BIENNIAL REPORT

OF THE

SECRETARY OF STATE

OF THE

STATE OF CALIFORNIA

FOR THE

SIXTY-FOURTH AND SIXTY-FIFTH FISCAL YEARS, BEGINNING
JULY 1, 1912, AND ENDING JUNE 30, 1914

FRANK C. JORDAN, Secretary of State

CALIFORNIA
STATE PRINTING OFFICE
1914

REPORT OF SECRETARY OF STATE.

STATE OF CALIFORNIA, DEPARTMENT OF STATE,
SACRAMENTO, December 10, 1914.

To His Excellency, HIRAM W. JOHNSON,

Governor of the State of California.

SIR: I have the honor to present herewith my second biennial report as Secretary of State, which contains a statement of all fees received by this office from July 1, 1912, to June 30, 1914, inclusive. The report also includes a statement of the expenditures, and the amount drawn against the several appropriations made for the support of this department.

The records of this office, kept as provided by subdivisions 2, 3 and 4 of section 408 of the Political Code, show that the Governor has granted 46 pardons, 16 commutations of sentence, and 4 reprieves; has signed 913 restorations to citizenship; has issued 30 holiday and other proclamations; has granted 1819 orders of release of prisoners from state prisons under the Goodwin Act; has signed 637 land patents; has commissioned 4,182 notaries public and 2 commissioners of deeds; has made 682 executive appointments, and has approved 35 official bonds.

The total receipts of this department from all sources during the last two fiscal years ending June 30, 1914, were \$2,162,334.75. Receipts for previous two fiscal years ending June 30, 1910, \$2,279,670.79.

The License Tax Department collected from July 1, 1912, to June 30, 1913, \$798,692.50; from July 1, 1913, to June 30, 1914, \$817,008.75, making the total license taxes collected during the two fiscal years, \$1,615,701.25.

An examination of the financial statement shows that \$429,979.50 was collected during the last two fiscal years as general office fees.

The receipts in the Motor Vehicle Department from July 31, 1912, to December 31, 1913, were \$116,654.00. During this period 45,775 motor vehicles were registered.

The following is a statement of the monthly receipts of that department:

RECEIPTS OF MOTOR VEHICLE DEPARTMENT, BY MONTHS, FROM JULY 1, 1912, TO DECEMBER 31, 1913.

<i>Sixty-fourth fiscal year, July 1, 1912, to June 30, 1913.</i>		<i>Sixty-fifth fiscal year, July 1, 1913, to December 31, 1913.</i>	
July	\$6,011 00	July	\$6,815 50
August	6,071 50	August	6,872 50
September	5,578 00	September	6,025 00
October	6,365 50	October	6,372 00
November	6,293 50	November	3,887 00
December	6,594 50	December	872 00
January	6,949 50		
February	6,597 00		
March	8,596 00		
April	9,388 00		
May	9,430 00		
June	7,935 50		
Total	\$85,810 00	Total	\$30,844 00

SYNOPSIS MOTOR VEHICLE DEPARTMENT.

Number of motor vehicles registered July 1, 1912, to June 30, 1913	33,842
Number of chauffeurs registered July 1, 1912, to June 30, 1913	6,360
Number of motor vehicles registered July 1, 1913, to December 31, 1913	11,933
Number of chauffeurs registered July 1, 1913, to December 31, 1913	2,395

CORPORATION LICENSE TAX DEPARTMENT.

The Corporation License Tax Law, as amended March 19 and 20, 1907, by placing the license tax on a graduated scale, payable according to the amount of the authorized capital stock of corporations, the amount of the tax ranging from \$10 up to \$250, produced the following revenues:

<i>Sixty-fourth fiscal year, July 1, 1912, to June 30, 1913.</i>	<i>Sixty-fifth fiscal year July 1, 1913, to June 30, 1914.</i>		
July	\$214,190 00	July	\$196,290 00
August	360,500 00	August	368,583 75
September	72,360 00	September	77,280 00
October	33,536 25	October	35,491 25
November	87,473 75	November	99,942 50
December	6,143 75	December	7,238 75
January	6,256 25	January	6,936 25
February	4,732 50	February	6,182 50
March	5,467 50	March	8,192 50
April	3,308 75	April	4,635 00
May	2,880 00	May	3,282 50
June	1,843 75	June	2,953 75
Total	\$798,692 50	Total	\$817,008 75

There was collected during the period commencing on July 1, 1912, and ending June 30, 1913, inclusive, the sum of \$798,692.50, segregated as follows:

15,719 corporations paid the graduated tax under section 2, in the sum of	\$612,905 00
2,122 corporations paid the graduated tax and \$10 penalty.....	110,595 00
3,555 licenses were issued under the provisions of section 2a.....	72,792 50
18 corporations paid the revivor license, under section 6 of the license tax law, in the sum of.....	2,400 00
Total	\$798,692 50

The number of domestic corporations which forfeited their charters, and of foreign corporations which forfeited their rights to transact business in this state, was 2,726.

The number of corporations which filed articles during this year, and were exempted under the provisions of section 7 of the license tax law, was 468.

On May 30, 1913, section 6 of the license tax law was amended, to take effect August 11, 1913.

Under the law as amended, there was collected during the period commencing on July 1, 1913, and ending on June 30, 1914, inclusive, the sum of \$817,008.75, segregated as follows:

15,498 corporations paid the graduated tax under section 2, in the sum of	\$588,725 00
2,777 corporations paid the graduated tax and \$10 penalty.....	140,425 00
3,112 licenses were issued under the provisions of section 2a.....	59,813 75
379 corporations paid the revivor license under section 6 of the license tax law, in the sum of.....	28,045 00
Total for sixty-fifth fiscal year	\$817,008 75

The number of domestic corporations which forfeited their charters, and of foreign corporations which forfeited their rights to transact business in this state, was 2,847.

The number of corporations that filed articles during this year, and were exempted under the provisions of section 7 of the license tax law, was 488.

Total amount received from corporation taxes during the sixty-fourth fiscal year	\$798,692 50
Total amount received from corporation taxes during the sixty-fifth fiscal year	817,008 75
Making a total amount of	\$1,615,701 25
The total amount received from corporation license taxes during the sixty-second and sixty-third fiscal years was.....	1,594,232 50
Showing an increase of	\$21,468 75

LETTER OF TRANSMISSION.

CONTROLLER'S DEPARTMENT, STATE OF CALIFORNIA,
SACRAMENTO, December 15, 1914.

*To the Honorable HIRAM W. JOHNSON,
Governor of California.*

SIR: In preparing the biennial report of the Controller's Department for the sixty-fourth and sixty-fifth fiscal years, which I now have the honor to submit to you, I purposely have refrained from attempting to send to print as complete a volume as did my predecessor, the late A. B. Nye, two years ago.

I have been in office only a little over a year, or for about one half of the biennial period now under consideration. From the start, I endeavored to take up the lines where the former Controller laid them down, but necessarily among the numerous problems presented, not a few of which are involved in great detail, there are many I prefer to study further before discussing them at length.

My predecessor, also, as one result of his long tenure of office, gathered, not only here but elsewhere, a great mass of statistical data which he used freely for purposes of comparison and otherwise. Much of this, necessarily, is not available for my use, and a large part of such as is, time has not permitted me to check and bring up to date to the extent I have desired.

I do not mean, of course, that the statements which are required by law and others it has become customary to print have been omitted. All such tables will be found embodied in this report. But much of the statistical comment and comparison by percentages in which my predecessor excelled, I have not attempted to prepare. To a large extent, those interested in such calculations and discussions can make use of the tables in this book and work out the results for themselves.

My chief purpose in this publication is to discuss the more important financial problems of the state, with particular reference to a probable deficit and suggestions as to raising additional revenue to meet the situation. Discussion of the work of the various departments under the Controller, with suggestions or recommendations not only as to them, but also as to other matters with which this office is concerned, have been given due consideration.

Respectfully,

JOHN S. CHAMBERS,
Controller.

MORE REVENUE WILL BE REQUIRED BY THE STATE.

While the budget which the State Board of Control and the Controller are engaged in preparing for submission to the Governor and the coming legislature will not be completed for a week or more, and it remains, of course, for the future to tell what appropriations the legislature will authorize and the Governor will approve, still enough is known to justify the assertion that the state's revenue as now based will fall considerably short of the requirements for the next two fiscal years.

The anticipated deficit is due, primarily, to a reduction in the gross earnings of the public service corporations, which will cut down the estimated tax receipts from this source materially; to the abolishment of the corporation license tax by the legislature (effective July 1, 1914), following an adverse court decision, and the wiping out of the poll tax by the people at the election last month. The total loss of revenue for the coming biennial period, due to the last two causes, will be in round numbers, three and a third millions of dollars.

While it is true the poll tax, which averaged \$800,000 annually, was paid directly into the school fund and used exclusively for that purpose, and so, on the surface, the general fund is not affected, still the presumption is that the legislature will deem it necessary to make up this loss to the school fund and to do so it will have to order, approximately, to cover the biennial period, a sum double the aggregate of the average annual poll tax collections transferred from the general fund to the school fund. So the effect on the general revenue, in all probability, will be the same as though the loss was a direct one on the general fund.

While certain sources of state revenue may show increases, the aggregate of such receipts, if greater, will not near offset the heavy loss occasioned by the abolishment of the taxes mentioned, to say nothing of the additional money that will be needed for the maintenance of the state government, the cost of which naturally increases each year as we develop.

While expenditures can, and, no doubt, will be held down, there is a limit to the extent to which curtailment should be enforced. The machinery for the proper conduct of the state government must be kept going. Money must be provided for the support of the various departments; the schools, hospitals and prisons must be maintained. Requests for extra clerical help in many instances will be denied, but in others, they should not be. Likewise, proposed buildings that could be used to advantage next year or the year following, but which are not indispensable, will not be erected; while, again, circumstances will force new construction in other instances. And so it will go. It is

entirely safe to assert there will be no extravagance, but the calls for necessities will be enough in themselves to swell the general appropriation and special bills well above the estimate of receipts.

It follows, therefore, inasmuch as the anticipated deficit can not be overcome by the curtailment of expenditures, that additional revenue must be provided. Numerous suggestions in this regard have been made, but it will not be worth while, here, to discuss any save those that are likely to be seriously considered. Following are the main suggestions:

1. To raise the rates on the gross earnings of all or several of the groups of the public service corporations and the banks.
2. To levy an ad valorem, or general property tax.
3. To impose a liquor traffic tax.
4. To impose a business license tax on individuals and co-partnerships.
5. To impose an income tax.
6. To restore the corporation license tax.

Other suggestions include a registration tax on credits, a stock transfer tax and stamp taxes.

Aside from the constitutional difficulties that would confront the imposition of a registration tax on credits, it would not produce sufficient revenue to meet the situation, if adopted, and so it need not further be considered in this connection. Neither would the yield from a stock transfer tax meet requirements. And as the Federal government is now collecting stamp taxes, made necessary by the war in Europe, it is not likely the legislature will devote much time to this suggestion.

Corporation Rates.

The original rates imposed by the legislature, in 1911, upon the gross earnings of the public utility corporations and the rates as revised two years later, were as follows:

Corporations	1911. per cent	1913. per cent
Railways -----	4	4.75
Car companies -----	3	4
Express companies -----	2	2
Telegraph and telephone companies -----	3.5	4.2
Gas and electric companies -----	4	4.6

The banks from the beginning have paid one per centum on the value of the shares of their capital stock.

The gross earnings rates as first fixed were based upon calculations made in 1906 by the Commission on Revenue and Taxation. In 1913, when it was feared that the state's revenue would prove insufficient, the legislature investigated the situation as to the rates paid by the corporations, concluded they were not in proportion to the taxes paid on other property and, accordingly, raised the figures.

This was done two years ago. The State Board of Equalization at the time submitted to the legislature a report on "The Relative Burden of State and Local Taxes in 1912," which declared that the average burden as affecting local taxation was 1.1386 per cent of the true value as compared to one per cent where state purposes were at issue. It was upon this report, largely, that the legislature acted, raising the rates on the corporations so as to adjust the burden of taxation, but not to the full margin of the estimated difference in all instances.

Have conditions changed materially since 1912? The public service corporations should pay in proportion to what the individual pays on the \$100 of valuation, neither more nor less. The mere fact that the state's need of money has been increased either because of unusual calls upon it or because of the loss of sources of revenue, is not enough in itself to justify raising the rates unless the corporations are paying less than their fair share, less in proportion than the householder does, let us say, on the \$100 of valuation as applied to his home. But they should be raised to that basis beyond question.

The suggestion has been made that such an investigation of state and local tax conditions as the limited time will permit be undertaken. It seems probable this will be done, that data may be obtained for submission to the legislature. That the rates on certain of the groups of the public utilities will be raised to the 1912 basis or to one more nearly approaching that ratio than is the case now, seems certain. Such an increase will produce considerable additional revenue. Beyond that point, arises the question as to whether or not there has been a material change in the tax situation since 1912. Local assessments and tax rates have advanced. The presumption is, because of these increases, that after the rates shall have been equalized on the 1912 basis, as just suggested, there still will exist such a disproportion against the general property taxpayer as to call for a further readjustment. This, if done, will add that much more to the revenue. But it hardly seems probable the entire deficit can be made up in this way.

No change was made, two years ago, in the rate on the capital stock of the banks, the figure being left at one per cent, although the Board of Equalization held, as it still does, that the rate should have been advanced to 1.1386.

An Ad Valorem Tax.

It was provided in the constitutional amendment which brought about a separation of state and local taxes, giving the corporations to the former and general property to the latter, that should the revenue so derived for the support of the state at any time be "deemed insufficient to meet the annual expenditures," then the Board of Equalization would be empowered to levy "a tax for state purposes on all property in the state," including the property of the public service corporations which now pay a tax upon their gross earnings in lieu of all other taxes.

The natural assumption, because of this provision, is that the framers of the constitutional amendment believed there was a possibility, if not a probability, that at some time or other the revenue derived from the taxes upon corporations would not prove sufficient to meet the needs of the state.

Their doubt is now justified by the prospective deficit. And the provision for the levying of an ad valorem tax by the Board of Equalization would seem to offer an easy and natural way out of the difficulty.

But, at the same time, such a procedure would be beset with obstacles. The people have become imbued with the idea that they should not contribute, at least directly, to the support of the state; that the corporations must bear this burden alone. It follows, therefore, that any attempt to tax them to make up a deficit (even though they are largely to blame for conditions because they voted out the poll tax) would arouse strong opposition.

Again, a number of the counties claim they are worse off under the new system than the old. It is to be assumed they would take advantage of the situation, should an ad valorem tax be levied, to attack the present system and that, because of irritation over the levy, they would be joined by other counties and, perhaps, succeed, eventually, in putting the state back upon the old taxation basis.

Is this desirable? Admitting that the state's present system is not elastic enough to withstand a loss of revenue of over \$1,600,000 a year and that it has other and perhaps serious imperfections, still are its shortcomings as many and as grave as existed under the old way of doing things, under the general property tax system, when county was pitted against county to escape supporting the state as far as could be and inequality and injustice were general?

The law provides an easy way for the levying of an ad valorem tax to meet requirements and its imposition need not be permanent, since it could be dropped any year that the corporation tax promised sufficient revenue; yet, notwithstanding, such a course is fraught with danger and should not be embarked upon without very serious consideration.

A Liquor Traffic Tax.

A third way suggested for overcoming the anticipated deficit is a liquor traffic tax—a state tax, in other words, upon dealers in liquor.

In round numbers there are 16,000 such dealers in California. A straight tax of \$100 a year per dealer would bring in a revenue of \$1,600,000; a tax of \$125, a revenue of \$2,000,000, and a tax of \$150, a revenue of \$2,400,000.

That one liquor dealer should pay more than another, according to the business done, let us say, would seem only fair. Difficulty, however, would be experienced in grading them.

The plan as suggested does not contemplate any interference with the local authorities. They would continue to license or to refuse to license saloons, to control them and so on. All the state would seek to do would be to tax such places upon their coming into existence, for revenue purposes only. The legislature would have to provide the machinery for ascertaining the number and location of the dealers in liquor and for collecting the tax.

It is assumed that the liquor people would offer less protest to such a plan than would many of those who are opposed to their line of business. The latter might argue that such a tax would be equivalent to placing the seal of the state's approval upon what they regard as an evil and that it would tend further to entrench it.

On the other hand, the Federal government collects a liquor tax. The state would not as a matter of fact be giving approval to the business by taxing it, since it would be done solely for the purpose of raising revenue, nor would it be creating the business, since it already exists. By such a tax, in fact, it would be adding to the burdens of the business.

Certainly, the suggestion is well worth consideration. It involves neither the expense and labor of a long investigation, with the result uncertain, as might follow in the first case discussed, nor is it fraught with the pitfalls that beset the second. And it would produce sufficient revenue to meet the needs of the situation.

A Business License Tax.

Not only are the public service corporations taxed upon their gross earnings, banks upon the value of the shares of their capital stock and insurance companies upon their gross premiums, less returns, but in addition all other corporations are taxed upon the value of their franchises.

Regardless of the benefits that come as a result of incorporating, corporations taxed upon their franchises frequently complain that competitors who are not incorporated and who, therefore, pay no franchise tax, are given too much of an advantage.

Even before it was known that a deficit was probable, agitation was begun to do away with this so-called discrimination. And now that the state will require additional revenue, the plan is being advocated more actively than ever.

If approved by the legislature, it would in all probability take the form of a license tax upon all lines of business other than the corporations. For the fiscal year of 1914-15, the franchise tax levy amounted to \$1,733,051. It is assumed that a business license tax would bring in as much more.

The details, of course, have not been worked out, but presumably the various lines of business would be divided into groups and sub-groups and the tax made to fit the condition of each. The public service corporations, for example, are placed in natural divisions, such as railroads, car companies, express, telegraph and telephone and gas and electric companies, the divisions paying at different rates upon their gross earnings.

No tax ever is levied upon the assumption that it will prove popular with those who have to pay it. Such a business license tax as proposed, while it would be a good revenue producer, undoubtedly would arouse strong and widespread resentment. Still the franchise taxpayers would appear to have some cause for complaint. Moreover, the good will of a business is taxable under the law and a license tax as suggested would come near offsetting the franchise tax as now collected.

A State Income Tax.

A fifth proposal is the imposition of a state income tax. There is no question that it could be made, in time at least, to produce an abundant revenue, but inasmuch as the Federal government is now collecting such a tax, it is not likely the legislature will care to impose one like it for state purposes, although under the Constitution it now has the right to do so.

Wisconsin, of all the states that have levied an income tax, has made the greatest success of it, although there it is in lieu of certain personal property taxes and the state only receives about ten per cent of the amount collected, the balance going to the counties, cities, towns and villages on the basis of the amounts paid in by the residents thereof.

Such an arrangement would not be of much use in California now in view of the emergency situation approaching. At best, it takes time to develop an effective income tax system and for that reason, if no other, it can not be considered under the circumstances.

Corporation License Tax.

The corporation license tax—not to be confused with the corporation franchise tax—when repealed following an adverse court decision, was bringing in yearly to the state something over \$800,000.

A decision by the Supreme Court of the United States and decisions by courts in several of the states, would appear to open the way for the reenactment of the law, or one similar, in California; and word comes, just now, that the Supreme Court of California has reversed itself, thus removing the legal obstacle in the way of reenactment here.

But if reenacted and sustained, the revenue, while of much help, would not be sufficient to overcome the anticipated deficit. Other revenue would have to be provided, also.

The corporations which now pay franchise taxes and complain that unincorporated competitors are favored too much, in all probability not only would protest at the imposition of this tax again, as a further discrimination, but it likely would arouse general irritation on the part of corporations, as occurred before, not only because it would make one more tax to pay but a tax to be paid at a different place from where the franchise tax is paid. This latter difficulty, however, could be avoided easily by throwing the additional work upon the Controller instead of the Secretary of State, provided sufficient clerical help be given the Controller to handle the business.

Automobile Competition.

Under the constitutional amendment which provides that the state's main revenue shall be derived from the earnings and franchises of corporations, the public service corporations, including transportation companies, are set forth, but in the enumeration there is no mention of automobiles or automobile companies engaged in the business of transportation.

Since the adoption of the amendment, however, there has been a large, if not a remarkable growth along this particular line. But despite the fact that this competition is making distinct inroads upon the business of steam and electric railroads—which pay taxes to the state at such and such a rate upon their gross earnings—there is no way as the law stands by which the state may reach the automobile engaged in the general transportation business.

Whether or not a general business license tax will be imposed, as already discussed, certainly a state license tax should be placed upon such automobile enterprises, the equivalent, perhaps, of a tax upon their gross earnings as near as may be.

Revenue Notes.

Elsewhere in this report, the revenue derived under the inheritance tax laws of the state, now large and giving promise of continued growth, is fully discussed.

The steady, if not alarming, increase in the bond refund payments by the state to the counties, cities and districts, is also taken up and is worth serious consideration. Excessive payments mean, practically, the loss of just so much revenue to the state.

The matter of exempting property from taxation is one that should be laid before the people for their information and consideration. It involves a grave problem. Elsewhere in this report a resume of the situation is given.

Also in the chapter dealing with the delinquent tax land laws of the state, it is shown how the receipts from this source can be enlarged.

Increasing bond debts and interest charges extending over long periods, are likewise commented upon and call for thought.

The budget, at this writing not completed, will be found elsewhere in this report, which will be held from the printer until that copy is ready; also, tables estimating receipts and expenditures.

THE BOND REFUND PROBLEM.

When the state's new system of taxation went into effect, it was provided in the law that the property of public service corporations (the gross earnings of which are taxed by the state for its support in lieu of all other taxes on such property) was "taxable" for the payment of the bond debts of the counties, municipalities and districts outstanding on November 8, 1910, together with the interest thereon.

That is to say, the property of the "withdrawn corporations" would continue to be assessed by the local assessors and the state would pay from its treasury at the local bond tax rates upon such assessments, subject to equalization by the State Board of Equalization. The corporations were not affected, nor was their property twice taxed in any sense.

The provision simply meant that the state's revenue from the tax imposed upon the gross earnings of the public service corporations would be reduced by the amounts refunded to the counties, municipalities and districts in payment of principal and interest on the bond debts outstanding when the new system of taxation went into effect. The state was the only loser.

It was argued at the time that it would be unfair to the taxpayers of the communities affected to permit the properties of the public utility corporations to escape paying their proportion of the old bond debts

and interest, as represented by taxes thereon, inasmuch as such properties were a part of the security offered at the time the bond debts were incurred. When the proposal to change the tax system of the state first was submitted, in 1908, the refund provision was not included, and it is contended that this omission had much to do with the defeat of the proposed amendment at that time. In 1910, however, the provision was included and the amendment was approved by the people.

It is not to be denied that there is a measure of justice in this provision of the law. Yet in endeavoring to be just, the state has laid itself open to opportunities for imposition and as a result faces serious problems.

Excessive Assessments.

The greatest of these is that of apparent excessive assessments by cities and counties upon the properties of the public utility, or withdrawn corporations. Two years ago, my predecessor, who had given serious thought to the situation, said: "that there will be difficulties in preserving a fair proportion of assessments already has been made manifest, for there is a marked tendency on the part of the indebted cities and counties to increase assessments on the operative (or public utility corporation property) roll most rapidly." He pointed out at that time that the total assessment of non-operative property on the county rolls increased only 11.21 per cent between 1911 and 1912, while that of the operative property increased 18.51 per cent.

In the following table will be found the bond refunds paid since first authorized, to June 30, 1914:

	1911-12	1912-13	1913-14
Cities -----	\$421,996 96	\$507,330 48	\$517,599 34
Counties -----	226,034 48	205,814 55	225,038 19
Sanitary districts -----	2,292 56	2,131 65	-----
Totals -----	\$650,324 00	\$715,276 68	\$742,637 53

Incidentally, it may be remarked that no refunds have been paid to sanitary districts since 1912-13, following the receipt of an opinion from the Attorney General that such districts were not entitled to payments of the kind. During the first year of the new tax system he also excluded irrigation and reclamation districts from the refund provision, on the ground that their levies are more in the nature of assessments than taxes.

As will be noted in the table given, the refunds to the cities for 1912-13 show a very considerable advance over those of 1911-12, while the increase for 1913-14 over the preceding year is not so marked. Although the increase for 1912-13 over 1911-12 amounted to \$85,333.52,

the increase in the refund to the city of Los Angeles alone, for the same period, was \$94,591.16, or more than the total increase for counties, cities and districts for the fiscal year in question. This was due to the assessment by Los Angeles of franchises on the operative roll, a subject I will take up a little later.

It stands to reason, of course, that if the refund to Los Angeles alone for 1912-13 was more than the total refund increase to all the other cities involved, that they as a whole showed a decrease. But this does not mean, necessarily, that every city received less than in the previous year. Several may have claimed far less and others considerably more. In other words, while it is asserted the city assessments of operative properties have increased far too much in proportion to the non-operative property assessments, the charge has not been meant to apply to all the cities.

As an illustration of the growth in the assessment of operative properties by cities there is given herewith a table showing the assessments of both operative and non-operative properties in eight cities for 1911, 1912, 1913 and 1914, with the percentage of increase of operative as compared to that of non-operative for 1914 over 1911.

City	1911		1912	
	Operative	Non-operative	Operative	Non-operative
Alhambra -----	\$166,950	\$3,056,956	\$268,710	\$4,185,685
Berkeley -----	1,428,520	33,361,595	1,775,512	37,382,550
Eureka -----	451,315	7,914,930	753,789	8,778,020
Los Angeles (old city)-----	37,602,181	237,119,385	55,967,673	267,731,540
National City -----	66,329	1,404,875	233,286	2,185,824
Pasadena (original city limits)	1,851,540	33,566,760	2,530,406	36,276,400
Pomona -----	492,744	6,446,920	571,651	7,497,718
Santa Rosa -----	166,650	5,871,222	179,760	6,131,964

City	1913		1914		Percentage Increase 1914 over 1911	
	Operative	Non-operative	Operative	Non-operative	Operative	Non-operative
Alhambra -----	\$321,526	\$4,332,346	\$330,350	\$5,039,515	98	65
Berkeley -----	1,939,116	38,822,815	2,128,590	40,643,815	48	22
Eureka -----	712,839	8,176,237	795,596	8,134,691	63	3
Los Angeles (old city) -----	70,728,364	280,941,600	71,272,644	299,076,620	90	26
National City -----	632,709	2,403,775	764,908	2,442,130	1,053	74
Pasadena (original city limits)---	2,717,268	37,466,850	2,833,516	39,458,695	53	18
Pomona -----	772,099	7,697,153	880,879	7,724,632	79	20
Santa Rosa -----	277,037	6,194,315	282,401	6,252,599	69	6

It will be noted that while the refund to the counties for 1912-13 is less than for 1911-12, yet that the figures for 1913-14 are within a few dollars of those of 1911-12.

Refunds Grow.

The situation is a peculiar one. After three years, the payment by the state to the counties, municipalities and districts of its share of the principal and interest on the bonds outstanding in 1910 is \$92,313.53 more than in the beginning. It can not be denied, of course, that the aggregate of the bond debts in question not only can not increase, but must decrease. In fact, it is estimated that the annual reduction of the principal is something over \$2,300,000. And yet the state's refunds are increasing each year.

The value of the bonds outstanding on November 8, 1910, was \$77,682,312.28. For the first year, to repeat for purpose of emphasis, the refunds amounted to \$650,324; for the second, to \$715,276.68, and, for the third, to \$742,637.53.

The legislature of 1913 set aside \$1,400,000 for the payment of the refunds to the various subdivisions concerned for the fiscal years of 1912-13 and 1913-14, on the assumption that about \$700,000 a year would be required, or probably more the first year than the second. The first year ran over the allotment by \$15,276.68, and the second, instead of falling under the estimate of \$700,000 to offset the increase in the first year, or even better, went over by \$42,637.53.

It is obvious, of course, that the more the state pays of the old bond debts and interest, the less will the counties, cities and districts have to pay. A certain amount falls due each year, say \$2,300,000, the estimated annual reduction. If the state pays \$700,000 of that sum, the subdivisions, naturally, will pay less as their proportion than if the state only paid \$500,000 or \$300,000. Hence the temptation presented to local assessors disproportionately to raise assessments on the operative properties—the properties, let it be borne in mind, of the public utility corporations, the gross earnings of which are taxed for the support of the state in lieu of all other taxes on such corporations. That many assessors have yielded to the temptation can not be denied. Just how much the state is out of pocket as a result no one can say. An investigation by the Board of Equalization could not accurately determine this. But that the amount is large can not be questioned.

Shift the Burden.

There are other causes, however, that have built up the refunds. One of these was the action of certain cities which had been paying the principal and interest of some of their bond issues out of the revenue derived from their water plants or other municipally owned utilities,

in turning such proceeds into their treasuries and filing claims against the state for the latter's proportion of the debt. Such a course probably was legal, but it hardly seems fair to the state. If a water plant was built by a city on the understanding that the bonds issued for its construction, and the interest, would be paid out of the revenue derived from such a plant in operation, there would seem to be no moral excuse for transferring a portion of that burden to the state just because the opportunity presented itself.

New Operative Property

Another cause that has contributed to increasing the bond refund payments, and one that will become more noticeable as the years go by, unless abandoned, is the assessment by local assessors of operative, or public utility properties that have come into existence since 1910, either as additions to the plants of old corporations or as created by corporations that have come into being themselves since then. If the assessment of such new properties is legal, and opinion is seriously divided on the subject, what hope does the future hold out of reducing the refunds?

Whatever may have been the intention of the framers of the constitutional amendment in this respect, they failed to make it plain. Although there has been no judicial decision of the issue, the assessments so far have been allowed to stand.

While only the properties of such public utility corporations as were in existence at the time the various bond issues were made (prior to November 8, 1910) would be security for such debts, the argument is advanced that those who bought the bonds looked forward, nevertheless, to the probable development of such properties in considering the value of the securities offered. Hence, it is claimed, it is only fair that the new properties be assessed, also.

Again, it is asserted that all new non-operative properties, such as hotel or store buildings, dwellings and so on, pay local taxes, a portion of which revenue is used in the payment of the old bond debt, principal and interest, by city and county. If this is done, runs the argument, why not, too, with new operative properties?

But, on the other hand, the claim is advanced that it is the local communities, not the state, which receive the benefit of such development as the money derived from the sale of the bonds has brought about and that, therefore, new as well as old non-operative property should help discharge the debt.

The question at issue, however, is entirely a legal one. If ever forced, the courts must determine it. Where attorneys disagree, the opinion of a layman would be of no great value. But it does not seem

probable the framers of the amendment intended that new operative properties should be assessed to help pay old debts, or, if so intended, that full consideration was given to the subject.

Franchise Assessments.

Another cause of the increase in payments by the state of the principal and interest on bonds outstanding in 1910, and a very serious cause, too, is the assessing by local assessors of the franchises of corporations, other than those of the public utilities.

It is the duty of the State Board of Equalization to determine the value of such corporation franchises that a tax may be levied thereon for the purpose of raising revenue for the state. Such a tax, however, is not in lieu of other taxes, as is the case with the tax on the gross earnings of public utility corporations. The buildings, the grounds or the stock in trade of these corporations are subject to local taxation. But inasmuch as the franchise assessments as made by the State Board of Equalization become a part of the operative roll, the claim is made that the cities and counties likewise can assess such franchises for the purpose of securing additional payments from the state in the shape of the so-called bond refunds.

I already have referred to the heavy advance in bond refund payments by the state for the fiscal year 1912-13 over the year preceding and particularly to the increase of \$94,591.16 in the payment made to Los Angeles that year over the year before. In 1911-12, Los Angeles collected from the state \$175,811.15 and in 1912-13, \$270,402.31. This great increase was due principally to the inclusion that year on its operative roll of franchise assessments on corporations that had their principal place of business there. San Francisco is preparing to follow suit. If one city can do so another can, the only requirement being that the corporation so assessed shall have its principal place of business within its limits.

In that part of the constitutional amendment which deals with the assessment of corporation franchises occurs this language, "the taxes collected thereon shall be exclusively for the benefit of the state." Yet in the following paragraph it is expressly directed that all property enumerated in subdivisions *a*, *b*, and *d*, the latter affecting the assessment and taxation of franchises, shall be subject to taxation, in the manner provided by law, to pay the principal and interest of any bonded indebtedness created and outstanding at the time of the adoption of the amendment. And, further, in the act to carry into effect the provisions of the amendment, the Controller is directed out of the taxes collected under the act to set aside sufficient money for the payment of refunds to the counties, cities and districts.

There would appear to be, therefore, no possibility of questioning the legal right of the subdivisions to include franchise assessments on their operative rolls. But it does not seem conceivable that the framers of the tax amendment meant this, or, if they did, that they realized what it would lead to.

THE EVER INCREASING BOND DEBTS.

In the biennial report issued by the Controller in 1910 a warning was sounded at the growing tendency on the part of the people to authorize bond issues. During forty years preceding, California had not encouraged the creation of state debts of the kind. In 1910, however, the electors voted bonds in the sum of \$29,500,000 including \$18,000,000 for the state highway, and for a direct tax of \$5,000,000 in aid of the Panama-Pacific Exposition.

While the cities and counties of California have not been as cautious as the state in incurring bond indebtedness, still it was not until recent years, comparatively, that they let go of the reins.

The following figures not only show the outstanding bond indebtedness of the municipalities for the years given but also the growth of such debts:

1910 (partial) -----	\$28,539,795 84
1911 -----	65,573,033 51
1912 -----	83,297,510 96
1913 -----	100,387,559 40

The records available for use by this office cover a longer period for the counties than for the cities, their outstanding bond debts for the years indicated being as follows:

1907 -----	\$6,555,660 00
1908 -----	7,605,315 00
1909 -----	17,998,310 00
1910 -----	23,357,411 00
1911 -----	27,503,066 00
1912 -----	36,118,481 00
1913 -----	47,346,540 00
1914 -----	57,353,545 00

In 1904, the people authorized a \$2,000,000 San Francisco seawall bond issue and in 1910, \$9,000,000 more. At the recent election, in November, 1914, another San Francisco harbor improvement bond issue, not to exceed \$10,000,000 in amount, was voted. While it is true these issues and the interest are to be paid out of the harbor receipts, still should the receipts prove insufficient for any reason, the state morally and legally would be bound to protect the bondholders,

At the November election of this year, the people also authorized a bond issue of \$3,000,000 for additional state buildings at Sacramento and \$1,000,000 at San Francisco. There was also approved an issue of \$1,800,000 for University of California buildings.

The aggregate of the approved state bond issues for 1914 is \$5,800,000, bearing interest at 4 per cent and $4\frac{1}{2}$ per cent covering a fifty-year period. It is calculated that the interest at the end of the time will amount to \$8,500,000, or, say, in round numbers \$3,000,000 more than the total issue. In other words, the cost to the state will be almost \$14,500,000 for the privilege of erecting \$5,800,000 worth of buildings. The interest as figured will average about \$170,000.00 a year.

In other words, a direct general property tax of, say, five cents on the \$100 of assessed valuation for a term of four years easily would raise an amount in excess of the total of the bond issue, the money would be available year by year as needed, and there would be no interest or delay due to failure to sell bonds.

But inasmuch as the state's main revenue now is derived from a tax upon corporations and any bond indebtedness it may incur is payable out of such receipts, the saving to be effected by a direct tax, as suggested in the preceding paragraph, may not appeal to the people as much as it should.

There is, however, another side to the shield. The revenue derived from the corporations is based upon rates as fixed by law. They yield so much. The cost of maintaining the state government is heavy and constantly growing heavier. If to this burden is added a large bond debt, and interest, the corporation tax revenue may prove insufficient. Then the rates either must be raised or one or more side sources of revenue sufficient to meet requirements must be resorted to. If the rates are raised, the people eventually will pay the extra cost. This need not necessarily be so as to other suggestions, but very likely would be as to many of them. The only way to avoid such a difficulty would be to see that no bond issue is authorized that would overburden the state's revenue as now derived. But in view of the increasing cost of government and uncertainty as to receipts, it would be a very difficult task indeed to make such a calculation.

When the state's tax system was changed, there was outstanding on November 8, 1910, as bond debts owed by the counties, cities and districts of the state, \$77,682,312.28. The law provided that the state must pay its share of this enormous sum, since the indebtedness had been incurred under the general property tax system, and over \$700,000 a year now is required to meet the state's obligation,

It is not the purpose here to enter into a discussion of bond issues as compared to direct taxation, but rather to give such figures and facts as are available, for the consideration of those interested. The situation certainly justifies a warning. The people should consider carefully before adding further to the burden of their bond indebtedness and not forget that a direct tax has many advantages, not the least of which is to make the voters think harder before encouraging expenditures of the kind.

GROWTH OF EXEMPTIONS.

“All property in the state except as otherwise in this constitution provided, not exempt under the laws of the United States, shall be taxed in proportion to its value,” declares the constitution of the state.

It follows, therefore, that all property exempted from taxation since the adoption of the constitution must have been exempted by amending the constitution, the people so voting. The legislature has no power to exempt property from taxation.

The only property exempted prior to 1894, was that to which the United States or this state held title, property belonging to any county or municipal corporation of this state, property used exclusively for free public schools, free museums, public libraries and growing crops. Then came, in 1894, the exemption of fruit and nut-bearing trees under four years of age and grapevines under three years.

In 1900, the property of the Stanford University and the California School of Mechanical Arts was exempted; in 1904 the property of the California Academy of Science, and in 1906, the property of the Cogswell Polytechnical College.

And the people last month by a vote of 331,549 to 293,721, voted to exempt from taxation any educational institution of collegiate grade, including its buildings; land not to exceed 100 acres, its securities, and income used exclusively for purposes of education.

Our educational institutions certainly have not been neglected.

In 1900, the people also exempted from taxation property used solely and exclusively for religious worship.

In 1904, “the personal property of every householder to the amount of \$100.” was exempted.

Property to the amount of \$1,000 of every resident of this state who served in the army, navy, marine corps or revenue marine service of the United States in time of war, unless such person or his wife owns property worth \$5,000 or more, was exempted in 1911.

And last month the people voted, 359,176 to 301,969, to exempt from taxation, save for state purposes, all vessels of more than fifty tons burden registered at any port in this state, for a period of twenty years.

The value of property in California now exempt from taxation runs away up in the millions. In Los Angeles County alone the soldiers' exemptions allowed on the assessment roll of 1914 is \$3,428,330; in San Francisco, \$621,000 and in Sacramento, about \$140,000. Church property in San Francisco now exempt from taxation is valued at \$7,750,000.

Under the present arrangement of a separation of state and local taxes, the former is not affected, but the taxpayers of the local communities are. They were affected as well, of course, under the old system of an ad valorem tax for state and counties. When property is withdrawn from taxation, it means, practically, that the taxes formerly collected thereon must be paid in the future by property not exempted. In other words, an additional burden is placed upon those who have not been fortunate enough to secure immunity for their property or at least certain classes of their property.

The declaration of the constitution that all property in the state shall be taxed in proportion to its value is a pretty good rule to go by. It is easy to advance plausible arguments why educational institutions and church property, for example, should be exempt from taxation, but the policy is wrong. The tax revenue so lost must be made up not only by the property owner who voted to exempt, but also by the property owner who voted not to exempt. The property owner who voted to exempt from taxation the church in which he worships merely voted to contribute just so much more to the support of the church. He gives it, however, in the shape of additional taxes, saving the church as much as his proportion of the extra burden will amount to.

Complaints are heard all over the state that local taxes are mounting up. Probably the strain would not be so great if all or many of the exempted properties were taxable.

Returns should be made annually by county assessors to the State Board of Equalization, giving the assessed value of all properties in their counties exempt from taxation and the Board thereupon should make public the information. It might have a deterrent effect as to future pleas for exemption.

DELINQUENT TAX LANDS.

Two years ago, under the heading, "Defects in the Law of Tax Sales," the then Controller discussed at considerable length the delinquent tax land situation in the state, not only pointing out the abuses to which the laws governing such matters were subjected and giving specific instances to emphasize his point of view, but also making suggestions to remedy the evils of which he complained. He made four definite suggestions as follows:

First, and most important, the code should be so amended as to terminate the equity of redemption at the date of the deed to the state, because the further extension of this privilege is the source from which have proceeded nearly all of the abuses herein enumerated.

Second, if for any reason the legislature should not see fit to adopt the preceding recommendation, at least it should provide a way in which the state and county can take the initiative in forcing the sale of tax-deeded property, instead of merely waiting for volunteer purchasers.

Third, ample authority should be conferred upon state and county officers to protect tax-deeded property against depredation by all persons, including former owners. All rents and profits from such property should inure to the benefit of the state and county.

Fourth, provision ought to be made for refunding the excess paid at a tax sale whenever the tax title is proved defective within a given number of years.

The first suggestion was not directly acted upon by the legislature, and I desire to repeat what my predecessor urged, that the code be so amended as to terminate the equity of redemption at the date of the deed to the state.

Indirectly, the end sought was accomplished to a limited degree through the action of the legislature in passing favorably upon the second recommendation and authorizing county supervisors to take the initiative in bringing about the sale of tax-deeded property, instead of being compelled to wait for volunteer applicants to purchase.

The purpose of the amendment, of course, is to force either sales or redemptions, thus placing the lands back upon the assessment rolls, and to put a stop to the tax-free use of delinquent property by former owners, a crying evil.

Again, indirectly, and to a limited degree, the purpose of the first suggestion was carried out in an amendment made to section 3771 of the Political Code, which provides that delinquent land at the end of the five-year period, instead of being deeded direct to the state, as heretofore, first shall be offered for sale to individual purchasers. If none shall appear, then the land takes the old course and passes into the possession of the state.

Obviously such prompt action is calculated to encourage sales and redemptions, thus getting delinquent lands back upon the assessment rolls that much sooner and cutting down the time in which delinquent owners, if so inclined, can enjoy the use of property upon which they have failed to pay taxes long overdue.

Direct Sales Aid Greatly.

The amendment in question has worked in a very satisfactory manner to date. The period since it became effective has been short, but it is doing just what its advocates predicted it would accomplish.

Under the five-year provision, this new amendment, of course, could not apply to lands that went delinquent before 1908. The lands of that year, under the old way of doing things, would have been deeded to the state in 1914, instead of being offered, first, for sale to individuals. The following figures, which are approximate, tell the story of improvement in a convincing way:

Number of tracts delinquent for the year 1908	3,178
Number sold direct to individuals, under new law	1,192
Number deeded to the state, no buyers	1,117
Number redeemed or cancelled	869

If the law had not been amended so as to permit direct sales at the end of five years, 2,309 tracts would have been deeded to the state instead of 1,117; and if the amendment authorizing boards of supervisors to take the initiative had not been enacted, nothing could have been done toward selling these parcels save upon the application of volunteer purchasers.

Further, the 1,192 delinquent tracts sold, were offered for \$4,322.08, the figures representing taxes, penalties and costs, but competitive bidding ran the amount received up to \$30,985.05, a clear profit to the state and counties concerned of \$26,662.97.

A very excellent showing, indeed. And if the legislature will act more fully as to the first and third suggestions, made two years ago, the improvement will continue.

Abuse of the Laws.

The third recommendation was to the effect that ample authority be conferred upon state and county officers to protect tax-deeded property against depredation by all persons, including former owners. Also, that all rents and profits from such property should inure to the benefit of the state and county concerned. The legislature went part of the way as to the first of these two suggestions, but did nothing as to the second.

When a tract of land is deeded to the state, after five years, for non-payment of taxes—tax-deeded land—it is no longer taxable, of

course, the title thereupon vesting in the state. As a result, in many instances, owners deliberately permit their lands to go delinquent, though fully intending to utilize them all the while, knowing that the right of redemption accorded them by law will enable them to frustrate any effort to sell the property and that after five years no taxes will accumulate against them.

And in other cases, where it may not have been the purpose of the former owners to use delinquent lands, instances are many where valuable property, such as mining and milling machinery, has been taken away by them or by outsiders. Timber lands have been denuded, buildings and fences removed, damaged or destroyed and many other deprecations committed.

The amendment secured at the hands of the last legislature, as the result of the third recommendation of my predecessor, classed all such acts as misdemeanors. More properly, many of them should come under the heading of felonies and should be so designated by law.

Moreover, funds should be provided for use in prosecuting such offenders, an important detail overlooked upon the passage of the amendment two years ago, and it should be made the duty of the county peace officers to enforce the law.

The legislature took no action at all as to the suggestion that rents and profits arising from the use of delinquent property should go to the state and counties concerned.

I am strongly in favor of this recommendation. If a law in accordance therewith should be passed, together with one for the better protection of tax-deeded property, the situation—now that the power to sell direct before deeding to the state has been given and the right of initiative after deeding has been granted—would be vastly improved.

In the matter of the fourth suggestion, looking to the refunding of the excess paid at a tax sale where the tax title is proved defective within a given time, no suits of the kind have been brought within the knowledge of this department and so no court has been called upon to act.

Redemptions.

The following figures as to general receipts from redemptions cover the two years from May 1, 1912, to May 1, 1914:

Property tax	\$574,866 09
Interest	102,629 42
Penalties	169,265 77
Total	\$846,761 28

The state's proportion ran as follows:

Property tax	\$75,292 71
Interest	25,153 76
Penalties	30,021 98
Total	\$130,468 45

Each item of the state's proportion shows a sharp falling off as compared with the figures of the preceding biennial period, or from May 1, 1910, to May 1, 1912, as witness the returns for that period:

Property tax	\$142,972 38
Interest	30,190 39
Penalties	40,810 71
Total	\$213,973 48

The bulk of the redemptions for the two years ending May 1, 1914, are for lands that went delinquent since 1910, when the state's tax system was changed, and as a result the only general property tax levied by the state was a very small one for Panama-Pacific Exposition purposes. This, naturally, cut down the state's share very materially and explains the large falling off in redemption receipts.

Receipts.

There is a better story to tell when it comes to sales of delinquent lands, although the total shows a slight falling off for the two years beginning May 1, 1912, and ending May 1, 1914:

Property tax	\$19,591 79
Interest	10,470 14
Excess	50,262 78
Total	\$80,324 71

Of these sums, the state's share was:

Property tax	\$4,063 90
Interest	2,718 64
Excess	14,398 78
Total	\$21,181 32

Two years ago the state's share of the sales receipts was as follows:

Property tax	\$5,350 97
Interest	2,651 79
Excess	14,399 20
Total	\$22,401 96

CONTINGENT FUNDS.

There would seem to be no question that the proper course to pursue would be for the legislature to direct that all institution receipts be paid into the state treasury for general use and that the institutions affected be supported entirely by direct appropriations. This would give to the legislature the full control the constitution intends it shall have over public moneys, would be more businesslike, minimize confusion and tend to curtail institution expenditures, or at least to regulate them in accordance with the general needs of the state rather than by the development plans of the institutions, which sometimes call for more money than their proper maintenance demands.

This is not to say that institutions should not be properly provided for, not only in the matter of support and salaries, but also as to new buildings, care of grounds, development of agricultural lands and so on. Money for these things should be given on a reasonably liberal scale. But there come periods in the state's finances when it is more necessary to curtail expenditures than at other times. On such occasions the development of the institutions should be checked accordingly. It is easier to regulate such expenditures under a straight appropriation system, than where institution receipts are retained by the institutions, and particularly where each institution claims all of its own receipts for its own use rather than for the benefit of all the institutions of its class.

While it would seem wise that all receipts of the kind should be paid into the state treasury for general use, the difficulties in the way of bringing about the change are many. As the contingent funds of the institutions now are administered, there is far less cause to urge a change in policy than was the case a few years ago. The State Board of Control keeps a watchful eye on such receipts and not only closely regulates their use, but, with the Controller, in preparing the biennial budget for submission to the legislature, takes them into account as affecting each institution concerned in the matter of recommending appropriations for its maintenance and development. One half of the receipts of the state hospitals are now set aside for salary purposes, and the balance is used as occasion calls for, subject, first, to the approval of the Board of Control. The contingent fund problem is one that affects the hospitals more than any other class of state institutions. A large number of pay patients are on the rolls, but they are by no means uniformly distributed among the institutions. It has not been the custom, however, to divide such receipts among the hospitals according to their needs, but to let each receive the benefit of its own special revenue, be it large or small. This, of course, has been done away with now to the extent that half of such receipts are applied

on the salary account, and that the balance is taken into consideration when it comes to authorizing other expenditures.

On July 1, 1914, the following balances in the contingent funds of the six hospitals stood to the credit of the institutions:

Agnews -----	\$35,174 92
Mendocino -----	29,700 27
Napa -----	35,164 73
Stockton -----	10,985 61
Southern California -----	61,864 53
Sonoma State Home -----	14,718 75
	\$187,608 81

While the Stockton hospital shows a small balance, its receipts are among the highest, with those of Napa and Southern California. The figures given are the balances as shown on the books and do not, of course, take into consideration approved estimates that may be out against these funds.

UNCLAIMED BANK DEPOSITS.

The law for the regulation of the business of banking provides, among other things, that "all amounts of money heretofore or hereafter deposited with any bank to the credit of depositors who have not made a deposit on said account or withdrawn any part thereof or the interest, and which shall have remained unclaimed for more than twenty years after date of such deposit or withdrawal of any part of principal or interest, and for which no claimant is known or the depositor can not be found, shall with the increase and proceeds thereof be deposited with the State Treasurer in the same manner and subject to the same distribution as provided for in section 1234 of the Code of Civil Procedure." It also is provided that the banks shall submit sworn statements as to such depositors to the Superintendent of Banks within fifteen days after the first of January of each year and also that copies of these statements be filed with the Controller. A fine of \$100 a day for each and every day this law or any portion of it is violated, is provided.

Very few of the banks of the state have obeyed the law. Various contentions were advanced by them why they should disregard it. It is claimed they are not sufficiently protected under the law to justify them in turning these old and unclaimed deposits over to the State Treasurer, and also that the law is unconstitutional. Several months ago a conference was held in San Francisco between representatives of the banks, the Superintendent of Banks, the Attorney General and the Controller to discuss the situation. It finally was decided that the Attorney General should bring a test suit. This he has done

and the matter is now before the courts. In view of this fact it would be useless to discuss the issue further at this time.

The banks which have obeyed the law and the amounts turned into the state treasury by them appear in the following list:

People's Savings Bank, Sacramento.....	\$536 29
Oakland Bank of Savings, Oakland.....	761 40
Northern California Bank of Savings, Marysville.....	534 23
The Bank of Monterey.....	5 50
Santa Cruz Bank of Savings and Loan.....	311 31
Sacramento Bank.....	368 39
Vallejo Commercial Bank.....	7 25
Alameda Savings Bank.....	46 17
Bank of Dixon.....	90 50
Stockton Savings Bank.....	15 00
The Donohoe-Kelly Banking Company, San Francisco.....	25 16
Farmers' Savings Bank, Lakeport.....	60 00
Mutual Savings Bank, San Francisco.....	1 61
Bank of Martinez.....	146 33
Bank of Italy, San Jose.....	542 13
San Jose Safe Deposit Bank of Savings.....	446 90
Bank of Tehama County, Red Bluff.....	404 85
Total	\$4,303 02

CORPORATION TAXES.

For the fiscal year ending June 30, 1913, the corporation tax collection department of the Controller's office collected \$10,887,144.77 at a cost of .009 on the one hundred dollars.

And for the fiscal year ending June 30, 1914, corporation taxes amounting to \$12,963,660.10 were collected by the department at a cost of .007 on the one hundred dollars.

In figuring these costs only the expense of maintaining the department itself was considered and no other factor as connected with the Controller's office as a whole was brought into the calculations. The record is a remarkable one.

The total corporation tax levy for the year ending June 30, 1913, was \$10,922,405.42. Of this sum, \$10,867,060.36 was collected in taxes and \$13,658.05 as penalties. In addition, \$6,426.36 was collected as taxes, penalties and lieu taxes on the 1911 assessment roll, making a grand total collection of \$10,887,144.77 for the year.

Delinquent taxes for the same period amounted to \$52,479.76 and penalties to \$6,440.19, or a total of \$58,919.95. Defunct corporations and duplications ran to \$790 and penalties to \$86.54, while the illegal levies amounted to \$2,075.30.

For the fiscal year ending June 30, 1914, the total levy was \$12,971,541.80. Of this sum, \$12,922,499.44 was collected as taxes, with \$15,357.50 as penalties and \$2,210 as lieu taxes. Other collections were made as affecting the rolls of 1911, 1912 and 1913, the grand total being \$12,963,660.10. The delinquent taxes totaled \$46,882.68 and the penalties \$5,666.35. Defunct corporations and duplications were \$325 and penalties \$28.23. The illegal levies were \$1,834.68.

The detail for these two years, showing the taxes levied on and collected from the various groups of public utility corporations, the taxes on general franchises and other corporations will be found in the tables forming a part of this report. The outline here given is to indicate briefly what has been done. In that portion of this report dealing with a probable deficit in the state's revenue and suggesting new sources of income will be found a discussion of the present tax system.

There are a number of suits pending for the collection of delinquent taxes and other litigation as affecting taxes, which are in the hands of the Attorney General and will be referred to as far as need be in the report of that official.

EMERGENCY FUND.

The legislature of 1911 was the first to appropriate money for general emergency purposes. Before that period, there had been contingent appropriations for the benefit of separate departments, but no general fund upon which drafts could be drawn for relief in special instances.

It was recommended to the legislature of four years ago that \$100,000 be appropriated for use during the following two years as an emergency fund, to be drawn upon subject to the approval of the State Board of Control and the Controller. In the end, \$75,000 was set aside for this purpose. The departure has proved a very wise one, and I am of the opinion that the amount so appropriated should be \$100,000 rather than less.

For the sixty-fifth and sixty-sixth fiscal years drafts upon the emergency appropriation of \$75,000 aggregating \$69,103.60 have been authorized by the Board of Control and the Controller, leaving a book balance of \$5,896.40 for use during the balance of the year, or from December 1, 1914, to July 1, 1915. The expression "book balance" is used because the full amount set aside for the purchase of paper on which to print the constitutional amendments was not used by something like \$400.00.

The following table shows the detail of the expenditures for the sixty-fifth fiscal year and up to December first, of this year:

For Sixty-fifth Fiscal Year.	
Stenographer for governor's office	\$2,625 00
Sonora and Mono road	500 00
Fire escape, state printing office	75 00
New machinery, state printing office	5,000 00
Watchman, governor's mansion	153 00
Clerk, controller's office	1,750 00
Revolving fund, California School for Girls	300 00
Traveling and contingency fund, treasurer's office	300 00
Repairs, state printing office	800 00
Official advertising	600 00
Medical assistance (Industrial Accident Commission)	1,000 00
Maintenance, etc., Board of Control	4,700 00
Postage, etc., adjutant general	400 00
Traveling fund, adjutant general	400 00
Official advertising	378 00
Secretary of state	23 65
Surveyor general	23 25
Traveling expenses, normal school trustees	145 16
Costs, foreclosure suits	24 08
Costs, foreclosure suits	36 22
	\$19,233 36
To December 1, 1914, of Sixty-sixth Fiscal Year.	
Controller's office, clerk	\$96 65
Controller's office, clerk	100 00
Telephone operator	60 00
Labor compiling election returns	1,918 25
Test of lamps, engineering department	281 40
Surveyor general, foreclosure suits	15 94
San Quentin prison, printing appropriation	37 78
San Quentin prison, support	25,000 00
Compiling election returns	2,000 00
Paper for constitutional amendments	20,360 22
Total	\$69,103 60

INHERITANCE TAX DEPARTMENT.

The fiscal year ending June 30, 1914, or possibly to be more strictly exact, the year ending with the annual settlement made in May, 1914, was the banner year, so far as the collection of inheritance taxes is concerned, the total being \$1,702,426.74. Not only was this maximum tax collected, but also there was actually in the hands of the county treasurer of Santa Barbara County to the credit of the State of California, pending the time of settlement, an additional sum of \$241,521.41, received from the estate of Charles H. Hopkins, deceased; and likewise at said time there was also in the hands of the county treasurer of Santa Clara County the sum of \$250,000, payable out of the estate of Sarah Fox, deceased. These sums were, under the law, subject to call by the Controller at any time. Also, there were in the hands of other county treasurers numerous smaller sums aggregating thousands of dollars.

The fiscal year ending June 30, 1915, gives promise of breaking all previous records, for there has been received by the various county treasurers of the state, since our settlement in May last, up to November 1st, the sum of \$1,513,784.64. It is difficult, of course, to say just what moneys will be received during the next six months. There are, however, two estates now in course of administration, from each of which the tax will exceed one half million dollars, and the time for the payment of the tax in each case, without imposition of penalty, will mature before the next May settlement.

The number and gross value of estates taxed during the last seven fiscal years have been as follows:

Year ending	Number of estates	Aggregate value	Net amount of tax
June 30, 1908.....	745	\$31,910,821 92	\$608,943 19
June 30, 1909.....	1,027	57,201,179 95	937,073 17
June 30, 1910.....	1,041	51,377,126 29	883,314 23
June 30, 1911.....	1,114	63,432,603 45	1,506,993 33
June 30, 1912.....	1,237	57,408,720 36	1,082,290 36
June 30, 1913.....	1,061	55,945,602 79	1,586,672 80
June 30, 1914.....	1,041	57,798,965 38	1,654,951 42

The following tables show the amount of tax derived from the smaller and the larger estates during this period:

Fiscal Year ending June 30, 1908.

703 estates, valued at less than \$100,000 each, paid taxes amounting to	\$209,614 60
35 estates, valued at from \$100,000 to \$500,000 each, paid taxes amounting to	148,424 36
2 estates, valued at from \$500,000 to \$1,000,000 each, paid taxes amounting to	71,058 60
5 estates, valued at over \$1,000,000 each, paid taxes amounting to	203,390 76
	\$632,488 32
Less fees and commissions	23,545 13
	\$608,943 19
Net amount paid state	\$608,943 19
Percentage cost of collection.....	.037

Fiscal Year ending June 30, 1909.

937 estates, valued at less than \$100,000 each, paid taxes amounting to	\$229,318 65
68 estates, valued at from \$100,000 to \$500,000 each, paid taxes amounting to	278,793 93
15 estates, valued at from \$500,000 to \$1,000,000 each, paid taxes amounting to	167,327 42
7 estates, valued at over \$1,000,000 each, paid taxes amounting to	291,755 47
	\$967,195 47
Less fees and commissions	30,122 30
	\$937,073 17
Net amount paid state.....	\$937,073 17

Fiscal Year ending June 30, 1911.

992 estates, valued at less than \$100,000 each, paid taxes amounting to -----	\$364,623 66
106 estates, valued at from \$100,000 to \$500,000 each, paid taxes amounting to -----	392,466 72
7 estates, valued at from \$500,000 to \$1,000,000 each, paid taxes amounting to -----	115,177 21
9 estates, valued at over \$1,000,000 each, paid taxes amounting to -----	672,293 05
	<hr/>
Less fees and commissions -----	\$1,544,470 64
	37,477 31
	<hr/>
Net amount paid state -----	\$1,506,993 33
Percentage cost of collection -----	.024

Fiscal Year ending June 30, 1912.

1,124 estates, valued at less than \$100,000 each, paid taxes amounting to -----	\$268,551 05
98 estates, valued at from \$100,000 to \$500,000 each, paid taxes amounting to -----	340,142 91
11 estates, valued at from \$500,000 to \$1,000,000 each, paid taxes amounting to -----	148,663 38
4 estates, valued at over \$1,000,000 each, paid taxes amounting to -----	358,356 45
	<hr/>
Less fees and commissions -----	\$1,115,713 79
	33,423 43
	<hr/>
Net amount paid state -----	\$1,082,290 36
Percentage cost of collection -----	.029

Fiscal Year ending June 30, 1913.

949 estates, valued at less than \$100,000 each, paid taxes amounting to -----	\$281,573 74
96 estates, valued at from \$100,000 to \$500,000 each, paid taxes amounting to -----	541,609 88
19 estates, valued at from \$500,000 to \$1,000,000 each, paid taxes amounting to -----	282,526 04
10 estates, valued at over \$1,000,000 each, paid taxes amounting to -----	514,724 96
	<hr/>
Less fees and commissions -----	\$1,620,434 62
	33,761 82
	<hr/>
Net amount paid state -----	\$1,586,672 80
Percentage cost of collection -----	.0208

Fiscal Year ending June 30, 1914.

913 estates, valued at less than \$100,000 each, paid taxes amounting to	\$618,289 70.
114 estates, valued at from \$100,000 to \$500,000 each, paid taxes amounting to	556,279 51
12 estates, valued at from \$500,000 to \$1,000,000 each, paid taxes amounting to	270,195 62
2 estates, valued at over \$1,000,000 each, paid taxes amounting to	257,661 91
	<u>\$1,702,426 74</u>

Less—

Fees and commissions	\$32,755 11
Refunds and court costs	9,822 31
Special counsel fees	4,897 90
	<u>47,475 32</u>
Net amount paid state	\$1,654,951 42
In maintaining inheritance tax offices in Sacramento, San Francisco and Los Angeles	\$15,825 00
Taking this expenditure into consideration, together with fees and commissions and special counsel fees, the percentage cost of collection was	.0315

The percentage cost of collection for 1914 is made up of the following items:

Treasurer's commissions	.0104
Appraiser's fees	.0091
Inheritance tax department	.0092
Special employments	.0028
Total	<u>.0315</u>

Concerning the last two items it may be said that they should be only partially charged against the inheritance tax collections of 1914, for the reason that the department was not organized until after July 1, 1913, and the results of the activity of the department would hardly be felt until toward the end of the fiscal year ending June 30, 1914. The law mill grinds slowly as a rule and it is not unusual for very large cases to consume a good part of a year in the course of adjustment and settlement. And in this connection, it may be said, from present indications, that the percentage cost of collection for the coming year will be less than for any year for the last seven years.

This is quite a remarkable showing when the rapid growth of the inheritance tax collections is taken into consideration. Normally the percentage cost of collection will increase as the collections are increased.

The matter of percentage cost of collection is largely a matter of diminishing returns. For example, it is quite probable that even if there were no commissions paid to the treasurers, no inheritance tax department maintained, nor other expenses incurred in collection of such taxes, that the receipts, under the present inheritance tax rates, would aggregate as much as a half million dollars; but no expense having been incurred the percentage cost of collection would, of course, be nil. An expenditure of one and a half per cent might increase the

collections to one million dollars annually. An expenditure of three per cent might bring a yearly revenue of two million dollars. It might then take from four to five per cent to increase the revenue to three million dollars. It might take more. It might take much less. How far the state should increase the cost of collection in order to increase the revenue from this source seems to be largely a matter of diminishing returns. As before indicated, the inheritance tax department on every increase of expenditure has so increased the revenue that the percentage of cost has been lowered rather than raised.

There is a considerable evasion of the inheritance tax which can only be met and combated by expensive litigation in the courts. Evasions of the tax are usually planned in secret, the procuring of evidence is often hard, the state is frequently compelled to call as witnesses persons hostile to its payment. Those who usually know most about a decedent's affairs are those who are recipients of his bounty.

Even where the property chargeable with tax is all before the court, it is possible for a difference of opinion to arise between the inheritance tax department and the estate chargeable, wherein the valuation contended for by the state may be double that contended for by the parties taxed. In estates that run into the millions, where the tax itself may run from a quarter to a half million, it is reasonable to suppose that the attorneys opposing the state will be skilled and highly paid, and that they will have at their service the best experts that money can buy.

Unless contested cases are fought, and fought hard, by the state, encouragement is given to those who would evade. But to fight such cases, even for the state, requires not only the employment of competent and able attorneys, but also in many cases the employment of experts qualified to testify as to the property to be appraised.

The inheritance tax appraisers are themselves coming to be a highly trained body of experts, not only upon the question of valuation of property in their respective communities, but also upon the questions of law that continually arise in the settlement of the tax.

During the past year two conventions for the appraisers were held; one in Los Angeles for the appraisers in the southern part of the state, and the other in San Francisco for those in the north. The expense of attendance was borne by the appraisers themselves. A very large percentage of the appraisers in each district were present. Some of them expended in attending the convention as much as they receive in compensation from the state in the course of a year. The benefits derived by the appraisers in attending this convention were such that provisions should be made in the next legislative appropriation for a general state conference, the expenses thereof to be paid by the state.

The position of the inheritance tax appraiser is growing to be a very important one. It may well be said that the inheritance tax appraisers are on the "firing line" of inheritance tax administration.

A case recently handled in San Francisco may illustrate the importance of the appraiser's position. In this particular case, one of the three inheritance tax appraisers in that county was appointed by the court as sole appraiser. The estate was valued at nearly five and a half million dollars, the amount of the inheritance tax assessed thereon was in the neighborhood of four hundred and fifty thousand dollars. The appraiser received as his fee from the State of California, for the work performed, the sum of one hundred thirty dollars. This compensation seems ridiculously low when the responsibility of the position is taken into consideration. The present method of compensating an appraiser is based upon a five dollar per diem. The question of providing for adequate compensation to the appraiser, without opening the door to difficulty in adjusting compensation, is one of the problems that will have to be solved by future legislation, but it seems wise, while the law is in the course of construction, to leave these matters to be settled when experience has developed a basis for some general system that can be fairly applied to the varying conditions that exist in the various counties of the state.

Probably one of the most important provisions of the Inheritance Tax Act, so far as administration thereof is concerned, is embraced in section 13, wherein it is provided that no bank, trust company, etc., shall deliver assets, shares of stock, bonds, etc., standing in the name or partly in the name, of a decedent, without the consent of the State Controller, or someone authorized by him in writing to issue such a consent. To illustrate the importance of this section, it might be noted that during the past year there was received out of two estates for the State of California, inheritance tax aggregating a half million dollars; the property subject to tax in both cases consisting of shares of stock and bonds in safe deposit boxes belonging to the decedents whose estates were taxed. Before the representatives of the decedent in either case could remove the contents of the safe deposit boxes they or the banks concerned, were required to secure the consent of the State Controller. In order to facilitate administration of the act the State Controller has authorized the several county treasurers of the state to investigate such cases and to issue consent upon proper return of the property being made. It would hardly be fair to assume that in any particular case an evasion of the tax would result were this investigation not made on the opening of the safe deposit box involved, and yet it may be fairly said that the examination which is required under section 13 is a guarantee that evasion will not take place. Any bank, trust company or similar institution which violates the provisions of

section 13 is subject to a fine of from one thousand to twenty thousand dollars.

For every case which results in the collection of a tax through an examination of a safe deposit box, etc., there naturally would be many cases where the examination would seem a mere matter of form, and a useless act, and yet it seems obvious that if any benefit is to be gained by the state in enforcing this provision of law that it must be enforced uniformly, for otherwise the securities which are sought to be taxed may be the very securities which will escape the tax through any laxity in administration. How to provide for prompt examination and release of deposits and securities so that estates, large and small, need not be put to unnecessary inconvenience and delay, and yet guard against the evasions that come with laxity of enforcement of the law on the one hand, or against an expensive administration on the other hand, is one of the problems for the department to solve. The various county treasurers and their deputies are showing a hearty spirit of cooperation in this regard.

While the inheritance tax appraisers are most helpful in securing an adequate and fair appraisal of property subjected to the jurisdiction of the court under which they act, an aggressive enforcement of a law which offers such fruitful reward where violation is possible, must needs be supervised by a well organized central department.

The first step toward centralization was taken in 1909 with the creation of the position of inheritance tax deputy under the Controller. Through the activity of the deputy, the law was amended to provide for a body of inheritance tax appraisers, appointed by the Controller. Through the activity of the appraisers such a multiplicity of legal and other inheritance tax problems were presented to the Controller's office that it became necessary at the last session of the legislature to create an inheritance tax department, consisting of an inheritance tax attorney and an inheritance tax clerk at Sacramento; and two assistant inheritance tax attorneys, one at San Francisco and the other at Los Angeles. An appropriation of twenty thousand dollars per year was made for stenographers and other assistants, and to maintain the department. So great has been the increase in the work that what might have seemed a liberal appropriation in the beginning is going to prove very close in the end.

The state has been divided into three districts: The San Francisco district, embracing the north coast counties; the Los Angeles district, embracing the southern counties; and the Sacramento district, embracing the rest of the state. The Sacramento office, in addition to caring for its own district, must obviously exercise a general supervision over the whole state. The work has so increased that it has become necessary to employ, in addition to the inheritance tax attorney

and the inheritance tax clerk, who is really acting as an assistant attorney, three stenographers, the third having been engaged within the month because of press of work. The San Francisco and Los Angeles offices now each consist of an assistant inheritance tax attorney, a second assistant inheritance tax attorney and a stenographer.

During the past six months two cases adjusted by the San Francisco office, involved three quarters of a million of dollars in taxes. In one case the amount first estimated as the worth of the property was doubled through information placed before the appraiser by the state's attorney.

In Los Angeles over eighty thousand dollars in taxes were received by actions brought by the assistant inheritance tax attorney, the amounts involved ranging from a few dollars to many thousand, and in addition to this the state is now being represented actively in estates in course of probate where the taxes approximate two millions of dollars.

GROWTH OF THE CONTROLLER'S OFFICE.

An idea of the work done in the Controller's office—that is, the office proper as exclusive of the inheritance tax, delinquent tax and corporation tax departments—may be gathered from the statement that for the fiscal year ending June 30, 1914, the warrants drawn numbered 26,719. This is an average of something like 2,227 a month; ninety-three a day and twelve an hour, figuring twenty-four working days of eight hours each.

For the five months of the present fiscal year, ending November 30, 1914, 13,169 warrants were drawn. On the same basis as above, this would give 2,634 a month, 109 a day and fourteen an hour.

I have drawn this out purposely. When it is borne in mind that all claims against the state are audited in the Controller's office as well as by the Board of Control, with the addition that certain departments and the statutory salary list are cared for in the Controller's office exclusively, and that a proper record is also kept of all claims and warrants—each of the latter having to be filled out, of course, and signed—a realization of the vast amount of detail and steady work required may be obtained.

And yet from 1904 until a few months ago, no extra help was provided to care for this great increase of labor. Then an extra clerk was put on the warrant desk, but no relief has yet been given the book-keeping division.

To show the growth in the volume of this character of work since 1904, I will give the number of warrants issued each even numbered

fiscal year from then on, excluding legislative session years, when, of course, there is always much extra work required.

Date	Warrants drawn
To June 30, 1904 -----	12,415
To June 30, 1906 -----	14,309
To June 30, 1908 -----	16,620
To June 30, 1910 -----	18,463
To June 30, 1912 -----	22,187
To June 30, 1914 -----	26,719

For the five months ending November 30 of each year from 1904 to 1914, inclusive, the record is as follows:

Date	Warrants drawn
To November 30, 1904 -----	5,230
To November 30, 1906 -----	6,268
To November 30, 1908 -----	6,558
To November 30, 1910 -----	8,356
To November 30, 1912 -----	9,091
To November 30, 1914 -----	13,169

It should be stated that the 8,356 warrants drawn in the five months ending November 30, 1910, covered a special session of the legislature.

The vast increase in the work of the inheritance tax department, the business done averaging well over \$2,000,000 a year now (the detail is given elsewhere in this report), has forced extra clerical help and other assistance, but not enough properly to carry on its affairs. It is not anticipated, however, that any difficulty will be experienced in securing from the legislature a sufficient appropriation for the conduct of this department. It is not only a revenue producer, but a very large one if properly maintained.

The delinquent tax and corporation tax departments are fairly well taken care of as matters stand.

Much inconvenience has been caused by lack of room, but this will be overcome to some extent by the readjustment of office locations that will follow the occupancy of several floors in the Forum Building for state purposes. The congestion in the two tax departments will be remedied largely, but not in the main office of the Controller, which is overcrowded now and will be more so when the additional necessary clerical help is put on.

CERTIFICATION OF IRRIGATION BONDS.

Under the law (chapter 336, Statutes of 1913) it is the duty of the Controller, upon application being made to him, personally to sign the certificates that are to be attached to the bonds of such irrigation districts as have been favorably passed upon by the commission whose duty it is to examine into the legal, financial and physical status of such organizations. The commission consists of the Attorney General, the State Engineer and the Superintendent of Banks.

The law should be amended so that a facsimile of the Controller's signature printed upon the certificate would be sufficient, upon the certificate being attached to the bond with the imprint of the Controller's seal appearing upon both certificate and bond, over and through the printed signature.

The law as it stands does not even permit the deputy controller to sign these certificates. But the time of either the Controller or the deputy controller is too valuable to be taken up in signing certificates or other papers, if other means can be provided and yet safeguard all interests. Not only should relief be given in this instance, but the legislature should consider carefully before imposing more burdens of the kind upon the Controller's office.

A suggestion has been made, in fact, that the Controller's office should draw, in addition to the large number now issued there, the warrants of various state institutions. The present practice is for blanket warrants to be sent to the institutions covering salaries of employees and for supplies, and the treasurers of such places then draw individual checks against these warrants.

While good business practice may call for centralization in this respect, still the obstacles in the way are many and serious. Not only would additional room be required for the many extra clerks that would be needed, but it would be impossible for the Controller and the deputy controller to sign such a multitude of warrants, to say nothing of the great un wisdom of placing such a burden upon them that they could not give attention to far more important matters.

True, others could be deputized to sign warrants, but as the Controller alone is responsible and under heavy bond he is not likely to give approval to any such arrangement.

SAN FRANCISCO HARBOR IMPROVEMENT CONDITIONS.

In the report of the State Controller covering the period ending June 30, 1912, there appears a rather careful and amplified analysis of conditions existing in 1912 concerning bond issues and investment of receipts on behalf of that enterprise.

It may be found interesting at this time to continue consideration of the matter and to bring the data relative thereto down to June 30, 1914.

The responsibilities and liabilities of the state have both been largely augmented through the sale of additional harbor improvement bonds since June 30, 1912, and in that connection I have continued a table originally appearing in the 1912 report, bringing the annual receipts of the Harbor Commission up to date.

San Francisco Harbor Revenues, 1906-1914.		
1906-07	-----	\$1,241,294 96
1907-08	-----	1,351,949 67
1908-09	-----	1,367,188 58
1909-10	-----	1,637,949 19
1910-11	-----	1,301,536 43
1911-12	-----	1,328,184 98
1912-13	-----	1,422,908 70
1913-14	-----	1,538,162 93

From which it appears that the annual increase in revenue is normal and persistent. The unusual revenue for 1909-10 was occasioned by large advance payments of rental by sundry shipping companies.

I quote from Controller's report for 1912:

"It is evident from these figures, which as to the distribution of expenditures do not differ greatly from those of former years, that the development of the harbor facilities at a rate which will meet commercial needs and will satisfy the reasonable ambitions of the people of San Francisco, is going to depend almost wholly upon loans. Improving a harbor out of the surplus of current revenue is a slow process, and it has not anywhere been found practicable upon a large scale.

For the state the most interesting question is how future loans are to be secured, for in addition to the resources assured by the \$2,000,000 and \$9,000,000 seawall bond loans, a much larger sum of money will be needed to complete the improvement as projected. The total investment required has been variously estimated at from \$10,000,000 to \$60,000,000. Recent changes in state policy, manifested by the legislation ceding in trust to San Diego, Los Angeles, Long Beach, and Oakland, respectively, the harbors embraced in the municipal limits of those cities, have raised a natural doubt whether more state bonds will be voted, to be secured, as the existing bonds have been, principal and interest, by the harbor revenues, because it is not certain that during the next few years those revenues are going to be more than adequate to meet the obligations already pledged."

Of the nine million dollar seawall bond issue mentioned above, it became necessary to market about \$6,435,000 during the two years following the issue of the 1912 report. The bond market was extremely weak and but for the existence of certain legislation the credit of the state would have been seriously strained, as four per cent bonds would not sell in the open market at par and the state laws inhibited the sale of these bonds at a price less than par and accrued interest.

The laws serving to relieve the condition were: *First*, the act of 1913, chapter 628, carrying an appropriation from the General Fund of \$500,000 to be used by the state treasurer in the payment of a commission of not more than ten per cent for sales of San Francisco seawall bonds—of which appropriation \$476,700 has already been expended as such commission on sales of \$4,767,000 bonds; *second*, the act of 1913, chapter 301, providing for the designation of certain money in the state treasury as “surplus money” and the investment of such surplus money in “(b) bonds of this state, or those for which the faith and credit of the State of California are pledged for the payment of principal and interest.” Under the second act the state was enabled to purchase \$1,668,000 four per cent seawall bonds not otherwise salable in the open market at par.

From the preceding table, showing gradual increase in harbor revenue and with present conditions presaging no appreciable increase, or at least an increase entirely incommensurate with the increased obligations incurred against the harbor revenue, it might be well to take under consideration the ten million additional issue of four per cent bonds for account of the Third San Francisco Seawall Fund, approved by the people of the state at the recent November election. The bonds are to be issued under identical terms governing the nine million dollar issue mentioned above; the call for four per cent bonds does not look at this time to be particularly voracious nor is the condition likely to be improved at an early date. Under these circumstances, it would seem the part of wisdom to carefully consider the advisability of enactment of further legislation enabling payment of bonuses to parties providing for sale of bonds of this nature, and also the advisability of further investment in state bonds having so low a rate of interest as to be unsalable in the open market.

SAN DIEGO HARBOR DEBT UNPAID.

When, some years ago, it was planned to issue \$1,500,000 of bonds for the improvement of San Diego harbor, the legislature (chapter 32, Statutes of 1911) appropriated \$9,706.22 to pay for advertising the bond act of 1909, but with a provision that this sum should be repaid

from the San Diego Harbor Improvement Fund, as money might accumulate therein.

But despite the fact that this fund has had sufficient money, or nearly so, at different times with which to comply with the law, the Harbor Commissioners persistently have refused to make repayment, either in whole or in part. My predecessor urged them to do their duty in the matter but without avail, and I likewise have done so with a similar result. I succeeded so far, at one time, as to come to an understanding with the attorney for the board, who agreed to pay into the state treasury a good proportion of the debt, leaving a working balance in the fund. But the board, upon learning of the transaction, not only refused to ratify the agreement but also accepted the resignation of the attorney.

The fact that the legislature, in 1911, conveyed in trust to the city of San Diego so much of the harbor as is embraced in the municipal limits, and thus put an end to the bonding project, does not relieve the Harbor Commissioners of the legal and moral obligation they are under to repay the loan of \$9,706.22. The state made the advancement in good faith.

THE STATE PRINTING.

The continuation of a businesslike administration of the affairs of the State Printing Office is very gratifying.

Below is a tabulation showing the expenditures for state printing during the twenty years ending June 30, 1912:

Fiscal years	Total expenditures	For school textbooks	All except textbooks
Total for five years, 1892-93 to 1896-97---	\$1,416,209 56	\$442,839 03	\$973,370 53
Average per year -----	283,241 91	88,567 80	194,674 10
1897-98 (appropriations vetoed) -----	98,989 09	92,009 93	6,979 16
Total for five years, 1898-99 to 1902-03----	990,794 94	397,781 49	593,013 25
Average per year -----	198,158 94	79,556 29	118,602 65
Total for five years, 1903-04 to 1907-08--	1,413,517 94	693,772 58	719,745 36
Average per year -----	282,703 58	138,754 51	143,949 07
For year 1908-09 -----	264,783 01	106,365 35	158,417 66
For year 1909-10 -----	240,893 01	130,876 60	110,016 41
For year 1910-11 -----	347,888 81	151,532 03	196,356 78
For year 1911-12 -----	217,608 96	68,011 38	149,597 58
Total for four years -----	\$1,071,173 79	\$456,785 36	\$614,388 43
Average per year -----	267,793 45	114,196 34	153,597 11

For purpose of comparison the expenditures of the last two years tabulated above and considered with the expenditures of 1912-13 and 1913-14 may prove of interest.

	Total expenditures	For school textbooks	All except textbooks
For year 1910-11 -----	\$347,888 81	\$151,532 03	\$196,356 78
For year 1911-12 -----	217,608 96	63,011 38	149,597 58
For year 1912-13 -----	395,486 22	119,480 16	276,006 06
For year 1913-14 -----	525,476 18	249,820 63	275,655 55
Total four years -----	\$1,486,460 17	\$588,844 20	\$897,615 97
Average per year -----	371,615 04	147,211 05	224,403 99

The increased yearly cost is accounted for by the increased number of commissions, boards, etc., requiring official printing, the growing demands of older departments of the state government and the greatly augmented distribution of free textbooks, under the act becoming effective in November, 1911, and leading to first shipment of free books in January, 1912.

The free textbooks produced during the past three years amount to—

Sixty-third fiscal year -----	\$684,547 00
Sixty-fourth fiscal year -----	954,174 00
Sixty-fifth fiscal year -----	1,392,670 00

A result showing an increased output and a decreased unit cost of production.

MOTOR VEHICLE REVENUE.

Chapter 326, Statutes of 1913, provides for the regulation of vehicles upon the public highways and elsewhere, for the registration of motor vehicles, the licensing of persons operating such vehicles and so on.

It also creates a "motor vehicle fund," into which are paid the registration fees, fines and so forth collected. One half the net receipts shall be "returned to the counties from which received, as determined by the places of residence of the persons to whom the licenses are issued, and all such amounts returned shall be paid into the road funds of the several counties receiving the same." If any county concerned has no road fund, its proportion of the motor vehicle fund shall be retained by the state until such a fund is established by it.

It is the duty of the State Engineering Department, of which the Motor Vehicle Division is a subsidiary, in January and July of each year to report to the Controller the latter department's gross and net receipts for the preceding six months and the Controller thereupon shall

draw his warrants upon the motor vehicle fund in favor of the county treasurer of each county entitled to share in the distribution of the net collections. The remaining money in the fund, after the cost of maintaining the Motor Vehicle Division has been provided for, shall be expended under the sole direction of the department of engineering for the maintenance of state highways without specific appropriation by the legislature.

The following table shows the collections and payments to counties to June 30, 1914, with the total number of registrations and so on:

Total amount collections to June 30, 1914	\$1,218,466 00
Total amount apportionment to June 2, 1914	1,056,565 75
Total number auto registrations to June 30, 1914	106,181 00
Total number auto dealers to June 30, 1914	635 00
Total number motorcycle dealers to June 30, 1914	184 00
Total number motorcycle registrations to June 30, 1914	21,701 00
Total number chauffeurs to June 30, 1914	14,316 00

California's first motor vehicle registration law was enacted in 1905. It followed New York's lead, calling for a fee of two dollars but not requiring an annual renewal. New York, as did Massachusetts, soon found, after engaging upon a large scale in highway construction, that the cost of upkeep was a tremendous burden, and this led to a complete readjustment of the registration fees for motor vehicles. California profited by the experience of these and other states and today, as a result, has a motor vehicle registration fee law that is producing not only a handsome revenue but one that will grow.

STATE HIGHWAY BOND INTEREST.

Of the \$18,000,000 of state highway bonds authorized by the people, \$400,000 were sold up to July 1, 1912. From July 1, 1912, to June 30, 1913, \$3,559,020, including \$20.00 premium, were sold, and from July 1, 1913, to June 30, 1914, \$6,371,027, were sold, including \$27.00 premium.

The disbursements from the money so derived, from July 1, 1912, to June 30, 1913, amounted to \$1,092,609.24, and from July 1, 1913, to June 30, 1914, \$2,440,131.17.

The cash balances on hand the first of each of the fiscal years concerned, that is on July 1, 1912, 1913 and 1914, were as follows: \$210,118.08, \$2,679,143.13 and \$6,615,634.

For the fiscal year ending June 30, 1913, the state paid out as interest on highway bonds sold, \$113,800, and for the year ending June 30, 1914, \$105,500.

For the first of these years, the counties, in which highway work had been done, paid to the state as interest on the amounts expended within their borders, \$4,118.61; for the second of the years in ques-

tion \$69,630.64, and for the present fiscal year, which will end June 30, 1915, there will be paid to the state \$120,045.15.

It is possible to tell what will be paid back for this fiscal year because the counties are practically twelve months behind owing to the necessity they are under to raise such money by taxation before it can be turned into the state treasury. They are notified as to the amounts due and include them in their regular tax levies. In other words, the interest that will have been paid the state by June 30, 1915, is on highway money expended in the counties concerned during the year ending July, 1914.

It was the intention of the framers of the \$18,000,000 highway act, that the entire principal should be paid by the state and all of the interest by the counties in which the road construction was done in proportion to the amount of money expended in each. But it is clear that this purpose never fully will be carried out. The general overhead expense some day may be computed and more or less accurately apportioned, as, also, in the matter of the purchase of field and office equipment and other preliminaries. But that the state in the end will be fully reimbursed is not probable.

The figures presented show the receipts from the sales of highway bonds, the expenditures, balances on hand at certain intervals, interest paid on the bonds and the interest received from the counties. It is necessary, of course, to keep sufficient funds on hand to meet demands, but necessarily, under the wording of the act, the proportion of the bond interest paid on the balances can not be charged to the counties since they only can be held liable for interest on money actually expended within their borders.

THE STATE HOSPITALS.

One of the heaviest burdens resting upon California today is the cost of caring for the insane who are committed to the various state hospitals. Two years ago the total appropriations for that purpose (including support, salaries and specials, as for buildings) amounted to over \$4,000,000, while the estimates now on hand for submission to the coming legislature, not including the new hospital at Norwalk, run a million and a quarter, approximately, above the former figure. The Board of Control and the Controller, at this writing, have not acted finally upon these estimates for budget purposes. While they will be materially reduced, particularly the specials, still there is a limit to curtailment. The patients must be properly clothed, fed, housed and looked after. In other words, the presumption is that the appropriation increase to be recommended necessarily will be considerable.

In addition to the growth in population of the five hospitals and the Sonoma State Home (for feeble-minded children and which is classed as a hospital) there are two main reasons for the increase in the support and salary appropriations. One is due to the action of the legislature of two years ago in placing female employees upon an equal salary footing with male employees doing similar work. No one can question the justice of this legislation; but, as it affects from 325 to 340 women, necessarily the hospital payrolls have been increased materially. The other reason is the sharp advance in the cost of food supplies.

From June 30, 1912, to June 30, 1914, the hospital population advanced from 8,895 to 9,805, a total increase of 910. The increase during the next biennial period is estimated at from 950 to 1,000. This is based upon the average increase during the past four years, but necessarily is uncertain. At this time it is not known, of course, what appropriations the legislature will make for the accommodation of patients, nor what effect the Panama-Pacific Exposition will have as to increasing commitments above the yearly average. Undoubtedly, the Exposition will be the cause of adding materially to the insane and criminal population of the state.

In this connection, the deportation of insane people to the states from which they came should be gone into more carefully and a definite policy fixed and adhered to. Deportation is now practiced to some extent. As it costs the state, on an average, \$196.50 a year to maintain a patient, it is evident that it is cheaper to send home those who have no legal claim upon us than it is to keep them. Moreover, such a policy relieves congestion.

The establishment of a new hospital at Norwalk, in Los Angeles County, now under way, will tend, of course, to relieve overcrowded conditions. Two years ago, an appropriation of \$250,000 was made by the legislature for this project, \$90,000 of which was for the purchase of land, and there is a balance on hand of \$153,679. Estimates are out against this sum, however, amounting to \$131,000, for the erection of three buildings. The Department of Engineering, estimating the cost of eight other buildings desired, places the cost at \$455,750, and the legislature will be asked to appropriate this amount or as much thereof as the Board of Control and the Controller may approve.

An act passed by the legislature of 1911 authorized the commitment to state hospitals of inebriates and victims of narcotics. In my judgment this policy is wrong, and I base my opinion not only upon my observations while a member of the Board of Managers of the Napa Hospital, but also upon the conclusions of medical men skilled in the care of the insane. Aside from adding materially to the cost of main-

tenance and to the congestion, the alcoholics and narcotics do not have a good effect upon the insane.

Their stay in the hospitals is short, a few months as a rule, but the supply never runs out. They are coming and going all the time. The figures are not available as to the average number on hand. In 1911, for example, there were 728 such commitments. In the past two years there has been a decided decrease. On July 1, 1912, there were 502 alcoholics and narcotics in the various hospitals, but on July 1, 1914, only 309, a decrease of 193.

That many of these unfortunates have been aided greatly by the treatment given them can not be denied, but it would be better to care for them in an institution set apart for that particular purpose.

The following table covering the period from 1906-07 to 1913-14, gives the cost of hospital maintenance, always going up save for the year 1911-12, and the cost of improvements, quite variable, with the total expenditures for each year:

Year	Maintenance	Improvements	Total expense
1906-07 -----	\$1,027,110 63	\$240,007 81	\$1,267,118 44
1907-08 -----	1,195,030 52	341,787 90	1,536,818 42
1908-09 -----	1,231,118 03	863,397 85	2,094,515 88
1909-10 -----	1,353,503 45	770,911 59	2,124,415 04
1910-11 -----	1,535,316 97	391,500 53	1,926,817 50
1911-12 -----	1,534,673 53	145,690 61	1,680,364 14
1912-13 -----	1,651,858 02	333,720 45	1,985,578 47
1913-14 -----	1,838,747 69	373,873 89	2,212,621 58

The details as to the cost of maintaining the hospitals, with the number of patients in each, follow for the sixty-fifth fiscal year:

	Average number of patients	Total cost	Yearly per capita	Daily per capita
Stockton -----	2,129	\$385,229 59	\$180 94	.4957
Napa -----	2,023	379,253 51	187 47	.5136
Agnews -----	1,339	282,513 07	210 99	.5780
Mendocino -----	1,038	208,933 55	201 28	.5512
Southern California -----	1,992	358,516 00	179 98	.4931
Sonoma -----	1,027	224,301 97	218 39	.5983

Inasmuch as California supports the state hospitals entirely, save for such money as patients or their relatives who are able to pay contribute, such receipts going into the contingent funds of the institutions, the state should be represented at all examinations for commitment. Such a policy undoubtedly would cut down the number of commitments.

It has been suggested that the state maintain at San Francisco and Los Angeles branch hospitals or wards where many of those who otherwise would be directly committed to the hospitals, could be detained,

watched and cared for, the theory being, and experience commends it, that in numerous instances the improvement would be so marked the patients could be returned to their homes, never entering the real hospitals at all. This would relieve them of the stigma of having been inmates of such institutions, reduce congestion and cut down the cost of maintenance. It would be necessary, however, that direct appropriations be made for the support of these branches, or else that the hospitals be authorized to contribute toward their maintenance.

SACRAMENTO DRAINAGE DISTRICT.

While the matter is not of first importance, the legislature, nevertheless, should take steps properly to close up the affairs of the old Sacramento Drainage District, the act creating which was repealed in 1911, but without providing for the lawful disposition of the funds remaining in the hands of the state and county treasurers, or of the uncollected portion of an assessment of \$50,000.

At the time the act was repealed there remained uncollected of this assessment, \$12,886.61. How much of this delinquency may have been lifted no one knows. Payments have been made now and then by residents of the nine counties in the district to clear title to their lands, the assessment being a lien. There remains no requirement, however, for the collection of the unpaid balance, nor, if payments voluntarily are made, is there any requirement for the transfer of such sums to the state treasury, although the original act contained such a provision.

SOLDIERS' EXEMPTIONS

The legislature of two years ago, or, rather, 1913, failed to enact a statute that would end confusion and call for uniform practice under the amendment to the constitution, in 1911, exempting from taxation to the extent of \$1,000 the property of persons who have served in the army, navy, marine corps or revenue marine service of the United States in time of war.

Although apparently a simple matter, there has been much diversity of opinion regarding it, among the questions that have arisen being the following:

What periods of the history of the country shall be considered as being war time? Whether Indian wars shall be recognized; whether a specific portion of a claimant's property shall be exempted, and, when a claimant owns property in different locations having different

tax rates—as, for example, inside and outside of an incorporated city—whether he shall be granted exemption under the lower or higher tax rate?

What is needed is a legislative act defining terms and regulating procedure.

COUNTY AND MUNICIPAL STATISTICS.

The legislature of 1911 made it the duty of the Controller to collect and publish annually a report of the financial transactions of municipalities and counties. The first complete report was published in 1911 and the reports covering the following two years were published in due course. The report for 1914 is now being prepared and will be ready for distribution early in 1915.

In providing for the collection and compilation of these statistics the legislature allowed an appropriation of \$1,000 each year to cover printing of blanks, cost of collection, compilation, printing and mailing the reports.

A number of complications have arisen in the effort to make these reports of the proper comparative value, chief of which is the proper classification of the different receipts and disbursements

Trained Men Needed.

The U. S. Census Bureau, in the collection of statistics, has found it necessary to send trained men into the field for the purpose of classifying the receipts and disbursements so that the reports when published would be of a proper comparative value.

To place our reports on the proper basis, it would be necessary for the legislature to appropriate sufficient money to enable the Controller to put men in the field to collect the data, or about \$25,000 for two years.

The report form for the city reports has been changed from a temporary to a permanent one which corresponds with those in use by the U. S. Census Bureau. There are certain changes as to form contemplated for the county reports.

For 1912 and 1913 the published reports are as complete and accurate as can be obtained by this method of collection, viz: depending upon the city clerks and auditors and county auditors to furnish the data.

Today the accounting systems in use in the cities and counties has improved to a very considerable degree over that in vogue before the collection of these statistics began, due partially to the fact that the officers in charge are making their accounts more uniform and partially to the fact that the communities are taking more interest in governmental affairs. Uniform reporting will eventually bring about

uniform systems of keeping accounts. A considerable number of our cities in the past two years have advanced from the old and poor system of paying from two or three funds and juggling their revenues to meet the occasion, to a budget system which guides them in their payments and estimates their receipts from different sources. This has a tendency to cut payments for certain functions so that they may be kept within the bounds of the budget appropriation. Such a result naturally lessens the amount of taxes levied.

Most of our counties and a number of our cities today are purchasing their materials and supplies on a competitive bid basis, where a few years ago a few favored firms received the order regardless of price.

A model system of accounting for counties is now being installed in the county of Los Angeles by the State Board of Control. Eventually, this system, which is based upon a revenue and expenditure basis, instead of the old receipt and disbursement basis, with modifications and additions to meet their peculiar requirements, will be installed in each county in the state.

By our method of reporting, we are at all times conversant with the total taxes received, the valuations, tax rates and bond debts of the entire state, and can compare not only the total receipts and disbursements of two cities or counties of practically the same size, but can compare them from the standpoint of sources.

These reports show what it costs each officer to maintain his office during the year and if two cities or counties of the same size differ widely in their costs for a particular office, the legislative body can easily investigate and remedy the trouble.

City and County Tax Growth.

The following figures, which are based upon the actual cash receipts, show not only the rapid advance in city taxes, but also that they are growing much more rapidly than are the county taxes. The figures given are the cash receipts from taxes levied for general purposes:

	Cities	Counties
1911 -----	\$21,476,152 57	\$30,245,863 98
1912 -----	24,711,883 63	30,738,334 25
1913 -----	27,528,486 30	

It was not until 1912 that county finances were so segregated that the actual cash receipts from taxes levied could be ascertained.

COST OF STATE COMMISSIONS.

The report of 1910 contained the first tabulated figures on the cost of the various state commissions. They were continued in the biennial of 1912 and are brought down to the close of the past fiscal year, June 30, 1914, in this publication.

For the fiscal year of 1913-1914 there are nine new commissions to account for, several of which, however, are temporary, others probably not permanent, while the remainder likely will be and are important.

The new commissions and their cost to date are as follows:

Industrial Welfare	\$8,995 18
Immigration and Housing.....	15,140 72
Smelter Waste Investigation.....	1,613 69
Rural Credits	2,996 00
State Board of Education.....	106,022 54
Civil Service	23,434 88
Panama-Pacific and San Diego Expositions.....	165,693 06
State Reclamation Board.....	40,245 78
Viticultural	4,709 47

The following tables give the cost of the older commissions, going back as far as the fiscal year of 1906-07 as to twelve of them and to 1910-11 as to the other four, when they went into operation:

	Railroad Commission	Insurance Commission	Bank Superin- tendent	Building and Loan Commissioner
1906-1907	\$18,894 93	\$15,892 42	\$31,589 96	\$8,933 49
1907-1908	17,994 48	33,543 04	37,201 61	9,736 88
1908-1909	23,920 52	33,436 44	35,304 31	9,446 50
1909-1910	33,715 74	34,470 59	71,657 18	11,066 88
1910-1911	46,252 51	30,276 16	74,334 48	10,133 09
1911-1912	121,880 41	32,228 72	78,782 27	7,652 47
1912-1913	219,070 38	35,313 40	77,817 72	7,615 62
1913-1914	306,093 84	41,302 67	89,547 84	7,679 76

	Board of Equalization	Board of Health	Bureau of Labor Statistics	State Mining Bureau
1906-1907	\$22,156 06	\$13,464 04	\$11,110 26	\$22,089 45
1907-1908	21,450 19	37,452 22	10,786 79	25,219 94
1908-1909	30,906 75	52,686 06	16,690 91	27,367 48
1909-1910	41,617 72	61,120 63	43,757 63	32,708 15
1910-1911	39,727 07	57,646 65	28,006 93	38,285 74
1911-1912	40,739 40	59,706 91	30,058 63	26,110 57
1912-1913	50,303 17	55,383 88	37,445 69	24,255 25
1913-1914	35,987 76	112,682 76	50,123 70	48,743 36

	State Board Forestry	Fish and Game Commission	Horticultural Commission	State Veterinarian
1906-1907 -----	\$17,774 77	\$49,616 00	\$23,215 42	\$5,832 78
1907-1908 -----	21,973 46	109,859 33	25,749 39	8,096 77
1908-1909 -----	16,521 78	171,045 33	27,736 57	14,765 25
1909-1910 -----	23,557 61	189,878 05	29,962 50	20,036 62
1910-1911 -----	19,664 94	203,951 57	27,755 99	23,374 77
1911-1912 -----	21,818 61	218,391 93	48,585 78	23,490 55
1912-1913 -----	18,746 06	233,281 65	56,038 27	21,241 44
1913-1914 -----	23,676 36	221,063 97	51,071 04	19,497 72

	Board of Control	Conservation Commission	Board of Water Control	Industrial Accident Commission
1910-1911 -----	\$19,239 76	\$126 30	\$308 72	-----
1911-1912 -----	42,150 52	39,160 03	20,194 42	\$21,737 46
1912-1913 -----	80,664 54	35,523 44	16,203 90	32,232 19
1913-1914 -----	79,618 88	13,561 48	10,294 95	439,738 88

It should be noted that of the sum charged against the Industrial Accident Board \$297,350.48 was invested in bonds, the interest of which is turned into the Compensation Insurance Fund.

COST OF LEGISLATIVE SESSIONS.

The sessions of the legislature now are conducted on a different financial basis to that of a few years ago. The first change applied to the session of 1909, following the adoption of a constitutional amendment, in 1908, which placed the senators and assemblymen upon a salary basis of \$1,000 instead of the per diem formerly paid, and also limited to \$1,000 a day the expenditures for officers, employees and attachés.

The second change, also, due to a constitutional amendment, and which became effective with the session of 1913, provides for a thirty-day recess of the legislature after the first month of the session.

This last change makes it more difficult to estimate the cost of holding a session and adds at least to the expense in the matter of extra mileage allowances, as will be seen by comparing the salaries (fixed sums) and mileage of senators and assemblymen for 1913 with those of 1911.

The session of 1907, held before either change was made, cost \$355,126.77; that of 1909, when the salary provision went into effect, cost \$332,436.50; that of 1911, \$337,133.46, not taking into account the two extra sessions of 1910; and that of 1913, when the thirty-day recess became effective, \$348,696.76. It will be seen that under the two changes the cost in no year has been as great as in 1907, although the recess provision, making more traveling necessary, ran 1913 over either 1911 or 1909.

The following table gives the detail for the past three regular and two extraordinary sessions:

	Session of 1909	Regular session 1911	Extra session 1911	Session of 1913
Salaries and mileage of senators and assemblymen	\$124,670 80	\$124,545 80	\$16,688 80	\$131,164 40
Pay of officers and clerks	50,222 00	84,986 00	1,546 00	90,274 00
Contingent expense	63,104 20	26,601 66	511 20	27,015 13
Legislative printing	94,439 50	101,000 00	1,800 00	100,243 23
Totals	\$332,436 50	\$337,133 46	\$20,546 00	\$348,696 76

Expenditures by Appropriations.

The following table is a record of legislative appropriations made at both regular and extra sessions during the last fifteen years:

	General appropriations	Special appropriations	Total
1899	\$5,056,944 50	\$762,219 58	\$5,819,164 08
1900 (special session)		34,695 00	34,695 00
1901	5,047,467 00	1,315,204 33	6,362,671 33
1903	5,470,996 00	2,050,657 18	7,521,653 18
1905	7,376,052 00	2,592,381 97	9,968,433 97
1906 (special session)		1,365,055 00	1,365,055 00
1907	8,305,164 00	3,026,613 08	11,331,777 08
1907 (special session)		22,587 19	22,587 19
1909	9,686,575 00	3,720,338 50	13,406,913 50
1910 (September special session)		1,500 00	1,500 00
1910 (October special session)		3,300 00	3,300 00
1911	10,870,850 00	3,653,154 66	14,524,004 66
1911 (special session)		247,600 00	247,600 00
1913	12,999,660 00	5,740,968 79	18,740,628 79
Total for 15 years	\$64,813,708 50	\$24,536,275 28	\$89,349,983 78

REVENUE RECEIPTS AND SOURCES.

Following the classification of receipts as to sources as made necessary on the adoption of the new tax system, the following tables are given for the fiscal years of 1912-13 and 1913-14:

	For Fiscal Year 1912-1913.
I. Taxes:	
1. State corporation taxes:	
a. Railroads and street railroads.....	\$4,940,743 48
b. Light, heat and power companies.....	1,365,697 08
c. Telephone and telegraph companies.....	486,236 72
d. Car companies	90,746 06
e. Express companies	104,591 27
f. Insurance companies	602,904 35
g. Banks	1,686,282 71
h. Franchises	1,603,516 74
i. Penalties, etc.	6,426 36
	\$10,887,144 77
2. Poll taxes	856,875 80
3. Inheritance taxes	1,586,875 07
4. Corporation licenses	798,886 25
5. Panama-Pacific Exposition tax	1,273,446 25
6. General property tax (delinquencies, etc.).....	88,450 87
II. Fees, fines and licenses.....	719,674 53
III. Other department collections	835,708 17
IV. Institution receipts	907,675 06
V. San Francisco harbor receipts.....	1,422,887 84
VI. Sale of state lands.....	114,744 16
VII. From United States government.....	173,753 88
VIII. From bond sales, interest and redemption.....	5,139,685 46
IX. Estates deceased persons	35,985 15
X. Miscellaneous receipts	211,066 84
	\$25,052,860 10
	For Fiscal Year 1913-1914.
I. Taxes:	
1. State corporation taxes:	
a. Railroads and street railroads.....	\$6,254,924 04
b. Light, heat and power companies.....	1,723,935 40
c. Telephone and telegraph companies.....	640,106 00
d. Car companies	125,112 94
e. Express companies	112,745 92
f. Insurance companies	760,300 22
g. Banks	1,766,371 17
h. Franchises	1,557,483 35
i. Penalties, etc.	22,681 06
	\$12,963,660 10
2. Poll taxes	845,485 10
3. Inheritance taxes	1,796,478 57
4. Corporation licenses	741,082 55
5. Panama-Pacific Exposition tax	1,270,301 14
6. General property tax (delinquencies, etc.).....	58,129 47
II. Fees, fines and licenses.....	2,301,650 76
III. Other department receipts	757,650 46
*IV. Institution receipts	836,120 07
V. San Francisco harbor receipts.....	1,538,162 93
VI. Sale of state lands.....	71,195 82
VII. From United State government.....	179,357 33
VIII. From bond sales, interest and redemption.....	12,074,670 56
*IX. Estates deceased persons	13,589 57
**X. Miscellaneous receipts	447,469 15
	\$25,895,013 58

*IV. Institution receipts show an apparent decrease, but San Quentin Prison has approximately \$200,000 of jute fabric on hand which can not be sold as the law stands.

**X. Miscellaneous receipts include a receipt of \$301,061.01 from the sale of the Los Angeles Normal School site, which could not be classified above.

In explanation of the \$10,842,153.48 increase in receipts of 1913-14 over 1912-13, it should be stated that highway bonds to the amount of \$6,371,000 and San Francisco seawall bonds to the amount of \$4,843,000 were sold that year.

RECEIPTS AND DISBURSEMENTS.

The receipts and disbursements by the state continue to increase year by year, as the following figures show :

	Receipts	Disbursements
Fifty-eighth and fifty-ninth fiscal years	\$32,535,126 29	\$32,023,328 82
Sixtieth and sixty-first fiscal years.....	37,340,918 04	37,348,979 82
Sixty-second and sixty-third fiscal years	46,246,662 70	43,628,298 02
Sixty-fourth and sixty-fifth fiscal years	75,841,598 60	56,447,421 59

The large increases for the sixty-fourth and sixty-fifth fiscal years are due to bond sales, motor vehicle fund revenue, money derived as insurance premiums under the so-called workmen's compensation act and so on.

The following table shows the receipts into and disbursements from the treasury for the two years in question :

Receipts.		
Cash receipts for sixty-fourth fiscal year	\$25,052,863 10	
Transfer receipts for sixty-fourth fiscal year	6,136,375 70	
Canceled warrants receipts for sixty-fourth fiscal year	856 48	
Total receipts for sixty-fourth fiscal year		\$31,190,095 28
Cash receipts for sixty-fifth fiscal year	\$35,895,013 58

TEN YEARS OF RECEIPTS AND DISBURSEMENTS.

The following is a comparison of receipts and disbursements (less transfers) for each of the last ten years:

Fiscal year	Receipts	Disbursements	Excess receipts	Excess disbursements
Fifty-sixth (1904-05) -----	\$13,598,510 98	\$13,144,487 46	\$454,023 52	-----
Fifty-seventh (1905-06) -----	13,285,236 62	11,945,862 73	1,289,373 89	
Fifty-eighth (1906-07) -----	14,638,940 41	14,154,987 78	483,952 63	
Fifty-ninth (1907-08) -----	15,517,625 12	15,489,780 28	27,844 84	
Sixtieth (1908-09) -----	17,099,442 92	16,841,666 11	257,776 81	
Sixty-first (1909-10) -----	18,487,881 72	18,573,720 31	-----	\$265,838 59
Sixty-second (1910-11) -----	17,877,175 22	18,020,555 39	-----	143,380 17
Sixty-third (1911-12) -----	21,445,956 99	18,691,877 28	2,754,079 71	
Sixty-fourth (1912-13) -----	25,052,863 10	22,900,416 40	2,152,446 70	
Sixty-fifth (1913-14) -----	35,895,013 58	28,655,022 56	7,239,991 03	
Excess of receipts during ten-year period -----			\$14,659,489 13	\$409,218 76
Excess disbursements during ten year-period -----			409,218 76	
Net excess receipts during ten-year period -----			\$14,250,270 37	

COMPARISON OF EXPENDITURES.

The following table of expenditures does not include transfers or money paid to the counties either as reimbursement for the loss of railroad property from their assessment rolls or as refunds on account of bond debts:

Fiscal year	Expenditures	Per cent of increase annually	Per cent of increase since 1900-1
Fifty-second (1900-01) -----	\$8,891,535 42		
Fifty-third (1901-02) -----	8,997,084 59	1	1
Fifty-fourth (1902-03) -----	9,585,180 78	6	8
Fifty-fifth (1903-04) -----	11,116,591 88	16	25
Fifty-sixth (1904-05) -----	12,214,011 62	10	37
Fifty-seventh (1905-06) -----	10,981,375 23	*10	24
Fifty-eighth (1906-07) -----	13,072,258 36	19	47
Fifty-ninth (1907-08) -----	13,931,997 56	7	57
Sixtieth (1908-09) -----	15,229,650 83	9	71
Sixty-first (1909-10) -----	17,197,005 05	13	93

Sixty-fourth (1912-13) -----	22,054,258 72	23	148
Sixty-fifth (1913-14) -----	27,781,910 85	26	212

*Decrease.

THE 1915-16 BUDGET.

Fully realizing because of the falling off in the gross earnings of the public service corporations, which are taxed, and the loss of the corporation license tax and the poll tax that the receipts for the coming biennial period—which will date from July 1, 1915, to June 30, 1917—would not be sufficient to meet the cost of maintaining the state government during the two years in question, the Board of Control and the Controller, in preparing the accompanying budget, exercised the greatest care in making their recommendations. Knowing that curtailment was wise only to the point where it would not cripple departmental and institutional work or check development too markedly, every effort was made to ascertain facts and then to approve such requests as were not rejected outright, first, in the order of their importance and, second, in such sums as appeared sufficient to meet actual needs.

Yet notwithstanding the precautions taken, the deficit is estimated as \$2,871,063.74, the total expenditures being placed at \$36,137,863.74 and the receipts at \$33,266,800. These sums do not take into account, of course, anything save fixed charges, the various items that usually make up the general appropriation bill and numerous special appropriation bills, such as for free textbooks, printing office machinery, flood control, new buildings and improvements for the state institutions and so on.

Members of the legislature, as always is the case, will have bills of their own calling for appropriations for this object and that, but such proposed bills, even if definite information as to them was ascertainable now, would not be included in the recommendations. The allowance of \$500,000 in the budget for "needs not reported" takes these unknown requests into consideration to that extent. In the end, it is for the legislature and the Governor to say how far the budget recommendations shall control and to what extent additional measures bearing upon revenue shall be approved or disapproved.

As affecting the general appropriation bill, the requests for appropriations totaled \$17,365,726 and appropriations amounting to \$15,358,200 are recommended in the budget. In other words, \$2,007,526 was cut off from the total of the sums asked. Special appropriations totaling \$11,334,405.49 were requested and \$3,981,426.74 recommended, requests amounting to \$7,352,978.75 having been disapproved. The established expenditures placed in the budget this year so as to make the financial requirements better understood, total \$14,432,802. The detail of the budget will be found a little further along.

The general appropriation bill, the special appropriation bills and the allowance set aside for needs not yet reported, as recommended,

total \$19,839,626.74 as against actual appropriations by the legislature of 1913 of \$18,057,628.79, an increase of .984 or practically .10 per cent.

If, however, the various sums constituting revolving funds of two years ago, amounting to \$683,000, are to be considered as are other appropriations, then the total of the 1913 appropriations must be raised accordingly, giving \$18,740,628.79 instead of \$18,057,628.79, and changing the percentage of increase from .984 down to .058. Inasmuch as revolving funds represent money that goes out but later comes back, the contention is that they should not be regarded as are the straight appropriations, which are all outgo.

Special Appropriations.

Under the head of special recommendations for new projects are several calling for large appropriations. At the recent November election the people approved the constitutional amendment placing in the hands of the Railroad Commission the power to fix rates for the public utility corporations in all incorporated municipalities. This will throw a heavy burden upon the Commission and an appropriation of \$200,000 is recommended to enable it to carry on this important work. Aid to counties for the benefit of unfortunates suffering from tuberculosis calls for \$100,000.

A purchasing agent and department is approved and a recommendation of \$50,000 made. There is no doubt that such an establishment will be able to save the state several times the cost of its maintenance. An appropriation of \$80,000 for three labor exchanges or employment bureaus, under the Immigration and Housing Commission, also is recommended. For the El Centro-Yuma highway project \$200,000 is recommended or one-half the sum asked.

For the Los Angeles flood control project \$200,000 is recommended as an emergency upon the condition that a like sum be secured from Congress during the present session. It is expressly stated that this recommendation is made to meet an emergency only, without considering or recommending a policy in any way or as laying the basis for further appropriations as to this project.

For the Sacramento and San Joaquin flood control and river improvement project, now well under way, \$500,000 is recommended, half of the amount finally asked. This, too, is conditioned upon like action by Congress. It was felt, in view of the progress made on this project, that unless at least a half a million was recommended and secured, the standing obtained for it in Congress would be seriously jeopardized and the work of years perhaps undone.

While the requests of the institutions for new buildings, improvements and so forth were freely cut, still their total is heavy. The

recommendations were confined to what were considered necessities. Many things the institutions should have but which, now at least, are not indispensable, were disapproved or the estimates cut down.

State University.

When the new system of state taxation went into effect it did away, of course, with the general property tax of three cents on the \$100 levied for the support of the state university. In lieu thereof the legislature passed an act directing that the appropriation for 1911-12, under the new tax system, should be seven per cent more than the tax levy of 1910-11 under the old system, amounting to \$710,773.55, and that each year thereafter until 1915, the appropriation should be increased over that of the year preceding by seven per cent. These appropriations were, in fact, fixed charges. The amounts could be determined accurately.

But in contemplating the needs of the university for the coming biennial period, the Board of Control and the Controller (the seven per cent requirement expiring) were compelled to consider the university situation from a new point of view. Having in mind the deficit and the needs not only of the university but of all other state institutions and departments as well, it was decided to recommend an appropriation of \$1,865,435 for the two years, or just double that made for the last year under the seven per cent arrangement. This recommendation appears in the budget apart from either the general appropriation bill or the special bills. In the matter of requests for special appropriations by the University, no action was taken beyond recommending \$40,000 for University extension purposes, the others being left until the legislature shall settle the question of financing the institution.

San Quentin Prison.

In the general appropriation bill, \$720,000 is recommended for the salary and support account of San Quentin Prison and in the special appropriations, including an item of \$232,000 for deficiency support, \$302,000 is recommended for various purposes. Approximately, the prison has on hand \$225,000 worth of jute bags that can not be sold at the present market price because of the legal requirement that the bags can not be disposed of at less than a certain price as fixed by the Prison Directors. Could the stock of bags on hand be sold, the deficiency appropriation recommended would not be needed.

That a reorganization of San Quentin's finances is necessary is evident. It should be treated as are other state institutions—supported by direct appropriations, with such revolving funds as its manufacturing industries require, and its receipts going into the State Treasury.

The Loss of the Poll Tax.

So far as the budget is concerned, nothing was done as to making a recommendation for an appropriation to reimburse the school fund for the loss of the poll tax abolished by the vote of the people at the recent November election and which of late years had averaged annually over \$800,000. Such reimbursement is in the hands of the legislature. It is a matter of policy for that body to consider. If approved, it will increase the estimated deficit of \$2,871,063.74 by presumably \$800,000 for each year, or \$1,600,000 for the biennial period.

Two years ago the Board of Control and the Controller were not in entire accord as to the budget recommendations. The Controller recommended \$11,999,962 for the general appropriation bill of 1913 and \$3,943,520 in specials, a total of \$15,943,482. The Board of Control agreed with him to that extent and in addition made supplemental recommendations, bringing its total up to \$18,255,082. This year the recommendations agree in detail and in total. Each request was carefully considered, as already stated, with the deficit ever in mind, the main object being to provide for needs as generously as circumstances would allow.

The arrangement of the present budget is different from that of preceding ones, the segregation being amplified and the situation thereby made much clearer. Two years ago the budget consisted of recommendations for the general appropriation bill and for special appropriation bills. This year the established expenditures are given. Necessarily no recommendation is required as to them since they carry themselves. Also, the special recommendations have been divided into two groups, one for established projects and one for new. The recommendation as to the university fund, formerly a fixed charge as already explained, is placed by itself, as also is the allowance for needs not reported. This arrangement gives a much clearer idea of the character of the expenditures than could be obtained by the former grouping.

The estimate as to receipts has been most carefully considered. The total as given is greater than figured at first, but changes were not made until justified by investigation and additional data. The estimate of receipts from corporation taxes though raised over our first figures, is still under (either year) the actual receipts of 1914. So, too, we have raised the estimate of receipts from inheritance taxes, but the amount is still under the actual collections as held by the state treasurer and county treasurers for the past year. All things considered, the estimate of \$16,460,900 for the first year of the coming biennial period and \$16,805,900 for the second, a total of \$33,266,800, appears to be fairly accurate. The tables follow:

RECEIPTS ESTIMATED.

	Sixty-seventh fiscal year	Sixty-eighth fiscal year
Corporation taxes	\$13,300,000	\$13,500,000
Inheritance taxes	2,000,000	2,000,000

State highways in process (441 miles)-----	\$3,097,000 00	3,097,000 00
Total -----		\$99,899,093 82

The foregoing figures are derived from estimates furnished by officials in charge of the various boards, commissions, institutions, etc., mentioned, and are based on the best judgment of the reporting official.

There is shown an increased valuation of state property on June 30, 1914, over the valuation of 1912, amounting to something in excess of \$25,000,000—which, on the face of things, seems to be a most unusual showing; but by comparison and analysis, it becomes evident at once that the increase is readily explained.

For instance, three new armories are credited to the Adjutant General's department, valued at \$700,000; the valuation of San Francisco harbor improvements has been increased \$2,000,000; the university holdings have appreciated \$2,000,000. The cash balance in the state treasury is \$10,000,000 more than two years ago. Bonds investment, held in trust, have augmented some \$6,000,000, and most of the institutions of the state have increased valuations in buildings and improvements.

A new factor appearing in this year's valuation schedule is the estimate put upon state highways—completed and in course of completion—amounting to over \$3,000,000.

DETAILED STATEMENT.

Showing expenditures of the appropriation for traveling and contingent expenses in office of the Controller of State during the sixty-fourth fiscal year, ending June 30, 1913.

EXPLANATION—The excessive increase in personal property for 1913 over 1912 is due to Los Angeles, San Francisco and other counties assessing franchises as personal property and Kern County switching approximately \$18,000,000 on oil wells from real estate and improvements to personal property. In 1914 Kern County returned the oil well assessments to the real estate and improvements column on her rolls.

STATEMENT No. 16.

Showing indebtedness and tax rate of each county for the year 1913.

REPORT.

*To His Excellency, HIRAM W. JOHNSON,
Governor of California.*

SIR: Complying with the law, I have the honor to submit a biennial report of the transactions of the treasury department of the State of California from July 1, 1912, to June 30, 1914, inclusive, covering the sixty-fourth and sixty-fifth fiscal years.

During this period the receipts and payments were materially increased, as compared with those of the preceding two years.

The total receipts (exclusive of transfers) were \$60,947,876.68, exceeding the receipts of the two preceding years by \$21,624,744.47; the payments (exclusive of transfers) were \$51,638,174.13, exceeding the payments of the two preceding years by \$15,017,355.96. The receipts exceeded the payments by \$9,309,702.55. Balance on hand June 30, 1914, was \$19,213,236.41. (See detailed account under Statement No. 1.)

Corporation Franchise Tax Collections.

Under Senate Constitutional Amendment Number 1, providing for the separation of state from local taxation, and for the taxation of public service and other corporations for the benefit of the state, the collections for the sixty-fourth fiscal year amounted to \$10,887,144.77, and for the sixty-fifth \$12,963,660.10, as compared with the collections for the sixty-third fiscal year of \$10,387,206.66.

Motor Vehicle License Fee Collections.

Under the motor vehicle act of 1913, it devolves upon the state treasurer to collect various fees provided for therein. This act became effective in August, 1913, and to June 30, 1914, the collections amounted to \$1,225,442.91, covering the registration of 104,090 automobiles, 21,784 motoreycles and 14,885 chauffeurs. The expense of this office in making the above collections amounted to \$3,443.21. (See Statement No. 48.)

State Funds Deposited in Banks.

You will note from the following comparative statement that there has been a decided increase in the amount of state funds deposited with banks, under the state deposit act. On June 30, 1908, the end of the first year under the act, the deposits aggregated \$3,668,150 in 82 banks; June 30, 1909, \$4,533,150 in 118 banks; June 30, 1910, \$5,636,000 in 151 banks; June 30, 1911, \$5,435,990 in 150 banks; June 30, 1912, \$8,733,360 in 195 banks; June 30, 1913, \$10,619,910 in 229 banks; and June 30, 1914, the deposits amounted to \$12,742,915 in 268 banks.

Both the amount of interest earned and the average interest rate have increased on the deposits of state money. The total interest collected at the end of the sixtieth fiscal year, June 30, 1908, was \$55,080.92; on June 30, 1909, \$87,733.37; June 30, 1910, \$101,915.99; June 30, 1911, \$102,950.35; June 30, 1912, \$163,412.60; June 30, 1913, \$198,368.72, and on June 30, 1914, \$241,929.82.

In addition to the above collections shown as of June 30, 1914, I will collect in December, 1914, the sum of \$33,230.95 as interest on money deposited with the Bankers' Trust Company of New York, the fiscal agent for the State of California in the city of New York, having been collected by them on the sale of a portion of the San Francisco harbor improvement bonds. This interest will be credited to the second San Francisco seawall sinking fund.

State Highway Bonds.

Of the issue of \$18,000,000 state highway bonds, provided for in chapter 383, statutes of 1909, and approved March 22, 1909, up to June 30, 1914, I have sold \$10,330,000.

San Francisco Harbor Improvement Bonds.

Of the issue of \$9,000,000 San Francisco harbor improvement bonds, provided for in chapter 320, statutes of 1909, approved March 20, 1909, up to June 30, 1914, I have sold \$8,298,000. The balance of this issue, amounting to \$702,000, will be purchased by the State of California as soon as the San Francisco harbor board is prepared to use the money. By delaying this sale the San Francisco harbor improvement fund is relieved of the interest on the bonds until the money is actually needed.

San Francisco Seawall Sinking Fund.

This fund, created by act of legislature approved March 20, 1893, for the purpose of paying the principal and interest on the San Francisco seawall bonds, an issue of \$2,000,000, is in a very satisfactory condition. During the sixty-fourth and sixty-fifth fiscal years I purchased bonds in amount of \$384,000. On June 30, 1913, at the end of the sixty-fourth fiscal year, the amount of securities in this fund aggregated \$498,950, on which the net interest for that fiscal year was \$24,890.74.

On June 30, 1914, the close of the sixty-fifth fiscal year, the amount of securities on hand was \$782,075, on which the net interest received for that fiscal year was \$31,415.12.

The act authorizing the sale of this issue provides for the retiring of the bonds by lots, commencing January 2, 1915; investments from this fund, therefore, consist of bonds of short maturities.

(For detailed account of this fund, see Statements Nos. 14 and 21.)

Second San Francisco Seawall Sinking Fund.

This fund was created by act of legislature to provide a fund by transfers from the San Francisco harbor improvement fund for the payment of the interest on the outstanding San Francisco harbor improvement bonds, and for the redemption of these bonds at maturity. The balance in this fund on June 30, 1914, was \$148,023.20. (For detailed statement of this account, see Statements Nos. 33 and 37.)

State Highway Sinking Fund.

This fund was created by an act of legislature to provide a fund by transfers from the general fund of the state, to pay the interest on the outstanding state highway bonds, and for the redemption of the bonds at maturity. On June 30, 1914, there was \$49,957.71 in this fund. (See Statements Nos. 35 and 39 for detailed account.)

Funded Debt of 1873.

There are \$2,277,500 of this issue outstanding and unredeemed, although due in 1893. These bonds were bought by the state for the benefit of the state school fund and the university fund, and are held in trust by the state treasurer, and while not a state obligation in the ordinary sense, nevertheless they appear as such in every financial statement by the state. (See Statements 17 and 20.)

I strongly recommend to your excellency that suitable legislation be introduced into the next legislature whereby these bonds may be redeemed, and the funds thus released be invested in the issues of state bonds authorized by the election of 1910, to be offered for sale from time to time, thus removing the stigma of the apparent failure of the state to redeem a portion of its financial obligations.

Registration of Bonds of the State of California.

Pursuant to the provisions of chapter 19, statutes of 1913, providing for the registration of bonds of the State of California in this office, to June 30, 1914, I have registered bonds in amount of \$3,134,000, receiving fees to cover registration totalling \$1,567. The expense to this office covering such registration has been \$94.81. The difference between the fee collections and the expense will be reported into the general fund.

Respectfully submitted.

E. D. ROBERTS,
State Treasurer.

Sacramento, California, October 31, 1914.

NOTE.—This fund is not one of the regular funds of the state, but is held by me as Special Treasurer for convenience, and is disbursed on authorization of the Governor and Adjutant General of the state.

STATEMENT No. 44.

Transactions under acts of Congress approved August 30, 1890, and March 4, 1907, and an act of the Legislature of California, approved March 31, 1891, expressing assent of the State of California to the act of Congress, approved August 30, 1890, entitled "An act to apply a portion of the proceeds of the public lands to the more complete endowment and support of the colleges for the benefit of agriculture and the mechanic arts, established under the provisions of an act of Congress approved July 2, 1862," and to the purposes of the grants of moneys authorized thereby, and to all the provisions thereof during the sixty-second and sixty-third fiscal years.

The University of California, having the only established college in this State for the benefit of agriculture and the mechanic arts, receives, through its treasurer, all moneys received by the State of California under the above act. The money is not paid into the state treasury, but is turned over to the University as received from the United States Government.

SACRAMENTO OFFICE :

State Capitol.

SAN FRANCISCO OFFICE :

Humboldt Bank Building.

REPORT OF THE ATTORNEY GENERAL.

SAN FRANCISCO, September 15, 1914.

HON. HIRAM W. JOHNSON,
Governor of California,
Sacramento, California.

SIR: Herewith I transmit the report required by law of the business transacted by this office for the two years ending September 15, 1914. The report, together with compilation of cases attached, includes cases instituted by or against the state, criminal cases appealed to the District Courts of Appeal, Supreme Court, Federal Courts, habeas corpus proceedings in which this office has appeared, opinions rendered, and miscellaneous matters that have been cared for by this department. I attach also to this report a transcript of the records of the various district attorneys of the state in felony cases instituted in their respective counties.

CRIMINAL APPEALS.

The following is a compilation of the appeals taken in criminal cases during this biennial period, and showing as to the result thereof:

Criminal Appeals for Two Years Ending September 15, 1914.

Number of cases appealed.....	264
Cases originally appealed—	
To the Supreme Court	14
To the First District Court.....	106
To the Second District Court	76
To the Third District Court	68
	264
Final decisions for the people	162
Final decisions for defendants	28
Pending	74
	264

Percentage decided for the people, 85 per cent.

Supreme Court.

Cases, originals and rehearings.....	32
Decided for the people	17
Decided for defendants	7
Pending	8
	32

Percentage decided for the people, 70 per cent.

Nine death penalty cases affirmed; none reversed.
Ten murder cases affirmed; 4 reversed; 4 pending.

First Appellate.

Number of cases (1 pending Supreme Court last report).....	105
Decided for the people	72
Decided for defendants	3
Pending	30
	105

Percentage decided for the people, 96 per cent.

Sixteen murder cases affirmed; none reversed; 4 pending.

Second Appellate.

Number of cases (2 pending Supreme Court last report) -----		74
Decided for the people -----	41	
Decided for defendants -----	9	
Pending -----	23	
Disagreed -----	1	
		<hr/> 74

Percentage decided for the people, 82 per cent.
Eleven murder cases affirmed; 2 reversed; 6 pending.

Third Appellate.

Number of cases (3 pending Supreme Court last report) -----		65
Decided for the people -----	40	
Decided for defendants -----	10	
Disagreed -----	2	
Pending -----	13	
		<hr/> 65

Percentage decided for the people, 80 per cent.
Seven murder cases affirmed; 2 reversed; none pending.

Hearings Granted by Supreme Court After Decisions in District Courts of Appeal.

First District (5 consolidated into one in Supreme Court) -----	7
Second District -----	4
Second District, disagreement -----	1
Third District -----	8
Third District, disagreement -----	2
	<hr/> 22

(The 19 rehearings appear as 15 in the Supreme Court by reason of the consolidation above referred to.)

Hearings Denied by Supreme Court After Decisions in District Courts of Appeal.

First District -----	17
Second District -----	10
Third District -----	22
	<hr/> 49

In addition to the foregoing criminal cases the following proceedings upon *habeas corpus* involving the validity of various statutes and criminal proceedings have also been defended by this office, and with the exception of two cases have been finally disposed of. The two cases mentioned have been briefed and submitted for decision:

Validity of automobile law, sustained -----	4
Validity of optometry law, sustained -----	1
Validity of parole law, sustained -----	1

DISTRICT ATTORNEYS' REPORTS.

The reports of the various district attorneys disclose the following figures concerning the criminal cases instituted in the various counties of the state:

Number of persons charged -----		8,177
Convicted -----	1,772	
Pleaded guilty -----	3,691	
Acquitted -----	605	
Dismissed -----	1,648	
Pending -----	461	
		<hr/> 8,177

Take from 8,177 persons charged, 1,648 dismissed, and 461 pending, leaves 6,068 proceeded against. Of this 3,691 pleaded guilty, 1772 were convicted, making over 90 per cent.

CIVIL CASES.

During the past two years this office has instituted actions in behalf of the state, or defended actions instituted against the state or some of its officers, to the number of 1,083. In addition thereto there were pending cases instituted during the year 1912 amounting to 438, making a total number of civil cases engaging the attention of this office during the past two years of 1,521. Of this number of civil cases, we have finally disposed of 548 cases. A large percentage of the civil cases have been actions instituted by this office for the collection of taxes due the state upon the assessment of corporation franchises by the State Board of Equalization. Of these cases there were 1,041, out of which number we have brought to a conclusion and judgment for the state 436 cases, thereby collecting and remitting to the State Controller the sum of \$10,745.71 in cash, and securing in addition thereto judgments in behalf of the state amounting to \$24,578.42 which is in course of collection.

In 11 cases instituted to recover taxes paid to the state, the plaintiffs have prevailed, obtaining judgment for a refund in said cases to the amount of \$36,466.37. As against the judgments thus obtained by certain of the plaintiffs, the state is entitled to a credit on account of the reassessment of the franchise of the corporation plaintiff, which reassessment was made by the State Board of Equalization subsequent to the rendition of such judgments. I will treat these particular cases under another heading.

CORPORATION LICENSE TAX AND FILING FEE STATUTES.

In my report to you under date of September 15, 1912, this subject was commented upon, and by reason of developments since that time in the litigation concerning the subject matter, some further comment seems pertinent and proper.

In 1911, the Supreme Court in the case of *H. K. Mulford Company vs. Curry*, 163 Cal. 276, declared the corporation license tax and filing fee statutes unconstitutional, in so far as they applied to corporations, any portion of whose business or property lay outside the state. Thus broadly interpreted the decision included practically all foreign and domestic corporations. The state was thereby threatened with a loss of revenue which averaged about one million dollars a year. This office immediately applied for a rehearing of the case in an endeavor to obtain a limitation upon the rule expressed in this case but failed to secure the same. Much litigation has since ensued by way of suits

for writs of mandate, writs of injunction and suits to recover fees paid under protest. In none of these suits has a final judgment been obtained against the state, and notwithstanding the claimed unconstitutionality of these statutes practically the whole normal revenue therefrom has been collected to date.

In the cases of *Albert Pick & Company vs. Frank C. Jordan*, and *Melville Clark Piano Company vs. Frank C. Jordan*, the question of the validity of the corporation license tax and filing fee statutes has again been presented to our Supreme Court, the contention of the state being that the same are mere *excise* taxes. A favorable decision is expected in these cases for the reason that while the same have been pending and since the decision in *Mulford vs. Curry*, the Supreme Court of the United States and the Supreme Court of Massachusetts, Montana and Utah have rendered decisions in line with our contention.

TAX LITIGATION.

During the past three years this office has been compelled to institute 1,041 cases, as hereinbefore mentioned, against foreign corporations, and the trustees of defunct domestic corporations, to collect the tax levied upon the franchises of such corporations by the State Board of Equalization and the inadequacies of the present statute providing for the collection of this tax taken in conjunction with the difficulties experienced in endeavoring to collect the same through the medium of the courts, would seem to suggest a change in the method of collection of this tax upon corporate franchises. The difficulties of collecting the tax through the medium of litigation to which I refer consist principally in the inability to locate any property of the corporation after its charter has been forfeited for non-payment of the tax. Under the statute, unless the tax is paid by the assessed corporation prior to the Saturday preceding the first Monday in March of the year succeeding the levy of the tax, the charter of such corporation is forfeited and its directors become trustees for the purpose of winding up its affairs. A large percentage of these corporations have no property to which the lien of the tax may attach, and for this reason it would appear that taxes upon the corporate franchise should be collected immediately upon the levy of the same in some manner similar to that which is provided for the collection of personal property taxes. Such a method would not only secure to the state the revenue to which it is entitled but would avoid considerable costly litigation, some of which can never be successful, and would also do away with the forfeiture of many corporate franchises which if not forfeited for non-payment of taxes would remain existent and subject to taxation in succeeding years.

TIDELAND LITIGATION.

In my report to you two years ago I referred, at page 6, under the heading "San Pedro Harbor Cases," to the then pending litigation involving the law respecting tidelands of the state, and reviewed the course of this litigation to the date of that report. That report showed these cases, some ten in number, involving the legality of patents which theretofore had been granted by the state to the tidelands surrounding San Pedro harbor, and to practically the whole of the bed of Wilmington Bay, to be then pending on appeal in the Supreme Court of the state. These cases were decided on December 20, 1913, and the decisions are found in Volume 166, California Reports, beginning at page 576. In that report it was stated:

We have endeavored through this litigation to gain for the state an affirmance of the principle that the state holds title to tidelands, as well as to the lands covered by the inland navigable waters, in trust for all the inhabitants of the state, and that the inhabitants have the right of access to, and use of, such lands for the purposes of navigation, commerce, and fishery. In short, that the state holds the title in trust for the people, who are the beneficiaries of such trust, and that the state may not, by conveyance or otherwise, destroy the trust property, or deprive the people of its beneficial use.

The decisions rendered by the Supreme Court in deciding these cases sustained our contentions in every particular, except that the court held, in effect, that it was within the power of the legislature of the state to convey by specific grant particularly defined areas of tidelands, which, in the judgment of the legislature, are not required for the purposes of commerce, navigation or fisheries. The decisions establish the doctrine that no title to tidelands is conveyed by patents purporting to have been issued under the general acts for the disposition of swamp and overflowed salt, marsh, or tidelands now found in the Political Code.

Prior to 1872 the legislature of the state, through several different acts, provided for the segregation, platting, and sale of a large portion of the water frontage of San Francisco Bay, and, in accordance with these several acts much of the water front of this bay passed into private ownership. The legality of these particular grants was not before the court in the litigation here referred to, but the decisions rendered in those cases clearly show that it is the judgment of the court that these grants are valid, and not now open to attack. With this exception these decisions have uniform application to the tidelands of the state, and put at rest for all time, I believe, the law applicable thereto.

An appeal from one of these judgments has been taken by writ of error to the Supreme Court of the United States where it is now pending. It is not believed, however, that the Supreme Court of the

United States will interfere with the construction given to purely local statutes by the Supreme Court of the state.

As bearing upon this matter, my report of two years ago referred to the condemnation suits involving approximately one hundred and twenty-five lots adjoining India Basin in San Francisco harbor brought by the State Board of Harbor Commissioners pursuant to the act of the legislature found in the statutes of 1909 at pages 711 and 713, respectively, and suggested that action in these cases be delayed until the decision by the court of the San Pedro harbor cases. In accordance with that suggestion action was so delayed, but since the decision of these cases these actions have gone forward in accordance with the law as announced in the decisions.

LAND LITIGATION.

Under this head in my last report I referred to many actions pending, involving state school and lieu lands. I am pleased to report that these actions have been decided favorably to the state. By decision recently rendered by the District Court of Appeal, First District, the action of the Surveyor General in refusing to file or approve applications involving some four hundred thousand acres of school and lieu lands was approved, and these lands may now be used in accordance with the provisions of the so-called Thompson Act. A rehearing in these cases was denied by the Supreme Court of the state, and the law applicable to the facts involved in these cases may be taken as settled by the decisions of the District Court of Appeal.

OPINIONS.

During the period of this biennial report this office has rendered 468 formal written opinions which bear serial number, and over 3,000 letters of advice preserved as records in the office but without serial number. In addition thereto, we have examined all contracts entered into by the state for various purposes, and also the abstracts of title and proceedings leading to the issuance of bonds prior to the purchase thereof by the state.

Following is the record of the bond issues examined and approved by this office:

Name	Rate	Premium	Total paid	Net rate per cent
Bakersfield Fire Department.....	5	\$2,441 18	\$50,041 73	4 60

Total		\$10,846 37

**JUDGMENTS RENDERED AND COMPANIES THEREAFTER
REASSESSED.**

Under this head are noted certain judgments rendered against the state for taxes illegally assessed and recovered after trial. In each case the franchise of such company was thereafter reassessed by the State Board of Equalization, thus reducing the gross sum of the judgments to the net figure shown. The judgments, however, should be repaid in full, as under the reassessment act the tax due the state upon a reassessment must be paid in the same manner as an original assessment.

		Costs
Miller & Lux, Inc.—		
Judgment rendered	\$10,295 00	
Reassessed after judgment	6,555 00	
Net judgment against state	\$3,740 00	\$42 06

Matson Navigation Company (3 cases)	3,307 00
Total	\$36,564 32

RECOMMENDATIONS.

One matter that has come to our attention recently prompts us to recommend the enactment of statutes that will hereafter guard the state against fraudulent initiative, referendum, and recall petitions. At the recent general election several measures appeared upon the ballot which found their way there through the medium of thousands of forged signatures. The law governing the circulation of petitions and the securing, checking, and certifying of signatures thereto is entirely inadequate at the present time to safeguard the ballot, or to prevent the

withholding from operation, through the medium of the referendum, statutes enacted by the legislature or the foisting upon the public of initiative measures through a similar medium.

Under the law as it exists today it is not a crime to forge the signature of an elector to any such character of petition, and the only criminal offense involved when forged petitions are sworn to by the person supposed to have circulated such petitions and obtained such signatures is the crime of perjury. The indiscriminate circulation of petitions, whether initiative, referendum, or recall, should not be permitted. It would appear most proper that such petitions, when circulated, should be in the hands of responsible parties and their circulation guarded by officials charged with the proper performance of such duty.

Inasmuch as the names on all such petitions, when filed with the registrar of voters or county clerk, must be inspected and checked as against the affidavits of registration on file in the offices of those officials, and the time within which such checking and certifying is to be done is limited and is done at a considerable expense to the county in which the petition is circulated, it would seem appropriate that those persons who desire to have such petition circulated should prepare and file the same with the registrar of voters or county clerk, and that such officer be authorized to appoint persons known to him to be reputable to act as the circulators of such petition. Before entering upon their work the persons so appointed should be required to subscribe an oath for the proper performance of such duties and such oath should be filed with the officer making such appointment. The expense of securing signatures to such petitions should be paid by the parties desiring to have the petition circulated, and an amount sufficient to cover the expense of such work should be paid by such parties to the registrar of voters or county clerk before such officers could be required to appoint persons to circulate such petition. The amount required to be deposited could be ascertained by determining the number of names required upon such petition, and provision could be made for the return of any excess deposited. In this way, the cost of circulating, checking, and certifying such petitions need not be more, and probably would be less, than the amount expended under the present system. Through this method, official responsibility would safeguard the verity of petitions and the genuineness of signatures. In addition to this, the statutes should be so amended that the forgery of names to petitions of this character would be penalized in a manner similar to other forgeries.

In connection with such petitions we have also noted that the language employed in the petitions themselves are dissimilar in various sections of the same petition, thus, as a matter of fact, constituting different petitions by reason of the different language, yet ultimately

all of such dissimilarly worded sections after circulation were attached together and assumed to constitute a petition identically similar in all of its sections. This could be remedied by having all petitions first referred to, and checked and certified by, the Legislative Bureau before they are filed with the respective registrars of voters or county clerks for purposes of circulation.

STATE BOARDS, ETC.

The reports of those boards and commissions of which ex officio I am a member will be placed before you by said boards and commissions.

Respectfully,

U. S. WEBB,
Attorney General.

CASES IN THE UNITED STATES SUPREME COURT.

Wm. Muir et al. vs. The United States of America and the State of California et al. To quiet title of defendants to the lands described in the complaint. Demurrer sustained to complaint. Plaintiffs appealed to United States Circuit Court of Appeal. Affirmed. Writ of error to United States Supreme Court. Ready.

The People of the State of California, by U. S. Webb, Attorney General, vs. Banning Company, a corporation. To quiet title to certain tidelands on San Pedro harbor. Los Angeles County. Judgment for plaintiff. Defendants appealed to Supreme Court of state. Judgment affirmed. Defendants appealed to United States Supreme Court. Ready.

CASES IN THE UNITED STATES CIRCUIT COURT OF APPEAL.

Physicians' Defense Company, a corporation, vs. E. C. Cooper, Insurance Commissioner. Complaint for injunction in Circuit Court of United States to restrain defendant as Insurance Commissioner from interfering with the business of plaintiff under the insurance laws of the state. Judgment for defendant. Plaintiff appealed. Affirmed. Closed.

Deseret Water, Oil and Irrigation Company, a corporation, vs. The State of California. In the Circuit Court of the United States to condemn a section of state school land. Demurrer sustained. Plaintiff appealed. Affirmed. Closed.

CASES IN THE UNITED STATES DISTRICT COURT,
NORTHERN DISTRICT OF CALIFORNIA.

The Crocker National Bank of San Francisco, a corporation, vs. E. D. Roberts, as State Treasurer. To recover \$40,858.44 franchise tax. Demurrer filed. Dropped from calendar.

Mercantile National Bank of San Francisco, a corporation, vs. E. D. Roberts, as State Treasurer. To recover \$36,612.64 franchise tax. Demurrer filed. Dropped from calendar.

Kern Trading and Oil Company, a corporation, and Associated Oil Company, a corporation, vs. Associated Pipe Line Company, Ulysses S. Webb, Attorney General, John M. Eshleman et al., Railroad Commissioners, and Max Thelan, Attorney. To restrain enforcement of acts of legislature making oil pipe line a common carrier. Submitted.

Southern Pacific Company vs. John M. Eshleman et al., and U. S. Webb, Attorney General. Injunction to restrain from enforcing public utilities statute. Submitted.

CIVIL CASES IN THE SUPREME COURT OF THE
STATE OF CALIFORNIA.

The People of the State of California, by U. S. Webb, Attorney General, vs. Southern Pacific Railway Company et al. Los Angeles County. To quiet title to certain tidelands on San Pedro harbor. Judgment for plaintiff. Defendants appealed. Affirmed. Closed.

The People of the State of California, by U. S. Webb, Attorney General, vs. Southern Pacific Company et al. Same county, nature of action, and proceedings as above case. Affirmed. Closed.

The People of the State of California, by U. S. Webb, Attorney General, vs. Southern Pacific Railroad Company et al. Same county, nature of action, and proceedings as above case. Submitted.

The People of the State of California, by U. S. Webb, Attorney General, vs. Banning Company et al. Same county, nature of action, and proceedings as above. Affirmed. Closed.

The People of the State of California, by U. S. Webb, Attorney General, vs. Banning Company et al. Same county, nature of action, and proceedings as above. Affirmed. Closed.

The People of the State of California, by U. S. Webb, Attorney General, vs. California Fish Company et al. Same county, nature of action, and proceedings as above. Affirmed. Closed.

The People of the State of California, by U. S. Webb, Attorney General, vs. Banning Company et al. Same county, nature of action, and proceedings as above. Affirmed. Closed.

The People of the State of California, by U. S. Webb, Attorney General, vs. Southern Pacific Railroad Company et al. Same county, nature of action, and proceedings as above. Affirmed. Closed.

The People of the State of California, by U. S. Webb, Attorney General, vs. Hancock Banning et al. Same county, nature of action, and proceedings as above. Submitted.

The People of the State of California, by U. S. Webb, Attorney General, vs. Southern Pacific Company et al. Same county. To forfeit that certain right of way for nonuser described in the complaint. Judgment for plaintiff. Defendants appealed. Ready.

Fred Miller vs. A. J. Pillsbury et al., as Industrial Accident Board. Petition for a writ of mandate to compel defendants to file claim for damages against the state. Writ denied. Closed.

San Diego and Arizona Railway Company, a corporation, vs. California State Board of Equalization et al. Petition for writ of mandate to compel assessment of property of petitioner as operative property. Writ denied. Closed.

San Diego and Arizona Railway Company, a corporation, vs. California State Board of Equalization et al. To fix property as operative property and prevent local taxation. Writ denied. Closed.

The Spaulding Company, a corporation, vs. E. D. Roberts, as State Treasurer. Los Angeles County. To recover certain bonds, deposited with defendant under Bank Act, plaintiff having abandoned business as such. Judgment for plaintiff. Submitted.

Deseret Water, Oil and Irrigation Company, a corporation, vs. State of California. Mono County. To condemn school land for water power reservoir. Judgment for plaintiff. Defendant appealed. Reversed by Third Appellate. Rehearing by Supreme Court. Affirmed.

Hartford Fire Insurance Company, a corporation, vs. Frank C. Jordan, as Secretary of State, and E. D. Roberts, as Treasurer. City and County of San Francisco. To recover license tax and penalties, \$525. Judgment for plaintiff. Reversed. Closed.

United Merchants' Realty and Improvement Company, a corporation, vs. E. D. Roberts, as State Treasurer. City and County of San Francisco. To recover \$150 franchise tax. Judgment for defendant. Plaintiff appealed.

United Cigar Stores, a corporation, vs. E. D. Roberts, as State Treasurer. City and County of San Francisco. To recover \$700 franchise tax. Judgment for defendant. Plaintiff appealed.

Pacific Gas and Electric Company, a corporation, vs. E. D. Roberts, as State Treasurer. City and County of San Francisco. To recover \$41,000.45 franchise tax. Judgment for defendant. Plaintiff appealed.

Coast Counties Light and Power Company, a corporation, vs. E. D. Roberts, as State Treasurer. To recover \$1,693.99 franchise tax. Judgment for defendant. Plaintiff appealed.

The Bank of California National Association, a corporation, vs. E. D. Roberts, as State Treasurer. City and County of San Francisco. To recover \$155,315.88, \$6,278.67, \$1,201.01, and \$1,697.62 franchise tax. Judgment for plaintiff \$7,479.68 and \$27.30 costs. Defendant appealed.

B. M. Aikins vs. W. S. Kingsbury, as Surveyor General. City and County of San Francisco. Mandate to compel defendant to issue patent to land. Judgment for plaintiff. In Third Appellate District Court. Affirmed. Hearing granted by Supreme Court. Ready.

Lake Tahoe Railway and Transportation Company, a corporation, vs. E. D. Roberts, as State Treasurer. City and County of San Francisco. To recover \$978.68 franchise tax. Judgment for plaintiff \$978.68 and \$9.00 costs. Affirmed. Closed.

C. A. Smith Lumber Company, a corporation, vs. E. D. Roberts, as State Treasurer. City and County of San Francisco. To recover \$750 franchise tax. Judgment for defendant. Plaintiff appealed.

C. A. Smith Timber Company, a corporation, vs. E. D. Roberts, as State Treasurer. City and County of San Francisco. To recover \$16,450 franchise tax. Judgment for defendant. Plaintiff appealed.

The People of the State of California, by U. S. Webb, Attorney General, et al., etc. vs. Continental Building and Loan Association, a corporation. City and County of San Francisco. To declare defendant doing an unsafe business. Judgment for defendant. Plaintiff appealed.

Albert Pick Company, a corporation, vs. Frank C. Jordan, as Secretary of State. City and County of San Francisco. Mandate to compel defendant to file designation of agent, etc. Judgment for plaintiff. Defendant appealed. Submitted.

Melville Clark Piano Company vs. Frank C. Jordan, as Secretary of State. Same county, nature of action, and proceedings as above.

Cluett, Peabody & Co., a corporation, vs. Frank C. Jordan, as Secretary of State. City and County of San Francisco. To restrain defendant from certifying plaintiff as delinquent for non-payment of corporation license tax. Judgment for plaintiff. Defendant appealed. Submitted.

T. C. Tognazzini et al., Trustee, Swiss American Bank vs. Frank C. Jordan, as Secretary of State. Mandate to compel to file amended articles of incorporation reducing time of existence of corporation. Writ granted. Closed.

Andrea Sbarboro et al. vs. Frank C. Jordan, as Secretary of State. Mandate to compel respondent to put Republican electors on ballot and omit Progressive electors. Writ denied. Closed.

Pacific Electric Railway Company, a corporation, vs. Edward Rolkin et al. Mandate to declare property of plaintiff operative property and so inform assessor of Los Angeles County. Writ denied. Closed.

The County of San Bernardino, a body corporate, etc. vs. The State Board of Equalization and Pacific Fruit Express Company. County of San Bernardino. Suit brought under section 1138, C. C. P., to set aside action of State Board of Equalization and adjudge property as not operative property and subject to taxation by county. Submitted.

John F. Atkinson vs. State Department of Engineering et al. Mandate to compel defendants to execute and deliver contract of Los Angeles Normal School to plaintiff. Writ denied. Closed.

Nina D. Crittenden, etc. vs. The Superior Court, etc. Writ of procedendo to Department 1, Superior Court, City and County of San Francisco to certify up record and proceed to try case of *Crittenden vs. State*. Writ denied. Closed.

Southern Pacific Company vs. Levee District No. 1 et al. and A. B. Nye, as Controller. Sutter County. Suit to determine validity of levee district tax on railroad property in said district. Judgment for defendants. Plaintiff appealed.

Petaluma and Santa Rosa Railway Company, a corporation, vs. E. D. Roberts, as State Treasurer. City and County of San Francisco. To recover \$6,179.91 and interest franchise tax. Judgment for defendant. Plaintiff appealed.

The Kelly-Springfield Motor Truck Company, a corporation, vs. Frank C. Jordan, as Secretary of State. City and County of San Francisco. Mandate to compel to file articles of incorporation. Writ ordered. Defendant appealed.

James H. Roberts vs. Dennis M. Duffy et al. Mandate to compel to consider prisoners' application for parole notwithstanding rule of Prison Board not to consider until one half of term has been served. Writ granted. Closed.

Westinghouse Electric Manufacturing Company vs. John S. Chambers, as State Controller. Mandate to compel defendant to draw warrant to pay judgment recovered for franchise tax. Submitted.

J. D. Baldwin vs. Frank C. Jordan, as Secretary of State. Mandate to certify recall petition against Senator J. C. Owens to Governor. Writ issued. Closed.

Bank of Los Banos, a corporation, vs. Frank C. Jordan, as Secretary of State. Mandate to compel certificate of increase of directors of corporation. Writ issued. Closed.

Pacific Gas and Electric Company, a corporation, vs. E. D. Roberts, as State Treasurer et al. Mandate to compel to register motor vehicles of plaintiff without payment of license tax. Writ issued. Closed.

Milton T. U'Ren vs. State Board of Control et al. City and County of San Francisco. Mandate to compel to audit and allow salary claim of \$200. Writ ordered. Defendants appealed.

In the Matter of the Estate of William Brady, deceased. Los Angeles county. Distribution of community property to heirs of deceased's wife. State intervened claiming escheat. Distributed to heirs and state appealed.

CIVIL CASES IN THE DISTRICT COURTS OF APPEAL OF THE STATE OF CALIFORNIA.

J. P. Lassen vs. The Board of Dental Examiners of the State of California. City and County of San Francisco. Petition for writ of review of action of board in suspending petitioner's license to practice dentistry. Writ denied. Judgment affirmed by District Court of Appeal, First District. Rehearing by Supreme Court denied.

State of California vs. Security Savings Bank, a corporation. First Appellate District. Mandate to compel to deposit with State Treasurer \$7,425.18 uncalled for deposit for twenty years. Petition filed. Case pending.

Sacramento Orphanage and Children's Home, a corporation, vs. John S. Chambers. Third Appellate District. Mandate to draw warrant for support of half-orphan of alien parents. Petition filed, writ issued.

W. F. McClure vs. A. B. Nye. Third Appellate District. Mandate to compel defendant to draw warrants for various claims. Writ denied. Closed.

CIVIL CASES IN THE SUPERIOR COURTS OF THE STATE OF CALIFORNIA.

Lotis Pfeiffer vs. W. S. Kingsbury, as Surveyor General. Sacramento County. Mandate to compel defendant to refer land contest. Demurrer overruled and stipulation made for answer to be served on notice.

John F. Dickson vs. W. S. Kingsbury, as Surveyor General, etc. Sacramento County. Mandate to compel reference of land contest. Demurrer filed.

Herman C. Pfister vs. W. S. Kingsbury, as Surveyor General, etc. Application for mandate to compel to file and approve purchase of state land. Demurrer filed.

George B. McCord vs. W. S. Kingsbury, as Surveyor General, etc. Same county, nature of action, and proceedings as above.

REPORT
OF THE
SURVEYOR GENERAL
OF THE
STATE OF CALIFORNIA

From August 1, 1912, to August 1, 1914

W. S. KINGSBURY, Surveyor General

CALIFORNIA
STATE PRINTING OFFICE
1914

REPORT OF THE SURVEYOR GENERAL.

STATE OF CALIFORNIA, OFFICE OF THE SURVEYOR GENERAL,
SACRAMENTO, September 4, 1914.

To His Excellency, HIRAM W. JOHNSON,
Governor of the State of California.

SIR:

In accordance with the requirements of the law relating to the duties of the Surveyor General, I have the honor to submit the following report of the transactions of this office from August 1, 1912, to August 1, 1914.

Respectfully submitted.

W. S. KINGSBURY,
Surveyor General.

GENERAL OFFICE BUSINESS.

AMOUNT OF FEES COLLECTED BY SURVEYOR GENERAL.

From August 1, 1912, to August 1, 1914, the Surveyor General's Office collected and paid into the state treasury the following fees:

ESTABLISHMENT OF COUNTY BOUNDARY LINES.

Pursuant to Section 3969 of the Political Code.

On July 3, 1912, the board of supervisors of Riverside County made application to this office for the establishment of the boundary line between Riverside and San Bernardino counties, in township 2 south, range 7 west, S. B. M., and on July 29, 1912, this office authorized George M. Pearson, county surveyor of Riverside County, to make the survey. On August 19, 1912, the board of supervisors of San Bernardino County made application to this office for a survey of the boundary line between San Bernardino County and Riverside County in township 2 south, range 7 west, S. B. M., and on August 23, 1912, this office authorized J. S. Bright, Jr., county surveyor of San Bernardino County, to make the survey.

From the field notes filed by the said county surveyors, the location of the boundary line was established by this office, and on June 18, 1913, the county surveyors of the two counties were instructed to mark the established boundary line with permanent monuments.

On April 10, 1914, the board of supervisors of Tulare County made application to this office for a survey of the boundary line between Fresno and Tulare counties, from the north line of township 16 south, range 23 east, M. D. M., south 45° west to the south line of township 16 south, range 22 east, M. D. M. The survey of said boundary line was made jointly by Byron O. Lovelace, county surveyor of Tulare County, and Scott McKay, county surveyor of Fresno County, February 25, to March 11, 1914, and the survey was approved and the boundary line established in accordance therewith by this office on May 20, 1914.

WITHDRAWAL FROM SALE OF SCHOOL LANDS.

The sixteenth and thirty-sixth sections of school land belonging to the State, not situated within United States reservations, were withdrawn from sale by an act of the legislature, approved January 22, 1912, to permit of their examination and appraisalment by the State Conservation Commission, and by an act of the legislature approved April 21, 1913, the withdrawal of said land was continued in force. Therefore, no sales of such land have been made by the State since said acts became effective.

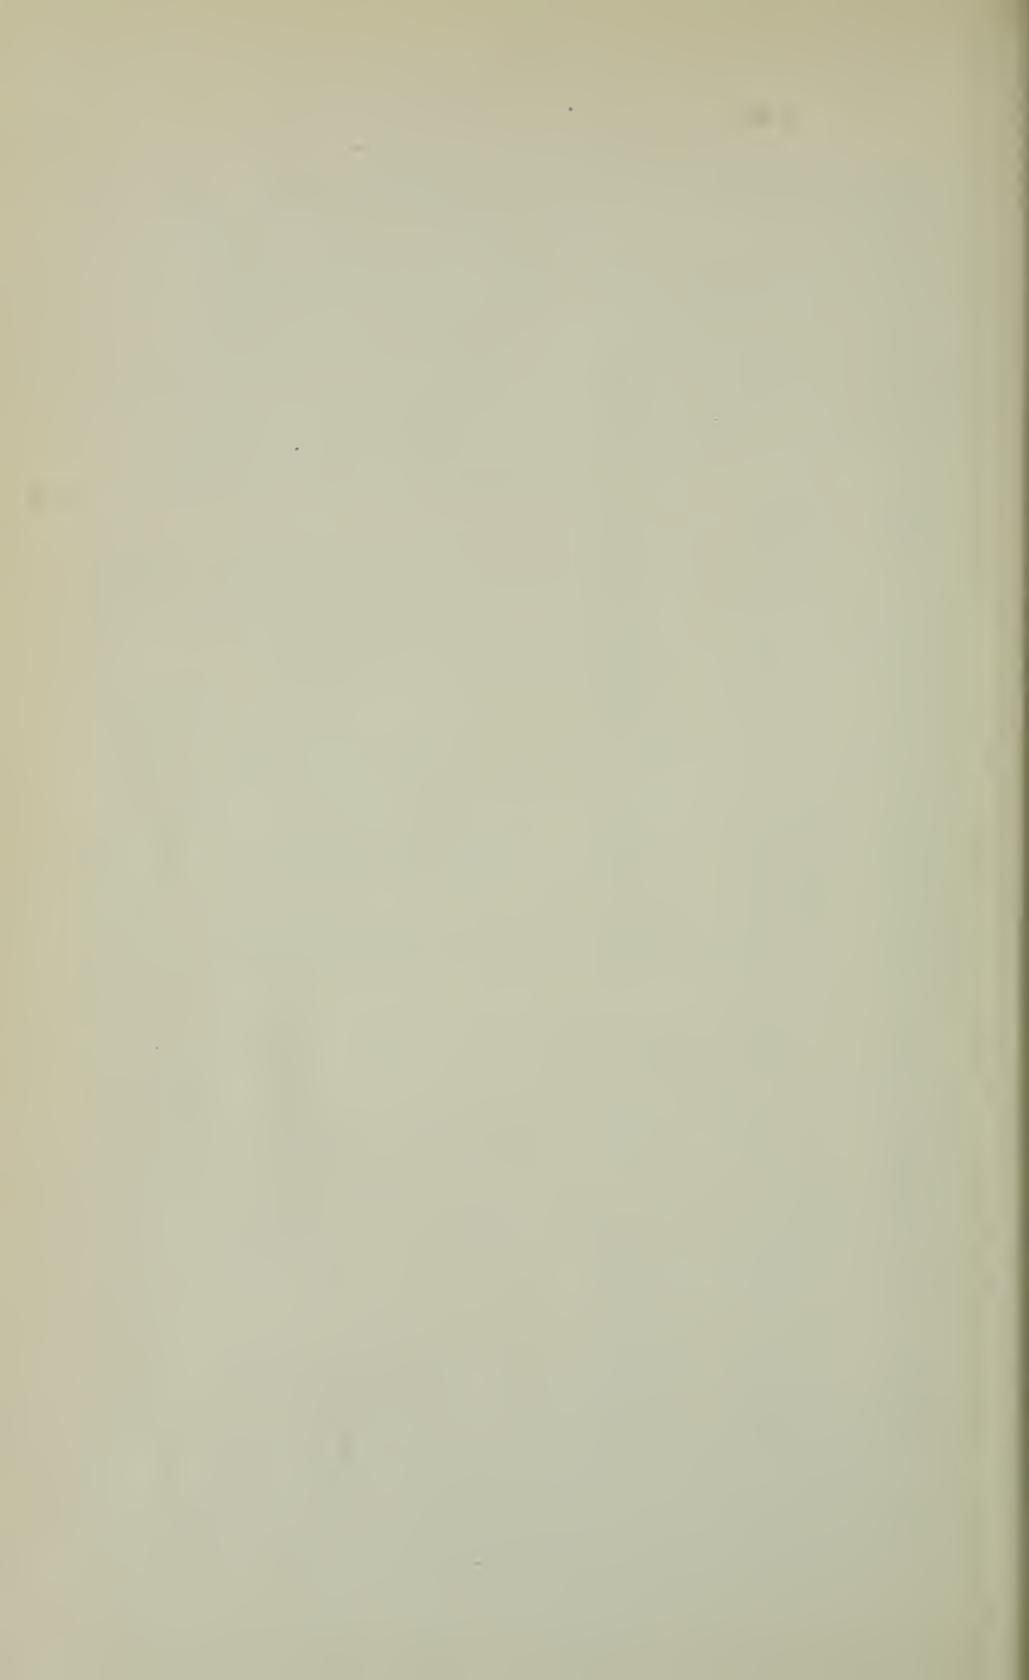

RIGHT OF WAYS GRANTED.

Pursuant to the provisions of Section 478 of the Civil Code.

To San Diego and Arizona Railway, across section 36, township 16 south, range 8 east, S. B. M., January 6, 1914.

To San Diego and Arizona Railway, across section 16, township 18 south, range 6 east, S. B. M., July 8, 1914.

To Central Pacific Railway Company, across section 16, township 30 north, range 9 east, M. D. M., January 27, 1913.

REPORT

OF

FRIEND WM. RICHARDSON Superintendent of State Printing

FOR THE

SIXTY-FIFTH FISCAL YEAR
July 1, 1913, to June 30, 1914

CALIFORNIA
STATE PRINTING OFFICE
1914

DEPARTMENT OF PRINTING

Annual Report, Sixty-Fifth Fiscal Year—1913-1914.

SACRAMENTO, CALIFORNIA,
October 1, 1914.

To His Excellency,

HIRAM W. JOHNSON,
Governor of California.

SIR: I have the honor to submit herewith my annual report of the business of the State Printing Office for the sixty-fifth fiscal year commencing July 1, 1913, and ending June 30, 1914. The report covers in detail the business of the State Printing Office.

The records made by the office in the manufacture of school books during the last year have been maintained this year, and further reductions made. The figures of the cost expert show that the school books are now being manufactured for nearly fifty per cent less than the cost of manufacture under the administration of my predecessor.

The printing of the pamphlet containing the constitutional amendments was the greatest task the plant has had to perform. This publication contained 112 pages, and it was necessary to print 1,500,000 copies. This great job required thirty carloads of paper and over one ton of ink. It was a job more than twice as large as the capacity of the plant would justify us in attempting to do. But the job was turned out on time and the pamphlets placed in the hands of the county clerks six weeks before election so the voters could receive the publication in ample time. In certain counties I am informed the voters did not get their pamphlets until a few days before election. In all of these counties the delay was in no way chargeable to the State Printing Office.

There is need for more equipment for the state printing plant. It has been difficult to do the great volume of work of the past year with inadequate equipment. The Board of Control has made allowances out of the emergency fund to help get out the work. There is great need for a better building. I called attention in my report last year, and the year before, to the inadequacy of the plant and the handicaps of the building. The plant should be housed in a fireproof building suitably arranged and located for a printing plant. The present build-

ing is an old wooden one erected for a governor's mansion over forty years ago. The building should be located near the Capitol and in pleasant and sanitary surroundings.

The schedule of supplies was further elaborated and perfected this year. Up to two years ago there was no adequate system of calling for bids for supplies. All bidding is now on a business basis and all awards made to the lowest bidder. The results this year show that the state is purchasing cheaper than any of the big commercial printing concerns.

On June first of this year I made a reorganization at the plant by which the position of general foreman was eliminated and each department head reported direct to me. The timekeeper was made assistant at an increase of forty dollars a month. The general foreman received two hundred and fifty dollars a month, so the change saved the department two hundred and ten dollars per month, and has not decreased the efficiency.

The State Board of Education has placed school book orders so that by the end of December there will be enough books printed to last until July, 1915. This plan will leave the plant free to do legislative printing during the 1915 session.

The civil service law is in full force at the plant and gives general satisfaction. The plan relieves the superintendent of the burden of personal applications for positions. A full list of eligibles will be ready by the legislative session and extra men will be taken from this list in the order of their efficiency. The Civil Service Commission has cooperated in every way with this department.

The records show that the men and women at the plant are doing effective work and that their efficiency equals the employees of private plants. The maintenance of this high efficiency depends upon the intelligent and zealous direction of the foremen and the cooperation of the employees.

An itemized list of purchases is given in this report. The list could be summarized and be more intelligible, but the law seems to require it in the form in which it is submitted. The report also contains an inventory of stock on hand on June 30th.

I desire again to commend the efficient work done by the men and women of the plant, and to thank the various department heads for their loyal cooperation. I desire particularly to commend the efforts of Robert L. Telfer, deputy; William H. Marsh, assistant; Robert Alexander, chief clerk; S. J. Mathews, foreman composing room; J. M. Welsh, foreman bindery; D. D. Sullivan, foreman pressroom; C. A. Carlson, foreman machinery, and J. C. Gilkerson, cost expert.

COMPARATIVE COSTS.

The following table shows the manufacturing cost of school textbooks as established by the State Board of Education on recommendation of W. W. Shannon during his term of office, also the cost as established by Friend Wm. Richardson and approved by the board in June, 1913, and the percentage of reduction made by Richardson.

NEW PLANT EQUIPMENT.

Purchases prior to the sixty-fourth fiscal year left a balance in the appropriation for machinery, made by the 1911 legislature, of \$2,928.45. During the sixty-fourth year \$2,399 was expended for equipment, leaving a balance in fund of \$528.95. The legislature of 1913 appropriated the sum of \$14,339 for the purchase of four additional linotype machines. Owing to the inadequacy of equipment to handle increased work, particularly upon school books in the bindery department, the Board of Control allowed \$9,150 from the emergency fund. An allowance of \$75 for a fire escape, and \$800 for added office space, was also made from this fund. The additional expense of \$1,458.72, aside from general repairs made, was borne by a distribution of costs in product.

Respectfully submitted.

FRIEND WM. RICHARDSON,
Superintendent of State Printing.

SCHEDULE OF SUPPLIES FOR THE CALIFORNIA STATE PRINTING OFFICE, JULY 1, 1914, TO JUNE 30, 1915.

SPECIFICATIONS.

All paper stock and supplies must be furnished in standard sizes, standard colors and standard weights, in quantities as ordered. Sizes, weights and colors in use at the state printing plant must also be furnished as ordered. The right is reserved to order greater or less quantities than those mentioned in the list. Bond paper lighter than 17 x 22 — 16 lb. base will be ordered under lots 5 and 6 if possible. Bond paper lighter than 17 x 22 — 16 lb. base; coated book lighter than 25 x 38 — 70 lb. base; M. F. lighter than 25 x 38 — 45 lb. base; and S. & S. C. lighter than 25 x 38 — 50 lb. base, will be paid for at base rates.

All stock must be furnished promptly as ordered. When materials are not delivered promptly or when goods delivered do not conform in quality, form or quantity to the requirements herein stated, the State Printer may purchase the goods specified in the open market. Any additional cost or expense incurred by the state by reason of the failure of the contractor, as above stated, shall be a liability against such contractor and his bondsmen.

Supplies must be delivered free of any express or freight charges at the state printing plant, on the corner of Fifteenth and L streets, Sacramento, at the net prices bid.

All paper, envelopes and other supplies must be carefully and properly packed in cases, and if damaged in transit the right is reserved to reject.

All bids must be made upon the quality of stock according to the samples on file in the office of the State Board of Control, and awards will be made to the lowest responsible bidder.

The successful bidder must furnish stock of as good quality as the samples, on which the bid is made, and must furnish it without delay.

All bids on paper must be accompanied by a certified check in the sum of two thousand dollars, payable to the Governor for the use of the people of the State of California, conditioned that if the bidder receives the award of contract, he will, within thirty days, enter into bonds in the sum of ten thousand dollars, with two or more sureties, to be approved by the Governor of the state, that he will faithfully perform the conditions of his contract.

All bids on other supplies must be accompanied by a certified check in the sum of five hundred dollars, payable to the Governor for the use of the people of the State of California, conditioned that if the bidder receives the award of contract, he will, within thirty days, enter into bonds in the sum of one thousand dollars, with two or more sureties, to be approved by the Governor of the State, that he will faithfully perform the conditions of his contract.

Scaled proposals will be received by the Superintendent of State Printing at his office, Room 43 in the State Capitol, at Sacramento, up to 12 o'clock noon, on Wednesday, June 10, 1914. Such proposals must have endorsed thereon, "Bid for Supplies for California State Printing Office."

FILL OUT BID ON THIS BLANK AND ATTACH LISTS.

BID OF -----

SCHEDULE A—PAPER.

**Proposals for Furnishing Paper and Supplies to the California State Printing
Office for the Fiscal Year 1914-1915.**

SCHEDULE C—PRESSROOM.

Proposals for Furnishing Pressroom Supplies to the California State Printing Office for the Fiscal Year 1914-1915.

All inks must be of good, high grade, standard quality, equal to the samples on file in the office of the State Board of Control.

Inks inferior in grade to the inks now in use, or inferior to the standard samples which are on file in the office of the State Board of Control, will not be accepted.

Bidders are requested to name but one price for each item of ink—the lowest price for which they can afford to deliver good, standard quality as specified and to the delivery of which they will be bound by contract and bond.

It is therefore understood and agreed that every bid submitted is for inks of the grade according to samples on file with the Board of Control.

TO FRIEND WM. RICHARDSON,

Superintendent of State Printing.

Sacramento, California.

The undersigned agrees to furnish and deliver to the California State Printing Office, at Fifteenth and L streets, in the city of Sacramento, free of all freight and express charges, for the term of one year, commencing July 1, 1914, and ending June 30, 1915, the articles mentioned in the following lists, at the prices noted and according to the terms, specifications, advertisements and schedules:

LETTER OF TRANSMITTAL.

Honorable HIRAM W. JOHNSON,
Governor of California,
Sacramento, California.

SIR: I have the honor to submit the following tabular statements containing resumes of the statistics gathered by the office of the Superintendent of Public Instruction for the two years extending from July 1, 1912, to July 1, 1914, together with some generalizations and observations drawn therefrom, for the convenience of legislators or others interested in educational legislation.

I am, sir, very respectfully, your obedient servant,

EDWARD HYATT,
Superintendent Public Instruction.

GENERALIZATIONS.

The biennial period ending June 30, 1914, the period covered by this report, has been one of great educational activity, rapid growth and sweeping changes.

Free Textbooks.

The first change we have to note is in the method of furnishing textbooks. Formerly textbooks for the elementary schools were sold by the state to the children at cost.

At the election held November 5, 1912, the people by a very decisive vote amended the constitution so that the state should manufacture and deliver free to the children in the elementary schools all textbooks used in such schools. This amendment also carried with it a provision that the legislature should provide for a state board of education "by election or appointment" in place of a board named in the constitution, which latter provision had been in force since 1872.

An opinion of the attorney general, Hon. U. S. Webb, was to the effect that the amendment providing for free textbooks went into effect at once; that the superintendent of public instruction must take the place of the state board of education until the new board was provided for; that he should order the textbooks manufactured and proceed to distribute them free to the children in the elementary schools.

With no funds to meet the expense of such undertaking, and no similar system in existence to serve as a guide, the task of making plans to meet the demands of the schools was taken up. The state printing office was taxed to its full capacity to manufacture books and take care of the printing required by the legislature and by all of the state officers and commissioners.

Immediately after the organization of the legislature an emergency appropriation was passed to meet the expenses of the shipment of these books. A second act was passed allowing the money in the state school book fund to be used for the payment of the manufacture of the books. The shipment of the free textbooks began January 15, 1913, by a lot sent to Superintendent Will C. Wood of the city of Alameda. As rapidly as books could be printed, they were sent to all parts of the state. A full report of the books sold and the books sent free will be found on pages 85 to 90, inclusive, of this report.

School Legislation.

The legislature of 1913 was one long to be remembered for the great amount of legislation enacted. There were 1,783 bills introduced in the senate, an average of 44.5 to the member, and 2,139 introduced in the assembly, about 26.6 per member. Of this mass of proposed legislation about 360 bills related to education.

Kindergartens.

A bill having for its purpose the encouragement of the organization of kindergartens was passed, and became a law of this state as section 1617c of the Political Code. The bill as originally drafted embodied a demand that kindergarten classes, instead of being regarded as local in character, should be recognized as a part of the state school system and given state aid. However, the educational committees having this matter in charge did not accept this view. Since kindergarten classes can thrive only in populous districts amply able to support them, the committee felt that the state should devote its energies to the encouragement of the elementary schools in which all children have a common interest.

The same end as giving state aid to the kindergartens may be reached by giving more aid to the elementary schools and leaving the localities to devote more of their money to the special school, such as the kindergarten, and the more practical work of the vocational schools. That the kindergarten school thrives best in large cities is shown by the fact that twenty-four cities in this state maintain these schools, nine of these cities being in Los Angeles County.

Elementary Schools.

In the kindergarten, elementary and high schools there are 501,021 pupils enrolled. Of this number 13,070 or 2.6 per cent are in the kindergartens; 422,024 or 84.3 per cent are enrolled in the elementary schools; while 65,927 or 13.1 per cent are in the high schools. All children must benefit from the elementary schools. It should be plain that this is the school that is common to all. Those who would enter the high school must have passed through the elementary schools. It is evident that the state should aid the elementary schools in preference to other schools since all children enjoy the benefits of these schools. The following table will show the gain in these schools and the proportion of state aid to local aid:

	1907	1914	Gain per cent
Number of teachers	8,246	12,266	48
Number of pupils enrolled.....	294,385	422,029	43
Average daily attendance	234,624	319,229	36
Number enrolled per teacher.....	35.7	33	-----
Number of graduates	12,683	24,780	92
Amount of state aid given.....	\$3,977,295 40	\$5,358,579 04	35
Amount of county aid given.....	2,866,479 17	4,980,197 76	73
Amount of district aid given (special taxes).....	937,001 16	4,591,921 29	390
Amount of bonds voted for buildings, etc.....	1,374,395 58	3,267,805 05	130

These figures show that the county has increased its aid to the schools more than twice as much as has the state, and that the district has increased its aid more than ten times as fast as the state, in addition to

the bonds that have been voted for buildings and grounds. In addition the districts have reported that, in 1907, \$163,618.31 was received under the head of miscellaneous receipts or donations, while in 1914 this money reached the sum of \$356,898.66, or a gain of 118 per cent

It would seem from the above table that the law should be so amended as to give more state and more county aid to the elementary schools, and that the burden is falling too heavily on many districts. The more wealthy sections of the state can give this local aid, while the less fortunate sections can not. The results are that the population is tending more and more towards the city, where these educational advantages can be had. The amount of state aid as reported above will be decreased by nearly \$900,000 in the voting out of the poll tax in the fall of 1914. This will increase the burden on localities. To partly offset this loss the state should give at least three dollars per pupil on average daily attendance, making the rate per pupil transferred from the general fund of the state \$16 in place of the \$13 now given. This would replace loss of poll tax. But in order to keep pace with the rapid development of the educational interests of the state, not less than \$18 per pupil should be given.

High Schools.

The following table will show the wonderful increase in the high schools of California for the eight years from 1907 to and including 1914. The rise of the high school is one of the most remarkable educational movements of modern times:

	1907	1914	Gain per cent
Number of schools -----	179	255	43
Number of teachers -----	1,188	2,997	152
Number of pupils enrolled -----	27,578	65,927	139
Average daily attendance -----	22,333	48,312	116
Number of graduates -----	2,890	7,477	158
Amount of state aid given for year -----	\$237,016 77	\$642,815 52	171
Amount of district aid given -----	2,026,685 26	5,506,429 22	172
Amount of bonds voted -----	429,576 50	1,893,657 00	341

It will be noted by the fact that the number of graduates has gained 158 per cent, while the enrollment has gained 139 per cent, that the high schools now are holding their pupils longer than formerly.

The law providing state aid to high schools adjusts itself to the rapid growth of the schools far better than does the law providing aid to the elementary schools. It will be noticed that the state aid to high schools has gained 171 per cent, while district aid has gained 172 per cent. But the districts gave \$2,026,682.26 for 1914, while the state gave but \$237,016.77, the district giving towards the support of the school 8.6 times as much as did the state, in addition to building the schoolhouse.

The crying need of the high school is legislation that will prevent too

frequent changes in the course of study, so that students, when they enter the school, may outline their course and follow it through without reference to changes in teachers and principal. There is need also for a more adequate law to prevent too frequent changes in high school textbooks. These books are so expensive that changes should be made only for good reasons. It is unreasonable to require parents to purchase a complete new set of books for each child when several children of the family enter school in successive years and elect the same course. If we can have fewer changes in high school textbooks, those whose duty it is to adopt them will consider the books more carefully before adopting them.

In many of the high schools the course of study is made to conform to the subject which the teachers can teach. In consequence, the students are compelled to make changes in their course to suit the change made by the introduction of the new teacher. It would be better for high school boards to select teachers to teach a course of study such as the district needs, than to select teachers and then make a course of study to fit the capabilities of the faculty.

Normal Schools.

The following table will show the rapid development of the state normal schools:

	1907	1914	Gain per cent
Number of schools -----	5	8	60
Number of teachers -----	116	229	98
Number of students in normal proper -----	1,769	3,994	126
Number of pupils in training school -----	2,109	3,068	45
Number of graduates -----	478	1,538	222
Total receipts -----	\$415,012 46	\$1,056,998 51	154
Total expenditure -----	274,785 71	516,389 90	81
Valuation of property -----	1,149,766 00	2,392,214 00	108

When the first state normal school was created the question of system could not enter, but as normal schools have been created one after another till we have eight state normal schools, the question of a state system of normal schools that should govern all of them has become increasingly important. The tendency has been to make each normal school a local school with its own conditions of entrance, its own course of study, and its own system of teaching. The legislature has undertaken to meet this condition by providing for a joint normal board, composed of the various normal presidents with certain of their trustees. By reason of the inherent difficulties of the situation, this joint board has not been able to make much headway up to the present time in the way of unifying or harmonizing the work of the different schools.

EDUCATIONAL DIRECTORY.

Superintendent of Public Instruction. (Elected November 8, 1910.)

Name of member	Term expires	Address
Edward Hyatt -----	January, 1915	Riverside.

Employees of the Superintendent of Public Instruction.

INSTITUTION FOR THE DEAF AND THE BLIND.

TABLE No. 16. Enrollment, Number of Teachers, Receipts and Expenditures, Valuation of Property.

CALIFORNIA SCHOOL FOR THE DEAF AND THE BLIND.

TABLE No. 16.

Showing Statistics California Institution for the Deaf and the Blind.

BERKELEY, CAL., September 7, 1914.

L. E. MILLIGAN, Principal.

The enrollment of pupils for the two years ending June 30, 1914, has been as follows:

Deaf boys -----	123	
Deaf girls -----	87	
		210
Blind boys -----	52	
Blind girls -----	42	
		94
Total both classes -----		304

The number of teachers, including manual craft instructors, has been:

Deaf Department.

Teachers, men -----	11	
Teachers, women -----	9	
		20

Blind Department.

Teachers, men -----	4	
Teachers, women -----	12	
		16
Total -----		36

RECEIPTS.

Appropriations for salaries and wages -----	\$117,467 91
Appropriation for support -----	54,633 86
Total -----	\$172,101 77

EXPENDITURES.

Salaries and wages -----	\$117,467 91
Support -----	54,633 86
Total -----	\$172,101 77

CONTINGENT FUND.

Balance on hand July 1, 1912 -----	\$1,204 45
Receipts -----	11,009 17
Total -----	\$12,213 62
Expenditures -----	9,296 97
Balance July 1, 1914 -----	\$2,916 65

VALUATION OF PROPERTY.

California School for the Deaf and the Blind.

BUILDINGS AND GROUNDS.

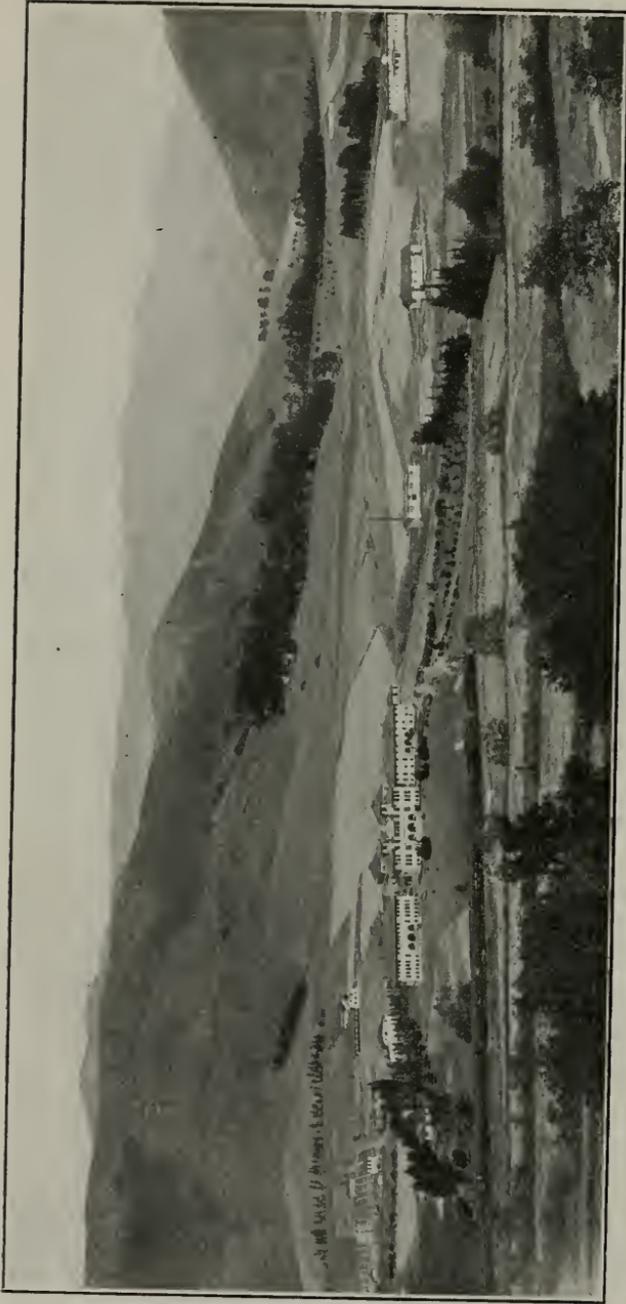

Land, 130 acres.....		\$630,000 00
Buildings—		
Educational Building	\$100,000 00	
Bartlett Hall	60,000 00	
Durham Hall	55,000 00	
Willard Hall	50,000 00	
Moss Hall	47,500 00	
Strauss Hall	47,500 00	
Refectory and other buildings.....	55,000 00	
Industrial Building	60,000 00	
		475,000 00
Water and machinery.....		35,000 00
Furniture		8,000 00
Total		\$1,148,000 00

GIFTS AND BEQUESTS.

Pipe organ	\$2,000 00	
Tower clock	1,393 00	
Library	3,000 00	
Hospital	10,500 00	
Loans	64,500 00	
Cash	5,691 71	
		87,084 71
Total		\$1,235,084 71

CALIFORNIA POLYTECHNIC SCHOOL.

TABLE No. 17. Number of Teachers, Number of Graduates, Receipts and Expenditures, Valuation of Property.

California Polytechnic School.

CALIFORNIA POLYTECHNIC SCHOOL.

TABLE No. 17.

Statistics of California Polytechnic School, at San Luis Obispo, for 1913 and 1914.

By R. W. RYDER, Director.

	1913	1914
Number of teachers employed:		
Men -----	11	12
Women -----	4	5
Totals -----	15	17
Number of students enrolled, 1913:		
First year ----- boys ----- 44; girls ----- 12		
Second year ----- boys ----- 34; girls ----- 17		
Third year ----- boys ----- 21; girls ----- 8		
Special students ----- boys ----- 26; girls ----- 0		
Totals ----- 125	37	162
Number of students enrolled, 1914:		
First year ----- boys ----- 60; girls ----- 21		
Second year ----- boys ----- 39; girls ----- 9		
Third year ----- boys ----- 24; girls ----- 12		
Special students ----- boys ----- 23; girls ----- 6		
Totals ----- 146	48	194
Number of graduates, 1913:		
Boys, 19; girls, 6 -----	25	
Number of graduates, 1914:		
Boys, 21; girls, 12 -----		33

FINANCIAL STATEMENT, 1913 AND 1914.

SALARIES.

Appropriation, biennial -----		\$70,000 00
Balance -----	\$30,264 31	
Administration -----	5,614 16	5,570 00
Faculty -----	24,649 90	24,890 04
Gardener, janitor, engineer, labor, etc. -----		4,539 00
Balance -----	25	3,500 96

GROUNDS.

Appropriation, biennial -----		\$7,000 00
Balance -----	\$3,136 73	
Expended -----	3,136 68	3,388 85
Balance -----	05	3,611 15

SUMMARY OF TEXTBOOKS.
Sold and distributed free: 1887-1914.

Period	Number of books sold. Column (a)	Number of books distributed free. Column (b)	School book fund. Column (c)	Royalty paid. Column (d)	Amount. Column (e)
Prior to July 1, 1904	4,052,327	-----	\$1,429,297 52	\$10,821 75	\$1,440,119 27
July 1, 1904, to June 30, 1906	857,749	-----	310,105 09	87,471 36	395,272 38
July 1, 1906, to June 30, 1908	1,072,575	-----	292,748 67	101,880 05	394,628 72
July 1, 1908, to June 30, 1910	1,178,594	-----	247,944 36	75,859 56	323,803 92
July 1, 1910, to June 30, 1911	683,079	-----	152,311 82	41,922 60	194,264 42
July 1, 1911, to June 30, 1912	683,527	-----	139,113 15	42,100 08	201,213 23
July 1, 1912, to June 30, 1913	476,241	477,933	78,352 70	55,321 72	106,037 84
July 1, 1913, to June 30, 1914	13,526	1,379,154	1,645 48	86,140 38	2,319 56
Totals	9,017,618	1,857,087	\$2,671,548 79	\$501,517 50	\$3,057,659 34

Column (a) and (b) are self-explanatory.

Column (c) is the total amount of money paid into the school book fund as a result of the sale of books listed in column (a).

Column (d) is the amount of money paid to the textbook companies for the use of plates in the manufacture of all State textbooks. This includes both books sold and books distributed free.

Column (e) is the total amount of money paid into the state treasury as the result of sales, column (a).

GENERAL STATISTICAL SUMMARY.

TABLE No. 21. Totals for 1913 and 1914 for Kindergarten Schools, Elementary Schools, Normal Schools. Recapitulation Showing Totals for All Schools.

STATISTICAL SUMMARY.

TABLE No. 21.

Statistical Summaries, 1913-14.

(Kindergarten, Elementary, High and Normal Schools, and California Polytechnic School, and University of California.)

(1) Kindergarten Schools.

	1913	1914
Number of counties maintaining-----	13	13
Number of teachers employed (women)-----	317	355
Grade of certificates held by teachers—		
Kindergarten primary -----	290	323
Kindergarten special -----	27	32
Totals -----	317	355
Number of pupils enrolled—		
Boys -----	5,527	6,532
Girls -----	5,466	6,538
Totals -----	10,995	13,070
	1913	1914
Average daily attendance-----	5,707	6,937
Average number of days school was open-----	180	183
Annual salary paid teachers (average)-----	\$868 26	\$822 30
Number of school visits made by county superintendents -----	479	432
Number visits by school trustees-----	215	338
Number books in libraries-----	1,162	1,863

Financial Statement.

Receipts from—		
Balance on hand-----	\$3,388 91	\$650 75
Taxes of all kinds-----	274,676 30	319,502 00
Donations, etc. -----	1,304 00	-----
Total receipts -----	\$279,369 21	\$320,152 75
Expenditures for—		
Teachers salaries -----	\$250,594 14	\$298,264 23
Supplies, etc. -----	16,269 56	11,262 61
Buildings -----	11,157 42	2,390 76
Totals -----	\$278,021 12	\$312,017 00
Balance on hand in funds-----	1,348 09	8,079 92
Valuation of all property—		
Sites and buildings-----	\$186,895 00	\$98,451 00
Books and apparatus-----	21,833 00	6,029 00
Totals -----	\$208,128 00	\$104,480 00
Average tax rate for maintenance-----		\$.067
Cost per pupil per annum for teachers and supplies---	\$24 27	23 70
Schoolhouses—built of—		
Brick -----	4	2
Wood -----	47	37
Totals -----	51	39

Many of the kindergarten schools are held in the regular grammar school buildings. The results are that an estimate of buildings and valuation of property varies from year to year.

TABLE No. 21—Continued.

Statistical Summaries, 1913-14.

(Kindergarten, Elementary, High and Normal Schools, and California Polytechnic School, and University of California.)

(2) Elementary (Primary and Grammar) Schools.

	1913	1914
Number of districts at beginning of year.....	3,349	3,374
Number organized.....	86	73
Number of suspended re-established.....	17	25
Number lapsed.....	28	17
Number suspended.....	45	36
Number combined.....	5	9
Total at close of year.....	3,374	3,410
Number of schoolhouses built of—		
Stone.....	25	8
Concrete.....	63	113
Brick.....	258	301
Wood.....	3,927	3,977
Totals.....	4,273	4,399
Number of teachers allowed on attendance.....	10,639	11,270
Number of teachers employed—		
Men.....	1,085	1,162
Women.....	10,468	11,104
Totals.....	11,053	12,266
Grade of certificates of teachers in Elementary schools—		
High school.....	488	515
Grammar.....	10,446	11,095
Primary.....	75	63
Special.....	549	593
Totals.....	11,053	12,266
Number of teachers attending institutes.....	11,208	11,764
Enrollment of pupils:		
First year—		
Boys.....	43,932	46,216
Girls.....	37,099	40,664
Second year—		
Boys.....	26,384	28,148
Girls.....	22,751	24,324
Third year—		
Boys.....	25,352	26,957
Girls.....	23,504	24,324
Fourth year—		
Boys.....	24,324	25,933
Girls.....	22,593	24,047
Fifth year—		
Boys.....	22,774	23,803
Girls.....	20,784	22,292
Sixth year—		
Boys.....	20,244	21,913
Girls.....	18,685	20,056
Seventh year—		
Boys.....	17,738	18,933
Girls.....	17,185	18,256
Eighth year—		
Boys.....	17,113	17,772
Girls.....	17,418	17,367
Total boys.....	197,861	210,676
Total girls.....	180,082	191,348
Grand total boys and girls.....	377,943	422,024

TABLE No. 21—Continued.

	1913	1914
Number of graduates from grammar schools—		
Boys	10,381	11,878
Girls	11,523	12,902
Totals	21,904	24,780
Attendance, length of term, libraries, etc.—		
Average daily attendance	297,884	319,244
Number of districts maintaining school—		
Less than 120 days for the year.....	27	13
Between 120 and 160 days.....	423	369
Between 160 and 200 days.....	2,611	2,764

REPORT

OF

The Adjutant General

OF THE

State of California

For the Period July 1, 1910, to November 16, 1914

CALIFORNIA
STATE PRINTING OFFICE
1914

GOVERNOR HIRAM W. JOHNSON.
Commander-in-Chief National Guard of California.

THE ADJUTANT GENERAL'S OFFICE.

BRIGADIER GENERAL EDWIN A. FORBES.....The Adjutant General
Ex officio Chief of Staff, Chief of Quartermaster Corps, and Chief of Ordnance.

COLONEL FRANK F. CANON.....The Assistant Adjutant General

HOWARD S. MCINTIRE.....Chief Clerk

JACOB ALEXANDER.....Clerk

JOHN F. SHERBURN.....Clerk

HENRY B. VAN HORN.....Clerk

ALICE M. COUGHLIN.....Stenographer and Clerk

JOHN L. HENDERSON.....Military Storekeeper

EDWARD B. IRISH.....Assistant Military Storekeeper and Porter

BRIGADIER GENERAL EDWIN A. FORBES.
The Adjutant General of California.

REPORT.

STATE OF CALIFORNIA,
THE ADJUTANT GENERAL'S OFFICE,
SACRAMENTO, November 16, 1914.

Honorable HIRAM W. JOHNSON,
Governor and Commander-in-Chief.

SIR: I have the honor to submit the following report, including a detailed statement of all moneys received and disbursed by The Adjutant General for military purposes during the four fiscal years ended June 30, 1914.

I assumed the duties of office on the seventh day of January, 1911, and the account of the financial transactions embodied in this report, as happening prior to that time, are taken from the records of the previous Adjutant General.

Owing to the many changes made in the National Guard since the beginning of the present administration of this office, this report, dealing with the numbers and condition of the National Guard and other matters referred to herein, is brought down to November 16, 1914.

ENROLLED MILITIA.

The return of the commanding general of the first brigade, which now territorially comprises the entire State of California, shows 390,200 able bodied male citizens subject to military duty on December 31, 1913.

The act of the legislature excusing citizens seeking registration as voters from giving their ages to the registration officers has greatly complicated the preparation of the military roll of this state, as most of the data therefor was taken from the great registers of the several counties by the county assessors. Much complaint was received at this office from those officials stating that the data from which they prepared their military rolls was eradicated by reason of said registration act. The old system was necessarily inaccurate, because by the registration system males between the ages of eighteen and twenty-one years, and persons who did not register as voters, were not enrolled, although subject to military duty. It is probable that 500,000 persons subject to military duty in this state will come nearer to being correct than 390,200. If necessity should arise, a special enrollment ordered by the Governor, as provided by section 1903, Political Code, would determine the actual number of citizens subject to military duty.

A bill was passed by the legislature in 1913 providing for a more accurate determination of the number subject to military duty in this state. The military roll will hereafter be made every odd numbered year.

NATIONAL GUARD.

The National Guard of California consists of:

The Adjutant General's Department;
 Inspector General's Department;
 Judge Advocate General's Department;
 Quartermaster Corps;
 Ordnance Department;
 Medical Department;
 Signal Corps,

and the troops shown by the following table:

TABLE SHOWING TROOPS OF THE NATIONAL GUARD OF CALIFORNIA.
Mobile Forces.

Name of organization	Number of organizations comprising same	Name of commanding officer	Headquarters
1st Brigade (Infantry)	3 regiments of infantry (2d, 5th and 7th regiments), 37 companies.	Brigadier General Robt. Wankowski.	Los Angeles.
2d Infantry -----	Headquarters, Det. Hosp. Corps, band, and 12 companies	Col. Lon Bond -----	Chico.
5th Infantry -----	Headquarters, Det. Hosp. Corps, band, and 12 companies.	Col. David A. Smith----	Oakland.
7th Infantry -----	Headquarters, Det. Hosp. Corps, band, and 12 companies.	Col. Wm. G. Schreiber--	Los Angeles.
1st Squadron of Cavalry.	Headquarters, Det. Hosp. Corps, 4 troops.	Major Samuel W. Kay--	Sacramento.
1st Battalion Field Artillery.	Headquarters, Det. Hosp. Corps, and 3 batteries.	Major Ralph J. Faneuf.	Oakland.
Company B, Signal Corps.	1 Type "A" signal company	Capt. Frank J. Sullivan	San Francisco.
Field Hospital, No. 1.	1 Field Hospital-----	Major Chas. W. Deeker	Los Angeles.
Ambulance Company, No. 1.	1 ambulance company, 12 ambulances.	Capt. Chas. H. Bulson	Napa.

Coast Defense and Naval Forces.

Coast Artillery Corps.--	Headquarters, Det. Hosp. Corps, band, and 12 companies.	Col. Geo. A. Sehastey--	San Francisco.
Naval Militia -----	Headquarters, Det. Hosp. Corps, band, and 9 divisions.	Captain Geo. W. Bauer.	San Francisco.

The strength of the National Guard of California on November 16, 1914, was as follows:

<i>Land Forces.</i>	
Commissioned Officers -----	274
Enlisted Men -----	3,499
<i>Naval Forces.</i>	
Commissioned Officers -----	54
Warrant Officers -----	10
Enlisted Men -----	634
Total National Guard-----	3,773
Total Naval Militia-----	698

Since the last report the following organizations were mustered out for the reasons assigned below:

Mustered Out.

Designation	Location	Date	Reason
*Company E, 7th Infantry--	Anaheim ---	July 15, 1910	Having fallen below the prescribed minimum membership.
*Company B, 2d Infantry--	Colusa ----	Sept. 24, 1910	Having fallen below the standard of efficiency.
Company E, 2d Infantry----	Sacramento	Dec. 11, 1911	Having fallen below the prescribed minimum and for inefficiency.
Company A, Signal Corps--	Los Angeles	Feb. 29, 1912	To balance National Guard. There were too many signal companies for the proportion of other troops.
Troop B, Cavalry-----	Sacramento	Sept. 21, 1912	Having fallen below the standard of efficiency.
Company H, 2d Infantry----	Napa -----	April 14, 1913	Having fallen below the standard of efficiency.

*Mustered out by predecessor.

Since June 30, 1910, the following organizations have been mustered into the National Guard:

Designation	Location	Date
Tenth Company, Coast Artillery Corps-----	San Francisco	February 27, 1911
Troop A, Cavalry -----	Bakersfield	March 4, 1911
Company B, Second Infantry-----	Willow	March 5, 1911
Eleventh Company, Coast Artillery Corps-----	San Mateo	March 11, 1911
Headquarters, First Squadron of Cavalry-----	Sacramento	Organized May 1, 1911
Battery A, Field Artillery-----	Los Angeles	May 29, 1911
Battery B, Field Artillery-----	Oakland	May 31, 1911
Company E, Second Infantry-----	Sacramento	January 16, 1912
Company E, 7th Infantry-----	Santa Monica	March 1, 1912
Battery C, Field Artillery-----	Stockton	December 14, 1912
Headquarters, 1st Battalion, Field Artillery-----	Oakland	Organized Dec. 20, 1912
Field Hospital, No. 1-----	Los Angeles	January 1, 1913
Ambulance Company No. 1-----	Los Angeles	January 1, 1913
Troop B, Cavalry-----	Sacramento	January 17, 1913
Twelfth Company, Coast Artillery Corps-----	San Francisco	January 6, 1913
Company H, 2d Infantry-----	Tulare	June 28, 1913

There has, since the last report of The Adjutant General, covering the date June 30, 1910, been an increase in the personnel of the National Guard and Naval Militia of 33 officers and 597 enlisted men.

Character of Personnel.

A steady attempt has been made by this department to eliminate from the National Guard all undesirable officers who were inefficient, whether from ignorance, immorality, drunkenness, dishonesty, inability to learn or to command troops, indifference to duty or for any other cause that makes an officer unfit to command troops in peace or in war. The same may be said of the undesirable enlisted personnel. They have been pretty effectually weeded out, and recruiting officers have been instructed not to enlist or re-enlist applicants without first inquiring

into their habits and character. It has been the endeavor of this department to raise the standard among the personnel of the National Guard so that any officer can conscientiously ask a parent to give consent for his or her eighteen-year-old son to enlist and receive a military training without danger of having the young recruit debauched by evil associations. This will be the continued policy during the present official term. It affords me pleasure to announce that much good has come from this policy, and that we are constantly getting a higher grade of both officers and men in the Guard—officers and men who do not believe that it is necessary in order to attain distinction as a soldier that they should consume large quantities of whiskey by day and rob hen roosts by night.

Infantry.

The National Guard of California has one brigade of infantry, comprised of two twelve-company regiments and one regiment (7th Infantry) composed of twelve companies and a machine-gun company. The companies making up these regiments are scattered from Redding in the north to Riverside County in the south. Every organization in the brigade was present with the number of officers and men required by the War Department, in accordance with Circular No. 1, Division of Militia Affairs, War Department, dated January 28, 1911, and participated in the joint maneuvers with the Regular Army troops south of San Francisco in August, 1912. With few exceptions every infantry officer of the brigade, from the commander down, was also present and participated in the maneuvers. The locations of brigade headquarters and of the different organizations comprising the 2d, 5th and 7th Regiments of Infantry, which make up the First Brigade of Infantry, National Guard of California, are shown on the roster hereinafter published.

The War Department has manifested great interest in sending instructors and literature, and furnishing information and supplying equipment for the infantry of the National Guard, all of which has added to the labors and responsibilities of the National Guard officers and National Guardsmen, and has made it more difficult to secure enlistments than it was before such added duties were placed on the soldiers. Procuring enlistments in the National Guard is a great problem. With the decline of patriotism among our people, which is surely occurring, the difficulty in securing enlistments increases. Several concerted attempts have been made to have a militia pay bill passed by Congress, which, if passed, would have the effect of partially paying militiamen for their services. A bill has recently been passed by one house of Congress, providing for pay for militiamen, but it has been hedged around by so many conditions that I doubt if it will be of

1

OFFICERS OF FIRST BRIGADE.

1. Brigadier General Robt. Wankowski, commanding First Brigade. 2. Colonel David A. Smith, commanding Fifth Infantry. 3. Colonel Wm. G. Schreiber, commanding Seventh Infantry. 4. Colonel Lon Bond, commanding Second Infantry.

any service to the National Guard in its present form. Young men who enlist and serve in the National Guard, without any compensation or attraction whatever as an inducement, do so from such downright patriotism as they may be imbued with, without the assistance of the state or federal government. The greatest mistake of the officials of the War Department and of the inspector-instructors that are concerned with the success of the National Guard, is that they seem to assume that there is no difficulty about securing enlistments, that all they have to do is to lay out work and have the guardsmen proficient therein by doing a lot of additional military work, when as a matter of fact the keeping up of an organization to the ever-increasing requirements of the War Department is one of the very hardest problems that confronts officers of the National Guard. The War Department or the instructors apparently do not once pause to consider that without enlistment we can have no Guard, and that by piling the work too heavily on the unpaid guardsman, he is liable to drop out of the militia. They entirely overlook the problem of the necessity of getting enlistments else the National Guard would soon be so depleted that there would be none to listen to the instructors or to carry or wear the equipment furnished by the War Department.

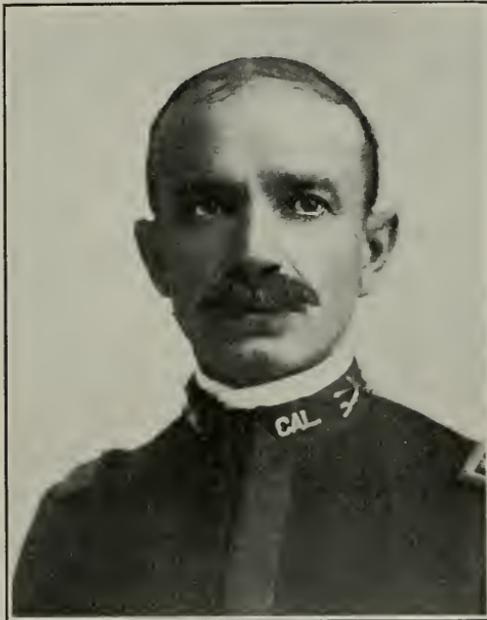

The infantry of the National Guard of California is composed of officers and men physically and mentally good and strong, and with the companies kept enlisted up to the full peace strength, much more good could be accomplished in the way of instruction.

The infantry of the National Guard of California is much better equipped than it has ever been before. Each man is provided with four uniforms, besides all the equipment that is used by the regular army. The entire brigade has been supplied with the requisite number of field wagons for land transportation.

Each regiment is now also supplied with a mounted scout detachment. The mounted scouts, during the joint maneuvers of 1912, proved themselves to be invaluable adjuncts with infantry. The officers all testified that the activity of the mounted scouts saved the wearing out of a large number of foot scouts, in getting nearby information and acting as scouts to the front and flanks of the main bodies of infantry. I sincerely trust that the War Department will not eliminate the mounted scout from the infantry. For nearly two years this department has attempted to get requisitions filled by the War Department for machine guns and the necessary equipment for machine gun companies or detachments to be attached to each regiment of infantry, but until the past year this department was unable to procure such ordnance, the reason being assigned by the War Department that it had not yet definitely determined upon a style of machine gun or form of organization for

the handling of the same, and consequently the requisitions were refused. The infantry regiments should have a number of machine guns attached, to do as effective work as other branches of the service. So far only one machine gun company, attached to the Seventh Regiment of Infantry, and located at Los Angeles, has been mustered into the service of the state.

The infantry brigade of the National Guard of California, aside from the lack of machine guns, is probably as well equipped as any National Guard brigade in the United States and probably as well equipped as a number of regular army brigades. A great many of the infantry

Major Samuel W. Kay, commanding First Squadron of Cavalry.

officers and enlisted men have been under fire and have seen service in the Philippines or in Cuba, either in the volunteer regiments or in the regular establishment.

Cavalry.

The cavalry branch of the National Guard of California consists of one complete squadron, or headquarters and four troops. Major Samuel W. Kay, located at Sacramento, California, is the squadron commander. Troop A is located at Bakersfield, Troop B at Sacramento, Troop C at Salinas, and Troop D at Los Angeles. These troops are officered by intelligent and energetic officers, most of whom have seen considerable service, either in the regular or volunteer troops. The personnel of the enlisted men is good. The great weakness in this cavalry, however, is

the same as exists in nearly all other National Guard cavalry, which is the lack of trained mounts and the lack of sufficient opportunity for training the men in horsemanship and in the care of horses. Cavalry without serviceable horses is of doubtful utility.

The care and feed of sufficient mounts for all the cavalry in peace times are so expensive that it is doubtful if our legislators will ever see their way clear to appropriate adequate funds for that purpose, but sufficient horses, say sixteen to the troop, should be provided and kept for training purposes.

In 1912 this state purchased seventeen horses as an experiment. These horses were especially strong and wiry animals, young and fairly well bred, and came wild from the plains of Modoc County, California. They were broken and were by far the best horses that were used by Troop B at the joint maneuvers in 1912, showing soundness, and, although young, great endurance during those maneuvers. These animals have been kept since and their keep has been expensive. Some of the larger horses of the same band have been turned over to Battery B, First Battalion, Field Artillery, at Oakland, and have been a success there.

In July, 1914, the state purchased nineteen head of horses, six of which were turned over to Troop C, of Salinas, twelve were shipped to Los Angeles for the use of Battery A, First Battalion, Field Artillery, and one was turned over to Troop B, of Sacramento.

In my opinion the state authorities, assisted by a United States army officer, should purchase the horses needed for the cavalry and field artillery and the government should feed and care for them. At least a sufficient number for training purposes should be obtained and kept in this way. With the exception of good horses, the California cavalry is well equipped for field service.

Heretofore, one serious drawback to both the cavalry and field artillery has been the lack of veterinarians. Not having a regiment of either we were not entitled, in accordance with the United States regulations, to have a veterinarian, and consequently lost and were compelled to pay for several valuable animals because of the absence of competent veterinarians. At the last session of the legislature, authority and appropriation for the appointment and expense of competent veterinarians for the squadron of cavalry and the battalion of field artillery, to be on the staffs of the commanding officers of those organizations, were obtained. This action was taken upon the War Department changing its regulations so as to provide veterinarians for the cavalry and field artillery. It is thought that this arrangement will provide the National Guard reasonably with veterinary attendance for the mounts, artillery horses and transport animals.

Breaking wild horses for the California Cavalry.

The same horses four months later.

Signal Troops.

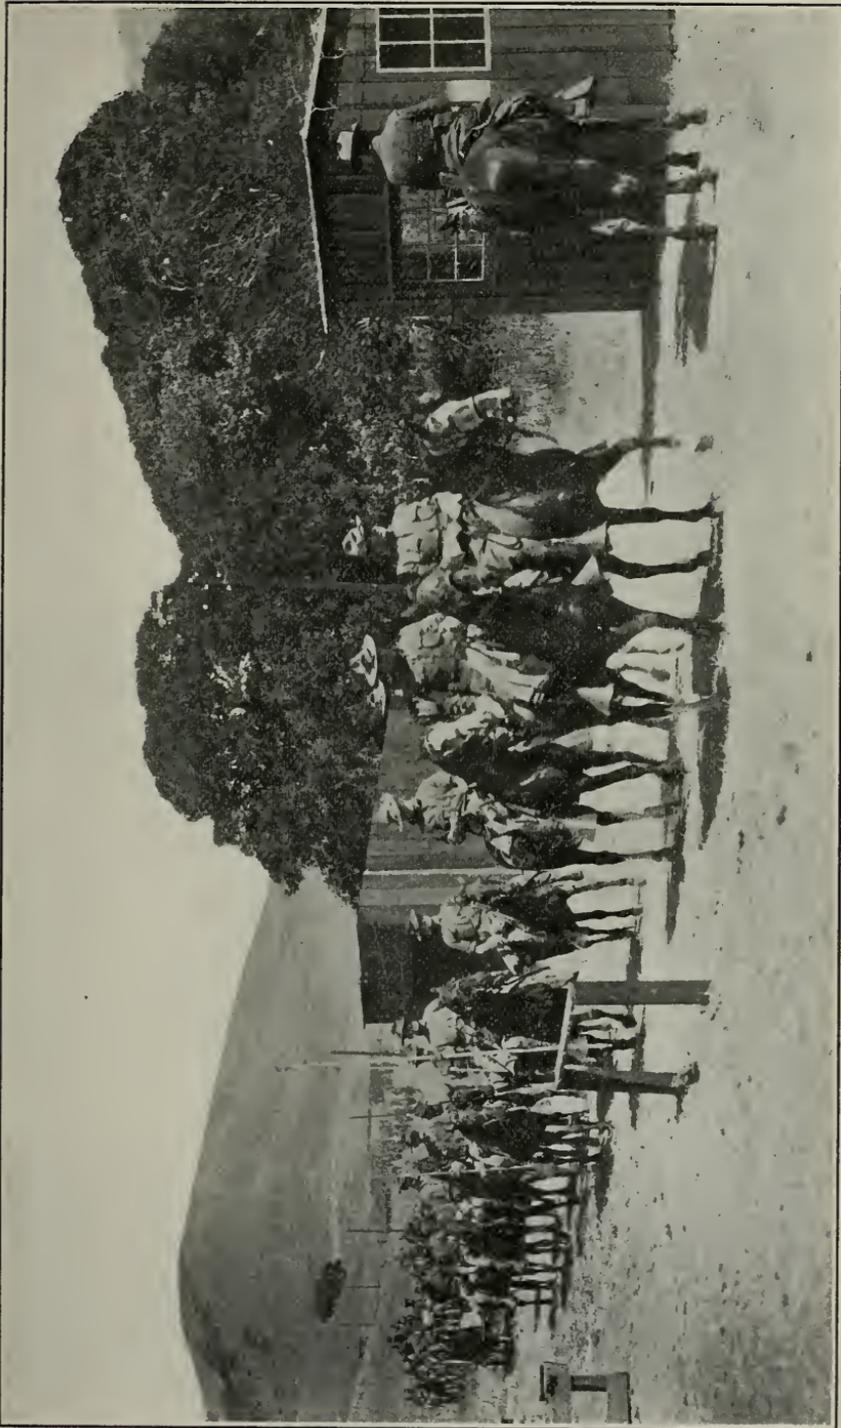

At the beginning of this administration there were two signal companies in the state. Neither was equipped for field work. They had no reel carts, no transportation, no wireless appliances and had no opportunity to practice, except in a very small way, because of lack of equipment. They frequently went to maneuvers dismounted and "took items" by watching the regular troops operate a reel cart. Much of the equipment they had was obsolete. The officers and men worked hard and intelligently with what meager and obsolete appliances they had. As two signal companies were beyond the normal balance of auxiliary troops for the National Guard of this state, one company, Company A of Los Angeles, was mustered out on February 29, 1912, and on June 20, 1912, Company B, at San Francisco, was converted and enlarged into a Type "A," Field Signal Company, as provided by Circular No. 12, Division Militia Affairs, War Department, June 30, 1911.

Company B is now fully equipped as a modern Type "A," Field Signal Company, with the required number of wire and wireless sections, transportation wagons and other appliances. This company is largely made up of commercial operators and skilled and professional men in wireless, telegraphic and electrical work and has many skilled horsemen. It should render a good account of itself if called upon for actual service. It was highly commended by regular officers for its efficient work at the joint maneuvers south of San Francisco, in 1912, where it worked the wireless and wire sections with celerity and accuracy for the Blue Army.

Field Artillery.

Since the advent of breech loading artillery pieces, there was not a gun of that make in the National Guard of California until May 29, 1911, when Battery A, Field Artillery, of Los Angeles, was organized. On May 31, 1911, Battery B, Field Artillery, at Oakland, was organized, and on December 14, 1912, Battery C, Field Artillery, was organized at Stockton. On December 20, 1912, headquarters were organized at Oakland and the First Battalion of Field Artillery, National Guard of California, completed. The National Guard of California now has a complete battalion of headquarters and three batteries of field artillery, with modern three-inch guns and as fully equipped, with the exception of horses, as the Regular Army field artillery, thus giving to the National Guard of California its normal balance of field artillery for the brigade of infantry.

Nearly all the officers of the headquarters and of Batteries A, B and C, of the California Field Artillery, have attended the artillery schools held at Fort Riley, Kansas, and Sparta, Wisconsin, several of these

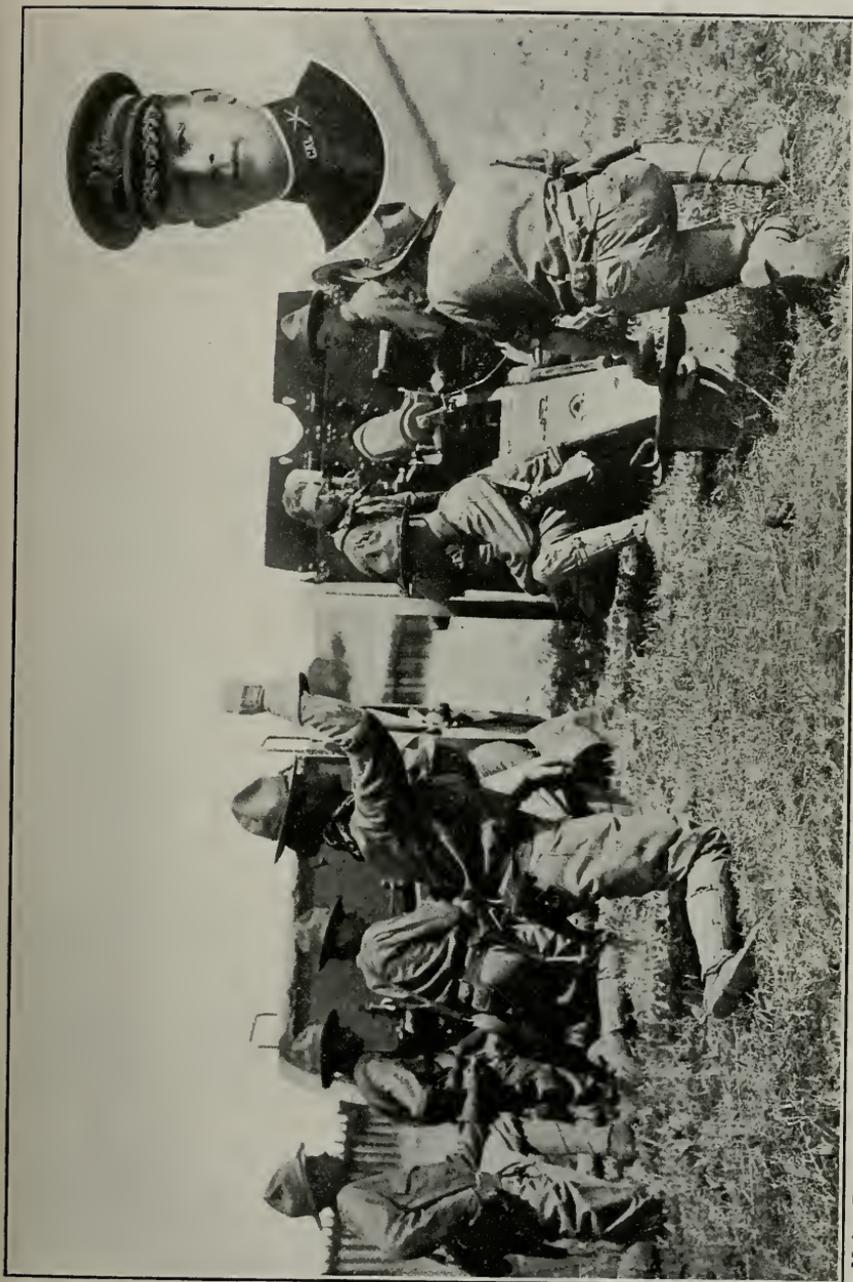

Company "B," Signal Corps, at Manzanita Rifle Range.

officers have attended two or three times, and are fairly well instructed in their duties. Several of the officers have graduated from the School of Fire at Fort Sill, Oklahoma. Both Batteries A and B participated in the joint maneuver campaign held south of San Francisco, in 1912, and rendered excellent service. The report of the Regular Army instructor, on the work of these batteries at the joint maneuvers, contains the statement that one of these batteries with thirty days' practice, mainly to be used in breaking in artillery horses, could take its position in the field with Regular Army batteries and render reasonably good service, and that the other battery, after a short training, would also be fit to take the field for active service. Since the muster in of these batteries they have had field firing every year under a Regular Army instructor and have made good progress.

The War Department, from unallotted funds, delivered all the artillery materiel and equipment for these batteries to the State of California, without cost, contingent upon the state complying with certain conditions as to armories, enlisted personnel, care and training, which have so far been complied with by the state.

In the matter of the field artillery, a very important branch of the state service, the chief weakness is found, as in the case of the cavalry, in the insufficiency of trained horses. Frequently in turn-outs and exercises, the batteries are not able to get the same horses for use more than one time, and the batteries have to turn out with a lot of new horses every time they hitch up. The expense of feeding and caring for sufficient artillery horses, even for demonstration purposes, seems to be beyond any appropriation that our legislators deem wise to make. The original purchase by the state of horses for the artillery would be an easy matter to accomplish, but the maintenance by the state of the great number of horses necessary for a battalion of field artillery seems beyond what the legislators consider a reasonable expenditure for the National Guard. Field artillery, although very useful and an absolute necessity in case of war, is also very expensive to maintain. Inasmuch as the War Department has expressed a desire that the National Guard of the several states should maintain a quota of field artillery, and as the expense of maintaining trained animals for the successful use of the same is so great, it would appear that the solution of the problem would be for the state to purchase artillery horses, the same to be bought under the supervision of Regular Army officers detailed for the purpose of inspecting the purchase, and thereafter that the United States government should pay the cost of maintaining such horses. In this way the government could more cheaply get together a large artillery force, which is so desirable, at less cost than in any other manner and the objection of the state to the extreme expensiveness of this arm of the service would be obviated.

Major Ralph J. Faneuf, commanding First Battalion, Field Artillery. Platoon, Battery "B," First Battalion, Field Artillery, getting ready to fire.

The personnel of both officers and men in the field artillery organizations are enthusiastic, willing workers and intelligent men, who are rapidly approaching efficiency.

Coast Artillery.

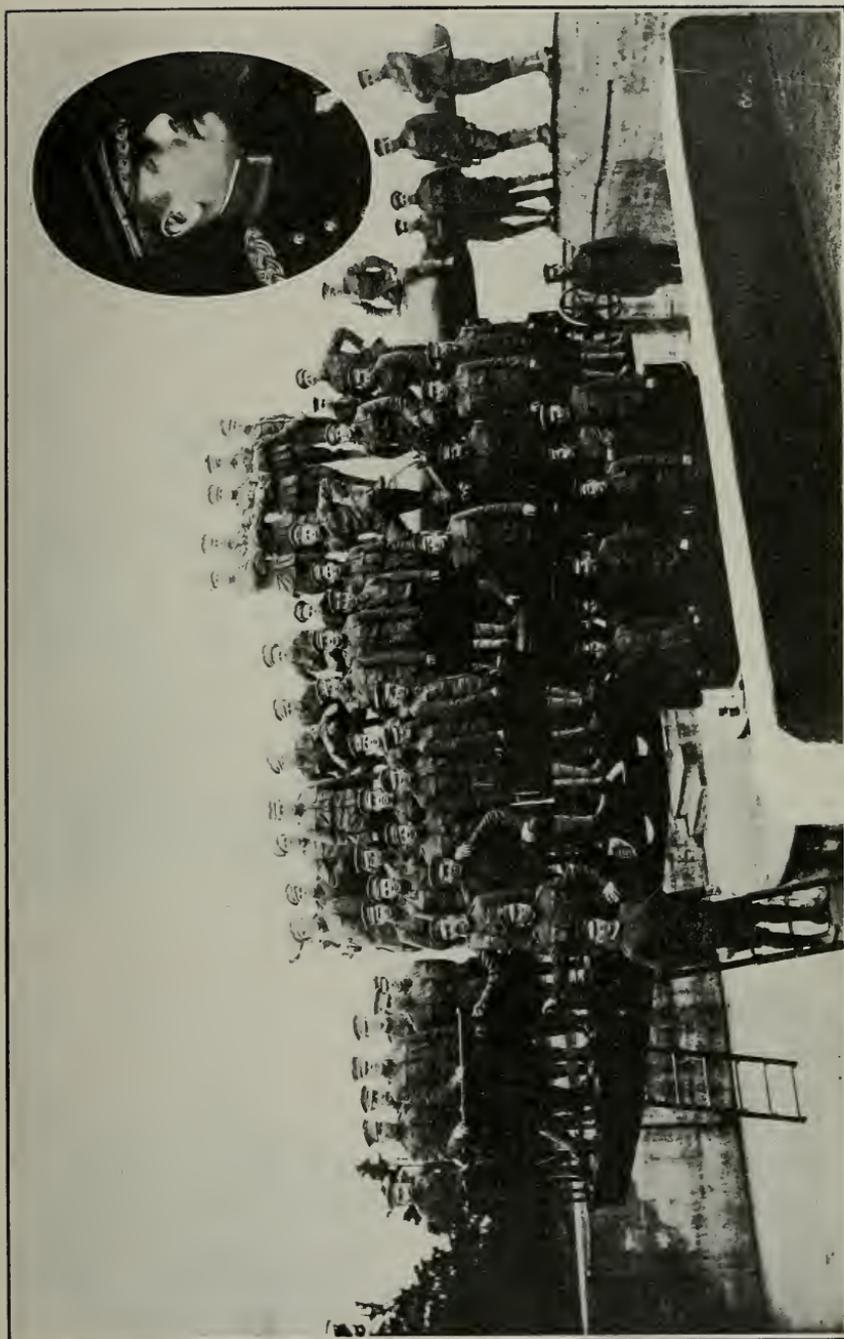

The Coast Artillery Corps of the National Guard of California contains twelve companies, ten at San Francisco, all of which drill and shoot with the big guns at the coast defenses of San Francisco, and two companies at San Diego, which drill and shoot with the big guns at Fort Rosecrans, near San Diego. These organizations have attained a high standard of proficiency in target practice with the ten and twelve-inch guns at long ranges. Many of the officers were infantry officers of considerable experience and service before entering the coast artillery. Many of the officers have taken the government examinations and have qualified in the basic course and some have qualified in the succeeding courses, as laid down by the War Department for coast artillery officers. One officer has graduated from the United States Garrison School at San Diego and has completed his military education at Fortress Monroe, Virginia. Many of the enlisted men have taken the government examinations, and qualified as enlisted specialists or for rated positions.

Inasmuch as these twelve organizations are required to also act as infantry at times, under the state law, they are organized as an infantry regiment and receive considerable drill as infantry. Every other year the organizations are taken out as a regiment of infantry for three or four days and given actual field service. They are generally accompanied by a battalion of infantry and the signal company, which work with them.

The Coast Artillery Corps of the California Militia is fairly well equipped for infantry field service, with exception of wagons for transportation, which it does not have. In case of emergency, the coast artillery, if not needed at the big guns and forts, can be relied upon as a good infantry regiment.

The Coast Artillery Corps was one of the first arms of the service to receive Regular Army instructors detailed with them by the War Department, and these instructors have done much good and the results of their efforts are apparent.

The Coast Artillery companies of the Militia go into camps for joint coast defense exercises at the coast defenses at San Francisco and San Diego for two weeks' target practice with the 10 and 12-inch guns, once each year, and their work shows added efficiency at each succeeding camp.

Colonel Geo. A. Schastey, Chief of Coast Artillery. One of the California Coast Artillery companies at coast defense exercises.

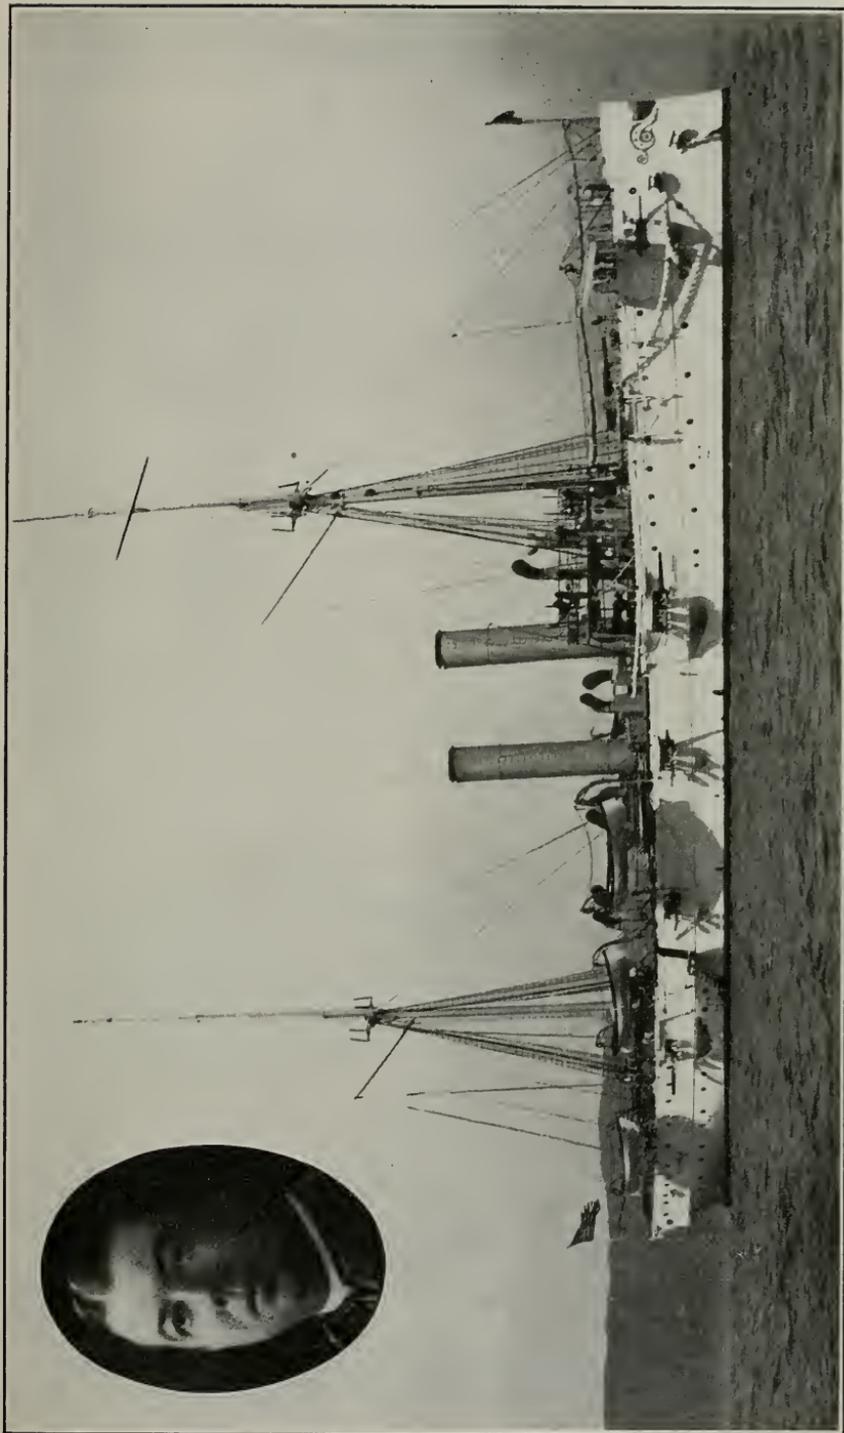

Medical Department.

The medical department of the National Guard of California was for a long time one of its weak spots. The personnel of both Medical Corps and of the Hospital Corps is and has been of high grade, efficient, able and well equipped, but our state law was such that these organizations could not be put on a Regular Army basis. They had no wagon transportation and had more or less trouble about getting proper wagons to move them in marching campaign. The surgeons, although staff officers, were to be recommended by the commanding officers of regiments and these recommendations were subject to change with every incoming regimental commander. There was not one ambulance in the

Litter-bearers, Medical Department.

National Guard of the state. A bill was passed by the last legislature which put the Medical Corps and Hospital Corps of the National Guard of California on a similar basis to those of the Regular Army, and the same have been reorganized by this department, carrying the bill into effect. Field Hospital, No. 1, has been organized at Los Angeles, and Ambulance Company No. 1, was organized at Los Angeles and later transferred to Napa. Both of these organizations are fully organized and fully equipped. With the reorganization of the medical department and the addition of the field hospital and ambulance company, it is believed that the California troops will be able to take care of their sick and wounded in the field.

Captain Geo. W. Bauer, commanding California Naval Militia. U. S. S. "Marblehead" in service with the California Naval Militia.

NAVAL MILITIA.

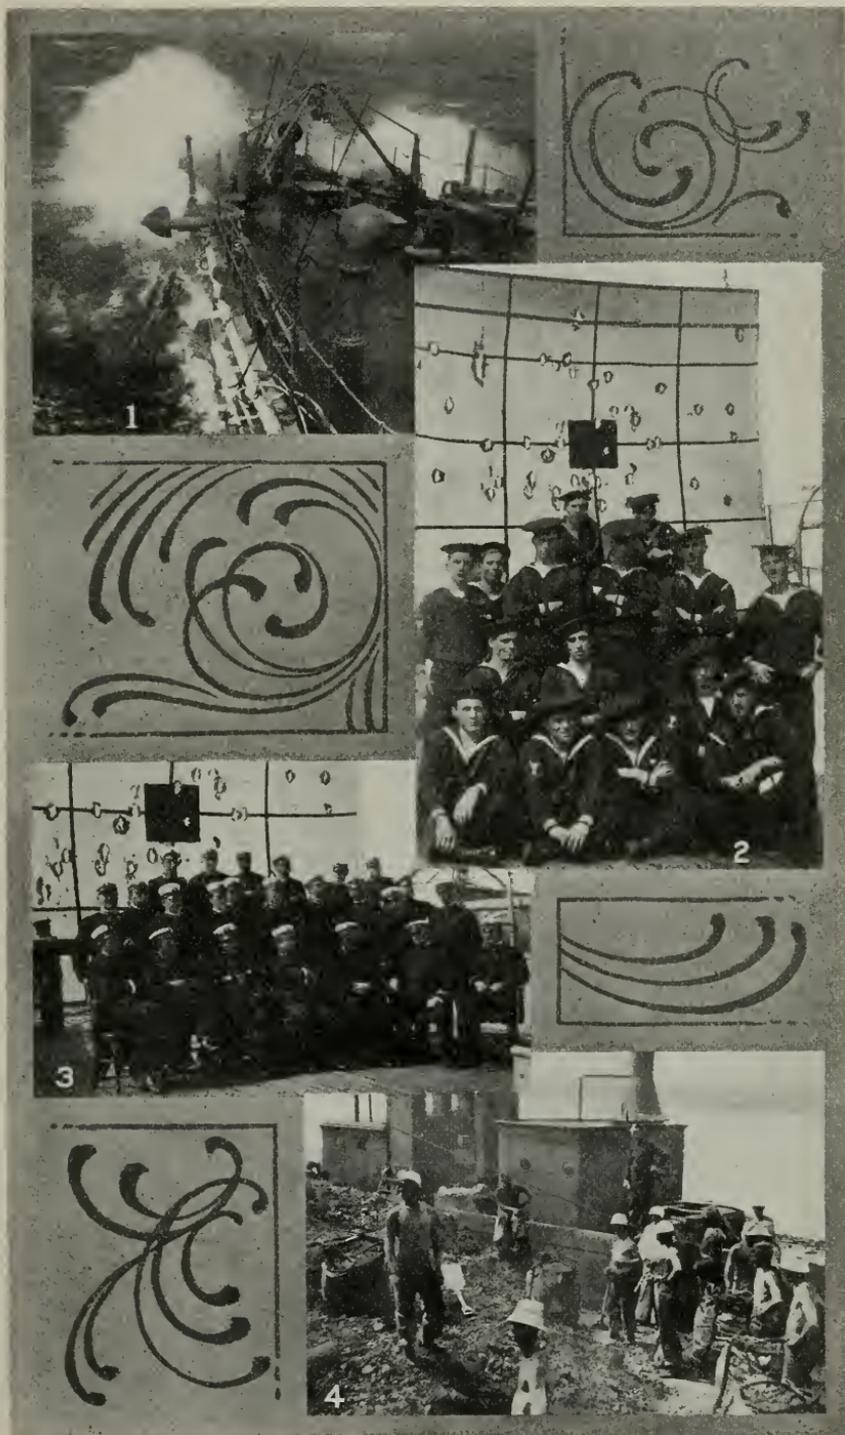

The Naval Militia of California consists of eight deck divisions, an engineer division, a band and medical officers, all under the command of Captain George W. Bauer.

The Naval Militia is twenty-one years old and is now of sufficient size to man and fight one of the Navy's large cruisers. This organization has received much aid from the State of California, but until the last few years, was treated with apparent apathy by the Navy Department. It was not able to get modern rifles from the Navy Department, although requisitions for the same had been often made and as often turned down. The Naval Militia was armed with the old Krag-Jorgensen rifles, which were used for years by the land militia and were ordered turned into the arsenal by the War Department, but which were turned over to the Naval Militia by a former Adjutant General, and the matter adjusted only recently between the War and Navy Departments.

I am glad to relate, however, that within the last year, and the passage of the Naval Militia bill by Congress, matters have greatly improved with the Naval Militia of California. A competent hard working officer has been put in charge of the Division of Naval Militia Affairs, at Washington, D. C., and a most earnest and enthusiastic worker from the Navy—Lieutenant Commander William V. Tomb—has been detailed as instructor with the California Naval Militia, and both officers have done wonderful work with the Naval Militia during their incumbency in office. The Navy Department has dropped its old state of apparent apathy and has equipped the Naval Militia with modern rifles and accoutrements, until it is now equipped in first class shape.

Another division will soon be mustered in and arrangements are being made to obtain a torpedo boat for the divisions in southern California.

Application has been made by The Adjutant General for a larger training ship, as it would take three years to give all the Naval Militia a cruise on the ship assigned to it now. The present ship, the Marblehead, can only accommodate a complement equal to about one third of the strength of the Naval Militia of California, and as it is now, only about one third of the enlisted personnel can go on the annual cruise, and yet, the Navy has a number of cruisers lying idle on this coast for want of crews. These cruisers have simply caretakers aboard. If the Naval Militia had one, it would comfortably accommodate aboard at one cruise the entire Naval Militia of California, which amounts to approximately seven hundred men. This is quite important, to get the best results in training. For a long time there seemed to be no fixed policy and little enthusiasm among many of the naval officials for

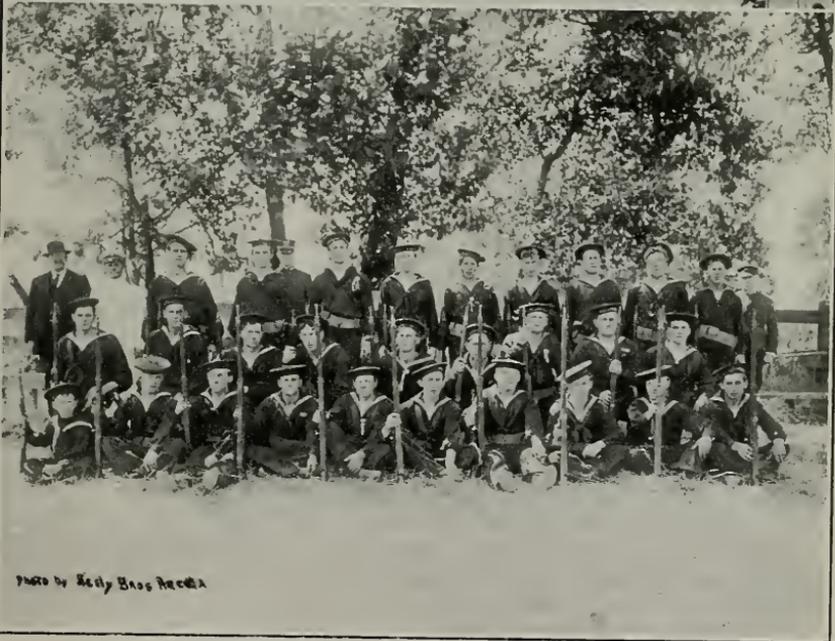

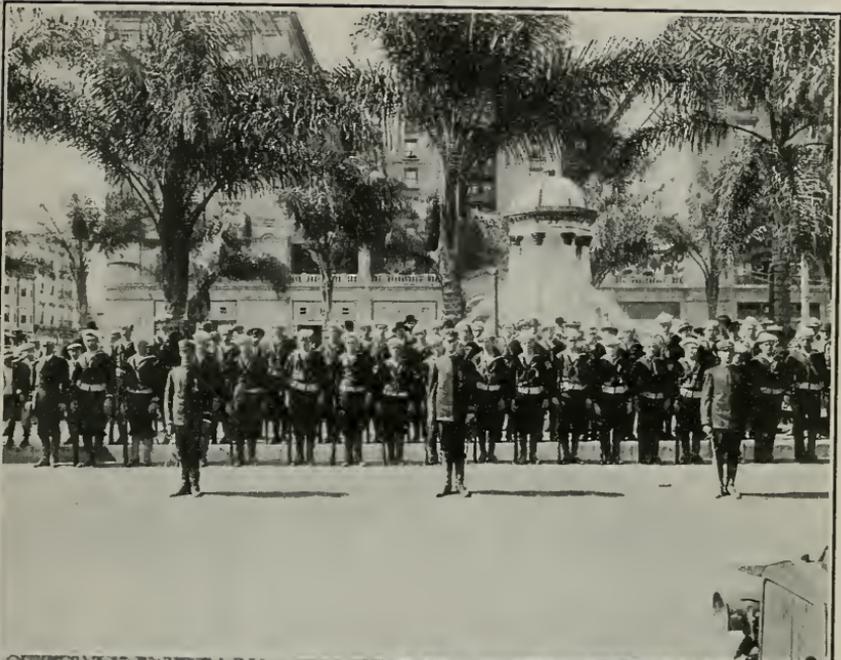

1. U. S. S. "Marblehead" in rough seas on cruise of 1912. 2. Record target and men who made it. 3. Naval Militia officers on "Marblehead," cruise, 1912. 4. Coaling "Marblehead."

the Naval Militia. Occasionally an officer detailed in charge of the office of Naval Militia Affairs is personally a believer in the future efficacy of the Naval Militia and occasionally an officer is detailed as local instructor who possesses the same qualities. When these latter conditions existed the Naval Militia received great help, instruction and benefit, and then again some naval officer is detailed in charge of the Naval Militia who appears to care little about the Naval Militia and things have stood still until some other enthusiastic official succeeds to the office, to be soon removed. These difficulties that have been met with, in my opinion, can be largely attributed to two facts: First, that we had no bill like the "Dick Bill" adequately fixing, in detail, the relationship and status between the Navy and Naval Militia, and secondly, the all too prevailing opinion among naval officers that no one can know anything at all about naval matters unless he has passed through Annapolis.

I had thought strongly of asking your Excellency to muster out the Naval Militia of California because of the lack of support from the Navy Department. However, there has been a material improvement during the last few years, since the appointment of an officer in charge of the office of Naval Militia Affairs at Washington. This officer, Captain Davis, was enthusiastic and did much good. Imagine a naval organization being in the state service for nineteen years without even having target practice at sea with large guns, or without being able to fight its ship. That was the condition of the Naval Militia of California in 1911. After considerable importuning from this office and the commanding officer of the Naval Militia, Lieutenant Benjamin G. Barthalow (Regular Navy), was detailed to instruct the Naval Militia of California. This officer rendered splendid service and under his suggestions gun crews were made up and trained and in July, 1912, the Marblehead, with its gun crews and a badly overcrowded complement of officers and men, steamed for Bremerton and Port Angeles, by way of Portland, for target practice, for the first time with large caliber guns. At Portland, upon receipt of information from the Navy Department that there were no targets at Port Angeles, the captain ordered a target made and a regulation target was made by the Naval Militia men of the Marblehead, in nine hours, and which was later towed to the target grounds at Port Angeles. The target practice was done under the official inspection of Lieutenant Barthalow, who officially reported the result to the Navy Department.

The shooting is claimed to be the best ever done in the world by any gun crews of any navy at any time or at any place. Marvelous as this seems for new men to perform, I have been unable to find that the same is not true. This shooting was done under the official inspection

Top picture, Third Division, Naval Militia of California, San Diego.
Lower picture, Detachment, Fifth Division, Naval Militia of California, Eureka.

and was officially reported by a Regular Navy officer, regularly detailed, and, therefore, I accept the statement as true. The scores were made at a range of 1,600 yards, at a regulation target, with 4-inch guns, with the Marblehead traveling at a speed of eight knots. Sixty-five consecutive hits were made with the 4-inch guns, which is claimed to be the record. This is also the record of one enthusiastic, capable and earnest United States Naval instructor, for less than a year with Naval Militia, backed by a competent naval officer in the Naval Militia office at Washington, D. C., and the earnest commanding officer of the Naval Militia of California. What would be the result if the intelligent and patriotic young men who compose the Naval Militia had had such instruction during the twenty years preceding? Following is the score referred to and the first official score made by the Naval Militia of California:

Cartridge case expanded after fifth shot of Earle's string was fired, putting No. 1 4-inch gun out of commission, remaining 4-inch being fired at No. 2 gun.

The Naval Militia has competent licensed navigators, licensed marine engineers, competent, educated officers, most of them being college and professional men, wireless men, divers and carpenters, and the other necessary mechanics.

With the same backing from the Navy that the Army affords the land militia, there is no reason why the approximately 7,000 patriotic young Americans who comprise the Naval Militia of the United States, with help of a few specialists and technical officers of the Regular Navy, should not, in the hurry and hustle and confusion at the outbreak of

The Adjutant General instructing officers of Los Angeles High School Cadets.

war, officer, man and fight at least seven or eight of Uncle Sam's empty warships, without waiting for months for the enlistment and instruction of 7,000 raw recruits devoid of any experience or training. It should be the policy to work this citizen-sailor force to the highest possible efficiency during times of peace, that the country may have handy and at ready call an, at least, partially trained force. The Naval Militia of California has many men who have served enlistments in the Regular Navy and also furnishes many recruits to the Navy Department.

The Naval Militia of California has been divided into two battalions to act as an infantry landing force, and as the various divisions are armed with one-pounders and various pieces of ordnance, as such it is believed that they can render quite effective service on land. There are many good shots with small arms among them and their inability heretofore to cope with the land forces with small arms is largely due to the fact that they have had old and worn out rifles.

My recommendations are that the Navy Department always detail instructors who believe in the future efficiency of the Naval Militia as a fighting force, if properly trained, and it should always keep a Naval officer in charge of the division of Naval Militia Affairs at Washington, D. C., who has faith in the efficacy of the Naval Militia, and who will work to make it efficient. Under such conditions, with the present state help, California, whose Naval Militia now stands second in point of numbers and first in target shooting of any in any state in the union, will have an efficient Naval force to offer the government in case of trouble, that will justify all the effort and money that may have been expended on it.

Since the last report practice cruises have been held by the Naval Militia of California as follows:

- 1910—July 2 to July 16, inclusive.
- 1911—July 1 to July 16, inclusive.
- 1912—July 6 to July 21, inclusive.
- 1913—July 2 to July 6, inclusive.
- 1914—June 27 to July 12, inclusive.

HIGH SCHOOL CADETS.

One of the most important moves to strengthen the military spirit in this state and to awaken waning patriotism and love of the flag and to furnish a young, virile and trained asset to the country, in case it should be needed in time of the nation's stress, was the passage of the high school cadet bill by the California legislature of 1911.

After a fairly careful but hasty study of the military educational systems of the countries of Europe and of Japan, in 1910, where splendid military reserve systems are maintained by those governments, the

undersigned, with the approval of the Governor, prepared a bill during the last days of the session providing for the formation of high school cadet organizations and which bill was passed and subsequently signed by the Commander-in-Chief. Only enough money was appropriated to experiment with the measure. The experiment has proven such a suc-

Company "A," Placer County High School Cadets, Auburn, at target practice.

cess as to justify an increase in the appropriation by the legislature of 1913 somewhat in proportion to the importance of the movement. Following is the law as it now stands on the statute books:

An act to provide for the organization, control and equipment of high school cadet companies, and for the promotion of rifle practice therein, and appropriating the sum of five thousand dollars therefor.

[Approved April 5, 1911.]

SECTION 1. The male students of any high school in this state, having forty or more such students, fourteen years of age or over, may be organized into a high school cadet company, or companies, of not less than forty members each, under such rules and regulations as the governing body of said school may prescribe. Said cadet company, or companies, shall at all times be under the guidance and control of the principal of the said school, whose duty it shall be to make regulations regarding the moral, educational, and physical welfare of said cadets.

SEC. 2. Said companies shall each have one captain, one first lieutenant, one second lieutenant, elected by the members thereof, and such non-commissioned officers and privates as correspond to the non-commissioned officers and privates of the infantry companies of the National Guard of California, the non-commissioned officers to be appointed by the captain.

SEC. 3. In case any high school has more than one company, it shall have one cadet major, who shall be elected by the commissioned officers of the companies; one cadet adjutant, and one sergeant-major, who shall be appointed by the major.

SEC. 4. The principal of such high school may issue commissions to such officers so elected, and warrants to the non-commissioned officers.

SEC. 5. Said cadets shall drill in accordance with the drill regulations prescribed by the United States Army.

SEC. 6. Said high school cadets may wear a uniform similar to that prescribed for the National Guard of California, except that instead of shoulder straps, cadet chevrons indicating rank, and distinctive collar ornaments shall be worn.

SEC. 7. Any commissioned officer, or non-commissioned officer, may have his commission or warrant canceled, and be reduced to the ranks, by the principal of the high school for falling back in his studies, or for misbehavior, either in school, or in the cadet company, or for other good cause appearing in the judgment of said principal.

SEC. 8. A sufficient number of obsolete rifles for drill purposes may be purchased by the board of high school trustees, board of education, county superintendent of schools, or the State Superintendent of Public Instruction, out of any funds available and not otherwise appropriated.

SEC. 9. Target practice shall constitute a part of the instruction to be given to said cadets, and The Adjutant General of the state shall purchase and supply to each of said high schools a sufficient number of Krag-Jorgensen, or other efficient, rifles for field target work and for gallery practice, and ammunition and equipment therefor, as in his judgment shall be necessary for efficient rifle practice. All target practice shall be under the supervision of competent members of the National Guard of California, detailed for that purpose by The Adjutant General of the state. The expenditures therefor shall be paid out of the moneys hereinafter appropriated.

SEC. 10. The Adjutant General of the state shall detail from the organizations of the National Guard, when practicable, some competent member thereof who shall act as drill and rifle practice instructor for said high school cadets. The Adjutant General may provide for compensating the person or persons detailed by him to instruct said cadets in drill and target practice.

SEC. 11. Whenever practicable said high school cadets shall be permitted to shoot at target practice upon National Guard rifle ranges, when not needed by the National Guard, under the supervision of National Guard instructors.

SEC. 12. The inspectors of the National Guard shall inspect and report on said high school cadet companies at least once each year.

SEC. 13. The Adjutant General shall provide suitable drill regulations, books of instruction, and the necessary blank forms for reports for each of said high schools having a cadet company, relating to the drill, target practice, attendance, discipline, and condition of property of said high school cadet organizations. Such reports shall be made and forwarded, in duplicate, one copy to the State Superintendent of Public Instruction, and one copy to The Adjutant General's office, semi-annually, and shall bear the indorsement of the principal of said school, containing such remarks as the principal may deem pertinent.

SEC. 14. The principal of the school shall be responsible for all public property supplied to said cadet companies, and shall supervise the proper care thereof.

SEC. 15. Each and every board of high school trustees, board of education, county superintendent of schools, and the State Superintendent of Public Instruction, are, and each is hereby authorized, empowered, and directed to facilitate the purposes of this act, by cooperating with The Adjutant General of the state.

SEC. 16. The sum of five thousand dollars is hereby appropriated from funds in the state treasury, and not otherwise appropriated, for the purpose of carrying out the provisions of this act.

SEC. 17. All acts or parts of acts in conflict with the provisions of this act are hereby repealed.

Under this act there were organized or taken under the act some twenty-one organizations. Of these four companies dropped out after being organized, owing to the socialistic tendencies of new teachers

Company "A," Mission High School Cadets, San Francisco.

Company "A," San Rafael High School Cadets.

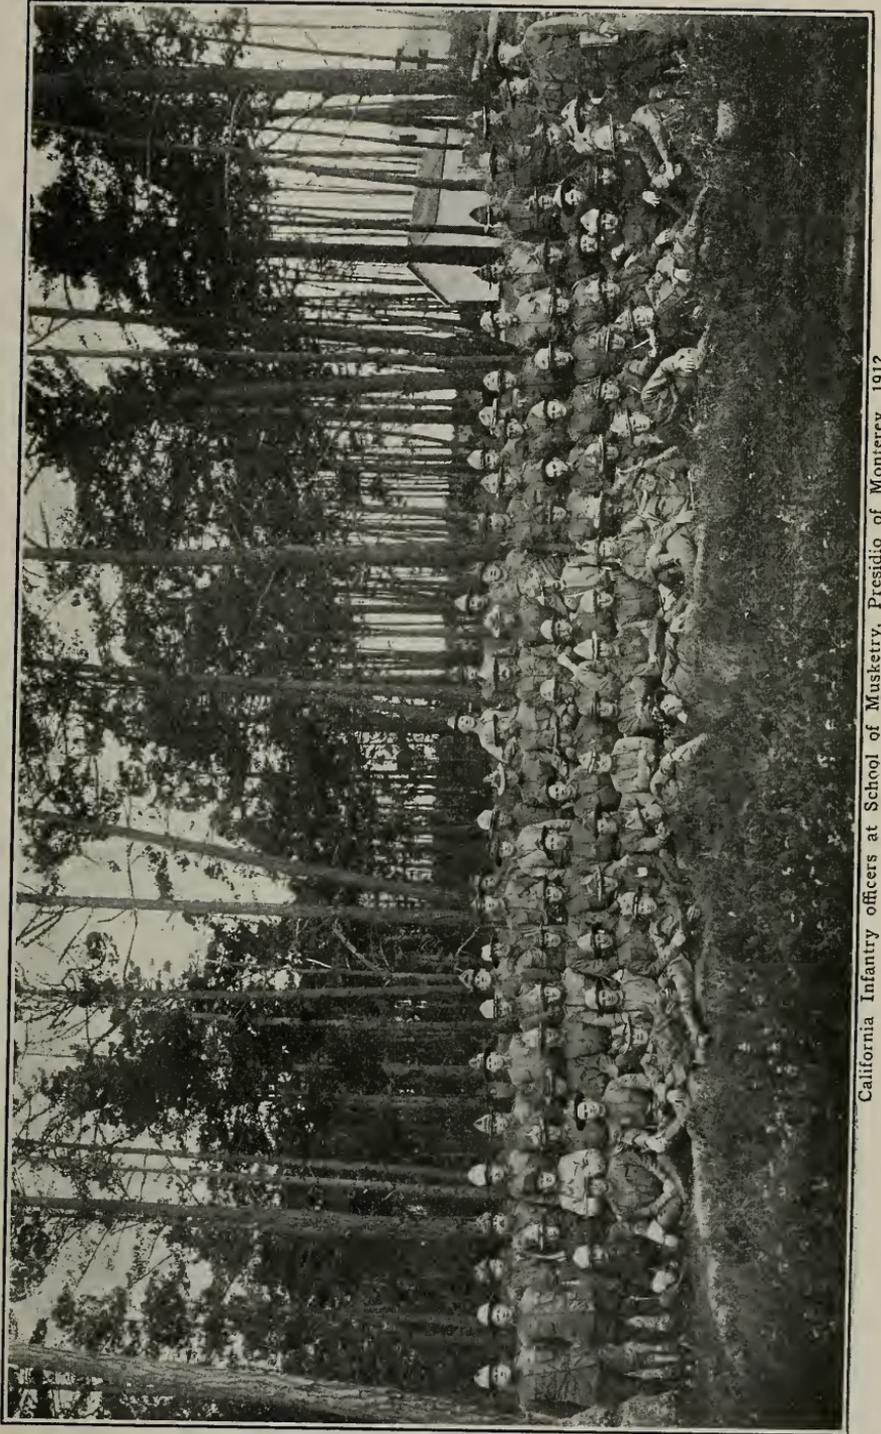

coming into control of the school, or on account of the lack of a competent instructor for the cadets.

The cadets have become greatly interested in target practice with the regulation arms of the United States Army, in drill and military education in general. The principals of schools having cadet organizations have stated that the cadets have made the very best students since taking up the military work. A more favorable feeling respecting military matters has been engendered by this cadet movement in California. We are now turning out about fifty cadets a year, qualified to act as officers of volunteers. After a year or two of instruction in the high school cadet organizations, under the direction of National Guard or Naval Militia officers, a class of fifty cadets has been sent to the school of military instruction for students, established by the United States government each year. The splendid course of instruction given at these government schools by the special officers detailed from the Army to give the instruction is earnestly absorbed by the enthusiastic students from the high school cadet organizations. The preliminary work required by the military instructors at the high schools fits these young men to assimilate the knowledge imparted by the Regular Army officers acting as teachers at the government schools. After performing the work required by the military instructors in the high schools for one year and attending the government school for a five or six weeks' course, these young men are probably as well qualified for the position of second lieutenant in the volunteer army as any others that could be obtained. In case of war the main trouble will be to get trained officers. In case of war every one wants to enlist and do his share for the country, but very few are qualified to serve as officers. These young men will come nearer doing this properly than any others that can be found. Therefore, this movement should be encouraged, as it is of the greatest importance to the country.

Several of the cadet organizations have joined the National Rifle Association of America. In 1913 the championship in gallery shooting, Class "C," National Rifle Association, for schoolboy rifle clubs throughout the United States, was won by Company A, California High School Cadets, Placer County High School, of Auburn, California. This was the first year that Company A had entered this contest.

ENCAMPMENTS.

Since the beginning of 1911 the National Guard in its various departments has attended many camps and schools of instruction, most of them wholly conducted by Regular Army officers, or by Regular Army officers and Militia officers working together, at places within or without the State of California.

California Infantry officers at School of Musketry, Presidio of Monterey, 1912.

Following are some of the camps of instruction and schools of instruction held during the period April 1, 1911, to November 16, 1914:

Government maneuvers on Mexican border (San Diego, California, and San Antonio, Texas) attended by California National Guard officers during April, May and June, 1911.

Camp of instruction for militia officers of cavalry and field artillery, Fort Riley, Kansas, June 1-15, 1911.

Joint coast defense exercises, San Francisco, July 15-22, 1911, at Fort Rosecrans, San Diego, July 1-8, 1911.

Joint field artillery exercises at Sparta, Wisconsin, September, 1911.

Encampment for instruction and competition in rifle practice, Sacramento, December 9-11, 1911.

Camp of instruction for cavalry officers, Presidio of San Francisco, May 11-22, 1912.

Camp of instruction for infantry officers at Presidio of Monterey, May 13-23, 1912.

Joint coast defense exercises, artillery district of San Francisco, June 1-15, 1912.

Camp of instruction for militia officers of field artillery, Fort Riley, Kansas, July 6-20, 1912.

Joint coast defense exercises, artillery district of San Diego (Fort Rosecrans), August 4-18, 1912.

Joint maneuver campaign between San Francisco and Salinas, August 11-21, 1912.

Encampment for instruction and competition in rifle and revolver practice, Sacramento, November 24-25, 1912.

Camp of instruction for target practice, Battery B, Field Artillery, Hewson Ranch, near Oakland, April 25-27, 1913.

Joint camp service in vicinity of San Francisco Bay (Coast Artillery, Battalion Fifth Infantry, Signal Corps and regular troops), May 29-31, 1913.

Joint field and camp service Coast Artillery Corps, Fort Winfield Scott, July 5-19, 1913.

Camp of instruction for officers of infantry, cavalry and medical corps and enlisted men, State Camp Grounds, Laveaga Heights, near Santa Cruz, July 6-16, 1913.

Camp of instruction for target practice and selection of team to represent California at Camp Perry, Ohio, August 1-9, 1913.

Camp of instruction for target practice Battery A, Field Artillery, at Centinela Ranch, near Los Angeles, August 29-31, 1913.

Camp of instruction for target practice, Battery C, Field Artillery, near Stockton, November 14-16, 1913.

Battalion and company camps authorized for summer of 1914.

Officers and enlisted men of Coast Artillery Corps in camp of instruction at Fort Winfield Scott, San Francisco, August 15-29, 1914.

Camp of instruction for target practice, Battery A, Field Artillery, near Los Angeles, September 5-7, 1914.

Camp of instruction for target practice, Battery C, Field Artillery, near Stockton, September 18-20, 1914.

Joint coast defense exercises, Fifth and Eighth Companies, Coast Artillery Corps, Fort Rosecrans, San Diego, October 4-13, 1914.

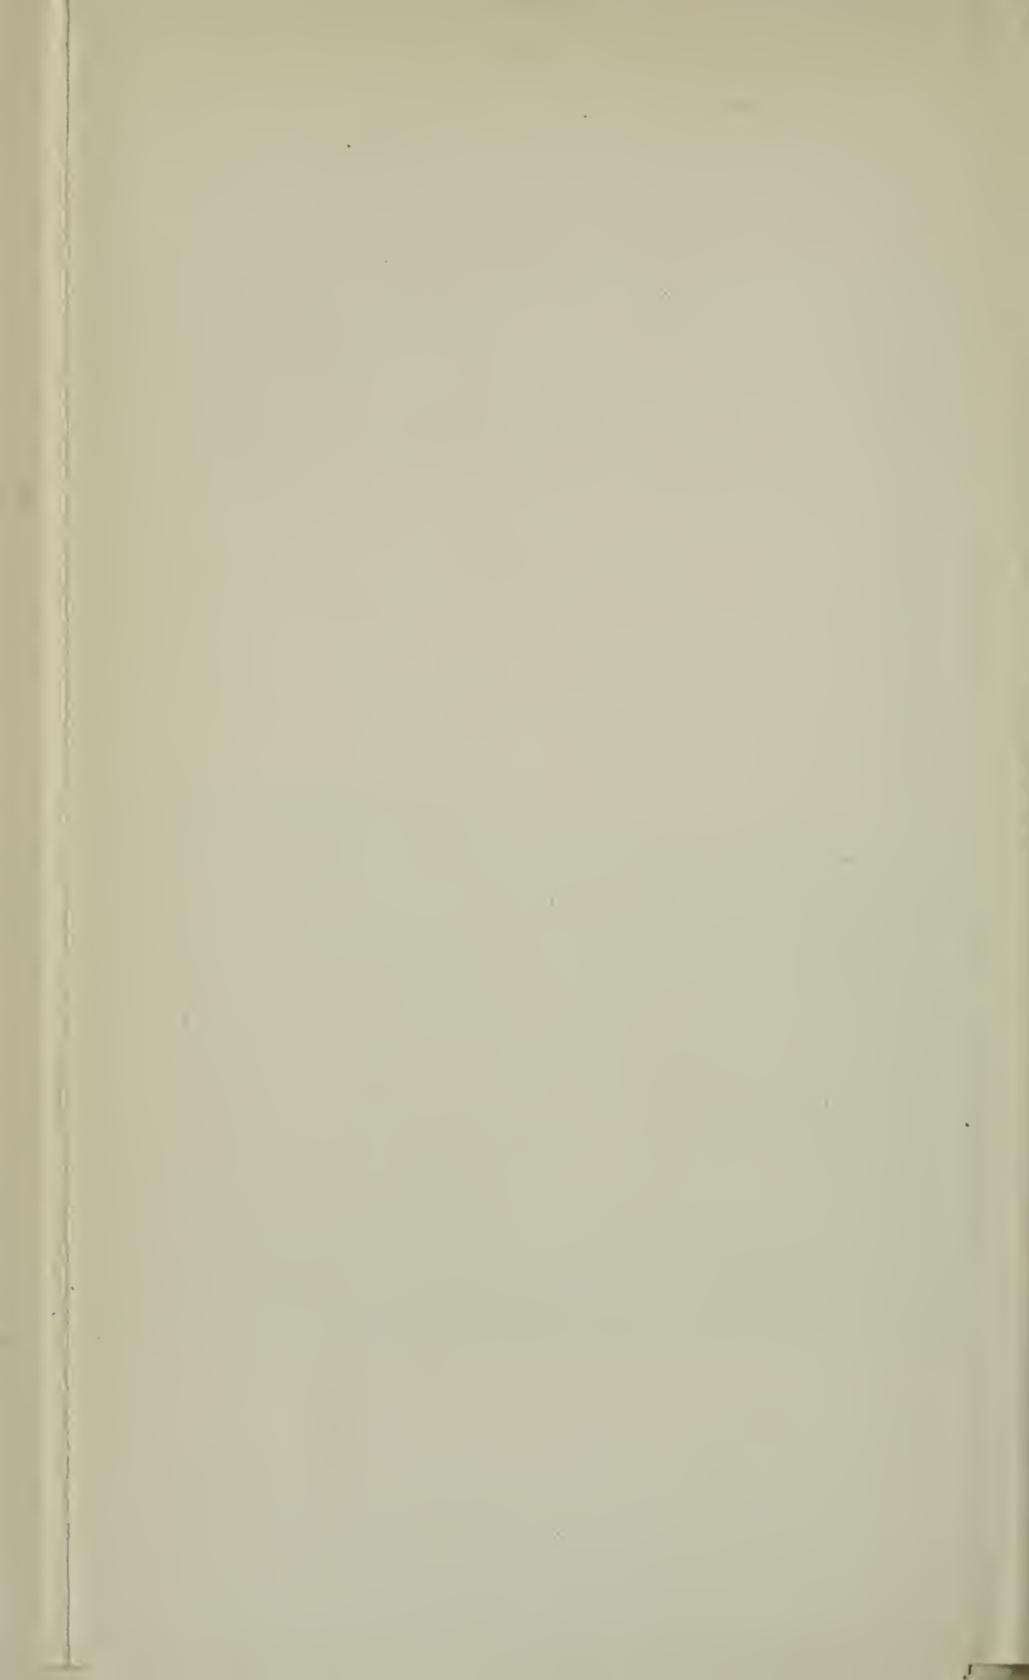

Camp of instruction for target practice, Battery B, Field Artillery, near Danville, October 10-12, 1914.

Camp of instruction for rifle practice, Sacramento, October 17-23, 1914.

It is needless to say that the National Guard has received much valuable information and practical instruction from its attendance at these various camps and schools.

California Infantry Officers at School of Musketry, Presidio of Monterey, 1912.

JOINT MANEUVERS.

A maneuver campaign was held with the Regular forces and California Militia south of San Francisco, in August, 1912. The National Guard held up remarkably well on the long marches, over the rough, hot and dusty roads. The good marching and endurance of the Militia were a surprise to the many Regular Army officers present, and showed that the Medical Department of the California National Guard, in its examination of recruits, has kept well up to the Regular Army standard.

All the mobile forces of California were present and participated in the maneuvers.

The men were furnished with government marching shoes before the campaign commenced, and as a consequence very little trouble was had with sore feet.

After the first day the wagon transportation was excellent. The wagon transportation was sufficient and the column never had to be halted by reason of any break in the transportation over, in a great many places, steep and rough roads. The wagons were such as could be hired promiscuously from farmers, teamsters, beet factories and various other sources. These were not suitable but were the best obtainable. Since that time the entire mobile forces have been equipped with regular escort wagons.

As mentioned before, every mobile organization in the state responded and participated in this maneuver campaign, without a single one failing to come up to the standard required in numbers by the Division of Militia Affairs. I think that it can be fairly said that the mobile forces of California can send into the field a normal infantry brigade, balanced with a normal addition of auxiliary troops, accompanied by the necessary transportation and equipment, and can be depended upon to render any service required of it in an orderly and efficient manner.

The ordinary militiaman looks on the biennial joint maneuvers as the big event of his enlistment and the disappointment was extremely keen to the California National Guard when it was learned that there would be no joint maneuvers for the year 1914, for the reason that the Division of Militia Affairs, at Washington, D. C., refused to allot sufficient money from funds appropriated by congress to the California Militia to justify the holding of maneuvers. The California legislature of 1913 also fell down and over my protest cut the appropriation for encampment \$10,000 from previous years.

For some reason unknown to this department the Division of Militia Affairs made a most unjust discrimination against California in the allotment of funds for maneuver purposes this present year. While the State of California has approximately the same number of mobile troops that all the rest of the states comprising the Western Depart-

San Francisco Army.

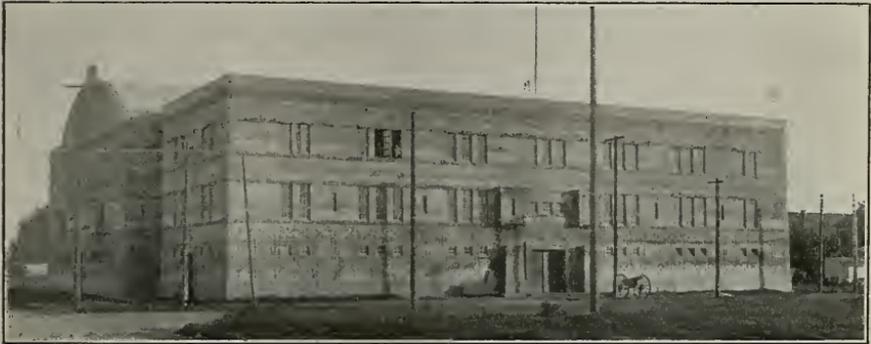

Main Entrance to Los Angeles Army.

ment have combined, and has a much more expensive National Guard, requiring nearly 350 more horses to put the various arms into the field, and distances for mobilization are about the same, yet California was allowed only \$38,000 as the federal government's contribution toward the maneuvers which would cost the state approximately \$123,000. The other states of the Western Department combined were allowed approximately \$75,000 toward the expenses of their maneuvers. The small allotment from the federal government made the holding of joint maneuvers in California for the year 1914 impracticable and, in fact, impossible.

ARMORIES.

When this administration went into office, the National Guard organizations were greatly handicapped by the lack of proper armories

Sacramento Armory and State Arsenal.

within which to hold their drills and exercises and to store the state and government property. Many of the armories in use were reported on by the government inspectors as being unfit for the purpose to which they were being put and as being insecure from theft, causing loss of property. In 1914 an active campaign for funds with which to build armories was instituted with the members of the legislature and appropriations were acquired, which with moneys previously secured for this purpose, and with which no action had been taken, aggregated in all to three quarters of a million dollars. Three large armories were started at once, one in San Francisco, another in Los Angeles and a third in Sacramento. These armories now accommodate thirty-seven organizations of the National Guard, including several divisions of the Naval Militia.

The War Department has installed in the San Francisco armory a replica of the fire-control station in one of the great forts on the San Francisco harbor. The coast artillerymen get their training and fire

instruction in this armory without the necessity of traveling to the Regular Army forts for the same.

All the larger cities now have armories for their Guard organizations and it will be the policy of this department to follow these up with the erection of small armories wherever National Guard organizations are located and wherever the required means can be obtained.

The appropriation for the Sacramento armory also called for a state arsenal, which has been erected in connection with the armory and in which the military property and stores of the government and state may be conveniently and safely kept.

The new state armories and arsenal are practically fireproof.

TARGET RANGES AND SHOOTING.

Upon entering on my duties and taking charge of this department, rifle shooting was on the wane because of the absence of target ranges. Such large places as San Francisco and Sacramento had no rifle ranges for their troops. During the past four years locations have been acquired and ranges constructed for the use of over forty organizations that heretofore were without ranges.

Target practice received a great stimulus and every year during my term state shoots, competitive and otherwise, have been held and have been participated in by nearly all of the organizations. Teams have also been sent to Camp Perry, Ohio, to participate in the national matches.

In 1913 nearly all of the infantry officers attended and took a special course of training in rifle and machine gun firing at the school of musketry, at Monterey, under Regular Army instructors.

Many good shots have been developed in the California National Guard during the past four years.

EQUIPMENT AND UNIFORMS.

The troops are now thoroughly equipped for service in the field. Some of the articles which have been added to complete the equipment of the California National Guard, during the present administration, are olive drab clothing, sweaters, russet marching shoes, housewives, field glasses, identification tags, compasses, message pads, cavalry sketching cases, first aid packets, escort wagons and harness, two complete horse equipments for each infantry company for the mounted scouts, sand glasses, fencing outfits, post and storm flags, conical tentage, surplus kit bags, officers' bedding rolls, signal flags, and whistles, three revolver web belts to each infantry company so that the revolver may be carried correctly, and cleaning material to be used in the armories and in the field. Good military libraries have been issued for the use of each organization of the Guard.

1. Rifle range at Bakersfield. 2. Rifle range at Los Angeles. 3. Rifle range at Manzanita.

All obsolete and unserviceable property which was in possession of the state at the time this administration came into office has been surveyed and either returned to the United States government or disposed of in accordance with directions from the War Department, leaving only serviceable property to be issued to National Guard troops.

An inventory of all property in the state arsenal has been taken and a complete system of record, showing all property issued and in possession of the different organizations of the Guard and Naval Militia, and in the state arsenal, has been inaugurated in this department, so that at any time an accurate check of the property can be made without delay.

LAWS.

During the administration of this office many excellent laws have been made looking to the betterment of the National Guard. In general the legislature has been liberal and patriotic toward the Guard.

Since the receipt of Circular No. 8, Division of Militia Affairs, War Department, dated August 1, 1913, and the Tables of Organization, Organized Militia, 1914, changes have been made, by state orders, to have the California National Guard conform to the requirements of the War Department in that regard, and these changes have been practically accomplished. At the next session of the legislature bills will be introduced to make such changes in the state military laws as may be necessary and which can be made only by the legislature.

Prior to 1911 a law had been passed providing for the pay of National Guardsmen at joint maneuvers, (\$1.00 per day in addition to government pay), but the law had been simply a dead letter, as no appropriation had been made to cover the pay. In 1911 the legislature made an appropriation carrying out the provisions of this law and since that time the California Guardsmen, participating in joint maneuvers, have received the pay called for by law. In 1913 a law was passed and appropriation made to pay the Naval Militia of California while on the annual cruise called for by the Navy Department.

Orders are now being drafted in this department for the organization of provisional headquarters and supply companies, to be attached to each regiment of infantry. This in accordance with Table 6, section VIII, Tables of Organization, Organized Militia, Peace, 1914, relating to the organization of regiments of infantry.

ACTIVE SERVICE.

During this term of service the troops have been called out for active service several times.

On September 3, 1912, Companies A, C, E, and F, and Detachment Hospital Corps, Seventh Infantry, were called out to preserve order at Ocean Park, Los Angeles County, California, where a great conflagration

1. Private Edward C. Crossman, Company A, Seventh Infantry, winner of State Individual Championship, target practice, 1911. 2. First Sergeant Francis Webster, Fifth Company, Coast Artillery Corps, winner of State Individual Championship, target practice, 1912. 3. North Sacramento Rifle Range. 4. Rifle Range of Company "D," Second Infantry, Redding.

had started, where several lives were lost, and nine blocks of business and residential property were burned down. The mayor and officials of Ocean Park called upon the Acting Governor for help, stating that approximately 60,000 sightseers and adventurers had rushed in and overrun the town, while the fire was in progress, and that the legal authorities had lost all control of the situation. It was stated that looting had commenced and immediate help was needed. Companies A, C, E, F, and Detachment Hospital Corps, Seventh Infantry, were at once despatched to the scene of the fire and remained on duty from two to six days, until the regularly constituted authorities were able to handle the situation.

In July, 1913, a great forest fire started in the park and woods north of San Francisco, on the slopes of Mt. Tamalpais, and threatened to destroy Mill Valley and a number of small towns. This fire finally got beyond all civilian control. About 2,000 Regular Army troops from the neighborhood of San Francisco and about as many sailors and marines from the ships in San Francisco Bay, were called out to fight the fire. Then a call was made for the Militia and Companies A, C, D, E, F, H, I, and K, Fifth Infantry, Battery B, First Battalion, Field Artillery, Company B, Signal Corps, N. G. C., the First, Second and Engineer Divisions, and Detachment Hospital Corps, Naval Militia, were ordered to the scene of the fire and rendered service for the four days, July 10 to 13, 1913, inclusive.

On August 3, 1913, the superior judge of Yuba County wired the Governor that serious rioting had taken place that afternoon in the hop fields near the town of Wheatland, that the sheriff had been seriously and supposedly mortally wounded and the district attorney and undersheriff of Yuba County had been killed, two Industrial Workers of the World had been killed, the constable of Wheatland township had been shot through the arm and several others wounded, in a fight between the Industrial Workers of the World hop pickers and the peace officers of Yuba County, that the Industrial Workers of the World retained the ground and bodies of the killed and wounded and that further bloodshed and rioting were imminent. Immediately upon receipt of this information, and receiving orders from the Governor to send help to stop the rioting and restore order, Company F, Second Infantry, of Woodland, was ordered to Sacramento to join Companies E and G, Second Infantry, and Troop B, First Squadron of Cavalry, and to proceed to Wheatland. Companies A and I, Second Infantry, were ordered to proceed by special train to Wheatland, there to meet me at daylight. I proceeded with the contingent from Sacramento. Orders were carried out promptly and connections made as directed. There were approximately 200 militiamen at Wheatland at daylight

of August 4th. The rioters' camp was estimated to contain 2,000 people. The militia promptly surrounded the camp and assisted the peace officers in serving warrants upon the leaders and those rioters charged with crime. Part of the camp was searched for dynamite, which we had been informed was in possession of the rioters. Afterwards we released our patrol of the camp and established a camp for the militia. The rioters commenced to leave after the militia had been in Wheatland a short time and within twenty-four hours most of them were gone. A detail of militia escorted the peace officers with their prisoners to the Yuba County jail. The work of the National Guard could have been concluded then, but the citizens were so badly frightened because of the horrible actions of the rioters on August 3d, that they begged the Governor to leave the troops longer on duty for fear of further outbreak. I left the camp with about 100 troops on August 5th, and the remainder were ordered to leave as soon as conditions would permit. On August 8th orders were issued for all troops to leave Wheatland the following day.

In September, 1913, the supervisors of Napa County and the authorities of Napa City wired to the Governor asking for help and stating that a great forest fire was raging in the vicinity of the state hospital for the insane, at Napa, and was threatening the state's buildings, that the local authorities were unable to cope with the situation. The Governor ordered me to take action and to render every assistance available. Ambulance Company, No. 1, located at Napa, promptly took the field and rendered excellent service. A volunteer corps was pressed into the service and was directed by the officers of the ambulance company. That, with the militia, was sufficient to overcome the fire, so that it could be handled by the civil authorities. The ambulance company served two days, September 23 and 24, 1913. Again on September 30, 1913, Ambulance Company, No. 1, was called out to fight fire in the vicinity of Napa, and served September 30 and October 1, 1913.

In March, 1914, a large band of I. W. W.'s styling themselves as "Kelley's Army," and another band of I. W. W.'s traveling with them, invaded Sacramento and established a camp near the Southern Pacific depot. These people refused to obey any orders of the police and started a campaign of vagrancy and begging and finally became threatening. They threatened to scatter over the town and commit various crimes if they were not fed by the citizens and given transportation to Ogden, Utah. The peace authorities ordered them out of town, but they refused to go and relations became quite strained. There were about 2,000 of these I. W. W. vagrants. They were trained into companies in military order, and of such numbers that the city authorities appealed to the

Governor for help. The Governor directed the city authorities to try their forces first. In the meantime he ordered me to get enough of the militia together to suppress this lawless assemblage, which was continually making threatening speeches, in case trouble should occur and the city authorities should prove inadequate to preserve order. I ordered Companies A, E, F, G, and I, Second Infantry, Troop B, First Squadron of Cavalry, and Battery C, First Battalion, Field Artillery, to assemble at the state armory in Sacramento. These organizations fell in under arms, ready to take action at a moment's notice. I went to the camp of the I. W. W.'s and watched the fight between the police and deputies, the sheriff and deputies and the firemen upon one side and the I. W. W.'s on the other side, to determine whether it would be necessary to intervene with the militia. The Governor was adverse to shedding blood by the troops unless it was absolutely necessary, his instructions being for me not to bring the troops into the fight unless to prevent bloodshed or great destruction of property. Fortunately we did not have to intervene, as the civil authorities, by the free use of pick handles and other clubs, and the hose from the city's fire department, routed the invaders and made it unnecessary for the militia to intervene. The troops were retained at the armory from six to ten days, until the civil authorities were satisfied that there was apparently no cause to fear further trouble.

In April, 1914, the people on the American side of the border between California and Lower California flooded the Governor's office with alarming telegrams about Mexicans coming across the border and committing depredations and making raids on the California side of the border. There were several garrisons and border towns just over the Mexican side, with some of them containing Mexican troops. It looked as though we were going to have war with Mexico and the Americans were greatly excited and were crying for help. There were no troops on our side of the border, except at Fort Rosecrans, San Diego County. Some parties had come over from Lower California and murdered a storekeeper and robbed a store, which actions were, of course, blamed on the Mexicans. The crime was probably committed by some ordinary bandits whose identity was not discovered. Some companies of Regular Coast Artillery scattered along the border were entirely insufficient to cover the ground. Rich American settlements in Imperial Valley were very much alarmed about the reported plan to cut their canal, which runs for a way through Mexican territory, and which supplies the water for Imperial Valley. The pleadings for help became fervent all along the line and the need of assistance so apparent that after a consultation with Major General Arthur Murray, United States Army, who had

charge of the line, the Governor concluded to provide some protection for the American inhabitants. The brigade of Regular troops in California had been ordered to El Paso, Texas, thus depleting more than ever the number of troops in service on the California border. The Los Angeles battalion of the Seventh Infantry was ordered to El Centro, under command of Colonel William G. Schreiber, Seventh Infantry, N. G. C., and did patrol and guard work for eighteen days. The officials and people of San Diego, who are just opposite the Mexican post of Tia Juana, were as excited over the situation there as were the people of El Centro, and the Fifth and Eighth Companies, Coast Artillery Corps, N. G. C., under command of Major Herbert R. Fay, Coast Artillery Corps, N. G. C., and the Third Division of Naval Militia, under command of Lieutenant Don M. Stewart, at San Diego, were ordered out for duty and were stationed at the different headquarters of the water systems, where they maintained a patrol for eighteen days. A band of Mexican prisoners of war, near Fort Rosecrans, under charge of Captain Frederick W. Benteen, Twelfth United States Infantry, tunneled under the confinement grounds and escaped. The militia took up the pursuit and recaptured about fifty out of sixty prisoners. The Regular troops captured the rest and they were all returned, except two or three.

I wish at this time to state that during these several tours of duty, the officers and men responded cheerfully to every call and performed all work and duty laid out for them without any complaint and in a most efficient manner, and I desire to commend them all for the fine spirit with which they took up and carried through the various duties assigned to them.

OFFICE BUSINESS.

The following will give some idea of the volume of merely routine work performed in this office during the four fiscal years ended June 30, 1914:

	June 30, 1911	June 30, 1912	June 30, 1913	June 30, 1914
Communications and other papers received.....	8,752	9,189	8,389	9,390
Communications written	7,300	9,125	7,665	9,040
Commissions issued				869
For four years				211
For four years				142
For four years				146
For four years				171
For four years				5,663
General orders issued.....	19	29	24	18
Special orders and circulars issued.....	18	17	21	19

Retirements	8	12	3	7
Leaves of absence granted.....	44	24	25	31

OLD WAR FLAGS.

Under a special act of the legislature passed in 1911 the sum of \$600 was secured for the purpose of building suitable cases in which to display the old war flags in the rotunda of the State Capitol, where they might be properly cared for and where the old soldiers might come and view the battle flags under some of which they served half a century ago. Appropriate cases have been installed in the rotunda of the Capitol, and all the battle flags in possession of this department will now be preserved for the edification of future generations.

GENERAL REMARKS AND RECOMMENDATIONS.

The infantry of the National Guard of California is spread over such a large territory, from Redding to Riverside, that the travel of one Regular Army officer detailed to instruct the organizations comprising these three regiments of infantry is extremely expensive, whereas the expenses would be much less if two or three Regular Army officers were detailed as infantry instructors with the California National Guard. The State of California pays only the traveling expenses of these instructors. I recommend that three, or at least two, Regular Army officers be detailed to act as instructors of infantry in the National Guard of California. So much time would not be lost in traveling if three instructors were on duty.

I recommend that some action be taken by the next session of the legislature for the relief of the several militiamen who have been injured while in line of duty since the last session of the legislature. Appropriate bills will be introduced in the coming legislature by this department. It is the opinion of this department that hereafter the State Industrial Accident Commission should afford relief to guardsmen injured in line of duty, in the same manner as relief is given to other state employees injured in the performance of their duty.

From the success already attained, it is evident that the High School Cadet organizations effected, as well as those not yet come into force, will soon develop into one of the most prominent and important factors in the military training of the young men of this state and will, therefore, need more ample attention than The Adjutant General's office has been able to give it by borrowing the services of one of its clerks. I, therefore, recommend that an additional clerk be given to The Adjutant General to have charge of a department exclusively for the high school cadet movement, that this important branch of the state's work may have appropriate care and attention.

One of the most important lessons to be learned from the present European war is that of having on hand, in case war breaks out, a sufficient number of officers trained to operate with and to handle large bodies of troops, of which we have only a small number. I doubt if we have a single officer in the United States Army, or in the Organized Militia, who has ever handled a division on the line. We have always made the mistake of scattering our forces into little maneuvers of a few thousand men each, instead of pooling our appropriations in maneuvering with large bodies of not less than a division anyway. In case of war the mobilization would, in all probability, be by divisions. We have very few officers who have ever seen a division together, much less marched with, provided for, transported and maneuvered with so large a number of troops, yet upon short notice and without experience we may be called upon to do these things in earnest and probably under unfavorable conditions. Therefore, I recommend that the next maneuvers we have be by division, if it is nothing more than the mobilization of the division, transporting it, marching it in its various columns, feeding it and lining it up for battle. The officers and troops would in this way learn more of what would have to be done in actual war than in many small maneuvers and many small camps.

I doubt if our present small Regular Army and our present militia system will ever be adequate to meet the struggle that will come with a modern war with any first-class power. War strength of countries is now running into the millions. Our army and militia and proposed line of reserves, which does not seem to take very well, would give but a drop in the bucket. If this country is to be protected in case of war we can not rely alone upon the patriots and those who are willing to fight for the flag. Modern warfare demands trained men and plenty of them. It is my belief that it should be made compulsory for every young man in the United States, eighteen years of age, to serve in the Regular Army for one year, then to join the National Guard for three year's service; afterward to enlist in the first reserves, in which service every man must perform at least one month's active duty in maneuvers or other field service, at specified periods, to keep him from getting rusty, which last enlistment should cover a period of ten years. At the conclusion of this service a man would go into the second reserves, there to remain until his military age shall have expired. This would give the country an immense army of trained men available in case of need, and would call upon every man to do his share toward maintaining his country, and would not permit any man to escape what should be every

citizen's duty—to be ready to defend his country in time of need. Thus the burden could not be shifted upon the patriotic alone, a hardship would not be placed on any particular one and as a result this country would be made so strong as not to be a bait tempting more warlike nations to attack it.

It is recommended that liberal appropriations be made by the legislature to cover the unusual expenses of the National Guard and Naval Militia of California during the Panama-Pacific International Exposition, in 1915, as the National Guard organizations of other states and troops of foreign countries have announced that they will be present during the exposition and enter the military tournaments scheduled. The entire National Guard and Naval Militia of California should be present and take part in the doings at the exposition and also entertain and look after the visiting troops. This will entail large expenditures, and it is hoped that sufficient appropriations will be made by the legislature at the approaching session to handle these expenditures.

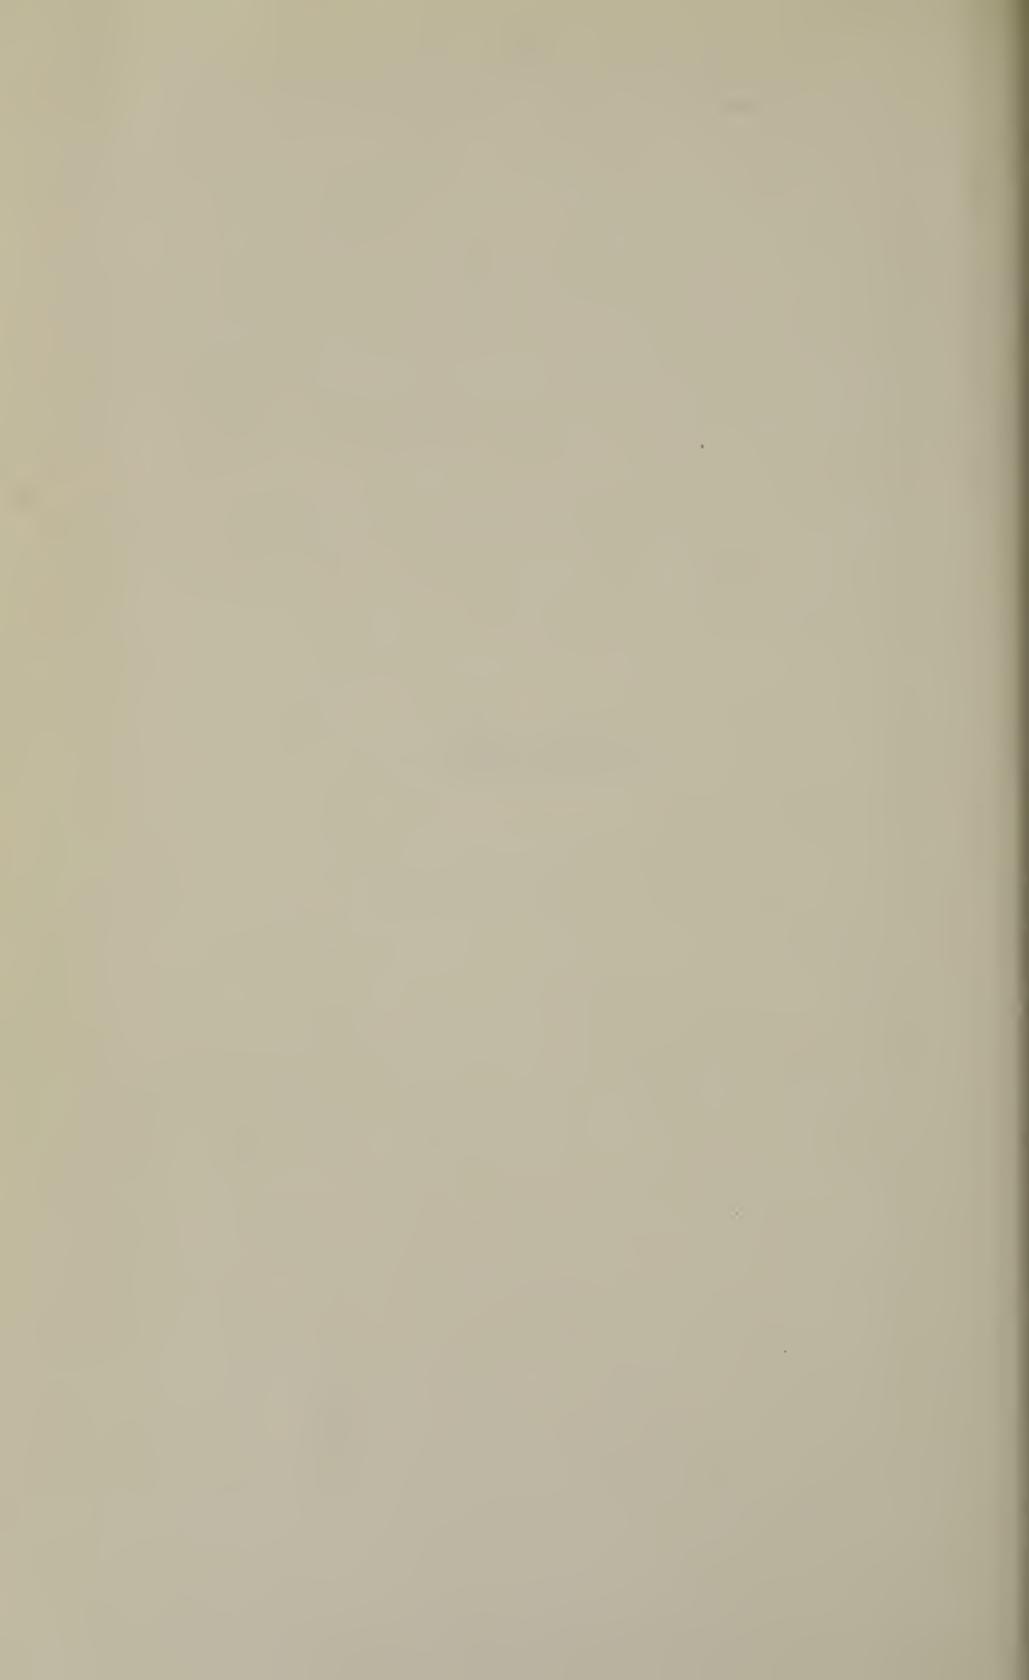

E. A. FORBES,
The Adjutant General.

APPENDIX F.

Report of Brigadier General Robert Wankowski, First Brigade,
N. G. C., Commanding Red Forces, Joint Maneuver
Campaign, August 11-21, 1912.

APPENDIX "F."

HEADQUARTERS FIRST BRIGADE.

NATIONAL GUARD OF CALIFORNIA.

Los Angeles, California, September 1, 1912.

From: Commanding General, Red Army.

To: Commanding General, Department of California, U. S. A.

Subject: Report of Red Forces During Maneuvers in California.

Pursuant to paragraph VI, General Orders, No. 12, Headquarters, Department of California, dated July 26, 1912, I herewith submit the following report of the military operations of the Red forces during the maneuvers held in California, August 11 to 21, 1912, inclusive.

In accordance with telegraphic instructions from Headquarters, Department of California, dated August 6, 1912, I was assigned to command the Red forces.

On August 11, 1912, I assumed command of the First Brigade, Sixth Division, Red Army, at Salinas, California, consisting of the following organizations:

Third Battalion, Twelfth Infantry, U. S. A.

Second Infantry, National Guard of California.

Fifth Infantry, National Guard of California.

Seventh Infantry, National Guard of California.

Troops C and D, First Squadron Cavalry, National Guard of California.

**Battery A, Field Artillery, National Guard of California.

**First Battery, Field Artillery, National Guard of Utah.

Company A, Signal Corps, National Guard of Utah.

Detachment Company E, Signal Corps, U. S. A.

Pursuant to Special Orders, No. 181, Headquarters Western Division, dated August 12, 1912, Captain Stephen O. Fuqua, U. S. Infantry, reported for duty.

Pursuant to Special Orders, No. 86, Headquarters Department of California, dated August 9, 1912, Major William F. Lewis, Medical Corps, U. S. A., First Lieutenant Frank H. Adams, Twelfth Infantry, U. S. A., First Lieutenant James B. Nalle, Twelfth Infantry, U. S. A., and Second Lieutenant Walter S. Greacen, Twelfth Infantry, U. S. A., reported for duty.

On August 11, camp was established at El Toro ranch, about five miles from Salinas, the camp being named "Camp Forbes" in honor of The Adjutant General of California, Brigadier General E. A. Forbes.

The following staff was announced:

Chief of Staff—Captain Stephen O. Fuqua, U. S. Infantry.

Brigade Adjutant—Major Raymond I. Follmer, Adjutant General's Department, N. G. C.

Brigade Inspector—Major Lawrence D. Collins, Inspector General's Department, N. G. C.

Brigade Quartermaster—Second Lieutenant Walter S. Greacen, Twelfth Infantry, U. S. A.

Brigade Commissary—First Lieutenant Frank H. Adams, Twelfth Infantry, U. S. A.

Chief Surgeon—Major William F. Lewis, Medical Corps, U. S. A.

Brigade Ordnance Officer—First Lieutenant James B. Nalle, Twelfth Infantry, U. S. A.

Provost Marshal—Major George E. Heber, Quartermaster's Department, N. G. C.

Aide-de-Camp—First Lieutenant James K. Crum, Company F, Seventh Infantry, N. G. C.

Aide-de-Camp—First Lieutenant Harold H. Hearfield, Company D, Fifth Infantry, N. G. C.

** (Joined August 18, 1912, at Gilroy.)

Pursuant to section 2, paragraph VII, Maneuver Campaign Bulletin No. 1, Headquarters Department of California, dated August 1, 1912, the following Damage Board was appointed:

Captain S. Luke Howe, Quartermaster, Second Infantry, N. G. C.

Captain Miguel Estudillo, Company M, Seventh Infantry, N. G. C.

First Lieutenant Louis Soleliac, Twelfth Infantry, U. S. A.

Before reaching Salinas I had telegraphed the brigade quartermaster to arrange for all incoming organizations to be assigned their places upon arriving in camp. Having been informed that such assignments had been made and that all units would be directed to their proper places by a Regular Army officer, I remained in Salinas until 6 o'clock p. m., in order to witness the detraining of the troops, the issuing of rations, etc. Through some misunderstanding on the part of the brigade quartermaster the troops camped in some confusion on the first night, which was straightened out the following day.

Camp Forbes was retained August 12 and 13. It was thought that these two days were to be set aside for the organization of the command, this being so stated in instructions given by Department Headquarters. Plans were therefore made to utilize this time in training and organizing the National Guard troops, but through some misunderstanding the Blue forces were permitted to reconnoiter the camp of the Red forces and conduct a reconnoissance in force problem while most of the state troops were busily engaged south of the Red camp solving deployment problems against an imaginary enemy. The announcement that hostilities commenced on the morning of August 12 and the presence of a Blue force within six miles of the Red camp practically changed the whole scheme of instruction planned for the state troops in their first camp.

(August 12 and 13.)

SPECIAL SITUATION.

SIXTH DIVISION, RED ARMY,
Monterey, Cal.,

11, August 12, 11 A. M.

The Commanding Officer,

First Brigade, Sixth Division, Red Army,
Near Salinas, Cal.

Sir:

Retain your present camp the 12th and 13th instants. Utilize those days to perfect the organization and training of your command.

About one regiment of the enemy's force is reported in camp at Salinas. You will not march against this force until further orders: but will at all times after 6 a. m., 12th inst., keep in observation of it and protect your camp against it.

Respectfully,

SIX,
Major General.

(Sent by cyclist.)

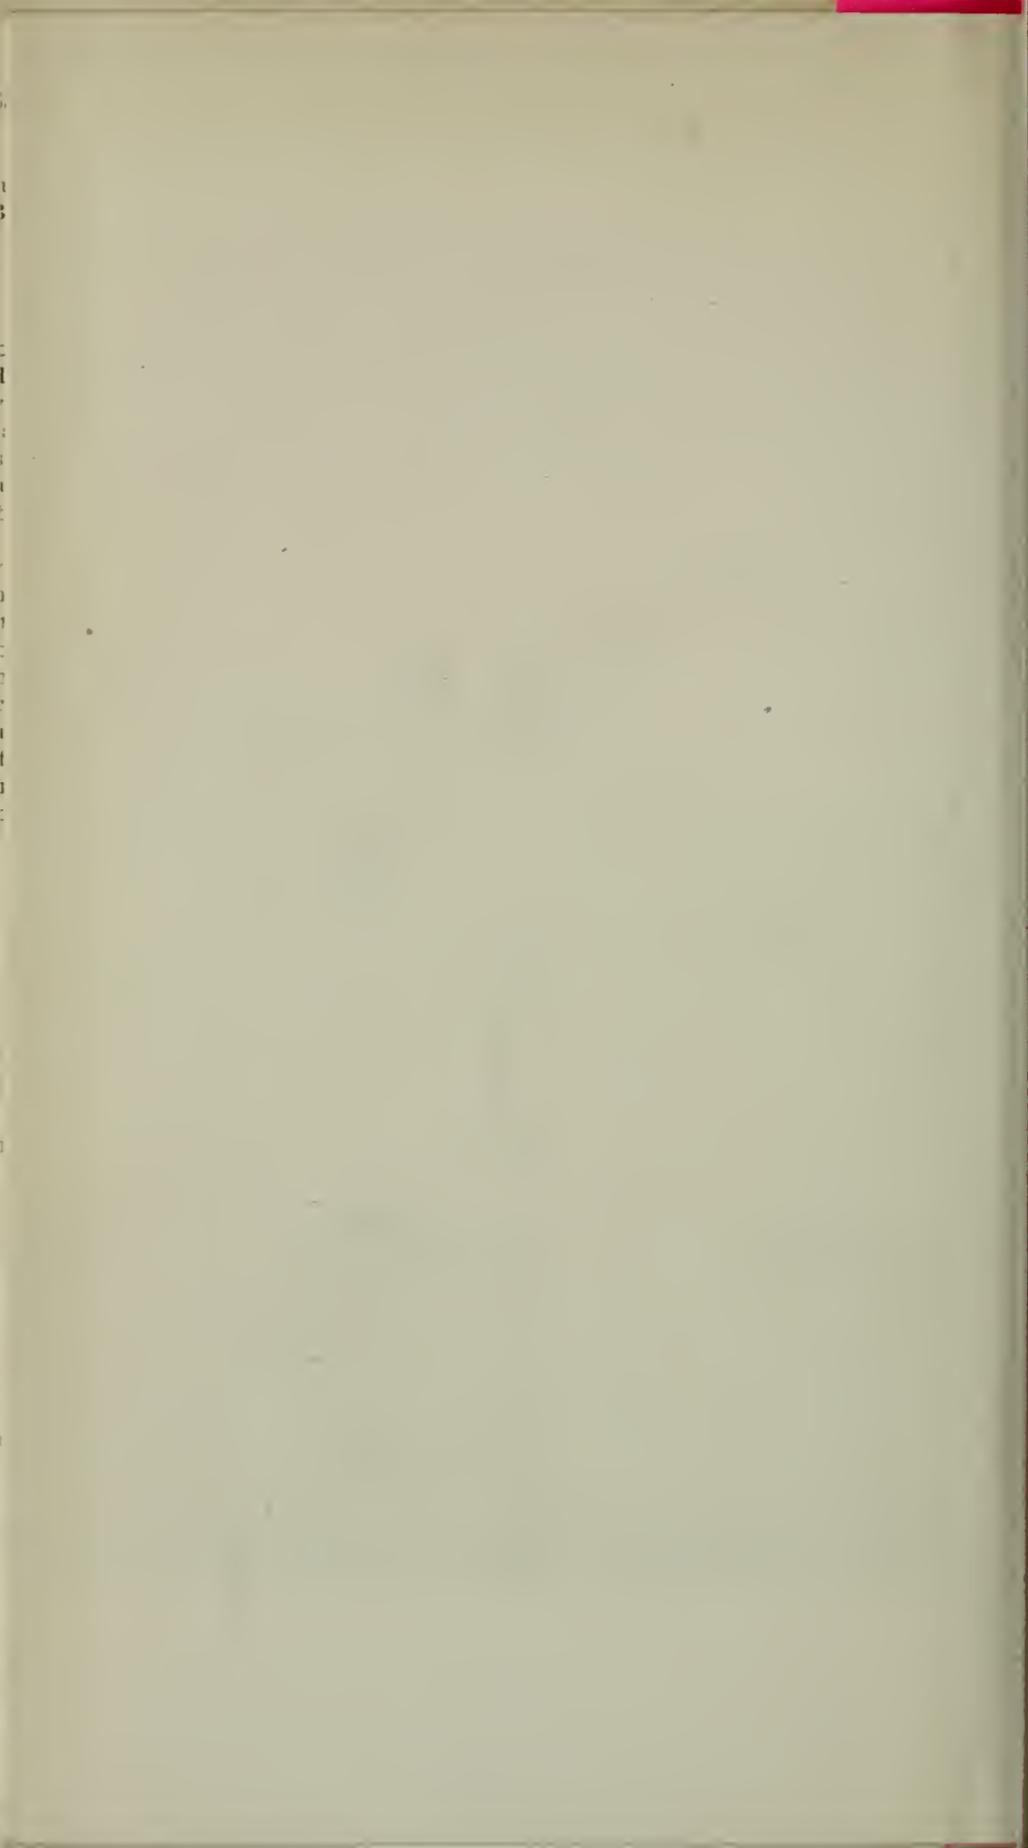

Acting under the above instructions, orders were issued on August 12, at 3:30 p. m., to the Second Battalion, Second Infantry, and one platoon Troop D, under Major Thomas, to establish an outpost along the general line, the north slope of Hill 700 (northeast of camp) westward across the Toro Creek valley to the heights beyond. To reconnoiter the Salinas River bridge and fords. That no patrols will cross the Salinas River. That the cavalry will return to camp for the night.

7

San Juan Rocks, Cal.
Aug 16th 1912

Wagon train of the "Red Army" at "San Juan Rocks," Cal.
Aug 16th 1912.

On account of the intermingling of the organizations in the first night's camp, and after consultation with the senior umpire, the forenoon was devoted to a "breaking camp, marching and pitching camp problem." Due to the condition noted and the problem worked out, the military situation was not taken up until the afternoon.

At 9:00 p. m. of same day orders were given for Troop C to leave camp at 5:00 a. m., the following day, marching towards Salinas and gain contact with and remain in observation of the enemy.

The state troops remaining in camp—Seventh Infantry (less one battalion), Second Infantry (less one battalion), and Fifth Infantry—were ordered south of the camp for instruction in deployment problems.

On August 13, at 7:45 a. m., four companies of the enemy's infantry were reported on the main road with machine gun platoon one half mile from Hill Town and one company infantry 300 yards south of county road at Hill Town.

It was later reported that about one regiment of the enemy was marching via Hill Town on the Salinas bridge. Owing to the fact that it was believed that the 12th and 13th of August were to be utilized in organizing the state troops and that the Reds had been directed by the senior umpire not to cross the Salinas River, the above report was taken to mean that the Blue troops were simply having a practice problem. As soon, however, as it was learned that this Blue movement was expected to be met by some action from the Reds, the battalion of the Twelfth Infantry was ordered to take the Salinas bridge, to hold same and to repair the destruction reported to have been committed by the Blue troops. The Blues, from reports of the umpires, were driven back towards Salinas after having done some damage to the larger of the Salinas River bridges.

At 8:15 a. m., orders were issued the Third Battalion, Twelfth Infantry, under Captain Clinton, to march at once via the Salinas road and gain and hold the Salinas River bridge, repairing whatever damage may have been done to the crossing.

(August 14.)

SPECIAL SITUATION.

The 13th of August a Red detachment is at Chualar (11 miles south of Salinas) in observation of part of the Blue defeated at Monterey and now reported at Soledad, 15 miles south of Chualar. The remainder of the defeated Blues (reported to be a regiment of infantry) is at Salinas. A Red brigade (First Brigade, Sixth Division, and certain additional troops) has reached the vicinity of Salinas (5 miles west of Salinas) from Monterey, in support of the Red forces at Chualar. The brigade is ordered by Red army headquarters to move to Salinas the following day (August 14) to drive out the Blue troops and more closely support the Chualar detachment. All rolling stock of the railroads has been taken along by the Blues in their retreat. Telegraph and telephone communication has been interrupted.

NOTE.—For the present the artillery will not be at the disposal of the brigade commander.

Orders were issued on August 13, at 8:30 p. m., for the brigade to march to Salinas the following day to drive out all Blue troops and to support the Chualar detachment. (See Exhibit A.)

On this date the brigade marched from Camp Forbes to the Salinas race track, a distance of about six miles.

The cavalry gained contact with the rear of the Blue column and from the reports received inflicted some damage upon the enemy.

Upon reaching the Salinas race track outposts were established consisting of one battalion of infantry, and the signal corps established a line of information connecting the reserve of the outpost with brigade headquarters.

(August 15.)

SPECIAL SITUATION.

SIXTH DIVISION, RED ARMY.

Monterey, Cal.,

14, August 12, 4:30 P. M.

To Commanding Officer,

First Brigade, Sixth Division, Red Army.

Salinas, Cal.

Sir:

It is rumored that scattered bands of the enemy are in the vicinity of Dumbarton P. O. and that the regiment retreating before you is backed up by his main force from the north. Move your command tomorrow to investigate these rumors.

Troops from this division will take your place at Salinas.

Respectfully,

SIX,

Major General.

(Sent by cyclist.)

Order was issued on August 14, at 8 p. m., for the brigade to march to Prunedale the following day. (See Exhibit B.)

The reasons for moving the brigade from Salinas to Langley's ranch over the Prunedale road were based upon the following estimate of the situation:

1. The direct road to San Juan was most favorable for a small force holding back a larger one; it was no nearer route than Nos. 2 and 3, below, for reaching Dumbarton, and it was the most difficult for wagons to cover. The only reason for taking this road was that the enemy, from our own reconnoissance, was on it, but the senior umpire of the Red forces directed that we not consider this fact, but base our estimate solely on the fact of the new formation furnished in the situation, *i. e.*, that scattered bands of the enemy were reported in the neighborhood of Dumbarton.

2. The direct road to Dumbarton over the mountains was nearer in point of distance than No. 3 road, below, but considering the favorable defensive positions for the enemy and the general character of the roadbed and grades, this route was not looked upon with favor.

3. The Prunedale road, considering the disadvantages of Nos. 1 and 2, above, seemed to offer the best results and was selected.

On this date the brigade marched from Salinas race track to Langley's ranch, a distance of about 10 miles.

One troop of cavalry reported having captured a detachment of Blue mounted orderlies.

Upon reaching Langley's ranch outposts were established, consisting of one battalion of infantry.

(August 16.)

SPECIAL SITUATION.

SIXTH DIVISION, RED ARMY.

Salinas, Cal.,

15, August 12, 4 P. M.

The Commanding Officer,

First Brigade, Sixth Division.

Sir:

Enemy moved south from Soledad by rail last night, destroying bridges and track there. Railway has been repaired by our troops from Monterey to Salinas River south of Castroville where bridge over the river has been destroyed. Our men at work building new bridge.

A locomotive and some flat cars have been landed from our ships at Monterey.

Mess on the March at 1912 Joint Maneuvers.

It is reported from Castroville that the enemy is at Hollister, east of San Juan. Army commander orders advance on San Juan via San Juan and Gilroy. Move your command to San Juan tomorrow.

I will follow with Sixth Division as soon as Third Brigade arrives from Monterey.

Respectfully,

SIX,
Major General.

(Sent by cyclist.)

Orders were issued on August 15, at 8:00 p. m., for the brigade to move to San Juan the following day. (See Exhibit C.)

On this date the brigade marched from Langley's ranch to San Juan, a distance of about $9\frac{1}{2}$ miles.

Upon reaching San Juan outposts were established, consisting of one battalion of infantry.

(August 17.)

SPECIAL SITUATION.

SIXTH DIVISION, RED ARMY,
Salinas, Cal.,

16, August 12, 4 P. M.

To Commanding Officer,

First Brigade, Sixth Division,
San Juan, Cal.

Railway bridge near Castroville unfinished. Sixth Division concentrating here. Will move as soon as supply route by rail is open to Castroville. Move your brigade to Sargent tomorrow and repair railway thence toward Pajaro.

SIX,
Major General.

(Communicated by telegraph.)

Orders were issued on August 16, at 7:30 p. m., for the brigade to march to Sargent the following day. (See Exhibit D.)

On this date the brigade marched from San Juan to Sargent, a distance of about 7 miles.

On nearing Sargent the advance guard became engaged with the enemy. The Second Infantry was sent forward to reinforce the advance guard and to drive the enemy from his position. The Fifth Infantry was ordered to leave the main road and to advance on Sargent via the railroad. This latter movement, taken in connection with the reinforced advance, so flanked the enemy that he was compelled to retire, which permitted the Red force to accomplish its mission, *i. e.*, to march on Sargent.

Upon reaching Sargent outposts were established, consisting of one regiment of infantry (less 1 battalion).

(August 18.)

SPECIAL SITUATION.

SIXTH DIVISION, RED ARMY,
Salinas, Cal.,

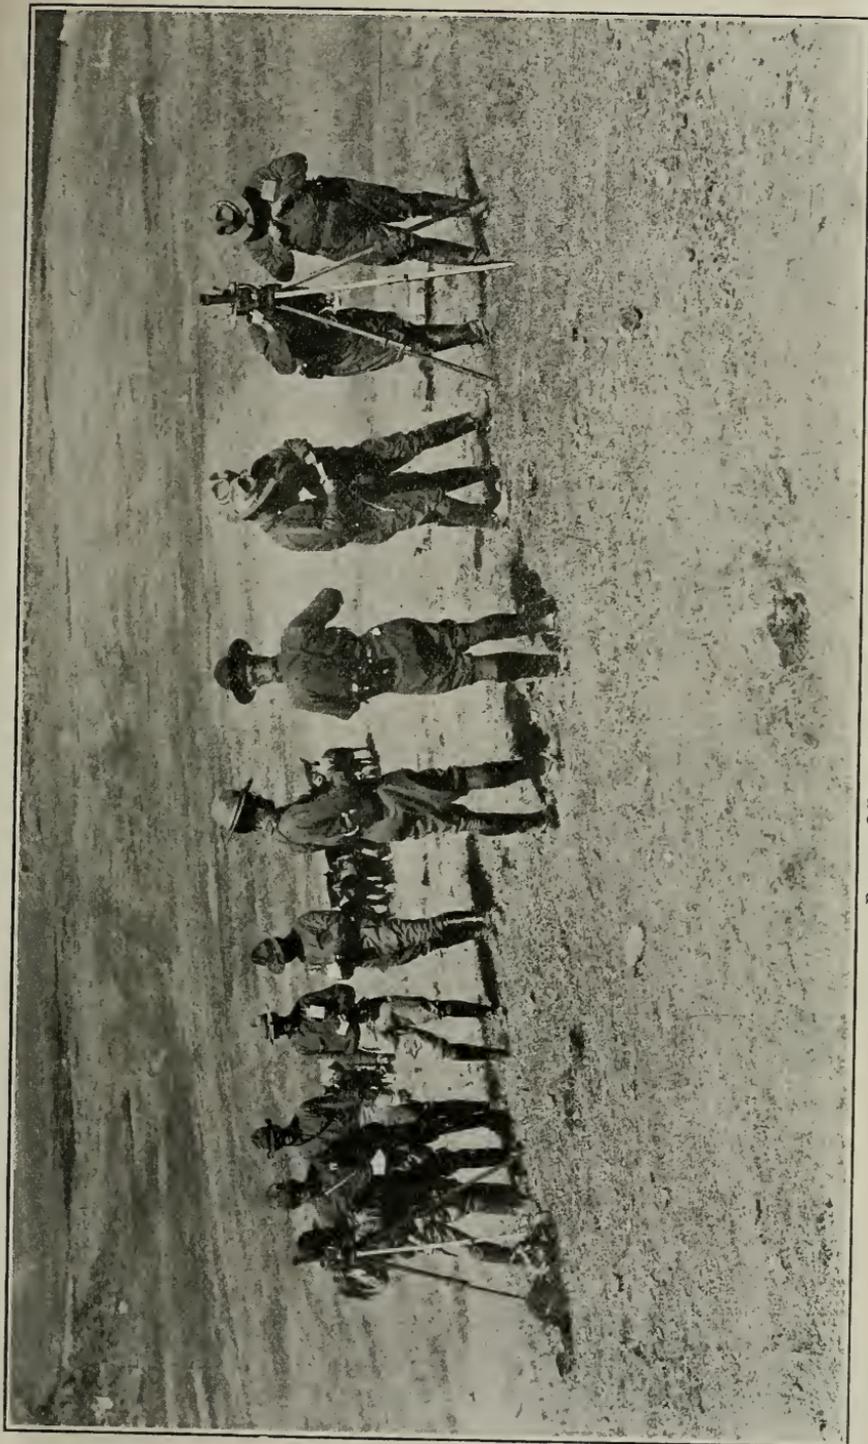

17, August 12, 4 P. M.

To Commanding Officer,

First Brigade, Sixth Division,
Sargent's Station, Cal.

Enemy reported in force at Morgan Hill. Tomorrow our Fifth Division marches on Castroville and this division on San Juan. Railway open from Monterey to Castroville. Move your brigade to Gilroy tomorrow.

SIX,
Major General.

Battery Officers Taking Observations.

Orders were issued on August 17, at 7:30 p. m., for the brigade to march to Gilroy the following day. (See Exhibit E.)

On this date the brigade marched from Sargent to Gilroy, a distance of about six miles.

Upon reaching Gilroy outposts were established, consisting of one regiment of infantry (less 1 battalion).

At Gilroy, Battery A, Field Artillery, National Guard of California, and First Battery, Field Artillery, National Guard of Utah, joined the brigade.

Pursuant to instructions from Headquarters Maneuver Campaign, the Detachment Company E, United States Signal Corps, was detached from the brigade and ordered to report to the chief umpire at Coyote.

(August 19.)

SPECIAL SITUATION.

SIXTH DIVISION, RED ARMY.

San Juan, Cal.

18, August 12, 5 P. M.

To Commanding Officer,

First Brigade, Sixth Division,

Gilroy, Cal.

Tomorrow our Fifth Division marches on Pajaro and this division on Sargent's; the Third Division on Castroville, and the Fourth on Salinas. Advance Depot at Sargent's. Army commander intends to use Santa Cruz as landing point and advance base as soon as San Jose has been captured. March your command on Morgan Hill tomorrow.

SIX.

Major General.

Orders were issued on August 18, at 8:30 p. m., for the brigade to march to Morgan Hill the following day. (See Exhibit F.)

The route selected was based on the estimate given under the heading "The Marches from Gilroy to Morgan Hill and from Morgan Hill to Coyote," under date of August 20. Orders were given for turning off of the main highway after the column had cleared the initial point.

On this date the brigade marched from Gilroy to Morgan Hill, a distance of about 15 miles.

The march on Morgan Hill was so conducted that the enemy was forced to give up his position and rapidly retreat to the north, thus permitting the Red force to accomplish its mission, *i. e.*, "to march on Morgan Hill," without the necessity of an engagement and its consequent losses.

Upon reaching Morgan Hill outposts were established consisting of one regiment of infantry (less 1 battalion).

(August 20.)

SPECIAL SITUATION.

SIXTH DIVISION, RED ARMY,

Sargent, Cal..

19, August 12, 5 P. M.

To Commanding Officer,

First Brigade, Sixth Division,

Morgan Hill, Cal.

Tomorrow our Fifth Division marches via Foothill road (and Foothill road runs via Freedom and east of Corralitor) on Gilroy and this division on San Martin, the Third Division on Castroville and Fourth on San Juan. Spy reports that enemy hastily assembled and in strength about equal to yourself is at Coyote. Advance tomorrow and drive him back, thus opening the way to San Jose.

SIX.

Major General.

California Battery of Field Artillery in Action, Joint Maneuvers of 1912.

Orders were issued on August 19, at 8:30 p. m., for the brigade to advance to Coyote the following day and drive the enemy back, opening the way to San Jose. (See Exhibit G.)

Written memorandum orders were also issued to Major Holtum's battalion of the Fifth Infantry. "To screen the movement of the main body on the Llagas River road by taking up an advance guard formation on the main highway and simulate an advance on Coyote and then to take the trail near Madrone and to join the rear of the main body."

The action at Coyote developed and progressed in accordance with the orders issued by the Red commander. As the history of this action will be reported in all probability in great detail by the umpires, no detailed account is here given. However, it is thought best to present the intentions of the Red commander just before recall, which were as follows:

As soon as it was definitely learned that the Blues were reinforcing the entrenched ridge facing the Red firing line and that it was the Blue intention to make a determined stand on this ridge it was decided that as soon as the general cessation of hostilities would permit and the grass fires were no longer an obstacle to an advance, to hold the attention of the Blue firing line by a determined fire fight all along the line, to throw Major Wilson's battalion of the Second Infantry (which had been ordered to remain at the artillery position as a part of the general reserve) and one company of the Twelfth Infantry around the south and east slopes of Signal Hill to the point where one company of the Twelfth Infantry had already gained and from that position to advance against and crush the Blue left flank and to hold the Fifth Infantry in reserve intact for future contingencies.

On this date the brigade marched from Morgan Hill to Coyote, a distance of about 17 miles.

The Marches from Gilroy to Morgan Hill and from Morgan Hill to Coyote.

The decision not to follow the main highway through the valley was in general based upon the following estimate of the situation:

(a) The enemy's outpost line at Morgan Hill was reported as covering the main highway just north of the Llagas River. It was estimated that if the enemy intended to hold in check the advancing Red force he would be compelled to prepare to meet an advance from the main highway, consequently an advance from the hills would most likely cause him to abandon his mission.

(b) The movements off of the main highway had the disadvantage of causing the troops to be at times in valleys commanded by prominent heights to either side, but this was also true to a great degree of the main valley highway. In order to thoroughly protect the column over the route taken, the cavalry was given an independent mission and ordered to report on each ridge which overlooked the roadway. These ridges had been numbered by the Chief of Staff and explained to the cavalry commander so that the messages sent by the latter simply announced, "Number one clear of the enemy," "Number two clear of the enemy," etc. The bad features of the route taken were well known beforehand and careful study had been given to overcome the difficulties which might be encountered. Like most cases where difficulties can be expected, if plans are made to overcome them in advance, they really do not seem to be serious obstacles.

(c) A movement by the main highway would probably have caused the Reds to be committed to either a frontal attack or to attempt a flank movement in plain view and possibly within rifle fire of the enemy's trenches.

(d) Should the Blues be found in superior force and the Reds driven back, the hills offered a better opportunity for holding the Blues in check.

(e) The hills offered a more favorable terrain for the deployment of the Red force for an attack—the general mission of the Reds.

(f) A Blue artillery position covering the main valley highway would have caused the Reds to deploy at great distances from the Blue position. The advance of the Reds would then have been unusually slow, with an additional hindrance that the terrain in the valley was not well suited for deployments and offensive action.

In addition to the fact that the flat valley offered no screen from the hills, the fences and cultivated land adjacent to the road would have made deployments most difficult to accomplish. Again, if the character of the ground for two or three miles south of Coyote east and west of the main highway be studied, it will be noted that on the west of the road lies Coyote swamp and on the east Coyote Creek; practically dry but swampy land lies adjacent to it.

(g) The routes selected were longer than the main valley highway, to wit:

Gilroy to Morgan Hill, main highway-----	9½ miles.
Gilroy to Morgan Hill, route taken-----	14 miles.
Morgan Hill to Coyote, main highway-----	8 miles.
Morgan Hill to Coyote, route taken-----	15½ miles.

It is believed, however, that the Red force reached its destination at Morgan Hill and would have accomplished its mission at Coyote in less time and with less losses than if the shorter road had been selected.

(h) Considering the base of the Red troops and their supporting Division, there seemed to be no risk whatever in marching two or three miles from the main highway while observing the same with patrols.

(i) It was estimated that it would be almost suicidal to march a column of troops up the main highway against an enemy of approximately equal strength in position, and probably entrenched, on the heights overlooking Coyote. It was estimated that the enemy would hold these heights and if this should be the case the Reds would have to seek the hills in order to dislodge the Blues. It was thought that this movement to one flank or the other might have to be made under the enemy's fire so it was deemed best to get the Reds into the hills before contact with the Blues was gained. Should the Blues be in position in the valley near Coyote, the Reds in the hills would have the advantage. Should the Blues be in position in the hills the Reds would certainly be at no disadvantage in being there also.

(j) The Blues, by the very nature of the situation, were compelled to cover the three road systems from Morgan Hill to Coyote, to wit: the road east of the valley, the main valley route, and the Llagas River road. An advance by the Reds along the main valley route would have placed both flanks of the Blues nearer supporting distance against an attack from the Reds marching via this route. It was believed that the main valley route offered less chance of success for the Reds with a mission, "To drive an enemy of approximately equal strength back from the Coyote section." The road east of the main valley was eliminated from serious consideration on account of the Red base and the fact that this route was impracticable for artillery and wagons.

(k) The route selected seemed to promise most difficulty for the enemy to meet. It was estimated that the enemy, of the three routes available, would prefer the Reds to advance up the main valley highway. In order to screen the movement selected, one battalion was given the mission to take up an advance guard formation on the main highway and simulate an advance on Coyote and then to take the trail near Madrone and join the rear of the main column. This battalion accomplished its mission and arrived in the main body before 1 o'clock and was assigned to the reserve at 1:30 o'clock.

(l) The plan, in connection with the movement made, was to hold the Red force together, so that when it became necessary to strike, the whole command would be in hand for this purpose. It will be noted that at least an hour before "recall" the Red army was concentrated on the "battlefield" and that its commander was present in person and actually commanding the entire Red force.

(m) Weighing the advantages and disadvantages of the routes open for selection for an advance on Coyote, the Red commander and his consulting staff all agreed that the one chosen promised the best chances for the successful accomplishment of the Red army's mission. Again, if the movement be measured by the results obtained, it is believed that the "estimate of the situation" made on the night of August 19, and outlined in general above, was not far wrong.

California Field Artillery on the March, Maneuvers of 1912.

On August 20, at the time when "recall" was sounded, at 2 o'clock p. m., the Red forces were distributed as follows:

Infantry.

Firing line -----23 companies.

Firing line, supports--- 1 company.

(Major Wilson's battalion of the Second Infantry had been ordered to remain near the artillery position as a part of the reserve.)

Reserves -----16 companies.

(300-500 yards from firing line.)

Artillery and Cavalry.

One battery in position to fire on supports and reserves coming to reinforce the Blue line and the other battery near by ready to go into position.

Two troops covering the left flank of the infantry line and operating against the right flank of the Blue infantry line.

(August 21.)

On this date, the brigade, with the exception of the Third Battalion, Twelfth Infantry, U. S. A., pursuant to Orders No. 4, Headquarters Maneuver Campaign, Department of California, broke camp and entrained for their respective home stations.

NOTES AND COMMENTS.

Cavalry.

The cavalry was used both as independent and as advanced cavalry, proving most efficient in scouting and in keeping the brigade commander in touch with the situation in front. Not a single cavalryman was detached from the organizations for orderly duty or for any other work, thus keeping the cavalry united and at full working strength at all times.

Artillery.

The position in column, when marching, was determined by asking this question when estimating the situation and deciding on the march order, to wit: "In case of action how much of the force will be needed in the firing line and how much in the reserve?" When this was determined upon the artillery was assigned in column to march between those subdivisions, which, if contact came, would place it in the normal position for going into action.

The artillery was in action only on the last day of the maneuvers. Its first position was taken for shrapnel fire on the Blue infantry trenches and its second position was immediately behind the Red infantry firing line to fire on more distant Blue positions, to prevent large reinforcements from joining the Blue lines immediately facing the Red infantry, and to be ready to fire on the retreating Blue infantry as soon as it was forced to leave its position, thus hoping to turn its retreat into a rout.

Signal Corps.

The Signal Corps, during most of the maneuvers, was left for instruction purposes, in the hands of the Regular Army instructor, who was told to lay out a course for the company and to work along the lines most needed.

On the last day of the maneuvers the company established wireless stations, connecting the advance troops with the main body, but in this work it was, owing to conditions, unable to accomplish anything. During the engagement it was ordered to lay lines of information connecting the Red commander with the various elements of the command but this was not completed before recall.

Mounted Scouts.

The employment of mounted scouts with infantry organizations proved most valuable in communicating information obtained. Instead of organizing them by details, it would be much better to make them, in each regiment, into a separate body under the command of a commissioned officer, by which method much better and more efficient service could be obtained.

Field Hospital and Ambulance Companies.

The Red army was organized without either a field hospital or an ambulance company. No ambulances were attached or supplied to the brigade for the first three days of the maneuvers, and then only upon special and urgent request, one ambulance was shipped by freight from the Presidio of Monterey. This lack of facilities necessitated the sick or injured to, at times, be carried in the company wagons and was far from satisfactory or proper.

Lack of Water Supply.

The lack of a sufficient water supply on the various camp sites selected for the Red forces caused great inconveniences to the troops and at times was actually a hardship. At Camp Forbes, where the troops were camped for two days, and which camp was prearranged, the lack of sufficient water was very apparent and considered inexcusable. Upon an investigation and report by the Brigade Surgeon, telegraphic request was made of the Maneuver Commander to change the camp site, which request was granted. However, before this was put into operation enough water was obtained, by means of hauling same in water wagons from Salinas (5 miles distant) and the windmills fortunately furnishing a sufficient supply to last the two days. At Langley's ranch the supply was also inadequate, the same having to be hauled a distance of nearly two miles by most of the organizations. Sargent was the only place, after leaving Salinas, that offered any water for washing purposes, and then only for a limited number of men. When so much stress is laid on the matter of cleanliness and sanitation by medical officers and where the camp sites are known in advance by higher authority, the matter of sufficient and proper water supply should be given more attention. It is firmly believed that the lack of water for washing purposes caused, to a very large extent, the cases of sore feet which developed on the marches.

Condition of Camp Sites.

The camp sites, as a whole, occupied by the Red forces were left in a dirty, and in some cases, in a filthy condition by troops who had apparently occupied them the day previous. Serious sickness was only prevented by reason of the fact that these camp sites were occupied by the Red forces but a very short time.

Rations.

In the matter of rations, it is believed that the subsistence of the Red forces, as to the periods for which rations were drawn, should have been placed in the hands of the brigade commander, or if the military problems prevented this, he should have been informed as to what these periods were to be. It is also believed that the present system of issuing rations is not well adapted to National Guard troops and that better results can be obtained by the brigade commissary dealing with regimental and other organization commissaries rather than issuing rations direct to companies. It is recommended that in future maneuvers the brigade commissary accompany the brigade in the field and not have him act for both forces as in the present maneuvers. The method of transporting commissary supplies by rail to points in advance of the brigade resulted, on one occasion, in the wagons of the troops on outpost duty being unable to reach the point of issue until after it was closed and en route to the next station, causing a shortage in rations for those particular troops and compelling them to buy sufficient for their use in the open market.

Transportation.

The system of handling the troops on their homeward journey was far from satisfactory, there not being enough track facilities at Coyote for handling so many troops and it being inexpedient to entrain all the troops in one day. The schedule of departure as provided and the actual time of departure varied from three hours to nine hours, with not a single train leaving anywhere near schedule time. The same applies in a great measure also when the troops detrained at Salinas on the date of arrival. In some cases the troops did not reach their camp until after midnight, necessitating great inconvenience. The manner of routing the troops from their

Battery A, California Field Artillery, at Joint Maneuvers of 1912.

home stations to Salinas was in some cases very poorly arranged. The failure of the railroad companies to place the troops at their home stations on time cost the state one extra day's pay for all officers, enlisted men and wagon teams arriving at their organization rendezvous after midnight of August 21. It is recommended that for future maneuvers, where contracts are made with railroad companies for transporting troops, a train schedule of running time under forfeiture be inserted.

It is also recommended that officers of the Quartermaster's Department be detailed to work out the problems of entraining and detraining and that officers from this department be detailed with the troops in the field, in order that questions pertaining to that department can be answered definitely and to assume responsibilities when occasions arise.

Wagon Trains.

Considering the very short notice given by the Maneuver Quartermaster to organize a wagon train, it is thought that the transportation obtained was very good and that it performed its functions exceedingly well. The wagons were of all patterns and sizes, with beds to correspond, making it very difficult to properly load same. The state should have sufficient wagons to transport all troops, as the method of hiring same from civilians is far from satisfactory. The only complaint came from the teamsters that their teams could not be properly subsisted on the government allowance of forage, there being too much grain and not enough hay. This complaint was just, in view of the fact that the animals hired were of the draft class and required more hay than the government allowance provided, which was later remedied by the purchase, with state authority, of additional hay.

Ammunition.

The number of rounds of ammunition issued per man was more than sufficient for all purposes. It is recommended that for future maneuvers, instead of issuing the total number of rounds to be used by each organization, at one time, that ammunition wagons accompany the troops on the march and issue the ammunition as provided for in Field Service Regulations.

Several accidents occurred throughout the various camps by reason of the explosion of blank cartridges which could have been avoided by a little more attention on the part of company commanders. It is recommended that section 33, Regulations for Field Maneuvers, 1910, be amended for future maneuvers, by having inspections also made *after* all field exercises to ascertain that no ball or *blank* cartridges are in possession of the men.

Marching Shoes.

In the matter of marching shoes, the maneuvers conclusively showed the necessity of issuing shoes to the state troops. This was done before maneuvers but the shoes being entirely new caused a good many cases of sore feet. It is recommended that shoes be issued before maneuvers and worn thirty days in order to properly fit the men's feet. Measurements should be taken and shoes fitted as prescribed by regulations at the time of enlistment and the records changed from time to time if subsequent fittings render changes necessary.

Veterinarian and Horseshoer.

A veterinarian and a horseshoer were also much needed in the brigade. A veterinarian was furnished the Red forces the last two days of the maneuvers and then only by engaging the services of a civilian and paying for the same from state appropriations. A study of the Militia Law and the organization of the National Guard of California would have shown the necessity of making some provision for the above. For future maneuvers it is recommended that the Chief Surgeon and the Maneuver Quartermaster be charged with the responsibilities of seeing that both forces be supplied with the necessary personnel and equipment as pertaining to their respective departments.

Case of Smallpox.

On the night of August 14 a mild case of smallpox developed in Company H, Second Infantry, which was diagnosed as such after a consultation of the Chief Surgeon and the regimental surgeons. The case was immediately reported to the health authorities of Salinas and permission obtained to remove the patient to the county hospital, where he was sent with his entire equipment. The matter was reported to the Maneuver Commander, also to the Chief Surgeon, Maneuver Campaign, and the Chief Surgeon, Western Division. Upon recommendation of the Chief Surgeon, and by direction of the Brigade Commander, Company H was ordered to be vaccinated. The Chief Surgeon was also directed to secure 2,500 units vaccine virus to vaccinate the entire command. Inasmuch as a number of the men were unwilling to be vaccinated, a decision was requested of the Commanding General, Maneuver Campaign, as to making the vaccination compulsory. This decision was received on August 17, and was to the effect that the National Guard troops would not be compelled to be vaccinated but advised to do so. A total of thirty-six in the brigade were vaccinated, thirty-one of these being from the Second Infantry. The men vaccinated did not suffer any ill effects from the same and none had to be excused from any duty.

Umpires.

In view of the fact that umpires are very apt to ride at the head of a column of troops and their work requiring them to be at the point where troops are first deployed, it is recommended that in future maneuvers all umpires wear the hat band insignia of the army with which they are serving and that they carry on their person a white band which they will attach to their hats when they deem it essential to announce their presence or to use their authority. This scheme would in a great measure do away with the complaints so frequently heard that umpires, marked with white hat bands, expose positions and movements of the troops. All Blue forces should also be required to wear blue hat bands.

The scheme of communicating the decisions of the umpires to the troops needs much revision and should be changed. Rocket signals of some kind should be arranged to announce a cessation of hostilities, the necessity of which was made very apparent on the last day of the maneuvers when it seemed impossible to impart this information to the supports advancing to reinforce the Blue position on the west of the Coyote Valley. A bomb signal of some kind should be arranged to indicate the "recall." Commanders of the opposing sides should be kept in touch with the various decisions of the umpires as to whether or not troops can advance, which information was lacking as far as the Red commander was concerned on the last day of the maneuvers and which caused some confusion, it being necessary at times to send staff officers to ascertain why certain troops were not advancing or not taking other positions.

The discussions as provided for in paragraph 15, Regulations for Field Maneuvers, 1910, were not held, and it is recommended that in future maneuvers these be made a part of the maneuvers. It would have been very instructive and more beneficial if a discussion could have been had covering the movements of both Blue and Red forces on the last day of the maneuvers.

Method of Issuing Orders.

Commanding officers and their adjutants were assembled at brigade headquarters each evening, at which time the military situation was explained, copies of field orders for the movement the following day issued, memorandum of orders concerning camp routine dictated, etc.

The halt order was issued daily while on the march and just before going into camp, the advance guard being detailed for outpost duty. On receipt of this order all organization commanders sent forward an officer who rode ahead to the camp and there got in touch with the brigade quartermaster, who explained the camp site and assigned places to the organizations. The officers sent forward would meet the incoming organizations and direct them to their proper places.

Battery B, California Field Artillery, at Joint Maneuvers of 1912.

A Field Officer of the Day was detailed daily, who, in addition to his general duties, was charged with the inspection and report of the outpost, inspection of all latrines and kitchens in camp and inspection of the camp site after breaking each morning.

Future Maneuvers.

It is recommended that future maneuvers be planned longer in advance of the time at which they are to be held so that state troops can be given at least three months' notice of what is expected of them and that they be informed as to the exact dates of the maneuvers in order that their summer vacations can be arranged in advance of the time set aside for maneuvers. The latter provision is absolutely necessary in order to insure a good attendance.

It is also recommended that some restrictions as to movements of troops be made so that after the day's march and troops have arrived in camp no bodies larger than patrols be permitted to advance in the direction of the enemy and that no marching be permitted before six o'clock a. m.

It is also recommended that the first two or three days of future maneuvers be set aside for the organization of the command, extended order drill, minor problems, military courtesy, etc., and that no long marches be made before the fourth or fifth day.

I can not close this report without expressing my thorough appreciation to the officers and men of the brigade for their untiring zeal, their cheerful compliance with orders, their willingness to properly perform a soldier's duty and their excellent deportment, all of which combined to make the maneuvers of 1912 the best in the history of the National Guard of California. Their work and the results obtained demonstrated the fact that the brigade is an efficient organization and can be put into field service at any time.

I wish also to especially express my appreciation to Captain Stephen O. Fuqua, U. S. A., Chief of Staff, for his very able and earnest efforts, his thorough military knowledge and his loyal assistance.

ROBERT WANKOWSKI,
Brigadier General, N. G. C.

HEADQUARTERS FIRST BRIGADE
6th Division, Red Army,
Camp Forbes, Salinas, Cal.,
13, Aug. 12, 8:30 P. M.

1. A detachment of Blue troops, defeated today at MONTEREY, is now reported at SOLEDAD. The remainder of the defeated Blues (reported without one regiment of infantry) is at SALINAS. Red troops hold CHUALAR.

2. The brigade will march to SALINAS tomorrow to drive out all Blue troops and to support the CHUALAR detachment.

3. (a) The independent cavalry will leave camp at 4:30 a. m., marching through SALINAS and via the SALINAS-NATIVIDAD road and gain contact with and remain in observation of the enemy.

(b) The advance troops will clear the northern exit of EL TORO ranch at 4:45 a. m., marching via SALINAS-MONTEREY road and drive the enemy out of SALINAS.

(c) The advance guard will clear the northern exit of EL TORO ranch at 5:30 a. m., marching via SALINAS-MONTEREY road.

(d) The main body will follow the advance guard at 800 yards.

4. The field train will follow the main body at $\frac{1}{4}$ mile.

5. The brigade commander will be at the head of the main body.

By command of Brig. Gen. Wankowski:

STEPHEN O. FUQUA,
Captain, U. S. Inf.
Chief of Staff.

HEADQUARTERS FIRST BRIGADE

6th Division, Red Army.

Race Track, Salinas, Cal.,

14, Aug. 12, 8 P. M.

1. It is rumored that scattered bands of the enemy are in the vicinity of DUMBARTON. The retreating Blue regiment is in supporting distance of its main force from the north.

2. The brigade will march tomorrow on Prunedale.

3. (a) The advance guard will clear the eastern exit of the RACE TRACK at 7 a. m., patrolling the NATIVIDAD-DUMBARTON road.

(b) The main body will follow the advance guard at 800 yards.

(c) The rear guard will follow the field train.

The troops on outpost will take their proper position in the column as it passes the outpost line.

4. The field train will follow close on the main body.

5. The brigade commander will be at the head of the main body.

HEADQUARTERS FIRST BRIGADE

6th Division, Red Army.

Sargent, Cal.,

17, Aug. 12. 7:30 P. M.

1. The enemy is reported in force at MORGAN HILL. The Blue detachment of about one regiment was defeated this morning and has retired towards GILROY. Tomorrow our fifth division marches on CASTROVILLE and the sixth division on SAN JUAN.

2. The brigade will march to GILROY tomorrow.

3. (a) The independent cavalry will clear the initial point, the bridge near the western exit of camp, at 5:30 a. m., scouting towards GILROY, and locate the enemy.

(b) The advance guard will clear the initial point at 5:45 a. m., marching via the SARGENT-GILROY road.

(c) The main body will follow the advance guard at 800 yards.

The troops on outpost will take their proper position in column as it passes the outpost line.

4. The field train, escorted by one company, 12th Inf., will follow the main body at $\frac{1}{4}$ mile.

5. The brigade commander will be with the reserve of the advance guard until 7 a. m.; thereafter at the head of the main body.

Det. Hosp. Corps.

HEADQUARTERS FIRST BRIGADE
6th Division, Red Army.
Morgan Hill, Cal.,
19, Aug. 12, 8:30 P. M.

1. The enemy, strength about equal to our brigade, is at COYOTE. Our division moves on SAN MARTIN tomorrow, the Fifth on GILROY, the Third on CASTROVILLE, and the Fourth on SAN JUAN.

2. The brigade will advance to COYOTE tomorrow and drive the enemy back, opening the way to SAN JOSE.

3. (a) The advance troops will march at 5 a. m. via the MORGAN HILL-LLAGAS RIVER-COYOTE road, and gain the high ground about one mile from the point where the road turns north from the river.

(b) The advance guard will clear the initial point, the junction of the road paralleling the south side of camp with the main MORGAN HILL-COYOTE road at 5:30 a. m., marching via the road taken by the advance troops.

(c) The main body will follow the advance guard at 600 yards. The troops on outpost will take their proper position in column.

4. The field train, escorted by one company, 5th Inf., will clear camp at 8 a. m., and follow the main body.

5. The brigade commander will be at the head of the main body.

By command of Brig. Gen. Wankowski:

STEPHEN O. FUQUA,
Captain, U. S. Inf.,
Chief of Staff.

Copies to Major Hutchins, Colonel Schreiber, Commanding Officer, 5th Inf., 3d Bn., 12th Inf., 2d Inf., Prov. Bn. F. A., Signal Corps, Det. Hosp. Corps, and to staff; to outpost commander by mounted messenger; to General Six by wire.

REPORT

OF THE

State Board of Equalization

FOR

1913-1914

STATE BOARD OF EQUALIZATION

EDWARD ROLKIN, First District
R. E. COLLINS, Third District
JOHN S. CHAMBERS, Controller

JOHN MITCHELL, Second District, Chairman
JEFF McELVAINE, Fourth District
T. M. EBY, Secretary

CALIFORNIA
STATE PRINTING OFFICE
1914

ALFRED BOURNE NYE, State Controller and ex officio member of the State Board of Equalization 1906-1913.

Born at Stockton, California, October 25, 1853.

Died at Sacramento, California, August 19, 1913.

WHEREAS, A. B. Nye, State Controller and ex officio member of the State Board of Equalization, has departed this life; therefore, be it

Resolved, That as members of the State Board of Equalization, associated with him in the business of the state, we express our appreciation of his eminent ability, his unusual devotion to the public interest, and his unswerving adherence to lines of rectitude.

In his death the state has lost a valued servant, the community a citizen of high ideals of public service and private conduct, and this Board a master mind in the solution of its difficulties.

Resolved, That this expression be spread upon the minutes of the Board and a copy be sent to his widow.

JOHN MITCHELL,
EDWARD ROLKIN,
Committee.

REPORT OF THE STATE BOARD OF EQUALIZATION.

To His Excellency, HIRAM W. JOHNSON,
Governor.

SIR: In compliance with law the State Board of Equalization submits the following report covering the assessment years 1913 and 1914:

The State Assessment Roll.

The total assessed value of all property in the state for the year 1913 was \$3,114,136,640 and for the year 1914 is \$3,232,646,152, an increase of \$118,509,512, or nearly four per cent. These figures represent the assessed valuation of both the *nonoperative* and the *operative* property, the distinction being that it is upon the nonoperative property that the counties, cities and districts levy their taxes for the support and maintenance of their respective governments. The operative property represents the real estate, improvements and personal property belonging to the public service corporations and is exempt from all county and local taxation.

Panama-Pacific International Exposition Tax.

The final installment of this tax will be raised this sixty-sixth fiscal year, completing the amount of \$5,000,000 which the state voted in aid of the world's fair at San Francisco in 1915. The details of the assessments for the two years covered by this report are set forth in schedules "A" and "B" of the Appendix.

From the records of the controller it is shown that in the past three years there was raised for this purpose the sum of \$3,814,044.40, as follows:

Sixty-third fiscal year, ending June 30, 1912.....	\$1,270,297 01
Sixty-fourth fiscal year, ending June 30, 1913.....	1,273,446 25
Sixty-fifth fiscal year, ending June 30, 1914.....	1,270,301 14

Deducting from five million the amount already collected leaves a balance of \$1,185,955.60 to be raised in the current sixty-sixth fiscal year.

Railroad Assessments.

For the purpose of redemption of outstanding bonds and the payment of interest thereon, and raising the necessary tax voted by the state in aid of the Panama-Pacific International Exposition, the "franchise, roadway, roadbed, rails, and rolling stock" of the several railroads operated in more than one county in the state were assessed as follows:

RAILROAD ASSESSMENT BY THE STATE BOARD OF EQUALIZATION.

Name of railroad	1913			1914		
	Mileage in state	Assessed value per mile	Total assessment	Mileage in state	Assessed value per mile	Total assessment
Central Pacific Railway	1,109.758	\$21,881.61	\$24,283,294	1,151.38	\$19,846.26	\$22,850,580

Assessments of Withdrawn Property for State Refund on Bonded Indebtedness.

When the new state tax system was first submitted to the people in 1908, one of the objections raised to it, and which contributed to its defeat the first time, was that the withdrawal from local taxation of the classes of property selected for state taxation might possibly be construed as affecting the security of outstanding local bonds. A further objection raised at that time was that inasmuch as the withdrawn property was legally taxable at the time the bonded indebtedness was incurred, in justice and fairness such property should remain taxable until the bonded indebtedness had been paid. To meet these objections the second draft of the proposed constitutional amendment, adopted by the people in 1910, contained this provision :

All property enumerated in subdivisions *a*, *b* and *d* of this section shall be subject to taxation, in the manner provided by law, to pay the principal and interest of any bonded indebtedness created and outstanding by any city, city and county, county, town, township or district, before the adoption of this section. The taxes so paid for principal and interest on such bonded indebtedness shall be deducted from the total amount paid in taxes for state purposes.

To carry out these provisions the legislature in the enactment of chapter 335 of the laws of 1911 (amended by chapter 320, laws of 1913) made provision for the separate assessment of all such withdrawn properties by the local taxing officers, with provision that a copy of such "operative" assessments should be filed annually with the State Board of Equalization. The statutory law also contained broad provisions for the equalization of these assessments by the State Board of Equalization, and further defined the duties of the controller in the payment of the taxes accruing to the counties and cities as bond taxes upon such operative properties.

Under the old ad valorem tax system which governed prior to separation in 1910 the corporations, of course, were called upon to make payment direct to the authorities of the several bonded divisions and districts; hence the corporations were watchful as to the manner of the assessment of their properties. All over the state frequent applications were made for reductions and equalizations of assessments. When, however, the state assumed the burden of the payment of the bonded taxes from its revenue, the corporations, in a great measure, lost interest in such assessments and passed up to the state the duty of guarding against over-assessments.

Before commenting further we submit herewith a table showing the assessment of operative property by the county assessors from 1911 to 1914 and also the percentage of increase in those assessments. This table includes only the operative property withdrawn from local taxation but used (excluding bank assessments) in computing the amount of the taxes to pay the principal and interest of bonded indebtedness

outstanding November 8, 1910. The figures in the table include only the property of this class assessed by the county assessors and do not include the assessment of franchises, roadway, roadbed, railways and rolling stock of the railways operating in more than one county, which are the classes of property assessed by the State Board of Equalization and apportioned to the counties and cities and likewise subject to taxation for the purpose of the so-called bond refunds:

ASSESSMENT OF OPERATIVE PROPERTY BY COUNTY ASSESSORS, 1911-1914.

*Decrease 51 per cent.

†Decrease 22 per cent.

‡Decrease 45 per cent.

NOTE.—The percentage of decrease in Merced County is caused by the fact that in 1911 banks were assessed with \$182,638 and in 1912 \$195,835, money on hand, as operative property, which disappeared from the rolls in 1913 and 1914. The decrease in Del Norte County was probably caused in the same manner. The decrease in Siskiyou County is accounted for as follows: Prior to 1913 the branch line of railroad known as the California Northeastern Railway was assessed locally but in that year it became part of the Central Pacific Railway system and was assessed by the State Board.

In further explanation of the meaning of this table we submit the following smaller table, comparing the assessment of nonoperative property by the assessors with their assessment of the operative property for the years 1911, 1912, 1913 and 1914:

	Nonoperative	Operative
1911 -----	\$2,225,426,293	\$232,676,399
1912 -----	2,475,531,465	296,439,815
1913 -----	2,633,550,069	329,472,829
1914 -----	2,727,061,513	438,835,158

These figures, taken in conjunction with the detailed table giving the assessment of operative property by counties, show some very startling facts. The main fact is that while the assessment of the nonoperative property has increased only about 22½ per cent in the three years, the assessment made by the assessors of the operative property has increased nearly 50 per cent throughout the state, and in some counties the increase has been far greater than the average.

There have been three causes for this difference:

First—New pieces of operative property acquired or constructed since 1910 have been added to the roll.

Second—Franchises of the general corporations which prior to 1910 were not assessed by the county and city assessors have been by some of them added to their rolls.

Third—Operative property has been assessed at a higher rate than nonoperative property.

In a number of cases this board has been obliged to exercise the power of equalization conferred upon it by the constitution and statute above quoted, and to reduce or expunge from the rolls of the counties certain properties which it appeared were assessed at a higher rate than other property for the purpose of increasing the counties' or cities' refund for the payment of the principal and interest of bonded indebtedness outstanding November 8, 1910.

In spite of all our efforts the results are still far from satisfactory, as it would appear that during the past four years relatively little new operative property has come upon the rolls and the value of the operative property heretofore on the rolls has not changed in any such degree as shown by the above percentages.

The matter is still worse in the case of some of the municipalities which have outstanding bonded indebtedness, but as the controller has elaborated the assessment of operative property by the municipalities, it would serve no useful purpose to repeat the information here.

Reassessments.

The legislature of 1913 amended the law relating to assessments and collection of taxes for state purposes by adding a provision that "every assessment of property made after November 8, 1910, under the provisions of section fourteen, article thirteen of the constitution and the

provision of this act, which is or may hereafter be adjudged to be invalid by reason of any illegality, invalidity, or irregularity, declared or existing, in the assessment of such property, or in the mode provided for the assessment thereof, shall be remade and the property reassessed and equalized for each year for which such assessment is invalid as aforesaid." The amendment further provided the necessary procedure for such reassessment, equalization, payment of tax, and suit to recover in case of non-payment.

Under the provisions of this amendment, this board in 1914 reassessed the properties (franchises) of the corporations known as Miller & Lux, Incorporated, the San Joaquin and Kings River Canal and Irrigation Company, and the Matson Navigation Company.

The board had made assessments of the franchises of these corporations in and for the assessment year of 1911, being the first assessments under the new separation law. After payment of the tax as originally levied in the time prescribed by law, the companies brought actions against the state treasurer to recover such taxes.

Through an alleged irregularity in the method pursued by the board in arriving at the assessment of two of such companies, and lack of jurisdiction for assessment in the other, the trial court rendered decisions against the state in all three cases. No appeals were taken from the decisions, but the provisions of the reassessment act were invoked.

The actions were defended by the attorney general, and a history of the actions will be found in the report of that officer.

Veterans' Exemption.

In 1912, the first year of operation of the so-called veterans' exemption law, the number of claimants exempted was 10,692 and the assessed value of property exempted was \$7,220,992. Each year the exemption value has gradually crept up, as is shown by the following table:

INCREASE IN VALUE OF PROPERTY UNDER VETERANS' EXEMPTION LAW.

Counties	1913		1914

Settlement of Operative Property Questions.

After the amendment of the California tax law in 1910 by which separation was effected, great fear was expressed in many quarters that the separation of the "operative" property from the "nonoperative" would prove a vexed question, and that many perplexities would arise as between the corporations and the county and city taxing officials; in fact, this board shared to some extent in this fear. But to the surprise of every one the questions seemed to adjust themselves from the very inception of the change in the law. It must be said to the credit of the great corporations owning millions of dollars of assessable property of every character that they met the taxing officials in a spirit of absolute fairness; the same can be said of the taxing officials. The first year of the operation of the new law saw the almost complete adjustment of every problem to the entire satisfaction of all concerned. The law makes this board the final arbiter on the question of the operative character of property, but seldom was this board called upon to act. The same spirit of fairness prevailed in the determination of operative gross receipts. It is remarkable that in such determination appeal to the court by agreed statement of fact has been taken in only two or three instances.

Statistics on Land Assessment.

The board this year endeavored to collect data showing the assessment of various classes of lands in the different counties.

In asking for these statistics the assessors were instructed to give the average assessed value of lands as generally obtains throughout the county and not to select isolated cases or small holdings as sample or average, and moreover, not to select holdings adjacent to cities and towns which lands might be more valuable for town lot subdivision than for farming and fruit growing.

We endeavor to show the different assessed values per acre, highest and lowest, of the better class of lands under irrigation and non-irrigated.

Irrigation does not obtain in most of the counties, particularly those along the coast. In other counties, like Sacramento, San Joaquin, Sutter and some others, the reclaimed lands are the better class and of course need no irrigation; in such counties, where the values in the table show irrigated, same applies more specifically to the reclaimed land.

The counties where irrigation is carried on to the greatest extent are those embraced in the great Sacramento and San Joaquin valleys, and in a few counties in the southern part of the state.

LAND ASSESSMENTS—1914.

Taxation of Franchises.

At the last session of the legislature, a bill was introduced designed to furnish this board with a rigid mathematical rule for the assessment of franchises. While this board cooperated with the framer of the bill and with the committees which had it under consideration, in a sincere endeavor to secure a bill which, if it became a law, would be workable, yet in the end, after the bill passed both houses, the board was obliged to ask the governor to withhold his signature to the bill for the reason that the assessments made thereunder would be unjust and unequal, and also unconstitutional.

It is the opinion of the board that the constitutional provisions, the decisions of the courts and the provisions of chapter 335 of the laws of 1911, as amended by chapter 320 of the laws of 1913, are all the authority and law necessary for the equitable assessment of franchises. Any attempt to tie the hands of the board to a rigid rule is likely to work disastrously. No rigid rule can be devised which will apply alike to all the differing kinds and classes of corporations. Experience during four years has shown that almost every case has to be considered on its own merits. Corporations differ very much one from another as to the amount and kind of property used, and as to the significance of the different items. At one extreme are corporations using practically no tangible property, which yet do a large business and make large profits. Examples of these are the incorporated brokers, agencies, such companies as the chewing gum companies, and a multitude of others. At the other extreme are companies practically all of whose subscribed funds were invested in taxed tangible property. Examples of these are companies holding but not actively running buildings, hotels, parcels of land, stocks and bonds, some family estate companies, and the like. Obviously the same rule of procedure can not apply to both. Again, there are all sorts of manufacturing companies, oil, water, mining, financial, and other kinds, each of which presents a different set of considerations determining the value of the franchise.

No rule would be constitutional which contravened the spirit of the Bank of California case. To write that decision into a statute is unnecessary because it is the law. To lay down as a rigid rule the strict letter of that decision would be to deprive the board of the power to follow the spirit where the letter of the law works hardship. It would, moreover, be applying to all companies a method devised primarily for banks, and in so far would destroy other decisions of the courts.

In the case of franchises, as in any other case, the assessment is a determination or judgment of values, and no rigid rule for valuation is laid down for the assessment or valuation of any other class of property.

There are many cases where the data necessary to fit into any rule

are entirely lacking, yet it is perfectly possible to value the franchise. A company, for example, may invest all the money it raised at the time of its organization in tangible property. Its shares of stock may be firmly held and never enter the market, its profits may be allowed to accumulate, and no means may exist of finding the aggregate corporate value. Merely adding up the apparent assets is apparently adding up only the tangible property. In such cases the franchise must be valued *per se*. That it has a value and often a large value, no impartial person can deny.

Again—and this is far the most important consideration—a rigid rule will restrict the power of equalization. Intentionally dishonest reports are rare. But one company, managed by men of an optimistic character, will file a report claiming a stock value as high as their most sanguine hopes warrant; another company in almost the identical position, but more conservative, may file a report showing value but half as great. Justice demands that the two should be assessed in the same amount. Under a rigid rule, this would be very difficult.

Many other states tax franchises in one way or another. Massachusetts has for twenty-five years or more had a franchise tax somewhat like ours, and Rhode Island has recently adopted one almost exactly upon our model. Both the chairman of this board and the advisor have recently visited these states and conferred with the tax commissioners as to methods of assessment. We are of the opinion that we are farther ahead in four years than is Massachusetts in twenty-five. Massachusetts is handicapped by several restrictions in the law which results in serious difficulties.

While the board does not follow a rigid mathematical rule the same for all classes of companies, it does not, on the other hand, act arbitrarily and without rules. Quite the reverse is the case. Thus, we have classified the companies definitely into: (a) general franchises; (b) oil companies; (c) water companies; (d) mining companies, and require different reports from each. Thus, water companies are required to report mileage of pipe lines; oil companies, acreage, wells producing, gravity of oil, etc., and so on, a series of facts all throwing light in one way or another on values. We believe that still further classification will be helpful, but the classification should be made administratively, not by statute. To make such a classification successfully requires an accumulation of material and experience greater than we yet have. The reports for the first two years did not all include a statement of the income account, as that was not required by law. Hence we have only two sets of reports which give these important items. The board is at work on this important problem.

Taxation of Steamer Earnings.

The Lake Tahoe Railway and Transportation Company owns a line of railway running from Truckee to Tahoe City, in California, and also owns and operates certain steamers which ply the waters of Lake Tahoe, which lake is situate partly within this state and partly within the state of Nevada. These steamers carry freight, passengers, mail and express between California points on the lake, between Nevada points on the lake, and between interstate points on the lake.

The company estimated that forty-five per cent of the gross revenues from operation of the steamers came from local traffic.

The railroad does not operate in the winter months, but the steamers continue to run all the year in carrying freight, passengers, mail and express.

For the assessment year of 1912, and each year thereafter, this board taxed to said Lake Tahoe Railway and Transportation Company all of California's proportion of the so-called steamer earnings. The company paid the 1912 tax under protest and then began an action in the superior court of the city and county of San Francisco to recover the taxes so paid. The company contended that no part of the earnings of the steamers should be included in the taxable gross receipts of the company, even though the steamers were operated in direct connection with the railroad. The company had judgment in the lower court and was sustained in our supreme court. How far reaching the decision is and to what extent it may bear upon the state's revenues can not be determined by this board until after the completion of the 1915 assessments.

Insurance Suits.

The main provisions of the constitutional and statutory laws governing the taxation of insurance companies doing business in this state were that they should annually pay the state a tax of one and one half per cent (now $1\frac{3}{4}$ per cent) upon the amount of the gross premiums received upon their business done in this state, *less return premiums* and reinsurance in companies or associations authorized to do business in this state.

Upon the first assessment of life insurance companies under our new law we were confronted with the question of what constituted "return premiums," and particularly whether those amounts returned to the insured by the companies in the way of dividends upon policies and the amounts paid to the insured upon a completed policy, commonly known as the "surrender value," constituted under the law "return premiums." This board, acting jointly with the state board of control, took the position that such dividends and surrender values did not constitute return premiums.

Many of the life companies when paying the tax to the state upon these so-called dividends and surrender values filed a written protest and followed the protest with actions in court seeking to recover the taxes so paid.

The attorney general deeming himself disqualified from properly assuming the defense of these actions, granted permission for the employment of extra counsel, and this board sought and obtained the services of Hon. John W. Stetson, who, it may be incidentally stated, is also the statutory attorney for the state insurance commissioner.

The actions were commenced in the superior court in and for the city and county of San Francisco and were assigned to the department presided over by Judge James M. Seawell.

In the following statement, prepared by Mr. Stetson, are shown the companies plaintiff, the amounts of taxes involved, and the status of the suits:

Tax Year	Plaintiff	Case Number	Amount of Suit	Status
1911	Northwestern Mutual Life Insurance Company -----	40655	\$10,852 71	Tried and submitted.
1912	Northwestern Mutual Life Insurance Company -----	47290	14,316 60	Tried and submitted.
1913	Northwestern Mutual Life Insurance Company -----		18,218 02	Not at issue.

	Pacific Mutual Life-----		5,278 81	
	Fidelity Mutual Life-----		759 42	
	Columbia -----		53 24	

A summary of the taxes in litigation is:

Taxes of 1911-----	\$10,852 71
Taxes of 1912-----	53,860 14
Taxes of 1913-----	74,174 83
Total -----	\$138,887 68

The suits by the Northwestern Mutual and the Massachusetts Life, involving the first two years of taxes paid, have been regularly tried and were submitted to the court last August. With regard to the suits brought by Cox, as assignee of numerous companies, the disposition of plaintiff has been to wait for the decision in the Northwestern and Massachusetts cases, which involve the same points.

Suits to Recover State Taxes.

The law relating to collection of state taxes provides that after delinquency the controller may commence actions to recover the taxes and penalties. Each year the attorney general prosecutes several hundreds of such cases, but as the report of that officer will fully set forth all facts and information regarding these actions, those interested should turn to that report.

Payment of State Tax Precludes Exaction of Licenses.

The constitutional provision relative to the levy and collection of state taxes contains a provision that the payment to the state by the public service corporations, banks and insurance companies of the percentages named in the law, shall be in lieu of all other taxes and licenses, state, county and municipal, upon their property.

The license feature has thrice been involved in actions before our Supreme Court.

In the case of the *City and County of San Francisco vs. The Pacific Telephone and Telegraph Company* (Oct. 1, 1913), the city sued to recover licenses alleged to be due under an old license act of 1903 which was in force in November, 1910, when the new tax law became operative.

The case of the *Hartford Fire Insurance Company vs. Jordan* (July 28, 1914), involved the payment by an insurance company of the corporation license tax, inaugurated by the state in 1905, by which all corporations were called upon to pay to the secretary of state a stated fee for the right to do business in this state.

The legislature of 1913 enacted a statute commonly known as the Motor Vehicle Act, which required the payment of a graduated fee for the registration of all motor vehicles, automobiles and motoreycles. This fee was involved in the suit of the *Pacific Gas and Electric Company vs. Roberts, State Treasurer, et al.* (Oct. 1, 1914).

The city of Los Angeles attempted by ordinance to exact license taxes from banks and from resident agents of insurance companies. These license taxes were involved in the actions entitled *Los Angeles Trust and*

Savings Bank vs. City of Los Angeles, and *Hughes vs. City of Los Angeles* (December 11, 1914).

In each of these cases the state supreme court held that the payment of the state tax under section 14 of article XIII of the constitution was in lieu of the licenses sought to be imposed.

Changes in Administrative Law.

The legislature, in 1913, effected some important changes in the statutory law governing the assessments made by this board. Particular strength was given this board in exacting from the corporations the information necessary to more intelligently arrive at franchise values.

In the original enactment of the statute in 1911, in reporting to this board for franchise assessment, the common or closed corporation was granted an alternative method of reporting; that is to say, it could report the amount of its capital stock authorized, the amount issued and outstanding together with amount paid in thereon in money or property, the funded and floating debts, the market or actual value of such outstanding stocks and bonds, and the assessed value of its property both within and without the state. In case the corporation could not or did not fairly and fully state the facts and matters above required, then it was requisite under the law that an additional report must be made giving the dividends paid, the surplus, the gross receipts from all sources, the operating and other expenses, and the balance of profit or loss.

The law was changed by striking out the alternative feature and requiring every corporation to report in detail all information called for above. This was a very salutary provision. The board was enabled thereby to make comparison of the volume of business done by the different corporations. Moreover, it enabled the board to compare the gross business done and the net results obtained by the many corporations engaged in identical business, and thereby establish a greater equality in fixing the tax. Again, a showing of gross and net business done is often a fair index of stock values, which is a paramount feature in franchise ascertainment.

It is proper that this board should have before it all necessary factors or information which enter into franchise values, and the information should be as full as possible. The corporation should not hesitate to render full report. The information thus gained is held in law absolutely secret, it being a penal offense to divulge any fact gleaned through such reports.

The law permits the divulgence of only the amount of the assessment and the tax. The board has received many requests for specific information contained in the report, or for copies of the entire report of some general corporation. The board has uniformly refused to comply with such requests except in instances where we were directed to give

the information by the governor, who has sole authority in the matter. In an opinion given this board the attorney general, after holding to secrecy as above noted, says:

“The clear purpose of the act is to encourage the confidential relations between the corporations and your board by guaranteeing to such corporations that the information which the act requires them to report to your board shall be kept confidential. Though in some cases this may work a hardship to private citizens, in that they are denied access to a more simple field to secure information which they desire, the purpose of the act is not to aid such persons, but the guaranties of the act should be strictly maintained.”

Moreover, this board is called upon to annually assess the franchises of something like twenty thousand corporations engaged in every conceivable business. These assessments must be completed in a period of about three months. Without full and complete reports, therefore, irregularities in computations are liable to creep in and injustice done the taxpayer or the state.

The following table shows the number of corporations assessed by this board since the advent of the new tax law:

Number of Corporations Assessed.

	1911	1912	1913	1914
Railroads and street railways.....	167	173	158	151
Light, heat and power companies.....	208	234	196	192

Building and loan companies	109	107	104	97
General corporations	14,433	14,685	15,517	16,182
Totals	19,721	19,693	20,478	20,979

Loss of State Revenues by Competition of Auto Vehicles with Taxed Transportation Companies.

Motor busses and trucks operated as common carriers over the public streets and highways are a recent development in the transportation business. While it is not necessarily to be assumed that all the passengers and freight carried by these vehicles would otherwise have moved over the railways, yet a large part of them would have doubtless done so.

The Pacific Electric Railway Company, which has made careful observation of this competition with their lines, reports to this board that that company alone is losing \$20,000 a month or \$240,000 per

annum from this cause. The state tax on that alone would have been \$11,400. One company alone carried 122,686 passengers in a period of thirteen days, with an estimated revenue of nearly \$24,000. It is probable that the state loss from this cause is at least \$200,000 per annum.

In addition to the big double deck busses and other large motors that ply over more or less regular routes and on a more or less definite time schedule, there are many smaller vehicles plying for hire on less regular schedules and routes, all doing practically the same kind of business which comes under the purview of the state tax system.

It would appear that the state tax system ought to be extended to cover these carriers, both to protect the state revenues and in justice to the taxed transportation companies.

There seems to be no way of bringing these under the gross receipts tax except by a constitutional amendment. There will be difficulty in drawing the line between those vehicles which should be included and those which should not, on account of the irregularity of routes and schedules in many cases. But probably all the constitutional sanction needed would be obtained by a provision authorizing the legislature to include in the list of subjects for the state taxes "all common carriers operating on public highways."

On the other hand it is quite feasible to impose on such vehicles a state license tax at such rates as would be practically the equivalent of the gross receipts tax.

Public Utilities Owned by Municipalities.

The constitution provides that such property "as may belong to the United States, this state, or to any county or municipal corporation within this state shall be exempt from taxation." It also provides that railroads and certain other classes of public utilities shall pay to the state a tax *on their property* computed at certain percentage of the gross receipts. On the face of these provisions it would appear that any municipally owned public service enterprise would be exempt from state taxation. In the absence of any legislative instruction to the contrary this board has not assessed state taxes on street car lines, water works (as to the franchise), and electric plants, when owned by cities.

It is, however, a serious question whether this is a correct interpretation of the constitutional provisions. The matter is one of first importance. San Francisco has its municipal street railway. Los Angeles its great waterworks with allied electric power plants, and other cities to a lesser extent have followed suit. Furthermore, San Francisco and the cities around the bay are contemplating a great waterworks.

The exemption of these enterprises from taxation, if they are exempt, works grave injustice to the people of the state who do not live in the cities concerned, because whenever a city takes over such an enterprise

it lessens the state's taxes and increases the relative amount paid by taxpayers outside. This shows up very clearly under the present tax system, but it would be just the same under the old ad valorem tax or any other tax system.

The exemption of property belonging to a municipality and necessary for the performance of its purely governmental duties is universal. But whether that principle should be extended to municipal investments for profit is very dubious. The courts have always construed tax exemptions very narrowly. The framers of the Constitution seem to have used the above quoted phrase in a very narrow sense, because they felt that it would not of itself cover public school property, so they added a specific exemption of "property used exclusively for a public school." If they felt it necessary to specifically include schools would they not *per force* have specified public street railways if they meant to include them?

A street railway can not in any way be considered as necessary public property essential to the performance of purely governmental functions. Nor can waterworks and electric power plants be so regarded, except possibly to the limited extent to which they may be used for watering and lighting streets, and even that is doubtful.

The principle involved was recognized by the adoption by the people in 1914 of Assembly Constitutional Amendment No. 6, providing for the taxation of lands owned by a municipality outside of its own boundaries.

Increase in Corporation Tax Rates.

After completing its labors with the regular assessments in 1912, the board engaged in the preparation of statistics and data tending to show the relative burden of taxes borne by the corporations and property taxed for state purposes as compared with the tax ratios paid by the common forms of property taxable for local purposes.

This data was presented to the governor and the legislature (1913) in a special report entitled "The Relative Burden of State and Local Taxes in 1912."

After an exhaustive investigation, and the taking of much testimony by a special committee composed of members of both houses of the legislature, the legislature finally passed and the governor approved (to take immediate effect) an act raising the rates to be paid by the public service corporations and insurance companies on their gross receipts and gross premiums.

The following increases were made:

	From	To
Railroads, including street railways.....	4 per cent	4¾ per cent
Light, heat and power companies.....	4 per cent	4½ per cent
Telegraph and telephone companies.....	3½ per cent	4½ per cent
Car companies	3 per cent	4 per cent
Insurance companies	1½ per cent	1¾ per cent

No change was made in the rates fixed by the original law to be paid by express companies and banks. With relation to the banks, however, from the data collected by the board, we were satisfied that they were not paying a just and equitable share of taxes and so recommended to the legislative committee. No attention, however, was given the recommendation—at least the ratio was not changed.

No Ad Valorem Deficiency Tax for Sixty-fifth and Sixty-sixth Fiscal Years.

The general tax levy bill, chapter 596 of the statutes of 1913, provided for the levy and collection of a tax for 1913 amounting to \$14,748,800 and for the year 1914 of \$14,908,900, for support and maintenance of the state government for the sixty-fifth and sixty-sixth fiscal years.

Said statute, and the constitution, also provides that if the revenues derived from taxation of corporations, banks and insurance companies under section 14 of article XIII of the constitution, together with the revenues derived from all other sources, shall not raise the specific amounts required for maintenance, then the state board of equalization is directed to fix such an ad valorem rate of taxation upon all the assessable property in the state (non-operative and operative property) as will meet the deficiency.

For said two fiscal years this board deemed that sufficient revenues would be raised for all said purposes. For the sixty-fifth fiscal year over \$16,000,000 was received, as will more fully and at large appear by reference to the report of the state controller issued contemporaneously with this report.

The board's estimate of receipts for the sixty-sixth fiscal year is based upon the following table:

Estimated Receipts for Sixty-sixth Fiscal Year.

Taxes from:		
Railroads, including street railways.....	\$6,317,675	16
Light, heat and power companies.....	1,941,326	48
Telegraph and telephone companies.....	768,564	74
Express companies.....	107,755	74
Car companies.....	124,614	16
Insurance companies.....	816,096	54
State banks.....	885,823	86
National banks.....	945,920	76
Franchises:		
General corporations.....	\$1,140,810	00
Mining companies.....	66,310	00
Oil companies.....	445,155	00
Water companies.....	95,660	00
Building and loan associations.....	14,011	00
	\$1,761,946	00
Less estimated delinquency.....	50,000	00
	1,711,946	00
Total from taxation.....		\$13,559,663 44
Inheritance taxes.....	\$1,250,000	00
Less \$250,000 to school fund, and \$62,500 for teachers' permanent fund.....	312,500	00
Fees of secretary of state.....		937,500 00
Fees of insurance commissioner.....		180,000 00
Fees of insurance commissioner.....		50,000 00
Interest on highways money.....		100,000 00
Interest on deposits of public moneys.....		200,000 00
Collections of state institutions.....		150,000 00
Property tax redemptions.....		10,000 00
Miscellaneous receipts.....		75,000 00
Total estimated receipts, sixty-sixth fiscal year.....		\$15,262,163 44

Splendid Showing in Tax Payments.

For the years 1911, 1912, and 1913 there were levied by this board taxes aggregating \$29,463,799.98 against the gross receipts of public service corporations, the capital stock of banks, and the gross premiums of insurance companies. Of this vast sum only \$48,702.96, taxes and penalties, remain delinquent.

A statement of such levy for the three years is as follows:

Railroads (including street railways).....	\$15,973,092	36
Light, heat, power.....	4,310,786	98
Telegraph and telephone.....	1,551,227	90
Express.....	319,556	44
Car companies.....	305,664	16
Insurance.....	1,885,123	90
National banks.....	2,622,257	68
State banks.....	2,496,090	56
Total.....	\$29,463,799	98

Of the total amounts levied against railroads, express, car companies and national banks, not one dollar remains delinquent. As to the light, heat and power companies, a delinquency of \$203.85 appears, which is

owing by one small company. In the three years but one telephone company refused to pay, and there is a showing of \$95.17 delinquency. Of the large amount of insurance taxes, only \$2,628.92 remains delinquent, six companies having failed to pay.

The state banks, however, show a delinquency of \$45,774.92. Of this amount \$32,321.85 is owing by the California Safe Deposit and Trust Company of San Francisco, which is in the hands of a receiver appointed by the court, and \$10,942.20 is due the state from seven banks being liquidated by the state bank commissioner, none of which has ever paid the state a cent of taxes since liquidation began. Three other banks also are delinquent in the sum of \$2,545.75.

Tax Results Shown by Separation Law.

The state now has had four years of assessments under the tax law ratified in November, 1910. As an exemplar of what the law has accomplished in the production of revenue, we give herewith a table showing taxes levied by this board against corporations for the four years:

	1911	1912	1913	1914
Railroads, including street railways -----	\$4,776,203 58	\$4,941,224 70	\$6,255,664 08	\$6,317,675 16
Gas and electric -----	1,224,767 34	1,364,700 06	1,721,319 58	1,941,326 48
Telegraph and telephone -----	424,799 94	486,242 98	640,184 98	708,504 74
Car companies -----	89,262 02	91,292 74	125,109 40	124,614 16
Express -----	102,351 70	104,458 82	112,745 92	107,755 74
National banks -----	834,708 02	872,903 50	914,646 16	945,920 76
State banks -----	803,938 18	828,480 04	863,672 34	885,823 86
Insurance -----	520,214 68	602,204 88	762,704 34	816,096 54
General corporations ---	1,106,845 00	1,143,860 00	1,106,210 00	1,140,810 00
Oil corporations -----	346,359 00	300,800 00	291,085 00	445,155 00
Water corporations -----	119,441 00	94,180 00	89,610 00	95,660 00
Mining corporations ---	94,650 00	80,145 00	74,895 00	66,310 00
Building and loan companies -----	10,675 00	11,913 00	13,695 00	14,011 00
Totals -----	\$10,454,215 46	\$10,922,405 72	\$12,971,541 80	\$13,609,663 44

The Growth of the State Taxes.

The foregoing table shows an increase in the taxes assessed by this board of \$3,155,448 in 1914 over 1911, which is an increase of 30.1 per cent in three years. Of this total increase \$1,755,465 (or over half, that is 16.7 per cent out of the 30.1 per cent of increase) is attributable to the increase in the gross receipts, capital stock, premiums, etc., or in the value of the property assessed; and \$1,399,982 (or the remaining 13.4 per cent of the total of 30.1 per cent) to the increase in the tax rates made at the last session of the legislature.

The taxable gross earnings of the public utilities increased from \$168,702,633 in 1911, to \$200,313,158 in 1914, or a little over 18.7

per cent. This increase, although but a little less than the increase per cent in the nonoperative roll, is greater than the rate at which the whole roll was increasing under the old tax system. But it is, nevertheless, less than was expected at the time of the adoption of the new tax system. That it was less was partly due to causes which it was foreseen might come from time to time, but largely to causes which could not have been foreseen.

It is important to point out that so far as the amount of taxes paid by the corporations is concerned every one of these causes would have had the same effect under any system of taxation which could be applied to them, because anything that decreases the gross receipts affects the net earnings and through them depresses the value of the property. The only difference under the present system is that the loss, if a failure to advance as rapidly as was hoped may be called a loss, now falls on the state alone, and under the old system would have been divided between the state and the local governments.

It was of course anticipated that the taxes on gross receipts would not advance in times of industrial depression. But although the gradual tightening of the money market in Europe and the East has made it difficult to raise capital for the development of some new enterprises, and has thus lessened the new business of the transportation companies, there has been no real industrial depression in California in these years. Nevertheless the prices of the stocks and bonds, representing the property of the companies taxed, on the basis of gross receipts, has fallen materially since the investigation made by this board two years ago. Hence it is certain that taxes levied on the property of the corporations by the old ad valorem system, had that still been in force, would not have advanced any more rapidly than have the taxes based on gross receipts.

One cause of loss in anticipated gross receipts of railroads was the unusual and heavy frost two years ago, which damaged a large part of the orange crop.

Another very serious check to the growth of the state's revenues, which was not foreseen, resulted from the action of the railroad commission in reducing the rates which public utilities may charge for their services. Every reduction in rates, affecting the gross receipts of the public utilities, reduces in like proportion the state's revenues. How much these reductions have been we have no means of estimating. That they have been very large during the past four years there can be no doubt. Yet it can not be expected that they will continue to be as serious in the future as they have recently been, because, in the first place, the most urgent and large rate reductions have already been made; and in the second place the effect of these reductions will ulti-

mately be to stimulate new business and thus restore the gross receipts to at least their old level if not to advance them materially.

The taxes on express companies have been decreased by the inroads made into their business by the parcels post. The loss here in one year is about 9.2 per cent of the taxes on express companies.

Another source of loss in the anticipated revenues of the state has been the municipalization of public utilities. While the amounts lost thus far have not been large, nevertheless, the possibilities for the future are serious. There is, furthermore, a very serious question of policy and justice involved, which will be more fully discussed elsewhere. It is more than questionable whether any municipality has the unlimited right to increase the tax burden on other communities by taking over and rendering tax exempt large amounts of property not necessary for the exercise of its strictly governmental functions. San Francisco is rapidly municipalizing its street railways and looks forward to acquiring its water system, and Los Angeles has not only gone into the water business, but also into light, heat and power.

In like manner the State Industrial Accident Board, by entering the field of insurance, has encroached on the state's income. The equivalent of the state tax in the insurance premiums collected by this board should be paid into the state treasury. This would not be taking money out of one pocket and putting it into another, because the board pays back its surplus earnings to the policyholders. It is not fair that one class of policyholders should be taxed and the others go untaxed. The law should be amended so as to require the board to pay the regular state insurance taxes.

Still another cause of loss to the state in the expected increase in taxes arises from the competition of automobile busses with street and interurban railways. Indeed, the very wide use of the automobile for pleasure and for business of every sort cuts seriously into the revenues of all transportation companies. Four years ago there were no "double deckers," each carrying as many passengers as a street car can accommodate, and few auto stages and trucks competing with the railroads. This matter will be discussed elsewhere.

In forecasting future revenues it should be borne in mind that the industrial depression due to the war in Europe will affect the revenues for the coming year, but that there will in all probability be a rebound the next year. Furthermore, that the effect on revenues from the actions of the railroad commission is probably over. There is also no reason to expect another frost. But municipalization of public utilities and the competition of the automobile will probable increase each year. The opening of the canal will, also, take business from the railroads.

In this connection it is proper to point out that even under all the adverse conditions above outlined the new system of taxation shows

better results than did the old ad valorem system. From 1872, when by the adoption of the Political Code the old property tax was first perfected, to 1906, after which year the investigations and recommendations of the commission on revenue and taxation wrought a great change in the administration of the old taxes, the assessment roll of the state increased from \$637,000,000 (1872) to \$1,595,000,000 (1906), an increase of 150 per cent in 34 years, or at the average rate of 4.4 per cent per annum.

Estimate of Revenues, Sixty-seventh Fiscal Year.

The board has endeavored to ascertain, as nearly as may be, what revenues will be available for support of the state government for the sixty-seventh fiscal year beginning July 1, 1915.

To this end we sent out about one hundred and seventy-five communications to the several larger corporations asking them to ascertain as closely as possible what were their gross taxable receipts for the first ten months in 1914 and also to ascertain their gross taxable receipts for the same period in 1913. From this data we established the percentage of increase or decrease in gross receipts. By applying such percentage to the gross receipts taxed in 1914 (being for the calendar year ending December 31, 1913) we felt that we could approximate very closely the gross amount of receipts taxable for the calendar year ending December 31, 1914.

All but about twenty of the corporations at once complied with our request, so that we believe the information herewith given is very reliable and that the receipts from taxes shown in the table will closely approximate the figures given.

From the data so gathered we found that the gross receipts of telegraph and telephone companies had increased about 4.6 per cent; light, heat and power companies increased 3.7 per cent; car companies decreased 1.9 per cent; express companies decreased 9.2 per cent; railroads decreased 3.8 per cent.

As to the railroad receipts, in another paragraph we have given a short epitome of the supreme court decision in the Lake Tahoe Railway case involving the taxation of the so-called steamer earnings. As we therein stated, we have no means at this time of ascertaining how much revenue will be lost to the state, but that a loss will accrue is certain. In arriving at the gross railroad taxes we have therefore allowed for a loss along that line.

In estimating the taxes of banks we found that in the last three years such taxes had increased annually 3.8 per cent, 4.5 per cent and 3 per cent, or an average increase of 3.8 per cent. This percentage was applied to the gross bank taxes levied for the year 1914.

As to the insurance taxes, the State Insurance Commissioner estimates from what they were for the 1914 assessment.

The receipts from taxation of the general corporations, commonly denominated franchise taxes, are rather more difficult to estimate. In the ascertainment of franchise values, the value of the outstanding corporate stocks and bonds forms the main standard in our computation. It is generally felt that owing to the prevailing financial distress the trend of the stock and bond market has been downward and that the value of such securities is not on a level plane with that of one year ago. However, for lack of a better basis we are compelled to estimate that the receipts from this source will be the same as for the assessment year 1914.

The data as to revenue receipts other than from taxation are estimates of the Controller and are based upon previous results obtained and carefully revised.

Our estimate, therefore, of revenues available for the sixty-seventh fiscal year is as follows:

Railroads and street railways.....		\$6,030,213
Light, heat and power companies.....		2,012,951
Telegraph and telephone companies.....		741,067
Car companies.....		122,246
Express companies.....		97,840
Banks.....		1,902,210
Insurance companies.....		816,096
General corporate franchises.....	\$1,761,946	
Less estimated delinquency.....	50,000	
		1,711,946
Total from taxation.....		\$13,434,569
Other sources:		
Inheritance tax.....	\$1,650,000	
Less \$250,000 to School Fund, and less \$85,000 to Teachers' Permanent Fund.....	335,000	
		\$1,315,000
Insurance Commissioner.....	\$65,000	
Less transfer to Insurance Commission Special Fund.....	30,000	
		35,000
Fees of Secretary of State.....		175,000
Fees of Supreme and Appellate Courts.....		10,000
Fees from state institutions.....		180,000
Interest on deposit of state moneys.....		200,000
Interest on highway moneys.....		300,000
Interest on bonds (surplus moneys invested).....		33,000
From property tax redemptions.....		30,000
Transfer from San Francisco Harbor Improvement Fund.....		100,000
Miscellaneous.....		65,000
Total from other sources.....		2,443,000
Available revenues sixty-seventh fiscal year.....		\$15,877,569

This estimate shows a probable *increase* in state revenues available for the general fund of \$615,406 over the revenues of 1913, as shown in the table showing the estimated receipts for the sixty-sixth fiscal year, *ante*. If we estimate that \$880,000 will have to be transferred to the school fund to make good the loss from the repeal of the poll tax the general fund will run behind that for 1913 by \$275,000.

The state taxes assessed by this board for the sixty-sixth fiscal year were \$13,559,663. The estimate for the sixty-seventh fiscal year is \$13,434,569, a decrease of \$125,094. It may therefore be said that \$125,000 represents the aggregate effective net loss accrued to date occasioned by the industrial depression, adverse court decisions, reduction in public service rates, municipal ownership, unexpected competition and other causes more fully discussed elsewhere. While this is comparatively a small actual loss, the losses in growth or in revenues hoped for are very much larger.

NEW SOURCES OF REVENUE.

The repeal of the poll tax, following the repeal of the corporation license tax, represents a serious loss of state revenue. The amount of the two together is over \$1,600,000 annually. They would, had they been retained, have yielded \$2,000,000 annually in the near future.

As this loss comes at a time when the state's activities are expanding, and when all the old activities are necessarily costing more, it is a matter for serious consideration.

Both these losses fall upon the general fund ultimately. For although the poll tax went directly to the school fund, yet the constitution requires, even if the people did not insist, as they do, that the school fund be kept intact. Hence the \$880,000 per annum lost to the school fund must be made up out of general revenues. The language of the constitution on this point is: "Out of the revenues from the taxes provided for in this section (namely, the state taxes on the classes of property reserved exclusively for state purposes), together with all other state revenues, there shall first be set apart the moneys to be applied by the state to the support of the public school system and the state university."

The state controller and the state board of control will doubtless consider in their reports the question of the growth of expenditures and also the existing resources for meeting them. But the duty devolves upon this board, as the administrative arm of the state for assessing and enforcing the state taxes, to report on possible new sources of revenue to take the place of those lost.

It has been suggested by some that in view of the curtailment of private incomes and expenditures which will possibly result from the disturbance caused by the war, it would be fitting and proper for the state to curtail its expenditures and lessen the tax burden. This view overlooks the fundamental difference between public and private expenses. Public expenditures are for the essentials of government and for activities deemed by the people to be of paramount public importance. Schools, asylums, prisons, the care of orphans, and other state activities are not luxuries which can be passed up when times

are hard. Hence, state expenses can not be curtailed without inflicting a loss on the community as a whole far exceeding any gain from taxes saved. Thus the suggestion for shortening the school year to make up the loss of the poll tax would result not only in injustice to the teachers whose contracts run on present salaries, and a weakening of the teaching staff, but would postpone for every pupil in the schools the day when he or she can go forth into the world as an earner. As it would thus, all along the line, lessen the efficiency of the schools, it would inflict a very grave injury on the rising generation. The same thing is true of practically all lines of state activity.

Another suggestion is that the state run along as best it can on existing revenues, using up any surplus there may be on hand, trusting to the future and hoping that, with the growth of business, the state's revenues will revive and the surplus be ultimately restored.

It may be true that the state has an existing cash surplus, but it is not clear that the surplus is anything more than the sum of the necessary working cash balances in the various funds.

While there is every reason to expect a steady and rapid growth in the existing state revenues after the immediate depression of business is over, a growth sufficient to meet the future growth of the state's activities, nevertheless it can not be expected that the growth of the state's revenues will not only meet that growth, but also make good two millions a year of taxes repealed and cover the possible deficit of the coming year or year and a half. The revenue system can not stand the lopping off of two millions of taxes.

It would appear, therefore, that new revenues must be sought to replace those that have been lost by the repeal of old taxes. The following are some of the possibilities that are available:

I. An Ad Valorem Tax.

This is the simplest and easiest of all possibilities. A small ad valorem tax, which need not exceed five cents per \$100 of assessed valuation, might be levied. It would be just about the equivalent of the exposition tax which ended in 1914.

It was not expected, at the time of its adoption, that the taxes levied under what has come to be known as Senate Constitutional Amendment No. 1 of 1910, would, together with other revenues available, meet all the expenses of the state. Hence that measure provided, "In the event that the above named revenues are at any time deemed insufficient to meet the annual expenditures of the state, including the above named expenditures for education purposes (to wit, the public schools and the state university), there may be levied in the manner to be provided by law, a tax, for state purposes, on all the property in the state,

including the classes of property enumerated in this section (to wit, the public utilities, banks, etc., taxed for state purposes) sufficient to meet the deficiency." At each session of the legislature, namely, in 1911 and 1913, a "tax levy bill" was passed containing this language:

Section 1. The state board of equalization shall between the first Monday in March and the first Monday in July in the year * * *, for the support of the state government, assess and levy the taxes upon the property in the manner and upon the rates of taxation as provided for in subdivisions *a*, *b*, *c*, and *d* of section fourteen of article thirteen of the constitution of the State of California for the purpose of raising the sum of * * * dollars for annual expenditure for the support of the state government for the * * * fiscal year and in the event that the taxes so assessed and levied together with all available revenues other than those revenues required by law to be used for special uses, shall not raise said sum of * * * dollars, then said above named revenues shall be deemed insufficient to meet the annual expenditures of the state for the * * * fiscal year, which deficiency is hereby declared to be the difference between the amount of taxes assessed and levied upon the property and in the manner and upon the rates of taxation as provided for in subdivisions *a*, *b*, *c*, and *d*, of section fourteen of article thirteen of said constitution, together with all other state revenues, other than those revenues required by law to be used for special uses, and said sum of * * * dollars, then said state board of equalization shall in accordance with the provisions of subdivision *e* of said section fourteen of article thirteen of the constitution of the State of California, between the first and second Mondays in September of the said * * * fiscal year, fix such an ad valorem rate of taxation upon each one hundred dollars in value of taxable property, upon all the property in the State of California not exempt from taxation under the law and subject to taxation for state purposes on the seventh day of November in the year * * * as, after allowing five per cent for delinquencies, will raise for said * * * fiscal year the amount of said deficiency.

The commission which framed the new tax system made two estimates of the probable revenues which would be obtained under it. One was as of the year 1905 and amounted to \$6,805,000; the other was as of 1908, amounting to \$7,525,176. Both of these, as the commission pointed out, were short of the then existing expenses of the state. The language of the commission's recommendation was "that an absolute divorce between state and local taxation *be the ultimate aim* and that as nearly complete separation as possible be attained at the very outset."

It was for the foregoing reasons that the elaborate precautions to guard against a deficit were inserted in the constitution and have been provided in the statutes.

As discussed elsewhere, the results exceeded the most sanguine hopes, and for four years no ad valorem tax has been necessary. The exposition tax was distinctly exceptional.

Nor would any revenues outside of the state taxes on the corporations be necessary now except for the repeal of the two old taxes, the corporation license tax and the poll tax. But the provisions made for the expected deficit can now be used to meet the unexpected deficit arising from the loss of these two taxes.

The people repealed the poll tax with a clear understanding that it would result in a loss to the school fund and a deficit in state revenues which would have to be made good from other sources. Those facts were set forth in the pamphlet submitting the measures to be voted on by the people and were given wide publicity in the public press. The substitution of a state school tax on property for the old school tax on polls would possibly be a fair interpretation of the vote.

To impose an ad valorem tax nothing more is necessary in the way of legislation than to reenact, in the next tax levy bill, the language quoted above.

II. To Raise the Rates of the State Taxes.

The rates originally imposed upon the railroads and other corporations by Senate Constitutional Amendment No. 1 of 1910 were based on calculations and investigations of things as they were in 1906. In 1913 this board submitted to the legislature a special report on "The Relative Burden of State and Local Taxes in 1912," which has been said to be the most complete and exhaustive investigation of its kind ever made in the United States. This report showed that conditions had changed in the six years that elapsed between 1906 and 1912, and that the average burden of taxation on property taxed for local purposes was nearly 1.14 per cent of the true value, as against 1 per cent, on which the state tax rates had been calculated. Prolonged public hearings, at which the corporations affected were given full opportunity to be heard and at which they were represented by able counsel, and experts on taxation, failed to shake in the slightest particular the evidence and conclusions submitted by this board. The legislature, after considering that report and hearing all the evidence and arguments on the other side, raised the state tax rates and readjusted them as shown above.

The effect of the changes made by the legislature in 1913 can be most readily seen in the following table, which sets forth the old and the new rates on the gross receipts, and also shows their equivalents in ad valorem

rates. The figures in the last two columns are obtained by reducing the taxes levied on gross receipts to a percentage of the stock and bond values established for 1912 by this board.

Table Showing the 1910 and 1913 Tax Rates on Companies Taxed on the Basis of Gross Receipts.

Class	Tax rates		Increase		Ratios to commercial value	
	1910	1913	Absolute	Per cent	of 1910 rate	of 1913 rate
Railroads -----	4 %	4.75%	0.75	18½	.9092	1.1021
Gas and electric-----	4 %	4.6 %	.6	15	.75	.8768*
Telephone and telegraph-----	3½%	4.2 %	.7	20	.9060	1.1245
Car companies -----	3 %	4 %	1.0	33½	.8813	1.2587
Express -----	2 %	2 %	.0	0	1.5413	1.5413

*Note explanation in text.

The ratios established are fairly reliable, except in one case, namely, that of the gas and electric companies. The reasons for believing the ratio to be misleading in this one case are to be found in the nature of the "stock and bond" method of valuation, and were all set forth at great length in the special report of this board in 1912. We repeat here the summary of the explanation there given as it applies to this class of companies.

Explanation of low ratio of gas and electric companies:

The difference between the ratio of taxes to value of the gas and electric companies and those of the railroads and telegraph and telephone companies is a striking feature of the above results. This is the more remarkable since the ratio of net to gross earnings places them in the same class with the railroads. The explanation lies in the fact that practically all the larger companies in this group are developing new resources and are preparing or have prepared to render more service to the public than is now demanded. Thus the Pacific Gas and Electric has installed at great expense hydroelectric plants and other facilities not yet used to anywhere near full capacity. The same is true of the Pacific Light and Power Corporation. These investments and the reasonable or the speculative expectation of future increase in earnings are reflected in the stock and bond values. By way of contrast attention may be called to the Los Angeles Gas and Electric Corporation, with comparatively less unused plant, whose tax ratio is 1.1824 per cent as against 0.7037 and 0.7089 per cent for the two former companies respectively.

A gross receipt tax is essentially a tax on realized values and not on future values.

That the foregoing is the correct explanation of the difference is very clearly proven by a comparison of the stock and bond values with net operative revenues. The stock market, according to the data here presented, capitalizes railroad earnings on a basis of 6.4 per cent, but the stocks and bonds of gas and electric companies are selling on a basis of 5.75 per cent. There is no reason why investors should pay a higher price on the basis of present earnings for the securities of gas and electric companies than they pay for securities of old and well established railroads, except for the expectation of larger profits in years to come. In fact, the reverse would be the case except for reasons above stated.

To what extent the average ratio of 0.75 per cent for these companies should be corrected in order to make it a fair comparison with the other classes is a matter of judgment.

Just how literally the ratios of taxes to true values are to be taken is, of course, a matter of judgment. Obviously the legislature endeavored to keep within the mark in all cases, and not merely in the case of the gas and electric companies. For if the legislature had raised the railroad tax rate on gross receipts to the full equivalent of 1.1386 per cent ad valorem, the rate would have been 4.8875 per cent instead of 4.75 per cent. The telephone and telegraph companies' rate would likewise have been 4.244 per cent instead of 4.2 per cent. Just what the rate on gas and electric companies should have been to equal an ad valorem rate of 1.1386 is largely a matter of estimate. But it is reasonable to assume that it would have been about the same as that of the railroads.

The foregoing table and comments relate entirely to 1912. They show nothing more than the immediate effects of the changes by the legislature of 1913 as of that date.

Since then many important changes have taken place in the business world. The money market became tighter and tighter all through the year 1914, even before the outbreak of the war. Stock and bond prices fell rapidly and since the outbreak of the war, on account of the closing of the stock exchanges, but *few scattering quotations* for stocks and bonds are available. A "stock and bond" valuation made today would show a considerable shrinkage in the values established in 1912. This shrinkage does not have any permanent significance. It is, however, of some interest as showing the effect of prevailing conditions.

We have, therefore, compiled all such quotations as are to be had. As far as they go they show the following changes since 1912 for such items as seem to be in any way fairly comparable:

(1) *The Atchison, Topeka and Santa Fe Railway* quotations on both common and preferred stock and on seven different bonds show a shrinkage of 12.4 per cent.

(2) *The Los Angeles Gas and Electric Company*. No stock quotations. One issue of bonds alone of \$4,500,000 shows a shrinkage of 7 per cent.

(3) *The Los Angeles Railway* shows a shrinkage of 7 per cent on bonds alone. No stock quotations available.

(4) *The Pacific Electric Railway* shows a shrinkage of 5.5 per cent on bonds alone.

(5) *The Pacific Gas and Electric Company*. While this company's securities are more fully quoted than many others, yet the issues of new bonds and of preferred stock have so altered all the relations of the different issues that no comparison can be instituted.

(6) *The Pacific Telephone and Telegraph Company*. Total shrinkage in comparable items, including stock, 13 per cent.

(7) *The Southern Pacific Company.* The stock appears to have fallen from 112½ in 1912 to 96¼ in July, 1914, and from August 1st to December 15th averaged 83½, a fall of nearly 30 points. The bonds with a few exceptions show a fall of about 10 points. The total shrinkage on \$657,000,000 for which comparable quotations seem to be available amounts to \$119,650,000, or 18.2 per cent.

(8) *The United Railroads of San Francisco.* Refinancing, new control, city competition and other factors aside from the money market conditions have so affected the values of the securities of the company that comparisons can not well be instituted. The bonds alone have shrunk 27.7 per cent. The common stock had fallen, by the first week in July, from 35½ at which it was taken in 1912 to 12 and no quotation has appeared since then; the preferred fell from 63½ in 1912 to 33 in July.

In comment on the foregoing data it must be pointed out that the quotations since the war are few and scattering. Sales are in small lots and the conditions of the market are most abnormal. Any conclusions drawn from the above data are most unreliable. They are presented partly as a record which may eventually become a historical curiosity, and partly as explaining the difficulties of the present situation.

Authorities are agreed that, when possible, stock and bond values used should be averages covering a considerable period of time. The purpose of this is to eliminate or reduce to a minimum the influence of such unusual and abnormal conditions as now prevail. Thus in Wisconsin where taxes based on an ad valorem valuation are used in place of the gross earnings tax, the basis used is the average of five years.

In 1910, on the basis of the report of the Commission on Revenue and Taxation of 1906, on which report the new tax system was based, the tax rates on gross receipts were computed by a method involving the capitalizing of the average net earnings, a method which, since the publication of that report, has come to be known throughout the United States as the "Plehn rule," or sometimes as the "California rule." It should in justice be stated that the mathematical formula itself was written by Prof. T. M. Putnam of the department of mathematics of the University of California.

In 1912 the Minnesota Tax Commission presented to the Governor and legislature an elaborate report on all phases of taxation in that state. Among other things the report dealt extensively with the taxation of railroads. Minnesota has taxed railroads on the basis of gross receipts from the beginning of railroad construction in that state in 1857 and still continues that system. In order to test out that system the Minnesota tax commission in 1912 made an investigation as to how the state would have come off under each one of all other known systems of tax-

ing railroads. The tax commission of that state investigated the taxation of railroads in all other states. It summed up its conclusions as follows:

In view of the foregoing discussions and citations, the opinion is here ventured that the people of Minnesota are to be congratulated on having early adopted and steadfastly maintained the gross earnings tax on railroads, since this is at once the most scientific, the most simple, the most certain and the most just system yet devised. For the same reason it is greatly to be desired that the gross earnings system be extended to such public service corporations as are still subject to ad valorem taxation, at rates adjusted to their average ratio of net to gross earnings, according to the previous recommendation of the tax commission.

In the course of its investigation the Minnesota commission made or reported on nine different valuations of the railroads in Minnesota, each by a different method, for the purpose of comparing the results of an ad valorem tax with the results of the gross receipts tax.

After these had been made the commission said:

The foregoing computations have been made because, though involving much time and labor, they proceed from the same basis of valuation as the general property tax, and on this account may the better satisfy the popular demand for equality in taxation. There is, however, another and much simpler method of arriving at gross earnings rates equivalent to any given rate of taxation on general property. This method, which was suggested by Professor Carl C. Plehn of California, eliminates valuations altogether and works solely with rates. At bottom, it rests on the fact that a public service corporation is worth what it can earn at the schedule of rates which it is permitted to charge; and that earnings, on the whole and in the long run, consequently determine the property values of such corporations.

To employ this method, it is necessary to know only three things: (1) the average or typical ratio of net to gross earnings of the class of corporations in question; (2) the average rate of return which investors receive who purchase the corporation securities at market prices; (3) the rate of general property tax on the true valuation. Knowing these items, the next step is to apply the following formula:

$$\frac{\text{ratio of net to gross earnings}}{\text{rate of return to investors}} \times \text{rate of tax on true valuation} = \text{rate of tax on gross earnings.}$$

The results of all methods showed such close agreement that the commission said:

Such close agreements tend to confirm the soundness of both methods used and the general validity of the conclusions reached.

and concluded:

If the legislature should see fit to make regular provision for checking up net earnings from the reports of the Interstate Commerce Commission and average returns to investors from such market reports as are available, it could be more clearly established which of these levels of values affords the more reasonable and just basis of taxation. It may also be remarked, incidentally, that a like provision for all public service corporations would be extremely useful since it would afford a quick and accurate means of determining, so far as the average or typical ratio of net to gross earnings can be ascertained, what rate of tax on gross earnings ought to be paid by the several classes of such corporations.

The Minnesota commission reached the conclusion that 5 per cent on the gross receipts would be in the long run a fair equivalent of an ad valorem rate of 1.09 (the average rate in Minnesota). As that commission was speaking in round numbers (and as a more detailed analysis on our own data shows) this meant 4.75 per cent rounded out to 5 per cent.

By the short method, or the "California method" as it is now known outside of this state, we have the following:

The net receipts of California railroads are on the average 36.8 per cent of the gross. Deduct taxes 4.75 and we have 32.05. That is, out of every \$100 taken in, the companies have \$32.05 for betterments, depreciation not covered by the general operating charges, interest on bonds and dividends on stock.

The main question to be determined is the rate of interest to be allowed in the formula. As obligatory betterments required by the Railroad Commission and depreciation have to be allowed for, the rate should be above the market rate. As the market rate in 1912 was found to be for railroads 6.435, it would seem that 7 per cent is the minimum, and that $7\frac{1}{2}$ or 8 per cent might be among the rates considered as reasonable. 32.05 divided by 7 and multiplied by 1.1386 gives 5.2 per cent as an equivalent of 1.1386 ad valorem. $7\frac{1}{2}$ per cent as a basis gives 4.8655 as the rate equal to 1.1386 ad valorem. 8 per cent, which is held to be very liberal, gives 4.55 per cent as the equivalent of 1.1386. At 8 per cent as a basis of capitalization 5 per cent on gross receipts would be the equivalent of an ad valorem rate of 1.25 per cent. On a $7\frac{1}{2}$ per cent basis 5.128 on gross receipts is the equivalent of 1.20 per cent ad valorem.

The slight variation from year to year in the 32.05 ratio is negligible. The main factors are: (1) the rate of capitalization, and (2) what is the ad valorem rate the equivalent of which is sought.

What rate of interest to allow in capitalizing earnings is a matter in which the judgment of the legislature must be finally conclusive. What the actual burden of local taxes is, is a matter for statistical determination.

Local Tax Burdens.

The same abnormal conditions of today affect the market for, and hence the market value of, real estate. To have repeated the expensive appraisalment of "true value" of property taxed locally made in 1912, would, under present conditions, have been a waste of money and effort, because the results would have been unreliable. Hence no such appraisalment was made.

Whether the ratio of local taxes to true values has increased or not during the past two years must therefore be determined by reference to such facts having a bearing on the question as are available. Some of these facts are: (1) the aggregate county regular and special taxes levied in each of the two years, (2) the aggregate assessed values in the counties for the same years, (3) the aggregate city taxes levied in each of the two years, (4) the assessed values in cities in each of the two years, (5) the growth of bond debts, and the increase in other known costs of local government. The total of "special" school and

other district taxes cannot be obtained at the time of preparing this report, and this is peculiarly unfortunate, for in 1912 the amount was large, over \$10,000,000, and it is quite as much the fashion to vote "special" taxes as to vote bonds.

All of the above data will give "indices," more or less conclusive, as to the trend of local taxation. They have to be interpreted with care, with common sense and sound business judgment.

This much is certainly true both concerning the value of public utility property and the value of real estate taxed locally, and that is: that, while "*present market values*," in the absence of a market, are no criterion of true values, yet the underlying "*sound values*" have not disappeared; they are merely concealed; and there is no reason to assume that they are widely different from what they were two years ago. Those sound values will reappear as soon as the disturbing conditions are passed.

So far as "sound values" are concerned there can be no question that in the long run, year in and year out, the gross receipts taxes keep pace with the underlying values. This is inherent in the theory and principles of the gross receipts tax. This is the basis of the comment on that tax quoted from the Minnesota Tax Commission above.

We do not, therefore, have to inquire into the growth of value of the property of the public utility companies. No new companies of any size have entered the field during the past two years. In passing it may be noted as a matter of interest but not entering into our problem that the taxable gross receipts of railroads increased 7 per cent in the past two years, of gas and electric companies 12.6 per cent, of telephone and telegraph companies 12.2 per cent; the total for all three increased 9 per cent. The reasons why the increase was not more rapid have been set forth above.

On the other hand we do have to inquire into the increase in property subject to local taxation. Each new house, each new tract subdivided adds its contribution to the local taxes. If the city and county expenditures remain the same and the taxable property increases the tax burden is less all around. If, however, the local expenditures increase more rapidly than the taxable property increases, the burden increases.

While the assessment of property for purposes of taxation is not at full value, nor does the ratio to full value used by the assessor remain constant from year to year, yet there is no reason to suppose that there has been any marked change in the past two years. Hence the growth in the assessment roll may be assumed to be fairly representative of the growth in the property taxed locally.

At the time when this report must go to press the full data as to taxes levied on the assessments of 1914 are not in hand. They are

being collected and will be presented later. The United States Census Bureau collects data every year from the cities, which data are very reliable. We print below some data drawn from the census reports. The main source of difference is this: The state reports are based by law on "city corporation" revenues, and "county" (per se) revenues. But unfortunately between the two lie a mass of "districts" with taxing powers. These are reported to the controller by the county auditors. But the census bureau very sensibly says that when a school district is coextensive or nearly so with a city and the city as a corporation collects no taxes for schools, the collections made by the "district" are in effect "city school taxes." To illustrate the difference we may cite two cases. In San Francisco, in which the city and county governments are combined, the census gives the general property tax levy in 1913 as \$11,577,446, which is very close to our reports. But for Los Angeles the Census Bureau says \$11,395,058, while our reports show only \$6,119,000. Allowing for natural differences arising from the difference in fiscal years, and between taxes charged and taxes collected, and other similar items, there is a little matter of \$5,000,000 or 5-11 to be accounted for. The explanation for the discrepancy is that the \$5,000,000 is collected by the school districts and other "districts" and is reported to Sacramento as if it were a county tax.

Per Capita Receipts From the General Property Tax.
(Census Reports.)

	1911	1912	1913	Increase Per Cent
San Francisco -----	19.32	21.66	23.90	23.7
Los Angeles -----	22.08	20.83	27.91	27.4
Oakland -----	14.53	16.28	15.24	5
Sacramento -----	15.82	16.82	14.79	*
Berkeley -----	10.90	11.10	12.10	11
Pasadena -----	20.78	19.29	26.26	26.3
San Jose -----	10.53	10.90	10.08	*
San Diego -----	18.82	22.11	21.06	11.8

*Decrease. Includes specials.

The following facts lend support to the conclusion that local taxes are really increasing faster than values. In the first place the increase in assessed values is about the normal, or nearly 6 per cent per annum, which the rolls have shown for many years past. It is, to be sure, a little under, but not enough to be worth comment. In the second place the cities and counties have been borrowing heavily and as bond taxes for the most part fall outside the charter and other tax limits, they usually increase the tax rates materially. The following

figures from the Controller's report of the year show the facts. The report says:

The following figures not only show the outstanding bond indebtedness of the municipalities for the years given, but also the growth of such debts:

1910 (partial) -----	\$28,539,795 84
1911 -----	65,573,033 51
1912 -----	83,297,510 96
1913 -----	100,387,559 40

The records available for use by this office cover a longer period for the counties than for the cities, their outstanding bond debts for the years indicated being as follows:

1907 -----	\$6,555,660 00
1908 -----	7,605,315 00
1909 -----	17,998,310 00
1910 -----	23,357,411 00
1911 -----	27,503,066 00
1912 -----	36,118,481 00
1913 -----	47,346,540 00
1914 -----	57,353,545 00

The full effect of these increases is not yet shown in tax levies. But this much is clear. The increase in the city debts was in round numbers \$35,000,000 (the census shows \$34,000,000 in eight cities alone which far exceeds our imperfect reports) in two years and in county debts \$20,000,000. The amount of "district" debts and of special levies is not at this time known. A total of \$55,000,000 of new bonds means at 4 per cent interest only ($4\frac{1}{2}$ per cent is probably nearer the truth) \$2,750,000 additional interest charges, and taking an average of 30 years as the life of the bonds the new bond redemption charges are over \$1,800,000 annually, or a total of \$4,550,000 annually, which is 7 per cent at least of the taxes reported to the state. Inasmuch as "district" bonds are not included the 7 per cent stands. A table hereinafter set forth shows the Census Bureau's report on interest and redemption charges to be \$7,000,000 per annum for the eight largest cities alone. This leaves out 202 other cities and *all counties* and districts. It also shows increase in annual debt charges of \$1,500,000, or 28 per cent in the last two years.

Interest Payments and Debt Redemption.

Includes district taxes for purposes akin to general municipal.

Further items tending to raise local taxes are: (1) the share assumed by the counties in the new state highway system, namely, bridges and the interest on the state highway bonds (total authorized issue \$18,000,000); interest sixty-fifth fiscal year, \$69,630.66; sixty-sixth, \$180,045.15; (2) special local contributions for the Panama-Pacific Exposition and for exhibits; (3) many cities which have voted to prohibit the sale of liquor have had to increase the property tax to make up for the loss of license taxes.

These facts taken together explain in large measure why the taxes have outrun the assessment rolls in growth in the past two years. They make, together, in our opinion a complete confirmation of the otherwise astonishing growth of local taxes in the short space of two years.

There is one case in which the rates were not adjusted in 1913. That is the case of the banks. Their rate was left at 1 per cent of the book value of the capital stock less the assessed value of the real estate, as before. There is no question but that the state rate on banks should be raised to such an amount as will make their taxes equal to the taxes borne by other property. This report was not specifically argued by this board in the special report above referred to, because it seemed

to us self-evident that if other property is taxed at the rate of 1.14 per cent of its true value, bank stock should be taxed at the same rate.

As an argument against an advance in their tax rate the banks claimed that the total taxes they paid, including their taxes on real estate, equaled or exceeded the normal or average rate. This seems hard to believe, for, if the average or normal rate be applied to part of the property, namely, the real estate, and less than the normal rate to the balance, the result must be a total tax less than the normal. The banks submitted some figures to establish their claim, but unfortunately they were submitted in such a rough, nearly illegible form—mere pencil tabulations—that they could not be checked.

Two kinds of errors are surmised to have crept into these figures which may have made them show a result that is mathematically impossible. One is the practice of banks, especially of the strong ones, of carrying their real estate on the books at less than true value. This is no doubt good banking practice, as it makes the banks safer than their books show. But it has the effect of giving them a double deduction for their real estate, at least in part. This is a matter which has received the earnest attention of this board, and we have corrected it, so far as possible, to protect the state's revenues by raising the true value of the real estate and adding the increase to the taxable value of the stock. But a still more important source of error in the bank's figures seems to have been the inclusion of taxes paid on real estate held by the banks as security for loans. These taxes are of course paid on behalf of the true owner and not borne by the banks.

This much must be conceded to the argument made by the banks, namely, that they are allowed to deduct only the "assessed value" of their real estate and are thus not allowed in full the true ratio of the tax to the true value as an offset on the taxes on the stock. As any other procedure would involve insuperable administrative difficulties, this must continue. But it must never be lost sight of that the book value of the stock is less than the true value of that part of the assets belonging to the banks as explained above, and less also than the market value of the stock. The same under valuation as was noted above in regard to real estate is found in the securities held. These are concessions made to the banks in the interest of certainty in the tax administration. But their effect on mere figures should not be urged against a tax at the same rate on bank stock as on other property.

III. New Taxes.

There are a number of unused taxes which might be resorted to without any change in the constitution.

Among these are: (1) License taxes, which may be general on all lines of business, or special on selected lines. Among these, license

taxes may be imposed on the liquor business. (2) A state income tax. (3) A registration tax on credits. (4) A stock transfer tax. (5) The restoration of the old corporation license tax. (6) Stamp taxes. While this list is not exhaustive of all the possibilities, yet it covers everything of importance tried in the commonwealths of the United States recently.

1. LICENSE TAXES.

A general state tax in the form of a license tax on all lines of business not conducted by corporations already taxed by the state would fill in an alleged gap in our tax system. Corporations sometimes complain that they are subjected to competition from firms and partnerships not subject to the franchise tax which corporations have to pay, and that this constitutes a discrimination in favor of businesses that are not incorporated. While this is a debatable question in view of the great advantages arising from being incorporated, yet this much may be conceded, and that is that good will and the like, while clearly taxable property, are seldom taxed, and a license tax would to that extent fill in a gap.

Until the adoption of the codes in 1872, this state used frequently to resort to license taxes. Since then they have been left to the counties and municipalities. Comparatively few counties or municipalities make extensive use of these powers.

The Nature of Business License Taxes.

Such taxes are excise taxes under the law. The term "license" as applied to these taxes is misleading, because the popular idea of a license is that it is a permit connected with the enforcement of statutes, ordinances or regulations designed for the preservation of public morals, the protection of life, property, or health. As a matter of fact, the tax and the permit are two different things. To keep a dog, or to sell liquor requires a permit (license) because these things are subject to police regulation and supervision. The issuance of the permit may also be made, and usually is made, the occasion for imposing and collecting a tax. But the connection is not at all necessary. The permit may be issued without a tax, a tax imposed without a permit.

But where the tax is levied on a business not specifically subject to police regulation, say butchers, the permit, if issued, is of no other significance than a tax receipt.

General business taxes or license taxes are extensively used in the southern states. As a concrete example of what is meant we present in the appendix hereto a complete abstract of the laws of Tennessee and some citations from the laws of Louisiana. The compilation is based on the law of 1907. These citations are not presented as recommendations but as illustrations merely.

LIQUOR TAXES.

There are over 17,000 dealers in liquor, including malt liquor, in California. An annual state tax on these, at a rate as low as an average of \$100 per annum, would yield \$1,700,000. It is only a matter of graduating the rates to secure almost any revenue desired.

It is unfortunate that this possible tax probably can not be considered or discussed entirely apart from the question of regulation of the traffic, upon which the people are largely divided. Thus a high uniform tax will kill the small dealer. In doing so it might, also, affect municipal revenues. Yet if one is willing to do so, this tax can be considered quite apart from the question of "wet" or "dry."

It is not the province of this board to make recommendations concerning social policy. But we may point out that a graduated tax on liquor dealers can be framed which will not disturb existing conditions as to the policy in regard to the liquor business in any essential particular. A state tax on liquor dealers, framed for revenue purposes and not for regulation, need not in the slightest degree interfere with local option or with local regulation. The permit (license) may still be denied or issued locally in the first instance, and the payment of the state tax can be required subsequent thereto. It is not necessary to require a state permit in addition to the local as a prerequisite to doing business, nor even to secure collection of the tax, for the state tax can be enforced by making it a lien on the property. By so doing the state would never "license" the business. The local license, as now, would be the sole "license" or permit. Non-payment of the state tax would not make the business illegal nor destroy a license locally issued. Nor would the enforced collection by seizure and sale invalidate the local license any more than would such enforced collection of debts or of ad valorem taxes. The only possible effect of a purely revenue state liquor tax, such as has been described, might arise from the fact that, added to existing local taxes, it might kill off a few dealers. To that trivial extent it would lessen the number of saloons and require a readjustment of local license rates to secure the same local revenue.

We have secured through the courtesy of the United States revenue collectors the number of licenses of each class issued in California:

Retail dealers -----	15,843
Wholesale dealers -----	1,060
Rectifiers -----	128
Brewers -----	111
Distillers (southern district only) -----	76
Total -----	17,218

2. An Income Tax.

The constitution provides:

Income taxes may be assessed to and collected from persons, corporations, joint stock associations, or companies resident or doing business in this state, or any one or more of them, in such cases and amounts, and in such manner, as shall be prescribed by law.

This is the broadest provision in the constitution so far as power conferred upon the legislature is concerned. Under it the state can levy any kind of an income tax desired.

An income tax has many theoretical advantages. It is generally conceded that if all taxation were actually in proportion to income it would be wholly just. An income tax, in addition to and on top of other taxes is, of course, unequal unless adjusted to the other taxes. The adjustment is difficult but not impossible.

THE FEDERAL INCOME TAX.

The federal government has recently adopted an income tax but it has by no means preempted the field. The federal law itself suggests the joint use of the federal income tax machinery by the states, in that it provides that the reports rendered to the federal government may, on request of the governor, be used by any state which has an income tax.

If the federal government were using or showed any intention to use the income tax seriously for its own revenues, there might be objection to allowing the states to use the same source of revenue. But so far the federal income tax is very insignificant. It does not begin until an individual's income exceeds \$3,000 (\$4,000 for a man and wife) and the rates are so low that they do not reach 1 per cent until the individual's income reaches \$24,000. The revenue raised in the entire country by this means is less than \$30,000,000 over and above that portion of the tax falling on corporations, which was there before, and is only by construction a part of the income tax. The federal income tax was introduced as an elastic element in an otherwise inelastic tax system. But on the very first occasion for "elasticity," the recent "war taxes," the administration turned to new internal revenue taxes.

As the total federal revenues exceed \$1,000,000,000, the income tax is a very small part thereof, some 3 per cent only.

STATE INCOME TAX.

A number of states have tried to use income taxes at various times and in varying degrees. On account of administrative difficulties all failed, except Virginia, of getting favorable results, and the success of Virginia was trivial. It is the opinion of some authorities on taxation that the income tax is particularly appropriate to state use. Indirect

taxes for the federal government, income and inheritance taxes for the states, property taxes for the cities and counties, would constitute an ideal system for the country at large. But the states, while strong on legislation, have been weak on administration. Most state income taxes have been left to locally selected officers to assess and collect. As a result the income taxes were never effectively enforced, and many eminent authorities held that the states could not use income taxes effectively because they could never develop the necessary administrative machinery. There was the further difficulty that as every state was striving to tax *all property*, the sources of income were being taxed by them. To tax the income in addition to the property from which it came smacked of double taxation.

WISCONSIN'S INCOME TAX.

It remained for Wisconsin to discover the solution of both these difficulties. The administrative difficulty it solved by placing the execution of the law in the hands of a strong central tax commission, severed from politics and not dependent on the good will of the tax dodgers.

The other difficulty it solved by making the tax in lieu of certain taxes on personal property. As an illustration we cite the following description of the Wisconsin tax from the 1911-1912 report of the state tax commission of that state. The report is the latest published. It covers only the first year of the operation of the income tax.

THE INCOME TAX.

History of the Law.

The movement which culminated in the adoption of a state income tax in Wisconsin received its first impulse from the widespread dissatisfaction aroused by the operation of the general property tax as applied to personal property. There were grave doubts whether a graduated income tax could be sustained under the uniformity clause of the state constitution, and a joint resolution for a constitutional amendment authorizing such a tax was proposed to the legislature of 1903 and passed both houses with but one dissenting vote. Through an oversight this amendment was not advertised as required by law, and in 1905 the resolution was again introduced though in somewhat different form. Section 1, article VIII, of the state constitution was amended to read as follows:

"The rules of taxation shall be uniform and taxes shall be levied upon such property as the legislature shall prescribe. Taxes may also be imposed on incomes, privileges, and occupations, which taxes may be graduated and progressive, and reasonable exemptions may be provided."

The second sentence constituted the amendment, which was passed without much debate and by large majorities. At the legislative session of 1907 the amendment was ratified unanimously by the senate and with but one dissenting vote in the house. In 1908 the amendment was submitted to the people at the general election, and was adopted by the decisive vote of 85,969 to 37,729.

In 1909 a tentative bill providing for an income tax was introduced, and a "recess committee" of seven—four from the assembly and three from the senate—was appointed to investigate the subject and report to the next legislature. At the legislative session of 1911 a great number of amendments were offered to the bill proposed by the committee, and after very exhaustive discussion and debate it was finally passed by the assembly June 23, 1911, concurred in by the senate June 28th, and became a law by publication on the fifteenth of July.

It will thus be seen that the law was not passed hastily but received an amount of preliminary consideration and discussion such as has seldom been accorded to an American fiscal measure of this character.

Constitutionality of the Law.

Soon after the publication of the law, an action in equity was begun for the purpose of enjoining the secretary of state and other state officers, including the tax commission, from paying out any state moneys or performing any other administrative acts in connection with the law on the ground that the law was unconstitutional. The attorney general having declined to bring the suit, the original jurisdiction of the supreme court was invoked, and in the case of *State ex rel. Bolens vs. Frear, Secretary of State* (see *Income Tax Cases*, 148 Wis. 456), leave to bring a suit was granted. The decision in that case fully sustained the constitutionality of the law.

In answering the claim that the law violated the fourteenth amendment, the court held that such amendment

"* * * never was intended to lay upon the states an unbending rule of equal taxation; the states may make exemptions, levy different rates upon different classes, tax such property as they choose, and make such deductions as they choose and so long as they obey their own constitutions and proceed within reasonable limits and general usage there is no power to say them nay."

The progressive feature of the law in the graduation of the tax was sustained, and it was further held that exemptions might be allowed to individuals which were denied to firms; that there was not necessarily any injustice in permitting such persons as had paid personal property taxes to offset the amount of such taxes against their income tax; that the rental value of a residence occupied by the owner might be treated as income; that the income of wife and children might properly be taxed to the husband; that the law was not retroactive in that it taxed incomes received prior to its passage; and that corporations enjoyed privileges which would justify the difference of treatment in respect to rates, exemptions, and the like.

Salient Features of the Income Tax.

The Wisconsin income tax differs in several important particulars from any other income tax ever adopted in this country. The following are the distinctive features of the Wisconsin income tax:

First—It is not an additional tax, but a substitute for the tax on certain classes of personal property, particularly moneys and credits. Moreover, any personal property tax which a person pays is subtracted from his income tax. Thus, if John Smith is assessed for an income tax of \$25 and for a personal property tax of \$15, he pays as *income tax* only the difference of \$10. This is popularly referred to as the "personal tax offset."

Second—It does not tax the whole income of persons engaged in business within and without the state, but is confined to the income derived from property located and business transacted within the state.

Third—It is not a state tax. Seventy per cent of the tax goes to the town, city or village in which it is collected, 20 per cent to the county and 10 per cent to the state. The state pays out of this 10 per cent practically all of the expenses of administration.

Fourth—The tariff of rates imposed upon corporations differs materially from that applicable to copartnerships and individuals. The rate upon individuals and copartnerships is one per cent on the first thousand dollars of taxable income, one and one quarter per cent upon the second thousand dollars, and rises gradually to six per cent, where it stops. The rate applicable to corporations, however, is determined by the relation between the taxable income and the assessed value of the property used and employed in the acquisition of such income. The rate of taxation is practically one half of the earnings as calculated upon the assessed value of the property, but in no case exceeds six per cent. Thus, if the taxable

income of a corporation is one per cent or less of the assessed value of the property employed in its acquisition, the rate of taxation is one half of one per cent; if the taxable income is more than three but does not exceed four per cent of the assessed value of the property used in its acquisition, the rate of taxation is two per cent; and so on until six per cent is reached. In other words, the rate of taxation varies with the rate of earnings calculated upon the assessed value of the property employed in its acquisition.

Fifth—The principle of *collection at source* has been extensively applied. Thus, the corporation pays on its total profits and the individual stockholder is not taxed upon his dividend. So also the interest paid upon bonds of corporations subject to the Wisconsin income tax is, for practical purposes, taxed directly to the corporation and exempted to the individual bond holder.

Sixth—The administration of the law is centralized in the tax commission and is not left to local officials. The assessors of income are appointed after civil service examinations and are entirely independent of local influences.

Owing to the impossibility of securing necessary data at this time, the complete study of the operation of the income tax is necessarily deferred. However, it is possible at the present time to present totals for the entire state and a more or less complete study of the operation of the law in twelve typical counties, together with recommendations for certain amendments which it would be desirable to adopt immediately in order that they may be applied in the 1913 assessment.

General Results. The total income tax assessed amounts to \$3,501,161.46, of which \$2,392,454.44, or 68.3 per cent, is assessed against corporations and \$1,108,707.02, or 31.7 per cent, is assessed against firms and individuals. The average rate of taxation upon firms and individuals is 1.93 per cent and upon corporations 5.4 per cent. The number of taxpayers, excluding corporations, per 1,000 of population is 19.96, and varies from 40.27 in Milwaukee County to 2.55 in Burnett County.

These figures are noteworthy in many respects. It has repeatedly been charged by critics that although a number of American states have experimented with the income tax, in no case has it proved a success. The answer has been that the income tax was never given a fair trial by any American state. This answer now proves to be essentially correct. The Wisconsin income tax probably exceeds many times over the state income taxes of a general kind collected in all other states of the union. The largest of these state income taxes of which we have a knowledge, except during the civil war period, was collected in Virginia in the fiscal year 1910-1911. It amounted to \$129,429. This is less than the income tax assessed in Racine County alone.

The Wisconsin income tax makes a very favorable showing when compared with the federal income taxes which have been levied from time to time. The first federal income tax, imposed during the civil war, yielded in the first year, 1863, for the whole United States, \$2,741,858, or only 78.3 per cent of the amount raised last year in the state of Wisconsin alone. In the first year of the present federal income tax, known as the special excise tax on corporations, the whole amount assessed was \$27,290,767.43, of which \$592,217.42 was upon Wisconsin corporations. In the second year the amount assessed upon Wisconsin corporations was \$484,563.23, or only 20.3 per cent of the amount assessed upon corporations by the *state* income tax. It should be remembered that the federal law covers the income from railroads, public utility corporations, insurance companies and national banks which are not subject to the state income tax.

Personal Tax Offset. The preceding figures represent the amount of income tax assessed. What reduction will be caused by the personal tax offset cannot now be stated. The offset provided for by law plainly seems to be the personal taxes levied in 1912. Inasmuch as the personal taxes of 1912 had not been computed when this report went to press, it was impossible to determine exactly what per cent of the income tax assessed would be offset by personal property taxes. It seems not unreasonable, however, to assume that the personal tax of the average income taxpayer would not be larger in 1912 than in 1911. It is true that remarkable improvement in the assessment of personal property has taken place, but this is probably

counterbalanced by the exemption of those classes of personal property mentioned above. In the following figures, therefore, the personal tax of 1911 has been used as a fair measure of the personal tax offset of 1912.

On this assumption the net yield of the income tax over and above the personal tax offset will be between 60 and 65 per cent of the amount assessed, or from \$2,100,000 to \$2,275,000, in round figures. Careful investigation in twelve counties, excluding Milwaukee County, shows a personal tax offset in the case of corporations of 39 per cent, and in the case of individuals of 34 per cent. It is known that in Milwaukee County the offset will be less than this in the case of individuals, probably not more than 20 per cent, but more in the case of corporations, probably close to 50 per cent. All the figures agree in suggesting an offset for individuals and corporations together of from 35 to 40 per cent, say, 37 per cent. This would make the net yield of the income tax about \$2,200,000. Of this amount:

The share of the state will be.....	\$220,000
The share of the counties will be.....	440,000
The share of the towns, cities and villages will be.....	1,540,000
Total	\$2,200,000

Urban and Rural Communities. The results of the first assessment make it clear that the income tax is primarily an urban tax. Over 40 per cent of the entire tax is assessed in Milwaukee city alone and more than 80 per cent in the seventeen counties containing cities of the second, third and fourth classes. Measured by income, there are plainly more persons capable of paying taxes in the city than in the country. Excluding corporations, about 4.03 per cent of the population is assessed for income tax in Milwaukee County—about one family in every five. In the sixteen counties having second and third class cities, about 2 per cent of the population is assessed for income tax, or one family in every ten. In the fifty-four remaining counties only 1.1 per cent of the population is subject to the income tax, or something over one family in every twenty. The typical city taxpayer also pays a larger income tax than the rural taxpayer. Thus in Milwaukee city the average income tax assessed is \$30.63, while in the sixteen counties it is \$23.40, and in the other counties, \$14.95.

This concentration of the income tax in cities emphasizes both the strength and weakness of the income tax. Its weakest feature perhaps arises from the fact that a large part of the income of the farmer is non-monetary. The typical farmer raises, even at this time, a considerable amount of the produce which he consumes; and although this is theoretically taxable, it is difficult to measure it in money and add it to his net money income. Moreover, most farmers in Wisconsin have in past years taken a large part of their compensation in the form of a general increase in the value of their farms. A man buys 160 acres at \$8,000, farms and improves it for fifteen or twenty years and then sells it for \$16,000, taking a relatively small compensation in the mean while in order to build up his capital assets from \$8,000 to \$16,000. In the case of the mercantile or manufacturing concern with an accurate accounting system, the yearly improvement, if paid for from earnings, would show as net profit and be taxable as such. In the case of the farmer this annual increment escapes, because the farmer's accounts are too simple to record and measure it.

While this defect of the income tax must be acknowledged and clearly faced, it is of small importance. In the first place, with the liberal exemptions provided in the Wisconsin income tax, few farmers would be subject to any tax, even though their receipts and expenditures were recorded with absolute accuracy. In the second place, almost all the income tax goes back to the political subdivision in which it is collected. If a rural town has no income tax assessed within its borders, it gets little benefit from the income tax. Seventy per cent of the proceeds of the tax is retained in the local district in which collected; and the 20 per cent which goes to the county comes back to the local subdivisions, to a large degree, in the form of reduced county taxes. The rural districts benefit slightly by the 20 per cent which goes to the county. It contributes less to this quota than it receives in the form of reduced county taxes

on property. But the difference is slight and not unjust because, after all, the greater share of taxpaying ability is found in the cities. This is particularly true of that form of personal ability which the income tax is specifically designed to reach. Moreover, under the personal property tax the ratio of assessed to true value is higher in the country than the city districts; and real estate, which is relatively well taxed everywhere, constitutes a much larger share of the total wealth of the farmer than of the city man. While it is true, therefore, that the income tax works better in the city than in the country, it is also true that the defect is a small one and is counter-balanced by defects of the property tax working in the other direction. The income tax and the property tax mutually correct each other's deficiencies. The two must always be considered together.

The tax conditions in Wisconsin are very similar to those in California. The most important difference is that we have already exempted mortgages entirely.

The inauguration of an income tax might be regarded as an important step forward in the direction of a sounder system of taxation. It is a tax that is somewhat slow in yield at the beginning, and can not be counted on for the needs of the next fiscal year and possibly not for the second. If it be selected as the ultimate line of relief it might be advisable to use the ad valorem tax to tide over the interval.

3. A Registration Tax on Solvent Credits.

This is discussed here merely because it has been suggested by the practice of other states. We do not consider it feasible in California.

The difficulties encountered in enforcing the taxation of personal property under the old general property tax have led many states to introduce as a compromise a sort of commutation tax on bonds or mortgages and other credits, that is, a tax at a low rate is levied on these in lieu of the full property tax.

It should be borne in mind that the theory of the property tax in those states has differed materially from the theory of our property tax. In California, since 1879, the theory, more or less imperfectly worked out until lately, has been that the tax should fall on the property itself and on that only, and not on the things which stand for and represent the property. Hence with us stocks, bonds and mortgages are exempt and only a limited class of solvent credits is taxable. But in the states now referred to it has been the theory that as the stocks, bonds and mortgages belong to persons other than the holders of the property, both the property and the things which stand for and represent it should be taxed. In enforcing this theory the states encountered great practical difficulties. The owners of the stocks, bonds, mortgages and the like felt that this was double taxation. Moreover, it was impossible to hold a 4 per cent bond if it was subject to a 2 per cent tax. Hence the stocks, bonds and mortgages were hidden away. It was thought, however, that they might be brought out of hiding if subject to a less severe tax than the entire amount of the general property tax. No little success has been achieved in this way. The owners are willing to pay a small tax on

them to gain complete exemption from any danger of the heavy property tax which might otherwise fall upon them, if found by the assessor.

These taxes do, of course, involve a degree of double taxation. But it is argued that there is no objection to this because the possession of a secured income from such property argues the ability to pay more in taxes than is possessed by the less fortunate.

The prototype of these taxes is the old Connecticut tax called the chose in action tax. We quote the provisions of the statute in full:

Payment to state treasurer of tax on choses in action. Any person may take or send to the office of the treasurer of this state any bond, note or other chose in action, or a description of the same, and may pay to the state a tax of two per centum on the face amount thereof for five years or, at the option of such person, for a greater or less number of years at the same rate, under such regulations as the treasurer may prescribe, and the treasurer shall thereupon make an indorsement upon said bond, note or other chose in action, or shall give a receipt for the tax thereon, describing said bond, note or other chose in action, certifying that the same is exempt from all taxation for the period of five years, or for such longer or shorter period for which a proportionate tax has been paid, which indorsement or receipt shall be duly dated and signed in the name of the treasurer and with the seal of the treasurer affixed. Said treasurer shall keep a record of such indorsements and receipts with a description of such bonds, notes or other choses in action, together with the name and address of the party presenting the same and date of registration; and said treasurer shall annually, on or before the tenth day of November, mail to the town clerk of each town a general description of all such bonds, notes or other choses in action so registered before the first day of October last preceding by persons residing in such town, and the date and period of such registration, and the names of the persons by whom the same were registered; and all bonds, notes or other choses in action so indorsed or described in such a receipt shall be exempt from all taxation in the state during the period for which said tax is so paid.

New York began this type of taxation with a registration tax on mortgages alone in 1906, and in 1911 extended it to all secured debts. The latter tax is criticised because it exempts the bond in perpetuity for a single payment. It should be like the Connecticut tax, an annual tax.

Minnesota likewise began in 1907 with a mortgage registry tax and extended it in 1911 to money and credits.

There are grave constitutional difficulties in the way of this tax in California. Mortgages are exempt and that covers bonds secured thereby. All public bonds are exempt. Shares of stock in California companies are exempt. The small group of taxable solvent credits left consists of credits not all of a nature to be registered and moreover the taxpayer is allowed to deduct from them his debts. Thus the field for this sort of tax is extremely limited. The yield would be very small. Moreover, the theory of our property tax is sounder than that which called for this crude mode of correction in other states. We do reach the property represented by these securities, and that is enough.

4. A Stock Transfer Tax.

New York imposes a tax of this sort. The salient part of the law reads as follows:

There is hereby imposed and shall immediately accrue and be collected a tax, as herein provided, on all sales, or agreements to sell, or memoranda of sales of stock, and upon any and all deliveries or transfers of shares or certificates of stock, in any domestic or foreign association, company or corporation, made after the first day of June, nineteen hundred and five, whether made upon or shown by the books of the association, company or corporation, or by assignment in blank, or by any delivery, or by any paper or agreement or memorandum or other evidence of sale or transfer, whether intermediate or final, and whether investing the holder with the beneficial interest in or legal title to said stock, or merely with the possession or use thereof for any purpose, or to secure the future payment of money, or the future transfer of any stock, on each hundred dollars of face value or fraction thereof, two cents. It shall be the duty of the person or persons making or effectuating the sale or transfer to procure and affix the stamps and pay the tax provided by this article. It is not intended by this act to impose a tax upon an agreement evidencing the deposit of stock certificates as collateral security for money loaned thereon, which stock certificates are not actually sold, nor upon such stock certificates so deposited, nor upon mere loans of stock or the return thereof. The payment of such tax shall be denoted by an adhesive stamp or stamps affixed as follows: In the case of a sale or transfer, where the evidence of the transaction is shown only by the books of the association, company or corporation, the stamp shall be placed upon such books, and it shall be the duty of the person making or effectuating such sale or transfer to procure and furnish to the association, company or corporation the requisite stamps, and of such association, company or corporation to affix and cancel the same. Where the transaction is effected by the delivery or transfer of a certificate, the stamp shall be placed upon the surrendered certificate; and in cases of an agreement to sell, or where the sale is effected by delivery of the certificate assigned in blank, there shall be made and delivered by the seller to the buyer a bill or memorandum of such sale to which the stamp provided for this article shall be affixed. Every such bill or memorandum of sale or agreement to sell shall show the date of transaction which it evidences, the name of the seller, the stock to which it relates, and the number of shares thereof; and no further tax is hereby imposed upon the delivery of the certificate of stock, or upon the actual issue of a new certificate when the original certificate of stock is accompanied by the duly stamped memorandum of sale as herein provided. (Thus amended by law 1910, chap. 38; law 1911, chap. 352; law 1912, chap. 292; in effect May 1, 1912.)

No particular comment need be made on this tax, beyond pointing out that it is more productive of revenue in a state where the great stock exchange is located than in one where there are only minor exchanges.

5. The Corporation License Tax.

The old corporation license tax was repealed for two reasons. *First*, there were so many different taxes on corporations that they were justly annoyed by the multiplicity of tax bills and reports. *Second*, the decision of our supreme court in the Mulford case (*H. K. Mulford Co. vs. Curry, Secretary of State*, 163 Cal. 276), appeared to take foreign corporations out from under this tax. As the constitution provided that foreign corporations should not be allowed to do business in California on any more favorable terms than domestic corporations, it seemed necessary to equalize the taxes by repealing the tax on domestic companies.

Since the decision in the Mulford case was handed down there have been a long series of decisions in many states, and finally by the Supreme Court of the United States, holding the very reverse of the Mulford case. On December 15, 1914, our State Supreme Court handed down a decision in the case of *Albert Pick Company vs. Jordan, Secretary of State*, completely reversing the Mulford case and following out the views of the United States Supreme Court laid down in the cases of the *Baltic Mining Company* and *The S. S. White Dental Manufacturing Company vs. Commonwealth of Massachusetts*. A full history of these corporation license tax cases is set forth in the (1914) report of the Attorney General of California.

A new law in line with these decisions would certainly be upheld now.

The difficulty of many taxes, or many tax bills, can be overcome by making this tax payable at the same time and on the same bill as the other state taxes. This involves transferring the collection of this tax from the secretary of state to the controller, which would result in a saving of expense.

The ratification of the "blue sky" law makes the restoration of this tax very desirable. It may be that the "blue sky" law commissioner would be the proper officer to assess this tax, which tends to keep the rolls purged of dead companies.

At the old rates this tax should yield between \$800,000 and \$900,000 annually.

6. Stamp Taxes.

From 1857 to 1872 this state imposed a stamp tax on bills of exchange, drafts or orders, certificates or other written evidence of deposit, or letters of credit payable out of the state. The rates were:

If the draft were for—	Rates.
\$20 00 to \$50 00-----	\$ 08
50 00 to 100 00-----	20
100 00 to 150 00-----	30
150 00 to 200 00-----	40
200 00 to 300 00-----	60
300 00 to 400 00-----	86
400 00 to 500 00-----	1 00
500 00 to 750 00-----	1 50
750 00 to 1,000 00-----	2 00
1,000 00 to 1,500 00-----	3 00
1,500 00 to 2,000 00-----	4 00
2,000 00 to 3,000 00-----	6 00
3,000 00 to 4,000 00-----	8 00
4,000 00 to 5,000 00-----	10 00
5,000 00 to 7,000 00-----	14 00
7,000 00 to 10,000 00-----	20 00
10,000 00 to 15,000 00-----	30 00
15,000 00 to 20,000 00-----	38 00
20,000 00 to 30,000 00-----	56 00
30,000 00 to 50,000 00-----	90 00
50,000 00 to 100,000 00-----	175 00
Over 100,000 00-----	200 00

The tax yielded as high as \$200,000 in 1866. The year before its repeal it paid \$172,781.13 with \$37,951.52 coming in in 1872, or at the rate of about \$200,000. It would probably yield much more today.

This tax can easily be extended to many other things, such as checks, deeds, conveyances, receipts, stock certificates, in short to almost all documents. But it could not cover mortgages or bonds.

It is a rather uncommon tax for state purposes. Virginia has such a tax on deeds and conveyances.

CONSTITUTIONAL AMENDMENTS RELATING TO TAX LAWS.

At the recent election held on November 3d the people were called upon to vote upon several changes in our constitution, five of which propositions had a direct bearing upon the tax laws. We give the action of the people on these amendments:

Local Taxation Exemption.

Proposition to amend article XIII of the constitution by adding section 8 $\frac{1}{2}$, to read as follows:

Section 8 $\frac{1}{2}$. Any county, city and county, city or town, may exempt from taxation for local purposes in whole or in part, any one or more of the following classes of property: improvements in, on, or over land; shipping; household furniture; live stock; merchandise; machinery; tools; farming implements; vehicles; other personal property except franchises. Any ordinance or resolution of any county, city and county, city or town, exempting property from taxation, as in this section provided, shall be subject to a referendum vote as by law provided for ordinances or resolutions. Taxes levied upon property not exempt from taxation shall be uniform.

The amendment was defeated by a vote of 267,618 for and 375,634 against.

An amendment to almost the same tenor and effect was submitted to the people in the election of November, 1912, and was defeated by a vote of 169,321 for and 243,959 against.

Exemption of Shipping.

Proposition to amend article XIII of the constitution by adding section 4, to read as follows:

Section 4. All vessels of more than fifty tons burden registered at any port in this state and engaged in the transportation of freight or passengers, shall be exempt from taxation except for state purposes, until and including the first day of January, nineteen hundred thirty-five.

The amendment was adopted and ratified by the people by a vote of 359,176 for and 301,969 against.

Abolition of Poll and All Head Taxes.

Initiative proposition to amend section 12 of article XIII of the constitution, to read as follows:

Section 12. No poll tax or head tax for any purpose whatsoever shall be levied or collected in the State of California.

The amendment was adopted and ratified by the people by a vote of 405,375 for and 374,487 against.

Taxation of Public Property.

Proposition to amend section 1 of article XIII of the constitution, to read as follows:

Section 1. All property in the state except as otherwise in this constitution provided, not exempt under the laws of the United States, shall be taxed in proportion to its value, to be ascertained as provided by law, or as hereinafter provided. The

word "property," as used in this article and section, is hereby declared to include moneys, credits, bonds, stocks, dues, franchises, and all other matters and things, real, personal, and mixed, capable of private ownership; provided, that a mortgage, deed of trust, contract, or other obligation by which a debt is secured when land is pledged as security for the payment thereof, together with the money represented by such debt, shall not be considered property subject to taxation; and further provided, that property used for free public libraries and free museums, growing crops, property used exclusively for public schools, and such as may belong to the United States, this state, or to any county, city and county, or municipal corporation within this state shall be exempt from taxation, except such lands and the improvements thereon located outside of the county, city and county or municipal corporation owning the same as were subject to taxation at the time of the acquisition of the same by said county, city and county or municipal corporation; provided, that no improvements of any character whatever constructed by any county, city and county or municipal corporation shall be subject to taxation. All lands or improvements thereon, belonging to any county, city and county or municipal corporation, not exempt from taxation, shall be assessed by the assessor of the county, city and county or municipal corporation in which said lands or improvements are located, and said assessment shall be subject to review, equalization and adjustment by the state board of equalization. The legislature may provide, except in the case of credits secured by mortgage or trust deed, for a deduction from credits of debts due to bona fide residents of this state.

The amendment to the section is shown in black-faced type.

The amendment was adopted and ratified by a vote of 344,433 for and 216,612 against.

Exempting Educational Institutions From Taxation.

Proposition to amend article XIII of the constitution by adding thereto section 1a, to read as follows:

Section 1a. Any educational institution of collegiate grade, within the State of California, not conducted for profit, shall hold exempt from taxation its buildings and equipment, its grounds within which its buildings are located, not exceeding one hundred acres in area, its securities and income used exclusively for the purposes of education.

The amendment was adopted and ratified by a vote of 331,549 for and 293,721 against.

Respectfully submitted.

JOHN MITCHELL, Chairman.

R. E. COLLINS.

JEFF McELVAINE.

EDWARD M. ROLKIN.

JOHN S. CHAMBERS, Controller.

T. M. EBY, Secretary.

DETAILED STATEMENT OF EXPENDITURES.

Manner in which the appropriation for postage, expressage, telegraphing and contingent expenses of the State Board of Equalization was expended for the sixty-fourth fiscal year, ending June 30, 1913:

I, T. M. Eby, Secretary of the State Board of Equalization, do hereby certify that the foregoing is a true and correct statement, in detail, of the manner in which the appropriation for postage, expressage, telegraphing and contingent expenses was expended, vouchers for all of which are on file with the State Controller.

T. M. EBY.

Subscribed and sworn to before me this 2d day of September, 1914.

D. A. MOULTON, Deputy Controller.

Valuations and Rates of Taxes, 1913 and 1914.

Showing valuation of property on which was based the tax rate in aid of the Panama-Pacific International Exposition.

SCHEDULE A.

1913.

Value returned by auditors (non-operative).....	\$2,633,130,255 00
Value returned by auditors (operative).....	324,907,548 00
Railroad assessments by State Board (operative).....	151,113,742 00
<hr/>	
Valuation on which was based Panama-Pacific rate.....	\$3,109,151,545 00
Amount to be raised for sixty-fifth fiscal year.....	*1,226,554 00
Rate of tax on each \$100 of assessed value.....	042

SCHEDULE B.

1914.

Value returned by auditors (non-operative).....	\$2,694,088,860 00
Value returned by auditors (operative).....	351,511,804 00
Railroad assessments by State Board (operative).....	156,849,882 00
<hr/>	
Valuation on which was based Panama-Pacific rate.....	\$3,202,450,546 00
Amount to be raised for sixty-sixth fiscal year.....	†1,185,955 60
Rate of tax on each \$100 of assessed value.....	039

*In the sixty-fourth fiscal year there was raised \$23,446.00 over the \$1,250,000 required to be raised, hence in the sixty-fifth fiscal year the overplus was taken into account.

†From the Controller's records it was shown that in the sixty-third, sixty-fourth and sixty-fifth fiscal years there has been actually received \$3,814,044.40, which amount was deducted from \$5,000,000, the original amount to be raised.

SCHEDULE C.
Number of acres assessed, as per auditor's statements, and value of real estate and improvements, for 1913.

Counties	Acres assessed	Value of real estate other than city and town lots	Value of city and town lots	Value of all real estate (Non-operative)	Value of improvements on real estate other than city and town lots	Value of improvements on city town lots	Value of all improvements (Non-operative)

1914	3,232,981,478	543,809,923*	16.82	.039

NOTE.—The valuations shown in above table are taken from the controller's reports, which always differ from reports made to the state board of equalization. The difference is due to errors in additions by the county officials, afterwards corrected when report is made to the controller.

*The very noticeable increase in personal property assessments is caused in a great measure by several counties having commenced the assessment of franchises of general mercantile, manufacturing and other corporations not heretofore assessed, in order that refund of bond taxes may be reaped from the state. There was also a very heavy assessment of personal property of banks, liable for taxes in aid of the Panama-Pacific International Exposition. Also, in 1913, Kern County shifted in the neighborhood of \$18,000,000 assessment on oil wells, oil derricks, etc., from the realty column to the personal column.

SCHEDULE H.

Assessment of municipalities (incorporated cities and towns) by county assessors for the years 1913 and 1914, exclusive of operative property of corporations, exempt from local taxation.

NOTE.—Upper figures 1913; lower 1914.

¹Alameda also reports 550 acres asparagus, 600 acres tomatoes, 450 acres strawberries.²Colusa also reports 3,000 acres rice.³Imperial also reports 38,810 acres cotton and 11,801 acres cantaloupes.⁴Inyo also reports 6,000 acres red top and timothy.⁵Riverside also reports 3,000 acres cotton.⁶Yuba also reports 300 acres rice.

SCHEDULE M.

Illustrations of Business License Taxes. Extracts From Laws of Other States.

Tennessee Privilege Taxes. (Law of 1907.)

Each vocation, occupation, and business named below is declared to be a privilege, and subject to a privilege tax which is paid to the county tax collector on behalf of the state. These taxes are in addition to the property tax.

Unless otherwise stated the taxes are per annum.

Abstract Companies and Persons Pursuing the Business of Furnishing Abstracts of Title.

In cities, taxing districts, or towns of 60,000 inhabitants or over, each---	\$75 00
In cities, taxing districts, or towns of from (of) 20,000 to (and less than) 60,000 inhabitants, each -----	50 00
In cities, taxing districts, or towns of from (of) 15,000 to (and less than) 20,000 inhabitants, each-----	25 00
In cities, taxing districts, or towns of less than 15,000 inhabitants, each--	10 00

Advertising Companies.

All persons, companies, or corporations owning, controlling, or conducting the business of advertising in street cars in counties of 60,000 inhabitants or over, each -----	100 00
In counties of less than 60,000 inhabitants, each-----	25 00
All persons, companies, or corporations owning, controlling, or conducting the business of advertising in dummy cars of railroad cars in counties of 50,000 inhabitants or over, each-----	50 00
In counties of less than 50,000 inhabitants, each-----	25 00
All persons, companies, or corporations owning, controlling, or conducting the business of advertising in railroad depots in each county in which business is done, each-----	10 00

Amusements.

(See Circuses and Menageries.)

Artists and Photographers.

In cities, towns, or taxing districts of over 20,000 inhabitants, each-----	25 00
In cities, towns, or taxing districts of from 6,000 (inclusive) to 20,000 (inclusive) inhabitants, each -----	15 00
In cities, towns, or taxing districts under 6,000 and above 2,000 inhabitants, each -----	7 50
In cities, towns, villages, or taxing districts under (of) 2,000 (and less) inhabitants, each -----	5 00
On each photograph, tintype, open-air gallery or tent gallery set up in or outside of any city, town, village, or taxing district in each county (whether the work shall be finished there or not), each-----	5 00
On each photograph gallery going from county to county in a railroad car, for the state (to be paid in one county only)-----	50 00

Auctioneers.

(Which shall include all persons selling goods, wares, merchandise, all other chattels, live stock, real estate, or securities at public outcry, whether they charge for the same or not; but is not to apply to judicial sales or sales by trustees.)

In cities, towns, and taxing districts of 35,000 inhabitants, or over, each, per annum -----	20 00
In cities, taxing districts, or towns of (and) from 20,000 to (less than) 35,000 inhabitants, each -----	15 00
In cities, taxing districts, or towns of (and) from 6,000 to (less than) 20,000 inhabitants, each -----	10 00
In cities, towns, or taxing districts of less than 6,000 inhabitants, each--	5 00
In counties outside of cities, towns, or taxing districts-----	5 00
Provided, that this shall not apply to persons selling effects of estates of deceased persons.	

Automobiles, Garage, or Dealers.

In cities, towns, or taxing districts of 60,000 inhabitants or over, each---	40 00
In cities, towns, or taxing districts of 20,000 to (less than) 60,000 inhabitants, each -----	25 00
In cities, towns, or taxing districts of less than 20,000 inhabitants, each--	10 00

Automobiles for Hire.

(This shall include all automobiles for rent or hire.)

For each automobile for rent or hire-----	\$5 00
<i>Baseball Parks.</i>	
(For professional leagues.)	
In counties of over 50,000 inhabitants, when admission fee is charged, each-----	25 00
In counties of less than 50,000 and over 20,000 inhabitants, when admission fee is charged, each-----	15 00
In counties of less than 20,000 inhabitants, each-----	10 00
Traveling baseball teams, playing in open air or tents and not playing in league parks paying a privilege tax as baseball parks, each-----	10 00

Billposters.

All persons, companies, or corporations posting bills or other printed matter for hire in cities, towns, or taxing districts of 60,000 inhabitants or over, each-----	75 00
In cities, towns, or taxing districts of (and) from 10,000 to (less than) 60,000 inhabitants, each-----	50 00
In cities, towns, taxing districts, or villages of (and) from 2,000 inhabitants to (less than) 10,000, each-----	10 00
In cities or towns under 2,000 inhabitants-----	5 00

Billiard Tables.

(See Games.)

Bicycles.

(Dealers in.)

Dealers in bicycles or bicycle supplies, or both, each person, firm, or corporation, or agent dealing in bicycle or bicycle supplies, or both-----	10 00
Any person, firm, corporation, or agent keeping bicycles for hire, each-----	10 00
When bicycles or bicycle supplies constitute a part of a merchant's common stock and to be sold as such in the usual course of business, the same shall be taxed as part of the merchant's stock; provided, that the part of the common stock composed of bicycles or bicycle supplies, or both, does not exceed ten per cent of the entire common stock. In case the same does exceed ten per cent of the entire common stock, then the privilege tax under the first clause of this item shall be paid.	

Bottlers.

Each bottler or bottling association, other than bottlers of natural mineral waters, each, in counties of 50,000 inhabitants or over-----	75 00
In counties of over 35,000 and under 50,000 inhabitants, each-----	50 00
In counties of over 25,000 and less than 35,000 inhabitants, each-----	25 00
In counties of less than 25,000 inhabitants, each-----	10 00
Provided, that brewers or brewers' agents paying tax as such shall not be liable for the above tax where they bottle beer only.	

Breweries.

Breweries located in this state shall pay, each-----	500 00
Said tax shall be paid in the county where the brewery is located. Each agent of, or person selling on commission for, breweries, or any dealer or his agent by whom beer is sold, when the same was purchased from, or on account of, breweries, shall pay, each, in cities, towns, or taxing districts of 20,000 inhabitants or over, for each brewery represented-----	500 00
In cities, towns, and taxing districts of over 7,500 inhabitants and under 20,000-----	150 00
In towns, cities, and taxing districts of 7,500 inhabitants or under-----	50 00

Brokers.

(Other than real estate or merchandise.)

Each person, firm, or corporation, or agent engaged in buying or selling notes, stocks, bonds, or other securities, in cities, towns, or taxing districts of 60,000 inhabitants or over, each-----	75 00
In cities, taxing districts, or towns of from (over) 20,000 to (less than) 60,000 inhabitants, each-----	50 00
In cities, taxing districts or towns of from 20,000 inhabitants and under-----	25 00
In villages or counties outside of cities, taxing districts, or towns, each-----	25 00
No person or persons, firms, associations, or corporation engaged in the business of banking or insurance shall, directly or indirectly, transact any business or enter into or perform any negotiations as a broker without paying the privilege tax levied upon brokers, it being the intention of this act that if any person, firm, association, or corporation engaged in the business of banking or insurance shall act, directly or indirectly, as a broker, the same shall be classified and held liable for the foregoing privilege tax on brokers. Dealers in stocks or bonds are hereby held to be brokers.	

Butchers or Retailers of Fresh Meat.

(This includes all offices, stalls, and stores for the sale of fresh meat, or from wagon at retail.)

In cities, towns, or taxing districts, or on territory within two miles of the limits of such city, town, or taxing district of 20,000 inhabitants or over, each	\$15 00
In cities, towns, or taxing districts of (and) from 10,000 to (less than) 20,000 inhabitants, or on territory within two miles of such city, town, or taxing district, each	10 00
In cities, towns, or taxing districts of (and) from 6,000 to (less than) 10,000 inhabitants, or on territory within two miles of the limits of such city, town, or taxing district, each	7 50
In cities, towns, or taxing districts of (and) from 3,000 to (less than) 6,000 inhabitants, or on territory within two miles of such city, town, or taxing district	5 00
In towns, cities, taxing districts, or villages of (and) from 1,000 to (less than) 3,000 inhabitants, or on territory within two miles of the limits of such cities, towns, or taxing districts, each	5 00

But this shall not apply to farmers butchering and selling meat of their own raising from wagons, nor to abattoir associations whose members are butchers already subject to butchers and retailers of the fresh-meat tax, and who kill for their own trade, and not for profit.

Wholesale Dealers in Fresh Meat, Other Than Butchers.

(This tax shall also apply to cold storage companies.)

In counties of 50,000 inhabitants or over, each	200 00
In counties of less than 50,000 and (of or) over 40,000 inhabitants, each	100 00
(The above shall apply to all cold storage companies making charges for cold storage, except manufacturers owning and operating their own plant.)	
In counties of less than 40,000 inhabitants, each	50 00
Provided, that cold storage companies where only produce or meats killed by local butchers is stored shall pay, in counties of 75,000 inhabitants or over, each	75 00
In counties of less than 75,000 and (of or) over 40,000 inhabitants, each	37 50
In counties of less than 40,000 inhabitants, each	5 00

Check Room.

Persons, firms, or corporations, conducting a check room for the deposit of packages and baggage shall pay a privilege tax for state purposes as follows:

First.—Where the charge for the keep or deposit of any article is at a rate of 10 cents or more for every twenty-four hours or fraction thereof of storage, each	20 00
Second.—Where the charge for the keep or deposit of any article is at a rate of less than 10 cents for every twenty-four hours or fraction thereof of storage, each	10 00

Cigar Stands.

In cities, towns, or taxing districts of 20,000 inhabitants or over	10 00
In cities, towns, or taxing districts under 20,000 inhabitants	5 00

This shall not apply to merchants engaged in the mercantile business, paying an ad valorem merchant's or privilege tax, as such, and who sell cigars and tobacco as an incident thereto from established business place, when the ad valorem value of their stock of cigars and tobacco does not exceed ten per cent of the value of their general stock of merchandise.

Circuses or Menageries, or Both.

(When admission fee is charged.)

See Exhibitions, etc., Wild West shows, post.

In counties of 50,000 inhabitants and over, each	200 00
In counties of (and) more than 40,000 and less than 50,000 inhabitants, each	150 00
In counties of (and) more than 35,000 and less than 40,000 inhabitants, each	100 00
In counties of (and) more than 30,000 and less than 35,000 inhabitants, each	75 00
In counties of (and) more than 25,000 and less than 30,000 inhabitants, each	50 00
In counties of (and) more than 20,000 and less than 25,000 inhabitants, each	35 00
In counties of less than 20,000 inhabitants, each	25 00

(Side shows and other shows and concerts in connection with the above taxed separately under their appropriate head, if they charge a separate or additional entrance fee.)

Sleight of hand, or legerdemain, each day and night, or day or night, each	\$20 00
Other exhibitions for profit (except circuses, menageries, etc.), except exhibitions for purely charitable purposes, and those given by amateur or home troupes, each day and night, or day or night, each	15 00
Per week	30 00
Per month	100 00
Traveling theatrical companies showing in halls and not paying a privilege tax as theaters, for each day and night, or day or night	5 00
Per week	25 00
Per month	100 00
On each show, exhibition, concert, or other performance where a fee is charged or collected or any contribution received for admission, and not devoted exclusively to religious, benevolent, or educational purposes, not being herein otherwise taxed, each	40 00
On vitascope, moving pictures, or similar entertainments, in cities, towns, or taxing districts of 36,000 inhabitants or over, each	60 00
In cities, towns, or taxing districts of less than 36,000 inhabitants	40 00
On magic lanterns, each	5 00

Clocks.

(See Ranges and Clocks.)

Coal or Coke, or Coal and Coke.
(Agents or Dealers.)

This shall apply to each person, firm, agency, or corporation, and to each yard from which coal or coke is delivered or sold.

In cities, towns, or taxing districts of 60,000 inhabitants or over, each	40 00
In cities, towns, or taxing districts of (and) from 20,000 to (less than) 60,000 inhabitants, each	30 00
In cities, towns, or taxing districts of (and) from 6,000 to (less than) 20,000 inhabitants, each	12 50
In cities, towns, or taxing districts of less than 6,000 inhabitants, each	5 00

Provided, that nothing in this section shall apply to persons mining their own coal and selling same from wagons. This shall not apply to persons or companies who sell in quantities of five bushels or less, or persons who mine their own coal and sell the same in five bushel lots.

Coal Oil, Illuminating Oil, or Lubricating Oil, or Petroleum Products.

Each and every person, firm, partnership, corporation, or local agent having oil depots, storage tanks, or warehouses for the purpose of selling, delivering, or distributing oil of any description, and each and every person, firm, partnership, corporation, or local agent using a railroad car or railroad depots for such purpose, shall pay a privilege tax as follows:

In cities, towns, and taxing districts of 30,000 inhabitants or over, or in territories within five miles of the limits of such city, town, or taxing district, each	300 00
In cities, towns, or taxing districts of (and) from 10,000 to (less than) 30,000 inhabitants, or in territories within five miles of the limits of such city, town, or taxing district, each	200 00
In cities, towns, or taxing districts of (and) from 5,000 to (less than) 10,000 inhabitants, or in territories within five miles of the limits of such city, town, or taxing district, each	150 00
In cities, towns, or taxing districts of (and) from 2,000 to (less than) 5,000 inhabitants, or in territories within five miles of the limits of such city, town, or taxing district, each	75 00

Under 5,000-----	2 50

Elevators.

(See Warehouses and Elevators.)

Pressing and Dyeing Establishments.

Steam or electric cleaning, pressing, or dyeing establishments, in cities, taxing districts, or towns of 20,000 inhabitants or over, each-----	25 00
In cities, taxing districts, or towns of (and) from 10,000 to (less than) 20,000 inhabitants, each-----	12 50
In cities, taxing districts, or towns of (and) from 6,000 to (less than) 10,000 inhabitants, each-----	7 50
In cities, taxing districts, or towns of less than 6,000 inhabitants, each--	2 50

Exhibitions of Trained Animals and Dog and Pony Shows.

On each exhibition of trained animals or dog and pony shows, not being a circus or menagerie, for each day and night, or night and day:	
In counties of 50,000 inhabitants or over-----	20 00
In counties from (of and over) 30,000 to (less than) 50,000 inhabitants--	15 00
In counties of less than 30,000 inhabitants, each-----	10 00

Wild West Shows.

Each day and night, or night:	
In counties of 50,000 inhabitants and over, each-----	150 00
In counties of less than 50,000 inhabitants, each-----	75 00

Feather Renovators.

Persons, firms, or their agents soliciting or engaged in cleaning and renovating feathers, in each county, each-----	300 00
--	--------

Fees.

All persons, banking associations, or brokers or their agents buying or attempting to buy fees of any officer or witness accruing in any of the courts of this state shall be taxed as follows:

In counties of 50,000 inhabitants or over, each-----	100 00
In counties of (and) from 20,000 to (less than) 50,000 inhabitants, each-----	50 00
In counties of (and) from 10,000 to (less than) 20,000 inhabitants, each-----	25 00
In counties of less than 20,000 (10,000) inhabitants, each-----	10 00

Said tax shall be paid for each and every person employed in said business, whether as principal or agent; but said tax shall not apply to merchants or other persons paying face value for said fees.

Ferries.

(Except those run by hand with oars, when landing in this state, at or within five miles of taxing districts, cities, or towns.)

At or within five miles of cities, towns, or taxing districts of 10,000 inhabitants, or over, each-----	50 00
At or within five miles of cities, towns, or taxing districts of (and) from 5,000 to (less than) 10,000 inhabitants, each-----	30 00
At or within five miles of cities, towns, or taxing districts of (and) from 3,000 to (less than) 5,000 inhabitants, each-----	20 00
At or within five miles of cities, towns, or taxing districts of less than 3,000 inhabitants, each-----	5 00
All firms taxable under this act more than five miles from towns, cities, or taxing districts, each-----	5 00

Provided, that there shall be no tax upon any ferry owned by the county wherein the same is situated.

Flying Jennies.

In cities, towns, and taxing districts of over 30,000 inhabitants, each----	5 00
In cities, towns, and taxing districts under 30,000 inhabitants, each----	2 50

Fortune Tellers.

Each ----- \$10 00

Fruit Stands.

In cities, towns, or taxing districts of 50,000 inhabitants, or over, each-- 5 00

In cities, towns, or taxing districts under 50,000 inhabitants, each----- 2 50

Provided, that this shall not apply to persons engaged in the mercantile business, paying an ad valorem merchant's or privilege tax as such, and who shall sell fruit as an incident thereto from the same established business place, when the ad valorem value of their stock of fruit does not exceed twenty per centum of the value of their general stock of merchandise.

Futures.

Each and every person, firm, partnership, or corporation doing a brokerage or commission business for cash or actual future delivery on the regularly organized exchanges of the country or through any member of said exchanges in cities, towns, or taxing districts of 30,000 inhabitants or over, or within one mile of said city, town, or taxing district, each-----

500 00

In cities, towns, or taxing districts of (and) from 20,000 to (less than) 30,000 inhabitants, or within one mile of said city, town, or taxing district, each -----

400 00

In cities, towns, or taxing districts of less than 20,000 inhabitants, or within one mile of said city, town, or taxing district, each-----

300 00

Provided, that nothing in this act shall be construed to license any business now prohibited by law.

Games.

Billiard tables, pool tables, bagatelle tables, tivolli tables, Jenny Lind tables, tenpin alleys, roller coasters, or shooting galleries or stands, on each, in cities, towns, or taxing districts of 20,000 inhabitants or over, each, per annum, in each -----

25 00

In cities, towns, or taxing districts of (and) from 10,000 to (less than) 20,000 inhabitants, each -----

15 00

In cities, towns, or taxing districts of 10,000 and less inhabitants, each--

10 00

In counties outside of cities, towns, or taxing districts, each-----

25 00

But this shall not apply to pool or billiard tables in private houses not used for profit, nor to tenpin alleys on private premises not used for profit and not open to the public, or associations for social purposes, or schools where no liquors or refreshments are sold.

All devices used by persons as a source of profit to themselves, such as throwing at wooden figures or any other object, throwing rings or any device of like nature, and striking an object to test the strength, and blowing to test the lungs, each, per annum, in each county-----

10 00

Hotels and Taverns.

For each room, excepting dining rooms, kitchens, and parlors, for which more than \$1 per day is charged, each room-----

75

For each room, excepting dining rooms, kitchens, and parlors, for which is charged \$1 or less per day, per room-----

50

Hotels kept at places of summer resorts to be taxed as other hotels, but may be paid semiannually.

Hucksters.

Persons who either at stalls or booths or from wagons sell butter, eggs, poultry, fruit, or other produce from the farm, garden, or orchard directly to the consumers in cities, towns, or taxing districts of 60,000 inhabitants or over, each -----

5 00

In cities, towns, or taxing districts of (and) from 20,000 to (less than) 60,000 inhabitants, each -----

3 00

In cities, towns, or taxing districts of (and) from 6,000 to (less than) 20,000 inhabitants, each -----

2 00

In cities, towns, or taxing districts of less than 6,000 inhabitants, each--

1 00

Ice.

(Dealers in.)

This shall apply to each person, firm, or corporation selling imported or home ice, and to each ice depot from which ice is delivered.

In cities, towns, or taxing districts of 35,000 inhabitants or over, each--- 100 00

In cities, towns, or taxing districts of (and) from 15,000 to (less than) 35,000 inhabitants, each -----

75 00

In cities, towns, or taxing districts of (and) from 6,000 to (less than) 15,000 inhabitants, each -----

50 00

In cities, towns, or taxing districts of (and) from 2,500 to (less than) 6,000 inhabitants, each -----

10 00

In cities, towns, or taxing districts of (and) from 1,000 to (less than) 2,500 inhabitants, each -----

5 00

Provided, the above tax shall apply to and be paid when the factory is located on territory adjacent to such city, town, or taxing district within a distance of two miles. Each person, firm, or corporation retailing or selling ice from any car running upon any railroad in this state, in lieu of all other taxes to be paid in any county of the state through which the cars run and in which such sale or sales may be made----- \$50 00

Retail ice dealers, except manufacturers running wagons in connection with their business, each wagon----- 5 00

This tax shall not apply to municipal corporations owning and operating ice works and plant.

Provided, that this tax shall not apply to towns under 1,000 inhabitants.

Intelligence Offices and Employment Agencies.

Each office ----- 10 00

Itinerants.

Every corporation, partnership, or individual acting as itinerary (itinerants), whether physician or not, either selling medicine or advertising their services, or both, by appearing on the streets or elsewhere, or making harangue for the purpose of advertising or selling as aforesaid, shall pay to the state controller, direct, a privilege tax of \$1,000 per annum for the whole state, and to each county, municipality, where they exercise the privilege, as follows:

To counties having a population of 60,000 or over----- 40 00

To counties having a population of 30,000 and less than 60,000----- 25 00

To counties having a less population than 30,000, not more, per annum, than ----- 15 00

To cities, towns, or taxing districts having a population of 25,000 or over ----- 40 00

To cities, towns, or taxing districts having a population of 5,000 and less than 25,000 ----- 25 00

To cities, towns, or taxing districts having a population of less than 5,000, not more than----- 15 00

No license to be issued for less than a year.

Laundries.

(To all persons, firms, or corporations doing a public laundry business.)

In cities, towns, or taxing districts of 20,000 inhabitants or over, each--- 50 00

In cities, towns, or taxing districts of (and) from 5,000 to (less than) 20,000 inhabitants, each ----- 25 00

All under 5,000 inhabitants, each----- 7 50

This shall also apply to such laundries run by hotels for profit. This shall not include towns and villages of less than 1,000 inhabitants.

Agents for laundries located outside the state, for each laundry so represented in each county----- 10 00

Lightning Rod Dealers or Agents.

Each dealer or agent in each county shall pay----- 100 00

Liquor Dealers.

Wholesale, and, in addition, taxed as other merchants----- 500 00

Retail, taxed as other merchants, and, in addition, shall pay as follows:

In cities, taxing districts, or towns of 6,000 inhabitants or over, each----- 500 00

At any place, city, taxing district, or town of less than 6,000 inhabitants, each ----- 500 00

Provided, that in towns of less than 6,000 inhabitants whose charters of incorporation have been abolished to take effect before January 10, 1908, dealers shall not be liable for the above tax, but shall pay as provided in the revenue act of 1903.

Persons selling beer or any quantity of liquors on steamboats, flatboats, or any other vessel or watercraft or from railroad cars, shall pay a tax, each, in lieu of all other taxes to be paid in any county they may elect----- 500 00

Persons selling liquors in quantities of one quart or more, except manufacturers selling to dealers in original packages of not less than five gallons, are wholesale dealers, and persons selling smaller quantities than five gallons are retail dealers; and the tax on liquor dealers applies to all drug stores, except in uses of wine for sacramental purposes and alcohol for domestic purposes. No producers of grape wine, where they raise and make the wine themselves, shall pay any privilege tax for selling the same; provided, they shall not sell in quantities of less than one and a half (1½) gallons. Liquor dealers are defined as every person, company, or firm selling spirituous, vinous, or malt liquors, beer or ale, or intoxicating bitters, or any medicated or adulterated cider; or any social club or association, incorporated or otherwise, which handles such liquors for sale. The procuring of United States revenue license to wholesale or retail liquor dealers shall be taken as prima facie evidence that the parties are in the wholesale or retail liquor business,

and are subject to state and county taxes, unless established by proof that they are not so engaged. Upon any clerk's receiving knowledge of such internal revenue license, he shall have a right to collect the taxes by distress warrants.

Litigation.

Each suit in law or equity in courts of record, to be paid by the unsuccessful party -----	\$2 50
Each indictment or presentment -----	5 00
Each appeal to the supreme court in criminal cases, if defendant is unsuccessful -----	7 50
Each appeal or writ or error or certiorari from the circuit or county court or chancery court to the supreme court -----	5 00
Each appeal or certiorari from a justice of the peace -----	2 50

Provided, that on appeal cases from justice's courts, where the case is compromised before trial, this tax shall not accrue.

All of the above taxes shall be taxed in bills of costs, and are hereby declared part of the costs in the cases, and shall in no case be remitted when such tax can be made out of the defendant; and said officers collecting said taxes and under the small offense act shall report the amount collected by them every ninety days, and pay the same over to the treasurer of the state, and report the same to the controller.

No taxes shall be paid on application for dower or homestead, and no taxes on application of guardians to sell property for maintenance of wards, or to sell or exchange property for manifest interest of wards, or to trench on the property of wards, or on application for petition (partition), and no taxes on suits brought by the state, county, or municipality to collect taxes; provided, that any suit commenced in a court of record and carried to another court of concurrent jurisdiction and appeals from the county court to the circuit court or criminal court, but one litigation tax shall be paid; provided, that if any judge or attorney general shall remit any part of the state tax, the same shall be taken by the controller out of the salary of the judge or attorney general remitting same.

Livery, Sale, or Feed Stables.

Each stall -----	50
Outside of towns of more than 5,000 and less than 5,500 population in counties of more than 24,000 and less than 25,000 population -----	5 00

Lumber Dealers.

Lumber dealers who buy and sell lumber sawed, dealers in sawed logs, and dealers in staves must pay a privilege and ad valorem tax as merchants; provided, that merchants who also deal in lumber shall pay only one privilege tax.

Machines.

Nickel-in-the-slot machines or nickel-in-the-slot music boxes or phonographs or other machines or devices of like character (not run in violation of criminal law), each -----	10 00
Penny-in-the-slot machines, each -----	2 50

Provided, that this shall not apply to merchandise machines delivering merchandise and kept by dealers in their regular place of business, paying a privilege tax as merchant.

Magic Lantern Shows.

(See Circuses and Menageries.)

Merchants.

All merchants shall pay a privilege tax of 15 cents on each \$100 worth of taxable property, $7\frac{1}{2}$ cents of which shall be for school purposes and $7\frac{1}{2}$ cents for state purposes; provided, that such privilege tax, without regard to the length of time they do business, shall in no case be less than \$5, which \$5 is to be paid when the license is taken out; and in case of those whose privilege tax amounts to more than \$5, the \$5 paid shall be a credit when the balance of the tax is paid; provided, further, that said \$5 shall be equally divided between the state and counties.

Parcel Cars.

Express or parcel cars, running on streets, railroads, or dummy lines, in counties of 50,000 inhabitants or over, each car -----	50 00
In counties of less than 50,000 inhabitants, each car -----	25 00

Parks, Public.

Public parks (when visitors are charged an admission fee more than six times during the year, or more than 10 cents at any one time), each -----	100 00
--	--------

Pawnbrokers.

In cities, towns, or taxing districts of 30,000 inhabitants or over, each	\$150 00
In cities, towns, or taxing districts of (and) from 8,000 to (less than) 30,000 inhabitants, each	75 00
In cities, towns, or taxing districts of (and) from 6,000 to (less than) 8,000 inhabitants, each	75 00
In cities, towns, or taxing districts under 6,000 inhabitants, each	50 00
Outside of towns, taxing districts, and cities, in each county	50 00
In addition, they shall pay a tax as other merchants.	

Peddlers.

Buying or selling for profit, gift, prizes, or exemptions, or by the formation of purchasing clubs, or both, if on foot, in each county, each	10 00
If with horse and vehicle, in each county, each	20 00
If with more than one horse, in each county, each	20 00
If for patent medicines and nostrums, and on foot or horse, in each county, each	15 00
If for patent medicines and nostrums, if with horse and wagon, in each county, each	20 00
Peddlers of patent school apparatus, maps, charts, and other articles, if on foot, in each county, each	150 00
If with horse and vehicle in each county, each	300 00
If with more than one horse, for each additional horse, in each county, each	100 00
Peddlers of coal oil and gasoline, in each county	10 00

This shall apply to all parties, if the article is delivered in other manner than by mail, freight, or express. This tax shall not apply to peddlers dealing in eggs, fowls, and butter. It shall be the duty of each justice of the peace, constable, sheriff, and deputy sheriff to demand of each peddler to see his license; and if the person so peddling has no license, then said officer shall arrest said person and seize his stock of goods and take him before the county court clerk, when said clerk shall require the payment of said tax and a fee of \$2 to said officer for said arrest; and if said tax is not voluntarily paid, then the clerk shall by distress warrant collect the same, together with costs.

Photographs.

(See Machines.)

Photographers.

(See Artists and Photographers.)

Playing Cards.

Wholesale dealers, each	20 00
Retail dealers, each	5 00

Plumbers and Gas Fitters.

In cities, towns, or taxing districts of 35,000 inhabitants or over, each	20 00
In cities, towns, or taxing districts of from 10,000 to 35,000 inhabitants, each	15 00
In cities, towns, or taxing districts of from 5,000 to 10,000 inhabitants, each	10 00
In cities, towns, or taxing districts of under 5,000 inhabitants, each	5 00

In addition, they shall pay tax as other merchants.
The above tax shall be paid by gas and water companies doing a plumber's business; provided, that plumbers and gas fitters paying this tax shall not be liable for a merchant's privilege tax.

Pool Tables.

(See Games.)

Pressing and Dyeing Establishments.

(See this subject, ante.)

Ranges and Clocks.

Each company, firm, or corporation selling or delivering ranges or clocks in this state, either in person or through agents or consignees, and all persons who engage in the business of delivering ranges or clocks, shall pay a privilege tax in counties of 35,000 inhabitants or over, each	25 00
In counties of from 20,000 to 35,000 inhabitants, each	20 00
In counties of less than 20,000 inhabitants, each	15 00

Provided, that no privilege tax for selling ranges and clocks shall be required of any merchant either acting as agent or carrying as a part of his stock ranges and clocks on which he has paid a merchant's privilege tax and ad valorem tax and the same are sold at his established place of business.

Real Estate Dealers and Agents and Land Companies Doing a Real Estate Business.

In cities, taxing districts, or towns of (and) over 50,000 inhabitants	\$25 00
In cities, taxing districts, or towns of 35,000 inhabitants and under 50,000, each agent	20 00
In cities, taxing districts, or towns of (and) from 20,000 inhabitants to (less than) 35,000 inhabitants, each	15 00
In cities, taxing districts, or towns of (and) from 10,000 to (less than) 20,000 inhabitants, each	10 00
In cities, taxing districts, or towns of less than 10,000 inhabitants, each	5 00
In counties outside of cities, towns, or taxing districts, each	5 00
Every person who solicits or endeavors to make sales or rent property, on commission or otherwise, shall be liable for the above tax, unless they are members of the real estate firms who have paid the tax and their name appears in the license.	

Restaurants and Cafés.

(Same as hotels, on each room, in addition, as follows.)

In cities, towns, or taxing districts of 35,000 inhabitants or over, each	40 00
In cities, towns, or taxing districts of (and) from 20,000 to (less than) 35,000 inhabitants, each	30 00
In cities, towns, or taxing districts of (and) from 10,000 to (less than) 20,000 inhabitants, each	25 00
In cities, towns, or taxing districts of (and) from 6,000 to (less than) 10,000 inhabitants, each	20 00
In cities, towns, or taxing districts having less than 2,000 inhabitants, each	3 00
In counties not in towns, cities, or taxing districts, each	3 00
This shall include all places where meals are served at table.	

Security Dealers and Loan Agents.

In counties of 50,000 inhabitants or over, each	50 00
In counties of from 30,000 to 50,000 inhabitants, each	25 00
In counties of from 15,000 to 30,000 inhabitants, each	10 00
In counties of less than 15,000 inhabitants, each	5 00
1. Shaving notes, accounts, judgments, or evidence of indebtedness, including loans or mortgages, is hereby classed and held to be dealing in securities.	
2. The business of loaning or advancing money on salaries, furniture, or household goods, or other personal chattel, as a security, whether the security be by mortgage or sale, is hereby classed and held to be dealing in securities.	
3. Dealers in securities, as heretofore declared, shall not apply to real estate dealers or merchandise brokers and agents paying a privilege tax as such.	

Sewing Machine Companies and Dealers in.

(In lieu of all other taxes, except merchant's privilege and ad valorem tax.)

Each company, firm, or corporation selling sewing machines in this state through agents, and every wholesale or retail dealer in sewing machines selling sewing machines in this state, either as local agents or as part of their merchandise stock, unless the manufacturer of such sewing machines so sold by such merchant has paid the tax thereby imposed, shall each pay to the controller, per annum, \$200; and upon the payment of said tax of \$200 by any manufacturer, it shall be the duty of the controller to immediately notify the various county court clerks of such payment, and said clerks shall preserve and keep on file in their offices said notices; and, in addition to the tax herein imposed, each company, firm, or corporation shall pay to the controller five dollars (\$5) per annum for each agent which it employs in the sale of its machines within this state; but this tax of five dollars (\$5) shall not apply to merchants of this state who carry sewing machines as part of their stocks of merchandise, and selling at their regular place of business, and not selling by or through agents. The tax herein imposed shall be paid direct to the state controller, whose duty it shall be to issue to such company, firm, or corporation, a certificate, signed by him in his official capacity, showing the payment of said taxes, and which shall be authority to said company, firm, or corporation and its agents to sell sewing machines of such company, firm, or corporation within this state for one year.

No privilege tax for selling sewing machines shall be required of any merchant either acting as agent or carrying as a part of his stock sewing machines made by any company, firm, or corporation that has paid said tax of two hundred dollars (\$200). The privilege tax hereby imposed shall be in lieu of all other taxes, except merchant's privilege and ad valorem tax.

Skating Rinks.

In cities, towns, or taxing districts of 20,000 inhabitants or over, each	30 00
In cities, towns, or taxing districts of (and) from 10,000 to (less than) 20,000 inhabitants, each	15 00

In cities, towns, or taxing districts of (and) from 5,000 to (less than) 10,000 inhabitants, each -----	\$10 00
In cities, towns, or taxing districts of less than 5,000 inhabitants, each---	5 00
In counties outside of cities, towns, villages, or taxing districts-----	5 00

Soda Fountains.

In cities, towns, and taxing districts of over 30,000 inhabitants, each---	5 00
In cities, towns, and taxing districts under 30,000 inhabitants, each-----	2 50

Stock Yards, Stock Pens, etc.

(This shall not apply to livery stables already paying privilege taxes.)
 Stock yards, stock pens, feed or sale stables having stock pens in connection with their business, shall pay a privilege tax of one dollar per pen of four hundred square feet (in calculating the number of pens, the surface covered by pens shall be considered, counting each four hundred square feet as a pen).

Tenpin Alleys.

(See Games.)

Theaters.

In cities, taxing districts, or towns of 40,000 inhabitants or over, each---	200 00
In cities, taxing districts, or towns of (and) from 20,000 to (less than) 40,000 inhabitants, each, per annum (not to be taken out for less than twelve months) -----	100 00
In cities, taxing districts, or towns of (and) from 10,000 to (less than) 20,000 inhabitants, each (not to be taken out for less than twelve months) _	50 00
In cities, taxing districts, or towns of (and) from 5,000 to (less than) 10,000 inhabitants, each (not to be taken out for less than twelve months) _	25 00
In cities, towns, or taxing districts of (and) from 3,000 to (less than) 5,000 inhabitants, each (not to be taken out for less than twelve months) _	15 00
In cities, taxing districts, or towns of less than 3,000 inhabitants, each (not to be taken out for less than twelve months)-----	10 00
In counties outside of cities, towns, or taxing districts (not to be taken out for less than six months)-----	50 00
Theaters run in public parks in counties of more than 100,000 inhabitants and not charging more than 25 cents for any performance, each-----	100 00
In counties of (and) from 50,000 to 100,000 (inclusive) inhabitants and not charging more than 25 cents for any performance, each-----	50 00

Transfer Business for Hire.

(This shall apply to companies or individuals operating hacks, carriages, or wagons for hauling freight or passengers, and not paying a livery, feed, or sale stable license.)	
For each horse -----	1 00

Turnpikes.

Each tollgate that collects toll both ways the same day in counties of 50,000 inhabitants or over, each-----	50 00
Each tollgate that collects toll both ways the same day in counties of 30,000 inhabitants and not over ("under" instead of "not over") 50,000 inhabitants, each -----	40 00
Each tollgate that collects toll both ways the same day in counties of less than 30,000 inhabitants, each-----	12 50
Provided, this shall not be construed to allow any turnpike company to collect more than one fare for both ways the same day, unless the charter of incorporation provides for and permits such greater charge.	
Any corporation or turnpike company which increases its tolls for one way beyond what those tolls now are shall pay a privilege tax for each gate	250 00

Undertakers.

In cities, towns, or taxing districts of 50,000 inhabitants or over, each--	50 00
In cities, towns, or taxing districts of from (read "above" instead of "from") 20,000 to (less than) 50,000 inhabitants, each-----	30 00
In cities, towns, or taxing districts of from (read "above" instead of "from") 10,000 to 20,000 inhabitants, each-----	20 00
In cities, towns, or taxing districts of from (read "above" instead of "from") 6,000 to 10,000 inhabitants, each-----	10 00
In cities, towns, or taxing districts of 6,000 or under-----	5 00
In any county in the state outside of cities, towns, or taxing districts, each-----	5 00

Variety Theaters.

Each -----	200 00
------------	--------

Warehouses and Elevators.

In cities, towns, or taxing districts of 8,000 inhabitants or over, each....	\$50 00
In cities, towns, or taxing districts under 8,000 inhabitants, each.....	25 00

This shall cover all taxes for the selling of produce or other articles stored in the warehouses of such warehousemen, but shall not be so construed as to exempt commission merchants from taxation as provided by law.

Warerooms or Warehouses for the Storage of Furniture and Household Effects.

Warehouses or warerooms in cities, towns, or taxing districts of 8,000 inhabitants or over, each.....	25 00
Less than 8,000 inhabitants.....	15 00
In counties of over 30,000 inhabitants (computed by the federal census of 1900 or any subsequent federal census), outside of cities, towns, and taxing districts, each.....	25 00

MANUFACTURERS AND MERCHANTS TAXES.

The Tennessee license tax system does not cover many classes of manufactures and the taxes on merchants, being based on property, are not true business taxes. In these respects the Louisiana law is far superior, being based on gross sales. To illustrate this we cite the Louisiana law as to wholesale and retail dealers:

EXTRACT FROM LOUISIANA LAW.

SEC. 6. Be it further enacted, etc., That for every wholesale mercantile business, whether as principal, agent or commission, by auction, representing the foreign merchants or otherwise, the license shall be based on the gross annual amount of sales, as follows:

First Class.—When gross sales are seven millions of dollars or over, the license shall be three thousand five hundred dollars, \$3,500.

Second Class.—When gross sales are six million five hundred thousand dollars or more, and under seven millions of dollars, the license shall be three thousand dollars, \$3,000.

Third Class.—When gross sales are six million dollars or more, and under six million five hundred thousand dollars, the license shall be two thousand five hundred dollars, \$2,500.

Fourth Class.—When gross sales are five million five hundred thousand dollars or more, and under six million dollars, the license shall be two thousand dollars, \$2,000.

Fifth Class.—When gross sales are five millions of dollars or more, and under five million five hundred thousand dollars, the license shall be fifteen hundred dollars, \$1,500.

Sixth Class.—When gross sales are four millions of dollars or more, and under five millions of dollars, the license shall be one thousand dollars, \$1,000.

Seventh Class.—When gross sales are three millions of dollars or more, and under four million dollars, the license shall be seven hundred and fifty dollars, \$750.

Eighth Class.—When gross sales are two million five hundred thousand dollars or more, and under three million dollars, the license shall be seven hundred dollars, \$700.

Ninth Class.—When gross sales are two millions of dollars or more, and under two million five hundred thousand dollars, the license shall be five hundred and fifty dollars, \$550.

Tenth Class.—When gross sales are one million five hundred thousand dollars or more, and under two million dollars, the license shall be four hundred dollars, \$400.

Eleventh Class.—When gross sales are one million dollars or more, and under one million five hundred thousand dollars, the license shall be three hundred dollars, \$300.

Twelfth Class.—When gross sales are eight hundred thousand dollars or more, and under one million dollars, the license shall be two hundred and fifty dollars, \$250.

Thirteenth Class.—When gross sales are six hundred thousand dollars or more, and under eight hundred thousand dollars, the license shall be two hundred dollars, \$200.

Fourteenth Class.—When gross sales are five hundred thousand dollars or more, and under six hundred thousand dollars, the license shall be one hundred and fifty dollars, \$150.

Fifteenth Class.—When gross sales are two hundred and fifty and not more than five hundred thousand dollars, the license shall be one hundred dollars, \$100.

Sixteenth Class.—When gross sales are two hundred and fifty thousand dollars or less, the license shall be fifty dollars, \$50.

Provided, that no person or persons shall be deemed wholesale dealers unless he or they sell by the original or unbroken package or barrel only; and provided, further, that no person or persons shall be deemed wholesale dealers unless he or they sell to dealers for resale. If they sell in less quantities than original and unbroken

packages or barrels, they shall be considered retail dealers, and pay licenses as such. That for every business of selling at retail, whether as principal, agent, on commission or otherwise, the license shall be based on the gross annual amount of sales, as follows:

First Class.—When gross sales are three million five hundred thousand dollars or over, the license shall be thirty-five hundred dollars, \$3,500.

Second Class.—When gross sales are three million dollars or more, and less than three million five hundred thousand dollars, the license shall be three thousand dollars, \$3,000.

Third Class.—When gross sales are two million five hundred thousand dollars or more, and under three million dollars, the license shall be twenty-five hundred dollars, \$2,500.

Fourth Class.—When gross sales are two millions of dollars or more, and under two million five hundred thousand dollars, the license shall be two thousand dollars, \$2,000.

Fifth Class.—When gross sales are one million five hundred thousand dollars or more, and under two millions of dollars, the license shall be one thousand five hundred dollars, \$1,500.

Sixth Class.—When gross sales are one million dollars or more, and under one million five hundred thousand dollars, the license shall be one thousand dollars, \$1,000.

Seventh Class.—When gross sales are seven hundred and fifty thousand dollars, and under one million dollars, the license shall be seven hundred and fifty dollars, \$750.

Eighth Class.—When gross sales are seven hundred thousand dollars or more, and under seven hundred and fifty thousand dollars, the license shall be seven hundred dollars, \$700.

Ninth Class.—When gross sales are six hundred thousand dollars or more, and under seven hundred thousand dollars, the license shall be five hundred and fifty dollars, \$550.

Tenth Class.—When gross sales are four hundred thousand dollars or more, and under six hundred thousand dollars, the license shall be four hundred dollars, \$400.

Eleventh Class.—When gross sales are three hundred thousand dollars or more, and under four hundred thousand dollars, the license shall be three hundred dollars, \$300.

Twelfth Class.—When gross sales are two hundred and fifty thousand dollars or more, and under three hundred thousand dollars, the license shall be two hundred and fifty dollars, \$250.

Thirteenth Class.—When gross sales are two hundred thousand dollars or more, and under two hundred and fifty thousand dollars, the license shall be two hundred dollars, \$200.

Fourteenth Class.—When gross sales are one hundred and fifty thousand dollars or more, and under two hundred thousand dollars, the license shall be one hundred and fifty dollars, \$150.

Fifteenth Class.—When gross sales are one hundred thousand dollars or more, and under one hundred and fifty thousand dollars, the license shall be one hundred dollars, \$100.

Sixteenth Class.—When gross sales are seventy-five thousand dollars or more, and under one hundred thousand dollars, the license shall be seventy-five dollars, \$75.

Seventeenth Class.—When gross sales are fifty thousand dollars or more, and under seventy-five thousand dollars, the license shall be fifty dollars, \$50.

Eighteenth Class.—When gross sales are forty thousand dollars or more, and under fifty thousand dollars, the license shall be forty dollars, \$40.

Nineteenth Class.—When gross sales are thirty thousand dollars or more, and under forty thousand dollars, the license shall be thirty dollars, \$30.

Twentieth Class.—When gross sales are twenty-five thousand dollars or more, and under thirty thousand dollars, the license shall be twenty-five dollars, \$25.

Twenty-first Class.—When gross sales are twenty thousand dollars or more, and less than twenty-five thousand dollars, the license shall be twenty dollars, \$20.

Twenty-second Class.—When gross sales are fifteen thousand dollars or more, and less than twenty thousand dollars, the license shall be fifteen dollars, \$15.

Twenty-third Class.—When gross sales are less than fifteen thousand dollars, and more than five thousand dollars, the license shall be ten dollars, \$10.

Twenty-fourth Class.—When gross sales are five thousand dollars or less, the license shall be five dollars, \$5.

SCHEDULE N.

State taxes levied against public service corporations, banks and insurance companies, for the year 1914.
