DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

Chapter 8
PUBLIC HEALTH

1. MISSION.

a. The mission of military government in public health is to assist the Japanese in attaining the following objectives:

(1) To become self-sufficient by the effective use of their own personnel, equipment and supplies.

(2) To attain and maintain the highest possible standards of health and sanitation for the Japanese people.

(3) To aid in the formation of democratic ideals and ethical codes of medical practice through public health education.

(4) To insure that the health of the occupation forces is not endangered by disease among the Japanese.

(5) To control narcotics.

b. A health mission of this magnitude requires hard work, knowledge, tact, ingenuity, perserverence and tolerance for its accomplishment. Besides public health, the problem of medicine with its many ramifications, including nursing, veterinary, dental and sanitary practice, medical education, pure food and drug control, narcotic control, health laws and finance will tax to the utmost the resources of the health officer. Military government must exert every effort to insure that the Japanese government takes all means available for the promotion, restoration and maintenance of the health program.

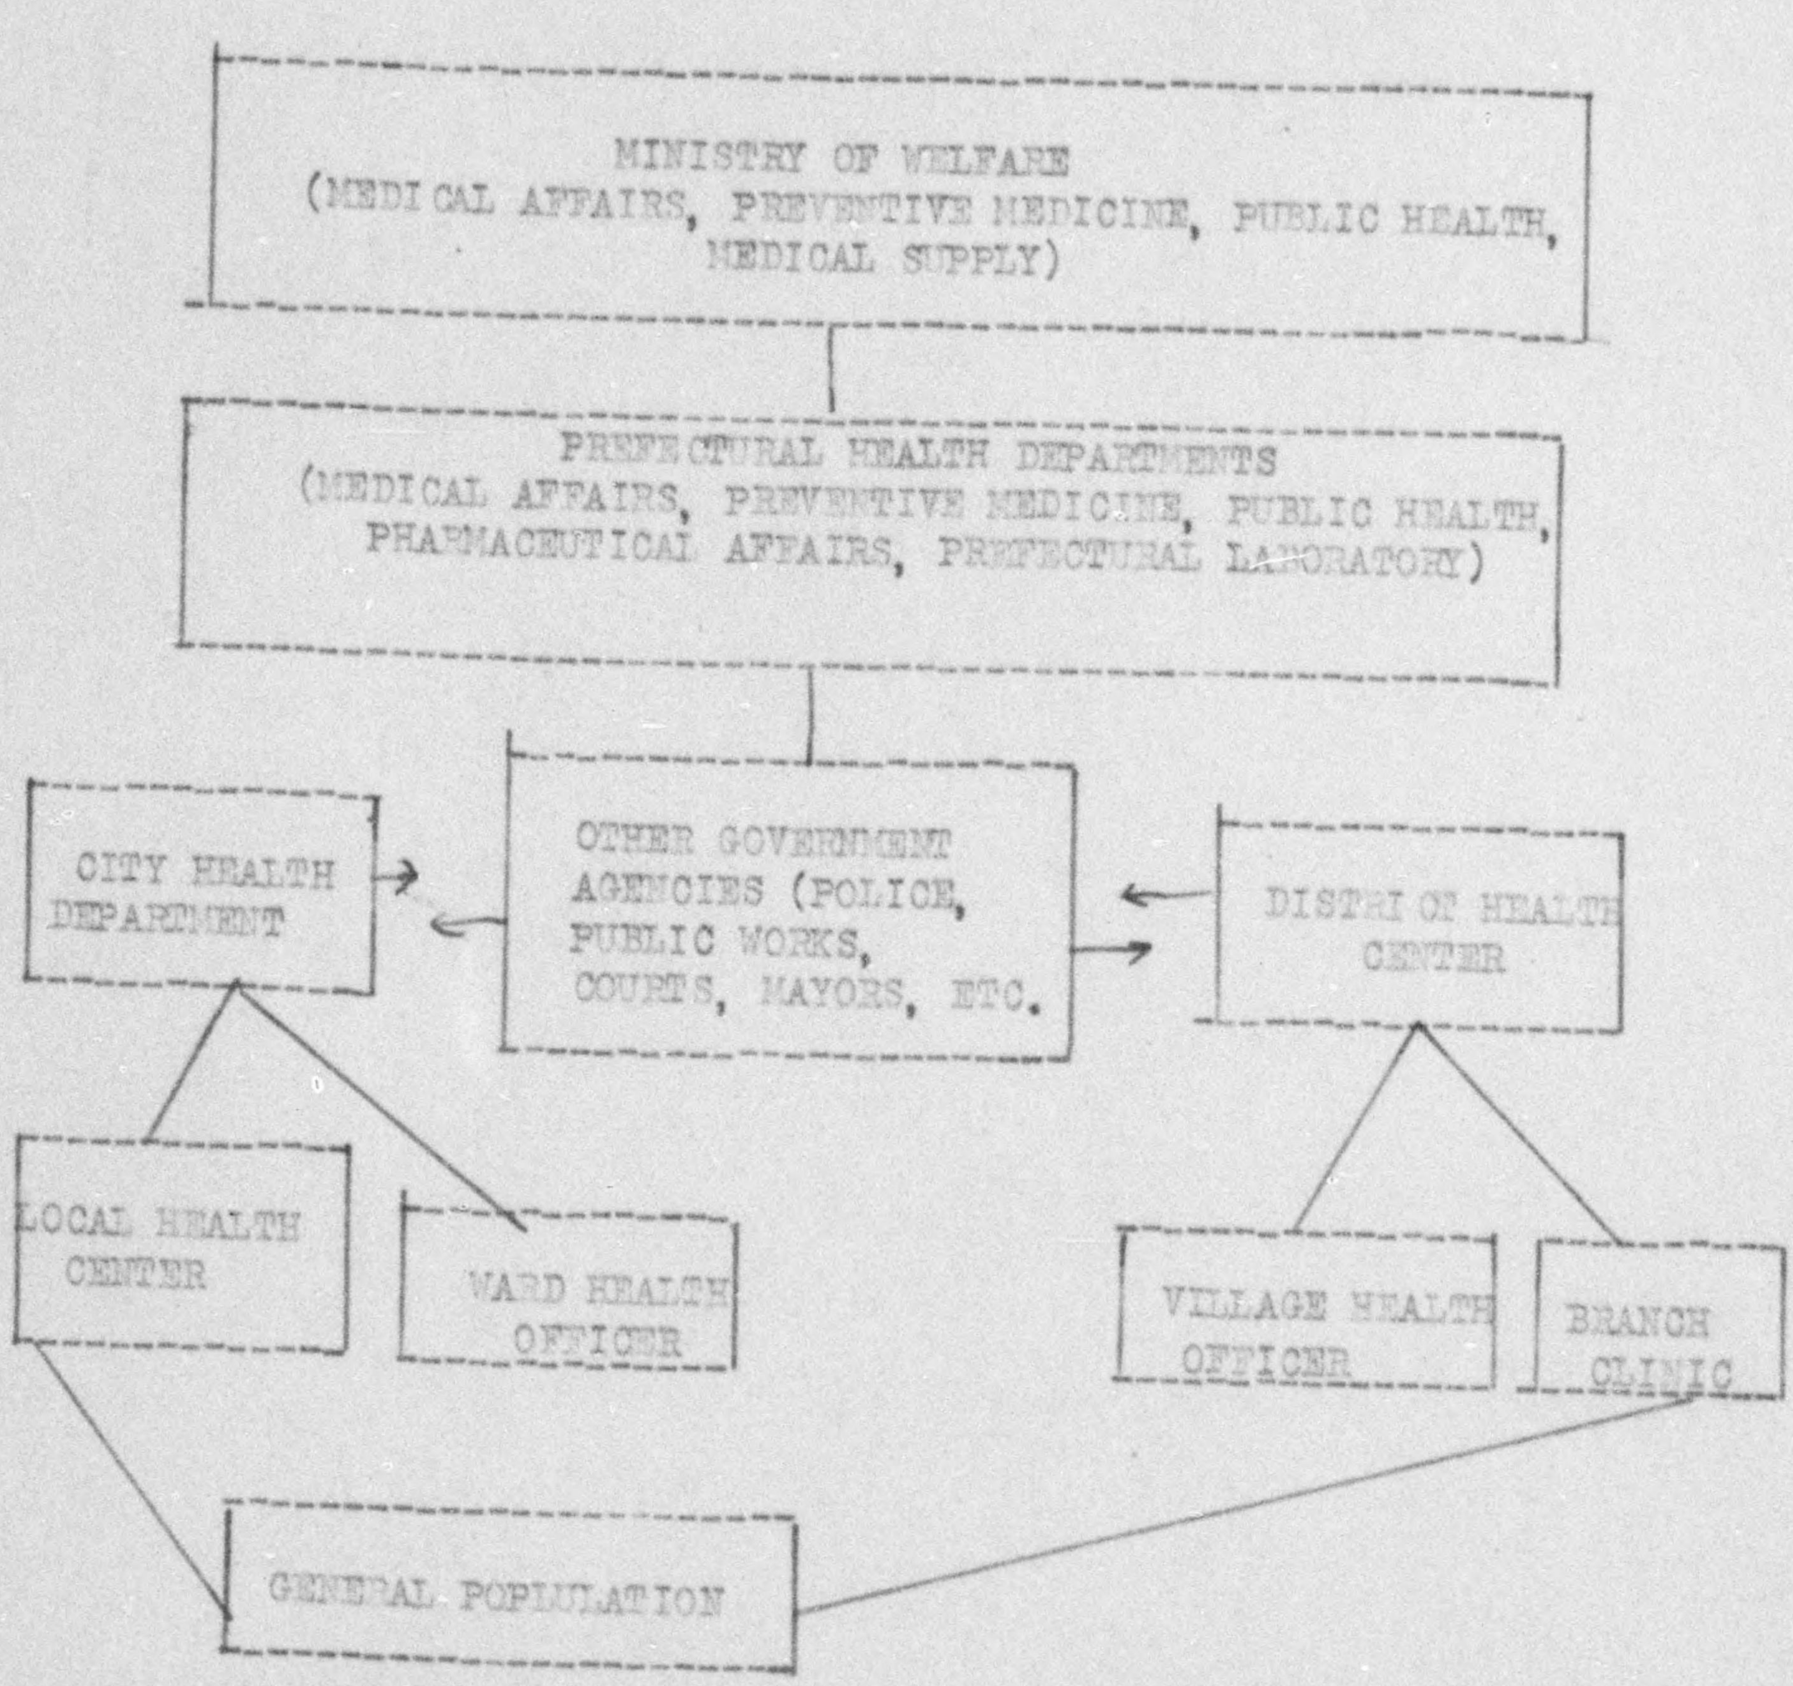
c. Full attainment of this mission may not be reached during the occupation. The nation is neither economically nor educationally capable at the present time of carrying on a full, well-rounded program. The foundations have been laid in the various changes in public health structure at ministry level, prefectural level, prefectural level, and in the health centers.

d. Our Objective today is to build a permanent, adequate organization to carry on the public health programs. This organization must be based on a population educated to know and expect a high standard of medical care, and allied professions educated sufficiently to be capable of rendering this care and willing to do so. This our main efforts are to be on education and adminstration.

2. JAPANESE PUBLIC HEALTH ORGANIZATION.

a. The chart below illustrates the present organization of the Japanese health service:

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013



b. The Ministry of Welfare is the national public health agency. Personnel of its four major bureaus plan, administer, and supervise the national health programs and services.

c. The prefectural health department is an independent unit directly under the governor. It is responsible for planning, organizing and supervising the health programs of the prefecture. Local or district health administration is accomplished by city health departments in urban areas or by district health centers in rural areas. In cases where a city health department exists, this department will administer the local health centers which provide health services in the area of their jurisdiction.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

Rural district health centers, in addition to their administrative functions, will usually incorporate the clinic services with the administrative work. It is hoped that eventually there will be a local health officer, who is a doctor, for each town and village or city ward under these district health units.

3. GENERAL. - Operating procedures of general application are contained in Chapter 3.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

i. Veterinary activities include the supervision of prefectural inspection services relating to meat, milk, and fish inspections, and education of the veterinary officials relative to new procedures in plant and establishment inspections, and the use of laboratories in milk control. The formulation and introduction of new programs and methods concerning animal-disease control, and the supervision of existing programs and of laboratories manufacturing veterinary biologicals, are further activities falling within the scope of veterinary affairs. Supervision is accomplished by visiting meat establishments, dairy farms, milk plants, and fish markets, accompanied by prefectural veterinary officials. Periodic conferences may be held with these officials and their technical staffs at which time deficiencies noted on inspections and methods to be used in correcting them should be discussed.

j. In the field of quarantine supervision, public health officers who have open ports in their prefectures are responsible that all vessels are inspected and that provisions of operational directives are complied with.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

k. After having informed himself of the measures required by public health directives as well as of the general aims of the occupation, and after having acquired some knowledge of the present situation of the Japanese nation, the public health officer should systematically investigate the public health situation in his prefecture. To do this, first become thoroughly familiar with the organization of the health service in the prefecture, investigating its size, the state of its finances, who the key officials are, and something of their ability. In addition, gather information as to the number of health centers, hospitals, sanitoria, clinics, and other institutions for medical care in the prefecture, and the number of doctors and nurses available to staff these institutions. Investigate the vital statistics and morbidity statistics of the prefecture. Investigate sanitary engineering facilities. Ascertain adequacy of disease control programs, especially venereal disease and tuberculosis. Examine methods and facilities for drug production and distribution. Determine the status of public health information and education programs.

l. The public health officer is now in a position to determine the particular measures which must be taken to establish and adequate health service. With the information thus gained, prepare a list of objectives which must be accomplished to provide such a service. Each month set certain of these objectives as goals with due consideration to priorities established by higher headquarters. Then, plan a detailed schedule which will indicate the inspections, conferences, special reports, lectures, et cetera, which will be necessary to accomplish these objectives. At the same time this schedule should provide for coordination of these particular activites with the routine work which must be performed by the section. Such planning will make it possible to obtain regular progress in all the fields of public health. Without planning, progress is frequently one-sided, personnel poorly utilized, and efficiency poor.

m. The chief modes of operation utilized by military government teams include inspection, special reports, conferences, and lectures. The chief object of these techniques is to find out what progress is being made, to correct misinterpretations or mistakes on the part of the Japanese, and to educate theJapanese officials in the scope of their work. The organization of information programs utilizing pamphlets and posters, the preparation of literature, and the organization of committees, et cetera, form a very important part of the business of Japan's education and the work of military government. Finally, in case of non-compliance by the Japanese with SCAP directives, military government may take action by reporting such non-compliance to SCAP through channels, who will in turn take corrective action through the Japanese government. It should be emphasized that the Japanese government is entirely responsible for the health program.

n. Field inspections should occupy about one half of the health officer's time. They should be caried out so that all health installations and programs are inspected in one area at the same time. Inspections should be as educational and informative to the Japanese as possible. Deficiencies are more frequently and the result of ignorance and the lack of material and personnel than lack of cooperation and obstinacy on the part of the officials.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

n. Inspections should cover regularly all the major health programs. They form the chief basis for estimating progress and indicating lines along which future action must be directed. Verbal assurance by Japanese officials should not be subsituted for actual investigation.

o. Follow-up inspection should be carried out regularly. Japanese personnel and enlisted men may be utilized at times for these inspections, in accordance with specific and detailed instructions. These persons must not give instructions or orders.

p. Special reports from the Japanese form a means of keeping informed as to the progress of various programs. In this line, weekly reports of communicable disease, reports on attendance and types of treatments at venereal disease clinics, reports of water chlorination, and perhaps a summary of monthly health department activities, are particularly valuable. However, reports from the Japanese should not be burdensome. Neither should they be used as a substitute for field work by the section personnel. The Japanese health officials need time to carry out their duties.

q. Conferences with Japanese officials are perhaps the most useful and valuable technique of operation utilized by military government. In these, the nature of Japanese activities can be learned, their problems understood, and proposals for their solution made. These conferences also provide the best opportunities for education of key officials and the development of programs which will tend to accomplish the objectives of the occupation. In this same line, lectures and meetings with committees of influential citizens also form valuable means of education. Through their aid, literature, posters, radio programs, and other publicity campaigns can be devised.

r. Underlying the accomplishment of the objectives previously described, must be good office routine to facilitate and direct the aims and techniques of operations described above.

s. An adequate filing system should be established. This could be arranged in four sections. The first might contain all the partinent public health directives, the second all the file copies of reports being sent out of the office, the third incoming reports from the Japanese, and the fourth a folder for each of the major activities carried on by the section.

t. Reports of communicable disease from the Japanese should be complied systematically and plotted in graphic form so that disease problems are clearly illustrated. Such charts are valuable for demonstrating health problems to the Japanese and indicate to the health officer some of his chief problems. Cases of typhus, smallpox, cholera, plague and Japanese B encephalitis and any significant outbreak of communicable disease should be reported immediately through the regional team. The team public health section is also responsible for preparing several medical department reports.

u. It is advisable that frequent, brief, informal conferences be held among members of the health section so that current plans and

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

operations may be discussed and coordinated. Weekly conferences with other sections of the team are also valuable.

v. The public health officer must coordinate his activities with all other sections of military government in order to get a more detailed and more intelligent approach to specific problems relating to these sections.

5. PUBLIC HEALTH ADMINISTRATION. Through the operational procedures listed in Chapter 3 the team public health officer will take necessary action on all public health activities. The principal fields of public health activities are discussed in succeeding paragraphs.

a. Public healthdepartments were provided for the major prefectures as a result of SCAPIN 945, 11 May 1946 - "Reorganization of Governmental Public Health and Welfare Activities". The Local Autonomy Law, No. 67, 16 April 1947, as amended 17 December 1947, provided for a separate health department in each prefecture. A description of the new health department is set forth in OD 9 for 1948, subject: "Establishment of Prefectural Health and Welfare Department". Encourage the implementation of recommendations pertinent to the public health department and the assumption of full responsibility for all health activities in the prefecture by the health department chief.

b. The problem of properly staffing health department facilities has been recognized b the Ministry of Welfare. A plan is being put into effect to correct this as shown in OD 7 for 1948 - "Procurement and Training of Personnel to Staff Public Health Organizations". Encourage local action.

c. Health centers are to be the keystones of the public health system in Japan. Present plans call for one such center for each 100,000 persons. The Health Center Law, No. 101, was passed by the Diet 5 Dec, 1947. Among the other provisions it gives this unit the following functions (Also PHMJG 16, 7 April 1947 - "Expansion and Improvement of Activities of Health Centers"):

(1) Vital statistics.

(2) Communicable disease control.

(3) Venereal disease control.

(4) Tuberculosis control.

(5) Sanitation.

(6) Health education.

(7) Public health nursing

(8) Maternal and child welfare.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

(8) Maternal and child welfare

(9(Diagnostic laboratories.

(10) Nutrition.

(11) Dental hygiene.

(12) Medical social service.

d. The doctor in charge of the health center will also be the public health officer for the area which the health center serves. He should be the best qualified man available as he will act both in a professional and an administrative capacity.

e. Health centers must be located where they are easily accessible to the majority of people they are intended to serve. Some existing health centers may have to seek new sites. The health centers, whether municipal (in the 31 cities over 150,000 population) or prefectural, will be directly responsible to the prefectural health officer and he in turn to the governor.

f. The doctors and hospitals in the health center area will send in all epidemiological and vital statistics reports to the health center. Here they are compiled and analyzed so that the health center chief is cognizant of the health conditions of the people in the area. He will be able to stop or minimize incipient epidemics by taking ea ly preventive and quarantine measures. The clinics for venereal disease and tuberculosis control will offer all treatment necessary to affect an arresting of these diseases without regard for ability to pay. All other services are for the indigent. Sanitary and veterinary officers are to be assistants to the health center chief and responsible for activities in their respective fields. The clinics for maternal and child welfare are to give pertinent advise. The health education section should give demonstrations and maintain exhibits in order t o make the health center a focal point for hygiene information. Nutritionists check the food intake of the people and also investigate and teach the preparation of new foods. The dental section makes dental surveys of school children and refers them to private dentists where possible. The laboratory services are open to all physicians and hospitals as are the other services of the health centers. Some health centers do the more complicated diagnostic tests while others do only simple ones. The public health nurses, through liaison with the other services, help in the the clinics and in the field, do contact tracing, home nursing, and home education. The nurse follows the patient from his district through the clinic, taking charge of his records and seeing that all necessary action is taken. The team health officer should familiarize himself with each of the health centers, encourage and aid the chiefs in making them clean and in bringing the services now offered to as high a professional standard as possible.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

11. VETERINARY AFFAIRS. - Veterinary medicine is presented in a series of technical bulletins. These are TB-PH Vet. 1, PH & W Section, GHQ, SCAP, February 1947 - "Duties and Functions of Military Government Veterinary Officers"; TB-PH Vet. 2 PH&W Section, GHQ, SCAP, 22 November 1946 - "Dairy Inspection"; TB-PH Vet. 3, PH&W Section, GHQ, SCAP, October 1946 - "Meat Inspection"; TB-PH Vet. 4, PH&W Section, GHQ, SCAP, March 1947 - "Anthrax"; and TB Med. Vet. 5, PH&W Section, GHQ, SCAP, July 1947 - "Rabies".

a. The 1948 program of livestock dusting allows the use of both dust and 5% residual DDT spray. These agents will be issued through the Animal Hygiene Section of the various prefectural governments in the amount of 25% of the quota each quarter. The spraying program will be carried out once every three months.

b. Surveillance is required of veterinary action by OD 40/.1, 8 April 1946, subject: "Public Health and Welfare Procedures in Japan".

c. In the field of animal disease control, particular emphasis is place on the eradication of bovine tuberculosis and the control of rabies. Prefectural officials should adhere strictly to existing policies, and enforce laws relating to these diseases. In the matter of bovine tuberculosis, modern methods of testing should be demostrated and their adoption advocated, while the importance of removing all reactors from dairy herds should be stressed. In the field of milk and meat inspections, every effort should be made to bring to the attention of officials concerned sanitary deficiencies found in abattoirs, dairy farms, and milk plants, on periodic visits to these establishments. Further, surveillance should be maintained over these officials and the corrective measures they have instituted. The value of a laboratory service in producing a safe milk supply and its use in the sanitary control of a milk supply should ever be impressed upon prefectural inspection officials.

d. The prefectural veterinarian should be required to furnish the local military government public health office immediate report of the following animal diseases:

(1) Anthrax.

(2) Blackleg.

(3) Foot and Mouth Disease.

(4) Texas Fever.

(5) Swine Cholera.

(6) Swine Plague.

(7) Swine Erysipelas.

(8) Equine Encephalomelitis.

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

And a monthly report of the following diseases:

(1) Anthrax.

(2) Blackleg.

(3) Infectious Abortion.

(4) Glanders.

(5) Foot and Mouth Disease.

(6) Scabies.

(7) Swine Plague.

(8) Swine Cholera.

(9) Swine Erysipelas.

(10) Texas Fever.

(11) Foul Pest.

(12) White Diarrhea of Chickens.

(13) Rabies.

(14) Equine Infectious Anemia.

(15) Equine Abortion.

e. Statistics of these diseases should be compared with the figures published in the weekly PH&W Bulletin and should agree closely.

f. Important Japanese laws on veterinary affairs are listed below:

(1) Law 29 - The prevention of Animal Infectious Diseases.

a. Ordinance No. 152, 25 April 1947 - The maximum value which shall be delivered to owner.

b. Ordinance No. 9, 19 January 1923 - Expense amount in conducting the prevention of infectious diseases and cattle tuberculosis.

c. Ordinance No. 1, 19 January 1923 - Application of laws concerning the prevention of animal disease (infections).

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

d. Ordinane No. 2, 19 Jamuary 1923 - Relating to animal quarantine.

(2) Law 22 - Horse Castration Law.

a. Ordinance No. 223, 17 June 1916 - Pertaining to the expense and indemnities for carrying out castratio.

b. Ordinance No. 29, 17 June 1939 - Regulation pertaining to the application of the above law

(3) Law 53 - Veterinarian Law

a. Ordinance No. 6, 9 April 1927 - Concerning the application of the above law.

b. Ordinance No. 19, 27 December 1932 - Relating to the designation of private veterinary colleges.

c. Ordinance No. 12, 20 April 1938 - Relating to licensure examination.

d. Ordinance No. 75, 5 April 1927 - Relating to veterinary association.

(4) Law 89 - Animal Horseshoer Law.

a. Ordinance No. 440, 29 June 1940 - Relating to Horseshoers' Association.

b. Ordinance No. 50, 29 June 1940 - Relating to application of the above law.

(7) Pending - Law relating to the control of biological products for animal use.

(8) Law 233, 1 January 1948 - Food sanitation Act.

(9) Law 32, 1906 - Slaughter House Law.

(10) Pending - Milk Law (Now under draft).
Meat Law (Now under draft).

g. Japanese prefectural animal disease control programs should include plans for the control of outbreaks of important animal diseases such as foot and mouth disease, rinderpest, rabies, anthrax, and infectious equine anemia.

h. When difficult problems arise in this field and the services of a trained veterinarian are needed, a request should be made to higher headquarters for such service. As the oestrus period of dogs is usually April and October, eradication of stray dogs should be intensified at this time.

Laboratories

Health Center

A. Health Center:

Name and location of each health center, physical plants, equipment, especially X-ray apparatus.

No. of doctors_____
No. of nurses ____Clinical_____Public Health_____
No. Technicians (including sanitary teams)_____No. of Clerks____
No. of clinics and their schedules _____No. of average patients_____
Population of the health center district_____
Operating committees:
Who are they?

Blood tests done before giving out maternity ration book?_____

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

Where do you send the blood, culture, and other laboratory test samples?

How long do they have to wait for the results?

No. of communicel diseases during the month of past 3 months. (Especially dysentery, typhoid(para) typhus, Japanese B. encephalitis, polio and etc.)

How often and how many doctors and nurses do you send them to get refresher courses at Public Health Institute?

(i) Environmental sanitation:

a) Equipments for rodents and insects control.

b) How many teams?

c) How often the districts covered?

d) Garbage disposal

e) Water supply system and plants.

f) Gas, electricity and other utility facilities.

(ii) Food Sanitation:

a) How many inspectors?

b) No. of restaurants with and without license.

c) No. of stalls.

d) How many public markets?
vegetable and fruits -
meat -
miscellaneous including beverages -

e) Hospital food supply?

(iii) Veterinary

a) How many slaughter houses?

b) How many milk plants?

c) How many canneries?

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

d) General survey figures for
(horses -
(milk cows -
Population of dogs -
(dogs -

e) No. of rabies in 1949.

f) No. of Equine encephalitis in 1949.

g) Quantity available for infant and baby milk supply.

(IV) Activities:

a) Education and other campaigns.

b) Exhibitions of what kind?

(V) Activities of Public Health Nurses:

a) How the rural districts covered, and the transportation facilities?

(VI) Clinical test samples:

a) Where do you send Wassermann culture and test samples?

B. Medical Sections:

(1) Local medical association?

a) Names of staff members of board

(2) List of hospitals (names, addresses, telephone no. and the director)

a) Government

b) Public

c) Private

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

Please give classification and bed capacity of the hospital (TB beds?)

(3) Do you maintain special division to work on TB program? and how often

(4) How do you make inspection for hospitals and sanatorium.

(5) How do you inspect clinics?

(6) Blood transfusion

Present status

(7) How do you meet the emergency cases?

Ambulance?

Where do you keep it?

Who runs it?

(8) Do you have close cooperation of medical examiner and ambulance service?

(9) Medical Statistics

(10) Physical and routine medical examination for Occupation's Japanese personnel.

C. Nursing Section:

(1) Clinical nurses, midwives and public health nurses association.

a) Membership?

b) How do you maintain smooth connections with the central office?

c) How often do you hold meeting?

d) Private nurses' association?
Is it consolidated with b)?

D. Pharmaceutical Section?

1) How is narcotics controlled?

(2) How are these drugs, medical instruments, equipment, and etc. supplied?

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

(3) Do you have central supply system?

(4) Do you make inspection of prescription at individual drugstores?

How long do they keep them?

E. Water Supply, Sanitary (nightsoil) Constructions

(1) How many reservoirs? Purification System?

(2) How many pumping plants? and sources of water?

(3) Disposal of nightsoil and garbage?

(4) Do you inspect the nightsoil reservoir of farmers? and give them instructions to mature to couple fermentation?

(5) How do you maintain cleanliness of ditches and sewage pipes?

(6) Do you maintain public benjo?
If so how do you keep them clean?

(7) Do you have public telephone booth?
How do you keep the mouthpiece and receiver clean?

(8) How often do you maintain anti-spitting campaign?

F. School lunches

(1) How is your school lunches carried out?

(2) Do you maintain school lunch dietitian?

(3) Do you keep health teachers at schools?
How do they keep smooths cooperation of health centers?

(4) Who get supply of food materials?

(5) Do you keep good connection with health offices?

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013

(6) Gives names and addresses of medical school, nurses' training school, and other miscellaneous schook in connection with sanitation and public health concerns.

G. Laboratories

(1) Do you maintain prefectural laboratory for medical and industrial examinations?

(2) Describe all the sections in the laboratory.

(3) Describe the type of work done in each section.

(4) Describe the system to send the samples to the laboratory.

(5) What are the charges?

(6) Do you maintain branches?

(7) Describe the relation of health centers and laboratory.

H. General Affairs:

(1) Have you done anything to simplify the clerical work?

DECLASSIFIED E.O. 12065 SECTION 3-402/NNDG NO. 775 013
