The *Fruit Situation* is published in February, July, September, and November.

The deciduous fruit crops in the table below have a 7 percent increase in production from last year. This does not include apples, grapes, fall and winter pears, or some others. Peach production is forecast near last year's level, but the Clingstone crop in California is down 5 percent. West Coast Bartlett pear output is estimated 39 percent above last year's small crop and cherry prospects are substantially higher than a year ago. Plum and prune production in California may be down substantially from the large crops of last year but the almond crop appears 9 percent larger. The 1971 estimate for apricots is 17 percent higher than last year and for strawberries 4 percent lower.

The 1970/71 orange crop is indicated 4 percent larger than the previous season with Florida output 5 percent higher and California the same. Harvest of Florida Valencias was nearly complete by mid-June and harvest in California was still active. By the end of May, four-fifths of the U.S. crop had been harvested with fresh use down slightly and processing use up from last season. With strong consumer demand and somewhat smaller shipments, f.o.b. prices of fresh packed Florida oranges in May averaged 25 percent above a year ago and in California they averaged 35 percent higher.

The expected grapefruit crop for 1970/71 is 12 percent above the past two seasons. By June 1, harvest was nearly complete with fresh use up 4 to 5 percent and processing use up one-fifth. In May, f.o.b. prices of fresh packed Florida grapefruit averaged 15 percent above a year ago. Lemon production is forecast 8 percent greater than last season. Harvest was completed in Arizona and on June 1 about half finished in California. Both fresh and processed utilization to June 1 were below last season's levels; in May, the U.S. average f.o.b. price for fresh packed lemons was 31 percent above last season.

The canned pack of non-citrus fruits in the 1970/71 season was about one-fifth smaller than 1969/70. The carryin was one-fourth larger though, so total supply is

U.S. fruit production for selected crops: 1969,
1970, and indicated 1971

Crop	1969	1970	1971
	1,000 tons	1,000 tons	1,000 tons
Apricots	231	176	207
Cherries, sweet	127	122	137
Cherries, tart	152	119	130
Nectarines	66	66	70
Peaches	1,833	1,506	1,478
Bartlett pears (West Coast) ...	488	384	535
Strawberries	243	247	238
Total	3,140	2,620	2,795

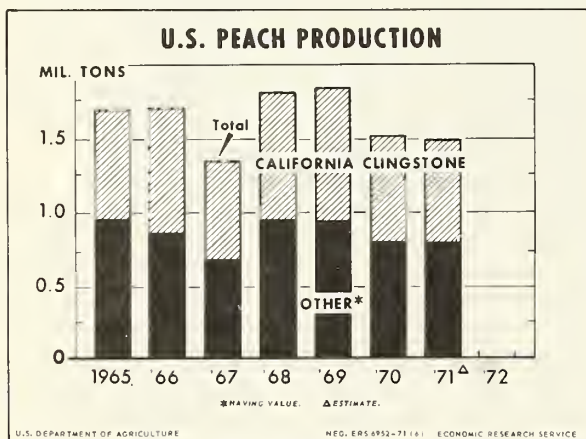

only about a tenth less. The supply of canned apples is 15 percent less than last season, applesauce 6 percent less, RSP cherries 30 percent less, fruit cocktail 19 percent less, Clingstone peaches 13 percent less, and pears 12 percent less. Raisin production for 1970/71 fell 22 percent, but the saleable supply of dried prunes was up 5 percent. The pack of frozen fruits was about 8 percent less than the previous season, although the frozen strawberry pack was 13 percent larger.

About 8 percent more citrus had been processed in Florida by June 13 than the same time a year ago. Two

percent more citrus remains in Florida for certified use. (Certified use excludes certain minor utilization channels.) While the carryin and pack of frozen concentrated orange juice have been greater this season than last, the movement has been about one-third more. This leaves stocks about 5 percent under a year ago. Florida cannery prices of 6-ounce cans are 16 percent higher. The pack of canned single-strength grapefruit juice this season has been about 16 percent greater than last and stocks are around 28 percent larger. F.o.b. cannery prices are 7 percent higher.

FRESH FRUIT AND NUTS

PEACHES.—The 1971 crop is forecast at 2,957 million pounds, 2 percent below last year and 19 percent below 1969. Excluding California's Clingstones, used mostly for canning, the forecast is 1 percent above last season. The 9 Southern States expect 12 percent less production than last year, while greater output will come from the North Atlantic and North Central States. The crop appears larger in most of the Western States except California where the Clingstone crop and the Freestone crop are both down 5 percent.

In early June, fresh peach f.o.b. prices in Fresno, Calif. were about one-fifth above a year ago while in Macon, Ga., they were around 30 percent higher.

PEARS.—With generally good weather conditions, bloom and set of West Coast Bartlett pears were heavy and production is estimated at 535,000 tons, 39 percent above last year and 10 percent above 1969. The crop promises to be of good quality. California's Bartlett crop is expected to be 35 percent larger than last year, Oregon's more than double last year's short crop, and Washington's 20 percent higher.

APPLES.—Cold storage holdings of apples at the end of May were 231 million pounds, 21 percent more than a year ago. Controlled atmosphere holdings were 63 percent of the total compared with 60 percent last year. During 1971 the average U.S. price received by farmers for fresh use has been above year-ago levels. In May it

was 7.25 cents per pounds, 28 percent above a year ago. The July USDA *Crop Production* report will carry an estimate of the 1971 crop.

CHERRIES.—Total 1971 cherry production is forecast at 267,000 tons, 11 percent higher than last year with sweet cherries up 13 percent and tart up 10 percent. In the Great Lakes States sweet cherry output is 30,000 tons, 20 percent over last season and higher in all 3 producing States. Production of sweet cherries in 7 Western States is expected to be 107,400 tons, 11 percent above last year. Larger crops are expected in all Western States except Oregon. The tart cherry crop in the Great Lake States is 118,000 tons, up 8 percent. Of the 5 producing States, New York, Michigan, and Wisconsin expect larger crops. Tart cherry production in 3 Western States is forecast at 11,950 tons, 51 percent more than last year. Oregon and Colorado expect larger crops but Utah's output will be down. On April 1 stocks of canned RSP cherries were 23 percent less than a year ago and canned sweet cherries 9 percent greater. Frozen cherry stocks on May 31 were 36 percent less than a year ago.

STRAWBERRIES.—The indicated 1971 strawberry crop totals 476 million pounds, 4 percent under last year. Production in all major areas is below last year because of acreage reductions. Yields are expected to equal or exceed the levels of 1970. The California crop is indicated to be 282 million pounds, down 2-1/2 percent from last year. Fresh strawberry f.o.b. prices in California in mid-June were a little below a year ago, with fresh movement larger. On the Eastern Shore of Maryland and Virginia, f.o.b. prices were above the year-ago levels.

U.S. strawberry imports

	U.S. strawberry imports		
	January-April	Fresh	Frozen
		Million pounds	Million pounds
1967		14.0	30.6
1968		18.9	31.5
1969		35.8	45.8
1970		40.0	55.2
1971		41.5	36.9

Imports of strawberries have been trending upward but to date in 1971 frozen are below the level of last year while fresh are slightly higher. During 1970, 75 percent of total imports of fresh strawberries and 50 percent of the frozen were imported during January-April.

PLUMS AND PRUNES.—California's plum crop, forecast at 105,000 tons, is 15 percent less than last year but 57 percent above the small 1969 crop. Harvest of early varieties was underway by June 1. California's prune crop is forecast at 185,000 tons (dried basis), 8 percent less than last year's large crop but 42 percent larger than in 1969. The crop promises to be of good size and quality.

APRICOTS.—The 1971 crop is expected to be 207,200 tons, 17 percent more than 1970 but 10 percent less than 1969. California production is estimated 18 percent above last year but Washington is 27 percent lower.

BANANAS.—During January-April, gross imports of bananas were 1,439 million pounds, 15 percent above the same period a year ago. Approximately 150 million pounds were re-exported to Canada. Average retail prices have been lower than last year. In May, the BLS retail price was 14.7 cents per pound, 13 percent below a year ago.

ALMONDS.—California's 1971 crop is forecast at 140,000 tons in-shell, 9 percent more than last year and 15 percent above 1969. The crop is developing well. Exports have been near last season's level.

ORANGES.—The 1970/71 crop is estimated at a record-high 194 million boxes, 4 percent more than last season. Florida production is expected to be 145 million boxes, 5 percent above last season. Harvest of Florida Valencias was nearly complete by mid-June. Rains during May improved tree condition and new crop prospects are good.

California's production is estimated at 39 million boxes, the same as last season but 12 percent less than in 1968/69. Navel orange harvest was completed about mid-May and Valencia harvest during June was active. The Texas orange crop is indicated at 6 million boxes, 48 percent more than last season. The Valencia harvest was nearly complete by June 1.

By the end of May, 158 million boxes of oranges had been harvested, taking 82 percent of the U.S. crop. Because of the smaller California Navel crop this season, fewer oranges have been used fresh. Processing use is up by 6.6 percent. In mid-June, more oranges than last season remained for harvest in both California and Florida.

Prices of Florida oranges increased sharply during the season, especially for oranges going into processing. During November and December 1970, on-tree returns

for processing were down to 35 to 40 cents per box, only about one-half the level of the previous season. In March the return was \$1.35 per box, 8 percent above last season. Two factors contributed to the large price increase. One was the reduction in estimated crop size and juice yield caused by the freeze in late January. The other was the excellent movement of frozen concentrated orange juice during the winter months. In May 1971, Florida Valencia oranges for processing had an on-tree return of \$2.10 per box, 68 percent over a year ago. F.o.b. prices of fresh packed Florida Valencias were \$5.00 per box in May, a fourth above a year ago. F.o.b. prices of fresh packed California oranges have been above the year-ago price all season.

Exports of fresh citrus during the 1970/71 season have been close to last season's level.

Citrus crop—Utilization to June 1

Crop	1969-70			
	Utilization			Remain- ing for harvest
	Fresh	Pro- cessed	Total	
	<i>Thousand boxes</i>	<i>Thousand boxes</i>	<i>Thousand boxes</i>	<i>Thousand boxes</i>
Oranges	34,747	117,533	152,280	33,380
Grapefruit	21,251	28,785	50,036	3,874
Lemons	5,500	4,550	10,050	5,470
	1970-71			
Oranges	33,094	125,307	158,401	35,499
Grapefruit	22,232	34,780	57,012	3,388
Lemons	5,437	4,412	9,849	6,951

GRAPEFRUIT.—The expected crop is 60 million boxes, 12 percent over the past two seasons. By June 1, harvest was 94 percent complete with some fruit left in Florida and California. About 5 percent more grapefruit than last season has been used fresh but processing has taken one-fifth more. Less now remains for harvest than a year ago.

The Florida f.o.b. price of fresh packed grapefruit dropped below the year-ago price in November 1970, but by February had risen above the year-ago level. In May it was \$6.86 per box, 15 percent above a year ago. The on-tree processing return of Florida grapefruit fell below the year-ago level during January and February but recovered in March. In May it was \$1.98 per box, one-fourth above a year ago. The new crop in Florida is developing well.

In Texas, f.o.b. prices of fresh packed grapefruit stayed below year-ago levels until March. In May the price was \$5.10 per box, a tenth above last year. The on-tree processing return stayed near the low levels of last season with some improvement in April and May.

LEMONS.—U.S. production is forecast at 17 million boxes, 8 percent more than last season. Harvest is

complete in Arizona and on June 1 was about half finished in California. About 59 percent of the lemons had been picked by June 1 in comparison to 65 percent last season. Both fresh and processed utilization are below last season's levels.

The U.S. average f.o.b. fresh packed lemon price was

below last season until February but has moved higher since then. In May it was \$10.20 per box, 31 percent above last season. On-tree returns for processing have been below last season since November 1970. In May the average on-tree return for processing was 46 cents per box, 15 percent below last season.

PROCESSED NONCITRUS FRUIT

CANNED.—The canned pack of noncitrus fruits in the 1970/71 season was about one-fifth smaller than the 1969/70 season. The carryin was one-fourth larger though, so total supply was only about 10 percent less.

The carryin of canned apples and applesauce was sharply greater than usual but the pack was smaller. Total supply of apples is about 15 percent less than last season and of applesauce about 6 percent less. Through June 1, shipments of canned apples were 5 percent under last year's level but were slightly higher for sauce. June 1 stocks were lower for both. The BLS wholesale price for canned applesauce has been steady this season and in May was 1 percent above a year ago.

While the carryin of canned apricots was double the usual amount, the 1970/71 pack was down sharply, giving a total supply about one-tenth smaller than last season. Shipments were near the 1969/70 season and stocks on June 1 were down 30 percent. In May the BLS wholesale price fell below 1969 or 1970 levels.

The RSP cherry canned pack was sharply below last season's level and the total supply is 30 percent less. Shipments to June 1 were well under last season and stocks on June 1 were about one-fourth under a year ago. Wholesale prices on RSP cherries have been steady this season and in May the BLS price was 3 percent above a year ago. The canned sweet cherry pack and supply in the 1970/71 season were below last but shipments have been down, leaving stocks on April 1 above a year ago.

The canned pack of fruit cocktail was down 22 percent in the 1970/71 season from last and shipments were one-fifth less. Carryin stocks on June 1 were 15 percent under a year ago. Wholesale prices have been steady since the fall and in May the BLS price was 16 percent above a year ago. Shipments of canned "fruits for salad" to June 1 were below last season but "mixed fruits" were almost the same. Stocks of both were below a year ago on June 1.

The canned pack of Clingstone peaches last season was one-fifth under 1969/70 and the total supply 13 percent less. Shipments during the 1970/71 season were one-tenth less, leaving stocks on June 1 at a level 19 percent lower. Wholesale prices rose during the fall and winter but fell in the spring. In May the BLS price was 3 percent above a year ago. The Freestone peach pack was smaller last season than the previous two. On April 1 shipments were 15 percent below last season and stocks were a third less.

The 1970/71 canned pear pack was about one-fifth

under the previous season but shipments to April 1 were down by the same proportion, leaving stocks nearly the same. Wholesale prices increased during the fall and winter but fell some in May to a level 11 percent above a year ago by BLS data.

The pack of canned apple juice for the 1970/71 season exceeded 14,000 cases (basis of 24/2's), 5 percent more than last season. The BLS wholesale price was steady during the winter but increased slightly in April. In May it was 1 percent over a year ago. Imports of apple juice during July-April 1970/71, set a record 20.5 million gallons, a third above the total for the season in 1969/70.

Exports of canned fruits have been mostly below last season's levels. Exports of canned pears are higher but they are down sharply for apricots, cherries, fruit cocktail, and peaches. Exports and imports of canned pineapple are higher but exports of pineapple juice are lower.

On June 24, the USDA bought 500,400 cases of canned pineapple for distribution to child nutrition programs. Cost of the purchase, f.o.b., is \$2,327,350.

DRIED.—Raisin production in 1970 was 195,000 tons, 22 percent less than in 1969. At the end of May, deliveries to handlers were nearly 193,000 tons (sweatbox weight), 23 percent under the previous season. Free tonnage shipments at the end of April were only 2 percent below last season. Wholesale prices increased in the fall and in May the BLS price was 2.6 percent above a year ago. Exports have been around 6 percent below last season.

The saleable supply of dried prunes for 1970/71 was 5 percent more than last season and shipments through April 30 were 10 percent larger. Remaining stocks are 16 percent higher. Wholesale prices were reduced this spring and in May the BLS price was 2 percent under a year ago. Exports have been near the level of last season.

On May 14, the USDA bought about 203,000 cases (24, one-pound packages) of dried prunes for distribution to needy families and other eligible outlets. Cost of the purchase, f.o.b. shipping point, was about \$850,000.

CRUSHED.—In California during the 1970 season, 1,506,000 tons of grapes were crushed for wine, 24 percent less than the previous season. By types, 851,000 tons of raisin grapes were crushed, 1 percent more than last season; 160,000 tons of table grapes, 62 percent less

than last season; 364,000 tons of black wine grapes, 34 percent less; and 131,000 tons of white wine grapes, 17 percent less.

Average grower returns per ton for grapes crushed in California for the 1970 season were 15 percent higher than last season for raisin grapes, 47 percent higher for table grapes, 46 percent higher for black wine grapes, and 22 percent higher for white wine grapes.

FROZEN.—The pack of frozen fruits and berries in the

PROCESSED CITRUS FRUIT

About 8 percent more citrus has been processed in Florida by June 13 than the same time a year ago; 2 percent more citrus remains in Florida for certified use.

In Florida the harvest of Early and Midseason oranges is over. About 73.8 million boxes were processed, 13 percent more than a year ago. About 2 million fewer boxes of Valencias have been processed as last year but about the same quantity remains for certified use. In Florida 27.9 million boxes of grapefruit had been processed by June 13, 21 percent more than a year ago. About one-fourth of a million boxes remain for certified use. In Texas, processing of grapefruit was 28 percent larger this season than last and little remains for harvest. Processing of lemons in Arizona and California is slightly behind the pace of last season but more remain for harvest.

FROZEN.—Strong demand and crop damage by the January freeze have resulted in higher prices for frozen concentrated orange juice the past three months. At mid-June the f.o.b. Florida cannery price of a dozen 6-ounce cans was \$1.78 compared with \$1.53 a year ago. Delivered-in prices of oranges for frozen concentrate in mid-June were 60 to 65 percent above year-ago levels. The yield per box of Florida oranges going into frozen concentrate through June 12 was 1.20 gallons, compared with 1.24 gallons last year to date. While the carryin and pack of FCOJ this season have been greater than last, movement to June 12 was 81 million gallons, 31 percent more than a year ago. This left stocks on hand at 67.6 million gallons, 7 percent under a year ago. The Florida pack of frozen concentrated grapefruit juice through June 12 was 6.9 million gallons, 60 percent more than at this time last season. Movement has been about the same as a year ago, leaving stocks 65 percent larger. Exports of frozen concentrated orange juice have been about 33

1970/71 season was about 8 percent less than in the previous season. The pack of frozen apples was down 18 percent, cherries down 13 percent, peaches down 11 percent, and grapes down 53 percent. The strawberry pack was 13 percent larger but the blueberry pack 42 percent smaller. Frozen stocks for most fruits on May 31 were below a year ago. The BLS wholesale price for frozen strawberries has been steady since last fall and in May was 3 percent under a year ago.

percent above last season's level and exports of frozen grapefruit juice 27 percent higher.

CANNED.—Cannery grapefruit prices in Florida are slightly above year-earlier levels. At mid-June, a dozen 46-ounce cans of grapefruit juice were \$4.65 f.o.b. compared with \$4.35 a year ago and grapefruit sections were \$7.85 compared with \$7.40. The pack of single-strength grapefruit juice in Florida through June 12 was 20 million cases (24/2's), 17 percent over this time last year, while movement was only slightly larger. Stocks are 29 percent larger than a year ago. In mid-June, prices of grapefruit delivered for processing in Florida were about the same as a year ago. Yield per box for canned juice is close to last year's level. Exports of canned single-strength grapefruit juice have been 14 percent below last season.

Cannery orange juice prices in Florida at mid-June were \$4.05 f.o.b. for a dozen 46-ounce cans compared with \$3.30 last year. In mid-June delivered-in prices of oranges for canned juice were 40 to 45 percent above year-ago levels. The yield per box through June 12 ran 6 percent under last season. The total supply of Florida canned orange juice through June 12 was slightly less than last year and movement the same, leaving stocks at 3.8 million cases (24/2's), 10 percent less. Exports of single-strength orange juice have been 4 percent above last season.

CHILLED.—The pack of chilled orange juice through June 12 came to 100 million gallons, 7 percent more than a year ago. Packers' stocks are above last year at 34.2 million gallons. The pack of chilled grapefruit juice through June 12 totaled 10.9 million gallons, 28 percent over last year. Stocks are 2.9 million gallons, 17 percent more than a year ago.

Table 1.—Production and utilization of specified fruits, United States, crops of 1966-70

Commodity and crop year	Production ¹	Farm home use	Sold	Utilization of sales ²					
				Fresh sales	Processed (fresh equivalent)				
					Canned	Dried	Frozen	Other ³	Total processed
