (*Journ. Relig. Psychol.* vi. [1913] 1-49). Among the Ojibwa,

e.g., the 'prophet' Tenskwatawa (a Shawnee settler-forth of a 'new religion,' in 1805-1812) came to be looked upon as an incarnation of Manabozho. The revolt of the Mexican Zapotecs in 1550 was led by an Indian priest, who declared himself to be an incarnation of Quetzalcoatl.

After the departure of the culture-hero, some Indians, according to the legends of not a few tribes, succeeded in making their way to his far-off abode. Leland (*Algonq. Leg.*, 1885) records (pp. 94-103) two Micmac tales of the men who went to Gloscap for gifts, and Jones (*Fox Texts*, pp. 332-337) gives the Fox Tale of how 'The Red-Earths went to where Wisa'ká was.' Upon this story he remarks (p. 332):

'This narrative is but another version of a familiar story known to other Algonkin tribes. It is the account of the visit of four men to the culture-hero at his distant home, and of how each obtained what he asked for. The visit is supposed to have taken place long after the culture-hero had departed from this world. It is not stated in the text, but the place of the home is at the frozen north.'

In the Micmac story the departed Gloscap is represented as dwelling in a land of magic and of beauty.

7. Interpretation of heroes and hero-gods.—Both in his *The Myths of the New World* and his *Essays of an Americanist*, and in other writings as well, Brinton sought to interpret the culture-heroes of the American aborigines as personifications of light, dawn, etc., calling to his aid, not infrequently, Max Müller's 'disease of language' theory. The Algonkian *Michabo*, the 'Great Rabbit,' was a light-god, because of the relationship of *wábos* (i.e. 'white one'), the term for 'rabbit,' and *wában* (also from the root *wáb*, 'white'), the word for 'dawn'; and *Manabozho* was disposed of in a similar manner. The Iroquoian *Ioskeha*, Aztec *Quetzalcoatl*, Mayan *Itzamna*, Chibchan *Bochica*, Peruvian *Viracocha*, and many other figures, he made out to be essentially the same. The often-occurring contest of two brothers or of the twins, as, e.g., the Iroquoian *Ioskeha* and *Tawiskara*, the Algonkian *Manabozho* and *Chokanipok*, he explained as the contest of light and darkness. The culture-hero is, as was sung of Itzamna, 'son of the mother of the morning,' or 'born in the east.' To cite Brinton's own words (*Amer. Hero-Myths*, p. 29):

'The most important of all things to life is Light. This the primitive savage felt, and, personifying it, he made Light his chief god. The beginning of the day served, by analogy, for the beginning of the world. Light comes before the sun, brings it forth, creates it, as it were. Here, the Light-God is not the Sun-God, but his Antecedent and Creator.'

This is somewhat different from the solar and lunar theories of hero-myths revived in recent years, in particular by Frobenius and others, and shared also by Ehrenreich, in his monograph on general mythology (p. 233), where he identifies 'culture-heroes' with the sun, the moon, and Venus; in his special treatment of South American myths (*Myth. und Leg. der südamer. Urvölk.*, p. 24), he says of 'the so-called culture-heroes' that 'they all bear more or less the character of sun or moon beings.'

As noted above, the unsatisfactory character of the naturalistic theory for the explanation of American hero-tales and hero-myths has been pointed out by Lowie, who emphasizes their interpretation on grounds of human experience. Not more successful than the solarists and the lunarists are the Freudian school of psycho-analysts, with their *outré* dependence upon sex and sex-motifs. One outgrowth of Freudianism in this field is Otto Rank's *Der Mythos von der Geburt des Helden* (Leipzig, 1909). Wundt's conception of the hero as 'a projection of human wishes and hopes' may perhaps hold without either the solar-lunar basis of Frobenius-Ehrenreich or the more pathological substrata of the Freudian school. Here, as else-

where, the explanation from normal humanity is always the best.

ALEXANDER F. CHAMBERLAIN.

HEROES AND HERO-GODS (Babylonian).

—The amount of material furnished by the native inscriptions, Berosus, and the Greek writers who deal with Bab. mythology indicates that the literature treating of this subject was exceedingly extensive. Moreover, not only are the narratives which have been handed down attractive and entertaining; they also reveal to us the opinions of the more cultured Babylonians concerning the origin of created things, the relationship of the gods to men, and the limit of the power of both, to say nothing of the fancies and the inventive power of their minds; and the stories of their hero-kings are probably, in certain cases, not without a historical value.

I. BABYLONIAN HEROES MENTIONED BY BEROSUS.—I. Alorus and five of his successors.—After Oannes came forth from the sea (the Persian Gulf) to teach the people, there ruled Alorus, 'the shepherd of the people,' for 10 *sari* (36,000 years). Afterwards came Alaparus (see below, III. 1, 'Adapa') for 3 *sari* (10,800 years). He seems to have been regarded, like the next, Amelon or Amillarus, who reigned for 13 *sari* (46,800 years), as a native of Pantibibla, probably Sippar, in the province of Agadé. The fourth mythical king was Ammenon (in Sumerian probably *En-men-nunna*; see below, III. 3), who reigned for 12 *sari* (43,200 years). In his time came the Musarus Oannes (? *U-anna*, 'luminary of heaven,' possibly the sun), or Annedotus, half man and half fish, from the Persian Gulf. The fifth ruler was Megalarus (Metalarus), also of Pantibibla, who reigned for 18 *sari* (64,800 years). The sixth reign was that of Daos or Daonos, the shepherd of Pantibibla, who ruled 10 *sari* (36,000 years; see below, IV. 3, 'Tammuz'). In his time four composite beings, Evedocus (Sumerian *En-we-dugga*), Enugamos

(? Sumer. *En-we-gan*), Enubulus, and Anementus, arose from the Persian Gulf.

2. Euedoreschus.—With the seventh name we have a clearer historical personage, Euedoreschus (*En-we-dur-an-ki*, possibly 'the lord of the word binding heaven and earth'), also of Pantibibla. Berosus relates that in his time another Annedotus, called Odakon (cf. Sumer. *Utuki*, a name of the sun-god), or Apodaphos, arose from the sea. The British Museum tablet K. 2486 calls En-we-dur-an-ki 'king of Sippar, . . . beloved of Anu, Bel, and Ea, . . . whom Samaš and Addu (Hadad) had placed on a golden throne.' He was a diviner, versed in all sacred things, and the perfection of his person served as a model for all who aspired to the priesthood after him.

3. Amempsinus, Opartes, and Xisuthrus.—The eighth ruler was Amempsinus of Larancha, who ruled for 10 *sari* (36,000 years), but of this personage nothing more is known. The ninth, however, was of much greater note, being none other than Otiartes (a scribe's error for *Opartes*, the *U(m)bara-Tutu* of the Flood-legend). The Gr. text describes him as being of Larancha, but the Flood-story in the Legend of Gilgames seems to make him a native of Surippak, now Fara, on the Euphrates. He ruled for 8 *sari* (28,800 years), and was succeeded by his son, Sisithrus or Xisuthrus (*Ħasis-athra*, Bab. *Atra-Ħasis* transposed), 'the exceedingly wise.' This is simply a title which was given to Bab. heroes, and the patriarch's name seems to have been *Ūt-napištim* (*Ūta-naištim* in the Gilgames-legend discovered by Meissner). Xisuthrus ruled 18 *sari* (64,800 years). He probably passed for the greatest of all the mythical kings of Babylonia.

The most complete account of the Flood and the end of the great Bab. hero who figured in it is probably that given by Berosus, as quoted by Alex. Polyhistor (see *ERE* iv. 553^a). The fullest account of his life, however, was probably that known as the legend of 'Ēa and Atar-Ħasis' (a variant form of *Atra-Ħasis*). Unfortunately the mutilation of the text renders the sequence and bearing of the events which it records exceedingly doubtful. A series of years up to 7 are mentioned in which distressing things occurred among the people (cf. Gn 6⁵⁻¹¹⁻¹³), parents and offspring being unnatural towards and suspicious of each other. There was scarcity of water and corn, and children were not brought forth. Owing to this, Atar-Ħasis appealed to the god Ēa, on the second occasion setting up his abode at his door. Ēa, however, took no notice, and the cries of the tormented people rose on high, troubling the god Enlil; so various sicknesses were sent among them, silencing their complaints. This apparently gave Atar-Ħasis opportunity for a fresh appeal, and the god this time answered, but the text is too mutilated for the sense to be gathered.

In the considerable gap which occurs at this point, it is not improbable that the intention of the gods to send a flood upon the earth is announced. If so, the Pierpont Morgan fragment (Scheil, *RT* xx. [1897]) probably gives the text. Though exceedingly mutilated, there appears to be a conversation between Ēa and the patriarch, whom the former seems to advise to ask (the other deities), 'Why wilt thou kill the people?' Whether the Hilprecht fragment (see *ExpT* xxi. [1909-10] 364 ff.) belongs to this legend or not is doubtful, but seems not improbable. The announcement of the intention of the deity to bring a flood is given in detail, with directions as to the construction of the ark. Another doubtful fragment—that found by G. Smith and known as *D(aily) T(elegraph)* 42 (T. G. Pinches, *OT in the Light* 2, London, 1903, p. 117)—also covers this section of the story, and contains part of *Atra-Ħasis'* reply concerning the building of the ship.

From this point onwards the text is wanting until the last column of the large British Museum tablet (K. 3399+3934), which refers to 14 pieces of clay, out of which seven beautiful males and females were created by the goddess of generation, Mami (*bēliti ilī*, 'the lady of the gods,' also called Aruru, the creatress). These lumps of clay would correspond with the stones which the hero of the Flood and his wife threw behind them in the legend of Deucalion's flood (*ERE* iv. 554). Concerning the death of Atra-hasis nothing is known.

Such were the hero-kings of Babylonia until after the great Deluge; and, notwithstanding the fact that the Babylonians believed in their historicity, there is no doubt that they are wholly mythical—though historical personages of later date may have been transferred into that remote past which the Babylonians pictured to themselves so clearly. It is doubtful whether the first kings after the Flood can be looked upon as more historical, but it is to be noted that the successor of Xisuthrus or Atra-hasis—Evekhous, Evekhous, Euexius, or Eutykhuis, who reigned for 4 *neri* (2400 years)—is identified by Syncellus with Nembrod (Nimrod), and the latter, if really Merodach (IV. 2, below), was the first great Bab. hero-god, the beginning of whose kingdom was Babel, etc. (Gn 10⁹). He is said to have been succeeded by his son Khomasbelus, who reigned 4 *neri* and 6 *sossi* (2700 years).

II. THE BABYLONIAN HERO-KINGS MENTIONED IN THE NATIVE INSCRIPTIONS.—I. Gilgameš.—Gilgameš was, in all probability, the first important hero after Merodach, and may be the Khomasbelus who succeeded Merodach. The full form of his name seems to have been Gibil-gameš, and his capital was Erech (*Uruk supuri*, 'Erech of the enclosures'). The legend concerning him covered 12 tablets, and was, therefore, of considerable length. Unfortunately, there are many lacunæ. Gilgameš is described as having been 'two-thirds god and one-third man'; and, as no being seems to have existed with whom he could associate on equal terms, Aruru (see *ERE* ii. 643^b, v. 723^a), who had created him, formed a man in his likeness—the sage Enki-du (Ea-bani), who dwelt in the wilds among the beasts of the earth. Enticed to Erech, Rêmut-Bêliti, the mother of Gilgameš, tells her son that Enki-du is to be his companion, and he accepts him at once.

Gilgameš and Enki-du go together on an expedition against Humbaba, the Elamite, whose head they cut off. Later, the renown which Gilgameš had acquired attracted the attention of Istar, the goddess of Erech, who wished to espouse him. Notwithstanding her divinity, he had a very low opinion of her morality, and rejected her advances with reproaches. Angered, Istar complained to her parents Anu and Anatu, and a divine bull was sent down to overawe the hero and avenge the goddess. Undismayed, Gilgameš and Enki-du killed the animal, over whose remains Istar and her maidens lamented. Probably owing to Istar's hostility, Gilgameš was smitten with an incurable malady, and he also had the misfortune to lose his friend Enki-du. In despair, Gilgameš roamed about the world seeking to have his friend restored to him, and to find relief for himself. Many were the people whom he met, and the wonders which he saw, and he arrived at last, accompanied by Sur-Sanabi the boatman, at the place to which Ut-napistim (Xisuthrus or Atra-hasis [see above]), the Bab. Noah, had been translated, there to dwell for ever after the Flood.

After an account of the calamity (*ERE* iv. 550^b, 551^a) and Ut-napistim's explanation that he had attained immortality as a reward for his faithfulness, certain ceremonies are performed which

restore the hero to health. Later, when on his way back, he finds and loses a plant which would have given him the life and youth which he sought. Bemoaning his loss, he reaches Erech, and takes measures for the restoration of its walls. The exceedingly imperfect 12th tablet details the raising of his old companion, Enki-du, who describes to him the state of the good and the wicked after death. The last days and death of Gilgameš are not referred to. (For other details, see *ERE* ii. 315 f.)

As handed down, the legend of Gilgameš appears as the life-history of a great and energetic ruler. H. C. Rawlinson, however, thought that the 11th tablet of the series, with the story of the Flood, corresponded with the 11th zodiacal sign, Aquarius; and the creation of Enki-du in the likeness of the hero might be held emblematic of the constellation of the Twins. In its present condition, however, the story does not lend itself to satisfactory analysis, at least from the astral point of view.

Whether the infant Gilgameš, son of Sevekhros, thrown from a tower, and caught by an eagle (*Ælian, de Nat. Animal.* xii. 21), refers to Gilgameš or Gibil-gameš is at present uncertain.

2. Azag-Bau.—Though a woman, this ruler seems to have been looked upon as worthy of herofame. According to the chronological list published by Scheil (*CAIBL*, Oct. 1911; *Expt* xxiii. [1911-12] 306, 308), she had been a wine-seller, and is said to have founded the city of Kiš, of which she became queen, perhaps on account of her vineyards and presses being there. The length of her reign is given as 100 years. As in the case of Sargon of Agadé afterwards, events of her reign are quoted in the omen-tablets.

3. Sargon of Agadé.—This ruler, whose name in Bab. is Sarru-kin, was the great royal hero after Gilgameš. His autobiographical legend states that his mother was a priestess or devotee (of some deity), and that he knew not his father (who had possibly visited his mother without making himself known to her). After the child had been brought forth in a secret place at Azupirānu on the Euphrates, his mother placed him in a little basket-ark made water-tight with bitumen, and set him afloat on the river. Carried by the stream to Akki the libation-priest, he became his adopted son. How he attained royal rank is not known, but he had a long and renowned reign. The omens from his reign state that he crossed the Eastern sea, and conquered all the lands of the West. Besieged, during a revolt, in his capital Agadé, notwithstanding his advancing years he made a sortie, and defeated his foes. After this he subjugated Subartu, and made the boundaries of Agadé equal with those of Babylonia. He probably died in consequence of the anxieties due to a famine.

4. Narām-Sin.—This was a ruler hardly less renowned than his father, Sargon. He conquered all the regions around the State of Agadé—Apirak, Subartu, Media, Elam, Tilmun (Bahrein and the W. coast of the Persian Gulf), Magan, and Meluhha, capturing, in all, 17 kings, with 90,000 troops. Unfortunately, less than a sixth of the inscription dealing with his reign is preserved.

5. The historical and deified hero-kings.—Though the exploits of Azag-Bau, Sarru-kin, and Narām-Sin may be largely legendary, those of the deified kings Dungi, Būr-Sin, Gimil-Sin, Libit-Istar, Eri-Aku (or Arad-Sin), Rīm-Sin, Išmê-Dagan of Isin, and the apparently non-deified Nebuchadrezzar I. are well within the range of history. Colophon-dates and contemporary inscriptions show that they carried on campaigns, performed ceremonies, and worked for the welfare of their people by digging irrigation-channels,

administering justice, and building temples. The records of heroic deeds on their part are, it is true, wanting, but a fragment, whose colophon contains the name of Dungi, gives an account of his pious works, implying that such were preferable to deeds of prowess on the battle-field. Libit-Ištar, too, although 'his weapon prevailed greatly,' enjoyed as much renown because he set up some monument 'for the admiration of multitudes of people,' and his sacrifices and prayers seem to have been acceptable to Enlil, the old patron-deity of Nippur.

In the case of Nebuchadrezzar I. (c. 1120 B.C.), the historian compares him with a lion and with the god Hadad, and his great men with lions' cubs. Finding his country wanting in prosperity, he prayed to Merodach for Babylon and his temple E-sagila; and success against Palestine (Amurru) and Elam was promised him—success which, as we know from the historical inscriptions, was realized. The glory of his namesake of later date, surnamed the Great, is known to all. Had the Bab. nation continued its career as an independent State, there is little doubt that the two Nebuchadrezzars would have figured with equal renown among its great and royal heroes.

III. OTHER LEGENDS OF HEROES FROM THE NATIVE RECORDS.—I. Adapa.—This hero is described as having possessed all the wisdom of Anu, the god of the heavens, as well as that of Ea, in whose city, Eridu, he dwelt. He bore the title of *nuhatimmu*, which seems to indicate one who had the preparation and distribution of sacred food. He was also a fisherman of that city, which in his time lay on the shores of the Persian Gulf.

While he was sailing out one day, the south wind came and sank his vessel, and Adapa found himself in 'the house(s) of the fish.' He threatened to break the wings of the wind, and this was forthwith accomplished. For a week the south wind did not blow, to the annoyance of the god Anu, who summoned the wind and Adapa before him. Ascending to the heaven of Anu, Adapa saw there at the god's door Tammuz and Giš-zida, two deities who had disappeared from the earth. Adapa explained to Anu why he had broken the south wind's wings, and these two deities, speaking for him, appeased the wrath of Anu, who, however, was displeased with Ea for having thus caused to be revealed 'the heart of heaven and earth' to a man. The food of life was now offered to Adapa, but he refused to eat of it, explaining that he was acting in accordance with the instructions of Ea. He had apparently declined to eat it, however, under the impression that it was the food of death. Seemingly as a compensation for the loss, rule over the people of the earth was conferred upon him; and it may be supposed that, like Atra-hasis, he attained immortality in the end at the hands of his own god, Ea. It has been suggested that Adapa is the *Alaparos* of Berosus, written for *Adaparos*; but the *r* would, in that case, seem to be intrusive.

2. Etana and the Eagle.—This legend is also exceedingly imperfect. At a time when there was no king upon the earth, and apparently not even the insignia of royalty, Ištar, seeking a ruler, had come upon Etana, whose wife expected a child, destined by the gods to govern the earth. The birth, however, was retarded, and Etana sought a remedy for this delay—the divine 'herb of bearing,' which it was thought that the eagle would be of use in obtaining. This bird, unfortunately, conceived a desire to eat the young of the black serpent, and, having descended to carry out this intention, had his wings broken by the enraged reptile. The eagle having been in the end healed, Etana, clinging to its body, attempted to

reach the throne of Ištar, who is elsewhere called 'the mother of those who bring forth.' That giddy height, however, they seem not to have attained, as Etana refused to be carried so far, and they descended to earth again. How the legend ends is uncertain, but the attempt may have been successfully repeated, or the coveted herb may have been acquired in another way.

3. Other legends.—Numerous other legends existed, but in many cases the titles (first lines) are all that remain. Among these are 'The legend of En-men?-nanna' (probably Ammenon [see above, I. 1], the fourth pre-historic hero-king), by Enlil-ban-kudurri-son of Ħu-meme; and 'the legend of Si-du,' by Si-du the ancient (apparently an autobiography). 'The legend of Lidlul, the sage,' of which fragments are extant, is rather a philosophical work, treating of the miseries and the disappointments of life, than the story of a hero.

IV. BABYLONIAN HERO-GODS.—I. Enlil and Ninlil.—The story of these deities is contained in a bilingual composition of unusual beauty. Enlil and Ninlil are described as the youthful hero and handmaid of Dur-an and Nippur (identified with the Calneh of Gn 10¹⁰), and dwelt there, as well as in Dur-gišimmar, 'the date-palm fortress,' with its holy river, its food-store, well of sweet water, and holy brook. Therein Ninlil had the comfort of her mother Kiel-azaga, and the protecting goddesses of the holy streams made the water flow. After a gap, the text seems to speak of the ceremonial entrance of Enlil and Ninlil into Nippur, when unclean or undesirable things were to be sent forth therefrom. On their approach, Enlil calls to the gate-keeper announcing the lady Ninlil's coming, and admonishing him not to reveal her (Ninlil's) abode. Repeating his call, Enlil says:

'Man of the great gate, man of the lock—
Man of the bolt, man of the holy lock—
Thy lady Ninlil cometh,
The handmaid so bright, so shining.
Let none woo her, let none kiss her—
Ninlil so bright, so shining.'¹

From a kind of catch-line, it would seem that Enlil entered the city to pronounce certain decisions, but the second tablet, which would give the sequel, is wanting. For details of this deity, see *ERE* ii. 310^b; also 6 and 7 below.

2. Merodach.—Though not the oldest of the deities of the Bab. pantheon, Merodach is the most important from the present standpoint, on account of his probable human origin. The full form of his name was *Amaruduk*, 'the steer of day,' i.e. the sun in his growing strength. It is noteworthy that one of his Semitic names is *Nūr-ili*, 'light of the god (? of day),' and the character by which this is represented was read as *Asari*, compared with the Egyptian Osiris. (In cuneiform, as in Egyptian, it is composed of the signs for 'city' and for 'eye.') He was also one of the gods designated by the character for 'king,' in Sumer. probably *Lugal*, and in Sem. Bab. *Sarru* and the above-named *Nūr-ili*.

Concerning Merodach's earthly kingship we know nothing, but the royal title may refer either to that or to his heavenly authority. In consequence of the hostility of Tīamat (cf. *ERE* iv. 129), the gods decided to destroy her and her brood, but none of them had the courage to attack so terrible an adversary. Merodach, therefore, offered himself; and, aided by the powers which the gods bestowed upon him, he succeeded in overthrowing her, imprisoning her followers, and dividing her body (*ib.* 129^b). Installed as king of the gods in consequence of this great service, Merodach reconstructed the universe, and created mankind and all living things (see also *ERE* ii. 314^a, iv. 232).

¹ Cf. HYMNS (Babylonian).

Other legends concerning Merodach are lost, but one of them, beginning, 'When Merodach was in Sumer and Akkad,' may have referred to his earthly existence. Another was 'The record of Merodach, the glorious lord, who was placed over the heavens,' by Gimil-Gula. For Merodach in his divine character, see *ERE* ii. 31 f.

3. The legend of Tammuz.—The descent of Istar into Hades, to bring back *Dumu-zi(da)* or Tammuz, the 'husband of her youth,' proves that the Babylonians had the legend in a similar form to that in which it was known in Syria. There is no inscription, however, dealing with the cause of his premature death, so that we are in doubt whether it was regarded by the Babylonians as having been due to 'the boar's tusk of winter' or to some other cause. His release by Istar from the domain of Ereš-ki-gal, or Ereš-ê-gal, is one of the most noted productions of Bab. literature (see *ERE* ii. 313, 315^b).

4. The myth of Ura.—In this we have the legend of a seemingly purely divine hero, without any suspicion of human origin such as attached to Merodach and Tammuz. Ura (or Ira) seems to have been so called as 'the perfect one' (*[gitma]u* [*Cuneif. Texts*, xii. 13, 44b]); but, as the ideograph with which the name is written is that for 'servant,' perfection of service (to the gods, or to the universe) may be intended. In the inscriptions, Ura appears as one of the forms of Nergal, the god of war, famine, plague, and destructive things in general.

In the legend, Anu, the god of heaven, gives Ura seven evil spirits to support him when prompted to 'kill the dark-heads' (mankind), and smite down the beast of the field. In a dialogue between Ura and I-šum (a destroyer like himself), the destruction wrought in Bab. cities is referred to—that at Babylon, which caused Merodach to utter 'an unloosable curse'; and at Erech, whose goddess, Istar, was moved to wrath. Ura justifies himself, and shows his impartiality by stating that he has not spared Dêr, his own city. Secure in his own justice, Ura speaks of further punishments which he intends to inflict, and I-šum promises to follow in his footsteps, whereat Ura is pleased, and finds his words 'as finest oil.' It is thought that they were not going to spare even the king of the gods, Merodach, himself. In any case, civil war was to ravage the seacoast, Mesopotamia, Elam, the Kassites, the Sutes, the Qutites, and the Lulubites; land would not spare land, or house house, or brother brother, but they would kill each other, until the Akkadian came and overthrew them all. I-šum turned, however, first against Saršar (the Amorites), destroying the mountain of the land and its vegetation. Ura was also engaged in this work; and, when he rested, all the gods bowed down to him. He then explained to them that he had destroyed mankind on account of former sin, and he seems to ask why he should make a difference between the just and the unjust more than the others. He would favour those who glorified him and sang his praises.

5. Nergal and Ereš-ki-gal.—These deities were the king and queen of the under world, the former being the hero-god Ura under his more familiar name. The legend relates that the gods made a feast; but, as Ereš-ki-gal was not allowed to ascend to them, they requested her to send a messenger to receive her portion. This she did, and all the gods except Nergal stood up when the messenger entered. This enraged Ereš-ki-gal, who sent and demanded that the deity who had thus failed in politeness should be delivered up to her. Nergal tried to escape his doom by hiding behind the other gods, but was discovered, and sent down to Hades with fourteen companions.

Leaving these last to guard the fourteen gates of Hades, he entered, seized Ereš-ki-gal, and dragged her from her throne to cut off her head. Begging for mercy, she offered to become his spouse, and was accepted. Kissing her, and wiping away her tears, Nergal granted whatever she had asked of him 'for months past.'

6. Enlil, Tišpak, and the Labbu.—Here we have a legend which seems to supply something similar to the stories of combats with dragons in the Middle Ages. The people of the land (? Babylonia) sighed and complained on account of a giant-serpent (*muš-gala*) which plagued them, and which Enlil had designed in the heavens. Its length was 60 leagues, and it had members in proportion. Who, it was asked, would kill this creature, and save and rule over the wide land? Apparently the god Tišpak (Ninip as god of lustration) volunteered, and was ordered to go. The imperfection of the record leaves us in doubt whether it was he or another deity who accomplished the dragon's overthrow; but this was done by holding up before the creature 'the seal of life,' and its blood flowed (from a wound) for 3 years, 3 months, 1 day and 10 (?) [hours?]. Hrozný regards the Labbu as typifying the mists at sea—which seems probable (cf. *ERE* ii. 315^a).

7. Zû the storm-bird, and the Tablets of Fate.—Though told at some length, this legend needs but few words. A deity seems to have sent Zû, so that he saw 'with his eyes' the Tablets of Fate, and, coveting Enlil's power, decided to take possession of them, mount his throne, and rule the *Igigi* (gods of the heavens). Taking advantage of the moment when Enlil was performing his daily ablutions preparatory to mounting his throne, Zû seized them, and flew to the security of his mountain. Enlil being thus rendered powerless, Anu, the god of the heavens, addressed himself to the gods and goddesses, asking them to get them back. All, however—Anu's son Addu (Hadad), his daughter Istar, Bara, Istar's child, and others—seem to make excuses, and are ordered not to go. After this Nin-igi-azaga (Êa as god of deep wisdom) speaks to Anu, and it seems possible that he volunteered, but after this the text is wanting.

The narrative is possibly continued in what seems to be another version, known as 'The outwitting of Zû.' In this (a bilingual document) Lugal-banda (? Nergal as the fighting-cock) goes forth to the distant mountain of Sabu 'to do to the bird Zû what was right.' He would allow Zû's wife and son to sit down to their meal, and, with the aid of the wise woman Siris (wine), prepare an intoxicating drink. The text here is wanting, but in all probability the ruse was successful. Who it was who rose from Zû's nest, and made an unknown place in the mountain his refuge, is uncertain.

The possible meanings of the legends.—Notwithstanding the simplicity of these legends of heroes and hero-gods, there is apparently in each of them some hidden teaching, concerning either the early kings of Babylonia, or the gods whom they worshipped, or the dealings of those gods with men—kings, heroes, or the people in general; and in some cases it is clear that attempts were made to reconcile the seeming hardships, meted out to the innocent and the guilty alike, with the existence of the beneficent deities whom the Babylonians worshipped. There seems also to have been the desire to reconcile the different beliefs which prevailed from time to time in Babylonia—the discarding of Enlil in favour of the milder rule of Êa, and that, again, for the divine direction of 'the merciful Merodach.' In these cases, the older deities (their names are practically records of the supremacy, at the time of their greatest influence, of the cities of which they were the chief patrons)

seem to have been classed, by the majority of the population, with those who, like Nergal the plague-god, or Addu (Hadad) the storm-god, brought misfortune upon men. Thus it comes that Enlil, 'lord of the air,' leads the gods who wish to destroy mankind by means of a flood, and forms the *Labbu*, or, according to Hrozný, mist-dragon. In like manner, the really malevolent deities, like Ura (Nergal), or the demon of the south wind, destroy mankind by means of the powers of Nature, and Ereš-ki-gal (Persephone) exacts the presence of Tammuz in the under world, producing winter and its sterility.

LITERATURE.—To the works mentioned under BABYLONIANS AND ASSYRIANS (vol. ii. p. 319) may be added T. G. Pinches, *The Religion of Babylonia and Assyria*, London, 1906, and the articles 'Gilgamesh and the Hero of the Flood,' *PSBA*, 1903, pp. 113 ff., 195 ff., 'The Bab. Gods of War and their Legends,' *ib.*, 1906, pp. 203 ff., 270 ff., 'The Legend of Merodach,' *ib.*, 1908, pp. 53 ff., 77 ff., 'Ištar,' *ib.*, 1909, pp. 20 ff., 57 ff., 'Enlil and Ninlil,' *ib.*, 1911, p. 77 ff.

HEROES AND HERO-GODS (Chinese).—

As might be expected in the case of a people with so long an existence, the Chinese nation has produced many persons who, on account of their pre-eminence in some admirable quality, may rightly be called its heroes, and whose names are preserved in its national tradition and history. Moreover, local tradition and the system of local records have preserved the fame of many others who, though not attaining to the rank of national heroes, have a restricted celebrity. As tradition and history thus supply heroes, so the religious conceptions of the Chinese easily allow their transformation into gods.

The famous names in ancient Chinese history, back to its semi-mythical period, have been revered by the whole nation under its successive dynasties, and through all its political vicissitudes. Such names are to-day still appealed to, and must be to some extent a living force both in public and in private life. To Hwang Ti, whose reign is dated 2697 B.C., is attributed much of the beginning of Chinese polity, and for this reason it was proposed to date the Republic from his era. Yao (2356 B.C.) and Shun (2255 B.C.), virtuous monarchs of antiquity, are professed by the President of the Republic as his ideals; and in the sphere of private life a popular tract exhorts one to behave as if he beheld Yao in the pottage and Shun on the wall. These examples of heroic personages are taken from the most ancient times, and the long course of Chinese history supplies the names of many others which, being sufficiently well known to be appealed to hortatively, may be called heroic. The fame of some of these has been preserved by the salt of some pithy saying, as in the case of Yang Chên (A.D. 124), famous for his integrity, who refused a secret bribe, saying, 'Heaven knows it, Earth knows it, you know it, I know it; how can you say that none will know it?' Others have a vogue in proverbial allusion, such as Chang Ch'ang (53 B.C.), who, on the eve of unmerited disgrace and dismissal, being jeered at by an enemy as 'Prefect for but five days,' summarily vindicated his rapidly expiring authority on the person of the offender, so that the jeering phrase survives as a classical allusion to unslacking fulfilment of office. Others, again, find a place in one of those numerical categories under which the Chinese are fond of grouping men and things worthy of note, e.g. 'the Three Good Men of the Yin dynasty' (1130 B.C.), or 'the Four Sages' (Shun, Yu, Chow Kung, and Confucius). In addition to those thus commemorated in national history and literature, there are the more numerous worthies peculiar to each locality.

Many of these worthies, whether of a general or of a merely local fame, remain exemplars only.

But in accordance with what is called, perhaps not quite accurately, the animistic strain in the religious conceptions of the Chinese, it may be said that they all either are or might become objects of worship, and take rank therefore as gods. Of those who have already attained divine honour, some have been raised to it by popular opinion; in the case of others, their divine rank has been conferred or recognized by Imperial decree. Thus, the reputed inventors of some of the fundamental arts of Chinese civilization—Tsang Hieh, inventor of writing, the empress Si Ling She, of silk-worm rearing, K'i, of husbandry—are deified. The being everywhere worshipped as Genius of the Soil figures in history as one of the ministers of Hwang Ti. The fourth of the ministers of the same emperor has been 'metamorphosed into one of the controlling spirits of the universe, and regarded as the god of fire' (W. F. Mayers, *Chinese Reader's Manual*, no. 87). A skilled mechanic has become the god of carpenters. The case of Kuan-u well illustrates the way in which a hero becomes a god. A warrior of the era of the Three Kingdoms, famous for fidelity to his chief and for martial prowess, he was finally captured and beheaded by his enemies (A.D. 219). His name was handed down as that of a martial hero. Canonized under the Sung dynasty (12th cent. A.D.), he continued to receive additional honours, until in 1594 (Ming dynasty) he was raised to the rank of *Ti*, or god, and has ever since been worshipped as the God of War, being regarded with special favour by the late Manchu dynasty. Similarly, the Guardians of the Doors, depicted so frequently on the two-leaved doors of Chinese buildings, are historical characters of the 7th cent. A.D. They are said to have guarded the apartment of their emperor; and his commemoration of their fidelity by having their portraits painted on his doors was the first step which led to their enjoyment of divine honours. As an example of a heroine raised to divine rank, we may take Ma-tsu. A girl of Fokien, sitting with her mother spinning, went into a trance, in which she saw the boat capsized in which were her father and her two brothers. In the anguish of her affection she seized with each hand one of the drowning persons, and held up the third with her teeth. Unfortunately, her mother roused her, and she opened her mouth to reply. The facts correspond to what was done in trance: the two persons grasped by the girl's hands were saved; the third was lost, owing to the untimely opening of her mouth. Such is the story which lies at the basis of the worship of this girl as Ma-tsu, patron goddess of sailors.

In addition to those nationally, or at least very widely, recognized as divine, there are, as has been said, many others in whose case a local celebrity has culminated in a local worship. Thus, to give one example: in a village not far from Chao Chow Foo there is a temple and image in honour of a herd-boy, much sought after in times of drought, the idol being carried in procession and worshipped alike by mandarins and people. Of this herd-boy it is believed that in his lifetime he was able, by the waving of his bamboo sun-hat, to draw rain from heaven. His cult is quite local.

Regarding such hero-worship generally, it may be noted that it is somewhat capricious in the selection of its objects. If all heroes are possible objects of worship, still only some attain that dignity. None of the heroes of the Three Kingdom era enjoys such divine honours as Kuan-u. Moreover, the worship of any particular person may be early or late in its rise, and it is subject to ebb and flow in its popularity. Near Swatow there has arisen within recent years an extensive cult in honour of a monk, who, partly by supernatural means, gave to the district a much-needed bridge.

This cult, which has already somewhat declined in popularity, is recent, though the monk who is its object lived so long ago as the Sung dynasty. On the other hand, a worthy may begin to be worshipped even during his lifetime (cf. J. J. M. de Groot, *The Religion of the Chinese*, New York, 1910, p. 64). Of such worship it may be noted also that it is largely non-ethical. Its objects were distinguished, no doubt, by some excellent quality; but in being raised to divine rank they are potentialized rather than moralized, although as supernatural beings (*shên*) they may, *ex officio* as it were, be supposed to enforce the sanctions of the current ethical code. Thus the warrior Kuan-u becomes the God of War, and the rain-producing herd-boy is appealed to as Rain-producer. But in popular tracts Kuan Ti appears also, not specifically as the God of War, but as promulgating the ethical precepts inculcated in these tracts, and his power of sending weal or woe is brought forward as their sanction.

LITERATURE.—W. F. Meyers, *Chinese Reader's Manual*, Shanghai and London, 1874; H. A. Giles, *Chinese Biographical Dictionary*, London, 1898; T. Richard, *Calendar of the Gods*, Shanghai, 1906. P. J. MACLAGAN.

HEROES AND HERO-GODS (Egyptian).—From Herodotus ii. 50 (*νομιζουσι δ' ὡν Αἰγυπτίοι οὐδ' ἥρωσι οὐδέν*) it might be inferred that the worship of heroes was unknown among the Egyptians. Yet he tells us elsewhere that they worshipped Herakles (ii. 42) and Perseus (ii. 91)—names which, it is true, can here apply only to Khonsu and Min respectively, *i.e.* to gods in the proper sense of the term. In the Hellenistic period, however, there was in Egypt a city which was actually designated 'the City of Heroes' (*Ἡρώων πόλις*). The Egyptian monuments likewise show that the religion of the country had really a place for the worship of personages who, as being deified men, must be designated heroes or hero-gods. Hence, if we are not to regard Herodotus as in conflict with himself and with facts, his words as quoted above must be taken to mean only that there was among the Egyptians no such cult of heroes as corresponded exactly with that found in Greece. In point of fact, the Egyptian deities who may be styled hero-gods do not, like the Greek heroes, occupy a position intermediate between gods and men. They are not demi-gods, but have become gods in the proper sense, and, in spite of the earthly residua that still adhere to them, were worshipped along with, and in the same manner as, real gods.

Before these heroes became gods, however, they too passed through a stage of semi-divine worship, which, as in the case of the Greek heroes, was associated with their tombs, and which may have developed from the ordinary cult of the dead to something in the nature of ancestor-worship. According to Egyptian beliefs, the 'spirits' of the departed stand midway between the gods and the king and queen (Hood Papyrus, published by G. Maspero, in *Études égyptiennes*, ii., Paris, 1893). Manetho, in one particular instance where he refers to the practice of ancestor-worship, calls them *vékves ἡμιθεοί* (see below, I. 2). The Egyptians themselves, referring to the same practice, sometimes speak of those ancestral spirits as gods, just as they often apply the term 'god' to the semi-divine king. The line of demarcation between a real god and a deified human spirit is thus far from rigid.

As regards the heroes of the Greeks and other peoples, the question often arises whether the hero-gods worshipped by the people were originally men who had been promoted to divine honours by reason of their achievements, or were at first real deities to whom a human form and human experi-

ences came to be ascribed; or, finally, whether they are literary creations which, born of poetic fancy, found a footing in popular belief. But no such question can arise in the case of the Egyptian hero-gods, except perhaps in a single instance (II. 1 (1)). For, on the one hand, the Egyptian gods, invested with human activities and regarded as kings who ruled upon earth in the far distant past (as, *e.g.*, the sun-god Rē, *i.e.* 'sun,' the earth-god Gēb, *i.e.* 'earth,' the hawk-shaped Horus, and his adversary, the animal-shaped Seth—both originally local gods), are in other respects so lacking in human traits that their divine nature cannot be doubted for a moment. Then, on the other hand, the Egyptian deities who may be called heroes or hero-gods are without exception deified men, a number of whom lived in the full light of history, and of whose earthly existence we in some cases possess authentic indications.

It is to be noted that the deification of human beings in ancient Egypt was of two kinds, viz. (1) general deification, which all who occupied a certain position in life, or suffered a particular fate, shared in an equal degree—*de jure*, as it were, and independently of any action on their own part, much in the same way as the fallen warriors of the Teutons were all admitted to Valholl; and (2) individual deification, which was attained only by individuals of special eminence. The latter class comprises those who, as akin in character to the heroes of Greek mythology, are the genuine hero-gods, who were always treated by the Egyptians as if they had been real gods; the former is composed of the semi-divine beings from whom proceeded the hero-gods.

I. **GENERAL DEIFICATION.**—I. It is a well-known fact that the Egyptians, from the earliest traceable period of their history, believed their kings to be embodied forms of certain gods—in incarnations like the bull Apis, the ram of Mendes, and the other sacred animals. The reigning king was regarded as 'Horus' (the national god of Lower Egypt in pre-historic times, and, later, of the whole kingdom), or as 'Horus and Seth' (the union of the ancient national deities of Lower and Upper Egypt respectively), or, again, as 'the two mistresses,' *i.e.* Eileithyia and Buto (the tutelary goddesses of the two divisions of the country in the final period of the pre-historic age). The deceased king, on the other hand, ranked as Osiris (by Heliopolitan doctrine the father of Horus), and under that conception ruled over the dead, just as, under the name of Horus, he had previously ruled, and as his son and successor now ruled, over the living. From the IVth dynasty onwards the king was accounted 'the son of the sun-god Rē,' who in the form of the previous king, his human father, was supposed to have begotten him of the queen (Maspero, 'Comment Alexandre devint dieu en Égypte,' in *Annuaire de l'école pratique des hautes études* [Paris, 1897]). In a later age, again, each god was regarded within his own province as the king's father. Accordingly the reigning king was styled 'the good god' (*ntr-nfr*), or, at an earlier day, 'the great god' (*ntr*); from the XIXth dynasty the latter designation was applied to the deceased king. When the king's real father was not himself a king, he was called 'the father of the god' (*jtj-ntr*, an expression authenticated from the XIIth dynasty), and the worship at the king's tomb—the pyramid—was, even in the Old Kingdom (first half of the 3rd millennium B.C.), performed in a 'house of a god' (*ht-ntr*), *i.e.* a temple specially dedicated to him, and by 'servants of a god' (*hm-ntr*) and 'pure ones' (*wē'eb*), *i.e.* priests, appointed for the purpose, precisely like the worship of the real gods; while the worship accorded to all other human beings, even

queens, after death was performed simply by 'servants of a genius' (*hm-k3*), i.e. priests of the dead, and in 'a house of a genius' (*ht-k3*), i.e. chapels of the dead.

It is nevertheless probable that the ancient kings of Egypt were not honoured with divine worship in their lifetime; at least we have no evidence of such worship. When the reigning monarch appointed one of his courtiers as a *hm-ntr*, i.e. 'servant of a god,' at his pyramid (J. H. Breasted, *Ancient Records of Egypt*, Chicago, 1906-07, i. § 307), this did not imply that the person so honoured was to act in that capacity during the king's life; on the contrary, the office, with its duties, honours, and emoluments, was conferred upon him—and probably also upon his descendants—in anticipation of the king's death, i.e. for the time when the latter should be worshipped as a departed spirit. The first of the Egyptian kings to have divine honours paid to them while still alive and in conjunction with their ancestors were the Hellenistic kings of the Ptolemaic period.

2. In Heliopolis, which in the pre-historic age was for a time the capital of the whole country, a species of ancestor-worship seems to have been accorded to the *manes* of the contemporary (pre-historic) kings. They were worshipped there as 'souls of Heliopolis.' Similarly, 'souls of Hierakonpolis' and 'souls of Buto' were worshipped in these cities, the respective capitals of the two States into which Egypt was eventually divided prior to the foundation of the historical centralized State under Menes ('the union of the two lands'). As these predecessors of Menes had, in particular, worshipped the god Horus, the latter two companies of spirits were known also as the 'servants of Horus.' Moreover, they are variously designated, according to the connexion, as 'kings,' 'spirits,' or 'gods.' In Manetho they are called *νεκρες* or *ημιθεοι*. They are depicted as gods with a human body and an animal's head, exactly like the local fetish deities of the Egyptians; the souls of Hierakonpolis have the head of a jackal, those of Buto that of a hawk, and, accordingly, they are even spoken of as 'jackals' and 'hawks' respectively. From certain allusions in the texts it might seem as if, in earlier times (till 2000 B.C.), herds of jackals and flocks of hawks were kept in the two cities just named, and were regarded as incarnations of those royal souls.

See, further, K. Sethe, *Untersuchungen zur Gesch. und Altertumskunde*, iii. (Leipzig, 1901) 3ff.; the same author in Borchart, *Gräbdenkmal des Sa-hurê*, Leipzig, 1913, ii. 102 f.

The 'souls of Heliopolis,' wherever they are mentioned, seem to be treated exactly like gods, and are associated with Atum, the local deity of that city. The dynastic kings dedicate temples and other monuments to them, and speak of themselves as beloved by them. It is possible that the name *Ἡρώων πόλις* (*Ἡρωόπολις*, *Ἡρώ*), by which the Greeks render Pithom, *Παρουῖμος*, i.e. 'house of Atum,' the name of the city dedicated to Atum, bears a reference to these 'souls.' In such translations we usually find that, when they do not give the name of the god in question, as in the case of *Διὸς πόλις*, then they have the name of his sacred animal in the plural, as, e.g., *Κυνῶν πόλις* for 'House of Anubis,' and *Κροκοδείλων πόλις* for 'House of Suchos.' In the Greek rendering of Pithom given above, therefore, the *Ἡρώες* seem to take the place of the sacred animals.

3. After the fall of the Old Kingdom (c. 2400 B.C.) the identification of the dead with Osiris, which had been customary in the case of kings, was gradually extended to others—first of all to members of the royal family, then to the feudal nobility (who at that time also arrogated to themselves other privileges of royalty), and finally to

all human beings without distinction of rank. The logical result of this should have been that in the realm of the dead there existed rulers only, and no subjects. But in point of fact the attribute Osiris seems very soon to have lost its original force. The deceased N, who is called 'Osiris N,' was in no sense identical with the god Osiris, who continues as before to be king in the realm of the dead, and therefore rules over the 'Osiris N' also. The dead who are so designated worship Osiris, justify themselves before his judgment-seat, etc.

4. A special apotheosis seems in later times to have been accorded to those who were drowned in the Nile, probably because, according to the legend, Osiris had suffered a like fate. Those who died in this way were regarded as having been peculiarly distinguished by the gods, and were styled 'glorified' (*hāsje*)—a term which at an earlier period appears to have been applied more generally to all the blessed dead (cf. *beati*). According to Herod. ii. 90, the bodies of the drowned were entombed with peculiar pomp (cf. Griffith, in *Zeitschr. für ägypt. Sprache*, xlvi. [1909-10] 132).

5. That a cult of the deified high priests of Heliopolis and Memphis existed at Pathyris in Ptolemaic times is evidenced by a number of papyri (Griffith, *Catalogue of the Demotic Papyri in the J. Rylands Library*, Manchester, 1909, iii. 132, n. 9).

II. *INDIVIDUAL DEIFICATION.*—1. Deified kings and queens.—(1) The earliest instance of this may have been Osiris. This deity, so highly honoured in later times, was in some remote age, as it would seem, a hero in whose person the idea of the unity of the Egyptian people came to be embodied: hence the myth of the dismemberment of his body and the distribution of the parts among the Egyptian nomes. He was regarded as having been a good and noble monarch, who was treacherously murdered, somewhat like the Siegfried of Teutonic mythology, and then restored to life by means of magic, though he did not resume his earthly existence, but lives on in the under world as king of the dead. He is always portrayed in a purely human fashion, with certain symbols of royalty which pertain to him alone among the gods—the Upper Egyptian diadem adorned with

two ostrich feathers , as also the scourge

, and the crook , the primitive emblems

of sovereignty. It is possible, however, that these symbols may have been transferred to him from an ancient local deity with whom he was subsequently identified (see below). In the earlier religious literature of the 'Pyramid Texts' Osiris very seldom plays an active part like the other gods. The theme of interest is, nearly everywhere in these texts, found in his experiences, his death, and his resurrection. What had happened to him would happen also to the deceased king, who is, in fact, generally identified with him.

The suffering Osiris, thus conceived of as purely human, was in his origin as little a god of vegetation or of the dead as was Christ, with whom he has many points of resemblance. He, too, founded a confessional religion of a personal and ethical stamp, which forms a most decided contrast to the numerous Egyptian local cults based on fetishism, as well as to the Nature-religions indigenous to Egypt from primitive times (worship of the sun, the sky, the Nile), and which in the course of centuries gradually extended its range, to some extent with a conscious rejection of other forms of religion (the mysteries, communal life).

The earliest triumphs of his cult must certainly go back to a very remote past. Even while Heliopolis was the capital of a united Egypt,¹ and when the Heliopolitan theology instituted the 'great divine ennead of Heliopolis,' he not only found a place in that group as one of the representatives of the past—beside the great cosmic deities (sun, air, sky, earth) and the national god of the southern kingdom of Upper Egypt, which had been overthrown by the kings of Lower Egypt, and was now subject to it—but he actually became the centre of the whole artificial system. He was made the son of the divine pair, Heaven and Earth.² Horus again, who, as the national deity of the dominant kingdom of Lower Egypt, represented the present, and therefore remained outside the ennead, became the son of Osiris. Seth, the god of the Upper Egyptian kingdom, and now the last member of the ennead, was branded as the slayer of Osiris, and the arch-villain who had been guilty of dismembering the kingdom. These two local deities, Horus and Seth, were originally of a purely fetishistic character, and had at first no more to do with the hero Osiris than had the cosmic deities who had come to be recognized as his parents. Thus the Heliopolitan theology was even then completely under the influence of the Osirian faith.

Osiris seems to have become the god of the dead (Khentamentiū, 'the chief of the Westerners') and the god of Abydos only in the historic era, and probably in consequence of the deceased king's identification with him and of the fact that the tombs of the earliest historical kings (Ist and IInd dynasties) were situated at Abydos, the necropolis of This, their capital. It thus came about that the grave of Osiris was sought in Abydos, and was found among the ancient royal tombs there. The function of the god of the dead and the designation 'chief of the Westerners' were thereby transferred from the dog-shaped local god Anubis to Osiris (E. Meyer, in *Zeitschr. für ägypt. Sprache*, xli. [1904] 97). Between 2500 and 2100 B.C., in consequence of this development, Abydos became a pre-eminent centre of pilgrimage for all Egyptians.

If originally Osiris had no connexion with Abydos, he would seem to have had as little with his other sanctuary, situated in the Delta, and subsequently named Busiris ('House of Osiris') after him. Here, too, he either superseded or absorbed an older local god, the 'ndtj depicted as an idol in

the form . It was presumably from this deity,

who in the earlier religious literature is called 'the chief of the Eastern nomes' (of the Delta), and may perhaps have been the god of a small kingdom comprising these nomes, that Osiris acquired the symbols of sovereignty by which his images were distinguished in later times.

In Memphis, likewise, Osiris seems to have been identified with the fetish worshipped there, ,

'the magnificent Ded-pillar,' as also with Ptah and Soker, only after the Old Kingdom was at an end. The violent death which, according to the legend, he met with in the waters of the Nile brought him into close relations with the sacred river itself. Like the Memphite Ptah, Osiris now came to be identified with it, and the idea of his resurrection fitted in with the annual inundation. His life and death were interpreted as referring to the

¹ About 1000 years before the dawn of the historical era, at the time when the Egyptian calendar was introduced (4242 B.C.).

² Heaven and Earth were formerly believed to be the parents of the sun-god Rē, but Rē is now at the head of the ennead and their grandfather.

growth and decay of Nature. He thus eventually became the god of vegetation, from whose corpse the corn was supposed to spring.

(2) King Sesostri III. (1887-1850 B.C.), who completed the subjugation of Northern Nubia begun by his predecessors, and protected this new province of the Egyptian kingdom by the erection of fortresses, had already become a national deity in that district in the time of the New Kingdom, and, along with the ancient Nubian deity *Dd-wm*, was worshipped under his sacred name of *Kha-kew-rē*, which denotes his relation to the sun-god Rē (the Rē-name). Thutmosis III. (1501-1447 B.C.), who, in similar fashion, completed the reconquest of Nubia begun by his own predecessors, erected in that country temples, and instituted sacrifices and festivals, for the deified Sesostri. The latter was thus treated altogether like a god, but he is portrayed and designated as an Egyptian king, exactly as in his lifetime.

See Lepsius, *Denkmäler*, Berlin, 1849-60, iii. 43 ff.; Breasted, *op. cit.* ii. § 187 ff., and *History of Egypt*, New York, 1905, pp. 186, 269, 317.

(3) King Amenemmes III. (1849-1801 B.C.), the builder of the so-called Labyrinth near Hawara, at the entrance to the Fayyūm, became subsequently a tutelary deity of that oasis, for the economic development of which he (the Mæris of Herodotus?) must have done good service. Under his Rē-name of *La-ma'-rē* (*Λαμαρής*), in its abbreviated form *Ma'-rē* (*Μαρής*, *Μαρρής*), or, with the addition of 'Pharaoh,' the later Egyptian term for king, as *Παραμαρρής*, *Πρεμαρρής*, he is frequently mentioned in monuments of the Græco-Roman period from the Fayyūm, and especially from the vicinity of his pyramid and his mausoleum (the Labyrinth). He is there depicted in the stereotyped attitude of the gods, except that his head is that of an Egyptian king and bears the royal head-band.

See further, Rubensohn, in *Zeitschr. für ägypt. Sprache*, xlii. [1905] 111 ff.; Spiegelberg, *ib.* xliii. [1906] 84 ff.

(4) Menes (c. 3300 B.C.), the deified founder of the Egyptian centralized State of historical times, is believed by Wilcken to be identical with the similarly named deity *Πραμής* or *Φραμής*, who is frequently mentioned in Greek papyri from the village of Tebtunis in the Fayyūm (Mitteis-Wilcken, *Grundzüge u. Chrestomathie der Papyruskunde*, Leipzig, 1912, i. 1. p. 106).

(5) King Amenophis I. (c. 1551-1535 B.C.), son of that King Amosis who expelled the Hyksos and founded the New Kingdom, was regarded, from c. 1300 B.C., as a guardian deity of the Theban necropolis. In that capacity he is often portrayed in tombs and coffins of this period—mostly in the form of a reigning king, but with the scourge and crook, as borne by Osiris. In his honour was observed the festival of Pa-amen-hotp ('the [festival] of Amenophis'), from which the month of Phamenōth derived its name.

(6) Amenophis III. (c. 1415-1380 B.C.), whose reign seems to mark the zenith of Egypt's position as a world-power, instituted in his own honour a divine cult in the temple of Soleb, in Nubia, built by himself, his name here being 'Neb-ma'-rē, the lord of Nubia,' or 'N. the great god.' In the sculptures which adorn the walls of this sanctuary, the god is depicted as being worshipped by the king himself, and is called by him 'his living image upon earth.' In the inscriptions, the king dedicates the temple to the god, and speaks of himself as being beloved by the latter. In short, Amenophis treats his deified self in every way as an independent divinity. The god is represented as a king wearing the royal head-band, but as having around his ears the twisted ram's horns peculiar to Amun in Nubia and in the Oasis of Ammon (Siwa), and upon his head a small crest

(modius) bearing the moon's crescent and disk, as worn by the ancient lunar deities, Thoth of Shmun and Khonsu of Thebes. He thus comes before us as a fusion of Amun and Khonsu.

Cf. Lepsius, iii. 85-87; Breasted, *Ancient Records*, ii. § 893 ff.

In the Græco-Roman period, the king who thus deified himself in Nubia was identified with Memnon, the legendary king of Ethiopia who came to the help of the Trojans. His colossal statues in Western Thebes, which bore the name 'Neb-ma-rē', lord of lords' (Lepsius, iii. 142, 144; Burton, *Excerpta Hieroglyphica*, Cairo, 1825-30, p. 30), are the famous colossi of Memnon, one of which, after being overthrown by an earthquake in 27 B.C., used to give forth a resonant note at sunrise, until it was restored in the reign of Septimius Severus (Letronne, 'La Statue vocale de Memnon,' in *MAIBL* x. [1833] 249). Its association with the Memnon of Greek mythology can be traced back to the Ptolemaic period, and is, therefore, of earlier date than its property of emitting sounds. In Greek documents of the middle of the 2nd cent. B.C. the name τὰ Μερμβνεια is used of the locality called in Egyptian *Djême*, the modern Medinet Habu, in which was situated not only the sepulchral temple of Amenophis III. with the two colossi in front of it, but also a great palace belonging to him.

It is evident, from various *quiproquos*, that the identification of Amenophis III. with the Greek Memnon is based upon his Rē'-name, Neb-ma-rē', which in that age was apparently abbreviated to Marē (Sethe, *Untersuchungen*, i. 61, n. 1; ii. 6, n. 2). In the Babylonian letters from el-Amarna, dating from the king's own lifetime, his name is rendered by Nimmuria or Mimmuria, and its contemporary pronunciation may, therefore, have been something like Nemmāre' or Memmāre'. It is thus not inconceivable that the Greek mythical figure of the Ethiopian or Egyptian Memnon, whose name is not unlike the form just given, was in reality the final residuum of Egypt's three centuries' supremacy in the Eastern Mediterranean, which, as has been indicated, culminated in the reign of Amenophis III. Moreover, it is precisely the names of this king and his consort that are met with repeatedly on objects of Egyptian origin found at Mycenæ and in Rhodes.

Among the Semitic peoples, again—unless all the evidence is at fault—the memory of this monarch would seem to have survived in the traditions regarding Nimrod, the mighty hunter of Cush (*i.e.* Nubia); and, as a matter of fact, Amenophis III. in his memorial scarabs, which, like commemorative coins, were designed to keep in remembrance the important events of his reign, has recorded not only the expansion of his kingdom from Kari in Nubia to Naharen on the Euphrates, but also his prowess as a hunter of lions and wild oxen (Breasted, *op. cit.* ii. § 860 ff.).

(7) A deified king of unknown name is found in the 'Pharaoh of Snmt' (*i.e.* the Island of Bige), worshipped in the Græco-Roman temples of the Island of Philæ. In the temple sculptures he is represented as an Egyptian king with the so-called war-helmet on his head. In a Greek inscription from the Island of Sehêl he is called Περεισθήμις, 'the god of Bige,' and is identified with Hermes (Sethe, in *Zeitschr. für ägypt. Sprache*, xlvii. [1910] 166).

(8) King Ptolemy Philadelphus gave orders that Arsinoë, his sister and wife, 'the goddess who loves her brother' (Φιλάδελφος), who died in 270 B.C., should be worshipped along with the local deities in all the temples of the country as θεὰ σύνναος, and that a tax of one-sixth of all garden-produce should be devoted to her cult. In the Fayyûm she became a nome goddess, and this fertile region was thereafter called the Arsinoë

nome. A temple of Arsinoë at Memphis is mentioned in the inscriptions of the Memphite high-priests in the Ptolemaic period. In the sculptures of the Egyptian monuments the deified queen appears as a purely human figure, but in the inscriptions she is styled 'daughter of Amun,' and 'Divine mother of the living Apis, the king of all the other divine animals.'

Cf. W. Otto, *Priester u. Tempel im hellenistischen Ägypten*, i. (Leipzig, 1905) 348; Mitteis-Wilcken, *Grundzüge d. Papyruskunde*, i. 2. p. 234; Sethe, *Urkunden d. ägypt. Altertums*, ii. (Leipzig, 1904) 106 ff.

2. Deified individuals not of royal rank.—(1) I-m-hôtep (Ἰμωθης), chief architect to Tosorthros of the IIIrd Dynasty (*c.* 2900 B.C.), the king who built the step pyramid of Saqqara, the oldest edifice of hewn stone in Egypt, is said to have discovered the art of building with that material, but was renowned in later times also as a physician, an astrologer, and the author of wise writings. In the period of the New Kingdom, *i.e.* after 1580 B.C. (one instance found in Thebes under Amenophis III.), it was the custom with writers, in beginning their work, to make a libation from their water-bowl in honour of I-m-hôtep as their patron (Schäfer, in *Zeitschr. für ägypt. Sprache*, xxxvi. [1898] 147; Gardiner, *ib.* xl. [1902] 146). By this time, therefore, he seems to have become a kind of demi-god, and to have lost his human character.

Afterwards, in the Persian period (from 525 B.C.), he became a god in the full sense, who was specially concerned with healing, and was subsequently identified by the Greeks with Asklepios. His cult was attached to his tomb, which, according to Egyptian usage, was situated beside the Pyramid of his patron; and here stood the Asklepieion often referred to in Greek papyri from Saqqara. To this new hero-god, as being originally a Memphite deity, was assigned a divine father in Ptah (Hephaestus), in place of his actual father, Ka-nofer, who is known to us from a genealogy dating from the beginning of the Persian period. His mother, Khredu-onekh, and his wife, Ronpetnofret, were also raised to divine rank, and are often found in association with him. Their names and titles clearly reveal their human origin.

In the numerous statuettes of this god which have come down to us, and which were, no doubt, dedicated to his temple mainly by persons restored to, or in search of, health, he is figured as altogether human, as a learned man sitting on a chair and reading a book (A. Erman, *Ägyptische Religion*, Berlin, 1905, p. 174). We certainly have figures on the temple walls which, while still giving him a human form, show him in the attire and with the bearing of the gods, but these figures date only from the Græco-Roman period. In that age we frequently meet with his cult also in Upper Egypt, as, *e.g.*, in Thebes and Edfu, as well as in Philæ, where Ptolemy Epiphanes erected a small temple in his honour.

Even after his apotheosis I-m-hôtep frequently receives, in addition to the epithet 'Son of Ptah' expressive of his divine origin, his erstwhile human titles, 'reciting priest,' 'expert in affairs,' etc., but only in cases where the reference is to his achievements as a man in the remote past. It is worthy of note that here he is also designated as 'Ibis,' *i.e.* as the sacred bird of the god Thoth, who was believed to have the form of that bird—a designation which re-appears in connexion with the deified individuals discussed below (nos. 2 and 3). It would thus seem that the sages of the past who were subsequently exalted to divine honours were thought of as incarnations of the god Thoth, somewhat in the same way as was indicated in I. 2, above.

Cf. Sethe, 'Imhotep der Asklepios der Ägypter' (*Untersuchungen*, ii. [1902] 98 ff.).

(2) A counterpart to this deified sage of old is met with in Theban temples on the left bank of the Nile dating from the Græco-Roman period, and also in funerary papyri of the same era. This is the famous Amen-hōtp ('Αμενώτης, Αμένωφης), the son of Hapu, and a native of Athribis, who had won renown by a long and honourable career as a minister of the Amenophis III. mentioned above (II. 1 (6)). We possess several original monuments of him, as, e.g., a portrait-statue which represents him as an old man of eighty years, and the inscriptions on which contain moral apophthegms (*Catal. général du Musée du Caire*, no. 42127; Legrain, *Statues de rois et de particuliers*, Cairo, 1906, i. 78, pl. 76), while a second bears an autobiographical inscription (Breasted, *op. cit.* ii. § 913 ff.). A third statue, four metres in height, from the temple of Karnak, and now in the museum of Cairo, likewise contains an ostensibly autobiographical record, which, however, presupposes his deification, and speaks of him in exactly the same terms as do the temple inscriptions of Euergetes II. This monument, to judge from its style and orthography, cannot be earlier than the Græco-Roman period, and it bears, above its Egyptian inscription, a Greek dedication to the name of the Emperor Augustus (*RTAP* xix. [1897] 13).

This Amen-hōtp is also frequently mentioned in the monuments of his royal master. Manetho, who wrote his history of Egypt in the reign of Ptolemy Philadelphus, refers to him, under the name of 'Αμένωφης Παάριος (Egyp. Amen-hōtp Pa-hape, i.e. 'the son of Apis'), as a wise counsellor of a king called Amenophis. It is clear, from what Manetho says of him, that Amen-hōtp had not yet been deified. Hence it is no merely accidental circumstance that our earliest evidences of his being regarded as a god all date from the reign of one particular king, viz. Ptolemy Euergetes II. In all probability it was in that reign that he first became a god. With this accords the fact that, in contrast to I-m-hōtep, he is still portrayed, in the temple sculptures already referred to, in a purely human fashion: he still wears the garb of his time, and his bearing is only in part that usually assigned to the gods. Moreover, though, like I-m-hōtep, he too is styled 'Ibis,' and has received, in addition to his human mother—named 't—a divine mother in the form of the goddess of writing and reckoning (*Sst*) (Lepsius, *Text*, iii. 168), and while the name of his father, Hapu, was interpreted as indicating the sacred bull Apis, yet Amen-hōtp still retains his human titles.

As we meet with the cult of Amen-hōtp only in temples of Western Thebes, it would in all probability be associated with his tomb, which, according to the custom of his time, would be situated in the Theban necropolis and nowhere else. The sepulchral chapel attached to his tomb is referred to in a protective ordinance which survives in a later inscription, executed probably some four hundred years after the death of Amen-hōtp (Möller, in *SBAW*, 1910, p. 932 ff.), and witnesses to the long survival of his cult as a departed spirit. Amen-hōtp resembles I-m-hōtep also in being a healing god. 'I expel all disease from thy body'—so he speaks to the king, offering sacrifice to him (Lepsius, iv. 32c; cf. *JHS* xix. [1899] 13 ff.; *Catal. général du Musée du Caire*, no. 9304; J. G. Milne, *Greek Inscriptions*, Oxford, 1905, p. 37). He too is said to have composed wise maxims, and, in fact, a number of the sayings attributed to the Seven Wise Men of Greece were ascribed to him (Wilcken, in *Aegyptiaca, Festschr. für Ebers*, Leipzig, 1897, p. 142 ff.). Cf. Sethe, in *Aegyptiaca*, 107 ff.

(3) Ptolemy Euergetes II., in whose reign, as

has been said, the deification of the sage Amen-hōtp, the son of Hapu, seems to have taken place, erected at Medinet Habu, in Western Thebes, a small temple in honour of Thoth, the god of wisdom, who appears to have been worshipped there under the designation of 'Thoth, Teos the Ibis' (Τεεφίβης), and 'Thoth *stm*.' We have here a deified high priest of Memphis (*stn*)¹ named Teos, who was thus identified with the god of wisdom, and hence also designated as 'the Ibis.' This would seem to be the same person who is referred to by Clement of Alexandria (*Strom.* i. 21 [p. 399]) as the 'Theban Hermes,' and as an instance of the deification of human beings.

Now there was, as we know, a Memphite high priest named Teos in the Ptolemaic period; according to the inscription on his tombstone (now in Vienna), he lived from 267 to 224 B.C. But, as the office of high priest in Memphis was hereditary, it is possible that he had predecessors and successors of the same name as himself. Cf. Sethe, 'Imhotep,' p. 9 (*Untersuchungen*, ii. 100 f.).

(4) In 238 B.C., by an ordinance of the Egyptian priests, the prematurely deceased daughter of Ptolemy Euergetes I. was deified (*εθελωσας*) under the title of Βερενίκη ανάσση παρθένων, and it was also enjoined that 'statues of this goddess' should be set up in all the temples of the country (Decree of Canopus).

(5) Another deified man of the later era (after 900 B.C.) must—if we are to judge from the name—be recognized in the god Petesuchos or Petesuchis (i.e. Egyp. *Pete-subek*, 'he whom the god Suchos gave'). In Pliny (*HN* xxxvi. 84) he is erroneously identified with the king who built the Labyrinth. This hero-god was depicted as a crocodile, like Suchos, the old local deity of the Fayyūm, from whom he took his name. Here perhaps we have a parallel to the designation of the deified sages as 'Ibis,' the sacred bird of Thoth (see 1-3 above).

Cf. Wilcken, in *Zeitschr. für ägypt. Sprache*, xxii. [1884] 1367, and Mitteis-Wilcken, *Grundzüge d. Papyriuskunde*, i. 1, p. 106.

(6) In the temple of Dendur in Lower Nubia, built in the reign of Augustus, there were worshipped, among others, two brothers named Pete-ese and Pa-hor, the deified sons of a certain Kṽpr; their names seem to point to the later period. In addition to the usual designations of the dead, 'Osiris' and 'justified,' they bear the epithet 'glorified' (*hāsyē*), or 'glorified in the necropolis,' and for this reason Griffith conjectures that they had died by drowning. Pete-ese sometimes receives the title 'the snake of destiny' (*sai = ἀγαθοδαίμων*) who [is] in *Ht't* (the name of the locality), placed after his own name, and, therefore, a divine epithet, while Pa-hor bears the enigmatic designation *Pḥri*, 'the chief' (Φρι-) before his own name, and, accordingly, as a human title. The two brothers are portrayed in human form, but in their bearing and garb altogether as gods.

Cf. Griffith, *Zeitschr. für ägypt. Sprache*, xlv. [1909-10] 134; A. M. Blackman, *The Temple of Dendur (Les Temples immergés de la Nubie)*, Cairo, 1911, iii.).

(7) Finally, the two hero-gods just mentioned, who may possibly have owed their apotheosis to a death by drowning, would find a parallel in Antinoos, the celebrated favourite of the Emperor Hadrian. While accompanying the Emperor on his Egyptian journey, he is said to have thrown himself into the Nile in order that he might by his own death save his patron from imminent peril. On the spot where this took place Hadrian founded a Roman city, which he called Antinoopolis, and in which he in all likelihood instituted a cult in honour of the youth, as a city-hero, or,

¹ The spelling of this word shows that it is not the equivalent of 'to hear,' as in the proper name Θεοσώρις ('Thoth, hear!'), which Spiegelberg (*Zeitschr. für ägypt. Sprache*, xlv. [1909-09] 90) would compare with it.

according to the Egyptian mode of speech, as a 'city-god' (*i.e.* a local deity), and this is rendered all the more probable by the fact that the Emperor caused divine honours to be paid to Antinoos elsewhere. See P. von Rohden, in Pauly-Wissowa, i. 2439.

LITERATURE.—This has been sufficiently indicated in the course of the article.
K. SETHE.

HEROES AND HERO-GODS (Greek and Roman).—The belief in heroes plays a very important part in the development of Greek religion, and to an extent which literature, taken by itself, insufficiently demonstrates. The conception of a hero arose from the prevalence of ancestor-worship, when the spirit of the dead man was canonized by his descendants. Remembering the identification of demons with the ghosts of the departed (see DEMONS AND SPIRITS [Greek]), we shall not be surprised to find that demons and heroes are sometimes treated as indistinguishable (*e.g.* Plat. *Apol.* 27 D). But, when a distinction was drawn between them, demons, though inferior to gods, were, in their turn, regarded as superior to heroes (Plut. *de Def. Or.* 10, p. 415 B). This classification, which is the product of later reflexion, may be traced ultimately to the verses of Hesiod, who makes the demons the representatives of the Golden Age of man (*Op.* 122), but regards the Age of the Heroes as immediately prior to his own (*ib.* 159 ff.). These are they, he adds, who fought before the gates of Thebes, and crossed the sea to bring back fair-haired Helen from Troy; and after death they dwell free from care in the Islands of the Blessed beside the stream of Ocean. The heroes were definitely understood by Hesiod to have been men of renown, who lived in the age celebrated by epic poetry, and whose exploits had been immortalized as the achievements of a semi-divine race (Hom. *Il.* xii. 23; *Hom. Hym.* xxxii. 18 f.; Simonid. fr. 36). Though there is thus one point of view from which demons are preferred to heroes, it is equally true that the demonic being is a more primitive conception; and that the hero, with his clearly-marked personality and more intimate relations with his worshippers, is the product of a more advanced stage in religious thought. Further, demon is the wider term: every hero might be described as a demon, but not all demons were heroes. Although the derivation of the word *ήρωας* is unknown, there is reason for thinking that it was originally an adjective bearing some such meaning as 'strong' or 'noble' (Hesych. *s.v.*), so that it may have been an honorific title intended to distinguish the souls of those among the departed whose protection and favour it was desired to secure.

The old view that hero-worship arose from a weakening of the belief in gods can no longer be maintained in the light of recent research (Rohde, *Psyche*, 148₂). The ritual facts, as will presently be shown, are decisive against it, and the transition of thought which it assumes is by no means characteristic of the tendency of an early society. Even if it were conceded that old divinities might be re-fashioned as men, and so at a later stage come to be worshipped as heroes, that would be insufficient to prove that a hero is ever derived immediately from a god. The heroes in their original form, as ghosts of ancestors, were neither demi-gods, if that term is used to describe living warriors, nor demons, who have never been incarnate in human shape. It is more difficult to account for the fact that hero-worship, which can be shown to have flourished in the 7th cent. B.C. or even earlier, exercised—so far as we can see—hardly any influence on the practice of Homeric society. Somehow or other, old beliefs in the

power of the dead, which were temporarily obscured during the flourishing period of epic poetry, sprang anew into life and dominated popular thought in the succeeding centuries and throughout the classical era. Or it may be that, as the political system which supported the courts of the feudal chieftains fell away and decayed, the voice of the commoner, whose primitive superstition had remained unchanged, became articulate in later literature.

There are many facts which attest the connexion of heroes with the under world, and especially with the ghosts of ancestors. The central hearth of the house, under which the hero was buried (cf. Plut. *Phoc.* 37), and near to which a precinct was reserved for him, was an object of especial veneration in family-worship (cf. art. HEARTH [Greek]). Or an image of the hero might be set up close to the house-door (Callim. *Epigr.* 26), in order to protect the inmates against the approach of their enemies. At every family meal the second libation was poured out in honour of the heroes (Plut. *Qu. Rom.* 25, p. 270 A), and to them belonged all the broken fare which fell from the table (Arist. fr. 180 R.). In regard to the latter custom, Athenæus (427 E) states that dead kinsmen are actually the recipients, and it is not to be doubted that the pouring of the wine on the ground was for the benefit of the family ghosts.

Heroes were kept in remembrance by their graves, as may be seen from the case of the shrine erected in honour of Protesilaus on the shore of the Thracian Chersonese, which, though despoiled by the order of Xerxes (Herod. ix. 116), was still an object of veneration in the time of Philostratus (*Her.* iii. 1 f.). The grave itself was a mound of earth (*χάμα*) situated within a sacred enclosure (*τέμενος*, or, more strictly, *σηκός* [Poll. i. 6]). Over the mound a small chapel (*ήρώιον*) was raised, the precinct was planted with trees, and its limits were marked by a stone wall (*θηρυκός* [Paus. i. 42. 8]). The most distinctive feature of the locality was the cavity (*βήθος*) communicating with the interior of the grave, into which the blood of the victim was poured or other offerings were cast. Thus, the tomb of the hero actually served as an altar (*βωμός*) for his worshippers, and might be so described (Eur. *Hel.* 547, with the present writer's note). Strictly, however, since no elevation was essential, a circular hollow in the ground (*έσχάρα* [Reisch, in Pauly-Wissowa, vi. 615]) was the appropriate receptacle for offerings to heroes. The sacrificial terms applied to hero-worship belong also to chthonic worship in general (for *εναγίσειν*, as distinguished from *θύειν*, see Herod. ii. 44), and the ritual was the same: the victims—generally black bulls or rams—were slaughtered so that the blood from their throats fell into the hollow of the altar, to be drunk by the ghost (*αίμακουλία*); their heads were pressed downwards so that they looked towards the earth (*έτρομα*, as explained by schol. Hom. *Il.* i. 459); none of the flesh was eaten, but the whole of it was consumed by fire; or—since the employment of an animal victim was by no means universal—when firstfruits of all kinds (Thuc. iii. 58) as well as cakes and cheese were offered to them, none of the gifts must be touched subsequently by the human worshippers. There is the same significance in the fact that offerings to heroes were often made by night or towards evening (Pind. *Isth.* iii. 83; Ap. Rhod. i. 587); in the custom of beating the ground (*Αesch. Pers.* 685), or of kneeling before the tomb (Soph. *EL.* 453); and in the annual recurrence of the ceremony to commemorate the hero's death. The institution of funeral games over the grave of a dead hero was a common custom (*e.g.* Paus. viii. 4. 5), and it is generally supposed that such was the

origin of the four great pan-Hellenic festivals, which were afterwards brought into connexion with the cult of an Olympian god.

See Rohde⁴, 152; Eitrem, in Pauly-Wissowa, viii. 1126. An attempt has recently been made by F. M. Cornford, in J. E. Harrison's *Themis*, 212 ff., to explain the games as originally and essentially a New Year's festival. This view accords with the general argument of the authoress that the hero is a later conception derived from that of the year-daimon (*op. cit.* 375).

A remarkable feature in the worship of a hero is that he was supposed to appear in the form of a snake. So Cychreus was figured at Salamis, and Erichthonius at Athens (Paus. i. 36. 1, i. 24. 7). Vergil describes the arrival of an enormous snake when Æneas was celebrating the anniversary of his father's death by the performance of solemn rites at his tomb (*Æn.* v. 84 ff.). The superstitious man in Theophrastus (*Char.* 16), if he saw a snake in the house, at once erected a small chapel on the spot. The snake is also frequently depicted in the class of reliefs known as the Dead-Feast type, in which the hero is represented as partaking of a meal (Rouse, *Gr. Votive Offerings*, Cambridge, 1902, p. 20 ff.; Eitrem, 1142 f.). Plutarch, in his Life of Cleomenes (39), says that, after Cleomenes had been put to death by Ptolemy and his body impaled, a snake was seen wound round his head; and certain learned men explained the occurrence by propounding the theory that snakes are produced within a human corpse by the thickening of the juices of the marrow. The explanation, which is also given in a speech of Pythagoras recorded in *Ov. Met.* xv. 389, is perhaps due to the rationalizing tendency of popular opinion at a time when the superstition had ceased to be credible. Although the association of the snake with death and the grave appears to be free from doubt, it has, nevertheless, recently been maintained that the snake-attribute of a hero points to his origin as a fertility-daimon, and symbolizes the resurrection of life in the new year (J. E. Harrison, *Themis*, 271, 310).

The worship of ancestors in general culminates in the worship of a hero as the representative of the family. He is no longer one of a class in which all the members are equally entitled to veneration. There has arisen a belief that, in accordance with the measure of their achievements on earth, distinguished men are to be held in esteem after death, and that in virtue of their mysterious influence they can exercise a wide range of power over their former haunts. Thus, one who has become famous as a ruler or a warrior is selected by his immediate descendants to occupy a supreme position as eponymous founder of the clan (*ἀρχηγέτης*). In this sense Cecrops may be said to give his name to the Cecropidæ, Butes to the Eteobutadæ, Æacus to the Æacidæ, and so forth. It may be true that some of these name-givers never had any individual existence, but that their names were projected, so to speak, in order to express the unity of a clan-group (J. E. Harrison, *op. cit.* 267). But, however the actual particular facts may have come to pass historically—and it is unlikely that the development was uniform in every group—the conception of the hero in the classical age figured him as the remote forefather to whom the members of the clan proudly referred their birth. The wide-spread belief that gods and men were of the same race led to the further conclusion that the most glorious of mankind must have been of divine origin; the eponymous heroes of the clans were the sons of the gods. There is thus a difference not only of degree but of kind between the class of heroes and their mortal descendants; the progress of the religious sense has evolved a new grade of supernatural beings capable of recruitment from the ranks either of gods or of men (Eitrem, 1129).

The relationship of heroes to the gods must now be examined in detail. It frequently happens that

the chapel or grave of a hero is in the temple of one of the great gods. Saron lay in the temple of the Saronic Artemis (Paus. ii. 30. 7), Iphigenia in that of the same goddess at Brauron (Eur. *Iph. Taur.* 1462). Telmessus was buried under the altar of Apollo at Telmessus (Clem. Alex. *Protr.* ii. 45), Eurystheus in the temple of Athene Pallenis (Eur. *Heracl.* 1025), and Cleobis and Biton in the Heraeum at Argos (Herod. i. 31). The list might be very largely increased; but, in order to appreciate its significance, we must rule out any suggestion that the shrines of these local worthies were superimposed on the existing sanctuaries of the Olympian gods. We should rather infer that hero-worship was a survival from an older system of religion, which preceded the establishment of the greater cults.

There are other indications which point to a conflict between the representatives of an older and a later system. Apollo drove out Hyacinthus at Tarentum (Polyb. viii. 30. 2); Artemis came to terms with Callisto in Arcadia (Paus. viii. 35. 8); and Aphrodite was identified with Ariadne at Naxos (Plut. *Thest.* 20). Sometimes the superseded hero assumed the functions of founder of the new cult, or of minister and attendant to the new god. Thus we read that Aristæus built an altar to Zeus Ikmaios in Ceos (Ap. Rhod. ii. 522); and hence the numerous stories of a god welcomed by a mortal, who was held in honourable remembrance on that account, as when Dionysus was welcomed by Icarius and Pegasus. Sometimes the god took over the honours instituted for a hero, as when Zeus succeeded to the funeral games established at Nemea as a memorial to Archemorus (Arg. to Pind. *Nem.*), or when the Rhodian celebration dedicated to Tlepolemus was transferred to Helios (schol. Pind. *Ol.* vii. 146). Sometimes, again, the Olympian has entirely effaced the reputation of the hero, whose name has been forgotten: Pausanias (i. 1. 4) mentions that there were altars at Phalarum dedicated to certain unknown gods and heroes, and also that an altar which was inscribed to an anonymous hero was known by antiquarians to belong to Androgeos. Whenever the hero has been subordinated to the god, but the recollection of his former eminence has not entirely passed away, a preliminary offering made to the hero precedes the celebration of the chief sacrifice. In this way Pelops was honoured at Olympia (schol. Pind. *Ol.* i. 149), and Scæphrus at the festival of Apollo Agyieus at Tegea (Paus. viii. 53. 3); and on Mount Helicon the worshippers made offerings every year to the hero Linus before the sacrifice to the Muses (*ib.* ix. 29. 6).

If we find certain mythical personages appearing now as gods and now as heroes, the variation may be attributed either to the promotion of a hero to the status of a god or to the reduction of a god to that of a hero. The latter process, as we have already seen, cannot be used to explain the origin of hero-worship in general; but it is currently assumed as an element in the possession of heroic attributes by certain of the greater gods (Usener, *Götternamen*, Bonn, 1896, pp. 254 f., 273; Rohde⁴, 148₂; Eitrem, 1129). When Dionysus is addressed as a hero in the old ritual chant of Elis (*Poet. Lyr. Gr.* i. iii. 656)—the earliest example of the cult title—an explanation is drawn from his recent association in legend with Semele, the daughter of Cadmus. The growth of legendary stories about the gods, or the introduction of their names into the genealogical tables of princely families, accounts for the ambiguous position of the Dioscuri and Helen, of Asclepius and Heracles, of Theseus and Amphiaræus. Another view has recently been advocated: that the conception of an Olympian god is always later than that of the

hero from which it was developed (J. E. Harrison, *Proleg.* 326 ff., *Themis*, 365 ff.), that the individual history of the hero is due to a re-fashioning of elements derived from still more primitive cults, and that the Dioscuri and Theseus are ultimately the impersonations of fertility-daimons (*Themis*, 304, 317). The difference in treatment is exaggerated by the ambiguity of the terms employed, when one investigator uses 'god' (*θεός*) in a wider sense as including 'demon,' and another in a narrower and more refined. Thus, it is unreasonable to doubt that Helen was worshipped as a 'goddess' in the Peloponnese before the details of her heroic story were commemorated by Homer; but, on the other hand, so far from having attained to Olympian dignity, she may have been nothing more than a tree-spirit (Dendritis in Rhodes [Paus. iii. 19. 9]) or a local demon. The advancement of a hero to divine rank is less disputable: the Phocæan colonists at Pityoessa paid divine honours to Lampsace, who had previously been worshipped as a heroine (Plut. *Mul. Virt.* p. 255 E); the hero Tlepolemus received burnt sacrifice as a god at Rhodes (Pind. *Ol.* vii. 77); and Hippolytus was raised to heaven as a divine charioteer (Paus. ii. 32. 1).

When the significance of the hero as a being intermediate between gods and men was generally recognized, it became natural to apply the name—as a synonym of 'demon'—to various supernatural potencies of secondary rank. Hence it was transferred to the gods of limited jurisdiction (*Sondergötter*), whose importance for the history of religion has been demonstrated by Usener (p. 75 f.). To this class belonged the hero Acratopotes (drinker of unmixed wine) at Munychia, and the heroes Matton (baker) and Ceraon (wine-mixer) at Sparta (Athen. 39 C), whose function was that of superintending the slaves engaged upon the preparation and service of the meals. Similar to these were the Telchin Mylas, the demon Eunostos (miller), and the bogey Alphito (white-meal). Another group comprised the spirits which watched over vegetation. Phytius, the Ætolian, son of Orestheus and father of Ceneus (Hecat. fr. 341), and Phytalus, who entertained Demeter in his house near the Cephissus (Paus. i. 37. 2), became individualized in spite of the obvious significance of their names; but Calamites (reed-spirit), Cyanites (bean-spirit), and Hadreus (spirit of ripening) were on another footing. Another department belonged to the spirits which protected against particular evils, such as the wind-stiller (*Εὐδάμεμος*) at Athens, or the fly-hunter (*Μύιαγρος*) at Aliphera in Arcadia; and another to the guardian spirits, the sentries (*Τειχοφύλαξ*), and night-watchers (Lucian, *Peregr.* 27). Phylacus was the significant name of one of the two heroic warriors of more than human stature who protected the Delphians against the Persian invaders (Herod. viii. 39). In the temple of Asclepius at Epidaurus was found an inscription on the entablature of a limestone column in honour of the hero Key-bearer (*Κλαυκοφόρος*), who, according to Usener (p. 265), had undertaken the responsibility for the safe-keeping of the temple. The Hesychidæ, who ministered to the worship of the Semnæ on the Areopagus, claimed descent from the hero Hesychus, and on every occasion when an offering was made to the goddesses a ram was sacrificed to him (schol. Soph. *Ed. Col.* 489). He was the impersonation of religious silence, and corresponded to the Doric hero Euphemus, who, however, is known solely from the Argonautic saga as the steersman of the Argo. In all the cases which have been enumerated, the heroes, except where they acquired a legendary personality, became shadowy abstractions which failed to maintain their privileges on

the advent of the fully-developed forces of the greater gods. The usual result was that they lost their identity, and survived only as epithets attached to the name of the Olympians. Hence we find Zeus Myleus and Demeter Himialis, Zeus Phytius and Poseidon Phytalius, Zeus Apomuiois and Apollo Parnopios, and Zeus Euphamius, Heracles Hoplophylax, and Apollo Prophylax.

It will have been observed that the hero was believed to exercise protective power within a prescribed sphere. The grave, as we have already seen, was the cult-centre, and the influence of the hero may be said to have radiated outwards from it. Just as the hero, so long as he was regarded merely as a family guardian, was buried beneath the hearth or close to the doorstep, so, when his influence had spread to a wider circle, his tomb was placed where it might best serve the interests of the township. Thus Adrastus lay in the central agora at Sicyon (Herod. v. 67); Melanippus in the Prytaneum, the hearth of the State, at the same place (Pind. *Nem.* xi.); and Ætolus hard by the city-gate at Elis (Paus. v. 4. 4). As the blessing anticipated from the hero was dependent on the security of his grave, it was a matter of supreme importance that the remains of national heroes who had died abroad should be brought under the control of the State. Hence Cimon restored the bones of Theseus from Scyros to Athens (Plut. *Thes.* 35); Orestes was brought from Tegea to Sparta (Herod. i. 67), and Rhesus from Troy to Amphipolis (Polyæn. vi. 53); and the lost shoulder-blade of Pelops was recovered for Elis (Paus. v. 13. 4). Or, if a foreigner whose assistance might be needed had died in the country, it became the duty of the government jealously to protect his grave, as in the classic instances of Œdipus (Soph. *Ed. Col.* 409 ff.) and Eurystheus (Eur. *Heracl.* 1025 ff.). In the case of Tiresias, who died at Haliartia, the Thebans were obliged to be content with a cenotaph (Paus. ix. 18. 4). There were good reasons, therefore, for keeping the hero's place of burial concealed from strangers, lest they should molest it for their own purposes (Soph. *Ed. Col.* 1522 f.). This consideration may serve to explain why the position of the graves of Neleus and Sisyphus at Corinth was always unknown (Paus. ii. 2). The result of such secrecy was that in certain cases the name itself was forgotten, and the locality passed under the protection of the grave of an unknown hero (Rohde⁴, 161 ff.). This scrupulous concern for the remains of the mighty dead was one of the features which the Christian Church inherited from paganism; and it is sufficient in this connexion to refer to the custody of sacred relics, and the burial of monarchs and bishops within the cathedral sanctuaries (Eitrem, 1122).

The saving qualities of the heroes might be manifested in various ways. Some of these have already been indicated, and particularly the exercise of their power by those who furthered the increase of crops. Hippolytus and Protesilaus heard the vows of lovers, and assisted or consoled them as occasion might require (Philostr. *Her.* iii. 3. 14; Eur. *Hipp.* 1423 ff.). But that was a form of activity altogether exceptional. The benefits normally to be derived from heroes may be put into three classes: (α) Help in time of danger, and especially in battle. Thus Theseus and Echetlos assisted the Athenians against the Persians at the battle of Marathon (Plut. *Thes.* 35; Paus. i. 32. 5). Spectres of armed men were seen holding out their arms to protect the Athenian ships at Salamis: these were the Æacids, whose assistance had been invoked before the battle (Plut. *Them.* 15). On the same occasion the hero Cychreus was alleged to have appeared in the form of a serpent (Paus. i.

36. 1).—(b) Health in time of sickness was especially invoked from Machaon and Podalirius, the sons of Asclepius, and others of his descendants such as Polemocrates, who healed in Thyreatis (Paus. ii. 38. 6). The ritual of incubation, according to which the suppliant slept in the temple on the skin of the victim which he had sacrificed (Lycophr. 1050), is full of interest, but must not detain us here. At Athens there was a sanctuary of the hero physician (Dem. xix. 249), which reminds us of the baker and miller heroes previously mentioned. But the power of healing was not confined to those who claimed it as their particular province: Heracles was a healer in Bœotia (Paus. ix. 24. 3) and elsewhere, and Helen is said to have changed an ugly child into a beautiful woman (Herod. vi. 61).—(c) The function of divination was regularly exercised. All over Greece were oracular shrines, where the tutelary hero forecast the future, and imparted his advice to the inquirer by means of a dream. The most famous was perhaps that of Trophonius at Lebadea in Bœotia, the procedure at which is described in detail by Pausanias (ix. 39). From many others we may select as representative the sanctuaries of Alemeon near to Thebes on the road leading to Delphi (Pind. *Pyth.* viii. 58), of Ino-Pasiphae at Thalamæ in Laconia (Paus. iii. 26. 1, Frazer), and of the seer Anios—the father of the three Enotropi—at Delos (Rohde⁴, 176₂).

The power of the heroes to help corresponded with the measure of their revenge if slighted. They might bring defeat, as they did to the Persians in punishment of their impiety (Herod. viii. 109), or drought and barrenness, as when Actæon in anger ravaged the land of Orchomenos (Paus. ix. 38. 5), or when Theagenes punished the Thasians for flinging his statue into the sea, because it had fallen on one of his enemies and killed him (*ib.* vi. 11. 6 ff.). The hero Anagyros executed a terrible revenge upon an old man who had cut down a tree in his sacred grove. He inflamed the man's mistress with a passion for his son, and when, like Potiphar's wife, she accused him who had slighted her, the father blinded his son and bricked him up in a vault. Finally, the old man hanged himself, and the woman threw herself into a well (Suid. *s.v.* 'Αναγυράριος). No wonder that men dreaded to come into the presence of such baleful spirits, that they passed by their sanctuaries in fearful silence (Alciphr. iii. 58), and averted their eyes lest they should encounter their apparitions (schol. Aristoph. *Av.* 1493). To the vulgar the heroes seemed more disposed to injure than to help; but it is a hyperbole when they are described as responsible for all the sufferings of mankind (Babr. 63).

The belief in heroes and their worship can be shown to have been firmly established in Greece from the 7th cent. B.C. onwards, so long as the framework of the ancient Greek civilization continued to persist. The ordinance of Draco commanding the Athenians to worship gods or heroes in accordance with inherited tradition (Porphyr. *de Abst.* iv. 22) proves that in his days hero-worship was no innovation; and its permanence is shown by the regular combination of the names of heroes with the gods in the oaths taken upon solemn occasions (Dinarch. i. 64). The reforms of Cleisthenes recognized the importance of the heroic ancestor, whose presidency was extended from the sphere of the clan to the artificial units of tribe and deme. The hero, as local demon, had sometimes merged his identity in the name of the settlement, as may be seen from the examples of Tænarus, Marathon, and Corinthus. In other conditions he was regarded as the leader and founder of the newly-established State, as was Danaus at Argos, Battus

at Cyrene, and Tlepolemus at Rhodes. It was a natural consequence in historical times that the personage to whom a new society owed its origin or its prosperity should be advanced to the rank of these mythical chieftains. Thus we find the cult of Miltiades established in the Thracian Chersonese; and in the same neighbourhood at Amphipolis, where a festival had been founded in honour of Hagnon as *οκιστής*, the citizens afterwards transferred their veneration to Brasidas by consecrating his tomb and investing him with the annual honours of games and sacrifices (Thuc. v. 11). Other military and political services were recognized in the same way: the cult of Leonidas survived at Sparta until the age of the Antonines (Paus. iii. 14. 1), and Harmodius and Aristogiton received heroic honours at Athens (Pollux, viii. 91).

But political merit did not stand alone in earning this posthumous honour. Cleomedes of Astypalæa and Ebotas of Dyme were canonized as Olympian victors (Paus. vi. 9. 3, vi. 3. 4); Bias of Priene for his wisdom (Diog. Lært. i. 88); and Philippus of Croton for his beauty (Herod. v. 47). Here may be added the honours freely accorded to literary celebrities, among whom may be mentioned Homer, Hesiod, Archilochus, Pindar, and Æschylus. The case of Sophocles was peculiar: he had welcomed Asclepius in his home, and honoured him with regular and formal worship, and consequently he was himself worshipped as a hero after death, under the title of Dexion, 'the Entertainer' (*Etym. Mag.* 256). The philosophical schools were organized as religious societies (*θλαροι*), and it became the rule to honour the founder as a hero (Wilamowitz, *Antigonos von Karystos*, Berlin, 1881, p. 263 ff.). There is less of historical certainty in the heroization of Drimacrus, the leader of runaway slaves in Chios (Athen. 266 D), and of Pixodarus, the Ephesian shepherd, who directed the officials charged with the building of a temple to a quarry of beautiful marble (Vitruv. x. 7).

Throughout historical times the influence of the Delphic oracle in recommending the establishment of a heroic cult (*e.g.*, Herod. i. 167) was very conspicuous; for the Delphian Apollo was regarded by every Greek as the greatest of seers in all that appertained to the worship of gods and heroes. The priests, we may well believe, shared the current superstitions of their age, even if they pursued a policy of self-interest by spreading cults which owed the charter of their establishment to Delphi (Rohde⁴, 180).

The belief was ultimately degraded by the heroization of living men. The earliest recorded example is perhaps the Syracusan Dion (Diodor. xvi. 20). The servility of the age of the Diadochi was reflected in the extravagance of the rewards showered upon Demetrius by the Sicyonians (*ib.* xx. 103). Posthumous honours, not merely heroic, but divine, were granted to the representatives of the dynasties of Ptolemy and Seleucus; and the second Ptolemy took a further step forward by permitting himself to be raised to the rank of a god during his life.

An entirely different cause—the increase of affectionate regard for the dead—contributed to the secularization of hero-worship. It became the practice for religious corporations so to honour one who had held high rank in the society, or even for private individuals to endow a religious foundation in honour of themselves or members of their own family. The best-known example of the latter is the will of Epicteta of Thasos, who left directions for the heroization of herself, her husband, and her two dead sons (Hiller v. Gärtringen, in Pauly-Wissowa, vi. 124). Copious evidence of private consecration will be found in the heroic reliefs, which 'from prehistoric days to the last period of

Greek art maintain their connexion with the dead' (Rouse, 36). (For the details, see Deneken, in Roscher, i. 2556 ff.; Rouse, 19 ff.; Eitrem, 1142; J. E. Harrison, *Themis*, 313.) In Bœotia and Thessaly the word 'hero' was used from an early date as a customary epithet of the dead (*ἥρωες χηρστῆ, χαίρε* [Roscher, i. 2549 ff.]), and as such was applied even to children and to slaves. In this connexion may be mentioned the declared intention of Cicero to build a shrine in honour of his daughter (Cic. *Att.* xii. 18). The last phase of hero-worship returns to the point from which it started, the family-worship of the souls of the dead.

Hero-worship was entirely alien to the native religion of Rome (Mommsen, *Rom. Hist.* i. 174, Eng. tr. [ed. 1877]); but the fully-developed notion of the hero as a warrior of Homeric epos and as a superhuman or semi-divine being passed over to the Romans as part of the mental equipment which they borrowed in consequence of their contact with Greek civilization. As the Romans had no heroic past of their own, they refurbished their ancient traditions by introducing Greek heroes into Italy, or by assimilating the forms of their native kings to the foreign pattern. The legends of the exposure of Romulus and Remus, of the translation of Romulus, and of his apotheosis, are demonstrably of Greek origin. The story of the assistance given to the Romans by the Dioscuri at the battle of Lake Regillus is exactly typical of the epiphanies of Greek heroes; and it has been shown that the details were transferred directly from a Greek account of the battle at the river Sagras between the Locrians and the people of Croton (G. Wissowa, *Religion u. Kultus der Römer*, Munich, 1902, p. 216). Later poets, of course, spoke of heroes entirely after the Greek manner, as when Horace put Numa and Cato on the same level as Hercules and the Tyndaridæ (*Odes*, i. 12), or when Vergil prophesied that the glorious child to be born in Pollio's consulship would join the throng of gods and heroes on equal terms (*Ecl.* iv. 16).

HEROES AND HERO-GODS (Hebrew).—I. Hebrew heroes.—The record of heroes among the ancient Hebrews, viewed apart from the mythological idea attaching to the second part of the title at the head of this article, must be allowed to have been a particularly great one. The Book of Judges alone, with its long series of heroic struggles under the successive (and partly contemporary) leadership of men of extraordinary daring and valour, is sufficient to attest the presence of a very high degree of the heroic quality among the Israelitish settlers;¹ and the exploits of Saul, Jonathan, and David fitly round off the tale of deadly conflicts which ended in complete victory over the hostile forces on all sides.

In the history that follows these events the more distinctly spiritual type of heroism overshadows—in our view, at any rate, though it may not have appeared so at the time itself—more or less completely the military form of it, the 'hero as prophet' acquiring, and for several centuries retaining, a very high degree of significance both for his own time and for the distant ages to come. The spiritual hero wielded for the most

¹ Even Winckler, whose mythical theories may be said to reach to the farthest possible limit (see under § 2 (b)), cannot help admitting an historical basis for the history of the Judges (see *KAT*³, 213-219). Concerning Samson, see note on p. 655a.

part his powerful influence independently of the priesthood, or even in antagonism to it; though at times, and very powerfully so in the case of Jeremiah and Ezekiel, prophetic inspiration rested on members of the priestly order. In Ezra, again, we have a hero-priest endowed with special gifts for teaching and the re-organization of the religious life of the nation; and in the latter period of independent Hebrew polity the military successes of the Hasmonæan priest-warriors appeared to revive the heroic glories of the reign of David before the astonished eyes of the Græco-Syrian world around.

The common source of energy of all these different types of heroism lay for the ancient Israelite in the mighty strength of Jahweh. The steady possession or occasional onrush of the Divine spirit was as much required for great military and administrative achievements as for the utterance and action of the psalmist and the prophet (see, e.g., Jg 14^{6, 19}, 15¹⁴ [Samson's case], 3¹⁰ [relating to the judge Othniel, son of Kenaz], 1 S 11⁶ [Saul's first warlike undertaking], 2 S 23² [sacred minstrelsy], Is 11² [the ideal king]); and in special emergencies even the functions of the priest, ceremonial though they were, were invigorated by a special Divine affluence proceeding from Jahweh, as can be seen from Hag 1⁴, where the high priest Joshua is, equally with the prince Zerubbabel, Divinely stirred up to the performance of his office, and where, indeed, the people generally are said to be similarly affected by the spirit of Jahweh.¹ Heroism in ancient Israel was, therefore, conceived as a direct effluence from Deity acting on the individual human spirit, and it may be readily conceded that Carlyle's great postulate of the 'primal reality of things' as the basis of heroism almost pales into a philosophical abstraction by the side of the intense, personal, and all-compelling manifestation of Divine force which went to the making of a hero among the Hebrews.

2. Traces of mythology.—So far, then, we have historical fact, with which—as may be admitted—a certain amount of mythical and legendary matter has in some cases been combined. Legend and myth, or speculation as to such, in the full sense of the word, first meet us when we set about to answer the question whether, or in what specified instances belonging to the period preceding the conquest of Canaan, the hero was in the mind of the primitive Hebrew identical with one form or another of Deity.

It is first of all to be noted that this part of the subject is very closely connected with the problem of ancestor-worship (see 'Hebrew' art. in vol. i. p. 444 ff.), or may in fact, in one view of it, namely that of the euhemeristic interpretation of myths,² be regarded as a branch of ancestor-worship in its wider sense, the special feature of the 'hero as divinity' consisting in this, that, whilst an ancestor or a ruler may in the course of time attract to himself the worship of men, mainly on account of relationship or exalted official position, the hero can become a god only by virtue of his inherent personal greatness. The case would, on the other hand, look entirely different if an original deity is supposed to have become transformed into a human hero, but it so happens that, in the first mythical record (designated as *a*) which we have to consider,

¹ Even for special degrees of mastery in arts and craftsmanship the indwelling and informing spirit of Jahweh was required; see Ex 28³ 31³.

² No opinion is here, however, intended to be pronounced on the question whether in any given case an originally human hero became a divinity (in accordance with euhemeristic principles), or whether an original deity later on acquired the character of a human hero. In many cases a solution of this problem is, in the present state of our knowledge, probably impossible. Our Biblical mythologists (Winckler, Ed. Meyer, and others), as will be seen later, assume the second alternative.

the two aspects of the case appear, in a manner, combined.

(a) The myth in question is contained in Gn 6¹⁻⁴. It is there related that the sons of God (or, rather, 'sons of the gods') took human wives, and that the offspring of these unions were the Nephilim (RVm 'giants'), the same having been 'the mighty men which were of old, the men of renown.' The literal meaning of this passage was for a long time naturally distasteful to both Jewish and Christian interpreters. The former (in the Targums, etc.) therefore explained the term 'sons of God' (*bēnē 'ēlōhīm*) to mean sons of judges, *i.e.* the noble and élite of the land, whilst to the latter the narrative referred to intermarriage between the godly men of the line of Seth and the sinful women of the line of Cain. Modern students are, however, undoubtedly right in regarding the passage as a genuine 'torso' of ancient mythology. As Driver puts it (*Westminster Com., in loco*):

'The expression "sons of God" (or "of the gods") denotes elsewhere (Joh 1⁹ 21 387 . . .) semi-divine, supra-mundane beings, such as, when regarded, as is more usually the case, as agents executing a Divine commission, are called *mal'ākīm* or *ἄγγελοι* (*i.e.* "messengers"). And this, which is also the oldest interpretation of Gn 6² (LXX [A] Enoch 6^{2d} . . .), is the only sense in which the expression can be legitimately understood here.'

The Nephilim, who are in Nu 13³³ identified with the sons of Anak, therefore represented a race of giants¹ who were believed by the Israelites—in common, no doubt, with others—to have been the offspring of gods and human women, thus blending in their persons the character of deity with that of the human hero. As they were not racially connected with the Israelites, the belief in the existence of these hero-gods cannot, of course, serve as a *point d'appui* for interpreting the nature of genuine Hebrew heroes on a similar principle; but the belief must all the same be regarded as a genuine part of the mythological ideas prevalent in Israelitish circles (on Hebrew ideas concerning giants among other nations, see also Dt 2¹⁰⁻¹² 31¹¹⁻¹³).

(b) A mythological theme of a different kind confronts us in the cycle of ideas which several modern writers connect with the Biblical account of the patriarchs and other personages of early Hebrew history.

There are at present in the field three main modes of interpreting the histories of Abraham, Isaac, Jacob, and Joseph (to lay special emphasis on these great Biblical figures, without, however, intending to confine ourselves to them absolutely). (1) They were real persons, and their histories are, in outline at any rate, true. If so, they head the list of the genuine Hebrew heroes of the purely human type, such as lie before us in the history of the conquest of Canaan and later times.² (2) They are historico-genealogical—that is to say, they originally represented, not individuals, but tribes or clans. (3) They are mainly, if not absolutely, to be regarded as mythological figures whose

¹ As the clause stands ('the sons of Anak are some of the Nephilim'), an identification, or rather a genealogical connexion, is clearly intended; but the clause reads like a gloss (see Gray, *ICC, in loco*), and may represent a later genealogical interpretation. The word נְפִלִים apparently means 'long-necked' people, in allusion to their gigantic height; cf. Dt 3¹¹, where the headstead of Og, king of Bashan, is described, though that king is stated to have belonged to the נְפִלִים, for these are—like the לִיָּוִיִּם—in all probability connected either racially or in the manner of descent with the נְפִלִים. The etymology of the terms נְפִלִים and נְפִלִים is, however, very doubtful (see, *e.g.*, F. Schwally, *Das Leben nach dem Tode*, Giessen, 1892, p. 64 f.). On the whole subject, see, *e.g.*, art. 'Giant,' in *HDB* ii. 166 f. The term נְפִלִים, which also occurs in Gn 6¹⁻⁴, indicates mainly physical strength coupled with warlike prowess.

² This view of the original nature of the patriarchs would not be affected by the distinct trace of later apotheosis referred to in *ERE* i. 445, though it must be admitted that the passage of Deutero-Isaiah there referred to (63⁹) might possibly relate to an original divinity-myth attaching to Abraham and Jacob.

legends were later on set out in the form of human histories.

Of the mythological interpretation, with which alone we are concerned in this part of the article,¹ two main streams of theory, respectively identified with the names of Hugo Winckler and Eduard Meyer, are to be distinguished.

Winckler (see *Gesch. Israels*, ii. [Leipzig, 1900] 23 and *passim*, *KAT*³, Berlin, 1903, p. 222 and *passim*, *Altorient. Forschungen*, pt. iii. [Leipzig, 1902], pp. 385-470), whose theory is dominated throughout by data drawn from Babylonian mythology, declares Abraham, Isaac, and Jacob to represent forms of the moon-god as conceived by the Semitic mind in successive stages of its astral religious contemplation, whilst he interprets Joseph, as also Lot and Esau, as forms of the sun-god. Sarah is identified with the Babylonian Ishtar, and the wives of the other patriarchs are, of course, supposed to be in one way or another the divine counterparts of their husbands. Nor does Winckler's cycle of astral deities terminate with the patriarchs and their associates. Moses is to him the sun in spring-time, and even the lives of Saul, Jonathan, and David are held to embody mythical elements of the same class, though in their case no pronouncement against their historical reality is hazarded.²

Meyer's mythological theory is in form as different as possible from that of Winckler. Rather than seek identifications for the figures of the patriarchs among the Assyro-Babylonian cults, he attempts to establish a connexion between the Biblical account of the hero-ancestors of the Hebrews and sacred localities in Canaan. To him (see *Die Israeliten*, Halle, 1906, p. 249 ff.) Abraham was originally the *numen* of Hebron, or, rather, he was one of the four divinities who had their habitation in that locality, which accordingly also bore the name אֲרָבַת קָרַת, or 'the city of four' (*i.e.*, as Meyer suggests on p. 264, Ahiman, Sheshai, and Talmi [who are called the offspring of Anak in Nu 13²²], besides Abraham). Naturally associated with him was a deity residing in the near neighbourhood, who was called Sarah, or 'princess.' Isaac, again, is a *numen* connected with Beersheba, whilst the figure of Rebecca has to remain undefined. Jacob, according to E, was as a deity mainly associated with Bethel, whilst in J a locality in Gilead is assigned to him. His wives remain for the most part indefinite. With regard to Joseph, the possibility that a tribal eponym lies before us rather than the legend of a hero-god is left open, special stress being, however, laid on his connexion with Sichem.³

It will thus be seen that, however much Winckler,

¹ It should be noted that the historico-genealogical interpretation of the data is the most in vogue among critics at the present time. Driver, however, who combines clear critical insight with a strong conservative tendency, holds that 'the view which may be said best to satisfy the circumstances of the case' is that 'Abraham, Isaac, and Jacob are historical persons, and that the accounts which we have of them are *in outline* historically true' (*HDB* ii. 534).

² It should here be noted that Winckler has not only had an interesting immediate predecessor in E. Stucken (*Astralmythen*, Leipzig, 1896-97), but that Ignaz Goldziher, having very largely on Aryan parallels, and also employing the Jewish *Haggadah*, produced a rather similar cosmic theory in his *Mythology among the Hebrews* (R. Martineau's tr., London, 1877). Abraham, according to Goldziher's view as then formulated, represents the heaven at night; Sarah is the princess of heaven, *i.e.* the moon; Isaac ('Laughter') was originally the sun; Jacob ('Follower') is the sky at night, and his family are the moon and the stars, etc.

³ Meyer had originally (in *Gesch. des Alterthums*, Stuttgart, 1884, etc.) strongly advocated a mythological interpretation of the patriarchal history (which was also the view shared by Nöldeke). But the occurrence of the Palestinian place-names generally read Ya'qub-el and Yoseph-el in the List of Thutmosis II. inclined him in 1886 to the adoption of Stade's view that Jacob and Joseph were originally names of tribes or clans. His reversion to his original mythological theory was largely due to the labours of Bernhard Luther, who collaborated with him in the preparation of *Die Israeliten* (see p. 249 f.).

Meyer, and their respective associates and predecessors may differ as to the special form of the mythological scheme to be adopted, they are in full agreement on the main point: the declaration that the patriarchs were originally divinities, and that the elaboration of their histories as human heroes is a late interpretation of the myths, the order of development being the exact reverse of that which is associated with the name of Euhemerus. The question as to the amount of probability with which the theories are to be credited may be regarded as an open one. A fine destructive criticism of Winckler's view was furnished by K. Budde (see *Das Alte Testament u. die Ausgrabungen*², Giessen, 1903). Cheyne expressed the following opinion (*EBi* ii. 2312): 'That there are somewhat pale mythological elements in some of the biblical narratives may be admitted; but to many minds Winckler's proof of his hypothesis will seem almost too laboured to be convincing.' The following argument (or, perhaps more fairly put, *point d'appui*) used by Winckler in *Altorient. Forschungen*, pt. iii. p. 406, will (though possibly one of the extreme instances) show how deeply steeped the mind must, as a preliminary, be in the astral mythological cycle of ideas in order to admit even a slight degree of probability in favour of his method in interpreting the Biblical text. It is said in Gn 13² that Abraham was very rich עֲשֵׂרֵי אֲבָרָם ('in cattle'). Winckler argues that in this Hebrew word we have the root עֲשֵׂר=קֵן, but קֵן is nothing but an appellation of the *deus summus*, i.e. the moon. The use of עֲשֵׂרֵי therefore shows that Abraham was originally a moon-god.

Meyer's theory is, of course, quite as much as that of Winckler at variance with the usual critical interpretations of the data. Thus Cheyne, who himself adopts the genealogical scheme of interpretation, pointedly speaks of it as Meyer's 'present view' (see *Review of Theology and Philosophy*, ii. [1907] 414 ff.); and Gunkel (in *Die deutsche Literaturzeitung*, 1907, pp. 1925-31), though not specially referring to this part of Meyer's thesis, throws doubt on the correctness of much in his method of interpretation in general. All that can be said at present is that it would be both uncritical and unfair definitely to negative the Palestinian *numen* theory of the patriarchs in its entirety simply because it may appear startling at first sight. Specially to be noted is that for the phrase עֲשֵׂרֵי אֲבָרָם ('the Fear of his father Isaac') in Gn 31³³ (see also v. 4²) Meyer adopts (p. 254) the very doubtful explanation which identifies Isaac himself with עֲשֵׂר (*i.e.* 'Dread'=divinity). The forms Ya'kub-el and Yoseph-el found in the list of Palestinian place-names belonging to the reign of Thutmosis III. he would take to mean 'Ya'kub, the god' and 'Yoseph, the god' (p. 252), instead of 'El supplanteth' and 'El addeth.'

(c) Under (a) and (b) we considered respectively a myth concerning non-Israelites believed in by the Israelites, and certain mythological speculations regarding traditional Israelitish heroes. We now come to a group of heroes belonging partly to pre-Israelitish times and partly to purely Israelitish tradition. These are, to confine ourselves to leading figures of the highest order, Enoch the son of Jared, Noah, Moses, and Elijah.¹ It was shown in *ERE* i. 441 f. (see also p. 438) that there are, in the case of these spiritual heroes, clear indications of a kind of apotheosis; and it will be sufficient to add in this place that Winckler and Meyer only partially attempt to carry us here beyond the idea of deified or semi-deified ancestral heroes. Winckler, as has been seen (§ 2 (b)), believes Moses to represent

the sun in spring; and Meyer (p. 217) regards Enoch as 'Gott (oder Personifikation) des 365-tägigen Sonnenjahres' (see Gn 5²³; Enoch lived 365 years).¹

LITERATURE.—Besides the works named under the art. ANCESTOR-WORSHIP (Hebrew) in vol. i., and the publications referred to in the body of the present article, the reader may specially consult: F. Lenormant, *Les Origines de l'histoire d'après la Bible*, etc., 3 vols., Paris, 1880-84 (Eng. tr. of vol. i., London, 1883); K. Budde, *Die bibl. Urgeschichte*, Giessen, 1883; H. Gunkel, *The Legends of Genesis* (tr. W. H. Carruth, Chicago, 1901), particularly pp. 119-122; F. Schwally, 'Ueber einige paläst. Völkernamen,' *ZATW* xviii. (1893); Ed. Meyer, 'Der Stamm Jacob u. die isr. Stämme,' *ib.* vi. (1886) 1-16 (expressing, for the time being, agreement with Stade's genealogical theory advocated in l. 112 ff.); artt. 'Nephilim,' and on the different patriarchs in *HDB* and *EBi*.

G. MARGOLIOUTH.

HEROES AND HERO-GODS (Indian).—In Sanskrit there is no word corresponding to the Greek ἦρως, denoting a famous warrior or hero promoted to divine rank and worshipped as the patron of a town, district, gild, etc. But similar ideas, though not well defined and of a much wider application, have always been prevalent in India; they have given rise to the belief in, and the worship of, a great variety of superhuman beings, of whom some are regarded as local patrons, saints, and godlings, while others have attained to the rank of supreme gods.

There is a class of Brāhmanical heroes to be mentioned hereafter, who are duly recognized in the religion of the Brāhmins; but most other Indian heroes seem to have belonged to popular religion, to the undercurrent of the various forms of higher religion acknowledged and sanctioned by the Brāhmins. We therefore find only occasional notices of, or vague allusions to, them by Sanskrit writers. As a rule, those heroes only who had become the subject of a more general or quasi-universal homage are mentioned by the Brāhmins and admitted into their pantheon. In order, therefore, to form an idea of the extent and nature of hero-worship in India, it will be well to advert first to the state of things in modern India. W. Crooke devotes the second chapter of his *Introd. to the Popular Religion and Folklore of Northern India* (London, 1896) to 'The Heroic and Village Godlings,' whom we may regard as the equivalents of the ancient heroes. Such are Hanuman of the *Rāmāyana*, Bhima and Bhīṣma of the *Mahābhārata*, and, besides, a great number of local or village godlings of whom Crooke believes 'that most, if not all, belong to the races whom it is convenient to call non-Aryan or aboriginal, or at least outside Brāhmanism, though some of them may have been from time to time promoted into the orthodox pantheon.' In the fourth and fifth chapters ('The Worship of the Sainted Dead' and 'The Worship of the Malevolent Dead,' i. 175 ff., 230 ff.) he describes the class of semi-divine beings who in life had been men—warriors, chiefs, even robbers, or holy men—and after death had become the object of worship. Sir Alfred Lyall,² in his suggestive account of the 'Religion of an Indian Province' (Berar), bears testimony to the deification of famous men after their death. The process can be observed best, though not exclusively, with regard to saints and hermits.

¹Of the numerous local gods known to have been living men, by far the greater portion derive from the ordinary canonisation of holy personages' (i. 26 f.). 'The number of shrines thus raised in Berar alone to these anchorites and persons deceased in the odour of sanctity is large, and it is constantly increasing' (i. 28). The process of deification he describes as follows. 'But, in India, whatever be the original reason for venerating

¹ Winckler's strikingly drawn parallel between Enoch, the seventh primeval patriarch in Genesis, and Enmeduranki, the seventh primeval patriarch of the Babylonian record (see *KAT* 3, p. 540 f.), need not necessarily move in the sphere of ancestral heroes rather than that of original gods, though he also refers to the number 365 in Gn 5²³.

² *Asiatic Studies* 2, 2 vols., London, 1907

¹ Samson, whose history, as is well known, is held to embody myths of a form of the sun-god, should, however, also be mentioned in this connexion.

a deceased man, his upward course toward deification is the same. At first we have the grave of one whose name, birth-place, and parentage are well known in the district; if he died at home, his family often set up a shrine, instal themselves in possession, and realise a handsome income out of the offerings; they become hereditary keepers of the sanctuary, if the shrine prospers and its virtues stand test. Or, if the man wandered abroad, settled near some village or sacred spot, became renowned for his austerity or his afflictions, and there died, the neighbours think it great luck to have the tomb of a holy man within their borders, and the landholders administer the shrine by manorial right. In the course of a very few years, as the recollection of the man's personality becomes misty, his origin grows mysterious, his career takes a legendary hue, his birth and death were both supernatural; in the next generation the names of the elder gods get introduced into the story, and so the marvellous tradition works itself into a myth, until nothing but a personal incarnation can account for such a series of prodigies* (i. 29 f.).¹

These references to popular beliefs and religious practices in modern India will enable us to detect the traces of hero-worship in ancient India. That it always existed cannot be doubted. For the most important factor in producing it—the cult of the *manes*—has always formed a part of the Indo-Aryan religion; even after the primitive ideas about the life after death, on which ancestor-worship is based, had been replaced by the tenet of the migration of the soul, which is incompatible with it, the offering of *śrāddha* sacrifices, which are performed in honour of the *manes*, continued to be one of the most sacred duties of the twice-born.² The close connexion between *manes* and heroes is best illustrated by the fact that the words *dis manibus*, occurring on so many Roman tombs, are rendered in Greek inscriptions of the same time *δαίμοσι ἡρώσι* or *θεοῖς ἡρώσιν*. Not every ancestor, however, who is habitually worshipped by his descendants may be regarded as a hero in this technical sense of the word, but only such as were believed to have, in their life, achieved great or wonderful deeds. It matters little how this belief

¹ Not only holy men are venerated as gods after their decease, but also criminals, as will be seen from the following note by W. Crooke:

Deification of robbers and bandits.—A peculiar form of deification in India is that of bandits, who are specially regarded as heroes by the criminal tribes. The Maghalyā Doms of Bihār and the adjoining region worship Gaṇḍak and make pilgrimages to his tomb. According to their traditions, he was hanged for theft a long time ago, and when dying promised to help the Maghalyās in time of trouble. He is worshipped by the whole tribe, and is invoked on all important occasions; but he is pre-eminently the god of theft, and a successful raid is always celebrated by a sacrifice and feast in his honour (Crooke, *TC*, 1896, ii. 326). Of the same class is Sālhes, who is worshipped by the Dusādhs (*q.v.*), a caste in Bihār and the neighbouring districts, whose profession is stealing and acting as village watchmen, preferably the former. Sālhes, they say, was the first watchman and a noted bandit, in whose honour a popular epic is chanted in Bihār (Grierson, *JASB*, pt. i. [1882] p. 3 ff.). The Dusādhs of Bihār also worship Gaurālā or Gorālā, another bandit chief of this tribe, whose shrine is at Sherpur, near Patna, to which members of all castes resort. The higher castes make offerings of meal, the lower sacrifice pigs and pour oblations of spirits on the ground. The cultus of this deity is, however, in a state of transition, because this low-caste robber is now identified with the potter of Bhimsen, who is quite a respectable minor god, already occupying a niche in the Hindu pantheon. Doubtless before long both Sālhes and Gaurālā will be accepted as manifestations of one or other of the Hindu gods (Risley, *TC*, Calcutta, 1891, i. 256; Buchanan, in Martin, *Eastern India*, London, 1838, i. 192). The Banjāra (*q.v.*) tribe of carriers and suttlers, again, have a similar deity, the freebooter Miṭṭhu Būkhīyā. In every camp there is a hut set apart and devoted to him. No one may eat, drink, or sleep in this hut, which is distinguished by a white flag. When a criminal expedition is arranged, the members of the gang meet at night in this hut, and an image of the tribal Sati is produced. A wick soaked in butter is placed in a saucer and lighted, and an appeal is made to it for a favourable omen, the worshippers mentioning the direction and object of the proposed expedition. If the wick should drop, it is regarded as a favourable omen. The worshippers immediately rise, make obeisance to the flag, and start then and there on the business which has been arranged. After the plunder has been secured, a share is set aside for the deity. Cooked food, spirits, and incense are taken to his hut, the liquor is poured at the foot of the flagstaff, the incense is burnt on the altar, and the food left in the hut. The tribal priest makes an obeisance, and all assembled thank Miṭṭhu Būkhīyā for accepting the offering (Cumberlandge, *NINQ* iv. [1894] 173 ff.).

² J. Jolly, *Recht und Sitte*, Strassburg, 1896, p. 153 f.

was brought about: by tradition, by superstition, or by fiction; whether the renown of the hero lived in the traditions of chroniclers and genealogists, in the talk of the people, in tales and legends, in the song of the bard, or in epic poetry. If the fame of a great person, historical or imaginary, is once firmly established, he is likely to become invested with a semi-divine character and to command the homage of the many. This quasi-religious veneration felt for great men of the past, though not part of the religion of the Brāhmins as taught in their books, was none the less generally acknowledged. The Sanskrit name for it is *bhakti*, a word which denotes all degrees of veneration from respectful love to the devotion of the worshipper. The feeling of *bhakti* is deeply rooted in the Indian mind, so much so that it has left traces in the structure of the language. Pāṇini (iv. 3, 95) teaches how words are formed to denote that a person or thing to whose name certain affixes are applied is the object of *bhakti*, love, or veneration, as the case may be. Thus from *sūtra* 98 we learn that the worshippers of Vāsudeva (*i.e.* Kṛṣṇa) and Arjuna were called Vāsudevaka and Arjunaka, and *sūtra* 99 teaches the formation of the names of those who venerate a man with a *gotra*-name or a Ksatriya. We thus see that already at the time of Pāṇini, in the 4th cent. B.C. or earlier, hero-worship was a wide-spread custom. We have no detailed knowledge of the form which this worship assumed; all that can be reasonably asserted is that the places sacred to the memory of heroes were included in the great number of *tīrthas*, *i.e.* places of pilgrimage. To visit such places (*tīrthayātrā*) and to worship at them was considered very meritorious.¹ The Tīrthayātrā-parvan of the *Mahābhārata* (iii. 80-90) enumerates a great many *tīrthas*, especially in Gangetic India; the epic, of course, would mention only *tīrthas* of great fame. Some of them are dedicated to renowned ṛṣis, but the names of many suggest that they belonged originally to less famous saints or local celebrities, and only later on had divine myths or legends of ṛṣis attached to them. By the natural tendency to increase the sanctity of a *tīrtha* it came about that in the exceedingly numerous *Māhātmyas*, or descriptions of holy places, which are being fabricated up to our days and usually pretend to be parts of *Purāṇas*, many insipid myths of gods and incarnations are told, but few records are preserved of the humbler hero who may originally have been worshipped in that place.

We shall divide what may be called Indian heroes into two classes: ancestral heroes, and epic heroes. This division, however, is not strictly correct; for the characteristics of one class are frequently present also in members of the other; *e.g.*, many ancestral heroes have become the subject of epic poetry, and are, therefore, also epic heroes in a wider sense.

1. Ancestral heroes may be called the founders of families (*gentes*), of clans, and of dynasties. Now the Indian *gentes*, especially those of the Brāhmins, are called *gotra* (*q.v.*). Max Müller² says:

All Brāhmanic families who keep the sacred fires are supposed to descend from the Seven Ṛṣis. These are: Bhrigu, Angiras, Viśvāmītra, Vasiṣṭha, Kāśyapa, Atri, Agastī. The real ancestors, however, are eight in number: Jamadagni, Gautama and Bharadvāja, Viśvāmītra, Vasiṣṭha, Kāśyapa, Atri, Agastya. The eight Gotras, which descend from these Ṛṣis, are again subdivided into forty-nine Gotras, and these forty-nine Gotras branch off into a still larger number of Gotras. . . . A Brāhman who keeps the sacrificial fire is obliged by law to know to which of the forty-nine Gotras his own family belongs, and in consecrating his own fire he must invoke the ancestors who founded the Gotra to which he belongs.

These ṛṣis, then, are the ἡρώες ἐπώνυμοι of the Brāhmanical *gentes*, and as such they receive a

¹ *Mahābhārata*, iii. 82.

² *Hist. of Ancient Sanskrit Literature*, London, 1859, p. 379 f.

kind of worship in prescribed forms. It may be added that some of them, especially those whom Max Müller calls the real ancestors, are the subject of legends related in the epics and *Purānas*, while about many tradition is silent except in so far as they are regarded as the authors of the hymns of the *Rigveda*. Not only the Brāhmins but also the Kṣatriyas¹ and Vaiśyas seem to have had, in ancient times, *gotras* of their own, some of which at least were identical in name with those of the Brāhmins. But we know practically nothing about them; they seem in the early centuries of our era to have fallen into disuse, probably because the Kṣatriyas were split into a great many clans, and the Vaiśyas into an ever-increasing number of castes, and these divisions acquired a greater importance than the old-fashioned *gotras*.²

We pass now to such ancestral heroes as are regarded as the founders of clans and dynasties. The dynasties of ancient India belong either to the Solar race (Sūrya-vaṁśa) or the Lunar race (Soma-vaṁśa). Both races go back to Manu, the son of the Sun (Vivasvat), but with this difference, that the solar race contains the descendants of Manu's sons, the lunar race those of his daughter Ilā and Budha, the son of Soma, the Moon. In this way it is explained that the Sun (Vivasvat) and the Moon (Soma) are the progenitors of the solar and lunar races respectively, while to either belongs Manu, the father and eponymous hero of mankind. The nine sons of Manu, Ikṣvāku, etc.³ are said to have founded as many branches of the solar race, and must, therefore, be regarded as their ancestral heroes. But these genealogical traditions seem to have been fixed at a time when they were already on the point of dying out; for there is some confusion even about the number and the names of these ancestors. It deserves, however, to be mentioned that one of them, Nābhānediṣṭha (who is also reckoned as two, Nābhāga and Nediṣṭha, or is called Nediṣṭha the son of Nābhāga), became a Vaiśya, and another, Pṛsadhra, became a Śūdra, and a third one, Karuṣa, founded a warrior tribe called after him. In the lunar line the first king was Purūravas, whose amours with the nymph Urvaśi have been celebrated in the Vedas, the epic, and Kālidāsa's famous play. His third successor, Yayāti, had five sons, Yaḍu, Turvaśu, Druhyu, Anu, and Puru, the ancestors of as many clans or dynasties, of which the Yādavas and Pauravas were the most conspicuous. In the line of Puru was born Bharata, the ancestral hero of the race of the Bhāratas, from whom India got its Purānic name Bhārata Varṣa. In his line rose Kuru, the ancestor of the Kauravas, the cousins and foes of the Pāndavas, whose internecine war is the subject of the *Mahābhārata*. The line of the Yādavas contains also such branches as the Vṛṇis, Andhakas, Sattvatas, Madhus, Krathas, and Kaiśikas, named after their founders.⁴ These instances, which might easily be multiplied, may suffice to show that the ancient history of India, of which the epics and the *Purānas* have preserved only fabulous and distorted records, abounds with ancestral heroes. Some of them may have been historical persons, but many have probably been invented and set up by bards and genealogists in order to account for the origin of a clan or a line of rulers whom they served. Such a process of hero-making is, of course, not confined to ancient times; it was going on also in

¹ J. F. Fleet, 'Dynasties of the Kanarese Districts,' p. 277 f. notes (BG, General chapters, 1895).

² It may, however, be mentioned that the Jain writer Haribhadra (9th cent. A. D.) speaks of the *gotra* of the Śrāvakas, most of whom certainly did not belong to the caste of the Brāhmins (*Dharmabindu* [Bibl. Ind.] i. 15, and the remarks of the commentator Munichandra on that passage).

³ *Visṇu Purāna*, tr. Wilson, London, 1864-70, iii. 231 f., and 13.

⁴ J. Dowson, *Class. Dict. of Hindu Myth.* etc., London, 1903, ii. 69 f.

mediaeval India, as will be seen from the following instances. The Rāṣṭrakūṭas descended from a prince of that name, the son of Raṭṭa, who belonged to the Sātyaki branch of the Yādavas.¹ The Chālukyas derived their origin from a hero sprung from the *chuluka*, or water-vessel, of Brahmā. 'From him descended the Chālukyas, a race of heroes, among whom Hārita is reckoned as first progenitor, and Mānavya arose who humbled the kings of the earth.'² Paramāra, the eponymous hero of the Paramāra race of Kṣatriyas, issued from the sacrificial fire of Vasiṣṭha on Mount Arbuda.³ According to modern tradition, the races or mediaeval regnal houses of the Chālukyas, Chāhamānas, Pratihāras, and Paramāras are the four *agnikulās* which originated from the *agnikūṇḍa* on Mount Abu. Prominent rulers have arisen in these races who have in their turn been acknowledged as heroes by their clans and become the subjects of the homage of their descendants.

Another class of ancestral heroes which was very numerous and important in Greece, the founders of cities and patrons of districts, is not absent in India; but it is of little importance. Most famous towns, according to popular opinion, are of a fabulous antiquity; witness the legends of the Buddhists and the Jains. These relate events which are believed to have occurred many millions (even oceans) of years ago, and yet lay the scene in countries and towns that flourished in historical times. Yet some legends about the founding of towns are met with in the epics and *Purānas*. According to *Rāmāyaṇa*, i. 32, the four brothers Kuśāmba, Kuśānābha, Asūrtarajas, and Vasu founded the towns Kauśāmbī, Mahodaya (Kānyakubja), Dharmāranya, and Girivraja; Viśāla, son of Ikṣvāku, founded Viśālā (i. 47); Śatrughna, Madhupuri, or Madhurā (Mathurā) (vii. 70); Bharata's sons Takṣa and Puṣkala, Takṣilā and Puṣkalāvati; Lakṣmaṇa's sons Aṅgada and Chandraketu, Aṅgadiya and Chandrakantā (vii. 102); Rṣabha became the second founder of Ayodhya, after it had been deserted on the death of Rāma (vii. 111), etc. These epic notices about founders of towns, whether they be records of popular traditions or inventions of the poet, prove at least that this kind of hero was known in India, and we may assume that as local heroes they got their share of *bhakti* in one form or another.

2. We now come to the epic heroes, i.e. those personages described in the epics whom popular admiration and veneration have promoted to a superhuman or semi-divine rank. Epic poetry seems to remove from the everyday sphere all persons and things that make part of the narrative, and to invest them with an exalted character. Every beginner in Sanskrit remembers how, in the opening of the story of Nala, Indra inquires after the warriors and kings who used to visit him as his dear guests, but at that time stayed away on account of Nala's *svayamvara*. Thus, the principal persons of the epics have a tendency to become heroes in the technical sense of the word, and, once having entered upon their upward career, they may end with being regarded as gods. The most instructive instance is the hero of the oldest epic, the *Rāmāyaṇa*. In the original parts of that work (viz. books ii.-vi.) Rāma is still a human hero, the best of men, the supreme model of morality and loyalty; notwithstanding his association with superhuman beings, the monkeys, and his fight with, and victory over, the demons (Rākṣasas), he remains essentially a man. But in the first and last books, which are decidedly later in origin and of a different

³ *Navasahasānka-charita*, xi. 64 ff. (ib.).

(*Purāna*-like) character, the authors regard him already as a god—an incarnation of Viṣṇu.¹ As such he has been adored ever afterwards down to the present day. The case is somewhat different with regard to Kṛṣṇa in the *Mahābhārata* and the *Purānas*. The authors of these works frequently declare him to be a supreme god, an incarnation of Viṣṇu; yet in most of his adventures, from his killing of his uncle Kāṁsa down to his death by the arrow of the hunter Jara (Old Age), we seem to recognize the miraculous records of a tribal chief who had come to be worshipped as a true hero by the members of his clan. But he seems early to have been combined or identified with a cowherd-god, Govinda, 'the cow-finder,'² and this coalescence with a deity probably brought about the deification of Kṛṣṇa as an incarnation of Viṣṇu. He became one of the most popular gods of the Hindu pantheon.

Rāma and Kṛṣṇa are the epic heroes who have reached the highest possible rank; others have become minor deities, e.g. Hanuman, and some true epic heroes of human standing, e.g. Bhīṣma. But at the time when such heroes were celebrated in epic songs they had already, as it were, accomplished a part of their career. Some may always have been regarded as men who were the centres of an ever-increasing epic cycle; others, however, may once have been popular gods who were losing their rank somehow, and therefore were represented by the poets only as superior men; e.g., Arjuna seems to retain some marks of an originally divine nature; he is intimately connected with Indra, his father, in whose heaven he lives for five years, and he vanquishes the Asuras (Nivātakavachas, Paulomas, Kālakañjas); Pāṇini, iv. 3, 98, mentions his worshippers along with those of Vāsudeva (Kṛṣṇa). Karna, the son of the Sun-god, is born with the mail-coat and the earrings of that god, of which he is cheated by Indra. Bhīma, who is now worshipped as a hero in the whole of India, betrays, in the great epic, many traits of a demonic (Rākṣasa) nature: his association with Rākṣasas, his ravenous appetite (Vṛkodara), and his ferocity (he tears off the arm and drinks the blood from the breast of Duḥśāsana). The heroine of the *Rāmāyaṇa*, Sītā, is described in the old parts of that work only as the loving spouse of Rāma; but, as her name, which denotes 'furrow' and 'agriculture,'³ her origin from, and her return to, the interior of the earth, indicate, she was originally a chthonic deity. The present writer is also inclined to believe that Hanuman was a godling before Vālmiki sang of his friendship with Rāma, whereby he came to be recognized as a popular deity throughout India. We thus see that epic heroes may be men, historical or fictitious, on promotion; or, on the other hand, they may be gods and divine beings on the decline.

Now, as regards the epic heroes who actually were worshipped, besides Rāma, Lakṣmaṇa, Sītā, and Hanuman, Kṛṣṇa, Baladeva, etc., who are generally acknowledged gods of the Hindu pantheon, we must chiefly rely on the testimony of

¹ In an inserted passage of the sixth book, vi. 170, Rāma is still ignorant of his divine character, and Brahmā is introduced to explain the identity of Rāma with Nārāyaṇa. It may be mentioned that the Jains, both Svetāmbaras and Digāmbaras, possess a very old version of the story of the *Rāmāyaṇa* fabricated with a strong sectarian bias. In this Jain *Rāmāyaṇa* (Padmacharita and Padmapurāṇa), Rāma is frequently called Nārāyaṇa; but his most common name is Padmanābha (abbreviated into Padma), a synonym of Viṣṇu.

² According to Kātyāyana (Pāṇini, iii. 1, 138, *vārttika* 2), Weber's explanation of *govinda* as the Prakrit for *gopendra* is scarcely admissible, for the supposed change of *p* to *v* belongs to a more advanced state of the Prakrit language than may be assumed for the Prakrit at the time of Kātyāyana.

³ Sītā has this meaning in the title of an official in the king's service—*sītādhyakṣa*, 'superintendent of agriculture' (*Kautilya Arthśāstra*, ii. 24).

modern popular religion and folklore. They seem to form a class of superhuman beings who are known as the *chirajivins*, i.e. the long-living or immortal ones. A *versus memorialis* in Sanskrit¹ enumerates seven *chirajivins*: Aśvatthāman, Bali, Vyāsa, Hanuman, Vibhiṣaṇa, Kṛpa, and Parāśurāma; a quotation in the *Sabda Kalpa Druma*² adds an eighth—Mārkaṇḍeya. The belief in *chirajivins* can, however, be traced back to comparatively early times. In the 108th *sarga* of the Uttarakāṇḍa of the *Rāmāyaṇa*, Rāma commands that Hanuman and Vibhiṣaṇa should live as long as the *Rāmāyaṇa* shall exist; verse 33 adds Jāmbavat, Mainda, and Dvidida, and says that they will live 'till the Kali comes.' The commentator says that Hanuman and Vibhiṣaṇa will live till the destruction of the world, but Jāmbavat, Mainda, and Dvidida³ will die during the incarnation of Kṛṣṇa. It is, therefore, probable that the class of heroes continuing to live and removed to a higher sphere was originally more numerous than the verse alluded to above would make us believe.

Besides these never-dying heroes there probably were a great many others who were believed to have died, yet still received some kind of homage, though in most cases we have no accurate information about them. On the evidence of modern folklore, we may safely reckon among them Bhīṣma and the five Pāṇḍavas, especially Bhīma, who seems to have been a favourite of the people in many parts of India.

3. In modern India there is a third class of heroes—the departed saints and ascetics. There can be no doubt that there were such in ancient India also; but, being of local importance only, they did not find their way into general literature, and were ousted, as it were, by the great *rṣis*. Those, however, who might be included in this class have been treated of above among the ancestral heroes.

LITERATURE.—The necessary references have been given in the article itself. It may be mentioned that the subject has not been treated before.

HERMANN JACOBI.

HEROES AND HERO-GODS (Iranian).—In the conventional sense of the word, the Iranians possessed many heroes of whom more or less legendary tales were told; and several passages of the Avesta—notably *Yasna* ix., and *Yashts* v., xiii., xix.—record traditions of a number of them, such as Vivahvant, Yima, Athwya, Thrita, Urvāxšaya, Keresāspa, Haošyanha, Thraētaona, Usan, Haosravah, Tusa, Paurva, Jāmāspa, Ašavazdah, Vistarū, Yōišta, Vištāspa, Zairi-vairi, Urupi, Kavāta, Aipivanhu, Usadhan, Aršan, Pisinah, Byaršan, and Syāvaršan; and these heroic figures, with others, recur throughout Pahlavi literature and in the *Sāh-nāmah* of Firdausi.

Of heroes in the technical sense, however, Zoroastrianism knows nothing, though in that religion marked traces of ancestor-worship exist (see artt. ANCESTOR-WORSHIP AND CULT OF THE DEAD [Iranian]; FRAVASHI). In all Zoroastrian literature the nearest approach to anything in the least suggestive of a hero-cult is *Yasht* xiii. 17.

They, the *fravashis* of the righteous, give most help in battle fierce; the *fravashis* of the righteous are most mighty, Spitama [Zarathuštra], those of the first teachers of the faith, or those of men unborn, of the Saōšyants, the preparers [of the world for the final restoration]; but the *fravashis* of other living righteous men are more mighty, Spitama Zarathuštra, than [those] of the dead.

Old Persian literature is silent on the subject of heroes, but in Greek references to the Persians we find what seem at first blush to be allusions to these apotheosized men of renown. On arriving at Pergamum, on the river Scamander, Xerxes

¹ Quoted in *Indian Antiquary*, 1912, Supplement, p. 54, note.

² Böhtlingk-Roth, *Skr. Wörterb.*, St. Petersburg, 1855-75, s.v. 'Chirajivin.'

³ Mainda and Dvidida are also two demons killed by Kṛṣṇa and Baladeva.

'sacrificed a thousand kine' to Ilian Athene, and the magi poured libations to the heroes' (χοάς δὲ οἱ μάγοι τοῖσι ἥρωσι ἐπέσαντο [Herod. vii. 43]). Furthermore, Xenophon makes Cyrus the Great offer prayer 'to the gods and heroes who occupy the Persian land' (θεοῖς καὶ ἥρωσι τοῖς Περσίδα γῆν κατέχουσιν [Cyrus. ii. i. 1; cf., however, the simple θεοῖς τοῖς Μηδῶν γῆν κατέχουσιν immediately following]), 'to the heroes who inhabit and protect the land of Media' (ἥρωας γῆς Μηδίας οἰκήτορας καὶ κηδεύοντας [ib. iii. iii. 21]), to 'the gods and heroes of Assyria' (ib. § 22), and 'to the heroes who hold Syria' (ἥρωσι τοῖς Συρίαν ἔχουσι [ib. viii. iii. 24]). Yet, side by side with Xenophon's reference to 'the gods and heroes who occupy the Persian land', Herodotus (vii. 53) makes Xerxes pray simply 'to the gods who guard the Persian land' (τοῖσι θεοῖσι τοὶ Περσίδα γῆν λελόγησιν). A. Rapp had, therefore, good reason to declare (ZDMG xix. [1865] 66 f.) that the Greeks, in their references to the Persians, used ἥρωας and θεοί synonymously; and in this connexion it is noteworthy that Strabo (p. 733) says that 'the deeds of the gods and of the noblest men' (ἔργα θεῶν τε καὶ ἀνδρῶν τῶν ἀρίστων) were imparted in the course of instruction, the omission of all allusion to heroes being at least curious if their cult was of any importance.

There is, however, a possible identification of these 'heroes' of Persia and of other countries, for the Greek accounts seem to be in general more accurate than is often supposed. It would appear that the 'heroes' in question are none other than the *fravashis*, who not merely guarded the house, village, district, etc., but were also 'for the protection of the Aryan lands' (*thrāthrāi airyanām dahyunām*. [Yast xiii. 43]), and, indeed, 'of all lands' (*vispanām dahyunām* [ib. § 21; cf. Yastna xxiii. 1]). It is possible that there may have been a hero-cult in ancient Iran at a very early period; but, if there was, it had been merged in the worship of the *fravashis* before the date of our oldest records concerning the Iranian race; and all traces of it, if it ever existed, have long since vanished.

LOUIS H. GRAY.

HEROES AND HERO-GODS (Japanese).—The essential basis of Shintō was a primitive Naturism, from which Animism was gradually developed. Just as the ancient Japanese used to worship the forces of Nature, so they bowed before human powers. Out of the admiration which they felt for certain visible and living men grew the more abstract worship of the same men after their death. The deification of heroes began, then, in the adoration of famous living men—a form of worship which constitutes a sort of transition between Naturism and Animism, and which is the tangible germ of all after-development.

In order to understand this basis aright, we have only to remember that, in the conception of the Japanese, as, indeed, of many other peoples, a god is not, as he is to our modern ideas, a being immeasurably above and beyond humanity, but simply, as the word *kami* indicates, a 'superior' being. Between a powerful man and a god there is a difference only of degree, and a great man may easily become a minor god. We find a confirmation of this, in historical times, in the divine honours paid to the Emperor—an evident survival of a wider deification.

Originally all men of note who were above the ordinary level seem to have been worshipped. The first objects of this adoration were the ancient chiefs or independent kings, of whom we are continually reminded, even after the triumph of

Imperialism, by the 8th-cent. annals (see *Kojiki*, 167 ff., 173, 185, 189, etc.). The Emperor himself is often required, and consents, to worship local gods, who are the souls of ancient chiefs (ib. 179, 215, etc.); and the honour thus paid to the shades of departed chiefs, like that given to Imperial ancestors, leads us to think that these chiefs must have been worshipped in their lifetime, just as the Emperor himself was. Besides, mythology is full of descriptions of wars between 'gods,' who were, without doubt, human chiefs (ib. 167, 178, 260 f., 264, etc.). The worship of the Emperor was only the synthesis of the cults of these local chiefs, just as the Imperial power finally united in its own person all the separate local powers which had formerly existed.

The next in order are the sorcerers, who were originally, before the division of social work, often identified with the chiefs themselves; thus, on the day of his accession to the throne, we find Jimmu, the first legendary Emperor, instructing one of his followers in the magic formulæ (*Nihongi*, i. 133). These sorcerers, when they accomplished anything which seemed particularly wonderful to their neighbours, were naturally the object of an admiration which finally merged into worship, continuing at first during their lifetime, and, later, even after their death. Just as the adoration of powerful chiefs was an instinctive homage paid by weakness to superior force, so the worship of a 'medicine-man,' famous for his miraculous gifts, is the natural homage paid by ignorance to superior intelligence. The Japanese gods are magicians (see *Kojiki*, 83 ff., 149 ff., etc.), and it may readily be conceived how, on the other hand, magicians may easily turn into gods. Thus, even to-day, by a titular survival of these ancient beliefs, the high-priest of Kizuki, in Idzumo, is called *iki-gami* ('living god').

In the same connexion we must mention also the inventors of arts, the importers of useful articles, and all the great benefactors whose intelligence or skill arouses gratitude and demands respect. In Shintō mythology, we find first of all the worship of the group of illustrious gods, who, under the direction of Omohi-kane, the god of cunning, invented the principal arts, beginning with the art of the blacksmith, whom the primitive people were most willing to consider as a veritable magician (*Kojiki*, 63-65). Then come the gods Oho-kuni-nushi, a powerful chief, and Sukuna-biko-na, a dwarf-wizard, who not only completed the material construction of the country, begun by the Creator-Pair, but also taught men magic and medicine (see *Nihongi*, i. 59); then the great god Susa-no-wo, who had already gained fame, in a well-known myth, by delivering a young princess from the monster-serpent of Koshi, which was about to devour her, and who also, with the help of his son Itakeru, the 'deserving god' (*isaoshi no kami*), created, by tearing and dispersing the hairs of his body, the cedars and camphor-trees for the construction of ships, the thuyas for the building of palaces, the podocarps for the manufacture of coffins, while at the same time he sowed and caused to grow all kinds of fruit for the nourishment of human beings (*Nihongi*, i. 58). Along with these gods appears another beneficent being, Mi-wi-no-Kami, who sank wells in several parts of the country (*Kojiki*, 88).

All these gods, who were at the same time magicians and inventors, were without doubt originally real personages, whose fame was only increased by legend. So, Sukuna-biko-na, the mysterious dwarf who is depicted as arriving on the crest of the waves in a tiny boat made out of a berry in the form of a long gourd, and dressed in the skin of a bird, and who, after having done

¹ The sacrifice of a thousand kine (together with a hundred stallions and ten thousand sheep) has a genuinely Iranian ring; cf., for example, *Yast* v. 21, 25, etc., ix. 3, 8, etc.

wonderful deeds, disappears by climbing up a stalk of millet, from which he is carried away to another world, no doubt finds his prototype in the miraculous visit of some strange sorcerer (see *Kojiki*, 103; *Nihongi*, i. 59 f.). Strangers, indeed, were often considered as beings of superior nature; the god who imported plants, Itakeru, seems to have belonged to Korea (see *Nihongi*, i. 58), and here and there we find traces of the worship of other Korean 'divinities' (*Nihongi*, i. 11, 169, 225, 378).

Finally it may be said in a general way that, just as the natives, crushed by the conquerors, are deified under the general name of 'evil gods,' 'demons,' or 'savage gods' (*Kojiki*, 167, 178, etc.; *Nihongi*, i. 198, 202 f., etc.), so the conquering race as a whole also invests itself with divinity, and, claiming descent from Heaven (*Kojiki*, 72, 112-135, etc.; *Nihongi*, i. 110 f., 123), proclaims itself as the only true race of gods.

All these elements—the power of the political chiefs, the magic of the sorcerers, the skill of the inventors, the quarrels between tribes—intermingle and end in one central cult which is at once the result and the proof of its manifold origin. The Emperor, having become both the undisputed master and the high-priest of the nation (*matsuri-goto*, 'government,' comes from *matsuri*, 'cult'), and being considered as the direct descendant of the most illustrious gods—from the goddess of the Sun downwards—ends by being the supreme personification of all the glories of the State. He is regarded as the only 'incarnate god' (*ara-hito-gami*, or *ara-mi-kami* [*Nihongi*, ii. 198, 217, etc.]); he believes himself to be so, and assumes this title in his own edicts (*ib.* ii. 210, 226 f., 359). Sometimes, even in his own lifetime, he has the funeral-mound erected, the immense *misasagi*, where he will continue to be worshipped after his death (*ib.* i. 298 ff.; cf. ii. 178). So much is the Emperor considered all-powerful, that, in the ancient annals, the most famous heroes are always classed, like personages of secondary importance, under the name of the Emperor whose reign they have served to make famous. For example, in the *Kojiki*, the whole legend of Yamato-dake is entitled 'Emperor Keikō,' in spite of the small part played by him, and the entire story of the Empress Jingō, the legendary conqueror of Korea, is called 'Emperor Chuai,' although the exploits of the heroine begin exactly on the death of her husband (*Kojiki*, 248-278, 283-298).

Here we have a proof of the existence of a movement in the evolution of Japanese hero-worship which tends to diminish little by little the importance of individual famous men so as to increase the glory of the Emperor, in whose person all the traditions are united. But at the same time there still exists, and that in a profoundly living form, the worship of true heroes—ancestors who have wrought mighty deeds, and great benefactors, the conquerors of the islands and the civilizers of the country, the monster-killers and inventors, all those eminent men whose memory has been handed down by popular favour, and whose fame occupies an increasingly large place in the heart of new generations.

As a typical example of these deified heroes, we may quote Yamato-dake, 'the Brave of Japan,' the most famous figure of legendary times. This hero, who, according to traditional chronology, lived about A.D. 100, was the third son of the Emperor Keikō. The first of his exploits, while showing his loyal respect for his father and sovereign, is sufficient to indicate the violent character of the mighty deeds which were to make his career famous. He began by assassinating one of his elder brothers, who had omitted to appear at the 'morning-and-evening-great-august-repasts.' The

Emperor, angry at such negligence, had charged Yamato-dake, then a youth of sixteen, to recall his elder brother to a sense of his duties, and five days later, as there had been no appearance of the brother, he asked his youngest son if he had fulfilled his orders. Yamato-dake replied that he had not failed to do so, calmly adding an explanation of how he went about it: 'I grasped hold of him, and crushed him, and, pulling off his branches [*i.e.* limbs], wrapped them in matting and flung them away.' It may be imagined that the Emperor showed himself somewhat 'alarmed at the valour and ferocity of his august child's disposition.' He therefore sent him off at once to the West, to fight against two warriors of the country of Kumaso, who were rebelling against the authority of the Emperor. The manner in which the young prince acquitted himself on this mission will be a sufficient example of the general character of these heroes of primitive Japan, with whom cunning occupies as large a place as courage.

'On reaching the house of the Kumaso bravo, His Augustness Wo-usu [the name given to Yamato-dake as a child] saw that near the house there was a three-fold belt of warriors, who had made a cave to dwell in. Hereupon they, noisily discussing a rejoicing for the august cave [a house-warming], were getting food ready. So he sauntered about the neighbourhood, waiting for the day of the rejoicing. Then, when the day of the rejoicing came, having combed down after the manner of girls his august hair which was bound up, and having put on his aunt's [Yamato-hime, the high-priestess of Ise] august upper garment and august skirt, he looked quite like a young girl, and, standing amidst the women [concubines], went inside the cave. Then the elder brother and the younger brother, the two Kumaso bravos, delighted at the sight of the maiden, set her between them, and rejoiced exuberantly. So, when the feast was at its height, His Augustness Wo-usu, drawing the sabre from his bosom, and catching the elder bravo of Kumaso by the collar of his garment, thrust the sabre through his chest, whereupon, alarmed at the sight, the younger bravo ran out. But pursuing after and reaching him at the bottom of the steps of the cave, and catching him by the back, Prince Wo-usu thrust the sabre through his buttock. Then the Kumaso bravo spoke, saying: "Do not move the sword; I have something to say." Then His Augustness Wo-usu respited him for a moment, holding him down as he lay prostrate. Hereupon the bravo said: "Who is Thine Augustness?" Then he said: "I am the august child of Oho-tarashi-hiko-oshiro-wake ['the governing Lord, the prince prelat and great,' primitive name of the Emperor Keikō], the Heavenly Sovereign who, dwelling in the palace of Hishiro at Makimuku, rules the Land of the Eight Great Islands; and my name is King Yamato-woguna ['the young man of Yamato,' another name for the prince]. Hearing that you two fellows, the Kumaso bravos, were unsubmissive and disrespectful, the Heavenly Sovereign sent me with the command to take and slay you." Then the Kumaso bravo said: "That must be true. There are no persons in the West so brave and strong as we two. Yet in the Land of Great Yamato there is a man braver than we two. Therefore will I offer thee an august name. From this time forward it is right that thou be praised as the August Child [*i.e.* Prince] Yamato-dake [*i.e.* 'Yamato-Brave,' the Bravest in Yamato]." As soon as he had finished saying this, the Prince ripped him up like a ripe melon, and slew him. So thenceforward he was praised by being called by the august name of His Augustness Yamato-dake.'

After this exploit, which reminds us of Zeus, in disguise, entering the dwelling of Lycaon, and then killing him and his sons in the midst of a feast, Yamato-dake triumphed, again by cunning, over another enemy, an Idzumo warrior. Yamato-dake, who was armed with a trusty sabre, got his enemy to fight against him with a wooden sabre, which he had cunningly substituted for the weapon of his adversary. That done, he returned to the capital, but very soon his father sent him off to do battle in the East. He set out, and to protect him against the dangers which awaited him, his aunt, the high-priestess, gave him a weapon famous in Japanese mythology, the 'Herb-Quelling-Sabre,' with an 'august bag,' the use of which will be seen later on.

'So then, when he reached the Land of Sagamu, the Ruler of the land lied, saying: "In the middle of this moor is a great lagoon, and the Deity that dwells in the middle of the lagoon is a very violent Deity." Hereupon Yamato-dake entered the moor to see the Deity. Then the Ruler of the land set fire to the moor. So, knowing that he had been deceived, he opened the mouth of the bag which his aunt, Her Augustness Yamato-

hime, had bestowed upon him, and saw that inside of it there was a fire-striker. Hereupon he first mowed away the herbage with his august sword, took the fire-striker, and struck out fire, and, kindling a counter-fire, burnt the herbage and drove back the other fire, and returned forth, and killed and destroyed all the rulers of that land, and forthwith set fire to and burnt them.

This legend, so often depicted by Japanese artists, is followed by another no less famous story:

'When he thence penetrated on, and crossed the sea of Hashiri-mizu [Running-water], the Deity of that crossing raised the waves, tossing the ship so that it could not proceed across. Then Yamato-dake's Empress (i.e. his consort), whose name was Her Angustness Princess Ototachibana ["Younger-orange"], said: "I will enter the sea instead of the Angust Child. The Angust Child must complete the service on which he has been sent, and take back a report to the Heavenly Sovereign." When she was about to enter the sea, she spread eight thicknesses of sedge rugs, eight thicknesses of skin rugs, and eight thicknesses of silk rugs on the top of the waves, and sat down on the top of them. Thereupon the violent waves at once went down, and the angust ship was able to proceed. Then the Empress sang, saying: "Ah! thou whom I enquired of, standing in the midst of the flames of the fire burning on the little moor of Sagamu, where the true peak pierces [probably Mount Fuji]." So seven days afterwards the Empress's august comb drifted on to the sea-beach, which comb was forthwith taken and placed in an angust mausoleum which was made.'

The heroic devotion of his wife drew from the bereaved prince an exclamation of sorrow which for many centuries echoed through the whole of Japanese poetry—where the name of Azuma, the traditional meaning of which is given below, still stands for Eastern Japan:

'When, having thence penetrated on and subdued all the savage Yemishi [the ancestors of the Ainu, now confined to the island of Yezo, but formerly occupying a large part of the empire], and likewise pacified all the savage Deities of the mountains and rivers, he was returning up to the capital, he, on reaching the foot of the Ashigara Pass [leading to Mount Fuji], was eating his august provisions, when the Deity of the pass, transformed into a white deer, came and stood before him. Then forthwith, on his waiting and striking the deer with a scrap of wild chive [used, in Japanese magic, against evil spirits], the deer was hit in the eye and struck dead. So, mounting to the top of the pass, he sighed three times and spoke, saying: "Azuma ha ya! [oh! my wife!]." So that land is called by the name of Azuma.'

Yamato-dake, however, soon married another princess, with whom he left the sacred Sabre. Then he set out to make an unarmed attack upon 'a boar as big as a bull' who was the god of Mount Ibuki (a mountain famous on account of this legend, a large part of which disappeared in the earthquake of 1909). But this god led him astray into the mountain and caused heavy hail to fall on him, which paralyzed his limbs and finally caused his death. After a long and wearisome march, interrupted by songs in praise of Yamato, in which he envied the young people who still danced in that land with their crowns of oak-leaves, and welcomed the clouds coming from his native land and mourned for the divine Sabre which might have saved his life, he finally died on the return journey, without having seen the capital again. His wives and children came to look for his body; but it was transformed into a large white *chidori* (plover), which flew away towards the sea. All his relations 'with sobbing song' followed the bird to the spot where it alighted, and there erected a tomb. 'Nevertheless, the bird soared up thence to heaven again, and flew away' (*Kojiki*, 254-275).

It is of importance to note that, in this curious ending to the legend of Yamato-dake, it is not only his soul, as we might imagine at first sight, but also his body, that is transformed into a bird and disappears. According to the corresponding version of the *Nihongi*, the Emperor had his son buried in one of these rock-tombs, surmounted by a vast tumulus, where great men were interred; but Yamato-dake, in the form of a white bird, flew away towards Yamato. 'The ministers accordingly opened the coffin, and, looking in, saw that only the empty clothing remained, and that

there was no corpse' (*Nihongi*, i. 210 f.). With this narrative we may compare another, found in the *Nihongi* (i. 297), where a guardian of the Shiratori-no-misasagi, the 'Tomb of the White Bird,' erected to the memory of Yamato-dake, is transformed into a white deer under the eyes of the terrified Emperor—a story which is easily enough explained by the frequent presence of deer and plovers round these ancient tombs. The origin of such a legend, as far as Yamato-dake is concerned, may easily be imagined: some one is mourning over a tomb; suddenly, a bird flies off, and the idea naturally arises that it is the dead man that is escaping. At the same time it may be conceived how such an illusion must have favoured the deification of the hero.

We have laid special emphasis on this legend of Yamato-dake, because he is the most famous of all Japanese heroes. Naturally, after those primitive heroes, of which he is the typical example, other more civilized personages were deified in their turn. For example, Sugahara no Michizane, a famous statesman and man of letters of the 9th cent., was afterwards deified under the name of Tenjin Sama, and is still worshipped, especially in a temple at Kyōto, as the god of wisdom and calligraphy. But it is probable that, if the Chinese cult of Confucius had not here furnished a model, the Japanese would never have thought of attributing to this minister of historical times the magic powers of action on Nature which were one of the causes of his deification. It is then safer, if we wish to confine ourselves to Shintō pure and simple, not to attach too much importance to those apotheoses which follow the introduction of Chinese culture.

Nevertheless, we must note that the normal deification of heroes, particularly of warrior-heroes, continues through the whole course of Japanese history, and that, until recent times, quite a number of personages were the object of a well-defined worship. While the obscure mass of the vulgar dead were regarded as descending to the darkness of the under world, certain heroes were considered as for ever haunting the land of the living, and some of them were even raised to the stars. In 1877, when the famous Saigō Takamori, the chief of the Satsuma insurgents, committed suicide after a crushing defeat, popular imagination raised him to a place in the planet Mars.

MICHEL REVON.

HEROES (Slavic).—The Slavs as well as other nations have preserved the memory of the heroic period of their past and of their prominent national heroes, but the heroic legends were developed in epic songs only by some Slavic tribes. Heroic epic thrived mainly among the Russians, Southern Slavs, and Little Russians.

1. Russians.—Russian heroic songs are called *byliny* (derived from the word *byl* = 'the past event'). They began to appear in the 10th-12th centuries, and have been preserved—of course, in a form considerably altered—by oral tradition down to the present day. They were originally composed by professional bards who lived at the courts of princes and wealthy noblemen (*bojari*) and sang the brave exploits of every hero of the prince's suite. From these bards they were received by wandering minstrels (*skomorochi* = *jongleurs*), who considerably modified the contents of the original songs, enlarged them with new *motifs*, and partly composed new songs of a similar character. Through the medium of wandering minstrels these songs penetrated into the very heart of the nation, and popular singers (*skaziteli*) took possession of

them. In the northern regions of Russia, especially in the government of Olonez, Archangelsk, and in Siberia, Russian national epic has preserved its full vigour and freshness down to the present time. Some of the popular singers are acquainted with about 20 songs, containing in all some 3000 lines. The extant songs are considered as remains of a rich epic repertory which was diffused, many years ago, in the districts of Kieff and Novgorod.

The first collection of Russian epic songs was made by Richard James, an Oxford graduate, who came to Moscow in 1619 with the English embassy and had six epic songs written out for him. The manuscript of them is kept in Oxford, and was reprinted several times in the 19th century. The first collection of Russian heroic songs was published in 1804; it contains those collected by Kiril Danilov in Siberia in the 18th century. Other large collections were published by Pavel Ribnikov (1861-67, 4 vols.); Petr Kirejevskij (1860-74, 3 vols.); Alexander Gilderding (1873); Tichonravov and V. Miller (1894); A. Markov (1901); and A. Grigorjev (1904-10, 3 vols.).

Russian heroic epic has frequently been the subject of careful study. Among its first investigators there appeared scholars (e.g. Buslajev, Orest Miller) who explained the contents of the songs mythologically according to Grimm's theory. Thinking that their original scheme was mythical, they saw in every hero a representative of pagan, especially solar, gods. Other scholars were influenced by Benfey's theory of the Indian origin of European oral tradition; they derived the Russian heroic songs from Oriental legends and songs, and explained them accordingly. Minute analysis led other scholars to assume that in the heroic songs various subjects, both national and international, were developed; and the aim of their study was to discover separate strata in these songs and to distinguish them as to their origin, place, and time.

The chief representative of this comparative method was Alexander Veselovskij, an excellent authority in the world's literatures; he is the author of the significant saying: 'The national epos of every historical nation is inevitably international.' Comparative studies did much to explain the composition and style of Russian oral epic, but they did not lead to any positive results as to its origin. In recent times, however, this one-sided accumulation of comparative materials, international parallels, and motives has been given up, and the main stress has been laid upon the historical evolution of the songs and upon an investigation of the elements of national culture and history which are deposited in them. This is certainly the only correct standpoint. On this principle the songs have been studied by Vsevolod Miller, Ivan Zdanov, S. Šambinago, A. Loboda, etc., who have already reached more reliable results.

On the ground of its contents, Russian heroic epic may be divided into two principal groups: (a) the cycle of Kieff, (b) the cycle of Novgorod.

(a) *The cycle of Kieff*.—In this are celebrated the heroes who lived at the court of the epic prince Vladimir, who, like king Arthur, was the centre of a heroic suite. The chief figure among these heroes was *Ilja Murometz*, by birth a peasant's son. He remained thirty years at home, being unable to move hand or foot; wandering pilgrims succeeded in curing him and bestowed prodigious powers on him. Ilja joined the court of the prince Vladimir in Kieff; on the way he defeated a great Tatar army and captured the robber Solovej, who had his seat upon seven oaks grown together. In the service of Vladimir, Ilja performed feats of bravery in his fights with the Tatars, and gained the renown of an invincible hero. The historical Ilja Murometz probably lived in the 12th cent. and became famous by his heroic deeds; he is mentioned also in Germanic sagas (in the 13th cent.).

Popular singers adorned him with all the qualities of an ideal hero of Russia, and connected with him various mythological and fabulous legends.

Another prominent hero of Vladimir's suite was *Dobrynja Nikitič*. He rendered himself illustrious mainly by killing a terrible seven-headed dragon which devastated the Russian country. The well-known legendary *motif* of a dragon-killer was transferred to Dobrynja, who lived in the 10th cent., and is called the uncle of the prince Vladimir.

Aleša Popovič is mentioned as a comrade of Dobrynja. The songs particularly celebrate his victories over the enormous giant Tugarin, in whose name is preserved the memory of the Khan of Polovci, Tugorkan, who devastated the Russian country in the 11th cent., and was killed in a combat. The historical Aleša Popovič was not born till about the beginning of the 13th cent., but the popular singers praised him as the real victor over Tugorkan.

In the service of the prince Vladimir, *Dunaj Ivanovič*, *Suchman*, *Saur Vanidovič*, etc., are mentioned as famous heroes. Foreign heroes also would come to Kieff to pay their compliments to the prince Vladimir and to make acquaintance with his brave suite. To their number belong: *Curila Plenkovič*, boasting of luxury and riches, *Djuk Stefanovič*, *Solovej Budimirovič*, and others.

(b) *The cycle of Novgorod* differs from that of Kieff in that the persons celebrated in these songs are not knights, but sons of rich merchants. The great Novgorod, an important commercial centre of the Hanseatic league in the 12th cent., was famed for the luxury and wealth which it had attained owing to its wide-spread commerce. The city had a republican constitution, and the foremost municipal posts were occupied by the nobility and the rich merchants. Quarrels occasionally arose between the two, which form topics of some of the songs. There are also descriptions of other scenes from public life, e.g. family disputes, love adventures, robberies of brides. The principal heroes are: *Vasilij Buslajevič*; *Sadko*, a rich merchant; *Stavr Godinovič*; *Ivan*, a merchant's son.

A separate group is formed by the songs which deal with fabulous and legendary subjects. For example, the song about *Ivan Godinovič* is an expansion of the fabulous theme of an unfaithful wife; the songs on *Potyk Ivanovič* and *Kasjan Michajlovič* have a similar subject. The song about *Vanka*, a widow's son, is based upon the story of a princess who will marry only the man who manages to hide from her, etc.

The Russian heroic songs are penetrated with those deep religious and moral ideas which characterize the Russian people; but in some cases the symbols used are still unexplained. The renowned figure of the Russian epic is *Svjatogor*, a huge giant, whose head touched the clouds, and who had such extraordinary strength that he could set the whole world in motion. When crossing the steppe, he saw lying in front of him a little bag, filled with earth, and was about to lift it up; but the bag was so heavy that Svjatogor broke through the ground and perished. As is explained in another variant of this song, what was hidden in the bag was the terrestrial gravity. By this poetic symbol the sway of the earth over mortal man is beautifully illustrated. The songs about *Volch Svatoslavovič* and *Mikula Seljaninovič* have also symbolical meanings. Volch, the hero of the Vladimir group, well instructed in all knowledge and wisdom, noticed the ploughman, Mikula Seljaninovič, at work in a field, and conceived the notion of tearing his plough from the earth; he tried to do so, but failed. Then Mikula with one hand seized the plough, lifted it up easily, and threw it aside. The simple ploughman, the representative

of agriculture, triumphs over the knowledge and wisdom of the representative of military and princely power.

The typical figure of Russian epic is *Ilja Murometz*, in whom the people have incorporated their ideal of a national hero, democrat, and altruist. Born in a peasant family, Ilja remained all his life a man of simple customs, upright character, and noble mind. Although first among the heroes as regards power and fortitude, he did not become proud of the glory he had gained, and never boasted of his deeds. He considered it his first duty to protect the oppressed, and to fight for his creed, people, and country against the enemies who ravaged Russia. At the same time, he was pious, and fully trusted in the help of God. Deep moral meanings attach to the songs about the three expeditions he undertook before his death. Towards the end of his life, Ilja happened to encounter a stone where three roads divided. On the stone was written: 'Who goes the first road will be killed; who takes the second will marry; who enters the third will become rich.' Ilja chose the first road, and, having come to some high mountains, he met with robbers, who tried to kill him. Ilja took an arrow and shot it at an oak-tree with such force that it split to pieces. The robbers, terribly afraid, fell from their horses. Then Ilja returned again to the stone and set out along the second road. He came to a magnificent palace, where a beautiful queen lived. Ilja did not allow her beauty to seduce him, and put her in chains. He set free the knights whom the cunning queen kept imprisoned in her palace, and distributed amongst them all the wealth that he had found in the palace. He returned once more to the stone and took the third road, where he found huge treasures of gold, silver, and pearls. Out of this treasure he ordered churches and monasteries to be built, and did not take anything for himself. During the building, Ilja was carried over by the invisible power of an angel into the monastery of Pečersk, near Kieff, where he breathed out his soul. It is surely impossible to imagine a more beautiful apotheosis than that with which the Russians have celebrated their well-loved popular hero.

2. **Southern Slavs.**—Popular epic flourished richly among the Southern Slavs (Serbs, Croats, and Bulgarians). When, at the beginning of the 19th cent., the first collections of their songs appeared, they aroused genuine admiration in learned Europe, owing to their variety as well as their cultivated poetic form. They differ from the Russian epic, especially in their contents, which are more simple: each song usually contains only one epic *motif*, whereas the Russian poems are, as a rule, compositions made up of different subjects, and represent a higher and more artistic degree of epic evolution. The greatest merit in the collection of the popular songs of the Southern Slavs is due to Vuk Stefanović Karadžić; his example was followed later by many other collectors.

There is no certainty as to the age of the epic of the Southern Slavs. Some scholars place the beginning of these epic productions as far back as the 12th and 13th centuries; others fix on the 16th century. It is probable that the epic creative faculty of the Southern Slavs did not begin to develop until after the great historical revolutions in the second half of the 14th century. Its highest development is to be placed, therefore, in the 15th century.

As among the Russians, so among the Southern Slavs, heroic songs were composed at first by professional bards, who were educated in special vocal schools. Afterwards they were taken up by popular singers, the *guslari*, so called after the musical

instrument *gusle* (a sort of violin) on which they accompanied their songs.

Historical events are the chief topics of the South Slavic epic; very few nations have preserved the image of their past events in their national poetry so vividly as the Serbs and Bulgarians. First of all, the songs celebrate certain monarchs of the *Nemanić family* (1168–1371), who are praised for their pious disposition, which they often evinced by founding churches and monasteries. Far richer is the cycle of songs whose central theme is the ill-fated battle on the field of *Kosovo* (1389), with which the Turkish supremacy began. The songs of this cycle describe partly single events in connexion with that battle, partly the principal heroes who took part in the fight (Miloš Obilić, the Czar Lazar, Vuk Branković, the brothers Jugović, etc.). It is curious that the defeat of Kosovo is related as a disaster predestined by God to the Serbian people.

The most beloved hero of the South Slavic epic is *Prince Marko* († 1394). Nearly a hundred songs about him are current, describing his life and heroic deeds, from his birth to his death. They contain very few historical reminiscences; popular singers have connected various Biblical, legendary, and fabulous *motifs* with him, and transformed him into a semi-mythical being. He was educated by mythical beings, *vile* (fairies), who bestowed superhuman power on him. Marko makes use of this power for the benefit of his fellow-men, succours the oppressed on every occasion, and administers stern justice. He hates violence and loves liberty; he sets prisoners free, and willingly helps the unhappy. He is at the same time pious, and undertakes the hardest battles for the Christian faith. When dying, he bequeaths one part of his gold to him who will bury him, the second for the embellishment of churches, and the third to the blind bards that they may sing his glory.

Another cycle represents the historical events after the battle of Kosovo, and describes battles between the Serbs and the Turks down to the complete enslavement of Serbia in 1521. The chief heroes of this cycle are the Servian monarchs of the family of *Brankovići*, and the *Kings of Hungary* who fought against the Turks. Under the cruel Turkish yoke, these songs took the place of history and poetry among the Southern Slavs. They celebrated not only subjects from the glorious past, but also contemporary events, especially the petty battles of the Slavs in revolt against the Turks. The most recent ones celebrate the wars of liberation of modern times.

Besides these historical subjects, which, of course, the popular singers changed and adorned in various ways according to their imagination, there were included in the living stream of South Slavic epic many *motifs*, partly apocryphal (creation of the world), partly legendary (about incest, immolation of one's own child), and partly fabulous (about the dead brother, immurement of people in buildings, the serpent-bridegroom, the unfaithful mother, etc.). Owing to this great variety of poetic *motifs*, the epic of the Southern Slavs takes its place high above all similar epic products of other nations.

The most notable names in the interpretation of the South Slavic songs are Stojan Novaković, F. Miklošić, V. Jagić, T. Maretić, M. Chalanski, and Asmus Scerensen.

3. **Little Russians.**—The heroic songs of the Little Russians (Ukrainians) are called *dumy*. They took their rise among the famous Cossacks, and their authors were professional minstrels, educated in vocal schools, the number of which was very considerable in Ukraine. The name of the present singers of the *dumy* is *kobzari*, from the musical instrument *kobza*, similar to the guitar.

Professional singers used to follow the Cossacks on their expeditions, and give expression to their feelings in melancholy songs. They sing either the battles of the Cossacks with the Tatars and the Turks, or those of the famous Chmelnicki, *ataman* of the Cossacks (in the 17th cent.), against the Poles who oppressed the free Cossacks. Besides the historical events, touching scenes from domestic and family life are described in the *dumy*. The songs of the Little Russians are penetrated with a fervent love of native land and liberty, and a sincere piety. Their melancholy character, as well as their tone and composition, reminds us somewhat of the Psalms of the OT.

The best interpreters of these songs are Kostomarov, Antonovič, Dragomanov, Ziteckij, Franko, and Grinčenko.

4. The Bohemians and the Poles have many heroic legends; but these did not become subjects of epic poetry. They were noted, however, by old chroniclers. The Bohemian legends deal with the ancestor *Čech*, who came with his suite from the trans-Carpathian regions and settled in Bohemia. Among the pagan Bohemian princes, *Krok* is mentioned as eminent for wisdom, etc. His youngest daughter, *Libuše*, a famous prophetess, chose for her husband *Premysl Oráč* (ploughman), founded *Praha* (Prague), and with her husband gave wise laws to the country. The Poles have similar legends. Their pagan prince *Krak* had a daughter *Vanda*, who reigned after his death, and offered her life for her country's liberty. According to popular legends, the founder of the national dynasty of Poland was the farmer *Piast*; as a reward for the hospitality he showed to two pilgrims, his family was elevated to the throne, instead of the cruel ruler *Popel*, who was devoured by mice.

HEROES AND HERO-GODS (Teutonic).—

The most explicit reference to the practice of hero-worship among Teutonic peoples occurs in the following passage from Jordanes (*de Getarum Origine*, 13):

'proceres suos, quasi qui fortuna vincebant, non pueros homines, sed semi-deos, id est Anses, vocaver.'

This, it will be seen, is a parallel to Hesiod, *Works and Days*, 156-173. Trustworthy evidence is, however, necessarily scanty, as the Germanic races adopted Christianity soon after the Heroic Age, or towards its close. The existing records of the heroes date, for the most part, from even later times, and are therefore almost entirely coloured by Christian beliefs and practices. An example of worship paid in the form of libation to a hero of the Heroic Age occurs in *Ynglinga Saga* (41):

'So she (*i.e.* Hildigunna) took a silver bowl, and filled it, and went before King Hjorvarðr and spoke; "Hail to you all, Ylfings! This in memory of Hrólfr Kraki."

Further reference to a similar custom is found in the *Saga of Hákon the Good* (*Heimskringla*, iv. 16):

'Men drank also a cup to their dead kinsmen who had been buried in hoves, and that was called the cup of memory.'

An extreme case of the representation of a hero as a supernatural being is that of Dietrich von Bern; in this instance the hero becomes, not a god, but a demon—a point of view due to ecclesiastical hostility towards the Arian king, and the slayer of the Pope. Hence he occurs in legend as the Wild Huntsman, and the connexion of his

name with places such as the Castle of Saint Angelo and the Amphitheatre of Verona shows him under the aspect of a local, though hardly tutelary, hero (cf. *Deutsche Predigten*, ed. K. Roth, Leipzig, 1839, p. 76; Grimm, *Deutsche Mythologie*⁴, Berlin, 1875-78, vol. iii. ch. xxxvi.). A classical parallel may possibly be found in the story of Minos. In Attic tradition—naturally unfavourable—this king is generally represented as 'a tyrant . . . and violent, and an exactor of tribute' (Strabo, x. 4. 8 [p. 476]); while his sea-power, his connexion with the Minotaur, and his position as one of the judges in Hades after his death, combine to endow him with a semi-supernatural character.

In later times, up to the 10th and 11th centuries, we hear among the Scandinavian peoples of beings, apparently human, receiving divine honours. In *Landnámabók* (pt. i. ch. xiv.), mention is made of one Grimr, who 'because of his popularity was worshipped when dead, and called Kamban.' By this name he is twice referred to elsewhere in the same work. Similarly in *Flateyjarbók* (*Olafs Saga hins helga*, ch. vi.) an account is given of Olafir, brother of Haldán the Black, who after death is worshipped under the name of Geirstaðarálfr, and receives sacrifices offered to ensure a plentiful harvest. This mention of sacrifice in connexion with the barrow of a dead hero is reminiscent of the cult of the dead to which Burchard of Worms bears witness (*Decreta*, bk. xix. ch. v., 'de Superstitione'): 'the offerings that in certain places are made at the tombs of the dead.' An illustration of the virtue supposed to emanate from the dead body of a hero is found in the story of Haldán the Black (*Heimskringla*, ii. 9), where we are told that his body was claimed by four districts, each 'thinking that they who got it might expect to have plenteous seasons thereby.' To avoid discord, the body was then divided into four parts, and the resting-place of the head is specially mentioned.

An extreme case, amounting to more than hero-worship, is found in the deification of King Eric of Sweden, narrated by Rimbert in his *Life of Anskar* (ch. 26). Bishop Anskar found his missionary efforts among the Swedes, in the middle of the 9th cent., temporarily checked by a man who claimed to have received a message from the gods. They deplored the decay of their sacrifices, and offered an inducement to renewal of worship:

'If you desire to have more gods, and we are not sufficient, then do we now, with unanimous decision, admit your former King Eric into our community, so that he henceforth is one of the gods.' The people, therefore, 'built a temple to King Eric, who had died long before, and began to offer to him vows and sacrifices as to a god.'

Reference is made to this by Adam of Bremen in his *Gesta* (iv. 26): the Swedes

'also worship gods made from men, to whom they ascribe immortality because of their mighty deeds, as it is recorded that they did with King Eric in the Life of Saint Anskar.'

Deification was probably by no means uncommon, but the circumstances in this case are somewhat unusual.

Reference is frequently found to some supernatural beings who may at one time have been regarded as human, or who have taken certain elements of heroic worship. The euhemeristic account of Frey in *Ynglinga Saga* (4. 13, and *passim*), and of his priest-kinship over the Swedes, if at all reliable, would point to a fusion of human and divine attributes—the priest-king combined with the deity of fertility. Members of the Swedish royal house claimed descent from Frey, and were called Yngvi, from the god's full name Yngvifreyr (*Ynglinga Saga*, 20); similarly Skjöldr appears as the eponymous ancestor of the Danish kings, the Skjöldungar or Scyldingas. The name Yngvi can be traced in Tacitus (*Germ.* 2), who, basing his account on ancient native poems, states that the

ances of the Germani trace their descent from the god Tuisto and his son Mannus; from the latter spring 'three sons, from whose names those who are nearest to the Ocean are called Ingaevones [probably for Inguæones], the central tribes Herminones, and the rest Istævones.' These names occur again in Pliny (*HN* iv. 28) as group-names of the Germani; while in the Frankish genealogy the descent of thirteen nations is traced to three brothers, Ermenus, Inguo, and Istio. From the reference to Ing in the Anglo-Saxon Runic poem, it seems that he must have had a distinct personality, however mythical, and this is borne out by the conception of Frey in the *Ynglinga Saga*. An extension of the idea of Frey's power of controlling the weather is to be traced in the identification of the object of reverence with the offering, and in the idea of the efficacy of a king as a sacrificial victim. Thus in *Ynglinga Saga* (18 and 47) King Dómaldi and King Ólafr are offered up by their subjects to stay the famine and to ensure plenty.

Turning now to women, we may possibly trace a human element in Thorgerðr Hólgabrúðr and Yrpa, her sister. In *Njála Saga* (88), where Hrapp commits sacrilege in their temple, and in *Jónsvíkinga Saga* (44), where Earl Hákon, their votary, sacrifices his son to them in order to gain victory, they are obviously goddesses; but in *Skáldskaparmál* (45), as in Saxo (bk. iii.), Thorgerðr appears in connexion with a character Helgi, who is apparently the eponymous hero of Halogaland. The importance, among Germanic races, of women as prophetesses is attested by Strabo in his description of the part played by 'holy prophetesses' in the sacrifice of captives, and in divination from their blood (vii. 2. 3). Tacitus (*Germ.* 8) says:

'They attribute to them some holy and prophetic power . . . many others are venerated, not out of servility, or as if they were deifying mortals.' As examples, he refers to Aurinia [probably for Alhrna] and to Veleda, and a further account of the latter is found in his *Historiæ* (iv. 61, 65): 'Veleda, a maiden of the tribe of the Bructeri, who possessed extensive dominion; for by ancient usage the Germans attributed to many of their women prophetic powers, and, as the superstition grew in strength, even actual divinity. . . . She dwelt in a tower, and one of her relations conveyed, like the messenger of a divinity, the questions and answers,' i.e. in her intercourse with the Roman ambassadors.

It is perhaps possible to regard the Germanic reverence for women, and the large part played by them in divination and sacrifice, as a parallel with the importance attached to the cult of the *Matres*. Though this is considered to have been originally a Celtic cult (cf. Roscher, s.v. 'Matres'), it was apparently common to Germany and Gaul. One aspect especially of the *Matres*, whereby they are saluted as 'Matres campestris,' or guardians of the military camp (cf. M. Siebourg, *de Sulevis Campetribus Fatis*, Bonn, 1886), may be compared with the account by Tacitus. It must, however, be borne in mind that the function of the *Matres* is essentially protective, not warlike. If it were possible to connect Bede's interesting reference (*de Temporum Ratione*, 15) to the sacrifices on *Módraniht*, *id est matrum noctem*, on the one hand, with the *Matres*-cult, and, on the other hand, with the *disablot* of the Scandinavians (cf. *Ynglinga Saga*, 33), a link would be formed between the different phases of Germanic goddess-cult. Similarly, too, if the *disir* may be identified in part with the Valkyries, the human element recurs again, for certain of the Valkyries, e.g. Brynhildr, undoubtedly have some human characteristics.

With regard to the ethical aspect of non-deified heroes in the Teutonic epics, the extant accounts either date from Christian times or are so largely overlaid with Christian thought as to render it difficult to form a definite idea of any rules of conduct governing their lives. As far as we can

gather from the records, the chief virtues throughout the Heroic Ages seem to have been courage and generosity; the combination of the two would appear to have been the ideal, but proof of either sufficed to win fame, and thus to attain the real object of a hero's existence, as Beowulf confesses:

'Let him who can, win for himself glory before he dies; that is the best thing that can come to a knight in after times, when he is no more' (1387 ff.).

The individual impatience of all restraint resulted in faults of excess, and crimes of passion and savagery. Revenge was not only allowed, but was a duty, and was taken not only for shedding of blood, but also for lesser wrongs; thus Egil revenges himself on Armód for scanty hospitality, by insulting him and blinding him in one eye (*Egils Saga Skallagrímssonar*, 75). One virtue, however, does appear clearly—personal loyalty and honourable devotion, as that of a retainer to his lord. It may be objected that this was won and retained chiefly by gifts, but proof of its power is given even by foreign historians; thus, when Folchere (Phulcaris) dies, overpowered by the Franks, 'upon his body his followers fell to a man' (Agathias, i. 15). Treachery, infidelity, and cunning were hated, but were probably largely practised, especially in the interests of self. The tendency of the age was individualistic, and its annals have many dark records; but it may be urged in extenuation that the aspect of heroic life and deeds which would naturally appear in history and song is one-sided, and omits far more than it records.

LITERATURE.—No definite literature on the subject exists. Compare the references quoted in the course of the article, and such general works as E. Mogk, in Paul, *Grundriss der germ. Philologie*², iii. (Strassburg, 1900); E. H. Meyer, *Germanische Mythologie*, Berlin, 1891; Chantepie de la Saussaye, *Religion of the Teutons*, Boston, 1902. M. E. SEATON.

HESIOD.—For the Greeks of the 5th cent. B.C. Homer and Hesiod stood side by side as the two great poet masters: Homer the singer of war and adventure, Hesiod the inspired teacher of practical wisdom. Thus Aristophanes (*Frogs*, 1030–36) puts into the mouth of Æschylus these words:

'Consider from the beginning how useful the noble poets have been. Orpheus taught us mystic rites and to refrain from murder; Mousaios taught us healing of diseases and oracles; Hesiod taught us the tilling of the earth, the seasons of crops, ploughing; and the divine Homer, whence got he honour and glory save from this, that he taught men good things—even marshalling of troops, deeds of valour, arming of men?'

The contrast between the Homeric and the Hesiodic epic is concisely put in the words which, as Hesiod tells us, the Muses addressed to him when they gave him his call to poetry (*Theog.* 26 ff.): 'Shepherds of the fields, evil things of shame, bellies only! We know to speak full many things that wear the guise of truth, and know also when we will to utter truth.' To tell 'true things' is the characteristic of didactic poetry.

The *locus classicus* as to the poems attributed to Hesiod in antiquity is Pausanias, *Description of Greece*, ix. 31. 4 f.:

'The Æbotians who dwell round Helicon record it as the traditional opinion that Hesiod wrote no other poem than the *Works*; and from that they take away the Preface [i.e. 1–10], saying that the poem begins with the lines on the Strifes [i.e. 11 f.]. And they showed me a leaden tablet where the fountain (Hippocrene) is, for the most part, destroyed by time, and on it is inscribed the *Works*. But there is another and different opinion to the effect that Hesiod composed a large number of epics, those on women, and the so-called *Great Eoiai*, and the *Theogony*, and a poem on the seer Melampus, and how Theseus descended into Hades along with Peirithoos, the *Adices to Cheiron for the instruction of Achilles*, and all that is embraced by the *Works and Days*. These same people say also that Hesiod received instruction in prophecy from the Acarnanians. And there exist prophetic verses which I myself have read, and *Explanations of Portents*.'

Fragments of most of these poems have come down to us, and we possess in an approximately complete form the *Works and Days*, and the *Theo-*

gony, as well as the so-called *Shield of Herakles*, which may be a fragment from the *Eoiai*.

It is impossible here to enter into minute questions of date and authenticity. The ancients seem to have regarded Hesiod as contemporary with Homer, and as author at least of the *Works* and of the *Theogony*. Thus Herodotus (ii. 53) says:

'Whence each of the gods came or whether they all existed forever, and what form particular gods have, they [the Greeks] did not know until (so to say) the other day. For I consider that Hesiod and Homer lived four hundred years before my time, and no more. And it was they who created the theogony of the Greeks, and who gave their names to the gods, and assigned to them their honours and arts, and marked their forms. And the poets who are said to have lived before Hesiod and Homer were, in my opinion, later.'

Without dogmatizing about particular lines, if we assume that the bulk of the *Works and Days* and of the *Theogony* belongs to about 800 B.C., we shall probably be sufficiently near the mark. It may be noted that in the *Works* (564 ff.), Hesiod says: 'When Zeus hath completed sixty days after the turning of the sun, then the star Arcturus, leaving the sacred stream of Ocean, first riseth in his radiance at eventide' i.e. the evening or acronychal rising of Arcturus takes place sixty days after the winter solstice, which for lat. 38° gives a date 900 B.C. But, as there was a tendency to give conventional dates for the rising of stars, we cannot perhaps build too much on this.

In considering the theology of Hesiod, it is well to remember that we must not expect to find either the lucidity or the consistency which we should require in a modern theologian. We shall expect to find elements of quite different date and of quite different stages of spiritual advancement existing side by side, with no attempt at reconciliation. As some great river carries to the sea the gathered testimony of its long wandering from the trickling spring in the lonely glen which gave it birth—'in his high mountain cradle in Pamere'—so the poet, using the materials of his nameless and unknown predecessors, refining here, adding something there, creates at last the literary masterpiece which henceforth bears his name and his name only, though many a long-silent tongue, and many a long since darkened brain, had contributed to the common end. We shall find in Hesiod only a few traces of the conscious reflexion, tending towards the reconciliation and purification of the ancient myths, which is so marked in Pindar and Æschylus. Hence the reproach of Xenophanes of Colophon (c. 550 B.C.): 'Homer and Hesiod ascribed to the gods all things that among men are a shame and a reproach—to steal, and to commit adultery, and to deceive one another.' But men cleave piously to an ancient tradition long after they have intellectually and morally renounced it, and we shall form a truer conception of the ethical advancement of the early poet, if we judge him not by his lowest but by his highest.

The purpose of the *Theogony* is to give a systematic account of the genealogy of the gods; cf. *Theog.* 104 ff.:

'Hail! daughters of Zeus, and grant delectable song. Sing ye the holy race of the deathless gods which are for ever: even them that were born of Earth, and starry Heaven, and dusky Night, and those whom the briny Sea brought forth. And declare ye how in the beginning Gods and Earth came into being, and Rivers and the infinite Sea with raging flood, and the shining Stars, and the wide Heaven above, and the Gods which sprang from them, givers of good things; and how they divided their wealth, and how they apportioned their hours; yea, and how at the first they possessed them of manyfold Olympus. These things, even from the beginning, declare ye unto me, O Muses, who dwell in the halls of Olympus, and tell me which of them was first created.'

But it includes also some cases of the union of gods with mortal mothers (940 ff.), and (965 to end) a somewhat more detailed account of the union of goddess mothers with mortal sires.

In broad outline the order of creation in the *Theogony* is as follows. First came Chaos, i.e.

void space; then Earth and Eros (Love). From Chaos sprang Erebus and Night, and from Night in union with Erebus sprang Æther and Day. Earth first bore Ouranos (Heaven), and the Mountains and the Sea (Pontos). These she bore without wedlock. Then in union with Ouranos she bore the Titans, of whom the youngest was Kronos, 'of all her sons most terrible, who hated his valiant sire.' Now, as each of his sons was born, Ouranos hated them, and 'he would hide them every one in a covert of Earth, and allow them not to rise up into light.' Then Earth fashioned a sickle of adamant, with which her son Kronos cut off the privy parts of Ouranos and cast them into the sea. Kronos in union with his sister Rhea became father of Zeus, Hera, Demeter, Hestia, Hades, Poseidon. Now 'these did mighty Kronos swallow, even as each came forth from the holy womb to his mother's knees, that none other of the glorious sons of Ouranos should hold the kingly honour among the immortals. For he learned from Earth and starry Ouranos that it was fated him to be overcome by his own son, for all his strength, by the devising of mighty Zeus.' Now, when Rhea was about to bring forth Zeus, she asked counsel of Earth and Ouranos; and they carried her to Lyktos in Crete, where 'Zeus was born and brought up. But she wrapped a great stone in swaddling clothes and gave it to Kronos, who swallowed it for his son, and so was induced to vomit forth first the stone and afterward his children whom he had swallowed.' So Zeus came to be king of the immortals.

It is sometimes said that the myth of Ouranos is unknown to Homer. It is true that the myth does not occur in his writings; but there seems no reason to doubt the line in *Il.* v. 898 where we have *ἐνέπρεπος Οὐρανίωνων*—'lower than the sons of Ouranos,' i.e. lower than Kronos and the other Titans. It may be noted that while, according to Homer, the fate of Kronos is to be imprisoned with the other Titans in Tartaros (*Il.* xiv. 274, xv. 225; cf. *Æsch. Prom.* 222), in Hesiod he is king in the Islands of the Blest (*Works*, 169; cf. *Pindar, Ol.* ii. 77 ff.).

Zeus in Hesiod, as in Homer, is supreme among the gods, omnipotent and omniscient. But, just as Homer apparently did not feel it to be inconsistent with omniscience that he should be deceived by Hera (*Il.* xiv.), so Hesiod (*Works*, 48 ff.) represents him as deceived by Prometheus. There is, indeed, a hint of reflexion in *Theog.* 534 ff., where, in recounting the same tale, he says that Zeus was not really deceived, but only pretended to be: 'Zeus, who knoweth counsels imperishable, knew and failed not to remark the guile.'

Since gods and men alike are children of Earth, they are said to be sprung from one stock (*Works*, 108: 'from one stock spring gods and mortal men'; cf. *Pind. Nem.* vi. 1 ff.: 'One is the race of men, one the race of gods, and from one mother do we both have breath. But we are sundered by altogether diverse powers, so that man is naught, while the brazen heaven abides an unshaken habitation for ever'). But mankind is the direct creation of the gods.

The Hesiodic conception of the history of man is, like the Hebrew, that of a fall from a primitive state of sinlessness and happiness into a state of sin and misery. Hesiod's most detailed account is the story of the Five Races of men (*Works*, 109-201).

(1) First the gods created a Golden race of men. This was while Kronos was still king in heaven. The men of the Golden race knew neither toil nor sorrow. The earth of its own accord gave them abundant livelihood. Moreover, they never grew old, but died as if overcome by sleep. But this race passed away—we are not told how or why—and now they are,

'by the devising of mighty Zeus, spirits (*daimones*) of good upon the earth, guardians of mortal men; who watch over dooms and the sinful works of men, faring everywhere over the earth, cloked in mist, givers of wealth. Even this kingly privilege is theirs.'

(2) Next the gods created 'a far inferior race, a race of Silver, nowise like to the Golden race in body or in mind.' These had a long childhood, but a short life after they grew up.

'For a hundred years the child grew up by his good mother's side, playing in utter childishness in his home. But when he grew to manhood and came to the full measure of age, for but a brief space they lived and in sorrow, by reason of their foolishness. For they could not refrain from sinning the one against the other, neither would they worship the deathless gods, nor do sacrifice on the holy altars of the Blessed Ones, as is the manner of men wheresoever they dwell.'

So Zeus 'hid them,' being wroth because they did not give honour to the blessed gods. They now dwell beneath the earth and 'are called the blessed dead: of lower rank [*i.e.* than the Spirits of the Golden race], yet they too have their honour.'

(3) Next Zeus created a third race—a race of Bronze, sprung from the Ash-tree nymphs, or Meliai. The men of the third race were fierce and warlike, strong of arm and of heart. They did not eat bread (*i.e.*, apparently, they lived on flesh). 'Of bronze was their armour, of bronze their dwellings, with bronze they wrought. Black iron was not yet.' This race perished by their own hands and 'went down to the dark house of chill Hades, nameless.'

(4) Next Zeus created a fourth race, 'a juster race and a better, a godlike race of hero men who are called demi-gods (*ἀνδρῶν ἥρώων βέιον γένος, of καλέονται ἡμίθεοι*), the earlier race upon the bounteous earth' (*i.e.* the race which immediately preceded the present). This race is the men of the Heroic Age, who perished at Thebes and at Troy. These are now in the Islands of the Blest:

'Zeus the Father, the Son of Kronos, gave them a life and an abode apart from men, and established them at the ends of the earth and far from the deathless gods: among them Kronos is king. And they, with soul untouched of sorrow, dwell in the Islands of the Blest beside deep-eddying Okeanos: happy heroes, for whom the bounteous earth beareth honeysweet fruit fresh thrice a year.'

(5) Then followed the fifth race (*i.e.* the present race), which 'is verily a race of Iron,' and Hesiod expresses the wish that he had 'either died before or been born afterwards.' It is destined to become progressively more wicked:

'Father shall not be like to his children, nor the children like to the father; nor guest to host, nor friend to friend, nor brother to brother shall be dear as aforesaid; and they shall give no honour to their swiftly ageing parents, and shall chide them with words of bitter speech, sinful men, knowing not the fear of the gods. These will not return to their aged parents the price of their nurture; but might shall be right, and one shall sack the other's city. Neither shall there be any respect of the oath-aiding or of the just or of the good; rather they shall honour the doer of evil and the man of insolence. Right shall lie in might of hand, and Reverence shall be no more; the bad shall wrong the better man, speaking crooked words and abetting them with an oath. Envy, brawling, rejoicing in evil, of hateful countenance, shall follow all men to their sorrow. Then shall Reverence and Awe veil their fair bodies in white robes and depart from the wide-wayed earth unto Olympos to join the company of the Immortals, forsaking men; but for men that die shall remain but miserable woes; and against evil there shall be no avail.'

The end of this race—'for whom also good shall be mingled with evil'—is foretold in the curious words: 'This race also of mortal men shall Zeus destroy when they shall be hoary-templed at their birth.' The expression becomes quite intelligible if we remember what was said of the Golden and Silver races. The men of the Golden Age knew no old age. They remained 'unchanged in hand and foot' until they 'died as if overcome by sleep.' The men of the Silver race, again, had a childhood of a hundred years. The idea is that childhood becomes progressively shorter until finally men are grey-haired at birth; this shall be the sign of the end. It is interesting to compare the myth in Plato's *Politicus* (268 E–274 E; see J. Adam, *Plato's Rep.*, London, 1902, Appendix to bk. viii. vol. ii. 295 ff.). Ridgeway's notion (*Early Age of Greece*, Cambridge, 1901, i. 628), that it is 'some sort of

oracular utterance referring to fair-haired invaders of some Teutonic stock,' is entirely fanciful.¹

In this account of the fall of man no reason is given for the fall. But in *Works*, 90 ff., and *Theogony*, 535 ff., we have another account of the history of human degeneration which, taking no account of the Five Races, ascribes the coming of evil into the world to the creation of woman. In the *Theogony* (*l.c.*) we read how, when the gods and mortal men were contending at Mekone (Sikyon), Prometheus

'cut up a mighty ox and set it before them, deceiving the mind of Zeus. For he set for them the flesh and the innards with rich fat upon a hide, and covered them with an ox paunch; but for Zeus he set the white bones, arraying them craftily, and covering them with glistening fat. Then the Father of Gods and men spake unto him: "Son of Iapetos, most notable of all princes, how unfairly, O fond! hast thou divided the portions!" So spake Zeus, who knoweth counsels imperishable, and mocked him. Then spake to him in turn Prometheus of crooked counsels, smiling quietly, but forgetting not his crafty guile: "Zeus, most glorious, mightiest of the everlasting gods, of these portions choose whichever thy soul within thy breast biddeth thee." So spake he with crafty intent. But Zeus, who knoweth counsels imperishable, knew and failed not to remark the guile; and in his heart he boded evil things for mortal men, which were destined to be fulfilled. With both his hands he lifted up the white fat. And he was angered in his heart, and wrath came about his soul when he beheld the white bones of the ox given him in crafty guile. And thenceforth do the tribes of men on earth burn white bones to the immortals upon fragrant altars. Then, heavily moved, Zeus the Cloud-Gatherer spake unto him: "Son of Iapetos, who knowest counsels beyond all others, O fond! thou hast not yet forgotten thy crafty guile." So in anger spake Zeus, who knoweth counsels imperishable. And thenceforward, remembering evermore that guile, he gave not the might of blazing fire to wretched mortals who dwell upon the earth. But the good son of Iapetos deceived him and stole the far-seen gleam of unwearied fire in a hollow fennel-stalk, and stung to the depths the heart of Zeus who thundereth on high, and angered his heart when he beheld among men the far-shining gleam of fire. And straightway he devised evil for men.'

Hesiod goes on to tell how, to punish men, Zeus made Hephaistos fashion woman of earth, and (590 ff.) we have a tirade upon the sins of woman; but the *Theogony* gives no hint of any definite fall brought about by the creation of woman. In the *Works* he is somewhat more explicit. He first tells how

'Zeus in his anger hid the bread of life, for that Prometheus of crooked counsels had deceived him. Wherefore Zeus devised sorrow for men, and hid fire. But the good son of Iapetos stole it again for men from Zeus the Counsellor in a hollow fennel-stalk, what time the Hurler of the Thunder knew not.' To punish men, we are told, Zeus caused Hephaistos to fashion the first woman (47 ff.). Then Hesiod proceeds to say (90 ff.): 'For of old the tribes of men lived on the earth apart from evil and grievous toil and sore diseases that bring the fates of death to men. For in the day of evil men speedily wax old. But the woman took off the great lid of the Jar with her hands and made a scattering thereof and devised baleful sorrows for men. Only Hope abode within in her unbreakable chamber under the lips of the Jar and flew not forth. For ere she could, the woman put on the lid of the Jar, as Zeus the Lord of the Aegis, the Gatherer of the Clouds, devised. But ten thousand other evils wander among men. For the earth is full of evil, and the sea is full. By night and by day come diseases of their own motion, bringing evil unto mortal men, silently, since Zeus the Counsellor hath taken away their voice. So surely may none escape the will of Zeus.'

Hesiod continues (80 ff.): 'and he named this woman Pandora, for that all the dwellers in Olympos had bestowed on her a gift.' It seems that the truth is rather that Pandora is only another name for Ge, 'Earth,' as the giver of all things. Hesiod's account seems to imply that the contents of the jar were evils; later accounts vary between evils and goods. There is in any case some difficulty about the inclusion of Hope (*Ἔλπις*). A comparison with Æschylus (*Prom.* 248 ff.)—*Prom.* 'I made men cease to foresee their doom.' *Cho.* 'What cure didst thou find for this disease?' *Prom.* 'I planted in men blind hopes (*τυφλάς ἐλπίδας*)'—suggests that *ἐλπίς* may mean 'anticipation of the future,' so that *ἐλπίς* might itself be reckoned an evil. But the matter cannot be dis-

¹ It should be noted that the epithets 'golden,' 'silver,' 'bronze' have no other meaning than merely to indicate progressive degeneration. They do not mean either 'made of gold, etc.' or 'working with gold, etc.'

cussed here (see HOPE [Greek and Roman]). (For the Pandora myth, see J. E. Harrison, *JHS* xx. [1900] 99 ff.)

The cardinal virtues in Hesiod are Industry and Justice.

'Work is no reproach, idleness is a reproach' (*Works*, 311). 'Work, Peres, that hunger may abhor thee, and that Demeter may love thee and fill thy barn with livelihood' (299 ff.). 'The gods are angry with the man who lives in idleness, like the drones which devour the labour of the bees' (303 ff.; cf. 308 ff.). 'Whatever your fortune be, to work is best' (314).

The praise of Justice runs through the whole of the *Works and Days*, e.g.:

'The other way is better, the way of Justice. Justice in the end is better than violence, and the fool learns it by suffering.' Horkos attends to punish crooked judgments (216 ff.). 'The Immortals are nigh among men and remark them that with crooked judgment oppress one another, taking no heed of the anger of the gods. Yea, thrice ten thousand Immortals are there on the bounteous earth who keep watch over mortal men; who watch over judgments and froward works; clad in mist, faring everywhere over the earth. Also, there is the maiden Justice, the daughter of Zeus, glorious and worshipful among the gods who hold Olympus. And whenever one injureth her with crooked reviling, straightway she sitteth by Zeus the Father, the son of Kronos, and telleth of the unrighteous mind of men, till the people pay for the folly of their rulers, who with ill thoughts wrest aside judgment, declaring falsely' (249 ff.).

Injustice is punished in this world by all manner of evil—barren wife, poverty, disaster by land and by sea (242 ff.). On the other hand, those who do justice prosper:

'Peace is in their land, the nurse of children, and Zeus doth never decree war for them. Neither doth famine nor doom consort with men who deal straight judgments, but they do their work in gladness. For them earth beareth much livelihood, and on the hills the oak's top beareth for them acorns, the oak's midst bees; their fleecy sheep are heavy with wool; their wives bear children like unto their parents; they flourish with good things continually, neither go they on ships, but bounteous earth beareth fruit for them' (228 ff.).

Hesiod is confident that justice is better in the end:

'Now may neither I nor son of mine be just among men. For it is an ill thing to be just, if the unjust shall have the greater justice. Howbeit, this I deem not that Zeus, the Hurler of the Thunder, will bring to pass' (270 ff.).

Justice, indeed, is the great distinguishing mark between man and the lower animals:

'This law hath the Son of Kronos appointed, that fishes and wild beasts and the fowls of the air should devour one another, since there is no justice among them. But to men he hath given justice, which is far the best' (276 ff.).

The sins of the fathers are visited on the children, but the children of the just are better in the after days (284 ff.; cf. *Æsch. Ag.* 758 ff.).

Specific prohibitions enjoined by Hesiod are: Thou shalt not commit adultery (328). Thou shalt not wrong the suppliant or the stranger (327). Thou shalt not wrong the orphan (330). Thou shalt not revile thy aged parent (331); Zeus is wroth with one who does so, and for his unrighteousness lays upon him in the end a heavy recompense. Thou shalt not steal (355). Thou shalt not bear false witness (709).

Among specifically religious precepts the duty of worshipping the gods is insisted on:¹

'According to thy power do sacrifice to the deathless gods in holy wise and purely, and burn splendid thigh pieces; at other times propitiate them with libations and incense, both when thou goest to bed and when the sacred light comes, that they may have a propitious heart and mind toward thee; that thou mayest buy another's estate, not another thine' (336 ff.).

In particular, ceremonial purity is emphasized: libations are not to be made to the gods with unwashed hands (724 ff.; cf. *Hom. Il.* vi. 266 ff.). Certain necessary functions are to be performed discreetly even by night; 'for the nights too be-

¹ J. E. Harrison, *Themis*, 95 ff., writes of Hesiod that 'when it came to real definition of his duties, these duties are, not to glorify Athena or to offer burnt sacrifice to Zeus, they are not prayer or praise or sacrifice in any form, but simply the observance of sanctities, *attentions*, positive and negative.' For this there seems no ground. Miss Harrison's treatment of Hesiod's birds is equally ill-founded. She assumes that for Hesiod the bird is a prophet of the weather, and on her theory the bird is a 'maker of the weather.' Hesiod nowhere speaks of the bird as a prophet. He simply says that when a particular bird arrives—crane, cuckoo, swallow—certain things are to be done.

long to the blessed gods' (727 ff.). The nails of the hand should not be cut at a festival of the gods (742 ff.). Sexual uncleanness is recognized (733 ff.).

There is not space here to speak of the various precepts of traditional lore of a practical kind to be found in Hesiod; of the things which it is unlucky to do; of the days which are lucky or unlucky, either altogether or partly and for specific works (765-828).

The most striking thing about the Hesiodic teaching is that here, as in the Hebrew 'Wisdom,' there is no question of a life after death. It is in this life that the just man finds his reward. It is in this life that the unjust meets his punishment. Good and bad alike, without distinction, go down to Hades—as far beneath the earth as the heaven is above the earth—and there is no distinction of fortune for the dead.

Death 'hath a heart of iron, and brazen and pitiless is the soul within his breast. Whomsoever among men he once hath seized, he keepeth; and he is hated even of the deathless gods. There in front stand the echoing halls of the god of the under world, of strong Hades and dread Persephone. And a dread dog keepeth watch before them; pitiless is he and hath an evil guile. On them who enter he fawneth with his tail and with both his ears; but to come forth again he alloweth none, but keepeth watch and devoureth whomsoever he catcheth coming forth from the gates of strong Hades and dread Persephone' (*Theog.* 764 ff.; cf. CERBERUS).

There is a hint of the doctrine of atonement in *Theog.* 783 ff., where we are told that, if any of the gods swears falsely,

'he lieth breathless till a year be fulfilled. And he never draweth nigh to eat of ambrosia and nectar, but breathless and speechless he lieth on a strewn bed, and an evil stupor covereth him. But when he hath fulfilled his ordeal for a great year, another and another more grievous disease awaiteth him, and for nine years he is separated from the everlasting gods, and never cometh to their counsels or their feasts for nine whole years; but in the tenth year he entereth again the assemblies of the immortals who hold the halls of Olympus.'

But such atonement is made by the gods. There is no hint of any such thing for mortal men.

LITERATURE.—*Hesiod*, ed. D. J. van Lenep, Amsterdam, 1847 ff.; J. E. Harrison, *Themis*, Cambridge, 1912; J. Adam, *The Religious Teachers of Greece*, Edinburgh, 1908; A. W. Mair, *Hesiod* (Translation and Appendices), Oxford, 1908; E. K. Rand, *Amer. Journ. of Philol.* xxxii. [1911], 131-165; A. Rzach, in *Pauly-Wissowa*, viii. [1913] 1167-1240.

A. W. MAIR.

HIERODOULOI (Græco-Roman).—In classical antiquity this term designated certain temple ministrants who were below the rank of priests, and usually, if not invariably, of servile status; but how far it was, or ought to be, applied to all temple slaves, and even to certain free persons who gave voluntary service, is very doubtful. E. Curtius (*Anec. Delph.*, Berlin, 1843, p. 16 ff.) led the way in giving it a very wide application, inclusive even of slaves manumitted by dedication or sale to a god, and he has been generally followed (cf., e.g., Daremberg-Saglio, *s.v.*). But the rarity of the occurrence of the term itself in Greek authors and inscriptions; the distinction sometimes implied in our authorities between *hierodouloi* and certain other ministrants, e.g. temple-sweepers (*νεωκόποι*); and the peculiar nature of the cults in connexion with which the term does actually occur—these considerations suggest that *hierodouloi* were an extraordinary class, not found in all temples or cults, and not to be confounded with the mass of sacred slaves.

The term itself has not been found in any author or inscription of earlier date than the Augustan period. Strabo uses it of ministrants in the temples of Ma at the two Comanas (535, 559), of Zeus at Venasa in Morimene (537), and of Men Pharnaces at Cabeira-Sebaste. These shrines are all Cappadocian. He uses it also in connexion with two temples of Aphrodite—one at Eryx in Sicily (272), and the other at Corinth (378). It is not used by Lucian in connexion with the cult of the Syrian goddess at Hierapolis; and its only other occur-

rences in literature seem to be where Philo employs it of Jewish ministrants (ii. p. 420)—probably a loose use of translation—and where Plutarch (*Amator*. 21) speaks rhetorically of the power of love over great men, who *καθάπερ ιερόδουλοι διατελοῦσι*.

As for inscriptions, we have a cippus from an unknown Cyclad isle, recording the death of a *hierodoulos*, a dedication to Hermines by one Asklepiades *ιερόδουλος* at Pselchis in Nubia, and another at Rome (in the time of Marcus Aurelius) to Zeus Helios by one who describes himself as *ιερόδουλος πάσης ιεροδοουλείας*. At Ostia a *νεωκόρος* of Serapis dedicates to the *ιεροδοουλεία*; and at Smyrna, in a text concerning the erection of public buildings, we hear of a *Stoa πρὸς τὴν οἰκίαν τῶν ιεροδόλων καὶ τὸν θεὸν θεραπευόντων* (*CIG* 2327, 5082; *CIG, Ital. and Sic.* 1024, 914; *CIG* 6000; Dittenberger, *Syll.*², Leipzig, 1898, p. 583).

At each of the two Comanas, according to Strabo, there were about 6000 *hierodouloi*; at the southern they formed the major part of the population; at the northern they were at the disposition of the high priest for every kind of service, but might not be sold. In both cases they were of both sexes. At Venasa there were 3000, and they formed a *κατοικία*. At Cabeira they were numerous, and tilled the sacred soil. At Eryx and Corinth only females are mentioned; and these were prostitutes, dedicated, we are told, by both men and women, to the service of the goddess. At the first shrine they had been numerous, but in Strabo's time the practice of dedicating them had largely declined; at the second there were above 1000, famous among seafaring men for their beauty and greed. It was to these women, doubtless, that Pindar devoted the *scholion* of which we have a beautiful fragment (87); but he did not call them *ιερόδουλοι*.

At Eryx and Corinth, then, we see that the *ιερόδουλοι* were nothing but female prostitutes, who gave all, or a share of, their gains to the temple. At Comana Pont., Strabo (p. 559) evidently means us to understand that a part of the *ιερόδουλοι* were included in the *πλήθος γυναικῶν ἐργαζομένων ἀπὸ τοῦ σώματος*, who made the place a 'little Corinth.' But at Comana Capp., Venasa, and Cabeira we are not explicitly informed that the *ιερόδουλοι* did anything but cultivate the temple lands. At the first shrine they were distinguished from a class of bearers of sacred images or emblems, *θεοφόρητοι*, who took part in the *θεοφορία*, mentioned also at Comana Pont., and are credibly supposed by Ramsay (*Cities and Bishopricks of Phrygia*, i. [Oxford, 1895-97] 136) to have been voluntary servants of free condition. There is, therefore, no doubt that the term *hierodouloi*, in all the instances so far discussed, means serfs, whose bodies were absolutely at the god's service and the priests' discretion, to be used either for purposes of labour or prostitution. They were inalienable, but probably could not acquire freedom; on the whole, they represent a class of slave whose condition was worse than was customary or generally approved in Hellas, whatever its sacrosanct character. Was the term, however, more generally used in popular or official parlance? Philo (*l.c.*) couples *νεωκόροι καὶ ιεροδουλοι*, but it would not be safe to say that he intends any precise distinction. Nor can we say whether the *νεωκόρος* of the Ostian inscription was included in the *ιεροδοουλεία* to which he dedicates. The Smyrna inscription, however, seems clearly to distinguish *ιερόδουλοι* from mere *θεράποντες*; and the *ιερόδουλος* of the Roman text equally clearly seems to be proud of his condition and to magnify his office—*ιερόδουλος πάσης ιεροδοουλείας*. If other temple ministrants are to be included popularly under the term, it should only be temple slaves, such as, *e.g.*, the *οἰκέται* of Zeus at Olympia (Strabo, p. 532), the *δοῦλοι*

of Asclepius Archagetas on Parnassus (Pausan. p. 879), and such captives as the Phœnissæ of Euripides, or the *νεωκόροι* and *ζάκοροι* mentioned by Herodotus.

The term cannot have included free men and women who offered their services to the god for life or for a time, such as the Armenian ladies who prostituted themselves in Acilisene, or the *θεράπναι* of Apollo (*Hom. Hym. Apoll. Del.* 157). Even such a case as that of Ion in Euripides' drama seems to be excluded; for, though a founding, he can say *ιερὸν τὸ σῶμα τῷ θεῷ δίδωμ' ἔχειν, ἰ.ε.*, his service was voluntary like that of all whom he calls *Φοίβου θέραπες* (Eur. *Ion*, 1284, 109). More clearly akin, probably, to the Eastern *hierodouloi* were certain cultivators of sacred lands in Sicily and Italy, the *Venereti* of Eryx and the *Martiales* of Larinum (Cic. *Verr.* ii. 3. 20, § 50, ii. 5. 54, § 141, *pro Cluentio*, xv. § 43).

It is true that such a class as the *ιερόδουλοι* was not likely to secure frequent mention in ancient authors or inscriptions; but it is impossible not to attach weight to the fact that only in a very few localities do we actually hear of *ιερόδουλοι*, and even in these not till a period at which Asiatic cults had become known and introduced to Greece. We prefer, therefore, to regard them as a peculiar class of servile ministrants not identical with the usual temple slaves of Greece or Italy. Their condition and their name seem alike usually to have been eschewed on Greek soil; and we must infer that the nature of their servility, both as cultivators and as prostitutes, was such as was less congenial to the West than to the East.¹

If we are right, then there is no further question of the manumission of slaves by sale, real or fictitious, to a god being a preliminary to the state of *ιεροδοουλεία*, although it may very well have led to their becoming in many cases ordinary temple servitors, or even *ιεροί*.² That a slave could be dedicated to actual service in a temple is proved by a curious inscription of Lebedæa,³ wherein a son, acting under his father's will, manumits a slave by dedicating him to Zeus Basileus and Trophonius, stating that his duty will be *λειτωργίμεν ἐν τῆς θεοῦ τῶν θιῶν*, but only after he shall have rendered ten years' more service to the family which freed him. Such a condition, however, was undoubtedly not the rule. In the vast majority of cases the slave had no further obligations after being thus manumitted—*e.g.* at Delphi, where the god's payment really came out of the slave's own pocket. Probably local usage varied. Some temples had need of a large number of slave attendants, cultivators or prostitutes, and were prepared to support them; others had not the same needs, or were poorer. In any case, as it happens, we are unable to say that this custom of sacred manumission and the institution of *ιεροδοουλεία*, expressly so called, co-existed at any one shrine.

LITERATURE.—This is given in the article.

D. G. HOGARTH.

HIERODOULOI (Semitic and Egyptian).—The term, which signifies simply 'sacred servants,' is employed by scholars to designate religious officials whose functions included sexual rites. Such officials can be traced in connexion with several shrines, and probably existed at others, concerning which no testimony has survived. These officials were of both sexes, though, as is natural, evidence for the existence of female *hierodouloi* is much more abundant than for male.

¹ Cf. Ramsay, *Cit. and Bish.* i. 147: 'It is probable that the *hieroi* represent the *hierodouloi*, as the institution was modified by the development of western civilization in Asia Minor.'

² So Hicks, in *Anc. Gr. Inscr. Brit. Mus.*, London, 1874-90, iii. 2, p. 86. Ramsay expresses doubts (*l.c.*). See art. *HIEROI*.

³ *Recueil inscr. jur. grecques*, Paris, 1892-1904, 2nd ser., p. 238.

1. **Babylonian.**—Evidence for the existence of female *hierodouloi* at Erech, in Babylonia, in connexion with the worship of the goddess Ishtar, is found in the Gilgamesh epic. The first tablet of the epic contains the story of Eabani, a wild man, who terrified a hunter whom Gilgamesh sent against him. The hunter was directed to take with him a *harimtu*, 'a woman who was *herem*,' or consecrated to a deity; this woman, when they approached Eabani, opened wide her garments, exposing her charms, yielded herself to his embraces, and for six days and seven nights gratified his desire, until he was won from his wild life.¹ In the light of the evidence from other shrines, to be presented below, there can be little doubt that this woman who was *herem* was a sacred prostitute belonging to the temple of Ishtar at Erech.²

From the code of Hammurabi, which was set up in Esagili, the temple of Marduk at Babylon, it appears that similar functionaries existed elsewhere, and were given a legal status by the code. The code was meant for Hammurabi's whole realm, and accordingly implies that such women might be connected with any temple of the land. Direct proof of the wide-spread nature of the institution is found in § 182, where 'women of Marduk,' the god of the city of Babylon, are granted greater rights in the inheritance of the property of an intestate father than other women of this class, as well as in the business documents, which mention the consecrated women of various gods.

Several terms are applied by the code to such women. They are called *NIN-AN*, 'woman of a god'; *SAL-zikrum*, 'vowed woman,' or possibly 'man-woman,' if *zikrum* be taken from a different root; *SAL-NU-GIG*, which is defined in the bilingual texts as *qadistu*, 'holy one'; and *SAL-NU-BAR*, which is defined as *zërmasitu*, 'seed-purifying' or 'seed-forgetful' ones. It is probable that these terms referred to different grades of this peculiar priesthood. The term most frequently used in the code is *SAL-zikru*. This class would seem to have been the most numerous. These women were hedged about with certain restrictions, but also had in some respects larger privileges than women in common life. There were special houses for them, in which they ordinarily lived, though they were not compelled to live there. If one did not reside in one of these special houses, she was forbidden, on pain of death, to open a wine-shop (§ 110). They were protected from slander by the same law which guarded the good name of married women (§ 127). A father could leave to such a woman an inheritance by will. In that case her brothers were to work her portion of the estate and pay her the income. Should she become dissatisfied with their management, she might take the property from their hands, and lease it to whomsoever she pleased. Her father's will might give her the power of leaving her property by testament after her death; if it did not, her share, when she died, reverted to her brothers. If she was accorded no portion by her father's will, she was to inherit equally with her brothers, if she was a *SAL-zikru*; if a *qadistu* or a *zërmasitu*, she received one-third of a brother's share (§§ 178, 179, 180, 181, 182). That the two classes last mentioned were temple prostitutes is sufficiently indicated by their names, especially when the use of *qadhesh* and *qadheshah* in Hebrew (cf. e.g. Dt 23¹⁸) is compared. That the *SAL-zikru* were women of the same character appears from the fact that they might have children, and that these children stood in such a peculiarly orphaned condition that they were apparently frequently adopted into regularly constituted families (§§ 187, 192, 193). The 'women

of Marduk,' for whom the code legislates especially, were apparently of the classes *qadistu* and *zërmasitu*, for, like these, they received, when no provision was made for them in a father's will, only one-third of a son's portion. Their advantage over other women of their class was that they could always dispose of their property at death as they chose (§ 182). Probably it was one of these 'women of Marduk,' who, Herodotus (i. 181) tells us, passed the night on the couch in the sanctuary at the summit of the *ziggurat* of the temple. Apparently she was supposed to act as the wife of the god. These votaries of Marduk appear in the contract literature.¹ One of them, Lamazatum, married, and it was agreed that her children should be her heirs.² Votaries of Shamash appear with especial frequency in contracts;³ votaries of Enmashtu (*NIN-IB*),⁴ sisters of Suziana,⁵ votaries of Zamama,⁶ *qadistu* of Adad,⁷ also are found. The relations of these women to the world, both when married and when unmarried, are to some extent revealed in the contracts. Thus a votary and her husband adopted a son and agreed that, if they had other children, this one should always be regarded as the elder brother.⁸ A *zërmasitu*'s marriage is recorded.⁹ A man and his wife adopted the son of a votary of Shamash;¹⁰ a votary of Shamash gave her daughter in marriage and received five shekels of silver;¹¹ a votary of Shamash gave her daughter in marriage to her brother, stipulating that as long as the brother lived he should support his sister;¹² another votary of Shamash gave her property to her grand-daughter, stipulating that the grand-daughter should support her as long as she lived.¹³ A woman consecrated her two daughters to Shamash, stipulating that they should support her as long as she lived.¹⁴ A *qadistu* and her sister divided an inheritance.¹⁵ One votary adopted a child;¹⁶ another brought suit for a share in an estate; another, who was the daughter of a king, was prominent in transactions in grain;¹⁷ while no fewer than three consecrated women appear in a lawsuit in which one sued another and the third appeared as a witness.¹⁸ Votaries entered, accordingly, into the active affairs of life, much as other people did.

Lyon,¹⁹ like Johns,²⁰ endeavours to support the improbable view that these consecrated women were chaste. His arguments are three in number: (1) one who slandered them was punishable in the same way as one who tarnished the name of a married woman; (2) one of them adopted a child; therefore, when it is said that one of these women had a child, probably it was adopted; (3) when one of these women married, the possibility that she might present her husband with a child is not expressed by the word *aladu*, but by *usarsi* or *ustabsi*. Lyon thinks that this was because votaries generally did not marry till they were advanced in years, so that it could be presumed that they would be barren.

With reference to these arguments the following points should

be noted. (1) The law against tarnishing the good name of a votary no more implies of necessity that she was a perpetual virgin than it implies that a married woman must be. We learn from Herodotus (i. 199) that certain rules had to be observed by women who became temporary *hierodouloi* (see below), and it is altogether probable that intercourse with one of these consecrated women was regarded as innocent only if practised under certain conditions. If such were the case, it is easy to see why the law should protect such a woman from the reputation of being a common prostitute, just as it protected married women. When the nature of the *ḥarimtu* of Erech, the nature of the *q'dhēshāh* in Israel, and the testimony of Herodotus are taken into account, together with the fact that unmarried votaries had children, one is compelled to interpret the law in the way suggested. (2) The idea that *all* the children of votaries were either adopted or born in wedlock is mere assumption. It has no support in the texts. (3) Lyon's explanation of the use of the words *ušarši* and *uštābši* may possibly be right; but, even if it is, it does not follow that the consecrated women were virgins until married.

It is sometimes asserted (as by Johns¹) that these women were virgins who, when they married, still maintained their virginity. Johns supports his view by a reference to a text of the time of Hammurabi published in *CT* ii. 33, which, as he interprets it, states that a certain woman purified her daughter and then married her to another man, at the same time vowing her to perpetual virginity. In reality there is no reference to perpetual virginity in the text; it simply repeats the statement that the daughter was pure.² What this process of purification was we can only conjecture. It is clearly to be connected with the purification of a maiden before her adoption, to which another text refers,³ which has been thought to be connected with circumcision (see CIRCUMCISION [Semitic], in vol. iii. p. 679). It clearly has no bearing on the marriage of female *hierodouloi*.

Two passages in the code refer to a class of men, called by the Sumerian name *NER-SE-GA*, whose children are classed with those of the *SAL-zikru*. An old syllabary defines *NER-SE-GA* as *manzaz-pani*, 'foremost place,' equivalent, as the name of an official, to 'dignitary' or 'magnate.' A legal document of the Hammurabi period⁴ describes certain men as *NER-SE-GA* of the temple of Marduk. It is clear, therefore, that they were religious officials; and, since the code accords their children the same treatment accorded to children of female *hierodouloi*, it is probable that they were sodomites, though full proof of this is lacking.

Closely connected in principle with the service of these permanent *hierodouloi* was the temporary pre-nuptial service in this capacity required of every Babylonian woman. According to Herodotus (i. 199), once in her life every Babylonian woman had to sit in the temple of the goddess of fertility until some stranger came and threw into her lap a piece of silver, uttering the formula: 'I beseech Mylitta (*i.e.* the goddess who helps women in travail) to favour thee.' Thereupon the woman lay with the stranger outside the temple precincts. The money thus given was sacred. Having discharged her obligations to the goddess, the woman returned home to a normal life. No disgrace, but rather honour, attached to her for this act. Strabo (xvi. i. 20 [p. 745 f.]), as well as the apocryphal Epistle of Jeremiah (v. 48), bears witness to this custom.

2. Syrian.—Among the Syrians of the upper Euphrates the Semitic mother-goddess was worshipped at Hierapolis-Bambyce under the name Attar, and this worship was closely akin to her cult elsewhere.⁵ Probably it is her worship to which the Syrian Father, Ephrem, alludes, when he says that, on the feast of their idol, women prostituted themselves, and virgins forthwith vowed their virginity to prostitution.⁶ These remarks would seem to point to the existence of both permanent and temporary *hierodouloi* at Bambyce.

At Hierapolis in Lebanon, the modern Baalbek,

⁵ See Lucian, *de Syria Dea*, xv.; cf. also art. ASHTART.

⁶ Ephrem, *Opera*, 459 C.

custom required every maiden to prostitute herself to a stranger in the temple of Ashtart,¹ as the women of Babylonia were required to do for their goddess. Whether the regular sacred harlots were maintained there we do not know, but Eusebius says that even matrons as well as maids prostituted themselves in the service of the goddess. Perhaps this is not to be taken literally, but may refer to a regular order in which such women grew old. Constantine abolished the practice, destroyed the temple, and built a church in its stead.

3. Phœnician and Punic.—In Phœnicia these rites were, no doubt, practised in the worship of the same goddess, wherever her temples existed; for the Hebrews, who regarded Sidon as the chief city of Phœnicia, speak of the goddess as 'the abomination of the Sidonians' (2 K 23¹³). Definite evidence comes to us, however, through Lucian,² of the existence of this worship in a modified form in connexion with the worship of Adonis, or Tammuz, at Byblos (Gebal). At his festival, we are told, all women who were not willing to sacrifice their hair were compelled to prostitute themselves for a day. Only strangers might solicit their charms, and the money received in payment of their shame was dedicated to the goddess. Lucian bears witness to the existence here of the institution of temporary harlotry as a sacred service, but shows that the custom had been modified, so that a modest woman might purchase immunity from this service by sacrificing her hair.

At Paphos in Cyprus, according to the testimony of Herodotus,³ Clement of Alexandria,⁴ Justin,⁵ and Athenæus,⁶ there was a similar practice. Each woman, whether princess or low-born, offered herself in prostitution before marriage. Justin, through a misunderstanding, says that they did it to obtain money for a dowry; but the reason for the custom is clearly religious, like that at Babylon. Whether there were at Paphos women permanently devoted to this type of sacred service, we do not know, but it is probable that at some time there had been. The pre-nuptial sacrifice of virtue, however, may have long outlived the permanent institution of *q'dhēshōth*.

At the other end of Cyprus, in connexion with a Semitic temple at Kition, we have evidence of the existence of a class of male prostitutes. A fragmentary inscription (*CIS* i. 86) records the provisions granted for the festival at the beginning of a given month to various classes of temple officials. Although the ends of the lines, where the rewards were enumerated, are broken away, the beginnings, where the officials are mentioned, are preserved. Thus we learn that sustenance was apportioned to builders who repaired the temple of Ashtart, to doorkeepers, men set for the sacred service of this day, slaves, slaughterers, barbers who worked for the sacred service, engravers, the chief scribe, and resident aliens. The last-mentioned class consisted of foreigners, who, in accordance with ancient custom, had taken refuge in a strange land under the protection of the sanctuary.⁷ It is clear from its context that the 'dogs' (𐤁𐤓𐤕) must refer to a class of people, and equally clear that the word is to be interpreted by Dt 23^{18, 19}, where 'dog' (𐤁𐤓𐤕) is equated with *qādhēsh*, or 'male prostitute.' If the Semitic settlement here supported male *hierodouloi*, the female were, without doubt, not lacking, though as yet evidence of their presence has not been recovered. At Eryx in Sicily the presence of a Semitic colony and a temple of Ashtart is attested by Phœnician in-

scriptions.¹ Strabo (vi. ii. 5 [p. 272]) testifies that formerly the temple of Aphrodite (Ashtart) was 'full of women *hierodouloi*.' In view of the nature of this class elsewhere, the functions of these *hierodouloi* need not be elucidated.

Among the Semites of North Africa the Semitic mother-goddess was worshipped under the two names of Ashtart and Tanith. Hundreds of votive inscriptions attest the popularity of her cult. The change of sentiment which came over the world with reference to the relation of the sexes in the early centuries of the Christian era led the worshippers of these goddesses to call them 'celestial virgins'; at least, that was the case with Tanith. St. Augustine² testifies that once in his youth he attended her festival, and that 'such foulness of obscene speeches and actions as the players would be ashamed when rehearsing to act at home before their own mothers, they acted publicly in the presence of the mother of the gods, in the sight and hearing of a very great company of both sexes.' He goes on to say that 'chastity was shamelessly outraged.' This language is vague and oratorical, but, in view of evidence from other parts of the Semitic world, it is probable that the devotees of the goddess at the time of her festivals became temporary *hierodouloi*, even though evidence for the existence of permanent *hierodouloi* in North Africa is wanting.

4. *Arabian*.—Among the pre-Muhammadan Arabs the worship of the mother-goddess was practised; in some places she was called Al-Lât, in others Al-Uzzâ. Few traces of the worship have survived from the non-literary pre-Muhammadan time, but Patristic references to the worship of Arabian goddesses imply that from the Christian standpoint it was, like that at Bamyce and Carthage, sexually impure,³ and the great Muhammadan festival at Mecca, which was taken over from heathenism, is still marked by sexual irregularities.⁴ We are safe, accordingly, in assuming that in Arabia the worship of the mother-goddess was accompanied by the temporary practice of sacred prostitution. Owing to the unsettled character of nomadic life, it is hardly probable that permanent officials dedicated to this service were maintained.

5. *Hebrew*.—As *hierodouloi* in some form are traceable in so many parts of the heathen Semitic world, it is probable that it was a primitive Semitic institution, which survived in practically all the Semitic nations. It becomes, then, an interesting question whether these officials had a place in early Hebrew religion. There is some evidence to show that they had. We are told (1 K 14²⁴) that the 'sodomite' (*qâdhesh*) was in the land, and that in this respect Hebrew ritual did not differ from that of other nations. Again (1 K 15¹²), we read that King Asa drove the sodomites (*qâdheshîm*) out of the land. This reform must, however, have been but temporary, for Hosea (4¹⁴) declares that the women and brides of Israel not only commit harlotry (*i.e.* become temporary *hierodouloi*), but that the guides of the nations themselves, her rulers and priests, offer their sacrifices with sacred prostitutes (*qâdheshôth*). The author of Deuteronomy, in the next century, bears witness to the existence of both male and female *hierodouloi* in his land, for he prohibits them for the future (Dt 23¹⁷). As legislators in modern times do not find it necessary to prohibit the sale of intoxicating drinks where such drinks are unknown, this law on the pages of Deuteronomy is evidence of the presence in Judah of the

institution legislated against. Further testimony to the same effect is found in 2 K 23⁷, where it appears that, in carrying out the reform, which he based on Deuteronomy, King Josiah found it necessary to destroy the houses of the sodomites (*qâdheshîm*) in the very temple of Jahweh. It is clear from the context here that *qâdheshîm*, though a masculine plural, refers to sacred prostitutes of both sexes, for the last clause of the verse describes these houses as 'where the women wove hangings for Asherah.' It seems, accordingly, that down to the time of Josiah *hierodouloi* of both sexes had been attached to the temple of Jahweh, and that the prophetic teaching had not sufficiently awakened the public conscience to dislodge them.

Two explanations of the presence of these ministers in Israel have been offered. The Hebrew prophets believed that they were no part of the ritual of Jahweh, but that they were an importation from other Semitic religions. Some modern scholars believe that the religion of Jahweh had its roots in the soil of primitive Semitic ritual, and that *hierodouloi* were one of the features which Jahweh's religion, like other Semitic religions, inherited from the parent stock. Whatever the origin of the institution, it is certain that, aided by the Deuteronomic law, the prophets imposed their view upon Judah, and finally uprooted this debasing type of religious service, banishing it from their land. How debasing it had become, and what frank appeals it made to those sensual passions which men have more need to control than to inflame, the excavations at Gezer make it possible for us to realize as never before. Such art as they possessed was employed to extend the appeal by which these sacred courtesans in the service of deity enticed men to indulgence.¹ That the prophets succeeded in removing from Judah's religion an institution consecrated by religious sanction and hoary with age, which appealed so powerfully to the animal element in man, is eloquent testimony to the fact that they were working with God and for Him.

6. *Egyptian*.—Among the Egyptians the institution of *hierodouloi* can be most clearly traced at Thebes. Strabo (xvii. i. 46 [p. 816]) declares that here 'a very beautiful virgin of most distinguished lineage was consecrated to Zeus (Amon), and that she played the concubine and had intercourse with whomsoever she desired until the natural purification of her body was accomplished (*i.e.* until the expiration of a month); then, after her purification, she was given to a husband.' This points to the existence of an institution kindred to that which we have traced among the Semites. That this practice was not confined to one woman, but was one manifestation of a more general institution, is indicated by an inscription of Ramses III., in which he tells of the disposition of the booty taken in his Syrian war. In speaking of the captives he says: 'I have carried them away: the males to fill thy storehouse; their women, to be subjects of thy temple.'² Breasted is undoubtedly right in thinking that these women became *hierodouloi*.³ This is confirmed by scenes pictured on the wall of the temple erected by Ramses III. at Medinet Habu, which one must see in order to appreciate. They are usually spoken of as '*harîm* scenes,'⁴ but their occurrence in a temple would seem to indicate that it was no ordinary *harîm*. On the great festival days the priestesses of Hathor and other deities danced before the god (or goddess) just as the women of the *harîm* were accustomed

to do for the entertainment of their earthly lord,¹ and it can hardly be that the dances were chaste.

At Thebes the wife of the high priest bore the title 'chief concubine,' while a queen or princess was called 'wife of the god.'² This recalls the statement of Herodotus (i. 182), that a bed on which a wife of the god slept for his enjoyment was placed in the inner sanctuary at Thebes for Amon, as in the sanctuary at the top of the *ziggurat* of the temple of Bel at Babylon. That it might be claimed that this relationship on the part of the wife of the god to him was no mere fiction is shown by the account which the famous queen, Hatshepsut, of the XVIIIth dynasty, gives of her parentage. She claims that the god Amon came and actually had intercourse with her mother.³ When it was thought that a god could thus treat women—and women, too, who had earthly husbands—it is probable that, under religious regulation, provision was made for similar conduct on the part of his worshippers. Osorkon II., of the XXIIth dynasty, declares that he had assumed 'the protection of the sacred women of the house of Amon and the protection of all the women of the city, who have been maid-servants since the time of the fathers.'⁴ The sacred women of the house of Amon are classed by him with the maid-servants throughout the city as having no natural protectors. They were probably of the class under consideration. The existence of *hierodouloi* in connexion with other Egyptian deities is not so clear. The god Min, of Coptos, is pictured with phallus erect, and it would seem probable that some such institution attached to his cult. Ramses III. says that he made decrees for the administration of the 'pure' settlement of women of the god Ptah of Memphis.⁵ 'Pure' is here used in a ceremonial sense; they were women consecrated to the god, whose functions were probably similar to the functions of the women of Amon. Perhaps it was a garbled report of the functions of such consecrated women, among whom were princesses, that reached Herodotus, and led him to say (ii. 126) that Khufu (Cheops), in order to obtain money for his pyramid, prostituted his own daughter. If there is any truth behind the story, it is probable that the princess was a priestess of Ptah and acted as a *hierodoulos*. That the Egypt of the Old Kingdom was not unacquainted with the circle of ideas which we have traced at Thebes is shown by the fact that one of the Pyramid Texts describes the king as 'the man who takes women from their husbands whither he wills and when his heart desires.'⁶ In the Old Kingdom the king was a god, and his actions were divine. Probably other gods, through such practices as we have traced, were thought to do the same.

The goddesses Hathor and Bastet were mother-goddesses, and were pictured nude, as were the Semitic goddesses of the same type.⁷ Hathor was praised in a chorus of dancing women.⁸ That women became temporary *hierodouloi* at the festival of Bastet at Bubastis is implied by Herodotus (ii. 60), who says that men and women went in large numbers together in boats to this feast at Bubastis, playing and singing the whole way. At towns they would disembark, sing, dance, and taunt the women of the town, some of the visitors pulling up their clothes. In the light of the goddesses' character, the nature of the services of these women is not difficult to divine.

A similar service seems to have attached to the worship of the god of Mendes, whom Herodotus

identifies with the Greek god Dionysus. He tells us (ii. 48) that at his festival women carried about in procession images of the god with the member nodding, and that the member was about as large as the image. The women were singing the praises of the god. It seems clear that these women were playing the part of temporary *hierodouloi*, though they may have been in part permanently dedicated to that vocation. The institution seems to have been as wide-spread in Egypt as among the Semites, though its details cannot be so clearly traced.

The ideas which called into existence this institution, so revolting to modern feeling, can now be only conjectured. It seems most likely that it originated in a polyandrous society, and in that circle of ideas, traceable in many parts of the world, in which originated the custom of giving a bride the first night to a king or priest in order to secure the blessing of fertility. Priesthood and kingship in their later senses were unknown among the primitive Semitic and Hamitic tribes, and hence, probably, it was thought to secure the divine blessing by leaving the first and consecrating act to divine chance.

The temporary *hierodouloi* were a survival of this custom. The more permanent and professional *hierodouloi* were a later development, and grew out of the conception that intercourse with a supernatural being produced fertility and a remarkable offspring (cf. Gn 30^a 6²⁻⁴). The consecrated *hierodouloi* were the representatives of deity, to give concrete expression to this idea. Fertility was thought to come to women through intercourse with these sacred males, and virile power to men through commerce with the consecrated women.

GEORGE A. BARTON.

HIEROI (*lepol*, *lepal*).—This word, as noun substantive, is found only in inscriptions, and, with very few exceptions, only in inscriptions of Western Asia Minor. Although much light has been thrown on *lepol* by recent explorations in Anatolia, much remains obscure concerning them (cf. Ramsay, *Cit. and Bish. of Phrygia*, i., Oxford, 1895, pp. 135, 147). On the mainland of Greece only two inscriptions have been found which mention *lepol*—the great Mystery Rule of Andania in Messenia, which is headed *Ἱερωὶ καὶ Ἱερωῶν* (Dittenberger, *Syll.*², Leipzig, 1898, no. 653), and another Messenian text discovered at Calamata (*CIG* 1487). In the first text certainly, and the second probably, the word is simply equivalent to *μύστος*, and means 'initiated.' Whether that is its sense also in inscriptions of Tenos and Delos (*CIG* 2339^b, 2953^b) is unknown. The word is not otherwise used in Greece of initiated persons; its Messenian use may safely be put down as local and singular.

In Asia Minor the name certainly does not mean the initiated, but temple ministrants. It seems clear that all *lepol* did not come to be so in the same way, nor had they the same tenure and conditions of service. (1) At certain shrines free

persons either dedicated themselves or were dedicated by parents and guardians to the service of a deity; but sometimes only for a period. So, for example, at Tralles, one L. Aurelia Æmilia, of good native family, boasts in an inscription (cf. Ramsay, p. 95) that, sprung from a family which had always done divine service by practising ceremonial prostitution, she likewise has so served by order of the god. At the shrine of Anaitis in Acilisene, 'the highest nobles consecrate their daughters while virgins; and among these it is the rule to live as prostitutes before the goddess for a long time before being given in marriage' (Strabo, p. 532). (2) The larger body of evidence seems to refer to involuntary *tepoi*, either of servile origin and status or at least of a status below civic freedom. At Erythræ, for example, we find that they were not included in the Demos, but had so well recognized a political position that they co-operated with the civic body to erect an honorary inscription. At Ephesus the evidence of the Mithridatic decree, concerning the payment of debts and future constitution of the city, is clear. The *tepoi* (doubtless of the Artemesium) are enumerated as a class to be enfranchised after the *παροικοι* or resident aliens, but before the *ἀπελευθεροί* or freedmen (Wadd. 136a). At Magnesia ad Mæandrum (if *tepoi* is really noun substantive and not adjective in this inscription), *tepoi* of Apollo appear as gardeners (O. Kern, *Die Inschriften von Magnesia am Mæander*, Berlin, 1900, p. 115^a); and a Smyrna text shows a *tepos* holding a servile relation to an individual citizen (Wadd. 1522a). The Delian text, quoted above, seems also to imply that a *tepos* could be a private slave.

These instances, and especially the relative place of the *tepoi* in the Ephesian constitution, make it more than probable that in most cases the temple ministrants either had been slaves, or at best held a sort of freedman status from the first. Hicks, commenting on the Ephesian inscriptions (*Anc. Gr. Inscr. Brit. Mus.*, London, 1874-90, iii. 2, p. 86), confidently suggested that *tepoi* were the outcome of manumission by dedication or sale to a divinity—a revival of E. Curtius' view about *hierodouloi* (q. v.). But Ramsay (*op. cit.* i. 148), while inclined to admit this as possibly one among several origins of *tepoi*, objected that, if those so freed always became *tepoi*, we ought to meet more often and more widely with the class. It may be added to his objection that we have, as it happens, no records of this sort of manumission at Ephesus, and there is no reason to think it was a universal practice. On the evidence available, it is preferable to suppose that most *tepoi* had never been themselves slaves, but, if not of the voluntary class, were drawn from foundlings and orphans, either adopted by a priesthood of its own motion or consigned to it by outsiders (cf. the common modern practice of conventual institutions adopting foundlings and orphans, who act as servants). This origin is strongly supported by the inscriptions of the shrine of Apollo Lermenus (or Lairbenus), discovered in 1887 by Ramsay and Hogarth on the Upper Mæander, which throw more light on the condition of *tepoi* than any others.¹ In the ruins of the temple itself were found parts of several records of the dedication of *θρεπταί* and *τεθραμμένοι*, words the usual sense of which is 'foundling' (cf. Ramsay, i. 147, who cites Pliny, *ad Traj.* lxxv). One of these gives explicit information to the effect that a child, now dedicated (*καταγράφειν*) by its proper parents, had been exposed in obedience to a dream, and found and reared (*ἐθρεψεν*) by a stranger. In no case is there mention of a *δοῦλος*. From

the same shrine and its neighbourhood came also a large number of inscriptions concerning *tepoi* and *tepai*, which are of a class known as *exemplaria*. In these the ministrant, having failed in some duty or obligation of service, and been visited with divine vengeance (sickness?), acknowledges his or her fault, and sets up a warning to all other *tepoi*. Here it is reasonable to relate one class of inscription to the other, and to infer that the local *tepoi* were the outcome of a common practice of dedicating foundlings or orphans. If, moreover, it be borne in mind that the children of these dedicated persons, in all likelihood, retained their parents' status and functions, and that there were also certain voluntary and temporary recruits, we get a class quite numerous enough to account for all the *tepoi* for whose existence we have evidence in Western Asia Minor; a class, moreover, of sufficiently respectable origin to explain the political position which the *tepoi* held at Erythræ and Ephesus. In literature the case of Ion, the Delphic foundling, may be compared.

The duties of *hieroi*, of whatever origin, seem to have been in part those of *hierodouloi* elsewhere, but, in greater part, of more honour. In fact, it is very probable that, as Ramsay says (*l.c.*), they 'represent the *hierodouloi*, as the institution was modified by the development of western civilization in Asia Minor.' By an inscription of Chalcedon (Dittenberger, *Syll.*² no. 595), we see that they took part in the sacrifices and ritual, holding, no doubt, as Ramsay suggests, the same position as the *θεοφόρητοι* of Comana, and probably also as the *ἄλλο πλῆθος ἀνθρώπων ἱρῶν*, the musicians, *castrati*, frenzied women, and prostitutes, whom Lucian saw performing *ἔργα* in the precinct of the Temple of Atargatis (Atheh) at Hierapolis of Syria.¹ If, like the *hierodouloi*, the *hieroi* in some cases practised ceremonial prostitution, and always did menial offices about the shrine, we have no reason to suppose that they were to the same extent serfs of the soil, although those of Apollo Lermenus inhabited a sacred settlement, *χωρίον* or *κώμη* (both words occur in the texts), and must have constituted a *καρούκτα* not dissimilar to that of the *hierodouloi* of Venasa (Strabo, p. 537). It appears from the Lermenus inscriptions that they had obligations of personal service in the *hieron* at stated seasons, and were bound then, and probably for a certain period previously, to maintain ceremonial purity in garments and person, and abstain not only from lewd sexual actions, but from marital intercourse. The inner meaning of the latter obligation has been interpreted with great probability by Ramsay (p. 136) to imply, not that all sexual acts entailed impurity (for they might even be obligatory in the divine service), but that those usually held to be sanctioned by wedlock were especially repugnant to the cult of the Nature-goddess of West Asia, the Great Mother, which was a negation of true marriage altogether, and typified the matriarchal principle. In a well-known inscription of Laurium in Attica, recording the formation of an *eranos*, or religious club, by a Lycian slave, the conditions of ceremonial purity according to the usage of West Asia Minor are enumerated; and, with modifications, these may be predicated of all *tepoi*. They included, besides sexual abstention, the avoidance of a corpse and of certain foods, including pork and garlic, and freedom from skin complaints or contact therewith (see Foucart, *Assoc. rel. chez les Grecs*, Paris, 1873, p. 119 ff.). We find, in fact, in an obscure Lermenus text, that eating some part of the flesh of a goat called down the divine wrath on a *tepos*; but in this case probably because the

¹ See Hogarth, in *JHS* viii. (1887), and Ramsay, *op. cit.* i. ch. 4. In the latter publication the inscriptions are considerably added to and revised.

¹ *de Dea Syr.* xliii.-l. Lucian distinguishes them from the priests (*ἱερείς*), of whom he saw above 300 at once, performing the higher offices of actual sacrifice, libation, and service of the altar.

animal was sacred. *Hieroi* and *hierai*, when not actually serving the shrine, seem to have lived as other people; and, as we have seen, the voluntary ministrants of the class could in some places (as, e.g., Acilisene) return altogether, after a time, to ordinary secular life; but, while engaged in the *hieron*, they evidently had to ignore their private condition. Those born free must for the time adopt a lower political status, wives must act as unmarried (*παρθέναι*), and married men must forget their marital duties. They must live, in fact, the divine life.

It is much to be hoped that further discoveries of inscriptions may throw clearer light on this peculiar institution of ancient religion. It seems to have contained certain elements of later monastic institutions, and may well have had a good deal to do with those which were developed at an early period in Christian Asia.

The use of *lepós* as an adjective for persons dedicated to sacred service is, of course, common. It is found in literature as early as Herodotus (ii. 54, two *lepai gynáikes* at Dodona); but such dedication must have been much older. The best known literary instance is Ion. The word is also, doubtless, used sometimes for *hierodouloi*, as by Strabo in speaking of the prostitutes of Comana Pontica—*ὄν αἱ πλεῖστος εὐλοῖν lepai*.

LITERATURE.—This is given in the article.

D. G. HOGARTH.

HIGH PLACE.—1. Name.—The Heb. is *הַרְבַּע*, *bāmāh*, pl. *הַרְבָּעִים*, *bāmōth*, signifying 'high ground' or 'crest'; cf. the Assy. *bamātu*, pl. *bamāti*, 'height(s)'. The equivalent in the LXX is *σῆλαι* (in the Prophets also *βουαί*); in the Historical Books, *בְּשֵׁף*, *בְּשֵׁף*; Vulg. *excelsa*; Pesh. '*alawāthā*, 'high places', sometimes *pérakke*, 'idol shrines.' The Heb. terms *הַרְבַּע* and *בְּשֵׁף*, which likewise signify 'height', are not true synonyms of *הַרְבַּע*. The pl. *bāmōth* is used four times in the OT either as a proper name or compounded with some other proper name (Nu 21¹⁹, 20, 28 RVm, Jos 13¹⁷). It is also found as an element in a place-name on the Moabite Stone (line 27), and is likewise the name of a Moabite sanctuary for Chemosh (line 3). The origin of the name is unknown. In Hebrew it may have been—probably was—borrowed from the Canaanites. Ezekiel's derivation (20²⁹) of *bāmāh* as from *bā*, 'go,' and *māh*, 'what,' is, of course, a mere pun, by means of which the prophet expresses his contempt for high-place practices.

2. Location.—In the OT *bāmōth* are generally associated with elevations. People approaching them are said to 'go up' to (1 S 9¹³, 12, Is 15²), and departing to 'come down' from, them (1 S 9²⁵ 10⁵). In Ezk 20²⁸, 29 the singular *bāmāh* is synonymous with *gibh'āh rāmāh*, 'high hill.' They were usually located near cities (1 S 9²⁵ 10⁵), and were sometimes said to be in cities (1 K 13³², 2 K 17⁹, 29 23⁵), or 'at the entrance of the gate' of the city (23⁸), or 'at the head of every way' (Ezk 16²⁶, 31); but also in valleys (Jer 7³¹ 19⁵, 6 32²⁵, Ezk 6³). They were often on the hill above the town, as at Ramah (1 S 9¹²-14). Probably every city and village had one (2 K 17⁹, 11 23⁸, Ezk 6³). They were evidently artificially constructed, for they are spoken of as having been 'destroyed,' 'broken down,' and 'burnt' (2 K 21³ 23¹⁵; cf. Ezk 6³, Lv 26³⁰, Nu 33³²). They were ordinarily 'built' (1 K 11⁷ 14²³). It is possible that they resembled the *ziggurats* of the ancient Babylonians. On the other hand, there is little doubt that they closely resembled, and in many cases were identical with, the ancient shrines of the Canaanites (Dt 12², Nu 33³²). This was in keeping with early religious custom. In primitive cults the crests of conspicuous mountains were regarded as the distinct territory of Deity. Zeus of the Greeks had many such mountain-abodes.

The gods of Persia, India, Java, and other lands were thought to dwell on lofty peaks. There were high places in Moab (Is 15² 16¹²), on which altars were erected (Nu 22⁴¹ 23¹, 14, 23-30, Jer 48³⁵). From Jer 3² it may be inferred that *shēphāyīm*, 'bare heights,' were chosen because from them the view of heaven was unobstructed. In Ps 68¹⁶ Zion is regarded as 'the mountain which God hath desired for his abode'; while in 1 K 20²³, 28 Israel's victory is ascribed by the Syrians to Jahweh who is 'a god of the hills.' All this is in keeping with the representations in the three great poems of the OT, which make Sinai Jahweh's primitive abode (Dt 33², Jg 5⁴, 5, Hab 3³), whither Elijah fled when threatened by Jezebel (1 K 19¹⁻⁸).

3. Significance.—*Bāmōth* in the prose of the OT are commonly places of sacrifice. They are pre-eminently religious centres (1 S 9¹²-14, 1 K 3²⁻⁴, Is 16¹², Lv 26³⁰, 31); in Am 7⁹ 'high place' is synonymous with *mikdash*, 'sanctuary.' In poetry, however, *bāmōth* are occasionally spoken of as 'mountain fastnesses' (Ezk 36², according to the received text), and are symbolical of dominion (Dt 32¹³ 33²⁹, 2 S 22³⁴, Is 14⁴ 58¹⁴, Am 4¹³, Mic 1⁸, Hab 3¹⁹, Ps 18³³, Job 9⁹); but the term is used in the plural only, in this sense.

4. Sacred furniture.—Ancient high places possessed various sacred accessories, of which the principal one was: (1) *the altar, or place of sacrifice* (1 K 3⁴, Hos 10⁹). It might consist of either hewn or unhewn stone, even of a mere mound of earth. In the OT it is distinguished from the high place itself (2 K 23¹⁵, Is 36⁷, 2 Ch 14⁸). Before it the sacrifices were presented.—(2) Near the altar stood *the maṣṣēbāh, or sacred pillar of stone* (Hos 10¹⁻²). It might consist either of a rough unhewn boulder or of a chiselled pillar, which the worshipper regarded as the abode of Deity. In very ancient times these pillars were left unhewn because they were regarded as sacrosanct, the belief being that, if they were cut or carved by human hands, the *numen* would be driven out of the stone. Later, artificial obelisks took their place. To the ancient Canaanites the *maṣṣēbāh* was the symbol of the Divine presence, and was worshipped as the representation of Deity (Ex 23²⁴, Dt 7⁵ 12⁹). By the patriarchs such pillars were regarded as symbols of the true worship of Jahweh (Gn 28¹⁸-22 31⁴⁵-51; cf. Ex 24⁴, Is 19¹⁹); but later they were proscribed as illegitimate because of their heathen and idolatrous associations (Dt 16²², Mic 5¹³). Among the Arabs they were smeared with blood in order that the offering might be brought into closer contact with Deity. Jacob poured 'oil' upon his *maṣṣēbāh* at Bethel (Gn 28¹⁸). In general the worship of stone pillars was a species of idolatry, their presence being the distinguishing mark of the sanctuary.—(3) Another important part of the furniture of a high place was the *'āshērāh, or sacred pole*. It consisted of an artificial pole of wood, or stump of tree, planted in the earth (Dt 16²¹), and was regarded as a symbol of the goddess Astarte, according to some, though this is not demonstrable. The *'āshērāh* was artificially constructed of wood (Jg 6²⁸, 1 K 14¹⁵, 23 16³³, 2 K 17¹⁰, 16, Is 17⁹), in image-like form (1 K 15¹⁸), and could be 'plucked up' (Mic 5¹⁴), 'cut down' (Ex 34¹³), 'broken to pieces' (2 Ch 34⁴), and 'burnt' (Dt 12³). It stood in close proximity to the *maṣṣēbāh* and to the altar (Jg 6²⁸), and might be set up even beneath living trees (2 K 17¹⁰). What its origin was it is impossible to say, but it was evidently akin to tree-worship, the tree probably being revered as an abode of Deity (Dt 11²⁰), and as the symbol of fertility. A famous *'āshērāh* stood in Samaria in the days of King Jehoahaz (2 K 13⁹), probably the one made by Ahab (1 K 16³³). Manasseh also made an *'āshērāh*, which he set up in the Temple in Jerusalem (2 K

217), but it was destroyed by Josiah (23⁸⁻⁷).—(4) Not infrequently, also, connected with *bāmōth* there were *rooms, chambers, or sacred halls*, called 'houses of high places' (1 K 12³¹ 13³², 2 K 23¹³). These were used probably as dwellings for the priests, and as the houses where the sacrificial meals were eaten (1 S 9²²); quite possibly also as the places of the most immoral worship—religious prostitution (Am 2⁸; cf. the 'vaulted chambers' mentioned by Ezekiel 16^{24. 31. 39}). These chambers also sheltered the images of the gods worshipped (2 K 17²⁹; cf. Jg 17⁵). Tents, however, were used for the same purpose (2 K 23⁷, Ezk 16¹⁸; cf. Hos 9⁸); for example, David pitched a tent to shelter the ark (2 S 6¹⁷ 7⁸; cf. 1 K 2²⁸, Ex 33⁷⁻¹¹; cf. also the proper name *Oholibamah*, signifying 'tent of the high place,' Gn 36²). The Carthaginians are said to have used tents as portable sanctuaries (Diod. Sic. xx. 65).—(5) There were *attendants* also at the high places, sometimes called *kōhāntm*, which is the ordinary word in Heb. for 'priests' (1 K 12³² 13²⁻³³); sometimes called *kēmārm*, 'idolatrous priests' (2 K 23⁵). Besides these, there were *q'dheshim*, 'male prostitutes,' and *q'dheshōth*, 'sacred harlots,' in connexion with high places (2 K 23⁷, 1 K 14²⁴ 15¹², Dt 23^{17. 18}, Hos 4¹⁴).

5. The cultus.—In general the worship practised at the *bāmōth* was not only ceremonial but sensual. It was borrowed largely from the Canaanites. Joy and feasting characterized their ritual (1 S 9¹²⁻¹³). The rites performed probably typified the annual renewal of Nature. Tithes were brought thither (Am 4⁴; cf. Gn 28³⁰⁻²²). Doubtless many of Canaan's high places became dedicated to Jahweh. Solomon, for example, sacrificed and burnt incense in the *bāmāh* of Gibeon, offering a thousand burnt-offerings upon the altar there (1 K 3⁴), and to please his foreign wives he built other high places to Chemosh and Molech, burning incense and sacrificing to their gods (1 K 11^{7. 8}). The Canaanites and Israelites may, indeed, have joined in the worship of Baal at some of these *bāmōth*. Whether they did or not, by the introduction of foreign cults the worship of the sanctuaries became corrupt. It is no exaggeration to say that the grossest and most sensual forms of religion described in the OT are associated with 'high place' worship. Hosea paints a vivid picture of their practices, though he mentions *bāmōth* by name only once in all his prophecies (10⁸). To him the high places of Aven were 'the sin of Israel.' Accordingly, he warns Israel against such sacrifices and libations (9⁴); points a finger of scorn at their rewards of adultery—bread, water, wool, flax, oil, drink, grain, new wine, silver and gold, which in turn they bestow upon Baal (2^{5. 8} 7¹⁴); denounces them for burning incense to other gods, themselves clothed in gala dress and decked with earrings and jewels (2¹⁸); threatens destruction upon the rewards of licentiousness received from their lovers (2¹²); and pronounces the ruin of all those who give themselves over to divination and harlotry in the name of religion (4¹²⁻¹⁴). Isaiah likewise gives a most striking description of heathen rites practised at the *bāmōth* (57²⁻⁸), explaining how the people inflame themselves among the oaks, slay their children in the valleys among the smooth stones (regarded as the abode of the *numina*, or gods), pour out drink-offerings as sacrifices on high mountains, and set up memorials of shame (perhaps alluding to phallic worship; cf. Ezk 16¹⁷). The same prophet describes Moab as literally wearing himself praying upon his high places (Is 16¹²; cf. 1 K 18²⁸).

6. History of high places in OT.—(1) *In the Pentateuch and Joshua*.—*Bāmōth* are not mentioned in either Genesis or Exodus; or, indeed, as places of worship, in the entire Book of Deuteronomy; cf. however, the figurative allusions in Dt 32¹³ 33²⁹,

in which to 'ride' or 'tread' upon the enemies' high places signifies to march over them in triumph. In Lv 26³⁰ and Nu 21²⁸ 22⁴¹ 33³², however, they are spoken of as places of worship. Two of these passages (Lv 26³⁰, Nu 33³²) warn Israel against the contaminating and despiritualizing influences of the heathen practices associated with such sanctuaries. They are the only passages in the Hexateuch which use the term with a religious significance. In Nu 21^{13. 20} and Jos 13¹⁷ the word is used as a proper name. The plural form is employed in all these instances.

(2) *From Joshua to Solomon*.—There is no mention by name of high places in the Book of Judges, and only a few cases (all in a single context) in the Books of Samuel refer to *bāmōth* as sanctuaries. The allusions in 2 S 1^{9. 23} 22³⁴ are poetical and figurative. In the classical passage in 1 S 9^{12. 13. 14. 19. 25} 10^{5. 13}, Samuel the seer is represented as going up to a *bāmāh* to worship, where the people await him, expecting him to bless the sacrifice (1 S 9¹²⁻¹⁴). While there, he is visited by Saul, who, with his servant, is searching for his father's lost asses. Saul and his attendant are invited to join in the sacrificial meal, which they eat together in the *ḥṣṣṣ*, or sacrificial dining-room (1 S 9^{13. 22}). Later in the account, mention is made of a band of prophets who are expected to come down from the high place, having presumably been there engaging in religious service (1 S 10⁵). The story gives no hint that there is anything illegitimate in sacrificing at such a sanctuary. In David's day, Gibeon was the great high place (1 Ch 16³⁹ 21²⁹). Under Solomon, also, the people continued to sacrifice at the high places, 'because there was no house built for the name of Jahweh until those days' (1 K 3⁴). Even the king himself 'went to Gibeon to sacrifice there, for that was the great high place' (1 K 3⁴, 2 Ch 1^{3. 13}). All this was in strict keeping with the traditional laws of Moses; namely, Ex 20²⁴, which allowed sacrifices to be made 'in every place' where Jahweh should record His name. Dt 12^{10. 11} insists upon the unity of sanctuary *only when God has given Israel rest from all their enemies round about*; when Israel should conquer Canaan and dwell in safety, *then* they should bring their sacrifices to the place which Jahweh should choose. This *may* be interpreted to mean that the law of the one sanctuary was not expected to come into practical operation until Solomon's time. Yet the fact is that Solomon did not observe this Deuteronomic law, for he built high places for his foreign wives; but he is explicitly rebuked for not having observed it (1 K 11⁷⁻¹⁸).¹

(3) *In North Israel*.—The revolt of the Ten Tribes under Jeroboam, and the gradual declension of religion in the Northern Kingdom, can be explained only in the light of the religious syncretism which had grown up in the nation before the death of Solomon. On entering Canaan, Israel had taken possession of the high places of the Canaanites. The common illiterate people did not grasp clearly the difference between the pagan worship of the Canaanites and the worship of Jahweh. As time went on, the upper classes also became indifferent, and dedicated Canaanite sanctuaries to Jahweh. The construction of the Temple did not, of course, change at once the people's devotion to local sanctuaries. Jeroboam built 'houses of high places,' and made priests from among all the people, and placed in Bethel the priests of the high places (1 K 12^{31. 32} 13^{2. 32. 33}), and the result inevitably was that Israel departed

¹ It is held by the majority of OT scholars that this rebuke is relevant only from the standpoint of the redactor of the Books of Kings, who reviews the history by the standard of the Deuteronomic code, which is believed by these scholars to have been first introduced in the time of Josiah (621 B.C.).

farther and farther from the worship of Jahweh, imperfect as that already was. Elijah, as a patriot, could protest only against the worship of Israel's sanctuaries rather than against the sanctuaries themselves (1 K 19¹⁰⁻¹⁴). On the other hand, the prophets of the 8th cent. attempted more than merely to reform the cultus of these sanctuaries. Hosea predicts that the high places of Aven, the sin of Israel, shall be destroyed (10⁸). Amos also declares that 'the high places of Isaac shall be desolate, and the sanctuaries of Israel shall be laid waste' (7⁹). The only other allusion in Amos to high places is figurative—that of Jahweh as treading upon the high places of the earth (4¹³). When the redactor of 2 Kings sums up the reasons for the downfall of North Israel, he ascribes it to their having built high places in all their cities and there burnt incense, as did the nations whom Jahweh carried away before them (17⁹⁻¹¹).

(4) *In Judah.*—Under Rehoboam the people built high places in Judah, and the king appointed priests for them (1 K 14²³, 2 Ch 11¹⁵). Asa is said to have taken them away out of Judah (2 Ch 14³⁻⁶), but not out of Israel (2 Ch 15¹⁷, 1 K 15¹⁴). Jehoshaphat likewise removed the high places from Judah (2 Ch 17⁶), but not from Israel (1 K 22⁴³, 2 Ch 20³⁸). On the other hand, Jehoram, who married the idolatrous daughter of Ahab, actually made high places in the mountains of Judah (2 Ch 21¹¹), which none of his successors—Jehoash (2 K 12⁹), Amaziah (14⁴), Uzziah (15⁴), and Jotham (15³⁶)—removed. Ahaz actively 'sacrificed and burnt incense' on them (16⁴, 2 Ch 28⁴⁻²⁵). Hezekiah, on the other hand, removed them, instituting a genuine religious reformation (2 K 18⁴, 2 Ch 31¹), the historicity of which is most reasonably attested (2 K 18²², 2 Ch 32¹²). But Manasseh rebuilt them (2 K 21⁸, 2 Ch 33^{3, 17, 19}). Josiah, however, undertook and carried out a most drastic reformation, putting down the idolatrous priests and destroying the high places of all his predecessors, including Solomon's (2 K 23^{5, 8, 13-15, 19, 20}, 2 Ch 34³). During all this period of schism the prophets of Judah say little or nothing against the high places as such. Isaiah, for example, shows no pronounced hostility to high places themselves (14¹⁴ 15² 16¹² 36⁷ 58¹⁴). Micah, likewise, is all but silent concerning them, his allusions being figurative rather than literal (1⁵ 3¹²; cf. Jer 26¹⁸). Jeremiah is more explicit and pronounced. He emphatically rebukes his people for having 'built the high places (the LXX has 'high place') of Topheth, which is in the valley of the son of Hinnom, to burn their sons and their daughters in the fire' (7³¹ 19⁵ 32³⁵), because they are centres of sin throughout all their borders (17³), and he threatens in Jahweh's name to cut off in Moab him who sacrifices in a high place (48³⁵; cf. Is 15² 16¹²). Ezekiel in similar strains protests against Judah's high places, and threatens in Jahweh's name to destroy them (6³⁻⁶). He points a finger of reproach at those who labour to make them attractive (16¹⁶), and warns those who congratulate themselves on possessing 'the ancient high places' (36²). Habakkuk's single allusion to high places is a figurative one (3¹⁸).

The only other references to *bāmōth* in the OT, with one exception, are Job 9⁸ and Ps 18³⁸, both of which are figurative; the exception is Ps 78³⁸, which is a literal commentary on Israel's repeated deflection from the true worship of Jahweh.

(5) *After the Exile.*—After the downfall of Jerusalem we hear little of high places. The captivity accomplished what neither Hezekiah nor Josiah could do. The people had learned at great cost the folly of idolatry, and her sons and grandsons, who returned after 536 B.C., had no disposition to revive the old local cults whose continuity had

been so long interrupted. In the 5th cent. B.C., however, there were altars to Jahweh in Elephantine, and, in the 3rd cent. B.C., at various places in the Delta of Egypt.

7. *Recent discoveries.*—During the past fifteen years several ancient *bāmōth* have been discovered, chief among which is: (1) the *Great High Place at Petra*, the capital of Edom, which was discovered by the present writer on 3rd May 1900. S. I. Curtiss was shown it in July of the same year. For location, size, completeness, and importance this high place still holds first rank among all the ancient sanctuaries as yet found to exist. A recent writer speaks of it as 'undoubtedly' existing already in the days of Moses (F. E. Hoskins, *From the Nile to Nebo*, Philadelphia, 1912, p. 336). It is situated on the very top of one of the most conspicuous peaks which surround the unique capital of Edom. Rock-cut stairways lead up to it from different directions. Two *massēbāhs*, or pillars, 100 ft. apart, situated on the brow of the promontory, mark the approach from the S.E. The oval rock-dome on which the *bāmāh* proper stands is some 300 ft. long (N. and S.) by 100 ft. broad (E. and W.). The view from the summit is unobstructed. Among the principal features of the sanctuary is the large, deep rock-cut court, 47 ft. long (N. and S.) by 20 ft. broad (E. and W.), where the worshippers probably stood. Near the centre of this court there is a raised platform 4½ in. high, measuring 5 ft. 1 in. (E. and W.) by 2 ft. 8 in. (N. and S.), on which the victims for sacrifice may have been slain. To the west of the court, some 15 ft. distant, with four steps leading up to it, is an altar, 9 ft. long (N. and S.) by 6 ft. broad (E. and W.), and 3 ft. high, with a rock-cut passage 32 in. broad, running about it on the N., W., and S. sides. In the surface of the altar there is a rectangular depression hewn out, intended perhaps for fire. Three of the corners of the altar seem to have been prepared by cuttings to receive 'horns.' Close by the altar and of about the same height, but extending nearer to the court, is an irregular oval rock platform, some 12 ft. 9 in. square, with circular depressions on the top surface (the one circle being inside the other), the diameter of the outer circle being 3 ft. 9 in., and that of the inner 17 inches. These were probably used as the place for pouring out libations (Ex 29¹²). A drain from the centre of the inmost circle would carry the blood, or water, as the case might be, towards the stairway by which the platform was approached (2 S 23¹⁶). In the sides of this platform there are two water cavities, which were probably used for purposes of ablution. About 32 ft. S. of the court is a pool or cistern excavated in the rock, and at one time cemented, whose dimensions, though somewhat irregular, are approximately 10 ft. long (N. and S.) by 8 ft. broad (E. and W.) and 4 ft. deep, with a drain to carry off the overflow. Two trees, of stunted growth naturally, and yet in one case measuring 2 ft. 10 in. in girth, are to-day growing in the near vicinity. From any part of the sanctuary the traditional Mt. Hor is visible. While this *bāmāh* is old, it cannot be demonstrated that it is the most ancient high place discovered, or even the oldest of those (in all 20 or more) now known to exist at Petra; all are devoid of inscription and ornamentation. At the same time, there is no doubt that this Great High Place was at one time the central sanctuary of the Edomites, and it may, indeed, mark the very spot where religious rites were celebrated by the sons of Esau three thousand years ago.¹

(2) *The High Place at Gezer.*—This *bāmāh* was

¹ A plan of the Great High Place at Petra is reproduced in Driver's *Schweich Lectures* (London, 1909), p. 61 (see also pl. facing p. 62); and in *HDB* iv. 396.

discovered by R. A. S. Macalister in 1902, and is described by him in the *PEFSt* of Jan. 1903 (pp. 23-36). It is situated in an open square just about the middle of the city, on the east declivity of the western hill, and was, doubtless, the centre of the city's religious life. It is the largest *bāmāh* as yet found in Palestine proper. Several of the essential features of an ordinary high place, however, are wanting. For example, there is no court for the worshippers; no certain place for the *āshērāh*, or pole; and it is doubtful whether there is an altar, though Macalister thinks it possible that the bank of hard earth some distance to the south of the pillars, which was about 11 ft. in length and excessively difficult to cut, may have been the altar of the *bāmāh*. A similar altar of baked earth, ornamented with figures of animals in relief, was found by the Austrians at Taanach. The majestic series of eight huge unhewn monoliths, standing in a row on bases of smaller stones, due N. and S., and ranging in height from 10 ft. 6 in. to 5 ft. 5 in., define this place as a genuine *bāmāh* of the ancient Canaanites of Gezer. In breadth the largest of these obelisks measures 4 ft. 7 in., in thickness 2 ft. 6 inches. There were originally ten, but only the stumps remain of the two at the north end. The laver is identified with a square block of stone, 6 ft. 1 in. long by 5 ft. broad and 2 ft. 6 in. thick, standing beside the row of pillars, and having a rectangular hollow cut in the top of it, intended probably for ablutions. A remarkable feature of this high place remains still to be described. On the east of the northernmost of the monoliths there is an entrance leading down into two large caves, which are connected with each other by a narrow, crooked passage. They were once the residences of the 'cave-dwellers' in Gezer, and were originally independent but are now connected. The smaller of the two was found to have large blocks placed against its door on the inside. When the passage was clear, however, hearing was possible between the two, but seeing was not; accordingly it has been conjectured that the inner cavern was used as a secret chamber from which oracles were given forth, a priest or a boy being sent into the inner chamber before the inquirer was admitted to the outer. The human voice issuing from the mouth of the narrow tunnel would be regarded as the voice of a spirit or of a god. In Solomon's temple provision was made for an oracle (1 K 6¹⁶; cf. 1 S 28⁷⁻²⁵, Is 8¹⁷). Underneath the *bāmāh* in a stratum of earth were found also some twenty earthen jars containing the skeletons of infants, all newly born, probably not more than a week old. Beside these jars, or, as in some cases, inside them, other smaller vessels were discovered, in which, perhaps, food was deposited for the infant in the other world. These bones are supposed to have been those of first-born children who had been sacrificed to some deity, either to appease his wrath or to obtain his help (cf. 2 K 3²⁷, Mic 6⁷). Finally, a bell-shaped pit resembling an ordinary cistern, situated a little to the east of the sacred cave, and apparently a little outside the sacred precincts of the sanctuary, used probably as the depository of the refuse from the sacrifices, completes the equipment of the Gezer high place.¹ In 1905 another *bāmāh* was found at Gezer, having four standing *massēbāhs* and the base of a fifth (cf. *PEFSt*, 1907, p. 267 f.).

(3) *Other high places.*—Still other altars and pillars have been discovered from time to time in Palestine, but it would be perhaps incorrect to speak of them all as *bāmāhs*. For example, Sellin of Vienna, in 1904, unearthed at Taanach, on the southern edge of the plain of Esdraelon in Galilee, a double row of five *massēbāhs*; Schumacher of

Haifa more recently found two others at Megiddo; and, more recently still, Kittel of Leipzig discovered cup-shaped depressions or hollows in the rock surfaces at Mizpah, near Jerusalem. A complete list would also include the ancient rock-altar discovered at Zorah (Samson's birthplace, Jg 13²⁻²³) by Baurath Schick in 1887; and other 'finds' of similar character discovered at Tell el-Mutesellim, Gibeon, Tell es-Sâfi, and Tell Sanda-hannah by Guthe, Vincent, and others. The latest discovery reported is that unearthed during June and July 1912 by Duncan Mackenzie, field-director of the Palestine Exploration Fund, at 'Ain Shems, the ancient Bethshemesh (cf. *PEFSt*, Oct. 1912, pp. 171-178). While cutting a trench, from north to south, across the central area of the city, Mackenzie found, towards the middle of the trench, five pillars lying on their sides as though they had been knocked down, the one on the east side being broken in two as if it had been purposely smashed. These stones are regarded by him as the sacred pillars, or *bētyls*, of a high place. Their tops are rounded, but their bottoms are flat for better standing. Three of the five bear marks of tools. Two are flat like the headstone of a tomb, and are composed of a rough-surfaced, stratified kind of limestone which seems foreign to the environments of Bethshemesh. Mackenzie conjectures that they were set up in veneration of the dead, the spirit of the departed being imagined by the ancients to take possession of his pillar on the performance of certain ceremonial and magic rites for that purpose. At a point west of the high place a circle of stones was found, which leads by a shaft through the rock down into a great subterranean chamber, or burial cave, resembling those found at Gezer and Taanach. The cave extended away beneath the pillars of the high place, and contained all the paraphernalia of the cult of the dead, there in position as they had been left thousands of years ago.¹

GEORGE L. ROBINSON.

HIGH PRIEST.—See PRIEST.

HILLEL.—Hillel was a most distinguished teacher, and head of the Sanhedrin in Jerusalem during part of Herod's reign. Known as 'the Babylonian' (*Pesāhīm*, 66a; *Sukkāh*, 20a) be-

¹ See figures reproduced in Driver (*l.c.*), facing p. 65 and following pages.

¹ See figures reproduced in Driver (*l.c.*), p. 63.

cause he was a native of Babylon, he is also designated as 'Hillel the elder,' either to distinguish him from later teachers of the name or to indicate his official rank (*Bēṣāh*, 16a). The dates of his birth and death cannot be fixed accurately. From the fact that he was one of the pupils of Shemaiah and Abtalion (see C. Taylor, *Sayings of the Jewish Fathers*³, Cambridge, 1897, p. 18), and that tradition is emphatic in describing him as in his prime when he first arrived in Jerusalem, the inference is warranted that he was born about a century and a half before the destruction of the second Temple. No credence attaches to the statements (*Siphre Berākāh*, 36) that he was forty years of age when he left Babylon, that he spent forty more as a student under the 'pair' (see Taylor, p. 14, note 9), or that he was named and elected president of the Sanhedrin at the age of eighty, and filled that office for forty years more. All this is clearly due to an endeavour to make Hillel's career a parallel with that of Moses, just as he is hailed elsewhere (*Sukkāh*, 20a) as a second Ezra, who, like the first, comes from Babylon to rescue God's Law from complete oblivion. Talmudic report names him among the men who held the Presidency about 100 years before the national catastrophe (*Shabbath*, 15a). There is, therefore, good ground for dating his death at about 10 B. C.

Of his family little is known. Tradition traces its pedigree, through the female line, back to king David (Jerus. *Ta'anith* iv. 2). His father's name is not given, but a brother of his, Shebna, is mentioned as engaged in mercantile pursuits (*Sotā*, 21a), and from him Hillel is supposed to have received substantial pecuniary assistance, though the passage just referred to admits also of the contrary interpretation.

Hillel from his earliest youth is represented as a student. Babylon then offered only scant opportunity for acquiring sound education in the things pertaining to the Law. 'What may one look for in a Babylonian?' was the constant scornful query which came from the tongue of the Palestinians, who held the would-be scholars from Babylon in slight esteem—a fact which Hillel was to discover the very first time he took a decided part in settling a controverted point of ritual practice (Jerus. *Pes.* vi. 1). The limited facilities which his homeland afforded for attaining full mastery of the intricacies of the Law induced him, in the prime of his manhood, to emigrate to Jerusalem (see *Siphra Tazrā*, § 10, where the perplexities are enumerated on which he felt light would be shed in the Jerusalem academy). Without means of subsistence, he braved the hardships of the poor student's life in order to satiate his mind with abundance of knowledge. Arrived in Jerusalem, he supported his family and himself by precarious manual labour. (Later Rabbinical authorities report his occupation to have been that of a hewer of wood [*Keseph Mishneh* to Maimonides, *Hilkhoth Talmud Torah* i. 9].) Out of his meagre earnings he was able to save enough to pay the small fee which the doorkeeper exacted from the students attending the lectures. But—so runs the story—one Sabbath eve he found himself without money. Yet this did not deter him. He climbed up at the window, listening intently to the word of God as explained by Shemaiah and Abtalion. It was in the month of Tebeth, midwinter, and the night was cold and snow fell thickly. Unmindful of physical discomfort, absorbed in following the expositions of the teachers, he neither felt numbness creeping on, nor was he aware of the increasing mass of snow that enveloped him. In the morning, Abtalion, trying to discover why the room continued dark long after the expected hour of light, spied Hillel under a mantle of snow three cubits

thick, his life well-nigh extinct. Though it was the Sabbath, they brought him in and proceeded to revive him, saying that for one so worthy the Sabbath might be desecrated. This experience of his came to be cited against the plea of poverty as an excuse for neglecting study (*Yoma*, 35b).

If Hillel's personal circumstances were not of the easiest, the political conditions of the times were by no means propitious to the peaceful pursuit of his studies. Herod persecuted the teachers of the Law unsparingly. Internal dissensions between the contending politico-religious factions (Pharisees and Sadducees) added an element of uncertainty to the situation. This may have been the reason why Hillel returned to his native land. It is not known when he left Jerusalem, or how long he stayed in Babylon. The fact that when he emerged into publicity—according to some, in consequence of a call sent him to Babylon—the 'sons of Batheira' were at the head of the school, and the practice of the 'pair' who preceded them apparently was forgotten, would seem to indicate that his absence had been of long duration. The identity of these 'sons of Batheira' is in doubt. The name is most likely that of a Sadduceean school, partisans of Herod. This would explain their ignorance of the practice of their predecessors, and their disinclination to base decisions of ritual matters on reasoning by analogy and a *fortiori*, and the other methods of exegesis employed by Hillel. This is shown by the incident related in the Talmud to account for the withdrawal of the sons of Batheira from, and the elevation of Hillel to, the Presidency (Jerus. *Pes.* vi. 1, Bab. *Pes.* 66a).

The fourteenth day of Nisan, the eve of Passover, chanced to coincide with the Sabbath. Grave doubts arose whether the Paschal lamb could be slaughtered at such a time. But one who remembered that Hillel had been one of Shemaiah's and Abtalion's students suggested that the matter should be submitted to him, notwithstanding the jeering comment of others that he was a Babylonian (see above). Hillel came and decided the question in the affirmative, contending that the Passover sacrifice set aside the Sabbath-injunction (לפסח ורחה שבת). He based his opinion on these considerations: Passover was, like the daily offering (*tamid*, תמיד), a community and not a private offering; and, as the *tamid* set aside the Sabbath, so did the Passover lamb. Moreover, when speaking of the *tamid*, Scripture employs the term *b'mo'edah*, 'in its season'—a term used also in connexion with the Passover-sacrifice. Hence the latter is in the same category as the former. Again, neglect of the *tamid* entails lighter punishment than non-observance of the Passover, which is visited with *kareth*, 'excision.' The presumption in favour of the Passover is, therefore, all the stronger than it reasonably could be in the case of the others. These arguments failed to convince his opponents until Hillel remembered that he had heard them from his teachers, whereupon he was appointed *Nasi*, 'head.'

The historical accuracy of this story may safely be doubted. The narrative proves, however, that 'the Babylonian' for some time may have led a growing opposition to the Benê-Batheira, bringing to bear on the text of Scripture a method of interpretation not in favour with them, and clinching his arguments by appealing to the authority and precedents of his masters. Finally, Hillel succeeded in dislodging the Batheirites. His main support may have been Herod, who at this period of his reign was anxious for peace, and, therefore, not disinclined to the election of a 'man of peace,' such as Hillel was (see below), to the presidency.

Certain it is that Hillel is associated with the formulation of exegetical rules (קריית, *middoṭh*, 'measures'). He is credited with having developed seven of them—by later teachers enlarged to thirteen. Though probably not the inventor of the method, which orthodox Jewish tradition regards as of Mosaic origin (*Sanh.* 99a), Hillel may be held to have been among the first to divide these rules into distinct categories (Hillel's catalogue is given in *Siphra* at the end of the *Baraita d'R. Yishmael*, and again in ch. 37 of the *Abhoth of R. Nathan*, and in the *Tosefta Sanh.* 7).

Not many ritual-legalistic decisions are remembered as Hillel's. On a few points he is reported to have differed from his Vice-President Shammai, who inclined to more rigid constructions of the Law. Both of them founded schools, not always agreeing in theory or practice. But these controversies are of too technical a character to be noticed here. Hillel is also mentioned as a compiler of *Mishnayoth* (*Yebhämöth*, 37a).

Of greater interest as throwing light on the attitude of Hillel to the letter of the Law are the *Tekamoth*, the modifying arrangements, of which he was the author. War, failure of crops, and the policy of spoliation pursued by Herod, which led to excessive burdens of taxation, had reduced the people to distressing poverty. The dispossessed were forced to resort to loans, while those in better circumstances were little inclined to make the advances in view of the provision of the Pentateuch, according to which the advent of the Sabbatical year 'outlawed' all indebtedness. To meet the situation, Hillel devised the *prosbol* (πρός βουλή), which enabled the creditor, by making the court his agent, to whom before the Sabbatical year he had assigned his claim, to collect his due from his debtors even after the Sabbatical year (*Shebhi'ith* x. 3; *Gittin* iv. 3). Similar relief was obtained by another of his 'arrangements,' which provided that in case of the absence of the (temporary) purchaser of a house in a walled city the original proprietor could repay the purchase price into the hands of the court or deposit it in the 'hall of the hewn stones' (*Ushkhat hāgāzith*) and re-enter into the possession of the house. He was prompted to devise this procedure in order to circumvent the strategy of the purchaser, who often went into hiding the last day of the year—the period of grace for the redemption of such property, according to the Pentateuch—and, not being repaid, refused to release the house (*Ara-khin* ix. 4). The legitimacy of the issue of certain marriages contracted in Alexandria being doubted, Hillel, construing the marriage contract according to its intent, declined to stigmatize the children as bastards (*Baba meši'a*, 104a).

Hillel's great distinction, however, was won as a teacher of ethics, both by precept and by example. A man of peace-loving disposition, of tender, humane sympathies, of genuine piety, of true humility, he stands forth a shining exemplar of the virtues which his religion consecrated. Beloved by his contemporaries, he has lived in the memory of posterity as the teacher in whom came to flower the sweetest and the strongest gifts that faith in Israel's God had power to stimulate.

Of his 'sayings'—reported partly in Aramaic, his native idiom, partly in Hebrew, and some of them in both Hebrew and Aramaic versions—some are contained in the collection of Jewish ethical maxims left by the Tannaim, the masters of the Mishna (Taylor, *op. cit.*). The high estimate he placed on peace is revealed by this saying:

'Be of the disciples of Aaron, loving peace and pursuing it; loving all mankind (or all created beings) and bringing them nigh to the Torah' (*Abhoth* i. 13).

Humility, wholly free from pretence, is the keynote of this observation:

'A name made great is a name destroyed; he who increases not, decreases; and he who will not learn (perhaps teach) deserves slaughter; and he who serves himself with the tiara (is arrogant) perishes' (*ib.* 14).

The clearest insight into the relation between egoism and altruism, positing the duty of self-reliance and self-development as the means of rendering service unto others—a conception which is characteristically Jewish and soundly and sanely limits both self-effacement and self-aggrandizement—is exhibited in the words:

'If I am not for myself, who is for me? And if I am only for myself, what am I? If not now, when then?' (*ib.* 15).

Egoism and self-sufficiency found no favour in his eyes.

'Separate not thyself from the community, and trust not in thyself before the day of thy death; judge not thy fellow until thou comest into his place; do not delay teaching; say not, "When I have leisure, I shall study"; perchance thou mayest not have leisure' (*ib.* ii. 5; see Taylor, *op. cit.* p. 30, note 11).

Ignorance and vulgarity preclude piety.

'No hoar is a sinner; nor is the unrefined pious; the shamed face is not apt to learn, nor the passionate (prone to anger) fit to teach. Nor is every one that has much traffic wise. In a place where there are no men, endeavour to be a man' (*ib.* 6).

The thought that, as we do unto others, so will we be done by he put into this language, suggested by the sight of a skull floating on the water:

'Because thou drownedst, they drowned thee; and they that drowned thee shall in turn be drowned' (*ib.* 7).

That ease and luxury are, in the ultimate analysis, burdens is the dominant emphasis of this saying of his:

'More flesh, more worms; more maid servants, more lewdness; more men servants, more theft,' etc. (*ib.* 8). 'But he who hath gotten unto himself the words of the Torah hath gotten unto himself life in the world to come' (*ib.*).

For most of the preceding sentences, he could easily have selected as supporting authority one or the other Biblical passage. In recording other sayings of his, this has been done (see W. Bacher, *Die Agada der Tannaiten*, i., s.v. 'Hillel'), and, as the apostrophe to the skull in *Abhoth* ii. 7 suggests, he was by no means averse to employing the *meshal*, parable, or simile. Pointing to the statues of the kings in the theatres and the circuses, he deduces from the duty to keep them clean by washing and scouring them, which is incumbent on the keeper, that laid on man to keep his body clean by bathing, for the human body is made in the image of God (*Midrash Lev. Rabba* xxxiv.; *Yalkut* to Pr 11⁷). The soul he likens to a guest whose entertainment (*i.e.* study) was expected of man (*ib.*).

The proselyte anecdotes of which Hillel is the hero are characteristic tributes to his humanity, his forbearance, his patience—traits which stand out all the more prominently because they are in contrast with the contrary dispositions of his colleague Shammai. How Hillel remains unperturbed under the greatest provocation is told in the story of the man who made a wager that he would succeed in angering Hillel, and failed ignominiously (*Shab.* 31a; Taylor, p. 23, note 33). The 'Golden Rule,' virtually the saying, 'Thou shalt love thy neighbour as thyself' (Lv 19¹⁸), he names the fundamental principle of the Jewish religion, and designates everything else as an unfolding thereof. Thus, in conversation with a proselyte who promised to accept Judaism provided it could be taught him during the time he could stand on one foot (*i.e.* *stante pede*, briefly and without unnecessary delay), Hillel replied: 'What is hateful unto thee do not do unto thy fellow. This is the great foundation; the rest is commentary. Go now and learn.' This negative formulation of the 'Golden Rule' is not less comprehensive than its NT counterpart (see *JE*, art. 'Golden Rule,' vi. 21; and art. under that title in the present work).

The esteem in which Hillel was held led posterity to attribute to him the knowledge of God's true name and that of the speech of plants and birds and of many peoples (A. Jellinek, *Beth Ha-Midrash*, Leipzig, 1853-78, ii. 117; *Mass. Sopherim* xvi. 9). But the tribute paid him at his bier in the lament, 'Woe! Departed is the pious man. Woe! gone is the humble man, the disciple of Ezra' (*Sanh.* 11a; *Soṭa*, 48b), showed how his worth was recognized by those who had heard him 'praise God every day' (*Besäh*, 16a), who had been inspired by his faith in God, so intense that he was confident 'outcry at adversity did not proceed from his house' (*Berakhoth*, 60a; *Jerus. Berakhoth*, 14b),

who had been taught by him true charity, which endeavoured to restore to the dependent all the comforts and honour of his better days (*Ketubhoth*, 67b), and who had by him been brought 'to scatter (learning generously) when there are men to gather in' (*Berakhoth*, 63a).

HIMYARITES.—See AFRICA, SABÆANS.

HĪNAYĀNA.—*Hīna* means 'abandoned,' 'low,' 'mean,' 'miserable'; *yāna* means 'carriage,' 'means of progression,' 'vehicle'; the compound word *Hīnayāna*, as used of religious opinions, means a wretched, bad method, or system, for progress on the way towards salvation. It was a term of abuse occasionally used by some of the later Buddhist authors, who wrote in Sanskrit, to stigmatize or depreciate those older teachings which they desired to supersede. The use of the term in India, however, is exceedingly rare—not that the theologians of the later deistic Buddhist schools were not sure they were right; but the word was not polite, and the needs of controversy could be met without it. It might be now left in fit obscurity, had it not been adopted by one or two well-known Chinese and European writers, to whose sympathies it appealed, and who have made it a cornerstone of their views on the history of Buddhism. This makes it desirable to summarize the little that is known on the subject of the so-called Hīnayāna schools.

1. Origin and date of the term.—In the present stage of our knowledge of the history of Buddhism we suffer from a serious gap in the chain of available authorities. From the rise of Buddhism down to the time of Aśoka (*q.v.*), we have documents of varying age and importance, which enable us to draw a fairly accurate picture of the original Buddhism as understood by the early Buddhists, and also of the changes in doctrine down to the close of that period. The majority of these documents are in Pāli, but there are a number of side-lights as to detail from other sources, both early and late.

The following period of about three centuries, from Aśoka to Kaniṣka, is an almost complete blank. Even the date of Kaniṣka is uncertain. The able and sober discussion of the question by H. Oldenberg in the *JPTS* for 1912, the latest utterance on the point, suggests the end of the 1st cent. A.D. or the commencement of the 2nd as the most probable approximate time of Kaniṣka's accession. We have notices from Chinese sources as to national migrations in Central Asia, which resulted in successive movements of nomad tribes into the districts adjacent to the extreme N.W. of India. These notices are not always very clear, and at times appear conflicting; but they are sufficient to show that such movements in Central Asia were continually taking place during the centuries immediately preceding the Christian era, and culminated in the conquest, not indeed of India, but of Kashmir and the Panjāb, and of the districts round Mathurā and Gujārāt, by hordes of uncivilized nomads, mostly Huns or Śakas by race. These aliens adopted the religion, language, and civilization of the Indian peoples, mostly Buddhist, whom they conquered. Kaniṣka, the most famous and powerful of their princes, became a Buddhist; and lavishly supported the Buddhist scholars in Kashmir, who belonged to the *Sabbatthivāda*, the Realist school.

The result of these events was a momentous change affecting all the subsequent history of India.

Politically the centre of power was moved, for centuries, from the east to the west of the continent. Linguistically the Kosala dialect, of which Pāli is the literary form, had to yield its place, as the *lingua franca* of political, religious, and literary circles, to the dialect of Kashmir, of which Sanskrit is the literary form.¹ In religion a complete transformation was gradually but surely brought about. The brave barbarians became Buddhist so far as they were able. But they were so soaked in animistic superstitions that their ability was equal to the task only after they had brought down the religion to the level of their own understanding. There had been a slackening already. It is apparent in the later parts of the *Nikāyas* themselves, and is shown quite clearly by the questions considered in the *Kathā Vatthu* as being discussed in the schools at the date when that work was composed (c. 250 B.C.). From the time of Kaniṣka the whole power and influence of the Imperial State were thrown on the side of the animistic tendencies, and it was within the boundaries of the empire of the Kushan Tatars that the more important of the innovations were introduced into Buddhist doctrine.

A precisely similar series of events took place in Europe. A wave of invasion, similar to that which broke on the N.W. frontiers of India, and due, indeed, to similar national movements in Central Asia, broke in its turn over Europe. The Goths and Vandals adopted the faith of the Roman Empire. But, in adopting it, they contributed largely to the changes—some would call them deteriorations—that had already set in. When the conflict of nations subsided, the religion of the Roman Empire had become Roman Catholicism; politically the Continent was broken up among a large number of petty principalities, and such philosophy as survived was perforce of one and the same authorized pattern.

At the corresponding period in India, we find Buddhists who had borrowed from the pagans, and pagans who had adopted and improved upon the conflicting speculations of the many Buddhist schools. Philosophy was very much alive; and quite a number of conflicting systems were able, in the absence of even any attempt at authoritative suppression, to appeal to the suffrages of inquirers. It was at this stage that the word *Hīnayāna* came into use. The oldest datable mention of the word is in the *Record of Buddhist Kingdoms* by Fa-Hian, written shortly after his return to China in A.D. 414. He states, in his account of Shen-Shen (N.W. of Tibet):

'The King professed our Law (Dharma), and there might be in the country more than three thousand monks who were all students of the Hīnayāna.'²

In about half a dozen other passages he has similar statements. Legge, in his note on this passage, says that there were three vehicles—the larger, smaller, and middle (*mahā, hīna, and madhyama*), suggesting, therefore, that Fa-Hian had these three in his mind. It is, however, by no means quite certain what the word, at that date, exactly meant, or what Fa-Hian had in view, whether he had learnt the phrase in China, or picked it up during his travels in India. It is not probable that Legge's suggestion is right. That group of three vehicles has not been found elsewhere. The *Saddharma Puṇḍarīka*, which is later, gives a different group of three: *śrāvaka, pacceka-buddha, and mahā*—in which *Hīnayāna* does not occur. This group seems to have been widely known, as it is found also in the 3rd cent. in Ceylon, only applied to the word (*vachana*) instead of to the vehicle (*yāna*).³

¹ Rhys Davids, *Buddhist India*, London, 1905, ch. ix., and R. O. Franke, *Pāli und Sanskrit*, Strassburg, 1902, p. 87 ff.

² J. Legge, *Travels of Fa Hien*, Oxford, 1866, p. 16.

³ R. Morris, *Buddhavaṃsa* (*PTS*, 1882), p. xi.

The word occurs in the *Lalita Vistara*,¹ in a long list of qualities or states of mind, each of which is said to conduce to some other quality. In this list it is said:

'Thought, that opening (or beginning) of religious light, conduces to scorn for a mean method' (*Hinayāna*).

Unfortunately, the date of the existing text of this work (which has been certainly recast once, and perhaps oftener) is late and uncertain.² Such a list as this lies peculiarly open, in a re-casting of the work, to sectarian interpolation; and the passage throws little light on the meaning of the word, as it is short and ambiguous. It might equally well be rendered 'scorn for *the* Hinayāna.'

Nearly two centuries and a half later we know that another Chinese pilgrim, I-Tsing, explained the word *Hinayāna* as meaning one who did not believe in the various deities and heavens created by the later schools. Fa-Hian may have thought the same, or he may have had, not a negative, but a positive test: that a Hinayānist, for instance, was one who still believed in the Aryan eightfold Path; or he may simply have considered that a Hinayānist was a man who belonged to one or other of the eighteen primitive schools. The last seems the most probable explanation. It was the easiest way to draw the line. We know from Fa-Hian's 36th chapter (Legge, p. 98) that he was familiar with the list of these schools current among so many of the Buddhists. But, whatever be the exact meaning attached to the word *Hinayāna* by Fa-Hian, it is probable, from his use of the Chinese equivalent of it, that the word, and with it the division of Buddhists into Hīna-yānists and Mahā-yānists, was already current in India in the 4th cent. A.D.

2. The *Hinayāna* schools.—We have quite a number of copies of the list just referred to. The Sinhalese give it in half a dozen different books, from the 4th cent. A.D. downwards. They all agree in the names, having taken them from the still older, but now lost, Sinhalese *Atthakathā*. St. Julien³ reproduces five distinct lists from the Chinese. Schiefner, Wassilief, and Rockhill give us other lists from the Tibetan.⁴ These eight differ from one another, and from the Pāli list, in a few of the names; omitting one or two, and adding others. Each of them also pretends to be able to say of each school that it arose out of some other, and gives the name of the latter. In the details of these statements they also differ; and it is most unlikely that their language can ever have been exact except in a very limited sense. They can, at most, when they agree, afford us some guide to the relative age of the various schools within the period of a century and a half—from the time of the Council of Vesālī to that of the Council of Patna (about 400–250 B.C.)—within which they are all said to have arisen.

All the lists agree, however, in one point of great historical importance. Each of them gives one particular school, 'the School of the Presbyters' or 'the School of Distinction' (*Thera-vādins*, *Vibhajja-vādins*), as the original from which each of the seventeen others was ultimately descended.⁵

We have information as to some of the doctrines of several of these schools in the *Kathā Vatthu* (3rd cent. B.C.) and its commentary (5th cent. A.D.).

¹ R. Mitra's ed., Calcutta, 1877, p. 33.

² See M. Winternitz, *Gesch. der ind. Litteratur*, ii. (Leipzig, 1913) 199.

³ *J.A.*, 1859, p. 327 ff.

⁴ See W. Geiger, *Mahāvamsa* (tr. *PTS*, 1912, p. 277). He has made a comparative table of all the lists.

⁵ R. Pischel (*Leben und Lehre des Buddha*², Leipzig, 1910, p. 6) expresses this by saying: 'The Pāli canon is only the canon of one sect.' This is inaccurate in several ways. It implies that there were sects (like European sects); that each had a separate canon; and that each canon stood on a level in respect of age. Not one of these implications is supported by the evidence.

This has been specified, and discussed, together with other information, in two articles by the present writer.¹ The conclusions reached are:

(1) The data are not sufficient to enable us to give a complete description of the doctrines, or even of the innovations, current in any one particular school.

(2) The principal innovations discussed in the *Kathā Vatthu* relate, not to ethics or philosophy, but to Buddhology.

(3) Both the commentator and Fa-Hian, writing in the 5th cent. A.D., are agreed in granting only to three or four of these schools any considerable importance.

(4) Yuan Chwāng, writing at the end of the 7th cent. A.D., attaches importance to the same schools only. It is very doubtful whether any of the others had had, at any time, either large numbers or much influence.

(5) The figures given us by Yuan Chwāng—he stayed many years in India, travelled extensively, and usually recorded, where he stopped, the approximate number of members of the Order, and the school they adhered to—reveal the astounding fact that even as late as the end of our 7th cent., that is, the 13th cent. of Buddhism, no fewer than two-thirds of the 200,000 *bhikkhus* in India and its confines still adhered to one or other of the primitive schools. The allurements of the myriads of resplendent deities created by the Mahāyānist theologians, and that of the new ethics based on belief in those deities, had equally failed to attract them.

(6) These schools have been, and are still, often called 'sects.' This is a mistake. They had no separate hierarchies, presbyteries, or other forms of church government; no separate dress, churches, or services. They were more like the Low, Broad, and High Churchmen among the Episcopal clergy. And, as in the Anglican Church, each individual combined the various tendencies in varying degrees. This may explain how the same people are classed under the names of different schools. Thus, the *bhikkhus* in Ceylon called themselves *Thera-vādins*; Fa-Hian, who stayed two years in the island, apparently thinks (Legge p. 111) that they were Mahīśāsakas; Yuan Chwāng (Watters, *On Yuan Chwang's Travels*, London, 1904–05, ii. 234) calls them Mahāyānist Sthaviras.

(7) From what has been stated above as to the many lists of the 18 schools it seems clear that the number 18 is purely conventional—a round number. Were we to make a new list, including all the names found either in the old lists or in inscriptions (such, for example, as those mentioned in *JRAS*, 1891, p. 410; 1892, p. 597), we should have 28 or 30. That none of the names appears in the earliest inscriptions would seem to show that not much weight was attached to them in the earliest times. When the schools are mentioned, the name of each is given separately. A Hinayāna school as designating a body of men is never referred to. So with the Mahāyāna. There are a score or more of schools that must be included under that name. Some of them to-day in Japan have become sects with separate revenues, government, dress, doctrines, and services. To compare Hinayāna with Mahāyāna it is necessary, if one would serve any useful historical purpose, to compare the whole of the one with the whole of the other. The position will best be understood in the West if it be pointed out that the Mahāyāna schools bear a relation to the Hinayāna schools similar to the relation borne by the various Roman and Greek Catholic schools to the early Christian ones. This similarity is due to similar causes (one of which was mentioned above). But there are also remarkable and interesting differences. The most noteworthy of these is that the early forms of thought subsisted

¹ *JRAS*, 1891, 1892.

in India through so many centuries, while in Europe they were allowed to persist, if they persisted at all, only underground. When toleration was the rule in India, the Inquisition was busy in Europe.

Those schools, apart from the original school of the Theravādins, which would seem, from our late and scanty evidence, to have been of some importance, are the following :—

(i.) *Sammitīya*.—Yuan Chwāng estimates their numbers in the 7th cent. as about 43,000 *bhikkhus*, of whom about half were in Sind, and the rest scattered through the Ganges valley or in Avanti. They are referred to nineteen times in the commentary on the *Kathā Vatthu*.

(ii.) The *Sabbatthivādins* (Realists).—In the 7th cent. they were in the territories beyond the extreme N.W. frontier of India, and Yuan Chwāng reckons their number there at about 12,000. Fa-Hian does not mention them, and Buddhaghōṣa (*q.v.*) refers to them only three times. But Takakusu, in his important article in the *JPTS* for 1905, has shown how very great was the influence of this school of thought at the court of Kaniska, and afterwards; and has given a summary of the contents of seven of their works. Probably *Āsvaghōṣa* (*q.v.*), the celebrated court-poet and dramatist in Kaniska's time, was a Realist. The *Lalita Vistara* is believed to be founded on the text of an older biography of the Buddha current in this school; and about half of the legends in the collection called *Divyāvadāna* are also thought to have been taken over from a work on Canon Law used by the Realists.¹

(iii.) *Andhaka* (Andhras).—Buddhaghōṣa, in his commentary on the *Kathā Vatthu*, attaches more importance to these, the inhabitants of the S.E., than to all the other schools put together. But they are mentioned nowhere else, and we do not know even the titles of any of their books.

(iv.) *Mahā-sāṅghika*.—They are mentioned by Buddhaghōṣa sixteen times, and a branch of them, the Lokottara-vādins, was found still existing in the 7th cent. by Yuan Chwāng in Bamiyan. They are particularly interesting as being the original authors of the collection of legends called the *Mahāvastu*, where we find the germ of the docetic theories, dealt with under *DOCETISM* (Buddhist).

A good deal of the literature of these, and of the other schools of early Buddhism, is still extant in Chinese translations. It is not likely that, in the fine collection of translations of Buddhist Sanskrit works into Tibetan, made from the 9th cent. onwards, there will be anything left of the works of these older schools. In the Buddhist Sanskrit MSS in our libraries there are, however, many books, whose titles we know, that will undoubtedly throw much light on the interesting and important historical problem of the gradual growth and change of early Buddhist thought and doctrine. The publication of these works is the greatest desideratum in the present state of our knowledge. The beginning we know well. The Pāli Text Society has now (1913) published 73 volumes of the works, early and late, of the original school, the Theravādins. We know a good deal about the end—the final shapes taken by the various schools of later Buddhism still existing in China, Tibet, and Japan. For the intervening periods very little, apart from story-books and collections of edifying tales, has as yet been made available for European scholars. It will be sufficiently evident from the above why it is that no attempt has yet been made in Europe to elucidate the history of these schools, or to trace the development of their doctrine.

LITERATURE.—The authorities have been given in the article.
T. W. RHYS DAVIDS.

¹ Winternitz, *op. cit.* pp. 198, 222.

HINDUISM.—**i. Definition.**—'Hinduism' is the title applied to that form of religion which prevails among the vast majority of the present population of the Indian Empire. Brāhmanism (*q.v.*), which is the term generally used to designate the higher and more philosophical form of modern Hinduism, is more properly restricted to that development of the faith which, under Brāhman influence, succeeded to Vedism, or the animistic worship of the greater powers of Nature.

The name 'Hindu' carries us back to the period of the invasion of the Peninsula by the Aryan tribes from the N. or N.W. The word *Sindhu* was applied by them to the great river of the west, the modern Indus; and, though in Vedic literature *sindhu* was used as an appellative noun for 'river' in general, throughout Indian history it remained the name of its powerful guardian river, the Indus. A common term for the ancient Aryan settlements in the Panjāb was 'the Seven Rivers' (*sapta sindhavaḥ*). The name 'Hindu' appears in the form *Hirūṣū* in the inscription on the monument of Darius Hystaspes near Persepolis (c. 486 B.C.); *Hōd(d)ū* in the later Heb. literature (Est 11³⁹); and in its modern form (c. 440 B.C.) in Herodotus (iii. 98). The question of the so-called 'Aryan invasion' of N. India has been re-opened, from the Dravidian standpoint, by P. T. Srinivas Iyengar (*Journal Royal Society of Arts*, lx. [1912] 841 ff.), who opposes Kinsley's theory of a complete occupation of the Panjāb by Aryan tribes accompanied by their women, and a subsequent interruption of communication with Central Asia, which ensured the purity of the race in that province. He asserts that the 'only certain difference between the Arya and the Dasyu . . . is one of cult,' that is, of fire-rites. 'The language and the cult of the Aryas were borrowed from without, and profoundly altered on Indian soil. If this cultural drift had been accompanied by any appreciable racial drift, if the cult and language had been brought into India by any considerable body of foreigners, who formed a race by themselves, and lived apart from the native races, neither the cult nor the language would have undergone such serious alterations as they have, but would have remained relatively pure. Hence we may conclude, with a fair degree of certainty, that in the second millennium B.C. a foreign tongue and a foreign cult drifted into India, and were adopted by certain tribes, later called Aryas, among whom the cult and the speech developed in new ways, and distinguished the tribes that possessed them from the other tribes of this country.'

2. Statistics.—According to the Census of 1901, the total population of the Indian Empire was 294,361,056, of whom 207,147,026 (70·3 per cent) declared themselves to be Hindus. Of these the vast majority (207,050,557) professed to follow the Brāhmanical or orthodox form of the faith, the small minority belonging to the modern theistic sects, such as the Brāhma and Arya Samājes. If to the body of declared Hindus be added Sikhs (2,195,339) and Jains (1,334,148), both of whom claim to be Hindus, the total adherents of Hinduism amount to 210,876,513. If the estimates of H. Zeller be accepted, Hinduism thus stands numerically third among the religions of the world, being exceeded only by Christians (534,940,000) and followers of Confucius (300,000,000).

The distribution of Hindus throughout the Empire varies greatly. The most Hindu province is Orissa, in Bengal, where 94·7 per cent of the total population follow this faith. In succession to this follow Mysore (92·0 per cent); Madras (89·1); Bombay, excluding Sind and Gujārat (88·9); Hyderabad or the Dominions of the Nizām (86·6); the United Provinces of Agra and Oudh (85·4); the Central Provinces (82·7); Central India (80·9); Baroda (79·2); Bombay, the whole Presidency (76·5); Travancore (68·9); Bengal, the whole Presidency (63·3). The least Hindu portions of the Empire are the N.W. Frontier Province with the Panjāb (35·6), Sind (23·4), and Burma (4·3); in the first two Hinduism having given way to Islām, in the third to Buddhism. In Eastern Bengal the percentage of Hindus has been reduced by the notable extension of Muhammadanism, and in Travancore of Christianity.

Hinduism is thus strongest in the more isolated portions of the Peninsula—Orissa, Mysore, Madras, and the Deccan or central plateau—where the influence of foreign religions has been weakest; in regions like the Panjāb, the Frontier Province, and Sind, Islām has been dominant; in Eastern Bengal in later times it has grown at the expense of Hinduism. The accuracy of these statistics is, however, seriously impaired by the difficulty of dealing with the beliefs of the non-Aryan or so-called 'Dravidian' population. The well-organized forest tribes, who in 1901 numbered 8,584,149 (2·9 per cent of the total population), were generally classed as Animists. But besides these there are vast masses of people drawn from the lower strata of the population throughout the Empire whose connexion with orthodox Hinduism is hardly more than nominal.

Besides the Hindus settled within the Empire, some adherents of the faith are found beyond its

limits. Early traditions in W. India tell of fleets from the coasts of Sind and Gujarāt conveying emigrants to Cambodia and Java, and Ptolemy's map of the Indo-Chinese coast contains Skr. names, indicating the existence of Hindu settlements as early as the 1st cent. A.D. In Cambodia the remains at Angkor, Nakhon Wat, Borobūdūr, and other places are of Indian origin in their details. In Java, as in Sumatra, the early ascendancy of the Hindus is supported by tradition, and there was certainly a period of Buddhism, and then a period of aggressive Saivism, followed by an age of apparent compromise between the rival faiths. Hinduism finally gave way to Islām, and has been extinct for more than four centuries (see *ERE* ii. 239; *EBr*¹¹ xv. 288 f., 292, xxvi. 74). But in Bali, or Little Java, it still holds its ground in a corrupted form, sanctioning the custom of widow-burning (*sati*) and the traditional fourfold Hindu caste system. It is now largely blended with the baser forms of Buddhism and the animistic cultus of evil spirits (*kāla*). For Hindu emigration to the Far East, see V. A. Smith, *Hist. of Fine Art in India and Ceylon*, Oxford, 1911, p. 259 ff. In the early centuries of the Christian era, Hindu literature, art, and religion penetrated extensively into Khotan and all Chinese Turkistān up to the frontier of China Proper. The discussion of the influence of Hindu belief on the religions of the West is beyond the scope of this article; but Flinders Petrie has discovered portraits at Memphis of an Aryan woman from the Panjāb and a seated Hindu figure.

¹These are the first remains of Indians known on the Mediterranean. Hitherto there have been no material evidences for that connection, which is stated to have existed, both by embassies from Egypt and Syria to India, and by the great Buddhist mission sent by Asoka as far west as Greece and Cyrene. We seem now to have touched the Indian colony in Memphis, and we may hope for more light on that connection which seems to have been so momentous for Western thought' (W. M. Flinders Petrie, *Man*, viii. [1908] 129; cf. V. A. Smith, *Asoka*², Oxford, 1909, p. 43).

Within recent times Hindu emigrants to S. and E. Africa and various ports and trading centres in other parts of the world have, in spite of the Brāhmanical prohibition of ocean travel, carried with them their religion and some of their social institutions.

3. Materials for the study of Hinduism.—The subject of Hinduism, in many of its varied phases, is considered in several articles in this work—those describing the great provinces of the Empire; those tracing the development of the faith as illustrated by Aryan Religion, Vedic Religion, Brāhmanism, etc.; those dealing with the greater gods, religious sects, and sacred places. The purpose of this article is to discuss, in a general way, the progressive evolution of Hinduism, and to group the facts, as far as is possible, in their historical setting. It must be remembered, however, that the materials for such a survey are in many directions incomplete and fragmentary. In the first place, the Hindu religious records are of much later date than those of Babylonia or Egypt. In Babylonia inscriptions from Nippur earlier than the third millennium before our era are available (*HDB* v. 532; for various other estimates, see *EBr*¹¹ iii. 108 ff.); the oldest Egyptian dynasty of which remains have been discovered goes back, according to Flinders Petrie, to 4777 B.C., or, in a later estimate, to 5510 (*EBr*¹¹ ix. 69). The accounts of the origin of Hinduism start with the Vedic age, which is believed to date from about 1500 B.C. Secondly, while the hymns of the Veda embody the naive speculations of the early Indo-Aryans on the character and functions of their gods, the writings of the later Brāhmaṇa period were compiled by the priestly class to support its claims to the leadership of the Aryan community. A comparison of these writings with those of the Buddhists and

Jains, so far as they have been examined, leads to the conclusion that this Brāhmaṇa literature does not accurately represent the early development of Hinduism (Rhys Davids, *Buddhist India*, 1903, p. 149 ff.). The historical side, again, of this literature is vague and incomplete. These ancient religious teachers had little of the historical sense, and were not concerned to compile a systematic account of political events or of the phases of social progress. The inference which they desired to suggest was that Brāhmanical Hinduism dates from the most ancient period; that Brāhmins have always been the political, religious, and social guides of the community; that the orderly progress of religious development was never interrupted by any violent cataclysm. The literature prepared by them contains no adequate account of the rise, progress, and decay of Buddhism and Jainism; and in a great measure it ignores the successive invasions of N. India by Greeks, Parthians, Scythians, and Huns, of which the two last races profoundly influenced the religious and social life of the Hindus. To this must be added that lack of historical insight and national patriotism which the Hindus share with other oriental races. The priestly record of the early Hindu period cannot, to any large extent, be supplemented from independent sources. The true historical period does not begin before the 7th cent. B.C., and

²up to about that time the inhabitants of India, even the most intellectual races, seem to have been generally ignorant of the art of writing, and to have been obliged to trust to highly trained memory for the transmission of knowledge' (V. A. Smith, *Early Hist.*², Oxford, 1908, p. 24 f.).

No extant inscription can be assigned to a date earlier than that of Aśoka (*q.v.*), the middle of the 3rd cent. B.C., while numismatic evidence begins to be of value only from the time of the invasion of Alexander (*ib.* 13 ff.). The architectural remains of the earlier period which have survived are Buddhist or Jain, not Brāhmanical; and the art and style are, for the most part, independent of religion. We possess no historical records and no sacred literature of the non-Aryan races of S. India, until they came into contact with the Hindus of the North. That of the Tamils is said to date only from about 100 B.C. (V. Kankasabhai, *The Tamils: Eighteen Hundred Years Ago*, 1904, p. 2 f.).

4. Vedic Animism.—The Vedic religion will be discussed in a separate article. Here it is only necessary to point out that the methods employed by the school of mythologists represented in Great Britain by F. Max Müller, who evolve a complex divine personality from a single physical concept, such as the wind or dawn, are now generally discredited in the study of Indian as in that of Hellenic myths (Farnell, *CGS*, Oxford, 1896–1909, v. 9 n.). The identification of the titles of the Vedic gods in languages akin to the Skr. has been widely contested and found to be in a great measure unfruitful; and attention at present is more generally concentrated on the comparison of cults rather than of divine titles.

The priests and higher classes of the Indo-Aryan community, whose beliefs are represented in the Vedic hymns, had raised to the rank of gods the greater spirits which control the chief energies of Nature; but the lesser spirits, which were dreaded and propitiated by the mass of the people, were to a large extent ignored in the religious literature. The latter and lower form of Animism, though it has been denied that it formed 'anything like a complete background to Vedic mythology,' can be traced in the Veda (F. Max Müller, *Contrib. to the Science of Mythology*, 1897, i. 211).

³Everything that impressed the soul with awe or was regarded as capable of exercising a good or evil influence on man, might in the Vedic age still become a direct object not only of adoration but of prayer. Heaven, earth, mountains, rivers, plants might be supplicated as divine powers; the horse, the cow, the bird

of omen, and other animals might be invoked; even objects fashioned by the hand of man, weapons, the war-car, the drum, the plough, as well as ritual implements, such as the pressing-stone and the sacrificial post, might be adored' (A. A. Macdonell, *Vedic Mythology*, pp. 2, 86 f., 147 ff.).

Again, many myths (though an attempt has been made by Max Müller [*op. cit.* ii. 429, 532, 573] to derive them from physical concepts) are of the type common to all primitive races. The tales of Indra overcome with drink, and committing adultery with Asura women; of the incest of Prajāpati; of the creation of all things out of the severed limbs of a magnified non-natural man, Puruṣa, are all common to savage folk-lore, and 'in the religions of even the lowest races, such myths . . . are in contradiction with the ethical elements of the faith' (A. Lang, *Myth, Ritual, and Religion*, London, 1899, i. 9 f.). The practice of magical rites also forms a link between the Aryan and the purely savage culture. It is true that magic, in its crudest form, does not appear in the original Veda; but the belief in the power of formulæ (*mantra*; see CHAKMS AND AMULETS [Indian]); the practice of sympathetic or mimetic magic, such as the use of figures which are wounded to destroy an enemy; magical practices connected with marriage, initiation, the anointing of the king; the use of homœopathic magic for the cure of baldness or jaundice, are all similar to those current among savages at the present day (H. Oldenberg, *Die Religion des Veda*, Berlin, 1894, pp. 508, 59, 477, 420 f., 507; M. Bloomfield, *Atharvaveda* [SBE xlii. [1897] 7 f., 263 f.]). Ideas of this kind are most largely found in the Atharvaveda, which was compiled from very ancient materials after the Aryans had penetrated some distance down the valley of the Ganges (Bloomfield, *op. cit.* Introd. xl, xiv). The fact that such beliefs were common to Aryans and non-Aryans naturally facilitated that contamination of the earlier and purer theology which developed first into Brāhmanism, and at a later date into Hinduism.

5. Foreign influence in Aryan culture and belief.—The view is now gaining ground that the Indo-Aryans were not unaffected by foreign influences.

(a) Some authorities recognize a stratum of Babylonian culture. If about 1400 B.C. the hegemony of Babylon had been established in W. Asia, it is not unreasonable to suppose that its influence may have extended to India. The great trade routes through Persia and Turkistān must have been controlled by the rulers of the Euphrates-Tigris valley; ruins of terraced fields and irrigation channels in Baluchistān prove that in ancient times it must have been a most fertile land, through which communication between the Euphrates-Tigris and Indus valleys could have been maintained. As early at least as the 7th or 8th cent. B.C. sea commerce was carried on between the non-Aryans of S. and W. India and Babylon; and by this route the pre-Semitic alphabet, which is the basis of the Indian scripts, reached India (J. Kennedy, *JRAS*, 1898, p. 241 ff.; Smith, *Early Hist.*², 25 n.; Sayce, *Origin and Growth of Religion* [HL, 1887], London, 1891, p. 137 f.). Various lines of coincidence between the Babylonian and early Hindu culture have been traced: the resemblance of Babylonian charms against disease, evil spirits, and other invocations to those of the Atharvaveda (M. Jastrow, *Rel. of Bab. and Assyr.*, Boston, 1898, p. 253 ff.); the belief in sorcery, witchcraft, omens, lucky and unlucky days (*ib.* 266, 328 ff., 380; Sayce, 150, 327); the custom at Taxila of selling maidens who failed to secure husbands, which was in force at Babylon (Herod. i. 196); the habit of burying in terra-cotta coffins, found in S. India, which closely resemble those of Babylonia (*IA* v. 255; Jastrow, 597 f.). It has also been suggested that India owes to Babylonia

the introduction of brick masonry (*IGI* ii. 103), the adoption of the seven-days week, and of the system of the twenty-four or twenty-seven lunar mansions (*nakṣatra*) (A. Weber, *Hist. of Indian Lit.*, 1878, p. 246 ff.). On the other hand, Max Müller (*India, What can it teach us?*, 1883, p. 125 ff.) strenuously denies that the Vedas show traces of Babylonian influence, and M. Haug (*Aitareya Brāhmaṇa*, 1863, i. 46) suggests that the early astronomical observations of the Hindus must have been made in N. India. In any case, the lunar mansions were a late introduction in Babylonia, and, if the Hindus borrowed them, it was probably later than the 7th cent. B.C. (J. Kennedy, 261, 269; cf., further, F. K. Ginzel, *Handb. der mathemat. und techn. Chronologie*, Leipzig, 1906 ff., i. 74-77). A recent discussion of the influence of Babylon on the religion of Greece shows that 'so far as our knowledge goes at present, there is no reason for believing that nascent Hellenism, wherever else arose the streams that nourished its spiritual life, was fertilised by the deep springs of Babylonian religion or theosophy' (L. R. Farnell, *Greece and Babylon*, Edinburgh, 1911, p. 307). Further investigation may show that these conclusions apply to the relations of Babylonia with India. On the whole, the influence of Babylonian on Hindu culture seems to have been comparatively late, and the results of the intercourse of the two races have been so thoroughly assimilated that they are no longer visible on Indian soil.

In the case of religion and myth, the primitive elements having become worn down or absorbed, it is difficult to trace the connexion between the two cultures. If the goddess Nānā Devi worshipped at Hinglāj (*q.v.*) is identical with the Babylonian Nana of Erech, we may suppose that the cults of the Mother-goddesses of east and west may here have been combined; her name, in the form Nano, appears on the coins of the Kuṣān king Huiṣka, who ascended the throne about A.D. 150 (*JRAS*, 1908, p. 60; Smith, *Early Hist.*², 252 f.; cf. J. G. Frazer, *GB*³, pt. i. *The Magic Art and the Evolution of Kings*, London, 1911, i. 37 n.; T. Holdich, *The Gates of India*, do. 1910, p. 162 f.). An echo of the Babel legend has been traced in the Brāhmanas, where the demons pile up a great fire-altar by which they hope to scale the sky; when they have climbed some distance, Indra pulls out a brick; they fall to earth, and all but two, who fly away and become the dogs of Yama, are turned into spiders (Bloomfield, *SBE* xlii. 500). The conception of the upper or heavenly sky appears in the Veda as well as in the Avesta and in the cosmogony of Babylonia. It has been urged that the coincidences between the Babylonian and the Hindu Flood-legend can hardly be accidental (*Atharvaveda*, xix. 39. 8; *Satapatha Brāhmaṇa*, i. 8, 1. 6; Jastrow, 518). But the Hindu Flood-story is comparatively late, and it has been suggested that its independence of the legends in the Avesta and the Bundahiś shows that it was not derived from Irān, but possibly, by Dravidian intermediaries, from Babylon, after the opening of communication by sea (J. Kennedy, *JRAS*, 1898, p. 260 f.; also see T. K. Cheyne, in *EB*¹¹ vii. 976 ff.; *EBi* i. 1065 f.; F. H. Woods, *ERE* iv. 555 f.). It must also be remembered that such myths prevail in many parts of the world (E. B. Tylor, *Researches into the Early Hist. of Mankind*, London, 1865, p. 317 ff.); and that India has its own legends of the same kind, such as those prevalent among the Lepchas, Korkus, Muṣṭas, Karens, and Andamanese, which are almost certainly independent of Aryan tradition. The question of Babylonian influence on India has been discussed by R. von Ihering (*Vorgesch. der Indo-Europäer*, Leipzig, 1894, Eng. tr. *The Evolution of the Aryan*, by A. Drucker, London, 1897),

whose conclusions must be accepted with caution. For the wide-spread influence of Babylonian culture, see L. W. King, *A Hist. of Sumer and Akkad*, London, 1910, Pref. p. vii.

(b) Among the western kinsfolk of the Indo-Aryans their connexion with the Iranians, as is shown by their common knowledge of geography and its nomenclature, was particularly intimate. The affinity of the Avesta to the Rigveda in the domains of mythology and cult is remarkable; and the resemblance would certainly be greater if we possessed Avestan literature as old as the Vedic, the reforms of Zarathustra having caused a very considerable displacement of mythological conceptions (Macdonell, *Vedic Myth.*, 7; Max Müller, *Selected Essays*, 1881, ii. 132f.; J. Muir, *Orig. Skr. Texts*, ii. [1860] 477 ff.). Risley (*Census Report India*, 1901, i. 548) suggests that the Brāhmanical theory of castes 'may be nothing more than a modified version of the division of society into four classes—priests, warriors, cultivators, and artisans—which appears in the sacerdotal literature of ancient Persia.' Haug (*Alt. Bräh.* i. 60) remarks that the Agniṣṭoma rite, from its complete similarity to Iranian ceremonial, must be extremely ancient. It is certain that the great Medo-Persian Empire must have profoundly influenced N. and W. India; they certainly held the Indus valley and considerable parts of the S. Panjāb and Rājputāna (Strabo, xv. 10; *JASB.* 1892, p. 198; Malik Muhammad Din, *The Bahāwalpur State*, Lahore, 1908, p. 22f.). At a later date, under the Greek successors of Alexander the Great, Iranian sun-worshippers entered India, and were adopted into the Brāhman ranks under the title of Sakadvīpiya, or 'those of the Scythian island.' To this intercourse with Irān may be attributed the extension of sun- and fire-worship in N. India; though, of course, it is possible that cults of this kind may have sprung up in India independently of foreign teaching. The traditions of W. India indicate a connexion of the rulers of Valabhī in Kāthiāwār with the Sasanian dynasty, and a similar story is told of one of the great Rājput houses (*Ain-i-Akbarī*, tr. Blochmann and Jarrett, Calcutta, 1873-94, iii. 338). The extent of the indebtedness of Indian art and architecture to that of Irān is disputed, and the origin of certain symbols, such as that of Garuḍa, the winged vehicle of Viṣṇu, is uncertain (Perrot-Chiépiz, *Hist. of Art in Persia*, Eng. tr., London, 1892, pp. 5, 339 n.; A. Grünwedel, *Buddhist Art in India*, Eng. tr., do. 1901, pp. 16, 21, 48, 50, 56 f.; Fergusson-Burgess, *Cave Temples of India*, do. 1880, pp. 21, 34f., 243, 307, 522f.). The dominant influence of Persia on Indian art in the time of Aśoka is clearly established (V. A. Smith, *Hist. of Fine Art in India and Ceylon*, pp. 60, 377 f.). For the early relations between India and Persia, see the summary in *BG* ix. (1901) pt. ii. 133 ff.

(c) The Greek campaigns of Alexander the Great produced little effect upon the history, politics, or religion of India (Smith, *Early Hist.*², 110). A pillar inscription recently discovered at Besnagar, near Bhilsa in the Gwālīor State, records that it was set up in honour of Vāsudeva or Viṣṇu by Heliodorus, son of Dion, a devotee of Bhagavata, who came from Taxila in the reign of Antalkidas of the Græco-Bactrian dynasty (c. 150 B.C.). It is uncertain whether Heliodorus accepted Vāsudeva as an Indian god or identified him with Herakles or some other Greek deity; in other words, whether he was a Hinduized foreigner or had remained a Greek and was merely anxious to profess conformity with an Indian cult. In any case, it throws new and interesting light on the relations between Greeks and Hindus (Smith, *Early Hist.*², 65f.).

6. The religious isolation of India.—But, even

if it be admitted that in certain regions and in certain departments of religion or art the influence of foreign races on India may be detected (see Smith, *Early Hist.*², 377), the fact remains that the beliefs and cultus of the Hindus are, in the main, of indigenous origin, and that they developed on national lines of evolution. The Peninsula on east and west is bounded by an ocean, which in the early period was not open to the navies of the world. To the north and west India was cut off from the neighbouring Asiatic kingdoms by a gigantic mountain barrier, a great river, wide tracts of desert, and a borderland held by savage tribes. This isolation of the country promoted that confidence in, and respect for, their national religion and customs which are inherent in the Hindu mind. 'The Hindus,' said al-Birūnī, 'believe that there is no country but theirs, no nation like theirs, no kings like theirs, no religion like theirs, no science like theirs' (*India*, tr. Sachau, London, 1888, i. 22). In short, the leading characteristics of Hinduism are the result of its environment. Its pessimism results from a depressing climate, where the population is successively exposed to malaria, tropical heat, and torrential rain. Hence, naturally, as was the case in Babylonia, the evil spirits which bring famine, disease, and other calamities are objects of propitiation, while those of a benignant nature are often neglected. The molecular character of Hinduism is due to the varieties of race and culture in the population, the localization of its deities resulting from the worship of the guardian spirits of the isolated communities which formed their settlements in its jungles.

'The Indians are the only division of the Indo-European family which has created a great national religion—Brahmanism—and a great world-religion—Buddhism; while all the rest, far from displaying originality in this sphere, have long since adopted a foreign faith. . . . In spite of successive waves of invasion and conquest by Persians, Greeks, Scythians, Muhammadans, the national development of the life and literature of the Indo-Aryan race remained practically unchecked and unmodified from without down to the era of British occupation. No other branch of the Indo-European stock has experienced an isolated evolution like this. No other country except China can trace back its language and literature, its religious beliefs and rites, its domestic and social customs, through an uninterrupted development of more than three thousand years' (A. A. Macdonell, *Hist. of Skr. Literature*, London, 1900, p. 71.).

7. Pre-animistic and animistic beliefs.—The religion of the Vedic period was a form of that higher Animism found among other savage and semi-savage races. It has been recently suggested that this type of Animism is not the most primitive form of belief; in other words, that Animism, as we find it in ancient and modern India, does not account for what some recent authorities are disposed to regard as distinct phases in the religious consciousness—the belief in the spirit world and the recognition of a God. It is urged that Animism, in the sense in which it is recognized by E. B. Tylor and his school,

'explains only the dead material of religion, viz., that material which concerns the human, the natural, the world of the dead, of animated nature, ancestor-worship, and so on; that is, all that lies on this side of the gulf. What lies on the other side, the truly supernatural, cannot originate in Animism, and Animism does not explain it. The idea of God is derived from Nature worship, at the back of which lies Mana; and this is not contradicted by the recognition of possible links between souls and gods, or between magic and prayer.' The facts 'seem to point uniformly to decaying phases of monotheistic belief—belief in a power to which, or to whom, evil of any kind is displeasing—as existing among widely separated savage races whose religion is now admittedly animistic' (*Athenæum*, 5th June 1909).

This *mana* among the Melanesians is defined by R. H. Codrington (*The Melanesians*, Oxford, 1891, p. 118) as the supernatural power or influence which operates to effect everything which is beyond the ordinary power of men, outside the common processes of Nature; and it is equivalent to the Algonquin *manitou*, the *oki* or *orenda* of the Iroquois (see E. S. Hartland, *British Associa-*

tion Report, Dublin, 1908, London, 1909, p. 5; E. Clodd, 'Pre-Animistic Stages in Religion,' *Fortnightly Rev.*, June 1909, p. 1130 ff.). The monotheism of the peasant is discussed in § 39 below.

Beliefs of this kind have been traced by Risley in India.

'If one must state the case in positive terms, I should say that the idea which lies at the root of their [the jungle peoples'] religion is that of power, or rather of many powers. What the Animist worships and seeks by all means to influence and conciliate is the shifting and shadowy company of unknown powers or influences making for evil rather than for good, which resides in the primeval forest, in the crumbling hills, in the rushing river, in the spreading tree, which gives its spring to the tiger, its venom to the snake, which generates jungle fever, and walks abroad in the terrible guise of cholera, small-pox, or murrain. Closer than this he does not seek to define the object to which he offers his victim, or whose symbol he daubs with vermilion at the appointed season. Some sort of power is there, and that is enough for him. Whether it is associated with a spirit or an ancestral ghost, whether it proceeds from the mysterious thing itself, whether it is one power or many, he does not stop to enquire. . . . When the era of anthropomorphism sets in and personal gods come into fashion, the active and passive powers of the earlier system are clothed in appropriate attributes. The former become departmental spirits or gods, with shrines and temples of their own and incessant offerings from apprehensive votaries. The latter receive sparing and infrequent worship, but are recognised, *en revanche*, as beings of a higher type, fathers and well-wishers of mankind, patrons of primitive ethics, makers of things who have done their work and earned their repose. The Santal Marang Buru represents the one; the Bongas or godlings of disease are examples of the other' (*Census Report India*, 1901, i. 352 f.; cf. R. R. Marett, *The Threshold of Religion*, London, 1909, p. 13 ff.).

There is nothing antecedently improbable in the theory that the belief in one Supreme God may have prevailed in India from a very early period, even before the rise of Vedic polytheism, because it is not confined to races in a high stage of culture, and is not infrequently found among primitive peoples (A. Lang, *The Making of Religion*, London, 1898, ch. ix. ff.). If pre-animistic beliefs assumed the form to which Risley has called attention, it would go some way to account for the 'higher gods of the lower races,' which have been recognized in various parts of the world. This conception has been traced in some of the later Vedic hymns, where the idea is expressed that the various deities are but different manifestations of a single Divine Being (Macdonell, *Vedic Myth.*, 16 f.). It is unnecessary to apply Max Müller's term 'Henotheism' to this form of belief, because it amounts to little more than the poetic exaggeration with which a singer magnifies the deity whom for the moment he is addressing. The germs of monotheism which have been traced in the cult of Varuṇa seem to have been exaggerated; but it appears to be clear that at the close of the Vedic period, and more particularly in that of the Brāhmanas, Prajāpati has come to be realized as the chief and father of the gods, existent from the beginning, a conception which in the Upaniṣads gives place to Brahma, the universal soul or the Absolute (E. W. Hopkins, *Rel. of India*, 1896, pp. 67, 172; Macdonell, *Vedic Myth.*, 118 ff.). The later development of monotheism has been illustrated by G. A. Grierson, in art. BHAKTI-MĀRGA, vol. ii. p. 539; 'The Monotheistic Religion of Ancient India,' *Proc. Oxford Congress of Religions*, 1908, ii. 44 ff.; L. J. Sedgwick, 'Bhakti,' in *JRASBO*, xxiii. (1911).

3. Contributions from Vedism to modern Hinduism.—As is often the case with the great gods of savage races, the deities of the Vedic period have become otiose, take little part in the control of earthly affairs, receive scanty worship, and, if recognized at all, occupy a much lower position than that assigned to them in the early literature.

(a) *Varuṇa*.—At present Varuṇa, the old god of the firmament, is only vaguely conceived as one of the minor gods of the weather. At high-caste weddings in the Deccan he is installed in a brass bowl filled with water; the father of the bride draws four lines with sandal paste on the outside

of the jar, and with extended hands prays to Varuṇa to bless the wedded pair (*BG xviii*. [1885] pt. i. p. 200). On the western sea-coast he is believed to reside in the sea, wells, and streams, and he is propitiated by sailors and others whose business is in the great waters (*ib. ix*. [1901] pt. i. p. 349). In N. India he is supposed to preside over the weather and the rivers, and when a boat is launched the boatman flings an offering into the stream in his name.

(b) *Indra*.—The worship of Indra still survives, but in an attenuated form (see art. BRĀHMANISM, vol. ii. p. 804). Even in the Epic period he had suffered some loss of dignity, and he is now generally conceived as lord of a paradise of delights to which he conveys the souls of warriors slain in battle. In Buddhist mythology, under the name of *Sakka*, the Pāli form of the Vedic *Sakra*, 'the mighty one,' he retains some measure of respect. In the older Buddhist Sūtras he is almost the only deity of a well-defined type; at a later period he is conceived as reigning in a heaven of his own, whence he occasionally descends to interfere in earthly affairs (H. Kern, *Manual of Indian Buddhism*, 1896, pp. 16, 33, 45; A. Grünwedel, *Buddh. Art in India*, Eng. tr., 1901, pp. 7, 38). Hence among the Buddhists of Nepāl the thunderbolt (*vajra*) of this god has become the favourite religious symbol. 'Buddhists regard this thunderbolt of Indra as the sacred symbol of their divine Master's victory over the king of the Hindu heavens, and they venerate it accordingly'; all classes of Newārs, Buddhist as well as Hindu, perform the annual festival (*Indra-jātra*) with processions, performances by masked dancers, and illuminations; figures of Indra with outstretched arms appear in all parts of the city of Kāthmāṇḍu (*q.v.*), and are invoked in memory of the sainted dead; in some places the old Vedic rite of uplifting the standard (*dhvajotthāna, in-dradhvaja*) is still performed in his honour (H. A. Oldfield, *Sketches from Nepāl*, London, 1880, ii. 119, 312 ff.; cf. art. ASSAM, vol. ii. p. 137). Among the Hindus of the plains, his heaven (*Svarga*), said to be situated on the peak of the sacred mountain, Meru, is most closely associated with him. There he watches the dances of the nymphs who form his court—a view of his character which naturally commends itself to erotic Hinduism. His culture extends even to the forest tribes, like the Bhills (*q.v.*). In Bengal the non-Aryan Koch venerate a local god under the title of *Hudum Deo*, who is identified with Indra, and rides on his elephant, Airāvata; and in Dinājpur he has suffered still further degradation, seeming 'to be androgynous, and is represented by two figures, male and female, made of clay or cowdung. When drought is feared, the women make offerings of curds, parched rice, and molasses, and dance round the images at night, performing many obscene rites and abusing Indra in the foulest language, in the hope of compelling him to send the much-needed rain' (*Census Report Bengal*, 1901, i. 190 f.). In other places in the same province, after worship is done to him, his image is flung into the river as a mimetic rain-charm, or with the object of purifying the deity, and fitting him to answer the prayers of his worshippers during the coming year (W. Ward, *The Hindoos*², 1817, ii. 32).

(c) *Agni*.—As Indra was the special god of the warriors, so Agni was closely connected with the Brāhmanas; and this devotion, with the intensified belief in the efficacy of the sacrifice, was fully developed in the Brāhmana period. This deity seems to have developed from the cult of the sacrificial fire; but his personification, like that of the Greek Hestia, was never sufficiently anthropomorphic to disguise his ritualistic origin (Farnell, *CGS* v. 358). Some Brāhmanas, known as

Agnihotra, still, in accordance with the sacred law (Manu, iii. 67, xi. 66), maintain the sacred fire, which is produced by means of friction with the fire-stick (*araṇi*). The sacred fire is also kept up at certain temples, such as those in Nepal (Oldfield, ii. 242; D. Wright, *Hist. of Nepāl*, Cambridge, 1877, p. 35; Monier-Williams, *Brāhmanism and Hindūism*¹, 1891, p. 363 ff.). At Juālamukhī (*q.v.*), in the Panjāb, the goddess Devī manifests herself in the jets of combustible gas which rise out of the earth near her shrine. Fire is also venerated as the agency by which the savour of the sacrifice reaches the gods; in the form of the *homa* it is an important part of the ordinary domestic ritual (see art. BRĀHMANISM, vol. ii. p. 803 f.).

(d) *Sun-worship*.—At the present day worship is performed in honour of Sūraj Nārāyan, the Sūrya of the Vedic period, also known under the titles of *Aditya* and *Savitṛ* (see *ERE* ii. 804 f.). All pious Hindus revere the rising sun, and he is invoked when the pilgrim bathes in sacred rivers, and at other domestic rites. But, like the Greek Helios, he is now regarded as a minor god rather than a great divinity, the most probable explanation of his loss of dignity being that his functions have been in a great measure transferred to Viṣṇu. As Farnell (*CGS* v. 420) remarks: "Earth," "hearth," "sun" were names of palpable objects, regarded indeed with some sense of mystery that is the emotional background of religion, but liable to be transformed by the healthy materialistic perception, and in any case too limited in respect of local position, movement, or function to satisfy the true Hellenic idea of godhead.' The sun being a visible god whose beneficence is obvious to all, the Hindu conceives that he has little need of images, and, though some temples, like those at Konārak in Orissa, Gayā in Bengal, and Ayodhya in the United Provinces, are dedicated to him, they are far less numerous than those of the sectarian gods; and his worship as a tribal deity is confined to tribes like the Kāthī of W. India, who are probably a branch of the Gurjāras, and comparatively late emigrants from Central Asia (J. Kennedy, *JRAS*, 1907, p. 987). The Saura sect, which was specially devoted to this form of worship, seems to have practically disappeared (H. H. Wilson, *Works*, London, 1861, i. 19). The cult of this deity which prevails among the non-Aryan tribes is probably not based on imitation of the practices of the Aryans.

(e) *Forgotten Vedic deities*.—This list of four gods—Varuṇa, Indra, Agni, and Sūrya—practically exhausts those cults of the Vedic gods which survive in modern times. Of Mitra, the sun-god, Uṣas, the dawn, the twin Aśvins, Vāyu-vāta, and the Maruts, Pūṣan, deity of roads and cattle, hardly even the names survive. Their places have been taken by a host of minor deities of tribe or village, or their cults have been appropriated by the sectarian gods. The cults of stars and sacred animals, mountains, rivers, and the like, which appear in the Veda have now assumed forms presenting only a faint analogy to the primitive tradition. One cult, well established in Vedic times, that of the Pitṛi, or sainted dead, continues perhaps more than any other to impress the imagination of the modern Hindu (see ANCESTOR-WORSHIP [Indian], vol. i. p. 450 ff.).

9. *Transition from Vedism to Brāhmanism*.—The leading note of the Vedic hymns is cheerfulness; the great gods are the benevolent patrons of their worshippers; they lead the Indo-Aryan in his struggles with the Dasyu, or dark indigenous races; the evils which assail men are the work of demons, against whom the kindly gods wage successful warfare. In the period which

follows, that of the Brāhmaṇas (c. 800–500 B.C.), the prevailing feeling is very different. Its pessimism is perhaps due to climatic environment, and to the general acceptance of the doctrine of metempsychosis. The atmosphere of this age is that of religiosity rather than religion—the quibbles and elaborate ceremonialism of professional priests, contrasted with the peaceful poetry and naive speculations of the Vedic singers on things Divine and human. It may be compared with the transition from the prophetic literature of the Hebrews into legalism, and its crystallization in the later Pharisaism. This change of feeling may be attributed partly to climatic, partly to political, conditions. The Indo-Aryans had by this time advanced some distance down the Ganges valley, where the climate is damper and more depressing than that of the Panjāb. They had apparently broken up into a number of petty States which waged warfare one against the other. They had also come into contact with the non-Aryans, by some called Dravidians, but more probably members of the Mon-Khmer family, who, according to recent investigations, do not seem to have entered the Panjāb in any considerable numbers. Against these Mon-Khmer or Dravidian tribes, known as Dasyu, 'destroyers of the good,' they waged constant war. The clash of these rival cultures formed the source from which modern Hinduism ultimately sprang.

It is a popular error, which vitiates all conclusions regarding the early history of the Hindus, to suppose that these indigenous tribes were all savage barbarians. Many of them were probably forest-dwelling tribes, like the Gonds or Mūṇḍas, or nomadic hordes, like the modern Beḍiyās or Sānsiyās. Collectively they were known to the Indo-Aryans as 'those who do not maintain the sacred fire' (*anagnitṛa*), or 'flesh-eaters' (*kravyād*). Some of them seem to have attained a fairly high level of culture, even possessing, as the jealous Vedic singers admit, forts and cattle, and practising a rude form of husbandry (Muir, *Orig. Skr. Texts*, ii. 395 f., 399). Their religion, like that of their modern successors, was a form of Animism, and they had reached the belief in the existence of the soul after death. 'They adorn,' says an early text, 'the bodies of their dead with gifts, with raiment, with ornaments, imagining that thereby they shall attain the world to come' (Muir, ii. 369). In short, it seems probable that in material culture, as well as in religious belief, they were not far below the standard of the mass of the Indo-Aryans. The importance of this consideration lies in the fact that this uniformity of culture facilitated the union of these two rival stocks, and led to that amalgamation of the cultus of the conqueror and the conquered from which modern Hinduism was evolved.

10. *Contributions to modern Hinduism from the Brāhmaṇa period*.—The chief contributions from this period to Hinduism were: (a) a great system of religious philosophy known as the Vedānta; (b) the supremacy of the Brāhman; (c) the dogma of the efficacy of sacrifice; and (d) the doctrine of metempsychosis.

(a) *Vedāntic pantheism*, 'which is breathed by every Hindu from his earliest youth, and pervades in various forms the prayer even of the idolater, the speculations of the philosopher, and the proverbs of the beggar' (Max Müller, *India, What can it teach us?*, 249), and which has been traced in a hymn of the Rigveda (x. 90), is fully developed in the philosophical literature known as the Upaniṣads. It forms the subject of a special article (see VEDĀNTA, and *ERE* i. 47 f., 137 ff.). Its chief interest at the present time lies

in the fact that its revival is one of the most important movements in the Neo-Hinduism of our day (see § 35).

(b) *The supremacy of the Brāhman.*—The priest, who, in his most primitive form, is an exorcist or medicine-man, appears in Vedic times; but the priestly order does not seem at that period to have been organized into a profession, nor did its members claim to hold office by hereditary right, though transmission of magical powers from one generation to another may have been recognized. The household worship of the early Aryans, conducted by the head of the family, gave way to the intricacies of ritual, and thus led to the creation of the office of *purohita* (*prepositus*, 'he that is set before'), or family priest, whose claim to office mainly rested on his skill in magic (Bloomfield, *SBE* xlii., Introd. lxvii ff.). Haug, however, is inclined to date this office back to the period when Iranian and Hindu formed a single community (i. 67); and it seems clear that the hereditary magical power of the priestly class was recognized even before Vedic times (see *ERE* ii. 43^b). The supremacy of the Brāhman was doubtless closely connected with the denial by the Indo-Aryans to the Dasyu of the right of *connubium*, which was one of the causes which contributed to the establishment of the caste system (Rhys Davids, *HL*, 1881, p. 22 f.). But it is not till the Brāhmaṇa period that Brāhman claims are fully developed. 'The gods,' says the *Aitareya Brāhmaṇa* (Haug, ii. 528 f.), 'do not eat the food offered by a king who has no house priest.' There are, we are told, two kinds of gods, the Devas and the Brāhmanas, the latter being 'deities among men.' At a later time Manu (xi. 85) lays down that 'by his origin alone a Brāhmaṇa is a deity even for the gods, and his teaching is authoritative for men, because the Veda is the foundation for that'; and, again (ix. 317), 'a Brāhmaṇa, be he ignorant or learned, is a great divinity, just as the fire, whether carried forth or not carried forth, is a great divinity.'

The Brāhman of the present day lays claim to the rights accorded to him in the early sacred books; and some of them, like the Nāgars of Gujarāt and the Nambūtiris of Malabar, surround themselves with rigid tabus of various kinds in order to ensure personal purity (A. K. Forbes, *Rās Mālā*, London, 1878, p. 554; J. A. Dubois, *Hindu Manners*, 1906, p. 178 ff.; F. Fawcett, *Bull. Madr. Mus.* iii. 33 ff.; *Census Report Cochin*, 1901, p. 136 ff.; L. K. Anantha Krishna Iyer, *Cochin Tribes and Castes*, ii. [1912] 169 ff.). Owing to its isolation and to the special environment of Orissa, the local Brāhmanas, with their metropolis at Jāipur, possess more power and property than in almost any part of India (W. Hunter, *Orissa*, London, 1872, i. 265 ff.; *Ethnograph. Survey Central Prov.*, pt. v. [Allahabad, 1911] p. 28). But in the case of some of the southern Brāhmanas this affectation of extreme personal purity is not deemed incompatible with the strange marriage law under which some of them, like the Nambūtiris, live in a recognized system of concubinage with women of the Nāyar caste.

The position of the Brāhman in S. India in relation to popular belief is specially interesting, as the respect paid to him depends partly on race, partly on history, and partly on environment. Thus, in the great delta of Tanjore in the S.E. part of the province,

'Brāhman influence is predominant in social and religious matters. In almost all non-Brāhman castes the services of a Brāhman *purohita* (family priest) are indispensable at weddings, funeral and other domestic ceremonies; and the rites observed on these occasions are tinged with Brahmanical observances to a degree which is unapproached elsewhere. Brahmanical Hinduism is here a living reality, and not the neglected cult, shouldered out by the worship of aboriginal godlings, demons

and devils, which it so often is in other districts. Almost every village has its temple dedicated to one of the orthodox gods, holy places are legion, and every important town possesses a *matham* (monastery, lodging-place for ascetics) where ascetics may find shelter, and in which are held discussions by the erudite on disputed questions of doctrine or ritual. Brāhmanas versed in the sacred law are numerous in Tanjore; Vedic sacrifices are performed on the banks of its streams; Vedic chanting is performed in a manner rarely equalled; philosophical treatises are published in Sanskrit verse; and religious associations exist, the privilege of initiation into which is eagerly sought for, and the rules of which are followed earnestly, even to the extent of relinquishing the world' (F. R. Hemingway, *Gazetteer of Tanjore*, Madras, 1906, i. 67 f.). The explanation of this predominance of Brāhmanism probably lies in the influence of the great Chola kings, to whose religious fervour are due the fine temples numerous in the district (Smith, *Early Hist.*, 2, 414 ff.).

In the adjoining District of Madura, however, the situation is different. Though Madura itself is a well-known centre of Brāhmanism, the religious sentiment of the people is Dravidian. The important temple-worship at the chief city creates the impression that the people must be devoted to the worship of the orthodox gods; but a closer examination shows that large areas are devoid of any important shrine dedicated to the members of the Brāhmanical pantheon, and the village people are given over to the worship of the lesser Dravidian godlings. The cult of Śiva is predominant. One reason why Brāhmanas have been unable to impose their rites to any great extent upon the people is that large sections of the community do not regard it as necessary that their marriage or funeral rites should be attended by any professional priest (W. Francis, *Gazetteer of Madura*, Madras, 1906, i. 84).

Passing to the northern Districts of the Presidency, in Bellary on the N. slope of the Deccan plateau,

'the real worship of the people is paid to the shrines of Hanumān [the monkey god] and those of the village goddesses. The former abound, and there is a saying that there is no village without a cock or a Hanumān temple. The village goddesses are many. Besides the usual Māriamma and Durgamma [of whom the former presides over small-pox, while the latter is malignant], the water goddess Gangamma [see GANGES], and the numerous unnamed Uramma, or village mothers, there are several local Ammas [mothers] held in great repute . . . Brāhmā is worshipped in the form of four-faced images, sometimes without any tangible image, a fort well and one of the pillars in a temple being declared to be habitations of him' (W. Francis, *Gazetteer of Bellary*, Madras, 1904, p. 63 ff.).

In the Godāvāri District on the east coast, partially composed of a deltaic region, with tracts of hill country occupied by wild tribes,

'in addition to the orthodox gods, three other classes of deities are worshipped—village goddesses, essentially local in character; caste deities; family deities, namely the *virudu*, or soul of some dead bachelor of the family [*PR*² i. 230, 261], and the *perantam*, or spirit of some woman outlived by her husband, who have been accorded apotheosis because they appeared in a dream to some member of the family, and announced that they have been made immortal. The Telugu Brāhmanas, though in Vedic learning and observance of caste customs not inferior to those in the southern districts, are less scrupulous in minor matters. They will, for instance, smoke and eat opium. They also perhaps have less influence in religious and social matters; the lower castes do not salute them so readily as in Tanjore, nor is there the same desire for their services in social and domestic ceremonies. They do not hold themselves aloof from non-Brāhman castes as in the south' (F. R. Hemingway, *Gazetteer of the Godāvāri District*, Madras, 1907, i. 47, 52 f.).

Of the Brāhmanas of the Deccan, Shridhar V. Ketkar (*An Essay on Hinduism, its Formation and Future*, 1911, pp. 87 note, 80-83) writes:

'Marātha Brāhmanas . . . regard themselves as the élite of mankind, not only because they are Brāhmins, but also because they believe themselves superior to all other Brāhmins in India. To them Gujrath Brāhmins [the Brāhmanas of Gujarāt] are only a caste of water-carriers, and Telang Brāhmins [Tilanga or Carnatic Brāhmanas] are a caste of cooks. They look upon Śārasvata Brāhmanas and the Brāhmanas of Northern India as degenerate because the latter are "fish-eaters." They again believe that all other Brāhmanas, like those of Northern India, are unable 'to pronounce Sanskrit speech correctly.' On account of their pretensions to political and scholarly wisdom the Marātha Brāhmanas 'are far from popular, irrespective of the respect which they may inspire' (p. 87 f.). 'The Brāhmanas are still a power, but their power is extremely limited. All the power they have is that of advisers. They can tell what

is proper and what is improper. They can tell which actions and conduct have scriptural sanction, and which have not, but they cannot compel any other caste to do anything. They again have a power of conferring Vedic or Puranic sacraments, as they are the priests of the nation, but the possibilities of this power, and the good uses to which this power can be applied, are not yet fully realized by them' (p. 80). . . . 'The Peishwas are gone, and so is the power of the Śāstris and Pundits in Poona.' They 'still like to play their excommunication formalities. They often excommunicate persons, either those who have returned from England, or married a widow, or drank tea with Englishmen; but nobody pays attention to their excommunication excepting their own circle, which to-day has become very small and unimportant' (p. 83).

The Brāhmins of N. India, doubtless as the result of a long period of foreign domination, are much less pretentious and exacting. The laxity of practice among those of Kāśmīr and Rājputāna is notorious; and, though the Kanaujiyas exercise extreme care in the matter of food, on the whole the priestly class, particularly in regions occupied by manlier races like the Jāt or Rājput, have lost much of the influence which they once possessed (J. Wilson, *Indian Caste*, Bombay, 1877, ii. 139, 145, 151; Ibbetson, *Punjab Ethnography*, 1883, p. 120). Many of them, like the Gayawāl of Gayā, the Prayāgwāl of Allahābād, the Chaubē of Mathurā, all of whom are pilgrim guides at these sacred places, bear an indifferent reputation. Among the ordinary village Brāhmins the theory of vicarious sacrifice has been so far extended that many of them exist only for the purpose of being fed at funeral and other feasts, and perform no priestly duties. The Brāhmin exorcist and astrologer still maintains much of his influence even among those classes which pretend to have assimilated the learning of the West, and particularly among women, who are specially devoted to the traditional domestic rites.

(c) *The efficacy of sacrifice.*—With the supremacy of the Brāhmin was combined the dogma of the efficacy of sacrifice. 'By sacrifices,' says the *Taittirīya Brāhmaṇa*, 'the gods obtained heaven' (Monier-Williams, *Brāhminism and Hindūism*⁴, 23). According to other Vedas, should sacrifice cease for an instant to be offered, the gods would cease to send the rain, to bring back at the appointed time the dawn and sun, to ripen the harvest, because they would no longer incline to do so, and also, as is sometimes surmised, because they could no longer do so (Barth, *Rel. of India*, 1882, p. 36). There is not much evidence to support the belief that the Indo-Aryan sacrifices depended on the assimilation of the divine life through the eating of the totem animal—a view advocated in the Semitic sphere by W. R. Smith (*Rel. Sem.*² 385 ff.) and further extended by F. B. Jevons (*Intro. to History of Rel.*, London, 1896, p. 103 ff.). There is little trace of totemism in Vedic literature, and we find little proof that the Vedic Indians believed that the sacrifice meant the slaying of the god, or of the conception of the Semitic sacramental meal (Macdonell, *Vedic Myth.*, 153; A. B. Keith, *JRAS*, 1907, pp. 931, 939). It is also improbable that sacrifice in all its complicated details could have been developed from one only of a group of kindred ideas included in the general system of primitive worship. In India it would appear that

'the first aim of sacrifice was to present a simple thank-offering. The second aim was to nourish the gods with the essence of the offered food, and to strengthen them for their duty of maintaining the universe. The next idea was that of making these oblations the means of wresting boons from the invigorated and gratified deities, and so accomplishing some specific earthly object, such, for example, as the birth of a son. A still more ambitious object was that of employing sacrifice as an instrument for the attainment of superhuman powers and even exaltation to heaven' (Monier-Williams, 22).

It gradually became a mystic rite, which of itself gave supernatural power to the worshipper apart from the aid of the god; or it was simply mimetic, the offerer imitating the action which he

desired the god to perform; or it was intended to propitiate spirits or tutelary gods. It gradually became surrounded with that air of mystery which Hindu thought associates with things in themselves trivial, that 'making a parade of symbols which at bottom signify nothing, and of playing with enigmas which are not worth the trouble of trying to unriddle' (Barth, 29).

The great Vedic sacrifices, at which thousands of victims were immolated by hosts of priests—the rite lasting, it is said, in some cases three generations—have quite fallen into disuse; and the number of Brāhmins fully skilled in the elaborate ritual is now small. Human sacrifices, rare in Vedic times, and possibly adopted from the non-Aryan races, increased at a later period; and, though the *meriah* sacrifice of the Kandhs (*q.v.*) has long been suppressed, isolated examples of such practices are still occasionally reported (H. H. Wilson, *Works*, ii. 268 f.; W. Crooke, *Things Indian*, London, 1906, p. 262 ff.; Rajendralāla Mitra, *Indo-Aryans*, London and Calcutta, 1881, i. 111 f.). At the present day sacrifices are of two kinds—bloody and bloodless offerings. The former are usually made to the Mother-goddess in one of her many forms, especially in Bengal and Madras, and among the lower classes of the people rather than among the higher. Their object is to avert the anger of the goddess, to propitiate malignant spirits, or to remove disease or other calamity, or they are made in fulfilment of a vow. Sometimes a compromise is made, the animal being merely laid before the shrine, or its ear is pierced and its blood presented, after which it is released. Bloodless offerings consist of the fire-sacrifice (*homa*), in which butter is cast into the flame so that the sweet savour may reach the gods, or presentations are made of grain, fruit, flowers, or leaves of some sacred tree or plant, which are laid before, or laid upon, the image, and are sometimes accompanied by a water oblation. Śiva, except very rarely in the case of his Himālayan manifestation Paśupati, which was probably adopted from some non-Aryan cult, receives none but bloodless offerings; and this is, of course, the rule in the worship of Viṣṇu, the humanitarian Buddhist tradition being clearly traceable in his cultus. The intention of the modern worshipper is to propitiate the god; 'man needs things which the god possesses, such as rain, light, warmth, and health, while the god is hungry and seeks offerings from man; there is giving and receiving on both sides' (Barth, 35 f.).

(d) *Metempsychosis, palingenesis.*—The most important dogma which was admitted into the official creed during the Brāhmaṇa period was that of the transmigration of the soul. It is not found in the Veda, which inculcates a belief in immortality, and that of a personal nature; but in the *Satapatha Brāhmaṇa* (x. 4. 3) we are told that those who do not perform rites with due knowledge are born again after their decease, and repeatedly become the food of death. As E. S. Hartland points out (*Primitive Paternity*, London, 1909, i. 192 ff.), it was in origin not philosophical dogma, but rather a development of the savage belief in transformation. In many different parts of the world it seems to have been independently discovered (Tylor, *PC*, 1871, ii. 1 ff.); and by some authorities its adoption by the early Hindus is attributed to the non-Aryan tribes (Rhys Davids, *HL*, 82; Macdonell, *Hist. Skr. Lit.*, 387; A. E. Gough, *The Phil. of the Upanishads*, London, 1882, p. 24; G. Oppert, *Orig. Inhabitants*, Madras, 1893, p. 553). It appears, for instance, among the Kāchāris and Rabhas of Assam (*Census Report*, 1912, i. 78). For the development of the doctrine in S. India under the influence of the monism of Śāṅkarāchārya, see *Census Report Madras*, 1912, i.

49 f. When it was taken over by Buddhism, Gautama did not teach the doctrine of the transmigration of souls, for which there is no place in his system, but the transmigration of character; and he held that 'after the death of any being, whether human or not, there survived nothing at all but that being's *karma*, the result, that is, of its mental and bodily actions . . . not a single instance has been found in the older parts of the Pali Pitakas of man being reborn as an animal' (Rhys Davids, *HL*, 92; cf. Waddell, *Buddhism of Tibet*, London, 1895, p. 100 ff.). It is particularly prominent in the Buddhist *jātakas*, or birth-stories, in which the Master describes events which occurred in a previous birth. Closely connected with this doctrine is that of *ahimsā*, the respect for animal life, which was accepted by Buddhism, more fully developed by Jainism, and is now observed by the Vaiṣṇava sectarians, who owe the inspiration largely to Buddhism. In opposition to Barth (p. 97), Hopkins (*Rel. of India*, 199 f.) denies that 'aversion to beast-sacrifice is due to the doctrine of *karma*, and re-birth in animal form. The *karma* notion begins to appear in the Brahmanas, but not in the *samsāra* shape of transmigration. It was surely not because the Hindu was afraid of eating his deceased grandmother that he first abstained from meat. For, long after the doctrine of *karma* and *samsāra* is established, animal sacrifices are not only permitted but enjoined; and the epic characters shoot deer and even eat cows.'

At the present day the dogma is widely accepted. In N. India most Hindus believe that wrong-doing is displeasing to Parameśvara, the great god, and that the wrong-doer must suffer for his acts, possibly in the present existence, but certainly in his future life or lives. It is, however, doubtful whether the future penalty is in any way connected with that to which the sinner is liable in the present life, because the operation of the law of *karma* is regarded as so certain that the specific condemnation by Parameśvara in each case is seldom required (*Census Report United Provinces*, 1901, i. 76). The same writer remarks that a fundamental difficulty in the way of the spread of Christianity results from a belief in transmigration, which is in direct conflict with the belief in a Divine atonement. H. A. Rose, again (*Census Report Panjāb*, 1901, i. 161 ff.), quotes, as a development of the transmigration theory, the belief that certain classes and castes possess powers of causing evil or curing disease which are believed to be supernatural and to pass from one generation to another. These powers are independent of worldly status, and a person who possesses them retains them even when he pursues a menial occupation, provided it be not so disgraceful as to involve ostracism by his brethren. This, however, is the recognition of the influence of heredity rather than of direct transmigration. Several birth customs in the Panjāb—burial of infants near the house door; offering of milk after the death of a child; the belief that, if jackals or dogs disinter the corpse and drag it towards the house or village, the child will return to its mother; the preservation of the clothing of dead infants—illustrate the same belief (*Census Report Panjāb*, 1912, i. 299). On the subject of metempsychosis, see A. Bertholet, *The Transmigration of Souls*, London, 1909.

11. The anti-Brāhmanical reaction.—While, during the period represented by the Brāhmana literature, the priestly body was engaged in elaborating the cultus, and the philosophers were engrossed in the study of the nature and destiny of the soul, the mass of the people was little affected by ritual or speculation, and the time was ripe for

change. Hence arose both Buddhism and Jainism, almost contemporaneous movements, due to the reaction against the claims of the Brāhmins to a monopoly of admission to the ascetic orders (see Hoernle, *JASB*, 1898, p. 39 ff.).

'When Buddhism arose, the accepted and general belief was that the souls of men had previously existed within the bodies of other men, or gods, or animals, or had animated material objects; and that when they left the bodies they now inhabited, they would enter upon a new life, of a like temporary nature, under one or other of these various individual forms—the particular form being determined by the goodness or evil of the acts done in the previous existence. Life, therefore, was held to be a never-ending chain, a never-ending struggle. For however high the conditions to which a soul had attained, it was liable, by an act of wickedness, or even of carelessness, to fall again into one or other of the miserable states. There was a hopelessness about this creed in direct contrast to the child-like fullness of hope, the strong desire for life, that is so clearly revealed in the Vedas' (Rhys Davids, *HL*, 17). It was the distinguishing characteristic of Buddhism that it swept away the whole of the animistic soul theory, 'which had hitherto dominated the minds of the superstitious and the thoughtful alike. For the first time in the history of the world it proclaimed a salvation which each man could gain for himself, in this world, during this life, without the least reference to God, or to gods, either great or small' (*ib.* 29).

The main distinction between Jainism and Buddhism lay in the fact that the former specialized and intensified the earlier ascetic discipline, and prescribed reverence for life, not only human, but immanent in animals, plants, fire, earth, water, and wind; while Buddhism advocated asceticism in a milder form, and found salvation for its members in knowledge and right living.

It has often been suggested that this movement was part of a wide-spread religious and social revival.

The sixth century B.C. is one of those epochs in the history of our race which mark a widespread access of spiritual vitality. In the case of Hellas it is still a moot question how far some fresh impact from Egypt or from further east had to do with this. But a sort of pantheistic awakening, at once intellectual and religious, beginning from many centres, of which the names of Pythagoras, Heraclitus, Parmenides, and the mythical Orpheus may serve to remind us, had set going a wave of mingled speculation and aspiration, which at one time threatened to destroy mythology, at another to transmute it into novel forms. Wants hitherto unmet were met in various ways. Individuals were not satisfied with the traditional and conventional worship of the family or of the state. There was a deepening sense, we know not how infused, of guilt requiring atonement, of pollution crying for purgation, a feeling which had its roots in very early times, but was now becoming universal' (L. Campbell, *Religion in Greek Literature*, London, 1898, p. 127 f.; cf. also Casartelli, in *Spiegel Mem. Vol.*, Bombay, 1908, pp. 130-132).

According to the most probable theory, this was the age of Zoroaster (660-583 B.C.; West, *SBE* xlvii. [1897], Introd. xxvii, xxxviii). The Hebrew prophetic literature, starting in the 8th cent., continued during this period (*HDB* iv. 112). In the Tigris-Euphrates valley, Nineveh fell in 607-6 B.C.; Babylon was captured by Cyrus in 539 B.C.; the life of Buddha may approximately be fixed between 567 and 487 B.C. (see *ERE* ii. 881). As in the case of the Heroic Age in Europe, racial disturbances, tribal unrest and movement, promoted individualistic tendencies in this new grouping of peoples. It is at present, however, impossible to trace any real connexion between these almost contemporaneous historical and literary events, or to find any evidence of the communication of the ideas underlying Buddhism from the east to the west, except that they were all the results of a long series of previous movements; 'and these previous movements were, in fact, so similar that they ran on nearly parallel lines resting on the common basis of animistic conceptions. And similar causes acting in these parallel lines took about, though by no means exactly, the same time to produce corresponding results' (Rhys Davids, *HL*, 123).

12. The relations of Buddhism to the rival religions.—Buddhism and Jainism, as we have seen, were the results of parallel and almost contemporaneous movements, organized outside the Holy Land of the Brāhmins, by Kṣatriyas, in

opposition to Brāhman claims. But, in spite of this initial antagonism, during the early period the three rival faiths seem to have existed side by side in comparative harmony. The lay members of the Buddhist and Jain orders, while they looked for spiritual guidance to their own teachers, retained the services of their Brāhman priests for the performance of domestic rites. Buddhism has so completely disappeared from the Indian northern plains that it is impossible from modern facts to illustrate the conditions which prevailed at the period of its origin and vigour.

Even to the present day the orthodox Buddhists of Nepal combine the worship of Śiva with that of Buddha, and employ Brāhmans in sacred and domestic rites (Oldfield, ii. 147). The same fusion between Buddhism and Brāhmanism, especially in the cult of Śiva, prevails in Ceylon, and was recognized under the late Burmese dynasty at Mandalay (R. S. Hardy, *Eastern Monachism*, London, 1850, p. 201 ff.; Shway Yoe [J. G. Scott], *The Burman*, 1882, i. 173; H. Yule, *Mission to Ava*, 1855, London, 1858, p. 50 f.). In continental India the same conditions prevail in the case of Jainism. Jains, as a rule, at present freely worship the Hindu gods that are connected with the legends of their saints. In Bombay, Mārāvāri Jains worship Viṣṇu and Kṛṣṇa as Bālājī, and observe Hindu fasts and holidays; some even worship the Śaktis, or Mother-goddesses (Ferguson-Burgess, *Cave Temples*, 1880, p. 487; *BG* v. [1880] 52, ix. [1901] pt. i. p. 111, xxi. [1884] 105, xxii. [1884] 125; Wilson, *Works*, 1861, i. 321). In Baroda the Vaiṣṇava and Jain sections of the Vāpia or merchant caste freely intermarry; and, when a Vaiṣṇava girl is married in a Jain family, she attends Jain rites while she is at her husband's house, and worships the old Brāhmanical gods when she visits her parents—a condition of things which prevails among similar castes in other parts of the country (*Census Report Baroda*, 1901, i. 492 f.; *BG* ix. [1901] pt. i. p. 100; Ibbetson, *Punjab Ethnography*, 130). In S. India, while a Śaiva will neither eat food nor intermarry with a Vaiṣṇava, the ancient hostility between Jains and Hindus has nearly disappeared; but in the Central Provinces, though they may dine together, they do not intermarry (R. V. Russell, *Gazetteer of Nagpur*, 1908, i. 67, 71). The line, in fact, which divides Jains from Hindus can with difficulty be traced; and there are other sects, admittedly Hindu, which present greater divergence from orthodox Brāhmanism.

The evidence of the Chinese pilgrims and that derived from other sources proves that the same tolerance of the rival faiths prevailed during the greater part of the period when Buddhism was in the ascendant, and even when it began to show symptoms of decay. The actual decay of Buddhism, which was due to internal weakness and the competition of the revived Brāhmanism, seems to have set in about A.D. 700; and, while it still held its ground in remote parts of the land, its final disappearance was due to the Muhammadan occupation of N. India. Buddhism in its early form was probably too simple, and was thus ill adapted to supply the religious needs of a race which has always found a sensuous type of worship more attractive. It demanded from its followers a standard of morals which was in advance of their stage of culture. It involved the discontinuance of sacrifice, and of the myriad ritualistic devices by which the Hindu has ever tried to win the favour, or avert the hostility, of his gods. It abolished the personality of Brahma, into whom most orthodox Hindus hope eventually to be absorbed, and it substituted the vague conception of Nirvāṇa, which meant to Buddha the extinction of lust, anger, and ignorance; to the Jains and some Buddhists eternal blissful repose; to other Buddhists extinction and annihilation (Hopkins, 321; Rhys Davids, *HL*, 283).

The State in India has always been tolerant of every form of religion (see A. Lyall, *Fortnightly Review*, Nov. 1908, p. 717 ff.); and this rule was followed by the great Buddhist Emperor Aśoka (q.v.). Though it may be true that the gradual downfall of Buddhism in the Indian plains was due to causes other than persecution, it is also certain that fanatical rulers from time to time indulged in savage outbursts of cruelty, and that both Buddhists and Jains were victims of outrage.

That such outbursts of wrath should have occurred is not wonderful, if we consider the extreme oppressiveness of the

Jain and Buddhist prohibitions when ruthlessly enforced, as they were by some Rājās, and probably by Aśoka. The wonder rather is that persecutions were so rare, and that as a rule the various sects managed to live together in harmony, and in the enjoyment of fairly impartial official favour' (Smith, *Early Hist.* 2, 191; for a somewhat different view, see Rhys Davids, *Buddhist India*, 319).

13. The continuity of Brāhmanism and the rise of Hinduism.—Thus Brāhmanism, even during the ascendancy of Buddhism, never suffered complete extinction, though it undoubtedly lost much of its dignity and importance when Buddhism in N. India and Jainism in the S. and W. enjoyed the patronage of ruling powers and were elevated to the rank of State religions. The extension of Indo-Aryan colonization, the continuous absorption of the non-Aryan tribes, and, finally, the establishment of the great Maurya Empire under Aśoka (272–232 B.C.), which ruled the greater part of the Peninsula, led to a modification of the earlier forms of Hindu belief. The Hindu has always been accustomed to localize his gods, and probably from the earliest times the tutelary village-gods received more veneration from the masses of the population than the deities of a higher class whose cultus was the monopoly of the priestly body. This was the case with the Roman colonists under the Empire.

'The conditions of health and disease are so obscure, the influences of will and imagination on our bodily states are so marked, that, in all ages, the boundaries between the natural and the unknowable are blurred and may be easily crossed. . . . On hundreds of provincial inscriptions we can read the catholic superstition of the Roman legionary. The mystery of desert or forest, the dangers of march and bivouac, stimulated his devotion. If he does not know the names of the strange deities, he will invoke them collectively side by side with the gods whom he has been taught to venerate' (S. Dill, *Roman Society from Nero to Marcus Aurelius*, London, 1904, pp. 459, 480; and see artt. DRAVIDIANS).

It was from this combination of Aryan and non-Aryan cults and beliefs that the Neo-Brāhmanism took its rise.

14. The Scriptures of the Neo-Brāhmanism.—The literature of the new form of Brāhmanism is all the work of, or inspired by, the Brāhman hierarchy. The theory which it suggests is that there was no violent break between the older and the newer faith. Hence it is difficult to trace the stages of the evolution by which the theology was reconstructed.

(a) *The Purānas*.—This difficulty has been increased by a long-standing error regarding the date of that body of literature known as the Purānas. To the Hindu mind their name—'Archæologia,' 'the ancient writings'—suggests immemorial antiquity. It has been the habit of critics to date the best known of them, *Viṣṇu Purāna*, about A.D. 1045 (H. H. Wilson, *Viṣṇu Purana*, London, 1840, *Intro.* lxxii). It has, however, recently been proved that this and other important works of the same series must be dated about A.D. 500, while the *Vāyu Purāna* is referred to the 4th cent., and all the principal works, which in their present form are recensions of a much older body of literature, were re-edited in the Gupta period (A.D. 320–480), when the study of Sanskrit was revived (Smith, *Early Hist.* 2, 19 f.; Macdonell, *Sk. Lit.*, 299). From this conclusion the important result follows that the growth of the Neo-Brāhmanism was contemporaneous with the decay of Buddhism in N. India, and its development naturally progressed side by side with that of the later Buddhism and Jainism.

(b) *The Law literature*.—The second body of literature connected with this religious revival is that of the Law-books. These, like the Purānas, are the result of various recensions. The two most important, the *Vaiṣṇava Dharmasāstra* and the *Mānava Dharmasāstra*, probably assumed their present form about A.D. 200; and the latter is closely connected with the *Mahābhārata*, contain-

ing many verses quoted from that Epic (Bühler, *Manu* [SBE xxv. (1886)], Introd. xxi; Macdonell, *Skr. Lit.*, 428). But, according to Bühler, the Law-book did not borrow from the Epic; both authors used the same materials; and those materials were not systematic treatises on law and philosophy, but the floating proverbial wisdom of the philosophical and legal schools, which already existed in metrical form. Manu's treatise, which has become for modern Hindus the text-book in matters connected with religion and social observances, represents the period before the recognition of the sectarian gods in the schools where it originated. It nowhere teaches the performance of rites other than Vedic; it nowhere inculcates the worship of any of the deities of the Paurāṇic school; nor is there any hint that it was intended to form a digest of the sacred Law. It rather bears unmistakable marks of being a school book, intended for the instruction of all Āryas (Bühler, *SBE* xxv., Introd. lv). It contains no allusion to the post-Vedic Trimūrti, the triad consisting of Brahmā, Viṣṇu, and Śiva, the last two gods being only once mentioned by name (xii. 121); and it ignores the cultus of the Śakti (female powers), and the efficacy of fervent faith in Kṛṣṇa (see art. BHAKTI-MĀRGA, vol. ii. p. 539 ff.). The great god is Prajāpati, lord of created beings; the Brāhman and his teacher are objects of reverence, and hell is the fate of those who insult or injure them (ix. 319, iv. 165). A Brāhman who serves his teacher until death enters forthwith the eternal mansions of Brahma. Image-worship is casually observed, but temple priests are spoken of with a measure of contempt (iii. 152, 180). The doctrine of transmigration is clearly stated, and, as a consequence of this, the various hells described, though places of terrible torture, resolve themselves merely into places of temporary purgation, while the heavens become only steps on the road to union with Brahma. The dignified isolation or calculated reticence of the school is shown by the absence of reference to Buddhism; and two verses which speak of the Mlechchha, or barbarian (ii. 23, x. 45), are devoid of any particularity which would identify them with the Greeks or any other foreign races. For the ethical tone, see *IA* iv. [1875] 121 ff.

(c) *The Epics; the Mahābhārata*.—It is in the Epic literature, represented by the *Mahābhārata* and the *Rāmāyaṇa*, that the literary evolution of the Neo-Brāhmanism is most fully illustrated. This period may be fixed roughly from 500 to 50 B.C. But behind this probably lies a long period, when, as in the case of Homer, the ballads out of which the Epics were compiled existed in an oral form. Episodes are embedded in the existing texts which may be regarded as fragments of older narratives, the antiquity of which is proved by the fact that their subject-matter often refers to the resistance offered by the warrior class to the growing claims of the Brāhman hierarchy.

The *Mahābhārata*, after undergoing various recensions, is believed to have grown round a legendary nucleus during some eight centuries (400 B.C.—A.D. 400) (see Hopkins, *The Great Epic of India*, London, 1901, p. 398). The war between the Pāṇdavas and Kauravas, which forms the main subject of the poem, has been supposed to represent the contest between two successive bodies of Indo-Aryan immigrants, the former a Himālayan tribe practising polyandry, whose deity was Kṛṣṇa Vāsudeva, the traditional founder of the anti-Brāhmanical monotheistic Bhāgavata religion; the second much later comers and supporters of official Brāhmanism (G. A. Grierson, *Census Report India*, 1901, i. 287 ff., *JRAS*, 1908, p. 604 ff.; A. Weber, *IA* xxx. [1901] 281 ff.). The Kṣatriya party won the day, but had in the end to yield to the

supporters of Brāhmanism. In this Epic the transition from the older to the newer Hinduism is marked in various ways. The facts have been carefully collected and analyzed by E. W. Hopkins (*Rel. of India*, 351 ff.). There is, first, an abnormal growth of *yoga*, or mental concentration.

'In the Brāhmanas it is the sacrifice that is god-compelling; but in the epic, although sacrifice has its place, yet when miraculous power is exerted, it is due chiefly to Yoga concentration, or to the equally general use of formulæ; not formulæ as part of a sacrifice, but as in themselves potent; and mysterious *mantras*, used by priest and warrior alike, serve every end of magic.'

Caste distinctions are now fully recognized, and the most heinous crime is to commit an offence against caste order. On the other hand, the greatest merit is to present gifts to priests, whose insolence, greed, and rapacity are constantly dwelt upon. This, however, applies chiefly to court Brāhmanas and to ascetics, who are above all law, while the village Brāhmanas and hermits are free from the reproach attaching to their hypocritical, debauched brethren. Apart from the sectarian gods, the chief objects of worship are priests, the *manes*, and, for form's sake, the Vedic gods. These, with the addition of Kubera, god of riches, are now degraded to the rank of 'world guardians' (*lokapāla*), and are definitely subordinated to the newer divinities. Among the latter is now included Dharma Vaivastava, the god of justice, son of the Sun-god. Another new and interesting figure is Kāma, god of love, who, in the form of the personification of sexual desire, is as old as the Atharvaveda (ix. 2, iii. 25) and is still the subject of a Mystery Play in S. India (E. Thurston, *Castes and Tribes of S. India*, iv. 399 ff.). In the Purānas he is provided with a consort, Rati or Revā, goddess of desire; and it has been suggested that his eminence is due to association with the Greek Eros, through the agency of Greek slave-girls, who about this time were imported into W. India (J. W. McCrindle, *Periplus*, Calcutta, 1879, p. 123; *IA* ii. [1873] 145). The old Nature-worship is represented by the cult of mountains, rivers, and sacred trees, many ancient rites and beliefs being concealed under the 'all-embracing cloak of pantheism,' which appears in the Epic. It has been alleged that phallus-worship is often mentioned in the *Mahābhārata*, as if it had always been common everywhere throughout N. India; but this assertion has been disputed (Rhys Davids, *Buddhist India*, 165 f.; B. C. Mazumdar, *JRAS*, 1907, p. 337 ff.). The local theriolatry is illustrated by the cult of Hanumān or Hanumat, the monkey hero of the *Rāmāyaṇa*, who in later times has become the chief village guardian deity. Serpent-worship appears in the cult of Nāgas.

From the religious point of view the most interesting portion of the Epic is the *Bhagavad-gītā*, in which the Supreme Being incarnate as Kṛṣṇa expounds to Arjuna the result of the eclectic movement combining the Sāṅkhya, Yoga, and Vedānta doctrines (see *ERE* ii. 535 ff.). It is now certain that portions of this poem, in which the doctrine of *bhakti*, or fervent faith, is taught, are pre-Christian, and therefore the doctrine itself is of indigenous Indian origin (*ib.* ii. 547^b).

'Nothing in Hindu literature is more characteristic, in its sublimity as in its puerilities, in its logic as in its want of it. It has shared the fate of most Hindu works in being interpolated injudiciously, so that many of the puzzling anomalies, which astound no less the reader than the hero to whom it was revealed, are probably later additions. It is a medley of beliefs as to the relation of spirit and matter, and other secondary matters; it is uncertain in its tone in regard to the comparative efficacy of action and inaction, and in regard to the practical man's means of salvation; but it is at one with itself in its fundamental thesis, that all things are each a part of One Lord, that men and gods are but manifestations of the One Divine Spirit, which, or rather whom, the Vishnuite re-writer identifies with Krishna, as Vishnu's present form' (Hopkins, *Rel. of India*, 390).

It has become the Gospel of the Vaiṣṇava sectarians, and is the inspiration of the new school led

by Vivekānanda (see § 35). For a criticism of its theology from the Christian standpoint, see Slater, *Higher Hinduism*, 1902, p. 126 ff.

(d) *The Rāmāyaṇa*.—While the *Mahābhārata* thus collected and popularized the legends and traditions which had their centre in the Holy Land of the Hindus, the Eastern Panjāb, the same service was done by the second Epic, the *Rāmāyaṇa*, for the eastern stories which originated in the kingdoms of Magadha and Kosala, the present W. Bengal. Like the *Mahābhārata*, in its present differing forms, it is the result of a long series of recensions, and considerable additions have been made to the original nucleus, which 'appears to have been completed at a time when the epic kernel of the *Mahābhārata* had not as yet assumed definite shape'; and this earlier portion seems to be pre-Buddhistic (Macdonell, *Hist. of Skr. Lit.*, 306 f.; Rhys Davids, *Buddhist India*, 183 f.). The first portion, that treating of the banishment of the hero Rāma, is in form a historical saga, widely differing from the second part, which records the extension of Brāhmanism into S. India; but the story is based on N. Indian myths, and in the heroine, Sītā, who is represented as having emerged from the earth when her father was ploughing, we recognize the favourite myth of the Earth-spirit mated to a consort, from whose union, by a sort of mimetic magic, the fertility of men, cattle, and crops is assured.

From a religious point of view the *Rāmāyaṇa* is much less interesting than the *Mahābhārata*, because it has been remodelled by a single hand, that of Vālmiki, the traditional author, who has manipulated his materials to produce at once an artistic poem and a religious treatise, in the interest of the Rāma-worshipping section of the Vaiṣnavas.

15. **The historical development of Neo-Brāhmanism.**—The scanty information which we possess of the history of this period has been collected and arranged from materials derived from the writings of Greek travellers and Buddhist pilgrims, with the aid of inscriptions and coins, by V. A. Smith (*Early Hist.*²).

The Maurya dynasty, founded by Chandragupta Maurya (321 B.C.), attained its supremacy under Aśoka-varḍhapa (see *ERE* ii. 124 ff.), who made Buddhism the State religion. It was destroyed in 184 B.C. by Puṣyamitra Śuṅga, who, in order to assert his claim to be paramount sovereign, performed the antique rite of the horse-sacrifice (*āsvamedha* [q.v.]), thus marking the beginning of the Brāhmanical reaction against Buddhism, which was fully developed under Samudragupta and his successors five centuries later. At the same time, there is no evidence that Buddhists or Jains suffered persecution. Under the next dynasty, the Kāpva, we find the king supporting the ideal system of Manu, and acting under the advice of Brāhman ministers. This was followed by the Āndhra dynasty, among the kings of which Hala is famous as a patron of Prakṛit literature.

In the obscure period which followed, N. India was overrun by hosts of invaders from the north under the names of Śaka or Scythians, and Pahlavas or Parthians. The dates are much disputed; but it appears that about A.D. 60 the Yuehchi or Kuśān dominion was consolidated in the N.W. by Kadphises I., and that his successor, Kadphises II., annexed N. India and destroyed the Indo-Parthian power in the Panjāb. This Kuśān empire lasted till A.D. 226. The important point to be noted here is that these foreign chieftains rapidly succumbed to the influence of their new environment. Kanaiśka and Huviška seem, at least formally, to have become Hindus; Vāsudeva (c. A.D. 185-226) bears an Indian name, and adopted Śaiva symbols on his coins (J. Kennedy, *JRAS*, 1907, p. 967).

From this point we have hardly any information until the rise of the Gupta empire under Chandragupta I. (A.D. 326-375), whose successor, Samudragupta, showed his sympathy with orthodox Brāhmanism by performing the horse-sacrifice. The claim to perform this rite, symbolic of supreme power, was asserted by various Hindu princes in S. India in the early centuries of our era (Rice, *Mysore and Coorg from the Inscriptions*, 1909, p. 209 f.). 'Whatever may have been the causes, the fact is abundantly established that the restoration of the Brāhmanical religion to popular favour, and the associated revival of the Sanskrit language, first became noticeable in the second century, were fostered by the western satraps during the third, and made a success by the Gupta emperors in the fourth century. These princes, though apparently perfectly tolerant of both Buddhism and Jainism, . . . were themselves, beyond question, orthodox Hindus, guided by Brahman advisers, and skilled in Sanskrit, the language of the pundits. An early stage in the reaction against Buddhist condemnation of sacrifice had been

marked by Puṣyamitra's celebration of the horse-sacrifice towards the close of the second century. In the fourth, Samudragupta revived the same ancient rite with added splendour; and in the fifth, his grandson repeated the solemnity. Without going further into detail, we may sum up the matter in the remark that coins, inscriptions, and monuments agree in furnishing abundant evidence of the recrudescence during the Gupta period of Brāhmanical Hinduism at the expense of Buddhism, and of the favour shown by the ruling powers to "classical" Sanskrit at the expense of the more popular literary dialects' (Smith, *Early Hist.*², 287).

The Gupta empire fell before the attack of another body of invaders, the Huns, about A.D. 500.

These successive inroads produced important results on the ethnology of N. India. The progress and final absorption of these foreigners in the Hindu population have recently been fully investigated for W. India (*BG* ix. [1901] pt. i. p. 433 ff.). The Hūna, or Hun, invaders were admitted by the Brāhmins among the Kṣatriya or warrior class—a fact disguised under the legend of the fire-initiation at Mount Ābū (*ERE* i. 51 f.). Similar legends describe the successive introduction of foreigners into the Brāhman hierarchy (V. A. Smith, 'The Gurjaras of Kāpūtāna and Kanauj,' *JRAS*, Jan.-June 1909; D. R. Bhandarkar, 'The Guhilots,' *JASB*, 1909, p. 167 ff.).

The influence of these foreigners on Hindu beliefs must have been considerable; but the official Brāhman literature gives little or no indication of the process of the reconstruction of the faith during the period of foreign rule. When we come to the establishment of the national power under Harṣa (A.D. 606-645), the evidence is more complete. He was a Hindu, but in his later life favoured Buddhism. He worshipped at times Śiva or the Sun, or followed the Buddhist rule, and he impartially erected temples to all three. Most of his subjects worshipped the sectarian gods, and selected as their patron deity whichever god they preferred (see Cowell-Thomas, *The Harṣa-carita of Bāṇa*, London, 1897, *Introd.* xii ff.; M. L. Ettinghausen, *Harṣa Vardhana*, Louvain, 1906, ch. ii.). Thus the modern sectarian worship was gradually established in N. India; and the same revival occurred in the Deccan under the Chalukya king, Pulakeśin I. (A.D. 550-608), who, in the decadence of Buddhism, is said to have performed many Hindu sacrifices, including the *āsvamedha*, or horse-rite (*BG* i. [1896] pt. ii. p. 191). The activity of the new faith is shown in the erection of numerous cave temples in the period A.D. 500-800 (Fergusson-Burgess, *Cave Temples*, 1880, p. 403).

16. **The extension of Brāhmanism in S. India.**—The extension of Hindu influence into the South was obstructed by the great forest tract known as Dandakāraṇya, the present Marāṭha country, and by the ranges of the Sātpura and Mahādeo hills which cross the Peninsula, dividing the North from the plateau of the Deccan. Hence, at the outset, Brāhman missionaries seem to have made their way along either the eastern or the western coastline, or by the sea route. The question has been discussed in the article on the Bombay Presidency (*ERE* ii. 788), and the facts there collected need not be repeated. The Aryans before the 7th cent. B.C. seem to have had little knowledge of the Deccan; and R. G. Bhandarkar dates their acquirement of information regarding the southern region about 350 B.C. (*BG* i. pt. ii. p. 141). The question has also been discussed by Rhys Davids (*Buddhist India*, 23 ff.), by Caldwell (*Dravidian Grammar*², London, 1875, p. 114 ff.), and by H. A. Stuart, quoted by Thurston, *Castes and Tribes of Southern India*, i. 373 ff. Burnell (*IA* i. [1872] 310) believes that about A.D. 700 Brāhmanical influence was inconsiderable in the South, and that the Skr. place-names which are found appear only in the fertile deltas and at the seaports, where they were probably introduced by Buddhist missionaries. The latest discussion of the subject (A. Govindacharyar Svāmin [*IA* xli. [1912] 227 ff.) rejects Burnell's view, and places the 'Arianization of the South' after the 6th and before the 3rd cent. B.C., which is too early. The modern school of S. Indian scholars naturally adopts the higher

series of dates. Whatever may be the exact date of the introduction of Brāhmanical beliefs and practices into S. India, it was certainly, when contrasted with N. India, comparatively late; and this fact accounts for the characteristic form of S. Indian Brāhmanism, which has developed on lines of evolution quite different from those of the North (V. Kankasabhai, *The Tamils: Eighteen Hundred Years Ago*, 1904, p. 227 ff.; L. K. Anantha Krishna Iyer, *Cochin Tribes and Castes*, ii. [1912] 171 f.; Rice, *Mysore and Coorg from the Inscriptions*, 204 ff.).

17. The establishment of Hinduism in its modern form.—We have now reached the stage at which the Brāhmanical reaction against Buddhism and Jainism was completed, and Hinduism, as we find it in existence at the present time, was firmly established. The Brāhmins now controlled the law and social institutions of the people. The theory of caste was fully adopted, and they were placed at the head of society; the movement led by the Kṣatriyas in opposition to them had collapsed.

All philosophy, except their own pantheistic theosophy, had been driven out of the field. But Vedic rites and Vedic divinities, the Vedic language and Vedic theology, had all gone under in the struggle. The gods of the people received now the homage of the people. Bloody sacrifices were still occasionally offered, but to new divinities; and Brahmins no longer presided over the ritual. Their literature had had to be recast to suit the new worship, to gain the favour and support of those who did not reverence and worship the Vedic gods. And all sense of history had been lost in the necessity of garbling the story of the past so as to make it tally with their own pretensions. . . . A small and decreasing minority continued to keep alive the flickering lamp of Vedic learning; and to them the Indian peoples will one day look back with especial gratitude and esteem* (Rhys Davids, *Buddhist India*, 157 l., who possibly somewhat overstates the case).

18. The development of Hinduism.—The Neo-Brāhmanism, henceforward to be called 'Hinduism,' was developed in two ways: first, by the creation, mainly illustrated by the Epic and Paurānic literature, of a gallery of deified personages, the legends regarding whom were largely drawn from the current folk-lore or popular tradition, and, by a reconstruction of the traditions, were in a measure connected with the system which they had superseded; secondly, by the adoption of deities, religious myths, and cults derived from the races beyond the Brāhmanical pale.

We have examples of the first class in the deified heroes of the *Mahābhārata*, the five Pāṇḍava brethren, whose cults still prevail in various parts of the country; at many sites in the Himalaya; at Benares; in the Konkans and the Deccan; in S. India (Atkinson, *Himalayan Gazetteer*, ii. [1884] 281 f.; M. A. Sherring, *The Sacred City of the Hindus*, London, 1868, pp. 67, 177, 217; *BG* i. pt. i. [1896] p. 278, xxii. 389, xiii. 404; Fergusson-Burgess, p. 113; Thurston, *Ethnogr. Notes*, Madras, 1906, pp. 146 ff., 249, 301). The second process by which the pantheon has been formed was by the adoption and absorption of the local deities, this localization being a feature which Indian polytheism shares with the Semites and the Egyptians (W. R. Smith, *Rel. Sem.*², 38 ff.; Sayce, *HL*, 89, 121; A. Erman, *Life in Ancient Egypt*, Eng. tr., London, 1894, p. 259 f.; A. Wiedemann, *Rel. of the Anc. Egyptians*, do. 1897, p. 8 f.). Naturally, the process of absorption, in India as in Greece, assumed many and varied forms.

* We recognize now that the personages of the Greek and other polytheisms were not pure crystallized products of a single and identical people, but were modified variously by their environment, borrowing traits and epithets from other local powers whom they may have dispossessed or with whom they may have shared their rule. . . . The divine name, especially in ancient religions, was a powerful talisman, a magnet attracting to itself a definite set of cult-ideas and legends* (Farnell, *CGS* v. 86 f.).

The worship of vague spirits of the forest by the most primitive tribes, as the stage of settled agriculture displaces nomadism, develops into the

cult of spirits which promote the fertility of the soil, cattle, and men. In Manipur, for instance, no fewer than 'four definite orders of spiritual beings have crystallized out from the amorphous mass of animistic Deities' (Hodson, *The Meitheiis*, 1908, p. 96). By degrees, one of these local deities, usually known in N. India as Devī, in S. India as the Grāmadevatā and Aiyānār, the central figure of the Dravidian pantheon, pushes itself into notoriety, and is finally adopted by Brāhmanism. This may occur because the shrine is on the borders of the territory occupied by more than one allied tribe or village, and thus acquires a reputation more than local; or because at this particular place there has been a manifestation of special spiritual power, shown by the 'possession' of the medicine-man or his followers, or by some notable case of healing. Such a shrine is, in process of time, appropriated by some low-caste Brāhman priest, and the local deity comes gradually to be identified with some manifestation or incarnation of one of the greater gods. Hence arose the Devī or Kālī of Calcutta, of the Vindhyan hills, of Devipātan in Oudh, and the Bhavānī of Tuljāpur in the Nizām's Dominions, who possess powers of magic, wonder-working, and healing superior to those of the village-goddesses from whose ranks they have been promoted. The same is the case with the shrines dedicated to men who gained a reputation for good works or wickedness in this life (Lyall, *Asiatic Studies*², i. 1 ff.). Of course, it is not always possible to trace the exact course of the evolution. This difficulty is increased in India by the absence of expressive cult-titles, which in Greece have so largely facilitated the analysis of the elements of the pantheon (*CGS* i. 35 ff.).

19. Modern Hinduism defined.—In tracing the evolution of religion in India, no problem is more difficult than that of framing a definition of Hinduism as we observe it at the present day. Many of the tests which have been proposed from time to time are obviously inadequate. Thus it has been said that a Hindu is one who cremates the adult dead. But certain classes of Hindu ascetics, like the Bishnoīs of the Panjāb and the Lingāyats of the Deccan, always bury their dead; and among the lower classes of Hindus both forms of disposal of the corpse are in use. Again, it is said that a Hindu is one who receives religious service at the hands of Brāhmins. But in the Panjāb nearly all Sikh villagers reverence and employ Brāhmins as their Hindu neighbours do, and the same is the case with the Jains; while many Hindus who have been converted to Islām appoint the Brāhman to conduct their marriages according to the Hindu rule, adding the Muhammadan ritual as a legal precaution (Ibbetson, *Punjab Ethnography*, 112 f.).

The difficulty of framing a definition of Hinduism arises from the fact that under the general title 'Hindu' are included classes whose belief, ritual, and mode of life are strangely diverse—the learned Brāhman, who is a follower of the Vedānta philosophy; the modern theist or agnostic, trained in the learning of the West; the semi-barbarous hillman, who eats almost any kind of food without scruple, knows little of Brāhmanical mythology, belief, or ritual, and in time of need bows before the stone which he supposes to be occupied by the god of his tribe or village; lastly, there is the vagrant, or the member of a caste like the Chuhṛā or Bhangī of N. India or the Pariah of the South, who is abhorred by all pure Hindus. The difficulty, in short, lies in separating the Animist from those classes of Hindus whose beliefs have a more or less animistic basis. Hence a recent writer proposes to include among Hindus

* all natives of India who do not belong to the Musalmān, Jain, Buddhist, Christian, Parsi, Jew, or any other known religion of

the world, and whose form of worship extends from monotheism to fetishism, and whose theology is wholly written in the Sanskrit language' (*Census Report Baroda*, 1901, i. 1201.).

This definition is unsatisfactory, inasmuch as it ignores the fact that Hinduism is not a religion in the sense of the word as used by European scholars. Thus a Hindu writes: 'Hinduism is that which a Hindu does'; in other words, it is a question of ritualistic and social observance (Guru Proṣad Sen, *Introd. to the Study of Hinduism*, 1893, p. 9). The current terms, 'Hinduism' and 'Brāhmanism,' are of European origin, the only Hindu general term for 'religion' being *dharma*, defined as 'established order, usage, institution, custom, prescription; rule, duty; virtue, moral merit, good works; right, justice, law' (Macdonell, *Skr. Eng. Dict.*, London, 1893, s.v.). According to Manu (*Laws*, ii. 6 [SBE xxv. 30]), 'the whole Veda is the (first) source of the sacred law, next the tradition and the virtuous conduct of those who know the (Veda further), also the customs of holy men, and (finally) self-satisfaction.' *Dharma* is distinct from 'the path' (*mārga*), inasmuch as 'the path' came into existence at a definite period, while *dharma* is eternal. 'The path' and 'the doctrine' (*mata*), combined together, are often expressed by one word, *sampradāya*, literally 'that which is given,' which Monier-Williams (*Brāhmanism and Hindūism*, 4, 61) defines as 'a particular body of traditional doctrines handed down through a succession of teachers,' also designated 'darśana or mata—that is, particular views or opinions on religion or philosophy.'

The great difference between the Hindu conception of the "dharma" and the European conception of "religion" is this. To a European, Christianity or Christian religion are self-defined terms, and the acceptance of those ideas and practices that are indicated by the word would make a man Christian. In the case of Hindu-"dharma," the relation is different. Hindu are a definite body, and Hindu-"dharma" is that indefinite thing which the Hindus consider their own "dharma." . . . The word *Hindu* is itself a foreign one. The Hindus never used it in any Sanskrit writing, that is, those which were written before the Mohamedan invasion. In fact there was no need of calling themselves by any particular name [all the rest of the world being 'foreigners' (*mitcchka*, Greek *βάρβαρος*)]. . . . Hindus define a Hindu as a man who has not fallen from Hinduism, that is, taken up the membership of any community like Christian or Mohamedan, which is not considered as a Hindu community. The distinction between the Hindus and the Animists is thus based only on ignorance. . . . The distinction drawn between a Hindu and non-Hindu is merely a provisional one. It may change at any time. Hinduism may, in future, include Christians, Mohamedans, and Buddhists. Hinduism is an ever-changing society, which may expand and take in races and peoples irrespective of their religious beliefs. What societies it will absorb depends almost entirely on the circumstances' (Shridhar V. Ketkar, 18, 22, 33).

For practical purposes the definition proposed by Lyall may be accepted, that Hinduism is

'the collection of rites, worships, beliefs, traditions, and mythologies that are sanctioned by the sacred books and ordinances of the Brahmins and are propagated by Brahmanic teaching. And a Hindu is one who generally follows the rules of conduct and ceremonial thus laid down for him, particularly regarding food and marriage, and the adoration of the gods' (*Rel. Systems of the World*, London, 1889, p. 114). Or—to use the words of a Hindu writer—the modern Hindu 'should be born of parents not belonging to some recognised religion other than Hinduism, marry within the same limits, believe in God, respect the cow and cremate the dead' (*Census Report Panjāb*, 1912, i. 109). For criticisms of other proposed tests of Hinduism, see *Census Report*, 1912, *United Provinces*, i. 121, *Madras*, i. 50 f., *Travancore*, i. 198 ff.

20. Hinduism as a missionary religion.—Though concealed by various fictions and conventions, the theory which underlies the system is that all residents of India are born Hindus. This is illustrated by the controversy which arose upon the question whether Hinduism is, or is not, a missionary religion. In the Lecture on Missions delivered in Westminster Abbey in 1877 (*Selected Essays*, 1881, ii. 49), F. Max Müller argued that three religions—Judaism, Brāhmanism, and Zoroastrianism—are 'opposed to all missionary enterprise'; while 'three have a missionary character from their very beginning—Buddhism, Mahoni-

medanism, and Christianity.' Comparing Brāhmanism with Judaism, he argued that

'a very similar feeling prevented the Brāhmins from ever attempting to proselytise those who did not by birth belong to the spiritual aristocracy of the country. Their work was rather to keep the light to themselves, to repel intruders; and they went so far as to punish those who happened to be near enough to hear the sound of their prayers, or to witness their sacrifices.'

This was written from the point of view of a student of the Hindu sacred books, not of a practical observer of the people; and, as he afterwards explained, by missionary religions he meant 'those in which the spreading of the truth and the conversion of unbelievers are raised to the rank of a sacred duty by the founder or his immediate successors' (*ib.* i. 94). This view is so far correct that Hinduism was not the creation of any single founder, and that no authority has ever controlled its organization or systematically promoted the conversion of the heathen. In his reply to these remarks, A. Lyall (i. 134 ff.) contended that

'so far from it being a non-missionary religion, in the sense of a religion that admits no proselytes, one might safely aver that more persons in India become every year Brahmanists than all the converts to all the other religions in India put together. . . . If by Brahmanism we understand that religion of the Hindus which refers for its orthodoxy to Brahmanic scriptures and tradition, which adores the Brahmanic gods and their incarnations, venerates the cow, observes certain rules of intermarriage and the sharing of food, and which regards the Brahman's presence as necessary to all essential rites, then this religion can hardly be called non-missionary in the sense of stagnation and exclusive immobility. . . . If the word proselyte may be used in the sense of one who has come, and who has been readily admitted, not necessarily being one that has been invited or persuaded to come, then Brahmanism might lay claim to be by far the most successful proselytising religion of modern times in India' (*ib.* i. 135 f.).

The question thus resolved itself into a controversy between two writers who discussed the question from two different points of view—one a student of the sacred books, who treated Hinduism as an organized religion founded on an ancient literature, and who regarded proselytism as a conscious, well-defined procedure carried on under conditions analogous to those which characterize Christian missionary work; the other an acute observer of the almost unconscious, unorganized methods by which the non-Aryan tribes are induced to enter the fold of Hinduism. The controversy is now somewhat obsolete, and in the opinion of all competent observers has been finally settled in favour of the views advocated by Lyall. For a recent discussion of Hinduism as a missionary religion, see Shridhar V. Ketkar, *op. cit.* 66 ff.

21. The conversion of the non-Aryans to Hinduism.—The process by which the non-Aryan tribes are converted to Hinduism has been described by Lyall in an essay familiar to all students of comparative religion (i. 157 ff.). Such conversion is naturally most common on the outskirts of the territory long occupied by the Hindus. Thus in Assam the Koch Rājās, who are without doubt of non-Aryan descent, have been recognized by the Brāhmins as sprung from Siva, the god having taken the form of one of their ancestors and visited the queen, who was herself none other than an incarnation of his divine spouse, Pārvatī.

'The Kachāri kings of Hiramba were similarly converted, and after their ancestry had been satisfactorily traced back to Bhim [one of the Pāṇḍava princes of the *Mahābhārata*] the two chiefs were placed about A.D. 1790 in the body of a large copper image of a cow, and thence produced as reclaimed Hindus. . . . For the Ahoms, Indra was selected as the progenitor of the kings, but no special origin seems to have been assigned to the common people, so that an Ahom on conversion takes as low a place in the Hindu caste system, in his own estimation, as he does in that of orthodox Hindus' (*Census Report Assam*, 1892, i. 83; cf. art. ASSAM, vol. ii. p. 1371.).

The process is often gradual. When the Kachāri first puts himself under the guidance of a *gōsāin*, or teacher of the Vaiṣṇava sect, he is a Hindu in little more than name, eating pigs and fowls, and continuing to drink strong liquor. After a time he somewhat modifies these abominable practices.

and then, after several generations, when the family has given up or concealed its taste for forbidden food and drink, and has become, in appearance at least, ceremonially pure, its members are finally promoted to the rank of orthodox Hindus.

'This, however, is a matter of many years, as spirits and pig's flesh are dear to the aboriginal palate, and many a man who would fain be admitted as a pure Hindu remains outside the pale, because it is not in him to forswear the nourishing diet of his ancestors' (ib. i. 84).

Some Assamese, when they profess a desire for conversion, are compelled to fast for a day or two (fasting being a form of purification from malignant spirit influence [A. E. Crawley, *The Mystic Rose*, London, 1902, p. 153 ff.]), after which they undergo a rite of atonement (*prāyāścitta*) at the hands of their teacher, who claims a suitable fee. But for at least three generations they are somewhat despised, and take no part in social affairs; after this they rank as Hindus (*Census Report Assam*, 1901, i. 225). The condition of things in the Central Provinces, where tribes like the Gonds (*q.v.*) are rapidly embracing Hinduism, is very similar (*Census Report*, 1901, i. 95).

22. Hindu sectarianism.—The process of the formation of new sects provides another method by which outsiders are admitted into Hinduism. The worship of the sectarian deities grew up during the period represented by the Epics and the Purānas; but the material for tracing their evolution is very scanty.

(a) *Brahmā*.—Of the members of the Hindu triad, Brahmā has now become an otiose, decadent divinity, mainly because he was always a god of the philosophers rather than of the common people. The process of his degradation is clearly marked in the *Mahābhārata*. It is commonly said that he has only a single shrine, that at Puškara in Rājputāna. But he has also a temple at Khed Brahmā in the State of Māhikāṅṭha in Gujārāt (*BG v.* [1880] 437 f.); in S. India his cult is more persistent, shrines being dedicated to him at Chebrolu in the Kistna District, at Kālahastī in S. Arcot, at Mitranandapuram close to Trivandrum, and possibly in a few other places (Oppert, 288 f.; V. N. Aiyar, *State Manual Travancore*, 1906, ii. 49; *Census Report Travancore*, 1901, i. 97). In the domestic ritual he is worshipped under the form of Vidhātṛi, personified fate; but even here he is placed second to Śaṣṭī, the goddess presiding over the sixth day after birth (*BG ix.* [1901] pt. i. p. 33 f.; see BRĀHMANISM, vol. ii. p. 810 f.).

(b) *Śiva*.—The philosophical side of the cult of Śiva represents him as 'the earliest and universal impression of Nature upon men—the impression of endless and pitiless change' (Lyll, ii. 306). But he has also assimilated much of the demonolatry and Animism of the non-Aryan races, as in his manifestation as Bhūteśvara, 'lord of goblins,' in which form his cultus was well adapted to serve the needs of the devil-worshipping Dravidians of S. India. He is the descendant of the Vedic Rudra, who has a beneficent as well as a malevolent character (Muir, iv. 339; Macdonell, *Vedic Myth.*, 77), the latter being veiled under his euphemistic title, Śiva, 'the auspicious one.' There seems no good reason to assign the origin of Śiva, the special Brāhman god, to the non-Aryan races, though his cultus may have been contaminated by their influence (Muir, iv. 349). It must be noted, however, that his temples are very commonly served, not by Brāhmanas, but by members of the ascetic orders connected with his cult. His association is rather with the Himālaya (H. A. Rose, *Census Report, Punjab*, 1901, i. 127 f.). This is also shown by his cult-titles, Giriśa and the like, 'mountain-god,' and those of his consort Umā as Pārvatī, 'mountain-goddess,' and Haimavati, 'she of the Himālaya,' and some Greek writers

identified him with Dionysus (J. W. McCrindle, *Ancient India as described in Classical Literature*, 1901, p. 64 n.). It has been suggested that the introduction of the cultus was due to the movement of Hun tribes from the north (*BG ix.* [1901] pt. i. p. 476). He is at once a god of Nature, the impersonation of re-integration and destruction; the typical ascetic; the contemplative philosopher and sage; the wild and jovial mountaineer, surrounded by troops of dancers. Hence his personality attracts two different classes of worshippers—the Brāhman philosopher, who sees in him the All-god from whom the Universe is evolved; and the peasant, who associates him with the mysteries of the reproduction of life.

The worship of the līṅga.—In modern Hinduism the symbol of Śiva is the *līṅga*, or phallus. Phallic worship appears in the Veda in the *śisnadevāh*, 'those who have the phallus as their deity'; but this seems to be regarded as a non-Aryan cult, and Indra is besought not to allow them to approach the sacrifice (Macdonell, *Vedic Myth.*, 155). In Buddhism and in the Atharvaveda we meet phallic genii (*kumbhāṅḍa*, *kumbhamuṣka*; Weber, *IA xxx.* [1901] 282), and in the *Mahābhārata* it is mentioned as if it had been common in N. India; but it is not included in the superstitious forms of worship described in the Buddhist Nikāyas (Rhys Davids, *Buddhist India*, p. 165 f.). The origin of the cult in India is obscure. Fergusson was disposed to connect the symbol with the Buddhist *dāgaba*, one of which has been found adapted to Śaiva worship in a cave at Wāi (*Hist. of Indian Arch.*, London, 1899, p. 304 f.; Fergusson-Burgess, 213; F. A. Maisey, *Sanchi*, London, 1892, p. 16 n.). Oppert suggests that it was derived from the Greeks—a view which seems improbable (*Orig. Inhab.*, 381; Muir, iv. 161, 421). Stephenson (*JRAS viii.* [1842] 330) and F. Kittel (*Ueber den Ursprung des Līṅga-kultus in Indien*, Mangalore, 1876) connected phallic worship with the non-Aryan tribes. In opposition to this view, we have the important fact that of the twelve great *līṅga* shrines, only three, those at Omkāra on the Narbadā, Triyambaka at Nāsik, and Bhīma-śaṅkara in the Deccan, can be reasonably classed as outside the distinctively Aryan area, and early traditions associate the establishment of *līṅgas* in N. India with Aryan saints and worthies (Muir, ii. 202, iv. 189 ff., 405 ff.). It may also be said that phallic worship is not general among the forest tribes at the present day. Thus, though the Todas are apparently immigrants from Malabar, there is no evidence of phallic worship among them (W. H. R. Rivers, *The Todas*, London, 1906, p. 447). On the whole, the facts seem to indicate that, though the cult may have prevailed among some of the indigenous tribes, it was not confined to them, and that in the form in which it now appears its extension was largely due to the Aryans.

The prevalence of this ancient symbol of fertility and life in the cults of India 'shows that in the more naive religion of the older age there was not yet that divorce between the physical and moral world which the spiritual law of modern religion has made' (*CGS v.* 11 f.). It is 'by no means an early or a universal cult. It can only become prominent in a population having a settled abode and cultivating the soil; its orgiastic developments are sporadic' (Hartland, *Primitive Paternity*, i. 122). It seems to be an aberrant form of the cult of stones and pillars which was widely distributed in Greece, and among the Semites (Frazer, *Pausan.*, London, 1898, ii. 539, iv. 110, 154, 318 ff., v. 314 ff.; *CGS iv.* 149, 307; *HDB iii.* 879 ff., v. 110 ff.; art. BAAL, vol. ii. p. 287 f.). Some of the great Indian *līṅgas* have no sexual connotation (cf. *ERE v.* 829 f.). Thus, that at the

shrine of Yājñśvara at Benares is 'simply an enormous block of stone, round and black, six feet in height, and twelve in circumference' (Sherring, *Sacred City*, p. 117). That of Bhojpur in Bhopāl is $7\frac{1}{2}$ feet high and 17 feet 8 inches in circumference, raised on a massive platform (*IGI* viii. [1908] 121). The kindred pillar-cult is, as A. J. Evans has shown, widely distributed (*JHS* xxi. [1901] 99 f.). One of the pillars of Aśoka at Benares (*ERE* ii. 466) has now become the famous *lāt*, or pillar, of Śiva. The symbol, in itself, is not necessarily indecent (Rājendralāla Mitra, *Indo-Aryans*, i. 146 f.; *IGI* xviii. 202). Among the Śaivas it is not connected with eroticism, a tendency distinctly absent from the cult of Śiva. This, however, refers only to the devotees of the higher class; and, when it is worshipped in connexion with the female symbol (*yoni*), or among the Līngāyat (*q.v.*) sect in the Deccan, it undoubtedly has a sexual suggestion (cf. Elliot, *Hist. of India*, iii. 91; Hartland, *Primitive Paternity*, i. 123). Its connexion with Śiva may probably be traced to his manifestation as a god of reproduction, as, for instance, when he appears as Mrtyuñjaya, 'destroyer of death.' Even in the Veda, he, as Paśupati, 'lord of beasts,' a title of Rudra, is regarded as the agent promoting fertility in cattle (Macdonell, *Vedic Myth.*, 75). In parts of the Deccan, as a mode of mimetic magic, the marriage of Śiva and Pārvatī is periodically celebrated (*BG* xxiii. [1884] 676; V. A. Smith, *Hist. of Fine Art in India and Ceylon*, p. 215; cf. *CGS* v. 217; Frazer, *GB*² ii. 204 ff.), and in parts of the Central Provinces he seems to be connected with tree-worship (*ERE* iii. 312). The same conception doubtless underlies his manifestation as Ardhā-nārīśvara, half male and half female, symbolizing the union of Puruṣa and Prakṛiti, the central idea of Nature-worship (see *ERE* ii. 38^b). We may also compare the phallic processions which occasionally accompany the Holi celebrations in India, as in the cult of Nathurām at Gwālīor (Crooke, *PR*² ii. 319 f.), the *φαλλοφορία* of the Dionysus worship in Greece, 'which arises from the same idea as that which prompts the corporeal union of the husbandman and his wife in the cornfield at the time of the sowing or after reaping' (*CGS* v. 197, 205; Frazer, *GB*² ii. 205 ff., *GB*³, pt. i. vol. ii. p. 97 ff.). The story of Viṣṇu cutting up and scattering the fragments of the *liṅga* throughout the world reminds us of the mutilation of Osiris, and the Kandh custom of distributing the ashes of the human representative of the spirit of vegetation as a fertilizing charm (Frazer, *Adonis, Attis, Osiris*², London, 1907, p. 331; *CGS* iii. 19 f.). As in the case of other gods of fertility, the bull is the appropriate emblem of Śiva (Frazer, *Adonis*, pp. 96, 130, *GB*² ii. 312, 277 ff.; *CGS* iii. 11, v. 97; Jastrow, 632; Wiedemann, 178 f., 187 f.). The conception, also, of the phallus as a protective (*ἀποτροπαιόν*) may, as in the case of the Greek *Hermai*, have contributed to its popularization (*CGS* v. 32). On the worship of the *liṅga* in India, see Muir, iv. 343 ff.

23. The popularization of the cult of Śiva.—The popularization of the cult of Śiva involved a process of syncretism, the adoption of various local deities as his manifestations. The most respectable of these is Ganapati, or Gaṇeśa, lord of the troop of demons attending the god. His worship starts from the Paurāṇic period; and, except in one legend contained in the northern recension of the *Mahābhārata*, he does not appear in the Epic literature (*JRAS*, 1898, p. 380 ff.). His symbols of the elephant and the rat connect him with some local theriolatry; but he is now independent, and, though he is a member of the Śaiva group of deities, he has become almost non-sectarian, and all sects agree in doing him honour as the god of

luck (*IA* xxx. 255 f.; cf. BRĀHMANISM, vol. ii. p. 807 f.). Another deity of the same class is Skanda, or Kārttikeya, who was the family-god of some W. Indian dynasties, and now, under the name of Subhramanya, is most popular in S. India, where his association with the Mother-goddesses shows that he is connected with non-Aryan cults (*BG* i. pt. ii. pp. 180, 287; Oppert, 303, 370). In a much lower class is Khaṇḍobā, or Khaṇḍerāv, 'sword father,' probably a deified non-Aryan prince, now the chief guardian-deity of the Deccan, where his cult shows obvious signs of contamination with those of the forest tribes (*BG* xviii. pt. i. pp. 290, 413 f.). Similar instances are to be found in the identification of Śiva-Viṣṇu as Harihara with the non-Aryan Aiyānār, or Vetāla, the demon-leader and ghost-scarer of the Tamil, Kanarese, and Deccan peoples (*ib.* xxiii. [1884] 556, xviii. [1885] pt. iii. pp. 347, 388).

24. The yoga and asceticism.—The system of *yoga*, by which, through strange postures, suppression of the breath, self-restraint, and meditation, the soul seeks union with the Supreme World Spirit, was an outgrowth of the Sāṅkhya philosophy, and, though dogmatically no part of the Vedānta, reached its fullest development under Patañjali about the 2nd cent. B.C. In the time of Buddha it was recognized, as it continues to be in the later forms of Buddhism, and the condition of ecstatic abstraction was held in high esteem (H. Kern, *Manual of Indian Buddhism*, 11; Macdonell, *Hist. Skr. Lit.*, 396 ff.; L. A. Waddell, *Buddhism of Tibet*, 126, 141). It assumes special prominence in the *Mahābhārata* epic, where concentration, with the use of magical formulæ, supersedes the power of the sacrifice (see artt. YOGA, ASCETICISM [Hindu], vol. ii. p. 87 ff.; AUSTERITIES, vol. ii. p. 225 ff.; BRĀHMANISM, vol. ii. p. 802 f.).

The development of asceticism in its coarser forms is one of the main contributions of Śaivism to modern Hinduism. It represents, in a measure, a revolt against the tyranny of caste. It has its literary origin in the Brāhmanical rule which divides life into a series of stages (see *ERE* ii. 802); and the life of the ideal ascetic served as a model for the rules regulating the conduct of the ordained monks of the Buddhist and Jain orders (Manu, vi. 41; Kern, 73 ff.; Bühler, *Indian Sect of the Jainas*, 1903, p. 13 f.). Perhaps the closest imitation of the observance of the stringent rules of ancient asceticism is to be found in the remarkable colony of Tibetan hermits at Shigatze (Waddell, *Lhasa and its Mysteries*, London, 1905, p. 234 ff., *Buddhism of Tibet*, 223 f.). At the present day, among some of the Śaiva orders instances are found of genuine asceticism carried on according to the ancient rule in caves and forests; but such enthusiasts are not numerous. Occasionally at bathing fairs and places of pilgrimage may be observed the Ūrdhva-bāhu, who extends one or both of his arms above his head until they become fixed in that position; the Akāśamukhin, who keeps his neck bent back gazing on the sky; the Bhūmimukhin, who hangs by his feet with his head nearly touching the ground; the Nakhin, who allows his nails to grow to an excessive length; those who recline on a couch studded with nails; and others of the same kind who present an obvious parallel to the early Christian hermits, the social and religious results of such excessive devotion being in both cases equally disastrous (J. C. Oman, *Mystics, Ascetics, and Saints of India*, London, 1903 [useful so far as the personal experience of the writer goes]; artt. CELIBACY [Indian]; BRĀHMANISM, vol. ii. p. 801 f.).

25. Development of the cult of Śiva.—We know little of the early development of the cult of Śiva.

The Sibæ of the Panjâb, according to Megasthenes, who visited India about 20 years after the death of Alexander the Great, branded their cattle with the trident symbol of the god, or rather perhaps with the mark of the club of Hercules, who was identified with him (McCrindle, *Anc. India as described by Megasthenes*, 1877, p. 111; *JRAS*, 1907, p. 967). Bardesanes, who seems to have lived in the beginning of the 3rd cent. A.D., and whose account is preserved by a late compiler, Johannes Stobaios (c. A.D. 500), apparently describes the worship of the god in the hermaphrodite form of Ardhanaṛiṣa (McCrindle, *Anc. India as described in Classical Lit.*, 172 f.). His image, attended by that of his bull Nandi, with the noose, trident, and other symbols, appears on the coins of the Kuṣāṇ kings Kadphises II. (c. A.D. 90-100) and Vāsudeva (A.D. 185-226). In the 3rd cent. his cult seems to have been established throughout India (*JRAS*, 1907, p. 972). In S. India, Śaivism was the oldest form of Brāhmanism, and its rise is connected with a teacher named Lakuliṣa, as far back as the first century of our era (Rice, *Mysore and Coorg*, 205; cf. D. R. Bhandarkar, *JRASBo* xxii. [1910] 151 ff.). At a later period his worship was adopted by Śaśāṅka, king of Bengal, who persecuted the Buddhists, and by the emperor Harsa, both of whom reigned early in the 7th cent. A.D. (Smith, *Early Hist.*², 285 f., 318 f.).

The popularization of the cult was the work of a series of missionary preachers, who, like the founders of the revived Vaiṣṇavism, came from S. India, where Hinduism, comparatively safe from the inroads of the foreigner, was allowed to follow the natural course of its evolution undisturbed. This is shown by the greater abundance of the inscriptions surviving in that region, where the Muhammadan powers, remote from the centres of fanaticism in the N., were less hostile to Hinduism, and did less damage to the temples and the records in stone (*IA* xxx. 17).

The first of these teachers was Kumāriḥa Bhaṭṭa, a learned Brāhman of Bihār, who in the 8th cent. A.D. restored the ancient Vedic rites, and encouraged the persecution of Buddhists and Jains—a tradition which has magnified into the extermination of Buddhism from the Himalayas to Cape Comorin. A follower of the Mimāṃsā school, he ascribed the universe to a Divine act of creation, and assumed an all-powerful Deity as the cause of the existence, continuation, and destruction of the world. He adopted, as a philosophical argument in opposition to Buddhism, the Vedānta principle of the non-duality (*advaita*) of the Godhead. His mantle fell upon his more famous disciple, Śaṅkarācārya (c. A.D. 737-769), who moulded the Uttara-mimāṃsā philosophy in its final form (*Sri Śaṅkarācārya: His Life and Times, his Philosophy*², by C. N. Krishnaswami Aiyer and Pandit Sitanath Tattvabhushan, Madras, n.d.; *Census Report Travancore*, 1901, p. 101 f.; L. K. Anantha Krishna Iyer, *Cochin Tribes and Castes*, ii. [1912] 256 ff.).

¹He seems to have risen as an inspired genius to throw a quick, bright light, like to the momentary after-glow of an Indian sunset before darkness descends over the land, on the fading glories of Aryanism before they sink into the dimness of the drear days of Hinduism. . . . According to the teachings of Śaṅkara, the entire system of Vedāntic thought finds its natural culmination in an uncompromising declaration that the sole object of the sacred literature of India was to reveal the delusive appearance of what appeals to the senses as reality and the doctrine of non-duality. . . . The question of metaphysical reality is solved, not as Kant resolved it, by referring all objective reality to perceptions of the intellect where he sought a solution, but in endeavouring to pierce, in the manner of Plato, and Parmenides, beyond the reality itself. This objective form was held by Śaṅkara to be but the mode in which the delusion of life was mirrored forth' (R. W. Frazer, *Literary Hist. of India*, 1898, p. 326 l.).

To him is due the foundation of the Smārta sect among the Brāhmins of the Deccan, who take their

name from their adherence to authoritative tradition (*smṛiti*), as opposed to the Vedic Scriptures (*śruti*). They worship the Triad, Brahmā, Viṣṇu, and Śiva, under the symbol of the mystic syllable Om; and while admitting these three deities they exalt Śiva to the highest place. They hold the pantheistic Vedānta doctrine of non-dualism (*advaita*), asserting God and matter to be identical, and everything only an atom of the Divine, they themselves being part of the Supreme Being (Rice, *Gazetteer of Mysore*, 1897, i. 236, 471 ff.).

But these Brāhman movements were too philosophical to be comprehended by the common folk; and the real popularization of Śaivism in S. India was left to the Brāhman Basava, as he is called in the Liṅgāyat Purāṇas, the date of whose death is fixed by tradition in A.D. 785. But it has recently been discovered that the real founder of this sect was the Brāhman Ekāntarāmaya, who revived Śaivism in its popular form in the latter half of the 12th cent. A.D. (*IA* xxx. 2; *BG* i. pt. ii. p. 225 ff.; Rice, *Gaz. Mysore*, i. 476, *Mysore and Coorg*, 206). The Liṅgāyats (*q.v.*) may be described as Hindus who deny Brāhman ascendancy, and claim to receive from their own priests (*janāgama*) the 'eightfold protection' (*aṣṭavarṇa*), or, as others term the rite, 'the eightfold sacrament' (*aṣṭavarṇa*). With the denial of Brāhman ascendancy they have discarded other orthodox rites, such as the cremation of the dead (for which they substitute inhumation) and the observance of caste, pilgrimages, and penance. As is so often the case with such movements in India, there appears now to be a tendency among them to revert to orthodox Brāhmanism (Rice, *Gaz. Mysore*, i. 476 f.; *Census Report Bombay*, 1901, i. 180 ff., 197; *Census Report Mysore*, 1901, i. 530 ff.; *BG* xxiii. 219 ff.).

26. Vaiṣṇavism.—In one sense the cult of Viṣṇu may be regarded as in direct antithesis to that of Śiva. Like the latter, it has its philosophical side. Viṣṇu 'impersonates the higher evolution; the upward tendency of the human spirit. He represents several great and far-reaching religious ideas. In the increasing flux and change of all things he is their Preserver; and although he is one of the highest gods, he has constantly revisited the earth either in animal or in human shape' (Lyall, *Asiatic Studies*², ii. 306). In the Veda he occupies a subordinate position, his only anthropomorphic traits being the strides which, as a solar god, he takes across the heavens (Macdonell, *Vedic Myth.*, 37). He is closely related to Indra, but his connexion with Kṛṣṇa is still obscure (Weber, *IA* xxx. 284 f.; see BRĀHMANISM, vol. ii. p. 811 f.). The historical evolution of this deity has, however, exercised little effect on the view of his personality held by his modern worshippers. His cult is less gloomy, less tinged with asceticism, more kindly, more human, than that of Śiva; and it has found its expression 'in more striking literary works, which, translated into, or rather reproduced in, the principal languages, Aryan as well as Dravidian, have furnished an inexhaustible quarry for popular poetry' (Barth, 216 f.). Its eclecticism is clearly marked. Its theory of incarnations or descents (*avatāra*) at once links it to Vedic mysticism and at the same time permits it to absorb the deities, with their cultus, or the non-Aryan racial elements out of which Hinduism was developed. The doctrine of incarnations is peculiar neither to Hinduism nor to Vaiṣṇavism. But in the latter the conception of a god becoming incarnate through compassion for suffering meets the needs of worshippers craving for a personal God who sympathizes with the sorrows of humanity (see BHAKTI-MĀRGA, vol. ii. p. 542 f.; *JRAS*, 1908, p. 245 ff.). There is no reason to refer this animal cultus to totemism, which appears among the Indo-Aryans, if at all,

only in aberrant form (J. G. Frazer, *Totemism and Exogamy*, London, 1910, iv. 13). More probably the animal cultus sprang from the Aryan or non-Aryan theriolatry, the sacred animals being 'regarded in relation to a more generalized conception of the Divine power, which lies behind them and finds expression through them' (*HDB* v. 114). As Sayce points out in the case of Babylonia (*HL*, 112), the local god was originally theriomorphic, and when he assumed an anthropomorphic shape there was no room for the primitive animal forms save as the vehicle (*vāhana*) or attendant of the god. To the modern believer it is sufficient to be told that the god assumed these successive forms to save mankind from ever recurring attacks of the forces of evil.

It is in his later developments that the influence of the non-Aryan races is most apparent. On this question Molony (*Census Report Madras*, 1912, i. 51) remarks:

'Whatever be their present-day union or interminglement, it is difficult to imagine any original connection of the Aryan Brāhmins, and their subtle philosophies, with the gross demonolatry of the Dravidian peoples who surrounded them. Philo-sophic Hinduism or Brāhmanism, it has already been suggested, is rather the attempt to find an answer, without the aid of a final revelation, to an enigma probably insoluble, than a religion in the sense understood in modern days. Holding certain philosophical opinions, which they neither expected nor particularly desired their Dravidian neighbours to share, it is unlikely that the early Aryan theists made any serious efforts to obtain adherents to their way of thinking. But, satisfied with the acknowledgment of their undoubted intellectual superiority, they built gradually many a connecting bridge between their own somewhat unpractical speculations and the extremely material demonologies of the Dravidians.'

There is some force in this statement; but, when the Brāhmins, at some period subsequent to their arrival in S. India, seriously undertook the task of absorbing the local idolatries, the result of the compromise was that at the present day, except among special groups like the Nāmbūtiris, Brāhmanism survives merely as a veneer over the indigenous beliefs. This process of absorption assumed varied forms. Thus in the Deccan and S. India, Viṭhobā, or Viṭṭhal, of Pandharpur (*q.v.*), who is generally believed to have been a deified Brāhman, is accepted as an incarnation of Viṣṇu. It has been suggested that his name is derived from Viṣṭu, a form of Viṣṇu, modified under Dravidian influence (*JRAS*, 1907, p. 1053). So Bālājī, usually identified with the infant Kṛṣṇa, is now the great god Vyānkaṭeśa of Tripetty, or Tripatti (*q.v.*), and is claimed to be a local deified saint. The same process appears in the Himālaya, where Vāsudeva or Bāsdeo and Puruṣottama, 'best of men,' are believed to be mountain-deities absorbed into the Viṣṇu cultus (Atkinson, *Himalayan Gazetteer*, ii. 752; Muir, iv. 297). In Travancore, under the title of Padmanābha, 'he from whose navel springs the lotus,' he is at Trivandrum connected with a serpent-cult. In A.D. 1752 the Mahārājā dedicated his royal person and kingdom to this his tutelary god, and at his succession his first official title is that of Śrī Padmanātha, 'slave of the god' (S. Mateer, *Land of Charity*, London, 1871, p. 160 ff.; *State Manual Travancore*, i. 362).

These local manifestations, however, are of small importance compared with Rāma and Kṛṣṇa. Their cults present so many intricate problems that the consideration of them must be left to special articles. The influence of Christianity on their development is discussed in art. BHAKTI-MĀRGA, vol. ii. p. 549 ff.; also see BRĀHMANISM, vol. ii. p. 811 f.; J. Kennedy, *JRAS*, 1907, p. 951 ff.

27. The popularization of Vaiṣṇavism.—As was the case with Saivism, the popularization of the Vaiṣṇava cultus was the work of several missionary teachers, and in this case also the inspiration came from S. India. The first of these teachers was Rāmānujāchārya, also called Emburumānār, who,

according to the common tradition, was born at Śrī Permatūr about A.D. 1127, and, after a life which is said to have extended to 120 years, was buried in the temple of Śrīraṅganātha at Trichinopoly, where a shrine has been dedicated to him.

The chief religious tenet of the sect of Rāmānujas or Śrī Vaiṣṇavas is the assertion that Viṣṇu is Brahmā, that he was before all worlds, and was the cause and creator of all. Although they maintain that Viṣṇu and the universe are one, yet, in opposition to the Vedānta doctrines, they deny that the deity is void of form or quality, and regard him as endowed with all good qualities and with a two-fold form—the supreme spirit, Paramātma or cause, and the gross one, the effect, the universe or matter. The doctrine is hence called *viśiṣṭadvaita*, or doctrine of unity with attributes. Besides his primary and secondary form as the creator and creation, the deity has assumed at different times particular forms and appearances (*avatāra*) for the benefit of his creatures' (Rice, *Gaz. Mysore*, i. 475; cf. Monier-Williams, *Brāhmanism and Hindūism* 4, 119 f.).

His teaching is followed by the Śrī Vaiṣṇava sect in N. India, who hold that Viṣṇu, the one Supreme God, though invisible as cause, is, as effect, visible in a secondary form in material creation. They are the most respectable of the reformed Vaiṣṇava communities, and show their adherence to the more primitive tradition in their refusal to worship Rādā, the consort of Kṛṣṇa. They are divided into two sections—the Southerners (*Tengalai*) and the Northerners (*Vaḍagalai*),

'who differ on two points of doctrine, which, however, are considered of much less importance than what seems to outsiders a very trivial matter, viz., a slight variation in the mode of making the sectarian mark on the forehead. The followers of the Tengalai section extend the middle line down to the nose itself, while the Vaḍagalai terminate it exactly at the bridge' (F. S. Growse, *Mathura*, Allahabad, 1883, p. 193 f.; *State Manual Travancore*, ii. 292 f.; Monier-Williams, 125 f.; Thurston, *Castes and Tribes*, i. 348 f.).

The second Vaiṣṇava teacher was Mādhva or Ānandatīrtha, a S. Indian Brāhman, who was born at Udipi in S. Kanara about A.D. 1200. The result of his teaching was to effect a certain compromise between the cults of Viṣṇu and Śiva, maintaining, however, the supremacy of the former (Rice, *Gaz. Mysore*, i. 236, 477). He taught the existence of Viṣṇu, or Hari, and the doctrine of duality (*dvaita*) in opposition to the monism or non-duality (*advaita*) of Śāṅkarāchārya. He held that 'there are two separate eternal principles (instead of three, as asserted by Rāmānuja), and that these two are related as independent and dependent, as master and servant, as king and subject. The one is the independent principle, God (identified with Viṣṇu), the other is the dependent principle consisting of the human spirit, or rather spirits' (Monier-Williams, 130 f.; see C. N. Krishnaswami Aiyer, *Sri Madhva and Madhvaism*, n.d.).

The third and most important agent in the spread of Vaiṣṇavism in N. India was Rāmānanda, of whom little is known, even his date being uncertain. He seems to have lived between the end of the 14th and the first half of the 15th cent., and the distinctive note of his teaching was the exaltation, as a form of Viṣṇu, of Rāma and his consort, Sītā (M. A. Macauliffe, *The Sikh Religion*, Oxford, 1909, vi. 100 ff.). His followers are closely connected with the school of Rāmānuja, except that they are not so exclusive in regard to privacy at meals (*Census Report Baroda*, 1911, i. 77; *BG* xv. [1883] 176; *PR*² i. 293). The name Rāmānandī is now usually given to a branch of the Bairāgis (*q.v.*). In fact, until the missionary career of Rāmānanda, this order had little importance, and it has been suggested that his teaching represented a revolt of the more liberal northern school against the older and stricter leaders. He advocated the principle that all personal distinctions of rank or caste merged in the holy character (Rice, *Gaz. Mysore*, i. 477 f.). He seems to have admitted members of the lower castes to his sect—a privilege which most teachers reserved to the Brāhman and Kṣatriya. Thus the movement was essentially popular, and the books published by this school were written in Hindī, not in Sanskrit—a

reform which led to important results throughout N. India, and especially in the Punjāb (*Census Report, Punjāb*, 1891, i. 122 f.; *Census Report, Baroda*, 1911, i. 77; *BG* xv. [1883] 175).

28. The Muhammadan conquest.—The course of the evolution of Hindu beliefs was rudely interrupted by the Muhammadan conquest of N. India.

The history of the new power which appears upon the scene falls roughly into three periods: first, a time of incursions ending in final conquest (A.D. 637-1206); that of the kingdoms founded as a result of the first conquest (1206-1526); and, lastly, the Mughal Empire, which finally passed away when British ascendancy was established. During the earliest period the Muhammadan annals abound in descriptions of ruthless massacres of Hindus, of destruction of their temples and other religious institutions. In A.D. 1024, Mahmūd of Ghaznī penetrated Kāthiāwār and destroyed the famous Somnāth (*q.v.*) temple. Qutb-ud-din (1206-10) captured Benares, destroyed nearly a thousand temples, and raised mosques on their foundations (Elliot-Dowson, *Hist. of India*, 1867-77, ii. 223). Alā-ud-din (1296-1316) sacked the temple city of Bhilsa, and sent the idols to one of the gates of Delhi to be trodden under the feet of true believers (*ib. ii.* 148). Even Firūz (1351-88), more merciful than many of his predecessors, prides himself on destroying temples and torturing unbelievers (*ib. iii.* 380). The invasion of Timūr in A.D. 1398 was accompanied by massacre and rapine at Hardwār and other places (*ib. iii.* 394 f., 501 ff.). It was not till the reign of the great Akbar (*q.v.*) (1556-1605) that the faith of his Hindu subjects was deemed worthy of protection. This change of policy was due mainly to his laxity on questions of Musalmān orthodoxy, to his religious eclecticism, when he dallied with Hindu Pāndits, Parsi priests, and Jesuit missionaries, dreaming of a new religion which was to reconcile the many creeds of his Empire, and to his statesmanlike desire to conciliate the powerful Rājput tribes (Blochmann-Jarrett, *Āin-i-Akbarī*, Calcutta, 1873-94, i. 162 ff.). His son and grandson were too indifferent to religious questions, and too dependent upon the support of their Rājput kinsmen, to engage in a crusade against Hinduism. This was not renewed until the accession of the Puritan iconoclast, Aurangzīb (*q.v.*) (1659-1707), who ordered the destruction of Hindu temples, such as that of Keśava Deva at Mathurā (*q.v.*), that of Adī Deva at Brindāban (*q.v.*), and the Adī Viśveśvara shrine at Benares (*q.v.*), on the ruins of which rose the stately mosque which now overlooks a myriad Hindu temples (Growse, 34 f., 37, 265; Sherring, *Sacred City*, 316 ff.). In early Muhammadan times it is not too much to say that every great mosque was erected from the materials of ruined shrines of the older faith of Hindu or Jain, such as that adjoining the Qutb Minār at Delhi, those at Kanauj, Ajmer, Jaunpur, and many other places (Fergusson, *Hist. of Ind. Arch.* 502, 510, 521, 540; *JASB* xlv. 190 f.). Some of the kings of the Ahmadābād dynasty also spread the faith in Gujārat by persecution (*BG* ix. pt. ii. p. 4 f.). But the Muhammadan dynasties of S. India were more tolerant, and their rulers lived on good terms with the Marāṭhas of the Deccan.

But it is possible to exaggerate the destructive effect upon Hinduism of the Muhammadan invasions. Persecution and the competition of the new creed stimulated religious activity among the Hindus, and during the Muhammadan period various spiritual teachers arose, new sects were formed, and theological controversies divided the intellectual classes—a revival to which the early Muhammadan rulers seem to have been generally indifferent (Lyall, *Fortnightly Review*, Nov. 1908, p. 729). The numerous conversions to Islām were not so much the fruit of active persecution as the result of a desire to gain the favour of the Court, or of missionary teaching (T. W. Arnold, *The Preaching of Islam*, London, 1896, p. 208 ff.). It is also significant that at the present day the proportion of Muhammadans is comparatively small in the neighbourhood of the chief centres of Mughal power—Delhi, Agra, and the cities in the Bengal Delta. The explanation is that, in the neighbourhood of the great Muhammadan cities of N. India, Islām was confronted by the powerful Rājput tribes, devoted to their ancestral faith, and offering strong resistance to proselytism, in which they were supported by their marriage alliances with the Mughal princes. In E. Bengal the animistic tribes had imbibed little of the tenets of Hinduism, and were ripe for conversion by the missionary agents of Islām. Hinduism would have collapsed during the reign of Aurangzīb had it not been protected by Rājputs and Marāṭhas. Outside Rājputāna and the Deccan its strength lay in its amorphous character. Buddhism collapsed when its monasteries were

burnt and its monks slain. But Hinduism possessed no single administrative body, no centre of religious life, the destruction of which might have involved a general collapse. It survived because it depended upon its caste and tribal organization; because it represented the basis of social life, with its perpetual round of ceremonial observances; because it possessed a great and indestructible religious literature.

29. The influence of Islām on Hinduism and of Hinduism on Islām.—The contact of these two great religions profoundly affected the evolution of both. The pure monotheism of Islām, which became the State religion of N. India, could not fail to exercise influence on Hinduism. At this time, also, Christian and Jewish teaching began to affect Hinduism. It is significant that the Saiva and Vaiṣṇava missionaries came from the S. and W. of the Peninsula, where Arab, Jewish, and Christian communities first settled; and Islām in S. India has adopted many Hindu practices—worship of local deities, the black art and divination, rites of birth and marriage (*Census Report Madras*, 1912, i. 54). Some are inclined to believe that the theory of fervent faith in the Godhead was derived from Christianity (see BHAKTI-MĀRGA, vol. ii. p. 539 ff.; and on the effect of the dogmas of the Nestorians, see *JRAS*, 1907, p. 477 ff.). On the other hand, by the adoption of beliefs and practices derived from the indigenous Animism, Islām became fitted to enter upon the task, which it still pursues, of establishing itself as the national religion. To foreign influence of various kinds Hinduism was indebted for the effort to suppress the cults of the mythological and sectarian deities, and for the recognition of a single Divine Power, the Almighty Ruler of the universe. It must also be remembered that Persia contributed to Indian Muhammadanism that form of mysticism or supersensuous knowledge, that influence which diverts emotional souls from the insight which they hope to attain through the veil of illusion into the deeper mysteries which lie behind it. The origin of this belief, known as Ṣūfism, is obscure. Some have regarded it as a revolt of the Aryan spirit against a Semitic religion imposed by force of arms upon a conquered people; to others its wide diffusion in India at an early period of its development suggests that it was home-born; others, again, connect it with Buddhist preaching (E. G. Browne, in *Rel. Systems of the World*, 315 ff.; *JRAS*, 1904, p. 125 ff.; and for the influence of Buddhism, *EB* vi. xxvi. 31 f.). At any rate, if it was not ultimately derived from the principles of the Vedānta preached in W. Asia by Brāhman or Buddhist teachers, it was so closely allied to the Indian pantheism that it was readily assimilated on Indian soil. Whether, as E. G. Browne observes (p. 317), 'its practical part, its quietism, its renunciation of worldly objects, its passionate longing for closer commune with God, preceded, and, indeed, led to its theoretical part, its pantheism, its idealism, its scorn of outward forms, its universal tolerance,' or not, the doctrine was well adapted to the needs of the prophets of the reformed Vaiṣṇavism. Their teaching, as well as that of Kabir and Nānak, seems to have been largely indebted to it.

30. The spread of Vaiṣṇavism.—The results of these religious and political movements led to the popularization of Vaiṣṇava doctrine, which has continued to the present time, when it has become the working force in Hinduism. Its predominant note is the growth of a democratic feeling tending towards universal comprehension. Many sects were founded by men of the lower castes, Kabir the weaver, Senā the barber, Rāmdās the tanner. While the movement was in many ways healthful and inspiring, it resulted in the toleration of the

abuses which contaminated Vaiṣṇavism in its later stages. It also encouraged a more personal tone in the teaching of the reformers. The Śaiva sects, which are differentiated more by distinctions of practice than of theology, as a rule, take impersonal titles. The Vaiṣṇava sects, on the contrary, are often named from their founders, and, as a necessary consequence, there is a constant tendency to exalt the founder to a position of divine or semi-divine authority, in which the worship of the Deity becomes of secondary importance.

Kabīr (c. A.D. 1488-1512), one of the twelve disciples of Rāmānanda, has become one of the most prominent figures in the popular Hinduism of N. India. His career illustrates the eclecticism of Hinduism. His leaning towards Islām was no bar to his becoming a Hindu *bhakta*, and his writings display a wonderful combination of beliefs drawn from Christianity, Sūfism, and Vedāntism (*JRAS*, 1908, p. 245 ff.). The result of his attempt to fuse Hinduism with Islām is that in Bombay some of his followers describe themselves as Hindus, some as Muhammadans (*Census Report*, 1901, i. 61; cf. *Census Report Panjāb*, 1912, i. 121 f.). As in other reform movements of the same kind, his later followers have not maintained the ideal of their founder. They now occupy a position between idolatry and monotheism, and some of them have almost completely succumbed to Brāhman influence. Among the peasantry of the present day Kabīr retains his authority as a hymnist more than as a religious reformer. His racy religious and moral apophthegms are constantly on the lips of the middle-class Hindu. They inculcate a pure and tender morality which has strongly affected popular feeling. To his writings the Ādi-granth, the Scripture of the Sikhs, is largely indebted. (See KABĪR; G. A. Grierson, *Modern Vernacular Literature of Hindustan*, Calcutta, 1889, p. 7 f.; G. H. Westcott, *Kabīr and the Kabīr-Panth*, London, 1908; Macauliffe, *The Sikh Religion*, vi. 122 ff.)

31. Vaiṣṇavism in Bengal.—Another side of the Neo-Vaiṣṇavism is shown in the teaching of Mīrā Bāī, a prophetess who was born about A.D. 1504, and preached the doctrine of fervent faith in Kṛṣṇa in its most ecstatic form (Grierson, 12; Macauliffe, vi. 342 ff.; H. H. Wilson, i. 136 ff.). This form of mysticism found a congenial soil in the Bengal Delta, among an emotional race little affected by Aryan influence, and steeped in Animism.

The leader of this movement was Chaitanya, born two years after Luther (A.D. 1484-1527). He taught the sufficiency of faith in the divine Kṛṣṇa and his consort Rādhā; and the only form of worship prescribed was the repetition of the name of the Deity without any concomitant feeling of genuine devotion. This creed naturally found acceptance among the sensuous people of Bengal, who still retained some leaning towards Buddhism, were depressed by the results of long-continued social disorder, and had no alternative but to accept either Śāktism or Animism. The stress laid by Chaitanya on ecstatic devotion towards Kṛṣṇa and Rādhā had encouraged sensuality, and the Bairāgī Vaiṣṇavas of Bengal have acquired such an evil reputation that Vaiṣṇavi, the title of the female members of the order, has become synonymous with courtesan (Wise, *Notes on the Races, Castes, and Trades of E. Bengal*, 1883, pp. 154, 162). For Chaitanya and the Vaiṣṇavas of Bengal, see *Calcutta Review*, xv. [1851] 169 ff.; E. A. Gait, *Census Report Bengal*, 1901, i. 182 ff.

32. The adoration of the guru.—The slavish adoration of the spiritual teacher (*guru*, *gosaīn*), though no part of the original teaching of Chaitanya, who held that the Deity was all in all, and the teacher only the spiritual father of his flock, is the essence of this type of modern Vaiṣṇavism;

and the worship done to him differs in no way from that addressed to the Godhead (see *ERE* ii. 546). Respect for the *guru* is not a modern idea, because it was inculcated by Manu (ii. 130, iv. 251 f., xi. 1, ix. 235 ff.). Such reverence, however, when paid by the pupil, ceased on the completion of the term of religious training.

From the twelfth century, on the contrary, the founder rises to the rank of Buddha or Jina; he becomes what the Prophet or the Imams are for the Moslem, a revealer, a supernatural saviour. He is confounded with the god of whom he is an incarnation. Like him, he is entitled to *bhakti* [devotion]; and if the sect admits of a traditional hierarchy, his successors share more or less in the same privilege. Rāmānuja, Rāmānanda, Anandatīrtha, Bāsava, and many others who established subordinate divisions, or who have been distinguished saints or poets, were from an early date regarded as Avatāras [incarnations] of the deity' (Barth, 229).

The same pretensions are now displayed by some of the Bengali *gurus*, and, in particular, by those of the Vallabhāchārya sect, whose headquarters are at Gokul (*q.v.*). Similar claims made by the Śaiva *gurus* in Madras are fully described by Dubois (p. 123 ff.). In more recent times their authority has much decreased.

The great heresiarch, Vallabhāchārya, a Brāhman from S. India, was born in A.D. 1478; gained his first triumphs as a disputant at Vijayanagar; visited all the holy places in N. India; and at Brindāban (*q.v.*) saw Kṛṣṇa in a vision, who directed him to establish a new cult of Bālākṛṣṇa, or Bālgopāl, the god in the form of a boy cowherd, which is the form of worship still most popular among the members of the sect. This cult seems to have been later in date than that of Kṛṣṇa as a hero, from which it appears to have developed (J. Kennedy, *JRAS*, 1907, p. 975 ff.). In his later years Vallabhāchārya renounced the ascetic life, married, became the father of sons, and died at Benares A.D. 1531. His followers are the Epicureans of the East, and frankly avow their belief that the ideal life consists in social enjoyment (*puṣṭi-mārga*, 'the primrose path of dalliance'), rather than in solitude and self-mortification. The doctrine of the sect which has specially aroused popular resentment is the deification of the *guru*, with the corollary that his devotees, in body, soul, and substance (*tan, man, dhan*), are at his disposal, this rule being enforced specially in the case of the female votaries. The sect is found in the largest numbers at Gokul and in the commercial cities of W. India. At Bombay the immoralities of their leader, the Mahārājā, were exposed during a famous trial in 1861 ([Karsandās Mūlji], *Hist. of the Sect of the Maharajas in W. India*, London, 1865; *BG* ix. pt. i. p. 555 ff.; *Census Report Baroda*, 1912, i. 77 f.). The same criticism applies to another sect of wandering beggars in W. India, known as Mānbhāv (Skr. *māhanubhāva*, 'respected'); and this evil reputation is enhanced by the contempt in which they are held by the Brāhmans who serve the orthodox gods (*BG* xiii. pt. i. p. 199, xvii. 181 ff.; art. CELIBACY [Indian]).

33. The Śāktas.—This licentious type of Hinduism appears still more clearly in the form of Śāktism, the worship of the active female principle (*prakṛiti*) as manifested in one or other of the forms of the consort of Śiva—Kāli, Devī, Pārvatī, and many others. The general character of this, the most debased side of Hinduism, is fairly well known; but comparatively little study has been devoted to it by European scholars, and the secrecy under which its rites are celebrated ensures that its mysteries are revealed to none but the initiated. It is believed that the Tāntrik ritual and beliefs are older than the age of the Buddha (*JRAS*, 1904, p. 557); but in its present form it seems to have been popularized among the sensuous population of Assam and E. Bengal about the 5th cent. A.D.

On the one hand, it has been supplied with a philosophical justification, being a popularized version of the Sāṅkhya principle of the union of the soul of the universe (*puruṣa*) with the primordial essence (*prakṛiti*). It regards the self-existent Being as not only single, solitary, and impersonal, but also quiescent and inactive. Once it becomes conscious and personal it is duplex, and acts through the associated female principle which, again, is conceived to be possessed of a higher degree of activity and personality. Combined with this is a literal and misconceived interpretation of various passages in the Veda, in which the will and power to create the universe are represented as originating from the Creator, as co-existent with Him, and as part of Himself. On this theory, the belief is more closely connected with Saivism than with any other religious system, originates in philosophical Brāhmanism, and traces back its history through Brāhmanism to the earliest Vedic conceptions (Monier-Williams, 180 f.; H. H. Wilson, i. 241 f.; Waddell, *Buddhism of Tibet*, p. 129 f.).

On the other hand, Śāktism has a second and less reputable side, and this is more present to the majority of its adherents than any philosophical speculations and reminiscences of Vedic doctrines. The impersonation of the female energy in the form of Mother Earth appears among the non-Aryan tribes in the cult of the village-goddesses (*grāmadevatā*), some of whom are purely local or tribal, while others, like Kālī or Māriyamma, though they still retain some local characteristics, have become national deities. Even in the Veda, Pṛthivī appears as a kindly guardian-deity (Macdonell, *Vedic Myth.*, 88); but with her, by a process of syncretism, has been associated the non-Aryan Mother-cult, which has been described in the art. DRAVIDIANS.

The progress of this syncretism is indicated in various ways. In the Bādāmī cave-temple, for instance, Pṛthivī is identified with Bhūmī-devī, or Bhū-devī, the Earth-Mother of the non-Aryans, goddess of patience and endurance, who in Manu and in the formal ritual of Brāhmanism receives special adoration (Fergusson-Burgess, 409; Manu, iii. 85 f., ix. 311; Colebrooke, *Essays*, 1858, p. 85). In one of the S. Indian temples, again, Devī appears in the form of a female image in stone, of which the head alone is visible, while the body is still concealed in the earth (Oppert, *Orig. Inhab.* 468). This conception also appears in Buddhist art, where she rises under the feet of the horse of the Master (Grünwedel, *Buddhist Art in India*, 98 ff.); and in the Greek representations of the goddess Ge (Farnell, iii. 25, 27, 55, 216, 223 f., 256, v. 245 f.; J. E. Harrison, *Proleg. to the Study of Gr. Rel.*, Cambridge, 1903, p. 276 ff.). In its benevolent manifestation the cult of the Earth-goddess is shown in that of the Rājput Gaurī, 'the brilliant one,' whose annual marriage to Īśvara or Śiva is intended, by a sort of mimetic magic, to stimulate the growth of the young corn (Tod, *Annals of Rajasthan*, Calcutta reprint, 1884, i. 602 ff.; Frazer, *Adonis, Attis, Osiris*², 199 f.). In other cognate manifestations she is known as Sākambhārī, 'herb-nourisher,' or Āśāpūrnā, 'she who fulfils desire' (*BG* i. pt. i. p. 158, xxiii. 679 f.; Atkinson, *Himalayan Gaz.* ii. 328; Tod, i. 67).

But, besides these benevolent manifestations, she exhibits more of the non-Aryan feeling when she displays her chthonic and malignant nature. Cults of this class are specially common in S. India. Such is that of Ellamma, 'mother of all,' whose ritual includes animal-sacrifice, and the brutal rite of hook-swinging, intended as a mimetic charm to promote vegetation, the plant springing as the victim rises in the air; Māriyamma, 'plague

mother,' at whose shrine an officiant known as Potrāz, 'ox king,' tears open the throat of a living ram and offers a mouthful of the bleeding flesh to the goddess, as in the frenzy of the cannibal or murderous orgy which was a feature of the Dionysiac ritual (*CGS* v. 156, 166); or Pidāri, the Tamil form of the Skr. Viṣahari, 'poison-remover,' a passionate, irascible goddess, with a red-hot face and body, and on her head a burning flame; when drought or murrain prevails, she is propitiated with fire-treading and the sacrifice of a bull; lambs are slain in the route of her procession, and the blood, mixed with wine, is flung into the air to propitiate the powers of evil (*Bull. Madr. Mus.* iii. 265; Oppert, 471 ff., 491 ff.). The cults of these goddesses have recently been carefully investigated by H. Whitehead, bishop of Madras (*Bull. Madr. Mus.* v. 107 ff.; cf. Gopal Panikkar, *Malabar and its Folk*², Madras, 1904, p. 128 ff.; Dubois, 286 f.).

From deities of this class the transition to the orthodox cults of Kālī and Devī, shorn though they may have been of some of their brutality and licence, is easy. A modern orthodox Hindu, however, traces goddess-worship to the Veda, and denies its connexion with Earth cults (*Census Report Panjāb*, 1912, i. 114 ff.).

Devī still retains much of her chthonic character, as when she manifests herself as Vindhyaśāsinī, the presiding goddess of the Vindhyan hills, or the Saptāśrī Devī of Sāgargad in the Kolāba district of Bombay, who have their homes in caves, and represent the original aniconic cult of the vague, disembodied spirits which haunt mountain-gorges; or when, as in the Panjāb, she is manifested in a young girl, who performs mimetic magic to foster the growth of crops; or when, as in Nepāl, in the form of Kumārī, 'the maid,' she is accompanied by boys representing Gaṇeśa and Mahākāl (Śiva) in his malignant form (*Census Report Panjāb*, 1901, i. 126; Oldfield, ii. 315). Kālī has been adopted into the Mahāyāna Buddhism of Tibet (Waddell, *Lhasa and its Mysteries*, 370). Durgā (*q.v.*) seems to be a non-Aryan goddess imported into Hinduism, and identified with the Vindhyaśāsinī Kālī (see *ERE* v. 117 ff.). She does not appear, at least by name, in the early Vedic or Brāhmaṇa literature, though there are several prototypes from which she may have been developed, and it is believed that her identification with Kālī took place about the 7th cent. of our era (*JRAS*, 1906, p. 355 ff.). By others she has been connected with Nirrti, the Vedic goddess of evil—which would account for the malignity of her character (see BRĀHMANISM, vol. ii. p. 813). When she appears seated on a lion, she represents a well-known Oriental type, indicating that these deities

'were originally indistinguishable from the beasts, and that the complete separation of the bestial from the human or divine shape was a consequence of that growth of knowledge and of power which led man in time to respect himself more and the brutes less' (Frazer, *Adonis*², 107).

Śāktism is thus a direct offshoot of the Mother-cultus, and it has developed on lines similar to those of Ishtar, Ashtar or Ashtoreth, the Paphian Aphrodite, the Phrygian Cybele, and 'Diana' of the Ephesians.

Closely connected with these is the cult of the divine Mothers (*mātrī*), of whom there are various enumerations, the catalogues including seven, eight, or sixteen (Monier-Williams, *Skr. Dict.*, Oxford, 1872, *s.v.* 'Mātrī'). Each of them is usually associated with one of the greater gods as his female energy. The eight Mothers are represented on the shrine of Gaṇeśa at Kirtipur in Nepāl (Oldfield, i. 130). In Gujārāt, some of them represent the malignant ghosts of Chāraṇ women who perished in some tragic way, the chief of

them being Khoriyār, the embodied curse of the spirit (A. K. Forbes, *Rās Mālā*², 242 f.; *BG* viii. [1884] 643). In Madras also many of the Mothers are of human origin; Gaṅgamā was a Brāhman woman, and Puṅgamma one of three sisters who constructed a famous tank (Cox-Stuart, *Manual of N. Arcot*, Madras, 1895, i. 186). Such worship readily develops into that of a single female deity, like Ambā Bhavānī of Gujarāt, who is propitiated by animal-sacrifice and offerings of spirituous liquor, her image being a block of stone rudely hewn into the semblance of a human face (*BG* v. 432 f., ix. pt. i. Introd. xxxv f.; for Mother-worship, see Monier-Williams, *Brāhmanism and Hindūism*⁴, 222 f.). The cult may be compared with that of *al θεαλ μαρτεpes* at Enguim in Sicily, which Cicero calls 'augustissimum et religiosissimum fanum' (in *Verr.* iv. 44, v. 72), and the *Deae Matres* of the Romans. It is, however, in Assam and Bengal that the cultus appears in its most popular form (see *ERE* ii. 134^a, 491 f.). Here the old savage beliefs, temporarily submerged, but not extirpated, by Buddhism, assume a new development. The cultus is believed to have originated at Kāmṛūp in Assam, and may be older even than the preaching of Buddha (*Census Report Assam*, 1891, i. 80, 1901, i. 39 f.; *JRAS*, 1904, p. 557). The goddess revels in blood sacrifice, and satisfies the desires of her votaries for a diet of meat by permitting the use of the flesh of the animals sacrificed (Wilkins, *Modern Hindūism*, 1887, p. 168). In one Assamese form, Kāmākṣā, 'goddess of desire,' the most abominable rites are practised, and licentious scenes exhibited which it is scarcely possible to suppose the human mind could be capable of devising'; and up to quite recent times these were accompanied by human sacrifice (*Census Report Assam*, 1891, i. 80; cf. *ERE* ii. 134 f.). Human sacrifice, though it appears in the legend of Hiranyakaśipu, is not a characteristic of the Vedic religion, and was probably derived from some non-Aryan cult. In former times human victims were immolated at shrines of Kālī in Assam; when the temple of Kāmākṣā was rebuilt in A.D. 1565, Nārāyaṇ consecrated it with numerous human sacrifices, the heads of the victims being offered to the goddess on copper plates; similar sacrifices were frequently offered at the copper temple at Sadiyā, and at Beltolah in Kāmṛūp; it was owing to the seizure of four British subjects for this atrocious purpose that the Rājā of Jaintia was deposed in 1835 (*Census Report*, 1891, i. 80). In Bengal, again, the worship of Durgā is accompanied by wearisome puerilities and gross idolatry (Pratapachandra Ghosha, *Durgā Pūjā, with Notes and Illustrations*, Calcutta, 1871). The cult of Kālī-Devī is also associated with the horrors of Thagi (E. Thornton, *Illustrations of the History and Practices of the Thugs*, London, 1837; W. H. Sleeman, *Ramaseana: Vocabulary of the Peculiar Language used by the Thugs*, Calcutta, 1836; *Report on the Depredations connected with the Thug Gangs*, Calcutta, 1840).

34. Later developments of Hindūism.—The modern development of Hindūism aims at the reconstruction of the faith in order to adapt it to new conditions. On the one hand, it proposes to reconcile it with the social uprising of the more depressed classes resulting from the impartial reign of British law; on the other, to meet the requirements of the educated classes who have to some extent assimilated the results of Western thought and culture, and among whom the general use of English, like that of Greek under the Roman Empire, or of Latin in the Middle Ages, tends to form a bond of union, and results in the growth of a feeling of common nationality among

the diverse races of the Peninsula. The first movement is illustrated by the growth of sects founded on social revolt; the second by those which seek to reconcile the faith with European philosophy, mysticism, or agnosticism, the method employed being usually to reject the more objectionable dogmas and practices of Hindūism, and to substitute for them the ancient Vedic rites and beliefs.

(a) *Sects founded on social revolt.*—Before the British occupation this type may be illustrated by the rise of Sikhism. The ground was prepared for it by the Musalmān dominion in the Panjāb, which encouraged the growth of unitarian beliefs, and by the eclectic preaching of Kabir and his followers. It was originally an attempt at religious reform, and, in process of time, arousing the patriotism of the people, ended in becoming a political organization. Founded by Guru Nānak (A.D. 1469–1539), it was further developed by his successors, notably by Guru Govind Singh (A.D. 1675–1708). The creed in its strictest form enjoins the belief in a single God, condemns the worship of other deities, idolatry, pilgrimages to the great shrines of Hindūism, faith in omens, charms, and witchcraft; and does not recognize ceremonial impurity at birth or death. As a social system it aimed at abolishing caste distinctions, and, as a necessary consequence, Brāhmanical supremacy and ordinances, in all family rites. But this ideal system is accepted by few, and there is a growing tendency, now strongly resisted by its leaders, to conform more closely to official Hindūism (see Macauliffe, *The Sikh Religion*). Recent investigations show the difficulty of differentiating Sikhism from Hindūism (*Census Report Panjāb*, 1912, i. 154 ff.). In more recent times a similar movement has been started among the depressed castes, who resent the contempt in which they are held by the punctilious high-caste organizations, particularly in S. India. Thus the Pariahs of Madras have founded an organization of their own, and now assert claims to privileges from which in former times they were rigidly excluded. This movement has caused considerable alarm among some of the leaders of Hindu society, who recognize that, unless the position of these outcasts is seriously considered, there is a risk that they may, in despair, adopt Christianity, as many of them have already done (for recent efforts to relieve the so-called 'untouchables,' see *Census Report Baroda*, 1912, i. 262; *Madras*, 1912, i. 161 f.). In the same way the Satnāmīs (*q.v.*) of the Central Provinces have revolted against Brāhman domination, and are now divided into rival groups, one of which refuses intermarriage with the other, and has adopted a ritual which admits some of the fouler practices of the Vaiṣṇava and Śākta sects (*Census Report Central Provinces*, 1901, i. 89).

(b) *Sects aiming at the reconstruction of Hindūism.*—This movement owes much of its inspiration to the translations of the Hindu sacred books into English, which now, in this form, appeal to a wider educated public. The results of the Brāhma Samāj (see *ERE* ii. 813 ff.) have not been encouraging.

'Many who are really Brahmos, other than those of the Sādhāran Brahmo Samāj sect, prefer to describe themselves as Hindus'; and 'so far as outward appearances go, the present-day tendency amongst the educated classes of Bengal, to whom alone the [Brahmo] sect . . . is likely to appeal, is towards agnosticism or indifferentism in matters of religion, and Brahmoism has no special attractions for them when orthodox Hindūism allows them all the latitude they need' (*Census Report India*, 1901, i. 398; *Bengal*, i. 159).

Its most important innovation has been the establishment of public congregational worship, hitherto unknown in India (see *ERE* ii. 813 ff.). The Ārya Samāj, which repudiates idolatry and in a large measure ignores the sectarian deities, studies Christianity chiefly in the works of its

opponents, adopts towards it the attitude of hostility rather than eclecticism, and depends mainly for its influence on the sympathy of the advanced political parties in N. India (see *ERE* ii. 57 ff.).

35. The new Vedāntism.—Some attention, particularly in America, has been directed to the new development of the old Vedāntism taught by Śrī Rāmākṛṣṇa Paramahansa, and expounded by his disciple Swāmi Vivekānanda.

He thus delivers the message of his master: 'Do not care for doctrines, do not care for dogmas, or sects, or churches, or temples; they count for little compared with the essence of existence in each man which is spirituality, and the more that this is developed in a man, the more powerful he is for good' (*Speeches and Writings of Swāmi Vivekānanda*, Madras, n.d. [c. 1909], p. 31). He denies the existence of polytheism in India. 'In every temple, if one stands by and listens, one will find the worshippers apply all the attributes of God—including omnipresence—to the images. This is not Polytheism' (ib. 46). The earnest worshipper before an idol 'recognizes in it a necessary stage of his life. "The child is father of the man." Would it be right for the old man to say that childhood is a sin or youth a sin? Nor is image-worship compulsory in Hinduism' (ib. 48). His ideal religion is what 'we call in India Yoga, union between God and man, union between the lower self and the higher self. To the worker it is union between men and the whole of humanity; to the mystic, between the lower and the higher self; to the lover, union between him and the God of love; and to the philosopher it is union in all existence' (ib. 95). The Hindu mythology is consistent with the principle of evolution, because it 'has a theory of cycles, that all progression is in the form of waves' (ib. 215). The claims of the Vedānta to universal acceptance rest on the fact that it is associated with no single founder, that 'it is the one scripture the teaching of which is in entire harmony with the results which have been attained by the modern scientific investigations of external nature. . . . Most of our modern reform movements have been inconsiderate imitations of western means and methods of work, and that surely will not do for India' (ib. 462 ff.). 'The most hideous ceremonies, the most horrible, the most obscene books that human hands ever wrote or the human brain ever conceived, the most bestial forms that ever passed under the name of religion, have all been the creations of degraded Buddhism' (ib. 504). 'My idea is the conquest of the whole world by the Hindu race' (ib. 553; on Rāmākṛṣṇa, see, in general, Max Müller, *Rāmākṛṣṇa, his Life and Sayings*, London, 1899).

36. Theosophical Hinduism.—Another movement, having as its object the reconciliation of Hinduism with more advanced forms of thought, may be called Theosophical Hinduism, which has its centre at the Central Hindu College, Benares, under the guidance of Mrs. A. Besant.

The 'Catechism for Boys and Girls in Hindu Religion and Morals' (Benares, 1907) begins by expounding the 'Basic Principles of Hinduism,' under the name of 'Eternal Religion' (*Sarādhāna Dharmā*). It claims to be the oldest of the world religions, eternal because the truths taught by it are eternal. It depends upon the four Vedas, and other Scriptures written by the *ṛṣis*, or Saints, such as the *Laus of Manu*, the great *Purānas*, the *Mahābhārata* and *Rāmāyana* Epics. There is one Boundless Eternal Being—Brahman or Parabrahman, who is known only when revealed as Īśvara, 'the Lord, the loving Father of all the worlds, and of the creatures which live in them.' He helps us to know Him 'by taking different forms, each of which shows us a little portion of Him.' These forms are the three great Devas—Brahmā, Viṣṇu, and Śiva, or Mahādeva. Brahmā creates, Viṣṇu sustains, Śiva dissolves the worlds again 'when they are worn out and useless.' He also manifests Himself in the form of Devas and Devis—Vāyu, god of wind, Agni, of fire, Varuṇa, of water, Kubera, guardian of the earth. Besides these are Sarasvatī and Gaṇeśa, 'who will help us to learn, if we ask them. He lives in us, in our hearts, in our inner self'; He shines out on us when we are loving and pure, and is clouded when we are cruel or unclean. 'He lives in all animals, and even in plants and stones. He is everywhere, helping everyone and everything, and we cannot do harm to any without hurting Him.' He appears in incarnations (*avatāra*), specially in the ten manifestations of Viṣṇu. Man is composed of spirit (*jīva*), a portion of Īśvara, of whom our bodies are the coats. The *jīva* cannot die; at death he leaves the body behind 'like a worn-out cloth,' and 'goes into the next world, dressed in his other bodies.' Then he puts off another of these and goes on to Svarga, and is very happy there, till his Svarga body is also worn out. 'In the next world a very good man is happy, 'but does not stay long; but a bad man is very unhappy, and suffers a great deal. People who tell lies, who get drunk, who are cruel to women, children, and animals, have to stay there a long time.' When the Svarga body is worn out, 'the *jīva*, helped by the Devas, begins to make some new bodies for himself, as a man might get new clothes. Then he comes back to the earth and is born in his new baby-body.' The conditions of his new birth are controlled by his desires, thoughts, and actions in his previous lives. Desires condition it 'because we must have the things we have wished for, and must be born

where we can get them'; thoughts, 'because we become that which we think about. . . . So our character, that governs our conduct, is made by our thoughts'; actions, 'because we are paid back that which we have done.' The law of *karma* determines all this. The second great law is that of *yaṅna*, or sacrifice. 'The bodies in which the *jīvas* live can only be kept going by feeding them with other bodies. The bodies of the *jīvas* living in minerals go to feed vegetables. The bodies of the *jīvas* living in vegetables go to feed animals and men. As the *jīvas* living in animals and men sacrifice the bodies of others to keep themselves alive, they in turn must sacrifice their bodies to those about them. Thus the young should sacrifice their bodies to the old, by serving and helping them; fathers and mothers sacrifice their bodies to their children by taking care of them. . . . Every one should give the sacrifice of prayer to God, who gives him all things, and should try to do kindness to the people round him.' A man knows what bodies he should use 'by avoiding the infliction of pain. Grasses and roots, and leaves, and fruits, and vegetables generally do not suffer pain when they are picked and eaten. To avoid giving pain is the highest sacrifice, says the great Bhiṣma. We should try always not to give pain.'

The account of the 'General Hindu Religious Customs and Rites' begins by defining the *mantra*, or mystical formula, as 'a succession of sounds in a definite order, arranged so as to bring us help and protection from Īśvara, or from some Deva or Devi.' The order of the words is important, because 'if notes are played in a particular order, we have a tune; if the order is changed, the tune is spoiled.' If a *mantra* be translated into another language, it loses its use, as 'an Indian tune, played on an Indian musical instrument, cannot be played on an European musical instrument, because the latter has not all the notes that the Indian one has.' Sacraments (*saṁskāra*) are 'ceremonies performed at particular times during the life, to make the bodies more useful to the *jīva*.' The chief of these are the giving of the sacred thread (*upanāyana*) and marriage (*vivāha*). The funeral mind-rite (*śrāddha*) helps the *jīva* 'to pass quickly through the world into which he goes at death, and to reach the happy world of Svarga much sooner than he would do if he were left to himself.' Purity (*śauca*) is essential because dirt is poisonous; 'bad smells are the warnings of the Devas of disease.' Worship is 'love of Īśvara; being devoted to Him, thinking about Him, praying and singing praises to Him, and trying to serve Him in all the forms He takes, by kindness to everyone and everything.'

37. Hindu eclecticism.—This summary account of Hindu sectarianism may tend to exaggerate its extent. It would be a mistake to suppose that the faith is divided into so many water-tight compartments between which intercommunication is impossible. The position of the advanced Hindus on the question of sectarianism has been defined as follows:

'The attitude of an educated Hindu towards the question of doctrine and worship is this: What God is is not entirely knowable, as it is an infinite conception. Of this infinite conception only a fraction in the form of an idea of either power, miracle or material, comes to the knowledge of man, by an occasional and wonderful manifestation. It is vain for a man to be proud of any particular manifestation and to exclude the rest from cognizance. All worship, therefore, should be tolerated. Any deity may continue to be worshipped provided the worshippers' conception becomes widened. It is neither proper nor necessary to replace one deity by another, because it is not a matter of importance whether the absolute and infinite conception is called Shiva, Viṣṇu, Durgā, or Buddha. Whether a man worships the Sun, Jupiter, or Saturn, or any historical great hero, or a saint, or a river like the Ganges, or any other object that inspires awe or creates fear, is a matter of no importance. All these gods or manifestations are but starting-points. To disturb the faith of a man in a finite God is foolish as long as his mind is not fit to accept the higher' (Shridhar V. Ketkar, 161).

While the Śāktas are more distinctively separated from Saivas and Vaiṣṇavas, these two are, in the view taken by most Hindus, complementary rather than antagonistic. Both appeal to the *Purānas* as their Scripture; members of one sect may venerate the deities of another. Thus in some places Harihara (Viṣṇu-Śiva) is worshipped (Rice, *Mysore and Coorg from the Inscriptions*, 205). In Malabar we find 'none of the strict differentiations between worshippers of Viṣṇu and Śiva, or, indeed, between any of the forms of the deity, whether venerated as gods or goddesses, which are to be seen elsewhere in Ś. India beyond Malabar and Travancore. . . . The people generally do not, as a rule, give much regard to such differentiation. The Nambūtiris do, but by no means to such an extent as one sees, for example, among the Śrī Vaiṣṇava Brāhmins of Holy Conjeevaram, who are divided into two sects, each hating the other with the most acrid bitterness' (*Bull. Madr. Mus.* iii. 79; cf. *Census*

Report Cochin, 1912, p. 22; Thurston, *Castes and Tribes*, v. 369). In those regions, again, into which Hinduism and the rules of caste have recently been introduced, the distinction of sect is often a matter of diet, the vegetarian being a Vaiṣṇava, the meat-eater a Śakta. But in Assam, where the Vaiṣṇava teachers follow the strict law of Chaitanya, new converts, accustomed to a diet of pork, refuse to abandon it (*Census Report*, 1901, i. 39). In Bengal many worshippers of the goddess Durgā, who demands animal sacrifices, are in private worshippers of Viṣṇu (Wilkins, *Modern Hinduism*, 43); in W. India many Vaiṣṇavas worship the Mother-goddesses (*BG* v. 51 f.); and in Madras change of sect is common (Dubois, *Hindu Manners and Customs*³, 119). For a discussion of the relation of Vaiṣṇava and Śaiva beliefs, and of the suggestion that all Hindus of the Province can be classed under one or other of these sects, see *Census Report Panjāb*, 1912, i. 125 ff. The same eclecticism prevails in the worship of images. The sacred place is the home of many gods, who are all impartially worshipped by pilgrims. Again, in many places we find a syncretic combination of cults, the lesser gods being regarded as the 'doorkeepers' (*dvarapāla*) of, or subordinate to, the chief deity. Many of the greater gods have absorbed non-Aryan beliefs and ritual—a process which is often marked by special legends.

It was a non-Aryan Sāvāra who discovered the image of Jagannāth, and it was not till a Brāhman married a daughter of the finder that the cult was established. It was a Pulayā, an out-caste, who found the child, an incarnation of Viṣṇu, now worshipped as Padmanātha in Travancore (Hunter, *Orissa*, London, 1872, i. 89 ff.; Oppert, 76 f.). The same fusion of cults appears at many shrines, the place having been adopted by rival sects in succession. The sculpture of the great gates at Tanjore is all Vaiṣṇava, while everything inside the courtyard is Śaiva; and 'one of the great difficulties of an antiquary before the 8th century is to ascertain to what divinity any temple or cave is dedicated' (Fergusson, *Hist. of Indian Arch.* 744, 441). In the same way, Benares, a Śaiva stronghold, is a museum of cults associated with other gods (Sherring, *Sacred City*, 63, 102, 130, 172). The shrine of Śiva, as Mahākāla, at Kāthmāndu (*g.v.*) is visited by all sects and by all ranks of the people, from the Hindu Gorkhā king and queen down to the humblest Buddhist Newār; Bāhhras, or Buddhist priests, officiate at Hindu celebrations, and Hindus regard the Buddhist deities as eminent saints (Oldfield, ii. 285 f.). The association of the cultus of Śiva and his consort with that of Viṣṇu at the temple of Jagannāth, a chief seat of Viṣṇu worship, is specially noteworthy (Hunter, *Orissa*, 128). In Ceylon, Buddhists continue to worship many of the Hindu gods (Hardy, *Eastern Monachism*, 201; cf. Waddell, *Buddhism of Tibet*, 325). In W. and S. India many Christian shrines command respect from Hindus, and in a less degree from Muhammadans (*BG* xiii. pt. i. p. 209; N. Manucci, *Storia do Mogor*, London, 1907, iii. 343; *IGI* x. 167). In the N.W. Frontier Province the predominance of Islām has seriously influenced the local Hinduism (*Census Report*, 1912, i. 93). Hindus and Muhammadans worship at the shrine of the Virgin Mary at Cochin, and the bust of a well-known missionary at Madras was recently associated with the image of Sarasvatī at a Hindu religious rite (Thurston, *Ethnogr. Notes*, 361; *Bombay Ethnogr. Survey*, 1909, 'Kharva,' no. 114, p. 5). On the other hand, many groups of Christian converts retain Hindu beliefs and observances (*Census Report Cochin*, 1901, i. 59 f.). In N. India the high-caste Brāhman keeps in his private house-chapel an ammonite

śālagrāma representing Viṣṇu, and a pair of phallic emblems of Śiva and his consort; when he goes on pilgrimage to sacred places he pays homage both to the Śaiva and to the Vaiṣṇava shrines (Jogendra Nath Bhattacharya, *Hindu Castes and Sects*, Calcutta, 1896, p. 364). In Bombay every Brāhman householder worships a group of five deities—Śiva in the *līnga*; Viṣṇu in an ammonite or in a picture; a metal image of the Śakti, or Mother-goddess; Gaṇapati, or Gaṇeśa, god of luck and wisdom; Sūrya, the Sun, or Hanumān, the sacred monkey (*BG* ix. pt. i. Introd. p. xxxv). In the temples of the Mādhavachārī sect in the Baroda State are found images of Śiva, Durgā, and Gaṇeśa side by side with those of Viṣṇu and his consort, the explanation given by members of the sect being that the founder, originally a worshipper of Śiva, afterwards adopted the cult of Viṣṇu (*Census Report Baroda*, 1901, i. 137 f.). In this State any hostility towards adherents of rival sects is not felt by the population at large, but by the leaders and inner circle of devotees (*ib.*, 1912, i. 74).

The continuity of religious life is exemplified by the successive occupation of the sacred sites by various forms of religion. Benares and Mathurā were centres respectively of Buddhism and Jainism, the former being at present devoted chiefly to the cult of Śiva, the latter to Viṣṇu in the form of Kṛṣṇa. At Sakhi Sarwar (*g.v.*), near the Sulaimān range, Hindus perform their rites of prayer and ablution, Sikhs venerate a shrine of Nānak, Muslims the tomb of a Muḥammadan saint (*IGI* xxi. 390). Nāsik and Wāī, both at the present day important centres of Hinduism, have lines of Buddhist caves (Fergusson-Burgess, 263 ff., 211). In Kāśmīr, in spite of the nominal conversion of the population to Islām, their shrines stand on the sites of the holy places of the Hindus, and receive a veneration not accorded to the modern mosques and their Mullas (*IGI* xv. 102). But, though Hinduism is eminently eclectic and tolerant, disputes between rival sectarians, ending in bloodshed, are not uncommon. Serious riots between rival bands of ascetics have occurred at Hardwār (*g.v.*). Rival Vaiṣṇava sects have come in contact in the Madras Presidency, and Vaiṣṇavas have resisted the Śaiva Līngāyats (*g.v.*) (*IGI* x. 257, 378; Dubois, 119 f.). Conflicts between Vaiṣṇavas and Jains frequently occurred in S. India in the 14th cent. (Rice, *Mysore and Coorg*, 177). In N. India, processions of the Jain 'naked gods' have led to serious riots between them and orthodox Hindus.

38. Idolatry.—The feature of modern Hinduism which attracts the attention and provokes the contempt of foreign observers is the universality of idol-worship. The earlier forms of Hinduism were aniconic. The older Buddhism paid reverence to relics and symbols. It was the later Mahāyānā development which introduced images of the Master. In its modern form the Hindu idol has little of the artistic beauty which we find in Greek anthropomorphism, which,

'although falling far short of the grandeur and purity of the Infinite, yet furnishes its noblest image, because it has glorified by artistic genius the human body, which has been chosen as the earthly home of the rational soul' (Dill, *Roman Society from Nero to Marcus Aurelius*, 1905, p. 422).

The Hindu theory of the idol is in sharp contrast with that of the Greek. To the former human form is merely the ephemeral clothing of the soul, in which, unhappily, it is forced to linger for a time. Though in the sculptures of the age of Aśoka an interest in portraiture, at least in that which represents national characteristics, begins to appear, the child-like naturalism, somewhat refined in the delineation of woman, tends to become rococo in style. As idol-worship advanced, from the 7th or 8th cent., energy exhibited itself in gigantic images, or was expressed in a multiplica-

tion of the limbs or symbols of the deity. It is a mistake to suppose that idolatry was introduced into India by the example of the Greeks, and that it was rarely practised until the beginning of the Christian era. Images of the gods were certainly common in the Maurya period (321-184 B.C.), and doubtless at a much earlier time; but of these ancient images none has survived (V. A. Smith, *Hist. of Fine Art in India and Ceylon*, p. 79 n.). In the modern idol the rigid conservatism of the race limits artistic invention as the forms become stereotyped; and the growth of aestheticism has exercised little influence on the development of the Hindu image. (For the development of the Buddha images, see Shway Yoe, *The Burman*, i. 237.)

The image may be regarded in two aspects: as a symbol merely bringing close to the sense the spiritual idea of divinity, and serving to stimulate the prayerful thought of the worshipper; or it may be venerated as the indwelling abode of the divinity, in which he habitually resides, or into which, by spells and blood-offerings, he may be compelled to enter' (Farnell, *Evolution of Religion*, London, 1905, p. 42 f.).

The first is the view of orthodox Brāhmanism, which corresponds with the apology for anthropomorphism given by Platonists like Dion or Maximus of Tyre.

The justification lies in the vast gulf which separates the remote, ineffable, and inconceivable purity of God from the feebleness and grossness of man. Few are they who can gaze in unaided thought on the Divinesplendour unveiled. Images, rites, and sacred myth have been invented by the wisdom of the past, to aid the memory and the imagination of weak ordinary souls. The symbols have varied with the endless variety of races. Animals or trees, . . . or the miracles of Pheidias in gold and ivory, are simply the sign or picture by which the soul is pointed to the Infinite Essence which has never been seen by mortal eye or imaged in human phantasy' (Dill, 394 f.). 'Idolatry is in fact nothing more than a representation of the abstract by the concrete, of remote by proximate, and of the principal by the agent.' No man on earth 'can conceive of infinities like time, space, or God with the same vividness as that of a finite object' (Shridhar V. Ketkar, 48; and cf. the apology for idolatry by an orthodox Hindu [*Census Report Travancore*, 1902, i. 201 ff.]).

In the same way, the Buddhist defends the use of images as 'a means to the pious of localising their feelings and concentrating their thoughts on the supreme model' (Shway Yoe, i. 221, 227). This view, however, is not that of the masses of Hindus. They regard the image as being, for the time, occupied by the deity. When the image of Durgā is installed at the Durgā-pūjā festival, the priest makes this invocation:

'O goddess, come and dwell in this image, and bless him that dedicates it.' Then, naming the person on whose behalf the rite is being performed, he touches the eyes, lips, forehead, cheek, and other parts, saying: 'May the soul of Durga long live in this image!' (S. C. Bose, *The Hindoos as they are*, Calcutta, 1881, p. 102).

In Nepāl, while the idol of Grāmdevī Jayabāghesvari is being re-painted, the spirit of the deity is extracted and kept in a jar until the work is finished, when it is restored to its abode (Wright, *Hist. of Nepāl*, 127). The same idea, in a grosser form, appears in the degraded northern Buddhism, when internal organs made of dough or clay are inserted in the larger images; in those most highly valued, precious stones, filings of the nobler metals, consecrated rice, scrolls containing the Buddhist creed, texts, and sacred relics are placed (Waddell, *Buddhism of Tibet*, 329).

The luxuriance of modern idol-worship is best observed at the more important holy places.

In 1863, Sherring estimated that there were 1454 temples in Benares; and this enumeration did not include the minor shrines and wall-niches, each containing one or more images, which are found everywhere in the streets. 'These inferior shrines were, on one occasion, by a curious contrivance immensely increased; and yet the increase could hardly have been generally perceived. Rājā Mān Siñh of Jeypore, wishing to present a hundred thousand temples to the city, made the stipulation that they were all to be commenced and finished in a single day. The plan hit upon was to cut out in blocks of stone a great many tiny carvings, each one representing a temple. The separate blocks, on the work being completed, exhibited from top to bottom, and on all sides, a mass of minute temples. These blocks are still to be seen

in various parts of Benares. . . . In regard to the number of idols of every description actually worshipped by the people, it certainly exceeds the number of people themselves, though multiplied twice over; it cannot be less than half a million, and may be many more' (*Sacred City*, 42 f.). Cf. IMAGES AND IDOLS (Indian).

39. The beliefs of the peasant classes.—The primitive animistic or pre-animistic beliefs (see § 7) have been to some extent obscured or modified by the predominant Brāhmanism among the menial races of the plains, and in a less degree among the forest tribes. The Hindu villager, like the Jew at the period of the growth of Christianity (W. R. Cassels, *Supernatural Religion*, London, 1902, p. 57 ff.), lives in an atmosphere peopled by spirits, generally malignant, capable of being repelled or conciliated by sacrifice, spells, incantations, amulets, and other magical or semi-magical means.

'A belief in every kind of demoniacal influence has always been from the earliest times an essential ingredient in Hindu religious thought. . . . Certainly no one who has ever been brought into close contact with the Hindus in their own country can doubt the fact that the worship of at least ninety per cent. of the people of India in the present day is a worship of fear' (Monier-Williams, *Brāhmanism and Hindūism*⁴, 230).

The Hindu villager has no conception of the reign of law in the natural world. The occurrence of miracles is a matter of daily observance. He appeals to the minor rather than to the greater gods, because the latter have, in his belief, in a large measure lost touch with humanity, and no longer interest themselves in the petty details of his ordinary life ('Magna di curant, parva neglegunt' [*Cic. de Nat. Deor.* ii. 66, 167]). In all matters of practice, custom is conceived as a moral rule, which decides what is right and what is wrong. 'The custom handed down in regular succession since time immemorial . . . is called the conduct of virtuous men' (Manu, ii. 18; cf. Westermarck, *MI* ii. 161 ff.). The rites connected with the cult of this vaguely conceived spirit agency are generally performed in the house or at some spirit-haunt, not at a regular shrine or temple. They are usually done by the head of the household, or, when the services of a regular officiant are needed, he is not a Brāhman of the higher class, but a hedge priest drawn from the inferior Brāhman ranks or from one of the menial or forest tribes, the members of which, being assumed to be autochthones, are supposed to be better acquainted with the local spirits and more skilled in repelling or conciliating them than the newer comers. Sometimes the conduct of the rites is entrusted to women, whose greater susceptibility to spirit influence is believed to qualify them for such duties. While the men often worship, with more or less regularity, the official god or gods of their choice, the propitiation of village deities or spirits is often left to women, who are much more conservative than the other sex in matters connected with religion.

It has been suggested that, as in the case of the Greek goddesses, the cult of the female powers or Sāktis has its origin in the matriarchate—a view advocated by J. E. Harrison (*Prolegomena*, 260 ff.), and vigorously opposed by Farnell (*HJ* ii. [1904] 825 f.). It is possible that mother-right once widely prevailed in India, as is indicated by the common rule of inheritance through females, the position of the maternal uncle at marriages, and the priestly functions assigned to the sister's son. But there seems no good reason for connecting the prevalence of Sāktism with mother-right. In N. India the daily worship of the peasant is confined to bowing to, or pouring out a little water in the name of, the sun on rising, as the Greek prayed to Helios (*CGS* iv. 139); to making reverence to the deity or deities embodied in the village-shrine, as he passes it on his way to work; to naming Śiva or

one of the incarnations of Viṣṇu when he feels piously inclined. For the rest, his religious wants are sufficiently provided for by an occasional visit to a sacred river or place of pilgrimage, where he bathes, visits the chief temples, and feeds a Brāhman or two; to the propitiation of his deceased ancestors; to attendance at village or local festivals, where the religious service is only an adjunct to trade or amusement. There is little or no domestic worship save the rites at birth, marriage, and death, the first two being discharged by his family chaplain (*purohit*), the third by some degraded Brāhman who acts as funeral priest. Occasionally a pious man hires a Brāhman and invites his friends to attend a recitation (*kathā*) of one of the sectarian Scriptures. Such rites involve considerable expense, which the thrifty peasant avoids as far as he can consistently with the desire to conciliate his gods and escape the contempt of his neighbours. Among the trading classes it is the custom at the close of life to devote considerable sums to the erection of a temple in their native village or at some sacred place. The peasant may thus seem to be lax in the discharge of his religious duties. But this is not actually the case, because all his ordinary social rites are performed from a motive which to him is religious, that is to say, in obedience to the laws of the caste to which he belongs. It may be said that there are few races among whom religion, as they conceive it, forms a larger part of their daily life. In the eastern Panjāb he

'has practically no belief in the transmigration of souls, but he has a vague idea that there is a future life, in which those who are good in this world will be happy in a heaven, while those who are bad will be wretched in a hell. His devotional offerings to demons, saints, and godlings are meant rather to avert temporal evils, or secure temporal blessings, than to improve his prospects in the life to come. . . . He believes vaguely that it is good for him to meditate on the deity, and to show that he is not forgetting him by mutters *Rām! Rām! Rām!* or repeats the name of some other Hindu god when he gets up in the morning, and if he is piously inclined, at other times also, in season and out of season. Notwithstanding all the numerous saints and deities whom he endeavours to propitiate, he has a vague belief that above all there is one Supreme God, whom he calls Nārāyaṇ or Paramēśvar, who knows all things, and by whom all things are made, and who will reward the good and punish the bad in this life and in the life to come' (Wilson, *Settlement Report of the Sirsa District*, Lahore, 1882, p. 133).

In Gujārāt, as the peasant wakes, he mutters the name of his patron deity, Mahādeva or Siva, Thākurjī or Viṣṇu, Ambābhavānī the Mother-goddess; and if he knows a little Sanskrit he repeats the verse: 'I call to mind in the morning the Lord of deities, the Destroyer of the fear of death!' If he is a layman under a special vow, he chants the praises of his personal deity in a verse from some vernacular poet, or meditates upon his attributes and perfections. If he is a Brāhman or man of high caste, he always bathes, invokes the sun, and pours water in his name, and thrusting his right hand into an ornamented bag, known as the 'cow's mouth' (*gaumukhā*), he runs over his rosary, repeating the ancient Gāyatri, or prayer to the sun. His house oratory contains images of Bālmukund or the infant Kṛṣṇa, the *śālagrāma* ammonite representing Viṣṇu, figures of Siva, Gaṇeśa, Durgā-Devī, Sūrya the sun-god, Hanumān the monkey-god, and others, thus showing the extreme eclecticism of his beliefs. These he washes, dresses, crowns, and adorns with flowers and other offerings, and, if truly pious, he performs the sixteen rites of worship, including all modes of service to the deities, and ending with the circumambulation of the images and a hymn of praise (Forbes, *Rās Māla*, pp. 552 f., 596 ff.).

In Berār the peasant is both a polytheist and a monotheist, believing in one God, to whom the others are subordinate. His special deities are the village Māruti or the monkey-god who is the village guardian, and his family tutelary deities. His

chief religious duty is to make pilgrimages, but these are not compulsory. All life he more or less regards as sacred. He is tolerant, regarding every religion as true and good for him who is born to it.

'He believes that a very strict account has been kept of his good and bad actions; and that he is as sure of getting his reward as his punishment, very often in this world, but generally after death. His belief in a region beyond the grave is very firm. There he will meet with his deserts, and, after enjoying the bliss of heaven or enduring the tortures of purgatory, he will be sent back to this world in the incarnation of a man or a beast, according as he has made good or bad use of his time in this life' (*Census Report Berar*, 1901, i. 54 f.).

For similar beliefs in Madras, see J. E. Padfield, *The Hindu at Home*, 1896, chs. iii. and iv.; for Bengal, *Census Report*, 1901, i. 186 ff.; for the Panjāb, Ibbetson, *Punjab Ethnography*, ch. iv. pt. ii.

40. The ethics of Hinduism.—The influence of Hinduism on life and character is a subject too wide to receive detailed treatment here, and it has been elsewhere discussed (*ERE* v. 496 ff.). The supernatural beings of savage belief frequently display the utmost indifference to questions of worldly morality; and in the early stages of the evolution of public justice, the community interferes only on supernatural grounds with actions which are regarded as endangering its own existence (Westermarck, *MI* i. 663, 709 f.; L. T. Hobhouse, *Morals in Evolution*, London, 1906, i. 119). In other words, sin is regarded as a social or ritual offence, not as the defilement of the individual soul. From the earliest period, it is true, the evil of sin is fully recognized, and its removal is stated to be the work of the gods; but the first mention of the public confession of sin appears in Buddhist literature (Hopkins, 42, 60, 65, 329). It was fully developed under the Bhāgavata monotheism (see *ERE*, vol. ii. p. 544^b; and cf. EXPIATION AND ATONEMENT [Hindu], vol. v. p. 659). It is also true that the official Hinduism of the sacred books 'cannot be charged with indifference to moral ideals. Its sacred literature teems with reflections on the vanity of human life, the glory of renunciation, the necessity of good works, the duty of sympathy with all living things, the beauty of forbearance, the hatredness of revenge, and the power of man to determine his own fate by right conduct. It appeals both to the intellect and to the emotions, and it derives a certain measure of support from the penalties imposed by the caste system' (Risley, *The People of India*, 235).

Such is the official view of the Brāhmanical teachers, who share with the lay members of the community a craving for moral formulas and programmes, and an incapacity for applying them in practical life. Much of this teaching is thus merely idealistic, and is beyond the comprehension and above the moral standard of their disciples. Much, again, of this official morality is open to criticism. Thus, though a regard for truth is taught in Hindu literature from the earliest period, Manu admits that false evidence given with a pious motive does not involve the loss of heaven (F. Max Müller, *India, What can it teach us?* 64 ff.; Manu, viii. 105 f., 112). At the same time, the lawgiver reprehends perjury in certain cases (Manu, viii. 97–101, xi. 57). On the other hand, the assertion of Dubois (p. 171) that neophytes, as a part of their training, are instructed in the art of lying, has no foundation, at the present time at least. A recent native writer remarks that the chief ethical defect in the Hindu Scriptures is that penance is regarded as an atonement for sin.

'Every Hindu believes that he will be able to wash off his sins by performing a penance or by giving *dān* [gifts] to Brāhmins, who have proclaimed that pardon or even merit will be attained through their agency. . . . It leads to the monstrous belief that evil deeds, of whatever enormity, can be atoned for and expiated by money' (*Census Report Baroda*, 1901, i. 135).

The belief, again, that morals depend not on religion, but on the relations of family, caste, or tribe, tends to produce dangerous results.

'Murder is an offence against caste involving severe penalties. But there are no caste penalties for forgery, perjury, cheating, or theft, and this is perhaps the reason why Hindus frequently find it difficult to realize that there is anything morally wrong in this category of offences' (*Census Report Central Provinces*, 1901, i. 81).

The theory, again, that Brāhmins are above all social and moral law saps the foundations of morality. Probably the most effective rule of morals for the average Hindu is the Indian Penal Code, which, for the first time in the history of the race, has carefully defined all criminal offences, and has assigned a fitting punishment for each. There is no doubt much indecency in the outward observances of Hinduism—in temple carvings, the original purpose of which was probably to repel evil spirits, but which have now ceased to subserve this purpose in the eyes of most worshippers; in some religious processions; in the institution of the Devadāsī dancing-girls, attached, like the *hierodouloi* (*q.v.*) of some Greek shrines, to a few of the greater temples. But much of this indecency of word and act is common to all Eastern races, and is not necessarily pornographic among people who have never learned, like those of the West, to treat normal and abnormal sexual questions and relations with reticence. It is this condition of things, sufficiently apparent to any competent observer of native life and manners—not to speak of the secret obscenities which disfigure much of the Śākta and Vaiṣṇava cultus—which has called forth the unmeasured criticism of missionary writers. But it is certain that, if the majority, or even any considerable portion, of the Hindu population were infected with the pollutions against which writers like Ward and Dubois have justly protested, society ere now would have collapsed through its own corruption, just as the Roman world, had it been as debased as it is painted by Juvenal and Martial, must have speedily perished through sheer rottenness. The truth probably is that such vices have always infected only a minority of the people. At the same time the real influence of Hinduism on public morals is small. An experienced missionary writes:

'As far as I can gather from observation and conversation with the people [of Bengal], by their acts of worship there is no attempt after real purity of heart, the conquering of an evil nature, and a desire to please God in return for His goodness. Men sin at the shrines as they do in their houses, and on their return as before their visit. Nor is it thought anything remarkable that this should be so, excepting perhaps in the case of those who have gone to some sacred place in the hope of ending their days there. In cases of this kind I have heard of a higher, purer life being attempted, and of the expectation of this by those who know them. But certainly there is neither the attempt nor expectation of this in the minds of the large majority of the people who go on a pilgrimage. It is not that they may be made pure, but that, by an act of penance, they may give an equivalent to the gods for their sins' (Wilkins, *Modern Hinduism*, 313).

But it must not be forgotten that, behind the immoral beliefs which disfigure some aspects of Hinduism, there is much good sense, benevolence, self-control, self-abnegation, active charity, and kindness which are characteristic of Hindu home life, and are particularly noticeable in those parts of the country where the institution of the joint family prevails.

Hinduism, then, in its practical aspect, exercises little influence over morals. As Farnell, discussing the Dionysiac cultus, remarks, 'As the highest flight of religion rises above mere morality, so a religion may be most powerful in its appeal, and yet remain directly non-moral' (*CGS* v. 238; cf. F. B. Jevons, *An Introduction to the Study of Comparative Religion*, New York, 1908, p. 215 ff.). In default of a well-defined religious sanction for morals, Hinduism has made the ordinary sinner responsible to the caste council for breaches of the moral or social law as interpreted by the elders of the caste. The only agency which really provides moral teaching is the *guru*, or religious preceptor.

He whispers into the ear of the neophyte the secret formula which is to be his guide during life, and he thus admits him to caste privileges and responsibilities. In after life the influence of such teachers is often valuable. In Bengal the *guru* ranks higher than in the Panjāb or the United Provinces, where he seldom makes official progressions to visit his disciples and inquire into questions of morals and caste discipline (Buchanan, *Eastern India*, London, 1838, ii. 751; Wilkins, 26 ff.). In S. India he is an important personage, vested with wide powers of control and discipline over the members of the sect of which he is the leader (Buchanan, *Journey through Mysore*, London, 1807, i. 144 f.; Nelson, *Manual of Madura*, Madras, 1868, pt. iii. p. 160 ff.; Dubois, 123 ff.).

41. The lack of organization in Hinduism.—Hinduism thus provides a characteristic example of the primitive, unorganized polytheisms—an example probably unique among the races of the modern world. This is partly due to the peculiarities of the Eastern temperament, the devotion to mystical speculation, and the incapacity for political organization, which are obvious throughout the history of the Hindu people. It extends over an enormous area, inhabited by many races, all differing in origin, language, and character. The absence of a great and permanent Hindu empire, except under Aśoka and Harṣa, with a single capital city as a centre of religious and political life, prevented the consolidation of the local cults into a State religion, like that of Babylonia or Egypt. This condition of things has been often compared (as by Lyall, i. 159) with Gibbon's account of the state of religion in the Roman Empire (*Decline and Fall*, ed. Smith, i. 165 ff.):

'The various modes of worship which prevailed in the Roman world were all considered by the people as equally true; by the philosopher as equally false; and by the magistrate as equally useful.' Like the Brāhmin Vedāntist, 'the devout polytheist, though fondly attached to his national rites, admitted with implicit faith the different religions of the earth. Fear, gratitude, and curiosity, a dream or an omen . . . perpetually disposed him to multiply the articles of his belief, and to enlarge the list of his protectors.' The modern semi-educated Hindu resembles 'the ingenious youth . . . alike instructed in every school to reject and to despise the religion of the multitude.' There is, again, a philosophic class who, 'viewing with a smile of pity and indulgence the various errors of the vulgar, diligently practised the ceremonies of their fathers, devoutly frequented the temples of the gods.' Lastly, the Anglo-Indian magistrates 'know and value the advantages of religion, as it is connected with civil government.'

Hence Hinduism has never prepared a body of canonical Scriptures or a Common Prayer Book; it has never held a General Council or Convocation; never defined the relations of the laity and clergy; never regulated the canonization of saints or their worship; never established a single centre of religious life, like Rome or Canterbury; never prescribed a course of training for its priests. This is not due to the fact that war, or civic tumult, or foreign domination prevented the growth of institutions of this kind; but simply to the fact that all such action is essentially opposed to its spirit and traditions. Added to this is the prevailing tendency towards pessimism.

Lyall (ii. 33), writing under the guise of an orthodox Vedāntist, says: 'The innermost religious idea of the Hindus has for ages been the supreme unimportance, if not the nothingness, of this particular stage of existence, and they have lapsed into a deep indifference for humanity at large, a feeling that is probably as much the product of their environment as are their dark skins and physical delicacy. The lords of life may be pleasure and pain; but though we have deified them under various symbols, we have always sought to escape from the servitude of their dominion, believing that the soul's true liberty lay beyond their realm.'

The links which bind together this chaotic mass of rituals and dogmas are, first, the general acceptance of the Veda, representing under this term the ancient writings and traditions of the people, as the final rule of belief and conduct; secondly, the recognition of the sanctity of the Brāhmin Levite

caste as the custodians of this knowledge and the only competent performers of sacrifice and other ritual observances, though the respect paid to them varies in different parts of the country (§ 10 (b)); thirdly, the veneration for sacred places; fourthly, the adoption of Sanskrit as the one sacred language, which plays a part like Latin in Europe during the Middle Ages; fifthly, the general veneration for the cow (see W. Crooke, 'The Veneration of the Cow in India,' *FL* xxiii. [1912] 275 ff.).

42. The future of Hinduism.—The progress of Hinduism, as compared with that of the other religions of India, does not readily lend itself to statistical analysis. In recent enumerations of the people, the figures have been obscured by exceptional outbreaks of famine, plague, and other epidemic diseases; and, as has already been observed, it is practically impossible to discriminate the Animists from the general body of Hindus.

During the twenty years preceding the Census of 1901, the recorded proportion of Hindus to the total population fell from 74·32 to 70·37 per cent in the Empire as a whole; from 72·08 to 68·6 in the British provinces; from 82·99 to 77·56 in the Native States. On the other hand, in the whole Empire the percentage of Mubammadans has in the same period risen from 19·74 to 21·22 per cent; that of Christians from 7·3 to 9·9 per cent.

The result is thus slightly unfavourable to Hinduism. But it is probable that the Hindu, owing to his vegetarian diet, more than the followers of other religions, is exposed to the exceptional disasters to which reference has been made. At the same time, there has been a notable increase of vigour in Hinduism, owing to its connexion with an active political agitation.

'In late years the strength of the Hinduising movement has been greatly augmented by the improvement of communications. People travel more, pilgrimages can be more easily made, and the influence of the orthodox section of society is thus more widely diffused. Railways, in particular, which are sometimes represented as a solvent of caste prejudices, have in fact enormously extended the area within which these prejudices reign supreme' (Risley, *The People of India*, 178 f.).

The future development of Hinduism must remain purely a matter of speculation, and the materials on which a reasonable forecast can be based are scanty and uncertain. Hinduism meets the needs of two classes of the people: one, the small intelligent class which is accessible to foreign influences, and at the present day is easily affected by that wave of unrest which has troubled the usually calm surface of the Eastern world; the other, the mass of the population, chiefly rural, uneducated, immersed in the constant struggle for existence conditioned by their environment, strongly conservative in their views, and caring little for the new theological and political controversies, which are mainly confined to the residents in the towns and great cities. For the former, Hinduism admits the new ideas and principles which are the result of Western culture, and enforces no rigid standard of orthodoxy. For the latter it provides the traditional form of belief, largely animistic in spirit, and well adapted to the intellectual capacity of an ignorant, superstitious body of worshippers. It was at one time the fashion to assume that the fresh Western learning, and increasing home and foreign travel, would inevitably sap the power of caste, and with it the religion to which it is so closely linked. But this view loses sight of the extreme immobility of the masses of the people, who are as little disposed to leave their crowded hamlets in search of novel modes of livelihood as to abandon their ancestral beliefs and ritual, and seek the protection of deities other than the gods of their native village. On the other hand, the conditions of the country prevent any uniformity of belief; and, until a general *lingua franca* is established, it is impossible that the diverse elements in the people can be welded into a single whole.

Hinduism is obviously confronted with serious difficulties, due to the spread of new beliefs and theological speculation. The most obvious parallel is the position in the Roman Empire during the early centuries of our era, when the official paganism was assailed by Christianity, Neo-Platonism, and sundry foreign cults. It was not till the close of the 4th cent. that paganism finally succumbed. In India the movement has already extended over a much longer period, and the process has been much more protracted. It is now some twelve centuries since the attack of Islām began, and Hinduism shows no obvious signs of weakness. It possesses wonderful powers of adaptation to novel conditions. It has held its ground for long ages against anarchy and persecution; it has proved victorious against the assault of Buddhism. If it yields, it yields very slowly before Muhammadanism and Christianity. Even if in the present conflict it has to surrender much, it is possible that it may emerge from the struggle purified and reinvigorated. The question has been thus treated by A. C. Lyall:

'Taking things as they are now, and looking upon the actual state and movement of religions in India, an eye-witness would still be justified in affirming that this religion, although powerfully affected by social and political changes so strong and sudden that they would try the constitution of any national creed, is nevertheless not yet dead, nor dying, nor even dangerously ill; and, moreover, that so far from it being a non-missionary religion, it converts more than all the other Indian faiths. . . . 'Although polytheism still prevails and multiplies throughout the land, and although the Brahmanic system, deep-rooted and wide-spreading, shows no signs of vital decay, one may nevertheless venture to anticipate that the end of simple paganism is not far distant. . . . Though it would be most presumptuous to attempt any kind of prediction as to the nature or bent of India's religious future, yet we may look forward to a wide and rapid transformation in two or three generations, if England's rule only be as durable as it has every appearance of being. It seems possible that the old gods of Hinduism will die in these new elements of intellectual light and air as surely as a net full of fish lifted up out of the water; that the alteration in the religious needs of such an intellectual people as the Hindus, which will have been caused by a change in their circumstances, will make it impossible for them to find in their new world a place for their ancient deities. Their primitive forms will fade and disappear silently, as witchcraft vanished from Europe, and as all early modes of thought and symbolism become gradually changed. In the movement itself there is nothing new, but in India it promises to go on with speed and intensity unprecedented' (Lyall, *Asiatic Studies* 2, i. 134, 37, 319).

Regarding this forecast, it may be urged that too little stress has been laid upon the numerical weakness of the educated or semi-educated classes, and upon the immobility and ignorance of the rural population; and that the possibility of the rise of some great religious teacher, a new Buddha or Saṅkara, has not been sufficiently considered.

Another writer, N. Macnicol (*HJ* vi. [1907] 63 ff.), has discussed the same question from the standpoint of Christianity. He points out that

'the two features of Hinduism that have been emphasised as peculiarly characteristic of it, its lack of articulation as a system of belief, and its adaptability to new circumstances, have been possible to it because of another peculiarity which is a main source of its strength and yet is likely to prove a fatal weakness. The danger of anarchy is avoided by reason of the fact that Hinduism is, at the same time, a fully organised and articulated social system. However frequently and completely the spiritual cabinet may change, the permanent department of caste carries on the government and maintains continuity. In this lies its strength to resist assaults upon the reasonableness or the truth of its doctrinal tenets. However it may be stricken and overcome as a system of truth, so long as it retains its authority as a social system it is unconquered and presently its vigour revives. But in this also lies a fundamental weakness, for time will at the last wear out even the most tenacious social system that rests on privilege and prejudice; and if, by that time, the spiritual content of Hinduism has not found a fitter tenement, the one may perish with the other' (p. 65). . . . 'This religion is striving, with a success that is certain to be increasing and enduring, to slough its superstition and to recover and conserve the spiritual contents of its ancient heritage' (p. 66). But he urges that 'no thoughtful observer, whether Indian or European, will deny that the main factor in producing the movement of thought and the recombination of beliefs in the country is Christianity' (p. 67). He refers specially to the new Vedāntism,

'which has overshadowed the old Theistic churches, like the Brahma and Arya Samaj.'

There are three main factors in securing Hinduism in the crisis which is now imminent. The first is the general acceptance of the system of caste, with the social rights which it confers, and the social duties which it enforces. This system, indefensible though in theory it may be, shows at present no signs of decadence. On the contrary, we find that those groups which possess claims to social respect are most tenacious in asserting and maintaining them; that those in the second rank, that is, below the 'twice-born' classes, are endeavouring to claim equality with them; and that even the depressed and despised races, like the Pariah of the South and the sweeper of the North, are anxiously seeking an escape from their present position, and are quite prepared to join the caste-system whenever its doors are opened to them. The second force is the universal recognition of the power of *dharma*—a term which connotes much, but may be roughly explained as personified social law. The third is the influence of women: 'without their support, both Brahmanism and Hindūism would rapidly collapse' (Monier-Williams, 388).

As regards the influence of foreign creeds, Islam wins adherents by its clear-cut monotheism, and its democratic constitution, which, to a large extent, frees the convert drawn out of the lower ranks of society from the bondage of caste. Its religious ideals—action as opposed to hypnotic contemplation—its practical spirit which allots a single life to man and bids him make the best of it, its repudiation of the doctrines of *karma* and transmigration, commend it to the vigorous and progressive sections of the community. It is, again, highly eclectic, offering shelter to the fanatical Wahhābī, who is a puritan in spirit, while it also receives the low caste convert, whose animistic preferences are met by that worship of saints, their tombs, and relics, which is an abomination to the Wahhābī. It is thus rapidly increasing, not so much as the result of a regularized religious propaganda, for which its lack of organization renders it incompetent, as by a process of natural growth, due to the liberality of its marriage rules and the absence of restrictions in the matter of diet.

Christianity, in the same way, offers a new hope to the Animist, haunted by a host of greedy, malignant demons. Its future progress depends upon the regulation of its missionary methods—a question which cannot be considered here. In the near future it will probably be obliged to modify its dogmas to suit the new environment, many competent observers, for instance, admitting that the Indian Christianity of the future will necessarily take a Vedāntic colouring. The discussion of missionary methods involves many tangled problems; as, for example, whether it is possible or advisable to revert to the type of propaganda employed with such striking, but only temporary, success by St. Francis Xavier, and, with less sensational but perhaps more enduring results, by Dubois, who deliberately accepted the rôle of the *yogi* and followed the ascetic rule of life; whether educational and philanthropic work is more or less effective than a policy of active proselytism; whether it is possible for the missionary to combine with his other activities the study of Hindu philosophy and dialectics and the investigation of the animistic cults of the forest and menial tribes, among whom the prospects of success are most favourable; whether in the future the morals and modes of thought of professing Christians will assist or impede the spread of Christianity.

On questions such as these and others raised in the course of this article it is presumptuous to

speculate, because the religious situation is at present in a condition of instability, and is liable at any time to be modified in unexpected directions. We need a more sympathetic attitude towards the measures of reform which are now in progress, and a wider knowledge of the working and development of the system of caste, of asceticism and monasticism, of the ritual of temple worship and domestic rites, of abnormal cults, such as those of the Śāktas and Vaiṣṇavas, of the beliefs and practices of the forest, menial, and nomadic tribes. In all these departments the information at present available is fragmentary, incomplete, and often misleading. Such inquiries will throw much light on the darker places of Hinduism, and may stimulate the work of the reformers. Above all, we must endeavour to rid ourselves of the prejudices natural to Western inquirers in attempting a detailed examination of this ancient and highly developed polytheism. In India we possess a greater and more important storehouse of information for the study of comparative religion than is perhaps available in any other region of the world. But its secrets will remain hidden except to those who possess the only key to its treasures—the feeling of sympathy which will encourage their guardians to disclose the mysteries to foreign inquirers. To quote the words of Dill in relation to the decaying paganism of Rome:

'The gulf which separates us from the world of heathen imagination is so wide, and old associations in matters of religion are so powerful, that we may easily do injustice to the devout sentiment of paganism. Grotesque or barbarous religious symbols, even those tainted in their origin with the impurity attaching to nature-worship, often sloughed off their baser elements, and with the development of a more sensitive morality, and a higher conception of the divine, may have been the vehicles of a real religious emotion. What the worshipper will find in a worship depends greatly on what he brings' (*Roman Society in the Last Century of the Western Empire*, London, 1893, p. 84).

LITERATURE.—Under the various articles dealing with the many phases of Hinduism a special bibliography is given, and many of the more important books have been quoted throughout the article. Here it is necessary only to name those works which are useful for a general survey of the subject or throw light on special topics.

i. GENERAL ACCOUNTS OF ONE OR MORE ASPECTS OF HINDUISM: L. D. Barnett, *The Heart of India*, London, 1909, *Brahma-Knowledge*, do. 1907, *Hinduism*, do. 1906; A. Barth, *The Religions of India*, Eng. tr., London, 1832; H. T. Colebrooke, *Essays on the Rel. and Philos. of the Hindus*, do. 1858; J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*³, ed. H. K. Beauchamp, Oxford, 1906; P. Deussen, *Philos. of the Upanishads*, Eng. tr., Edinburgh, 1906; H. J. Eggeling, 'Hinduism,' in *EB*¹¹ xiii. 501 ff.; J. N. Farquhar, *A Primer of Hinduism*², Oxford, 1912; R. W. Frazer, *Lit. Hist. of India*, London, 1898; E. W. Hopkins, *The Religions of India*, do. 1896; C. N. Krishnaswami Aiyer, *Sri Madhva and Madhvaism*, Madras, n.d.; C. N. Krishnaswami Aiyer and Pandit Sitanath Tatvatbhusan, *Sri Saṅkarācārya: his Life and Times, his Philosophy*², do., n.d.; M. M. Kunte, *The Vicissitudes of Aryan Civilization in India*, Bombay, 1880; A. C. Lyall, *Asiatic Studies*², London, 1907, 'Hinduism,' in *Rel. Systems of the World*, do. 1889; A. A. Macdonell, *Hist. of Skr. Lit.*, do. 1900, *Ved. Mythol. (GIAP)*, Strassburg, 1897; A. A. Macdonell and A. E. Keith, *Vedic Index of Names and Subjects*, London, 1913; J. D. Mayne, *Hindu Law and Usage*, do. 1878; J. Murray Mitchell, *Hinduism Past and Present*², do. 1897; M. Monier-Williams, *Hinduism*, do. n.d., *Brahmanism and Hindūism*⁴, do. 1891, *Ind. Wisdom*, do. 1875; J. Morrison, *New Ideas in India during the 19th Cent.*, do. 1907; J. Muir, *Orig. Skr. Texts*, do. 1858-72; F. Max Müller, *Chips from a German Workshop*, do. 1867-76, *Contrib. to the Science of Mythol.*, do. 1897, *Hist. of Skr. Lit.*, do. 1889, *Lects. on the Origin and Growth of Religion, as illustrated by the Religions of India (H.L.)*, do. 1878, *Selected Essays on Language, Mythology, and Religion*, do. 1881, *India, What can it teach us?* do. 1883; Guru Prasad Sen, *Intro. to the Study of Hinduism*, Calcutta, 1893; Shridhar V. Ketkar, *An Essay on Hinduism, its Formation and Future*, London, 1911; T. E. Slater, *The Higher Hinduism in relation to Christianity*, do. 1902; W. Ward, *View of the Hist., Lit., and Relig. of the Hindoos*³, do. 1817; A. Weber, *Hist. of Ind. Lit.*, Eng. tr., London, 1878; W. J. Wilkins, *Modern Hinduism*, do. 1837, *Hindu Mythology, Vedic and Puranic*, Calcutta, 1832.

ii. TRANSLATIONS OF THE SACRED BOOKS OF THE EAST: see esp. F. Max Müller, *The Upanishads*; G. Bühler, *Sacred Laws of the Aryas, Institutes of Manu*; J. Jolly, *Institutes of Viṣṇu*; K. T. Telang, *Bhagavadgītā*; J. Eggeling, *Satapatha Brāhmaṇa*; H. Jacobi, *Jaina Sūtras*; G. Thibaut,

Vedānta Sūtras—all published in the Oxford Series, 1879-1900. To these may be added M. Haug, *The Aitareya Brahmanam*, Bombay, 1863; Kesari Mohan Ganguli, *Mahābhārata*, Calcutta, 1898-96; R. T. H. Griffith, *Rāmāyana*, Benares, 1895; F. S. Growse, *Rāmāyana of Tulsi Dās*, Allahabad, 1877-80.

iii. **GENERAL HISTORIES OF INDIA:** Mountstuart Elphinstone, *Hist. of India*⁶, London, 1874; H. M. Elliot, *Hist. of India, as told by its own Historians*, ed. J. Dowson, do. 1867-77; V. A. Smith, *Early Hist. of India*², Oxford, 1908, *Āśoka*², do. 1909, *History of Fine Art in India and Ceylon*, do. 1911; the series of trr. of Gr. and Lat. authors describing India, by J. W. McCrindle, *Anc. India as described by Megasthenes and Arrian*, Calcutta, 1877, *The Commerce and Navigation of the Erythraean Sea*, London, 1879, *Anc. India as described by Ktesias the Knidian*, do. 1882, *Anc. India as described by Ptolemy*, do. 1885, *Anc. India as described in Classical Literature*, do. 1901, *The Invasion of India by Alexander the Great*, 1st ed. 1893, 2nd ed. 1896. See also trr. of the travels of the Buddhist pilgrims—*Fa-hien*, by J. Legge, Oxford, 1886; *Siyū-ki, Buddhist Records of the Western World*, by S. Beal, London, 1884. Other important books on early Buddhism are: A. Cunningham, *The Bhilsa Topes*, London, 1854, p. 154, *Mahābodhi*, do. 1892, *The Stupa of Bharhut*, do. 1879; T. W. Rhys Davids, *Buddhism*, do. 1878, *Buddhism, its Hist. and Lit.*, New York, 1896, *Origin and Growth of Religion, as illustrated by Indian Buddhism* (*HL*), London, 1881, *Buddhist India*, do. 1903. On Jainism: J. G. Bühler, *The Indian Sect of the Jainas*, ed. J. Burgess, London, 1903; U. D. Barodia, *History and Literature of Jainism*, Bombay, 1909; H. Warren, *Jainism*, Madras, 1912.

iv. **GENERAL TREATISES ON THE ETHNOLOGY OF INDIA:** M. A. Sbering, *Hindu Tribes and Castes in Benares*, Calcutta, 1872-81; H. H. Risley, *TC*, do. 1891-92; D. C. J. Ibbetson, *Punjab Ethnography*, do. 1883; J. Wise, *Notes on the Races, Castes, and Trades, Eastern Bengal*, London, 1883; E. T. Dalton, *Deser. Ethnol. of Bengal*, Calcutta, 1872; W. Crooke, *TC*, do. 1896, *PR*², London, 1896; E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, *Omens and Superstitions of Southern India*, London, 1912; H. A. Rose, *A Glossary of the Tribes and Castes of the Punjab and North-West Frontier Province*, Lahore, ii. (all published 1911); A. Baines, 'Ethnography (Castes and Tribes)', in *GIAP*, Strassburg, 1912.

v. **THE SERIES OF CENSUS REPORTS**, of which the most useful are: *India*, by J. A. Baines, Calcutta, London, 1898, E. A. Gait and H. H. Risley, 1903, the latter revised and reprinted in part as *The People of India*, Calcutta, 1908; *Bengal*, by C. J. O'Donnell, 1893, E. A. Gait, 1902; *Assam*, by E. A. Gait, 1892, B. C. Allen, 1902, J. McSwiney, 1912; *Punjab*, by D. C. J. Ibbetson, 1883, E. D. MacLagan, 1892, H. A. Rose, 1902, Pandit Harikishan Kaul, 1912; *Bombay*, by J. A. Baines, 1882, R. E. Enthoven, 1902, F. J. Mead and G. L. Macgregor, 1912; *Madras*, by W. Francis, 1902, C. Molony, 1912; *Mysore*, by T. Ananda Rao, 1903, V. R. Thyagaraja Aiyar, 1912; *Baroda*, by J. A. Dalal, 1902, Govindbhai H. Desai, 1912; *Travancore*, by N. S. Aiyar, 1903, N. Subramanya Aiyar, 1912; *North-West Frontier Province*, by C. Latimer, 1912; *United Provinces of Agra and Oudh*, by E. A. H. Blunt, 1912.

vi. **VARIOUS MONOGRAPHS ON SPECIAL SUBJECTS:** J. M. Campbell, *BG*, Bombay, 1873-1901, *Notes on the Spirit Basis of Belief and Custom*, do. 1885; E. T. Atkinson, *Himalayan Gazetteer*, Allahabad, 1889-84; B. L. Rice, *Gazetteer of Mysore*, 1897, *Mysore and Coorg from the Inscriptions*, 1909; V. N. Aiyar, *State Manual of Travancore*, 1906; C. Achyuta Menon, *Cochin State Manual*, Ernakulam, 1911; *Bulletins of the Madras Museum*, ed. E. Thurston, Madras, 1897 ff.; E. Thurston, *Ethnographic Notes in S. India*, do. 1906; L. K. Anantha Iyer, *Cochin Tribes and Castes*, do., i. (1909), ii. (1912); the series of monographs on the tribes of Assam: P. R. T. Gurdon, *The Khasis*, London, 1907; E. Stack, *The Mikirs*, do. 1908; T. C. Hodson, *The Meithei*, do. 1908, *The Naga Tribes of Manipur*, do. 1911; A. Playfair, *The Garos*, do. 1909; S. Endie, *The Kacháris*, do. 1911; J. Shakespear, *The Lushai Kuki Clans*, do. 1912; V. Kankasabai, *The Tamils: Eighteen Hundred Years Ago*, Madras, 1896; H. Kern, *Manual of Ind. Buddhism* (*GIAP*, Strassburg, 1896); J. E. Padfield, *The Hindu at Home*, Madras, 1896; Shway Yoe [J. G. Scott], *The Burman, his Life and Notions*, London, 1882; *Gazetteer of Upper Burma and the Shan States*, Rangoon, 1900; Sarat Chandra Roy, *The Mundas and their Country*, Calcutta, 1912. W. CROOKE.

HINGLAJ (said to be derived from Skr. *hingula*, a preparation of mercury with sulphur, vermilion; possibly, on account of the smearing of a sacred stone with red pigment, a survival of a more primitive blood-sacrifice [Tylor, *PC* ii. 164]).—One of the most famous places of pilgrimage in Baluchistān; situated in lat. 25° 30' N., long. 65° 31' E., in British Makrān, on the W. bank of the Hingol river, a few miles from its mouth. The place is specially interesting inasmuch as it is the furthest western point to which Hindu polytheism extends. By Hindus it is held sacred to the goddess Pārvatī, Mātā, or Kālī, the mother-goddess in her malevolent form. The local legend

tells that after the quarrel between Śiva and Dakṣa, Viṣṇu cut in pieces the body of Umā, wife of Śiva, and that the crown of her head fell here (*Gopatha Brāhmaṇa*, Calcutta, 1872, p. 30 ff.; *Ān-i-Akbari*, tr. Blochmann and Jarrett, do. 1873-94, ii. 313).

Like many other sacred places in the East, Hinglāj is venerated by other faiths. Muhammadans revere it as the abode of Bibi Nāni, 'the lady grandmother.' This title, as was suggested by Masson (*Narrative of a Journey to Kalāt*, 1843, p. 391), may be identified with Nanea (RV *Nanea*) of 2 Mac 1¹⁸⁻¹⁶, the mother-goddess, worshipped in Syria, Persia, and Armenia, and other parts of Asia, under the titles of Anaiti, Anæa, Aneitis, or Tanaïs, the primeval Babylonian goddess Nāna, the Lady of the temple E-anna of her city Uruk (Erech) (*HDB* iii. 485; G. Maspero, *Dawn of Civ.*, Eng. tr.², London, 1896, p. 665 ff.; M. Jastrow, *Rel. Bab. Assyr.*, Boston, 1898, i. 81, 85, 206). Scholars are now beginning to admit that there is possibly a stratum of Babylonian culture underlying the early civilization of India, either antecedent to, or possibly influencing, the Aryan or Dravidian culture, or both. This view seems to be not unreasonable. The Tell el-Amarna records disclose an extension of Bab. culture in W. Asia as early as the 12th cent. B.C., and a wave of the same culture may well have passed eastward, particularly if, as Risley (*Census of India*, 1901, i. 509 ff.) remarks, remains of buildings, irrigation works, and terraced cultivation indicate that at an early period—how early it is at present impossible to decide—Baluchistān, which now is largely desert, was a highly cultivated, thickly populated country (see **HINDUISM**, § 5). It is not possible to assign a date to this western extension of Hindu polytheism; but it is certain that long before the invasion of Maḥmūd of Ghazni (A.D. 1001-30) the mass of the people in that region were Buddhists (H. M. Elliot, *Hist. of India*, London, 1867-77, i. 136, 147, 190, 504); and this condition of things must have existed from a very much earlier period.

This inaccessible shrine has been visited by few Europeans. The best account of it is that of Goldsmid, who explored it in 1861. Moving along the course of a stream bisecting the Hinglāj hill (3740 ft. high), he observed the place of sacrifice, a hollow in the hill smeared with the blood of animals sacrificed to the goddess, and the rocks decorated with sectarian marks (*tilak*) in a red pigment. From this place up to the temple itself many of the stones under foot were smeared with blood. About a quarter of a mile higher up the hill is the shrine itself, quite surrounded by mountain peaks. It 'boasts of no architectural magnificence or beauty. It is the sort of thing that an infantine taste for architecture would create out of wooden toy bricks. But its appearance and site are in good scenic effect.' In a cavity to the left, far deeper and more confined than the sacrifice hollow, is visible, surmounted by a long arch of pale sandstone, the so-called abode of Marī or Nāni, the presiding goddess of the place. It is a low castellated mud edifice with a rude wooden door. In the penetralia of the temple 'we found the shrine of the goddess. Two diminutive domes, one at the head and the other at the foot, of short, tomb-shaped mud erection, marked the chosen sanctum of this divinity of the Hindu pantheon. A wooden rail has been set at the front and at the sides.' This, as is the case at the shrine at Pandharpur and at other places, seems to be intended to prevent access to the holy place. 'Some rods steeped in vermilion were placed near the wall at the back. These were intended for the use of pilgrims unprovided with the wand of office borne by their *agwas*, or leaders.' The ritual

directs that the worshipper should creep on all-fours through a narrow entrance, and it is believed that no person burdened with grievous sin can accomplish this feat.¹

There appears to be no image of the goddess; at least, nothing of the kind is noticed by travellers. Though situated in a dreary, desert region, Hinglāj is surrounded by abundant verdure—the wild plum and various other shrubs and flowering plants; one report states that 'near the Hinglāj Ziārat [shrine] there is verdure enough to make glad the heart of a pilgrim even from Southern India. To the Panjābi it must be a veritable garden of Eden.'

Bands of pilgrims from all parts of India, each conducted by a leader known as *agwā*, make the journey by land from Karāchi. Fees are collected at Miāni by a *bhārtī*, or hereditary pilgrim overseer, from all except devotees and unmarried girls. The proceeds amount to about £40 annually. On the return of the pilgrim, at Tatta he is invested with a string of white beads like grains of pulse, which, he is told, is the petrified grain of the Creator, left on earth to remind men of the Creation. These are found and pierced at Jhirak in Sind (Burnes, *Travels into Bokhara*, ii. 33 f.). A native pilgrim, Hājī Abdul Nabī, who recently visited Hinglāj, adds that near the shrine is a well,

'the water of which rises up at times with a bubbling noise, discoloured like that of a river fresh swollen after rain, and carrying mud in suspension. The Hindu pilgrims, when this takes place, throw in betel-nuts, cloves, cardamoms, and coconuts. Should there be a delay in the rising, pilgrims in the most abject manner call on Mātā to give them a sight of herself, exhorting each other to reveal their sins and inwardly repent. When the water rises, they salaam with both hands joined, and throw in their offerings, which, after some time, on a second rise, are brought back again, when they are collected and formed into large cakes, which they bake near the spot.'

It is thus an example of those oracular wells from which omens are taken in many parts of the world (Frazer, *Pausanias*, London, 1898, iii. 388, iv. 151). The shrine is much frequented by the Kāpdi devotees of the goddess Āsāpūrnā, 'she who fulfils desires,' who is much revered in Cutch. It is said that, if dawn overtake their Rājā or headman at the Hinglāj hill, the goddess will drown or otherwise destroy him (*BG* ix. [1901]

¹ The habit of creeping under a sacred stone or through an orifice pierced in it is common in many parts of the world. Sometimes the intention seems to be that the person performing the rite may receive some benefit from the stone, or rather bring himself into communion with the spirit occupying it, and thus gain some spiritual or material advantage. This belief is illustrated by the English custom of passing children through a cleft ash-tree as a cure for rupture or rickets, a sympathetic connexion being thus established between them and the tree (J. G. Frazer, *GP* iii. 394 f.). E. W. Lane (*Mod. Egyptians*, London, 1860, i. 325) describes how women pass in silence, with the left foot forwards, seven times under and over the stone table on which the bodies of decapitated criminals are washed before burial, as a cure for ophthalmia, to obtain children, or to expedite delivery. Musalmāns at Samarkand creep under the marble desk which holds the Qur'an in the great mosque as a cure for spinal disease (E. Schuyler, *Turkistan*, London, 1876, i. 250). The custom of creeping through the *foramina* of rocks, dolmens, and other megalithic monuments is common in Ireland as a means of procuring spiritual benefits (W. C. Borlase, *The Dolmens of Ireland*, London, 1897, iii. 757 f.). Women in Gujārat creep under the litter of a Jain monk when he has taken the vow of suicide by abstinence, believing that they thus obtain male offspring by communication with the spirit of the holy man (A. K. Forbes, *Rās Mālā*², London, 1878, p. 611). In the present case the performance of the feat is regarded as a test of virtue or chastity. At the tomb of a Musalmān saint at Baroda there is a perforated slab, through which it is believed that no thief can creep; and at Malabar Hill, near Bombay, a famous perforated rock is supposed to purify or regenerate those who pass through it, as the Mahārājā of Travancore, on his installation, passes through a golden cow, and thus becomes a member of the 'twice-born' class (*BG* vii. [1883] 548; J. Douglas, *Bombay and W. India*, London, 1893, ii. 240 n.; S. Mateer, *Land of Charity*, do. 1871, p. 69; E. Thurston, *Ethnographic Notes*, Madras, 1906, p. 271). A good instance of the rite as a test of virtue is found in the case of the 'breeding' of St. Willfrid's 'Needle' in the crypt of Ripon Cathedral (*FLJ* ii. [1884] 286 f.; R. Burton, *Anatomy of Melancholy*, ed. Shilleto, London, 1893, iii. 323; *NQ*, 8th ser., iii. [1893] 336 f.).

pt. i. p. 85). The goddess has another shrine on a hill at Cheul in the Kolāba District of the Konkan (*ib.* xi. [1883] 287, 301). The Hinglāj Devi is revered throughout India. A Rājputānā legend tells that Ugrā Prabhū, one of the early rulers of Mār-wār, made a pilgrimage to her shrine, and that the goddess caused to rise from her fountain a magic sword with which he conquered all the southern countries touching the ocean (Tod, *Annals of Rajasthan*, Calcutta reprint, 1884, ii. 6). She is the family-goddess of many tribes in W. India (*BG* v. [1880] 49, 74, ix. [1901] pt. i. p. 247); and even as far west as Mirzapur in the United Provinces the Kharwārs sacrifice a goat to her, saying: 'O Devi Hinglāj! Go and destroy my enemy!' (*NINQ* i. [1891] 195). Many Dasnāmī Gosāins from western Bengal make the pilgrimage to her shrine (Buchanan, in M. Martin, *Eastern India*, London, 1838, i. 197).

LITERATURE.—This article is based mainly on a collection of original, unpublished reports on the place, for which the writer is indebted to Mr. R. Hughes-Buller, Superintendent of the Ethnographical Survey of Baluchistān. Among accounts by earlier travellers may be noted: C. Masson, *Narrative of a Journey to Kalāt*, London, 1842-43, p. 390 f.; A. Burnes, *Travels into Bokhara*, do. 1834, iii. 32 f.; M. Postans, *Cutch*, do. 1839, p. 166; A. W. Hughes, *Gazetteer of Sind*², do. 1876, ii. 96 f., also *Baluchistan*, do. 1877, p. 143 f.; T. H. Holdich, *The Indian Borderland, 1880-1900*, do. 1901, p. 206.

W. CROOKE.

HISTORIOGRAPHY.—The profound changes which have so drastically altered the whole situation in the religious thought and practice of modern times make their appearance in various spheres, and assail the traditional Christian view of the world from the most diverse quarters and with the most manifold results. To begin with, there is the modern conception of Nature, which, as comprised in the mathematico-mechanical method, has dissolved the purely metaphysical teleology of Nature given by Aristotle, demolished the cosmology of the Bible, and provided modern philosophy with all its essential problems. There is, secondly, the new conception of history, which has radically altered our whole attitude to the past and the future, and with which the present is a link in the whole concatenation of things. Thirdly, there is the modern ethics of humanity, which, besides the unworldly virtues of love to God and one's neighbour, has emphasized the intrinsic excellences of artistic and scientific culture—treating them, indeed, as peculiar and indispensable ideals—and has also recognized the positive ethical imperatives involved in political, social, economical, and industrial problems. There are, finally, the new conditions of social life on its economical and industrial sides, and the sociological mode of thought issuing from them, which, in contrast to mere abstract speculation, insists upon the novelty of the whole situation in its social and economical aspects. The first three movements sprang from the Renaissance, while the fourth is a product of the Illumination, and, under the influence of 19th cent. thought, has become a force that towers above all else.

Among these various tendencies, of course, there exists a manifold inter-relation and inter-action. But, if they are to be properly understood, they must be isolated and severally analyzed. In this article only the second, *i.e.* modern historical reflexion, will be specially dealt with, and its nature and results set forth in the shortest possible compass.

1. The development, function, and results of modern historiography.—In history, as in natural science, systematic thought is the product of a relatively high state of civilization. Primitive man is content with the recollections of his family and clan, his tribe and race. As all unknown things coalesce in his mind with religion and mythology, so, in particular, his ideas of the

beginning and primitive history of things are bound up with religious cosmology, the myths of holy places, and the legends of his tribal deities. In this domain he delights in the extraordinary and the fantastic, the ingenious and the intricate. Hence the beginnings of history are found in religious traditions, legends, myths, and tales, and among almost all peoples primitive recollection is embedded in a vast romanticism. At this stage there is not the slightest trace of a desire for real knowledge or of a critical spirit. And not only does primitive man lack the sense of continuity and criticism; he likewise tends to regard himself as something apart and absolute. His origin, his mode of life, and his morality seem to him to be the only true and primordial forms, in comparison with which all that is foreign is barbarian and inferior. The ties of custom and morality avail only in his own circle, and do not concern those beyond it. He has no conception whatever of the unity of mankind or of the concatenation of events. The chronological eras with which he deals are purely fanciful—sometimes idyllically short, sometimes fabulously long. The only people of ancient times who in the fullest sense consciously passed beyond this stage of popular legendary reminiscence, of priestly tradition and royal annals, were the Greeks; and in this, as in all other provinces, it was they who laid the foundations of science. Among the Greeks, the traveller and the inquirer, untrammelled by the traditions of temples and the archives of princes, and impelled only by a thirst for knowledge, began to investigate and reflect historically. Here Herodotus, Thucydides, and Polybius, partly as a result of their contact with the non-Hellenic world, partly from the need of elucidating their own people's affairs and the operation of them, and, finally, impelled by their predilection for a philosophical generalization of knowledge, laid the foundations of history as an explanation of public movements by material or psychological causes, and, in particular, as a reasoned concatenation of events occurring in the Euræo-Asiatic arena. Even these early writers took account of analogies and uniformities with a view to reaching general historical conceptions; and in their idea of a Hellenic civilization, and, later, of a cosmopolitan civilized State organized by the Roman Empire, they had a focus into relation with which they endeavoured to bring all that occurred.

These earliest manifestations of historical reflexion, however, were extinguished by Christianity and the great religious revolution of later antiquity. It is true that Christianity itself operated throughout with historical conceptions of universal application, and that for the purely anti-barbarian civilized State it substituted the central conception of humanity, and a supreme ethical and religious end for the race. These provided new and powerful incentives to historical reflexion. In reality, however, they served to produce, not a scientific, but a revived mythological representation of history. The early Christian conception of mankind, alike as regards time and as regards space, was narrow in the extreme, and was involved in all manner of purely speculative pre-conceptions. The history of the human race, with respect to both its beginning and its end, was saturated with mythology; in the middle stood the miracle of the Incarnation and the rise of the Church. Interest was once more concentrated upon the inexplicable, and the desire to explain came to be regarded as the mark of a profane mind. Heathen and Biblical myths regarding the origin of things were combined: Paradise with the Golden Age, the primeval transgressions of Cain and Ham with the spiritual lapse to the Silver and Iron Ages, Nimrod's tower-

building with the Trojan war; and, again, the Messianic outlook of the prophets with the hymns and eclogues of Vergil; the miracles of Elijah, of saints and martyrs, with those of Orpheus and Herakles. In the eschatological sphere, again, the Second Advent of Christ was brought into connexion with the universal conflagration of the Stoics, Heaven with Elysium, Hell with Hades, and the stages of the soul's purification with the Empyraean. The history of the intervening period fell into three parts: a relatively short and wholly supernatural period, in which prophecy and miracle prepare the way for the coming of the God-man; an intermediate epoch, in which the God-man Himself appears as the bodily investment of the whole supersensual world, leaving behind Him His permanent incarnation in the Church as a Divine institution for the redemption and salvation of man; and, finally, the longer and for the most part non-miraculous era of secular history, which, although it is largely controlled by Satan and by demons, does not wholly fail to show the intervention of a redeeming God. The mythology of redemption, assimilating the mythical traditions of the ancients, now takes the place of historical reflexion. The all-embracing scheme of the four Danielic world-kingsdoms was constructed by Jerome, and held its ground till the 18th century. Mediæval thought grafted its histories of the world and of nations upon this scheme, and combined with it its love of the fabulous and its legends of the saints. The fresh narratives of fact or arid annals occasionally incorporated with them produced no essential modification.

It was in reality Humanism and the Renaissance that first reverted to the traditions of ancient historical composition and historical reflexion, and thus laid the foundations of modern historiography—as in the school of Bruni, where it was influenced by the style of the ancient rhetoric; in that of Blondus, where it showed proficiency in the rendering and criticism of documents; and in that of Machiavelli and Guicciardini, where it sought to explain events by their psychological and material causes. Wherever the culture of the Renaissance took root, there also modern history was evolved, being written, for the most part, by commission of State. From this, again, sprang the historiography of the Illumination in the school of Voltaire, in the hands of Hume, Gibbon, Robertson, and Schlœzer—a type of history which elaborated and appraised its materials with the freedom of an emancipated scholarship, extended its operations to the whole compass of human history and to the various factors of civilization, and, in its criticism of tradition as in its psychological explanations and its search for causes, far surpassed the methods of antiquity and the Renaissance. Then, in the 19th cent., there arose philological criticism, the idea of organic evolution, the new analyses of the State and of parties, pre-historic ethnography, the historical study of economics and society, the development of a history of art, of literature, and of religion, taking a place beside the too restricted political history, and, finally, the expansion of politics on a world-wide scale in its bearing upon European events.

This vast array of facts, ideas, and judgments has greatly amplified and complicated the subject-matter of historiography, has made its procedure more delicate and more difficult, and has enormously enlarged and at the same time disintegrated the web of causality. From all this has accrued an immense mass of historical work, moving on various lines, yielding magnificent results, and, nevertheless, with every supposed solution of its problems, giving rise to a fresh group. The total result, however, is not a mere mass of unsolved

problems, but is rather the full development of modern historical reflexion, which, notwithstanding all misgivings as to its conclusions, consists, precisely like the modern conception of Nature, in a purely scientific attitude to facts. The history of mankind merges in the evolutionary history of the earth's surface; it takes its rise in the pre-historic life of primitive peoples; it is determined throughout by the general laws of geographical conditions, and by the various phases of social life, and forms an unspeakably complex, yet altogether coherent, whole of immeasurable duration both in the past and in the future. It is as a part of this array and system that we must survey and estimate our own existence, and find its rationale and origin. On the analogy of the events known to us we seek by conjecture and sympathetic understanding to explain and reconstruct the past. From this point, again, we advance to the criticism of extant traditions and to the correction of generally accepted historical representations. Since we discern the same process of phenomena in operation in the past as in the present, and see, there as here, the various historical cycles of human life influencing and intersecting one another, we gain at length the idea of an integral continuity, balanced in its changes, never at rest, and ever moving towards incalculable issues. The causal explanation of all that happens, the setting of the individual life in its true relations, the interpretation of events in their most intricate interaction, the placing of mankind in a rounded system of ceaseless change—these constitute the essential function and result of modern historical reflexion. The latter, viewed as a whole, forms a new scientific mode of representing man and his development, and, as such, shows at all points an absolute contrast to the Biblicotheological views of later antiquity.

2. The purely scientific character of historiography.—Modern historical reflexion, precisely because of what has been said, certainly involves a multitude of fresh and difficult problems. These relate partly to the significance of such a view of history for our conceptions of ideal truth, and for our theory of the universe in general, and partly to the question regarding the scientific nature of historical study itself. The latter is the more restricted problem, and must be discussed first. It is, at the same time, the only problem that is directly concerned with historical reflexion as such. Here it is necessary to emphasize one particular principle. In so far as historical thought purports to be scientific, its specifically theoretical or scientific element must be clearly marked off and defined. For, besides the purely scientific attitude to historical fact, there are numerous other attitudes which must be rigorously distinguished from it, but are seldom distinguished in a proper degree. There is, for instance, the æsthetic attitude to history, which centres in its teeming wealth of incident, and the suggestive action and romantic charm of the individual; or which is concerned with an artistically rhythmical construction of the course of events. There is mere curiosity, and that liking for the remarkable, the astonishing, and the unconformable which is ever ready to be excited and kindled to sympathy by graphic description. Then there are some whose aim it is to estimate the ethical value of human actions, and to derive from history an insight into that which reveals itself everywhere as moral force. Others, again, see in history a manual of politics and a means of educating national and political opinion—an education which, they hold, can never be acquired by merely abstract doctrines, but results only from the concrete observation of the whole historical process. Some seek in history support for the sociological and

economical principles which, they believe, can be attained only by abstracting from various particular developments, and which must form the basis of our own conception and organization of society. Finally, history often serves as a school of scepticism and caution, on the ground that very divergent representations of historical facts may be given, that criticism is uncertain and tradition not uniform, and that, accordingly, history yields but little real information, and more than anything else brings home to man the limitations of his knowledge.

Now, these various attitudes to the facts of history are all quite competent in their own place and in their own way, and the idea of excluding or avoiding them altogether is not to be entertained. Nevertheless, they all lie outside the purely cognitive and theoretical sphere, and within that of judgment and appraisal. So far as historical study is concerned with distinctively theoretical and scientific interests, these other interests, as being here of secondary importance, must be scrupulously guarded against and excluded. We may grant that, if descriptive historical works were composed upon such rigid lines, they would lack interest and charm for the majority of readers, and that the impression they make depends precisely on the effective combination of purely historical knowledge with the motives and incentives that may be drawn from it. Delineations of this type, however, are necessarily composite, and must be recognized and studied as such. They combine the interest of the first degree, *i.e.* that of purely historical knowledge, with interests of the second degree, *i.e.* those relating to the significance of such knowledge for human feeling and human action. Such works are, accordingly, not purely scientific at all, and historical knowledge is to be obtained from them only by a process of elimination.

What is it, then, that constitutes the essential element of pure historical knowledge? The answer to this question is furnished by the foregoing discussions, and it becomes increasingly clear in the history-writing of the present day. History as pure theoretical science is different from history as an element of *belles lettres*, politics, economics, and the like. In history, as in other things, purely theoretical knowledge is knowledge based upon general conceptions, and that signifies primarily knowledge derived from causal conceptions. The sole task of history in its specifically theoretical aspect is to explain every movement, process, state, and nexus of things by reference to the web of its causal relations. That is, in a word, the whole function of purely scientific investigation. What is so explained may then quite well become the subject-matter of interests lying outside the sphere of theoretic science, and the resultant treatment may unite the two constituents as closely as desired. But it will always be possible and necessary to isolate either element, and this will be the more or less easy as the specifically scientific side has been the more or less conscientiously dealt with.

Only in one single point is this simple process of discrimination attended with any real difficulty. One may ask whether, in view of the peculiar nature of psychical causation, or motivation (which will be more fully discussed presently), the insight necessary to determine and appreciate it must not be drawn from personal experience and personal judgment. Such insight, it will be said, is always bound up with subjective estimates of what ought to be. Thus, *e.g.*, only those who feel that certain ethical, political, and artistic excellences ought to exist will seek and discover them as real springs of action, while those who do not so regard them

will seldom be able to recognize them as motives, and the less so as historical causes do not lie on the surface or force themselves into notice, but are, as a matter of fact, always brought to light by the sympathetic imagination. Such a view is certainly not wrong. Yet it does not subvert our fundamental principle, since the causes so discovered and realized are, in the sphere of historical study, taken account of as facts only, and not as grounds for the corrections and criticisms of the historian, whose subjective attitude to the facts must, accordingly, be once more discounted. Besides, every supposed and, on grounds of analogy, probable cause must be shown to be actually operative in the particular case. Knowledge of the power of motives is thus, as a means of discovery, doubtless bound up with personal judgments, and the knowledge of what should be often serves as a heuristic principle for the understanding of forces actually at work. But the 'ought-to-be' must in turn always be separated from what really is. Historical study is concerned only with the latter, and the personal judgments which have lent keenness to the power of perception must give way before the evidence of the real facts. Historical investigation is, in practice, always subjectively conditioned by the fullness, depth, and range of the personal experience of the investigators themselves, and is thus always marked by irreducible differences in their several starting-points. But the purely scientific aim of historical reflexion is not thereby surrendered.

3. The nature of historical causality.—This brings us at length to what is really our main problem, viz. that relating to the nature of historical causation. Here we find ourselves in the sphere of the logic or epistemology of history. Of the various provinces of knowledge this was the last to be won for modern logic, and it is as yet the most imperfectly elucidated. The Aristotelian philosophy dominant in the Mediæval Church found no difficulty here. It regarded the operations of Nature and the processes of history as essentially of the same kind, and it applied to both spheres a metaphysico-teological conception of development, and knew nothing of the modern conception of a causality immanent in experience. The latter conception was first set forth by natural science, and by philosophy as modified thereby; but it was, in fact, framed originally to suit Nature only. Down to the time of Herder and Hegel, accordingly, modern philosophy either took no account of history at all, and abandoned it to historians, litterateurs, or theologians; or else brought historical occurrences under a causal conception, which was simply that of natural science philosophically generalized. Descartes surrendered history to the theologians and to revelation; Hobbes and Spinoza treated it in a naturalistic fashion. The naturalistic view prevailed also in the case of Hume and Kant, notwithstanding the great diversity in their respective views of causality. This is the case even to the present day among the successors of Hume—the adherents of the Positivism of Comte—and we need here recall only the names of Buckle and Taine. In the Kantian school, in its development towards Hegel's Panlogism, the knowledge and ætiology of Nature were, on the other hand, subjected to extreme violence by historical thought, inasmuch as the latter became simply the application of the law of dialectical movement to the cosmic process and the course of human affairs. But if this was a violation of natural science, it was no less a violation of historical thought itself, which by such procedure gained only a finer sense of order and continuity, but no clearer comprehension of its own fundamental conceptions. It was only with the return

to the Kantian theory of knowledge, and the emancipation of psychology, that the task of framing a logic of historical science, in contradistinction to the logic of natural science, came to be clearly recognized. Wundt, Dilthey, Windelband, and Rickert were the pioneers of this new and powerful method of investigation.

Here the primary fact was the recognition of the difference between the causality of natural science and that of historical science. The causality of natural science implies the absolutely necessary principle that events are bound together by a changeless, all-pervading, and, in all particular cases, identical law of reciprocity. The scientist demonstrates the laws thus ascertained by artificially constructed examples or experiments, and by means of these submits natural processes to exact calculation. The method finds its highest expression in the establishment of a perfect equivalence between the amount of energy that disappears in the first form of an occurrence and that which re-appears in the second, *i.e.* the law of mere transformation and quantitative conservation of energy. To this end, by abstracting from all qualitative distinctions, the method of natural science reduces events to mere manifestations of energy, and attends only to the aspects of reciprocity and transformation in the quantity of energy present. Now, historical causation is something entirely different, being almost exclusively a matter of psychological motivation. In the historical sphere nearly everything passes through the medium of consciousness, and in the last resort all turns upon the constant interaction of conscious efforts, into which even the unconscious elements tend to resolve themselves. Thus the peculiar irrational quality and initiative of the individual consciousness make themselves felt in the ultimate result, alike in the individual life and in the life of groups. Here, therefore, it is not permissible to reduce events to non-qualitative forces, or to explain effects by causal equivalence. Then we must also bear in mind the infinite complexity of the motives that arise on all sides and act upon one another—a complexity which gives a special and peculiar character to every particular case, and so defies all calculation and experimental proof. Further, all occurrences, whether in the individual life or in the life of groups, are so affected by the entire psychological condition of the individual or the group that another quite incalculable element is introduced. In the historical process, moreover, there ever emerges the fact of the *new*, which is no mere transformation of existent forces, but an element of essentially fresh content, due to a convergence of historical causes (cf. art. CONTINGENCY, vol. iv. p. 89^a). Accordingly, psychological motivation differs in all respects from natural causation.

It might thus appear that the peculiar character of historical ætiology could be interpreted and methodized by means of psychology, as is proposed by Dilthey and Wundt. But on various grounds this is impossible. For one thing, historical study does not work with psychological motivation alone, but very frequently has recourse to natural causation as well. Polar limitations, glacial periods, earthquakes, famines, destructive winters, uninhabitable regions, and the like, often play a great part in history, and certainly not always by their purely psychological effects. The destruction of Napoleon's army by the Russian winter was due only in part to the psychological effects of the cold; and even in cases where geographical and physiological conditions eventually produce psychological results, we have something very different from purely psychological motivation. Further, psychology cannot supply any kind of real pre-

calculation of historical events and developments. If that were possible, it would imply that the facts of history were known beforehand, and then traced back to the soul, as something that had issued from it. This is the case especially with the so-called folk-psychology, which is simply a rendering of history in terms of psychological laws, but does not explain the former by the latter. Here, indeed, the facts are always anterior to the psychology, and it would be more accurate to say that the history helps to explain the psychology than to assert the converse. The peculiar nature of the causality of motives points, no doubt, to the distinctive nature of historical knowledge, but it cannot properly provide a basis for it. Nor can such basis be found in the subject-matter; it is to be derived from the method alone. The method, however, is determined, not by the subject-matter, but by the epistemological end in view; for knowledge is never a mere reproduction of experience, but always an abstract selection of particular elements of experience for a definite intellectual end. Thus, *e.g.*, the method of natural science is determined by the interest of selecting that aspect of experience in which it manifests itself as absolutely determined by universal laws, and, accordingly, the method in question abstracts from all that is qualitative and individual. The method of historical science, on the other hand, is determined by the object of selecting from the flux of phenomena that which is qualitatively and uniquely (1) *individual*, whether on a larger or on a smaller scale, and of making this intelligible in its concrete and specific relations. It therefore abstracts from the universal laws which may possibly regulate even its subject-matter, but which fail to explain the peculiar and concrete elements of it, and it operates not with the conception of causal equivalence, but with that of individual causes, which, precisely because of their infinite complexity, produce the unique.

Now the method of history, with its logical determination by a distinct intellectual end, answers to the peculiar characteristics of the historical material, just as the method of natural science answers to those of its material. The processes of the physical world demand in greater degree the first-mentioned type of isolating interest (universal law); those of the psychical world, the second (individual causality). It is not the methods themselves, but their respective intellectual ends, that spring directly from the nature of the subject-matter; and, accordingly, the distinctive characteristics of the material correspond in either case to the ends determining the respective methods. The physical world invites us to understand it by the deduction of general laws; the psychical world by a sympathetic reconstruction of the causal connexions in which the actual facts of history have taken shape. Here, then, the true nature of historical knowledge comes to light. Historical knowledge selects its materials as it may require—a national history, a state of civilization, a biography, an intellectual development, etc.—and seeks, by means of the individual causality proper to history, to make it as intelligible as if it were part of our own experience. Even the history of mankind, were it within our grasp, would be a freely selected and individually concrete subject-matter, inasmuch as its development could be understood only as a particular concatenation, and in no sense as an instance of the operation of universal laws. Such purely objective causal explanation, based upon the widest possible experience and the most methodical application of experience, constitutes the distinctive character of history as a pure theoretical science.

Precisely because of this, however, historical thought shows itself to be (2) *conceptual* thought,

though the concepts which it must frame are different from those of the natural sciences. The universal application of the category of causality in the special form of individual causality subjects the entire material to a uniform conceptual mode of treatment. Moreover, the several isolated subjects of inquiry which are to be causally explained in this way are conceptual unities, for which, it is true, we have as yet no logical term, but which may be designated 'historical aggregates' (*historische Totalitäten*). Such would be, *e.g.*, a human life, a nation, a condition of affairs, the spirit of an age, a legal constitution, an economical condition, a school of art, etc. These aggregates are selected freely and one after another by the investigator, but may be re-combined, till at length the highest concept of historical totality, *i.e.* humanity itself, is reached. It is, indeed, true that this highest concept can be described only by the successive descriptions of its separate components and factors. The conception of mankind as a whole, just because mankind cannot be brought within a single, simultaneous, and all-embracing view, can never be more than an incomplete work of the imagination.

Now, inasmuch as these totalities are processes, and internally coherent congeries of phenomena, there emerges a third fundamental principle of historical reflexion—(3) the principle of *development*. This conception must certainly be taken in its purely historico-empirical sense, and must not be confounded either with the idea of development in natural science or with that found in metaphysics. The scientific conception of development signifies the explanation of becoming by the addition of infinitesimal mechanical changes; the metaphysical conception denotes the interpretation of reality as the expression of an absolute intelligence which realizes itself therein. In contradistinction to these, the conception of historico-empirical development denotes the progress that issues from the essential element of certain psychical efforts, the working out of the consequences that are latent in the earliest beginnings, the dynamic element in psychical forces which are not exhausted in a single manifestation, but work out towards a result—forces in which exists a tendency to a development akin to logical evolution. Thus there is development in religious, ethical, and philosophical ideas; likewise in the character of individuals and peoples, as also in forms of government and economic conditions. Wherever this tendency asserts itself, it constitutes a principle that organizes the aggregates, and moves them onward from within—a principle that absorbs and elaborates the various causes, and supplies them with a focus of attraction or repulsion.

Nevertheless, the value of the conception of historical development must not be over-estimated, as it often is at the present day. For, in the first place, it does not mean an infinite progress, but in every particular case implies only a single concrete impulse controlling a given aggregate. It manifests itself in the fact of exhaustion as well as in that of advance. All progressive developments work also towards regression, so as to make room for fresh movements. The conception in question has, therefore, nothing to do with the conception of an unlimited and continuous progress found in the philosophy of history. Then, again, besides the fact of continuity, we must also recognize the fact of historical contingency, *i.e.* the convergence of a series of mutually independent causes (see art. CONTINGENCY, vol. iv. p. 87 ff.). In virtue of this contingency, processes of development are commingled, furthered, amplified, obstructed, and sometimes even completely arrested; though, of course, the syntheses thus fortuitously brought

about may occasionally give rise to new and fruitful developments, for the spiritual life of man has everywhere a tendency to unify the elements of a given situation, however produced, and thus also to mould them into new stimuli to development. To the sphere of accident or contingency belong the supremely important influences of climate, atmosphere, fertility, geographical position, and natural wealth. That sphere also embraces physiological occurrences and conditions—deaths, interbreeding, mixture of races, food-supplies, and the like. To the domain of chance must likewise be reckoned, so far at least as we at present know, the distribution of individual qualities, as, *e.g.*, talent and genius, which sometimes occur but sparsely, sometimes in amazing profusion. It is true that such 'accidents' are rightly so designated only when judged with reference to the conception of historical aggregates and the developmental tendencies that give rise to them. They may, to a very great extent at least, be brought under the conception of natural law. The idea of contingency is, in fact, one in regard to which the historical and scientific modes of thought are discriminated with special clearness.

In the sense specified, accordingly, the causal explanation of historical aggregates constitutes the purely theoretical function of historical investigation. It is certainly obvious that such causal explanation has a rather restricted range. It is dependent upon the existence of a tradition, upon a critical examination of that tradition, and upon the imaginative and synthetic powers of the investigator. It can never re-constitute its objects in their entirety, but must decompose them; it can depict them only consecutively, and never in their simultaneous inter-dependence. Hence it can proceed only by analyzing, and by moving from subject to subject. This explains why the work of history must ever be taken up afresh. The accession of new material, the fresh sifting of facts by criticism, new ideas and views in the linking of causes to historical aggregates—all of these call for ever new beginnings, and lead to a revision of previous delineations. The writing of history can never be exhaustive, and never complete; it will never be able to compass the All in its extension and in its intension. It will never be able fully to analyze the individual peculiarities of souls or groups of souls, or to explain that power of initiative and self-determination which we call freedom. It will never be able to find the ultimate derivation of a historical world of personalities, or even of the movements at work within that world, in anything else. There will always be limits to its realization of its intellectual end, and always residua incapable of being rationally determined. But the writing of history is not on that account futile or valueless. For it enables man to comprehend himself so far as a causal comprehension of himself is possible or necessary. It is, in fact, only on the basis of such causal self-comprehension that our own historical work can be clearly and circumspectly extended. The ages of naive traditionalism and naive rationalism required no such understanding of oneself. But, as they pressed against their narrow bounds, and made a beginning with historical reflection, they found it necessary to carry the latter to its ultimate issues. The cultured man of to-day is a person who thinks historically, and can construct his future only by means of historical self-knowledge. This holds good for every sphere of life, even for the religious sphere, in which, it is true, such self-knowledge is still opposed by the naive traditionalism and rationalism of large masses of mankind.

4. The relation of historiography to the philo-

VOL. VI.—46

sophy of history.—Our concern with history, however, is by no means exhausted in causal interpretation and the formation of aggregates. For, on the one hand, there arises the problem regarding the relation of the historical process in the world to the fundamental forces of the universe, and, on the other, the problem regarding the significance of that process for the living and operative will of each particular age—the will which is nurtured by the events of history, and yet manifests at every instant a creative power of its own. To the former problem belong the questions concerning the foundation of the psychical world in the Universal Spirit, the connexion between the physical and the psychical world, the Divine direction and sustaining of the cosmos, and the distinction between the purely natural life of the soul and the spiritual and civilized life that strives to transcend it. The second problem comprises the questions relating to the teachings of history for the active and constructive will, to the inward meaning and significance of that substance of life which takes concrete form in the process of history, the ideal values to be won from that process and to be recognized in it; and, finally, its ultimate meaning and aim. These questions all lie outside the sphere of empirical historiography, and belong in reality to the philosophy of history which explains and estimates metaphysically. Empirical and philosophical history must be clearly distinguished in principle, though in the actual delineation of events they are usually found in some degree of combination.

But the philosophy of history itself, as has just been indicated, includes very different kinds of problems. The questions of the first group noted above relate to purely metaphysical matters; and, whether they are dealt with as lying within the sphere of a complete system of metaphysics, or agnostically set aside as unanswerable, it is comparatively easy to keep them apart from history proper. The metaphysical background will be discerned only in delineations on a large and comprehensive scale, and even there it will assert itself rather in the intellectual attitude as a whole and in occasional aphorisms than in elaborately constructed theories. This is, at all events, what we find in so purely empirical a historian as Ranke. Modern historiography, as contrasted with the mediæval and theological types, has certainly in principle wrenched itself free from the metaphysical element, whatever the personal views of the historian regarding the latter may be. This, however, is no more than a theoretical emancipation. In view of the practical importance of the metaphysical presuppositions, their separate consideration and discussion are matters of the highest import to philosophy, and the historian must take care to keep such vital questions open, and not to foreclose them by casual remarks and ostensible truisms.

The other group of questions in the history of philosophy are not so easily kept distinct from historical composition. It is true that purely historical delineations, like the delineations of natural science, may conceivably be given in purely empirical categories, as, *e.g.*, Tocqueville, Fustel de Coulanges, and Eduard Meyer endeavour to do. This, however, cannot possibly be the regular procedure, because the reader aspires not only to a knowledge of causes, but to a point of view from which he may pass judgment on the facts of history, and because the questions that thus arise cannot be answered by themselves alone, or apart from a mental picture of the entire field of history. Nevertheless, with a view to clearness in the questions involved, the distinction must, in principle at least, be strongly insisted upon. This

is demanded also by the fact that the valuations and interpretations thus conjoined with description are sometimes contradictory to one another. We meet here with interpretations from various points of view—political, legal, artistic, moral, and religious. These may show an altogether one-sided character, or they may be combined with one another. Each of these points of view, moreover, may itself exhibit variations, and may even give rise to extreme contrasts within its own sphere. This chaos of value-judgments, the perplexing impression made by which is but intensified by the perpetually fluctuating course of history, can be transcended only by grouping the questions together and finding their answers in (1) a *complete system of values*. Such a system of values, however, is neither more nor less than Ethics—to take that term in its ancient sense of a doctrine of absolutely essential qualities and goods, as formulated anew most definitely by Schleiermacher among modern thinkers, and as employed—in effect—in the Hegelian ethics and philosophy of history. On this view history is to be interpreted and evaluated by comparison with a system of values which it is the task of ethics to construct. Every single historical aggregate must, therefore, be judged by the measure of its approximation to this system, or to particular standards forming part of it. Whether that judgment is carried out with glowing personal emotion or with graphic and impressive imagery, it is always based upon such an objective system of values, of which the writer may be unaware, but whose validity he assumes.

The great obstacle to this procedure, however, lies in the fact that ethics itself must derive its knowledge of values from the facts of history, and can furnish nothing more than a critical delimitation and adjustment of these values. We are thus confronted with a logical circle: we must interpret history by the degree in which it approximates to ethical values, and at the same time we must derive these ethical values from history. The circle is not to be evaded, and the difficulty can be solved only by the thinker's own conviction and certainty that amid the facts of history he has really recognized the tendencies that make for ethical ideals, and that he has truly discerned the dynamic movement and progressive tendency of the historic process. A complete proof of the accuracy of his view, *i.e.* of his system of values, is impossible, and, accordingly, ethical interpretations of history will exhibit manifold divergences in the future, just as they have done in the past. Still, such a system of values, notwithstanding its irretrievably subjective character, involves no mere abstract subjectivism; on the contrary, the critical survey of the objective phenomena is through and through a matter of *insight*, and proceeds upon a true homage to the facts. The system would be more accurately described as intuitional rather than subjective. Its demonstration can, therefore, be given only by letting the critic repeat the observation in his own experience, and by leading him to draw from the historian's view of the facts a view of his own in keeping with it. This shows how great a part imagination plays in the framing of those conceptions. But the process cannot be dispensed with except by such as claim to have received a system of the kind by revelation.

From the standpoint of such a system, the historical process appears as an approximation to the complete harmony of ethical values. But here emerges another important conception of the philosophy of history, *viz.* that of (2) *metaphysical or ethical development*. This, as already noted, must be carefully distinguished from the conception of historical development in the empirical

sense, and is not to be demonstrated by means of the latter. The empirical conception of historical development shows only partial, or progressive and regressive, developments, but not the advance of mankind as a whole towards a final and universal end. It certainly exhibits the formation of ethical aggregates, but not their synthesis in a uniform and progressive continuity. Hegel made the mistake of reducing each of these conceptions of development to the other, and also of basing both together upon the metaphysico-logical movement of the Absolute. In reality, the conception of ethical development is merely a postulate of faith—in the Kantian sense—a postulate based upon the actual occurrence of the aggregates of ethical life, and our personal experience of them. Consequently, it must remain an open question whether this kind of development attains its end in the present life, or in a further progress of souls in a life beyond. Certainly experience does not support the former alternative. Similarly, as the system of values can be realized only approximately, and as the possibilities of an approximation are, for the individual, so varied, his share in the final system must also remain an open question.

In connexion with this conception of development, mention must be made, finally, of still another important element in the philosophy of history, *viz.* (3) the problem of *individualization*. The system of values is no rationally demonstrable abstract system, such as would confront all the phenomena of empirical history as an absolute and everywhere identical standard. If we designate the system of values as the 'Idea,' then the course of history is not a sometimes more and sometimes less effective progress towards the realization of the ideal, which is everywhere the same. The truth is, rather, that all spiritual manifestations—in individuals, in groups, or in periods—are individualizations or concrete manifestations of the ideal. This accords perfectly with the earliest, merely descriptive, and non-nomothetic type of historiography; and it accords likewise with the metaphysic of spirit—which cannot be more fully dealt with here. But in that case every historical phenomenon, viewed from the standpoint of the ethical philosophy of history, bears a double character: it is, on the one hand, a concrete manifestation of the Idea, having a relative right of its own, and, on the other, a mere approximation to the absolute system of values. In spite of all obstacles and defects, there obtains everywhere an individual and concrete progress towards the ideal. Final perfection itself, indeed, might be conceived of as simply the sum of the individual realizations of the Idea. Here, however, we encounter the antithesis between universal validity and individualization—an antithesis which cannot be theoretically reconciled at all. Hence each historical phenomenon is to be estimated by reference only to that degree of approximation to the Idea which is set before it and is possible to it. In this way every epoch has a relative justification, though it must, at the same time, be judged in the light of an absolute end. This shows the necessary relativity of the philosophy of history, and yet makes it possible that the relative shall appear to be included in the movement towards the absolute. The absolute *in* the relative, yet not fully and finally in it, but always pressing towards fresh forms of self-expression, and so effecting the mutual criticism of its relative individualizations—such is the last word of the philosophy of history. This implies, however, that in the writing of history and the description of historical phenomena—in spite of all appraisements by reference to final and absolute values—there still remains the concrete individual character of the objects dealt with, and there

remains also the non-rationality of personal life, with its rightful claims in face of all the ideals of universal value that hover before the human mind.

HITTITES.—1. Ethnography and history.—

The Hittites were a people, possibly of mixed Aryan and Caucasian elements, who controlled, during the second millennium and a part of the first millennium B.C., large portions of the Nearer East. In the OT they are frequently mentioned under the name Hittim (חִיטִּים), rendered in the Greek by the word *Xeraiōi*. They appear on the Egyptian monuments under the name *Hiti*, commonly rendered in English as *Kheta*, and they were known to the Babylonians, Assyrians, and Haldians as *Hatti*, the form of the name by which, according to the Cappadocian tablets, they called themselves.

In early times there seems to have been no central Hittite power, but a number of separate and independent city-States, each with its king, who seems also to have been chief priest. Later, the Mitannians, apparently a Hittite people, established a centralized Hittite kingdom, with Carchemish perhaps as their capital; and the rulers succeeded in extending their sway not only over the north Mesopotamian region, their proper domain, but also over North Syria and, possibly, the plain to the east of the Tigris.

The Hittite sphere of influence can be fairly well determined by their monuments and mounds. Two groups of isolated rock sculptures,¹ near the Aegean Sea, and close to the end of the natural trade-route from the great central plateau of Asia Minor, would seem to indicate that they controlled this route for a time, though they apparently did not hold sway over the mountainous regions west of Lycaonia and Phrygia. Beginning, however, with the territory represented by those two provinces, their influence was felt eastward to the Euphrates, as well as in North Syria, northern Mesopotamia, and Assyria. It is interesting to note that both the first builder of the wall of the city of Ashur in Assyria and the founder of the temple to the god Ashur in the same city bore Hittite names²—a fact which goes far to prove Hittite or Mitannian control of this region before the end of the third millennium B.C. It was, doubtless, an army from this southern band of Hittites that invaded Babylonia about 1800 B.C.,³ overthrew the first dynasty of Babylon, and set a Hittite king on the throne, maintaining their power there for something like twenty years. In the same general period, the beginning of the second millennium B.C., or possibly at the end of the third millennium, must have occurred the southward expansion of the same people into Palestine, where we find their early importance reflected in the Abraham episode (Gn 23), despite the late origin of the present narrative. Whether they made their way south by force of arms or through peaceful migration is uncertain; but they are, at any rate, considered in the Biblical passages as a part of the settled population.

Our knowledge of the Hittites up to the 14th cent. B.C. is very fragmentary. An Egyptian stela of the XIIth dynasty¹ may possibly refer to Hittites settled in Southern Syria, and Thothmes III. records² that he received tribute from Kheta. However, the magnificent find of some 2500 cuneiform tablets, unearthed by H. Winckler³ at Boghaz Keui, enables us, with the help of the Amarna tablets, to form a fairly clear idea of the succession of events in the 14th and 13th centuries B.C.

The central figure of this period is Subbi-luliuma, ruler of the Hittite capital in Cappadocia known as the 'City of Hatti,' the modern Boghaz Keui. At the beginning he seems to have been little more than a city-king; but, by uniting the neighbouring States in friendly alliance, and by a series of campaigns in North Syria and northern Mesopotamia, he succeeded in establishing a Hittite Empire, including Syria north of Kadesh on the Orontes, the Mitannian kingdom, and the central portions of Asia Minor. Subbi-luliuma was followed successively by two sons, Arandas and Mursil, both of whom lacked the energetic spirit of their father, to the extent that both Assyria and Egypt made successful campaigns into the Hittite territory. Mursil's son and successor, Mutallu, immediately upon his accession, set about rebuilding the Hittite power. His influence may be judged from the array of nations that gathered to his standard: troops from Arinna and Pisidia, Dardanians and Mysians, Lycians and Cataonians, together with contingents from all North Syria, banded together and marched to meet the Egyptians led by Ramses II. Battle was joined at Kadesh on the Orontes. Neither side seems to have been signally victorious. Shortly after, Mutallu was assassinated, and his brother Hattusil fell heir to the throne. This ruler, about the year 1271 B.C., made an offensive and defensive alliance with Ramses II., the terms of which were inscribed on a silver tablet and sent by the Hittite king to Ramses. The treaty is preserved to us in an Egyptian translation engraved on the wall of the temple at Karnak, and another translation, now very fragmentary, in the Ramesseum, as well as in a cuneiform tablet from Boghaz Keui, written in the Bab. language.

The rising power of the Assyrians and of the Muski on the north now not only checked any further desire for conquest which the Hittites may have had, but gradually reduced the limits of their realm. Only two further rulers of the Hatti dynasty, Dudhalia and his son Arnuanta, are named in the Boghaz Keui tablets. It is very likely that not long after this the Hittite Empire was dissolved, and before the end of the 8th cent. B.C. the greater part of its territories had been absorbed by Assyria and Phrygia.

2. Religion.—The chief sources of our knowledge of Hittite religion are the sculptured monuments and seal cylinders, the inscriptions in Assyrian and Egyptian, and the Boghaz Keui tablets. Pending the complete decipherment of the Hittite language,⁴

¹ Stela, C. 1, Musée du Louvre.

³ *Mitteilungen der deutschen Orient-Gesellschaft*, xxxv. (Dec. 1907) ff.

⁴ Contributions towards the decipherment of the Hittite pictographs have been made by J. Halévy, F. Hommel, J. Ménant, L. Messerschmidt, and others, while more or less complete systems have been put forward by C. J. Ball, C. R. Conder, F. Jensen, F. E. Peiser, and A. H. Sayce. Only the systems of Sayce and Jensen have received recognition from scholars, and it is now generally considered that the chief value of Jensen's work consists in his excellent list of symbols, and his division of inscriptions into word groups. Sayce's system, on the contrary, is slowly gaining adherents. His work began with the investigation of proper names such as Carchemish, Tyana, Mar'ash, Hamath, and Sandon, appearing in various forms, purely phonetic or partly ideographic. A considerable list of values has thus been formed. Doubtless, many of these values will require modification; but the system seems in the main

³ Jastrow, *RS* xviii. [1910] 87 f.

these sources are meagre. While the sculptures deal, in the great majority of cases, with representations of deities and scenes from the cult, they afford us at present none of the names of the gods concerned, and in very few instances can the deity be identified and the name supplied from the Assyrian and Egyptian sources. The case is much the same with the carvings on the seal cylinders. A fairly large mass of material is preserved in the later Græco-Roman writers; but, like the historical material they present for the Nearer East, this can be used with confidence only when checked by the sources already mentioned.

Primitive animistic conceptions stand out clearly in the historical form of the religion. Springs, rivers, trees, and mountains were considered sacred. At Aflatun Bunar, west by south from Iconium, is the familiar monument which stands as the remains of a building, with sculptured front, dedicated to the spirit of the copious fountain which here flows forth. On the shoulder of Mount Argæus, the highest peak in Asia Minor, is another fountain, whose sacred character was marked in Hittite times by a spring house with an inscription, parts of which remain. The tetrastyle temple, which is a feature of some of the Argæus coins, may have stood on the same spot; and that the sanctity of the place was transmitted to later times is evidenced by the discovery, in the same place, of the remains of a Christian church or chapel. High up in the Anti-Taurus range above Comana Aurea, and near the small village of Qoqar Quyu, is a lion monument¹ with Hittite inscription, which owes its position, no doubt, to the sacred character of the mountain. The peak of Argæus likewise was considered sacred, and further evidence is furnished by the representation in various instances of deities standing on mountain tops. Moreover, the treaty of Hattusil with Ramses II. mentions 'the Lady of mountains and rivers.' The sacred tree appears in one perfectly preserved sculpture from Sakje-Geuzi, and it is perhaps used as a symbol in the inscriptions.

However, in the period represented in the Hittite monuments, the religious belief of the people had long passed the primitive stage. Animals were still used as emblems, and the people may have continued to believe in the sacred character of springs, mountains, and trees; but a higher plane had been reached, and we may believe that the religion stood on about the same level as that of Babylonia before the time of the first dynasty of Babylon. The selective processes of time had exalted a comparatively small number of the primitive Nature-spirits into gods directly concerned with the welfare of the people; and these had taken on anthropomorphic forms, assuming the appearance and dress of the Hittites. The distinguishing garb of the male deity, as seen on the monuments, consists of the short tunic and conical hat; that of the goddess, the long robe and high cylindrical hat. Shoes pointed and turned up at the toes were a feature common to the dress of both. The Hittite artist, as a rule, made no attempt to differentiate the deities through varied portraiture, but relied in well grounded, notwithstanding the fact that translations of connected passages are not altogether satisfactory. The chief obstacle to further advance is lack of well-preserved inscriptions, though new material is constantly coming to light. It is confidently expected that the Hittite language will be recovered in great part from the cuneiform material discovered by H. Winckler at Boghaz Keui, which is now being investigated by Ernst Weidner of Berlin. The grammatical structure of the language and a considerable vocabulary once determined, the complete decipherment of the hieroglyphic inscriptions will shortly follow (cf. P. Jensen, *Hittiter und Armenier*, Strassburg, 1893; L. Messerschmidt, 'Bemerkungen zu den hethitischen Inschriften,' *MVG*, 1898, p. 179f.; A. H. Sayce, 'Hittite Inscriptions,' *PSBA*, 1907, pp. 207-213, 253-259).

¹ Olmstead, Charles, and Wrench, *Travels and Studies in the Nearer East*, vol. I. pt. 2, figs. 27-29.

this matter on accessories such as insignia, arms, or totemistic emblems. In many cases the name also is appended, so that to one who knew the native writing there need be no uncertainty.

The status of the Hittite religion in the early period was much the same as that of religion in early Babylonia. Each city-State had its own gods worshipped in the local temple or temples; and this situation seems, as in Babylonia, to have continued to the end of Hittite history, notwithstanding the later establishment of a pantheon. Predominant among these city deities seem to have been some of the local forms of the Mother-goddess and of the storm-god. The former, as the personification of the productive forces, and, in connexion with her son, of the reproductive forces of Nature, was always a favourite with the Hittite peoples, as with the later races who occupied Asia Minor; and it is not surprising that a land so favourable to this cult should at a later time prove such fertile soil for the development of the cult of Virgin and Son. Among male deities, the storm-god, who seems to have been the tutelary deity of the armies, was the favourite. When, therefore, with the formation of an empire, a well-defined imperial pantheon was established, it was but natural that this pair should stand at the head; and thus we find them represented in the sacred gallery of Yazyly Qaya,¹ the holy place of the city of the Hatti.

Although in the enumeration of the Hittite gods preserved in the famous treaty the sun-god is mentioned first, the storm-god seems actually to have held the foremost place in the pantheon. From a perusal of the list in the treaty it is evident that the native translator has made a rather unsatisfactory attempt to render it into intelligible Egyptian. As the sun-god, if actually a native deity, appears to have received scant recognition among the Hittites in general, his appearance at the head of the list would seem to demand explanation. Three explanations suggest themselves: (1) the native translator considered the Mother-goddess a solar deity, and, unable or unwilling to conceive of such a deity as feminine, identified her with the sun-god, lord of heaven; (2) the Hatti themselves, as a concession to Egypt, may have placed the solar deity, as an adopted god, at the head of the list; (3) the Hittite king, whose emblem is formed in part by the winged solar disk, may himself be the sun-god referred to.

The chief male member of the pantheon, then, was the storm-god. He was known in the capital as Teshub—a name common also among the Mitannians and Haldians as the designation of important local storm-gods. He corresponds closely to the West Semitic and Babylonian god Adad. Representations of him vary considerably, but he generally bears in one hand his distinctive weapon, the three-pronged thunderbolt. His most characteristic representation is that found at Malatia.² He is here clothed in the typical dress of the male deity, and bears the bow and thunderbolt as weapons. He stands on a bull, whose roaring, apparently represented by a line drawn from his mouth to the thunderbolt held in the god's hand, is a fit emblem of the thunder, while from the horns issue flames, typical of the lightning. In the procession in the sacred gallery at Boghaz Keui his weapons are the trident and mace, and he is borne on the necks or shoulders of two men, possibly priests; while in the Zinjerli sculpture he is a bearded god armed with trident, hammer, and dagger, and does not support bull or priest. The monument at Isbekjür,³ on which he stands

¹ Garstang, *op. cit.*, pls. lxiv.-lxxi.

² Olmstead, Charles, and Wrench, *op. cit.*, fig. 41.

³ *ib.* fig. 33.

on a charging bull, may be taken as depicting the god in action.

The name of the Great Mother is not yet determined, though it seems likely that the original Cappadocian form was something like *Mā*—the name under which she was worshipped later at Comana. Perhaps the most satisfactory representation of her is that in the sacred procession at Boghaz Keui. Her skirt is here pleated and provided with a train. Her hair falls in a long braid, and on her head is the 'mural crown.' She has no weapons, but bears in her left hand her peculiar symbol and in her right a staff. The totemistic emblem on which she stands is the lioness or panther. Her son, who follows her in the procession, is a beardless youth in the typical masculine dress, bearing in one hand a staff, and in the other a double axe, while a dagger rests in its sheath at his belt. The animal on which he stands is the same as that of his mother. His Hattian designation has not been determined, though he was known in the West as Attis. A similar deity of fertility, perhaps Sandan or a local form of the son of the Great Mother, is the bearded god in the Ivriz sculpture, carved near a copious spring.¹ He holds in his right hand a cluster of grapes and in his left the heads of several stalks of grain. That he is not a god of the harvest or a Bacchus is evident from the fact that both grain and grapes are seen to be still attached to growing stalk and stock. A reminiscence of this or a similar early god still lingers in Damascus in a tradition, reported by J. E. Hanauer,² of a steel idol representing the deity who guaranteed the crops, holding in one hand, as a symbol of his function, a cluster of grapes, and, in the other, stalks and ears of wheat and barley.

The numerous other deities, male and female, in the sacred procession, like the majority of divinities pictured by the Hittites, cannot at present be identified. Prominent among them may be mentioned a mountain-god who stands behind Teshub, the two goddesses of the double-headed eagle, and a grotesque figure with human head, body formed of lions, and lower extremities replaced by the blade of a dirk or dagger.

Among other deities who seem to be native, but of whom little more than the name is known, may be mentioned Hipa, Sallu, Tarqu or Tarhu, and Tilla, most of whom appear only in personal names.

Though each city had its tutelary deities and the Empire its pantheon, there was no hesitancy in recognizing and adopting foreign gods; and as a result native and foreign deities are often so associated that, in the present state of our knowledge concerning such religious systems as the Phœnician and the Assyrian, it is difficult, and at times impossible, to assign a god to his rightful people. Ashur (or Ashir) appears frequently in personal names in the so-called Cappadocian tablets;³ and, notwithstanding the rôle he played as chief Assyrian god, his origin is by no means certain. Ishhara is mentioned in the treaty with Egypt as a Hittite goddess, and her name appears on the Indilimma bilingual,⁴ but she may have been adopted from a neighbouring people. A Hittite Reshpu is mentioned in the Egyptian records, but this also is a Phœnician and Aramæan deity.

Perhaps the most remarkable element in this complex of divinities connected with the Hittites is represented by four names of Mitannian gods found on one of the Boghaz Keui tablets:⁵ *mi-it-*

ra-as-si-il, u-ru-w-na-as-si-el, in-da-ra, na-sa-at-ti-ia-an-na; that is, Mithra, Varuna, Indra, and perhaps Nāsatya, the 'Twins.' An attempt to discuss this interesting admixture would be premature, but it clearly shows some very close connexion between the Hittite culture and that of the Aryans of India, possibly the addition to the Western people of a fresh stratum of population, representing a migration during the middle of the second millennium.

We shall doubtless find, when the tangled mass of Asiatic religious ideas is understood, that the Hittite religion contributed in no small degree to the later classical mythology. Two of the sculptured blocks dug from the mound of Arslan Tepe near Malatia¹ contain a scene which reminds us forcibly of a classical myth. One block contains the figures of two gods in ornate pointed caps and the ordinary short tunics. One of these, a bearded god, bears a dagger, club, and lance. He is preceded by a beardless figure who seems to be combating with his lance a many-headed serpent coiled in the water. The scene is not complete, but several of the serpent's heads with open mouths and fangs ready to strike are clearly discernible. This may prove to be the prototype of Hercules' slaying of the hydra, assisted by his friend Iolaus.

The sanctity of Mount Argæus from Hittite to Christian times is well attested. Moreover, *Argaios* is a title of Zeus in Cappadocia, and Argæus is known from Maximus of Tyre to have been a god as well as a mountain. This god Argæus, then, must be identified with the Apollo-like deity represented on the Argæus coins, who was doubtless originally the Hittite god of this mountain. It is interesting to note that in this instance the myth seems to have come down to the present day; for we must see in the modern legend to the effect that Ali Dagh, the cone-shaped mountain below Argæus, was formed by a basketful of earth which fell here as the result of the breaking of Ali's basket an adaptation of an earlier legend in which the god Argæus was the actor.

It is very possible that the sources of the Amazon stories will also be found among the Hittites, perhaps suggested to the story-teller of later times by a vague tradition of some rite connected with the cult of the Mother-goddess, or by an actual warring band of women. The possibility of this source is suggested by the discovery of an armed lady sculptured on a post of one of the gates of the Boghaz Keui fortifications.

The figure,² which is one of the best examples of Hittite art, is that of a woman with short skirt, girdle, coat of fine mail, and the pointed hat adorned with horns, her dress thus closely resembling that of the male deities. The lady's arms are the single-bitted axe, which she bears in her right hand, and the dagger, which rests in a sheath attached to her belt. While the figure is of great interest in its suggestion of a possible connexion with the Amazon legends, too much stress must not be laid upon this theory. It is more natural to suppose that the sculpture represents a Hittite Athene, and that she stands here as the guardian of gate and city.

3. Death, etc.—The common method of burial among the Hittites seems to have been interment in large jars after a partial cremation of the bodies. In 1907 a mound was discovered by the Cornell Expedition in the plain south of Mount Argæus, at the hamlet of Egri Keui, which was used as a cemetery and seemingly also as a crematory. Here were found human bones, fragments of large jars, some of them painted ware, and pieces of charred

wood. This and the further discovery of such jar-burial at the pre-classical Iconium as well as at Carchemish would indicate that this was the chief method. That other methods were in vogue is suggested by the discovery, made by the Cornell Expedition, of an instance of cist-burial at Sevinjik in Lycaonia south of Ilghin, the grave in this case containing a small earthen pot unmistakably Hittite in type. Persons of note, however, were interred in mounds built in a conspicuous spot, such as the summit or shoulder of a mountain. Whether the manner of interment was the same as in mounds further west is not known, as no tumulus definitely shown to be Hittite has been investigated.

It is to be expected that a people so favourable to the cult of the Mother-goddess who yearly revived Nature should have a steadfast belief in a life after death. Strangely enough, none of the larger monuments sheds any light on the subject. Several most interesting seal cylinders,¹ however, though showing strong Babylonian and Egyptian influence, may be taken as pictures of the Hittite lower world. In these the deity who judges the dead sits in a high-backed chair, and the soul of the departed is brought before him by an attendant with two faces, one of which he turns towards the judge, while with the other he watches the deceased. Three figures following the dead suggest the three assessors, Minos, Æacus, and Rhadamanthus, associated by the Greeks with Pluto, and indicate one more line of connexion between pre-Hellenic Greece and Asia Minor. Other scenes on the cylinders represent the dead partaking of food, some of which is furnished by kindly monsters; and in one place² we seem to have a cremation scene.

4. **Status of woman.**—From the prominence of the Great Mother cult as well as from the importance of other female deities in the pantheon, it was natural to conclude that the status of woman among the Hittite peoples must have been comparatively high. This conclusion is confirmed by the records. Whether monogamy was the rule is uncertain, but it is interesting to note that, when Subbi-luliuma supported Mattiuaza as heir to the throne of the Mitanni land, he conditioned his support on a monogamous marriage of the Mitannian prince with a princess of Hatti. The high position of woman is shown further by the importance of the queen as chief priestess alongside the priest-king, as well as by her prominence in State affairs, as evidenced by her seal affixed to treaties and royal edicts. A similar position of importance was held by the queen-mother, whose seal also appears on such documents; and one queen-mother of the Hatti dynasty, Putu-hipa, is mentioned as co-ruler, and later as regent, during a short interregnum.

5. **Cultus.**—In the course of the excavations at Boghaz Keui, the foundations of four buildings which seem to have been temples were laid bare, three in the upper city and one on a lower terrace. The last mentioned is the site where a portion of the collection of cuneiform tablets was unearthed. The foundations of all four temples are massive, and in their plan and construction have features in common with buildings excavated at Cnossos, Tiryns, and Mycenæ. The lower temple, which Winckler considers to have been the sanctuary of Teshub, consists in the main of a large rectangular court, with entrance from the south, opening northward through a hall of columns or pillars into the *adyton*, another rectangular room at the north side of which stands an immense basis, undoubtedly the pedestal of the god's statue. Added

to this main plan is a system of long, narrow chambers, which served as magazines for the stores and accessories of the temple; and the whole is surrounded by paved streets. Only the foundations of the temple complex remain. These consist of massive squared blocks of limestone forming a socle about a metre high, the upper surface of which is provided with rows of holes, doubtless designed for the reception of long poles supporting the clay superstructure. The three buildings in the upper city have a similar plan and structure, though the construction is not so massive. It is of interest to note in this connexion that the Anu-Adad temple at Ashur in Assyria shows a distinct departure from the usual Bab. type, revealing features which may prove to be Hittite.¹

Very little of the cult can be reconstructed from the monuments. These clearly show that libation and animal-sacrifice played an important part, the victims, so far as we can judge from the sculptures, being sheep and goats. The king or queen is represented in various instances as standing before the deity pouring a libation with a high one-handed pitcher, the stream from which, in some cases, falls into a two-handed urn set on the ground, as in the sculptures at Malatia and Isbekjür.² In several scenes of this character an attendant is pictured in the background, leading or holding the sacrificial animal. The Fraktin sculptures show the priest pouring a libation while the offering is on the altar, presumably burning.

6. **Divination.**—Among the interesting discoveries made at Boghaz Keui was that of a number of clay representations of sheep's livers closely resembling the Bab. model coming from the time of Hammurabi. This shows clearly that hepatoscopy, introduced from Babylonia, was practised among the Hittites, and we may believe that other forms of divination were adopted at the same time; indeed, it is not at all unlikely, considering the long occupation of these regions of the Nearer East by the Hittites, that this people, whose intercourse with the Ægean races is well attested, transmitted hepatoscopy and astrology to the West.

7. **Relation to other civilizations.**—Our present knowledge of the Hittites is too meagre to permit a discussion of the mutual interchange of cultural elements between the Hattian and the Assyro-Babylonian civilizations on the one hand and the Ægean world on the other. That such interchange between Hittites and Assyro-Babylonians occurred, and in no small measure, might, if no other evidence existed, be safely conjectured from the facts that before the end of the third millennium B.C. we find Hittites or Mitanni in control of Assyria, that from very early times Hittites lived peacefully in Babylonia and Assyria, and that in a period possibly as early as 2000 B.C. we find Assyrian names and name-elements in the Cappadocian tablets. We have seen that Bab. divination, in one of its phases at least, was borrowed by the Hittites, and that they were not averse to recognizing Assyro-Babylonian gods. Their greatest debt to the Euphratean civilization, however, is represented by the cuneiform script, which came to be used in all their commercial and legal transactions as well as in their international correspondence. With every advance in our knowledge of the Hittites it becomes increasingly apparent that these debts were not left unpaid. It seems clear from a study of the monuments and seal cylinders that the Hittites exerted a by no means inconsiderable influence on the architecture, as, for example, in the well-known *bit hilāni*, and on

the art, a notable example of which is found in the Maltaya sculptures¹ so obviously akin to the processions of gods at Boghaz Keui; while a strong Hittite influence on the religion must be predicated from the large number of names of Hittite deities forming a part of the personal names found in the Assyrian business documents.² That the Hittites exerted an equally important influence on the peoples of the Ægean cannot be doubted; but how far the constant similarity between the two is due to actual influence and how far to racial identity no one may safely say. These and similar questions which meet one at every stage of the investigations we may raise, but even such general hypotheses will continue to be of doubtful value until we have much more complete collections of material, and especially until the deciphering of the Hittite and allied languages has been accomplished.

LITERATURE.—For the native inscriptions: L. Messerschmidt, 'Corpus Inscr. Hettiticarum,' in *MVG*, Berlin, v. (1900) nos. 4-5, vii. (1902) no. 3, xi. (1906) no. 5; A. T. Olmstead, B. B. Charles, and J. E. Wrench, *Travels and Studies in the Nearer East*, vol. i, pt. 2, Ithaca, 1911. The results of the Boghaz Keui excavations are given by H. Winckler, in *OZ* ix. [Leipzig, 1906] 621 ff., and by H. Winckler and O. Puchstein, in *Mitteilungen der deutschen Orient-Gesellschaft*, xxxv. [Dec. 1907] 1 ff. The best study of the Hittite-Egyptian treaty is that by W. Max Müller, 'Der Bündnisvertrag Ramses II. und des Chetivkönigs,' in *MVG* vii. [Berlin, 1902] 193 ff., and the best Eng. tr. is to be found in J. H. Breasted's *Ancient Records of Egypt* (Chicago, 1906-07), iii. 163 ff. For the history: J. Garstang, *The Land of the Hittites*, London, 1910; J. H. Breasted, *Hist. of Egypt*, New York, 1911; G. Maspero, *Struggle of the Nations*, do. 1897, *Passing of the Empires*, do. 1900. Cf. for the later period also A. T. Olmstead, *Western Asia in the Days of Sargon of Assyria*, New York, 1908. For the art and architecture: F. von Luschan, C. Humann, R. Koldewey, and others, *Ausgrabungen in Sendschirli*, Berlin, ii. (1898), iii. (1902), and iv. (1911); J. Garstang, *Land of the Hittites*; O. Puchstein, *Bauwerke von Boghazköe*, Leipzig, 1912. Cf. also Perrot-Chiépiz, *History of Art in Sardinia*, etc., New York, 1890. The seal cylinders are collected in W. H. Ward, *Seal Cylinders of Western Asia*, Washington, 1910. The religion is discussed, sometimes in considerable detail, in most of the foregoing works. There is a special study by W. M. Ramsay, in *Luke the Physician*, London, 1908. The religions of Asia Minor in general are fully dealt with in J. G. Frazer's *Adonis, Attis, Osiris*, London, 1907. Special phases of the subject are treated in the various special periodicals in art, by Ramsay, Sayce, Ward, and others. B. B. CHARLES.

HIUEN TSIANG.—See YUAN CHWANG.

HOS.—A tribe classed by Risley as Dravidian or non-Aryan, found in the Singhbhūm District of the Chota Nāgpur Division of Bengal, where, according to the Census of 1901, they number 385,125. The tribal name seems to be a contracted form of the word *horo*, 'man,' which is used by the cognate Munda and Santāl tribes as their national designation, and which appears in various forms in the tribal names Oraon, Kol, Korwā, Korkū, etc. Risley further remarks that the Munda and Santāl are not called *horo* by outsiders; and 'in the case of the Hos, the tribal name of the original stock whence Hos, Mundas, and Santāl are sprung has obtained popular recognition, in a slightly altered form, as the distinctive name of the branch which inhabits Singhbhūm, and which may now be regarded as a separate tribe. For intermarriage between Hos and Mundas or Santāl, though not absolutely forbidden by custom, is certainly uncommon, and may be expected soon to fall into disuse' (*TC* i. 319 f.).

1. Tribal legends.—The Hos possess a remarkable tradition concerning the creation of the world and the origin of the human race, recorded by Tickell (*JASB* ix. [1841] 797), and thus summarized by Dalton (*Descrip. Ethnol. of Bengal*, 185) :

'Otā Borām and Sing Bongā were self-created, and they made the earth with rocks and water, and they clothed it with grass and trees, and then created animals, first, those that man domesticates, and, afterwards, wild beasts. When all was prepared for the abode of man, a boy and girl were created, and Sing Bongā placed them in a cave at the bottom of a great

¹ Perrot-Chiépiz, *History of Art in Chaldea and Assyria*, London, 1884, ii., fig. 123.

² Cf. Jastrow, *Aspects of Religious Belief and Practice in Babylonia and Assyria*, New York and London, 1911, Index, s.v. 'Hittites.'

ravine, and finding them to be too innocent to give hopes of progeny, he instructed them in the art of making Illi, rice beer, which excited the passions, and thus the world became peopled' (cf. Tylor, *PC* 4, London, 1903, ch. xvii.; Lang, in *EB* 11 xix. 142 ff.). 'When the first parents had produced twelve boys and twelve girls, Sing Bongā prepared a feast of buffaloes, bullocks, goats, sheep, pigs, fowls, and vegetables, and, making the brothers and sisters pair off, told each pair to take what they most relished and depart. Then the first and second pair took bullocks' and buffaloes' flesh, and they originated the Kols (Hos) and the Bhūmij (Matkum); the next took vegetables only, and are the progenitors of the Brahmins and Chatris (Skr. *Katriya*, the warrior class); others took goats and fish, and from them are the Sūdras [menials in the Hindu caste system]. One pair took shell-fish, and became the Bhuiyās [q.v.]; two pairs took pigs, and became Santāls. One pair got nothing, seeing which, the other pairs gave them of their superfluity, and from the pair thus provided spring the Ghāsis, who toil not, but live by preying upon others [for the Ghāsi or Ghasiyā tribe of out-castes, see Risley, *TC* i. 277 f.; Crooke, *TC*, Calcutta, 1896, ii. 408 ff.]. The Hos have assigned to the English the honour of descent from one of the first two pairs, the elder. The only incident in the above tradition that reminds one of the more highly elaborated Santāl account is the divine authority for the use of strong drink' (cf. the legends which attribute the invention of wine to Noah, Dionysus, and Osiris).

From the ethnological point of view this legend is interesting, as it admits the common origin of the forest tribes occupying this region. On the other hand, it is ætiological, inasmuch as it purports to explain the present status of these tribes; it is comparatively recent, since it embodies Hindu beliefs; and the account of the origin of the English must be quite modern.

2. Religion.—According to Dalton, the Hos at the present day have no conception of a heaven or hell which may not be traced to Brāhmanical or Christian teaching.

'They have some vague idea that the ghosts of the dead hover about, and they make offerings to them; and some have, like the Chinese, an altar in the house on which a portion of the "daily bread" is offered to them; but, unless under a system of prompting often inadvertently adopted, they will not tell you that this after existence is one of reward or punishment' (*op. cit.* 204).

Their burial customs certainly indicate a belief that the spirits of the dead abide in the neighbourhood of their graves. Ball (*Jungle Life*, 64), writing of them under the name of Larḱā Kols, describes one of their cemeteries which contained a number of ancient stone monuments:

'The major part of them had a sort of truncate pyramidal shape, and were marked superficially with groovings, which may possibly have some signification; they recalled to my recollection the ancient Ogam inscriptions of Ireland, though not actually similar to them in form. In this neighbourhood, too, I saw an ancient cross; but regret to say, I do not retain any description of it, as I did not, at that time, fully recognise the importance of the symbol occurring otherwise than in connection with the Christian religion. The assumption, however, that it is the exclusive property of Christianity is clearly unwarranted by certain now well-established facts' (quoting *PASB*, 1877, p. 189; *JASB* xvi. [1877] pt. ii, p. 179; to which may be added D'Alviella, *Migration of Symbols*, Eng. tr., London, 1894, p. 12 ff. and *passim*). 'Most of these stones were erected as memorials to worthies of the tribe' (*op. cit.* 163).

Another account of the death-rites shows more clearly the belief in the survival of the soul after death. After the cremation of the corpse, the ashes are placed in an earthen vessel until all the arrangements for interment have been completed.

'Then the chief mourner, carrying the vessel with the remains of the deceased on her head, leads the funeral procession to every house in the village, the inhabitants of which come out and pay their last tribute of respect to the dead. The deep solemn notes of the drum and the low-voiced grief of the women form a weird funeral march as the procession winds from house to house, returning at last to the grave prepared close to the house of the deceased. Rice and other food is first thrown in, and then the vessel containing the remains is lowered into the hole and covered over with earth [see FOOD FOR THE DEAD]. A huge uncut slab of stone is placed over the spot to mark the grave and guard it against desecration. Outside the village, the Hos, like the Munda, put up another monument to the deceased's memory in the form of a huge pillar of rock varying in height from four to twelve or fourteen feet' (Bradley-Birt, *Chota Nagpore*, 101).

3. Other religious beliefs.—Besides the cult of deceased ancestors, the worship of the Hos is directed towards the propitiation of a host of malignant spirits of forest, hill, and stream, which

are practically identical with those of the kindred tribes, Kols, Mundas, and Santāls (*qqv.*).

W. CROOKE.

HOBBS.—**I. Life.**—Thomas Hobbes, known to his friends as 'Malmesburiensis Philosophus,' an original and forceful English writer on political philosophy, was born at Westport, in Wiltshire, on 5th April 1588. His early education was received at the Westport church school, at a school in Malmesbury, and also at one kept by a Mr. Latimer, who is described as 'a good Grecian, and the first that came into our parts since the Reformation' (J. Aubrey, *Brief Lives*, ed. A. Clark, Oxford, 1898, i. 329). Later, Hobbes entered Magdalen Hall, Oxford, where he became discontented with the traditional learning of the University and turned his attention to the study of men and current affairs. After admission as bachelor on 5th Feb. 1608, he became tutor to the son of William Cavendish, later the second Earl of Devonshire, and began the life-long intimacy with a family whose social position and political fortunes carried him into that turmoil of public life wherein his opinions were formed. Through the travels incident to this connexion, Hobbes became acquainted with the work of such men as Galileo, Kepler, and Montaigne. This fired his imagination and led him to conceive a system of philosophy worked out in the spirit of the new learning, and applied especially to the moral, social, and political problems of human life. He felt his project to be the more urgent because of the political disturbances of his time and the uncertainties of life and fortune incident to the Civil War. Although his political writings were not his earliest essays in philosophy, and although his political theory was probably worked out as a part of his general theory before the Civil War gave to it a special impetus, the publication at Amsterdam in 1647 of *de Cive*, and at London in 1651 of *Leviathan*, was felt by Hobbes himself to be a matter vitally important for the trend of events. He professed the ambitions of a scholar, owned a preference for scientific inquiry secure from the excitements of public life, and yet, in spite of self-confessed timidity, sought repeatedly the opportunity to make his writings felt by those in power. His contributions to political theory, together with his observations on human nature, are by far the most important parts of his philosophy. His own time and times subsequent have found little of marked significance in his other work. Yet the student of philosophy can find many illustrations of keen insight into logical problems and the theory of science, and the student of literature can find a real treasury of forcible and clear English prose. He died on 4th Dec. 1679, in his ninety-second year, and 'was buried,' as told by James Wheldon, 'in the parish church of Hault Hucknall, close adjoining to the rail of the monument of the grand-mother of the present Earle of Devonshire, with the service of the Church of England by the minister of the parish' (Aubrey, i. 382).

Hobbes is described by John Aubrey, his friend and contemporary, as six feet high and something better; with a good eye of hazel colour; with a head of mallet form approved by the physiologists, and with a temperament 'sanguineo-melancholicus,' similarly approved; of temperate and regular habits; as an harmonical soul and not a woman-hater, although never married; of a sharp wit which was also sure and steady; as one who contemplated more than he read, and who remarked 'that if he had read as much as other men, he should have been as ignorant as they'; and as a man who 'would have the worship of God performed with musique' (*ib.* i. 348 t., 354).

2. Writings.—The writings of Hobbes show how wide his intellectual interests were. Especially

noteworthy is his interest in Greek literature, rhetoric, and mathematics. His translations are vigorous and suggestive. His rhetoric is largely an unacknowledged reproduction of Aristotle. His mathematical writings expose his deep interest in the subject and also an incapacity to handle the more difficult problems. He believed he had squared the circle, and he engaged in controversies which redounded more to the credit of his adversaries than himself. The complete list of his writings is as follows:

The History of the Grecian War written by Thucydides, London, 1623; *de Mirabilibus Pecci*, do. 1636; *Objectiones in Cartesii de Prima Philosophia Meditationes*, Paris, about 1641; *Tractatus Opticus*, do. 1644; *Elementa Philosophica de Cive*, Amsterdam, 1647 (a few copies were privately printed in Paris, 1642, with the title *Elementorum Philosophica Sectio Tertia, De Cive*; in English: *Philosophical Rudiments concerning Government and Society*, London, 1651); *Human Nature*, do. 1650; *de Corpore Politico, or Elements of Law*, do. 1650; *Answer to Davenant's Preface before Gondibert*, Paris, 1650; *Leviathan*, do. 1651; *Of Liberty and Necessity*, do. 1654; *Elementorum Philosophica Sectio Prima, de Corpore*, London, 1655, published in English, do. 1656; *Six Lessons to the Professors of Mathematics*, do. 1656; *Questions concerning Liberty, Necessity, and Chance*, do. 1656; *Marks of the Absurd Geometry, etc.*, of John Wallis, do. 1656; *de Homine, sive Elementorum Philosophicæ Sectio Secunda*, do. 1657; *Examinatio et Emendatio Mathematicæ Hodiernæ*, do. 1660; *Dialogus Physicus, sive de Natura Aeris*, do. 1661; *de Duplicatione Cubi*, do. 1661; *Problemata Physica*, do. 1662; *Considerations upon the Reputation, etc.*, of Thomas Hobbes, do. 1662; *de Principiis et Ratiocinatione Geometrarum*, do. 1668; *Appendix ad Leviathan*, Amsterdam, 1668; *Quadratura circuli, Cubatio sphaeræ, Duplicatio cubi*, London, 1669; *Letter to the Right Honourable Edward Howard*, do. 1669; *Rosetum Geometricum*, do. 1671; *Three Papers presented to the Royal Society*, do. 1671; *Principia et Problemata aliquot Geometrica*, do. 1672; *Luz Mathematica*, do. 1672; *The Voyage of Ulysses*, do. 1673; *Epistola ad Anthony a Wood*, do. 1674; *The Iliad and Odyssey of Homer*, do. 1675; *Letter to the Duke of Newcastle, on the Controversy about Liberty and Necessity*, do. 1676; *Decameron Physiologicum*, do. 1678; *T. Hobbes Malmesburiensis Vita Carmine Expressa*, do. 1679, published posthumously; *An Historical Narration concerning Heresy*, 1680; *Behemoth: the History of the Causes of the Civil Wars of England*, London, 1680 (an edition from a defective MS was published without the authority of Hobbes in 1679 shortly before his death); *T. Hobbes Malmesburiensis Vita*, do. 1681; *The Whole Art of Rhetoric*, do. 1681; *The Art of Rhetoric*, do. 1681; *The Art of Sophistry*, do. 1681; *A Dialogue between a Philosopher and a Student, of the Common Laws of England*, do. 1681; *Answer to Bishop Bramhall's Book called 'The Catching of Leviathan'*, do. 1682; *Seven Philosophical Problems*, do. 1682; *Historia Ecclesiastica*, do. 1683; a few letters have been published by Molesworth in vol. v. of the *Latin Works* and vol. vii. of the *English Works*.

3. Philosophy.—Although Hobbes is best known for his political theory, he himself regarded that theory as a part of a comprehensive and unified philosophy, and as a specific illustration of its principles. His statement in the 'Preface to the Reader' prefixed to his *Philosophical Rudiments* is a characteristic expression of his point of view:

'I was studying philosophy for my mind sake, and I had gathered together its first elements in all kinds; and having digested them into three sections by degrees, I thought to have written them, so as in the first I would have treated of *body* and its general properties; in the second of *man* and his special faculties and affections; in the third, of *civil government* and the duties of subjects. Wherefore the first section would have contained the *first philosophy*, and certain elements of physics; in it we would have considered the reasons of *time, place, cause, power, relation, proportion, quantity, figure, and motion*. In the second, we would have been conversant about *imagination, memory, intellect, ratiocination, appetite, will, good and evil, honest and dishonest*, and the like. What this last section handles, I have now already showed you. Whilst I contrive, order, pensively and slowly compose these matters (for I only do reason, I dispute not); it so happened in the interim, that my country, some few years before the civil wars did rage, was boiling hot with questions concerning the right forerunners of the obedience due from subjects, the true forerunners of an approaching war; and was the cause which, all those other matters deferred, ripened and plucked from me this third part. Therefore it happens, that what was last in order, is yet come forth first in time' (*English Works*, vol. ii. p. xix).¹

The Latin titles of his three principal works reflect this general plan—*de Corpore, de Homine, de Cive*. These main divisions of philosophy are in their turn subdivided, but his philosophy finds its unity in the conception of bodies and their

¹ All references are to the Molesworth edition of Hobbes' works.

relations to one another. There are two kinds of bodies, 'one whereof being the work of nature is called a *natural body*, the other is called a *commonwealth* and is made by the wills and agreement of men' (*ib.* i. 11). Accordingly, the whole body of knowledge may be divided, as he divides it in the elaborate table of the sciences in ch. ix. of the *Leviathan*, first of all into those sciences which deal with 'consequences from the accidents of bodies natural' and those which deal with 'consequences from the accidents of politic bodies.'

This general and comprehensive scheme of a system of philosophy indicates one of the two chief ideas which are characteristic of Hobbes's thinking. Bodies, that is, things which can be moved, are the elements with which he deals. They are, including the human body, natural, and they move according to laws of motion which are natural to them. There is, consequently, a natural condition or state of bodies which follows from their mutual interactions and is the basis for any control or manipulation of them. This, in his view, is true not only of inanimate bodies, but also of man himself. There is a natural condition of mankind which illustrates the results which flow from his natural motions. This natural condition may be so controlled and regulated that a commonwealth is constituted. The State becomes thus the organized control of the natural motions—'the dispositions, affections and manners'—of men. It is a product of art utilizing Nature.

The other idea which markedly determines his reason is found in his conception of science itself.

'There are,' he writes in ch. ix. of the *Leviathan* and elsewhere, 'of knowledge two kinds; whereof one is knowledge of fact, and the other knowledge of the consequence of one affirmation to another. The former is nothing else but sense and memory, and is absolute knowledge. . . . The latter is called science and is conditional.'

This 'conditional' character of science does not, however, impair its usefulness. The ability of man to organize his observations in a connected discourse is responsible for all the benefits of civilization.

'The end of knowledge is power; and the use of theorems (which, among geometricians, serve for the finding out of properties) is for the construction of problems; and, lastly, the scope of all speculation is the performing of some action or thing to be done. . . . Now, the greatest commodities of mankind are the arts; namely, of measuring matter and motion; of moving ponderous bodies; of architecture; of navigation; of making instruments for all uses; of calculating the celestial motions, the aspects of the stars, and the parts of time; of geography, etc. By which sciences, how great benefits men receive is more easily understood than expressed' (*English Works*, i. 7).

The conditional character of science does, however, involve an important consequence for Hobbes's philosophy. Science is concerned with consequences, with results that follow from accepted premisses or initial truths. It is dependent on these premisses and truths, and is conditioned by them. So far as we have the chain of possible consequences in mind, there is no source of difference of opinion in science itself which industry, discipline, and method may not remove. The source of controversy is exterior to science itself, in the initial premisses from which the consequences are drawn. These take their beginning from experience, from that other kind of knowledge which is not science, but fact. If the similar experiences of men were free from variations, from prejudices, and from self-interest, science, so far as it rests on fact, would be free from dispute. But experiences are not uniform. It thus happens that men differ in their opinions, not because of differences in their reasoning, but because of differences in their experiences which reason cannot settle. Such differences can be settled only by mutual agreement, or by the intervention of a constituted authority which arbitrarily decides all points at issue. Hobbes does not blink the rigid consequences of this conception of science. While he would commend his own

philosophy because of its consonance with every man's experience and its conformity with facts accessible to all, he repeatedly asserts that in questions of fact individual differences may be so great that only authority can settle them.

In these two principal ideas—(1) the idea of a natural order through the control of which all advantages of civilization and all social institutions arise, and (2) the idea of science as a body of consequences drawn from premisses which are often so subject to variation that they must be standardized by authority—the essential things in Hobbes's philosophy are contained. Nature is inadequate for man's uses without science and art, and these are inadequate to this service without a constituted authority. The problem of authority would not, however, be a serious one if it did not involve men so seriously in their social and civil relations; if it did not, that is, involve the whole problem of man's peace and safety. The problem of society becomes the problem of authority. With Hobbes it is the great problem of philosophy and overshadows all his other interests.

Hobbes's contributions to the philosophy of bodies in general do not deserve particular notice. He is influenced throughout by Galileo, and sees everywhere motion and the laws of motion. It is his transference of these ideas to psychology that is first of all significant. Sense, imagination, the association of ideas, the passions, and the will are all conceived and expressed by him in terms of motion, or, more precisely, in terms of the reactions called forth in men by the stimuli which affect them. Thus, sense is defined as a 'phantasm made by the reaction and endeavour outwards in the organ of sense caused by an endeavour inwards from the object, remaining more or less' (*ib.* i. 391). Imagination is 'decaying sense' and illustrates the law that motion, once started, continues until opposed by contrary motion; referred to the past, it is memory. The association of ideas—Hobbes speaks of the 'train of imaginations' or the 'train of thoughts'—arises from the fact that motions which are simultaneous or successive in sense tend to recur as a whole when any one of them recurs. Passions are the 'interior beginnings of voluntary motions,' and will is defined as the 'last appetite in deliberation,' that is, as the last motion in a delayed or suspended series of motions.

These ideas Hobbes deliberately opposes to the traditional psychology of his day. They made comparatively little impression at the time, but we can see in them now the first important general statement of the basal positions of the physiological psychology of a much later day. It is the reacting organism on which Hobbes lays emphasis, an organism which, excited by external stimuli, reacts only after the excitations received have been internally assimilated and organized.

'There is no other act of man's mind, that I can remember, naturally planted in him, so as to need no other thing, to the exercise of it, but to be horn a man, and live with the use of his five senses. Those other faculties, of which I shall speak by and by, and which seem proper to man only, are acquired and increased by study and industry; and of most men learned by instruction, and discipline; and proceed all from the invention of words, and speech. For besides sense, and thoughts, and the train of thoughts, the mind of man has no other motion; though by the help of speech, and method, the same faculties may be improved to such a height, as to distinguish men from all other living creatures' (*ib.* iii. 16).

Because life itself is but motion, man can never be without desire or fear, just as he cannot be without sense. Thus, according to Hobbes, felicity is 'continual success in obtaining those things which a man from time to time desireth' (*ib.* 51); it is not 'the repose of a mind satisfied.' Nor does a man desire to enjoy once only, but rather 'to assure forever the way of his future desire; and this he can do only by having the power to do it'

(*ib.* 85). This is one of Hobbes's most important generalizations in view of his theory of the State. He expresses it most emphatically in these words:

'In the first place, I put for a general inclination of all mankind, a perpetual and restless desire of power after power, that ceaseth only in death. And the cause of this is not always that a man hopes for a more intensive delight, than he has already attained to; or that he cannot be content with a moderate power: but because he cannot assure the power and means to live well, which he hath present, without the acquisition of more. And from hence it is, that kings, whose power is greatest, turn their endeavours to the assuring it at home by laws, or abroad by wars: and when that is done there succeedeth a new desire; in some, of fame from new conquest; in others, of ease and sensual pleasure; in others, of admiration, or being flattered for excellence in some art, or other ability of the mind' (*ib.* 85 f.).

Associated with this is a second generalization of similar importance:

'Nature hath made men so equal, in the faculties of the body, and mind; as that though there be found one man sometimes manifestly stronger in body, or of quicker mind than another; yet when all is reckoned together, the difference between man, and man, is not so considerable, as that one man can thereupon claim to himself any benefit, to which another may not pretend, as well as he. For as to the strength of body, the weakest has strength enough to kill the strongest, either by secret machination, or by confederacy with others, that are in the same danger with himself' (*ib.* 110).

From this equality of ability men entertain equal hopes of securing the ends they desire.

'And therefore if any two men desire the same thing, which nevertheless they cannot both enjoy, they become enemies; and in the way to their end, which is principally their own conservation, and sometimes their delectation only, endeavour to destroy, or subdue one another. And from hence it comes to pass, that where an invader hath no more to fear, than another man's single power; if one plant, sow, build, or possess a convenient seat, others may probably be expected to come prepared with forces united, to dispossess, and deprive him, not only of the fruit of his labour, but also of his life, or liberty. And the invader again is in the like danger of another' (*ib.* 111).

Thus, in so far as men depend upon their natural powers, they are virtually in a state of war 'of every man against every man.' War is a man's natural condition, the results of which Hobbes thus eloquently describes:

'Whatsoever therefore is consequent to a time of war, where every man is enemy to every man; the same is consequent to the time, wherein men live without other security, than what their own strength, and their own invention shall furnish them withal. In such condition, there is no place for industry; because the fruit thereof is uncertain: and consequently no culture of the earth; no navigation, nor use of the commodities that may be imported by sea; no commodious building; no instruments of moving, and removing, such things as require much force; no knowledge of the face of the earth; no account of time; no arts; no letters; no society; and which is worst of all, continual fear, and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short' (*ib.* 113).

This 'natural condition of mankind' is not, as Hobbes expressly declares, the primitive condition in which men once lived. It was never universal. The nearest approach to it is, he thinks, represented in the 'savage people in many places in America.' Yet it is man's natural condition if we consider how his propensities express themselves in the absence of a restraining and superior power, and that the function of government is restraint and control, and observe that the police and the systematic guarding of property are evident indications of the suspicious men naturally have of one another. In other words, man is not naturally what the Greeks called a 'political animal.' Naturally he is an impulsive animal seeking the gratification of his desires, and the security of his life, and finding that this seeking brings him into competition with his fellows. As such his rights are measured and determined solely by his power to secure what he desires. He knows nothing of right and wrong, of justice and injustice, as over against his fellows.

'Where there is no common power, there is no law; where no law, no injustice. Force, and fraud, are in war the two cardinal virtues. Justice, and injustice, are none of the faculties neither of the body, nor mind. If they were, they might be in a man that were alone in the world, as well as his senses, and passions. They are qualities, that relate to men in society, not in solitude. It is consequent also to the same condition, that there be no propriety, no dominion, no *mine* and *thine* distinct; but only that to every man's, that he can get;

and for so long, as he can keep it. And thus much for the ill condition, which man by mere nature is actually placed in; though with a possibility to come out of it, consisting partly in the passions, partly in the reasons' (*ib.* 115 f.).

It is upon such a foundation that Hobbes conceives the State, and, with the State, the moral laws, to be built. The fear of death, the necessity of a sure provision for the needs of life, the disastrous consequences of enmity and war, are tendencies which naturally incline men to peace. These tendencies are supplemented by reason, which leads men to agree or attempt to agree with one another and to set up certain rules of conduct which make for peace. These rules suggested by reason Hobbes calls 'laws of nature,' of which the two most fundamental are: (1) 'that every man ought to endeavour peace as far as he has hope of obtaining it, and, when he cannot attain it, that he may seek and use all helps and advantages of war'; and (2) 'that a man be willing, when others are so too, as far forth as for peace and defence of himself he shall think it necessary, to lay down this right to all things; and be contented with so much liberty against other men, as he would allow other men against himself' (*ib.* 117 f.). From these fundamental natural laws or dictates of reason Hobbes deduces others, all looking towards the establishment of peace through mutual agreements, concessions, and covenants.

He insists, however, that these laws are contrary to our natural passions, as they impose restrictions on our desires. They are obeyed only so long as obedience to them is necessary and profitable, if there is no established power to enforce them. 'Covenantants without the sword are but words and of no strength to secure a man at all' (*ib.* 154). Consequently, *mutual* concessions and covenants are not sufficient. To live peaceably men must agree to transfer all their individual power to a single individual or a group of individuals, that is, to a sovereign. Only then is a State established. But the transfer of power must be absolute and thereby the sovereign becomes an absolute sovereign. To him belong ultimately all decisions of right and wrong, of justice, and of property. By him all disputes are settled. From his decisions there is no appeal, for the idea of appeal contradicts the idea of a sovereign power, and is, therefore, irrational.

'This is the generation of that great Leviathan, or rather, to speak more reverently, of that *mortal god*, to which we owe under the *immortal God*, our peace and defence. For by this authority, given him by every particular man in the commonwealth, he hath the use of so much power and strength conferred on him, that by terror thereof, he is enabled to perform the wills of them all, to peace at home, and mutual aid against their enemies abroad. And in him consisteth the essence of the commonwealth; which, to define it, is *one person, of whose acts a great multitude, by mutual covenants one with another, have made themselves every one the author, to the end he may use the strength and means of them all, as he shall think expedient, for their peace and common defence*' (*ib.* 158).

The sovereign power may be attained by voluntary agreement or by natural force.

It is thus clear that Hobbes regards the State as a product of man's attempt to control, through the use of his reason, his natural desires and propensities. No such control would be necessary if the desires of men did not conflict. The existence of the State implies, therefore, restriction, and consequently needs to be supported by force. In other words, men do not *naturally* consent to be governed. Government can exist, therefore, only so long as it is absolute. Any other condition is incipient war or revolution. It is to be noted, further, that Hobbes bases all morality on the decisions of the sovereign power. There is no natural right or wrong, justice or injustice. Virtue is not, like sense, the natural exercise of a natural faculty. It is a thing imposed on nature, and is practised only so long as there is interest or power

to enforce it. Hobbes is thus not properly classified as either an egoist or a hedonist. With him morality is wholly a political matter, and politics is wholly the work of reason.

Religion Hobbes defines as 'fear of power invisible, feigned by the mind or imagined from tales publicly allowed' (*ib.* 45). If the tales are not publicly allowed, the fear is superstition. It is thus clear that Hobbes makes religion also a political matter. Yet he recognizes also a 'kingdom of God.' That which is significant in his philosophy here is not its positive content, but the separation of the doctrine of God from all that concerns the doctrine of Nature.

'The Scripture was written to show unto men the kingdom of God and to prepare their minds to become his obedient subjects; leaving the world and the philosophy thereof to the disputations of men for the exercising of their natural reason' (*ib.* 68).

To enter the kingdom of God it is necessary to believe that Jesus is the Christ and to obey the laws of God. In a Christian commonwealth there can be no conflict between allegiance to God and to the State. It is only when the civil sovereign is an infidel that such a conflict may arise, for it is a law of God, found out by reason, that subjects should obey their sovereigns. Yet even here the conflict can arise, Hobbes thinks, only when an infidel sovereign commands a Christian subject to renounce Christ. Then the subject has no resource

but to 'go to Christ by Martyrdom.' Apart from what Hobbes regards as the essential tenet of the Christian faith—namely, that 'Jesus is the Christ, the son of the living God'—all the public regulation of religion rests with the sovereign. He is thus to the end of his doctrine the political philosopher who would have the State supreme in all those matters which affect the mutual relations of men. Yet his emphasis on absolute power does not fall in the interests of the rights of sovereigns, but in the interests of peace and public safety.

LITERATURE.—The principal ed. of Hobbes's works is that by W. Molesworth (London, 1839-45) in 16 volumes, 11 containing the works in English, 5 the works in Latin, an extensive index, and a number of plates. This ed. contains also the chief sources of his life, namely, his autobiography and the account of him by John Aubrey. The best ed. of the *Leviathan*, his most widely known work, is the Cambridge Press ed. of 1904. In addition the following may be mentioned: G. Croom Robertson, *Hobbes*, Edinburgh, 1886; F. Tönnies, *Hobbes Leben und Lehre*, Stuttgart, 1896; E. H. Sneath, *The Ethics of Hobbes*, Boston, 1898; F. J. E. Woodbridge, *The Philosophy of Hobbes*, in extracts and notes collated from his writings, Minneapolis, 1903; Leslie Stephen, *Hobbes*, London, 1904; Mary W. Calkins, *The Metaphysical System of Hobbes*, Chicago, 1905. FREDERICK J. E. WOODBRIDGE.

Roman (J. S. REID), p. 750.

Semitic (O. C. WHITEHOUSE), p. 751.

HOLINESS (General and Primitive).—1. Holiness is the great word in religion; it is even more essential than the notion of God. Real religion may exist without a definite conception of divinity, but there is no real religion without a distinction between holy and profane. The attaching of undue importance to the conception of divinity has often led to the exclusion from the realm of religion of (1) phenomena at the primitive stage, as being magic, although they are characteristically religious; and of (2) Buddhism and other higher forms of salvation and piety which do not involve a belief in God. The only sure test is holiness. From the first, holiness constitutes the most essential feature of the divine in a religious sense. The idea of God without the conception of the holy is not religion (F. Schleiermacher, *Reden über die Religion*, Berlin, 1799). Not the mere existence of the divinity, but its *mana*, its power, its holiness, is what religion involves. This is nowhere more obvious than in India, where the men of religion, through their art of acquiring holy power, became dangerous rivals of the gods, who, in order to maintain something of their religious authority, were obliged to adopt ascetic holiness themselves (*Sat. Brāhm.* ii. 2, 4, ix. 1. 6, 1 ff.). The definition of piety (subjective religion) runs thus: 'Religious is the man to whom something is holy.' The holy inspires awe (*religio*).

The original idea of holiness seems to have been somewhat indeterminate, and applied to individual things and beings. Then the great systems were evolved which are found (1) in barbaric societies, such as the Polynesian, West African, etc.; and (2) in nomistic religions such as the Avestan, and in Judaism, where everything is arranged under the categories of 'tabu' (holy) and ordinary (profane). The 'holy' is apart from ordinary life. Spiritual religion tries to abolish the outwardness of this distinction and to make it a purely personal one.

Hence it strives to bring the whole of life under the sway of holiness. The prophetic religion in Israel considered the whole people of Israel as holy (Lv 19² 20²⁴, Jer 2³, Is 62¹² 63¹⁸ etc.) by bringing the idea of 'the chosen people' into connexion with the idea of holiness. But the ideal of spiritual religion—that every person and every thing should be holy—is an absurdity to primitive tabu systems and to nomistic holiness, because something must be left free for use. In the same way ascetic schemes of salvation presuppose that some people are not holy, religious, in a strict sense. If every one were 'religious,' 'holy,' there would be no families, no future generations, nobody to till the ground, constitute society, and perform the daily labours.

2. Holiness is viewed as a mysterious power or entity connected with certain beings, things, events, or actions. Amongst the Melanesians everything that exceeds the ordinary capacity of man or the ordinary course of nature is called *mana*.¹ In some cases, as with this Melanesian *mana*, the power is expressly reserved for certain beings. Some souls, *e.g.*, have no *mana*, and, therefore, are soon forgotten and receive no worship. In other cases, as with the Iroquoian *orenda*, 'this hypothetical magic is held to be the property of all things, all bodies,' etc. (J. N. B. Hewitt, 'Orenda and a Definition of Religion,' in *Amer. Anthropologist*, new ser., 1902, p. 33 ff.). But in any case only its concentrated appearance in some beings and things is of practical importance. Of the somewhat analogous conceptions and words

¹ From the classical work of R. H. Codrington, *Melanesians* (Oxford, 1891), this term has been adopted, through L. Marillier, R. R. Marett, etc., as the general term for positive holiness working as power, as distinguished from negative holiness involving the conception of danger, interdict, prohibition, which in current terminology is now designated by the Polynesian word *tabu*.

which are to be found everywhere in primitive religions, we mention here a few examples:

The Australian *joia* (A. W. Howitt, *Native Tribes of South-East Australia*, London, 1904); the ancient Indian *brahman* (q.v.; cf. H. Oldenberg, in *Anzeiger für indogerm. Sprach- und Altertumskunde*, viii. [1897] 40; and N. Söderblom, *Gudströms uppkomst*, Stockholm, 1913); the *tendi* of the Batak; the *sumangat*, 'life-stuff,' and the *pemati*, 'extraordinary,' 'mysterious,' of the Malays (A. C. Kruijt, *Het Animisme in den indischen Archipel*, The Hague, 1906; W. W. Skeat, *Malay Magic*, London, 1900; Skeat-Blagden, *Pagan Races of the Malay Peninsula*, do. 1906; J. Warneck, *Die Religion der Batak*, Leipzig, 1909); the *hasina* of the Malagasy (defined in the dictionaries as 'indwelling or supernatural power, which renders a thing good and effective; the power of a medicine; the truth of a word; the efficacy of amulets and incantations; the holiness of a thing,' etc.; cf. A. van Gennepe, *Tabou et totémisme à Madagascar*, Paris, 1904); the *ntongo* of Congo languages (*longo* signifies 'medicine,' 'charm' [K. E. Laman, in his forthcoming *Dictionary*]); the *orunda* of the Mpongwe; the *eki* of the Fans (cf. A. Le Roy, *La Religion des primitifs*, Paris, 1909, and P. H. Trilles, *Le Totémisme chez les Fân*, Münster, 1912); the *ozo* of the Ewe (D. Westermann, *Wörterbuch der Ewe-Sprache*, Berlin, 1905); the *oudah* of the Pygmies (R. R. Marett, *The Threshold of Religion*, London, 1909); the *wakanda* of the Siouan Indians (which was used 'indiscriminately as substantive and adjective, and with slight modification as verb and adverb, which may be translated by 'mystery,' 'power,' 'sacred,' 'ancient,' 'grandeur,' 'animate,' 'immortal,' although 'no English sentence of reasonable length can do justice to the aboriginal idea expressed by the term wakanda' [W. J. McGee, 'The Siouan Indians,' 15 *RBEW*, 1897, p. 182 ff.; J. O. Dorsey, 'Omaha Sociology,' 3 *RBEW*, 1884, p. 211 ff.]); the *orenda* of the Iroquoian Indians (denoting a mystic potency which is particularly great in the shaman, in the skilful hunter, in any man or animal who in fight, hunting, or play outmatches another; and which is 'regarded as related directly to singing and to anything used as a charm, amulet, or mascot, as well as to the ideas of hoping, praying, or submitting' [J. N. B. Hewitt, *loc. cit.* p. 38 ff.]); the old Norse *hamingja*, 'luck,' 'success,' 'protecting genius,' 'fate,' of individuals and of clans (W. Groenbeck, *Lykkemand og Niding*, Copenhagen, 1909, and *Soul or Mana*, do. 1913; cf. *Reports of the Intern. Congress of the History of Religion in Leyden*, 1912); the *makt*, 'might,' 'power,' of Swedish folk-lore (men and animals can be 'might-stolen' [*makt-stulna*], through evil influences; the old Norse said *hamstoli*, 'ham-stolen').

This mysterious holiness is to be found, in the first place, in the medicine-man, or priest-king, who is powerful and sacred (J. G. Frazer, *Lectures on the Early History of the Kingship*, London, 1905), and in the sacred formula which is used as a spell or a prayer. Further, it belongs to special objects which are connected in any way with the holy rites and the exercise of religion or magic, e.g. the *churinga* (*tjurunga*, Strehlow) of the central tribes of Eastern Australia (Spencer-Gillen^a, 1899, ^b 1904; C. Strehlow and M. F. von Leonhardi, *Die Aranda- und Loritja-Stämme in Zentralaustralien*, pt. iii., 'Die totem. Kulte,' Frankfurt, 1911), the bull-roarers, drums, rattle-staffs (the Mexican rattle-staff was called *chicauaztli*, 'that through which one makes strong, powerful' [E. Seler, in *Veröff. aus dem kön. Museum für Völkerkunde*, vi. (Berlin, 1899) 89]), and other things used in the mysteries; the West African *minkisi*, 'fetishes' (M. H. Kingsley, *West Afr. Studies*, London, 1899; R. E. Dennett, *At the Back of the Black Man's Mind*, do. 1906; Laman and other missionaries, in *Nordenskiöld, Etnografiska bidrag af svenska missionärer*, Stockholm, 1907). It also belongs to relics, amulets, divinities, their images, and everything connected with them. In a wider sense the mysterious power of holiness is supposed to be the cause of everything which is out of the ordinary course, and which, therefore, demands special explanation. Primitive man not being as yet an individual, but only part of society (the real unity), holiness is not a thing to be used for individual, anti-social, or selfish purposes—in which case its use becomes the worst of abuses, namely, sorcery or black art—but constitutes the great treasure of the community, manifested in its sacral institutions, in manifold objects, and in its members, who derive their life, power, and happiness from the general holiness, and at the same time have to enhance and concentrate this common mysterious influence through their ritual celebrations and

manly actions. But the essential connexion between 'the sacred' and society does not imply that the notion of the 'sacred' is merely a kind of objectifying and idealizing of the community as a power mysteriously superior to the individual (E. Durkheim, *Les Formes élémentaires de la vie religieuse*, Paris, 1912).

We meet, of course, with somewhat different lines of evolution in proceeding from the most primitive stages onwards, and a supposed uniformity must not be allowed to obscure the peculiar features of holiness in particular societies at the lower stages of civilization. But, as far as we can see, the psychological origin of the conception of holiness seems to have been the mental reaction against what is startling, astonishing, new, terrifying. This reaction may have expressed itself in a cry or an exclamation. Individual experiences influenced the collective mind, which by degrees created forms of language which gave more durable expression to the mental reaction in face both of what was really new and of certain often recurring phenomena which never cease to startle and awaken a vivid emotion. A motley series of beings, things, events, and actions are named by such words as 'the great one,' 'the powerful,' 'very old,' 'dangerous,' 'successful,' 'divine,' etc.; and—what is still more significant—those things are surrounded, by a natural reaction, with a fence of precautions and interdictions. The first point is that these startling things are not to be treated lightly. It is evident that the idea of the extraordinary (this seems also to be the original meaning of the Semitic *qds*; cf. below, p. 751^b), as distinguished from the ordinary, already exhibits a tendency towards the conception of the supernatural. Primitive man is unable, indeed, to conceive anything beyond Nature or higher than Nature; yet the term 'supernatural' may perhaps supply the best conception of what 'the holy' means to him.

'Holiness' so conceived is the most valuable source of health, strength, food, success, influence; at the same time, it involves a constant danger. Hence the rites to which the conception gives rise have either a positive or a negative character.

3. The positive rites have as their object the acquiring, concentrating, and utilizing of holiness. (1) *Augmenting rites* are to the greatest extent employed in order (a) to produce or augment the supply of food—e.g. Australian *intichuma* and ceremonies analogous to the agricultural rites in which the holy power may be concentrated in the last sheaf, a cake, an image, an animal, a tree, or a man. Phallic or sexual religion is also chiefly concerned with the well-being of the herds and of the field. In order to secure fertility, the art of producing rain and sunshine was exercised; and fishermen needed a suitable wind. Everything is accomplished through the power of holiness, natural or acquired; at the same time a certain technique is elaborated, with impersonal rules and laws. (b) The power may also be acquired in other ways than those connected with the procuring of ordinary food. One may receive it through blood, which is either drunk or smeared over the body. It may be communicated by saliva or breath. Parts of beasts or men imbued with the mysterious thing may be eaten; or men, perhaps one's own sons, may be killed in order to add to one's capital of life. Sacrifice served as a means of endowing with holy power, before it was brought into connexion with a divinity, in the way of communion or by being considered as a gift. The sacrifice exercises an immediate effect. This is obvious, e.g., in the foundation- or building-sacrifice, where the life that is sacrificed communicates *mana*, strength, to the foundations and to the house. Even when a sacrifice is presented to a divinity, the original

conception may prevail. The sacrifice communicates holiness or power. Therefore the images of the gods are smeared with blood, the precious fluid which contains the *mana*. In the religion of blood *par excellence*—that of ancient Mexico—the men pour out their blood from tongue or members in order to strengthen the gods, and the divinities are portrayed as catching in their mouth the jet of blood from the victim. Blood appears with grim frequency in the Mexican sacred rites; it enabled the divinities to pursue their beneficent tasks in Nature (G. E. Selser, *Gesammelte Abhandlungen zur amer. Sprach und Altertumskunde*, ii. [Berlin, 1904] 704 ff. and *passim*; *Codex Borgia*, i. [Berlin, 1904] 174 ff.). The scalps which are seen hanging in the clubhouses of the Pacific islanders are not mere decorations; they are mainly sources of power to the community. To this group may also be assigned the ceremonies intended to secure help against sickness, and success in hunting, love, or war. To the category of augmenting rites belongs also the art of injuring or killing enemies, because this increases the vitality of the community. But *corruptio optimi pessima*. When used against members of one's own blood or one's own community, such practices become the blackest sin.

(2) *Revealing rites* have the object either of (a) revealing the future—oracles, prophecy; or of (b) indicating the guilty—ordeals, which originally operated directly without any divine intervention.

(3) In the *initiatory rites* to (a) manhood, (b) secret societies, or (c) the priesthood, the positive element, *i.e.* the acquiring of holiness, is still more closely bound up with the negative element of danger and prohibition.

(4) In the *interdicts and observances imposed on holy persons* it is impossible to determine in every case whether the value or the danger of holiness is the predominant motive. As we have seen, value and danger are blended together in 'the holy.' The holy man exposes himself to personal danger in performing acts which are forbidden or tabu. At the same time such precautions are intended to preserve the precious power in him which guarantees the welfare of the community. They may be said to have also a positive purpose. Holy persons are subjected to more severe restrictions than ordinary people, because they stand in a more important relation to holiness and religion (just as orthodoxy is more rigidly required of clerics than of laymen).

4. The negative or prohibitory rites are designated in current language by the word *tabu* (the leading collection of tabu rites is that made by J. G. Frazer, *Taboo and the Perils of the Soul*, London, 1911). The word belongs in this form to the Tonga dialect in the Friendship Islands, and is a compound of *ta*, 'marked,' and *pu*, an adverb with an intensive force, hence = 'marked thoroughly' (Frazer, in *EBR*⁹, s.v. 'Taboo'). It is used in many regions of the Pacific in the sense of 'sacred,' 'holy,' 'prohibited,' 'forbidden' (besides other words, such as *rahui*, which is more common in Easter Island [W. Lehmann, *Anthropos*, ii. [1907] 258]). C. E. Meinicke (*Die Südseevölker und das Christentum*, Prenzlau, 1844) called attention to its signification as a divine power, manifesting itself in such a way that everything to which it is applied is withdrawn from the use of ordinary people. Everything was divided into two classes: *moa*, that which was withdrawn from ordinary use; and *noa*, the usual, the common, the profane. Thus the tabu is closely connected with the idea of *mana*.

Takao tapu means 'a secret word,' *vahi tapu*, 'a prohibited place,' 'a place regarded as holy'; *kiri tapu*, 'a sacred skin, one not to be touched or approached.' Verbal forms are *tabui*, 'to abstain from'; *tapui*, 'to make sacred'; *akatai, u.*, 'to make holy,' 'to consecrate' (E. Tregear, *Maori-Polyn. Comp.*

Dict., Wellington, 1891, s.v.). The forbidden is in Malagasy *fady*; *mfady* means 'to abstain from.' Among the Ba-Ronga (H. A. Junod, *Les Ba-Ronga*, Neuchâtel, 1898) *yita* corresponds to *tabu*. The Zulu says *zila* (*zila* with reflexive *zi*), 'to abstain from.' In the Bondai language *zila* means 'detest'; Congo dialects have *kizila* with the meaning of 'sacred object,' 'fetish.' A more special word is the Zulu *hlonipa* (*inhloni*, 'shame,' 'respect,' and *pa*, 'give'), 'to give respect,' 'to show special reverence,' in observing several rules of ritual. The wife has to *hlonipa* her husband and his parents by not using their proper names or words that resemble their proper names, by not touching their milk-vessels, etc. Mother-in-law and son-in-law must *hlonipa* each other by avoiding each other. Everybody must *hlonipa* the king and dangerous animals by not using their right names, etc. The Malays give their children *pantang* (= *tabu*) rules.

The close connexion of the tabu with the mysterious power is found in the common idea of extraordinariness. Tabu is thus what is new, *e.g.* the foreigner, the new-born child, the firstfruit, the new metal (iron); certain phenomena which constantly recur, but always seem to be extraordinary, *e.g.* sexual life, death, war, hunting; and animals and men endowed with special prudence, power, or success.

5. Later the tabu is often connected with the soul—a fact which admits of different explanations. The relation to the soul is sometimes secondary or imaginary; *e.g.*, the reason alleged by the Bataks of Sumatra for not cutting all the hair of the child is connected not with *begu*, the soul (especially after death), but with *tendi*, the impersonal life-stuff, or *mana*. But sometimes the interdict refers to the soul or to other considerations equally foreign to holiness proper, although the general features are very similar. The distinction may be difficult or impossible to draw in every single case. Nevertheless, it is required by the essence of the tabu-holiness. Thus, a sacred being is subjected to a multitude of awkward rules and interdicts. He must not behold the sea or a lake, the sun must not shine on him, he must not touch the ground, not even his own head, nor eat with others, etc. Why? Because his soul is exposed to danger and may be injured or taken away? It is not so much a case of personal danger for the soul as of precautions against dissipating the precious holiness concentrated in the chief. Therefore he is himself dangerous to others who cannot bear contact with his *mana*. In death-rites the necessity of distinguishing the two motives—concern for the soul and for holiness—is more evident. (a) A dead body, either of man or of beast, is dangerous. A Kaffir who has killed a python is purified in water. A Laplander becomes tabu for three days after having killed a bear. At the ritual murder of the bear among the Ainus, in Siberia, and in Lapland, or of the bull at the *Bouphonia* in Athens, the killed animal is wept over and the killer undergoes a sham punishment. This may have something to do with fear of the ghost. But it may also depend upon the holiness of the animal or its kinship with man. The case is clearer with the widower in British New Guinea, who must hide himself like a wild beast and go about armed with a tomahawk against the dangerous soul of his dead wife. (b) Love, not fear, may also lead to special precautions. Pointed objects and knives must not be used after death, lest they may harm the dead. The Chinese even avoid using their eating-sticks during a certain time. Those rules do not belong to the tabu. (c) But it is impossible to explain the tabu of hunters and warriors, and mourning prohibitions in general, by fear or love of the dead person. The killing of a man or a beast shows the possession of a *mana* which makes it necessary for others to avoid him and his weapons and snares, and for him to submit himself occasionally to precautions analogous to those always observed by the sacred priest-king. The corpse also suggests uncanniness. Hence its im-

purity, and the withdrawal of the mourners from ordinary life. In Polynesia they must not carry food to the mouth with their own hands for ten months. The chief is always subjected to this rule, because of the holiness of his head. In this instance concern for the soul is excluded as an explanation. The tabu of the Laplander and the Kaffir and its purification mentioned above may both depend on their being charged with 'holiness,' *mana*. Or take the interdict as to preserving severed hair and nails or remains of meals. The reason is lest some one may take them and harm or kill their original owner by means of sympathetic magic, according to which the whole can be influenced through a part of it. This has nothing to do with tabu or holiness. But the case has another side. If the person to whom the hair and nails or the meal belonged is holy, it is tabu to touch them, because they are charged with holiness. The holy man in question must also take precautions against losing any of his precious power. Knots are often forbidden because they suggest complication and difficulty. Sympathetic magic uses them in order to cause hindrance and harm. The prohibition can acquire a secondary relation to holiness. The *flamen Dialis* in Rome, e.g., was forbidden to have any knots on his clothes, because they might be a hindrance to the beneficent action of his holiness.

6. It is, in fact, the essence of the tabu-interdict that it is not merely the avoiding of a definite danger by avoiding its cause (this may be a soul, sympathetic magic, the interest of society, or anything else); rather it amounts to an unconditioned and unreasoning 'you shall not.' The imperative character of duty, which Kant called the 'categorical imperative' and which he admired as the divine in man, is characteristic of primitive tabu, in spite of the differences as to the content of the prohibition or commandment. There is something mysterious, dreadful, about the danger of breaking a tabu (Marett, *op. cit.*). The aborigines cannot always tell the reason why a tabu is forbidden or why a thing or a being is holy. It is a fact, and a most important one. Of course, the tabu originates to a certain extent in natural observations. The rules can sometimes be traced back to a real practical interest and use. At a later rationalistic stage of religion, Jews, Parsis, and Hindus, with the help of Western scholars, have tried to trace in their tabus great improvements and discoveries in hygiene, breeding, and agriculture. Moses, Zarathustra, and Manu, to whom the tabu systems were erroneously ascribed, have been praised as early discoverers of the conditions of health. This is not completely devoid of truth, but it misses the characteristic of tabu, which foreshadowed the idea of the supernatural rather than of the rational. The common custom of isolating the woman in child-bed in a miserable birth-hut, and handing her food on long poles, or of subjecting boys, and sometimes also girls, to barbarous tortures at initiation, is not a matter of hygiene. It is the danger due to holiness that demands such practices.

7. The unreasoning awe of tabu appears in the consequences of breaking it. (a) Death or sickness immediately follows. An Australian died when he heard that he had lain upon his wife's blanket. A Hova youth in Madagascar fell into convulsions when he learnt that the meat he had eaten belonged to an animal holy to his kin. How would the reader of the present article feel if he were told that he had been feeding on dog cutlets or human kidneys? The origin of death and sickness is often explained by the breaking of a tabu. The Ningpo in Bengal, we are told, were immortal until some one entered a pool which was tabu.

Pandora's box was not to be opened; when it was opened, diseases came out. The effect may be a direct one, just as fire burns or poison kills, without the intervention of a divinity, which constitutes a secondary explanation. With the development of worship, tabu-rules come to be regarded as divine commandments. In other cases society sanctions the tabu through punishments inflicted upon the guilty, for holiness is the very source of life and strength to society. Such was the cause of the massacre of Marion and his crew in the Pacific in 1772. They had tried to catch fish in a holy place. In 1899 the men of the ship *Boyd* were murdered in New Zealand, because the captain had treated the son of a chief, i.e. a tabu person, in an ignominious way. Animals as well as men are killed if they defile holy ground by entering it or in any other way. In 1 S 5¹² 6^{12a}, 2 S 6^{6a}, 1 Ch 13^{7a}, Jos 6¹⁸, death or plague follows directly (in Jos 3¹⁹ the holy object exercises its power otherwise). In Lv 10 God punishes the breaking of a tabu. Even where a divine punishment is referred to, the original meaning sometimes seems to have implied an immediate consequence of touching the holy, as Nero's illness after his sacrilegious bath in holy water (*Tac. Ann.* xiv. 22). In Jos 7²⁵ the punishment is inflicted by the community, as the Ewe used to burn alive a man who had killed the holy python. Such punishments occupy a large portion of sacred law everywhere (cf. E. Krueger, *De Romanorum legibus sacris*, Königsberg, 1912). Sometimes, as in Ex 19^{12a}, Lv 19⁹, Nu 1³¹, we do not exactly know whether the penalty of death is referred to the inherent holiness of the thing, to God's vengeance, or to judicial punishment.

(b) There are also milder consequences, punishments, which at the same time effect a purification; or the immediate harmful consequence or punishment has its place taken by ceremonies for removing the contagion. There is anxiety to get rid of the dangerous stuff, whether it is considered as too strong a dose of holiness or as entirely bad. If a man had happened to touch a Tonga chief, he dared not put his food into his mouth with that hand before he had returned the mysterious power to the chief by rubbing the front and the back of his hand against the sole of the chief's foot and afterwards cleansing his hand with water. To such averting rites belong all kinds of purifications and atonement after murder, sexual intercourse, child-birth, etc. A scapegoat may be made to bear the impurity. Tabu food may be vomited up. Likewise the heart is disburdened of its sin by confession. (1) The medicine-man gives 'a pretended emetic' to one whose breaking of some tabu is manifested by pains, sickness, misfortune. Confession itself effects a deliverance; sin and its evil consequences are lessened by confession. The modern idea of sin as sickness is, in fact, the primitive one. (2) At a later stage, sin is considered as an offence against God or man, and confession is addressed to Him, and is not merely a kind of physical deliverance. But the immediate comfort of confession is not forgotten (Ps 32). Adversities show that God is angry. Why? Because of sin, of which the guilty one himself is perhaps unaware. He confesses his sins, known and unknown, in order to remove the cause of his misfortune. (3) Sin has two consequences: physical, material disaster; and the sense of guilt. At a higher stage the latter consequence is more feared than the former. Confession is intended to obtain pardon and to remove the guilt rather than the material results of the sin.

(c) In many cases the breaking of a tabu cannot be avoided. It is impossible entirely to avoid touching 'the holy.' The new-born child must be cared for. The woman in child-bed cannot be left

completely alone. The corpse requires to be moved and attended to in some way. One cannot help seeing and meeting foreigners. The firstfruit is full of mysterious power, but it constitutes the very sustenance of men. How is the precious power to be appropriated without incurring risk? By taking an antidote or a homœopathic preventive, or by rendering oneself immune in some other way against the danger of holiness. Such precautions form the kernel of a set of primitive rites which, later on, assume another meaning. The most important are: (1) 'politeness' ceremonies *vis-à-vis* strangers, in which, no doubt, natural kindness accounts for much, and is closely connected with the tabu fear (E. Westermarck, *MI*, London, 1906, i. 585 ff.); (2) funeral rites (see DEATH AND DISPOSAL OF THE DEAD); (3) puberty rites and wedding ceremonies, which are intended at once to indemnify against the danger of sexual holiness-tabu and to secure its efficacy in the matter of fecundity; (4) firstfruit rites at the birth of children and animals and before the eating of the first crops in the spring (see FIRSTFRUITS). In these ceremonies as well as in sacrifice (H. Hubert and M. Mauss, *Mélanges d'histoire des religions*, Paris, 1909; cf. *Satapatha Brāhmaṇa* [*SBE* xii. etc.]) and other rites mentioned above, we can sometimes distinguish introductory rites designed to prepare for intercourse with the holy in order to avoid its dangers; and averting rites, which are intended to remove the holiness before resuming ordinary life.

8. The value of primitive holiness or tabu lies (a) in the strength and coherence it gives to society, for 'the holy' supplies a perpetual centre of gravity, manifested in holy things, beings, places, and actions. In his doings and feelings the individual more or less approaches 'the holy,' but he is never completely out of touch with it. To us the tabu rules and the objects charged with holiness seem to be pure nonsense. But to the primitive mind they constitute the precious treasures of the community, from which strength, success, and confidence are derived. How strict and elaborate the systems of holiness are, e.g., in West Africa, has been told by M. H. Kingsley, Dennett, Ellis, Nassau, Spieth, Laman, Hammar, and others. Certain widely diffused festivals, in which the usual bonds and rules of society are relaxed, seem to have been designed for the purpose of renewing the quickening and strengthening essence of holiness in the tribe or people.

The social assurance afforded by the tabu systems appears in the superiority felt over tribes that have less numerous or less severe tabus. The tabu is regarded as a mark of distinction. The Zulu boy, in refusing to eat fish among the Thonga, the northern neighbours of the Zulus, boasts of belonging to a race superior to those wretched Ba-Thonga who eat fish (H. A. Junod, *The Life of a South African Tribe*, ii., Neuchatel, 1913, p. 67).

(b) The tabu imposes upon primitive man numberless intolerable, cruel, and harassing observances, which make his life a bondage. Freedom does not lie at the bottom, but is found perhaps at the top, of the scale of human development. At the same time the superstitious sanction of the rules of holiness has had an inestimable influence on civilization and the improvement of society. Animal desires were restrained; in the hard school of tabu man was taught self-control. Through abstinence and self-restraint man acquires strength and power not only over himself but also over others. It is not impossible that such an experience underlies the institution of tabu (Marett, at the Summer School of Theology, Oxford, 1912). At any rate such was its effect. J. G. Frazer has shown in his treatise entitled *Psyche's Task, a Discourse concerning the Influence of Superstition on*

the Growth of Institutions (London, 1909), what the system of holiness meant for the establishment and stability of government, for the security of private property against theft and destruction, for the sanctity of marriage, and, above all, for the respect for and protection of human life. Civilization and progress are inconceivable without the profoundly unreasoning sanction afforded by holiness. The tabu

'is inspired by strange, unscientific physiological ideas regarding debilement and contagion which will disappear when scientific knowledge has spread amongst them. But let these ideas be somewhat amended, let the natives understand that what is taboo is not physical uncleanness but moral evil, and their strong aversion to the act tabooed may become a powerful moral impulse for good' (Junod, *op. cit.* i. 9; cf. the Edinburgh Conf. on Missions, 1910, *Rep. of Com.* iv. 11).

Rational insight has gradually superseded barbarous rites and dispelled superstitious awe. As to the main principle of holiness—its unconditional imperative character and 'supernatural' sanction—the question is whether humanity can dispense with it in the future, and be guided by merely rational motives without religious guarantee and enforcement. This question has both a practical and a theoretical side. The practical problem is whether the self-restraint and effort necessary to civilization can be maintained without the unreasoned element inherent in the conception of holiness and developing its intrinsic value throughout the history of civilization. The theoretical problem lies deeper: Has the imperative and absolute form of duty any metaphysical grounds, or is it based on an initial error, by which humanity has been misled throughout its whole existence?

9. In order to apprehend the chief kinds of holiness, we make the following divisions:

(1) Original tabu may be *continuous* or *intermittent*. (a) Certain men, animals, things, and actions are always charged with holiness, and are therefore tabu. Such are shamans, priest-kings, and others. A chief in New Zealand was charged with holiness to such a degree that no one was allowed to touch him, even if he were in mortal danger. If he breathed on a fire, it could not be used for cooking. The vessels from which the Mikado used to eat were, as a rule, afterwards destroyed. If another man ate food from them, his mouth and throat would swell. Sometimes an animal is tabu for a whole people, as the pig in Syria, and the cow in Irān and India. Sometimes the tabu extends only to a clan or a kindred. Words are tabu, such as names of higher human or divine beings, holy or dangerous animals. Occasionally we find a whole tabu language, which is learnt at initiation, and used on special occasions, as in the mysteries, in the chase, in fishing, in reaping, and in war. Objects and places belonging to the sacred rites, to gods, or to holy men or secret societies are tabu. The holy man or animal is divine, and is worshipped in proportion as real worship is instituted and the notion of divinity evolved. They may be worshipped even during life, but especially after death, when the general awe of ghosts enhances the conception of their *mana*. Sometimes the holy power of a man is detected only after his death, through actions attributed to his soul. Such a *tindalo* receives worship amongst the Melanesians (Codrington, 125 ff.); other dead people are forgotten. So also the Veddas in Ceylon are concerned to know whether a dead man's spirit is a *yaku*, i.e. a powerful or holy one whom reverence and prudence bid them worship (C. G. and B. Z. Seligmann, *The Veddas*, Cambridge, 1911). The same idea underlies the system of relics and the worship of saints in higher religions. Their holy, wonder-working power is utilized and duly revered.

Certain days are full of danger. Work, pleasure, and undertakings which are carefully specified

must be omitted on these days. The institution of sacred or tabu days is known to several 'primitive' peoples in modern times, and was familiar to ancient peoples in different forms, e.g. the Egyptians, the Babylonians, and the Romans (*dies nefasti*). Such was probably the origin of the Sabbath (*q.v.*) in the OT. The genius of Mosaism gave to the tabu-day a new positive character of rest after work (otherwise R. Kittel, *Gesch. des Volkes Israels*², i. [Leipzig, 1912] 623); but in later Judaism the day recovered something of its gloomy tabu-character (cf. J. Hehn, *Siebenzahl und Sabbat bei den Babyloniern und im Alten Testament*, Leipzig, 1907; H. Webster, *Rest Days*, Lincoln, Nebraska, 1911).

Our abstract and conventional conception of time and space as measure is foreign to primitive man. To him time is, or rather times are, real and concrete. Some days and occasions contrast as extraordinary or tabu with the ordinary days. Such holy times, e.g. festivals and dangerous days, mark epochs in the general flux of existence, and give rise to the religious calendar. Thus the primitive apprehension of time originates in the conception of the holy. In a similar way tabu places awake a distinctive emotional notion of space.

(b) After death and on special occasions during life every one is tabu. The sexual life is accompanied by strange entrancing feelings and uncanny phenomena. In hunting and warfare even the ordinary man experiences the mysterious power, and must submit himself to restrictions and observances that are not required in his everyday life, but which are often identical with what shamans, priests, and kings are bound to observe always. We often encounter the notion that women dying in child-bed, fishermen drowned, or hunters killed during the performance of their perilous work, and warriors slain in battle (the *valr* of the Norse Valhall) obtain a better lot after death than other mortals. If two realms of the dead are recognized, these men and women come to the place reserved for 'better people,' i.e. for the *mana*-endowed, hence mighty and rich and noble in life, whereas the common man retains his dull and inferior condition also after death. It is tempting to adopt the explanation of this which attributes a higher moral value to the chief female and male vocations in life. But the reason, no doubt, lies in the holiness, or *mana*. The mysterious power that confers good fortune and superiority works also after death. Some men possess it always, ordinary mortals only in child-birth, war, hunting, and on certain other occasions.

(c) Some tabus affect every one, others only certain people. Mother-in-law and son-in-law are tabu to each other, also men and women in general to a certain extent (A. E. Crawley, *The Mystic Rose*, London, 1902, *passim*). A man may not marry a woman of his own clan, or even of any other clan indifferently. In Australia the totem (see TOTEMISM) as a rule is tabu to the members of its clan; in North America this is not so.

(2) *Artificial holiness* is acquired through ascetic exertions, such as fasting, abstinence from sexual life, mortifications, etc. (see ASCETICISM). The ascetic *śrāmyatī*, 'exerts himself,' Indian literature abounds in accounts of the superhuman powers acquired by devoted ascetics, making them superior to the gods and arousing their admiring envy. Such a state of artificial holiness is designated in several religions and languages as 'heat' (Skr. *tapas*). At Saa in Malanta in Melanesia, men and objects who have *mana* in themselves are said to be 'hot' (*saka*; Codrington, 191). In the Ewe language (D. Westermann, *Wörterbuch der Ewe-Sprache*) the magic power is called *dzo*, 'heat.'

(3) Holiness and impurity are *contagious*, as we have already seen (e.g. Ex 19¹⁷, Nu 16³⁷, Ezk 44¹⁹ 46³⁸, Ha 2¹²). Therefore every one in whose house a death has taken place or who has taken part in a funeral must submit himself to special observances before returning to ordinary life. In the Avesta, e.g., the degree of tabu is strictly defined for each relative of the deceased, and it is stated through how many people the contagion is able to penetrate.

(4) Besides this involuntary communication of holiness, a holy man or a body of men has the power of *imposing tabu*. This has been largely used by individuals and by societies for selfish purposes, in order to augment their property and influence (H. Webster, *Primitive Secret Societies*, New York, 1908, p. 95 ff.). In Melanesia, nobody dares to touch fruits on a piece of ground where *solo* (tabu-marks) have been put. Holiness throughout its history has seldom proved a bar to the acquirement of wealth. The ruling class in Polynesia, the *areoi*, have a special reputation for skill in utilizing their tabu. In Madagascar, European settlers have complained of the administrative use of *fady* in order to prevent improvements. But it must be added that the tabu has also often been deliberately applied in cases where the public interest required a prohibition. The Hawaiian government tabued the cattle even as late as 1846, because the diminution of the stock had aroused legitimate anxiety. Gluttony during the great festivals in Tonga and Hawaii made it necessary to tabu pigs, coco-nuts, and other food for several months. Sometimes language indicates the difference between natural or acquired holiness and imposed holiness. On the Banks Islands the former is called *rongo*, the latter *tapu* or *tambu*. In the New Hebrides the former is called *sapuga*, the latter *gogona*, etc.

10. A more important division of holiness is recognized in some primitive languages, which have special names for the good and for the bad varieties of holiness. Thus, in addition to ordinary magical processes, the Central Australian Arunta (Strehlow, *Aranda*) have a bad, noxious 'power,' *arungguiltha*, which is used to injure enemies. Tegegar speaks of 'unclean tabu.' Amongst the Huron Indians the *orenda* gradually fell into disuse, giving place to the *otkon*, the bad species of mystery or power. Besides the 'evil eye' there is the wholesome influence of the 'good eye'—e.g. the Iranian *sag-did* (*ERE* iv. 503; cf. S. Seligmann, *Der böse Blick*, Berlin, 1910). This distinction must not be confounded with the differentiation of tabu into holiness and impurity.

11. *Holy and unclean*.—In primitive religion one cannot tell whether tabu is holy or unclean. It simply means, 'Thou shalt not'—interdiction and danger. Later on, the tabu becomes either holy or unclean. Primitive man does not realize this difference. The original meaning of tabu as including both survives in language. The Latin *sacer* (French *sacré*) means 'holy' as well as 'cursed.' 'Holy' and 'impure' are combined in the Greek *ἅγιος*, which is then differentiated etymologically: *ἅγιος* means 'holy,' 'initiated' (in a secondary sense also 'pure,' 'clean,' 'immaculate,' 'permitted'); *ἐναγής* means 'accursed,' 'guilty.' The pig was unclean among the Jews. But, according to Plutarch, the Greeks did not know whether the Jews abhorred it or worshipped it. The mysteries alluded to in Is 65⁴ 66³⁻¹⁷ seem to imply the holiness of the swine (or only its cleanness). In Crete, pigs were holy, according to Athenæus (ix. 18 [p. 375 f.]), and must not be eaten. To both Jews and Cretans the pig was tabu, as in the great temple at Hierapolis. According to Lucian, *de Dea Syria*, 54, pigs were not sacrificed or eaten, the swine was de-

tested by the Syrians, but 'some believed that . . . they are not accursed (*εναγέας*), but holy (*ιποός*).' Among the Minas, south-east of Ajmer, the boar was holy. They identified this belief with the abhorrence of the Muhammadans for the unclean beast, and half adopted Islamism, but called the boar 'father Adam.' Then Siva-worshipping Brāhmans taught them to identify father Adam with Siva, and worship the cow as well as the boar (A. C. Lyall, in *Great Religions of the World*, London and New York, 1901, p. 97 f.). How near akin holiness is to impurity is shown by the Talmudic pronouncement that the Holy Scriptures defile the hands (see below, 'Semitic' section, p. 759^a), whereas the Gospels, the books of the *Minim* (heretics), and the books of later authors do not (Tos. *Jadaim*, ii. 13). In the OT, despite the strongly monotheistic differentiation of holiness from impurity, there are still some cases where it cannot be decided whether the tabu-interdict implies holiness or impurity: Lv 19¹⁹, cf. Dt 22⁹⁻¹¹; Lv 19^{23ff.} (cf. 17⁷). To an outsider, holy things and beings appear rather as something evil and maleficent through the mysterious dread that they inspire. European settlers or travellers often call the whole sacral system of the natives 'devil-devil.' In the Congo the first missionaries translated 'devil' by *Nzambi* ('the great maker,' also 'the one that causes death'). Now *Nzambi* is universally used as the term for 'God.' As we have seen, something of the same ambiguity belongs to the primitive conception of holiness. There is no doubt whatever, at this stage, as to whether a being or a thing inspires awe or not, whether it is 'supernatural' or ordinary, whether it belongs to the proper sphere of religion and mystery or not; but the distinction between good and bad in this 'holiness' is far from being conscious; it is scarcely adumbrated. Higher religion, in its ethical varieties, has a tendency to accentuate the difference between good and bad in a way which sometimes comes very near to obliterating the distinction essential to religion—that between holy and profane.

It is not possible in every case to discover why a tabu becomes holy or unclean. Tabu connected with death and with sexual life becomes unclean. Association with a divinity renders the tabu holy, e.g. the animals, which were kept in the temples and temple-precincts in Egypt, Syria, Greece, etc. In Israel the idea of God was such as to exclude the divinity, i.e. holiness, of animals—a notion highly developed in the religions of Egypt and India. Where the differentiation is complete, the holy and the unclean retain the character of tabu (forbidden), in opposition to the profane (common) and the clean, both of which may be freely used. Originally 'profane' (*noa*, נה, *kovós*, *gemein*, 'common') had not a bad meaning at all. The old correlation finds its classical expression in Lv 10¹⁰, Ezk 22²⁶ 44²³: on the one side, holy and unclean; on the other, profane and clean. The important thing in religion is to know and observe the distinctions—

holy unclean.
profane clean

Three principal factors have a tendency to modify or reverse that order, namely, the evolution of language, morals, and other practical aims and demands of culture, and the conception of divinity. This process consists in bringing together 'common' and 'unclean' on the one hand, 'clean' and 'holy' on the other hand. The question is whether 'clean' or 'holy' will become the chief word. Where practical and utilitarian purposes prevail, as in the Avesta, 'clean' eclipses 'holy.' Where the idea of the Godhead prevails, as in the OT, 'holy' keeps the foremost place.

(a) The 'common' becomes despised and bad. Language operates in this direction—that which is

much 'used' becomes 'use-worn.' Thus 'profane' has a tendency to approach towards 'unclean.' This is seen in the evolution of the words for 'profane.' The verb לָמַד, 'to give out for use,' assumes more and more the sense of 'to profane,' 'to unhallow,' and approaches the meaning 'to defile.' Even an author so deeply versed in sacred and clerical language as Ezekiel sometimes identifies 'profane' with 'defile' (43⁷, cf. v. 8; 23³⁸, cf. v. 39), although, as a rule, 'to profane' is used in connexion with the holy, the Sabbath (20¹³, 16, 24 22⁸, 26 23³⁸, cf. 44²⁴ etc.), the Temple (7²² 23³⁹ 28¹⁸ [of the sanctuaries of Tyre], etc., but see 5¹¹ 9⁷ 23³⁵), the sacrifice (20³⁰), the holy things (22²⁶), God's holy name (20^{39ff.} 36^{20ff.} 39⁷, etc., but see 43^{7ff.}); 'defile' is mostly used of idolatry (5¹¹ 14¹¹ 20⁷, 18 36^{17ff.}; cf. 20¹³, 16 5²⁷ of the Sabbath, and 20³⁰ of the holy name, etc.), or of the dead (4^{13ff.} 39^{14ff.} 43^{7ff.}, etc.). Likewise in Ex. and Lev., instead of being opposed to each other, 'profane' and 'unclean' become either occasionally identical or related as indicating a wider circle of objects and a narrower circle within it (e.g. Lv 6¹¹, 16 16¹⁹ 20³ 21⁴, Ezk 23³⁸). Something of the same evolution may be traced in *kovós*, which in LXX and the NT acquires the sense of 'unclean' or 'forbidden' (see below, 'Greek' section); in *gemein* in the secondary meaning of 'vile,' 'mean'; and in 'common' in a bad sense. The sacred fruit in Paradise was 'profaned first by the Serpent, by him first made common and unhallowed' (*Paradise Lost*, ix. 930). But the adjective נָח still retains its indifferent sense in modern Judaism. At the same time, 'unclean' is brought into opposition to 'holy,' which comes (e.g. Lv 6¹¹, cf. v. 16) to be considered as a stronger variety of pure, clean, its one-time contrast.

(b) In this evolution, morals play a part. Morally, 'pure' cannot be separated from 'holy' (Is 1¹⁶). This is true of every language, because in ethics the 'holy' cannot mean the forbidden, but the thing that is commanded (see below, § 14). Not only ethics, but practical considerations of human life and civilization in general, draw 'holy' and 'clean' more closely together and set them in opposition to 'unclean,' as we shall see in the next paragraph. Their correlation approaches the form:

holy clean.
profane unclean

But this process cannot be completed without ritualizing religion so as to leave mere rules and forms devoid of mystery and indwelling power, or without a certain secularizing of religion. 'Holy' must lose most of its tabu-character, i.e. its awe-inspiring mystery; and 'pure' or 'clean' becomes the chief word in religion instead of 'holy.' All the dangerous element in religion is included in the unclean, all the valuable element in the clean. At the same time, 'pure' or 'clean' expresses a stronger idea and receives a wider signification, as we shall see. Holy-profane vanishes from religion to a certain extent. All existence is divided into clean and unclean, where the clean includes also the tabus that have advanced to the divine, valuable side of existence. Such a process is positively favoured in Avestan religion by the practical purposes of culture that prevail. The Avestan dualism is a conflict between clean and unclean. This contrast prevails over the religious difference between holy and common. In India the same process was negatively favoured by the dethroning of the gods in favour of the sacrifice, the sacrificers, the ascetics, and the teacher of salvation. The gods were only invisible beings, the priests visible deities (*Sat. Brāhm.* ii. 2. 2. 6 f.), who sustained the world and by whose favour the gods resided in heaven (*Inst. of Vishnu*, xix. 20 ff.). The divine lost its strong tabu-character, and was not capable of enhancing holiness. In Semitic religions, and, to a certain

extent, in Roman heathenism, 'holy,' instead of yielding place to 'clean,' became the chief term, because the awe and dread remained in or were introduced into the feeling towards the divine.

(c) Especially in Semitic cult and piety the Godhead appeared as an overwhelming power. This is nowhere felt so strongly as in Mosaism (with its descendants). Notwithstanding the emphasis laid upon morality in the prophets from Moses onwards, 'holy' was never displaced by 'clean' or identified with it. The moral feeling contributed to widen the gulf between holy and unclean. The supernatural and active power in the Godhead worked still more in this direction. Here the divinity became 'holy' in an emphatic sense. Between the holy and the unclean an intermediate realm was left of indifferent and permitted, *i.e.* 'profane' (or 'common') and 'clean' things, with a tendency in 'common' to decline to 'unclean,' and
holy

in 'clean' to rise towards 'holy':

clean	common
unclean.	

But even in those passages in the OT where this process has advanced furthest, it never identifies 'holy' and 'clean.' 'Holy' is too mysterious, powerful, and divine; God's holiness, being His own essence, not primarily His relation to men (cf. Ezk 36²²), implies danger; there is nothing so much to be feared as the divine. Here not every danger inherent in the tabu has been banished to the unclean. The being not to be treated lightly in OT religion is, above all, Jahweh (Ex 19, Is 5¹⁶ 6³, Jer 2³, Ezk 20¹ 38^{16a}, and *passim*). Tabu-holiness has made its most important contribution to the history of religion by finding room for the awe-inspiring, supernatural, and yet active character of God characteristic of Mosaism. A reciprocal action was exercised by the idea of holiness and by the Mosaic-prophetic conception of God.

12. Pure.—In the Avesta, as well as to a great extent in India, the chief concern, as regards tabu, is not to pollute the clean by the unclean. The tabu 'holy' has lost its inherent superhuman awfulness and power. There is no instance of a man being visited with immediate destruction, without interference of man or society, through coming into too close contact with the holy-tabu. The words that come nearest to the idea of personal holiness (Skr. *ṛitavan*, Avest. *asavan*) do not suggest any tabu or supernaturalness. 'Pure,' not 'holy,' has become the characteristic word of religion. In such Indian languages as have not borrowed the word and the conception from the Arabs, Christian missionaries are at a loss to express 'holy' in its proper sense. The Skr. word *śuddha*, *pariśuddha* (and its later forms), 'pure,' 'clean,' as a translation of 'holy' in 'Holy Ghost,' the threefold 'Holy, holy, holy' (Is 6³ etc.), transfers the idea from the sphere of Biblical to that of Indian religion. The same term, 'pure,' is used in India for 'saint,' *e.g.* in the names St. Matthew and St. Paul. Man has more to say, the divine-tabu less. We may compare the Talmudic 'Holy Scriptures defile the hands' with the anxiety of Parsi *mōbeds* lest the glance of an infidel should defile their holy Scriptures. The holy-clean must be protected rather than the holy-dreaded. The mysterious awfulness of Jahweh has no analogy in the Avesta, where everything was divided between the Good One and the Evil Terrible One. Even Brāhmanism retained more of the mystery of tabu than Avestism. To both, cattle are tabu-holy, *i.e.* they must not be killed; they are unclean after death, and thus may not be eaten. In India, only Pariahs eat the dead cow (which is often given as wages for work). Among both peoples the cow is revered.

'Scratching the back of a cow destroys all guilt, and giving her to eat procures exaltation in heaven. In the urine of cows dwells the Ganges, prosperity dwells in the dust (rising from their couch), good fortune in cow-dung, and virtue in saluting them' (*Inst. of Vāṣṭu*, xxiii. 60 f. [*SBE* vii. 105 f.]).

But the holy bulls and cows (of Śiva, a secondary connexion), feeding in the temple-precincts or strolling in streets and market-places and allowed to do as they please, are unknown to the Parsi system. This irrational residue of the tabu-holiness has its counterpart in the Avesta, in an enhanced cleanness of cows. Thus tabu, apprehended as danger, becomes either holy or unclean, if it does not keep its undifferentiated character. Tabu, apprehended as valuable power, becomes, as we have seen, *e.g.*, in the OT, 'holy.' But it can also take another direction. The valuable thing or being may get rid of its mysterious danger and become directly clean—not clean in the sense of allowed (*noa*, *hōl*), but clean in an accentuated, concentrated sense. This is typical of holy-clean in the *Vendīdād*, our second main witness (besides the OT) to the evolution of tabu. We have already mentioned the twofold cause: the strict theological division of all existence into the Good (clean) and the Evil (unclean), and the practical aims—care of cattle and pastures and an ordered life—which inspired the prophet of this religion. Almost the only instance of anything like original tabu-holiness is furnished by the *haoma* (*q.v.*), which, when prepared, *i.e.* fully sanctified and powerful, cannot be defiled by a corpse (*Vend.* vi. 43). Here the difference comes out between the clean, which must be guarded against pollution, and the *mana*-charged holy, which is affected by nothing.

Beings and things exalted above the ordinary through their cleanness, but devoid of the awe of holiness, are: (1) the cow (*Ys.* xlvi. 6; *Vend.* iii. 2 ff.), the dog extolled above man (*Vend.* xiii.; cf. iv. 40, vi. 1, xv. 45, etc.), the hedgehog, the otter (*Vend.* xiv.), and in a lesser degree other animals (*Vend.* xvii. 9, xviii. 15 ff.); (2) the elements: the earth, fire, water, the purity-holiness of which explains the exposure of corpses to be eaten by animals, a practice which involved a special impurity to the Greek mind (*Soph. Antig.* 1017); (3) plants; (4) the objects belonging to the holy service: the *barsom* (*q.v.*), the bowls, the mortar, and the sacred formula.

All these things must be guarded against pollution. At the same time they possess an intrinsic power to purify and to restore purity, but less effective than that of the *haoma*. The urine of the cow is used, as in India, as a means of purification (*Vend.* xix. 21 ff.). If a cow has eaten of a corpse, she becomes pure of herself after a year (vii. 76 f.), whereas a man in the same case must be put to death without any possibility of purification (vii. 23 f.). As to the dog, the purifying look, the *sag-dīd* (see DEATH [Parsi]), seems also to be an attribute of the corpse-devouring birds (*Vend.* vii. 29 ff., viii. 16 ff.). Sometimes the eating (viii. 99 ff.), sometimes the look (*ib.* 16), appears to be the means by which these animals lessen the impurity of corpses. Since all animals belong either to Ahura Mazda or to Anra Mainyu, there are many that take part in the fight against the devils; all the animals of Ahura Mazda are clean; but we can still trace something of an original tabu in the extra cleanness and purifying power of some of them. The same clean power resides in the elements. Clothes infected by a dead body are rubbed with earth to be cleansed (*Vend.* vii. 15). The cleansing capacity of fire is universal. A corpse that has been exposed to the light of the sun during one year can work no more harm (vii. 45 f.; cf. v. 13). Water is used against uncleanness everywhere. It has the power of purifying itself when it has rained on a dead body (v. 19). In

India, purification is effected by water, earth, air, sun, etc. (*Inst. of Viṣṇu*, xxii. 88, 91). There also earth has a special cleansing power (*Manu*, v. 136). Hot water mixed with sulphur and gold-dust has the power of revealing guilt (*Vend.* iv. 46, 54), and so has the well-known ordeal by melted metal. The tests by water and by fire occupy an important place among the ordeals prescribed by Indian law ('Quotations from Nārada,' vi. [*SBE* xxxiii. 247 ff.]). The holy formula, which purifies with water and fire (*Vend.* viii. 72, xii. 2), is necessary against destruction (*Vend.* xix. 8 f.; cf. xviii. 8 f.). The position and practical character of the clean-holy in the Avesta are seen perhaps most clearly in a fifth group of things and actions, which work against impurity, the weapon of the devils. Something of the same practical sense is occasionally found in the agricultural Indian lay society:

'Among all modes of purification, purity in (the acquisition of) wealth is declared to be the best; for he is pure who gains wealth with clean hands, not he who purifies himself with earth and water' (*Laws of Manu*, v. 106 [*SBE* xxv. 187]). 'Of all pure things, pure food is pronounced the most excellent.' The learned is also purified by forgiveness of injuries, by liberality, etc. (*Inst. of Viṣṇu*, xxii. 89 f.; *Manu*, v. 107). But austerities, the renouncing of the world (*Inst. of Viṣṇu*, xxii. 91), and abstinence (*Manu*, v. 159) belong to a higher state of purity and religion.

In the Avesta the point of view is more consciously conceived and more consistently carried out. A house with priest, cattle, woman, children (*Vend.* iii. 2, iv. 47), the cultivating of corn, grass, fruit-trees, irrigating and draining (*Vend.* iii. 4, 23 ff., 30 ff.), good appetite (iii. 33, iv. 48), the giving of food (xiv. 17) and other gifts (iii. 34 f.), the filling up of the burrows of Anra Mainyu's animals (iii. 22), the building of bridges (xiv. 16), etc., are co-ordinated as purifying means with, e.g., the holy power of the cow and the dog. Likewise the unclean is assimilated to acts injurious to industry and culture.

There is a stock of tabus common to Brāhmanism and Avestism (see, e.g., the *Laws of Manu*, v., and the *Institutes of Viṣṇu*, xxii. ff.); but the difference becomes obvious (a) in that more consistent utilitarian tendency of Avestan purity which, of course, is not carried out, but permits many barbarous tabu-rites, e.g. at child-birth, to remain; (b) in the high appreciation of purity, cleansing, *yaozh-dao*, which is considered already in the *Gāthās* (*Ys.* xlvi. 5) as the greatest thing next to birth (*Vend.* v. 21, x. 18); the law of purity is the foremost word (v. 24 ff.); the devils tremble before the man that smells of purity after death (xix. 33); and (c) in the dualistic systematizing of clean and unclean. Something of the same process occurs in the OT. The gloomy character of the tabu-day gives place to the rest (Ex 20¹⁰, Dt 5¹²⁻¹⁴) and the delight (Neh 8^{9a}) of the Sabbath.

13. Exceptions to tabu-rules are due, in most cases, to practical considerations. The claims of real life prevail to a certain extent over the rule of infection by tabu-holy (Hag 2¹²) or tabu-unclean (Lv 11^{26a}, but see Hag 2¹³). According to *Vend.* v. 3 f., a bird that has eaten of a corpse does not defile the tree on which it perches; v. 6 f., infection of the dead brought by wolf or fox does not spoil the irrigated field; viii. 34, a dried corpse does no harm; vii. 71, a woman may drink pure water although she has brought forth a still-born child. The motive is assigned in *Vend.* v. 4: otherwise the whole of the created world would become polluted, because innumerable creatures die. In the case of the cow becoming clean of herself in one year (*Vend.* vii. 76 f.), we cannot decide whether this is due to her own dynamic purity or is an exception for practical reasons. To the same category belongs the universal rule that the corpse of a clean animal does not defile (cf. Lv 5² 11¹¹). According to Indian

law, the hand of an artisan, things exposed for sale in a shop, food given to a Brāhman (if not by a Sūdra), or food obtained by begging, which a student holds in his hand, the mouth of a woman in the process of kissing, a bird in pecking fruit, a dog when catching a deer, and flesh of animals killed by a dog, etc., are always pure notwithstanding the logic of tabu-infection (*Manu*, v. 129 ff., *Inst. of Viṣṇu*, xxii. 48 ff.). Carpenters and other workmen are not to be hindered in their work by defilement. To the group of practical exceptions belongs also the rule that impurity does not arise when the whole country is afflicted with a calamity, or in times of great public distress, such as an epidemic or a famine (*Inst. of Viṣṇu*, xxii. 51, 54 f.). In these instances the pedantry of laws of cleanness is temporarily abrogated by the hard necessities of life. Quite different are the exceptions noted in the Avesta which are due to the logic of dualism. The corpse of the *asavan* (holy, pious man) is unclean, because his death means a defeat to life and holiness. On the other hand, the wicked becomes pure after death: his death is an advantage; the infection of a dead body diminishes with the holiness of the man during his life until it disappears in the case of the ungodly (*Vend.* v. 35 ff., xii. 1 ff.). For that reason a dead dog is impure (vi. 1). On the contrary, there is the clerical exception in Brāhmanism of the priest Brāhman being so holy as to remain clean also after death. The indwelling holy power overcomes impurity in different degrees according to its strength. The impurity lasts ten days for a Brāhman; it lasts twelve for a Kṣatriya, fifteen for a Vaiśya, and a month for a Sūdra (*Manu*, v. 83). On several occasions the indwelling power is exempt from any defilement. The taint of impurity does not fall on kings, at least while engaged in the discharge of their duties; on devotees performing a vow; or on a man engaged in a sacrificial ceremony (*Manu*, v. 94; *Inst. of Viṣṇu*, xxii. 48 ff.). When the ceremonies connected with the installation of the monument of a deity or marriage rites have begun, impurity is powerless—it cannot arise (*Inst. of Viṣṇu*, xxii. 53). The explanation of the fact that no impurity attaches to the king—viz. because he incarnates the eight guardian-deities of the world, who cause and remove purity and impurity of mortals (*Manu*, v. 96 f.)—is evidently of a secondary character; the real reason is found in his own power of holiness or in the claims of practical life.

14. Holiness and morals.—In the tabu-interdicts, what we call moral rules and ritual or 'superstitious' commandments are intermingled without any attempt at differentiation. In the Congo the laws belonging to the fetish Mbuzi contain such prescriptions as not to eat newly slaughtered meat, not to steal, not to lie, not to stand upright when stirring the contents of a pot, not to whistle in the twilight, not to drink palm-wine without having a cap on the head (E. Nordenskiöld, pp. 123, 146). Amongst the rules prescribed for a *snātaka*, a young Brāhman who has just completed his studentship, are, e.g., not to carry water and fire at the same time, not to drink out of his joined hands, not to step over a rope to which a calf is tied, always to speak the truth, to conduct himself as an Aryan, to take pleasure in the Veda, never to hurt any being, to restrain his senses, etc. (*Gautama*, ix. [*SBE* ii. 218 ff.]; cf. *Apastamba*, i. 11. 30 [*SBE* ii. 92 ff.]). In ch. 125 of the *Egypt. Book of the Dead* the departed protests his purity: 'I have not oppressed the feeble one . . . I have not degraded anybody . . . I have not let any one hunger . . . I am not a murderer . . . not an adulterer . . .' The ritual of the Great Purification, *Ō-harai*, in Shinto ceremonial, counts

among 'heavenly sins': to destroy the divisions between the rice-fields, to put sticks in the rice-fields, to flay living animals backwards; and among 'earthly sins': leprosy, incest, snake-bite, killing the cattle of another, sorcery (H. Weipert, 'Das Shintogebet der grossen Reinigung,' in *Mitteil. der deutschen Ges. für Natur- und Völkerkunde Ostasiens*, 1901, Suppl.; E. Satow and K. Florenz, 'Ancient Japanese Rituals,' in *TASJ* vii. ix. xxvii. 1). Similarly, the Law of Holiness in Lv 19 includes fear of mother and father, prohibition of theft, of deceit, of lying, as well as prohibitions against eating anything with the blood or rounding the corners of the head.

The tabu imperative covers a very wide area in primitive and barbarous culture. In higher civilization a process of reduction takes place. At the same time the idea of obligation is deepened. The separation of ethics from ritualistic rules belongs to a higher moral appreciation of holy and unclean, represented in Greece and Rome by thinkers and poets from Heraclitus (frag. 5, in H. Diels, *Fragmente der Vorsokratiker*³, Berlin, 1912, i. 78), e.g. Diogenes of Sinope (cleansing water cannot take away a moral fault any more than a grammatical blunder; will an initiated thief have a better lot in Hades than Epaminondas? [Diog. Laert. vi. 2. 42]; Cicero, *de Leg.* ii. 10. 24: 'animi labes nec diuturnitate evanescere nec omnibus ullis elui potest,' etc.). These protests probably referred to the cathartics of the Mysteries (*q.v.*) and of Orphism (*q.v.*). Orphism started as a special, higher 'holiness,' *ἀγνεια*. Primitive tabu-rules on food, clothing, sexual life, etc., were revised and united into an ascetic and pedantic 'orphy life,' destined to secure a happy life after death. This was the theory of the great Pythagoras also, with whom a higher morality prevailed. In opposing the later purifying Orphic charlatans, and in taking cleanness in a purely moral sense (= righteousness [Rep. 364]), Plato enhanced the ascetic tendency of the Apollonian, Orphic, and Pythagorean cathartics (the soul must be delivered from the body even in this life through spiritual occupation, 'philosophy,' and completely after death [*Phædo*, 66 ff.]), and the religious character of ethics as a means of salvation and happiness in the life to come (*Phædo*, 86 ff.; a more positive appreciation of morals prevails in the *Rep.* and other dialogues). The moralization of holiness and cleanness is urged in the OT by Amos and other prophets, and distinctly stated by Christ (Mk 7^{15a}). The general principle of Lv 19, etc., 'Ye shall be holy: for I the Lord your God am holy,' is repeated in 1 P 1¹⁶, but applied to moral behaviour (*ἀναστροφή*, v. 15), and the quotation 'holy people' in 1 P 2⁹ has no ritual meaning. The paradoxical claim laid on the whole people to be holy (see above, § 1) receives a new and higher significance in this way, and can be fulfilled without any limiting or clericalizing of life.

In India, Buddha opposed an outward and non-moral conception of purity. At the end of the *Dhammapada*, a set of verses explain what it means to be a true Brāhman:

'A man does not become a Brāhman by his platted hair, by his family, or by birth; in whom there is truth and righteousness, he is a Brāhman. What is the use of platted hair, O fool! what of the raiment of goat-skins? Within thee there is ravening, but the outside thou makest clean.' (*Dhammap.* xxvi. 393 ff. [SBE x. 2 pt. i. p. 91].)

According to the *Sutta-Nipāta*, Kassapa explained the sin of eating raw flesh (*āmagandha*) in this way:

'Destroying living beings, killing, cutting, binding, stealing, speaking falsehood, fraud and deception, worthless reading, intercourse with another's wife, this is *āmagandha*, but not the eating of flesh.' 'Neither the flesh of fish, nor fasting, nor nakedness, nor tonsure . . . purify a mortal who has not conquered his doubt' (*Sutta-Nip.* ii. 2. 4 [241], ii. 2. 11 [248], in SBE x. 2 pt. ii. p. 39 ff.).

In Buddhist polemics against Brāhmanism the question of purifications always played a part: if water could cleanse from sins, frogs and tortoises, water-snakes and dolphins, would get to heaven and be happy. The title of the Pāli work, the *Visuddhi-magga* of Buddhaghōṣa, 'The Way of Purity,' has nothing to do with ritualistic purifications (H. C. Warren, *Buddhism in Translations*, Cambridge, Mass. 1900, *passim*; M. Winternitz, *Gesch. der ind. Lit.* II. i. [Leipzig, 1913], p. 164 ff.). The momentous step in the evolution of holiness and purity consists in this, that holiness becomes a personal quality of the deity and of man, instead of being a substance in things as well as in wills. This evolution is favoured by autonomous moral refinement, as in Greece, India, and China, and also by the preponderating conception of the deity as an ethical will, as in Mosaism. The later process has had the greater importance for the internal history of religion. As to man, 'holiness' retained its aspect of something supernatural and divine in the NT, notwithstanding its being moralized and personalized. In its essence, holiness does not depend on man, but is a divine influence. But the making holy of man by God obliges man to strive for perfection. Holy means 'good,' 'perfect' in an ethical sense in so far as religion implies ethics. It is used of God (Jn 17¹¹), His name (Lk 1⁴⁰), the city (Mt 4⁵), and temple (1 Co 3¹⁷) connected with His service; of Christ (Mk 1²⁴); and the angels (8³⁸); of the prophets (Lk 1⁷⁰), the men (Mt 27⁵²) and women (1 P 3⁶) of old; of John the Baptist (Mk 6²⁰); and of Christians as God's sacred property and servants (Ro 1⁷, 1 Co 1², 1 P 2⁶), bound, therefore, to purity in life (Eph 1⁴, 1 Co 6¹¹). The language is ritualistic (Ro 12¹ 11¹⁶ [firstfruit, see above, § 7 (c)], Jn 10³ 17¹⁹); the sense is personal and moral, but it is entirely kept under the sway of religious sacredness.

15. In the Church 'holy' never became a merely ethical word, but chiefly suggests divine, supernatural power. The original meaning of *sanctus* and *sanctus* in the heathen Roman language recalls *tabu*, 'well defined,' 'particularly marked,' as far as *sanctus*, *sanctus* meant *definitus*, *destinatus*, *determinatus* (G. Link, *De vocis 'sanctus' usu pagano*, Königsberg, 1910, p. 9). It was used of things, places, and men, withdrawn from the common and ordinary (see below, 'Roman' section). In early Christianity all the faithful were called 'saints,' because they had been selected and separated by God from the worldly life and common humanity—which meant also essentially a moral change and a severe moral obligation. But the word *sanctus* was used especially of the departed brethren and of the martyrs, over whose remains altars were erected as centres of divine holy power as well as of pious commemoration. Later on, *sanctus* indicated the religious dignity of the *religiosi*, monks and priests. In the 5th and 6th centuries this honourable title was usually reserved for the bishops, until the word 'saint' finally received the sense it has kept in the Roman Catholic Church—that of one who receives and also deserves the general veneration of the religious community. The recognition of a dead believer as a saint depended upon the verified fact that he had had a festival of his own for a long time past, that his tomb had been held in special honour, etc. (H. Delehaye, 'Sanctus,' in *Analecta Bollandiana*, Brussels, 1909, xxviii. 145 ff.; cf. *Les Origines du culte des martyrs*, do. 1912). When the Church became more scrupulous about the dignity of saint and began to submit the claims to it made by local heroes of piety or of some religious genius to a regular Roman commission, primary importance was, and is still, attributed to miracles performed by the alleged holy person before or after his death.

Here we encounter, in a higher sphere, the same test as is applied by primitive peoples—to learn whether the departed possesses the power of holiness or not (cf. above, § 9 (1) (a)), whether his bones, when touched, or his soul, when invoked in prayer, are capable of healing sick people, revealing guilt, and accomplishing other wonders. The chief question about holiness is not: Did he or she attain to moral perfection? but, in fidelity to the essence and tradition of religion, Was there something divine or supernatural about the man? (cf. P. Chauvin, *Qu'est-ce qu'un saint?* Paris, 1910). We may refer to the important rôle played in the process of canonization of Joan of Arc (introduced in 1869, ended by the decree of Pius X. on 11th April 1909) by certain healing miracles performed by her on nuns who implored her help, even at the end of last century. The underlying thought is that holiness means revelation of divine power. Only religion might recognize that supernatural manifestation, not in cases of auto-suggestion or the like, but in creative genius, high personal idealism, and ready obedience to the mysteries of divine guidance and to vocation. Joan of Arc could well stand that more severe test. See, further, HOLINESS (NT and Christian).

16. Holiness has had its most notable history in Western civilization with its antecedents. There it has become the greatest word in religion, the last word of piety so far, as well as the first. Western observers, who form their conception of religion from Biblical or Islâmic examples of piety, have often been struck by the relative absence of awe in Eastern religions. In the West (using this term in a wide sense, to include Persia; cf. Wassilieff-Conrady-Stübe, *Die Erschliessung Chinas*, Leipzig, 1909, § 51) the unweakened sense of the 'holy' has accompanied religion all through its history and has gained strength on the heights of religious experience. But at the same time magical practice and 'superstitious' feelings, which still survive in modified forms in the lower strata of civilization and in highly cultured and delicately organized minds, still draw their nourishment from a primitive conception of the holy.

17. The imperative and unconditioned character of the holy, being anterior to any definite idea of divine commandments (cf. K. T. Preuss, 'Der Ursprung der Religion und Kunst,' in *Globus*, lxxxvi. [1904] 321 ff., 355 ff., 375 ff.), cannot be derived from it. Nor has it originated in precautions for the soul (§ 5), nor in calculations of negative magic (§§ 6 and 7) or of hygiene. To say that the categorical tabu is an initial mistake of humanity (§ 8) gives no explanation, only an appreciation. The time-honoured sociological theory recognizes the momentous importance of society to religion. But, as far as lower culture is concerned, the derivation of the holy institutions and beings from a mysterious apprehension of society seems to be artificial. In the higher culture, holiness and mysticism most consciously put their ideals beyond society. According to the history of religion itself, the conception of the tabu results, as we have seen, in the idea of the supernatural.

LITERATURE.—This is indicated in the article. See also T. Wächter, *Reinheitsvorschriften im griech. Kult.* Gießen, 1910; E. Fehrlé, *Die kultische Keuschheit im Altertum*, do. 1910.

NATHAN SÖDERBLOM.

HOLINESS (Greek).—In its ordinary use 'holiness' is a word both of religious and of high ethical significance. But, while it is always a religious word, it has often little or no ethical content. Thus, in primitive religion, holiness is often conceived as *physical*, though doubtless with an implicit sense of something deeper. It is an essentially physical quality inherent in persons or things reckoned divine, or, on the negative side,

it is freedom from bad spirits, which are conceived as physical, and against which physical precautions are taken (W. R. Smith, *Rel. Sem.*², London, 1894, p. 161; J. E. Harrison, *Proleg. to the Study of Gr. Rel.*², Cambridge, 1908, pp. 39, 165, etc.). Sometimes, again, 'holiness' indicates what is merely *formal*, as the relation in which a particular place stands to a divine being, or a restriction upon human freedom to enter within it (W. R. Smith, 118, 150). It would be easy to illustrate these non-ethical conceptions, as well as the tabu customs founded upon them (cf. Söderblom's art. HOLINESS above), from the history of Greek, especially primitive Greek, religion. But in the present article we shall deal only with the higher conception of holiness, meaning thereby, on the one hand, the moral perfection of God, and, on the other, human goodness viewed in relation to God. How and how far did the idea of holiness, as thus defined, enter into Greek religious thought?

1. **Greek national religion.**—From at least as early as the Homeric age two contrasted types of worship prevailed in Greece. The one was directed to the sunny deities of Olympus, the other to the gloomy chthonian, or under-world, powers (cf. W. M. Ramsay, in *HDB* v. 143). The latter is usually regarded as the earlier of the two, and, though it never became a part of the national religion, was preserved in local cults throughout the historic period (cf. Harrison, p. 11, and *passim*; L. R. Farnell, *CGS*, Oxford, 1896-1909). In spite of serious defects, it contained much of ethical value, which, as we shall see, entered into later Greek religious thought. Meantime our concern is with the religion which centred in the Olympian gods and goddesses. Canonized by Homer and Hesiod, these became the objects of national, or pan-Hellenic, as distinct from merely local, worship.

For our present purpose we may consider this national religion, first in its popular, and then in its literary, aspect.

(1) **Popular religion.**—The Greek religion was one of easy trust in the gods, of simple and serene piety. It was satisfied to acknowledge the blessings of the gods by the payment of traditional observance. Such a religion was prone to become 'the art of giving something in order to get more in return, a species of higgling in the celestial market' (F. B. Jevons, *Introd. to Hist. of Rel.*, London, 1896, p. 224), and this is in fact the account given by Socrates in the *Euthyphro* (Plato, *Euth.* 14 E) of the current conception of holiness (*δαιμόνης*). Plato may have rated the popular religion too low (cf. F. B. Jevons, *Introd. to The Makers of Hellas*, by E. E. G., London, 1903, p. xxiv). Its sacrifices must often have expressed real gratitude. But it is certainly true that the idea of moral purity, as a matter vitally affecting man's relations to the gods, was foreign to the spirit of Greek religion. That spirit was essentially one with the spirit of Greek art, which derived its inspiration not from the supernatural, but from the visible, world. Hence the Greek gods were but magnified men, superior, as G. L. Dickinson points out, in external gifts such as strength, beauty, and immortality, but not in spiritual or even moral attributes. This being so, the average Greek did not trouble about his spiritual relation to the gods. 'To the Puritan, the inward relation of the soul to God is everything; to the average Greek, one may say broadly, it was nothing' (Dickinson, *The Greek View of Life*, London, 1896, p. 18). Greek ethics no less than Greek religion was dominated by the artistic spirit. And hence human goodness meant to the Greek, not indeed a relation to the gods, but an inward harmony. 'The good man was the man who was beautiful—beautiful in Soul' (*ib.* 134).

(2) **Literary ideals.**—Here we shall consider

chiefly the moral aspect in which the gods are presented to us in Greek literature. In Homer and Hesiod, from whom popular religion drew its chief inspiration, we can hardly be said to find any idea of divine holiness. It is true that Homer often presents the gods, especially Zeus, in a noble and even sublime moral aspect. He and Hesiod habitually regard them as the champions of Justice, whom the latter even describes as the daughter of Zeus (*Opp.* 254). Yet their conduct, as reflected in the myths, is often an outrage upon morality. And the reason is that moral perfection was not felt or seen to be an essential part of the divine nature. 'Never,' says Nägelsbach, speaking of Homer, 'is an epithet applied to the Godhead, indicating a consciousness similar to that with which the Bible speaks of the holiness of the true God' (*Homer. Theologie*², Nüremberg, 1861, p. 31). But as time goes on we meet with deeper conceptions of the divine nature. Not only is polytheism gradually purged of its grosser elements, not only is there an approach to monotheism in the more assured supremacy of Zeus over the other gods (J. Adam, *Relig. Teachers of Greece*, Edinburgh, 1908, p. 83; J. P. Mahaffy, *Social Life in Greece*, London, 1875, p. 94), but Zeus is himself regarded in a more spiritual aspect. This is particularly true of Æschylus and Sophocles. In Æschylus 'we find an ideal of divine righteousness which is strikingly parallel to that of Hebrew prophecy' (L. Campbell, *Relig. in Gr. Lit.*, London, 1898, p. 380). Sophocles, on the other hand, comes nearer the Christian standpoint in the more gracious aspect under which he views the divine justice. 'Zeus is no longer solely the awful dispenser of doom, but "he hath Mercy for the partner of his throne"' (A. M. Adam, in *Early Ideals of Righteousness*, Edinburgh, 1910; Soph. *Æd. Col.* 1298; cf. *Phil.* 196). The idea of divine purity, however, was especially associated with Apollo (L. R. Farnell, in *HDB* v. 145). And the growing conception of the divine nature is measured by the purity which Apollo demanded of his worshippers. At first it was freedom from homicidal guilt, and such as could be attained by ritual; later it was viewed as inward, and as extending to all the relations of life (*ib.* 145, 147; E. E. G., *Makers of Hellas*, p. 335 ff.; cf. esp. the story of Glaucus, in Herod. vi. 86).

2. *Mystical conceptions of holiness.*—From the ideas of holiness proper to the national religion we pass to others, different in kind, and likewise more profound, which flourished during the period of its decadence. Before considering them, however, in detail, we have to ask how the phase of thought from which they sprang entered as a powerful, though not, as we shall see, a wholly new, factor into the religious life of Greece.

In the 6th cent. B.C. the Greek colonies of Asia Minor were profoundly stirred by a new spirit of religious mysticism, which probably came to them from the Semitic peoples (cf. W. R. Smith, 358), and also by a new spirit of philosophic inquiry. These influences were widely diffused by various teachers, and by the end of the 5th cent. had revolutionized the religious thought of Greece. It was, says Campbell, 'one of those epochs in the history of our race which mark a wide-spread access of spiritual vitality' (p. 127). Greek philosophy was undermining traditional belief in the more thoughtful minds. And side by side with the intellectual awakening there was a 'deepening sense of guilt requiring atonement, of pollution crying for purgation' (*ib.* 128), which many sought to satisfy, partly by an ascetic discipline, and partly by mystical rites, including a sacramental meal, which was regarded as an act of union with the divine. Such, as far as we need describe it here, was the character of the Orphic movement,

which powerfully affected Greek religious life from the 6th cent. onwards. Although it probably owed much to foreign influence—including its chief mystery, the sacramental feast—yet Orphism appealed to a religious instinct already potent in the old chthonian religion, previously mentioned, namely, to its profound sense of evil, seen in the conception of the Erinyes (*q.v.*; cf. Harrison, 6, 29, 213), and in rites of purification (*ib.* 24–29, 162). It should be added that philosophy and mysticism were to a large extent but two aspects of a single movement. Orphism had its speculative side, while philosophers like Pythagoras and, at a later time, Plato were steeped in mysticism. There can be no doubt that speculation and mysticism had much to do with the growing spirituality of the national religion (cf. *HDB* v. 147), but they were both foreign to its spirit. We have now to examine conceptions of holiness which were essentially mystical, though they were to some extent reflected in Greek philosophy.

In doing this we are directly and chiefly concerned with the human aspect of holiness. It is true that Greek philosophy sometimes lays stress on the goodness of God. Thus we find in Plato (*Rep.* ii. 379 A) that the fundamental duty prescribed for teachers of the young is to represent God as He really is, and that the first article of their teaching must be that God is good. But there is nothing in such teaching that might not have been applied to the Zeus of the national religion. It is true also that a deepened conception of the divine nature is involved in Orphism; but as this, like all mystical religion, is primarily concerned with inner experience, we shall discuss it rather in connexion with the human aspect of holiness.

(1) *Holiness as likeness to God.*—Humanly regarded, holiness is more than goodness. It always involves a relation to God. But the relation, and with it the *nuance* of the idea of holiness, varies. Perhaps its most familiar implicate is that of likeness to God. The conception became prominent in Greek religious thought chiefly through the teaching of Pythagoras and of Plato. Probably Pythagoras owed it to the influence of the mysteries, as it is closely related to the essential kinship of the human and divine natures, which is a cardinal doctrine of Orphism. 'The Pythagorean ethical doctrine . . . has a thoroughly religious character: to follow God and to become like Him is its highest principle' (Zeller, *Pre-Socratic Phil.*, London, 1881, i. 491; cf. also E. E. G., 335, W. H. S. Jones, *Greek Morality in relation to Institutions*, London, 1906, p. 7, and authorities cited by these two writers). The same doctrine, which is hinted at by Socrates, occupies a prominent position in the teaching of Plato, whose 'conception of the ethical end . . . is "assimilation to God"—*ἁμολογίς τῷ θεῷ*' (J. Adam, 401; cf. also p. 18, and Jones, 155; for Plato, cf. *Theæt.* 176 B, *Laws*, 716 C, *Tim.* 29–30). We cannot here attempt to trace fully the influence of this idea in Greek literature, but we may add that it is reflected in the cardinal doctrine of the Stoics, that man should live according to Nature—which, in their view, was only another name of God.

(2) *Holiness as communion with God.*—But, again, the relation to God implied in holiness is often thought of as communion. This aspect of holiness is represented in the mystic union with his god which the Orphic regarded as the goal and crown of the spiritual life. The god in question was Dionysos Zagreus, who was born again after his dismemberment by the Titans. And it is significant that Dionysos, though admitted to the Olympic pantheon in his character as a wine-god—an aspect foreign to Orphism—belonged essentially, as he does in this his Orphic aspect, to the class of

chthonian powers. Like the worshipper in that old religion, the Orphic sought deliverance from evil, but his conception of evil was more ethical. And, while to the former purity meant freedom from divine anger, to the latter it meant union with the divine life. Holiness in this high Orphic sense is *δαίμων*. The words *ἅγιος* and *ιερός* also refer to holiness, the holiness that comes of consecration—in the former case, to the powers of the lower world, in the latter, to those of Olympus. But in both the consecration is thought of chiefly in its negative aspect, as prohibition or tabu; it is the devotion to unseen powers, in which the idea of the blessing readily passes into that of the curse. On the other hand, *δαίμων* and *δαίμων* are words of positive content. Their prevailing sense is that of freedom, which to the Orphic meant freedom from the bonds of the flesh, or moral purity (Harrison, 57 ff., 505 f.). 'Consecration (*δαίμων*), perfect purity issuing in divinity, is . . . the keynote of Orphic faith, the goal of Orphic ritual' (*ib.* 478).

We have been dealing with what may be called the mystical aspect of holiness. But in this sense especially holiness may be said to involve the element of love, which is itself an aspect of goodness. It is just here, however, that we see the limitations of the Greek idea of holiness. Even the Orphic, though steeped in the mysticism of love, did not perceive that holiness and love are really inseparable ideas. Accordingly, in actual religion he turned to Dionysos, in mystical dogma to Eros, or Love. Eros is to the Orphic the Creator of all things; especially he is thought of as the source of life, and of life's ecstasy (cf. Harrison, ch. xii.). But he is not a god of holiness; he is a poetical as much as a religious conception. Yet the Orphic did unconsciously associate holiness with love, since he showed that the pathway to both lay through a mystical union with the divine.

Orphic views had a deep influence on Greek literature. Of this, so far as concerns our subject, two illustrations may be given:

(a) *Euripides*.—Euripides is certainly not to be described as an exponent of Orphism. On the other hand, the *Bacchæ*, whatever may be its central motive, is full of Orphic mysticism.

'No other ancient poem shows so rapturous a feeling of the kinship between man and nature. The very hills are "thrilled with ecstasy" in sympathy with the frenzied votaries of the god (*Bacch.* 726). We feel that Dionysus has become a power pulsating throughout the whole of nature, both inorganic and organic, making the universe into a living, breathing whole; and we are stirred with a new sense of unification with the mystery that surrounds us' (J. Adam, 317).

Again, we have the Orphic longing for spiritual freedom, seen in lines like the following:

'Happy he, on the weary sea,
Who hath fled the tempest and won the haven.
Happy whose hath risen, free,
Above his striving!'

(*Bacch.* 901 ff., Murray's tr.).

Finally, Holiness is personified in the chorus beginning '*Ὅσα νότ'ρα θεῶν*' (*Bacch.* 370). It will be seen that she is addressed by her Orphic name, and J. E. Harrison refers to her as 'Hosia, the real Heavenly Justice, she who is Right and Sanctity and Freedom and Purity all in one' (*op. cit.* p. 507). Nor is her aspect less lofty in Murray's exquisite free rendering of the opening lines of the chorus:

'Thou Immaculate on high;
Thou Recording Purity;
Thou that stoapest, Golden Wing,
Earthward, manward, pitying,
Hearst thou this angry King?'

That an idea of holiness as high as it is mystical is reflected in the *Bacchæ* may be safely gathered from these citations. At the same time, it is important to remember that what we have before us is not a monotheistic, still less a Christian, conception of divine Holiness. The ground note of religious feeling in the *Bacchæ*, here as elsewhere,

is pantheistic. Holiness is, indeed, personified by the poet, and, so regarded, is one among many divine beings. But in its religious and ethical significance it is simply an aspect, profoundly realized, of the divine running through the whole of Nature.

(b) *Plato*.—But the Orphic view of holiness is most fully reflected in Plato, although to some extent modified, chiefly by being rationalized. We have seen that Plato described the ethical end as assimilation to God. But he also taught that perfection consists in communion with or participation in the divine, of which, indeed, as J. Adam has pointed out (p. 436), 'the theory of likeness is only a kind of explanatory gloss' (cf. Plato, *Parm.* 132 D). It is in the *Phædo* that the theory of participation in the divine nature (*κοινωνία, μέθεξις*, etc.) is most fully developed. In the *Symposium*, on the other hand, Plato describes human perfection under the imagery of love. It is the soul's marriage with her ideal, or it is the beatific vision of the realities of an eternal world. It must, indeed, be observed that in Plato the soul does not enter into direct relation with the Supreme Being, 'the Good' (cf. esp. *Rep.* vi. 508 E, 509 B, with *Tim.* 28 C), but only with the Ideas, to which, however, he also attributes a real transcendental existence (*Rep.* v. 476 A ff., *Tim.* 57 D ff.; and Aristotle's account of Plato in *Met.* A 6, 987^a 29-987^b 10). Again, the relation is predominantly intellectual. Even the love described in the *Symposium* is primarily an *amor intellectualis*. But, on the other hand, the Ideas 'are in very truth the Platonic equivalent of Gods' (J. Adam, 431); while to Plato true knowledge, that which grasps the real and abiding, and which is man's highest good, is an act, primarily, indeed, of the intellect, yet affecting also every part of the soul. Lastly, Plato marks an advance on Orphism in that it is one and the same divine being whose perfection the soul shares, and after which its love aspires.

In Orphism and in Platonic speculation we reach the highest Greek conception of holiness. It does not lie within the scope of this article to discuss its obvious limitations. It must suffice to say that the loftier Christian conception depends upon a nobler and more satisfying conception of God, as a supreme Father, who enters into direct personal relations with His children, and whose goodness is at once perfect holiness and perfect love.

LITERATURE.—This is sufficiently indicated in the article.

I. F. BURNS.

HOLINESS (NT and Christian).—I. *NEW TESTAMENT DOCTRINE*.—The NT continues and completes the most spiritual teaching of the OT prophets and psalmists with respect to holiness (cf. 'Semitic' art.). The background to Christian doctrine, however, is still priestly and legalistic, and many instances of the ceremonial conception of holiness appear in the NT writings. Inanimate things or places, such as Jerusalem, the Temple, the inner sanctuary, the Scriptures, the Mount of Transfiguration, are spoken of as 'holy' by virtue of their special association with God. Indeed, the whole NT terminology on the subject is directly borrowed from ceremonial sources, in respect of altars, sprinkling, oblations, putting away sin, and the like. But this ritual phraseology is now given an inward spiritual signification, its former use having been sanctioned only 'until a time of reformation' (He 9^s, 10). Christians themselves must now be veritable temples, priests, vessels, and altar gifts, sanctified for the offering of purely spiritual sacrifices (Ro 12¹, 1 Co 3¹⁶, 1 P 2⁵, 2 Ti 2²¹). Thus the emphasis in the conception of holiness becomes increasingly ethical, having advanced from the outward to the inward, from the

negative to the positive, from the merely ceremonial act to the moral and spiritual motive.

An interesting illustration of the passing of the word *ἀγιασμός* from its ceremonial to its ethical use is seen in 1 Co 7:14, where the unbelieving husband is spoken of as being 'sanctified' in the believing wife. 'Paul wishes to prove that the holiness of a Christian transmits itself forthwith to those who are closely allied to him' (J. Weiss, *Der erste Korintherbrief*⁹, Göttingen, 1910, p. 182; see also Ro 11:16, 1 Ti 4:4-9). For a study of the Greek terms used in the NT to designate holiness and kindred ideas, see *HDB*, s.v. 'Holiness' and 'Sanctification'; for the extension of the conception of holiness to things and places, see artt. CONSECRATION and HOLINESS (General and Primitive); and for a discussion of ritual purification as a means of holiness, see L. R. Farnell, *The Evolution of Religion*, London, 1905, pp. 152-162.

Partly, perhaps, because of these ritual associations, Jesus makes very little use of the technical vocabulary of holiness. He prefers the prophetic form of expression, 'Be ye perfect, as your Father in heaven is perfect' (Mt 5:48; cf. Dt 18:13), to the more priestly formula, 'Be ye holy, for I am holy' (Lv 11:44).

Jesus avoided almost entirely the usual OT designation of God as the 'Holy One' of Israel, except in the phrase 'Holy Spirit.' The reason appears to be that Jesus regarded the Levitical "holiness"—which many of His countrymen thought to be real holiness—as negative and temporary. True "holiness" is to be applied to spiritual things, and is to be positive, not negative. It is to consist in imitating the Holy One, not in washings, nor in abstaining from meats, but in being, as He is, "perfect"—that is, perfectly good in will and deed, benevolent and beneficent to all' (E. A. Abbott, *The Son of Man*, Cambridge, 1910, p. 522 f.; see also C. G. Montefiore, *The Synoptic Gospels*, London, 1909, ii. 522-527).

It is, then, in moral likeness to God that man's perfection or holiness consists. The NT has no hesitation in applying the same term to both God and man, and in bidding us be 'holy as he is holy.' God is holy, because, as the absolute moral Reality of the world, separate from all evil and infinite in every excellence, He is pledged by His own nature to secure a perfect and loving righteousness everywhere, even at the cost of redemption. Man is holy when he is brought by grace into that relationship to God by which the Divine righteousness may be honoured and conserved. The progressive ethicizing of this idea constitutes the Biblical revelation, and Christ's advance on the OT teaching in this respect consists in His own unique conception and manifestation of God. God is the 'Holy Father,' a Being who freely loves and saves His guilty children, not only without any sacrifice of His Divine sanctity, but even by its supreme exercise. This combination of holiness and love in God constitutes His excelling glory. The holiness humbles us and forbids an unethical presuming on His kindness. The Fatherhood attracts us and forbids a despairing dread of His commandments. And the acknowledging of this essential glory of the Father, by a reverent hallowing of His name in life and service, must ever be bound up with the coming of His kingdom and the doing of His will on earth as it is done in heaven.

This characteristic NT association of the holiness of God with the Divine Fatherhood recurs in an important passage, Heb. 12:10, where God is spoken of, in the language of the home, as a Father chastening His children 'that they may be partakers of His holiness.' Here, too, we have a breaking away from the more negative OT view of the Divine holiness. God disciplines us through suffering, that we may enter into that filial relationship of obedient and trustful love (*pietas*) in which true holiness consists. On the meaning of God's holiness and its relation to holiness in man, see *PRE³*, s.v. 'Heiligkeit Gottes im AT'; Sanday-Headlam on Ro 17, and Hort on 1 P 1:15.

Man's holiness thus consists in a perfect moral sonship, the consecration of all his powers and opportunities to the worship of God, and the realization of His gracious purposes in history. Of such a perfect holiness Jesus Christ Himself is the unique example. For this very purpose the Holy Father consecrated Him and sent Him into the world, so that He was holy from the beginning (Lk 1:35, Jn 10:36). To the same purpose Jesus steadfastly consecrated Himself to the end (Jn 17:19

18:37). Through an eternal Spirit He offered Himself without blemish to God (He 9:14). The result was something more than mere sinlessness. It was the full presentation, in the first instance to God Himself, of the moral glory of the Father's own holiness, through the pouring of the Spirit without measure upon Him, and His own perfect obedience to the Father's will—a holiness manifesting itself not in withdrawal from the world, but in a life of perfect love and action among men, and finding its inevitable consummation and ratification in the power of the Resurrection (Ro 1:4). It is in keeping with all this that Christ is referred to throughout the NT as pre-eminently 'holy,' by the announcing angel (Lk 1:35), the disciples (Jn 6:69), and the believing Church (Ac 2:27, He 7:26, 1 Jn 2:20, Rev 3:7).

The supreme test and manifestation of this perfect sanctity of Christ was the death upon the cross. By this crowning act our Lord honoured, secured, and satisfied the Divine holiness as well as perfected His own, on a world scale and at history's moral centre, in a supreme judgment upon and victory over sin, through the sacrifice of an active and complete obedience. By this perfect purification of human guilt (He 1:3) Christ both fulfilled and abolished the whole sacrificial system (9:28 10:26), and became unto men 'sanctification' (1 Co 1:30), the objective ground or warrant of the believer's new standing of holiness before God. Through the one offering of His body on the cross He 'perfected for ever them that are being sanctified' (*ἀγιασθέντες*), i.e. He effected in principle the complete sanctification of His followers in the eternal future, rendering them independent of every other sacrifice (He 10:14).

Further, the holiness of Christ, which conditions that of the Christian, also guarantees it. 'Both he that sanctifieth and they that are sanctified are all of one' (He 2:11). Being separated unto God in baptism, believers find themselves washed, sanctified, justified in the name of the Lord Jesus (1 Co 6:11), and, entering into all the privileges of the old covenant on a new plane, they know themselves to be 'an elect race, a royal priesthood, a holy nation, a people for God's own possession' (1 P 2:9, Dn 7:18). Such believers are already called 'saints,' not because of their attainments, but because of their new standing as regenerated or 'sanctified in Christ Jesus' (1 Co 1:2), who is the encompassing sphere, as it were, in which the whole process is begun, continued, and ended. Having Him as *ἀγιασμός*, they themselves are *ἅγιοι*, earmarked, destined, and set apart from everything profane, as belonging to God and His kingdom, although as yet they may be no more than babes in Christ, or even carnal.

It still remains, however, that this preliminary implicit hallowing of the inmost personality shall become explicit in a holy character and manifest itself in every sphere of daily conduct (cf. Hort on 1 P 1:15). The Christian must work out in practice what he already is in principle, since deliverance from the guilt of sin through justification involves deliverance from its power through sanctification. There is thus a growth *in* holiness rather than into it (1 Ti 2:15). The NT is explicit in emphasizing the ethical nature of true holiness, its contrast to all licence and uncleanness (Ro 6:19-22, 1 Th 4:3-7). Christians must consecrate body as well as spirit; and all sins against the body, which is God's temple, are tantamount to sacrilege (Ro 12:1, 1 Co 6:15-20). Stress is also laid on the importance of our co-operating effort and initiative in sanctification (2 Co 7:1, Ja 4:8, 1 P 1:22, 1 Jn 3:3). Yet the whole process is spoken of as wrought by the Holy Spirit in our hearts (Ro 15:16, 1 Co 12:11, Eph 3:20) in conjunction with our faith (Ac 15:9 26:18, Gal 3:14).

Indeed, the two agencies are regarded as complementary and inseparable (Eph 1^{13, 14}, Ph 2^{12, 13}, 2 Th 2¹³). To the extent that we consecrate, the Spirit sanctifies. Nor is NT holiness a merely negative or self-regarding sinlessness, an ascetic purity or abstinence from known sin. It implies the constant activity and positive exercise of all goodness in the realm of daily life. As such, Christian holiness is necessarily a social grace, and it ripens many gifts and adjusts many idiosyncrasies of character. So impossible is the perfecting of holiness in isolation that the NT never contemplates a single 'saint,' but speaks constantly of 'the saints' or a 'holy people.' The root of Christian holiness is faith, and its flower is love; and the sphere for the cultivation of this holy love in Christ is His Body, the society of the Christian Church (1 Co 12¹²⁻²⁷, Eph 1²³ 4¹⁰, Col 2¹⁹).

The final goal of the Christian life is complete holiness, the deliverance of the soul from the guilt, power, and even presence, not of sin only but of sins also, through its perfecting in holy love (1 Jn 1⁹ 2¹⁻⁶ 3¹⁻⁹). It is the teaching of John that this follows inevitably from the believer's dwelling in Him who is the negation of all sin and its destroyer, and who came not only to impute but also to impart righteousness, even as He is righteous. Where the Divine 'seed' of the Holy Spirit abides in the child of God, the kinship to Satan is necessarily annulled, and the Christian need not, must not, does not, and cannot sin, since it is impossible that Christ and sin should dwell together in the same breast. Whether John is here speaking of an actual attained experience (G. G. Findlay, *Fellowship in the Life Eternal*, London, 1909, pp. 114, 253-269), or is merely affirming the moral implications of an ideal faith (P. T. Forsyth, *Christian Perfection*², London, 1910, pp. 1-49), is a matter of dispute. Strictly speaking, only the eternal Son was fully perfect. Even in regenerate Christians, allowance has still to be made for occasional lapsing into transgression through ignorance, surprise, or hostile circumstance (2¹). Such sin, however, does not *reign*, as it does in the unregenerate. It is not unto death, and can plead the Advocate with the Father. The Christian perfection taught in the NT is not faultlessness but blamelessness and loyalty, the staying of the heart in the obedience and love of God through faith, however the feet may be betrayed by the deceitfulness of sin into hidden snares. It is (a) *relative* to our creaturely experience and earthly limitations; (b) *derived* from God's grace in Christ, not based on any merits of our own; (c) *progressive*, or capable of indefinite improvement; (d) *alienable* or forfeitable, not guaranteed to perpetuity, but (e) *conditional* on faith, our striving against sin, and steadfast abiding in the love of God. It will also be characterized by humility, contrition, and self-sparagement. Such earthly or relative perfection, which *consists* in faith, is necessarily different from that full and final perfecting which *crowns* our faith, and which awaits the consummation of Christ's atoning work (Ro 8^{29, 30}, 2 Co 3¹⁸, Ph 1⁶, Col 1^{22, 23}, 1 Jn 3⁹).

We may now attempt to gather into a few propositions the teaching of the NT on this subject, without losing sight of the warning reminder of Lord Morley, that holiness is the 'deepest of all the words that defy definition' (*Voltaire*³, London, 1878, p. 175).—(1) Holiness is the sovereignly moral or self-preserving element in perfect love—that element in it which, to secure the ends of righteousness, exerts a reaction of wrath or self-defence against all that would impair its purity and intensity. 'It is the holy that makes love divine, makes it racial, eternal, sure, changeless, and invincible' (P. T. Forsyth, *The Principle of Authority*, London,

1912, p. 211).—(2) Christian holiness results from the imparting to man of God's own holiness, as it is mediated through Christ in a new creation.—(3) In one aspect, it is the fruit of sanctifying grace in us, the effect of the Holy Spirit working in our faith, to separate us from sin, perfect us in goodness, and enable us to do the will of God.—(4) In another aspect, it is the result of our own moral effort and aspiration of faith—an effort engaging the entire personality, body as well as soul, in the life of righteousness and love.—(5) Such holiness implies the existence of the Christian community, as the necessary soil and atmosphere in which it lives, and (6) it is a continuous and progressive spiritual discipline.—(7) Finally, while the NT distinguishes holiness as something larger than morality,¹ it yet knows of no divorce between holiness and virtue. 'Holiness is virtue rooted in the religious relation. . . . The distinction between holiness and virtue is qualitative, not quantitative' (W. R. Inge, *Faith and its Psychology*, London, 1909, p. 240).

II. *HISTORICAL DEVELOPMENT*.—The materials presented in the NT were very variously utilized in the history of the Church. Now one aspect, and now another, of the full-orbed Christian doctrine was singled out and emphasized, and the conception of holiness changed with every changing view of the nature of the evil to be shunned and the goal of ideal perfection to be attained.

1. Gnosticism introduced into the Christianity of the early Church a crude Oriental dualism and a fantastic Greek system of speculation, which tended to substitute a metaphysical or semi-physical cosmology of redemption, with an allegorizing of history, for the NT gospel of the Incarnation. Evil was identified with matter, and salvation consisted in the exaltation of the soul from unhallowed immersion in the material world of sense to its true spiritual home in the Divine *pleroma*, by means of ascetic purifications, mystical rites, and the illumination of a special *gnosis* granted to the pneumatic or truly spiritual Christian, and superior to the historic *pistis* which sufficed for the ordinary believer, or merely psychic Christian. Insight was elevated above faith. The result was a kind of *esoteric holiness*, more theosophic and speculative than ethical and spiritual.

2. On the other hand, Montanism, or *prophetic holiness*, was a protest against the rapid 'secularization' of the Church as it spread through the Roman Empire in the 2nd century. It sought, by a more ascetic discipline and the cultivation of the spirit of ecstatic 'prophecy' among the laity, to distinguish the congregation of the 'holy' not only from the world outside the Church, but also from the worldly elements within it, in view of the expected advent of the Lord in Phrygia. Montanism went beyond the NT conception of holiness in affirming a new dispensation of the Spirit. 'The Paraclete has revealed greater things through Montanus than Christ revealed through the Gospel' (pseudo-Tertullian, 52).² Yet it was a serious attempt to realize the ideal of the 'holy Church' by insisting that a pristine purity of communion must necessarily accompany established purity of doctrine. Montanism was the first of many efforts made within Christianity to restrict the membership of the Church to those actually holy or spiritually elect. Negatively, it forced the Church

¹ 'No holy person is not good, but not every good person is holy. The distinguishing feature of holiness would seem to reside in something which lies beyond goodness, or at any rate is an addition to it. . . . There lies a touch of excess in holiness. It is not a matter of rule and policy . . . of more or less, but of nothing and all. Holiness needs fervour' (C. G. Montefiore, *Truth in Religion*, London, 1906, pp. 89, 95). 'For holiness is wanted a harmony of will, a perfect self-devotion, death to self and absolute submission' (*Amiel's Journal*, Eng. tr., London, 1892, p. 207).

² Migne, *PL* ii. 91.

gradually to take up the position, especially after the Novatian and Donatist controversies of the 3rd and 4th centuries, that its holiness consists not necessarily in the spiritual purity of all its members, but in the official and inalienable connexion of its orders with the Holy Spirit, the true doctrine it teaches, the eminent saints it can produce—in fact, in its possession of the means of all grace and holiness in the deposit of faith and in the sacraments. 'The Church . . . was legitimised by the possession of the apostolic tradition instead of by the realising of that tradition in heart and life' (A. Harnack, *History of Dogma*³, Eng. tr., London, 1894-99, ii. 83).

3. The recognition thus openly given to higher and lower planes of sanctity within the Church led, first of all, to a duality of practice, still under ordinary social conditions, reflected in a theory of the 'Two Lives' (cf. C. Bigg, *Christian Platonists of Alexandria*, Oxford, 1886, p. 83 ff.; E. Hatch, *Influence of Greek Ideas*, London, 1890, p. 164 ff.), and finally to **Monasticism** as a fresh type of *ascetic holiness*. Early monasticism may be regarded as a continuation of the aims of Montanistic 'Puritanism,' without its anti-ecclesiastical elements, and welcomed by the Church itself. Despairing of making the majority even of its own members holy, the Church sought to counteract the prevailing laxity by approving, side by side with ordinary Christianity and in loose attachment even to the sacraments, the pursuit of holiness by particularly religious persons, released from ordinary social obligations. Thus, whereas Jesus bade *all* His followers be 'perfect,' and the NT *ἅγιοι* and *τέλειοι* were sanctified or mature Christians in the ordinary walks of life; and whereas even Clement regarded the ideal 'Gnostic' as one who took his place in the daily round, 'acting the drama of life which God has given him to play' (*Strom.* vii. 11), monasticism confined 'the religious' to a professional class, who should make the cultivation of holiness a distinct calling by fleeing from the world. Based thus on a religious egoism and an essentially dualistic view of the world, both of them alien to Christ's spirit, monasticism cultivated a negative or retired type of holiness. It attached a unique sanctity, not to inner renunciation or detachment from the world, with an exemplary practice of the ordinary Christian virtues, but to an external abnegation of all property and marriage, and to the practice of artificially selected virtues such as poverty, chastity, and ecclesiastical obedience. In monasticism, too, the holy man tended to identify himself with the sufferings and death of Christ rather than with His glorious risen life and quickening Spirit. Holiness was to be attained and peace won by refinements of mortification, a severe penitence, and the rigours of self-disciplinary effort, rather than by the free gift of God's sanctifying Spirit acting on the soul through faith.

³The Ascetic theory has always rested in the contest between the human spirit and the flesh: too often forgetting that the Divine Spirit is not merely the umpire and witness, but the Almighty Agent also in the destruction of sin' (W. B. Pope, *Compendium of Christian Theology*², London, 1880, iii. 68).

There was, no doubt, gain as well as loss in the ideals of monasticism. It kept the light of religion burning in dark ages, and rebuked all diletant forms of holiness by the example of a heroic and thoroughgoing renunciation. But its defect was that it made asceticism an end in itself rather than a means, withdrew the practice of holiness from its proper sphere in the ordinary life of the community, depressed and falsified the standard of holiness to be attained by the average man, and left to itself the world which it should have leavened. The degree of individualism marking monasticism varied in different countries and at different epochs, often becoming, especially in the

West, social and co-operative within the narrow circle of the monastery, as well as devoted to works of general utility. But still its holiness remained at heart a 'sublime individualism,' in marked contrast to the ideals of the NT.

4. A new conception emerged in **Pelagianism**, which may perhaps be described as a kind of *natural holiness* or Christian Stoicism. Pelagius claimed that, by means of the freedom of the will and the help afforded by God's grace in revelation, man is capable of perfect conformity to the will of God, who prescribes nothing impossible. In so far as man is *not* capable of conforming to the Divine ideal, he cannot be charged with sin for failing to do so, since there is no sin prior to the actual choice of evil by the free will.

'Quaerendum est, utrumne debeat homo sine peccato esse. Procul dubio debet. Si debet, potest; si non potest, ergo nec debet; et si non debet homo esse sine peccato, debet ergo cum peccato esse; et jam peccatum non erit, si illud debere constiterit. Aut si hoc etiam dici absurdum est, confiteri necesse est debere hominem sine peccato esse, et constat eum non aliud debere quam potest' (Pelag. *apud* Aug. *de Perf. Just.* 3).

This essentially rationalistic system of belief in the inherent capacity of man to achieve all the righteousness required of him appears in history in various forms, such as Socinianism and modern Naturalism. But it belittles the Divine demand, lays stress on sympathetic goodness rather than on the holiness that is mediated through faith, rejects both atonement and regeneration, and conflicts with the normal Christian consciousness of sin and grace. 'Grace is needed to make a man into a saint, and if any man doubt this he knows not what is a saint nor what is a man' (Pascal, *Thoughts*, Eng. tr., London, 1889, p. 296).

5. This truth was brought out by **Augustine**, who made the keystone of his entire system the utter dependence of the believer, for the beginning, middle, and end of Christian holiness, on the free, indispensable, supernatural, preventent, and irresistible grace of God. Two other aspects of Christian holiness received prominence in Augustine: (a) its personal, emotional aspect, as a cleaving to the Lord God, the living individual relationship of faith, humility, and love, which appropriates the Divine Spirit and leads at last to life's blissful goal of perfect knowledge, vision, righteousness, fruition, and eternal rest; and (b) its social aspect, as a grace mediated to us only by means of and within the Christian Church, which is the *civitas dei*, the Kingdom of God on earth, and the sole sphere of salvation. Augustine may thus be said to have attached equal importance to the inward experience of grace and to its outward ecclesiastical attestation; but the emphasis which he laid on the moral effect of the infused love of God, as conditioning our holiness, rather than on the soul's new religious standing through forgiveness and regenerating faith, gave a direction to the Church's doctrine on this subject which was not to receive a corrective until the Reformation.

6. From Augustine sprang the mediæval conception of *sacramental holiness*, which was developed in systematic detail by the schoolmen, and reached its final form in the Catholicism of the Council of Trent. The characteristic features of this type are the objective provision for man's holiness in the supernatural grace of the sacraments, and the place assigned to merit in the process of sanctification. The one perfect treasury of all holiness and righteousness is Jesus Christ. We become members of His body, and share in the fruits of His Incarnation and Passion, when we receive the sanctifying grace of His Holy Spirit. This preventent grace is a supernatural power or quality infused into the soul by means of the Divinely appointed sacraments or through prayer. It imparts the impulse towards righteousness and God, obliter-

ates sin both original and mortal,¹ and produces, on the condition of our co-operating trust, that inner sanctification or disposition of assenting faith and justifying love which warrants the Divine forgiveness, inaugurates a state of supernatural sonship or infused habit of holiness, and enables the soul to acquire those merits which are requisite for salvation.²

¹By a justifying faith the [Catholic] Church understands qualitatively the theoretical faith in the truths of Revelation, and demands over and above this faith other acts of preparation for justification': namely, fear, hope, charity, penance, and almsgiving (*The Catholic Encyclopædia*, vi. [1909] 701 f.; cf. *Council of Trent*, vi. 7, 9).

These good works, however, are themselves the fruit of co-operating grace,³ which incites and stirs into activity the latent goodness of man, and enables him, by a refined synergism, to fulfil the law of Christ, to receive justification, and to merit, *ex condigno*, or in strict justice, increase of grace, eternal glory, the *fruitio dei*, and participation in the Divine nature, which are the rewards of holiness.⁴ In Catholicism, justification is not simply a formal declaration of the forgiveness and remission of sins, with an external imputation of the holiness of Christ through faith; it is the actual result of the sacramental renewal of the inner man, by means of the acquisition of a new *qualitas* within the soul, as it is appropriated through incorporation in the Holy Catholic Church. As such, justification is necessarily gradual and not instantaneous. It admits of increase and decrease or even loss, according to each man's co-operating disposition to receive it,⁵ the plain precepts of the gospel sufficing for ordinary Christians of the second order, while higher counsels of perfection remain additional and optional for such as 'in a better and quicker way' would attain to eternal life by totally abandoning the good things of this world.⁶ These not only attain to a religious level 'quæ statum perfectionis profitetur,' but they may even so excel in holiness beyond what is strictly required of them ('bonum superexcedens' [*Summa*, II. i. qu. 109, art. 2]) as to accumulate a treasury of merit or works of supererogation, which are available for less mature Christians in the form of indulgences (*q.v.*), by a kind of transferred holiness, yet always on the basis of the mystic union of believers in the One Head.⁷ The absence of any assurance of salvation in this system⁸ constrains the believer to supplement his faith by making diligent use of the Church's means of grace and by applying himself eagerly to salutary acts of virtue, in order to acquire, 'by many repeated efforts after obedience,' that holiness which is necessary for future blessedness (see J. H. Newman, *Parochial and Plain Sermons*⁵, London, 1844, i. 1-16).

7. Side by side with this sacramental type of holiness, and partly in protest against its spirit, there was fostered within the Church the piety of **Mysticism**, or immediate *subjective holiness*. Mysticism has assumed many forms in the history of the Church, but its characteristic ethical feature is the desire for inward purity as a neces-

¹ Thomas Aquinas, *Summa*, III. qu. 69, 86, 87; *Council of Trent*, v. 5, vi. 14, 16¹¹.

² *Summa*, I. qu. 110-114; *Trent*, vi. 7.

³ Augustine, *de Gestis*, 35; *Trent*, vi. 16.

⁴ *Summa*, II. i. qu. 114, art. 3; *Trent*, vi. 5, 16³².

⁵ *Trent*, vi. 10, 15.

⁶ *Summa*, II. i. qu. 108, art. 4. See, further, art. COUNSELS AND PRECEPTS. Official Catholicism, however, does not require withdrawal from the world as a condition of complete holiness.

⁷ For the canonization of a servant of God it is sufficient that there be proof that he has practised those virtues which occasion demanded, in an eminent and heroic degree, according to his condition in life, rank, and circumstances' (Benedict XIV., *de Servorum Dei Beatific. et Beatorum Canoniz.*, Padua, 1743, III. 21).

⁸ *Summa*, III. suppl. qu. 13, 25. Cf. III. qu. 48, art. 2; *Trent*, vi. 16; *The Catholic Encyc.* x. [1911] 203.

⁹ *Summa*, II. i. qu. 112, art. 5; *Trent*, vi. 9, 16¹³⁻¹⁵.

sary condition of beholding and being united to God, through purgation, illumination, the renunciation of all creatures, and the elevation of the soul above the distractions and multiplicities of the world of time and sense. In its extreme forms, mysticism tends to dispense with everything external and intermediary, and to wander into vague regions that are non-Christian, non-historical, and even pantheistic, thus making a fatal sacrifice of the Divine holiness. Christian mysticism frequently tends to depart from NT holiness by seeking to approach God otherwise than through the Incarnate Word, the means of grace, and the sole relationship of faith, as well as in its whole manner of laying emphasis on finitude rather than sinfulness, immanence rather than transcendence, communion rather than forgiveness, feeling and imagination rather than will and conscience, the bliss of personal absorption in the life of God rather than a life of filial obedience to His will. Yet mysticism has ever served piety by insisting on inward experience and spiritual passion in religion; and in a St. Bernard it exhibited intense personal love of the suffering and lowly Jesus, the Bridegroom of the soul, as an all-important element in Christian holiness.

8. In the Mendicant Orders we find a still further reaction against the clerical ideal of sanctity, in the emphasis laid upon *lay holiness*. St. Francis and the friars brought back holiness from monasteries, churches, and the technicalities of hierarchical religion to the homes and haunts of ordinary men and the service of one's neighbour, by the preaching of penitence, humility, love, and a joyous imitation of the poverty of Jesus.¹

9. The chief corrective, however, to the sacramental conception of holiness was to come not from mysticism within the mediæval Church, but from Protestantism outside it. The Reformers contended for a *fiduciary holiness*, based on the religious experience of faith.

¹ Augustine and Catholicism attached great weight to sin; but behind sin stood *concupiscentia*, virtually a physical conception; and behind righteousness the hyper-physical *infusio dilectionis*, etc. Hence Catholicism culminates in ascetic morality and mysticism. For Luther there stands behind sin in the ethical sense sin in the religious sense, *i.e.* unbelief, and behind the being righteous the fundamental religious virtue, *i.e.* faith. . . . Luther attained that which Augustine, owing to his Neo-Platonism, was not fortunate enough to reach, notwithstanding numerous approaches to it; he made Christianity again a religion' (F. Loofs, *Leitfaden* 4, Halle, 1906, p. 737 f.).

(a) To the mystical doctrine of holiness through spiritual absorption in God in a love that replaces faith, Luther opposed the evangelical doctrine—itsself essentially mystical—of the soul's present justification and holiness through the forgiveness of sins and a personal acceptance with the Father, for Christ's sake, by means of a sincerely penitent and trustful faith which neither need be nor can ever be outgrown. To the semi-Pelagian Catholic doctrine of holiness, with its mysterious stream of forces in the sacraments, its infused and almost quantitative grace, its merely assenting faith, its elaborate penitential apparatus for the removal of sin, its toil and uncertainty, its emphasis on co-operating merit as imparting to the believer an objective and inherent righteousness before God—to all this Luther opposed the more religious conception of a joyous present certainty of individual salvation as a result of the direct personal relationship of childlike faith in the Father who has opened His loving heart to us in Christ Jesus, and won our unswerving trust by the free forgiveness of our sins. In such a system, sanctification, so far from being a stage in the process of justification, issues from justification as its necessary obverse; for there is no other or further holiness possible

¹ For the Friends of God, Waldenses, and other holiness sects of the Middle Ages, see separate articles.

to the Christian than that of faith, which is simply the continual daily appropriation, not of forgiveness only, but of God Himself in Christ, as the source of the believer's peace, power, righteousness, and good works. In the teaching of Luther, Christ Himself assumed the central place which in Scholasticism was occupied by infused grace; and the holiness of monasticism, with its ascetic morality and withdrawal from the world, was rejected to make way for a holiness of faith which could nowhere be better exemplified than in one's ordinary calling as ordained by God.

'Perfectio Christiana est serio timere Deum, et rursus concipere magnam fidem, et confidere propter Christum, quod habeamus Deum placatum, petere a Deo, et certo expectare auxilium in omnibus rebus gerendis, juxta vocationem; interim foris diligenter facere bona opera, et servare vocationi. In his rebus est vera perfectio et verus cultus Dei' (*Augsburg Confession*, 1530, ii. 27).

(b) The teaching of Calvin on this subject was governed by his doctrine of Divine predestination, electing grace, and the sovereign will of God. His aim was to cultivate an *intensive holiness* which should consist not simply, as Luther so breezily taught, in that free and loving service of all men which results from the joyous experience of the Divine forgiveness, but rather in reverent obedience to God's commandments and the observance of 'such legitimate worship as is prescribed by the law' of God (*Inst.* i. ii. 3). True holiness is possible only to such as are elect by the decree of God (*III.* xxii. 2), and it follows by a Divine inner necessity from justification, yet only within the sphere of the Christian Church, because of its possession of the Word and sacraments (*IV.* i. 4, 16). Not that all the members of the Church are equally holy,

'only that with their whole heart they aspire after holiness and perfect purity; and hence, that purity which they have not yet fully attained is, by the kindness of God, attributed to them.' 'The Church is sanctified by Christ, but here the commencement only of her sanctification is seen: the end and entire completion will be effected when Christ, the Holy of holy ones, shall truly and completely fill her with His own holiness' (*IV.* i. 17, viii. 12).

Hence the importance attached by Calvin to a strict ecclesiastical discipline as a means to holiness (*IV.* xii.).

'According to Luther the primary purpose of the Church was to proclaim the Gospel of God's forgiving love in Christ; according to Calvin it was to train the elect in holiness. . . . The notion of the Church as a communion of holy people, pure both in doctrine and in conduct, because wholly governed by the will of God, increasingly overshadowed the idea of it as an agency for the proclamation of God's forgiving love' (A. C. McGiffert, in *Essays in Modern Theology and Related Subjects*, New York, 1911, p. 218 f.).

These characteristics profoundly influenced modern Europe and gave birth to the *austere holiness* of Scottish Presbyterianism and English Puritanism, with their occasional excesses of harsh casuistry, Sabbatarian gloom, and iconoclastic zeal, but with compensating glories of spiritual grandeur and imaginative power. These types aimed at recovering the full *ethical* content of holiness, as well as the due emphasis on the holiness of God, and, by a new asceticism, they were all the more mighty in outwardly dominating the world because they had inwardly and spiritually renounced it (see E. Troeltsch, *Protestantism and Progress*, Eng. tr., London, 1912, pp. 79-85, 136-141).

10. The ferment caused by the Reformation gave rise to several attempts, mostly non-ecclesiastical, to establish a more *experimental holiness*, the various forms of which may be studied in the Anabaptists, Seekers, Quakers, and other sects, in Pascal and the Port-Royalists, and in Molinos, Fénelon, Madame Guyon, and the Quietists. In Germany in the 18th cent. the movement took the form of Pietism, a reaction against the stiff scholastic dogmatism of the Lutheran Church and current rationalism. Spener, Francke, and Gottfried Arnold were the leaders of a school which sought to transfer

the emphasis in religion from belief in an orthodox creed, and reliance upon institutions and means of grace, to the more emotional and personal appropriation of saving truth and the exemplification of it in holy conduct. The experience of conversion and regeneration was insisted on as an indispensable preliminary to the true knowledge of God or the fruitful study of theology. 'Awakened' Christians were encouraged to meet together for free prayer, and an attitude of aloofness or antagonism was taken up towards worldly amusements and secular culture. The movement gave rise to both philanthropic and fanatical developments, and in passing over into Moravianism it revealed strong separatist as well as missionary tendencies.

11. Moravianism in its turn did much to inspire Methodism, with its characteristic doctrine of *perfect holiness*. Already in his undergraduate days at Oxford, John Wesley had been known as the founder and leader of the 'Holy Club.' When he was about twenty-two, the reading of Thomas à Kempis led him to see that

'true religion was seated in the heart, and that God's law extended to all our thoughts as well as words and actions. . . . I set apart an hour or two a day for religious retirement. I communicated every week. I watched against all sin, whether in word or deed. I began to aim at, and pray for, inward holiness' (*The Journal of John Wesley*, ed. N. Curnock, London, 1909, i. 466 f.).

These and subsequent experiences, rather than any abstract theorizing on the subject, led Wesley to become the life-long champion of doctrines which he afterwards unfolded in 'A Plain Account of Christian Perfection, as believed and taught by the Rev. Mr. John Wesley, from the year 1725 to the year 1777' (*Works*², London, 1830, xi. 366-446).¹ Wesley 'believed and preached that the Divine Spirit was as mighty in administering redemption as the Divine Son in accomplishing it' (*A New History of Methodism*, ed. W. J. Townsend, etc., London, 1909, i. 214). In opposition to the Catholic doctrine of meritorious perfection, the mystical conception of perfection through isolated communion with and absorption in deity, and the general view of perfection as something to be attained only in a future life, Wesley maintained the doctrine of a present evangelical or Christian perfection in the entire sanctification of perfect love. Such perfection is not to be confused with absolute or angelic or 'Adamic' righteousness, and is consistent with a thousand defects arising from our ignorance, infirmity, and creaturely limitations, being relative to the helps and opportunities of every moment. 'It is the perfection of which man is capable while dwelling in a corruptible body; it is loving the Lord his God with all his heart and with all his soul and with all his mind.' The sin from which it is free is 'the voluntary transgression of any known law,' and it implies constant self-renunciation and even fasting, the careful observance of Divine ordinances, a humble, steadfast reliance on God's forgiving grace in the Atonement, a pure intention to regard God's glory in all things, and an increasing exercise of the love which itself fulfils the whole law and is the end of the commandments.

'The perfection which I have taught these forty years cannot be a delusion, unless the Bible be a delusion too; I mean, *loving God with all our heart, and our neighbour as ourselves*. I pin down all its opposers to this definition of it. No evasion! No shifting the question! Where is the delusion of this?' (*Journal*, 27th Aug. 1768).

This doctrine of full sanctification was 'the grand *depositum* which God has lodged with the people called Methodists; and for the sake of propagating

¹ Wesley's doctrine of perfection may be studied further in the *Journal*, 24th July 1762, 14th May 1765, 27th Aug. 1768, 26th June 1769; *Sermons*, nos. xliii., lxxvi., cxx.; and the *Letters* dated 5th Apr. 1768, 7th July 1761, 15th Sept. 1762, 12th May 1763, 21st Feb. 1771. See also *Minutes of Conversations*, June 1744 and Aug. 1745, and the *Methodist Hymn Book*, section 'For Believers Seeking Full Redemption.'

this chiefly, He seems to have raised them up.' Wesley even doubted whether any who preached against it could continue in the Society (*Letters*, 15th Sept., 26th Nov. 1790).
