STATE OF CALIFORNIA,
DEPARTMENT OF THE STATE LIBRARY,
SACRAMENTO, CAL., June 30, 1914.

To his *Excellency*, HIRAM W. JOHNSON,
Governor of California.

SIR: We have the honor to submit the Biennial Report of the State Librarian for the two years ending June 30, 1914.

By order of the State Board of Library Trustees.

A. H. HEWITT, *President.*

ALLEN B. LEMMON, *Trustee.*

BRADNER W. LEE, *Trustee.*

CHARLES S. GREENE, *Trustee.*

R. M. RICHARDSON, *Trustee.*

REPORT OF THE STATE LIBRARIAN.

To the Honorable Board of Library Trustees of the California State Library.

GENTLEMEN: I have the honor to submit my report covering the transactions of the State Library for the sixty-fourth and sixty-fifth fiscal years, ending June 30, 1914.

FINANCES.

Balance on hand, July 1, 1912-----	\$3,527 78
Amount received during sixty-fourth and sixty-fifth fiscal years-----	145,509 87
Total -----	\$149,037 65
Expenditures during sixty-fourth and sixty-fifth fiscal years-----	134,692 54
Balance -----	\$14,345 11

THE LIBRARY FUND.

During the first half of this biennial period the Library continued on the reduced maintenance fund of \$3,500; and it was necessary, as was noted in the preceding report, to limit book purchases and to reduce the staff to the lowest number possible. The legislature of 1913, however, gave the Library the best fund it has ever had, amounting to \$197,200.00 for the two years, July 1, 1913, to June 30, 1915. With this fund it has been possible to resume book purchases on a scale more commensurate with our demands. Several members have been added to the staff in order to carry out the plans for better service. And the binding which was badly in arrears has been caught up with. We were further enabled to start a library school which for many years has been greatly needed in the development of library activities in California.

STAFF.

J. L. Gillis, Librarian.

Milton J. Ferguson, Assistant Librarian and in charge of Law Department.

Miss Laura Steffens, Second Assistant Librarian and Editor of News Notes of California Libraries.

Melvin G. Dodge, Legislative Reference Librarian.

Miss Margaret Eastman, in charge of Order Department.

Miss Susan T. Smith, Reference Librarian.

Miss Eudora Garoutte, Head of California Department.

Miss Alice J. Haines, Head of Documents Department.

Miss Sarah S. Oddie, Head of Catalog Department.

Miss Mabel R. Gillis, Head of Books for the Blind Department.

Miss Harriet G. Eddy, County Library Organizer.

Mrs Annie K. Blanchard, Shelf Lister.

Miss Annie Lowry, in charge of Periodicals and Binding.
Miss Ida G. Munson, Assistant.
Miss Anne B. Bailey, Assistant.
Miss Florence Whyte, Assistant.
Miss Anna Creaner, Assistant.
Miss Essae M. Culver, Assistant.
Miss Mary V. Provines, Assistant.
Miss Elisabeth C. Haines, Loan Desk Assistant.
Miss Margaret E. Dold, Assistant.
Miss M. Gladys Brownson, Assistant.
Miss Beulah Mumma, Assistant.
Miss D. Florence Montfort, Assistant.
Miss Ethel L. Wiles, Assistant.
Miss Clara L. Murray, Assistant.
Miss Persis C. McIntire, Assistant.
Miss Ella A. Clark, Indexer.
Wm. H. Lugg, Shipping Clerk and Cameragraph Operator.
Elmer Walther, Assistant in Law Department.
Miss Emma F. De Merritt, Book Repairer.
Miss Mae Sternsdorff, Book Repairer.
Miss Gladys M. Kidd, Stenographer.
Miss Lily Tilden, Stenographer.
Miss Florence Lamb, Bookkeeper and Stenographer.
Jos. E. Ryan, Assistant Shipping Clerk and Assistant Cameragraph Operator.
George J. Raymond, Assistant Shipping Clerk.
Lloyd Smith, Messenger.
Lon Hochderffer, Messenger.
George Glackin, Messenger.
Albert Marty, Messenger.
J. L. Foss, Janitor.
Albert E. Walsh, Assistant Janitor.

The following persons have been employed by the Library during the period covered by this report, but are not now in our service :

Robert Alexander, Jr. (temporary).
Miss Winifred Bigley (temporary).
Miss Jennie May Brown.
A. Cifuentus (temporary).
Martin Clancy (temporary).
Miss Vera M. Cleghorn.
Harry Coon.
Earl Eckles.

Miss Helen Evans (temporary).
Laurence Harrigan.
Mrs D. A. Hibbard.
Miss Nellie L. Hill.
J. Fulton Irwin.
Miss Edith C. Lawrence.
Lawrence Lewis.
Emmett Phillips (temporary).
Miss Edith Richardson.
Everett Rutherford.
Charles Schinkel.
James Snook.
Miss Julia Steffa.
Russell Tracy.

LAW DEPARTMENT.

The regular increase of reports, statutes and court records has quite filled up the shelf room in the Law Department. The most important addition to the collection consists of a complete set of *Lois et Actes du Gouvernement* (France) beginning 1789 with continuations to date. The laws of several other important European countries are also being secured.

DOCUMENTS DEPARTMENT.

The consolidation of the Documents and Legislative Reference Departments has proven advantageous. A certain amount of needless duplication has been avoided; and the time of assistants has been disposed of to better advantage. The work of the Library for the legislature of 1913 proves quite conclusively that better results are obtained under the new plan than under the old.

The documents collection is being checked carefully and missing items are being sought for. The New York State Library Index to Legislation, as far as it has been printed, is being clipped and mounted on catalog cards, so that all the items on any one subject may be filed together. This work, which will be completed before the convening of the legislature of 1915, will greatly facilitate investigations of the laws enacted throughout the United States.

From the point of view of the public some of the most important work of the department has been a review of legislation in 1913, a summary of measures to be submitted to the people in 1914, and select lists of references on the following subjects: The eight hour working day, "blue sky" laws, and state-wide prohibition; all of which appeared in the various issues of News Notes of California Libraries. Similar lists will be included in the July and October issues, and it is hoped thus to cover before the election most of the measures to be submitted.

BOOKS FOR THE BLIND DEPARTMENT.

The Books for the Blind Department aims to furnish reading matter to all the blind people of the state, and also to the partially blind and to those who have weak eyes. Books, magazines, and music in five types (American Braille, European Braille, Line, Moon and New York point) are loaned to those who can already read; and instruction books and alphabets to those who wish to learn. Games and writing appliances are loaned as samples so that the blind can try them before buying. Information about all phases of work for the blind is given to inquirers.

The accessions of the department are now 3,863, 1,441 additions having been made in the last two years. There are 635 borrowers, a gain of 124 in two years; 15,101 loans were made from July 1, 1912, to June 30, 1914—4,271 more than were made in the previous two years.

A new circular and finding list was issued January, 1914. This explains the method of borrowing books, and contains a complete list of the books in the department at that date. A copy was sent to each blind borrower, and has helped greatly in the selection of books wanted.

The finding list is supplemented each quarter by News Notes, a reprint of the books for the Blind Department section of News Notes of California Libraries. This gives statistics about the department work, as well as a list of additions, and is sent to all blind borrowers.

The best for our purpose of the new books published in American Braille, New York point and Moon during the last two years have been added immediately; and older publications have been bought mainly on request. Many gifts have also been received from blind borrowers, schools, societies and publishers for the blind. Our collection of music, which had not been materially added to for some time, was built up during the last year, so that we now have 105 pieces of New York point music and 430 pieces in American Braille.

The fact that the Uniform Type Committee will probably decide on European Braille as a basis for a uniform type has aroused much interest in that system. The Library has accordingly ordered a new collection of primers and books in that type. Formerly our collection of books in European Braille had consisted mainly of donations.

The department is trying at present to be of assistance to those blind students who are attending schools for the seeing. All books needed for school work are bought, if they have been put into raised type. This, of course, can only be done on request, as education of the blind with the seeing is just beginning in California, and it is impossible to judge for what studies and for what grades books are going to be needed. To these students the greatest assistance given has been along the lines of history, mathematics and the languages.

The greatest advance made by the department in the last two years has been in the employment of a home teacher for the blind. Her appointment was made at the June, 1914, meeting of the Board of State Library Trustees, to take effect July 1, so no report of her work can be made at this time. The plan, however, is to have as a beginning, three hours on two afternoons a week at the Los Angeles Public Library, where the blind who can go to the Library, will be taught to read. On other days the teacher will visit the blind of Los Angeles and vicinity in their homes. Miss Kate M. Foley, of Los Angeles, a graduate of the California School for the Blind, is the teacher employed. For some years she has been teaching the adult blind merely from interest in the work, and is thoroughly informed on all problems of the blind.

CALIFORNIA DEPARTMENT.

The cards of about 300 pioneers, artists, authors and musicians, generally accompanied by photographs and other biographical material, have been added to the collection during the past two years. Much progress has been made in our endeavor to gather together reproductions of the works of California artists and the manuscript and published writings of California authors and musicians. About 5,000 commercial documents of unusual historical value have been acquired during the period covered by this report.

The newspaper index now covers the period, August 15, 1846, to March, 1905, and January to September, 1913. Rapid progress is being made towards filling in the gap from 1905 to 1913. The time of one person is entirely devoted to this work.

The department prepared a supplementary list of the pseudonyms of California authors, which was published in v. 8, News Notes of California Libraries, p. 587. The department also compiled a list of Fiction in the State Library having a California coloring which will be found in v. 9, News Notes of California Libraries, p. 227.

REFERENCE DEPARTMENT.

The work of the Reference Department continues to grow, especially through requests from the county free libraries, from public libraries, and through work done for high schools and women's clubs. During the past two years the department has tried especially to build up a collection to fill the demand for foreign books, and toward that end has purchased books in the Bohemian, Italian, Portuguese, Danish and Swedish languages, as well as added to the French, German and Spanish collections.

The Library is acquiring prints, which are being loaned through the Reference Department. There are now a few over nine hundred in the collection, consisting of a full set of the Medici prints; reproductions of the masterpieces in famous galleries of Europe, from the Berlin Photo-

graphic Company; some of Braun and Company's reproductions; and examples of American art from the Detroit Publishing Company, and Curtis and Cameron.

Lantern slides are also being loaned through this department. The first collection of slides to be added are those showing California industries. Forestry and horticulture subjects are now available.

Many women's clubs have been assisted in the preparation of programs, in the selection of books on stated subjects, and in the lending of the books as needed. The Library is to be brought into even closer touch with the clubs during the coming year, as the Head of the Reference Department has recently been appointed Chairman of the Bureau of Library, Information and Reciprocity of the California Federation of Women's Clubs, and in that capacity will help in much of the work of making up programs, give all kinds of information and direct the club women to a close connection either with their local libraries or the State Library.

As the work of the department has grown, it has become necessary to make some change in the service given. Beginning July 1, 1914, all requests for material from individuals, institutions or libraries in a county having a county free library must be sent to the State Library through the county free library. This applies to cities which have not joined the county free library, as well as to the regular established branches. This will help economy of service, and will prevent the sending of material which is already available in the county.

CATALOG DEPARTMENT.

The work of the Catalog Department has proceeded as usual—current accessions have been cataloged as fast as possible, and classes needing recataloging have been worked on as demand arose. The recataloging of books on sociology has been finished, and the 800's are now being worked on. During the past two years 69,286 cards, representing 17,562 volumes, were added to the catalog.

ORDER DEPARTMENT.

With the increase in our funds we immediately began to purchase books in much larger quantities, in order to make up for the lack of purchases during the preceding biennial period. It was soon found that our old accessions system was too laborious; too much time was required to enter books after their receipt. A new order and accessions system, similar to that employed in the Library of Congress, has been adopted, and has been found satisfactory in every respect. It requires much less time to handle the books under the new plan than it did under the old. In particular, a lot of books may now be cleared in a fraction of the time required under the older system; a matter which is of special importance in the case of books needed immediately upon receipt at the Library.

BRANCHES OF THE STATE LIBRARY.

As the 1913 legislature was nearing the end of its session the heirs of Adolph Sutro decided to give the Sutro collection of books to the State Library on condition that the Trustees establish a permanent branch in San Francisco in which to house the gift. Action in accordance with the terms of the gift was immediately taken by the Board of State Library Trustees. A bill, carrying an appropriation of \$70,000.00 for quarters, stacks and other expenses, was immediately passed but did not receive the Governor's approval. The Trustees felt, however, that the gift was too important not to accept.

The books which for more than thirty years had been housed in the old Montgomery Block were packed up during September, 1913, and early in October were moved to Sacramento and Webster streets on the second floor of the Lane Medical Library Building. These quarters, which in many ways are highly desirable, are in a fire-proof building and have been taken under a five-year lease. A one-story wooden stack has been placed covering about half of the floor space, and having a capacity of 60,000 or 70,000 volumes. Some progress has already been made in listing the books by author and placing them on the shelves. Just the number of volumes in the collection and their worth can only be definitely ascertained, however, after the books have all been handled. Enough is known about the library to be sure that it contains many very valuable volumes.

Such a branch in the heart of the most populous section of the state will give the State Library an opportunity to make its material accessible to more people. No attempt will be made, of course, to compete with local libraries; but enough remains of that field which the State Library has been covering, supplementary to local libraries, to tax our resources.

Nothing has yet been accomplished toward the establishment of a branch in Los Angeles. Should the bond measure for a state building in that city be approved, however, it may then be possible to give consideration to this question.

COMPILATIONS AND INDEXES.

The legislature of 1913 amended the law relating to the duties of the state librarian, who thereby is now required to index the statutes and journals, to make a general index to the laws of the state, and to compile such volumes and pamphlets of laws and other matter as the various state departments may require in the exercise of their official duties. Under this law the library has indexed the histories of both houses of the legislature, the journals and the statutes for the session of 1913. As yet no provision has been made for printing the general index to the laws, so that work has not been done.

The following compilations have been made:

Election Laws.

Library Laws.

Health Laws.

Laws Relating to Orphans.

Supplement to the Compilation of Laws of Interest to Women and Children is on the press.

NEWS NOTES OF CALIFORNIA LIBRARIES.

"News Notes of California Libraries" is issued quarterly, and is now in its ninth volume. It contains statistics from the libraries of the state, news notes about their work, information about the California Library Association and the Board of Library Examiners, and a Directory for Library Supplies. Almost every number has as an additional feature reference lists of various kinds on California subjects or subjects of interest to California. The publication aims primarily to keep every library worker of California informed about what the other librarians and libraries are doing. It is hoped by means of this quarterly to make the knowledge of library conditions in California very general. From all indications we believe that this result is being accomplished.

We have been able to effect a considerable saving in the mailing of "News Notes of California Libraries," through second class rates which were granted in December, 1913. Though two applications had previously been made for this privilege, for some reason never very clear or very forceful to us both applications had been denied.

UNION CATALOG AND DEPOSITORY CATALOG.

The Union Catalog for California was started in 1909 with cards for the periodical files in most of the libraries of California. The Catalog aims to include an author card for every addition to every library in California. The county free libraries and some of the public libraries of the state are already sending cards for additions. Stanford University accessions since October, 1912, are included and cards have been promised from the University of California Library as the books are recataloged.

The State Library is also a depository for cards from Harvard University Library, the University of Chicago Library and the Library of Congress. The depository set of Library of Congress cards that was formerly located in the Denver Public Library was transferred to us in January, 1914. As the Denver Public Library had had the cards discontinued in January, 1911, the accumulation since that date was being held at the Library of Congress. This accumulation, in addition to a large quantity of cards which came unfiled from Denver, has been impossible to handle in the five months' time, but by January, 1915, the cards will doubtless be filed to date.

Any information the Union Catalog or depository cards can give is furnished promptly to any inquirer.

ELEVATOR.

Efficient and ready service has long been attained in the State Library quarters in spite of the fact that the reading rooms and book stacks are scattered over five floors of the Capitol building and without an inside elevator. The handicap became so evident during the early part of 1914 that the State Engineering Department was requested to investigate the feasibility of installing an elevator exclusively for library use. The plan has been approved, and it is expected that the elevator will be ready for use by January 1, 1915.

LIBRARY SCHOOL.

In order to meet the demand both on the part of libraries for librarians and assistants, who have had the benefits of technical training, and also of persons desiring to enter the profession for training within the state, the Trustees of the State Library at the meeting on September 4, 1913, authorized the establishment of a library school. The course covers a period of one academic year. The number of students taken has been limited to fifteen. The first class, selected by competitive examination held by the State Civil Service Commission entered upon its work on January 12, 1914, and consists of the following persons:

Ruth Beard, Modesto.
Helen V. Briggs, Sacramento.
Helen M. Bruner, Sacramento.
Blanche Chalfant, Bishop.
Miriam J. Colcord, Modesto.
Mabel Coulter, Salinas.
Bernice L. Goff, San Jose.
Vivian Gregory, Woodland.
Eloise Gundrum, Sacramento.
Cecilia Henderson, Santa Paula.
Anne Margrave, Santa Barbara.
Lenala Martin, Sacramento.
Myrtle Ruhl, Redwood City.
Jennie Rumsey, Woodland.
Caroline Wenzel, Sacramento.

This first class will end its year's work on December 18, 1914.

The second class, for which examinations will be held in Sacramento, San Francisco and Los Angeles on September 2, 1914, will begin its work on September 23d. Beginning with the second class the school year will regularly begin in September and end the following June.

In the Fall of 1915 the entrance standard will be raised, at which time and thereafter only college graduates will be considered for admission to the School.

During the Summer vacation of 1914 the students of the school were employed part time cataloging the books of the Sutro collection, and part time working in the San Francisco Public Library. The experience gained in both phases of their work will no doubt be of much value to them.

SUTRO GIFT.

Mention of the Sutro collection has already been made under the heading Branches of the State Library, but further and formal notice and thanks must be made to the heirs of Adolph Sutro and especially to the executrix of the estate, Dr. Emma L. Merritt, for this splendid gift. These books, including as they do much valuable material in all departments of knowledge, will be made available to the public as soon as possible and will serve the purpose which their far sighted collector had in mind.

LIBRARY BUILDING.

The Commission to investigate the need for more adequate quarters for departments of the state government, including the State Library, made a thorough investigation of the whole question and in its report to the Governor strongly urged the necessity of at least two more buildings in Sacramento: an office building and a building for the courts and the State Library. The committee was unanimous in condemning any plan to put the additional buildings on the present Capitol park. It decided after thorough discussion and consultation with experts that the most convenient location for these buildings would be the two blocks adjoining the Capitol grounds on the west; and suggested that the city of Sacramento purchase and donate this ground to the state. Accordingly the citizens of Sacramento who are interested in preserving the park in its present open and beautiful condition undertook a campaign of education. So thoroughly convincing was the argument that the bond proposition to purchase the two blocks carried almost eight to one.

The legislature of 1913 passed a bond measure providing \$3,000,000.00 to construct the two buildings in question. This proposition will be submitted to the people at the general election in November, 1914; and from all indications will be approved.

EASTERN TRIPS.

In October and November, 1913, the Assistant Librarian made a trip to many of the eastern libraries; and in January and February, 1914, the Legislative Reference Librarian made a similar trip, covering for the most part different libraries. The purpose of these trips was to study library conditions and activities in the places visited, to find out where things are done differently and why, and to attempt in every possible way to better our practice and service.

The State Library was represented at the 1913 and 1914 conferences of the American Library Association by a member of the Board of Trustees, Charles S. Greene.

COUNTY LIBRARIES.

The following counties have established county free libraries since the last report: Butte, Contra Costa, Glenn, Humboldt, Inyo, Los Angeles, Monterey, San Bernardino, San Mateo, Santa Clara and Solano. Many school districts have joined the county free libraries and are having library service. Branches established in these school districts and in other localities by the county free libraries amount to the total of 752, an increase of 535 in the last two years. On July 1, 1912, fifteen school districts had joined county free libraries; July 1, 1914, 183 school districts have joined, making an increase of 168 school districts having county free library service in two years.

The following is a list of the counties having county free libraries, with the date of establishment, income, and number of branches on June 30, 1914.

	Date established	Income, 1912-14	Number of branches
Alameda -----	Sept. 26, 1910	\$32,177 32	24
Butte -----	Sept. 3, 1913	5,199 38	52

APPENDIX E.

BOARD OF LIBRARY EXAMINERS.

Members of the Board.

J. L. Gillis, State Librarian, Chairman.

Everett R. Perry, Librarian Los Angeles Public Library, Secretary.

Robert Rea, Librarian San Francisco Public Library.

Section 6 of the County free library law reads:

A commission is hereby created to be known as the board of library examiners, consisting of the state librarian, who shall be ex officio chairman of said board, the librarian of the public library of the city and county of San Francisco and the librarian of the Los Angeles public library . . . (Chap. 6S, Cal. Statutes 1911.)

Four examinations have been held (July 1, 1912—June 30, 1914):

Los Angeles, October 10, 1912, and San Francisco, October 11, 1912.

Santa Barbara, June 10, 1913.

Los Angeles, December 8-9, 1913, and San Francisco, December 11-12, 1913.

Coronado, June 19, 1914, and San Francisco, June 23, 1914.

Sixty-eight candidates took the examinations and 28 passed.

The Board has issued 90 certificates in all.

Certificates of qualification have been issued to the following persons :

First Grade.

- Bailey, Anne Bell, Assistant State Library, Sacramento.
 Baird, Jean D., Assistant Alameda County Department Free Library, Oakland.
 Barmby, Mary, Chief Alameda County Department Free Library, Oakland.
 Bigley, Winifred H., Librarian Merced County Free Library, Merced.
 Chapin, Artna M., Librarian A. K. Smiley Public Library, Redlands.
 Cloudsley, W. F., Librarian Stockton Free Public Library and San Joaquin County Free Library, Stockton.
 Coffin, Helen L., 934 Walnut St., Riverside.
 Daniels, Joseph F., Librarian Riverside Public Library and Riverside County Free Library, Riverside.
 Dills, Clara B., Librarian Solano County Free Library, Fairfield.
 Evans, Helen, Reference Librarian Public Library, Riverside.
 Ferguson, Milton J., Assistant Librarian State Library, Sacramento.
 Gillis, Mabel R., Head Books for Blind Department, State Library, Sacramento.
 Gleason, Celia, Librarian Los Angeles County Free Library, Los Angeles.
 Greene, Charles S., Librarian Free Library, Oakland.
 Hadden, Anne, Librarian Monterey County Free Library, Salinas.
 Haines, Alice J., Head Documents Department, State Library, Sacramento.
 Herrman, Bessie, Librarian Tulare County Free Library, Visalia.
 Herrman, Jennie, Librarian San Diego County Free Library, San Diego.
 Huntington, Stella, Librarian Santa Clara County Free Library, San Jose.
 Kennedy, Helen T., Chief Branches Department, Public Library, Los Angeles.
 Lion, Mrs Frances Burns, Librarian Santa Barbara Free Public Library and Santa Barbara County Free Library, Santa Barbara.
 Long, Harriet C., Librarian Kern County Free Library, Bakersfield.
 McCardle, Sarah E., Librarian Fresno Free Public Library and Fresno County Free Library, Fresno.
 Oddie, Sarah S., Head Catalog Department, State Library, Sacramento.
 Perry, Everett R., Librarian Public Library, Los Angeles.
 Provines, Cornelia D., Librarian Stanislaus County Free Library, Modesto.
 Reagan, Ida M., Librarian Butte County Free Library, Oroville.
 Ripley, Lauren W., Librarian Sacramento City Free Library and Sacramento County Free Library, Sacramento.
 Smith, Susan T., Reference Librarian State Library, Sacramento.
 Steffa, Julia, Assistant Los Angeles County Free Library, Los Angeles.
 Steffens, Laura, Second Assistant Librarian State Library, Sacramento.
 Waterman, Minerva H., Librarian Public Library, Santa Cruz.
 Waters, Caroline S., Librarian San Bernardino County Free Library, San Bernardino.
 Watson, William R., Chief Division of Educational Extension, New York State Library, Albany, New York.
 Whitbeck, Mrs Alice G., Librarian Contra Costa County Free Library, Martinez.

Second Grade.

- Babcock, Mrs Julia G., Librarian Yolo County Free Library, Woodland.
 Baker, Mignon, Librarian Girls' High School Branch, Public Library, Riverside.
 Barnett, Margaret Adelle, Librarian Public Library, Santa Rosa.
 Beeman, Mrs Anne (Madison), Mrs Thomas Beeman, Librarian Imperial County Free Library, El Centro.
 Brown, Charlotte M., Librarian University of Southern California Library, Los Angeles.
 Brown, Jennie May, Librarian Inyo County Free Library, Independence.
 Brownson, Gladys, Assistant State Library, Sacramento.
 Clatworthy, Linda M., Estes Park, Colorado.
 Craig, Agnes S., Librarian North Branch Public Library, Pasadena.
 Culver, Essae M., Assistant State Library, Sacramento.
 Davison, Mrs Hannah P., Librarian Free Public Library, San Diego.

Dickson, Lillian L., Head Cataloger, Public Library, Riverside.
 Dold, Margaret E., Assistant State Library, Sacramento.
 Ellis, Victoria, 427 N. Grand avenue, Los Angeles.
 Ferris, Katharine Post, Librarian Public Library, Corona.
 Field, Clara C., 548 E. Almond avenue, Orange.
 Foote, Frances R., Assistant Public Library, Los Angeles.
 Goldman, Belle A., Superintendent of Branches and Stations, Public Library, San Francisco.
 Lawrence, Edith C., 5705 Washington avenue, Chicago.
 McCluhan, Elva, Assistant City Free Library, Sacramento.
 Madison, Mrs Elizabeth S., Librarian High School Library, Oakland.
 Mallory, Gertrude, Custodian Central Avenue Branch, Public Library, Los Angeles.
 Mast, Maude L., Librarian Madera County Free Library, Madera.
 Maynard, Glyde, Cataloger University of California Library, Berkeley.
 Mumm, Beulah, Assistant State Library, Sacramento.
 Munsen, Ida G., Assistant State Library, Sacramento.
 Robson, Anna Laura, Assistant Public Library, Berkeley.
 Silverthorn, Bessie B., Librarian Kings County Free Library, Hanford.
 Strother, Nell, Assistant Fresno County Free Library, Fresno.
 Weyand, Anna, Assistant Contra Costa County Free Library, Martinez.
 Wilsey, Della M., Librarian Public Library, Richmond.

Third Grade.

Maxwell, Agnes, Librarian Public Library, Crescent City.
 West, Mabel G., Elko, Nevada.
 Williams, Anna L., Librarian Public Library, Alturas.

At Present Out of Library Work.

Dickinson, Asa Don (2d grade).
 Dickinson, Mrs Norma (Burrell) Mrs G. C. Dickinson (2d grade).
 Green, Mrs Mabel (Prentiss), Mrs Donald R. Green (1st grade).
 Harris, Mrs Emma B. (Barker), Mrs Daniel Harris (2d grade).
 Hollabaugh, Mrs Antoinette M. (Humphreys), Mrs Thomas G. Hollabaugh (1st grade).
 Laurence, Mrs Ethelwyn H. (Fagge), Mrs Roger Laurence (1st grade).
 Schurch, Mrs Bertha (Kumli), Mrs John Schurch (1st grade).

A revised edition of the "California county free library law and circular of information for applicants for certificates of qualification to hold the office of county librarian in California" was prepared and was printed in *News Notes of California Libraries*, January, 1914, and later issued in pamphlet form.

COLONEL D. M. McRAE-----Surgeon

GENERAL JOHN F. SHEEHAN-----Quartermaster

PRESIDENT'S REPORT.

VETERANS' HOME OF CALIFORNIA.

September 29, 1913.

To His Excellency, HIRAM W. JOHNSON,
Governor of California.

SIR: In presenting this, my twelfth annual report as president of the Veterans' Home of California, I have the honor to express to you my thanks and appreciation for reappointment as a Director of the Home for a new term. In the future, as in the past, it shall be my endeavor to work for the best advantage of the State and the institution, guarding the interest of the Veterans entrusted to the care of the Nation and the State. As a part of my report I also hand you those of the Commandant of the Home, and other officers, referring to their respective departments.

The directorate of the Home remains unchanged since last report.

On November 1, 1912, General C. A. Woodruff resigned as Commandant, and Colonel H. G. Burton was elected in his place. Colonel Burton efficiently acted in that capacity until May 1, 1913, when he resigned, and the Directors were fortunate in again securing the services of General Woodruff. The Home is being ably conducted under the management of General Woodruff, who looks well after the disabled and aged veterans under his care. Added to kindness of heart in dealing with the members, great executive skill is displayed in handling the many employees, men and women, in the general conduct of the institution.

On February 24, 1913, occurred the death of Colonel J. J. Lyon, who for thirteen years had served as Quartermaster and Commissary and two additional years as Commissary of the Home. Previous to his residence at the Home, Colonel Lyon had been untiring in his efforts on behalf of the Home and the old soldiers. With Colonel Lyon's death the Home lost an upright, conscientious officer and the veterans of the Nation's wars a loyal and faithful friend.

Otherwise the personnel of the officers of the Home remains unchanged.

Many necessary repairs and improvements have been made throughout the Home during the year. The installation of waitresses in the Hospital on May 1, 1912, having met with such marked success, it was deemed advisable to place them in the main dining-room. Consequently, about twenty-three waitresses are now employed in the main dining-room in addition to those in the Hospital.

Interest in the Library increases among the members. The Library is open daily from 8 o'clock a. m. to 8 o'clock p. m. The long reading tables are in constant use, there being 44 newspapers and 53 periodicals to interest the readers. On June 30, 1913, there were 4,297 books on hand. During the year 21,844 were loaned to members. A new system of cataloging has recently been inaugurated, and the fiction portion has been completed and placed accessible to readers. The Library is

efficiently managed. Visitors to the Library are now enabled to read in any part of the room as a new lighting system has been installed.

Throughout the year affairs of the Home have been generally satisfactory. The Directors and officers have worked in harmony with the State officials.

In conclusion, I desire to express the thanks of the Board of Directors and the officers to the Governor of the State, the State Board of Control, the Legislature, and all State officers with whom we have come in contact, for many courtesies extended and cordial co-operation in our endeavors to administer the affairs of the Home and direct our efforts toward alleviating the suffering of the veterans entrusted to our care; providing for them a comfortable and well-equipped home, and disbursing the funds appropriated by the Government and the State for the purposes contemplated by them.

Very respectfully,

SAMUEL W. BACKUS,
President.

REPORT OF COMMANDANT.

To the President and Members of the Board of Directors, Veterans' Home of California:

I have the honor to submit herewith my report of the affairs of this Home for the fiscal year ending June 30, 1913.

Accompanying this paper are the reports of the Secretary and Treasurer, Surgeon, Quartermaster, Commissary and Engineer, and especial attention is invited to these reports, as they give in detail the business side of the affairs of this Home.

In the Treasurer's report I call especial attention to the amount of pension checks cashed by the Treasurer—\$139,574.58 during the year, and not one dollar of this has been used for the support of the Home.

During the year the members have deposited with our Treasurer \$41,081.93 and drawn out \$32,807.14. We have now on deposit \$23,341.65. All of this voluntarily deposited by the members.

A rather remarkable fact is that the gains and losses have each been greater than ever before in the history of the Home. One fourth of the admissions were veterans of the Spanish-American War.

I invite special attention to the Surgeon's report in reference to the need of a tubercular pavilion. It is to be regretted that the last Legislature, which was generally so generous to the Home, overlooked our request for this vitally important building.

This office has received many letters from former patients of the hospital, and from friends and relatives of former patients, expressing their thanks and heartfelt gratitude for the care extended by the surgeons, nurses and attendants. The growing importance of the hospital owing to the increasing infirmity of the fast aging veterans has only to be known to be appreciated. Probably no other hospital in the State, public or private, has a more diverse male clientage than ours: old, middle aged and young; sick, wounded and blind; feeble-minded and strong; victims of drug and liquor habits and tropical diseases; and mentally diseased.

The Quartermaster's report gives in considerable detail the work of this department.

The report of the Commissary shows that the poultry plant and hog ranch have been successful, and the gross receipts from all Home products was \$13,959.43.

The report of the Engineer gives in detail the work of his department, save the daily repairs, so numerous at such an institution.

The last Legislature was liberal to this institution. In addition to the maintenance fund of \$132,500 per annum, they gave special appropriations as follows:

General repairs -----	\$13,500 00
Assembly and Library building -----	15,000 00
For a pipe line from the California State Reformatory -----	12,000 00
A dairy barn -----	7,500 00
Painting -----	7,500 00
Repairs to plumbing -----	5,000 00
Lavatories -----	1,250 00
For the septic tank and drains and laterals leading thereto -----	5,200 00

Among all of California's institutions her home for disabled veterans is unique in many respects. The Home property, valued at \$321,149, was presented to the State, not by any of our wealthy citizens, but by the Associated Veterans of the Mexican War and the Grand Army of the Republic; its membership represents the classes who were paramount in the Mexican War, the Civil War, the Spanish-American Philippine War, and in the westward march of civilization from the Mississippi and Rio Grande to the Pacific Ocean; and the emoluments of its officers are much less than those of any similar institution of the State.

The conduct of the members generally has been excellent and is worthy of the military record of the organizations wherein they earned the right of admission to this Home. All soldiers were not heroes, and unfortunately a small percentage of our membership is not worthy of the protecting hand of the State, and more unfortunately still the lack of moral stamina of a very small number brings reproach upon the vastly greater number of honorable, self-respecting, well conducted men.

Public opinion will shrug its shoulders at the sight of one feeble old veteran under the influence of cheap, and sometimes drugged, liquor, and never raise a hand or voice against the well known disreputable grogeries and "blind pigs" where the weakness of this feeble old veteran was played upon until he was completely debauched, rebbed of the last dollar of his honorably earned pension, and thrown out to find his way, as best he could, back to the benign care of our hospital.

There are still "blind pigs" and so-called "clubs" in Yountville, a saloon in Oakville, where I am informed they take dishonest advantage of those whom they have partly intoxicated; and there is a saloon two miles from the Home on a back road for which there is no excuse whatever, except that it is just outside the mile and a half limit. The disgrace for such a condition of affairs should not rest upon this Home, its officers or its members, but upon the community that suffers it to continue. I desire to say that I am indebted to the sheriff of Napa County for cordial support.

Discipline is absolutely necessary for success in every walk of life, in business, in the home, in schools, in every institution, but it is the desire of the authorities of this Home that our discipline shall be as mild and kindly as possible, and more for the happiness and protection of the well disposed and the weak than the correction of the erring.

As far as practicable members can do as they please, so long as they do not infringe upon the rights of others; it is their Home; but maudlin sympathy that would permit a self-respecting man to be annoyed or put upon by a bully or a drunkard is not encouraged; from reveille to tattoo members come and go as they please, passes and furloughs are granted upon request, and the electric and steam railroads issue to members half-rate transportation upon the request of the Commandant.

Owing to three dry seasons in succession, the water supply has been a very serious problem, and but for the new well on the eastern part of our grounds we would have been almost destitute of sufficient water for domestic purposes. Owing to the appropriation for a pipe line from Rector Canyon, next year will undoubtedly find this Home abundantly supplied with this very necessary article.

The main dining-room has been enlarged by building two wings, which gives us room for all at one sitting, and this room is now lighted by two large skylights, to the additional comfort of the members.

The cement walks have been extended and now render it unnecessary for members to get their feet wet going to almost any building of the Home.

The improvement in service and benefits derived from the installation of waitresses to replace members in the dining-room of the hospital were so manifest that the Board of Directors determined to introduce waitresses in the main dining-room. A competent matron has been employed for this important work, and early in the next fiscal year we expect to have a full force engaged. This change was rendered advisable and almost necessary owing to the increasing age of members.

Frequent inquiries induce me to again state that no part of the pension is taken for the support of members at this Home.

Those only are eligible to admission who served in the army or navy or marine corps of the United States, and received honorable discharge therefrom, during the war with Mexico, 1846 to 1848; the Civil War, April 15, 1861, to April 2, 1866; the Spanish War, April 21, 1898, to April 2, 1899; the Philippine Islands, China or in Alaska and those who served in any Indian wars, and are now aged, disabled or in indigent circumstances, residents of California for six months immediately preceding admission and have not been a member of any other Home for six months.

During the past year Department Commander W. R. Thomas, accompanied by his staff, made several visits at the Home, which were enjoyed by the members, and on several occasions he brought with him "The Old Boys Choir." and they naturally aided in producing happiness and pleasure.

The members themselves, often aided by Christian women, have religious exercises two evenings each week, and we have preaching by clergymen. Catholic and protestant, nearly every Sunday. Baseball games three times per month and moving picture shows three times per week.

Our library is of great importance and benefit to the members, and again I thank those papers of the State of California that have generously supplied us with copies of their issues; and again I ask the papers of California who have not yet done so, to furnish us with at least a weekly edition, for some of our members are interested in every locality in the State.

From September 16, 1912, to May 15, 1913, when he was compelled to resign on account of ill health, Colonel H. G. Burton was the efficient Commandant of this Home.

On February 24, 1913, Colonel J. J. Lyon, who has justly been called the "Father of the Home," and for fifteen years was Commissary, passed over the river and sleeps beside the comrades whom he loved so well.

I am indebted to the members of the Board of Directors individually and collectively for their cordial support and encouragement.

Any success that has attended the operation of this Home during the past year is largely due to the labor and co-operation of the officers and non-commissioned officers of the Home, and the members generally, to

all of whom my appreciation is extended, for I fully recognize the fact that no home can ever succeed in being what a home for veterans should be without the support of its members; they must assist in keeping up the moral tone, in restricting the use of intoxicants and in promoting harmony.

To the hearty co-operation and hard work of the headquarters employees is due in a great measure the cordial relations that have existed between this office and the Board of Control, and this office and the National Home for Disabled Volunteer Soldiers and Sailors.

Respectfully submitted.

C. A. WOODRUFF,
Commandant.

SECRETARY AND TREASURER'S REPORT.

VETERANS' HOME, July 1, 1913.

To the President and Board of Directors, Veterans' Home of California
(through General C. A. Woodruff, Commandant):

GENTLEMEN: I have the honor to submit herewith my annual report for the fiscal year ended June 30, 1913.

GENERAL FUND.

Receipts.

July 1, 1912—Balance on hand	-----		\$819 07
July 1, 1912, to June 30, 1913—			
State and United States appropriations	-----	\$234,919 55	
Subsistence:			
Sales, commissary stores	-----	\$4,839 42	
Board of guests, directors' cottage	-----	151 90	
Board, main dining-room	-----	48 50	
			5,039 82
Current expense:			
Rents collected	-----	\$180 00	
Telephone collections	-----	121 35	
Postage sold	-----	36 00	
			337 35
Farm:			
Sale products	-----		679 59
Quartermaster stores:			
Clothing, etc., sold	-----	291 80	
Clothing refunded	-----	357 62	
			649 42
Refund of transportation and cash advanced	-----		19 05
Household	-----		532 50
Miscellaneous:			
Excess amount allowed on pay rolls	-----	93 03	
Hospital sales, barrels	-----	6 75	
Sundry refunds and rebates	-----	24 79	
Sales: hides, sacks, barrels, etc.	-----	128 90	
Reimbursement from Department of Engineering	-----	45 06	
			298 53
Amount borrowed on note	-----	12,100 00	
			254,575 81
			\$255,394 88

Disbursements.

July 1, 1912, to June 30, 1913—			
Paid approved bills and pay rolls	-----	\$234,919 55	
Remitted to State Treasurer	-----	7,785 62	
Note paid	-----	12,100 00	
Erroneous telephone charge	-----	60	
			254,805 77
June 30, 1913—Balance on hand	-----		\$589 11

In addition to above balance the Treasurer has on hand a \$500.00 Revolving Fund belonging to the General Fund.

POST FUND.

Receipts.

July 1, 1912—Balance open account-----		\$1,971 77
July 1, 1912, to June 30, 1913—		
Post Store receipts-----	\$7,339 30	
Transportation and loans to members returned-----	89 85	
Transferred from savings account-----	3,000 00	
Transferred from posthumous fund in accordance with the law-----	1,900 13	
Interest and dividends-----	674 25	
Reimbursements-----	101 17	
Premiums on canceled insurance policies and bonds--	123 95	
		<u>13,228 65</u>
		\$15,200 42

Disbursements.

July 1, 1912, to June 30, 1913—		
Paid approved bills and pay rolls-----		\$13,535 95
June 30, 1913—Balance, open account-----		\$1,664 47
Revolving Funds:		
July 1, 1912—On hand-----	\$2,540 00	
On deposit with savings banks:		
On hand, July 1, 1912-----	\$13,999 65	
Received dividends-----	110 25	
Received posthumous fund-----	3,655 09	
	<u>\$17,764 99</u>	
Transferred to open account-----	3,000 00	
		<u>14,764 99</u>
		17,304 99
June 30, 1913—Total to credit of post fund-----		\$18,969 46

SPECIAL DEPOSIT FUND.

Receipts.

July 1, 1912—Balance on hand-----		\$19,785 00
July 1, 1912, to June 30, 1913—		
Received from depositors-----	\$41,081 93	
Received interest and dividends-----	299 63	
Deposit to cover overdraft of fiscal year ended June 30, 1912-----	3 05	
		<u>41,384 61</u>
		\$61,169 61

Disbursements.

July 1, 1912, to June 30, 1913—		
Paid to depositors-----	\$32,807 14	
Paid on orders of depositors-----	821 04	
Transferred to posthumous fund-----	4,199 77	
		<u>37,827 95</u>
June 30, 1913—Balance on hand-----		\$23,341 66

Checks to the amount of \$139,574.58 were cashed for pensioners during the year.

Statistics as to membership, gains, losses, etc., during the year ended June 30, 1913.

Membership of Home, June 30, 1912-----		1,118
New admissions during the year—		
Survivors of Civil War-----	189	
Survivors of Spanish-American War-----	64	
Survivors of Indian wars-----	6	
Total admissions -----	259	
By readmissions -----	278	
Total gain -----	537	
Losses during the year—		
By discharge, own request-----	339	
By discharge, summary -----	13	
By discharge, dishonorable -----	2	
By dropped, absent without leave-----	52	
By dropped, not renewing furlough -----	98	
By death -----	120	
Total loss -----	624	
Net loss -----		87
Membership of Home, June 30, 1913-----		1,031
Segregation as to wars—		
Mexican War -----	10	
Civil War -----	882	
Spanish-American War -----	116	
Indian wars -----	23	
Total -----		1,031
Average present during the year-----		944
Average present and absent during the year-----		1,084
Average absent with leave-----		130
Average absent without leave-----		10
Average sick -----		208
Average age of all living members-----	69 years	
Average age of members admitted-----	59 years	
Average age of members dying -----	69 $\frac{3}{4}$ years	
Total admissions to June 30, 1913-----		5,975
Highest number present during the year-----		1,013
Highest number present and absent-----		1,122
Average T. A. P. -----		10

Average number sick, with leave, without leave, present, absent, whole number cared for, gain and loss, at Veterans' Home of California from June 30, 1890, to June 30, 1913.

C. DE COLMESNIL,
Secretary and Treasurer.

SURGEON'S REPORT.

HOSPITAL, VETERANS' HOME, July 12, 1913.

To the President and Board of Directors of the Veterans' Home of California (through General C. A. Woodruff, Commandant):

GENTLEMEN: I have the honor to submit the report of the Hospital Department for the fiscal year ending June 30, 1913, as follows:

Number of patients treated in hospital during year-----	682
Number of patients admitted to hospital during year-----	491
Number of patients discharged from hospital during year-----	355
Number of patients remaining in hospital June 30, 1913-----	202
Number of patients treated at sick call during year-----	5,947
Daily average number of patients treated at sick call-----	19
Number of surgical treatments and dressings during year-----	5,840
Daily average number of surgical treatments and dressings-----	16
Number of patients died in hospital during year-----	112
Number of members died in quarters and on Home grounds-----	4
Number of members died while absent from Home during year-----	9
Total number of deaths during year, including 6 T. A. P.'s-----	126

Of the above—

111 were Civil War veterans, whose average age was 72.5 years.

14 were Spanish War veterans, whose average age was 45 years.

Percentage of deaths to total number treated in hospital, 16.4.

Number of tubercular patients treated during year (about)-----	90
Number of tubercular patients who have died during year-----	24
Number of tubercular patients in hospital, June 30, 1913 (about)-----	35

The following operations were performed during the year:

Amputations—		Fractures—	
Of foot-----	4	Of fibula, silver plate-----	1
Herniotomy-----	4	Of legs and arms-----	6
Cataracts-----	2	Minor operations-----	24

I would again like to call attention to the urgent need for a proper tubercular pavilion for the care of this class of patients. The number is rapidly increasing, and means of caring for them is becoming a serious question. The building used for such purpose is nearly always full, and to make room for the sicker men it is very often necessary to send patients who show improvement back to quarters; at present there must be at least twenty men in quarters who should be in hospital, but who, for lack of room, are allowed to remain there—and allowed to spread infection.

A number of improvements have been made, among which might be mentioned the rearranging of the surgical dressing-room and the addition to it of needed equipment, enabling the dresser to do his work far better than formerly; a large sun porch has been constructed for the men of the annex, furnishing them with a large, warm and comfortable room, to gather in, which was especially welcome this winter. Both the tubercular building and the annex have been screened, doing away with the fly question, which used to be a serious one in these buildings. Some of the sections in the lower wards have been divided into rooms, where very sick men can be isolated and be made more comfortable than in the general wards. Fans have also been installed in these wards, which have added greatly to the comfort of the men in hot weather.

The Board has very generously met the requests made for additional nurses; the increasing number of patients and their advancing age has made this addition necessary. At the same time, the number of dressings done has increased in the same proportion, until the work done is almost double that of a year ago.

In closing, I wish to thank Dr. Crane, my assistant, and Miss Patten, the head nurse, for their loyal support and help, and their readiness to respond any time they were called upon, without which there could have been no success in handling the different problems which have arisen.

Respectfully,

D. M. McRAE,
Surgeon.

DIED IN HOSPITAL DURING YEAR ENDING JUNE 30, 1913—MEMBERS.

No.	Name.	Age.	Service.	Nativity.	Died.	Cause of death.

QUARTERMASTER'S REPORT.

VETERANS' HOME, September 29, 1913.

General C. A. Woodruff, Commandant Veterans' Home.

GENERAL: I have the honor to present herewith report concerning transactions in the Quartermaster's Department of the Veterans' Home for the fiscal year ended June 30, 1913.

The Quartermaster's Department embraces within its jurisdiction many features of the industrial life of the Home, and employs an average of about 45 men, nearly all of whom are members from the Civil and Spanish-American wars. The Quartermaster has supervision of the clothing; dairy, including the care of and distribution of milk; all features of farming, with the exception of hog and chicken ranches and orchard; irrigation of alfalfa lands; charge of the stables, blacksmith shop; transportation of persons and hauling of all freight to and from railroad stations; care of manure pits; disposition of swill; sprinkling of Home roads; graveling and grading same; delivery of ice; vegetable garden; removing and burning garbage at dump; whitewashing. Also has charge of post store, tailor shop, shoe shop, mattress and harness shops, baggage rooms, and care of effects of deceased members, besides having charge of and making inventory of all the household property of the Home, and supplying fuel for all departments and households.

Supplies of clothing from contractors have been eminently satisfactory, and no complaints from members are recorded. The value of clothing on hand has been reduced to the maximum allowed by the Board of Directors, viz. \$3,000, although the membership is larger and prices of garments higher than when said maximum was established. The following statistics relating to clothing should prove interesting to all concerned:

Clothing received during the fiscal year ended June 30, 1913.

Article	Number	Value
Uniform coats	150	\$1,102 50
Uniform trousers	599	2,069 64
Uniform blouses	270	1,134 00
Overalls	231	162 86
Jumpers	62	48 98
Overshirts, cotton	697	237 02
Overshirts, merino	795	761 89
Undershirts, cotton	36	14 85
Undershirts, merino	1,353	885 10
Knit jackets	241	466 12
Drawers, cotton	67	27 64
Drawers, merino	1,543	1,009 39
Socks, cotton	1,178	109 06
Socks, merino	3,339	481 98
Hats	666	591 08
Shoes	1,266	3,330 71
Suspenders	481	86 18
Handkerchiefs	600	32 50
Gloves	73	12 78
Shoe laces, dozen pairs	310	16 75
Total value		\$12,600 98

Clothing report for fiscal year ended June 30, 1913.

Although the past has been a season of drought generally throughout the State, Napa County proved an exception and crops in this vicinity averaged fairly good. The total rainfall for the season 1912-1913 at the Veterans' Home amounted to 25.81 inches, being 2½ inches in excess of the preceding year, and more than 17 inches greater than the rainfall in the Sacramento Valley for the same period.

About 100 acres are available for cultivation for crops of hay, and from this acreage and volunteer hay land there was produced last season 222½ tons of the following varieties: Alfalfa and barley mixed, alfalfa, beardless barley, oats, wheat, volunteer. Of this quantity there were 37¼ tons of alfalfa and 17¾ tons of alfalfa and barley mixed. The total value of this crop of hay at market rates of July 1st is estimated to be \$4,433.40. There were 180 tons the previous year. None of this hay was baled as it is all required for Home consumption and there is storage room in barns for 350 tons of loose hay. There has been an increase of live stock within the past two years by the purchase of 14 Holstein heifers, and three horses were added to Home stables. It is estimated that 300 tons of hay per annum is required to feed our present stock. With sufficient water for irrigation we can cut 200 tons of alfalfa per year and should be able to raise an average of 120 tons of grain hay and 40 tons of volunteer hay each season. Pasturage on hill lands has been very light the last two seasons. Since making our report on hay crop to July 1st there has been cut and hauled to cow barn and outside stacks 25 tons and 1,730 pounds of alfalfa, all of second or third cutting; and there is now growing on a field east of septic tank a fine third crop. We have been able to supply to the hog ranch fresh alfalfa nearly every day since July 1st. There will be some alfalfa pasturage for milch cows nearly all the fall. Thanks to the Board of Directors and Commandant for energetic action in furnishing distributing pipe, the farm department has been enabled to irrigate several acres of alfalfa which otherwise would have drooped and died out from drought. As it appears now we will have no difficulty in irrigating the tracts sown to alfalfa if water is available.

The dairy produced 40,208 gallons of milk during the year, against 38,020 gallons for the previous year. This yield of 110 gallons per day

has served the Home without purchase of milk, but a greater quantity is required for the aged and sick. The hospital received one half of the total supply. The value of the milk furnished by the dairy for the year is \$9,046.80 at 22½ cents per gallon. There were born on the farm 58 calves, of which 35 of common stock and 11 Holstein were sold for \$216.50. Three Holstein heifers are being raised at the Home. Nine calves were born dead, three being of Holstein stock. Eight old cows were condemned and slaughtered for beef.

Stock on farm at present: 59 milch cows, 2 bulls and 2 Holstein calves. If the supply of milk will admit of it all promising Holstein heifers will be raised at the Home. Of the cows 45 are being milked at present, 14 being out dry. There are 12 horses and 4 mules, all but one (retired on account of old age) being worked daily.

During the fiscal year there were cleaned and repaired in Home tailor shop 472 uniform coats, 670 blouses and 1,153 pair of trousers.

The shoe shop reports show that 1,014 pair of shoes were repaired.

In the mattress shop 343 mattresses and 79 pillows were made and repaired.

Sewing done through this department as follows: made, 727 sheets, 852 pillow cases, 351 hand towels, 193 roller towels, 48 napkins, and 159 waiters' aprons.

During the present summer 155 loads of gravel have been hauled from Napa River at a point about a mile beyond Oakville, involving a round-trip haul of nine miles, each team bringing two loads per day. The gravel is had without cost to the Home except the hauling. Efforts have been made to obtain gravel from a place nearer the Home, but without avail. A goodly quantity of this gravel has been used in the making of cement for walks, etc. What is left will be placed upon Home roads.

The vegetable garden supplies the Home tables with staple vegetables all the year round. Tomatoes have been furnished since early in August and will continue to yield until frost appears. Celery will be ripe by Thanksgiving. The garden is irrigated with clean water from the septic tanks.

Report of vegetable garden for fiscal year.

Vegetable	Amount	Value
Beets -----	12,530 pounds	\$125 30
Cabbage -----	7,438 heads	371 90
Cauliflower -----	449 heads	22 45
Celery -----	794 heads	39 70
Carrots -----	24,080 pounds	240 80

String beans -----	5,005 pounds	150 15
Beet greens -----	21 sacks	5 25
Cucumbers for pickles -----	250 gallons	50 00
Cabbage for kraut -----	9,300 pounds	325 00
Total value -----		\$2,751 80

I earnestly recommend the purchase of a motor truck as soon as finances will admit of it. A motor truck is a business necessity. Six of the best horses and two men are required in hauling fuel oil from the spur track on the Southern Pacific railroad, a distance of three quarters of a mile, all up grade, and this work occupies at least eight days per month, average. About 1,000 gallons are hauled each load, the weight of oil and tank being in excess of $5\frac{1}{2}$ tons. I believe I can safely assert that the cost of fuel for the motor will be less than the maintenance of the horses engaged; and besides the motor would haul practically all the freight from the railroad stations. Thus from six to eight horses could be disposed of and the payment of demurrage minimized.

The Post store, under the supervision of the Quartermaster, is a profitable adjunct to the Home, besides being a great convenience to members, officers and employees. A careful inventory of stock is taken every month, a complete report of expenditures and receipts made and the profit ascertained. For the twelve months ended June 30, 1913, the cash profit was \$1,912.82, as against \$1,630.26 for the year previous. During the warm days the sale of temperance drinks is very great. As an instance, on a recent hot day 435 "soft" drinks were sold, from which the store realized \$21.75, making a profit of nearly 100 per cent. For the accommodation of the women employees of the Home and others a line of delicatessen goods has been added to the stock in the Post store. Total cash receipts of Post store for the fiscal year amounted to \$7,339.30, as shown by Treasurer's book. Cash is turned in to Treasurer three times each week.

All stove wood required is cut on Home grounds. About 60 cords are used each year and the cost of felling trees and chopping into 2-foot and 14-inch lengths is \$2.00 per cord, a saving of \$4.50 per cord over cost of firewood in former years.

For kindly consideration and co-operation the thanks of this department are due the Board of Directors, the Commandant and other officers, and to a corps of earnest, intelligent employees.

Respectfully submitted.

JOHN F. SHEEHAN,
Quartermaster.

COMMISSARY DEPARTMENT REPORT.

General C. A. Woodruff, Commandant, Veterans' Home of California.

SIR: The business pertaining to the Commissary Department for the fiscal year ending with June 30, 1913, is herewith respectfully submitted.

Poultry Plant: The poultry plant is one of the paying propositions of the Home, and is very ably managed by the present Superintendent.

Issued and sold during the fiscal year:

Eggs, chickens and ducks, received from plant-----	\$6,788 85
Feed, labor, etc. -----	5,637 19
Credit to poultry plant-----	\$1,151 66
Fowls on hand July 1, 1912, 3,823; value-----	2,266 25
Fowls on hand June 30, 1913, 4,289; value-----	2,192 25

The higher valuation last year on young chickens makes the total valuation this year less than last, although there is a greater number of fowls.

Some 23,040 $\frac{3}{4}$ dozen eggs were delivered to the Commissary Department, the value of which at contract price was \$6,396.56.

Hog Ranch: Last year a partnership existed between the Home and Messrs. Chinn & Rabattero, they being equal partners with the Home in the herd of swine. This partnership was dissolved about November 1, 1912, by the Home purchasing the interest held by Messrs. Chinn & Rabattero for \$400.00, they turning over to the Home at that time 214 head of swine.

June 30, 1913, shows a record of the herd as follows: 1 boar, 98 hogs, 44 shoats, 113 pigs, 28 sows; total, 284. During the year just passed ending with June 30, 1913, there was delivered to the Commissary Department 138 fat hogs, whose aggregate weight was 30,538 pounds, the value of which at market prices was \$2,384.00.

Hogs delivered to Commissary Department-----	\$2,384 00
Feed, labor, etc.-----	1,905 62

To credit of hog ranch-----	\$478 38
-----------------------------	----------

During October and November, 1912, a very complete hog ranch was established on the Home grounds, with the necessary buildings, cement feeding platforms, watering troughs, slaughterhouse, etc. This year, if all goes well, the hog ranch should make a good showing with a fair profit.

Vegetables: The Home garden has supplied the vegetables for the main dining-room and hospital in a very creditable manner, the following table designating the amount of each article.

Fruits: Scarcely any fruits were received this season on account of the heavy frosts, the last season's prune crop, however, being very good, the Commissary Department receiving about 17 tons of very nice dried prunes. The price being very low, none were sold, and the Home can now dispose of at least 8 tons to good advantage.

Supplies: With very few exceptions the supplies furnished by the present contractors have been A No. 1, and quite satisfactory.

Employees: Some decided changes have been made in the matter of help in the main kitchen to the betterment of all concerned, and we are very appreciative of the kindness of the Board of Directors in granting many of our requests. The three cooks now employed in the main kitchen are civilians, and are giving good satisfaction.

Very respectfully,

SIMON PETER,
Commissary of Subsistence.

Account of Home products for fiscal year ended June 30, 1913.

Article	Quantity	Price	Value
Apples -----	1,332 pounds	\$0.11 per lb.	\$13 32

BILL OF FARE.

SUNDAYS.

Breakfast—Fried sausage and boiled eggs, boiled potatoes, bread, butter, coffee.

Dinner—Roast pork, brown gravy, steamed potatoes, hominy, bread, apple pie, tea.

Supper—Rolled wheat, mush and milk, bread, butter, cheese, cake, tea, apricot sauce.

MONDAYS.

Breakfast—Mutton stew, corn and wheat bread, butter, coffee.

Dinner—Split pea soup, roast mutton, tomato sauce, summer squash, boiled potatoes, bread, tea.

Supper—Boiled rice and steamed California figs, bread, butter, tea.

TUESDAYS.

Breakfast—Pork and beans, bread, butter, coffee.

Dinner—Boiled beef, peeled boiled potatoes, stewed parsnips, tapioca pudding, bread, tea.

Supper—Macaroni and cheese Italian, bread, butter, prune sauce, tea.

WEDNESDAYS.

Breakfast—Lamb curry and rice, bread, butter, coffee.

Dinner—Corned beef and cabbage, steamed potatoes, beets, bread, tea.

Supper—Corn meal mush and milk, bread, butter, peach sauce, tea.

THURSDAYS.

Breakfast—Pickled lambs' tongues, boiled potatoes, corn and wheat bread, butter, coffee.

Dinner—Boiled salt pork, mashed potatoes, stewed tomatoes, bread, tea.

Supper—Rolled oat mush and milk, bread, butter, prune sauce, tea.

FRIDAYS.

Breakfast—Codfish family style, Bayo beans, boiled potatoes, bread, butter, coffee.

Dinner—Pearl barley soup, fresh fish, boiled potatoes, cold slaw, bread, bread pudding, tea.

Supper—Lima beans, bread, butter, apple sauce, tea.

SATURDAYS.

Breakfast—Beef stew, corn and wheat bread, butter, coffee.

Dinner—Roast beef, brown gravy, peeled boiled potatoes, bread, tea, boiled onions.

Supper—Cold meats, potato salad, bread, butter, prune sauce, tea.

REPORT OF ENGINEER.

VETERANS' HOME, September 29, 1913.

General C. A. Woodruff, Commandant Veterans' Home.

General: I have the honor to submit the following statement pertaining to the work performed in the departments of this Home, which are under the supervision of the Chief Engineer, during the fiscal year ended June 30, 1913:

WATER SYSTEM.

An extension of sixty feet has been added to the well at the county road, giving it a total length of ninety feet. The well has been housed over and painted, and the walls lined with lagging and braced.

One thousand feet of 1½-inch pipe has been run from supply line from the dam to the hog ranch, with ¾-inch branches, supplying water to corrals and brooding pens. Connection has been made with pipe line from the canyon below Whitton Spring to water tank for dry cattle.

A pipe line has been run from new spring near old Commissary residence to tank near concrete bridge for sprinkling. Connection has also been made with same spring to irrigate alfalfa field.

CONSTRUCTION.

A complete and modern equipment for breeding and raising hogs has been installed to the west of and adjoining the chicken ranch. The old slaughterhouse has been torn down and a new one erected at the hog ranch. A frame dwelling house for the accommodation of the men there employed has been constructed at the same place.

The Commandant's residence has been enlarged by an addition containing a sewing-room, bathroom, closet and two toilets.

The work on the Surgeon's cottage has been completed in all details.

The Treasurer's office has been enlarged by extending it to the west on a line with the walls of the Library.

A sun porch has been constructed at the hospital annex, and wire screening placed around same.

A carpenter shop has been built adjoining Uncle Tom's Cabin for the use of the carpenter employed at the hospital.

An addition has been constructed to the old power house building providing quarters for members and lavatories for hospital employees. A barber shop has been constructed in the Post store building.

An addition of two rooms and porch has been built to the dwelling house on the chicken ranch.

The old oil tank building has been remodeled into a dwelling house for the farmer.

An addition of sixteen feet in length with concrete walls has been built to the tin shop.

A galvanized iron house with concrete foundation has been built for storage of gasoline.

A wood shed has been erected with capacity for storing 100 cords of wood.

CONCRETE WORK.

A concrete floor has been placed in the storehouse for flour and prunes; concrete floor placed with addition to tin shop; concrete walls and floor placed for storage house for gasoline; the basement of Surgeon's cottage concreted, given coat of asphaltum and cemented; cement walk run from nurses' cottage to main walk; at hog ranch nine floors for brood sow houses; eighteen yards for brood sow houses; floors and walls for granary and feeding platform; three water basins; floor in slaughterhouse and two hundred and thirty yards of gutter have been concreted, and scalding kettle bricked in and chimney built.

CARPENTER WORK.

Practically all carpenter work on the new construction work hereinbefore mentioned has been performed by Home labor. Window screens have been placed throughout Company "B"; old annex building, upper and lower porch of tuberculosis annex, Quartermaster's building, farmer's cottage, kitchen employees' quarters and addition to old power house building. Forms have been made for concrete valve boxes; two double doors and two skylights placed in main dining-room; 20 table frames made for main dining-room and maple tops placed thereon and doors placed in electric station. One hundred and fifteen coffins have been made, and all repairs to furniture, buildings, etc., performed by the Home carpenters.

WORK OF PAINTERS.

The Home painters have painted all new carpenter work and lettered all head boards, painted and varnished furniture as required, and made all necessary repairs.

WORK OF TINSMITH.

The Home tinsmith has made the tin and galvanized iron ware and construction material required for use, and has also made all necessary repairs. The tin shop equipment being modern and complete, everything required in this line is manufactured therein.

WORK OF LAUNDRY.

The Home laundry washed on an average 25,500 pieces per month. The working force employed therein consists entirely of members of the Home.

ICE PLANT.

The ice plant supplied refrigeration for the various cold storages in operation and manufactured 129 tons of ice during the year.

STATE DEPARTMENT OF ENGINEERING.

The following work has been done by the State Department of Engineering under the supervision of the Chief Engineer as Inspector:

Sewer line. Sewer line of 5,220 feet has been laid and 25 manholes placed. This includes main sewer line and laterals from quarters, etc., to septic tanks. The sewer line is now entirely confined to the limits of the Home reservation.

Cottages, Company "C." The interior plastering of cottage No. 7, Company "C," has been removed, and the same has been lined with

plaster board. The interior woodwork and plaster board have been painted, new electric wiring and closet fixtures have been installed, and cement floor placed in the lavatory.

Addition to old power house. The interior to the old power house building, now fitted for waitresses' quarters, was painted and varnished throughout by Home labor.

Very respectfully,

T. W. LAWRENCE.
Chief Engineer.

DESCRIPTIVE LIST OF MEMBERS OF THE VETERANS' HOME OF CALIFORNIA, JUNE 30, 1913.

Name.	Company and regiment.	Rank.	Length of service, months.	Nativity.	Age.	Pension per month.	Disability.	When admitted.
Ackerman, James D.	U. S. Navy.	1st Class Boy	22	New York	65	\$14 50	Rheumatism	Feb. 1, 1901
Adams, John C.	M, 21st U. S. Inf.	Private	36	Iowa	49	14 00	Skin disease	Jan. 5, 1907

Applications Committee.
THE ENTIRE BOARD OF DIRECTORS.

BOARD OF SURVEY.

GENERAL WM. H. C. BOWEN.....	Commandant
COLONEL D. M. McRAE.....	Surgeon
GENERAL JOHN F. SHEEHAN.....	Quartermaster

PRESIDENT'S REPORT.

VETERANS' HOME OF CALIFORNIA,
August 21, 1914.

To His Excellency, HIRAM W. JOHNSON,
Governor of California.

SIR: I have the honor to submit herewith my thirteenth annual report as President of the Board of Directors of the Veterans' Home of California. As a part of my report I also submit reports of the Commandant, Secretary and Treasurer, Surgeon, Quartermaster, Commissary, and Engineer, giving in detail transactions of their several departments.

The directorate of the Home has changed in one instance since my last report. Colonel Bonus Leightner, of Sacramento, was appointed to fill the vacancy occasioned by the expiration of the term of office of Senator Wm. H. Savage. Owing to ill health Colonel Leightner was constrained to resign, and on April 11, 1914, Judge James O. Prewett, of Sacramento, was appointed in his place. With his experience along legal lines, and in all other respects, Judge Prewett is a valuable addition to the directorate.

To Senator Savage is due our thanks for his untiring work on behalf of the Home and its members during his eight years of service as a director.

On May 1, 1914, the resignation as Commandant of Brigadier General C. A. Woodruff (U. S. A. retired) was accepted with regret on the part of the directors, the members, officers and employees of the Home. General Woodruff, with his kindly and courteous manner, had endeared himself to all with whom he came in contact at the Home.

Colonel Wm. H. C. Bowen, U. S. A., retired, was elected Commandant. In Colonel Bowen we should find a worthy successor to General Woodruff, and his record in the army leads one to the belief that his administration at the Home will be a successful one. Colonel Bowen has served in the army continuously since 1875, when he was commissioned second lieutenant and was retired January, 1914, as colonel of the 12th U. S. Infantry. He is a veteran of many Indian campaigns and of the Spanish-American War.

On July 1, 1913, Captain J. P. Edmunds was elected to the position of Commissary. Owing to Captain Edmunds' experience in the Commissary Department of the United States Army, he is well fitted to cope with the many and arduous duties connected with his position.

In other respects the personnel of the officers of the Home remains unchanged.

Recently, the Department Commander of the Grand Army visited the Home, and I beg to quote from his report to the Forty-seventh annual Encampment of the Grand Army, as follows:

“With senior Vice Commander B. B. Tuttle and Past Department Commander E. L. Hawk, I visited the Veterans' Home. General Woodruff and staff welcomed us to the hospitality of as lovely a home as any soldiers' home could be. It is an ideal place, in a beautiful valley backed by wooded hills. The grounds are well kept and there are about eleven hundred members in the Home. Of that number one hundred and fifty are veterans of the Spanish-American War. They receive the same care and protection that are given to the older veterans. We ate at the same table with the members, and were bountifully served by the young ladies who now attend that service. We found no ground of complaint, and we heartily commend the officers of the Home for their faithfulness and efficiency.”

Great interest is manifested by the members of the Home in the library, where fifty-eight magazines and forty-two newspapers are regularly received. On July 1, 1914, we had 4,347 volumes on hand. During the last year 22,493 volumes were loaned to 737 cardholders. The library is mostly supported from our Post fund and we are indebted to many kind friends for contributions of books and periodicals.

In administering the affairs of the Home for the past year, the directors and officers have worked in harmony with the state officials.

To the Governor of the State, the State Board of Control, and all State officers with whom we have come in contact, I desire to express the thanks of the board of directors for many courtesies extended and cordial co-operation accorded us, in our desire to bring help and comfort to the veterans whose welfare we have at heart.

Respectfully submitted,

SAMUEL W. BACKUS,
President.

REPORT OF COMMANDANT.

VETERANS' HOME, June 30, 1914.

To the President, Board of Directors,
Veterans' Home of California.

SIR: I have the honor to submit annual report for the year ending June 30, 1914:

Inclosed find reports of Treasurer, Surgeon, Quartermaster, Commissary and Engineer.

Total number carried on rolls June 30, 1914.....	1,055
Total number carried on rolls June 30, 1913.....	1,031
Gain for the year.....	24
Number present June 30, 1914.....	882
Number absent June 30, 1914.....	173
Number in hospital, including extra duty members absent with leave and absent without leave June 30, 1914.....	256
Average for year, present and absent with leave.....	1,029
Number of deaths during year.....	139

Membership.—I quote from annual report for year ended June 30, 1912: "It was generally expected that the membership of all veterans' homes would decrease after 1907, but the membership of this Home has constantly increased since that date, as follows: 1907, average present, 721; 1908, 761; 1909, 834; 1910, 855; 1911, 925; 1912, 982; an average increase of 6 per cent per annum. If the coming year shows a corresponding increase we will be crowded to the very extreme limit."

Additional Buildings.—The increase for 1913 and 1914 did come—the increase being 24 for year ended June 30, 1914. We are crowded to the limit. Our needs for barrack room, night nurses' cottage, a large and commodious building to keep men in restraint, a warehouse or storehouse, a kitchen of adequate capacity, an ice plant of large enough capacity for our needs, certain additions to the hospital, or preferably a new one, buildings for civilian employees, etc., are urgently needed. Attention is now called to the matter that proper steps may be initiated at once, looking to the next meeting of the legislature for adequate provisions for relief.

Hospital Buildings—Tubercular Pavilion.—The hospital needs, and needs at once a separate pavilion or building for the tubercular patients. In our large centers of population "the white plague" is receiving deserved attention and adequate provisions are rapidly being made to segregate this class of disease.

The patients here should have separate buildings, separate dining hall, separate dishes, separate nurses, and separate laundry. At present

all the members are in danger, more or less, and more so here than in most other communities, for the reason that the average age is so high and the physical condition is far from first rate.

I invite special attention to the Surgeon's report in reference to the need of a tubercular pavilion. It is to be regretted that the last legislature, which was generally so generous to the Home, overlooked our request for this vitally important building.

The growing importance of the hospital, owing to the increasing infirmity of the fast aging veterans, has only to be known to be appreciated. Probably no other hospital in the State, public or private, has a more diverse male clientage than ours; old, middle-aged and young; sick, wounded and blind; feeble-minded and strong; victims of drug and liquor habits and tropical diseases, and mentally diseased.

Detention Quarters.—There should be a large and commodious ward in hospital set apart for alcoholic patients, where our poor old inebriates can be properly cared for and restrained, and where the regular patients would not be inconvenienced and annoyed. These dipsomaniacs or habitually drunken men need restraint and care. As it is at present, the hospital attendants and nurses have all they can attend to in caring for their regular sick, without being bothered by the alcoholics.

The conduct of the members generally has been excellent, and is worthy of the military record of the organizations wherein they earned the right of admission to this Home.

“Public opinion will shrug its shoulders at the sight of one feeble old veteran under the influence of cheap, and sometimes drugged, liquor, and never raise a hand or voice against the well known disreputable groggeries and ‘blind pigs’ where the weakness of this feeble old veteran was played upon until he was completely debauched, robbed of the last dollar of his honorably earned pension, and thrown out to find his way as best he could, back to the benign care of our hospital.

“There are still ‘blind pigs’ and so-called ‘clubs’ in Yountville, where I am informed they take dishonest advantage of those whom they have partly intoxicated; and there is a saloon two miles from the Home on a back road for which there is no excuse whatever, except that it is just outside the mile and a half limit. The disgrace for such a condition of affairs should not rest upon this Home, its officers or its members, but upon the community that suffers it to continue. I desire to say that I am indebted to the sheriff of Napa County for cordial support.

“It is the desire of the authorities of this Home that our discipline shall be as mild and kindly as possible, and more for the happiness and protection of the well disposed and the weak than for the correction of the erring.”

As far as practicable members can do as they please, so long as they do not infringe upon the rights of others; it is their Home; but maudlin sympathy that would permit a self-respecting man to be annoyed or put upon by a bully or a drunkard is not encouraged; from reveille to tattoo members come and go as they please, passes and furloughs are granted upon request, and the electric and steam railroads issue to members half-rate transportation upon the request of the Commandant.

Regarding alcoholic patients Dr. George Donohue, Superintendent State Hospital for Inebriates, Knoxville, Iowa, says: "There is no cure for drunkenness and inebriety save not to drink. There is no known specific for the cure of this condition," and this was said in 1914, the present year, at a public meeting before the Iowa State Board of Control, at which there were representative officials from many contiguous states.

At this Home there are between 70 and 100 periodical drunkards, and perhaps 20 confirmed drunkards. They are men who can not be depended on from day to day.

We should have a ward that would accommodate this number at least, separated from the main hospital and divided into separate sleeping apartments, with a common dining-room. Here they should be kept, except during the hours of work, and during those hours they should be closely guarded and watched.

Ward for Female Sick.—We need a ward in the hospital for the sick female help. Comment unnecessary.

Amusement Room and Library.—The State Architect, Mr. McDougall, was here about the 16th instant, and I had a good talk with him about the need of buildings, appropriations, etc. In his opinion, all new buildings should be of reinforced concrete, and on a definite plan.

Labor.—We are rapidly approaching the limit of labor that can be performed satisfactorily by members of the Home. In this connection attention is called to the report of 1913. "The employment of more civilian help will soon be rendered necessary by the increasing age and infirmities of members who are now employed."

Good men must live and many have families, and, if not fairly treated as to pay and promotion, they will leave just as they are most efficient. Constant change does not invite good service. Keep your employees and keep them satisfied. Provide, not only proper shelter and food, but provide amusements so as to keep them contented.

Burbank Spineless Cactus for Forage.—The subject of Burbank spineless cactus for forage is called to the attention of the board. At a cost of \$300 we can secure 1,000 cuttings, which, in three years, will bear a crop large enough to harvest, and from which other plants can be raised. The subject is of interest, and, so far as this Home is

concerned, it is indorsed by the Commandant, by the Quartermaster, and by the Farmer.

Milk Supply.—Our herd of cattle is too small. At the Napa State Hospital, with a membership of over 2,000 they are milking some 200 cows—here, with a membership of over 1,000, we have less than 40 cows (for June we were milking 33). The number is insufficient.

Horses.—Our horses are getting old and their feet are giving out. For the proper working of the farm, we have not enough of them. The handling of oil and supplies is constant, requiring all our horses and mules most of the time.

Cold storage.—Our cold-storage plant is inadequate. The machine is a small one, having a daily capacity of only 1,800 pounds, running twenty hours. We use 1,200 to 1,400 pounds daily in the summer time, but not including that required for cold storage. If any serious break should happen to the machine, which has been in constant use fifteen or sixteen years, we would be hard-put to properly care for meat, etc., besides causing great inconvenience and loss.

Expenses.—If our expenses seem large it is only necessary to note the continued high cost of living and increase in membership; which condition is obtaining in other soldiers' homes, and may so continue for years.

The State of New Hampshire gives \$15,000 a year for maintenance, or an average of \$172.00 per member per annum.

Massachusetts, the wealthy, gives something over \$300.00 per member per annum. California, with an average attendance of 912, gives \$145.00 per member per annum.

The Veterans' Home of California is unique in its membership, claiming members from almost every state in the Union, from Maine to California and from Oregon to Texas. A tabulated statement of the deaths during the past fifteen months will show this, viz:

Maine -----	1	Kentucky -----	2
Vermont -----	1	Texas -----	1
Massachusetts -----	5	Missouri -----	2
Rhode Island -----	1	Kansas -----	3
New York -----	15	Nevada -----	2
New Jersey -----	2	Oregon -----	1
Pennsylvania -----	8	Washington -----	2
Ohio -----	5	California -----	20
Illinois -----	4	United States Army -----	13
Indiana -----	4	United States Navy -----	20
Wisconsin -----	8	United States Marine Corps -----	1
Michigan -----	1	United States Colored Troops -----	1
Minnesota -----	2		

Pensions.—Frequent inquiries induce me to state that no part of a man's pension money is taken for the support of the Home, or for any other purpose. Each pensioner uses his money as he sees fit.

Visitors.—The Home is always open to inspection and visitors are welcome. We invite inspection and a thorough examination at any and all times of the Home and of its management. We request visits from members of the legislature especially.

Before closing my report I desire to call attention to an extract from the Thanksgiving Day proclamation of Governor G. C. Perkins in 1881:

“I would especially invoke the aid of the people of the State in behalf of the Veterans’ Home Association of California. This day having been set apart by the executive committee of said association for such free-will offerings as our people may deem proper to donate, to the extent of your ability contribute to this worthy cause. Remember that the blessings which are ours this day come through them, periling life and limb to keep this nation one and indivisible. It is not charity they ask, but justice. We owe it to them; it is an obligation the fulfillment of which has been already too long delayed.”

On May 1, 1914, General C. A. Woodruff resigned as Commandant because of personal reasons, and the undersigned was appointed in his stead.

I am indebted to the board of directors, individually and collectively, for cordial support and encouragement, and to the hearty co-operation and hard work of the Home officials and employees.

WM. H. C. BOWEN,
Commandant.

SECRETARY AND TREASURER'S REPORT.

VETERANS' HOME, July 1, 1914.

To the President and Board of Directors,
Veterans' Home of California.

GENTLEMEN: I have the honor to submit herewith my annual report for the fiscal year ended June 30, 1914.

GENERAL FUND.

Receipts.

July 1, 1913—Balance on hand	\$589 11
July 1, 1913, to June 30, 1914—	
State and United States appropriations	\$230,806 38

C. DE COLMESNIL,
Secretary and Treasurer.

SURGEON'S REPORT.

HOSPITAL, VETERANS' HOME, July 7, 1914.

*To the President and Board of Directors,
Veterans' Home of California.*

GENTLEMEN: I have the honor to submit the report of the Hospital Department for the fiscal year ended June 30, 1914:

Number of patients treated in hospital during year.....	687
Number of patients admitted to hospital during year.....	490
Number of patients discharged from hospital during year.....	358
Number of patients remaining in hospital June 30, 1914.....	197
Number of patients treated at sick call during year.....	5,640
Daily average number of patients treated at sick call.....	18
Number of surgical treatments and dressings during year.....	5,120
Daily average number of treatments and dressings.....	14
Number of patients died in hospital during year.....	127
Number of members died in quarters and on Home grounds.....	5
Number of members died while absent from Home during year.....	13
Total number of deaths during year, including 5 T. A. P.'s.....	145
Of the above—	

132 were Civil War veterans, whose average age was 74 years.

13 were Spanish War veterans, whose average age was 44.4 years.

Percentage of deaths to total number treated in hospital, 21.1.

Number of tubercular patients treated during year (about).....	85
Number of tubercular patients who have died during year.....	20
Number of tubercular patients in hospital June 30, 1914.....	31

The following operations were performed during the year:

Amputations—		Fractures—	
Leg, above knee.....	1	Arm	1
Leg, below knee.....	1	Hip	3
Toe	1	Hydrocele—	
Herniotomy	1	Radical operation for cure.....	1
Carcinomatous growths on face.....	2	Cataracts	1
		Minor operations	14

One of the most important questions confronting not only the hospital department, but the health of the entire Home, is the construction of a proper pavilion, suitably located, to take care of the constantly increasing number of tubercular patients who present themselves for treatment, or who are known to be scattered throughout the barracks, for lack of room in the present quarters that are provided for the purpose. This building is entirely unfitted for the care of tubercular patients, the back rooms having practically no sunlight, and no circulation of air, on account of its being backed up against another building. How urgent is the need of a new building, complete in itself, with kitchen, dining-room, surgical dressing-rooms, etc., I am sure I do not have to point out to the Board.

The present building is badly needed for the increasing number of incompetents and helpless old men, who need care and attention more than they do treatment in a hospital; in fact, many are in such a state that they could not be kept in the regular wards of the hospital.

Another building, removed from the noises of the camp, is a necessity, if the night force is to obtain proper rest; such building need not be either large or expensive. Happily, the night nurses now have a small cottage to themselves.

Speaking of new buildings, I heartily agree with the Commandant, that a separate ward for alcoholics is a necessity; such a ward should have a high fence surrounding it, to prevent friends on the outside from passing in liquor to the inmates. With the present jag-rooms, patients in nearby wards are frequently kept awake by noisy and violent drunks.

While realizing that the hospital is receiving its full share of the milk supplied by the Home dairy, such supply is inadequate for the present number of patients, the majority of whom are very old men. With this class of patients, milk is not a luxury, but a necessity, as food. The same statement holds true of the chicken ranch and the egg supply.

A large amount of repair work has been necessary this year; wards and rooms needing plastering; new porches and foundations to replace the old, worn-out ones, etc. The morgue has been put in a sanitary condition by having a new cement floor, and proper drainage has been installed.

Numerous minor repairs have been made, and buildings, etc., kept from needing more extensive overhauling at the end of long periods of time, by the employment of a carpenter for the hospital alone.

While on the subject of buildings, the cottage occupied by the hospital waitresses comes to mind. This building, while fairly serviceable for summer use, needs a great many repairs to make it a comfortable and fit place for occupation during the winter months.

With the fast increasing age and feebleness of the members of the Home, it will only be a short time before the present main building will be too small to accommodate all who must be taken care of in the hospital. Even this last winter it was often crowded to the limit of its capacity.

In closing, I wish to thank my assistant, Dr. Crane, and my two head nurses, Miss Patten and Miss Bahr, for their loyal support and help.

Respectfully,

D. M. McRAE,
Surgeon.

DIED IN HOSPITAL DURING YEAR ENDING JUNE 30, 1914—MEMBERS.

ANNUAL REPORT OF QUARTERMASTER.

VETERANS' HOME, August 17, 1914.

*General Wm. H. C. Bowen, Commandant,
Veterans' Home.*

GENERAL: I have the honor to present herewith report concerning transactions in the Quartermaster's Department for the fiscal year ended June 30, 1914:

The recent changes in method of accounts and in making requisitions, etc., inaugurated by experts of the State Board of Control, should produce good results. Ever since taking charge of this department the Quartermaster has felt the necessity of ascertaining the exact profit (or loss if any) of the various departments of the Home, and was about to inaugurate a system more than a year ago, until informed of the intentions of the Board of Control to establish a general state system. So far as the Quartermaster's Department is concerned the new system is working well, although it involves a great deal of additional clerical work.

This department is experimenting in raising the Burbank spineless cactus, some 200 plants having already been planted. This number of plants covers about one fourth of an acre of ground. The spineless cactus is a natural silage, as it can always be gathered in the green state, and is exceedingly succulent and can be mixed with alfalfa hay or meal. It is relished by poultry and hogs, as well as by cattle.

The total yield of hay for the season already stored amounts to 195 tons and 35 pounds, every load having been weighed, classed as follows: alfalfa 41 tons, alfalfa and oats mixed 12, barley 19, wheat 12, oats 50, volunteer 52, and 9 tons of alfalfa cut green and delivered in lots daily to hog and chicken ranches. The horse barn has been filled to its capacity with best quality of hay, all the alfalfa being stored in cow barn. The new barn, in pasture field, for storage of hay for dry cows contains 25 tons of volunteer hay. No hay was baled, there being ample storage for all the crop loose. A third crop of alfalfa is now being cut and a fourth crop is expected from about 12 acres if water is available for irrigating.

The rainfall for season 1913-14 amounted to 58.13 inches.

Under the appropriation of \$7,500.00 by the last legislature a new dairy building has been constructed under the direction of the contractor, Louis Ceroghino of San Francisco. The contract price was

\$6,747.00, covering all but electrical work. The building is one story, 141½ feet in length and 35 feet in width, the walls of concrete to a height of about 9 feet, all above, including roof, being of wood; the floor all concrete. There are 60 milking stalls, with storage room for milk, feed, etc., at ends. The ground upon which the building has been erected lies on the southeast part of the cow barnyard, below the present milk house.

Profits of Post store for the last fiscal year amounted to \$2,041.98, being \$129.16 more than the profit of the previous year. A grocery department for the accommodation of families of the Home has been established in connection with the store.

The dairy gave 33,468 gallons of milk during the year. There has been a shortage of milch cows, but the Home has purchased 22 Holstein heifers, through the State Veterinarian, which increases the stock to 34 Holsteins, 27 common stock, 1 registered Holstein bull, 1 yearling Holstein bull raised at the Home, 3 yearling heifers and 1 calf. All the Holstein heifers born here are being raised at the Home.

The Home owns 12 horses and 4 mules. Six of the horses are old and nearly broken down.

The strictest economy in issuance of clothing was maintained during the past year. The quality furnished by contractors was fully up to samples.

Clothing purchased during year.

Uniform coats	111	\$815 85
Uniform blouses	251	1,192 25
Uniform trousers	676	2,323 20
Overalls	285	213 75

Total -----	-----	\$1,697 54

The Home shoemaker repaired 1,097 pairs of shoes.

Mattress maker made 290 mattresses and 90 pillows.

In the tailor shop there were repaired and cleaned 635 coats, 859 blouses and 1,418 pairs of trousers.

Sales of Quartermaster's stores amounted to \$840.39.

Eighty-eight and one half cords of stove wood were cut from Home grounds at \$2.00 per cord.

Thanking the board of directors, the Commandant, and fellow officers for kindly considerations, I am,

Very respectfully,

JOHN F. SHEEHAN,
Quartermaster.

REPORT OF THE COMMISSARY DEPARTMENT.

OFFICE OF COMMISSARY, June 30, 1914.

*General Wm. H. C. Bowen, Commandant,
Veterans' Home of California.*

GENERAL: I have the honor to submit herewith report of the Commissary Department of the Veterans' Home of California for the fiscal year ended June 30, 1914. The Commissary has supervision of the bakery, butcher shop, vegetable room, dining hall, kitchen, chicken ranch, hog ranch, and all features pertaining thereto.

Supplies.—With very few exceptions the supplies furnished by the contractors have been up to the standard of the specification of the contract; except potatoes, fresh—the quality not being up to the standard, hence the rejections. Reclamations are made in conformity with generally accepted trade rules; with this method the loss, if any, is sustained by the contractor.

Employees.—The department employs 35 male and 25 female help (26 members and 34 civilians); total 60. In positions occupied by veterans, the work has been done at small wages, but as their infirmities increases with advancing years the time is not far distant when they will become unable to perform the duties required, so that civilians will necessarily have to be employed at an increased expense. Civilians have been employed only when it has been found that the veterans at the Home were unable to perform the work satisfactorily. This method, however, has too often resulted in a detriment to the best interest of the home. In view of the fact that an applicant for position on the civil service list is granted quarters, board, etc., suitable quarters should be provided him when reporting for duty. At present this is impossible, as the quarters now are wholly inadequate. Special inducements should be made to hold desirable employees.

Dining hall.—During the past fiscal year the dining hall has been thoroughly overhauled and renovated. No effort has been spared to make it attractive and inviting. On holidays a special menu is prepared, and once a month a special chicken dinner is served. It has been the aim to serve good, wholesome and palatable food and in this I believe the department has been successful. The unnecessary waste which arises from so many sources has been entirely eliminated. The employment of waitresses has proven a decided success in every particular—cleanliness, good order and economy have resulted. I desire to express my appreciation of the highly efficient services rendered by the matron, Mrs. C. W. Dibble, under whose direction the waitresses are employed, quartered and cared for, etc. The daily average attend-

ance at the dining hall has been 726 men during the past year. The messing of the men is one of the features of the Home, and has received my unremitting and constant attention.

Kitchen.—The constant increase of the membership at the Home will make the kitchen room too small for its purpose. Its enlargement is recommended. The use of oil fuel in place of coal in the kitchen ranges is also recommended from a point of economy and cleanliness. A cold storage box should be built for use of kitchen; at present time a medium sized ice box is being used but is entirely unsatisfactory.

Bakery.—During the year the oven has been overhauled and repaired; since that time a noticeable saving of oil fuel has been made. Exceptionally good bread is baked.

Pantry.—During the past months a woman has been substituted for a man employee therein; it has resulted in attaining higher efficiency in every respect.

Vegetable room.—One of the greatest wastes is in peeling potatoes, and if this is not overcome, a higher cost of the ration will result. A new potato peeler has been recommended and will be installed shortly. The Home garden has supplied the vegetables for the main dining-room and hospital in a very creditable manner. A greater variety of vegetables would be acceptable and appreciated.

Fruits.—During the month of November, 1913, prunes held in storage and not required for use were sold for \$1,727.45. Amount turned over to the treasurer. A great deal of the fruit received from the orchard has not been of the quality expected.

Butcher shop.—The cold storage box now in use should be overhauled and enlarged also, a separate compartment should be built for storage of eggs, etc. The making of pork sausage has been very successful. Fresh pork used at the Home is of home production, none being purchased from contractor.

Waste.—During the year all old bags, tea lead, bones, etc., were sold to the highest bidder, \$238.78 being realized. This amount was turned over to the treasurer.

Poultry plant.—The following statement of the operations of the plant speaks for itself: July 1, 1913—June 30, 1914:

RESOURCES.	
Per inventory, fowl, feed, etc.....	\$1,598 95
Purchased feed, etc.	3,901 46
Payment of wages, services, etc.....	94 14
Purchase minor supplies	37 27
Total	\$6,431 82

LIABILITIES.

Received eggs, chickens, etc. -----	\$6,874 21
Old bags, refuse, etc., sold -----	146 19
Per inventory, fowl, feed, etc. -----	2,401 87
Total -----	\$9,422 27
Total net gain during year -----	\$2,990 45

Eggs received, 22,592 dozens.

All eggs not required for immediate use are stored in "water glass." The eggs so stored have been tested and the quality is excellent. The housing of the fowl is wholly inadequate, particularly so during raining season, little or no shelter is afforded the bird. Suitable sheds as well as at least six new colony houses are recommended to be provided.

Hog ranch.—The following is a statement of the operations of the ranch from July 1, 1913 to June 30, 1914:

RESOURCES.

Per inventory, hogs, feed, etc. -----	\$2,276 00
Purchase of feed, etc. -----	841 13
Payment of wages, killing hogs, etc. -----	1,182 70
Purchase of blooded stock -----	58 25
Purchase of supplies -----	8 72
Inoculation of herd against cholera -----	296 21
Loss from secondary invasion of last year -----	400 00
Total -----	\$5,063 01

LIABILITIES.

Received from ranch in pork -----	\$4,785 44
Old bags, bones, refuse -----	66 26
Per inventory, stock, feed, etc. -----	2,727 45
Total -----	\$7,579 15
Total net gain during year -----	\$2,516 14

All stock in good condition. Every effort to stamp out disease or infection is being made and continued, and it is hoped in this we will be successful, which means a great deal towards profit in hog-raising. At present we have ten full blooded Tamworth stock.

I desire to thank the President, Board of Directors and Commandant for the courtesy shown me.

Respectfully submitted.

J. P. EDMUNDS,
Captain, Commissary.

BILL OF FARE.

SUNDAY.

Breakfast—Fried ham, soft boiled eggs, steamed potatoes, wheat bread, fresh butter, coffee.

Dinner—Roast veal, dressing, creamed mashed potatoes, stewed string beans, lettuce salad, plum pie, wheat bread, tea.

Supper—Cornmeal mush, fresh milk, cheese, peach sauce, cinnamon cake, fresh butter, tea.

MONDAY.

Breakfast—Bayo beans, hot cakes, wheat bread, fresh butter, coffee.

Dinner—Boiled pork and cabbage, peeled potatoes, rhubarb sauce, bread pudding, wheat bread, tea.

Supper—Fried potatoes, oatmeal mush, fresh milk, toast bread, wheat bread, stewed prunes, ginger cake, fresh butter, tea.

TUESDAY.

Breakfast—Irish stew, corn bread, hot cakes, fresh butter, wheat bread, coffee.

Dinner—Bean soup, boiled beef, gravy, steamed potatoes, creamed carrots, wheat bread, tea.

Supper—Beef hash, apple sauce, fresh butter, wheat bread, tea.

WEDNESDAY.

Breakfast—Hamburger steak, steamed potatoes, corn bread, fresh butter, wheat bread, coffee.

Dinner—Meat pie, boiled hominy, lettuce salad, tapioca pudding, wheat bread, tea.

Supper—Boiled rice, fresh milk, toast bread, apricot sauce, vanilla cake, wheat bread, fresh butter, tea.

THURSDAY.

Breakfast—Fried pork sausage, hot rolls, wheat bread, fresh butter, coffee.

Dinner—Roast mutton, dressing, mashed potatoes, beet salad, wheat bread, tea.

Supper—Maccaroni and cheese, oatmeal mush and milk, stewed figs, wheat bread, spice cake, fresh butter, tea.

FRIDAY.

Breakfast—Cream codfish, corn bread, fresh butter, wheat bread, coffee.

Dinner—Baked fish, sauce, mashed potatoes, plum pudding, wheat bread, tea.

Supper—Lima beans, toast bread, stewed prunes, wheat bread, fresh butter, tea.

SATURDAY.

Breakfast—Mutton curry and rice, corn bread, wheat bread, fresh butter, coffee.

Dinner—Pea soup, roast beef, gravy, steamed potatoes, creamed onions, wheat bread, tea.

Supper—Cold meats, potato salad, stewed apricots, wheat bread, fresh butter, toast bread.

Sugar, syrup, pickles, sauces, mustard, vinegar, etc., on all tables at all times. Fresh vegetables added when received from farm.

REPORT OF CHIEF ENGINEER.

*General Wm. H. C. Bowen, Commandant,
Veterans' Home.*

SIR: I have the honor to submit the following statement pertaining to the work performed in the departments of the Home which are under the supervision of the Chief Engineer, during the fiscal year ending June 30, 1914:

CONSTRUCTION AND INSTALLATION.

Quarters for cook have been built in rear of directors' cottage, and electric and plumbing fixtures installed.

A hay barn, 20 by 40 feet, with 12 foot shed on west side, has been built for feeding dry cattle.

A room for storing goods has been built in rear of post store.

Floors have been placed in shelter houses, and farrowing houses have been battened up at hog ranch.

Board floors have been placed in chicken houses at chicken ranch.

A room has been built for the Home bugler under the porch at the south end of the library.

A bath tub and three wash trays have been placed in the main dining-room, waitresses' quarters. Linoleum has been placed throughout the same quarters.

Electric daylight service has been installed in the Commandant's, Treasurer's and Commissary residences, and in commissary, main laundry, main dining-room, waitresses' quarters and baggage room.

Trenches have been dug in lower alfalfa field and pipe line and connections extended for irrigating same.

The stairway on the east side of Company B has been rebuilt.

CEMENT WORK.

Concrete foundations have been placed for cooks' quarters in rear of directors' cottage, and for hay barn for dry cows. Concrete floor has been placed in room for bugler, and concrete partition in main dining-room toilet.

CARPENTER WORK.

Four hundred and twenty window and door screens have been made and placed in different quarters and buildings. One hundred and twenty-eight coffins and 15 shipping cases have been made, and all repairs to furniture and minor repairs to buildings have been done by the Home carpenters.

PAINTING.

All painting of new work and all repairs in painting has been done by the Home painters.

TINSHOP.

All tin and galvanized iron work and construction material required has been manufactured at and necessary repairs in this line have been made in Home tinshop.

LAUNDRY.

The Home laundry washed on an average 26,165 pieces per month. All laundry employees are members of the Home.

ICE PLANT.

The ice plant manufactured 167 tons of ice during the year and supplied refrigeration for the various cold storages in operation.

STATE DEPARTMENT OF ENGINEERING.

The following work has been done by the State Department of Engineering under the supervision of the chief engineer as inspector:

Sidewalks—4,150 square feet of cement pavement has been laid on Home grounds.

Cottages, Company C—The interior walls and ceilings of all cottages have been kalsomined, the interior woodwork painted, and furniture cleaned and varnished.

Main dining-room waitresses' quarters—A two-story wire screen enclosed porch has been built in front of these quarters.

Main dining-room—The pantry and dish washing machine have been removed from the center of the main dining-room, a new pantry constructed in the former passageway between the main dining-room and bakery, and the dish washing machine has been installed therein. Floor joists, with concrete pier supports, and 2,000 square feet of flooring have been renewed in main dining-room. Interior walls and ceiling have been repainted throughout in white; also walls and ceilings of main kitchen and butcher shop.

Ice plant—At ice plant floor joists and 1,080 square feet of flooring have been renewed in loft, and water distilling equipment installed. Insulation has been renewed around brine tank, and platform built for ice delivery, with concrete catch pit and protecting shed.

Septic tanks—6-inch sewer pipe connections have been made with contact beds and 12-inch line run to vegetable garden.

North ward, Company G—Flooring has been renewed and front and rear porch torn out, concrete foundations placed, and new porch constructed.

Commandant's residence—Front porch steps have been torn out and renewed and board floor placed in basement.

Wells—A new well, 5 by 96 feet and from 19 to 21 feet deep, draining into well No. 1, has been sunk at foot of oil road. The well has been housed over and painted, and the walls lined with lagging and braced.

Morgue—A concrete floor has been placed in the morgue.

Power house—Boilers Nos. 3 and 4 have been retubed and walls of power house given a coat of Dekorato.

Chicken ranch—The roof of the large brooder has been reshingled and painted.

Farmer's residence—The roof has been reshingled and painted.

Lavatories, Companies E and G—New lavatories, occupying a building separate from quarters have been constructed.

Hospital—Wall studding, floor joists and flooring have been renewed in the south end of ward No. 3. Loose plaster has been removed and walls replastered throughout main hospital and hospital annex. Interior walls have been sized and painted in wards Nos. 3 and 4, and interior walls of lower dining-room kalsomined.

Dairy barn—A modern and thoroughly equipped dairy barn has been constructed, with a capacity for 60 cows.

Pipe line—A five-inch wire bound redwood pipe line has been laid from Rector Canyon, on the State Farm, and is now supplying the Home with an abundance of pure water.

Very respectfully,

T. W. LAWRENCE,
Chief Engineer.

DESCRIPTIVE LIST OF MEMBERS OF THE VETERANS' HOME OF CALIFORNIA, JUNE 30, 1914.

Name.	Company and regiment.	Rank.	Length of service, months.	Nativity.	Age.	Pension per month.	Disability.	When admitted.

FIRST BIENNIAL REPORT

OF THE

California State Civil Service Commission

TO THE GOVERNOR

DECEMBER 22, 1914

CALIFORNIA
STATE PRINTING OFFICE
1914

FIRST BIENNIAL REPORT OF THE STATE CIVIL SERVICE COMMISSION TO THE GOVERNOR.

HONORABLE HIRAM W. JOHNSON,
Governor of California.

Pursuant to the mandate of the civil service law (sec. 5, subdivision eighth), the State Civil Service Commission makes its first biennial report to you.

The law went into effect August 15, 1913. On November 14 the rules and regulations required by law had been completed and adopted, and the civil service of the State divided according to duties into 198 classes, and graded according to salaries. This involved an investigation into the history of every State employee. We found that there were, in offices affected by the civil service law, 4,834 State employees, of whom 345 were exempt, leaving 4,489 subject to the jurisdiction of this Commission. A firm of accountants in Chicago, which claimed to have classified the employees of four jurisdictions, and presented the most satisfactory references, made a bid to do this work for \$7,000.

The first great obligation laid on us was to provide eligible lists for the 198 classes of employees. The success of civil service depends upon an eligible list for every class. Without eligible lists resort must be had to temporary and emergency employments, which usually are political appointments.

The Commission has held ninety examinations up to the date of this report (December 22, 1914), the first being for Chief Clerks (November 18, 1913). Five thousand twenty-four persons have been examined, and over 659 permanent appointments have been made. The examinations have been divided into two general classes, educational and non-educational. In the case of educational examinations, candidates are assembled and given a written test relating to the duties to be performed. The non-educational examinations, which cover the skilled trades, consist of an inquiry into the applicant's training and experience, based upon the facts stated in his sworn application and the confidential vouchers of employers referred to by the applicant, and an oral examination into his personality and fitness; 44.4 per cent of the applicants for educational examinations have passed, and 78.1 per cent in the non-educational class.

We believe that by steady persistence in examinations the remaining classes will be provided with eligible lists before January 1, 1916. The Civil Service Commission has had the assistance of every branch of the State government on which we have called in preparing, holding and

marking examinations. The cooperation of these departments has been remarkable, and without it the large number of examinations held would have been impossible.

The first great object of a civil service law has been accomplished. There are no longer political appointments in California. Every citizen of the State is free to take the examinations, and the positions go to the highest competitors, regardless of politics or any other consideration except merit.

The next great object of a civil service law is to promote efficiency. This is to be accomplished by a study of the cost of work in each class of employees, the marking of the most worthy by efficiency records, the rewarding of the most efficient by raises of salary and promotion to higher positions, and the demotion of the incompetent.

The proper marking of efficiency records, however, is a subject of great difficulty. The Civil Service Commission has provided a general efficiency blank for all classes, covering quality and quantity of work and discipline, including punctuality, obedience to rules, and courtesy to the public and fellow-employees. An investigation of this fascinating field of efficiency, however, will convince the student that there is general agreement on the part of those who are striving to get results that no general efficiency blank will suffice. The quality and quantity of work of a hospital attendant is not the same as that of a clerk or a gardener. The factors that make for efficiency in each class must be carefully grouped and separately rated. The United States government is earnestly following up this inquiry, as are also the railroad companies and the great private business corporations. Mr. Robert Catherwood, president of the Cook County (Ill.) Civil Service Commission, writes the California Commission that the railroads centering in Chicago have scientific employment bureaus, under which the foreman is not allowed either to discharge or hire, arbitrarily, any employee. A certain per cent (in two large railroads about 2 per cent) of the pay roll is set aside to provide funds for the bureau. Sears, Roebuck & Co., Marshall Field & Co., the National Cash Register Company, the Ford Manufacturing Company, and other great corporations hiring from five to twenty thousand employees, have adopted scientific employment systems as a matter of business. It saves money. The most notable advance in securing results in this line of work has been in the city of Chicago. One hundred eighty-six thousand dollars a year is there set aside for the Civil Service Commission. Mr. Catherwood says that in Chicago the Civil Service Commission sits with the finance committee of the council, "and everybody agrees that they save the city millions of dollars." The whole secret is courteous and persistent checking up of the work of the subordinates. Those who do their work well are encouraged and promoted. Those who do their work ill are warned by being

marked low in their efficiency records, and then if the inefficiency continues they are automatically removed from the service.

Taxes have doubled in the United States in fifteen years. Government activities have more than doubled. Government will break down unless its work is done efficiently. A civil service law is necessary to destroy boss politics. As a matter of course there rests upon civil service reform the necessity of promoting efficiency as well.

Louis Brandeis says:

“Efficiency is the hope of democracy. Efficiency means greater production with less effort and at less cost, thru the elimination of unnecessary waste, human and material. How else can we hope to attain the new social ideals?”

No man in the United States has done so much to point out the inefficiency of the great public service corporations as Mr. Brandeis. No man has done more to emphasize the public demand that government shall enter upon larger duties, particularly that kind of duty covered by the new social program. What he means by efficiency being the hope of democracy is that without efficiency the larger governmental activities will fail and the new ideals never be realized unless the work of government can be economically done. The cost will otherwise break the government. With all the fervor of an apostle pleading for the liberties of a people, he is calling upon America to be governmentally efficient, because the hope of democracy is in efficiency.

New York City finds its hope for civic betterment in the development of efficiency. Mayor John Purroy Mitchell says:

“We have now gone so far in New York that even Tammany Hall asks for votes on the efficiency records of its candidates and supports a bureau with the avowed purpose of furthering efficiency of the city government. The gospel of achieving results in a clean cut, direct way—results which are worth while and in the public interest—has become the creed of every alert and progressive city administration in the United States.”

Edward Earle Purinton, the efficiency engineer, states the substance of efficiency in the epigram:

“Efficiency is the power of doing one’s most and best, in the shortest time and easiest way, to the satisfaction of all concerned.”

A prejudice against efficiency records obtains in some quarters, because it is conceived to be a system which will grind the faces of the State’s employees by speeding up their work at the cost of their happiness. Efficiency, however, means the happiness of all concerned—the public, the superior, and the subordinates. The public is made happy by better and greater service; the superior by managing and directing that service, and the subordinate by being more useful and having his usefulness recognized and better paid.

May we discuss two phases of this question by examples? Let us suppose there is an important branch of the State service where the superintendent is harsh, overbearing, tyrannical, unjust and discourteous, both to the public and to his subordinates. He discharges many men for insufficient reasons, and selects as far as possible those who are servile. Is it not at once apparent that efficiency will require a changed superintendent or a change in superintendents? It would be the duty of the Civil Service Commission to insist upon better treatment of employees by the superintendent, for the good of the service.

Judge Elbert H. Gary, chairman of the United States Steel Corporation, declares that the first rule for building up efficiency is that the head of an organization shall "observe the duties of the employer and the rights of the employee. Generous motives, fair principles, and honest dealing are vastly more important as efficiency measures than the technical phases of skilled management and economical production."

There is a vacancy in the office of steward in one of the state hospitals. A study of the efficiency of one who is to fill this important position will disclose; first, that the steward is the purchasing agent of all supplies (Political Code, sec. 2161), which requires that he shall have a knowledge of market conditions; second, he must be a bookkeeper, "he shall keep true and accurate books and accounts;" third, he "shall have the control of the farm, livestock, grounds, and all outside departments", which involves a knowledge of horticulture and intensive farming, due to the orchards, farms and truck gardens attached to each institution; fourth, he "shall exercise general supervision over the kitchen and all food supplies, and see that they are properly cooked and served"; fifth, he must have executive ability, because he is in charge of many subordinates; sixth, he should have idealism, because his work, properly understood and properly discharged, will enable him to be of social service to thousands of God's afflicted. His duties are exceedingly varied; with thousands of inmates affected by the manner in which he discharges his duties, and with hundreds of employees to supervise, he is really called upon to exercise the knowledge and responsibility of a city manager. Yet the dairy herd of one of the state hospitals has been so badly handled that it is hopelessly afflicted with tuberculosis, and the management is unable to conceive of any remedy except the destruction of the herd. In another institution the steward denies responsibility in any important matter, and lives only in the shadow of the superintendent. He had allowed certain orchard trees to be unplowed and unpruned for years. Vacancies in a fine young orchard have not been filled up, until less than two thirds of the ground is occupied. In another institution the trees have been worked over to better varieties, but have been allowed to become stunted, and a large number destroyed by neglect of the buds during summer growth. Would not an insistence upon the

proper discharge of the duties that the law imposes upon the steward be a good work? If the place of steward were filled by a man capable of discharging these duties, would not that elevate the institution and bless the inmates, as well as reduce the cost?

The case of the steward illustrates what a serviceable and wise efficiency bureau could accomplish throughout the state service. The saving would pay the cost of the Civil Service Commission many times over. It is the vision of such results that buoys up the civil service reformer, and makes him echo the words of Brandeis: "Efficiency is the hope of democracy."

The State civil service law, in section 5, subdivision fifth, provides:

"Records of individual efficiency of holders of positions in performing their duties shall be established in all offices and places of employment affected by this act."

This duty we have been unable to perform, except in part. Practically all our energies have been consumed in holding examinations. We have, indeed, established general efficiency records in the Engineering Department, the Health Department, the Industrial Accident Commission, the California School for the Deaf and Blind, and on the Belt Railroad in San Francisco. We are, however, unable to follow up this important work for lack of funds. If the legislature would provide the Civil Service Commission with a fund equal to two per cent of the State payroll, then our Commission would be equipped for continuous service in this important department. The payroll of the classified civil service of the State is approximately \$4,000,000. Two per cent of this is \$80,000. Our annual appropriation has been \$25,000. Following is a table showing the appropriations for some other civil service commissions, with which California may be compared:

State	Amount	Number of employees
California -----	\$25,000 00	5,000
Illinois -----	46,440 00	5,000
Chicago -----	186,000 00	20,000
Cook County, Illinois -----	42,000 00	3,000
Massachusetts -----	57,966 00	*60,000
New Jersey -----	25,000 00	No report
New York (state) -----	74,750 00	14,277
Ohio -----	66,820 00	†20,000
Wisconsin -----	23,565 00	No report
Los Angeles County, California -----	33,000 00	
San Francisco -----	17,500 00	

*State, cities and towns.

†State and counties.

The California Civil Service Commission should have at least as much as the state of Illinois gives its commission.

SUGGESTIONS.

The civil service act requires the report of the Commission to include "any suggestions that the Commission or any Commissioner may deem practicable for the more effectual accomplishment of this act".

First suggestion: The first suggestion is that every commissioner should devote all of his time to his official duties. The work of the Commission has grown rapidly, and its importance can not be over-estimated. The work of the Commission requires frequent conference and discussion by the entire board. The salary paid the commissioners, however, is not sufficient to justify responsible men leaving their business or profession to devote their entire time to the work of civil service. It is therefore felt that the salaries of the commissioners should be made adequate, in order that their entire time may be given to the work. The civil service act as passed by the legislature of 1913 did not contemplate resident commissioners giving all of their time to the work.

Second suggestion: The appointing power should be allowed to specify sex in the requests for certification. The Attorney General has given it as his opinion that this can not now be done.

Third suggestion: A revolving fund should be allowed the Commission, for traveling expenses, purchase of stamps, and other current expenses, of at least \$500.

Fourth suggestion: The law should be amended to allow transfers from one class to another, upon the recommendation of the appointing power and the approval of the Civil Service Commission. For instance, an attendant at a hospital shows marked ability in some other line of work; he is personally known to the management, and has an agreeable personality. It should be within the power of the superintendent and the Civil Service Commission to put this man in his proper place. Otherwise a new man from the eligible lists must be certified and tried out before the position can be properly filled. A locomotive engineer, laid off because of the temporary non-use of a locomotive, should be assignable to the position of machinist, if he is competent, and so maintain a coherent force, rather than have him dismissed and possibly lost to the service. By the time the locomotive is put again in commission the engineer might be permanently employed a thousand miles away.

Fifth suggestion: Where the appointing power makes charges against a civil service employee, it should not have the right to try him on these charges. No man should be a judge in his own cause. The prosecutor has already determined the guilt of the accused before he brings the charges.

Sixth suggestion: The general clause (section 7, subdivision 14) exempting superintendents, chiefs and heads of departments from the operations of the civil service act should be repealed. There is steady

progress all over the United States to raise the standard of civil service employees. In New York, Chicago, San Francisco and Los Angeles, engineers at the head of great enterprises and doctors at the head of great hospitals are put under civil service, with salaries ranging from five to ten thousand dollars per year.

The clause is exceedingly indefinite. It could easily be stretched to cover every employee in the service having supervisory powers over any subordinate. An administration hostile to civil service might remove every important subordinate, by claiming that he was the chief or the head of some minor department. For instance, on the water front at San Francisco the assistant state engineer, the superintendent of tugs and dredgers, the superintendent of the Ferry building, the foreman carpenter, the foreman paver, the foreman piledriver, the various engineers in charge of different boats, dredgers and stations, the foreman of the sweepers on the docks, and so on to every petty boss, who now imagine that they are protected by the civil service law, could be removed. Is it not evident that it depends upon the point of view of the harbor commissioners? Is a chief engineer of a dredger a chief? Is a head nurse a chief? Is a foreman of pavers or sweepers a chief?

Furthermore, the superintendents, chiefs and heads of departments should be protected by the civil service act as a matter of justice. Mr. Newman, assistant chief engineer of the State, assigned to the State Board of Harbor Commissioners, passed second in the United States civil service examination for appraising engineers for the valuation of railroads under the Interstate Commerce Commission. He came to the Civil Service Commission and said, "If my position has a civil service status I will stay. Otherwise I will accept the offer of a position by the United States at a higher salary, but I want to stay in California." Mr. Newman, in one view, is an assistant to State Engineer McClure. In another, he is a superintendent in charge of one of the most important departments of the state service, spending millions of dollars in the construction of docks and wharves.

Mr. W. H. Shebley is superintendent of the fish hatchery at Sisson. He has never worked for another employer but the State of California. His father before him occupied the same position; his son is following in his footsteps. He said to the President of this Commission, "Why should I be discriminated against, after my life's service; why should I be made the sport of politics, while my assistant is protected?"

Seventh suggestion: The Civil Service Commission should have authority to standardize salaries in the State, so that the same services should receive the same reward. It should have the authority to declare useless positions vacant. There are many positions in the State service where the title and the salary are fixed by statute. In some cases the salaries are too high; in other cases the position is useless, but is filled

simply because it exists. In still other cases the position is filled and the occupant discharges duties entirely different from those imposed by statute. This authority might well be exercised in conjunction with the Board of Control.

Eighth suggestion: Laborers should be chosen by competitive physical examination, instead of by priority of application. There are over two thousand applicants for laborer's positions. The Civil Service Commission gives a qualifying examination only. We weed out cripples and worn-out shells, but we can not select the best material. A man of forty-five, addicted to drink, fat and ill-conditioned, easily proves that he can labor; he earns his living that way. And the young, snappy, muscular men who could be selected are passed by for the earlier applicant. The State has reclamation work near Lathrop, requiring laborers of the best grade. Many civil service laborers refuse to take this position, or having taken it, give it up because it is "too hard." They come back to the Civil Service Commission and ask to be retained on the civil service list until some position that they fancy will be open to them. The Civil Service Commission has made it a rule that every laborer who will not stick is dropped, but we are helpless to certify men who will stick, because of this priority clause in the law.

Ninth suggestion: A small fee to cover the actual cost of examination might well be charged all applicants. We now require a medical certificate, but we have never received one reflecting on the applicant, although some have been physically unfit. The fee that the applicant pays the doctor of his selection insures a favorable report. We are convinced from experience that these certificates are valueless, but hardly dare to do without them. The cost of such service by the State would be less than now paid by the applicant to some physician, but our funds will not permit of providing for such examinations ourselves.

Tenth suggestion: There are many cases in the State service where important positions, involving unusual professional or scientific attainments, are filled by temporary appointment, because there are no eligible lists. Before examinations can be given the occupant has become thoroughly at home in the office, and is doing invaluable service. We suggest that when such cases occur the Civil Service Commission be authorized to give a non-competitive examination to the occupant of the position, and if he qualifies that he be given a civil service status.

We have found it expedient to exempt the experts employed in inaugurating the new departments of the Industrial Accident Commission, for the period of one year, as we doubtless will do in the case of the new corporation bureau and the water commission. We are unable to hold many more examinations than are already scheduled. At the end of a year we should be able to retain these men in the State service. The

giving of a large percentage for experience is in our power, but it seems to render the examinations non-competitive. Besides, we find that in a highly technical examination it is impossible to guarantee to any one that he will be highest. The result is that the experienced man is thrown out because he does not get the highest percentage, and the appointing powers are sorely grieved because of that fact, and indict the civil service system for failure to certify the most efficient man, from their point of view. A sound discretion in such cases should be left to the Civil Service Commission where there is no eligible list and the employee has been in the service of the State for at least a year.

Criticism has been made that this is an abandonment of the civil service principle. We think, however, that it is a better plan than to exempt such places entirely from the civil service law. As it is now, the State can not hire men of high technical or professional training and guarantee them any considerable length of employment, unless they take a civil service examination, which they are often unwilling to do. The higher you go the less the competition, and the more sought after are the competent men. In one case we searched the United States over for a specialist, and found only one competent man willing to accept, and that only on condition of a guarantee of a year's employment.

The head of the insurance department in the Industrial Accident Commission receives \$500.00 a month. He has rendered invaluable service to the State in setting the new law going. If he were to take a competitive examination and with forty or fifty competitors came fourth, he would be lost to the service and the work of the Accident Commission impaired. We think a certain elasticity here would make for the welfare of the State service.

Eleventh suggestion: Separate lists of employees for the different State institutions seem in some cases highly desirable. The distance is so great between Patton and the northern asylums that certification to all from the same list of eligibles for attendants is difficult. One superintendent wants married attendants, and another does not. The five hundred odd miles that separate these institutions make immediate filling of these positions at times impossible. The law allows separate lists for laborers for different institutions, and the reason holds for many other classes of State employees.

Twelfth suggestion: The Railroad Commission should not be exempted from the protection of the civil service law. The exemption was not asked for at the time the law was enacted. As surely as strange hands gain control of the administration of the State, the pressure to find political jobs will be tremendous. There will be so few not protected by the civil service law that a determined effort will be made to displace the employees of the Railroad Commission. It would be wise

now to throw the protecting arm of service tenure around this important branch of the State service, and not leave it open to future attacks by spoilsmen.

Thirteenth suggestion: The State Librarian, who was very earnest to prevent the civil service from applying to his office, now asks the assistance of this Commission in extending the provisions of the civil service law to all county librarians appointed under the State law. The Horticultural Commissioner also asks that the selection of county inspectors, now devolving upon him, be taken over by the Civil Service Commission. The Sealer of Weights and Measures, likewise, is a State official in charge of county appointments. His assistants in the counties should obviously be appointed by State authority, instead of by the county supervisors. This important work depends upon the fearlessness and impartiality of the deputies. It is easy to imagine that a deputy sealer of weights and measures might find some big merchant using short weights, and yet be afraid to fight him because of his political influence with the board of supervisors, which has the power to appoint and dismiss the deputy at pleasure.

We suggest that these three classes of deputy officials be put under the State civil service law.

Respectfully submitted,

CHARLES WESLEY REED.
J. M. HUNTER.
EDGAR WILLIAMS.

POSITIONS EXEMPTED FROM PROVISIONS OF THE CIVIL SERVICE ACT BY RESOLUTION OF THE COMMISSION.

Department.

BANKING

DEPARTMENT.

Position.

Special Deputy Superintendents in charge of the liquidation and distribution of the assets of delinquent banks taken over by the Superintendent.

Reasons for Exemption.

"The positions are not permanent; are filled but infrequently; are of great responsibility; are confidential in character; and it appears difficult, if not impossible, to provide lists of eligibles under Civil Service Rules."

*Names of Incumbents.*DAIRY
BUREAU.

Inspectors of city and county health departments acting as state officials.

Said inspectors act without compensation from the state.

CALIFORNIA
SCHOOL FOR
GIRLS.

Parole Officer.

1.

Subdivision 8 of section 7 of the Civil Service Act exempts the Parole Officer of the Whittier State School. The California School for Girls was formed by segregating the boys and girls in the Whittier State School and the exemption should therefore apply to the Parole Officer in charge of the girls.

Mary K. James.

2.

The State Civil Service Commission is of the opinion that, had the attention of the Legislature been called to the matter, the exemption of this position would have been made.

BOARD OF
HEALTH.

1. All student help, employed in the Bureau of Food and Drugs at Berkeley.

Students work at 25 cents per hour for short periods; many are thus assisted in earning their way through college; the positions are not subject to open competition of general public and could not properly be filled from an eligible list after examination.

Miss E. L. Middlehoff.

1. Subforemen, including grading subforemen, cement subforemen, straw bosses, and stable bosses.
2. Engine men, including roller engineers, pump men, and concrete mixer engineers.
3. Blacksmiths, including helpers.
4. Carpenters, including helpers.
5. Cooks, including flunkies.
6. Teamsters, including drivers of 2, 4, 6, 8-horse teams, Fresno scrapers, plows, and graders.

Mr. Foster and Miss Middlehoff are members of Dr. Hyde's staff and their services are available for special work only.

1. Entire work of Highway Commission is relatively temporary in nature and will not be permanent unless further legislation is enacted.
2. Majority of day laborers employed on the state highways are engaged upon contracts which Commission was compelled to take over because of failure of contractor. When roads are completed at end of few months, these forces will be disbanded.
3. Majority of employees are unskilled and it would not be economical to pay their transportation from one piece of work to another. If eligible lists of unskilled laborers were established at sundry centers of population throughout the state, it would

CALIFORNIA
HIGHWAY
COMMISSION.

be impossible to draw from these lists for men for they would be available only within very short distances from such centers, and they could not afford to pay their own transportation.

4. The habits of the class of men employed are such that they do not stay longer than a few weeks in one place.

H. L. Viereck.

1. Commission is organized to introduce parasitic and predaceous insects from Europe and the Orient into California.
2. Such services require a man of special training and experience.

Commission has just been created; has no experience to guide it; does not know what field should be covered first; therefore it can not advise Civil Service Commission of the duties of its employees without first making investigation. Civil Service Commission is not prepared at this time to hold examinations for such positions.

Lilas Ball, Clerk and Stenographer.

M. A. Brady, Investigator.

INDUSTRIAL
HOME FOR THE
ADULT BLIND.

Sightless inmates who are in receipt of money from the state for work performed in the institution.

CALIFORNIA
POLYTECHNIC
SCHOOL.

Student help.

Various students who are employed at 20 and 25 cents per hour, not exceeding \$10 per month.

1. Students work at odd hours for small compensation to assist in earning their way through school.
2. Opportunity to do this work encourages them to be self-supporting.
3. It is more economical to have such intermittent and irregular work done by the students than by outsiders.

SMELTER WASTES
COMMISSION.

Chemist and Botanist to act as investigators under provisions of chapter 615 of the Statutes of 1913.

Work is to be accomplished in three or four months; heads of departments of botany and chemistry of Stanford University to supervise investigation without salary, and to be assisted by other employees of the university; this force has just completed similar investigation for the Department of Justice in Washington, D. C., and is therefore familiar with the work.

VETERANS' HOME
OF CALIFORNIA.

Positions filled by inmates who receive money from the state for work performed by them in the home.

"Said employees are unable to earn a living outside of the institution, being in a manner dependent, and the opportunity of doing useful work for which they receive small sums from the state, creates in them a sense of independence, relieves them from temptations of absolute idleness, and in every way makes for character and happiness." Civilian help could not be obtained at such small salaries.

SUGGESTION BY COMMISSIONER REED ALONE.

Under the authority of that phrase in the Civil Service law which contains the provision that the biennial report shall contain "any suggestions the commission or *any commissioner* may deem practicable for the effectual accomplishment of the purposes of this act." I hereby present to the consideration of your Excellency a suggestion, which, while it does not meet with the approval of my fellow commissioners, has at the same time not met with their disapproval.

Certification should be made from the highest name on the eligible list and not from the first three. Recently there was a vacancy in the position of locomotive engineer. Three names were certified according to law. One man lived in Auburn, one in Bakersfield and one in San Francisco. The San Francisco man arrived first and was selected at once; he happened to know the Superintendent. The Bakersfield man resigned his position and came to San Francisco, only to be informed that the position had been filled without considering him. The Auburn man did not come, but wrote that he was ready to accept. When informed that the place had been filled, he came to the conclusion that he had been deprived of his rights. He enlisted the aid of a high state official, with the result that the Civil Service Commission became the target for severe criticism.

On October 29 the Civil Service Commission certified twenty-eight switchmen to the Board of Harbor Commissioners, there being twenty-six vacancies. The latter body availed themselves of the literal provision of the law, which says that "the commission shall then certify to the appointing power the names and addresses of the three persons standing highest on the eligible list for the class or grade to which the position belongs." Although more than two months have since elapsed, only seven appointments have been made by the Harbor Board from the switchmen's list; in other words, the insistence upon the literal observations of the law may defeat its object and allow non-Civil Service men to hold their positions for months, although Civil Service eligibles are legally entitled to be appointed.

Respectfully submitted,

CHARLES WESLEY REED,
Commissioner.

PART I.

LETTER OF TRANSMITTAL AND REPORT OF
PRESIDENT.

LETTER OF TRANSMITTAL.

The State Board of Education has the honor to submit to his Excellency, Hiram W. Johnson, Governor of California, in accordance with section 1519 of the Political Code, its first biennial report.

The report contains, in addition to a résumé of the activities of the Board, the reports of the various committees of the Board, the reports of the Commissioners and the Superintendent of Public Instruction, and the report of the Public School Teachers' Retirement Salary Fund Board.

Respectfully submitted.

STATE BOARD OF EDUCATION.

REPORT OF THE PRESIDENT.

In accordance with the provisions of section 1517 of the Political Code of California, approved June 6, 1913, the members of the State Board of Education were appointed by your Excellency, August 29, 1913. The Board held its first meeting in Sacramento, September 10, 1913, and organized as provided by law.

A State Board of Education consisting of seven members appointed by the Governor, is a new departure in the administration of the California school system. Another new feature embodied in the statute creating the Board is that none of its members may be actively engaged in school work during their respective terms of office.

THE COMMISSIONERS.

In pursuance of the expressed intent of the legislature, the Board took steps immediately to select a Commissioner of Elementary Schools, a Commissioner of Secondary Schools, and a Commissioner of Industrial and Vocational Education. This was one of the most important of the duties with which this Board was charged. These Commissioners were to constitute an entirely new force in the educational work of the state, supplying adequate specialized supervision for the schools. Recognizing the responsibilities to be placed upon the Commissioners, and the expectations that had been aroused among the school people of the state regarding their usefulness, time was taken for a very thorough investigation of the men and women available; and the counsel of some of the best educational authorities in California and the East was secured.

As a result of this investigation, the Board at its meeting in December, 1913, appointed Margaret E. Schallenberger Commissioner of Elementary Schools, Will C. Wood Commissioner of Secondary Schools, and E. R. Snyder Commissioner of Industrial and Vocational Education. These Commissioners assumed the duties of their respective offices January 1, 1914.

In organizing their work, the Commissioners have gathered, systematized and made available much information and data of great value in shaping educational policies. In their visitation and observation of schools, they are becoming thoroughly conversant with the educational needs and conditions of the entire state. By lecturing at teachers' institutes, addressing various public gatherings, attending teachers' conferences and advising school trustees, superintendents and principals, the Commissioners are disseminating the highest educational ideals and are rendering a real and practical educational service which is already appreciated by the people of this state.

THE RURAL SCHOOL.

I cannot refrain from directing your attention to a few of the suggestions which appear in the reports of the Commissioners. In the matter of supervision, city school systems in California are well provided for. The supervision of our rural schools, however, is clearly inadequate. This condition may be remedied by the employment of additional supervisors, by urging communities to take advantage of existing laws permitting the consolidation of school districts, and by discouraging the creation of new districts through division of old ones, which will increase the efficiency of the schools with no increase of cost. We must endeavor not only to maintain rural schools of a standard equal to that of the urban schools, but we must aim to give the rural schools some of those cultural agencies which have proved so beneficial in the city. Of these, the moving picture and the phonograph are no longer experiments. With the rural school as a neighborhood center, the parents as well as the children of the community may derive profit and enjoyment from these educational features. By requiring standardization of equipment it will be practicable for the state to lend films or reels and phonograph records to the various counties or school districts in the same manner perhaps as books are now distributed from the state library. A moderate appropriation would enable a start to be made along this line.

It is the desire of the Board to be of real practical service to the schools of this state. In view of the unsatisfactory types of rural school architecture and poor conditions of lighting, heating and ventilating in rural school buildings, we believe that the state, through the proper department, should prepare and keep on hand plans and specifications of various types of school buildings, to be lent to any school district in the state. In doing this, the state would be rendering an inexpensive and valuable service to the rural communities.

IMPROVEMENTS IN STANDARDS OF CERTIFICATION.

Some professional educators of the state undoubtedly feared that a lay Board of Education would propose iconoclastic changes in the educational affairs of the state, and lower standards that had come to be recognized as essential to the successful administration of the schools.

On the contrary, the Board has been specially careful to maintain and safeguard in every way California's recognized high standards for the certification of teachers and for the accreditation of educational institutions.

A revision of the rules governing high school certification has been made in the interest of clearness, and to bring the California requirements into harmony with the best practice of other states, and with recent legislation.

The Board heartily endorses the recent establishment of a training school in Oakland for prospective teachers in high schools. This meets a long felt need, and augurs well for the increased efficiency of high school teachers.

The standard for the accreditation of normal schools has been raised, so that now only those normal schools are eligible which meet the highest standard of California normal schools, namely, those which require for admission graduation from a four-year high school course, and give at least a two-year course of professional training of attested merit.

In the matter of kindergartens (as in that of vocational education) the lay Board has shown itself at once sensitive to the needs and wishes of the people of the state, and scrupulous in providing sound and stable ways of meeting these needs. Recent legislation has opened the way for an increase in the number of kindergartens and a projection of kindergarten ideals. Consequently, the board has conducted—through its experts—an exhaustive investigation of the kindergarten training schools of the country, in order to determine standards and revise its accredited list so that an adequate number of well trained kindergarten teachers may be secured to meet the needs of this growing and popular feature of the school system of the state.

PROPOSED SCHOOL LEGISLATION.

The Board has been cautious in recommending new legislation because it believes that a new constitution is necessary before any real progress can be made in educational legislation. However, the Board is carefully studying the larger educational problems of the state, and as it sees a solution of these problems, it will recommend such legislation as may be necessary. For the recommendations of this Board on school legislation, your attention is directed to the report of the Committee on Legislation, submitted herewith.

FREE TEXTBOOKS.

The plan of furnishing free textbooks to the pupils of the elementary schools, which went into effect in November, 1912, has been successfully carried out. It is a matter for congratulation that common school education is now entirely free to the children of California. Through the economical and efficient methods of the State Printing Office, the appropriation of \$500,000 made by the legislature for this purpose has been sufficient to provide all textbooks required and will show a balance of \$129,906.56 at the end of the present fiscal year. The amount expended to date for free textbooks is \$379,727.19. The Commissioner and textbook expert are now reviewing various textbooks and unpublished manuscripts. In adopting textbooks the Board will aim to obtain the best textbooks known to educational experts. In

making any changes, however, the Board will endeavor to make a financial saving to the state by obtaining the most favorable prices.

SECONDARY EDUCATION.

The Board believes that the high schools of the state should attract and hold a larger number of pupils than they do at present. In the last two years of the elementary school and the first two years of the high school, large numbers of pupils drop out. For the purpose of holding pupils in school longer, two plans have been suggested—one is designed to effect a reorganization of the work of these four years through the intermediate school; the other is designed to assist small rural high schools in making their work more attractive and broader in its scope.

These plans are more fully discussed in the report of the Committee on Legislation, submitted herewith.

VOCATIONAL EDUCATION.

In the creation of the department of industrial and vocational education our state has committed itself to a policy that will place it in line with the leading states in educational matters. While vocational education includes training in agricultural branches, it is in the city that greatest advancement has been made in vocational training. This work deserves to be fostered and developed, for through it, we believe, many of the social and ethical problems of our country may be solved, by holding pupils in school for a longer time, and training them to earn a livelihood. In establishing this important educational work on a firm basis, state, county and district should coöperate.

TEACHERS' RETIREMENT SALARY FUND.

In obedience to the law of the state the Board has met quarterly since its organization, namely, in September, December, March and June. Because of the great amount of work entailed in organization, it has been necessary to hold special meetings on the following dates:

September 22, 1913; November 11, 1913; January 12, 1914; April 8, 1914.

It will be remembered that the powers and duties of the Public School Teachers' Retirement Salary Fund Board are lodged in the State Board of Education, thus giving the Board a dual function. The Public School Teachers' Retirement Salary Fund Board is a distinct organization under the law. Since, however, its officers and members are also officers and members of the State Board of Education, it has been deemed advisable to hold the meetings of this Board while the members are assembled for the sessions of the State Board of Education, thereby saving traveling expenses of members. Since the state pays a retirement salary of \$500 per annum to each annuitant under

this law, a sum equivalent to 5 per cent interest on an investment of \$10,000, the members of the Retirement Salary Fund Board deem it incumbent upon them to scrutinize and thoroughly investigate the qualifications of each applicant for the retirement salary, and feel that in the disbursement of this fund they should show the same care, prudence and fidelity as is shown by other trustees or by bank directors. Since the retirement salary law went into effect, 169 applications for retirement have been filed, and 130 have been granted. As each applicant is obliged under the rules to furnish evidence of his qualification for retirement by filing certificates and affidavits showing when and where his teaching service was rendered, and, as each applicant's history extending over a period of at least thirty years must be investigated, the Retirement Salary Fund Board has been obliged to devote much time to its work.

In closing, permit me to say that my colleagues of the State Board of Education are fully mindful of the responsibilities resting upon them in the shaping of the educational policies of California. They have brought to their work high ideals, sound judgment and a true devotion to the welfare of the public school system. The work of the Board is accomplished very largely through committees, the members of which are deserving of the highest commendation for their diligence and fidelity in the discharge of their duties. The reports of the committees are incorporated in this report.

Respectfully submitted.

W. H. LANGDON, President.

PART II.
REPORTS OF THE COMMITTEES.

REPORT OF THE TEXTBOOK COMMITTEE.

The publication of textbooks by the State of California can be divided into three distinct periods. The first period dates from 1884 with the adoption of the Perry amendment to section 7 of the state constitution to 1903 which followed the adoption of the Perry amendment in section 7 of the state constitution of 1879. In accordance with the laws existing during this period, the books were written by teachers of the state employed by the State Board of Education and printed at the State Printing Office. This method proved very unsatisfactory, and was abandoned in 1903, when, under a ruling of the Attorney General, it was held that although state textbooks must be printed and manufactured in the State Printing Office, the subject matter of the books might be leased or purchased outside of the state. With this ruling began the second period, and the State Board of Education opened negotiations with various publishing houses for the lease of plates on a royalty basis, intending thus to secure satisfactory textbooks by choosing from the best in the market. The result of this plan has been much more satisfactory, and there has been a steady reduction in the cost of our textbooks due in part to competition among the publishing houses, which has tended to reduce the royalty, but principally, under the present management of the State Printing Office, to the efficiency of that department, which has, within two years, cut the cost to nearly one half what the parents of the state paid for their children's books four years ago.

The selection of textbooks has usually been made upon the recommendation of expert readers employed by the State Board of Education with the final approval by that Board, and the contracts with the publishing companies have usually required duplicate sets of plates, together with such changes in the text as were at the time recommended. The statute provided that the textbook committee of the former Board should be composed of the Governor, Superintendent of Public Instruction and one member of the Board, and as the work was at times arduous, it necessarily drifted into the hands of those willing to do it. We find no uniform form of contract in existence and are somewhat embarrassed by that fact.

Before the state adopted a system of free textbooks in 1912, the books printed by the State Printer were, according to law, sold by the Superintendent of Public Instruction to dealers or to the officers of the schools at a cost based on the royalty paid and the cost of their manufacture. It is to be regretted that the excessive cost in manufacturing during many years, due to the inefficiency of the State Printing Office, placed

the people of the state under a direct burden which was lifted in part when the management of the State Printing Office was changed, and completely, when the free textbooks began to be issued.

At the November election of 1912 the people of the state amended the constitution so as to provide for a reorganization of the State Board of Education, and for free textbooks. On the passage of this amendment the former Board ceased to act, consequently the state was without a State Board of Education until a new law providing for a new Board had been passed, and this new Board had been appointed and finally qualified. The new Board met for the first time in September, 1913.

The third textbook period dates from January 15, 1913, when the constitutional amendment authorizing the free distribution of state textbooks became operative. It had been thought that this work would not begin until the end of that school year, then half over, but the interpretation put upon the constitutional amendment by the Attorney General necessitated the immediate distribution of free textbooks.

From the carefully compiled tables to be found in the report of the Superintendent of Public Instruction, it will be seen that there were on hand January 15, 1913, when the law became unexpectedly operative, 229,862 bound books, and 224,477 writing (copy) books. Against this assortment, which should have been ample for the ordinary mid-winter demands, was launched an unprecedented requisition causing a shortage of books which was annoying, but wholly unpreventable. That time has passed, and with steadier demands and growing precedents upon which to base estimates, we trust there may never again occur serious interruptions in the distribution of free textbooks. By June 30, 1913, or during the first five and a half months, there were distributed 359,634 bound books, and 118,299 copy books, the latter at a cost, for distribution, of \$2,787.24, or practically 5.8 mills, a trifle over a half cent per copy. This date brings us to the beginning of the fiscal year, but the work of this Board did not begin until September 10, 1913, when its members qualified.

When the present State Board of Education came into being, September 10, 1913, it found that the system of printing and distributing free textbooks in accordance with the amendment to section 7 of article 9 of the constitution of the state, had been begun, as stated above, January 15, 1913, under an interpretation of the law by the Attorney General that the free textbook act became operative upon the passage of the amendment authorizing it. Under this ruling a state series of textbooks, of which this Board had no official knowledge, and for which it had no responsibility, had already been established and a system of distribution begun. It was under such conditions that this textbook committee took up the work where others had left off.

The state series thus established prior to the creation of this Board, and inherited by it, consists of textbooks adopted at various times by the former State Board of Education. These books are all being manufactured by the state under existing or expired contracts upon a royalty basis, the royalty being payable to the owners of the copyrights. As yet we have made no new contracts, but are now preparing a speller bulletin compiled in our office and have experts investigating all the book series used in the elementary schools.

On January 15, 1913, when the free textbook distribution began, there were on hand in the state warehouse 503,599 books of all kinds. Between then and June 30th of that year there were manufactured 449,098, a total of 952,697 books. During this period there were distributed 477,933 books, leaving on hand June 30, 1913, the end of the fiscal year, a balance of 474,764 books. During the fiscal year 1913-14, there were manufactured 1,351,715 books, which, together with the number on hand July 1, 1913, as above, give us a total on June 30, 1914, of 1,826,479. There were distributed in this fiscal year 1,379,154 books and there were sold to dealers, private schools and others in the state, 13,516, leaving us a balance on hand, July 1, 1914, of 433,809 books.

Among the interesting results found in our experience thus far, we note first, that the cost of distribution has been reduced to a trifle less

than 5.5 mills per book, a material reduction in expense; that the cost of manufacture has been lessened; and that the first estimate of our needs made in 1912 of 1,611,000 volumes, based on attendance in all grades, was not justified by nearly a quarter of a million books, and this, in spite of the fact that the increase of enrollment during the past year had been greater than ever before in our school history. These figures effectually dispose of the objections sometimes made that free textbooks are incompatible with public economy, and sustain for us the contention that the citizens of California are willing to care for the property of the state as for their own. They also offer the best evidence in answer to the question as to the ability of the State of California to minister directly to the needs of her citizens in this popular manner.

The distribution of the textbooks for the elementary schools has been carried out according to rules covering requisitions, specifications and necessary statistics, to be furnished by the county and city superintendents' offices. As yet no steps have been taken to enforce care and preservation of the books, so issued, after they have passed into the hands of the districts, and thus beyond the jurisdiction of this Board, as there has been no evidence of either waste or injury. A careful study of the requisitions made by school districts shows no disposition to order beyond apparent needs. All these matters are under careful supervision in the office of the Superintendent of Public Instruction.

Very interesting has been the question of costs of textbooks. In spite of the decided advance in the market price of paper and other supplies needed in their manufacture, our textbooks have cost less with each edition. An exceedingly clever scheme of cost finding maintained by the Superintendent of Printing keeps us posted on the exact cost of each book. Some unfair statements have been made concerning our textbook costs, but so accurately is the record kept that our cost figures cannot be questioned.

Last year the State of Georgia had a committee investigating cost of school books, and in their report they have listed a number of states of the union, with the cost in each, of a single series of elementary school textbooks. From that report we learn that in Georgia, a single series of textbooks costs \$7.90; Idaho, \$10.09; Indiana, \$5.85; Kansas, \$5.57; Oregon, \$9.52; Utah, \$17.41; Virginia, \$9.79. This same report gives California as \$5.95. The whole report seems to be naturally antagonistic to state publication of textbooks. We have no way of verifying the figures from other states as given above, which are of about half the number of states quoted, and representative of all, but it is interesting to note that \$5.95, which they give for California, was not the cost but a former dealer's retail selling price for a series of our textbooks. As a matter of fact on July 1, 1914, our cost of the same

series was \$4.60, much lower than any other state given. This report goes on to make a general charge that the State of California has a million dollars invested in a rapidly depreciating printing plant for the sole purpose of printing textbooks, while, as every citizen knows, the plant is equipped and maintained for the purpose of state and legislative printing, as well as for the printing of texts. The plant is thoroughly up-to-date, though very poorly housed. Their criticism that our books are not up to the grade of similar works turned out by regular publishing houses is trivial and manifestly unfair.

AN EIGHTH GRADE PUPIL'S OUTFIT OF BOOKS.

Take a concrete case, that of the books for a pupil in the eighth grade of the grammar school, the grade using the most expensive free textbooks.

Books	Former state selling prices				Publisher's list price	Cost to state, 1914
	1902	1906	1910	1912		
Reader -----	\$.60	\$.60	\$.60	\$.38	\$.60	\$.24
Speller -----	.31	.25	.24	.22	.25	.14
Advanced Arithmetic -----	.50	.60	.50	.37	.60	.23
Brief History -----	.82	.95	.80	.71	.80	.41
Advanced Geography -----	1.20	1.20	.95	.87	1.00	.54
English Lessons -----	.55	.55	.59	.55	.60	.26
Hygiene -----	.58	.44	.49	.28	.40	.18
Civics -----	.54	-----	.60	.48	.75	.31
Copy books -----	.08	.08	.08	.06	.08	.04
	\$5.18	\$4.72	\$4.81	\$3.92	\$5.08	\$2.35

This case is simply that of the ordinary eighth grade outfit, and reference to it will disclose that books which formerly cost approximately \$5, all of which the parents paid, are now being furnished free and that the cost to the state is only \$2.35. Since there are over 35,000 eighth grade children in the schools of the state, we are effecting in this item alone a saving of over \$90,000. There is a corresponding economy in equipping the children of the other grades. There has been a saving to the parents in another direction, not available in figures.

HIGH SCHOOL TEXTBOOKS.

Section 1750 of the Political Code, governing the selection of high school textbooks, was found by the Commissioner of Secondary Schools to be widely disregarded. On his recommendation, an administrative plan for enforcing the regulations of this law was adopted by the Board and its measures immediately became operative. The lists of high school texts as published by the former Board, with the exception of vocational and commercial studies, which are still under consideration, was brought down to date by eliminations and additions and the list of expert readers

reviewed and changed to meet present requirements. Details of the administrative plan may be found in the report of the Commissioner of Secondary Education.

In accordance with section 1527 of the Political Code, the Board adopted resolutions stating that preference will be given to texts "entirely written, compiled, printed and published in the State of California," providing that merit be the sole criterion in judging all texts from whatsoever source. In deciding upon the comparative merits of textbooks, this Board purposes giving due consideration to the judgment of the teachers of the state.

We append herewith the financial statement of the textbook fund June 30, 1914. It will be noticed that the balance on hand from the former revolving fund July 1, 1913, was \$77,365.32. To this fund \$300,000 of the \$500,000 made available for free textbooks by the legislature of 1913, has been added. The statement shows a credit balance of \$129,906.56 and to this should be added \$200,000 remaining of our original half million appropriation, leaving available for the publication of free textbooks July 1, 1914, to June 30, 1915, \$329,906.56.

Based on present cost of books, and taking into consideration the needs for the years 1914-15 and 1915-16, and the rapid growth of our school system, and bearing in mind the fact that we are just beginning an extensive and possibly rather expensive study of all our textbook needs, we deem it best to ask that the next legislature place at the disposal of this Board \$500,000 for textbook publication during the next two years.

Respectfully submitted.

MARSHALL DEMOTTE,
GEORGE W. STONE,
MARY G. BARNUM,
Textbook Committee

REPORT OF THE COMMITTEE ON ACCREDITATION.

To the Honorable State Board of Education:

Your Committee on Accreditation submits the following annual report:

The particular work of the Accreditation Committee has been to investigate the fitness of certain schools outside of the state to receive the recommendation of the State Board of Education as required by law and by the rules of the Board.

These are of three classes: *First*, graduate schools, the credits of which may be accepted for the graduate work required for regular high school certificates; *second*, normal schools, the diplomas of which may be accepted in granting elementary certificates; *third*, kindergarten training schools, the graduates of which may receive kindergarten-primary certificates.

This work obviously requires expert professional skill. Therefore, all investigations have been placed in the hands of the Commissioners of the Board—the Commissioner of Secondary Schools taking charge of those pertaining to graduate schools, the Commissioner of Elementary Schools taking charge of those pertaining to normal schools and kindergarten training schools.

APPROVED GRADUATE SCHOOLS.

Approved graduate schools include the University of California, Leland Stanford Junior University, the University of Southern California (for graduate work done after 1911–12), and such other universities or colleges belonging to the Association of American Universities, or Association of State Universities, approved by the State Board of Education as offering graduate academic and professional preparation equivalent in quality to that offered by the University of California. The institutions so approved are as follows:

Indiana University, Bloomington, Ind.
 University of Michigan, Ann Arbor, Mich.
 University of Pennsylvania, Philadelphia, Pa.
 University of Wisconsin, Madison, Wis.
 Princeton University, Princeton, N. J.
 University of Virginia, Charlottesville, Va.
 Yale University, New Haven, Conn.
 University of Illinois, Urbana, Ill.
 University of Missouri, Columbia, Mo.
 University of Minnesota, Minneapolis, Minn.
 Iowa State University, Iowa City, Ia.
 University of Kansas, Lawrence, Kan.
 Catholic University of America, Washington, D. C.
 University of Chicago, Chicago, Ill.
 Clark University, Worcester, Mass.
 Columbia University, New York City.
 Cornell University, Ithaca, N. Y.
 Harvard University, Cambridge, Mass.
 Johns Hopkins University, Baltimore, Md.
 University of Nebraska, Lincoln, Neb.

The following institutions are accredited with the proviso that this accreditation shall not extend to post-graduate work done prior to the academic year 1911–1912:

Ohio State University, Columbus, Ohio.
 University of Washington, Seattle, Wash.
 University of Colorado, Boulder, Colo.
 University of Texas, Austin, Tex.

NORMAL SCHOOLS.

Article XVI, section 1775, of the Political Code, states that county boards of education may, without examination, grant certificates to holders of California state normal school diplomas, San Francisco city normal school diplomas heretofore granted, and other normal school diplomas; *provided*, that the State Board of Education of this state

shall have recommended the normal school issuing said diploma as being of equal rank with the state normal schools of California. This provision necessitated knowledge of the efficiency of normal schools desiring to be accredited in California. The State Board of Education immediately preceding the one now serving recognized one hundred and thirty-seven normal schools as issuing diplomas equal to those of California, designating them the list of accredited normal schools. Such a list was necessarily unstable. Institutions not accredited were continually applying to be recommended, and their requests were either granted or refused; while those accredited were, from time to time, investigated in order that there should be no doubt concerning their claims to be considered of equal rank with the California state normal schools.

The Committee on Accreditation, on assuming the duties of office, found an accumulation of applications waiting to be acted upon. It found also that some years had elapsed since the last investigation of accredited normal schools had been made. The committee, therefore, recommended a revision of the list of accredited normal schools, based upon an investigation. No institution was to be accredited which did not reach the highest standard of California normal schools. The Board authorized this investigation and revision to be conducted, as stated above, by the Commissioner of Elementary Schools.

Essential requirements for the accreditation of an institution claiming equal rank with the normal schools of California were considered to be the following:

For entrance into the normal school a four years' course in a good high school—minimum requirement; for graduation, two years of professional training, with practice teaching of at least one period a day for a year. Not always were the conditions quite so clear-cut and simple, but nothing less than the equivalent of such requirements was deemed equal to those of the California normal schools.

An application form was sent to each normal school on the accredited list, the entrance requirements and professional training of which were not known to be entirely satisfactory, and to normal schools applying to be accredited. A circular letter was sent to the state superintendents of public instruction in the states from which normal schools were being considered for accreditation. Where possible, additional information of certain normal schools was obtained through personal interviews with men who were well acquainted with their standing and history. Catalogues of the schools and other of their printed documents outlining the courses of study, stating the size of the faculties and their training, and touching upon many other significant facts were carefully examined.

The following list, selected upon the principles and employing the methods above stated, was submitted for accreditation, as being equal in rank to the California state normal schools:

LIST OF ACCREDITED NORMAL SCHOOLS.

Arizona:

Flagstaff (1902).
Tempe (1900).

Canada:

Fredericton, N. B. (1902 to 1907).
London, Ont. (1901 to 1907).
Ontario Normal College, Hamilton (1903 to 1907).
Ottawa, Ont. (1901 to 1907).
School for Teachers, Macdonald College, formerly McGill Normal, Quebec (1904 to 1907).
Toronto, Ont. (1901 to 1907).
Truro, Nova Scotia (1903 to 1907).
Winnipeg, Manitoba (1907 only).

Colorado:

State Teachers College, formerly State Normal School, Greeley (1898).

Connecticut:

Danbury (1909).
New Britain (1902).
New Haven (1903).
Willimantic (1902).

District of Columbia:

The James Ormond Wilson Normal School, formerly Washington City Normal No. 1 (1903).

England:

Normal Dept., Edge Hill Training College, Liverpool (1904).

Idaho:

Albion (1911).
Lewiston (1911).

Illinois:

Chicago Normal (1901).
Eastern State Normal, Charleston (1900).
Northern State Normal, De Kalb (1900).
Southern State Normal, Carbondale (1901).
State Normal University, Normal (1900).
University of Chicago, Normal Dept. (1906).
Western State Normal, Macomb (1905).

Indiana:

Normal Training School, Indianapolis (1913).
Terre Haute (1900).

Iowa:

College of Education, Drake University, Des Moines (1905).
State Teachers College, formerly State Normal, Cedar Falls (1900).

Kansas:

Emporia (1904).
Fort Hays Normal, Fort Hays (1911).

Kentucky:

Western State Normal, Bowling Green (1914).

Louisiana:

Natchitoches (1901).

Maine :

Aroostook State Normal, Presque Isle (1905).
Castine (1901).
Farmington (1901).
Gorham (1901).

Maryland :

Baltimore (1904).
Baltimore Training School for Teachers (1907).
Normal Dept., Washington College, Chestertown (1909 to 1912).

Massachusetts :

Boston (1903).
Bridgewater (1899).
Framingham (1900).
Fitchburg (1900).
Hyannis (1901).
Lowell (1900).
North Adams (1901).
Salem (1904).
Westfield (1900).
Worcester (1900).

Michigan :

Central State Normal, Mt. Pleasant (1900).
Northern State Normal, Marquette (1900).
Wales C. Martindale Normal Training School for Teachers, formerly Wash-
ington Normal, Detroit (1910).
Western State Normal, Kalamazoo (1906).
Ypsilanti (1900).

Minnesota :

Duluth (1903).
Mankato (1900).
Moorhead (1900).
St. Cloud (1900).
St. Paul Normal, St. Paul (1908).
Winona (1900).

Missouri :

Cape Girardeau (1902).
Kirksville (1900).
Maryville (1907).
Springfield (1907).
School of Education, University of Missouri, formerly Teachers College (1908).
Warrensburg (1900).

Montana :

Dillon (1906).

Nebraska :

Dept. of Education, University of Nebraska (1909).
Kearney (1906).
Peru (1902).
Teachers College, Nebraska Wesleyan University, University Place (1909).
Wayne (1911).

New Hampshire :

Keene (1913).
Plymouth (1902).

Nevada :

Normal Dept., State University, Reno (1900).

New Jersey :

Montclair (1909).
Trenton (1900).

New Mexico:

- Normal Dept., University of New Mexico, Albuquerque (1908).
- Normal University, Las Vegas (1905).
- Silver City (1908).

New York:

- Albany (1900).
- Brockport (1900).
- Buffalo (1900).
- Cortland (1900).
- Fredonia (1900).
- Geneseo (1900).
- New Platz (1900).
- New York City Normal (1902).
- Oneonta (1900).
- Oswego (1899).
- Plattsburg (1901).
- Potsdam (1900).
- Teachers College, Syracuse University (1909).
- Teachers College, Columbia University (1898).

North Carolina:

- State Normal and Industrial College, Greensboro (1905).

North Dakota:

- Teachers College, University of North Dakota, University (1909).

Ohio:

- Baldwin-Wallace University Normal Dept., Berea (1907).
- City Normal, Columbus (1909).
- City Normal, Cleveland (1909).
- City Normal, Dayton (1907).
- City Normal, Toledo (1909).
- State Normal College of Ohio University, Athens (1902).

Oklahoma:

- Central, Edmond (1905).
- East Central, Ada (1909).
- Northeastern, Tahlequah (1909).
- Northwestern, Alva (1908).
- Southeastern, Durant (1909).
- Southwestern, Weatherford (1909).

Oregon:

- Monmouth (1912).

Pennsylvania:

- Bloomsburg (1904).
- California (1905).
- Clarion (1905).
- East Stroudsburg (1905).
- Edinboro (1905).
- Indiana (1905).
- Kutztown (1905).
- Lock Haven (1905).
- Mansfield (1905).
- Millersville (1905).
- Philadelphia Normal for Girls (1905).
- Shippensburg (1905).
- Slippery Rock (1905).
- West Chester (1905).

Rhode Island:

- Providence (1900).

South Carolina :

Winthrop Normal and Industrial College, Rock Hill (1906).

South Dakota :

Northern Normal and Industrial School, Aberdeen (1912).
Spearfish (1914).

Tennessee :

Peabody College for Teachers, Nashville (1901).

Utah :

School of Education, University of Utah, Salt Lake City (1903).

Washington :

Bellingham (Whatecom), (1902).
Cheney (1904).
Ellensburg (1904).

Wisconsin :

LaCrosse (1909).
Milwaukee (1896).
Oshkosh (1900).
Platteville (1901).
River Falls (1903).
Stevens Point (1903).
Superior (1900).
Whitewater (1901).

Wyoming :

Normal Dept., University of Wyoming, Laramie (1909).

KINDERGARTEN TRAINING SCHOOLS.

Article VII, section 1617c of the Political Code, reads as follows :

“The board of education of every city, city and county, or the board of school trustees of every school district in this state, shall upon petition of the parents or guardians of twenty-five or more children between the ages of four and one half and six years, residing within a mile of any elementary school building situate in such city, city and county or school district, establish and maintain a kindergarten, or kindergartens; *provided*, that such kindergarten, or kindergartens, shall be established only between the first day of June and the first day of August in any year. The board of education of every city, city and county, or board of school trustees of every school district, in which a kindergarten is established under the provisions of this act, shall, at least fifteen days before the month in which the board of supervisors is required by law to levy the taxes required for county purposes, submit to the county superintendent of schools, an estimate of the amount of money which will be required for the maintenance of any kindergarten, or kindergartens, in their several school districts for the ensuing school year. The county superintendent of schools shall thereupon examine said estimates and submit copies of the same, with his approval or disapproval endorsed thereon, to the board of supervisors and to the county auditor at the time he submits to them his estimate for the county school tax for the ensuing year. If the county superintendent of schools approve such estimate, the board of supervisors shall, at the time and in the manner of levying other taxes, levy and cause to be collected in the several school districts for which estimates have been submitted and approved as herein provided, the amount so estimated

and approved. The fund so levied shall be known as the kindergarten fund of _____ school district (as the case may be), and shall be available for the maintenance of the kindergarten, or kindergartens, established under the provisions of this section, and the moneys drawn from such fund shall be paid out in the same manner as money from the state and county school funds for the maintenance of the elementary schools are drawn and paid out. If the average daily attendance in any kindergarten in any city, city and county, or school district, shall be ten or less for the school year, the governing body for such city, city and county, or school district, shall, at the close of such school year discontinue such kindergarten. In case a kindergarten shall be discontinued, as provided by this section, the property and funds of such kindergarten shall immediately revert to the elementary schools of the city, city and county, or school district, in which said kindergarten has been located."

Article X, section 1663, states that the holder of any valid special certificate for kindergarten work, or of any kindergarten primary certificate, who has had at least one year of training in a state normal school of California or other normal school accredited by the state board of education, or one year's teaching in an elementary school, shall be entitled to teach in the first grade of the elementary schools.

These two laws, the one providing for the establishment of kindergartens, the other extending certain opportunities of the primary school to kindergartens, emphasize the importance of care in the accreditation of kindergarten training schools. Therefore, your Committee on Accreditation instructed the Commissioner of Elementary Schools, January 14, 1914, to undertake the investigation of kindergarten training schools with a view to their standardization.

It has been found that standardization is extremely difficult owing to the fact that there are both public and private kindergarten training schools, that some are connected with normal schools, some with colleges, some with universities, some are independent and some are called associations. They vary greatly in the length and strength of their curricula, in the size and personnel of their faculties, and in the character of their "practice teaching."

In order to obtain as accurate information as possible, the following methods were used:

(1) Letters were written to some of the best known kindergartners in the country, and personal interviews were held with a number of them at the convention of the National Educational Association, held in St. Paul July 4-11, 1914. From these sources much valuable concrete, detailed information was obtained.

(2) Application forms to be filled out were sent to all institutions applying to be accredited.

(3) Catalogues of kindergarten training schools, and other of their printed publications were carefully studied.

It seems to be generally conceded that the minimum requirements for the granting of a kindergarten diploma should be two years of professional training with practice in a good kindergarten, and that no student should be admitted into a kindergarten training school who has not completed a four-year course of study in a high school, or who has not received the equivalent of this education. These requirements, your Committee on Accreditation has made compulsory for all kindergarten training schools applying to be listed.

The list of accredited kindergarten training schools in force at the time of the organization of the present Board included sixty-five institutions. Information concerning each of these schools has been obtained. Some of them have been discontinued but remain listed in order that the diplomas of their graduates may be honored.

The following kindergarten training schools are recommended as worthy of accreditation :

LIST OF ACCREDITED KINDERGARTEN TRAINING SCHOOLS.

California :

- Berkeley Kindergarten Training School, Berkeley (1909).
- Broadoaks Kindergarten Training School, Pasadena.
- California Kindergarten Free Normal Training School, San Francisco (1889).
- Golden Gate Kindergarten Association, San Francisco (1903).
- Miss Barnard's Kindergarten Training School, Berkeley (formerly Oakland) (1903).

Canada :

- Toronto Normal Kindergarten Training School, Toronto (1906).

Colorado :

 Superior State Normal, Kindergarten Department (1910).
 Stout Training School for Kindergarten Teachers, Menominee (1905).
 Wylie Training School, Madison (1901).

In the interest of thoroughness and for the convenience of county boards of education, the committee decided that changes in the accredited lists should only be made annually, the present list to stand until the meeting in March, 1915.

The chairman and members of the committee have worked throughout the year in close coöperation with the commissioners.

The Board has unanimously adopted the revised list, as recommended by the committee.

(Signed) MARY G. BARNUM, *Chairman.*
 E. P. CLARKE.
 LAWRENCE E. CHENOWETH.

REPORT OF THE STATE BOARD HIGH SCHOOL CREDENTIAL COMMITTEE.

The work of the State Board High School Credential Committee has been very exacting, made so not only by the number of individual cases considered, but also by a desire upon the part of the committee to maintain the high standard which has been maintained in the past, or, where it seemed necessary, to raise that standard.

A résumé of the work done by this committee during the period ending June 30, 1914, shows unmistakably that the standard has been raised uniformly in high school certification requirements. The doubts of educators, and there were doubts, as to the advisability of a purely lay Board passing upon the certification of high school instructors, and the fear that the prideful standard in California might be lowered by the new State Board of Education, have been dissipated entirely, and this committee believes that its work has met with the commendation and approval of those most closely identified with, and interested in the educational advancement of California.

The law provides that the State Board of Education shall prescribe certain rules under which county boards, and city and county boards of education may grant regular certificates of the high school grade.

These requirements have been revised by the committee in the interest of clearness and to bring the requirements into harmony with the best practice in other states. The standard for regular certification has been advanced in the following particulars:

(a) The number of hours of pedagogy required has been increased from twelve to fifteen.

(b) Four pedagogical courses that bear directly on teaching problems in the high school have been prescribed. It was possible formerly for the candidate to elect courses in pedagogy regardless of their application in high school work.

(c) The candidate is required to take one graduate course in at least one of the subjects which he expects to teach.

(d) The new regulations clearly set forth exemptions from the prescribed pedagogical work which may be made where candidates are normal school graduates or teachers of experience.

(e) A form for recommending candidates for the high school certificate has been prescribed.

The last provision is for the purpose of aiding the work of county boards of education. County boards of education will no longer be confused by a variety of forms of recommendation, each setting forth different facts concerning the candidate's preparation, and the committee

believes that experience will show more uniform action of county boards of education and a more rigid adherence to the standard of requirements.

These revised rules governing high school certification were prepared by the committee in conjunction with the Commissioner of Secondary Education, and issued in June, 1914, as California State Board of Education Bulletin No. 5.

The great bulk of work performed by the committee has been in passing upon the issuance of state board high school credentials. The law provides that the State Board of Education may consider the cases of individual candidates who have not the exact credentials required for regular high school certification.

The State Board of Education, in considering such cases through this committee, has hewn to the line by requiring that the standard shall be the same as for regular certification, accepting only after the closest investigation, satisfactory permitted equivalents. Candidates who in the judgment of the Board fully meet the academic and professional standards of regular certification have been granted the state board high school credential upon which county and city and county boards of education may grant high school certificates.

The strictest investigation is made by the committee before recommendation for action is made to the State Board of Education, and each application is weighed carefully and conscientiously. About two hundred and forty applications have been passed upon by the committee during the past year, and in many cases applicants were accorded the privilege of reconsideration to permit the introduction of further or more complete evidence of fitness for the credential.

The committee has endeavored earnestly to be of aid to those who are seeking the credential, and in many instances has recommended an additional educational course to be pursued, and when the required work has been accomplished satisfactorily, the credential has been issued.

The spirit of the committee has been not to sit in cold and unresponsive judgment upon the applications, but to aid in securing for California high schools the highest trained and best equipped teachers who, though barred by the regular requirements, were highly desirable and were admissible to certification through the granting of the state board high school credential.

The amount received under the law from applicants for the state board high school credential during the fiscal year ending June 30, 1914, was \$559.80, and the cost of conducting the department, including the issuance of the documents to successful applicants, was \$480.59.

It will be seen by this financial report that this department of the work of the State Board of Education is more than self-sustaining, and the expense of conducting it does not fall upon the state but upon the applicants for credentials.

Upon the recommendation of this committee resolutions were adopted by the State Board of Education requesting the three accredited universities in California to organize teachers' training schools for the purpose of offering prospective high school teachers adequate opportunity for practice teaching.

The Commissioner of Secondary Education was directed to confer with the university authorities, and the committee has pleasure in reporting that the University of California, coöperating with the board of education of Oakland, has organized a training school of intermediate and secondary grade in which its students may take the courses in practice teaching under the supervision of competent heads of departments.

A preparatory department in which prospective high school teachers may do practice work is maintained by the University of Southern California. Leland Stanford Junior University is disposed to coöperate with the State Board, but so far has been unable to undertake the organization of a training school.

The work of this committee has been directed toward the consideration of problems and necessities arising out of certification of high school teachers, and its activities and work accomplished as set forth in this brief résumé, are respectfully submitted for approval.

LAWRENCE E. CHENOWETH, *Chairman.*

REPORT OF THE COMMITTEE ON HEALTH AND DEVELOPMENT CERTIFICATION.

Under a law enacted in 1909, boards of school trustees and city boards of education are authorized to establish health and development supervision in the public schools of California, for the purpose of securing the correction of developmental and acquired defects of both pupils and teachers which interfere with health, growth and efficiency; to adjust school activities to health and growth needs and to development processes and to attend to all matters pertaining to school hygiene, and to bring about a special study of mental retardation and deviation of pupils.

The law specifically sets forth the requirements for certification of those who shall have charge of health and development supervision, and provides that a recommendation from the State Board of Education certifying special fitness for the work shall be granted.

During the period ending June 30, 1914, this committee has passed upon and recommended granting seventeen health and development certificates. The form of the recommendation issued was changed by the committee whose recommendations were adopted by the State Board of Education.

REPORT OF COMMITTEE ON EXAMINATIONS.

To the State Board of Education:

Your Committee on Examinations presents the following annual report:

Two examinations for state high school credentials have been held during the past year; the first was conducted in December, that being the earliest date possible after the present State Board of Education went into office, and at that time twelve applicants were examined. The examinations were conducted at Los Angeles, San Jose and Chico, and nine of the twelve applicants were successful. The total cost of this examination was approximately \$500; this, however, is a much larger sum than it will be necessary to expend on such examinations in the future, as the work is now being largely handled by the Commissioner of Secondary Education. For this December examination it was necessary to secure expert assistants for the preparation of the papers, the conduct of the examination and the grading of papers. The second examination was conducted in June, applicants being examined at Los Angeles and Sacramento; nine applicants appeared and seven of these made a passing grade. This examination was conducted under the direction of the Commissioner of Secondary Education and the total cost was approximately \$90. This will fairly represent the cost of such examinations in the future, and our estimate is that as a maximum amount, not over \$300 will be required to meet the expense of these examinations for the next biennial period.

While a large number of letters of inquiry are received regarding these examinations, it will be noted from the statistics given above that only a small number of applicants actually appear at the time the examinations are held. It is the opinion of the committee, therefore, that hereafter only one examination annually should be held instead of two as has been the rule in the past. We do not, however, ask definite action on that point at this time, deeming it wise to wait until some estimate can be made from the letters of inquiry as to the number who

would be accommodated by the holding of such examination. These examinations undoubtedly have served a useful purpose in meeting the needs of exceptional cases and some strong teachers for high school work have secured their credentials in this manner. In view, however, of the large number of high school credentials that are being issued on credentials, the possibility of entirely discontinuing these examinations may well be considered. Specific recommendation on this point is reserved until the situation has been more fully canvassed, in the light of the experience of the coming year. If an examination is held the coming year, the date will probably be some time during the month of May.

Respectfully submitted.

E. P. CLARKE, *Chairman*.

Committee on Examinations.

REPORT OF THE LEGISLATIVE COMMITTEE.

September 17, 1914.

To the Honorable State Board of Education:

The Committee on Legislation desires to present the following report regarding the more important phases of educational legislation which will naturally be considered by the legislature at its coming session:

1. Repeated amendments and additions to the California school law have resulted in repetition and confusion, causing a demand for a recodification of the same to effect: (1) rearrangement of sections for ease of reference; (2) a clear statement with regard to the intent of the law; (3) to correct certain clerical errors and discrepencies.

In view, however, of the possibility of a constitutional convention being called, we recommend that all suggestions for changes or corrections in the present school laws, or for desired legislation along that line, be received and filed by this Board for future use unless emphatically requiring immediate action; but in the event that no constitutional convention is called, it will be the policy of this committee to recommend recodification and revision to perfect school administration.

2. We endorse the following recommendation made in the report of the Secondary Commissioner, regarding the recognition of the intermediate schools: "The law should definitely recognize the intermediate school, should provide for the granting of intermediate school certificates, legalize the introduction of certain school studies in the seventh and eighth years, and authorize the grouping of the seventh

and eighth years with the ninth, or the ninth and tenth years in the intermediate school—the organization of intermediate schools to be left optional with the various school districts.”

While, however, recognizing the value in practical efficiency of grouping the seventh, eighth, ninth and tenth years together in many communities, we should regret to see any legislation that would multiply distinct schools with graduation from one to the other. Wherever a break of this sort occurs, there is danger that the children will feel that they are through school and will be anxious to drop out. Whatever changes are made in the grouping of grades, the unity of the public schools from the first to the twelfth grade should be maintained.

3. We believe provision should be made for state aid for vocational schools, but in view of the fact that a feasible plan for such aid is now under consideration by several educational authorities in the state, who are interested in the movement for vocational education, we are not prepared at this time to endorse any specific plan. The Commissioner of Industrial and Vocational Education has gathered and embodied in his annual report quite specific suggestions for the organization of vocational schools, which report we trust will result in general consideration of this matter throughout the state, in order that before the next legislature meets sufficient data will be at hand to form the basis of desired legislation along this line.

4. The present law regarding the attendance in the organized high schools of the state, of pupils from districts having no high schools, is unsatisfactory and inequitable. This Board is now conducting an investigation regarding the feasibility of providing by law for a general county high school fund. That plan would result in free high school privileges for all pupils of the state who desired to attend high school, and the fund could be apportioned so as to strengthen the country high schools. Until, however, a general survey of conditions in the state has been completed, we are not prepared to go further than to suggest that the plan of a county high school fund is well worthy of consideration.

5. We believe the law relating to the issuance of special certificates should be amended in order to meet the needs for special teachers of vocational subjects and modern languages. Due care should, however, be exercised to maintain a high standard of general scholarship for all teachers who are to give instruction in the public schools of the state.

6. The teachers' retirement salary law is on trial, but we believe the general sentiment of the teachers of the state is that it is a most beneficial measure and is working efficiently. Numerous amendments to the law have been suggested and will be considered by this Board as the law is more fully tested by actual administration. It is the

opinion of this committee that it is unwise at this time to attempt any general revision of the act.

7. The free textbook law is also on trial, and we doubt the wisdom of attempting any revision of it until its provisions have been more fully tested by actual administration. The principal criticism has been on the slowness with which the books were provided at the beginning of the last school year. This was due entirely, however, to the fact that the law became operative immediately upon its passage and it was a physical impossibility to manufacture the books in the State Printing Office as rapidly as was necessary to meet the immediate operation of the law. Books have now been accumulated in sufficient numbers so that all orders are being promptly met.

The present plan of distribution is efficient and satisfactory, but the great problem is the enforcement of economy and care in the use of the books after they go into the hands of the pupils. This is a matter, however, that must be worked out by the local school authorities and the ultimate responsibility rests with the teacher and the children. There should be no wasteful use of books simply because they are free. Every county and city superintendent and every teacher should remember and should impress on the children the fact that the state textbooks cost the taxpayers of the state a large amount of money and should be used as if they were paid for directly instead of indirectly by the parents.

8. In view of the fact that there are many children attending the public schools of the state of such physical and mental variation that they are a cause of retardation in the regular classes, we recommend that these be taught in separate classes and given special instruction suited to their needs.

9. Among the data now in the hands of this committee for use in drafting or suggesting legislation along the lines indicated are a report from the Legislative Reference Bureau upon those matters submitted to it by this Board regarding suggested new legislation and the correction of certain clerical errors in the present school laws; suggested amendments making legal provisions for the establishment of intermediate schools, their courses of study and accreditation of teachers for the same; suggested legislation encouraging the establishment of vocational schools, providing their course of training and the basis for accreditation of their teachers; a tentative provision for an adequate library fund in cities, specific amendments to provide for the instruction of children physically and mentally unable to keep up with the regular classes; suggestions for better supervision and encouragement of the rural schools as well as abundant data toward revising and correcting the school law in the event that a constitutional convention is not called

in the near future and the work of codification is undertaken by this Board.

The policy of this committee is at this time one of conservatism and caution rather than enthusiastic haste to make sweeping changes and revolution. It is a policy of evolution born of the conviction that California is a state of large area with varied conditions to be considered when attempting to expand and unify its school system, and is, moreover, a state which is already in the forefront of states in matters of education. These two considerations prompt us to only the most rational legislation, which is, at the same time, widely beneficial to the end that the public school of California shall continuously go forward and not backward.

10. In compliance with Senate Resolution No. 8, directing the State Board of Education to investigate the conditions surrounding and affecting the orphan children of the state, the education and training they receive, and to make recommendation regarding the same, the Legislative Committee has consulted the biennial reports of the State Board of Charities and Corrections, these reports being the most available and authoritative. From the report of that Board, 1911-1912, much information has been obtained concerning the numbers of children in orphan asylums receiving state aid, July, 1912, and the school facilities offered by each institution. Since, however, the report for the years 1913-1914 will soon be available, the committee wishes to secure this later information before making definite recommendation in this matter. There can be no question that both economy and humanity demand that these helpless wards of the state should be afforded adequate educational and vocational training necessary to good citizenship.

AGNES RAY, *Chairman.*

E. P. CLARKE.

MARSHALL DEMOTTE.

REPORT OF THE COMMITTEE ON LIFE DIPLOMAS AND DOCUMENTS.

The work of this committee has been very simple and is merely a ratification of recommendations made by the county board of education of each county in the state. There is a specific provision of the law governing the method by which a teacher may secure a life diploma of the different grades issued or a document. The requirements are clearly set forth, and the application reaches this committee only when in complete form.

Each application has been carefully checked by this committee, and upon recommendation the State Board of Education has granted during the period closing June 30, 1914, the following diplomas and documents:

Kind	No.
High school life diplomas.....	135
Grammar school life diplomas.....	601
Kindergarten-primary life diplomas	20
Special life diplomas	41
New issue life diplomas	1
Normal documents	40
Total	838

Under the law a fee of \$2 is required from each applicant; the total amount received from applicants during the period above named was \$1,674, and the amount expended in furnishing the diplomas and documents was \$1,507.60.

LAWRENCE E. CHENOWETH, *Chairman*.

MARY G. BARNUM.

E. P. CLARKE.

REPORT OF THE RETIREMENT SALARY FUND COMMITTEE.

The Committee on Retirement Salary Fund presents the following report:

The work of the committee commenced at the first meeting of the Board after its appointment, namely, on September 10, 1913. Under the new law it was necessary to prepare forms and books of record to carry on the work of the Board effectively. An expert was detailed by the Board of Control to prepare the system of books and blanks needed. Numerous points in the new law were referred by the Board to the Attorney General for an opinion before proceeding with the enrollment of those entitled, under the law, to retirement salary. Considerable time was required to prepare for this important work, and not until the meeting of the Board in March, 1914, was it possible to begin an enrollment of teachers entitled to retire under the new law.

Since that date, 212 names have been enrolled—42 men and 170 women. Of this number, 73 were received from the organization in San Francisco and 9 from the association in Alameda County, both established under the law approved March 26, 1895. Two of these annuitants have died since this enrollment began. With this list of

annuitants from San Francisco and Alameda counties, the sum of \$58,700.79 was received and placed in the Public School Teachers' Permanent Fund, in compliance with section 21 of the law creating this Board.

The revenues of the Board under the law have been ample, thus far, to supply the demands upon the fund. The receipts to July 1, 1914, have been as follows:

From San Francisco and Alameda counties (annuity funds) -----	\$58,700 79
From taxes collected under the inheritance tax law -----	79,343 75
From monthly payments by teachers, several counties not having reported	55,934 25
From other sources -----	3,768 90

The disbursements to July 1, 1914, have been as follows:

Payment of retirement salaries -----	\$35,984 69
Cost of books, blanks and other expenses attending the organization of the work -----	1,226 00
Office expense, clerical help, etc. -----	2,238 67

These figures will show only a part of the first year and can therefore have little value in forming estimates for the future. With the records of a complete year, it will be practicable to present a much fuller report. The system of bookkeeping will then be completed and a satisfactory statement will be possible.

On the whole, the administration of the act has been attended, thus far, with very little complication or dissatisfaction. Questions have naturally arisen concerning rules for conducting the business of the Board, but in view of the lack of precedent and the necessity for creating new rules, more rapid progress has been deemed unwise.

The coöperation of the teachers in the matter of accepting the benefits of the act and complying with its requirements, has been general. The law seems to be working satisfactorily.

We append herewith a list of teachers receiving the retirement salary, also tables showing the collections for Teachers' Permanent Fund, and another table showing the amount of salary paid in each county.

Respectfully submitted,

GEORGE W. STONE, *Chairman.*

AGNES RAY.

State Capitol.

PART III.
REPORT OF SECRETARY.

LETTER OF TRANSMITTAL.

*The State Board of Education,
Sacramento, California.*

LADIES AND GENTLEMEN:

I have the honor to submit the following tabular statements containing résumés of the statistics gathered by the office of the Superintendent of Public Instruction for the two years extending from July 1, 1912, to June 30, 1914, together with some generalizations and observations drawn therefrom, in accordance with section 1518, subdivision fourth (*d*), of the Political Code.

Very respectfully yours,

EDWARD HYATT.

Superintendent of Public Instruction and ex officio
Secretary of State Board of Education.

GENERALIZATIONS.

The biennial period ending June 30, 1914, the period covered by this report, has been one of great educational activity, rapid growth and sweeping changes.

Free Textbooks.

The first change we have to note is in the method of furnishing textbooks. Formerly textbooks for the elementary schools were sold by the state to the children at cost.

At the election held November 5, 1912, the people by a very decisive vote amended the constitution so that the state should manufacture and deliver free to the children in the elementary schools all textbooks used in such schools. This amendment also carried with it a provision that the legislature should provide for a state board of education "by election or appointment" in place of a board named in the constitution, which latter provision had been in force since 1872.

An opinion of the attorney general, Hon. U. S. Webb, was to the effect that the amendment providing for free textbooks went into effect at once; that the superintendent of public instruction must take the place of the state board of education until the new board was provided for; that he should order the textbooks manufactured and proceed to distribute them free to the children in the elementary schools.

With no funds to meet the expense of such undertaking, and no similar system in existence to serve as a guide, the task of making plans to meet the demands of the schools was taken up. The state printing office was taxed to its full capacity to manufacture books and take care of the printing required by the legislature and by all of the state officers and commissioners.

Immediately after the organization of the legislature an emergency appropriation was passed to meet the expenses of the shipment of these books. A second act was passed allowing the money in the state school book fund to be used for the payment of the manufacture of the books. The shipment of the free textbooks began January 15, 1913, by a lot sent to Superintendent Will C. Wood of the city of Alameda. As rapidly as books could be printed, they were sent to all parts of the state. A full report of the books sold and the books sent free will be found on pages 85 to 90, inclusive, of this report.

School Legislation.

The legislature of 1913 was one long to be remembered for the great amount of legislation enacted. There were 1,783 bills introduced in the senate, an average of 44.5 to the member, and 2,139 introduced in the assembly, about 26.6 per member. Of this mass of proposed legislation about 360 bills related to education.

Kindergartens.

A bill having for its purpose the encouragement of the organization of kindergartens was passed, and became a law of this state as section 1617c of the Political Code. The bill as originally drafted embodied a demand that kindergarten classes, instead of being regarded as local in character, should be recognized as a part of the state school system and given state aid. However, the educational committees having this matter in charge did not accept this view. Since kindergarten classes can thrive only in populous districts amply able to support them, the committee felt that the state should devote its energies to the encouragement of the elementary schools in which all children have a common interest.

The same end as giving state aid to the kindergartens may be reached by giving more aid to the elementary schools and leaving the localities to devote more of their money to the special school, such as the kindergarten, and the more practical work of the vocational schools. That the kindergarten school thrives best in large cities is shown by the fact that twenty-four cities in this state maintain these schools, nine of these cities being in Los Angeles County.

Elementary Schools.

In the kindergarten, elementary and high schools there are 501,021 pupils enrolled. Of this number 13,070 or 2.6 per cent are in the kindergartens; 422,024 or 84.3 per cent are enrolled in the elementary schools; while 65,927 or 13.1 per cent are in the high schools. All children must benefit from the elementary schools. It should be plain that this is the school that is common to all. Those who would enter the high school must have passed through the elementary schools. It is evident that the state should aid the elementary schools in preference to other schools since all children enjoy the benefits of these schools. The following table will show the gain in these schools and the proportion of state aid to local aid:

	1907	1914	Gain per cent
Number of teachers.....	8,246	12,266	48
Number of pupils enrolled.....	294,385	422,024	43
Average daily attendance.....	234,624	319,229	36
Number enrolled per teacher.....	35.7	33	-----
Number of graduates.....	12,683	24,780	92
Amount of state aid given.....	\$3,977,295 40	\$5,358,579 04	35
Amount of county aid given.....	2,866,479 17	4,980,197 76	73
Amount of district aid given (special taxes)	937,001 16	4,591,921 29	390
Amount of bonds voted for buildings, etc....	1,374,395 58	3,267,805 05	130

These figures show that the county has increased its aid to the schools more than twice as much as has the state, and that the district has increased its aid more than ten times as fast as the state, in addition to the bonds that have been voted for buildings and grounds. In addition the districts have reported that, in 1907, \$163,618.31 was received under the head of miscellaneous receipts or donations, while in 1914 this money reached the sum of \$356,898.66, or a gain of 118 per cent.

It would seem from the above table that the law should be so amended as to give more state and more county aid to the elementary schools, and that the burden is falling too heavily on many districts. The more wealthy sections of the state can give this local aid, while the less fortunate sections can not. The results are that the population is tending more and more towards the city, where these educational advantages can be had. The amount of state aid as reported above will be decreased by nearly \$900,000 in the voting out of the poll tax in the fall of 1914. This will increase the burden on localities. To partly offset this loss the state should give at least three dollars per pupil on average daily attendance, making the rate per pupil transferred from the general fund of the state \$16 in place of the \$13 now given. This would replace loss of poll tax. But in order to keep pace with the rapid development of the educational interests of the state, not less than \$18 per pupil should be given.

High Schools.

The following table will show the wonderful increase in the high schools of California for the eight years from 1907 to and including 1914. The rise of the high school is one of the most remarkable educational movements of modern times:

	1907	1914	Gain per cent
Number of schools.....	179	255	43
Number of teachers.....	1,188	2,997	152
Number of pupils enrolled.....	27,578	65,927	139
Average daily attendance.....	22,333	48,312	116
Number of graduates.....	2,890	7,477	158
Amount of state aid given for year.....	\$237,016 77	\$642,815 52	171
Amount of district aid given.....	2,026,685 26	5,506,429 22	172
Amount of bonds voted.....	429,576 50	1,893,657 00	341

It will be noted by the fact that the number of graduates has gained 158 per cent, while the enrollment has gained 139 per cent, that the high schools now are holding their pupils longer than formerly.

The law providing state aid to high schools adjusts itself to the rapid growth of the schools far better than does the law providing aid to the elementary schools. It will be noticed that the state aid to high schools

has gained 171 per cent, while district aid has gained 172 per cent. But the districts gave \$2,026,682.26 for 1914, while the state gave but \$237,016.77, the district giving towards the support of the school 8.6 times as much as did the state, in addition to building the schoolhouse.

The crying need of the high school is legislation that will prevent too frequent changes in the course of study, so that students, when they enter the school, may outline their course and follow it through without reference to changes in teachers and principal. There is need also for a more adequate law to prevent too frequent changes in high school textbooks. These books are so expensive that changes should be made only for good reasons. It is unreasonable to require parents to purchase a complete new set of books for each child when several children of the family enter school in successive years and elect the same course. If we can have fewer changes in high school textbooks, those whose duty it is to adopt them will consider the books more carefully before adopting them.

In many of the high schools the course of study is made to conform to the subject which the teachers can teach. In consequence, the students are compelled to make changes in their course to suit the change made by the introduction of the new teacher. It would be better for high school boards to select teachers to teach a course of study such as the district needs, than to select teachers and then make a course of study to fit the capabilities of the faculty.

Normal Schools.

The following table will show the rapid development of the state normal schools:

	1907	1911	Gain per cent
Number of schools.....	5	8	60
Number of teachers.....	116	229	98
Number of students in normal proper.....	1,769	3,994	126
Number of pupils in training school.....	2,109	3,068	45
Number of graduates.....	478	1,538	222
Total receipts	\$415,012 46	\$1,056,998 51	154
Total expenditure	274,785 71	516,389 90	81
Valuation of property.....	1,149,766 00	2,392,214 00	108

When the first state normal school was created the question of system could not enter, but as normal schools have been created one after another till we have eight state normal schools, the question of a state system of normal schools that should govern all of them has become increasingly important. The tendency has been to make each normal school a local school with its own conditions of entrance, its own course of study, and its own system of teaching. The legislature has under-

taken to meet this condition by providing for a joint normal board, composed of the various normal presidents with certain of their trustees. By reason of the inherent difficulties of the situation, this joint board has not been able to make much headway up to the present time in the way of unifying or harmonizing the work of the different schools.

DIRECTORY.

STATE BOARD OF EDUCATION.

(Appointed by the Governor.)

Name of member	Term expires	Address
Wm. H. Langdon.....	August, 1917	Modesto.
Mrs. O. Shepard Barnum..	August, 1917	312 S. Fifth St., Alhambra.
Mrs. Agnes Ray.....	August, 1916	272 Twenty-third St., Oakland.
George W. Stone.....	August, 1916	Santa Cruz.
Marshall De Motte*.....	August, 1915	Corning.
Lawrence E. Chenoweth..	August, 1915	Bakersfield.
E. P. Clarke.....	August, 1914	Riverside.

*Appointed to fill term left vacant by resignation of Chas. F. Stern of Eureka.

NOTE.—Edward Hyatt, Superintendent of Public Instruction, is Secretary of the Board according to law.

Assistant Superintendents of Public Instruction.

(Appointed by State Board of Education. Took office January 1, 1914.)

PART IV.
REPORTS OF COMMISSIONERS.

LETTER OF TRANSMITTAL.

SACRAMENTO, CALIFORNIA, September 1, 1914.

The Honorable STATE BOARD OF EDUCATION,

Sacramento, California.

LADIES AND GENTLEMEN :

In compliance with the state law of California—Political Code, section 1519—I have the honor to submit to you the first annual report of the Commissioner of Elementary Schools. Since the duties of this office were assumed January 1, 1914, the report necessarily is limited in time to that portion of the year beginning January 1st and closing June 30th.

Very respectfully yours,

MARGARET E. SCHALLENBERGER,
Commissioner of Elementary Schools.

FIRST ANNUAL REPORT.

THE OFFICE.

The elementary teachers of the State of California number 12,266. Variation in the efficiency of the schools taught by these teachers is marked. Some of the schools are poorly taught, some have slender courses of study, some house the children in unsanitary buildings and furnish meager equipment, while others leave little to be desired in any of these respects. Therefore equal opportunity is not provided for all the children of the state.

State superintendents, county superintendents, city superintendents, members of boards of education, faculties of state normal schools, and professors in the departments of education of the University of California and of Leland Stanford Jr. University have each and all proved their worth in aiding in the direction and supervision of the work of elementary education, but the activities of each and all are limited by manifold and increasing duties and interests, some of which lead away from, rather than toward, much that is of vital importance to the elementary schools.

The enactment of a law, therefore, approved June 6, 1913, providing for the employment of an official to be known and designated as the Commissioner of Elementary Schools, committed to work in the interests of this particular field of education, who shall visit the elementary day and evening schools of the several counties of the state, investigate the courses of study, report his findings and make recommendations to the State Board of Education, is virtually a recognition by the people of the necessity for more and special attention to the elementary schools; and the wording of the law defining the duties of the office imposes an inferred obligation on the part of the state officer employed to use continually all possible diligence and effort in bringing about action for the improvement of these schools.

This does not mean that the Commissioner is to work alone, unaided by those co-operative agencies which have proved and are proving extremely valuable, but rather that with and through these agencies and others which may be brought into action, the central state office may be instrumental in strengthening, enriching and unifying the elementary school system to the end that it may more completely serve the interests of the state.

With this understanding of the meaning and function of the office, the Commissioner of Elementary Schools entered upon her duties January 1, 1914.

ELEMENTARY SCHOOL CONDITIONS.

Exclusive of the children attending kindergartens, there are 402,024 boys and girls enrolled in the elementary schools of California; including the kindergarten children there are about 500,000. In comparison

with this half million the total enrollment of the high schools, 65,927, appears strikingly small and thrusts into the foreground of consciousness with tremendous force the fact, recognized but not sufficiently dwelt upon, that the rank and file of our population are dependent for their start in life upon the knowledge, habits, productive power and ideals given them by the elementary school. Moreover, the ability of the favored 65,927 high school students to profit by the opportunities there offered is largely conditioned by the preparation obtained in the lower school, and even college graduates not infrequently trace certain of their inefficiencies or proficiencies either to inadequate or to adequate elementary training. Democratic, impartial, sympathetic, the doors of the elementary school swing open to all of the children of all of the people, and, because it begins at the beginning, it is the only school to which the whole half million are eligible. In view of these facts, its importance as a state institution can not be over-estimated or its possibilities over-emphasized. Not only should the elementary school offer the widest possible opportunity throughout the eight years of its course to each child pursuing it, but the nature of this course should be such that children beginning it are tempted to complete it and many thousands more than 65,927 should be given, between the ages of 6 and 14 years, an impetus which will carry them into high school. However, no matter what success may attend the effort to swell the high school enrollment, it is obvious that the most widely attended school of the people will always be the elementary school and many of the state's most intelligent and worthy citizens—indeed, many of its most valuable leaders in all fields of life's activity—will receive no other technical education than that which it offers.

So important have been the changes wrought by discoveries in science, so varied and complex are the life occupations, the interests and the means of service of the people, that the ideals and functions of the elementary school of today are quite unlike those of twenty or even ten years ago. Education is no longer the acquirement of a body of facts, but is dynamic in character, being carried on by means of various life experiences; and the problem before educators today is the determination of the value of these experiences. The laws of psychology, sociology, hygiene and ethics, therefore, are studied eagerly by the progressive teacher. The child must be taught to live sanely and must, through concrete experiences, become imbued with right ideas concerning the necessity for the support of himself and of others. At the same time appreciation of music, of art and of literature are recognized also as valuable life experiences.

Love of nature and command of nature's forces are both to be attained. Honor and loyalty, unselfishness, courage, diligence, thrift, generosity, the feelings of mercy, pity, brotherly love, and desire for service, to be taught, must be experienced. Opportunities must be

given for these experiences. The two great forces conditioning all lives are heredity and environment. Each human being is what he is through and by means of heredity and environment, not what he would have been had his environment been different. Absolutely essential for the planning of his early education is the study by the teacher of the conditions under which the child's life experiences are in operation, and the determination of what those conditions ought to be is the modern educator's problem. Moreover, the school is truly performing its service only when it projects its efficiency into the home and makes possible the continuation of activities inaugurated but only partly carried out in the school.

Since the direction for the whole range of his life's activities is given to the child in the elementary school, the experiences planned for him there are of vital importance, and to be right, need certain provisions.

The State should provide good teachers. No teacher can be too well educated for work in the elementary school. Books no longer are the only tools of the elementary teacher. She must not only understand just what she is trying to accomplish through their use when they are used, but she must be able to lead the child into many an avenue to which no book provides an entrance. High standards of teaching qualifications for the teachers mean right life experiences for the citizens of the state, for the child's school experiences are truly a part, and a very important part, of his life experiences.

Expert supervision of these teachers is imperative. No individual in any field of activity who works alone, receiving neither help, suggestion nor recognition, does his best work.

Sanitary school buildings and school grounds, with room for play, comfortable and sanitary furniture, as beautiful too as may be, should be provided. The physical well-being of the state's citizens demands the former and their aesthetic appreciation as consumers the latter.

School and home gardens should flourish, much work of all kinds should be done with the hands; habits of thrift should be inculcated; libraries, that the library habit may function, should be in evidence.

These schools are often benefited by various influences which are brought to them by the people as the result of social, economic, ethical, scientific and artistic development. Among them are the moving picture, the phonograph and the school savings bank. The Commissioner has observed these agencies operating effectively in the elementary schools and believes that they well deserve the careful consideration of all teachers as direct educational agencies.

All of these and many other conditions offer opportunities by means of which our citizens will learn to find themselves.

Each child is a unit different from all other children, yet all children are alike. Mind patterns are different, mind material is common. With

the state itself lies the responsibility of providing the conditions under which a system of education may be wrought out sufficiently simple to be the same for all the children, yet sufficiently complex to give each different unit his unique opportunities.

TEXTBOOKS.

As teachers increase in efficiency, the value of textbooks as factors in education is apt to be discounted. "The best teachers," it is often asserted, "need no textbooks." "Children tend to regard the statements of textbooks as beyond question and to depend upon them rather than upon themselves."

Undoubtedly there is truth in these criticisms, but, nevertheless, while schools exist we shall have textbooks, and, excellent as some textbooks are, none can be too good. California should have the best.

While it may be true that good teachers can more easily than poor ones dispense with a textbook, yet good teachers need them and use them to advantage. No good teacher feels hampered or limited by a good textbook.

Textbooks can be written and often are written in a way that stimulates rather than inhibits the thought of the child. It is the business of textbook publishers to keep in touch with present-day life conditions and progressive school ideals. If education means experiences rather than memorized statements, then textbooks must aid the teacher in providing experiences. If education is dynamic rather than static in its nature, then textbooks must lead the children to action. If education means increase of ability to appreciate, then textbooks must be a means to that end. If education is to result in social efficiency, then textbooks must be servants of social efficiency.

While a good textbook is an aid to the city teacher and the city child, it is a necessity to the rural teacher and the rural child. So far from regarding textbooks as mere accessories, the Commissioner looks upon good textbooks as fundamental in the maintenance and improvement of our elementary course of study.

In view of the fact that the contracts for readers expired July 1, 1914, and that there are at present no readers or literature textbooks for the upper grammar grades, the Commissioner recommends that the State Board of Education take such action as will insure the provision of the best reading and literature textbooks available for the elementary schools.

Other subjects, taught without textbooks, are music, morals and manners, humane education, drawing and elementary science. This condition also—not a satisfactory one—is called to your attention for action. The contract for writing books expired in 1912, that for history for the lower grades in 1910. The best textbooks and manuscripts in both these subjects should be investigated before state adoption.

Dates for the expiration of the other contracts are the following: Geographies, 1916; hygiene, 1916; language books, 1916; civics, 1918; history for the upper grammar grades, 1918; arithmetics, 1918. While no immediate action is necessary, it is suggested that careful examination of textbooks and manuscripts in these subjects be begun.

THE COUNTY UNIT SYSTEM.

Though good textbooks are powerful factors in vitalizing an elementary course of study which hopes to be of service to all of the people, yet neither good textbooks nor good teachers can be brought to their highest degree of effectiveness under wrong or weak or loose or slender organization and administration. The cities have long ago realized this and, though not perfect, their method is far superior to that obtaining in rural communities. California is to be congratulated on the fact that she sets the same general standards of teaching qualifications for the rural as for the urban teacher, but cities, through their city boards of education and their city supervising experts, are able to exercise a selective power which secures for them specially well-trained, experienced teachers. In the cities, too, there is a tendency to standardize teachers, and when a premium is put upon good teaching, and better salaries are offered those who continue to educate themselves, the quality of the teaching is sure to improve. In the rural communities there is little criticism of poor teaching or recognition of excellent teaching, and no incentives are offered for improvement. Teachers are not always wisely chosen by the three district trustees, and having been chosen are left alone, uncriticized and unrewarded. The county superintendent, their only professional advisor, overburdened with other duties, which are continually increasing, is rarely able to pay more than one official visit per year, the one required by law. Such visitation can not be dignified by the name of supervision.

In addition to training for her work, however, the rural, like the city teacher, needs training *in* her work. It is passing strange that we should imagine we are getting the best service from a teacher when we put her as far away from public opinion and expert supervision as possible. Even a good teacher does not know enough to fulfill all her task when thus isolated. She needs special kinds of knowledge which must be brought to her, just as she must be provided with special kinds of textbooks and teaching equipment. She needs a knowledge of the people of the various communities. Every teacher ought to be shown how to make a survey of her district, of its industries, its religions, its amusements, its living conditions, its faults, its virtues, its ideals, its limitations, its possibilities. There is a certain personality about every community that must be known, and to attain this knowledge even trained teachers must have leadership and supervision. Who has not wondered at the pluck of the optimistic young Normal graduate who

goes, as a rule, for the first few years of her teaching life to the rural school. Far removed from all social relationship that would tend to stimulate or inspire her, unrewarded, unencouraged, unnoticed, she spends day after day, week after week, month after month, trying to do what she thinks she is paid for doing. No wonder should she lose her standards, no wonder should she become disheartened. We have no other analogous condition. Our army, our railroads, our banks, our churches, all our great political and industrial organizations are planned according to some method of oversight of the rank and file by the superior officer. In the rural school only, does the worker go about her task unchecked by superior criticism, uncheered by superior approval.

The county superintendents are eager for more supervision, and it is interesting to note that, even without legislation, plans are evolving which tend conclusively to a general line of action. In illustration of this the Reedley experiment might be cited. In Fresno County, California, about twenty-five miles from the city of Fresno, is to be found the little town of Reedley, containing a good grammar school of several rooms and a union high school. This union high school has its own board of trustees, composed of members from the various rural school districts contributing to its support. No adequate law obtaining for the provision of a district supervisor, an additional high school teacher is employed, who, however, as a matter of fact, devotes almost his entire time to visiting the various district schools. The distances are long and the roads are not always good, so this district supervisor is provided with an automobile. He goes from school to school, doing what he can to better the condition of each, and using his own judgment as to what he deems the most urgent demand. Among these demands the following have been met:

Library and supplementary books have been distributed; the floors of all the one-room schools have been oiled; good water has been piped to several schools; sanitary drinking fountains have been installed; an open-air schoolroom has been built; several neighborhood differences have been settled; lecture courses by professors of the University of California have been delivered; trees and flowers have been planted and cared for. In some schools, sewing has been taught by a woman supervisor, and the high school musical director having been interested, now gives a portion of his time to the direction and supervision of music in these rural district schools. As a consequence, a number of union concerts have been held, at which people from several districts assembled. A group of boys from one of these schools, not too far from the high school, has gone into the Reedley high school once a week for work in manual training. Seventy-eight per cent of the children of the district schools, upon their graduation from the eighth grade, signified their intention of entering high school. So helpful has this experiment

proved to the district schools, to the high school and to the communities, that it is to be continued next year, and teachers outside the fortunate "ring" are begging to be included in the supervised group.

This may appear a crude and unsatisfactory supervision, but it is much better than this brief sketch shows, and in sparsely settled districts, it is certainly far superior to almost absolute neglect. It shows there is no better way quickly to improve the condition of rural schools, especially of scattered one-room district schools, than to establish a system of expert supervision. The children remain in their own setting, while a sympathetic educated outsider, understanding their difficulties, appreciating their advantages, and thoroughly in earnest, having a distant as well as an immediate end in view, comes to them and says to them and to their teachers, "Let me show you how."

There is a great movement all over the country for better organization and administration of rural schools. What is called the County Unit System is the plan of administration most in favor. It is found in modified forms in several states. One after another they are reorganizing their rural systems on this basis. The Minnesota Education Commission, appointed under an act of legislature to study the school systems of the state, has just reported in favor of it. It is only a matter of time in the opinion of your Commissioner when it will be universally recognized as far and away the most effective system in operation. The plan in general is the subordination of the districts to the county. A lay board appoints the county superintendent and such assistants as may be needed. The members of this professional board are the educational administrators of the county. They have no jurisdiction over the city schools. Their duties correspond in general to those of a city board of education. The teachers are selected and supervised by this board. School supplies are purchased and school buildings erected under its direction. The sites of these buildings also are decided by this administrative board. The retention of local advisors or helpers to confer with the county board in order to furnish the local interest supplied by the old district trustees is advisable. Under such a system of administration rural teachers are provided with leadership and supervision analogous to that given to city teachers.

The present constitution of the State of California does not permit the establishment of the county unit system, but legislation for the employment of assistants to the county superintendents, in order that rural teachers may be directed and supervised in their work, is possible and is recommended by the Commissioner as one of the most important changes necessary for the improvement of the rural schools.

Article X, section 1674, provides for the formation of union school districts. Consolidation of school districts tends greatly not only to equalize but to increase the educational opportunities of the children

living within them, and effort is being made by progressive educators and by intelligent, far-sighted citizens of various communities throughout the state to avail themselves of the privileges of the law wherever possible and to discourage the formation of new, small, struggling districts, each barely able to maintain an insignificant school. Some of the county boards of education have studied their counties and have made maps showing where union schools could best be placed—Santa Cruz County has made an excellent map of this kind—but because of local pride and jealousy and because of erroneous ideas concerning union schools, the attempt to form them has often been blocked. With administration such as the county unit system would provide, or even with district supervisors who work with the county superintendent and who have the interest of all the rural schools of the county at heart, there is no doubt that union schools would be formed more often and—what is quite as valuable—that new, weak, one-room schools would cease to be built except in localities where conditions absolutely forbid the transportation of the children to a central union school.

IMPROVEMENT OF THE ELEMENTARY SCHOOLS.

The rural schools educate some of the most capable and efficient citizens of the state, but undoubtedly if educational advantages were greater in the country, more children would complete the elementary school course and many of those who move into cities in order to obtain the superior advantages there offered by the city schools, would remain in the rural districts. No greater inducement for people to make their homes in agricultural districts can be offered than the fact that these districts afford excellent educational opportunities. On the other hand, intelligent farmers and orchardists are not seeking permanent homes in those sections of the state where the schools offer education to their children noticeably inferior to that provided for all children in urban communities.

For these reasons the Commissioner believes that the state ought to provide for the rural schools more money for their maintenance and improvement.

The favor with which the proposed abolition of the poll tax is being received by the people, strongly suggests that the state school fund will be deprived of about \$850,000 per annum, or approximately one seventh of the total amount which the state provides for the support of common schools. To meet this deficit, if it occurs, the state will probably increase the amount transferred by the State Controller, on the basis of average daily attendance, to the school fund from the general fund of the state.

This amount is now computed at thirteen dollars for each pupil in average daily attendance in the elementary schools. The average daily attendance during the last seven years shows an increase of thirty-six per cent, while the state aid for the same period shows an increase of

only thirty-five per cent. In contrast to this, the state aid given to high schools during the last seven years shows an increase of one hundred seventy-one per cent. In order to meet the possible deficit from the abolition of the poll tax and to give added necessary assistance to all of the children of all of the schools, both urban and rural, the basis of computation upon which the State Controller transfers funds from the general fund of the state to the school fund should be not less than seventeen dollars for each pupil in average daily attendance in the elementary schools.*

THE ELEMENTARY COURSE OF STUDY.

Investigation discloses the fact that instead of one there are many courses of study for the elementary schools. So great are the differences that a child in being transferred from one school to another not infrequently is placed a half grade or even a grade lower or higher than his original assignment. This condition not only is often specially unfortunate for the children so transferred, but involves a greater expenditure of public funds for their education than is necessary.

While no change should be made which would curtail local educational opportunities, yet a standard of minimum requirements would tend to systematize the course for all schools without impairing the efficiency of any one of them.

PROBLEM OF THE HIGHER GRADES OF THE ELEMENTARY SCHOOLS.

Perhaps at no time in the history of our country has the elementary school received greater attention from both educators and the people at large than is being given it today.

The high school as a part of the public school system is no longer an experiment. To be sure, necessary requirements for the training of its teachers need modification, and it has, and will always have, problems to be solved, but its place in the educational scheme is no longer questioned.

Because the high school is established, and because every year larger numbers of boys and girls are taking advantage of the opportunities it offers, we are brought face to face with several problems in the elementary schools that formerly did not present themselves so insistently.

There is undoubtedly a gap between the upper elementary grades and the high school. If the high school is a recognized part of our school system, if the people are taxed to support it, then it follows that it is to be used as much as possible by the people and not by a special or selected class. The high school has been blamed, and there can be no doubt that the criticisms are not unwarranted, for not extending a welcoming hand to all sorts and conditions of boys and girls who approach it with well defined, or even illy defined inclinations for

*Since the submission of above report the poll tax, by vote of the people, has been abolished.

more education and, in order to remedy this defect, much time and attention have been given to these wrong conditions in the existing high school.

While this readjustment is still in progress, the searchlight of investigation has been circling around the educational field and is now focussed upon the seventh and eighth grades of the elementary school with only strong side lights flashing upon the first year of high school. It is the elementary school, it is claimed, that needs reforming. Statements are made that courses offered in the last two grades—the seventh and eighth—of the elementary school are neither interesting nor instructive; that they are theoretical rather than practical, logical rather than psychological. The people are clamoring for an education that will better fit the children for life. The high schools, it is said, holding to certain entrance requirements imposed upon them by the universities, have been insisting that they fit them for high school.

Reform is now in process both in the high school and in the elementary school. The questions everywhere under discussion are:

What is a practical education? What does it mean to fit a human being for life? Are cultural courses practical? How much time should be given to work requiring self-expression that prepares the individual to be a producer; how much that increases his ability for appreciation and thus prepares him to be a consumer? These and similar questions for the last ten years have formed a hotbed of inquiry concerning the high school. They are now being discussed with even greater enthusiasm concerning the grammar grades.

Never before has the feeling been so strong, both among citizens at large and among teachers, that it is the business of the school, especially the elementary school, so to modify its work as to hold the children in school for as long a time as possible. Never before has the feeling been so strong that if the elementary school offered suitable work to all sorts and conditions of children, the children would be eager to take the work. It is hoped by means of vocational guidance, a certain form of which can be given directly to the youngest children—it has always been given indirectly to all children—by means of vocational training, and by means of beneficial changes in the curriculum and administration of the upper elementary grades to give opportunity not only to the brilliant and average children, but also to the retarded, to the foreign-born, to those who are below par mentally, and to those who can excel in certain lines of work but are unable to accomplish anything in others.

Your Commissioner wishes to call attention to the fact that the major part of all initiative in this reorganization and readjustment of the elementary school course is being taken by the high school faculties and the departments of education in universities. "Intermediate" schools, as they are commonly termed, are being formed. These schools are

usually either separate schools set apart from the other elementary grammar schools and taught by special faculties, special teachers being employed to teach special subjects, or they are carried by high school faculties as preliminary or preparatory courses (neither of these conditions is ideal, as the children are young and not always are they ready for the independence of action usually permitted), or—and this change is less radical—the seventh and eighth grade work, reorganized, is carried on as before in the grammar school buildings by the regular grammar school teachers.

The elementary school itself seems strangely apathetic in its attitude. If the intermediate school is to be definitely formed, it is a serious undertaking. If it is to be separated from the elementary school, it is a more serious undertaking. At present the thought in the minds of the people is eight years of elementary education. To be sure, there is a great dropping off in attendance, even in the fifth year, and one of the great benefits to be attained by the establishment of the intermediate school, it is claimed, will be the holding in school through the sixth year, children who otherwise would certainly drop out. But what must be faced is the danger of making two gaps—one between the elementary and the intermediate, the other between the intermediate and the high school. This gives rise to the much discussed question as to whether or not the intermediate is to be still a part of the elementary school, involving questions concerning the requirements necessary for its teachers and legislation for its support.

This whole subject is being considered not only in our own state, but throughout the country. United States Commissioner P. P. Claxton is in favor of dividing our educational system into periods of six years—six years of elementary school education, *e. g.*, and six years of secondary school education.

Whatever readjustment may be made, whatever legislation may be considered necessary, the continuity of our state educational system should thereby not be weakened, but strengthened. No legislation should be enacted which will tend to carry with it the idea that the child at the end of his sixth year of school life reaches an educational climax. It is to be regretted that the close of the present eighth year forms a line of demarkation between the elementary and the high school. Certainly this line must not be set back two years. On the contrary, all charges in the curriculum of the upper grammar grades of the elementary school and all legislation with reference thereto should have in view an unbroken system of public education.

CERTIFICATION OF TEACHERS.

More than eighty per cent of the teachers of California are professionally trained. In some counties no applicants for teachers' certificates present themselves as candidates for examination; in others only

one or two. From June, 1913, to June, 1914, inclusive, the three semi-annual examinations held in each county of the state for the purpose of certifying elementary teachers, resulted in the granting of only six hundred seventy-eight certificates, an average of less than four for each examination. In three counties no certificates were granted; in seven counties only one.

It seems as if the time were fast approaching when California could require professional training of all of her teachers, and as if the time had arrived when no teacher should be allowed to be examined who can not produce evidence of education equal to that of a graduate of a reputable high school. A proposed law exacting high school education or its equivalent as a minimum requirement in scholarship, and a definite amount of professional training as a minimum requirement, in practical efficiency, for all candidates for certification as elementary teachers, is included in the proposed recommendation for legislation now in the hands of your committee on legislation.

The present law, which, as it stands, permits graduates of universities to teach in the elementary schools without having received any special professional training, is illogical and impractical and ought to be repealed.

The law relating to the kindergarten-primary certificate should be so amended as to permit, under prescribed conditions, the holder of any valid special certificate for kindergarten work, or of any kindergarten-primary certificate to teach in any grade below the fourth of the elementary schools. All these proposed changes have been submitted to the committee on legislation.

ACCREDITATION OF NORMAL SCHOOLS AND KINDERGARTEN TRAINING SCHOOLS.

Immediately on assuming the duties of office, the Commissioner of Elementary Schools was instructed by the Committee on Accreditation of the State Board of Education to investigate the standing of all normal schools in the United States or elsewhere applying to be accredited, and also of all those already accredited which were not known to be thoroughly efficient. Kindergarten training schools in like manner were to be examined and, as far as possible, standardized. The results of these investigations are embodied in the biennial report of the State Board of Education.

SCHOOL VISITATION.

One of the few definite duties specified by law assigned to the Commissioner of Elementary Schools is that of visiting schools. In no way can the actual work of a school be so well understood as by direct concrete visitation. Since all the schools can not be visited, it is planned to visit typical ones. During the seven months forty-one schools have been visited and about fifty conferences have been held with groups of

teachers, educational experts and school patrons. Twenty addresses have been made in teachers' institutes, including a State Teachers' Association at Fresno and the National Educational Association at St. Paul; five addresses in trustees' institutes; nine addresses in parent-teachers' associations, clubs and citizens' meetings, and six commencement addresses. A number have also been given to teachers and groups of pupils in schools. These addresses have frequently been followed by discussions. Some of them have dealt with subjects relating to the actual work of the schoolroom, but largely discussions have centered about school conditions; buildings, union or consolidated schools, grounds, school equipment, school sanitation, school architecture, water supply, etc.

Because these conditions, as a rule, are not so good in the rural as in the urban schools, most of the visits have been made in rural districts, detailed reports of which have been submitted to the State Board of Education.

The rural schools of the state vary greatly in efficiency, due largely to the division of the county into numerous school districts, each independent of the other, and to the fact that they have no adequate common supervision. The latter condition could be remedied by legislation.

LETTER OF TRANSMITTAL.

SACRAMENTO, CALIFORNIA,
September 14, 1914.

*The Honorable State Board of Education,
Sacramento, California.*

LADIES AND GENTLEMEN :

As required by section 1519 of the Political Code of California and by resolution of your honorable board, I submit herewith the first annual report of the Commissioner of Secondary Schools. Owing to the fact that the office had no incumbent previous to January 1, 1914, this report covers only that part of the fiscal year beginning January 1, 1914, and ending June 30, 1914.

Very respectfully yours,

WILL C. WOOD,
Commissioner of Secondary Schools.

FIRST ANNUAL REPORT.

THE OFFICE, ITS ORIGIN AND FUNCTION.

The office of Commissioner of Secondary Schools was created by act of the legislature approved June 6, 1913. In defining the powers and duties of the new State Board of Education, the legislature authorized and directed the board to study the educational conditions and needs of the state; to make plans for the improvement of the administration and efficiency of the public schools and to conduct educational investigations. It was to assist the state board in exercising these powers that the legislature authorized the appointment of three assistant superintendents of public instruction, who are known and designated as the Commissioner of Elementary Schools, the Commissioner of Secondary Schools and the Commissioner of Industrial and Vocational Education.

In defining the duties of the Commissioner of Secondary Schools, the legislature provided that he "shall visit and investigate the secondary day and evening schools of the several counties of the state. He may recommend changes in the course of study, and shall investigate all contracts with textbook companies and see that they comply with the law, and shall perform such other duties as may be assigned to him by the Superintendent of Public Instruction under the direction of the State Board of Education."

The office was created in order that the state department might undertake a closer supervision of the secondary schools, which have increased in number until they have reached a total of two hundred and fifty-seven. When the constitution of 1879 was adopted, provision was made for the supervision of the schools of the state by the Superintendent of Public Instruction and the various county superintendents of schools. At that time the high school was not fully recognized as an integral part of the state school system. There were a few public institutions of secondary grade, but these were supported entirely by district taxation. Owing to the fact that they were locally supported, the inspection of high schools by county superintendents was only casual and perfunctory. Since that time the growth of the elementary schools has been so great that the county superintendent has been kept busy supervising the work of the grades, and, except in a few instances, he has not been able to undertake more than a very general oversight of the high schools within his jurisdiction.

After a time it became necessary to standardize the high schools, and the university, through its examiners, undertook the task which the state and county educational agencies could not or did not perform. In fact, up to very recent times, the university examiner has been the only supervisor that most of the high schools have known. In performing

this service, the university has unquestionably established quite definite standards in high school work, especially in matters of curricula and methods of presenting the subjects required for entrance to the university. It has succeeded in working out a better articulation of college and high school—a closer cooperation of these institutions in arranging courses of study for the students who are planning to enter college. The high school has been modified by university supervision, and the modifications have resulted in establishing higher standards. The university requirements have been modified also because of a better understanding of high school conditions gained by the university examiners as they journeyed about the state. However, the supervision of high schools by university examiners has its limitations growing out of the very reasons for university inspection, which are to determine whether graduates of the various secondary schools are qualified to enter the state university, and to suggest changes in the course of study and methods of teaching necessary to make the work meet university requirements.

While preparation of students for the university is one of the great functions of the high school, we are coming to realize that it is not the only function. This is well illustrated in statistics compiled from the Commissioner's recent high school survey questionnaire. Replies from 209 high schools in California show that in the first year classes these schools enrolled on the last school day in February, 17,898 students. Last year these same high schools granted diplomas of graduation to 5,852 young people. Of this number only 1,741 entered colleges; 918 entered normal schools; 587 undertook advanced work other than that provided by college and normal school, and 2,606 did not undertake any kind of advanced work. In other words, the high schools are graduating only about 33 per cent of the first year enrollment and are sending only 10 per cent of the students enrolled in the first year, to college. Using the total number of graduates as a basis for computing percentages we find that only 29 per cent of the graduating classes enter college; 16 per cent enter normal schools; 10 per cent undertake other kinds of advanced work, and 45 per cent make the high school their finishing school for life.

These statistics indicate in a general way the need for supervision of secondary schools by the state department. Ninety out of every one hundred students who enter the high schools are not going to the university. These young people are entitled to supervision which shall aim to assist in arranging courses suited to their needs. While it is true that many of these students would be benefited in greater or less degree by taking purely academic courses, the fact remains that for most students these courses as taught at present will not afford a well rounded, efficient preparation for life, unless followed by a college

course. The great function of the American high school—the function which, when generally recognized, will make the high school an institution for all the children of all the people, is to afford each adolescent human being who enrolls therein an opportunity to discover himself. If the high school course is limited to traditional academic subjects taught with the sole aim of preparing students for college, we are justified in concluding that most of the students will not have adequate opportunity to attain self-discovery through work done in high school. There is need, therefore, for a redirection of all the branches of the high school course, to the end that all the students may find in them efficient preparation for life.

If we accept the principle that the high school should stand for equality of opportunity, we commit ourselves to a more comprehensive curriculum, and to a broader treatment of the traditional academic branches. The ninety who do not go to college are entitled to something more than an incomplete and restricted course leading to a place from which they are barred by circumstances. A few years ago we might have eased our consciences by asserting that preparation for college is the best preparation for life. Recently, however, the assaults of the psychologist on the doctrine of formal discipline, reinforced by the criticism of employers of students trained in the high school, are forcing us to recognize that specific preparation of the ninety for life is quite as important as specific preparation of the ten for college. The modern school is therefore broadening its scope. It must continue to prepare the ten for college, but it must also offer to the ninety some work and genuine culture which will serve as a foundation for the best lives they are capable of living. It is the duty of the Commissioner of Secondary Schools to look after the interests of the ninety, as well as those of the ten—to stand for a secondary school which will perform all its functions and offer to each student the kind of education best suited to his mental and physical capabilities. The Commissioner should represent the interest of the state in the education of all of its wards for citizenship. He must view the high school at a different angle from that of the university examiner. However, his entering upon the field need not restrict the sphere of influence of the university in its inspection of high school work. The university is justified in inspecting the work of the secondary schools for the purpose of determining whether graduates of these schools are qualified to enter the university. The Commissioner and examiner will not work at cross-purposes, because their purposes do not cross. They are co-workers, striving to advance the standards, to broaden the scope and increase the efficiency of secondary education in the state.

It should be pointed out in this report that inspection of high schools by the state department is not peculiar to California. Thirty-two of the United States have some form of state inspection of high schools. In thirteen of these states, the only inspection of high schools is by university examiners. In fifteen states, inspection is conducted by representatives of the state office. In four states, including California, there are two inspectors, one representing the state office, the other the university. In New York there are fifteen state inspectors of high schools; in Missouri, two inspectors; in New Hampshire, two inspectors; in Ohio, two inspectors; in Pennsylvania, four inspectors, and in Wisconsin, two inspectors.

VISITATION OF SCHOOLS.

Although one of the chief duties of the Commissioner is to visit the secondary schools in the several counties of the state, he has found it quite impossible to visit more than 10 per cent of the high schools during the first six months of his incumbency. However, he has, during this period, met more than one fourth of the high school teachers of California by attending teachers' institutes and other educational gatherings. Owing to the necessity of organizing the work of his office, he was unable to begin visiting before the middle of March. Within the last three and a half months he has visited twenty-one counties including Alameda, Butte, Colusa, Contra Costa, Fresno, Kern, Los Angeles, Marin, Mariposa, Mendocino, Merced, Nevada, Placer, Sacramento, San Francisco, Santa Clara, Santa Cruz, Solano, Sonoma, Tulare and Yolo. To make these visits he has traveled about 6,000 miles. In his journeys he has made 50 addresses to teachers, trustees and various public gatherings; has held 13 conferences and has visited 28 high and intermediate schools. The total expense to the state of these visits was \$401.98.

Of the addresses, 18 were delivered in teachers' institutes; 5 were delivered in trustees' institutes; 9 were delivered in various teachers' clubs and other organizations; 9 were commencement addresses, and 9 were delivered in citizens' mass meetings for the discussion of local educational problems. Of the conferences four dealt with the state-wide organization of high school principals for the control of school athletics; three were with groups of high school teachers; one was with a board of education regarding the selection of a site for the new high school building; one was with a committee of the Northern California Teachers' Association regarding a better organization of debating contests; three were with university authorities regarding the establishment of training schools for secondary school teachers, and one was with a city board of freeholders regarding the educational features of a proposed charter.

A BUREAU OF INFORMATION.

The law prescribes that the Commissioner shall investigate the secondary schools of the state. The object of this investigation is not stated, but it is presumed that it is twofold. It is to obtain information which the State Board may use in determining policies, and to disseminate this information for the benefit of the schools. The office of the Commissioner is rapidly assuming the function of an information bureau in matters pertaining to the high schools of the state. High school principals, university departments of education, teachers, public officers and newspapers have forwarded requests for information which the office should have on file. Frequent requests are made for data concerning tax rates for high school purposes, cost of school buildings, cost per pupil for maintenance, bond issues and teachers' salaries paid in various places. Information is wanted concerning new departures in education such as the intermediate school, vocational guidance, continuation courses, civic centers, student self-government and the junior college. Many requests are received for information concerning the arrangement of courses of study. School principals desire answers to such questions as the following: "What is the general practice in arranging science courses?" "What proportion of California schools offer two year commercial courses?" "When is algebraic theory taught in most high schools?" "How many years of German are offered in small high schools, and in which years?"

In order to secure information of the kind indicated above, the Commissioner has sent out a high school survey questionnaire, and replies have been received from 249 high schools.

Courses of study have also been collected and filed. Much of the data has been compiled from these sources and is ready for distribution.

The office of the Commissioner may undoubtedly render great service as a clearing house for information relating to the high schools of the state. Much of the data should be compiled and published in the form of state bulletins, thus anticipating inquiries. The Commissioner is preparing a bulletin on the intermediate school which will be published within the next half year. He has also requested the State English Teachers' Association to undertake the preparation of a bulletin on "Oral English in the Secondary Schools," and the work is now under way. Much good work done by committees of teachers' associations in connection with the high school course is worthy of distribution, but it reaches only a few of the teachers because there is no agency that will undertake publication. The State Board will render a service to the schools if it will undertake the publication and distribution of matter of this kind.

CERTIFICATION OF HIGH SCHOOL TEACHERS.

California has always maintained a high standard for high school certification. The former State Board of Education, acting by authority of statute, prescribed by general regulations the conditions under which county boards of education granted certificates of high school grade, and the present State Board of Education has affirmed its adherence to the high standard of its predecessor. The only credentials recognized are university credentials granted by accredited universities, and special credentials issued by the State Board itself. The university credential has been issued by an approved university to any candidate who holds a bachelor's degree and who has completed a year of graduate study, including twelve units (semester hours) of work in pedagogy. Certain exemptions from the requirements in pedagogy are made when the candidate is a teacher of experience, or a graduate of an approved normal school. The State Board high school credential is issued to teachers with twenty months' experience who, while not fulfilling the technical requirements for the university credential, have academic and professional preparation equivalent to that required for the university credential.

The Commissioner of Secondary Schools acting under direction of the committee on credentials has undertaken a revision of the regulations governing high school certification and the State Board of Education has approved the revision. The new regulations which will be effective for all candidates who receive their credentials after February 1, 1915, are more fully discussed in the report of the State Board of Education. The purposes of the revision are to advance the pedagogical requirements from twelve to fifteen units; to prescribe certain courses in pedagogy, to define more clearly the conditions under which the universities may grant the credential, and to standardize the form of the credential. As a result of the revision, the standard of regular high school certification will be substantially advanced.

In March, the State Board of Education directed the Commissioner to confer with the President of the University of California and the President of Stanford University and urge the organization at each university of a training school of secondary grade in which prospective high school teachers may be given opportunity for practice teaching under direct supervision of the university faculty. The University of Southern California has already provided opportunities for practice teaching in a secondary school under its supervision. The Commissioner conferred with President Wheeler of the University of California, and was assured that the organization of such a school would be undertaken if an arrangement mutually satisfactory to the university and to a neighboring school department could be worked

out. Since that time, the university has arranged with the school department of Oakland for the organization of the University High School in which students at the university may do practice teaching. At Stanford University, President Branner and the faculty show an earnest desire to cooperate with the State Board of Education, but so far, no plan for a training school has been formulated.

The law governing the granting of special certificates is in very unsatisfactory form. It provides that special certificates may be granted by county boards of education "to those who, by examination or any credentials, or by both, shall satisfy the board of their special fitness to teach one or more of the particular studies for which special certificates may be granted, and who shall satisfy the board of their proficiency in English grammar, orthography, defining, and methods of teaching. No special certificate shall be granted to teach, in any school, studies other than drawing, music, physical culture, and commercial, technical or industrial work." Special certificates authorize "the holders to teach in the schools of the county such special branch or branches of learning, and in such grades as are named in such certificates." In accordance with these provisions, county boards are issuing special certificates of elementary and secondary school grade.

The chief defect of the law is the failure to establish a uniform standard for special certification; there are as many standards as there are county boards of education. There are a number of counties in California that have established a minimum academic qualification no higher than that fixed in the law—namely, proficiency in grammar, spelling, defining and methods of teaching. As a result, we have a considerable number of special teachers in California who have never taken a high school course or its equivalent. Strange to say, some of these are teaching special branches in the high schools.

A tolerance of low standards for the special certificate is almost certain to have a bad effect on professional standards generally. One county can not maintain a low standard of certification without hurting its neighbors. Owing to the practice of reciprocity in certification, a special certificate granted in one county is recognized in many other counties of the state. In the circumstances, there is danger that the lowest standard for special certification will become the uniform standard.

It is quite essential, therefore, that the regulations governing special certification be revised. There should be a uniform standard for the state, and such a standard can be established only by state authority. The State Board of Education, if authorized to do so by law, could prescribe the rules under which special certificates may be granted by county and city and county boards of education in the same manner as it now prescribes the rules under which high school certificates may be

granted. A great increase in the number of special certificates granted in recent years emphasizes this need for state regulation. In 1909, there were 201 high school teachers holding special certificates. In 1913, there were 669, an increase of 233 per cent. In fact, more than 25 per cent of the high school teachers of the state are teaching on special certificates.

It should be observed in connection with this discussion of certification requirements, that commerce is rapidly assuming the rank of a profession. In spite of this fact, most of the commercial departments in our high schools are not training the students for the higher positions in the world of commerce. They are devoting themselves for the most part to the training of clerks and stenographers. While there is need for high school courses in commercial geography, economics, economic and industrial history, commercial law, salesmanship, advertising and other studies of a more or less scientific nature, there is a dearth of teachers who can teach these subjects. The teacher of commerce in the high school should have had training quite as broad as that required of teachers of the academic branches. The teacher who knows only rule-of-thumb business methods, will prepare students for only rule-of-thumb positions in the world of commerce. The teacher with breadth of training is required to prepare young people for the higher commercial positions, for which there is a greater need and in which there are greater opportunities. In the circumstances we should urge upon the university the need for undertaking the preparation of broadly trained teachers of commerce in our high schools. Ultimately commerce should be recognized as a branch in which regular high school certification shall be required.

STUDENT ACTIVITIES.

The high school is one of the means which American democracy has devised for conserving and advancing its manifold interests, and the interests of its citizens. Because of the fact that it undertakes to deal with Americans of adolescent years, it has a peculiar and intricate function. The period of adolescence is a period during which dominant life interests are being selected. It is peculiarly a period during which ambitions are shaped, and actions organized into habits. In consequence, the work of the high school teacher is not limited to the classroom; it reaches out into extra classroom activities—into a great variety of social manifestations which are known as student activities. These activities are not to be regarded as superfluities or excrescences of school life. They are a youthful expression of desire for social organization. It is true that many of these activities do not measure up to adult standards; however, if we condemn them, we condemn youth itself.

In school activities, we find a means for developing qualities of manhood and womanhood which twentieth century democracy demands. Character is the foundation of good citizenship, therefore, the development of character is one of the chief ends of public education. However, education that is limited to the acquirement of knowledge in the classroom, does not insure the development of character. In the light of psychological and sociological investigations, we are coming to recognize that character is the resultant of wholesome knowledge and wholesome activity. Our aim, therefore, should not be to suppress student activities, but to use them for social ends. High school education is not complete unless students are given opportunity to cooperate and to test seriously their powers. We should give the students a chance to show initiative, to develop independence, to evaluate human actions. We should make occasions for the development of a sense of responsibility. By allowing a degree of freedom, and opportunity for self-direction in student activities, we may encourage young Americans to develop these qualities of self-control and self-direction, so essential in American citizenship. This does not mean that the prerogatives of the faculty should be surrendered to the student body. The purpose of student activities is defeated if they are allowed to run riot; if they are not subject to able guidance and supervision by the faculty.

It is a difficult problem to utilize student activities for purposes of education. As yet, the utilization of these activities for such purposes is in the stage of experiment. Earnest efforts toward their utilization are being made in various high schools in California, and the experiences of those who have attained some success in dealing with student activities should be made available for all high school teachers of the state. Some high schools have developed an excellent system of limiting student dues and controlling student finances; others have succeeded in putting athletics on a satisfactory basis. Debating, student body government and school journalism are activities which should be investigated and organized on a more satisfactory basis. The Commissioner is working on these problems, and both principals and teachers are cooperating with him in their solution. Already a plan of organizing athletics on a state-wide basis has been worked out and will soon be in operation.

For a long time high school authorities have recognized the need for general and genuine faculty control of interschool activities. Each high school principal is quite able to control student activities within his own school, but he feels the need of general control where his students are competing with the students of other schools. In consequence of a lack of general organization, many abuses have grown up in interschool contests. In many instances, these contests are positively harmful to the moral as well as to the physical well being of the con-

testants. It is idle, however, to decry athletics, and to attempt to bar these activities from the high school by positive and prohibitive regulations. We are facing a condition, not a theory. High school athletic activities are with us, and they are generally regarded as natural means of expression for adolescent human beings. However, they must be controlled if they are to serve their real purpose as agencies for moral and physical training. School athletic activities that are allowed to run wild not only dominate the spirit of the school, but they also militate against the development of wholesome habits of life. There is need for a greater moral emphasis in athletics and this can be secured best through statewide control.

During the last six months much good constructive work has been done, having for its purpose the control of interschool athletics throughout the state by faculty representatives, the abolition of the paid coach system, the employment of teachers of physical education in the high schools, the limitation of overnight trips by athletic teams, and the development of a widespread interest in games and sports throughout schools upon a wholesome, recreational basis. A committee of the California High School Teachers' Association and a Committee of the Athletic Council of Southern California, together with representatives from the Sacramento and San Joaquin Valley regions, and the Commissioner of Secondary Schools met in Los Angeles in April and drafted a constitution for the California Interscholastic Federation. According to this constitution the state is divided into four sections corresponding roughly to the four sections of the California Teachers' Association. Two representatives from each section, elected by the high school principals thereof, form the Federated Council which will be the controlling body for the state, and the final court of appeal in all matters pertaining to final and semi-final contests between schools. The Federated Council will also try to maintain a proper relation between high school activities and other school work.

The constitution of the California Interscholastic Federation was printed by the State Board of Education as Secondary School Bulletin No. 2. The constitution has been accepted by a majority of the high school principals of each section, so it is now in operation. Representatives from all of the sections met at Berkeley in July, perfected an organization and established certain standards. The organization of this federation is one of the most hopeful signs of better times in high school athletics in California.

NEW TEACHERS' ORGANIZATIONS.

During the year, two important organizations of high school teachers were formed. The California High School Teachers' Association held its first meeting at Berkeley in July, 1913, and its second meeting in the

same city in July, 1914. There were several hundred high school teachers in attendance, to hear the fine program of addresses and papers. In April, 1914, a state English teachers' club was formed at a meeting in Oakland. Its purpose is to secure a better organization of English work in the elementary and secondary schools. Several committees have been appointed to investigate problems in the course of study in English, and their reports should be of much assistance in the reshaping of English courses in California schools.

It is the desire of the Commissioner to work with these new organizations and with the older ones as well, in solving the problems of the secondary schools of California. The voluntary organization of high school teachers into clubs having for their purpose the study of high school problems, is worthy of encouragement, since real advance in secondary education depends very largely on the cooperation of all the factors in high school work.

DISTRICT CONVENTIONS OF HIGH SCHOOL PRINCIPALS.

The Commissioner of Secondary Schools has observed a great need for district conventions of high school principals. While he is able, by means of bulletins, to inform the various high school principals concerning administrative matters, he feels the need for meetings in which these matters may be thoroughly discussed. It was very difficult, for example, to organize the California Interscholastic Federation because of misunderstandings which could have been cleared away in a half hour in any convention of principals. The administration of the high school textbook law has also been very difficult because of lack of opportunity to exchange ideas.

The State Board of Education should be authorized by law to call annual high school principals' conventions, or institutes, in at least four sections of the state for the discussion of high school problems. Each high school district should be required to bear the actual and necessary traveling expenses of the principal while attending these conventions. In the judgment of the Commissioner, these conventions are necessary in the development and unification of secondary education in California.

THE HIGH SCHOOL COURSE OF STUDY.

High school principals and teachers are constantly facing two great problems—what studies shall be offered and how shall they be treated so as to minister efficiently to the needs, aptitudes and ambitions of the students. These problems are as old as education itself. Plato, in his great work "The Republic" set forth an educational theory based upon his conception of the nature of man and the nature of the state and suggested a course of study founded upon that conception. His aim was to develop philosopher-statesmen who would rule the state in accordance

with the principles of absolute truth and justice. To develop a race of philosopher-statesmen, he would select for education only those young men who have the necessary perfection of mind and body, and especially the right mingling of gentleness with spirit. He would have these chosen ones study music, literature, gymnastics, generalized arithmetic, geometry, astronomy, musical harmony, pure philosophy and dialectic.

Since Plato's time, courses of study have been made and remade to reflect the spirit of the times and the wisdom or caprice of educational theorists. At all times educational theory has been a powerful influence in the making of curricula, and it is to be hoped that its influence will never wane. *That educational theory is best, however, which interprets and reflects the spirit of the times and aims to render dynamic the genius of a people.* Plato's course of study may fulfill an ideal purpose in an ideal state, but a modern course of study must fulfill a *real* purpose in a *real* state.

In California, we are educating in our high schools more than 65,000 young people for life in a highly complex civilization. They are not "chosen beings" nor are they all to become "philosopher-statesmen." They are the children of all the people, and they are to become active citizens in a great republic. The course of study they follow must be adjusted to them—to their needs, to their aptitudes, to their ambitions. These needs, aptitudes and ambitions are of great variety and of varying degree. It is accordant with modern civilization that they should be so. For these twentieth century students the course of study outlined by Plato or by the scholastics of the Middle Ages will not do. While we should not underrate the culture of the ancients, we can not overlook the strides that civilization has made in recent centuries. We must recognize that during the eighteenth and nineteenth centuries, the world progressed wonderfully in the arts and sciences, and in the application of these to life. An industrial and economic revolution has been in progress for two centuries and as a result we have a civilization the complexity of which is a challenge to the noblest and wisest of human kind.

This civilization demands thinkers and workers who understand and appreciate its problems. It has its peculiar ideals and purposes, and these must be interpreted and applied. The education of our high schools must therefore be of the twentieth century, by the twentieth century and for the twentieth century. However, we must not lose sight of the fact that the twentieth century is a product of the preceding centuries; we must view our century in the light of its evolution. The culture of the ancients, and the contributions of other times and peoples must have their rightful place in the education of the young people of America. However, greater emphasis must be placed on modern developments in art, science and literature, even though it requires a progres-

sive curtailment of courses that deal with ancient culture. It is not that the world values ancient culture less, but that it values certain phases of modern culture more. It is because these phases of modern culture have greater social significance that they are becoming more prominent in high school courses of study.

For the method of approach in our modern courses of study we can, with profit, antedate Plato and adopt some of the methods of Socrates. As he saw possibilities of development in every one whom he chanced to meet, so we must afford educational opportunities to any who may seek them. As his teaching started with the natural inquiries of his fellow beings, whatever their station in life, so must our teaching be grounded in the life interests and needs of our students. As he built upon their inquiries a higher conception of their work and their place in the order of things, so must we build upon the interests and motives of our students and enlarge the horizon of their lives. As he awakened dormant interests, so must we render dynamic the static human energies of our students: *In other words, the modern course of study must start with the student as a center, and the interests and motives in school work must be organized about that center.*

The high schools of California, generally speaking, are developing courses of study that take into account the varying needs of the students. They are coming into accord with the modern spirit. The University of California is cooperating with the high schools and encouraging what Dean Lange so aptly terms "self-directed high school development." During the last ten years, the university has widened the scope of its entrance requirements until it recognizes practically all of the studies that may rightfully have a place in the high school curriculum, and the high schools, generally speaking, are rising to the responsibility that follows their freedom.

Among the developments of recent years, we note an earnest effort to motivate the English work and relate it to life. Thorough courses in English literature are given, but many teachers are taking advantage of the wider latitude allowed by the university in the choice of selections to be studied. The best literature of recent times is given greater recognition. In the junior and senior years, many high schools are offering elective courses in public speaking, dramatics, short story writing, and journalism. Some high schools are offering courses in the modern novel, significant modern books and American literature. Current magazine literature is recognized and the library habit encouraged. The composition text is no longer followed slavishly; in many schools it is used only as a guide. Serious efforts to correlate composition with other subjects are being made with varying degrees of success.

In history, some of the high schools are offering courses which place emphasis on the history of modern Europe, only one year being given to European history up to about the year 1500. Some of the larger high schools are offering elective courses in economics and present day social and economic problems. The industrial and social phases of history are receiving greater emphasis. In one city, a course in Pacific coast history and problems is being offered. So far, however, these changes in the history courses have been regarded in the nature of experiments. Until their success is more definitely determined, most schools are proceeding along the lines laid down by the Committee of Seven or by the Committee of Five. There is need for cooperative constructive effort by California teachers of history looking toward the elimination of unnecessary details in the whole range of European, English and American history and the preparation of a set of topics in each period of history, upon which emphasis should be placed in teaching. This is perhaps the biggest present problem in history teaching, and it is to be hoped that college and high school teachers will cooperate in the preparation of such a syllabus.

In science, efforts are being made to relate the subjects to life, without sacrificing their scientific value. Teachers of mathematics are giving more thought to the humanizing and vitalizing of instruction. In the intermediate school, especially, interesting experiments in the teaching of concrete geometry and algebra are being tried with promise of success.

In the teaching of ancient and modern languages, redirection of effort is apparent. Teachers are getting away from the idea that parsing and syntax are of highest importance in the teaching of Latin and Greek. The observation made by Milton in his "Tractate on Education," in spite of the fact that it was written almost three hundred years ago, expresses the modern viewpoint in teaching the classics: "*Language is but the instrument conveying to us things useful to be known. And though a linguist should pride himself to have all the tongues that Babel cleft the world into, yet if he have not studied the solid things in them, as well as the words and lexicons, he were nothing so much to be esteemed a learned man, as any yeoman or tradesman competently wise in his mother dialect only.*"

Young people should study syntax, parsing, "words and lexicons"; but only as a means to higher ends. In order to appreciate Latin and Greek, the student must know "the solid things" in these languages, must develop appreciation of Greek and Roman life and literature, must understand and justly estimate the value of ancient culture.

In the intermediate schools, the study of Latin and modern languages has been introduced with success. The children like the new studies and really acquire a feeling for the language. In some high and intermediate schools the direct method in teaching the classics is used as

much as possible, making the lessons interesting and lively. The teaching of foreign languages, ancient and modern, is thus yielding to the new spirit in education.

Among the newer subjects in the curriculum there is need for greater standardization. In music, manual arts, commercial branches, and some of the recently developed courses in English and history, this need is most apparent. While these branches do not permit of standardization to the degree that some of the older subjects do, a great deal can be accomplished by interchange of ideas and experiences and the publication of model courses worked out by high school teachers in cooperation with the universities and the commissioner.

PROBLEMS OF THE INTERMEDIATE SCHOOL.

During the last six years the school people of California have been working slowly and earnestly toward a better articulation of the elementary and secondary schools. School people have recognized the fact that the American organization of school work into two groups of grades—the elementary group including the first eight years, and the secondary group including the succeeding four years, is neither logical nor scientific. This traditional arrangement is perhaps due to the fact that the American people, cherishing the common school as the hope of the nation, have learned to regard common school education and elementary education as one and the same. Looking upon the common school as the conservator of democracy, our forefathers seem to have assumed that the greater the number of years devoted to elementary education, the more democratic education would be. The school course was lengthened in some communities until it included twelve years. With the coming of the high school, however, the course has been curtailed until it now includes eight years of work.

In the light of educational research we have discovered that six years are quite sufficient to place the child in possession of the working tools of knowledge such as reading, writing and the elements of arithmetic, and that the remaining two years of the elementary course are the least efficient years. Some educators have advocated a rearrangement of the twelve years on the basis of six years of elementary work and six years of secondary work. Others have advocated the organization of a six year elementary course, followed by a three year intermediate course which in turn shall be followed by a three year upper high school course. Others have taken the position that the grouping of grades has no greater significance than the supervising official may attach to it; that the essential thing is that the school course below the college shall be regarded as a unit of twelve segments or years of work properly linked together, or articulated; that the transition from the eighth to the ninth

year, or from the sixth to the seventh year, or from the tenth to the eleventh year, should be no more difficult than the transition from the first to the second year.

In California, all three of these plans are being tried. The plan of the six year elementary school, followed by the six year high school, is being tried in Santa Rosa. The plan of a three year intermediate school course, including the seventh, eighth and ninth years, followed by an upper high school course of three years, is being tried in Berkeley, Los Angeles and Palo Alto. The plan of maintaining the traditional grouping of eight years in the elementary school and four years in the high school and introducing some secondary school work as early as the seventh year, is being followed in Alameda, Oakland, San Francisco, Santa Monica, Anaheim, Santa Ana, and San Diego.

So far, it is impossible to determine which of these plans is best, nor is it necessary that we do so. We are justified, however, in concluding that any of the three plans is better than the old arrangement. In the opinion of the Commissioner, it is not advisable for the State Board of Education to express a preference for any of the plans at this time. However, it may render the school system a service by recommending legislation aiming to secure greater flexibility in the school organization. Among other things, the law should definitely recognize the intermediate school, should provide for the granting of intermediate school certificates, legalize the introduction of certain school studies in the seventh and eighth years, and authorize the grouping of the seventh and eighth years with the ninth, or ninth and tenth years in intermediate schools. Of course, the organization of intermediate schools should be left optional with the various local school districts.

THE JUNIOR COLLEGE.

In 1911 the legislature passed an act enabling "the high school board of any high school district to prescribe postgraduate courses of study for the graduates of such high school, or other high schools, which course of study shall approximate the studies prescribed in the first two years of university courses." The act also authorizes the high school board to charge tuition for pupils living without the boundaries of the district and enrolling in such postgraduate courses.

The first school to take advantage of the provisions of this act was the Fresno High School. In this school the first two years of college work, approximating the "lower division" courses at the University of California, are offered. For convenience, the postgraduate department is known as the "junior college" department. Similar departments have been organized in Los Angeles, Fullerton, Santa Monica, Long Beach, Santa Barbara, Auburn, Le Grand and Bakersfield. The enroll-

ment in postgraduate courses in the various high schools of these cities March 1, 1914, was as follows:

Junior College	Enrollment		
	First year	Second year	Total
Fresno	40	12	52
Los Angeles	¹ 490	¹ 40	¹ 530
Fullerton	28	-----	28
Santa Monica	11	17	28
Long Beach	58	-----	58
Santa Barbara	23	13	36
Auburn	2	2	2
Bakersfield	10	-----	10
Le Grand	2	-----	2
Totals	662	82	744

¹Includes all students enrolled in postgraduate courses.

²Auburn's "junior college" department will be established August, 1914.

In addition to those enrolled in "junior college" departments, there were 464 students enrolled in the first "postgraduate" year of high schools not maintaining "junior college" departments, and 113 in the second "postgraduate" year. In all there were 1,331 students enrolled in "postgraduate" high school courses in California.

The college courses offered in the various junior colleges include the following:

English (two years).

Latin (two years).

Modern Languages (two years each).

Mathematics, including Solid and Spherical Geometry (one half year), Synthetic Protective Geometry (one half year), Plane Analytical Geometry (one half year). Differential and Integral Calculus (one year), Advanced Algebra (one half year).

Surveying (one year).

Advanced Physics (one year).

Organic Chemistry (one year).

Qualitative Chemical Analysis (one half year).

Quantitative Chemical Analysis (one half year).

History, including Modern European History (one year), Industrial and Institutional History (one year), General History (one year), Western American History (one year), History of the Nineteenth Century (one year).

Logic and Psychology (one year).

Economics (one year).

Sociology (one year).

Advanced Agriculture (two years).

Advanced Shop Work (two years).

Drawing (two years).

In all of the high schools, the "junior college" department is quite closely related to the high school. In fact, one of the purposes of the "junior college" is to secure a closer articulation of college and high school work. An arrangement whereby the "junior college" instructor teaches some of the high school classes, promotes articulation. However, the "junior college" courses are given only by teachers who are

specially equipped for the work, many of them holding advanced academic degrees. The maintenance of a close relation to the high school is also more economical. Where the junior college is organized on this basis, the cost per student for instruction in the "junior college" department is little more than the cost per student in the high school. In smaller institutions, the cost is kept within reasonable limits by giving certain courses in alternate years.

The advantages claimed for the "junior college" department are many. In the latest announcement of the Santa Barbara junior college, we find the advantages stated as follows:

"It offers peculiar advantages, first, to the student who can not afford to live away from home; second, to the young and immature student who is not yet ready to cope with the problems incident upon life at a large university; third, to the student who has failed to get his recommendation for college but who, by faithful and consistent study, may prove himself ready for advanced work, and fourth, to the student who does not intend to enter college, but who desires to continue his study along certain lines."

That it is possible for the "junior college" department to do work comparable with that done in the lower division classes at the university, is shown by the records of students entering the upper division classes at the University of California from the Fresno "junior college" department. Mr. Frederick Liddeke in a recent article discusses this phase as follows:

"There is encouragement in that the 'junior college' scholars from Fresno High School have been admitted to advanced standing at the university and have uniformly made good, judging from the reports of their first semester. No studies have had to be repeated and there have been no failures in any subject. This year, six of Fresno's college department entered the University of California—four of them as sophomores after one year's postgraduate work, two as juniors after two years. The latter even excelled with high rank in their first semester, which facts should go to show that good high school instructors doing intensive work with small classes can do safe college work."

It is a matter for congratulation that smaller communities have not undertaken the organization of junior colleges. It may be that this is due to the fact that the "junior college" is still in the stage of experiment. After the "junior college" is more firmly established, many ambitious communities may be tempted to establish "junior college" classes without the means necessary to properly maintain them. There is a double danger in this. The high school may be weakened to strengthen the "college" courses, or the college courses may be given under such unfavorable circumstances that they will not be worth while. It may be that legislation limiting "junior college" courses to districts

having a fixed minimum of assessed valuation, or to high schools having a fixed minimum of enrollment, will be necessary.

It should be recognized that the advantages of the "junior college" are not limited to the field from which it draws its students. It is of advantage to the state at large because it makes for better citizenship. It is of advantage to the state in a narrower sense because it relieves the state of the taxation necessary to educate a large number of students, many of whom would otherwise be enrolled in the state university. It is only just, therefore, that the state should contribute the greater part of the funds necessary to support "junior college" departments. The law should also be amended so that the cost of educating "junior college" students residing in other high school districts shall be estimated annually, added to the high school tax budget in such high school districts, and paid into the fund of the high school district maintaining the "junior college." That tuition in the "junior college" should be paid by the community, not by the individual, is a proposition thoroughly consistent with the broad principles upon which free education is predicated.

THE SMALL HIGH SCHOOL.

In his first report to the State Board of Education, the Commissioner stated that one of the most important problems in secondary education is the problem of assisting the smaller high schools, located in the rural districts, to adjust themselves to community needs. In compiling statistics obtained by the survey questionnaire, the Commissioner found that of the 257 high schools in the state, 132 enrolled less than one hundred students.

The grouping of schools according to enrollment is as follows:

Schools enrolling 100 pupils or less.....	132
Schools enrolling 100 to 200 pupils.....	68
Schools enrolling 200 to 500 pupils.....	34
Schools enrolling 500 to 1,000 pupils.....	10
Schools enrolling more than 1,000 pupils.....	13
Total	257

Of the 42,852 students (average daily attendance) in California high schools in 1912-1913, no less than 27,866 were attending high schools in cities having city superintendents of schools. There were only 14,986 students attending the smaller high schools of the state. In spite of the fact that in 1910 the population in California cities of 10,000 and over was only 32 per cent greater than the population outside of these cities, the high schools in cities of 10,000 and over have a high school attendance which was 80 per cent greater.

An incomplete survey of the small high schools shows that they need and deserve the careful attention of state school authorities. The

course of study in many of these schools differs very little from the course in the high schools of the early eighties. Most of the work is of the academic type, because teachers of these subjects are more easily obtained, and it costs less to offer this kind of work. The science laboratories are not adequately equipped in many schools and are improperly equipped in others. Wherever commercial subjects, music, art, agriculture or similar branches have been introduced, the work is frequently done by a teacher whose specialty lies in an unrelated branch. In spite of these drawbacks, some of the smaller schools are doing excellent work, but the work in the old traditional academic branches is much better done than in the more modern branches. Speaking generally of the smaller high schools, there is need for improving conditions, and to this end a close survey of the situation should be made.

The chief reason for the failure of the rural high school more fully to adjust itself to rural conditions, is lack of continuity in the administrative and teaching force. While principals and teachers in the larger high schools hold their positions for years, the average term of principals and teachers in the smaller high schools is perhaps less than three years. There are several smaller high schools of the state in which a complete change of teaching force was made at the close of the last year.

In such circumstances, it is quite impossible for the rural high school to develop a continuous or definite policy based on community needs. This accounts for the shortcomings observable in many of the high schools of smaller communities.

The reasons for changes in the teaching force can not be set forth fully in this report. However, most of the changes are due to the ambition of teachers to obtain better salaries and better living conditions. The salaries paid to principals of high schools enrolling less than one hundred students, range from \$1,100 to \$2,400 per annum, the average being less than \$1,800 per annum. The salaries of high school teachers in these schools range from \$810 to \$1,400 per annum, the average being about \$1,100. Although the salaries are not very attractive, many smaller communities add to the discouragement of good teachers by failing to provide satisfactory boarding places. Teachers of culture and refinement will not remain in a community which has not sufficient interest in the high school to offer its teachers a comfortable home.

A few of the reasons for the failure of many smaller high schools to meet community needs have been set forth. However, most of the reasons may be resolved into one, namely, lack of funds. The young people of rural districts are entitled to more than they are getting in the smaller high schools, but many communities can not afford to spend more money on secondary education. They must look to the state for help. The wealthy communities of the state must be called upon to give greater assistance to the smaller high schools if they are to advance their

standards and increase their facilities. The smaller communities and the rural districts are contributing mightily to the upbuilding of these larger centers, in an industrial and financial way, and it seems only fair that the larger centers should aid in educating the children of these communities. Education is a state function, as well as a local function, and the state must, in its own interest, assist the local communities when they can not maintain standard schools for the education of their children.

A COUNTY HIGH SCHOOL FUND.

The state is now raising \$15 per annum for each student of average daily attendance in the high schools; the high school districts are raising the remainder of the cost of educating each student. In the smaller high schools the average cost per pupil based on average daily attendance is almost twice as great as it is in cities. In 1912-1913, the average cost per student for the entire state was \$90.90, although some of the smaller communities expended more than \$300 per student. It will be observed that the state is contributing only a small share to the support of its high schools.

However, the Commissioner feels that it will not be necessary to increase the state high school fund, if other sources of revenue can be found. He suggests that a county high school tax be authorized by law, such tax to be levied at a rate sufficient to raise at least \$60 per student of average daily attendance. The fund should be apportioned in a manner similar to that in which the state high school fund is apportioned. A fixed flat apportionment should be made to each high school, regardless of size, and the balance distributed according to average daily attendance. This suggestion is founded on the fact that in various counties large areas not included in any high school district, escape all high school taxes. Other large areas pay only a small tax for high school privileges provided for their children by neighboring communities at great expense. In Solano County, for instance, property within high school districts is taxed from 17 to 56 cents per \$100 of assessed valuation for the maintenance of high schools. Several of the high school districts are paying an additional rate for interest and redemption of bonds. The territory outside of high school districts is paying only 5 cents per \$100 of assessed valuation for maintenance of high schools, although its children enjoy high school privileges equal to those of residents within the various districts.

Many protests against this arrangement have been made to the Commissioner from various parts of the state. In one community, for example, the high school is crowded to overflowing and the district is heavily bonded for building and grounds. About one hundred pupils from outside territory are in attendance. An effort to induce the out-

lying territory to enter the district so that bonds for a new building might be voted, was defeated because the residents outside found it cheaper to remain outside. In the circumstances, it seems just that a general county levy for high school purposes be made, leaving local communities to bear the expense in excess of state and county apportionments. We have a *state* common school fund, a *county* common school fund, and a *district* common school fund. We have the same arrangement of high school funds, except that the *county* fund is omitted. The Commissioner recommends that a thorough investigation of the plan for a county high school fund be made, and that if the plan be found practicable, a law providing for a county high school fund be recommended to the legislature.

If a county high school fund is created, it will be necessary to provide safeguards against the establishment of weak high schools in the hope that they will derive practically all of their support from the county fund. A weak high school is little better than no high school at all, consequently it is not to be encouraged. No community should undertake to organize a high school unless it is able and willing to contribute substantially to its maintenance. Since it is not possible for a high school having less than four teachers to offer a satisfactory course of study, no high school established for four years or more should be entitled to receive the full flat apportionment from the county high school fund unless it employs at least four teachers. A school that employs less than four teachers should receive an apportionment according to its average attendance, and in addition, should receive one fourth of the fixed flat apportionment for each teacher employed. Provision should also be made that at least 90 per cent of the county high school fund and all of the state high school fund shall be set aside for the payment of teachers' salaries, leaving most of the cost of upkeep to be borne by the local community.

Such safeguards will not work a hardship on the small high schools now established in the state. The survey questionnaire of March, 1914, brought out the fact that 221 of the 249 high schools reporting employed four or more teachers. Of the 28 schools employing less than four teachers, 20 employed three teachers, and 8 two teachers. There were enrolled in these schools 762 pupils, the average enrollment being 27. Fifteen of the twenty-eight schools have been established within the last four years and each will probably employ four teachers before it enters upon its fifth year. These fifteen schools enroll 402 pupils, leaving only 360 pupils in established high schools having less than four teachers. If a county high school fund is created, nearly all of these schools will be able to employ four teachers.

CONCERNING HIGH SCHOOL TEXTBOOKS.

The matter of high school textbooks is governed by section 1750 of the Political Code, reading as follows: "The high school board of each district, which has not already done so, shall adopt a list of textbooks for use in such high school district of textbooks prescribed by the State Board of Education, and the clerk or secretary of said board shall certify to the superintendent of schools having jurisdiction over such high school, a list of all textbooks so adopted or previously adopted by order of said board or then in use in said high school; and no change shall thereafter be made in said list of books for the term of four years after adoption; provided, that the high school board may, at a regular meeting, adopt for a period of not less than four years such additional or other textbooks as they may deem best, but the same shall not be changed for four years. The order of adoption shall be entered upon the minutes of the board, and a certified copy thereof shall be at once transmitted by the clerk or secretary of the high school board of trustees to the superintendent of schools having jurisdiction over such high school. The said board shall enter into a written contract with the publisher of the textbooks so adopted for their use or purchase during such period."

In pursuance of this law the State Board of Education has appointed two expert California school teachers as readers in each of the subjects usually taught in high schools. The board has referred to these expert teachers all proposed new textbooks and all questions relating thereto; has asked a report from them to the Commissioner of Secondary Schools on June 1st; and from these reports has prepared a new list, by adding desirable books and cutting off unused or undesirable books. The new list thus prepared was presented to the State Board of Education and recommended by them in the month of June for use during the ensuing year. All books adopted by the high school authorities in pursuance of law as regular high school textbooks must be chosen from this list. If supplemental or illustrative material not found on the list be found necessary, it should be purchased by the school and furnished without expense to the pupils.

The official list of high school textbooks for 1914-1915 was compiled in accordance with the directions of the board, to include the following:

- (1) All textbooks authorized for use by the former State Board of Education in its list of July, 1912, except such books as were stricken therefrom by the committee on textbooks, and such books as were dropped from the list automatically in accordance with the rule hereinafter set forth.

- (2) All textbooks authorized for adoption by the State Board of Education at a meeting held January 15, 1914.

(3) All textbooks, not included in (1) and (2) above, which were adopted by high school boards between November, 1912, and January 1, 1914, during a large part of which time there was no state board to prescribe a list of textbooks from which adoptions could be made.

(4) All textbooks placed upon the official list, by order of the State Board of Education, at the regular June meeting.

A considerable number of textbooks were dropped from the list in accordance with the following regulation: "Any book which has been listed for a period of two years before the date of making the annual official list, and which has not, during this time, been adopted by a high school board in California, shall be dropped from the list, provided that all textbooks now being used in the high schools of California shall be retained on the official list."

The official list of high school textbooks for 1914-1915 has been compiled in accordance with these regulations and issued as "Bulletin No. 3," and "Bulletin No. 4."

A form of order of adoption for high school boards has also been prepared, printed and distributed. General directions for high school boards, principals, publishers and readers, together with questions and answers concerning the administration of the law, were published and distributed as "Secondary School Bulletin No. 1."

The board has also adopted the following regulation:

The Commissioner of Secondary Schools shall require of the principal of each high school in California, during the month of April, 1914, and during the month of September, 1914, and the month of September of each year thereafter, an official list of high school textbooks in use in said high school. In furthering this purpose, he shall prepare and distribute a form of official report on textbooks, which shall include a statement when each book was adopted.

In accordance with this regulation most of the high schools have submitted lists of books in use, together with a statement when each book was adopted. In case no formal adoption has been made, the Commissioner has held that the book was constructively adopted on the date when pupils were required to purchase it. In administering the law, he has been obliged to give more than fifty different rulings.

Following is a list of expert readers appointed by the State Board of Education :

ENGLISH :

Fannie W. McLean, Berkeley High School.
A. J. Cloud, Deputy Superintendent of Schools, San Francisco.

HISTORY, CIVICS, ECONOMICS :

J. R. Sutton, Oakland High School.
John Nowell, Fresno High School.

BIOLOGY, PHYSIOLOGY :

Chas. S. Morris, Palo Alto High School.
Elizabeth D. Palmer, Los Angeles High School.

GERMAN :

Elise Wartenweiler, Berkeley High School.
Laura W. Friedrich, Pomona High School.

FRENCH :

Josephine Ginaca, Los Angeles High School.
Emma M. Garretson, Alameda High School.

COMMERCIAL SUBJECTS :

B. F. Allison, Polytechnic High School, Oakland.
Ira W. Kibby, Red Bluff High School.

MATHEMATICS :

A. C. Olney, Santa Barbara.
E. E. Brownell, Gilroy High School.

MANUAL TRAINING, TECHNICAL AND INDUSTRIAL ARTS :

Elmer H. Whittaker, Santa Barbara, California.
Frank K. Barthel, Supervisor Manual Training, San Francisco.

PHYSICS, CHEMISTRY :

Anthony Rose, Modoc County High School, Alturas.

LATIN, GREEK :

H. O. Williams, Sacramento High School.
F. O. Mower, Madera High School.

SPANISH :

Ruth Henry, San Jose High School.
Marie Lopes, San Gabriel.

PHYSICAL GEOGRAPHY, GEOLOGY, ASTRONOMY :

Edna E. Rowell, Fresno High School.
C. K. Studley, State Normal, Chico.

AGRICULTURE :

J. B. Corcoran, State Normal School, Arcata.
H. F. Tout, High School, Bakersfield.

MUSIC :

Gertrude B. Parsons, Los Angeles.
Kate C. Wood, San Jose High School.

DOMESTIC SCIENCE, HOUSEHOLD ARTS :

Louise K. Willett, Sacramento High School.
Maud Murchie, State Normal, San Jose.

The Commissioner has found some difficulty in enforcing section 1750, of the Political Code, owing to the loose manner in which it was drawn. He recommends that the section be amended so as to make its meaning clear, and thus avoid the necessity for so many administrative rulings. A more definite recommendation covering this matter will be made before the meeting of the legislature.

LETTER OF TRANSMITTAL.

To the Honorable STATE BOARD OF EDUCATION,
Sacramento, California.

LADIES AND GENTLEMEN :

Pursuant to law, I hereby submit to you the first annual report of the Commissioner of Industrial and Vocational Education. Being the first incumbent of the office, and not having assumed the duties of the same until January 1, 1914, my report will deal only with the last half of the fiscal year, 1913-1914.

The office which I have the honor to fill, being new, had no established functions other than those relating to the visitation and inspection of industrial and vocational schools receiving state aid, as provided by section 1520 of the Political Code. Consequently, I have made it a part of my duty :

First.—To encourage the introduction and extension of vocational education by counselling with boards of education, superintendents of schools, and others interested in the subject, and by lecturing before bodies of teachers, school trustees, and other organizations interested in educational, social, or civic matters.

Second.—To influence and encourage teachers and school officials to modify the regular academic subjects of the curriculum in such a manner as to make them more practical and consequently more useful.

Third.—To make a statistical survey of the actual condition of the manual, domestic, and vocational arts in the public schools of the state, and to segregate and make this material available to legislators, educators, and others interested in the subject.

Fourth.—To seek for those schools which have successfully developed vocational courses in the various subjects and advertise them to school authorities desiring the information.

Fifth.—To investigate the conditions under which county boards of education grant certificates to teach the special subjects, to the end that a more uniform standard among the various counties may be established.

Sixth.—To make a survey of the general educational situation with the purpose of discovering the efficiency of the present school system: (a) in dealing with children who possess different mental and physical traits; (b) in dealing with children who possess different capabilities within these traits; and (c) in dealing with children who are differently situated financially.

Seventh.—To consult freely with those in the state and elsewhere who have made a study of vocational education, and later to formulate for your honorable body what, in my judgment, is demanded by the situation in order that the public schools of California may more adequately provide for the training for their life work of those boys and girls who do not secure a professional or other vocational training in an institution of higher learning.

Very respectfully yours,

EDWIN R. SNYDER,
Commissioner of Industrial and Vocational Education.

VISITATION AND LECTURES.

In accordance with the above plan of procedure, your Commissioner of Industrial and Vocational Education visited 53 schools in 11 districts, including most of the larger cities of the state, and delivered 29 lectures in 13 different communities of the state.

The total expense to the state for these visits and lectures was \$453.20, less \$8.20 in scrip on hand and rebates on \$111.80 worth of scrip. In addition to the above, \$74.85 was expended upon account of county institute work. Your Commissioner was reimbursed in this amount by the four counties involved.

The Situation in the Elementary and High Schools as it Relates to the Need for Vocational Education.

INTRODUCTORY STATEMENT.

For many years it has been a matter of common knowledge that the American public school system fails adequately to provide for the training of a large proportion of the children of the country. Many reasons have been advanced for this failure. Among others have been poor teaching; lack of ability, lack of interest, or indolence upon the part of the pupil; lack of school opportunity; or, lack of cooperation upon the part of parents. Strenuous efforts have been made from time to time to correct these faults. During this period school opportunities have been extended so that almost every child in the land has access to a school located within a reasonable distance of his home. In most of the states of the Union, and in California in particular, compulsory educational laws have been enacted and are in general well enforced. Moreover, those who enforce the attendance and child labor laws of the state agree that in general the parents are not only willing but anxious that their children shall attend school. Likewise, the compensation and qualifications of teachers have been very greatly advanced in recent years. Indeed, it may be safely stated that, upon the whole, the children of California attend the schools regularly and are instructed by well trained, conscientious teachers.

Every effort has been made by these teachers to enlist the interest of the children in their work. From time to time new content subjects have been introduced, such as music, drawing, nature study, sloyd, manual training or cabinet work, art metal work, domestic science, and domestic art, and in addition, many of the high schools have offered courses in turning, in forging, in molding and in machine shop work. While all of these improvements of schools and teachers and methods, together with the compulsory education law, the method of distributing funds, and the addition of new subjects have improved the situation, the fact still remains that, although approximately all of the children remain in school eight years and many of them much longer, less than one half of them complete the eight years' course. But the evidence of the failure of the public school system to fit the needs of all children is only partly shown by the number of failures to receive promotion and graduation. Many of the children who accept the situation and complete the work of the grades, as presented by the traditional school, fail to receive the training they most need for their future work as men and women.

A STATISTICAL STATEMENT.

Much controversy has arisen lately over the meaning of the figures represented by the enrollment of children by grades. Some claim that the scholastic mortality of children in the first eight grades is greater than seventy per cent. Others claim that the scholastic mortality is negligible. Because of this disagreement, I venture to present to you certain school statistics of California cities and counties with an interpretation which I believe to be ultra conservative.

It is not uncommon in interpreting such statistics to compare the state enrollment in the various grades and the number of graduates with the enrollment in the first grade. This method is decidedly inaccurate, because pupils may be enrolled only once during the academic year. When they are transferred or promoted, they are not re-enrolled. In schools where promotions occur semi-annually and where children are received into the first grade in the middle of the year, three half-year classes are enrolled in the first grade, and but two half-year classes in the other seven grades. As a result, the enrollment in the first grade does not represent the number of pupils belonging to it at any given time, but may in certain cases represent one and one-half times the normal number belonging to it.

Another source of error is the comparison of the number *belonging* in one grade, *e. g.*, in the eighth grade, with the number *belonging* in the first grade, or in any other grade. The error here is due to the fact that the retarded pupils are included in these grade statistics. As shown by the accompanying retardation charts, the number of retarded pupils belonging to the first grade is always great, though it varies considerably in the different localities, depending largely upon the proportion of foreign children represented, and upon the scholastic standards maintained.

The only method of obtaining absolutely correct figures and comparisons would be to secure the scholastic history of each child from the time he enters until he leaves school. At present, such information is not to be had, but it will be available for certain of the cities in the near future, as a number of them have established continuous record systems. The enrollment by grades and ages combined is a good index of retardation, but at present the segregation of such statistics has been made and is available only for a few cities.

TABLE I.

Statistics of Children Belonging in Each Grade in Elementary Schools in Twenty-nine California Cities for the Month of October or November, 1913.

City	Grade one	Grade two	Grade three	Grade four	Grade five	Grade six	Grade seven	Grade eight	Grade average
Los Angeles	8,482	6,356	6,500	6,376	5,388	5,058	4,925	3,901	5,854

*Alameda city school report, 1911.

A very good but less accurate method is to correct for mortality and permanent disability and then compare the numbers enrolled in each of the various grades for any given year with the number of entrants in the first grade for the corresponding year. But here again the necessary figures are not available.

Because of these limitations and in view of the fact that the state enrollment is slightly affected by errors made by the re-enrollment of transferring pupils, the numbers *belonging* to the various grades for a given month in twenty-nine of the principal cities of the state are used in Table I, instead of such enrollment. In addition, the grade enrollments in five typical counties of the state containing no large cities together with similar statistics for the State of California, are given in Table II. Also the retardation charts of two small California cities are presented. It is the desire of the Commissioner in presenting these figures, to give not only a *conservative* but a *safe* estimate of the proportion of pupils who do not fit the present course and the present system in vogue in our elementary schools. Consequently, in reducing these statistics, the figures for the various grades were combined and divided by eight—the number of grades. The quotient thus obtained was then corrected for mortality* and entered in the columns marked “grade average.”

THE RELIABILITY OF THE STATISTICAL EVIDENCE.

It is the belief of the Commissioner that these averages fall short of representing the number of children who should be found in each grade. This belief is founded on the following considerations:

First.—That those children who are not in attendance upon the elementary schools, but who should be, are probably out because they do not fit the system, and their inclusion would only raise the “grade average,” which would probably lower the proportionate number belonging to the upper grades.

Second.—That almost the entire number of pupils over fifteen years of age (about seven per cent of the enrollment as shown by the accompanying retardation charts), is to be found in the last three grades of the course.

Third.—That in all probability the inclusion of the enrollment of the private and parochial schools would not materially affect the *relative* number of children enrolled in any given grade of the public elementary school, since these schools usually maintain the same grades and probably draw to them in about the same proportions as the public elementary schools. Reference to the two accompanying retardation charts establishes the fact that the number of children, of each age

*In 1913 the total mortality of children, 5 to 14 years of age, was 1,048, for the entire state. Dividing the total enrollment in the elementary schools of the state for the same year by this number, we get an average of one death for each 360 children enrolled.

enrolled, remains practically constant throughout the eight years. The apparent falling off between the ages of 14 and 15 is due to the fact that a large number of children finish the course before they have reached this age.

Fourth.—That the number of mentally defective children included in these figures is too small to materially affect the relative proportions in the grades, because as a rule these children, if they enter school at all, remain only for one or two years.

Fifth.—That usually a failure because of illness retards the child but one half, or at most, one year.

Taking all of these possibilities of error into consideration, it would seem that the claim is well founded that the *grade average given* is below the real grade average. Other factors, such as immigration and emigration, affect the situation, however, barring foreign immigration, they probably have but slight effect upon the results. The effect of the latter is clearly shown by the relatively large number of children to be found in the first grade in each of the larger cities. The piling up here is due chiefly to language difficulty. However, the number of retardations on account of inability to handle the language, is by no means large enough to account for the large decrease in numbers in the upper grades.

The statistics of graduation from city schools were not secured in time to incorporate them, but from those received it would seem that rarely more than ninety per cent of those belonging to the eighth grade graduated, and the percentages ran as low as seventy-five.

THE DERIVED TABLES.

Tables I A and II A were derived from Tables I and II. The grade average has been reduced in each case to 100 and all grade numbers have been reduced in the same proportion. To illustrate the table shows that in Los Angeles there are 67 or less children in the eighth grade for each 100 who should be there. Stating it another way, there are in the eighth grade less than 67/100 of the children who should be there. In other words, 33 or more children out of each 100 in Los Angeles fail to reach the eighth grade. In San Francisco more than one half of the children fail to reach the eighth grade, and in the state of California more than 54 per cent of the children fail to finish the eighth grade.

THE HIGH SCHOOL STATISTICS.

Table III contains figures representing the numbers belonging in each grade in a given month, in the high schools of twenty-four California cities, also in a few cases the number of graduates is given. Table IV gives the enrollment of high school pupils in the various grades, the number of graduates in five counties of the state, and the number of graduates in the state of California for the academic year 1912-1913.

Tables V and VI contain statistics of *enrollment* of pupils in the high schools of the same cities and counties in successive years, with this exception, the figures in the column marked "Grade 12" represent the *number belonging* in that grade in October or November, 1913. These tables were introduced in order to correct any error of comparison that might be due to recent growth in high school attendance. Barring mortality and complete disability, it would be possible theoretically to graduate this year just as many as entered the high schools four years ago.

In the cities receiving pupils into the high school in the middle of the year, the enrollment in the ninth year will contain more pupils than belong to that grade at any one time. The figures representing the *numbers belonging* to the different grades at a given time, are not subject to this inflation. The totals in Tables IV, V and VI are corrected by reducing the various total enrollments in the ninth grades so that they bear the same relation to the corresponding enrollments in the tenth grades as the total number belonging in the ninth grade bears to the total number belonging in the tenth grade in the twenty-four cities.

The same method of reduction can not be used in handling the high school statistics as was used in handling the elementary school statistics, because in this case the pupils that might, and really should be in school are not there. However, in this case, the use of the *number belonging* in the ninth grade as a basis of comparison, is not nearly so fallacious as would be the use of the *number belonging* in the first grade as a basis of comparison in the elementary school. The reason is this—that when a pupil fails to receive promotion in the high school, he usually leaves school, so that the number of hold-overs remaining in the ninth year of the high school is relatively quite small. Tables III A, IV A, V A and VI A have been reduced from Tables III, IV, V, and VI. All of the ninth grade figures have been reduced to a basis of 100 and the numbers in the other grades have been reduced to a relative basis. Consequently, the number entered under each grade against each city, county, or state, as the case may be, represents the percentage of the pupils that remained or passed up from the ninth grade. For instance, Table V A shows that on an average something more than 38 per cent of the pupils enrolled in the ninth grade in the twenty-four cities four years ago, were re-enrolled in the twelfth grade last year. Inversely, something less than sixty-two out of each hundred pupils entering the high school in these twenty-four cities in 1910-1911, failed to reach the twelfth grade. In considering these figures, it should be understood that in certain cities, notably San Francisco and Oakland, pupils are graduated in certain commercial courses at the end of the tenth grade, and in a few cases at the end of the ninth grade.

The heavy broken line passing from the upper left to the lower right hand corner of each of the retardation charts is supposed to divide the over-age from the regular or under-age pupils. The figures above these lines are supposed to represent the regular or under-age pupils, and the figures below them are supposed to represent all of the over-age pupils.

The above interpretation, which is the usual one, is more liberal than the facts warrant. If a child enters school at six he should complete one year's work by the time he is seven, rather than by the time he is eight, and, barring accident, he should finish the eight grades by the time he is fourteen. A reference to the charts will disclose the fact that a large number of children do this. If, however, the charts were interpreted in this manner, the general showing would be quite different. It is true on the other hand that some children do not enter school until they are seven, but in cities this is the exception.

These figures show that if the efficiency of the present public school system is to be measured by its own standards of scholarship, it is then a failure *for many* of the children. That both the elementary and high schools have proved themselves successful in handling many of our children can not be disputed. However, their success is probably even less than indicated by the number of children who complete their courses of study. Many of the pupils who complete these courses do so merely because there is nothing else for them to do.

SCHOOLS—INSTITUTIONS OF SELECTION.

The high schools as at present organized are largely institutions for selecting and preparing those who will ultimately benefit by a later vocational course in a higher institution. Generally speaking, the only public educational institutions in the state that give efficient vocational courses are the universities, the normal schools, and certain colleges or technical schools. These schools train for the professions, for engineering, for agriculture and numerous other vocations, and the entire public school system is directed toward the selection and preparation of individuals for one or the other of these courses, though this is not the recognized purpose of the school system. The influence of these higher schools is felt in the elementary schools in standards of academic requirement, rather than in subjects. In the high schools, the influence is felt both in curriculum and in standards. The higher institutions are justified in requiring certain subjects in the public schools and in establishing and maintaining certain definite standards, but it is a mistake to apply this curriculum and these standards to the great mass of children who can not secure a higher education and who, consequently, can not benefit therefrom.

The mere fact that each higher institution, secondary or collegiate, and each grade of the public schools has established more or less definite uniform standards of entrance, causes the institutions and teachers of a lower grade to establish minimum common standards of advancement which are almost entirely dominated by these higher classes and higher institutions, though usually without conscious intent upon their part. And these single standards for advancement are really the only efficient standards, because the standards that are usually set up for entrance upon a life work are so general and so indefinite that they can not be measured in terms of the usual school subjects. *It will be possible to establish definite standards of preparation for life other than those demanded by the collegiate institutions, only when an analysis of the demands of life is made and when definite vocational courses have been introduced into the curriculum of the public schools.* The placing of a definite standard of efficiency for entrance into each field of human endeavor is essential to efficient preparation for the same. This does not imply that there must be a minimum *common* standard of efficiency demanded upon the part of each pupil, but it does imply that each pupil shall give to his work of preparation the best that is in him.

So long as the schools fail to establish a wider variety of vocational courses with varying requirements for entrance, and so long as they maintain a single common standard of advancement for all pupils, most of the pupils will sooner or later be eliminated from the school without having completed any finishing course whatever.

Under our present system the tendency is to test children only for the purpose of determining those who are capable of doing creditably further scholastic work along the same lines. *Children should be examined not to determine this alone, but also to discover what they can best accomplish, to classify them and to fit them into the lines of work they are interested in and most capable of doing.* After having discovered what the child can do creditably, or, if he can not do anything well, what he can do best, we should accept from him the best that he can give and pass him along through the elementary school and into a vocational course. *It is inhuman to insist upon the child trying to do that which we know he will never succeed in doing.* We can never provide a universal education for our children until we drop the single institutional standard of advancement and establish individual standards. *The present standard, which groups the children into two classes, those who can, and those who can not, is undemocratic, unjust and inefficient.* It fails because it sets up as its only standard, for all children the securing of a scholastic education. It fails because it sets up as a further ideal, equality of accomplishment within this restricted field. *The children who can not be interested in these subjects, the children who have but slight ability in them, and the children who have a greater interest in the practical*

affairs of life, usually fail of promotion and frequently become discouraged, lose confidence in themselves and leave school at the first opportunity. Also, many of the children who have unusual ability in these subjects, are satisfied to accept for themselves the minimum standard set by the school for the completion of the subject, and as a result are never taught to work up to capacity. On the other hand a considerable number of the children who barely pass, have been taught by the school to overestimate their abilities in these lines. *The whole system tends to destroy for the dull, the mediocre, and the bright, the opportunity to get a just estimate of their own weaknesses and strengths.* This false estimate or lack of knowledge concerning their own relative capacities, tends to render them helpless in selecting a suitable vocation when leaving school.

The machinery of the school with its standards has been inherited from the past, when universal education was a theory and when class education was the fact. In recent years the law has compelled all children under fifteen years of age, who have not completed the eighth grade, and all unemployed children under sixteen, to attend school. This in theory provides for universal elementary education, but the fact is that a large number of the children are not equipped by nature to do the work provided in the schools and consequently they can not survive in the struggle to pass the standards set for the various grades and for the various subjects in these grades. Many teachers and school officers, being more interested in children than in maintaining the institutional standards, have yielded to the need of the situation, have to some extent ignored the static standard, and have permitted pupils to advance, who, under a strict interpretation of the requirements of the system, would have failed of advancement. However, the system maintains intact its more or less fictional minimum common standards of advancement which always work to the disadvantage of a large number of the children.

The addition of courses in the more common vocational arts will permit of a segregation of pupils which will aid in the solution of the problem, *but universal opportunity can never be provided by the public school so long as it requires of all individuals a minimum common standard of efficiency in all courses.* Such procedure will always prohibit many children from advancing into the vocational courses which should be pursued by the pupil *only at the extreme end* of his school course, and, if a minimum common standard is maintained in these vocational courses, a certain proportion of the children will always fail of progress. Thus they will not only be prohibited from accomplishing in the school even the little which they would be capable of accomplishing were they allowed to try the work provided, but they will in many cases become discouraged and leave school earlier than necessary.

Without question, specific minimum standards of efficiency are essential in the professions, because these are social service occupations, but no such requirements are necessary in the common occupations of life. The elimination of the common minimum standard does not mean the elimination of all standards. Standards are ideals for accomplishment and are essential to all progress, but we can not set a definite standard of accomplishment for all people and try to hurdle them over without placing on some the stigma of complete failure.

The adoption of an individual standard of advancement for pupils does not necessarily imply individual instruction, nor does it imply that there shall be no system, but it does imply that a worn out regulation of the system shall not be considered of more importance than the good of the child. It implies that there shall be a new system evolved to meet the new situation resulting from the fact that the school of today has to deal with *all of the children* with their great range of abilities and opportunities, rather than as in the past with *a select few of them*.

CAUSES OF FAILURES.

Children fail in their school work, as a rule, not because they are incompetent, but because *they have no adequate motive for doing the work*, and generally those who leave school without finishing, do so either because they have failed to pass, or because the work of the world seems more attractive to them than the work of the school. The lack of interest in school work is usually due to the failure of the child to connect it up in his mind with life. Only the child with a faith great enough to cause him to accept the word of the parent, the teacher, or the friend, that the school really does connect up with life, will put forth sufficient effort to do the work satisfactorily.

The normal child is naturally interested in adult life and occupation. The boy longs for manhood, when he can work, and earn and have money. Likewise, the girl longs for womanhood with all of its obligations of wifehood and motherhood. These are normal, natural ideals, but the schools of the past have not encouraged them. They have inherited their ideals as well as their courses of study and their standards. The subjects pursued in the school of the past have been inherited from the days of class rule and class education. They were originally intended to prepare for leadership. And so the principal ideal instilled in the minds of the young by the school has been that of leadership. We have directed both our studies and our ideals to the sole end of producing intellectual, political, or industrial leaders. The ideal of making the living with the mind rather than with the hands, or with the hands and mind, is emphasized. *The entire educational system tends to start all for the same goal, a goal that only a few can reach.* All are groomed for the same race and those that drop out enter life with little

or no preparation, frequently with the wrong ideals and with a lack of confidence in their own abilities.

The school as an institution has upon the whole directed the attention of the children away from the practical affairs of life. They are required to give their attention to the subjects of the school, to the exclusion of the outside world. In many cases children have been taught that the desire to earn and possess money is a manifestation of a low ideal. The idea is suggested that education is above the common affairs of life. However, the common affairs of life interest many children more than the uncommon affairs of school life, and at the first opportunity they escape to the outside world. If we wish to reach these children and hold them in school and give each of them as much of a mastery of the school subjects as is possible, we shall have to greatly modify the system.

CHANGES NEEDED.

First.—We shall have to connect the school and the subjects of the school so closely with life that even the child may see clearly the relationship thereto. This may be done only by introducing and maintaining in the schools specific and clearly defined preparatory and vocational courses. And these courses, to serve the purpose, *will have to be introduced far enough down in the grades to attract the attention of the thousands of children who are leaving the elementary schools with a sixth or seventh grade education.*

Second.—We shall have to provide for the motivation of the work, by directing the minds of the children toward the practical affairs of life, instead of, as at present, away from them. This can be accomplished only by having each one at all times direct his school work toward the preparation for a specific vocation. This should apply to those who are planning to secure a higher education as well as to those who are planning to finish earlier in the course.

Third.—We shall have to shift pupils into such courses and such subjects as their native capacities, their economic conditions, and the economic demands may warrant.

Fourth.—We shall have to advance practically all of the pupils with their classes, giving them their true standing in each subject and sending with them a true written record of such standing, whether it be a record of 20 per cent or 95 per cent; we shall have to allow such pupils as have completed the elementary school, whatever their record may be, to enter the high school, provided that there is any course given therein from which they may secure an adequate return; and we shall have to promote pupils into courses rather than into schools.

Fifth.—We shall have to provide that the repetition of subjects by pupils shall be the exception, and that it shall be tolerated *only* when

it is clear that the pupil will be more benefited thereby than he would be by advancing.

Sixth.—When it is clearly evident that a pupil can not master a subject, or that such mastery will require more time than the subject is worth to him, we should advise him to drop it and take up something that he can do better.

Seventh.—We shall have to provide ungraded classes or classes for individual instruction in order that such pupils as are weak in the essentials but who have attained power by maturing, may have opportunity to make them up.

Eighth.—We shall have to introduce the task system in teaching the vocational as well as many of the other subjects of the school, because it is the only method that will permit of adequate growth upon the part of the individual.

Ninth.—We shall have to place the entire scholastic record of the pupil upon his diploma so that he may at an early age appreciate the fact that *he has to stand upon his own record* and that in a democracy men are rated as individuals rather than as classes.

WHY SUCH CHANGES ARE NECESSARY.

First.—We wish every child in the commonwealth to have the opportunity to secure such training in the school as will fit him to do as well as possible that work in the world which he is, by nature and economic opportunity, best fitted to do. This can be brought about only when we provide that every child who leaves school shall have his eight or more years of schooling pointed with two or more years of vocational training, even though he may have to leave the school relatively deficient in some other branches of instruction.

Second.—We wish each child to remain in school as long as his financial condition will permit.

Third.—We wish him while there to associate with children of his own age rather than with the younger children, with his peers or his superiors, rather than with his intellectual inferiors.

Fourth.—We do not wish to destroy all motive and all ambition to advance by classifying the child as a failure.

Fifth.—We wish each child to advance, because no amount of repetition ever made a dull pupil brighter. Usually the more a child repeats the duller he gets, and he usually leaves the school with little or nothing to show for his years of effort. There is no subject in the school so important or so essential to the child that we can ignore time and effort upon his part for its accomplishment.

Sixth.—We wish to have pupils instructed rather than to have subjects or classes taught and, above all, we want them instructed to do their part in the world's work.

Seventh.—We wish the recompense of pupils while in school to be equivalent to their real earning or their real product.

Eighth.—We wish the child to get his own measure, to the end that he may fit himself for the work that he can do best.

Ninth.—We do not wish any child to get the notion that he is a complete failure, when he is merely slow to acquire the formal things in education. Success in life is a relative matter, and the school should be administered in such a manner as to recognize relative success in the acquirement of its work.

Tenth.—We wish the bright pupils to work up to capacity instead of being satisfied to acquire a standard set by and for the average pupils.

Eleventh.—We want the pupils who are advanced and who graduate, to know at all times their exact rating in each subject, whether that rating be high or low.

FAILURE NOT ENTIRELY MEASURED BY LACK OF PROMOTION.

As suggested elsewhere, the failure of pupils to win promotion and the elimination of pupils from the grades do not fully measure the failure of the public schools to adequately prepare all of the youth for life's work. With few exceptions, those who complete the high schools and do not secure the special vocational training provided by higher institutions, are not as well prepared as they should be to enter any of the usual vocations. The same is true of those who complete their education in the elementary school. These two groups taken together composed more than 86 per cent of those who theoretically might have completed the high school last year.

The preparatory work is quite well done in the high schools, but poorly done in the last two years of the elementary school. This is due to the fact that in these grades an attempt is being made to put all children through exactly the same mill which, theoretically, is designed to prepare the children for *life*, and for the *high school*, at one and the same time.

The great need for the seventh and eighth grades is the segregation of the pupils according to their various abilities, their various interests, and their various financial situations; the provision of proper vocational courses for those who will end their school training with the completion of the elementary school; the provision of preparatory courses for those who can postpone their vocational courses until later in the public school course, and the provision of other courses for those who expect ultimately to enter higher institutions of learning.

In the high schools, the situation is in some measure similar. Many boys and girls who have no natural aptitude for the work leading to the higher institutions, are compelled to do this class of work or nothing. The inclusion of these individuals in the preparatory classes lowers the standard of work for the entire class. This group together with such others as do not desire a higher education, or can not afford one, should be provided with an opportunity for securing vocational training in the high school.

In the cities, where the segregation of the pupils of the seventh and eighth grades is possible, the provision of vocational courses is seriously handicapped *only* by shortage of money and difficulty in securing teachers who know their subjects. In rural communities, the only way that the children of the elementary schools can be given opportunity to get proper attention, is by making provision for them in the rural high schools. However, there would be slight gain in this at present, since almost the entire energy in these schools is directed toward the preparation of pupils for the higher institutions of learning.

There are many rural high schools in the state that send pupils to the university only occasionally, and yet each school is required by the present law to maintain at least one course that will prepare students for this institution. Consequently, since they are not financially able in many districts to provide more than one course, the pupils are compelled to take this work or none. It seems unreasonable that *eighty or ninety per cent* of the pupils of our rural high schools should be denied opportunity to prepare for life in order that *ten or twenty per cent* may be given opportunity to prepare for the university. Almost every rural high school in this state should provide first of all a thorough agricultural course for boys and a complete home-making course for girls.

These courses would naturally include many of the subjects required for entrance into the university, so that it would only be necessary for the exceptional pupils who might desire to attend the university to spend an extra year therein. Thus all of the other pupils would be relieved from the need of pursuing courses that for them lead nowhere. If a rural high school can have but two teachers, one of them should be a man with an agricultural training, and the other should be a woman who has had a thorough course in rural homemaking.

THE OUTPUT NOT COMPETENT.

Those who employ the output of the public school, particularly the merchants, complain that these young people are rarely competent in any of the branches of the elementary school and that generally speaking, they can not add, subtract, multiply or divide when they are first employed. It should be pointed out that these individuals are recruited largely from the failures in our elementary and high schools, but

there is slight comfort in this since these same employers frequently point out that they establish private schools and in a few weeks at most remove the deficiencies, thus accomplishing that which the public schools have failed to accomplish. In some instances, the failure of these young people is due to the fact that they are out of practice and have forgotten, but this is merely evidence that the long training has not properly functioned. However, the reason that the private school of the employer succeeds where the public school fails, is largely to be found in the fact that in one case the recipient of the training is absolutely convinced of the need, while in the other, he is really not conscious of such need. In one instance, this training is considered a part of his real work; in the other, it is far removed from the world of real work. It has an economic value in one case, while it appears to have but a scholastic value in the other.

Only a limited number of the larger employers of the state maintain such schools. In consequence there are at present thousands of young people over the age of fifteen, some employed in blind alley occupations, and others apprenticed in the skilled occupations, who have no opportunity for further school training. All of these individuals are badly in need not only of vocational education proper, but also of continuation work in certain of the common school branches. These young people can be taken care of, only by the establishment of a statewide system of part-time vocational and continuation schools. And the work in the elementary and secondary schools of the state can be vitalized and caused to function for many of the pupils, only by introducing into these schools clearly defined vocational courses; by causing each child in the school to be constantly conscious of the vocation which he at that time expects to enter and by providing that he shall have at least two years of training in a suitable vocation before he leaves the school.

ATTITUDE OF THE PUBLIC TOWARD INTRODUCTION OF VOCATIONAL TRAINING.

Your Commissioner of Vocational Education has met and counselled with scores of school administrators, members of boards of education, superintendents, and principals, and has found that sentiment among these men and women is almost unanimously favorable to the introduction of vocational courses in the public schools of the state. The only reason that such courses are not already common in the schools of the state is the inability of the local communities to finance them.

The great need of vocational education to complete and round out our public school system has also been proclaimed before thousands of teachers in the state, and in every instance the response has been instantaneous and favorable.

So far as can be ascertained, the general public is almost universally favorable to any movement that will make the schools more efficient in

preparing for the common affairs of life. This is particularly true of both employers and experienced employees.

One of the greatest difficulties confronting the future development of vocational education is that of the false ideals of life and success held by parents and teachers. The individual, as employer, sees the need of vocational education and recognizes individual differences, but he does not always recognize such differences in his own children. He frequently tries to make leaders of them when they have no natural qualifications for such leadership. In the same manner, the working man tends to hold as an ideal for his children, a professional life, and not being in a position to see their lack of fitness for such, he frequently insists upon their taking the university preparatory course. This latter situation is particularly obnoxious and destructive when accompanied by the idea of making a living without working. It is difficult for parents to appreciate the fact that heredity, in its operation, respects neither their feelings nor their desires in this matter. The child of the professional man may be and frequently is cut out for an industrial pursuit. On the other hand, the child of the mechanic or tradesman may be naturally equipped for leadership. As a matter of fact, it is not uncommon for all of the children in a family to differ in natural traits and in interests.

THE MINIMUM WAGE.

The adoption of a minimum wage scale will ultimately decrease the demand for unskilled labor and will consequently tend to advance the age at which work may be obtained by our boys and girls. This will, in turn, leave three alternatives for the youth of our large cities: (*a*) to accept work for a certain time in blind alley occupations; (*b*) to attend school longer or, (*c*) to loaf. Unless a great change is made in the curriculum and the standards of advancement in our schools, many of them will pursue the latter course. When the time comes that the employer can demand upon the part of the new employee a certain degree of efficiency, it will also become absolutely necessary to provide compulsory continuation schools for those of our children who are stranded in blind alley occupations. Otherwise, there will be no opportunity for them to get a fair start in life.

In addition, it would seem that the just and natural corollary of a compulsory minimum wage will be the assurance of a certain amount of efficiency upon the part of the future employee.

THE STATE AND VOCATIONAL EDUCATION.

The policy of the state in regard to general education was definitely settled at its inception and it has assumed a constantly increasing share of the burden of providing an adequate education for all of its children. Though the welfare of the individual in the state is always placed

second to the welfare of the state, his welfare and that of the state usually coincide, and so it proves in this case. Heretofore, this discussion has been confined to a consideration of vocational education from the standpoint of the good of the individual. The matter will now be considered briefly from the standpoint of the state.

It is presumed that the state is, above all, interested in making of its children good citizens. To express all that this term means would be difficult, but it certainly includes the following: efficiency in production, efficiency in control, and efficiency in the occupation of leisure time. Perhaps the above arrangement represents better than any other the order of their relative importance in so far as the relation of the individual to established society is concerned. If this were to prove true, it would be an interesting commentary upon the education of the recent past, and in fact upon much of the education of the present, since this education tends to reverse such order. The term production is here used in its broadest sense, including not only material things, but also the product of trade, transportation, etc. It is supposed to include that product which the individual contributes to society through his occupation.

In the past the school has placed most emphasis upon general appreciation. Thus it has confined itself almost entirely to training for consumption, and it has proved particularly efficient in preparing for the consumption of leisure time, which has for many individuals never materialized. In general, education for production has had little recognition below the university, and it is only in recent years that it has become prominent in that institution.

Efficiency in production insures to the state, first, that the individual shall be self-supporting and therefore not a burden upon society; second, that he shall add the maximum amount of his very best product to the total product of the commonwealth. Since not only the prosperity but the very existence of the state depends upon its products, it would seem that it could not afford to neglect to educate its producers in the art of production.

DRAWING IN THE SCHOOLS.

In the elementary schools drawing is one of the subjects required by law, and undoubtedly it is taught in some manner in practically all of them. Courses in freehand drawing are given in fifty-seven per cent of the high schools of the state, and fifty-one per cent of them also give courses in mechanical drawing.

Without doubt, drawing was originally given its place in the curriculum of the public schools upon the representation of its practical value—and those who were responsible for having it included in the group of required subjects for the elementary schools of this state, probably had the same thing in mind. It was not long, however,

until this purpose was pretty generally lost sight of and the subject was pursued either as a culture, as a discipline, or as an instrument to cultivate the so-called general powers of observation. The spirit of scholasticism and the fine art ideal were so powerful that the vocational ideal could get no foothold. This result came about more easily because of the fact that strictly speaking, there really is no vocation of drawing. Drawing is a means of expression essential to many vocations, ranging from fine art to the most prosaic of occupations. Strictly speaking, it exists as a vocation only for the teacher. Because it was a subject in the school, it was pursued not for its usefulness in the occupations of life, but rather as an end in itself. It has become almost purely a subject for appreciation and consequently a preparation for consumption rather than for production. There is, however, at the present time, a powerful movement on foot to vocationalize it, but this can be successful only when the course completely yields itself to the needs of the real vocational subjects of the curriculum.

MANUAL TRAINING IN THE SCHOOLS.

Like the drawing, the manual training which is to be found in the schools of most of the cities of this state, came into the curriculum as a vocational subject, but here again the spirit of the school devotionalized it until in some cases it is as impractical and as scholastic both in content and in process as any of the other subjects of the curriculum.

In establishing the manual courses, little attention has been given to the vocational situation or need in the local communities. The usual method has been to find out what equipment was possessed and what course was given in some school of similar grade elsewhere and then appropriate and put into practice both ideas. Thus we find laboratories containing rows of lathes and other machinery-manufacturing equipment located in cities without an iron working shop. But here again a change is coming and school authorities are now trying to adapt these courses to the local needs.

One of the reasons that the manual training courses both in elementary and high schools have yielded so readily to the scholastic spirit, has been that they have attempted to give *general* vocational knowledge that presumably includes the common elements of many crafts, or they have attempted to give so-called general hand training or hand skill courses. This procedure tends to shift the attention directly away from the practical situations and the practical applications in life, and tends on the other hand to center the minds of pupils and teachers upon generalizations.

As shown by this experience, a school subject occupying such a position has little chance of defending itself against the spirit of traditional scholasticism that naturally dominates the school.

At first glance, one is inclined to the view that the manual courses in many of our modern high schools are practical vocational courses. And judging from the content of these courses and the practical manner in which they are handled, they are. However, the students who take advantage of them rarely, if ever, enter the vocations they represent. As a rule they are used as a preparation to the engineering departments of the university.

Molders, blacksmiths, tanners, plumbers, etc., are not recruited from the high schools. They are recruited from the elementary schools, and usually the boys who will ultimately take up these trades can not enter our high schools under the present scholarship restrictions upon matriculation. If we wish to teach these subjects as vocations, we shall have to do so in the grammar grades of the elementary school, and we shall have to admit boys to these courses upon age rather than upon scholastic qualifications.

The present manual training and manual arts courses in both the elementary and the secondary schools are serving a good purpose. In fact, they have in our urban communities become an essential part of our general educational system. Occupying as they do, a place in the preparation of the pupils for all future vocational courses, and being general in character, they may be made a means to the proper exposure of the children to the vocations of the community and may thus perform invaluable service in aiding in the guidance of the youth in selecting suitable future occupations. However, the fact remains that they are very rarely, if ever, real vocational courses. Such courses to be vocational must be specific rather than general in character; they must prepare for occupations that exist within reach of the pupils, and they must be pursued by the children for the purpose of preparing for actual and definite vocations.

DOMESTIC SCIENCE AND DOMESTIC ART.

In general the work in the domestic arts is much more practical than that in the manual arts. This is not necessarily due to teachers or teaching, but to the character of the domestic arts themselves. It is much simpler and easier to duplicate in the school the indoor occupations of the home, than it is to duplicate those of the outside commercial, industrial, or agricultural world. In fact, only ignorance, or inexperience, or pedagogical theory could make a cooking or a sewing course entirely impractical and useless. While in certain places these courses sometimes run to fancy work in both cooking and sewing, in general they are rapidly tending to become more practical both in content and in process. Perhaps the reason they receive some criticism because of impracticability, is that the teachers, not being practical housekeepers themselves, are not always in a position to see the practical needs of

the situation. Emphasis upon the practical experience end of the teacher's training would, in the future, tend to materially strengthen these courses.

One of the great needs of the situation is that this line of work shall be expanded into real homemaking and housekeeping courses; that sewing shall be the making and repairing of the clothing of children, as well as those of adults; that cooking shall include a study of the feeding of infants and the ill and that courses shall be added in home accounting, in home sanitation, home building, home furnishing, home gardening, and home keeping with all that these imply.

Another matter of great importance is that these courses in homemaking and home management shall be made available to the children of the elementary schools who never enter the high schools.

One thing that has tended to make both the manual and domestic courses more or less inefficient, has been the lack of time devoted to them, and this is particularly true of the work in the elementary grades where the usual time is about 90 minutes per week. The homemaking courses should be expanded, ample time should be given the individual pupils for their accomplishment, and every girl should secure a thorough course therein before she leaves the school.

VOCATIONAL COURSES GIVEN.

During the last three or four years, a remarkable change has been coming about in the secondary schools of California. Fifty-six real vocational courses other than the homemaking courses, have found their way into the curriculum. To be sure, many of these courses are offered only in one or two high schools in the state, but the diversity of courses introduced into these schools by the different local communities will serve the important function of establishing experience in these various fields that will be of great value in the future. A list of these subjects with the number of schools giving instruction in them follows:

Animal Husbandry -----	1	Navigation -----	1
Architectural Drawing -----	25	Nursing -----	7
Architecture -----	7	Pattern Making -----	20
Assaying -----	1	Photography -----	1
Automobile Engineering -----	1	Pottery -----	1
Automobile Repairing -----	5	Printing -----	4
Domestic Service -----	3	Retail Salesmanship -----	2
Drafting -----	12	Stock Business -----	6
Blacksmithing -----	5	Telegraphy -----	1
Bookbinding -----	6	Viticulture -----	2
Horticulture -----	10	Dressmaking -----	22
Laundrying -----	5	Electrical Wiring -----	3
Library -----	1	Farm Architecture -----	1
Machine Design -----	3	Farm Management -----	5
Market Gardening -----	7	Banking -----	10
Millinery -----	18	Bee Business -----	1
Molding -----	7	Farm Mechanics -----	4
Naval Architecture -----	1	Furniture Construction -----	16

Boat Building	1	Teaching	1
General Farming	30	Painting and Tinting	1
Bookkeeping	162	Office Practice	3
Brickwork	1	Pipe Fitting	2
Carpentry	21	Poultry Business	3
Care of Children	1	Restaurant Cooking	1
Cementwork	7	Shorthand	159
Chamber of Commerce Work ...	1	Tailoring	4
Confection of Candies	6	Typing	104
Dairying	7	Waiting on Tables	8

Under the general caption "Homemaking or Housewifery," the following courses are given in the number of schools indicated:

Care of Children	1	Home Accounting	9
Care of Sick	4	Home Economy	10
Cooking	179	Home Gardening	10
Dressmaking and Millinery	1	Home Laundering	3
Feeding of Children	2	Home Sanitation	1
House Construction	1	House Decoration	14
House Furnishing	10	House Planning	9
Household Management	1	Household Mechanics	1
Textiles	14	Sewing	190

RECOMMENDATIONS.

In view of the foregoing considerations, your Commissioner of Vocational Education recommends the following:

I.

That legal provision be made for the establishment and maintenance by local boards of education, of vocational schools, departments, or classes in their respective districts; that provision be made that these schools, departments, or classes may be established and maintained for the purpose of giving well organized, definite instruction in one or more of the vocations common to the local community, in any two or more consecutive grades of said school from the seventh to the fourteenth, inclusive and that for the purposes of this act, homemaking and homekeeping and all non-professional money-producing occupations shall be considered vocational subjects.

REMARKS.—It is essential that the vocational subjects shall be introduced as far down as the seventh grade:

(a) Because at least one half of our children leave school at or before the age of fifteen, so that a half of the homemakers and a large proportion of the skilled workmen are recruited from the elementary school.

(b) Because the selection of a vocation at an early age will motivate the school work for many boys and girls who, under the present system, fail because they can not see the relation of the school's work to the world's work.

The situation could also be met by introducing these subjects in the high school alone, provided that an age rather than a scholastic requirement should be placed upon entrance into such courses in said high school.

II.

That legal provision be made for the optional organization and maintenance of intermediate schools consisting of grades 7, 8, and 9, or grades 7, 8, 9, and 10, in all districts that maintain both elementary and high schools under the management of a common board of education.

REMARKS.—*First*, the segregation of the pupils and the establishment of departmental work is necessary in order to provide special instruction in the vocations and in the high school preparatory subjects; *second*, the incorporation of certain of the high school grades in these schools is essential because, with the introduction of vocational courses and the consequent advancement of pupils into these courses, a large number of the children will have completed nine years' work by the

time they have reached the age of fifteen; *third*, it is constantly becoming more difficult for children to secure employment under the age of sixteen, consequently, a number of the vocational courses started lower down should be extended through the tenth year; *fourth*, the increasing of the size of the school by the incorporation of one or two of the high school grades with the seventh and eighth grades, will decrease the range of subjects taught by each teacher and make it possible to increase the numbers of different vocational courses: *fifth*, the legalizing of such schools will make it possible to provide for an intermediate teacher's certificate, a very desirable end, if we are to succeed in finding a sufficient number of competent teachers of the vocational subjects in these grades.

III.

That legal provision be made for the establishment and maintenance by local boards of education of intermediate and secondary day, part time day, and evening vocational schools, departments, or classes; that provision be made, at the option of local boards of education, that all of the youth under eighteen years of age who reside in such districts as maintain suitable day schools, departments, or classes of this character, and who are not at the time in attendance upon a regular day school, shall be compelled to attend such part time schools, departments, or classes for a period of not less than four hours per week, or eight hours in each two week period; also, that provision be made that for the purpose of carrying out the provisions of this act, the part time school day may include two sessions, one extending from 8 a. m. to 12 m., and another extending from 1 to 5 p. m.; to further provide that no individual shall be compelled to attend such part time school on Saturday afternoon and that the evening schools shall not remain in session more than three hours nor later than 10 p. m.

REMARKS.—As suggested in the preceding general discussion, the larger proportion of our boys and girls between the ages of fifteen and eighteen are not in attendance upon any school whatever. Some of them are already apprenticed in skilled occupations, some are employed in blind alley occupations, and others are loafing, largely because their productive ability is too small to attract employers. All of these individuals are badly in need of vocational guidance, of vocational training and training in citizenship; and some of them, particularly the children of foreign parentage, need further training in the common school branches. All or nearly all of the girls need training in home making; and those girls and boys who are already apprenticed in skilled vocations need help on the theoretical side of their occupations; while the others who are employed in the blind alley occupations, or who have

no steady employment, need guidance and practical training in suitable vocations.

Of those who are past the age of eighteen, many can doubtless arrange to attend the part time day continuation and vocational schools, departments, or classes, especially if they provide a Saturday afternoon session, but any who can not find time to attend these day courses should be provided for in the evening sessions.

The establishing of the particular courses in these schools should pend the desires and needs of the pupils. The pupils should, as far as possible, be handled as individuals and each should pursue his own task and should be advanced in his work as rapidly as possible. For the foreign immigrant children, the most essential work might be found in a study of the language, and the laws and the customs of the country, while for the product of our own elementary school, it might be found in the special mathematics, the special drawing or the special language essential to advancement in the chosen vocation, or for certain others of these it might be found in a shop or laboratory course preparing them for apprenticeship in some skilled occupation or in certain cases, preparing them for a change from one skilled occupation to another.

In short, these institutions should be established and maintained to take care of the most pressing needs of those who can not afford attendance upon the regular day schools. The curriculum should be moulded largely after the desires of the pupils, with this exception, that all girls between fifteen and eighteen should be urged to devote at least two hours per week to the pursuit of the homemaking course.

IV.

That legal provision be made for the establishment and maintenance by local boards of education, of extension work in citizenship, in housewifery, in agriculture and in other vocational subjects.

REMARKS.—Extension work in housewifery and in citizenship is clearly needed in handling the immigrant population in certain of our cities. The foreigner is often suspicious of the school and can be reached only through the indirect method of approach. Again, the problem here is largely of an individual nature and can be met adequately only by getting into personal touch with the home lives of these peoples. The extension teachers in this subject can also act as advance agents for the part time continuation and vocational schools.

Under this provision the instructor in agriculture in a county or union high school could give his service to the various communities within his district either as instructor or as counsellor. The use of the teacher of agriculture in this manner would also serve to acquaint him with the agricultural conditions and needs of the district.

Again, it might be an economy and an educational advantage for the courses in such subjects as salesmanship to be conducted in department stores or other places of employment.

V.

That legal provision be made through the state department of education for the establishment and maintenance of classes in the English language, in citizenship, and in such other subjects as may be deemed advisable, for the education of such foreigners as may be attached to wandering or transient laboring camps.

VI.

That section 1772 of the Political Code referring to special certification be repealed; that legal provision be made for the granting of special certificates by county boards of education upon credentials only; that legal provision be made whereby it shall be the duty of the State Board of Education:

1. To prescribe by general rules and regulations the credentials upon which the various county boards of education may grant certificates to teach any of the special subjects in the elementary, the intermediate or the secondary schools of the state.

2. To issue to individuals, under such regulations as it may see fit to adopt, credentials in any special subject or subjects upon which county boards of education may grant special certificates of a like type and of a like grade, in the subject or subjects listed therein.

3. To issue to individuals, under such regulations as it may see fit to adopt, temporary or permanent certificates to teach the various academic, vocational and professional subjects in the part time vocational normal schools of the state, and to keep on hand for the use of local educational authorities an available list of such teachers.

REMARKS.—The situation demands that provision shall be made for four general types of special certificates as follows:

(a) Elementary, intermediate and secondary manual, household, fine, and physical arts certificates.

(b) Temporary intermediate and secondary vocational arts certificates.

(c) Permanent intermediate and secondary vocational arts certificates.

(d) Secondary technical arts certificates.

An investigation of the regulations under which county boards of education are at present granting certificates in the special subjects, reveals the fact that they are granted almost entirely upon credentials. Also, that while the standards established by many of these boards are about equivalent to those which should be prescribed for the inter-

mediate manual, domestic, fine, and physical arts certificates, there is as a rule no distinction made between the requirements for the elementary and the secondary certificates.

The paragraph under section 1772 of the Political Code, which governs the granting of all special certificates, was enacted at a time when it was difficult to secure teachers of the special subjects mentioned above, who possessed any definite academic, special, and professional training. At the present time well trained teachers of the manual, domestic, fine, and physical arts may be readily obtained. On the other hand teachers of the vocational arts who are efficient in their special lines and who in addition possess the above academic and professional training, do not exist in sufficient numbers to supply the demand even at the present time.

This condition has placed county boards of education in a position where it is necessary either to refuse certification to those who are efficient in the special vocations but who lack the higher academic qualifications, or break down all of their standards governing the certification of teachers in such special subjects as are thoroughly established and provided with competent, well trained teachers.

The vocational arts demand teachers who have had experience in the vocations to be taught. It is desirable to secure as much additional training, scholastic and professional, as possible, but at the present time and for some time to come, the combination of the two can not be secured. Any attempt to have scholastically trained teachers who have had no real experience in the vocations teach these subjects, will prove a failure. The powerful traditional influence of the school and the teacher will, within a very short time, absorb and work over all such attempted practical courses into so-called disciplinary and cultural courses, and we will have as a result merely other new forms of manual training.

On the other hand, school trained teachers are available and they are much more efficient in the manual, domestic, fine, and physical arts than would be the business, or industrially trained teachers who have had no adequate school training.

The technical arts certificate is designed to provide college or university trained teachers for the technical subjects in high schools. In many of those subjects the college trained teachers are more efficient than the experience trained teachers who have had no such college training. However, it might be well to provide in the future that all such college trained teachers should also have some experience in the industrial world.

It is necessary that the power regulating the conditions under which special certificates may be granted, shall be centralized in order that greater uniformity may be secured throughout the various counties of

the state. It is, however, also necessary that some responsible body shall be given full authority to modify these regulations from time to time in order that the academic requirements for the vocational arts certificates may be placed as high as possible, but at the same time, not so high but that a sufficient number of men and women, efficient in the various vocations, may be secured to do the necessary teaching. Also, it is clearly evident that a much higher academic requirement may be established for certification in some vocations than in others. These considerations taken together make it essential to have a pliable system for the control of special certification.

It is also important that the authority to investigate the claim of the fitness of certain individuals who can not qualify to teach these special subjects under the general regulations, shall be placed in the hands of some one responsible body. Sometimes it would prove an advantage to the county boards of education if the special cases could be handled by a body not subject to local pressure. In fact, most of the county boards of education have already fenced themselves in by establishing general regulations to govern all cases. This is indeed unfortunate, since, in the fine arts especially, many of the most competent teachers have had but a relatively small amount of school training.

The establishment of vocational certificates will bring about another complication. Many able manual training teachers may wish to qualify as vocational teachers; also, certain domestic arts teachers may wish to qualify as vocational arts teachers. It is evident that to require of these individuals five or seven years in the vocation, as the case may be, would merely result in barring them from the field. An experienced manual training teacher of university caliber would often get more in two years' experience in a vocation than certain other men would get in a lifetime. In the same manner a school trained teacher of sewing would frequently be able to qualify in the vocational aspects of the subject in a much shorter time than would a previously untrained woman.

Again, it is barely possible that certain practical housekeepers who are mothers could qualify to teach homemaking to our girls without having either the full academic or the full special and professional courses suggested in the code.

VII.

That legal provision be made whereby any teacher who devotes as much as one half of his or her teaching time to the teaching of a special subject, or who receives the salary of a special teacher, or who is in any other manner classed as a special teacher, must hold a special certificate in said special subject.

VIII.

That legal provision be made:

First.—To provide for extending state aid under the conditions hereinafter set forth to all such elementary and high school districts as establish and maintain vocational schools, departments, or classes conducted (a) as a part of the regular day schools, (b) as part time day vocational schools, departments, or classes, (c) as evening vocational schools, departments, or classes, or (d) as extension vocational courses, in any of the grades of the public schools above the seventh grade and inclusive of the same.

Second.—To provide that no school district shall receive aid from the state under this act on account of any such vocational school, department, or class, unless the same shall have been accredited by the State Board of Education, and to provide further that the State Board of Education in order to carry out the purposes of this act, shall be authorized to make such general rules and regulations as it may see fit for the establishment, maintenance, organization of curriculum, and management of all vocational schools, departments, or classes, on account of which local boards of education expect to benefit by the provisions of this act, except as hereinafter provided.

It should be made the duty of the State Board of Education to inspect the vocational schools receiving state aid, this work to be done by the Commissioner of Vocational Education and by such other experts as may be secured by the board. The State Board of Education, moreover, should be given the power to cancel the accreditation and direct the withholding of state aid in the case of schools which, on inspection and after reasonable notice, fail to maintain the standard of work on which their accreditation was based.

Third.—To provide; (a) that state aid may be extended on account of a vocational course in a regular day school only when it is planned to occupy as a minimum 150 minutes per day for a period of two school years or an equivalent; provided, however, that the State Board of Education shall adopt special or general regulations governing the subjects that may be included in any given course; (b) that state aid may not be given on account of a commercial course including as its major vocational subjects, typing, stenography or shorthand, and book-keeping.

Fourth.—To provide that any school district in order to have a vocational course accredited, must, upon its organization or immediately after this act goes into effect, apply to the State Board of Education for such accreditation, at the same time submitting to that body a written statement including an outline of the proposed course or courses, the approximate number of pupils of each grade expected in the same, the

anticipated teaching force, and any other information required by said board.

Fifth.—To provide that there shall be apportioned to each district maintaining vocational schools, departments, or classes, in addition to other state aid apportioned, either on the account of the high or the elementary schools, the sum of 40 cents per hour for the aggregate hours of actual instruction (including vocational guidance) or supervision given by each properly certificated teacher in accredited vocational subjects. To further provide, that no district shall receive on account of any teacher the special aid contemplated under this act either in an amount in excess of \$500 annually or in an amount in excess of one third of the amount actually paid to such teacher for the service upon which such state aid is requested.

Sixth.—To provide that nothing in this act shall be construed in such a manner as to prohibit pupils, at the option of the vocational teacher, from doing a part or all of their shop or other practical field work under the supervision of such teacher, in the shops, fields, or places of business of their parents or guardians or under employment in the shops, fields, or places of business of others.

Seventh.—To provide for the appointment, by such local boards of education as are maintaining vocational schools, departments, or classes, of one or more local lay advisory boards, as provided for under general regulations to be established by the State Board of Education; further, to provide, that the membership of these boards shall consist, where possible, of employees and employers, that the members shall serve without pay, that they shall visit and inspect the classes pursuing the vocational courses they represent in their respective districts, that they shall counsel and advise with the local boards of education upon the problem of making the course or courses they represent as practical as possible, and that they shall act with the representative of the State Board of Education and shall assist him in his inspection of the instruction and management of these schools, departments, or classes.

REMARKS.—There are several important reasons why the state should aid vocational education. The first is that in modern industry and particularly certain of the trades such as the building trades, the demand for workmen is not constant in any given locality, thus necessitating their shifting from place to place. The second is that it is exceedingly important to the state that its workers be trained to the maximum of efficiency in the lines in which they are by nature best fitted to contribute to society their product. The third is that the state of California already acts upon the assumption that public education is largely a function of the state. And since the projected vocational education will by its very nature cost much more to admin-

ister than the older types, and since the local communities are at the present time, at least in their own judgments, contributing to education all they can possibly afford, it will be necessary for the state to assume a part of the burden in order to stimulate the local communities to introduce the work.

The difficulties attendant upon making school instruction in the vocations practical, and in hindering the courses from becoming general educational, disciplinary, or cultural courses, make it exceedingly important that a strict supervision be exercised by the state authorities. Most of the attempts of the past to make the schools more practical by the introduction of vocational subjects have failed. The only subjects in which success has been even reasonably satisfactory are those subjects such as domestic science, domestic art, shorthand, typing, and bookkeeping, which are usually practiced under conditions quite similar to those prevailing in the schoolroom.

Many of the promoters of vocational training including certain of the leading educational experts of the country are of the opinion that a practical subject can not survive in the atmosphere of the traditional school. In fact, Wisconsin has set up an independent system of schools to teach the vocational subjects. It is, however, the opinion of the Commissioner of Industrial and Vocational Education that if the state will provide a sufficient amount of aid to command the respect of the local communities, and if it will lodge sufficient power in the hands of the State Board of Education to enable it to generally control the training and selection of teachers, and the construction of courses, and the supervision of instruction, these courses can be made just as practical as similar courses in independent schools.

It is suggested that shorthand, typing and bookkeeping shall for the present receive no state aid for the reason that they are at this time not only well established, but in all probability over-established. Statistics in this office show that in Oakland and San Francisco together, there were enrolled last year in the day high schools, 1,396 pupils in bookkeeping, 1,771 pupils in shorthand, and approximately 1,300 in typing.

The aggregate hours of instruction is selected as the basis of apportionment because this method will adjust itself automatically to recitations of different lengths, to part time day schools, and to evening schools; it will as readily adjust itself to a situation created where a teacher has to teach a vocational subject two or three hours per day and some other subject the remainder of the time and it will also permit of the employment of a vocational teacher for two or three hours a day, or for two or three days per week, or for any other broken or irregular period.

This method will work better than the aggregate attendance method in that it will aid all classes equally. This is highly desirable since a

teacher may be able to handle efficiently forty pupils in certain vocational subjects and only fifteen or twenty in others, and since it is desirable that the vocational courses established shall not be too much influenced by cost of instruction.

The requirement on the part of the local community to spend two dollars from its regular school fund for every dollar received from the state, will insure that said community shall employ an efficient teacher and shall see that he is kept busy teaching classes of a respectable size.

The provision for local advisory boards composed as they will be of both employees and employers, will guarantee that the course shall have the support of both employers and employees and that the local boards of education shall in each case have the advantage of expert advice in each of the vocations taught.

IX.

That legal provision be made:

1. To provide for the establishment and management of evening state normal vocational schools, or classes, by such local city boards of education or state normal school boards as maintain evening vocational schools suitable for use as training schools, and to provide that the purpose of these schools shall be to offer opportunity for properly qualified individuals employed in the various local occupations to prepare for teaching the same.

2. To provide by state appropriation for the entire expense of maintaining these schools except the expense of housing, heating, lighting and power which shall be provided by such local boards as establish them.

3. To provide that such local boards shall select the necessary teachers from a list submitted by the State Board of Education at such a schedule of salaries as may be set by said state board.

4. To provide that these schools or classes may be established by such local boards only after they have, upon their own motion, received permission to establish the same from the State Board of Education, and to provide that the State Board of Education may order the local board to discontinue such school, or class, when in its judgment, the demand for such school or class is not great enough to warrant its further maintenance.

5. To provide that the entrance requirements into each teacher's vocational course and the qualifications for graduation from such course shall be established from time to time by the State Board of Education, which body shall be authorized to issue to such graduate the State Board of Education special vocational arts credential; provided, that no student shall be admitted into any such school or class who has not had a minimum of five years practical experience in the

vocation in which he desires to qualify as teacher, or who does not possess a teacher's certificate valid in California.

REMARKS.—It should be perfectly clear to all that vocational instruction, being more or less a new departure, has established neither the content of its various subjects nor an adequate method for their presentation. It would seem then that centralized institutions, such as these, given over to a study of the subject of instruction, could do a wonderful work in gathering the experiences of the most successful and passing them along to the beginners, or the less competent. Again, if we are to select our teachers from those experienced in the various vocations, we shall have to provide them an opportunity not only to prepare to teach but also, in certain cases, to acquire a knowledge of the essential common school branches which were neglected by them in their childhood and youth.

That these schools should be evening schools and located where needed, is evident, since it would be difficult to get the students either to give up their regular occupations or to leave home in order to prepare for the work.

X.

That legal provision be made authorizing the State Board of Education to require vocational surveys in such communities as are asking for or receiving state aid on account of vocational schools, departments, or classes.

REMARKS.—The need for such a survey is evident when we take into consideration the fact that we neither know the numbers employed in the various occupations, nor the particular grades in the schools from which they were recruited. The first piece of information is needed that we may not tend to overcrowd certain occupations, and the second is needed that we may place the vocational courses in such grades in our schools as will make them available to the children who will enter these vocations in the future.

Digest of Laws of States that Provide State Aid for a More or Less State-wide System of Vocational Education.

Indiana.

1. *Units of organization* are cities, towns and townships.
2. *Types* are separate schools, regular day schools, part-time day, and evening schools or classes.
3. *Compulsory education* in part-time day, ages 14 to 16, 5 hours per week.
4. *Approved* by State Board of Education.
5. *Restricted* to such courses in part-time schools as are supplementary to regular employment.
6. *Established and maintained* by regular school authorities.
7. *Local Board of Inspection* is appointed by school board, ratified by State Board of Education. Three members suggested for each separate vocation taught.
8. *State reimburses* local communities maintaining regular day, part-time and evening vocational schools and classes to the extent of two thirds of net cost of maintenance less tuition collected.
9. *State reimburses* local communities to extent of one half of amount expended for tuition.
10. *Age limits* are for regular day and part-time day schools, 14 to 25.

Maine.

1. *State aids* elementary schools teaching manual training and domestic science, to the extent of two thirds of the teacher's salary, not to exceed \$800 for each teacher.
2. *Approved* by Superintendent of Public Instruction.
3. *State aids* secondary schools providing instruction in agriculture, domestic science and mechanical arts, to the extent of two thirds of cost of instruction, but not to exceed \$500 to any district for any one year.
4. *State aids* certain selected vocational schools teaching agriculture, domestic science, manual arts and the trades, to the extent of two thirds of the cost of instruction, but not exceeding \$2,000 for any one district.

Massachusetts.

1. *Units of organization* are counties, cities and townships.
2. *Types* are regular day, part-time day, and evening schools or classes.
3. *Compulsory education* in part-time day, ages 14 to 16, 5 hours per week.
4. *Approved* by State Board of Education.
5. *Restricted* to such courses in part-time schools as are supplementary to regular employment. Exception: Vocational courses for women in evening classes do not have to be supplementary to regular employment.
6. *Established and maintained* by regular school authorities, or by *independent boards*.
7. *Local Board of Inspection* is appointed by school board, and ratified by State Board of Education. Three members suggested for each separate vocation taught.
8. *State reimburses* local communities maintaining regular day, part-time, and evening vocational schools and classes to the extent of: (a) One half net cost of maintenance less tuition collected; (b) two thirds net cost of maintenance for vocational courses in regular high schools maintaining agricultural courses.
9. *State reimburses* local communities to extent of one half of amount expended for tuition.
10. *Age limits* are for regular day and part-day schools, 14 to 25 years, for evening schools, 17 or over.

New Jersey.

1. *Units of organization* are county, joint county, districts, or union of districts.
2. *Types* are regular day, part-time day, and evening schools or classes.
3. *Not compulsory.*
4. *Approved* by State Board of Education.
5. *Restricted* to such courses in part-time schools as are supplementary to regular employment. Exception: Vocational courses for women in evening classes do not have to be supplementary to regular employment.
6. *Established and maintained* by regular school authorities.
7. *No local boards of inspection.*
8. *State reimburses* local communities maintaining regular day, part-time, and evening vocational schools and classes to the extent of one half of net cost of maintenance but not to exceed \$10,000 for any district, county or joint district.
9. *Tuition reimbursed* to local communities to extent of \$25, through another act.
10. *No age limitation.*

New York.

1. *Units of organization* are cities and districts.
2. *Types* are regular day, part-time day, and evening schools or classes.
3. *Not compulsory.*
4. *Approved* by Commissioner of Education.
5. *Not restricted.* (See (5) other states.)
6. *Established and maintained* by regular school authorities.
7. *Local Boards of Inspection* are appointed by school board, and ratified by State Board of Education. Two members suggested for each separate vocation taught.
8. *State reimburses* local communities maintaining regular day, part-time and evening vocational schools and classes to the extent of: (a) one half of net cost first teacher not to exceed \$1,000; (b) one third of salary of all additional teachers. Provision is made for a pro rata distribution of part-time teachers in evening part-time, or other schools.
9. *State reimburses* local communities through high school act for tuition expended.
10. *No age limitations.*
11. Minimum of 15 pupils required for formation of class.

Pennsylvania.

1. *Units of organization* are districts or joint districts.
2. *Types* are regular day, part-time day, and evening schools or classes.
3. *Not compulsory.*
4. *Approved* by State Board of Education.
5. *Restricted* to such courses in part-time schools as are supplementary to regular employment. Exception: Vocational courses for women in evening classes do not have to be supplementary to regular employment.
6. *Established and maintained* by regular school authorities.
7. *Local Board of Inspection* is appointed by school board and ratified by State Board of Education.
8. *State reimburses* local communities maintaining regular day, part-time, and evening vocational schools and classes to the extent of two thirds of cost of instruction not to exceed \$5,000 in any one district for any one year.
9. *State reimburses* local communities for tuition to extent of \$25 per child through other act.
10. *No age limitations.*

Wisconsin.*

1. *Units of organization* are school districts.
2. *Types* are all day, part-day, and evening schools or classes.
3. *Compulsory education* in part-time day, ages 14 to 16, 5 hours per week.
4. *Approved* by the State Board of Industrial Education, consisting of 9 members, 3 employees, 3 employers, and 3 educators.
5. *All cities with 5,000 or more inhabitants* required to provide boards for industrial education—these boards to be appointed by the local boards of education and to consist of 6 members, 2 employees, 2 employers, the superintendent of schools and the high school principal.
6. *State aid provided* for four types, industrial, commercial, continuation and evening schools.
7. *State reimburses* local communities maintaining above types to the extent of one half expense of instruction up to \$3,000 for each school maintaining all four types but not to exceed \$10,000 to any one community.
8. *Employers must pay wages* to "permit pupils" for the five hours spent in continuation schools.

*The Wisconsin laws covering this topic were not available, so this digest was gleaned from various secondary sources.

*In many high schools a commercial course is given which, in most instances, closes at end of second year. These graduates have been included, hence high percentage on enrollment in fourth year.

†Averages.

TABLE No. 15.

II. GENERAL SUMMARIES: 1851-1914.
Statement, by years, showing the amount of receipts and expenditures for Public, Primary, Grammar, High and Kindergarten Schools of the State of California, from 1851 to 1914, inclusive.

Years	Total amount of state school fund appropriated	Total amount raised by county and city taxes	Total amount raised from miscellaneous sources	Amount paid for salaries of teachers	Amount paid for fuel and contingent expenses	Amount paid for libraries	Amount paid for apparatus	Amount paid for stoves, buildings, and furniture	Total expenditures
1851			\$2,417 00	\$21,355 42	\$2,000 00	*	*	\$4,748 82	\$28,103 74

INSTITUTION FOR THE DEAF AND THE BLIND.

TABLE No. 16. Enrollment, Number of Teachers, Receipts and Expenditures, Valuation of Property.

CALIFORNIA SCHOOL FOR THE DEAF AND THE BLIND.

TABLE No. 16.

Showing Statistics California Institution for the Deaf and the Blind.

BERKELEY, CAL., September 7, 1914.

L. E. MILLIGAN, Principal.

The enrollment of pupils for the two years ending June 30, 1914, has been as follows:

Deaf boys	123	
Deaf girls	87	
		210
Blind boys	52	
Blind girls	42	
		94
Total both classes.....		304

The number of teachers, including manual craft instructors, has been:

Deaf Department.

Teachers, men	11	
Teachers, women	9	
		20

Blind Department.

Teachers, men	4	
Teachers, women	12	
		16
Total		36

RECEIPTS.

Appropriations for salaries and wages.....	\$117,467 91
Appropriation for support.....	54,633 86
Total	\$172,101 77

EXPENDITURES.

STATE TEXTBOOKS.

TABLE NO. 20. Number of Textbooks Sold, and Amount of Money Secured as the Result of Such Sales; Number of Books Distributed Free, Cost of Free Textbooks and Distribution; General Review of Textbooks, Sales, etc.

TABLE No. 20.

The following tables will show the number of textbooks sold, the number distributed free to the elementary schools, since January, 1913, the cost of the manufacture of the same and the cost of distributing the free textbooks and the amount of royalty paid textbook companies for the use of their plates in the manufacture of the books.

Number of textbooks sold to dealers, orphan asylums, private schools and individuals from July 1, 1912, to June 30, 1913, cost per book of manufacture, amount of money paid into state treasury from sale of books, etc.

Books	Number of books sold	Cost of manufacture	To school book fund	Royalty	To royalty fund	Price	Amount of sales

SUMMARY OF TEXTBOOKS.

Sold and distributed free: 1887-1914.

Period	Number of books sold, Column (a)	Number of books distributed free, Column (b)	School book fund, Column (c)	Revolvy fund, Column (d)	Annual fund, Column (e)
Prior to July 1, 1904.	4,052,327	-----	\$1,429,297 52	\$10,821 75	\$1,440,119 27
July 1, 1904, to June 30, 1906.	857,749	-----	310,105 09	87,471 36	395,272 38
July 1, 1906, to June 30, 1908.	1,072,575	-----	292,748 67	101,880 05	394,628 72
July 1, 1908, to June 30, 1910.	1,178,594	-----	247,944 36	75,859 56	323,803 92
July 1, 1910, to June 30, 1911.	683,079	-----	152,341 82	41,922 60	194,264 42
July 1, 1911, to June 30, 1912.	683,527	-----	159,143 15	42,100 08	201,243 23
July 1, 1912, to June 30, 1913.	476,241	477,933	78,352 70	55,321 72	106,037 84
July 1, 1913, to June 30, 1914.	13,526	1,379,154	1,645 48	86,140 38	2,319 56
Totals	9,017,618	1,857,087	\$2,671,548 79	\$501,517 50	\$3,057,659 34

Columns (a) and (b) are self-explanatory.

Column (c) is the total amount of money paid into the school book fund as a result of the sale of books listed in column (a).

Column (d) is the amount of money paid to the textbook companies for the use of plates in the manufacture of all state textbooks.

This includes both books sold and books distributed free.

Column (e) is the total amount of money paid into the state treasury as the result of sales, column (a).

GENERAL STATISTICAL SUMMARY.

TABLE No. 21. Totals for 1913 and 1914 for Kindergarten Schools, Elementary Schools, Normal Schools. Recapitulation Showing Totals for All Schools.

STATISTICAL SUMMARY.

TABLE No. 21.

Statistical Summaries, 1913-14.

(Kindergarten, Elementary, High and Normal Schools, and California Polytechnic School, and University of California.)

(1) Kindergarten Schools.

	1913	1914
Number of counties maintaining	13	13
Number of teachers employed (women)	317	355
Grade of certificates held by teachers—		
Kindergarten primary	290	323
Kindergarten special	27	32
Totals	317	355
Number of pupils enrolled—		
Boys	5,529	6,532
Girls	5,466	6,538
Totals	10,995	13,070
	1913	1914
Average daily attendance	5,707	6,937
Average number of days school was open	180	183
Annual salary paid teachers (average)	\$868 26	\$822 30
Number of school visits made by county superintendents	479	432
Number visits by school trustees	215	338
Number books in libraries	1,162	1,863
<i>Financial Statement.</i>		
Receipts from—		
Balance on hand	\$3,388 91	\$650 75
Taxes of all kinds	274,676 30	319,502 00
Donations, etc.	1,304 00	-----
Total receipts	\$279,369 21	\$320,152 75
Expenditures for—		
Teachers salaries	\$250,594 14	\$298,264 23
Supplies, etc.	16,269 56	11,362 01
Buildings	11,157 42	2,390 76
Totals	\$278,021 12	\$312,017 00
Balance on hand in funds	1,348 09	8,079 92
Valuation of all property—		
Sites and buildings	\$186,895 00	\$98,451 00
Books and apparatus	21,833 00	6,029 00
Totals	\$208,728 00	\$104,480 00
Average tax rate for maintenance		\$.067
Cost per pupil per annum for teachers and supplies	\$24 27	23 70
Schoolhouses—built of—		
Brick	4	2
Wood	47	37
Totals	51	39

Many of the kindergarten schools are held in the regular grammar school buildings. The results are that an estimate of buildings and valuation of property varies from year to year.

TABLE No. 21—Continued.

Statistical Summaries, 1913-14.

(Kindergarten, Elementary, High and Normal Schools, and California Polytechnic School, and University of California.)

(2) Elementary (Primary and Grammar) Schools.

	1913	1914
Number of districts at beginning of year.....	3,349	3,374
Number organized	86	73
Number of suspended re-established	17	25
Number lapsed	28	17
Number suspended	45	36
Number combined	5	9
Total at close of year	3,374	3,410
Number of schoolhouses built of—		
Stone	25	8
Concrete	63	113
Brick	258	301
Wood	3,927	3,977
Totals	4,273	4,399
Number of teachers allowed on attendance.....	10,639	11,270
Number of teachers employed—		
Men	1,085	1,162
Women	10,468	11,104
Totals	11,553	12,266
Grade of certificates of teachers in Elementary schools—		
High school	483	515
Grammar	10,416	11,095
Primary	75	63
Special	549	593
Totals	11,553	12,266
Number of teachers attending institutes.....	11,208	11,761
Enrollment of pupils:		
First year—		
Boys	43,932	47,217
Girls	37,099	40,664
Second year—		
Boys	26,384	28,148
Girls	22,751	24,324
Third year—		
Boys	25,352	26,957
Girls	23,557	24,324
Fourth year—		
Boys	24,324	25,933
Girls	22,593	24,342
Fifth year—		
Boys	22,774	23,803
Girls	20,784	22,292
Sixth year—		
Boys	20,244	21,913
Girls	18,685	20,056
Seventh year—		
Boys	17,738	18,933
Girls	17,185	18,256
Eighth year—		
Boys	17,113	17,772
Girls	17,418	17,367
Total boys	197,861	210,676
Total girls	180,082	191,348
Grand total boys and girls.....	377,943	402,024

TABLE No. 21—Continued.

	1913	1914
Number of graduates from grammar schools—		
Boys	10,381	11,878
Girls	11,523	12,902
Totals	21,904	24,780
Attendance, length of term, libraries, etc—		
Average daily attendance	297,884	319,244
Number of districts maintaining school—		
Less than 120 days for the year	27	13
Between 120 and 160 days	423	369
Between 160 and 200 days	2,611	2,764
Over 200 days	256	212
Total districts in which school was open	3,317	3,358
Average number of days schools were open	171—	172+
Average amount of money paid teachers per annum—		
Men	\$1,021 63	\$1,018 96
Women	732 02	744 91
Number of visits made by—		
County superintendents	20,101	22,461
School trustees	19,525	16,722
Number of books in school libraries	2,484,371	2,747,901
Number of books in county teachers' libraries (library of county superintendent)	59,805	52,530

NOTE.—In several counties the county library has absorbed the books in school libraries and the books in the teachers' libraries, as they can be bought and handled to better advantage in this way.

Financial Statement.

	1913	1914
Receipts from—		
Balance on hand	\$4,476,584 63	\$4,039,779 63
State apportionments	5,195,268 50	5,430,282 61
County apportionments	5,591,184 58	4,980,197 76
City or district (special) taxes	3,602,377 44	4,591,921 29
Sale of bonds	2,130,552 60	3,267,805 05
Miscellaneous sources	399,485 39	356,898 66
Total receipts	\$21,395,453 14	\$22,666,885 03
Expenditures for—		
Teachers' salaries	\$10,694,708 07	\$11,752,150 24
Contingent expenses, supplies, etc.	3,330,616 22	3,161,163 41

LETTER OF TRANSMITTAL.

September 28, 1914.

To his excellency, HIRAM W. JOHNSON, Governor, State Capitol, Sacramento, California.

DEAR SIR—The Recreational Inquiry Committee has the honor to transmit herewith the report of its investigation of recreational conditions in the State of California.

The Committee held three general meetings, two in San Francisco and one in Los Angeles. There were also numerous conferences and much correspondence between the individual members of the Committee.

The work was divided into three parts, certain members being assigned to report upon those parts:

1. Why we need recreation.
2. Existing conditions of recreation in the state.
 General conditions.
 Rural recreation.
3. What we need further in recreational facilities.
 Recommendations.

There has been of necessity some overlapping, but it was thought best to submit these reports severally, rather than to combine them in one. Respectfully submitted,

HERBERT C. JONES,
HOWARD A. PEAIRS,
C. A. STEBBINS,
GRACE M. FERNALD,
BESSIE D. STODDART,
JAMES E. ROGERS,
AUGUST VOLLNER,
Recreational Inquiry Committee.

CREATION OF THE STATE RECREATIONAL INQUIRY COMMITTEE.

The following resolution, authorizing the appointment of a Recreational Inquiry Committee, was passed at the Legislature of 1913.

SENATE CONCURRENT RESOLUTION No. 29.

Relative to the appointment of a recreational inquiry committee for studying, investigating and reporting with recommendations upon recreation for both young and old in California, including recreation in rural communities as well as in small and large towns and cities.

Resolved by the senate of the State of California, the assembly concurring, That a committee of seven persons, consisting of one member of the senate, and one member of the assembly, and five other persons, be appointed for the purpose of studying, investigating and reporting upon recreation for both young and old in California, including recreation in rural communities as well as in small and large towns and cities.

The president of the senate shall appoint the senate member of said committee, and the speaker of the assembly shall appoint the assembly member of said committee, and the governor shall appoint the remaining five members of said committee, said five persons to be chosen for their knowledge or experience, or both, in public school work, in juvenile court work, in playground work, in public and private charities, and in police work, respectively. Such committee shall be appointed promptly; and the initial meeting thereof shall be called by the senate member of said committee, which shall thereupon choose from among its own members a chairman, a secretary and a treasurer.

Said committee shall make such study and investigation, and shall make such report on or before November 1, 1914, with such recommendation to the governor, to be transmitted to the next regular session of the legislature; and for the purpose of such study, investigation and report, such committee may solicit and receive gifts. The moneys received by such committee may be used to defray the expenses incurred by it in the performance of its duties in accordance with this resolution. The report to the governor herein mentioned shall be accompanied by a financial statement showing the amount of all moneys received and the disposition of the same.

The following were appointed upon the Recreational Inquiry Committee:

Senator Herbert C. Jones, of San Jose, appointed by the President of the Senate.

Assemblyman Howard A. Peairs, of Los Angeles, appointed by the Speaker of the Assembly.

C. A. Stebbins, of the Chico State Normal School, appointed by the Governor for his knowledge of public school work.

Dr. Grace Fernald, of the Los Angeles State Normal School, appointed by the Governor for her knowledge of juvenile court work.

Bessie D. Stoddart, of Los Angeles, appointed by the Governor for her knowledge of playground work.

James E. Rogers, of San Francisco, appointed by the Governor for his knowledge of charities.

August Vollmer, of Berkeley, appointed by the Governor for his knowledge of police work.

Officers of Committee: Chairman, Senator Herbert C. Jones; Secretary, Bessie D. Stoddart; Treasurer, James E. Rogers.

PART ONE.

WHY WE NEED RECREATION.

JAMES EDWARD ROGERS.

PART ONE.

WHY WE NEED RECREATION.

JAMES EDWARD ROGERS.

Percy Mackaye in the Civic Theater says that the use of a nation's leisure is a test of its civilization and that public amusement is a matter of public leisure.

The full force of this statement is now realized by those who hold public office and by those who serve the public as social, civic or recreational workers.

At the threshold of the twentieth century what is the clarion call to be? The new "call" is not to conserve natural resources, but to conserve human resources. Two hundred years of industrialism have fostered the rapid growth of prouder cities, the erection of giant factories, the acquirement of prodigious wealth. In all this mad rush, the *human* has been neglected. This age has been well termed by economists the Machine Age. Human beings have been converted into machines, and our large factories are but the cogs of the greater mechanism.

Just as this spirit of industrialism caused waste in natural resources, it has likewise caused waste in human energies and capabilities, so that today students of society and well-wishers of the public have come to realize that they must preach the doctrine of the conservation of humanity. The nineteenth century was the century of the Machine, the twentieth will be the century of the Man. Our interests will center about the individual as a living, responsible factor in the community, and, in the spirit of conserving human strength and resources, attention will be paid to preserving and fostering the leisure time of the individual and of the community. No social truth is more deeply written upon the hearts of men today than Mackaye's words: "The use of a nation's leisure is a test of its civilization."

Industrialism grows and at its side leisure is likewise growing. Much of this latter growth is due to the presence and to the demands of labor organizations. Much is also due to the greater systematizing of our industrial life. Much is due to the fact that the strain of modern industrial life is prohibitive to steady working during sixteen, fourteen and twelve hour days. Employers realize the efficiency added by the short eight or nine hour working day during which the employees can labor to their full capacity and with all their energy.

Yet much of this growth in leisure time has also been produced by natural causes within the organization of industry. Whatever the causes, the fact remains that today the majority have a much shorter

working day, and soon the standard working day will be eight hours. This means that what was once the privilege of the few will be the privilege of the many.

The significance of this increased leisure time for the people has not yet been fully appreciated, but it is the greatest problem with which the coming century must cope and it will demand man's best courage and wisdom before it can be properly handled. For together with this growth of industrialism and this greater leisure there has come the abolition of the old-time home with its front lawn and its back yard. The old-fashioned pleasures and amusements of the evening are no more. Nowadays people live in flats, apartment houses and hotels. These increased hours of leisure, therefore, are not spent in the simple pleasures and pastimes of the home, but are spent instead in the streets of the community and under the roofs of privately owned and operated houses of amusement, such as the motion picture house, the dance hall, the theater and the pool room.

Within the last twenty-five years our cities have just begun to awaken to the urgent necessity of providing for the people's leisure time and to enter into competition with privately owned amusement places through the establishment of recreation centers, public parks and playgrounds, social centers, athletic fields and bathing beaches.

The social settlements were the first to anticipate this need and to realize what private capital was doing when it entered the field to provide entertainment for the people during their increased leisure time. They did not, however, realize that this was a matter of public concern.

Here is the problem in a nutshell. There are twenty-four hours in the day. In the past, roughly speaking, these twenty-four hours have been divided into two parts: twelve hours of labor and twelve hours at home.

But today there has been a shift in the twenty-four hours, and instead of being divided into two parts of twelve hours each, the day is now divided into three parts of eight hours each—eight hours or one third at home, spent largely in sleep, eight hours or one third at the factory and workshop, and eight hours or one third for leisure.

Turning to our laws, we find little legislation relating to this eight hours of leisure time except that which has been passed in recent years. This part of the twenty-four hours has yet to be adequately covered and will demand the strictest attention from our law-makers. Just as in the past the "laissez faire" system dominated labor and private property, so today in leisure this doctrine of let-alone holds sway; but just as this doctrine gave way in the two former cases, so it will have to give way in the matter of leisure hours.

The student of modern, everyday life has learned emphatically that most of our municipal problems of daily concern arise from two causes.

First, there are such problems as building streets, keeping them clean, sewerage, public buildings and the maintenance of police and sanitary protection. These problems may be called public works.

The student of municipal government, however, sees that the most of the so-called social and civic ills arise not from these municipal activities, but rather from those activities which should be under municipal control and direction and are not. The new department of government is grouped under the general title "public welfare."

The student turns to the saloon, which is primarily a recreation center and social gathering place, and in the saloon he sees the problems of drink and crime connected with recreation, and poverty and charity connected with recreation. He sees the social problem arising from the dance hall and the skating rink and realizes that crime and evil-doing arise from these public recreation places which are owned and operated privately. So we may run the whole gamut of recreation places privately owned, and we will see that such civic problems as crime, poverty and white slavery are born largely, if not wholly, from these hours of recreation ill-spent.

The student of government, therefore, sees very clearly that to cope with these newer problems the government must provide adequate legislation and must take constructive steps toward maintaining and supervising public recreation places.

The leisure time of the people has been capitalized by private individuals to the extent of billions of dollars throughout the country. The sums spent in erecting palaces of amusement can not be computed. The commercialization of the amusements of the people has meant in part the prostitution of the people's leisure time, for usually the owners of places of amusement have had but one desire and aim—to make money.

In some cases, it is true, theater owners have done everything in their power to provide clean amusement for their patrons and dance hall proprietors have taken every precaution to protect their clientele. But these men are the exceptions, not the rule. Usually the owners of amusement places have but one care—to increase their dividends.

True it is, therefore, that the nation's concern must be directed toward supplying wholesome recreation for the leisure hours of the people; yet more particularly is it true that the nation should provide for the young men and women who work in its shops and factories, and who when they have an evening free must seek their pleasure in privately owned and privately conducted dance halls, skating rinks and amusement palaces. These places do very little in the way of providing healthful forms of amusement or taking precaution to protect the innocent. From these places many white slavery cases have their beginnings and many young men make a wrong start in life.

The coming problem in the field of recreation is immediately to provide municipal dance halls and recreation places which will guarantee to the future mothers and fathers, to the responsible men and women of tomorrow, a protection from the evil-minded and from the wrongdoer. Public recreation is a public utility as much as the other necessities of life, such as light, air and water.

How is it that the minister, the school teacher, the social and charity worker, and the probation officer have come to realize the necessity for paying keen attention to this situation?

The minister knows that his church is practically empty as far as young boys and girls and especially young men and women are concerned. Where are they? In places of amusement. Why? To satisfy the human instinct and natural desire for play. Hence, we find the church concerning itself with social work, with gymnasiums and recreation centers, and auditoriums and clubrooms, with clean places of amusement where the young people of the congregation may gather.

The school teacher has come to realize that it is wise to make physical training and recreation a considerable part of a child's education; that Froebel and Pestalozzi were right in basing their philosophy upon the inborn desire of children to grow and develop through play. Groos in his book, "The Play of Man," has clearly shown that after all much that we are today is not the result of formal instruction in the schools, but rather of that instruction which came through play in the yard and out of doors. The truth of this fact has recently dawned upon our foremost educators and so today we see the earnest efforts of school teachers and superintendents to make physical education and recreation part of the regular curriculum. And so in cities throughout the country we find special departments, as in New York and Rochester, which deal with opening the school plant to wider use, both building and yard, and with the recreation of young and old in the afternoons and evenings.

In addition to this development on the recreational side there has been an equally rapid growth under separate organization of a department of physical training for boys and girls through the public schools athletic leagues. Baltimore alone spent over \$40,000 last year in this one line of work. Besides, universities and normal schools are creating and maintaining departments which provide courses for training men and women who are to become qualified recreation workers. Five thousand workers are already enlisted in this new profession. In short, the school people in this country are just beginning properly and adequately to take care of the physical and recreational needs of our youth.

The social worker realizes that much of the misery in the world comes through the lack of leisure time or the misuse of leisure time. He realizes, perhaps more than any one else, that not only must the municipality provide and supervise recreation for the people, but also that it

must instruct the people in the use of their leisure hours. The love of the finer pleasures, such as music, reading, folk dancing, pageantry, must be cultivated to take the place of the wilder pleasures, such as gambling, drinking, ragging, skating.

The juvenile probation officer is a strong advocate of municipally controlled and directed recreation, because he knows that ninety per cent of the wrongdoing committed by the young is due to the misuse of leisure time. Mischievousness is nothing less than perverted play. Court records throughout the country testify that 65 per cent of the cases of juvenile delinquency arise from the misuse of leisure time by the young. Statistics also show that whenever a playground or social center is opened in a neighborhood where juvenile delinquency is a highly prevalent evil, such delinquency is decreased by 50 per cent. Throughout the country these probation officers have been insistent in their demands for social centers and recreation places as the most efficient means for decreasing juvenile delinquency and crime.

The charity worker also comes into close contact with recreation problems. One authority in the charity field has recently stated that perhaps 90 per cent of the illegitimate children brought to their attention were the result of misguided recreation instincts. The community's problem in taking care of a young girl tricked into motherhood and of an innocent babe is twofold; yet frequently there is but a single cause—a young girl seeking either in a dance hall or skating rink an evening's amusement. In many other ways the charity worker will point out the fact that poverty is due to the wrong use of leisure time, the indulgence in drink and other vices.

The business man, perhaps as much, if not more than others interested in the community's welfare, is vitally concerned with the problem of how his employees spend their leisure time. The cry in the business world today is "Efficiency!" and the business man realizes that he must have employees who are "on the job" bright and early with clear brains and steady nerves, men and women who have not dissipated the evening previous their capabilities and energies in misusing their leisure time.

The managers of large concerns such as department stores and factories have themselves assumed the task of providing decent, clean recreation for their employees. Very large sums have been spent by such concerns as the Dayton Cash Register Company, the United Steel Corporation, the Pullman Car Company, the Hershey Chocolate Manufacturing Company, Wanamaker's, Marshall Field's and the Emporium, in providing amusement for their employees. All this is not done merely for altruistic reasons, for employers are just as anxious to assure themselves a class of employees who shall be permanent, happy, clear-headed and always on the job, as to give these employees recreation. They find

that this welfare work pays in increased dividends and in decreased labor troubles. They realize that the girls and young men who spend their idle hours in pursuit of the wrong sort of amusement are restless, listless, inefficient and often useless. Nay, there is a further loss which this welfare work saves concerns. Many have medical and pension systems, and those who misspend their recreation hours are always on the sick list or soon on the pension pay roll. Furthermore, new legislation, such as the workmen's compensation act, has made the listless and indifferent workmen a menace to be avoided by the thoughtful employer.

Masses of new people have had, with the shortened working day, free hours thrust upon them to do with as they will. The employer in order to protect his factory, his warehouse, his products and his profits, must see to it that they are not dissipating them in evil places of recreation.

This new leisure class is the result of industrial revolution that ushered in the factory system and the machine age of steel and electricity. It has increased production to such a point that with efficient methods the working day may be shortened.

Our municipalities are arriving at the same opinion concerning the importance of recreation, rather slowly perhaps, but steadily nevertheless. They must do so, for it is a matter of self-preservation and of common concern. So we find a national playground and recreation association, and many municipal organizations, such as recreation leagues and alliances, established throughout the country for the express purpose of providing clean recreation for young and old.

Universities are training young men and women to be leaders in the recreational field. Cities are inaugurating recreation commissions to provide, maintain and supervise playgrounds, athletic fields and social centers. Our parks are becoming park playgrounds, no longer remaining horticultural only. They are now places of amusement where people may find opportunity to indulge in sports and games and in picnicking.

Our school boards are opening the schools, buildings and yards, as evening recreation centers and outdoor neighborhood playgrounds. In fact throughout the community all available means are being used to provide for the leisure time of the people. Our people are harkening to the cry as stated by Percy Mackaye, "The use of a nation's leisure is a test of its civilization."

Today, therefore, we have this very interesting situation: public and private enterprise are competing for the privilege of providing recreation for the people's leisure time. On the one hand we find millions of dollars invested by factories and shops for welfare work, by cities for parks, playgrounds and athletic fields, by workers and believers in recreation. On the other hand we find vast sums of money expended by private individuals and corporations, catering in many ways to the demands of the people who crave and cry for amusement. Out of this

competition, which will become fiercer and more heated yearly, has grown a strong feeling that the municipality should have some control over even privately owned and managed recreational places. Just as the city and government at large has come to regulate privately owned industry, so in recreation the well-wishers of the community have come to the decision that part of the duties of recreation commissions should be to supervise and censor privately owned concerns which furnish amusements for the people during their leisure hours. The doctrine of *laissez-faire* must be discarded for the eight hours of the twenty-four which are devoted to recreation.

The immediate problem is this: Let the municipality recognize its right to control places of amusement which its citizens patronize. The future problem is this: Let the municipality adequately provide for and supervise the leisure time of its citizens, young and old.

It will be no easy task to gain recognition for those two problems. The opposition, backed by money and men of shrewdness, will be great. But this opposition must be met by well-wishers of society who possess strength of character, infinite patience, and common sense.

We submit the following section of the report more as an indication of the work that needs to be done in the state than as a complete survey of the situation. A report of recreation for the entire state, in order to be even approximately complete, would involve adequate leisure and funds, as each situation needs to be actually studied first hand. Perhaps there is no field in which an extended superficial investigation would be of less value than in the one we have under consideration. We have, consequently, limited our study to certain restricted fields and endeavored to make it as thorough as possible within those fields. We have not used questionnaire results, unverified by direct investigation, except in the report on schools and on commercial recreation. In these two cases the results depend on actual statistics sent by school and police officials.

The Committee has on file considerable material which will be of value when completed by further investigation.

Enough ground has been covered in our brief study to show either the need of definite constructive or corrective work, or else the need of more complete and detailed study.

The following outline gives the fields that we feel should be covered in any complete survey of recreation:

Outline of Activities Which May be Considered as Phases of Recreation.

A. Public amusements.

I. Recreation centers.

1. Playgrounds.

- a.* Gymnasium.
- b.* Indoor games.
- c.* Outdoor games.
- d.* Swimming baths.
- e.* Dancing.
- f.* Music.
- g.* Drama.
- h.* Fine arts and manual training.
- i.* Picture shows.
- j.* Social entertainments.

2. Recreation parks.

- a.* Boating.
- b.* Music, band or orchestra.
- c.* Museum.
- d.* Art gallery.

II. Parks.

III. Swimming.

- 1. Pool.
- 2. Beach.
- 3. River.

IV. Public resorts.

- 1. Mountain.
- 2. Beach.
- 3. River.

V. Social centers.

- 1. Schools.
- 2. Special buildings.

} Including {
 1. Social meetings.
 2. Political meetings.
 3. Lectures.
 4. Instruction.
 5. Children's entertainments.

VI. Excursions.

- 1. Tramping.
- 2. Bicycle trips.
- 3. Camping.

VII. Fairs.

B. Institutional.

I. Public.

- 1. Orphanage.
- 2. Home finding societies.
- 3. Day nurseries.
- 4. Homes for dependents.
- 5. Detention homes.
- 6. Reform schools.
- 7. City jails.
- 8. County jails.
- 9. State penitentiaries.
- 10. Asylums.
 - a. Insane.
 - b. Deaf and dumb.
 - c. Blind.
 - d. Home for aged.
 - e. Feeble-minded institutions.
- 11. Hospitals.

II. Educational.

- 1. Elementary schools.
- 2. Intermediate schools.
- 3. High schools.
- 4. Normal schools.
- 5. Universities.
- 6. Libraries.
- 7. Art museums.
- 8. Museums.

} Including {
 Gymnasiums.
 Playgrounds.
 Entertainments.
 Libraries.
 Museums.

III. Private.

- 1. Y. M. C. A.
- 2. Y. W. C. A.
- 3. Athletic clubs.
- 4. Church centers.
- 5. Orphanages.
- 6. Home finding societies.
- 7. Day nurseries.
- 8. Asylums.
 - a. Orphan.
 - b. Deaf and dumb.
 - c. Insane.
- 9. Homes for the aged and infirm.
- 10. Homes for defectives.
- 11. Schools.
 - a. Elementary.
 - b. Preparatory.
 - c. Business colleges.
 - d. Colleges and universities.

C. Commercial.

I. Entertainments.

1. Theaters.
2. Moving pictures.
3. Dance halls.
4. Penny arcades.
5. Cabarets and cafes.

II. Games and gymnastics.

1. Pool rooms.
2. Bowling alleys.
3. Swimming baths.
4. Base ball parks.
5. Boxing contests.
6. Racing.
7. Boating.
8. Tennis courts.
9. Skating rinks.

III. Parks.

1. Amusements.
2. Picnic.

IV. Excursions.

V. Resorts.

1. Mountain.
2. Beach.
3. River.

VI. Libraries.

1. Book exchanges.
2. Circulating libraries.
3. Magazine stands.

D. Industrial.

- I. Stores.
- II. Factories.
- III. Railroads.
- IV. Telephone and telegraph.
- V. Mines.
- VI. Farms.
- VII. Logging and lumber camps.

} Including

- Gymnasiums.
- Games.
- Social entertainments.
- Picture shows.
- Music.
- Dancing.
- Fine arts and manual training.
- Picnics and excursions.

E. Philanthropic.

1. Church.
2. Settlement.

PLAYGROUNDS.

We are all more or less familiar with the playground movement in the United States and with the splendid work that is being done along this line in California. The following table gives the data concerning the playground work in the principal cities of California last year. The statistics are taken from "Playground," January, 1914.

California Playground Statistics.

City	Population	Number of centers	Hours open under supervision	Average Daily attendance July and August	Managing authorities	Total expenditures	Source of support
Alameda	28,353	3	28 per week	600	Recreation committee	\$14,969 38	Municipal funds.
Berkeley	40,434	1	5 per day	150	Playground commission	1,471 91	Municipal funds.
Coalinga	4,159	1	7 per day	30	Women's club	140 69	Private funds.
Kentfield	130	1	2-6	4,290	Women's club	61,644 15	Private funds.
Los Angeles	319,198	22	(15) 5 (6) 6 (1) 10	350	Playground commission	5,650 00	Municipal funds.
Marysville	5,430	1	6	3,013	Playground commission	50,385 66	Municipal funds.
Oakland	150,174	13	Summer, 7; winter, 4 $\frac{1}{2}$	550	Board of playground directors	6,000 00	Municipal funds.
Pasadena	30,291	1	7 $\frac{1}{2}$	750	City	15,500 00	Municipal funds.
Riverside	15,202	1	7	173	Park commissioners	80,000 00	Municipal funds.
Sacramento	41,695	3	7 $\frac{1}{2}$	2,229	Playground commission	79,960 00	Municipal and private funds.
San Diego	39,578	1	7	200	Playground commission	2,900 00	Municipal and private funds.
San Francisco	416,912	9	Winter, 3 $\frac{1}{2}$; summer, 8 $\frac{1}{2}$	150	Playground commission and recreation league.	1,200 00	Municipal and private funds.
Santa Barbara	11,659	3	8 p.m. to 10 p.m.	300	Neighborhood house	1,200 00	Private funds.
Stockton	23,253	2	9 a.m. to 10 p.m.	3	Playground association	1,200 00	Municipal and private funds.

SCHOOL AS A SOCIAL AND PLAY CENTER.

The Committee was surprised at the difficulty experienced in obtaining information concerning the use of the schools as social and play centers. We understand that it is the purpose of the State Board of Education to take the matter up and to investigate first the number of social centers already established and second the means whereby others may be encouraged and developed. While every one admits that the school is the logical center for the social and play life of the community, the movement seems to be as yet little organized in the state.

The Committee sent out a questionnaire to the school districts of Los Angeles County. Answers were returned from 100 districts and covered 531 schools. Fifteen schools, thirteen school districts, reported nothing in the way of recreation connected with the schools. Ten asked for assistance in establishing centers and playgrounds and have spoken of the need of the district for these things. The answers are too indefinite to tabulate.

The report showed very little general use of the schools as social centers except in the city of Los Angeles. The answers show that, with the exception of the city of Los Angeles, the people have not yet generally availed themselves of the recent act of the legislature, making the use of the school as a social center by any given community optional. The reports and the letters sent with them show an awakening interest particularly in rural communities. It is probable that with some assistance from the state, the schools of California could be generally used as social and recreation centers.

What can be done in a given community is shown by the specific instances of schools in the state which have become real neighborhood centers. Such a school as the Castelar School in Los Angeles illustrates the place a school may have in the community. This school is used by a congested Slavic, Mexican, and Italian population from early morning till late at night for everything from men's and women's clubs to shop work and shoe repairing, and is crowded at all times. A sufficient number of other schools are successful as social centers to justify any movement which will make the practice general.

PUBLIC LIBRARIES.

The following statistics are taken from the January 1914 issue of the "News Notes of California Libraries":

- 24 county free libraries;
- 1 library-district library;
- 3 high school district libraries;
- 129 libraries supported by city taxation;
- 66 law libraries;

- 58 county teachers' libraries;
- 334 libraries in educational institutions, including :
 - 6 universities;
 - 7 colleges;
 - 7 normal schools;
 - 248 public high schools;

46 subscription libraries with 626 branches and deposit stations.

There are 125 library buildings, of which 108 were gifts and of these gifts 91 are from Andrew Carnegie. Of these 91 Carnegie buildings, 6 are being planned, and 2 are under construction.

One of the most interesting phases of the library work is the establishment of branch libraries in playground and social centers. Those connected with the work tell us that this is one of the best means of actually getting the books to the people who need them.

PUBLIC LANDS.

We have no statistics concerning the number of people who use the public beaches, mountain resorts, and the millions of acres of forest reserve lands, but we do know that they have not been made as accessible as might be to people in moderate or poor circumstances. (See Part Three, Recommendation III.)

RECREATION IN INSTITUTIONS.

Before discussing the recreation facilities of our state institutions, we should make it clear that we do not include under recreation merely games and physical exercises, but all those activities which may be performed for their own sake in such a way as to refresh and develop the individual. Recreation should be a term to cover all the activities of the individual which are not expended in toil.

Much of the labor of today is so mechanical that the burden of the moral and aesthetic development of the individual is thrown more and more on recreation. The only thing of any value the institution does for the individual is to develop in him ideals that shall hold outside the institution and give him such education and habits as shall be of aid in realizing these ideals. The problem is the more difficult in reformatory institutions as the new idealism must be strong enough to hold against old ideals and habits.

Number of inmates in institutions.

There are in state institutions, a total of 13,968 inmates distributed as follows (July 1, 1914) :

Industrial Home for Adult Blind.....	116
Total in reform schools.....	687
Total in state hospitals (insane).....	8,769
Total in Sonoma State Home (feeble-minded).....	1,035
Total in state prisons.....	3,361
Total	13,968

In other institutions, which receive state funds, there were, according to the latest statistics available (July, 1912), 3,258 children. The state expended \$207,004 on these latter institutions, and the cities and counties \$111,818, making a total of \$318,822. There are, in addition to the 17,226 individuals, already mentioned, the inmates of county and city jails.

Need of investigation.

Perhaps it will be claimed that it is not necessary even to investigate the recreation in these institutions as they all are under the management of individuals who are capable of looking after this side of the life of the inmates. The answer is that in our investigation we found situations which are almost barbarous in their disregard of the needs of the individual for spontaneous activity. We should state further that the difficulty was sometimes due to the conditions for which the heads of the institutions are not responsible, such as a large number of inmates crowded into a single building.

Result of investigation of fifteen institutions.

The Committee has not been able to make a thorough investigation of all the institutions of the state. We have fairly complete data, however, concerning fifteen of them. We found, even in this small group, everything from almost ideal conditions to conditions which should not be allowed to continue.

The following summary gives a statement of conditions in two specific institutions. These institutions represent the two extremes:

Too long a period before breakfast (one and three-quarter hours): time mostly spent in religious exercises and work.

Meal time silent—*not allowed to speak, even to ask for food.*

No athletics or games. (Condition found only in institutions for girls or women.) Walk and talk for recreation.

Children under school age not in school required number of hours.

Poor and inaccessible library—no periodicals.

Evenings—sit around except when religious meetings are held. Talk until bedtime.

Work so hard, too exhausted for play; do laundry work for people outside school.

Dress and brief exercise (about half hour in all before breakfast.)

Meal time real recreation—natural conversation, laughter.

General athletics and games during recreation and other periods.

Special feature made of correcting all defects in education and vitalizing school.

Splendid library—best periodicals.

Games, music, reading, entertainments, till bedtime.

Work constructive and reasonable, training for future occupation.

Among the fifteen institutions investigated, four could be classified as extremely good, that is, they have practically the same conditions as those described under the second column. Three have conditions which

are extremely bad. In two the congestion is such as to thwart the best efforts of the superintendents; in another the large number of inmates and the lack of segregation of various grades of defectives, makes suitable recreation conditions impossible. In five of the children's homes conditions were fair, though there was not adequate supervision for the number of children who played together. In one institution, delinquent, defective and dependent children were allowed to play together with no supervision and with every opportunity for general contamination.

One condition to which the Committee wishes particularly to call attention is that existing in city and county jails. In many cases, no provision whatever is made for the recreation of the inmates, though they sometimes remain for a period of a year or more. Groups of young boys from sixteen to twenty-one years of age are shut into single pens for periods of from one day to a month with no provision for recreation except the stories they are able to tell each other. The groups vary in size from four to twenty boys.

The Committee wishes to commend especially the work that is being done in the men's department of San Quentin, in the State School at Whittier and in the California School for Girls. These three institutions have so far developed normal recreational activities among the inmates as to prove conclusively that the conditions existing in other similar institutions are inexcusable; moreover, the results already show that proper recreation has a wonderful reformatory value.

In the men's department at San Quentin, in addition to baseball, handball and general athletics, there are dramatics, lectures and excellent library facilities. The educational work can also be classified as a phase of recreation. This consists of an hour and a half of school a day for the younger men, and in university extension courses. Three hundred men are now taking regular university extension courses.

The most remarkable thing about the recreation in the Whittier State School is the spirit which has developed there within the last two years. Recreation is not limited to formal play periods; even meal time is made a genuine recreation. All the spare moments between work periods are utilized in some constructive way so that the boys are active and at the same time spontaneously happy. This is very remarkable in contrast to institutions where the boys sit around and talk or else have all activity suppressed in the interludes between work. In the evening there are entertainments, informal parties, as well as occasional attendance at meetings and entertainments outside the school.

In outlining the recreation work of the Whittier State School, the superintendent included in his report certain valuable suggestions concerning the needs of the institution before ideal recreational activities can be established. He includes under the essential conditions the establishment of the cottage plan, with small enough groups to make

home life possible; the segregation of the mentally defective from the normal; sufficient funds to pay well trained men in the capacity of teachers and officers.

Within the last few months the newly appointed Women's Board for the California School for Girls—formerly the Girls' Department of the Whittier State School—has demonstrated what can be done in institutions for girls and women. Up to that time there was no organized recreation in the school. We were told, as we have been of girls in other institutions, that the girls didn't "care for athletics," that "games excited them too much," that it wouldn't do to let them talk out loud at meals as they would make "too much noise" and that on the whole the problem in a reformatory institution for girls was so different from that of handling other girls that normal conditions were impossible.

We may summarize the present situation by saying that they are doing all the "impossible" things and that the order in the school has never been better than it is now and that the amount of discipline required in the institution has never been so little. Every girl who is physically able is playing basket-ball, volley ball, tennis or baseball, and each girl has a period of developmental gymnastics each day. The evenings are spent in such a pleasant fashion that the girls look forward to them through the day. Even meal time has been reformed into a decidedly normal function.

There is no question concerning the enthusiasm of the girls over the various phases of recreation or the beneficial effects of these activities on the general moral tone of the institution and of the individual girls.

We might add here that we found the worst recreational situations in the institutions for girls and women. Even at San Quentin, where such splendid work is being done for the men, it is not thought necessary to have any organized recreation for the twenty-four women inmates. We were unable to investigate the women's department directly as it was inconvenient for the authorities to show us this department at the time when we visited the prison. We have a letter from the warden and saw the women's court from the outside. Two things seem evident, first that nothing constructive in the way of recreation is being done, and second that it would be difficult to do anything very effective in the small court, which is just a walled-in space in the general prison inclosure.

COMMERCIAL RECREATION.

Perhaps there is no phase of our subject which needs more thorough investigation than commercial recreation. It is safe to say that more of the people of the state indulge in commercial recreation than in all other forms put together.

Summary of statistics for state.

The following table is a summary of the statistics obtained by the member of the committee representing the police from the police officers of the state (for full report see page 8) :

1. Theaters	148
2. Moving picture shows	470
3. Museums, cycloramas or panoramas	22
4. Penny arcades, phonographs or kinetoscope parlors	158
5. Pool and billiard rooms	1,400
6. Card rooms	314
7. Saloons	4,596
8. Bowling alleys or box-ball courts	137
9. Shooting galleries	94
10. Swimming baths	73
11. Amateur baseball parks	210
12. Professional baseball parks	30
13. Amusement parks	49
14. Outdoor parks and gardens	187
15. Recreational grounds	69
16. Picnic parks	85
17. Skating rinks	62
18. Dance halls	331
19. Dance halls where intoxicating liquors are sold	24
20. Dance halls where temperance drinks are sold	165
21. Cabarets	38
22. Cafés or restaurants where music or other entertainment is furnished	124
23. Boathouses where boats are rented	74
24. Tennis courts	196
25. Boxing or prize-fighting clubs	41
26. Circulating libraries	193
27. Race tracks, coursing parks, or motordromes	46
28. Riding academies	9
29. Ring or ball throwing games	64
30. Mountain resorts	177
31. Beach resorts	49
32. River or lake resorts	55
33. Other summer or winter resorts	46
34. Roadhouses	90

Theaters and moving picture shows.

The most thorough report we have on commercial recreation is that of the Commonwealth Club of San Francisco (Transactions of the Commonwealth Club of California, June, 1913).

The following table taken from this report gives the average attendance for and the amount of money spent on various kinds of shows:

The capacities of the theaters and motion picture houses were determined by actual count, and while all such efforts are subject to error, the work was done carefully and with a view to conservatism rather than overestimation.

Attendance.

	Estimated weekly attendance	Estimated yearly attendance	Per cent	Estimated weekly expenditures by patrons	Estimated yearly expenditures by patrons	Per cent
Legitimate theaters (5) -----	34,432	1,790,464	6	\$41,318	\$2,148,536	40
Burlesque theaters (2) -----	20,307	1,055,964	3½	4,467	232,284	4½
Vaudeville theaters (9) -----	141,977	7,382,804	25	31,234	1,624,168	30
Moving picture houses (69) -----	373,776	19,436,584	65½	26,164	1,360,528	25½
Total -----	570,492	29,665,584	100	\$103,183	\$5,365,516	100

This table represents a serious attempt to estimate the attendance. It is figured on what we believe to be a minimum basis, and is, in our opinion, well within the actual attendance.

Statistics based on the study extending over twenty-three months show that classical plays are the least popular; serious dramas, comedies, melodramas and farces rank for popularity in the order named. * * * But musical comedies easily outdistance in popularity all other classes of plays.

In estimating the value of various classes of theaters the committee of the Commonwealth Club consider classical dramas, serious drama and melodrama as either good or neutral in their effect on the audience.

The farces, though often well written, were considered decidedly harmful in their general effect. Vulgarities are not uncommon; plausible and gentlemanly rascals are held up for admiration, and the cardinal virtues and the ten commandments made fertile sources of mirth. It is rare that a farce has any good moral effect; when it has, it generally rises to the dignity of a comedy. The musical comedies are worse. They depend for their success neither on their merit as dramas nor on the skill of the actors; rather are they dependent upon the suggestiveness of the lines and the costumes. The popularity of this class of entertainment with its partiality for equivocal situations and scenes of marital infelicity is to be deplored.

The vaudeville house has spread throughout the city. At the same price, owing to the variety offered, it draws better than the motion picture house. The general effect is good in that it gives enjoyment to many who otherwise would not have it. It is a substitute for amusements that do positive harm. However, its standard is lower than is justifiable, and preventive measures should be taken to limit its coarseness and vulgarity, but it will only be really appreciably improved as to morals and general conduct when, and to such extent as, the community evidences to the management that an improvement may be had not only without financial loss, but with financial gain.

In speaking of the two burlesque theaters, the committee states that "the laughs are obtained by disgusting vulgarity and indecency."

In their report on moving picture shows, the Committee comments on the wide range of subjects and the lack of adequate censorship. Out

of 1,236 films, they found an average of 38 per cent as a per cent of the scenes of brutality and violence. The lack of censorship is due to the fact that the National Board of Censors has no real authority to forbid the appearance of any film and that the need of its approval is not recognized particularly on the Pacific Coast. This leaves the responsibility to the community.

The report of conditions in San Francisco represents, we believe, approximately the conditions in Los Angeles and other cities of the state, though there are, of course, differences in details, as censorship, etc. We have practically the same circuits in other localities as in San Francisco and films are passed from one place to another. Certainly what has been said of censorship applies to all places except those which have rigid local boards of censors. Those of us who have attended the theaters of all classes in Los Angeles during the last year will recognize the descriptions and justify the conclusions.

Dance halls.

We have no statistics concerning dance halls except the mere statements of numbers of such halls given in the police report (page 8). There is such general agreement concerning the detrimental influence of the public dance hall when not properly regulated that it seems almost unnecessary to gather statistics on the subject.

We may quote again from the Commonwealth Club report, as it probably represents the opinion of the group of people who have made the most thorough investigation of the problem in the state up to the present time. In the Commonwealth Club report we find the following statement:

But of all recreations, public dance halls bear the most direct and immediate relation to the morals of their patrons, and it is very much to be regretted that this influence, as at present exerted, is extremely destructive.

This destructive influence upon the morals of those who attend public dances may be directly traced to three primary causes: *first*, the forming of promiscuous acquaintanceships; *second*, the intimate relations of the dancers; *third*, the sale of liquor. In addition to each of these causes exerting an influence peculiarly its own, the three working in conjunction form a combination that is extremely destructive to the moral sense of the participant. This influence, while directed against both sexes, is of course most evident when considered in connection with the young girls and women who frequent the more vicious public dances, for lack of a better place at which to spend their leisure.

THE ALL NIGHT DANCE.

Of all vicious dances, the Saturday all night dance, which has become a part of our city life, is by far the most dangerous. Situated in the heart of the residential district, it does not display the warning signals carried by the dances which are located in a part of the city well known as a center of vice. Young people are attracted to these dances by advertisements displayed upon the fences and in the newspapers, stating that they are given by different clubs and societies, and they attend without a thought of danger. Parents who do not realize their true character often permit their young sons and daughters to attend frequently the most vicious dances.

That Saturday all night dances are a real and not an imaginary cause of delinquency is proven by the fact that while one of these dances was under discussion at a gathering of social workers recently, the statement was made that at least one girl sacrificed her morality as the result of each of those dances. Discussion brought out the fact that the records of our juvenile and other courts show that not only does one girl sacrifice her virtue as the result of each of these dances, but that some weeks three and four cases of this kind are reported. There can be absolutely no question but that at these dances many girls make their first step toward the Tenderloin and the Barbary Coast.

It happens that one of the compilers of this report has had considerable experience among the girls in the juvenile court of Chicago and some experience in California, and she is able to verify the statement just quoted from the sorry stories of many of these girls.

In conclusion, the committee of the Commonwealth Club makes the following recommendations:

The conclusions and recommendations of the Dance Hall Committee of the Recreation Survey of the Commonwealth Club of California are: *first*, that the sale of liquor be absolutely prohibited at any public dances; *second*, that the promotion of public supervised dances is advisable; *third*, that proper supervision be provided for public dances conducted by private interests; *fourth*, that the Commonwealth Club lend all possible assistance to those who are endeavoring to improve dance hall conditions.

We might state that two reports of investigations, one in San Francisco and one in Los Angeles, will be published shortly but will unfortunately be too late for this recreation report.

Pool rooms and skating rinks.

Concerning pool rooms and skating rinks, we have as little data as we have concerning dance halls, and yet there is as little question that, under existing conditions, these two innocent amusements are made the means of working great harm. It is not the game or the exercise, but the associations which produce the bad results. Both are open to the public promiscuously and are consequently not fit places for young boys and girls—for young men and women for that matter. It is probable that almost as many girls come to grief at the public skating rink as at the public dance halls.

Commercial libraries and news stands.

Under this head comes much that is good and also much that is decidedly not good. The commercial library usually has a scheme by which some sum, as a dollar, is paid for the first book. This book may then be exchanged for any other book for from five to ten cents. There is no censorship of these books and they are sometimes of the most undesirable sort. We found last winter, for example, a book which had already been censored by the Chicago Protective Association, circulating among a crowd of adolescents. The book was absolutely immoral in tone and detailed many things in the most suggestive sort of way. This library was supposed to be perfectly respectable. We should state that the owners of such libraries are usually quite willing to take a book off their lists if it is reported as indecent by a responsible person.

We do not have statistics concerning news stands, but we have a list of objectionable periodicals gathered from these sources. We also have some results of answering advertisements that would cause mothers and fathers some unrest if they would look into the matter.

INDUSTRIAL RECREATION.

Of the recreation facilities connected with industries throughout the state we know very little, except that in certain cases industrial concerns are conspicuous for the recreation facilities offered their employees.

Among department stores, the Emporium of San Francisco is the most conspicuous. The store employs a director for recreation and a welfare secretary. Each employee has an hour for luncheon. During the three successive hours of the luncheon periods, the roof garden, recreation hall and conference room are all open; music is provided for dancing. In the evening there are dancing clubs where any employee may receive instruction in dancing; there are informal dances, classes in gymnasium, and club meetings. The extent to which the fraternal spirit has developed among the employees is shown by the fact that one constantly finds in the social hall notices of excursions and trips organized by the employees themselves.

Other industrial concerns, as the Hercules Powder Company, the Southern Pacific Railroad, and the Pacific Telephone Company, have social clubs and offer many forms of recreation to their employees.*

PREPARATION OF SOCIAL AND RECREATIONAL LEADERS.

In every case in which the recreation of a community or institution was particularly successful, we found some individual largely responsible for the success. This suggests the need of training courses in the various phases of recreation. Mere training will not develop the individuality which is the first essential of success, but if adequate courses were offered in colleges and normal schools, individuals possessing the qualities necessary for leadership, would be attracted to them.

Though most of the universities, colleges and normal schools of the state offer courses in gymnastics, physical training and general education, Leland Stanford Junior University, the University of California and the State Normal School of Chico are the only ones which offer any adequate training for playground and recreation work. Even in these institutions, the courses are rather planned to develop playground teachers or social workers along some limited line, rather than social workers in the broader sense. There is not the correlation of training in the various forms of recreational activity with social, psychological, and educational subjects and the practice in field work that would give us skilled leaders.

RURAL RECREATION

C. A. STEBBINS.

The writer, as a member of the State Recreational Inquiry Committee, has given special attention to the recreational problems from the viewpoint of the rural community, considering such a community as a group of people living in homes rather widely scattered, yet bound together by some common interest, a church, a school, or the like.

METHOD OF PROCEDURE.

Butte County is very cosmopolitan. Practically speaking, every type of community is represented, the mining camp, the ranch, the mountain village, the farm, the valley, town, etc. A careful study was made of Butte County in so far as lack of funds would admit, with a casual glance now and then into neighbor counties.

Questionnaires were sent to adults and to children above the age of eleven years. Personal visits were made to many communities. The questionnaires were searching in nature, yet enough were returned to allow one to arrive at definite conclusions and to offer recommendations to the Governor and members of the legislature for the betterment of rural life.

An effort has been made to determine the present status of recreation among adults, adolescents, and juveniles in rural communities.

ADULT QUESTIONNAIRES.

The questionnaire for adults was divided as follows: Group I, eleven questions; Group II, six sections with sixty-three questions; Group III, four sections, thirty questions; Group IV, ten questions; Group V, twenty-eight questions.

GROUP I. Questions in this group made inquiry as to name, age, sex, etc.

GROUP II. Section I. Questions (1) to determine how much lodges, clubs, etc., enter into the play life of rural communities; (2) to determine the effort made by country people to find recreation in home social gatherings; (3) to discover the social interest of each community.

Answers to the questions showed (1) that 75 per cent attended the above organizations regularly at least once a month; (2) that 50 per cent have social gatherings in their homes at least once a month; (3) that the church is the social center of interest for the large majority of rural people. Generally speaking the answers showed a dearth of amusements in the county.

Section 2. Questions to determine the moral tone of rural recreation brought answers highly favorable to the country.

Section 3. Answers to questions in this section showed that rural people seldom have time and money to devote to recreation. Only 15 per cent were able to take vacations of a week or longer.

Section 4. Seventy per cent of those who answered the questionnaire had excellent health. (Not one of this number had been sick during the past year.)

Section 5. Forty per cent play a musical instrument. Less than 5 per cent draw or paint, 80 per cent grow flowers, particularly roses, 85 per cent show acquaintance with birds, insects, wild flowers and trees, but only 50 per cent know the habits of these plants and animals. Disregarding flower growing, rural people show little aptitude in amusing themselves.

Section 6. Answers to questions in this section show that rural people are reading quite widely. Eighty per cent use public and circulating libraries; 50 per cent use the school library; 60 per cent take two or more daily papers; 62 per cent take weekly papers, while 35 per cent read monthly magazines.

GROUP. III. Section 1. Institutions both public and private are doing very little to make country life livable from the viewpoint of recreation. Twelve and one-half per cent have a Y. M. C. A. within a convenient distance for attendance; 25 per cent noted organizations that afford regular places of amusements.

Section 2. Ten per cent live within the influence of a park; 52 per cent make use of adjoining schoolhouses; 60 per cent reported nearby streams, lakes and canals, most of which were unused for recreational purposes.

Section 3. Practically no truly rural home of one family reported the presence of saloons. Several writers stated that their reason for living in the country was to avoid the degrading influence of saloons. However, the saloon is present in small rural towns of a less puritanical atmosphere.

Dance halls in the majority of cases are properly supervised. As a usual thing social clubs initiate the dances. Dancing is the favorite pastime of the young people in the country. Dance halls in small towns of less than 2,500 people are poorly supervised.

Section 4. Business firms in the country are slow to recognize the need of directing the play life of their employees. Less than 6 per cent reported an effort made by employers to improve the recreational life of those who make their business possible. This is to be expected. The country is very conservative. The city is progressive, yet the city business office pays very little attention indeed to the play life of its employees.

The farm hand drudges from daylight to sundown for a month; draws his wages; retires to the nearest town and takes his so-called recreation—a striking demonstration of a play spirit perfectly undisciplined. Thus the farmer, not knowing how to play, denies his hands, and paves the way for inferior labor, yet rails at the indifference of farm hands the while.

The city man moves to the country. Unless he is a man of service he does little for the play life of his community. He takes his play in the nearest city, or within his own family environment, and enters little into the recreational life of his district. The hard working farmer and his family have little in common with the man and his family from the city, that is of a recreational nature.

Nature is put to use in 35 per cent of the communities reported. Private parks, home places and acreages are open to the public.

GROUP IV. Sixty per cent reported that efforts were being made in their districts by the teacher or preacher to improve rural recreation. In answer to the question, "If funds were available to keep the schoolhouse or church open evenings as a reading or play place, would you favor doing so?" 75 per cent answered "Yes."

Thirty-seven per cent reported that they often met at the nearby store, blacksmith shop, or other similar places, seeking companionship. "At home" was given by every report in answer to the question, "Where do you spend most of your leisure time?" The little play life that a rural family has, is selfish to the extreme. Its recreation is self-centered.

Eighty-four per cent of the rural people are in favor of a legal half-holiday each week, to be given to recreation.

But one individual objected to a moving picture show to be given in the schoolhouse or church twice a month if the state furnished machines and films. The writer is convinced of the great educational and play potentiality in moving picture evenings. Neighbors in the country need to get acquainted. Nothing will so tease people together as moving pictures (see conclusions).

With one exception the vote was unanimous for recreational centers, to be established by the state and local people concerned, in every rural community throughout California.

"Are there enough opportunities for recreation in your community?" Every answer was "No."

GROUP V. It is quite evident that the rural home is trailing the city home in conveniences. The city type of home conveniences has reached the country. Fifty per cent reported running water in the house and a bathtub. Other reports were as follows: Stationary washtubs 23 per cent, sleeping porches 30 per cent, electric lights 55 per cent, gas lights

1 per cent, gas 8 per cent, fireplace 30 per cent, grass lawn 60 per cent, flowers and vines 90 per cent.

The average hours for a day's work are 5 a.m. to 9 p.m. when light enough to see, with no time interspersed for play.

There is little cooperation in the country. But 18 per cent are members of cooperative organizations, and there is practically no effort upon the part of individuals to exchange work with neighbors. The old-fashioned working "bees" are dead. While but 20 per cent of the rural people are members of cooperative organizations, yet 75 per cent are in favor of cooperation. Too many rural people are tied so tightly to plow handles that they can not see the mountains or the big opportunities.

CHILDREN'S QUESTIONNAIRES.

GROUP I. Names, age, school district, etc., were determined in this group.

GROUP II. Fifty per cent of the children go to church. Picnics are attended by the majority twice a year; 66 per cent of the children play with neighbors after school hours on an average of thirty minutes a day. Many children reported no play time at home after school; 75 per cent reported an excess of work. Following is a typical school day's work for a boy: "get in wood," "wipe dishes," "churn," "milk," "feed the cows and hens." On Saturday he labors as does a man. The country boy and girl drudge with little recognition for drudgery.

GROUP III. Very little is being done by the school, church, or home, to teach the boy and the girl how to entertain themselves or to awaken social instincts. Twenty-five per cent are learning to play a musical instrument; 66 per cent are learning to sing, but get nothing further than is offered by the rural school—a meager amount, indeed; 90 per cent are learning elementary drawing at school; 75 per cent are growing flowers, either at school or at home (this high percentage due in part to the Extension Department Chico Normal School); 80 per cent of the children have pets. All show a greater or less knowledge of insects, birds, flowers, trees, and wild animals.

Practically all of the boys like to work with tools. Yet tool work is taught to but 10 per cent of the boys and this in a meager way. The girls are unanimous in their interest in cooking and sewing, yet but 20 per cent get school training in these subjects. Ninety-five per cent like to see moving pictures and to hear a phonograph. (See conclusions as to moving pictures in schools.) Fifty per cent are getting some recreation from making collections.

CONCLUSIONS.

The mating instinct fundamentally directs the life of man for good or for bad. A survey of the history of man's development for the past four thousand years almost leads one to conclude that the driving forces for good—that nature—had lost control, and that the mating instinct, misdirected, might eventually burn the heart out of mankind. However, the saving grace will be the evolution of ideals which nature, in her slow, costly way, is building as the controlling factor.

Play is one of the fundamental factors in disciplining this racial urge, hence we should concern ourselves, as citizens of a great state, with the recreation of the people. Sixty-five per cent of juvenile delinquency and 90 per cent of the illegitimate births are due to misdirected play. A man's community value is from \$15,000 to \$25,000 between the ages of 15 to 40 years. Delinquency destroys community value and delinquency is materially the result of loose recreation.

The country home is the balance wheel of the state. Its citizenship determines the citizenship of the state. Only those nations have achieved greatness who have had great rural homes. Let us give our direct attention to rural recreation.

In 1800, 4 per cent of the people lived in cities, 96 per cent lived in the country. In 1910, 46.3 per cent lived in the cities, a gain of 42 per cent, and 53.7 per cent lived in the country, a loss of 42 per cent. These figures teach us that forty-five million producers are supplying ninety million consumers. In other words, there is already an overproduction of non-producers. In one hundred years the population has shifted immensely. If the shift continues from country to city, in one hundred years more we shall face the dangerous situation of the country life practically eliminated.

These figures indicate not merely a drift to the city, but a ferryboat rush. They point out a dangerous situation, for the city home is subject to extremes in forms of play, in religion, in art, in fads of diverse kinds, while the country home is conservative, substantial, reliable, if monotonous. They teach that the country with its present home atmosphere can not compete with the city in its call to the young people. There is little use to decry the successful city (successful in its call to the young people); rather the rural home should stimulate its resident possibilities for recreation, for the same root factors are at work in both the urban and the rural home. It should imitate the best methods of the city home.

Let us parallel for a moment a typical urban and a typical rural home. There is too much drudgery in the country home and too little return for energies expended. Johnnie works faithfully and laboriously growing radishes in the farm garden. The crop is harvested by the parents, not by the small son. Johnnie receives no recognition either in praise or

in cash. On the other hand the city boy grows radishes. At harvest time he obtains a superior price for an inferior product. The training derived is wrong in both cases. Both boys should receive fair recognition for good radishes, for labor expended. In the city, money is evidenced on all sides. Johnnie as a young man confidently believes that he can tap the golden stream. At least he intends to try. A prominent citizen of Sacramento told the writer that he left his father's farm because money was an alien to him in his home. He had worked faithfully for his father; a few days before a Fourth of July celebration he asked him for \$10. There was a young woman to be entertained. The young man was denied the small sum, for a farm tool was needed. Then and there unrest took possession. The young man went to the city, tapped the golden stream successfully, married his mate. Lack of money apparently indirectly drove the young man to the city. Carried to the last analysis, however, it was the unsatisfied mating urge which determined his loss to the country. The young woman was near yet unattainable so long as the young man remained on the farm. Play-mates are too few in the country and the few seldom have opportunity to play with each other. Parents are so busy drudging day after day that they forget their children wish to play more and work less.

The city cousin brings distress to the country cousin, for the visitor tells of parties, new dresses, new hats. She sings the latest songs and wonders at the lack of electric lights, bathroom, and other home conveniences. Mary of the country sees her mother old at forty and feels that she is on the same way, for a girl can not lift tons of water, feed pigs, can fruit, wash, sweep, dust, milk cows, make butter, etc., without such drudgery turning the corners of the mouth down, making the hair gray, bending the back, and dulling the eyes. She is not favorably impressed with the picture of the woman she may be in twenty years and of the life she may have to live. Nature tries to make every girl attractive, beautiful. She adorns her with graces. She makes no mistakes. Instinctively the young girl abhors anything which upsets Nature's plan.

The city is successful in its call to the people (1) because it satisfies best the racial mating urge. While this urge lies dormant in the child up to twelve or fifteen years of age, Nature has not forgotten. She is quietly forcing the child to play—to grow mentally and physically through play. One may argue that the country is the place for the boy to play. It is. The fields are green and fragrant, the swimming pools are convenient. The stock tease for exercise. But the call of Nature through her attractive fields, pools and animals, "Come out and play," is unanswered. It can not compete with father's orders, "Johnnie, hoe the corn," "Don't go near the pool," "Feed the stock." So Nature in

her slow, quiet, unobtrusive, yet irresistible way, sends the boy to the city where there is less opportunity for play, yet he plays the more.

During adolescence the mating instinct ferments. This is the danger period of one's life. Teachers, preachers, parents, realize this, yet blind faith prevents definite steps to discipline, to direct this greatest of instincts. The mother, the father, the chaperon, the rules of society, physical play, all are necessary as parts of the disciplinary schedule. The city home calls in no uncertain voice to the adolescent boy or girl. Playmates are lacking in the country. There is no time for play.

(2) The city home is successful because it is convenient, sanitary. It is close to the best types in music, in art, in literature, in other forms of recreation. It has time for play. Rural roads are rutty. Rural homes are unsanitary and inconvenient. There is little recreation in the rural home. All because the rural home does not know what a good road is, what a convenient, sanitary home is. The country does not know how to play. There is need of type-setters in the country.

(3) The city home is successful because the silver cartwheel keeps rolling. In the country it stalls in the fields. Perhaps it may roll past the door of the city home, perhaps it may roll in, at least it is an evidence of quick recognition for good work done. This is a big factor, for, after all, the farmer's wife and daughter would smile at drudgery if it meant a new Easter hat, a new dress, a pair or two of silk stockings, a trip to the theater or to the city now and then, and if the road of drudgery were not eternally long. Three thousand dollars spent on farm machinery versus \$25 for household conveniences; \$1,000 spent on stock decorations versus \$25 for dresses and hats, are stories which take the youth and joy out of many a woman's life.

(4) The city is successful because there is community spirit—cooperation. The city wants and gets what it wants. It wants better health, it wants convenient homes, it wants good roads, it wants recreation, and through cooperative agencies it gets all four. In the city there is group initiative. In the country there is individual initiative. Such initiative, such elimination of the neighbor, is selfish and lack potentiality.

What should California do to direct the play of its people and particularly the play of the rural people?

The imagination runs riot when one thinks of the great possibilities for good in directing a people's play. There is an immense waste in this state due to lack of articulation, conserved potentiality, "canned" goods as it were.

Step into a high school. There may be a museum, filled with stuffed animals ranging from a mouse to a mountain lion. Hundreds of books unused may be found in the library. The splendid assembly hall may seldom assemble people. The building may be closed during the most

important hours of a community life, namely, the evening hours, the hours of darkness.

Each link in the educational chain, from the elementary school to the university, has the same root aim—to serve the state, yet each works egotistically along. There is need of articulation—a combined effort to “uncan the canned goods.” Let your imagination go. Think of the conserved, unarticulated potentiality in the schools of this state.

Pardon a personal illustration. The Chico Normal School has a two-fold purpose (so has each educational institution in the state). (1) A purpose specific to itself—that of preparing men and women to be teachers; (2) a purpose of direct service to the people of its community. Until the last two or three years the school has concerned itself but little with the second function. And this function of articulation with the community is universally ignored by all schools. Three years ago there were no paved streets in Chico. The type paved street came after strenuous efforts on the part of a few. Now there are sixty blocks of pavement. The type only was necessary. Realizing that rural homes do not know their needs, that types are needed, that stimulation of resident forces is necessary, we visited the trustees and teachers of four representative rural school districts a year ago. We asked for eight evenings in their communities. With one exception they were freely given.

One Thursday evening four Normal School students and two members of the faculty autoed to Durham. The program as given for over two hundred children and adults was as follows:

- PIANO DUET.....Normal school students
- READINGNormal school student
- SONGChildren of school
- VOCAL SOLONormal school student
- THE GRAND CANYON, illustrated talk.....Member of faculty
- DEMONSTRATION OF BABCOCK MILK TESTER.....Member of faculty
- DISTRIBUTION OF FARM BULLETINS.
- MOVING PICTURES.

This is one of the typical evenings given in each district. The primary aim is to set best types in sanitation, in home conveniences, in agricultural practice, in recreation, before the rural people so as to teach and to stimulate resident potentialities. The songs, the reading, the moving pictures tease the people to the meetings. Already definite results show. A recreational league, literary societies, and parental clubs have been organized. Schoolhouses and churches have been wired for electricity. Organs and pianos have been added to school equipment, industrial clubs of various kinds have been started. A growing community interest is quite manifest. The Chico Normal School is demonstrating a constructive plan for making country life optimistically livable.

The outlet for the "canned goods," conserved material in the normal school, in bulletins, books, seeds, trees, in types of all kinds, is the rural school. The normal school is truly an extension center and is touching the people directly. Just so each high school, each normal school, should articulate itself with the people by way of adjoining rural schools. Its conserved information should flow in a steady stream to the people.

In a score of different ways the rural school is the logical recreational center for a community. Electric lights, a reading room, a room for games, a gymnasium, etc., should be prominent features of the plan. With superior leadership, such recreational centers would revolutionize country life. A healthy balance between rural and urban communities would thus be attained.

Just as the type of the man is indexed by the play of the boy, so the citizenship of a state is reflected in the manner of its play. California is beginning to realize this. Let us hope that the committee has drawn a clear picture of the needs of the rural people particularly, and that the members of the legislature will see, as does the committee, the imperative need of establishing a balanced life in the country.

PART THREE.

WHAT WE NEED FURTHER IN RECRE-
ATIONAL FACILITIES.

RECOMMENDATIONS.

BESSIE D. STODDART.

PART THREE.

WHAT WE NEED FURTHER IN RECREATIONAL FACILITIES.

RECOMMENDATIONS.

BESSIE D. STODDART.

The following recommendations are compiled after a short survey of the recreational needs of this state. Thanks are due to a number who were consulted concerning special phases of the recreation problem and gave suggestions that have been incorporated in this report. The time allowed was too short for an exhaustive study, but the outline will show what an immense field of opportunity California possesses for developing public recreation.

I. CITIES.

1. Schools.

(a) The school grounds should be increased in size and used the year round as neighborhood playgrounds. Legislation might be enacted (as attempted in the State of Washington) compelling boards of education, in acquiring new sites, to provide a playground containing a minimum area for each one of the estimated number of pupils who will use the school, and recommending as much larger area as may be practicable. Play directors should be provided for both boys and girls.

(b) The school should become, perhaps universally, a civic and social center for the neighborhood. A statute of the last legislature legalized this new function for the school properties, and *permitted* paid supervision. A step further should be taken, and paid supervision for recreational, social and civic activities be *definitely provided* for out of school budgets. In a contemplated bill for Wisconsin, the paid service of civic secretaries is provided for, but in addition to this, there should be paid service for leadership along recreational and social lines, so that the school may become in fact a place where the recreational, social, political and artistic life of the people may be expressed. School architecture should be adapted to this added function.

(c) Physical education in the schools should fill as important a place as mental education. The Greek curriculum observed this balance and produced some of the greatest minds the world has ever known.

(d) Athletics should be encouraged, but the effort should be towards the participation of all in healthful and happy exercise, sport and recreation, and not towards the development of a few individuals as star players to be pushed forward for the sake of winning contests.

(e) Swimming should be taught in connection with every school as an essential subject.

(f) There should be school supervision of health conditions, and hygiene should be taught.

(g) Vacation schools, with their opportunities for natural expression and supervised recreation, should be established in all schools where children have limited opportunities in their home environment.

(h) School gardens should in time become the rule rather than the exception.

2. Playgrounds.

(a) A statute should be enacted to provide for the appointment of playground commissions, in all municipalities of the state where provision is not already made by charters or other laws.

(b) In all congested districts, including apartment house districts, playgrounds should be within easy walking distance of small children. Bonds should be voted to acquire the necessary land, which is usually expensive in such districts. If an excess condemnation act should be passed, such sites might often be secured for small outlay.

(c) The roofs of public buildings which are located in congested regions, such as schools, libraries, courthouses, fire houses, etc., should be built in some instances to accommodate playgrounds. This is particularly feasible in this climate, where the roofs could be used throughout the year. Commercial establishments could also provide recreation for employees upon their roofs, to great advantage.

(d) Frequently land is going to waste that could be utilized for playground purposes. There may be opportunities to place playgrounds in public parks or squares or upon other land owned by the city or county; or land may be reclaimed for play purposes by draining a marsh or filling some low spot, etc. Vacant lots could also be used. A survey should be made to discover such opportunities.

(e) Every city should have a definite working plan for the location of future playgrounds and athletic fields, with the idea in mind of covering in time the needs of the entire city.

(f) New subdivisions might be required to set aside a certain percentage of land to be dedicated for playground and park purposes.

(g) All playgrounds should have ornamental planting of trees, vines and shrubs.

(h) Club houses for indoor recreation for people of all ages should be a part of the equipment of playgrounds. The family should be the unit that the playground seeks to interest rather than the child alone. The club house as a neighborhood social center is no less important than the playfield.

(i) Public baths and swimming pools, gymnasiums, branch libraries, public forums, district nurses' stations, clinical milk stations, etc., should

be operated in connection with school social centers and with playground club houses. These various enterprises serve the public better when grouped together.

(j) Men's clubs should be established in down town districts to take care of the many men who live in the lodging houses of large cities, without families or home connections, who therefore are not apt to patronize the school center or playground club house to any great degree. The club rooms should be made attractive and provide various conveniences, wholesome recreation and good reading; also, soft drinks and light refreshments should be served at a low price.

In seaports these clubs should be furnished for the sailors and long-shoremen.

With comparatively small additional outlay, fire houses and police stations might be arranged so as to permit of their use as recreational centers for men.

3. Parks.

(a) Parks should be made attractive not only to the seekers of horticultural beauty and of relaxation, but also to those who wish to engage in sports, games and other active pursuits. Wherever practicable, there should be ball fields, athletic grounds, tennis courts, opportunities for swimming and rowing, golf links, archery ranges, polo grounds, bowling greens, etc.

(b) Play in parks should be supervised.

(c) In our outdoor climate, parks should be very liberally provided with pleasant and convenient picnic grounds where families may enjoy picnicking in the open.

(d) Parks should minister to the artistic life of the people by providing good band concerts; by providing open-air or Greek theaters for the presentation of good drama; and by encouraging the holding of festivals, pageants and other celebrations.

(e) Park, playground, and social center features should be combined where possible, as in the renowned South Parks System of Chicago.

(f) Parks should operate their own concessions wherever this is at all practicable instead of letting out privileges to the highest bidder; charges to the public should be kept down to cost, so as to encourage the fullest use of concessions.

(g) Every city should have many small parks or squares for breathing spaces and beauty spots. They serve also as fire breaks and promoters of public health. If an excess condemnation law should become operative, our cities would be enabled to acquire squares at suitable intervals with the ultimate expense often reduced to the vanishing point.

(h) Large outer parks should be secured by cities in nearby mountains and along the beaches, before prices of land become almost pro-

hibitive. In the larger, wilder parks, camping privileges might be allowed, and sanatoria be instituted. A system of metropolitan parks might be established.

(i) Every city should have a plan for future park and boulevard development.

(j) Often beautiful parks and parkways may be secured for a very low cost by utilizing arroyos, or low grounds that can be made into sunken gardens, or by draining and filling marshes, or by beautifying declivities, etc. What would become a dump and a nuisance thus becomes an ornament. By disposing of sewage scientifically, land along the seashore where sewers empty into the ocean could be redeemed and used for park purposes.

(k) Park departments should conduct schools of horticulture for professional and home gardeners. The art of gardening would thus receive great impetus and homes would become more attractive, and cities more beautiful.

4. Private agencies.

Religious, benevolent, civic, fraternal and other agencies of a private nature should be encouraged in carrying on their various lines of recreational activities, by reason of the interest and generous private support of our citizens. In addition to the work that the public may do in providing for wholesome recreation, there is needed as well all the effort that private initiative can put forth in such recognized centers as the institutional church, the Young Men's Christian Association, Young Women's Christian Association, the settlement, the turn verein, etc., and in such associations as athletic clubs, drama leagues, etc.

II. RURAL COMMUNITIES.

1. Schools.

(a) Rural schools, as well as city schools, should provide large grounds to be used as neighborhood playgrounds; and supervision of the sports and games of both boys and girls should be furnished by the school. Teams should be organized to play with neighboring schools. It is the lack of organization in play that often makes rural schools dull when, with their advantages of natural surroundings, they might be more live and interesting than city schools.

(b) The rural school should be, wherever practicable, a social center supervised by a paid director. The formation of musical and dramatic organizations should be fostered, meetings for the discussion of social and political problems should be held, and general encouragement should be given for classes, clubs and fraternal organizations to meet and give their entertainments at the schoolhouse. Every new school building should have an auditorium or a plan for an auditorium; also movable desks and various other aids to social center work should be provided.

The Russell Sage Foundation has issued a pamphlet containing excellent models of elementary schoolhouses to be used as social centers.

The union high schools could be used to great advantage as social centers. Large sums of money are appropriated for these schools and they could be made to answer a double purpose—that of furnishing a high school education in sparsely settled regions and of providing a social center for people of all ages for those same regions.

In the community use of school buildings in agricultural districts, the provisions adopted by the State of Washington might be followed to advantage. The school there may become a center not only for recreation, but also a center for the dissemination of knowledge of farming, household economics, etc. Dwellings may be provided for the teachers, thus completing the ideal community center.

(*c*), (*d*), (*e*), (*f*), (*g*) Same as under the subject of city schools.

(*h*) Agriculture should be taught, not only in rural high schools but in rural elementary schools as well.

(*i*) Rural schools should be consolidated. This would make possible both better educational and better recreational facilities.

(*j*) Where men are employed in distant camps, evening schools should be opened for teaching the English language, our customs and form of government, and elementary studies. These schools should provide also for the wholesome recreation from which the men are cut off. This would be a distinctive aid to the work of the Immigration Commission. Foreigners may be more readily assimilated through recreation than in any other way.

2. Playgrounds.

(*a*) In rural communities, playgrounds may be operated altogether in connection with the schools or parks. Separate playground commissions are needed, however, in towns where school and park bodies can not be waked up to the recreational needs. A special agency must in such places be created to give impetus to the new movement for providing public recreation.

(*b*) A bill might be passed enabling a group of citizens to start a recreation center, and later, when the center has taken root, to pass it over to the community to operate. This provision might prove very helpful in mining towns, lumbering centers, and other places where the owners of big industrial plants could start recreation centers, and, after the work has been founded, turn them over to the public to run.

3. Parks.

(*a*) Rural communities should acquire parks early in their development, when the best locations can be secured for little outlay. No village is too small to plan for its future growth. Tracts of land should be

secured, even if communities can not spend money upon their beautification for years to come.

(b) Parks for rural communities should be equipped with athletic fields, ball grounds, tennis courts, and other features that will encourage young men and young women to engage in active sports, and that will give opportunity for neighboring towns to come together in friendly rivalry.

(c) There should be opportunity for outdoor drama, for festivals, meets and public celebrations of all kinds that will bring the countryside together.

(d) Every town or village should have its down town plaza or square in connection with its public buildings.

4. County Libraries.

Through the County Free Library Law, California has in operation a remarkable system for providing library advantages for rural communities—the only system of its kind in the country. Country schools, camps, even ranch houses, may be supplied with books through this generous state and county system, in those counties where the supervisors have established libraries. So far, twenty-six counties have taken advantage of the opportunity offered. (Los Angeles County alone has seventy-two library stations.) The remaining thirty-two counties should speedily avail themselves of the opportunity. The effort of county librarians to link this work with recreation centers should be encouraged.

5. Private agencies.

These should receive the same promotion and support as in cities.

III. OUTDOOR LIFE.

1. Mountains.

We have in California some of the most magnificent mountain scenery in the world. Our mountains, moreover, are "livable," not subject to great dangers, and should be used for pleasure and health yearly by hundreds of thousands in place of the few thousands that are now able to visit them. Switzerland has spent a vast sum to make her mountains accessible, but has received back many times that sum from tourists. Our mountain scenery in the high Sierras is as magnificent as that of Switzerland, but thus far California has done very little towards opening up this great treasure of beauty and inspiration to the inhabitants of our state and the tourists of the world. Any one of our national parks—the Yosemite National Park, covering 1,150 square miles, the Sequoia National Park, the General Grant National Park, the Muir Woods, so close to San Francisco—is a heritage beyond price. The series of national forest reserves of this state cover an area of 27,567,075 acres—

more than two and a half times the area of Switzerland. The Forest Service of the United States Department of Agriculture controls these forests, and its policy is both to serve the public and to conserve the forests. Hence these lands may be used for seekers of recreation, and this human side of the forester's work is coming more and more to the fore.

What may be done to promote greater use of our mountains?

(a) The state should expend money upon building mountain highways suitable for travel by wagon and by motor vehicles; and upon developing systems of trails for pack animals and foot passengers.

(b) Printed instructions for campers and "hikers," maps showing roads and trails and pastures, all manner of useful information for pleasure seekers, instructions as to the trees, flowers, animals, birds, minerals, etc., of the region to be visited, should be freely furnished by a state agency.

(c) Stations should be provided at advantageous points where wayfarers could buy staple groceries, utensils, blankets, and simple remedies. In the national parks this might well be managed by the army. In the Yosemite National Park there are about a dozen outposts where the soldiers could handle supplies. In the forest reserve and other places, some other public way of furnishing supplies should be worked out, as private initiative does not seem to wish to take the risk for the short season that the mountains are open.

(d) Railroads that run into the mountain fastnesses or near the base of the mountains might be induced to lower fares for campers during the summer season. By utilizing old rolling stock, or even flat-cars, the cost could be cut, and the campers would not miss the lack of the luxurious first class coach.

(e) Camps, to be run at cost, should be established by cities and towns. The Los Angeles Playground Department operates such a camp in the San Bernardino Mountains forest reserve, seventy-five miles distant from the city. The city puts in the camp equipment and pays the salary of those in charge. The sum of seven dollars and a half paid by campers meets the expense of transportation and of board for two weeks. It is possible to make so low a charge by securing reduced fares and buying provisions at wholesale rates. The towns situated in the San Joaquin and Sacramento valleys could easily institute such camps in the forest reserves or national parks situated in the Sierras. Practically all the towns and cities of the state are near enough to beautiful mountain ranges to make such camps practicable. With improved roads, auto trucks could be used largely for transportation at low cost. Playground, school or park departments could undertake the management of these camps.

Institutions also could operate camps with great benefit to those connected with them—orphans, reform schools, homes for deaf and blind, hospitals for the insane (for certain cases), homes for feeble-minded and for epileptics, etc. The yearly change of climate and environment would bring health and happiness both to inmates and to those in charge.

Convalescent camps should also be established in our health-giving mountains by city and county governments, as a means of conservation of public health. A few weeks of rest after an illness or operation may bring renewed health to the worker who can not afford the charges of a sanitarium. Camps for tuberculous patients should also be established in the curative atmosphere of the mountains.

Business concerns, such as department stores, wholesale establishments, factories, railroads, telephone companies, etc., could institute camps where employees could enjoy their vacations at cost price. The *esprit de corps* of the business concern would be greatly improved by the workers coming together under the wholesome, happy conditions of outdoor life.

More family camps should be established in the mountain retreats.

The Forest Service stands ready to help the individual, the city or any who are desirous of locating summer homes in the mountains. It means not only a service to recreational needs, but quicker discovery and fighting of forest fires, more homesteading, and generally greater development of the resources of these regions.

(f) The Secretary of Agriculture, under whom the Forest Service operates, should be petitioned to reserve from homestead entry certain tracts in the mountains valuable for recreational purposes, irrespective of the agricultural value of the land.

(g) A bill should be enacted prohibiting the cutting of timber for a certain space on each side of highways running through forest land. The roads would thus remain attractive and shady, though running through a deforested country.

(h) Trees should be planted along roadways in farming and other rural communities.

(i) The recreational value of the water of our mountain streams and lakes should have consideration along with other values in taking up the problems of water conservation. Water should be free for recreational purposes. Individuals, corporations, and municipalities controlling water rights should be required to furnish water for recreation free. For instance, irrigation water could be used for swimming pools without detriment.

(j) California possesses a magnificent state park, the Redwood Park of the Santa Cruz Mountains, comprising 3,800 acres. The roads are being improved. The movement to increase the area of the park should

receive encouragement, and thousands of people should be directed towards this beautiful retreat, lying but fifty miles distant from San Francisco.

(k) California should possess not only this park, but whole chains of parks in the Sierra Nevadas, Coast Range and other ranges. By making trades with the Federal Government of the scattered school lands in the forest reserves (sections 16 and 36 of each township) for a few large tracts in the reserves, a beginning could easily be made. Also, wherever privately owned land in the reserves is now sold by the state for delinquent taxes, such land might instead be traded to the government for land contiguous to a state park.

The state could also purchase desirable tracts for conservation, adding each year for a number of years to the area of its parks. By using the German system of forestry, while conserving the forest, enough commodities could probably be used for state purposes or sold (lumber from mature trees, shingles, shakes, tan bark and by-products), to maintain the parks, and finally to pay back the cost of their acquisition. During a crisis of hard times labor could be furnished to large numbers in these parks in the making of roads, trails, etc., and in the limited forestry work.

These chains of parks should be placed under the care of the State Forestry Department.

2. Beaches.

California possesses 1,200 miles of sea coast. The state should gradually acquire a chain of beaches for public recreation. There are magnificent points that could be secured in the next ten or twenty years for comparatively small sums that would prove in years to come a priceless inheritance to the great population that is bound to inhabit this state.

3. Outing clubs.

“Hiking” clubs, scout work, whatever will get the young people (and the older people, too) out into the hills and open regions, should be encouraged. There are day trips and two-day trips that can be taken, exploring beautiful and wild regions in the vicinity of the San Francisco Bay cities, of Los Angeles, and of many smaller towns. Here is afforded a wonderful opportunity for those whose vacations are mostly week ends and holidays. Through some state agency, lists of these available trips should be published.

4. Helpful agencies.

(a) The movement for increasing opportunities for outdoor recreation will receive great impetus by the public taking interest in and giving moral support to the work of these state commissions: Forestry, Redwood Park, Fish and Game, Water, Highway, Conservation.

(b) The Sierra Club and other private organizations that have helped to open up to the people the rare and wonderful recreational resources of our state should receive hearty appreciation and cooperation.

IV. INSTITUTIONS.

The introduction of play into institutions requires special promotion, since institutions deal with abnormal conditions and play is needed to bring its cheering and socializing influence.

1. Where play is needed.

Play is needed in *all* institutions: in hospitals for the insane, for its curative and educational value; in homes for feeble-minded, for its value in developing latent mentality; in homes for the care of epileptics, of incurables, and of the blind and deaf, for its cheering and educational value; in homes for the aged, for the relief from dreariness it offers; in orphanages it is needed for creating the atmosphere of the normal home and keeping children from becoming "institutionalized"; in reform schools and homes for delinquent children, it is needed to develop right impulses and curb wrong ones; in jails and penitentiaries, it is needed to reform those imprisoned, to re-create in them a right attitude towards society. By all who are physically, mentally or morally afflicted, provision for right kind of recreation is needed even more than by normal people. Humane treatment demands that this fact be recognized.

2. Difficulties to be met.

(a) Space. Many institutions do not possess the needed space for vigorous play. Orphanages, in particular, are apt to have small play yards, and these yards are often cemented. In time, legislation should compel the provision for a minimum play space for each child.

(b) Equipment. Equipment suitable for the particular type of institution should be installed.

(c) Leadership. Trained leaders of play must be provided for institutions. In the institutions for the abnormal, the leaders must study the needs of the afflicted and adapt their work to conditions.

(d) Support. In some institutions, a readjustment of the budget might provide for equipment and for salaries of leaders of play. In others, special appropriations are necessary to bring about this desired improvement.

(e) Adjustment. While some notably good work has been accomplished by some boards of directors and employees, a great deal of adjustment will be necessary in order to include play as an integral, vital part of the program of all of our institutions. Those in charge must be imbued with a desire to meet adequately the recreational needs of their wards and must adapt their regimen to these needs.

V. THE BUSINESS WORLD.

1. Welfare work.

Individuals or corporations in control of factories, railroads, stores, telephone exchanges, mining camps, mills, farms and other business enterprises where large numbers are employed, can institute what is known as "welfare work" with much benefit to all concerned and without disproportionate outlay. This work, which involves the study of and ministering to the physical and recreational needs of employees, has received much attention of late years in Eastern centers. A notable example inaugurated in California is the system of clubs for employees instituted by the Southern Pacific Railroad, a system which has been extensively copied by other railroads. Another example is the excellent recreational and physical welfare work instituted by the Emporium of San Francisco.

2. Other possibilities.

Under the following headings may be seen also what may be done by business concerns in securing public recreational benefits for employees or in promoting private enterprises:

Rural communities: Schools (*j*).

Playgrounds (*b*).

County libraries.

Outdoor life: Mountains (*e*).

VI. ART EXPRESSION.

Art and play are closely allied. California should, in every way possible, foster expression through the fine arts. Encouragement should be given to efforts that look towards the establishment of civic theaters that will give the best in drama, towards the establishment of public concerts and of low-priced opera, the production of music festivals, historical pageants, etc. In our public schools, all forms for the expression of the finer human feelings should find a place. With our mixed population, we are rich in the inheritance of the art expression of many peoples. It is possible for this coast, with all its natural resources and its type of population, to become to a budding new world what Greece was to the world of her day, if commercialism is not given the right of way.

VII. RESTRICTIVE MEASURES.

1. Commercial recreation.

In this day of commercially supplied recreation, many laws and local ordinances must be passed and vigilantly enforced to protect the citizenship from what is unwholesome. Regulation of dance halls, pool rooms, motion picture houses, saloons, and of all commercial places where people congregate for amusement and social intercourse, must be insisted upon by the various communities. There should be censorship of cer-

tain types of books circulated among the young, and of post cards. Public chauffeurs should be obliged to be registered with the police. Saloons should not be permitted to run ball games and athletics.

In the case of the censorship of motion pictures, a state board should be created to censor the photographic material from which pictures are developed, before large sums of money have been invested. This would relieve the many local boards of censoring after production.

2. Public resorts.

There should be adequate lighting and policing of all parks, recreation beaches, and other public resorts.

3. Public health.

(a) Housing conditions must more and more receive careful attention, so that this state will insure plenty of room for every child to grow up under normal conditions, and will also require healthy surroundings for all occupations. The Immigration and Housing Commission is already doing notable work along this line.

(b) Occupational diseases, over-fatigue and eye-strain should be studied and prevented.

(c) Sale of tobacco to minors and use of tobacco by minors should be prohibited, in the interests of the future health of the state.

VIII. GENERAL NEEDS.

1. Vacations.

The growing tendency to grant vacations is greatly to be commended. This privilege should be extended in time to every form of employment, public and private.

2. Exchange of posts.

There should be a sufficient modification of laws concerning professional men and women to permit of exchange of positions on a vacation basis. The temporary change of environment for teachers, physicians, and others engaged in professional work, would be broadening, recreative, and beneficial in every way. In time this provision should allow of interstate exchanges. The idea should be promoted of facilitating exchanges, also, in other lines of employment. We have in California endless variety in climatic condition, elevation, and industrial and social environment. Why not make use of the educational and recreational values that exchange of posts would mean? State unification as well as individual benefits would be the result.

3. State recreation league.

A state-wide league might be formed of all organizations and interests that have to do with any form of recreation. Under right leadership, such a league could become a great clearing-house for information,

guidance, exchange of ideas, etc., and would generally promote the recreational facilities of the state.

IX. HIGHER INSTITUTIONS OF LEARNING.

In addition to furnishing the best types of recreation for their student bodies, we should look to our higher institutions of learning for leadership in developing recreational facilities.

1. State University.

(a) Play course. One of the greatest problems in the development of recreation is that of securing trained leaders. Our university has an excellent course in play leadership in connection with the summer school, and some work is done in the regular course; but the necessary funds should be granted to allow our university to rank with the University of Wisconsin in providing an adequate course of study for recreational and social leadership, and in promoting the development of recreational facilities throughout the state. Extension work should prepare play leaders in the larger centers. Frequent conferences should be held.

(b) Adviser. The position might be created of a state-wide adviser in physical education and play. An experienced man should be placed in this position, whose duty it would be to respond to requests from school people, playground boards and park boards throughout the state, in matters pertaining to physical education, playground activities and athletics. He should be able to give the necessary advice concerning the construction of playgrounds, athletic fields, swimming pools, etc., and in general, any information of a technical nature.

(c) Agricultural conference. The farm school at Davis invited clergymen from all over the state to meet and discuss means of improving farm conditions. Should these conferences continue, the subject of recreation in agricultural districts might be given prominence and impetus be given to the movement for providing recreation in rural communities.

2. Normal schools.

(a) Play course. Every prospective teacher should have a course in play leadership. Higher courses should prepare the teacher who wishes to specialize in this subject. Financial support is needed in order that the normal schools may afford greater development in these lines.

(b) Leadership. The normal schools, especially those situated in the smaller cities, have great opportunity for promoting right types of recreation in neighboring towns and villages. The Chico Normal School undertakes this work, also the promotion of children's gardens, with great benefit to the countryside.

3. High schools.

High schools, especially those in rural communities, may exercise leadership in setting types of recreational pursuits. They may do what the Chico Normal School is doing.

4. Universities and colleges under private control.

These should be encouraged in their efforts to provide play courses and to promote recreational facilities.

X. A STATE RECREATION COMMISSION.

So great is the scope of the work that may be done in California along recreational lines that there is need of a state agency to promote that work, and it is therefore recommended that a recreation commission be created. This commission should report from time to time upon conditions and needs, and should be a general correlating and promoting agency.

Various chambers of commerce and other boards are advertising the industrial opportunities of this state, but there is a great field left untouched—that of making known to the public the exceptional recreational advantages of California. From a business point of view alone, the consideration of the cost of a recreation commission is far outweighed by that of the benefits such an agency would mean to our state.

The present recreational needs of the state have been indicated. What of the future demands if the welfare of our citizens is to be conserved?

California is almost as large as New York, Pennsylvania, Illinois and New Jersey combined; it covers an area equal to England, Scotland, Ireland, Wales, Holland, Belgium and most of Denmark. Our population is bound to increase to large proportions, and we should be laying the foundation for future development. The accompanying bill for the creation of a recreation commission is therefore respectfully submitted.

AN ACT

Creating a State Recreation Commission, providing for the employment by said commission of a secretary and other employees and authorizing said commission to fix their compensation, prescribing the powers and duties of said commission, and making an appropriation for the purpose of carrying out the provisions hereof.

The people of the State of California do enact as follows:

Section 1. There is hereby created a commission to be known as the State Recreation Commission, hereinafter called the commission. Said commission shall be composed of five suitable persons, and all shall be appointed by the governor and shall hold office for a term of four years; *provided*, that those members first appointed hereunder shall be appointed within thirty days after the taking effect of this act; two shall be appointed to serve for a term of one year; one for a term of two years; one for a term of three years; and one for a term of four years. Thereafter all appointments shall be for a term of four years. Should any vacancy occur, such vacancy shall be filled by appointment by the governor, the person so appointed to hold office only for the balance of the period of time that his predecessor in office would have held had no vacancy occurred. In case of a vacancy, the remaining members shall exercise all the powers and authority of the commission until such vacancy is filled.

Section 2. The members of said commission shall serve without compensation, but shall be entitled to receive from the state their actual and necessary expenses while traveling on the business of the commission, either within or without the State of California. For the purpose of carrying out the provisions of this act, the commission is authorized to employ a secretary, and such expert, clerical and other assistants as it may deem necessary, and upon such terms and for such compensation as it may deem proper. The commission is authorized further, for the purpose of carrying out the provisions of this act, to incur reasonable and necessary office and other expenses, including the actual and necessary expenses of the secretary or of other employees while traveling on the business of the commission, either within or without the State of California.

Section 3. Within thirty days after appointment, the commission shall meet at the State Capitol and shall organize by selecting a president and a vice-president. At the first meeting following any appointment to the commission, the commission shall again organize by selecting a president and a vice-president. The concurrence of the majority of all the members of the commission shall be necessary to the validity of any of its acts.

The commission shall adopt and use, in authentication of its acts, an official seal.

The commission shall meet once in two months, or oftener, at such times and in such places as it may by resolution determine, and special meetings may be called by the president. Upon the request of any two members in writing, the secretary shall call a special meeting. The failure of a member to attend three consecutive meetings of the commission during any calendar year, unless excused by formal vote of the commission, may be construed by the governor as a resignation of said non-attending member.

Section 4. The powers and duties of the State Recreation Commission shall be as follows:

First—To adopt rules and regulations not inconsistent with the laws of this state for the government of the commission and for the government of its appointees and employees.

Second—(a) To study and investigate generally recreational conditions and needs for people of all ages in cities, towns and rural communities throughout the state, and, so far as possible, to respond to requests for information and for recommendations concerning recreation and recreational facilities; to demand of all officials, state, county and municipal, and it shall be the duty of said officials to supply, such information and references to records as will enable the commission to carry into effect the provisions and intent of this act; to enter upon private property, including all places of amusement, without payment of any admission fee, to make investigation for the purpose of carrying out the provisions of this act; to gather any and all such evidence as it may deem proper and necessary in order to present the same to the proper authorities for the purpose of instituting prosecutions against any and all persons, firms or corporations found violating any of the laws of any municipality, county or of the state or of the federal government, concerning any of the matters in this act referred to.

(b) To devise methods for the utilization of the recreational facilities, actual and potential, of the mountain ranges and of the seashore, lakes and waterways of the state, and to cooperate with federal, state and other authorities having charge of public parks and forest reserves, with the object in view of promoting recreation.

(c) To gather information concerning recreational conditions and needs in charitable, correctional, penal and other institutions, including hospitals for the insane, feeble-minded and epileptic, and institutions for the aged, blind and deaf, and to furnish recommendations concerning the promotion of recreation in such institutions.

(d) To study recreational conditions and needs in stores, factories and other business concerns, and to aid, when requested, with recommendations.

(e) To promote conferences concerning recreation and to promote the establishment of courses of study in the higher institutions of learning for the preparation of recreation leaders; to cooperate with the State University, the state normal

schools, the state board of education and the several boards of education in the state, in the promotion of recreation; to cooperate with other state commissions, and with all proper authorities, federal, state, county, municipal and private, in the promotion of recreation.

(f) To publish reports and bulletins pertaining to matters of recreation; and the commission is hereby empowered and authorized to have printed by the state printer any such reports and bulletins as it may deem proper.

Third—To submit biennially to the governor, on or before the fifteenth day of September next preceding the regular session of the legislature, a report of its work and transactions for the preceding two years, together with recommendations of its needs for the coming biennium, and such recommendations as to changes in laws or new recreational legislation as may seem to it to be necessary.

Section 5. The sum of twenty thousand dollars is hereby appropriated out of any moneys in the state treasury not otherwise appropriated, for the purpose of carrying out the provisions of this act; and the state controller is hereby authorized and directed from time to time to draw his warrants on the general fund in favor of the commission for the amounts expended under its direction, and the treasurer is hereby authorized and directed to pay the same.

TENEMENT HOUSE ACT

OF THE

STATE OF CALIFORNIA

Approved June 13, 1913. In Effect August 10, 1913

Printed at the State Printing Office, Friend Wm. Richardson, Superintendent

CHAPTER 356.

An act to amend an act entitled, "An act to regulate the building and occupancy of tenement houses in incorporated towns, incorporated cities, and cities and counties, and to provide penalties for the violation thereof and repealing an act entitled, 'An act to regulate the building and occupancy of tenement houses in incorporated towns, incorporated cities, and cities and counties, and to provide penalties for the violation thereof,' approved April 16, 1909, statutes of California of 1909, page 948," and approved April 10, 1911, statutes of California of 1911, page 860.

The people of the State of California do enact as follows:

SECTION 1. An act to regulate the building and occupancy of tenement houses in incorporated towns, incorporated cities, and cities and counties, and to provide penalties for the violation thereof and repealing an act entitled "An act to regulate the building and occupancy of tenement houses in incorporated towns, incorporated cities, and cities and counties, and to provide penalties for the violation thereof, approved April 16, 1909, statutes of California, of 1909, page 948," and approved April 10, 1911, statutes of California of 1911, page 860, is hereby amended to read as follows:

Tenement house act.

SECTION 1. This act shall be known as the tenement house act, and its provisions shall apply to all incorporated towns, incorporated cities, cities and counties in the State of California. It shall be the duty of the department of health of incorporated towns, incorporated cities and city and counties to enforce all the provisions of this act; *provided, however*, that incorporated towns, incorporated cities, cities and counties in the State of California shall have and are hereby given authority to designate and charge by ordinance, any other department than the department of health with the enforcement of this act or any portion thereof; *provided*, that the department of health of incorporated towns, incorporated cities and cities and counties shall always have supervision over and shall enforce the provisions of this act relating to sanitation, ventilation and health in all tenement buildings not in course of actual construction or alteration, and shall issue the permit hereinafter mentioned, entitled "Permit of occupancy upon completion of construction." In the event that an incorporated town, incorporated city or city and county shall by

municipal ordinance designate another and different department than the department of health to enforce the provisions of this act or any of them which by the provisions of this act may by such ordinance be transferred to the control of another department than the department of health all powers not so transferred shall be and remain in the department of health.

Definitions.

SEC. 2. For the purpose of this act certain words and phrases are defined as follows:

A tenement house is any house or building, or portion thereof, of more than one story, which is designed, built, rented, leased, let or hired out, to be occupied or is occupied as the home or residence of four families or more living independently of each other, and doing their cooking upon the premises, or by three families so living and cooking, and having a common right in the halls, stairways, yards, water-closets, or some or any of them.

Provided, that a building of not more than two stories in height, which is designed, built, rented, leased, let or hired out, to be occupied or is occupied as the home or residence of not more than four families living independently of each other, and so constructed that each section is arranged to be occupied as the home or residence of a separate family and each section having an entirely independent and separate entrance and stairway from the street or from an outside vestibule on the level of the first floor of said building and with no room, hall, bathroom, water-closet, kitchen or other convenience used in common by two or more families occupying said building, shall not come within the definition of a tenement house contained in this act.

An "apartment" in a tenement house is a room or a suite of rooms which is occupied, or is intended or designed to be occupied as a family domicile.

A "yard" is an open, unoccupied space on the same lot with a tenement house, situated in the rear of said tenement house; *provided*, that in case of a corner lot the yard may be placed in the rear of either frontage.

A "court" is an open, unoccupied space, other than a yard, on the same lot with a tenement house. A court not extending to the street or yard is an inner court. A court extending to the street or yard and bounded on three sides by a tenement house on the same lot is an outer court. If it extends to the street it is a street court. If it extends to the yard it is a yard court. If it extends from the street to the yard it is a street-to-yard court. A court bounded on one side and both ends by a tenement house and on the remaining side by a lot-line is a "lot-line" court.

A "court" bounded on one side and one end by a tenement house and on the remaining side by lot line and the remaining end open to the street or yard is a lot line outer court.

A "shaft" includes exterior and interior shafts, whether for air, light, elevator, dumbwaiter, or any other purpose. A vent shaft is one used solely to ventilate or light a water-closet compartment or bathroom.

A "public hall" is a hall, corridor or passageway not within an apartment.

A "private hall" is a hall, passageway, corridor or vestibule within an apartment.

A "stair hall" includes the stairs, stair landings and those portions of the public halls through which it is necessary to pass in going between the entrance hall and the roof.

A "basement" is a story partly below the level of the curb, the ceiling of which is not less than seven feet above the curb level.

A "cellar" is any story partly or wholly below the level of the curb, the ceiling of which is less than seven feet above the curb level.

A fireproof tenement house is one the walls of which are constructed of brick, stone, iron or other incombustible material, and in which there are no wooden beams or lintels, and in which the floors, roofs, stair halls and public halls are built entirely of brick, stone, iron, or other hard incombustible material, and in which no woodwork or other inflammable material is used in any of the partitions, furrings or ceilings. But this definition shall not be construed as prohibiting elsewhere than in the stair halls or entrance halls, the use of wooden flooring on top of the fireproof floors or the use of wooden sleepers, nor as prohibiting wooden handrails, and hardwood treads.

A "wooden tenement" is a tenement of which the exterior walls or a portion thereof are of wood. Wooden buildings covered with metal, plaster, terra cotta, or veneered with masonry are wooden structures.

For the purpose of this act the greatest horizontal linear dimension of any building shall be its length, and the next greatest horizontal linear dimension its width.

The height of buildings shall be measured from the curb level at the center of the main front of the building to the top of the highest point of the roof beams in case of flat roofs, and for high-pitched roofs the average height of the gable shall be taken as the highest point of the building.

For a building erected upon a street corner, the measurements shall be taken from the curb level opposite the center of either front.

Measurement of height when ground above street level.

When the ground upon which the walls of a structure are built is above the street level, the average level for the ground adjoining the walls may be taken instead of the curb level for the height of such structure.

Buildings converted to tenements.

SEC. 3. A building not erected for use as a tenement house, if hereafter altered or converted to such use, shall thereupon become subject to all of the provisions of this act affecting tenement houses hereafter erected.

Alteration. Existing tenement houses.

SEC. 4. No tenement house shall at any time be altered so as to be in violation of any provision of this act. If any tenement house or any part thereof be erected, altered or occupied contrary to law, such tenement house shall be deemed an unlawful structure, and the department of health, or the department charged with the enforcement of this act, may cause such building to be vacated, and such building shall not again be occupied until it or its occupation, as the case may be, has been made to conform with the law.

Proportion of lot occupied.

SEC. 5. No tenement house hereafter erected shall occupy more than ninety per cent of a corner lot or more than seventy-five per cent of any other lot, except as otherwise provided in this act; *provided*, that the space occupied by open iron fire escapes erected and constructed according to law shall not be deemed a part of the lot occupied, but that the space occupied by fireproof stairs, and by vent shafts thirty-two square feet or less in area, shall be considered as part of the lot occupied. For the purposes of this section the measurements may be taken at the level of the second tier of beams (the second floor level), except where rooms on the ground floor are to be used for sleeping apartments.

Corner lot defined.

SEC. 6. By corner lot is meant a lot situated at the junction of two streets, or of a street and public alley or other public thoroughfare or public park, not less than sixteen feet in width. Any portion of the width of such lot distant more than fifty feet from such junction shall not be regarded as part of a corner lot, but shall be subject to the provisions of this act respecting other than corner lots. Where, in any corner lot, the two frontages are of unequal length, either street frontage may be taken as the width of the lot. Street frontage alone and not alley frontage shall be considered in determining such lesser frontage.

Height of tenement house.

SEC. 7. The height of no tenement house hereafter erected shall by more than one half exceed the width of the widest street upon which it stands.

Yard.

SEC. 8. Behind every tenement house hereafter erected, there shall be a yard extending across the entire width of the lot and at every point open from the ground to the sky, unobstructed, except that open iron fire escapes may project not over four feet from the rear line of the house. The depth of said yard, measured from the extreme rear wall of the house toward the rear line of the lot, shall be as provided in the following sections.

Yard inside lot. Yard, two houses on one lot.

SEC. 9. Except upon a corner lot, as provided in section ten, or upon a lot running through from street to street or street to public alley, or public park as provided in section eleven, the depth of the yard behind every tenement house hereafter erected sixty feet in height shall not be less than twelve feet in every part. Said yard shall be increased in depth two feet for every additional twelve feet in height of the building or fraction thereof, and may be decreased in depth one foot for every twelve feet in height of the building less than sixty feet; but it shall never be less than ten feet in depth in every part.

In the event that two tenement houses or a tenement house and another structure of more than one story in height are constructed or erected upon the same lot, then and in that event the full yard space as set forth in this section shall be provided for each of such buildings. In no case shall two buildings of more than one story in height abut upon the yard of a width as herein provided for a single tenement house.

To determine the depth of yard as described in this section, the measurement shall be taken of the rear wall of such tenement house abutting on said yard and from the top of such wall to the level of the floor of the yard at such rear wall.

Yard for corner lot.

SEC. 10. The depth of the yard behind every tenement house hereafter erected upon a corner lot shall be not less than ten feet in every part and at every point open and unobstructed from the level of the second tier of beams (the second floor level); *provided*, that where any such lot is less than one hundred feet in depth the depth of the yard be not less than ten per centum of the greatest depth of such lot, but shall never be less than five feet in every part, nor less than the minimum width of an outer court on the lot line as prescribed by this act. If rooms on the ground floor are used as sleeping apartments the yard shall be taken from the ground up. When a corner lot is more than fifty feet in width, the yard for that portion in excess of fifty feet shall conform to the provisions of section nine of this act.

Yard for street-to-street lot. Lot surrounded by streets, etc.

SEC. 11. Whenever a tenement house is hereafter erected upon a lot which runs through from one street to another street or public alley or public park and said lot is not more than one hundred and fifty feet in depth one half of the width of the street or alley upon which the yard abuts may be included in the depth of the yard required by sections nine and ten, but said one half not to exceed in width the depth of the yard for such lot provided in sections nine and ten; *provided*, that on such lot no tenement house hereafter erected shall occupy more than ninety per centum of a corner lot, or more than seventy-five per centum of any other lot.

One half the width of the rear street or public alley or public park, immediately behind said lot, may be included in the portion of lot that is left uncovered in computing the percentage; *provided*, that whenever said one half the width of said rear street, or public alley or public park equals or exceeds the depth of yard required in section ten, if the lot be a corner lot, or in section nine, if the lot be not a corner lot, only such portion of such street, or public alley or public park may be included in computing the percentage to be left uncovered as will equal the depth of yard required for said lot.

When one half the width of such rear street, or public alley or public park is less than the depth of the yard required for such lot by the provisions of sections nine and ten it may be included in computing the percentage of the lot to remain uncovered.

If a lot is surrounded upon its four sides by streets or streets and public alleys twenty feet or more wide or public parks over twenty-four feet wide, the provisions relating to yards in sections eight, nine, ten and eleven need not be complied with; *provided*, that the tenement house to be constructed on such lot does not occupy more than seventy-five per centum of the lot and contains an outer court at least eighty feet deep and of a width twice as great as the depth prescribed for yards in section nine and open to one of the surrounding streets, public alleys, or public parks; *provided*, that said outer court shall not be required to be of a depth which shall leave less than fifty feet between the rear line of said court and the line of said lot immediately behind said court.

Court and vent shaft open to sky.

SEC. 12. No court or vent shaft of a tenement house hereafter erected shall be covered by a roof or skylight, but every such vent shaft or court shall be at every point open from at least two feet above the floor of the lowest apartment abutting upon such vent shaft or court to the sky, unobstructed, except that open iron fire escapes, as required by law, or by ordi-

nances or regulations of incorporated towns, incorporated cities or cities and counties, may project into the court, but not more than four feet from the wall of the house. All courts in tenement houses hereafter erected shall conform to the requirements of the following sections.

When recesses on street or yard or court not counted.

Except that recesses may be built on the street or yard or a court, provided the depth of same is no greater than the width and that their area be not counted in computing the area of the court.

Outer courts. Lot line outer courts. Street-to-yard courts, size of.

SEC. 13. The outer courts of all tenement houses hereafter erected shall have not less than the following minimum widths nor more than the following maximum lengths:

<i>Building.</i>	<i>Least width.</i>	<i>Maximum length.</i>
2 stories-----	4 feet	16 feet
3 stories-----	4 feet 6 inches	25 feet
4 stories-----	5 feet 6 inches	30 feet
5 stories-----	6 feet	35 feet
6 stories-----	8 feet	35 feet
7 stories-----	10 feet	40 feet
8 stories or more--	12 feet	40 feet

The length of outer courts shall not be more than the maximum lengths given in the above table unless six inches be added to the minimum widths for each additional five feet or fraction thereof in length. The lot line outer courts and street to yard courts shall have the same minimum width as outer courts but are not governed by the provision in this section regarding maximum lengths.

Inner courts, size of.

SEC. 14. The inner courts of all tenement houses hereafter erected shall have areas and minimum widths in all parts, not less than the widths and areas as follows:

<i>Building.</i>	<i>Area in square feet.</i>	<i>Least width.</i>
2 stories-----	75	6 feet
3 stories-----	120	7 feet
4 stories-----	160	8 feet
5 stories-----	250	12 feet
6 stories-----	400	16 feet
7 stories-----	625	20 feet
8 stories or more--	840	24 feet

Provided, that when only the windows of kitchens containing not more than seventy-five square feet of floor area or of bath rooms or toilets open or are designed to open upon an inner court and said court is entirely open and free from obstruction from the bottom hereof to the sky, said court shall

have areas and minimum widths in all parts not less than the areas and widths specified in the following table:

<i>Building.</i>	<i>Area in square feet.</i>	<i>Least width.</i>
2 stories-----	75	6 feet 0 inches
3 stories-----	84	7 feet 0 inches
4 stories-----	112	8 feet 0 inches
5 stories-----	144	12 feet 0 inches
6 stories-----	240	16 feet 0 inches
7 stories-----	360	20 feet 0 inches
8 stories or more----	400	20 feet 0 inches

Lot line courts, size of.

SEC. 15. Lot line courts in tenement houses hereafter erected shall have areas and minimum widths in all parts not less than those specified in the following table:

<i>Building.</i>	<i>Area in square feet.</i>	<i>Least width.</i>
2 stories-----	50	4 feet 0 inches
3 stories-----	72	6 feet 0 inches
4 stories-----	105	7 feet 0 inches
5 stories-----	180	9 feet 0 inches
6 stories-----	300	12 feet 0 inches
7 stories-----	490	14 feet 0 inches
8 stories or more----	595	17 feet 0 inches

Provided, that when only the windows of kitchens containing not more than seventy-five square feet of floor area or of bath rooms or toilets open or are designed to open upon a lot-line court and said court is entirely open and free from obstruction from the bottom thereof to the sky, said court shall have areas and minimum widths in all parts not less than the areas and widths specified in the following table:

<i>Building.</i>	<i>Area in square feet.</i>	<i>Least width.</i>
2 stories-----	50	4 feet 0 inches
3 stories-----	50	4 feet 0 inches
4 stories-----	60	6 feet 0 inches
5 stories-----	108	9 feet 0 inches
6 stories-----	144	12 feet 0 inches
7 stories-----	168	14 feet 0 inches
8 stories or more----	225	15 feet 0 inches

Inner court and lot line court air intakes.

SEC. 16. Every inner court, including lot line courts, shall be provided with one or more horizontal air intakes at the bottom. Such intakes shall always communicate directly with the street or yard, and shall consist of an unobstructed passageway, not less than three feet wide and six feet six inches high, which shall be left open, or if not open, there shall always be provided in said passageway open grilles or transoms one at each end of a size not less than ten square feet each, and such

open grilles or transoms shall never be covered with glass or in any other way. In case the court does not go down below the second floor level, the intake shall consist of unobstructed open ducts having an open interior area of not less than sixteen square feet at any point, and covered at each end with a wire screen of not less than one-inch mesh. Such duct shall be so arranged as to be easily cleaned out. These ducts or intakes must in any case be either of fireproof construction or lined with No. 26 galvanized iron on inside.

Minimum distance between buildings. Rear tenements.

SEC. 17. No existing tenement house shall (unless the rear of the lot upon which it stands abuts upon a public alley at least ten feet wide) hereafter be enlarged or its lot be diminished so that there will not be a yard immediately behind said tenement house building of the size required by this act for tenement house buildings hereafter constructed. Where a tenement house, now or hereafter erected, stands upon a lot, other than a corner lot, no other building shall hereafter be placed upon the front or rear of that lot, unless the minimum distance between such buildings shall be at least ten feet, if neither building exceeds the height of one story; or twelve feet if either building exceeds the height of one story, but not the height of two stories, and so on, two additional feet to be added to such minimum distance of ten feet for every story more than one in the height of the highest building on such lot. Every rear tenement hereafter erected, or every tenement that hereafter becomes a rear tenement by the erection of a building or buildings on the front of the same lot, shall have direct access to a street, or to a public alley at least sixteen feet wide, by a passageway not less than five feet wide by seven feet high.

Windows.

SEC. 18. In every tenement house hereafter erected every room, except water-closet compartments and bath rooms, shall have a window or windows of the area required by section 19 of this act, opening directly upon the street or upon a yard or a court of the dimensions specified in sections eight to sixteen of this act, and such windows shall be located so as to properly light all portions of such rooms.

Window area.

SEC. 19. In every tenement house hereafter erected, the total window area of each room within each apartment, except water-closet compartments and bath rooms, shall be at least one eighth of the superficial area of the room, except in the cellar or basement, where it shall be one sixth, and the upper half of all windows shall be made so as to open the full width. The total window area of any such room shall never be less than twelve square feet, measured to outside of sash.

Rooms, size of and height of ceiling. Kitchens, size of. Height of ceiling of closets, water-closets and bath rooms.

SEC. 20. In every tenement house hereafter erected all rooms, except water-closet compartments and bath rooms, shall be of the following dimensions: In each apartment there shall be at least one room containing not less than one hundred and twenty square feet of floor area, and each other room shall contain at least ninety square feet of floor area. Each room shall be in every part not less than nine feet from the finish floor to the finished ceiling; *provided*, that an attic room need be but nine feet high in but half its area. Except that small closets, and water-closet compartments, and bath rooms may be not less than seven feet six inches in height and except that kitchens or pantries may be less than ninety square feet of area; *provided*, that same are not occupied or intended or designed to be occupied as bed rooms.

Alcoves. Size of closet and small alcove. Cooking in closets or alcoves forbidden.

SEC. 21. In every tenement house hereafter erected an alcove in any room shall be separately lighted and ventilated and must conform to all the requirements of other rooms, and shall not be less than ninety square feet in area. No part of any room in a tenement house hereafter erected shall be enclosed or subdivided at any time, wholly or in part, by a curtain or portiere, fixed or movable partition, or other contrivance or device, unless such part of the room so enclosed or subdivided shall contain a separate window as herein required, and shall have a floor area of not less than ninety square feet; *provided, however*, that closets or alcoves of not more than twenty-five square feet floor area do not come within the provisions of this section; *provided, further*, that it shall be unlawful to do any cooking or prepare any food in closets or alcoves unless they conform to all the provisions of sections eighteen and nineteen of this act relative to windows.

Windows in hall. Stair well. Skylight, size of.

SEC. 22. In every tenement house which is hereafter erected, which is occupied or arranged to be occupied by more than two families on any floor, or which exceeds four stories and cellar in height, every public hall or stair hall shall have at least one window at each floor opening directly upon the street or upon a yard or court, except as otherwise provided in this section. Any part of a hall divided off from any other part of said hall by a door or doors shall be deemed a separate hall within the meaning of this section; and if no window from such hall opens directly upon a street or upon a yard or court, there shall be a skylight over each such public hall with louvers and at least twenty square feet of glass area over buildings two stories in height. The area of glass in such skylight shall be increased at a ratio of six square feet for each additional story in height

of the building, and a stair well be provided. The clear open area of such stair well at each floor to be equal to one third of the area of the glass in such skylight, and all doors leading from such public halls shall be provided with translucent glass panel of an area of not less than five square feet for each door and also with fixed transoms of translucent glass over each door; *provided*, that in a stair hall that does not have a window opening directly upon a street or upon a yard or court in lieu of such window a skylight with louvres and at least twenty square feet of glass area shall be constructed in the roof over such stairway.

Public hall. Window, size of.

SEC. 23. In every tenement house hereafter erected, one at least of the windows provided to light each public hall or part thereof shall have an area of at least twelve square feet measured to outside of sash.

Window in stair hall, size of. Sash door.

SEC. 24. In every tenement house hereafter erected, the windows required by law on each floor to light or ventilate stair halls, shall be at least fifteen square feet of area measured to outside of sash. Sash doors in entrance halls and public halls shall be deemed the equivalent of a window for lighting purposes; *provided*, that such doors contain the amount of glazed surface prescribed for windows.

Vent shaft. Air intake. Pipes in vent shaft.

SEC. 25. Every vent shaft hereafter constructed in a tenement house shall be at least sixteen square feet in area, and the least dimension of such vent shaft shall be at least four feet; and, if such vent shaft is above fifty feet in height measured from the bottom to the top of said shaft, such vent shaft shall throughout its entire height be increased in area three square feet for each addition of twelve feet or fraction thereof above fifty feet.

Every such vent shaft shall be constructed of fireproof materials or shall be covered on the outside (weatherside) with metal and on the inside (room side) with metal lath and plaster, excepting that portion of such vent shaft extending from the ceiling of the topmost story of the building may be covered with metal on both sides in lieu of metal lath and plaster.

Every such vent shaft shall be provided with an air intake or duct at the bottom, communicating with the street or yard, or a court; such air intake shall be three square feet in total area; such air intake may be divided into not more than three separate ducts running between the joists or otherwise, and shall in all cases be placed as nearly horizontal as possible. Such ducts shall be constructed of fireproof material and shall

enter the shaft at or near the bottom thereof, and shall be provided with a wire screen of not more than one inch mesh at each end. Plumbing, gas, steam or other similar pipes may be placed in a vent shaft.

Access to water-closet in apartment of more than three rooms.

SEC. 26. In every apartment of four or more rooms in a tenement house hereafter erected, access to every living room and bed room and to at least one water-closet compartment shall be had without passing through any bed room.

Rooms in basement. Two thirds above building grade. Ceiling 7 feet above grade and ground level.

SEC. 27. In no tenement house hereafter erected, shall any room in the cellar be constructed, altered, converted or occupied for living purposes; and no room in the basement of a tenement house shall be constructed, altered, converted, or occupied for living purposes, unless all of the following conditions of this act be complied with, and at least two thirds of the basement shall be above grade for building; *provided*, in each case of each such room the ceiling shall be at least seven feet above the adjoining street grades and actual ground levels.

(1) Such rooms shall be at least nine feet in every part from the floor to the ceiling.

(2) There shall be appurtenant to such room or apartment a water-closet conforming to the regulations and ordinances relating to water-closets, of the incorporated town, incorporated city or city and county in which the tenement house is or is to be built.

Walls below ground dampproofed.

SEC. 28. If the basement of any tenement house hereafter erected is used or designed to be used for living purposes it shall have all walls below the ground level and all cellar or lower floors dampproofed and waterproofed. When necessary to make such floors and walls dampproof and waterproof, the dampproofing and waterproofing shall run through the walls as high as the ground level and continue throughout the floor. All cellars and basements in such tenement houses shall be properly lighted and ventilated to the satisfaction of the department charged with the enforcement of this act.

Drainage of shafts, courts, areas and yards.

SEC. 29. In every tenement house hereafter erected the bottom of all shafts, courts, areas, and yards which extend to the basement for light or ventilation of living rooms, shall not be more than two feet above the floor of the lowest apartment abutting on such court, shaft, area or yard. In every tenement house all shafts, courts, areas and yards shall be properly graded and drained and connected with the street or sewer

so that all water may pass freely through into it, and when required by the department charged with the enforcement of this act, shall be properly concreted.

Sink with running water in every apartment.

SEC. 30. In every tenement house hereafter erected, there shall be in each apartment a proper sink with running water.

Water-closets and baths. Window area. Construction.

SEC. 31. In every tenement house hereafter erected there shall be a separate water-closet in a separate compartment within each apartment, and one shower bath or bath tub in a separate compartment, shall be provided on each floor for every ten rooms or fraction thereof and arranged so that one bath tub or shower is accessible to each apartment, provided that where there are apartments consisting of but one or two rooms there may be one water-closet compartment for every two such apartments accessible from each such apartment through the public hall, and not more than twenty feet distant from an entrance of each such apartment.

Each compartment shall not be less than two feet four inches wide and shall be enclosed with plastered partitions which shall extend to the ceiling.

Every such water-closet compartment shall have a window or windows of at least six square feet total area opening directly upon a vent shaft, court, street or yard.

However, a bath tub or shower may be placed in a separate water-closet compartment where neither bath tub or shower, or water-closet are to be used by more than one apartment.

Every water-closet compartment shall be provided with proper means for lighting same by night.

The floor of every such water-closet compartment shall be made waterproof with asphalt, tile, cement or some other non-absorbent waterproof material, which shall be satisfactory to the department charged with the enforcement of this act.

Wooden tenement, size.

SEC. 32. No wooden tenement house shall hereafter be erected which shall contain more than one hundred and fifty rooms exclusive of bath rooms.

Wooden tenement, height. Three stories living apartments. Amusement rooms. Basement is a story. Step up or down, but not exceed, provided herein.

SEC. 33. No wooden tenement house exceeding three stories in height, exclusive of cellar, shall hereafter be erected. However, the building may step up or down to follow the grade; *provided*, no part of the said building is over three stories in height; *provided, however*, that a wooden tenement containing a basement or a full first story the floor of which is not below the level of the curb may, where such basement or story is not used or designed to be used for living purposes,

be constructed with not more than three stories of living apartments above such basement or such first story; *and provided, further*, that when three stories of living apartments are constructed or designed to be constructed or occupied above such first story or basement of a wooden tenement such first story or basement shall not be of such height as to have more than fourteen feet or less than nine feet between the finished floor and finished ceiling.

Where such wooden tenement contains three stories designed for living purposes no stores shall be placed therein.

Whenever in a wooden tenement three stories of apartments designed for living purposes are constructed above such last mentioned basement or story, such basement or story may contain reception or amusement rooms, not to exceed five in number, which shall be for the use of the tenants of the building and are not to be used for commercial purposes, and shall not contain apartments used or designed to be used for living purposes.

Every tenement house may contain not to exceed five such reception or amusement rooms for the use of the tenants of the building and not to be used for commercial purposes. Every reception or amusement room shall have a minimum floor area of not less than one hundred and fifty square feet and a minimum width of not less than ten feet and shall have a window or windows therein, opening upon a street or public alley, or other public thoroughfare or public park, or court or yard, as follows:

When such room contains not more than one hundred and eighty square feet of floor area the window area, if said room is not a basement room, shall be not less than one eighth the superficial area of said room, and if located in a basement shall be not less than one sixth the superficial area of such room, and the upper half of the windows shall be made so as to open the full width.

No reception or amusement room containing more than one hundred and eighty square feet of floor area shall have a lesser window area than that provided for such rooms containing one hundred and eighty square feet of floor area.

No such reception or amusement room shall be used for lodgings, sleeping apartments or family domicile.

Whenever such reception or amusement rooms are placed in a wooden tenement building or in a tenement which is not a wooden tenement, the story or basement in which such rooms are located shall have a minimum height between the finished floor and finished ceiling of not less than nine feet.

No wooden tenement shall contain more than three stories used or designed to be used for living purposes and a basement containing living apartments shall be counted as a story

in determining the number of stories of a tenement house. Such tenement house may step up or down to follow the grade.

Non-fireproof tenement. Step up or down, but not to exceed number of stories provided herein.

SEC. 34. A non-fireproof tenement house may be built four stories in height; *provided*, the exterior walls are all of brick or stone or concrete and all other municipal requirements for this class of buildings are complied with. If in addition to above requirements all joists, girders, studding, furring and the soffits of stairs be lathed with metal lath and plastered, such tenement houses may be built not to exceed six stories; *provided*, the height limits imposed by municipal ordinance for all buildings of this particular class be not exceeded. A cellar is not a story within the meaning of this section. However, the building may step up or down to follow the grade, provided that no part of said building exceeds the number of stories provided for in this section.

Fireproof tenement.

SEC. 35. Every tenement house hereafter erected exceeding six stories or parts of stories in height (above the curb) shall be a fireproof tenement house. A cellar is not a story within the meaning of this section.

Standpipes. Fire escapes.

SEC. 36. Every tenement house shall be provided and equipped with standpipes and with metallic fire escapes, combined with suitable metallic balconies, platforms and railings, as provided for, or which shall be provided for by the ordinances of the incorporated town, incorporated city or city and county in which the tenement house is situated. No incumbrance of any kind shall at any time be placed before, upon or against any stairway, steps or landings or fire escapes in or upon any tenement house. All fire escapes upon tenement houses shall be kept in good order and repair, and every exposed part thereof shall at all times be protected against rust by durable paint.

Stairway to roof. Penthouse in every tenement over two stories.

SEC. 37. Every tenement house hereafter erected, more than two stories in height, shall have a stairway not less than three feet in width leading to an opening onto the roof and provided with a penthouse over such a stairway (such penthouse to be constructed on the inside and ceiling, of the same materials as required in this section for the walls enclosing stairway, and provided with a door). Such stairway shall be provided with proper handrail and be enclosed with walls of fireproof materials or wood studs lathed on the stair side with metal lath and plaster, or such wood studs may be covered with metal in lieu of metal lath and plaster. Any door opening from such stairway to the roof space shall be covered on

the stair side with metal. The soffits of all such stairs shall be covered with metal or metal lath plastered.

Stairway. Additional stairs non-fireproof tenement with less than 50 rooms.

SEC. 38. Every tenement house hereafter erected, more than two stories in height, shall have at least one flight of stairs, extending from the entrance floor to the roof and the stairs and public halls therein shall be at least three feet wide in the clear and every non-fireproof tenement house containing not more than fifty rooms shall have a secondary flight of stairs running from the top floor down to the second floor and not less than two feet six inches wide. A fire escape may take the place of this second stairway, provided said fire escape connects directly with a public hallway or is accessible to each apartment.

Stairway in non-fireproof house.

SEC. 39. Every non-fireproof tenement house hereafter erected containing over fifty rooms, exclusive of bath rooms, above the entrance story, shall also have an additional flight of stairs for every additional eighty rooms or fraction thereof; if said house contains not more than one hundred rooms above the entrance story, in lieu of an additional stairway, the stairs, stair halls and entrance halls throughout the entire building shall be at least one half wider than is specified in sections thirty-eight and forty-two of this act. However, where an additional flight of stairs is added in accordance with the provisions of this section, the secondary stairway required in section thirty-eight may be omitted.

Stairway in fireproof house.

SEC. 40. Every fireproof tenement house hereafter erected containing over one hundred and twenty rooms above the entrance story, exclusive of bath rooms, shall have an additional flight of stairs for every additional one hundred and twenty rooms or fraction thereof, but if said house contains not more than one hundred and eighty rooms above the entrance story, exclusive of bath rooms, in lieu of an additional stairway the stairs, stair halls and entrance halls throughout the entire building may each be at least one half wider than is specified in sections thirty-eight and forty-two of this act, and if such house contains not more than three hundred rooms above entrance story, exclusive of bath rooms, in lieu of four stairways there may be but three stairways; *provided*, that one of such stairways and the stair halls and entrance halls connected therewith are at least one half wider than is specified in sections thirty-eight and forty-two of this act.

Stair entrance and construction. Height of riser. Width of tread.

SEC. 41. Each flight of stairs mentioned in the last two sections shall have an entrance on the entrance floor from the street or street court, or from an inner court which connects directly with the street. All stairs shall be constructed with a rise of not more than eight inches, and with treads not less than nine inches wide, exclusive of nosings. Where winders are used all treads at a point eighteen inches from the strings on the wall side shall be at least ten inches wide.

Entrance hall, size. Access from yard to street direct.

SEC. 42. Every entrance hall in a tenement house hereafter erected shall be at least three feet six inches in the clear from the entrance up to and including the stair enclosure, and beyond this point three feet wide in the clear. In every tenement house hereafter erected, access shall be had from the street to the yard, either in a direct line or through a court.

Closets under stairs forbidden.

SEC. 43. In non-fireproof tenement houses hereafter erected no closet of any kind shall be constructed under any stairway leading from the first story exclusive of the cellar, to the upper stories, but such space shall be left entirely open and kept clear and free from incumbrance.

Entrance to cellar or basement from outside.

SEC. 44. In every tenement house hereafter erected there shall be an entrance to the cellar or other lowest story from the outside of said building.

Diminishing lot area forbidden.

SEC. 45. No tenement house shall be increased in height or its lot decreased so that its yard shall be diminished to less than is required by sections eight to eleven inclusive of this act, or so that a greater percentage of the lot shall be occupied by buildings or structures than provided for in section five of this act. For the purpose of this section, the measurements for computing the percentage of lot to be occupied may be taken at the level of the second tier of beams, the second floor level, except in tenement houses where rooms on the ground floor are to be occupied as sleeping apartments; *provided*, that the space occupied by open iron fire escapes and by chimneys or flues located in yards and attached to the house, which do not exceed five square feet in area and do not obstruct the light or ventilation, shall not be deemed part of the lot occupied.

Maximum height.

SEC. 46. No tenement house shall be increased in height so that said building shall exceed in height by more than one half the width of the widest street on which it stands.

Shaft or court in existing tenement.

SEC. 47. Any shaft or court used or intended to be used to light or ventilate rooms intended to be used for living purposes, and which may hereafter be placed in tenement houses erected prior to the passage of this act, shall not be less in area than twenty-five square feet, or less than four feet in width in any part, and such shaft shall under no circumstances be roofed or covered over at the top with a roof or skylight.

Added room or hall.

SEC. 48. Any additional room or hall that is hereafter constructed or created in a tenement house shall comply in all respects with the provisions of this act applicable to tenement houses to be erected hereafter, except that such rooms may be the same height as the other rooms of the same story of the house.

Alteration. Light not to be diminished.

SEC. 49. No tenement house shall be so altered that any room or public hall or stairs shall have its light or ventilation diminished in any way not approved by the health department or other department designated by municipal ordinance for that purpose.

Room not to be divided. Closet or alcove 25 square feet area.

SEC. 50. No part of any room in any tenement house shall hereafter be enclosed or subdivided wholly or in part, by a curtain, portiere, fixed or movable partition, or other contrivance or device, unless such part of the room so enclosed or subdivided, shall contain a window as required by section eighteen of this act, and have a floor area of not less than ninety square feet; *provided, however*, that closets or alcoves of not more than twenty-five square feet in area do not come within the provisions of this section.

New water-closets.

SEC. 51. Every new water-closet hereafter placed in a tenement house, except one provided to replace a defective or antiquated fixture in the same location, shall comply with the provisions of section thirty-one of this act relative to water-closets in tenement houses hereafter erected.

Limit size wooden tenement.

SEC. 52. No existing wooden tenement house shall hereafter be increased in size so as to contain more than one hundred and fifty rooms exclusive of bath rooms.

Limit of height, wooden tenement. Step up or down to follow grade.

SEC. 53. No wooden tenement house shall be increased in height so as to exceed three stories, exclusive of the cellar. However, the building may step up or down to follow the grade; *provided* no part of said building is over three stories in height.

Altering height. May step up or down, but not to exceed number of stories provided.

SEC. 54. A non-fireproof tenement house may hereafter be altered to be four stories in height; *provided*, the exterior walls are all of brick or stone or concrete and all other municipal requirements for this class of buildings are complied with. If in addition to the above requirements all joists, girders, studding, furring and the soffits of stairs be lathed with metal lath and plastered, such tenement houses may be built not to exceed six stories; *provided*, the height limits imposed by municipal ordinances for all buildings of this particular class be not exceeded. A cellar is not a story within the meaning of this section. However, the building may step up or down to follow the grade; *provided* no part of the said building exceeds the number of stories provided for in this section.

Altering height. Fireproof house.

SEC. 55. No tenement house shall hereafter be altered to exceed six stories or parts of stories in height unless it is a fireproof tenement house. A cellar is not a story within the meaning of this section.

Stairs to roof not to be removed.

SEC. 56. No stairs leading to the roof in any tenement house shall be removed or replaced with a ladder, unless a new stairway is built in conformity with requirements of section thirty-seven.

Reducing stair width forbidden.

SEC. 57. No public hall or stairs in a tenement house shall be reduced in width so as to be less than the minimum width prescribed in sections thirty-eight and forty-two of this act.

Lighting halls. Sunrise to sunset.

SEC. 58. In every tenement house containing fifteen rooms or more, where the public halls and stairs are not, in the opinion of the health department or other department designated by municipal ordinance for that purpose, sufficiently lighted, the owner of such house shall keep a proper light burning in the hallway near the stairs upon each floor from sunrise to sunset.

Lighting halls. Sunset to sunrise.

SEC. 59. In every tenement house containing fifteen rooms or more, a proper light shall be kept burning by the owner in the public hallways, near the stairs, upon the entrance floor, and upon the second floor above the entrance floor of said house, every night from sunset to sunrise throughout the year, and upon all other floors of the said house from sunset until ten o'clock in the evening.

Water-closets in cellars. Must obtain permit.

SEC. 60. No water-closets shall be maintained in the cellar of any tenement house without a special permit in writing from the health department, or other department designated by municipal ordinance for that purpose which shall have power to make rules and regulations governing the maintenance of such closets.

Number of water-closets required in existing tenements.

SEC. 61. In every tenement house existing prior to the passage of this act, at least one water-closet shall be provided for every two families; *provided, however*, that the health department or other department designated by municipal ordinance for that purpose may exempt any tenement house existing prior to the passage of this act from the provision in this section above contained, whenever, in the judgment of said department, it would not be detrimental to the health of the occupants of said tenement house and the written permit be signed by an officer of said department authorized so to do and filed in said department as a part of its records; *provided, further*, that the above exemption shall not apply to extensions of or additions to tenement houses existing prior to the passage of this act.

Basement room, definition of. Basement two thirds above building grade. Ceiling seven feet above street grade and actual ground level.

SEC. 62. In no now existing tenement house shall any room in the cellar be constructed, altered, converted or occupied for living purposes; and no room in the basement of a tenement house shall be constructed, altered, or converted to be occupied for living purposes, unless all of the following conditions of this act be complied with, and at least two thirds of the basement shall be above grade for building; *provided*, in each case it shall be at least seven feet above the street grade and actual ground level. Such rooms shall be at least eight feet six inches high in all now existing tenement houses in every part, from the floor to the ceiling. There shall be appurtenant to such room or apartment a water-closet conforming to the regulations and ordinances relating to water-closets, of the incorporated town, incorporated city, or city and county in which the tenement house is or is to be built. All walls shall be dampproofed, and there shall be an open area way extending to bottom of basement floor and running clear across outside of at least one room in each apartment.

Sinks and water-closets to be in good order.

SEC. 63. In all tenement houses the floor and wall surfaces beneath and around all water-closets and sinks shall be maintained in good order and repair, and if of wood shall be kept well painted with light colored paint.

Owner must repair roof. Owner to keep house in good order.

SEC. 64. The owner of every tenement house shall see that such house and all parts thereof shall be kept in good order and the roof shall be kept so as not to leak, and all rain water shall be so drained and conveyed therefrom as to prevent its dripping on the ground or causing dampness in the walls, ceilings, yards, or areas.

Owner must remove dirt and garbage from yards, etc. Keep house clean.

SEC. 65. The owner of every tenement house shall see that such house and every part thereof shall be kept clean and free from any accumulation of dirt, filth or garbage or other matter in or on the same, or in the yards, courts, passages, areas or alleys connected or belonging to the same.

Owner paint courts, etc., a light color.

SEC. 66. The walls of all yard courts, inner courts and shafts, unless built of light colored brick or stone, shall be thoroughly whitewashed by the owner, lessee or tenant, or shall be painted a light color and so maintained.

Kalsomining white, etc.

SEC. 67. In all tenement houses, the health department or other department designated by municipal ordinance for that purpose may require the walls and ceilings of every room that does not open directly on the street to be kalsomined white or painted with white paint when necessary to improve the lighting of such rooms, and may require this to be renewed as often as may be necessary.

Wall paper first removed.

SEC. 68. No wall paper shall be placed upon a wall or ceiling of any tenement house unless all wall paper shall be first removed therefrom and said wall and ceiling thoroughly cleaned.

Owner must provide ash-cans.

SEC. 69. The owner of every tenement house shall provide for said building proper and suitable conveniences or receptacles for ashes, rubbish, garbage, refuse and other matter.

Animals forbidden on premises. Tenement not to be used for lodging house. Rags not to be stored.

SEC. 70. No horse, cow, calf, swine, goat, rabbit, or sheep, chickens or poultry shall be kept in a tenement house, or within twenty feet thereof on the same lot, and no tenement house or the lot or premises thereof, shall be used for a lodging house or stable, or for the storage or handling of rags.

Janitor.

SEC. 71. Whenever there shall be more than eight families living in any tenement house, in which the owner does not reside, there shall be a janitor, housekeeper, or some respon-

sible person who shall reside in said house and have charge of same, as the department charged with the enforcement of this act shall so require.

Air per person.

SEC. 72. No room in any tenement house shall be so overcrowded that there shall be afforded less than four hundred cubic feet of air to each person occupying such room.

Articles forbidden storage.

SEC. 73. No tenement house or any part thereof, nor of the lot upon which it is situated, shall be used as a place of storage, keeping or handling of any combustible article except under such conditions as may be prescribed by the department of any incorporated town, incorporated city, or city and county to which this act applies, which are now charged with the enforcement of laws, ordinances, or regulations, relating to the erection of buildings, the protection of public health, and police and fire protection. No tenement house nor any part thereof, nor of the lot upon which it is situated, shall be used as a place of storage, keeping or handling of any article dangerous or detrimental to life or health, nor for the storage, keeping or handling of feed, hay, straw, excelsior, cotton, paper stock, feathers or rags.

Bakery or place where fat is boiled. Fireproofing.

SEC. 74. No bakery, and no place of business in which fat is boiled shall be maintained in any tenement house which is not fireproof throughout, unless the ceilings and side walls of said bakery or place where fat boiling is done are made safe by fireproof materials around the same, and there shall be no openings either by door or window, dumb waiter shafts or otherwise, between said bakery or said place where fat is boiled in any tenement house and the other parts of said building.

Fireproofing where paint, oil, spirituous liquors or drugs are stored.

SEC. 75. All transoms and windows opening into halls from any portion of a tenement house where paint, oil, spirituous liquors or drugs are stored for the purpose of sale or otherwise, shall be glazed with wire glass or they shall be removed and closed up as solidly as the rest of the wall. And all doors leading into such hall from such portion shall be made fireproof.

Scuttles and penthouse doors not to be locked.

SEC. 76. All scuttles and penthouses and all stairs or ladders leading thereto shall be easily accessible to all tenants of the building, and kept free from incumbrance, and ready for use at all times. No scuttle and no penthouse door shall at any time be locked with a key, but either may be fastened on the inside by movable bolts or hooks.

Sleeping rooms in existing tenements.

SEC. 77. No room in a tenement house erected prior to the passage of this act shall hereafter be occupied for sleeping purposes, unless it shall have a window opening directly upon the street, or upon a yard not less than ten feet deep, or above the roof of an adjoining building, or upon a court of not less than twenty square feet in area, open to the sky without roof or skylight, unless such room is located on the top floor and is adequately lighted and ventilated by a skylight opening directly to the outer air, or is on the top floor and has a window opening upon a court not less than ten square feet in area and not more than three feet below the top of the walls of said court. Every room in such tenement house, regardless of the use thereof, shall comply with the above provisions; or, if the room be not used for sleeping purposes, shall be provided with a sash window, opening into an adjoining room in the same apartment, which latter room either opens directly on the street or on a yard of the above dimensions. Said sash window shall be a vertically sliding pulley, hung sash not less than three feet by five feet between stop beads; both halves shall be made so as to readily open, and shall be glazed with translucent glass, and so far as possible it shall be in line with windows in outer rooms opening on the street or yard as to afford a maximum of light and ventilation.

Extra light in halls.

SEC. 78. In all now existing tenement houses whenever a public hall on any floor is not light enough in the day time to permit a person to read in every part thereof without the aid of artificial light, the wooden panels in the doors located at the ends of the public halls and opening into rooms shall be removed, and ground glass or other translucent glass or wire glass panels of an aggregate area of not less than four square feet for each door shall be substituted; or said public hall may be lighted by a window at the end thereof with the plane of the window at right angles to the axis of the said hall, said window opening upon the street or upon a yard or court.

Existing water-closets. Woodwork removed.

SEC. 79. In all now existing tenement houses, the woodwork enclosing all water-closets shall be removed from the front of said closets and the space underneath the seat shall be left open. The floor and other surface beneath and around the closet shall be maintained in good order and repair and if of wood shall be kept well painted with light colored paint.

Woodwork removed in sinks and lavatories.

SEC. 80. In all now existing tenement houses the woodwork enclosing sinks or lavatories, located in rooms, located in public halls or stairs shall be removed, and the space underneath sink

or lavatory, shall be left open. The floors and wall surfaces beneath and around the sink or lavatory shall be maintained in good order and repair, and if of wood shall be well painted.

Door or window at bottom of shaft or court.

SEC. 81. In all now existing tenement houses there shall be at the bottom of every shaft or inner court, a door or window giving sufficient access to each shaft or court to enable it to be properly cleaned out.

Plumbing in existing tenements. School sinks and privy vaults to be removed.

SEC. 82. In all tenement houses erected prior to the passage of this act, where a connection with a sewer is possible, all school sinks, privy vaults or other similar receptacles used to receive fecal matter, urine or sewage, shall be completely removed and the place where they are located properly disinfected under the direction of the health department or other department designated by municipal ordinance for that purpose. Such appliances shall be replaced by individual water-closets of durable non-absorbent material, properly sewer-connected, and with individual traps, and properly connected flush tanks providing an ample flush of water to thoroughly cleanse the bowl. Each water-closet shall be located in a compartment completely separated from every other water-closet, and such compartment shall contain a window of not less than three square feet in area opening directly to the street, or yard, or on a court of the minimum size prescribed in section twenty-five of this act. The floors of the water-closet compartments shall be waterproof as provided in section thirty-one of this act. Where water-closets are placed in the yard to replace school sinks or privy vaults, the structure containing the water-closets shall not exceed ten feet in height; such structure shall be provided with a ventilating skylight in the roof, of adequate size, and each water-closet shall be located in a compartment separated completely from every other water-closet. Proper and adequate means for lighting the structure at night shall be provided. There shall be provided at least one water-closet for every two families in every tenement house existing on the day this act takes effect subject to the provisions of section sixty-one of this act. Except as in this section otherwise provided such water-closets and all plumbing in connection therewith shall be in accordance with the ordinances and regulations in relation to plumbing and drainage.

Penthouses and scuttles in existing tenements.

SEC. 83. Every tenement house of more than two stories in height erected prior to the passage of this act, shall have in the roof a penthouse or a scuttle which shall not be less than twenty-one by twenty-eight inches, and located in the ceiling

of a public hall. All scuttles shall be covered on the outside with metal and shall be provided with stairs or stationary ladders leading thereto and easily accessible to all tenants of the building. No scuttle and no bulkhead door shall at any time be locked with a key, but either may be fastened on the inside by movable bolts or locks. All key locks on scuttles and on penthouse doors shall be removed.

Application by owner, his agent or architect for permit to build to be on blank forms furnished by department. Plans and specifications and lot plan to be filed with application. Also, duplicate copy of plans for use on work. Agent of owner must file affidavit that he is authorized to act for owner and sign statement. Application for permit to be verified by affidavit of person making application. Changes in plans and specifications must be approved. Certificate that "tenement house act has been complied with." Permit for nominal alterations and repairs. Permit expires if work is not commenced or is suspended for 90 days.

SEC. 84. Before the construction or alteration of a tenement house or the alteration or conversion of a building for the use of a tenement house is commenced, and before the construction or alteration of any building or structure on the same lot with a tenement house, the owner or his agent or architect shall submit to the health department or other department designated for that purpose by ordinance of the municipality in which said work is contemplated, a detailed statement in writing, verified by the affidavit of the person making the same, of the construction of such tenement house or building or of such alterations proposed to be made to the said tenement house or building, upon blanks or forms to be furnished by such department. Also a full and complete copy of the plans and specifications of the tenement house or building proposed to be erected or altered, as the case may be, together with a plan of the lot on which such building is proposed to be erected or altered or such portion of the lot as will be set aside exclusively for and under the control of the said tenement house building. Such statement shall give in full the name and residence by street and number of the owner or owners of such tenement house or building. Also the name and business address by street and number of the architect and the contractor. Said affidavit shall allege that said plans, specifications and lot plan are true and contain a correct description of such tenement house, building lot, structure and proposed work. The statements and affidavits herein provided for may be made by the owner or his agent or architect. No person, however, shall be recognized as the agent of the owner unless he shall file with said department an affidavit alleging that he is authorized by the said owner to act for him and to sign the required affidavit. Any false swearing in a material point in such affidavit shall be deemed perjury. Such plans, specifications and statements shall be filed in said department and shall be deemed public records. Said department charged with

the enforcement of this act shall cause all such plans and specifications to be examined and if such plans and specifications conform to the provisions of this act shall issue a written certificate to that effect to the person submitting the same. Such certificate shall state that "Tenement house act has been complied with." Said department may from time to time approve changes in any plans or specifications previously approved by it; *provided*, plans and specifications when so changed shall be in conformity with the provisions of this act. Said department shall have power to revoke or cancel any permit or approval that has been previously issued in case of any failure or neglect to comply with any of the provisions of this act or in case any false statement or misrepresentation is made in any of the said plans, specifications or statements submitted or filed for such permit or approval. The construction, alteration or conversion of such tenement house, building or structure or any part thereof, shall not be commenced until the filing of such specifications, plans and statements, and the approval thereof, as above provided. The construction, alteration or conversion of such house, building or structure, shall be in accordance with such approved specifications and plans. When the original plans are filed a copy shall be presented to the department with which the plans are filed and when the permit to construct or alter is issued said copy shall be certified thereon by said department as a true copy of said plans and delivered to the person applying for said permit and shall be kept upon the premises upon which the tenement house or building is to be constructed or altered from the commencement of the work thereon to the final completion of the construction or alteration and be subject to inspection at all times by all proper authorities.

A copy of all changes or alterations in the original plans duly authorized shall also be kept upon the premises or said changes or alterations shall be noted upon the original copy so issued and certified by the department with which the original plans were filed. The department charged with the enforcement of this act may, at its discretion, issue a permit in case of nominal alterations and repairs, when application is made therefor in writing by the owner, his agent or architect, when the making of said nominal alterations and repairs do not affect any structural feature, light or sanitation of a tenement house building, without requiring the filing of plans, specifications or lot plan. Any permit or approval which may be issued by said department but under which no work has been done within ninety days from the date of issuance of such permit or approval or where work has been suspended for a period of ninety days shall expire by limitation, and a new permit shall be obtained before the work may be prosecuted.

Certificate of final completion. Permit of occupancy, how obtained.

SEC. 85. Upon the completion of the construction or alteration of a tenement house or alteration of a building into a tenement house and the making of a written application therefor by the owner, his agent, architect or contractor to the health department or other department designated by municipal ordinance to enforce the provisions of this act regarding actual construction or alteration of a tenement house or building, said department, if said building at the date of such application is entitled thereto, shall, within ten days from the date of application, issue a certificate that the tenement house or building or alteration thereof is completed in conformity with the Tenement House Act, which certificate shall be entitled "Certificate of final completion," and upon presentation of said certificate to the department of health of the incorporated town, incorporated city, or city and county in which the building is located and filing the same with such department the department of health shall issue a permit to occupy such tenement house, which last mentioned permit shall be entitled "Permit of occupancy upon completion of construction."

Said certificate and said permit shall each be made in duplicate and one copy of each shall remain on file in the department issuing it.

No tenement house shall be occupied in whole or in part for human habitation until the issuance of the said "Certificate of final completion" and of said "Permit of occupancy upon completion of construction."

Unlawful occupancy.

SEC. 86. If any building hereafter constructed as or altered into a tenement house, be occupied in whole or in part for human habitation in violation of the last section, during such unlawful occupancy said premises shall be deemed unfit for human habitation and the department of health or other department charged with the enforcement of this act may cause them to be vacated accordingly.

Enforcement. Definition of "Department of Health."

SEC. 87. Except as herein otherwise provided, the provisions of this act shall be enforced by the departments of any incorporated town, incorporated city, or city and county to which this act applies, which are charged with the enforcement of laws, ordinances, and regulations relating to the protection of public health and the erection of buildings.

By the term "department of health" used in this act is meant any department, portion or part of the government of any incorporated town, incorporated city or city and county to which this act applies which is charged with the enforcement of laws, ordinances and regulations relating to the protection of public health.

Inspection.

SEC. 88. The department of health or other department charged with the enforcement of this act in any incorporated town, incorporated city or city and county to which this act applies and the officers and agents of such departments shall have the right and it shall be its and their duty to enter into tenement houses and buildings within the said municipal corporation for the purpose of inspecting such houses and buildings to secure compliance with the provisions of this act, and to prevent violations thereof.

Tenement house act is minimum requirement.

SEC. 89. Nothing in this act shall be construed to abrogate or impair the powers of the department of health, the department of public works or of the courts, to enforce any provisions of the charter or building ordinances and regulations of any incorporated town, incorporated city, or city and county, not inconsistent with this act, or to prevent or punish violations thereof.

The provisions of this act shall be held to be the minimum requirements adopted for the protection, health and safety of the community. Nothing in this act contained shall be construed as prohibiting the legal legislative body of any incorporated town, incorporated city or city and county, from enacting from time to time supplementary ordinances imposing further restrictions. But no ordinance, regulation or ruling of any municipal authority shall repeal, amend, modify or dispense with any provision of this act.

Penalty for violation.

SEC. 90. Every person who shall violate or assist in violation of any provision of this act shall be guilty of a misdemeanor punishable by imprisonment in a county jail not exceeding six months or by a fine not exceeding five hundred dollars or by both, and in addition to the penalty therefor, shall be liable for all costs, expense and disbursements paid or incurred by the department, by any of the officers thereof, or by any agent, employee or contractor of the same, in the prosecution of such violation.

Procedure for enforcement.

SEC. 91. Except as herein otherwise specified the procedure for the prevention of violations of this act, or for the vacation of premises unlawfully occupied, or for other abatement of nuisance in connection with a tenement house, shall be as set forth in charter and ordinances of the municipality in which the procedure is taken. In case any tenement house, building or structure or any part thereof is constructed, altered, converted or maintained in violation of any provision of this act or of any order or notice of the departments charged with its

enforcement, or in case a nuisance exists in any such tenement house, building or structure or upon the lot on which it is situated, said departments may institute any appropriate action or proceeding to prevent such unlawful construction, alteration, conversion or maintenance, to restrain, correct or abate such violation or nuisance, to prevent the occupation of said tenement house, building or structure, or to prevent any illegal act, conduct or business in or about such tenement house or lot. In any such action or proceeding said departments may, by affidavit setting forth the facts, apply to the superior court, or to any judge thereof, for an order granting the relief for which said action or proceeding is brought, or for an order enjoining all persons from doing or permitting to be done any work in or about such tenement house, building, structure or lot, or from occupying or using the same for any purpose, until the entry of final judgment or order. In case any notice or order issued by said departments is not complied with, said departments may apply to the superior court, or to any judge thereof, for an order authorizing said departments to execute and carry out the provisions of said notice or order, to remove any violation specified in said order or notice, or to abate any nuisance in or about such tenement house, building or structure, or the lot upon which it is situated. The court, or any judge thereof, is hereby authorized to make any order specified in this section. In no case shall the said departments or any officer thereof or the municipal corporation be liable for costs in any action or proceeding that may be commenced in pursuance of this act.

Fine a lien on tenement house.

SEC. 92. Every fine imposed by judgment under section ninety of this act upon a tenement house owner shall be a lien upon the house in relation to which the fine is imposed from the time of the filing of a certified copy of said judgment in the office of the recorder of the county in which said tenement house is situated, subject only to taxes and assessments and water rates, and to such mortgage and mechanics' liens as may exist thereon prior to such filing; and it shall be the duty of the department of health or other department by municipal ordinance designated for that purpose, upon the entry of such judgment, to forthwith file the copy as aforesaid, and such copy upon filing shall be forthwith indexed by the recorder in the index of mechanics' liens.

Notice of pendency.

SEC. 93. In any action or proceeding instituted by the departments charged with the enforcement of this act, the plaintiff or petitioner may file in the county recorder's office of the county where the property affected by such action or

proceeding is situated, a notice of the pendency of such action or proceeding. Said notice may be filed at the time of the commencement of the action or proceeding, or at any time afterwards before final judgment or order, or at any time after the service of any notice or order issued by said department. Such notice shall have the same force and effect as the notice of pendency of action provided for in the Code of Civil Procedure. Each county recorder with whom such notice is filed shall record it, and shall index it in the name of each person specified in a direction subscribed by an officer of the department instituting such action or proceeding. Any such notice may be vacated upon the order of a judge of the court in which such action or proceeding was instituted or is pending. The recorder of the county where such notice is filed is hereby directed to mark such notice and any record or docket thereof as canceled of record, upon the presentation and filing a certified copy of such order.

Owner and lessee to file address, etc., with department of health.

SEC. 94. Every owner of a tenement house and every lessee of the whole house, or other person having control of a tenement house, shall file in the department of health a notice containing his name and address, and also a description of the property, by street and number, and otherwise, as the case may be, in such manner as will enable the departments charged with the enforcement of this act to easily find the same; and also the number of apartments in each house, the number of rooms in each apartment, and the number of families occupying the apartments. In case of a transfer of any tenement house, it shall be the duty of the grantee of said tenement house to file in the department of health a notice of such transfer, stating the name of the new owner, within thirty days after such transfer. In case of the devolution of the said property by will, it shall be the duty of the executor and the devisee, if more than twenty-one years of age, and in the case of devolution of such property by inheritance without a will, it shall be the duties of the heirs, or in case all the heirs are under age, it shall be the duty of the administrator of the deceased owner of said property to file in said department a notice, stating the death of said owner and the names of those who have succeeded to his interests, within thirty days after the death of the decedent, in case he died intestate, and within thirty days after the probate of his will, if he died testate.

Agent's address for service of process filed with department of health.

SEC. 95. Every owner, agent or lessee of a tenement house shall file in the department of health a notice containing the name and address of such agent of such house, for the purpose of receiving service of process, and also a description of the

property, by street and number or otherwise, as the case may be, in such manner as will enable the department charged with the enforcement of this act to easily find the same. The name of the owner or lessee may be filed as agent for this purpose.

Names and addresses indexed by Department of Health.

SEC. 96. The names and addresses filed in accordance with sections ninety-four and ninety-five shall be indexed by the department of health in such a manner that all of those filed in relation to each tenement house shall be together and readily ascertainable. The department of health shall provide the necessary books and clerical assistance for that purpose, and the expense thereof shall be paid by the municipality. Said indexes shall be public records, open to public inspection during business hours.

Notice or order, when served.

SEC. 97. Every notice or order in relation to a tenement house shall be served five days before the time for doing the thing in relation to which it shall have been issued.

Summons, how and when served.

SEC. 98. In any action brought by any department charged with the enforcement of this act in relation to a tenement house for injunction, vacation of the premises, or other abatement of nuisance, or to establish a lien thereon, it shall be sufficient service of summons to serve the same as notices and orders are served under the provisions of the Code of Civil Procedure.

Penalty for forbidden use.

SEC. 99. A tenement house shall be subject to a penalty of one thousand dollars, if it or any part of it shall be used for the purposes of a house of prostitution or assignation of any description, with the permission of the owner thereof, or his agent, and said penalty shall be a lien upon the house and the lot upon which the house is situated.

Owner liable for unlawful use.

SEC. 100. A tenement house shall be deemed to have been used for the purposes specified in the last section with the permission of the owner or lessee thereof, if summary proceedings for the removal of the tenants of said tenement house, or so much thereof as is unlawfully used, shall not have been commenced within five days after notice of such unlawful use, served by a department charged with the enforcement of this act in the manner prescribed by law for the service of notices and orders in relation to tenement houses.

Reputation of house.

SEC. 101. In a prosecution against an owner or agent of a tenement house under section three hundred and sixteen of the

Penal Code, or in an action to establish a lien under section ninety-nine of this act, the general reputation of the premises in the neighborhood shall be competent evidence, but shall not be sufficient to support a judgment without corroborative evidence, and it shall be presumed that their use was with the permission of the owner or lessee; *provided*, that such presumption may be rebutted by evidence.

Action against the tenement house.

SEC. 102. Said action shall be brought against the tenement house as defendant. Said house may be designated in the title of the action by its street and number or in any other method sufficiently precise to secure identification. The property shall be described in the complaint. The plaintiff, except as hereinafter provided, shall be any department charged with the enforcement of this act.

Action, where brought. Complaint filed.

SEC. 103. Said action shall be brought in the superior court in the county or city and county in which the property is situated. At, or before the commencement of the action, the complaint shall be filed in the office of the clerk of the county or city and county, together with a notice of the pendency of the action, containing the names of the parties, the object of the action, and a brief description of the property affected thereby.

Lien of judgment.

SEC. 104. The judgment in such action, if in favor of the plaintiff, shall establish the penalty sued for as a lien upon said premises, subject only to taxes, assessments, and to such mortgages and mechanics' liens as may exist thereon prior to the filing of the notice of pendency of the action.

All cities must comply with law. Laws and ordinances making further restrictions not repealed.

SEC. 105. All statutes of the state and ordinances of incorporated towns, incorporated cities and cities and counties, as far as inconsistent with the provisions of this act, are hereby repealed; *provided*, that nothing in this act contained shall be construed as repealing or abrogating any present law or ordinance in any incorporated town, incorporated city or city and county of the state, further restricting the percentage of the lot to be covered by a tenement house, the number of stories or the height of such house, the number of apartments therein, the occupation thereof, the materials to be used in its construction, or increasing the size of yards or courts, the air space to each individual occupying a room, the requirements as to sanitation, ventilation, light, protection against fire.

Further restrictions by cities.

SEC. 106. Nothing in this act contained shall be construed as abrogating, diminishing, minimizing or denying the power of any incorporated town, incorporated city or city and county by ordinance to further restrict the percentage of the lot to be covered by a tenement house within said municipality, the number of stories or the height of such house, the number of apartments therein, the occupation thereof, the materials to be used in its construction or increasing the size of yards or courts, the air space to each individual occupying a room, the requirements as to sanitation, ventilation, light, protection against fire.

This law absolute.

SEC. 107. Except as herein otherwise provided, every tenement house shall be constructed and maintained in conformity with the existing law, but no ordinance, regulation or ruling of any municipal authority shall repeal, modify or dispense with any provisions of this act.

Time limit to comply.

SEC. 108. All improvements specifically required by this act upon tenement houses erected prior to its date of passage, shall be made within one year from said date, or at such earlier period as may be fixed by the boards of health charged with the enforcement of this act.

Heating furnaces, steam boilers, water-heating apparatus enclosed in masonry room. No gravity flow of oil.

SEC. 109. All steam boilers, heating furnaces, or water-heating apparatus, using any fuel other than coal-gas or natural gas, installed in the basement or cellar of any tenement building, shall be enclosed in a room with walls of masonry, reinforced concrete, terra cotta or tile from the basement or cellar floor to the bottom of the first floor joists, and the ceiling of same construction or of not less than three fourths ($\frac{3}{4}$) inch plaster on metal lath.

All windows shall be of wire glass not less than one quarter of an inch thick in metal frames and sashes. All doors leading from said room shall be fire doors and either run on tracks or arranged to swing out and to close automatically.

All fire doors shall overlap the wall at least three inches at side and top. Sills shall be of metal at least one quarter of an inch thick on masonry, or of masonry, and have horizontal faces extending under fire doors and outer edges flush with outer surface of fire doors.

Top of sliding door shall conform to incline on the track, which shall be three quarters inch to the foot. No door shall be hung on wooden frames or in contact with any woodwork.

Doors shall be made of three (3) thicknesses of seven

eighths inch by six (6) inch tongued and grooved redwood boards, surfaced both sides, the outer thickness to be placed vertical or diagonal and the inner thickness to be horizontal, nailed with clinched nails.

Doors shall be entirely covered with good tin plate ("IC" charcoal, 109 lbs. to the box), not over fourteen (14) inches by twenty (20) inches in size, laid with locked joints covering nail heads, and all vertical seams shall be double-locked. No solder shall be used.

All doors shall have hinges, hangers, latches and chafing strips of wrought iron bolted to the doors, and shall have steel tracks, (when sliding doors) and wrought iron stops and binders bolted through the wall. Swinging doors shall have wall eyes of wrought iron built into or bolted through the wall.

Where oil is burned, every doorway shall have a masonry sill rising not less than six (6) inches from the floor.

Where oil is burned the oil shall not be fed to the furnace by a gravity flow.

Fire escapes. Two on interior house. One on each frontage on corner house.

All tenement houses hereafter constructed of more than two stories in height shall have at least two standard fire escapes, one of which shall be on the front of said tenement house. Tenement houses over two stories in height hereafter constructed located on corner lots shall have at least one standard fire escape, constructed as hereinafter described, placed upon each front of the building upon each frontage upon each street.

The fire escape balconies of said standard fire escapes shall commence at the level of the second floor and one such fire escape balcony shall be placed at the level of each floor above such second floor and from the topmost balcony shall extend an iron gooseneck ladder over the firewall to the roof.

Permit to construct or alter. Annual license.

SEC. 110. Every person desiring to construct or alter a tenement house shall obtain a permit from the department charged with the enforcement of this act. Every owner or lessee of a tenement house shall obtain at the beginning of each year a license from the health department of the incorporated town, incorporated city, or city and county in which said tenement house is situated.

INDEX.

OFFICE OF THE COMMISSION OF IMMIGRATION AND HOUSING
OF CALIFORNIA,

UNDERWOOD BUILDING,

SAN FRANCISCO, January 2, 1915.

To his Excellency, HIRAM W. JOHNSON,
Governor of California.

SIR: In compliance with section 13 of the act creating this Commission, we have the honor to submit herewith the First Annual Report of this Commission.

Respectfully yours,

SIMON J. LUBIN, President,
EDWARD J. HANNA, Vice-President,
MARY S. GIBSON,
PAUL SCHARRENBERG, Secretary.
Commissioners.

INTRODUCTION.

The Commission of Immigration and Housing of California was created by an act of the legislature in 1913. The act creating the Commission calls for an annual report to the Governor on the second day of January, but the organization was not perfected until October 3, 1913, and offices were not opened until December 15, 1913, therefore no report was made on January 2, 1914, it being deemed best to defer a report until actual accomplishments could be recorded.

The Commission was created to benefit the state primarily by expediting the distribution and assimilation of immigrants. It was the intent of the legislature that these results be accomplished by protecting immigrants from exploitation in the early stages, by guiding and aiding them in adaptation to American standards of living, and by encouraging their education in the English language, and, particularly, in the duties of citizenship. In addition to this direct aid to immigrants the Commission was authorized to investigate and study the housing conditions in the state. The immigrant population is usually congested in tenements and the poorer quarters of our cities, therefore the problem of immigrant assimilation is so closely related to the problems of housing and sanitation that the legislature gave to the Commission certain supervisory powers of housing inspection. A broad field of activities was prescribed, but the following extracts from the creating act outline the principal powers and duties:

Section 1. Within thirty days after this act shall go into effect, the governor of the state shall appoint five suitable persons to act as commissioners of immigration and housing. Said commissioners shall hold office and serve solely at the pleasure of the governor and not otherwise.

Section 2. Said commissioners shall serve without compensation, but shall be entitled to receive from the state their actual necessary expenses while traveling on the business of the commission, either within or without the State of California.

Section 5. The commission of immigration and housing shall have the power to make full inquiry, examination and investigation into the condition, welfare and industrial opportunities of all immigrants arriving and being within the state. The commission shall also have power to collect information with respect to the need and demand for labor by the several agricultural, industrial and other productive activities, including public works, within the state; to gather information with respect to the supply of labor afforded by such immigrants as they shall from time to time arrive or be within the state; to ascertain the occupations for which such immigrants shall be best adapted, and to bring about intercommunication between them and the several activi-

ties requiring labor which will best promote their respective needs; to investigate and determine the genuineness of any application for labor that may be received and the treatment accorded to those for whom employment shall be secured; to cooperate with the state employment bureaus, municipal employment bureaus, and with private employment agencies within the state, and also with the employment and immigration bureaus conducted under the authority of the federal government or by the government of any other state, and with public and philanthropic agencies designed to aid in the distribution and employment of immigrants; and to devise and carry out such other suitable methods as will tend to prevent or relieve congestion and obviate unemployment.

Section 6. The commission shall cooperate with the proper authorities and organizations, federal, state, county, municipal and private, with the object in view of bringing to the immigrant the best opportunities for acquiring education and citizenship. The commission shall further cooperate with the superintendent of public instruction and with the several boards of education in the state to ascertain the necessity for and the extent to which instruction should be imparted to immigrants within the state and to devise methods for the proper instruction of adult and minor aliens in the English language and other subjects; and in respect to the duties and rights of citizenship and the fundamental principles of the American system of government; and shall cooperate with the proper authorities and with private agencies to put into operation practical devices for training for citizenship and for encouraging naturalization. It shall be the aim to communicate this instruction to the immigrant as soon after his arrival as is practicable. The commission shall cooperate with the proper authorities to extend this education for both children and adults to labor camps and other localities from which the regular schools are not easily accessible. The commission in cooperation with the proper authorities and organizations shall encourage the establishment of playgrounds and other recreational activities, and also the establishment of settlements and social centers in cities and towns.

Section 7. With the object in view of rendering to the immigrant that protection to which they are entitled, the commission of immigration and housing may inspect all labor camps within the state, and may inspect all employment and contract agencies dealing with immigrants or who secure or negotiate contracts for their employment within the state; may investigate the banking relations that exist between immigrants and laborers; may investigate and inspect institutions established for the temporary shelter and care of immigrants and such philanthropic societies as shall be organized for the purpose of securing employment for or aiding in the distribution of immigrants, and the methods by which they are conducted; and shall investigate housing conditions under which immigrants live, and sanitary and safety conditions under which immigrants are employed; it shall further investigate conditions prevailing at the various places where immigrants are landed within the state and at the several docks, ferries, railway stations, and on trains and boats therein, and shall investigate any and all complaints with respect to frauds, extortion, incompetency and improper practices by notaries public and other public officials; it shall further investigate the relations existing between immigrants and steamship and rail-

way ticket agents, hotel runners, cab men, baggage men, interpreters and pawnbrokers; it shall further investigate the dealings carried on between immigrants and real estate firms or corporations; and as the result of any of the above inspections or investigations, if it should find evidences of fraud, crime, extortion, incompetency, improper practices or exploitation, it shall be the duty of the commission of immigration and housing to present to the proper authorities the evidences for action thereon, and shall bring to bear all the authority within its power to see that justice is rendered. The commission shall also encourage the establishment of legal aid societies.

Section 8. With the further object in view of bringing to the immigrant the best protection the state can afford, it shall be the duty of the commission to call to the attention of the proper authorities any violations it may discover of the laws pertaining to the payment of wages, to the mode of paying, pertaining to the child labor laws, the employment of women, factory inspection laws, weekly day of rest laws, protection of labor under building laws, protection of labor under public works laws, laws relating to the white slave traffic, and laws of the state and county and municipal health departments; the tenement house laws, and other laws pertaining to housing conditions. The commission shall investigate and study the general economic, housing and social conditions of immigrants within the state, for the purpose of inducing remedial action by the various agencies of the state possessing requisite jurisdiction; and shall generally, in conjunction with existing public and private agencies, consider and devise means to promote the welfare of the state. The members of the commission of immigration and housing or any of their authorized agents shall have the right to enter into tenement houses, buildings and dwelling places for the purpose of inspecting such houses, buildings, and dwelling places to secure compliance with state tenement and building acts and municipal ordinances and to prevent violation thereof, and shall have the right to examine the records of the various city departments charged with the enforcement of the tenement house law and other building regulations and to secure from them reports and copies of their records at any time.

Section 9. For the purpose of carrying out fully the intent and spirit of this act, the said commission shall have full power and authority to gather any and all such evidence as it may deem proper and necessary in order to present the same to the proper authorities for the purpose of instituting prosecutions against any and all persons, firms or corporations found violating any of the laws of any municipality, county or of the state or of the federal government, concerning any of the matters in this act referred to.

Owing to the fact that the two problems of immigrant assimilation and housing had never been investigated or carefully analyzed in the state, much of the first work of the Commission has necessarily been of a pioneer or preliminary nature—discovering and standardizing the concrete problems, and devising methods for dealing with them. However, several departments of work have been definitely organized and results have been obtained which have not only justified the creation

of the Commission but have also brought much credit to the state. The legislature specifically directs the Commission to cooperate with others in its work, and, in submitting this report of its achievements, the Commission desires to acknowledge its gratitude to the many federal, state, county and city officials, and private organizations and individuals who have cooperated in the work and made achievements possible.

It has been found that while the work of the Commission is limited to those things connected with immigrants and housing, this work reacts upon and influences the whole life of the poor and the working population. The poor native born is open to the very evils from which the immigrants suffer; particularly is this true of bad housing conditions. Therefore, the work of the Commission is only nominally restricted to the alien population. If fully carried out the act creating the Commission becomes an act for the general social betterment of the state as a whole.

In a separate and supplementary volume is embodied the report of the Commission on the unemployment problem. In the following pages an account of the general work is rendered, and also an endeavor is made to point out that the trail is but blazed in many places and that in order to make this work of lasting benefit to the state it must be continued consistently and persistently.

I. PRELIMINARY SURVEYS.

When the offices of the Commission were opened in San Francisco on December 15, 1913, in addition to an executive officer, a housing expert and several special investigators were employed to make preliminary surveys in the various fields of work in order that the Commission might find the proportionate size of its different tasks, and place the emphasis accordingly. A mere summary of these findings is given here, as they are too long and too detailed to be of value in such a report. The full reports are on the public files of the Commission.

A. THE TENEMENT HOUSE PROBLEM IN SAN FRANCISCO.

It was discovered that there are approximately 5,000 buildings in San Francisco which come within the legal definition of a tenement house, yet the city had no tenement house inspectors. The state tenement house act was being perfunctorily enforced only in regard to the construction of buildings; nothing was being done with reference to the maintenance and to health provisions, except when conditions became so bad in particular cases as to cause complaints from citizens; nor had any effort been made to compel owners of existing tenements to conform to the part of the act applicable to old buildings. No data was to be found, outside the fragmentary records of private organizations, which would show whether or not there existed housing congestion or conditions dangerous to the public health and morals. The initial and brief survey of the Commission disclosed enough of evil living conditions and violations of the state and municipal laws to stamp the housing problem as dangerous and demanding immediate attention. The expected growth of the city during the exposition year, and the probable ultimate influx of immigrants through the Panama Canal make this situation even more significant and serious.

B. THE LODGING HOUSE AND CHEAP HOTEL PROBLEM IN SAN FRANCISCO.

These habitations in San Francisco at the time of the survey housed between 35,000 and 40,000 men, yet no regular sanitary inspectors were provided by the city to watch over this notorious menace to health. A certain percentage of these houses was clean; many were carelessly managed and insanitary; and a large number were foul, full of disease infection and vermin, without ventilation and often devoid of ordinary accommodations. The patrons of these places move from lodging to

lodging, carrying infection. It is imperative, therefore, that rigid hygienic standards for these places be created, and that there be established a system of licensing and inspection to insure compliance.

C. THE NATURALIZATION OF ALIENS IN CALIFORNIA.

This investigation showed great neglect in California of the opportunity to acquire citizenship, and little appreciation of its true value when acquired. First papers were often taken out simply to secure a job or to save a fee. In April, 1913, it was rumored that Congress would force all foreigners fishing in Alaskan waters to pay a license. During that month 1,300 declarations of intention to acquire citizenship were made in San Francisco. This is 1,000 above the normal. The rumor proved false and the declarations in May dropped to 300. Many applicants for papers want city jobs, positions in the police force, hunting licenses, or protection while on visits to their native country, and have no realization of the meaning or of the duties of citizenship.

The blame for this situation rests not so much on the aliens as on the state, for, while a few political and fraternal clubs and certain evening schools maintain naturalization classes, most of the instruction in citizenship comes from private and doubtful sources. Certain alleged "lawyers" seem to have no other business than that of taking up cases of enterprising immigrants seeking citizenship. One Italian, himself barely literate, operated a private class for immigrants, charging a tuition fee of \$25 and gave a guarantee that citizenship would be obtained. The survey proved that California continues the same careless methods of citizen making, which obtain in most of the big immigrant centers in the East.

D. THE EDUCATION OF THE IMMIGRANT.

The last census shows that 50,292 foreign born whites in California were unable to read or to write. This is 10 per cent of the total foreign born white population. This percentage of illiteracy ran up as high as 20 per cent in Contra Costa County, 31 per cent in Kings County and 36 per cent in Imperial County. It was also shown that among the male white immigrants of voting age, 28,921 were illiterate, and a census of the females of this class (who are now potential voters) would probably show a larger percentage, owing to the fact that the women have less opportunity to acquire knowledge. Of the foreign born white children in California between 6 and 14 years of age, 3,052 or 18 per cent were not attending school.

These last figures point to the great need of efficient truancy supervision. The Commission is therefore making arrangements to send to local school authorities the names and the addresses of newly arrived immigrant children of school age. The survey also revealed the need

of special instruction in English for foreign children who are otherwise advanced in their studies. The large number of illiterate alien adults points to the need of the creation by the state of a thorough-going program for the education of the adult immigrant. It was found that the City of Los Angeles is making a commendable effort to teach the adult immigrant English and civics. In San Francisco no special work was undertaken except by private organizations. One association conducted, in 1913-1914, twenty-two classes for immigrants with a total attendance of 1,069. This shows the need of such instruction.

E. THE IMMIGRANT AND THE ADMINISTRATION OF LAW.

The methods of the police and the superior courts of San Francisco, the methods also of the prosecuting authorities in the conduct of immigrant cases, were investigated. It was found that while there is a fairly adequate staff of interpreters, they are not under civil service and this allows a wide opportunity for fraudulent practices. There is no sympathetic hearing of the complaints of immigrants who have been defrauded or made the victims of criminals. Little patience with aliens, who of necessity know nothing of American laws, city ordinances or legal traditions, is shown in the courts. Like the Chinese and Japanese, some nationalities have societies which are in the nature of legal aid societies, but the newer immigrant races suffer from all the handicaps of counsel appointed in a hasty and perfunctory manner by the judge. It is well known that many of these appointed counsel are selected from the court hangers-on and "shysters." This, in addition to the difficulty which friendless foreigners have in obtaining bail, causes needless misery.

F. THE IMMIGRANT AND TRANSPORTATION.

Immigrants destined for the west and California are in trouble from the moment they land from Ellis Island, as is shown in the reports of the Bureau of Immigration of the State of New York. They are exploited in going from the boat to the train by baggage men, taxicab drivers, fake land agents and "confidence" men. Furthermore, they do not appreciate distances and, on leaving the port of entry for California, bring little supply for the trip. Train officials are not usually sympathetic and scarcely ever speak the immigrant's language. These conditions in the ports of entry and in transit, coupled with the too frequent roundabout routing of immigrants, cause them to land in California hungry, discouraged, and oftentimes with depleted pocket books.

It was found that usually upon arrival in the larger cities in California the immigrant again falls into the clutches of exploiters. For instance, in San Francisco, immigrants may put their baggage into the

care of the reputable baggage companies, or, just as easily, into the hands of a group of "shyster" transfer companies, who, under their changing names, have for years exploited the immigrant and the inexperienced visitor from the country. These "companies" operate under a quarterly license fee of \$5. A case was found where their runners had pulled a woman's parcel check from her and held it until given 50 cents; in another case they charged \$1 for re-checking a trunk; and often they so juggled checks that the baggage disappeared, with no identification receipt whereby it could be traced. It was largely because of the discovery of many instances of exploitation in connection with transportation that the Commission was led to establish a bureau of investigation and of complaints. So many complaints of this nature have been reported to this bureau, and are recorded in a later portion of this report, that further mention of similar cases of fraud discovered during the preliminary survey is here omitted.

II. LABOR CAMP INSPECTION.

Under section 7 of the creating act, "with the object in view of rendering to the immigrant that protection to which he is entitled," the Commission was given authority to "inspect all labor camps within the state." Although it had been planned to examine into labor camp conditions, the Commission was almost unwittingly drawn into what has proved to be one of its most important works when this examination was actually begun.

A. THE WHEATLAND CASE.

There had occurred on August 3, 1913, on the Durst hop ranch near Wheatland, Yuba County, a riot among the hop pickers employed on the ranch, resulting in the killing of two police officials and two pickers. It was the claim of the pickers that one of the primary causes of the discontent in their ranks, leading to riot and bloodshed, was the insanitary condition of the camp in which they were segregated on the ranch. Brief investigations and reports of state officials had partially substantiated these claims. Before the trial of Richard Ford and Hermann Suhr, charged with having caused the murder of one of the state officials by inciting the crowd of pickers to riot, was begun, it was announced that evidence concerning the sanitary and living conditions in the camp would be introduced. Consequently the Commission decided to avail itself of this opportunity to conduct a careful investigation into the economic and social causes leading up to the riot.* This investigation was decidedly pertinent, as a preliminary survey disclosed the fact that, at the time of the riot, approximately one half of the pickers on the Durst ranch were immigrants.

During the trial of the accused pickers, which was begun on January 12, 1914, the Commission had present at times four and at other times two investigators, besides its executive secretary and attorney. The investigation was directed by the Commission's attorney along legal lines. All hearsay was excluded and only direct evidence from persons who had actually been present in the camp on the Durst ranch and who spoke from actual knowledge was considered. From the witnesses at the trial the names and addresses of other persons who had been employed on the Durst ranch in 1913 were obtained, and investigators were sent to the homes of these people throughout central and northern California to get their direct testimony. This testimony was of particular value, because it was entirely free from the possible influence of the prejudice which might have governed the feelings of

*NOTE.—Long and detailed majority and minority reports of this investigation were made to the Governor on June 1, 1914, and much publicity has been given to their contents.

Tent, or shelter, in the hop pickers' camp on the Durst ranch near Wheatland in the season of 1913.

A section of the hop pickers' camp on the Durst ranch near Wheatland in the season of 1913.

A row of 4 x 6 foot stalls in a bunk house, where from 15 to 20 laborers slept. Window at rear, only means of ventilation, nailed down.

some of the witnesses in the murder trial. Besides the evidence bearing on the living conditions recorded during the progress of the trial, 67 affidavits were secured and interviews with 30 witnesses recorded. The results of this investigation are here merely summarized.

In previous years there had often been a lack of pickers when the hops were ripe, but in the season of 1913, by means of coastwide advertising, the Durst brothers succeeded in assembling an army of nearly 3,000 persons, and at the time of the riot there were probably 2,800 workers in the camps, about half of them women and children. Of this number, fully 1,000 were foreign born males, including Syrians, Mexicans, Italians, Porto Ricans, Poles, Hindus and Japanese. The American element was made up of wandering casual workers, poor persons from near-by towns, owners of small ranches in the foothills of the Sierras, roving hoboes and a few families of the better laboring class from towns and cities, who often go to the hop fields for their summer "outing."

When this motley horde arrived at the Durst ranch, they found a desolate, sunbaked field, without shelter from the burning California sun. There were a few tents to be rented at 75 cents a week, but the majority had to construct rude shelters of poles and gunny sacks, called "bull pens," while many were compelled to sleep in the open on piles of vines or straw.

There was a great lack of toilets, and even those furnished were but crude boxes set over shallow holes in the ground. Many of them had no seats with holes, and a rough scantling nailed across the box took the place of the usual arrangement. These toilets soon became foul. They were also used as receptacles for the garbage from the camp, as well as for the offal of slaughtered animals, and swarmed with blue flies and were alive with maggots. These unspeakable toilets were used indiscriminately by both sexes, and at times women and children were forced to stand in line and await their turn. There was some dysentery, or "summer complaint," and frequently women and children were compelled to relieve nature among the vines and in the fields, and often in plain view of rough men.

There was a scarcity of drinking water, some of the wells were pumped dry, while others became infected from the surface water that drained back from stagnant pools, which formed in close proximity to the toilets and garbage piles. Under such shocking insanitary conditions sickness followed as a matter of course. There were cases of typhoid and malaria, caused probably by these germ laden waters.

While the wage scale and other factors contributed to the feeling of discontent, the real cause of the protest of the pickers seemed to come from the inadequate housing and the insanitary conditions under which the hop pickers were compelled to live.

B. STATEWIDE LABOR CAMP INSPECTION.

The Commission decided that these conditions constituted an aggravation of industrial warfare, and that they could and should be changed. It was ascertained that the Durst camp was no exception; similar conditions existed in other labor camps throughout California and it was evident that a statewide "clean-up" campaign was necessary. This task really came under the jurisdiction of the State Board of Health, but that body was without funds to do the work of inspection and of correction. Consequently, the Commission, with the consent of the State Board of Health, decided to enter upon the undertaking itself, particularly because over one half of the population of the labor camps of the state is made up of immigrants.

The existing state law pertaining to the housing and sanitation of labor camps was found to be indefinite and inadequate. It merely states in general terms that tents, sleeping quarters, and the ground about the camp must be kept clean. No way is provided for ascertaining the conditions of the camps, except through the occasional complaint of a laborer fearless enough to risk incurring the displeasure of his employer. Nor does the statute attempt to set forth a minimum standard of housing and sanitation. Owing to these weaknesses in the existing law, the Commission had first to work out a minimum standard of living conditions in labor camps. This minimum standard must be sufficiently high to insure results, but not so expensive and so impracticable as to deter employers of labor from adopting it, since employers had to be persuaded, rather than compelled by law, to make the improvements suggested.

It was not until after eight months of experience in camp sanitation work that the Commission drafted a detailed law to govern labor camp sanitation. This law does not deal in generalities but makes specific regulations for every feature of the camp. A digest of this law is given at the end of this report.

In order that it might be sure of its ground in the beginning, the Commission decided to take over a camp and make it sanitary, thus putting theories to actual test. This first experiment in camp sanitation was made at Shingle Springs, El Dorado County, where 129 men were employed by the state on the state highway. The sanitary engineer of the Commission was sent to the camp, where he installed sanitary camp latrines, shower baths, fly-screened cooking and dining tents, model sleeping quarters, garbage incinerators and other modern improvements at a minimum cost. The results were very satisfactory and a set of sanitation rules was accordingly drawn up. These rules and the practical suggestions for carrying them out were incorporated in a small pamphlet of seven pages, which met with the approval of the State Board of Health.

A tent in a state highway construction camp at Shingle Springs. The double deck bunks were occupied by 17 men, each having only about 120 cubic feet of air.

The same tent after the entire camp had been remodeled under the supervision of the Commission. The eight single bunks allow of about 500 cubic feet of air per occupant.

An unscrined mess tent and kitchen at Shingle Springs.

The same mess tent one month later after it had been screened and remodeled under the supervision of the Commission.

These pamphlets were distributed among camp operators, and two inspectors, under the direction of a sanitary engineer, were put in the field. Although most of the camps were below the minimum standard, the inspectors found that employers or operators were willing to cooperate in the effort to improve the conditions of the men, but they did not know *how* to go about the work. Consequently, a larger and more comprehensive pamphlet, containing detailed plans and instructions, was prepared for general distribution.*

Believing that much of the abuse arose more through carelessness and ignorance on the part of those operating labor camps than because of any disposition to avoid the law, the whole spirit of the pamphlet was "cooperation and advice," rather than "compulsion." This is evidenced by the following extract from the Introduction:

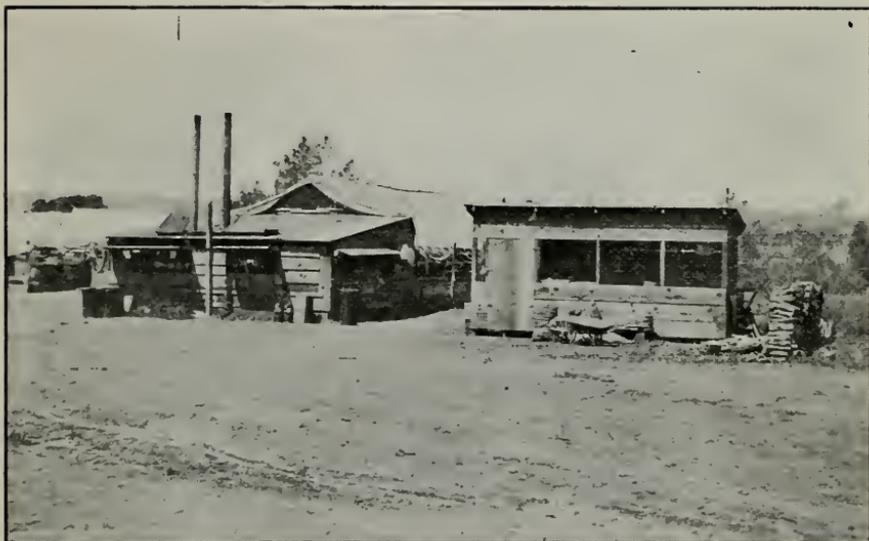

"Our contact with the employers of labor made it clear to us that the undesirable sanitation was not the result of intentional carelessness, but rather a relic of early California days when our people were good-naturedly willing to put up with almost any housing conditions. Where we have suggested improvements in housing or sanitation, we have met with hearty cooperation on the part of every camp owner.

"In our desire to be of the greatest possible help to the owner of the labor camp and to the man who must live in it, we have thought it wise to submit in the form of a pamphlet certain suggestions pertaining to the housing of men in camps.

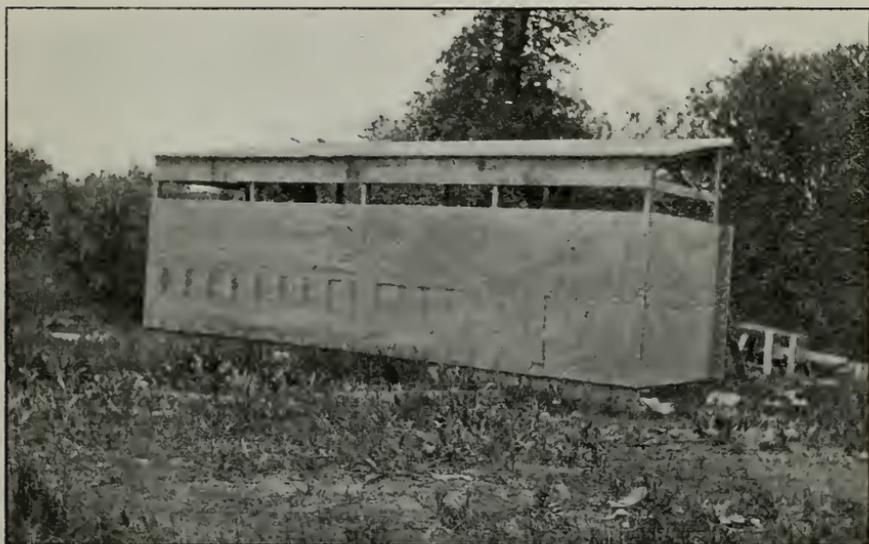

"If any portions of this pamphlet are not perfectly clear to you, or if you have a problem in housing or sanitation which we do not cover herein, we invite you to write to our San Francisco office stating your difficulty. Your inquiry will have the personal attention of our engineering department. And if we can not handle your problem satisfactorily through the mail, we shall willingly send a personal representative at no expense to you."

The pamphlet contained 54 pages and 43 drawings and illustrations. More than 5,000 copies of this comprehensive booklet have been distributed throughout the state since it was published in July, 1914. In this booklet it was pointed out that a sanitary camp meant an increase in the willingness and efficiency of the laborer, and that it was in the employers' own pecuniary interest, as well as that of humanity, to have a sanitary and livable camp. Every phase of camp housing and sanitation was dealt with, costs in different parts of the state were quoted, and building specifications were given. Blue prints were furnished when desired. The suggestions covered the site of camp, with advice as to choosing high ground; layout of camp, giving proper distances from chicken houses, pig pens, toilets, garbage receptacles, etc., from sleeping, eating and cook houses; water supply, how polluted and how to avoid

*"Advisory Pamphlet on Camp Sanitation and Housing," 56 pages. Mailed free upon request, by Commission of Immigration and Housing, 525 Market Street, San Francisco.

Screened storeroom and kitchen at Shingle Springs, remodeled under the supervision of the Commission. Note covered garbage containers.

Shower bath installed in the Shingle Springs highway camp by the Commission's sanitary engineer. There had been no bathing facilities in this camp.

A model labor camp with small individual screened kitchens.

Portable bunk houses built in a construction camp from plans furnished by the Commission's sanitary engineer.

A section of the model camp on the Durst ranch near Wheatland in 1914. This camp was laid out along military lines by the Commission's sanitary engineer. Note covered garbage containers.

contamination; construction of tents, buildings and bunks, screening, ventilation, etc.; kitchens and eating houses, with suggestions for keeping food; garbage, its disposal by means of camp incinerators; fly-proof toilets and urinals, with complete plans and specifications for building; bathing facilities, near sleeping quarters, with proper drainage; and how to avoid camp sicknesses that come from flies, mosquitoes, manure piles and other causes.

This booklet met with the most astonishing and gratifying response from labor camp operators all over California and was commented upon by many persons living outside the state. Hundreds of letters extolling the excellence of the pamphlet were received from employers of laborers and experts on housing and sanitation. Major William M. Cruikshank, department quartermaster of the United States army, wrote from Honolulu that he considered it a "most excellent work," and that he "desired copies for each post quartermaster in his department." Professor W. B. Herms, parasitological expert in the department of entomology at the University of California, who has done much to exterminate the mosquito in California, wrote in regard to the booklet that the "advice is practical," and "you are to be congratulated on this fine effort." Elmer S. Forbes, author of "Rural Housing" and chairman of the housing committee of the Massachusetts Civic League, wrote that the booklet "is an admirable piece of work, the best I have ever seen on the subject. It is a genuine pleasure to get hold of anything so practical and useful as this pamphlet." F. L. Wright, general manager of the Gold Ridge Land and Improvement Company of Santa Rosa, Sonoma County, a section where labor camps are maintained during the harvesting of the berry crop, wrote that the booklet and the "proposed regulation is a long needed requirement. The suggestions are practical and from every standpoint desirable. Our camps will be made in strict conformity with your suggestions. We have no criticism to offer."

During the months of June, July, August and September, when the largest number of labor camps are in existence, from five to seven inspectors were kept in the field. The inspectors found little, if any, antagonism, some procrastination, and a great deal of good feeling and hearty cooperation. They reported their findings to the office of the Commission on blanks prepared for the purpose, which gave every detail of the camp inspected, including the number and nationality of men employed, permanent or transient, skilled or unskilled labor, living conditions, sanitary conditions, toilets, bathing facilities, etc. A letter of instructions and a pamphlet were then promptly mailed from the main office to each owner or superintendent, calling attention to the special needs of his camp, and inviting correspondence with the office of the Commission if any difficulty arose in trying to make his camp conform to the requirements,

A model twelve-shower bathhouse for men which was built under the supervision of the Commission on the Durst ranch, Wheatland, in 1914.

A model five-shower bathhouse for women which was built under the supervision of the Commission on the Durst ranch, Wheatland, in 1914.

A row of screened, sanitary toilets on the Durst ranch, Wheatland, in 1914. Built according to plans furnished by the Commission.

Two open, filthy toilets in different construction camps. Typical labor camp toilets, violating every rule of sanitation.

An old, non-flyproof toilet to the left, and a new, screened, flyproof toilet with automatically closing door to the right: the latter built according to plans furnished by Commission.

The active inspection began on April 10, 1914, and ended November 1, 1914. Practically no reinspections were made during this period, it being the policy to visit as many camps as possible during the summer months. Since November 1st, only the sanitary engineer and one inspector have been in the field, and they have devoted practically all their time to reinspection, only incidentally covering new camps. Up to January 2, 1915, 915 camps have been inspected.

The statistics gathered from 876 of these camps have been tabulated and are set out in Tables I to IV. These 876 camps housed 36,846 persons on the date of inspection and had an ultimate capacity of 60,813. By "ultimate capacity" is meant the number the camp is arranged to accommodate and those figures represent the true population of the camps, because many hop, berry and fruit camps, etc., were empty when inspected, as the season had not begun.

Camps were classed as "good," "fair" and "bad," according to a rating established in connection with the minimum standard; 297 of the 876 camps were "good" and housed 21,577 persons; 316, housing 22,382, were "fair;" 263, housing 16,854, were "bad."

A striking feature of these statistics is the tabulation of nationalities. Forty different nationalities were represented, and of all the workers in the camps, 50.7 per cent were immigrant aliens; 49.3 per cent were American born and naturalized immigrants. The statistics as gathered do not show the proportion of the 49.3 per cent that are foreign born naturalized citizens. These figures show how close is the connection between the work of labor camp sanitation and the work of raising, or protecting, the standards of living of immigrants. In improving labor camp conditions, the Commission has done much to protect its immigrant wards, and has guarded against the lowering of the workers' standards of living by those races that are more careless and more ignorant in this regard.

The table further shows the presence of 2,659 women and 1,553 children in the camps as against 31,741 men. This comparison is of social interest and significance. A census gathered when the camps are filled to their ultimate capacity would probably show a larger percentage of women and children, since such a census would cover hop, berry, and fruit camps, etc., where women and children are more often employed.

The figures on the proportions of skilled and unskilled laborers are of economic and social value in that they throw great light upon the character of our casual or migratory laboring class. Of the 30,020 laborers concerning whom data as to skill was obtainable, 22,560 were unskilled and only 7,460 were skilled.

Flyproof toilet in course of construction according to plans furnished by the Commission. The lids over holes are on hinges and are forced to fall by plank in back.

Sanitary covered tanks used for carrying water to pickers in the field on the Durst ranch, Wheatland, in the season of 1914.

A large, exposed pile of manure near a labor camp. A breeding place for millions of flies.
Note contrast with picture below.

In the foreground is a composting pit for manure, entirely screened and flyproof. Built according to plans furnished by the Commission.

It is important here to call attention to the more important features of the statistics pertaining to sanitation:

The records of bathing facilities show that:

353 camps had no baths;

141 camps had no baths, but were near natural bathing facilities, such as streams or lakes;

346 camps had tub or shower baths or both;

36 camps had no returns on this question.

A summary of the toilet accommodations gives the following:

114 camps had no toilets;

364 camps had filthy toilets.

179 camps had slightly exposed toilets;

208 camps had fly-proof toilets;

11 camps gave no returns on toilets.

Washing facilities for hands, face and clothes were carefully investigated. In 143 camps an adequate supply of water, basins, tubs, etc., was not provided. In many cases the laborers were obliged to forego washing entirely. In 683 camps, an adequate supply of these necessities was available. No returns on this point were obtained in 50 of the camps visited.

In the camps of a more permanent nature, which are kept open throughout the year, over 1,000 sanitary iron "bunks" or beds have been installed upon the suggestion of the Commission.

Of the 527 camps with stables, in 201 the stables were less than 100 yards from the kitchen or dining quarters, while in 281 the stables were 100 yards or more from the cooking and dining quarters. Forty-five camps gave no returns in this particular.

Manure was disposed of in a sanitary manner in 250 of the 527 camps having stables, and in an insanitary manner in 246 camps, 31 not being reported on in this feature.

The kitchens and dining quarters were screened in 408 camps and were not screened in 305 camps. No information was obtained on the remaining 163 camps as to this feature.

Garbage was properly disposed of in 572 camps and not disposed of in a sanitary manner in 220 camps. No data was obtained in 84 camps on this feature.

201 camps had no garbage containers;

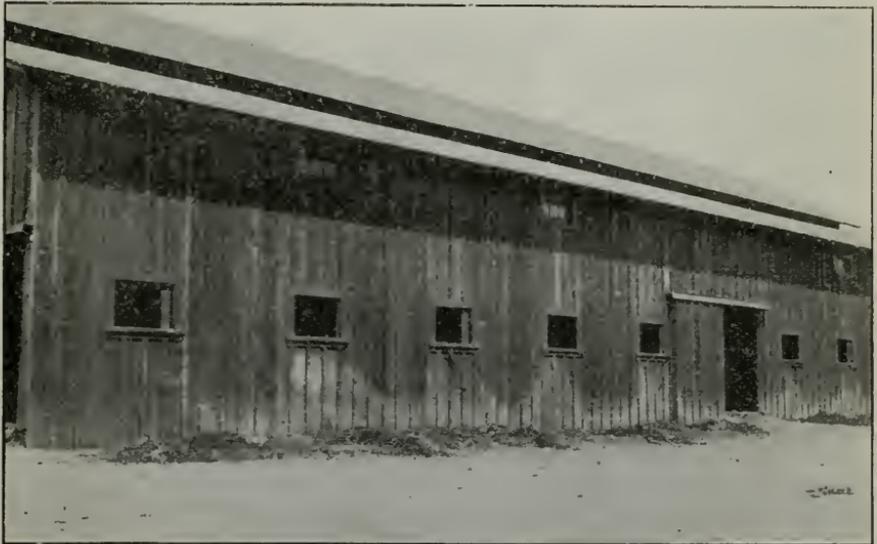

170 camps had uncovered garbage containers;

353 camps had fly-proof containers;

152 camps gave no data.

The usual method of manure disposal in grading camps. These exposed manure piles breed disease-carrying flies that are a menace to the whole surrounding community.

The white marks on the barn were made by the manure piles which were removed at the request of the Commission. Manure now hauled away each day.

A common type of open garbage container. A feeding place for the flies that breed in open manure piles.

Garbage scattered behind a camp kitchen. At the suggestion of the Commission covered garbage cans are now used in this camp and the garbage burned twice a week.

A stack type garbage incinerator built in an oil camp from plans in the Commission's Advisory Pamphlet.

A chimney type garbage incinerator. Built in labor camp from plans in the Commission's Advisory Pamphlet.

C. REINSPECTION.

Up to January 1, 1915, 228 camps had been reinspected. The results, as shown in Table V, are most gratifying. Where it was found that no effort had been made to correct abuses and improve conditions, the attitude of "advice and cooperation" was changed and the operators have been warned that, unless they improve conditions as requested at once, the Commission will do all that is possible to prosecute them under the existing laws. The Commission will endeavor to have such camps as really constitute a menace to public health and safety condemned as public nuisances by the health authorities.

It is most important to note, however, that 72.3 per cent of the camps reinspected have been brought to at least the minimum standard. Many have surpassed it, and 77.1 per cent have actually carried out some of the suggested improvements. The camps which remained in the same condition represent only 14.1 per cent of the total. Only 8.8 per cent have actually retrograded, and only 5.3 per cent of these have slipped down to "bad."

It is also interesting to note that the owners of the Durst ranch at Wheatland cooperated with the Commission, and, under the supervision of the sanitary engineer, a model camp, complete in every particular, was constructed. In spite of the activities of agitators there were no riots or demonstrations and there is no doubt that the model camp was a factor in frustrating such attempts.

When it is recalled that these improvements have been brought about merely by persuasion, it not only speaks well for California employers, but it bodes well for the future, when it is to be hoped that the complete and detailed camp sanitation law* draughted by the Commission will be put into effect, and the recalcitrant camp operators forced to improve conditions.

*A summary of this law is given in the Appendix.

TABLE V.

Summary of Reinspection Returns on 228 Labor Camps.

	Number	Per cent
Number of camps showing improvement—		
From bad to good.....	23	11.4
From bad to fair.....	11	4.8
From fair to good.....	60	26.3
From good to better*.....	79	34.6
Totals	176	77.1
Number of camps showing no improvement—		
1. Stayed same as when first inspected:		
Bad	7	3.1
Fair	25	11.0
Totals	32	14.1
2. Retrograded:		
From good to fair.....	8	3.5
From good to bad.....	5	2.2
From fair to bad.....	7	3.1
Totals	20	8.8
Grand total	228	100
Number of camps which not only show improvement, but which have been brought up to the minimum standard set by the Commission—		
From bad to good.....	26	11.4
From fair to good.....	60	26.3
From good to better.....	79	34.6
Totals	165	72.3

*On first inspection these camps were classed good. On reinspection it was found that minor suggestions made by the Commission had been put into effect.

III. BUREAU OF COMPLAINTS.

The Commission had determined from the very outset to make all of its work of a practical nature, based upon facts, not theories. Consequently it was decided not to theorize concerning the problems and difficulties met with by newly arrived immigrants, but to find out from the immigrants themselves what these facts and problems were. It would be obviously unwise to attempt to render direct aid to immigrants or to propose remedial legislation until the actual needs were thus ascertained. Therefore, in order to accomplish these results, a complaint bureau was organized. The purpose was to receive complaints from immigrants in trouble and aid them in securing justice, to carry on independent investigations, and to standardize the general problems and needs as a basis for remedial legislation and general relief measures.

Furthermore, the recorded experiences of the Bureau of Immigration of New York state and of other state immigration departments, disclosed the need for a specially equipped department in the handling and disposition of current complaints of immigrants. The preliminary surveys of the Commission had likewise shown that aliens within this state encounter serious difficulties in securing even a hearing when they have been exploited or actually defrauded, and the active work of the complaint department during the last eight months has demonstrated that such a department exercises a much broader and more human function than the mere collection of statistics for future use. Pressing and immediate needs, which have been unheeded for years, have received attention. Confidence in our government and in its institutions has been instilled into the justly suspicious immigrants; an ambition to become active, participating units in that government has been aroused; assimilation and adaptation have been encouraged instead of retarded and discouraged.

Yet the work has but begun. Only a small percentage of the state's immigrant population has been reached, and when the expected influx of immigrants through the Panama Canal after the termination of the European war sets in, the work of thus directly aiding and encouraging adjustment and assimilation will be increased to an incalculable extent.

A. ORGANIZATION.

During the first four months after its organization the Commission was so unexpectedly involved in the investigation of the Wheatland case and the inception of labor camp inspection that little was done toward getting into actual and personal contact with immigrants. Investigations disclosed a few cases where American exploiters had made capital of the ignorance and of the helplessness of newly arrived immi-

grants, and only a few straggling complainants found their way to the office of the Commission as a result of announcements in the foreign press. Years of unsympathetic treatment by public officials, of innumerable experiences where confidence had been misplaced and solicitous "American friends" and "immigrant protective societies" had turned out to be professional exploiters, had given rise to widespread distrust of all offers of advice and of assistance.

It soon became obvious, therefore, that a definite, organized effort would have to be made to inspire confidence and get in close touch with the immigrant and his peculiar problems. To this end, in April, 1914, posters containing the following announcement, printed in twelve different languages, were put up in conspicuous places throughout San Francisco, particularly in the "foreign quarters":

TO IMMIGRANTS.

The State of California Commission of Immigration and Housing is created to protect and aid immigrants in California.

Immigrants who feel they have been wronged or defrauded, or who wish information, are asked to come in person or write to the office of the State Commission, Underwood Building, 525 Market street, San Francisco.

The Commission will furnish information and will aid all in obtaining justice. We speak and write all languages.

The city of San Francisco was well placarded with these posters by April 24, 1914, and the record of the Complaint Bureau really dates from that time. This more or less impressive offer of assistance by the state, conspicuously displayed in their familiar haunts, reassured many disheartened immigrants who had been the almost helpless victims of fraud and deceit.

All complainants who came to the office were given a full and careful hearing, even when their complaints were seemingly of a trifling nature. An interpreter was employed who was proficient in the languages of the complainants from the larger immigrant colonies, and arrangements were made for the occasional services of interpreters for the rarer languages. Each complaint was carefully taken down in writing and submitted to the attorney of the Commission, who was in direct charge of the Complaint Bureau. The attorney then showed the investigators how to check up on the facts of the complainant's allegations and how to examine into the entire matter. If the charges proved to be entirely without foundation, the attorney would cross examine the complainant and his witnesses to make sure the case had been properly reported. If no new evidence was thus discovered the complaint was dismissed, after a careful explanation to the complainant through the interpreter.

But if the complainant's charges were substantiated in the slightest degree by the investigation, the defendant* was either called upon or summoned to the office of the Commission and asked to give his version of the case. Further investigation was then made of any new facts brought out by the defendant. If the total evidence then showed that a crime had been committed by the defendant, prosecution was instituted and conducted by the Commission's attorney, who appeared in such criminal cases as special prosecutor for the state. If no crime was

Investigator and interpreter interviewing immigrants in the Sacramento complaint office of the Commission.

involved, but the defendant was shown to be civilly liable, the parties were brought before the attorney for an informal hearing, and every effort was made to bring about an amicable settlement or adjustment. If such a case could not be settled out of court, the complainant was advised of his rights and urged to employ an attorney to file suit against the defendant. This procedure was, of course, necessary, as the Commission, or its attorney, could not represent an individual in a civil suit. Our experience goes far in showing the need of a strong, well organized legal protection society, of which the report speaks later on.

If a defendant was shown to be morally liable, although not legally so, an even greater effort was made to effect a settlement or, at least, a compromise.

*The person or corporation against whom a complaint is lodged is designated as the "defendant" in the records for the sake of brevity and clearness, though he is not a defendant in the legal or technical sense.

Two investigators and an interpreter, besides the Commission's attorney, have been regularly employed in handling complaints in San Francisco.

B. BRANCH OFFICES.

When the Complaint Bureau, as organized in San Francisco, had proved to be an effective means for handling this important and press-

Entrance room of Sacramento office. Immigrants waiting to file their complaints and to ask for information or advice.

ing phase of the Commission's work, it was necessary that branch complaint offices be maintained elsewhere, so that the Commission might perform its proper functions as a state organization. Accordingly, offices were opened in Los Angeles and Sacramento with full time, salaried agents in charge, and the gratuitous services of residents, whose private offices were used, were secured in San Diego, Riverside, San Bernardino, Ventura, Santa Barbara, and San Luis Obispo. These agencies were established during July and August, 1914. The "To

Immigrants' posters were placed in conspicuous positions in the districts about these cities, with the address of the local office stamped prominently thereon in red ink.

Complaints which were filed in these branch offices were mailed to the San Francisco office within twenty-four hours after they were filed and the investigation and handling of the cases were then carried on under the direction of the attorney in the same manner as in San Francisco cases. This established a uniform procedure and provided a checking system which prevented the abuses and errors that might go with the exercise of decentralized authority.

Interpreters were not required at first in these offices, as the complainants could usually bring in a friend to act as interpreter, and if they could not do so, they wrote out their complaints and had them sent to the San Francisco office for translation. But the work developed to such an extent in Sacramento and in Los Angeles that it became necessary to furnish an assistant to the agent in each of these cities, who could also act as an interpreter. Consequently, a stenographer-interpreter has been employed in the Sacramento office since September and in the Los Angeles office since November.

It also became necessary to open a branch complaint office in the foreign quarter in San Francisco as many immigrants who were loath to go to a distant office building were not being reached; consequently an office was opened on Columbus avenue in November and excellent results have been obtained.

C. SUMMARY OF COMPLAINT RECORDS.

The fact that 2224 complaints were filed with the Commission between April 24, 1914, and January 11, 1915, demonstrates the need of a complaint bureau. Practically all these complaints were based on justifiable grounds and very few were of a trivial nature. Numerous cases were successfully presented or settled where the complainants had had established rights for months and even years, but had been unable to put the facts before the proper authorities or get action, because no one understood their language or had the patience to assist them, and because also of the terrifying and confusing paths of "red tape" and jurisdictional procedure, which even native born Americans lament.

Although no strictly judicial powers were vested in the Commission, section 10 of the creating act gave it "power to hold hearings for the purpose of investigation and inquiry, and for the purpose of reaching an amicable settlement of controversies existing between persons, firms and corporations" coming within the terms of the act. Through the exercise of this power, amicable adjustments of a majority of the complaints were obtained. Not only was justice secured for the individuals in such cases, but the informality and simplicity of the hearings had

the broader and more far reaching effect of reassuring the wronged immigrants of the strength and fairness of our governmental institutions, and the further effect of creating in the minds of the American citizens involved a new viewpoint of respect for and a feeling of responsibility toward these potential citizens.

Table VI shows the detailed disposition of the complaints up to January 1, 1915. It is interesting to note that less than 25 per cent of the complaints were of a nature which could be referred to or handled by other state departments or local authorities. But even in these referred cases, the Commission performed an important function, for the majority of the complainants were ignorant of the existence of such departments, or, if they knew of them, they did not know where or how to reach them. This was particularly true in the case of newly created commissions, such as the Industrial Accident Commission. Many immigrants who had been injured while at work were taken to the offices of the Industrial Accident Commission by the interpreter of this Commission and aided in securing compensation as provided by law, where otherwise they would have received little or no compensation because of their ignorance of the law, and because of the fraud of their employers.

The Commission has instituted 11 criminal prosecutions, and appeared therein through its attorney, who acted as special prosecutor. These prosecutions have resulted in 9 convictions, only one of these being reversed by higher courts. One appeal is now pending, and 5 other cases are now awaiting trial. Evidence is now being collected in six cases in which arrests will be made and prosecutions begun within the next month.

This cooperation in criminal cases with the various district attorneys has resulted in bringing some criminals to justice who otherwise would have escaped prosecution, owing to the fact that the immigrant complainants were either too ignorant to know where to turn for aid in starting a prosecution, or too timorous to venture into strange and impressive buildings to search among numerous offices for the proper authorities, especially when they knew that only too often they would find no sympathetic hearing of their "foreign lingo" if they did finally find the proper office. This work has also impressed prosecuting authorities and other officials with the peculiar difficulties and problems of immigrants, and thus many of the old bulwarks of helplessness and prejudice, behind which those who preyed on immigrants safely hid, are broken down.

TABLE VI.

Complaints Received From January 20, 1914, to January 1, 1915, and the Disposition Thereof.*

In San Francisco.....	1,010
In Sacramento.....	908
In Los Angeles.....	139
In other offices.....	2
Total.....	2,659

Up to January 1, 1915, there were still pending or unsettled, from various causes, 617 complaints.† They are as follows:

Business fraud.....	6
Fraudulent aviation company cases.....	36
Illegal land company cases.....	15
Land fraud cases.....	15
Miscellaneous.....	545
Total.....	617

The complaints of crime and fraud of a criminal nature were disposed of as follows:

Adjusted.....	57
Claims paid in full or settled.....	52
Compromised.....	20
Convictions.....	9
Fees returned.....	20
Total.....	158

Other complaints were disposed of as follows:

Attorneys, private, referred to.....	12
Board of Health, referred to.....	6
Board of Medical Examiners, referred to.....	24
Charitable institutions, referred to.....	42
Dropped by complainant.....	37
Dismissed.....	9
Employment agencies, referred to.....	95
Industrial Accident Commission, referred to.....	57
Information, general, given.....	423
Insurance Commissioner, referred to.....	2
Legal advice given.....	76
Miscellaneous.....	103
Police Department, referred to.....	17
Public Prosecutor or Defender, referred to.....	10
Sanitary conditions improved by Commission's housing and camp inspection departments.....	41
State Labor Commissioner, referred to.....	313
State Railroad Commission, referred to.....	1
Surveyor General, referred to.....	1
United States authorities, referred to.....	11
United States Shipping Commissioner, referred to.....	1
Weights and Measures Inspector, referred to.....	3
Total.....	1,284
Grand total.....	2,659

*The Complaint Bureau of the Commission was not organized and in active operation until April 25, 1914; the Sacramento Complaint Office was not opened until August 1, 1914; and the Los Angeles Complaint Office was not opened until August 15, 1914; therefore, this table, in fact, shows only the results of a maximum period of about eight months.

†423 of these complaints are, in fact, settled or disposed of. They are of such a nature, however, that future events might make it possible for the Commission to do more for the complainants. It is for this reason that they are kept open on the complaint registers.

D. NEED OF LEGAL AID SOCIETIES, ETC.

Great difficulty in disposing of complaints where no amicable adjustment could be reached, was encountered in those cases which could not

be referred to public officials. The machinery for law enforcement where public officials can intervene was usually found to be adequate, but there is a deplorable lack of private organizations to which needy immigrants can be referred when public officials are without power to render aid. Particularly is there a great need for legal aid societies or public defenders and public prosecutors to handle civil cases in court for immigrants (as well as for needy citizens). In such cases the Commission had to avoid sending complainants to any particular attorneys, as the state can not assume such responsibility or subject itself to the possible criticism of showing favoritism. Yet it is an established fact that the immigrant usually falls into the clutches of unscrupulous attorneys who have their offices in or near the foreign colonies. The office of the public defender in the city of Los Angeles cooperated with the Commission in taking over the civil cases, but elsewhere there is no such official, or legal aid societies, and the Commission could only refer complainants generally to private attorneys and do what it could with propriety to keep them out of the hands of "shysters." The Commission has now started a movement for the organization of legal aid societies in San Francisco and in Sacramento.

There was found to be an equally great lack of reliable and efficient agencies to which destitute immigrants who can not find work could be referred for aid. Most of these complainants had at some time or other been defrauded or deceived by private employment agencies, and would not go to them even if the Commission had been willing to take the chance of recommending any; moreover, the majority of such complainants had no money with which to pay fees to an employment agency. The obvious remedy seems to be a system of free state labor exchanges, or employment offices. The evidence collected by the Complaint Bureau in this connection strongly influenced the Commission in recommending a state labor exchange as the first step toward the solution of the unemployment problem.* Furthermore, in several cities the Commission found that there are no organized or associated charities to which destitute resident immigrants can be referred even for charity relief. This makes an acute problem, especially in the city of Sacramento. Obviously, it is a problem in which destitute resident citizens are concerned as well as immigrants. Since the Governor has designated this Commission to represent the state during the present winter in an endeavor to secure uniform action by the cities in furnishing relief to the unemployed, the Commission has an opportunity to encourage and aid in the organization of associated charities, and it is to be hoped that some of this temporary work will have a lasting effect.

*A copy of the supplementary report of the Commission of Immigration and Housing on unemployment, containing a discussion concerning labor exchanges, will be mailed free on request.

E. CAUSES OF COMPLAINTS.

The nature and causes of complaints have been so varied that they can be set out effectively only in tabular form. Table VII shows the broad field covered by different forms of immigrant exploitation. But it is important that attention be called particularly to the more common and most serious frauds and abuses.

There were 193 complaints of fraud and deceit in the sale of land. While not numerically the greatest, this is probably the most serious cause of complaint. People are generally agreed that the economic assimilation of our immigrants can best be expedited by encouraging the "back to the land" movement and discouraging congestion in the cities. Yet practically all of these complaints of immigrants who had invested their savings in land were well founded, and they not only lost their meager capital but were discouraged from making further efforts to leave the cities and enter upon agricultural pursuits. News of such land frauds spreads like wildfire among immigrants, not only in the East but even in Europe. The good name of the state is endangered and the native born, as well as immigrants, are sufferers. The Commission has sought to offset these past abuses by giving widespread publicity to its prosecutions of several fraudulent land dealers. More stringent land fraud laws have also been proposed, and the creation of a land information bureau urged by the Commission.

There were approximately 260 complaints involving crimes and frauds of a criminal nature. These complaints indicate how the ignorance and helplessness of immigrants furnish food for the nourishing of criminals in our communities.

The 22 cases of fraud of attorneys-at-law, all of which were justified and of a serious nature, show how little the helpless immigrant can rely on even sworn officers of our courts. Likewise, the 6 complaints of fraud on the part of official interpreters emphasize the helplessness of the immigrant. As a result of these complaints, which were found to be based on facts, the Commission has recommended that official interpreters be put under high bond and placed under civil service.

The 31 complaints concerning "quack" doctors and illegal medical practice show what an easy prey the immigrant is for these leeches upon society. As a result of publicity obtained in this connection, the Commission started and aided in a movement to eliminate "quack" medical advertising, and evidence was furnished the State Board of Medical Examiners which led to the conviction of some of the illegal practitioners.

The 163 cases of general business frauds illustrate the difficulties the immigrant encounters in endeavoring to become more than a wage-earner and to acquire an independent business of his own. This sort of fraud discourages assimilation almost as much as does land fraud

The 9 cases of contributing to the delinquency of minors, together with the 6 cases of white slavery charges, evidence the fact that the usually friendless and trusting immigrant girls are easy victims of the adroit exploiters of the underworld. Though the number of cases in this connection is seemingly small, it is really surprisingly large in view of the fact that these cases were reported voluntarily and to ferret them out no effort was made. The Commission plans to make a more positive effort and take the initiative in protecting immigrant women, if it is granted a sufficient appropriation.

The 186 cases where assistance in obtaining employment was requested indicate the difficulty immigrants have in becoming productive units who are not familiar with our language or with our labor markets. This emphasizes again the need of free labor exchanges, already alluded to, as does the record of 170 complaints concerning employment agency frauds. Independent inspections of private employment agencies in connection with the unemployment investigation disclosed many further instances of fraud.

The 326 cases where information and advice were requested show the important part the Commission can play in aiding immigrants to become useful citizens.

The 25 complaints concerning fraud on the part of insurance companies, most of which were justified, are typical in that they represent the result of the practice of many companies, in all kinds of business, of employing notoriously unscrupulous agents, who exploit the credulity of immigrants.

The 10 complaints of misrepresentation and fraud in the sale and refund of transportation tickets are prophetic of the abuses in this connection that will have to be guarded against when there is more direct immigrant travel to and from California through the Panama Canal.

That employers make a practice of holding back the wages of immigrant laborers is evidenced by the 287 wage claim cases. Only a few of these claims were without foundation. Owing to the fact that the Commission has given wide publicity in foreign languages to its Complaint Bureau, many of these cases were filed, brought to the attention of the Commissioner of the Bureau of Labor Statistics, and settled, where otherwise the immigrants would have been worn out by delay and would have left their claims uncollected, not knowing of the aid rendered by the Labor Bureau in this connection. All wage claim cases have been referred to the Bureau of Labor Statistics and the Commission has cooperated in collecting evidence and in furnishing translations and interpreters when necessary.

TYPICAL CASES.

In order to better visualize the peculiar problems of the immigrant and the ingenious frauds practiced upon him, a few typical cases that have been handled by the Complaint Bureau are here summarized.

LAND FRAUD.

I. An ignorant Slavonian, while residing in the State of Washington, received a letter from a real estate company in San Francisco. The letter stated that the company understood that this man was a leader in the Slavonian colony and that, in view of that fact, they were sending an agent to call upon him with an attractive offer of a fine city lot for \$27.50. It was explained that this offer was made in order that he, as a famous man, might aid in advertising the company. Later, the agent called as promised and represented to the Slavonian that the lot offered for sale was in a suburb of San Francisco, twenty minutes from the center of the city and on a five cent car line. It was represented that the streets were laid out and paved. The fare to San Francisco was more than \$27.50, so that the Slavonian decided to pay without going to see the land.

Upon investigation, the Commission found that this company had sold lots to nearly one hundred immigrants and to as many American citizens. The prices varied from \$27.50 to \$250.00. Two agents of the Commission were used as detectives to investigate the case. When they called upon the company and pretended to be hunting jobs as salesmen, the manager frankly stated the scheme was fraudulent; that if the people saw the land they would never buy it. These agents tricked the manager of the company into sending statements of this nature, as well as other fraudulent statements, through the mail.

The land was investigated and found to be an unsurveyed tract in the hills two hours distant from San Francisco; the railroad fare is 75 cents for the round trip. The Commission sent out letters to all purchasers and thus succeeded in obtaining over forty fraudulent letters mailed out by the company to innocent purchasers.

The case was taken up with the federal post office authorities and all the members of the company were arrested charged with using the mails to defraud. They were held guilty by the committing magistrate and are now awaiting trial.

II. A large company subdivided its properties into small farms and town lots and engaged in elaborate advertising, particularly in immigrant quarters and among laboring people. They employed salesmen who spoke many languages, and were thus able to induce scores of immigrant laborers to invest thousands of dollars in this land. The foreign speaking salesmen promised the immigrants steady work for at least three years at a wage of \$2.25 per day; explained that the company would irrigate all the land and furnish many improvements and *further assured them* that these promises were contained in the contracts which the purchasers signed but could not read. Not one of these promises was written in the contracts. The company gave employment to some for a few days, denied it to others altogether, never installed the promised irrigation, finally discharged all laborers, ceased improvements, and practically shut down. Unfortunately, the laws concerning fraud are not broad enough to allow criminal prosecution. As a result, stricter laws have been proposed by the Commission

In some cases the Immigration Commission induced the company to refund the pitifully small savings deposited by these defrauded purchasers; in other cases the company has made new contracts, waiving interest and giving more time for payments. In most cases the company retained the ill-gotten money and the poor immigrants have gone away in disgust, to hunt another "job," vowing that they would never again attempt to buy land in California. So not only the discouraged immigrant, but also the state loses.

III. In another land case some real estate operators secured options on a large tract of arid, waste land in the northern part of the state. The tract was subdivided for sale, but no effort was made to sell in this state. Instead, the company used several Bohemian newspapers in the east as advertising mediums and ran full page advertisements for several months to the effect that a strictly Bohemian colony was to be established. A few months after this advertising campaign began, a picture of an attractive California town was reproduced in the center of the advertisement; it was stated that many Bohemian settlers had arrived, that streets were laid out, many homes erected, and that the surrounding farms were being cultivated. Immediately, Bohemians from all over the country were lured by these representations and many bought twenty-five and fifty acre tracts through the mail, at prices ranging from \$50 to \$65 per acre, being warned that they would have to "act at once" if they wished to get in on the big scheme. When these purchasers came to California, after selling their small holdings in other states, they found a barren, rocky tract of land, no settlers, and in place of the thriving village a rain washed sign bearing the inscription "Domov," meaning "Home!"

Several purchasers complained to the Immigration Commission. Agricultural experts, who were called in, stated that the land was full of alkali, fit only for sheep pasturage, and perhaps not even for that, owing to the lack of vegetation in the dry months. The Commission has collected all the fraudulent advertisements and letters of the company and a criminal prosecution is to be begun in the federal courts on the charge of using the mails to defraud. Some of the purchasers, on the advice of the Commission, have instituted civil suits to recover the purchase price.

IV. In a similar case, land near San Francisco was advertised and sold almost exclusively among immigrant laborers in distant construction camps. The men did not leave their work to look at the land, because they would have lost their jobs, so they bought on the installment plan upon the strength of representations made by agents, and by the promoter through the mail. The land was described as "sub-urban farms and lots" in a beautiful tract with streets and walks laid, on the edge of a thriving town. When one of the defrauded purchasers became suspicious and wrote to the Commission, an investigation was made. It was found that the land was not even surveyed, that it was rough and mountainous, covered with brush and rocks, and miles from any town. The post office authorities prosecuted the promoter for using the mails to defraud, the Commission aiding in collecting the evidence, and he is now serving a sentence of two years in a federal prison. Several Italians and Greeks had paid installments of from \$200 to \$450 apiece, and the Commission is endeavoring to secure a refund of this money.

V. A Swiss bought lots in the city of Richmond on an installment contract and was five years in completing his payments. The contract provided the seller was to pay taxes on the then assessed value, the buyer those on any increased value. At the end of the period, \$20 taxes were demanded before a deed would be given. The Swiss thought this was too much and complained to the Commission. An investigator obtained from the county assessor the assessed values and rates for each of those particular years. Computation showed about 91 cents actually due. When confronted with these facts, the company auditor passed over the deed for \$1.50, the complainant being generous enough to allow the few additional cents and the auditor being small enough to demand them.

VI. An illiterate Italian requested information regarding a cooperative land venture which he had been invited to join. Glowing promises had been made to him, the land was represented as extremely valuable, and he was assured that the project had the backing of great financiers. It was not technical information he wanted, but advice as to the financial soundness of the scheme, which he was entirely unable to investigate. The Immigration Commission sent an investigator to interview the chief promoter, followed the clues obtained, and made inquiries at different sources. It was ascertained that the people interested had a poor, wild tract of land, little money, few settlers, and hazy plans, and that furthermore there was much dissension among themselves. The venture was obviously doomed to failure. The Italian was warned of the unstable nature of the scheme and advised to avoid it. He did so and probably avoided losing the savings of many years.

TAXICAB FRAUD.

Five Mexicans, lacking all knowledge of the English tongue, were met, on their arrival at the Ferry Building in San Francisco, by an officious taxicab driver. With his plated badge he made a great impression on the foreigners, and induced them to believe he was a city official and that they *had* to enter his cab. They would rather have walked to their hotel, which was near by, but feared to violate some rule of the government. The hotel was only four blocks distant, but the way the driver took was so roundabout that a full two hours was consumed in the trip. The newcomers were asked to pay \$7.50, although the legal taxi fare was \$1.50. But, as they had only \$6.50 among them, the driver finally consented to take \$6. When the driver was confronted by a Commission deputy he readily restored \$4.50 to the defrauded Mexicans. The Mexicans left town before prosecution could be begun, but this particular driver will be more careful in dealing with immigrants in the future.

BAGGAGE FRAUD.

A French woman on landing at the Ferry Building in San Francisco looked for a reliable man to take care of her baggage. A solicitor presented himself and assumed to represent a reputable transfer company. He took the check and agreed to deliver the baggage for \$1.25. In reality this man had no means of carriage at all. What he did was to turn over the check to one of the leading companies and arrange for its delivery at the address given. But he paid the company only 50 cents, the regular fee, and therefore made 75 cents on the transaction. This

“scalper” and his numerous fellows gain their living by trading upon the ignorance of immigrants. This particular man learned that the case had been reported to the Commission and left the city hurriedly.

FAKE ATTORNEYS.

I. A Greek, long resident in San Francisco, advertised as an attorney in many of the foreign papers. As a matter of fact, he was not an attorney, but many immigrants of all nationalities went to him with their legal and business troubles. He drew up many bills of sale, contracts, partnership agreements, and other legal papers which proved to be utterly worthless from a legal standpoint. Whenever a case had to go to court he employed cheap “shyster” lawyers to appear for him and charged his ignorant clients stupendous fees. The Commission of Immigration collected evidence concerning this man, its attorney prosecuted him under the Penal Code provision in regard to falsely advertising as an attorney, and he was sentenced to six months in the county jail.

II. In a case almost identical with the one above, a foreign born resident of San Francisco acted as a sort of police court “runner” for a firm of lawyers, and likewise advertised himself as a lawyer on placards in cheap restaurants and hotels. This man was an attorney in his own country, but had never been admitted to practice here. Numerous immigrants were “fleeced” by this man, and by means of threats that he could send them to prison on account of laws peculiar to the United States if they did not pay his exorbitant demands for fees for trifling services, he has extorted literally thousands of dollars from the foreign colony of San Francisco. The Commission prosecuted this man, but was unable to convict him, because of certain legal technicalities. However, his “practice” was discontinued as a result of the publicity given to the case.

INSURANCE FRAUDS.

I. An Italian who had been in this country only a few months and spoke little or no English, was prevailed upon by a suave agent to take out a combined life and sick benefit policy in a supposedly reliable insurance company. He was told that this would fully protect his wife and three little children, to whom he was passionately devoted. There were many long paragraphs in fine print on the policy, but the American agent, through the Italian’s ten-year-old daughter, who had learned English at school, explained that these were meaningless things required by law and that the policy covered any sickness or death from any cause. When the insured man became seriously ill of pleurisy, a kindly Italian doctor reported the fact to the insurance company; the company doctor called and made a cursory examination, saying not a word. The next day a formal notice was sent to the sick man that his policy was forfeited because he had refused to allow an examination for tuberculosis, and a part of the fine printed matter covering such an instance was quoted. To the bedridden man this message was meaningless, and the little family was too distressed and helpless to do anything. Three months later the man recovered sufficiently to come to the office of the Commission. He swore he had not refused to be examined by the company doctor. He went with a Commission interpreter to the company’s office and offered to permit any examination. The general manager informed the interpreter that “our doctor’s word is final, and though

the defense is technical it is just!" The man suffered a relapse; the Commission had to call in the Associated Charities to support the family. The Immigration Commission appealed to the company to pay something, and before a reply was received the man suddenly died. Then it was found that the policy covered only violent, accidental deaths. However, \$90 was really due under the sick benefit clause, and the Commission urged the widow to put the case in the hands of an attorney who volunteered his services. But an agent of the company called the day after the funeral and prevailed upon the distracted and penniless widow to take \$10 as settlement in full, and she dropped the case.

II. An Armenian was approached by an agent of an accident insurance company, but declined to purchase accident insurance, saying he wanted to insure against fire. The agent thereupon sold this Armenian a policy which he represented furnished fire protection. It turned out to be an accident policy after all, as the Armenian discovered when he had already paid a \$5 premium. The company claimed it was not bound by the acts of its agents, but after some argument \$3.75 was refunded the victim of the misrepresentation, the remainder being kept as a premium to cover the risk during the period the policy had been in existence and the few days still left to run.

FRAUDULENT CHECKS.

A little immigrant woman was persuaded to cash a \$50 check for a young man of supposedly good family, who had ingratiated himself in her esteem. The check was returned unpaid, with the statement that the man had never opened an account in the bank. The affair dragged on for weeks with repeated promises to pay, and finally the man disappeared. The case was brought to the attention of the Immigration Commission. With the aid of the police the culprit was located and arrested for the statutory offense of cashing a check without sufficient funds, whereupon a prompt settlement was made by his relatives, and the case dismissed. In two other cases where fraudulent checks have been passed on immigrants, the Commission has brought criminal actions. Suspended sentences were given when the money was refunded.

GENERAL BUSINESS FRAUDS.

I. A salesman of an automatic piano company induced two Greek boys to install one of his pianos in their restaurant. He explained that the deal was to be "at no cost" to them, for the piano was to be paid for by the nickels collected in its box. The Greeks, however, were persuaded to sign an innocent appearing document for the protection of the company as owner. In reality they bound themselves in this document to pay \$850 for the piano. So far did the agent press this alleged obligation that an attachment was actually levied on the restaurant. But through the efforts of the Commission the matter was brought to the attention of the company's officers, a new agreement according to the terms of the original understanding was drawn up, and the Greeks released from their predicament. Four similar cases with such companies were settled in the same manner.

II. The defendant in another case used the simple and yet effective scheme of selling a half interest in his cleaning establishment. He had a little cubby hole of an office, run so it was more "establishment" than "cleaning." The complainant, however, was an easy going immigrant

from Northern Europe, and was easily "stuffed" with stories of vacuum cleaners and lucrative incomes. He paid \$50 cash for a partnership interest, and bound himself to pay \$100 in installments. The profits from which the installments were to be met were not forthcoming, however, as none of the much talked of customers appeared, and the defendant was at the point of seeing his little game culminate successfully in the "freezing out" of the new man, when the Commission stepped in. The swindler was arrested on a charge of petit larceny by trick and device, and when haled before the court he offered to restore \$40 to the victim of the hoax. The latter accepted this offer, as it meant more to him than the imprisonment of the defendant, and, as he refused to testify, the case was dismissed.

GENERAL IMPOSITION.

I. A young German girl traveling to marry her lover in Honolulu was accosted on the train by a middle-aged man. He assisted her with trifling favors, and gradually established such an intimacy that he proposed matrimony. But the girl proceeded to Honolulu. However, the gracious attentions of this generous and seemingly wealthy fellow traveler had made her dissatisfied with her lover's comparatively low estate. So she returned to San Francisco, hoping to find the man who had sought to wed her. She came to the offices of the Commission for assistance. Investigators located the man and discovered that he had met his former wife, now divorced, and was contemplating a remarriage with her. When he learned of the Immigration Commission's interest in the case, he fled with his divorced wife. The girl was warned of these facts and committed to the careful charge of the Travelers' Aid and the Y. W. C. A.

II. An Italian window washer, injured by an automobile, found neither the owner nor her liability insurance company inclined to pay him any compensation. The owner claimed there had been no carelessness on her part. The insurance company cheerfully suggested a suit at law, as they learned that the man was destitute and probably unable to bring suit. The Italian's outraged sensibilities and angry demands only added to the obstinacy of the others. Through the intervention of the Immigration Commission, however, the insurance company was induced to consider some friendly settlement on a reasonable ground, as there was considerable evidence of fault on the part of the driver of the automobile. As the man's injuries were not serious, and his chief damage was loss of time, his case was compromised for \$50.

"QUACK" DOCTORS.

To the Commission's already lengthy list of complaints against "quack" doctors, a Sacramento Greek added three. He stated that these irresponsible and unlicensed physicians, two Chinese and one American, were advertising widely their herbs and extraordinary cures for all diseases, venereal and otherwise. These advertisements were printed in a Greek newspaper, in the Greek language. It is calculated that inestimable physical injury as well as monetary loss can be traced to these charlatans. As the California Board of Medical Examiners is conducting a strenuous campaign against all such "quacks," the matter was referred to it, and already one of the three has been convicted on the charge of practicing medicine without a license.

GENERAL AID AND ADVICE.

A Servian went to a rural post office to register and mail a letter to Belgrade. As it contained a draft, he was much disturbed to find, after some months, that it had not arrived. He was unable to explain his difficulty to the authorities, as he spoke no English. The Commission took the matter up with the local postmaster, obtained the necessary form for the Servian to fill out, and saw that he wrote in the necessary information. The difficulty has now been referred by the Immigration Commission to the Washington authorities, in the hope of hastening the investigation and shortening, as far as possible, the inevitable delay due to the war.

SEDUCTION.

A pretty and innocent immigrant girl from a hill town of Italy, who found work as a domestic servant in San Francisco, was assiduously courted by a well to do hotel owner. He lavished attentions upon her and finally won her promise to marry him. He put off the marriage from month to month on the plea of financial reverses. At length he played upon her sympathies and induced her to enter into illicit relationship with him, saying that they would soon be married anyway. In a few months he jilted the girl. A baby came and she pleaded with him to marry her. He answered by marrying another woman. The girl was earning \$35 a month and had to pay \$20 a month to a home where the baby was placed, and to provide it with clothes. The father paid not a cent toward the support of the child.

The Commission instructed its attorney to prosecute the man in any way possible. A law had been passed in 1913 making the father of an illegitimate child civilly liable for its support, but the girl-mother had no money to hire an attorney. Consequently, a criminal action was instituted under the Penal Code section making the parents of children liable for failure to support. This section in the past had been applied only to the parents of legitimate children, but it has been contended in this case that the new civil statute now imposes a duty of support on all parents, and that therefore the defendant is criminally liable. This point was decided in favor of the Commission in the police court, and in the superior and appellate courts on habeas corpus, and it has now been appealed to the supreme court. If this case is decided in favor of the prosecution, it is estimated that approximately \$50,000 will be saved the state annually in contributions to the support of illegitimate children, as such criminal prosecution will bring in the payments of large fines, and also the fear of prosecution will tend to make fathers of illegitimate children support them voluntarily.

IV. HOUSING.

In section 8 of the creating act, the commission is given power "to enter into tenement houses, buildings and dwelling places for the purpose of inspecting such houses, buildings, and dwelling places to secure compliance with state tenement and building acts and municipal building ordinances and to prevent violation thereof." and in addition there was given "the right to examine the records of the various city departments charged with the enforcement of the tenement house law and other building regulations and to secure from them reports and copies of their records at any time." Obviously one of the grave questions within the problem of immigration is that of the ever miserable housing of the aliens within our cities. It was for this reason that these powers of housing investigation were vested in this Commission.

San Francisco naturally presents the gravest existing housing and congestion problems, and the danger of future immigrant congestion is limited largely to that city. Consequently, the Commission made its initial investigation in that city in order to determine the scope of its work in housing. The reports of their preliminary surveys are set out in chapter I of this report under A and B. Conferences were also held with the State Board of Health, local health officers, the Housing Association of San Francisco, and the Los Angeles Housing Commission in order to profit by their experience and obtain their views as to what particular problems were most pressing and demanding of immediate attention.

These surveys and conferences disclosed the fact that the problem of the Commission was exceedingly difficult because the enforcement of the state housing laws is entrusted to the boards of health and building departments of the cities and towns. Uniformity of action is therefore difficult, and there is no central authority to which the Commission could present a general campaign of action for correcting the abuses which might be discovered. It was determined that the first duty of the Commission, as a state organization, was to secure the uniform enforcement of the two state housing laws—the Tenement House Act and the Hotel and Lodging House Act. It is in tenements and cheap lodging houses that immigrants usually congregate; moreover, it was found that little or nothing was being done to enforce these, the only state laws pertaining to housing. The concrete work before the Commission, therefore, was to stimulate into action the municipal authorities where bad housing conditions were found, principally in enforcing the state laws, and incidentally in enacting and in enforcing municipal ordinances pertaining to all dwellings.

In the following pages summaries of the housing surveys of the different cities are set out, together with the results obtained in each locality. The reports make it apparent that California generally has not awakened to a realization of its housing problems, or its opportunities in this connection as a comparatively new state. Feeling secure for the present with its broad acres and more or less scattered population, the state is not insuring against the future as it should by watching over each step in city housing construction and development, and by keeping a careful supervision over maintenance according to the laws of health and sanitation. Since the Commission had so many other fields of activities, its limited appropriation permitted the employment of only one housing expert, who was assisted at times by one, and at times by two, investigators. Consequently, the accomplishments of the Commission in securing concrete results have been comparatively small, and its main achievement has been the inspiring of the local authorities with a sense of duty. But it is apparent that if the work is to have any lasting effect, it must be continued, and on a larger scale, with a special appropriation for that purpose.

SAN FRANCISCO.

1. Tenements.

Following the general preliminary housing investigation in San Francisco, an intensive survey was made in that city's Telegraph Hill and North Beach districts during March and April, 1914. A house to house survey of two solid blocks on Telegraph Hill and a detailed study of law violations in fifty scattered tenements selected at random were made. These investigations were conducted to secure definite evidence that would convince the local authorities that city housing inspectors were needed, not only to see to the enforcement of specific laws, but also to protect the community from conditions amounting to public nuisances dangerous to the health and morals of the community.

In these inspections the inspectors were not allowed to deal in generalities. In cooperation with housing experts, cards were carefully prepared, upon which detailed and specific measurements were recorded to show the most serious housing and sanitary violations.

Table VIII shows the worst violations of the tenement house act in the thirty-four tenements which were found to be in the most dangerous condition. It is truly startling to note that there were 392 serious violations found in these thirty-four houses, and that there were innumerable violations of less importance in each building. While all these houses were not built in actual violation of laws that were in existence when they were constructed, still these violations of the present law show that careful watch should be kept over the construction of new houses, and many conditions even in old buildings could be remedied

Totally dark room. The window opens on wall of adjoining house. (This picture and those following were taken by the Commission's housing inspectors.)

A violation of the state cubic air law and of the lodging house act. This inside room is occupied by nine men. The windows open into the kitchen.

under the express provisions of the present law—notably inside bed rooms and insanitary toilets. In these thirty-four houses were found nine inside rooms without any windows whatsoever, thirty-six dark bedrooms not opening directly to the outer air, and nineteen bedrooms opening on courts less than twenty square feet in area—making a total of sixty-four inside rooms. Inside rooms were found to be common in the other districts which were surveyed, the statistics of which are not here tabulated.

The dark, unventilated toilet, usually in an insanitary condition, is another grave danger in these tenements. Such toilets are usually situated in the common hallway, or common porches, under the stairways, and admit neither of light nor ventilation. The use of these toilets by two or more families is generally the cause of their disgustingly filthy condition. No one assumes the responsibility for their cleanliness. Likewise, the utter lack of scarcity of bathing facilities is a severe criticism of the city's housing and living conditions.

It is also important to note that in twenty-eight out of the thirty-four houses shown in Table VIII there were instances of overcrowding in fifty-six rooms. This violation of the cubic air space law is the rule rather than the exception. A recent investigation, made in December, 1914, into the general living conditions of 103 Spanish families, who have come to California by way of Honolulu, reveals a much worse condition this winter than last, as regards over-crowding. Most of these Spaniards are in the poorer tenements, two and three families being huddled together in a one-family apartment. One apartment of three rooms was found to be occupied by three families; two families, consisting of four adults and two children, occupying one small bedroom. This general situation is due to the lack of employment, and shows how unemployment and bad housing go hand in hand.

After the tenement house inspections were completed in April, 1914, the Commission submitted the results to the San Francisco Board of Health and enlisted the cooperation of the Housing Association, and others interested in housing, in a campaign to secure the creation of a tenement inspection department under the Board of Health. The Board of Health was soon convinced of the need of such inspectors and aided the Commission in petitioning the board of supervisors for the necessary appropriation. Eventually the supervisors allowed the appointment of two tenement house inspectors at a salary of \$125 per month in the budget for the fiscal year beginning in June, 1914, and in July two inspectors were appointed. Many more inspectors are needed in a city the size of San Francisco, but this small beginning signifies a realization of the problem and a determination to deal with it.

The Commission, through its housing inspector, has cooperated with and aided these local tenement inspectors in every possible way in

The Commission, through its housing inspector, has cooperated and aided these local tenement inspectors in every possible way in

Bedroom occupied by an American family of six—parents and four children.

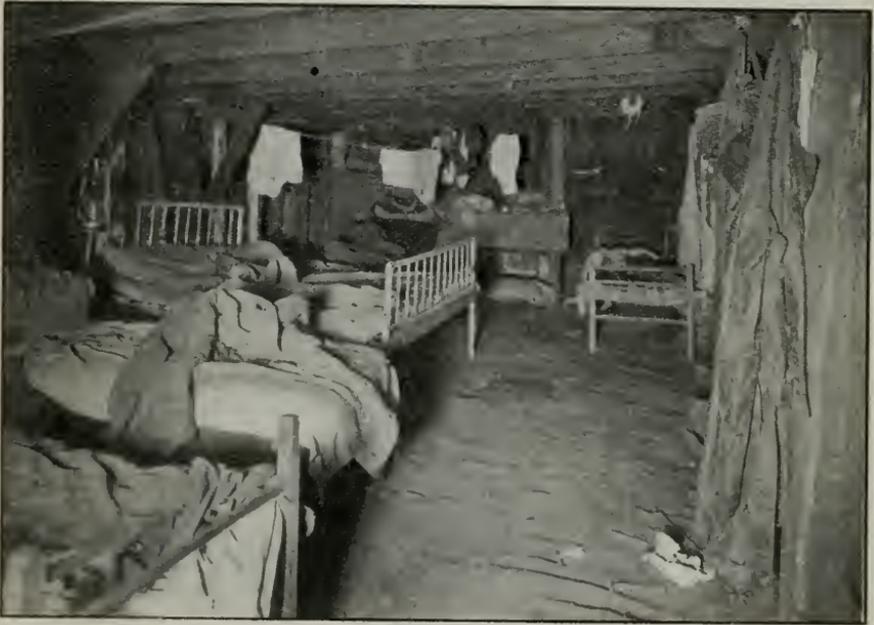

Inside bedroom in a tenement house. Window opens into another room. A common feature of California tenements.

Bedroom occupied by young boy. There are planks over only one half of the damp dirt floor.

Dilapidated bedroom common in California shacks and single family dwellings. The need of immediate repair is obvious.

Cellar, under a shack and more than half below street level, occupied by six men. Dirt floor covered with old moldy carpet. No ventilation except through rear door.

Old shed turned into a cheap lodging house. There are eighteen bunks and an old wooden sink in the rear of the room is the only facility for bathing.

undertaking their new work. The inspectors have concentrated their efforts largely on inside rooms, as they present about the worst condition and can be eliminated under the present law, even in tenements built before the law went into effect. They have compelled many owners to make alterations in their buildings to eradicate this evil. The work is necessarily slow, as the two inspectors have to cover the entire city. Moreover, tenement houses are even now being erected which violate the law, as there are not sufficient inspectors to aid the building department in checking up permits and construction. Houses have been built covering the entire lot area, leaving no rear yards, and with the courts obstructed by stairways.

It is apparent that if the tenement house act is to be effectively enforced, both as regards construction and maintenance, a larger staff of inspectors will be required.

2. Family Dwellings Other Than Tenements.

San Francisco has an equally serious problem with its single houses and flats, which are not technically tenements. Especially is this so in the Telegraph Hill district, where an intensive survey was made. Many of these houses are two family flats built in the rear of tenements, and a large number are dilapidated, tumble-down huts which were not destroyed at the time of the fire in 1906, and which are at present mostly occupied by Spanish and Porto Rican families. Inside rooms, overcrowding on lot area, congestion of occupants, and bad sanitary conditions are as prevalent as in the tenement districts. And, in a manner, this problem is more serious than that of the tenements, because there are no laws regulating these conditions. The Commission has urged the passage of municipal ordinances specifically regulating the construction and maintenance of all family dwellings, so that a repetition of these conditions might not arise in the poorer sections of the city, and it is to meet this general problem that the Commission is also proposing a general state housing law to cover all types of housing.

Rents for these shacks are enormously high in view of the accommodations afforded, and, on account of the destitution of families and the unemployment of the men, several families often crowd into one small house or a single apartment.

At the time of the writing of this report an epidemic of diphtheria is raging in one of these congested neighborhoods and spreading through the whole district.

3. Lodging Houses.

Subsequent to the general preliminary survey of lodging houses reported in chapter I, thorough and detailed inspections of twenty-nine cheap lodging houses in San Francisco have been made. Since these buildings house thousands of more or less roving and irresponsible men

A lodging house in a basement. There are twenty-three rooms, each a mere stall, with no ventilation. The only light is artificial.

Cellar under a shack. Typical of the squalid living conditions prevalent in the smaller cities of California.

of the poorer classes, who are careless as to their general personal habits and cleanliness, they present an ever constant danger to the health of the entire city. The preliminary survey had disclosed the fact that the city maintains no regular inspection of these lodgings; consequently this detailed survey was undertaken to gather definite evidence of the need of inspection.

These detailed inspections disclosed such startling conditions that the newspapers in San Francisco gave wide publicity to the report, considering the news to be of vital import to the general public. The worst violation discovered, which may not be a technical violation of the existing hotel and lodging house act, but which presents a real menace, was the existence of hundreds of so-called "stalls." A large room with a ceiling of from twelve to fourteen feet in height is divided up into small rooms, or stalls, by partitions seven or eight feet high. These "stalls" are lighted and ventilated only by the windows of the large room, the separate "stalls" not being ceiled over. In one lodging house containing 163 rooms there were 129 such "stalls" or inside rooms; in another there were 105 "stalls" and only 45 outside rooms proper; and in the smaller lodging houses this condition was comparatively as bad. That such rooms with indirect light and ventilation are obnoxious, and at the best only technical evasions of the law, is apparent.

A woeful lack of bathing facilities was also found, and the toilets and baths are generally in an insanitary and almost filthy condition. The proprietors regard their lodgers, as one expressed it, as "the scum of the earth," and consequently they refuse to employ sufficient help to keep the toilet and general plumbing facilities in a proper condition.

The general vile condition of the beds and bedding is especially dangerous in that it affords an active medium for the breeding and spreading of loathsome and contagious diseases. The sheets are rarely changed for new lodgers, there are many recorded instances where the beds were found to be covered with vermin, and the blankets and heavier bed clothes were reeking with filth and soaked with wine. In a few instances the sheets are changed once a week, in most cases twice a week, and only seven houses were found that ever fumigated the blankets and other bedding.

In addition practically every one of these 29 houses were found to be regular fire traps. The hallways and stairways are narrow and inadequate and practically no fire escapes are provided.

These conditions were reported to the San Francisco Board of Health and it was especially recommended that four of the houses be at once

One room apartment—one of twelve of similar character on the same premises. The walls and ceiling are of tin patchwork.

Two small rooms occupied by a Portuguese family—parents and two children. There is one bed for the entire family. The father is tubercular.

condemned as public nuisances. A strong effort was made to have the city create a lodging house inspection department under the Board of Health with at least one inspector, but no provision was made for this work in the budget. Therefore, today, San Francisco is going on heedful of this eminently dangerous sore, acting only when strenuous complaint is made by some incensed private citizen concerning some particularly bad lodging house.

In December, 1914, the four lodging houses which the Commission had branded as public nuisances were reinspected. The results are not encouraging, as only one house has actually been condemned and torn down, and it is evident that more work will have to be done by the Commission to arouse the city authorities to a sense of duty. The results of this reinspection can be summarized as follows:

1. Lodging house on Clay street. Condemned by Board of Health and torn down.

2. Lodging house on Howard street. Condition of house insanitary and even worse than when first inspected. Vacant lot in rear filled with even more refuse than when previously inspected.

3. Lodging house on Third street. Conditions still insanitary to a dangerous degree. No improvement whatsoever.

4. Lodging house on Natoma street. Bad conditions slightly improved, so the house might be classed as fair.

SACRAMENTO.

Two surveys of housing conditions have been made in Sacramento. This city has retained much of the *laissez faire* attitude of the early California days as regards its housing, although it has a serious problem in this connection on account of its large railroad shops and canneries, whose thousands of workers are housed in a low, poor quarter, and it is also the temporary home each year of many casual agricultural workers, who are regularly destitute a portion of each year.

The first investigation, made in May and June, 1914, included an intensive survey of two half blocks, detailed inspections of houses in scattered sections of the city, the careful investigation of conditions in six cheap lodging houses, and a rapid resurvey of large portions of the area covered by a housing investigation made in 1913 by the Chamber of Commerce. The report of this survey revealed deplorable living conditions, and particularly an absolute lack of effort on the part of landlords to keep their premises in repair, although rentals are never reduced, but kept surprisingly high.

A filthy shed shared by a man and a horse. The man's bunk is almost directly over the horse and the manure pile.

A 6 x 8 foot shed built of tin and wood patchwork. No ventilation. A Mexican is asleep in the bunk.

The chief evil disclosed, and which seems to be peculiar to Sacramento, is the common use of cellars for sleeping and general house-keeping purposes. The sections of the city where bad housing prevails are low and poorly drained, and consequently the cellars in the dry season are damp, and in the winter season they are actually wet and the walls dripping. Some instances were discovered where five or six persons, usually immigrant lodgers, slept in such cellars, with dirt floors and walls, and with not more than 1,200 or 1,300 cubic feet of air space.

The usual overcrowding or congestion was found to be as prevalent as in San Francisco. Likewise scores of inside rooms were discovered, and insanitary conditions and general uncleanness were found more frequently than in San Francisco. The old and carelessly constructed privy vaults which are still not uncommon in this city also present a serious problem, endangering the health of the entire community.

Conditions were found to be so serious that the Commission drew up two ordinances to regulate housing, as there were practically no effective housing ordinances, and no effort was being made to remedy the situation or guard against an increase of the evils. One of the proposed ordinances was to regulate tenements and all other family dwellings, and the other provided for the regulating and licensing of lodging houses and hotels. These ordinances, together with the report and a large number of photographs showing the bad conditions, were submitted to the city commission. The Sacramento "Bee" cooperated with the Commission by giving full publicity to the entire report, reproducing the photographs and carrying on an extended editorial campaign for the passage of the proposed ordinances.

However, even with all this publicity the effort to arouse the public and the authorities to an appreciation of the problem failed and the city commission refused to pass the proposed ordinances.

Nothing daunted, the Commission made a much more extended survey in October and the early part of November, 1914, with the object in view of arousing the city by disclosing all of the very worst conditions. Two hundred houses, including twelve tenements and thirty-three of the cheap lodging houses, were inspected. Innumerable photographs were taken and the results have been incorporated in a detailed report which is to be submitted to the city commission in January, when the housing ordinances, slightly amended to meet new conditions which were discovered, will be again proposed.

Badly clogged and foul toilet to the left. To the right typically dangerous living conditions. House dilapidated and overrun with rats.

Filthy corner where food is prepared and dishes washed. The door beside the sink opens into a dirty toilet ventilated only through this room.

The most serious conditions that were disclosed during this second investigation of 200 houses can be grouped as follows:

1. Lack of adequate toilet facilities.....	14
2. Cellar dwellings	9
3. Insanitary conditions of woodwork around sinks and toilets	50
4. Bad repair of building.....	196
5. Filthy premises, exterior and interior.....	116
6. No garbage cans.....	69
7. Animals on premises, causing insanitary condition...	25
8. Totally inadequate cubic air space in bedrooms.....	29
9. Inside rooms	23
10. Enclosed plumbing	41
11. Privy vaults	14
12. Houses keeping lodgers and thereby causing over- crowding and encouraging moral laxity.....	24
Total	610

The lodging houses disclosed the following most noteworthy evils:

A total of thirty-three cheap lodging houses, having accommodations for over 1,000 persons were investigated. These thirty-three houses had 371 interior, dark rooms, many of which had no ventilation and were consequently filled with foul air. Seventy instances of bad cubic air violation were found.

Seventeen houses were without any bathing facilities, and all the houses are without adequate conveniences. Usually one bath serves the entire house.

Allowing for ten persons to a toilet—these facilities are insufficient in each house inspected. Many of the toilets were found in filthy condition and with no means of ventilation.

Prices ranged from ten cents to one dollar a night. Papered and plastered walls were found torn and broken and in need of repair. Of the total number of houses, sixteen were found to be in an absolutely filthy condition.

One of the worst evils is the occupation of underground cellars; five such cellars, accommodating over two hundred persons, were found. These are damp, dark, unventilated, and a direct cause of tuberculosis.

FRESNO.

A detailed inspection of one hundred family dwellings and ten cheap lodging houses was made in Fresno during July and August, 1914. There are practically no tenement houses in Fresno, and the problem is largely that of the single family house or "shack." The houses inspected were for the most part in the foreign colony section, where there are many Germans, Russians, Armenians, Italians, and Mexicans.

A few instances were found where several families occupy an old residence which has been left behind in the poorer section with the city's growth, and these presented the problems peculiar to tenements. But

A piece of leaky rubber hose used as substitute for broken pipe. The faucet is badly in need of repair.

Old broken cesspool. One of the worst evils in California cities. A common factor in the distribution of typhoid.

the worst conditions were found to result from a lack of sanitary conditions and the overcrowding of large families in one-room huts. There were found to be an unusually large number of these rude huts or "shacks," and their general dilapidated condition, combined with the congestion, offer every advantage for the breeding and spreading of disease.

The old privy vaults, many of which were in a neglected and broken condition, also present the same evil as was found in Sacramento.

Though the very cheap lodging house has not yet been established in Fresno, an inspection of ten of the twenty-five cent houses revealed conditions already bad and which threaten to become worse. Many inside rooms were found—one of the worst evils of cheap lodging houses. There is also the usual lack of adequate bathing and toilet facilities, and the toilets were found to be generally in an insanitary condition. Moreover, two or three of these cheaply constructed buildings were reported as being regular firetraps, a menace to the lives of lodgers and the community.

The health authorities were found to be unusually eager to cooperate in improving conditions, but they are hampered by a lack of laws or ordinances regulating housing. Consequently, dwelling and lodging house ordinances were drafted by the Commission to fit the local conditions, and these have been submitted to the city authorities for adoption.

The Fresno "Republican" has given full publicity to the report and has endorsed the proposed ordinances, and it is to be hoped that the authorities will take this definite step toward the improvement of housing and living conditions in this comparatively young and growing city, which has such a splendid opportunity to prevent the growth of "slums."

BAKERSFIELD, VISALIA, SANTA ROSA, EUREKA, GALT AND ISLETON.

The Commission of course with its small force of inspectors available for housing could not cover all the cities and towns of the state. However, an effort was made to conduct housing inspections in the smaller cities and towns when bad conditions were reported, or when the local authorities requested such inspection. Such surveys or inspections were made in Bakersfield, Visalia, Santa Rosa, Eureka, Galt and Isleton. These more or less hurried surveys showed that in these smaller communities the housing problem is not that of tenements and lodging houses, but of crowded single family houses and generally bad sanitation. The foreign quarters are especially neglected so far as housing and sanitation is concerned.

Insanitary toilet and stagnant waste water in backyard. Breeding places for disease germs.

A backyard—unsightly because of its untidiness and dangerous because of the uncovered pile of manure at the rear,

Two bad features are common to all these smaller cities and towns—the lack of adequate sewer systems, and the danger of pollution of the water supply. In fact these conditions are so prevalent that it might be said that the sanitary problem becomes the most important factor in the housing problem of the small towns of the state.

In Bakersfield and Visalia the only truly bad housing conditions were found to exist in the sections where the small "shanties" predominate. General uncleanness and lack of repair are the worst violations and these features could be eradicated by careful and systematic inspection, followed up by orders from the Board of Health under its general regulatory powers. This fact was impressed upon the local authorities in these two towns and they have recently reported that a "clean-up" campaign has been inaugurated.

At the request of the local health officer the Commission's housing expert was sent to Santa Rosa to examine into a case involving the enforcement of the state hotel and lodging house act. The owner of a lodging house in which the health officer had ordered certain alterations had interested several lodging house proprietors in making a sort of test case of the situation. The Commission inspector, after an investigation, reported in favor of the health officer. The contesting parties were then called into a conference and convinced of the legal, as well as the moral, necessity of complying with the lodging house act. As a result all the inside rooms were removed from the house in question, an enamel sink replaced an old and insanitary wooden one, and the halls and stairways were widened and made accessible to fire escapes. All the lodging houses of the town will probably be remodeled along these same lines, and the publicity given this case in the local papers has caused the inception of a general campaign for better housing and sanitary conditions.

In Eureka, while inspecting some labor camps on the river near the town in December, the sanitary engineer discovered that the river water, which is the source of the city's water supply, was being polluted and contaminated by these camps and by many private residences. This fact was reported to the local health officials, who admitted that they had known of the pollution for some time and had actually attributed certain typhoid epidemics to this source, but they claimed that they had refrained from acting because it was believed to be a case for state action, since a state law governs the pollution of streams. The local newspapers heard of the sanitary engineer's report and immediately gave wide publicity to the matter. This, combined with the pressure brought to bear by the Commission, soon stopped the quibbling over the question of procedure and at the time of the writing of this report half of the camps and residences have already been made to install

Row of shacks hidden by signs. Their back doors open directly upon the free city dump.

The garbage dump in rear of the shacks shown above.

aseptic tanks, which prevent the pollution, and the other half are in the process of either installing sewer systems or aseptic tanks. The Commission took advantage of the publicity gained in this connection to start a general improvement campaign, and the interest and enthusiasm that have been aroused bid fair to bring further good results.

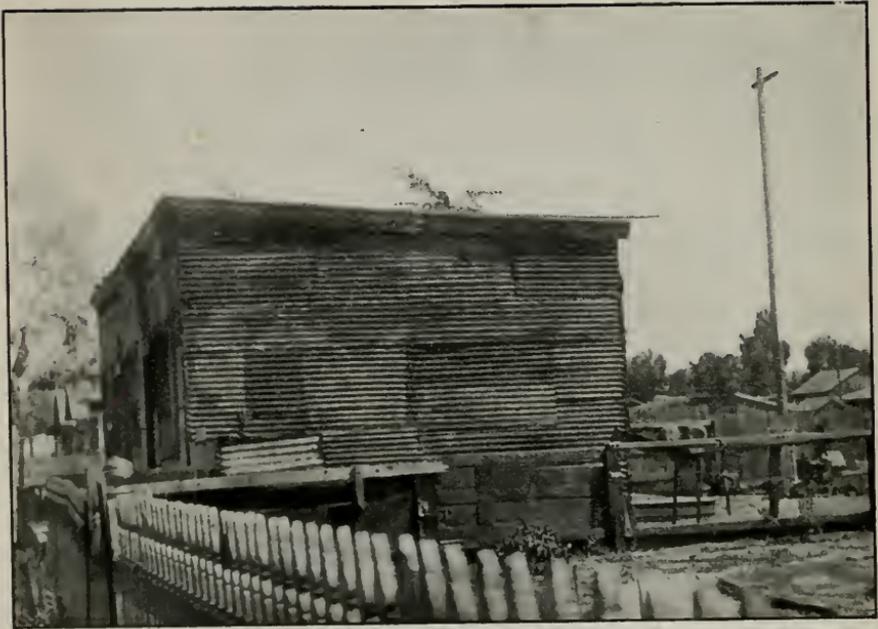

The towns of Galt and Isleton, in the Sacramento Valley, appealed to the Commission during the summer to aid them with their problems of sewage disposal. Both towns were entirely without sewer systems, and as a result there was pollution of the water supplies on account of the peculiar location of the towns. Moreover, the general sanitary conditions were extremely bad. The Commission's sanitary engineer was sent to make careful investigations and then submit definite recommendations. The sanitary engineer, after three weeks' work in the two towns, submitted carefully drawn plans and specifications for the construction of sewer systems, and for the erection of simple and inexpensive garbage and refuse incinerators. The town of Galt adopted the plans as submitted and the authorities have voted to begin the construction of both the sewer system and the incinerator. The Isleton authorities are making some minor changes in the plans submitted to them, but they intend to follow the general suggestions of the Commission.

LOS ANGELES AND SAN DIEGO.

These two cities are mentioned last for the reason that they are aroused to a sense of responsibility in connection with their housing problems and the local authorities are doing much to enforce the laws and improve conditions. Consequently the Commission has done little in these cities, but has concentrated its efforts on those communities where practically nothing is being done in this connection.

In Los Angeles, the city housing commission, a bureau under the health department, has four inspectors constantly in the field and by issuing explicit orders, followed by prompt re-inspection, has achieved much in the way of enforcing state laws and local ordinances. The problem peculiar to Los Angeles is found in the house courts. These are not technically tenements, though they often house several families, and, therefore, present some of the same problems. The local housing commission is not only correcting abuses in these quarters, but it has also undertaken some constructive work, offering prizes for plans of model house courts and urging the adoption of these plans upon builders.

The Immigration Commission has cooperated with the Los Angeles municipal housing commission and is now engaged in an intensive housing and social survey of a large school district. This district is in a congested quarter of the city which is largely peopled by immigrants. The general purpose of the survey is to show the effect of housing upon

Three family tenement house which grew from a dilapidated shack. A combination of California's two most serious housing problems.

Shack built of tin and pieces of dry goods boxes. One small window. Vault toilet adjoins the front door.

the health, character, prosperity and citizenship of the people of the district and upon the general life of the city.

Its specific purpose is to show the present influence and value of a fine neighborhood school which is the social center of the district, and the necessity for enhancing that influence by adding home teachers to the present force of school teachers.

Likewise in San Diego an earnest effort has been made to abate housing evils and improve conditions. On October 14, 1913, an inspector was appointed in the health department to devote his entire time to tenement and lodging-house inspection. The department has obtained excellent results in enforcing the laws pertaining to these structures and has incidentally done much to improve general conditions in single family dwellings and the flats which do not come within the Tenement House Act. It is interesting to note that the fees collected in the course of this work have paid all expenses and salaries of the department. This department has cooperated most enthusiastically with this Commission in carrying out suggestions concerning the enforcement of the state laws, and it was so anxious to be entirely correct in its actions that it requested that an inspector be sent to make a general survey of the city. Consequently an inspector of the Commission of Immigration and Housing made a rapid investigation, which consisted mostly of checking over the work of the local department and gathering general statistics pertaining to the immigrant situation for the use of the Commission in its general activities. The housing work was found to be well systematized and accurate in every particular.

The following brief summary of the housing work done in San Diego by the health department during the year, October 14, 1913, to October 14, 1914, is given to show how much can be accomplished by but one inspector if a definite, consistent plan of work is followed:

Old Buildings.

- 88 New water-closets were installed.
- 107 New kitchen sinks were installed.
- 21 Bathtubs were condemned and removed.
- 12 New bathtubs were installed.
- 76 Old defective water-closets, slop hoppers and wooden sinks were condemned and removed.
- 101 Kitchen sinks had woodwork removed from around.
- 378 Pieces of carpets, rugs, matting, pillows and blankets were condemned and destroyed.
- 57 Wooden bunks were condemned and destroyed.
- 402 Pieces of floor covering were cleaned.
- 44 Yards were cleaned.
- 1200 Rooms were repapered, painted and calcimined.
- 455 Rooms found infested with vermin. These rooms were thoroughly cleaned and fumigated.
- 7 Rain water cisterns were condemned and either filled or sealed.
- 31 Leaky roofs repaired.
- 227 Water-closet compartments were cleaned and painted.

- 10 Fire escapes were installed.
- 14 Fire hose lines were installed.
- 27 Buildings were removed from the condemned class by compliance with our orders for improvements, alterations and repairs.
- 287 Inside rooms were provided with sufficient light and ventilation by the installation of air shafts, ventilators and skylights.
- 121 Rooms were condemned on account of the lack of sufficient light and ventilation.
- 243 Rooms were condemned on account of being insanitary.
- 3 Rooms were condemned on account of not having the required amount of cubical air space.

There were 4,363 nuisances abated on orders, together with approximately 3,400 abated on verbal notices and voluntarily, making a grand total of 7,763 general nuisances abated during the year.

Five hundred fifty-six licenses were issued and 1,331 notices to abate nuisances were served. In many cases it was necessary to send second notices.

New Buildings.

There are under construction at the present time, 3 lodging houses and 7 tenement houses, containing 184 guest rooms and 135 housekeeping apartments.

BUILDINGS CONDEMNED.

Forty-one entire buildings were condemned as being unfit for human habitation, but immediate results were obtained in 27 of these. The owners of the same, when the places were placarded, went ahead and made all the necessary alterations and repairs and the installation of additional plumbing fixtures required by the laws, which now leaves only 14 buildings actually remaining condemned.

GENERAL CONCLUSIONS.

A situation developed, however, in San Diego which shows that the greatest difficulty in the enforcement of the state housing laws lies in the fact that it is left entirely to the local municipal authorities to put the acts into effect. The reports herein set out indicate that there is not a general, uniform enforcement of the tenement and hotel and lodging house acts, for the majority of cities are not even making an effort to carry out their provisions. Moreover, in San Diego, where an effort was made to put the law into effect, difficulties arose. The Tenement House Act allows the municipalities to divide up the enforcement of its provisions among local departments. In San Diego, after a few months of active work by the health department, the powers of enforcement were so divided between the building inspector and the health department that this situation arose: Several owners were granted building permits and erected their houses under the supervision of the building department. The health department, when the buildings were completed, decided they were tenement houses and refused to issue permits of occupancy because the houses were not built according to law, and the occupancy thereof would be in violation of the "health, sanitation and ventilation" clause of the act, the enforcement of which clause is always in the local health department irrespective of the will of

the municipal government. The building department maintained that the buildings were not tenement houses. The Commission's attorney made an investigation and rendered an opinion in favor of the health department—but to no avail, as the Commission had no actual power and could act only in an advisory capacity. Thus the innocent owners were caught between two official fires. As a result of several such instances an intense local political fight has developed over an attempt to abolish the position of housing inspector in the health department and the work has been much hampered.

It is plainly apparent that such a situation should be remedied and it is to this end that the Commission has proposed the law, summarized at the end of this report, creating a state housing bureau with supervisory powers. Such a bureau would have the authority to straighten out such complications and could also secure a general and uniform enforcement of all state housing laws.

Moreover, the surveys have indicated that the broad, general housing problem in the state, with a few exceptions, may be summed up as a single and two family dwellings problem, the chief factors of which are overcrowding, or congestion, poorly constructed and dilapidated shacks, and a lack of sanitary conveniences. Yet there is no state law, and only a few local ordinances, applying to such houses. It is to protect the state against this unheeded increase of bad housing conditions, especially in the smaller cities and towns where no interest is displayed in such affairs, that the Commission has proposed a state law to regulate all dwelling houses. The proposed state housing bureau would be given supervisory and direct power to enforce this law as well as the existing state laws. Cities seem reluctant to take up their own problems, and local health officers, who are usually practicing physicians, are underpaid and too busy to attend to their official duties. Moreover, there is always a strong local and political influence brought to bear upon such officials to curb their activities when the property of influential owners is affected.

The Commission has, at least, pointed out the way, aroused interest in the betterment of housing conditions, and accomplished some tangible, concrete results—all of which work benefits not only the resident immigrants but also the American inhabitants of the poorer quarters and, indirectly, the entire population of the state.

V. CONSTRUCTIVE HOUSING.

The inspections made with respect to the violation of the state housing laws, and the investigations with respect to general housing conditions, convinced the Commission that the deplorable conditions discovered were due largely to a lack of knowledge concerning the way to build the proper sort of cheaper houses, and a lack of appreciation of the economic and social advantages to be gained from careful planning and construction. It was also found difficult to arouse interest or enthusiasm in the housing problem by merely pointing out bad conditions and violations of housing laws. Such statistics do not appeal to the imagination of the public, as people have lived in the midst of bad conditions so long that they are apathetic and willing to compromise and procrastinate.

After almost a year of experience, the Commission decided to undertake some sort of a constructive housing program in order to point out not only the value of proper housing but the fact that it can be attained easily and, in the end, at a lower cost than bad housing. An architect, who is a trained housing and city planning expert, was therefore sent East by the Commission in November to collect material, photographs, and data showing what is being done in eastern cities and Europe in building workingmen's inexpensive model homes, and especially cottages and bungalows which would be adaptable to California. This expert has returned, after a month spent in investigating in Washington, Philadelphia, Baltimore, New York, Boston, Toronto, Cleveland and Chicago. An excellent collection of photographs has been secured, many valuable statistics showing the cost and ultimate economy of model housing have been gathered and the loan of valuable exhibits of housing organizations has been secured. This material and that collected in the course of local surveys, is now being arranged as an exhibit, which it is hoped will fire the imagination of the public, as well as the authorities, and demonstrate the grave evils of bad and the importance of good housing. The Commission will continue to urge the necessity of the first step in any campaign for housing improvement—the inspection of existing buildings, combined with rigid law enforcement. The exhibit will be so assembled as to bring out this important point, agreed on by all experts, as well as to encourage constructive work along new lines.

This exhibit will be taken throughout the state to as many cities and towns as possible. Housing associations, chambers of commerce, city planning associations, and many individuals have offered financial assistance and hearty cooperation in this work. The exhibit will also

be displayed before the present legislature to convince it of the need of more general and stringent laws and additional appropriations to insure proper enforcement.

But, undoubtedly, the best results that will be accomplished by this exhibit will come from displaying it in a city at a time when a housing survey is being made. Accompanied with wide publicity and lectures on the meaning of the exhibit and the results of the local survey, it should accomplish much.

VI. IMMIGRANT EDUCATION.

In chapter I, subdivision D, of this report the general importance of the education of immigrant children and adults, and California's neglect of this work, is brought out. Much of the future activity of the Commission will be in the field of encouraging the development, and aiding in the planning of this work, for this is perhaps the most constructive feature of the task of bringing about immigrant assimilation. But the problem is a large one, involving numerous technical educational details which require careful study; therefore, during the first year of its existence, the Commission has carefully refrained from advocating any hasty measures, which might easily be ill advised and impractical. Only one plan has been crystalized in the form of a proposed law, and of the soundness of this idea the Commission is convinced.

However, in the course of the general work among immigrants in the housing, complaint, and camp inspection departments, many statistics concerning immigrant education have been gathered and the needs of the people carefully standardized. In San Francisco and Sacramento special surveys have been made along this line, and at present a detailed investigation is being made in Los Angeles in a school district, which is inhabited almost exclusively by immigrants. Two or three further investigations are planned and when these are completed all the material will be carefully assembled and analyzed, and a definite program drawn up.

1. HOME EDUCATION FOR WOMEN.

The general surveys have disclosed one definite educational problem which is so urgent that the Commission has ventured to suggest a solution, feeling sure of its ground. This is the problem of the education and assimilation of the immigrant mother. The immigrant mother who does not speak English is even more helpless than the man, for even his failures give him education and slowly help him to adjust himself to the new life. With the woman in her poor home there are few points of contact with educational opportunity. The Americanization of the children in the public schools often adds to her difficulties. The child takes command of the home and becomes ashamed of the mother. By statistics it was found that this is adding to delinquency and filling the juvenile courts.

The quickest and surest way of dealing with the problem is by educating the mother in our language, our laws and our standards of living. For this purpose it is necessary to provide visiting teachers who will, as rapidly as possible, connect these mothers with the public schools and

our civic life. To this end the Commission has proposed to the present legislature a law summarized at the end of this report. The survey now being made in Los Angeles, mentioned above, is planned particularly to bring out this need of education in the immigrant home. The report of this survey will probably be published in separate form and made the basis of the arguments for the need of this legislation.

2. LABOR CAMP EDUCATION.

The statistics gathered by the camp inspectors disclosed a surprisingly large percentage of illiteracy among the adult laborers, and also the utter lack of school facilities for hundreds of children of immigrants (and Americans) residing in camps. Since the population of the camps inspected is upwards of 64,000, over 50 per cent of which number are immigrants, this is a situation of grave import to the state. These facts were therefore submitted to the State Board of Education and several conferences were held with that board, as a result of which the state board has seen fit to propose a bill in the present legislature for the creation of a camp education department, with a staff of itinerant teachers, under the control of the state board. By dividing the state into several camp districts, and organizing a system of correspondence teaching, in connection with the direct teaching, it is believed that much can be accomplished in furnishing general education and citizenship training to the thousands of aliens in our labor camps.

3. GENERAL CITIZENSHIP EDUCATION.

Since the great immigration problem before the state is the assimilation of the incoming mass, too much stress can not be placed upon ultimate citizenship. As is pointed out in chapter I, little is being done in California to train or instruct the immigrant in either English or citizenship. To cover this field of work the Commission is gathering information for the formulation of a definite program.

Within the last few months the Commission has been much encouraged by the initiative and activity of the school and court authorities in Los Angeles. The judges of the federal and superior courts have arranged with the federal naturalization officers to grant citizenship papers to all aliens who present diplomas from the night schools in English and citizenship, conducted by the local department of education for adult immigrants. These diplomas are granted only to those who pass strict examinations after a course of study in civics and the English language. Consequently, the holders of these diplomas are much better prepared to appreciate the value and duties of citizenship than are those aliens who pass a more or less perfunctory examination in the court, after a haphazard, individual course of study. The

importance of citizenship is further emphasized by holding impressive ceremonies each month when citizenship papers are given out. Addresses are made to the new citizens, by the presiding judge and a few special speakers, after which there is an informal program of music and entertainment followed by a gathering at which many old citizens mingle with and welcome the new. This entire system has had the effect of trebling the attendance at the night school, and many have been inspired to continue their studies even after they are admitted to citizenship.

This work has so outgrown the staff of teachers that the Commission is now cooperating with interested organizations in urging a reorganization of the work by the local board of education. The Commission is also cooperating with the local teachers and others in preparing textbooks for this instruction and general information pamphlets for immigrants in all languages.

The Commission intends to urge the adoption of the above method of training and admitting citizens in all the cities of the state. Already it has cooperated with many private organizations in San Francisco in urging the establishment of social centers in the public schools, under the new state law. These centers would be evening schools for adult immigrants and would also fill the urgent need of a social gathering place for all those who dwell in tenements and in the crowded quarters of the city.

In order that the state may be able to assimilate future immigration it is necessary that it take immediate steps to properly assimilate its present immigrant population.

The Commission would suggest to school superintendents of California that the teaching of English and citizenship be standardized and carefully supervised; that the present system of providing for the evening classes of aliens, teachers already exhausted by service in the day schools, be discontinued as soon as possible. When working people are earnest and ambitious enough to attend evening schools, they should be taught by teachers qualified to work with vigor and ability.

To make this change it is necessary that the state bear its share of the expense of the education of the adult immigrant and that it also supply proper textbooks.

VII. UNEMPLOYMENT.*

The creating act, in section 5, directs the Commission to "devise and carry out such suitable methods as will tend to prevent or relieve congestion and obviate unemployment." The work which the Commission has done directly among immigrants in the complaint bureau, camp inspection bureau, and in the course of the extensive housing investigations, has thrown many sidelights upon the problem of unemployment. In fact, as is pointed out in the separate report of unemployment published by this Commission, the problem of immigration, in its most fundamental aspect, is almost identical with that of employment and its corollary, unemployment.

Furthermore, at the Governor's express request, the Commission undertook a separate and entirely distinct investigation of the unemployment and migratory labor problems. The United States Commission on Industrial Relations also requested the Commission to act as its agent in this investigation and contributed a generous amount to defray the expenses of the work. From May 1st to August 15, 1914, four investigators traveled throughout the state, devoting their entire time to this work. Since August 15th, two, and at times, three investigators have been employed in field work and the compiling of the reports. These intensive investigations were conducted along the following lines:

- (a) Study of special localities to show methods of obtaining labor;
- (b) Study of several hundred life histories of migratory and casual workers to learn causes of unemployment and methods of obtaining jobs;
- (c) Study of the ownership of land and the effect of the land tenure system on employment;
- (d) Study of available material in United States Census, report of United States Immigration Commission, report of State Commissioner of Labor Statistics, reports of labor unions in California;
- (e) Investigation of eighty-one private employment agencies within the state to determine their real status and value.

A separate published report on unemployment gives the results of this work in detail, therefore a mere summary of the conclusions and recommendations contained in that report is given here:

CONCLUSIONS AND RECOMMENDATIONS.

(1) The creation of a state bureau of labor exchanges, under a representative board or commission, with an annual appropriation of not less than \$75,000; this bureau to have branch offices in the centers of population to gather and disseminate labor intelligence, to be a clearing house—bringing the man to the job, and the job to the man; the value of the bureau is to be judged by both the extent and thoroughness of its accomplishments. The bureau should cooperate with the Railway Commission to provide special low transportation rates to those for whom it

*A separate and comprehensive report on unemployment was published by the Commission of Immigration and Housing on December 9, 1914. This report will be mailed free on request.

finds positions; this bureau should have authority to regulate private and philanthropic employment agencies, to issue licenses to them and to revoke them at pleasure.

In the light of the experience of last winter, and of the probable happenings of the season we are now entering, we strongly urge the wisdom of passing this act as an emergency measure as early as possible during the first session of the coming legislature.

(2) The enacting of more stringent laws for the regulation of private employment agencies.

(3) The passing of definite laws governing sanitation and housing in labor camps, based upon our experience during the past year; the enforcement of these laws to be placed in the hands of a bureau of camp sanitation and housing, under our Commission, the Bureau of Labor Statistics, or under a reorganized State Board of Health; with a special appropriation of \$25,000 per year.

(4) The complete revision of our housing laws, broadened to take in family dwellings as well as tenements and lodging houses; the enforcement to be in the hands of a bureau of housing, under our Commission or under a reorganized State Board of Health; with a special appropriation of \$20,000 per year.

(5) The appointment of a special committee or designation of some existing commission to conduct an extended investigation into—

(a) The wisdom of devising some scheme for out-of-work insurance that will not have the effect of drawing into our state the unemployed of the nation;

(b) The best methods for dealing with the unemployable and the vagrant;

(c) Possible schemes for regularizing and dovetailing private enterprise, not in cities alone but in the rural districts as well, so that the burden may be justly and fairly borne by the state as a whole;

(d) Ways and means for providing public work during periods of depression.

(6) The encouraging of some mode of rural credits along the lines of European experience, to make farming more attractive and more profitable; and the creation of rural organization after the type of the German Landwirtschaftratsrat, with the same object in view.

(7) Laws that will make more difficult fraud and misrepresentation in the sale of rural lands, and that will bring to speedier justice the violators of the same and give equity to the exploited.

(8) A state land bureau, preferably cooperating with the University of California, to supply prospective purchasers with all needed information regarding the best economic uses of land, its value, approaches to market, etc.

PLAN FOR TEMPORARY RELIEF.

In compliance with a recent request of the Governor, the Commission also submitted on December 9, 1914, certain suggestions for state action in dealing with the destitute unemployed during the present winter. These suggestions are incorporated in the separate report on unemployment, and the substance thereof is given in the following extract from the report:

“Since any possible state legislation looking toward an alleviation of the situation could not become effective in time to meet the needs of this winter, the burden of the problem must rest upon the different communities and municipalities, and they must deal with the problem locally. However, we deem it advisable that some uniformity should be established in the method of handling the various unemployed groups,

and therefore suggest that some existing state board or a special representative committee, to be appointed by your Excellency, undertake the formulation of some plan of action and urge the adoption of the plan by the various authorities." A general program of relief work for the municipalities was also submitted.

On December 15, 1914, the Governor endorsed the plan and requested this Commission to undertake the work outlined therein.

The Commission immediately communicated with the authorities in all the larger cities and towns, and on December 19th, participated in a conference of the mayors of seven cities of central California called for the purpose of discussing relief measures. San Francisco, Oakland, Berkeley, Alameda, Sacramento, Stockton and San Jose were represented at this conference. A uniform plan of action, along the lines of that proposed by the Commission, was agreed upon and these cities have pledged themselves to put this plan into operation.

An agent of the Commission is now engaged in visiting sixteen other cities and towns to urge the authorities to adopt this uniform plan, and to aid in organizing the work. Copies of the plan have been mailed to the council, or governing body, in each of these cities, and a date fixed for a conference with the Commission's agent. It is hoped that the work will be completed and the cities will organize to deal with the situation by the middle of February, as the unemployment problem usually becomes acute toward the end of the winter, during February and March.

The Commission is also carrying on a campaign of publicity through the newspapers of the Pacific coast and Eastern States, warning those in search of employment that there is no work for outsiders in California and that relief or aid will be furnished only to the destitute unemployed now within the state. This should have some effect in discouraging the hundreds of unemployed that drift to California every winter.

The task of dealing with the unemployed was undertaken on short notice and the work will necessarily be somewhat hurried, but this uniformity of action, though hastily organized, should arouse each community to a sense of its own responsibility in the matter and thus tend to prevent the formation of the irresponsible, roving "armies" of the unemployed, which last year were shunted from county to county during the entire winter. Furthermore, it is felt that it is the bounden duty of the state to interest itself in this ever-recurring problem, and the experience gained during this winter should be of considerable value.

VIII. MISCELLANEOUS WORK, AND COOPERATION WITH OTHER DEPARTMENTS

Some phases of the Commission's work can not be properly grouped under the headings of the previous chapters, and they are therefore briefly touched upon in this general chapter.

PORTS OF ENTRY.

General surveys of the conditions that have a bearing upon immigration problems were made in the three principal ports, San Francisco, Los Angeles, and San Diego. This was done in order that the Commission might be prepared to control the situation, and render efficient service in expediting distribution, when the expected influx of immigrants direct from Europe, through the Panama Canal, sets in.

In Los Angeles and San Diego the federal government has not established immigrant detention stations, although it recognizes the fact that probably thousands of immigrants will enter these ports annually after the termination of the present European war. The chambers of commerce and other local organizations have inaugurated a definite campaign to persuade the steamship companies to land immigrants at the southern ports; it may be taken for granted that many immigrants destined for California will disembark at these ports. Consequently the absolute lack of any sort of facilities for handling, inspecting, and distributing immigrants in these cities presents a grave problem. It is obvious from the experiences in handling immigrants in other ports, that detention stations such as those on Ellis Island in New York harbor and on Angel Island in San Francisco harbor are absolutely necessary. Even under present conditions there have been cases in San Diego where immigrants from South American ports have been detained for weeks while errors in records and papers were being straightened out, and during the period of detention they were placed in the county jail. Scarcely a fitting reception for those we permit, and even invite, to come to our country to live!

The Commission cooperated with the Los Angeles and San Diego officials in urging the federal authorities to take some action in the matter, but the latter have decided that they can do nothing until it has been established by a year's actual experience that European immigrants will land in these ports. It would then take another year to erect and provide adequate facilities. Consequently, the cities decided to take matters into their own hands and build detention stations for the use of the federal government. San Diego voted \$30,000 and the Los

Angeles Harbor Commission appropriated \$25,000 for this purpose. The buildings, which are to be erected on the municipal piers in both ports, will serve to meet the needs until such time as the federal government sees fit to provide permanent stations of its own.

As a further result of these surveys, and guided by the experiences of Atlantic seaport cities, the Commission has proposed that the state establish neutral zones at every point where immigrants are landed after being inspected by the federal immigration authorities. The proposed law provides that only such persons shall be admitted to these zones to meet immigrants as have permits or licenses issued by this Commission. In this manner the Commission could protect the newcomers from the fraudulent baggage men, cabmen, hotel runners, and other professional exploiters of immigrants, and cooperate with reliable and trustworthy agencies in expediting proper distribution throughout the city and state. The United States Commissioner of Immigration has endorsed this plan and pledged the active cooperation of the federal authorities in putting it into operation.

INFORMATION CONCERNING AGRICULTURAL LAND.

From the very beginning the Commission was besieged with requests for information concerning land. These requests have not come from immigrants alone, but from prospective American purchasers or settlers throughout the United States. Information was sought concerning the general agricultural possibilities of the state, and soil surveys of particular tracts were desired.

Obviously this Commission is not equipped to supply such technical information. Consequently, all these requests were referred to the Department of Agriculture of the University of California, which gladly cooperated in this work. This demand for information grew so general, that the department of agriculture issued a pamphlet entitled "Some Things the Prospective Settler Should Know." This pamphlet was compiled by the faculty of the College of Agriculture and published in October, 1914.*

The College of Agriculture, however, has definite information concerning types of soil and their adaptation for only a portion of the state. For such portions as are known only statements concerning crop adaptations for the type in general can be furnished. No assurance of economic returns can be made. This information is not for the purpose of passing upon the value of the particular tract, but for the purpose of determining to what soil type the tract belongs. Therefore the Commission has drafted legislation proposing the creation of a Land Information

*Copies of this pamphlet may be obtained, free of charge, by applying to the University of California, Berkeley, or to the Commission of Immigration and Housing, 525 Market St., San Francisco.

Bureau, under the Department of Agriculture of the University of California, which, upon request, will make careful surveys concerning the soil and economic value of particular tracts. It is proposed that charges for such work shall cover only the actual cost.

SANITATION OF RIVER AND BAY STEAMERS.

Several complaints concerning the sanitation of river and bay steamers operating in San Francisco Bay and on the Sacramento and San Joaquin rivers caused the Commission to make careful inspections of several such steamers. The crews of these steamers are made up largely of immigrants. The quarters provided for the crews were found generally to be crowded, dirty, and insanitary. The matter was taken up with the State Board of Health and, relying upon the reports of the Commission, that Board issued orders to the owners of the steamers directing them to abate the nuisances and improve conditions on or before January 15, 1915. After that date the Commission will reinspect the steamers and report again to the State Board of Health.

COOPERATION WITH OTHER DEPARTMENTS AND PRIVATE ORGANIZATIONS.

The Commission has everywhere met with the heartiest cooperation in its work. Little or nothing could have been achieved in many of its fields of activity if departments of government, private organizations, and individuals, had not cooperated so eagerly and effectively. Such splendid aid has been so frequently received from certain sources that special acknowledgments are here made, and furthermore, to all others who have cooperated in official and unofficial ways, the Commission expresses its sincere thanks and profound appreciation.

To the following the Commission desires to acknowledge its especial debt of gratitude for earnest and generous cooperation in innumerable instances:

The California State Board of Health; the Commissioner of the Bureau of Labor Statistics; the United States Commissioner General of Immigration, and the local immigration officials; the Industrial Accident Commission of California; the Housing Commission of Los Angeles; the Housing Association of San Francisco; the San Francisco Board of Health; the San Diego Board of Health; the Travelers' Aid Society of California; the Board of Education of Los Angeles; the Department of Agriculture of the University of California; the district attorneys of San Francisco, Sacramento, and Los Angeles counties; the Public Defender of Los Angeles; the State Federation of Women's Clubs, and the newspapers of the state.

When the Commission of Immigration and Housing began its labors a little over a year ago, it faced practically an unexplored field, with little or no precedents to guide its efforts. The so-called immigration commissions of other states were either colonization agencies or merely investigating bodies. The one possible exception is the Bureau of Immigration under the New York State Department of Labor. In fact, the California Commission is the only independent board of its kind in the United States today.

Certain preliminary surveys soon revealed to the Commission the almost unlimited field of activity before it. The problem presented itself of dividing off this total field, and of according to each special activity its proper estimate of relative value. Conditions, too, helped to determine the direction and emphasis of effort.

A year's actual service has helped to clear up the vision and to standardize the problems of immigration. A year's actual experience has better equipped the Commission to enter upon enlarged duties. Besides the realization of the needs of those whom the Commission was created to help, our greatest inspiration has come from the cooperative spirit exhibited by the state's administration, and from the helpful assistance always given by the state's Chief Executive. We trust that our response merits still further cooperation and assistance.

APPENDIX A.

RECOMMENDATIONS FOR LEGISLATION.

The following is a digest of the legislation which the Commission of Immigration and Housing proposes to have introduced in the legislature of 1915. This legislation is recommended in order to remedy or improve certain bad conditions which the Commission has met with and investigated in the course of its work.

1. STATE LABOR EXCHANGES.

The creation of a state bureau of labor exchanges, under the Commission of Immigration and Housing, with an annual appropriation of \$75,000.

(a) The bureau to be a separate department of the Commission with a director in charge.

(b) Ten offices to be established in the centers of population.

(c) A committee, composed of representatives of employers and employees, to be appointed by the governor in each city where an office is maintained to advise the Commission with respect to the work of the Bureau.

(d) The bureau to have the following functions and powers:

(1) To gather and disseminate labor intelligence, acting as a clearing house for the publication of information concerning the labor market gathered by public and private employment agencies throughout the state;

(2) To provide a chain of free labor exchanges securing employment without charge;

(3) To cooperate with such federal labor exchanges as may be established, and to conform to such regulations as may serve to bring about a nationally coordinated system of labor exchanges;

(4) To cooperate with the State Railroad Commission to provide special low transportation rates to those for whom it finds employment in distant parts of the state;

(5) To collect data concerning unemployment.

2. REGULATION OF PRIVATE EMPLOYMENT AGENCIES.

Stricter regulation of private employment agencies, including:

(a) Requirements for higher license fees;

(b) The establishment of a uniform schedule of fees to be charged for securing employment;

(c) The prohibition of the credit fee system;

(d) Provisions requiring private employment agencies to pay an applicant for time lost, at the rate of wages promised by the agency, when such applicant reports for work according to directions and is refused employment;

(e) Provisions making it a misdemeanor for an employment agency to divide fees with any person, or his agent, to whom employees are furnished;

(f) Provisions making it a misdemeanor for an employment agency to send an applicant for employment, who is charged a fee, to an employer who owns an interest in the employment agency, or whose agent in charge of the employment of labor, owns such an interest.

3. LABOR CAMP SANITATION.

The repeal of chapter 182 of the laws of 1913, governing labor camp sanitation, and the substitution of a more definite and detailed law. The enforcement of this law to be entrusted to a bureau of labor camp inspection, under the Commission of Immigration and Housing. The proposed sanitation law covers the following details:

(a) Camp sites and the layout of camps;

(b) Water supply; sufficient quantity; provisions against sources of pollution;

(c) Tents and buildings; proper cubic air space in sleeping quarters, proper ventilation, proper bunks, screening of dining and cooking quarters, heating facilities in cold climates;

(d) Garbage and refuse; sanitary disposal in any of the several enumerated ways;

(e) Toilets; proper construction and screening, separate facilities for women, proper sanitary maintenance;

(f) Washing and bathing facilities; adequate provision, proper construction and maintenance;

(g) Manure; sanitary disposal in any of several enumerated ways;

(h) Sanitation service; the employment of at least one person to keep the camp clean, rules for general cleanliness.

Provision is also made for keeping a record of all labor camps, requiring owners, or operators, to register their camps at the office of the Commission.

Violations of the provisions of the proposed law are made punishable by a fine or imprisonment, or both.

An annual appropriation of \$25,000 for this bureau is requested.

4. TENEMENT HOUSE ACT.

(a) The amendment of the existing tenement house act as to substance. These proposed amendments change and simplify the definition of a tenement house; clear up certain ambiguities; and strengthen the act in certain particulars to apply to conditions disclosed by the housing investigations conducted by this Commission and by others.

(b) The amendment of the existing tenement house act as to enforcement. The creation of a state bureau of housing under the Commission of Immigration and Housing, is proposed. This bureau would have power to directly enforce the act in cities and towns where the local authorities fail to enforce it, and, furthermore, would have power to review and revoke orders made by local authorities in the enforcement of the provisions of the act. In order to secure a uniform enforcement of the act the bureau is given power to compel local authorities to carry out its orders.

An annual appropriation of \$20,000 is requested to provide for the employment of housing inspectors and traveling expenses.

5. GENERAL HOUSING LAW TO COVER SINGLE FAMILY DWELLINGS.

The revision of the state housing laws so as to take in single family dwellings as well as lodging houses and tenements. This proposed law regulates the construction of single family dwellings, and contains provisions with regard to sanitation and ventilation.

The proposed state housing bureau (mentioned in Appendix A-4) under the Commission of Immigration and Housing, is given power to directly enforce, and generally supervise the enforcement of this proposed law as in the case of the tenement house act.

6. STATE HOTEL AND LODGING HOUSE ACT.

The amendment of the state housing law pertaining to hotels and lodging houses, making it much broader and more stringent with regard to maintenance and sanitation.

7. VISITING HOME TEACHERS.

The addition of a new section to the Political Code which will allow common school districts to employ home teachers, not exceeding one such teacher for every 500 units of average daily attendance. The following are the duties of these proposed home teachers:

(a) To work in the homes of pupils, instructing children and adults in matters relating to school attendance and preparation therefor;

(b) To instruct children and adults in sanitation, in the English language, in household duties, and in the fundamental principles of the American system of government and the rights and duties of citizenship.

The qualifications of such teachers shall be a legal certificate to teach in the schools and special fitness to perform the duties of a home teacher.

8. RESTRICTIONS ON DOCKS WHERE IMMIGRANTS ARE LANDED.

The establishment, wherever immigrants are landed from ships, of neutral zones under the control of the Commission of Immigration and Housing. Only such persons as have permits from the Commission shall be allowed to enter these zones.

9. LAND FRAUD.

The enactment of a special law covering fraud in the sale of real estate. This proposed law is practically the same as a New York statute which was passed in 1911. Any person who in any publication makes any statement or assertion of fact, knowing the same to be false, concerning the extent, location, ownership, title or other characteristic, quality or attribute of any real estate, or concerning a motive or purpose of sale that is untrue and calculated to mislead, is made guilty of a misdemeanor under this proposed law.

10. LAND BUREAU, STATE.

The creation of a state land bureau, to be affiliated with the Department of Agriculture of the University of California. This proposed bureau to have the following powers and duties:

(a) To publish general information concerning agricultural lands throughout the state.

(b) To supply at cost to prospective purchasers information regarding the best economic uses of a particular tract of land, its value, approaches to market, etc.

11. PUBLIC DEFENDERS.

The creation of the office of Public Defender in the more thickly populated counties, such official to defend criminals unable to employ counsel and to represent poor persons in small civil suits.

12. CONTRACTS IN FOREIGN LANGUAGES.

(a) A law, requiring that all contracts involving amounts over fifty dollars, to which an alien of less than three years' residence is a party, be written both in the English language and in the language of the alien.

(b) A translation bureau to be established by the Commission of Immigration and Housing which will furnish translations of contracts at cost.

13. INTERPRETERS, OFFICIAL COURT.

An act placing official interpreters in courts of law under civil service; requiring them to be put under a sufficient bond; and establishing a schedule of fees to be charged by interpreters acting for private persons and not for the state.

14. TITLES OF SEMI-PUBLIC UTILITIES.

Prohibiting the use of such words as "state", "city", "California", etc., in the title of a semi-public utility, when the use of such words might mislead as to the question of ownership and management, and might give the impression that the utility is owned and operated by some department of government.

15. WITNESSES, SUBPOENAING.

An amendment of section 10 of the act creating the Commission of Immigration and Housing giving the Commission power to subpoena witnesses for hearings therein provided for.

APPENDIX B.

Bibliography of Reports Prepared by Investigators of the Commission of Immigration and Housing of California.

NOTE.—Space requirements prevent the inclusion of the complete reports. These are on public file at the San Francisco office of the Commission.

1. **The Floating Laborer in California.**

A statement of the conditions under which the casual itinerant laborer travels and works, including a summary of the factors forcing workers to take up this life.

2. **The Sand Creek Road Situation.**

Dealing with conditions on a piece of county contract work in Fresno County, in which many of the evil effects of insanitary camp conditions and an inefficient employment agency system are exemplified.

3. **Scenes and Incidents "On the Road."**

Detached pictures of vagrant life as seen by an investigator of the Commission in studying the hobo problem.

4. **Preliminary Report on Tentative Findings and Conclusions in the Investigation of Seasonal, Migratory and Unskilled Labor in California.**

A discussion of the employment agency system, traveling and living conditions among floating laborers, a description of the labor market in certain sections and industries, and a preliminary statistical compilation of labor camp reports, and life histories obtained from floating laborers.

5. **Casual Labor in California.**

A survey of seasonal and other casual labor by industries and districts, with a description of the land tenure and crop situations in California and their relation to the problem of casual labor. The report includes a discussion of the character of the casual labor force, the extent of organization among these casuals, the unemployment situation, and a description of working conditions in the seasonal industries, with complete statistics of conditions in labor camps inspected by the Commission. Reform measures that have been attempted are briefly dealt with, and suggestions and recommendations for future state and federal remedial action are included.

6. **Life-History Statistics.***

A compilation of facts obtained from the biographies of migratory and casual laborers in California.

7. **Report on "Kelly's Army."**

A brief statement of conditions surrounding the break-up of the army of the unemployed in the winter of 1913-14, with tabulated reasons for the unemployment of certain members of that army.

8. **The Berry Picking and Fruit Canning Industries of Sonoma County.**

A report on the character of the demand and the supply of labor, and on general working conditions in these industries.

9. **The Orange Industry of Central California.**

A discussion of labor conditions in the picking and packing of oranges in Tulare County, including a description of the makeup of the labor force and conclusions as to the effect of the seasonal nature of the work on the employees.

10. **An Economic Survey of a Sierra Lumber Camp.**

A description of the character of the labor force and of working conditions in the camps and mill of a Fresno County lumber company.

*Printed in the Report on Unemployment by the Commission of Immigration and Housing of California.

11. **The Alaska Salmon Fishing Industry.**

The number and nature of the labor force engaged in salmon fishing and canning, and a description of the system of contract labor prevailing in the industry.

12. **The Labor Market in Lumbering and Railroad Construction Work in Mendocino County.**

A description of the labor force, working conditions, the character of the demand and supply of labor, and the employment agency situation in the above district.

13. **The Employment Agency Situation in California.***

A report on an investigation of the organization of the labor market in California, dealing with the private employment agency system, free municipal and philanthropic agencies, sub-rosa methods of connecting job and man, and labor unions as employment agencies.

14. **The Wheatland Hop Field Riot.**

A statement of the causes and circumstances pertaining to the riot and killing, of August 3, 1913, in the Wheatland hop fields, with recommendations for a solution of the problems disclosed.

15. **The Wheatland Hop Field Riot.**

A condensed report on the strike and riot at the Durst Ranch at Wheatland.

16. **Sanitary Conditions in the Wheatland Hop Fields in August, 1914.**

A survey of camp conditions one year after the riot of 1913.

17. **Preliminary Report on the I. W. W. in California.**

A tentative report on the strength and character of the organization.

18. **The Industrial Workers of the World (I. W. W.) in California.**

A report on the strength and influence of the I. W. W. in California in February, 1914, with a consideration of the effects of the Wheatland hop field riot upon the activities and general policy of the organization.

19. **Alien Transportation Problems.**

A survey of transportation conditions in California in so far as they are related to the immigrant problem, with a description of conditions encountered by the incoming alien at San Francisco.

20. **Naturalization of the Alien.**

Dealing with the naturalization of immigrants in San Francisco and Alameda counties, and the abuses connected therewith.

21. **Relation of the Alien to the Administration of Civil and Criminal Law.**

A description of the conditions and a discussion of the abuses arising from the relation of the immigrant to the administration of the law in San Francisco.

22. **Southern European Farmers in the Bay Region.**

A report on farms of new immigrants in a limited locality in California, with a description of agricultural conditions prevailing among them, and recommendations for reforms.

23. **Education and Assimilation of the Alien.**

A survey of the problem of immigrant education in the chief cities of California, with recommendations for remedial action.

24. **Relation of Foreigners to the Penal Institutions of California.**

A report on aliens in Folsom and San Quentin State Prisons, and in the Preston State School of Industry.

25. **The Operations of the Northwestern Development Company in Sonoma County.**

A report of an investigation disclosing the fraudulent operation of the above named real estate firm in selling worthless or almost worthless land to aliens and others.

26. **Tenement House Conditions in San Francisco.**

A description of insanitary housing conditions in the Mission district and on Telegraph Hill in San Francisco, and a discussion of the laws and regulations governing housing questions.

27. Hotel and Lodging House Conditions in San Francisco.

A report of a sanitary survey of a number of cheap hotels and lodging houses in San Francisco.

28. Housing Survey of Sacramento.

A report of an investigation of tenement, dwelling and lodging houses in Sacramento, dealing with general housing conditions and disclosing violations of state and municipal regulations.

29. Housing Survey of Sacramento.

Dealing with a later investigation of similar nature.

30. Housing Survey of Fresno.

A description of tenement, dwelling and lodging house conditions and violations of housing regulations in Fresno.

31. Housing Surveys of Bakersfield and Visalia.

A report of a general investigation of housing conditions in these cities.

32. Housing Conditions in Santa Rosa.

A survey of lodging houses with a description of violations of housing regulations.

33. San Diego Immigration and Housing Conditions.

A description of San Diego as an immigrant port; a general housing survey of San Diego.

34. San Pedro Immigration and Housing Conditions.

A description of San Pedro as an immigrant port; a limited housing survey of San Pedro.

35. The Problem of the Survey of a Suburban City.

A survey of the city of Richmond including a report of an investigation of sixty of its hotels and lodging houses, and general deductions regarding the problem of surveying suburban cities.

APPENDIX C.

Act Creating the Commission of Immigration and Housing of California.

CHAPTER 318.

An act relating to immigrants and immigration, creating a commission of immigration and housing, providing for the employment by said commission of a secretary, agents and other employees, authorizing said commission to fix their compensation, prescribing the duties of said commission, providing for the investigation by said commission of all things affecting immigrants, and for the care, protection and welfare of immigrants, and making an appropriation for the purpose of carrying out the provisions hereof.

[Approved June 12, 1913.]

The people of the State of California do enact as follows:

SECTION 1. Within thirty days after this act shall go into effect, the governor of the state shall appoint five suitable persons to act as commissioners of immigration and housing. Said commissioners shall hold office and serve solely at the pleasure of the governor and not otherwise.

SEC. 2. Said commissioners shall serve without compensation, but shall be entitled to receive from the state their actual necessary expenses while traveling on the business of the commission, either within or without the State of California.

SEC. 3. The commission shall be known as the "commission of immigration and housing of California." It shall have a seal for the authentication of its orders and proceedings upon which shall be inscribed the words "commission of immigration and housing—California—seal." Each member of the commission, before entering upon the duties of his office, shall take the oath of office as prescribed by the Political Code for state officers in general, and must execute an official bond in the sum of five thousand dollars. Within thirty days after appointment, the commission shall meet at the state capitol and organize, selecting a president, a vice-president and a secretary. A majority of the commission shall constitute a quorum for the exercise of the powers or authority conferred upon it. Whenever a vacancy occurs in the commission, from any cause whatsoever, such vacancy shall be filled by the governor, as provided in section one for the original creation of the commission. In case of a vacancy, the remaining members shall exercise all the powers and authority of the commission until such vacancy is filled. The commission shall maintain its headquarters and principal office in the city and county of San Francisco, and may establish branch offices at any place or places which in the judgment of the commission may be deemed advisable. The commission may, however, hold sessions at any place other than its offices when the convenience of the commission and the parties interested so requires.

SEC. 4. For the purpose of carrying out the provisions of this act, the said commission is authorized to employ such expert and other employees as it may deem necessary, and upon such terms and for such compensation as it may deem proper. The said commission shall have power to enter into contracts of employment with such persons as it may desire to employ for a definite period of time; but no contract shall be made for more than one year. The employees of the commission shall be entitled to receive from the state their actual necessary expenses while traveling on the business of the commission, either within or without the State of California.

SEC. 5. The commission of immigration and housing shall have the power to make full inquiry, examination and investigation into the condition, welfare and industrial opportunities of all immigrants arriving and being within the state. The

commission shall also gather information as to the agricultural possibilities and opportunities for settlement on land within the state; such information to include soil and agricultural surveys of the arable land within the state and other data relating to the price and productivity of land. The commission shall also have power to collect information with respect to the need and demand for labor by the several agricultural, industrial and other productive activities, including public works, within the state; to gather information with respect to the supply of labor afforded by such immigrants as they shall from time to time arrive or be within the state; to ascertain the occupations for which such immigrants shall be best adapted, and to bring about intercommunication between them and the several activities requiring labor which will best promote their respective needs; to investigate and determine the genuineness of any application for labor that may be received and the treatment accorded to those for whom employment shall be secured; to cooperate with the state employment bureaus, municipal employment bureaus, and with private employment agencies within the state, and also with the employment and immigration bureaus conducted under the authority of the federal government or by the government of any other state, and with public and philanthropic agencies designed to aid in the distribution and employment of immigrants; and to devise and carry out such other suitable methods as will tend to prevent or relieve congestion and obviate unemployment; and to collect and publish, in English or foreign languages, for distribution among immigrants, in, or embarked for, California, such information as is deemed essential to their protection, distribution, education and welfare; and said commission is hereby empowered and authorized to have printed by the state printer any such reports or information, records or proceedings as it may deem necessary or proper; and if for any reason the state printer is not equipped to do any part of said work, then the said commission shall have the right and the authority to have the same done elsewhere upon such terms and conditions as it may deem proper.

SEC. 6. The commission shall cooperate with the proper authorities and organizations, federal, state, county, municipal and private, with the object in view of bringing to the immigrant the best opportunities for acquiring education and citizenship. To that end it shall procure from, or with the consent of, the federal authorities, complete lists giving the names, ages and destination within the state of all immigrant children of school age, and such other facts as will tend to identify them, and shall forthwith deliver copies of such lists to the superintendent of public instruction or the several boards of education and school boards in the respective localities within the state to which said children shall be destined, to aid in the enforcement of the provisions of the education law relative to the compulsory attendance at school of children of school age. The commission shall further cooperate with the superintendent of public instruction and with the several boards of education in the state to ascertain the necessity for and the extent to which instruction should be imparted to immigrants within the state and to devise methods for the proper instruction of adult and minor aliens in the English language and other subjects; and in respect to the duties and rights of citizenship and the fundamental principles of the American system of government; and shall cooperate with the proper authorities and with private agencies to put into operation practical devices for training for citizenship and for encouraging naturalization. It shall be the aim to communicate this instruction to the immigrant as soon after his arrival as is practicable. The commission shall cooperate with the proper authorities to extend this education for both children and adults to labor camps and other localities from which the regular schools are not easily accessible. The commission in cooperation with the proper authorities and organizations shall encourage the establishment of playgrounds and other recreational activities, and also the establishment of settlements and social centers in cities and towns.

SEC. 7. With the object in view of rendering to the immigrant that protection to which they are entitled, the commission of immigration and housing may inspect all labor camps within the state, and may inspect all employment and contract agencies dealing with immigrants or who secure or negotiate contracts for their

employment within the state; may investigate the banking relations that exist between immigrants and laborers; may investigate and inspect institutions established for the temporary shelter and care of immigrants and such philanthropic societies as shall be organized for the purpose of securing employment for or aiding in the distribution of immigrants, and the methods by which they are conducted; and shall investigate housing conditions under which immigrants live, and sanitary and safety conditions under which immigrants are employed; it shall further investigate conditions prevailing at the various places where immigrants are landed within the state and at the several docks, ferries, railway stations, and on trains and boats therein, and shall investigate any and all complaints with respect to frauds, extortion, incompetency and improper practices by notaries public and other public officials; it shall further investigate the relations existing between immigrants and steamship and railway ticket agents, hotel runners, cab men, baggage men, interpreters and pawn brokers; it shall further investigate the dealings carried on between immigrants and real estate firms or corporations; and as the result of any of the above inspections or investigations, if it should find evidences of fraud, crime, extortion, incompetency, improper practices or exploitation, it shall be the duty of the commission of immigration and housing to present to the proper authorities the evidences for action thereon, and shall bring to bear all the authority within its power to see that justice is rendered. The commission shall also encourage the establishment of legal aid societies.

SEC. 8. With the further object in view of bringing to the immigrant the best protection the state can afford, it shall be the duty of the commission to call to the attention of the proper authorities any violations it may discover of the laws pertaining to the payment of wages, to the mode of paying, pertaining to the child labor laws, the employment of women, factory inspection laws, weekly day of rest laws, protection of labor under building laws, protection of labor under public works laws, laws relating to the white slave traffic, and laws of the state and county and municipal health departments; the tenement house laws, and other laws pertaining to housing conditions. The commission shall investigate and study the general economic, housing and social conditions of immigrants within the state, for the purpose of inducing remedial action by the various agencies of the state possessing requisite jurisdiction; and shall generally, in conjunction with existing public and private agencies, consider and devise means to promote the welfare of the state. The members of the commission of immigration and housing or any of their authorized agents shall have the right to enter into tenement houses, buildings and dwelling places for the purpose of inspecting such houses, buildings, and dwelling places to secure compliance with state tenement and building acts and municipal building ordinances and to prevent violation thereof, and shall have the right to examine the records of the various city departments charged with the enforcement of the tenement house law and other building regulations and to secure from them reports and copies of their records at any time.

SEC. 9. The commission shall have the right to demand of all officials, state, county and municipal, and it shall be the duty of said officials to supply, such information and references to records as will enable the commission to carry into effect the provisions and intent of this act; and shall have the right to enter upon private property to make investigation for the purposes of carrying out the provisions of this act. For the purpose of carrying out fully the intent and spirit of this act, the said commission shall have full power and authority to gather any and all such evidence as it may deem proper and necessary in order to present the same to the proper authorities for the purpose of instituting prosecutions against any and all persons, firms or corporations found violating any of the laws of any municipality, county or of the state or of the federal government, concerning any of the matters in this act referred to.

SEC. 10. For the purpose of carrying out to the fullest extent the provisions hereof, the said commission or any member thereof shall have power to hold hearings for the purpose of investigation and inquiry, and for the purpose of reaching an amicable settlement of controversies existing between persons, firms and corpora-

tions mentioned herein: and to this end and purpose, the said commissioners and each of them and such person as may be designated in writing by said commission, are hereby authorized and empowered to administer oaths. No decision shall be deemed to be final until ratified and approved by the said commission and filed in its office.

SEC. 11. For the purposes of this act, the words immigrant and immigration shall refer to any alien who is within the state, either permanently or temporarily domiciled here, or in transit, or passing through the state to a contiguous state or territory; said words shall further refer to any alien who may first have taken up residence in some other state or in one of the federal territorial possessions, and then shall have removed to this state: said words shall further refer to all aliens coming to and being within the State of California. For the purpose of this act, the word alien shall refer to all persons who are not native born or who have not received their final citizenship papers under the naturalization laws of the United States.

SEC. 12. This act shall not be construed to authorize or direct the commission of immigration and housing to induce or encourage immigration into this state or the United States.

SEC. 13. The commission of immigration and housing shall make an annual report to the governor, on the second day of January, of the operation of the commission.

SEC. 14. The sum of fifty thousand dollars is hereby appropriated out of any moneys in the state treasury not otherwise appropriated, for the purpose of carrying out the provisions of this act: and the state controller is hereby authorized and directed to draw warrants upon such sum, from time to time, upon the requisition of said commission, approved by the board of control; and the state treasurer is hereby authorized and directed to pay such warrants.

ADVISORY PAMPHLET
ON
CAMP SANITATION AND HOUSING
BY
COMMISSION OF IMMIGRATION AND HOUSING
OF CALIFORNIA

Third revised edition published September 1, 1914.
