# INAUGURAL ADDRESS

OF THE

## HON. GEORGE O. BRASTOW,

Jan. 1, 1872.

*Gentlemen of the City Council:*

In entering upon the duties assigned me by the very flattering vote of my fellow-citizens, the first impulse of my heart is to express my thanks for the honor which their confidence confers, and to acknowledge my full appreciation of the responsibility which it imposes upon me. The change from a town to a city form of government was regarded by the wise and good men who established our State, as of sufficient importance to be recognized and provided for in the Constitution of our Commonwealth.

For about two centuries after the settlement of the colony, the people of Massachusetts adhered without change to the town system of local government. In small communities the town organization is the most desirable and the best, because it is the most simple and the most democratic. It brings the people frequently together to consider and discuss all matters pertaining to their municipal welfare, and by them all such business is transacted in the town meeting. But where a town has increased in population beyond a certain limit, and its

various public needs become more and more weighty and pressing, it is impossible for the people in the crowded town meeting, to give to all the questions which arise, that careful deliberation which their importance demands; consequently a delegated or city form of government becomes a necessity. The real difference in the two forms of government is just this: In the town, the people act directly for themselves in "open town meeting;" in the city, the people elect certain officers to act for them. This change is entirely optional with the people themselves. No town can be made a city unless its citizens desire the change.

The city charter of Somerville, granted by the last Legislature, has been voted upon and legally accepted, and a city form of government adopted by the people; and to us, the City Council, they have delegated the public affairs of our new city. The Board of Aldermen and the Common Council, in the exercise of their various duties, hold to the City Government similar relative powers which the Senate and the House of Representatives do to the State Government; the upper branch being considered the conservative, and the lower branch the popular body.

Each branch in its action has a check upon the other; and this feature, and the fact that every measure must pass through several stages of consideration before it is finally adopted, is a peculiarity of a city form of government as compared with that of a town, and furnishes ample security against hasty and inconsiderate action.

Upon us is imposed a great trust, and a weighty responsibility — to us the welfare of our beautiful and rapidly growing city is confided.

It is well that a divine blessing has been invoked for the future welfare of our city, and it was fitting that a

thank offering was rendered for the past prosperity of our town.

I congratulate you and I congratulate our fellow-citizens that this change in our municipal government, which is the most important event in our history, is made under circumstances so promising and so encouraging.

#### THE TOWN DEBT.

The present debt of the town, including the water bonds issued, is five hundred and ninety-three thousand three hundred and forty-nine dollars (\$593,349), and the last assessed valuation of its public property is six hundred and sixty thousand dollars (\$660,000).

#### GROWTH OF THE TOWN.

The growth and increase in population and taxable property in Somerville, and her progress in all that tends to improve and elevate a community, has been constant and rapid, from its incorporation as a town in 1842 to the present time. Its beginning was small and humble, and the contrast between its then "day of small things," and its present vigorous proportion, is most striking. At the time of its incorporation the population of the town was only one thousand and thirteen (1,013); to-day our population is fully sixteen thousand (16,000). In 1842 the assessed value of taxable property of the town was nine hundred and eighty-eight thousand five hundred and thirteen dollars (\$988,513); in 1871 it was fifteen million seven hundred and seventy-five thousand dollars (\$15,775,000). The whole amount of money raised by taxation in 1842 was four thousand seven hundred and fifty dollars (\$4,750); in 1871 the amount was two hundred and sixty thousand four hundred and sixty

dollars and ninety-five cents (\$260,460.95). In 1842 there were but four schools and four teachers in Somerville; to-day there are fifty-two schools and sixty-five teachers. The whole amount of money appropriated for the support of schools in 1842 was eighteen hundred dollars (\$1,800); the amount appropriated the last year for the same purpose was fifty-nine thousand four hundred dollars (\$59,400). When incorporated as a town, and for two years subsequent thereto, there was not a church edifice within our corporate limits, nor did there exist a religious society distinct from former parish connections; to-day there are eleven church edifices, with as many distinct organized religious societies. It will be seen from this brief enumeration, that our public schools have been one of our most popular and cherished institutions, and always in advance of our progress in wealth and population. They have ever stood high on the public record; and for several years, Somerville has ranked number one in the whole list of towns and cities in the Commonwealth, judged by the amount of money appropriated for each scholar. That the high character of our schools has contributed much toward the rapid and vigorous growth of our town there can be no doubt. They were never as a whole in a more satisfactory condition than at the present time; and I venture but little when I pledge in the name of myself and my associates, that they shall not be permitted to recede from their present high position, from any lack of judicious fostering care on the part of our new City Government.

#### THE NEW HIGH SCHOOL BUILDING.

The removal within a few days, of the scholars of the high school, from the building occupied by them in past years, to the new and elegant edifice just being completed,

will leave the old high school building unoccupied and subject to such use as you may direct. I respectfully recommend that it be set apart for a City Hall, and used for the purposes of the City Government. With few alterations and small expense, it can be made to afford ample and convenient accommodations for all our wants for several years to come. If this recommendation meets the approval of the City Council, I would suggest that the necessary alterations be at once made, and that they include a thoroughly fire-proof vault, sufficiently large for the safe keeping of the town as well as city records, the preservation of which must forever be of incalculable importance.

#### THE STREETS.

The proper care of our streets should, and I have no doubt will, receive that attention at your hands which their importance demands. At the present time they are generally in better condition than usual ; especially is this the fact in regard to the main thoroughfares. In a city making such rapid growth as ours, and where individual interests and enterprise are constantly opening new streets, the question of accepting and maintaining them by the city is one of daily increasing importance, and will require the exercise of our best judgment in order that the interests of the city and of individual citizens may be alike properly regarded. In this connection I would recommend that a careful attention be given to the provisions of the betterment act, which have so much importance and such salutary bearing upon the question of laying out new streets and the altering of old ones ; as they have also in regard to drainage and the construction of sewers. These two subjects are so intimately connected that it is hardly possible, nor is it desirable, to

separate them. With so much presenting itself which requires early attention, and while so little can be accomplished in one year, it is impossible but that individuals must be more or less annoyed by temporary delays ; and there will be much less difficulty in deciding what ought to be done than in determining what can best be deferred for a brief season. When and where reasonably practicable, without imposing too heavy taxation upon the people, the want of public improvement surely ought not to retard private enterprise ; nor should the waiting patience of individuals be unreasonably taxed.

I trust that by constant vigilance on your part, by reasonably liberal appropriations of money, judiciously and prudently expended, the work of public improvement will be sure and constant, and the just hopes and expectations of our citizens be fully realized.

#### STREET RAILWAYS.

Closely connected with the matter of streets and highways, are the street railroads which pass through our municipal thoroughfares. They were originally constructed of the T rail on the side of the streets ; but having in the judgment of the citizens become practically the cause of too much inconvenience, they were last summer removed from Milk, Washington and Elm streets, and new tracks were constructed in the centre of the streets, with flat rails, and thoroughly paved. This change has proved most beneficial and satisfactory to our people. The same change should be made on Broadway, and I recommend the application of all proper means for its speedy accomplishment. In the matter of common sewers it is your duty to carry out what has been begun, and of perfecting the present system. A considerable extent of sewerage has been constructed, and, so far as I know, the

plan has been proper, and the work well done. You will judge whether any improvements can be made upon the existing plan, and if so you will adopt them.

#### THE FIRE DEPARTMENT.

Our Fire Department is, as it has been for many years, in a most efficient and satisfactory condition, and is regarded by our people with feelings of just and honest pride, not only for the services it has rendered, but for the manly conduct and bearing of its officers and men.

For the toils, hardships and dangers which firemen encounter, their greatest reward, next to an approving conscience, is in the knowledge, that their labors are properly appreciated by their fellow-citizens: and in both these respects, I am sure the Somerville firemen have been richly rewarded. The proper maintenance and encouragement of this indispensable organization is in your keeping.

#### THE WATER WORKS.

The comfort and convenience of a large proportion of our people have been much enhanced by the introduction of the Mystic water. More than twenty-eight miles of pipe is laid in our streets, with one hundred and forty-six fire hydrants connected therewith, and judiciously distributed over our territory. The former appropriations for the Water Works have been expended, and the responsibility of their further extension, and of making the requisite appropriation therefor, devolves upon you.

#### THE POLICE DEPARTMENT.

The Police Department of Somerville has increased in numbers and efficiency with our increase in population

and wealth, until it has become of great interest and importance. In my judgment the force is well organized, and the members generally vigilant and faithful to their trust. In every large community a well organized Police is indispensable for the protection of persons and property, and for the maintenance of good order; and although strong by being clothed with the authority of law, its usefulness and efficiency depends much upon the personal character and manly deportment of its individual members, and upon the moral support and sympathy of the citizens, of whose lives and property they are the constant protectors and guardians.

#### THE SANITARY CONDITION OF THE CITY.

Upon the Health Department rests a great responsibility. It is charged with duties which immediately effect the comfort and well-being of every citizen. Intimately connected with this department is a matter of great importance, and one which demands judicious consideration and efficient action. I allude to the nuisance in Miller's River, caused by an accumulation of filth which covers a large area of flats which are bare at low water. These flats are partly in Somerville and partly in Cambridge, the river being the boundary line between the two cities for a considerable distance, and both are equally responsible for the nuisance. During the "heated term" of last summer, when the tide was out, the stench from these flats was most offensive. The Selectmen of Somerville and the City Government of Cambridge sought by united and harmonious action to improve the condition of this locality. The aid of the State Board of Health was sought, and stringent rules were adopted for the prevention of further corruption of the water; but in the judgment of the authorities

of Cambridge and Somerville, and of the State Board of Health — nothing short of the filling the flats with sand or gravel could cure the existing evil; and such filling cannot be undertaken without permission from the Legislature.

I know you will heartily unite with the authorities of Cambridge in procuring the needed legislation, and in devising the best and most speedy mode for abating the nuisance, and thereby reclaiming a large extent of worthless territory to valuable building land. The improvement contemplated, embraces the construction by the two cities, of a large box sewer of sufficient size to conduct off all the water of the stream, and to serve the purpose for drainage for quite an extent of both localities.

With the requisite legislation granted, it is hoped and expected that the several owners of the flats will at once enter upon the work of filling, and that without any unreasonable delay this great improvement will be accomplished. Of course it will take time to complete these improvements, and the people realizing and acknowledging the fact that the work of a year cannot be accomplished in a day, must endeavor for awhile to cultivate the virtue of patience.

#### THE CARE OF THE POOR.

The services of the board of Overseers of the Poor, which in the earlier history of our town were hardly required, are now, and have been of late years of much importance in relieving the wants of the destitute and needy. The people will require of their servants that this class be kindly cared for, that necessary aid be cheerfully, not grudgingly bestowed; that none among us shall suffer from want of the necessaries of life, and that no child be kept from school from want of proper

clothing. The Board of Soldiers' Relief have a most sacred duty to perform. The sick and needy of our returned soldiers, who endured hardships and privations, and periled their lives for the preservation of our National Government, are worthy objects of our favor and solicitude. The people of Somerville, who, in the time of their country's need, exhibited so much liberality in encouraging enlistments, and in caring and providing for the wants and comforts of her men in the field and their families at home, will never consent that one of them shall suffer from want, or that he or any one of his family shall ever be classed or treated as a pauper; and especially will they require that the families of our *fallen heroes* shall be regarded with the most tender care. If the occasion permitted, I would gladly say more in regard to the part which our people took in promoting enlistments and furnishing volunteers for the war; but a single statement of Gen. Wm. Schouler, in the second volume of his most valuable "History of Massachusetts in the Civil War," must suffice. After speaking of the great liberality of our people, both men and women, he says: "Somerville furnished eleven hundred and thirty-five men for the war, which was a surplus of one hundred and forty-seven over and above all demands." That statement stands as the proud record of our town, when its population was much less than at present, and that record will forever stand as enduring proof of the patriotism and liberality of its people, who, by their devotion to the public welfare, have in the years that have passed been steadily laying the sure foundation of our city, which is destined at no distant day, to rank favorably among the older cities of our Commonwealth.

## FINIS.

*Gentlemen of the retiring Board of Selectmen*: I cannot let the occasion of entering upon my term of official service pass without expressing to you my appreciation of the magnitude and importance of your public duties during the past year; and also my high appreciation of the fidelity with which those duties have been discharged. In thus expressing to you my own judgment, and my own feelings, I am sure I am but giving utterance to the sentiments of all our citizens who have had opportunity to know and judge of your official action. The faithful manner in which the duties of a long line of town officers have always been performed has been most creditable to them, and most satisfactory to an appreciative public; and I congratulate you that in retiring from public service you carry with you the confidence, the esteem, and the best wishes of our entire community.

*Gentlemen of the City Council*: The people of Somerville, always confiding and liberal, are ever watchful and exacting in regard to all matters pertaining to the public good; and while they will justify liberal appropriations for the welfare of the city, they will exact of its Government zealous devotion to its various duties, and a judicious economy in the expenditures of the public money. Let us see to it that no duty be neglected, and that not a dollar be wasted!

TREASURER'S  
FIRST ANNUAL REPORT  
OF THE  
FINANCIAL CONDITION  
OF THE  
CITY OF SOMERVILLE,  
AND THE  
RECEIPTS AND DISBURSEMENTS;  
FOR THE FINANCIAL YEAR

1872.

CITY OF SOMERVILLE,

TREASURER'S OFFICE, FEB. 24, 1873.

*To the Hon. the Mayor and the*

*City Council of the City of Somerville,*

GENTLEMEN :

In compliance with a requirement of the City Ordinances, the undersigned has the honor to present the following statement of the FINANCIAL CONDITION OF THE CITY at the close of, and an account of the RECEIPTS AND DISBURSEMENTS during, the year 1872.

## FINANCIAL CONDITION OF THE CITY.

### *Public Property.*

The value of the property of the City at the commencement of the year as appears by a "Statement of the Financial Condition of the Town of Somerville, December 30, 1871," was \$649,570.26. The valuation of much of the property comprised in this statement, was from an appraisal of an earlier date; and an inventory taken at the present time would, therefore, give an enhanced value to much of the property. The value of the property acquired during the past year was \$81,697.51; making as the total of "Public Property" at the present time \$731,267.77, as will be seen by Table A, appended hereto.

The items of the increase the past year are as follows:—

City Hall — for heating apparatus, fire-proof vault, plumbing, gas pipes and fixtures, and window screens, . . . . .	\$4,549 80
for furniture, . . . . .	3,457 24
Fire Department — for hose-carriage for steamer, valued by Chief Engineer at . . . . .	1,000 00
for horse for Winter Hill hose-carriage, . . . . .	375 00
School Contingent — for additional furniture, . . . . .	4,700 00
High School-house — additional to amount expended in 1871, . . . . .	10,213 29
Elderly School-house — additional to amount expended in 1871, . . . . .	451 38
City Stables — additional to amount expended in 1871, . . . . .	209 10
Winter Hill Hose-house — additional to amount expended in 1871, . . . . .	5,298 51
Hose-house in Ward 4 — cost of land, . . . . .	3,184 86
School-house in Beach Street, — cost of Chapel and land, purchased for school purposes, . . . . .	5,000 00
Somerville Water Works — additional construction, . . . . .	43,288 33
Amounting to . . . . .	\$81,727 51
Less safe disposed of, valued by estimate, at . . . . .	30 00
Making the increase as before stated, . . . . .	\$81,697 51

### *Funded Debt.*

The debt of the City in bonds and notes, at the commencement of the year amounted to \$593,349.00. The increase of the funded debt, the past year, was \$50,005.00; making the total of "Funded Debt" at the present time \$643,354.00.

By authority of the City Council, bonds of the City have been issued and disposed of, the past year, to the

amount of \$172,500.00: of this sum \$122,495.00 was applied to the payment of so much of the debt as became due during the year; leaving the increase, as before stated, \$50,005.00, which was mainly for the extension of the Water Works and the erection of a Hose-house in Ward 4.

At the commencement of the year a part of the City debt was in bonds and a part in notes: for such of the latter as would not mature during the year, bonds of corresponding amounts, payable at nearly even dates with the notes, have been substituted, by authority of the City Council; the only variation in dates having been the dating of the bonds on the first day of July or October, instead of, as was the case with the notes, a few days prior or subsequent thereto. One advantage in dating all bonds on the first day of January, April, July or October, is, the uniformity in time at which the semi-annual interest will become due; to the obvious convenience of whomsoever may be called upon to provide for its payment. The entire "Funded Debt" of the City, as will be seen by Table B, is now in bonds.

Authority has been given by the Committee on Finance, for a further increase of the funded debt, by the issue of "Sidewalk" bonds for \$30,000.00 of the 100,000.00 authorized by the City Council; and also, — making provision for the purchase of the Chapel and land on Beach street, — a bond for \$5,000.00. The stringency in the money market has rendered it impossible to negotiate these bonds at a satisfactory rate of interest, and the money has been borrowed temporarily. The disposal of these bonds at some future day, while it will increase the "Funded Debt," will also reduce, correspondingly, "Temporary Loans," and therefore not disturb the aggregate indebtedness of the City.

*Available Assets.*

The assets of the City, other than the public property already alluded to, amount to \$139,776.67, as will be seen by Table C.

*Unfunded Liabilities.*

The liabilities of the City, other than the funded debt, amount to \$161,439.88, as will be seen by Table D.

*Property & Debt Balance.*

The total assets of the City exceed the entire liabilities \$66,250.56 as will be seen by Table E.

**RECEIPTS AND DISBURSEMENTS.***Receipts.*

The receipts from all sources have been \$784,371.66, as will be seen by Table F.

*Disbursements.*

The aggregate disbursements have been \$779,467.86, as will be seen by Table G.

The excess of receipts over disbursements was \$4,903.80; this sum being a part of the available assets at the close of the year, as in Table C.

The excess of appropriations for current expenses, over the expenditures therefor, was \$1,513.25 to the credit of Excess & Deficiency account, as will be seen by Table H.

In addition to the appropriations for current expenses and for the State and County taxes, there was appropriated for the extension of the Water Works, \$40,000 ; for the Construction of Sidewalks, \$100,000 ; for the purchase of the Baptist Chapel, \$5,000 ; and for the erection of a Hose House in Ward 4, \$10,000. The unexpended balances of these appropriations are, Sidewalks \$66,837.89 ; Hose House in Ward 4, \$6,815.14, as in Table D.

Respectfully submitted.

AARON SARGENT,

*Treasurer.*

SOLOMON DAVIS, *Clerk.*

IN WATER BOARD,

SOMERVILLE, DEC. 28, 1872.

TO THE CITY COUNCIL:

The Somerville Mystic Water Board, in accordance with the provisions of the City Ordinances, respectfully submit their Annual Report.

The Board are much gratified to represent to you that the Works are in excellent condition, the number of water takers rapidly increasing, and the advantages of this important work to the general interests and welfare of the City fully established.

The pipe laid during the present year has been of the same description as that heretofore adopted, viz: wrought-iron and cement; and its reputation for strength and durability, confirmed by our own experience, and that of many other Cities. The fire hydrants, and stop-gates, are of the Boston Machine Co.'s pattern.

The total amount of distribution pipe laid in the City, is 34 miles, 3,810.9 feet; number of fire hydrants, 184; number of stop-gates, 220; of which 6 miles, 2,295.3 feet of pipe, 38 fire hydrants, and 54 stop-gates, have been laid and set in 1872.

The water is now supplied to 1919 dwelling-houses, occupied by 2500 families, 49 stores, 18 manufactories, 213 stables, 3 brick-yards, the McLean Asylum, American Tube Works, Somerville Bleachery, 4 Churches, the City Hall, School houses and other Public buildings.

The water fixtures in use in the City are classified as follows, viz. :

2300 Sinks, 225 Taps, 383 Bath Tubs, 434 Wash Hand Basins, 409 Pan, 306 Self-acting, and 150 Hopper Water Closets, 80 Private Hydrants, 22 Urinals, 8 Fountains, and 287 Hand Hose.

There are laid in streets of the City bordering on the Cambridge line, about two miles of water pipe belonging to the City of Cambridge. That City supplies Fresh Pond water to the abutters on those streets, and collects the water rents. Four fire hydrants, only, are connected with these pipes, and many complaints from citizens resident in that section, and from the Engineers of our Fire Department, are made on account of the insufficient head of water, and the small number of fire hydrants on the line, as being inadequate to a requisite supply in case of fire.

Under present circumstances, the Board do not deem it advisable to cause more hydrants to be attached to this line of pipe, and recommend its purchase, (provided an arrangement to that effect can be made with the City of Cambridge on satisfactory terms,) or the extension of the distribution pipes of Somerville through said streets.

On account of the rapidly increasing population of the westerly portion of the City, and the distance of that section from the present supply mains, the time is near at hand when a more direct supply from the Reservoir will be required. In view of this fact, a line of 10 inch pipe has been laid, commencing at the westerly end of Highland Avenue at Grove street, continuing through said Avenue to and across Elm street and through Holland street to Broadway, intended finally to be continued

through Broadway to a new Avenue now in process of construction, to the College Grounds on Walnut Hill. Through this new Avenue, a 12 inch main can be laid connecting directly with an independent 24 inch pipe already laid by the Charlestown Authorities, and connected with the Reservoir.

This new main will not only give the additional supply required, but will materially contribute to a better circulation, and more even head of water throughout the City, and will prove of great advantage in case of accident to our Central street main.

The trenching and general detail of the work during the year, has been under the supervision of a member of this Board. The piping has been laid by the Jersey City Water & Gas Pipe Co., under the superintendence of Mr. Benjamin Almy, who has completed the work in his usual faithful and satisfactory manner.

The engineering has been under the direction of Mr. Charles Elliott, the City Engineer.

The value of the Works is as follows, viz.:

Value Dec. 30, 1871, as by report of Com-	
mittee, . . . . .	\$202,398 43
Expended during the past year, . . . . .	43,288 33
Total value, . . . . .	<u>\$245,686 76</u>

The tabular statement presented herewith, will show the location, sizes, and other detail of the pipes, gates, and hydrants, laid and set in the City, up to the present time.

# ANNUAL REPORT

OF THE

# SCHOOL COMMITTEE

OF THE

# CITY OF SOMERVILLE

FOR THE YEAR 1872.

# CITY OF SOMERVILLE.

---

IN SCHOOL COMMITTEE, DEC., 31, 1872.

The Superintendent submitted his Annual Report, which was read and unanimously accepted.

It was voted that the Committee adopt the report now submitted by the Superintendent of the public schools, and present it to their fellow-citizens as the Report of the School Committee for the year 1872.

J. H. DAVIS, *Secretary*.

# SUPERINTENDENT'S REPORT.

---

TO THE SCHOOL COMMITTEE OF SOMERVILLE:—

GENTLEMEN—In conformity with the requirements of your regulations, I respectfully submit the following as the First Annual Report on the condition of the Public Schools of the City of Somerville.

At the commencement of the year the School Committee was composed as follows:

HON. GEO. O. BRASTOW, Mayor, Chairman, *ex officio*.

OREN S. KNAPP, President of the Common Council, *ex officio*.

## WARD ONE.

JOSHUA H. DAVIS, for three years.

HENRY M. MOORE, for two years.

URIAH R. HARDING, for one year.

## WARD TWO.

REV. GEO. W. DURELL, for three years.

REV. J. W. HAMILTON, for two years.

EDWIN MILLS, for one year.

## WARD THREE.

HENRY F. SPENCER, for three years.

SELWIN Z. BOWMAN, for two years.

REUBEN WILLIS, M. D., for one year.

## WARD FOUR.

HORACE CHAPIN, M. D., for three years.

PROF. BENJAMIN G. BROWN, for two years.

ENOCH R. MORSE, for one year.

# ORGANIZATION.

---

*Chairman.*

HON. GEORGE O. BRASTOW.

*Secretary and Superintendent.*

JOSHUA H. DAVIS.

## SUB-COMMITTEES.

### ON THE HIGH SCHOOL.

Messrs. DURELL, SPENCER, BROWN, CHAPIN.

### ON SCHOOLS IN FORSTER DISTRICT.

Messrs. SPENCER, BOWMAN, WILLIS.

### ON SCHOOLS IN PRESCOTT DISTRICT.

Messrs. DAVIS, MOORE, HARDING.

### ON SCHOOLS IN PROSPECT HILL DISTRICT.

Messrs. KNAPP, MILLS, HAMILTON.

### ON SCHOOLS IN MORSE DISTRICT.

Messrs. MORSE, DURELL, CHAPIN.

### ON SCHOOLS IN LINCOLN DISTRICT.

Messrs. BROWN, MORSE.

### ON EVENING DRAWING SCHOOL.

Messrs. SPENCER, DAVIS.

### ON EXAMINATION OF TEACHERS.

Messrs. MORSE, DURELL, CHAPIN, SPENCER.

### ON BOOKS.

Messrs. KNAPP, MILLS, HARDING, HAMILTON.

### ON MUSIC.

Messrs. DURELL, WILLIS, BROWN, MOORE.

### ON SCHOOL FURNITURE.

Messrs. KNAPP, SPENCER, BOWMAN, MORSE.

### ON HEATING APPARATUS.

Messrs. MILLS, HARDING, MOORE.

### SCHOOL SUPPLIES.

Messrs. SPENCER, DURELL, DAVIS.

At the meeting of the Committee, held February 12, the resignation of Selwin Z. Bowman, was received and accepted. The vacancy thus occasioned was filled in convention of the City Council and School Committee, February 17, by the election of Samuel A. Carlton.

Mr. Carlton was subsequently appointed to fill all vacancies in the Sub-Committees, caused by the resignation of Mr. Bowman.

To meet the requirements of the 7th Section of the 15th City Ordinance, adopted April 6th, the Superintendent resigned, as member of the School Board, and the vacancy was filled in convention of the City Council and School Committee, April 20, by the election of Sanford Hanscom, M. D.

The year just closing has been one of continued prosperity, and its review presents much that is encouraging.

The schools have maintained their usual standard of excellence. Liberal appropriations have been made for their support. Parents and the Committee have manifested their accustomed solicitude. Teachers have labored faithfully—many of them with marked ability and success. Pupils have pursued their work with commendable industry, and reasonable expectations have been fully realized.

True intellectual progress and development, however, must ever be comparatively slow. The transient outstrips the enduring. Annuals come to maturity in a few weeks only, while the yearly growth of perennials that thrive amid the vicissitudes of a century, is scarcely perceptible. "As we perceive the shadow to have moved, but did not

perceive it moving; so our advances in learning, as they consist of such minute steps, are perceivable only by the distance."

In the brief period of their pupilage, the young can do but little more than lay the *foundation* for an education. The activities and study of a long life-time alone, can rear a superstructure of tolerably fair proportions.

To complete our entire Course of Study requires about thirteen years; but the average period of pupilage is less, probably, than ten years. Hence within the year just closing, the majority of our pupils have enjoyed more than one-tenth of their school privileges.

The shortness of the time allotted to the schools to accomplish their measure of influence in forming the character of the young, and in preparing them to go forth and assume the duties of citizens, should stimulate us to greater fidelity and increased activity in our work.

Whatever of error the review of the past may reveal to us, we must labor earnestly to correct in the future. Ever keeping before us a high standard of excellence, it should be our constant endeavor to attain thereto.

## GENERAL SUMMARY FOR 1872.

---

**PUPILS.**

The whole number of pupils connected with the public schools in January last, was 2905.

The number of persons in the city between the ages of five and fifteen years upon the first day of May last, as reported by the Assessors, was as follows:—

Ward One,	.	.	.	.	.	1041
Ward Two,	.	.	.	.	.	1024
Ward Three,	.	.	.	.	.	482
Ward Four,	.	.	.	.	.	385
						2932
Total,	.	.	.	.	.	2932

Increase for the year,	.	.	.	.	.	.	108
------------------------	---	---	---	---	---	---	-----

The number of pupils connected with the schools at that date, was 2987.

Of that number 235 were over fifteen years of age.

It will be seen that the whole number of pupils of all ages belonging to the schools, on the first day of May, was in excess of the number of persons in the city between the ages of five and fifteen years.

Whole number of pupils in December,	.	.	.	.	.	3128
Boys,	.	.	.	.	.	1569
Girls,	.	.	.	.	.	1559
Number over 15 years of age,	.	.	.	.	.	206

**HIGH SCHOOL.**

First Class,	29	or	.927	per cent	of the whole number.
Second “	33	“	1.055	“	“ “ “ “
Third “	50	“	1.598	“	“ “ “ “
Fourth “	69	“	2.206	“	“ “ “ “
Total,	181	“	5.786	“	“ “ “ “

**GRAMMAR SCHOOLS.**

First Class,	116	or	3.708	per cent of the whole number.

The following changes have been made in the corps of Teachers within the year :—

## RESIGNED.

John Wilson, Esq., Principal of Prescott school.  
 Miss Eva M. Edmands, Teacher in Cedar Street school.  
 “ Jennie M. Belknap, “ Forster “  
 “ Sue L. Lathe, “ Webster “  
 “ Mary E. Sargent, “ Morse “  
 “ Charlotte R. Cutter, “ Edgerly “  
 “ Kate D. Perry, “ Bennett “  
 “ Anna M. Leland, Principal of “ “

## ELECTED.

Miss Lilian E. Woodward, Teacher in Lincoln school.  
 “ Alice Simpson, “ Cedar Street “  
 “ Kate D. Perry, “ Bennett “  
 “ Agnes Woodberry, “ Forster “  
 “ Agnes M. Cox, “ Webster “  
 “ Lizzie J. Hamilton, “ Jackson “  
 “ Abbie M. Bigelow, “ Edgerly “  
 “ Pauline S. Downes, “ Morse “  
 “ Alice I. Bradford, “ “ “  
 “ Rowena G. Delano, “ Edgerly “  
 “ Helen Tincker, Principal of Bennett “

Augustus Linfield, Esq. was elected Principal of Prescott school, March 7th, and died May 5th. When invited to Somerville, he was Principal of the High School in Lenox, Mass.

He was an estimable Christian gentleman. During the brief period of his connection with the school, he won the confidence and esteem of the Committee, and gave promise of great usefulness in his profession.

June 20, Luther B. Pillsbury, Esq., was elected to fill the vacancy caused by the death of Mr. Linfield. When elected he was Principal of the High School in Bridgewater, Mass.

#### SPRING HILL CHAPEL.

By request of the School Committee, the City Council purchased of the Baptist Society, for \$5000, their property situated on Beech Street, and adjoining the Spring Hill primary-school lot.

The property is centrally and beautifully located. It may be regarded a matter for congratulation that it has been secured to the city for school purposes.

#### HIGH SCHOOL HOUSE.

This beautiful and substantial edifice was commenced in April, 1871, and completed in February, 1872.

It is situated on the summit of Central Hill, and near the geographical centre of the city. Its style of architecture is novel, and its appearance is pleasing from all points of observation.

The building is sixty-seven by one hundred feet on the ground, and three stories in height. Its front entrance is from Highland Avenue, and there are two side entrances for the pupils.

The basement contains the heating apparatus, a room for fuel, water-closets, rooms for the Janitor's family, two entries for the pupils, a laboratory, and a philosophical room.

Each of the first and second stories contains a hall twenty-two by twenty-four feet, a school-room fifty-two feet square, two recitation rooms twenty-two by twenty-six feet.

Communicating with each school-room there are two spacious and convenient dressing rooms for the pupils, and two rooms for the teachers.

The third story contains an exhibition hall sixty-four by eighty feet, with three ante-rooms attached.

The view from this story is rarely surpassed. The eye of an observer standing upon the floor of the Exhibition Hall is about one hundred and sixty feet above the water level. In an open, level country an area of more than seven hundred and fifty square miles comes under observation at such an elevation. After making ample deduction for that portion of this area hidden by hills which elevate a part of the horizon, there remains, doubtless, within the range of vision, an unobstructed view of more than five hundred square miles of territory.

The walls of the building, including the partitions, are constructed of bricks. The exterior walls are faced with pressed bricks. The base and belt courses, the door-steps, and the door and window trimmings are of fine hammered granite. The roof is covered with copper and slate, and fitted with copper gutters.

The ground at the base of the building is one hundred and sixteen feet above the level of the sea at mean low tide. The first floor is nine and one-fourth feet above the ground. Each of the first and second stories is four-

teen and one-half feet high in the clear. The Exhibition hall is twenty and one-fourth feet in height.

The second floor is sixteen feet below the level of the reservoir on Walnut Hill, from which the supply of water is obtained.

The building is heated by steam, and is provided with ample means for ventilation.

Cost, including heating apparatus, \$59,919. 45.

It was formally dedicated to the service of education, with appropriate ceremonies, on the evening of February 27, 1872, and occupied by the school, March 4th.

     Chairman of the School Committee.
6. ADDRESS . . . . . of O. S. Knapp, Esq.  
     On receiving the Keys, and delivering them to the Principal of the  
     High School .
7. ADDRESS . . . . . of George L. Baxter, Esq.  
     Principal of the High School, on receiving the Keys.
8. SINGING, . . . . . by Pupils of the High School.

### DEDICATION ODE.

Fair Science, from her sacred hill,  
 Shineth afar with gems of light,  
 Whose glories beam like stars that fill  
 The clear and distant skies of night.

And fair the scenes that she beholds ;  
 Here, Freedom's battle hills and plains,  
 There, towns where wave the starry folds,  
 And Industry in quiet reigns.

Through all the lands her temples rise ;  
 Where rivers to the ocean wind,  
 Or hamlet in the valley lies,  
 Her name is sacredly enshrined.

So on this hill of prospect fair,  
 This temple to her honor stands,  
 Guarded by Freedom's watchful care,  
 And crowned by work of skilful hands.

God of the nations, learning's Source,  
 From whom are liberty and light,  
 Through whom we keep our peaceful course,  
 Take Thou our work and praise to-night.

9. ADDRESS . . . . . by J. H. Davis, Esq.
10. POEM, . . . . . by E. R. Morse, Esq.
11. ADDRESS, . . . . . by Henry F. Spencer, Esq.
12. MUSIC, . . . . . by the Somerville Musical Associations.

**FIRST HIGH SCHOOL HOUSE.**

The following items gathered from the School Records and Reports, may interest some of our citizens.

The corner-stone of the building was laid in September, 1851.

**BUILDING COMMITTEE.**

Rev. A. R. Pope, Chairman of the School Committee.

Isaac F. Shepard, Secretary      “      “      “

Hon. George O. Brastow.

The building was dedicated, April 29, 1852.

**ORDER OF EXERCISES.**

1. Singing.—Original Hymn, by I. F. Shepard.
2. Surrender of the keys by the Building Committee.
3. Remarks of Hon. Luther V. Bell, M. D., former member of the School Committee.
4. Prayer of Dedication, by Rev. J. T. Sargent.
5. Singing by scholars of the Grammar Schools.
6. Address by I. F. Shepard, Esq.
7. Singing by the scholars.
8. Benediction.

The school was organized, May 3, 1852, and sixty-one pupils were connected with it the first term.

Eight hundred and fifty-three pupils were admitted to the school during the twenty years it occupied the building.

The last session of the school was held, February 23, 1872, at which time it contained one hundred and fifty pupils.

### ADDITIONAL SCHOOL ACCOMMODATIONS.

The demand for additional school accommodations in Prospect Hill and Prescott districts is urgent.

All the school-rooms in both districts are occupied, with the exception of one room in the Webster school-house.

One hundred and fifty pupils in Prospect Hill district are occupying halls rented for the purpose.

From seventy to eighty pupils were in attendance in the Brastow primary school, and in each of the two primary schools in the Prescott school-house during the summer and autumn.

To relieve the Prescott school, all the rooms in the Edgerly school-house have been occupied. Hence there remains no spare room in that building for the accommodation of the rapidly increasing population in its immediate neighborhood.

In both of these districts a large number of dwellings are in process of construction; others are completed and ready for use. All of these will, doubtless, be occupied in the coming spring and summer.

It will be seen by referring to our summary, that in December there were nineteen hundred and twenty pupils belonging to the schools in these two districts, and only *two* Grammar Masters, while in the schools of the remaining three districts there were only ten hundred and twenty-seven pupils and *three* Grammar Masters.

It seems desirable that these two districts should be divided into three; that two grammar-school buildings, each of the size of the Prescott school-house, should be constructed; and that an additional grammar school should be established.

Should such an arrangement be deemed expedient, the matter of locating becomes important.

When the present Prospect Hill school-house was located there were but few dwellings upon the territory bounded by Highland Avenue, Walnut, Milk, and School streets. That territory is now occupied by a comparatively dense population. The new school building for Prospect Hill district should be located with a view to the accommodation of pupils residing in that section, as well as of those located west and south of Milk street, and upon the southern declivity of Prospect Hill.

Following the line of Summer, Bow, Washington, and Myrtle streets, the grammar-school building for Prospect Hill district should be located at a point about one-third of the distance from the Morse school-house to the Prescott school-house; and the grammar-school building for the new district should be located about half way between the Prescott school-house and the building which may be erected in Prospect Hill district.

In the construction of these buildings provision should be made for future wants. If the experience of the past is to be repeated, a population will soon centre about the points designated, sufficient to fill two buildings, each of the size of the Prescott school-house.

The following items may be interesting in this connection, and may serve to raise the inquiry, Is the ratio of male to female teachers in our schools as large as it should be to secure the greatest efficiency?

April 23, 1842, Wm. E. Graves, the first Grammar Master in Somerville, was elected Principal of the Prospect Hill grammar school:—  
Salary, \$600.

Whole number of pupils in the town at that date was 293.

In 1843, a small building with one room was constructed on the corner of Broadway and Franklin street, for the accommodation of the East Village and Winter Hill. April 12, 1844, a grammar school was established in that building, called the Lower Winter Hill grammar school, and George Swan was elected Principal:— Salary, \$30 per month.

Whole number of pupils in town at that time was 308.

The name of this school was changed to Prescott grammar school, January 8, 1847.

The Franklin school-house was completed in the autumn of 1846. October 12, Wm. E. Graves was transferred from Prospect Hill grammar school to Franklin grammar school.

The first Forster school-house was completed early in the year 1855. February 22d of that year, John Jameson was elected Principal of Forster grammar school:— Salary, \$700.

Whole number of pupils in town at that date was 1,045.

The Lincoln school-house was dedicated March 23, 1867. Jan. 1, 1867, Horace P. Makechnie was elected Principal of Lincoln grammar school:— Salary, \$1,000.

Whole number of pupils in town at that date was 2,123.

In 1842 there was one Grammar Master to 293 pupils.					
1844	“	“	“	154	“
1846	“	“	“	160	“
1855	“	“	“	261	“
1867	“	“	“	424	“
1872	“	“	“	625	“

**RULES AND REGULATIONS OF THE BOARD.**

Within the year, the Rules and Regulations of the School Committee, and the Course of Study for the several grades of the schools have been carefully revised and printed in pamphlet form.

It is the wish of the Committee that not only each school, but every family in the city should be furnished with a copy. Copies can be obtained on application to the Superintendent, or any member of the School Committee.

**SCHOOL YEAR.**

The school year has been reduced from forty-two to forty weeks: commencing on the first Monday in September and closing about the first of July.

This change seemed to be demanded by the general wish of the community, as indicated by the small attendance for several years, during the weeks the schools were continued in July.

**EXHIBITIONS.**

In order that each member of the Committee might attend all of the annual exhibitions of the schools, they were so arranged that no two occurred at the same time. To accomplish this we were obliged to have exhibitions every session of the schools from the 27th day of June last, to the 12th day of July, inclusive.

It is the prevailing opinion of the teachers, and also of the Committee, that the time spent in a school after its exhibition is of little value.

We would suggest that the exhibitions of the schools in the several districts take place, under the direction of the Sub-Committees, at the same time, and as near the close of the school year as possible; and that all the schools in each district close with the exhibition of the grammar school.

### **MUSIC.**

Music, under the direction of an accomplished teacher, has been pursued during the past year in the same manner as in several preceding years. A lesson of one hour each week has been given in each of the grammar-school buildings and in the High School.

When this mode of giving instruction in music to the schools was adopted, it was probably the best that could have been devised. But the schools have multiplied greatly since that time, and a radical change in the present mode is demanded in order that each separate class in the several departments may receive such instruction, and such only, as is adapted to the capacity and advancement of the pupils composing it.

We solicit an early consideration of the matter by the Committee on Music.

### **EVENING DRAWING SCHOOL.**

To meet the requirements of the law of the State making it the duty of School Committees to furnish in-

struction in Mechanical or Industrial Drawing to persons over fifteen years of age, a school was organized under the direction of Lucus Baker, Esq., early in January last.

The school was held in the school-room of the old High School House, in January and February, and in the Exhibition Hall of the new High School House, in March and April.

-------------------------------------	----

#### **IRREGULAR ATTENDANCE.**

The most discouraging feature of our schools is the irregular attendance of many of the pupils composing them.

That this is an evil of sufficient magnitude to excite unpleasant apprehension and arouse us to strenuous efforts to diminish it will be apparent from a careful study of our "exhibit" on page 15, and a comparison of this with our "summary" showing the whole number of pupils nominally belonging to the schools.

Teachers can do much towards reducing the evil by rendering the schools more interesting and attractive; but it is to parents we must look, mainly, for its correction and cure: and we most earnestly solicit their consideration and persistent co-operation in the matter.

We apprehend that the evil has its origin, in part, in

what we regard a false impression, namely, —“That children are overtasked in their studies, and subjected to undue confinement in the school-room.”

That this is true in some cases there can be no doubt.

During our connection with the schools of Somerville, we have known a few pupils, of superior endowments and of great promise, who have been permanently, and, in a few instances, fatally injured by too close confinement and too continuous and severe mental labor. But we have found, upon investigation, that, in every instance of this character, the sufferer had been laboring beyond the stated requirements of the School Committee, or had been promoted prematurely and forced to pursue studies beyond his comprehension.

A few pupils have attempted to pursue the studies of the “Classical Course” and also of the “Regular Course,” in the High School, at the same time,—a task which should never be undertaken. He who attempts it must do it at his peril.

With injurious, and sometimes fatal consequences, a few ambitious pupils, with nervous temperaments and fragile constitutions, urged on by equally ambitious parents and teachers, have engaged in intellectual efforts beyond their years or their mental and physical endurance. But these were exceptional cases.

We have watched, with much solicitude, the effect of our prescribed school work upon pupils in the different departments, and our conviction is, that no pupil of ordinary health and intellectual capacity, with correct habits, and who is free from other mental labor, will be injured by attending constantly and faithfully upon the duties of the schools, and in complying strictly with all of their requirements.

A little consideration will convince us that the *time* allotted to the schools is not excessive.

Forty weeks constitute our school year. To the twelve weeks of vacations we may add another week for the stated holidays, which reduces the school year to only three-fourths of the civil year. There are five sessions a week of five hours each, in the High School, and ten sessions a week averaging two and three-fourths hours each in the grammar and primary schools. These sessions are divided by recesses and general school exercises, so that the time devoted to actual mental effort in school, by pupils in constant, punctual attendance will not exceed four hours a day for five days in each of the thirty-nine weeks of school time.

Neither is the *work* required of pupils who are regular in their attendance, excessive, or such as to produce injurious results.

Much care and thought have been bestowed upon the preparation of a "Course of Study" that would be adapted to the average capacity of our pupils. But the studies have been arranged and apportioned with the expectation that pupils will be regular in their attendance and faithful in the performance of their school work.

When scholars are irregular in their attendance, one or more of several unpleasant consequences follow. Either they must overwork during the time they are in attendance, or their education will be superficial; or they must be transferred, from time to time, to a lower class—whereby the time for completing the course of study will be prolonged; or what is still more probable, they will become discouraged, lose their interest in the school, and leave it prematurely.

Immeasurable mischief comes to any school by the

irregularity of a portion of its members who must ever hang as an incubus upon it,—impairing its efficiency and retarding the progress of those who are regular in attendance, and faithful in their work.

We have no moral right to squander our own time, much less can we innocently prevent the most profitable use of it by others.

### PROMOTIONS.

Every person, at all conversant with the matter, realizes the extreme difficulty of measuring correctly the capacity of pupils, of adapting instruction judiciously, and of making a right apportionment of mental labor, in quality and amount, to the various and ever-varying capacities of scholars in the different stages of their school course.

Public schools must, of necessity, be graded schools. Pupils with every diversity of natural endowment, varying in temperament, organization, ambition, habits of thought and study, and physical endurance, must be grouped into classes.

To all pupils in each class the same lessons must be assigned, and they must all receive substantially the same instruction. A discriminating and ingenious teacher, it is true, will adapt his *instruction* to the extreme as well as to the mean capacity of all the members of the class; but in his assignment of lessons he must be governed by his estimate of their *average* ability. Every lesson, therefore, which is adapted to the average scholar will overtask the abilities of some members of the class, and be insufficient for others.

The disparity which must necessarily exist in the abilities and attainments of different members of every class at the beginning of the year, will increase as time advances, and at the end of the year will be greater than should ever exist between members of the same class. But this disparity is found in nearly every class at the close of each school year when promotions are made and the classes are arranged for the succeeding year.

To make promotions under such circumstances, to deal justly with every pupil, and give satisfaction to all, is a task not easily performed.

A reasonable degree of uniformity can be maintained only by individual promotions from one extreme of the class, and by transferring pupils to a lower class from the other extreme. In our "Course of Study," limits, as definite as is practicable, have been prescribed for each class, and the amount of work to be performed distinctly assigned.

How *much*, has been decided by the Committee. How *well*, will depend mainly upon the industry of the pupils, and the faithfulness and skill of the teachers. The harvest from fields of equal fertility is usually commensurate with the excellency of tillage.

Seventy per cent in scholarship is the requirement for promotion from one class to another in the Grammar Schools, and for admission to the High School.

Ninety per cent in scholarship is about the average of the best scholars in the several classes. But 70 is nearly 78 per cent of 90; therefore our requirement is that the scholarship of the lowest in rank in any class, shall be to that of the highest in rank as 78 to 100; thus allowing a range of 22 per cent between the extremes of the same class.

To obviate the liability to injustice resulting from promotions based upon a single examination at the close of the year, the Committee adopted the following rules :

Pupils in each of the several Grammar schools shall be examined at the end of each month upon the various studies pursued since the commencement of the school year, by means of questions carefully prepared by the teacher and approved by the Principal and Superintendent.

A record of the examinations shall be kept by the teachers ; and those pupils — in all the classes except the first — whose average rank in scholarship for the year has been seventy per cent, will be entitled to promotion.

Applicants will be admitted to the High School when their rank in scholarship, as indicated by the average of their monthly examinations and the usual annual examination, is seventy per cent.

The requirements of these rules impose much extra labor upon the teachers ; but, with scarcely an exception, they have conformed to them with great cheerfulness, and with an enthusiasm even, which is gratifying in a high degree.

The advantages claimed for this mode of examinations and promotions are briefly as follows :—

The questions for the monthly examinations, being examined and approved by the Principals of the grammar schools, uniformity is secured in a given district ; and being examined by the Superintendent also, a good degree of uniformity can be maintained throughout the city, thereby securing justice to pupils in all sections.

Promotions being based upon the average of the monthly examinations, the chances of pupils for promotion are multiplied, and the liability to failure from the contingencies of a single examination is obviated.

Parents are informed at the end of each month of the

rank of their children and of the probabilities of their promotion at the end of the year.

Faithful pupils are encouraged and stimulated, and the indolent are roused to greater activity.

Frequent reviews are secured, and all the subjects passed over within the year, come under observation at the end of each month.

The minds of pupils are relieved from the anxiety and uncomfortable forebodings incident to the uncertainty of a single annual examination.

Promotion by an annual examination is often too high a premium upon verbal memory. Every educator understands that the mere possession of facts is not always a criterion of development, or of a pupil's ability to cope successfully with the studies in advance. By frequent examinations of subjects but recently passed over, the industrious pupil with imperfect memory is placed more upon an equality with a pupil less industrious but with a more retentive memory.

### **DISCIPLINE.**

The matter of discipline — the proper maintenance of which is so essential to the harmony and prosperity of the schools — demands our consideration.

Proper government is indispensable to the efficiency of any school. How to secure it in the best manner is a vital question.

That certain schools can be well managed by some teachers without recourse to corporal punishment, is a fact within our knowledge. Whether all schools could

be so conducted by *any* teacher is doubtful. That they are not by the average of teachers is sure.

We have usually accompanied our commendations of the excellent order which characterizes most of our schools, with the statement: "It is secured mainly by mild measures."

During the past year, teachers have made a record of all cases of corporal punishment in their respective schools; and by corporal punishment is understood "the infliction of physical pain."

The number of cases reported may not be regarded a large one, when we take into account the whole number of pupils, and all the varied and unfavorable circumstances under which many of them are being reared; but we could wish it had been smaller.

The record is interesting, and suggestive of several important lessons.

In three schools there was no case of punishment reported. One teacher reports one case only; one, three only; one, seven; one, eight; one, nine; two, ten each.

Of the whole number of cases reported, eight per cent only were in twenty schools; fifty per cent were in thirteen schools, and forty-two per cent were in the remaining twenty-six schools.

If we represent the average number of punishments to each pupil in the first and second classes of the grammar schools by .3, then .9 will represent the number in the third and fourth classes, and 1.3 the number in the fifth and sixth classes, and 1.2 the number in the Primary Schools.

From this record we learn that some of our schools have been most successfully managed without recourse to corporal punishment; and that other, and more diffi-

cult schools, have been as well conducted without resorting to punishment except in rare and extreme cases.

It is but just to say, however, that while the teachers of those schools where little or no punishment is employed, are among our best teachers, it is also true that the schools they teach are our best schools, being made up largely of pupils whose home influences and previous training in lower schools have been most conducive to the result secured.

We may not conclude that these teachers would succeed equally well in all schools, with the same kind of discipline. Neither may we infer that their schools are so tractable that teachers with less ability and skill would meet with similar success in their attempts to control them.

The teacher *and* the school are the components to be considered in arriving at just conclusions.

There would be great injustice in requiring of teachers, in schools of every grade, equal results by similar means. But, other things being the same, we do award the highest commendations to those teachers who secure good order, and cheerful, prompt obedience by moral means.

It is interesting to notice the rapid decrease in the number of cases of corporal punishment from the lower to the higher grades in the grammar schools. This diminution is satisfactorily accounted for by the following reasons:—The upper classes are all under the care of teachers of long experience. Self-respect, sense of propriety, and pride of reputation increase as pupils advance. Obedience and orderly deportment are largely the result of habit: when, therefore, pupils have been well trained at home and in the lower schools, the habits they form render it easy for them to conform to school requirements.

We can find no satisfactory reason why the per cent of punishments should be less in the primary schools than in the fifth and sixth classes of the grammar schools; especially, as nearly all the teachers who have had but little experience are in the primary schools. The inquiry is suggested, "Is not an improvement practicable?"

In nothing do teachers differ more widely than in their ability to govern. Hence it is, that we find such a marked difference in the amount of corporal punishment in schools of the same grade and similar in character.

Many persons are largely endowed by nature with qualities that enable them to control with ease; but generally, the art of governing is an *acquired art*, and is the result of long and observant practice.

The teacher who would govern well must possess, in the first place, ample literary qualifications, and a character above reproach. He must have a self-consciousness that he is equal to the task before him; and it must be apparent to the quick perceptions of his pupils that he is "*master of the situation.*"

He must possess perfect self-control. "He that is slow to anger is better than the mighty; and he that ruleth his spirit than he that taketh a city."

He must be in full sympathy with his pupils, and their highest good must be his constant and controlling motive. His requirements must be reasonable and uniform. What he censures on some occasions, should not be permitted at other times. He must govern in accordance with fixed principles, and not according to his ever varying moods.

His bearing must be dignified; his manner gentle but decided; and his tones of voice firm but never boisterous. He must abstain constantly from indulgence in bitter sarcasm, and never, under any circumstances, resort to ridicule, which is always "sharper than a serpent's tooth," to a sensitive child. He should cultivate in his pupils self-respect and confidence in their own abilities; and ever be quick to observe and ready to approve whatever is commendable. On all occasions he must be what he would have his pupils become.

A radical change must be effected in our social condition before corporal punishment can be *entirely* dispensed with in the government of schools.

The young must early be taught lessons of obedience, and of prompt submission to rightful authority.

Whenever a spirit of insubordination manifests itself, and fails to submit to the persuasions of kindness or the dictates of authority, recourse must be had to penal suffering.

What we would counsel is, "*never resort to corporal punishment until other means have been exhausted.*" Whenever it seems necessary to inflict punishment the teacher should carefully scrutinize his motives, and raise the inquiry, "Is there not a more excellent way?"

Corporal punishment is a summary mode of discipline; and the temptation to resort to it is strong, especially when the duties of the school are pressing.

We need to fortify ourselves constantly against tendencies in a wrong direction.

The regulation of our Committee in relation to this matter is as follows:—

“Teachers should aim at such discipline in their schools as would be exercised by a kind, judicious parent in his family, avoiding corporal punishment, especially in the case of girls, in all cases where good order can be preserved by milder measures; and in no case resorting to confinement in closets or wardrobe, or to other cruel and unnatural punishment.”

The prevailing opinion of educators is indicated by the following extracts from the Regulations of School Committees in various sections.

“Teachers shall avoid corporal punishment in all cases where good order can be preserved by milder measures.”—*Boston, Chicago, Oswego.*

“Corporal punishment shall be resorted to only in cases of persistent misconduct and after the failure of all other reasonable means of reformation.”—*Brooklyn, N. Y.*

“So far as practicable teachers are to govern their pupils by the moral influence of kindness, and by appeals to the nobler principles of their nature.”—*Cincinnati, Ohio.*

“Corporal punishment shall only be resorted to when other means fails.”—*Lowell, Mass.*

“Corporal punishment shall be avoided except in extreme cases.”—*Salem, Mass.*

“Teachers are to maintain a kind and faithful discipline, avoiding harsh punishments, and provoking and improper language.”—*Worcester, Mass.*

“As a general rule, corporal punishment should be resorted to only after milder measures have been fairly tried without success.”—*Springfield, Mass.*

**PRIVATE EXAMINATIONS.**

---

At the meeting of the Committee, held December 5, Sub-committees were appointed to examine the several schools:—

HIGH SCHOOL. . . .					Messrs. Durell, Spencer, Brown, Chapin.
GRAMMAR SCHOOLS, 1st Class,					“ Mills, Chapin.
“	“	2d	“	“	“ Hamilton, Willis.
“	“	3d	“	“	“ Carlton, Spencer.
“	“	4th	“	“	“ Morse, Brown.
“	“	5th	“	“	“ Durell, Harding, Hanscom.
“	“	6th	“	“	“ Knapp, Moore.

The Primary Schools were examined by the Sub-committees of the several districts.

By this arrangement, all schools of the same grade came under the observation of the same Committee. Hence their comparative merits were more readily determined.

These Committees waived the usual custom of making written reports; but instead thereof, presented at the meeting of the Board, held December 31, interesting verbal reports upon the condition and relative standing of the various schools examined by them.

Various causes, beyond the control of teachers, affect the standing and general appearance of different schools of the same grade; as, the previous preparation of pupils, their home influences, and regular or irregular attendance. There are causes also,—not always apparent or

traceable, which make any school appear to a disadvantage on certain days, and possibly upon the day of examination. For all of these, Committees are generally disposed to make due allowance.

The same amount of work is required of all schools of the same grade, within a given period; and a good degree of uniformity exists in the average ability, ages, and previous preparation of the pupils composing them. When, therefore, they are found to differ materially, it is usual to attribute the difference mainly to the teachers; for it has passed into a proverb, "*As is the teacher, so is the school.*"

Nearly twenty per cent of our present corps of teachers have been elected within the year. As vacancies occur, too great caution cannot be exercised in the selection of persons to fill them. We should endeavor to avail ourselves of the best talent that can be procured with the means at our disposal.

Mr. Philbrick, Superintendent of the Public Schools of Boston, says in a recent report, "*All roads lead to Rome;*" so all lines of educational improvement converge into one central object, — *the teacher*. The importance of other elements that go to make up a good school may be, and often are, over-estimated. Not so with the teacher. The teacher *is* the school. How to secure to every school a teacher who understands and loves his work, — this is the supreme educational problem, at all times and in every place."

We should aim to secure teachers of scholarly culture and large experience; those possessing professional enthusiasm and a just appreciation of the importance of their work, — who will labor skillfully and faithfully to develop in their pupils whatever is essential to render

them valuable citizens, — who will be solicitous, not only to secure their intellectual advancement, but also to cultivate in them a deeper sense of moral obligation, and greater reverence of heart.

Allow me, gentlemen, in concluding my report, to congratulate you on the satisfactory condition of the interest committed to your charge, — the great harmony which has ever characterized your deliberations, — the interest of our citizens in the cause of education, — the general faithfulness of teachers, — the industry, obedience, and orderly deportment of pupils; and, to express to you my gratitude for your uniform kindness to me personally, and for your constant and cheerful co-operation in my work.

J. H. DAVIS,

*Superintendent of Public Schools.*

December 31, 1872.
