Foreword

I take pleasure in presenting the 90th Annual Vital Statistics Report compiled by the Office of the Registrar-General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1959. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1959.

In conclusion, may I state that, while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths in the Province of Ontario.

A handwritten signature in black ink, appearing to read "J.W. Gareau".

B.A., Q.C.,

Registrar-General.

SIR :

I have the honour to submit for your approval the Ninetieth Annual Vital Statistics Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1959.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,
Deputy Registrar-General.

TO THE HON. JOHN YAREMKO, B.A., Q.C.
Registrar-General of Ontario.

* Born to unmarried mothers

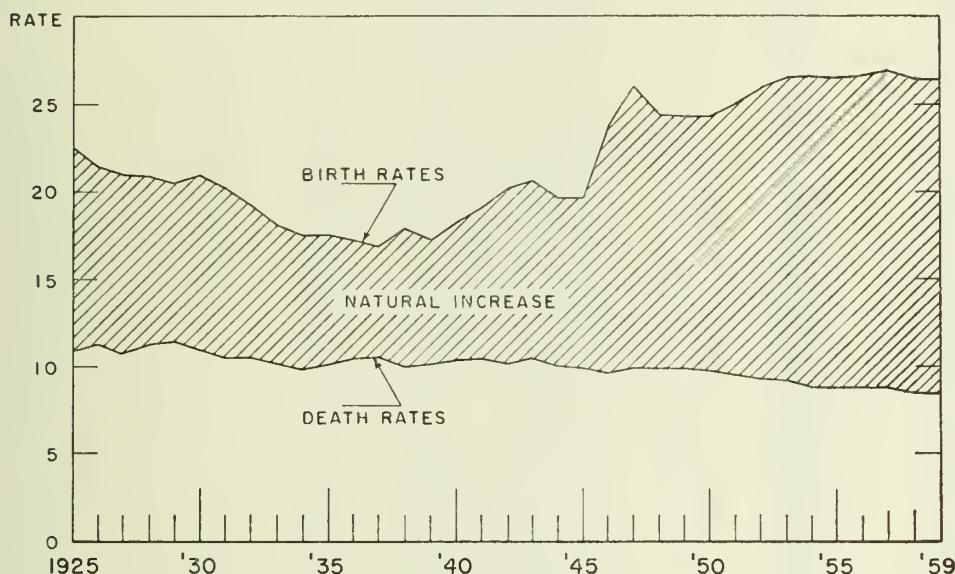

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951-1959.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1959 for every 1,000 babies born alive, 12 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1959, 78 were to this group of mothers.

Stillbirths

In 1953, for the first time, certain detailed information regarding stillbirths registered in Ontario was published in this Report.

The data included in the following three tables comprises the total number of stillbirths (2,016) registered to resident mothers of this Province, 1959.

Of the 2,016 stillbirths registered during the year, 1,160 or 57.6 per cent occurred at or near term, while 853 or 42.5 per cent were recorded as less than 37 weeks' gestation (Table I(1)).

In Table I(2) there are shown the ten major categories of causes of stillbirth according to the age of the mother while in Table I(3) the same ten causes of stillbirth are set out by periods of gestation.

TABLE I(1) STILLBIRTHS BY AGE OF MOTHER AND REPORTED PERIOD OF GESTATION, ONTARIO, 1959

Chart 3

INFANT MORTALITY
ONTARIO
DEATH RATES PER 100,000 LIVE BIRTHS
AT EACH AGE PERIOD
FIVE YEAR AVERAGES 1941-1955
AND FOR THE YEAR 1959

2800 —

Infant Mortality

Table J and Chart 3 both show very clearly that, although infant and neonatal mortality rates have declined during the past ten years, the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

Sixth Revision of the International Lists of Diseases and Causes of Death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1959 being 617, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1959 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

Towns—Units of 5,000 to 10,000.

General Mortality

Table N presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

*Includes Hodgkin's disease and the leukaemias.

TABLE R NUMBER OF DEATHS FROM SELECTED NOTIFIABLE DISEASES,
ONTARIO, 1950-1959

Chart 5

DEATHS FROM
TUBERCULOSIS, CANCER AND PNEUMONIA
ONTARIO, 1948-59
RATES PER 100,000 POPULATION

* The 1950 to 1959 figures comprise the malignant neoplasm group (categories 140-205 under the 6th Revision of the International List of causes of death).

Mortality from Tuberculosis

Table S (1) shows the deaths from all forms of tuberculosis in the province from 1950 to 1959. Table S (2) shows the death rates per 100,000 population classified by the age of the decedents from 1950 to 1959. During the year 1959 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 2.8 per 100,000 of population. Chart 5 illustrates the reduction in mortality from tuberculosis which has taken place since 1948.

Table S (3) in Part 1 of this report gives details of deaths and death rates for counties, cities, towns and villages of 5,000 population and over according to place of occurrence and place of residence for the year 1959.

(1) Excluding Patricia Portion

Mortality from Cancer

Chart 5 illustrates the trend in the mortality rate from cancer. The increase in the total number of deaths since 1950 is shown in Table T (1) and is apparent in most of the age groups particularly among older persons. Table T (2) shows the rate from 1950 to 1959 by sex.

Table V Classification of Accidental and Violent Deaths According to the Nature of the Injury, Ontario, 1959

Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1959.

**TABLE W MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION,
ONTARIO, 1933-1959**

YEAR	Number	Rate per 1,000 Population	YEAR	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1946.....	46,073	11.2
1934.....	25,874	7.3	1947.....	44,056	10.5

			1959.....	46,598	7.8

Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past five censuses.

	1921*	1931	1941	1951	1956
Divorced persons—Male.....	1,135	1,071	2,291	4,766	5,529
Female.....	1,369	1,015	2,865	7,668	9,069
Per cent of population—Male.....	0.08	0.06	0.12	0.21	0.20
Female.....	0.09	0.06	0.15	0.34	0.34

*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but, since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts, the rate has been increased.

TABLE X DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1959, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1959

Year	Dissolu-tions of Marriage	Rate per 100,000 Popula-tion	Year	Dissolu-tions of Marriage	Rate per 100,000 Popula-tion	DISSOLUTIONS GRANTED TO—		Ratio of Dissolu-tions to Males per 1,000 Dissolu-tions to Females
