"Municipal program," framed by National Municipal League.—"At the joint invitation of the City Club of New York and the Municipal League of Philadelphia, a Conference for Good City Government was held in Philadelphia in January, 1894. Out of this conference grew the National Municipal League, formally organized in New York City in May, 1894. The League includes in its affiliated membership, the leading municipal reform organizations of the country, and, in its associated membership the leading students of municipal government. At the annual meeting of the League in 1897 held in Louisville, a special committee was appointed 'to report on the feasibility of a *Municipal Program* which will embody the essential principles that must underlie successful municipal government, and which shall also set forth a working plan or system, consistent with American industrial and political conditions, for putting such principles into practical operation; and the Committee, if it finds such *Municipal Program* to be feasible, is instructed to report the same with its reasons therefor, to the League, for consideration.' The Committee appointed under this resolution made a preliminary report at the annual meeting of the League held in Indianapolis in 1898, and a final one at the annual meeting of the League held in Columbus in 1899. The Committee did not claim that its report constituted the final word upon the subject referred to it, but its members were convinced, as a result of their studies and investigations, that '*A Municipal Program*' which would embody the essential principles that must underlie successful municipal government was entirely feasible, and they recommended certain Constitutional Amendments and a general Municipal Corporations Act, as setting forth a working plan or system consistent with American industrial and political conditions, for putting such principles into practical operation. The Committee's recommendations were unanimously adopted by the League at its Columbus meeting."—H. E. Deming, *Government of American cities*, p. 203.—As originally published, the "municipal program" has gone out of print, but Mr. Deming, under an arrangement with the league, reproduced it as an appendix to his book, with an explanatory discussion of it. The main objects sought in it are "to clothe the city government with such broad powers as will enable it to perform all the appropriate functions of a local government without resort to the State Legislature for the grant of additional power;" and to "prevent the interference by the State Legislature with the free exercise by the city of the governmental powers granted it." Beyond this, the designers of the "program" worked out what seemed to them the most effective plan of organization in municipal government for the exercise of such full powers. In 1910, the National Municipal League published a "new municipal program."

MUNN VS. ILLINOIS, celebrated legal case concerning a man by the name of Munn, who was prosecuted and convicted under the statutes of Illinois for carrying on the business of public warehouseman without a license. He appealed to the United States Supreme Court on the grounds that the statute would deprive him of his property without due process of law, and that the statute was a contradiction of the commerce clause in the Constitution. These contentions the Supreme Court denied, holding that the business of public warehousing, like that of common carriers, was affected with a public interest and subject to special regulation under the police power, and that this power was legislative, having been exercised by the British Parliament prior to the formation of the United States, and was therefore a part of common law and as such, retained by the State legislatures, if not limited by the Constitution of the United States.—See also SUPREME COURT: 1882-1898.

MUSCADINS, or *Jeunesse Dorée*, Anti-Jacobin party of the French Revolution. See **FRANCE:** 1794-1795 (July-April).

MUSCHENBROECK, or *Musschenbroeck*, Pieter von (1692-1761), Dutch mathematician and natural philosopher. Credited with the discovery of the Leyden jar. See **ELECTRICAL DISCOVERY:** Early experiments.

MUSCOGEES, tribe of North American Indians. See **MUSKHOGEAN FAMILY.**

MUSCOVY, former name for Russia.

MUSCULUS, huge movable covered way which the Romans employed in siege operations.

MUSEO NAZIONALE, Florence, in the Bargello. It is chiefly devoted to sculpture, splendidly representing Donatello, Verrocchio and Michelangelo. "It is, if we may believe Vasari, partly to Arnolfo and partly to Agnolo Gaddi that we owe the Bargello, that place so like a fortress at the corner of the Via del Proconsolo and Via Ghibellina. Begun in the middle of the thirteenth century for the Capitano del Popolo, it later became the Palace of the Podesta, passing at last, under the Grand Dukes, to the Bargello, the Captain of Justice, who turned it, barbarously enough, into a prison, dividing the great rooms, as it is said, into cells for his prisoners. To-day it is become the National Museum, where all that could be gathered of the work of Tuscan sculptors is housed and arranged in order."—E. Hutton, *Florence*, p. 276.

ALSO IN: E. G. Gardiner, *Story of Florence*, pp. 214, 216.

MUSEO NAZIONALE, Naples.—"Originally commenced in 1586 as a cavalry barrack, but left unfinished until 1610, when it was assigned to the University, and after the inauguration in 1616 the building was known as the *Regii Studii*. After the earthquake in 1688 it was used by the courts, and during the revolution of 1701 it became a barrack. In 1767 it was enlarged and assigned to the Department of Public Instruction, and having been arranged for a public Museum, King Ferdinand IV, in 1790, removed here the Royal Collection of antiquities. After the restoration of the Bourbons they enriched it by additions from time to time, and declared it to be their private property, independent of the Crown, under the name of the Museo Reale Borbonico. Garibaldi, when dictator, proclaimed in 1868 the Museum and the territory devoted to the excavations to be the property of the nation, and increased the endowments and works connected with it. On the consolidation of the kingdom of Italy, Victor Emmanuel reorganized the Museum and included in it the Cumæan and Santangelo collections. The Museo Nazionale is especially rich in bronzes and statues, but its most characteristic feature is the priceless collection of frescoes and paintings, and other objects dug from the ruins of Pompeii and Herculaneum."—T. Greenwood, *Museums and art galleries*, pp. 350-351.

MUSHROOM VALLEY, Battle of (1914). See **SOUTH AFRICA, UNION OF: 1914.**

MUSIC

Introduction.—The names, "Primitive Music," "Art-music," and "Folk-music," serve both as headings to the three main divisions of the article "Music," and as differentiating terms. Song, the most complex achievement of primitive man, is a permanent element in musical history and is one of the connecting links between primitives and civilization. *Primitive music* rests upon the pentatonic scale of five whole notes, and for the most part major; the melodies generally run from the top of the scale to the bottom; there is no part singing, no way of determining the pitch, and no universal key. Co-existent with art-music, and having the same common ancestry, is yet a third

type known as *Folk-music*; existing for purposes of lyric and narrative poetry, though never written down (except by collectors), it is one of the most permanent things in the world. Each singer learns his tunes, alters them to suit his own ideas, and transmits the result, orally, to his successor. Although an agglutination of the subconscious mind of a nation, *Folk-music* has the ordered beauty of design, balance, contrast, and proportion. *Nationalism in music* is better defined as a phase of national consciousness which is expressed in the idioms, and built on the elements of Folk-music by trained composers. *Art-music*, consciously formulated by the most competent thinkers of each

age, traces its beginnings back to ancient Egypt. In the three broad divisions of history: Ancient, Medieval, and Modern, art-music is progressively characterized by simple melody, simultaneous melodies (polyphony), and accompanied melody.

PRIMITIVE

First music.—Rude instruments.—"Music is coeval with the human race. In all probability it precedes spoken language. For music is primarily the expression of emotion; articulate language is the expression of definite thought. And in the process of evolution emotion precedes thought. The beginnings of music are to be found in nature herself. The howling of the winds, the humming of insects, the cries of animals, the songs of birds must all be considered as elemental music, inasmuch as they contain the two fundamental elements thereof: 'rhythm' and 'tone.'" In so far as we can learn from records and the study of primitive races, the first and lowest type of music is purely rhythmical; but man marked off from the rest of creation can at will, and with taste, combine emotion (melody) with gesture (rhythm). "When we contemplate the life of the savage we are to all intents and purposes observing the lives of our own primitive ancestors. As we see them to-day they without doubt portray for us a phase through which we ourselves passed on our way upward to civilization. No tribe of savages has yet been discovered who have not possessed some elemental fragments of music. . . . Most savage tribes gave their war cries, songs, and dances; their playful or ceremonious dances; their love or marriage songs, their funeral songs; and lastly their mysterious and pantheistically religious incantations: . . . to effect the deliverance of some person from a dread disease, or to bring rain, or abundance of game, etc. All of these are to be regarded as primitive music—music which has hardly as yet attained the dignity of an Art. . . . The most elemental cries of primitive peoples consist of a succession of sounds beginning on a high tone and descending by means of a gliding or slurring effect, to a low tone. Such are the cries of the Caribs, and of the aboriginal inhabitants of Australia. Definite musical tones cannot be recognized in these primitive cries, hence they cannot be accurately written down in the musical notation of civilization. In such simple and elemental cries as these, although no definite musical intervals are to be recognized, it is not long before they appear . . . and definite melodic design is the object toward which the savage mind unconsciously gropes. . . . It must not be supposed that the intervals in use in civilized music are wholly the invention of man. Many of the intervals, such as thirds, fifths, and octaves, are found to be quite perfect in certain animal cries and particularly in bird-song. . . . Music and the dance developed side by side. . . . In savage life they are well-nigh inseparable. . . . All primitive dances are accompanied by hand clapping, stamping of the feet, the beating of stones, the knocking of two sticks of wood together, or something of this nature to keep the time regular and to accentuate the rhythm. . . . The drum, roughly speaking, is the oldest musical instrument. It is of great interest . . . as it still holds a place of honor in the modern orchestra. . . . We have seen how naturally the percussion instruments . . . sprang into being, as it were, in response to an innate necessity for rhythmic expression, an inevitable accompaniment of the dance and the dance-song. Almost at the same time wind instruments of a simple and rude

kind were fashioned. Whistles were made from the bones of animals with the marrow removed. Pipes were made from hollow reeds, while conch shells and the horns of deer-like animals furnished the first trumpets. . . . To construct an instrument of the whistle variety which should produce more than one tone was the next step. On whistles or pipes of different lengths, tones of different pitches can be produced, low tones from long pipes, higher tones from shorter pipes. So different lengths of whistles were rudely bound together, the longest at one end, the shortest at the other end, and the intermediate ones arranged in a sequence according to their relative lengths. Thus an instrument was made from which it was possible to obtain a succession of rising tones, a primitive scale. . . . It has been given the poetical name of 'Pan's Pipes.' These 'Pan's Pipes' of more or less primitive construction, are found quite generally among the savage tribes of the world."—D. G. Mason, *Art of music*, v. 1, pp. 1, 3, 7, 14-15, 20-21.—"It is impossible to trace the progress of music in unbroken sequence from its primitive beginnings to its development as an art by civilized nations. The record is far too fragmentary. There are too many missing links, too many isolated and well-nigh inexplicable facts."—*Ibid.*, p. 28.

American Indian music.—"Of special interest to Americans is the music of the North American Indians. It is difficult to characterize this music by a few general remarks, as there are, or rather were, over fifty different tribes, each of which had its own peculiar music. . . . Music among the Indians did not occupy the place of an art. Song was not indulged in for the sake of giving pleasure, and music can hardly be said to have been developed among them in response to a love of melody for its own sake. . . . Song was the inevitable accompaniment of every important act or ceremony in tribal or individual life. The song, as a song, had no existence apart from the ceremony. It is true that gambling songs, and songs of labor, such as corn-grinding songs, are to be found among many of the tribes, but these are apparently variations of the general rule, and that they were indulged in for the sake of æsthetic pleasure is very doubtful. . . . In general it may be said that the . . . 'Iroquois,' 'Algonquin,' . . . or 'Kwakwiti,' are much ruder and present more rugged characteristics than those of the southern tribes, such as the 'Zunis' or 'Navahoes.' These southern Indian melodies are much more graceful. . . . The use of the interval of the fourth as a prominent melodic interval is quite a general characteristic of Indian music, and is noticeable in the music of many different tribes. . . . True to the most primitive characteristic of savage music, that of beginning on a high tone and descending gradually to the bottom of the voice, the melodic course of . . . Indian tunes is ever downward. . . . Among the Indians the drum is naturally the instrument most frequently in use. . . . The only other musical instrument deserving the name which is in widespread use is the so-called flute. This flute, pierced with six-holes and blown through the end (not across the side) is used as a court-ing or love-making instrument on which to serenade the loved one. . . . With the exception of the flute and its love-calls, instrumental music can be said not to exist among the Indians."—D. G. Mason, *Art of music*, v. 1, pp. 33-36.—"Nothing like a scientific study of Indian music was attempted until 1880. In that year Theodore Baker lived a while on the Seneca reservation, in the state of New York, and collected and studied

such Indian melodies as he could there obtain. The results of his studies were embodied in a pamphlet and published under the title, *Über die Musik der nordamerikanischen Wilden*. This little book first drew the attention of ethnologists and others to the hitherto unsuspected existence of a large and important native musical culture among the Indians. Since the publication of Baker's essay . . . the subject has not lacked investigators. The application by Prof. Fewkes, of Harvard University, of the phonograph to the accurate recording of Indian melodies has been used with brilliant success by investigators. Through the efforts of such workers as Alice C. Fletcher, Frederick R. Burton, Franz Boaz, James Mooney, Natile Curtis, Frances Densmore, and others, thousands of Indian songs of many different kinds have been collected, written down and published, forming a library of American primitive music of great completeness and inestimable value to students of the subject."—*Ibid.*, v. 1, p. 37.

Mexico, Ancient.—"The Music of Mexico was founded on the Drum. And the Mexicans developed the Drum in a manner which was quite peculiar to themselves. It was an instrument of melody with them, as it is with the Chinese and the rest of the Pipe nations, but instead of resorting to the somewhat clumsy contrivance of combining a lot of separate drums to produce the melody, the Mexicans had discovered how to produce different melodic notes from the same drum. And this they did by the use of vibrating tongues. In the top of the drum, which was an oblong, trough-shaped block of hollowed wood, in the flat top of this . . . they cut two long slits one at each side reaching nearly the whole length of the drum, and then cut a cross slit from one to the other, like a slit in a money box. This gave them two tongues of wood, and they had only to slice them to tune them to what note they pleased. Sometimes they would make two sets of these on the same drum, by cutting only half the top at a time, so that they could have two tongues on the left half of the top, and two on the right, with a little space of plain wood between each set. . . . These tongued drums were called *teponaztlis* and had a very deep tone. When they were played with other instruments, they served as the double bass. . . . But they were also played solo; for *teponaztlis* of various pitches might be so arranged as to play a consecutive melody between them, much as the Peruvian pipe players did with their Pan pipes. . . . So enamoured were they [the primitive Mexicans] of bass voices, for instance, that 'they would keep bass singers singing their bass songs for days together.' And the kind of bass they liked best was the deepest of deep bass—the *basso profundo*. For the tenor voice they did not care at all. . . . The Great Drum of the Mexicans was called *Vueatl*, and it could be tuned to any pitch by tightening or loosening the drum head. The reason of this was that it might play in concert with the *teponaztlis*. The copper gongs were struck with copper drumsticks, but the drums with drumsticks tipped with Indian rubber. And they had musical stones too like the Chinese, but they used them in a different way, for they clashed them together like cymbals. . . . And the copper rattles were made like small oil flasks, and the neck was the handle, and it was hollow; and the rattle was filled with small stones. Sometimes these rattles were made of silver, and sometimes of pure gold. In their ignorance of any stringed instrument, the Mexicans were put to it to devise perpetual variety in those simpler instruments they

had, not only in their form but in their quality of tone. So in their rattles, having tried the sound of pebbles rattled against copper, against silver, against gold, or of terra cotta pellets rattling against terra cotta, for they had terra cotta rattles too, they went on to try the sound of wood rattling against wood, or perhaps these wooden rattles may have been the oldest of all, and the terra cotta and copper rattles the subsequent ones. . . . They made those strange things . . . called Rattle Organs, and of which the music consisted in little pieces of wood rattling against one another. Of these Rattle Organs there were 2 kinds, the Small Rattle Organ, and the Great Rattle Organ; the first was called *Aiochicaoaztli* or *Nacatl-quouvitl*, and the second was called *Ayanhchicaoaztli*. . . . The second, of which the first was only a diminutive copy, . . . consisted of a board 12 feet long and a span broad (the first was only 6 feet long), on which were fastened, at certain intervals, round pieces of wood something of the shape of drumsticks, and when the board was moved these pieces of wood rattled against one another. These Rattle Organs were principally used in processions, and the players carried them on their shoulder. . . . Under the dominion of the master spirit the musical instruments became regular works of art. . . . They made their whistles in the shape of birds, frogs, men's heads; their *teponaztlis*, even the ordinary ones, were covered with carvings; but the *teponaztlis* used in war, the war drums, . . . were cut in the figure of a man crouching on his knees. . . . So delicate an ear had the Mexicans for all the shades of percussional sounds, that they could appreciate the variation caused by the stopping and unstopping of a hole in the body of a tambourine, no bigger than the hole of an ordinary flute stop. And they had rattles made in the shape of a snake crushing a toad in its coils; and things very much like the Chinese egg-instruments, that were really flageolets with two mouthpieces, that could play a bass and a treble at the same time; and pipes and rattles combined, in the form of three human heads supporting a pedestal—the pedestal was the pipe, and the heads, which were filled with stones, were the rattles. . . . As a curious commentary on . . . [the] blending and fusion of the Arts in Mexico, let us take those bodies which existed probably in all the cities of the Chichimec empire, and of which the chief one was at Terzucoc—may serve as a type of the rest. . . . It was concerned primarily with the regulation of Music. . . . Poets sang their compositions before it, and received prizes according to their merits; and it doubtless had much to do with determining what songs, out of the many that were written and rehearsed, should be sung at the monthly festivals. . . . It acted as a general Æsthetic Inquisition, and yet the name, Council of Music, was sufficient to denote its functions. . . . In the Vocal Music, 'metre and cadence were attended to so much, that unmeaning syllables were constantly interspersed in the poetry for the sake of the music.' Perfect time—perfect unison, are the invariable eulogies that are passed on the Mexican Music, and it is quite in keeping with such a character that dancing was its constant attendant. . . . The God of Music . . . was called *Tezcatlipoca*. He had brought Music from heaven on a bridge of whales and turtles; and he had twenty golden bells suspended round his ankles, which were a symbol of his power. And once a year the most beautiful youth in Mexico was chosen to be sacrificed to him; and the youth was chosen a whole year before, and during all that year he was dressed to represent

the god, and was regarded as the incarnation of Tezcatlipoca. . . . When the morning of the day of sacrifice arrived, he was taken by water to the Pyramid Temple where he was to be sacrificed. . . . And when the barge touched the shore, he was . . . delivered over to a band of priests. . . . And these conducted him to the steps of the pyramid, and he was hustled up in a crowd of priests, with drums beating and trumpets blowing. And he broke a flute on every step as he went up, to show that his love and his delights were over. And when he got to the top, he was sacrificed on an altar of jasper, and the signal that the sacrifice was completed was given to the multitudes below by the rolling of the great sacrificial drum. This was the drum that Bernal Diaz saw, and he says it was made of serpents' skins, and that the sound of it was so loud, that it could be heard eight miles away."—J. F. Rowbotham, *History of music*, pp. 332-342.

Peru, Ancient.—"Now could we have but crossed over to Peru before its conquest by the Spaniards, we might have heard those songs, forgotten now, which the reapers used to sing in the maize fields, as they were cutting the crops of Atahualpa; and whether they were reaping or binding up the sheaves, all the motions of their bodies were in time to the measure of their songs. . . . These reapers' songs were renowned all over Peru for their beauty. Except a few of the very best love songs, there was nothing that could come up to the reapers' songs; and in another way too they were remarkable, for Peruvian music consisted almost entirely of love songs, except a few songs about the warlike deeds of the past, which were sung at festivals and these reapers' songs, there was nothing else but love songs. And fortunately we can form a very fair idea of the ancient Peruvian singing, and could almost undertake to reconstruct the lost Peruvian melodies; for we have some very curious information about them. We are told that no such thing as unequal time was ever heard in Peru; that all the notes in a song were all of exactly the same length; we know what the favourite metre of the poetry was; and we know what the scale was . . . [the same as the Chinese 5 note scale]. So that putting these hints together, it would be no hard matter to reproduce much of the Ancient Peruvian music—for that piece of information about all the notes being of the same length is particularly valuable, indeed it is this which renders the attempt possible. . . . The Peruvians were not great singers and these are just the kind of metres, to have had an instrumental origin. 'In my time,' says Garcilasso, 'the people of Peru never sang at all, but they used to play their songs on the Flute instead, which came to much the same thing, for the words of the songs being well known and no two songs having the same tune, the melody of the flute immediately suggested the words to the mind.' It would be possible perhaps to argue from these and similar hints for a purely instrumental origin for the Peruvian metres. . . . The first thing that Garcilasso says [is] . . . that in his time the people of Peru never sang at all; and he adds that they had very had voices into the bargain, which he ascribes rightly or wrongly to this disuse of the art of singing. Flute-playing it appears had put singing quite out of court in Peru, and while it had always been in high favour there, just before the conquest it amounted to a positive passion. . . . The flutes which the gallants played upon had 4 or 5 stops, and were often wrapped in embroidered needlework. The reason the stops were so few was this, that only

songs were played on the flute, and 5 stops, which gave the complete Vocal Scale, were therefore sufficient. In the same way many of their Pan Pipes only sounded the 5 note scale, so that probably the Pan Pipes were also used to play the melodies of songs on. But most of the Pan Pipes however were tuned to a fanciful Instrumental Scale:—and these would no doubt toy with sweet sound, and play music not unlike the Instrumental Music of the Chinese. And they were such skilful players on the Pan Pipe and delighted in the instrument so much, that they used to form bands of Pan Pipes alone. And these bands were composed of 4 players, each with a different set of pipes,—one player had a set of Bass Pipes, another of Tenor, the third of Alto Pipes, and the fourth of Treble. And the Bass player would begin, and the Tenor player would answer him and the Alto would answer the Tenor, and the Treble the Alto. And so the Melody would soar up from the very lowest note right up to the highest, and they would fling it about from one to the other; and all in excellent time, for they were well trained. These bands used to play in the front of the palaces."—J. F. Rowbotham, *History of music*, pp. 327-331.

FOLK-MUSIC AND NATIONALISM

Introduction.—"The more a nation advances in civilization and self esteem, the more will it appreciate the precept put forth by the ancient sages, 'Know thyself;' and the more attentively will it investigate the views and tastes of other nations, since it is especially by observing others that we learn more thoroughly to understand ourselves. . . . The interest evinced, since the beginning of the present century, by several European nations in the popular songs, folk-lore, and other monuments of the mental condition of man in different parts of the world, is therefore a sign of progress not less delightful than the most important discoveries which have been made through the agency of practical science."—C. Engel, *Literature of national music*, p. vii.—"The Term National Music implies that music, which, appertaining to a nation or tribe, whose individual emotions and passions it expresses, exhibits certain peculiarities more or less characteristic, which distinguish it from the music of any other nation or tribe."—C. Engel, *Literature of national music*, p. 1.—"The folk-tale is the father of all fiction and the folk-song is the mother of all poetry. . . . 'The special value,' wrote Goethe, 'of what we call national songs and ballads, is their inspiration [which] comes fresh from nature—they are never got up, they flow from a sure spring. . . . The unsophisticated man is more the master of direct, effective expression in few words than he who has received a regular . . . education.'"—E. Martincgo-Cesaresco, *Essays on the study of folk-song*, p. 2.—There has always been, possibly always will be, two co-existent types of music—art music and folk-music. Folk-music is invariably simple melody, handed down from generation to generation, without any writing at all. It can be studied from one of two standpoints: artistic and the historical; and both may be studied along comparative lines; it is purely melodic, harmonic only by accident—the Russian *horovodi* affords the only known instance of folk-music which has developed into a rudimentary harmony without being written down. "A glance at the history of music will suffice to show that it falls into three periods: National music, in the sense of music being identified with the country of its origin, owing to

the comparative isolation of one country from another in early times. (Greek modes or tones; their adoption by St. Ambrose and St. Gregory; the flourish of Ambrosian and Gregorian chants all over Italy and abroad, consequent on the spread of Christianity; the English contrapuntists; the School of the Netherlands; the Italian movement, of which the Florentine Reformation forms an important part; the French clavecinists and opera writers, etc.), nationalism, here being in every case dependent on circumstances and not on the will of the composer. In Gluck, for the first time, we find music *International*, universal, not belonging to any one nation or school, but the outgrowth and representative of all the musical nations and schools of his time. . . . With Wagner the case is very different. He marks the starting point of the present great *Nationalist Movement*, and his aim, like that of every nationalist artist, was to express the character or soul of his country by means of his art."—R. T. Hall, *Wagner question and nationalism (Etude, Sept., 1918, p. 574)*.

Basque music.—"Among this little race of scarcely five millions, that speak five dialects of a language that none understands, . . . a vast treasure of folk music has been preserved since time immemorial, tunes ranging from the most emotional melancholy to the wildest rhythms of warlike dances (Zortzikos), from sweet shepherd lays saturated with mountain air to boisterous ditties of merriment and carousing. . . . The Celtic strain is clearly felt, a certain kinship to Breton and Welsh melody; but, strangely enough, also a relation to Finnish rhythms and harmonic conception. But this relation of the Basques and Finns is a shrouded mystery, strangely accentuated by the fact that recently anatomists have declared the absolute identity of the skull formation of both races."—K. Schindler, *Program of the 2nd subscription concert of the Schola Cantorum, New York, Mar. 24, 1920*.—"Therefore if the music of the Basques is of great antiquity, it must have sprung up under wholly different conditions from that of other nations. [No manuscript hitherto discovered is earlier than the eighteenth century.] It has a strange affinity with modern music, . . . due to the constant use of the leading note and the rapid and incessant changes of key. The Basque melodies are not founded on any particular scale; augmented intervals, whole tones, semi-tones, and even quarter-tones are freely intermixed, and a curious result is obtained by the constant repetition of a short phrase with alternating major and minor thirds. The time and rhythm of the Basque songs are irregular and complicated . . . but generally the bar has two beats, a weak and a strong which alternate in position: . . . the rhythmical grouping of the phrases is absolutely irregular; the periods are unequal in number, and none corresponds with the other; . . . the most popular tune (Sant Basque) . . . is surprisingly irregular. . . . In Aragon and Navarre the popular dance is the jota . . . almost always sung in thirds, and has the peculiarity that in the ascending scale the minor seventh is sung in place of the major."—G. Grove, *Dictionary of music and musicians, v. 4, p. 549*.

Bohemia.—"Bohemia has a musical history which is quite as brilliant as its literary. A love for music and a certain aptitude in its practice are the birthright of every Bohemian, be he Czech or German. . . . Soon after his [Dr. Burney, the historian,] arrival in the country he was privi-

leged to discover one cause of the preëminence of the Bohemians in music. At Czaslan he found a school full of 'little children of both sexes, from six to ten or eleven years old, who were reading, writing, playing on violins, hautboys, bassoons and other instruments.' After that it was easy for him to understand how the nobility of the country could maintain orchestras in their houses. In keeping servants it was impossible to do otherwise, 'as all the children of the peasants and tradespeople in every town and village throughout the Kingdom of Bohemia are taught music at the common reading schools, except in Prague, where, indeed, it is no part of school learning, the musicians being brought thither from the country.' As Bohemia led Europe in general culture centuries ago, it is not surprising to hear of the extremely early period at which the cultivation of artistic music began. A singing society was founded in Prague A.D. 1105, and there seems to have been an association of amateurs devoted to the singing of motets, madrigals, etc., as early as 1616. For over two hundred years some of the leading composers and performers of Europe have come out of Bohemia, the names of men like Gyrowitz, Wauhal, Dionys Weber, Wranitzky, Duschek, Dreyschock, Kalliwoda Benda, Stamitz, Skroup, Smetana, Dvorak and Fibich shining on the pages of history. A distinctively national movement on lines similar to those of the Young Russian School began in 1862, when a national theatre was founded at Prague and Smetana set a model for a large company of followers, now headed by Dvorak, by writing a national opera, 'Branibori v Cechach' ('The Brandenburgs in Bohemia'). Smetana carried the national movement also into the department of orchestral music, and in this, as well as in the writing of operas, he has been followed by Dvorak. . . . K. J. Erben and Franz Sutil alone succeeded in collecting three thousand folk songs and folk dances, and the whole body of folk music literature numbers about five thousand tunes. These are overwhelmingly and sturdily major, though, as is the case with all Slavic peoples, there is also a minor tinge coming either from the employment of the modern minor scale or of sequences of intervals which recall the church modes. The author of an admirable historical sketch of Bohemian music in Mendel's 'Musikalisches Conversations Lexicon' says that the oldest songs were built out of the first, second, third and fifth tones of the diatonic major scale, and that the minor mode came into the country along with the Catholic religion and the Roman chariot. Protestant hymnology began in Bohemia, John Huss, like Luther, being a hymn writer and also composer. Luther made use of Hussite tunes, and adapted them for use in the Reformed Church."—H. E. Krehbiel, *Folk-music studies (New York Tribune, Aug. 6, 1899)*.—See also below: Modern; 1540-1672.—"The . . . two prominent national schools in modern times are the Bohemian and Scandinavian. . . . The Bohemian School centres about the achievements of . . . [Zdenko Fibich (1850-1900), Friedrich Smetana (1824-1884), and Anton Dvorak (1841-1904)], and its prevalent characteristics are the variety of dance rhythms . . . together with the peculiarly novel harmonic and modulatory scheme. . . . Smetana's significant work lies in his numerous operas, his symphonic poems and in the remarkable String Quartet in E minor entitled 'Aus meinem Leben.' The operas deal with subjects so strongly national that they have but little outside their own country. However, . . . *the Bartered Bride*—has been universally recognized as one of the genuine comic

operas in modern times and its spirited Overture is played the world over. . . . Although in some respects not so characteristic as Smetana, Dvorak by reason of his greater breadth and more cosmopolitan style, is considered the representative Bohemian composer."—W. R. Spalding, *MUSIC: An art and a language*, pp. 321-322.—See also BOHEMIA: Status of art and education.

Celtic: BRITANNY.—"Among the bards who, in the fourth and fifth centuries of our epoch, resisted the invasion of Druidism by Christianity, the name of Kian, surnamed Givenc'hlan (meaning 'pure of race'), has been preserved to us in one of the fragments attributed to Taliesin, who speaks of him as one he had known in his youth, a composer of songs in humour of his country and its heroes. Nennius speaks of him, with Taliesin, Ancurin, and Llywarc'h Henn, as one of the most illustrious of bards 'in poemate Britannico.' Prophecies (Diouganou) ascribed to him existed in a MS. of the fifteenth century, preserved till the Revolution in the Abbey of Landévenec. This MS., in all probability the transcript of one much more ancient, perished in the Revolutionary troubles. Some fragments of it have escaped, which are quoted by M. de la Villemarqué. . . . M. de la Villemarqué, to whom we owe the Breton original of 'The March of Arthur' which he obtained from the recitation of an old mountaineer of Leuhan, called Uikel Floc'h, informs us that these triplets were sung in chorus, as late as the Chouan war, by the Breton peasants, as they marched to battle against the Republican soldiers. . . . A large proportion of the ballads still sung in the gatherings of the Breton peasantry—at the 'pardon' of the patron saint, the festivities of the wedding or the conservation of the new threshing-floor—relate to historical events of remote antiquity. One of these time-worn but deeply-stamped pieces of bardic coinage, now come down to exclusive circulation, among hard peasant-hands, but still precious for the quality of its true poetic metal, and venerable for its ancient mint-mark, is the ballad of 'The Plague of Eliant.' . . . The plague which the ballad commemorates ravaged Brittany in the sixth century. The 'Book of Llandaff' (in Jesus College, Oxford) contains an account of this plague. . . . It is . . . difficult to believe that a ballad of the date of the Conquest of England by William the Norman, and describing an episode in the life of one of the young Breton warriors . . . should have survived to our own time. Yet such is the conclusion, not of M. de la Villemarqué only . . . but of the . . . historian Augustin Thierry, who, in his history of the conquest, quotes this ballad as a contemporary composition. . . . 'The Goss-Hawk' ballad is the popular record of a peasants' war which broke out in Brittany 1008 . . . and is still sung in the Black-Mountains of Cornouaille. . . . 'The Nightingale' ballad or one on the same subject, was popular before the middle of the thirteenth century, when Marie of France—the first Anglo-Norman poetess—translated it among her 'Lais' giving it the name it bears. . . . 'The Battle of the Thirty' . . . is the popular account of one of the most gallant episodes of the intestine war between the rival houses of De Montfort and Blois, which ravaged Brittany from 1341 to 1364. . . . There can be little doubt that it is contemporaneous with the incident it describes. Froissart has told the same story in one of the supplemental chapters of his 'Chronicle' discovered by M. Buchon among the MSS. of the Prince de Soubise and published by him in 1824."—T. Taylor, *Ballads and songs of Brittany* (tr. from the *Barsaz-*

Breiz of Vicomte Hersart de la Villemarqué, pp. 15, 23, 61).

HEBRIDES.—"The particular field of folk-music research here dealt with, that of the Hebridean Isles, offers peculiar advantages. Nowhere else in Europe probably can the labour song and the heroic chant be so studied from the living specimen. And these still living specimens date probably from many widely divergent stages of melodic development, the simplest forms and the most highly developed coming up, so to speak, in the same dredging net. Much of this music, again, is not necessarily unsophisticated. That it was unwritten (dating probably from pre-notation days) is no argument against conscious art. The Hebrideans have phenomenal memories . . . and this with their strong musical sense and their 'compelling sense of style,' has enabled them to retain and pass on a rich and varied literature of words and airs alike. . . . From our music we Gaels may learn that we are not only 'music-makers and dreamers of dreams,' not only of those that 'take up Harp and Sorrow and the wandering road,' but of those also that take up spears and die for a name. . . . Eigg and Benbecula indeed have furnished two-thirds of the material that is to be presented in our forthcoming second volume, the remainder hailing from Barra, Eriskay, South and North Uist and the Lewes. Low-lying, watery Benbecula of the sea-fords and the lochs and mirage-like illusions yielded us a great crop of labour lilt and some interesting and valuable Ossianic forms of chanting. I had been attracted to the island in 1911 by the fame of Callum Barraich as a singer of sacred songs. I looked for incantations and hymns and runes, such as those collected, translated and published by Dr. Alex. Carmichael in his 'Carmina Gadelica.' What was my astonishment to find that Callum's repertoire, and it was a very large one, consisted entirely of ancient, rhymed, heroic tales of pagan origin, just such Ossianic fragments as Macpherson found here in the eighteenth century, when covering this self-same ground in search of materials for his great epic. When his poems founded on this fugitive, fragmentary, orally transmitted lore appeared, all Europe reverberated to the strains of his Ossian. Macpherson died in 1796, but long before his death the Ossianic poems had become, according to William Sharp, one of the most vital influences in literature. . . . For seventy years (he was then eighty-seven) Callum had tended his cattle on the *machar* and chanted his tales of the heroes. He was out in the rain herding when we drove over one day, but he came with us to his cottage, and we were courteously ushered into the cheerful kitchen. . . . From the goodman we heard only Ossianic tales and lays. And ancient custom, we found, did not sanction an easy transition from these to lighter lilt. At one séance attention might be given only to the stuff of heroic tradition recited and listened to in reverent mood. These fugitive literary remains of the Gælic Homer are sacred to the Islesmen. Pre-mediæval, pre-Christian, pre-historic, these feats of Fionn and the Fayne, heroic, romantic, wild, fantastic maybe, hold up for imitation as a model Fionn, 'truest, wisest, kindest, gentle to women, generous to men. . . . Besides these Ossianic tales proper, the tales of Cuchullain, of the Great Fool (Parsifal?), of Deirdre, tales of suffering, of quest, and of high courage, are still recited orally by the folk around the peat fires. This lore was not spoken, it was chanted, and of the forms of chanting Callum Barraich used, we phonographed and

noted one or two specimens. From the goodwife we got labour lilt *guleor*, with intoxicatingly rhythmic refrains. These were mostly *waulking* songs sung at the shrinking of the home-spun web. As this process of fulling the cloth was long and heavy, the songs used for it were correspondingly stimulating. And many ancient airs are still preserved in Benbecula just because the work of weaving still goes busily forward there. . . . Hardly a day passes that is not marked by a *waulking*. And where there are many *waulkings* there will survive the greater number of varied and complex refrains. For at these gatherings the singing is the attraction and the tedious work of tossing, dumping and circulating the moisture-laden cloth is completely forgotten in the intoxicating swing of the body to the rhythmic refrain. . . . The workers, seated in opposite rows at a long table, rhythmically swing the cloth, tossing it on the boards to the pulse of the song. The stirring vocables of the refrains have, as a rule, no meaning. . . . Presumably women themselves were the authors of most of the labour songs used by them. . . . Many songs go to the shrinking of one web, and these vary in character and speed with the progress of the work. . . . But our main source of supply is Eigg. . . . Recurrent waves of Celtic inundation seem to have swept into and over Europe, probably from the East, in early days of racial migrations. And partly Oriental in character, the Celts remain in the mountain fastnesses, and remote isles and peninsulas where a remnant still faithful to the old memories and the old tongue remains. . . . There are traces in Celtic airs of kinship with Greek and Arabian. These may be found in the traditional formulae, which seem to persist for generations, although evidently quite freely redistributed in the order of their use by the various singers who receive them and pass them on, 'building with stones not of this building but of an older architecture.' . . . Yet it is notable that the Island melodic formulae—component entities out of which the complete tune is fashioned—lend themselves with amazing elasticity to the more extended forms of modern polyphonic music, as proved by their consummate use in Granville Bantock's 'Hebrides' symphony.'—M. Kennedy-Fraser, *Song collecting in Eigg and Benbecula* (*Musical Standard*, Mar. 10, 1917).

IRELAND.—'The Land of the Harp traces the origin of its national instrument, which is also its heraldic emblem, to ancient Egypt. On the monumental and sculptured remains of old Thebes we find the prototype of that polychord Bardic harp of the primitive Irish. . . . The inhabitants of pre-Christian Erin came from the East in various bands of colonists, bringing with them art-knowledge from their contact with the Land of the Nile. . . . If we reckon the growth of modern music to have commenced in earnest about two or three hundred years ago . . . or trace the first attempts at counterpoint (the crude organum) to have been somewhat previous to the great Flemish school of the 15th century, we have to go back not centuries, but thousands of years, to locate methods of harp playing in ancient Ireland through the first mention in Gaelic manuscripts of the harp or *cruit*. During the time of the tutha De Danaan race in ancient Erin (circa 1800, B.C.) it is recorded that the Daghdha, the Arch Druid of those mysterious and highly gifted colonists, so fascinated a band of pirate invaders by his harp-playing . . . that he threw a slumber-trance over his foes and so rescued . . . the treasure they had stolen [O'Curry's trans. of *Battle of Magh Tuireadh*], Harleian MSS.,

5280, British Museum]. Fanciful and legendary though this story is, the musical references in it are displays . . . practised by inhabitants of the Emerald Isle several centuries before the Christian Era; such evidence being contained in a large mass of Gaelic literature published during the last fifty years by the various Irish societies. From these and other sources we learn that later colonists than the De Danaans, the Milesians, . . . also coming from the Far East [according to the annals of the *Four Masters*, circa 1000 B.C.], brought with them 'a comely poet and gifted harper'—Cis, the son of Cis, and Clna by name. These artists fell by lot respectively to the two sons of Milesius, Heber and Heremon, the former obtaining 'the accomplished and most dexterous harper' [*Book of Conquests*]. Great indeed was the honour paid to their minstrels by the ancient Irish, bards ranking next . . . to chiefs and kings. Oisín . . . the famous warrior-minstrel of the Fianna heroes of the 2nd century, was far-famed as a harper, some Ossianic fragments of melody still in existence, being attributed to him. A few centuries later than the Fianna circle so formidable to Irish native rulers did these poet-musicians become that the then monarch, Hugh, endeavoured to get the bardic order banished from the country, peace being, however, made between the rival parties by St. Colum-Cille (558 A.D.). Foreign invasion, shortly following, interfered with the power of this strong musical caste. But the traces of a native minstrelsy of an exalted character, which these autocrats of the harp bequeathed to posterity, are still preserved in the vitalising and emotional appeal of the *oldest* specimens of our native music. . . . As compared with the pipers, who were mainly music-makers for the masses, the harpers were on a more elevated, aristocratic footing. Hence we will find two elements in Irish music proper: the 'traditional' music of the countryside and the more perfected melodic and semi-improvisatory work of the well-instructed bards. . . . Carolin (1670-1738), the blind harpist and composer, sustained his country's reputation in a musical contest with the Italian virtuoso, Geminiani. Gradually, owing to the disturbed state of the country, the well-to-do bard was replaced by the wandering minstrel, who sought hospitality for himself and his gentle art from door to door. Subsequent attempts were made to gather together and maintain the old harpers, who were gradually dying out toward the close of the 18th century. Hence the Granard and Belfast Harp Meetings. It was at and after the latter (1792) that Edward Bunting was able to note down from the playing of the aged blind harper, Denis Hempson (then over 100 years of age and practically the last of the old school) and others, a great number of the most beautiful of our ancient melodies. Bunting published three volumes in all of his life-long Collection, from which the poet Moore borrowed largely for his famous 'Melodies.' Dr. Petrie, the antiquarian, also did admirable work as a collector (Vol. I, 1855), his researches being mainly among the rural singers. . . . Subsequently, the late Dr. P. W. Joyce, tapped the Limerick district, swelling his own interesting Collections with those of Messrs. Pigott and Ford. Among numerous other collectors were Messrs. Levey (in *Dance Music*), Roche (in traditional music) and, notably, Captain Francis O'Neill (of Chicago) who, in addition to his colossal 'Music of Ireland' . . . has recently issued 'The Dance Music of Ireland' and '400 Choice Selections' . . . together with exhaustive volumes dealing with his subject, 'Irish Folk-Music: a fascinating hobby,' and 'Irish Minstrels and Musicians.' The latest Collections to date are those

of the Feis Ceoil (Vol. I, 1914), edited by Arthur Darley and P. J. McCall, and Mrs. Costillos, 'Traditional Songs from Galway and Mayo' (1918). When it is mentioned that the total of tunes, with distinct variants . . . number close upon 6000, some idea may be given of the quantity and variety of native-music items, the majority of which were bequeathed by the Irish bardic-harpers of old to their native country."—A. Patterson, *Folk-music of Ireland: Its past, present and future aspects* (*Musical Quarterly*, v. 6, no. 3, July, 1920).—Irish harpers travelled over Europe from the 8th to the 14th centuries, and their musical performances were in high repute. Vincenzo Galilei writing from Florence in 1581 quotes Dante (1300) to the effect that the harp was introduced into Italy from Ireland "where," he continues, "the instrument is excellently made and in great numbers, the inhabitants of that country having practised on it for many and many ages, they even place it in the arms of the kingdom, and paint it on their public buildings, and stamp it on their coin, giving as the reason their being descended from the royal prophet David."—V. Galilei, *Dialogo della musica antica e moderna*.—"The most ancient Irish harp now remaining, is that which is said to have belonged to Brian Boiromt, King of Ireland who was slain in battle with the Danes at Clontarf, near Dublin . . . 1014. . . . His son Donagh having murdered his brother, presented [the Harp, and other regalia] to the Pope in order to obtain absolution. . . . The Pope sent the Harp to Henry VIII with the title of Defender of the Faith. . . . Henry gave the Harp to the first earl of Clanricard, in whose family it remained till the beginning of this century [19th]."—E. Jones (Bard to the King, 1825), *Musical and poetical relics*, p. 97.

SCOTLAND.—*Bagpipes*.—"It is obviously impossible to arrive at a just conception or appreciation of the character of the ancient vocal music of Scotland, without taking into view the songs and rhymes to which it was adapted. . . . Music and poetry were much more intimately connected during the middle ages than they are at present; and whether the ancient melodies of Scotland were chiefly the invention of an order of men, who . . . conjoined these two sister arts, and 'sung verses to the harp of their own composing,' who graced all scenes of festivities with the exercise of their talents, and were welcome guests in the halls of the great, and the humble cabins of the poor; or whether they might have emanated from a class of persons who, . . . were little better than . . . 'mere instrumental performers, fiddlers . . . who made it their business to wander up and down the country, chanting romances; . . . or whether they took their rise among shepherds tending their flocks . . . who actually felt the sentiments and affections of which they are so very expressive,—all must be agreed that a congeniality,—a reciprocity, more or less perfect, must have . . . existed between the melody, and the words and the genius of the one must have alternately inspired and awakened that of the other. . . . It is believed that until within the last three hundred years, our Scottish songs were but seldom committed to paper. . . . The most ancient specimen of Scottish song, believed to be extant, is that which is given in Andrew Wyntown's "Rhyming Chronicle of Scottish History," written

about the year 1420, where speaking of the disastrous effect which resulted from the death of Alexander III, who was killed by a fall from his horse, in 1286, he says, "This falyhyd fra he deyed suddenly, This sang was made of him for thi." Another rhyme of the same period . . . is quoted . . . from an old Harleian MS., and was made by the Scots at the siege of Berwick. . . . In 1328, when Edward the Second's daughter Jane was given in marriage to David . . . and a [humiliating] treaty of peace entered into at York between the two nations . . . we are informed by the . . . historian, Fabian, that the contempt of the Scots broke out in diverse truffles, rounds and songs.' No more vestiges are traceable till the commencement of the sixteenth century . . . [when songs were] discovered [in] the 'Minute-book of Burgh Sasines' of the city of Aberdeen. . . . To what they owe their insertion in this inauspicious volume . . . we know not; but certain it is, that they appear there 'duly recorded' (1503-7). . . . The ballad of Evil Wyffis, the ballad of Guid Fallowis, and several—shorter pieces, which appear in the Bannatyne MS. (1568) may be considered as lyrical productions of this era. . . . The Skene MS. . . . is the property of the Faculty of Advocates at Edinburgh. It was bequeathed to that learned body . . . by the late Miss Elizabeth Skene . . . the great-great grand daughter of John Skene of Hallyards, who was the son of Sir John Skene . . . Clerk Register during . . . the reign of King James VI. . . . The MS. is without date, and there is . . . difficulty in [determining] the precise time . . . it was written. . . . From the appearance of the paper, the handwriting, and the fact that some of the tunes are here and there repeated . . . it is extremely probable, that they had been taken down at different times. . . . Circumstances . . . would indicate that this part [1] of the volume had been written some time between 1615 and 1620. . . . Part VI which contains some of the most valuable of our national airs, is evidently the oldest of all. . . . Written prior to 1615, though how long prior . . . it is impossible to say, . . . this collection of Scottish airs precedes in date by at least one hundred years the earliest compilation of the kind issued from the press. . . . As a great many musical instruments were anciently made use of in Scotland, especially in the low lands, much of the Scottish music must have been adapted to suit their particular genius, structure and compass. . . . Giraldus Cambensis [twelfth century] in his 'Topographia Hebermiaë,' observes that the Irish use only two musical instruments, the harp and the tabour; The Scots use three, the harp, the tahour, and the bagpipe. . . . The old music of Scotland belongs to a different scale from the regular music of modern times, which is founded either upon the diatonic or chromatic series; whereas that upon which most . . . of our national music is written, has been described to be the same with the modern diatonic, with two exceptions,—viz. that it wants the fourth and the seventh in such keys as resembles our major modes, and the second and sixth in those which we characterize as minor."—W. Dauneay, *Ancient Scottish melodies*, pp. 40-43, 47, 54, 5, 10, 12, 15, 175, 316.—"When we come to the question of the introduction of the bagpipe . . . into Scotland, we are . . . on highly controversial ground. It is obvious enough that the instrument is not peculiar to the Celtic races; that it has maintained its hold on them long after its disappearance in other European nations is equally so. But who introduced it into these favoured isles, whether the Cruithne or Prydani or Picts or the later 'C' Gaidheal branch of the Celtic stem—who shall say? Some authori-

ties—students of the subject would be a safer term—are prepared to assert that the bagpipe was introduced first into England, thence to Lowland Scotland, and only long afterwards into the Highlands; and one recent writer in the *Celtic Magazine* says the evidence of its association with the Scottish Gaels does not go back beyond the middle of the sixteenth century! . . . There is no likelihood of its ever being settled. Records did not exist in the ancient Highlands, and we have to turn to early Irish literature for reference to the bagpipe. In the Brehon Laws of the fifth century it is spoken of as the 'cuisle'; and, although Tara's halls are usually associated with the harp, it is recorded that at the assemblies which took place there in pre-Christian days it was the custom for the pipes to play at the banquets. It is possible the bagpipe was brought over from the north of Ireland, 'Scotia' as it then was, on the invasion of the Highlands by Cairbre Riada, who founded the kingdom of Dalriada in Argyle in 120 A. D.; or in the later great colonisation, about 506 A. D., under Lorne and Angus, the sons of Erc. . . . Unfortunately we have very little accurate knowledge of the early history of the Highlands, and there are no local written records extant to prove . . . that the instrument existed in those early days. We do know that the harper and the bard were national institutions of immense antiquity in the Highlands, and that, as the bagpipe became an increasingly important feature of everyday life, they were bitterly opposed to it. . . . In the absence of records of the employment of the bagpipe in war in the Highlands it is to Ireland, the so-called Lowlands of Scotland and to England that we have to turn for information; at the same time we must bear in mind that evolution of the instrument itself had begun to operate, and the English and Lowland pipes were different from the variety now known as the 'Highland,' which has supplanted all others. . . . Two institutions existed there [Scotland] which fostered the tradition and saved *piob mhor* from the fate of disappearance—the Burgh piper and the Clan piper; and by 1450 A. D. these had certainly become part of the national life. In Edinburgh in 1487 A. D. there were three town pipers, who were paid three pence daily; one of their duties was 'to accompany the town's drummer throw town morning and evening.' In 1505 A. D. the town records of Dumbarton, Biggar, Wigton, Dumfries and Linlithgow refer to burgh pipers. In Aberdeen in 1630 A. D. exception appears to have been taken to the custom of playing through the streets, as it is placed on record that this was to be stopped, 'it being an uncivill forme to be usit uithin sic a famous burgh, and being oftene found fault uith als weill be sundrie niehbouris as by strangeris.' That the citizens of this 'famous burgh' are peculiarly susceptible to the criticisms of 'strangeris' might never have been suspected by superficial observers, and it is well that there is official testimony to the fact. The effect of their daily music on the inhabitants of Perth was different,—or perhaps Perth was less amenable to the criticisms of 'strangeris.' In any case it is recorded of a burgh piper, who used to rouse the citizens at 5 a.m., that his music was 'inexpressibly soothing and delightful.' At Dundee the piper played through the town 'every day in the morning at four hours and every nicht at aucht hours,' and was paid twelve pennies yearly by each householder. The pipes, at least in the pre-Reformation days, were sometimes played in church; in course of time, however, piping on Sunday scandalised the authorities, religious and civil, and, in the burgh records, we find repeated instances of pipers being

punished for this misdemeanour. The burgh piper was a man of peace; the clan piper was a man of war. For many centuries he had to compete with the 'clarsair,' or harper, and the bard, and aroused feelings of acute hostility from the latter. In 1411 A. D. one hard, MacMhurich of Clan Ranald, wrote a poem of a most uncomplimentary nature about the bagpipes. The recitation of the bard before battle was probably last heard at Harlaw in 1411, and the clan bards disappeared finally in 1726; the last clan harper died in 1739, and the 'croistara'—the fiery cross—was sent round the clans for the last time in '45. The last Scottish piper will pass when the Scottish race itself passes—which will certainly be the last of all. . . . For four years and a half the pipes of war played their part in the greatest war in history [World War]; in the front, under conditions in which they could never have been expected to exist at all, they have led men to victory, have rallied them when victory eluded their grasp, and have marched them back undismayed by the tortures of battle; behind the lines they have headed the long columns of Scottish troops on their way up to the furnace in which the fate of nations was cast."—B. Seton and J. Grant, *Pipes of war*, pp. 10-13, 34.

WALES.—"By the Roman invasion, and the more barbarous excursions of the Saxons, the Danes, and the Normans and the emigration of the Britons to America [now Bretagne, France]; by the frequent destruction of MSS.; . . . and the massacres of the clergy and the Bards, the Poetry and Music of Wales have suffered a loss that has thrown a dark cloud over the history of those native arts. . . . Yet from the memorials still extant, and the poetical and musical compositions which time has spared we are enabled . . . to produce unquestioned evidence . . . concerning their rise and progress among us; since there is no living nation that can produce works of so remote antiquity, and at the same time of such unimpeached authority as the Welsh. . . . Of the Bards . . . and [their] music . . . little more than faint tradition is preserved. . . . In all the Celtic nations we discover a remarkable uniformity of manners and institutes. . . . It was the . . . office of the Bards of Britain to sing to the Harp, at the nuptials, funeral obsequies, their games . . . and at the head of their armies."—E. Jones (Bard to the king, 1825). *Musical and poetical relics*, pp. 1-13.—"The office, or function of the British Cambrian Bards, was to keep and preserve y tri Chôv Ynys Prydain; that is, the three Records, or Memorials of Britain, otherwise called the British Antiquities; which consist of three parts, and are called tri Chôv. . . . The first of the three Chôv, is the history of the notable acts of the kings and Princes of Britain and Cambria. The second of the three Chôv, is the language of the Britons, of which the Bards were to give an account of every word, and syllable, therein . . . in order to preserve the ancient language and to prevent its intermixture with any foreign tongue. . . . The third Chôv, consisted of the pedigrees, or descents of the nobility, their division of hands and the blazoning of arms."—*Three memorials of Britain* (An ancient folio manuscript in Bodleian Library, Oxford, marked KKK, p. 207).—"These bards served a higher purpose than the commemoration of individual leaders. They became the historians of their epoch. The profession was one of recognized eminence, and numbered kings among its adepts. Then it declined with the rise of written chronicles, till the last bard disappeared and only the ballad singer remained."—E. Martinengo-Cesaresco, *Essays on the study of folk-songs*, p. 4.—"Among the Celts, says Dio-

dorus Siculus [*bk. 5, ch. 2, p. 213, ed. 1559*] are composers of melodies [etc.] . . . Posidonius of Apamea, who flourished about 30 years before Christ, an author cited by Athenæus in his sixth book has the following passage: 'The Celts always carry to battle with them [Bards] whom they maintain as Parasites. . . . These companions . . . celebrate their praises, either before the crowd . . . or before any individual who may be interested in their Eulogies.' The disciples of the Druidical Bards . . . learnt an immense number of verses, in which they preserved the principles of their religious and civil polity by uninterrupted tradition for many centuries. Though the use of letters was familiar to them, they did not deem it lawful to commit their verses to writing. . . . 'Draig amyffrau odd uct llan lleffrau llady' . . . addressed to Beli Mawr is perhaps the oldest historical poetry of the Britons [written about eighty-five years before the Christian era]. . . . The Druids expelled from Britain by Cæsar . . . [took refuge in Ireland and the Isle of Man, and] British music moved with them. . . . At the commencement of the sixth century, we find the Bards resumed the Harp with unusual boldness to animate their country's last successful struggle with the Saxons. . . . From the ninth to the eleventh century their Awen or muse, seems to have received a check. . . . The hiatus continues till the time of Prince Gruffudd ab Cynan . . . who was the father of a noble succession of Bards, that brought the Poetry and Language of Wales to the highest perfection. . . . The Eisteddvod was a triennial assembly of the Bards (usually held at Aberffraw the royal seat of the Prince of Wales) . . . for the regulation of Poetry, and Music, for the purpose of conferring degrees, and advancing to the chair of the Eisteddvod by . . . musical contest. . . . Before any person could be enrolled in the Eisteddvod, the permission of the Prince . . . within whose jurisdiction he lived, was necessary. . . . The Eisteddvod was followed by the grand triennial Clera. . . . The period . . . between the reign of Gruffudd ab Cynan, and that of the last prince, Llewelyn is the brightest in our annals. . . . The works of most of the early Bards are to be found in the Myvyrian Archaeology of Wales collected from the oldest MSS. extant . . . [before the sixth century]. . . . Early in the twelfth century, Music and Poetry had approached their utmost degree of perfection in Wales. . . . The accession of a Tudor to the throne was destined to recall the exiled arts of Wales; and Henry VII was . . . the restorer of the Cambro British Muses."—E. Jones (Bard to the King, 1825), *Musical and poetical relics*, pp. 1-13, 31, 38, 46.

England.—"The Minstrels," says Percy, 'were the successors of the ancient Bards, who under different names were admired and revered, from the earliest ages, among the people of Gaul, Britain, Ireland, and the North. . . . [In the North] they were distinguished by the name of *Scalds*. . . . The origin of their art was attributed to Odin or Wodin, the father of their Gods; and the professors of it were held in the highest estimation. . . . The term Minstrel, however, comprehended eventually not merely those who sang to the harp or other instrument, romances and ballads, but also such as were distinguished by their skill in instrumental music only. . . . In the place of their old Scalders, a new rank of poets arose, called Gleemen, or Harpers. These probably gave rise to the order of English Minstrels, who flourished till the sixteenth century.' . . . The Scalds and Minstrels were held in great repute for many ages. . . . The Romans, on their first invasion of this island, found three orders of priesthood established here from a

period long anterior. The first and most influential were the Druids; the second the Bards, whose business it was to celebrate the praises of their heroes in verses and songs, which they sang to their harps; and the third were the Euhates, or those who applied themselves to the study of philosophy. The Northern annals abound with pompous accounts of the honors conferred on music by princes who were themselves proficient in the art. . . . Milton tells us, from the Saxon annals, that in 668, Pope Vitalian sent singers into Kent, and in 680, according to the Venerable Bede, Pope Agatho sent John, the Præcentor of St. Peter's at Rome, to instruct the monks of Weremouth in the manner of performing the ritual, and he opened schools for teaching music in other parts of the kingdom of Northumberland. Bede was also an able musician, and is the reputed author of a short musical tract in two parts, *de Musica theoretica*, and *de Musica practica, seu mensurata*. . . . Our great king, Alfred, according to Sir John Spelman, 'provided himself of musitians, not common, or such as knew but the practick part, but men skilful in the art itself; and in 866, according to the annals of the Church of Winchester, and the testimony of many ancient writers, he founded a Professorship at Oxford, for the cultivation of music as a science.

"The Normans were a colony from Norway and Denmark, where the Scalds had arrived at high renown before Rollo's expedition into France. Many of those men no doubt accompanied him to the duchy of Normandy, and left behind them successors in their art; so that when his descendant William invaded this kingdom, 1066, he and his followers were sure to favor the establishment of the minstrel profession here, rather than suppress it; indeed, we read that at the battle of Hastings, there was in William's army a valiant warrior, named Taillefer, distinguished no less for the minstrel arts, than for his courage and intrepidity. This man, who performed the office of Herald-minstrel (*Menestrier huchier*), advanced at the head of the army, and with a loud voice animated his countrymen, singing a war-song of Roland, *i. e.*, 'Hrofr or Rollo,' says our Anglo-Saxon historian, Sharon Turner. . . . Ingulphus, a contemporary of William the Conqueror, speaks of the popular ballads of the English in praise of their heroes; and William of Malmesbury, in the twelfth century, mentions them also. Three parishes in Gloucestershire were appropriated by William to the support of his minstrel."—W. Chappell, *Popular music of the olden time*, v. 2, pp. 1-3, 17.—"Minstrels and Poets abounded under Henry's patronage: they spread the love of poetry and literature among his barons and people, and the influence of the royal taste soon became visible in the improved education of the great, in the increasing number of the studios, and in the multiplicity of authors, who wrote during his reign and the next."—S. Turner, *History of England*.—"In the reign of Richard I. (1189) minstrelsy flourished with peculiar splendour. His romantic temper, and moreover his own proficiency in the art, led him to be not only the patron of chivalry, but also of those who celebrated its exploits. Some of his poems are still extant. . . . In the reign of King John (1212 A.D.) the English Minstrels did good service to Ranulph, or Randal, Earl of Chester. He, being besieged in his Castle of Rothelan (or Rhyudland), sent for help to De Lacy, Constable of Chester, who, 'making use of the Minstrels of all sorts, then met at Chester Fair, by the allurements of their music, assembled such a vast number of people, . . . that he intimidated the Welsh, . . . so that they instantly raised the siege and retired.' For this deed

of service to Ranulph, both De Lacy and Dutton had, by respective charters, patronage and authority over the Minstrels and others, who, under the descendants of the latter, enjoyed certain privileges and protection for many ages. . . . We have innumerable particulars of the good cheer and great rewards given to the Minstrels in many of the convents, which are collected by Warton and others. But one instance, quoted from *Wood's Hist. Antiq. Ox.*, vol. 1. p. 67, during the reign of King Henry III. (sub. an. 1224), deserves particular mention. Two itinerant priests, on the supposition of their being Minstrels, gained admittance. But the cellarer, sacrist, and others of the brethren, who had hoped to have been entertained by their diverting arts, &c., when they found them to be only two indigent ecclesiastics, and were consequently disappointed of their mirth, beat them, and turned them out of the monastery. In the same reign (1252 A.D.) we have mention of Master Richard, the king's Harper, to whom that monarch gave not only forty shillings and a pipe of wine, but also a pipe of wine to Beatrice, his wife. . . . Edward the First, according to the Chronicle of Walter Hemmingford, about the year 1271, a short time before he ascended the throne, took his harper with him to the Holy Land. . . .

"During the middle ages Music was always ranked, as now, among the seven liberal arts, these forming the *Trivium* and *Quadrivium*, and studied by all those in Europe who aspired at reputation for learning. . . . At Oxford the first who filled the chair [of music] was Friar John, of St. David's, who read not only lectures on Music, but also on Logic and Arithmetic. Academical honors in the faculty of music have only been traced back to the year 1403, when Henry Habington was admitted to the degree of Bachelor of Music, at Cambridge, and Thomas Saintwix, Doctor of Music, was made Master of King's College, in the same university; but it is remarkable that music was the only one of the seven sciences that conferred degrees upon its students, and England the only country in which these degrees were . . . conferred. . . . With the reign of Edward IV. we may conclude the history of the *old wandering minstrel*. In 1469, on a complaint that persons had collected money in different parts of the kingdom by assuming the title and livery of the king's minstrels, he granted to Walter Haliday, *Marshal*, and to seven others whom he names, a charter of incorporation. They were to be governed by a marshal appointed for life, and two wardens to be chosen annually, who were authorized to admit members; also to examine the pretensions of all who exercised the minstrel profession, and to regulate, govern, and punish them throughout the realm (those of Chester excepted). . . . Although Henry VIII. had given all possible encouragement to ballads and songs in the early part of his reign, both in public and private,—and in proof of their having been used on public occasions, I may mention the coronation of Anne Boleyn, when a choir of men and boys stood on the leads of St. Martin's Church, and sang . . . ballads in praise of her majesty,—yet, when they were resorted to as a weapon against the Reformation, or in opposition to any of his own opinions and varying commands, he adopted the summary process of suppressing them altogether. It is in some measure owing to that act, but principally to their perishable nature, that we have no *printed* ballads now remaining of an earlier date than that on the downfall of his former favorite, Thomas, Lord Cromwell, which is in the library of the Society of Antiquaries, at Somerset House. . . . During the long reign of Elizabeth, music seems to have been in

universal cultivation, as well as in universal esteem. . . . Even the city of London advertised the musical abilities of boys educated in Bridewell and Christ's Hospital, as a mode of recommending them as servants, apprentices, or husbandmen. In De-loney's *History of the gentle Craft*, 1598, one who tried to pass for a shoemaker was detected as an imposter, because he could neither 'sing, sound the trumpet, play upon the flute, nor reckon up his tools in rhyme.' Tinkers sang catches; milk-maids sang ballads; carters whistled; each trade, and even the beggars, had their special songs; the base-viol hung in the drawing room for the amusement of waiting visitors; and the lute, cittern, and virginals, for the amusement of waiting customers, were the necessary furniture of the barber's shop. They had music at dinner; music at supper; music at weddings; music at funerals; music at night; music at dawn; music at work; and music at play. . . . The most distinguishing feature of chamber music, in the reign of James I, from that of his predecessor, was the rapidly-increasing cultivation of instrumental music, especially of such as could be played in concert; and, coevally, the incipient decline of the more learned, but less melodious descriptions of vocal music, such as madrigals and motets. During the greater part of the reign of Elizabeth, vocal music held an almost undivided sway, and the practice of instrumental music, in private life, was generally confined to solo performances, and to accompaniments for the voice. The change of fashion, so far as I have been able to trace it, may be dated from 1590, in which year Morley printed a 'First Booke of Consorte Lessons, made by divers exquisite authors,' for six instruments to play together; and Anthony Holborne a collection of 'Pavans, Galliards, Almains, and other short airs, both grave and light, in five parts.'—W. Chappell, *Popular music of the olden time*, v. 1, pp. 9-11, 18, 43, 45, 50, 54, 98, 244.

"The first collection of songs in parts that was printed in England, was in 1530; but of that only a base part now remains. There are, however, many such collections in manuscript in public and private libraries. Stafford Smith's printed collection of songs in score, composed about the year 1500, is almost entirely taken from one manuscript. . . . In the Douce Collection (Bod. Lib., Ox., MS. No. 139), there is an English song with music, beginning—'Fowles in the frith, the fisses in the fiod' and the MS., which contains it, is of the thirteenth century, but it is only in two parts; and in Harl. MSS. No. 1717, is a French or Anglo-Norman song, 'Parti de Mal,' which seems to have been cut from an older manuscript to form the cover of a Chronicle of the Dukes of Normandy, written by order of Henry II. It is only for one voice, and a sort of hymn, but a tolerable melody. Both these may be seen in Stafford Smith's 'Musica Antiqua,' Vol. 1. Another very early English songs, with music, is contained in a manuscript, 'Liber de Antiquis Legibus,' now in the Record Room, Town Clerk's Office, Guildhall. It contains a Chronicle of Mayors and Sheriffs of London, and of the events that occurred in their times, from the year 1188 to the month of August, 1274, at which time the manuscript seems to have been completed. It is the Song of a Prisoner. . . . In the Arundel Collection (No. 202), there is a song in 'a handwriting of the time of Edward II.,' beginning—'Uncomly in cloyste l coure [cower] ful of care,' which is on the comparative difficulties of learning secular and church music, but, except in the line, 'Thou bitest asunder bequarre for bemol'

(B natural for B flat), there is no reference to the practice of music."—*Ibid.*, pp. 55, 25-26.

"That the harp was the common musical instrument of the Anglo-Saxons, may also be inferred from the word itself, which is not derived from the British, or any other Celtic language, but of genuine Gothic original, and current among every branch of that people, viz.: Ang. Sax. *hearpe* and *hearpa*; Gal. *harpe*; Span. *harpa*; Ital. *arpa*. The Welsh, or Cambro-Britons, call their harp *teylin*, a word for which no etymon is to be found in their language. In the Erse its name is *crwth*. That it was also the favorite musical instrument of the Britons and other Northern nations in the middle ages, is evident from their laws, and various passages in their history. . . . To prevent slaves from pretending to be gentlemen, it was expressly forbidden to teach, or to permit, them to play upon the harp; and none but the king, the king's musicians, and gentlemen, were allowed to have harps in their possession. . . . That the Gleeman or Minstrel held a stated and continued office in the court of our Anglo-Saxon kings, can be proved satisfactorily. We have but to turn to the Doomsday Book, and find under the head: Glowcesterscire, fol. 162, col. 1.—'Berdic, Jocolator Regis, habet iii villas,' &c. That the word Jocolator (at this early period) meant Harper or Minstrel, is sufficiently evident from Geoffrey of Monmouth, of whom Dr. Percy observes very justly, 'that whatever credit is due to him as a relator of facts, he is certainly as good authority as any for the signification of words.'"—*Ibid.*, pp. 4-6.—'English Folk-song has long been the ugly duckling of the folk-song family. For years musicians and experts, while fully recognizing the existence of traditional art in every other country, denied the possibility of there being any English folk-song.' In 1848, Rev. John Broadword (a name honorable in the annals of English folk-songs) published "Sussex Songs." "No more was done for the cause until 1880, when Mr. Baring-Gould made a large collection of West-County songs, and published a small selection of them under the title of 'Songs of the West,' this was followed in 1801 by Mr. Frank Kidson's 'Traditional Times' obtained chiefly from Yorkshire. . . . In 1898 the folk-song Society was founded 'for the purpose of collecting folk-songs, ballads and tunes.' Finally, in 1903, Mr. Cecil Sharp began his exhaustive researches in Somerset, which revealed a wealth of melody hitherto undreamt of, and his example has fired the enthusiasm of many collectors, and disseminators of folk-song. . . . The Oxford Folk-Music Society, [was] founded for the purpose of preserving, encouraging, and reviving traditional songs and songs among the people. Thus it seems that the ugly duckling is beginning to show its plumage, and is, in the opinion of many, turning out to be as white a swan as any of its elder brothers."—R. V. Williams, *English folk-songs (Musical Times, Feb. 1, 1911)*.

Finland.—'The Finlanders possess a folk-poetry of both the narrative and lyric kinds. Their national epic the *Kalevala* may be compared with the *Iliad*, the *Nibelungenlied*, *Beowulf*, or the narrative-poems that make up the ballad-groups of the English border. [See FINLAND: 1809-1898; KALEVALA.] They also have short poems, descriptive or emotional, which are sung to the accompaniment of the copper-strung plucked instrument called the *kantele*. But Finland has this special advantage: that its folk-music and poetry are still matters of common daily delight to its

people. . . . The art-music of Finland takes its rise . . . [from a German, Friedrich Pacius (1809-1891), who] seems to have possessed the unique faculty of being able to identify himself with the people among whom he lived. His successors were Collan, Linsen, and Ehrström. . . . [Martin] Wegelius (1846-1906) and [Robert] Kajanus [1856]—both cultured men of strong personality—asserted the national claims both on the literary and the musical side. The latter was one of the first to treat subjects from the *Kalevala*. In the next generation there are at least four composers whose vivid interest in their national art does honour to themselves and to their country. Of these the first three are Genetz [1852], [Armas] Järnefelt [1869], and Palmgren [1878]. The choruses of the first and last-named are imbued with the true spirit of folk-song. The fourth member of this group is [Jean] Sibelius [1865]. He studied both in Berlin and in Vienna. But on his return to Finland he asserted his position as an uncompromising nationalist. In fact, he may well be quoted as a living example of that type. To him Finland owes much of her present-day musical fame. His compositions have been played all over the world. We need only mention among his best known works the suite *Karelia*, *The Swan of Tuonela* (from the *Kalevala* epic), the *Elegy*, and *Finlandia*."—C. V. Stanford and C. Forsyth, *History of music*, pp. 334-335.

France.—'The verses of the historic song have almost always been fitted to some air known long before the events which the song celebrates, and which has, therefore, no immediate connection with the events. Our old epic poems, of which the Song of Roland is the oldest and the most admirable type, were sung, as we know. But to what music we will never know; that is certain. In not one case has any trace of the old tune been found in the old manuscripts. . . . In any case, it seems evident, that this music, to which our old minstrels, accompanying themselves on the rebec, told their love for 'sweet France,' was reduced to insignificance, scarcely more than a melismatic recitative. . . . Then there is another reason, which induces us to avoid the examination of our so-called historic folk-songs here. And that is the questionable authenticity of most of those which have been set in circulation throughout the world, either by investigators who are easily satisfied, . . . or by singers, who . . . have desired to satisfy a curious public by serving it, under the color of archaism, with entirely modern fabrications. . . . The least contaminated among these folk-songs are those in which the falsification is limited to the *ex post facto* application, by analogy, of a name or a historic event, though this name or this event was wholly foreign to the original poem at the time of its conception. . . . Cassandra, which serves as a title to the chanson and to the dance, was the name of the woman beloved of Ronsard, to whom were dedicated some of the most perfect verses ever written in French; the Book of the Loves of Cassandra. . . . *Vive Henri IV* is almost the only *chanson* of this period which deserves attention. Shall we stop to speak of *Malbrough s'en va t'en guerre?* . . . This *chanson*, truly popular, is said to have been brought to the court of Versailles by the nurse of the Dauphin, the son of Louis XVI and Marie Antoinette. . . . Sung by her to lull the royal babe to sleep, the song charmed the august personages who heard it. Following their example, all the

world repeated it. . . . No other song has ever been so successful. . . . No one will be astonished to learn that the Revolution found for its national festivals poets and musicians who were worthy of translating its lofty aspirations into verse and music. . . . From the first anniversary of the fall of the Bastille, July 14, 1790, to that festival of the Federation which united on the *Champ de Mars* before the outdoor altar of *La Patrie* the representatives of all the provinces of France, assembled for the first time in one place, the need, immediate and irresistible, made itself felt. The preparations for the solemnity were simple in comparison with the majesty of the spectacle of such an assemblage. Those who made the arrangements had provided for no music but the *Te Deum*. Now, this would not suffice. On this day people must sing in another tongue than Latin, and with accents better fitted to express the sentiment that thrilled thousands of hearts beating in unison. Even before the approach of the great day a young author, who had recently made a brilliant début in the theater, and who was soon to become a veritable national poet, Marie Joseph Chénier, had written some verses which thróbbéd with this collective sentiment. . . . A musician was soon found, who set these beautiful words to music, a hymn-like melody supported by majestic chords. His name was Jean François [or François Joseph] Gossec. With this beginning destiny assigned to him the mission of composing the repertoire needed for the national festivals. Having provided the first models, Gossec soon found himself surrounded by a whole *Pléiade* of young composers who co-operated with him in this noble work. This historic moment, of capital importance to France and to humanity, was also of great significance in the history of French music. Until then, although French musicians had been quite active, a national school, properly so-called, had never come into being. . . . The people themselves must sing, and there was only one form that could satisfy this need,—the *chanson*. And so it came that the *chansons* multiplied exceedingly in the course of the French Revolution. Taken together they form a most enlivening and interesting object of study. . . . The first is contemporaneous with those manifestations of lyric fervor which we mentioned at the beginning of our consideration of the revolutionary epoch. It is the '*Ça ira*.' The plan to celebrate the fourteenth of July, 1790, the first anniversary of the fall of the Bastille, by uniting representatives from all the provinces of France at Paris in one great Federation, had aroused great enthusiasm among the people; but its execution met with some resistance on the part of the adherents of the old régime. The festival, the scene of which was laid in the Champs de Mars, at that time outside of Paris, was organized with difficulty. . . . Filled with ardor and with confidence, the groups of laborers met day after day with the cry of encouragement '*Ça ira!*' (That will go!) At that period there was a *contredanse*, frequently played at the public balls, the tune of which had become popular, as much because of its rhythms as of its title, 'The National Carillon,' which was quite suited to the taste of the day. By what mysterious force the saying *Ça ira* and the air of the *contredanse* were associated one with the other will never be known. This much is certain,—once the union was established, the success of the *chanson* was assured. . . . Numerous adaptations of words were forthcoming, rhyming well or ill, and all different. The *chanson*, in all its variants, sticks to the original beginning with the words thrice repeated:

Ah! ça ira, ça ira, ça ira. . . . The involuntary and astonished collaborator of the player of public dance music who composed the air, . . . was Bécourt. . . . Another characteristic *chanson* of the Revolution, the *Carmagnole*, was likewise Parisian. It belongs to another period, the most troubled, possibly the most terrible, of the Revolution; for it came into being on the morrow of the events of the 10th of August, 1792, when, under the menace a foreign invasion, the royal power was overthrown by a popular uprising, and when Louis XVI and Marie Antoinette, having fled from the Tuileries, were imprisoned in the tower of the Temple. The popular hatred finds emphatic utterance in certain stanzas of the *chanson*, which has no literary merit whatever, the author of which remains utterly unknown. . . . The melody of the *Carmagnole* is no less anonymous than the words. It certainly antedates the words and has all the earmarks of a true folk-song. . . . [Worthy of mention is a third *chanson* in] three stanzas, composed according to the usage of the time, to a well-known air: *Veillons au salut de l'empire*. Note in passing that the word 'empire' did not mean that the song was dedicated intentionally to the imperial rule. The *chanson* is dated 1791. The author [A. S. Boy, d. 1795], who had gone through his classical course at college, simply used the word 'empire' in its Latin acceptance: *imperium*, state, nation. . . . The tune to which he adapted his verses, an ariette from an *opéra-comique* by Dalayrac, . . . is truly transfigured, magnified, illumined by them. Thanks to this conviction, the *chanson* *Veillons au salut de l'empire* endured with honor throughout all the revolutionary years, and was many a time associated, without being eclipsed, with the immortal *Marseillaise*. . . . The history of the *Marseillaise* constitutes a chapter of general history which deserves to be universally known. No other song has ever played such a part in the life of humanity. . . . The hymn destined to become the national air of France was composed—the date is significant—on the first day of the war between France and the empires beyond the Rhine. . . . The author of the *Marseillaise*, . . . was the engineer captain, Rouget de Lisle [born at Lons-le-Saulnois (Jura)]. Having spent the first two years of the Revolution at Paris, he was sent to Strassbourg in 1791, there to fulfill the obligations of his rank [captain of engineers]. . . . He was received upon his arrival in Alsace in the social circle that gathered in the home of the mayor of Strassbourg, Frederick Dietrich, a man of means, active and full of generous ideas. . . . On the 20th of April, 1792, France declared war on the King of Prussia and the Emperor of Austria. On the morning of the 25th of April the news reached Strassbourg. It was proclaimed immediately by the mayor and the municipality, who organized a procession, entirely military, through the streets and squares. . . . A halt was made on each of the principal squares. Each time, the Mayor on horseback and his secretary read the declaration of war in French and in German. The drums beat flourishes and the bands, without interruption, played *Ça ira*, and again *Ça ira* and always *Ça ira*. . . . To end this day of patriotic celebration the Mayor gave a grand dinner to all residents of note, both civil and military, in his house on the *Place de Broglie*, the family residence. . . . As the dinner continued the company became more animated. . . . Music was made the topic of discussion. But the idea of war, persisting in spite of all, thrust itself into the musical conversation. The subject of patriotic songs was broached. All the songs sung by the

people came from Paris and were really too mediocre. What, after all, was this *Ça ira*, for instance, which had been dinned all day into one's ears, while Dietrich was making his importunate speeches? . . . Dietrich, well brought up, was indignant at its unmerited success. 'Ah what!' said he. 'Is there no one who will lift up his voice to let us hear a real national song? . . . Turning toward the Captain, and speaking in a tone of benevolent authority, he addressed him: 'But you, M. de Lisle, you who speak the language of the gods, who play the harp of Orpheus, do you do this for us. Find a beautiful song for this warrior-people, that arises on all sides at the call of the country in danger, and you will have deserved well of the nation!' . . . At last the party broke up. The freshness of the night air brought the fervid ideas in Rouget de Lisle's head into equilibrium again. He found himself in an unusually excited frame of mind. After such a day, after such a display of popular enthusiasm and patriotic emotion, he was sorely troubled. The champagne, of which he had drunk deeply (he confessed it later), did not fail to contribute its share to his uneasiness. His house on the *rue de la Mésange* was but a few steps off. He entered and mounted to his chamber, the thoughts seething in his brain. His violin lay on the table. He seized it and ran off a few arpeggios. The formulas of the all-pervasive enthusiasm of the day thrust themselves with imperious insistence into his consciousness. 'To arms, citizens! The standard of war has been unfurled; the signal has been given. To arms!' His fingers ran over the strings. Mysterious fragments of song vibrated under his bow, 'March on! Let us be free until we draw our latest breath!' Little by little the melodic formula crystallized. Verses, in which the words heard in the speeches of the day recur, associated themselves, as if of their own accord, with the music. He took note successively of the essential phrases of the first stanza, 'paying attention to the words' he tells us later on, 'only so far as was necessary to observe the order which they must follow in the melody.' Then he sat down and in one heat wrote the five succeeding stanzas. . . . Arranged immediately for a military band, the war song of Rouget de Lisle was executed for the first time in public at a final review of the forces departing from Strassbourg, which took place on the Sunday immediately following the composition, April 20, 1792, on the *Place d'Armes*. . . . The following month the Strassbourg printer, Dannbach, published it under the title, 'War Song for the Army of the Rhine,' words and melody, the latter embellished at the close with a singular little ritornell for the violin. in rococo style, which betrays the hand of the amateur. Then, no one knows how, the song was transported southward, and was sung at Marseilles at a banquet of the volunteer battalion, which in July marched through France from that city to Paris. Enthused by the accents in which they found an echo of their own sentiments, these warm-blooded men adopted it as their rallying song. They made it popular, first along the line of march, from the Rhône as far as the Seine, and then in the capital itself. By reason of this propagation Rouget de Lisle's song, composed by the banks of the Rhine, was spread throughout the world, first as the 'Hymn of the Men of Marseilles,' and finally as 'The Marseillaise.' . . . The *Conservatoire* is the direct issue of the national festivals. . . . The life of this great institution, was consecrated to a participation, in the Cathedral of Notre-Dame, in the justly decried Festival of Reason. . . . The Festival of the Supreme

Being . . . constitutes a chapter of a veritable musical novel. . . . Gossec and Chenier had composed the 'Hymn to the Supreme Being,' a vast choral and orchestral fresco, the execution of which they had assigned to the chorus of professional artists, already numerous. . . . In addition, the celebration was to be terminated by a performance of the *Marseillaise*, likewise sung by all the people, but to other words than those of Rouget de Lisle, words written to suit the circumstances. It was necessary to bring into accord the thousands, the tens of thousands of Parisian voices. How was this to be done? Very simply. The people were made to rehearse! By order of the authorities the forty-eight wards of the city assembled, on the eve of this festival, 'everything which had a voice, a heart, and blood in its veins,' as Berlioz said later. And the forty-eight musicians, the most famous—Méhul, Cherubini, Lesueur, Kreutzer, Dalayrac, and all the rest—armed with violins or accompanied by singers, applied themselves to the task of teaching the people, who were surely unable to read music, the new *Hymn to the Supreme Being* and the national song which was to be the fitting conclusion of the festival. And on the next day at the celebration in the Tuileries, Gossec's hymn rolled forth, borne by the three thousand voices of the ward delegates, and a little later on the *Champs de Mars* the national air was thundered out by one hundred and fifty thousand voices in unison! Surely, we have never heard such a concert, and we may confidently marvel at the effect which it must have produced. Grétry called the music of the Revolution 'cannon shot music.' The expression may be taken literally. Not only did this immense populace sing with one voice, held together by the baton of an orchestra leader, but also, to the thunder of the last refrain, the drums began to beat and to roll and salvos of artillery roared a mighty accompaniment to the harmonious tumult. Gossec won lasting renown by conducting this immense musical action. For many years his greatest title to glory was his authorship of the *Hymn to the Supreme Being*." —J. Tiersot, *Historic and national songs of France* (*Musical Quarterly*, Oct., 1920).

Germany.—"Before there was such a thing as conscious musical art, song was existent. When art was stiff, unyielding formalism, popular song supplied it with suggestion and sentiment. Now that music seems to have reached that degree of virtuosity in all its elements and features which is always marked by a decay of the spontaneous creative faculty, the people's song is again enlisted to imbue it with color, life and characteristic expression. The three phases of development thus suggested are more clearly and forcibly exemplified in the music of Germany than in that of any other country, because music has entered more deeply into the common life of the German people than that of their neighbors. There is scarcely a phase in the life of the Germans which has not been crystallized in their songs. . . . It is only a century or so since the lyrical voice of the German people arrested the attention of critics and historians. Collections of the people's songs have existed for five hundred years, it is true, but the ancient codices were few, though they were the fruits either of a lively love for homely beauty, or of that antiquarian spirit which has always existed and has done so much for knowledge. Now the body of Folk-song is become stupendous in magnitude, and it is well for the purposes of study to distinguish between its different elements;

for it is by such segregation that the story of the songs, of their origin and growth, of their influence upon art and art's reflex influence upon them, is lifted into notice. For the present purpose I distinguish between three types of song: they are the Folk-song, the Popular Song and the Artistic Song which has won so much favor as to have been unconsciously adopted into the Folk-song category. [For centuries, German Folk-song has been interpenetrated with the best work of professional musicians.] Making use of the German terms we should call them *das Volkslied*, *das volkstümliche Lied* and *das populär gewordene Kunstlied*. The three types are generally confounded by all but writers and students who cultivate scientific accuracy; and it must be confessed that the differentiation, strictly considered, is largely a matter of accident and time. . . . The true Folk-song is the song of the folk as distinguished from the song of the individual; a lyrical effusion which in a peculiar sense gives voice to the emotional life of a people in its widest and yet most intimate phases; the direct, homely, simple, unconscious voice of a people's inspirations. Its potency is national, not individual; and it reflects the common traits—moral, social, political—of the multitude bound together by natural and national ties. To such songs no authors' names attach; they are the utterances of the people as poet, and the people as composer. . . . It shall never be known when the tale of Hero and Leander first took hold of the human imagination. Because it entered into literature through the Greek we think of the Hellespont as its theatre; but seek it out in half a dozen different countries in Europe, or as many provinces in Germany, and you shall find it in its essentials, though with changes in scene and personnel. . . . An old song which has figured in artistic music ('Ach Elsein') tells the story in one German form, and there is another ('Es waren zwei Königskinder') . . . —an old song on an exceedingly old subject. . . . When the canticles of the Roman Church took on the florid dress of which they were partly stripped by papal command in the beginning of the seventeenth century, such melodic flourishes on single syllables as may be seen in the very old, and very beautiful folk-song, 'Es steht ein Lind,' . . . found their way into the people's songs of Germany, as did also the scales upon which the church chants were built. In this, then, we find evidence of age, as well as the influence exerted by artistic expression on natural expression, just as later we shall find the reverse. It was not until the German Folk-song had reached the climax of its development that the song of the second class which I have mentioned came into being. I have called it the Popular Song, by which I mean the song which is like the song of the Folk yet not a Folk-song; a song which is *volkstümlich*,—like the Folk-song in manner as well as in contents, poetical and musical. These songs are the product of artists who are known. They were written and composed with conscious art by poets and musicians of excellent gifts, not the least of which was a peculiar susceptibility to native influences. In this field the poets have been more successful and also more fruitful than the musicians. It was the publication of Bishop Percy's 'Reliques' which called the attention of the great poets of Germany to the charm of Folk-song. The Weimar coterie was startled by the homely strength and beauty of the English popular ballads. It turned its eyes upon its own country and set the movement on foot which recovered the most widespread of the German Folk-poems. Then came 'Des Knaben

Wunderhorn' and the delightful little lyrics in the Folk-song vein by Goethe, Schiller, Uhland, Herder and, later, Heine, Geibel, Kotzebue, von Eichendorff, Hauff, Kermer and others. . . . Look at such songs as 'Ännchen von Tharau,' 'Ich weiss nicht was soll es bedeuten,' 'In einem kühlen Grunde,' if you would see how beautifully poet and composer can be consorted in artistic marriage by the genius of the Folk-song. It is a singular and significant fact that though every great composer has attempted at one time or another to write in the Folk-song vein, the results are scant, few and unsatisfactory. It is as difficult to write a true Folk-song tune as it is to write a real national hymn; and for very much the same reasons. The most notable success achieved by really great composers was that of Carl Maria von Weber, whose genius was racy of the soil which has produced the German *Märchen* as well as the *Volkslied*. . . . As a rule, however, composers of Weber's class have preferred to make literal quotations from the body of Folk-song rather than attempt the well-nigh impossible task of writing tunes in the Folk-song manner. . . . 'Als der Grossvater die Grossmutter nahm,' . . . is the *Grossvater Tanz* of the seventeenth century which Bach found a place for in one of his secular pieces, which Spohr introduced in a march which he wrote for the wedding festivities of the Duke of Saxe-Meiningen, which became the 'March of the Davidites against the Philistines' in Schumann's 'Carnaval,' and made itself heard in the finale of the same composer's 'Papillons.' The appropriateness of the quotation in Spohr's piece appears from the fact that the old-fashioned dance was the *Kehraus* (clear-out, wind-up) of the homely wedding merrymakings of two centuries ago in Germany. In its original shape its humor was of so rude a sort that the young people were all bundled out of the room before the married guests struck it up. It is amusing to see Nägeli's 'Freut euch des Lebens' figuring in variant form in the overture to Rossini's 'Semiramide.' Rossini . . . introduced it in his score with a truly sublime disregard of anachronism, just to please his friend. . . . The tune of 'So viel Stern am Himmel stehen' . . . figures in Goldmark's 'Heimchen am Heerd,' and also in Franchetti's 'Germania,' where it was evidently introduced under the impression that it was a German students' song. Popular with the students many of these songs are, but this particular one was long ago appropriated by the children of the Fatherland, who sing it sometimes to a religious variant of the words, beginning 'Weisst du wie viel Sterne stehen?' A true students' song . . . 'O Tannenbaum,' though it belongs to a Latin song known to students throughout the world, viz.: 'Lauriger Horatius.' In the United States it was appropriated for one of the patriotic songs of the South during the war of secession,—'Maryland, my Maryland.' . . . With the third class of songs mentioned at the beginning of this note, some of the most admirable composers of Germany are to be credited. Schubert's 'Lindenbaum' . . . in its original form is an example of the *durchkomponiertes Lied*, as the Germans say; that is, a song with a musical investiture which gives appropriate dramatic expression to every stanza of the poem. Its principal melody has exercised so great a fascination on the popular fancy, however, that it may be heard in simple harmonic garb or even without accompaniment at gatherings of the people. So, too, Mendelssohn's 'Es ist bestimmt in Gottes Rath' . . . has completely won the popular heart with its sweet pathos, and though an artistic song in every

respect, has taken its place in the popular category, as have some songs from Mozart's 'Zauberflöte' and the operas of Kreutzer, Lortzing and other composers of German *Singspiele*. Finally, the patriotic feeling of the Germans, particularly their intense longing for unity, which found its fruition in the results of the Franco-Prussian war of 1870, was responsible for putting the stamp of popularity on such a song as 'Die Wacht am Rhein,' and even so difficult and extended a composition as 'Was ist das deutschen Vaterland?'" —M. Spicker, ed., *Songs of the people, songs of Germany, eighty-one German folk—and popular songs*, pp. iii-vi.—See also below: Medieval: 12th century.

Hungary.—"Though there is as great a mixture of peoples in Hungary as in any neighboring land, the dominant race for a thousand years has been the Magyar, and it is the music of the Magyars which must be and is recognized as the national music of Hungary. But the Magyars are not Slavs. They belong to the Finno-Ugrian stock; they are Scythians, much more closely connected with the Turks than with any of the Slavonic or Germanic races. So, too, their language and their characteristic music. The rhythmical peculiarities of the Hungarian folk-songs differentiate them from the songs of all other European nations. The intervallic peculiarities, though not quite so marked, point to an Oriental origin, and might be accepted as either an aboriginal product (since the Magyars were originally an Eastern people) or as a contribution from the gypsies, who have been a powerful and influential element in the population of Hungary ever since the fifteenth century, and have for a century or more been recognized as Hungary's minstrels. From the performances of the gypsies, as we shall see, came the style of music called 'all ongarese,' the style which is so widely exploited by Hungarian bands to-day. The Hungarians have developed no school of composers, though their characteristic music has long exerted a charm upon the composers of Germany. . . . There are two marked peculiarities in the Hungarian folk-songs and dances (the terms, here as in most other cases, might as well be treated as synonymous) which must now be considered. The first, which is the more general, and which distinguishes Magyar music from that of all the rest of the world, is rhythmical. The majority of Hungarian folk-melodies are built on a metrical scheme of which the chief motive is a measure containing a dotted eighth note, two sixteenth notes and another dotted eighth, or, to use the terms of prosody, a union of a trochee and an iambus, i. e., a choriamb."—H. E. Krehbiel, *Folk-music studies* (*New York Tribune*, July 30, 1899). —"Although there is no doubt of the strong musical interest inherent in the Hungarians—witness the prevalence of Hungarian rhythms in Schubert, Liszt, Brahms and others—their country has always been so torn with political dissensions that the lack of a national artistic culture is not to be wondered at. Recently, however, three Hungarian composers, Dohnanyi, Moor and Bela Bartok, have produced works embodying racial tendencies and yet of such significant content and sound workmanship as to attract the attention of the world outside."—W. R. Spalding, *Music: An art and a language*, p. 328.

Italy.—"Italy was more slowly caught by the poetic flame which the Provençal Troubadours had kindled, than other southern countries. For not until the middle of the 13th century, when

Raymond Berenger, Count of Provence, visited the Emperor Frederick II. at Milan, bringing Troubadours and Jongleurs in his train, do we hear of them in this country. A similar patronage was extended to them by Raymond's son-in-law, Charles of Anjou, king of Naples and Sicily. Through which of these two gates the Provençal language entered Italy has ever been a disputed point. But taught by these singers, whom the common people called *Uomini di Corti*, Italy soon produced her own *Trovatori* and *Giocolini*. At first they deemed their native dialect unsuitable to poetry, and used the Provençal language. But it is certain that already, by the time of Dante, the *volgar poesia*, which sprang from it, had reached a stage when it was capable of receiving rules and of being taught in the schools founded for the purpose. After Dante, no Italian could longer doubt the capacities of his own tongue for all forms of poetry. It must not be forgotten that the *terza rima*, used by the Provençal troubadours for the *sirvente*, was adopted by Dante for the 'Divina Commedia' and by Petrarch in his 'Trionfi.' But soon the verse of the Troubadours began to pale before the splendours of the great poet; and towards the middle of the 14th century, the *Trovatori* declined in numbers and popularity, and after 1450 were heard of no more. Notwithstanding the subordination of lyric song to other branches of poetry and music in Italy, her long and careful study of *la melica poesia*—poetry wedded to music—has not been surpassed elsewhere. Dante's sonnets and Petrarch's 'Trionfi' were among the earliest poems set to music. Dante's own contemporary and friend Casella (born 1300), who set his sonnet 'Amor che nella mente' to music, is believed to have also composed the music for a *ballata* by Lemmo da Pistolja, still extant in the Vatican. The *ballate* and *intuonate* were perhaps the oldest forms of songs written in the vernacular; both were love-songs sung to a dance. After them the *maggiolate* or May-day songs had their popularity. These also were love-songs, sung in the spring-time by bands of young men. The hunting-songs or *cacci* equally deserve mention. The most celebrated were written by Soldanieri and Sacchetti, and the words are far better than their music by Nicolaus da Perugia, Laurentius, and Ghirardellus. Some are realistic, imitating the sounds of the hunt; others are canonic in form, and others again interesting from the historic side, as they bring in the street-cries of the time. When later the *Canti Carnascialeschi* came into vogue they at first were Carnival songs, but under the skilful hand of Lorenzo di Medici a kind of consecutive drama grew out of them. During the 14th century there existed a class of dilettante musicians called *cantori a liuto*, whose business it was to set other poets' verses to music and sing them. They differed from the *Trovatori* who were poets, and who sang their own verses to their own music or to that of others, and equally from the *Cantori a libro*, who were the learned professional musicians. Casella and Minuccio d' Arezzo, mentioned by Boccaccio, would belong to the *cantori a liuto*. It was the habit of these musicians to improvise, for until the 16th century musical notation remained so difficult that only learned musicians were able to avail themselves of it. This is the reason why the melodies of the strophic songs, which contemporary writers show to have been so popular and universal during the 14th and 15th centuries, have not survived. . . . But although we find within recent years that the study of the folk-lore of Italy has received serious attention,

materials for a satisfactory treatment of the *canti popolari* do not exist. . . . During the latter half of the last century Ricordi and other publishers have issued large quantities of modern *canti popolari* in volumes entitled . . . 'Canti Lombardi,' . . . 'Siciliani,' . . . and the 'Canti Abruzzesi,' collected by P. Tosi and G. Finamore. The latter, in an interesting article on the harvest-songs of this district, draws attention to the solemn, religious character of the melodies, in contrast to the words, which are merry love-songs. This peculiarity Finamore attributes to the great antiquity of the melodies, which have remained unchanged for centuries, though the words have altered. . . . The wealth of *canti popolari* is prodigious, and although (as mentioned above) they vary greatly in the different districts, their general characteristics are the same. The harmonic and formal structure is simple. The accompaniment, which is usually intended for the guitar, consists merely of the tonic and dominant chords, and rarely modulates into anything except the nearest related keys. Few modal *canti popolari* are extant, although the flattened supertonic which is characteristic of the Sicilian and Neapolitan folk-songs recalls the Phrygian mode."—G. Grove, *Dictionary of music and musicians*, pp. 554-555, 559.

Russia.—The chief representative countries where nationalism in music stands out as a prominent feature are: Russia, Bohemia, Scandinavia and Hungary. "Every country has its folk-songs—the product of national rather than individual genius—but Russia, in the number and variety of these original melodies is most exceptional. The Russian expresses himself spontaneously in song, and so we find appropriate music for every activity or incident in daily life. . . . For many centuries the bulk of the Russian people has been downtrodden; and the country, with its endless steppes and gloomy climate, is hardly such as to call forth the sparkling vivacity found in the Scandinavian and Hungarian songs. The prevalent mood in Russian folk-songs is one of melancholy or of brooding, . . . very often in the old Greek modes, the Aeolian, Dorian and Phrygian. . . . To understand fully the tendencies of Neo-Russian music, and above all to sympathize with the spirit in which this music is written, the incredible history of Holy Russia, the history of its rulers and people—the mad caprices and horrid deeds of the Romanoffs, . . . —the nature of the landscape, the waste of steppes, the dreariness of winter, and the loneliness of summer— . . . the sublime patience of the common people—the devotion of the . . . multitude to the Tsar—all this should be as familiar as a twice-told tale.—Inasmuch as Neo-Russian music is founded upon the folk-songs of that country, one should know first of all the conditions that made such songs possible, and one should breathe the atmosphere in which musicians who have used such songs have worked."—W. R. Spalding, *Music: An art and a language*, pp. 301, 315.—"Since the folksong of a nation is the cornerstone of its musical art, it should follow that the nation richest in folksong should be the first to develop its artistic music; but this reasoning, though logical enough, does not apply to Russia. Strange to say, it took this nation longer than any other in Europe to bring the sapling of its folksong up to the bloom and fruitage of a higher order of music. In a large measure this must be ascribed to the circumstance that, ever since the time of Peter the

Great, the culture of the upper classes was foreign; principally French and, in music, Italian. . . . In the mind of influential society Italian music was good *eo ipso*, because it was Italian, while Russian music—existing so far only in folksong—was thought good enough for the lower classes and only for them. Of the wealth of melody in their own folksongs; of their rhythmical force; of their noble and peculiarly sweet harmonies, Russian society knew practically nothing, and this condition might never have changed had not Balakireff and his pupil Rimsky-Korsakoff gathered these despised tonal gems, published them elaborately, and so saturated their minds, and the minds of their pupils, with this melodic essence as to make it permeate and color every artistic musical thought of their time and generation. . . . The first to draw Russian music out of its obscurity into the light of general public recognition was Michael Ivanovitch Glinka with his opera *A Life for the Tsar* (1836). While his workmanship and ideas were by no means free from Italianisms, the 'ethnic note' in this opera was so strong that the public felt its appeal quite as spontaneously and powerfully as the Germans felt it in Weber's *Freischütz*, which recalled them to their own musical consciousness. Glinka's second opera, *Ruslan and Ludmilla*, was not equally successful until after his death, but its predecessor proved strong enough to break the ice of public indifference and to make—though, alas! not yet to 'pave'—a path for his successors, Seroff, Dargomishski, and others. Their operas were not unsuccessful, but instead of ending the period of pioneering—aye, and of martyrdom—they marked but a stage of it. . . . The greatest sufferer [of public neglect] . . . was undoubtedly Moussorgski, whose *Boris Godounoff*—thanks to a splendid performance in every respect—has aroused great enthusiasm at the Metropolitan Opera in New York. In his day he was laughed at except by musicians; he was called an 'irregular' in harmony, counterpoint, and orchestration because he made his own laws. That he also kept his self-made laws and thus incontestably proved his definiteness of a sane purpose—almost a synonym for genius—did not save him from the charge of dilettantism. . . . His only moral support came from a group of fine, but at that time totally unimportant, musicians, who later on became known in Russia as the 'Great Five,' and to whom the fuller realization and fruition of the martyrs' work is due: Balakireff, Borodin, Rimsky-Korsakoff, César Cui, and Liadoff. Following their predecessors' course they, too, chose the opera as a field of action because, more than the Symphony concert, an Opera draws its audience from all social strata, and thus checks the false fastidiousness of a fashionable, over-refined and foreign-cultured society by the stronger racial and national feeling of the occupants of the cheaper seats, who are more quickly sensitive to the home touch in the music and exert an influence through their numerical strength. . . . Balakireff has been the teacher of the other four members of the Great Five, and was much beloved and honored by them; but at length his views grew altogether too radical for the times, and as he obstinately declined to modify them his little circle broke up. His place, however, was soon filled by young Glazounoff, a pupil of Korsakoff, and after awhile the reconstituted Five found a new home in the house of a wealthy wood and grain merchant by the name of Belaieff. This man, though neither a composer nor an executant, has earned an honorable position in the annals of Russian music by his ardent and active devotion

to its cause and by his princely financial generosity, which is largely accountable for the great rapidity with which Russian music found its way into foreign countries. . . . The absence of the names of Rubinstein and Tchaikovsky in connection with the Great Five requires explanation at this point. Rubinstein was highly esteemed by all Russian musicians as a pianist; he was personally much beloved and highly honored for having founded the Petrograd Conservatory of Music; but as a composer he had nothing in common with his Russian confrères. Being of Semitic origin he lacked those racial traits which united the others. . . . He was a Russian and a composer, but not a Russian composer. With Tchaikovsky it was different. What separated him from the Great Five was a fundamental diversity of art philosophy. That the Five followed the lead of their precursors in laying the greatest stress upon the racial element in their work was only natural under the conditions which led to their advent. The 'ethnic note' was their war-cry because it had to be. Tchaikovsky, on the other hand, regarded the ethnic note as a point which art must of necessity touch on its way to the summit of perfection, but not as the summit, itself. What he saw in art, far above and beyond the ethnic note, was—*personality!* And to this he gave free rein, while the others believed themselves to be serving the cause better by keeping this element in check. . . . The Great Five had been successful not only as composers but also—and equally so—as teachers in developing the dormant or latent creative talent among their compatriots. And this to such a degree as to make it now a fair question whether any other nation can equal Russia in the number of thoroughly trained, interesting, and respect-compelling composers of all types of music. . . . The briefest glance at Neo-Russian music reveals the composers' seriousness, sincerity, and absolute devotion to the cause of their national art. That the younger generation adheres to the same high ethics is, partly at least, due to the noble example their elders have set before them. . . . The unity of purpose, the enthusiasm for the cause that was sacred to their hearts, bound and held them together so firmly and closely as to bar all conflicts of personal interest and to make jealousy or envy among them impossible. Several compositions *written by a whole group of composers* testify most beautifully to their ideal personal relations. . . . To produce such artistic results where only good-natured fun was intended is, in itself, an indication of the high mental level of the coöperators; but it also throws a strong light upon such a friendship among them as can be based only upon their sincere devotion both to their art and to their country. No source of lesser dignity could have given to Russian music the strength to make its way from its far northern home through the whole civilized world, to win a spontaneous and sympathetic welcome everywhere and to establish itself (in less than twenty-five years) in the world of higher culture as an equal of the best contemporary musical product of any nation."—C. von Sternberg, *Modern Russian piano music*, v. 1, pp. x-xiv.

Scandinavia.—"In the sense which is to prevail in these studies of national music the first distinctive school in the field was the Scandinavian. Gade was its father, and its chief exponents to-day are Grieg, Svendsen and Sinding. It was a protest against Gade, the founder, that put Grieg at the head of the school and gave it the individuality

and potency which it now enjoys. . . . To understand how truthfully Scandinavian music is a reflex of Scandinavian character, the physical environment which has formed both music and character should be studied. Though Sweden's political significance has long outweighed that of Norway the national type has been better preserved in the latter country. It is a rugged land, and rugged people inhabit it. Long and narrow, in places little more than a mountain chain, it extends two degrees into the Arctic Circle. Fogs envelop its shores and storms roar around its rocky cliffs. More than one-third part of Norway is within the region of perpetual snow. The crops raised do not suffice for home consumption. Even in Sweden, where the conditions are less rigorous, there is frequently a want of grain. But where Nature is most unkind her children love her best. The language of Scandinavia (which, as in the case of ancient Scandia, we are making to include Northern Denmark) is Danish—softened in Sweden, harsher, more forceful, a nearer approach to old Norse in Norway, and almost pure Norse in Iceland, where also are to be found the greatest number of the relics of antiquity. Parallel distinctions exist in the music of the different sections, though it is a fact for which we shall not attempt an explanation that the folk-music of Iceland is cast in a merrier mould than that of Norway or Sweden. The Norse men in Iceland being in the major, whereas in Sweden there are perhaps six times as many minor songs as major. . . . The Scandinavian school of composers have familiarized the world with two of the most popular forms of Norse dance—the Halling and the Springdansen. The former is characteristically the dance of Norway, and is, as a rule, in the major, enjoying a unique distinction in this respect among Norwegian folk tunes. It is in 2—4 time, and gets its name from the Hallingdal, between Christiania and Bergen."—H. E. Krehbiel, *Scandinavian music (New York Tribune, July 9, 1899)*.—"The earliest records that we have of music in the three Northern Kingdoms are the performances of the troubadours of the North, who were called skalds. . . . Unlike the class of poets and musicians of other countries, already mentioned, the skalds were not only poets in the ordinary sense of the word, but also tone-poets, singers or declamators, and instrumentalists, which can hardly be said of any of the other representatives of the art of folksong. As far as the subject matter of their performances is concerned, they ranked with the *trouvères* of France and the bards of Celtic Scotland, whose poems were mostly epics, and not lyrics, of which the troubadours were the chief representatives in France. The instrument, to the accompaniment of which the skalds either sang or declaimed their epics, was the *harp*. These epics were often of great length, recording the deeds of knights and warriors of the Middle Ages. None of these lays are complete, but we possess fragments of many of them in the younger Edda, which also contains a long list of skalds of the thirteenth century, amongst whom there are persons of the highest rank, and even kings. . . . The harp of the skalds has vanished, but there still exists an ancient national instrument in Norway and Iceland called *langeleik*, or *langspil*, which may possibly be a development of the harp of the skalds. It has somewhat the shape of the harp, but with this difference, that it is played with a bow; a similar instrument is also found in Sweden, under the name of 'nyckelharpe.' . . . It is only at a comparatively recent date that the folksongs of the three Northern Kingdoms have been collected and

arranged in a systematic form. As early as the end of the sixteenth century, when the court music of Denmark was chiefly in the hands of Flemish musicians, Peter Syv is recorded as the collector of Northern melodies; but it is due to the untiring effort of A. P. Berggreen, Lindemann, Otto Lindblad and other collectors, all of the nineteenth century, that we now possess a complete and well-assorted collection of highly characteristic folksongs. The 'Folkesange,' corresponding to the German 'Volkslieder,' were handed down from generation to generation at a time, when the art of notation was mostly unknown in the North; they simply lived in the hearts of the people who sang them, and, like any other tradition, they underwent many modifications in the different parts of the country where they had sprung up. The so-called 'Kæmpeviser' (*i.e.*, songs of knights and warriors) had most likely their origin in the thirteenth and fourteenth centuries, shortly after the skalds had disappeared. . . . On account of the greater facility of handing the text over from the one country to the other by writing it down, than of making a *melody* known in another country, when the art of notation was unknown, it follows, that the *melodies* of these old songs have a more distinctive national character in each of the three countries than the texts; thus it is not uncommon that the same texts are sung to different melodies, not only in the three Northern Kingdoms, but also in different districts of the same country. . . . As to the older Northern folksongs, it is possible that a greater number are in a minor than in a major mode. . . . There are . . . some characteristic features about our Northern songs. . . . One of them is this, that not a few of them begin in a major mode, and end in the minor mode, or *vice versa*. This is the case with the second of the little 'Kæmpeviser', . . . viz., 'The Tournament.' Another common feature is, that some of them close on the third, or even fifth of the tonic, like the troubadour song. . . . Besides the melodies in the ordinary major and minor modes, there exists a considerable number which are in the Greek modes, such as the 'hyperdorian,' where the seventh degree is not sharpened, having no proper leading note. Whether this is due to mere accident, or whether some of the Church modes have found their way into the folksongs is impossible to decide in each case. There is another characteristic regarding melodic progression which occurs pretty frequently in these songs, not so often met with in folksongs of other countries, viz., an emphatic repetition of the closing note in the final cadence. . . . There are probably no other countries in Europe where the belief in fairies has been so widespread, and has lingered so long as in the three Northern Kingdoms. . . . These songs, 'Fædrelandsange' either express the love and admiration for one's country and birthplace, or in the time of war and struggle with other nations, express the determination to sacrifice one's life for the beloved country. Of the last-named class (the war-song) Denmark possesses the greatest number, but for wealth of patriotic songs, without reference to war, it is difficult to decide whether Denmark or Sweden bears the palm."—*Saga Book of the Viking Club*, v. 5, pt. 1, 1907-1908, pp. 154-157, 159, 162, 165.—"Scandinavian music, ethnologically considered, would comprise that of the three related nations, the Swedes, the Danes and the Norwegians; some would include even the Finns, with their eloquent spokesman [Jean] Sibelius [1865]. Although the Danes have considerable folk-music, and as a people love music, they have produced no composer of dis-

tinction save Niels Gade (1817-1890), who was so encrusted with German habits of thought that his music is neither one thing nor the other—certainly it is not characteristically Danish. The best known of the Swedish composers is [Emil] Sjögren [1853-] from whom we have some poetic songs. . . . Scandinavian music, as far as the outside world is concerned, practically centres about the Norwegian composer Grieg (1843-1907) just as its dramatic art centres about Ibsen. The names, however, of four other Norwegian composers deserve mention; [Halfdan] Kjerulf (1815-1868) . . . [Johan] Svendsen (1840-1911) . . . and [Rikard] Nordraak (1842-1866). . . . In modern times the mantle of [Edvard H.] Grieg [1843-1907] has fallen upon [Christian] Sinding (1856-). . . . In Norwegian music we find the exuberant rhythmic vitality of a people living in the bold and highly colored scenery of that sun-lit land. . . . Grieg, a born lyric poet saturated with folk-music, has embodied this spirit in his works. His fame rests upon his songs and descriptive pianoforte pieces; though in his Pianoforte Concerto, in his Peer Gynt Suite, in the Violin Sonatas and String Quartet he proved that he was not lacking in power to handle large forms. . . . While Grieg's music is patterned upon Norwegian folk-dances and folk-melodies it is something far more. He has evoked from the characteristics of his native land a bold, original harmony and a power of color and description thoroughly his own."—W. R. Spalding, *Music: An art and a language*, pp. 324-325.

The Netherlands: BELGIUM.—"The glories of the old Flemish days are past but enthusiastic efforts have been made to found a new Belgian school, and there is now a long list of native composers. At the head of them, for many years, stood Pierre Leonard Leopold Benoit, or Peter Benoit, as he preferred to be called. He was born at Harlebeke, in the western part of Flanders, on August 17, 1834 [d. 1901]. His great love of music caused his father to give him lessons, and resulted in some juvenile efforts at composition. When he reached the age of seventeen he received more solid instruction, for he was sent to the Brussels conservatory, where he soon became a favourite of the great teacher Fétis. He studied piano, harmony, and composition, gaining several prizes for counterpoint and fugue. . . . In a few years he was appointed director of the Flemish School of Music at Antwerp, a position that gave him many opportunities to influence rising composers and develop their musical patriotism. . . . Among the important works of Benoit are a sacred 'Quadrilogie,' a piano concerto, the choral symphony 'De Maaiers' (The Reapers), and many lesser works for voice and piano. A more ambitious work is his second opera, 'Isa,' and the incidental music to the dramas 'Charlotte Corday,' 'William de Zwijger,' and 'Het Melief.' But the especial field in which Benoit excelled was the oratorio-cantata. His compositions in this line form a list of ample proportions, and show the composer at his best. One of the greatest of these is 'Oorlog' (War), while other striking works are 'Lucifer,' 'De Schelde,' 'De Rhy,' the Rubens cantata, and 'Promethée.' A Van Dyck cantata was also planned, but not finished before the composer's death in 1901. All of Benoit's larger works indicates a great power of conception, real inspiration, ripe technical knowledge, and much skill in the handling of great masses of tone. His oratorios are not modelled on the religious forms of Bach or Handel, but are the thoroughly modern

and dramatic in effect. They are great decorative pictures in tone, suggesting vistas of grand palaces, armies in battle array, rich fields of grain, mystic visions of the spirit world, or gorgeous triumphal marches."—A. Elson, *Modern composers of Europe*, pp. 184-187.—"Among other well-known followers of Benoit in the national movement, Lenaerts, leader of the Flemish theatre at Antwerp in his nineteenth year, has produced an excellent cantata, 'The Triumph of Light.' Keurvels, orchestral director at the same theatre, has produced the operas 'Paris,' 'Rolla,' 'Hamlet,' and others in lighter vein, as well as a Mass and some melodious ballads. Wambach, the violinist, is responsible for the drama 'Nathans Parabel,' the symphonic poem 'Aan de Boorden van de Schelde,' two oratorios, and many lesser works. Mortelmans is credited with the cantata 'Sinai,' the symphony 'Germania,' and the more recent 'Homeric' symphony, the symphonic poems 'Aspiration' and 'Helois,' and the cantata 'Lady Macbeth.' Vleeshouwer, a pupil of Blockx, has composed the operas 'Ecole des Pères' and 'Zrinyi,' also the fantastic 'Der Wilde Jäger.' [Jean Baptiste] Van Der Eeden [1842-], at Mons, has produced the prize cantata 'Faust's Last Night,' the opera 'Numance,' and several oratorios. Van Duyse, son of the poet of that name, has written the prize cantata 'Tassos Dood,' and seven operas. Emile Mathieu [1844-], leader of the Ghent conservatory, has composed much incidental music. Waelput is responsible for four symphonies, numerous cantatas, and the lyric drama 'Stella.' Huberti has devoted himself to secular oratorios, while Mestdagh, except for two overtures, has also confined himself to the choral field. Raway's sacred drama 'Neon' and the two-night lyric drama 'Freya' are ambitious works, while his symphonic poems are also well spoken of. Sylvain Dupuis, professor of counterpoint at the Liège conservatory, has produced the symphonic poem 'Macbeth,' and the operas 'Cour d'Ognon' and 'Moina.' Juliette Folville, famous among women as pianist and violinist, has composed the opera 'Atala,' a march, parts of a symphony, a violin sonata, and many songs. [Eugène] Ysaye [1858-] and [Martin Pierre] Marsick [1848-], both renowned as violinists, have produced several concertos for their instrument.

HOLLAND.—"Richard Hol was for many years the Nestor of the Dutch composers. His fame was assured by the patriotic hymn, 'Comme je t'aime, O mon pays,' and his long life of usefulness was of excellent service to the cause of music in Holland. Born at Amsterdam on July 23, 1825, he studied first at the Royal School, and later in Germany. He became piano teacher on his return, but did more important work in musical reform as leader of choral and symphony concerts. Among his hundred and fifty published works are the sacred opera 'David,' and cantatas 'Floris' and 'Le Hollandais Volant,' four symphonies, and several masses, to say nothing of lesser compositions for voice, piano, or chamber performance. Hol was for many years critic of the *Cecilia*, and afterward editor of the *Messenger Musical*. His long and active career reached its close with his death on May 14, 1904. Julius Röntgen was born of Dutch parents at Leipzig, May 9, 1855. His studies brought him under [Carl Heinrich] Reinecke and [Franz] Lachner [1803-1890], and made him a pianist as well as composer. In 1877 he came to Amsterdam, where he made his home. Here his activity took the form of teaching in the Amsterdam music-school, and he afterward aided in founding the conserva-

tory. His compositions include a piano concerto, an operetta, 'Toscani Rispetti,' 'Das Gebet,' for chorus and orchestra, and other lesser works. Amsterdam has become the musical centre of Holland, and its festivals afford a chance for the production of the best native works. Among the Dutch composers thus heard is Van t'Kruys, who has to his credit no less than eight overtures and five symphonies, to say nothing of the opera 'De Bloem van Island.' Smulders, of the Liège conservatory, has written the symphonic poem 'Adieu, Absence et Retour,' and other lesser works. Cornelius Brandt-Buys and his three sons have produced much organ and choral work. Hendriks is another prominent organist, while Averkamp, as director of a singing society, is also prominent in the vocal field. Gottfried Mann has seen the performance of his charming opera 'Melaenis,' while Van Milligen has written 'Brinio' and 'Darthula.' Among the latest Dutch operas are 'The Eagle's Nest,' by Julius Schey, leader of the Amsterdam opera, 'The Doge of Venice,' by John Wagenaar; and 'Kerstboom,' by Grellinger. Dirk Schaefer's piano concerto has created a good impression, and two movements of a symphony by De Haans have been well received. The best of the younger men, however, are Bernard Zweers and Alphonse Diepenbrock. Holland has also its quota of women composers. The children's songs of Catherine van Rennes and Hendrika van Tussenbroek are of unusual excellence, while the works of Cornelia van Oosterzee, if somewhat over-swollen in effect, show a mastery of larger forms. Cora Dopfer has entered the field of opera, and her 'Ratleft' is soon to be produced. All these names show that the national movement in Holland, if not yet of the same dimensions as that in Belgium, is still beginning to bear fruit."—*Ibid*, pp. 198-202.

United States.—"There is such a thing as an American note in music; only, for the present at least, you must not seek it in the symphonies and grand operas made in America. . . . America is not lacking in native composers of real worth and high technical proficiency. The most advanced among them, Charles T. Griffes, died too young to fulfill all the promise of his great talent. Music is being written to-day in the United States, which commands attention, not because it happens to be American-made, but because it is fine music. Nevertheless, it is almost entirely unmarked by national or racial traits. The work of American composers has, these many years, ignored the inventiveness and daring so splendidly exemplified in nearly everything else that American force and ingenuity have created or reshaped. Originality in the sense in which Whitman, Poe, and Whistler possessed it; boldness, such as American architects have shown, not to mention industrial and scientific pioneers—these qualities are yet to find a way into the art-music of America. . . . Among the native-born, few seem to walk ways of their own. A certain symphony, intended to depict in four movements the cardinal points of American landscape and character, might—as far as musical distinctiveness goes—be titled 'Everywhere and Nowhere.' The opera of an ardent demonstrator in American-Indian folklore, honored, for patriotic reasons, by a performance at the Metropolitan, is daubed all over with blotches of warranted-not-to-fade Sioux and Chippewa, in order to give the music 'native color.' And yet these works are representative American music! They are representative because they typify the two main sources from which the unoriginality of so much American music has sprung. One was the influence

of Europe. That was natural and, to a certain degree, unavoidable. It went with the training of American music-students in Paris or in Munich. But the case is more serious and quite humiliating, when we consider the second, namely, the musical 'borrowing' from the black man and the red, and when we see musicians applying the curling-iron or the war-paint to their tunes, by which processes they pretend to give us American music, which, in reality, but apes the merely tolerated negro or the ruthlessly exterminated Indian, who, each in his own manner, did that sort of thing a great deal better than the white man can ever hope to do. Of course, and contradictors notwithstanding, there never was and never will be an American folk-music, such as for instance Russia, Germany, or Scotland knows. Some people have seen therein the American composer's chief difficulty in obtaining a note of individuality. But the fact that a race inherited a wealth of ancient and traditional tunes does not always make for abundant musical genius of a high order. If it did, why do we not hear more from Greece or Polynesia? No doubt, the Southern negro is responsible for many characteristics in music which have passed for 'American.' There is the genuine bush-and-jungle thing, fierce and grand, preserved in a good many negro tunes; and there is the pseudo-darkey song, the kind that Stephen Foster wrote, pretty and domesticated—the amiable, shambling coon in congress-boots and stovepipe. It has never been established how many of the so-called plantation songs were nothing but Africanized English melodies, popular in the days of the colonists. No sooner did the packet bring from London a consignment of new publications for Messrs. Carr & Co.'s Musical Repository in Philadelphia, than these shilling sheets sped north and south. Floating through the parlor windows of Georgia and Virginia mansions, such snatches of the latest Covent Garden or Royal Circus show must have been quickly seized by the more musical dwellers in the slave quarters. It is not reasonable to believe that 'My heart is devoted, dear Mary, to thee,' one of Hook's Vauxhall songs published by Anne Bland before 1793, and clearly recognizable in the later negrofied 'Darling Nelly Gray,' was an isolated case. . . . Whether real or spurious, these negro elements are beginning to wear away; they are becoming 'bleached' and are taking a newer, indigenous shade. No matter what insistent advocates may say, the plantation songs of the South, the rich store of peculiar, tribal melodies of the Indian, cannot be regarded, or used, as foundation for true American music. They are foreign elements of a dead past. . . . MacDowell, better than any one else, succeeded in giving noble musical expression to the spirit of the Red Man. But in spite of his Indian Suites, ethnology and Leipzig could have done as much. Perhaps only hybrid music befits a hybrid people. . . . It is the same *Volkstümlichkeit*, or popular contemporary origin (*not* ancient folk-songs!), that is the root of the real American note in music. It did not make its entry timidly, in peasant skirts; it kicked out brazenly, in tights. Its cradle was the vaudeville stage. . . . The development of popular music in America, during the last fifteen years, has been astounding. While Vienna, Paris, and London have succeeded only in repeating, over and over again, the formulas of Johann Strauss, Offenbach, and Sullivan, New York has set the pace with tunes that have captured the world. Why not acknowledge that the war has produced in music nothing more typical of the spirit that won it, than the extraordinarily Mr. Cohan's superbly confident 'Over There'? Is it indeed so trivial and trite that

it may not take rank with the immortal 'Ça ira'? Compare with it the senile war-ditties of Messrs. Saint-Saëns and Widor, well-intentioned but inadequate, with the pathetically impotent 'Berceuse Héroïque' of the dying Debussy, or the spineless 'Madelon.' There was the American-made 'Tipperary' and the British admonition to 'Keep the Home Fires Burning.' But nothing really expressed the Allies' final go-to-it-iveness as did 'Over There.' The key-note of American popular music is optimism, [*i. e.*] 'punch.' . . . The true American note is that happy affirmation of the joy of living, the delight in bold and sensuous harmonies, the predilection for snappy and suggestive rhythms. In other words, it is the healthy negation of misery, murder and metaphysics. Therefore it is not essential to the white race, which is clearly put on its defense. History being dotted all over with *dal segno* marks, we see the whole of Europe seeking oblivion and relief in the panacea of the dance; this time the piper is American, being the only one left with breath enough to pipe. Shall speculation be ruled out of musical criticism because, generally, 'it comes the other way'? What fun posterity would lose! Let us then speculate what a composer might accomplish, who, in a day when we shall have forgotten how to dance the fox-trot (along with the *pavane* and *pique*), should succeed in idealizing, not the actual dance, but the *spirit* that animates it. Perhaps in that direction lies the unique opportunity which belongs to American composers. . . . Some ten or twelve years ago, Mr. Arthur Shepherd, one of America's most independent composers, wrote a piano sonata, quite remarkable considering its date. It contains no trace of negro or Indian. It is interesting because its last movement is based on a cowboy tune that Mr. Shepherd had learned to know while, as a young man, he conducted a vaudeville orchestra in his home town, Salt Lake City. That tune is autochthonal, it has the 'punch.' A more recent specimen is the trio for flute, viola, and piano by the young Chicagoan, Leo Sowerby. The scherzo of that work is obviously something that can be described only as American. It has no counterpart in music. Neither Dvorak nor Debussy could have written it; not even Mr. Gilbert. . . . Both Mr. Shepherd and Mr. Sowerby know Europe only by having served in the Expeditionary Force of their country. They studied music in America. There are other and smaller works which, for all their relative unimportance, are none the less characteristic of the trend. Whatever may be said of it, there is this advantage in the tendency, that music may derive from it a contribution, positive and universally applicable by white musicians. It is no longer the attempted infusion of elements forever alien and irrelevant, such as the Afro-American and American-Indian motives. It remains to be seen whether more will come of these meagre beginnings. The American note is there. . . . Transformed by the touch of white hands, it has gained in variety, elasticity, and a certain impudent swing. The stuff is Aryan, in the main, with perhaps a dash of Semitic effervescence and over-emphasis. It is happy, and at its best, supremely virile."—C. Engel, *American note in music* (*Living Age*, Sept. 3, 1921, pp. 609-612).

ANCIENT (ART-MUSIC)

circa. B. C. 4000-525.—Semi-civilized stage.—Egypt.—First nation to cultivate music.—"Golden Age."—Paintings and hieroglyphics.—National instrument.—Other instruments.—"Rhythm, pitch and articulation underlie all musi-

cal art and sum up all their possibilities."—C. V. Stamford and C. Forsyth, *History of music*, p. 7.—The historical development of art-music can be classified under three heads: ANCIENT: c. B. C. 4000-A. D. 900, unison, or at most octave singing; MEDIEVAL: A. D. 900-1600, simultaneous melodies, (polyphony); and MODERN: 1600 to the present day, accompanied melody, progression of chords (harmony). "Music enters the semi-civilized stage along with the other activities of developing society. When a people emerges from the heedless and irregular habits of savagery, its music usually attracts enough reasoning and skill to make it in some sense, artistic. The advance appears in heightened dexterity with song and instruments, in more exactly defined styles of composition, and in some attempt at literature about music, including often the use of a notation. Why some people cross this line and others do not is an enigma. However this may be, brief reference must be made to certain past or present systems of this grade, even though our knowledge of them is imperfect and though they seem wholly unconnected with our own music."—W. S. Pratt, *History of music*, p. 32.—"As is the case with other Egyptian institutions, music was very ancient in its origin, antedating 3000 B. C. [Egyptians were the first people to cultivate music] and was intimately connected with religion and through this with astronomy. There were many stages of development, which culminated in the Golden Age, 1500-1200 B. C., when music was employed as a social diversion and as an adjunct of religion, and was placed in the hands of carefully trained professional dancers, players, and singers, who formed orchestras and choruses. . . . After the Golden Age, music gradually degenerated, losing its individuality when Egypt was finally conquered by Persia in 525 B. C. The data from which we have derived our only knowledge of Egyptian music have been gleaned from hieroglyphics, bas-reliefs, paintings, and remains of instruments; and these show that stringed and wind instruments vastly predominated. The national instrument was the *Harp*, which was made in all sizes, from the portable kinds to the magnificently decorated and enormous temple harps, played upon by men only. . . . Other stringed instruments were lutes and lyres. . . . The chief wind instruments were single and double pipes and flutes; while for martial music there were trumpets, drums, and the Sistrum. [A nation could not have called into existence this array of instruments, except at the prompting of artistic feeling; and as music was associated with the chief events of their lives we may assume that they must have had an organized musical system.] From the structure of the instruments we infer that the scale was diatonic; and also, from the size of the orchestras in which women were allowed to take part, it is possible that some sort of harmony existed."—C. G. Hamilton, *Outlines of music history*, pp. 14-16.—See also INVENTIONS: Ancient and medieval: Stringed instruments.

ALSO IN: C. Engel, *Music of the most ancient nations*.

B. C. 3000-7th century.—**Assyria and Babylonia.**—Warlike character of their instruments.—**Dulcimer.**—An "ancient system [of music] existed here, the outcome of the culture of Babylon, which city, dating from 3000 B. C., was merged in the Assyrian Empire about 1300 B. C. At Nineveh, resplendent in the eighth and seventh centuries B. C., the warlike character of the people was reflected in their instruments, which, though similar to those of Egypt, were yet constructed so that they might be strapped to the body, and thus car-

ried in processions. The most popular of these was the *Dulcimer*, shaped like a zither . . . while other instruments were portable harps, lutes, double pipes, trumpets, . . . etc. Many instruments of percussion were in use, and all the music was high-pitched and shrill."—C. G. Hamilton, *Outlines of music history*, pp. 16-17.

B. C. 2852-478.—**China.**—**Music in the reign of Emperor Fu Hsi.**—**Theory.**—**Lus**, basis of Chinese music.—**"Ta Shao,"** oldest known composition.—**Use of music encouraged by Confucius.**—**Japanese musical system and instruments.**—The Chinese claim their music began in the reign of Emperor Fu Hsi (2852 B. C.); and their musical system to take form about the time of the "Yellow Emperor" Huang ti (2697 B. C.). In ancient times the Chinese based their music on a series of *lus*; an instrument made up of twelve tubes, originally bamboo, of different lengths from nine inches downwards. "The tone-system is theoretically complicated. Its basis is probably tetrachordal, like the Greek, but in practice it tends to a pentatonic scale, discarding semitones. But the division of the octave into twelve semitones is also known and in theory is applied somewhat intricately. The rhythms of song are emphatic. . . . Some rudiments of harmony are known, but are rarely used except for tuning." The oldest known composition, the celebrated "Ta Shao," was composed by Shun (2255 B. C.). Confucius favored a serious and acute speculation about music and "from Chinese literature it appears that music has had a long and honorable history in connection with Confucianism and under the patronage of the imperial court. Some of the temple music to-day is impressive, and the tone-system and many instruments are notable. Yet the status of popular music, as heard in the streets and the theatres, is notoriously low. Possibly the present is a time of degeneracy from ancient standards, or perhaps in past times suggestions of progress were so partially assimilated as not to affect general use. It seems as if music, having reached a certain point, became fixed, without the power of further advance. . . . Chinese instruments are numerous and important. But it is uncertain which of them are indigenous and which are borrowed from other parts of Asia."—W. S. Pratt, *History of music*, pp. 32-33.—"The Japanese musical system was derived from China, but so long ago that it has now become distinct. The popular use of singing and of instruments is here an almost universal accomplishment of importance, but, on the other hand, the literary treatment of the art is meagre. . . . Japanese instruments are in general replicates of the Chinese, but with many variations of details and usually with greater external beauty."—*Ibid.*, p. 36.—While it is possible to play both the Chinese and Japanese music on European instruments, the music of the East and West will always be distinctly separated because of the impossibility of applying the oriental harmony to the occidental rhythm.

B. C. 2000-A. D. 1200.—**India, Persia and Arabia.**—The music of India, Persia and Arabia having always been peculiarly Asiatic and the earliest specific data so far apart in terms of years the inclusive dates have been made 2000 B. C. to 1200 A. D. "The details of Hindu music are better known than those of Chinese. Evidently from the time of the Aryan immigrations (c. 2000 B. C.) much attention has been paid to the art. But, since India has been repeatedly invaded and even subjugated by foreign peoples, and has been for ages in close commercial relation with Western countries, no one can say what of its music is original. . . . Music exists chiefly in the form of

popular song or as an accompaniment for dancing. In religious ceremony it is less frequent, though somewhat used by both Brahmins and Buddhists. The singing of poems is universal, from the old Sanscrit odes to the ballads of modern origin. Dancing to music is very popular, and professional dancing-girls are a feature at social functions. Music is often employed in pantomimes and plays having a mythical, social or fantastic subject. . . . The tone-system rests upon a primary division of the octave into seven steps, but more exactly into twenty-two nearly equal . . . quarter-steps. These latter are not all used in any single scale, but serve to define with precision various seven-tone scales that differ in the location of the shorter steps (as in the mediæval modes of Europe). Theory has been so refined as to name almost 1000 possible varieties of scale. . . . In practice not more than twenty of these appear, the usage varying with locality and tribe. Most of these scales are somewhat akin to ours, so that melodies in them often suggest our common modes. . . . [These modes are known as *rāgs* and can be classified as pure, mixed and altered.] The art of making instruments has been as minutely studied as the theory of scale. . . . Native writers indicate four classes—those with strings, those with membranes sounded by striking, those struck together in pairs, and those sounded by blowing. Of these the stringed group is by far the most characteristic and admired.”—W. S. Pratt, *History of music*, p. 37.—The most ancient composition appears to be the “Saman Chant” a plain-song with a compass of three notes; “*Natyas astra*” (Bharata, about 600 A. D.) contains the first known treatise on theoretical music; and Jayedva (1200 A. D.) is the earliest known non-legendary musician. It is possible that the earliest attempts at notation were made by the Hindus and Chinese and later transferred to Greece. “There is little actual knowledge of the ancient Persian system, but, since many of its characteristics were undoubtedly transmitted to Arabian music after the Mohammedan conquest of Persia about 700 A. D., we are able to judge something of its nature from the study of the music of the Arabs. The well-known mathematical propensities of the latter people were applied to the structure of the scale, resulting in a very perfect division of the octave into seventeen equal parts, each consisting of one-third of a tone. . . . Such an appreciation of very small musical intervals would seem to point toward the existence of delicately adjusted instruments; and of these the Arabs had a great number, chiefly of the string type. . . . Of a number of members of the viol family, the strings of which were played by a bow, the *Rebab*, a two-stringed violin was a direct ancestor of our violin. It was chiefly through these instruments that Arabian music finally came to have important effects upon our own; for when the Arabs, under the influence of Mohammedanism, over-ran Egypt, North Africa, Turkey and Spain, in the 7th and 8th centuries, they carried with them their musical institutions which later on, especially through the Crusades, came into contact with European civilization. Since, also, Mahomet disapproved of music in connection with religion, the Arabian music was largely used for social diversion, and hence affected European music principally on the secular side.”—C. G. Hamilton, *Outlines of music history*, p. 12-14.—Arabia has been claimed as the birthplace of the bowed instruments but it is nearly certain that they were invented in England. In the very earliest years of our era, the British had the cruth, a primitive plucked instrument of several strings, and by the eleventh century the principle of the bow had

been applied to the cruth. In Arabia, the bow principle was applied to the lute, but not earlier than the fourteenth century.

circa B. C. 1000-A. D. 70.—Hebrews.—Earliest record.—Religious uses.—Theories on adoption of ancient Jewish melodies by early Christians.—The earliest recorded application of music was by bands of prophets under Samuel before 1000 B. C., and for “obvious reasons the student will turn to the music of the Hebrews with greater interest than to that of any other ancient nation except the Greeks. The common supposition that the Hebrews had highly developed music in connection with their worship may easily be shown to have no foundation. There is no reason to suppose that music with them was any further advanced than among the Assyrians and Egyptians. It was unharmonic, simple and inclined to be coarse and noisy; it had a place in military operations, at feasts, private merry-makings, etc., but its chief value lay in its availability for religious uses. ‘The music of the Hebrews was divine service, not art’ (Ambros, *Geschichte der Musik*). Their instruments were plainly identical with those of their neighbors, the Assyrians and Egyptians. . . . There is no proof that any of the ancient Hebrew melodies have come down to us. Hebrew poetry, like that of all ancient nations, was always intoned or chanted. The cantillation of the modern Jewish synagogue is a traditional survival of the ancient usage. . . . The peculiar structure of Hebrew poetry known as parallelism may be noted as probably indicating an antiphonal manner of singing, as in the Church of England to-day. . . . An elaborate musical service, both vocal and instrumental, was organized in connection with the temple worship. The female voice was evidently not employed. . . . The archaic melodies and tonalities found in the modern synagogue song books of many countries have much interest, but their connection with the music of the old Jewish monarchy or with the synagogue worship of the time of Christ cannot be proved, or disproved. The adoption of ancient Jewish melodies by the early Christians, and their influence upon the Plain Song of the Catholic church, is also mere conjecture.”—E. Dickinson, *Study of the history of music*, pp. 7-9.—An opposite view will be found in T. Tapper and P. Goetschius, “Early Christian music.” Some authorities claim that the ancient Hebrew melodies formed the basis of the early Christian plain-song; and it is possible that these melodies were preserved in at least as pure a form in the Roman church as elsewhere. The Catholic Plain-song may be a collection of melodies older than any other in existence.

B. C. 540-A. D. 4th century.—Greece.—Homer.—Pythagoras.—Tone system.—New fountain-head for western art.—“It is odd to think that among the Greeks, at a time when poetry, painting, sculpture and architecture had attained the greatest heights, music was still in its infancy. They knew neither harmony nor even melody, as we conceive it; all musical interest for them consisted in rhythmic combinations and the union of these with prosody [originally tone or accent of a syllable, later applied to a song sung to music]; music was the humble slave of poetry; [chanted songs are mentioned by Homer]; it was rather a sort of rhythmized and droning diction, which must have gone well with the immobility of the tragic mask. As to instruments, their only use was to guide and sustain the voice of the declaimer, to give him the pitch, and to accentuate the rhythmic forms. . . . It is from the writings of the philos-

opers, Pythagoras (540 B. C.), Plato (430 B. C.), Aristotle and Aristoxenes (IV cent. B. C.) that we gain some vague idea of what Greek music must have been; it is certain that they knew the semitone, the tone, some say one quarter-tone; and they had the three systems, diatonic, chromatic, and enharmonic. The extent of their general scale was about three octaves. . . . They had numerous modes, each constituting a different scale. . . . [Greek tone-system was based on the tetrachord (four strings diatonic series of four tones)]. In conclusion, the Greeks possessed a very complicated system of notation. [They had two systems: one for the singers and the other for instrumentalists; the latter the more ancient] formed by means of the letters of their alphabet, . . . modified, inverted, etc., and varying for vocal or instrumental music."—A. Lavignac, *Music and musicians*, pp. 384-386.—While Pythagoras of Samos (6th century B. C.) is credited with the founding of Greek music and philology based on his previous studies in Egypt, yet some authorities claim Terpander (7th century B. C.), awarded the prize in musical feasts of the festival of Apollo Carneius (670 or 672 B. C.), should be considered the founder of Greek classical music. Research has not brought forth data definitely to settle either claim; the outstanding fact of this whole period is: that the music of the ancient Greeks was incorporated in the plain-song of the Christian church and the "modes" furnished material for later day tone systems.—See also EDUCATION: Ancient: B. C. 7th-A. D. 3rd centuries: Greece: Plato and Aristotle; Contrast between Athenian and Spartan education.

B. C. 2nd century.—Invention of the *Hydraulos* by Ctesibius. See INVENTIONS: Ancient and medieval: Wind instruments.

B. C. 146-A. D. 524.—Rome.—Important treatise.—Center of distribution.—With the exception of the treatise, "De Musica," by Boethius (d. 524 A. D.), which had great influence upon medieval church music, pagan Rome cannot be said to have contributed anything toward creative music. The Romans obtained their scales, instruments, and musical methods from their cultural ancestors, the Greeks; and for a thousand years, Rome was the distributing center of civilization. Their lack of creative ability was so pronounced that even Horace (65-8 B. C.), in his "Ars Poetica," complained about the key-mechanism of the *aulos*, a wood-wind instrument.

B. C. 4-A. D. 397.—Early Christian.—Sources of first church music.—Saint Ambrose first reformer.—Ambrosian chant.—"The momentous religious awakening which ushered in the era of Christianity provided wholly new conditions, signally auspicious for the development of music. With the advent of spiritual ideals and impulses, the true power and mission of music became recognizable, and before long there evolved for the first time in human history, the possibility of directing this power into its most significant channels. The regenerated soul, longing for a medium of expression for its new hopes and feelings, found no other form of utterance so peculiarly qualified as music for this spiritual experience. The early Christian congregations were, therefore, impelled to sing, as well as to pray; and what they sang could scarcely have been altogether new, but was probably appropriated from the existing traditions of the Jewish church, . . . [the early Christian church not only drew on Jewish art, but also transformed and incorporated many heathen tunes both Greek and Latin; and from earliest times the Sanctus, Magnificat, Benedictus and Nunc Dimittis were sung to these simple tunes. It is more than likely

that the method of singing was antiphonal. Antiphon originally meant the breaking up of a long psalm into passages of equal length which were sung alternately by the two halves of the choir. Both sexes joined in singing; but instruments of every kind were prohibited for a long time. Saint Ambrose (333-397 A. D.) is regarded as the founder of the music of the Catholic Church. The first attempts to organize and establish a system of musical service are identified with his name. Saint Ambrose was a great lover of music and a hymn writer of such eminence that the term Ambrosian was applied to all hymns written in his characteristic prosodic measure, and even became a general synonym for all ecclesiastic hymns of that epoch. . . . The Ambrosian chant or intonation was, no doubt, recitative in style; the rhythm was marked as in speaking, while the voice remained mostly upon one tone, excepting at the cadences (the end of the lines or verses), where either a rising or falling inflection was made. . . . There was yet no system of musical notation; the tones were indicated by letters only, as among the earlier Greeks. Saint Ambrose classified his intonations according to the following four modes [forms], borrowed, presumably, from the Greek theory; these are known as the Ambrosian ecclesiastic tones or authentic modes:

Tetrachord Tetrachord

1. D \widehat{E} A G A \widehat{B} C D
2. \widehat{E} F G A \widehat{B} C D E
3. F G \widehat{A} B C D \widehat{E} F
4. G A \widehat{B} C D E \widehat{F} G

[These modes (forms) were made up of two whole tones and one half tone, the location of the half tone varying with the mode.] It must not be forgotten that at this time music was limited to melody alone. Harmony [grammar of music], or anything approaching the idea of independent parts, was still wholly unknown."—T. Tapper and P. Goetschius, *Essentials of music history*, pp. 33-36.—See also MILAN: 374-397.

314-590.—Singing schools.—Music in ecclesiastical life.—Papal Choir or Schola Cantorum.—"The first school of song mentioned is that of Pope Sylvester established in Rome sometime between 314 and 335." It was during this period that the Papal Choir, or Schola Cantorum as it was then called, came into existence. The Schola Cantorum was a regularly constituted company of singers who lived in community, with a clergyman of high rank, usually a bishop, at its head. It was more a guild than a school and was attached to St. John Lateran, at that time the Papal Church. "Later schools are ascribed to Pope Hilarius (461-468) and others. The influence of the Gregorian system upon the artistic development of ecclesiastic music extended, undiminished, over a period of a thousand years (from 500 to 1600 A. D.), and to the present day it constitutes the basis of all Roman Catholic musical ceremony and service. The significance of music as a vital factor of ecclesiastic life was early recognized and its use and cultivation received serious attention almost from the beginning."—T. Tapper and P. Goetschius, *Essentials of music*, pp. 40, 43.

540-604.—Saint Gregory.—Reformations of church ritual and music.—Gregorian chant.—

"In course of time a more perfect system [of Church ritual and music] became desirable, and the efforts to bring this about seem to have centered next in Gregory, surnamed the Great (born about 540 A.D., pope from 590 to 604), who is credited with having reformed and reorganized the liturgical and musical service of the Catholic

reason every chant it contained was known as a *cantus firmus* (fixed chant). The distinction between the Ambrosian and Gregorian manner of singing appears to have rested largely upon the rhythm, which, in the former, was apparently far more natural and animated, conforming to an unconstrained declamation of the text. Church. The music he established was called the Gregorian chant. . . . [The Gregorian chant is a sort of a free recitative.] All the intonations belonging to his liturgy were noted in (letters only) in a book called the *Antiphonary* which, bound by a chain to the altar of St. Peter's church in Rome, was to remain an inviolable guide for the music of the Roman Church for all time. For this

gorian chant, on the contrary, held less strictly to the natural rhythm of the words; . . . not only were two or more tones often sung to one syllable, but at times a whole melodic group accompanied a single vowel. [All language depends for intelligibility on quantity and accent; in ancient poetry it is quantity at fixed intervals, but in the modern it is accent at fixed intervals; and Gregory's

problem was to make his music a satisfactory vehicle for the singing of the Psalms in Latin.] Gregory increased the number of modes to eight by adding four subordinate ones, known as plagal, to the four authentic modes of Ambrose. The plagal modes differed from the authentic only that they proceeded from dominant to dominant (fifth step) instead of from key-note to key-note. . . . Besides notation in letters there was another system of which Gregory, and perhaps earlier writers, are known to have made some use. This was the so-called *neuma* [written above the text to indicate relative pitch] *script* (from *pneuma*, breath) and was said to have been invented by a monk, St. Ephraem, as early as the fourth century. . . . It was, at all events, the first device for indicating musical sounds ever invented that proved to be capable and worthy of development, and it was . . . the direct forerunner of our modern musical notation. . . . The neumas did not indicate any particular tone or time value, but merely the rising, falling, sustaining, or inflecting of the voice in a general way. They were consequently mnemonic rather than strictly notational. Finally—possibly as early as the seventh century—some conscientious copyist hit upon the simple expedient of drawing a line to guide him in placing his neumas accurately and neatly above the text. This probably purely accidental device was soon turned to account as a means of fixing the pitch of the tones themselves. The first line was fixed for the middle F of the bass and was identified by the corresponding letter (F), from which, . . . the present sign of the F Clef (:) has been derived. Shortly afterwards—about the ninth century—a second line was added, representing the fifth tone above F (that is, C) also marked with its letter, (F, the original of the modern C clefs). The F line was red, the C line either yellow or green. Later, a black line, for the tone A, was placed between these. . . . Thus the musical staff was gradually formed; and it grew until a few centuries later it became the so-called great staff of eleven lines—our present G and F staves with the C line between.”—T. Tapper and P. Goetschius, *Essentials of music*, pp. 36, 38-39.

MEDIEVAL (ART-MUSIC)

900-1050.—Hucbald.—Attempts to multiply vocal parts.—First attempt known as *organum*, later *discantus*.—Guido of Arezzo.—“The time was come when those who revered music and believed in its wider power grew impatient of the narrow and monotonous mode of unison singing. . . . Certain it is that in the first decades of the tenth century, if not earlier, attempts were made to combine—or, rather, to multiply—the vocal parts. This was the most momentous step in all the ranges of music history, for it pointed out the only method of extending and amplifying the resources of musical expression; . . . nothing else could have unlocked the vast treasure . . . house of musical potentiality—could have started the process of evolution that has led to the truly marvellous art of our day. The individual associated with the new movement was Hucbald, or Ubaldu [systematizer of the organum], a learned Benedictine monk in the convent of St. Amand, in the French Netherlands, who lived from 848 to 930. Whether or not Hucbald originated these novel experiments of increasing the one-voice (unison) mode of singing the Gregorian intonations to a more ample body of two or more simultaneous melodies, or

merely assisted in systematising them is not known. [The Hucbald authorship of ‘Musica Enchiridis’ has been questioned.] . . . The first attempts at combining melodic parts were known originally by the name of *organum* [simultaneous progression of parallel 5ths], and later *discantus*. [The germ of counterpoint lay in experiments with combining of two voices.] These were of two kinds: the first consisted in an unaltered succession of parallel fifths or fourths and octaves. To the Gregorian melody (the *cantus firmus* [fixed song]), as lower-most part, a higher voice was added, singing exactly the same melody either in the fourth or fifth. In case the organum (or *discantus* [a term which in medieval times was applied to contrary motion]) was to embrace more than two parts, one or both of these voices was doubled in the next higher octave. . . . To the modern ear this method of multiplying parts . . . is repugnant. To those who first heard it, it was, no doubt, a welcome novelty. . . . In itself, as a specimen of combined melodies, the organum was worthless; but it soon led to other and more valuable results, as for instance; the so-called secular organum, in which different intervals were used, generally in consequence of holding the lower part stationary (on one tone) while the other intoned the *cantus*. . . . The second species, called *diaphony*, was of greater artistic promise. This consisted in a succession of changing intervals, only obtainable by the impulse of giving to each separate part a more distinct melodic movement, and of introducing other and more euphonious intervals; for example, the third. . . . It did not take long to develop this into actual polyphony [simultaneous melodies], the artistic multiplications of genuine melodic parts. . . . The novel practice of *diaphony* was indulged in by all the singers of the time, and it is probable that it gave rise to other experiments which may have threatened the purity and integrity of the sacred intonation. It was, no doubt, necessary and fortunate for the church that a gifted and authoritative musical mind should appear at this juncture to control and conduct the new technical achievement into safe and serious channels. This authority was Guido of Arezzo [systematizer of musical notation] (c. 995-1050), a Benedictine monk of the convent of Pomposa, Guido was such an eminent leader in musical matters that many of the important innovations of this era have been attributed to him, probably without foundation. It is evident, however, that he was instrumental in simplifying the confused theories of his day; in perfecting the notation; in regulating the technic of melody combinations; and, most vital of all, in establishing a scale system which has required no significant modification to this day, agreeing as it does in all essential points with the scientifically demonstrated major scale of modern music.”—T. Tapper and P. Goetschius, *Illustrated history of music*, pp. 43-48.

11th-13th centuries.—Part singing.—Organum.—Diaphony.—Discantus.—Invention of a new notation.—Franco of Cologne.—Mensural song.—Uneven time.—When the practice of part-singing became more general it was found necessary to fix the value of the notes of the different parts, and although the strictly measured bars of our time with their bar-lines were not then adopted, a near approach was made in this direction. When,

in the tenth and eleventh centuries, the organum and diaphony were chanted, the voices moved in the same direction, and it was then possible to sing in time without any special difficulty. But in the twelfth century a change took place, diaphony was merged into the Discantus . . . which was especially the case among the inhabitants of the northeast of France and the Netherlands. In these districts a practice . . . arose of embellishing the upper notes of the Discantus with ornaments, called in France, *Fleurettes* and in Italy, *Fioriture*.—Under such circumstances, the melody of the upper voice gained a considerable accession of movement compared to that of the lower voice, the second voice singing the *cantus firmus* [fixed song, plain chant], and on this account it was called *Tenor*. Under these conditions, a further united singing of the two divergent voices was impossible, unless governed by some fixed rules of measure. . . . Hence the invention of

uneven Tempo, or triple time, introducing it into Church music on the ground, which was entirely in keeping with the spirit of the mediæval ages, that the Holy Trinity teaches us to regard the number three as the symbol of perfection, and hence triple time was even to be regarded as the *tempus perfectum*. . . . The laws of part-writing laid down by Franco of Cologne were, in their essential elements, the same as those which govern modern harmony. . . . The germs of the new notation, forced into existence by the Mensural music, and which were to mark the varying durations of the tones of a melody, were known, however, previous to the time of Franco. He adopted therefore for his purpose the four . . . well-known characters, each representing a different value, viz., the *Longa* [7], the *Brevis* [■], the *Maxima* [7], . . . and the *Semibrevis* [♦].—E. Naumann, *History of music*, pt. 7, pp. 214, 216-217.—The earliest vocabulary of musical terms is in the prolix work

DEVELOPMENT OF NOTATION

a new notation, or at least a re-modelling of the old system, had become a necessity. . . . We are indebted for the oldest and most trustworthy information extant on this subject to the learned Franco of Cologne [author of treatises on musical rhythm, and the theory of intervals, one copy of which is in the Bodleian Library, Oxford]. The exact period at which this celebrated master lived is not known, but most probably it was during the latter end of the twelfth and the early part of the thirteenth centuries. . . . It is curious that even up to a very recent date, the personality of Franco of Cologne was surrounded with much mystery, . . . but the researches of the Belgian historian [C. E. H. de] Coussemaker [1805-1876] . . . prove that besides Franco of Cologne, another Franco (of Paris) existed, whose period was but little anterior to that of . . . Franco. . . . This celebrated teacher zealously advocated the adoption of the Mensural song, [measured song] which he greatly improved. . . . ["Discantus positio vulgaris," an anonymous treatise written before 1150, is said to contain the earliest rules for "measured music"]. He also originated the

of Joannes Presbyter (late 11th century). "The discovery . . . of Discant is one of the greatest steps forward ever taken by the human mind. . . . It is not to be compared with such a mechanical invention as that of a locomotive, but rather—if comparison is possible, with some such fundamental discovery as that of a wheel. In both cases the discovery was probably not the work of one man, of one group of men, or even of one age, but was achieved by the slow effort of many minds and many ages, after a desperation of painful thought."—C. Forsyth, *Music and nationalism*, p. 67.

12th century.—Popular music of Middle Ages.—Troubadours and Minnesingers.—Jongleurs and Menestriers.—"As far back as we may go in the story of European civilization we find traces of the use of song in common life. The same instinct for musical expression that is universal among uncivilized men persists in civilized conditions. Song springs forth spontaneously as the voice of the ordinary sentiments of domestic and communal life, embodying the feelings belonging to whatever occupies man's interest with intensity. It beguiles labor and loneliness, and enlivens all

social festivity. It gives outlet to exuberant vitality, interacts with all sorts of bodily and mental effort, and brings to light that love for the beautiful and the ideal that is latent in healthy natures. It passes over readily into dancing—the rhythm and motion of the voice fitting closely with expressive movements of the body. It also turns easily to the use of whatever instruments the singer's wit suffices to fashion.”—W. S. Pratt, *History of music*, p. 102.—“The slow and tedious progress made by Church music in its striving after artistic form, even after the great reforms introduced into the liturgical song by Gregory, . . . forms a strong contrast to the free . . . development of secular song among the people. The folk-songs, refrains, and roundelays which accompanied all the popular dances, the tales . . . and the ballads and serenades of the southern nations, although made by the people . . . contained in themselves the germs of a rich development, which, coming into contact at a later period with the achievements of art, attained to the most gratifying results. . . . In order to gain a more general understanding of European mediæval folk-lore and its musical setting . . . we must devote our attention to a study of the songs of the eleventh and twelfth centuries which are really the melodies of the troubadours and minstrels. . . . Specimens of the oldest secular mediæval folk-music, whether in the romances of the South, or among the popular ditties of the Northern Germans, are to be found in the songs of mountebanks, adventurers, itinerant jugglers, and strolling players, all of whom accompanied their songs on various musical instruments. In Germany these wandering musicians were generally tramps and vagrants, a class of humanity very characteristic of the Middle Ages. In Italy they were chiefly recruited from strolling players, from showmen who traversed the country exhibiting camels, monkeys, and dancing bears, from tricksters and vendors of molasses. . . . In France, more especially in Provence and Normandy, they were represented by the *Jongleurs* and *Menes-triers*, men who were indifferently buffoons, rope-dancers, or musicians, and also by . . . professional story-tellers who sometimes accompanied their recitals by music. In England they were known under the name of minstrels. It must be distinctly understood that the . . . beautiful melodies of Germany, Gaul, and Italy, sung by the wandering minstrels, were not their own original productions, but were the outpourings of the heart-felt emotions of the people themselves. The minstrels were but hawkers and disseminators of the tunes, carrying the themes and a knowledge of the musical elements from one people to another. But to their credit it must be said that it was owing to their skilful pipe and rota [a guitar-like stringed instrument] playing that a more lively style and many an original and singular rhythm were introduced while the comical vein of their quaint, humorous songs stimulated others to new and bolder attempts in musical contrivance. Notwithstanding the great favour with which these wanderers were regarded by the people . . . they never achieved any social distinction or attained any civil rights. True it is that their existence was tolerated, but all real protection of the law was withheld from them. . . . Even the Church withheld its sympathy and denied them the right to partake of the Christian sacrament. These drawbacks, however, did not prevent their congregating in hundreds at court festivals and fairs, on great market-days, and when celebrated pilgrimages were to be made; their rewards, either in money, food, or raiment, being usually very great. . . .

The strolling player, besides exercising his public calling, frequently acted in numerous other capacities; thus, he was the secret messenger of princes and nobles, the *courier d'amour* of lovers, the agent of merchants, and the bearer of news to the peasant from distant relatives. When the players moved about in companies, women and children formed part of the troupe. . . . Among the companies that roved through the South we find women and children skilfully using the well-known Oriental tambourine and Egyptian clapper in their wanton dances. Their rambling, dissolute life induced a certain moral laxity that brought upon them public censure.”—E. Naumann, *History of music*, pt. 8, pp. 226-229.—“During the eleventh and twelfth centuries mountebanks and strolling minstrels were engaged in the service of Troubadours and Minnesingers, a circumstance that contributed greatly to the development of secular mediæval music. At first their office was only that of instrumental accompanists to the poetising nobles and knights, as the latter were either incapable of accompanying themselves or considered such performances unbecoming their exalted station. Later on they were intrusted with the task of disseminating a knowledge of the songs and canzonets of their lordly masters; and so great was their success that the courtly Troubadours, stimulated by the skill with which the strollers manipulated the Rota and the Rebeck [a stringed instrument, the earliest known of the viol class], and their dextrous performance on the lute and fife, strove anxiously to acquire so effective an accomplishment, and from this time they numbered in their ranks many excellent instrumentalists. The honour of having been the pioneers of the courtly poetry and song belongs to the nobles of South-eastern France. It was there, . . . under the deep blue sky of Provence; that the romantic element, after the fall of Rome, had remained comparatively pure, without mingling with that which was foreign in the same degree as did the romanticism of more Northern France. The homely poetry and song of a contented people, gifted with the love of adventure and possessed of a cheerful, sensuous conception of the world, so excited the admiration . . . of the nobles, that they created for themselves a song akin to that of the peasant, giving to it, however, the stamp of their own individuality. The result was that their song was distinguished by a . . . more refined versification, nobler language and a somewhat improved melody . . . exercising a refining influence on the mind and morals of Christian mediæval chivalry. . . . The Troubadours did not disdain to accept gifts from their princes and noble ladies . . . but their poetising and song did not . . . descend, as with the *Jongleurs* to a mercenary profession, but practised and loved solely for itself, it rose to a self-dependent art. Prominent among the Troubadours of this time stands the name of *Count William of Poitiers* (1087-1127 A. D.)”—*Ibid.*, pp. 231-233.—See also TROUBADOURS.—“The movement of the Crusades, which convulsed the whole of the chivalric knighthood of Europe, naturally drew Germany into the vortex of its religious enthusiasm. . . . It was, however, but a part of Germany only that was at all influenced by this movement, for if we examine the lays of the Minnesingers of Southern Germany . . . we shall find that in the majority of cases they are of an entirely different character to those of the Troubadours. Indeed we may say that they were almost entirely independent of the Provençal influence, although the Northern German provinces . . . naturally felt though in a very slight degree, the effects of the

mental thrill which then electrified the whole of European chivalry. The case was different, however, with the Minnesingers of Lower and Central Germany. They, evidently, were first acted upon by the song of the Trouveres of Northern France. . . . The Lower German School therefore, before it came into contact with . . . that of Upper Germany, betrayed all the characteristics of its courtly origin, while throughout all ages the songs of Upper Germany preserved the stamp of their popular source, as true folk-music. . . . We may date the commencement of the German Minnesong from the time of Frederick the Red (1152-1190 A. D.). The songs of the Minnesingers did not, like the greater number of the courtly chansons of France, Spain and Italy, treat of the tender passion only. They embraced moral, religious, and even political topics of the period. . . . As a rule they . . . were not attended by bards like the Jongleurs or the Troubadours, but sang their own lays, often improvising words and music together. Those who were able to accomplish this were subsequently designated 'Mastersingers.'—*Ibid.*, pp. 238-239, 247.

ALSO IN: G. J. Aubry, *Trouveres and troubadours*.

12th-14th centuries.—Chansonnier, or Trouveres.—Count Thibaut.—Adam de la Halle.—"Jus de Robin et Marion."—Trobadores of Spain.—Minstrels of England.—Heinrich von Meissen.—"The poetry and song of the Provençals was gradually disseminated throughout France, and towards the latter end of the twelfth century we find the Troubadours flourishing in the North under the name of *Chansonnier*, (or *Trouveres*), among whom the name *Count Thibaut* . . . (1201-1253) King of Navarre is the most celebrated. . . . Besides . . . Thibaut, Adam de la Halle of Arras in Picardy (1240-1286 A. D.) deserves mention as one of the most noted Trouveres. . . . The favoured Chansonnier of Picardy is considered to have been the first to re-model the Pastourelle into a complete musical drama, and his 'Jus de Robin et Marion,' has often been sportively referred to as the first comic opera of France. But he is chiefly to be remembered by reason of the efforts which he made in part-writing. . . . Yet de la Halle was not alone in his endeavours to establish polyphony, for the Troubadours of Provence, and the Trouveres of Artois and Picardy of the twelfth and thirteenth centuries, were not only melodists, but relatively harmonists and contrapuntists. . . . In Spain the *Trobadores* were chiefly to be found at the courts of Arragon and Castile, their melodies forcibly reminding one of their Provençal origin. . . . Poetry and song were introduced into England from Northern France, and here the knightly songsters, who like the Troubadours, fostered the love for national poetry and secular song, were known as Minstrels. In Italy the Provençal lay did not strike deep root . . . [which may be accounted for by the fact that the] original genius of Dante may have absorbed all the poetical interest of his nation. . . . The name of Heinrich von Meissen has attached to it a special significance in connection with the history of music. The last of the Minnesingers, he was born in 1260 A. D. at Meissen, and died in 1318 A. D. at Mayence. So constant and successful were his praises of women that by common acclamation he was named 'Frauenlob' i. e. woman's praise. The name Frauenlob stands out prominently in the history of the general development of art, not only as the last of the Minnesingers, but also as the connecting link between the dying courtly minstrelsy and the germinating civil Meistersong. The German Meis-

tersong seems to have originated at Mayence, from whence it became disseminated throughout the German lands." E. Naumann, *History of music*, pp. 235-236, 250.—"The rise of the Meistersong followed upon the decay of the Minnesong, the exponents of the former adopting, especially in lyric song, the forms of the latter. The Meistersong flourished for a period of nearly four centuries, and may be roughly said to be represented by the celebrated *Hans Sachs* (1494-1576). . . . In the sixteenth century schools for its propagation are known to have existed as far north as the Baltic Sea. Besides the celebrated school at Nuremberg, others were founded at Frankfurt, Ulm, Ratisbon, . . . Danzig, and many smaller cities. . . . In the seventeenth century the Meistersong, practised according to strict guild law, began to decay: one school, however, survived at Ulm as late as 1839 A. D."—*Ibid.*, p. 252.

12th century-1350.—Old French school.—Counterpoint.—Faux-bourdon.—Old masters: Leonin, Perotin, De Garlande, Franko of Paris, De Machault, and Adam de la Halle.—"During the first eleven centuries of the Christian era, the development of music was in the hands of various men of different nations. . . . Discanting, which arose in France, spread rapidly among other nations, as had been the case with *diaphony* and the sacred *organum*. Beginning with the twelfth century, however, there seems to be a rotation of nations whose composers really formed schools of music. . . . The [old] French school of polyphony is the real beginning of counterpoint [note against note, i. e., the setting of one or more parts against a given melody, so all the voices are of equal importance and independence] as an art, as well as a science. Its donation to the musical world was the union of the secular and the church methods as a result of the influence of the Trouveres upon the church music. The *faux-bourdon*, a progression of voices in sixths and thirds . . . was very much like organum except . . . its voice-progressions moved in the more tuneful intervals of the third and sixth. . . . [The discant (contrary motion of voices) led to counterpoint and this, in turn, to the establishment of a system of notation in which the different values of the notes in regard to time were definitely fixed.] Among the leading names [of this period] . . . are Leonin and Perotin, organists at Notre-Dame in Paris in the 12th century, [also De Garlande, Franko of Paris and De Machault. Adam de la Halle, 1240-1286 and De Machault, d. 1350, are the connecting links between the Troubadours and the archaic contrapuntists]."—A. J. Gantvoort, *Familiar talks on history of music*, p. 50.—Three art forms were developed in this period: the motet, rondellus (rondeau), and conductus.

1226-1622.—Old English school.—"Sumer is icumen in."—John of Dunstable.—Lutenist song writers.—Old masters.—England has the oldest known specimen of polyphonic writing: "Sumer is icumen in" (1226); no work within two centuries of its date attains a style so nearly intelligible to modern ears. England of the thirteenth century must have attained a comparatively high state of development. The tuneful character of "Sumer is icumen in" has something in common with the songs of the Troubadours. The few preserved compositions by John of Dunstable (pioneer composer, d. 1453) show the same general characteristics as the Old French school. The school of lutenist song writers stands by itself as something which has no parallel in the contemporary schools of music in Europe. It shone brilliantly for twenty-five years, 1507-1622; during

this period some thirty sets or volumes of song were issued beginning with Dowlands "First Booke of Songs Ayres" in 1507. Music of a characteristically English kind is united to some of the finest English verse. Some of the masters of the Old English school were Walter Odington (d. 1280), writer on music; Thos. Tallis (1515-1585), styled the father of English cathedral music; William Byrd (1543-1623) "bread up to music under Tallis"; Richard Farrant (16th century), composer of the anthems "Hide not thou thy face," and "Call to remembrance"; Orlando Gibbons (1583-1625), created doctor of music by the university of Oxford in 1622, the following year became organist at Westminster Abbey; and John Merbeck (d. 1583), organist at St. George's, Windsor.

1350-1500.—Gallo-Belgic school.—Papal choir.—Fuga.—Canon.—Old masters: Guillaume Dufay, Gilles de Binche, Antoine de Busnois.—"At the beginning of the fourteenth century, this art [counterpoint] had begun to decline in importance in France, but had taken on new life in the Netherlands. This migration was due partly to political and social conditions. . . . In addition to this, the politico-religious disturbances which caused the removal of the Papal See from Rome to Avignon in 1305, brought from Italy the very best composers, who aided in the advancement of musical culture in the new center of the arts. . . . [When the Papal See was transferred from Rome to Avignon the Choir was left in Rome, and another choir was formed, mostly of the best French and Flemish singers.] Thus there came to be established what is now called the Gallo-Belgic School (1350-1430), the connecting link between the early French School and that of the Netherlands. The most brilliant exponent and master of the Gallo-Belgic school was Guillaume Dufay (1400-1474). He was the first master to formulate rules . . . for the 'imitations' so timidly introduced by the masters of the French school. [Dunstable of the English school and Dufay of the Gallo-Belgic were the principal founders of artistic counterpoint.] Such imitation was then called fuga, a polyphonic composition developed from a given theme or themes according to strict contrapuntal rules. The subject theme is first given out by one voice part which then proceeds with a counterpoint, while the subject, now called an answer, is repeated by another voice at an interval of a fourth or fifth until parts have answered one by one. Strict imitation was exemplified in the canon, a composition in two or more voice parts employing imitation. The melody of the leading voice at a few beats from its beginning is taken up by another voice and imitated precisely throughout its extent. To detail all the improvements which Dufay made in musical art would require too much time and space; but we must mention . . . that by him, . . . the pure four-part style of vocal writing was inaugurated. In his labors for the improvement of musical art, Dufay had the hearty coöperation of Gilles de Binche or Binchois (1400-1460). . . . The last great master of the Gallo-Belgic school was Antoine de Busnois (1440-1482). Dufay, Binchois and Busnois, with their following, form a bridge between the French school and that of the Netherlands, which latter we are now to consider."—A. J. Gantvoort, *Familiar talks on the history of music*, pp. 74-76.

tory of music.—C. V. Stanford and C. Forsythe, *History of music*.

1450-1600.—School of the Netherlands.—Johannes Okeghem.—Josquin de Près.—Orlando Lassus.—Jan Pieters Sweelinck.—The school of the Netherlands comprised "the Dutch and the Belgian composers through whose efforts was developed that great school of vocal polyphony which finds its culmination on the one hand in Palestrina [see below: Modern: 1535-1674], and on the other in Handel and Bach. [See below: Modern: 1700-1827.] . . . The two hundred years from 1425-1625, during which the influence of this school was predominant, we shall, for the sake of convenience, divide into four overlapping periods, in each of which some great master is supreme. In the first of these periods the name of Johannes Okeghem (1425-1513), a pupil of Binchois, stands out above those of his contemporaries. He is considered the founder of the Netherlandic school, and is called the father of artistic counterpoint, because he developed the canonic style, the style of strict imitation, to its greatest ingenuity. . . . The great luminary of the second period of the Netherlands schools (1445-1525) was that most distinguished of Okeghem's pupils, Josquin de Près [first great composer]. . . . He is the first of the great Netherlands school who exhibits real geniality and appreciation of the aesthetic value of a dissonance in the expression of emotion as depicted in the text. . . . Among famous contemporaries of Josquin must be mentioned Mouton and Arcadelt. . . . The leading masters of the third period of the Netherlands school were largely the best pupils of Josquin, such as Gombert, Goudimel, de Rore, Willaert. [See below: Modern: 1527-1613.] . . . While the fourth period of the Netherlands school presents a number of excellent musicians, one name stands out brilliantly above all others, that of Orlando Lassus, the greatest of all Netherland masters. During the fourth period . . . there lived in Holland a musician, Jan Pieters Sweelinck [1562-1621] who attracted the notice of all the musical world. . . . He soon attained the reputation of being the greatest organist of his time, and so many young musicians came to study with him from all over Europe that he became the founder of a great organ school. [See also below: Modern: 1620-1722.] Among his pupils were Samuel Scheidt, . . . Adam Reinken, and . . . Dietrich Buxtehude, whose works deserve to be in the repertoire of every organist. . . . His vocal compositions deserve a place in the repertoire of ambitious choral-societies, as superb examples of the *a cappella* styles, [vocal music, unaccompanied] and direct precursors of the great vocal works of Bach. His chief title to lasting fame rests upon his development of the organfuge, a branch of composition wherein his first worthy successor was J. S. Bach."—A. J. Gantvoort, *Familiar talks on the history of music*, pp. 76, 80, 83-86.

MODERN (ART-MUSIC)

Introduction.—"The 16th century is perhaps the most fascinating of any before the 19th, since it was the meeting-point of mediaeval and modern life. Into it as towards a focus various lines of progress converged, only to be recombined and redirected. All Europe was stirred by the great mental movements of the Renaissance and the Revival of Letters, which originated further back, but were now hastened to maturity by certain events that gave an unexampled expansion to in-

tellectual and artistic interests."—W. S. Pratt, *History of music*, p. 111.

1500-1628.—German polyphonic school.—Growing importance of instrumental music.—Old masters: the two Fincks, Gallus, Hasler, and Aichinger.—The German polyphonic school was divided into two periods, the first showing Flemish influence, the latter Venetian; but in the bold use of dissonances the German masters went beyond their predecessors. "Without giving up emphasis upon the voice as the primary musical implement, it was perceived how advantageously mechanical implements might also be used themselves and in ways essentially unvoiced. In consequence, instrumental music . . . shook itself clear and set out upon a vigorous development that had marvelous later consequences. The two classes of instruments that took the lead were those with a key board, especially the organ, and those sounded by a bow, that is, the entire viol family. The problem of forms of composition for the organ remained unsolved far into the 17th century. . . . In Germany . . . increasing emphasis [was laid] on two particular forms, the true fugue, . . . and the chorale-elaboration."—*Ibid.*, pp. 218-219.—The chief composers showing Flemish influence are Heinrich Finck (d. 1519) and Herman Finck (1527-1558). Those showing Italian influence are Gallus (or Handl, 1550-1501), Hans Leo Hasler (1564-1612) and G. Aichinger (1565-1628).

1527-1613.—Venetian school.—Adrian Willaert.—Other masters: Zarlino, Merulo, and the two Gabrieli.—"For various reasons Venice stands out in the 16th century as one of the most interesting cities. She had long been foremost in commerce, her trade reaching far into the Orient on the one side and over all western Europe on the other. With her wealth came a . . . productive culture. Notable among her national institutions was the Church of St. Mark's founded in the 9th century. . . . Here the powerful patronage of the state developed a musical establishment that in the 16th century attained fame in all Europe. The peculiar eminence of Venice in the early 16th century was due to the genius of Adrian Willaert [(1480-1562) a pupil of Josquin De Près], choir-master at St. Mark's . . . who is commonly called the founder of the Venetian School."—W. S. Pratt, *History of music*, pp. 116-117.—"The presence of two organs in the church of San Marco is presumed to have suggested to Willaert the use of two distinct choirs for the antiphonal singing of the Psalms, and this led to his discovery of the fact that the effect thus produced was one of harmony rather than polyphony. In consequence he began the practice and study of harmony for harmony's sake, rather than as the result of an intertwining of the voice parts. He created a new style of part-writing in which the individual voice parts bore no melodic relation to each other, but combined to form *one* effect. . . . Willaert was also the creator (in its present form) of the madrigal, which originated as a love-song, or a song on a pastoral theme, in Provence, thence to be transplanted into Italy, where it had been in use for many years. . . . The most talented among the many Venetian musicians were Andrea Gabrieli (1510-1586). [Gioseffo Zarlino (1517-1500) theorist, Claudio Merulo (1583-1604), a great organist whose compositions are of permanent value, being among the earliest specimens of a distinct organ style and Giovanni Gabrieli (1557-1613).] . . . The elder Gabrieli (Andreas) had occasionally used instruments in his church compositions and the younger (Giovanni) added still others. [Through

the efforts of the Gabrielis, instrumental music thus gradually began an entirely independent existence.]"—A. J. Gantvoort, *Familiar talks on the history of music*, pp. 109-110, 113.—See also below: 1650-1739.

1535-1674.—School of Rome.—Papal choir.—Giovanni Pierluigi Sante, called "Palestrina."—Miracle plays.—Oratorio beginnings.—On the return of the papal see to Rome, the pope took his new Avignon singers with him to strengthen the old choir, which then became known as the Capella Papala or papal choir. It exemplified at that time, and has ever since initiated and perfected, practically all new developments in church music. When Gregorian melodies were still the sole music of the church, the choir set the standard for the rest of Christendom. After melody blossomed into polyphony it was in the Sistine choir that it received its most adequate interpretation. The Venetian school regarded the chord as a basis and gained their effects by means of modulation; the Roman masters restored greater freedom to the voices. The introduction of secular themes into church music had led to serious abuses. Palestrina (and other masters) proved that the contrapuntal style was not antagonistic to proper church music. Palestrina, (1514-1594) like Baini and others, was at St. Peter's several years before going to the Sistine Chapel and "may be claimed as a direct descendant of the Netherland School, for he was an early pupil of Goudimels' famous school in Rome. With Palestrina, polyphonic religious music was brought to its culmination, and it may be rightly claimed that no church music since his day has reached the truly religious height of Palestrina's Marcellus Masses ['Missa Marcelli,' a composition which revolutionized sacred music]. These works were written in 1563 at the request of Pope Pius IV, who wished to prove to the Council of Trent that music could be religious and popular at the same time. Palestrina and his followers. [Giovanni] Nanini (1540-1607), and [Gregorio] Allegri (1584-1662) . . . helped to give again to the Roman Catholic Church the purity and strength of the Gregorian type of expression. They also laid the foundations for the great chorus singing of the oratorios and operas of the next century."—A. S. Faulkner, *What we hear in music*, p. 83.—"Many converts of the church in the early Christian era were descended from the Greeks and Romans, and thus inherited a pronounced taste for theatrical display and representation, their plays being founded almost entirely upon their mythology. The Church recognizing the natural demand of the people for dramatic expression, attempted to satisfy it and to show at the same time her superiority. . . . Sacred plays were therefore used so that the mind might be reached through the senses. . . . Theatrical representations of the acts of Christ and the Apostles were also given, and variously termed 'moralities,' 'mysteries,' or 'miracle-plays.' . . . The clergy, being the guides of their congregations both in spiritual and social matters . . . desired that even the amusements of the people should be under church supervision; they arranged spiritual plays which were given for public instruction and edification and for religious purposes, on stages erected in the church edifices. Priests in appropriate costumes impersonated [the various characters]. . . . In the course of time the clergy, recognizing the fact that the congregation . . . did not enjoy the Church plays because they were not allowed to take part, permitted societies to be formed whose members might appear in them. . . . All these plays were . . . but allegories, and, as the congregation began

to take part in them, they became very popular, sometimes lasting several days and often, in the larger cities, employing several hundred actors. Soon the churches became too small, and a stage was erected in a field or some wide street; but the favorite place was the cemetery, presumably because its inhabitants could not object, and did not mind the disturbance. . . . Because the clergy were few and the people were many, jongleurs, buffoons and vagabonds began to take part in these sacred plays, and introduced all sorts of profane comic scenes. . . . The Church, seeing that the laity thus gave undue prominence to the worldly element, finally forbade such performances. . . . The musical members of these church plays were called 'Laudes spirituales,' i.e., spiritual praises. This form of sacred miracle-play, a relic of those times, may still be seen every ten years at Oberammergau. It remained for Filippo Neri [1515-1595], the priest who administered the last sacrament to Palestrina, to elevate the miracle-play into the Oratorio. Every kind of theatrical performance being forbidden during Lent, Neri conceived the idea of adding to his daily explanations of the Scriptures some choral music to illustrate them; so he asked certain Italian composers to help him by the compositions of these 'laudes spirituales,' or illustrative choruses. . . . When Palestrina took up this form of church music, this sacred play . . . was already called 'oratorio' after the name of the place where the plays were performed, the *oratory*, a room adjoining the church. The chorus work was all in the style of the Netherland school, polyphonic. The 'Passion according to Matthew' was thus enacted and while its four-part choruses are free from dramatic intention, they are really preparatory for the great oratorio choruses which were to follow in the days of Handel and Bach."—A. J. Gantvoort, *Familiar talks on the history of music*, pp. 126-128, 130-131.

1540-1672.—School of Protestant Church music.—First Protestant hymnal.—Zwingli, Swiss reformer.—Protestant music in England.—"It is universally conceded that all of the arts of the Christian era, and especially music, owe much to the Roman Church; and it is not denied that the Protestant Church rather impeded than furthered their development. But this is scarcely true of music; for the Reformation and its consequences prepared a soil for this very art out of which it was to draw new vigour, and that at the moment when its trend, in Catholic environment, was in the direction of a new growth which Protestant conditions were calculated to foster most effectually. The significance of the Reformation in musical history is found in the fact that it led to the affiliation of both sacred and popular elements; that it thus brought the higher phases of music nearer to the people themselves, as a whole, and prepared music for that technically simpler and more direct emotional expression through which it was to attain its greatest power and develop its proper spirit. The Reformation, which wrought so many changes, also demanded a wholly different mode of musical practice. The music of contrapuntally interwoven parts, which reached such artistic perfection in the Catholic Church, was repudiated in favour of a simple, one-voice melodic style, externally similar to the early, unadorned chants . . . of the old church but of an entirely different, more popular character. The masses and other settings of the

liturgy, sung by clergy and trained choirs, were displaced by the chorale and sung by the congregation in unison. . . . The origin of the German chorale is ascribed to three different sources: First, to the old hymns and chants of the Latin Church. . . . Second, to the German sacred songs of earlier days, which were of a far more popular type than those of other countries. . . . Third . . . were the songs of earlier days, from which legacy of the minne-singers and the music-loving populace the most stirring and beautiful melodies were derived. . . . But, besides this practice of borrowing material for its music, . . . the Reformed Church soon began to compose its own chorale melodies. . . . History names Martin Luther himself in this connection and has accredited him with a large number of original chorales."—T. Tapper and P. Goetschius, *Illustrated history of music*, pp. 130-134.—"The great reformation movement in Bohemia, so strongly influenced by Wyclif, of which the leader was John Huss [1373-1415], gave to the world the first Protestant hymnal, for which Huss himself wrote hymns in Latin and Czech. Of his followers the Utraquists or Calixtines published a Czech hymnal in 1501, and the United Brethren in 1505, or twenty years before Luther. These hymnals were based on poetic versions of the Psalms, old Latin hymns, religious songs in the vernacular, and secular songs. Both Huss and Calvin established schools of sacred music in connection with their respective churches. The Swiss reformer [H.] Zwingli [1484-1531], was perhaps the most highly cultivated musically of all the reformers, as even in his childhood he had astonished his fellow-students and his masters by his great talent in instrumental and vocal music. He could play seven instruments and is known as the composer of several Reformation hymns."—H. and C. Dickinson, *Excursions in musical history*, pp. 129-130.—"Various fortunate circumstances caused the transition from Roman Catholicism to Protestantism in England to be gradual and moderate, with the happy result that the noble style of the Roman Church music of that age passed without change into the music of the Reformed Church. . . . Of those who came earliest into the field at this time . . . Christopher Tye . . . (died 1572) . . . held a most prominent position among musicians, and did great service to the cause of the art of the Reformed Church. . . . When the English Service-Book was compiled in 1550, the traditional plain song used in the old Church was adapted to it by John Merbecke [d. 1585], thereby confirming the musical identity of the old and new services. In the next generation . . . Thomas Tallis . . . (c. 1510-1585) occupied a foremost place. . . . His pupil, William Byrd (c. 1538-1623) . . . wrote admirable madrigals and instrumental music for keyed instruments as well as Church music of the finest and noblest quality."—L. Elson, *Modern music and musicians*, p. 28.

1575-1676.—School of Florence.—Opera, one of the oldest institutions.—Foundation of modern opera.—"La Rappresentazione di Anima e di Corpo."—Florentine monody.—"While [much] was going on within the Church, the musical world outside the church had not been idle. The spirit of the Renaissance fostered an admiration for everything handed down from the Greeks, which leads us to our next topic, the rise of the opera."—A. Gantvoort, *Familiar talks on history of music*, p. 132.—"It may seem strange to speak of the Opera as one of the oldest institutions in existence; yet our search for its origin leads us back to a time long antecedent to the beginning of the Christian era; and he who would read the story

of its infancy aright must collect its details from the history of ancient Greece; for it is as old as the drama itself. It was nurtured at Athens, in that glorious theatre, the acoustic properties of which have never yet been rivalled. Its earliest librettists were Aeschylus and Sophocles, and its earliest orchestra a band of lyres and flutes."—G. Grove, *Dictionary of music and musicians*, p. 435.—"The date which marks the end of the Renaissance, serves also as a beginning of a form of opera which has developed into the music drama of the present day. About 1575 there arose in Florence a group of Florentine nobles who were known as the 'Camerata.' This little band of ardent, musical enthusiasts, the most important of whom were . . . Jacopo Peri [1561-1633], and Giulio Caccini [1558-1615?], met in Florence at the home of Giovanni Bardi, Count of Vernio to discuss the possibilities of developing a new kind of musical art in the form of solo music with instrumental accompaniment. Their chief aim was to restore the style of the ancient Greek drama, and to have music, drama and interpretation on an equal footing. The result of their work was the invention of a kind of musical vocal expression half-way between speech and song, out of which came recitative and aria. These inventions mark the foundation of modern opera. The first practical results were the 'monodies' of [Peri] and the *Nuove Musiche* of [Giulio] Caccini [1550-1618]. The first application of the new recitative to an entire play was in 'Dafne,' composed by Peri and Caccini collaborating, with text by Rinuccini, in 1597. 'Euridice' by the same poet was set to music by Peri and made also by Caccini in 1600. The music of these two compositions has survived; that of 'Dafne' had been lost. . . . A religious allegorical piece by [Emilio del] Cavaliere [b. 1550?] called *Rappresentazione di Amina e di Corpo* [one of the first works dependent on instrumental accompaniment] was performed at Rome in 1600. This work has been called the first oratorio. It was given, like an opera, with action and costume. It comprised ninety members, consisting of choruses, solos and recitatives, with an instrumental prelude. . . . There was no intention on the part of the Florentine inventors . . . to create a form of art which should appeal to the ear and the sensibility on purely musical grounds. They did not dream of the subsequent career of the opera. They wished merely to throw off the trammels of counterpoint, and allow the single voice complete freedom of utterance. . . . The Florentine monody must therefore be studied not simply as the addition of music to dramatic poetry; . . . not even as an experiment in singing one part alone . . . but rather as the substitution of a free chord accompaniment in place of polyphonic parts. It was the introduction of the homophonic principle supplementing the contrapuntal, and hence the dawn of a new era in the history of music."—E. Dickinson, *Study of the history of music*, pp. 67-69.—"Without taking into consideration the many external causes which influenced and modified the character of various arts about the end of the sixteenth century, it might have been seen that a new departure in music was inevitable on internal and artistic grounds alone. The range of the art had been extremely limited so far; and though its limitations had conduced to the development of singularly perfect results, such advantages could not prevent men from wearying of apparent monotony, and becoming restive under restrictions which seemed to be hinderances to the fullest expression of their musical ideals. A reaction, such as in analogous situations in ordinary life drives men

accustomed to ease and refinement of surroundings to court hardship, danger, and privation, drove men of the highest taste and refinement, and such as were most thoroughly in touch with the spirit and movement of their age, to cut themselves adrift from the traditions of a perfectly mature art . . . and adopt a kind of music which was formless, crude and chaotic. . . . To the conservative musician of the early days of the seventeenth century the projects of the enthusiasts who founded modern music must have appeared, as radical reforms generally do, to be based on misconceptions—an outrage against all the best grounded principles of art. . . . The reformers, with the hopefulness characteristic of enthusiasts, thought they could dispense with all the fruits of past experience, and develop a new art on the basis of pure theoretic speculation. They gave up the subtleties of polyphonic writing and the devices which were natural to choral music; the beautiful effects obtainable by skillful combinations of voice parts; the traditions of a noble style, and the restrictions which made it consistent and mature; and they thought to make a new heaven and a new earth where secular expression should be free and eloquent without reference to past artistic experience as a guide to the artistic means. But they had to adopt unconsciously much that their predecessors had built up for them. . . . Even the earliest experiments were based upon a crude application of choral effects of which they could have no conception without the development of choral polyphony which their predecessors had laboriously achieved. Their first experiments were essentially steps made in the dark; and the first results that they achieved had the usual aspects of such steps in reform, and look purely infantile and absolutely ineffective by the side of the artistic works which they meant to supersede. But nevertheless the event proved the reformers to be perfectly right. For unless they had ventured as they did, . . . the ultimate building up of the marvellously rich and complicated edifice of modern art could never have been achieved."—C. H. Parry, *Evolution of the art of music*, pp. 125-126.

1607-1734.—Venetian opera school.—Claudio Monteverde.—Operatic orchestra.—Introduction of the aria.—"In following the history of the opera we find that no further progress was made at Florence, but our interest is transferred to Venice, where through the efforts of a musical genius, Claudio Monteverde, [pioneer of modern harmony] (1568-1643) opera achieved a success which brought it before the whole world. This remarkable composer was one of the boldest innovators in the history of music. The operatic orchestra had its beginning with him and his two operas 'Arianna' and 'Orfeo' produced in 1607 at the court of the duke of Mantua show the dramatic expression sought for by the Florentine *dilettanti* but with much greater musical expression and force. It was doubtless due, in a great part, to the stimulus of his example that operatic composition was so widely and so successfully cultivated in Venice. During this time the first public opera house was built in Venice. This was an epoch-making event, for it marks the beginning of opera as a public entertainment, whereas elsewhere it continued to be, for a long time, exclusively the property of princes and nobles, who used it on festal occasions for the entertainment of their guests. In Venice it was a popular matter, not a court affair. So popular was it that other opera houses were built, and before the year 1734 some four hundred operas of forty different

composers had been publicly performed in Venice. . . . [Francesco] Cavalli [c. 1599-1676], who became Monteverde's successor at St. Mark's in 1668, must be mentioned as the one Venetian composer, after Monteverde, who contributed essentially to the development of the dramatic style. (It was he who made the first deviation from the strict 'musical parlante' of the Florentines, by the introduction of the Aria.) He won a reputation which extended far beyond the bounds of Italy. After his time, opera in Venice began to emphasize the sensuous rather than the dramatic element, and with this change began its degeneration and downfall."—J. C. Fillmore, *Lessons in music history*, p. 66.—"At this time the great Roman composer [Giacomo] Carissimi [1604-1674] pursued similar lines taken by Cavalli but his efforts figured more in the Oratorio and cantata. His pupil [Marc' Antonio] Cesti [1620-c.1669] transferred to the opera all that Carissimi had brought out in the cantata and by so doing raised opera to a higher dignity than it had ever reached before. Although the rise of the Italian opera under Monteverde, Cavalli, Carissimi and Cesti has unique historic importance, the story of the early opera was by no means confined to Italy. Italy's musicians visited other countries or migrated to them, carrying with them the styles to which they were wonted. With these the Italian opera either competed or coalesced, and out of their varied interactions were gradually shaped the types of opera found in the 18th century."—W. S. Pratt, *History of music*, p. 180.

1607-1737.—Evolution of the violin.—Guarneri, Stradivari, and Ruggeri family.—"Although in all stages of musical progress instruments are interesting, in the formal evolution of the art they were long remitted to a strictly subordinate place, vocal music supplying the ideal norms of procedure. . . . Experiments with instruments were made at first either to imitate vocal effects or for their mere support or incidental decoration. . . . As the 17th century approached, however, and much more as it proceeded, a new tendency asserted itself. The evolution of the violin took place between the middle of the 16th century and the first third of the 18th, culminating with the work of geniuses like Stradivari and Guarneri. The chief makers worked at Brescia or Cremona in northern Italy—a region offering superb materials, established traditions and fine instrument-making, and nearness to Venice, then the headquarters for artistic secular music. . . . At Cremona the great makers are more numerous and renowned. First stands the Amati family especially Andrea (d. 1611), his two sons Antonio and Geronimo and the noted son of the latter, Nicola Antonio Stradivari (d. 1737) . . . the Guarneri family . . . and the Ruggeri family. The rapid improvement of the violin and its larger relatives was due to the recognition of their remarkable artistic possibilities. The 17th century, therefore, witnessed the foundation of violin music and violin-playing, using both terms in the wide sense that includes all bowed instruments. Prior to 1650 there was little consensus as to the forms in which purely instrumental music should be written. . . . After that date composers tended to apply the term 'sonata' to pieces for a small group of instruments or for a solo instrument with accompani-

ment. Two varieties were distinguished, the 'sonata da chiesa' [several movements of contrapuntal writing]; and the 'sonata da camera' [dance forms]. . . . Thus instrumental composition worked itself free from the old imitation of vocal styles and launched out into forms that were perfectly suited to the instruments used."—W. S. Pratt, *History of music*, pp. 214-235, 238-239.

1620-1722.—School of German organists: Sweelinck, Reincke, Schütz, Schein, Froberger, Buxtehude, and Pachelbel.—"If Palestrina may be termed the musical father of Italian sacred music, the musical father of North Germany was Jan Pieterszoon Sweelinck (1562-1621). . . . He closely studied Italian music, and was greatly influenced by such masters as Zarlino and Gabrieli, not to speak of Frescobaldi, the founder of organ-playing. . . . His chief work as a pioneer was in his treatment of the organ, . . . his initiative in applying and improving it upon the principles of Frescobaldi, and the establishment of the great school in the Netherlands which trained many Germans, who carried the art into their native land. The cities of Hamburg and Lübeck (Germany) became the centers of a new instrumental school whose basis was the choral. "He had one pupil, Jan Reincke (or Reinken) [1623-1722] . . . also a Dutchman, who went to Hamburg and became one of the apostles of the new religion. . . . Some eighteen years after the birth of Sweelinck, three men were born in Germany within a short space of time, Heinrich Schütz (b. 1585-1672), Johann Heinrich Schein (b. 1586-1630), and Samuel Scheidt (b. 1587-1654), all of whom worked on the principles of the great Dutchman, [Sweelinck], Schütz being (like him) a direct pupil of Gabrieli at Venice. Schein (a predecessor of Bach as Cantor of the Thomas School in Leipzig) added largely to the literature of the Chorale, and principally devoted himself to unaccompanied choral writing on the Italian model. Scheidt (the German Frescobaldi) made the organ his chief medium of expression. Schütz, the greatest of the 'three S's' as they were termed, was wider in his sympathies and more experimental in his range. Three other masters of the organ intervened between the days of Sweelinck and those of Sebastian Bach: Johann Jacob Froberger (b. 1605-1667), Dietrich Buxtehude (b. 1637-1707), a Dane who held office at Lübeck, and Johann Pachelbel (b. 1653-1706) of Nuremberg."—C. V. Stanford and C. Forsythe, *History of music*, pp. 228-229.

1630-1800.—German Singspiel.—Cradle of German opera.—Reinhard Keiser founder of the Great German school.—Early in the seventeenth century there arose, in Germany, the so-called school of comedy, with the dramatic representations made by students. This finally gave rise to the Singspiel and the Singspiel in turn to national German opera. "What the ballet did for French Opera and the masque for English opera, the singspiel did for German opera. In 1627 Italian opera was first imported into Germany by Heinrich Schutz (1585-1672) who set to music his German translation of Rinuccini's 'Dafne.' The true cradle of German opera was Hamburg, where Johann Theile (1646-1724) produced in 1678 his 'Adam and Eve,' the first singspiel ever produced in the German language. [Johann Hiller established the Singspiel on the basis of the older folksong during the years 1728-1804. In this period the form of the Singspiel rose to an artistic level.] The name of Reinhard Keiser (1674-1739) stands out as one of the most famous in early German opera.

GREAT MUSICIANS

He wrote over 116 operas for the Hamburg opera house and did so much to advance opera in Germany that he may well be called the founder of the great German school which has produced such famous composers."—W. S. Pratt, *History of music*, p. 188.—See also below: 1818-1880.

1645-1764.—Early French opera.—Giovanni Baptiste de Lully.—Jean Philippe Rameau, one of the founders of modern orchestration.—"Opera in France, . . . found its origin in the ballet. This was a semi-dramatic form of entertainment, greatly in favor in the French court, consisting of tableau, processions and dances with music both vocal and instrumental. The appearance in 1645 of an Italian opera troupe and Cavalli's visit to Paris in 1662 gave a musical impetus to the ballet. The first attempt at real French opera was made by [Robert] Cambert [1628-1677] in the 'Pastoral' in 1659 (text by Perrin) but no definite school of music was established until the advent of Giovanni Baptiste de Lully [1633-1687]. Lully, a native of Florence, was brought to Paris at the age of thirteen and through his musical ability, cleverness and versatility soon won the favor of Louis XIV. After the appearance in 1645 of the Italian opera the French people were prepared to receive with open arms the composer who would combine the more pleasing features of the Italian opera with the national characteristics of France. Lully proved to be the man and as a result his popularity procured for him a monopoly of French opera which made him the leading figure for nearly a hundred years. The French overture is established in the works of Lully; and dramatic truth in the French opera, which has always resisted the Italian tendency of sacrificing dramatic action to musical display, was made a permanent tradition. Jean Philippe Rameau (1683-1764), a musician of far greater genius and learning than Lully, made no essential change in the structure or style of the French grand opera. He increased the variety and expressiveness of the aria and recitative; he greatly enriched the harmony, and made a long step in advance through the greater importance given to the accompaniment. He so far revealed the latent power of the orchestra that he may be considered one of the founders of modern orchestration."—E. Dickinson, *Study of the history of music*, pp. 102-103.

1650-1739.—Later school of Venice.—Andrea and Giovanni Gabrieli.—"The Venetian school, after its earliest period produced two great composers from one family. These were Andrea Gabrieli (1510-1586) and his nephew Giovanni Gabrieli (1557-1613). The former followed Willaert's plan of writing for antiphonal choruses, but he employed most frequently three instead of two. The latter was more of an instrumental composer than his uncle, and hence conceived the idea of writing instrumental accompaniments. In his 'Surrexit Christus' he used an orchestral accompaniment of first and second violins, two cornets, and four trombones. This work of Giovanni Gabrieli's fairly marks the termination of the era of a *capella* (unaccompanied) polyphonic church music. The opera had been born, and so had the oratorio, and church music began to borrow ideas from them. Giovanni Legrenzi (1625-1600) increased Gabrieli's orchestra to nineteen violins, two

violins, three viole da gamba, four theorboes (lutes of large size), two cornets, one bassoon, and three trombones. Antonio Lotti (1667-1740) was an opera writer as well as a church composer. . . . His later works are full of passages in which the voices alternate with the instruments and there are accompanied solos and choruses. With Lotti, who used unaccompanied choruses occasionally, we bid a final farewell to the great period of a *capella* church music, and enter upon the era in which music for the church was made in the same way as other kinds."—W. J. Henderson, *How music developed*, pp. 78-79.

1650-1827.—Sonatists.—Scarlatti to Beethoven.—About 1650, composers began to apply the term "sonata" to pieces for a small group of instruments or for a solo instrument with accompaniment. Domenico Scarlatti (1685-1757) "may truly be called the father of the modern pianoforte school. . . . Domenico's operas have been forgotten, but his pieces 'for the Gravi-Cembalo,' (one of the predecessors of the pianoforte) are as alive today as when they were composed. . . . In treating the clavicembalo as a medium for solo performance Domenico Scarlatti was in some degree forestalled by a famous Frenchman, Francois Couperin [1631-1688] . . . who may be said to have fixed the style of the *Partita* or 'Suite de Pieces,' a cycle of dances of the period, which became the model of a multitude of similar compositions."—C. V. Stanford and C. Forsythe, *History of music*, pp. 222-223.—"It is from the Italians that our modern style of violin music sprang, but in the department of clavier sonata the Italians were not so prominent. . . . The clavier sonata was cultivated with greater musical success by the Germans. They, in their turn, were not so highly successful as violinists, and rather preferred the keyed instruments; perhaps because they were less attracted to melody than to harmony. Bach's sons and pupils were distinguished for their works of this order, more especially the second son, *Karl Philipp Emanuel* (1714-1788). Like all the representatives of his generation, he was affected to a certain degree by the Italian influence, springing from the universal popularity of the Italian opera throughout Europe. But he kept more of the artistic vigor and genuineness of his father than of his . . . contemporaries. He wrote an immense number of sonatas, which are the best representative works of their kind in the interval between the days of Bach and Handel and the time of Haydn; and it was his sonatas which Haydn especially studied in early years as models for his own efforts in the same line."—L. Elson, *Modern music and musicians*, pp. 40-41.—Secular music, through the labors of the seventeenth-century composers, gradually acquired definiteness of aim and technical resources; in the work of Josef Haydn (1732-1800) and Wolfgang Amadeus Mozart (1750-1791), it reached maturity of self-consciousness; and Ludwig van Beethoven (1770-1827) brought it to perfection. Haydn perfected the sonata form but his work belongs to the style and idiom, of a bygone generation, and seems to close an epoch; Mozart enriched it with his wonderful genius; Beethoven enlarged the forms, of Haydn and Mozart, and brought the sonata to a point which would seem to indicate the highest possible development. "The commanding position which Beethoven holds in the history of art cannot be stated in a single formula . . . In some of his works there is conformity to a type, in others a defiant assertion of individualism. The classic sonata form (symphony, quartet, solo sonata, etc.) . . . attained in him its complete maturity in outline and contents."—E. Dickin-

son, *Study of the history of music*, p. 172.—See also below: 1700-1827.

ALSO IN: E. J. Dent, *Alessandro Scarlatti: His life and works*.—O. Jahn, *Mozart* (tr. by P. D. Townsend).—A. F. Pohl, *Joseph Haydn*.—A. W. Thayer, *Beethoven* (tr. by H. E. Krehbiel).

1660-1694.—English music during the Restoration.—Henry Purcell.—Music declined, in England, after the death of Orlando Gibbons (1583-1625), the contributing causes were: the fanaticism of the Puritans; and the unsettled state of affairs during the reign of Charles I. Under the influence of Charles II and the inspiration of Henry Purcell, music attained its former importance and even rose to such a height that for a short time, England boasted a national school of opera. "The dramatic form that led toward the opera was the 'masque' originally imported from Italy in the 16th century, but specially developed by English poets. This was a piece of private theatricals in which members of high society in disguise (whence the name) acted out a mythological or other fanciful story with dialogue and declamation, much dancing, elaborate scenic effects and as time went on, considerable singing and incidental pieces for instruments. Throughout the century almost all leading English composers wrote masque music and thus gradually the musical masque became important sometimes under the Italian name opera. Its development into a national type of musical drama hardly came to pass but the operatic genius Purcell was influenced by it more or less."—W. S. Pratt, *History of music*, p. 188.—"Henry Purcell in 1675, when only a boy of seventeen, showed a master hand in his setting of *Dido and Aeneas*. . . . He showed the way clearly to the treatment of the solo voice as a dramatic exponent of a situation in aria form, as distinct from recitative. . . . What had been a tentative experiment in the hands of Lully [see above; MODERN: 1645-1764], became in his a vital force."—C. V. Stanford and C. Forsythe, *History of music*, pp. 220-221.

1675-1764.—School of Naples.—Alessandro Scarlatti.—"The line of progress in the development of opera in Italy next passes from Venice to Naples where the *bel canto* school was founded by Alessandro Scarlatti (greatest harmonist of Italy). The influence of Scarlatti (1659-1725) as composer (he practically created the language of classical music), teacher and director extended all over Europe and he with at least thirteen pupils attained European renown as opera writers and members of the Neapolitan school which dominated Italian opera in the 18th century." (See also below: 1813-1868.) The Neapolitan school had adopted the polyphonic Church style of the Venetians, the oratorio from Rome, and the musical drama from Florence, but the new school paid more attention to the melodic outline of the highest voice. "Under the Neapolitan regime the musical form in the opera—a succession of *da capo* arias separated by recitative—took precedence over the dramatic form to the utter disregard of the latter and not until the advent of Gluck (see below: 1700-1827) did reform set in."—C. V. Stanford and C. Forsythe, *History of music*, p. 222.—Leonardo Leo (1694-1744) was the first of the Neapolitan school to obtain complete mastery over modern harmonic counterpoint.

1700-1827.—Masters of music of the classical school: Bach, Handel, Gluck, Haydn, Mozart, and Beethoven.—"That part of musical history of which

[Johann Sebastian] Bach [1685-1750] and [George Frederick] Handel [1685-1759] are the chief ornaments is, even apart from them, a momentous period. In every branch of the musician's industry it is equally true that nothing remained at the end of that period exactly as it had been at the beginning; and the changes through which each branch of the art had to pass were such as affected its whole being and essence. Perhaps no half century has seen such radical alterations in ideals, in methods, both creative and interpretative, and in the relations between musicians and the outer world, as that period which roughly coincides with the first half of the eighteenth century. Stated in terms of the lifetime of one or two men, the rapidity of the changes seems remarkable; but when it is remembered that the death of Henry Purcell was only separated from the birth of Mozart by an interval of sixty-one years, it is easier to realize how extensive a phase of development had to be passed through in a space of time which, in any other history, would seem impossibly short for any transition less momentous than an actual revolution. And none of the great artistic revolutions fall into this period; that sudden substitution of the monodic style for the polyphonic which affected all countries alike, coincides, . . . with the junction of the sixteenth and seventeenth centuries, and the operatic reforms which we associate with the name of Gluck lie just past the middle of the eighteenth. These crises, the two nearest in time to the lifetime of Bach and Handel, must each of them be kept in mind if we would study the influence and tendencies of the period that lies between them; for even a century after the old art of the motet and the madrigal had been superseded by the simpler yet more expressive methods of musical utterance, men were still far from realizing all that the change involved; . . . while in the latter years of the period under consideration, we are compelled to study the gradual progress of that operatic convention from which Gluck set the world free. . . . The two giants who dominate the earlier half of the eighteenth century had little or no direct . . . connexion with either of the revolutions referred to, although Handel had a good deal to say to the process by which opera was so conventionalized as to require complete reform. It was only in a slight degree that the various structural changes in music concerned the two greatest composers of their time. . . . The genius of the two men worked in exactly opposite directions; and if in studying Handel we seem to have our eyes turned always toward the past, in Bach we are continually brought face to face with idioms and turns of expression which are so much of the essence of modern music, that the student is tempted to imagine that the art has made no progress since Bach. . . . The various parallels and contrasts between the lives of Bach and Handel, and the methods of their work, . . . have a peculiar significance, since with these Masters began that supremacy of German music which lasted without a break from the year in which both were born down to the date of the death of Brahms, a period of 212 years. . . . The German supremacy once begun, we shall not go far wrong if we seek henceforth among German musicians the best illustrations of the various tendencies which swayed the world of music during this period. . . . All forms and all materials of music, . . . were in a state of fusion during the lifetime of Bach and Handel; two alone of the whole number attained in this period, their full growth and that point of their development beyond which no further progress was possible. These two forms

are the fugue and the oratorio; and the two, by something more than a mere coincidence, are inseparably connected with the names of Bach and Handel respectively. Bach's position in regard to the fugue is precisely that of Beethoven towards the sonata; that is to say, the form attained, in his hands, to an eloquence, a directness of expression, and a vitality, which gave the crowning touch to the structure upon which so many other hands had laboured. . . . In much the same way the oratorio found its highest and ultimate expression in the maturest work of Handel, . . . and it is generally held that the last great writer of oratorios, as well as the first, was Handel. With all other forms of music the case was different; the sonata . . . had to wait for a far later date before its perfection was reached under Beethoven; in the history of the opera our period is one of cold convention, without any kind of organic life; church music had many further stages of development to attain which were unguessed at by the men of Handel's days. . . . One of the most momentous changes which was taking place all through the lifetime of Bach and Handel was the transition from the strict counterpoint of their predecessors, to the free part-writing of their followers."—J. Fuller Maitland, *Oxford history of music*, v. 4, pp. 1-6.—"John Sebastian Bach (1685-1750), revered today as the 'father of modern music [Bach marks the culmination of the polyphonic period, as well as the beginning of the new homophonic-harmonic period], came of one of the most musical families in the history of the world. In the words of Robert Schumann 'To John Sebastian Bach, music owes as great a debt as does a religion to its founder.' The obligations of modern music to Bach are well summed up. As a writer for the organ and clavichord, of orchestral works, and of passion music he was a composer of distinction. His 'Well-tempered Clavichord,' a series of compositions written for the purpose of disseminating the system of equal temperament, and his 'Twenty-four Preludes and Fugues' have been the basis of education of every organist and pianist even down to our own day. His sacred cantatas and passion music stand above any ever written. His relation to the Protestant choral is analogous to Palestrina's relation to the Gregorian Chant. Among the five Passions which Bach is believed to have written, only two are preserved, namely, the Passions according to St. John and St. Matthew, the later being considered the greater of the two. To sum up in a single statement the greatness of Bach is to say that 'he was the culmination of all the greatness of the contrapuntal school, combined with the deep poetic insight into the true ideality of music. For this reason his works may be regarded as the embodiment of the science of music, yet they will always make a direct appeal to the human heart.'"—A. Faulkner, *What we hear in music*, p. 91.—"George Frederic Handel (1685-1750), [born Halle an der Saale] while contemporaneous with the great Bach and the German School, had also identified himself with the Italian opera of the day, directing and composing operas in London for a period of about 20 years. His place in history, however, as an opera writer belongs wholly to the eighteenth century Italian School. He wrote over forty operas and while they were superior to those of his contemporaries according to some opinions, they are practically not known today, owing to the poor libretti, obsolete musical and dramatic dialect. His contribution to music, therefore, as stated above, rests in the field of oratorio. 'The Messiah,' 'Samson,' 'Saul,' and 'Judas Maccabaeus'

are his greatest works. They mark the culmination of the oratorio form."—C. H. Parry, *Evolution of the art of music*, p. 206.—According to some authorities Handel's genius and overwhelming popularity seemed to inhibit the flow of native English talent for more than a century and a half. "About the middle of the eighteenth century the indolence of fashionable audiences and the short-sighted egotism of popular singers had reduced the opera to such a state of monotonous and mechanical dullness, that a reaction was inevitable. Slight changes and improvements were frequently attempted by various composers, but the name with which the most definite attempts at general reform are associated is that of Christoph Willibald Gluck (1714-1787). Gluck's position in musical history, particularly with respect to the development of the opera, is very similar to Wagner's in recent times. . . . But he labored under the obvious disadvantage of living at a time when the development of resources, such as are characteristic of regular modern music, was yet slender. The arts of orchestration were only just beginning to be understood and the arts of dramatic expression of the modern type were both limited in amount and but vague in general character, while the subtler possibilities of modulation were hardly thought of. Like Wagner he was not gifted with musical powers of any very exceptional caliber to start with . . . but he developed what he had with exceptional success under the influence of great dramatic and poetic sympathy and insight. His later work is unique in style and in the dignified sincerity with which he treats great and pathetic situations. Even when he had to compromise with popular taste, as in the excessive use of the ballet which was required by the French audiences, he succeeded in making it tell as part of the dramatic effect, and the same may be said of his use of arias which he dispensed with as much as possible in favor of a shorter and more concentrated form of solo; while he raised the recitative whenever possible to a high degree of dramatic interest."—L. Elson, *Modern music and musicians*, p. 43.—The central purpose of Gluck's reforms was to return to the principles laid down by Peri, and the members of the "Camerata" by restoring to the opera its real dramatic truth and power. (See above: Modern: 1575-1676.) His "Orfeo ed Euridice" was the first attempt at the revised style of opera. This was given in Vienna, in 1702, and was followed by "Alceste" in 1707. In 1773 Gluck went to Paris at the invitation of Marie Antoinette, where he met with great success in his "Iphigenie en Aulide." His radical ideas caused a great furor in Paris and the opposing champions of the Italian opera headed by Piccini pitted themselves against him in a desperate struggle for the supremacy of Italian opera. (See below: 1730-1816.) The controversy was one of the bitterest the musical world has ever known with a final victory for Gluck, the reformer of French opera. While Gluck founded no particular school of music his influence has been felt down to the days of Richard Wagner. "The artistic crisis which Mozart and Haydn represent is so important that the nature of musical advance made by them in the instrumental line may here be fitly summed up. Before their time, the only two branches in which first-rate and mature work of the harmonic kind had been done were the violin sonatas written chiefly by the great Italian violinists . . . and the clavichord sonatas. [See above: MODERN: 1650-1827.] The scope of movements was small and without much development, and the ideas even in the best examples

were rather indefinite. By the end of their time instrumental art had branched out into a very large number of distinct and complete forms; such as symphonies, concertos, quartettes, trios and sonatas for violin and clavier. . . . Between them they had completely transformed the treatment of the orchestra. . . . There is hardly any branch or department of art which does not seem to have been brought to high technical perfection by them; and if the world could be satisfied with the ideal of perfectly organized simplicity, without any great force of expression, instrumental art might well have stopped at the point to which they brought it. Joseph Haydn (1732-1809) was the first great man to trace out the course which instrumental music was to take after the death of the great J. S. Bach. So powerful was the impetus which he gave to the homophonic cyclic form, and so rapid its growth that he has been called the father of the symphony sonata and string quartet. Haydn saw very clearly the possibilities of instrumental music and the application of the sonata form to its various classes. Among Haydn's works we find nearly 700 instrumental pieces of which 125 are symphonies. His vocal works include masses, motets and oratorios. His oratorio 'The Creation' which rivals Handel's 'Messiah' and Mendelssohn's 'Elijah' has done as much to insure his fame as his instrumental works. Wolfgang Amadeus Mozart (1756-1791) the great connecting link between Haydn and Beethoven was the most universal genius the musical world has ever known. He worked in every branch of the art known at his time, and in them all showed a sensitive, spontaneous musical temperament the most complete illustration in music history. Of his 49 symphonies, the E flat, G minor and the C major (Jupiter) are the greatest. As composer of opera, Mozart is still ranked among the first. His dramatic works show marked individual genius [and the simplicity of a highly trained mind] without much regard for the previous reforms of Gluck. His most popular operas 'The Marriage of Figaro,' 'Don Giovanni' and the 'Magic Flute' were never more studied and admired than at the present day."—C. H. Parry, *Evolution of the art of music*, pp. 247-248.—"The spirit of human equality which voiced itself at the close of the eighteenth century in the American and French Revolution influenced also all forms of art. One result was that artists who had before depended upon wealthy patrons for their maintenance now found means of support and inspiration in public patronage; another was that they turned their attention from classic subjects and ideals of abstract beauty to the consideration of every-day life and the thoughts of the every-day individual. In Germany, after Napoleon's overthrow, a vital national spirit arose which furnished still greater incentive to such study; and poets and musicians began to take for their subjects not only the real peasant life, but also the rich fund of traditions and myths perpetuated in German folk-lore. Thus arose the romantic school [see below: 1818-1880] . . . which rendered these subject to the intense expression of individual emotion."—C. G. Hamilton, *Outlines of music history*, p. 141.—"Ludwig van Beethoven (1770-1827) stands just at the turning-point of the ways of modern art, and combines the sum of past human effort in the direction of musical design with the first ripe utterance of the modern impulse—made possible by the great accumulation of artistic resources—in the direction of human expression. After him the course of things naturally changed. In the art of the century before him formality was prominent and expression very

restrained; in the times after him the conditions were reversed, and the instinct of man was impelled to resent the conventions of form which seemed to fetter his imagination, and began his wanderings and experiments anew in the irrepresible conviction that every road must lead somewhere. A new artistic crisis had been passed, similar to the crisis of Palestrina and Bach, but implying a still greater organization and a richer accumulation of actual resources than was available for either of the earlier masters."—C. H. Parry, *Evolution of the art of music*, p. 273.—"In mastery of form and affluence of invention he [Palestrina] holds a place among the foremost creative intellects in the history of art. The most powerful currents in the nineteenth century music (the romanticism of Schumann, Liszt, Berlioz; the Wagnerian music drama) to a large extent take their point of departure from Beethoven. No one disputes his pre-eminence as sonata and symphony writer. In these two departments he completes the movements of the eighteenth century in the development of the cyclical homophonic form, and is the first and greatest exponent of that principle of individualism which has given the later instrumental music its typical character."—E. Dickinson, *Study of the history of music*, p. 172.—"As Beethoven was such an intensely subjective composer, a knowledge of his personality and environment is indispensable for a complete appreciation of his works. Beethoven, Ludwig van (1770-1827), born on the Rhine, though his active career is associated with Vienna, may be called the first thinker in music; for at last the art is brought into correlation with man's other powers and becomes a living reflex of the tendencies and activities of the period. Notwithstanding the prodigious vitality of Bach's work, we feel that his musical sense operated abstractly like a law of Nature and that he was an unconscious embodiment, as it were, of a deep religious sentiment of his time and of the sturdy independence of his race. . . . Beethoven's music, however, in its intense personality and as a vivid expression of the ideals of his fellow men, was different from any the world had heard before. . . . He is the embodiment of that spirit of individualism of human freedom and self-respect which found its expression in the French Revolution, in our own American War of Independence and in the entire alternation of social standards. . . . He was the first musician to free himself from the enervating influence of having to write exclusively for aristocratic patronage. Such was the social emancipation of the period that he could address himself at first hand to a musical public eagerly receptive and constantly growing. . . . Since Beethoven's works compel a man to think for himself the constructive power of the creator must be met with an analogous activity on the part of the receptive hearer. The symphonies, for example, are more than cunningly contrived works of musical art; they are human documents of undying power to quicken and exalt the soul which will submit itself to their influence. Beethoven's great instrumental compositions are few in number in comparison with the voluminous and uneven output of his predecessors. Thus from Haydn we have 125 symphonies, from Mozart about 40, from Beethoven 9. . . . Condensation of subject matter, conciseness of style, a ceaseless exaltation of quality above quantity are the prominent features in Beethoven's work. . . . Beethoven's life is of supreme interest and importance, for his music is the direct expression of himself, of his joys and sorrows. . . . To touch . . . upon a few of the formal aspects of Beethoven's work, as far as ver-

bal analysis can help, it may be asserted that he is the acknowledged master of the Sonata Form as Bach was of the Fugue, and in his hands this form, and also the Air with Variations, were raised to a potency the influence of which is felt even to-day. . . . We are now in a position to approach . . . the mighty works of Beethoven which, though built upon the foundations of Haydn and Mozart, yet take us into an entirely new world of power and fancy. . . . Each of Beethoven's symphonies has its characteristic attributes and each is the work of a genius. . . . The First Symphony is somewhat experimental, composed when Beethoven was working out his technique of expression. . . . In the Third Symphony (Heroic) the complete Beethoven steps forth. It was his declaration of independence and in this work . . . he began a completely new line of activity. . . . The Fifth . . . is undoubtedly the most popular of them all, in the true sense of the term. . . . The Sixth or Pastoral, Beethoven's one excursion into the realm of tone-painting based on natural phenomena, is of interest more as a point of departure for the work of his successors than for its intrinsic message. . . . The Ninth Symphony, composed in the philosophic period of Beethoven's life, when he was attempting still greater heights, is a vast work, the first three movements purely instrumental, and the Finale, for the first time, in symphonic literature, a union of solo voices and chorus with the instrumental forces."—W. R. Spalding, *Music: An art and a language*, pp. 122-124, 126, 127, 129-131.—"As we take a last backward glance over the life of Beethoven, and over that larger life of the art of music in the classical period, of which it was the final stage, we cannot but be profoundly impressed by the unity and continuity of the whole evolution. From its first and tentative beginnings in the experiments of the Florentine reformers [see above: Modern: 1575-1676], secular music. . . . acquired . . . definiteness of aim and technical resources. . . . In the work of Haydn and Mozart, it reached the stage of maturity, of self-consciousness, . . . [and] was brought by Beethoven to its ripe perfection, its full flowering. . . . It reached the fullness of life beyond which it could have gone, only by breaking itself up into new types, as the old plant scatters forth seeds. And even these new types were dimly divined, and suggested to his successors, by Beethoven. Was it not his effort to express, in absolute music, the most various shades of personal, highly specialized feeling, . . . that inspired the romantic composers, Schubert, Schumann, Chopin, and their fellows to pursue even further the same quest? Was it not his feeling out toward novel dramatic effects in the combined chorus and orchestra, in the Ninth Symphony, that showed Wagner the path he must take? Was it not his attempts defeated by insufficient technical skill, to combine the polyphony of the Sixteenth century with the harmony and rhythmic structure of the nineteenth, that suggested to Brahms, more fully equipped, his great enterprise? Thus even the failures of a great man are full of promise; and Beethoven, and all his forerunners too, still live and speak to us in the music of to-day."—D. G. Mason, *Beethoven and his forerunners*, pp. 350-352.

1730-1816.—Italian opera buffa.—Pergolesi to

Rossini.—"Towards the end of the seventeenth and the beginning of the eighteenth century, serious opera in Italy, had come to consist mainly of an interminable series of airs and duets relieved only by a final chorus. . . . In order to relieve the monotony . . . it had become customary to introduce between the acts an *interlude* in the form, sometimes of a *ballet*, sometimes of a little *comedy*—the characters being borrowed from the traditional Italian *Masque*. . . . The absolute freedom of treatment permitted in these little entr'actes released such exuberance of activity hitherto suppressed—that, . . . in the midst of the foregoing stagnation the life of music was renewed. Out of the free style of these slight compositions, fraught as they were with an irresistible buffoonery—though never divested of amiable feeling—there grew a more versatile originality—more variety in vocal style, a subtler feeling of the scene and richer instrumentation—than had ever existed before in opera properly so-called. Thus arose Opera Buffa. . . . This form and character of piece took root outside serious opera, and the two forms of opera went on independently. When fully developed Opera Buffa consisted of two acts—a grand finale coming in at the end of the first, and this division remained classical up to the last century. The new style began its flight with [Giovanni Battista] Pergolesi [1710-1736]. Rinaldo da Capua (. . . 1719) . . . applied to comic and half-comic opera a more finished style of instrumentation than his predecessors. . . . [Nicholas] Logroscino (. . . born about 1700), increased still further the proportions of the *finale*. [Thomas] Traetta (1727-1779), was bold in modulation and ingenious in his orchestration. . . . Guglielmi (1727-1803) is classed with Cimarosa [1749-1801] and [Giovanni] Paësiello [1741-1816] as among the greatest masters of the Italian school. . . . Nicholas Piccini (1728-1800) [of whom it can be said] . . . no composer revealed a greater elegance in melody or more touching grace of expression . . . was among those Italian composers that exercised a very important influence upon the French school. . . . Giuseppe Sarti, contemporary of Piccini—celebrated in the archives of Opera Buffa by the 'Gelosie villane' (1770); . . . and above all, by the 'Noces de Dorine,' containing a sextet which is one of the finest things in the repertory of Italian comic opera. . . . Giovanni Paësiello (1741-1816) wrote 'Frascatani' so rich in melody, . . . and the capital piece of buffoonery, 'Marchese Tulipano.' . . . Cimarosa (1740-1801) the greatest master of this period, and one of the greatest of all time. His *chef-d'oeuvre* in the comic vein is 'Il Matrimonio segreto,' an incomparable specimen of French gaiety without noisiness, combining a charming delicacy of expression with a deep feeling of the spirit of the scene. Soon after Cimarosa . . . another change in the direction of greater variety in expression began to prepare—and particularly a new wave of melody.—The tendencies of this change were caught up and set forth organically by [Gioacchino] Rossini [1792-1868] and carried on in new phases of expression by Bellini and Donizetti."—J. Goddard, *Rise and development of opera*, ch. 2, pp. 14-18, 22.—See also below: 1813-1868.—With the aria the Neapolitan school had given to music that form which was soon to bring about a general decline of dramatic music. Composers did not waste time in studying counterpoint and polyphonic writing when success was easily won by writing pretty melodies. (See also ITALIAN LITERATURE: 1600-1800.) "The original conception of the *opéra-comique* as a portrayal of the humorous side of life was main-

tained by a brilliant company of writers, the most racy of whom before Auber was François-Adrien Boieldieu (1775-1834). . . . The king of opéra-comique in the generation following Boieldieu was Daniel-François Auber (1782-1871). . . . His works combine in a representative degree those qualities of wit, grace and vivacity that especially characterize the lighter French drama. . . . Among other writers of opéra-comique the most successful in this period were Louis Hérold (1791-1833) and Adolph Adam (1803-1856).—E. Dickinson, *Study of the history of music*, pp. 299-300.—“Another striking fact in the history of the French opera of the nineteenth century is the great share given to its development by foreign musicians. Among the most distinguished writers of French opera beginning with Gluck, a German, are Cherubini, Spontini and Rossini, Italians [see above: Modern: 1730-1816] and Meyerbeer and Offenbach, Germans [see below: 1774-1866]. . . . The early education and the native habit of these Italian and German composers could not be outgrown, and the result of all the influences involved has been a form of music which, if not cosmopolitan, is eclectic rather than strictly French.”—*Ibid.*, p. 295.—See also below: 1830-1921.

1730-1816.—French Opéra Comique.—Master of this school: Gluck.—“The rapid development of German instrumental music, and the powers of dramatic expression revealed in the orchestra of Mozart, Beethoven and Weber, must be recognized as one of the chief vitalizing forces in the creation of the new French opera. [See also above: Modern: 1700-1827.] Add to these influences the strongly developed dramatic sense of the French people which from the days of Lully, separated the whole conception and treatment of the French opera from the Italian.”—E. Dickinson, *Study of the history of music*, p. 295.—“With the triumphant close of the campaign of Gluck, Paris became the head centre of European opera, and remained so throughout the greater part of the nineteenth century. . . . Notwithstanding what we now see to be the world-wide significance, of Mozart’s ‘Figaro’ and ‘Don Giovanni,’ Beethoven’s ‘Fidelio’ and Weber’s ‘Der Freischütz,’ . . . their success was at first local and temporary. The opera must pass through several important stages before the lyric drama of Wagner could effect its conquest, and the history of the opera in Paris may be considered as an inevitable preliminary so far at least as the education of public appreciation is concerned. The old, Italian ‘god and hero’ opera and the French grand opera of Lully had been drained by Gluck of whatever vitality they possessed; the old forms were but shells and could be discarded, and styles more suited, to the needs of the new age appeared in their stead. It is somewhat difficult to classify the numerous French operas of the nineteenth century among the several genres. Theoretically there are two categories—the grand opera—and the opéra comique. . . . The confusion lies in the second class, for the opéra comique, . . . [originated] in the eighteenth century in the vaudeville [during this first period the productions somewhat resemble the German Singspiel. It] gradually expanded and elevated its music and its subjects, and reduced the space given to the spoken dialogue, until in certain later works pathetic and cheerful scenes are mingled as in the higher grade of spoken comedy, and in some instances the subject is even tragic and the dialogue given in recitative. In such cases there is no apparent distinction between the grand opera and the opéra-comique, [the only comical thing is the name], and their designation depends merely upon the theatre.

—Académie de Musique or Opéra-Comique—in which they are performed.”—E. Dickinson, *Study of the history of music*, p. 293.

Also in: W. J. Henderson, *Masters of French music*.

1740.—Mannheim symphonists.—“There is yet another branch of instrumental music which was very slow in developing, but has come in later days to form one of the most conspicuous features of the art. . . . All the composers of the early part of the eighteenth century, even the giants, had been especially backward in feeling for orchestral effect. They used instruments of most diverse tone-quality in a purely contrapuntal manner, just as they would have used voices, or the independent parts of an organ composition . . . and it was not till they had to write independent instrumental movements that the requirements of instrumentation began to dawn upon them. The first occasions which induced composers to attempt independent orchestral movements of the harmonic kind were for the symphonies or overtures of operas. These had been written at first as by Scarlatti and Lully, for stringed instruments only, with the occasional addition of trumpet solos. . . . When these ‘symphonies’ or ‘overtures’ came to be played more often apart from the operas, both composers and performers began to realise that they were wasting opportunities by slovenliness. . . . Among the men who had an important share in the early development of orchestral music, a Bohemian violinist named [Johann W. A.] Stamitz [1717-1757, and his two sons, Anton and Karl], seem to have been most noteworthy. . . . He succeeded in developing the best orchestra in Europe and established a tradition which lasted long after he had passed away, even till Mozart came through Mannheim on his way to Paris, and had an opportunity of hearing what refined orchestral playing was like . . . with important results to the world in general. A similar line was pursued by the Belgian [François Joseph] Gossec [1734-1829] in Paris. . . . The enormous number of symphonies which were produced . . . in those days [these works are an indispensable connecting link between the Italian sonatists and the great German classical masters] . . . proves that public taste was gravitating strongly towards orchestral music. . . . By the time that Haydn and Mozart arrived upon the scene this scheme of instrumental music was fairly established, but it had been used by most composers before their time crudely, obviously and mechanically. . . . It was the superior artistic instinct of Mozart and Haydn which led them to . . . develop and organise the system of design to a very high degree of perfection.”—C. H. Parry, *Evolution of music*, pp. 206-207, 209-210, 241-242, 247.

1750-1870.—English music since Handel.—“That there was a remarkable school of music in England as early as the thirteenth century, is known definitely [see above: 1226-1622] . . . but the free expression of musical thought which was born with the opera in Florence was seriously handicapped in England by the Civil Wars of the seventeenth century, and the attitude of the Puritans under Cromwell. The English dramatic form of the seventeenth century was known as the Masque (as stated above) and the most prominent names of English composers, who contributed to this form of music, are: Henry Lawes (1595-1662); William Lawes (1582-1645), Pelham Humphrey (1647-1674) and Henry Purcell (1658-1695), the last great English composer until our present day. At the time of Handel, an English ‘Singspiel,’ commonly known as the ‘Ballad Opera,’ made its

appearance. . . . Several well known English musicians are associated with this form; among them being Henry Carey (1685-1743), said to be the composer of 'God Save the King,' Thomas Arne (1710-1778), composer of 'Rule Britannia' and Sir Henry Rowley Bishop (1786-1855). . . . During the early nineteenth century Michael Balfe (1808-1870) an Irishman, wrote some excellent operas and operettas, his most famous work being the 'Bohemian Girl.'—A. Faulkner, *What we hear in music*, pp. 136-137.—"In England the public insistence upon a continuation of the ideals and methods of Handel and Mendelssohn put composers for many years under a bondage that made progress impossible. The public refused a fair hearing to the claims of the new romantic school which was revolutionizing musical thought and production upon the continent, took its stand upon the classical traditions in instrumental music, discouraged opera and made religious music, in the Anglican anthem and the Handel-Mendelssohn oratorio, its paramount interest. . . . England has therefore done nothing of historic value in opera, symphony or piano music."—E. Dickinson, *Study of the history of music*, pp. 389-390.—"The word *renaissance* when applied to English musical conditions from about 1870 onwards is convenient but slightly inaccurate. It gives an easy group-symbol for a large and unexpected outburst of activity; but it does not either state or explain a fact. *Renaissance* means 'a being born again,' and that implies previous death. But the flame of life had never quite died out. . . . In its church and choral music especially there had always been a flicker of life which at least once in the reigns of Elizabeth and the first James, had blazed up into an astonishing vitality. However, it was not to be expected that the nation could go on living at this white heat. The flame burnt itself down, but not out; and the embers of a national art that had once been great enough to light up the wide spaces of the world smouldered through the eighteenth century and far into the nineteenth. . . . From about the time of Purcell's death onwards (1695) England was engaged in eating up as much of the world as possible. And the result was national indigestion. . . . Hence, began the artistic invasion of England. The foreigner was quick to see his opportunity in the preoccupations of the nation. . . . This deplorable state of affairs continued more or less down to the middle year of the last century. About that time certain forces came into play which have markedly changed the social and artistic conditions of England. And only in this sense can we say that there has been such a thing as a renaissance or rebirth of music. . . . The main fact on which we wish to dwell is that between the years 1870 and 1915 England has been able to assert her nationality in music. . . . In a short sketch like the present it is not possible to discuss fully the changed social conditions which brought about the English musical renaissance. One must, however, mention two forces which acting somewhat blindly on the individual yet produced great effects in the mass. The first of these was the recognition that the man who mattered was the man of the soil. From this recognition sprang the whole folk-song movement—a movement whose depth and importance are still very little understood in America. [See above: Folk-music and nationalism: England.] The second is the growth of healthy, liberal opinions and the partial reconsideration of the English caste-system. On this change the example of democratic American has undoubtedly had great influence. The result of this levelling upwards and downwards can be seen in the fact

that, whereas prior to 1870 the English composer was generally a scallywag, now he is a gentleman."—D. G. Mason, *Art of music*, v. 3, pp. 409-413.

1774-1864.—French Grand Opera.—Cherubini to Meyerbeer.—"The first of the naturalized Italians to contribute important works to the modern French school was Luigi Cherubini (1760-1842). He was born in Florence, enjoyed a strict training in the counterpoint of the Palestrina school, went to Paris in 1788 and became conspicuous as a writer of serious operas. He was successful with the public and was recognized as the most learned musician in France. . . . His importance is mainly historic as one of the founders of that higher form of French opera technically classed as *opéra-comique*, in which serious subjects are treated in a manner similar to that employed in the grand opera; preserving only the spoken dialogue. . . . The spirit of Gluck survived also in his disciple, Etienne-Henri Méhul (1763-1817), who shares with Cherubini the honor of leading the *opéra-comique* into that path of dramatic earnestness and musical breadth in which it has won such distinction. . . . A remarkable career was that of Gasparo Spontini (1774-1851), an Italian who came to Paris in 1803, threw himself into the current of opera set in motion by Gluck, and opened still another view by seizing subjects of an heroic, martial nature, and setting them forth with an unprecedented pomp of scenic parade and orchestral splendor. Such themes also hit a ruling taste during the Napoleonic régime, and Spontini has been generally described as the dramatic interpreter of the spirit of French imperialism. . . . The French grand opera entered upon a new career of glory under the guidance of Rossini, Auber and Meyerbeer. [Gioachino Rossini 1792-1868] made his permanent residence in Paris in 1824, revived some of his earlier works and modified them out of deference to French taste by pruning away some of their vocal redundancies, broadening the recitative and giving more space to concerted scenes and choruses. The climax of his effort to naturalize himself as a French composer was in his 'Guillaume Tell,' produced in the Academie in 1829. [See also below: 1813-1868.] In the development of the French heroic opera, on the way to its culmination in the hands of Meyerbeer, 'Tell' is a transition work. So also was its famous rival of 1828, Auber's 'La Muette de Portici.' . . . The history of French grand opera culminates in Giacomo Meyerbeer (1791-1864). He was a German Jew, born in Berlin; was a fellow pupil of Weber at Munich for a time and wrote one or two German operas; then went to Italy and adopted the Rossini manner; went to Paris in 1826, changed his direction a second time and built up the style by which he is now known. His chief works are 'Robert le Diable,' 'Les Huguenots,' 'Le Prophète,' . . . 'Dinorah' and 'L'Africaine.' The first three in this list are those which have given him his fame. The success of Meyerbeer's three chief operas was hardly less in Germany than in France. From the first appearance of 'Robert le Diable' until the opening of the Bayreuth theatre Meyerbeer dominated the German stage. The only composer in Meyerbeer's genre who could be called a rival was Jacques Halévy (1790-1862) whose grand opera, 'La Juive' compounded of elements very similar to those of Meyerbeer's 'historic' operas contains enough of dramatic force and musical beauty to give it an honored place upon the French stage."—E. Dickinson, *Study of the history of music*, pp. 297-298, 301-302.

music.—A. W. Locke, *Music and the romantic movement in France*.

1774-1908.—Early American music.—More recent development.—“American music was at first planted in a very sterile soil; both Pilgrims and Puritans were opposed to the development of the musical art, yet, by an irony of fate, their psalm-singing became the cradle which cherished the music of America. . . . There never was an innovation made in the Puritan or Pilgrim church, but that a vehement storm of opposition arose in some quarters. . . . Some believed it right to sing, but thought it wrong to sing the Psalms of David; others believed that Christians should not sing at all, but only praise God with their hearts; some believed it wrong for any but Christians to sing; and others thought that only one should sing, while the assembly should join in silence, and respond Amen. . . . It will readily be understood . . . that from such seeds . . . no very bountiful harvest of native compositions could result.”—L. Elson, *National music of America*, pp. 29, 38-39, 67.—“The first American composer was probably Francis Hopkinson (1737-91). [Mr. Oscar Sonneck, when chief of the Music Division of the National Library at Washington, revealed the fact that American music began with the publication of Hopkinson's “My Days Have Been So Wondrous Free.”] . . . William Billings (1740-1800), of Boston, was a composer of somewhat more advanced style. He was a tanner's apprentice at first, but he soon began chalking musical exercises on the sides of leather. By 1770 he published an original collection, ‘The New England Psalm Singer,’ which established his reputation. . . . Other hymn composers, of later date, were Oliver Holden, Samuel Holyoke, Jacob Kimball, Henry Oliver, Daniel Read and Lowell Mason [1792-1872].”—A. Elson, *Book of musical knowledge*, p. 288.—“The development of advanced musical interest in America seems anomalous when compared with contemporaneous European experience, though, if one were to go back far enough, some analogies might be found. In rapidity and variety, however, it is phenomenal. . . . [The] American situation is far too complex to lend itself to brief statement, but it has several points of interest. A change began to be seen about 1850. Before that time operatic singers and instrumental virtuosi had found welcome, but music of importance was exotic and sporadic. The influx of well-trained foreign musicians, the influence of native-born student who went abroad for culture, and the general rise of interest in literature and art—all these prepared the way for a healthy expansion. Soon after the Civil War the epochal activity of the great conductor Theodore Thomas (d. 1905) . . . spread a knowledge of orchestral music. . . . Hence, as regards the public performance of important musical works of all kinds, both the appliances and the popular interest to sustain them have advanced with [signal] rapidity. [“The Beggar's Opera,” written by John Gay, 1728, was the first musical play to be produced in America.] Now, New York, at least, is one of the most brilliant operatic centres in the world. A considerable number of . . . permanent orchestras are steadily at work, of which the New York Philharmonic is the oldest and the Boston Symphony . . . the most famous. . . . Choral societies of size and proficiency, are not infrequent, the oldest of importance being the Handel and Haydn Society of Boston founded in 1815. . . . Most of the principal cities are supplied with a notable array of dignified concerts. . . . In general the amount of this public musical life is greatest in the East, the

two chief foci being New York and Boston, but the area of activity has rapidly extended westward . . . and is now reaching the South and Far West as well. Ever since the time of Lowell Mason (d. 1872), working in Boston from 1828, elementary music has found place in some of the public schools. . . . Energetic work is in progress to standardize school instruction and to bring it into relation with the courses offered in higher institutions. . . . Among national societies one of the most efficient is the American Guild of Organists (incorporated in 1896). . . . The aim of the Manuscript Society (formed in 1888) is to foster original composition in all styles. The Music Teachers' National Association (founded in 1876) was designed to band together private teachers for mutual benefit. . . . Several of the great libraries, notably the Library of Congress in Washington, the Public Libraries of New York, Boston, Chicago and many other cities, and those of several universities, have given attention to the gathering of scholarly musical literature of several classes. The collection of instruments at the Metropolitan Museum in New York is famous as one of the largest and best-arranged in the world; others of importance are at the University of Michigan, Ann Arbor, and at the National Museum in Washington. In touching upon the status of composition in America it is necessary to bear in mind one or two factors that have greatly effected its development. One of these is the comparative recency of interest in the more advanced forms of music . . . and the extremely heterogeneous character of American population. In the pioneer days all the cultured inhabitants were immigrants, coming from diverse points of origin. In the middle period, before the war, homogeneity was being established, but upon different lines in different sections. As these sections have since been drawing together, a new flood of immigration has set in, so extensive and varied as to show that the complexity of races and mental aptitudes is to be far greater than ever before. Because of all this American music has never had a native or national basis like that found in practically all European countries. There is no unconscious folk-music that embodies the national temperament and life. Furthermore, American taste in music has been made extraordinarily eclectic, because . . . of all kinds of influences coming from every principal European country. . . . As knowledge increases, however, it is possible that this very cosmopolitanism of experience may bring forth a better blending of existing styles into one expressive of the most modern feeling that could be reached in any other country.”—W. S. Pratt, *History of music*, pp. 648-650.—“The greatest American composer, who won an international reputation, was Edward MacDowell (1861-1908). MacDowell was a devoted student of American music and in several of his large works incorporated Indian themes. He was a modern disciple of program music. . . . The Dean of American composers was John Knowles Paine 1830-1906, who was for many years the Director of Music at Harvard University.”—A. S. Faulkner, *What we hear in music*, p. 140.—“It has often been remarked that the American composer has a rich field of folk music in songs and dances of the Indians, the Negroes, and the Creoles, and much of this material has attracted the attention of European composers as well as those of America. George W. Chadwick (1854), Arthur Foote (1853), Frederick Converse (1871), Charles M. Loefler, and Mrs. H. H. A. Beach, are Boston composers who, one may rightly say, are outgrowths of the Paine School. Other Ameri-

can composers are Walter Damrosch, 1862; Ethelbert Nevin, 1862-1901, who, as a writer of graceful songs and short piano compositions showed a rare individuality; and Victor Herbert, who although a native of Dublin, has won much fame in the United States as a conductor and composer of tuneful comic operas. His grand opera 'Natomá' 1910, shows an interesting use of Indian music. . . . Horatio Parker (1863-1919) one of America's foremost composers, was head of the Yale School of Music until his death, and until 1919, conductor of the New Haven Symphony Orchestra. Other American composers who are helping to develop music in this country are: Howard Brockway, Arthur Farell, Charles Wakefield Cadman, Henry K. Hadley, Henry Holden Huss, Edgar Stillman Kelly, George B. Nevin, Adolph Weidig, John A. Carpenter, Eric Delamarter, . . . Arne Oldberg [and Constantin von Sternberg].—*Ibid.*, p. 140.

ALSO IN: L. C. Elson, *History of American music*.—L. Gilman, *Edward Macdowell*.—J. F. Porte, *Edward MacDowell*.—O. Sonneck, *Early opera in America*.—O. Sonneck, *Miscellaneous studies in the history of music*.

1800-1903.—Growth of musical literature.—“Along with all other lines of intellectual development in the first decades of the [nineteenth] century, the scientific, philosophical and historical discussion of music grew steadily in dimensions and importance. On the side of science, acoustical problems were still further investigated, many . . . questions about rhythmic and metric structure brought into view, the modern doctrines of chord-building and harmonic progression reduced to more satisfactory form, and the systematic presentation of all the technical divisions of composition, . . . made more logical and complete. The leading theorists were almost all teachers at the Paris Conservatoire. . . . Charles Simon Catel (1773-1830) . . . was the first professor of harmony in the Conservatoire [and] his text-book (1802) was used there until about 1820. . . . Jérôme Joseph Momigny (1838) . . . advocated a system like Catel's, though justified by different reasoning. . . . He made the first clear statement of the doctrine of measure, phrase and period. Anton Reicha (1770-1836) . . . won his place chiefly as a teacher and a writer of orchestral and chamber works. In 1818 he followed [Etienne] Méhul (1763-1817) as professor of counterpoint at the Conservatoire. He published an extended treatise . . . and several other theoretical works. Luigi Cherubini (1760-1844) . . . professor at the Conservatoire . . . was recognized as the most powerful contrapunctist of his day. . . . Late in life, assisted by [Jacques] Halévy (1799-1862), he published a famous treatise on counterpoint that is a classic. Gottfried Weber (d. 1839) . . . was an enthusiastic musical student and organizer. Through a diligent use of authorities, . . . he elaborated a compendium of composition . . . which was the most important text book of the period. . . . The discussion of acoustical questions naturally connected itself with Theory and aesthetics. . . . The chief acousticians . . . were Ernst Florens Chladni (1756-1827) who has been called the father of modern acoustics; and Felix Savart (d. 1841), . . . the brilliance of [whose] researches . . . was made known through many technical papers in the *Annales de physique et de chimie*. Among the writers upon aesthetics were the critic [Johann] Rochlitz of Leipsic (d. 1842); Johann Friedrich Herbart (1776-1841); and Karl Christian Friedrich Krause (1781-1832). . . . The practical spirit of the period was illustrated by the energetic efforts to diffuse musical knowledge and

enlarge popular education . . . by various pedagogical plans like those of [Johann] Logier (1780-1846) and [Pierre] Galin (1786-1821). . . . In this period [middle of the nineteenth century] the modern spirit of scholarship became engaged in earnest upon the problems of music-history. At various places original research was prosecuted. . . . Manuscript music and other data were . . . collected, collated and sometimes published. Civil and ecclesiastical records began to be searched for statistical facts. Investigations of the sources thus provided the materials for sound history. . . . It was not until after 1850 that the results began to show in many comprehensive manuals. [François Joseph Fétis (1784-1871) was the most important of the scholars in the early part of the century. His greatest literary work was the 'Biographie universelle'—the first of the great biographical dictionaries. Edmond Henri de Coussemaker (1805-1876) was led by Fétis' writings to adopt historical work. He published invaluable monographs on 'Huchald,' 'Medieval instruments,' the 'Rise of Polyphony,' the 'Medieval Drama,' and 'Adam de la Hâle.' François Auguste Gevaert (1828-1908), one of the foremost of musical savants began his career as an operatic composer. In 1871 he succeeded Fétis as director of the conservatory at Brussels, and from this time on, devoted himself to research work on the history of music].—W. S. Pratt, *History of music*, pp. 490-493.

1813-1868.—Italian bel canto.—Rossini, Donizetti, and Bellini.—“The clue to the history of the opera since its beginning is found in the struggle for control on the part of its two essential elements, viz., the musical and the dramatic. . . . The Italian opera, with a few notable exceptions, has always been controlled by the effort to give pleasure by means of abstract melody and seductive vocalism. Its prevailing characteristics have been artificiality and feebleness of plot, comparative neglect of the orchestral part, subordination of every other feature to tunefulness and vocal display. The Italian bel canto has been the ruling power. . . . The Italian grand opera of the eighteenth century had faded to an extent that seemed to forebode extinction in the hands of such men as Paisiello, Paër and Zingarelli. It suddenly burst forth with new splendor under Rossini, swept public taste along with it, and the Italian bel canto once more gave the law to the lyric stage. Gioachino Rossini (1792-1868), born in Pesaro, Italy, gained a European fame with 'Tancredi' (1813). Italy, Austria, Germany and Paris became successively the scenes of his conquests. . . . His strongest qualities lay in opera buffa. Hardly less noted as a wit and *bon vivant* than a musician, he has given in 'Il Barbiere di Siviglia' a real masterpiece of his class. It still remains unsurpassed. [See also above: modern: 1774-1864.] . . . A brilliant group of composers gathered around Rossini, continuing his methods and principles, contributing nothing essentially new. The most accomplished were Gaetano Donizetti (1798-1848) and Vincenzo Bellini (1802-1835). They were almost as gifted as their master in the invention of melody of the bewitching, often cloying Italian type, and although their immense popularity has declined . . . they still have a loyal body of adherents.”—E. Dickinson, *Study of the history of music*, pp. 283, 286-287, 280, 201.

1818-1880.—German romanticism.—Weber, Mendelssohn, Schumann.—Chopin's influence.—“The middle of the nineteenth century is known as the 'Romantic Period' in the history of music. 'Romantic music' is, in some sense, an offshoot of literature; a reflex of poetry expressed in musical

terms; a kind of impressionism which tends to reject formality, and aims at a direct rendering of its object; a desire to produce musical effects suggested by natural phenomena; an art eager, sensitive, impulsive, which seeks its ideal of beauty through emotional expression. . . . Literary Romanticism, about 1800, found a voice for the thoughts and feelings which by natural reaction had begun to invade the rationalistic world of the eighteenth century. It was not so much a protest against classical work as against some aspects of the reasoned taste in art that had sprung from the spirit of rationalism. It gave voice to a keen love of the past, especially of the religious aspect of past ages, and to a keen passion for nature. . . . In Germany as in France, a little later on, the growth of music proceeded on similar lines. German music followed the traces of German literature at an interval of a generation or so—while in France, more directly in accordance with the *École romantique*, music and literature came to be very nearly contemporaneous. On every side it is evident that music received, and in its peculiar way brought to efflorescence, modes of feeling which had their roots in literature. . . . A German 'Singspiel,' is a play of light texture in prose or verse copiously supplied with incidental music. A German 'Oper' is a musical play in which a minimum of dialogue is employed for the exposition of the situations, while music serves as the exponent of emotion. With the exception of [Carl Maria] Weber's *Euryanthe* and [Robert] Schumann's *Genoveva*, German operas up to Wagner are merely enlarged 'Singspiele.' . . . The triumph of romanticism [one characteristic of the Romantic school is the great advance in orchestral tone coloring, and a preference for dissonances] in operatic music begins with Weber's success *Der Freischütz* (1821). In the story of this opera . . . certain romantic elements, such as the mystery of the forest, the interference of demoniacal powers in the life of men, the redemption of a man's soul through a woman's devotion, appealed powerfully to the instincts of the German people and assisted in establishing Weber's work in the position of a national favourite [and through it Weber became the founder of the Romantic school of German opera].—E. Dannreuther, *Oxford history of music*, v. 6, pp. 2-3, 16-17.—Weber's style rises, in his three greatest works ("Der Freischütz," "Euryanthe," and "Oberon") to heights which show his kinship with the great classics and the great moderns. "Though Weber holds the first place in the opera of the romantic school, he was excelled in other branches of composition by his contemporary, Franz Schubert (1797-1828). Pure and classic as was the form of Schubert's symphonies and sonatas the very essence of romanticism is disclosed in them by sudden transitions from one key to another and by the unexpected modulations in his exquisite harmony. That wealth of melody in which he is perhaps without a rival, was the gift of romanticism in 'Song.'—Under Schubert the German lived (a song for single voice with piano accompaniment) was perfected and placed among the musical forms of music history."—G. Grove, *Dictionary of music and musicians*, v. 3, p. 150.—"The two greatest masters of the German romantic school were Felix Mendelssohn-Bartholdy and Robert Schumann. Both were men of wealth and education, and by virtue of their intellectual achievements, were well fitted to carry on the work of the Romantic school. Mendelssohn (1800-1847) . . . was from his earliest childhood surrounded by the best of musical training; and his work although anticipating the romantic feeling, still re-

fects the technical science of his predecessors. Mendelssohn wrote in all forms, save that of the opera. His largest works were the oratorios 'St. Paul' . . . and 'Elijah.' His symphonies, while following the classical models, are program music in that they are given definite titles, such as, 'The Reformation,' 'Scotch,' and 'Italian.' . . . Schumann and Mendelssohn both made use of the overture form as a vehicle for the expression of program music. They called their works in this form 'Concert Overtures.'"—A. S. Faulkner, *What we hear in music*, p. 105.—Mendelssohn had much in common with the classicists (see above: Modern: 1700-1827) and became head of a school whose chief representatives were Moritz Hauptmann (1792-1868), Ignaz Moscheles (1794-1870), Salomon Jadassohn (1831-1902), Karl Reinecke (1824-1910), and Hans Richter (1823-1884). "Robert Schumann (1810-1856) by reason of his two-fold activity as critic and composer . . . was a new force in music. Highly cultivated in literature, philosophy and poetry, he possessed a keen and discerning critical taste, and a literary style that was picturesque and eloquent. . . . For ten years, he was in touch with the public by reason of his editorship of the 'New Journal,' and by his championship therein of all that was good and progressive in the music of the day, did much for the encouragement of true art. His articles on Schubert, Mendelssohn, Gade, Chopin, Berlioz, Liszt, Brahms and others formed a new epoch in musical criticism, and helped the cause of Romanticism immeasurably. . . . His collected writings give a graphic illustration of his views on music, and form a supplement to his personality as expressed in his music. Schumann's most representative works include four symphonies and the 'Overture,' 'Scherzo and Finale,' the overtures 'Genoveva' and 'Manfred.' . . . In the field of song, Schumann is a worthy successor to Schubert, . . . but perhaps his most conspicuous service to music lies in his development of the short piece. In this direction he has cultivated a branch of expression, with an originality, a freedom and a richness that has no parallel in the Romantic movement except in Chopin."—W. Baltzell, *History of music*, pp. 410-412.—"Among Schumann's many able reviews of new music, showing the keenest critical insight, none exhibit a more just appreciation of an original talent than his article on some variations by a young composer who was destined to exert so deep and widespread an influence on piano style and piano composition. Chopin's romanticism, . . . is one of the most individual developments of the entire period. Frederic Chopin [composer of pianoforte lyrics] was born at Zelazowa-Wola, near Warsaw in Poland, on February 22, 1810 (of Polish descent on his mother's side and French on his father's side). Chopin was exceedingly patriotic . . . and gave many proofs of his devotion to Poland, which he never forgot in spite of years of absence. He was a pianist of extraordinary distinction in spite of the preëminence of Liszt. . . . Although he possessed great brilliancy, the most prominent trait in his playing was its all-pervading and inexhaustible fund of poetry. . . . Although Chopin composed a number of works in which he uses the orchestra, some chamber-music, and a set of Polish songs, he was first and last a composer for the piano. . . . He was thoroughly national as a composer; hence in some respects his mazurkas and polonaises are the most characteristic of his compositions. . . . Among romantic composers he has done more for the advancement of piano style than anyone except Liszt. . . . Chopin's influence has been immense not only on the com-

posers and pianists of France and Germany but also markedly among living composers in Russia. Chopin is the preëminent poet of the piano."—*Ibid.*, pp. 417-423.—See also below: 1830-1921.

ALSO IN: J. A. Fuller-Maitland, *Schumann*.—J. G. Huneker, *Chopin, the man and his music*.—W. A. Lampadius, *Life of Mendelssohn* (tr. by Gage).—A. W. Locke, *Music and the romantic movement in France*.—F. Niecks, *Life of Chopin*.—C. von Sternberg, *Tempo rubato*.—K. Storck, *Schumann's Briefe*.—M. M. von Weber, *Karl Marie von Weber*.

1818-1921.—German Lied.—"Just at the epoch when the most gigantic types of dramatic and choral writing were being undertaken, the smallest of the important vocal forms, the song, at length secured its destined maturity and eminence. The most original path breaker was undoubtedly Franz Schubert (1794-1828)."—W. S. Pratt, *History of music*, p. 608.—"In one sense there is no more pathetic story in musical annals than that of Schubert. . . . His lot was full of material misfortune. . . . Yet from his sixteenth year he poured forth a stream of works, over eleven hundred in all, such as no other composer has equaled. Among these were hundreds of songs that mark him as a prince in this beautiful branch of art, but among them, too, were remarkable instrumental and dramatic works, that bring him into relation with Beethoven on the one hand and Weber on the other; . . . he was a shining exponent of the new romanticism, though his favorite idiom of expression was instinctively regular and classical. As Schubert became known, his success with the song proved a mighty stimulus to other composers."—*Ibid.*, p. 432.—"Schubert in his short life of 31 years has left to the world some 650 songs, masses and part songs, besides a vast number of instrumental compositions including his ten symphonies the most popular of which is his 'Unfinished Symphony' and the Symphony in C Major, no. 10. His best known song 'Der Erlkönig,' was written at the age of eighteen. In this Schubert shows his dramatic power and an ability for adapting music to the sentiment of the text."—A. S. Faulkner, *What we hear in music*, p. 105.—"As a composer of songs Robert Schumann (1810-1856) stands by the side of the trio of great writers in this class of music. Schubert shows the greatest wealth of melody; Mendelssohn the most perfect roundness of form; but Schumann is by far the most profoundly and intellectually suggestive. [The peculiar place of Schumann as a song writer is indicated by his being called the "musical exponent of Heine."]"—*Ibid.*, p. 432.—About 1850 we find that important composers rarely failed to cultivate song-writing to some degree, and by this time several eminent specialists in the song field were in evidence like Karl Löwe (1796-1869), Robert Franz (1815-1892), Franz Abt (1819-1885), Adolf Jensen (1837-1870), Johannes Brahms (1833-1897). Later Hugo Wolf (1860-1903) transferred the principles of Wagner's music drama to the Lied and endowed the instrumental portion with symphonic power. Richard Strauss (1864-) cultivated the song, from the beginning of his career; and with such success, that in his best productions of this kind he reaches the level of the greatest lyric masters.

ALSO IN: W. Dahms, *Schubert*.—L. C. Elson, *German songs and song writers*.—H. Finck, *Richard Strauss, the man and his work*.—J. A. Fuller-Maitland, *Schumann*.—M. Kalbeck, *Johannes Brahms*.—D. G. Mason, *Romantic composers*.—E. Newman, *Hugo Wolf*.

1830-1900.—Berlin academicians.—"The modern importance of Berlin as the capital of Ger-

many began to develop after Napoleon's career was checked in 1813-15. In the outburst of patriotic aspiration following the War of Liberation, intellectual and artistic interests including music, received much attention. But those who happened to be leaders in musical matters chose to apply themselves almost exclusively to choral music of a somewhat antique type. Hence arose a Berlin group or school which long stood aloof from the exuberant instrumentalism of the Viennese group, and from the several phases of romanticism represented by Mendelssohn, Schumann and Chopin, as well as the radicalism of Wagner, Liszt and Berlioz. The Berlin Akademie became the stronghold of an extreme conservatism and it was not until toward the end of the period now under review (middle nineteenth century) that the liberal spirit came in which has since made Berlin one of the progressive musical capitals of the world. It may be that the attitude of certain Berlin masters, like Eduard Grell (1800-1886), Siegfried Dehn (1799-1858), and Friedrich Kiel (1821-1885) served a useful purpose as a counterpoise to the impulsive swing of style away from the traditions of the old vocal counterpoint."—W. S. Pratt, *History of music*, p. 601.—The followers of absolute music are: Joseph Rheinberger (1830-1901), Max Bruch (1838), Gustav Mahler (1860-1911), Max Schillings (1868) George Schumann (1866) and Max Reger (1873-1916).

ALSO IN: R. Braungart, *Monographien moderner musiker*, Max Schillings, v. 3.—J. A. Fuller Maitland, *Masters of German music*.—P. Stefan, *Gustave Mahler: Eine Studie über Persönlichkeit und Werk* (tr. by T. E. Clark).

1830-1908.—Spain.—"The remaining European country possessing musical interest is Spain. . . . It cannot be said to be of considerable importance if the number of their representatives in musical art be held to be an indication, although their gift in other subjects cannot be denied. But of whatever nature it may be, it has never to our knowledge, been disseminated beyond its respective borders; it cannot, therefore, expect any critical attention, since it has not submitted itself to the judgment of musical opinion either in the English, French, Italian, or German capitals. . . . Thus we see that the Spaniards with their brilliant poetry and their achievements in the plastic art, and even in music, possess few composers that have aspired to anything beyond the "fashionable" in music. These exceptions are Juan Arrieta, Baltasar Saldoni, and Pablo de Sarasate. The first, Arrieta, born in 1823 at Puente la Reina, . . . by the performance of his first opera, *Ildegonda* at Milan, . . . gained celebrity as a dramatic composer. He subsequently composed other operas and operettas; . . . the most popular of them the *Zarzuelas* (operettas), being well known through Spain. Baltasar Saldoni, born in 1807 at Barcelona, . . . a composer and musical savant of note, was educated in the music school of Montserrat. . . . He has written a number of organ compositions in the strict polyphonic style, and other sacred works. A symphony, entitled 'A mi Patria,' 'A Hymn to the God of Art,' Italian operas, and Spanish *Zarzuelas*, have secured him considerable favour. . . . We cannot take leave of Spain without referring to one of the greatest violinists of his day. Pablo de Sarasate, in 1844-1908 exhibits as a virtuoso, an almost marvellous perfection. His brilliant artistic conceptions of works such as those of Mendelssohn and Spohr, besides his arrangements and compositions of Spanish airs have gained him the greatest popularity."—E. Nau-
mann, *History of music*, v. 5, pp. 1203-1264.

ALSO IN: J. Altadill, *Memorias de Sarasate*.

1830-1921.—Modern France.—Berlioz.—Program music.—Gounod and Bizet.—Renowned organists.—Impressionism.—Debussy.—“The school of modern music in general, is a direct outgrowth of the romantic school. It may be said that as Richard Wagner’s works mark the culmination of the romantic school and are the foundation of modern opera, so Franz Liszt stands in the same relation to instrumental music. With the exception of the greatest modern German master, Johannes Brahms, and his followers, all modern instrumental music has been founded on the two principles of the romantic school, namely, program music and nationality. . . . In France, where the opera has held sway for so many generations, an awakened interest in purely instrumental forms is responsible for the remarkable instrumental school, where the most interesting development in modern music is now to be found. In Italy there also exists an independent instrumental school. The most important feature of the latter part of the nineteenth century has been the rise of the national schools of music.”—A. S. Faulkner, *What we hear in music*, pp. 121-122.—Berlioz [master of impressionist orchestration] is the one great composer who perfectly represents the romantic movement, not only in France, but in all Europe. . . . If ever an artist reflected the conditions of the epoch in which he lived, that man was Berlioz in whose character and music are mirrored all the complex features of the romantic revolution. . . . Berlioz stands out, not only among all other musicians in Paris, but among the whole group of artistic, literary, social, and political romanticists, as the most perfect exemplification of the romantic spirit. As Berlioz represented in his compositions . . . the most complete expression of romanticism . . . so Liszt, more than any other musician, understood all the kindred ramifications of romanticism in the philosophical and sociological, as well as artistic and literary, thought of his day. . . . If any reason need be given for considering [Franz] Liszt [1811-1886] as one of the protagonists of French musical romanticism, it may be remembered that he first appeared in Paris as an infant prodigy in 1823, and that after his father died in 1827, the sixteen-year old youth settled down to make his home in Paris and to win in a few years the reputation of a mature musician. . . . After 1848 he became permanently allied with the neo-German School of musical composition, and became, during his residence in Weimar, its actual leader. At the same time he continued his propaganda for the romantic school in France.”—A. Locke, *Music and the romantic movement in France*, pp. 110, 145-147.—See also below: 1843-1897, 1847-1921.—“Berlioz and Liszt were not content with the novel possibilities opened up by the infusion of the romantic spirit into the established forms. They desired rather, to bring about some sort of direct alliance of instrumental music with poetry. To effect this they chose to make use of the means of musical expression for purposes of illustration. Thus they came to lay stress upon the conjunction of music with some particular poem or some special order of ideas, and, in the construction of their pieces, to rely directly on suggestions received from literary or other non-musical sources. The result was the production of a curious hybrid, which has been called *Programme music*, i. e., music posing as an unsatisfactory kind of poetry.”—E. D. Dannreuther, *Oxford history of music*, v. 6, p. 111.—“In the case of Berlioz’s symphonies, the programme forms an important part of the artistic scheme and the

music is hardly intelligible without it. . . . Berlioz, who claimed to have ‘taken up music where Beethoven laid it down,’ deserves respect for the power and persistence of his efforts. About his originality there can be no contention. His aim was always high, his ambition unbounded. Whether he succeeded in expressing what he meant to express, as Beethoven almost invariably did, is another matter. After more than half a century of controversy, it is by no means easy to estimate the value or to gauge the genuineness of his claims.”—*Ibid.*, p. 112.—“As a master of the orchestra, however, there can be no doubt that Berlioz ranks among the first. His knowledge of the different instruments, surpassed that of even the virtuosi who played them; while his unlimited store of orchestral combination and color was inexhaustible. In France the change in the methods used by Gounod, while not so radical as that noticeable in Verdi, is still apparent. Charles Gounod (1818-1893) in his early operas shows the direct influence of Meyerbeer and the French Grand Opera School. In ‘Faust’ (1859), Gounod reached the zenith of his genius, and it is not strange that in this setting of the old Teutonic story, the influence of ‘Lohengrin’ should be apparent. ‘Faust’ remains the most universally popular opera of the French School. . . . (George) Bizet (1838-1875), the composer of ‘Carmen,’ was a devoted adherent to Wagner’s ideals as adapted to the French opera school, while the modern masters of the French school have all shown the direct influence of Wagner’s ‘Music of the Future.’ In Germany the direct followers of Wagner in opera are Carl Goldmark (1830-1915), Engelbert Humperdinck (1845) and Richard Strauss (1864).”—A. Faulkner, *What we hear in music*, p. 119.—“The drift of romanticism toward realism is easy to trace in all arts. There were, however, artists of all kinds who were caught up, so to speak, from the current into a life of the spirit, who championed neither the glory of the senses, as Wagner, nor the indomitable power of reason, as Brahms, but preserved a serenity and calm, a sort of confident, nearly ascetic rapture, elevated above the turmoil of the world, standing not with nor against, but floating above. Such an artist in music was Cesar Franck, (1822-1890), growing up almost unnoticed between Wagner and Brahms, now to be ranked as one of the greatest composers of the second half of the century.”—D. G. Mason, *Art of music*, v. 2, p. 469.—“Franck was a Belgian born at Liège—one of that long line of musicians who, though born elsewhere, has become thoroughly identified with French thought and standards; and there is much in his music which finds a parallel in the literary qualities of another Belgian artist, Maeterlinck, for in both is that same haunting indefiniteness, that same symbolic aspiration. . . . A distinct note of religious exaltation runs through much of his music. . . . He was universally acknowledged to be the greatest improviser on the organ since Bach himself. . . . Franck’s services to the development of music was twofold: 1st, as an inspired composer of varied works, which are more and more becoming understood and loved; 2d, as a truly great teacher, among his notable pupils being d’Indy, Chausson, Duparc, Repartz, and the gifted but short-lived Lekeu. . . . He was the first composer of the French School to use adequately the great forms of symphonic and chamber music which had been worked out hitherto by the Germans: Bach, Haydn, Mozart, Beethoven, etc. [See above: Modern: 1700-1827.] . . . Franck was likewise a pioneer in establishing in a sonata or symphony a new conception as to the relationship of

the movements. This he affected by the use of what may be called 'generative motives' which, announced in the first movement of a work, are found with organic growth, modulatory and rhythmic, in all the succeeding portions. Such a method of gaining unity had been hinted at by Beethoven in his Fifth Symphony, was further developed by Schumann and Liszt and, since the example of Franck, has become a recognized principle in all large cyclic works."—W. R. Spaulding, *Musical art and a language*, pp. 257-258.—The renowned organists of modern France are followers of Franck. The most prominent among them are Alexandre Guilmant (1837-1910), Theodore Dubois (1837), Charles Widor (1845) and Gabriel Fauré (1845). Conspicuous among the modern French opera composers are Jules Massenet (1842-1912) whose "Manon," "Thais," and "Jongleur de Notre Dame" have won great popularity. Other French dramatic composers are Gustave Charpentier (1860) with his operas "Louise" and "Julien," and Alfred Bruneau (1857) with "Le Rêve" and "L'Attaque du Moulin." The most versatile French composer of recent years was Camille Saint-Saëns (1835-1921), sometimes called the "supreme eclectic"; he wrote in all forms including opera and oratorio, and his style ranged from the severely classic to program music. It was his good fortune to have done more than any other since Berlioz, to foster instrumental music in France; and his literary gifts were as striking as his musical endowment. "The history of music records several cases in which a new movement, a new departure in musical thinking or musical expression was intimately connected with, and followed closely upon some new movement in other fields of art or literature. . . . The phenomenon or the new style in music now known by the name of 'impressionism' was born of the same spirit as the impressionism of the painters. . . . It was not until [about 1890] . . . that musicians began to fix and to convey aural impressions somewhat in the same manner as the painters had conveyed impressions of and for the eye. The musical movement also originated in France. Claude Debussy is really its founder and Maurice Ravel its most prominent living exponent. . . . The specifically musical features of the new style are the introduction of what the old theory called tones foreign to the harmony, that is, dissonances. But their dissonant character is disregarded as it were. They are treated as the old composers treated consonances. In fact, the ear soon becomes accustomed to them, and, if it follows the impressionist principles, regards merely their general effect and not their theoretical derivation or justification. In the same manner the conventional scales are abandoned. New scales like the succession of whole tones, are treated with the freedom of the conventional major and minor or the older church modes. The clear cut melodic construction of themes according to the older theory makes way for vague, intangible tone successions, which purposely avoid the points of reference and of crystallization which the older theory made the basis of its melodic conceptions. . . . Debussy's style crystallized in the nineties. But before that, Ernest Fanelli (born 1866) had produced works which employed some of the methods which later became characteristics of the impressionists. The score of Fanelli's symphonic tableaux, *Thebes*, founded on Gautier's *Roman de la Momie*, was begun in 1883. The work remained unknown until Fanelli was 'discovered' by Gabriel Pierné in 1912. Satie's *Ogives*, *Sarabandes* and *Gymnopédies*, all for piano, were written in 1886, 1887 and

1888 respectively. But the historical basis of musical impressionism,—for it has a historical foundation,—goes still farther back. The impressionist's stress on tonal color effects is only a logical development of the earlier romantic composer's attention to this phase of musical creation. About the middle of the century we find Liszt resorting to melodic formulas which prepare the way for impressionist melodies, and harmonically also there are premonitions in Liszt's works of what is to follow. Wagner's idea of the 'endless melody' of the orchestra is akin to the impressionist's theory of melodic structure. . . . The effect of the impressionist movement upon symphonic form has been just a continuation of the romanticist's departure from the strict rules of logical musical construction. As to the development of the orchestra and orchestral instruments, their influence has not, on the whole, been so marked."—O. Kinkeldey, *Beginning of musical impressionism* (*Symphony Society Bulletin*, Feb. 9, 1921).—"Achille Claude Debussy (1862-1920), one of the most unique figures of the twentieth century, . . . [has left to] the world music of unique and baffling originality. It is not easy to explain or locate the original sources of his art. . . . Debussy has seen nature and beauty in a way peculiarly his own, and has found new forms of expression. . . . What is most astonishing is the fact that underneath all this free poetic impressionism one discovers workmanship of unerring logic and precision. Yet there are analysts who deny the presence of 'form' in the music of Debussy. . . . He won the Grand Prix in 1884 with his cantata 'L'Enfant Prodigue.' . . . Debussy made an exquisite setting of Rossetti's poem, 'The Blessed Damozel' (1888). He composed his epoch-making reverie for orchestra, 'Prélude à l'Après-midi d'un Faune,' in 1892. 'Pelléas et Mélisande,' a music-drama of a strange and shadowy beauty, based on the play of Maurice Maeterlinck, and one of the most significant operas of recent times, was performed at the Opera Comique, Paris, April 30, 1902. Important songs, piano and orchestral works, followed. . . . Debussy had a finer harmonic sense, a freer, a more poetic spirit, than any other musician of his day in France."—O. Downes, *Lure of music*, pp. 177-179.—The followers of Debussy are Maurice Ravel and Paul Dukas, whose unique tonal combinations make them worthy of mention. "Today the composers of France surpass those of all other countries in originality and the varied character of their productions. We have mentioned but a few of an astonishing generation of creative artists. There is no brighter page in the history of modern music than that which records the contribution of France—a triumph in art which precedes the glorification of her spirit in other spheres, on other fields."—*Ibid.* p. 182.

1842-1921.—Modern Italian school.—Verdi.—Music drama, and church music.—“Wagner marks the culmination of the romantic school and the beginning of the modern school, for every great opera since his day clearly reflects the influence of the ‘greatest musical personality since Beethoven.’”—A. S. Faulkner, *What we hear in music*, p. 119.—“Italy proved more responsive to Wagner’s influence than France. The performance of *Lohengrin* (1868) in Bologna, created much enthusiasm among the young musicians of northern Italy, but it was the septuagenarian Verdi who inaugurated the era of the music drama by his *Otello* . . . and *Falstaff*. . . . Strictly speaking he had been anticipated by Arrigo Boïto (1842) who, thrown under Wagner’s influence in Germany, had followed his example in being the poet and composer alike of *Mefistofele* . . . a version of the *Faust* legend. . . . Giuseppe Verdi is the representative of all the struggles and crises which Italian opera had to pass through in order to free itself from the fetters of conventionality and rise to dramatic truth. From first to last of all his works we meet this progress; each shows a step in advance, a new conquest, until perfection is reached in *Otello* and in *Falstaff*. . . . Verdi is numbered among the greatest dramatic composers of any time. . . . Although the plan of separating an artist’s work into periods is not desirable . . . yet with Verdi this division and his constant aspiration towards greater perfection is most apparent and characteristic, for no one could place *Nabucco* and *Ernani* beside *Rigoletto* and *Ballo in Maschera*, nor these beside *Aida* and *Otello*. . . . In *Otello* and *Falstaff* sentiment and dramatic truth reign supreme. . . . Verdi’s music too, had political importance. He is the musician of new Italy; his inspirations often express the cry of grief from a people oppressed by foreign rule; his songs stimulated youth to lofty enterprises and in a certain way contributed to the work of a nation.”—A. Untersteiner, *Short history of music*, pp. 288-291.—“The latest development of the music drama in Italy has been in the direction of so-called naturalism. This consists in the choice of brutal phases of life for illustration, told in short, concise forms which concentrate and hasten the dramatic action. . . . It is more than probable, indeed, that the reaction against the excessive length of the music drama, led to the great and sudden vogue of this school. The first impulse to naturalism was given by Pietro Mascagni (1863) in his two-act opera, *Cavalleria Rusticana* (*Rustic chivalry*), in 1890. . . . Two years later followed *I Pagliacci* (*The Clowns*) by Ruggiero Leoncavallo (1858-1919). . . . Their popularity has been approached only by Giacomo Puccini (1858) in *La Bohème* (*The Bohemians*) produced in 1896. Four years later his *Tosca* appeared and did much to strengthen the impression given by its predecessor—that in Puccini Italy possesses her most promising dramatic composer” [These works were followed by *Madame Butterfly*] and *The Girl of the Golden West*].—W. J. Baltzell, *History of music*, pp. 375-376.—The operas *The Secret of Suzanne* and *The Jewels of the Madonna* have placed their composer Ermanno Wolf-Ferrari (1876) in the high ranks of modern Italian opera writers. Other Italian orchestral composers include Giovanni Sgambati (1843-1914), a pupil of Liszt and a follower of Wagner, who dominated a symphonic school, practically the first of its kind in Italy since the seventeenth century, Giuseppe Martucci (1856-) Ferruccio Busoni (1866-) and Marco Bossi (1861-).—“In church music, the Italians of the last generation had

sunk to a very low plane being satisfied with trivial operatic melodies entirely unsuited to religious expression. Pope Leo X greatly encouraged the right development of religious music, by his edict that the Roman Catholic Church must return to the use of the Gregorian Chant. Don Lorenzo Perosi (1872), the director of the Papal Choir, has written many masses in the style of Palestrina, yet with modern expression, which have proved that religious music should be regarded as apart from the operatic school.”—A. S. Faulkner, *What we hear in music*, pp. 134-135.

ALSO IN: F. Crowset, *Verdi, man and musician*.—A. Visetti, *Verdi*.—F. M. Underwood, *United Italy*, pp. 334-335.

1842-1921.—Modern English composers.—“The group of able men who sprang rather suddenly, as it would seem, out of the dead level of mediocrity that had existed for one hundred and fifty years, includes Arthur S. Sullivan, Alexander C. Mackenzie, Charles V. Stanford, Frederick Cowen, Charles H. Parry and Edward Elgar. There are others hardly less worthy of conspicuous mention, such as Samuel Coleridge-Taylor, Arthur G. Thomas, Hamish McCunn, Edward German, Granville Bantock and Frederick Delius. The fame of Arthur Sullivan (1842-1900) rests upon his clever and delightful operettas of which *‘Trial by Jury,’* *‘Pinafore,’* *‘Patience,’* *‘The Pirates of Penzance’* and *‘The Mikado’* have won their composer international praise. . . . Alexander Mackenzie (1847-) born in Edinburgh, has produced notable work in oratorio, ode, . . . opera, compositions for orchestra, violin and piano. Charles V. Stanford (1852-) is of Irish birth; his best work is in vocal music, including compositions for the church, choral ballads . . . and dramatic works. . . . Frederick H. Cowen (1852-) is known favorably on the continent as well as at home for his romantic *‘Scandinavian symphony’*; . . . Charles H. Parry (1848-) is, in the view of many, the ablest of this company, considered in his versatile capacity as composer, teacher, historian and critic. Within a few years the very brilliant and challenging work of Edward Elgar (1857-) has made him for the time being one of the most talked-of composers of the day. His setting in oratorio form of Cardinal Newman’s *‘Dream of Gerontius’* was for a time the reigning sensation in circles devoted to choral music. Its intense dramatic contrasts and the emphasis upon the most advanced treatment of the orchestra as the chief means of effect seem in the minds of many to announce a new epoch in the history of the oratorio”—E. Dickinson, *Study of the history of music*, pp. 301-302.—Percy Grainger, born at Melbourne, Australia, (1882) and Cyril Scott (1879) are two of the youngest of the English composers who are devoting their attention toward the development of early English folk-music. Scott, however, while tending toward nationalism, shows a marked influence of the impressionism of the modern school, so that he is known in Europe as the “*English Debussy*.”

ALSO IN: R. J. Buckley, *Sir Edward Elgar*.—A. Lawrence, *Sir A. Sullivan, life story, letters and reminiscences*.—C. V. Stanford, *Pages from an unwritten diary*.—C. V. Stanford and C. Forsythe, *History of music*.

1843-1897.—Wagner, Liszt and Brahms.—“In the latter part of the nineteenth century the musical world was overshadowed by one of the greatest geniuses that the art has produced,—Richard Wagner. It seemed almost as if he summed up his works the whole range of musical possibilities,—almost as though he had reached the Ultima Thule, beyond which no progress was possible.

... It was in the proper union of music and action, ... with its endless melodic recitative, that Wagner's truly marvellous gifts found expression. ... The step from diatonic harmony to chromatic modulation was a natural one, and bound to come, even if it came slowly."—A. Elson, *Modern composers of Europe*, pp. 1, 3.—"It is to Richard Wagner (1813-1883) that we owe the renaissance in modern form of the primitive ideal of the opera as embodied in the works of Peri and Caccini [see above; Modern: 1575-1676.] Simple and formless as these now appear, they contain the germ of all that he has accomplished, apart from the question of means, even to the very name of music drama. This he revived because, in his opinion, the term had acquired a preponderantly musical signification which made it inappropriate for his later works in view of their dramatic character. ... The future master of the music drama, however, began by composing operas. ... Lohengrin ... was his last opera: all his later works were known as music dramas."—Baltzell, *History of music*, pp. 364-365, 369.—"So far as the musical stage is concerned Wagner sums up and completes the ideas and aspirations of Romanticism. He expresses them in *Tanhauser* and *Lohengrin*, transcends them in *Tristan*, departs from them in *Der Ring* and *Die Meistersinger*, and returns to them in *Parsifal*. ... Dramatic poet by instinct, by training supreme master of musical effect, Wagner was gradually led towards a new manner of blending music with the drama. ... The main object Wagner had in view was, as he put it, 'to reconcile the claims of poetry and music with the claims of that most contestable, most equivocal institution of our day, the opera.' ... Can the modern spirit produce a theatre that shall stand in relation to modern culture as the theatre in Athens stood to the culture of Greece? This is the complex problem that he set himself to solve. ... The main argument is as follows: Poetry, imitation, and music were united in the drama of the Greeks; the drama disappeared with the downfall of the Athenian State; the union of the arts was dissolved, each had an existence of its own, and at times sank to the level of a mere pastime. ... In our day each 'separate branch of art' has reached its limits of growth, and cannot overstep its limits without incurring the risk of becoming incomprehensible, fantastic, absurd. At this point each art demands to be joined to a sister art—poetry to music, imitation to both; each will be ready to forego special pretensions for the sake of an 'artistic whole,' and the musical drama may become for future generations what the drama of Greece was to the Greeks. The entire music-drama is musical in spirit and in detail."—E. Dannreuther, *Oxford history of music*, v. 6, pp. 333, 346-347, 349.—"The part assigned by the Greek dramatists to the chorus who expounded and commented on the events of the play was in his [Wagner's] scheme transferred to the orchestra. This he did by means of the *Leitmotiv* (leading motive). A *leitmotiv* is a characteristic theme or harmonic progression associated with each of the *Dramatis Personae* and which appears with such modification of mode, rhythm, or any of its component parts as the dramatic situation demands. It is not confined to personages alone; in *The Ring* of the *Nibelung*, for instance, the stolen gold, the ring formed from it, the sword which plays such an important part in *Die Walküre* and in *Siegfried* all have their corresponding motives. It is through these motives that Wagner is able to give his orchestra an all but articulate speech and to weld the music drama into an organic whole.

... Wagner had long cherished the plan of a festival theatre for the performance of his *Ring* of the *Nibelung*. ... The quiet town of Bayreuth therefore, as being a central point, was chosen and there in 1876 the *Festspielhaus* was opened with the first complete performance of the *Tetralogy*. It made a profound impression, but the expense of the undertaking was so great that it resulted in a heavy loss and the theatre was closed for a number of years. In 1882, however, it reopened with *Parsifal* and since then its triumphant career has been part of musical history."—W. J. Baltzell, *History of music*, pp. 370, 373.—"Side by side with Chopin's comparatively short and pathetic career ran the first half of [Franz] Liszt's long and showy one [1811-1886]. Like Chopin he brought into music a decidedly new national flavor. Like him he developed preciously into a masterly virtuoso and early sought Paris as headquarters. ... He stood forth, even in youth, as a consummate swayer of audiences and master of men, as an interpreter of the whole range of piano literature and ultimately as a versatile composer and an imperial force in musical progress. ... His eminence [was] partly due to his readiness to appreciate great art wherever found and to throw himself generously into its furtherance. ... As a player he ... reached a place of incontestable supremacy, and then as a teacher he stamped a deep impression upon the whole texture of musical thought. Liszt's technical accomplishments were so extraordinary that he expanded the range of pianism in several directions, almost stepping beyond the verge of what is germane to it, at least establishing a new standard of dexterity and eloquence for it. ... Liszt's service to piano music went much beyond the enrichment of technic."—W. S. Pratt, *History of music*, pp. 530-540.—"Liszt understood that to introduce new forms he must cause a necessity to be felt, in a word, produce a motive for them. He resolutely entered on the path which Beethoven, with the ... 'Choral Symphonies,' and Berlioz, with the 'Symphonie Fantastique' ... had suggested rather than opened; ... they had enlarged the compass of the symphony, but not transformed it, and it was Liszt who created the symphonic poem. This brilliant and fecund creation will be to posterity one of Liszt's greatest titles to glory, and when time shall have effaced the luminous trace of this greatest pianist who has ever lived it will inscribe on the roll of honour the name of the emancipator of instrumental music."—J. G. Huneker, *Liszt*, pp. 105-106.—"Saint Saëns rightly denies and ridicules the accusation that Liszt sought to set philosophical systems to music; and stoutly maintains that he translated into music none but poetical ideas. ... Be, however, the ultimate fate of his works what it may, there will always remain to Liszt the fame of a daring striver, a fruitful originator, and a wide-ranging quickener. ... The chief sources of information regarding this matter are Liszt's *Lettre d'un Bachelier ès Musique*, dated January, 1837, his review of Schumann's Op. 5, 11, 14, of the same year, likewise published in the *Revue et Gazette musicale*, and especially his essay *Berlioz and his Harold Symphony*, of 1885."—*Ibid.*, pp. 311, 316, 276.—"The one other personality in modern music that assumes any proportions beside the overshadowing figure of the Bayreuth master is Johannes Brahms. As it would seem necessary for the detractors of any cause or movement to find an opposing force that they may pit against the object of their disfavor, so did the anti-Wagnerites, headed by Hanslick (celebrated critic, Brahms's champion and anti-Wagnerite) gather round the

unconcerned Brahms with their war cries against Wagner. . . . So opposed are the ideals and methods of these two leaders of modern musical thought that comparisons become . . . stupidly odious. To the reflective classicist of intellectual proclivities Brahms will remain the model, while Wagner rests, on the other hand, the guide of those beguiled by sensuous color and dramatic freedom."—D. G. Mason, *Art of music*, v. 2, p. 436.—"Johannes Brahms (1833-1897) famed both as composer and pianist, . . . was comparatively unknown when at the age of twenty Schumann brought him into public notice by hailing him as the successor of Beethoven. Unlike most composers, Brahms was mature from the very beginning. . . . Unaffected by the pomp and glow of the ultra-romantic tendency initiated by Berlioz and culminating at present in the works of Richard Strauss, he remained true to the great classical school (of absolute music) which rests on Bach and Palestrina. Unlike the modern impressionistic school, his art is based on essentially musical ideas and their contrapuntal treatment; it is architectural; [Brahms is the greatest contrapuntist since Bach. His practice of welding together the working out and recapitulation sections of his movements in a closer union than any of his predecessors, is an innovation which cannot fail of having results in the future]. In such a scheme, color is subordinate to thematic interest, hence his instrumentation often appears heavy and austere to those who look for the brilliancy and tone painting of Liszt or Wagner. His music in general is founded on Bach and Beethoven [see above: MODERN: 1700-1827]. His works for the piano are large and orchestral in style. . . . Though Brahms' four symphonies have become reasonably familiar, his piano works have not even yet achieved widespread popularity. . . . Brahms never wrote for the stage but was active in all other departments of music. . . . It is perhaps too soon to deliver an authoritative judgment as to the ultimate rank that Brahms will take among the great composers of the past. There is no doubt, however, that he is one of the commanding figures of the last century [and a transitional bridge between Beethoven and the modern composers] and that he has enriched the world with a mass of noble music, [the first composer since Beethoven to sound the sublime], all of which deserves to be known for its elevation and consummate mastery of detail."—W. J. Baltzell, *History of music*, pp. 430-441.—Von Bülow classed Brahms with Bach and Beethoven as "one of the three great B's."

ALSO IN: W. E. Ashton, *Life of Richard Wagner*.—H. S. Chamberlin, *Richard Wagner*.—H. T. Finck, *Wagner and his works*.—J. Fuller-Maitland, *Brahms*.—J. G. Huneker, *Franz Liszt*.—M. Kalbeck, *Johannes Brahms*.—E. Newman, *Wagner as a man and an artist*.—R. Wagner, *Mein Leben*.

1847-1921.—Neo-German school.—Program music.—"Along artistic line the strongest influence in Wagner's favor came from the cordial and faithful enthusiasm of Liszt and the circle of which he was the centre. Liszt had won his leadership as a piano-virtuoso, but after settling at Weimar in 1848, . . . he turned his energies more and more to conducting and composition. He became the apostle of musical progress, transformation, even revolution . . . while other groups in Germany were conservative in tendency—the Weimar circle became noted for its radicalism. He began several lines of progress which ultimately gave character to the succeeding period, with its tendency to reconstruct the whole fabric of musical style."—W. S. Pratt, *History of music*, pp. 574-575.—Liszt

transferred the principle of Wagner's dramatic style to the realm of instrumental music; and originated the form known as the *Symphonic Poem*, which became the most important factor in the development of modern program music. "Liszt himself never did more than 'suggest' the subject of his inspiration by a title; he never went into detailed description of what he 'meant' and he never indicated a course of events. . . . An occasional lapping over the boundaries of one art into the province of another does not make such an incursion a rule, much less a principle. . . . Genius, trespassing occasionally against the realm of another art, will always know and has always known just how far to go; how to be a tactful visitor, not a rude interloper. With a composer of mere talent this instinct of artistic propriety is not always strong enough to prevent esthetic absurdities. . . . We need only eliminate Liszt's titles or to remove the dramatic signification of Wagner's music to perceive that there still remains good, solid, beautiful music, music *per se*; also we would not have whole Wagner programs in our symphony concerts. . . . What the past has left us has been sifted from generation to generation. Only the very great works in music . . . have stood the test of time; they have stood this severest of tests because they were free and true human utterances."—C. von Sternberg, *Liszt's program idea* (*Musical America*, Apr. 28, 1917, p. 13).—There exist today in the German school of music two distinct classes: The followers of absolute music as exemplified in Johannes Brahms; and the followers of the program music of Wagner and Liszt. Strauss is at present the central figure in Germany for musical controversy. Although educated in the classical school he has abandoned its forms and styles and has adopted the methods of the "programme school" and has become "the freest of modern tone-poets." "Strauss is undoubtedly a musical genius of extraordinary endowment and intellect and commands a wide range of original resources. His harmonies are rich; his melodies often peculiar but quite as often filled with the spirit of classic naturalness and beauty; his rhythms are vital, energetic, and novel; his counterpoint infinitely scholarly and free; and his orchestration extremely opulent and vivid. He is almost as complete a master of the climax as was Richard Wagner, but his contrasts are more often striking than wholly pleasurable. Strauss is apparently sincere in his artistic attitude and serious in his aims, though so revolutionary and daring that he sometimes arouses the suspicion of aiming for effect only. His most pretentious creations are his symphonic poems, Don Quixote, Sinfonia domestica, and his operas, Salome, Elektra, Rosenkavalier, etc. His songs, already numerous, are exceedingly impressive and often of fascinating beauty and emotional depth."—T. Tapper and P. Goetschius, *Essentials in music history*, pp. 318-319.—Among the composers of the program school are Carl Goldmark 1830-1915, Engelbert Humperdinck (1854-), Felix Weingartner (1863-), and Hugo Wolf (1860-1902), whose early death was a great loss to the world of music.—"The wildest radical" in modern Germany is Arnold Schoenberg, born in 1874. "His earlier compositions, including the large vocal-orchestral 'Gurrelieder,' were fairly direct in style. In recent years, however, he has employed wildly dissonant harmonies in a most surprising way. . . . His piano pieces have made audiences think that he must have written them as a joke. But in spite of their jumbled character, they show a marked dramatic force, even though they are too radical for those who appreciate the

more orderly work of Strauss. [Schoenberg's music is not founded on direct harmonic forms but on extensions and adaptations of these forms.] The 'Five Orchestral Pieces' form another much-discussed and much-abused work. Like the piano pieces, they are for the most part too wildly radical to be classed as music. But some of them, especially the first one entitled 'Presentiments,' show a dramatic power of utterance that prevents Schoenberg from being disregarded."—A. Elson, *Book of musical knowledge*, p. 245.

MUSKHOGEAN (MASKOKI) FAMILY.—"Among the various nationalities of the Gulf territories the Maskoki family of tribes occupied a central and commanding position. Not only the large extent of territory held by them, but also their numbers, their prowess in war, and a certain degree of mental culture and self-esteem made of the Maskoki one of the most important groups in Indian history. From their ethnologic condition of later times, we infer that these tribes have extended for many centuries back in time from the Atlantic to the Mississippi and beyond that river, and from the Apalachian ridge to the Gulf of Mexico. With short intermissions they kept up warfare with all the circumjacent Indian communities and also among each other. . . . The irresolute and egotistic policy of these tribes often caused serious difficulties to the government of the English and French colonies, and some of them constantly wavered in their adhesion between the French and the English cause. The American government overcame their opposition easily whenever a conflict presented itself (the Seminole War forms an exception), because, like all the Indians, they never knew how to unite against a common foe. The two main branches of the stock, the Creek and the Cha'hta [or Choctaw] Indians, were constantly at war, and the remembrance of their deadly conflicts has now passed to their descendants in the form of folk lore. . . . The only characteristic by which a subdivision of the family can be attempted, is that of language. Following their ancient topographic location from east to west, we obtain the following

synopsis: First branch, or Maskoki proper: The Creek, Maskokálgi or Maskoki proper, settled on Coosa, Tallapoosa, Upper and Middle Chatahuchi [Chatahoochee] rivers. From these branched off by segmentation the Creek portion of the Seminoles, of the Yámassi and of the little Yamacraw community. Second, or Apalachian branch: This southeastern division, which may be called also 'a parte potiori' the Hitchiti connection, anciently comprised the tribes on the Lower Chatahuchi river, and, east from there, the extinct Apalachi, the Mikasuki, and the Hitchiti portion of the Seminoles, Yámassi and Yamacraws. Third, or Alibamu branch, comprised the Alibamu villages on the river of that name; to them belonged the Koasáti and Witumka on Coosa river, its northern affluent. Fourth, Western or Cha'hta [Choctaw] branch: From the main people, the Cha'hta, settled in the middle portions of the State of Mississippi, the Chicasa, Pascagoula, Biloxi, Huma, and other tribes once became separated through segmentation. The strongest evidence for a community of origin of the Maskoki tribes is furnished by the fact that their dialects belong to one linguistic family. Maskóki, Maskógi, isti Maskóki, designates a single person of the Creek tribe, and forms, as a collective plural, Maskokálgi, the Creek community, the Creek people, the Creek Indians. English authors write this name Muscogee, Muskogee, and its plural Muscogulgee. The first syllable, as pronounced by the Creek Indians, contains a clear short a. . . . The accent is usually laid on the middle syllable: Maskóki, Maskógi. None of the tribes are able to explain the name from their own language. . . . Why did the English colonists call them Creek Indians? Because, when the English traders entered the Maskoki country from Charleston or Savannah, they had to cross a number of streams or creeks, especially between the Chatahuchi and Savannah rivers. Gallatin thought it probable that the inhabitants of the country adjacent to Savannah river were called Creeks from an early time. . . . In the southern part of the Cha'hta territory several tribes, represented to be of Cha'hta lineage, appear as distinct from the main body, and are always mentioned separately. The French colonists, in whose annals they figure extensively, call them Mobilians, Tohomes, Pascogoulas, Biloxis, Mougoulachas, Bayogoulas and Humas (Oumas). They have all disappeared in our epoch, with the exception of the Biloxi [Major Powell, in the Seventh Annual Report of the Bureau of Ethnology, places the Biloxi in the Siouan Family], of whom scattered remnants live in the forest of Louisiana, south of the Red River."—A. S. Gatschet, *Migration legend of the Creek Indians*, v. 1, pt. 1.—"The Natches, a residue of the well-known nation of that name, came from the banks of the Mississippi, and joined the Creeks less than one hundred years ago. The original seats of the Uchees were east of the Coosa and probably of the Chatahoochee; and they consider themselves as the most ancient inhabitants of the country. They may have been the same nation which is called Apalaches in the accounts of De Soto's expedition: . . . The four great Southern nations, according to the estimates of the War Department . . . consist now [1836] of 67,000 souls, viz.: The Cherokees, 15,000; the Choctaws (18,500), the Chicasas (5,500), 24,000; the Muskhogeas, Seminoles, and Hitchitees, 26,000; the Uchees, Alibamons, Coosadas, and Natches, 2,000. The territory west of the Mississippi, given or offered to them by the United States in exchange for their lands east of that river, contains 40,000,000 acres, exclusively of what may be allotted to the Chicasas."—A. MUTINY ACT.—In 1689 the parliament (called a Convention at first) which settled the English crown upon William of Orange and Mary, "passed the first Act for governing the army as a separate and distinct body under its own peculiar laws, called 'The Mutiny Act.' [See also MILITARY LAW: Mutiny Act.] . . . The origin of the first Mutiny Act was this. France had declared war against

Holland, who applied under the treaty of Nimeguen to England for troops. Some English regiments refused to go, and it was felt that the common law could not be employed to meet the exigency. The mutineers were for the time by military force compelled to submit, happily without bloodshed; but the necessity for soldiers to be governed by their own code and regulations became manifest. Thereupon the aid of Parliament was invoked, but cautiously. The first Mutiny Act was very short in enactments and to continue only six months. It recited that standing armies and courts martial were unknown to English law, and enacted that no soldier should on pain of death desert his colours, or mutiny. At the expiration of the six months another similar Act was passed, also only for six months; and so on until the present practice was established of regulating and governing the army, now a national institution, by an annual Mutiny Act, which is requisite for the legal existence of a recognised force, whereby frequent meeting of Parliament is indirectly secured, if only to preserve the army in existence."—W. H. Torriano, *William the Third*, ch. 7.—"These are the two effectual securities against military power: that no pay can be issued to the troops without a previous authorisation by the commons in a committee of supply, and by both houses in an act of appropriation; and that no officer or soldier can be punished for disobedience, nor any court-martial held, without the annual re-enactment of the mutiny bill."—H. Hallam, *Constitutional history of England*, v. 3, ch. 15.

MYRES, John Linton (1869-), English historian. See HISTORY: 33.

MYRMIDONS.—According to Greek legend these people lived in Thessaly, their supposed ancestor being Myrmidon, the son of Zeus and Eurymedusa, whom Zeus wooed in the form of an ant, hence the name. Another legend says that when all the inhabitants of the island of Ægina had died of the plague except King Æacus, at his prayer Zeus changed the ants into men and that the Myrmidons went later to Thessaly. Myrmidons accompanied Achilles to the Trojan War as his soldiers. The name is now given to subordinates who execute orders of their superior without scruple, or mercy.

MYRON (born c. 450 B. C.), Greek sculptor. Pupil of Ageladas, founder of the Peloponnesian school; his most famous works are the runner, "Ladas," and the "Discobolus." See SCULPTURE: GREEK: B. C. 5th century; EDUCATION, ART: EGYPT.

MYRONIDES (fl. 457 B. C.), Athenian general. See GREECE: B. C. 458-456.

MYSIANS, ancient tribe of Asia Minor. See PHRYGIANS; THRACE: PEOPLE.

MYSORE, native state in southern India. (See INDIA: MAP.) It has an area of 20,475 square miles, and a population (1921) of 5,976,000. Mysore has rich gold fields, yielding 95 per cent of the gold of India. Sandal-wood carving is the chief industry. The present state was founded in 1610 and became powerful under Deva Raja. The dynasty was overthrown by Hyder Ali, who after a brief but brilliant reign, was defeated at Seringapatam in 1799. (See also INDIA: 1780-1783; 1785-1793; 1798-1805.) The British changed the capital from Seringapatam to Bangalore, and administered the country from 1831 to 1881, when it was restored to native rule by a treaty. The administration is carried on under the Maharaja of Mysore by the Diwan, or prime minister, assisted by two councillors. The administrative headquarters are at Bangalore. The dynastic capital is Mysore. In 1921 the population of the city was 83,932. Kanarese and Telugu are the chief languages.—Based on *Imperial Gazetteer of India*, xviii.—See also INDIA: 1662-1748; 1767-1769.

MYSORE WARS (1767-1805), wars of Hyder Ali and Tipoo Saib against the British. See INDIA: 1767-1769; 1780-1783; 1785-1793; 1798-1805.

MYSTERIES, Ancient religious. See ELEUSINIAN MYSTERIES.

MYSTIC SHRINE. See MASONIC SOCIETIES: Masonic bodies.

MYSTICISM, QUIETISM.—"There is probably no more misused word in these our days than 'mysticism.' It has come to be applied to many things of many kinds: to theosophy and Christian science; to spiritualism and clairvoyance; to demonology and witchcraft; to occultism and magic; to weird psychical experiences, if only they have some religious colour; to revelations and visions; to other-worldliness, or even mere dreaminess and impracticability in the affairs of life; to poetry and painting and music of which the motif is unobvious and vague. . . . Against all this stands the perfectly clear traditional historical meaning, handed down in the Christian Church throughout the centuries, not subject to confusion of thought until recent times. Here it is necessary to explain

that in the Latin Church the word used was not 'mysticism,' but 'contemplation.' The word 'mystic' was originally used in connexion with the Greek mysteries, as the Eleusinian. The Christian use of the word is due to the writer now known as pseudo-Dionysius, probably of the fifth century, who gave the title 'Mystical Theology' to the little treatise that was the first formulation of a doctrine on the subject. Though this treatise was at an early date translated into Latin and became well known in the West, the old word 'contemplation' held its ground, so that 'mystical' did not become current until the later Middle Ages, and 'mysticism' is a quite modern word. Consequently, 'contemplation' is the word that will be met with in St. Augustine, St. Gregory, and St. Bernard, to designate what is now commonly called 'the mystical experience.'—D. E. C. Butler, *Western mysticism*, pp. 2-3.—"Mysticism, in the religious sense, is the historic title for a special discipline or frame of the soul, through which it seeks to be literally at one with the highest reality of which it knows. The aim is not merely to understand, but to enter into, or become, this First Reality. . . . The true type, and parent-nerve, of mysticism, seems to be found in the Hindoo and Buddhist systems, where the First Reality is regarded as a bare abstract unity, without differences. The pilgrim puts off, husk by husk, the illusion of this motley world and the evil of phenomenal existence, in order at last, after many phases, to be drawn into the One. [See also BUDDHISM: Nirvana.] The hindrance is desire, which is left behind after a long training. . . . With the Neo-Platonists, the last great masters of Greek thought, the One figures at the apex of their system, lying beyond not only Soul and Mind but existence itself; and their chief, Plotinus, had rare and short ecstasies in which he attained to union with it."—O. Elton, *Note on mysticism* (*Fortnightly Review*, Sept., 1904).—"We find that in the 4th century the Church was troubled by a sect called Massalians or Euchites, who placed the whole of religion in the habit of mental prayer; alleging as their authority the Scripture precept 'That men ought always to pray, and not to faint.' They were for the most part monks of Mesopotamia and Syria; there were many of them at Antioch when St. Epiphanius wrote his Treatise against heresies, [in] 376. They held that every man is from his birth possessed by an evil spirit or familiar demon, who can only be cast out by the practice of continual prayer. . . . The Massalians did not openly separate from the Church; they were condemned, however, by two Councils—one at Antioch in 391, the other at Constantinople in 426. Delusions of the same kind were reproduced from time to time in the Oriental Church; and, as is commonly the case, the originators of error were followed by a race of disciples who advanced considerably beyond them. The Hesychasts, or Quietists of Mount Athos in the 14th century, seem to have been fanatics of an extreme type. They imagined that, by a process of profound contemplation, they could discern internally the light of the Divine Presence—the 'glory of God'—the very same which was disclosed to the Apostles on the Mount of Transfiguration. Hence they were also called Thaborites. The soul to which this privilege was vouchsafed had no need to practise any of the external acts or rites of religion. . . . The theory of abstract contemplation, with the extraordinary fruits supposed to be derived from it, travelled in due course into the West, and there gave birth to the far-famed school of the Mystics, of which there were vari-

ous ramifications. The earliest exponent of the system in France was John Scotus Erigena, the contemporary and friend of Charles the Bald. . . . Erigena incurred the censures of the Holy See; but the results of his teaching were permanent. . . . The Mystics, or Theosophists as some style them, attained a position of high renown and influence at Paris towards the close of the 12th century. Here two of the ablest expositors of the learning of the middle age, Hugh and Richard of St. Victor, initiated crowds of ardent disciples into the mysteries of the 'via interna,' and of 'pure love'—that marvellous quality by which the soul, sublimated and etherialized, ascends into the very presence-chamber of the King of kings. . . . The path thus traced was trodden by many who were to take rank eventually as the most perfect masters of spiritual science; among them are the venerated names of Thomas à Kempis, St. Bonaventure, John Tauler of Strasburg, Gerson, and St. Vincent Ferrier. . . . Under the various appellations of Beghards, Fratricelli, Cathari, Spirituals, Albigenses, Illuminati, Guerinets, and Quietists, the self-same delusion has been sedulously propagated in different parts of Christendom, and with the same ultimate consequences. A revival of the last-named sect, the Quietists, took place in Spain about the year 1675, when Michel de Molinos, a priest of the diocese of Saragossa, published his treatise called 'The Spiritual Guide,' or, in the Latin translation, 'Manuductio spiritualis.' . . . Molinos was arrested and imprisoned, and in due time the Inquisition condemned sixty-eight propositions from his works; a sentence which was confirmed by a Papal bull in August, 1687. Having undergone public penance, he was admitted to absolution; after which, in 'merciful' consideration of

his submission and repentance, he was consigned for the rest of his days to the dungeons of the Holy Office. Here he died in November, 1692. . . . The principles of Quietism had struck root so deeply, that they were not to be soon dislodged either by the terrors of the Inquisition, or by the well-merited denunciations of the Vatican. The system was irresistibly fascinating to minds of a certain order. Among those who were dazzled by it was the celebrated Jeanne Marie De la Mothe Guyon," whose ardent propagation of her mystic theology in the court circles of France—where Fenelon, Madame de Maintenon, and other important personages were greatly influenced—gave rise to bitter controversies and agitations. In the end, Madame Guyon was silenced and imprisoned and Fenelon was subjected to humiliating papal censures.—W. H. Jervis, *History of the Church of France*, v. 2, ch. 4.—The German mind welcomed mysticism. Elizabeth of Hungary, the pious land-gravine of Thuringia, aided in its spread in the thirteenth century. In Meister Eckart (c. 1260-1327), scholastic mysticism became practical and philosophical. His followers were numerous. His disciple, Tauler, visited Jan van Ruysbroeck (1294-1381), father of mysticism in the Netherlands. Mystical theology with chemicastrological speculations is exhibited in T. B. von Hohenheim, known as Paracelsus (1493-1541), whose theories, mingled with those of Schwenkfeld (1490-1561), Franck (1500-1545), and Weigel (1533-1588), influenced Jakob Böhme (Boehme, Behmen Behmont), father of the chief developments of theosophy in modern Germany.—See also CHRISTIANITY: The beginnings; EUROPE: Ancient; GREEK civilization; Spread of Hellenism; BRAHMANISM; VEDANTISM; NEOPLATONISM; SWEDENBORG.

MYTHOLOGY

Meaning of the word.—Folk lore in relation to history.—"In dealing with the folklore of any country, it is important to note the general bearing of anthropological conditions. The earliest inhabitants, to whom part of the folklore belonged, and the later peoples, to whom part belonged, have both arrived at their ultimate point of settlement in the country where we discover their folklore after being in touch with many points of the world's surface. They are both world-people as well as national people—they belonged to anthropology before they came under the dominion of history. This important fact is often or nearly always neglected. We are apt to treat of Greek and Roman and Briton, of Cretan, Scandinavian, and Russian, as bounded by the few thousands of years of life which have fixed them with their territorial names, and to ignore all that lies behind this historic period. There is, as a matter of fact, an immense period behind it, reckoned according to geological time in millions of years, and this period, longer in duration, more strenuous in its influences upon character and mind, containing more representatives in peoples, societies, and races than the later period, has affected the later period to a far greater extent than is generally conceded or understood. We cannot understand the later period without knowing something of the earlier period. . . . Early beliefs cannot properly be separated from the society of which they form a component part. We require to know not only what beliefs a particular people possess, but in what manner these beliefs generate custom and rite and take their place among the influences which affect the social organism. . . . If the several items of custom and belief preserved by

tradition are really ancient in their origin, they must be floating fragments, as it were, of an ancient system of custom and belief—the cultus of the people among whom they originated. This cultus has been destroyed, struggling unsuccessfully against foreign and more vigorous systems of religion and society. To be of service to history each floating fragment of ancient custom and belief must not only be labelled 'ancient,' but it must be placed back in the system from which it has been torn away."—G. L. Gomme, *Folklore as an historical science*, pp. 208-209, 306-307.—See also HISTORY: 12; 13.

Myths affected by race.—"No one is likely to confound a Homeric myth with a myth from the Edda, nor either with a myth from a Brahmana, though in all three cases the substance, the original set of ideas, may be much the same. In all three you have anthropomorphic gods, capable of assuming animal shapes, tricky, capricious, limited in many undivine ways, yet endowed with magical powers. So far the mythical gods of Homer, of the Edda, of any of the Brahmanas, are on a level with each other, and not much above the gods of savage mythology. This stuff of myth is *quod semper, quod ubique, quod ab omnibus*, and is the original gift of the savage intellect. But the final treatment, the ultimate literary form of the myth, varies in each race. Homeric gods, like Red Indian, Thlinket, or Australian gods, can assume the shapes of birds. But when we read, in Homer, of the arming of Athene, the hunting of Artemis, the vision of golden Aphrodite, the apparition of Hermes, like a young man when the flower of youth is loveliest, then we recognise the effect of

race upon myth, the effect of the Greek genius at work on rude material. Between the Olympians and a Thlinket god there is all the difference that exists between the Demeter of Cnidos and an image from Easter Island. Again, the Scandinavian gods, when their tricks are laid aside, when Odin is neither assuming the shape of worm nor of raven, have a martial dignity, a noble enduring spirit of their own. Race comes out in that, as it does in the endless sacrifices, soma drinking, magical austerities, and puerile follies of Vedic and Brahmanic gods, the deities of a people fallen early into its sacerdotage and priestly second childhood. Thus race declares itself in the ultimate literary form and character of mythology, while the common savage basis and stuff of myths may be clearly discerned in the horned, and cannibal, and shape-shifting, and adulterous gods of Greece, of India, of the North. They all show their common savage origin, when the poet neglects Freya's command and tells of what the gods did 'in the morning of Time.'—A. Lang, *Custom and myth*, pp. 26-27.

African.—Fetichism.—Totemism.—"Africa, so far as it is neither Musliman nor Christian, comprises two great ethnical divisions which present very diverse religious phenomena: Kafirs, Hottentots and Bushmen in the south; Negroes in the centre, the east and west. There are further marked differences between the Negroes of the Soudanese or western group and those of the Bantu or eastern group. . . . The religion of the South Africans seems poor and sterile, perhaps because it has been but imperfectly studied hitherto. Trees and animals are held to be the ancestors of man, and it is chiefly in animal forms that the dead appear to the living. . . . Among the Negroes, Fetichism, or as it is called in the basin of the Niger *Jujûism* (from *juju*, a fetich), is predominant. The fetich is a material object, natural or artificial, in which the ancestral spirit, which has become the protecting spirit of a group or tribe, has taken up its abode. Fetichism is so deeply implanted in the souls of the Negroes that they even adapt to it the more enlightened creeds taught them, such as Christianity or Islamism. . . . The Bantu Negroes, who live in the regions of the great lakes, are divided into totemic clans; the members of a clan may neither kill their totem, nor marry a wife of their own clan. Totemism is also to be found in British East Africa and in Madagascar, with a strongly developed system of magic."—S. Reinach, *Orpheus*, pp. 154-156.

American Indian.—Creation myths.—Birds.—Serpent.—Great Hare.—"The mythologies of the Red Man are infinitely more rich in creative and deluge myths than those of any other race in the two hemispheres. Tales which deal with the origin of man are exceedingly frequent, and exhibit every phase of the type of creative story. Although many of these are similar to European and Asiatic myths of the same class, others show great originality, and strikingly present to our minds the characteristics of American aboriginal thought. The creation-myths of the various Indian tribes differ as much from one another as do those of Europe and Asia. In some we find the great gods moulding the universe, in others we find them merely discovering it. Still others lead their people from subterranean depths to the upper earth. In many Indian myths we find the world produced by the All-Father sun, who thickens the clouds into water, which becomes the sea. . . . The serpent and the bird appear sometimes separately, sometimes in strange combination, in North American mythology. The bird

is always incomprehensible to the savage. Its power of flight, its appearance in the heavens where dwell the gods, and its musical song combine to render it in his sight a being of mystery, possessing capabilities far above his own. From it he conceives the idea of the winged spirit or god, and he frequently regards it as a messenger from the bright regions of the sun or the sky deity. . . . The eagle appears to have been regarded with extreme veneration by the Red Man of the north. . . . Some writers think that the serpent symbolized the Indian idea of eternity, but it is unlikely that such a recondite conception would appeal to a primitive folk. . . . Among the Indians the serpent also typified the lightning. The rapidity and sinuosity of its motions, its quick spring and sharp recoil, prove the aptness of the illustration. The brilliancy of the serpent's basilisk glance and the general intelligence of its habits would speedily give it a reputation for wisdom, and therefore as the possessor of *orenda*, or magic power. . . . Algonquins believed that the lightning was an immense serpent vomited by the Manito, or creator, and said that he leaves serpentine twists and folds on the trees that he strikes. The Pawnees called the thunder 'the hissing of the great snake.' . . . As the emblem of the fertilizing summer showers the lightning serpent was the god of fruitfulness; but as the forerunner of floods and disastrous rains it was feared and dreaded. . . . As in all mythologies, godhead is often attached to the conception of the bringer of culture, the sapient being who first instructs mankind in the arts of life, agriculture, and religion. American mythologies possess many such hero-gods, and it is not always easy to say whether they belong to history or mythology. . . . We discover one of the first class in Michabo, the Great Hare, the principal deity of the Algonquins. In the accounts of the older travellers we find him described as the ruler of the winds, the inventor of picture-writing, and even the creator and preserver of the world. . . . In the autumn, ere he takes his winter sleep, he fills his great pipe and smokes, and the smoke which arises is seen in the clouds which fill the air with the haze of the Indian summer. . . . The great life-giving god of the Creeks and other Muskogean was Esaugetuh Emisee, whose name signifies, 'Master of Breath.' The sound of the name represents the emission of breath from the mouth. He was the god of wind, and, like many another divinity in American mythology, his rule over that element was allied with his power, over the breath of life—one of the forms of wind or air. Savage man regards the wind as the great source of breath and life. . . . North America is rich in thundergods. Of these a typical example is Haokah, the god of the Sioux. . . . The Dakota Indians worshipped a deity whom they addressed as Waukheon (Thunder-bird). This being was engaged in constant strife with the water-god, Unktahe, who was a cunning sorcerer, and a controller of dreams and witchcraft. Their conflict probably symbolizes the atmospheric changes which accompany the different seasons."—L. Spence, *Myths of the North American Indians*, pp. 106, 110-112, 119-120, 122-126.—See also INDIANS, AMERICAN; Cultural areas in North America.

Arabian and Persian.—Jinn.—Solomon.—Mountains of Kaf.—Peries.—Deevis.—"The Muslims, in general, believe in three different species of created intelligent beings: Angels, who are created of light; Genii, who are created of fire; and Men, created of earth. . . . No man ever obtained such absolute power over the Jinn as Suleyman Ibn Daood (Solomon, the son of David). This he did by virtue of a most wonderful talisman, which is

said to have come down to him from heaven. It was a seal-ring, upon which was engraved 'the most great name' of God, and was partly composed of brass and partly of iron. . . . By virtue of this name engraved on his ring, Suleyman compelled the Jinn to assist in building the Temple of Jerusalem, and in various other works. . . . The Mountains of Kaf, which bound the Circumambient Ocean and form a circular barrier round the whole of our earth, are described by interpreters of the Kur-an [Koran] as composed of green chrysolite, like the green tint of the sky. . . . They are the chief abode of the Jinn, or Genii.—E. W. Lane, *Arabian society in the Middle Ages*, p. 25.—Persian mythology is closely connected with Arabian. "In the realms of supernatural light sits enthroned Ormuzd, the first-born of beings; around him are the six Amshaspands, the twenty-eight Izeds, and the countless myriads of Ferohers. In the opposite kingdom of darkness Aherman [Ahriman] is supreme, and his throne is encompassed by the six Arch-Deevis, and the numerous hosts of inferior Deevis. Between these rival powers ceaseless warfare prevails; but at the end the prince of darkness will be subdued, and peace and happiness prevail beneath the righteous sway of Ormuzd. From this sublime system of religion probably arose the Peri- or Fairy-system of modern Persia. . . . The Peries and Deevis of the modern Persians answer to the good and evil Jinn of the Arabs. . . . The same Suleymans ruled over them as over the Jinn, and both alike were punished for disobedience. It is difficult to say which is the original; but when we recollect in how much higher a state of culture the Persians were than the Arabs, and how well this view accords with their ancient system of religion, we shall feel inclined to believe that the Arabs were the borrowers, and that by mingling with the Persian system ideas derived from the Jews, that one was formed by them which is now the common property of all Moslems. In like manner we regard the Mountains of Kaf, the abode alike of Jinn and of Peries and Deevis, as having belonged originally to Persian geography. The fullest account of it appears in the Persian romance of Hatim Tai, the hero of which often visited its regions. From this it would seem that this mountain-range was regarded as, like that of the ancient Greek cosmology, surrounding the flat circular earth like a ring, or rather like the bulwarks of a ship, outside of which flowed the ocean; while some Arab authorities make it to lie beyond, and to enclose the ocean as well as the earth. . . . According to some, its height is two thousand English miles. Jinnestan is the common appellation of the whole of this ideal region. Its respective empires were divided into many kingdoms, containing numerous provinces and cities. Thus in the Peri-realms we meet with the luxuriant province of Shad-u-kam (*Pleasure and Delight*), with its magnificent capital Juherabad (*Jewel-city*), whose two kings solicited the aid of Caherman against the Deevis, also the stately Amberabad (*Amber-city*), and others equally splendid. The metropolis of the Deev-empire is named Ahermanabad (*Aherman's city*); and imagination has lavished its stores in the description of the enchanted castle, palace, and gallery of the Deev monarch, Arzshenk."—T. Keightley, *Fairy mythology*, pp. 14-16.

Babylonian and Assyrian.—Great triad.—Marduk.—Ishtar.—Pantheon of Assyria.—Winged bulls.—"At the head of the company of the gods may be set the great triad of deities Anu, Bēl and Ea, whose spheres of influence together embraced the entire universe. Anu was the god of heaven, Bēl the god of the earth and of mankind,

and Ea the god of the Abyss of water beneath the earth. . . . After these three deities with their world-wide dominion may be set a second triad, consisting of the two great gods of light, Sin and Shamash, and the god of the atmosphere, Rammān. Sin, the Moon-god, identified also with Nannar, had two centres of worship, the temple E-gish-shirgal in Ur, and the temple E-khul-khul in Kharran, of which the former was the more ancient. In Ur the worship of the Moon-god was celebrated from remote antiquity, and in influence and splendour his cult appears to have eclipsed that of Shamash, the Sun-god, whose worship was centred in the cities of Sippar and Larsa, in two great temples each of which bore the name of E-babbara, 'the bright house.' . . . The most prominent deity in the company of the Babylonian gods was Marduk, who, as the local god of Babylon, naturally claimed the highest respect from the men of his own city. . . . In intimate association with Marduk may be mentioned Nabū, the god of Borsippa, a city which is marked to-day by the mound of Birs Nimrūd, and which, built a little to the south-west of Babylon on the opposite bank of the Euphrates, was in its later period little more than a suburb of the capital. . . . Another prominent deity was Nergal, whose temple, E-shidlam, in the city of Kūtū, or Cuthah, was one of the oldest and largest sanctuaries in Northern Babylonia. In general character Nergal was the god of battle. . . . A god who was in later times closely associated with Nergal is Ninib. The reading of his name is conjectural, and his original character is also a matter of some uncertainty, but under the Assyrian kings his personality was more clearly indicated. By them he was regarded as a god of battle and the chase, and it was to Nergal and Ninib that they ascribed the gift of their mighty weapons. The Fire-god, Nusku, may also be mentioned among the more important deities, in view of the prominent position he occupies in the magical works of the Babylonians. The Babylonian goddesses, with one exception, are not very imposing figures, nor are their characters very sharply defined or differentiated. Their position corresponded to some extent with the inferior position of women in Babylonia. . . . There is one very striking exception to this general rule, namely the goddess Ishtar. This deity in her own person appears to have absorbed the power and influence which were, at times, ascribed to other goddesses. She was identified with the Sumerian goddess Ninni, and in the Assyrian inscriptions she becomes the wife of the national god Ashur; she was also referred to as 'Bēlit,' i.e. 'the Lady,' and in this character she assumed the titles and prerogatives of the wife of Bēl. In course of time the name 'Ishtar' was employed as a generic term for goddess. In Babylonia, moreover, she was known by two different local names, which represented two quite distinct and separate characters. Under the title Anunitu she was worshipped as the goddess of battle at Agade and also at the city called Sippar of Anunitu; and under this aspect she was regarded as the daughter of Sin the Moon-god and of Ningal his wife. At the great temple of E-ana at Frech, on the other hand, she was worshipped as the goddess of love and identified with Nanā; and in this character she was regarded as the daughter of Anu and Anatu. It was in her gentler character as the goddess of love that she became connected in legend with Dumuzi, or Tammuz, her lover who died in early youth, and for the sake of whose recovery she descended to the realm of the dead. She was served at Erech by numerous priestesses attached to her worship, and the rites practised at her shrine, a later form of which is described by Hero-

dotus, were performed in her honour as the goddess of love. . . . The identification of the planets with some of the greater gods was probably neither a very early nor primitive development, but one which took place after the Babylonian company of the gods had been definitely formed."—L. W. King, *Babylonian religion and mythology (Books on Egypt and Chaldaea, v. 4, pp. 14, 17-18, 21-25)*.—"The Pantheon of Assyria, as befitted the religious system of a nation of soldiers, was more highly organized than that of the kindred people of Babylonia, the ranks and relationships of the gods who comprised it were more definitely fixed, it was considerably more compact than that of the southern kingdom, and its lesser luminaries were fewer. . . . The state religion of Assyria centres in Asshur, nor was any deity ever so closely identified with an empire as he. On the fall of the Assyrian state, Asshur fell with it. Moreover, all the gods of Assyria may be said to have been combined in his person. In Babylonia, Merodach [Marduk] was a leader of hosts. In Assyria, Asshur personified these hosts, that is, the other Assyrian gods had become attributes of Asshur, and we can only understand the remaining Assyrian gods if we regard them as lesser Asshurs. . . . We find temples to him broadcast over Assyria. Indeed as Assyrian history advances, we see different cities alluded to as the chief centre of his worship, and he resides now at Asshur, now at Calah, now at Nineveh, now at Khorsabad. Wherever the Kings of Assyria took up their official residence there Asshur was adored, and there he was supposed to dwell. He was not symbolized by an idol, or any man-like statue, which would serve to give the populace an idea of his physical likeness, but was represented by a standard consisting of a pole surrounded by a disc enclosed with two wings. Above the disc was the figure of a warrior with bent bow and arrow on string. This well symbolized the military nature of the Assyrian nation and of its tutelary deity. . . . Next to Asshur in the affections of the Assyrian people stood Ishtar. As a goddess in Assyria she was absolutely identical with the Babylonian Ishtar, her favourite shrines in the northern kingdom being Nineveh, Arbela, and the temple of Kidmuru, also in Nineveh. . . . She appeared in dreams to the war-loving Kings of Assyria, encouraging and heartening them with words of cheer to further military exploits. Fire was her raiment, and, as became a goddess of battle, her appearance was terrific. She consumed the enemies of Assur-banipal with flames. Still, strangely enough, in the religious texts, influenced probably by Babylonian sources, she was still to a great extent the mild and bountiful mother of nature. . . . Dagan the fish-god, who . . . was the same as Oannes or Ea, strangely enough rose to high rank in Assyria. Some authorities consider him of Philistian or Aramean origin, and do not compare him with Ea, who rose from the waters of the Persian Gulf to enlighten his people, and it is evident that the Mesopotamian-Palestinian region contained several versions of the origin of this god, ascribing it to various places. In the Assyrian pantheon he is associated with Anu, who rules the heavens, Dagan supervising the earth. It is strange to observe a deity whose sphere must originally have been the sea, presiding over the terrestrial plane, and this transference it was which cost Dagan his popularity in Assyria, for later he became identified with Bel and disappeared almost entirely from the Assyrian pantheon. . . . Ramman enjoyed much greater popularity in Assyria than in Babylonia, for there he exercised the functions of a second Asshur, and was regarded as destruction personified. . . . The

weapons of Ramman are lightning, deluge, hunger, and death, and woe to the nation upon whom he visits his wrath, for upon it he visits flood and famine. Thus his attributes as a storm-god are brought into play when he figures as a war deity. . . . As for Bel, whose place Merodach usurped in the Babylonian pantheon, he was also recognized in Assyria, and Tiglath-pileser I built him a temple in his city of Asshur. . . . Ea was of course accepted into the Assyrian pantheon because of his membership in the old Assyrian triad, but he was also regarded as a god of wisdom, possibly because of his venerable reputation; and we find him also as patron of the arts, and especially of building and architecture. Threefold was his power of direction in this respect. The great Colossi, the enormous winged bulls and mythological figures which flanked the avenues leading to the royal palaces, the images of the gods, and, lastly, the greater

ASSYRIAN CONCEPTION OF ASSHUR

Carved about 4,000 years ago

buildings, were all examples of the architectural art of which he was the patron. . . . The winged bulls so closely identified with ancient Chaldean mythology were probably associated with Merodach. These may have represented the original totemic forms of the gods in question, but we must not confound the bull forms of Merodach and Ea with those winged bulls which guarded the entrances to the temples. These, to perpetrate a double 'bull,' were not bulls at all but divine beings, the gods or genii of the holy places. The human head attached to them indicated that the creature was endowed with humanity and the bull-like body symbolized strength. When the Babylonian translated the word 'bull' from the Akkadian tongue he usually rendered it 'hero' or 'strong one.' It is thought that the bull forms of Ea and Merodach must have originated at Eridu, for both of these deities were connected with the city. The Babylonians regarded the sky-country as a double of the plain in which they dwelt, and they believed that the gods as planets ploughed their way across the azure fields of air. Thus the sun was the 'Bull of Light.'

and Jupiter, the nearest of the planets to the ecliptic, was known as the 'Planet of the Bull of Light.'—L. Spence, *Myths and legends of Babylonia and Assyria*, pp. 203, 206-207, 212-213, 216-218, 227, 229, 289-290.—See also BABYLONIA: Creation myths.

Celtic: Pre-Roman.—"The same great gods were, no doubt, adored by all the Celts not only of Great Britain and Ireland, but of Continental Gaul as well. Sometimes they can be traced by name right across the ancient Celtic world. . . . Just as the Olympians struggled with the Giants, the Æsir fought the Jotuns, and the Devas the Asuras, so there is warfare in the Gaelic spiritual world between two superhuman hosts. On one side are ranged the gods of day, light, life, fertility, wisdom, and good; on the other, the demons of night, darkness, death, barrenness, and evil. . . . The first are ranged as a divine family round a goddess called Danu, from whom they took their well-known name of *Tuatha Dé Danann*, 'Tribe' or 'Folk of the Goddess Danu.' The second owned allegiance to a female divinity called Domnu; their king, Indech, is described as her son, and they are all called 'Domnu's gods.' The word 'Domnu' appears to have signified the abyss or the deep sea, and the same idea is also expressed in their better-known name of 'Fomors,' derived from two Gaelic words meaning 'under sea.' The waste of water seems to have always impressed the Celts with the sense of primeval ancientness; it was connected in their minds with vastness, darkness, and monstrous births—the very antithesis of all that was symbolized by the earth, the sky, and the sun. Therefore the Fomors were held to be more ancient than the gods, before whom they were, however, destined to fall in the end. . . . Gaelic tradition recognizes two divine dynasties anterior to the *Tuatha Dé Danann*. The first of these was called 'The Race of Partholon.' Its head and leader came—as all gods and men came, according to Celtic ideas—from the Other World, and landed in Ireland with a retinue of twenty-four males and twenty-four females upon the first of May, the day called 'Beltaine,' sacred to Bilé, the god of death. . . . Following the race of Partholon, came the race of Nemed, which carried on the work and traditions of its forerunner. . . . The most ancient divinity of whom we have any knowledge is Danu herself, the goddess from whom the whole hierarchy of gods received its name of *Tuatha Dé Danann*. . . . All the other gods are, at least by title, her children. The greatest of these would seem to have been Nuada, called *Argellam*, or 'He of the Silver Hand.' He was at once the Gaelic Zeus, or Jupiter, and their war-god. . . . After Nuada, the greatest of the gods was the Dagda, whose name seems to have meant the 'Good God.' . . . The Dagda had several children, the most important of whom are Brigit, Angus, Mider, Ogma, and Bodb the Red. Of these, Brigit will be already familiar to English readers who know nothing of Celtic myth. Originally she was a goddess of fire and the hearth, as well as of poetry, which the Gaels deemed an immaterial, supersensual form of flame. But the early Christianizers of Ireland adopted the pagan goddess into their roll of saintship, and, thus canonized, she obtained immense popularity as Saint Bridget, or Bride. . . . Her Christian attributes, almost all connected with fire, attest her pagan origin. She was born at sunrise; a house in which she dwelt blazed into a flame which reached to heaven; a pillar of fire rose from her head when she took the veil; and her breath gave new life to the dead. . . . With so little of her

essential character and ritual changed, it is small wonder that the half-pagan, half-Christian Irish gladly accepted the new saint in the stead of the old goddess."—C. Squire, *Mythology of the British islands*, pp. 43, 48, 65, 67, 50-51, 54, 56, 228-229.—"The institution of Druids [see Druids] was supposed to have come originally from Britain; but the British druids are never mentioned by Cæsar. They sat down at a certain time of the year, in the borders of Britain, in a consecrated grove of the island Mona (now Anglesey); whither all, from every quarter, among whom was controversy, came together, and acquiesced in their judgments and decrees. . . . The druids held nothing more sacred than the mistletoe, and the tree on which it grew, provided it were an oak. Therefore, they chose out solitary groves, wherein were no trees but oaks, nor performed any ceremonies without the branches or leaves of that tree. So that from thence (if we regard the Greek signification) they may very well be thought to have taken the name of *Druidæ*."—J. Ritson, *Memoirs of the Celts or Gauls*, pp. 71, 95-96.—"Brittany, the ancient Armorica, retains perhaps as unmixed a population as any part of Western Europe. Its language has been, however, like the Welsh and the Celtic dialects, greatly affected by the Latin and Teutonic. The ancient intercourse kept up with Wales and Cornwall by the Bretons, who were in a great measure colonists from these parts of Britain, caused the traditions and poetry of the latter to be current and familiar in Little Britain, as that country was then called. . . . The origin of the Breton Korrigan, as they are called, has been sought, and not improbably, in the Gallicenæ or ancient Gaul. . . . The Korrigan, our authority further states, can predict the future, assume any form they please, move from place to place with the rapidity of thought, [and] cure maladies by the aid of charms which they communicate to their favourites. Their size is said not to exceed two feet, but their proportions are most exact; and they have long flowing hair, which they comb out with great care. Their only dress is a long white veil, which they wind round their body. Seen at night, or in the dusk of the evening, their beauty is great; but in the daylight their eyes appear red, their hair white, and their faces wrinkled; hence they rarely let themselves be seen by day. They are fond of music, and have fine voices, but are not much given to dancing. Their favourite haunts are the springs, by which they sit and comb their hair. . . . At Carnac, near Quiberon, says M. de Cambry, in the department of Morbihan, on the sea-shore, is the Temple of Carnac, called in Breton 'Ti Goriquet' (*House of the Gories*), one of the most remarkable Celtic monuments extant. It is composed of more than four thousand large stones, standing erect in an arid plain, where neither tree nor shrub is to be seen, and not even a pebble is to be found in the soil on which they stand. If the inhabitants are asked concerning this wonderful monument, they say it is an old camp of Cæsar's, an army turned into stone, or that it is the work of the Crions or Gories. These they describe as little men between two and three feet high, who carried these enormous masses on their hands; for, though little, they are stronger than giants. Every night they dance around the stones; and woe betide the traveller who approaches within their reach! he is forced to join in the dance, where he is whirled about till, breathless and exhausted, he falls down, amidst the peals of laughter of the Crions. All vanish with the break of day."—T. Keightley, *Fairy mythology*, pp. 419-420, 431, 440-441.—"In

all lands whither the Celts came as conquerors there was an existing population with whom they must eventually have made alliances. They imposed their language upon them—the Celtic regions are or were recently regions of Celtic speech—but just as many words of the aboriginal vernacular must have been taken over by the conquerors, or their own tongue modified by Celtic. So must it have been with their mythology. Celtic and pre-Celtic folk alike had many myths, and these were bound to intermingle, with the result that such Celtic legends as we possess must contain remnants of the aboriginal mythology, though it, like the descendants of the aborigines, has become Celtic. It would be difficult, in the existing condition of the old mythology, to say this is of Celtic, that of non-Celtic origin, for that mythology is now but fragmentary. The gods of the Celts were many, but of large cantiles of the Celtic race—the Celts of Gaul and of other parts of the continent of Europe—scarcely any myths have survived. A few sentences of Classical writers or images of divinities or scenes depicted on monuments point to what was once a rich mythology. These monuments, as well as inscriptions with names of deities, are numerous there as well as in parts of Roman Britain, and belong to the Romano-Celtic period. In Ireland, Wales, and north-western Scotland they do not exist, though in Ireland and Wales there is a copious literature based on mythology. Indeed, we may express the condition of affairs in a formula: Of the gods of the Continental Celts many monuments and no myths; of those of the Insular Celts many myths but no monuments. The myths of the Continental Celts were probably never committed to writing. They were contained in the sacred verses taught by the Druids, but it was not lawful to write them down; they were tabu, and doubtless their value would have vanished if they had been set forth in script.”—J. A. Macculloch, *Celtic mythology* (L. H. Gray, ed., *Mythology of all races*, v. 3, introduction, p. 7).

Celtic: Roman.—“The influences of Roman civilization and religion were fatal to the oral mythology taught by Druids, who were ruthlessly extirpated, while the old religion was assimilated to that of Rome. The gods were equated with Roman gods, who tended to take their place; the people became Romanized and forgot their old beliefs. Doubtless traditions survived among the folk, and may still exist as folk-lore or fairy superstition, just as folk-customs, the meaning of which may be uncertain to those who practise them, are descended from the rituals of a vanished paganism; but such existing traditions could be used only with great caution as indexes of the older myths. . . . There is no evidence that all the Gauls worshipped a few gods. Many local deities with similar functions but different names is the evidence of the inscriptions, and these are grouped collectively by Caesar and assimilated to Roman divinities. There are many local Mercuries, Minervas, Apollos, and the like, each with his Celtic name attached to that of the Roman god. Or, again, they are nameless, as in the case of the Yorkshire inscription, ‘To the god who invented roads and paths’—an obvious Mercury. Caesar adds, ‘The Gauls declare that they are descended from Dispatier, and this, they say, has been handed down by the Druids.’ . . . A British goddess Sul, equated with Minerva at Bath, is mentioned by Solinus (third century A.D.) as presiding over warm springs. In her temple perpetual fires burned and never grew old, for where the fire wasted away it turned into shining globes.

The latter statement is travellers’ gossip, but the ‘eternal fires’ recall the sacred fire of St. Brigit at Kildare, tended by nineteen nuns in turn, a day at a time, and on the twentieth by the dead saint herself. The fire was tabu to males, who must not even breathe on it. This breath tabu in connexion with fire is found among Parsis, Brahmins, Slavs, in Japan, and formerly in Rügen. The saint succeeded to the myth or ritual of a goddess, the Irish Brigit, or the Brigindo or Brigantia of Gaulish and British inscriptions, who was likewise equated with Minerva. . . . The sixth century Byzantine historian Procopius has a curious story about the island of ‘Brittia,’ which was divided by a wall from north to south. West of the wall none could live, so foul was the air, so many the vipers and evil beasts; but in its inhabited part dwelt Angles, Frisians, and Britons. The island lay between Britannia and Thule. Thule is probably Scandinavia; Britannia, which is, strictly speaking, Britain, is confused with the region lying between Brittany and the mouths of the Scheldt and Rhine. Brittia is Britain; the wall is the Roman Wall, shown on Ptolemy’s map running north and south at the present Scottish border, because Scotland was represented as lying at right angles to England. The region beyond the wall, mountainous, forest-clad, and inaccessible, was easily conceived as a sinister place by those who heard of it only vaguely. Procopius then says that on the coast of the Continent fishermen and farmers are exempt from taxation because it is their duty to ferry souls over to Brittia, doing this in turn. At midnight they hear a knocking at their door and muffled voices calling; but when they reach the shore, they see only empty boats, not their own. In these they set out and presently perceive that the boats have become laden, the gunwale being close to the water; and within an hour Brittia is reached, though ordinarily it would take a day and a night to cross the sea.”—*Ibid.*, pp. 8-9, 11, 15-16.

Celtic: Christian era.—“In Wales and Ireland, where Roman civilization was unknown, mythology had a better chance of survival. Yet here, as in Gaul, it was forced to contend with triumphant Christianity, which was generally hostile to paganism. Still, curiously enough, Christian verity was less destructive of Celtic myths than was Roman civilization, unless the Insular Celts were more tenacious of myth than their Continental cousins. Sooner or later the surviving myths, more often fragments than finished entities, were written down; the bards and the *filid* (learned poets) took pride in preserving the glories of their race; and even learned Christian monks must have assisted in keeping the old stories alive. . . . In the two heroic cycles—those of Cúchulainn and Fionn respectively—the . . . Celtic magic and glamour are found. . . . The main sources for the study of Irish mythology are the documents contained in such great manuscripts as the *Book of Leinster* and the *Book of the Dun Cow* (*Leabhar na Uidhre*), written in the eleventh and twelfth centuries, but based on materials of older date. Later manuscripts also contain important stories. Floating tales and traditions, fairy-and-folklore, are also valuable, and much of this material has now been published. Among the British Celts, or those of them who escaped the influence of Roman civilization, the mythological remains are far less copious. Here, too, the euhemerizing process has been at work, but much more has the element of romance affected the old myths. They have become romantic tales arranged, as in the *Mabinogion*, in definite

groups, and the *dramatis personae* are the ancient gods, though it is difficult to say whether the incidents are myths transformed or are fresh romantic inventions of a mythic kind. Still, the Welsh *Mabinogion* is of great importance, as well as some parts of Arthurian romances, the poems about Taliesin, and other fragments of Welsh literature."—*Ibid.*, pp. 17-19.—"Of the Irish manuscripts, the earliest . . . is in the possession of the Royal Irish Academy. Unluckily, it is reduced to a fragment of one hundred and thirty-eight pages, but this remnant preserves a large number of romances relating to the old gods and heroes of Ireland. Among other things, it contains a complete account of the epical saga called the *Táin Bó Chuailgne*, the 'Raiding of the Cattle of Cooley,' in which the hero, Cuchulainn, performed his greatest feats. This manuscript is called the Book of the Dun Cow, from the tradition that it was copied from an earlier book written upon the skin of a favourite animal belonging to Saint Ciaran, who lived in the seventh century. . . . Far more voluminous, and but little less ancient, is the Book of Leinster, said to have been compiled in the early part of the twelfth century by Finn mac Gorman, Bishop of Kildare. This also contains an account of Cuchulainn's mighty deeds which supplements the older version in the Book of the Dun Cow. . . . The Welsh documents cover the same period as the Irish and the Scottish. Four of these stand out from the rest, as most important. The oldest is the Black Book of Caermarthen, which dates from the third quarter of the twelfth century; the Book of Aneurin, which was written late in the thirteenth; the Book of Taliessin, assigned to the fourteenth; and the Red Book of Hergest, compiled by various persons during that century and the one following it. . . . The last—the Red Book of Hergest—is far larger. In it are to be found . . . the so-called Mabinogion, stories in which large portions of the old British mythology are worked up into romantic form. The whole bulk, therefore, of the native literature bearing upon the mythology of the British Islands may be attributed to a period which lasted from the beginning of the twelfth century to the end of the sixteenth."—C. Squire, *Mythology of the British islands*, pp. 9-12.—See also CELTS: Religion.

Chinese.—Gods and goddesses.—"In the earliest times there was an 'age of magic' followed by an 'heroic age,' but myths were very rare before 800 B. C., and what is known as primitive mythology is said to have been invented or imitated from foreign sources after 820 B. C. In the eighth century B. C. myths of an astrological character began to attract attention. . . . The most conspicuous figure in Chinese cosmogony is P'an Ku. He it was who chiselled the universe out of Chaos. According to Chinese ideas, he was the offspring of the original dual powers of Nature, the *yin* and the *yang*. . . . Some accounts describe him as the actual creator of the universe—'the ancestor of Heaven and earth and all that live and move and have their being.' . . . P'an Ku is pictured as a man of dwarfish stature clothed in bearskin, or merely in leaves or with an apron of leaves. He has two horns on his head. In his right hand he holds a hammer and in his left a chisel (sometimes these are reversed), the only implements he used in carrying out his great task. Other pictures show him attended in his labours by the four supernatural creatures—the unicorn, phoenix, tortoise, and dragon; others again with the sun in one hand and the moon in the other, some of the first fruits of his stupendous labours.

. . . The Chinese pantheon has gradually become so multitudinous that there is scarcely a being or thing which is not, or has not been at some time or other, propitiated or worshipped. . . . Buddhism and its mythology have formed an important part of Chinese thought for nearly two thousand years. . . . The principal gods of Buddhism are Jan-t'eng Fo, the Light-lamp Buddha, Mi-lo Fo (Maitrēya), the expected Messiah of the Buddhists, O-mi-t'o Fo (Amitabha or Amita), the guide who conducts his devotees to the Western Paradise, Yüeh-shih Fo, the Master-physician Buddha, Ta-shih-chih P'u-sa (Mahastama), companion of Amitabha, P'i-lu Fo (Vairochana), the highest of the Threefold Embodiments, Kuan Yin, the Goddess of Mercy, T'isang Wang, the God of Hades, Wei-t'o (Vihārapāla), the Dēva protector of the Law of Buddha and Buddhist temples, the Four Diamond Kings of Heaven, and Bodhidharma, the first of the six Patriarchs of Eastern or Chinese Buddhism. . . . On the right and left sides of the entrance hall of Buddhist temples, two on each side, are the gigantic figures of the four great *Ssu Ta Chinkang* or *T'ien-wang*, the Diamond Kings of Heaven, protectors of governors of the continents lying in the direction of the four cardinal points from Mount Sumeru, the centre of the world. . . . Mu Kung or Tung Wang Kung, the God of the Immortals, was also called I Chün Ming and Yü Huang Chün, the Prince Yü Huang. The primitive vapour congealed, remained inactive for a time, and then produced living beings, beginning with the formation of Mu Kung, the purest substance of the Eastern Air, and sovereign of the active male principle *yang* and of all the countries of the East. His palace is in the misty heavens, violet clouds form its dome, blue clouds its walls. Hsien T'ung, 'the Immortal Youth,' and Yü Nü, 'the Jade Maiden,' are his servants. He keeps the register of all the Immortals, male and female. Hsi Wang Mu was formed of the pure quintessence of the Western Air, in the legendary continent of Shên Chou. She is often called the Golden Mother of the Tortoise. . . . Chang Tao-ling may rightly be considered as the true founder of modern Taoism. . . . He is generally represented as clothed in richly decorated garments, brandishing with his right hand his magic sword, holding in his left a cup containing the draught of immortality, and riding a tiger which in one paw grasps his magic seal and with the others tramples down the five venomous creatures: lizard, snake, spider, toad, and centipede. Pictures of him with these accessories are pasted up in houses on the fifth day of the fifth moon to fend calamity and sickness. . . . The Four Kings of Heaven, *Ssu Ta T'ien-wang*, reside on Mount Sumeru (Hsü-mi Shan), the centre of the universe. It is 3,360,000 *li*—that is, about a million miles—high. Its eastern slope is of gold, its western of silver, its south-eastern of crystal, and its north-eastern of agate. The Four Kings appear to be the Taoist reflection of the four *Chin-kang* of Buddhism already noticed. Their names are Li, Ma, Chao, and Wên. They are represented as holding a pagoda, sword, two swords, and spiked club respectively. Their worship appears to be due to their auspicious appearance and aid on various critical occasions in the dynastic history of the T'ang and Sung Periods. . . . Tou Mu, the Bushel or Goddess of the North Star, is worshipped by both Buddhists and Taoists. . . . Tsao Chün is a Taoist invention, but is universally worshipped by all families in China—about sixty millions of pictures of him are regularly worshipped twice a month—at

new and full moon. 'His temple is a little niche in the brick cooking-range; his palace is often filled with smoke; and his Majesty sells for one farthing! He is also called 'the God of the Stove.' . . . The God of Riches is universally worshipped in China; images and portraits of him are to be seen everywhere. Talismans, trees of which the branches are strings of cash, and the fruits ingots of gold, to be obtained merely by shaking them down, a magic inexhaustible casket full of gold and silver—these and other spiritual sources of wealth are associated with this much-adored deity. He himself is represented in the guise of a visitor accompanied by a crowd of attendants laden with all the treasures that the hearts of men, women, and children could desire. The God of Longevity, Shou Hsing, was first a stellar deity, later on represented in human form. . . . The deity is a domestic god, of happy mien, with a very high forehead, usually spoken of as Shou Hsing Lao T'ou Tzu, 'Longevity Star Old-pate,' and is represented as riding a stag, with a flying bat above his head. He holds in his hand a large peach, and attached to his long staff are a gourd and a scroll. The stag and the bat both indicate *fu*, happiness. The peach, gourd, and scroll are symbols of longevity. . . . The dragons are spirits of the waters. . . . In China the dragon, except as noted below, is not a power for evil, but a beneficent being producing rain and representing the fecundating principle in nature. He is the essence of the *yang*, or male, principle. 'He controls the rain, and so holds in his power prosperity and peace.' . . . The imperial dragon has five claws on each foot, other dragons only four. . . . There is the celestial dragon, who guards the mansions of the gods and supports them so that they do not fall; the divine dragon, who causes the winds to blow and produces rain for the benefit of mankind; the earth-dragon, who marks out the courses of rivers and streams; and the dragon of the hidden treasures, who watches over the wealth concealed from mortals. The Buddhists count their dragons in number equal to the fish of the great deep, which defies arithmetical computation, and can be expressed only by their sacred numerals. . . . The Sea-dragon Kings live in gorgeous palaces in the depths of the sea, where they feed on pearls and opals. There are five of these divinities, the chief being in the centre, and the other four occupying the north, the west, the south, and the east. . . . As Mary is the guiding spirit of Rome, so is Kuan Yin of the Buddhist faith. According to a beautiful Chinese legend, Kuan Yin, when about to enter Heaven, heard a cry of anguish rising from the earth beneath her, and, moved by pity, paused, as her feet touched the glorious threshold. Hence her name 'Kuan (Shih) Yin' (one who notices or hears the cry, or prayer, of the world). Kuan Yin was at one time always represented as a man; but in the Tang dynasty and Five Dynasties we find him represented as a woman, and he has been generally, though not invariably, so represented since that time. . . . Other gods are feared, she is loved; others have black, scornful faces, her countenance is radiant as gold, and gentle as the moonbeam; she draws near to the people and the people draw near to her. Her throne is upon the Isle of Pootoo [P'u T'ou], to which she came floating upon a water-lily. She is the model of Chinese beauty. . . . Either singly or in groups the Eight Immortals, Pa Hsien, of the Taoist religion are one of the most popular subjects of representation in China; their portraits are to be seen everywhere—on porcelain vases, teapots, teacups, fans,

scrolls, embroidery, etc. Images of them are made in porcelain, earthenware, roots, wood, metals. The term 'Eight Immortals' is figuratively used for happiness. The number eight has become lucky in association with this tradition, and persons or things eight in number are graced accordingly. . . . The legend of the Eight Immortals is certainly not older than the time of the Sung dynasty (A. D. 960-1280), and is probably to be assigned to that of the Yuan dynasty (1280-1368)."—E. T. C. Werner, *Myths and legends of China*, pp. 71, 76-77, 93, 118, 120, 136, 139, 142, 144, 166, 171-172, 208-210, 251-252, 288.—See also CHINA: Religions of the people.

Eastern Asia.—"The vast majority of the inhabitants of Annam, not less than of Burma and Siam, are nominally Buddhist; but there are deities of Brāhmanic origin, alongside of demons with human passions and prejudices and abundance of obvious nature-myths. . . . Buddha Gotama . . . in countless shrines, temples, and monasteries, is not regarded as an idol to be worshipped, but as a model to be followed; he was yet a mere man, and his death was ascribed by early tradition to an overheavy meal of pork. This is still more apparent in the Amitābha of China, who has been transplanted to Tongking and Annam. He has not yet become a Buddha, but reigns in unending glory in Ching-tu, the Pure Land, the Western Paradise, where those who attain salvation will live in unalloyed happiness. Amitābha is the Omīto-fu, the name which, as a simple invocation, is inscribed on tablets and walls of multitudes of temples, and carved on the rocks and cliffs of a hundred caverned hills. Amitābha, we are told, was like Prince Siddhārtha (the royal name of the Buddha), only that, instead of being merely a prince, he was a rich and powerful monarch, who abdicated, and becoming an ascetic under the name of Fa-tsang, attained the state of a Bodhisattva, or one destined hereafter to become a Buddha. . . . [Among the Bodhisats attendant on the Buddha are Manju-śri and Avalokiteśvara, the former the personification of wisdom; the latter of overruling love.] In the popular Buddhism of China, Japan, and (to a lesser extent) Annam, there is the curious figure of a female Bodhisattva, named Kuan-yin. Kuan-yin is the divine person known to foreigners in China and Japan as the 'Goddess of Mercy.' . . . Kuan-yin is not only a Bodhisattva, but stands on the left, the honourable side, of Amitābha, and probably receives a greater amount of voluntary reverence in China than any other figure in Buddhist worship. . . . Chinese Buddhists, and with them those of Annam, believe that the original seat of Kuan-yin's worship was a rocky hill near the harbour of Cape Comorin in Southern India."—J. G. Scott, *Mythology of all ages*, v. 12, pp. 258, 261-262.

Egyptian.—Gods and goddesses.—Sacred animals.—"Even to the ancients Egypt was antiquity, and the Greeks sought in the dateless mysteries of the Egyptian religion for the fountain of all that was most mysterious in their own. Curiosity about the obscure beginnings of human creeds and the first knowledge of the gods was naturally aroused by that spectacle of the Pantheon of Egypt. Her highest gods were abstractions, swathed, like the Involuti of the Etrurians, in veils of mystic doctrine; yet in the most secret recess of her temples the pious beheld 'a crocodile, a cat, or a serpent, a beast rolling on a purple couch.' . . . The foreign traveller in the time of the pyramid-builders, as in the time of Rameses II., or of the Ptolemies, or of the Roman domination, would have found a crowd of gods in

receipt of honour and of sacrifice. He would have learned that one god was most adored in one locality, another in another, that Ammon Ra was predominant in Thebes; Ra, the sun-god, in Heliopolis; Osiris in Abydos, and so forth. He would also have observed that certain animals were sacred to certain gods, and that in places where each beast was revered, his species was not eaten, though it might blamelessly be cooked and devoured in the neighbouring nome or district, where another animal was dominant. Everywhere, in all nomes and towns, the adoration of Osiris, chiefly as the god and redeemer of the dead, was practised. While these are the general characteristics of Egyptian religion, there were inevitably many modifications in the course of five thousand years. If one might imagine a traveller endowed, like the Wandering Jew, with endless life, and visiting Egypt every thousand, or every five hundred years, we can fancy some of the changes in religion which he would observe. . . . While cer-

hostile. There was the presence of the animal in the most sacred *penetralia* of the temple; and there was the god, conceived of, on the whole, as anthropomorphic, but often represented in art, after the twelfth dynasty, as a man or woman with the head of a bird or beast. These points in Egyptian religion have been the great puzzle both of antiquity and of modern mythology. . . . Once more, and by a nearer approach to what is probably the truth, the beast-gods were said to be survivals of the badges (representing animals) of various tribal companies in the forces of Osiris. Such were the ideas current in Græco-Roman speculation, nor perhaps is there any earlier evidence as to the character of native interpretation of animal-worship."—A. Lang, *Myth, ritual and religion*, v. 2, pp. 83, 91-93, 97-98.

"The god who personated Chaos before the time of created things was 'Nu,' the god of the primeval waters. He was represented as the heavens in which floated 'Ra,' the Sun god, in the solar bark.

A KING MAKING AN OFFERING BEFORE THE APIS BULL

(British Museum)

tain gods, who retained permanent power, appear in the oldest monuments, sacred animals are also present from the first. The gods, in fact, of the earliest monuments were beasts. Here is one of the points in which a great alteration developed itself in the midst of Egyptian religion. Till the twelfth dynasty, when a god is mentioned (and in those very ancient remains gods are not mentioned often), 'he is represented by his animal, or with the name spelled out in hieroglyphs, often beside the bird or beast.' 'The jackal stands for Anup (Anubis), the frog for Hekt, the baboon for Tahuti (Thoth). It is not till after Semitic influence had begun to work in the country that any figures of gods are found.' By 'figures of gods' are meant the later man-shaped or semi-man-shaped images, the hawk-headed, jackal-headed, and similar representations with which we are familiar in the museums. The change begins with the twelfth dynasty, but becomes most marked under the eighteenth. . . . The strangest feature in the rites of Egypt was animal-worship, which appeared in various phases. There was the local adoration of a beast, or bird, or fish, to which the neighbours of other districts were indifferent or

. . . Ra was one of the principal deities, the sun being to the Egyptians the source of life and light, and the night typical of death and darkness. . . . Ra was called 'Lord of life'; he had no consort, all his acts he performed alone. He was looked upon at his rising as the giver of all good things, when he was named 'Harmakhis,' or 'Horus,' whose symbol, the hawk, was supposed to soar nearest to the sun; he is also called 'Khepera' in the morning, when he is shown as a figure with a scarabæus on his head and outspread wings. The true meaning of 'Kheper' is to 'become,' so the sun begins as 'Kheper,' becomes 'Ra' at noon in his full strength and heat, and 'Atum,' or 'Tûm,' when he sets. Tûm was worshipped in the Delta, and the town of Pi-tûm, or Pithom, was dedicated to him. So Ra passed each day through the heavens fighting against 'Set,' the god of darkness, whom he vanquished every night, and by his reappearance in the morning showed the triumph of good over evil. Although worshipped throughout all Egypt, the principal shrine of the god Ra was at Heliopolis, or On. Obelisks were dedicated to him because they pointed to the sky, and the hieroglyphic sign for Heliopolis is an

obelisk. Ra is generally represented as a man with a hawk's head, on which he bears the disk of the sun encircled by the uræus, or asp, the emblem of eternity. In one hand he carries the jackal-headed staff of power, the 'user,' in the other the symbol of life, the 'ankh.' 'Sa Ra' was used as the title of all the kings of Egypt, and meant the 'Son of the Sun,' showing the belief in the divine origin of the kings. 'Shu' is the 'Divider of the Water,' or 'Uplifter of the Atmosphere.' He is pictured as a man kneeling with the sun's disk or the feather of truth upon his head; his hands are outstretched holding up the sky, which is personified by the goddess 'Nut,' whose body, painted blue, usually covered with stars, forms the vault of the sky, her feet touching the horizon on one side and her hands stretched across to the other. In these scenes, in front of Shu, 'Geb,' the earth, lies, as if trying to rise, but prevented from doing so by Shu, the Divider, who divides the earth from the sky. Shu is the father of Seb, or Geb, and Nut is his mother. The emblem of Seb is a goose, which is supposed to have laid the egg from which the world was made. . . . 'Ptah' is named 'Father of the Mighty Fathers,' 'The Opener or Creator.' He created himself, and is 'Lord of Truth,' and 'King of both Lands,' meaning the Upper and the Under World. Kheper, the beetle, or scarabæus, was his emblem. In the same way as this beetle rolls up with its hind legs a large ball of earth, in order to conceal its eggs, so Ptah the Creator, as 'Ptah Tanen,' is supposed to have formed the Sun egg and the Moon egg, and is the counterpart of Seb, who, as the goose, laid the Earth egg. Ptah is a figure swathed as a mummy in a close-fitting cap with a scarab on the top and a long, bell-shaped tassel, the 'menat,' at his back. He holds the 'tet,' or 'Column of Stability,' in his hand. His name is found on some of the earliest monuments, and his chief seat of worship was at Memphis. Ptah also was a builder. . . . 'Amen' may mean the 'secret one,' and is one of the forms of Ra reappearing every day. He was revered as one of the greatest of the gods, and had many titles: such as 'The Ruler of Thrones,' 'Chief of all the Gods,' 'Lord of Kings,' 'Maker of Men,' 'Farmer of Flocks,' 'Maker of Herbage,' 'Who maketh the Cattle to live,' 'Lord of the Everlasting,' 'The Creator.' . . . Amen-Ra is depicted under the form of a man, with two tall feathers on his head, which rise from a stiff cap having the horns of a ram curled over the ears. He holds the sceptre and the 'ankh,' or symbol of life, in his hand. At Thebes a live ram was kept in the temple, and was held sacred and revered as being the reincarnation of this god. The goddess Mut was the wife of Amen-Ra and daughter of Ra. She is entitled 'The Lady of Heaven,' and 'The Eye of Ra.' She is represented with a head-dress in the form of a vulture surmounted by the crowns of Upper and Lower Egypt. . . . Sekhet (or more correctly Sekhmet) was the wife of Ptah; she is typical of the scorching, destructive power of the sun, and carries a knife in her hand wherewith to destroy the wicked in the next world. She has the head of a lioness or cat, and was especially honoured at Memphis. Bast (now read Ubastet), her sister, 'The Lady of Life,' represents the milder rays of the sun, and is also drawn as a woman, carrying a musical sistrum in her hand, and with the head of a lioness or cat. The saying, 'kindly as Bast and terrible as Sekhet,' which is inscribed in the temple of Isis at Philæ, refers to these two sisters. Bast was principally worshipped at Bubastis, in the Delta. . . . Nefer-Tum was the son of one of these

sisters; he wears a lotus on his head, and is connected with the Resurrection, and appears in the Memphite Triad. The goddess Hathor, the 'Great Mother,' and protectress of earthly mothers, was good and beautiful, lovely and gentle, the goddess of love and joy; her names are innumerable. She is represented as a woman, with a head-ornament of cow's horns; for the divine Cow was her symbol. She is often shown standing at the western gate of the tomb to feed and protect the mummy as it enters the kingdom of the Under World. The worship of Hathor is very ancient, and was carried on in many temples. Her principal temple, built by the Ptolemies and Romans, is at Dendera, and magnificent ceremonies took place there. . . . Neith was worshipped as the goddess of Art and Learning, and also as the mother of Ra. She is depicted as a tall, graceful woman, wearing the crown of Lower Egypt, and as inventor of the art of weaving bears the sign of a shuttle on her head; she also carries bows and arrows in her hand. The chief centre of her worship during the XXVII Dynasty was at Saïs, in the Delta. She is supposed to be of Libyan origin, as the Libyans used a shuttle as a device, and is connected with Sebek, the Crocodile god, being sometimes represented as nursing two of these creatures. Neith is considered to be the goddess of the air and of the three seasons, spring, summer, and winter. Maat, the goddess of truth and justice, was not worshipped in any particular temple. She wears a large ostrich feather, the emblem of truth, on her head; this feather was weighed in the balance against the heart of the deceased. . . . Set, Sutekh, or Typhon, the god born on the third epagomenal day, was looked upon as a very evil god. Bad air, bad seasons, unwholesome food, eclipses of the sun and moon, and all wicked deeds were ascribed to him. The people used to make offerings to propitiate him, but in the XIX Dynasty his worship ceased, and his name was scratched out of all monuments, as he came to be despised as much as he had formerly been feared. He was painted red—a mark of hatred. The ass is supposed to be an emblem of Set, although the curious beast's head given to him is a purely imaginary one. . . . Taur, or Taurt, the goddess of Evil, is a frightful figure of a fat woman with a head and tail, sometimes of a hippopotamus, sometimes of a crocodile; her one good quality was that she assisted Hathor when presiding at births, and stood beside her at the western doors of the tombs, possibly awaiting the second birth into the Under World. Another god was Bes, who was a most extraordinary creature. He stands on crooked legs, dressed in a large skin with its tail hanging down behind him. He has huge ears and a great beard, and in paintings stands full face with his tongue hanging out, and on his head a cap with tall feathers. He was said to come from Punt; his head-dress resembles that of the goddess Anakt. Sometimes he carries a great knife and a shield, and is called the god of Death, War, and Battles. He is seen at one time as an old man, and at another with the long lock of hair which is the symbol of youth. As the guardian of infants, he is supposed to amuse them by his funny figure, and is seen carrying a little baby on his shoulder, and in his hand a cup of food. . . . The jackal-headed god Anubis is called 'The Guardian of the Tombs' and 'Opener of the Way,' under the name of Up-uat. He had the special charge of embalming, and in the Judgment Hall held the balance on which was weighed the heart against the feather of truth. Anubis was also guide of the roads of the north and south. Wooden figures of

Anubis were often placed on the lids of the mummy-cases in the tombs. Sebek, the Crocodile god, personifies the destroying power of the sun, and was worshipped at Ombos (Kom Ombo), and had a shrine in that temple. . . . Sebek was a deity of Thebes, and was also honoured at Tarnis, where Petrie found evidences of his worship. There he was more or less identified with Set, or Sutekh. . . . The god of the Nile, or Hapi, is usually depicted as a fat creature, half man and half woman, of a blue color, with a bunch of lotus flowers on the head, and papyrus stalks and water-plants in the hand, holding a jar from whence water pours out, which is typical of the inundation of the Nile. . . . Thoth, or Tahuti, was the 'God of Letters' and 'Scribe of the Gods.' He was one of the lunar deities, and was connected with divisions of times and seasons. He is often seen carrying in his hand a staff marked with the cubit with which he measured the world, and hence was called 'The Measurer.' He invented numbers, and counted the duration of 'millions of years.' The first month of the year was dedicated to him. As scribe to the gods, he is seen with a reed and writing-tablet. All their sacred books, charms, and formulæ, besides books on magic and medicines, and letters to the gods on earth and to those in the Under World, were written by him. He was stationed with Anubis at the entrance to the Under World to lead the souls of the departed through the Hall of Judgment, and to record in writing all their good and evil deeds. The Cynocephalus, or Ape, 'Opener of the Way,' was one of the emblems of Thoth. The ibis was also sacred to him, and he is always represented with the head of that bird. His chief temple was at Hermopolis, where many mummies of the ibis are found. Khensu is a deity very similar to Thoth, though represented with the hawk's head surmounted with the lunar disk. He is the 'Traverser,' or 'Messenger,' and is sometimes called Khensu Thoth. His great temple is at Thebes, begun by Rameses III., and finished in the XXI Dynasty. Ymhetep, or 'Coming in Peace,' is always seen as a seated figure holding a scroll of papyrus on his knee. He practised medicine and magic, and recited formulæ. He was worshipped till a late period as Æskulapios by the Greeks. Osiris (Asar), 'Lord of the Under World' and 'Judge of the Dead,' is one of the principal gods of Egypt, and his worship, with that of his wife Isis, lasted till a very late period of history; his birthday was kept as a festival, and was the day of the first rising of the Nile. He was the son of Geb, the father of the gods, and was born on the first epagomenal day. His titles are endless,—'The Manifester of Good,' 'The Benevolent and Beneficent Power,' 'The Lord of Life,' etc., etc.—and he is given 49 names in the Book of the Dead. He is said to have been born a king, and when he was 28 years old he travelled through the world seeking to do good, teaching the people agriculture and giving them laws. . . . Osiris' life was held as a pattern for others, and to show that, though all men must die, their good deeds and virtues live after them, while they themselves are rewarded in a future state. Osiris is represented as swathed in burial wrappings, his crossed hands holding the flail and crook, symbols of sovereignty and dominion, and wearing on his head a crown like that of Upper Egypt, with feathers at each side. Isis (Ast), wife of Osiris, usually appears as a woman wearing a head-dress in the form of a throne, or with the horns of Hathor and the disk of the sun. . . . The two goddesses of Upper and Lower Egypt—Nekhebyt the Vulture, and Uazyt the Asp—are seated side

by side on two horizons when they form part of the royal title. The Vulture wears the crown and plumes of Upper Egypt, and has outspread wings like the beetle Horbehetet. The Asp wears the crown of Lower Egypt, and is also winged. . . . Sphinxes were placed at the entrance of temples to guard them from the approach of any evil thing. The Sphinx is one of the manifestations of the Sun god, Ra Harmakhis, 'Sun of the Morning,' 'Banisher of the Mists of the Night.'—Lady 'Amberst of Hackney, *Sketch of Egyptian history from the earliest times to the present day*, pp. 61-70, 75.—See also RELIGION: B.C. 2000-200; EGYPT: Religion.

Germanic: Sources of knowledge.—"Germanic paganism survived Celtic paganism by five centuries; we are, therefore, much better informed as to the former. . . . Documents may be divided into three groups: (1) the texts of classic authors, especially Cæsar and Tacitus; (2) the work which set forth Scandinavian or Norse mythology, Sagas and Eddas; (3) popular customs and traditions, some collected and observed at a relatively recent period, others known by prohibitions of the church, and by a species of interrogatory compiled for the use of priests who received the confessions of German converts to Christianity."—S. Reinach, *Orpheus*, pp. 125-126.

Germanic: Identification of Germanic gods with Roman.—"One of the documents most often quoted upon the Celtic religion is a passage in Cæsar's 'De Bello Gallico,' where the conqueror of Gaul describes what he conceives to be the principal gods of the vanquished people:—"The God they worship most of all is Mercury, and his statues are numerous. The Gauls [Celts] regard him as the inventor of the arts, and the guide who directs the wayfarer and the voyager; they also attribute to him great influence in the acquiring of riches and in commerce. After him come Apollo, Mars, Jupiter, and Minerva. These they regard pretty much the same as do other nations. Apollo drives away sickness, Minerva instructs the novice in the arts and handicrafts, Jupiter has the lordship of the heavens, Mars that of war, and before going into battle they consecrate to him whatever spoil they hope to obtain.' If we take this passage literally, it would seem that the Gauls had five gods almost identical with the great deities of the Romans—Mercury, Apollo, Mars, Jupiter and Minerva, any difference they might have being in name only. This doctrine seems to be corroborated by Roman inscriptions, where the Gaulish names are found alongside those of the Roman gods, as epithets or surnames. . . . To understand Cæsar, it must be admitted that in the language he uses, the word 'god' designates beings whose real existence is considered as indisputable, and whom one cannot, without manifest error, regard as simple conceptions of the human mind, fictions more or less fanciful, more or less logical. . . . It is difficult, therefore, to satisfy us by attempting to show that two divinities, one Roman, born from the union of Roman and of Greek mythology, the other Gallic, sprung from the genius peculiar to the Celtic race, are identical with each other. It is not enough that the two divine figures exhibit certain points of coincidence; they must have if not complete concordance, agreement at least upon all the principal points. . . . Their Jupiter, for instance, holds the thunderbolt in his right hand, as his characteristic insignia; the Gauls had also a god who controlled the thunder. Upon this simple indication the Romans concluded that the Gaulish god was identical with their own Jupiter. Because, in fact, the two gods, one na-

tional, the other foreign, were endowed with a common attribute, they were one and the same; and this they concluded without considering the differences which, on other more important points, these two mythical figures might present. . . . Cæsar has, then, affirmed the identity of five great Roman gods with the great gods of the Gauls, and this identity has been admitted after Cæsar. . . . The most celebrated of these divine triads worshipped in Gaul is that referred to by Lucan in his well-known lines. . . . The gods who form it are Teutates, Esus, Taranis or Taranus. They were gods of death and night, the evil parent gods, whom the Irish called Fomorians. . . . After recording the fact that they had a god identical, in his opinion, with the Roman Mars, Cæsar continues: 'When they resolve on battle, they usually dedicate to this god all the spoil they hope to obtain; and after a victory they immolate everything that has life in his honour.' . . . Toutatis or Teutates is thus a god to whom the Gauls offered up their prisoners of war. It is one of the names or personifications of the parent god who reigned over the dead. They believed that by a special favour he could spare the Gaul whose days were threatened, if a substitute were sent into the other world to him, as, for instance, a captive offered up in sacrifice. Taranis or Taranus, is a counterpart of Teutates or Toutatis. The derivation of his name clearly shows him to be a god of the thunderbolt: *taran* being the thunderbolt in Welsh, in Cornish, and Breton. . . . Taranus is the god of Death, father of the gods of Life. Hence it is that in Gaul, as Lucan informs us, human sacrifices were offered up to him. Esus, of which another form *Æsus* has come down to us on a British coin, has been rightly placed by Lucan in the same triad, human sacrifice being offered to him also. The wood he is seen cutting in the Gallo-Roman bas-relief in the museum of Cluny was, doubtless, destined for the sacrificial altar. In the reign of Tiberius, 14 to 37 of the present era, which was about the time this work of art was executed, human sacrifice was no longer permitted in Gaul. . . . It is Lug whom Cæsar identifies with the Roman Mercury already confused at that period with the Greek Hermes. Lug resembles this Mercury-Hermes in that he is the god of the Arts and of Commerce. . . . The Gaulish god whom Cæsar called Mercury was an original mythological conception, resembling Mercury-Hermes in certain particulars, differing from him in others; he is a warrior god, for instance. The Gauls had other names for him besides Lugus: several of them being compounded of the root SMER, the meaning of which has not yet been determined."—H. D'Arbois de Jubainville, *Irish mythological cycle and Celtic mythology* (tr. by R. I. Best), pp. xi, xiii-xv, 213-217.

"German and Celts agreed in the practice of helping the sun by lighting brands, especially at the beginning of spring and in the solstices, and by carrying about and finally immersing fiery wheels. . . . The moon was identified with the Diana of the Romans, the nocturnal huntress and queen of sabbaths. One of the questions put by Burchard, Bishop of Worms, in the year 1000 A. D., ran thus: 'Hast thou believed in the existence of a certain female who, like her whom the folly of the vulgar calls Holda, rides about at night on certain beasts, in company with demons transformed into women? This is affirmed by certain creatures deceived by the devil.' The question is repeated in other catechisms, with this difference, that Holda—the *Frau Holle*, or *Holde*, of German legends—is called 'Diana, goddess of the

heathen. . . . In the popular texts, Holle is a genius of water and the atmosphere. At noon in summer she may be surprised, like the Greek Artemis, bathing in a spring; in winter she causes snow to fall by shaking the eiderdown of her bed. But she is more especially a witch, the queen of witches, terrible and cruel, who carries off the souls of unhaptized children. In this character she was also identified with Herodias. . . . The week of seven days called by the names of the planets had been generally adopted throughout the Roman Empire by the end of the second century; the Germans adopted it in the fourth century, substituting the names of the Germanic divinities for those of the Roman gods. The *dies Martis* became *Tuesday* in English (the day of *Tiu* or *Tyr*, the Germanic Mars); the German *Dienstag* is derived from a surname of this god, *Thingsus*, which is found in Latin dedications by German soldiers. The *dies Mercurii* is in English *Wednesday*, the day of Woden; the German say *Mittwoch*, 'the middle of the week.' *Jovis dies*, in English *Thursday*, in German *Donnerstag*, attests that Thor or Donar, the god of thunder, was identical with Jupiter. *Veneris dies* (*Friday*, *Freitag*), proves that Freya was identified with Venus. . . . In the Eddas, Tyr-Mars is the son of Odin-Mercury, and, like him, a warrior-god. It must be noted that the name of Tyr (*Tiu* in Anglo-Saxon, *Ziu* in High German) is etymologically identical with the Sanscrit *Dyaus* and Greek *Zeus*; he was therefore originally the celestial god. . . . If we remember that according to Cæsar the Gauls believed themselves to be the descendants of a nocturnal god approximating to Pluto, it is difficult not to trace a connection between the Celtic conception and that of the Germans. . . . In addition to Mercury, Hercules and Mars, Tacitus believed that the goddess Isis was to be found among the Germans (*Germania ix.*). A portion of the great tribe of the Suevi offered sacrifices to this alien divinity, according to him; he adds that the ship which was her symbol, attests the fact that she came from beyond the seas. Tacitus was evidently thinking of the 'bark of Isis' which was offered annually to the goddess in the Roman worship of this Egyptian divinity. Similar customs are to be found among the Germans of the Middle Ages (twelfth century). The people, dancing and singing, followed a ship mounted on wheels, 'which contained,' says a chronicler, 'I know not what evil genius.' The hypothesis of the introduction of Isis-worship into Germany must be left to Tacitus; the ceremony described was one of those 'sacred processions' on a car or in a boat which recur in various countries, as, for instance, in the Græco-Roman worship of Cybele. A goddess of Abundance, adored on the sea-coast, might very well have had for her emblem a boat or an oar, like the Germanic Nehalennia, whose carved altars have been discovered in Holland, near the mouths of the Rhine. . . . Tacitus has given the name of this goddess of Sleswig; she was called *Nerthus* (the subterranean) and the Roman historian rightly identifies her with the Earth Mother, the Cybele or Mother of the Gods of the Asiatic Greeks. Her procession was in the nature of an agrarian festival, designed to promote the awakening of Nature in the springtime. Similar rites are still observed in Germany; the beneficent divinity is represented by effigies, the king and queen of the May, who are greeted with dance and song. . . . The Germanic Freya, the wife of Odin, identified with Venus in the name of Friday (*Veneris dies*, *Freitag*) is probably merely a goddess of fecundity, and the Nerthus of Tacitus and the

so-called Isis are perhaps her local designations or epithets. Tacitus further mentions a few secondary gods, for instance, in a sacred wood of the Waldgebirge (*Germania* xliii.): 'The direction of the ceremonial,' he says, 'is confided to a priest dressed as a woman. The objects of this cult are gods who, in the Roman Olympus, would be Castor and Pollux. There are no statues and no traces of a foreign influence: but the gods worshipped are certainly two young brothers.' Diodorus says that the 'Celts on the Ocean coast' (*i.e.*, the Germans) worshipped the Dioscuri. . . . We know hardly anything of other Germanic divinities, such as the *Tanfana* and *Baduhenna* of Tacitus, and the numerous mother-goddesses with barbaric names which occur by the hundred in inscriptions found in the Rhine Valley. Those in which the letter H occurs are certainly Germanic and not Celtic; but the conception of these goddesses, generally grouped in threes, seems to have originated in Gaul, where fairies played an important part, and whence they passed into German folk-lore. . . . Scandinavian mythology has certain points in common with the Germanic conceptions which we know from earlier texts. First of all the names: Odin, Tyr, Thor, Freya, and perhaps too the idea of Yggdrasil, which resembles the Irminsul of the Saxons. Then the idea that the world will perish by fire is found in Celtic mythology; it may therefore have been borrowed by the Germans at an early date from the Celts. . . . The story of the fatal mistletoe is Celtic and British, not Norwegian, for there is no mistletoe, or hardly any, in Norway."—S. Reinach, *Orpheus*, pp. 126-132, 141.

Grecian.—Anthropomorphic character.—"The abode of the gods was on the summit of Mount Olympus, in Thessaly. A gate of clouds, kept by the goddesses named the Seasons, opened to permit the passage of the Celestials to earth, and to receive them on their return. The gods had their separate dwellings; but all, when summoned, repaired to the palace of Jupiter, as did also those deities whose usual abode was the earth, the waters, or the underworld. It was also in the great hall of the palace of the Olympian king that the gods feasted each day on ambrosia and nectar, their food and drink, the latter being handed round by the lovely goddess Hebe. Jupiter, or Jove (Zeus), though called the father of gods and men, had himself a beginning. Saturn (Cronos) was his father, and Rhea (Ops) his mother. Saturn and Rhea were of the race of Titans, who were the children of Earth and Heaven, which sprang from Chaos. . . . There is another cosmogony, or account of the creation, according to which Earth, Erebus, and Love were the first of beings. Love (Eros) issued from the egg of Night, which floated on Chaos. By his arrows and torch he pierced and vivified all things, producing life and joy. Saturn and Rhea were not the only Titans. There were others, whose names were Oceanus, Hyperion, Iapetus, and Ophiom, males; and Themis, Mnemosyne, Eurynome, females. They are spoken of as the elder gods, whose dominion was afterwards transferred to others. Saturn yielded to Jupiter, Oceanus to Neptune, Hyperion to Apollo. Hyperion was the father of the Sun, Moon, and Dawn. He is, therefore, the original sun-god, and is painted with the splendor and beauty which were afterwards bestowed on Apollo. . . . Ophiom and Eurynome ruled over Olympus till they were dethroned by Saturn and Rhea. . . . The representations given of Saturn are not very consistent; for on the one hand his reign is said to have been the golden age of innocence and purity, and on the other he is

described as a monster who devoured his children. Jupiter, however, escaped this fate, and when grown up espoused Metis (Prudence), who administered a draught to Saturn which caused him to disgorge his children. Jupiter, with his brothers and sisters, now rebelled against their father Saturn and his brothers the Titans; vanquished them, and imprisoned some of them in Tartarus, inflicting other penalties on others. Atlas was condemned to bear up the heavens on his shoulders. On the dethronement of Saturn, Jupiter with his brothers Neptune (Poseidon) and Pluto (Dis) divided his dominions. Jupiter's portion was the heavens, Neptune's the ocean, and Pluto's the realms of the dead. Earth and Olympus were common property. Jupiter was king of gods and men. The thunder was his weapon, and he bore a shield called Ægis, made for him by Vulcan. The eagle was his favorite bird, and bore his thunderbolts. Juno (Hera) was the wife of Jupiter, and queen of the gods. Iris, the goddess of the rainbow, was her attendant and messenger. The peacock was her favorite bird. Vulcan (Hephestos), the celestial artist, was the son of Jupiter and Juno. He was born lame, and his mother was so displeased at the sight of him that she flung him out of heaven. Other accounts say that Jupiter kicked him out for taking part with his mother in a quarrel which occurred between them. . . . Mars (Ares), the god of war, was the son of Jupiter and Juno. Phœbus Apollo, the god of archery, prophecy, and music, was the son of Jupiter and Latona, and brother of Diana (Artemis). He was god of the sun, as Diana, his sister, was the goddess of the moon. Venus (Aphrodite), the goddess of love and beauty, was the daughter of Jupiter and Dione. Others say that Venus sprang from the foam of the sea. The zephyr wafted her along the waves to the Isle of Cyprus, where she was received and attired by the Seasons, and then led to the assembly of the gods. . . . Venus possessed an embroidered girdle called Cestus, which had the power of inspiring love. Her favorite birds were swans and doves, and the plants sacred to her were the rose and the myrtle. Cupid (Eros), the god of love, was the son of Venus. He was her constant companion; and, armed with bow and arrows, he shot the darts of desire into the bosoms of both gods and men. . . . Minerva (Pallas, Athene), the goddess of wisdom, was the offspring of Jupiter, without a mother. She sprang forth from his head completely armed. Her favorite bird was the owl, and the plant sacred to her the olive. . . . Mercury (Hermes) was the son of Jupiter and Maia. He presided over commerce, wrestling, and other gymnastic exercises, even over thieving, and everything, in short, which required skill and dexterity. He was the messenger of Jupiter, and wore a winged cap and winged shoes. He bore in his hand a rod entwined with two serpents, called the caduceus. Mercury is said to have invented the lyre. . . . Ceres (Demeter) was the daughter of Saturn and Rhea. She had a daughter named Proserpine (Persephone), who became the wife of Pluto, and queen of the realms of the dead. Ceres presided over agriculture. Bacchus (Dionysus), the god of wine, was the son of Jupiter and Semele. He represents not only the intoxicating power of wine, but its social and beneficent influences likewise, so that he is viewed as the promoter of civilization, and a lawgiver and lover of peace. The Muses were the daughters of Jupiter and Mnemosyne (Memory). They presided over song, and prompted the memory. They were nine in number, to each of whom was assigned the presidency over some particular department of literature art, or science. . . . Pan was the god of flocks and

IVORY AND GOLD STATUE OF PALLAS ATHENE IN THE PARTHENON

(Reconstruction)

shepherds. His favorite residence was in Arcadia. The Satyrs were deities of the woods and fields. They were conceived to be covered with bristly hair, their heads decorated with short, sprouting horns, and their feet like goats' feet. Momus was the god of laughter, and Plutus the god of wealth."—T. Bulfinch, *Mythology*, pp. 3-9.—"In the gods of Greece, when represented in ideal art and in the best religious sentiment, as revealed by poets and philosophers, from Homer to Plato, from Plato to Porphyrus, there is something truly human and truly divine. It cannot be doubted that the religion of Apollo, Athene, Artemis, and Hermes was, in many respects, an adoration directed to the moral and physical qualities that are best and noblest. Again, even in the oldest Greek literature, in Homer and in all that follows, the name of the chief god, Zeus, might in many places be translated by our word 'God.' [See RELIGION: Course of development in highly organized religions.] . . . 'Homer and Hesiod named the gods for the Greeks; so Herodotus thought, and constructed the divine genealogies.' . . . Xenophanes very early proclaimed that men had made the gods in their own likeness, as a horse, could he draw, would design his deity in equine semblance. But the detection by Xenophanes of the anthropomorphic tendency in religion could not account for the instinct which made Greeks, like other peoples, as Aristotle noticed, figure their gods not only in human shape, but in the guise of the lower animals. For that zoomorphic element in myth an explanation, as before, will be sought in the early mental condition which takes no great distinction between man and the beasts. . . . If Apollo was originally the sun-god, it is certain that his influence on human life and society was as wide and beneficent as that of the sun itself. He presides over health and medicine, and over purity of body and soul. He is the god of song, and the hexameter, which first resounded in his temples, uttered its latest word in the melancholy music of the last oracle from Delphi. . . . He is the god of sudden death; he is amorous and revengeful. The fair humanities of old religion boast no figure more beautiful; yet he, too, bears the birth-marks of ancient creeds, and there is a shadow that stains his legend and darkens the radiance of his glory."—A. Lang, *Myth, ritual and religion*, v. 2, pp. 163, 166-167, 206-208.—See also RELIGION: Course of development, etc.; B. C. 750-A. Indian: Unparalleled length of life.—"The mythology of India claims unique interest by virtue of its unparalleled length of life. It is true that not even the discoveries at Boghaz Kyoï render it prudent for us to place the *Rgveda* at an earlier period than 1500 B. C., and in part at least that collection may come from three centuries later, so that as contrasted with the dates of Egyptian and Babylonian records the earliest monument of Aryan mythology is comparatively recent. In mass of content and in value for mythology, however, these cannot compare with the *Rgveda*. Of still more importance is the fact that from the period of the *Rgveda* to the present day, a space of some thirty-five hundred years, we have a mythology which is in constant but organic development."—A. B. Keith and A. J. Carnoy, *Mythology of all races*, v. 6, p. 5.—"Every superstition reigns or has reigned in India. Animism manifests itself in ancestor-worship, in the adoration of the heavenly bodies, mountains, rivers—the Ganges in particular—trees, plants, shells, stones, implements, &c. Totemism has left its traces not only in certain alimentary

restrictions—the cow—but in the widespread worship of a host of deities in animal form—such as the elephant-headed Ganesha—in the myths of creation and the deluge. Even in the present day certain tribes, whose languages are non-Aryan, are divided into clans distinguished by the names of animals, within the limits of which inter-marriage is forbidden. There were formerly in the Brahmanical caste, certain classes where union was forbidden, which may indicate a totemistic survival. Magic, the basis of all ritual, has not ceased to flourish in India. These are characteristics common to all primitive civilisations. But there are in India two popular conceptions, related by a logical bond, which are nowhere else to be found in such a highly developed form. They are the belief in the *transmigration of souls and a redeeming asceticism*."—S. Reinach, *Orpheus*, p. 48.—"A large class of sacred writings in Sanskrit verse, ascribed to Vyasa, contains the whole body of Hindu mythology. There are, however, eighteen principal Puranas, as they are named from the Sanskrit word *pura*, meaning, of old. . . . In the Puranic mythology the Vedic gods have prominent places. Indra ranks next in position to the Trimurti. He is represented as a white man riding on a white elephant, holding the *vajra* (thunderbolt) in one of his right hands. Surya is a ruddy man seated on a lotus in a chariot drawn by a horse with seven heads or by seven horses. Holding in each of two hands, a lily, he makes, with two others, the *mudras*, or signs forbidding fear and bestowing blessing. Agni rides upon a blue ram or he-goat. In one right hand he carries a spear or battle-axe. Sometimes his handsome face is shown three times upon one head, and his limbs consist of seven arms and three legs. The sacred cord, *zenaar*, or *poita*, is tied round his neck. Vayu, or Pavana, is a white man, with blue robes, seated upon an antelope or upon an inverted lotus. Varuna is a white man, seated on Makara, a sea-monster something like a crocodile. Yama is represented as a green or blue man, with red or yellow robes seated on a blue buffalo. Kuvera is a white man riding a white horse or seated upon a pedestal, a self-moving aerial chariot, a present from Brahma. Soma usually rides in a four-wheeled chariot, drawn by an antelope, though this appears to represent the Hindu or Puranic god, Chandra, also. We will now shortly consider other Hindu gods. Saraswati, the consort, *sakti*, or *prakriti*, of Brahma is shown as a lovely woman, with a crescent on her brow, or seated upon a swan or peacock. Vishnu had eight reincarnations, or descents, called *avatars*, in which different forms were assumed. . . . There are numerous additional forms of Vishnu, such as those where, as Narayana, he is lying upon a great leaf which floats upon the water, and where with a tiny Lakshmi he reposes upon the serpent Ananta, or Sesha, the infinite. Siva, with his *sakti* Parvati, are often represented together. Siva and Parvati, or Devi, show two forms, one terrible, the other benign. When Siva is alone he shows generally five heads, each having a third eye and four arms bearing a *mrigu*, or antelope, a *trisula*, or trident, a *pasa*, or cord, and a *shanka*, or shell. . . . The *sakti* of Vishnu, Lakshmi, or Sri, is a lovely woman, who is also Ramba, the ideal female, goddess of plenty and good luck. When Vishnu in his eighth incarnation is Krishna, she is Radha and Rukmeni, and when, in the other form, he is Rama, she is Sita. So that Sita, Radha, and Lakshmi, in one ideal, present to the Hindu women, not only the beauty of Venus, but all those qualities which are held in high honour by true womanhood everywhere, and perhaps all the more because Lakshmi

is the mother of Kama-Deva, the god of love. . . . Another *sakti*, Parvati, allied, as we have seen, to Siva, is distinguished by her dual aspect of kindness and terror. Under several names her qualities are indicated. The most popular and the most terrible are Parvati, Durga, Kali, the black, Kumari and others. In these characters she is stern and destructive. On her softer side as Devi, the bright, and Rambha the Hindu Venus, she is kind. In Rambha she unites with Lakshmi, and so she does when, as Anna Purna, the food-giver, she benefits mankind. She was the mother of Ganesa, the short, fat god, with an elephant's head, the Hindu god of wisdom, whose father was Siva. It is said that his father, being mad with anger, cut the boy's head off, and, to save his life, stuck on the head of a passing elephant. Ganesa's image is always in the home, and though he was only the lord of the Ganas, or inferior deities, temples are dedicated to him, where his images are multiplied and invoked. The other son of Siva, Karttikeya, had no mother, but the Pleiades, or *Krittikas*, were his nurses, hence his name, though he is also known as Mangala and Subrahmanya. He is the Indian god of war, in which capacity he is red; at other times, as regent of the planet Mars, he is yellow. He rides upon a peacock, bearing an arrow in one hand and a bow in the other. . . . Krishna was born in the night, and his name means black; on his breast grew a curl of hair, the peculiar *Sri-vatsa*, which distinguishes him; but he may be otherwise distinguishable by his colour; he is often painted blue. The *Blahabhārata* gives prominence to his marvellous exploits. . . . Rama-chandra, the husband of Sita, was another great hero, whose story is told in the 'Ramayana.' His bow and arrow distinguish him in the scenes where he appears. Temples have been built to him all through the land, but in Oudh he is pre-eminent."—J. F. Blacker, *A B C of Indian art*, pp. 41-48.—The Vedas are the most ancient of Hindu holy books and were composed, according to accepted opinion, about 1000 or 1500 B. C. There are four Vedas: Rig-Veda; Yajur; Sama-Veda; and Atharva-Veda. The latter is the Veda of prayers, charms and spells.

Indian: Primitive elements.—"The gods of the Vedas are, on the whole, of the usual polytheistic type, though their forms mix into each other like shadows cast by a flickering fire. The ideas which may be gathered about them from the ancient hymns have, as usual, no consistency and no strict orthodoxy. . . . Indra is mainly concerned with thunder and other atmospheric phenomena; these are his department; but Vayu is the wind or the god of the wind, and Agni as fire or the god of fire is necessarily not unconnected with the lightning. The Maruts, again, are the storm-winds, or gods of the storm-winds; Mitra and Varuna preside over day and night; Ushas is the dawn or the goddess of dawn, and Tvashtri is the mechanic among the deities, corresponding more or less closely to the Greek Hephestus. Though many of these beings are still in Vedic poetry departmental powers with provinces of their own in external Nature, they are also supposed to be interested not only in the worldly, but in the moral welfare of mankind, and are imagined to 'make for righteousness.' . . . The natural conclusion, after a rapid view of Vedic deities, seems to be that they are extremely composite characters, visible only in the shifting rays of the Indian fancy, at a period when the peculiar qualities of Indian thought were already sufficiently declared. The lights of ritualistic dogma and of pantheistic and mystic and poetic emotion fall in turn, like the changeful hues of sunset, on figures as melting and shifting as the clouds

of evening."—A. Lang, *Myth, ritual and religion*, v. 2, pp. 126-127.

Japanese: Characteristics.—"The ancient religion of the Japanese is called *Kami no michi* (way, or doctrine, of the gods; *i. e.*, theology). The Chinese form of the same is Shinto. Foreigners call it Shintoism, or Sintoism. . . . Only a very few Shinto temples, called *Miya*, have preserved the ancient purity of the rites and dogmas during the overshadowing influences of Buddhism. In Japanese mythology the universe is Japan, the legends relating to Japan exclusively. All the deities, with, perhaps, a few exceptions, are historical personages; and the conclusion of the whole matter of cosmogony and celestial genealogy is that the Mikado is the descendant and representative of the gods who created the heavens and earth (Japan). Hence the imperative duty of all Japanese is to obey him."—W. E. Griffis, *Mikado's empire*, p. 96.—"Ama-terasu is the central figure in Japanese mythology, for it is from the Sun Goddess that the Mikados are descended. In the cycle of legends known as the Period of the Gods, we are introduced to the Sacred Treasures, we discover the origin of the Japanese dance, and in imagination wander through the High Plain of Heaven, set foot upon the Floating Bridge, enter the Central Land of Reed-Plains, peep into the Land of Yomi, and follow Prince Fire-Fade into the Palace of the Sea King. Early heroes and warriors are always regarded as minor divinities, and the very nature of Shintoism, associated with ancestor worship, has enriched those of Japan with many a fascinating legend. . . . The fox takes an important place in Japanese legend, and the subject is of a far-reaching and complex kind. Inari was originally the God of Rice, but in the eleventh century he became associated with the Fox God, with attributes for good and evil, mostly for evil, so profuse and so manifold in their application that they cause no little confusion to the English reader. All foxes possess supernatural powers to an almost limitless degree. They have the power of infinite vision; they can hear everything and understand the secret thoughts of mankind generally, and in addition they possess the power of transformation and of transmutation. The chief attribute of the bad fox is the power to delude human beings, and for this purpose it will take the form of a beautiful woman, and many are the legends told in this connection."—F. Hadland Davis, *Myths and legends of Japan*, pp. xvi, 93.

Latin American.—Maya gods.—Aztec gods.—Zuni fetichism.—Peruvian myths.—Bernal Diaz, the old "conquistador," described the appearance of the idols which Cortés destroyed in Mexico—"idols in the shape of hideous dragons as big as calves," idols half in the form of men and half in the form of dogs, and great serpents worshipped as divinities. However, grotesque as these statues were, and as those remaining in Mexico and Central America are, they are not without artistic merit. They may be compared to the Dravidian sculpture of Southern India. "It was to the Maya—the people who occupied the territory between the isthmus of Tehuantepec and Nicaragua—that the civilization of Central America owed most. . . . The designation by which Quetzalcoatl was known to the Maya was Kukulcan, which signifies 'Feathered Serpent,' and is exactly translated by his Mexican name. . . . In Mexico Quetzalcoatl . . . was not only the Man of the Sun, but the original wind-god of the country. The Kukulcan of the Maya has more the attributes of a thunder-god. In the tropical climate of Yucatan and Guatemala the sun at midday appears to draw the clouds

around it in serpentine shapes. From these emanate thunder and lightning and the fertilising rain, so that Kukulcan would appear to have appealed to the Maya more as a god of the sky who wielded the thunderbolts than a god of the atmosphere proper like Quetzalcoatl, though several of the stelæ in Yucatan represent Kukulcan as he is portrayed in Mexico, with wind issuing from his mouth. . . . In Yucatan the sun-god was known as Kinich-ahau (Lord of the Face of the Sun). He was identified with the Fire-bird, or Arara, and was thus called Kinich-Kakmo (Fire-bird; lit. Sun-bird). He was also the presiding genius of the north. Itzamna, one of the most important of the Maya deities, was a moon-god, the father of gods and men. In him was typified the decay and recurrence of life in nature. Chac, the rain-god, is the possessor of an elongated nose, not unlike the proboscis of a tapir, which of course is the spout whence comes the rain which he blows over the earth. He is one of the best represented gods on both manuscripts and monuments, and presides over the east. . . . A sinister figure, the prince of the Maya legions of darkness, is the bat-god, Zotzilaha Chimalman, who dwelt in the 'House of Bats,' a gruesome cavern on the way to the abodes of darkness and death. He is undoubtedly a relic of cave-worship pure and simple."—L. Spence, *Myths of Mexico and Peru*, pp. 143, 167-168, 170-172.—"As a matter of fact, the Aztec gods, though bedizened with the attributes of mortal conjurers, and with the fur and feathers of totems, are, for the most part, the departmental deities of polytheism, each ruling over some province of nature or of human activity. Combined with these are deities who, in their origin, were probably ideal culture-heroes, like Yehi, or Qat, or Prometheus. The long and tedious myths of Quetzalcoatl and Tezcatlipoca appear to contain memories of a struggle between the gods or culture-heroes of rival races. . . . Beginning with Huitzilopochtli, as perhaps the most famous, it is to be observed that he indubitably became and was recognized as a god of battles, and that he was also the guide and protector who (according to the Aztec painted scriptures) led the wandering fathers through war and wilderness to the promised land of Mexico. . . . It was not by swallowing a berry, as in Finland, but by cherishing in her bosom a flying ball of feathers that the devout woman, Coatlicue, became the mother of Huitzilopochtli. . . . By another myth, euhemeristic in character, Huitziton (the name is connected with *huitzilin*, the humming-bird) was the leader of the Aztecs in their wanderings. On his death or translation, his skull gave oracles, like the head of Bran in the Welsh legend. . . . The position of Huitzilopochtli as a war-god, guardian, and guide through the wilderness is perfectly established, and it is nearly as universally agreed that his name connects him with the humming-bird, which his statue wore on its left foot. He also carried a green bunch of plumage upon his head, shaped like the bill of a small bird. . . . The name of the patron goddess of the flower-wearers in feasts was Coatlicue or Coatlan, which is also the name of the mother of Huitzilopochtli; its meaning is 'serpent petticoated.' . . . Tezcatlipoca is a god with considerable pretensions to an abstract and lofty divinity. His appearance was not prepossessing; his image, as Bernal has described it, wore the head of a bear, and was covered with tiny mirrors. Various attributes, especially the mirror and a golden ear, showed him forth as the beholder of the conduct of men and the hearer of prayer. . . . Tezcatlipoca, like most of the other gods, revived, and came back from the sky to earth. At a place called Tulla he encoun-

tered another god or medicine-man, Quetzalcoatl, and their legends become inextricably entangled in tales of trickery, animal metamorphosis, and perhaps in vague memories of tribal migrations. . . . In Mexico the rain-god (Tlaloc, god of waters) was propitiated with sacrifices of children. 'If the children wept and shed abundant tears, they who carried them rejoiced, being convinced that rain would also be abundant.' The god of the maize, again (Cinteotl, son of the maize-goddess), had rites resembling those of the Greek Pyanopsis and Eiresione. . . . A less lovely set of Olympians than the Aztec gods it is difficult to conceive. Yet, making every allowance for Catholic after-thoughts, there can be no doubt that the prayers, penances, and confessions described at length by Sahagun indicate a firm Mexican belief that even these strange deities 'made for righteousness,' loved good, and, in this world and the next, punished evil."—A. Lang, *Myth, ritual and religion*, v. 2, pp. 68-70, 76-77, 79, 81.—"Another Mexican tribe, the Zuñis, furnishes the most striking example of totemism complicated by fetichism, or the fetich is the intermediary, the mediator between the Zuñi and his animal god. The Zuñis have also a cosmogony, a history of the creation of the world, and elaborate initiations or mysteries which have ever been compared with those of the Greeks."—S. Reinach, *Orpheus*, p. 159.—"The Incan Peruvians believed that all things emanated from Pachacamac, the all-pervading spirit, who provided the plants and animals (which they believed to be produced from the earth) with 'souls.' The earth itself they designated Pachacama (Earth Mother). Here we observe that Pachacamac was more the maker and moulder than the originator of matter, a view common to many American mythologies. . . . The world of visible things is thus Mamapacha (Earth-Mother), under which name the ancient Peruvians worshipped the earth. Pachacamac, on the other hand, is not the earth itself, the soil, but the spirit which animates all things that emerge therefrom. From him proceed the spirits of the plants and animals which come from the earth. Pachamama is the mother-spirit of the mountains, rocks, and plains, Pachacamac the father-spirit of the grain-bearing plants, animals, birds, and man. In some localities Pachacamac and Pachamama were worshipped as divine mates. . . . It is easy to see how such a conception as Pachacamac, the spirit of animated nature, would become one with the idea of a universal or even a partial creator. . . . Pachacamac was alternatively known as Pacharuar, the 'maker' of all things—sure proof of his amalgamation with the conception of the creative agency. As such he had his symbol in the great Coricancha at Cuzco, an oval plate of gold, suspended between those of the sun and the moon, and placed vertically, it may be hazarded with some probability, to represent in symbol that universal matrix from which emanated all things. Elsewhere in Cuzco the creator was represented by a stone statue in human form. . . . It cannot be too strongly emphasised that the cultures and mythologies of old Mexico and Peru were evolved without foreign assistance or intervention, that, in fact, they were distinctively and solely the fruit of American aboriginal thought evolved upon American soil."—L. Spence, *Myths of Mexico and Peru*, pp. 256-257, 303-304, 328.—See also INDIANS, AMERICAN; Cultural areas in Mexico and Central America; Maya area; MUSIC: Primitive; Mexico; PERU: 1200-1527.

Oceanic: Polynesian myths.—"In the beginning the gods dwelt in an upper sky-world, below which there was nothing but a wide-spread sea.

Into this a deity cast a stone, which ultimately became the world, where, after some of the heavenly beings had descended, mankind later appeared. For the fullest versions of this myth we must turn to Samoa, on the western verge of the Polynesian area. . . . The simple statement that the heavens and the earth, sun, moon, plants, and animals were all made or created by some deity is found in one form or other in every Polynesian group. . . . Of all the myths from the Polynesian area, probably none have been more frequently quoted than those which recount the deeds and adventures of the demigod Maui. Among the Polynesians themselves almost every group had its own versions of the tales, and the large number of variants, many of which have fortunately been recorded, make the Maui cycle one of the most important for the

one of which may be called Papuan, the other Melanesian. The former is best represented among the Kai tribes of the region north of Huon Gulf in German New Guinea, as well as by the Baining and Sulka of northern New Britain. . . . The Melanesian stratum on the other hand, is perhaps best developed in eastern Melanesia, *i. e.*, Santa Cruz, the Banks Islands, the New Hebrides, and Fiji."—*Ibid.*, pp. 122-123, 148.

Oceanic: Indonesian myths.—"In Indonesia itself, on the other hand, a larger number of distinct racial types are present, for we have here the Negrito, Indonesian, and Malay, as well as not inconsiderable elements from Semitic (Arabian) and Hindu sources. . . . Corresponding to the Maui cycle in Polynesia in universality, characteristic quality, and popularity, but differing entirely in type, are the Indonesian trickster tales centring about the mouse-deer (*kantjil* or *pelanduk*), the tarsier ape, or the tortoise. . . . In these tales or fables (for very many of them are indeed such) the mouse-deer usually plays the leading part in Borneo, Java, and Sumatra, as well as among the Malays of the Malay Peninsula; whereas in Celebes and Halmahera the same exploits are often attributed to the ape. Sundry other tales of a like character seem to be recorded only of the ape, and others again only of the tortoise. The order of the incidents varies considerably in different regions, although the series usually starts with a tricky exploit which rouses enmity and pursuit."—*Ibid.*, p. 153.

Oceanic: Australian myths.—"When we come to compare the Australian myths with those of the other portions of the Pacific area, one or two points seem to stand out clearly. Resemblances to Melanesia, both in general type and in specific details, are most marked in the southern and eastern portions of the continent. Only here, apparently, do we meet with such themes as the swan-maiden or the arrow-chain; and it is here that the animal stories are most abundant, and that we find cosmogonic tales referring to the creation of both the world and of man. . . . The tales which explain the origin of the individual habits, markings, or cries of animals and other living creatures are quite as typical, on the whole, for Australia as are the Maui myths for Polynesia, the wise and foolish brothers for Melanesia, or the trickster stories for Indonesia."—*Ibid.*, p. 302.

Roman.—Gods and goddesses.—Animism.—Fetiches.—Although the Romans adopted the gods and goddesses of Greece, there were certain divinities peculiar to Roman mythology. For example: "Saturn was an ancient Italian deity. It was attempted to identify him with the Grecian god Cronos, and fabled that after his dethronement by Jupiter he fled to Italy, where he reigned during what was called the Golden Age. In memory of his beneficent dominion, the feast of Saturnalia was held every year in the winter season. . . . Faunus, the grandson of Saturn, was worshipped as the god of fields and shepherds, and also as a prophetic god. His name in the plural, Fauns, expressed a class of gamesome deities, like the Satyrs of the Greeks. Quirinus was a war god, said to be no other than Romulus, the founder of Rome, exalted after his death to a place among the gods. Bellona, a war goddess. Terminus, the god of landmarks. His statue was a rude stone or post, set in the ground to mark the boundaries of fields. Pales, the goddess presiding over cattle and pastures. Pomona presided over fruit trees. Flora, the goddess of flowers. Lucina, the goddess of childbirth. Vesta (the Hestia of the Greeks) was a deity presiding over the public and private

MONOLITH FOUND ON EASTER ISLAND

study of this whole area."—R. B. Dixon, *Oceanic mythology*, pp. 18, 21, 41.

Oceanic: Melanesian myths.—"In contrast to Polynesia we find in Melanesia almost no signs of origin myths. With a few exceptions the Melanesians regard the earth as having always existed in the form in which it is today. One of these exceptions is the belief in a primeval sea which was co-extensive with the universal and out of which a sea serpent summoned the dry land. This belief is also found in Polynesia, Micronesia and Indonesia. Other myths of origin are the belief in the direct or indirect origin of man from birds, or clots of blood, or sprouts of sugar cane. . . . One of the most noteworthy features of Melanesian mythology is the prominence of tales relating either to two culture heroes, one of whom is, as a rule, wise and benevolent, while the other is foolish and malicious. . . . Many of the evil or harmful things in the world were the work of the foolish brother. . . . The material on the mythology of Melanesia, though incomplete and fragmentary, appears rather clearly to prove the existence of two distinct strata,

ODIN
(After statue by Rudolf Maison)

hearth. A sacred fire, tended by six virgin priestesses called Vestals, flamed in her temple. . . . Liber is the Latin name of Bacchus; and Mulciber of Vulcan. Janus was the porter of heaven. He opens the year, the first month being named after him. He is the guardian deity of gates, on which account he is commonly represented with two heads, because every door looks two ways. His temples at Rome were numerous. In war time the gates of the principal one were always open. In peace they were closed. . . . The Penates were the gods who were supposed to attend to the welfare and prosperity of the family. Their name is derived from Penus, the pantry, which was sacred to them. Every master of a family was the priest to the Penates of his own house. The Lares, or Lars, were also household gods, but differed from the Penates in being regarded as the deified spirits of mortals. The family Lars were held to be the souls of the ancestors, who watched over and protected their descendants. The words Lemur and Larva more nearly correspond to our word Ghost."

the Greeks, but their ideas as to the origin of the world and of another life. [See above: Grecian.] On this last subject they had certain popular conceptions which have survived to this day, Orcus, the devourer of corpses, perhaps a wolf originally, became the *orco* of the Italians, the *ogre* of our fairy-tales. The Roman Pluto, *Dis pater*, is represented with a mallet, wherewith to stun the dead, probably in imitation of the Etruscan Charon, who was rather an executioner than a ferryman."—S. Reinach, *Orpheus*, pp. 96-98, 101.

Scandinavian.—The great ash-tree, Ygdrasill, which sprung from the body of the frost-giant, Ymir, supports the universe. Its three immense roots extend into Asgard, dwelling of the gods; into Jotunheim, dwelling of the giants; and into Niffleheim, region of darkness and cold. By the root leading to Asgard sit the three Norns, or fates. The chief god is Odin; "Asgard is the name of the abode of the gods, access to which is only gained by crossing the bridge Bifrost (the rainbow). Asgard consists of golden and silver palaces, the dwell-

KING GORM'S STONE, WITH LATER RUNES
Jellinge, Jutland

—T. Bulfinch, *Mythology*, pp. 10-11.—"Italian animism is differentiated from that of the Greeks by an entire absence of imagination. Instead of Gods and goddesses, it created powers, *numina*, without genealogical connection or history. For us these are hardly more than names, the sterile exuberance of which is un instructive. Rome was all the more prepared to adopt the legends of the Greek gods, because she had so few of native growth. . . . Personifications such as Health, Fortune, Youth, belong to a class of genii without any legends, products of animism and of the tendency to abstraction. These are not altogether lacking in Greek mythology, but that of the Romans is positively overburdened with them. The reverses of coins struck under the Empire form a veritable museum of cold abstractions. A material object inhabited by a spirit is a fetich. Primitive Rome had fetiches instead of idols. A lance was the first image of the god of war, a flint that of Jupiter. . . . The mysterious object called the Palladium of Rome, which more or less resembled an armed Minerva (*Pallas*), was a fetich confided to the care of the vestals; later, a tradition grew up that it had been brought from Troy by Aeneas. . . . The Romans adopted not only the myths of

ings of the gods, but the most beautiful of these is Valhalla, the residence of Odin. When seated on his throne he overlooks all heaven and earth. Upon his shoulders are the ravens, Hugin and Munin, who fly every day over the whole world, and on their return report to him all they have seen and heard. At his feet lie his two wolves, Geri and Freki, to whom Odin gives all the meat that is set before him, for he himself stands in no need of food. Mead is for him both food and drink. He invented the Runic characters, and it is the business of the Norns to engrave the runes of fate upon a metal shield. . . . Valhalla is the great hall of Odin, wherein he feasts with his chosen heroes, all those who have fallen bravely in battle, for all who die a peaceful death are excluded. The Valkyrie are his messengers, and their name means 'Choosers of the slain.' When they ride forth on their errand, their armor sheds a strange flickering light, which flashes up over the northern skies, making what men call the 'Aurora Borealis,' or 'Northern Lights.' . . . The Valkyrie are warlike virgins, mounted upon horses and armed with helmets and spears. Odin, who is desirous to collect a great many heroes in Valhalla, to be able to meet the giants in a day when the final contest must

come, sends down to every battlefield to make choice of those who shall be slain. . . . Thor, the thunderer, Odin's eldest son, is the strongest of gods and men. . . . From Thor's name is derived our word Thursday. Frey is one of the most celebrated of the gods. He presides over rain and sunshine and all the fruits of the earth. His sister, Freya, is the most propitious of the goddesses. She loves music, spring, and flowers, and is particularly fond of the Elves (fairies). . . . Bragi is the god of poetry, and his song records the deeds of warriors. His wife, Iduna, keeps in a box the apples which the gods, when they feel old age approaching, have only to taste of to become young again. Heimdall is the watchman of the gods, and is therefore placed on the borders of heaven to prevent the giants from forcing their way over the bridge Bifrost (the rainbow). He requires less sleep than a bird, and sees by night as well as by day a hundred miles around him. So acute is his ear that no sound escapes him, for he can even hear the grass grow and the wool on a sheep's back. . . . There is another deity who is described as the calumniator of the gods and the contriver of all fraud and mischief. His name is Loki. He is handsome and well made, but of a very fickle mood and most evil disposition."—T. Bulfinch, *Mythology*, pp. 330-332.

Slavic.—Baltic myths.—"Extant data treat of the period immediately preceding the introduction of Christianity, when the Slavic nations, inhabiting a wide-spread region and already possessed of some degree of civilization, had made considerable progress from their primeval culture. Hence no inferences may be drawn from the mythology of one Slavic nation as to the religion of the Slavs as a whole. The most ample evidence, relatively speaking, is found regarding the religion of the Elbe Slavs, who adopted Christianity as late as the twelfth century. . . . The closest kindred of the Slavs are the Baltic peoples—the Prussians and Yatvyags (both long extinct), the Lithuanians, and the Letts. Their early history is unknown, but we have reason to believe that they are the Aestii of Tacitus and Jordanes; and two divisions of them, the Galindae and Sudeni, are mentioned by the geographer Ptolemy as living south of the Venedae, *i.e.*, the Slavs who were later driven from the Baltic shores. Like the Slavs, the Baltic peoples seem to have been part of the Aryan hordes of Sarmatians who formed a portion of the ethnological congeries somewhat vaguely termed Scythians; and since those Scythians with whom we are here concerned were very closely related to the Indo-Iranian race, in certain regards Baltic religion is strikingly similar to the Iranian, as it is set forth in our earliest documents. Arrived on the Baltic

coast, these peoples became subject, like so many other invaders, to the influences of the races whom they found settled there, this being especially marked in the case of the Letts, who, near neighbours of the Finno-Ugric Esthonians, received marked changes in their religion; while Scandinavian elements, from Norse sojourners and traders, must not be overlooked. The territory of the Baltic peoples stretched, roughly speaking, from the Vistula to the Dvina, and occupied approximately the districts now known as East Prussia, Courland, Kovno, Pakov, Vitebsk, Vilna, Suwalki, and Grodno, though the boundaries have fluctuated widely and have shown a constant tendency to contract. With the exception of the Lithuanians, who erected a considerable kingdom in the Middle Ages, only to share the unhappy fate of Poland, the Baltic peoples have played little part in history. In a backward of civilization, retaining in extraordinary measure the primitive forms of their tribal organization, their mode of life, their religion, and their language, they were no match for those who sought to subdue them, though they fared less hardly at the hands of the Slavs than at those of the Germans. If, then, we find a paucity of Baltic mythology, we are justified in assuming that it was destroyed by the oppressor. . . . In Russian and Slovak folk-tales the sun is represented as a ruler of twelve realms, or as served by twelve maidens, ever young and fair. The real destroyer of the tower was Perkunas, god of thunder and the chief Baltic deity; and in this connexion it may be noted that the Lithuanian name for a prehistoric celt is Perkuno kulka ('Perkunas's ball'), a term which, like Perkuno akmu ('Perkunas's stone'), is also applied to a belemnite. The parallel with the hammer of Thor in Eddic mythology at once suggests itself. The other myth is still briefer. Perkune Tete, 'mother of lightning and thunder,' we are told, receives at night the weary, dusty sun, whom she sends forth on the morrow, bathed and shining."—J. Machal, *Slavic mythology* (L. H. Gray, ed., *Mythology of all races*, v. 3, pp. 221, 317-319).

MYTILENE, island. See LESBOS.

MYTILENE, capital of the island of Lesbos in the Ægean sea, on a promontory in the southeastern part of the island. (See GREECE: Map of ancient Greece; TURKEY: Map of Asia Minor.) An important city of the Aeolian Greeks in ancient times; it revolted from Athens and was subdued in 427 B. C. See GREECE: B. C. 406; B. C. 420-427: Peloponnesian War: Phormio's sea-fights; ATHENS: B. C. 428-427.

N

NAARDEN, town in the province of North Holland, Netherlands, thirteen miles southeast of Amsterdam.

1572.—Massacre by Spaniards. See NETHERLANDS: 1572-1573.

1673.—Captured by William of Orange. See NETHERLANDS: 1672-1674.

NAASSENES, ancient sect of gnostics. See Gnostics.

NABAS, town in southeastern part of Southwest Africa. It was taken by the British in 1915. See WORLD WAR: 1915: VIII. Africa: a, 1.

NABATHEANS, or Nabatæns.—"Towards the seventh century B. C., the name Edomite sud-

denly disappears, and is used only by some of the Israelitish prophets, who, in doing so, follow ancient traditions. Instead of it is found the hitherto unknown word, Nabathean. Nevertheless the two names, Nabathean and Edomite, undoubtedly refer to the same people, dwelling in the same locality, possessing the same empire, with the same boundaries, and the same capital, Selah [Petra]. Whence arose this change of name? According to all appearances from an internal revolution, of which we have no record, a change in the royal race and in the dominant tribe."—F. Lenormant, *Manual of ancient history*, bk. 7, ch. 4.—"This remarkable nation [the Nabatheans, or Nabatæans] has often

been confounded with its eastern neighbours, the wandering Arabs, but it is more closely related to the Aramæan branch than to the proper children of Ishmael. This Aramæan or, according to the designation of the Occidentals, Syrian stock must have in very early times sent forth from its most ancient settlements about Babylon a colony, probably for the sake of trade, to the northern end of the Arabian gulf; these were the Nabatæans on the Sinaitic peninsula, between the gulf of Suez and Aila, in the region of Petra (Wadi Mousa). [See also SYRIA: B. C. 64-63.] In their ports the wares of the Mediterranean were exchanged for those of India; the great southern caravan route, which ran from Gaza to the mouth of the Euphrates and the Persian gulf, passed through the capital of the Nabatæans—Petra—whose still magnificent rock-palaces and rock-tones furnish clearer evidence of the Nabatæan civilization than does an almost extinct tradition.—T. Mommsen, *History of Rome*, bk. 5, ch. 4.—See also JEWS: B. C. 166-40.

ALSO IN: H. Ewald, *History of Israel*, v. 5, p. 351.

NABLUS, town in Palestine, thirty-three miles north of Jerusalem. The population in 1922 was estimated at 20,000. It is near the site of the ancient Shechem. It was attacked by the British in 1918. See WORLD WAR: 1918: VI. Turkish theater: e, 15.

NABOB, NAWAB, NAUWAB.—Under the Mogul empire, certain viceroys or governors of provinces bore the title of Nawab, as the Nawab Vizier or Wuzzer of Oude, which became in English speech Nabob, and acquired familiar use in England as a term applied to rich Anglo-Indians. It is also a title of honor given by the Mohammedans to their men of note.

NABONASSAR, king of Babylonia, 747-733 B. C. See CHRONOLOGY: Babylonian reform under Nabonassar.

NABONIDUS, king of Babylonia, 556-538 B. C. See BABYLONIA: Decline of the empire; Invasion by Cyrus the Persian; JEWS: B. C. 604-536.

NABOPOLASSAR, king of Babylonia, 625-605 B. C. Founder of the Chaldean empire. See ASSYRIA: Fall of the empire; BABYLONIA: Later empire; CHALDEA.

NABUCO, Joaquim (1840-1910), Brazilian diplomat and writer. Ambassador to England, 1901-1905, and to the United States, 1905-1910; president of the third international conference of American republics at Rio de Janeiro, 1906. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1906.

NACHTIGAL, Gustav (1834-1885), German explorer of central Africa. Imperial commissioner in West Africa, 1884; annexed Togoland and the Cameroons for Germany, 1884. See AFRICA: Modern European occupation: 1884-1889; CAMEROONS: Occupation by Germany.

NACIONALISTA PARTY, political organization in the Philippine islands. See PHILIPPINE ISLANDS: 1907.

NADIR SHAH, or Kuli (1688-1747), shah of Persia, 1736-1747. Invaded India, 1730. See BALUCHISTAN: 18th century; INDIA: 1662-1748; PERSIA: 1490-1887.

NAMAQUALAND, region of southwestern Africa, extending along the west coast for over 600 miles. It is now included in Southwest Africa. See SOUTHWEST AFRICA, PROTECTORATE OF.

NAMBUCO CHO PERIOD. See JAPAN: 1334-1574.

NAMUR, town in Belgium, the capital of the rich agricultural and mining province of the same name. (See NETHERLANDS: Map of the Netherlands and Belgium.) The city, built on a picturesque site at the junction of the Cambre with the Meuse, is an industrial center. In 1021, the population was 31,328 for whom iron and brass foundries, leather, glass cutlery and other manufactures provided employment. Namur dates from early medieval times; but probably the rocky promontory which stretches out between the two rivers, was a strong camp of the Belgæ before the Roman period. Don Juan of Austria made the city his headquarters in the sixteenth century, and late in the seventeenth century Vauban built a great fort on the promontory, after the place had been taken by the French.

1692.—Siege and capture by the French. See FRANCE: 1602.

1695.—Siege and recovery by William of Orange. See FRANCE: 1605-1606.

1713.—Ceded to Holland. See UTRECHT: 1712-1714; NETHERLANDS: 1713-1715.

1746-1748.—Taken by the French and ceded to Austria. See BELGIUM: 1740-1747.

1888.—Rebuilding of Vauban fort.—Vauban Fort was replaced by a modern fortress composed of encircling forts, nine in number, built on eleva-

tions at distances of from three to five miles from the city.

1914-1918.—World War.—In 1914 the forts were destroyed by the Germans, and Namur was held by them until 1918. It was the region of the German atrocities at the beginning of the war and the scene of the French offensive in 1918. See BELGIUM: 1914-1918: German occupation; WORLD WAR: 1914: I. Western front: e; m; 1918: II. Western front: x; Miscellaneous auxiliary services: X. Alleged atrocities, etc.; a, 3; a, 4.

NANA SAHIB (c. 1825-c. 1860), one of the leaders of the Sepoy mutiny in India in 1857. See INDIA: 1848-1856; 1857 (May-August); 1857-1858 (July-June).

NANAK, or Nanek (1469-1539), founder of the Hindu sect of Sikhs. See SIKHS.

NANCHO, branch of the imperial family in Japan during the fourteenth century. See JAPAN: B. C. 600-A. D. 1853.

NANCY, city of northeastern France. In 1921, the population was 113,226. It was besieged several times during the Middle Ages; Charles the Bold was defeated here by René II and lost his life, 1477. It was occupied by the French in 1552. From 1814 to 1815 it was occupied by the nations allied against Napoleon. See BURGUNDY: 1476-1477; FRANCE: 1547-1559; NETHERLANDS: 1473-1477.

NANKING, city of southeastern China. It is the capital of the province of Kiangsu and has long been famous for its porcelain and silk manufactures. It is an important literary and missionary center. The population in 1921 was 380,200.

1842.—Treaty ending the opium war and opening Chinese ports. See ASIA: 1500-1900; CHINA: 1830-1842; OPIUM PROBLEM: 1840.

1853-1864.—Capital of Taiping rebels. See CHINA: 1850-1864.

NANSEN, Fridtjof (1861-), Norwegian Arctic explorer, naturalist and diplomat. Led a North Pole expedition, 1893-1896; appointed ambassador to England, 1906; high commissioner of the League of Nations to act in its behalf in securing repatriation of prisoners of war in Russia and Central Europe, 1910; one of the commissioners in charge of famine relief in Russia, 1921. See ARCTIC EXPLORATION: 1867-1901; Chronological summary: 1888; 1893; 1896; 1900; Map of Arctic regions; SPITZBERGEN: 1906-1921; LEAGUE OF NATIONS: Achievements of the council; RUSSIA: 1910; INTERNATIONAL RELIEF: Russian famine relief.

NANSHAN, Battle of (1904). See JAPAN: 1902-1905.

NANTES, first city of Brittany, in western France on the Loire, capital of the department of Loire-Inférieure. (See BRITTANY: 818-912.) In 1921, it had a population of 183,704.

Origin of name. See VENETI OF WESTERN GAUL.

1598.—Edict of Henry IV. See FRANCE: 1598-1599.

1685.—Revocation of the edict. See FRANCE: 1681-1698; 1789: Survey of France on the eve of revolution: Résumé of causes.

1793.—Unsuccessful attack by the Vendéans.—Crushing of revolt and frightful vengeance of Terrorists.—Demoniac Carrier and his Noyades. See FRANCE: 1793 (July-December): Civil War; 1793-1794 (October-April).

NANTES, Edict of, edict issued by Henry IV of France, April 13, 1598. It ended the religious wars of the country by putting the Huguenots on an equality with the Catholics in political rights, but was revoked in 1685. See FRANCE: 1598-1599;

1681-1698; 1789: Survey of France on the eve of revolution: Résumé of causes.

NANTEUIL, town of France, in the department of the Seine and Marne, south of Chaumont-Thierry. It was captured by the Germans in 1914 and retaken by the French in 1918. See WORLD WAR: 1914: I. Western front: p; 1917; II. Western front: h, 1, ii.

NANTICOKES, tribe of North American Indians. See ALGONQUIAN FAMILY.

NANTUCKET, island in the Atlantic ocean, eighty-eight miles southeast of Boston. See AMERICA: Map of early colonial grants.

NANTWICH, Battle of. See ENGLAND: 1644 (January-July).

NAPATA, ancient Ethiopian capital. See ETHIOPIA.

NAPIER, John (1550-1617), Scotch mathematician. Invented logarithms. See SCIENCE: Middle Ages and the Renaissance.

NAPIER OF MAGDALA, Robert Cornelis, 1st Baron (1810-1890), British field marshal. Served in the Chinese War, 1860; commanded the expedition to free English captives in Abyssinia, 1868; appointed commander-in-chief in India, 1869. See ABYSSINIA: 1854-1889.

NAPLES, city in Italy, on the western coast, about 150 miles southeast of Rome. It was the capital of the former kingdom of Naples, and is now an important seaport. In 1921 the population numbered 780,220.—See also CITY PLANNING: Italy.

Origin of city. See NEAPOLIS AND PALÆPOLIS.

Schools.—In the first century of the Roman empire, "Neapolis [modern Naples] had its schools and colleges, as well as Athens; its society abounded in artists and men of letters, and it enjoyed among the Romans the title of the learned, which comprehended in their view the praise of elegance as well as knowledge."—C. Merivale, *History of the Romans*, ch. 40.

536-543.—Siege and capture by Belisarius.—Recovery by the Goths. See ROME: 535-553.

554-800.—Dukedom. See ROME: 554-800.

8th-9th centuries.—Duchy of Beneventum. See BENEVENTUM; AMALFI.

1000-1080.—Norman conquest.—Grant by pope as fief of the church. See ITALY (Southern): 1000-1090.

1127.—Union of Apulia with Sicily and formation of kingdom of Naples or the Two Sicilies. See ITALY: 1081-1194.

1183-1250.—Rule of Frederick II. See ITALY: 1183-1250.

1224.—University founded. See UNIVERSITIES AND COLLEGES: 890-1345; Other universities.

1282-1300.—Separation from Sicily.—Continuance as separate kingdom under House of Anjou.—Adhesion to name "Sicily." See ITALY (Southern): 1282-1300; TWO SICILIES, KINGDOM OF. 1312-1313.—Hostilities between King Robert and Emperor Henry VII. See ITALY: 1310-1313.

1313-1330.—King Robert's leadership of the Guelphs in Italy.—His part in wars of Tuscany.—Invitation to become lord of Florence. See ITALY: 1313-1330; FLORENCE: 1301-1313.

1343-1389.—Troubled reign of Joanna I.—Murder of her husband, Andrew of Hungary.—Political effects of the Great Schism in the church.—War of Charles of Durazzo and Louis of Anjou.—Interfering violence of Pope Urban VI. See ITALY (Southern): 1343-1389.

1386-1414.—Civil war between Durazzo and Angevin parties.—Success of Ladislas.—His capture, loss, and recapture of Rome. See ITALY (Southern): 1386-1414.

1414-1447.—Renewal of civil war.—Defeat of Angevins and acquisition of crown by Alfonso, king of Aragon and Sicily.—League with Florence and Venice against Milan.—War with the Visconti. See ITALY: 1412-1447.

1447-1454.—Claim of King Alfonso to duchy of Milan.—War with Milan and Florence. See MILAN: 1447-1454.

1451-1454.—Allied to Venice and Savoy against Florence and Milan. See MILAN: 1447-1454.

1458.—Separation of crown from those of Aragon and Sicily.—Left to an illegitimate son of Alfonso.—Revived French claims. See ITALY: 1447-1480.

1494-1496.—Invasion and temporary conquest by Charles VIII of France.—Retreat of the French.—Venetian acquisitions in Apulia. See ITALY: 1492-1494; 1494-1496; VENICE: 1494-1503.

1501-1504.—Perfidious treaty of partition between Louis XII of France and Ferdinand of Aragon.—Their joint conquest.—Their quarrel and war.—French expelled.—Spaniards in possession. See ITALY: 1501-1504.

1504-1506.—Relinquishment of French claims. See ITALY: 1504-1506.

1508-1509.—League of Cambrai against Venice. See VENICE: 1508-1509.

1528.—Siege by the French and successful defense. See ITALY: 1527-1529.

1528-1570.—Under Spanish viceroys.—Ravages of Turks along coast.—Blockade and peril of the city.—Revolt against the Inquisition.—Alva's repulse of the French. See ITALY (Southern); 1528-1570; FRANCE: 1547-1550.

1647-1654.—Revolt of Masaniello.—Under-takings of duke of Guise and the French. See ITALY: 1646-1654.

1713.—Kingdom ceded to House of Austria. See UTRECHT: 1712-1714.

1715.—Extent of territory. See EUROPE: Map of central Europe: 1715.

1734-1735.—Occupation by Spaniards.—Cession to Spain, with Sicily, forming a kingdom for Don Carlos, first of the Neapolitan Bourbons. See ITALY: 1715-1735; FRANCE: 1733-1735.

1742.—Neutrality of kingdom in the War of the Austrian Succession enforced by England. See ITALY: 1741-1743.

1744-1745.—War of the Austrian Succession.—Neutrality broken.—Allied with Spain and France against Austria. See ITALY: 1744; 1745.

1749-1792.—Under Spanish-Bourbon régime. See ITALY: 1749-1792.

1769.—Seizure of papal territory.—Demand for suppression of the Order of the Jesuits. See JESUITS: 1761-1766.

1793.—Joined in coalition against revolutionary France. See FRANCE: 1793 (March-September).

1796.—Armistice with Bonaparte.—Treaty of peace. See FRANCE: 1796 (April-October); (October).

1798-1799.—Attack of King Ferdinand IV upon the French at Rome.—His defeat and flight.—French occupation of the capital.—Creation of Parthenopean Republic. See FRANCE: 1798-1799 (August-April); AUSTRIA: 1798-1806.

1799.—Expulsion of the French.—Restoration of the king. See FRANCE: 1799 (August-December).

19th century.—Education legislation and reform. See EDUCATION: Modern: 19th century: Italy.

1800-1801.—King's assistance to the Allies.—Saved from Napoleon's vengeance by interces-

sion of Russian tsar.—Treaty of Foligno. See FRANCE: 1800-1801 (June-February).

1801.—Treaty of Florence with France. See FRANCE: 1800-1801 (June-February).

1803.—French occupation of Taranto, Brindisi and Otranto. See FRANCE: 1802-1804.

1805 (April).—Joined in third coalition against France. See FRANCE: 1805 (January-April).

1805-1806.—Napoleon's edict of dethronement against the king and queen.—Its enforcement by French arms.—Joseph Bonaparte made king of the Two Sicilies. See FRANCE: 1805-1806 (December-September).

1808.—Crown resigned by Joseph Bonaparte (now king of Spain), and conferred on Joachim Murat. See SPAIN: 1808 (May-September).

1808-1809.—Murat on the throne.—Expulsion of the English from Capri.—Popular discontent.—Rise of Carbonari.—Civil war in Calabria. See ITALY (Southern): 1808-1809.

1812.—Extent of empire in Europe.—Map of Napoleon's campaign. See EUROPE: Modern: Map of central Europe in 1812.

1814.—Desertion of Napoleon by Murat.—His treaty with the Allies. See ITALY: 1814.

1815.—Murat's attempt to head an Italian national movement.—His downfall and fate.—Restoration of the Bourbon Ferdinand. See ITALY (Southern): 1815; VIENNA, CONGRESS OF.

1815.—Accession to Holy Alliance. See HOLY ALLIANCE.

NAQSHBANDIYAH, Mohammedan religious order of dervishes. See DERVISHES.

NARA, or HEIJO, EPOCH. See JAPAN: 645-833.

NARBONNE, city of France, in the department of Aude, on the Canal de la Robine, five miles from the Mediterranean sea.

Founding of the city.—“In the year B. C. 118 it was proposed to settle a Roman colony in the south of France at Narbo (Narbonne). . . Narbo was an old native town which existed at least as early as the latter part of the sixth century before the Christian era. . . The possession of Narbo gave the Romans easy access to the fertile valley of the Garonne, and it was not long before they took and plundered Tolosa (Toulouse), which is on that river. . . Narbo also commanded the road into Spain.”—G. Long, *Decline of the Roman republic*, v. 1, ch. 22.—See also COMMERCE: Ancient: 200-600.

437.—Besieged by Goths. See GOTHS: 419-451.

719.—Capture and occupation by Moslems. See CALIPHATE: 715-732.

752-759.—Siege and recovery from Moslems. See CALIPHATE: 752-759.

NAREW, or Narev, river in Poland, flowing into the Bug, near Warsaw. Along its course are several strongly fortified cities which were captured from the Russians by the Germans in 1915. See WORLD WAR: 1914: II. Eastern front: c, 3; 1915: III. Eastern front: a, 6; g, 7; h, 1.

1907.—Surrender of charter and evasion of prohibition law. See **TENNESSEE**: 1887-1908.

NASI, title of the president of the Jewish Sanhedrin.

NASIR KHAN, ruler of Baluchistan, 1730-1795. See **BALUCHISTAN**: 1730-1795.

NASIR-UD-DIN, Nassir-ed-Din, or Nasr-ed-Din, (1831-1896), shah of Persia, 1848-1896. See **PERSIA**: 1896.

NASIR-UD-DIN-SABUKTIGIN, ruler of India, 977-997. See **INDIA**: 997-1290.

NASKAPI, North American Indian tribe. See **INDIANS, AMERICAN**: Cultural areas in North America: Mackenzie area.

NASRULLA KHAN (1875-), amir of Afghanistan, 1919. Sentenced to imprisonment for life because of complicity in the death of his brother, Habibullah, 1919. See **AFGHANISTAN**: 1919.

NASR-UL-MULK, prime minister of Persia. See **PERSIA**: 1908-1909.

NASSAU, Fort, fur trading post on the Hudson river below the present site of Albany. See **NEW YORK**: 1614-1621.

NASSAU, House of.—“We find an Otho, Count of Nassau, so long ago as the beginning of the 10th century, employed as general under the Emperor Henry I . . . in subduing a swarm of savage Hungarians, who for many years had infested Germany. . . . The same fortunate warrior had a principal hand afterwards in reducing the Vandals, Danes, Slavonians, Dalmatians, and Bohemians. Among the descendants of Otho of Nassau, Walram I and III more particularly distinguished themselves in the cause of the German emperors; the former under the victorious Otho I, the latter under Conrad II. It was to these faithful services of his progenitors that, in a great measure, were owing the large possessions of Henry, surnamed the Rich, third in descent from the last mentioned Walram, and grandfather to the brave but unhappy Emperor Adolphus [deposed and slain at the battle of Gelheim, in 1298 (see **GERMANY**: 1273-1308)]. The accession, by marriage, of Breda, Vianden, and other lordships in the Netherlands, gave the Nassaus such a weight in those provinces that John II of Nassau-Dillemburg, and his son Engelbert II, were both successively appointed governors of Brabant by the Sovereigns of that State [Charles the Bold, Duke of Burgundy, and his son-in-law, the Emperor Maximilian]. . . . The last, who was likewise honoured with the commission of Maximilian I's Lieutenant-General in the Low-Countries, immortalized his fame, at the same time that he secured his master's footing there, by the glorious victory of Guinegate [or Guinegate, or the 'Battle of the Spurs' (see **FRANCE**: 1513-1515)].”—J. Breval, *History of the house of Nassau*, pp. 2-3.—Engelbert II., dying childless, “was succeeded by his brother John, whose two sons, Henry and William of Nassau, divided the great inheritance after their father's death. William succeeded to the German estates, became a convert to Protestantism, and introduced the Reformation into his dominions. Henry, the eldest son, received the family possessions and titles in Luxembourg, Brabant, Flanders and Holland, and distinguished himself as much as his uncle Engelbert, in the service of the Burgundo-Austrian house. The confidential friend of Charles V., whose governor he had been in that Emperor's boyhood, he was ever his most efficient and reliable adherent. It was he whose influence placed the imperial crown upon the head of Charles. In 1515 he espoused Claudia de Chalons, sister of Prince Philibert of Orange, ‘in order,’ as he wrote to his father, ‘to be obedient to his imperial Majesty, to please the King of France, and more particularly for the sake of his own honor and profit.’ His son René de Nassau-Chalons succeeded Philibert. The little principality of Orange, so pleasantly situated between Provence and Dauphiny, but in such dangerous proximity to the seat of the ‘Babylonian captivity’ of the popes at Avignon, thus passed to the family of Nassau. The title was of high antiquity. Already in the reign of Charle-

magne, Guillaume au Court-Nez, or 'William with the Short Nose,' had defended the little town of Orange against the assaults of the Saracens. The interest and authority acquired in the demesnes thus preserved by his valor became extensive, and in process of time hereditary in his race. The principality became an absolute and free sovereignty, and had already descended, in defiance of the Salic law, through the three distinct families of Orange, Baux, and Chalons. In 1544, Prince René died at the Emperor's feet in the trenches of Saint Dizier. Having no legitimate children, he left all his titles and estates to his cousin-german, William of Nassau [the great statesman and soldier, afterwards known as William the Silent], son of his father's brother William, who thus at the age of eleven years became William the Ninth of Orange."—J. L. Motley, *Rise of the Dutch republic*, v. 1, pt. 2, ch. 1.—The Dutch branch of the House of Nassau is now represented by the royal family of Holland. The possessions of the German branch, in the Prussian province of Hesse-Nassau, after frequent partitioning, were finally gathered into a duchy, which Prussia extinguished and absorbed in 1866.—See also GERMANY: 1861-1866; 1866; Map; ORANGE; The principality; GUELDERLAND: 1070-1473; LUXEMBURG: 1780-1914.

NATAL, maritime province of the Union of South Africa (see SOUTH AFRICA, UNION OF). It has a seaboard of 360 miles on the Indian ocean. In 1844 it was annexed to Cape Colony but the next year it was allowed a separate government. It was made a distinct colony in 1856; the province of Zululand was annexed to it in 1897; and the districts of Vryheid, Utrecht, and part of Wakkerstroom in 1903. In 1921 the population was 1,420,398. See AFRICA: Modern European occupation: 1914-1920: Climatic conditions; Lack of railway and industrial development; ZULULAND.

Name. See SOUTH AFRICA, UNION OF: 1486-1806.

1763.—Ceded to England by Treaty of Paris. See SEVEN YEARS' WAR: Treaties which ended war.

1909.—Represented at imperial defense conference.—Naval program. See WAR, PREPARATION FOR: 1909: British imperial defense conference.

1910-1921.—Incorporated in Union of South Africa.—Part played in World War.—The colony became an original province of the Union, 1910. During the latter part of the World War Natal with the other provinces supplied the military forces necessary for its defense and the British troops were recalled. The forces of the province were demobilized in 1920. The Union's Army of Defense became responsible for the military administration of the Cape, and England's troops were permanently withdrawn in 1921.

NATCHESAN FAMILY.—When the French first entered the lower Mississippi valley, they found the Natchez [Na'htchi] occupying a region of country that now surrounds the city which bears their name. "By the persevering curiosity of Gallatin, it is established that the Natchez were distinguished from the tribes around them less by their customs and the degree of their civilization than by their language, which, as far as comparisons have been instituted, has no etymological affinity with any other whatever. Here again the imagination too readily invents theories; and the tradition has been widely received that the dominion of the Natchez once extended even to the Wabash. History knows them only as a feeble and inconsiderable nation, who in the 18th century attached themselves to the confederacy of the Creeks."—G. Bancroft, *History of the United States*, v. 2, p. 97.—"Chateaubriand, in his charming romances, and some of the early French writers, who often drew upon their fancy for their facts, have thrown an interest around the Natchez, as a semi-civilized and noble race, that has passed into history. We find no traces of civilization in their architecture, or in their social life and customs. Their religion was brutal and bloody, indicating an Aztec origin. They were perfidious and cruel, and if they were at all superior to the neighboring tribes it was probably due to the district they occupied—the most beautiful, healthy and productive in the valley of the Mississippi—and the influence of its attractions in substituting permanent for temporary occupation. The residence of the grand chief was merely a spacious cabin, of one apartment, with a mat of basket work for his bed and a log for his pillow. . . . Their government was an absolute despotism. The supreme chief was master of their labor, their property, and their lives. . . . The Natchez consisted exclusively of two classes—the Blood Royal and its connexions, and the common people, the Mich-i-mioki-quipe, or Stinkards. The two classes understood each other, but spoke a different dialect. Their customs of war, their treatment of prisoners, their ceremonies of marriage, their feasts and fasts, their sorceries and witchcraft, differed very little from other savages. Father Charlevoix, who visited Natchez in 1721, saw no evidences of civilization. Their villages consisted of a few cabins, or rather ovens, without windows and roofed with matting. The house of the Sun was larger, plastered with mud, and a narrow bench for a seat and bed—no other furniture in the mansion of this grand dignitary, who has been described by imaginative writers as the peer of Montezuma!"—J. F. H. Claiborne, *Mississippi*, v. 1, ch. 4.—In 1729, the Natchez, maddened by insolent oppressions, planned and executed a general massacre of the French within their territory. As a consequence, the tribe was virtually exterminated within the following two years.—Based on C. Gay-

arre, *Louisiana, its colonial history and romance, 2d series, lect. 3, 5*.—"The Na'htchi, according to Gallatin, a residue of the well-known nation of that name, came from the banks of the Mississippi, and joined the Creek less than one hundred years ago. The seashore from Mobile to the Mississippi was then inhabited by several small tribes, of which the Na'htchi was the principal. Before 1730 the tribe lived in the vicinity of Natchez, Miss., along St. Catherine Creek. After their dispersion by the French in 1730 most of the remainder joined the Chicasa and afterwards the Upper Creek. They are now in Creek and Cherokee Nations, Indian Territory. The linguistic relations of the language spoken by the Taensa tribe have long been in doubt, and it is possible they will ever remain so."—J. W. Powell, *Seventh Annual Report, Bureau of Ethnology*, p. 96.—See also LOUISIANA: 1719-1750; MUSKOGEEAN, OR MASKOKI, FAMILY; CHEROKEES.

NATIONAL CIVIC FEDERATION: Purpose and early history.—The Federation was organized in 1900 in Chicago. The executive committee was composed of Franklin MacVeagh, Archbishop Ireland, Samuel Gompers, John Mitchell, D. J. Keefe, John W. Stahl, and Benjamin Ide Wheeler. The prospectus, published at the time, stated the purpose of the organization to be as follows: "To

organize the best brains of the nation in an educational movement toward the solution of some of the great problems related to social and industrial progress; to provide for study and discussion of questions of national import; to aid thus in the crystallization of the most enlightened public opinion; and, when desirable, to promote legislation in accordance therewith." It was decided to take up for discussion, through national conferences, the three subjects of industrial arbitration, taxation and municipal ownership. The first conference, that on industrial arbitration, was held at Chicago, in December, 1900, and resulted in the organization of the Industrial Department, with A. C. Bartlett, of Chicago, chairman. In the following June a national conference on taxation was held in Buffalo, resulting in the formation of the Department on Taxation, with Edwin R. A. Seligman as chairman. It was the intention to hold the Conference on Municipal Ownership in New York the following December, but in the meantime a number of large strikes, especially the Steel Strike, the National Machinists' strike and a threatened Anthracite Coal Strike absorbed so much of the energy and attention of the active members of the Federation at that time that the Public Ownership Conference was postponed for the time being. Through the work done by the committee in connection with the coal and steel strikes, Senator Hanna became interested in the organization, and in December of that year was made President of the organization. His selection for that office, together with the appointment of other men of national reputation on the committee, attracted the attention of the country to the organization. For two years following that department was the only one prominent before the public, and its work in the prevention of strikes and lockouts was naturally regarded as the only purpose of the organization. The conferences held during this period were naturally confined to the subject of conciliation and collateral phases of the work. As national labor disturbances then became less frequent after two years of this special work the organization was able to resume its original programme, holding itself, however, in readiness to concentrate its energies on the industrial work at any time the need might arise. It was at this time that the national conference on immigration was called, and the Department of Immigration organized. After that a national commission on Municipal Ownership was formed, and by that time the public began to take interest in the broader aspects of the organization. Later came the establishment of the Industrial Economics Department, which has taken up some of the most important problems of the day, including Socialism and Trusts and Combinations. The holding of a national conference on Political Reform resulted in the organization of a department especially devoted to these subjects.—Based on *National Civic Federation Review*, Mar., 1909.

1907.—National conference at Chicago.—Action on trusts. See TRUSTS: United States: 1907: National conference; 1908-1909.

1913-1920.—Law plan proceedings.—The Civic Federation's plans of model laws were published in 1913. The next year, they drafted a bill for the regulation of public utilities. Pamphlets were printed by them in 1916, on the problems of federal, state, and industrial pensions, as well as the minimum wage law. In 1917 they organized the League for National Unity as a special branch to consider war policies. Their next efforts, in 1919, were studies on the laws of France, town planning and reparation of damages caused by the World War, and the labor situation in Great Britain and France. In

the document on profit-sharing by American employers, 1920, are examples of the same from their observations in England, as well as types in France.

NATIONAL DEFENSE, Council of, United States.—"Prior to the outbreak of the Great War, recognition was had of the need for some organ that should have as its function the formation of a general war programme and the correlation of the activities of the several branches of the Government for its execution, should the United States ever be called upon to engage in a conflict that would measurably tax its resources. To this end there was drafted as early as 1912 a bill providing for the creation of a body to be known as the Council of National Defense. . . . [It] provided for a body composed of *ex officio* members representing the two Houses of Congress, the President, and the War and Navy Departments. . . . As the possibility of the United States' being drawn into the war became progressively more apparent, this idea of a Council of National Defense was revived in a modified form and provision was made for its establishment by a clause inserted in the Army Appropriation Act of March 20, 1916. [See U.S.A.: 1917-1919: Effect of the war.] This Act provided for the creation of a body to be known as the Council of National Defense to consist of the six Secretaries—of War, the Navy, the Interior, Agriculture, Commerce, and Labor. [See WORLD WAR: 1917: VIII. United States and the war: i, 11.] . . . The Act made an immediate appropriation of \$200,000 for the support of the Council and its work. . . . Although the Act authorizing the establishment of the Council and the Advisory Commission [subordinate agency of the Council] was approved on August 20, 1916, it was not until October 11 of that year that the two bodies were formally organized. The Secretary of War was designated as Chairman of the Council, and Walter S. Gifford, Statistician of the American Telephone and Telegraph Company, was appointed Director. The Advisory Commission was constituted by the appointment of the following members: Daniel Willard, President of the Baltimore and Ohio Railroad Company; Hollis Godfrey, President of the Drexel Institute of Philadelphia; Howard E. Coffin, Vice-President of the Hudson Motor Company, of Detroit; Dr. Franklin H. Martin, President of the General American College of Surgeons of Chicago; Bernard M. Baruch, a banker of New York; Julius Rosenwald, President of Sears, Roebuck and Company, of Chicago; and Samuel Gompers, President of the American Federation of Labor, of Washington. . . . The chief service rendered by the Council, and particularly by its Advisory Commission, was that of furnishing the means through which the officers of the administrative Departments could get into immediate touch with the industrial interests of the country. . . . In a number of instances, notably in the case of the War Industries Board and the Commercial Economy Committee, the units originally established by the Council of

National Defense were taken over by the President and made independent agencies or integral parts of such agencies. . . . The Council became steadily more restricted until at the termination of hostilities it was playing a comparatively unimportant part in the general organization for the prosecution of war. In view of this the Council turned its attention to the consideration of the problems of reconstruction to be met after the war. . . . Of more immediate importance in respect to the work of reconstruction was the creation by the Council in February, 1919, of a new service known as the Reconstruction and Research Division of the Council. This Division . . . had as its prime purpose to act as a clearing house for information regarding reconstruction conditions and problems and the action being taken by the several branches of the Federal Government, the state governments, and other agencies for meeting these conditions and problems."—W. F. Willoughby, *Government organization in war time and after*, pp. 9-14, 17-18.—See also PRICE CONTROL: 1917-1919; RAILROADS: 1916-1920.

NATIONAL FARMERS' ALLIANCE, formerly a political party in the United States. "The National Farmers' Alliance was formed in 1880 when the Grange was in a weakened condition as a result of its political activity. It originated in Illinois; it was not secret; and its purpose was to unite the farmers for protection against class legislation. Each State organization was practically independent and consequently there was little upon which to build up a national union. 'Dakota, Missouri and New York were its outlying posts, within which the transportation question furnished a common bond.' Minnesota and Nebraska were its chief strongholds. This organization was commonly referred to as the 'Northern' Alliance. The most powerful of the organizations was the National Farmers' Alliance and Industrial Union, usually known as the 'Southern' Alliance. As early as 1875 an organization was formed in Texas. After an interval of inactivity it was revived in 1880, but in 1886 the breakup of this body seemed imminent. Through the efforts of . . . C. W. Macune correspondence was opened with the representatives of the National Farmers' Alliance and the Louisiana Farmers' Union. In January, 1887, internal differences were skillfully avoided by the proposal of a general movement for the 'organization of the cotton belt of America.' A fusion with the Louisiana Farmers' Union was arranged and the name of National Farmers' Alliance and Co-operative Union was adopted."—F. E. Haynes, *Third party movements since the Civil War*, pp. 228-229.—"The National Farmers' League was organized in 1890, with purposes mainly political. Its political order was as follows: to favor the issue of Treasury notes, Government loans to individuals, the increase of the circulating medium to \$50 per capita, free and unlimited coinage of silver, Government ownership and operation of railroads, election of Senators by popular vote, and an income tax; to oppose national banks, and alien ownership of land. At first it planned to graft itself on an existing party, but failing in this, a new political party was formed, combining with

the agricultural classes the various labor classes of the cities. This party, the Peoples' or Populist, . . . has had conventions and candidates since 1892."—*Cyclopedia of American government*, v. 1, p. 711.—The Alliance ceased to be a political party but has continued as an agricultural organization.—See also KANSAS: 1880-1890; NEBRASKA: 1874-1880; NORTH DAKOTA: 1892-1896; NORTH CAROLINA: 1870-1892; U.S.A.: 1866-1877.

NATIONAL GUARD.—French military system under municipal control, which existed from 1789 to 1871. As an organization for local defense it had long existed in many French towns but was not introduced into Paris until 1789. It was then called the Garde Bourgeois, as it was composed almost entirely of bourgeois volunteers. It was to maintain order at home, but might be used for the defense of the country against foreign invasion, in which case all able bodied male citizens between the ages of sixteen and twenty-one might be called. As a result of the insurrection in Paris (1789), caused by Louis XVI's refusal to comply with the request of the assembly to withdraw the troops and to authorize the formation of a civic guard in Paris Lafayette was appointed general of the citizen-militia and hastened to organize that body under the name of the National Guard. In a short time there were 300,000 men enrolled. "At the head of this force Lafayette struggled for two years to preserve public tranquillity and to enforce the laws decreed by the Assembly. . . . It required the utmost exertions of Lafayette to restrain the constant turmoil of the masses; . . . he only succeeded at all in doing so by having the National Guard on continual patrols."—T. Wright, *History of France*, p. 462.—The National Guard was very vacillating in its party adherence. Loyal to the king at the beginning, it later became a devoted follower of Robespierre. It was abolished by the government in 1827, but reorganized in 1830, when Lafayette was again commander by order of Louis Philippe. It formed an important part of the armed force of the kingdom, but in the Revolution of the 24th of February, 1848, "to a shot fired upon the Guard of the Foreign Office, the troops answered by a volley which cut down fifty inoffensive bystanders. . . . At the sight of their bodies . . . the people of the faubourgs flew to arms. . . . In the riot that arose the National Guard did nothing. Revolution followed, . . . [and Louis Philippe abdicated]."—Duruy, *History of France*, pp. 560, 562, 564.—They were dissolved in 1851, reorganized in 1855, served against the Germans in the War of 1870-1871, and later in 1871 took part in the Communist struggle. After a succession of changes the Guard was superseded by the military organization of 1870.—See also FRANCE: 1789 (July); (October); 1791 (July-September); 1792 (June-August); 1795 (October-December).

NATIONAL GUARD, United States.—"Prior to 1903 there existed, in the various states, and as a part of the military system of the United States, a loosely controlled force variously known as 'The National Guard,' 'The State Militia,' or more properly as 'The organized militia.' Membership in this organization was voluntary and without pay. The men were bound only by the terms of a rather lax enlistment period of three years. Each state controlled its own forces and governed them in accordance with the provisions of its own Constitution. In 1903 came Federal supervision and oversight through the agency of the Dick bill passed by Congress. . . . While The National Defense Act of June 3, 1916, is a distinct advance from the scheme as laid down under the Dick bill, it carries along some of the defects of that meas-

ure and helps to perpetuate the faulty National Guard system. . . . The National Guard is now required to conform to the standards of the Regular Army in physical qualifications and discipline, which includes training and drill. . . . The enlistment period has been increased from three years to six years. Three years of this 'shall be in an active organization,' and the remaining three years 'in the National Guard reserve'—Should he [the guardsman] join prior to the calling out of the guard by the President, his obligation is to the State and his status is that of a National Guardsman not in the active service of the United States. Upon the call of the President his status automatically changes, and his obligation is then not to the State, but to the Federal government. He, in other words, becomes a National Guardsman in the active service of the United States, and as such he is subject to 'such laws . . . as may be applicable to members of the (Regular and) Volunteer Army.'"—*National guard, its status and its defects (Review of Reviews, Aug., 1916)*.—See also WORLD WAR: 1917: VIII. NATIONAL RESEARCH COUNCIL.—"The National Research Council is a cooperative organization of the scientific men of America. . . . It is established under the auspices of the National

Academy of Sciences and enjoys the coöperation of most of the major scientific and technical societies of the country, its membership being largely composed of appointed representatives of forty or more of these societies. The Council was organized in 1916 to coordinate the research facilities of the country for work on war problems, and in 1918, by executive order of the President of the United States, it was reorganized as a permanent body. Its essential purpose is the promotion of scientific research and of the application and dissemination of scientific knowledge for the benefit of the national strength and well-being. In the character of its organization and support it differs materially from other similarly-named organizations which have been established in recent years in several other countries, notably England, Canada, Australia, Japan, and Italy. These organizations are all government-supported and to some extent government-controlled. The American National Research Council, is now [1920] entirely supported from other than governmental sources, and is . . . controlled by its own chosen officers.

. . . It is composed of a series of major divisions arranged in two groups. One group comprises seven divisions of science and technology. The other group comprises six divisions of general relations, representing foreign, government, states, and educational relations, research extension, and research information. The Council maintains two series of publications, one called *Bulletins*, the other *Reprints and Circulars*, and the publication of the *Proceedings of the National Academy of Sciences*. . . The financial support of the administrative work of the Council is assured by a gift of five million dollars recently made by the Carnegie Corporation. Part of this gift is to be devoted to the erection of a suitable building in Washington for the joint use of the Council and the National Academy of Sciences, and the rest is to serve as an endowment for the Council."—V. NATIONALISM AND INTERNATIONALISM: Nationalism defined.—"Nationalism is an organization of people living the same intellectual and moral life, economic and social, civil and political. Therefore it is accomplished with the naturalization of the ideas and costumes of the diverse popular masses, educating and co-ordinating these ideas and varied social habits in the heterogeneous ethnical groups, in order to establish a vital tie of organic life with uniformity of political laws. And inasmuch as the different ethnical groups . . . and relations can only unite themselves politically in

the camp of Democracy, therefore it is logical that Nationalism is only possible through the applications, development and synthesis of the Democratic principles."—L. Di Berardino, *Nationalism of the new democracy*, p. 5.—"Probably no word has been spoken more often in the political discussions of recent years than the word 'nation' or 'nationality.' No principle has been more frequently referred to by all sides in arguing for right and wrong than that each nation is entitled to settle its own affairs. One may assert that there has been many a declaration of independence for nationalities that corresponds to the American Declaration of Independence for the individual, that each nation has a right to life, liberty, and the pursuit of happiness in its own right just as the individual American claimed that right for himself. We are assured over and over again that the next peace must be based upon the principle of nationality. This means apparently that each nation, however small, must be permitted to manage its own affairs, without interference from any outside nation. All of these discussions presuppose an agreement as to what a nation is and the existence of definite criteria for deciding conflicting claims between peoples that believe a group of people to belong to its own rather than to another nation. That these criteria are not altogether clear in different cases is evident from numerous discussions. Both France and Germany claim Alsace and Lorraine, one on the basis of language and the desire of the inhabitants, the other on the ground of formal connection earlier in history, and community of race. In Ireland the same dispute exists in another form. Are the Orangemen to be regarded as Irish when they prefer to be English, or shall they determine their own affiliations? Here the question is different since it turns on whether a discordant element in a community is to be regarded as part of the community or as independent. The problem of criteria presents itself at many points on the borders between the central and eastern and southeastern peoples. Are the inhabitants of the Dalmatian Islands Italian because they speak the language and because their land formed part of the Roman and, later, part of the Venetian Empire? Are the people of Dobrudja Roumanians or Bulgarians? Is the Macedonian, Serb or Greek or Bulgarian? Are Little Russians really Russian or are they a separate people because of their different religion and slightly different language? These and many similar problems must be settled before the world can be properly partitioned and made safe for democracy or guaranteed a permanent peace. But before any one of them can be solved or even given a basis for adequate discussion, we must decide what a nation is and discover suitable criteria of nationality."—W. B. Pillsbury, *Psychology of nationality and internationalism*, pp. 1-3.—No true historian would minimize the sufferings which have often been endured by "submerged nationalities." But whether the status of the individual citizen or the group as a whole is materially improved by emergence as a nation may sometimes be doubted, in view of recent experiences. "The Balkan states . . . are all and several still in the pickpocket stage of dynastic statemaking, comparable with the state of Prussia before 'Frederick the Great Pickpocket' came to the throne. And now . . . Czechs, Slovaks, Slovenes, Ruthenians, Ukrainians, Croats, Poles and Polaks are breathlessly elbowing their way into line with these minuscular Machiavellians. Quite unchastened by their aching experience in adversity they are all alike clamoring for national establishments stocked up with all the time-tried contrivances for discomfort and defeat. With one

hand they are making frantic gestures of distress for an 'outlet to the sea' by means of which to escape obstruction of their overseas trade route by their nationally minded neighbors, while with the other hand they are feverishly at work to contrive a customs frontier of their own, together with other devices for obstructing their neighbors' trade and their own, so soon as they shall have any trade to obstruct. Such is the force of habit and tradition. In other words, these peoples are aiming to become nations in full standing."—T. Veblen, *Modern point of view and the new order* (*Dial*, Jan. 11, 1919, p. 21).

Chief source of imperialism. See EUROPE: Modern: Imperialism.

Cause of war. See WORLD WAR: Causes: Indirect: c.

Patriotism in ancient world.—Medieval feudal groups.—"The first records of emotions which may properly be called national are to be found in the Old Testament. The twelve confederated tribes of Israel (or at least what was left of them after the exile) in Judea and the diaspora possessed a lively and varied conviction of common interests, a common origin, and a glorious future. The Greek towns and their colonies, scattered as they were, had not only their local patriotism, but a general feeling of superiority and a certain theoretical solidarity indicated by the comprehensive name Hellenes. Of the love of country the Roman writers have much to say. Cicero declares that of all social bonds those that unite each of us with the commonwealth are the dearest and strongest. 'Parents are dear, children are dear, as are our relatives and friends; but our fatherland embraces in itself all our love for every one' (*De officiis*, I, xvii, 57). The writings of the Stoics, together with some passages in the later Hebrew prophets, afford us the earliest conscious protests against patriotism. The vast extension of the Roman Empire and the incoming of cosmopolitan religions, such as Mithraism, proselyting Judaism, Neoplatonism, and Christianity, must have undermined the older patriotism which had grown up in the city states, for this could not fail to suffer from the rivalry of these more inclusive competing loyalties. The Middle Ages had their special group loyalties, corresponding to the manor and the monastery, the commune and the guild, together with the supreme mystical entity of the Holy Catholic Church. The shifting feudal combinations and the weakness of the kings must have left little scope for anything corresponding to modern national feeling."—J. H. Robinson, *What is national spirit* (*Century Magazine*, Nov., 1916, p. 59-60).—See also EUROPE: Middle Ages: Political background; Background of Protestant Reformation.

Rise of the nation as an organic unit.—"Nationality, though a word to-day in common employment, is not to be found in Johnson's two folios of 1755, where you will only discover *Nation* and *National*, the latter being defined as 'bigotted to one's own country.' . . . But if you consult the New English Dictionary, 1905, you will find that eleven columns are devoted to this root and its various derivatives, which are now 'in widest commonality spread.' . . . The problem, vexed and troublesome as it is, of rival nationalities is in Europe a modern trouble. Lord Acton, in an illuminating, though, as indeed his work is apt to be, toughish, discourse on Nationality, contributed fifty-seven years ago to the *Home and Foreign Review*, and now to be studied in that volume of his essays called *The History of Freedom and other Essays*, wrote as follows:—"In the

old European system the rights of nationalities were neither recognised by governments nor asserted by the people. The interest of the reigning families, not those of the nations, regulated the frontiers; and the administration was conducted generally without any reference to the popular desires. Where all liberties were suppressed, the claims of national independence were necessarily ignored, and a princess, in the words of Fénelon, carried a monarchy in her wedding portion. The eighteenth century acquiesced in this oblivion of corporate rights on the Continent, for (*mark these words: much turns on them*) the Absolutists cared only for the *State*, and the Liberals only for the individual. The Church, the nobles, and the nation had no place in the popular theories of the age, and they devised none in their own defence, for they were not before the Revolution openly attacked. The aristocracy retained its privileges and the Church her property, and the dynastic interest which overruled the natural inclination of the nations and destroyed their independence, nevertheless maintained their integrity. The national sentiment was not wounded in its most sensitive part. . . . In time of war, as there was no national cause at stake, there was no attempt to arouse national feeling. . . . The art of war became a slow and learned game. The monarchies were linked not only by a natural community of interests, but by family alliances. A marriage contract sometimes became the signal for an interminable war, whilst family connections often set a barrier to ambition. After the Wars of Religion came to an end at the peace of Westphalia in 1648, the only wars were those which were waged for an inheritance or dependency, or against countries whose systems of government exempted them from the common law of dynastic States. . . . Those countries were England and Holland."

—*Nationality and the League of Nations* (*Contemporary Review*, Sept., 1919, pp. 241-243).—When the new nations did begin to appear, they took a slightly different character from those of ancient times. (See EUROPE: Modern: Rise of nation-state, etc.) The modern nation always began as a combination to resist oppression, and to establish ideals. In the ancient nationalism the nation grew first and the ideals came later, while in the modern nationality, the ideals were first and the nation emerged later to make those ideals staple. When the ancient civilizations fell as such, the ideals still lived on, they were sustained by many people, and when severe troubles became too great, the old ideals were revived to form the foundation of new organizations and to warrant organized uprisings. Almost all of the very modern states are the incorporations of these ideals, although they alone did not create the state until some urgency forced the group to realize their existence. Occasionally some of the cities in Italy advanced towards ideals, although they were more fully carried out by Switzerland, and the Netherlands in the sixteenth century. "England . . . had a gradually increasing consciousness of being a distinct people from a very early time. . . . It developed gradually and never had occasion to burst forth in any single expression. . . . It increased during periods of external conflict and was subordinated to class and religious allegiances during periods of internal strife. . . . The development of Nationalism in England is particularly important, [for there] . . . resistance to an aggressor or oppressor have been singularly lacking. . . . It gives evidence that the spirit of Nationality may develop to the full in a people who have usually been moved by a desire to co-operate by the sym-

pathetic instincts rather than by the more active protective or aggressive impulses. . . . In France, loyalty to the nation as a whole has alternated with adherence to the local group. . . . At times, as when Jeanne d'Arc stirred the nation, the National spirit is brought to the fore. On the whole, however, in medieval and modern France to the death of Louis XIV, the consciousness of unity is a common dependence on the reigning family. . . . In Germany the problem is still more difficult and the situation varies from time to time. The personal allegiance is . . . the most important element. . . . In neither Germany nor Italy was there a nation in the sense that we find one in Switzerland, in Holland and in England. . . . Not until the latter part of the eighteenth century . . . [do] we first find full recognition of the nation as an organic unit. . . . Patrick Henry . . . proclaimed the beginning of the New American Nationalism by saying 'I am not a Virginian, but I am an American.'—L. Di Berardino, *Nationalism of the new democracy*, pp. 3-5.

Development of international idea.—Meaning of term.—"Internationalism does not appear as a distinct phenomenon earlier than the nineteenth century. Throughout the historic period there have been various manifestations of the coöperative spirit. Some have seen adumbrations of internationalism in such gatherings as the Amphictyonic Council of Greece, the ecumenical councils of the Christian Church and the Crusades. But a little reflection upon the nature and objects of these gatherings will show that they have few of the elements of internationalism. There could be no internationalism until there were nations in the modern sense of the word. During the Middle Ages there was, under the ægis of the Catholic Church, a kind of imperial unity, which bound the various peoples of Europe together. The articles of religious faith and practice were prescribed for all and enforced by means of a complete hierarchical system. Latin, which was the language of the church, the universities and the courts, enabled the educated men of Italy, France, Germany and England to communicate freely. The feudal system, by preventing the centralization of civil authority, contributed to the imperialism of the church. . . . The seed-bed of internationalism was a group of nations in Western Europe 'growing side by side, and too nearly equal in power for any one of them to hope to maintain supremacy over any other.' . . . Here there grew up in the sixteenth and seventeenth centuries what might be termed concurrent nationalism, that is, a neighborhood of states nearly equal in power. . . . Under the influence of the nationalistic spirit commerce came to be regarded as an affair of the state and subject to its directing hand. . . . The nationalistic spirit found expression in the economic doctrine of the day which was that what one nation gained in international trade, the other lost. National development at the expense of one's neighbor was the principle of the mercantilist school of economists. But the physiocrats of France took a broader view of the situation. They saw that government restrictions were hindering that free outlet of products which would result in increased national prosperity. They wanted less paternalism and a greater freedom for capital. Their doctrine of *laissez faire* exercised a great influence over Adam Smith and the classical school of English economists who advocated greater liberty in international trade and prepared the way for those freer relations which the nations enjoy today."—J. C. Faries, *Rise of internationalism*, pp. 18-21.—"For good or evil, the

modern world is a large-scale world, and its most characteristic features connected with finance, industry, and commerce, are to a great extent international. Science, art, philanthropy, literature—even sport—are now fast assuming an international character. Never before have the communities and races of men met and mingled together as they are meeting and mingling today. The modern world is essentially international. Internationalism is as inevitable as gravitation. Side by side with internationalism we have nationalism. . . . The road to sound internationalism lies through a healthy nationalism. . . . Today we are actually witnessing these two principles, nationalism and internationalism, in active ferment. . . . A right understanding of the meaning and value of Nationality is an indispensable preliminary to any attempt at a solution of the international situation."—Takashi Hara, *Through nationalism to internationalism* (*Outlook*, June 16, 1920).—"Internationalism is the embodiment of a new conception of the advantages of rational coöperation in the whole field of human endeavor. It shows how men tend to act when the human understanding is freed from the shackles of narrow provincialism and grasps the possibility of a practical world unity . . . the coöperation between governments or their citizens, which tends to coördinate their efforts toward material or moral betterment in the interests of the whole social order. . . . Internationalism seeks the coördination of effort of every group, no matter what its 'interest may be; . . . it is the carrying over into the world field of the efforts of the local or national group, . . . a socializing process tending to establish social equilibrium in the race. Internationalism is a modern social phenomenon whose rise comes largely within the last fifty years. . . . It is not true to say that there was no progress in the development of a common organization for Europe, even in the period before the French revolution. Governments had acquired the habit of holding frequent consultations over questions affecting common interests; and if they had not yet succeeded in maintaining peace for even a consecutive period of ten years during three centuries, at least they were increasingly desirous of doing so, and more than once expressed the pious hope that their latest territorial adjustment might lead to permanent peace by being accepted as 'part of the public law of Europe.' The work of Grotius and his successors had in a quite remarkable way endowed Europe with an accepted body of international law. . . . There was a succession of schemes for the creation of a central European authority, all of which came to nothing, but each of which marked an advance upon its predecessor in its realization of the essential elements of the problem. Europe was ready to welcome the serious attempt at confederation with which the Nineteenth Century opened."—R. Muir, *Nationalism and internationalism*, pp. 153-154.—See also INTERNATIONAL LAW: Grotius and the early jurists; 1648-1714; 1713-1800; LEAGUE OF NATIONS: Former projects; ALX-LA-CHAPELLE: Congresses; 3.

Rise of Internationalism.—"The first great international congress was the Congress of Vienna in 1815. It was called together to restore the equilibrium of Europe. . . . The congress is interesting as showing the forces of an old and a new order in conflict. . . . It fell to England to hold the first [1851] of a long series of world's fairs which have done much toward bringing together the men of different nations in such a way that their national egotism has been modified, and their admiration of the skill of others has been aroused. . . . At the second Paris Exposition in

1867, a new feature was introduced. . . . M. Le Play whose interest in the social conditions of the working classes had led him to make one of the earliest attempts at a scientific study of the standard of living . . . [attempted] to bring together in conference during the exposition, those interested in the material, intellectual and moral welfare of mankind. . . . The chief aim of the international exposition at Vienna, in 1873, was to collect examples of every human industry, showing how the producers themselves lived and worked. . . . In connection with the Paris Exposition of 1878 an definite attempt was made to stimulate the meeting of international congresses on various subjects and the success was such as to warrant the establishment of a policy which has continued through succeeding fairs. . . . The French government issued invitations to the nations of the world to participate in an international exposition in 1889. . . . There were fifteen divisions, embracing belle lettres, beaux-arts, history and archæology, mathematics, physical and chemical science, natural science, geography, political economy and legislation, hygiene, social economy, education, civil engineering and public work, agriculture, industry and commerce. During this exposition sixty-nine international Congresses were held. . . . The world's Columbian Exposition in Chicago . . . 1893 . . . [planned] for a more widely representative assemblage of statesmen, jurists, financiers, scientists, literati, teachers and theologians than had ever yet been convened. [It was called The World's Auxiliary Congress.] . . . [At the] Paris Exposition of 1900 we find the fullest expansion of the international Congress as an adjunct of the World's fair. . . . At the Louisiana Purchase Exposition in St. Louis, 1904, a different plan of congresses was adopted. . . . The whole realm of human knowledge and activity was reviewed under the following classification: (1) Normative Science, (2) Historical Science, (3) Physical Science, (4) Mental Science, (5) Utilitarian Sciences, (6) Social Regulation, (7) Social Culture. [These were divided into 128 sections.] . . . There were two addresses in each of the 128 sections followed by ten-minute papers, the speakers were chosen equally from American and European scientists and experts. It will thus be seen . . . that the World's fairs . . . have stimulated the rise of internationalism."—J. C. Faries, *Rise of internationalism*, pp. 28, 32, 38-39, 41-42.—"At the present time, a world, shocked by the tragic spectacle of the late [World War], has formally adopted the general aims of internationalism. The right of small nations to determine their own destiny within wide limits is universally conceded; the principle that the policies of large races should be subordinated to the common welfare of the entire human race is vigorously upheld. . . . Yet side by side with such phenomena there is going on a significant intensification of nationalistic values and a correlative acceleration of those processes which inevitably bring nations face to face with the tragic necessity of choosing between dishonor and war."—G. V. Kracht, *Fundamental issue between nationalism and internationalism*, (*International Journal of Ethics*, Apr., 1920).—Since 1918 "the nationalist tendencies which had controlled Europe's political development in the Nineteenth Century were in no way checked by the derangements of the war. On the contrary, they were intensified, in spite of an idealistic effort at the peace conference to restrain nationalist energies and acquisitiveness by freezing national boundaries and creating an international police power. . . . The peace makers at Paris constructed a new interna-

tional organism—the League of Nations. But the treaties left Europe more intensely nationalised than ever."—J. H. Rose, *Development of the European nations*, pp. 399, 420.—"Any effective League of Nations must necessarily curtail national sovereignty. Kant perceived and faced the difficulty more than a century ago; nor did he shrink from the logical conclusion. 'There can be, according to reason, no other way of advancing from the lawless conditions which war implies than by States yielding up their savage lawless freedom, just as individuals have done, and yielding to the coercion of law.' He argues, in effect, that among States, as among individuals, the larger and truer liberty can be secured only by a curtailment of that lawless licence which he declared to be 'the negation of civilization and the brutal degradation of humanity.' To imagine that there can be a League of Nations without some curtailment of national sovereignty is not only to nourish an immediate delusion but to lay up for the future inevitable disappointment."—J. A. R. Marriott, *European commonwealth*, p. 367.

Internationalism vs. national sovereignty.—"I would not in the least minimize the difficulties attendant upon the successful working of an international order. . . . Questions of justice, of proper balance, true representation, the protection of national rights, the enforcement of decrees, etc., all remain for solution and settlement. But what I would maintain is, that, great as these are, they do not constitute the real barrier in the way. . . . The obstacle is from within; the sense of impracticability, of visionariness, into which we allow ourselves to be discouraged, is due to causes which lie beyond the mere structural problem. *There exists a feeling, or, better, a feeling-complex against international organization.* People say they wish it, and with the upper fringe of their intellect they really may approve of it, but emotionally they repudiate it. They are carried forward by reason and humanitarian ideals, and then drawn back and down by a feeling-undertow . . . of resistance to giving up the nation's *absolute* right to determine its course as seems best to itself. That undertow of feeling makes itself manifest at every proposal to do away with the old system of armaments and balance of power; it . . . makes itself felt even when the most internationally minded ministers are at the helm. There are always reservatory clauses in the treaties they make. We will arbitrate everything excepting honor. We will arbitrate everything excepting the Monroe Doctrine (or whatever the Doctrine may be of the particular nation in question). We can not abandon certain absolute rights. We can not give up the nation's sovereignty. Every overt attempt at a practical inauguration of an international organization has met with an undertow of resistance of this kind. . . . The great enemy of the nation today is the war-system. International organization is not only compatible with nationalism, but is today the sole salvation of the nation from the new terrible internationalism of the modern system of war. The relation of war to the group, its protective value in the past, has under modern conditions been completely transformed. What the group once may have had to fear from the alien enemy,—death of its manhood, spoliation of its treasure, control of its economic resources, the suppression of its individuality,—that the modern nation has to fear from the modern imperialism of war. *But while all these changes in group-relations and in the meaning of war have been effected, patriotism or group-passion has remained unchanged.* . . . The great barrier, the key-barrier,

of the psychological impasse toward internationalism is not the instinctive passion of group-love in itself, as many have believed, but survival-ideas, old meanings now false, with which group-love has been firmly associated. Hence the need, the supreme need, of the age is the redefinition of nationalistic ends. . . . The sovereignty of the state means that the state is an ultimate and absolute source of judgment, that it is the supreme arbiter of what it shall do and not do. . . . Now the real freedom of the group, which alone defines its positive end, is, just as in the case of the individual, the freedom for the full development of capacities and potencies. The positive end of the nation, and so the true ideal of nationalistic policy, will then be the freest development of the group along the line of its peculiar individuality, its characteristic genius. This and this alone a true nationalistic policy should be bent upon making possible. And amongst the basic conditions which make a nation's life possible is certainly self-determination. Full and untrammelled freedom for the unfolding of the various capacities of the group, as the absolutely necessary condition for such unfolding, is thus assuredly an indispensable, a supreme group-good. Such freedom of self-determination we call autonomy, and the freedom-value that autonomy represents is vital to the state. But sovereignty is something more; sovereignty goes far beyond the claim for self-determination. . . . A nation's autonomy is violated only when it is forced to yield to caprice; autonomy is quite compatible with yielding to law and reason. But a nation's sovereignty means its absolute independence of any law or reason but its own. That is, any infringement whatsoever of this absolute independence of the state, any yielding to a superior law, is a violation of the state's philosophical meaning. What kind of vicarious emotional satisfaction such an attribute can afford to the members of the state, we will not undertake to say. Certainly it represents nothing beyond that, it stands for no life-value, for no positive value of any kind; and what is more, its direct and inevitable implication is the war-system."—H. Slo-nimsky, *Nationalistic ideals and internationalization* (*Johns Hopkins Alumni Magazine*, Jan., 1919).

NATURAL HISTORY, American Museum of.—"The American Museum of Natural History was founded and incorporated in 1869 for the purpose of encouraging and developing the study of natural science, of advancing the general knowledge of kindred subjects, and to that end of furnishing popular instruction. The construction provides for a self-perpetuating board of trustees, not to exceed twenty-five in number, who hold office for terms of five years, with the Mayor, the Comptroller, and the President of the Park Board serving as trustees ex-office. . . . The building, which is the property of the city of New York is one of the largest municipal structures in the city, and has

cost over \$5,000,000. . . . The American museum is particularly famous as possessing the largest collection in the world of gems and gem material, the finest and most complete exhibits illustrating the evolution of the horse, the finest series of bird habitat groups, an extensive collection of meteorites, and the largest and best collections of fossil vertebrates and material showing all phases of the life of primitive man. . . . In addition to its work in securing and exhibiting natural history specimens, the institution maintains a Department of Public Education which works in conjunction with the city's public schools and institutions for the blind, giving lectures and circulating loan collections, slides and motion picture films. For teaching the blind, special apparatus including relief globes and maps, are used. From its Department of Public Health, located on the sixth floor, it distributes specimens of living bacteria to accredited institutions and individuals all over the world, while the institution is forced through lack of building space to keep the great majority of its collections in storage rooms, this material is available for study by persons interested."—J. Caccarajo, *Guide to the municipal government of the city of New York*, pp. 64-66.

NATURALIZATION: Definition.—"Naturalization is the act of investing an alien with the rights and privileges of a native-born citizen or subject. It is of two kinds, collective and personal."—C. P. Daly, *Naturalization*, p. 1.

Growth of idea of citizenship.—Relationship to naturalization.—"The word citizenship . . . comes down to us from the Greeks, through the Romans and across the Middle Ages. . . . In the ancient civilization the citizen was a member of a haughty exclusive class. Below him, and subject to him, stood all others in the state who were outside of this class. Among the Greeks admission to citizenship was easy at first, but difficult after Grecian civic life had reached a higher degree of organization [so difficult that in Sparta, according to Herodotus, there were two instances of naturalization]. In Rome, under the Republic, citizenship was conferred by vote of the people. [See ROME: Republic: B. C. 275.] There were perfect and less perfect citizens. [See ISOPOLITY.] All the private rights of citizenship belonged to citizens of the lower class, but the honour of the magistracy were denied them. Later, when the Caesars ruled, citizenship in whatever form was abolished. . . . The code of Justinian divided all persons into subjects and slaves. The Middle Ages inherited the political forms and names of Greece and Rome, both republican and monarchical. The Italian republics were based on aristocracy. . . . The Republic of Holland was built upon great land-holders. The Swiss republics were little groups of cousins united by blood relationship. [Around them loomed the colossal monarchies of medieval Europe, with the throne for the sun and the nobility for the sideral system.] . . . All through the past the distinction

between a citizen and a subject was this, that the latter was governed, the former also governed; so that a citizen might be a subject, many subjects were not citizens. . . . The essential principle of American citizenship is . . . that no man, and no set of men, shall be politically dependent on any other man or set of men, but each shall be armed for self-defense. The weapon of this self-defense is the ballot."—C. Martyn, *Christian citizenship*, pp. 12-14.—"Citizenship can be acquired after birth by naturalization. This . . . involves the change from the allegiance and sovereignty of one state to that of another. It is defined as the reception of an alien into the citizenship of a state through a formal act on application of the favored individual. This is naturalization in the ordinary sense. Besides this method of naturalization it may also take place through marriage, legitimation, resumption, option, acquisition of domicile, or appointment as a government official. It is a customary rule also in international law that the inhabitants of conquered and ceded territory lose one nationality and acquire another by the annexation of the territory to that of the conquering state. This is often known as collective naturalization or citizenship. Naturalization is regulated by municipal law, but it is also a matter of importance in connection with international law as questions of legal nationality may become of serious importance involving grave matters of international policy and action. The doctrine of perpetual allegiance which once prevailed in several countries may be considered as no longer existing, while the right of expatriation is generally conceded in fact if not in principle. It does not always follow that naturalization, which is an act of municipal law, grants all rights alike to the naturalized citizen and to one native-born. The Constitution of the United States, for instance, restricts the presidency of the nation to native-born citizens. . . . All naturalized citizens while in foreign countries are entitled to the same protection as to persons and property which is due native-born citizens. . . . The right of protection goes, however, with the right to demand the allegiance and support from the naturalized citizen on the part of the state. The necessity for special treaties on the subject of naturalization will be evident when it is realized that some states still take the ground that a renunciation of nationality without the consent of the government is punishable or results in practical exile from the original state."—C. H. Stockton, *Outlines of international law*, pp. 181, 183.

American republics.—Laws of citizenship.—The following convention was adopted and signed at Rio de Janeiro, 1906. (See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1906.)

Article I. If a citizen a native of any of the countries signing the present Convention, and naturalized in another, shall again take up his residence in his native country without the intention of returning to the country in which he has been naturalized, he will be considered as having resumed his original citizenship and as having renounced the citizenship acquired by the said naturalization.

Art. II. The intention not to return will be presumed to exist when the naturalized person shall have resided in his native country for more than two years. But this presumption may be destroyed by evidence to the contrary.

Art. III. This Convention will become effective in the countries that ratify it three months from the dates upon which said ratifications shall be communicated to the Government of the United

States of Brazil; and if it should be denounced by any one of them, it shall continue in effect for one year more, to count from the date of such denouncement.

Art. iv. The denouncement of this convention by any one of the signatory States shall be made to the Government of the United States of Brazil and shall take effect only with regard to the country that may make it.

Austria.—"An alien acquires the right of citizenship by being named a public functionary. The government can also confer those rights upon an alien who has been previously authorized to exercise a profession after ten years' residence. No one can exercise any profession in Austria without permission of the authorities. Mere admission into military service does not give the right of naturalization. The wife of an Austrian becomes an Austrian subject by her marriage."—*Opinions of the Principal Officers of [United States] Executive Department, Relating to Expatriation, Naturalization and Change of Allegiance, pamphlet, p. 110.*

Belgium.—According to the new naturalization law passed on May 15, 1922, for "ordinary naturalization" an applicant must be twenty-two years of age; and must have lived in Belgium for three years, or in the colonies for at least five years. Should a foreigner marry a Belgian woman, the required residence in the country before naturalization is shortened to two years. No foreigner, who has "ordinary naturalization" is allowed to vote or hold a public office. For this *grande* naturalization is necessary and to become a *grande* citizen the candidate must be twenty-five years of age and have been a resident of Belgium for ten years. Every man must report for military service twenty years from the date of public registration of his birth and must serve in the army for twelve months, after which a few months' service in the cavalry is required. The length of this service is imposed in accordance with the weight and build of the individual. A child born to a Belgian father in a foreign land, is a Belgian citizen, even though he remains abroad, until he renounces his Belgian citizenship, but a child of the second generation is not a citizen unless he declares his intent. By a special treaty between Belgium and France a child whose father is unknown is a Belgian, if born on the Belgian side of the frontier; but if born on the French side of the frontier is French. A Belgian woman who marries a foreigner does not thereby lose her nationality, unless she assumes the nationality of her husband. If by his own free will a man gives up his citizenship, he can never become a Belgian citizen again.—See also BELGIUM, CONSTITUTION OF: Title II.

France.—"In order to be naturalized in France an alien must . . . be of full age and get permission to become domiciled; after three years' domicile he may obtain a certificate of naturalization. Other methods of obtaining French citizenship are: (1) by ten years' continuous residence; or (2) by marriage with a French woman and one year's authorized domicile; or (3) by rendering important service to the state and one year's authorized domicile. The effects of naturalization apply also to infant children, who may, however, within one year after obtaining their majority renounce French nationality. The law of France requires every Frenchman to perform military service in person, and imposes a penalty on anyone who emigrates without having served his time in the army. The requirements of universal service have been the guiding principle in the modification of the law which now enforces French citizenship on

those born within the territory of the Republic. . . . Every individual who has been born in France of a foreigner, and who at the time of his majority, is domiciled in France, is a Frenchman; unless, during the year that follows his majority . . . he has declined to be French, and has proved that he has preserved the nationality of his parents by a certificate in due form from his government, which will remain annexed to his declaration, and unless he has also produced . . . a certificate proving that he has complied with the call to serve under the flag in compliance with the military laws of his country, excepting cases provided for in treaties. . . . A Frenchman may . . . divest himself of his nationality [see EXPATRIATION] . . . by naturalization abroad; by accepting a public office under a foreign Government without permission of his own Government; by accepting military service under a foreign government without the authorization of his own Government."—C. Phillipson, *Wheaton's elements of international law, pp. 258, 260.*

Germany: Imperial constitution.—**New constitution.**—The imperial constitution makes no provision with reference to the acquirement or loss of citizenship. (See GERMANY: Constitution of the empire; 1885.) "All children born to German parents are German citizens, whether they are born on German soil or abroad . . . whether born in the State wherein the father or mother has citizenship, or in one of the other federated states. . . . A child born in wedlock acquires . . . the citizenship of the father; a child born out of wedlock acquires the citizenship of the mother. . . . If the father of an illegitimate child is a German, and the mother does not possess the State citizenship of the father, the child acquires, through legitimation effected in accordance with the legal provisions covering such matters, the State citizenship of the father. . . . Marriage with a German invests the wife with the State citizenship of the husband. . . . Citizenship may be granted or conferred by an administrative act, performed by an administrative authority of the State, competent under the law. . . . Citizenship acquired through marriage does not revert on the death of the husband; . . . a divorce . . . has no effect on the citizenship acquired through marriage. A German who has lost his citizenship in one of the States without acquiring citizenship in another, . . . is 'staatenlos.' . . . His marriage would place his wife and children . . . in the same status. . . . A German who has acquired citizenship in several states transfers such citizenship to his wife and their children. . . . Acquiring of citizenship in one of the German States by a citizen of another German state must be attended by some formal act performed by the state into whose civic fellowship he is to be received. . . . A certificate of naturalization may be granted to foreigners only when they are capable of disposing of their property under the laws of their home land, unless lack of such capacity be supplanted by the consent of the father, or guardian, . . . [and they] have led an unblemished life; [when they] find a dwelling or lodging of their own in the place where they propose to settle, [and when they] are in a position to sustain themselves and those belonging to them. If a foreigner is appointed to service of the Empire, he acquires the citizenship of the State in which he has his service domicile. . . . A certificate of naturalization must not be refused by that federated State to which they apply for citizenship, to foreigners who are appointed to the imperial service, draw a salary from the imperial treasury, and have their domicile in a foreign land."—B. E.

Howard, *German empire*, pp. 139, 141, 142, 144, 154.—See also EXPATRIATION.

Great Britain.—"At present the law is laid down in the British Nationality and Status of Alien Acts, 1914 and 1918, which consolidated and amended the previous law as from Jan. 1, 1915. . . . Any alien who has resided in the United Kingdom for not less than one year immediately preceding the application and has previously resided in any part of His Majesty's dominions for four years during the last eight years before the application, may apply to the Secretary of State (the Home Secretary) at the Home Office, Whitehall, London, for a certificate of naturalization. . . . The applicant must produce satisfactory evidence that—(a) he has resided within His Majesty's dominions for not less than the qualifying period of five years or that he has within the last eight years before the application been for not less than five years in the Service of the Crown. A period spent in the service of the Crown may if thought fit be regarded as equivalent to residence; (b) he is of good character and has an adequate knowledge of the English language; and (c) he intends to reside in His Majesty's dominions or to enter or continue in the service of the Crown. [See BRITISH EMPIRE: Citizenship and naturalization.] Subject to the provisions of the Act of 1918, which prohibit the naturalization of Germans for ten years after the war, the Secretary of State has an absolute discretion in granting or refusing the application, and there is no appeal from his decision. He has also power to accept four year's residence or five years' service as a qualification, although not within the eight years' limit. A woman formerly a British subject may on the death of her alien husband or dissolution of her marriage with him recover her rights as a British subject on application without fulfilling the conditions as to residence, and special provision is made by the Act of 1918 for the protection or denaturalization of the wives and infant children of aliens who may be denaturalized. The effect of a certificate when granted is to give to the person naturalized all the rights, powers, and privileges of a natural-born subject as from the date of the grant, but subject to the corresponding obligations, duties, and liabilities, and subject to any statutory disabilities. Where a certificate of naturalization has during the war been granted to an enemy alien who was not a British subject by birth, it may be revoked, if, after formal inquiry, such revocation seems desirable. A committee for the purpose of such inquiry is established, or if thought fit the inquiry may be held by the High Court. In cases of doubtful nationality special certificates may be granted to quiet the doubts. . . . [See BRITISH EMPIRE: Colonial and imperial conferences: 1911.] The self-governing Dominions are not bound to recognize a certificate granted elsewhere, until their legislatures have adopted the Act, and they may at any time rescind their adoption of it. A wife takes the nationality of her husband, so that a female British subject marrying an alien becomes an alien and a female alien marrying a British subject becomes a British subject. The wife of a man ceasing to be a British subject may remain a British subject by making a declaration of her desire. The death alone of the husband does not alter the nationality of his widow, who, if she was a British subject before her marriage, must make an application as stated above before regaining British nationality. Children under 21 follow the nationality of their father, and if he ceases to be a British subject they also become aliens, unless by the law of the new nationality

they are not naturalized in that country or elsewhere. The marriage of a widow being a British subject with an alien does not affect the nationality of her children by the former husband and they remain British subjects, whether residing within His Majesty's dominions or not. They may, however, cease to be British subjects on other grounds. Any child whose father has so ceased to be a British subject may resume his British nationality by making a declaration to that effect within one year after attaining majority. A British subject not under disability who becomes naturalized in a foreign country ceases to be a British subject. A natural-born British subject who during his minority became also a subject of a foreign State, or a natural-born British subject born out of H. M. dominions may, if of full age and not under disability, cease to be a British subject by making a declaration of alienage. As, under the laws of certain countries, e.g. Russia and Germany, natives of those countries retain their former nationality though naturalized [in England], provision is made for conventions with foreign States to enable naturalized subjects to divest themselves of their status as such subjects, and after an Order in Council announcing any such convention naturalized British subjects of the State may during the period provided in the convention make a declaration of alienage and shall be regarded as a subject of the State to which they originally belonged. A declaration of alienage is not retrospective so as to discharge any previous obligation, right, or liabilities as a British subject, and cannot at common law be made during the war for the purpose of becoming an enemy alien."—*New Hazell Annual and Almanack*, 1922, pp. 78-79.

Spain.—"The following are Spaniards: Persons born in Spanish territory: Children of a Spanish father and mother, even though they were born out of Spain. Foreigners who may have obtained naturalization papers. Those who, without such papers, may have acquired a domicile in any town in the Monarchy. Children while they remain under the parental authority, have the nationality of their parents. In order that children born of foreign parents on Spanish soil may enjoy the benefits granted them, . . . it shall be an indispensable requisite that the parents declare, in the manner and before officials . . . that they choose on behalf of their children, the Spanish nationality. . . . Children of foreign parentage born in Spanish domains must state within the year following their majority or emancipation, whether they desire to enjoy the Spanish nationality granted them. . . . A Spaniard who loses his status as such by becoming naturalized in a foreign country, can recover it upon returning to the Kingdom by declaring to the official in charge of the civil registry of the domicile which he elects, that such is his wish. . . . A married woman follows the condition and nationality of her husband. A Spanish woman who marries a foreigner may upon the dissolution of the marriage recover Spanish nationality [by making a declaration to the official in charge of the civil registry of the domicile which she elects, that she wishes to regain her Spanish citizenship]. . . . In order that foreigners who have obtained naturalization papers or acquired a domicile in any town in the Monarchy, may enjoy Spanish nationality, they must first waive their former nationality, swear to support the constitution of the Monarchy and record themselves as Spaniards in the civil registry."—F. C. Fisher, *Civil code of Spain*, pp. 5-6.—See also EXPATRIATION.

United States: Law relating to the Five Civilized Indian Tribes. See INDIANS, AMERICAN: 1901-1902.

United States: Naturalization Act.—Citizenship Act of March 2, 1907.—The following is the partial text of the act of 1906, as amended in 1909, 1910, 1913, and 1918. The act provided—

“Section 1. . . . That the Bureau of Naturalization, under the direction and control of the Secretary of Labor, shall have charge of all matters concerning the naturalization of aliens. That it shall be the duty of the Bureau of Immigration to provide, for use at the various immigration stations throughout the United States, books of record, wherein the commissioners of immigration shall cause a registry to be made in the case of each alien arriving in the United States from and after the passage of this act of the name, age, occupation, personal description (including height, complexion, color of hair and eyes), the place of birth, the last residence, the intended place of residence in the United States, and the date of arrival of said alien, and, if entered through a port, the name of the vessel in which he comes. And it shall be the duty of said commissioners of immigration to cause to be granted to such alien a certificate of such registry, with the particulars thereof. [See IMMIGRATION AND EMIGRATION: United States: 1910-1920.] . . .

“Sect. 3. That exclusive jurisdiction to naturalized aliens as citizens of the United States is hereby conferred upon the following specified courts: United States circuit and district courts now existing or which may hereafter be established by Congress in any State. United States district courts for the Territories of Arizona, New Mexico, Oklahoma, Hawaii, and Alaska, the supreme court of the District of Columbia, and the United States courts for the Indian Territory; also all courts of record in any State or Territory now existing, which may hereafter be created, having a seal, a clerk, and jurisdiction in actions at law or equity or law and equity, in which the amount in controversy is unlimited. That the naturalization jurisdiction of all courts herein specified—State, Territorial, and Federal—shall extend only to aliens resident within the respective judicial district of such courts. . . .

“Sect. 4. That an alien may be admitted to become a citizen of the United States in the following manner and not otherwise: First: He shall declare on oath before the clerk of any court authorized by this act to naturalize aliens, or his authorized deputy, in the district in which such alien resides, two years at least prior to his admission, and after he has reached the age of eighteen years, that it is bona fide his intention to become a citizen of the United States and to renounce for ever all allegiance and fidelity to any foreign prince, potentate, state, or sovereignty, and particularly, by name, to the prince, potentate, state, or sovereignty of which the alien may be at the time a citizen or subject. And such declaration shall set forth the name, age, occupation, personal description, place of birth, last foreign residence and allegiance, the date of arrival, the name of the vessel, if any, in which he came to the United States, and the present place of residence in the United States of said alien: *Provided, however,* That no alien who, in conformity with the law in force at the date of his declaration, has declared his intention to become a citizen of the United States shall be required to renew such declaration. Second. Not less than two years nor more than seven years after he has made such declaration of intention he shall make and

file, in duplicate, a petition in writing, signed by the applicant in his own handwriting and duly verified, in which petition such applicant shall state his full name, his place of residence (by street and number, if possible), his occupation, and, if possible, the date and place of his birth; the place from which he emigrated, and the date and place of his arrival in the United States, and, if he entered through a port, the name of the vessel on which he arrived; the time when and the place and name of the court where he declared his intention to become a citizen of the United States; if he is married he shall state the name of his wife, if possible, the country of her nativity and her place of residence at the time of filing his petition; and if he has children, the name, date, and place of birth and place of residence of each child living at the time of the filing of his petition: *Provided,* That if he has filed his declaration before the passage of this act he shall not be required to sign the petition in his own handwriting. The petition shall set forth that he is not a disbeliever in or opposed to organized government, or a member of or affiliated with any organization or body of persons teaching disbelief in or opposed to organized government, a polygamist or believer in the practice of polygamy, and that it is his intention to become a citizen of the United States and to renounce absolutely and forever all allegiance and fidelity to any foreign prince, potentate, state, or sovereignty, and particularly by name to the prince, potentate, state, or sovereignty of which he at the time of filing of his petition may be a citizen or subject, and that it is his intention to reside permanently within the United States, and whether or not he has been denied admission as a citizen of the United States, and, if denied, the ground or grounds of such denial, the court or courts in which such decision was rendered, and that the cause for such denial has since been cured or removed, and every fact material to his naturalization and required to be proved upon the final hearing of his application. The petition shall also be verified by the affidavits of at least two credible witnesses, who are citizens of the United States, and who shall state in their affidavits that they have personally known the applicant to be a resident of the United States for a period of at least five years continuously, and of the State, Territory, or the District of Columbia, in which the application is made for a period of at least one year immediately preceding the date of the filing of his petition, and that they each have personal knowledge that the petitioner is a person of good moral character, and that he is in every way qualified, in their opinion, to be admitted as a citizen of the United States. At the time of filing his petition there shall be filed with the clerk of the court a certificate from the Department of Labor, if the petitioner arrives in the United States after the passage of this act, stating the date, place, and manner of his arrival in the United States, and the declaration of intention of such petitioner, which certificate and declaration shall be attached to and made a part of said petition. Third. He shall, before he is admitted to citizenship, declare on oath in open court that he will support the Constitution of the United States, and that he absolutely and entirely renounces and abjures all allegiance and fidelity to any foreign prince, potentate, state, or sovereignty, and particularly by name to the prince, potentate, state, or sovereignty of which he was before a citizen or subject; that he will support and defend the Constitution and laws of the United States against

all enemies, foreign and domestic, and bear true faith and allegiance to the same. Fourth. It shall be made to appear to the satisfaction of the court admitting any alien to citizenship that immediately preceding the date of his application he has resided continuously within the United States five years at least, and within the State or Territory where such court is at the time held one year at least, and that during that time he has behaved as a man of good moral character, attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the same. In addition to the oath of the applicant, the testimony of at least two witnesses, citizens of the United States, as to the facts of residence, moral character, and attachment to the principles of the Constitution shall be required, and the name, place of residence, and occupation of each witness shall be set forth in the record. Fifth. In case the alien applying to be admitted to citizenship has borne any hereditary title, or has been of any of the orders of nobility in the kingdom or state from which he came, he shall, in addition to the above requisites, make an express renunciation of his title or order of nobility in the court to which his application is made, and his renunciation shall be recorded in the court. Sixth. When any alien who has declared his intention to become a citizen of the United States dies before he is actually naturalized the widow and minor children of such alien may, by complying with the other provisions of this act, be naturalized without making any declaration of intention. Seventh. Any native-born Filipino of the age of twenty-one years and upward who has declared his intention to become a citizen of the United States and who has enlisted or may hereafter enlist in the United States Navy or Marine Corps or the Naval Auxiliary Service, and who, after service of not less than three years, may be honorably discharged therefrom, or who may receive an ordinary discharge with recommendation for reenlistment; or any alien, or any Porto Rican not a citizen of the United States, of the age of twenty-one years and upward, who has enlisted or entered or may hereafter enlist in or enter the armies of the United States, either the Regular or the Volunteer Forces, or the National Army, the National Guard or Naval Militia of any State, Territory, or the District of Columbia, or the State militia in Federal service, or in the United States Navy or Marine Corps, or in the United States Coast Guard, or who has served for three years on board of any vessel of the United States Government, or for three years on board of merchant or fishing vessels of the United States of more than twenty tons burden, and while still in the service on a reenlistment or reappointment, or within six months after an honorable discharge or separation therefrom, or while on furlough to the Army Reserve or Regular Army Reserve after honorable service, may, on presentation of the required declaration of intention petition for naturalization without proof of the required five years' residence within the United States. . . . Any alien who, at the time of the passage of this act, is in the military service of the United States, who may not be within the jurisdiction of any court authorized to naturalize aliens, may file his petition for naturalization without appearing in person in the office of the clerk of the court and shall not be required to take the prescribed oath of allegiance in open court. The petition shall be verified by the affidavits of at least two credible witnesses who are citizens of the United States, and who shall prove

in their affidavits the portion of the residence that they have personally known the applicant to have resided within the United States. The time of military service may be established by the affidavits of at least two other citizens of the United States, which together with the oath of allegiance, may be taken in accordance with the terms of section seventeen hundred and fifty of the Revised Statutes of the United States after notice from and under regulations of the Bureau of Naturalization. Such affidavits and oath of allegiance shall be admitted in evidence in any original or appellate naturalization proceeding without proof of the genuineness of the seal or signature or of the official character of the officer before whom the affidavits and oath of allegiance were taken, and shall be filed by the representative of the Government from the Bureau of Naturalization at the hearing as provided by section eleven of the act of June twenty-ninth, nineteen hundred and six. Members of the Naturalization Bureau and Service may be designated by the Secretary of Labor to administer oaths relating to the administration of the naturalization law; and the requirement of section ten of notice to take depositions to the United States attorneys is repealed, and the duty they perform under section fifteen of the act of June twenty-ninth, nineteen hundred and six (Thirty-fourth Statutes at Large, part one, page five hundred and ninety-six), may also be performed by the Commissioner or Deputy Commissioner of Naturalization: *Provided*, That it shall not be lawful to make a declaration of intention before the clerk of any court on election day or during the period of thirty days preceding the day of holding any election in the jurisdiction of the court: *Provided further*, That service by aliens upon vessels other than of American registry, whether continuous or broken, shall not be considered as residence for naturalization purposes within the jurisdiction of the United States, and such aliens can not secure residence for naturalization purposes during service upon vessels of foreign registry. During the time when the United States is at war no clerk of a United States court shall charge or collect a naturalization fee from an alien in the military service of the United States for filing his petition or issuing the certificate of naturalization upon admission to citizenship and no clerk of any State court shall charge or collect any fee for his service unless the laws of the State require such charge to be made, in which case nothing more than the portion of the fee required to be paid to the State shall be charged or collected. A full accounting for all of these transactions shall be made to the Bureau of Naturalization in the manner provided by section thirteen of the act of June twenty-ninth, nineteen hundred and six. Eighth. That every seaman, being an alien, shall, after his declaration of intention to become a citizen of the United States, and after he shall have served three years upon such merchant or fishing vessels of the United States, be deemed a citizen of the United States for the purpose of serving on board any such merchant or fishing vessel of the United States, anything to the contrary in any act of Congress notwithstanding; but such seaman shall, for all purposes of protection as an American citizen, be deemed such after the filing of his declaration of intention to become such citizen. . . . Ninth. That for the purpose of carrying on the work of the Bureau of Naturalization of sending the names of the candidates for citizenship to the public schools and otherwise promoting instruction and training in citizenship responsibilities of

applicants for naturalization, as provided in this subdivision, authority is hereby given for the reimbursement of the printing and binding appropriation of the Department of Labor upon the records of the Treasury Department from the naturalization fees deposited in the Treasury through the Bureau of Naturalization for the cost of publishing the citizenship textbook prepared and to be distributed by the Bureau of Naturalization to those candidates for citizenship only who are in attendance upon the public schools, such reimbursement to be made upon statements by the Commissioner of Naturalization of books actually delivered to such student candidates for citizenship, and a monthly naturalization bulletin, and in this duty to secure the aid of and cooperate with the official State and national organizations, including those concerned with vocational education and including personal services in the District of Columbia, and to aid the local Army exemption boards and cooperate with the War Department in locating declarants subject to the Army draft and expenses incidental thereto. Tenth. That any person not an alien enemy, who resided uninterruptedly within the United States during the period of five years next preceding July first, nineteen hundred and fourteen, and was on that date otherwise qualified to become a citizen of the United States, except that he had not made the declaration of intention required by law, and who during or prior to that time, because of misinformation regarding his citizenship status, erroneously exercised the rights and performed the duties of a citizen of the United States in good faith, may file the petition for naturalization prescribed by law without making the preliminary declaration of intention required of other aliens, and upon satisfactory proof to the court that he has so acted may be admitted as a citizen of the United States upon complying in all respects with the other requirements of the naturalization law. Eleventh. No alien who is a native, citizen, subject, or denizen of any country, State, or sovereignty with which the United States is at war shall be admitted to become a citizen of the United States unless he made his declaration of intention not less than two nor more than seven years prior to the existence of the state of war, or was at that time entitled to become a citizen of the United States, without making a declaration of intention, or unless his petition for naturalization shall then be pending and is otherwise entitled to admission, notwithstanding he shall be an alien enemy at the time and in the manner prescribed by the laws passed upon that subject: *Provided*, That no alien embraced within this subdivision shall have his petition for naturalization called for a hearing, or heard, except after ninety days' notice given by the clerk of the court to the Commissioner or Deputy Commissioner of Naturalization to be present, and the petition shall be given no final hearing except in open court and after such notice to the representative of the Government from the Bureau of Naturalization, whose objection shall cause the petition to be continued from time to time for so long as the Government may require: *Provided, however*, That nothing herein contained shall be taken or construed to interfere with or prevent the apprehension and removal, agreeably to law, of any alien enemy at any time previous to the actual naturalization of such alien; and section twenty-one hundred and seventy-one of the Revised Statutes of the United States is hereby repealed: *Provided further*, That the President of the United States may, in his discretion, upon investigation and report by the

Department of Justice fully establishing the loyalty of any alien enemy not included in the foregoing exemption, except such alien enemy from the classification of alien enemy, and thereupon he shall have the privilege of applying for naturalization. . . . Twelfth, That any person who, while a citizen of the United States and during the existing war in Europe, entered the military or naval service of any country at war with a country with which the United States is now at war, who shall be deemed to have lost his citizenship by reason of any oath or obligation taken by him for the purpose of entering such service, may resume his citizenship by taking the oath of allegiance to the United States prescribed by the naturalization law and regulations, and such oath may be taken before any court of the United States or of any State authorized by law to naturalize aliens or before any consul of the United States, and certified copies thereof shall be sent by such court or consul to the Department of State and the Bureau of Naturalization, and the act (Public fifty-five, Sixty-fifth Congress, approved October fifth, nineteen hundred and seventeen), is hereby repealed. Thirteenth. That any person who is serving in the military or naval forces of the United States at the termination of the existing war, and any person who before the termination of the existing war may have been honorably discharged from the military or naval services of the United States on account of disability incurred in line of duty, shall, if he applies to the proper court for admission as a citizen of the United States, be relieved from the necessity of proving that immediately preceding the date of his application he has resided continuously within the United States the time required by law of other aliens, or within the State, Territory, or the District of Columbia for the year immediately preceding the date of his petition for naturalization, but his petition for naturalization shall be supported by the affidavits of two credible witnesses, citizens of the United States, identifying the petitioner as the person named in the certificate of honorable discharge, which said certificate may be accepted as evidence of good moral character required by law, and he shall comply with the other requirements of the naturalization law. . .

"Sect. 7. That no person who disbelieves in or who is opposed to organized government, or who is a member of or affiliated with any organization entertaining and teaching such disbelief in or opposition to organized government, or who advocates or teaches the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers, either of specific individuals or of officers generally, of the Government of the United States, or of any other organized government, because of his or their official character, or who is a polygamist, shall be naturalized or be made a citizen of the United States. [See ANARCHISM: 1910.]

"Sect. 8. That no alien shall hereafter be naturalized or admitted as a citizen of the United States who can not speak the English language: *Provided*, That this requirement shall not apply to aliens who are physically unable to comply therewith, if they are otherwise qualified to become citizens of the United States: *And provided further*, That the requirements of this section shall not apply to any alien who has prior to the passage of this act declared his intention to become a citizen of the United States in conformity with the law in force at the date of making such declaration: *Provided further*, That the requirements of section eight shall not apply to aliens who shall hereafter

declare their intention to become citizens and who shall make homestead entries upon the public lands of the United States and comply in all respects with the laws providing for homestead entries on such lands. . . .

"Sect. 13. That the clerk of each and every court exercising jurisdiction in naturalization cases shall charge, collect, and account for the following fees in each proceeding: For receiving and filing a declaration of intention and issuing a duplicate thereof, one dollar. For making, filing, and docketing the petition of an alien for admission as a citizen of the United States and for the final hearing thereon, two dollars; and for entering the final order and the issuance of the certificate of citizenship thereunder, if granted, two dollars. The clerk of any court collecting such fees is hereby authorized to retain one-half of the fees collected by him in such naturalization proceeding; the remaining one-half of the naturalization fees in each case collected by such clerks, respectively, shall be accounted for in their quarterly accounts, which they are hereby required to render the Bureau of Naturalization, and paid over to such bureau within thirty days from the close of each quarter in each and every fiscal year, and the moneys so received shall be paid over to the disbursing clerk of the Department of Labor, who shall thereupon deposit them in the Treasury of the United States, rendering an account therefor quarterly to the Auditor for the State and Other Departments, and the said disbursing clerk shall be held responsible under his bond for said fees so received. In addition to the fees herein required, the petitioner shall, upon the filing of his petition to become a citizen of the United States, deposit with and pay to the clerk of the court a sum of money sufficient to cover the expenses of subpoenaing and paying the legal fees of any witnesses for whom he may request a subpoena, and upon the final discharge of such witnesses they shall receive, if they demand the same from the clerk, the customary and usual witness fees from the moneys which the petitioner shall have paid to such clerk for such purpose, and the residue, if any, shall be returned by the clerk to the petitioner: *Provided*, That the clerks of courts exercising jurisdiction in naturalization proceedings shall be permitted to retain one-half of the fees in any fiscal year up to the sum of three thousand dollars, and that all fees received by such clerks in naturalization proceedings in excess of such amount shall be accounted for and paid over to said bureau as in case of other fees to which the United States may be entitled under the provisions of this act. The clerks of the various courts exercising jurisdiction in naturalization proceedings shall pay all additional clerical force that may be required in performing the duties imposed by this act upon the clerks of courts from fees received by such clerks in naturalization proceedings. . . .

"Sect. 15. That it shall be the duty of the United States district attorneys for the respective districts, upon affidavit showing good cause therefor, to institute proceedings in any court having jurisdiction to naturalize aliens in the judicial district in which the naturalized citizen may reside at the time of bringing the suit, for the purpose of setting aside and canceling the certificate of citizenship on the ground of fraud or on the ground that such certificate of citizenship was illegally procured. In any such proceedings the party holding the certificate of citizenship alleged to have been fraudulently or illegally procured shall have sixty days personal notice in which to make answer to the petition of the United States;

and if the holder of such certificate be absent from the United States or from the district in which he last had his residence, such notice shall be given by publication in the manner provided for the service of summons by publication or upon absentees by the laws of the State or the place where such suit is brought. If any alien who shall have secured a certificate of citizenship under the provisions of this act shall, within five years after the issuance of such certificate, return to the country of his nativity, or go to any other foreign country, and take permanent residence therein, it shall be considered *prima facie* evidence of a lack of intention on the part of such alien to become a permanent citizen of the United States at the time of filing his application for citizenship, and, in the absence of countervailing evidence, it shall be sufficient in the proper proceeding to authorize the cancellation of his certificate of citizenship as fraudulent. . . .

"Sect. 28. That the Secretary of Labor shall have power to make such rules and regulations as may be necessary for properly carrying into execution the various provisions of this act. Certified copies of all papers, documents, certificates, and records required to be used, filed, recorded, or kept under any and all of the provisions of this act shall be admitted in evidence equally with the originals in any and all proceedings under this act and in all cases in which the originals thereof might be admissible as evidence."

The following is the partial text of the Citizenship Act of March 2, 1907:

"Sect. 2. That any American citizen shall be deemed to have expatriated himself when he has been naturalized in any foreign State in conformity with its laws, or when he has taken an oath of allegiance to any foreign State. [See EXPATRIATION.] When any naturalized citizen shall have resided for two years in the foreign State from which he came, or for five years in any other foreign State, it shall be presumed that he has ceased to be an American citizen, and the place of his general abode shall be deemed his place of residence during said years: *Provided, however*, That such presumption may be overcome on the presentation of satisfactory evidence to a diplomatic or consular officer of the United States, under such rules and regulations as the Department of State may prescribe: *And provided also*, That no American citizen shall be allowed to expatriate himself when this country is at war.

"Sect. 3. That any American woman who marries a foreigner shall take the nationality of her husband. At the termination of the marital relation she may resume her American citizenship, if abroad, by registering as an American citizen within one year with a consul of the United States, or by returning to reside in the United States, or, if residing in the United States at the termination of the marital relation, by continuing to reside therein.

"Sect. 4. That any foreign woman who acquires American citizenship by marriage to an American shall be assumed to retain the same after the termination of the marital relation if she continue to reside in the United States, unless she makes formal renunciation thereof before a court having jurisdiction to naturalize aliens, or if she resides abroad she may retain her citizenship by registering as such before a United States consul within one year after the termination of such marital relation.

"Sect. 5. That a child born without the United States of alien parents shall be deemed a citizen of the United States by virtue of the naturaliza-

tion of or resumption of American citizenship by the parent: *Provided*, That such naturalization or resumption takes place during the minority of such child: *And provided further*, That the citizenship of such minor child shall begin at the time such minor child begins to reside permanently in the United States.

"Sect. 6. That all children born outside the limits of the United States who are citizens thereof in accordance with the provisions of section nineteen hundred and ninety-three of the Revised Statutes of the United States and who continue to reside outside the United States shall, in order to receive the protection of this Government, be required upon reaching the age of eighteen years to record at an American consulate their intention to become residents and remain citizens of the United States and shall be further required to take the oath of allegiance to the United States upon attaining their majority.

"Sect. 7. That duplicates of any evidence, registration, or other acts required by this act shall be filed with the Department of State for record."—United States Bureau of Naturalization, *Naturalization laws and regulations*, pp. 4-30.

United States: Laws relating to women.—"A citizen of the United States can confer on a foreign born woman the rights and privileges of an American citizen by marriage. This rule is modified by ten United States Statutes at Large, 604, in this, 'any woman who is now or may hereafter be married to a citizen of the United States, and who might herself be lawfully naturalized, shall be deemed a citizen.' The requirement, 'who might herself be lawfully naturalized,' carries within it two elements, the first being the possibility under the laws of the United States of naturalization of women born in foreign countries; and second, the question of civil rights in her relations to the laws of the country of her origin. This latter element is of importance in this, that citizenship does not in itself involve rights and privileges in the country of which one is a citizen, but also protection abroad and recognition of her citizenship when abroad, and in particular in the country of her origin. While this latter element cannot strictly be inquired into as condition precedent and finally determined by the tribunals of the United States, yet its importance is beyond doubt, and should she, by the laws of her country of origin, not be competent to become naturalized in a foreign country, her citizenship, as conferred by the United States Statutes, would not avail her upon the return to the country of her origin. . . . The woman changes her nationality, absolutely, by marriage to a citizen of the United States. She does not enjoy in coverture, any other or different rights and privileges from those enjoyed by her husband. This rule does not require residence in the United States; a woman who is married to a citizen of the United States partakes of his citizenship, though residing abroad. . . . The same rule which applies to foreign women who marry citizens of the United States governs women citizens of the United States who marry foreigners. 'A woman, citizen of the United States, marries an alien who resides out of the jurisdiction. She absolutely ceases to be an American citizen, and becomes subject to all the disabilities of alienage.' F. R. of United States, 1874, p. 413. . . . The woman merges her nationality in that of her husband upon marriage to a foreigner. In case of legal separation, the practice places her in a position similar to that of a minor child, born of foreign parents, who has been adopted by a citizen of the United States upon reaching majority. The wife may

elect whether to preserve the foreign nationality acquired by her marriage, or re-acquire her former American citizenship."—P. Webster, *Treatise on the law of citizenship in the United States*, pp. 295-298.—A bill, relative to the naturalization and citizenship of married women was reported back with amendments by the house committee and presented by Mr. John L. Cable of Ohio, June 16, 1922,—"upon it hearings were held, and extended consideration given by the committee. . . . In previous Congresses Mr. Rogers of Massachusetts, . . . Miss Rankin of Montana . . . and Mr. Anthony of Kansas introduced bills containing somewhat similar principles."—*House of Representatives, Report No. 1110, 67th Congress, 2nd Session*.—The following is the text of the act relative to the naturalization of women, which was passed by Congress, September 22, 1922:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the right of any woman to become a naturalized citizen of the United States shall not be denied or abridged because of her sex or because she is a married woman.

Sect. 2. That any woman who marries a citizen of the United States after the passage of this Act, shall not become a citizen of the United States by reason of such marriage or naturalization; but, if eligible to citizenship, she may be naturalized upon full and complete compliance with all requirements of the naturalization laws, with the following exceptions: (a) No declaration of intention shall be required; (b) in lieu of the five-year period of residence within the United States and the one-year period of residence within the State of Territory where the naturalization court is held, she shall have resided continuously in the United States, Hawaii, Alaska, or Porto Rico for at least one year immediately preceding the filing of the petition.

Sect. 3. That a woman citizen of the United States shall not cease to be a citizen of the United States by reason of her marriage after the passage of this Act, unless she makes a formal renunciation of her citizenship before a court having jurisdiction over naturalization of aliens: *Provided*, That any woman citizen who marries an alien ineligible to citizenship shall cease to be a citizen of the United States. If at the termination of the marital status she resides continuously for two years in a foreign State of which her husband is a citizen or subject, or for five years continuously outside the United States, she shall thereafter be subject to the same presumption as is a naturalized citizen of the United States under the second paragraph of section 2 of the Act entitled 'An Act in reference to the expatriation of citizens and their protection abroad,' approved March 2, 1907. Nothing herein shall be construed to repeal or amend the provisions of Revised Statutes 1909 or of section 2 of the Expatriation Act of 1907 with reference to expatriation.

Sect. 4. That a woman who, before the passage of this Act, has lost her United States citizenship by reason of her marriage to an alien eligible for citizenship, may be naturalized as provided by section 2 of this Act: *Provided*, That no certificate of arrival shall be required to be filed with her petition if during the continuance of the marital status she shall have resided within the United States. After her naturalization she shall have the same citizenship status as if her marriage had taken place after the passage of this Act.

Sect. 5. That no woman whose husband is not eligible to citizenship shall be naturalized during the continuance of the marital status.

Sect. 6. That section 1994 of the Revised Statutes and section 4 of the Expatriation Act of 1907 are repealed. Such repeal shall not restore citizenship lost under such section nor terminate citizenship resumed under such section. A woman who has resumed under such section citizenship lost by marriage shall, upon the passage of this Act, have for all purposes the same citizenship status as immediately preceding her marriage.

NAUARCHI, title given in ancient Sparta to the commanders of the fleet. At Athens "the term Nauarchi seems to have been officially applied only to the commanders of the so-called sacred triremes."—G. Schömann, *Antiquity of Greece: State, pt. 3, ch. 1, 3.*

NAUKRATIS, ancient city of Egypt. It was an important Greek colony from 569 B. C., when the Greeks were forbidden to trade in any other Egyptian city. "Naukratis was for a long time the privileged port [in Egypt] for Grecian commerce with Egypt. No Greek merchant was permitted to deliver goods in any other part [port], or to enter any other of the mouths of the Nile except the Kanôpic. If forced into any of them by stress of weather, he was compelled to make oath that his arrival was a matter of necessity, and to convey his goods round by sea into the Kanopic branch to Naukratis; and if the weather still forbade such a proceeding, the merchandise was put into barges and conveyed round to Naukratis by the internal canals of the delta. Such a monopoly, which made Naukratis in Egypt something like Canton in China or Nagasaki in Japan, no longer subsisted in the time of Herodotus. . . . At what precise time Naukratis first became licensed for Grecian trade, we cannot directly make out. But there seems reason to believe that it was the port to which the Greek merchants first went, so soon as the general liberty of trading with the country was conceded to them; and this would put the date of such grant at least as far back as the foundation of Kyrene, . . . about 630 B. C., during the reign of Psammetichus. . . . [About a century later, Amasis] sanctioned the constitution of a formal and organised emporium or factory, invested with commercial privileges, and armed with authority exercised by presiding officers regularly chosen. This factory was connected with, and probably grew out of, a large religious edifice and precinct, built at the joint cost of nine Grecian cities: four of them Ionic,—Chios, Teos, Phokæa and Klazomenæ; four Doric,—Rhodes, Knidus, Halikarnassus, and Phaselis; and one Æolic,—Mitylene. By these nine cities the joint temple and factory was kept up and its presiding magistrates chosen; but its destination, for the convenience of Grecian commerce generally, seems revealed by the imposing title of *The Hellenion*."—G. Grote, *History of Greece, pt. 2, ch. 20.*—The site of Naukratis has been determined lately by the excavations of W. M. Flinders Petrie, begun in 1885. The ruins of the ancient city are found buried under a mound called Nebireh. Its situation was west of the Canobic branch of the Nile, on a canal which connected it with that stream. See EGYPT: B. C. 670-525.

NAVAL HOLIDAY (1913).—A naval holiday was suggested to the House of Commons by Winston Churchill, on March 26, 1913, in the following words: "The Navy is passing through a period, not merely of expansion, but of swift and ceaseless development. . . . The latest German Navy Law has increased the number of vessels we are required to construct each year, and that Law and the Mediterranean requirements, have still more increased the numbers and proportion of ships which must be maintained in the highest condition of readiness. . . . The increase in the size, cost and speed of capital ships, compelled by the general developments of naval science and the types building abroad, is marked and unceasing. . . . The adoption by Germany, America, and Italy, of larger guns for their primary armaments and more numerous guns for their secondary armaments, has necessitated a farther advance by us, thus very greatly increasing the outlay on these weapons. . . . No abatement in the annual consumption of practise ammunition can be looked for, but . . . increases are certain; . . . perhaps when the trade of the country is not at its best the Navy Estimates will automatically take an upward lift. . . . There is no prospect of avoiding increases in the future Navy Estimates unless the period of acute naval rivalries and rapid scientific expansion through which we are passing, comes to an end. . . . There happily is a way which is open, which would give almost instantaneous mitigation to the nations of the world from the absurd thralldom in which they are involving themselves at the present time. . . . The strength of one navy is its strength compared to another. The value of a ship depends almost entirely upon the contemporary ship which it may have to meet. . . . Every year the great nations . . . not only make obsolete the fleets of their rivals but they make obsolete their own fleet. . . . There is no practical result so long as all are advancing equally. On the other hand, no one Power can stand still while the others are advancing without being hopelessly outclassed in a very short time. . . . If, for the space of a year, 12 calendar months, no new ships were built by any nation, in what conceivable manner would the interest of any nation be affected? . . . Why should we not take a naval holiday for one year, so far . . . as new construction of capital ships is concerned? . . . It is an appeal which we address to all nations and to no nation with more profound sincerity than to our great neighbor over the North Sea."—W. Churchill, *Speech on the Naval Estimate in the House of Commons, Mar. 26, 1913 (pamphlet)*, pp. 3-9.—This proposal did not meet with the favor of Germany.—See also ENGLAND: 1912-1913; PEACE MOVEMENT: Attitude of governments.

NAVAL INVESTIGATING COMMITTEE, United States. See U.S.A.: 1920: Controversy

between Admiral Sims and Secretary Daniels.

NAVAL LAW: Origin.—The administration of naval discipline has always been entrusted to naval men since nations have exercised the prerogative of naval commands. In the early years of the British navy, the fleets, whether for aggression or defence, were raised on the requisition of the king by the inhabitants of the seaport towns and of these, the Cinque Ports furnished the principal ships and sailors. "From the time of the Conquest, the Kings of England delegated the charge of guarding the coasts and commanding the fleets to officers, who in the reign of Henry I. were called *Butescarles*, a title afterwards changed to that of guardians of the ships, or guardians of the maritime shore. In the reign of Edward I., instead of guardians or wardens they were termed admirals—a word first used by the Crusaders, who took it from the Saracens, who termed their generals *Emirs* or *Amiras*. Edward I. divided his shipping into three fleets, and in solemn manner created admirals of the navy towards the northern, western and southern parts. The office of Lord High Admiral was of later date, for the first commission to a single great officer was not issued until the time of Henry IV., when Thomas Beaufort, Duke of Exeter, was appointed to be admiral, not only of the fleets and navies, but of England and Ireland. The French fleets were governed by similar institutions. In early times naval jurisdiction was not limited to one functionary, the Admiral of France, but officers with corresponding powers were appointed to the great maritime provinces. About the year 1300, the office was concentrated and Amaurius, Viscount of Narbonne, was the first who bore the sole dignity of High Admiral of France. The functions of this great officer corresponded and were alike extensive on either side of the Channel. The Lord High Admiral of England not only organized and governed the fleets raised for the service of the Crown but held exclusive jurisdiction over all civil causes and criminal offences arising among seamen, whether belonging to the royal or merchant navy. The office of High Admiral of France was suppressed in the seventeenth century, and put into commission in England. New regulations for the maintenance of discipline in the navy were introduced in England by the statute of 13 Charles II., and in France by the ordinances of Louis XIV. Prescription has preserved many of the usages for the punishment of crime in the navy, handed down from the earliest times, and enforced by a succession of admirals; some of these have been perpetuated by statute law, some, under the name of customs of the navy, are still applicable to minor offences."—J. E. Stephens, C. E. Gifford and F. H. Smith, *Manual of naval law*, pp. 3-4.

Ancient code (1190).—The most ancient code of regulations is that of Richard I, when he marshalled his great fleet for the Holy Land. In a council of nobles he chose and appointed certain great officers to be justiciaries over the combined navy of England, Normandy, Brittany and Poitou, and delivered his charter to them as follows: "Know all men that we, with the aid of upright counsellors have laid down these ordinances." Punishments similar to those outlined in Richard's ordinance subsisted in the navy for many centuries afterwards, re-ordained on the fitting out of each successive expedition.

Court of admiralty.—"A permanent Court of Justice (the original of the present court of Admiralty was held under the authority of each High Admiral, for the trial of sea causes, both for life

and goods, and its jurisdiction was in some cases defined by statute. But as there was no standing navy during the thirteenth, fourteenth, fifteenth, and part of the sixteenth centuries, so there was no fixed code of naval law. Fleets were raised on emergencies for the public service, the greater part of the ships were furnished by private enterprise, the remainder bought up for the occasion, and fitted out by the crown. When the expedition was ready, the Lord High Admiral, or the actual commander-in-chief, by authority delegated from him, issued specific instructions to the admirals and captains, for the punishment of offences and general maintenance of discipline limited to the particular service. In this manner precedents grew up and the same forms applicable to similar circumstances were ordinarily reproduced."—J. E. Stephens, C. E. Gifford and F. H. Smith, *Manual of naval law*, pp. 4, 5.—See also ADMIRALTY LAW.

American naval law.—The United States Constitution, article 1, section 8, provides that Congress shall have power to declare war; make rules concerning captures on land and water; to raise and support armies; to provide and maintain a navy; to make rules for the government and regulation of the land and naval forces; etc. [See UNITED STATES, CONSTITUTION OF.] The customs and regulations of the British navy, with slight modifications were taken over by the American revolutionary authorities and various congresses have added to them. Naval discipline is now administered by officers and courts-martial under the authority of congressional acts relating to the navy and more particularly the articles for the government of the navy, sec. 2961, United States Statutes.

Deck Courts.—"When actively serving under the Navy Department in time of war, or during the existence of an emergency, pursuant to law, as a part of the naval forces of the United States, commissioned officers of the Naval Reserve Force, Marine Corps Reserve, National Naval Volunteers, Naval Militia, Coast Guard, Lighthouse Service, Coast and Geodetic Survey, and Public Health Service are hereby empowered to serve on naval courts-martial and deck courts under such regulations necessary for the proper administration of justice and in the interests of the services involved, as may be prescribed by the Secretary of the Navy."—*United States Statutes, Section 2088 a*.

ALSO IN: *United States Compiled Statutes, 1918*, p. 392.

Courts martial.—Naval courts-martial are held in accordance with the articles for the government of the navy. The legal aspects of these courts are similar to those of the military courts under the Articles of War.—See also MILITARY LAW.

See also ADMIRALTY LAW.

NAVARRÉ.—Formerly an independent kingdom, the territory is now partly a province of northern Spain, under the name of Navarra, and partly a portion of the French department of Basses-Pyrénées. The population in Navarre in 1920 was 329,477.

Aboriginal inhabitants. See BASQUES.

Origin of kingdom.—"No historical subject is wrapt in greater obscurity than the origin and early history of the kingdom of Navarre. Whether, during a great portion of the eighth and ninth centuries, the country was independent or tributary; and, if dependent, whether it obeyed the Franks, the Asturians, or the Arabs, or successively all three, are speculations which have long exercised the pens of the peninsular writers. . . . It seems undoubted that, in just dread of the Mohammedan domination, the inhabitants of these regions, as well as those of Catalonia, applied for aid to the renowned emperor of the Franks [Charlemagne]; and that he, in consequence, in 778, poured his legions into Navarre, and seized Pamploña. It seems no less certain that, from this period, he considered the country as a fief of his crown; and that his pretensions, whether founded in violence or in the voluntary submission of the natives, gave the highest umbrage to the Asturian kings: the feudal supremacy thenceforth became an apple of discord between the two courts, each striving to gain the homage of the local governors. . . . Thus things remained until the time of Alfonso III., who . . . endeavoured to secure peace both with Navarre and France by marrying a princess related to both Sancho Iñigo, count of Bigorre, and to the Frank sovereign, and by consenting that the province should be held as an immovable fief by that count. This Sancho Iñigo, besides his lordship of Bigorre, for which he was the vassal of the French king, had domains in Navarre, and is believed, on apparently good foundation, to have been of Spanish descent. He is said, however, not to have been the first count of Navarre; that his brother Aznar held the fief before him, nominally dependent on king Pepin, but successfully laying the foundation of Navarrese independence. If the chronology which makes Sancho succeed Aznar in 836, and the event itself, be correct, Alfonso only confirmed the count in the lordship. In this case, the only remaining difficulty is to determine whether the fief was held from Charles or Alfonso. . . . But whichever of the princes was acknowledged for the time the lord paramount of the province, there can be little doubt that both governor and people were averse to the sway of either; both had long aspired to independence, and that independence was at hand. The son of this Sancho Iñigo was Garcia, father of Sancho Garces, and the first king of Navarre [assuming the crown about 885-801]; the first, at least, whom . . . historic criticism can admit."—S. 1076.—Annexed to Aragon. See ARAGON.

1234.—Succession of Thibalt, count of Champagne, to the throne. See SPAIN: 1212-1238.

1284-1328.—Union with France, and separation.—In 1284, the marriage of Jeanne, heiress of the kingdom of Navarre and of the counties of Champagne and Brie, to Philip IV of France, united the crown of Navarre to that of France. They were separated in 1328, on the death of her last surviving son, Charles IV, without male issue. Philip of Valois secured the French crown, under the so-called Salic law, but that of Navarre passed to Jeanne's granddaughter, of her own name.—See also FRANCE: Maps of medieval period: 1154-1360.

1442-1521.—Usurpation of John II of Aragon.—House of Foix and the D'Albrets.—Conquest by Ferdinand.—Incorporation in kingdom of Castile.—Blanche, daughter of Charles III of Navarre and heiress of the kingdom, married John II of Aragon, to whom she gave three children, namely, Don Carlos, or Charles, "who, as heir apparent, bore the title of Prince of Viana, and two daughters, Blanche and Eleanor. Don Carlos is known by his virtues and misfortunes. At the death of his mother Blanche [1442], he should have succeeded to the throne of Navarre; but John II. was by no means disposed to relinquish the title which he had acquired by marriage, and Carlos consented to be his father's viceroy. But even this dignity he was not permitted to enjoy unmolested." Persecuted through life, sometimes imprisoned, sometimes in exile, he died at the age of forty, in 1461 (see SPAIN: 1368-1479). "By the death of Don Carlos, the succession to the crown of Navarre devolved to his sister Blanche, the divorced wife of Henry IV. of Castile; and that amiable princess now became an object of jealousy not only to her father but also to her younger sister, Eleanor, married to the Count of Foix, to whom John II. had promised the reversion of Navarre after his own death. Gaston de Foix, the offspring of this union, had married a sister of Louis XI.; and it had been provided in a treaty between that monarch and John II., that in order to secure the succession of the House of Foix to Navarre, Blanche should be delivered into the custody of her sister. John executed this stipulation without remorse. Blanche was conducted to the Castle of Orthès in Béarn (April 1462), where, after a confinement of nearly two years, she was poisoned by order of her sister Eleanor." After committing this crime, the latter waited nearly fifteen years for the crown which it was expected to win, and then enjoyed it but three weeks. Her father reigned until January 20, 1479, when he died; the guilty daughter soon followed him. "After Eleanor's brief reign . . . the blood-stained sceptre of Navarre passed to her grandson Phœbus, 1479, who, however, lived only four years, and was succeeded by his sister Catherine. Ferdinand and Isabella [now occupying the thrones of Aragon and Castile] endeavoured to effect a marriage between Catherine and their own heir; but this scheme was frustrated by Magdalen, the queen-mother, a sister of Louis XI. of France, who brought about a match between her daughter and John d'Albret, a French nobleman who had large possessions on the borders of Navarre (1485). Nevertheless the Kings of Spain supported Catherine and her husband against her uncle, John de Foix, viscount of Narbonne, who pretended to the Navarrese crown on the ground that it was limited to male heirs; and after the

death of John, the alliance with Spain was drawn still closer by the avowed purpose of Louis XII. to support his nephew, Gaston de Foix, in the claims of his father. After the fall of that young hero at Ravenna [see ITALY: 1510-1513], his pretensions to the throne of Navarre devolved to his sister, Germaine de Foix, the second wife of King Ferdinand [see SPAIN: 1496-1517], an event which entirely altered the relations between the courts of Spain and Navarre. Ferdinand had now an interest in supporting the claims of the house of Foix-Narbonne; and Catherine, who distrusted him, despatched in May 1512, plenipotentiaries to the French court to negotiate a treaty of alliance." But it was too late. Ferdinand had already succeeded in diverting to Navarre an expedition which his son-in-law, Henry VIII. of England, acting in the Holy League against Louis XII., which Ferdinand now joined (see ITALY: 1510-1513), had sent against Guienne. With this aid he took possession of Upper Navarre. "In the following year, he effected at Orthès a year's truce with Louis XII (April 1st 1513), by which Louis sacrificed his ally, the King of Navarre, and afterwards, by renewing the truce, allowed Ferdinand permanently to settle himself in his new conquest. The States of Navarre had previously taken the oath of allegiance to Ferdinand as their King, and on the 15th of June 1515, Navarre was incorporated into the kingdom of Castile by the solemn act of the Cortès. The dominions of John d'Albret and Catherine were now reduced to the little territory of Béarn, but they still retained the title of sovereigns of Navarre." Six years later, in 1521, the French invaded Navarre and overran the whole kingdom. "Pampeluna alone, animated by the courage of Ignatius Loyola, made a short resistance. To this siege, the world owes the Order of the Jesuits. Loyola, whose leg had been shattered by a cannon ball, found consolation and amusement during his convalescence in reading the lives of the saints, and was thus thrown into that state of fanatical exaltation which led him to devote his future life to the service of the Papacy." Attempting to extend their invasion beyond Navarre, the French were defeated at Esquirois and driven back, losing the whole of their conquests.—T. H. Dyer, *History of modern Europe*, v. 1, bk. 1, ch. 4, 7, bk. 2, ch. 3.

1528-1563.—Kingdom remaining on the French side of Pyrenees.—Jeanne d'Albret's Bourbon marriage and issue of it.—Establishment of Protestantism in Béarn.—Besides the Spanish province which Ferdinand the Catholic appropriated and joined to Castile, and which gave its name to the kingdom of Navarre, "that kingdom embraced a large tract of country lying on the French side of the Pyrenees, including the principality of Béarn and the counties of Foix, Armagnac, Albret, Bigorre, and Comminges. Catherine de Foix, the heiress of this kingdom, had in 1491 carried it by marriage into the house of D'Albret. Henry, the second king of Navarre belonging to this house, was in 1528 united to Marguerite d'Angoulême, the favourite and devoted sister of Francis I. of France. Pampeluna, the ancient capital of their kingdom, being in the hands of the King of Spain, Henry and Marguerite held their Court at Nérac, the chief town of the duchy belonging to the family of D'Albret. It was at Nérac that Marguerite, herself more than half a Huguenot, opened an asylum to her persecuted fellow-countrymen. [See PAPACY: 1521-1535.] Farel, Calvin, Beza sought temporary refuge and found glad welcome there,

while to Lefèvre, Clément Marot, and Gérard Roussel it became a second home. Marguerite died in 1549, leaving only one child, a daughter, who, in the event of her father having no issue by any second marriage, became heiress to the crown of Navarre. Born in 1528, Jeanne d'Albret had early and bitter experience of what heirship to such a crown involved. The Emperor Charles V. was believed to have early fixed his eye on her as a fit consort for Philip, his son and successor." To prevent this marriage, she was shut up for years, by her uncle, the French king, Francis I, in the gloomy castle of Plessis-les-Tours. When she was twelve years old he affianced her to the duke of Clèves, notwithstanding her vigorous protests; but the alliance was subsequently broken off. "The next hand offered to Jeanne, and which she accepted, was that of Antoine, elder brother of the Prince of Condé, and head of the Bourbon family. They were married in 1548, a year after the death of Francis I., and a year before that of his sister Marguerite, Jeanne's mother. The marriage was an unfortunate one. Ambitious, yet weak and vain; frivolous and vacillating, yet headstrong and impetuous, faithless to his wife, faithless to his principles, faithless to his party, Antoine became the butt and victim of the policy of the Court. But though unfortunate in so many respects, this marriage gave to France, if not the greatest, the most fortunate, the most popular, the most beloved of all her monarchs"—namely, Henry IV—Henry of Navarre—the first of the Bourbon dynasty of French kings. "Antoine of Navarre died at the siege of Rouen in 1562. The first use that the Queen made of the increased measure of freedom she thus acquired was to publish an edict establishing the Protestant and interdicting the exercise of the Roman Catholic worship in Béarn. So bold an act by so weak a sovereign—by one whose political position was so perilous and insecure—drew down upon her the instant and severe displeasure of the Pope," who issued against her a bull of excommunication, in October, 1563, and assumed the right to dispose of her kingdom. This assumption was more than the French court could permit. "The Pope had to give way, and the Bull was expunged from the ecclesiastical ordinances of the Pontificate."—W. Hanna, *Wars of the Huguenots*, ch. 4.

NAVIGATION ACT (1893). See ASYLUM, RIGHT OF: Right of asylum on merchant ships.

NAVIGATION LAWS.—With the growth of colonial enterprises and foreign colonies in the six-

teenth and seventeenth centuries the question of navigation laws acquired great importance.

1645.—Regulation concerning importation of whale oil.—England forbade the importation of whale oil except in English ships manned by English sailors.

1651.—First English Act.—"After the triumph of the parliamentary cause [in the English Civil War], great numbers of the royalists had sought refuge in Virginia, Barbadoes, and the other West India settlements; so that the white population of these dependencies was in general fiercely opposed to the new government, and they might be said to be in a state of rebellion after all the rest of the empire had been reduced to submission and quiet. Barbadoes, indeed, had actually received Lord Willoughby as governor under a commission from Charles II., then in Holland, and had proclaimed Charles as king. It was in these circumstances that the English parliament in 1651, with the view of punishing at once the people of the colonies and the Dutch, who had hitherto enjoyed the greater part of the carrying-trade between the West Indies and Europe, passed their famous Navigation Act, declaring that no merchandise either of Asia, Africa, or America, except only such as should be imported directly from the place of its growth or manufacture in Europe, should be imported into England, Ireland, or any of the plantations, in any but English-built ships, belonging either to English or English-plantation subjects, navigated by English commanders, and having at least three-fourths of the sailors Englishmen. It was also further enacted that no goods of the growth, production, or manufacture of any country in Europe should be imported into Great Britain except in British ships, or in such ships as were the real property of the people of the country or place in which the goods were produced, or from which they could only be, or most usually were, exported. Upon this law, which was re-enacted after the Restoration, and which . . . has been generally regarded and upheld as the . . . maritime Magna Charta of England, we shall only at present observe that one of its first consequences was undoubtedly the war with Holland which broke out the year after it was passed."—G. L. Craik, *History of British commerce*, v. 2, ch. 7.—See also ENGLAND: 1652-1654: War with Dutch republic.

1660-1672.—Effect upon American colonies.—Passage of second Navigation Act, 1663. See U.S.A.: 1651-1672; NEW YORK: 1664.

1849.—Complete repeal of British restrictive acts.—"The question of the navigation laws was . . . brought forward [in the British Parliament, at the commencement of the session of 1849] . . . with a fair prospect of being settled." The stringency of the original Act of 1651 had been "slightly mitigated by another act passed in the reign of Charles II.; but the modifications thus introduced were of slight importance. A farther relaxation, made at the conclusion of the war of independence, allowed the produce of the United States to be imported in ships belonging to citizens of those states. The last amendment of the original law was obtained in the year 1825 by Mr. Huskisson, who made some important changes in it. The law, then, which the legislature had to reconsider in the year 1840 stood thus: the produce of Asia, Africa, and America might be imported from places out of Europe into the United Kingdom, if to be used therein, in foreign as well as in British

ships, provided that such ships were the ships of the country of which the goods were the produce, and from which they were imported. Goods which were the produce of Europe, and which were not enumerated in the act, might be brought thence in the ships of any country. Goods sent to or from the United Kingdom to any of its possessions, or from one colony to another, must be carried in British ships, or in ships of the country in which they were produced and from which they were imported. Then followed some stringent definitions of the conditions which constituted a vessel a British ship in the sense of the act. These restrictions were not without their defenders. Even the great founder of economic science, Adam Smith, while admitting that the navigation laws were inconsistent with that perfect freedom of trade which he contended for, sanctioned their continuance on the ground that defence is much more important than opulence. But as it was more and more strongly felt that these laws were part and parcel of that baneful system of monopoly which, under the name of protection, had so long been maintained and was now so completely exploded, it began also to be seriously doubted whether they were necessary to the defence of the nation. . . . Therefore, on the 14th of February in this year, Mr. Labouchere, as president of the board of trade, proposed a resolution on the subject couched in the following terms: "That it is expedient to remove the restrictions which prevent the free carriage of goods by sea to and from the United Kingdom and the British possessions abroad, and to amend the laws regulating the coasting trade of the United Kingdom, subject nevertheless to such control by her Majesty in council as may be necessary; and also to amend the laws for the registration of ships and seamen." A long debate took place on the question of the second reading of the government measure. . . . 214 members followed Mr. Disraeli into the lobby, while 275 voted with the government, which therefore had a majority of 61. In the upper house Lord Brougham astonished friend and foe by coming forward as the strenuous and uncompromising opponent of the ministerial measure. . . . The second reading was carried by a majority of 10. The smallness of this majority caused some anxiety to the supporters of the measure with regard to its ultimate fate; but this anxiety was relieved by the withdrawal of the most conspicuous opponents of the bill."—W. N. Molesworth, *History of England*, v. 2, ch. 5.—See also TARIFF: 1846-1879.

Effects of navigation laws in seventeenth century.—Dangerous rivalry of Dutch.—Results of laws on English shipping.—Effect of repeal.—"The effect of this mixed colonial and commercial system was to make the entire carrying trade of the Plantations an English monopoly, and to constitute England and Wales the sole distributing centre for the greater part of their produce and the entrepot through which they must draw all supplies of foreign origin. Moreover, it reserved to English shipowners the carriage of practically the entire volume of the English import trade, with the exception of goods of European origin shipped in vessels belonging to the producing country. . . . In the first place, it must be noted that the danger of retaliation was, at the time of their enactment very small. The trade of the Dutch, Spanish, Portuguese, and French colonies was already governed by a system as rigidly exclusive as [that of the British]. . . . The Dutch shipowners were the common carriers of the world, and few other States were likely to be troubled

by the restrictions laid on the general carrying trade, so long as their ships were free to engage in direct traffic with England. In the second place, it must be remembered that the English mercantile marine was not yet ready to challenge the Dutch supremacy in the general carrying trade. The seafaring instinct, the aptitudes and traditions making for success in seaborne commerce were there; but the progress of English shipping which had made great strides under the Tudors, had been checked during the Stuart decadence, and the available tonnage was hardly adequate even to the services now reserved to it. The freedom of Dutch institutions, the development of banking and the cheapness of capital, gave to the merchants of the Netherlands an advantage against which it was almost hopeless for Englishmen to compete, and the prospect of immunity from Dutch competition in the reserved trades might well seem to outweigh any disadvantages accepted in respect of other branches of commerce. These considerations carried the more weight because the principal branch of trade reserved to English shipping was certain to increase and easy to regulate. The Plantation trade was, indeed, the corner-stone of the whole system. The North American and West Indian colonies were then in the first stages of settlement. Their vast, undeveloped, natural wealth enabled severe restrictions to be laid upon their commerce without arresting its inevitable expansion. . . . Even so, there is some difference of opinion as to the success of the Acts in securing the ends for which they were designed. It used to be confidently asserted that they had been primarily instrumental both in destroying the maritime greatness of Holland and promoting the expansion of English shipping but the former contention has now been generally abandoned and even the latter is open to question. The immediate effect of the Acts appears to have been to accentuate Dutch competition in all branches of trade not definitely reserved to English ships [due to the cost of English shipping and the freights demanded by English ship owners]. Adam Smith himself in the very chapter in which he defends the Navigation Acts (Book IV-c. 2) admits that at the time he wrote, more than a hundred years after the passing of those Acts, the Dutch were still 'the great carriers of Europe,' and that Holland still was 'the great emporium for all European goods.' It may be said that but for the Acts of Navigation the Dutch shipowners would have monopolized the Plantation trade also, and that they would have profited greatly by its expansion during the eighteenth century. . . . With regard to English shipping the position is not so clear. There is pretty general agreement even among admirers of the Acts that their ultimate effect was detrimental to the trade of the Colonies. From the first there were bitter complaints on the part of the colonial governors and colonial merchants as to the inconveniences arising from the restrictions placed upon their commerce. . . . Even in the Plantation trade there is room for doubt as to whether the demand for English goods was not unfavourably affected by the restrictions placed on colonial development; as to foreign commerce generally there were contemporary critics who regarded the operation of the Acts as thoroughly mischievous. It was however, rather by the effect of the Acts upon shipping than by their general influence on the economic development of the country that their promoters would have claimed to be judged. . . . Between the Restoration and the Revolution of 1688 the tonnage of the mercantile marine was

said to have doubled, and a comparison of the recorded clearances supports this statement. How much of this increase is to be attributed to the operation of the Navigation Acts, and how much to other causes, such as the development of industry at home and of markets abroad and the progress of banking and finance, it is difficult to say. This revolt [of the American colonies] shook the whole foundations of the system. When the independence of the United States was recognized, it became absolutely necessary to find some way in which trade with them might still be carried on, not only by Great Britain but by our remaining Colonies, especially the British West Indies, whose dependence upon the North American Continent was in many respects absolute. The process of finding a *modus vivendi* was marked by a long series of regulations and impositions on the part of either side, always countered by retaliatory measures on the other, and it was not until 1830 that something like a definite agreement was reached, by which American ships were enabled to import into British possessions abroad any produce of the United States, and to export goods from those possessions to any foreign country. They were also admitted to participation in the export trade from the United Kingdom to India. The repeal of the Navigation Law was bewailed by many of the shipowners as heralding the downfall of British shipping; but their gloomy prognostications were happily contradicted by the course of events. The frank acceptance of foreign competition proved to be a stimulus to greater efficiency on the part of British shipowners and shipbuilders, and a successful effort was made to rival the performances of the American clippers. . . . The transition from sails to iron and steam gave an opportunity of which full advantage was taken, and the proportion of British tonnage in the trade of the United Kingdom rose from 65 per cent in 1850 to over 68 per cent in 1870 twenty years after the repeal of the Acts."—D. NAVY DEPARTMENT, United States: Origin under John Adams.—Struggle to create a department.—Act passed by Congress, 1798.—Precedent set for department heads to enter cabinet.—“On April 30, 1798, on the eve of probable war with France, President John Adams approved and signed a bill formulated for the purpose of establishing an executive department to be called the Department of the Navy. . . . On February 7, 1781, Congress adopted a plan which provided for the establishment of a Secretary of Marine, and prescribed that officer's duties. . . . In the summer of 1781 three committees tried at different times to solve the administrative problems involved in the naval situation. Late in August the third committee adopted a makeshift policy, agreeing ‘that for the present an agent of marine be appointed, with authority to direct, fit out, equip, and employ the ships and vessels of war belonging to the United States, according to such instructions as he shall, from time to time, receive from Congress.’ . . . Robert Morris, Superintendent of Finance, was asked by Congress to assume all the powers and duties of the office ‘until an agent of marine be appointed by Congress.’ . . . In 1786 the Congress of the Confederation, stirred by the news of the depredations of the Mediterranean corsairs on American shipping, went on record to the effect that ‘it is proper and expedient for the federal government to turn their earliest attention to the Marine Department, and that a committee be appointed to frame and report an ordinance for organizing the same.’ . . . Congress determined in 1780 to place such naval business as there might be directly in charge of the Secretary of War. . . . In 1790 the Secretary of War, General Knox, was considering the possibility of getting together some armed vessels of war for the uses of the government. Early in January, 1791, the Senate, enlightened by Jefferson, Secretary of State, as to the conditions of Mediterranean trade, resolved ‘that the trade of the United States to the Mediterranean cannot be protected but by a naval force; and that it will be proper to resort to the same as soon as the state of the public finances will admit.’ Nothing came of this suggestion. . . . In Washington's last annual message there was a memorable passage in this connection, in which the President dwelt on the desirability of building up a navy. ‘To an active external commerce,’ he wrote, ‘the protection of a naval force is indispensable. . . . To secure respect to a neutral flag requires a naval force organized and ready

to vindicate it from insult or aggression. . . . These considerations,' he concluded, 'invite the United States to look to the means, and to set about the gradual creation of a navy.' . . . John Adams's administration opened in March, 1797. From 1794, when navy business first assumed vital importance, to May, 1798, three Secretaries of War endeavored successively to manage that business in consultation with Presidents Washington and Adams. . . . In his first message addressed to the special session of Congress—a message dated May 16, 1797—President Adams, calling attention to the growing interest in commerce, spoke urgently of the need of establishing a permanent system of naval defence. The sentiments of Adams were in accord with Washington's well-known views, and likewise with those of many less distinguished members of the Federalist party. They were expressed only six days after the frigate *United States* was launched at Philadelphia, but before any one of the three vessels was equipped for service. On July 1 following, Congress was moved to authorize the President to man and employ these vessels, and thus . . . really committed the country to a naval establishment. In accordance with this July law, the navy was to be governed by the rules and regulations of the old Revolutionary navy. . . . On November 22 Adams once more urged on Congress the need of protecting American commerce and of looking after the interests of seafaring citizens as well as those of others. In the following March, moved by the increasing danger of war with France, . . . Congress prepared to act. On March 8, 1798, a committee of the House of Representatives reported in favor of a commissioner of marine in the War Department 'who should be employed in the immediate superintendence of the naval concerns of the United States.' A fortnight later, . . . McHenry proposed separating the naval business from that of the War Department. . . . On Monday, April 2, Senator William Bingham of Pennsylvania made a motion favoring the appointment of a committee 'to take into consideration the propriety of instituting a separate executive department, for the purpose of superintending and regulating the various objects connected with the Naval Establishment of the United States.' In accordance with this motion a committee of three . . . reported a bill to the Senate on April 11. [This was] . . . signed by President Adams on April 30. . . . The Secretary of the Navy was the first official since 1789 who became a member of the President's Cabinet. In the debates in Congress over the establishment of the new executive department it was assumed . . . that the official at its head would become a counsellor. . . . There is one aspect of the establishment of the Secretaryship that should not be overlooked. The office developed naturally out of the necessity of differentiating the administrative tasks which were burdening the War Department. There was no popular demand for it. It had to be forced into being—extracted from a Congress that contained both hostile and inert elements—by a few leaders who appreciated the more immediate needs of the government, and saw in the future the possibilities of a disastrous war as affecting a steadily increasing commerce. The larger aspects of the problem were set forth—as they should have been—by both Washington and John Adams. These men, with the aid of their administrative assistants and certain enlightened members of Congress, after some years of effort, brought about the act of 1798."—H. B. Learned, *President's cabinet*, pp. 199, 201-202, 204, 206-207, 209-213, 215, 217-218.

System since 1842.—"The method of naval administration . . . in force in the United States is the outcome of a gradual development. . . . The Navy Department . . . reached its present constitution in 1842. Since then it has remained fixed in fundamental principles; but has been subject, necessarily, to occasional considerable changes of detail and adjustment, as the navy has grown with the nation's growth, and as naval science has become more complicated in its demands. . . . The general system is as follows: President being, by the Constitution, Commander-in-Chief of the Army and Navy, Congress has created by law the office of Secretary of the Navy, a single person, who relieves the President of the burden of details. These are of two principal kinds, namely, those that concern the operations of the fleet all over the world, in peace and in war, which is the military side of naval administration, and those that relate to the creation and preservation of material in its manifold phases—ships, guns, engines, etc.—which is the civil side. As the aggregation of duties under these two heads has been found in practice far too great for any one man to discharge, they have been again subdivided by law. For this purpose there exist side by side two systems, military and civil, the Secretary being at the head of both. . . . The eight bureaus of the Navy Department are by title as follows: Yards and Docks, Construction and Repair, Steam Engineering, Ordnance, Equipment, Supplies and Accounts, Navigation, Medicine and Surgery. . . . At a yard the ship receives on board her crew and goes into commission; to it she returns for repairs or to be laid up after a cruise. It underlies and concentrates the local activities of the several bureaus. . . . The general nature of the duties of each bureau is sufficiently apparent. . . . The essential fact to remark is that each bureau—except Yards and Docks—has a distinct and mutually independent function in each ship built and commissioned. . . . This is the essential characteristic of the United States Naval Administration, deliberately adopted in 1842 to insure efficiency and responsibility, after long trial of a different system."—A. T. Mahan, *Navy Department* (*Scribner's Magazine*, May, 1903).—During the Civil War the work of directing the navy was unexpectedly increased and confused by the necessity of having a greatly enlarged number of ships, officers and seamen. In this period the number of naval ships was advanced from 90 to 670; the number of officers was increased from 1300 to 6700, and the seamen from 7500 to 51,500. The Navy Department built two hundred war vessels and bought three hundred. The architecture of these vessels was changing at this time. Iron was supplanting wood as a material of construction and the sails were being replaced by steam-engines. At the opening of the war the ship-sailing naval vessels numbered one half; by the close four-fifths of them were steamers, of which many were ironclads. Monitors, as well as the modern style of war-vessels were introduced at this time. "During the first few months of the civil war the defects of the administrative system of the navy department attracted widespread attention. The weakness of the secretary's office as a directing and unifying force was remedied in part by the creation of the office of assistant secretary of the navy. . . . In 1863 a 'permanent commission' was appointed to report on all questions relating to science upon which professional boards, such as the 'ironclad board,' the 'harbor commission,' and the 'board on plans and designs for the new vessels,' were also created as circumstances demanded. . . .

Secretary William C. Whitney, in his annual report of 1885, frankly admitted the 'universal dissatisfaction' with the inner workings of the navy department. . . . 'The country has expended since July 1, 1868, over seventy-five millions of money on the construction, repair, equipment, and ordnance of vessels, which sum, with a very slight exception, has been substantially thrown away.' . . . Four years later we read Secretary Tracy voicing a similar complaint that the entire organization of the department was 'without system or coherence.' When the war with Spain broke out, the navy department, for the fourth time, found itself with no organization for the strategic control of its fleets, the bureaus being fully engrossed with their own administrative work. Accordingly, the so-called naval strategy board was extemporized to study the strategic situation and to offer sound military advice upon current affairs to the secretary of the navy and to the President as constitutional commander-in-chief. . . . The acts of March 3, 1915, and August 29, 1916, which established the office of naval operations, have paved the way for . . . coördination in the department through the creation of a constituted military organ, senior to the existing administrative civil bureaus, and responsible for the preparation of the navy for war. The military branch of the department has been brought to the fore. But the prerogatives of the chiefs of the several civil bureaus granted by the act of August 21, 1842, unfortunately still prevail. . . . The spirit of our government requires that a civilian shall be at the head of the navy department. That is as it should be. But in this very lack of permanent tenure by the secretary himself lies one of the weaknesses of our system."—R. W. Neeser, *Department of the Navy*, pp. 61-64, 74-75.—See also WAR DEPARTMENT, UNITED STATES.

B. C. 376.—Battle between Spartans and Athenians.—A battle was fought in September, 376 B. C., off Naxos, between a Lacedæmonian fleet of sixty triremes and an Athenian fleet of

eighty. Forty-nine of the former were disabled or captured. "This was the first great victory . . . which the Athenians had gained at sea since the Peloponnesian war."—G. Grote, *History of Greece*, pt. 2, ch. 77.

1204-1567.—Medieval dukedom.—"In the partition of the [Byzantine] empire [after the conquest of Constantinople, in 1204, by the Crusaders and the Venetians], the twelve islands of the Archipelago, which had formed the theme of the Ægean sea in the provincial division of the Byzantine empire, fell to the share of the crusading barons; but Mark Sanudo, one of the most influential of the Venetian nobles in the expedition, obtained possession of the principal part of the ancient theme—though whether by purchase from the Frank barons to whom it had been allotted, or by grant to himself from the emperor, is not known. Sanudo, however, made his appearance at the parliament of Ravenika as one of the great feudatories of the empire of Romania, and was invested by the emperor Henry with the title of Duke of the Archipelago, or Naxos. It is difficult to say on what precise footing Sanudo placed his relations with the republic. His conduct in the war of Crete shows that he ventured to act as a baron of Romania, or an independent prince, when he thought his personal interests at variance with his born allegiance to Venice. . . . The new duke and his successors were compelled by their position to acknowledge themselves, in some degree, vassals both of the empire of Romania and of the republic of Venice; yet they acted as sovereign princes. [Nearly at the close of the fourteenth century the dukedom passed from the Sanudo family to the Crispo family, who reigned under the protection of Venice until 1537, when the Duke of Naxos was reduced to vassalage by the Turkish sultan Suleiman. Thirty years later, his title and authority were extinguished by the sultan, on the petition of the Greek inhabitants, who could not endure his oppressive and disgraceful government.]"—G. NEAPOLIS. See NAPLES.

NEAPOLIS AND PALÆPOLIS.—"Palæopolis is mentioned only by Livy: it was an ancient Cumæan colony, the Cumæans having taken refuge there across the sea. Neapolis derives its name from being a much later settlement of different Greek tribes, and was perhaps not founded till Olymp. 91, about the time of the Athenian

expedition to Sicily, and as a fortress of the Greeks against the Sabellians. It is not impossible that the Athenians also may have had a share in it. Both towns, however, were of Chalcidian origin and formed one united state, which at that time may have been in possession of Ischia. Many absurdities have been written about the site of Palaepolis, and most of all by Italian antiquaries. We have no data to go upon except the two statements in Livy, that Palaepolis was situated by the side of Neapolis, and that the Romans [in the second Samnite war] had pitched their camp between the two towns. The ancient Neapolis was undoubtedly situated in the centre of the modern city of Naples above the church of Sta. Rosa; the coast is now considerably advanced. People have sought for Palaepolis likewise within the compass of the modern city. . . . I alone should never have discovered its true site, but my friend, the Count de Serre, a French statesman, who in his early life had been in the army and had thus acquired a quick and certain military eye, discovered it in a walk which I took with him. The town was situated on the outer side of Mount Posilipo, where the quarantine now is."—B. G. Niebuhr, *Lectures on the history of Rome*, v. 1, lect. 40.—"Parthenopé was an ancient Greek colony founded by the Chalcidians of Cuma on the northern part of the Bay of Naples. In after years another city sprung up a little to the south, whence the original Parthenopé was called Palaepolis or Old-town, while the new town took the name of Neapolis. The latter preserves its name in the modern Naples. [Palaepolis was taken by the Romans, 327 B. C., at the beginning of the second Samnite War, and is heard of no more. Neapolis made peace with them and lived.]"—H. G. Liddell, *History of Rome*, v. 1, bk. 3, ch. 21.—See also TEMENITES.

NEAR EAST CONFERENCE (1921). See DARDANELLES: 1920; TURKEY: 1921 (March-April): Secret treaties.

NEAR EAST, or LAUSANNE, CONFERENCE (1922-1923).—With a view to settling the Greco-Turkish crisis in Eastern Europe and Asia Minor, the representatives of France, Great Britain and Italy (M. Poincaré, Lord Curzon and Count Sforza) despatched a note from Paris in September, 1922, calling for a conference at Lausanne. The United States government designated as "chief observers" the American ambassador at Rome, Richard Washburn Child, the American minister to Switzerland, Joseph C. Grew, and the American high commissioner at Constantinople, Rear-Admiral Mark C. Bristol, as "associated observer." These officials were charged with the duty of protecting capitulations essential to safeguarding non-Moslem interests, freedom of the Straits (Dardanelles and Bosphorus), and racial minorities. The conference opened on November 20, 1922. The settlement to be effected rested between Great Britain, France, Italy and Greece on the one part, and the new Turkish Nationalist government on the other. "Among the serried ranks of officials [at the opening] stood Premier Poincaré . . . Lord Curzon, Venizelos, Stambulisky, the peasant Premier of Bulgaria, come to secure for his country, if possible, an outlet on the Aegean; Baron Hayashi, Ismet Pasha, the Turkish Generalissimo, surrounded by his Turkish colleagues; and Mussolini, the Premier of Italy to-day through a revolutionary coup d'état. . . . A formal protest against the presence of Americans at the conference made by the Turkish delegation at the second session was withdrawn on the intervention of Lord Curzon. No Russians were present, owing

to the allied insistence that the Russian delegation be admitted to the conference only when the question of the status of the Turkish straits came up. . . . The opening session lasted only seventeen minutes, and the proceedings were formal. The second session (on November 21) was marked first by a partial agreement of England, France and Italy on the program of peace with Turkey; second, an initial clash with the Turkish delegation, and, third, the organization of committees and a decision against publicity. The program agreed upon had fifteen points, covering the following ground: 1. Western Thrace—The Greek *status quo* is in general maintained, and the Turkish demand for a plebiscite is refused. 2. The Frontier of Western Thrace—To be ceded by Turkey to Bulgaria in 1915, with the possibility of an outlet to the Aegean for the Bulgars. 3. Freedom of the Straits—The principle is accepted by all the Allies; the means by which it is to be secured are to be discussed later, the Allies insisting that certain regions of the Bosphorus, the Sea of Marmora and the Dardanelles be demilitarized under conditions to be determined. 4. The capitulations as such are to be abandoned and replaced by special laws and other provisions to be proposed. 5. The Aegean Islands—To be ceded by Turkey to the Allies for their disposition. 6. The Frontiers of Syria and Irak—To be maintained except so far as the mandatory powers may consent to local rectifications. 7. Mandated Territories—No changes to be admitted. 8. Allied Graves—The ownership of the soil to be transferred to the Allies. 9. Indemnities—A Turkish indemnity to be demanded, as provided by the allied resolutions of March, 1922, the amount to be fixed by the Allies; the Turkish demand for an indemnity from Greece to be refused. 10. The Mudania Convention—To be strictly enforced, and all Turkish violations of it to be resisted. 11. The Constantinople Situation—No withdrawal of the allied troops before complete ratification of the new treaty with Turkey. 12. The Protection of Minorities—With regard to minorities in Asia, adherence as far as possible to the September resolutions; much stricter conditions for minorities in European Turkey. 13. The Turkish Army—General terms for the Turkish Army in Asia not to be strict, but stricter limitation to be put upon the forces in Europe, the figures to be fixed later. 14. Financial Clauses—To be arranged in discussion among the allied experts. 15. Economic Clauses—Insistence upon recognition by the Turkish Government of allied concessions and annulment of the Turkish repudiation of contracts made since the armistice of 1918."—*New York Times Current History*, Jan., 1923, pp. 531-532.—Several objections raised by the Turks were defeated. Three committees were appointed, and on November 22 the first question that came up was the Turkish demand for the holding of a plebiscite in Western Thrace, still occupied by Greece. "A certain measure of agreement was obtained, but on other questions the Turks were unyielding. At last, despairing of any adequate results from a protraction of the negotiations, the Allies put forward such terms as they felt able to concede in the form of a draft treaty and presented it to the Turks. . . . After four days of informal discussion between the heads of the delegations of the inviting Powers and Ismet Pasha, the Turks accepted the whole draft treaty as modified by the offers made during these discussions, except on two points, the judicial guarantees for foreigners in Turkey and the economic clauses of the treaty. Finally, after every effort had been made to overcome

their refusal on these points, the Turkish plenipotentiaries refused, on February 4, [1923] to sign the treaty."—*Lausanne conference (Round Table, Mar., 1923, p. 343)*.—"For ten weeks the Lausanne Conference kept on the lines in spite of the violent jerks which disturbed its course.

When the treaty was finally drawn up and ready for presentation, it looked as if the Allied front might hold. Then occurred an amazing stroke of French diplomacy. It was the second act of shortsightedness perpetrated by the French Government within a month. At the eleventh hour M. Poincaré again fell to the temptation of a separate flirtation with Angora. Behind the back of Lord Curzon and even of the French delegation at Lausanne, he informed Angora that he would not regard the Allied draft to be presented to Ismet as a final draft, and broadly hinted that France would be prepared to carry on further negotiations, separately or otherwise, at Lausanne or elsewhere, if that draft were rejected. . . . The Lausanne Conference broke up and the gaps left in the treaty for the signatures and for the date of signature was left unfilled."—G. Glasgow, *Foreign affairs (Contemporary Review, Mar., 1923, pp. 373-374)*.

Towards the end of March a group of Allied diplomats sat in London to consider the counter-proposals presented by the Turks. The Allied conferees agreed on an answer to the effect that troops could not be withdrawn from Turkish territory until the Treaty was ratified, but that indemnities between Greeks and Turks could be decided later by a neutral commission; separation of economic matters was considered inadmissible, together with modification of judicial clauses and retrocession of Castoriza Island. On March 29 it was announced that negotiations would be resumed at Lausanne some time between April 15 and 20. The second conference opened on April 22. By May 15 some progress had been made by mutual concessions, though the problem of Greco-Turkish reparations remained unsolved until towards the end of the month. Concessions to foreigners were ratified by private agreements in June, and on July 8 it was announced that, after three months of negotiations, an agreement in principle had been arrived at on the three outstanding questions—the Ottoman Debt, concessions and evacuations of Allied troops. The treaty, composed of 143 articles, was signed by Ismet Pasha on July 24.

NEBO, or Nabu, one of principal gods of Babylonians and Assyrians. See BABYLONIA: Religion.

NEBRASKA: Area. — Population. — Resources.—Nebraska lies in the center of the North American continent, bounded on the north by South Dakota, on the east by Iowa and Missouri; on the south by Kansas and Colorado, and on the west by Colorado and Wyoming. It has an area of 77,280 square miles, or 50,000,000 acres of very fine agricultural land. In 1920 the population numbered 1,206,372. "The general surface of the country is that of rolling prairie divided into upland and bottom lands; first lying on the ridges or divides, as they are called, and the latter fringing the innumerable streams, by which the State is everywhere crossed and intersected, watering every portion in the greatest profusion. Along the Missouri river the land rises abruptly in bluffs

from 50 to 100 feet in height, from which it stretches westward in long waves of hill and dale, just enough of roll in it to break the monotony, and not too much to injure it for cultivation. . . . Coal is found in the southern and southwestern counties, . . . the quality of which is very superior, while the quantity is supposed to be inexhaustible. . . . Clay for brick is plenty everywhere while the more uncommon kinds such as pipe clay, potter's clay, fire brick clay, etc., are found in various localities. Lime may be had for the burning as the country abounds in limestone formations and ledges, while chalk, shales, etc., are found in sufficient quantities to supply the demand for home consumption. . . . The principal rock of the country is blue and white limestone and sandstones of various kinds and colors, some of which are highly ornamental and susceptible of fine polish. . . . In salt deposits this State has no superior east of the Rocky Mountains. . . . The soil of Nebraska is a dark vegetable mold impregnated with lime varying from two to six feet deep and of inexhaustible richness and fertility."—G. S. Alexander, *Nebraska: Its resources, prospects, and advantages of immigration (pamphlet), pp. 3, 8*.—Nebraska has very little mineral production. There is some pumice, and crude potash. Originally trees were rare in that locality. Now there have been established forest reserves, and the government has done a great deal of tree planting. Agriculture is the chief source of state wealth. Nebraska is one of the leading states in grain, sugar beets, and cattle, and ranks first in the production of prairie hay and grass. Manufacturing is increasing. (See U. S. A.: Economic Map.) In 1922, the manufacturing industries were chiefly connected with the agricultural produce of the state. Other industries are: soap, candles, printing and publishing, brick and tile, linseed oil, beet sugar, smelting works, slaughtering and packing.

Aboriginal inhabitants. See PAWNEE FAMILY.

1541-1854.—Early explorers.—Indian treaty.—

The first white man to visit Nebraska was the Spanish General Coronado in 1541. In 1763 France yielded the territory to Spain, and thirty-eight years later it was ceded back to France. But not until 1820 was the first fur trading post established, by the French at Bellevue, and the next year posts were opened also at Omaha and Nebraska City. "For a long time [after the Louisiana Purchase] but little was known of this country. Now and then a wandering Indian trader or trapper might be found. Government had military outposts here and there. Lewis and Clarke and Fremont had crossed it on their Rocky Mountain explorations [1804-1806]. The Mormon hordes had dragged their trail over its grassy plains on their hegira to Salt Lake in '47 and '48; but up to the year 1840, when the tide of overland emigration to California set in, it had practically remained a *terre incognita* to civilization. . . . In the fall of 1854, a treaty was made with the Otoes and Omahas, two Indian tribes claiming the domain, and the country was formally opened up to occupation and settlement."—G. S. Alexander, *Nebraska: Its resources, prospects, and advantages (pamphlet), pp. 4, 5*.

1803.—Included in Louisiana Purchase. See LOUISIANA: 1708-1803.

1853-1854.—Kansas-Nebraska Bill.—Proposed railway to Pacific. See U. S. A.: 1853-1854.

1854-1867.—Created a territory.—Part played in Civil War.—Railroads.—Admitted as a state.—"The organic Act of Congress, which constituted Nebraska a territory, and opened the public lands to settlement, was approved on May 30, 1854.

The territory of Nebraska covered an enormous region. Its area comprised 351,558 square miles. . . . In 1861 Colorado and Dakota were constituted, the first obtaining 16,035 square miles from Utah and Washington territories and on the south-west slope of the Rocky Mountains. . . . In 1863 . . . the territory of Idaho was formed, taking 45,999 square miles from Nebraska. . . . The tract of bluff land immediately west of the Missouri was first occupied for about ten miles inland. . . . There was gradual steady growth along the river. Towns were founded and flourished; and the land brought under cultivation made fertile farms. . . . The next stage in Nebraska's progress, however, dates from the rush to Cherry Creek—better known as the Pike's Peak expeditions of 1859 and 1860. Cherry Creek is within a few miles of what is now Denver City. Gold had been discovered there, and in the neighbouring gulches; and the whole country—east and north and south—was moved to dig for it. . . . This gold-seeking movement bruited abroad the fame of Nebraska as an agricultural country. Some of the voyageurs stopped by the way, and opened up farms. Some others, whose expectations came to nothing in the gold country, returned in a style of rough comfort as good as that in which they went out. . . . In the meantime . . . the civil war broke out; and, simultaneously therewith, Indian troubles, Nebraska raised two regiments. One did good service against the Confederacy; the other effectually disposed of the Indians who had harassed the frontier. In the year 1862, Congress passed the first of the Pacific Railroad Acts; and in 1863 the Union Pacific Railroad Company was organized. . . . Other railways of more or less importance have also sprung into existence. . . . Early in 1866 the legislature of the territory devised a constitution which was duly ratified by the people; and on July 4th in that year the legislature elected under the constitution met at Omaha. On July 28th Congress passed a bill for the admission of Nebraska as a State, but the President refused to sign it. In 1867, in January, Congress passed a similar bill, and again it was vetoed by the President, as was alleged because the bill contained provisions different from those in the Enabling Act; because the proceedings, in forming the constitution, were alleged to be irregular; and because the President held the population of the territory not large enough to form a State. Congress this time, however, defeated the President, passing the bill over his veto by 30 to 9 in the Senate, and 120 to 44 in the House. . . . This ratification was made by the legislature of Nebraska on February 20th, 1867, and the fact was proclaimed by the President of the United States on March 1st, 1867."—E. A. Curley, *Nebraska, its advantages, resources, and drawbacks*, pp. 100-108.

1863-1921.—**Railroad and agricultural development.—Droughts.**—"The railroads of Nebraska pay into the several treasuries of the state nearly one-sixth of all the taxes paid, and they . . . have been the most potential factor in its development and in multiplying many times the value of its fertile acres. Preceding the commencement of the construction of the two great systems of railroads in Nebraska [1863], the territory which they traverse was popularly supposed to be practically uninhabitable as an agricultural country; but the far-sighted, sanguine men who invaded the territory and risked their capital in railroad construction, was further than the men whose judgment pronounced the country an arid waste. They found here a fertile soil and a genial climate, that gave promise of a rich field for the agriculturist

and stock man. . . . During the almost total failure of crops in western Nebraska, in 1880, and again in 1893, and 1894, the railroads voluntarily came to the relief of the sufferers by furnishing free transportation to thousands of the citizens of the drouth-stricken localities, who came to the eastern part of the state, or went to other states in search of employment, and to the numerous agents of different localities who went east to solicit aid from their more fortunate brethren; and in one year, more than a quarter of a million dollars in freight charges was rebated to the people of the western part of this state in seed grain, and feed for teams, and other stock and relief goods."—D. H. Ager, *Nebraska politics and Nebraska railroads* (*Collections of Nebraska State Historical Society*, v. 15, pp. 35, 38).—In 1921, there were 6,166 miles of steam railway and 256 miles of electric railway track in the state.

1874-1880.—**Grasshopper invasions.—Farmers' alliance.**—"Grasshoppers invaded the state and did great injury to the crops in 1874. They remained during 1875 and 1876, but most of the damage was done in 1874 and 1875. In the early part of 1875 the federal congress appropriated \$30,000 in money for the purchase of seeds and rations, and clothing to the value of \$150,000 to be distributed among the people of the several states who had suffered."—A. Watkins, *Outlines of Nebraska history*, p. 15.—"The first aim of the society [the Farmers' Alliance] throughout the Northwest was to unite the farmers for the purpose of discussing and advocating certain principles of industrial and political reform. . . . The first alliance organized in Nebraska was formed near Filley, in Gage county, in the year 1880."—J. M. Thompson, *Farmers' Alliance in Nebraska* (*Nebraska State Historical Society Transactions*, v. 5, 2d series, p. 199).

1890-1910.—**Political changes.**—"Until 1890 Republicans held firmly to power, but that year James E. Boyd, Democrat, was elected governor. . . . At the same election William J. Bryan, Democrat; William A. McKeighan, Independent Democrat; and Omer M. Kem, Independent, were chosen for members of Congress. The Senate of 1891 comprised 18 Independents, 8 Democrats and 7 Republicans; the House of Representatives, 54 Independents, 25 Democrats, and 21 Republicans. This legislature passed the first Australian ballot law and a law materially reducing railroad rates for transportation of freight. In 1892 Lorenzo Crownse, Republican, was elected governor. In 1893 the legislature elected William V. Allen, Populist, United States Senator. In 1894 Silas A. Holcomb was elected governor by a fusion of the Democratic and People's Independent parties. . . . All of the Republican candidates for other state offices were elected. Five of the six members of Congress elected this year were Republicans. The entire fusion state ticket was elected in 1896 and 1898. The Republican party again came into control in the legislature of 1895. In 1900 the Republican state ticket was elected, and the Republican party continued to control the executive and legislative departments until 1908 when Ashton C. Shallenberger, Democrat, was elected governor by a plurality of about 7,000 votes, and the legislature was democratic. In 1910 all of the Republican candidates for executive offices were elected; but the legislature was democratic and Gilbert M. Hitchcock, Democrat, was elected United States Senator. William J. Bryan, candidate for president of the United States, carried the state by a plurality of about 13,000 votes in 1896 and in 1908 by a plurality of about 4,000

votes."—A. Watkins, *Outline of Nebraska history*, p. 43.

1907.—Minimum wage law passed. See LABOR REMUNERATION: 1910-1920.

1911-1917.—Home rule.—Vocational education.—Workmen's Compensation Act.—Commission government was adopted by Omaha in 1911, following the Des Moines plan very closely; the Sixteenth Federal Amendment (income tax) was ratified the same year. In 1912, amendments to the state constitution provided for initiative and referendum (see INITIATIVE AND REFERENDUM: Development in the United States), election of judges of the supreme court, home rule in cities of 5000 population or over, and also gave certain high schools the right to introduce industrial and agricultural studies. The Seventeenth Federal Amendment providing for direct election of senators was ratified in 1913. The Workmen's Compensation Act was referred to the people and adopted in 1914. The Woman Suffrage Act was passed in 1917, giving women the right to vote in all cases not provided for in the constitution.

1913.—Industrial arbitration board created. See ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1886-1920.

1917-1918.—Resources developed during World War.—Part played in World War.—When the World War began, 1917, the supply of German potash was cut off, but within a year of that time Nebraska scientists had opened up new sources. Valuable salts were found to exist in some of the lakes of the state. Business men at once began mining them, and Nebraska became one of the chief potash producing states in America. In 1918, the state furnished 47,805 soldiers or 1.27 per cent of the whole army.

1919.—Reorganization of state government.—Constitutional convention.—In the spring of 1919 the governor put through the legislature a scheme merging twenty boards and commissions into six—namely, a department of finance, a department of agriculture, a department of trade and commerce, a department of labor, a department of public works, and a department of public welfare. The secretary at the head of each division of the government receives a salary of \$5,000 a year.—"In Nebraska and Illinois delegates to constitutional conventions were chosen at the November elections. In the former state the Non-Partisan League made a strenuous campaign. Twenty avowed league candidates and thirty-five radical candidates entered the campaign, but only four leaguers and seventeen radicals were elected. The conservatives numbered about eighty. The Nebraska convention convened at Lincoln on December 2 and after seventy-four days of deliberation adopted forty-one amendments. The most important of these provide: that the legislature may allow verdicts to be rendered in civil cases in any court by five-sixths of the jury; that it may regulate the rights of aliens in respect to the acquisition, ownership, enjoyment or descent of property; that the English language be the medium of instruction in all common schools; that the number of petitioners required to invoke the initiative and referendum be reduced; that new executive officers be created only by a two-thirds vote of both houses of the legislature; that the heads of executive departments established by law be appointed by the governor with the consent of a majority of the senate and the house of representatives in joint session; that the governor present a 'complete itemized budget of the financial requirements of all departments, institutions and agencies of the state,' the legislature to

reduce items and to increase them only by a three-fifths vote, these increases not to be subject to the governor's veto; that the power of judicial review be restricted by requiring five of the seven judges of the supreme court to concur in declaring a legislative enactment unconstitutional; and that no appropriations be made to sectarian or denominational schools or to any educational institution not exclusively owned and controlled by the state."—E. D. Graper and H. J. Carman, *Political Science Quarterly*, 1920, *Supplement*, pp. 71-73.

1919-1920.—Prohibition and woman's suffrage.—Judicial reforms.—The Eighteenth Federal Amendment (prohibition) and the Nineteenth (woman's suffrage) were ratified. A special election in 1920, ratified many amendments which had been proposed to the state constitution, chief of which were the proposals authorizing five-sixths jury verdicts in civil cases, permitting regulation by law of the property rights of aliens, declaring English the official language of the state and requiring common school branches to be taught in the same. Another important amendment that carried by a large majority was that which continues the present state officers, but provides for a budget and a board of pardons. The power of judicial review was restricted. Amendment 23 prohibited state aid to sectarian institutions.

1920-1921.—New constitutional taxes.—Voting privileges.—The new constitution adopted September, 1920, provides that taxes shall be levied by valuation uniform and proportionately upon all tangible property and franchises, and taxes uniform as to class, may be levied by valuation upon all other property. Taxes other than property taxes may be authorized by law. The only exemptions from taxation is "household goods to the value of \$200.00 to each family." Nebraska places a tax of four mills on the dollar of the gross earnings of building and loan associations. This constitution provides also for a re-assessment by the state board of any local assessing district in case of any undervaluation by the local officers. In 1920, for the first time, the presidential ballot eliminated from the ballot the names of the candidates for electors. The names of the candidates of each party for president and vice-president were printed on the ballot enclosed in a bracket with a square or circle at the left. The Nebraska law provides that the Governor shall appoint as electors of president and vice-president, those persons selected in the preceding delegate state convention, by the political party whose candidates for president and vice-president received the highest number of votes at the general election. By the laws of 1921, only United States citizens are permitted to vote. The changes permit the voter who expects to be absent from the county where he resides, on election day, to vote by mail for all offices for which the election is held.

NEMEAN AND ISTHMIAN GAMES.—"The Nemean and Isthmian [games in ancient Greece] were celebrated each twice in every Olympiad, at different seasons of the year: the former in the plain of Nemea, in Argolis, under the presidency of Argos; the latter in the Corinthian isthmus, under the presidency of Corinth. These, like the Pythian and Olympic games, claimed a very high antiquity, though the form in which they were finally established was of late institution; and it is highly probable that they were really suggested by the tradition of ancient festivals, which had served to cement an Amphictyonic confederacy."—C. Thirlwall, *History of Greece*, ch. 10.

NEMEDIANS.—It is among the legends of the Irish that their island was settled, about the time of the patriarch Jacob, by a colony of descendants from Japhet, led by one Nemedius, from whom they and their posterity took the name of Nemedians. The Nemedians were afterwards subjugated by a host of African sea-rovers, known as Fomorians, but were delivered from these in time by a fresh colony of their kindred from the East called the Fir Bolgs.—T. Wright, *History of Ireland*, bk. 1, ch. 2.

NEOPLATONISM.—"There now [in the third century after Christ] arose another school, which from its first beginnings announced itself as a reform and support of the ancient faith, and, consequently, as an enemy of the new religion. This was the Neoplatonic school of Alexandria, founded by Ammonius Saccas and Plotinus, and which was afterwards represented by Porphyrius, Amelius, and Iamblicus. The doctrine of this school was the last, and in many respects the best production of paganism, now in its final struggle; the effort of a society, which acknowledged its own defects, to regenerate and to purify itself. Philosophy, and the religion of the vulgar, hitherto separated and irreconcilable, joined in harmony together for mutual support, and for a new existence. The Neoplatonic, endeavored, therefore, to unite the different systems of philosophy, especially the Pythagorean, Platonic, and Aristotelean, in one body with the principles of oriental learning, and thus to raise an edifice of universal, absolute truth. In the same manner they represented the varied forms of eastern and western religious worship as one entire whole, which had manifested itself indeed in different ways, but at the foundation of which there lay the same true faith. They taught that 'every kind of homage and adoration, which men offer to superior beings, is referred to heroes, demons, or Gods, but, finally, to the one most-high God, the author of all: that these demons are the chiefs and genii of the different parts, elements, and powers of the world, of people, countries, and cities, to obtain whose favour and protection, it behoved men to honour them according to the rites and customs of the ancients.' It is, therefore, manifest that these philosophers were essentially hostile to the Christian religion,—the exclusive character of which, and tendency to destroy all other religions, stood in direct contrast with their doctrines: and as their school was in its vigour at the very time in which Christianity made its most rapid advances, and had struck Paganism with a mortal wound, they employed themselves especially, and more earnestly, than other philosophers, to maintain their own tenets, and to destroy Christianity. They in no-wise, however, desired to defend heathenism, or its worship, in their then degenerate and degrading state [see **EUROPE**: Ancient Roman civilization; **Intellectual bankruptcy**, etc.]: their ideal was a more pure, more noble, spiritualized, polytheism, to establish which was the object which they had proposed to themselves. Whilst, therefore, on the one hand, they preserved the ancient and genuine truths which had sprung from primitive tradition, and purified them from recent errors and deformations; on the other, they adopted many of the doctrines of the hated Christianity, and sought to reform paganism by the aid of light which had streamed upon them from the sanctuary of the Church. This admission and employment of Christian truths are easily explained, if it be true, that two of their chiefs, Ammonius and Porphyrius, had been Christians. It is well known that they received instructions from Christian masters. . . . This uniformity, or imitation, consists not only in the use of terms, but in essential dogmas. The Neoplatonic idea of three hypostases in one Godhead would not have been heard of, if the Christian doctrine of the

Trinity had not preceded it. . . . Their doctrines respecting the minor Gods, their influence and connexion with the supreme Being, approached near to the Christian dogma of the angels. Nor is the influence of Christianity less evident in the pure and grave morality of the Neoplatonics: in their lessons which teach the purifying of fallen souls, the detachment from the senses, the crucifying . . . of the affections and passions, it is easy to distinguish the Christian, from the commingled pagan, elements. The Neoplatonics endeavoured to reform polytheism by giving to men a doctrine more pure concerning the Gods, by attributing an allegorical sense to the fables, and a moral signification to the forms and ceremonies of religion: they sought to raise the souls of men to piety, and rejected from their mythology many of the degrading narrations with which it had before abounded. It was their desire also to abolish the sacrifices, for the Gods could only abhor the slaughter, the dismemberment and the burning of animals. But at the same time they reduced to a theory the apparitions of the Gods; they declared magic to be the most divine of sciences; they taught and defended theurgy, or the art of invoking the Gods (those of an inferior order, who were united to matter), and of compelling them to comply with the desires of men."—J. J. I. Döllinger, *History of the church*, v. 1, pp. 70-73.—Neoplatonism has shown an extraordinary vitality in the history of European thought. Its essential tenets have re-appeared in new and various forms in the ideas of such men as Giordano Bruno, Spinoza, and Swedenborg. In modern times the theosophists have drawn heavily upon the old treasury of ideas in neoplatonism in their attempts to make a new synthesis between the religions of the East and the thought of the West.—See also ECLECTICISM.

NESTORIAN AND MONOPHYSITE CONTROVERSY.—The great religious controversy of the Christian world in the fourth century, relating to the mystery of the Trinity, having been settled by the triumph of the doctrine of Athanasius over the doctrine of Arius, it was succeeded in the fifth century by a still more violent disputation, which concerned the yet profounder mystery of the Incarnation. To the dogmatists of one party it was wickedness to distinguish the divine nature and the human nature which they believed to be united in Christ; to the dogmatists of the other side it was sin to confound them. Cyril of Alexandria became the implacable leader of the first party. Nestorius, Patriarch of Constantinople, was forced to the front of the battle on the other side and became its martyr. The opponents of Nestorius gained advantages in the contest from the then rapidly growing tendency in the Christian world to pay divine honors to the Virgin Mary as the Mother of God. To Nestorius and those who believed with him, this was abhorrent. "Like can but bear like," said Nestorius in one of his sermons; "a human mother can only bear a human being. God was not born—he dwelt in that which was born." But the mob was too easily charmed with Mariolatry to be moved by reasoning on the subject, and Cyril led the mob, not only in Alexandria, where it murdered Hypatia and massacred Jews at his bidding, but generally throughout the Christian world. A Council called at Ephesus in 431 and recognized as the third Ecumenical Council, condemned Nestorius and degraded him from his episcopal throne; but a minority disputed its procedure and organized a rival Council, which retorted anathemas and excommunications against Cyril and his friends. The emperor at last interfered and dissolved both; but Nestorius, four years later, was exiled to the Libyan desert and persecuted remorselessly until he died. Meantime the doctrine of Cyril had been carried to another stage of development by one of his most ardent sup-

porters, the Egyptian monk Eutyches, who maintained that the human nature of Christ was absorbed in the divine nature. Both forms of the doctrine of one nature in the Son of God seem to have acquired somewhat confusedly the name of Monophysite, though the latter tenet is more often called Eutychian, from the name of its chief promulgator. It kindled new fires in the controversy. In 449, a second Council at Ephesus, which is called the "Robber Synod" on account of the peculiar violence and indecency of its proceedings, sustained the Monophysites. But two years later, in 451, the vanquished party, supported by Pope Leo the Great, at Rome, succeeded in assembling a Council at Chalcedon which laid down a definition of the Christian faith affirming the existence of two natures in one person, and which nevertheless condemned Nestorianism and Monophysitism, alike. Their success only inflamed the passions of the worshippers of the Virgin as the "Mother of God." "Everywhere monks were at the head of the religious revolution which threw off the yoke of the Council of Chalcedon." In Jerusalem "the very scenes of the Saviour's mercies ran with blood shed in his name by his ferocious self-called disciples." At Alexandria, a bishop was murdered in the baptistry of his church. At Constantinople, for sixty years, there went on a succession of bloody tumults and fierce revolutionary conspiracies which continually shook the imperial throne and disorganized every part of society, all turning upon the theological question of one nature or two in the incarnate Son of God. The Emperor Zeno "after a vain attempt to obtain the opinions of the chief ecclesiastical dignitaries, without assembling a new Council, a measure which experience had shown to exasperate rather than appease the strife, Zeno issued his famous Henoticon, or Edict of Union. . . . It aimed not at the reconciliation of the conflicting opinions, but hoped, by avoiding all expressions offensive to either party, to allow them to meet together in Christian amity." The Henoticon only multiplied the factions in number and heated the strife between them. The successor of Zeno, Anastasius, became a partisan in the fray, and through much of his reign of twenty-seven years the conflict raged more fiercely than ever. Constantinople was twice, at least, in insurrection. "The blue and green factions of the Circus—such is the language of the times—gave place to these more maddening conflicts. The hymn of the Angels in Heaven [the Trisagion] was the battle-cry on earth." At length the death of Anastasius ended the strife. His successor Justin (518), bowed to the authority of the Bishop of Rome—the Pope Hormisdas—and invoked his aid. The Eastern world, exhausted, followed generally the emperor's example in taking the orthodoxy of Rome for the orthodoxy of Christianity. Nestorianism and Monophysitism in their extreme forms were driven from the open field in the Christian world, but both survived and have transmitted their remains to the present day."—H. H. Milman, *History of Latin Christianity*, bk. 2, ch. 3-4, bk. 3, ch. 1.—See also NESTORIANS; JACOBITE CHURCH; MONOTHELITE CONTROVERSY.

NESTORIAN SCHOOLS. See MEDICAL SCIENCE: Ancient; 7th-11th centuries.

NESTORIANS.—"Within the limits of the Roman empire . . . this sect was rapidly extirpated by persecution [see NESTORIAN AND MONOPHYSITE CONTROVERSY]; and even in the patriarchate of

Antioch, where, as we have seen, the tenets of Nestorius at first found greatest favour, it had disappeared as early as the time of Justinian [527-565]. But another field lay open to it in the Persian kingdom of the Sassanidae, and in this it ultimately struck its roots deeply. The Chaldaean church, which at the beginning of the fifth century was in a flourishing condition, had been founded by missionaries from Syria; its primate, or Catholicos, was dependent on the patriarch of Antioch, and in respect of language and discipline it was closely connected with the Syrian church. It is not surprising, therefore, to find that some of its members lent a ready ear to the Nestorian doctrines. This was especially the case with the church-teachers of the famous seminary at Edessa in Mesopotamia. . . . One of their number, Barsumas, who was bishop of the city of Nisibis from 435 to 489, by his long and active labours contributed most of all to the establishment of the Nestorian church in Persia. He persuaded the king Pherozes (Firuz) that the antagonism of his own sect to the doctrine of the established church of the Roman empire would prove a safeguard for Persia. . . . From that time Nestorianism became the only form of Christianity tolerated in Persia. . . . The Catholicos of Chaldea now threw off his dependence on Antioch, and assumed the title of Patriarch of Babylon. The school of Edessa, which in 489 was again broken up by the Greek emperor, Zeno, was transferred to Nisibis, and in that place continued for several centuries to be an important centre of theological learning, and especially of biblical studies. . . . In the sixth century the Nestorians had established churches from the Persian Gulf to the Caspian Sea, and had preached the Gospel to the Medes, the Bactrians, the Huns, and the Indians, and as far as the coast of Malabar and the island of Ceylon. At a later period, starting from Balk and Samarcand, they spread Christianity among the nomad Tartar tribes in the remote valleys of the Imaus; and the inscription of Siganfu, which was discovered in China, and the genuineness of which is considered to be above suspicion, describes the fortunes of the Nestorian church in that country from the first mission, 636, to the year in which that monument was set up, 781. In the ninth century, during the rule of the caliphs at Bagdad, the patriarch removed to that city, and at this period twenty-five metropolitans were subject to him. . . . From the eleventh century onwards the prosperity of the Chaldaean church declined, owing to the terrible persecutions to which its members were exposed. Foremost among these was the attack of Timour the Tartar, who almost exterminated them. Within the present century their diminished numbers have been still further thinned by frightful massacres inflicted by the Kurds. Their headquarters now are a remote and rugged valley in the mountains of Kurdistan, on the banks of the Greater Zab. . . . Beyond the boundary which separates Turkey from Persia to the southward of Mount Ararat, a similar community is settled on the shores of Lake Urumia. A still larger colony is found at Mosul, and others . . . elsewhere in the neighbourhood of the Tigris. . . . Of their widely extended missions only one fragment now remains, in the Christians of St. Thomas on the Malabar coast of India."—H. F. Tozer, *Church and the Eastern empire*, ch. 5.—See also TURKEY: Diverse peoples of the country.

NETHERLANDS

Introduction.—Under this head, the Netherlands, both the North and South, are treated jointly up to the year 1648, when the independence of the United Provinces was recognized by the Treaty of Münster (Westphalia) at the close of the Thirty Years' War. From that period the article continues the history of Holland or, more correctly, the Kingdom of the Netherlands. The southern, or Roman Catholic Netherlands, through the course of the Spanish, Austrian and French domination and its subsequent independent existence is treated under Belgium. For Spanish (after 1648) and Austrian Netherlands, therefore, see BELGIUM; LUXEMBURG.

Geographical description.—Area and population.—**Resources.**—**Origin.**—**Forest enclosure.**—“We generally call the people of Holland the Dutch, but they call their country the Netherlands and themselves Netherlanders. The name Holland properly applies only to two provinces lying west and southwest of the Zuider Zee as far as the mouths of the Rhine; North Holland is west of the Zuider Zee and contains Amsterdam, the largest town of the Netherlands [see also AMSTERDAM]; South Holland lies to the south-west of this and contains the Hague, the capital, and Rotterdam, the greatest port. The Netherlanders are closely akin to the North German peoples, and their language is one of the Teutonic group. The area of the country is very small, it is about 12,600 square miles, *i.e.* considerably less than half the size of Scotland, but it has a population of nearly seven million people. This works out to an average of nearly 550 person to the square mile, a density of population only exceeded by Belgium among the states of the continent of Europe, and nearly equal to that of England and Wales. . . . Cattle-rearing is very important in the region below sea-level, which in most parts is too damp for cultivation, even when drained. The main object of the farmers is to obtain butter and cheese, which are sent largely to London and to the German manufacturing districts. Most of the dairies are owned by co-operative societies, and the selling of farm produce in general is not carried on by the farmers, but by officers of a co-operative marketing association. The land above sea-level but below river-level is mainly between, and on either side of, the Rhine and Maas. Here there are ‘grass districts,’ hundreds of miles in extent, absolutely flat except for the river dykes and canal dykes, with few houses or villages, but everywhere the black-and-white cattle. In other parts of these river lands, crops are grown; corn, sugar-beet, potatoes, flax, beans, and onions. . . . The manufacturing industries of Holland are numerous, and although none is very large, the total is considerable. Many of them arose for some particular reason in earlier times when coal and iron were not necessary, and they still manage to exist even though these minerals are lacking in the Netherlands. A very small amount of coal is found in the extreme south, where a strip of territory near Maastricht is thrust like a peninsula between Germany and Belgium and reaches the coal-bearing edge of the Ardennes massif. . . . Some textiles are manufactured, namely cotton, woollen and linen goods.”—J. F. Unstead, *Europe of to-day*, pp. 73-76, 79.—“The north-western corner of the vast plain which extends from the German ocean to the Ural mountains is occupied by the countries called the Netherlands [Low Countries]. This small triangle, enclosed between

France, Germany, and the sea, is divided by the modern kingdoms of Belgium and Holland into two nearly equal portions. . . . Geographically and ethnographically, the Low Countries belong both to Gaul and to Germany. It is even doubtful to which of the two the Batavian island, which is the core of the whole country, was reckoned by the Romans. It is, however, most probable that all the land, with the exception of Friesland, was considered a part of Gaul. Three great rivers—the Rhine, the Meuse, and the Scheld—had deposited their slime for ages among the dunes and sandbanks heaved up by the ocean around their mouths. A delta was thus formed, habitable at last for man. It was by nature a wide morass, in which oozy islands and savage forests were interspersed among lagoons and shallows; a district lying partly below the level of the ocean at its higher tides, subject to constant overflow from the rivers, and to frequent and terrible inundations by the sea. . . . Here, within a half-submerged territory, a race of wretched ichthyophagi dwelt upon ‘terpen,’ or mounds, which they had raised, like beavers, above the almost fluid soil. Here, at a later day, the same race chained the tyrant Ocean and his mighty streams into subserviency, forcing them to fertilize, to render commodious, to cover with a beneficent network of veins and arteries, and to bind by watery highways with the farthest ends of the world, a country disinherited by nature of its rights. A region, outcast of ocean and earth, wrested at last from both domains their richest treasures. A race, engaged for generations in stubborn conflict with the angry elements, was unconsciously educating itself for its great struggle with the still more savage despotism of man. The whole territory of the Netherlands was girt with forests. An extensive belt of woodland skirted the sea-coast, reaching beyond the mouths of the Rhine. Along the outer edge of this barrier, the dunes cast up by the sea were prevented by the close tangle of thickets from drifting further inward, and thus formed a breastwork which time and art were to strengthen. The groves of Haarlem and the Hague are relics of this ancient forest. The Badahuenna wood, horrid with Druidic sacrifices, extended along the eastern line of the vanished lake of Flevo. The vast Hercynian forest, nine days' journey in breadth, closed in the country on the German side, stretching from the banks of the Rhine to the remote regions of the Dacians, in such vague immensity (says the conqueror of the whole country) that no German, after traveling sixty days, had ever reached, or even heard of, its commencement. On the south, the famous groves of Ardennes, haunted by faun and satyr, embowered the country, and separated it from Celtic Gaul. Thus inundated by mighty rivers, quaking beneath the level of the ocean, belted about by hirsute forests, this low land, nether land, hollow land, or Holland, seemed hardly deserving the arms of the all-accomplished Roman.”—J. L. Motley, *Rise of the Dutch republic, introduction*, sect. 1.

889-1345.—Early counts of Holland.—On August 4, 889, Arnulf, German king, gave to Gerulf as perpetual fief a large strip of land on the mouths of the Rhine and Meuse. A probable son of this Gerulf was Count Dirk I. "It was in the year 922 that Charles the Simple [of France] presented to Count Dirk the territory of Holland, by letters patent. This narrow hook of land, destined, in future ages, to be the cradle of a considerable empire, stretching through both hemispheres, was, thenceforth, the inheritance of Dirk's descendants. Historically, therefore, he is Dirk I., Count of Holland. . . . From the time of the first Dirk to the close of the 13th century there were nearly four hundred years of unbroken male descent, a long line of Dirks and Florences. This iron-handed, hot-headed, adventurous race, placed a sovereign upon its little sandy hook, making ferocious exertions to swell into large consequence, conquering a mile or two of morass or barren furze, after harder blows and bloodier encounters than might have established an empire under more favorable circumstances, at last dies out. The countship falls to the house of Avennes, Counts of Hainaut. Holland, together with Zeland [Zealand], which it had annexed, is thus joined to the province of Hainaut. At the end of another half century the Hainaut line expires. William the Fourth died childless in 1345."—J. L. Motley, *Rise of the Dutch republic, introduction, sect. 5-6*.—"Hainaut [or Hainault], Holland, and Zealand were plunged into the deepest mourning. The evil tidings were carried to the unhappy countess who had given her husband no children. Thus the count's eldest sister, the Empress Margaret, suddenly became heiress to her brother's rich heritage. The death of William IV. was the signal for the outbreak of open hostilities between the two great parties of nobles. A civil war ensued, and the outlook was dark for the provinces. Edward III. made claims to the countship in behalf of his wife Philippa, the count's second sister, and danger menaced from all sides. The Frisians harried the coast, Bishop John of Utrecht invaded the regions adjacent to the bishopric, plundering and burning as he went. The Hainaut party attacked Zierikzee and Dordrecht. The nobles began to take advantage of the general state of confusion to fight out their private feuds, while in Zealand a strong sympathy was evinced for the English king, who hastened his preparations to land there in the hope of being acknowledged as sovereign. Thus throughout the provinces there was domestic strife and foreign war, plunder and fire, besides a terrible new calamity, the Black Death, which raged through Europe, and did not spare the provinces. Owing to the indescribable confusion of the period many records and accounts of both city and state were lost, or we should have a clearer picture of the times than we can glean from the chronicles. A true history of the effect of this frightful epidemic would be very interesting, but we know little more than the fact that victims fell by thousands. 'Forests of despair' is the phrase by which William van Hildegaerdsberch characterises the history of those dreary days. Emperor Louis, with the help of Beaumont who took affairs in hand, assumed the heritage of the late count in behalf of his wife, William's eldest sister (January, 1346). Margaret appeared in Hainaut in March, where she received homage promptly. Later she was recognised in Holland and Zealand. At first she restored order, possibly with the help of the French king, who feared England's gaining a foothold on the continent. She promised

to keep the provinces intact, confirmed ancient privileges and acceded to new ones, with the approval of her husband and co-operation of John of Beaumont. She also opened negotiations with Edward of England, and averted the danger of an invasion of Zealand. The summer passed, and the emperor began to demand the return of his wife. Being anxious to preserve the Netherlands for his family, he urged Margaret to appoint their second son as heir to her paternal heritage. This plan was acceded to in a meeting of nobles and cities at Geertruidenberg, September 24th. William of Bavaria was made stadtholder for his mother, to succeed her later as sovereign. His elder brother, Louis, renounced his rights, although the Netherlands apparently would have preferred him to the sixteen-year-old youth whom they felt it was wise to accept under the circumstances"—P. J. Blok, *History of the people of the Netherlands, pt. 1, pp. 311-312*.

13th-15th centuries.—Relations with the Hanseatic League. See HANSA TOWNS; COMMERCE: Medieval: 8th-16th centuries.

1345-1354.—Origin of the struggle between the Hooks and the Kabeljauws, or Cods.—Louis died suddenly in 1347. Margaret resigned Holland, Zealand and Friesland to her son. In Hainaut he was to remain stadtholder. Later William placed himself at the head of a disaffected party of nobles. Margaret called to her aid her eldest son, Louis, and found help from Edward III of England. William allied himself with the bishop of Utrecht and prepared to repel the threatened invasion of the English. In the sanguinary struggle which ensued, the people generally adhered to the cause of Margaret. . . . [They] looked forward to the necessities of a female reign as likely to afford them opportunities to win further immunities, as the condition of their support against the turbulent nobles. Did not these live, like the great fish, by devouring the smaller ones? And how could they be checked but by the hooks which, though insignificant in appearance, when aptly used would be too strong for them. Such was the talk of the people; and from these household words arose the memorable epithets, which in after years were heard in every civic brawl, and above the din and death-cry of many a battle-field. Certain of the nobles adhered to the cause of the Hooks, while some of the cities, among which were Delft, Haarlem, Dort, and Rotterdam, supported the Kabeljauws [or Cods]. The community was divided into parties rather than into classes. . . . In the exasperation of mutual injury, the primary cause of quarrel was soon forgotten. The Hooks were proud of the accession of a lord to their ranks; and the Kabeljauws were equally glad of the valuable aid which a wealthy and populous town was able to afford. The majority of the cities,—perhaps the majority of the inhabitants in all of them,—favoured the Hook party, as the preponderance of the landowners lay in the opposite scale. But no adherence to antagonistic principles, or even a systematic profession of them, is traceable throughout the varying struggle. . . . In Friesland the two factions were designated by the recriminative epithets of 'Vet-Koopers' and 'Schieringers,'—terms hardly translatable. In the conflict which first marshalled the two parties in hostile array, the Hooks were utterly defeated;—their leaders who survived were banished, their property confiscated, and their dwellings razed to the ground."—W. T. McCullagh, *Industrial history of free nations, v. 2, ch. 6*.—"The empress [Margaret] was forced to leave Zealand and take refuge in Hainaut. . . . Soon she betook herself to England, and placed the

three strongholds that her party still possessed in Holland . . . in the hands of the king [Edward] (December, 1351). . . Negotiations lasted for months, and no result was reached. The young count finally obtained aid from . . . Edward III., broke off his friendly relations with the empress and allied himself with William. . . . Margaret, thus bereft of English help, returned to her faithful Hainaut, . . . and after long years a last reconciliation was made between mother and son at Mons, in Hainaut (December 7, 1354). William agreed to pay his mother a large sum down and an annuity. He was recognised as count of Holland and Zealand, and she as countess of Hainaut."—P. J. Blok, *History of the people of the Netherlands*, pt. 1, pp. 315-316.

1356-1413.—Rule of William IV.—Duke Albert as regent and as count.—Accession of William VI.—Feuds and their effect.—Peace.—Eighteen months . . . after her reconciliation with her son (July, 1356), "the empress died at Quesnoy, and William [V] was free to enjoy the heritage of all the disputed territory. He had but brief enjoyment of his victory. In the autumn of 1357 he paid a visit to England. Scarcely had he returned when he began to show signs of insanity. His condition grew so serious that his wife, after consultation with his council, and with the count's own consent, appointed his brother, young Duke Albert, as reward. . . . During the period of peace in the time of William III. the cities [had] made great strides in prosperity and power. The sovereigns depended on them for loans in case of need—no unrequited contingency—and in return for the loans he was forced to make concessions. . . . Privileges were also granted to people in the country. The farm-land of Holland was by far the most privileged region of the North. . . . The chivalrous Duke Albert ruled for forty years over the three united countships, until 1389, as governor in behalf of the mad duke, later as his successor. . . . The reward and his son William, being both military in spirit, played a part in the affairs of Europe where complications of various kinds gave many a pretext for war to those inclined to make it. . . . The last three years of Albert's life were mostly spent in . . . party quarrels, which reached large proportions. Utrecht took sides in an effort to regain her rights on the Lek passage, the merchant city having been seriously inconvenienced by the tolls imposed by the Arkel party. This feud was still in progress when Albert died (December 12, 1404). William VI assumed sovereignty amid the jubilation of the Hooks, who thought their good days were come. The party feud lasted a year. The border lands of Utrecht were plundered and harried. . . . Arkel's brother-in-law, the duke of Guelders and Jülich, came to his aid, and the result was open warfare between Holland and Guelders. The poor peasants were the chief sufferers. Their harvests were destroyed and their villages burned. The cities were better able to defend themselves. The desolation was, in truth, dreadful until the proclamation of a three years' truce (until 1410). At the expiration of that time, hostilities were renewed, and lasted until a peace was enacted at Wijk, near Duurstede (1412). Gorkum was to be ceded to Duke William for one hundred thousand crowns, with some other compensation to John of Arkel and his son, but another year followed before peace was really attained."—P. J. Blok, *History of the people of the Netherlands*, pt. 1, pp. 315-317, 323, 333.

14th-15th centuries.—Commercial and industrial superiority.—Advance in learning and art.—"What a scene as compared with the rest of

Northern Europe, and especially with England . . . must have been presented by the Low Countries during the 14th century! In 1370, there are 3,200 woollen-factories at Malines and on its territory. One of its merchants carries on an immense trade with Damascus and Alexandria. Another, of Valenciennes, being at Paris during a fair, buys up all the provisions exposed for sale in order to display his wealth. Ghent, in 1340, contains 40,000 weavers. In 1389, it has 189,000 men bearing arms; the drapers alone furnish 18,000 in a revolt. In 1380, the goldsmiths of Bruges are numerous enough to form in war time an entire division of the army. At a repast given by one of the Counts of Flanders to the Flemish magistrates, the seats provided for the guests being unfurnished with cushions, they quietly folded up their sumptuous cloaks, richly embroidered and trimmed with fur, and placed them on the wooden benches. When leaving the table at the conclusion of the feast, a courtier called their attention to the fact that they were going without their cloaks. The burgomaster of Bruges replied: 'We Flemings are not in the habit of carrying away the cushions after dinner.' . . . Commynes, the French chronicler, writing in the 15th century, says that the traveller, leaving France and crossing the frontiers of Flanders, compared himself to the Israelites when they had quitted the desert and entered the borders of the Promised Land. Philip the Good kept up a court which surpassed every other in Europe for luxury and magnificence. . . . In all such matters of luxury and display, England of the 16th or 17th century had nothing to compare with the Netherlands a hundred or even two hundred years before. After luxury, come comfort, intelligence, morality, and learning, which develop under very different conditions. In the course of time even Italy was outstripped in the commercial race. The conquest of Egypt by the Turks, and the discovery of a water passage to the Indies, broke up the overland trade with the East, and destroyed the Italian and German cities which had flourished on it. . . . Passing from the dominion of the House of Burgundy to that of the House of Austria, which also numbered Spain among its vast possessions, proved to them in the end an event fraught with momentous evil. Still for a time, and from a mere material point of view, it was an evil not unmixed with good. The Netherlands were better sailors and keener merchants than the Spaniards, and, being under the same rulers, gained substantial advantages from the close connection. The new commerce of Portugal also filled their coffers; so that while Italy and Germany were impoverished, they became wealthier and more prosperous than ever. . . . With wealth pouring in from all quarters, art naturally followed in the wake of commerce. Architecture was first developed, and nowhere was its cultivation more general than in the Netherlands."—D. Campbell, *Puritan in Holland, etc.*, ch. 1.—See also COMMERCE: Medieval; 8th-16th centuries; TARIFF: 15th-17th centuries.

15th-16th centuries.—Rise of educational systems. See EDUCATION: Modern; 15th-16th centuries: Netherlands.

1406-1417.—Relations with France.—"William VI. was closely allied with France through his marriage to the sister of John the Fearless of Burgundy. The friendship of the house of Hainaut [or Hainaut] had usually been given to England, but William VI. was inclined to French sympathies, and in the battle of Agincourt his knights were on the side of France. This was in spite of the fact that he had himself visited England in his youth and had been honoured by the Order of the Garter,

much to the annoyance of his French kin. In July, 1406, this French bond was strengthened by the marriage of the five-year-old Jacqueline to John of Touraine, second son of the insane king of France. The bridegroom was only a trifle older than his bride, and the two children were brought up together in Hainaut until their marriage was solemnised in 1415. Hopes for the advancement of the house of Holland ran still higher when the dauphin died. The new dauphin and dauphiness crossed the border of France in the spring of 1417, prepared to assume the government under the direction of Jacqueline's father and uncle. A brilliant future opened for the daughter of William VI., which was suddenly clouded by the death of John of Touraine, April 4, 1417. William saw his ambitious plans for his daughter's future dashed to the ground. He began, furthermore, to doubt the possibility of his own realm being securely held by a woman. He knew that the Cods were deeply embittered at his measures against Arkel and his followers, he knew the ambitious nature of his brother, the bishop-elect of Liège, and he dreaded the bouse of Burgundy. When his daughter's husband was still alive and the future seemed secure for the young pair, he had called a gathering of the nobles, bailiffs, and cities of Holland and Zealand at the Hague (August 15, 1416), and asked and obtained their promises to support his daughter after his death. She even received homage as her father's heir, which had been given on condition that [John of] Arkel, and Egmont [party leaders] be banished from the land. Then the situation was changed. Jacqueline became a widow. There is little likelihood that William planned to marry her to young William of Arkel, as the story is. On the contrary, on his death-bed he designated his nephew, John IV. of Brabant, as her husband. At the end of May, 1417, the famous prince died at Bouchain, in Hainaut, where he had remained since his visit to France. His death was attributed to the careless treatment of a wound by a physician 'whom he trusted more than other masters.'"—P. J. Blok, *History of the people of the Netherlands*, pt. 1, pp. 334-335.

1417-1430.—Despoiling of Countess Jacqueline.—In 1417, Count William VI. of Holland, Hainaut and Friesland, died, leaving no male heirs, but a daughter, Jacoba, or Jacqueline, whom most of the nobles, and towns of the several states, had already acknowledged as the heiress of her father's sovereignty. . . . The young countess, fair in person and well endowed in mind, was left with no male support, to contend with the rapacity of an unscrupulous bishop-uncle (John, called the Godless, bishop of Liège), who strove to rob her of her heritage. "Henry V. [of England] had then stood her friend, brought about a reconciliation, established her rights and proposed a marriage between her and his brother John, Duke of Bedford, who was then a fine young man of five or six and twenty. . . . But she was a high-spirited, willful damsel, and preferred her first cousin, the Duke of Brabant, whose father was a brother of Jean Sans Peur [Duke of Burgundy]. . . . The young Duke was only sixteen, and was a weak-minded, passionate youth. Sharp quarrels took place between the young pair; the Duchess was violent and headstrong, and accused her husband of allowing himself to be governed by favourites of low degree. The Duke of Burgundy interfered in vain. . . . After three years of quarreling, in the July of 1421 Jacqueline rode out early one morning, met a knight of Hainaut called Escailion, 'who had long been an Englishman at heart,' and who brought her sixty horsemen, and galloped off for Calais,

whence she came to England, where Henry received her with the courtesy due to a distressed dame-errant, and she became a most intimate companion of the Queen. . . . She loudly gave out that she intended to obtain a separation from her husband on the plea of consanguinity, although a dispensation had been granted by the Council of Constance, and 'that she would marry some one who would pay her the respect due to her rank.' This person soon presented himself in the shape of Humfrey, duke of Gloucester, the King's youngest brother, handsome, graceful, accomplished, but far less patient and conscientious than any of his three elders. [Benedict XIII, the anti-pope, was persuaded to pronounce the marriage of Jacqueline and John of Brabant null and void]; . . . but Henry V. knew that this was a vain sentence, and intimated to his brother that he would never consent to his espousing the Duchess of Brabant; showing him that the wedlock could not be legal, and that to claim the lady's inheritance would lead to a certain rupture with the Duke of Burgundy, who could not but uphold the cause of his cousin of Brabant. [Notwithstanding these remonstrances, the Duke of Humfrey did marry the seductive Jacqueline, early in 1424.] . . . He then sent to demand from the Duke of Brabant the possession of the lady's inheritance; and on his refusal the Hainauters espoused whichever party they preferred and began a warfare among themselves. [Soon afterwards the godless bishop of Liège died and] . . . bequeathed the rights he pretended to have to Hainaut, not to his niece, but to the Duke of Burgundy. Gloucester in the meantime invaded Hainaut and carried on a 'bitter war there.' Burgundy assembled men-at-arms for its protection; and letters passed between the Dukes, ending in a challenge—not between Jacqueline's two husbands, who would have seemed the fittest persons to have fought out the quarrel, but between Gloucester and Burgundy. [It was arranged that the question of the possession of Hainaut should be decided by single combat. Humfrey returned to England to make preparations, leaving Jacqueline at Mons, with her mother. The latter proved false and allowed the citizens of Mons to deliver up the unhappy lady to Philip of Burgundy. Her English husband found himself powerless to render her much aid, and was possibly indifferent to her fate, since another woman had caught his fancy. Jacqueline, after a time, escaped from her captivity, and revived the war in Hainaut, Gloucester sending her 500 men.] . . . The Duke of Brabant died, and reports reached her that Gloucester had married Eleanor Cobham; but she continued to battle for her county till 1428, when she finally came to terms with Philippe [of Burgundy], let him garrison her fortresses, appointed him her heir, and promised not to marry without his consent. A year or two after, however, she married a gentleman of Holland called Frank of Burslem, upon which he was seized by the Burgundians. To purchase his liberty she yielded all her dominions, and only received an annual pension until 1436, when she died, having brought about as much strife and dissension as any woman of her time."—C. M. Yonge, *Comes of English history*, series 2, *cameo* 23.

Also in: E. de Monstrelet, *Chronicles* (Johnes tr.) bk. 1, ch. 164, 181, 234, bk. 2, ch. 22-23, 48-49.—C. M. Davies, *History of Holland*, pt. 1, ch. 5-6.—R. Putnam, *Medieval princess*, ch. 11-12.—P. J. Blok, *History of the people of the Netherlands*, pt. 2, pp. 1-15.

1428-1430.—Sovereignty of House of Burgundy established.—"Upon the surrender of Holland, Zealand, Friesland [Friesland], and Hainaut by

Jacoba, Philip [the duke of Burgundy called Philip the Good, brother of Jacoba's husband] became possessed of the most considerable states of the Netherlands. John, duke of Burgundy, his father, had succeeded to Flanders and Artois, in right of his mother Margaret, sole heiress of Louis van der Male, count of Flanders. In the year 1429, Philip entered into possession of the county of Namur, by the death of Theodore, its last native prince, without issue, of whom he had purchased it during his lifetime for 132,000 crowns of gold. To Namur was added in the next year the neighbouring duchy of Brabant, by the death [1430] of Philip (brother of John), without issue; although Margaret, countess-dowager of Holland, aunt of the late duke, stood the next in succession, since the right extended to females; Philip prevailed with the states of Brabant to confer on him, as the true heir, that duchy and Limburg, to which the Margraviate of Antwerp and the lordship of Mechlin were annexed. . . . The accession of a powerful and ambitious prince to the government of the county was anything but a source of advantage to the Dutch, excepting, perhaps, in a commercial point of view."—C. M. Davies, *History of Holland*, v. 1, pt. 2, ch. 1.

1466-1468.—Siege of Liège.—"So rapid and so brilliant a rise to fortune necessarily excited jealousy. Vassal though it was, the House of Burgundy rivalled that of Valois. Charles VII, and, later, Louis XI [of France], devoted all their energies to holding it in check. Louis XI secretly won over the House of Croy, the counsellors of Philip the Good, but the duke's son, Count Charles of Charolais [of Burgundy], succeeded in unmasking the schemes of the king and his accomplices. As early as 1465 Charles was appointed 'lieutenant-general' by his father, who had become old and infirm. Possessed of a thoroughly southern temperament and insanely violent in disposition, Charles, who was later surnamed the Rash [Bold], engaged in the most ambitious and dangerous enterprises. Instead of employing diplomacy, he believed that he could overcome every obstacle by force and terror; the cruelty with which he punished the towns of the district of Liège for their alliance with Louis XI amazed contemporary observers, accustomed though they were to such brutal exhibitions of princely 'justice.' Charles had imposed upon the district of Liège a humiliating peace at the time when he forced Louis XI to restore to him the Somme towns, those 'keys of France' (1465). But the King of France still hoped to rouse the men of Liège against his rival. The town of Dinant, moreover, controlled by the party of the lesser artisans, to whom were joined a crowd of outlaws, foreigners, and adventurers, had not accepted the terms of peace exacted by Charles, and adopted a provocative and hostile attitude. But, on August 18, 1466, Charles appeared with an army under the walls of Dinant, and, thanks to his artillery, reduced the town after a seven days' siege. His vengeance was terrible. Determined to make an example, he ordered the sack of the city, which was then set on fire; only the churches and religious houses were spared (August 28). In the following year, Liège, which had given shelter to a number of the ruined citizens of Dinant and which was seduced by Louis XI's promises of support, adopted in its

turn a recalcitrant attitude. The war party, which had adopted the name of 'Vrais Liégeois,' established a revolutionary government, in which Raes de Heers, a knight of the Looz district, a true *condottiere* eager for adventure, played the part of practical dictator. The news of the death of Philip the Good caused deep delight at Liège, and it was decided to assume the offensive. But the army of the city was defeated at Brusthem (October 27, 1467). Charles proceeded to occupy the principality, ordered all its towns to be dismantled, and the land to be wasted with fire and sword; he established in it one of his most faithful adherents, the Sire de Humbercourt, who really ruled the district in place of its bishop, Louis of Bourbon. In order to paralyse the King of France, Charles had allied with the King of England, Edward IV, and in 1468 he married Margaret of York, the sister of that monarch. He then believed himself to be invincible, while many German princes, such as the Duke of Bavaria, the Elector Palatine, and the Archbishop of Cologne, sought his alliance, and the emperor himself offered him the title of king. But Louis XI constantly placed all manner of obstacles in his path: he encouraged the exiled of Liège to undertake a fresh revolt, and they actually returned in the absence of the bishop and the governor and roused the workpeople with the cry, 'Vivent le roi et les franchises!' Charles was aware of his rival's plots and forced him to accompany him to the punishment of the rebels. Unwalled and almost unarmed, Liège made a desperate resistance. Goes de Strailhe, with some hundreds of men from Franchimont, attempted during the night to capture Charles and the king, but they all fell under the swords of the Burgundians. The city was then pillaged, sacked, and burned; its inhabitants murdered or drowned in crowds in the Meuse. Charles wished to destroy the very name 'Liège,' and to call the place Brabant. Sparring none, he aroused the hostility of the emperor, Frederic III, by his pretensions to the crown of King of the Romans."—H. Vander Linden, *Belgium, the making of a nation*, pp. 97-99.—See also BURGUNDY: 1467-1468.

1473-1477.—Defeat of Charles the Bold.—Government by Burgundians.—"After seizing Guelders [1473], which the old duke, Arnold, had left him against its wishes . . . [Charles] supported Ruprecht von der Pfalz, Archbishop of Cologne, against the emperor. The defeat which he suffered at his fruitless siege of Neuss was more or less compensated by the conquest of Lorraine, but he then plunged headlong into a fantastic enterprise, the conquest of the Rhone valley from Lyons to the Mediterranean, by which Italy would have been laid open to him. His furious obstinacy completely ruined him; Burgundian power was shattered at the battles of Granson and Morat, and the catastrophe of Nancy struck the final blow (1477). The territorial cohesion of the Low Countries was immediately broken; each principality began to pursue its individual interests as a result of a reaction against arbitrary monarchical power."—H. Vander Linden, *Belgium, the making of a nation*, p. 99.—See also GUELDERLAND: 1079-1473.—"As regards the provincial government the Burgundian princes left undisturbed the local and historical customs and usages, and each province had its individual characteristics. At the head of each provincial government (with the exception of Brabant, at whose capital, Brussels, the sovereign himself or his regent resided) was placed a governor, with the title of Stadholder, who was the

representative of the sovereign and had large patronage. It was his duty to enforce edicts, preserve order, and keep a watchful eye over the administration of justice. He nominated to many municipal offices, but had little or no control over finance. The raising of troops and their command in the field was entrusted to a captain-general, . . . [and] the offices were sometimes united. In the northern Netherlands there was but one stadholder for the three provinces of Holland, Zealand and Utrecht, and one . . . for Friesland, Groningen, Drente and Overijssel. The desire of the Burgundian princes to consolidate their dominions into a unified sovereignty found itself thwarted by many obstacles and especially by the lack of any supreme tribunal of appeal. It was galling to them that the *Parlement* of Paris should still exercise appellate jurisdiction in Crown-Flanders and Artois, and the Imperial Diet in some of the other provinces. Already in 1428 Philip had erected the Court of Holland at the Hague to exercise large powers of jurisdiction and financial control in the province of Holland and Zealand; and in 1473 Charles the Bold set up at Mechlin the body known as the Great Council, to act as a court of appeal from the provincial courts. . . . The Great Council, which had grown out of the Privy Council attached to the person of the prince, and which under the direction of the Chancellor of Burgundy administered the affairs of the government, more particularly justice and finance, was in 1473, . . . re-constituted as a Court of Appeal in legal matters, a new Chamber of Accounts being at the same time created to deal with finance. These efforts at centralisation of authority were undoubtedly for the good of the country as a whole, but such was the intensity of provincial jealousy and particularism that they were bitterly resented and opposed."—G. Edmundson, *History of Holland*, pp. 4-5.

1477.—Severance from Burgundy.—Accession of Duchess Mary.—Grant of the "Great Privilege."—On the fifth of January, 1477, Charles the Bold of Burgundy came to his end at Nancy, and Louis XI of France laid prompt and sure hands on the Burgundian duchy, which remained thenceforth united to the French crown. It was the further intention of Louis to secure more or less of the Netherland domain of the late duke, and he began seizures to that end. But the Netherland states much preferred to acknowledge the sovereignty of the young duchess Mary, daughter and sole heiress of Charles the Bold, provided she would make proper terms with them. "Shortly after her accession, the nobles, to whose guardianship she had been committed by Charles before his departure, summoned a general assembly of the states of the Netherlands at Ghent, to devise means for arresting the enterprises of Louis, and for raising funds to support the war with France, as well as to consider the state of affairs in the provinces. . . . This is the first regular assembly of the states-general of the Netherlands. . . . Charles, and his father, Philip, had exercised in the Netherlands a species of government far more arbitrary than the inhabitants had until then been accustomed to. . . . It now appeared that a favourable opportunity offered itself for rectifying these abuses; and the assembly, therefore, made the consideration of them a preliminary to the grant of any supplies for the war. . . . They insisted so firmly on this resolution that Mary, finding they were determined to refuse any subsidies till their grievances were redressed, consented to grant charters of privileges to all the states of the Netherlands. That of Holland and Zealand [was]

commonly called the Great Charter."—C. M. Davies, *History of Holland*, v. 1, pt. 2, ch. 2 with footnote.—"Mary's power was limited and restricted by this important act. First of all, the hated court of Mechlin, the central court of justice for all the Burgundian territories, was abolished; a Great Council was established, consisting of a chancellor and twenty-four members chosen by the duchess from the various states, to assist her in the administration of the provinces. All the ordinances of the duke which conflicted with ancient privileges were abolished. The right of declaration of war was made dependent on the consent of the States-General. The States-General and Estates of the provinces were empowered to meet on their own authority. The subjects were at liberty to refuse obedience if the duchess overstepped the stipulations. Only with conditions which strictly limited the sovereign power was Mary able to obtain financial and military help for the defence of her realm. She consented, and thirty-four thousand men were at once at her disposal by her united states. And these concessions were not all. Flanders, Holland, Namur, all forced especial charters from the duchess, all called Great Privileges. This was the occasion when Brabant obtained her famous *Joyeuse Entrée*. The cities, individually, followed the example offered by the states. The sovereign power was sharply circumscribed in many ways. The extent of the confusion in the Burgundian lands in 1477 is plain from the incident of the negotiations of the lords Hugonet and Humbercourt, influential officials of Charles the Bold. Making use of a treacherous letter sent by the two to Louis XI, in which they promised to deliver the duchess to him, make her marry the dauphin, and thus give the entire Burgundian heritage to France, the States-General threw the lords in prison. An extraordinary court sentenced them and, in spite of the pleadings of the duchess, the two lords were beheaded on the Friday's market-place at Ghent with the angry approval of the excited populace. Similar events were enacted at Brussels, Antwerp, Ypres, Mons, and elsewhere. Everywhere the people manifested their hatred for the officials of the dead tyrant. It was a frightful time, still the princess succeeded in holding her own and in wielding the government, although practically a prisoner, and the States-General remained loyal to her. The most important question calling for an immediate solution was that of her marriage."—P. J. Blok, *History of the people of the Netherlands*, pt. 2, pp. 147-148.

1477.—Austrian marriage of Mary of Burgundy.—"Several husbands were proposed to the Princess of Burgundy, and every one was of opinion there was a necessity of her marrying, to defend those territories that she had left to her, or (by marrying the dauphin), to recover what she had lost [see BURGUNDY: 1477]. Several were entirely for this match, and she was as earnest for it as anybody, before the letters she had sent by the Lord of Humbercourt and the chancellor to the king [Louis XI] were betrayed to the ambassadors from Ghent. Some opposed the match, and urged the disproportion of their age, the dauphin being but nine years old, and besides engaged to the King of England's daughter; and these suggested the son of the Duke of Cleves. Others recommended Maximilian, the emperor's son, who is at present King of the Romans." Duchess Mary made choice presently of Maxi-

milian, then arch-duke of Austria, afterwards king of the Romans and finally emperor. The husband-elect "came to Cologne, where several of the princess's servants went to meet him, and carry him money, with which, as I have been told, he was but very slenderly furnished; for his father was the stingiest and most covetous prince, or person, of his time. The Duke of Austria was conducted to Ghent, with about 700 or 800 horse in his retinue, and this marriage was consummated [August 18, 1477], which at first sight brought no great advantage to the subjects of the young princess; for, instead of his supporting her, she was forced to supply him with money. His armies were neither strong enough nor in a condition to face the king's; besides which, the humour of the house of Austria was not pleasing to the subjects of the house of Burgundy, who had been bred up under wealthy princes, that had lucrative offices and employments to dispose of; whose palaces were sumptuous, whose tables were nobly served, whose dress was magnificent, and whose liveries were pompous and splendid. But the Germans are of quite a contrary temper; boorish in their manners and rude in their way of living."—P. de Commynes, *Memoirs*, v. 2, bk. 6, ch. 2.—See also AUSTRIA: 1477-1495.

ALSO IN: L. S. Costello, *Memoirs of Mary of Burgundy*, ch. 31.

1482-1493.—Maximilian and the Flemings.—End of Hook party in Holland.—"According to the terms of the marriage treaty between Maximilian and Mary, their eldest son, Philip, succeeded to the sovereignty of the Netherlands immediately upon the death of his mother [March 26, 1482]. As he was at this time only four years of age, Maximilian obtained the acknowledgment of himself as guardian of the young count's person, and protector of his states, by all the provinces except Flanders and Guelderland. The Flemings having secured the person of Philip at Ghent, appointed a regency. [To reduce the Flemings to obedience, Maximilian carried on two campaigns in their country, during 1484 and 1485, as the result of which Ghent and Bruges surrendered.] . . . Maximilian was acknowledged protector of Flanders during the minority of Philip, who was delivered by the Ghenters into the hands of his father, and by him entrusted to the care of Margaret of York, Duchess-dowager of Burgundy, until he became of age. [Three years later (1488)—Maximilian having been, in the meantime, crowned 'King of the Romans,' at Aix la Chapelle, and thus cadetted, so to speak, for his subsequent coronation as emperor—the Flemings rose again in revolt. Maximilian was at Bruges, and rumor accused him of a design to occupy the city with German troops. The men of Bruges forestalled the attempt by seizing him personally and making him a prisoner. They kept him in durance for nearly four months, until he had signed a treaty, agreeing to surrender the government of the Netherlands to the young Duke Philip, his son; to place the latter under the care of the princes of the blood (his relatives on the Burgundian side); to withdraw all foreign troops, and to use his endeavors to preserve peace with France. On these terms Maximilian obtained his liberty; but, meantime, his father, the Emperor Frederic, had marched an army to the frontiers of Brabant for his deliverance, and the very honorable king of the Romans, making haste to the shelter of these forces, repudiated with alacrity all the engagements he had sworn to. His imperial father led the army he had brought into Flanders and laid siege to Ghent; but tired of the undertaking after

six weeks and returned to Germany, leaving his forces to prosecute the siege and the war. The commotions in Flanders now brought to life the popular party of the "Hooks" in Holland, and war broke out in that province. In neither part of the Netherlands were the insurgents successful. The Flemings had been helped by France, and when the French king abandoned them they were forced to buy a peace on humiliating terms and for a heavy price in cash. In Holland, the revolt languished for a time, but broke out with fresh spirit in 1490, excited by an edict which summarily altered the value of the coin. In the next year it took the name of the 'Casembrotspel,' or Bread and Cheese War. This insurrection was suppressed in 1492, with the help of German troops, and proved only disastrous to the province.] . . . It was the last effort made for a considerable time by the Hollanders against the increasing power and extortion of their counts. . . . The miserable remnant of the Hook or popular party melted so entirely away that we hear of them no more in Holland: the county, formerly a power respected in itself, was now become a small and despised portion of an overgrown state. [In 1494, Philip having reached the age of seventeen, and Maximilian having become emperor by the death of his father, the latter surrendered and the former was installed in the government of the Netherlands.]"—C. M. Davies, *History of Holland*, v. 1, pt. 2, ch. 3.

1494-1519.—Beginning of Austro-Spanish tyranny.—Absorption in vast dominion of Charles V.—Seventeen provinces: their independent constitutions and their states-general.—"In 1494, Philip, now 17 years of age, became sovereign of the Netherlands. But he would only swear to maintain the privileges granted by his grandfather and great-grandfather, Charles and Philip, and refused to acquiesce in the Great Privilege of his mother. The Estates acquiesced. For a time, Friesland, the outlying province of Holland, was severed from it. It was free, and it chose as its elective sovereign the Duke of Saxony. After a time he sold his sovereignty to the House of Hapsburg. The dissensions of the Estates had put them at the mercy of an autocratic family. Philip of Burgundy, in 1496, married Joanna, daughter of Ferdinand and Isabella. In 1500 his son Charles was born, who was afterwards Charles V., Duke of the Netherlands, but also King of Spain, Emperor of Germany, King of Jerusalem, and, by the grant of Alexander VI., . . . lord of the whole new world. Joanna, his mother, through whom he had this vast inheritance, went mad, and remained mad during her life and his [see SPAIN: 1496-1517]. Charles not only inherited his mother's and father's sovereignties, but his grandfather's also [see AUSTRIA: 1496-1526]. . . . The peril which the liberties of the Netherlands were now running was greater than ever. They had been drawn into the hands of that dynasty which, beginning with two little Spanish kingdoms [Castile and Aragon] had in a generation developed into the mightiest of monarchies. . . . Charles succeeded his father Philip as Count of Flanders in 1506. His father, Philip the Handsome, was at Burgos in Castile, where he was attacked by fever, and died when only 28 years of age. Ten years afterwards Charles became King of Spain (1516). When he was 19 years of age (1519) he was elected emperor [see GERMANY: 1519]. The three nations over whom he was destined to rule hated each other cordially. There was antipathy from the beginning between Flemings and Spaniards. The Netherlands nobles were

detested in Spain, the Spaniards in the Low Countries were equally abhorred. . . . Charles was born in Flanders, and during his whole career was much more a Fleming than a Spaniard. This did not, however, prevent him from considering his Flemish subjects as mainly destined to supply his wants, and submit to his exactions. He was always hard pressed for money. The Germans were poor and turbulent. The conquest and subjection of the Moorish population in Spain had seriously injured the industrial wealth of that country. But the Flemings were increasing in riches, particularly the inhabitants of Ghent. They had to supply the funds which Charles required in order to carry out the operations which his necessities or his policy rendered urgent. He had been taught, and he readily believed, that his subjects' money was his own. Now just as Charles had come to the empire, two circumstances had occurred which have had a lasting influence over the affairs of Western Europe. The first of these was the conquest of Egypt by the Turks under Selim I (1512-20). . . . Egypt had for nearly two centuries been the only route by which Eastern produce, so much valued by European nations, could reach the consumer. . . . Now this trade, trifling to be sure to our present experience, was of the highest importance to the trading towns of Italy, the Rhine, and the Netherlands. . . . But the Netherlands had two industries which saved them from the losses which affected the Germans and Italians. They were still the weavers of the world. They still had the most successful fisheries. . . . The other cause was the revolt against the papacy [the Reformation (see PAPACY: 1516-1517, and after)]."—J. E. T. Rogers, *Story of Holland*, ch. 5-6.—The seventeen provinces comprehended under the name of the Netherlands, as ruled by Charles V, were the four duchies of Brabant, Limburg, Luxemburg, and Guelderland; the seven counties of Artois, Hainault, Flanders, Namur, Zutphen, Holland, and Zealand; the five seignories or lordships of Friesland, Mechlin, Utrecht, Overysse, and Groningen; and the margraviate of Antwerp. "Of these provinces, the four which adjoined the French border, and in which a French dialect was spoken, were called Walloon (see WALLOONS); in the other provinces a dialect, more or less resembling German, prevailed, that of the midland ones being Flemish, that of the northern, Dutch. They differed still more in their laws and customs than in language. Each province was an independent state, having its own constitution, which secured more liberty to those who lived under it than was then commonly enjoyed in most other parts of Europe. . . . The only institutions which supplied any links of union among the different provinces were the States-General, or assembly of deputies sent from each, and the Supreme Tribunal established at Mechlin, having an appellate jurisdiction over them all [by Charles the Bold]. The States-General, however, had no legislative authority, nor power to impose taxes, and were but rarely convened. . . . The members of the States-General were not representatives chosen by the people, but deputies, or ambassadors, from certain provinces. The different provinces had also their own States."—T. H. Dyer, *History of modern Europe*, v. 2, pp. 221-22.

1521-1555.—Reformation in provinces.—Persecutions of Charles V.—Edict of 1550.—Planting of the Inquisition.—"The people of the Netherlands had been singularly prepared for the great religious revival of the sixteenth century by the work of the *Brethren of the Common Lot* and their schools. It was the aim of Gerard Groot, their founder, and also of Florentius Bodevynszoon, his great educational assistant, to see 'that the root of study and the mirror of life must, in the first place, be the Gospel of Christ.' Their pupils were taught to read the Bible in Latin, and the Brethren contended publicly for translations of the Scriptures in the vulgar tongues. There is evidence to show that the Vulgate was well known in the Netherlands in the end of the fifteenth century, and a translation of the Bible into Dutch was published at Delft in 1477. Small tracts against Indulgences, founded probably on the reasonings of Pupper and Wessel, had been in circulation before Luther had nailed his *Theses* to the door of All Saints' church in Wittenberg. Henrik of Zutphen, Prior of the Augustinian Hermitic Convent at Antwerp, had been a pupil of Staupitz, a fellow student with Luther, and had spread Evangelical teaching not only among his order, but throughout the town. It need be no matter for surprise, then, that Luther's writings were widely circulated in the Netherlands, and that between 1513 and 1531 no fewer than twenty-five translations of the Bible or of the New Testament had appeared in Dutch, Flemish, and French. When Aleander was in the Netherlands, before attending the Diet of Worms he secured the burning of eighty Lutheran and other books at Louvain; and when he came back ten months later, he had regular literary *auto-da-fés*. On Charles' return from the Diet of Worms, he issued a proclamation to all his subjects in the Netherlands against Luther, his books and his followers, and Aleander made full use of the powers it gave. Four hundred Lutheran books were burnt at Antwerp, three hundred of them seized by the police in the stalls of the booksellers, and one hundred handed over by the owners; three hundred were burnt at Ghent, 'part of them printed here and part in Germany,' says the Legate: and he adds that 'many of them were very well bound, and one gorgeously in velvet.' About a month later he is forced to confess that these burnings had not made as much impression as he had hoped, and that he wishes the Emperor would 'burn alive half a dozen Lutherans and confiscate their property.' Such a proceeding would make all see him to be the really Christian prince that he is. Next year (1522) Charles established the Inquisition within the seventeen provinces. It was a distinctively civil institution, and this was perhaps due to the fact that there was little correspondence between the civil and ecclesiastical jurisdictions in the Netherlands; but it must not be forgotten that the Kings of Spain had used the Holy Office for the purpose of stamping out political and local opposition, and also that the civil courts were usually more energetic and more severe than the ecclesiastical. The man appointed was unworthy of any place of important trust. Francis van de Hulst, although he had been the Prince's counsellor in Brabant, was a man accused both of bigamy and murder, and was hopelessly devoid of tact. He quarrelled violently with the High Court of Holland; and the Regent, Margaret of Austria [daughter of the Emperor Maximilian], . . . found herself constantly compromised by his continual

defiance of local privileges. He was a 'wonderful enemy to learning,' says Erasmus. His colleague, Nicolas van Egmont, a Carmelite monk, is described by the same scholar as 'a madman with a sword put into his hand who hates me worse than he does Luther.' The two men discredited the Inquisition from its beginning. Erasmus affected to believe that the Emperor could not know what they were doing. . . . Charles issued proclamation after proclamation, each of increasing severity. It was forbidden to print any books unless they had been first examined and approved by the censors (April 1st, 1524). 'All open and secret meetings in order to read and preach the Gospel, the Epistles of St. Paul, and other spiritual writings,' were forbidden (Sept. 25th, 1525), as also to discuss the Holy Faith, the Sacraments, the Power of the Pope and Councils, 'in private houses and at meals.' This was repeated on March 14th, 1526, and on July 17th there was issued a long edict, said to have been carefully drafted by the Emperor himself, forbidding all meetings to read or preach about the Gospel or other holy writings in Latin, Flemish, or Walloon. In the preamble it is said that ignorant persons have begun to expound Scripture, that even regular and secular clergy have presumed to teach the 'errors and sinister doctrines of Luther and his adherents,' and that heresies are increasing in the land. Then followed edicts against unlicensed books, and against monks who had left their cloisters (Jan. 28th, 1528); against the possession of Lutheran books, commanding them upon pain of death to be delivered up (Oct. 14th, 1529); against printing unlicensed books—the penalties being a public whipping on the scaffold, branding with a red-iron, or the loss of an eye or a hand, at the discretion of the judge (Dec. 7th, 1530); against heretics 'who are more numerous than ever,' against certain books of which a long list is given, and against certain hymns which increase the zeal of the heretics (Sept. 22nd, 1540); against printing and distributing unlicensed books in the Italian, Spanish, or English languages (Dec. 18th, 1544); warning all schoolmasters about the use of unlicensed books in their schools, and giving a list of prohibited books, among which are eleven editions of the Vulgate printed by Protestant firms, six editions of the Bible and three of the New Testament in Dutch, two editions of the Bible in French, and many others. Lastly, an edict of April 29th, 1550, confirmed all the previous edicts against heresy and its spread, and intimated that the Inquisitors would proceed against heretics 'notwithstanding any privileges to the contrary, which are abrogated and annulled by this edict.' This was a clear threat that the terrible Spanish Inquisition was to be established in the Netherlands, and provoked such remonstrances that the edict was modified twice (Sept. 25th, Nov. 5th) before it was finally accepted as legal within the seventeen provinces.—T. M. Lindsay, *History of the Reformation*, v. 2, pp. 228-232.—"No one," said the edict [of 1550], 'shall print, write, copy, keep, conceal, sell, buy, or give in churches, streets, or other places, any book or writing made by Martin Luther, John Ecolampadius, Ulrich Zwinglius, Martin Bucer, John Calvin, or other heretics repro- bated by the Holy Church; . . . nor break, or otherwise injure the images of the holy virgin or canonized saints; . . . nor in his house hold conventicles, or illegal gatherings, or be present at any such in which the adherents of the above-mentioned heretics teach, baptize, and form conspiracies against the Holy Church and the general welfare. . . . Moreover, we forbid . . . all lay

persons to converse or dispute concerning the Holy Scriptures, openly or secretly, especially on any doubtful or difficult matters, or to read, teach, or expound the Scriptures, unless they have duly studied theology and been approved by some renowned university; . . . or to preach secretly, or openly, or to entertain any of the opinions of the above-mentioned heretics. . . . Such perturbators of the general quiet are to be executed, to wit: the men with the sword and the women to be buried alive, if they do not persist in their errors; if they do persist in them they are to be executed with fire; all their property in both cases being confiscated to the crown.' [The horrible edict further bribed informers, by promising to them half the goods of a convicted heretic, while, at the same time, it forbade, under sharp penalties, any petitioning for pardon in favor of such heretics].—J. L. Motley, *Rise of the Dutch republic*, v. 1, pt. 1, ch. 1, pt. 2, ch. 1.

1547.—Pragmatic sanction of Charles V changing relations of his Burgundian inheritance to empire.—In the Germanic diet assembled at Augsburg in 1547, after the emperor's defeat of the Protestant princes at Muhlberg (see GERMANY: 1546-1552), he was able to exercise his will almost without opposition and decree arbitrarily whatever he chose. He there "proclaimed the Pragmatic Sanction for the Netherlands, whereby his old Burgundian inheritance was declared by his own law to be indivisible, the succession settled on the house of Hapsburg, it was attached to the German empire as a tenth district, had to pay certain contributions, but was not to be subject to the Imperial Chamber or the Imperial Court of Judicature. He thus secured the personal union of these territories with his house, and made it the duty of the empire to defend them, while at the same time he withdrew them from the jurisdiction of the empire; it was a union by which the private interests of the house of Hapsburg had everything to gain, but which was of no advantage to the empire."—L. Häusser, *Period of the Reformation*, ch. 16.

1555.—Abdication of Charles V.—"In 1555 an event occurred, destined to be of critical importance in the history of the Netherlands—the world-famous abdication of Charles V. The Emperor was but fifty-five years old, when, prematurely aged and already worn out by a life of incessant care and strife, he took the momentous resolve which he had for some years meditated, to hand over his dominions to his son Philip, and spend the rest of his days in the retirement of a monastery. Philip, already invested with the kingdoms of Naples and Sicily and the duchy of Milan, and compensated for the loss of the Empire by becoming, through his marriage with Mary Tudor, King-Consort of England, was residing in that country, when in the early summer of 1555 he was summoned by his father to Brussels. Charles was the wearer of

many crowns, but amongst them all, as a final token of his peculiar affection for his native land, it was his abdication of the sovereignty of the seventeen Provinces of the Burgundian Netherlands that he resolved to mark specially by an act of solemn and impressive publicity. The ceremony took place in the great hall of the palace of Brussels. Hither, on the afternoon of Friday, October 25, 1555, the deputies of the Provinces repaired. . . . [Charles] gave an account of his long and eventful reign, thanked his subjects for their constant dutifulness and affection, and asked them to show to his son the same love and loyalty that they had exhibited towards himself. . . . Philip might have seized his opportunity to use gracious language, which would have gained him at once a place in the hearts of his new subjects. That he did not do so was less due to his coldness of temperament than to his inability to express himself in any language but Spanish. Flemish he could not speak at all; and, after a few words in French, he found himself obliged to call upon Antoine Perrenot, Bishop of Arras, to address the audience in his place. The contrast between father and son could scarcely have been more strikingly exhibited. The new ruler of the Netherlands, who had thus publicly proclaimed himself a foreigner in their midst, was twenty-eight years of age. His general outward appearance was not unlike his father's, and distinctively that of a man with Teutonic blood in his veins. But it was not possible for two human beings to be further apart in temper and character than were the grave, silent, sedentary, undecided Philip, and the restless, purposeful, energetic warrior-statesman."—G. Edmundson, *Cambridge modern history*, v. 3, pp. 182-183.—See GERMANY: 1552-1561.

1555-1558.—Accession of Philip II.—War with France.—"On October 26, 1555, the day following the grand ceremony of the abdication, Philip received the deputies of the seventeen Provinces, who renewed the oath of allegiance they had already taken to him as heir-apparent in 1548; and he on his part again solemnly swore to maintain in each province all ancient rights, privileges, and customs, without infringing the same or suffering them to be infringed [see also GERMANY: 1552-1561]. Possibly, when he took those oaths, Philip had no intention of deliberately committing an act of perjury. The policy he adopted at the outset in the Netherlands certainly followed with precision the lines laid down by his father. It was the man, far more than the measures, that was the inciting cause of the troubles that ended in revolt. One of his first acts was to appoint his cousin Emmanuel Philibert, Duke of Savoy, to be Regent. Scarcely any but Spaniards were admitted to his intimate counsels with the exception of the Bishop of Arras, the son of Charles' trusted adviser, Granvelle. This statesman, though at first kept in the background, by force of sheer ability and proved usefulness gradually acquired greater and greater influence. On February 5, 1556, through the mediation of the Queen of England, a truce for five years was patched up with France at Vancelles. It was not, however, on either side intended to last any longer than was convenient; and in the following year it was wantonly broken by King Henry. War ensued, in which the English Queen, much against the will of her people, was induced by her husband to take part. It was marked by the great victories achieved over the French at St. Quentin (August 10, 1557), and at Gravelines (July 13, 1558). Both of these were won by the impetuous valour of Lamoral, Count of Egmont, at the head of the Flemish cavalry, who at Grave-

lines was much assisted by the cannon of the English fleet. These two crushing defeats brought France to her knees; and a peace was concluded in February, 1559, at Cateau-Cambrésis. The terms were entirely to the advantage of the Spanish King, who had no scruple in allowing the French to recoup themselves at the expense of his English ally. In the course of the war Calais had been captured in the winter by a *coup-de-main* by a French force under the Duke of Guise. The death of Queen Mary severed the only link which bound together the interests of Philip and the island realm. The restoration of all the French conquests of the previous eight years and the hand of the Princess Elizabeth of France were cheaply purchased by acquiescence in the surrender of a town, whose fate was now to the Spanish negotiators a matter of little or no moment."—*Ibid.*, pp. 183-184.

1559-1562.—First years of the reign of Philip II.—New bishoprics.—Struggle against Granvelle.—"In the very year of the victory of Saint-Quentin (1557), gained by Egmont, Philip II found himself on the verge of bankruptcy, and was compelled to require further sacrifices. The States-General boldly formulated their complaints and showed a wish to see the custody of fortresses committed to the nobles of the land and to have two-thirds of the army composed of native troops. Two years later, they demanded from Philip II, at the moment of his departure for Spain, the dismissal of the foreign soldiery who remained in the country, despite the conclusion of peace with France, and the conduct of the government by natives. The king, who was offended at these demands, promised to recall the Spanish troops, but delayed to do so. The absence of the sovereign caused the changes which he had surreptitiously introduced into the political organization of the country to appear more clearly. Philip had instructed the regent, Margaret of Parma, to have recourse on all important matters to the advice of a *consulta* of three members, Granvelle, [Granvelle] Bishop of Arras, Viglius, and Berlaumont, all of whom were servilely devoted to the Crown. [These three constituted an inner council, but] in reality, Granvelle directed the whole administration under the inspiration of Philip II. A native of Franche-Comté, he had no real fatherland; his fidelity to the king took with him the place of patriotism. Insatiable in his love of offices and greedy of power, he served the cause of absolutism from principle as well as from interest; himself neither fanatical nor violent nor cruel, he obeyed blindly his master's orders. Despite his diplomatic talent, he could not conceal his dislike for the liberties of the Low Countries, and more especially for the privileges of that high nobility, the members of which despised him as a parvenu. The extraordinary luxury which he displayed, for example, in his sumptuous villa of La Fontaine, near Brussels, is further an indication of his vanity. Ere long the Prince of Orange, who was then Governor of Holland and Zealand, and the Count of Egmont, Governor of Flanders and Artois, gathered all the nobility around them in opposition to Granvelle, the instrument of the 'tyranny of the prince.' Educated, like most of the nobles of this period, by the humanists, they did not share in Philip's hatred against heretics; least of all was that hatred shared by Orange, who was himself the son of a Lutheran, although he had been educated in the Catholic religion at the court of

Charles V.—H. Vander Linden, *Belgium, the making of a nation*, pp. 133-134.—Egmont and Orange, because of their great influence and popularity with the people, were allowed to be nominally Councillors of State, but they were rarely consulted and were practically shut out from confidential access to the regent. . . . Egmont, a man of showy rather than of solid qualities, held in 1550 the important posts of Stadholder of Flanders and Artois. The Prince of Orange was the eldest of the five sons of William, Count of Nassau-Dillenburg, head of the younger or German branch of the famous house of Nassau. . . . [The elder branch became extinct on the death of René of Nassau, who had inherited Orange-Châlons through his mother. René bequeathed his possessions to William who thus became Prince of Orange. Both Charles and Philip recognized William's ability, but] there arose between Philip and Orange a growing feeling of distrust and dislike, with the result that William speedily found himself at the head of a patriotic opposition to any attempts of the Spanish king to govern the Netherlands by Spanish methods. The presence of a large body of Spanish troops in the country aroused the suspicion that Philip intended to use them, if necessary, to support him in overriding by force the liberties and privileges of the provinces. It was largely owing to the influence of Orange that the States-General in 1559 refused to vote the grant of supplies for which Philip had asked, unless he promised that all foreign troops should be withdrawn from the Netherlands. . . . Orange and Egmont, with whom were joined a number of other leading nobles (among these Philip de Montmorency, Count of Hoorn, his brother the lord of Montigny, the Counts of Meghem and Hoogstraeten and the Marquis of Berghen), little by little adopted an attitude of increasing hostility to this policy, which they regarded as anti-national and tending to the establishment of a foreign despotism in the Netherlands. . . . Orange and Egmont, finding that they were never consulted except on matters of routine, wrote to Philip (July, 1561) stating that they found that their attendance at the meetings of the Council of State was useless and asked to be allowed to resign their posts. Meanwhile, feeling that the presence of the Spanish troops was a source of weakness rather than of strength, Margaret and Granvelle were urging upon the king the necessity of their withdrawal. Neither the nobles nor the regent succeeded in obtaining any satisfactory response. Orange and Egmont accordingly absented themselves from the Council, and Margaret ventured on her own authority to send away the Spanish regiments."—G. Edmundson, *History of Holland*, pp. 29-31.—"A new dispute, and one which was still more serious, forthwith arose on the matter of the creation of new bishoprics. In augmenting the number of bishops Philip II had chiefly in view the success of his campaign against Protestantism, but by creating at a stroke fourteen new bishoprics, whose holders were nominated by himself, with the consent of the pope, he at the same time considerably increased his personal power. Further, the method adopted for the creation of these bishoprics displeased the abbeyes, which were burdened with the duty of providing for the 'episcopal table' of the new prelates. It likewise provoked criticism from the nobles, who were discontented because they were debarred from holding the new sees, Philip II having decided that their occupants must be theologians. The new bishops, summoned to attend the States, further formed there a powerful monarchical party. It was at this time, too, that

Granvelle undertook the conversion of the University of Louvain into a real 'general seminary,' placed under the control of the sovereign by the establishment in it of regius professors. He further created a university at Douai (1562), in order to keep in the Low Countries youths who wished to prosecute their studies in a French-speaking town. Granvelle, loaded with favours by the king, and raised to the position of Archbishop of Malines and a cardinal, was regarded as responsible for all the mistakes which were in reality committed by Philip II. The Council of State dared to send Baron de Montigny to the king to explain the dangers of the situation, but this step was vain. Granvelle, however, lost the confidence of the regent, who imagined that the cardinal was intriguing against her with the king. Finally, Orange, Egmont, and Hoor sent to the king a formal complaint against the cardinal and Margaret secretly demanded his dismissal. Some weeks later Granvelle left 'on leave'; he did not return again (1564)."—H. Vander Linden, *Belgium, the making of a nation*, pp. 133-135.

1562-1566.—Beginning of organized resistance to tyranny and persecution of Philip.—Signing of the compromise.—League of the Gueux.—After the departure of Granvelle "the nobles again took their seats in the council-chamber, but they found it very difficult to operate the government machine as set in motion by Granvelle. He had ruled alone while excluding the majority of the three administrative councils—Councils of State and of Finance and Privy Council; but now that he was gone these three were left without cohesion. The nobles thought of changing the council of state (it was at this date on a par with the other councils and specially charged with the direction of civil and military matters) into an executive body of government, composed of a greater number of members of the upper nobility, with extensive privileges and practically independent of the national government, as the privy council had to do with jurisdiction and the council of finance with the domain. This was a scheme with which Philip had no sympathy whatsoever. Viglius and his fellow-jurists were terrified at the thought of an influx of untrained nobles into the administration. From the time of the rise of Burgundian power jurists had played an important rôle, and were now quite unwilling to be displaced. Thus the administration was divided against itself. There was a pressure of the lesser nobles to come in and a pressure from the jurists to keep them out. The first effect of the nobles' influence was not encouraging. Soon nothing could be done without their mediation or that of their servants. Financial judgments, pardons, were bought; old suits of the nobles against the royal domain were revived and brought to trial; justice was for sale. The middle point of avarice was the regent's favourite secretary, soon notorious as Argenteros from his greed and avarice. This confusion gave great pleasure to the cardinal and his friends. And still sharper were their comments when the nobles urged the king to convene the States-General. Philip would not hear of such a step, and began to repent the departure of the cardinal, especially when the council of state demurred at enforcing in the Netherlands the decrees of the just-ended council of Trent. Among the many problems with which the nobles had to struggle, after the departure of Granvelle, the persecution of heresy

on the basis of the placards was one of the most important. Calvinism had entered the province from France in spite of preventive measures taken by the government. The disposition of the Catholic population itself was just then favourable to the spread of heretical ideas. . . . At the end of 1564, three points were the main topics of discussion in the council of state—reformation in the national government, improvement of financial conditions, measures regarding religion. The discussions lasted throughout the winter 1564-65. It was finally decided to ask the king to grant greater power to the council of state, to convene the States-General, and to moderate the placards against heresy. It was further decided to send Egmont to Spain to lay these matters before Philip. Viglius drew up the instruction. In the meeting held to approve the instructions Orange gave a long address, sketching the programme for the future. The contents were as follows: We deceive both ourselves and others if we try to disguise illness and remedy with smooth words. We must tell the king plainly how the matter lies; it cannot be postponed longer. Above all, we must make him understand that religion has received a severe shock in the adjacent countries, and has also suffered in the Netherlands so that it cannot be maintained . . . by the severity of the placards or by the erection of new bishoprics. The people will not longer endure the fury of the inquisition, the judges are so notorious from their quarrels that they lack the power to force men to their duty. It thus follows that the government cannot be properly wielded except by the institution of a governmental council; confusion had ensued from the division among various councils. Further, in this government council certain distinguished men must be included who are respected by the people. Finally the king must be shown that the resolutions of the council of Trent could not be adopted; the provinces border on Germany, whose princes, both Protestant and Catholic, will refuse the council from serious grounds; the king must be shown that the regent must postpone the execution of these resolutions. The king must be persuaded to relax his strictness about heresy. 'I am Catholic and will not deviate from religion, but I cannot approve the custom of kings to confine men's creed and religion within arbitrary limits.' The prince's words rang throughout the assembly room, where such language had never been heard hitherto. The speech made such an impression on Viglius that he was attacked by apoplexy in the following night. The instruction was brought by Hopperus to the form desired by Orange. From this moment it was plain that either the king or Orange must yield. Two principles were irreconcilably opposed to each other in the Netherlands—the principle of Catholicism with its unlimited royal autocracy as Spain recognised it in opposition to toleration in the realm of religion with a national government according to ancient principles based on ancient privileges. The future conflict was, for a great part, foreshadowed in this speech. In January, 1565, Egmont set off for Spain. There were certain rumours afloat that Granvelle had advised the king to sacrifice a few heads to assure quiet in his northern dominions, and certain members of the league pledged themselves, as they bade the count farewell, to avenge any ill that might befall him. No apparent ill did befall him; he was delightfully entertained and returned safely in the spring, hardly conscious until he was again in the Netherlands that Philip had promised nothing in answer to the earnest representations of his Netherland nobles. The king's reply embraced

little more than a protestation of adherence to the Catholic faith wherein no change was to be permitted, besides a plan of calling a convention of theologians so as to consult with the council of state regarding means of bringing erring spirits to better opinions. Not a word of the demanded reform, just a few vague promises about the king's coming to the Netherlands; not one word on the moderation of the persecutions, not one about the assembly of the States-General! And soon came rumours of a conference at Bayonne in France between the duke of Alva and Catherine de Médicis, on a possible coöperation between the Catholic powers for the maintenance of the ancient faith. This conference did not actually come to pass, but it caused many meetings among the Protestants. . . . The Calvinists had been encouraged by the attitude of the nobles and officials towards the persecutions, even though the placards had been strenuously executed in some cases. Ruard Tapper, a native of Enkhuizen in Holland, appointed inquisitor in 1537, being notorious for his severity. The stake had become a painfully ordinary sight in Netherland cities; many suffered punishment for their creed, while many more fled to England and Germany. At the same time the lukewarm coöperation shown by most of the stadtholders, by the nobles in the country, and the magistrates in the cities, led the reformed to protest in a way to threaten a serious popular rising. There were too many conferences between the Calvinist preachers and congregations with the lesser nobles during the summer of 1565 while the king's decision was still in abeyance. But the decisive answer put an end to all hope of leniency. The privy council begged Margaret to publish the king's orders in a modified and softened form, while making one more effort to convince him of the danger of his policy. Orange and Egmont, however, urged an immediate publication, even though they knew that a great revolt might ensue, and their advice was adopted. The mandate sent to the prelates, universities, and cities accordingly made a deep impression everywhere. The Brabanters were very indignant, claiming that no inquisition had ever existed on their soil, and that their privileges were infringed by its establishment. Flanders, Namur, and other provinces protested too. Incendiary documents appeared pasted upon the churches and town halls in many a city, yes, even upon the walls of the palaces of the regent and the Brussels nobles, all testifying to the disappointment of the people. This ire was more and more excited, too, by widely circulated and eagerly read pamphlets. There was a universal cry that the Spanish inquisition was coming, and tales of its martyrs ran around like wildfire. At the time of the arrival of Philip's despatches it chanced that the Netherland nobility were gathered in Brussels in large numbers to take part in the marriage festivities of Alexander Farnese, prince of Parma, the regent's son. They, too, were very indignant at Philip's arbitrary command. Their presence in the capital gave an opportunity for open expression of their indignation. Towards the end of November, about twenty of the young nobles, under the leadership of Thoulouse and De Hames, entered into a secret compact. This was the famous Compromise or alliance of the nobles. Copies of the original document were immediately made and circulated among the petty nobles in the country, with the result that in a couple of months the number of the signatures had reached three hundred. The contents of the articles, written in the court tongue, French, was somewhat as follows: The nobles stated that a handful of stran-

gers, for their own profit, had persuaded the king not only to refuse to ameliorate the placards against heresy, but to render them more severe, and even to introduce the Spanish inquisition, 'which is not only unjust and contrary to all laws divine and human, surpassing the greatest barbarity that was ever practised by tyrants, but is to God's great dishonour and to that of the whole Catholic faith which they pretend to maintain,' and would militate to the ruin of the Netherlands. The nobles declared that it was their duty to prevent the introduction of the inquisition in any form, at the same time asserting that they would maintain the king's authority and prevent any disturbance of the peace. They promised to stand by each other like brothers and faithful comrades against anyone who tried to punish or persecute one of the allies either on account of the inquisition or of the placards, because of the compact or under any pretence whatsoever. It was expressly declared that the compact sprang only 'from a holy zeal and laudable desire to maintain the glory of God, the majesty of the king, public peace, and the security of our persons and property.' In case of doubt the signers were to submit to the joint resolution of all or of those who were appointed thereto. The document ended with a solemn appeal to God's protection for their confederation and alliance. The great nobles—Orange, Egmont, and the others—were not involved in this for the time being. Probably in the beginning they did not even know of it, but they acted in a spirit similar to the spirit expressed in the formal document by refusing to execute the king's commands, and by declaring that, if the placards were not ameliorated, they must resign from their positions in the government. Even the regent, although not inclined to follow their example wholly, urged the king to compliance. Orange and Hoorn again absented themselves from the council of state. Egmont followed their lead hesitatingly, telling the adherents of the government that he could not endure the daily protests of his friends, and deciding that his honour was at stake. The allied nobles now conceived far-reaching plans. If the king refused to yield, they determined to seek alliances abroad, in Protestant England and Germany, among the Huguenots in France. It was not until the end of February, 1566, that Orange openly acknowledged the compromise, either then first hearing of it, or—what was more probable—considering that the time was but just ripe, while he had been cognisant of it from its inception. He now endeavoured to persuade the other nobles to join the movement. Bergen, Montigny, Hoorn, and Hoogstraaten agreed, but Egmont, Megen, and Mansfield refused, while the last two ranged themselves decidedly on the side of the government. Egmont, loyal and devoted to the government, was very anxious to avoid any appearance of opposition and of anti-Catholic sentiment. The loss of Egmont's support was a serious blow for the plans of the confederated nobles. No armed resistance was possible without him. The advice of the prince to the confederates was, taking this fact into consideration, to make one more appeal to the regent before taking decisive steps. The confederates adopted the suggestion, a petition was drawn up, and on April 3d the petty nobles flocked into Brussels from all quarters, from Friesland, as well as from Artois and Luxemburg, to the total number of about four hundred instead of the thirty-five thousand soldiers the regent had been warned to expect with them. The text of the petition had been carefully prepared by Louis of

Nassau, probably not without the coöperation of Orange, Brederode, and others. On April 5th, towards midday, Brederode and Louis of Nassau, arm in arm, led the procession to the palace, where the regent, surrounded by the knights of the Golden Fleece, gave them audience and received the document from Brederode's hands. The petition began with a protestation of loyalty to the king. The confederates then proceeded to declare that it was their duty to give warning of the dangerous condition of public sentiment. There would be no safety in the country if the placards were executed. They therefore implored the regent to send an envoy to Philip to demand the amelioration of his orders against the heretics. For the time being, pending the king's answer, the petitioners demanded suspension of the inquisition and of execution of the said placards, and finally they declared that they were unwilling to incur the responsibility of a revolt by concealing the true state of affairs, and deemed that they had acted as good and loyal and faithful vassals. A story is current that Margaret was filled with anxiety and foreboding about the petitioners and that, just before they arrived, Berlaymont whispered to her encouragingly, 'How, Madame, afraid of these beggars!' On the receipt of the petition, however, she preserved an appearance of calm and answered with dignity the short but vigorous speech with which Brederode delivered the document. She reserved a fuller reply until the morrow. Then she informed the confederates that before the offering of the petition she had decided, on the advice of the stadtholders, of the knights of the Golden Fleece, of the council of state, and of the privy council, to publish a moderation of the placards. A suspension was beyond her power, but she hoped that they would be content with this step for the present and would support her in the maintenance of the ancient religion. Two days later the confederates presented a second document, expressing their disappointment at the restricted jurisdiction of the regent, and asking permission to have their petition printed to prevent the circulation of false reports as to its tenor. Margaret agreed to this, only begging that there should be no secret meetings, and that no new members should be received into the compromise. This dissatisfied the confederates, and some bitter words were exchanged. A couple of days of feasting followed, and then the nobles separated, leaving the interests of the Compromise in the hands of Brederode, Louis of Nassau, Culemborg, and Van den Bergh. The course events had taken left the regent displeased and the nobles not satisfied. Orange, too, was disappointed at the result and talked of going to Germany, an idea that perhaps had some connection with the current rumour that Philip considered him the cause of all ill, and thought that he was plotting to restore the shaken royal authority by force of arms. There was mutual distrust, and the distrust was not without reason. It was at this time that the name of Beggars, or Gueux, as applied to the confederates, came into vogue at one of the feasts in the house of Culemborg. Brederode, possibly in reference to Berlaymont's contemptuous term, proposed the adoption of the name. Soon the Beggar (Gueux), as denoting the nobleman of the Compromise, could be recognised from a simple grey garment. . . . On the breast was worn a silver or golden medal, on one side of which was a portrait of the king, on the other, two clasped hands and the inscription *fidèles au roy jusques à la besace*." —P. J. Blok, *History of the people of the Netherlands*, pt. 3, pp. 10-21.

ALSO IN: F. Schiller, *History of the revolt in the Netherlands*, bk. 3.—J. L. Motley, *Rise of the Dutch republic*, v. 1, pt. 2, ch. 3-6.—*Cambridge modern history*, v. 3, pp. 197-220.

1566.—Field preaching under arms.—Riots of image-breakers.—Philip's schemes of revenge.—Discouragement and retirement of Orange.—Blindness of Egmont and Horn, and their fate.—Up to this date, the people proper of the Netherlands, the burghers and the lower classes, had taken little part in the movement against the government. Only a few had ever heard the truth of the action of the great nobles in relation to Granvelle. The cardinal had, however, been considered the very personification of the Spanish system of government, and hated accordingly. The numerous pamphlets and pasquines against him had had a wide vogue among the burgher population at Antwerp, Ghent, and Brussels. Nor had it been a secret that Orange and Egmont were the leaders in the opposition to the cardinal, and their popularity throughout the provinces had increased accordingly. They were regarded by the people at large as zealous for the maintenance of national liberty, for a government by natives, for diminished severity in the observance of the placards—the blood placards to which so many sacrifices had fallen in the past years. Not that Calvinism or the doctrine of the Baptists, or Mennonites, found many adherents among the well-to-do citizens. On the contrary, although heresy was spreading to all classes of the population, it was in the main—just as in the time of the Baptists—the lowest classes who were chiefly affected by its spirit. In proportion to the whole population, the number of Calvinists was small, and chiefly to be found in Artois, Flanders, Brabant, Hainaut, Holland, and Zealand. Even increased by those of Mennonite opinions in the Frisian and Holland country districts, by the Lutherans of foreign birth in great commercial cities like Antwerp and Amsterdam, the whole number was far inferior to those who were somewhat indifferent to Catholicism and yet were averse to persecution. Only a very few zealous Catholics shared the king's opinions and thought that heresy must be rooted out by unyielding severity, and even, if need were, with Spanish help. Thus the desire for amelioration of the placards was a universal popular wish, and the movement among the nobles, especially their appearance at Brussels in April, was watched with the greatest interest during the spring of 1566. The cry of *Vivent les Gueux!* was soon heard in burghers' circles, and the Beggar's medal was seen in many places. The Calvinists especially had watched the course of events with the closest attention. They fixed their hopes on the action of the nobles, and expected instant amelioration, if not abolition, of the placards. The petition, translated into German and Dutch, together with the regent's answer and the nobles' reply, was read with the keenest interest by the Calvinists. . . . [The king's reply to the petition sent to him by the hands of Egmont, brought bitter disappointment, and aroused a growing desire for active opposition.] . . . In May sermons [by Calvinist and Zwinglian preachers] began to be given in a more open manner. Great multitudes assembled, first in the fields, later before the city gates, to hear the preaching. A synod of the Calvinist congregations met at Antwerp and, making use of the favourable opportunity, organised a general movement among the Calvinists throughout the Netherlands for the purpose of showing the government their strength and the significance of their demands. Many exiles returned, first secretly, then

openly; the placards were considered practically suspended! Antwerp was the centre of all this. Sometimes as many as twenty or thirty thousand people, says an eye witness, flocked to hear the open-air sermons outside that city, protected by watchers employed in the name of the consistories. Meanwhile the fulfilment of the promise made to the confederates was discussed earnestly by the regent with the council of state. As early as April 10th, Bergen and Montigny were appointed envoys to Spain to urge Philip against the introduction of the Spanish inquisition, and to beg him to come to the Netherlands and to convene the States-General. Granvelle wrote from Rome in the same spirit. Viglius and Berlaymont drew up a placard moderating the persecution temporarily, which was given to the provincial Estates before the end of the month. It was deemed so little to the purpose that it was soon termed a 'murderation' instead of a 'moderation.' The regent was placed in a very critical position. Private despatches from the king commanding stringency, concessions, which meant nothing, sent openly to the council of state, increased the uncertainty, while the Antwerp synod, under the secret leadership of Aldegonde, proceeded to organise Calvinist preaching. The ministers Guy de Bray, Peregrine de la Grange, Jean Taffin, François du Jon, Petrus Dathenus, Caspar van der Heyden, Hermannus Moded, and others, both from French and Netherland congregations, aroused their people with earnest harangues. A steadily increasing movement made itself felt throughout the whole land, especially in Flanders, in Artois, in Holland. In Holland, though, affairs took on a somewhat different character from that evident in the other provinces. The many Lutherans at Amsterdam affected the theology, and a certain disposition was evinced to adopt the Augsburg confession as the basis of a creed. A commission from the Calvinist congregations at Antwerp tried to persuade them to accept the Netherland-Calvinist confession of 1559, but Holland people declined to consider the propositions. The regent was at her wits' end. The council of state could give her little consolation. Aerscot, Aremberg, and Berlaymont were as helpless as she. Orange, Egmont, and Hoorn continued to urge the convention of the States-General and the abolition of the placards as the only effective measures to allay the disturbance. The regent sent messenger after messenger after messenger to Philip, but no letter came to her. For three months the Brussels government was left in a helpless condition without one word from Spain, where the king deliberated, as of old, with his council and the two envoys from the Netherlands. The increasing numbers of open-air congregations, and the fact that the members carried arms as they listened to the expounding of their faith, put the regent in constant fear of some sudden revolutionary outbreak. In her dilemma she finally appealed to the confederated nobles for aid, and implored them to use their influence to check these dangerous assemblies. In accordance with her request, which was indeed almost a supplication, Brederode, Louis of Nassau [a brother of Orange], Culemborg, and Van den Bergh met at Lier, July 2d, to discuss the situation. They also invited certain ministers, deputies of the Antwerp synod, to confer with them. In reply to the demand that the public sermons should be relinquished for a time, the preachers said that matters had gone too far, that the people could no longer be restrained, and that if the sermons were abandoned a serious uproar would ensue. Threats that the nobles would use force

if the meetings did not cease, affected the synod little under the circumstances. . . . The spirit of revolt, meanwhile, gathered strength in the Netherlands. The populace began to take matters into their own hands and to express in riotous acts their hatred for the priesthood and the Romish ceremonials. Towards the end of August an armed mob fell on isolated churches in Ypres and Courtrai, threw down the images, ill-treated the priests, and plundered the rich buildings and the well-stocked treasuries. This iconoclasm spread from village to village, from city to city. In West Flanders soon not one church was untouched. At Antwerp, Orange succeeded for a time in holding the mob in check, but during his absence in Brussels on August 10th, at the regent's command, the rabble fell on the churches, and in the space of four hours the beautiful cathedral of Notre Dame was reduced to a ruin of its former self. Gresham, the English agent, writes: 'and coming into Oure Lady Church, yt looked like bell where were above 1,000 torches brannyng and syche a noise! as yf heven and erth had gone together, with falling of images and fallyng down of costly works.' These same turbulent scenes were enacted in Holland, Zealand, and other regions in the north. Everywhere fanaticism and avarice went hand in hand; church ornaments, products of mediæval ecclesiastical art, fell as booty to thieves and plunderers when they escaped destruction by iconoclastic Calvinists in a zeal which they counted as holy. The authorities almost everywhere lacked energy and strength to oppose the onslaughts. Bruges, Mons, Courtrai, Douay, and Arras were almost the only towns where the riots were successfully met by the courageous attitude of the armed citizens. Unspeakable was the injury inflicted on the treasures of mediæval art. This rage of iconoclasm lasted more than a month, while the government at Brussels watched its mad course in impotent indignation. On August 12th, the regent received her brother's letter. One came to the prince of Orange at the same time, expressing full confidence in him, with friendly expressions. It was not known that the hypocritical king had taken the precaution to declare all concessions illegal before a notary! But even had he been sincere it was plain even to him that these unwilling and inadequate concessions could not stem the current of the revolt. No one of the three chief nobles thought that the concessions were sufficient under the circumstances. They wished more now, and refused to use force against the riots unless the regent would meet the wishes of the nobles as expressed at St. Trond. So the anxious duchess was forced to yield, at least in the chief points. On August 23d, she concluded an agreement with a deputation of the confederates, wherein she granted, in return for promises of immediate help, permission for preaching where sermons had already been given, provided the congregation carried no arms. No rioting was to be allowed and Catholic services were not to be disturbed. Further, she promised immunity for the signers of the Compromise and of the petition. This agreement was published and for a moment the storm of iconoclasm held up. . . . The king was indeed wroth when he learned what had passed, and determined to avenge the insults offered to his church and to his authority. His first intent was to go in person to the Netherlands in February, at the head of an army, and punish all who had worked against him; so at least he wrote privately to the regent, so run the despatches of Montigny and others from Spain, while his letters to the council of state were somewhat

calmer. Montigny and Bergen, detained by the king in Spain, gave a clear warning of what was to come. What was the action of the nobles to be? Submission or opposition? Aremberg and Megen had deserted the popular cause, Mansteld followed their example, Montigny advised yielding, Egmont hesitated. Orange and Hoorn believed in opposition, but the prince was unwilling to risk formal steps without Egmont. He tried to assure himself of support in Germany and left no stone unturned to win over Egmont to the party of opposition. In early October Hoorn, Hoogstraaten, Orange, and Egmont had a conference at Dendermonde. It was hoped that the latter could be persuaded to a combined step, allied with a convention of the States-General, to force the king to act as they wished, but Egmont, attached as he was to royal authority, refused to enter on this road. Meantime, as the autumn went on, the government felt itself stronger. Philip sent large sums of money which enabled the regent to levy troops. Noircarmes was sent to Valenciennes to quiet the city by force of arms, during the absence of the stadtholder, Bergen. The lord of Hlierges, Berlaymont's son, and other stout royalists were placed at the head of troops elsewhere, and it was evident that the administration was fully determined to assert itself with or without troops from Spain, and to avenge itself for its recent humiliation. And what were the Beggars doing? A feeling of insecurity had again affected the Calvinist congregations and the petty nobles. There was an attempt to revive the Compromise so as to demand the maintenance of the accord of August 23d, but this failed. Troops to the number of eight thousand were actually collected during the summer and retained by means of *wachtgeld*, or pledge money, for the Beggars' service, but the expense borne by the congregations was so heavy that the mercenaries were dismissed in November, and the majority passed directly into the service of the government. Another scheme was on foot—the minister Dathenus appears to have been the sponsor thereof—to raise three million guilders and offer them to the king for the grant of religious freedom. It is possible, however, that this somewhat naïve suggestion was only a cloak for collecting a war fund. There were many attempts, moreover, to secure coöperative action, but the majority of the city government were afraid to commit themselves, and these failed, just as did an effort to convene the States-General, although the latter emanated from Egmont himself. It was more and more evident that no leader was forthcoming for the discontented. Orange and Egmont both kept in the background; the prince was unwilling to venture action without Egmont. In these circumstances the Calvinists resolved finally to help themselves,—the more moderate Lutherans also drawing back,—and an assembly was held in December. It was decided to use the sums already collected, not to bribe the king, but to collect troops through their fellow-Calvinist, the elector palatine. The military command was to be offered to Orange, who must promise to maintain the reformed religion. If he refused, Hoorn and Brederode were the next choice, one or both together. The leader was to have a council of six nobles, members of the Compromise appointed by the consistories, six merchants, and a few other members. The two first-mentioned nobles declined the dangerous honour at once. Brederode thus became the chosen leader of the Calvinists, a man full of zeal for the Calvinist cause, but ill fitted for the difficult post. . . . In Amsterdam, the great Beggar, Bre-

derode, entered into negotiations with the Huguenots and with friends in England, and succeeded in collecting a small military force. He drew up, moreover, in the name of the confederated nobles, a new petition urging the maintenance of the accord of August 23d and permission to hold public sermons. The regent answered that she knew nothing of any 'confederated nobles,' that she had never intended to allow public sermons, and that she advised the nobles then gathered together to disperse and to obey their king,—an advice that was not followed. Now Orange had allowed all Brederode's actions to take place before his very eyes in spite of the regent's protests. He was still waiting. Egmont meanwhile ranged himself on the side of the government, returned all correspondence to Orange and his friends, and formally severed his relations with them. The prince's waiting attitude exasperated the Calvinists, who made repeated attempts to win him over to an open espousal of their cause, but he persevered in his position, with his eye fixed on Germany. Brederode continued his activity, on the other hand, and his army near Antwerp increased. The Beggars made an attempt to take Walcheren by force, but failed. Bombergen was more successful in an attack on Bois-le-duc, but Megeu the royalist stadtholder of Gelderland, also succeeded in gaining mastery of Harderwijk and Utrecht, while he seriously menaced the safety of Amsterdam and Vianen. Brederode hastened to Holland to protect his cities, and on March 13th [1567] an actual battle took place, in his absence, between the Beggars' troops under the inexperienced Thoulouse and a force of three thousand trained soldiers under the lord of Beauvoir. The Beggars had only numbers in their favour, and they were cut to pieces. Orange was blamed for this defeat, as he had, with the Lutherans' aid, held the Calvinists in check within Antwerp, when they were ready to burst out to help their brethren. Eleven days later Valenciennes opened its door to Noircarmes. With this step the revolt was practically suppressed. Brederode's own city of Vianen was held by German mercenaries under Eric of Brunswick, and the great Beggar took refuge at Emden. Several less fortunate nobles were captured as they attempted to reach Germany, delivered over to the Frisian stadtholder Aremberg, and confined at Vilvoorden. By that time the prince too had forsaken the land. Louis had warned him not to count on German help. The Calvinists at Antwerp were furious at him and threatened his life. The regent showed no disposition to be kindly towards him. 'As far as we can see, it looks as though it were up with this land,' he wrote on April 9th to the landgrave of Hesse. He had one last meeting with Egmont at Willebroek, whereof legend preserves the memory in the laconic farewell words: 'Adieu, landless prince'; 'Adieu, headless count.'—P. J. Blok, *History of the people of the Netherlands*, pt. 3, pp. 21-35.

1567-1573.—Alva in the Netherlands.—Council of Blood.—The forebodings of Orange "were only too correct. Philip had resolved to send the Duke of Alva to subdue the Netherlands. A force of nine thousand veteran Spanish infantry with thirteen hundred Italian cavalry had been collected from the garrisons of Lombardy and Naples, and Alva began a long, difficult march over the Mt. Cenis and through Franche Comté, Lorraine, and Luxemburg. William had escaped just in time. When the Duke arrived in Brussels and presented his credentials to the Council of State, it

was seen that the King had bestowed on him such extensive powers that Margaret remained Regent in name only. One of his earliest acts was to get possession of the persons of Counts Egmont and Hoorn, with their private secretaries, and to imprison Antony van Straelen, Burgomaster of Antwerp, and a confidential friend of the Prince of Orange. Many other arrests were made; and Alva, having caught his victims, invented an instrument to help him to dispose of them. By the mere fiat of his will he created a judicial chamber, whose decisions were to override those of any other court of law in the Netherlands, and which was to be responsible to none, not even to the Council of State. It was called the Council of Tumults, but is better known by its popular name, The Bloody Tribunal. It consisted of twelve members, among whom were Barlaymont and a few of the most violent Romanists of the Netherlands; but only two, Juan de Vargas and del Rio, both Spaniards, were permitted to vote and influence the decisions. Del Rio was a nonentity; but de Vargas was a very stern reality—a man of infamous life, equally notorious for the delight he took in slaughtering his fellow-men and the facility with which he murdered the Latin language! He brought the whole population of the Netherlands within the grip of the public executioner by his indictment: *Hæretici fraxerunt templa, boni nihil faxerunt contra; ergo debent omnes patibulare*; by which he meant, *The heretics have broken open churches, the orthodox have done nothing to hinder them; therefore they ought all of them to be hanged together*. Alva reserved all final decisions for his own judgment, in order that the work might be thoroughly done. He wrote to the King, 'Men of law only condemn for crimes that are proved, whereas your Majesty knows that affairs of State are governed by very different rules from the laws which they have here.' At its earlier sittings this terrible tribunal defined the crime of treason, and stated that its punishment was death. The definition extended to eighteen articles, and declared it to be treason:—to have presented or signed any petition against the new bishoprics, the Inquisition, or the *Placards*; to have tolerated public preaching under any circumstances; to have omitted to resist iconoclasm, or field-preaching, or the presentation of the *Request*; to have asserted that the King had not the right to suspend the charters of the provinces; or to maintain that the Council of Tumults had not a right to override all the laws and privileges of the Netherlands. All these things were treason, and all of them were capital offences. Proof was not required; all that was needed was reasonable suspicion, or rather what the Duke of Alva believed to be so. The Council soon got to work. It sent commissioners through every part of the land—towns, villages, districts—to search for any who might be suspected of having committed any act which could be included within their definition of treason. Informers were invited, were bribed, to come forward; and soon shoals of denunciations and evidence flowed in to them. The accused were brought before the Council, tried (if the procedure could be called a trial), and condemned in batches. The records speak of ninety-five, eighty-four, forty-six, thirty-five at a time. Alva wrote to Philip that no fewer than fifteen hundred had been taken in their beds early on Ash-Wednesday morning, and later he announces another batch of eight hundred. In each case he adds, 'I have ordered all of them to be executed.' In view of these records, the language of a contemporary chronicler does not appear

exaggerated: 'The gallows, the wheel, stakes, trees along the highways, were laden with carcasses or limbs of those who had been hanged, beheaded, or roasted; so that the air which God made for the respiration of the living, was now become the common grave or habitation of the dead. Every day produced fresh objects of pity and of mourning, and the noise of the bloody passing-bell was continually heard, which by the martyrdom of this man's cousin, and the other's brother or friend, rang dismal peals in the hearts of the survivors.' Whole families left their dwellings to shelter themselves in the woods, and, goaded by their misery, pillaged and plundered. The priests had been active as informers, and these *Wild-Beggars*, as they were called, 'made excursions on them, serving themselves of the darkest nights for revenge and robbery, punishing them not only by despoiling them of their goods, but by disfiguring their faces, cutting off ears and noses.' The country was in a state of anarchy. Margaret, Duchess of Parma, the nominal Regent of the Netherlands, had found her position intolerable since the arrival of the Duke of Alva, and was permitted by Philip to resign (Oct. 6th, 1567). Alva henceforth was untrammelled by even nominal restraint. A

king on the subject, as his dignity entitled him to do, since the Netherlands were a part of the Germanic body. It received an answer which was an insult to the remonstrant from its defiance of truth and common sense, and which cut off all hope from the miserable Flemings. Philip declared that what he had done had been done 'for the repose of the Provinces,' . . . and almost on the same day he published a new edict, confirming a decree of the Inquisition which condemned all the inhabitants of the Netherlands to death as heretics, with the exception of a few persons who were named [see above]. . . . In their utter despair, the Flemings implored the aid of the Prince of Orange, who . . . was now residing at Dillenburg, in Nassau, in safety from Philip's threats, and from the formal sentence which, . . . the Council of Blood had just pronounced against him by name. But he resolved that in such an emergency it did not become him to weigh his own safety against the claims his countrymen had on his exertions. After a few weeks energetically spent in levying troops and raising money to maintain them, he published a document which he entitled his 'Justification,' and which stated his own case and that of the Provinces with a most

DUKE OF ALVA

MARGARET, DUCHESS OF PARMAS

ALEXANDER FARNESE

process was begun against the Counts Egmont and Hoorn, and William of Orange was proclaimed an outlaw (Jan. 24th, 1568) unless he submitted himself for trial before the Council of Tumults. Some days afterwards, his eldest son, a boy of fifteen and a student in the University of Louvain, was kidnapped and carried off to Spain. William replied in his famous Justification of the Prince of Orange against his Calumniators, in which he declared that he, a citizen of Brabant, a Knight of the Golden Fleece, a Prince of the Holy Roman Empire, one of the sovereign Princes of Europe (in virtue of the principality of Orange), could not be summoned before an incompetent tribunal. He reviewed the events in the Netherlands since the accession of Philip II., and spoke plainly against the misgovernment caused, he said diplomatically, by the evil counsels of the King's advisers."—T. M. Lindsay, *History of the Reformation*, v. 2, pp. 255-259.

1568-1572.—Arming of revolt and beginning of war by prince of Orange.—Alva's successes, brutalities, and senseless taxation.—Quarrels with England and destruction of Flemish trade.—"So unprecedented already was the slaughter that even in the beginning of March 1568, when Alva had been scarcely six months in the country, the Emperor Maximilian, himself a Roman Catholic, addressed a formal remonstrance to the

convincing clearness; and at the end of April he took the field at the head of a small force, composed of French Huguenots, Flemish exiles, . . . and German mercenaries. . . . Thus in the spring of 1568 began that terrible war which for 40 years desolated what, in spite of great natural disadvantages, had hitherto been one of the most prosperous countries of Europe. . . . To dwell on many of its details . . . would require volumes. . . . And, indeed, the pitched battles were few. At the outset [May 23, 1568] Count Louis of Nassau, the prince's brother, defeated and slew Count Aremberg, the Spanish governor of the province of Groningen, very nearly on the spot [near the convent of Heiliger-Lee, or the Holy Lion] on which, in the palmy days of Rome, the fierce valor of Arminius had annihilated the legions whose loss was so deeply imprinted on the heart of Augustus; and Alva had avenged the disaster by so complete a rout of Louis at Jemmingen, that more than half of the rebel army was slaughtered on the field, and Louis himself only escaped a capture, which would have delivered him to the scaffold, by swimming the Ems, and escaping with a mere handful of troops, all that were left of his army, into Germany. But after dealing this blow . . . Alva rarely fought a battle in the open field. He preferred showing the superiority of his generalship by defying the endeavours of the prince and his

brothers to bring him to action, miscalculating, indeed, the eventual consequences of such tactics, and believing that the protraction of the war must bring the rebels to his sovereign's feet by the utter exhaustion of their resources; while the event proved that it was Spain which was exhausted by the contest, that kingdom being in fact so utterly prostrated by continued draining of men and treasure which it involved, that her decay may be dated from the moment when Alva reached the Flemish borders. His career in the Netherlands seemed to show that, warrior though he was, persecution was more to his taste than even victory. Victorious, indeed, he was, so far as never failing to reduce every town which he besieged, and to baffle every design of the prince which he anticipated. . . . Every triumph which he gained was sullied by a ferocious and deliberate cruelty, of which the history of no other general in the world affords a similar example. . . . Whenever Alva captured a town, he himself enjoined his troops to show no mercy either to the garrison or to the peaceful inhabitants. Every atrocity which greed of rapine, wantonness of lust, and blood-thirsty love of slaughter could devise was perpetrated by his express direction. . . . He had difficulties to encounter besides those of his military operations, and such as he was less skilful in meeting. He soon began to be in want of money. A fleet laden with gold and silver was driven by some French privateers into an English harbour, where Elizabeth at once laid her hands on it. If it belonged to her enemies, she had a right, she said, to seize it: if to her friends, to borrow it (she had not quite decided in which light to regard the Spaniards, but the logic was irresistible, and her grasp irremovable), and, to supply the deficiency, Alva had recourse to expedients which injured none so much as himself. To avenge himself on the Queen, he issued a proclamation [March, 1569] forbidding all commercial intercourse between the Netherlands and England; . . . but his prohibition damaged the Flemings more than the English merchants, and in so doing inflicted loss upon himself. . . . For he at the same time endeavoured to compel the States to impose, for his use, a heavy tax on every description of property, on every transfer of property, and even on every article of merchandise [the tenth penny, or ten per cent.] as often as it should be sold: the last impost, in the Provinces which were terrified into consenting to it, so entirely annihilating trade that it even roused the disapproval of his own council; and that, finding themselves supported by that body, even those Provinces which had complied, retracted their assent. . . . After a time [1572] he was forced first to compromise his demands for a far lower sum than that at which he had estimated the produce of his taxes, and at last to renounce even that. He was bitterly disappointed and indignant, and began to be weary of his post."—C. D. Yonge, *Three centuries of modern history*, ch. 5.

1572.—Beggars of the Sea and their capture of Brill.—Rapid revolution in Holland and Zeeland, but wholly in name of king and his stadholder, William of Orange.—Provisional government organized.—In the spring of 1572, Alva having reestablished friendly relations with Queen Elizabeth, all the cruisers of the rebellious Netherlanders—"Beggars of the Sea" as they had styled themselves—were suddenly expelled from

English ports, where they had previously found shelter and procured supplies. The consequence was unexpected to those who brought it about, and proved most favorable to the patriotic cause. Desperately driven by their need of some harbor of refuge, the fleet of these adventurers made an attack upon the important seaport of Brill, took it with little fighting and held it stubbornly. Excited by this success, the patriotic burghers of Flushing, on the isle of Walcheren, soon afterwards rose and expelled the Spanish garrison from their town. "The example thus set by Brill and Flushing was rapidly followed. The first half of the year 1572 was distinguished by a series of triumphs rendered still more remarkable by the reverses which followed at its close. . . . Enkhuizen, the key to the Zuyder Zee, the principal arsenal, and one of the first commercial cities in the Netherlands, rose against the Spanish Admiral, and hung out the banner of Orange on its ramparts. The revolution effected here was purely the work of the people—of the mariners and burghers of the city. Moreover, the magistracy was set aside and the government of Alva repudiated without shedding one drop of blood, without a single wrong to person or property. By the same spontaneous movement, nearly all the important cities of Holland and Zeeland raised the standard of him in whom they recognized their deliverer. The revolution was accomplished under nearly similar circumstances everywhere. With one fierce bound of enthusiasm the nation shook off its chain. Oudewater, Dort, Harlem, Leyden, Gorcum, Loewenstein, Gouda, Medenblik, Hoorn, Alkmaar, Edam, Monnikendam, Purmerende, as well as Flushing, Veer, and Enkhuizen, all ranged themselves under the government of Orange as lawful stadholder for the King. Nor was it in Holland and Zeeland alone that the beacon fires of freedom were lighted. City after city in Gelderland, Overijssel, and the See of Utrecht, all the important towns of Friesland, some sooner, some later, some without a struggle, some after a short siege, some with resistance by the functionaries of government, some by amicable compromise, accepted the garrisons of the Prince and formally recognized his authority. Out of the chaos which a long and preternatural tyranny had produced, the first struggling elements of a new and a better world began to appear. . . . Not all the conquests thus rapidly achieved in the cause of liberty were destined to endure, nor were any to be retained without a struggle. The little northern cluster of republics, which had now restored its honor to the ancient Batavian name, was destined, however, for a long and vigorous life. From that bleak isthmus the light of freedom was to stream through many years upon struggling humanity in Europe, a guiding pharos across a stormy sea; and Harlem, Leyden, Alkmaar—names hallowed by deeds of heroism such as have not often illustrated human annals, still breathe as trumpet-tongued and perpetual a defiance to despotism as Marathon, Thermopylae, or Salamis. A new board of magistrates had been chosen in all the redeemed cities by popular election. They were required to take an oath of fidelity to the King of Spain, and to the Prince of Orange as his stadholder; to promise resistance to the Duke of Alva, the tenth penny, and the Inquisition; 'to support every man's freedom and the welfare of the country; to protect widows, orphans, and miserable persons, and to maintain justice and truth.' Diedrich Sonoy arrived on the 2nd June at Enkhuizen. He was provided by the Prince with a commission, appointing him Lieutenant-Governor of North Hol-

land or Waterland. Thus to combat the authority of Alva, was set up the authority of the King. The stadholderate over Holland and Zeeland, to which the Prince had been appointed in 1559, he now reassumed. Upon this fiction reposed the whole provisional polity of the revolted Netherlands. . . . The people at first claimed not an iota more of freedom than was secured by Philip's coronation oath. There was no pretence that Philip was not sovereign, but there was a pretence and a determination to worship God according to conscience, and to reclaim the ancient political 'liberties' of the land. So long as Alva reigned, the Blood Council, the Inquisition, and martial law, were the only codes or courts, and every charter slept. To recover this practical liberty and these historical rights, and to shake from their shoulders a most sanguinary government, was the purpose of William and of the people. No revolutionary standard was displayed. The written instructions given by the Prince to his lieutenant Sonoy were to 'see that the Word of God was preached, without, however, suffering any hindrance to the Roman Church in the exercise of its religion.' . . . The Prince was still in Germany, engaged in raising troops and providing funds."—J. L. Motley, *Rise of the Dutch republic*, pt. 3, ch. 6-7.

1572-1573.—**Capture of Mons by Louis of Nassau and its recovery by Spaniards.**—**Spanish massacres at Mechlin, Zutphen and Naarden.**—**Siege and capture of Haarlem.**—"While William of Orange was in Germany, raising money and troops, he still directed the affairs of the Netherlands. His prospects were again brightened by the capture, by his gallant brother Louis of Nassau, of the important city of Mons. . . . This last startling blow forced Alva to immediate action. He at once sent his son, Don Frederic, to lay siege to Mons. Soon after, the Duke of Medina Celi, Alva's successor as governor of the Netherlands [to whom, however, Alva did not surrender his authority], arrived safely with his fleet, but another Spanish squadron fell with its rich treasures into the hands of the rebels. Alva was now so pressed for money that he agreed to abolish the useless tenth-penny tax, if the states-general of the Netherlands would grant him a million dollars a year. He had summoned the states of Holland to meet at the Hague on the 15th of July, but they met at Dert to renounce his authority, at the summons of William of Orange, who had raised an army in Germany, but was without means to secure the necessary three months' payment in advance. While still owning allegiance to the king, the states recognized Orange as stadtholder, empowered him to drive out the Spanish troops, and to maintain religious freedom. . . . Treating the Emperor Maximilian's peace orders as useless, the prince marched his army of 24,000 men to the relief of Mons. Most of the Netherland cities on the way accepted his authority, and everything looked favorable for his success, when an unforeseen and terrible calamity occurred. The French king, Charles IX., whose troops had been routed before Mons [by the Spaniards], had promised to furnish further aid to the provinces. Admiral Coligny was to join the forces of Orange with 15,000 men. The frightful massacre of Saint Bartholomew in Paris, on the 24th of August, . . . was a terrible blow to the prince. It broke up all his plans. He had reached the neighborhood of Mons, which he was trying to reinforce, when a night attack was made by the Spaniards on his

lines, September 11. . . . Obligated to leave his gallant brother Louis to his fate in Mons, Orange narrowly escaped being killed on his retreat. . . . Deserted by the cities that had been so earnest in his cause, sorrowful, but not despairing for his country, William had only his trust in God and his own destiny to sustain him. As Holland was the only province that clung to the hero patriot, he went there expecting and prepared to die for liberty. Louis of Nassau was forced, on the 21st of September, to abandon Mons to the Spaniards, who allowed Noircarmes . . . to massacre and pillage the inhabitants contrary to the terms of surrender. This wretch killed Catholics and Protestants alike, in order to secure their riches for himself. . . . The city of Mechlin, which had refused to admit a garrison of his troops, was even more brutally ravaged by Alva in order to obtain gold. . . . Alva's son, Don Frederic, now proved an apt pupil of his father, by almost literally executing his command to kill every man and burn every house in the city of Zutphen, which had opposed the entrance of the king's troops. The massacre was terrible and complete. The cause of Orange suffered still more by the cowardly flight of his brother-in-law, Count Van den Berg, from his post of duty in the provinces of Gelderland and Overijssel. By this desertion rugged Friesland was also lost to the patriot side. Holland alone held out against the victorious Spaniards. The little city of Naarden at first stoutly refused to surrender, but being weak was obliged to yield without striking a blow. Don Frederic's agent, Julian Romero, having promised that life and property should be spared, the people welcomed him and his soldiers at a grand feast on the 2d of December. Hardly was this over when 50 citizens, who had assembled in the town hall, were warned by a priest to prepare for death. This was the signal for the entrance of the Spanish troops, who butchered every one in the building. They then rushed furiously through the streets, pillaging and then setting fire to the houses. As the inmates came forth, they were tortured and killed by their cruel foes. . . . Alva wrote boastfully to the king that 'they had cut the throats of the burghers and all the garrison, and had not left a mother's son alive.' He ascribed this success to the favor of God in permitting the defence of so feeble a city to be even attempted. . . . As the city of Haarlem was the key to Holland, Don Frederic resolved to capture it at any cost. But the people were so bent upon resistance that they executed two of their magistrates for secretly negotiating with Alva. . . . Ripperda, the commandant of the Haarlem garrison, cheered soldiers and people by his heroic counsels, and through the efforts of Orange the city was placed under patriot rule. Amsterdam, which was in the enemy's hands, was ten miles distant, across a lake traversed by a narrow causeway, and the prince had erected a number of forts to command the frozen surface. As a thick fog covered the lake in these December days, supplies of men, provisions, and ammunition were brought into the city in spite of the vigilance of the besiegers. The sledges and skates of the Hollanders were very useful in this work. But against Don Frederic's army of 30,000 men, nearly equalling the entire population of Haarlem, the city with its extensive but weak fortifications had only a garrison of about 4,000. The fact that about 300 of these were respectable women, armed with sword, musket, and dagger, shows the heroic spirit of the people. The men were nerved to fresh exertion by these Amazons, who, led by their noble

chief, the Widow Kenau Hasselaer, fought desperately by their side, both within and without the works. The banner of this famous heroine, who had been called the Joan of Arc of Haarlem, is now in the City Hall. A vigorous cannonade was kept up against the city for three days, beginning December 18, and men, women, and children worked incessantly in repairing the shattered walls. They even dragged the statues of saints from the churches to fill up the gaps, to the horror of the superstitious Spaniards. The brave burghers repelled their assaults with all sorts of weapons. Burning coals and boiling oil were hurled at their heads, and blazing pitch-hoops were skillfully caught about their necks. Astonished by this terrible resistance, which cost him hundreds of lives, Don Frederic resolved to take the city by siege. [On the last day of January, 1573, Don Frederic having considerably shattered an outwork called the ravelin, ordered a midnight assault, and the Spaniards carried the fort.] . . . They mounted the walls expecting to have the city at their mercy. Judge of their amazement to find a new and stronger fort, shaped like a half-moon, which had been secretly constructed during the siege, blazing away at them with its cannon. Before they could recover from their shock, the ravelin, which had been carefully undermined, blew up, and sent them crushed and bleeding into the air. The Spaniards outside, terrified at these outbursts, retreated hastily to their camp, leaving hundreds of dead beneath the walls. Two assaults of veteran soldiers, led by able generals, having been repelled by the dauntless burghers of Haarlem, famine seemed the only means of forcing its surrender. Starvation in fact soon threatened both besiegers and besieged. Don Frederic wished to abandon the contest, but Alva threatened to disown him as a son if he did so. . . . There was soon a struggle for the possession of the lake, which was the only means of conveying supplies to the besieged. In the terrible hand-to-hand fight which followed the grappling of the rival vessels, on the 28th of May, the prince's fleet, under Admiral Brand, was totally defeated. . . . During the month of June the wretched people of Haarlem had no food but linseed and grapeseed, and they were soon compelled to eat dogs, cats, rats, and mice. When these gave out they devoured shoe-leather and the boiled hides of horses and oxen, and tried to allay the pangs of hunger with grass and weeds. The streets were full of the dead and the dying. [Attempts at relief by Orange were defeated.] As a last resort the besieged resolved to form a solid column, with the women and children, the aged and infirm, in the centre, to fight their way out; but Don Frederic, fearing the city would be left in ruins, induced them to surrender on the 12th of July, under promise of mercy. This promise was cruelly broken by a frightful massacre of 2,000 people, which gave great joy to Alva and Philip."—A. Young, *History of the Netherlands*, ch. 10-11.

1573-1574.—Siege and deliverance of Alkmaar.—Displacement of Alva.—Battle of Mookerhyde and death of Louis of Nassau.—Siege and relief of Leyden.—Flooding of the land.—Founding of Leyden University.—After the surrender of Haarlem, a mutiny broke out among the Spanish troops that had been engaged in the siege, to whom twenty-eight months' arrears of pay were due. "It was appeased with great difficulty at the end of seven weeks, when Alva determined to make a decisive attack on Holland both by land and

water, and with this view commanded his son, Don Frederic di Toledo, to march to the siege of Alkmaar, and repaired in person to Amsterdam. . . . Don Frederic laid siege to Alkmaar at the head of 16,000 able and efficient troops; within the town were 1,300 armed burghers and 800 soldiers, as many perhaps as it was at that time capable of containing. With this handful of men the citizens of Alkmaar defended themselves no less resolutely than the Haarlemmers had done. The fierce onslaughts of the Spaniards were beaten back with uniform success on the part of the besieged; the women and girls were never seen to shrink from the fight, even where it was hottest, but unceasingly supplied the defenders with stones and burning missiles, to throw amongst their enemies. . . . But as there were no means of conveying reinforcements to the besieged from without and their supplies began to fail, they resolved, after a month's siege, on the desperate measure of cutting through the dykes. Some troops sent by Sonnoy having effected this, and opened the sluices, the whole country was soon deluged with water. Don Frederic, astounded at this novel mode of warfare, and fearing that himself and his whole army would be drowned, broke up his camp in haste, and fled, rather than retreated, to Amsterdam. It seemed almost as though the blessing which the Prince of Orange had promised his people had come upon them. The capture of Geertruydenberg, about this time, by one of his lieutenants, was followed by a naval victory, as signal as it was important. The Admiral Bossu, to whom was given the command of the [Spanish] fleet at Amsterdam, having sailed through the Pampus with the design of occupying the Zuyderzee, and thus making himself master of the towns of North Holland, encountered the fleet of those towns consisting of 24 vessels, commanded by Admiral Dirkson, stationed in the Zuyderzee to await his arrival. [After several days of skirmishing, the Dutch fleet forced a close fight] . . . which lasted with little intermission from the afternoon of the 11th of October to midday of the 12th, during which time two of the royalist ships were sunk and a third captured. [The remainder fled or surrendered, Bossu, himself, being taken prisoner.] On intelligence of the issue of the battle, Alva quitted Amsterdam in haste and secrecy. This success delivered the towns of North Holland from the most imminent danger, and rendered the possession of Amsterdam nearly useless to the royalists. [Alva was now forced to call a meeting of the states-general, in the hope of obtaining a vote of money.] . . . Upon their assembling at Brussels, the states of Holland despatched an earnest and eloquent address, exhorting them to emancipate themselves from Spanish slavery and the cruel tyranny of Alva, which the want of unanimity in the provinces had alone enabled him to exercise. . . . Their remonstrance appears to have been attended with a powerful effect, since the states-general could neither by threats or remonstrances be induced to grant the smallest subsidy. . . . Alva, having become heartily weary of the government he had involved in such irretrievable confusion, now obtained his recall; his place was filled by Don Louis de Requesens, grand commander of Castile. In the November of this year, Alva quitted the Netherlands, leaving behind him a name which has become a bye-word of hatred, scorn and execration. . . . During the six years that he had governed the Netherlands, 18,000 persons had perished by the hand of the executioner, besides the numbers massacred at Naarden, Zutphen, and other conquered cities. [The

first undertaking of the new governor was an attempt to raise the siege of Middleburg, the Spanish garrison in which had been blockaded by the Gueux for nearly two years; but the fleet of forty ships which he fitted out for the purpose was defeated, at Romers-waale, with a loss of ten vessels.] . . . The surrender of Middleburg immediately followed, and with it that of Armeuyden, which put the Gueux in possession of the principal islands of Zealand, and rendered them masters of the sea. [But these successes were counterbalanced by a disaster which attended an expedition led from Germany by Louis of Nassau, the gallant but unfortunate brother of the prince of Orange. His army was attacked and utterly destroyed by the Spaniards (April 14, 1574) at the village of Mookerheyde, or Mook, near Nimeguen, and both Louis and his brother Henry of Nassau were slain.] . . . After raising the siege of Alkmaar, the Spanish forces, placed under the command of Francesco di Valdez on the departure of Don Frederic di Toledo, had for some weeks blockaded Leyden; but were recalled in the spring of this year to join the rest of the army on its march against Louis of Nassau. From that time the burghers of Leyden . . . had not only neglected to lay up any fresh stores of corn or other provision, but to occupy or destroy the forts with which the enemy had encompassed the town. This fact coming to the knowledge of Don Louis, he once more dispatched Valdez to renew the siege at the head of 8,000 troops. . . . Mindful of Haarlem and Alkmaar, the Spanish commander . . . brought no artillery, nor made any preparations for assault, but, well aware that there were not provisions in the town sufficient for three months, contented himself with closely investing it on all sides, and determined to await the slow but sure effects of famine. [In this emergency, the states of Holland] . . . decreed that all the dykes between Leyden and the Meuse and Yssel should be cut through, and the sluices opened at Rotterdam and Schiedam, by which the waters of those rivers, overflowing the valuable lands of Schieland and Rhyndland, would admit of the vessels bringing succours up to the very gates of Leyden. The damage was estimated at 600,000 guilders. . . . The cutting through the dykes was a work of time and difficulty, as well from the labour required as from the continual skirmishes with the enemy. . . . Even when completed, it appeared as if the vast sacrifice were utterly unavailing. A steady wind blowing from the north-east kept back the waters. . . . Meanwhile the besieged, who for some weeks heard no tidings of their deliverers, had scarcely hope left to enable them to sustain the appalling sufferings they endured. . . . 'Then,' says the historian, who heard it from the mouths of the sufferers, 'there was no food so odious but it was esteemed a dainty.' . . . The siege had now lasted five months. . . . Not a morsel of food, even the most filthy and loathsome, remained . . . when, on a sudden, the wind veered to the north-west, and thence to the south-west; the waters of the Meuse rushed in full tide over the land, and the ships rode triumphantly on the waves. The Gueux, attacking with vigour the forts on the dykes, succeeded in driving out the garrisons with considerable slaughter. . . . On the . . . 3rd of October . . . Valdez evacuated all the forts in the vicinity. . . . In memory of this eventful siege, the Prince and States offered the inhabitants either to found an university or to establish a fair. They chose the former; but the States . . . granted both: the fair of Leyden was appointed to be held on the 1st of October in every year, the 3rd being ever

after held as a solemn festival; and on the 8th of February in the next year, the University re-received its charter from the Prince of Orange in the name of King Philip. Both proved lasting monuments."—C. M. Davies, *History of Holland*, v. 1-2, pt. 2, ch. 8-9.—See also UNIVERSITIES AND COLLEGES: 1575: Leyden University.

1575-1577.—Congress at Breda.—Offer of sovereignty to English queen.—Death of Requesens.—Mutiny of soldiery.—Spanish fury.—Alliance of northern and southern provinces under the Pacification of Ghent and the Union of Brussels.—Arrival of Don John of Austria.—"The bankrupt state of Philip II's exchequer, and the reverses which his arms had sustained, induced him to accept . . . the proffered mediation of the Emperor Maximilian, which he had before so arrogantly rejected, and a Congress was held at Breda from March till June 1575. But the insurgents were suspicious, and Philip was inflexible; he could not be induced to dismiss his Spanish troops, to allow the meeting of the States-General, or to admit the slightest toleration in matters of religion; and the contest was therefore renewed with more fury than ever. The situation of the patriots became very critical when the enemy, by occupying the islands of Duyveland and Schouwen, cut off the communication between Holland and Zealand; especially as all hope of succour from England had expired. Towards the close of the year envoys were despatched to solicit the aid of Elizabeth, and to offer her, under certain conditions, the sovereignty of Holland and Zealand. Requesens sent Champagny to counteract these negotiations, which ended in nothing. The English Queen was afraid of provoking the power of Spain, and could not even be induced to grant the Hollanders a loan. The attitude assumed at that time by the Duke of Alençon, in France, also prevented them from entering into any *négociations* with that Prince. In these trying circumstances, William the Silent displayed the greatest firmness and courage. It was now that he is said to have contemplated abandoning Holland and seeking with its inhabitants a home in the New World, having first restored the country to its ancient state of a waste of waters; a thought, however, which he probably never seriously entertained, though he may have given utterance to it in a moment of irritation or despondency. . . . The unexpected death of Requesens, who expired of a fever, March 5th, 1576, after a few days' illness, threw the government into confusion. Philip II. had given Requesens a *carte blanche* to name his successor, but the nature of his illness had prevented him from filling it up. The government therefore devolved to the Council of State, the members of which were at variance with one another; but Philip found himself obliged to intrust it 'ad interim' with the administration, till a successor to Requesens could be appointed. Count Mansfeld was made commander-in-chief, but was totally unable to restrain the licentious soldiery. The Spaniards, whose pay was in arrear, had now lost all discipline. After the raising of the siege of Leyden they had beset Utrecht and pillaged and maltreated the inhabitants, till Valdez contrived to furnish their pay. No sooner had Requesens expired than they broke into open mutiny, and acted as if they were entire masters of the country. After wandering about some time and

threatening Brussels, they seized and plundered Alost, where they established themselves; and they were soon afterwards joined by the Walloon and German troops. To repress their violence, the Council of State restored to the Netherlanders the arms of which they had been deprived, and called upon them by a proclamation to repress force by force; but these citizen-soldiers were dispersed with great slaughter by the disciplined troops in various encounters. Ghent, Utrecht, Valenciennes, Maestricht were taken and plundered by the mutineers; and at last the storm fell upon Antwerp, which the Spaniards entered early in November, and sacked during three days. More than 1,000 houses were burnt, 8,000 citizens are said to have been slain, and enormous sums in ready money were plundered. The whole damage was estimated at 24,000,000 florins. The horrible excesses committed in this sack procured for it the name of the 'Spanish Fury.' The government was at this period conducted in the name of the States of Brabant. On the 5th of September, De Hèze, a young Brabant gentleman who was in secret intelligence with the Prince of Orange, had, at the head of 500 soldiers, entered the palace where the Council of State was assembled, and seized and imprisoned the members. William, taking advantage of the alarm created at Brussels by the sack of Antwerp, persuaded the provisional government to summon the States-General, although such a course was at direct variance with the commands of the King. To this assembly all the provinces except Luxemburg sent deputies. The nobles of the southern provinces, although they viewed the Prince of Orange with suspicion, feeling that there was no security for them so long as the Spanish troops remained in possession of Ghent, sought his assistance in expelling them; which William consented to grant only on condition that an alliance should be effected between the northern and the southern, or Catholic provinces of the Netherlands. This proposal was agreed to, and towards the end of September Orange sent several thousand men from Zeeland to Ghent, at whose approach the Spaniards, who had valorously defended themselves for two months under the conduct of the wife of their absent general Mondragon, surrendered, and evacuated the citadel. The proposed alliance was now converted into a formal union by the treaty called the Pacification of Ghent, signed November 8th, 1576; by which it was agreed, without waiting for the sanction of Philip, whose authority however was nominally recognised, to renew the edict of banishment against the Spanish troops, to procure the suspension of the decrees against the Protestant religion, to summon the States-General of the northern and southern provinces, according to the model of the assembly which had received the abdication of Charles V., to provide for the toleration and practise of the Protestant religion in Holland and Zeeland, together with other provisions of a similar character. About the same time with the Pacification of Ghent, all Zeeland, with the exception of the island of Tholen, was recovered from the Spaniards. . . . It was a mistake on the part of Philip II to leave the country eight months with only an 'ad interim' government. Had he immediately filled up the vacancy . . . the States could not have seized upon the government, and the alliance established at Ghent would not have been effected, by which an almost independent commonwealth had been erected. But Philip seems to have been puzzled as to the choice of a successor; and his selection, at length, of his brother Don John of Austria [a natural son of

Charles VI, caused a further considerable delay. . . . The state of the Netherlands compelled Don John to enter them, not with the pomp and dignity becoming the lawful representative of a great monarch, but stealthily, like a traitor or conspirator. In Luxemburg alone, the only province which had not joined the union, could he expect to be received; and he entered its capital a few days before the publication of the treaty of Ghent, in the disguise of a Moorish slave, and in the train of Don Ottavio Gonzaga, brother of the Prince of Meli. Having neither money nor arms, he was obliged to negotiate with the provincial government in order to procure the recognition of his authority. At the instance of the Prince of Orange, the States insisted on the withdrawal of the Spanish troops, the maintenance of the treaty of Ghent, an act of amnesty for past offences, the convocation of the States-General, and an oath

DON JOHN OF AUSTRIA

from Don John that he would respect all the charters and customs of the country. The new governor was violent, but the States were firm, and in January 1577 was formed the Union of Brussels, the professed objects of which were, the immediate expulsion of the Spaniards and the execution of the Pacification of Ghent; while at the same time the Catholic religion and the royal authority were to be upheld. This union, which was only a more popular repetition of the treaty of Ghent, soon obtained numberless signatures. . . . Meanwhile Rodolph II., the new Emperor of Germany, had offered his mediation, and appointed the Bishop of Liège, to use his good offices between the parties; who, with the assistance of Duke William of Juliers, brought, or seemed to bring, the new government to a more reasonable frame of mind. . . . Don John yielded all the points in dispute, and embodied them in what was called the Perpetual Edict, published March 12th, 1577. The Prince of Orange suspected from the first that these concessions were a mere deception."—T. H.

Dyer, *History of modern Europe*, v. 2, bk. 3, ch. 7-9.

1577-1581.—Administration of Don John.—Orange's well-founded distrust.—Emancipation of Antwerp.—Battle of Gemblours.—Death of Don John and appointment of Parma.—Corruption of Flemish nobles.—Submission of Walloon provinces.—Pretensions of duke of Anjou.—Constitution and declared independence of Dutch republic.—Form of government.—“It now seemed that the Netherlands had gained all they asked for, and that everything for which they had contended had been conceded. The Blood Council of Alva had almost extirpated the Reformers, and an overwhelming majority of the inhabitants of the Low Countries, with the exception of the Hollanders and Zelanders, belonged to the old Church, provided the Inquisition was done away with, and a religious peace was accorded. But Don John had to reckon with the Prince of Orange. In him William had no confidence. He could not forget the past. He believed that the signatures and concessions of the governor and Philip were only expedients to gain time, and that they would be revoked or set aside as soon as it was convenient or possible to do so. . . . He had intercepted letters from the leading Spaniards in Don John's employment, in which, when the treaty was in course of signature, designs were disclosed of keeping possession of all the strong places in the country, with the object of reducing the patriots in detail. . . . Above all, William distrusted the Flemish nobles. He knew them to be greedy, fickle, treacherous, ready to betray their country for personal advantage, and to ally themselves blindly with their natural enemies. . . . As events proved, Orange was in the right. Hence he refused to recognize the treaty in his own states of Holland and Zeland. As soon as it was published and sent to him, William, after conference with these states, published a severe criticism on its provisions. . . . In all seeming however Don John was prepared to carry out his engagements. He got together with difficulty the funds for paying the arrears due to the troops, and sent them off by the end of April. He caressed the people and he bribed the nobles. He handed over the citadels to Flemish governors, and entered Brussels on May 1st. Everything pointed to success and mutual good will. But we have Don John's letters, in which he speaks most unreservedly and most unflatteringly of his new friends, and of his designs on the liberties of the Netherlands. And all the while that Philip was soothing and flattering his brother, he had determined on ruining him, and on murdering the man [Escovedo] whom that brother loved and trusted. About this time, too, we find that Philip and his deputy were casting about for the means by which they might assassinate the Prince of Orange, ‘who had bewitched the whole people!’ An attempt of Don John to get possession of the citadel of Antwerp for himself failed, and the patriots gained it. The merchants of Antwerp agreed to find the pay still owing to the soldiers, on condition of their quitting the city. But while they were discussing the terms, a fleet of Zeland vessels came sailing up the Scheldt. Immediately a cry was raised, ‘The Beggars are coming,’ and the soldiers fled in dismay [August 1, 1577]. Then the Antwerpens demolished the citadel, and turned the statue of Alva again into cannon. After these events, William of Orange put an end to negotiations with Don John. Prince William was in the

ascendant. But the Catholic nobles conspired against him, and induced the Archduke Matthias, brother of the German Emperor Rodolph, to accept the place of governor of the Netherlands in lieu of Don John. He came, but Orange was made the Ruwaard of Brabant, with full military power. It was the highest office which could be bestowed on him. The ‘Union of Brussels’ followed and was a confederation of all the Netherlands. But the battle of Gemblours was fought in February, 1578, and the patriots were defeated. Many small towns were captured, and it seemed that in course of time the governor would recover at least a part of his lost authority. But in the month of September, Don Juan was seized with a burning fever, and died on October 1st. . . . The new governor of the Netherlands [Alexander], son of Ottavio Farnese, Prince of Parma, and of Margaret of Parma, sister of Philip of Spain, was a very different person from any of the regents who had hitherto controlled the Netherlands. He was, or soon proved himself to be, the greatest general of the age, and he was equally, according to the statesmanship of the age, the most accomplished and versatile statesman. He had no designs beyond those of Philip, and during his long career in the Netherlands, from October, 1578, to December, 1592, he served the King of Spain as faithfully and with as few scruples as Philip could have desired. . . . Parma was religious, but he had no morality whatever. . . . He had no scruple in deceiving, lying, assassinating, and even less scruple in saying or swearing that he had done none of these things. . . . He had an excellent judgment of men, and indeed he had experience of the two extremes, of the exceeding baseness of the Flemish nobles, and of the lofty and pure patriotism of the Dutch patriots. Nothing indeed was more unfortunate for the Dutch than the belief which they entertained, that the Flemings who had been dragooned into uniformity, could be possibly stirred to patriotism. Alva had done his work thoroughly. It is possible to extirpate a reformation. But the success of the process is the moral ruin of those who are the subjects of the experiment. Fortunately for Parma, there was a suitor for the Netherland sovereignty, in the person of . . . the Duke of Anjou, of the house of Valois [see FRANCE: 1577-1578]. This person was favoured by Orange, probably because he had detected Philip's designs on France, and thought that national jealousy would induce the French government, which was Catherine of Medici, to favour the low countries. Besides, Parma had a faction in every Flemish town, who were known as the Malcontents, who were the party of the greedy and unscrupulous nobles. And, besides Anjou there was the party of another pretender, John Casimir, of Poland. He, however, soon left them. Parma quickly found in such dissensions plenty of men whom he could usefully bribe. He made his first purchases in the Walloon district, and secured them. The provinces here were Artois, Hainault, Lille, Douay, and Orchies [which, on January 6, 1579, formed an alliance known as the Union of Arras]. They were soon permanently reunited to Spain. On January 29, 1579, the Union of Utrecht, which was virtually the Constitution of the Dutch Republic, was agreed to. It was greater in extent on the Flemish side than the Dutch Republic finally remained, less on that of Friesland [comprising Holland, Zeland, Gelderland, Zutphen, Utrecht, and the Frisian provinces]. Orange still had hopes of including most of the Netherland seaboard, and he still kept up the form of allegiance to Philip. The principal event

of the year was the siege and capture of Maestricht [with the slaughter of almost its entire population of 34,000]. . . . Mechlin also was betrayed by its commander, De Bours, who reconciled himself to Romanism, and received the pay for his treason from Parma at the same time. In March, 1580, a similar act of treason was committed by Count Renneberg, the governor of Friesland, who betrayed its chief city, Groningen. . . . In the same year, 1580, was published the ban of Philip. This instrument, drawn up by Cardinal Granvelle, declared Orange to be a traitor and miscreant, made him an outlaw, put a heavy price on his head (25,000 gold crowns), offered the assassin the pardon of any crime, however heinous, and nobility, whatever be his rank. . . . William answered the ban by a vigorous appeal to the civilized world. . . . Renneberg, the traitor, laid siege to Steenwyk, the principal fortress of Drenthe, at the beginning of 1581. . . . In February, John Norris, the English general, . . . relieved the town. Renneberg raised the siege, was defeated in July by the same Norris, and died, full of remorse, a few days afterwards. But the most important event in 1581 was the declaration of Dutch Independence formally issued at the Hague on the 26th of July. By this instrument, Orange, though most unwillingly, felt himself obliged to accept the sovereignty over Holland and Zeland, and whatever else of the seven provinces was in the hands of the patriots. The Netherlands were now divided into three portions. The Walloon provinces in the south were reconciled to Philip and Parma. The middle provinces were under the almost nominal sovereignty of Anjou, the northern were under William. . . . Philip's name was now discarded from public documents; . . . his seal was broken, and William was thereafter to conduct the government in his own name. The instrument was styled an 'Act of Abjuration.'—J. E. T. ROGERS, *Story of Holland*, ch. 11-12.—See also ABJURATION, ACT OF.—'The Union of Utrecht, as the only tie which bound the different provinces together, now became a sort of common constitution, something for which it had never been intended and for which it was not in the least adapted. The estates of the seven provinces, as the principle surviving form of the old order of things, were obliged to assume the direct sovereignty of their states and to take the actual government into their own hands. In our days the sovereignty would have gone to the people, but in the sixteenth century the people as such had not yet been invented. They were a vast and intangible mass. The estates were their only tangible representatives. As such they assumed the command of the provinces of the Union. These estates had been in existence for almost two centuries. Originally they had been a sort of advisory board which was consulted by the feudal lord whenever he needed funds. At first they had only consisted of representatives from among the clergy and the nobility. Gradually, with the increase of their economic importance, the cities had been asked to send delegates. The influence of the civic members had quickly increased during the fifteenth century. During the Reformation the clergy had of course disappeared, and their share in the estates had been taken over by the cities. This meant that the nobility lost most of its power, for it was now opposed by two-thirds of the total membership of the different estates. In many other countries, especially in Germany, the share of the clergy fell into the hands of the nobility, and meant a corresponding loss to the cause of the citizens. After the seven provinces had abjured their king, the estates re-

mained on the whole very much what they had been before. They still were chiefly a consulting body, composed of a certain number of representatives from different cities appointed directly by the town council and not in any way by the people. In no two provinces were the estates formed in the same way. The highest body of the central government was the Estates General. This body, which met permanently, had been intended to be both the House of Representatives and the Senate in one, with the addition of a few of the powers of the Executive. Each of the provinces had but one vote, although here, too, each could send as many delegates as it wished, and could appoint them after its own fashion. These delegates met like so many Ambassadors Extraordinary and Ministers Plenipotentiary from a number of independent sovereign powers, who deigned to come together to discuss some matter of common importance, but who intended strictly to maintain their own country's full and absolute autonomy. The Estates General were expected to discuss matters of war and peace, of treaties, of army and navy, of religion, and of taxation. They were also to indicate what foreign policy the Union should follow. Sometimes, indeed, when all these ambassadors happened to agree about some matter of common interest, the Estates General might be said to resemble a modern parliament. But only upon such rare occasions. Usually there was a difference of opinion upon all questions, and unless there was a strong man in the Republic who could force his will upon the whole community, the majority never felt itself bound to obey the decisions of the majority. For the high contracting parties of the Union of Utrecht, even in that moment of extreme danger, had been careful to avoid the institution of a central power which could have turned their old and beloved anarchy into a centralized government. The spirit of the Middle Ages had been too strong for them. Everything was left to the good will of the different provinces, and of this article they had very little. But there was still a third power in the Republic which, with an ill-defined right and prerogative, was apt to make things more complicated. This third power was the Stadholder. Originally the representative of the sovereign, the Stadholder, had been the executive of each province. But when the sovereign was abjured, it was impossible for the provincial estates to make themselves the executive of the whole province. They were too unwieldy a body to do the executive work for which they never had been trained. The office of the Stadholder was therefore continued in all of the provinces. But what were its direct powers? It is very difficult to say, because, as time went on and the estates grew in independence, they continually tried to encroach upon the old right of the Stadholder, while the Stadholder in turn tried to encroach upon the rights of the estates. Nominally the Stadholder, after the sovereign had been abjured, was the paid executive and the hired servant of the estates. But in many ways his power was much more direct and far-reaching than that of his nominal masters. When the Stadholder happened to be a strong man, he was apt to eclipse his masters entirely. He soon became a very undesirable institution in the eyes of the estates, and whenever they could do so the provinces tried to manage their affairs without appointing a stadholder; in which case they drew upon themselves the executive powers. In this way we often find part of the provinces with a stadholder and part of them without one, or a

number of provinces sharing one stadholder."—H. W. Van Loon, *Fall of the Dutch republic*, pp. 18-25.

1581-1584.—Refusal of sovereignty of the United Provinces by Orange.—Bestowal upon duke of Anjou.—Base treachery of Anjou.—"French Fury" at Antwerp.—Assassination of prince of Orange.—"What, then, was the condition of the nation, after this great step [the Act of Abjuration] had been taken? It stood, as it were, with its sovereignty in its hand, dividing it into two portions, and offering it, thus separated, to two distinct individuals. The sovereignty of Holland and Zealand had been reluctantly accepted by Orange. The sovereignty of the United Provinces had been offered to Anjou, but the terms of agreement with that Duke had not yet been ratified. The movement was therefore triple, consisting of an abjuration and of two separate elections of hereditary chiefs; these two elections being accomplished in the same manner by the representative bodies respectively of the united provinces and of Holland and Zealand. . . . Without a direct intention on the part of the people or its leaders to establish a republic, the Republic established itself. Providence did not permit the whole country, so full of wealth, intelligence, healthy political action—so stocked with powerful cities and an energetic population, to be combined into one free and prosperous commonwealth. The factious ambition of a few grandees, the cynical venality of many nobles, the frenzy of the Ghent democracy, the spirit of religious intolerance, the consummate military and political genius of Alexander Farnese, the exaggerated self-abnegation and the tragic fate of Orange, all united to dis sever this group of flourishing and kindred provinces. The want of personal ambition on the part of William the Silent inflicted, perhaps, a serious damage upon his country. He believed a single chief requisite for the united states; he might have been, but always refused to become that chief; and yet he has been held up for centuries by many writers as a conspirator and a self-seeking intriguer. . . . 'These provinces,' said John of Nassau, 'are coming very unwillingly into the arrangement with the Duke of Alençon [soon afterwards made duke of Anjou]. The majority feel much more inclined to elect the Prince, who is daily, and without intermission, implored to give his consent. . . . He refuses only on this account—that it may not be thought that, instead of religious freedom for the country, he has been seeking a kingdom for himself and his own private advancement. Moreover, he believes that the connexion with France will be of more benefit to the country and to Christianity.' . . . The unfortunate negotiations with Anjou, to which no man was more opposed than Count John, proceeded therefore. In the meantime, the sovereignty over the united provinces was provisionally held by the national council, and, at the urgent solicitation of the states-general, by the Prince. The Archduke Matthias, whose functions were most unceremoniously brought to an end by the transactions which we have been recording, took his leave of the states, and departed in the month of October. . . . Thus it was arranged that, for the present, at least, the Prince should exercise sovereignty over Holland and Zealand; although he had himself used his utmost exertions to induce those provinces to join the rest of the United Netherlands in the proposed election of Anjou. This, however, they sternly refused to do. There was also a great disinclination felt by many in the other states to this hazardous offer of their allegiance, and it

was the personal influence of Orange that eventually carried the measure through. . . . By mid-summer [1581] the Duke of Anjou made his appearance in the western part of the Netherlands. The Prince of Parma had recently come before Cambray with the intention of reducing that important city. On the arrival of Anjou, however, . . . Alexander raised the siege precipitately and retired towards Tournay [to which he presently laid siege, and which was surrendered to him in November]."—J. L. Motley, *Rise of the Dutch republic*, v. 3, pt. 6, ch. 4-5.—"In the face of Parma's menacing attitude, the need of a strong foreign ally was very pressing, and the duke of Anjou seemed the desirable personification of that alliance, as he had obtained his brother's forgiveness for his independent expedition into the Netherlands and as his prospective marriage with Elizabeth was again under discussion. Under these circumstances, it was not wonderful that Orange renewed negotiations with him in June, 1579, since the moment seemed favourable for securing French aid by taking the duke as lord of the land. There were many difficulties to be overcome. In January, 1580, the States-General urged the prince to draw up a draft of the conditions on which the duke might be accepted as sovereign lord. The actual author of this resolution is plain enough. By January 13th, the draft was ready. It was approved, and sent with a memorial from the prince to the provinces for discussion. In mid-February, the deputies were to return and arrive at a decision. The draft was in the same spirit as the treaty made by the Duke in 1576 with Holland and Zealand. Independence in respect to France, maintenance of privileges and of the religious peace in the other provinces, of the *status quo* in Holland and Zealand, recognition of the unions, restriction of sovereign right in financial and military realms, freedom of assembly for the States-General, which was to be convened once a year,—such were the principal stipulations. Probably Anjou thought that, when once sovereign, he could find means to do away with the restrictions, and was much pleased with the draft. The Netherland provinces, in spite of the prince's warnings and explanations, were less inclined to accept it. Flanders alone, now wholly under the prince's influence, approved the scheme. But the others delayed or refused assent outright. . . . After much friction and many difficulties, the famous treaty of Plessis-les-Tours was adopted (September 10th) wherein the duke of Anjou was made 'prince and seigneur' of the Netherlanders as his predecessors of the house of Burgundy had been. The Twenty-seven Articles accorded him only a restricted power, an authority dependent on the coöperation of the States in the most important points. At his death, one of his legitimate male heirs was to be elected by the States, who would rule during a minority. The religious peace was to be maintained, except in Holland and Zealand, where everything was to be *in statu quo*. The duke promised to reside within the provinces, and gave all due guarantees as to the convention of the States, raising of money, etc. He also pledged himself to gain the help of France, while the Netherlands were always to be independent of the French crown. He was also to make treaties with England, Denmark, Portugal, Scotland, Navarre, the Hanse towns, and the German princes. The provinces were to furnish 2,400,000 guilders annually. They protected themselves from French aggression by the provisions that the commander of the French auxiliaries could only be appointed in conjunction with the States; no French garrison could be placed,

nor French troops wintered in any place without its consent, etc. An oath was to be taken to the duke in every province. Any infringement of the new treaty on the part of the new sovereign released the provinces from all obligations. Matthias was to receive *raisonable satisfaction et contentement*. Certain other details were left to further negotiations. In this manner Orange considered that the goal of his policy—French aid for an independent Netherland state—was attained. In connection with the stipulations regarding Holland and Zealand, according to secret promises given in August by Des Pruneaux in the duke's name, Anjou gave a secret declaration wherein he assured to the prince compensation for the outlays of the campaigns of 1568 and 1572, and recognised Orange and his lineal successors as sovereigns of Holland, Zealand, and Utrecht. On January 23, 1581, this declaration was repeated in another form, but still secretly, at the same time with one wherein Anjou formally announced to the States his speedy arrival in the Netherlands to assume the sovereignty. . . . The new protector of the provinces, Anjou, had hoped to obtain the hand of Elizabeth at the same time with the sovereignty of the Netherlands. His negotiations with the English queen, which hung fire for months, finally ended in smoke. There were many cross-currents. Catherine de Médicis was the soul of the numerous intrigues in which the marriage plans were involved. She was determined to secure the possession of the Netherlands to her youngest son, either by an English alliance with the support of arms, or by a Spanish marriage with these as a dowry. In October, the duke went to England, was brilliantly received, actually exchanged rings with his promised bride, who was in correspondence with Parma at the very time she heaped terms of endearment on her 'beloved frog,' who had very little to recommend him. The Netherlanders grew weary of the delays, and finally (January, 1582) sent Marnix to England to tell their sovereign-elect that they would be obliged to choose another protector unless he came in person to fulfil his promises. The duke bade farewell to his bride with protestations on both sides as affectionate as they were hollow, and landed at Flushing with a brilliant escort, which included Elizabeth's favourite, the Earl of Leicester, and young Philip Sydney, afterwards so famous in the Netherland wars. He was received with all honours by Orange and the prince of Epinoy. A few days later the duke made his formal entry into Antwerp, where he received homage as the duke of Brabant and established his temporary residence. In early March, the States-General, convened at Antwerp, gave formal greeting to the new sovereign. No appropriate fair expression was wanting on these occasions, but nevertheless confidence was by no means established between the new ruler and his subjects. Scarce a fortnight had passed when Anjou began to complain of the difficulties raised by the Calvinists in regard to the exercise of Catholic rites by his followers. There was constant friction, too, between his frivolous French nobles and the stiff-necked Flemings, and distrust of the presence of his troops in Flanders. They had to withdraw to Dixmuiden. It was a thorn in the eyes of the Antwerp Calvinists that at the duke's pressure more and more freedom was accorded to the Catholics, who had been restricted to the exercise of the rites of baptism and marriage by a decree of 1580. Then came another wave of profound distrust which threatened to sweep the French from Antwerp. On March

18th, Anjou's birthday, the prince of Orange, whose popularity was still in the ascendant, was dangerously wounded by a would-be assassin, Jean Jaureguy. The first thought of the people was to suspect treason on the part of the French. They recalled St. Bartholomew's night, and it was only with difficulty that the alarmed populace were persuaded that this attack upon the prince was the work of a miserable Spanish bankrupt, d'Anastro, and his fanatic Basque clerk, who, persuaded by his employer, had made the attack, and was slain by the prince's halberdiers immediately after the commission of his crime. On his sick-bed, the prince himself took measures to allay the distrust of Anjou. At the same time, he wrote to Marnix,—in behalf of the murderer's accomplices,—a touching letter which shows his noble character and lofty spirit. He begs that 'they shall not be made to suffer torment,' but that the people shall be contented with a speedy death if it be found deserved. How many would have thought and written so at that time and under those circumstances? Slow, very slow, was the recovery from the dangerous wound. The prince's sister, the Countess of Schwartzburg, and his wife Charlotte were faithful nurses, day and night. The princess was sacrificed to her devotion. She fell a victim to her overexertion, and died on May 5th, a few days after the prince was strong enough to go to church for the first time. His unexpected recovery was a tremendous disappointment to the opposition party, who had already disseminated the news of his death, and rejoiced thereover. As late as September, Granvelle would not believe that the prince was still living. Indeed he had already devoted his offices to his son still detained in Spain. These were dangerous, sombre days for the Netherlands. Marnix, the prince's confidant, sent to the new sovereign as the personal representative of Orange, had great difficulty in keeping Anjou in the right path. The duke was very anxious to receive homage in Flanders, and to have Brussels as his capital, while the proverbial tendency of the French courtiers to prodigality came constantly in conflict with the low state of the finances in the new government. . . . Orange, although still weak from his wound, spent the whole autumn at Antwerp busy with the organisation of the new government and in preparations for an offensive attack upon Parma, which he intended to make with the aid of the expected French force and of newly levied Swiss, English, and German troops. At the same time he was considering the further regulation of the government in Holland and Zealand, where they desired to make him count, and were unwilling to accept the prince's proposition that he should still be 'Sovereign Chief' while Anjou bore the count's title. On August 14, 1582, Orange finally allowed himself to be persuaded to accept the countship, although all was to be done in secret, so as to avoid arousing Anjou's suspicion. The prince was fully aware of the discontent of the duke and his friends, but he relied on his own personal influence to keep his French ally in check. His confidence made it possible for Anjou to push on his plans of seizing Antwerp, although the increase of the number of French in the city had awakened some suspicion, and the municipal government ordered the watch to be doubled on the night of January 16th-17th, and lights to be kept in all windows. In the early morning of January 17th, Anjou asked Orange to review the troops gathered before the city, but both the prince, who was ill, and Norris declined to consider the invitation. At about midday, when the burghers

were at dinner, Anjou left Antwerp to hold the review, but scarcely was he outside of the Kipdorper gate when he gave his favourite, Rochefort, a prearranged signal and hastened back into the city at the head of his men, who cried: '*Ville Gagnée! Tue! Tue!*' ('City gained! Kill! Kill!'). The French, three thousand strong, rushed to the Bourse and began to plunder. A violent street battle began. Orange at once assumed the leadership, and, unwilling to embitter the French, tried to restore tranquillity with as little loss of life as possible. Marnix, who had been very zealous for the French, lost heart at once and sought refuge in Zealand. Thus the French Fury, a counterpart of the Spanish five years previously, ended without serious results. A plan to seize Bruges was no more successful than that to gain Antwerp. Dixmuiden, Dunkirk, and Dendermonde were, however, left in the control of the French, and Anjou took refuge in the last place. Indignation at the treachery was widespread, not only in the Netherlands where the French were ill-treated in many places, but in England, Germany, and among the Huguenots, who had never trusted Anjou. The prince, however, succeeded in persuading the States-General to send a moderate answer to Anjou's demand for his papers and to reopen negotiations in spite of the opposition of his friends. Finally a provisional accord was made with Anjou, who promised to dismiss his troops and pay an indemnity to Antwerp. This did not, however, restore belief in his good faith very effectually, and he returned to France under pretext of consulting his mother and brother. He was thoroughly disappointed and embittered. . . . At the same time with the negotiations with Anjou, those regarding the elevation of Orange to the countship of Holland and Zealand were also in progress. The two provinces desired to maintain independence of Anjou and of the other provinces, and never lost sight of this idea. From the beginning of the revolt, they had taken a peculiar position, which was confirmed by the course of events. The Pacification of Ghent and the union of Brussels had expressly left them their independence. The union of Utrecht was recognised by them because it gave the opportunity to use the other provinces as a bulwark, although, as a matter of fact, little advantage was derived from this bulwark when there was any question of financial support, to the vexation of the college of the nearer union, and to its successor, the national council for the east Meuse. They troubled themselves little about the States-General. The institution of a high council for Holland and Zealand in 1582 as a court of appeal for the two provinces also rendered them independent in judicial matters, while the other provinces still acknowledged, in a measure, the great council of Mechlin in that capacity. For this very reason, immediately after the abjuration of Philip, they were anxious to make the prince their separate sovereign. The prince cared little for the honour, partially because he was afraid of wounding Anjou in his sovereign rights, partially because he could not approve this separate position of the two provinces in the Netherland state which he projected. Thus the matter hung fire after the spring of 1582. Under the impression of the French Fury, the negotiations concerning this change were pushed forward more vigorously, but it was not until April 5th that the nobles and representatives of the big and little cities of Holland set their seals to the official act. After that, they proceeded to consider the conditions under which the prince of Orange should receive homage as count. All kinds of difficulties

—not alone those which had of old hampered the treatment of affairs in the many-headed body of the States—beset the renewed negotiations. Holland would not enter on the matter without Zealand, and in the latter province Middelburg made innumerable difficulties in the desire to secure her rights against Veere and Flushing. In Holland, Amsterdam, Gouda, and Briel fought shy of taking any steps for fear of jeopardising their privileges and exciting discontent among the burghers. It was hoped that Utrecht would enter the combination. The suspicion entertained of the remaining provinces and of Anjou had to be met with the greatest care, while other plans for strengthening the general national government absorbed attention for the moment. Moreover, the fixing of the conditions involved difficulties. The regents were anxious to retain as large a portion as possible of the power they had enjoyed during the past year. On December 30, 1583, the conditions were finally drafted and were accepted by the prince and the Estates of Holland. Before homage was given, the matter was to be referred again to the town councils and special efforts made to convince the hesitating members to approve the measure. The chief leaders of the Estates, among whom were the advocate Buys and the pensionary [the chief magistrate] of Rotterdam, John of Oldenbarnevelt, aided in composing the articles. The new sovereign was to be absolute, inasmuch as no superior was acknowledged, and all former ties with the empire were considered sundered. The 'true reformed religion' was to be maintained exclusively, but no one was to be harassed on account of his belief. Careful conditions were made, some taken from the old charters and some from the treaty with Anjou. Any infringement of these, on the count's part, dissolved all obligations. It is a very remarkable document, and suggestive of the ancient ideals of all the Netherland provinces in political matters. Yet the *Joyeuse Entrée* went farther than this in the limitation of sovereign power by the constitutional authority of the Estates—which was, at this time, primarily the authority of the municipal regents. In the course of the spring of 1584, the articles were discussed in the municipal councils. By June the matter was so far advanced that thirteen cities had signed, while a few others stated their readiness so to do. On July 6th, Gouda declared that they would agree if Zealand did. Amsterdam hesitated, owing to the influence of the burgomaster, Cornelis Pieterszoon Hooft. All opposition would have speedily vanished in Utrecht as well as in Holland and Zealand. We possess a memoir, drawn up by the prince in the beginning of July, wherein he urges Holland, for the sake of his own honour and of the general interest of the security in the land, to take a resolution in the matter. The prince made it perfectly clear that the plan emanated not from him but from the Estates, and indicates several points which should be kept in view at the time of the formal homage. Just then happened what the prince's friends had long feared. After Jaureguy's failure, various other murderers had cherished similar dreams, but also failed in their purpose. A fanatic from the Franche Comté, Balthazar Gérard, succeeded, alas better. For years Gérard nursed this plan of ridding his king and his church of a foe. After the publication of the ban, his desire to accomplish the deed, his belief in his own divine mission, had become irresistible. In the spring of 1582, he betook himself to Luxemburg. After Jaureguy's attempt, his own plans took form. A Jesuit of Trier and a monk at Tournay gave

him absolution at Easter, as he confessed later under torture, and confirmed him in his undertaking. The councillor Assonleville had spoken to him to the same purpose. In May, 1584, under an assumed name, claiming to be the son of a victim of the Catholic persecution, he obtained access to the prince's chaplain, Villiers, to whom he showed several blanks signed by Mansfeld, the stadtholder at Luxemburg, and stolen from him. The court preacher, misled by his Calvinist zeal, sent him to Noël de Caron, the ambassador of the States-General in France, who, at his request, charged him with carrying the news of Anjou's death to the prince. Gérard was admitted to the sleeping-room of Orange to give him further particulars of the event, and declared his readiness to carry an answer back to the ambassador. Then, to his chagrin, he was not prepared and not armed. On July 8th, he went to the prince's house in Delft to examine the exits and the chances offered for escape. Discovered in the act, he explained his presence by saying he had not liked to go into the church opposite the prince's dwelling because of the poverty of his clothing. Orange, being told of this, sent him some money to provide himself better. With this money he bought pistols and bullets, and returned upon July 10th at midday for his passport, just as the prince's family were going to the dining-room. The princess was much impressed by the ill appearance of the man, but her husband ordered that he should have his passport, without paying much attention to him. After dinner, at about two o'clock, the prince, clad in a fine tabbert, passed slowly out of the room, with his family following. He had had an earnest discussion with the guest of the day, Uylenburgh, upon Frisian affairs, and they continued talking as they crossed a little vestibule towards the stair which led to the second story. Suddenly the assassin sprang from a little dark bay which led to a narrow passage, and fired. Two bullets hit the prince. The wound was fatal. The prince exclaimed: '*Mon Dieu, ayez pitié de mon âme! Mon Dieu, ayez pitié de ce pauvre peuple!*' [My God, have pity on my soul! My God, have pity on this poor people!] and answered 'yes' to the question whether he committed his soul to Christ's hands, and gave up the spirit after a few minutes, his last look fixed on the princess and his sister, who stood by him in bitter distress."—P. J. Blok, *History of the people of the Netherlands*, pt. 3, pp. 143-178.

1584-1585.—Limits of United provinces and Spanish provinces.—Republican constitution of United provinces, and organization of their government.—Disgraceful surrender of Ghent.—Practical recovery of Flanders and Brabant by Spanish king.—Effect of Calvinism.—Destruction and decadence of art.—State of literature.—At the time of the assassination of the prince of Orange, "the limit of the Spanish or 'obedient' Provinces, on the one hand, and of the United Provinces on the other, cannot . . . be briefly and distinctly stated. The memorable treason—or, as it was called, the 'reconciliation' of the Walloon Provinces in the year 1583-4—had placed the Provinces of Hainault, Arthois, Douay, with the flourishing cities, Arras, Valenciennes, Lille, Tournay, and others—all Celtic Flanders, in short—in the grasp of Spain. [See above: 1577-1581.] Cambray was still held by the French governor, Sei-

gneur de Balagny, who had taken advantage of the Duke of Anjou's treachery to the States, to establish himself in an unrecognized but practical petty sovereignty, in defiance both of France and Spain; while East Flanders and South Brabant still remained a disputed territory, and the immediate field of contest. With these limitations, it may be assumed, for general purposes, that the territory of the United States was that of the modern Kingdom of the Netherlands, while the obedient Provinces occupied what is now the territory of Belgium. . . . What now was the political position of the United Provinces at this juncture? The sovereignty which had been held by the Estates, ready to be conferred respectively upon Anjou and Orange, remained in the hands of the Estates. There was no opposition to this theory. . . . The people, as such, claimed no sovereignty. . . . What were the Estates? . . . The great characteristic of the Netherland government was the municipality. Each Province contained a large number of cities, which were governed by a board of magistrates, varying in number from 20 to 40. This college, called the *Vroedschap* (Assembly of Sages), consisted of the most notable citizens, and was a self-electing body—a close corporation—the members being appointed for life, from the citizens at large. Whenever vacancies occurred from death or loss of citizenship, the college chose new members—sometimes immediately, sometimes by means of a double or triple selection of names, the choice of one from among which was offered to the stadtholder [governor, or sovereign's deputy] of the province. This functionary was appointed by the Count, as he was called, whether Duke of Bavaria or of Burgundy, Emperor, or King. After the abjuration of Philip [1581], the governors were appointed by the Estates of each Province. The Sage-Men chose annually a board of senators, or *schepens*, whose functions were mainly judicial; and there were generally two, and sometimes three, burgomasters, appointed in the same way. This was the popular branch of the Estates. But, besides this body of representatives, were the nobles, men of ancient lineage and large possessions, who had exercised, according to the general feudal law of Europe, high, low, and intermediate jurisdiction upon their estates, and had long been recognized as an integral part of the body politic, having the right to appear, through delegates of their order, in the provincial and in the general assemblies. Regarded as a machine for bringing the most decided political capacities into the administration of public affairs, and for organizing the most practical opposition to the system of religious tyranny, the Netherland constitution was a healthy, and, for the age, an enlightened one. . . . Thus constituted was the commonwealth upon the death of William the Silent. The gloom produced by that event was tragical. Never in human history was a more poignant and universal sorrow for the death of any individual. The despair was, for a brief season, absolute; but it was soon succeeded by more lofty sentiments. . . . Even on the very day of the murder, the Estates of Holland, then sitting at Delft, passed a resolution 'to maintain the good cause, with God's help, to the uttermost, without sparing gold or blood.' . . . The next movement, after the last solemn obsequies had been rendered to the Prince, was to provide for the immediate wants of his family. For the man who had gone into the revolt with almost royal revenues, left his estate so embarrassed that his carpets, tapestries, household linen—nay, even his silver spoons, and the very clothes of his wardrobe—were disposed of at auction for

the benefit of his creditors. He left eleven children—a son and daughter by the first wife, a son and daughter by Anna of Saxony, six daughters by Charlotte of Bourbon, and an infant, Frederic Henry, born six months before his death. The eldest son, Philip William, had been a captive in Spain for seventeen years, having been kidnapped from school, in Leyden, in the year 1567. He had already become . . . thoroughly Hispaniolized under the masterly treatment of the King and the Jesuits. . . . The next son was Maurice, then 17 years of age. . . . Grandson of Maurice of Saxony, whom he resembled in visage and character, he was summoned by every drop of blood in his veins to do life-long battle with the spirit of Spanish absolutism, and he was already girding himself for his life's work. . . . Very soon afterwards the States General established a State Council, as a provisional executive board, for the term of three months, for the Provinces of Holland, Zeeland, Utrecht, Friesland, and such parts of Flanders and Brabant as still remained in the Union. At the head of this body was placed young Maurice, who accepted the responsible position, after three days' deliberation. . . . The Council consisted of three members from Brabant, two from Flanders, four from Holland, three from Zeeland, two from Utrecht, one from Mechlin, and three from Friesland—eighteen in all. They were empowered and enjoined to levy troops by land and sea, and to appoint naval and military officers; to establish courts of admiralty, to expend the moneys voted by the States, to maintain the ancient privileges of the country, and to see that all troops in service of the Provinces made oath of fidelity to the Union. Diplomatic relations, questions of peace and war, the treaty-making power, were not entrusted to the Council, without the knowledge and consent of the States General, which body was to be convoked twice a year by the State Council. . . . Alexander of Parma . . . was swift to take advantage of the calamity which had now befallen the rebellious Provinces. . . . In Holland and Zeeland the Prince's blandishments were of no avail. . . . In Flanders and Brabant the spirit was less noble. Those provinces were nearly lost already. Bruges [which had made terms with the king early in 1584] seconded Parma's efforts to induce its sister-city Ghent to imitate its own baseness in surrendering without a struggle; and that powerful, turbulent, but most anarchical little commonwealth was but too ready to listen to the voice of the tempter. . . . Upon the 17th August [1584] Dendermonde surrendered. . . . Upon the 7th September Vilvoorde capitulated, by which event the water-communication between Brussels and Antwerp was cut off. Ghent, now thoroughly disheartened, treated with Parma likewise; and upon the 17th September made its reconciliation with the King. The surrender of so strong and important a place was as disastrous to the cause of the patriots as it was disgraceful to the citizens themselves. It was, however, the result of an intrigue which had been long spinning. . . . The noble city of Ghent—then as large as Paris, thoroughly surrounded with moats, and fortified with bulwarks, ravelins, and counterscarps, constructed of earth, during the previous two years, at great expense, and provided with bread and meat, powder and shot, enough to last a year—was ignominiously surrendered. The population, already a very reduced and slender one for the great extent of the place and its former importance, had been estimated at 70,000. The number of houses was 35,000, so that, as the inhabitants were soon farther

reduced to one-half, there remained but one individual to each house. On the other hand, the 25 monasteries and convents in the town were re-peopled. . . . The fall of Brussels was deferred till March, and that of Mechlin (19th July, 1585), and of Antwerp (19th August, 1585 [see below: 1585]), till Midsummer of the following year; but the surrender of Ghent foreshadowed the fate of Flanders and Brabant. Ostend and Sluys, however, were still in the hands of the patriots, and with them the control of the whole Flemish coast. The command of the sea was destined to remain for centuries with the new republic."—J. L. Motley, *History of the United Netherlands*, v. 1, ch. 1.

"Times were changed in many particulars. There was no longer a desire to adorn churches and chapels, town-halls and private dwellings, with works of art. Calvinism was opposed to such usage in every particular. The storm of iconoclasm which burst in 1566 revived after 1572 in Holland and Zeeland, after 1576 in Flanders, Brabant, and in other provinces, put an end to the high tide of ecclesiastical art in some regions for good, in others temporarily, as long as Calvinism was dominant. The churches, formerly ornamented with works of art, in the midst of which Catholicism was wont to worship, were stripped of every decoration. Nothing was left but bare walls. . . . The two great centres of learning in the Netherlands, Louvain and Leyden,—Douay hardly counted—attracted scholars more and more. The Reformation had decidedly affected the schools in the Netherland cities. Many of their best men had embraced the cause of reform or come under suspicion of Erasmianism. They were persecuted and banished. . . . In the midst of war and theological strife, Netherland learning remained worthy of its reputation in the very circles of the opposition against Spain."—P. J. Blok, *History of the people of the Netherlands*, pt. 3, pp. 192-196.

1585.—Siege and surrender of Antwerp.—"Antwerp was hard pressed. The fate of this last city aroused universal alarm. Her possession by Spain was an event which England, too, could not regard with indifference, the more that a speedy decision to furnish aid to the Netherlands would place this important city virtually in English hands. Meanwhile the authority of the States and of the council of state lost ground. The Union seemed in a condition of decay, as no real central government was in existence. The contributions of the provinces came in not at all, or very slowly. Holland and Zeeland bore the whole cost of the war, three-quarters of which had already been gradually shoved on their shoulders. The eastern provinces were long since overpowered by the foe, and thus out of condition to aid in the common cause. As a rule, they sent no representative to The Hague, where Holland, Zeeland, Utrecht, and Friesland—sometimes the first two alone—were obliged to make the most important decisions on their own authority. How lawlessness increased is evident from placards, issued by the States-General and by the council of state, forbidding the export of provisions. Holland, especially Amsterdam, asked that grain be excepted from the prohibition, and when the council of state refused to agree thereto, Holland, or rather the deputed council of the province, simply decided to make the exception on their own responsibility. The States-General and the council of state were very indignant at this resolution, but were powerless to resist it. The Utrecht citizens, who had again attained great influence in the administration, took part in the matter, unasked, and presented a strong remonstrance to the States-

General against the Amsterdam merchants. The assembly thanked them kindly for their interest, but Amsterdam and Holland paid little heed, and went on their way as though the placard respecting the grain trade did not exist. All this had an ill effect upon the condition of Antwerp. Parma wrote letter after letter, urging the city to capitulate. Marnix, who was in command, held out bravely. Then Parma began to build a bridge of ships over the Scheldt, designed to cut off Antwerp from supplies. Marnix refused for a long time to believe this possible. In January, 1585, he realised the extent of the danger, and began to take all the preventive measures. By February 25th, Antwerp was, however, cut off completely from the sea. Covered by two strong forts and a fleet of well armed men-of-war, protected before and behind by two great drifting floats, the bridge could bid defiance to any attack from the sea quarter and from the side towards the beleaguered city. The bridge, declared Parma, was to be his grave or his path to Antwerp. The besieged did not lose heart, nor did their friends in Zealand. Forts sprang up on the city side, while Parma gathered all the forces at his disposal. Every nerve was strained on each side. It was a contest calling to mind the old stories about Troy. Parma and old Mondragon, Count Charles of Mansfield and his hoary-haired father, Count Peter Ernest, the marquis of Richebourg and Caspar de Robles, Italians, Spaniards, Portuguese, and Walloons, on the Spanish side; Hohenlo and Marnix himself, Justin of Nassau and the Zealand admiral Haultain, Captain Herauzière and the English officers, Balfour and Morgan, Hollanders and Zealanders, French and Scots, covered themselves with glory in the skilful attack and the courageous defence. From the beginning, Marnix had to combat with burghers' dissatisfaction, and when supplies grew scarce the disturbances increased. The suffering at Antwerp could not, to be sure, be compared with that at Leyden, but the population of the Scheldt city was six times that of Leyden, and this mass was very difficult to hold in check. Moreover, the steadfastness of Marnix was not so great as that of Van Hout and Van der Does. Utterly discouraged and despairing of success, he soon gave ear to the offer of negotiations made to him in June. On July 9th, after nearly a month of parleying, Marnix had an interview with the besieging general. Marnix was too utterly discouraged, and too much impressed by Parma's personality, which he admired greatly, to hold his own and to insist on his conditions. On August 9th, the Broad Council of the city agreed to the terms of the capitulation. Eight days later the treaty was signed. Amnesty, return of the royalists to their property, restoration of the priests, of cloisters, and of churches; departure of non-Catholics from the city within two years, which they might have to regulate their affairs; further comprehensive maintenance of the Catholic religion, liberation of the prisoners, payment of four hundred thousand florins' indemnity, departure of the garrison with the honours of war, with their weapons and baggage,—such were the conditions on which Antwerp returned to obedience to the king. Great was the joy in the Spanish camp and brilliant the honours showered on Parma when he made his triumphal entry into the city. At the head of his guard and escorted by Aerschot, Chimay, the Mansfelds, Aremberg, and other south Netherland nobles welcomed by Antwerpia, the personification of the city, on a chariot of victory, proudly wearing his order of the Golden Fleece, with

which the king's gratitude honoured him, the victor passed into Antwerp. He lost no time in beginning to rebuild the citadel"—P. J. Blok, *History of the people of the Netherlands*, pt. 3, pp. 202-205.

1585-1586.—Proffered sovereignty of United provinces declined by France and England.—Delusive English succors.—Queen's treachery and Leicester's incompetency.—Useless battle at Zutphen.—"It was natural that so small a State, wasted by its protracted struggles, should desire, more earnestly than ever, an alliance with some stronger power; and it was from among States supposed to have sympathies with Protestants, that such an alliance was sought. From the Protestant countries of Germany there was no promise of help; and the eyes of the Dutch diplomatists were therefore turned towards France and England. In France, the Huguenots, having recovered from St. Bartholomew, now enjoyed toleration; and were a rising and hopeful party, under the patronage of Henry of Navarre. If the king of France would protect Holland from Philip, and extend to its people the same toleration which he allowed his own subjects, Holland offered him the sovereignty of the united provinces. This tempting offer was declined: for a new policy was now to be declared, which united France and Spain in a bigoted crusade against the Protestant faith. The League, under the Duke de Guise, gained a fatal ascendancy over the weak and frivolous king, Henry III., and held dominion in France. . . . Nor was the baneful influence of the League confined to France: it formed a close alliance with Philip and the Pope, with whom it was plotting the overthrow of Protestant England, the subjection of the revolted provinces of Spain, and the general extirpation of heresy throughout Europe. . . . The only hope of the Netherlands was now in England, which was threatened by a common danger; and envoys were sent to Elizabeth with offers of the sovereignty, which had been declined by France. So little did the Dutch statesmen as yet contemplate a republic, that they offered their country to any sovereign, in return for protection. Had bolder counsels prevailed, Elizabeth might, at once, have saved the Netherlands, and placed herself at the head of the Protestants of Europe. She saw her own danger, if Philip should recover the provinces; but she held her pursestrings with the grasp of a miser: she dreaded an open rupture with Spain; and she was unwilling to provoke her own Catholic subjects. Sympathy with the Protestant cause, she had none. . . . She desired to afford as much assistance as would protect her own realm against Philip, at the least possible cost, without precipitating a war with Spain. She agreed to send men and money: but required Flushing, Brill, and Rammekens to be held as a security for her loans. She refused the sovereignty of the States: but she despatched troops to the Netherlands, and sent her favourite, the Earl of Leicester, to command them. As she had taken the rebellious subjects of Spain under her protection, Philip retaliated by the seizure of British ships. Spanish vengeance was not averted, while the Netherlands profited little by her aid."—T. E. May, *Democracy in Europe*, v. 2, ch. 11.—Leicester sailed for the Hague in the middle of December, 1585, having been preceded by 8,000 English troops, eager to prevent or revenge the fall of Antwerp. "Had there been good faith and resolution, and had Lord Grey, or

Sir Richard Bingham, or Sir John Norris been in command, 20,000 Dutch and English troops might have taken the field in perfect condition. The States would have spent their last dollar to find them in everything which soldiers could need. They would have had at their backs the enthusiastic sympathy of the population, while the enemy was as universally abhorred; and Parma, exhausted by his efforts in the great siege, with his chest empty, and his ranks thinned almost to extinction, could not have encountered them with a third of their numbers. A lost battle would have been followed by a renewed revolt of the reconciled Provinces, and Elizabeth, if she found peace so necessary to her, might have dictated her own conditions. [But months passed and nothing was done, while Queen Elizabeth was treacherously negotiating with agents of Spain. In the summer of 1586], . . . half and more than half of the brave men who had come over in the past September were dead. Their places were taken by new levies gathered in haste upon the highways, or by mutinous regiments of Irish kerns, confessed Catholics, and led by a man [Sir William Stanley] who was only watching an opportunity to betray his sovereign. . . . Gone was now the enthusiasm which had welcomed the landing of Leicester. In the place of it was suspicion and misgiving, distracted councils, and divided purposes. Elizabeth while she was diplomatising held her army idle. Parma, short-handed as he was, treated with his hand upon his sword, and was for ever carving slice on slice from the receding frontiers of the States. At the time of Leicester's installation he was acting on the Meuse. He held the river as far as Venloo. Venloo and Grave were in the hands of the patriots, both of them strong fortresses, the latter especially. . . . After the fall of Antwerp these two towns were Parma's next object. The siege of Grave was formed in January. In April Colonel Norris and Count Hohenlohe forced the Spanish lines and threw in supplies; but Elizabeth's orders prevented further effort. Parma came before the town in person in June, and after a bombardment which produced little or no effect, Grave, to the surprise of every one, surrendered. Count Hemart, the governor, was said to have been corrupted by his mistress. Leicester hanged him; but Hemart's gallows did not recover Grave or save Venloo, which surrendered also three weeks later. The Earl, conscious of the disgrace, yet seeing no way to mend it, . . . was willing at last to play into his mistress's hands. He understood her [Queen Elizabeth] at last, and saw what she was aiming at. 'As the cause is now followed,' he wrote to her on the 27th of June, 'it is not worth the cost or the danger. . . . They [the Netherlanders] would rather have lived with bread and drink under your Majesty's protection than with all their possessions under the King of Spain. It has almost broken their hearts to think your Majesty should not care any more for them. But if you mean soon to leave them they will be gone almost before you hear of it. I will do my best, therefore, to get into my hands three or four most principal places in North Holland, so as you shall rule these men, and make war and peace as you list. Part not with Brill for anything. With these places you can have what peace you will in an hour, and have your debts and charges readily answered. But your Majesty must deal graciously with them at present, and if you mean to leave them keep it to yourself.' . . . No palliation can be suggested, of the intentions to which Leicester saw that she was still clinging, and which he was

willing to further in spite of his oath to be loyal to the States. . . . The incapacity of Leicester . . . was growing evident. He had been used as a lay figure to dazzle the eyes of the Provinces, while both he and they were mocked by the secret treaty. The treaty was hanging fire. . . . The Queen had . . . so far opened her eyes as to see that she was not improving her position by keeping her army idle; and Leicester, that he might not part with his government in entire disgrace, having done absolutely nothing, took the field for a short campaign in the middle of August [1586]. Parma had established himself in Gelderland, at Zutphen, and Duesberg. The States held Deventer, further down the Issel; but Deventer would probably fall as Grave and Venloo had fallen if the Spaniards kept their hold upon the river; Leicester therefore proposed to attempt to recover Zutphen. Every one was delighted to be moving. . . . The Earl of Essex, Sir William Russell, Lord Willoughby, and others who held no special commands, attached themselves to Leicester's staff; Sir Philip Sidney obtained leave of absence from Flushing; Sir John Norris and his brother brought the English contingent of the States army; Sir William Stanley had arrived with his Irishmen; and with these cavaliers glittering about him, and 9,000 men, Leicester entered Gelderland. Duesberg surrendered to him without a blow; Norris surprised a fort outside Zutphen, which commanded the river and straitened the communications of the town. [Parma made an attempt, on the morning of September 22, to throw supplies into the town, and Leicester's knights and gentlemen, forewarned of this project by a spy], . . . volunteered for an ambuscade to cut off the convoy. . . . Parma brought with him every man that he could spare, and the ambuscade party were preparing unconsciously to encounter 4,000 of the best troops in the world. They were in all about 500. . . . The morning was misty. The waggons were heard coming, but nothing could be seen till a party of horse appeared at the head of the train where the ambuscade was lying. Down charged the 500 . . . magnificently and as uselessly. . . . Never had been a more brilliant action seen or heard of, never one more absurd and profitless. For the ranks of the Spanish infantry were unbroken, the English could not touch them, could not even approach them, and behind the line of their muskets the waggons passed steadily to the town. . . . A few, not many, had been killed; but among those whose lives had been flung away so wildly was Philip Sidney. He was struck by a musket ball on his exposed thigh, as he was returning from his last charge [and died a few weeks later]. . . . Parma immediately afterwards entered Zutphen unmolested. . . . Leicester's presence was found necessary in England. With the natural sympathy of one worthless person for another, he had taken a fancy to Stanley, and chose to give him an independent command; and leaving the government to the Council of the States, and the army again without a chief, he sailed in November for London."—J. A. Froude, *History of England: Reign of Elizabeth*, v. 6, ch. 33.

1587-1588.—Ruin of Spanish provinces.—Great prosperity of United provinces.—Siege and capture of Sluys.—Last of Leicester.—"Though the United Provinces were distracted by domestic dissensions and enfeebled by mutual distrust, their

condition, compared with that portion of the Netherlands reduced under the yoke of Spain, was such as to afford matter of deep gratulation and thankfulness. The miseries of war had visited the latter unhappy country in the fullest measure; multitudes of its inhabitants had fled in despair; and the sword, famine, and pestilence, vied with each other in destroying the remainder. . . . The rich and smiling pastures, once the admiration and envy of the less favoured countries of Europe, were now no more; woods, roads, and fields, were confounded in one tangled mass of copse and brier. In the formerly busy and wealthy towns of Flanders and Brabant, Ghent, Antwerp, and Bruges, members of noble families were seen to creep from their wretched abodes in the darkness of night to beg their bread, or to search the streets for bones and offal. A striking and cheering contrast is the picture presented by the United Provinces. The crops had, indeed, failed there also, but the entire command of the sea which they preserved, and the free importation of corn, secured plentiful supplies. . . . They continued to carry on, under Spanish colours, a lucrative half-smuggling traffic, which the government of that nation found it its interest to connive at and encourage. The war, therefore, instead of being, as usual, an hindrance to commerce, rather gave it a new stimulus; the ports were crowded with vessels. . . . Holland and Zealand had now for more than ten years been delivered from the enemy. . . . The security they thus offered, combined with the freedom of religion, and the activity of trade and commerce, drew vast multitudes to their shores; the merchants and artisans expelled, on account of their religion, from the Spanish Netherlands, transferred thither the advantages of their enterprise and skill. . . . The population of the towns became so overflowing that it was found impossible to build houses fast enough to contain it. . . . The miserable condition of the Spanish Netherlands, and the difficulty of finding supplies for his troops, caused the Duke of Parma to delay taking the field until late in the summer [1587]; when, making a feint attack upon Ostend, he afterwards . . . commenced a vigorous siege of Sluys. In order to draw him off from this undertaking, Maurice, with the Count of Hohenlohe, marched towards Bois-le-Duc. . . . The danger of Sluys hastened the return of the Earl of Leicester to the Netherlands, who arrived in Ostend with 7,000 foot and 500 horse. . . . Sluys had been besieged seven weeks, and the garrison was reduced from 1,600 men to scarcely half that number, when Leicester made an attempt to master the fort of Blankenburg, in the neighbourhood of the enemy's camp; but on intelligence that Parma was approaching to give him battle, he hastily retreated to Ostend [and Sluys was surrendered]. . . . The loss of Sluys exasperated the dissensions between Leicester and the States into undisguised and irreconcilable hostility. [He was soon afterwards recalled to England, and early in the following year the queen required him to resign his command and governorship in the Netherlands. In the meantime, the English queen had reopened negotiations with Parma, who occupied her attention while his master, Philip II of Spain, was preparing the formidable Armada which he launched against England the next year.]—C. M. Davies, *History of Holland*, v. 2, pt. 3, ch. 2-3.—See also ENGLAND: 1587-1588; 1588: Spanish Armada.

1588-1593.—Successes of Prince Maurice.—Departure of Parma to France.—His death.—Appointment of Archduke Albert to the government.—“The destruction of the great Spanish Ar-

mada by the English in 1588 infused new hopes into all the enemies of Spain, and animated the Dutch with such courage, that Maurice led his army against that of the Duke of Parma, and forced him to raise the siege of Bergen-op-Zoom, at that time garrisoned by a portion of Leicester's army under the command of Sir Francis Vere. . . . The young Stadtholder was induced by this success to surprise the Castle of Blyenbeck, which was yielded to his arms in 1589; and the following year [March 1] he got possession of Breda by a ‘ruse de guerre,’ [having introduced seventy men into the town by concealing them in a boat laden with turf]. . . . The Duke of Parma was now recalled from the Low Countries into France [see FRANCE: 1590], and the old Peter Ernest, Count de Mansfeld, succeeded to the government of the Low Countries. . . . Maurice defeated the Spanish army in the open field at Caervorden, and took Nimeguen [October 21, 1591] and Zutphen [May 30, 1591; also, Deventer, June 10, of the same year]. . . . These successes added greatly to the reputation of Count Maurice, who now made considerable progress, so that in the year 1591 the Dutch saw their frontiers extended, and had well-grounded hopes of driving the Spaniards out of Friesland in another campaign. . . . The death of the Prince of Parma [which occurred December 3, 1592] delivered the Confederates from a formidable adversary; but old Count Mansfeld, at the head of an army of 30,000 men, took the field against them. Maurice, however, in 1593, notwithstanding this covering force, sat down before Gertruydenberg, advantageously situated on the frontier of Brabant. [The siege was regarded as a masterpiece of the military art of the day, and the city was brought to surrender at the end of three months.] . . . With the useful aid of Sir Francis Vere and the English, Maurice afterwards took Gronenburg and Grave, which formed part of his own patrimony. The Duke of Parma was succeeded in the government of the Netherlands by the Archduke Albert, a younger son of the Emperor Maximilian, who was married to Isabella, daughter of King Philip.”—E. Cust, *Lives of the Warriors of the Thirty Years' War: Maurice of Orange-Nassau*, pp. 25-28.

1594-1609.—Steady decline of Spanish power.—Sovereignty of provinces made over to the Infanta Isabella and the archduke, her husband.—Death of Philip II.—Negotiations for peace.—Twelve years' truce agreed upon.—Acknowledgment of the independence of the republic.—“Philip's French enterprise had failed. The dashing and unscrupulous Henry of Navarre had won his crown, by conforming to the Catholic faith [see FRANCE: 1501-1503]. . . . Great was the shock given by his politic apostacy to the religious sentiments of Europe: but it was fatal to the ambition of Philip; and again the Netherlands could count upon the friendship of a king of France. Their own needs were great: but the gallant little republic still found means to assist the Protestant champion against their common enemy, the king of Spain. In the Netherlands the Spanish power was declining. The feeble successors of Parma were no match for Maurice of Nassau and the republican leaders: the Spanish troops were starving and mutinous: the provinces under Spanish rule were reduced to wretchedness and

beggary. Cities and fortresses fell, one after another, into the hands of the stadtholder. The Dutch fleet joined that of England in a raid upon Spain itself, captured and sacked Cadiz [see SPAIN: 1596; CADIZ: 1596], raised the flag of the republic on the battlements of that famous city; and left the Spanish fleet burning in the harbour. Other events followed, deeply affecting the fortunes of the republic. Philip at length made peace with Henry of Navarre, and was again free to coerce his revolted provinces. But his accursed rule was drawing to a close. In 1598 he made over the sovereignty of the Netherlands to the Infanta Isabella and her affianced husband, the Archduke Albert, who had cast aside his cardinal's hat, his archbishopric, and his priestly vows of celibacy, for a consort so endowed. Philip had ceased to reign in the Netherlands; and a few months afterwards [September 13, 1598] he closed his evil life, in the odour of sanctity. . . . The tyrant was dead; the little republic, which he had scourged so cruelly, was living and prosperous. . . . Far different was the lot of the ill-fated provinces still in the grasp of the tyrant. The land lay waste and desolate: its inhabitants had fled to England or Holland, or were reduced to want and beggary. . . . That the republic should have outlived its chief oppressor was an event of happy augury; but years of trial and danger were still to be passed through. The victory of Nieuport [gained July 2, 1600, by an army of Dutch and English over the superior forces of the Archduke Albert] raised Prince Maurice's fame, as a soldier, to its highest point; and the gallant defence of Ostend, for upwards of three years [against a siege, conducted by the Spanish general Ambrosio de Spínola, a Genoese banker, to which its garrison finally succumbed in 1604, when the town was a heap of ruins, and after 100,000 men are said to have been sacrificed on both sides] . . . proved that the courage and endurance of his soldiers had not declined during the protracted war [while Sluys was taken by the prince the same year]. At sea the Dutch fleets won new victories over the Spaniards and Portuguese; and privateers made constant ravages upon the enemy's commerce. But there were also failures and reverses, on the side of the republic, dissensions among its leaders, and anxieties concerning the attitude of foreign States. And thus, with varied fortunes, this momentous war had now continued for upwards of forty years. . . . On both sides there was a desire for peace. The Dutch would accept nothing short of unconditional independence: the Spaniards almost despaired of reducing them to subjection, while they dreaded more republican victories at sea, and the extension of Dutch maritime enterprise in the East. Overtures for peace were first made cautiously and secretly by the archdukes ['this was the title of the archduke and archduchess'], and received by the States with grave distrust. Jealous and haughty was the bearing of the republic, in the negotiations which ensued. The states-general, in full session, represented Holland, and received the Spanish envoys. The independence of the States was accepted, on both sides, as the basis of any treaty: but, as a preliminary to the negotiations, the republic insisted upon its formal recognition, as a free and equal State, in words dictated by itself. . . . At length an armistice was signed, in order to arrange the terms of a treaty of peace. It was a welcome breathing time: but peace was still beset with difficulties and obstacles. The Spaniards were insincere: they could not bring themselves to treat seriously, and in good faith, with heretics and rebels: they desired the re-

establishment of the Church of Rome; and they claimed the exclusive right of trading with the East and West Indies. The councils of the republic were also divided. Barneveldt, the civilian, was bent upon peace: Prince Maurice, the soldier, was burning for the renewal of the war. But Barneveldt and the peace party prevailed, and negotiations were continued. Again and again, the armistice was renewed: but a treaty of peace seemed as remote as ever. At length [April 9, 1609], after infinite disputes, a truce for twelve years was agreed upon. In form it was a truce, and not a treaty of peace: but otherwise the republic gained every point upon which it had insisted. Its freedom and independence were unconditionally recognised: it accepted no conditions concerning religion: it made no concessions in regard to its trade with the Indies. The great battle for freedom was won: the republic was free: its troubles and perils were at an end. Its oppressors had been the first to sue for peace: their commissioners had treated with the states-general at the Hague; and they had yielded every point for which they had been waging war for nearly half a century."—T. E. May, *Democracy in Europe*, v. 2, ch. 11.

"The treaty thus concluded comprised thirty-eight articles besides the added acts. The first declared that the archdukes in their own name and that of the king concluded a truce for twelve years (Article 2) on the basis of possessions at the time (Article 3). The fourth article provided a universal cessation of hostility both for territory within and without Europe. As regarded the latter, this would not go into force within a year (Article 5), on account of the distance, and with the general stipulation that there should be mutual freedom of trade, while in the Spanish possessions within Europe the inhabitants of the provinces could not trade without the king's express permission, but outside of them should be allowed full freedom of entry. In a secret article, this permission herein mentioned was expressly given by the deputies from the enemy in the name of the king and the archdukes, 'on condition that the trade be free and assured.' The following articles had to do with tolls, taxes, etc., which could not be increased for their respective subjects. Article 7 gave the inhabitants of the northern provinces trading in the lands of kings or archdukes the same rights and same obligations as had been given to and imposed upon the English in 1604, especially as regards freedom of conscience and of respect for the Catholic religion. Article 13 stipulated restoration of confiscated property on payment of debts resting thereon (Article 16), with exception of houses sold in the cities (Article 17), which would make too much complication, and only for the period of the truce, so that nothing could be alienated. Article 20 stipulated the same thing for ecclesiastical property in so far as it was not alienated before January, 1607, in which case a yearly rental was to be paid, all for the profit of churches, colleges, and persons who were submissive to the archdukes and had possessions in the north or who were under the States, and rightfully entitled to property in the south. Article 20 decreed that no new fort could be erected; Article 30, that the house of Nassau could not be sued on account of the debts incurred by Prince William after 1567; Article 34, that all prisoners on both sides should be freed without ransom."—P. J. Blok, *History of the people of the Netherlands*, pt. 3, pp. 311-312.

1594-1620.—Rise and growth of Eastern trade.—Formation of Dutch East India Company.—“Previous to their assertion of national independence, the commerce of the Dutch did not extend beyond the confines of Europe. But new regions of traffic were now to open to their dauntless enterprise. It was in 1594 that Cornelius Houtman, the son of a brewer at Gouda, returned from Lisbon, where, having passed the preceding year, he had seen the gorgeous produce of the East piled on the quays of the Tagus. His descriptions fired the emulation of his friends at Amsterdam, nine of whom agreed to join stock and equip a little flotilla for a voyage round the Cape of Good Hope; Houtman undertook the command, and thus the marvellous commerce of the Dutch in India began. The influence which their trade with India and their settlements there exerted in maturing and extending the greatness of the Dutch, has often been overrated. It was a source, indeed, of infinite pride, and for a time of rapid and glittering profit; but it was attended with serious drawbacks, both of national expenditure and national danger. . . . From the outset they were forced to go armed. The four ships that sailed on the first voyage of speculation from Amsterdam, in 1595, were fitted out for either war or merchandise. They were about to sail into hitherto interdicted waters; they knew that the Portuguese were already established in the Spice Islands, whither they were bound; and Portugal was then a dependency of Spain. On their arrival at Java, they had, consequently, to encounter open hostility both from Europeans and the natives whom the former influenced against them. At Bali, however, they were better received; and, in 1597, they reached home with a rich cargo of spices and Indian wares. It was a proud and joyous day in Amsterdam when their return was known. . . . From various ports of Zealand and Holland 80 vessels sailed the following year to America, Africa, and India. Vainly the Portuguese colonists laboured to convince the native princes of the East that the Dutch were a mere horde of pirates with whom no dealings were safe. Their businesslike and punctilious demeanour, and probably, likewise, the judiciously selected cargoes with which they freighted their ships outwards, whereby they were enabled to offer better terms for the silk, indigo, and spice they wished to buy, rapidly disarmed the suspicion of several of the chiefs. . . . In 1602 the celebrated East India Company was formed under charter granted by the States-General,—the original capital being 6,000,000 guilders, subscribed by the merchants of Delft, Rotterdam, Hoorn, Enkhuysen, Middleberg, but above all Amsterdam. They established factories at many places, both on the continent of India and in the islands; but their chief depot was fixed at Bantam [until, dissatisfied with certain taxes imposed on them by the lord of Bantam, they looked elsewhere for a station.] . . . The sovereign of Java gladly offered them a settlement not above 100 miles distant, with full permission to erect such buildings as they chose, and an engagement that pepper (the chief spice thence exported) should be sent out of his dominions toll-free. These terms were accepted. Jocatra, a situation very propitious for traffic, was chosen as the site of their future factory. Warehouses of stone and mortar quickly rose; and dwellings, to the number of 1,000, were in a short time added. All nations had leave to settle and trade within its walls; and this was the

origin of Batavia. In six years the Company sent out 46 vessels of which 43 returned in due course laden with rich cargoes. . . . By the books of the Company it appeared that, during the next eleven years, they maintained 30 ships in the Eastern trade, manned by 5,000 seamen. . . . Two hundred per cent. was divided by the proprietors of the Company's stock on their paid-up capital in sixteen years. . . . But of all the proud results of their Indian commerce, that which naturally afforded to the Dutch the keenest sense of exultation, was the opportunity it afforded them of thoroughly undermining the once exclusive trade of Spain, not with foreign nations merely, but with her own colonies, and even at home. The infatuated policy of her government had prepared the way for her decline. . . . In the space of a few years the Dutch had taken and rilled eleven Spanish galleons, ‘carkets and other huge ships, and made about 40 of them unserviceable.’ So crippled was their colonial trade that, even for their own use, the Spaniards were obliged to buy nutmegs, cloves, and mace, from their hated rivals.”—W. T. McCullagh, *Industrial history of free nations, v. 2, ch. 13.*

“The operations of the East India Company had been on a large scale, and had been attended with much success. Not merely had the monopoly of Spain and Portugal in the Orient been invaded, but their dominion there had been seriously shaken. A great fleet of seventeen vessels under the command of Admiral Warwyck and Vice-Admiral de Weert sailed in 1602, and was absent for more than five years. All the principal islands of the Malay Archipelago, as well as Ceylon, Siam, and China, were visited. In 1604 another expedition of thirteen ships, under Steven van der Hagen, was sent to Malabar and the Moluccas. Factories were established and ports built at Amboina, Tidor, and other places; and the fleet returned in 1606 with a very rich cargo of cloves and other spices. On his return voyage van der Hagen met at Mauritius a third outward-bound fleet of the Company, under Cornelis Matelief. This force consisted of eleven small armed ships, manned by 1,400 sailors. In the summer of 1606 Matelief laid siege to the Portuguese fortress of Malacca, situate in a commanding position at the southernmost extremity of the Malay Peninsula. Here he was attacked on August 17 by Alphonso de Castro, the Spanish Viceroy of India, at the head of a vastly superior fleet, consisting of eighteen galleons and galleys, carrying 4000 to 5000 soldiers and sailors. A fierce but indecisive action resulted in the first instance in the raising of the siege of Malacca. On hearing, however, that de Castro had sailed away, leaving only ten ships in the roadstead of Malacca for the defence of the place, Matelief returned, and, on September 21, fell upon the Spaniards. One of the most complete victories in naval records was the result. Every single vessel of the enemy was destroyed or burnt, while the Dutch scarcely lost a man. After visiting China, and establishing the authority of the Company at Amboina, Tidor, Ternate, Bantam, and other places, Matelief left the further conduct of affairs in Eastern waters to Paul van Kaurden, who met him at Bantam at the head of yet another fleet, while he himself returned home with five ships, laden with spices, bringing into the midst of peace negotiations the great tidings of his adventures and victories.”—G. Edmundson, *Cambridge modern history, v. 3, p. 638.*

Many preachers hesitated to pledge themselves to doc-

JOHAN VON OLDENBARNEVELDT

trines that they did not think Scriptural nor according to primitive faith, and still more, not accordant with the eternal mercy of God. Of these Jacob Hermann, a minister of Amsterdam, or as he Latinised his name, Arminius, was the foremost, and under his influence a number of clergy refused their signature. The University of Leyden in 1603 chose Arminius as their Professor of Theology. The opposite party, in great wrath, insisted on holding a synod, and the States-General gave permission, but at first only on condition that there should be a revision of the confession of faith and catechism. The ministers refused, but the States-General insisted, led by John Barneveldt, then Advocate and Keeper of the Seals, who declared in their name that as 'foster fathers and protectors of the churches to them every right belonged.' It was an Erastian sentiment, but this opinion was held by all reformed governments, including the English, and Barneveldt spoke in the hope of mitigating Calvinistic violence. The Advocate of the States-General was in fact their mouthpiece. They might vote, but no one expressed their decisions at home or abroad save the Advocate; and Barneveldt, both from position and character, was thus the chief manager of civil affairs, and an equal if not a superior power to

Maurice of Nassau, the Stadtholder and commander-in-chief, and recently, by the death of his elder brother, Prince of Orange. The question had even been mooted of giving him the sovereignty, but to this Barneveldt was strongly averse. Maurice knew very little about the argument, and his real feelings were Arminian, though jealousy of Barneveldt made him favour the opposite party, whose chief champion was Jacob Gomer, or Gomerus as he called himself. King James, though really holding with the Arminians, disliked Barneveldt, and therefore threw all the weight of England into the scale against them. Arguments were held before Maurice and before the university, in which three champions on the one side were pitted against three on the other, but nothing came of them but a good deal of audacious profanity, till Arminius, in ministering to the sick during a visitation of the plague at Amsterdam, caught the disease and died. He was so much respected that the University of Leyden pensioned his widow. They chose a young Genevese, named Conrad Voorst or Vorstius, as his successor. Voorst had written two books, one on the nature of God, *Tractatus Theologicus de Deo*, and the other, *Exegesis Apologetica*, in which (by Fuller's account) there was a considerable amount of materialism, and likewise what amounted to a denial of the Divine Omniscience, being no doubt a reaction from extreme Calvinism. King James met with the book, and was horrified at its statements. He conceived himself bound to interfere both as protector to the States—which he said had been cemented with English blood—and because the University of Leyden was much frequented by the youth of England and Scotland, who often completed their legal studies there. He ordered Sir Ralf Winwood, his ambassador at the Hague, to deliver a sharp remonstrance to the States, and to read them a catalogue of the dangerous and blasphemous errors that he had detected, recommending the States to protest against the appointment, and burn the books. Barneveldt was much distressed, and uncertain whether James really was speaking out of zeal for orthodoxy, or to have an excuse for a quarrel. Letters and arguments passed without number. . . . Leyden supported the professor it had invited, and, together with Barneveldt, felt that to expel a man whom they had chosen, at the bidding of a foreign sovereign, was almost accepting a yoke like that of the Inquisition. . . . Maurice, on the other hand, was glad to set the English King against Barneveldt, and to represent that support of the foes of strict Calvinism meant treachery to the Republic and a betrayal to Spain. Winwood, on the King's part, insisted on Vorstius's dismissal and banishment. . . . Maurice's own preacher, Uytenbogen, wrote a remonstrance on behalf of the Arminians, who were therefore sometimes termed Remonstrants, while the Gomerists, from their answer, were called Counter-Remonstrants. Unfortunately, political jealousy of Barneveldt on the part of Maurice caused the influence of Uytenbogen to decline. Most of the preachers and of the populace held to the Counter-Remonstrants and their old-fashioned Calvinism, most of the nobles and magistrates were Remonstrants. The question began to branch into a second, namely, whether the state had power to control the faith of all its subjects, and whether when it convoked a synod it could control its decisions, or was bound to enforce them absolutely and without question. . . . Whichever party was predominant in a place turned the other out of church. Appeals were made to the Stadtholder, and he became angry.

SURRENDER OF BREDA

Justus of Nassau surrendering the keys of the town of Breda to Spinola, 1625

(After Velazquez's painting in the Museo del Prado, Madrid)

The States-General at large, with Barneveldt to speak for them, were Remonstrant; the states of Holland were Counter-Remonstrant; and one of the questions thus at issue was how far the power of the general government outweighed that of a particular state. . . . By steps here impossible to follow, Maurice destroyed the ascendancy of Barneveldt, and the reports that the old statesman was playing into the hands of Spain grew more and more current. The magistrates of the Arminian persuasion found themselves depending for protection on the Waartgelders, a sort of burgher militia, who endeavoured to keep the peace between the furious mobs who struggled on either side. Accusations flew about freely that now Maurice, now Barneveldt wanted the sovereignty. England favoured the former; and after Henri IV. was dead, French support little availed the latter, but rather did him harm. Maurice did not scruple to raise the popular cry that there were two factions in Holland, for Orange or for Spain, though he must have known that there never had been a more steady foe of Spain than the old statesman. The public, however, preferred the general to the statesman, and bit by bit Maurice succeeded in exchanging Remonstrant magistrates for Counter-Remonstrant, or, as Barneveldt explained the matter to Sir Dudley Carleton, who had become ambassador from England, Puritan for double Puritan. . . . Sunday, the 17th of July, 1617, Uytenbogen preached against the assembly of a national synod, knowing well that it would only confirm and narrow the cruel doctrine. Maurice, who was bent on the synod came out in a rage. . . . Barneveldt on this moved the States-General to refuse their consent to the synod as inconsistent with their laws. This was carried by a majority, and was called the Sharp Resolve. . . . The High Council by a majority of one set aside the Sharp Resolve, and decided for the synod. Barneveldt had a severe illness, during which Maurice's influence made progress, assisted by detestable accusations that the Advocate was in league with the Spaniards. At last Maurice mastered Utrecht, hitherto the chief hold of Arminianism. He disbanded the Waartgelders, and when the States-General came together in the summer of 1618, he had all prepared for sweeping his adversaries from his path. On the 20th of August, as Barneveldt was going to take his place at the States-General, he was told by a chamberlain that the Prince wished to speak with him, and in Maurice's ante-room was arrested by a lieutenant of the guard and locked up. In exactly the same manner was arrested his friend and supporter Pensionary Rambolt Hoogenboets, who had protested against the decree by which the High Council reversed that of the States-General, and Hugo Van Groot, or, as he called himself, Hugo Grotius, one of the greatest scholars who ever lived, especially in jurisprudence, and a strong adherent of the Advocate. . . . The synod met at Dordrecht [or Dort] in January, 1619, and lasted till April. The Calvinists carried the day completely, and Arminians were declared heretics, schismatics, incapable of preaching, or of acting as professors or schoolmasters, unless they signed the Heidelberg Catechism and Netherland Confession, which laid down the hard-and-fast doctrine that predestination excluded all free will on man's part, but divided the human race into vessels of wrath and vessels of mercy, without power on their own part to reverse the doom. . . . The trial of Barneveldt was going on at the same time with the Synod of Dordrecht after he had been many months in prison. Twenty-four commissioners

were appointed, twelve from Holland, and two from each of the other states, and most of them were personal enemies of the prisoner. Before them he was examined day by day for three months, without any indictment; no witnesses, no counsel on either side; nor was he permitted pen and ink to prepare his defence, nor the use of his books and papers." Barneveldt and his family protested against the flagrant injustice and illegality of the so-called trial, but refused to sue for pardon, which Maurice was determined they should do. "It was submission that he wanted, not life"; but as the submission was not yielded he coldly exacted the life. Barneveldt was condemned and sentenced to be beheaded by the sword. The sentence was executed on the same day it was pronounced, May 12, 1619. Grotius was condemned to perpetual imprisonment, but made his escape, by the contrivance of his wife, in 1621.—C. M. Yonge, *Camcos from English history*, series 6, cameo 9.—See also DORT, OR DORDRECHT, SYNOD OF.

"The death of Oldenbarneveldt and the complete overthrow of his party left the Prince of Orange (he had succeeded to that title on the death of his brother Philip William in February, 1618) sovereign of the United Netherlands in all but name. He might have had the title as well as the power; but he was unmarried, and was indifferent about the matter. He had never cared for the details of politics, and he now left the management of affairs in the hands of those who had taken the leading part in the opposition to the Advocate, foremost among whom were Francis van Aerssens and Reinier Pauw. These men were determined to reap to the full the fruits of victory. All over the country the Remonstrants were driven from their pulpits, and prominent adherents of Oldenbarneveldt deprived of their offices; the post of Advocate was abolished and never revived, his place being filled by a functionary styled *Raadpensionaris*, whose term of office was to be for five years instead of for life, and whose powers were much restricted. The year 1620 was marked by the death of two prominent members of the House of Nassau. The widow of William the Silent, who had been deeply afflicted by the tragic end of her old and faithful friend, died at Fontainebleau in March. William Lewis expired suddenly in October, to the deep grief of Maurice, who succeeded him in his dignities as Stadholder in Groningen and Drenthe; in Friesland his place was taken by his younger brother, Count Ernest Casimir of Nassau. In August, 1621, the Twelve Years' Truce came to an end, and after certain overtures for peace had been made by the Archdukes, which contained quite unacceptable conditions, war once more broke out, and Maurice took the field against his old adversary Spinola. But owing to the deaths in this year of Philip III, King of Spain, and of Archduke Albert, operations dragged for some time sluggishly along. In 1622 Maurice gained the only success of his last years, by relieving Bergen-op-Zoom, which Spinola was besieging. He sorely missed at the head of affairs the vigorous hand and wise brain of Oldenbarneveldt, and himself confessed that nothing went right after the Advocate's death. In this year a conspiracy was discovered against the life of Maurice, in which two of Oldenbarneveldt's sons were implicated. The younger, William, Lord of Stoutenburg, resented deeply being deprived of his post as Governor of Berzen-op-Zoom and having his property confiscated; and he laid a plot for the assassination of the Stadholder, to which very unwillingly his elder brother, Regnier, Lord of Groeneweld, was persuaded to become a party. The

plot was betrayed, and many arrests were made. Stoutenburg himself contrived to escape, but Groeneveld and a number of others were taken and executed. The health of the Prince of Orange was at this time seriously impaired; and he neither showed the same endurance as before in bearing the fatigues of campaigning, nor the same vigour and skill in his conduct of the war. Misfortune dogged his steps; and in 1624 [1625?] the town of Breda, an ancestral possession of his family, was taken by Spinola under his eyes. Deeply mortified, Maurice now fell seriously ill; and it was evident that his days were numbered. His last cares were to secure that his titles, dignities, and estates should pass to his younger brother Frederick Henry, to whom at his request the States General in the spring of 1625 had confided the command of the forces. The two brothers, despite a temporary estrangement, due to the leaning of the younger to the Remonstrant doctrines and the party of Oldenbarneveldt, had always been deeply attached to each other. Neither of them had shown any inclination for wedlock; but now Maurice on his bed of sickness used all his influence to bring about the marriage of Frederick Henry with the Countess Amalia of Solms. He was anxious to secure the prospect of the family succession, and is reported to have threatened even to disinherit his brother unless he complied with his wishes. The preliminaries were quickly arranged; and the wedding took place at the Hague on April 4, 1625. On the 23rd of April Maurice died, in the 58th year of his age, prematurely worn out by the hardships and privations of a life spent from his youth up in the camp and at the head of armies. He was perhaps the most accomplished soldier of his time, but as a politician weak, hesitating, and easily led, and he passed away under a cloud, for the splendour of his great achievements was overshadowed by the dark memory of the catastrophe of 1619."—G. Edmundson, *Cambridge modern history*, v. 3, pp. 655-656.

1625-1647.—Frederick Henry Stadtholder.—Siege of Grol.—Capture of the "silver fleet."—Assault on Bois le Duc.—Capture of Venloo.—Fall of Maastricht.—Siege of Breda.—Tromp's attack on the Spanish fleet in the Downs.—Capture of Dunkirk.—French and Spanish diplomacy.—"The offices and dignities held by Maurice were at once conferred on Frederick Henry [his younger brother]. He was elected Stadholder of Holland, Zeeland, Utrecht, Gelderland and Overijssel, and was appointed Captain-General and Admiral-General of the Union and head of the Council of State. During practically the whole of his life the prince spent a considerable part of the year in camp, but he was able all the time to keep in touch with home affairs, and to exercise a constant supervision and control of the foreign policy of the State by the help of his wife, and through the services of Francis van Aerssens, . . . [commonly called Sommelsdijk. Sommelsdijk succeeded in arranging an offensive and defensive alliance with England; but the troubles between Charles I and his parliament had already begun, and little was gained from the treaty; more was to be hoped from France, where Richelieu, a strong opponent of Spain, was now firmly entrenched in power.] Already those close relations between the French and the Dutch, which for the next decade were to be one of the dominating factors in determining the final issue of the Thirty Years' War, were by the diplomatic efforts of Richelieu and of Aerssens being firmly established. France advanced to the States a large subsidy by the aid of which the stadholder was enabled to take the field at the head of a really fine army and to give to the world a brilliant display of his military abilities."—G. Edmundson, *History of Holland*, pp. 141-143.—"The third year of Frederick Henry's administration had begun, and very little was as yet accomplished in the war. Now, however, the prince seemed to have something great in mind. At the end of July he laid siege to Grol, from which place the Spaniards had for years ravaged the district of Zutphen, and which Maurice had twice attempted in vain to capture. Notwithstanding the enemy's approach, the prince succeeded within a month in conquering the strong fortress, and his fame as a besieger was immediately established. . . . In 1627 alone fifty-five large and small vessels were captured from the enemy, and in the next year three great squadrons steered toward the west. One of them, under command of Piet Heyn, was specially destined to intercept the 'silver fleet,' sailing every year from Cuba to Spain. . . . Cruising along the northern coast of Cuba he met on September 8th the coveted fleet. . . . Fabulous indeed were the captured treasures of silver, gold, pearls, indigo, sugar, Campeachy wood, and costly furs, which sold in the Netherlands for no less than fifteen million guilders. The rejoicing over the news was boundless. . . . The company was enabled by this rich booty to distribute to its stockholders the unprecedented dividend of fifty per cent. . . . In the spring of 1629 Frederick Henry collected a large force for an assault on Bois-le-Duc. This important fortress, strong by its situation amidst marshes, had, besides about 5000 citizens, a garrison of 3000 foot soldiers and some hundreds of horsemen under the lord of Grobbendonck, while the Spanish army under Van den Bergh was stationed near Wesel and threatened Gelderland. The prince's army was equal to the task. No less than 24,000 infantry under Ernest Casimir, Wolfert van Brederode, the two Veres, the count of Chatillon, Coligny's grandson, and others, and 4000 cavalry under Stakenbroek and the young duke of Bouillon, brother of the later

famous Turenne, were gathered in April upon the heath of Mook and started before the end of the month for Bois-le-Duc. Hundreds of peasants aided the soldiers in quickly throwing up intrenchments. . . . When the moat of the city was at length reached and a great breach had been made in the wall by the explosion of the mines laid by the prince, Grobendonck began to negotiate. . . . [Terms of the capitulation were] signed September 14th. Stipulations favourable to the clergy were due to the prince, who sought to temper the zeal of the Calvinists, and thus gave another proof of his moderation of ecclesiastical matters, even with regard to the Catholics. . . . [In this same year, 1631, an expedition against Dunkirk was planned, but was abandoned]. At the end of May the prince assembled his army at Nimwegen, from where he moved on June 1st along the Meuse towards Venloo with over 20,000 men, while his cousin, Count William of Nassau, with a small division descended the Meuse and fell upon Flanders, capturing some forts near Antwerp. . . . Venloo, deserted by Bergh on the prince's approach, capitulated on these conditions after two days. . . . [On June 10th] the prince laid siege to Maastricht. The labyrinth of earthen ramparts, lines and sconces, redoubts and moats, traverses and hornworks, approaches and galleries of mines in and about the prince's camp awakened the admiration of contemporaries. . . . Early in August [the imperial army under the celebrated] Pappenheim reached the neighbourhood of Maastricht and soon joined Santa Cruz, so that the enemy had 40,000 men, and on the 18th made an attack in force, aided by a sortie of the garrison from Maastricht. Both combats resulted in favour of the Dutch, though they suffered severe losses, Robert de Vere, earl of Oxford, being among the killed. Two days later the prince had the city stormed through the breach made by his mines. Attack followed attack, but the brave garrison held its own and repulsed the Dutch. The citizens, afraid of being conquered and plundered by storm, now insisted upon surrender, so the governor, De Lede, consented on the 22d to a capitulation. Honourable withdrawal for the garrison, freedom for the Catholic religion, and retention of ecclesiastical property by the possessors, were the principal conditions. . . . In 1632, before the fall of Maastricht, negotiations were entered into between the States-General of the South and the North for a truce, with an alliance of the two Netherlands. . . . The continuation of the negotiations began to make Richelieu uneasy about the result. Peace or truce in the Netherlands would not at all suit his policy. In February, 1633, therefore, he sent to the aid of the old and not very vigorous Beaugy at The Hague the able Hercule de Charnacé, who was to offer the prince larger subsidies, even a corps of auxiliary troops under a French marshal, or, provided the war was actively prosecuted, a treaty of coöperation for the conquest of the south, thus preventing any peace unless France were included in it. [Stiffened by these proposals the representatives of the North were unbending in their attitude, and negotiations ended in failure.] A closer alliance between France and the United Netherlands was now at hand. . . . Thanks to Charnacé's ability, the French money, the support of the prince and of the war party, they [the negotiations] led in April to a treaty of subsidy notwithstanding the antagonism of Amsterdam. By it the States promised not to negotiate during eight months for peace or truce and not to conclude it within a year, while France in this time was not to make any agreement with Spain. France, unless it began a

war itself with Spain, was to give, besides the customary subsidy of a million, another million and 300,000 livres for a regiment of French troops in the service of the States. [Richelieu, however, was not satisfied with a state of affairs which might place a strong Protestant nation on the northern frontiers of France. He conceived the idea (not a new one) of conquering the southern provinces, and dividing them between France and the United Provinces. For this purpose a new treaty of offensive and defensive alliance was concluded on February 8, 1635 (see GERMANY: 1634-1639)]. Each party furnishing 30,000 men, a joint war was to be waged for the liberation of the southern provinces. . . . Great was the disappointment over this first campaign. The French complained bitterly of the neglect and misery that brought a pestilence upon them. . . . In Holland people complained of financial distress, demanded a reduction of the troops to 22,000 men, and were inclined to participate in the negotiations preparing at Cologne for a general European peace. . . . The war, however, went on. For 1637 a joint attack on Dunkirk was planned, but storm and contrary winds detaining the troops in Zealand, the prince, on July 21st, suddenly laid siege to the coveted Breda, which he surrounded with an intrenched camp as was done with Bois-le-Duc in 1620. . . . The siege of Breda, ending with its surrender on October 10th, was one of the most brilliant military exploits of the time, one of Frederick Henry's most remarkable feats, but it cost much money and many dead and wounded."—P. J. Blok, *History of the people of the Netherlands*, pt. 4, pp. 27-28, 36-37, 45, 40, 55, 57, 107, 110-111, 113, 115-116.

"The Cardinal Infant, Ferdinand, the victor of Nördlingen, had, as Governor-General of the Netherlands, been successful in the conduct of the war against the Dutch and French in the year 1638 and 1639. In the latter year Olivares determined to dispatch a powerful Spanish reinforcement by sea to the Netherlands to take part in the next campaign. Accordingly, early in September, a fleet left the Spanish ports consisting of seventy-seven vessels, many of them of the largest size, commanded by a veteran admiral who had seen much service, Antonio de Oquendo. . . . [On September 16th, the Dutch admiral, Martin Harpertzoon Tromp] sighted the armada. He had with him at the moment only thirteen ships. But without hesitation he fiercely attacked the Spaniards, and after a tremendous fight he forced Oquendo to fly for refuge to the English coast. Oquendo, after passing through the Straits of Dover, anchored under the lee of the Downs, side by side with an English squadron of ten ships under Vice-Admiral Pennington. Tromp sent at once urgent messages to Holland for reinforcements. . . . On October 21, being now at the head of a fleet of 105 sail with 12 fire-ships, the Dutch admiral, although the Spaniards still lay in English waters, resolved to take the offensive. . . . The contest was sharp, but decisive. Under cover of a fog, Oquendo himself with seven vessels made his way to Dunkirk. All the rest were captured or destroyed. Some 15,000 Spaniards perished, about 1,800 were taken prisoners. The Dutch only lost two ships and about 100 killed and wounded. Tromp had won one of the most crushing of naval victories, and had annihilated the power of Spain upon the sea. This daring infringement of English neutrality could not but give deep offence to King Charles, and be hurtful to the feelings of the English people. It was at once felt in the States that an explanation must be offered for the instructions given to Tromp, which had been so successfully carried out. . . . and Francis

van Aarsden [lord of Sommelsdijk was sent to] . . . complain of the help frequently afforded to the Spaniards by the English, and plead that the attack of Tromp at the Downs was a necessary sequel to the previous encounter from which the Spanish fleet had fled to seek refuge in English waters, and that it was justified by Art. 15 of the Treaty of Southampton. . . . Sommelsdijk, finding he could effect no good result, asked permission to return to Holland. . . . His request brought about a change in the King's demeanour. Charles requested him to remain, and showed himself more friendly. . . . On February 8, 1646, . . . [the ambassador] wrote to the Stadholder:—"The scandal of the Downs has been so thoroughly justified, that the greater part of the Council, in the presence of the King, has sustained that we both could and were obliged to do it; so it is sufficiently lulled to sleep, seeing that up to now there has not been made any further complaint."—G. Edmundson, *Anglo-Dutch rivalry during the first half of the seventeenth century*, pp. 121-126.—"The United Netherlands had now become a state which could not possibly submit again to the sceptre of Spain's king. Laying down the law in northern Europe, showing their preponderance in the neighbouring, small, German states, mediating in England driven through dissensions between king and Parliament into civil war, and ruling the seas, they stood the strongest power of Europe with France and against Spain, honoured or feared by those who needed their help or dreaded their enmity. . . . Holland's waxing influence and the waning power of the sickly and aged prince made the Dutch less eager for a joint conquest of the Spanish Netherlands, and uneasiness was felt at the pretensions of France. . . . The alliance continued. Five years more—Mazarin's *felix quinquennium*—the joint war lasted, year by year carefully planned by d'Estrades and the prince of Orange. But the Dutch army accomplished little. . . . On the French side with the help of Tromp's fleet, Mardijk, the bulwark of Dunkirk [which had become a nest of pirates], then Ypres, Cassel, Comines, Menin, Bethune, and other places in Flanders were taken, so that this province was as good as lost to Spain. . . . The French got possession of Courtrai and other towns and finished the campaign brilliantly in October by conquering Dunkirk [1646] with the aid of Tromp's fleet. The fall of this nest of robbers caused an outburst of joy in the Netherlands, but in recent years so many difficulties had arisen with the French government, respecting the trade of the Dutch merchants with the enemy and in consequence of French privateering, that people asked whether Dunkirk in French hands might not become a centre of dangerous commercial rivalry or of new piracies. . . . Not a year passed but Spain made some effort to bring the United Netherlands to a separate negotiation or to show the prince the advantages to be derived from it for him and his house. . . . Deliberations at Hamburg concerning a general European peace resulted, towards the end of 1641, in preliminaries fixing the terms on which representatives were to be sent by the different governments to a peace congress at Münster and Osnabruck. Much was still to be done before this congress could meet, but its foundations were laid."—P. J. Blok, *History of the people of the Netherlands*, pp. 106-107, 110-111, 113, 115-116, 123-126, 121.—"Both sides were exhausted by the long struggle of thirty years, but pride, prejudice, and religious antipathy delayed the conclusion of peace during five years passed in wearying negotiation. The death of Richelieu [in 1642] had brought fresh views into force at Paris, and a

breach was made in the alliance with the United Provinces. Mazarin looked towards Spain and England for allies, and was already speculating on the advantages of a Spanish marriage for the young king Louis XIV. The idea seems to have been first put forward by Contarini, the Venetian envoy, who suggested that the dower of the Infanta chosen might be the Spanish Netherlands. Although destined to bear fruit at a later period its immediate consequence was to alarm the Dutch and to induce them to come to a separate understanding with Spain. It was immediately after the accomplishment of this arrangement [the Peace of Münster] that Frederick Henry died (14th March, 1647). He completed the work of consolidating the Dutch state which his father and brother had begun, and in so doing had established the claims of the House of Orange to the gratitude of the Dutch nation. His successor was his son, William II., a young prince of twenty-one years of age [who was already married to Mary, eldest daughter of Charles I of England]."—D. C. Boulger, *History of Belgium*, pt. 1, p. 347.

1648.—Peace of Münster (Westphalia).—Prosperity of the nation.—The agreement with Spain, known as the peace of Münster, which had been negotiated before the death of Frederick Henry, was not effected until January, 1648. "The peace of Münster was brilliant indeed, and the United Netherlands might well be proud of the place it gave them among the powers of Europe. The famous treaty, seventy-nine articles in length, declared in Article 1 'the States-General of the United Netherlands and the respective provinces of the same with all associated districts, towns, and appertaining lands' as 'free and sovereign States,' on which the king of Spain 'makes no claim now, nor ever hereafter shall claim anything for himself, his successors, and descendants,' and with which he concludes 'an eternal peace.' With the German empire there was to be a continuation of neutrality and friendship, the king coöperating until the confirmation of the emperor and empire should be obtained. The territory was indicated by the possessions then held, so that all the conquests of Maurice and Frederick Henry were kept, unless they had been recaptured by Spain. A court, consisting of an equal number of judges from each side, was to settle the minor differences regarding frontiers and rights. The *status quo* was maintained in the East and West Indies, and each party was not to trade there in the ports of the other. The intercourse in Europe between the two countries was restored to the old footing of friendships, with prohibition of higher taxes than their own subjects paid, retention of the former exemptions from toll, and abolition of the king's rights to tolls on the Meuse, Rhine, and Scheldt within the borders of the United Provinces. The Scheldt and its canals were kept closed by the States; the vessels

and goods coming in and out of the Flemish ports were to pay duties equal to what was imposed on those entering and leaving the Scheldt, so that the dreaded competition of Antwerp and Flanders would be finally suppressed. In the matter of religion everything likely to cause scandal was to be avoided in public exercises both in the Netherlands and in the dominions of the king, and ecclesiastical property in the United Netherlands was restored or paid for. Restitution was to be made of the property of the house of Orange, even in Burgundy, with exceptions previously agreed upon. The members of the house of Nassau were not to be prosecuted for the debts of the late Prince William I. of Orange. Prisoners on both sides were to be released without ransom and with complete amnesty for all political offences. All records and documents relating to places ceded, also those concerning litigation, etc., were to be mutually delivered. The allies of both sides, who within three months after the ratification should wish to accede, were to be allowed to participate in the peace, especially Hesse, East Friesland, Emden, and the Hanse towns. Both sides promised to protect the seas and rivers as much as possible from piracy. Such was the treaty alike honourable and advantageous to the United Netherlands. It put an end to the war, which had been waged during the eighty years with varying success, which under the able guidance of the three princes of Orange and of the States of Holland, Zealand, and the other provinces had called into being the strong and independent state now making its appearance among the powers of Europe. The state was destined for at least a hundred years to hold an important place in the history of the world—the glory of its citizens and their descendants, an object of admiration to contemporaries and later generations.—P. J. Blok, *History of the people of the Netherlands*, pp. 139-150.—“The most marvelous feature of the struggle between the little Dutch state and Spain was that Holland grew wealthy during the contest, although the stage of the desolating war. The Dutch drew their riches not from the wasted land, but from the sea; and during the war they plundered the possessions of Spain in the East Indies. The little republic built up a vast colonial empire; and, especially after Spain’s naval supremacy had been engulfed with the Armada, the Dutch held almost a monopoly of the Asiatic trade for all Europe. One hundred thousand of their three million people lived constantly upon the sea. Success in so heroic a war stimulated the people to a wonderful intellectual and industrial activity. Holland taught all Europe scientific agriculture and horticulture, as well as the science of navigation. In the seventeenth century the presses of Holland are said to have put forth more books than all the rest of Europe.”—W. M. West, *Story of modern progress*, p. 170.—See also WESTPHALIA, PEACE OF (1648); BELGIUM: 1648; GERMANY: Map at peace of Westphalia.

1648.—Battle of Lens.—Effect of Franco-Spanish War and treaties on Anglo-Dutch relations.—“The two states left unaffected in their direct relations by these treaties [of 1648] were France and Spain. The former country was disturbed by the rivalry of Mazarin and the noblesse who formed the Fronde for his overthrow. In the latter Philip IV. still hoped that he might retrieve Rocroi, and overthrow the most formidable of his enemies. Philip accordingly determined to prosecute the war with greater vigour. . . . In the first campaign of 1648, Condé gained over the Spanish

army at Lens a second victory, scarcely less signal than Rocroi, but very soon afterwards his hatred of Mazarin led him not only to join the Fronde, but even to enter openly the service of the King of Spain. . . . The war between France and Spain continued for more than ten years, and the Belgian provinces were the scene of this long struggle. . . . The French Minister cleverly obtained the alliance of Oliver Cromwell, who fully realised the peril to English naval power from the Dutch fleet, and who actively participated in several of the campaigns on land while his Admiral Blake secured for that period at least the command of the seas. The United Provinces held aloof from the struggle except in so far as they were assailed at sea by the fleet of the Lord Protector, resolved to obtain redress for the massacre of Amboyna, and also an admission of equal trade rights for his countrymen in the Spice Islands. They were tied down to this inaction by the arrangements concluded at Münster, and also by the pacific policy of John de Witt, the Grand Pensionary.”—D. C. Boulger, *History of Belgium*, pt. 1, pp. 348-9.

1648-1650.—Suspension of stadtholdership.—Supremacy of states of Holland.—The fourth stadtholder, William II, who succeeded his father, Frederick Henry, in 1647, “was young and enterprising, and not at all disposed to follow the pacific example of his father. . . . He was brother-in-law to the Elector of Brandenburg . . . and son-in-law to Charles I. of England and Henrietta Maria, the sister of Louis XIII. . . . The proud descendant of the Stuarts, the Princess Mary, who had been married to him when hardly more than a child, thought it beneath her not to be the wife of a sovereign, and encouraged her husband not to be satisfied to remain merely ‘the official of a republic.’ Thus encouraged, the son of Frederick Henry cherished the secret purpose of transforming the elective stadtholdership into an hereditary monarchy. . . . He needed supreme authority to enable him to render assistance to Charles I. . . . Finding in the opposition of the States an insurmountable obstacle to his wish of intervention, he sought the support of France, . . . and was now ready to come to an understanding with Mazarin to break the treaty of Münster and wrest the Netherlands from Spain. Mazarin promised in return to help him to assert his authority over the States. . . . But if William desired war, the United Provinces, and in particular the province of Holland, could not dispense with peace. . . . The States of Holland . . . fixed the period for the disbanding of the twenty-nine companies whose dismissal had been promised to them. After twelve days of useless deliberations they issued definite orders to that effect. The step had been provoked, but it was precipitate and might give rise to a legal contest as to their competency. The Prince of Orange, therefore, eager to hasten a struggle from which he expected an easy victory, chose to consider the resolution of the States of Holland as a signal for the rupture of the Union, and the very next day solemnly demanded reparation from the States-General, who in their turn issued a counter order. The Prince made skilful use of the rivalry of power between the two assemblies to obtain for himself extraordinary powers which were contrary to the laws of the Confederation. By the terms of the resolution, which was passed by only four provinces, of which two were represented by but one deputy each, he was authorised to take all measures necessary for the maintenance of order and peace, and particularly for the preservation of the Union. The States-General consequently commissioned him to visit the town councils of Holland, accom-

panied by six members of the States-General and of the Council of State, with all the pomp of a military escort, including a large number of officers. He was charged to address them with remonstrances and threats intended to intimidate the provincial States.' This was the first act of the coup d'état that he had prepared, and his mistake was quickly shown him. [The prince gained nothing by his visitation of the towns. At Amsterdam he was not permitted to enter the place with his following, and he returned to the Hague especially enraged against that hold and independent city. He planned an expedition to take it by surprise; but the citizens got timely warning and his scheme was baffled. He had succeeded, however, in arresting and imprisoning six of the most influential deputies of the assembly of Holland, and his attitude was formidable enough to extort some concessions from the popular party, by way of compromise. A state of suspicious quiet was restored for the time, which William improved by renewing negotiations for a secret treaty with France.] . . . Arrogating to himself already the right to dispose as he pleased of

making the stadtholdership a standing menace to the public freedom. . . . The son of William II., an orphan before his birth, and named William like his father, seemed destined to succeed to little more than the paternal name. . . . Three days after the death of William II., the former deputies, whom he had treated as state prisoners and deprived of all their offices, were recalled to take their seats in the Assembly. At the same time the provincial Town Councils assumed the power of nominating their own magistrates, which had almost always been left to the pleasure of the Stadtholder, and thus obtained the full enjoyment of municipal freedom. The States of Holland, on their side, grasped the authority hitherto exercised in their province by the Prince of Orange, and claimed successively all the rights of sovereignty. The States of Zealand . . . exhibited the same eagerness to free themselves from all subjection. . . . Thus, before declaring the stadtholdership vacant, the office was deprived of its prerogatives. To complete this transformation of the government, the States of Holland took the initiative in summoning

MAURICE OF
ORANGE-NASSAUWILLIAM OF
ORANGE

JOHN DE WITT

the republic, he signed a convention with Count d'Estrades, whom he had summoned to the Hague. By this the King of France and the Prince of Orange engaged themselves 'to attack conjointly the Netherlands on May 1, 1651, with an army of 20,000 foot and 10,000 horse, to break at the same time with Cromwell, to re-establish Charles II. as King of England, and to make no treaty with Spain excepting in concert with each other.' The Prince of Orange guaranteed a fleet of 50 vessels besides the land contingent, and in return for his co-operation was promised the absolute possession of the city of Antwerp and the Duchy of Brabant or Marquisate of the Holy Roman Empire. . . . [But] three months later the Prince of Orange, having over-fatigued and heated himself in the chase, was seized with small-pox, of which in a few days he died. He was thus carried off at the age of 24, in the full force and flower of his age, leaving only one son, born a week after his father's death. . . . His attempt at a coup d'état was destined to press heavily and long upon the fate of the posthumous son, who had to wait 22 years before succeeding to his ancestral functions. It closed the succession to him for many years, by

to the Hague a great assembly of the Confederation, which met at the beginning of the year 1651. . . . The congress was called upon to decide between two forms of constitution. The question was whether the United Provinces should be a republic governed by the States-General, or whether the government should belong to the States of each province, with only a reservation in favour of the obligations imposed by the Act of Union. Was each province to be sovereign in itself, or subject to the federal power? [The result was a suspension and practical abolition of the stadtholdership.] . . . Freed from the counterbalancing power of the Stadtholder, Holland to a great extent absorbed the federal power, and was the gainer by all that that power lost. . . . The States of Holland, . . . destined henceforward to be the principal instrument of government of the republic, was composed partly of nobles and partly of deputies from the towns. . . . The Grand Pensionary was the minister of the States of Holland. He was appointed for five years, and represented them in the States-General. . . . Called upon by the vacancy in the stadtholdership to the government of the United Provinces, without any legal power

of enforcing obedience, Holland required a statesman who could secure this political supremacy and use it for her benefit. The nomination of John de Witt as Grand Pensionary placed at her service one of the youngest members of the assembly."—A. L. Pontalis, *John de Witt*, v. 1, ch. 1-2.

1648-1665.—Prosperity and preëminence of Dutch republic.—Causes.—"That this little patch of earth, a bog rescued from the waters, warred on ever by man and by the elements, without natural advantages except those of contact with the sea, should in the middle of the seventeenth century have become the commercial centre of Europe, is one of the phenomena of history. But in the explanation of this phenomenon history has one of its most instructive lessons. Philip II. said of Holland, 'that it was the country nearest to hell.' Well might he express such an opinion. He had buried around the walls of its cities more than three hundred thousand Spanish soldiers, and had spent in the attempt at its subjugation more than two hundred million ducats. This fact alone would account for his abhorrence, but, in addition, the republic was in its every feature opposed to the ideal country of a bigot and a despot. The first element which contributed to its wealth, as well as to the vast increase of its population, was its religious toleration. . . . This, of course, was as incomprehensible to a Spanish Catholic as it was to a High-Churchman or to a Presbyterian in England. That Lutherans, Calvinists, Anabaptists, Jews, and Catholics should all be permitted to live under the same government seemed to the rest of Europe like lying in the face of Providence. Critics at this time occasionally said that the Hollanders cared nothing for religion; that with them theology was of less account than commerce. To taunts like these no reply was needed by men who could point to their record of eighty years of war. This war had been fought for liberty of conscience, but more than all, as the greater includes the less, for civil liberty. During its continuance, and at every crisis, Catholics had stood side by side with Protestants to defend their country, as they had done in England when the Spanish Armada appeared upon her coast. It would have been a strange reward for their fidelity to subject them, as Elizabeth did, to a relentless persecution, upon the pretext that they were dangerous to the State. In addition to the toleration, there were other causes leading to the marvellous prosperity of the republic, which are of particular interest to Americans. In 1659, Samuel Lamb, a prominent and far-seeing London merchant, published a pamphlet, in the form of a letter to Cromwell, urging the establishment of a bank in England similar to the one at Amsterdam. In this pamphlet, which Lord Somers thought worthy of preservation, the author gives the reasons, as they occurred to him, which accounted for the vast superiority of Holland over the rest of Europe as a commercial nation. . . . As the foundation of a bank for England was the subject of the letter, the author naturally lays particular stress upon that factor, but the other causes which he enumerates as explaining the great trade of the republic are the following: First. The statesmen sitting at the helm in Holland are many of them merchants, bred to trade from their youth, improved by foreign travel, and acquainted with all the necessities of commerce. Hence, their laws and treaties are framed with wisdom. Second. In Holland when a merchant dies, his property is equally divided among his children, and the business is continued and expanded, with all its traditions and inherited experience. In England, on the contrary, the property goes to the eldest son, who

often sets up for a country gentleman, squanders his patrimony, and neglects the business by which his father had become enriched. Third. The honesty of the Hollanders in their manufacturing and commercial dealings. When goods are made up in Holland, they sell everywhere without question, for the purchaser knows that they are exactly as represented in quality, weight, and measure. Not so with England's goods. Our manufacturers are so given to fraud and adulteration as to bring their commodities into disgrace abroad. 'And so the Dutch have the pre-eminence in the sale of their manufactures before us, by their true making, to their very files and needles.' Fourth. The care and vigilance of the government in the laying of impositions so as to encourage their own manufactures; the skill and rapidity with which they are changed to meet the shifting wants of trade; the encouragement given by ample rewards from the public treasury for useful inventions and improvements; and the promotion of men to office for services and not for favor or sinister ends. Such were the causes of the commercial supremacy of the Dutch as they appeared to an English merchant of the time, and all modern investigations support his view; . . . Sir Joshua [Josiah] Child, writing a few years later [*A New Discourse of Trade*, p. 2, and after—1665], gives a fuller explanation of the great prosperity of the Netherland Republic. He evidently had Lamb's pamphlet before him, for he enumerates all the causes set forth by his predecessor. In addition, he gives several others, [among them] . . . the general education of the people, including the women [see EDUCATION: Modern: 17th century: Holland], religious toleration, care of the poor, low custom duties and high excise, registration of titles to real estate, low interest, the laws permitting the assignment of debts, and the judicial system under which controversies between merchants can be decided at one fortieth part of the expense in England. . . . Probably, no body of men governing a state were ever more enlightened and better acquainted with the necessities of legislation than were these burghers, merchants, and manufacturers who for two centuries gave laws to Holland. It was largely due to the intelligence displayed by these men that the republic, during the continuance of its war, was enabled to support a burden of taxation such as the world has rarely seen before or since. The internal taxes seem appalling. Rents were taxed twenty-five per cent.; on all sales of real estate two and a half per cent. were levied, and on all collateral inheritances five per cent. On beer, wine, meat, salt, spirits, and all articles of luxury, the tax was one hundred per cent., and on some articles this was doubled. But this was only the internal taxation, in the way of excise duties, which were levied on every one, natives and foreigners alike. In regard to foreign commodities, which the republic needed for its support, the system was very different. Upon them there was imposed only a nominal duty of one per cent., while wool, the great staple for the manufacturers, was admitted free. Here the statesmen of the republic showed the wisdom which placed them, as masters of political economy, at least two centuries in advance of their contemporaries."—D. Campbell, *Puritan in Holland, England, and America*, v. 2, pp. 324-331.

Also in: W. T. McCullagh, *Industrial history of free nations: The Dutch*, v. 2, ch. 12.

1651-1660.—Rule of Holland, and her grand pensionary, John de Witt.—"The Republic had shaken off the domination of a person; it now fell under the domination of a single province. Holland was overwhelmingly preponderant in the fed-

eration. She possessed the richest, most populous, and most powerful towns. She contributed more than one-half of the whole federal taxation. She had the right of naming the ambassadors at Paris, Stockholm, and Vienna. The fact that the States General met on her territory—at the Hague—necessarily gave her additional influence and prestige. . . . With the Stadtholder's power that of the States General also, as representing the idea of centralisation, had largely disappeared. The Provincial Estates of Holland, therefore, under the title of 'Their High Mightinesses,' became the principal power—to such an extent, indeed, that the term 'Holland' had by the time of the Restoration [the English Restoration, 1660] become synony-

was purely commercial and colonial, and she held in this respect the same position relatively to the rest of Europe that England holds at the present day."—O. Airy, *English restoration and Louis XIV*, ch. 9.

mous among foreign powers with the whole Republic. Their chief minister was called 'The Grand Pensionary,' and the office had been since 1653 filled by one of the most remarkable men of the time, John de Witt. John de Witt therefore represented, roughly speaking, the power of the merchant aristocracy of Holland, as opposed to the claims of the House of Orange, which were supported by the 'noblesse,' the army, the Calvinistic clergy, and the people below the governing class. Abroad the Orange family had the sympathy of monarchical Governments. Louis XIV. despised the Government of 'Meisieurs les Marchands,' while Charles II., at once the uncle and the guardian of the young Prince of the house of Orange, the future William III. of England, and mindful of the scant courtesy which, to satisfy Cromwell, the Dutch had shown him in exile, was ever their bitter and unscrupulous foe. The empire of the Dutch Republic

Louis XIV., had renounced all their rights to succeed to the Spanish throne by the Pyrenees Treaty, the French King at once began to intrigue in anticipation of the day when he could conveniently repudiate the obligation. Of these preliminary measures the most important was a new treaty of mutual offence and defence with the United Provinces, dated 27th April, 1662, which was to remain in force for twenty-five years. This treaty was negotiated with John de Witt who, while he resented and opposed an hereditary stadtholdership, had established in his own person as complete a dictatorship as that of William the Silent or Oliver Cromwell."—D. C. Boulger, *History of Belgium*, pt. 1, p. 351.

1665-1666.—War with England renewed.—Effect of claim to Spanish Netherlands by Louis.

—“A formal declaration of war between Holland and England took place in March, 1665. The English nation, jealous of the commercial prosperity of Holland, eagerly seconded the views of the king against that country, and in regard to the war a remarkable degree of union prevailed throughout Great Britain. Such, however, was not the case with the Dutch, who were very much divided in opinion, and had many reasons to be doubtful of the support of France. One of the grand objects of Charles II. was undoubtedly . . . to restore his nephew the Prince of Orange to all the power which had been held by his ancestors in the United Provinces. But between Holland and England there existed, besides numerous other most fertile causes of discord, unsettled claims upon distant territories, rival colonies in remote parts of the world, maritime jealousy and constant commercial opposition. [See EAST INDIA COMPANY, BRITISH.] These were national motives for hostility, and affected a large body of the Dutch people. But, on the other hand, considerations of general interest were set aside by the political factions which divided the United Provinces, and which may be classed under the names of the Republican and the Monarchical parties. The Monarchical party was, of course, that which was attached to the interests of the House of Orange. . . . In the end of 1664, 130 Dutch merchantmen had been captured by England; acts of hostility had occurred in Guinea, at the Cape de Verd, [in New Netherland], and in the West Indies: but Louis [XIV of France] had continued to avoid taking any active part against Great Britain, notwithstanding all the representations of De Witt, who on this occasion saw in France the natural ally of Holland. On the 13th of June [1665], however, a great naval engagement took place between the Dutch fleet, commanded by Opdam and Van Tromp, and the English fleet, commanded by the Duke of York and Prince Rupert. Opdam was defeated and killed; Van Tromp saved the remains of his fleet; and on the very same day a treaty was concluded between Arlington [the English minister] and an envoy of the Bishop of Münster, by which it was agreed that the warlike and restless prelate should invade the United Provinces with an army of 20,000 men, in consideration of sums of money to be paid by England. This treaty at once called Louis into action, and he notified the Bishop of Münster that if he made any hostile movement against the States of Holland he would find the troops of France prepared to oppose him. This fact was announced to the States by D'Estrades on the 22nd of July, together with the information that the French monarch was about to send to their assistance a body of troops by the way of Flanders. . . . Still, however, Louis hung back in the execution of his purposes, till the aspect of affairs in the beginning of 1666 forced him to declare war against England, on the 26th of January in that year, according to the terms of his treaty with Holland. . . . The part that France took in the war was altogether insignificant, and served but little to free the Dutch from the danger in which they were placed. That nation itself made vast efforts to obtain a superiority at sea; and in the beginning of June, 1666, the Dutch fleet, commanded by De Ruyter and Van Tromp, encountered the English fleet, under Monk and Prince Rupert, and a battle which lasted for four days, with scarcely any intermission, took place. It would seem that some advantage was gained by the Dutch; but both fleets were tremendously shattered, and retired to the ports of their own country to refit. Shortly after, however, they again encountered, and one of the most tremendous naval engagements in history took place,

in which the Dutch suffered a complete defeat; twenty of their first-rate men-of-war were captured or sunk; and three admirals, with 4,000 men, were killed on the part of the States. The French fleet could not come up in time to take part in the battle, and all that Louis did was to furnish De Witt with the means of repairing the losses of the States as rapidly as possible. The energy of the grand pensionary himself, however, effected much more than the slow and unwilling succour of the French king. With almost superhuman exertion new fleets were made ready and manned, while the grand pensionary amused the English ministers with the prospect of a speedy peace on their own terms; and at a moment when England was least prepared, De Ruyter and Cornelius de Witt appeared upon the coast, sailed up the Thames, attacked and took Sheerness, and destroyed a great number of ships of the line. A multitude of smaller vessels were burnt; and the consternation was so great throughout England, that a large quantity of stores and many ships were sunk and destroyed by order of the British authorities themselves, while De Ruyter ravaged the whole sea-coast from the mouth of the Thames to the Land's End. The negotiations for peace, which commenced at Breda, were now carried on upon terms much more advantageous to Holland, and were speedily concluded; England, notwithstanding the naval glory she had gained, being fully as much tired of the war as the States themselves. A general treaty was signed on the 25th of July.”—G. P. R. James, *Life and times of Louis XIV*, v. 2, ch. 6.—“The thunder of the Dutch guns in the Medway and the Thames woke England to a bitter sense of its degradation. The dream of loyalty was roughly broken. ‘Everybody now-a-days,’ Pepys tells us, ‘reflect upon Oliver and commend him: what brave things he did, and made all the neighbour princes fear him.’ But Oliver’s successor was coolly watching this shame and discontent of his people with the one aim of turning it to his own advantage.”—J. R. Green, *History of the English people*, v. 3, bk. 8, ch. 1.—“In May, 1667, Louis made his formal declaration to the effect that he was about to take possession of what belonged to him in the Netherlands by right of his wife. . . . The reception of the news of the French invasion in Holland was anything but favourable. It was sudden and unexpected, but the best arrangement De Witt could propose was that France should define the limits of the part of Belgium she proposed to take so that as wide a gap as possible should be left between the two frontiers. The French made no reply to this suggestion and continued to make conquests.”—D. C. Boulger, *History of Belgium*, pt. 1, pp. 352-353.—See also BELGIUM: 1667.

1667-1683.—Campaign of Colbert to drive Dutch from French colonies. See FRANCE: 1661-1683.

1668.—Triple Alliance with England and Sweden against French king.—“The rapid conquests of the French king in Flanders during the . . . summer [of 1667] had drawn the eyes of Europe towards the seat of war in that country. The pope, Clement IX, through pity for the young king of Spain, and the States, alarmed at the approach of the French arms to their frontier, offered their mediation. To both Louis returned the same answer, that he sought nothing more than to vindicate the rights of his wife; that he should be content to retain possession of the conquests which he had already made, or to exchange them either for Luxembourg, or Franche-comté, with the addition of Aire, St. Omer, Douai, Cambrai, and Char-

leroi, to strengthen his northern frontier. . . . But Spain was not sufficiently humbled to submit to so flagrant an injustice. . . . If it was the interest of England, it was still more the interest of the States, to exclude France from the possession of Flanders. Under this persuasion, Sir William Temple, the resident at Brussels, received instructions to proceed to the Hague and sound the disposition of De Witt; and, on his return to London, was despatched back again to Holland with the proposal of a defensive alliance, the object of which should be to compel the French monarch to make peace with Spain on the terms which he had previously offered. . . . Temple acted with promptitude and address: . . . he represented the danger of delay; and, contrary to all precedent at the Hague, in the short space of five days—had the constitutional forms been observed it would have demanded five weeks—he negotiated [January, 1668] three treaties which promised to put an end to the war, or, if they failed in that point, to oppose at least an effectual barrier to the further progress of the invader. The first was a defensive alliance by which the two nations bound themselves to aid each other against any aggressor with a fleet of forty men of war, and an army of 6,400 men, or with assistance in money in proportion to the deficiency in men; by the second, the contracting powers agreed by every means in their power to dispose France to conclude a peace with Spain on the alternative already offered, to persuade Spain to accept one part of that alternative before the end of May, and, in case of a refusal, to compel her by war, on condition that France should not interfere by force of arms. These treaties were meant for the public eye: the third was secret, and bound both England and the States, in case of the refusal of Louis, to unite with Spain in the war, and not to lay down their arms till the peace of the Pyrenees were confirmed. On the same day the Swedish ambassadors gave a provisional, and afterwards a positive assent to the league, which from that circumstance obtained the name of the Triple Alliance. Louis received the news of this transaction with an air of haughty indifference. . . . In consequence of the infirm state of Charles II. of Spain, he had secretly concluded with the emperor Leopold an 'eventual' treaty of partition of the Spanish monarchy on the expected death of that prince, and thus had already bound himself by treaty to do the very thing which it was the object of the allied powers to effect. . . . The intervention of the emperor, in consequence of the eventual treaty, put an end to the hesitation of the Spanish cabinet; the ambassadors of the several powers met at Aix-la-Chapelle [April-May, 1668]; Spain made her choice; the conquered towns in Flanders were ceded to Louis, and peace was re-established between the two crowns. . . . The States could ill dissemble their disappointment. They never doubted that Spain, with the choice in her hands, would preserve Flanders, and part with Franch-comté. . . . The result was owing, it is said, to the resentment of Castel-Rodrigo [the governor of the Spanish Netherlands], who, finding that the States would not join with England to confine France within its ancient limits, resolved to punish them by making a cession, which brought the French frontier to the very neighbourhood of the Dutch territory."—J. Lingard, *History of England*, v. 11, ch. 6.—"Dr. Lingard, who is undoubtedly a very able and well-informed writer, but whose great fundamental rule of judging seems to be that the popular opinion on a historical question cannot possibly be correct, speaks very slightly of this celebrated treaty [of the Triple Alliance]. . . . But grant that Louis was not really stopped in

his progress by this famous league; still it is certain that the world then, and long after, believed that he was so stopped; and that this was the prevailing impression in France as well as in other countries. Temple, therefore, at the very least, succeeded in raising the credit of his country, and lowering the credit of a rival power."—T. B. Macaulay, *Sir William Temple*.

1670.—Desertion of England from Dutch Alliance.—"The triple alliance, before which he had been compelled to bow, turned Louis from the ally into the enemy of the Dutch Republic, and he declared that 'the only way to conquer the Spanish Netherlands was by humbling the Dutch, and if possible destroying them.' With that object in view he succeeded in detaching England, in the person of Charles the Second, from the Dutch alliance, and in concluding with him the secret treaty of Dover (1st June, 1670) for the conquest of the Dutch Provinces."—D. C. Boulger, *History of Belgium*, pt. 1, p. 353.—See also ENGLAND: 1668-1670.

1672-1674.—War with France and England.—Murder of the De Witts.—Restoration of stadtholdership.—"The storm that had been prepared in secret for Holland began to break in 1672. France and England had declared war at once by land and sea, without any cause of quarrel, except that Louis declared that the Dutch insulted him, and Charles complained that they would not lower their flag to his, and that they refused the Stadtholdership to his nephew, William of Orange. Accordingly, his fleet made a piratical attack on the Dutch ships returning from Smyrna, and Louis, with an immense army, entered Holland. . . . They [the French] would have attempted the passage of the Yssel, but the Dutch forces, under the Prince of Orange, were on the watch, and turned towards the Rhine, which was so low, in consequence of a drouth, that 2,000 adventurous cavalry were able to cross, half wading half swimming and gained a footing on the other side. [This] . . . passage of the Rhine [was absurdly celebrated as a great military exploit by the servile flatterers of the French king]. . . . The passage thus secured, the King crossed the river the next day on a bridge of boats, and rapidly overran the adjoining country, taking the lesser towns, and offering to the Republic the most severe terms, destructive of their independence, but securing the nominal Stadtholdership to the Prince of Orange. The magistrates of Amsterdam had almost decided on carrying the keys to Louis and the Grand Pensionary himself was ready to yield; but William, who preferred ruling a free people by their own choice to being imposed on them by the conqueror, still maintained that perseverance would save Holland, that her dykes, when opened, would admit floods that the enemy could not resist, and that they had only to be firm. The spirit of the people was with him, and in Amsterdam, Dordrecht, and the other cities, there were risings with loud outcries of 'Orange boven,' Up with Orange, insisting that he should be appointed Stadtholder. The Magistracy confirmed the choice, but Cornelius de Witt, too firm to yield to a popular cry, refused to sign the appointment, and thus drew on himself the rage of the people. He was arrested under an absurd accusation of having bribed a man to assassinate the Prince, and . . . [after torture] was sentenced to exile, whereupon his brother [the grand pensionary] announced that he should ac-

company him; but while he was with him in his prison at [the Hague], the atrocious mob again arose [Aug. 20, 1672], broke open the doors, and, dragging out the two brothers, absolutely tore them limb from limb."—C. M. Yonge, *Landmarks of history*, pt. 3, ch. 4, pt. 6.—"The assumption of authority by the Prince of Orange was followed by a speedy alleviation of the situation. The German princes became alarmed at the consequences of a French conquest of Holland, and the ruler of Brandenburg, soon to be known as the great Elector, set an example of action in moving twenty thousand troops to the Rhine. The Emperor followed suit and the attitude of Spain became menacing. The courage of the Dutch themselves revived. They took the supreme step of preparing for an emigration *en masse* if the fortune of war deserted them. Ships were in readiness to convey the population to a new country in the East Indies. The necessity for executing this grave decision did not arrive, and the Prince of Orange enjoyed the honour by his skilful negotiations in every court of Europe, not less than by his dispositions for defence, of inflicting his first serious rebuff on the Grand Monarque."—D. C. Boulger, *History of Belgium*, pt. 1, pp. 354-355.—The Prince of Orange, profiting by the murder of the De Witts, rewarded the murderers, and is smirched by the deed, whether primarily responsible for it or not; but the power which it secured to him was used ably for Holland. The dykes had already been cut, on June 18th, and "the sea poured in, placing a waste of water between Louis and Amsterdam, and the province of Holland at least was saved. The citizens worked with the intensest energy to provide for their defence. . . . Every fourth man among the peasantry was enlisted; mariners and gunners were drawn from the fleet. [Meantime, on June 7, the fleet itself, under De Ruyter, had been victorious, in Southwold bay, or Solebay, over the united fleets of England and France. The victory was indecisive, but it paralyzed the allied navy for a season, and prevented a contemplated descent on Zealand.] . . . All active military operations against Holland were now necessarily at an end. There was not a Dutch town south of the inundation which was not in the hands of the French; and nothing remained for the latter but to lie idle until the ice of winter should enable them to cross the floods which cut them off from Amsterdam. Leaving Turenne in command, Louis therefore returned to St. Germain on August 1. [Before winter came, however, the alarm of Europe at Louis' aggressions had brought about a coalition of the Emperor Leopold and the elector of Brandenburg, to succor the Dutch states. Louis was forced to call Turenne with 16,000 men to Westphalia and Condé with 17,000 to Alsace.] . . . On September 12 the Austrian general Montecuculi, the Duke of Lorraine, and the Grand Elector effected their junction, intending to cross the Rhine and join William; [but Turenne, by a series of masterly movements, forced them to retreat, utterly baffled, into Franconia and Halberstadt. The elector of Brandenburg, discouraged, withdrew from the alliance, and made peace with Louis, June 6, 1673. The spring of 1673 found the French king advantageously situated, and his advantages were improved. Turning on the Spaniards in their Belgian Netherlands, he laid siege to the important stronghold of Maestricht and it was taken for him by the skill of Vauban, on June 30. But while this success was being scored, the Dutch, at sea, had frustrated another attempt of the Anglo-French fleet to land troops on the Zealand coast. On June 7, and again on the 14th, De Ruyter and Van Tromp fought off the invaders,

under Prince Rupert and D'Estrees, driving them back to the Thames. Once more, and for the last time they made their attempt, on August 21, and were beaten in a battle near the Zealand shore which lasted from daylight until dark. The end of August found a new coalition against Louis formed by treaties between Holland, Spain, the emperor and the Duke of Lorraine. A little later, the prince of Orange, after capturing Naarden, effected a junction near Bonn with Montecuculi, who had evaded Turenne. The electors of Trèves and Mainz thereupon joined the coalition and Cologne and Münster made peace. By this time, public opinion in England had become so angrily opposed to the war that Charles was forced to arrange terms of peace with Holland, notwithstanding his engagements with Louis. The tide was now turning fast against France. Denmark had joined the coalition. In March it received the elector palatine; in April the dukes of Brunswick and Lüneburg came into the league; in May the em-

ADMIRAL DE RUYTER

peror procured from the Diet a declaration of war in the name of the empire, and on July 1, the elector of Brandenburg cast in his lot once more with the enemies of France. To effectually meet this new league of his foes, Louis resolved with heroic promptitude to abandon his conquests in the Netherlands. Maestricht and Grave, alone, of the places he had taken, were retained. But Holland still refused to make peace on the terms which the French king proposed, and held her ground in the league."—O. 1673.—Reconquest of New Netherland from the English. See NEW YORK: 1673.

1674.—Treaty of Westminster.—Relinquishment of New Netherland.—An offer from the Dutch to restore New Netherland to England "was extorted from the necessities of the republic, and its engagement with Spain. With the consent of the States General, the Spanish ambassador offered

advantageous articles to the British government. Charles, finding that Louis refused him further supplies, and that he could not expect any from Parliament, replied that he was willing to accept reasonable conditions. . . . Sir William Temple was summoned from his retirement, and instructed to confer with the Spanish ambassador at London, the Marquis del Fresno, to whom the States General had sent full powers. In three days all the points were arranged, and a treaty was signed at Westminster [February 10, 1674] by Arlington and four other commissioners on the part of Great Britain, and by Fresno on the part of the United Netherlands. The honor of the flag, which had been refused by De Witt, was yielded to England; the Treaty of Breda was revived; the rights of neutrals guaranteed; and the commercial principles of the Triple Alliance renewed. By the sixth article it was covenanted that 'all lands, islands, cities, havens, castles and fortresses, which have been or shall be taken by one party from the other, during the time of this last unhappy war, whether in Europe or elsewhere, and before the expiration of the times above limited for the duration of hostilities, shall be restored to the former Lord and Proprietor in the same condition they shall be in at the time that this peace shall be proclaimed.' This article restored New Netherland to the King of Great Britain. The Treaty of Breda had ceded it to him on the principle of 'uti possidetis.' The Treaty of Westminster gave it back to him on the principle of reciprocal restitution. Peace was soon proclaimed at London and at the Hague. The treaty of Westminster delivered the Dutch from fear of Charles, and cut off the right arm of Louis, their more dreaded foe. England, on her part, slipped out of a disastrous war. . . . By the treaty of Westminster the United Provinces relinquished their conquest of New Netherland to the King of England. The sovereign Dutch States General had treated directly with Charles as sovereign. A question at once arose at Whitehall about the subordinate interest of the Duke of York. It was claimed by some that James's former American proprietorship was revived. . . . The opinion of counsel having been taken, they advised that the duke's proprietorship had been extinguished by the Dutch conquest, and that the king was now alone seized of New Netherland, by virtue of the Treaty of Westminster. . . . A new patent to the Duke of York was therefore sealed. By it the king again conveyed to his brother the territories he had held before, and granted him anew the absolute powers of government he had formerly enjoyed over British subjects, with the like additional authority over 'any other person or persons' inhabiting his province. Under the same description of boundaries, New Jersey, and all the territory west of the Connecticut River, together with Long Island and the adjacent islands, and the region of Pemaquid, were again included in the grant. The new patent did not, as has been commonly, but erroneously stated, 'recite and confirm the former.' It did not in any way allude to that instrument. It read as if no previous English patent had ever existed. . . . As his colonial lieutenant and deputy, the duke, almost necessarily, appointed Major Edmund Andros, whom the king had directed in the previous March to receive New Netherland from the Dutch."—J. R. Brodhead, *History of the State of New York*, v. 2, ch. 5-6.

1674-1678.—Continued war of the coalition against France.—"The enemies of France everywhere took courage. [But] . . . Louis XIV. embraced with a firm glance the whole position, and, well advised by Turenne, clearly took his resolu-

tion. He understood the extreme difficulty of preserving his conquests, and the facility moreover of making others more profitable, while defending his own frontier. To evacuate Holland, to indemnify himself at the expense of Spain, and to endeavor to treat separately with Holland while continuing the war against the House of Austria,—such was the new plan adopted; an excellent plan, the very wisdom of which condemned so much the more severely the war with Holland. . . . The places of the Zuyder-Zee were evacuated in the course of December by the French and the troops of Münster. . . . The evacuation of the United Provinces was wholly finished by spring. . . . Louis resolved to conquer Franche-Comté in person; while Turenne covered Alsace and Lorraine, Schomberg went to defend Roussillon, and Condé labored to strengthen the French positions on the Meuse, by sweeping the enemy from the environs of Liège and Maestricht. On the ocean, the defensive was preserved." Louis entered Franche-Comté at the beginning of May with a small army of 8,000 infantry and 5,000 or 6,000 cavalry, but with Vauban, the great master of sieges, to do his serious work for him. A small corps had been sent into the country in February, and had already taken Gray, Vesoul and Lons-le-Saulnier. Besançon was now reduced by a short siege; Dole surrendered soon afterward, and early in July the subjugation of the province was complete. "The second conquest of Franche-Comté had cost a little more trouble than the first; but it was definitive. The two Burgundies were no more to be separated, and France was never again to lose her frontier of the Jura. . . . The allies, from the beginning of the year, had projected a general attack against France. They had debated among themselves the design of introducing two great armies, one from Belgium into Champagne, the other from Germany, into Alsace and Lorraine; the Spaniards were to invade Roussillon; lastly, the Dutch fleet was to threaten the coasts of France and attempt some enterprise there. The tardiness of the Germanic diet to declare itself" frustrated the first of these plans. Condé, occupying a strong position near Charleroi, from which the allies could not draw him, took quick advantage of an imprudent movement which they made, and routed them by a fierce attack, at the village of Seneffe (Aug. 11, 1674). But William of Orange rallied the flying forces—Dutch, German and Spanish now fighting side by side—so successfully that Condé was repulsed with terrible loss in the end, when he attempted to make his victory complete. The battle was maintained, by the light of the moon, until midnight, and both armies withdrew next morning, badly crippled. Turenne meantime, in June, had crossed the Rhine at Philippsburg and encountered the Imperialists, on the 16th, near Sinsheim, defeated them there and driven them beyond the Neckar. The following month, he again crossed the river and inflicted upon the palatinate the terrible destruction which made it for the time being a desert, and which is the black blot on the fame of the great soldier. "Turenne ordered his troops to consume and waste cattle, forage, and harvests, so that the enemy's army, when it returned in force, as he foresaw it would do, could find nothing whereon to subsist." In September the city of Strassburg opened its gates to the Imperialists and gave them the control of its fortified bridge, crossing the Rhine. Turenne, hastening to prevent the disaster, but arriving too late, attacked his enemies, Oct. 4, at the village of Ensisheim and gained an inconclusive victory. Then followed, before the close of the year, the most famous of the military movements of Turenne. The

allies having been heavily reinforced, he retired before them into Lorraine, meeting and gathering up reinforcements of his own as he moved. Then, when he had completely deceived them as to his intentions, he traversed the whole length of the Vosges with his army, in December, and appeared suddenly at Belfort, finding their forces scattered and entirely unprepared. Defeating them at Mulhausen December 29, and again at Colmar, January 5, he expelled them from Alsace, and offered to Strassburg the renewal of its neutrality, which the anxious city was glad to accept. "Thus ended this celebrated campaign, the most glorious, perhaps presented in the military history of ancient France. None offers higher instruction in the study of the great art of war." In the campaign of 1675, which opened in May, Turenne was confronted by Montecuculi, and the two masterly tacticians became the players of a game which has been the wonder of military students ever since. "Like two valiant athletes struggling foot to foot without either being able to overthrow the other, Turenne and Montecuculi manœuvred for six weeks in the space of a few square leagues [in the canton of Ortnau, Swabia] without succeeding in forcing each other to quit the place." At length, on July 27, Turenne found an opportunity to attack his opponent with advantage, in the defile of Salsbach, and was just completing his preparations to do so, when a cannon-ball from one of the enemy's batteries struck him instantly dead. His two lieutenants, who succeeded to the command, could not carry out his plans, but fought a useless bloody battle at Altenheim and nearly lost their army before retreating across the Rhine. Condé was sent to replace Turenne. Before he arrived, Strassburg had again given its bridge to the Imperialists and they were in possession of lower Alsace; but no important operations were undertaken during the remainder of the year. In other parts of the wide war field the French suffered disaster. Marshal de Créqui, commanding on the Moselle, was badly defeated at Konaarbrück, August 11, and Trèves, which he defended, was lost a few weeks later. The Swedes, also, making a diversion in the north, as allies of France, were beaten back, at Fehrbellin (See SCANDINAVIAN STATES [SWEDEN]: 1644-1697.) But next year (1676) Louis recovered all his prestige. His navy, under the command of Duquesne and Tourville, fought the Dutch and Spaniards on equal terms, and defeated them twice in the Mediterranean, on the Sicilian coast. On land the main effort of the French was directed against the Netherlands. Condé, Bouchain and Aire were taken by siege; and Maestricht was successfully defended against Orange, who besieged it for nearly eight weeks. But Philippsburg, the most important French post on the Rhine, was lost, surrendering to the Duke of Lorraine. Early in 1677, Louis renewed his attacks on the Spanish Netherlands and took Valenciennes March 17, Cambrai April 4, and Saint-Omer April 20, defeating the Prince of Orange at Cassel (April 11) when he attempted to relieve the latter place. At the same time Créqui, unable to defend lower Alsace, destroyed it—burning the villages, leaving the inhabitants to perish—and prevented the allies, who outnumbered him, from making any advance. In November, when they had gone into winter-quarters he suddenly crossed the Rhine and captured Freiburg. The next spring (1678) operations began early on the side of the French with the siege of Ghent. The city capitulated March 9, after a short bombardment. The Spanish governor withdrew to the citadel, but "surrendered, on the 11th, that renowned castle built by Charles V. to hold the city in check. The

city and citadel of Ghent had not cost the French army forty men." Ypres was taken the same month. Serious negotiations were now opened and the Peace of Nimeguen, between France and Holland, was signed August 11, followed early the next year by a general peace. (See AUSTRIA: 1672-1714; NIMEGUEN, PEACE OF.) The prince of Orange, who opposed the peace, fought one bootless but bloody battle at Saint-Denis, near Mons, on August 14, three days after it had been signed.—II. Martin, *History of France: Age of Louis XIV* (tr. by M. L. Booth), v. 1, ch. 5-6.—"It may be doubted whether Europe has fully realised the greatness of the peril she so narrowly escaped on this occasion. The extinction of political and mental freedom, which would have followed the extinction of the Dutch Republic, would have been one of the most disastrous defeats of the cause of liberty and enlightenment possible in the then condition of the world. . . . The free presses of Holland gave voice to the stifled thought and agony of mankind. And they were the only free presses in the world. But Holland was not only the greatest book mart of Europe, it was emphatically the home of thinkers and the birthplace of ideas. . . . The two men then living to whose genius and courage the modern spirit of mental emancipation and toleration owes its first and most arduous victories were Pierre Bayle and John Locke. And it is beyond dispute that if the French King had worked his will on Holland, neither of them would have been able to accomplish the task they did achieve under the protection of Dutch freedom. They both were forced to seek refuge in Holland from the bigotry which hunted them down in their respective countries. All the works of Bayle were published in Holland, and some of the earliest of Locke's writings appeared there also; and if the remainder saw the light afterwards in England, it is only because the Dutch, by saving their own freedom, were the means of saving England as well. . . . At least, no one can maintain that if Holland had been annihilated in 1672, the English revolution could have occurred in the form and at the time it did."—J. C. Morison, *Reign of Louis XIV* (*Fortnightly Review*, Mar., 1874).

1690-1694.—Internal affairs of Dutch republic.—William III and his heirs.—"In the years after William III. became king of England the state of war, in which the republic existed, was of great importance to its internal condition. There was no thought of reforms in the faulty government, now that the stadholder's personal ambition seemed satisfied by his high dignity elsewhere and his dynastic interests were less strongly felt on account of the childlessness of his marriage. This lack of children imparted a tinge of sadness to the life of the reconciled pair, awakened in the minds of both a feeling of loneliness and desolation, was coupled in the queen with the mournful thought of her

father wandering in exile, and it caused repeated talk of transferring the succession to one of the related families, to the Frisian branch of the house of Nassau, or to a prince of the house of Hohenzollern. But William III. had only slight sympathy with the Frisian cousin, who on his side was not very obliging, and after a short reconciliation withdrew from the army on being passed over in the choice of a first field marshal at Waldeck's death in 1692. Prince Henry Casimir was even drawn into secret negotiation with his country's enemy, Louis XIV., and the serious dissension was not ended until 1694 through the mediation of the Frisian stadtholder's wife. When he died young in March, 1696, and left a son, the eight-year-old John William Friso, whose godfather was William III., the latter inclined to assure the succession to this young prince. After Queen Mary's death he named him as his sole heir by will of October 18, 1695. The death of the council pensionary, Fagel, in December, 1688, in the midst of the English complications, was a great loss to William III. His place was taken by Van Hove, pensionary of Haarlem, and, after his speedy death in May, 1689, and a temporary occupation, by the pensionary of Delft, Antonie Heinsius, who had been pensionary since 1679 and had attracted attention by his sagacity, though he did not at first belong to the Orange party. The prince had employed him in 1683 on a mission to Paris to defend the interests of the principality of Orange against French attacks, and Heinsius had returned from there and later from a mission to London a pronounced adherent of the prince's policy against France. He soon became the friend of Fagel, and when the latter's health began to fail, the prince looked to the Delft pensionary as his helper in treating foreign affairs. Fagel was not unwilling, and offered him in 1686 the office of pensionary of Dordrecht, whose pensionary usually replaced the council pensionary. But Heinsius, already forty-five years old, declined, believing that the employment suited 'neither with his humour, nor with his knowledge, nor with his health.' After reiterated entreaty, the modest man accepted and soon proved himself an excellent aid to William III., less independent and vigorous, much less enthusiastic and ardent than Fagel, but exact, zealous, honest, able, clear-sighted, docile, an invaluable tool in the prince's hand. With Dijkveld and Hop, he belonged to the best statesmen of the last period of William III.'s reign."—P. J. Blok, *History of the people of the Netherlands*, pt. 4, pp. 474-475.

1702-1704.—War of the Spanish Succession.—Marlborough's first campaigns.—"The campaign [of 1702] opened late in the Low Countries, owing, doubtless, to the death of king William. The elector of Bavaria, and his brother the elector of Cologne, took part with France. About the middle of April, the prince of Nassau-Saarbruck invested Keyserwerth, a place belonging to the latter elector, on the Rhine; whilst lord Athlone, with the Dutch army, covered the siege, in pursuance of the advice

of lord Marlborough to the states. The place was strong; the French marshal Boufflers made efforts to relieve it; after a vigorous defence, it was carried by assault, with dreadful carnage, about the middle of June. Boufflers, unable to relieve Keyserwerth, made a rapid march to throw himself between Athlone and Nimeguen, with the view to carry that place by surprise; was defeated by a forced and still more rapid march of the Dutch, under Athlone, to cover it; and moved upon Cleves, laying the country waste with wanton barbarity along his line of march. Marlborough now arrived to take the command in chief. It was disputed with him by Athlone, who owed his military rank and the honours of the peerage to the favour of king William. Certain representatives of the states, who attended the army under the name of field deputies, thwarted him by their caution and incompetency; the Prussian and Hanoverian contingents refused to move without the orders of their respective sovereigns. Lord Marlborough, with admirable temper and adroitness, and, doubtless, with the ascendant of his genius, surmounted all these obstacles. The Dutch general cheerfully served under him; the confederates were reconciled to his orders; he crossed the Meuse in pursuit of the French; came within a few leagues of Boufflers' lines; and, addressing the Dutch field deputies who accompanied him, said in a tone of easy confidence, 'I will now rid you of these troublesome neighbours.' Boufflers accordingly retreated,—abandoning Spanish Guelderland and exposing Venloo, Ruremonde, and even Liège, which he had made a demonstration to cover. The young duke of Burgundy, grandson of Louis XIV., and elder brother of the king of Spain, had commanded the French army in name. He now returned to Versailles; and Boufflers could only look on, whilst Marlborough successively captured Venloo, Ruremonde, and Liège. The navigation of the Meuse and communication with Maestricht was now wholly free; the Dutch frontier was secure; and the campaign terminated with the close of October. . . . The duke of Marlborough resumed his command in the Low Countries about the middle of spring. He found the French strong and menacing on every side. Marshal Villars had, like Marlborough, fixed the attention of Europe for the first time in the late campaign. He obtained a splendid victory over the prince of Baden at Fredlingen, near the Black Forest. That prince lost 3,000 men, his cannon and the field. . . . Villars opened this year's campaign by taking Kehl, passed through the Black Forest into Bavaria, and formed a junction with the elector; whilst the prince of Baden, was kept in check by a French army under marshal Tallard. . . . The imperial general, count Styrum was now moving to join the prince of Baden with 20,000 men. Villars persuaded the elector to cross the Danube and prevent this junction; attacked the imperialists in the plain of Hochstedt near Donawert; and put them to the rout. The capture of Augsburg followed: the road was open to Vienna, and the emperor thought of abandoning the capital. . . . Holland was once more threatened on her frontier. Marshal Villeroy, liberated by exchange, was again at the head of an army, and, in conjunction with Boufflers, commenced operations for recovering the ground and the strong places from which Marlborough had dislodged the French on the Meuse. The campaign had opened at this point of the theatre of war with the capture of Rheinberg. It was taken by the Prussians before the duke of Marlborough arrived. The duke's first operation was the capture of Bonne. He returned to the main army with the view to engage the French under Villeroy. That marshal abandoned

his camp, and retired within his lines of defence on the approach of the English general. Marlborough was prevented from attacking the French by the reluctance of the Dutch generals and the positive prohibition of the Dutch field deputies. . . . The only fruit of Marlborough's movement was the easy capture of Huy. Boufflers obtained the slight advantage of surprising and defeating the Dutch general Opdam near Antwerp. Marlborough, still embarrassed by the Dutch field deputies, to whose good intentions and limited views he bowed with a facility which only proves the extent of his superiority, closed the campaign with the acquisition of Limburg and Guelders. . . . In the beginning of . . . [1704] the emperor, threatened by the French and Bavarians in the very capital of the empire, implored aid from the queen; and on the 10th of April, the duke of Marlborough left England to enter upon a campaign memorable for . . . [the] victory of Blenheim. . . . On his arrival at the Hague, he proposed to the states general to alarm France for her frontier by a movement on the Moselle. Their consent even to this slight hazard for their own security, was not easily obtained. Villeroy, who commanded in Flanders, soon lost sight of him; so rapid or so well masked were his movements; Tallard, who commanded on the Moselle, thought only of protecting the frontier of France; and Marlborough, to the amazement of Europe, whether enemies or allies, passed in rapid succession the Rhine, the Maine, and the Necker. Intercepted letters, and a courier from the prince of Baden, apprised him that the French were about to join the Bavarians through the defiles of the Black Forest, and march upon Vienna. He now threw off the mask, sent a courier to the states, acquainting them that he was marching to the succour of the empire by order of the queen of England, and trusted they would permit their troops to share the glory of his enterprise. The pensionary Heinsius alone was in his confidence; and the states, though taken by surprise, conveyed to him their sanction and confidence with the best grace. He met Prince Eugene for the first time at Mindlesheim. Marlborough and Eugene are henceforth associated in the career of war and victory."—J. 1704.—War of the Spanish Succession.—Campaign on Danube and victory at Blenheim. See GERMANY: 1704.

1705.—War of the Spanish Succession.—Campaign spoiled.—After his campaign in Bavaria, with its great victory on the field of Blenheim (see GERMANY: 1704), Marlborough passed the winter in England and returned in the spring of 1705 to the Low Countries, where he had planned to lead, again, the campaign of the year. Prince Eugene was now in Italy, and the jealous, incapable Prince Louis of Baden, commanding the German army, was the coadjutor on whom he must depend. The latter assented to Marlborough's plans and promised coöperation. The Dutch generals and deputies also were reluctantly brought over to his views, which contemplated an invasion of France on the side of the Moselle. "Slight as were the hopes of any effective co-operation which Prince Louis gave, they were much more than he accomplished. When the time came he declared himself sick, threw up his command and set off to drink the waters of Schlangenbad. Count de Frise whom he named in his

place brought to Marlborough only a few ragged battalions, and, moreover, like his principal, showed himself most jealous of the English chief. . . . Marlborough nevertheless took the field and even singly desired to give battle. But positive instructions from Versailles precluded Villars [the commander of the French] from engaging. He intrenched himself in an extremely strong position at Sirk, where it was impossible for an inferior army to assail him. And while the war was thus unprosperous on the Moselle, there came adverse tidings from the Meuse. Marshal Villeroy had suddenly resumed the offensive, had reduced the fortress of Huy, had entered the city and invested the citadel of Liège. [Marlborough, on this news, being applied to for immediate aid by the Dutch General Overkirk—the ablest and best of his colleagues] . . . set out the very next day on his march to Liège, leaving only a sufficient force as he hoped for the security of Treves. [Villeroy] . . . at once relinquished his design upon the citadel of

JOHN CHURCHILL
FIRST DUKE OF MARLBOROUGH

Liège and fell back in the direction of Tongres, so that Marlborough and Overkirk effected their junction with ease. Marlborough took prompt measures to re-invest the fortress of Huy, and compelled it to surrender on the 11th of July. Applying his mind to the new sphere before him, Marlborough saw ground to hope that, with the aid of the Dutch troops, he might still make a triumphant campaign. The first object was to force the defensive lines that stretched across the country from near Namur to Antwerp, protected by numerous fortified posts and covered in other places by rivers and morasses, . . . now defended by an army of at least 60,000 men, under Marshal Villeroy and the Elector of Bavaria. Marlborough laid his plans before Generals Overkirk and Slangenberg as also those civilian envoys whom the States were wont to commission at their armies. But he found to his sorrow that for jealousy and lowness a Dutch deputy was fully a match for a German margrave. [He obtained with great difficulty a nominal assent to his plans, and began the execution of them; but in the very midst of his operations, and when one division of the Dutch troops had successfully crossed

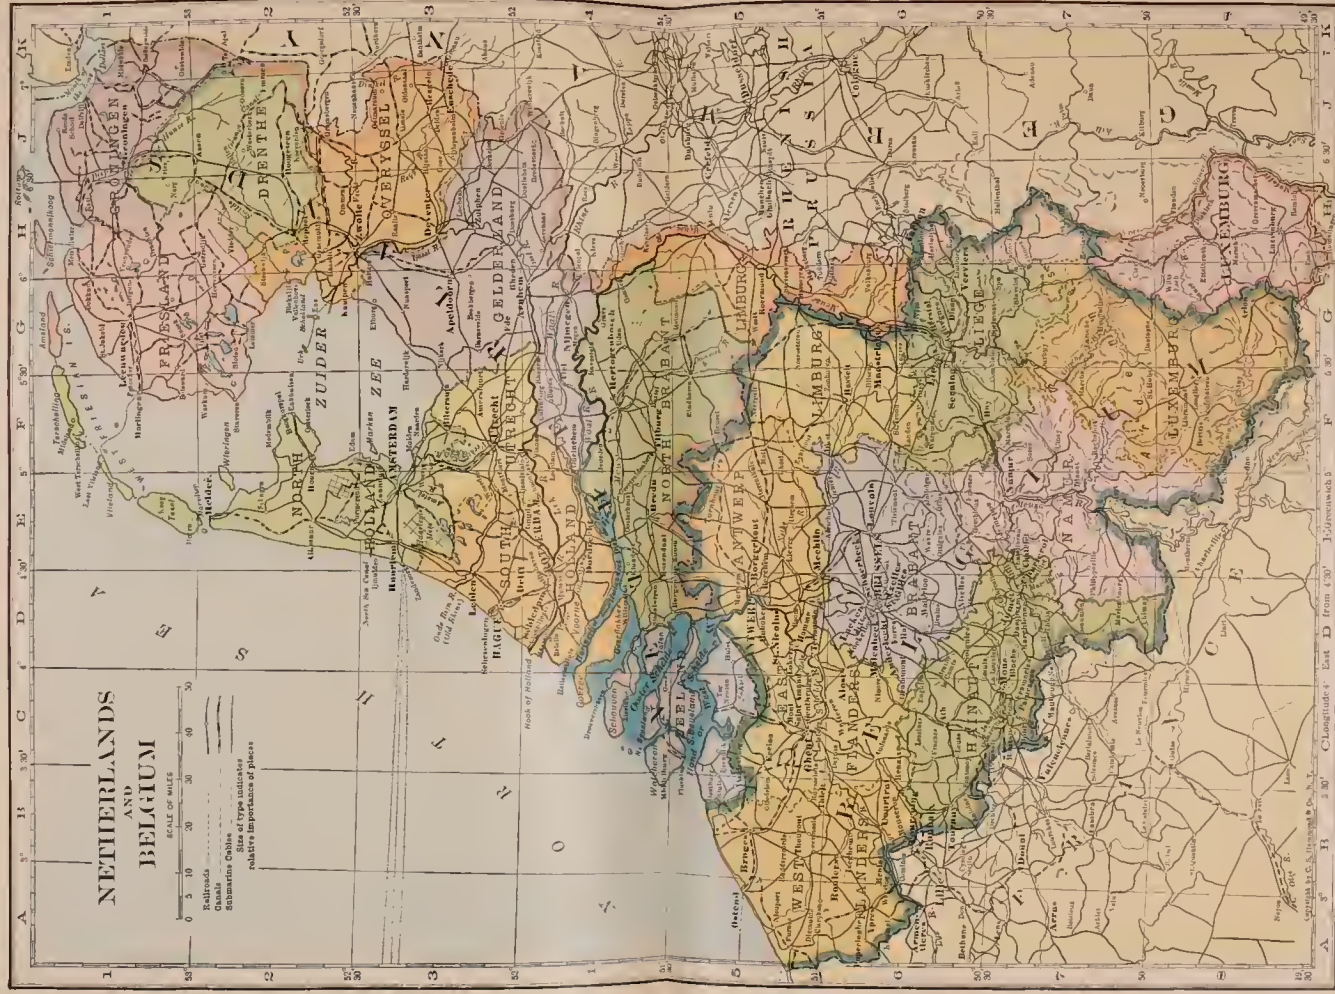

the river Dyle, General Slangenberg and the deputies suddenly drew back and compelled a retreat. Then Marlborough's] . . . fertile genius devised another scheme—to move round the sources of the river [Dyle] and to threaten Brussels from the southern side. . . . On the 15th of August he began his march, as did also Overkirk in a parallel direction, and in two days they reached Genappe near the sources of the Dyle. There uniting in one line of battle they moved next morning towards Brussels by the main chaussée or great paved road; their head-quarters that day being fixed at Fischermont near the borders of the forest of Soignies. On the French side the Elector and Villeroy, observing the march of the allies, had made a corresponding movement of their own for the protection of the capital. They encamped behind the small stream of the Ische, their right and rear being partly covered by the forest. Only the day before they had been joined by Marsin from the Rhine, and they agreed to give battle sooner than yield Brussels. One of their main posts was at Waterloo. . . . It is probable, had a battle now ensued, that it would have been fought on the same, or nearly the same ground as was the memorable conflict a hundred and ten years afterwards. . . . But the expected battle did not take place. [Once more the Dutch deputies and General Slangenberg interfered, refusing to permit their troops to engage; so that Marlborough was robbed of the opportunity for winning a victory which he confidently declared would have been greater than Blenheim. This practically ended the campaign of the year, which had been ruined and wasted throughout by the stupidity, the cowardice and the jealousies of the Dutch deputies and the general who counselled them.]—Earl Stanhope, *History of England: Reign of Queen Anne*, ch. 6.—In Spain, a campaign of more brilliancy was carried on by Charles Mordaunt, earl of Peterborough, in Catalonia. See SPAIN: 1705.

1706-1707.—War of the Spanish Succession.—Battle of Ramillies and its results.—“The campaign of 1706 was begun unusually late by Marlborough, his long stay on the Continent in the winter and his English political business detaining him in London till the end of April, and when he finally landed at the Hague his plans were still coloured by the remembrance of the gratuitous and intolerable hindrances which he had met with from his allies. . . . He had made up his mind to operate with Eugene in Italy, which, if he had done, there would probably have been seen what has not been seen for nearly two thousand years—a successful invasion of France from the southeast. But the kings of Prussia and Denmark, and others of the allies whom Marlborough thought he had propitiated, were as recalcitrant as the Dutch, and the vigorous action of Villars against the Margrave of Baden made the States-General more than ever reluctant to lose their sword and shield. So Marlborough was condemned to action on his old line of the Dyle, and this time fortune was less unkind to him. Secret overtures were made which induced him to threaten Namur, and as Namur was of all posts in the Low Countries that to which the French attached most importance, both on sentimental and strategical grounds, Villeroy was ordered to abandon the defensive policy which he had for nearly two years been forced to maintain, and to fight at all hazards. Accordingly the tedious operations which had for so long been pursued in this quarter were exchanged at once for a vigorous offensive and defensive, and the two generals, Villeroy with rather more than 60,000 men, Marlborough with that number or a little less, came to

blows at Ramillies (a few miles only from the spot where the lines had been forced the year before) on May 23, 1706, or scarcely more than a week after the campaign had begun. Here, as before, the result is assigned by the French to the fault of the general. . . . The battle itself was one completely of generalship, and of generalship as simple as it was masterly. It was in defending his position, not in taking it up, that Villeroy lost the battle. . . . Thirteen thousand of the French and Bavarians were killed, wounded, and taken, and the loss of the allies, who had been throughout the attacking party, was not less than 4,000 men. . . . The Dutch, who bore the burden of the attack on Ramillies, had the credit of the day's fighting on the allied side, as the Bavarian horse had on that of the French. In hardly any of Marlborough's operations had he his hands so free as at Ramillies, and in none did he carry off a completer victory. . . . The strong places of Flanders fell before the allied army like ripe fruit. Brussels surrendered and was occupied on the fourth day after the battle, May 28. Louvain and Malines had fallen already. The French garrison precipitately left Ghent, and the Duke entered it on June 2. Oudenarde came in next day; Antwerp was summoned, expelled the French part of its garrison, and capitulated on September 7. And a vigorous siege in less than a month reduced Ostend, reputed one of the strongest places in Europe. In six weeks from the battle of Ramillies not a French soldier remained in a district which the day before that battle had been occupied by a network of the strongest fortresses and a field army of 80,000 men. The strong places on the Lys and the Dender, tributaries of the Scheldt, gave more trouble, and Menin, a small but very important position, cost nearly half the loss of Ramillies before it could be taken. But it fell, as well as Dendermonde and Ath, and nothing but the recrudescence of Dutch obstruction prevented Marlborough from finishing the campaign with the taking of Mons, almost the last place of any importance held by the French north of their own frontier, as that frontier is now understood. But the difficulties of all generals are said to begin on the morrow of victory, and certainly the saying was true in Marlborough's case. . . . The Dutch were, before all things, set on a strong barrier or zone of territory, studded with fortresses in their own keeping, between themselves and France: the Emperor naturally objected to the alienation of the Spanish-Austrian Netherlands. The barrier disputes were for years the greatest difficulty which Marlborough had to contend with abroad, and the main theme of the objections to the war made by the adverse party at home. . . . It was in the main due, no doubt, to these jealousies and hesitations, strengthened by the alarm caused by the loss of the battle of Almanza in Spain, and by the threatened invasion of Germany under Villars, that made the campaign of 1707 an almost wholly inactive one. . . . The campaign of this year is almost wholly barren of any military operations interesting to anyone but the mere analyst of tactics.”—G. Saintsbury, *Marlborough*, ch. 6.—In Spain, several sharp changes of fortune during two years terminated in a disastrous defeat of the allies at Almanza in April, 1707, by the duke of Berwick. See SPAIN: 1706; 1707; GERMANY: 1706-1711.

1708-1709.—War of the Spanish Succession.—Oudenarde and Malplaquet.—To the great satisfaction of Marlborough, Prince Eugene of Savoy was sent by the emperor to coöperate with him, in the spring of 1708. The two generals met in April

Maps prepared specially for the NEW LARNED
under direction of the editors and publishers.

to discuss plans; after which Eugene returned into Germany to gather up the various contingents that would compose his army. He encountered many difficulties and delays, and was unable to bring his forces to the field until July. Marlborough, meantime, had been placed in a critical situation. "For whilst the English commander and Eugene had formed the plan to unite and overwhelm Vendôme the Court of Versailles had, on its side, contemplated the despatch of a portion of the Army of the Rhine, commanded by the Elector of Bavaria and the Duke of Berwick, so to reinforce Vendôme that he might overwhelm Marlborough, and Berwick was actually on his march to carry out his portion of the plan. [Prince Eugene crossed the Moselle on June 28], reached Düren the 3rd of July, and learning there that affairs were critical, hastened with an escort of Hussars, in advance of his army, to Brussels. On his arrival there, the 6th, he learned that the French had attacked and occupied the city of Ghent, and were then besieging the castle. [The two commanders having met at Assche, to concert their movements, made haste to throw] . . . a reinforcement into the fortress of Oudenarde, then besieged by the French; and, convinced now that the conquest of that fortress by Vendôme would give him an unassailable position, they pushed forward their troops with all diligence to save it. The two armies united on the 8th. On the 9th they set out for Oudenarde, and crossed the Dender on the 10th. Before daybreak of the 11th Marlborough despatched General Cadogan with a strong corps to the Scheldt, to throw bridges over that river near Oudenarde and to reconnoitre the enemy. The main army followed at 7 o'clock. [In the battle which ensued, Vendôme was hampered by the equal authority of the duke of Burgundy—the king's grandson—who would not concur with his plans.] . . . One after another the positions occupied by the French soldiers were carried. Then these took advantage of the falling night to make a retreat as hurried and disorderly as their defence had been wanting in tenacity. In no pitched battle, indeed, have the French soldiers less distinguished themselves than at Oudenarde. Fighting under a divided leadership, they were fighting virtually without leadership, and they knew it. The Duke of Burgundy contributed as much as either Marlborough or Eugene to gain the battle of Oudenarde for the Allies. [The French army, losing heavily in the retreat, was rallied finally at Ghent.] . . . The Allies, meanwhile, prepared to take advantage of their victory. They were within a circle commanded by three hostile fortresses, Ypres, Lille, and Tournay. After some consideration it was resolved, on the proposition of Eugene, that Lille should be besieged. [The siege of Lille, the capital of French Flanders, fortified by the utmost skill and science of Vauban, and held by a garrison of 10,000 men under Marshal Boufflers, was a formidable undertaking. The city was invested on August 13, and defended heroically by the garrison; but Vendôme, who would have attacked the besiegers, was paralyzed by the royal youth who shared his command. Lille, the town, was surrendered on October 22, and its citadel on December 9. The siege of Ghent followed, and the capitulation of that city, on January 2, 1709, closed the campaign.] . . . The winter of 1709 was spent mainly in negotiations. Louis XIV. was humiliated, and he offered peace on terms which the Allies would have done well to accept. [Their demands, however, rose too high, and the war went on.] . . . It had been decided that the campaign in the Netherlands should be continued under the same skilful generals who had brought that of 1708 to so suc-

cessful an issue. . . . On the 23rd of [June] . . . the allied army, consisting of 110,000 men, was assembled between Courtray and Menin. Marlborough commanded the left wing, about 70,000 strong; Eugene the right, about 40,000. Louis, on his side, had made extraordinary efforts. But even with these he had been able to put in the field an army only 80,000 strong [under Marshal Villars]. . . . Villars had occupied a position between Douai and the Lys, and had there thrown up lines, in the strengthening of which he found daily employment for his troops. [Not venturing to attack the French army in its strong position, Marlborough and Eugene began operations by laying siege to Tournay. The town was yielded to them on July 30, and the citadel on September 3. They next turned their attention to Mons, which the French thought it necessary to save at any cost. The attempt which the latter made to drive the allied army from the position it had gained between themselves and Mons had its outcome in the terribly bloody battle of Malplaquet] . . . the bloodiest known till then in modern history. The loss of the victors was greater than that of the vanquished. That of the former amounted to from 18,000 to 20,000 men; the French admitted a loss of 7,000, but German writers raise it to 15,000. Probably it did not exceed 11,000. . . . The results . . . were in no way proportionate to its cost. The French army retreated in good order, taking with it all its impedimenta, to a new position as strong as the former. There, under Berwick, who was sent to replace Villars, it watched the movements of the Allies. These resumed, indeed, the siege of Mons [which surrendered on October 20]. . . . But this was the solitary result of the victory."—G. B. Malletson, *Prince Eugene of Savoy*, ch. 10-11.

1709.—Barrier Treaty with England. See ENGLAND: 1709; BARRIER FORTRESSES.

1710-1712.—War of the Spanish Succession.—Last campaigns of Marlborough.—"As soon as it became clear that the negotiations [at Gertruydenberg] would lead to nothing, Eugene and Marlborough at once began the active business of the campaign. . . . Marlborough began . . . with the siege of Douai, the possession of which would be of the greatest importance to him. . . . In spite of Villars' boasts the French were unable to prevent the capture of Douai. . . . The campaign of 1710 was full of disappointment to Marlborough. He had hoped to carry the war into the heart of France. But after Douai fell, Villars so placed his army that [Marlborough] . . . was obliged to content himself with the capture of Bethune, St. Jeanant, and Aire. Heavy rains and a great deal of illness among his troops prevented further operations. Besides this, his energy was somewhat paralysed by the changes which had taken place in England [where the duchess of Marlborough and the Whig party had lost the favor of the queen, and the Tory opponents of Marlborough and the war had come into power.]"—L. Creighton, *Life of Marlborough*, ch. 15-16.—"In 1711, in a complicated series of operations round Arras, Marlborough, who was now alone, Eugene having been recalled to Vienna, completely outgeneraled Villars and broke through his lines. But he did not fight, and the sole result of the campaign was the capture of Bouchain at the cost of some 10,000 men, while no serious impression was made on the French system of defence. . . . Lille had cost 14,000; Tournay a number not exactly mentioned, but very large; the petty place

of Aire 7,000. How many, discontent Englishmen might well ask themselves, would it cost before Arras, Cambrai, Hesdin, Calais, Namur, and all the rest of the fortresses that studded the country, could be expected to fall? . . . Marlborough had himself, so to speak, spoilt his audience. He had given them four great victories in a little more than five years; it was perhaps unreasonable, but certainly not unnatural that they should grow fretful when he gave them none during nearly half the same time. . . . The expense of the war was frightening men of all classes in England, and, independently of the more strictly political considerations, . . . it will be seen that there was some reason for wishing Marlborough anywhere but on or near the field of battle. He was got rid of none too honourably; restrictions were put upon his successor Ormond, which were none too honourable, either; and when Villars, freed from his invincible antagonist, had inflicted a sharp defeat upon Eugene at Denain, the military situation was changed from one very much in favour of the allies to one slightly against them, and so contributed beyond all doubt to bring about the Peace of Utrecht."—G. Saintsbury, *Marlborough*, ch. 7.—See also ENGLAND: 1710-1712; UTRICHT: 1712-1714.

1713-1715.—Second Barrier Treaty with England.—Barrier arrangements with France and Emperor.—Connected with the other arrangements concluded in the treaties negotiated at Utrecht, the States, in 1713, signed a new Barrier Treaty with England, "annulling that of 1709, and providing that the Emperor Charles should be sovereign of the Netherlands [heretofore the 'Spanish Provinces'], but now become the 'Austrian Provinces'], which, neither in the whole nor in the part, should ever be possessed by France. The States, on their side, were bound to support, if required, the succession of the Electress of Hanover to the throne of England. . . . By the treaty concluded between France and the States, it was agreed that . . . the towns of Menin, Tournay, Namur, Ypres, with Warneton, Poperingen, Comines and Werwyk, Furnes, Dixmuyde, and the fort of Knokke, were to be ceded to the States, as a barrier, to be held in such a manner as they should afterwards agree upon with the Emperor. [In the subsequent arrangement, concluded with the emperor in 1715] . . . he permitted the boundary on the side of Flanders to be fixed in a manner highly satisfactory to the States, who sought security rather than extent of dominion. By the possession of Namur they commanded the passage of the Sambre and Meuse; Tournay ensured the navigation of the Scheldt; Menin and Warneton protected the Leyse; while Ypres and the fort of Knokke kept open the communication with Furnes, Nieupoort and Dunkirk. . . . Events proved the barrier, so earnestly insisted upon, to have been wholly insufficient as a means of defence to the United Provinces, and scarcely worth the labour and cost of its maintenance."—C. M. Davies, *History of Holland*, v. 3, ch. 11. See EUROPE: Map of Central Europe: 1715.

1747.—Restored stadtholdership.—"When in the spring of 1747 the French troops made ready to penetrate farther into Dutch territory, a terrible panic spread. Whosoever could afford to do so, fled across the Scheldt and escaped to the islands of Walcheren and Beveland. Most of the fugitives went to Middelburg on the island of Walcheren, the capital of Zeeland. Middelburg had been one of the first Dutch cities to throw off the Spanish yoke, and since the disappearance of the Spanish troops its inhabitants had not had opportunity to see what a foreign soldier looked like. They were now thrown into terrible distress by the harrowing stories of their brethren from across the Scheldt. The whole island, one of the richest parts of the whole Republic, saw itself at the mercy of the invading enemy. In Vlissingen and in Veere, the two cities over which the Prince of Orange, in his quality of Marquis of those cities, had always exercised great influence, and which had always been connected with the House of Orange by very affectionate ties, the people assembled in the market-place and caused considerable disorder. Vlissingen was still a prosperous city with a large colonial commerce. Veere was strongly on the decline, and was changing from an important mediæval town into a country village, where to-day the remains of an immense Gothic church, a wonderful town hall, and a few beautiful houses preach a silent lesson of past glory. Curiously enough, it was in Veere, with its thousand and odd inhabitants, that the first outbreak occurred. During the evening of the 24th April of the year 1747 the news of the fall of Aardenburg, the key to the whole of the Republic's part of Flanders, became known. The people flocked to the town hall. Speeches were made. Almost exactly the same thing happened as in the year 1672. There were loud and violent outcries of treachery. The Regents were blamed for everything. The only hope for salvation was seen in the immediate appointment of a stadtholder and commander-general. In the middle of the night the Burgomaster of Veere was visited by an angry multitude. In order to save himself from violence, he was obliged to promise that he would on the morrow advise the Estates of Zeeland to appoint Prince William as Stadtholder. From Veere to Middleburg is only half an hour's walk. The next morning the disorder of Veere had spread to Zeeland capital. The Regents, as always under similar circumstances, were helpless. They had no armed force at their disposal. Within three days the whole of the Province of Zeeland was clamoring for the appointment of William, and on the 28th of April the provincial estates decided to offer the Prince of Orange the dignity of Stadtholder of their province. The first news of this popular uprising reached Holland by way of Rotterdam, which heard of it through

the sailors of the small boats which early each morning brought the fresh vegetables from the Zeeland Islands. No sooner were these small boats, adorned with Orange flags, seen on the Maas, than the crowd along the river broke forth into wild joy. Orange ribbons were produced from somewhere, and soon a procession of much-beribboned people began to move towards the town hall, the final goal of all similar processions. Inside the town hall a number of badly frightened Regents were holding a meeting. Much against their will—for they were defenseless—the burgo-masters were forced to receive a delegation from among the processionists. A baker and a cart-wright were their spokesmen. In very determined words they demanded that the town council should lend its support towards the appointment of Prince William IV as Stadtholder of Holland. The town council could do nothing but acquiesce. Within an hour the Orange flag was floating from the old tower of the Lawrence Church. The rest of the day was spent in celebrations. The taverns did a great business. Exactly the same thing happened in Dordrecht and the Hague and Haarlem and Leyden. Processions formed everywhere; the town council was bullied into submission, and the old flag of the Prince was gloriously hoisted on the highest available church tower. Three days this peaceful revolution lasted. No blood flowed. Only a few very unpopular Regents suffered material damage in the form of broken window-panes. That was all. But on the 3d of May the Estates of Holland offered the Stadtholder of Friesland, Groningen, and Gelderland the dignity of Stadtholder of their own province, and on the next day they appointed him commander-in-chief of the Republic's armies and of the navy. The young Prince saw himself reinstated in all the dignities which had formerly belonged to his great-uncles. His patience was rewarded. Without himself contributing to the final results in any way, he was called to his high office. A deputation from among the Estates of Zeeland crossed the Zuyderzee and arrived in Leeuwarden on the 5th of May. They asked His Highness to proceed at once to their province. On the 10th of May His Highness with his young wife, Anna, daughter of George II of England, proceeded to Holland . . . [and was welcomed in Amsterdam] by the Burgo-master and deputations from all influential commercial and civic bodies of the town. . . . The enthusiasm was immense, and wherever the Prince appeared he was greeted as a returning hero. . . . [The people felt] as of old, the Prince of Orange would protect the country against the foreign enemy, and would put an end to all the many unbearable abuses which had gradually developed while the Regents were in supreme command of the country."—H. W. Van Loon, *Fall of the Dutch republic*, pp. 129-133.

1747-1795.—Last years of republic.—"When the terms at Aix La Chapelle restored their losses to the Dutch and confirmed the stipulations of previous treaties in their favour, it was felt that the Republic was indebted to the exertions of its allies, and not to any strength or successes of its own. It was well for the Republic that she could rest. The days of her greatness had gone by, and the recent struggle had manifested her decline to Europe. . . . The next forty years were years of peace. . . . When war again arrived it was again external circumstances [connected with the war between England and her revolted colonies in America] that compelled the Republic to take up arms. . . . She . . . contemplated, as it was discovered, an alliance with the American insurgents.

The exposure of her designs drew on her a declaration of war from England, which was followed by the temporary loss of many of her colonies both in the East and West Indies. But in Europe the struggle was more equally sustained. The hostile fleets engaged in 1781 off the Dogger Bank; and the Dutch sailors fought with a success that made them claim a victory, and that at least secured them from the consequences of a defeat. The war indeed caused far less injury to the Republic than might have been supposed. . . . When she concluded peace in 1783, the whole of her lost colonies, with the one exception of Negapatam, were restored to her. But the occasion of the war had been made use of by Austria, and a blow had been meanwhile inflicted upon the United Provinces the fatal effect of which was soon to be apparent. The Emperor Joseph II. had long protested against the existence of the Barrier; and he had seized upon the opportunity to undo by an arbitrary act all that the blood and treasure of Europe had been lavished to secure. 'The Emperor will hear no more of barriers,' wrote his minister; 'our connection with France has made them needless;' and the fortresses for which William III. had schemed and Marlborough had fought, were razed to the ground [1782]. Holland, unable at the moment to resist, withdrew her garrisons in silence; and Joseph, emboldened by his success, proceeded to ask for more [1784]. The rectification of the Dutch frontiers, the opening of the Scheldt, and the release for his subjects from the long-enforced restrictions upon their trade did not appear too much to him. But the spirit of the Dutch had not yet left them. They fired at the vessels which dared to attempt to navigate the Scheldt, and war again appeared imminent. The support of France, however, upon which the Emperor had relied, was now given to the Republic, and Joseph recognized that he had gone too far. The Barrier, once destroyed, was not to be restored; but the claims which had been put forward were abandoned upon the payment of money compensation by the States. The feverous age of revolution was now at hand, and party spirit, which had ever divided the United Provinces, and had been quickened by the intercourse and alliance with America during the war, broke out in an insurrection against the Stadtholder [William V.], which drove him from his country, and compelled him to appeal to Prussian troops for his restoration. Almost at the same time, in the Austrian provinces, a Belgic Republic was proclaimed [1787], the result in a great degree of imprudent changes which Joseph II. had enforced. The Dutch returned to their obedience under Prussian threats [and invasion of Holland by an army of 30,000 men—September, 1787], and Belgium under the concessions of Leopold III. But these were the clouds foreshadowing the coming storm, beneath whose fury all Europe was to tremble."—C. F. Johnstone, *Historical abstracts*, ch. 2.

1806-1810.—Batavian republic transformed into kingdom of Holland.—Louis Bonaparte made king.—His fidelity to the country offensive to Napoleon.—His abdication.—Annexation of Holland to French empire.—“While Bonaparte was the chief of the French republic, he had no objection to the existence of a Batavian republic in the north of France, and he equally tolerated the Cisalpine republic in the south. But after the coronation all the republics, which were grouped like satellites round the grand republic, were converted into kingdoms, subject to the empire, if not avowedly, at least in fact. In this respect there was no difference between the Batavian and Cisalpine republic. The latter having been metamorphosed into the kingdom of Italy, it was necessary to find some pretext for transforming the former into the kingdom of Holland. . . . The Emperor kept up such an extensive agency in Holland that he easily got up a deputation, soliciting him to choose a king for the Batavian republic.

This submissive deputation came to Paris in 1806, to solicit the Emperor, as a favour, to place Prince Louis [Napoleon's brother] on the throne of Holland. . . . Louis became King of Holland much against his inclination, for he opposed the proposition as much as he dared, alleging as an objection the state of his health, to which certainly the climate of Holland was not favourable; but Bonaparte sternly replied to his remonstrance—‘It is better to die a king than live a prince.’ He was then obliged to accept the crown. He went to Holland accompanied by Hortense, who, however, did not stay long there. The new king wanted to make himself beloved by his subjects, and as they were an entirely commercial people, the best way to win their affections was . . . not to adopt Napoleon's rigid laws against commercial intercourse with England. Hence the first coolness between the two brothers, which ended in the abdication of Louis. I know not whether Napoleon recollected the motive assigned by Louis for at first refusing the crown of Holland, namely, the climate of the country, or whether he calculated upon greater submission in another of his brothers; but this is certain, that Joseph was not called from the throne of Naples to the throne of Spain, until after the refusal of Louis. . . . Before finally seizing Holland, Napoleon formed the project of separating from it Brabant and Zealand, in exchange for other provinces, the possession of which was doubtful: but Louis successfully resisted this first act of usurpation. Bonaparte was too intent on the great business in Spain, to risk any commotion in the north, where the declaration of Russia against Sweden already sufficiently occupied him. He therefore did not insist upon, and even affected indifference to the proposed augmentation of the territory of the empire. . . . But when he got his brother Joseph recognized, and when he had himself struck an important blow in the Peninsula, he began to change his tone to Louis. On the 20th of December [1808] he wrote to him a very remarkable letter, which exhibits the unreserved expression of that tyranny which he wished to exercise over all his family in order to make them the instruments of his despotism. He reproached Louis for not following his system of policy, telling him that he had forgotten he was a Frenchman, and that he wished to become a Dutchman. Among other things he said: . . . ‘I have been obliged a second time to prohibit trade with Holland. In this state of things we may consider ourselves really at war. In my speech to the legislative body I manifested my displeasure; for I will not conceal from you, that my intention is to unite Holland with France. This will be the most severe blow I can aim against England, and will deliver me from the perpetual insults which the plotters of your cabinet are constantly directing against me. The mouths of the Rhine, and of the Meuse, ought, indeed, to belong to me. . . . The following are my conditions:—First, the interdiction of all trade and communication with England. Second. The supply of a fleet of fourteen sail of the line, seven frigates and seven brigs or corvettes, armed and manned. Third, an army of 25,000 men. Fourth. The suppression of the rank of Marshals. Fifth. The abolition of all the privileges of nobility, which is contrary to the constitution. Your Majesty may negotiate on these bases with the Duke de Cadore, through the medium of your minister; but be assured, that on the entrance of the first packet-boat into Holland, I will restore my prohibitions, and that the first Dutch officer who may presume to insult my flag, shall be seized and hanged at the main-yard.

Your Majesty will find in me a brother if you prove yourself a Frenchman; but if you forget the sentiments which attach you to our common country, you cannot think it extraordinary that I should lose sight of those which nature has raised between us. In short, the union of Holland and France will be, of all things, most useful to France, Holland and the Continent, because it will be most injurious to England. This union must be effected willingly, or by force.' . . . Here the correspondence between the two brothers was suspended for a time; but Louis still continued exposed to new vexations on the part of Napoleon. About the end of 1809, the Emperor summoned to Paris the sovereigns who might be called his vassals. Among the number was Louis, who, however, did not shew himself very willing to quit his states. He called a council of his ministers, who were of opinion that for the interest of Holland he ought to make this new sacrifice. He did so with resignation. Indeed, every day passed on the throne was a sacrifice to Louis. . . . Amidst the general silence of the servants of the empire, and even of the kings and princes assembled in the capital, he ventured to say:—'I have been deceived by promises which were never intended to be kept. Holland is tired of being the sport of France.' The Emperor who was unused to such language as this, was highly incensed at it. Louis had now no alternative, but to yield to the incessant exactions of Napoleon, or to see Holland united to France. He chose the latter, though not before he had exerted all his feeble power in behalf of the subjects whom Napoleon had consigned to him; but he would not be the accomplice of him who had resolved to make those subjects the victims of his hatred against England. . . . Louis was, however, permitted to return to his states, to contemplate the stagnating effect of the continental blockade on every branch of trade and industry, formerly so active in Holland. Distressed at witnessing evils to which he could apply no remedy, he endeavoured by some prudent remonstrances to avert the utter ruin with which Holland was threatened. On the 23rd of March, 1810, he wrote . . . [a] letter to Napoleon. . . . Written remonstrances were not more to Napoleon's taste than verbal ones at a time when, as I was informed by my friends, whom fortune chained to his destiny, no one presumed to address a word to him, except to answer his questions. . . . His brother's letter highly roused his displeasure. Two months after he received it, being on a journey in the north, he addressed to Louis from Ostend a letter [followed in a few days by another in which latter he said]: . . . 'I want no more phrases and protestations. It is time I should know whether you intend, by your follies, to ruin Holland. I do not choose that you should again send a Minister to Austria, or that you should dismiss the French who are in your service. I have recalled my Ambassador, as I intend only to have a Chargé-d'affaires in Holland. The Sieur Serrurier, who remains there in that capacity, will communicate to you my intentions. My Ambassador shall no longer be exposed to your insults. Write to me no more those set phrases which you have been repeating for the last three years, and the falsehood of which is proved every day. This is the last letter I will ever write to you as long as I live.' . . . Thus reduced to the cruel alternative of crushing Holland with his own hands, or leaving that task to the Emperor, Louis did not hesitate to lay down his sceptre. Having formed this resolution, he addressed a message to the legislative body of the kingdom of Holland,

explaining the motives of his abdication. . . . The French troops entered Holland under the command of the Duke de Reggio; and that Marshal, who was more King than the King himself, threatened to occupy Amsterdam. Louis then descended from his throne [July 1, 1810]. . . . Louis bade farewell to the people of Holland in a proclamation, after the publication of which he repaired to the waters of Toeplitz. There he was living in tranquil retirement, when he learnt that his brother had united Holland to the Empire [December 10, 1810]. He then published a protest. . . . Thus there seemed to be an end of all intercourse between these two brothers, who were so opposite in character and disposition. But Napoleon, who was enraged that Louis should have presumed to protest, and that in energetic terms, against the union of his kingdom with the empire, ordered him to return to France, whither he was summoned in his character of Constable and French Prince. Louis, however, did not think proper to obey this summons, and Napoleon, faithful to his promise of never writing to him again, ordered . . . [a] letter to be addressed to him by M. Otto, . . . Ambassador from France to Vienna, [saying]: 'The Emperor requires that Prince Louis shall return, at the latest, by the 1st of December next, under pain of being considered as disobeying the constitution of the empire and the head of his family and being treated accordingly.'—M. de Bourrienne, *Private memoirs of Napoleon*, v. 4, ch. 2.—See also FRANCE: 1806 (January-October).

1813.—Expulsion of French.—Independence regained.—Restoration of prince of Orange.—'The universal fermentation produced in Europe by the deliverance of Germany [see GERMANY: 1812-1813, to 1813 (October-December)] was not long of spreading to the Dutch Provinces. The yoke of Napoleon, universally grievous from the enormous pecuniary exactions with which it was attended, and the wasting military conscriptions to which it immediately led, had been in a peculiar manner felt as oppressive in Holland, from the maritime and commercial habits of the people, and the total stoppage of all their sources of industry, which the naval war and long-continued blockade of their coasts had occasioned. They had tasted for nearly twenty years of the last drop of humiliation in the cup of the vanquished—that of being compelled themselves to aid in upholding the system which was exterminating their resources, and to purchase with the blood of their children the ruin of their country. These feelings, which had for years existed in such intensity, as to have rendered revolt inevitable but for the evident hopelessness at all former times of the attempt, could no longer be restrained after the battle of Leipsic had thrown down the colossus of French external power, and the approach of the Allied standards to their frontiers had opened to the people the means of salvation [see GERMANY: 1813 (October); (October-December)]. From the Hansa Towns the flame of independence spread to the nearest cities of the old United Provinces; and the small number of French troops in the country at once encouraged revolt and paved the way for external aid. At this period, the whole troops which Napoleon had in Holland did not exceed 6,000 French, and

two regiments of Germans, upon whose fidelity to their colours little reliance could be placed. Upon the approach of the Allied troops under Bulow, who advanced by the road of Münster, and Winzingerode, who soon followed from the same quarter, the douaniers all withdrew from the coast, the garrison of Amsterdam retired, and the whole disposable force of the country was concentrated at Utrecht, to form a corps of observation, and act according to circumstances. This was the signal for a general revolt. At Amsterdam [Nov. 15], the troops were no sooner gone than the inhabitants rose in insurrection, deposed the Imperial authorities, hoisted the orange flag, and established a provisional government with a view to the restoration of the ancient order of things; yet not violently or with cruelty, but with the calmness and composure which attest the exercise of social rights by a people long habituated to their enjoyment. The same change took place, at the same time and in the same orderly manner, at Rotterdam, Dordrecht, Delft, Leyden, Haarlem, and the other chief towns; the people, everywhere, amidst cries of 'Orange Boven' and universal rapture, mounted the orange cockade, and reinstated the ancient authorities. . . . Military and political consequences of the highest importance immediately followed this uncontrollable outbreak of public enthusiasm. A deputation from Holland waited on the Prince Regent of England and the Prince of Orange, in London: the latter shortly after embarked on board an English line-of-battle ship, the Warrior, and on the 27th landed at Scheveling, from whence he proceeded to the Hague. Meantime the French troops and coast-guards, who had concentrated at Utrecht, seeing that the general effervescence was not as yet supported by any solid military force, and that the people, though they had all hoisted the orange flag, were not aided by any corps of the Allies, recovered from their consternation, and made a general forward movement against Amsterdam. Before they got there, however, a body of 300 Cossacks had reached that capital, where they were received with enthusiastic joy: and this advanced guard was soon after followed by General Benkendorf's brigade, which, after travelling by post from Zwoll to Harderwyk, embarked at the latter place, and, by the aid of a favourable wind, reached Amsterdam on the 1st December. The Russian general immediately advanced against the forts of Mayder and Halfweg, of which he made himself master, taking twenty pieces of cannon and 600 prisoners; while on the eastern frontier, General Oppen, with Bulow's advanced guards, carried Dornbourg by assault on the 23d, and, advancing against Arnheim, threw the garrison, 3,000 strong, which strove to prevent the place being invested, with great loss back into the town. Next day, Bulow himself came up with the main strength of his corps, and, as the ditches were still dry, hazarded an escalade, which proved entirely successful; the greater part of the garrison retiring to Nimeguen, by the bridge of the Rhine. The French troops, finding themselves thus threatened on all sides, withdrew altogether from Holland: the fleet at the Texel hoisted the orange flag, with the exception of Admiral Verhuel, who, with a body of marines that still proved faithful to Napoleon, threw himself with honourable fidelity into the fort of the Texel. Amsterdam, amidst transports of enthusiasm, received the beloved representative of the House of Orange. Before the close of the year, the tricolour flag floated only on Bergen-op-zoom and a few of the southern frontier fortresses; and Europe beheld the prodigy of the seat of war

having been transferred in a single year from the banks of the Niemen to those of the Scheldt."—A. Alison, *History of Europe*, v. 17, ch. 82.

1813-1830.—Union of Austrian Netherlands with United Provinces.—Reign of William I.—Causes of friction.—"After the Treaty of Amiens (1802), a proposal had been entertained by Great Britain and Russia for the union of Austria's Flemish domain with the United Provinces (Holland), which conferred the title 'Sovereign Prince' on William of Nassau upon his return and restoration in 1813. In 1814 Great Britain proposed to the Allies at Chaumont, and the first Treaty of Paris agreed (May 30), that 'Holland, placed under the Sovereignty of the House of Orange, shall receive an increase of Territory.' A secret clause provided, that 'the establishment of a just Balance of Power in Europe requiring that Holland shall be so constituted as to be enabled to support her independence through her own resources,' the Belgian provinces of Austria 'shall be given up for ever to Holland.' [See also BELGIUM: 1797-1815.] In fact, the new kingdom united three areas which had been separate before their conquest by France: (1) the former Austrian Netherlands, (2) the Bishopric of Liège, and (3) the United Provinces of the Netherlands. In July, 1814, William accepted the Eight Articles drawn up by the four Powers to regulate the union. They provided that the enlarged kingdom should adopt the monarchical Constitution formulated in Holland's Fundamental Law (*Grond-wet*) of February, 1814, with the necessary modifications. Religious equality was guaranteed, and adequate representation was promised to the extra-Dutch territory in the Assembly of the States General of the new kingdom, whose sittings were to be held in turn in a Dutch and Belgian town. The Belgians were promised equal commercial and political rights with their fellow subjects, and the public debt of Belgium and Holland was to be pooled. The arrangement in large measure was the work of British diplomacy, and a supplementary Convention of London (August, 1814) between Great Britain and Holland restored to the latter her losses since January 1, 1803, except the Cape of Good Hope and the Guiana region (Essequibo, Berbice, and Demerara). As Holland already (1802) had surrendered Ceylon to Great Britain, the Kingdom of the Netherlands came into existence possessed of the Dutch East Indies, and the islands Curaçao, Oruba, Buen Ayre, Saba, St. Eustatius, St. Martin (with the French) in the Antilles. . . . In March, 1815, William of Nassau assumed the title 'King of the Netherlands and Duke of Luxemburg,' receiving the duchy (excepting the federal fortress of Luxemburg) and membership of the Germanic *Bund* from the Vienna Congress as compensation for Nassau-Dillenburg and his other German territories acquired by Prussia. The second Treaty of Paris (November 20, 1815) added the districts of Philippeville and Marienburg and the Duchy of Bouillon, which were taken from France. But in forming the new kingdom the Allies paid little regard to considerations of race, religion, language, economics, or political tradition, neglect which endangered the union. William, like his Dutch compatriots, despised the Belgians. The latter resented the flippant diplomacy that dealt with their territory as a mere 'increase' of Holland and treated it as a fortuitous 'collection of provinces in which in turn every horse in Europe has stabled.' The Belgian Liberals disliked a Constitution which was essentially aristocratic and autocratic. The Belgian Catholics condemned the religious equality which

it guaranteed, and the bishops forbade (1815) their congregations to take the oath to support it. An added grievance was the king's insistence on a philosophic curriculum at the University of Louvain for candidates for the priesthood, and his refusal to allow Catholics to study abroad lest they should come under Jesuit influence. None was the equality of treatment promised to Belgium by the Eight Articles accorded. The Court resided regularly at the Hague. The States General never met out of Holland, and all the important public Departments were housed there. In 1830 the Court of Appeal was settled at the Hague, though about three-quarters of its litigation during the previous ten years came from Belgium. Even the administration of the coal-mines was established in Holland, though the industry was exclusively a Belgian one. In the civil service the same partiality was shown; in 1830 only one of the seven Ministers was a Belgian. In the army (1830) all but 147 of over 2000 officers were Dutch. Probably two-thirds of the Belgians spoke a dialect closely akin to the Dutch, but French for long had been the official language and that of the bar. With a sincere desire to promote a 'national' language, William made knowledge of Dutch a condition of public employment and eventually constituted it the sole language of official intercourse. The union also saddled Belgium with a share of a Public Debt much greater than her own, and the *mouture* (tax on grist or flour) and *abbatage* (tax on meat) affected her particularly. Belgium's population was far larger than that of Holland, but she had the same representation in the States General. While Belgium, a manufacturing and industrial country, demanded protective tariffs, Holland, a trading and commercial community, maintained a system of free exchange. Though the Fundamental Law, adopted after joint conference in 1815, guaranteed the freedom of the Press, Napoleon's invasion of Belgium in 1815 encouraged the government to introduce repressive legislation. The 'Law of Five Hundred Florins' (1816) imposed that sum on offending journalists for a first offence, and imprisonment from one to three years for its repetition."—C. S. Terry, *Short history of Europe*, pp. 153-155. See FRANCE: 1814 (April-June); VIENNA, CONGRESS OF; GERMANY: Map.

1815-1845.—Constitution.—"In fulfillment of a promise made his people, King William promulgated, August 24, 1815, a new constitution, drafted by a commission consisting of an equal number of Dutch and Belgian members. The instrument provided for a States-General of two chambers, one consisting of members appointed for life by the crown, the other composed of an equal number (55) of Dutch and Belgian deputies elected by the provincial estates. Bills might be rejected, but might not be originated or amended, by this assembly. The suffrage was severely restricted; trial by jury was guaranteed; the budget was to be voted for a number of years at a time; ministers were declared responsible solely to the king; and, all in all, there was in the new system little enough of liberalism. When the instrument was laid before a Belgian assembly it was overwhelmingly

rejected. None the less it was declared in effect, and it continued the fundamental law of the united dominions of William I, until 1830. . . . The revision of 1840 was forced upon the king by the Liberals, whose position was strengthened by the fiscal chaos into which the nation had fallen under the previous autocratic régime. . . . The reformers got very much less than they demanded. Instead of the ministerial responsibility and the public control of the finances for which they asked they procured only an arrangement to the effect that the budget should be submitted to the States-General every two years and the colonial balance sheet yearly, together with certain changes of detail, including a curtailment of the civil list and a reduction of the membership of the States-General in consequence of the loss of Belgium."—F. A. Ogg, *Governments of Europe*, pp. 519-522.

1839-1842.—Separation of Belgium.—Limburg and Luxemburg.—Treaty of The Hague.—"On April 13, 1839, the Five Powers, Belgium, and Holland signed a group of treaties which conveyed to Holland, Limburg, east of the Meuse, as a sovereign duchy within the Germanic *Bund*, which received it in compensation for the surrender of Western (Belgian) Luxemburg. Only eastern or Dutch Luxemburg remained within the *Bund*; it was neutralized (1867) as a separate State upon the formation of the North-German Confederation, and passed with the Dutch Crown until Queen Wilhelmina's accession in 1890, when the operation of the Salic Law gave it to the male heir. Limburg also, on the dissolution of the *Deutsche Bund*, became an integral part of the Kingdom of the Netherlands. The adjustment of matters relating to the Public Debt, the frontier, and the navigation of the Scheldt and Meuse was concluded between Holland and Belgium in 1842 (Treaty of the Hague)."—C. S. Terry, *Short history of Europe*, p. 159.

ALSO IN: A. H. L. Heeren, *Manual of history of political history of Europe and its colonies*, v. 2, pp. 416-418.

1840-1849.—Abdication of William I.—Reign of William II.—Amendment to constitution.—The stubborn attitude of William I in the Belgian question, had caused great discontent. The king lost the vestige of his popularity by marrying a Catholic Belgian countess, Henriette d'Outremont. He abdicated at Het Loo, October 7, 1840. His son William II began his reign under great financial difficulties. A voluntary loan of 127 million guilders at 3 per cent. closed in a very short time. The constitution of 1840 proved unsatisfactory. A "concept of revision" was introduced in the second chamber, March 8, 1848. Under the impression, made by the February revolution in France, the king decided on a more liberal revision than proposed in this "concept." A committee of five, composed of Donker Curtius, Luzac, Thorbecke, De Kampenaer and Storm brought in a new "concept," which was adopted in an extraordinary session of the states-general, and promulgated on November 3, 1848. "The revision of 1848 introduced into the Dutch constitutional system many fundamental changes. Instead of being appointed by the crown, members of the upper branch of the States-General were thereafter to be elected by the

provincial estates; and in the choice of members of the lower house, direct popular elections were substituted for indirect. The ministers of the king were made responsible to the States-General, and the powers of the legislative body were otherwise increased through the extension of its authority over colonial affairs, provision for a regular annual budget, and, most of all, recognition of the right to initiate and to amend projects of legislation. Constitutional government in Holland may be said virtually to have had its beginning in 1848."—F. A. Ogg, *Governments of Europe*, p. 522.—The king died at Tilburg, March 17, 1849, and his son was inaugurated as William III on May 12 at Amsterdam.

1848-1921.—**Suffrage movement.** See SUFFRAGE, MANHOOD: Netherlands: 1848-1921.

1849-1890.—**Reign of William III.**—The reign of William III began under the most fortunate circumstances. An improvement of the finances and various organic laws, carrying out the provisions of the constitution of 1848 were the fruits of the first Donker-Curtius Cabinet and its successor, that of the liberal statesman and economist Thorbecke. An electoral law, provincial and communal laws, navigation laws and a law establishing a telegraph system were enacted. (See TELEGRAPHS AND TELEPHONES: 1847-1852.) "The Catholics for the first time obtained in 1849 the full privileges of citizenship. They owed this to the liberals, and for some years they gave their support to that party. . . . The anti-revolutionaries placed in the foreground the upholding of the Reformed (orthodox Calvinistic) faith in the State, and of religious teaching in the schools. . . . [The] liberal majority in the newly elected States-General was considerable. . . . The king, however, suspected the aims of [Thorbecke] the liberal leader, and personally disliked him, . . . but, after a vain struggle against the hostile majority, . . . [the Donker-Curtius cabinet] was compelled to resign, and Thorbecke was called upon to form a ministry. Thorbecke was thus the first constitutional prime-minister of Holland. . . . A law was passed which added 55,000 votes to the electorate; and by two other laws the provincial and communal assemblies were placed upon a popular representative basis. The system of finance was reformed by the gradual substitution of direct for indirect taxation."—G. Edmundson, *History of Holland*, pp. 411-412.—"The antiquated state of things in which Old Dutch, French imperial, and post-revolutionary Dutch arrangements struggled for the mastery, was superseded by a system instinct with the modern spirit. Trade soon felt the benefit of the new impulse. The navigation laws fell in 1850, [tolls on through cargoes on the rivers were abolished] and improvements were rapidly made in taxation and the tariff; railways were pushed forward, a geological survey of the whole country was made, and the judicial system was reorganised. [In 1852 the empoldering of the Haarlem lake was completed. (See CONSERVATION OF NATURAL RESOURCES: Meaning of reclamation.)]"—M. E. Grant-Duff, *Studies in European politics*, pp. 296-297.—The dissolution of the German League in 1866 dragged the Netherlands into international complications. William III as duke of Luxemburg and Limburg had remained neutral in the Prussian-Austrian war and refused to join the newly formed North German League. While recognition of his new status was postponed by Prussia, Napoleon III attempted to buy Luxemburg. William III was willing to sell the duchy, but Prussia opposed this most vigorously. War was avoided between Prussia and France by the stipulations of the Treaty of London.

Luxemburg became an independent duchy and Limburg a province of the Netherlands. "For a quarter of a century the colonial system notably in Java and Madura, had been disturbed by a troublesome and costly war which the Dutch had to carry on with the Achinese of Western Sumatra. The war began in 1872, the year after Holland acquired England's rights in the island."—C. Mc L. Andrews, *Contemporary Europe, Asia and Africa (History of all nations, v. 20, pp. 309-310)*.—This costly war, created a deficit in the budget of 1877, caused another division in the liberal ranks, and brought about the downfall of the Kappeyne ministry. Van Lynden, Kappeyne's successor, had a difficult task in which he succeeded admirably and was able to carry his government through four difficult years. This period included the revolt in the Transvaal against British rule, during which in spite of the openly expressed sympathy felt in Holland for the Boers, he maintained cordial rela-

WILLIAM III

tions with Great Britain. "In 1877 Queen Sophie died. . . . The king's brother, Henry, for thirty years Stadholder of Luxemburg, died childless early in 1879; and shortly afterwards in June the Prince of Orange, who had never married, passed away suddenly at Paris. The two sons of William III's uncle Frederick predeceased their father, whose death took place in 1881. Alexander, the younger son of the king, [who] was sickly and feeble-minded . . . [died] in 1884, [and of] the male line of the House of Orange-Nassau . . . [only the king was left]. Foreseeing . . . [the possibility of the extinction of his house] in January, 1879, the already aged king took in second wedlock the youthful Princess Emma of Waldeck-Pyrmont. Great was the joy of the Dutch people, when, on August 31, 1880, she gave birth to a princess, Wilhelmina, who became from this time forth the hope of a dynasty, whose history for three centuries had been bound up with that of the nation. . . . The death of Prince Alexander and the king's growing infirmities made it necessary to provide, by a bill passed on August 2, 1884, that Queen Emma should become regent

during her daughter's minority."—G. Edmundson, *History of Holland*, p. 421.

1853.—April movement.—"In 1853 a storm suddenly gathered in a clear sky. The Vatican . . . converted Holland, which [from the sixteenth century] had been . . . a mission, into a country regularly provided with an episcopate. This it had, no doubt, a perfect right to do, for in modern Holland the state has nothing to say to the internal arrangements of the various churches which it recognizes and pays. It was not surprising, however, that a people whose history was so deeply coloured by hatred of Rome should have taken alarm at such an exercise of power, and there was nothing about the manner of the proceeding to make the matter of it more palatable. [Utrecht was erected into an archbishopric, Haarlem, Breda, Hertogenbosch, and Roremonde were made bishoprics.] The ministry itself, while it could not take exception to what had been done, was justly provoked by the way in which it was done. [The prime minister] M. Thorbecke, however, did not think himself justified in throwing himself into the first ranks of the agitation against this papal aggression. The tide, nevertheless, of popular feeling was too strong for him, and, deserted by the king, he and several of his colleagues left the cabinet. The issue of this agitation—the April movement, as it was called—was a bill regulating the relations of the state and the religious communities, which obtained the support of the more moderate Liberals, and the storm passed by without doing any serious damage to the free institutions of Holland."—M. E. Grant-Duff, *Studies in European politics*, pp. 296-297.—"At the meeting of the Second Chamber of the States-General on April 12, Thorbecke had little difficulty in convincing the majority that the Pope had proceeded without consultation with the ministry, and that under the Constitution the Catholics had acted within their rights in remodelling their Church organisation. But his arguments were far from satisfying outside public opinion. On the occasion of a visit of the king to Amsterdam the ministry took the step of advising him not to receive any address hostile to the establishment of the hierarchy, on the ground that this did not require the royal approval. William, who had never been friendly to Thorbecke, was annoyed at being thus instructed in the discharge of his duties; and he not only received an address containing 51,000 signatures but expressed his great pleasure in being thus approached (April 15). At the same time he summoned Van Hall, the leader of the opposition, to Amsterdam for a private consultation. The ministry, on hearing of what had taken place, sent in its resignation, which was accepted on April 19. Thus fell the Thorbecke ministry, not by a parliamentary defeat, but because the king associated himself with the uprising of hostile public opinion, known as the 'April Movement.'"—G. Edmundson, *History of Holland*, p. 413.

1853-1867.—Political developments.—Economic and educational progress.—Three parties were dominant during this period: the Conservatives, the Liberals and the Anti-Revolutionaries, the last named under leadership of the famous historian and statesman Groen van Prinsterer. The pendulum of political power swung frequently from the Conservatives, or Anti-Revolutionaries to the Liberals. "The four chief interests, . . . the subject of debate and party division, were schools, colonies, the army, and the franchise. Parties in the Netherlands were formed more or less on these issues: the Roman Catholics desired compulsory education in their interest; one branch of the Lib-

erals urged Calvinistic education, the other a strictly non-sectarian education. A law of 1857, which required that every commune should maintain non-sectarian public schools, led to the establishment of large numbers of private schools by both Roman Catholics and Calvinists."—C. McL. Andrews, *Contemporary Europe, Asia and Africa (History of all nations, v. 20, pp. 309-310)*.—In 1860 slavery was abolished in the East Indies. In 1862 a national militia was organized. "With the advent of Fransen van de Putte, as colonial minister in 1863, began a series of far-reaching reforms in the East Indies, including the lowering of the differential duties. His views, however, concerning the scandal of the cultivation-system in Java did not meet with the approval of some of his colleagues; and Thorbecke himself supported the dissentients. The ministry resigned, and Van de Putte became head of the government. He held office for four months only. His bill for the abolition of the cultivation-system and the conversion of the native cultivators into possessors of their farms was thrown out by a small majority, Thorbecke with a few liberals and some Catholics voting with the conservatives against it. This was the beginning of a definite liberal split, which was to continue for years."—G. Edmundson, *History of Holland*, pp. 416, 420.—Secondary education was reorganized in the year 1863 and various technical and agricultural schools were established. Medical legislation was enacted. The building of railways was encouraged by Minister Van Hall and the railway network was considerably enlarged by using the profits from the East Indian administration. In 1864 credits were opened for the digging of the canals from Rotterdam and Amsterdam to the sea.

1857-1868.—Commercial treaty with Japan.—Shimonoseki affair. See JAPAN: 1857-1862; 1863-1868.

1867-1870.—Germany's opposition to cession of Luxemburg to France by king of Holland.—Luxemburg made independent state. See GERMANY: 1866-1870.

1867-1887.—Political developments.—Economic and educational progress.—The abolition of the death penalty took place in 1870 and an important agrarian law for Java was enacted. The postal service was reorganized. (See POSTAL SAVINGS BANKS: 1881.) The Franco-Prussian war revealed, during the maintenance of Dutch neutrality, the weakness of the Dutch army. The third cabinet of Thorbecke reorganized the defense of the country. Thorbecke died June 4, 1872. After the death of his opponent Groen Van Prinsterer in 1876, the leadership of the Anti-Revolutionary party was assumed by Dr. Abraham Kuyper. "The elections of 1877 strengthened the liberals; and, an amendment to the speech from the throne being carried [the ministry resigned, and a new ministry was formed by] . . . Joannes Kappcyne, leader of the progressive liberals. A new department of State was now created, that of Waterways and Commerce, whose duties in a country like Holland, covered with a net-work of dykes and canals, were of great importance. A measure which denied State support to the 'private' schools was bitterly resisted by the anti-revolutionaries and the Catholics, whose union in defence of religious education was from this time forward to become closer."—G. Edmundson, *History of Holland*, p. 420.—Under the Conservative second cabinet of Van Heemskerck important judicial reforms were accomplished. Five new provincial courts were established. A new law regulating higher education was enacted in 1876 and an important law regulating primary education in 1878. The last named allowed subsidies for re-

ligious schools, but never satisfied the Anti-Revolutionaries. A new criminal code was substituted for the Napoleonic "Code Pénal." The "New Waterway" from Rotterdam to the sea was opened in 1871 and the "North Sea Canal," connecting Amsterdam with the sea in 1876. (See CANALS: Principal European canals: Holland.) An enlargement of the government railway net was begun. The first important piece of social legislation was the child labor law of 1874 on initiative of Samuel van Houten. From 1883 until 1885 Van Heemskerck and his councillors were engaged on a revision of the constitution. See NETHERLANDS, CONSTITUTION OF.

1883.—Queensland takes possession of New Guinea. See NEW GUINEA.

1887-1890.—Last years of reign of William III.—"The demand for an extension of the franchise, which had first made itself heard in 1872, was not granted until 1887, when, after a six years' struggle, the States-General voted for revision of the existing electoral system. This important reform extended the right to vote from 130,000 electors to 200,000, for it granted the privilege to all male citizens who paid 10 guilders taxes on real property or a personal tax on property beyond the amount that was partially exempt. [The elections of 1888 brought the Anti-Revolutionaries in power and the first socialist, F. Domela Nieuwenhuis, in the Second Chamber. Under the minister of the interior, De Savornin Lohman in 1889 a new law on primary education was enacted. With coöperation of the Liberals this law contained clauses, granting government subsidies to religious schools. A law against excessive labor by women and children was also enacted.] On the king's death on November 23, 1890, the succession passed to Wilhelmina, his daughter by his second marriage, . . . who occupied the throne under the tutelage of her mother, Emma of Waldeck. With William, the male branch of the house of Orange became extinct; and immediately a separation took place between Holland and Luxemburg, the latter of which, under the Salic law, fell to Duke Adolphus of Nassau."—C. McL. Andrews, *Contemporary Europe, Asia and Africa (History of all nations, v. 20, p. 310)*.

1890-1898.—Regency of Queen Emma.—The elections of 1891 were won by the Liberals. A series of taxation laws were enacted under the minister N. G. Pierson. A revision of the electoral franchise was defeated in the Second Chamber. (Tak van Poortvliet). "A new administration . . . came into office (May, 1894) under the presidency of Jonkheer Johan Roëll with Van Houten as minister of the interior. On Van Houten's shoulders fell the task of preparing a new electoral law. His proposals were finally approved in 1896. Before this took place the minister of finance, Spenger van Eyk, had succeeded in relieving the treasury by the conversion of the public debt from a 3½ to a 3 per cent. security."—G. Edmundson, *History of Holland, p. 429*.—"The organization of the army, which retained the old system of enlistment for a term of years with drafting by lot, was for years hotly discussed. Many efforts had been made to introduce the continental system of universal personal and obligatory service, but without success, and a bill to that effect was defeated by the Clericals in 1893. In 1898, however, the matter was made an issue in the elections, and a bill providing for the reorganization of the army was finally passed in the summer of that year, containing a

special clause exempting from military service ministers of religion."—C. McL. Andrews, *Contemporary Europe, Asia and Africa (History of all nations, v. 20, pp. 310-311)*.

1890-1920.—Housing problem. See HOUSING: Holland.

1894-1901.—Accident insurance.—Social insurance.—Workmen's compensation. See SOCIAL INSURANCE: Details for various countries: Holland: 1894-1901.

1896.—Electoral Reform Act.—"The Van Houten reform of the franchise was very complicated, as there were six different categories of persons entitled to exercise the suffrage: (1) payers of at least one guilder in direct taxation; (2) householders or lodgers paying a certain minimum rent and having a residential qualification; (3) proprietors or hirers of vessels of 24 tons at least; (4) earners of a certain specified wage or salary; (5) investors of 100 guilders in the public funds or of 50 guilders in a savings bank; (6) persons holding certain education diplomas. This very wide and comprehensive franchise raised the number of electors to about 700,000."—G. Edmundson, *History of Holland, p. 424*.—"The upper House of the States-General (the parliament keeps that ancient name) is chosen by the local legislatures of the various provinces for nine years, one third going out each third year. This plan of partial renewals of a branch of the legislature has been adopted in many countries, as in the Senate of the United States, but it seems to have originated in Holland some centuries ago. The House of Representatives (lower House of the States-General) is elected directly by the people. . . . [By the law of 1896] about three fourths of the adult men . . . [received] votes,—nearly all except paupers, vagabonds, and unmarried sons in poor families. The monarchy has been of the Prussian rather than the English type, until recently; but during the long minority of the girl-queen the ministries began to be truly 'responsible' to the Representatives."—W. M. West, *Story of modern progress, p. 539*.

1897.—First election under new franchise law.—The first election in Holland under the new franchise law, held June 15-25, 1897, returned to the Chamber forty-seven Liberals, twenty-two Catholics, twenty-two Protestant Anti-Revolutionists, four Radicals, one deputy, styled an Historic Christian, and four Socialists, among whom was the now famous leader, Pieter Jelles Troelstra. The new cabinet of Pierson and Goeman Borgesius (1897-1901) enacted many important social laws: personal military service act; compulsory education; housing act; accident insurance; child laws. Improvements in the condition of army and navy were introduced.

1898-1902.—Sugar conferences at Brussels. See SUGAR BOUNTIES.

1898-1903.—Enthronement of Queen Wilhelmina.—Elections of 1901.—Marriage of Queen Wilhelmina.—Threatened general strike.—War in Achin.—Queen Wilhelmina, who succeeded to the crown on the death of her father, William III, in 1890, reached the age of eighteen on August 31, 1898, and received the reins of government from her mother, Queen Emma, who had acted as regent until that time. The young queen was enthroned September 6 in the New Church at Amsterdam, where she delivered, with a simplicity and fervor which impressed those present, her address to the states-general and took her oath of allegiance to the constitution. "I am happy and thankful," the queen said, "to rule over the people of the Netherlands, who, although small in numbers, are great in virtue and strong by nature and character.

I esteem it a great privilege that it is my life's task and duty to dedicate all my powers to the prosperity and interests of my dear fatherland; and I adopt the words of my beloved father,—'Yes, Orange can never do enough for the Netherlands.'" After the queen and the queen-mother, the most striking figures at the ceremony were the princes from the Dutch Indies. "Queen Wilhelmina attained her majority (August 31, 1898) amidst public enthusiasm. At the same time the Queen-Mother received many expressions of high appreciation for the admirable manner in which for eight years she had discharged her constitutional duties. The measures passed by . . . [the liberal administration then in power] dealt with many subjects of importance. Personal military service was at last, after years of controversy, enforced by law, ecclesiastics and students alone being excepted. Attendance at school up to the age of 13 was made obligatory [in 1900], and the subsidies for the upkeep of the schools and the payment of teachers were substantially increased. . . . [October 10, 1899] a war broke out, in which the Dutch people felt a great and sympathetic interest, between the two Boer republics of South Africa and Great Britain. Bitter feelings were aroused, and the queen did but reflect the national sentiment when she personally received in the most friendly manner President Krüger, who arrived in Holland as a fugitive on board a Dutch man-of-war in the summer of 1900. The official attitude of the government was, however, perfectly correct, and there was never any breach in the relations between Great Britain and the Netherlands. The marriage of Queen Wilhelmina, on February 7, 1901, with Prince Henry of Mecklenburg-Schwerin was welcomed by the people, as affording hopes . . . of the birth of an heir to the throne. The elections of 1901 found the liberal ministry out of favour through the laws enforcing military service and obligatory attendance at school. Against them the indefatigable Dr. Kuyper, who had returned to active politics in 1897, had succeeded in uniting the three 'Church' groups—the democratic anti-revolutionaries, the aristocratic Historical Christians (both orthodox Calvinists) and the Catholics of all sections—into a 'Christian Coalition' in support of religious teaching in the schools. The victory lay with the coalition, and Dr. Kuyper became first minister. The new administration introduced a measure on Higher Education, which was rejected by the First Chamber. A dissolution of this Chamber led to the majority being reversed, and the measure was passed. Another measure revised the Mackay Law and conferred a larger subsidy on 'private' schools. The socialist party under the able leadership of Troelstra had won several seats at the election; and in 1903 a general strike was threatened unless the government concede the demands of the socialist labour party. The threat was met with firmness; an anti-strike law was quickly passed; the military was called out; and the strike collapsed. The costly war in Achin, which had been smouldering for some years, burst out again with violence in the years 1902-3. [See below: 1904.]"—G. Edmundson, *History of Holland*, pp. 426-427.

1904.—**Military operations against Achin.**—A Dutch military expedition against the long insurgent natives of the old Sultanate of Achin, in Sumatra, which was said to have carried death to a thousand women and children, gave rise to stormy scenes in the Netherlands when its session was opened in September. The excuse of the government was that the warriors used the women and children as shields.

1905-1914.—**Defeat of "Christian" coalition.—Social reform legislation.—Closing of Scheldt at outbreak of World War.**—"The quadrennial elections of 1905 found all the liberal groups united in a combined assault upon the Christian Coalition. A severe electoral struggle ensued, with the result that 45 liberals and 7 socialists were returned against 48 coalitionists. Dr. Kuyper resigned; and a new ministry, under the leadership of the moderate liberal [Theodore H.] De Meester, took its place. The De Meester government was however dependent upon the socialist vote, and possessed no independent majority in either Chamber. For the first time a ministry of agriculture, industry and trade was created. Such an administration could only lead a precarious existence, and in 1907 an adverse vote upon the military estimates led to its resignation [in 1908]. Th. Heemskerck undertook the task of forming a new cabinet from the anti-revolutionary and Catholic groups, and at the next general election of 1909 he won a conclusive victory at the polls. This victory was obtained by wholesale promises of social reforms, including old age pensions and poor and sick relief. As so often happens, such a program could not be carried into effect without heavy expenditure; and the means were not forthcoming. To meet the demand a bill was introduced in August, 1911, by the finance minister, Dr. Kolkman, to increase considerably the existing duties, and to extend largely the list of dutiable imports. This bill led to a widespread agitation in the country, and many petitions were presented against it, with the result that it was withdrawn. . . . [In 1900, the birth of the Princess Juliana, the only child of the queen, ensured the succession, to the joy of the great majority of the people.] The election of 1913 reversed the verdict of 1909. Probably in no country has the principle of the 'swing of the pendulum' been so systematically verified as it has in Holland in recent times. The returns were in 1913: church parties, 41; liberals of all groups, 39; socialists, 15. The most striking change was the increase in the socialist vote, their representation being more than doubled; and, as in 1905, they held the balance of parties in their hands. [The queen asked Dr. Bos to form a cabinet; he failed through the refusal of the Socialists to take part in its formation. Cort van der Linden then formed an "extra-parliamentary" cabinet. This cabinet had on its program the final solution of the school subsidy issue and revision of the constitution.] With some difficulty Dr. Cort van der Linden succeeded in forming a liberal ministry. The outbreak of the Great War in August, 1914, prevented them from turning their attention to any other matters than those arising from the maintenance of a strict neutrality in a conflict which placed them in a most difficult and dangerous position. One of the first questions on which they had to take a critical decision was the closing of the Scheldt. As soon as Great Britain declared war on Germany (August 4), Holland refused to allow any

belligerent vessels to pass over its territorial waters."—G. Edmundson, *History of Holland*, pp. 427-428.

1914-1918.—During World War.—When the World War broke out emergency measures took preference over social legislation. The army was mobilized in less than a day in order to enforce neutrality. In December, 1914, a loan of \$100,000,000 was floated to carry the military burdens. The loan was oversubscribed nearly 100 per cent. in January, 1915. On January 4, 1915, the Netherlands Overseas Trust company was organized to take over from the government the responsibility for all shipments to the Netherlands. Late in November a new taxation bill was introduced making the total taxation \$105,000,000 or \$21 per capita. Throughout the year the Netherlands was in constant trouble with the Allies or Germany with regard to violation of its territory, or hindrance to its shipping. In fact, a crisis was averted, several times, only by the diplomatic ability of Loudon, the minister of foreign affairs. About 1,200,000 Belgian refugees fled to the Netherlands, from the occupied territory, during 1914-1915, and were hospitably welcomed, and well cared for. During the next two years the majority returned to their homes. But, nevertheless a large number remained until after the armistice. In 1916, the strain on Dutch neutrality was severe. The Dutch were aroused by the torpedoing of the *Tubantia* (March 16), and *Palembang* (March 18), by the Germans, and on the other hand, restriction of trade by the British orders in council was strongly resented. (See WORLD WAR: 1914: XII. Neutral nations.)

Cort van der Linden had been enabled to form his ministry by undertaking to adopt social legislation and electoral reform from the programs of the Socialist and Liberal parties, which between them formed a majority, and thus obtained the name "extra-parliamentary," by which the ministry was known. In accordance with this agreement, on November 15, by a unanimous vote of the States General, a constitutional amendment, providing for universal suffrage was passed. The Lower House on November 17, voted to make women eligible to membership in the States-General. In November, under the influence of the German, Austrian and Hungarian revolutions, serious riots broke out and it looked as if the Netherlands might turn again to a republican form of government. Troelstra declared in the Second Chamber, that the time had come for the working class to assume control of the government, and large counter-demonstrations were organized by the Conservative parties and trade unions. The failure, however, of Troelstra's

revolutionary movement had become plain by the beginning of 1919. (See below: 1919-1921.) In November 1918 Emperor William II of Germany fled to the Netherlands. Diplomatic notes were exchanged during 1918 and 1919, with the Allied governments, who demanded extradition but the Netherlands maintained the right of political asylum to be paramount. In June 1918 elections took place for the first time under the new electoral Act. The Liberals of all shades lost heavily, the extreme Conservatives and Radicals gained. The Catholics had become the strongest party and the Catholic leader, Dr. Nolens, was requested by the queen to form a cabinet. On the ground, however, that his position as a priest precluded him from leadership in the government, Dr. Nolens declined, and after some delay Jhr. Ruys de Beerenbrouck was appointed on September 9, 1918, and succeeded in forming a cabinet. The program of this cabinet comprised: changes in the primary education law; revision of the constitution; the establishment of a supreme court of labor; the eight hour day; a law regulating the collective labor contract; drastic revision of the law on health and medical care; laws combating the housing shortage; the Primary Education Act provided for by the constitutional amendment of 1916, and old age pensions.

1914-1922.—Economic effect of World War.—Relations with belligerents.—Commercial difficulties.—Financial effects of war.—"Before the war the prosperity of Holland was based on the transit trade which passed through Rotterdam, on the colonial trade with the Dutch East Indies, and on her exports of agricultural produce. The transit trade, being chiefly German trade, came suddenly to an end on the outbreak of war. The colonial trade was slower to decline, but in the year 1918 it had fallen to negligible dimensions. These two blows were fatal to the prosperity of Rotterdam; even in 1917 the traffic of the port was only 10 per cent. of the total of 1913. There remained only the export trade in agricultural produce and in a few native manufactures (such as margarine) to which the war had given a temporary stimulus. Depending upon both groups of belligerents for necessary supplies and facilities—on the Associated Powers for cereals, fodder-stuffs, and fertilizers, on Germany for coal, iron, and potash—Holland was obliged to divide between them her surplus of agricultural produce in agreed proportions, and to allow her importers to give the most stringent undertakings and guarantees that the goods which they received from one group would not be used for the advantage of the other. Thanks to this policy of balance and exchange, the country managed to maintain its more important industries (apart from those dependent on the transit trade) at a tolerable level until the United States entered the war in 1917. But she was then confronted, like the other northern neutrals, with the demand that she should drastically reduce her exports to Germany, on pain of being deprived of all shipping facilities and of practically all the supplies controlled by the Associated Powers. Against this pressure Holland held out until the Armistice was signed. . . . One consequence of the line taken by the Dutch Government was that practically no grain was imported into Holland during 1918, and that the national food-supply remained throughout the year in a precarious position. Bread cards had been instituted in February 1917 on the basis of a normal weekly ration of 2,800 grm. per head per week. But this relatively generous allowance was soon reduced, and by the end of the year the standard ration of

2,800 grm. had to suffice for eleven days. . . . At the end of March [1918], as the hope of a compromise with the Associated Powers seemed more remote than ever, the ration was reduced to 1,400 grm. a week, in the hope that existing stocks would thus be made to last until the new harvest. The farmers and the peasants, who numbered 60 per cent. of the population, were able for the most part to ensure their own supplies of foodstuffs in defiance of rationing and requisitioning orders; and, although the Government was obliged, after the spring of 1918, to prohibit exports of food to Germany, the loss of the German market was to some extent balanced by the high prices obtained from the Dutch consumer. . . . In spite of the inducements given to farmers to extend the arable area [owing to lack of fertilizers], the yield of the chief crops was below the average; and the shortage of [imported] fodderstuffs led to wholesale slaughtering of dairy cattle in the autumn of 1917. Another consequence was enforced idleness of those national industries which depended upon foreign raw materials. The margarine trade . . . collapsed sharply because Great Britain was no longer dependent on it; and no supplies were forthcoming from other sources. [By 1918 most of] the cotton-spinning mills, which employed about 26,000 hands, . . . had closed for want of raw cotton. The cotton-weavers were similarly brought to a standstill because England would no longer supply them with her yarns, of which they had been accustomed to consume 40,000 tons per annum. The shipping yards appeared to be exceptionally fortunate, in that their iron and steel could be obtained from Germany. But in 1917 and 1918 the conditions which Germany attached to deliveries of iron and steel were so severe, and the prices exacted were so high, that many shipbuilders preferred to wait until British materials should be available. The systematic fashion in which Germany exploited the necessities of Holland was for the Dutch a most galling feature of the situation. . . . Up to the end of March 1918 it was the German practice, besides charging heavy prices for coal, to claim extensive 'compensation' in the form of licenses to export from Holland fixed quantities of . . . [foodstuffs]. After March the Dutch Government could no longer undertake to permit these exports on the old scale, and Germany recognized that a renewal of the old agreement was impracticable. None the less she prolonged the negotiations for a new coal agreement up to the end of July, and in those four months suspended her deliveries of coal. . . . These commercial arrangements with Germany were a confession of Holland's economic weakness and threw a heavy strain upon her industries. It is, however, probable that patriotic Dutchmen realized more acutely their country's military and political weakness when England and the United States combined, in March 1918, to requisition the whole of the Dutch shipping which lay in their respective ports. This step, justified by an appeal to the belligerent right of *angary*, was taken by the English and American Governments after the Dutch Government had deliberately refused to approve a chartering arrangement with the owners. . . . But the Dutch Cabinet argued, with some reason, that more respect was shown for the rights of the individual shipowners than for the sovereign rights of Holland. There was another aspect of the question which was forcibly stated by the American Government in a published dispatch. For the past twelve months Great Britain [1917-1918] and the United States had seen large numbers of Dutch vessels lying idle in their ports

at a time when every ton of shipping was urgently required; and it had become apparent that these vessels would not be employed without compulsion in any services that the Associated Powers could facilitate. . . . With this point of view the States-General were disposed to agree, especially when the Associated Powers offered Holland 100,000 tons of grain as a solatium. But the Dutch Cabinet felt the humiliation deeply. [Eighty-seven Dutch vessels, 980,000 tons, were seized by the United States government alone.] . . . For Holland the economic situation was materially eased by the Armistice. Late in November an agreement was concluded under which the Associated Powers undertook to facilitate, within fixed limits, Dutch imports of wheat and rice, oils and fats, fertilizers, and maize for a period of twelve months. But, as a matter of course, this undertaking was accompanied by severe restrictions on Dutch exports to Germany, to be maintained until the conclusion of peace. And it was difficult after the Armistice to obtain any coal from Germany. In November only 44,000 tons reached Holland out of the 120,000 which were due; and at the end of the month the German Government signified that they were unable to make further deliveries for the present. England promised to supply 60,000 tons as a stop-gap, but could not fulfil her promise as promptly as the situation required. It seemed for a time as though Holland would be forced to depend entirely on her own coal-mines, which produced only about 50 per cent. of her normal requirements. Matters improved in January 1919 with the resumption, on a small scale, of the German deliveries, and the prospect of larger supplies from Belgium. But before Holland's supplies of coal—and of a hundred other necessary articles—could be assured it was necessary that conditions of order and peaceful industry should be restored in neighbouring countries. On the political settlement at Paris would depend the future of her colonial trade and of her agriculture, the two most solid of her assets."—*History of the peace conference of Paris* (H. W. V. Temperley, ed., v. 1, pp. 148-152).—"The losses [of Dutch investments] in Russia and Austria alone may be estimated at a billion florins. Moreover, the losses suffered through the falling foreign exchanges, especially marks and kronen, cannot be much less than another billion. . . . Despite the wartime profits, the war . . . inflicted a heavy loss on the people as a whole. This is seen the more plainly in the increase of the national debt due to the war expenditure, . . . from an economic point of view, . . . a squandering of the national fortune. The total of this expenditure amounts to 2,275,000,000 florins, . . . about a billion of which was covered by increased taxation and by sums received from various sources in connection with the war crisis, the remaining 1,275,000,000 florins, or about 57 per cent., being obtained through loans. The interest and amortization payments on these loans amount to 80,000,000 florins per annum, . . . obtained by special taxation, appropriated for this purpose, and by percentages added to some of the existing taxes. Under the Acts authorizing the loans the amortization is so fixed as to extinguish the debt entirely in 1960; 480 millions, or one-third of the total, is to be paid off by 1943. Apart from this expenditure on interest and amortization of war-time loans, the ordinary expenditure of the State had risen in 1918 to 333,400,000 florins, or nearly 70 per cent above that of 1913. The ordinary revenues amounted in 1918 to 329,100,000 florins, or fully 60 per cent above 1913. The deficit on the ordinary Budget thus amounted

in 1918 to 4,300,000 florins, as compared with a surplus of 8,100,000 florins in 1913. The increase both in expenditure and revenue in the ordinary Budget is mainly attributable to the depreciation of money. . . . The Dutch people as a whole suffered considerably in consequence of the war. . . . The temporary revival which set in after the end of the war was regarded as of a permanent nature. . . . All acted as though the world had arrived at great wealth and prosperity instead of its appalling impoverishment through the destruction of capital on an unprecedented scale. . . . The 45-hour working week was introduced. For the two great railway companies alone this entailed the fresh engagement of 8,000 persons and an increased expenditure of 15 to 20 millions. . . . New company flotations were the order of the day. 1. 1920 building work to a total value of 259,000,000 florins was contracted for, against 50,400,000 florins in 1914. . . . Prices of building materials and rates of wages rose to an unprecedented level. Average hourly rates of wages in the building trade rose in Amsterdam from 0.42 florins in 1913 to 1.50 florin and more in 1921. . . . The ordinary expenditure, excluding that for interest and amortization of war loans, increased from 333,400,000 florins in 1918 to 626,600,000 in 1921 and the ordinary revenues increased from 329,000,000 to 591,600,000. Thus, in spite of the utmost increase in the burden of taxation, the ordinary Budget for 1921 showed a deficit of 35 million florins. . . . Per head of population, the national and municipal taxation in 1921 amounted to about 120 florins. In the large towns, persons with an income of 100,000 florins and upwards must pay 50 to 60 per cent of their income in direct taxes alone. . . . The extraordinary expenditure, financed by loans, amounted in 1921 to 287 million florins, of which no less than 209 millions was for working and middle-class housing. In the period from 1918 to November 1, 1922, more than 580 million florins was advanced from the Exchequer for this purpose. In 1921 the reaction set in. The index figure of unemployment, which had fallen in 1920 to 5.8, rose in 1921 to 9, and had reached 12 by March, 1922. Nevertheless, in comparison with other countries, unemployment in Holland [up to February, 1923] remained within relatively moderate limits. This is a notable phenomenon in a country which has abstained from protective measures and held fast to the sound principle of Free Trade. Opportunities of work were conserved as far as possible, but profits of any importance were hardly made any longer. The number of bankruptcies rose from 1,648 in the period from January 1 to October 13, 1921, to 2,392 in the corresponding period in 1922, or 45 per cent."—L. A. 1919.—Netherlands at peace conference.—Disputes with Belgium.—Holland had troubles of her own with the peace conference. The demands for territorial adjustments for the benefit of Belgium, which began soon after the signing of the armistice in newspaper articles in the French press and some few organs of public opinion in Belgium, took a strong tone in the first weeks of February. These questions commanded the most serious attention of the Dutch press, although the government has not taken notice of them officially. Newspapers in the principal Dutch cities devoted a large amount of space to arguments against any cession of territory of Holland, together with expressions from societies in the disputed territory in favor of retaining their ties with Holland. The territory in question is the peninsula of Maastricht, or Dutch Limburg, [east of the Meuse] and the south bank of the river Scheldt, or Dutch Flanders. "The questions at issue between Belgium and Holland are at once the most important, the most complicated, and the most difficult to settle. . . . The Belgian case was presented to the Conference by M. Hymans, and was referred to a special Commission for Belgian Affairs whose terms of reference were to examine the neutral status of Belgium, as established in 1830, and to suggest modifications. The report of the Commission was adopted by the Supreme Council; it urged revision in order to remove the 'risks and inconveniences' which had been imposed upon Belgium, and stated that 'the territorial and fluvial articles' of the Treaties had 'seriously diminished the Belgian capacity for defence.' In communicating this view to the Dutch Government the Supreme Council invited it to send representatives to put the Dutch view before them. The Dutch agreed to this proposal and sent their Foreign Minister, M. van Karnebeek, to take part in a Conference in Paris, which included the Foreign Ministers of the five Great Powers together with Belgian representatives. On the 4th June 1919 the question was referred back to a Commission of the five Great Powers with Belgian and Dutch representatives who were instructed to 'submit proposals which involve neither transfer of territory nor international servitudes.' . . . The Conference naturally decided that it was not within its province to consider any transfer of territory from a neutral State which was not represented at its sittings. The Dutch Government, no less naturally, refused to consider the possibility of any such cession, and a resolution of the 4th June definitely excluded it from subsequent negotiations. . . . The Belgians maintain that the long narrow salient of Dutch Limburg which projects southward into Belgian territory towards Liège is equally hampering to their own and to the Dutch system of military defence. . . . The Belgians have dwelt with great emphasis on the incident which occurred immediately after the Armistice, when some 75,000 disorganized German troops escaped to Germany by this short route. . . . The Belgians further complain of the economic disadvantages which are imposed upon them by Dutch Limburg. They declare that water-borne traffic between Antwerp and the Meuse is seriously hindered by the narrowness of the canal where it passes through Dutch territory. . . . The Dutch obtained control over the mouth of the Scheldt in 1648, when they were secured by the Treaty of Münster in their possession of the left bank. Except for the period between 1792 and 1814 they have maintained that control

ever since. The Treaties of 1839 placed Antwerp under serious strategic and economic disabilities. The port, in accordance with the stipulations of Article XV of the Treaty of Paris of the 30th May 1814, was to continue to be *uniquement un port de commerce*. This implied that no Belgian warships could pass up and down the Scheldt in peace or war; and that Antwerp could not become a naval base. Further, the mouth of the Scheldt was closed by the Dutch on the outbreak of war in 1914. . . . It is difficult to estimate accurately how far the existing regime is injurious to Belgium commercially. The navigation of the Scheldt has been entirely free since the capitalization of the dues in 1863, and the prosperity of Antwerp has been largely enhanced in consequence. On the other hand, the Belgians complain that the Dutch members of the mixed Board of Control which regulates navigation constantly block suggested improvements owing to their lack of interest in the prosperity of Antwerp, which indeed they are bound to regard as the rival of Rotterdam. The Dutch are also able to prevent the dredging of the Western Scheldt, and thereby to make the navigation of the Channel a constant danger."—*History of the peace conference in Paris* (H. W. V. Temperley, ed., v. 2, pp. 102-105).—Direct negotiations, which were entered into between the two governments, broke down in 1920 and prior to 1923 had not been resumed.—See also BELGIUM: 1920 (January).

1919-1921.—Anti-revolutionary feeling.—Social legislation.—Anti-Revolution Act.—Social disturbances in Holland, predicted for the latter part of January, failed to materialize. David Wijnkoop, a Socialist leader, positively asserted that a revolution would be carried out on January 20, 1910. Nothing happened. A correspondent at the Hague said: "People of Holland were greatly surprised at the final outcome of the last uprising. The great royalist demonstration at the time was the feat of the Catholic party, with the help of the capitalist and Court circles. The oldest and most aristocratic families turned out to cheer the Queen on Amalia Field at The Hague, but big demonstrations of this sort can hardly be repeated." During 1919, 1920 and 1921 much of the important legislation promised by the government was passed. In 1919 old age pensions and invalidity insurance were included in the Talma Act; an increase in salary was granted to government employees and teachers in October, 1920; the Primary Education Act became law in November 1920, and it is hoped that this law settles the long controversy, which has poisoned Dutch political life since the first half of the nineteenth century. (See EDUCATION: Modern developments: 20th century: General education: Netherlands.) On January 1, 1921, the eight hour law was promulgated. In the first half of 1920 the "Anti-Revolution" Act caused bitter controversies in the Second Chamber; but the law passed with a substantial majority.

NETHERLANDS, Constitution of.—The first constitution of the Kingdom of the Netherlands—known as the Fundamental Law—was granted in 1815. Important changes have been made since then, however. In 1887 it was modified to such an extent that the instrument as then amended is known as the Constitution of 1887. The principal articles of this Constitution are as follows:

CHAPTER I. THE KINGDOM AND ITS INHABITANTS

[The first three articles define the kingdom, declare the constitution to be binding only in Europe unless otherwise stated, and declare that the boundaries of the provinces, communes and the kingdom may be changed by law.]

Art. 4. All persons within the territory of the Kingdom shall have an equal right to protection of person and property. The law shall regulate the admission and expulsion of foreigners and the general conditions under which treaties may be concluded with foreign powers regarding their extradition. . . .

Art. 6. The inhabitants have the rights of assembly and association. The law regulates and restricts the exercise of these rights in the interests of public order. . . .

CHAPTER II. THE KING

Section 1. Succession to the throne

[Articles 10 to 17 determine the succession to the crown. The succession lies in the direct male line, in order of primogeniture, but failing a male heir, the crown passes to the female line.]

Art. 18. All children born of a marriage concluded by a king or by a queen without the consent of the States-General, or by a prince or princess of the reigning dynasty without the consent to be granted by a law, shall be excluded from the succession, both as regards themselves and their descendants. By contracting such a marriage a queen shall abdicate the throne and a princess shall forfeit her right thereto. . . .

Art. 19. Whenever special circumstances render advisable any change in or provision regarding the order of succession . . . The States-General, convened for this purpose in double number, shall deliberate and resolve thereon in joint session . . .

Art. 20. When no competent heir exists according to the constitution, one shall be appointed by a law, the draft of which shall be presented by the King. The States-General, convened for this purpose in double number, shall deliberate and decide thereon in joint session.

Art. 21. When no competent successor exists according to the constitution, upon the death of the King, the appointment shall be made directly by the States-General in joint session. It shall be convened for this purpose in double number within a month after the King's death. . . .

Art. 23. The King shall wear no foreign crown, except that of Luxemburg.

In no case shall the seat of government be transferred beyond the kingdom. . . .

Section 2. The Revenues of the Crown.

. . .

Section 3. Guardianship of the King.

. . .

Art. 31. The King shall be of age when he reaches his eighteenth year. The same principle shall apply to the Prince of Orange in case he becomes regent. . . .

Section 4. The Regency

Art. 36. During the minority of the King the royal authority shall be exercised by a regent.

Art. 37. The regent shall be appointed by a law, which may at the same time regulate the succession to the regency until the King attains his majority. This law shall be discussed and enacted by the States-General in joint session. The law shall be enacted during the life of the King for the event that his successor may be a minor.

Art. 38. The royal authority shall likewise be conferred upon a regent in case the King becomes incapable of performing the duties of government. Whenever the heads of the ministerial departments, assembled in council, conclude that this condition exists, they shall make their conclusion known to the Council of State and shall ask it to express its opinion within a fixed period. . . .

Section 5. Installation of the King

Art. 51. Upon assuming the government, the King shall be solemnly sworn in and installed as soon as possible in a public joint session of the States-General in the city of Amsterdam.

Art. 52. At this session the following oath or promise shall be taken by the king, on the constitution: 'I swear (promise) to the people of the Netherlands that I will always observe and maintain the constitution. I swear (promise) that I will defend and preserve the independence and the territory of the kingdom with all my power, that I will protect public and individual liberty and the rights of all my subjects, and that I will employ all means which the laws place at my disposal for the preservation and promotion of the general and individual welfare, just as a good king ought to do. So truly help me God Almighty! (This I promise!)

Art. 53. After taking this oath or promise, the King shall be installed at the same session by the States-General; the president of the States-General shall pronounce the following solemn declaration, which shall thereupon be sworn to and confirmed by him and by each of the members separately: 'In the name of the people of the Netherlands and by virtue of the constitution, we receive and swear allegiance to you as King; we swear (promise) that we will maintain your inviolability and the rights of your crown; we swear (promise) to do everything that a good and loyal States-General ought to do. So truly help us God Almighty! (This we promise!)

Section 6. The Powers of the King

Art. 54. The King is inviolable; the ministers are responsible.

Art. 55. The executive power shall be vested in the King.

Art. 56. General administrative regulations shall

be issued by the King. Provisions to be enforced by penalties shall not be included among such regulations except by virtue of a law. The penalties to be imposed shall be regulated by law.

Art. 57. The King shall have supreme control of foreign relations.

Art. 58. The King declares war. He shall give immediate notice thereof to the two houses of the States-General, together with such additional information as he deems consistent with the interests of the state.

Art. 59. The King shall conclude and ratify all treaties with foreign powers. He shall also communicate the purport of these treaties to the two houses of the States-General, as soon as he considers that the interests of the state permit. Treaties which contain modifications of the territory of the state, which impose pecuniary obligations upon the kingdom, or which contain any other provision concerning legal rights, shall not be ratified by the King until after approval by the States-General. This approval is not required if the power has been reserved to the King by law to conclude such treaty.

Art. 60. The King shall have the supreme control over the land and naval forces. The Military officers shall be appointed by him. They shall be promoted, discharged, or retired by him in accordance with the rules prescribed by law. . . .

Art. 61. The King shall have supreme control of the colonies and possessions of the kingdom in other parts of the world. The regulations for the conduct of the government in the colonies and possessions shall be established by law. The monetary system shall be regulated by law. Other matters relating to these colonies and possessions shall be regulated by law as soon as the necessity therefor appears to exist.

Art. 62. The King shall cause a detailed report to be made annually to the States-General regarding the government and condition of the colonies and possessions. The law shall regulate the manner in which the finances of the colonies are to be administered and accounted for.

Art. 63. The King shall have supreme control of the public finances. He shall regulate the salaries of all bodies and officials who are paid out of the national treasury. The salaries of the Council of State, of the Court of Accounts, and of the judicial officers shall be regulated by law. The King shall include the salaries in the estimates of expenses of the kingdom. The pensions of officials shall be regulated by law. The King shall have the right to coin money. . . .

Art. 64. The King shall have the right to grant pardon in case of penalties imposed by judicial sentence. He shall exercise this right after receiving the opinion of the judge designated for this purpose by a general administrative regulation. Amnesty or exemptions from the legal consequences of crime shall be granted only by law.

Art. 65. Dispensation from legal provisions shall be granted by the King only under the authority of law. The law conferring this authority shall specify the provisions to which the authorization to grant dispensation applies. Dispensation from the provisions of general administrative regulations is permitted, provided this right has been expressly reserved to the King in the regulation in question.

Art. 70. The King shall settle differences arising between provinces, between provinces and communes, between communes, and between provinces or communes and *waterchappen*, *veenschappen*, and *veenpolders*, which are not comprised among those mentioned in Art. 153 or among those

the settlement of which is intrusted, by virtue of Art. 154, to the regular courts, or to a body vested with administrative jurisdiction.

Art. 71. The King shall recommend projects of law to the States-General and make such other recommendations to them as he considers proper. He shall have the right to approve or to reject the laws adopted by the States-General. . . .

Art. 73. The King shall have the right to dissolve the houses of the State-General, either separately or simultaneously. The decree of dissolution shall at the same time contain an order for the election of new houses within fourteen days, and for the assembling of the newly elected houses within two months. When the Council of State exercises the royal authority it shall not have the right of dissolution.

Section 7. Council of State and Ministerial Departments

Art. 74. There shall be a Council of State whose composition and powers shall be regulated by law. The King shall be president of the Council and shall appoint its members. . . .

Art. 75. The King shall submit for discussion in the Council of State all matters to be presented by him to the States-General or which may be presented to him by the States-General, and all general administrative measures of the kingdom and of its colonies and possessions in other parts of the world. At the head of decrees to be issued, it shall be stated that the Council of State has been consulted upon the matter. The King shall also consult the Council of State upon all matters regarding which he thinks it proper to do so. The King alone shall decide and shall always make known his decision to the Council of State. . . .

Art. 77. The King establishes ministerial departments and appoints and dismisses the heads thereof at his will. The heads of the ministerial departments are charged with the enforcement of the constitution and of the other laws in so far as such enforcement is within the power of the crown. Their responsibility shall be regulated by law. All royal decrees and orders shall be countersigned by the head of one of the ministerial departments.

CHAPTER III. STATES-GENERAL

Section 1. Composition of States-General

Art. 78. The States-General represents all the people of the Netherlands.

Art. 79. The States-General shall be divided into an Upper and a Lower House.

Art. 80. The members of the Lower House shall be elected directly by the male inhabitants, who are at the same time citizens of the Netherlands, and who fulfil the requirements of the election law. . . . From the exercise of the right to vote are excluded those who have been deprived of this right by judicial sentence; those who are in prison or custody; those who have lost control or management of their property by judicial sentence; those who, during the civil year preceding the preparation of the electoral lists, have received assistance from a charitable institution or from a communal government. . . .

Art. 81. The Lower House shall be composed of one hundred members, who shall be elected in electoral districts. The division of the kingdom into electoral districts, as well as everything per-

taining to the right to vote and the manner of voting shall be regulated by law.

Art. 82. The Upper House shall be composed of fifty members. They shall be elected by the provincial estates in the following proportions: North Brabant, 6; Gelderland, 6; South Holland, 10; North Holland, 9; Zealand, 2; Utrecht, 2; Friesland, 4; Overijssel, 3; Groningen, 3; Drenthe, 2; Limberg, 3-50. In case of the union, division, or change in boundaries of provinces, or of the formation of new ones, the law shall provide for the changes thereby rendered necessary in this apportionment.

Art. 83. When the States-General is convened in double number, there shall be added to the regular members of each house an equal number of extraordinary members, to be elected in the same manner as the regular members. The decree of convocation shall also fix the day for the election.

Section 2. Lower House of States-General

Art. 84. In order to be eligible to membership in the Lower House, the only requisites are to be a male citizen of the Netherlands, not to have lost the control or management of one's property or to have been rendered ineligible by a judicial sentence, and to have attained the age of thirty years.

Art. 85. The members of the Lower House shall be elected for four years. They shall retire as a body and shall be immediately re-eligible. . . .

Art. 88. The president shall be appointed by the King, for the period of one session, from a list of three members submitted by the House. . . .

Section 3. Upper House of States-General.

Art. 91. The members of the Upper House shall be chosen for nine years. . . . One-third shall retire every three years in accordance with a list prepared for this purpose. The retiring members are immediately re-eligible.

Art. 92. The president shall be appointed by the King from among the members for the period of one session. . . .

Section 4. Provisions Common to Both Houses.

Art. 94. The heads of the ministerial departments shall have seats in both houses. They shall have only a deliberative voice, unless they have been elected members of the house in which they sit. They shall furnish the houses, orally or in writing, such information, as is requested and the furnishing of which is not considered detrimental to the interests of the state. They may be summoned by either of the two houses to attend its meetings for this purpose.

Art. 95. Both houses shall have the right to investigate the conduct of public affairs, either separately or in joint session, in the manner provided by law.

Art. 96. A member of the States-General shall not at the same time be vice-president or member of the Council of States; president, vice-president, member, attorney-general, or advocate-general of the High Court; president or member of the Court of Accounts, or commissioner of the King in a province. . . .

Art. 97. The members of the States-General shall not be liable to judicial prosecution for anything which they may have said in its sessions or which they may have presented to it in writing. . . .

Art. 100. The States-General shall meet at least once each year. Its regular session shall commence on the third Tuesday in September. The King may call an extraordinary session as often as he thinks proper.

Art. 101. The separate sessions of the two houses, as well as their joint sessions, shall be held publicly. The doors shall be closed whenever one-tenth of the members present so demand or when the president considers it necessary. The assembly shall decide whether the deliberations are to take place with closed doors. Matters considered in secret session may also be decided therein.

Art. 102. In case the King dies or abdicates the throne when the States-General is not in session, that body shall assemble without being called. Such extraordinary session shall meet on the fifth day after the King's death or abdication. If the houses are dissolved, this period shall begin at the conclusion of the new elections.

Art. 103. The session of the States-General shall be opened, in a joint meeting of the two houses, by the King or by a committee acting on his behalf. It shall be closed in the same manner whenever he thinks that the interests of the state no longer require its continuance. . . .

Section 5. Legislative Power

Art. 109. The legislative power shall be exercised jointly by the King and the States-General.

Art. 110. The King shall send his recommendations, whether of laws or of other matters, to the Lower House in a written message or by a committee. He may instruct special commissioners, designated by him, to support the ministers during the consideration of such measures in the meetings of the States-General.

Art. 111. Any measure recommended by the King shall always first be examined before being submitted to a public discussion. The House shall determine in its Rules of Order in what manner this examination shall be made.

Art. 112. The Lower House, as well as a joint session of the States-General, shall have the right to amend a measure proposed by the King.

Art. 113. Whenever the Lower House decides to adopt a proposition, either unchanged or amended, it shall send it to the Upper House. . . .

Art. 114. The Upper House, in accordance with Art. 111, shall consider the proposition as it is adopted by the Lower House. When it decides to adopt the proposition, it shall make the fact known to the King and to the Lower House. . . .

Art. 115. Until the Upper House takes action upon it, the King shall have the power to withdraw the proposition made by him.

Art. 116. The States-General shall have the power to present projects of law to the King.

Art. 117. The initiative in this regard shall belong exclusively to the Lower House, which shall consider the proposed measure in the same manner as prescribed for measures proposed by the King, sending it, after adoption, to the Upper House. . . .

Art. 118. When the Upper House, after having deliberated on the measure in the usual manner, shall have approved it, it shall send the measure to the King. . . .

Art. 119. Other recommendations than projects of laws may be presented to the King by either of the houses separately.

Art. 120. The King shall make known to the States-General as soon as possible whether or not he approves a project of law adopted by that body. . . .

Art. 121. All bills adopted by the States-General and approved by the King shall acquire the

force of law and shall be promulgated by the King. The laws are inviolable.

Art. 122. The laws shall be binding only for the kingdom unless it is expressed therein that they are binding for the colonies and possessions in other parts of the world.

Section 6. Budget

Art. 123. The estimates of all expenses of the kingdom shall be fixed and the means of meeting such expenses provided by law.

Art. 124. The projects of the general budgetary laws shall be annually presented to the Lower House in the name of the King, immediately after the opening of the regular session of the States-General, before the beginning of the year for which the budget is to serve. . . .

Art. 126. An account of the receipts and expenditures of the kingdom for each year shall, after approval by the Court of Accounts, be presented to the legislative bodies in the manner provided by law.

CHAPTER IV. PROVINCIAL ESTATES AND COMMUNAL GOVERNMENTS

Section 1. Composition of Provincial Estates

Art. 127. The members of the Provincial Estates shall be chosen directly for six years by the male inhabitants of the province, who are citizens of the Netherlands, and who fulfil the requirements of the law as to aptitude and social condition and have reached the age prescribed by the law, which shall not be under twenty-three. . . . Half of the members shall retire every three years. In order to be eligible to membership in the Provincial Estates it is necessary to be a male citizen of the Netherlands and a resident of the province, not to have lost the control or management of one's property or have been deprived of the right to vote by judicial sentence, and to have attained the age of twenty-five years. The election of the members of the Provincial Estates shall take place in the manner prescribed by law.

Art. 128. No one shall at the same time be a member of the Upper House of the States-General and of the Estates of a province nor a member of the Estates of more than one province.

Art. 130. The Estates shall meet as often during the year as the law provides, and also whenever they are convened in extraordinary session by the King.

The meetings shall be public. . . .

Section 2. Powers of Provincial Estates

Art. 133. The authority and powers of the Estates shall be regulated by law. . . .

Art. 134. The Estates shall be intrusted with the regulation and administration of the affairs of the province. They may enact such ordinances as they consider necessary for the interests of the province. Such ordinances shall require the approval of the King. This approval shall not be refused except by a decree giving the reasons therefor, after consultation with the Council of State. . . .

Art. 136. Every resolution of the Estates establishing, altering, or abolishing a provincial tax shall require the approval of the King. . . .

Art. 137. The budget of the provincial receipts and expenditures, to be prepared annually by the Estates, shall require the approval of the King. . . .

Art. 139. The Estates shall appoint from their

own members a Committee of the Estates, to which, in accordance with rules to be established by law, the daily administration of affairs shall be intrusted, and this whether the Estates are or are not in session.

Art. 140. The power of the King to suspend or annul the decisions of Provincial Estates or of the Committee of the Estates which conflict with the law or with public interests shall be regulated by law.

Art. 141. The King shall appoint a commissioner in each province, who shall be charged with the execution of royal orders and with supervision over the acts of the Estates. This commissioner shall be president of the Provincial Estates and of the Committee of the Estates, and shall have a vote in the latter body. . . .

Section 3. Communal Governments.

Art. 143. At the head of the commune shall be a council, the members of which shall be directly elected for a certain number of years by the male inhabitants of the commune who are citizens of the Netherlands, who fulfil the requirements of the law as to aptitude and social condition, and who have attained the age prescribed by the law, which shall not be less than twenty-three years. . . . In order to be eligible to membership in the council it is necessary to be a male citizen of the Netherlands and a resident of the commune, not to have lost the control or management of one's property or have been deprived of the right to vote by judicial sentence, and to have attained the age of twenty-three years. The president shall be appointed by the King, from among or from without the members of the council, and may be dismissed by him.

Art. 144. The council shall be intrusted with the regulation and administration of the local affairs of the commune. It may adopt such ordinances as it considers necessary for the interests of the commune. . . . The law shall determine what authority takes the place of the communal government when the latter fails to execute the laws, the general administrative measures, or the provincial ordinances.

Art. 145. A law shall regulate the power of the King to suspend or to annul the resolutions of communal governments which conflict with the law or with public interests. This power is unlimited in the case of local ordinances and regulations.

Art. 146. The decisions of communal governments concerning such control over communal property or such other civil acts as the law prescribes and concerning the budgets and expenditures shall be submitted to the approval of the Committee of the Provincial Estates. The preparation of the budgets and of the accounts shall be regulated by law.

Art. 147. The resolution of a communal government establishing, altering, or abolishing a local tax shall be presented to the committee of the Provincial Estates, which shall report thereon to the King, without whose approval no action shall be taken in the matter. . . .

CHAPTER V. JUSTICE

Section 1. General Provisions

Art. 149. Justice shall be administered throughout the kingdom in the name of the King.

Art. 150. Civil and commercial law, criminal law, military criminal law, the administration of justice, and the organization of the courts shall

be regulated by law in general codes, saving the right of the legislative power to regulate particular subjects by separate laws.

Art. 151. No one shall be deprived of his property without a previous declaration by law that the public utility requires that it be taken, and without receiving a compensation previously paid or determined, both in accordance with the provisions of a general law. . . .

Section 2. Courts

Art. 162. There shall be a supreme court called the High Court of the Netherlands, the members of which shall be appointed by the King in conformity with the following article.

Art. 163. When a vacancy occurs the fact shall be made known by the High Court to the Lower House of the States-General, which, in order to fill it, shall present a list of three persons from which the King shall choose one. The King shall appoint the president and the vice-president from among the members of the High Court.

Art. 164. Members of the States-General, heads of the ministerial departments, governors-general, and higher officers who under different titles are clothed with the same power in the colonies or possessions in other parts of the world, members of the Council of State, and commissioners of the King in the provinces shall, even after their retirement from office, be subject to prosecution before the High Court, either by the King or by the Lower House, because of offenses committed in the exercise of these offices. . . .

Art. 166. Judicial officers shall be appointed by the King. Judicial officers who are vested with the power to try cases, and the attorney-general of the High Court shall be appointed for life. They may be dismissed or relieved of their duties by judgment of the High Court in the cases prescribed by law. They may at their own request be relieved of their duties by the King. . . .

CHAPTER VI. RELIGIOUS WORSHIP

Art. 167. Every person shall be absolutely free to profess his religious opinions, except that society and its members shall be protected against violations of the criminal law.

Art. 168. Equal protection shall be granted to all religious denominations in the kingdom.

Art. 169. The adherents of the various religious denominations shall all enjoy the same civil and political rights and shall have an equal right to hold dignities, offices, and employments. . . .

CHAPTER VII. FINANCES

Art. 174. No taxes shall be levied for the benefit of the national treasury except by virtue of law. This provision is also applicable to taxes levied for the benefit of national works and institutions, in so far as the right to regulate these taxes is not reserved to the King.

Art. 175. No exemptions shall be granted in the matter of taxation.

Art. 176. The state guarantees the fulfilment of its obligations toward its creditors. The debt shall be taken under consideration annually for the purpose of protecting the interests of the creditors of the state.

Art. 177. The weight, standard, and value of the coin shall be regulated by law.

Art. 178. The supervision and management of affairs relating to the mint, and the settlement of controversies regarding the alloy, assay, and

other matters relating to coinage shall be regulated by law. . . .

CHAPTER VIII. DEFENSE

Art. 180. All citizens of the Netherlands who are able to do so are obliged to assist in maintaining the independence of the kingdom and in defending its territory. This obligation may also be imposed upon residents who are not citizens.

Art. 181. For the protection of the interests of the state there shall be an army and a navy composed of volunteers and of those who are required to perform military service. Compulsory military service shall be regulated by law. The obligations which may be imposed, with regard to national defense, upon those who do not belong to the army or navy, shall also be regulated by law. . . .

CHAPTER IX. WATERSTAAT¹

Art. 188. The law shall prescribe rules regarding the administration of the *waterstaat*, including the supreme immediate control thereof, regard being had for the provisions contained in the following articles of this chapter.

Art. 189. The King shall exercise supreme control over everything relating to the *waterstaat*, regardless of whether the costs thereof are defrayed from the national treasury or in some other manner.

Art. 190. The Provincial Estates shall have the immediate control over all works pertaining to the *waterstaat*, *waterschappen*, *veenschappen*, and *veenpolders*. Nevertheless the law may assign the control over these works to others. . . .

CHAPTER X. PUBLIC INSTRUCTION AND RELIEF OF POOR

Art. 192. Public instruction shall be an object of constant care on the part of the government. The organization of public instruction shall be regulated by law, the religious convictions of everyone being respected. Adequate public primary instruction shall be provided by the government throughout the kingdom. The imparting of instruction shall be free, except that it shall be under the supervision of the authorities, and that, as far as intermediate and primary instruction is concerned, the teachers shall be subject to examination as to their ability and moral character; all to be regulated by law. The King shall cause a detailed report to be made annually to the States-General on the condition of the higher, intermediate, and primary schools. . . .

CHAPTER XI. AMENDMENTS

Art. 194. In every project to amend the Constitution the proposed amendment shall be expressly indicated. A law shall declare that there is a reason for taking under consideration the proposed amendment as set forth in it.

Art. 195. After the promulgation of this law the houses shall be dissolved. The new houses shall consider the proposed amendment, and two-thirds of the votes cast shall be necessary to adopt the

¹ Under *waterstaat* are included all works for protection against the sea, dunes, dikes, dams, rivers, bridges, railways, other public works in general, and the exploitation of peat bogs. *Waterstaat* are associations formed for the purpose of protecting lands against the sea, and for drainage or irrigation. *Veenschappen* are peat bogs, and *veenpolders* are districts whose owners are grouped into associations for the administration and exploitation of peat bogs.

amendment as presented to them in accordance with the aforementioned law. . . .

Art. 197. Amendments to the constitution, adopted by the King and the States-General, shall be solemnly promulgated and added to the constitution. . . .

Amendments.—Primary Education Act, Universal suffrage, Revision of electoral system. See NETHERLANDS: 1887-1890; 1914-1918.

NEUCHÂTEL, or Neuchâtel, canton in the west of Switzerland, between Lake Neuchâtel and the French frontier. It has an area of 312 square miles and a population, 1920, of 131,349. Neuchâtel (German Neuenburg), chief town and seat of the cantonal government, is situated on the shore of Neuchâtel, eighty-five miles north-east of Geneva. The town had its origin in the fifth century. During the eleventh century Neuchâtel was under the suzerainty of the dukes of Burgogne, but in the thirteenth century the Count Rodolphe of Neuchâtel ceded his rights to Rudolph of Hapsburg, German emperor, who presented the territory in 1288 to Jean de Chalons. By a marriage Neuchâtel passed into the possession of Louis d'Orleans-Longueville, who came into conflicts with the adjacent cantons and was finally expelled in 1512. After his death his widow recovered the countship of Neuchâtel in 1520. On the death of the duchess de Nemours in 1707 the countship passed by succession to the king of Prussia, Frederick I, whose heirs held it until 1806.

NEUHOFF, Theodore Stephen, Baron von (c. 1690-1756), German adventurer, king of Corsica, 1736. See CORSICA: 1720-1760.

NEUILLY, Treaty of (1919), dictated to Bulgaria by the Allied and Associated Powers at the Paris Peace Conference, contained the terms of settlement resulting from Bulgaria's participation in the World War. The Treaty was handed to the Bulgarian delegation in Paris on September 10, 1919. It was signed at Neuilly, France, on November 27, 1919, ratified by the Bulgarian Sobranje on January 12, 1920, and became effective on August 9. The first part contained the Covenant of the League of Nations, to which Bulgaria was admitted in December, 1920. (For territorial changes stipulated by the Treaty, see BULGARIA: 1919.) By Section I, "Bulgaria recognizes the Serb-Croat-Slovene State and renounces in favor of that State all rights and title over the territories of the Bulgarian Monarchy situated outside the frontiers of Bulgaria, as defined by the present treaty." Provision is made for Bulgarian nationals residing in those territories to acquire Jugo-Slav nationality. In Section II, Bulgaria makes similar renunciation of territory in favor of Greece, while provision is made to grant choice of nationality to Greeks in Bulgarian territory and Bulgarians in Greek territory. In Section III, Bulgaria "renounces in favor of the Allied and Associated Powers all rights and titles over the territories in Thrace which used to belong to the Bulgarian Monarchy and . . . undertakes to accept whatever settlement" the Allies may

decide on, the latter, "on the other hand [undertake] to ensure economic outlets for Bulgaria to the Aegean Sea under conditions which will be fixed at a later date." Section IV, devoted to the protection of minorities, reproduces those laid down in the Austrian Treaty of St. Germain. Under this head, Article 49 "Bulgaria undertakes that the stipulations contained in the section shall be recognized as fundamental laws, and that no law, regulation or official action shall conflict or interfere with these stipulations, nor shall any law, regulation or official action prevail over them." Some of the other provisions are as follows:

Art. 50. Bulgaria undertakes to assure full and complete protection of life and liberty to all inhabitants of Bulgaria without distinction of birth, language, race or religion. All inhabitants of Bulgaria shall be entitled to the free exercise, whether public or private, of any creed, religion or belief, whose practices are not inconsistent with public order or public morals.

Art. 51. Bulgaria admits and declares to be Bulgarian nationals *ipso facto* and without the requirement of any formality all persons who are habitually resident within Bulgarian territory at the date of the coming into force of the present treaty and who are not nationals of any other State.

Art. 52. All persons born in Bulgarian territory who are not born nationals of another State shall *ipso facto* become Bulgarian nationals.

Art. 53. All Bulgarian nationals shall be equal before the law and shall enjoy the same civil and political rights without distinction as to race, language or religion. . . . No restriction shall be imposed on the free use by any Bulgarian national of any language in private intercourse, in commerce, in religion, in the press or in publications of any kind, or at public meetings. . . .

Art. 54. Bulgarian nationals who belong to racial, religious or linguistic minorities shall enjoy the same treatment and security in law and in fact as the other Bulgarian nationals. In particular they shall have an equal right to establish, manage and control at their own expense charitable, religious and social institutions, schools and other educational establishments, with the right to use their own language and to exercise their religion freely therein.

Art. 55. Bulgaria will provide in the public educational system in towns and districts in which a considerable proportion of Bulgarian nationals of other than Bulgarian speech are resident adequate facilities for insuring that in the primary schools the instruction shall be given to the children of such Bulgarian nationals through the medium of their own language. This provision shall not prevent the Bulgarian Government from making the teaching of the Bulgarian language obligatory in the said schools. . . .

Art. 56. Bulgaria undertakes to place no obstacles in the way of the exercise of the right which persons may have under the present treaty, or under the treaties concluded by the allied and associated powers with Germany, Austria, Hungary, Russia or Turkey, or with any of the allied and associated powers themselves, to choose whether or not they will recover Bulgarian nationality. . . .

Art. 57. Bulgaria agrees that the stipulations in the foregoing articles of this section, so far as they affect persons belonging to racial, religious or linguistic minorities, constitute obligations of international concern and shall be placed under the guarantee of the League of Nations. They shall not be modified without the assent of a majority of the council of the League of Nations. . . . Bulgaria agrees that any member of the council of the

League of Nations shall have the right to bring to the attention of the council any infraction, or any danger of infraction, of any of these obligations, and that the council may thereupon take such action and give such direction as it may deem proper and effective in the circumstances. . . .

The General provisions are as follows: "Following this section are general provisions by which Bulgaria accepts the abrogation of the Brest-Litovsk treaties and other pacts with the Bolshevik Government of Russia, and recognizes the frontiers, as they will finally be fixed, of Austria, Greece, Hungary, Rumania, Jugoslavia and Czechoslovakia; also the treaties concluded by the Allies with Germany, Austria, Hungary and Turkey, as well as the French protectorate over Morocco and the British protectorate over Egypt. . . . Among the most important of the general clauses are the following: Limiting the Bulgarian military forces to 20,000 and abolishing universal compulsory military service; limiting the Bulgarian Navy to four torpedo boats and six motor boats, all without torpedoes; forbidding the employment of any military or naval air forces or the keeping of any dirigibles. The reparation clauses compel Bulgaria to pay 2,250,000,000 francs gold (about \$450,000,000) in semi-annual installments over a period of thirty-seven years, beginning July 1, 1920, with interest at 5 per cent. per annum. In addition, it provides for the return to Greece, Rumania and Serbia of any objects or securities seized during the invasion. It requires Bulgaria to deliver to Greece, Rumania and Serbia within six months after the treaty came into force [certain] live stock. . . . It also provides that 50,000 tons of coal shall be delivered annually for five years to Jugoslavia. There is a provision requiring Bulgaria to pay the total cost of all armies of the allied and associated powers occupying Bulgarian territory from the signing of the armistice, Sept. 29, 1918, to the coming into force of the treaty."—*New York Times Current History*, June, 1920, pp. 548-550.—See also BULGARIA; 1919; BALKAN STATES; 1921; Bulgaria; THRACE; 1918-1921.

"NEUTRAL GROUND," territory in Westchester county, New York, between English and American forces during the Revolutionary War. See U.S.A.; 1780.

NEUTRAL NATION, North American Indian tribe, named for their neutrality in war between the Hurons and Five Nations. See HURONS; IROQUOIS CONFEDERACY: Their conquests and wide dominions.

NEUTRALISED STATE.—"A neutralised nation is one which is prohibited indefinitely, or for a considerable period, from carrying on war except in its own defence, and from entering into such political engagements with other states as might endanger its neutrality in the event of war; in return its neutrality or the inviolability of its territory is guaranteed by the great powers. It is, so to speak, bound over to keep the peace; and the undertaking is not regarded as impairing its sovereignty. The prohibition must proceed from the general body of nations, for a particular state cannot of its own accord cut itself adrift from the ordinary incidents of international character. Neutralisation is easily distinguished from neutrality. It is normally permanent, general and involuntary, whereas neutrality is temporary, particular and voluntary. Neutralisation necessarily involves neu-

trality, but neutrality does not necessarily involve neutralisation. The three instances of neutralisation usually cited are those of Switzerland, Belgium and Luxemburg.—F. Smith, *International law*, pp. 66-67.—See SWITZERLAND: 1803-1848; BELGIUM: 1839-1914; LUXEMBURG: 1780-1914.

NEUTRALITY: Development.—The conception of neutrality was not entirely unknown in ancient times, though, undoubtedly, there never was then uniform and systematic practice. The States of Hellas sometimes put into practice some of the fundamental principles involved in the conception, and their writers often use expressions signifying 'keeping quiet,' 'being of neither party,' 'occupying an intermediate position,' and the like. Roman writers speak of 'medii,' 'amici,' 'pacati'; but neutrality was scarcely compatible with their State's policy which regarded another country either as an ally or as an enemy. In the Middle Ages a similar view obtained. As time went on maritime commerce developed, interstate relations increased, colonies were founded, efforts to promote peace were made by the Church, the objects of war became modified, and the notion of neutrality came to be more and more clearly defined. Treaties and conventions aided this progress. Early in the seventeenth century practice was yet unsettled; but by the following century the duty of a non-combatant State's impartiality, and the belligerents' respect of the latter's territory began to be more definitely recognized and insisted on—thought it was still thought legitimate for a third State to furnish troops to a belligerent conformably to treaty obligations, and also for troops to be raised on neutral territory in general. A certain attempt to put into force something like a consistent doctrine was made—though unsuccessfully—in the case of the First Armed Neutrality formed by Russia in 1780 [see ARMED NEUTRALITY]; but it may be said that the essential principles of neutrality, conferring rights on the one hand and imposing obligations on the other, were first applied in practice by the United States during the Washington administration. Thus in regard to the conduct of the French envoy Genêt . . . Jefferson formulated in 1793 the obligations of neutral States: 'That a neutral nation must, in all things relating to the war, observe and enact impartiality toward the parties; that favours to one to the prejudice of the other would impart a fraudulent neutrality, of which no nation would be the dupe; that no succour should be given to either unless stipulated by treaty, in men, arms, or anything else directly serving for war; that the right of raising troops being one of the rights of sovereignty, and consequently appertaining exclusively to the nation itself, no foreign Power or person can levy men within its territory without its consent; and he who does may be rightfully and severely punished; that if the United States have a right to refuse the permission to arm vessels and raise men within their ports and territories, they are bound by the laws of neutrality to exercise that right, and to prohibit such armaments and enlistments.' Then followed both in Great Britain and in the United States notable enactments imposing on their subjects certain important duties in respect of neutrality.—C. Phillipson, *International law and the Great War*, pp. 262-264.

Present law.—"The present law of neutrality is founded partly on usage and partly on written law. The latter is contained in several Conventions of The Hague—more particularly the fifth Convention of 1907 (see HAGUE CONFERENCES: 1907) dealing with the case of war on land, and the thirteenth dealing with maritime war—and in the Declaration of London, 1909. . . . In summary form it may be

said that the obligations thus laid on every neutral State are, firstly, to abstain from doing certain acts, for example, furnishing a belligerent with troops, war material, and any supplies calculated to aid him in prosecuting the war; secondly, to prevent others from doing within its territory anything intended for belligerent service, for example, enlisting men, making there a base of operations, dispatching thence warships; thirdly, to acquiesce in certain belligerent acts that interfere with its subjects or their property, for example, searching merchantmen and seizing contraband. To these is to be added the general duty of impartiality, that is, all belligerents must be treated equally by the neutral State when it carries out its duties and exercises its discretionary powers. . . . A neutral Power must abstain from supplying instruments and munitions of war or giving or lending money to a belligerent; but it need not prevent its subjects from so doing. (Of course such commodities, specie and negotiable securities would, as contraband of war, be liable to capture by a combatant when on their way to an enemy destination.) A neutral Government is not bound to forbid its subjects to take stock in loans issued by a belligerent. However, States have sometimes construed their duties of neutrality so strictly that they have gone to the extent of prohibiting such transactions on the part of their subjects. For the transactions might, indeed, assume such enormous proportions that they would, in effect, be equivalent to aid furnished, not by a few individual persons, but by the whole country, by the very State itself. And to assent to or to tolerate the entering into such extensive transactions would virtually, if not nominally, make the State a party to them. Thus, about the middle of August, 1914, the American State Department announced that 'loans by American bankers to any foreign nation which is at war are inconsistent with the true spirit of neutrality.' This announcement called forth a great deal of controversy in America. Some critics thought that if it was intended to apply to such transactions as the Morgan French loan proposal—which was not a war loan in the ordinary sense of the term, but simply an arrangement to purchase foodstuffs for France on a credit to be established in the United States—then the Government's policy was to be condemned. Others asked whether, 'if Dr. Wilson and Mr. Bryan hold that it is a violation of the true spirit of neutrality to lend a belligerent funds to buy foodstuffs, it is not equally a violation of that spirit to sell a belligerent foodstuffs.' Further, the opinion was expressed that the position of the American Administration was incompatible with the modern theory of international law. Whatever exceptions these critics may have taken to their Government's policy, the position from the point of view of international law is as we have stated above. A Government may interpret the provisions of neutrality more or less strictly as it deems fit in view of the special circumstances of each case, provided, of course, that its interpretation be not inconsistent with the injunctions of international law. If it chooses to remain neutral with the utmost particularity, and thereby prejudices the commercial interests of its subjects, international law can have nothing to say—as the question is purely a domestic one concerning differences between the Government and the governed. Finally, with regard to the question of neutral supplies of war munitions to belligerents, and the raising of war loans, we may refer to the following observations that were made in January, 1915, by Mr. Bryan, the United States Secretary of State, to the Chairman of the Senate Committee on Foreign Relations. 'There is no

power in the Executive,' he declared, 'to prevent the sale of ammunition to belligerents. The duty of a neutral to restrict trade in munitions of war has never been imposed by international law or by municipal statute. It has never been the policy of this Government to prevent the shipment of arms or ammunition into belligerent territory, except in the case of neighbouring American Republics, and then only when civil strife prevailed.'—C. Phillipson, *International law and the Great War*, pp. 264-273.

Difficulties of neutrality.—“Taking into account the basis and the nature of neutrality and the extraordinary difficulties in the way of its effective maintenance, it would appear that the nation which desires to insist on a free exercise of neutral privileges virtually finds itself reduced to the following alternatives. (I) Having no concern with regard to the outcome of the war, it would trade indifferently with both sides, thus aiding them to prolong the fight at its own profit. It cannot serve effectively to help end the contest. As Lorimer pertinently remarks, it ‘cannot strike up the swords of the combatants by putting swords into their hands, money into their pockets, or food into their bodies.’ (II) By reason of the ability of one belligerent to control the seas, the neutral nation must find itself reduced to the role of supplying only one of the belligerents. Whatever it supplies, whether guns, food, or money, if greatly needed by the belligerent, will necessarily be of the nature of munitions of war. Under such circumstances it will not be strange if the other belligerent quotes reproachfully the words of Demosthenes: ‘That person whoever he be, who prepares and provides the means of my destruction, he makes war upon me, though he have never cast a javelin or drawn a bow against me.’ (III) If the neutral nation finds that its interests and sympathies are on the side of the belligerent which through the fortunes of war has lost control of the seas, it may find itself in the extraordinary situation of becoming the main support of the very side it desires to see defeated. (IV) If, however, its interests and sympathies are with the belligerent which controls the seas, the neutral nation may prefer to permit that side to place restrictions of perhaps a severe and unprecedented character even on its commercial intercourse with the other belligerent. In this case, if it tolerates under the thin guise of a benevolent neutrality technical violations of neutral privileges, it lays itself open to bitter and vigorous protests by the other belligerent against its patent failure to preserve strictly the impartial attitude of a true neutral.”—P. NEUVE CHAPPELLE, village in northeastern France, about ten miles west of Lille. In 1015 and 1018, it was the scene of severe fighting between the British and the Germans. See WORLD WAR: 1014: I. Western front: w, 16; 1015: II. Western front: b.

NEUVE ÉGLISE, town in western Belgium. It was captured by the Germans in 1018. See WORLD WAR: 1018: II. Western front: d, 11.

NEVADA, one of the far western states of the United States popularly known as the “Silver,” or “Sage Brush” state. The name Nevada, a Spanish word meaning “snow clad” or “snowy land,” was originally applied to the snow covered mountains along the western boundary of the state. The state is bounded on the north by Oregon and Idaho; on the east, by Utah and Arizona, the Colorado river separating it in part from the latter state; on the south and west by California. Nevada has an area of 110,600 square miles, and a population, 1020, of 77,407. As a result of the falling off in the mining industry, Nevada is the only state in the Union in which a decrease in population is taking place.

Resources.—Nevada is essentially a metal producing state. The mineral resources of the state are chiefly gold and silver; but copper, lead, zinc, pyrites, iron, quicksilver, tungsten, sulphur, and graphite are worked. In 1019, the output of gold was valued at \$6,610,037; silver, \$10,000,599; and the total mineral output at \$48,528,124. Owing to aridity and the lack of proper transport facilities, the state has not reached its ultimate limit of agricultural productiveness. In 1023 the federal irrigation project embraced 160,000 acres. The state has 3,163 farms with an area of 2,357,163 acres, of which 504,741 are improved land, largely given over to the raising of cereals. There is also considerable activity in stock raising. See U.S.A.: Economic map.

Aboriginal inhabitants. See INDIANS, AMERICAN: Cultural areas in North America; Southwest area; SHOSHONEAN FAMILY.

1767-1850.—Early exploration.—First immigrants.—Mormon colonists.—"Not to the pioneers crossing the plains; not to the Mormon saints looking for an empire of their own to build; . . . but to the religious fervor of the Franciscan monks of Spain and Mexico are we indebted for our first knowledge of the country of which Nevada is a part. [Francisco Garces is supposed to have been the first white man on Nevada soil.] In the year 1767 the Spanish government expelled the Jesuits from Mexico and the fathers were driven forth to the wilds of what then was known as the Californias. Following this, in the year 1771, the great unknown, indefinite 'California' was divided, the lower portion being given to the Jesuits, and the more northern portions to the Franciscan Fathers for their exploitation. . . . After the Franciscan monks came the trappers and traders. They followed the trails made by the wild animals far out into the Great American Desert, often to the springs and streams of water found in its mountain fastnesses and sheltered valleys."—H. J. Stewart, *Early knowledge of Nevada* (S. P. Davis, ed., *History of Nevada*, v. 1, pp. 214, 216).—"In 1825 one of the leaders of the expedition that explored the Great Salt Lake region, was Jedediah S. Smith, . . . who after hunting around the lake, crossed over the great desert of sagebrush between the Humboldt River and Salt Lake, and trapped down the Humboldt, which he named Mary's River . . . and crossed over from the Humboldt Sink to the Carson River, and then up Churchill Canyon to the Walker River in Mason Valley. He followed the Walker River to its source. . . . This was in 1825. On his return he saw Mono Lake and is said to have found gold. His second trip through Nevada was made over the southern route through what is now Lincoln County. From southern California he returned to the Rocky Mountains by way of the Columbia River, accompanying Peter Ogden's party to the winter home of the trappers in Jackson's Hole, just south of Yellowstone Park. In 1853 the famous Bonneville party passed through Nevada on its way to California. . . . It is supposed that this was the first party to follow the Truckee River route into California. This same year Kit Carson came into Nevada with Thomas McCoy's trappers. About 1841 the first emigrants passed through Nevada, comprising the Bartleson party from Independent, Mo."—J. W. Ingalls, *Indians of Nevada* (S. P. Davis, ed., *History of Nevada*, v. 1, p. 20).—"In the winter of 1850 the Mormon Church began to send its colonists into southern Utah, southern Nevada and Southern California in great numbers. . . . At Las Vegas they began the construction of a fort as protection against the Indians, and also built homes for their families. . . . In 1847, '48 and '49 travel across Nevada was more or less brisk, and in the latter part of 1849 and 1850 the discovery of gold in California had materially increased the number of emigrant trains. The road was now comparatively well-beaten, and enterprising traders from Salt Lake City and from California reaped large profits by establishing trading stations along the road to supply the hungry travelers with flour, bacon and clothing."—R. Lewers, *Early emigrants* (S. P. Davis, ed., *History of Nevada*, v. 1, pp. 214, 225).

1848-1864.—Acquisition from Mexico.—Silver discoveries.—Territorial and state organization.—"Ceded to the United States at the same time, and, indeed, as one with California [see MEXICO: 1848], this region of the Spanish domain had not,

like that west of the Sierra Nevada, a distinctive name, but was described by local names, and divided into valleys. In March following the treaty with Mexico and the discovery of gold, the inhabitants of Salt Lake valley met and organized the state of Deseret, the boundaries of which included the whole of the recently acquired Mexican territory outside of California, and something more. [But Congress, failing to recognize the state of Deseret, created instead, by an act passed on September 9, 1850, the territory of Utah, with boundaries which embraced Nevada likewise. This association was continued until (March 2), 1861, when the territory of Nevada was organized by act of Congress out of western Utah.]"—H. H. Bancroft, *History of the Pacific states: v. 20, Nevada*, p. 66.—"Nevada's Territorial history began November 12, 1851. On that date a public meeting was held for the purpose of organizing a squatter government. Less than a hundred persons took part in the gathering which was held at 'Mormon Station' (now Genoa). The object of the meeting was to adopt local rules and regulations for the benefit of the settlers then coming into the country. There was but little semblance of law and order at the time, and life and property rights seemed to need additional protection. But little was done at the preliminary meeting, and it was adjourned to a later date the same month. Subsequently a local form of government was adopted. . . . The first attempt at representation at Washington was made by electing James W. Crane as a delegate to represent the claims of the settlers to a Territorial Government. Crane having died, John J. Musser was elected his successor November 12, 1850. On June 6, 1850, a mass meeting of delegates from the several districts was held, at which the 14th day of July, 1850, was fixed for holding an election to elect delegates to a constitutional convention. Delegates met at Genoa on the 18th day of the same month, and in a ten days' session adopted a declaration of rights and a Constitution. The Constitution was submitted to the people September 1, 1850, and was adopted, and Isaac Roop elected Governor, with a Legislature and other State officers. Roop was the only officer who attempted to qualify. The Legislature met at Genoa on the 15th day of December, 1850, and adjourned to meet in July, 1860. They never met again."—S. P. Davis, ed., *Organizing the territory (History of Nevada, v. 1, pp. 190-191)*.—"Meantime the discovery in 1850 of the extraordinary deposit of silver which became famous as the Comstock Lode, and other mining successes of importance, had rapidly attracted to the region a large population of adventurers. It was this which had brought about the separate territorial organization. Three years later the young territory was permitted to frame a state constitution and was admitted into the Union in October 31, 1864.—Based on H. H. Bancroft, *History of the Pacific states: v. 20, Nevada*, p. 66—"The total vote on the acceptance of the constitution was 11,303, the majority in favor of it, 6,131. There were elected at the same time the members of the legislature for 1864, and a delegate to congress, John Cradlebaugh, on the independent ticket. . . . However, all these elections went for nothing when the president on the 31st of October proclaimed Nevada a state of the union. As the presidential election was yet to take place in November, a new election for representatives and state officers was ordered to be held at the same time. Two full tickets were put in the field, but the Republicans elected their candidates by large majorities. The choice of the people fell upon H. G. Worthington of Lander county for member of congress to fill the

unexpired term ending in March, 1865. H. G. Blasdel was chosen governor. Under the constitution the state was divided into nine judicial districts, one judge to be elected in each, with the exception of the 1st district, comprising Storey county, which might have three district judges. According to the constitution, also, the first legislature convened on the 12th of December, and on being organized listened on the 14th to the message of Governor Blasdel, which communicated to them, among other facts affecting the state, that the new government had inherited from the territory a debt of \$264,000 exclusive of the expenses of the last constitutional convention, and that to meet this indebtedness there was an empty treasury and an uncollected tax of \$70,000. . . . On the 16th of February the senate and assembly ratified the thirteenth amendment to the constitution of the United States by which slavery was abolished. But to return to more purely local affairs. On the 15th of December, both houses being organized, they proceeded to the election of two United States senators, Stewart, Nye, Charles E. De Long, Cradlebaugh, and B. C. Whitman being nominated. Stewart was elected on the first ballot. Then followed a number of ballottings for a senator among the remaining candidates, Nye receiving on every one the greatest number of votes, but not enough to elect him, and De Long receiving the next greatest number. An adjournment took place, which permitted the presentation of informal arguments, and at the first ballot on the 16th Nye was elected."—H. H. Bancroft, *History of Nevada, Colorado and Wyoming*, pp. 183-187.

1853-1856.—Attempts at annexation to California.—"In February, 1853, there was presented in the legislature of California a petition of fifty-three citizens of Carson Valley, praying to be annexed to California. . . . In January, 1856, the inhabitants of Carson Valley again petitioned the California assembly to annex them for judicial and other purposes."—H. H. Bancroft, *History of Nevada, Colorado and Wyoming*, v. 25, pp. 74, 78. —"Following the construction of the Central Pacific, the Virginia and Truckee Railroad was built; then the Nevada Central, from Battle Mountain to Austin; the Eureka and Palisade; Eureka and Ruby Hill; Pioche and Bullionville; Carson and Colorado; Nevada and Oregon narrow gauge, and in later years many other small roads, all of which act as feeders to the Central Pacific. Nevada today [1913] is a network of railroads, practically all of them depending a great deal on the mining industry. . . . Now there is hardly a town in Nevada with a population of 300, save possibly a few of the newest mining camps, which is not reached by rail. . . . Nevada depends almost entirely upon its railroads for its prosperity. Without them this State would soon become almost destitute of population."—S. P. Davis, ed., *History of Nevada*, v. 1, p. 591.

1860-1913.—Transportation.—"Transportation was always an important subject in Nevada. . . . In 1861 a daily overland mail stage business was established. As early as 1860 an application was made for a railroad franchise from Carson City to Virginia City. . . . Several projects were before the State's first legislature, which granted charters to four companies, namely, the Nevada Railroad Company, with the privilege of constructing a road from the western to the eastern boundary; to Leland Stanford, Charles Crocker, Collis P. Huntington, Lucius A. Booth, Mark Hopkins, Theodore D. Judah, James Bailey and Samuel Silliman; the Virginia City and Washoe Company; Virginia, Carson and Truckee Company; and the Esmeralda and Walker River Company. Only the first of

these roads was built under these legislative grants. So eager were the people of the West for cheap and rapid means of transportation to and from California gold fields and Nevada's silver fields, that in the first State constitution was introduced a clause permitting the legislative to give \$3,000,000 in bonds to the first company that should connect Nevada with navigable waters. This constitution was rejected, however, although the clause was not stricken out. It was at this period that the Central Pacific was building eastward from Sacramento and the engineers were making one of the greatest fights in history in an effort to conquer the Sierra Nevada Mountains. The actual race in the construction of a railroad from the Mississippi River to the Pacific Ocean occurred in Nevada. The Pacific Railroad Bill, which authorized the construction of the railroad, provided that the Union Pacific build westward and that the Central Pacific build eastward. With every mile constructed went many acres of Government land, so the further east the Central Pacific was built the more land it received. The further west the Union Pacific was built the more land was granted it. All the time the Pacific Railroad Bill was pending before the legislators at Washington, and during a great part of the time that the actual construction work was being pushed from both ends toward the centre, the United States was in the throes of the great Civil war. . . . The traffic from the silver mines of Nevada was the principal object that induced the backers of the Central Pacific to devote their fortunes and energies to this enterprise. . . . In the early part of 1869, rails or both the Central Pacific and Union Pacific were being laid at the rate of from six to ten miles a day. When the two tracks came together, the Central Pacific had nearly sixty miles of grading done parallel to the Union Pacific track, while the Union Pacific had located their line to the California State line and most of the grading was done as far west as Humboldt, Nevada. The laying of the last rail and the driving of the last spike occurred on May 10, at Promontory Point, Utah, in sight of Great Salt Lake."—S. P. Davis, ed., *History of Nevada*, v. 1, pp. 587-590.

1861-1874.—Boundary settlement.—"The organic Act for the Territory of Nevada, March 2, 1861, gave the eastern limit of Nevada as the 39th meridian west from Washington, while the south was bounded by the northern line of New Mexico. The next year after its Territorial organization Nevada secured by Act of Congress, July 14, 1862, a degree of longitude on the east, making the 38th meridian west from Washington, instead of the 39th, the dividing line between Nevada and Utah. . . . [Later] Senator Stewart of Nevada presented a bill which made the 37th meridian west from Washington the eastern boundary, and the Colorado River the southern boundary. It was passed, and became a law May 5, 1866. . . . The last attempt to gain more territory was made by Nevada in 1871, by way of a memorial from the Nevada Legislature to Congress asking for a portion of Idaho lying between the Snake River and the northern boundary of Nevada. [This petition failed.] . . . The northern boundary of Nevada was run by the authority and under the direction of the United States, and was completed in 1874. It was reported by the United States Surveyor-General at the same time with the survey of the line between California and Nevada. The southern boundary followed the channel of the Colorado River. Thus, the last line being established, the boundaries of Nevada were finally adjusted."—B. Hershiser, *Adjustment of boundaries* (S. P. Davis, ed., *History of Nevada*, v. 1, pp. 211-213).

1862-1864.—Part played in Civil War.—“It was the spring of 1862 before a recruiting office was opened in Nevada, the first one being in Virginia City. . . . In the spring of 1863 Nevada received permission to raise a battalion of cavalry. . . . Two companies were mustered into service and marched to Salt Lake, in 1864. . . . [Captain Zabriski, Company A] declined promotion and Baldwin [Company B] was promoted to major of the battalion and placed in command of Fort Bridger. Four more companies were added to this battalion. . . . There were also 1,000 men in six infantry companies, . . . stationed at various places in Nevada territory and Utah.”—T. Wren, ed., *History of the State of Nevada: Its resources and people*, pp. 226-227.

1864-1913.—Mining.—Silver, copper, iron and lead.—“In 1864 a bullion production of \$16,000,000 was made by the Comstock mines. Prospectors spread out over the State and the search for another Comstock caused many other mines and districts to be discovered. Mining litigation, arising out of the uncertainty of the titles and boundaries of the early claims and the cupidity of the claim owners, characterized the years from 1866 to 1866. Ten million dollars were spent in almost endless litigation during this time. . . . The exhaustion of the ore bodies first discovered, troubles with water encountered in the mines, and a stock panic in San Francisco, combined with the interminable litigation, soon caused a temporary set-back to the Comstock. Shrewd men saw the combination of interests and the securing of sufficient capital to properly equip and work the mines was necessary if successful mining was to be carried on. The period which followed was one of readjustment. William Sharon appeared upon the scene and as representative of the Bank of California became an active participant in mining affairs. He acquired control of a number of mills, and formed the Union Mill and Mining Company. . . . The organization, known as the Bank of California ring, continued to exercise a dominating position in Comstock affairs well into the next period. . . . Discoveries of ore in the Hale and Norcross, Chollar-Potosi and Yellow Jacket sustained the stock market for a while, but towards the close of this period Comstock affairs were depressed. The next period was one of great expansion. . . . No dividends were being paid and no new discoveries had been made. . . . In 1871 . . . a healthier tone supplanted . . . pessimism. . . . About the beginning of this period John W. Mackay and James G. Fair became associated in the Hale and Norcross. . . . Through the persistence of Fair, ore was at last discovered in 1873 upon Con Virginia ground. The discovery came none too soon as the treasury of the Con Virginia was nearly empty. Rapid work upon the ore body soon gave some idea of its great extent and richness. A bonanza had been struck and it was ‘the big bonanza.’ The four men associated in this third controlling and new combination were known as the four bonanza kings. They quickly acquired their own mills and started reduction of their ores. The bullion production of the Comstock exceeded \$21,000,000 in 1873 and steadily increased until it reached a maximum of over \$36,000,000 in 1877. The discovery of ore at depth rejuvenated the Comstock. Deep shafts were projected and started. Bigger plants were constructed and heavier machinery was installed. The stock market boomed. . . . By 1870 the inevitable decline began. In 1882 an immense flow of hot water was struck in the Exchequer Mine and the lower workings of the Yellow Jacket, Crown Point, Belcher, Overman, Confidence and Imperial mines were flooded. . . .

The succeeding years marked a constant struggle with heat and water in the north end mines, and finally in 1886 all work ceased below the Sutro Tunnel level from end to end of the Comstock. The miners returned to the upper levels and the low grade ores which had been left in the mad search for bonanza ore were extracted. With the end in sight the stock market slumped even more rapidly than the mines. Bullion production continued but in steadily diminishing amounts. During this period mines in other parts of the State were developed and production was made. The principal district was Eureka, and here the smelting of silver lead ores on a large scale was carried out. . . . No doubt the reputation of Nevada as a silver mining State, the decline in production of many of the camps and the rapid decline in the value of silver contributed to make the next period one of great depression. Industrial depression in the United States made capital hard to secure. During this period small amounts of ore and tailings were worked in Virginia City, and desultory mining and prospecting were carried out in the State. The only important discovery in this period was the Bamberger-De Lamar mine in Lincoln County. This mine was discovered in 1893 and soon became a producer. Until 1900 this mine made the principal bullion production of the State. The end of this period was marked by more active prospecting. . . . In 1900 electric power was generated at a hydro-electric plant upon the Truckee River and transmitted to Virginia. . . . The steady lowering of the water followed and in 1902 electric driven Reidler pumps were installed upon the 2,150 level of the C & C shaft. The opening up of an ore body in Con Virginia ground furnished sufficient impetus to rejuvenate the Comstock, not to anything like its former glory, but a good start. The discovery of rich surface ores at Tonopah by J. L. Butler marked the beginning of the mining revival in the State. Fast upon the heels of this discovery came that of Goldfield, and once more Nevada became the Mecca for an army of adventurers, miners and others, all seeking a short-cut to fortune. The distinctive feature of the opening up of these camps was the introduction of the leasing system. Tributing or leasing is not uncommon during the last stages of a mine, but it is uncommon during the initial stages of a mine’s development. The system was introduced from Colorado and proved successful in rapidly opening up and developing the mines. . . . In 1902 Goldfield was discovered, and in 1903 a rush to that locality followed. The leasing system was adopted and rapid development followed. The progress of the camp was steady and more and more attention was drawn to it. Many of the leases were successful and rich gold ores were produced. The rich strike by Hayes and Monette upon the Mohawk claim in 1906 introduced an era of intense excitement. Other discoveries added to it. . . . The extent and richness of the ore bodies were uncertain. . . . The population of Goldfield reached 15,000. Five mills were in operation and two sampling works received ores for shipment to the distant smelters. . . . In the Yerington district in the western part of the State another group of copper mines was developed. The Yerington Copper Company and the Mason Valley Copper Company acquired groups of claims and systematically developed them. Success rewarded their efforts and while this district does not show the tonnages that have been developed in the Ely district, it does show promise of considerable importance. In 1910 a railroad, the Nevada Copper Belt, was constructed between the mines and Wabuska. In 1912 a smelter was constructed and put in operation. At

present over 2,000 tons per day are supplied from the Yerington district. . . . The last mining camp to be discovered is Rochester, some 12 miles east of the old mining town of Oreana. This was discovered late in 1912 and early in 1913 a small rush started. The absence of high grade ore prevented this rush from assuming any size, although several thousand people went to the new camp. . . . From a silver State Nevada has passed, in this last period, to a State of varied mineral resources."—G. J. Young, *History of mining in Nevada* (S. P. Davis, ed., *History of Nevada*, v. 1, pp. 317-326).—See also U. S. A.: 1865-1885.

1872-1878.—Political changes.—Attempt to revise constitution.—Amendment to state constitution.—"The republican candidate for congressman, C. C. Goodwin, was defeated in 1872 by Charles W. Kendall, reflected on the democratic ticket, but the [Republican] party gained the presidential electors by over 2,000 majority; also the supreme judge and state printer, the only state officers voted for. The senatorial contest of 1874 was another struggle between men with large moneyed interests principally. The democrats again chose in convention Thomas H. Williams, and the republicans William Sharon. A third, or independent, party had for its leader Adolph Sutro, who feared if Sharon should be elected it would redouble the power of the bank of California and Comstock Lode, against which he was making his great fight for the Sutro tunnel. Party lines were less rigidly drawn than ever before. There were some men on the independent ticket from both the other parties, but more from the democratic than the republican ticket. This insured the reelection of Governor Bradley, the election of Jewett W. Adams lieutenant-governor, J. R. Kittell attorney-general, J. J. Hill state printer, and J. Schooling treasurer; the remaining offices being given to the republicans, who also elected their candidate for congressman, William Woodburn of Storey county. The legislature consisted of forty-seven republicans and twenty-eight democrats, the full number of members allowed by the constitution. . . . The state congressional and presidential election of 1876 gave results showing the very gradual restoration of the ante-bellum political balance. Again the republicans obtained the presidential electors, their representative in congress, Thomas Wren, and supreme judge, O. R. Leonard. They still had a large majority in the assembly, but in the senate the democrats had a majority of one. A movement to call a convention to revise the constitution, and also to change the time of the beginning of the fiscal year from the 31st to the 1st of December, was set on foot by a resolution of the legislature, passed February 18, 1875, and voted upon at this election, there being a majority of 3,341 against it, and against the design of the agitators to abolish the tax on mining products. In the political canvass of 1878 this matter of refusing to repeal the tax on bullion was made a plank in the republican platform, but afterward withdrawn through the influence of the bonanza firm. . . . J. H. Kinkead, republican, was elected governor."—H. H. Bancroft, *History of Nevada, Colorado and Wyoming*, pp. 191-193.

1890-1902.—Formation of Silver party.—Fusion of Silver and Democratic parties.—"Since its admission into the Union, Nevada has been normally Republican and could be safely counted on to cast its electoral vote for a Republican President, until the formation of the Silver Party [or People's party], which first appeared in Nevada politics in the election of 1892 when it swept

the State by majorities averaging in the neighborhood of 5,000. In that year the Republican vote was less than 3,000 and the Democratic vote fell below 1,000. The first suggestion relative to the formation of a Silver Party to protect Nevada's chief industry appeared in the Morning Appeal published at Carson City. On January 1, 1890, it made the announcement, editorially, that it was time for Nevada to raise the standard of revolt against the Republican party for its demonetizing of the chief product of Nevada's industry. It called for the formation of a party having the remonetization of silver, the chief plank of its platform. This stand was treated derisively at the time, but within a year other newspapers took the matter up and finally in 1891 the Editorial Association of the State met at Reno and passed a resolution that it would have nothing to do with any political party that did not include in its platform a plank demanding the free and unlimited coinage of silver. . . . In 1896 the Democrats and Silver men fused on most of the nominations and carried the State by heavy majorities, not losing a man on the ticket."—S. P. Davis, ed., *History of Nevada*, v. 1, pp. 426, 428.—"In 1898 the Silver party elected the lieutenant governor, Reinhold Sadler, governor, and J. R. Judge, lieutenant governor. Although a nomination from the Silver party was considered equivalent to an election, McMillan, the Democratic candidate, came so close to Sadler that it was at first thought he had beaten him. Recourse to the courts was had, and after nine months the decision was given to Sadler, by a very close margin, his plurality being less than 25. Orvis Ring, superintendent of public instruction, was the only Republican elected in Nevada at this election. In 1899 W. M. Stewart found it more difficult to secure his election. . . . In August, 1902, the Silver and Democratic parties fused, John Sparks, for governor, and C. D. Van Duzer, for congressman-at-large, heading the ticket. A. C. Cleveland was offered the gubernatorial nomination by the Republican convention, but he refused to take it on a silver platform. . . . In the interest of harmony he was forced to take it, Frank H. Button being nominated for lieutenant-governor and E. A. Farrington for congressman-at-large. C. C. Wallace, commonly known as 'Black' Wallace, of Eureka county, who had bitterly fought Van Duzer for years, died January 30, 1901, and Mr. Van Duzer was elected with the rest of the fusion ticket."—T. Wren, ed., *History of the State of Nevada*, pp. 91-92.

1904.—Referendum adopted. See INITIATIVE AND REFERENDUM: Development in the United States.

1906.—Goldfield strike.—In 1906 disturbance attendant upon the strikes of the workers in the gold mines at Goldfield and other points reached such proportions as to make it necessary to send United States troops to the state.

1907-1913.—Railroad commission.—Legislation.—"The Railroad Commission of Nevada is one of the newer branches of the State government. It was created under the provisions of an Act of the Legislature, approved March 5, 1907. . . . The Commission consists of three members. They are appointed by the Railroad Board consisting of the Governor, Lieutenant Governor and Attorney General. . . . On March 27, 1911, the Railroad Commission law was amended so as to provide for a Chief Commissioner, who is to be chairman and who is also to be an attorney well versed in railroad law; a First Associate Commissioner, who must be a practical railroad man, and a Second Associate Commissioner, who must

be a business man having a general knowledge of fares and freights, tolls and charges as levied by common carriers coming within the meaning of the term 'railroad' as defined by law. This made no change in the personnel of the Commission. . . . The creation of the Railroad Commission was prompted both by the progressive legislative spirit of the age, and by the transportation conditions existing in this State."—S. P. Davis, ed., *History of Nevada*, v. 1, pp. 607-608.—In 1909, several measures were passed to prevent Japanese owning land in the state. Among important acts of legislation in 1911 were workmen's compensation and compulsory education acts, acts to regulate banks and to prevent the enticement of workmen into the state under false pretenses, the establishment of a Juvenile Court and of a bureau of industry, agriculture, and irrigation. A primary election law was passed (See PRIMARIES), and the Sixteenth Federal Amendment (Income Tax) was ratified. In 1913 a tax commission was created, the Seventeenth Federal Amendment was ratified providing direct election of senators, and the Industrial Insurance Act, elective instead of compulsory, a corrupt practices act, and an inheritance tax law were passed. A divorce law was passed which required one year's residence before a suit could be brought. This law was intended to diminish the number of divorces. It was later repealed and the former practice of six months' residence restored.

1907-1913.—Organization of public school system.—"At the very organization of Nevada as a Territory, in 1861, provision was made for a system of public schools supported by county taxation; and while still a territory, provision was further made for district taxation. Enlarged provision was made in the State Constitution adopted in September, 1864. The system, as adopted in 1865, provided for school districts throughout the State. . . . From 1865 to 1885, good schools were built up in all the larger towns, . . . but as there was no required course of study, each school was a law unto itself. . . . The rural schools fared worse in the matter of aid from the State or county through supervision, as they were seldom reached by a school official who understood school work or requirements. . . . About the year 1887 the County Superintendent as an elective officer was dispensed with on the score of economy, and his duties were devolved on the District Attorney, who became *ex-officio* County Superintendent. . . . The opening of the State University in Reno in 1885 largely aided in centering interest on educational matters through the State. . . . While the coöperation of the University with the teachers of the State, in the absence of definite school organization and supervision, has been an important factor in Nevada's educational growth, our large progress in public school education dates from the Reorganization Act of 1907. . . . The system thus inaugurated did away with the varieties and inequalities of county supervision, substituting therefor unified supervision by the State. . . . By the Reorganization Act the various County Superintendents were done away with. . . . The State Superintendent and five Deputy State Superintendents took the place of these with larger powers and duties. . . . Through the State Board of Education, composed of the Governor of the State, the President of the State University and the Superintendent of Public Instruction, courses of study for the elementary and high schools are prepared and promulgated. . . . The primary and grammar schools are placed on a definite basis, and preparation for entrance to high schools is improved

and made substantially uniform. . . . In response to popular interest and demand, voiced by many teachers and school officers, the Legislature of 1909 passed an act authorizing industrial education in schools, and a movement was at once begun in several districts to make manual training, domestic science and commercial courses features of regular school work. . . . All the larger high schools of the State are accredited to the University of Nevada, the University of California and Stanford University. This fact sufficiently tells the story of the present excellency of work and attainment in Nevada schools. . . . Nevada has over \$2,000,000 in its Irreducible State School Fund. This is invested in State and United States bonds, the interest on which is semi-annually distributed to the schools."—S. B. Doten, *Education* (S. P. Davis, ed., *History of Nevada*, v. 1, pp. 518-523, 525, 527).

1909-1921.—Legislation.—Part played in World War.—Gubernatorial changes.—Amendments to the constitution were passed in 1909, 1913, 1915, and 1919, the first two the recall, and woman suffrage were the most important and the third was to permit a state debt amounting to one per cent of the assessed valuation of property. In 1917, a labor law was passed for women in industries, providing an eight hour day. In 1918, a state prohibition law was passed, and on January 21, 1919, the Eighteenth Federal Amendment (Prohibition) was ratified. A land settlement act was passed, 1919, providing a bond issue of \$1,000,000 for soldier settlement work in coöperation with the Federal government. On February 7, 1920, the Nineteenth Federal Amendment was ratified. In 1921, acts were passed providing: four year terms of office for county officers; criminal execution by lethal gas; standardized testing and weighing of dairy products; prophylactic treatment of the eyes of the newly born; creation of town-planning commissions for incorporated cities and towns; a state budget; and oil pipe lines were made common carriers. During the World War, the state furnished 5,105 men or .14 per cent of the whole Expeditionary Forces. The governors for the period 1907 to 1921 were as follows: D. S. Dickerson, 1907-1910; Tasker L. Oddie, 1911-1914; E. D. Boule, 1915-1921.

NEVILLE'S CROSS, or DURHAM, Battle of.—A crushing defeat suffered by an army of the Scots, invading England under their young king, David Bruce, who was taken prisoner. The battle was fought near Durham, October 17, 1346.—J. H. Burton, *History of Scotland*, v. 3, ch. 25.—See also SCOTLAND: 1333-1370.

NEVIS, British island of the West Indies, united in 1882 with St. Kitts (St. Christopher) and Anguilla to form one presidency. It has an area of fifty square miles and a population, in 1911 of little over 12,045. The capital is Charlestown with a population of about 1,000. The island, which is simply a single cone-shaped mountain sur-

rounded by a margin of lowlands, "was included in the grant to James Hay, earl of Carlisle in 1627 [and] was colonised by some English from St. Kitts in 1628. . . . In 1706 it was ravaged by the French, who destroyed property to the value of half a million sterling and carried off between three and four thousand slaves. On April 30, 1680, Jamestown, the first capital, was engulfed with its inhabitants; in 1737 cultivation was destroyed by a blight; and in 1772 the island was visited by a devastating hurricane; but in spite of an occasional setback it prospered exceedingly, being made the slave market of the Leeward Islands by the Royal African Company, while for a short period it was the seat of the government of this group. In 1782 the island was invaded by the French. Alexander Hamilton, the statesman who drafted the constitution of the United States, was born in Nevis on January 11, 1757."—A. E. Aspinall, *British West Indies*, pp. 37-38.

NEW ALBION, name applied by Drake to the western coast of North America. See PACIFIC OCEAN: 1513-1764.

NEW ALBION, County Palatine of.—By a royal charter, witnessed by the Deputy-General of Ireland, at Dublin, June 21, 1634, King Charles I granted to Sir Edmund Plowden and eight other petitioners, the whole of Long Island ("Manitie, or Long Isle"), together with forty leagues square of the adjoining continent, constituting the said domain a county palatine and calling it New Albion, while the island received the name of Isle Plowden. "In this document the boundaries of New Albion are so defined as to include all of New Jersey, Maryland, Delaware, and Pennsylvania embraced in a square, the eastern side of which, forty leagues in length, extended (along the coast) from Sandy Hook to Cape May, together with Long Island, and all other 'isles and islands in the sea within ten leagues of the shores of the said region.' The province is expressly erected into a county palatine, under the jurisdiction of Sir Edmund Plowden as earl, depending upon his Majesty's 'royal person and imperial crown, as King of Ireland.'" Subsequently, within the year 1634, the whole of the grant was acquired by and became vested in Plowden and his three sons. Sir Edmund, who died in 1650, spent the remainder of his life in futile attempts to make good his claim against the Swedes on the Delaware and the Dutch, and in exploiting his magnificent title as Earl Palatine of New Albion. The claim and the title seem to have reappeared occasionally among his descendants until some time near the close of the 18th century.—G. B. Keen, *Note on New Albion* (J. Winsor, ed., *Narrative and critical history of America*, v. 3, pp. 457-468).—See also NEW JERSEY: 1640-1655.

NEW BRUNSWICK: Geographic description.—Area.—Population.—Resources.—New Brunswick, a province of the Dominion of Canada, lies northeast of the state of Maine, from which

it is separated by the international boundary. On the north it is bounded by the province of Quebec and the Bay of Chaleur; on the east by the Gulf of St. Lawrence on the south by the little river Missiguash, and the Bay of Fundy, and on the west by Maine. It is divided from Prince Edward island by Northumberland strait, and is joined to Nova Scotia by the isthmus known as the Gut of Canso. The area is 27,985 square miles. The population in 1921 was 388,092. The chief industries are agriculture, manufacturing, lumbering and fishing. The province is rich in minerals; but only gypsum and some coal is mined. About a third of the area of the province is covered by crown land forests.—See also CANADA: Agriculture; Names; U. S. A.: Economic map.

1713.—Uncertain disposition by Treaty of Utrecht. See CANADA: 1713.

1758-1785.—Early settlement.—Coming of Loyalists.—"In 1758, at the same time the last expedition proceeded against Louisburg, a British force was sent to take possession of this Harbour [i.e., St. John]. . . . In 1760 a party of rangers was despatched from Quebec under Capt. Rogers, to drive the French Settlers off the St. John. They performed the duty ferociously, ravaging the country & burning and destroying all before them. The French fled in all directions; some of them making their way up the River toward Canada, . . . [and] conceiving that they were not likely to be disturbed formed the settlement of Madawaska. . . . In 1761, Fort Frederick in this Harbour was garrisoned by a Highland Regiment, . . . [and] the Harbour of St. John was first regularly surveyed. . . . The Governor of Massachusetts, in 1761, dispatched an exploring party, for the purpose of ascertaining the position of affairs and the state of the country on the St. John. The leader of that party was Israel Perley. . . . They found the country a wide waste, and no obstacles, save what might be offered by the Indians, to its being at once occupied and settled, and with this report they returned to Boston. In May 1762, a party of about twenty, came to this Harbour of St. John, in a small vessel from Newburyport. Mr. Samuel Peabody, Mr. James Simonds, and Mr. James White, were the three principal persons of this party. . . . The next year, 1763, . . . about 200 families, in all about 800 souls, under the charge of Israel Perley proceeded to the new Township of Maugerville, where they established themselves, and thus made the first permanent British settlement on the river St. John. . . . The settlers on the St. John, at Maugerville, in addition to the many difficulties and privations attendant on establishing new settlements in a remote part of a wilderness country, were for some time also annoyed by threatened attacks from the Indians. But in 1765 an amicable arrangement was entered into, and a good feeling established between them and the white settlers. . . . On the 30th April 1765, all the country bordering on the St. John, was erected into a county, called the county of Sunbury in the Province of Nova Scotia. This year, 1765, was an important one to this Province. Mr. DesBarres surveyed the whole of the Bay of Fundy for the first time. . . . The settlements on the River continued to increase slowly for some years, and a few more persons began to settle about this harbor. . . . In 1768 all the troops at Annapolis, Cumberland, Amherst and this place were removed to Boston, in consequence of some threatened disturbances there. . . . On the 4th May 1770 Wm. Owen, Plato Denny and Wm. Sherwood were appointed the first Jus-

tices of the Peace in the County of Sunbury and the boundaries of the County were then defined. . . . All the eastern part of this Province, at that time appears to have been considered part of the County of Cumberland in Nova Scotia. . . . At this time hostilities were going on between Great Britain and her revolted Colonies, . . . and the inhabitants in this quarter were much pressed, & solicited to join the confederacy. But they stood firm in their faith to the British flag, and thereby incurred the displeasure of their western neighbours. In August, 1775, the rebels from Machias landed at this place, burned the fort & Barracks at Fort Frederick; and captured a brig laden with oxen and sheep for the British Army then at Boston. The following year the Vulture, Sloop of war, was stationed in this Bay, between Annapolis and St. John, for the protection of both places; but . . . the rebels, visited and plundered the Inhabitants several times in that year. . . . On the 4th July 1776, the day on which the Americans declared their independence, Mr. Michael Franklin, the agent for Indian affairs, concluded a treaty of peace with the Indians on . . . [the St. John], and induced them to deliver up to him an agreement they had entered into with an agent of the rebels, to furnish them with 600 fighting men. For some time after, however, the Indians were kept in a state of ferment, by emissaries from the rebels. . . . In 1777 a rebel privateer visited this harbor and plundered the Inhabitants of everything of value. . . . This last visit almost beggared them, and then, upon their urgent representation, a party of soldiers was sent from Halifax, in a transport, Dec. 1777. . . . In 1778, the Indians were incited by a Colonel Allen, who resided among and had great influence over the Penobscot Indians to make an attack upon the Settlers on this harbor & also upon Fort Howe, . . . [which was prevented by the bravery and address of one of the settlers, named White. Under his influence, the principal chief, Pierre Thoms, informed the band that] he had determined to keep peace with King George & his people, and should return with his followers to *Ock-pa-haag*. . . . And now we come to a point of great interest in our history. On the 16th December, 1782, the governor of Nova Scotia received a letter from General Carleton, dated at New York, stating that many families determined on maintaining their allegiance to the British Crown, would come to Nova Scotia, and settle on the ungranted lands, within its extensive limits. . . . The first party of Loyalists that arrived, landed at the present Market Square [of Halifax], cleared away the dense forest then standing upon it, . . . [and] with ships' sails made hurricane houses. . . . In a dispatch dated 30th Sept. 1783, Gov. Parr stated to the Colonial Minister, that the number of Loyalists who had arrived in Nova Scotia up to that time amounted to 18,000 & three weeks after he reported the arrival of 2000 more. . . . In the summer of 1784 more persons came from the United States. . . . On the 16th Aug. 1784 a Comm. issued under the Privy Seal to Thomas Carleton Esquire appointing him Captain General & Govr. in Chief of the Province of New Brunswick, the boundaries of which (the same as at present) [written 1841] were defined and established by Commission. On the 22nd day of Novr. 1784 this commission was received & promulgated at this place, and the first entry in our Council Records . . . [was made]. Before . . . [New Brunswick] was erected into a separate Province, and while it remained a county of Nova Scotia, a great number of extravagant and improvident grants had been made. Among others Sir Andrew

Snape Hammond, at one period Govr. of Nova Scotia, got 100,000 acres on the Hammond River. . . . Sir John St. Clair got 100,000 acres between the Kennebeckasis and the Washademoac. Our Govr. & Council forthwith set about escheating these large grants, because the conditions of settlement were not complied with, and they acted with such spirit, determination, and high sense of duty, that nearly the whole of the lands so improvidently granted were reverted to the crown, and thus a great barrier to the settlement of the Province was removed. . . . In October following [1785] writs were issued to the Sheriffs of the Several Counties for a General Election at which every Inhabitant, who had been three months a resident was entitled to vote. The Election proceeded and it appears that there were great riots during its continuance in the City. . . . On the 9th Jan. 1786 the first Genl. Assembly met in St. John."—M. H. Perley, *On the early history of New Brunswick* (*Educational Review*, 1891, no. 45-49, pp. 20, 23).

1820-1837.—Family compact. See CANADA: 1820-1837.

1824-1854.—First census.—Great fire of Miramichi.—Boundary disputes.—Irish immigration.—"In 1824 the first census of New Brunswick was taken, and the population found to be 74,176 persons. . . . But the flow of population and the prosperity of these years was to be followed by a period of loss and ruin. . . . The Great Fire of Miramichi, in October, 1825, not only destroyed a vast extent of forest, but the flourishing towns and settlements along the Miramichi, built up with patient toil and industry, were swept away, and with such awful suddenness that many people were burned to death or drowned in the river where they had sought refuge. At that time the Miramichi river was settled on both sides for the distance of one hundred miles from its mouth. On the north bank of the river lay the thriving town of Newcastle, then containing a thousand inhabitants, and Douglstown, near by, with one-third as many. On the south side was Chatham, already a flourishing trading port, and on both sides of the river there were numerous villages and settlements. . . . The town of Chatham happily escaped the flames and afforded a place of refuge. . . . The loss, not including the timber on Crown lands, was estimated at \$1,250,000. . . . It would appear that the only border lines of New Brunswick not subject to dispute are those 'writ in water' along her coasts. Nova Scotia was not satisfied with the Missiguash river boundary, and wished to have the line placed farther north, so as to include all the settlements made at the head of the Bay of Fundy before New Brunswick became a separate province in 1784. It was more than half a century after the separation that the present boundary line between the two provinces was agreed upon. . . . Quebec claimed all the north-west portion of . . . the province beyond a line starting from Mars Hill and running east and north to the mouth of the Restigouche. But, as in the case of Maine, New Brunswick had a counter claim which, if admitted, would place her northern limit as far up as the St. Lawrence watershed. After various efforts to settle the dispute, the present boundary line was decided upon in 1855. . . . Between 1840 and 1850, thirty-seven thousand Irish people settled in various parts of New Brunswick. More than fifteen thousand arrived in St. John in the year 1847, and many at Miramichi. In the year 1854 St. John was visited by Asiatic cholera, and more than 2,000 people died from this terrible scourge. The shipyards and places of business were almost

deserted, and hundreds fled from the city to avoid the plague."—G. U. Hay, *History of New Brunswick (Gage's 20th Century Series, pp. 121-123, 125-126, 136-138)*.

1620-1623.—Incorporation of Council for New England successor to Plymouth Company.—Great domain and monopoly of fisheries.—"While the king was engaged in the overthrow of the London company [see VIRGINIA: 1622-1624], its more loyal rival in the West of England [the Plymouth company, or North Virginia branch of the Virginia company] sought new letters-patent, with a great enlargement of their domain. The remonstrances of the Virginia corporation and the rights of English commerce could delay for two years, but not defeat, the measure that was pressed by the friends of the monarch. On the 3d of November, 1620, King James incorporated 40 of his subjects—some of them members of his household and his government, the most wealthy and powerful of the English nobility—as 'The Council established at Plymouth, in the county of Devon, for the planting, ruling, ordering, and governing New England in America.' The territory, which was conferred on them in absolute property, with unlimited powers of legislation and government, extended from the 40th to the 48th degree of north latitude, and from the Atlantic to the Pacific. The grant included the fisheries; and a revenue was considered certain from a duty to be imposed on all tonnage employed in them. The patent placed emigrants to New England under the absolute authority of the corporation, and it was through grants from that plenary power, confirmed by the crown, that institutions the most favorable to colonial independence and the rights of mankind came into being. The French derided the action of the British monarch in bestowing lands and privileges which their own sovereign, seventeen years before, had appropriated. The English nation was incensed at the largess of immense monopolies by the royal prerogative; and in April, 1621, Sir Edwin Sandys brought the grievance before the house of Commons. . . . But the parliament was dissolved before a bill could be perfected. In 1622, five and thirty sail of vessels went to fish on the coasts of New England, and made good voyages. The monopolists appealed to King James, and he issued a proclamation, which forbade any to approach the northern coast of America, except with the leave of their company or of the privy council. In June, 1623, Francis West was despatched as admiral of New England, to exclude such fishermen as came without a license. But they refused to pay the tax which he imposed, and his ineffectual authority was soon resigned."—G. Bancroft, *History of the United States, v. 1, pt. 1, ch. 13*.

1620-1660.—Puritan domination. See PURITANS: 1620-1660.

1621-1631.—Grants made by Council for New England.—Settlements planted.—Nova Scotia, Maine and New Hampshire conferred.—Captain John Mason, a native of King's Lynn, in Norfolk, became governor of Newfoundland in 1615. "While there he wrote a tract entitled 'A Brief Discourse of the Newfoundland,' and sent it to his friend Sir John Scot of Edinburgh, to peruse, and to print if he thought it worthy. It was printed in the year 1620. . . . In the spring or summer of 1621, Mason returned into England, and immediately found proof of the effect of his little tract. . . . Sir William Alexander, afterwards Earl of

Stirling, immediately sought him out. He had been appointed Gentleman of the Privy Chamber to Prince Henry, honored with Knighthood, and was Master of Requests for Scotland. He invited Mason to his house, where he discussed with him a scheme of Scotch colonization, and he resolved to undertake settling a colony in what is now Nova Scotia. He begged Mason to aid him in procuring a grant of this territory from the Council for New England, it being within their limits. Mason referred him to Sir Ferdinando Gorges, one of the Council and their Treasurer. The king readily recommended Alexander to Gorges, and Gorges heartily approved the plan. In September, 1621, Alexander obtained a Royal Patent for a tract of land which he called New Scotland, a name attractive to his countrymen. This must have been gratifying to Mason, who had urged Scotch emigration in his tract printed only a year before. The Council for New England, established in November, 1620, was now granting and ready to grant to associations or to individuals parcels of its vast domain in America. . . . The second patent for land granted by the Council was to Capt. John Mason, bearing date March 9, 1621-2. It was all the land lying between the Naumkeag and the Merrimac rivers, extending back from the sea-coast to the heads of both of these rivers, with all the islands within three miles of the shore. Mason called this Mariana. This tract of territory lies wholly within the present bounds of Massachusetts. We now arrive at a period when Mason and Gorges have a joint interest in New England. On the 10th of August, 1622, the Council made a third grant. This was to Gorges and Mason jointly of land lying upon the sea-coast between the Merrimac and the Kennebec rivers, extending three-score miles into the country, with all islands within five leagues of the premises to be, or intended to be, called the Province of Maine. Thus was the territory destined seven years later to bear the name of New Hampshire, first carved from the vast domain of New England, whose boundaries were fixed by the great circles of the heavens. Thus was Capt. Mason joint proprietor of his territory afterwards known as New Hampshire, before a single settler had built a cabin on the Pascataqua. Capt. Robert Gorges, son of Sir Ferdinando, was authorized to give the grantees possession of this new Province. Great enthusiasm on the subject of colonization now prevailed in England, extending from the king, through all ranks. . . . Before the year 1622 closed, the Council issued many patents for land, in small divisions, to persons intending to make plantations. Among the grants, is one to David Thomson and two associates, of land on the Pascataqua. The bounds and extent of this patent are unknown. Only the fact that such a patent was granted is preserved. . . . The Council for New England, in view of the many intended settlements, as well as the few already made, now proposed to set up a general government in New England. Capt. Robert Gorges, recently returned from the Venetian wars, was appointed Governor, with Capt. Francis West, Capt. Christopher Levett, and the governor of New Plymouth as his Council. Capt. Gorges arrived here the middle of September, 1623, having been preceded some months by Capt. West, who was Vice-Admiral of New England as well as Councillor. Capt. Levett came as late as November. . . . The next year, 1624, war between England and Spain broke out, and drew off for a while Gorges and Mason from their interests in colonization. Gorges was Captain of the Castle and Island of St. Nicholas, at Plymouth, a post

that he had held for thirty years; and he was now wholly taken up with the duties of his office. Mason's services were required as a naval officer of experience. . . . In 1626 England plunged into a war with France, without having ended the war with Spain. Capt. Mason was advanced to be Treasurer and Paymaster of the English armies employed in the wars. There was no time now to think of American colonization. His duties were arduous. . . . In 1629 peace was made with France, and the war with Spain was coming to an end. No sooner were Gorges and Mason a little relieved from their public duties than they sprang at once to their old New England enterprise. They resolved to push forward their interests. They came to some understanding about a division of their Province of Maine. On the 7th of November, 1629, a day memorable in the history of New Hampshire, the Council granted to Mason a patent of all that part of the Province of Maine lying between the Merrimac and Pascataqua rivers; and Mason called it New Hampshire, out of regard to the favor in which he held Hampshire in England, where he had resided many years. . . . This grant had hardly been made when Champlain was brought to London, a prisoner, from Canada, by Kirke. The French had been driven from that region. Gorges and Mason procured immediately a grant from the Council of a vast tract of land in the region of Lake Champlain, supposed to be not only a fine country for peltry, but to contain vast mineral wealth. The Province was called Laconia on account of the numerous lakes supposed or known to be there, and was the most northern grant hitherto made by the Council. The patent bears date Nov. 17, 1629, only ten days later than Mason's New Hampshire grant. . . . For the purpose of advancing the interests of Gorges and Mason in Laconia as well as on the Pascataqua, they joined with them six merchants in London, and received from the Council a grant dated Nov. 3, 1631, of a tract of land lying on both sides of the Pascataqua river, on the sea-coast and within territory already owned by Gorges and Mason in severalty. This patent, called the Pascataqua Patent, covered, on the west side of the river, the present towns of Portsmouth, New Castle, Rye and part of Greenland; on the east side, Kittery, Eliot, the Berwicks, and the western part of Lebanon."—C. 1635.—Dissolution of Council for New England and partitioning of its territory claims by lot.—“The Council for New England, having struggled through nearly fifteen years of maladministration and ill-luck, had yielded to the discouragements which beset it. By the royal favor, it had triumphed over the rival Virginia Company, to be overwhelmed in its turn by the just jealousy of Parliament, and by dissensions among its members. The Council, having, by profuse and inconsistent grants of its lands, exhausted its common property, as well as its credit with purchasers for keeping its engagements, had no motive to continue its organization. Under these circumstances, it determined on a resignation of its charter to the king, and a surrender of the administration of its domain to a General Governor of his appointment, on the condition that all the territory, a large portion of which by its corporate action had already been alienated to other parties [see above: 1621-1631], should be granted in severalty by the king to the members of the Council. Twelve associates accordingly proceeded to a distribution of New England among themselves by lot; and nothing was wanting to render the transaction complete, and to transfer to them the ownership of that region, except to oust the previous patentees, of whom the most powerful body were colonists in Massachusetts Bay. To effect this, Sir John Banks, Attorney-General, brought a writ of ‘quo warranto’ in Westminster Hall against the Massachusetts Company. [See MASSACHUSETTS: 1634-1637.] . . . It seemed that, when a few more forms should be gone through, all would be over with the presumptuous Colony. . . . But . . . everything went on as if Westminster Hall had not spoken. ‘The Lord frustrated their design.’ The disorders of the mother country were a safeguard of the infant liberty of New England.”—J. G. Palfrey, *History of New England*, v. 1, ch. 10.—In the parcelling of New England by lot among the members of the Council, the divisions were: (1) Between the St. Croix and Pemaquid, to William Alexander. (2) From Pemaquid to Sagadahoc, in part to the marquis of Hamilton. (3) Between the Kennebec and Androscoggin; and (4) from Sagadahoc to Piscataqua, to Sir F. Gorges. (5) From Piscataqua to the Naumkeag, to Mason. (6) From the Naumkeag round the sea-coast, by Cape Cod to Narragansett, to the marquis of Hamilton. (7) From Narragansett to the half-way bound, between that and the Connecticut river, and fifty miles up into the country, to Lord Edward Gorges. (8) From this midway point to the Connecticut river, to the earl of Carlisle. (9 and 10) From the Connecticut to the Hudson, to the duke of Lennox. (11 and 12) From the Hudson to the limits of the Plymouth company’s territory, to Lord Mulgrave.—W. C. Bryant and S. H. Gay, *History of the United States*, v. 1, p. 337, foot-note.

1637.—Pequot War.—“The region extending from the bounds of Rhode Island to the banks of the Hudson was at the time of the colonization held in strips of territory mainly by three tribes of the natives, who had long had feuds among themselves and with other tribes. They were the Narragansetts, the Mohegans, and the Pequots. The Mohegans were then tributaries of the Pequots, and were restive under subjection to their fierce and warlike conquerors, who were estimated to number at the time 1,000 fighting men. . . . The policy of the whites was to aggravate the dissensions of the tribes, and to make alliance with one or more of them. Winthrop records in March, 1631, the visit to Boston of a Connecticut Indian, probably a Mohegan, who invited the English to come and plant near the river, and who offered presents, with the promise of a profitable trade. His object proved to be to engage the interest of the whites against the Pequots. His errand was for the time unsuccessful. Further advances of a similar character were made afterwards, the result being to persuade the English that, sooner or later, they would need to interfere as umpires, and must use discretion in a wise regard to what would prove to be for their own interest. In 1633 the Pequots had savagely mutilated and murdered a party of English traders, who, under Captain Stone, of Virginia, had gone up the Connecticut. The Boston magistrates had instituted measures to call the Pequots to account, but nothing effectual was done. The Dutch had a fort on the river near Hartford, and the English had built one at its mouth. In 1636 several settlements had been made in Connecticut by the English from Cambridge, Dorchester, and other places. John Oldham, of Watertown, had in that year been murdered, while on a trading voyage, by some Indians belonging on Block Island. To avenge this act our magistrates sent Endicott, as general, with a body of 90 men, with orders to kill all the male Indians on that island, sparing only the women and little children. He accomplished his bloody work only in part, but after destroying all the corn-fields and wigwams, he turned to hunt the Pequots on the main. After this expedition, which simply exasperated the Pequots, they made a desperate effort to induce the Narragansetts to come into a league with them against the English. It seemed for a while as if they would succeed in this, and the consequences would doubtless have been most disastrous to the whites. The scheme was thwarted largely through the wise and friendly intervention of Roger Williams, whose diplomacy was made effective by the confidence which his red neighbors had in him. The Narragansett messengers then entered into a friendly league with the English in Boston. All through the winter of 1637 the Pequots continued to pick off the whites in their territory, and they mutilated, tortured, roasted, and murdered at least thirty victims, becoming more and more vindictive and cruel in their doings. There were then in Connecticut some 250 Englishmen, and, as has been said, about 1,000 Pequot ‘braves.’ The authorities in Connecticut resolutely started a military organization, giving the command to the redoubtable John Mason, a Low-Country soldier, who had recently gone from Dorchester. Massachusetts and Plymouth

contributed their quotas, having as allies the Mohegans, of whose fidelity they had fearful misgivings, but who proved constant though not very effective. Of the 160 men raised by Massachusetts, only about 20, under Captain Underhill,—a good fighter, but a sorry scamp,—reached the scene in season to join with Mason in surprising the unsuspecting and sleeping Pequots in one of their forts near the Mystic. Fire, lead, and steel with the infuriated vengeance of Puritan soldiers against murderous and fiendish heathen, did effectively the exterminating work. Hundreds of the savages, in their maddened frenzy of fear and dismay, were shot or run through as they were impaled on their own palisades in their efforts to rush from their blazing wigwams, crowded within their frail enclosures. The English showed no mercy, for they felt none. . . . A very few of the wretched savages escaped to another fort, to which the victorious English followed them. This, however, they soon abandoned, taking refuge, with their old people and children, in the protection of swamps and thickets. Here, too, the English, who had lost but two men killed, though they had many wounded, and who were now reinforced, pursued and surrounded them, allowing the aged and the children, by a parley, to come out. The men, however, were mostly slain, and the feeble remnant of them which sought protection among the so-called river Indians, higher up the Connecticut, and among the Mohawks, were but scornfully received,—the Pequot sachem Sassacus, being beheaded by the latter. A few of the prisoners were sold in the West Indies as slaves, others were reduced to the same humiliation among the Mohegans, or as farm and house servants to the English. . . . But the alliances into which the whites had entered in order to divide their savage foes were the occasions of future entanglements in a tortuous policy, and of later bloody struggles of an appalling character. . . . In all candor the admission must be made, that the Christian white men . . . allowed themselves to be trained by the experience of Indian warfare into a savage cruelty and a desperate vengeance.”—G. E. Ellis, *Indians of eastern Massachusetts (Memorial History of Boston, v. 1, pp. 252-254)*.—“More than 800 [of the Pequots] had been slain in the war, and less than 200 remained to share the fate of captives. These were distributed among the Narragansetts and Mohegans, with the pledge that they should no more be called Pequots, nor inhabit their native country again. To make the annihilation of the race yet more complete, their very name was extinguished in Connecticut by legislative act. Pequot river was called the Thames, Pequot town was named New London.”—S. G. Arnold, *History of Rhode Island, v. 1, ch. 3*.—See also RHODE ISLAND: 1637.

1640-1644.—Growth of population and rise of

towns.—End of Puritan exodus.—“Over 20,000 persons are estimated to have arrived in New England in the fifteen years before the assembling of the Long Parliament [1640]; one hundred and ninety-eight ships bore them over the Atlantic; and the whole cost of their transportation, and of the establishment of the plantation, is computed at about £200,000, or nearly a million of dollars. The progress of settlement had been proportionally rapid. . . . Hingham was settled in 1634. Newbury, Concord, and Dedham were incorporated in 1635. And from that date to 1643, acts were passed incorporating Lynn, North Chelsea, Salisbury, Rowley, Sudbury, Braintree, Woburn, Gloucester, Haverhill, Wenham, and Hull. West of Worcester, the only town incorporated within the present limits of the state was Springfield, for which an act was passed in 1636. These little municipalities were, in a measure, peculiar to New England; each was sovereign within itself; each sustained a relation to the whole, analogous to that which the states of our Union hold respectively to the central power, or the constitution of the United States; and the idea of the formation of such communities was probably derived from the parishes of England, for each town was a parish, and each, as it was incorporated, was required to contribute to the maintenance of the ministry as the basis of its grant of municipal rights. Four counties were erected at this time: Suffolk, Essex, Middlesex, and Old Norfolk, all which were incorporated in 1643. Each of the first three contained eight towns, and Old Norfolk six.”—J. S. Barry, *History of Massachusetts, v. 1, ch. 8*.—“Events in England had now [1640] reached a crisis, and the Puritan party, rising rapidly into power, no longer looked to America for a refuge. The great tide of emigration ceased to flow; but the government of Massachusetts went on wisely and strongly under the alternating rule of Winthrop, Dudley, and Bellingham. The English troubles crippled the holders of the Mason and Gorges grants, and the settlements in New Hampshire—whither Wheelwright had gone, and where turbulence had reigned—were gradually added to the jurisdiction of Massachusetts. In domestic matters everything went smoothly. There was some trouble with Bellingham, and Winthrop was again made Governor [1642]. The oath of allegiance to the King taken by the magistrates was abandoned, because Charles violated the privileges of Parliament, and the last vestige of dependence vanished. Massachusetts was divided into counties; and out of a ludicrous contest about a stray pig, in which deputies and magistrates took different sides, grew a very important controversy as to the powers of deputies and assistants, which resulted [1644] in the division of the legislature into two branches, and a consequent improvement in the symmetry and solidity of the political system.”—H. 1643.—Confederation of colonies.—In May, 1643, “a confederacy, to be known as the United

Colonies of New England, was entered into at Boston, between delegates from Plymouth, Connecticut, and New Haven on the one hand, and the General Court of Massachusetts on the other. Supposed dangers from the Indians, and their quarrels with the Dutch of Manhattan, had induced the people of Connecticut to withdraw their formal objections to this measure. Two commissioners from each colony were to meet annually, or oftener, if necessary; the sessions to be held alternately at Boston, Hartford, New Haven, and Plymouth; but Boston was to have two sessions for one at each of the other places. The commissioners, all of whom must be church members, were to choose a president from among themselves, and everything was to be decided by six voices out of the eight. No war was to be declared by either colony without the consent of the commissioners, to whose province Indian affairs and foreign relations were especially assigned. The sustentation of the 'truth and liberties of the Gospel' was declared to be one great object of this alliance. All war expenses were to be a common charge, to be apportioned according to the number of male inhabitants in each colony. Runaway servants and fugitive criminals were to be delivered up, a provision afterward introduced into the Constitution of the United States; and the commissioners soon recommended, what remained ever after the practice of New England, and ultimately became, also, a provision of the United States Constitution, that judgments of courts of law and probates of wills in each colony should have full faith and credit in all the others. The commissioners from Massachusetts, as representing by far the most powerful colony of the alliance, claimed an honorary precedence, which the others readily conceded. Plymouth, though far outgrown by Massachusetts, and even by Connecticut, had made, however, some progress. It now contained seven towns, and had lately adopted a representative system. But the old town of Plymouth was in decay, the people being drawn off to the new settlements. Bradford had remained governor, except for four years, during two of which he had been relieved by Edward Winslow, and the other two by Thomas Prince. New Haven was, perhaps, the weakest member of the alliance. Besides that town, the inhabitants of which were principally given to commerce, there were two others, Milford and Guilford, agricultural settlements; Southold, at the eastern extremity of Long Island, also acknowledged the jurisdiction of New Haven, and a new settlement had recently been established at Stamford. . . . The colony of Connecticut, not limited to the towns on the river, to which several new ones had already been added, included also Stratford and Fairfield, on the coast of the Sound, west of New Haven. . . . The town of Southampton, on Long Island, acknowledged also the jurisdiction of Connecticut. Fort Saybrook, at the mouth of the river, was still an independent settlement, and Fenwick, as the head of it, became a party to the articles of confederation. But the next year he sold out his interest to Connecticut, and into that colony Saybrook was absorbed. . . . Gorges's province of Maine was not received into the New England alliance, 'because the people there ran a different course both in their ministry and civil administration.' The same objection applied with still greater force to Aquidday and Providence."—R. Hildreth, *History of the United States*, v. 1, ch. 10.—See also U. S. A.: 1607-1752.

1674-1675.—King Philip's War: Causes and beginning.—"The Pokanokets had always rejected the Christian faith and Christian manners, and their chief had desired to insert in a treaty, what the Puritans always rejected, that the English should never attempt to convert the warriors of his tribe from the religion of their race. The aged Massasoit—he who had welcomed the pilgrims to the soil of New England, and had opened his cabin to shelter the founder of Rhode Island—now slept with his fathers, and Philip, his son, had succeeded him as head of the allied tribes. Repeated sales of land had narrowed their domains, and the English had artfully crowded them into the tongues of land, as 'most suitable and convenient for them,' and as more easily watched. The principal seats of the Pokanokets were the peninsulas which we now call Bristol and Tiverton. As the English villages drew nearer and nearer to them, their hunting-grounds were put under culture, their natural parks were turned into pastures, their best fields for planting corn were gradually alienated, their fisheries were impaired by more skilful methods, till they found themselves deprived of their broad acres, and, by their own legal contracts, driven, as it were, into the sea. Collisions and mutual distrust were the necessary consequence. There exists no evidence of a deliberate conspiracy on the part of all the tribes. The commencement of war was accidental; many of the Indians were in a maze, not knowing what to do, and disposed to stand for the English; sure proof of no ripened conspiracy. But they had the same complaints, recollections, and fears; and, when they met, they could not but grieve together at the alienation of the domains of their fathers. They spurned the English claim of jurisdiction over them, and were indignant that Indian chiefs or warriors should be arraigned before a jury. And, when the language of their anger and sorrow was reported to the men of Plymouth colony by an Indian tale-bearer, fear professed to discover in their unguarded words the evidence of an organized conspiracy. The haughty Philip, who had once before been compelled to surrender his 'English arms' and pay an onerous tribute, was, in 1674, summoned to submit to an examination,

and could not escape suspicion. The wrath of his tribe was roused, and the informer was murdered. The murderers, in their turn, were identified, seized, tried by a jury, of which one half were Indians, and, in June, 1675, on conviction, were hanged. The young men of the tribe panted for revenge; without delay, eight or nine of the English were slain in or about Swansea, and the alarm of war spread through the colonies. Thus was Philip hurried into 'his rebellion,' and he is reported to have wept as he heard that a white man's blood had been shed. . . . What chances had he of success? The English were united; the Indians had no alliance, and half of them joined the English, or were quiet spectators of the fight: the English had guns enough; few of the Indians were well armed, and they could get no new supplies: the English had towns for their shelter and safe retreat; the miserable wigwams of the natives were defenceless: the English had sure supplies of food; the Indians might easily lose their precarious stores. They rose without hope, and they fought without mercy. For them as a nation there was no to-morrow. . . . At the first alarm, volunteers from Massachusetts joined the troops of Plymouth; on the twenty-ninth of June, within a week from the beginning of hostilities, the Pokanokets were driven from Mount Hope; and in less than a month Philip was a fugitive among the Nipmucks, the interior tribes of Massachusetts. The little army of the colonists then entered the territory of the Narragansetts, and from the reluctant tribe extorted a treaty of neutrality, with a promise to deliver up every hostile Indian. Victory seemed promptly assured. But it was only the commencement of horrors. Canonchet, the chief sachem of the Narragansetts, was the son of Miantonomoh; and could he forget his father's wrongs? Desolation extended along the whole frontier. Banished from his patrimony where the pilgrims found a friend, and from his cabin which had sheltered exiles, Philip and his warriors spread through the country, awakening their race to a warfare of extermination."—G. Bancroft, *History of the United States*, v. 1, pt. 2, ch. 5.—"At this time, according to loose estimates, there may have been some 36,000 Indians and 60,000 whites in New England; 10,000 of the former fit for war, and 15,000 of the latter capable of bearing arms. . . . At the outset, the Narragansetts, numbering 2,000 warriors, did not actually second Philip's resistance. But Canonchet, their sachem, might well remember the death of his father Miantonomo [who, taken prisoner in a war with the Mohegans, and surrendered by them to the English, in 1643, with a request for permission to put him to death, was deliberately returned to his savage captors, on advice taken from the ministers at Boston—doomed to death without his knowledge]. . . . No efforts at conciliation seem to have been made by either party; for the whites felt their superiority (were they not 'the Lord's chosen people?'); and Philip knew the desperate nature of the struggle between united and well-armed whites, and divided uncontrolled savages; yet when the emergency came he met it, and never faltered or plead from that day forth."—C. W. Elliott, *New England history*, v. 1, ch. 40.

ALSO IN: B. Church, *History of King Philip's War* (*Prince Society Publication*, 1867).—S. G. Drake, *Aboriginal races of North America*, bk. 3.

1675 (July-September).—**King Philip's War.**—**Savage successes of the Indian enemy.**—**Increasing rage and terror among the colonists.**—The Nipmucks, into whose country Philip retreated, "had already commenced hostilities by

attacking Mendon. They waylaid and killed Captain Hutchinson, a son of the famous Mrs. Hutchinson, and 16 out of a party of 20 sent from Boston to Brookfield to parley with them. Attacking Brookfield itself, they burned it, except one fortified house. The inhabitants were saved by Major Willard, who, on information of their danger, came with a troop of horse from Lancaster, thirty miles through the woods, to their rescue. A body of troops presently arrived from the eastward, and were stationed for some time at Brookfield. The colonists now found that by driving Philip to extremity they had roused a host of unexpected enemies. The River Indians, anticipating an intended attack upon them, joined the assailants. Deerfield and Northfield, the northernmost towns on the Connecticut River, settled within a few years past, were attacked and several of the inhabitants killed and wounded. Captain Beers, sent from Hadley to their relief with a convoy of provisions, was surprised near Northfield and slain, with 20 of his men. Northfield was abandoned and burned by the Indians. . . . Driven to the necessity of defensive warfare, those in command on the river determined to establish a magazine and garrison at Hadley. Captain Lathrop, who had been dispatched from the eastward to the assistance of the river towns, was sent with 80 men, the flower of the youth of Essex county, to guard the wagons intended to convey to Hadley 3,000 bushels of unthreshed wheat, the produce of the fertile Deerfield meadows. Just before arriving at Deerfield, near a small stream still known as Bloody Brook, under the shadow of the abrupt conical Sugar Loaf, the southern termination of the Deerfield mountain, Lathrop fell into an ambush, and, after a brave resistance, perished there with all his company. Captain Moseley, stationed at Deerfield, marched to his assistance, but arrived too late to help him. That town, also, was abandoned, and burned by the Indians. Springfield, about the same time, was set on fire, but was partially saved by the arrival of Major Treat, with aid from Connecticut. Hatfield, now the frontier town on the north, was vigorously attacked, but the garrison succeeded in repelling the assailants. Meanwhile, hostilities were spreading; the Indians on the Merrimac began to attack the towns in their vicinity; and the whole of Massachusetts was soon in the utmost alarm. Except in the immediate neighborhood of Boston, the country still remained an immense forest, dotted by a few openings. The frontier settlements . . . were mostly broken up, and the inhabitants, retiring towards Boston, spread everywhere dread and intense hatred of 'the bloody heathen.' Even the praying Indians, and the small dependent and tributary tribes, became objects of suspicion and terror. . . . Not content with realities sufficiently frightful, superstition, as usual, added bugbears of her own. Indian bows were seen in the sky, and scalps in the moon. The northern lights became an object of terror. Phantom horsemen careered among the clouds, or were heard to gallop invisible through the air. The howling of wolves was turned into a terrible omen. The war was regarded as a special judgment in punishment of prevailing sins. . . . About the time of the first collision with Philip, the Tarenteens, or Eastern Indians, had attacked the settlements in Maine and New Hampshire, plundering and burning the houses, and massacring such of the inhabitants as fell into their hands. This sudden diffusion of hostilities and vigor of attack from opposite quarters, made the colonists believe that Philip had long been plotting and had gradually matured an extensive con-

spiracy, into which most of the tribes had liberally entered, for the extermination of the whites. This belief infuriated the colonists, and suggested some very questionable proceedings. . . . But there is no evidence of any deliberate concert; nor, in fact, were the Indians united. Had they been so, the war would have been far more serious. The Connecticut tribes proved faithful, and that colony remained untouched. Even the Narragansetts, the most powerful confederacy in New England, in spite of so many former provocations, had not yet taken up arms. But they were strongly suspected of intention to do so, and were accused, notwithstanding their recent assurances, of giving aid and shelter to the hostile tribes."—R. Hildreth, *History of the United States*, v. 1, ch. 14.

ALSO IN: R. Markham, *History of King Philip's War*, ch. 7-8.—G. H. Hollister, *History of Connecticut*, v. 1, ch. 12.—M. A. Green, *Springfield, 1636-1886*, ch. 9.

1675 (October-December).—King Philip's War.—Crushing of Narragansetts.—"The attitude of the powerful Narragansett tribe was regarded with anxiety. It was known that, so far from keeping their compact to surrender such enemies of the English as should fall into their hands, they had harbored numbers of Philip's dispersed retainers and allies. While the Federal Commissioners were in session at Boston [October], Canonchet, sachem of the Narragansetts, came thither with other chiefs, and promised that the hostile Indians whom they acknowledged to be then under their protection should be surrendered within ten days. But probably the course of events on Connecticut River emboldened them. At all events, they did not keep their engagement. The day for the surrender came and went, and no Indians appeared. If that faithless tribe, the most powerful in New England, should assume active hostilities, a terrible desolation would ensue. The Commissioners moved promptly. The fifth day after the breach of the treaty found them reassembled after a short recess. They immediately determined to raise an additional force of 1,000 men for service in the Narragansett country. They appointed Governor Winslow, of Plymouth, to be commander-in-chief, and desired the colony of Connecticut to name his lieutenant. The General was to place himself at the head of his troops within six weeks, 'a solemn day of prayer and humiliation' being kept through all the colonies meanwhile. . . . Time was thus given to the Narragansetts to make their peace 'by actual performance of their covenants made with the Commissioners; as also making reparation for all damages sustained by their neglect hitherto, together with security for their further fidelity.' . . . It is not known whether Philip was among the Narragansetts at this time. Under whatever influence it was, whether from stupidity or from confidence, they made no further attempt at pacification. . . . The Massachusetts troops marched from Dedham to Attleborough on the day before that which had been appointed by the Commissioners for them to meet the Plymouth levy at the northeastern corner of the Narragansett country. The following day they reached Seekonk. A week earlier, the few English houses at Quinsigamond (Worcester) had been burned by a party of natives; and a few days later, the house of Jeremiah Bull, at Pettyquamscott, which had been designated as the place of general rendezvous for the English, was fired, and ten men and five women and children, who had taken refuge in it, were put to death. . . . The place where the Narragansetts were to be sought was in what is now the town of South Kingston,

18 miles distant, in a northwesterly direction, from Pettyquamscott, and a little further from that Pequot fort to the southwest, which had been destroyed by the force under Captain Mason forty years before. According to information afterwards received from a captive, the Indian warriors here collected were no fewer than 3,500. They were on their guard, and had fortified their hold to the best of their skill. It was on a solid piece of upland of five or six acres, wholly surrounded by a swamp. On the inner side of this natural defence they had driven rows of palisades, making a barrier nearly a rod in thickness; and the only entrance to the enclosure was over a rude bridge consisting of a felled tree, four or five feet from the ground, the bridge being protected by a block-house. The English [whose forces, after a considerable delay of the Connecticut troops, had been all assembled at Pettyquamscott on Saturday, December 18], breaking up their camp [on the morning of the 19th] while it was yet dark, arrived before the place at one o'clock after noon. Having passed, without shelter, a very cold night, they had made a march of 18 miles through deep snow, scarcely halting to refresh themselves with food. In this condition they immediately advanced to the attack. The Massachusetts troops were in the van of the storming column; next came the two Plymouth companies; and then the force from Connecticut. The foremost of the assailants were received with a well-directed fire, [and seven of their captains were killed or mortally wounded]. . . . Nothing discouraged by the fall of their leaders, the men pressed on, and a sharp conflict followed, which, with fluctuating success, lasted for two or three hours. Once the assailants were beaten out of the fort; but they presently rallied and regained their ground. There was nothing for either party but to conquer or die, enclosed together as they were. At length victory declared for the English, who finished their work by setting fire to the wigwams within the fort. They lost 70 men killed and 150 wounded. Of the Connecticut contingent alone, out of 300 men 40 were killed and as many wounded. The number of the enemy that perished is uncertain. . . . What is both certain and material is that on that day the military strength of the formidable Narragansett tribe was irreparably broken."—J. G. Palfrey, *Compendious history of New England*, v. 2, bk. 3, ch. 3.

ALSO IN: S. G. Arnold, *History of Rhode Island*, v. 1, ch. 10.

1676-1678.—King Philip's War.—End of conflict.—"While the overthrow of the Narragansetts changed the face of things, it was far from putting an end to the war. It showed that when the white man could find his enemy he could deal crushing blows, but the Indian was not always so easy to find. Before the end of January Winslow's little army was partially disbanded for want of food, and its three contingents fell back upon Stonington, Boston, and Plymouth. Early in February the Federal Commissioners called for a new levy of 600 men to assemble at Brookfield, for the Nipmucks were beginning to renew their incursions, and after an interval of six months the figure of Philip again appears for a moment upon the scene. What he had been doing or where he had been, since the Brookfield fight in August, was never known. When in February, 1676, he reappeared, it was still in company with his allies the Nipmucks, in their bloody assault upon Lancaster. On the 10th of that month at sunrise the Indians came swarming into the lovely village. Danger had already been apprehended, the pastor,

Joseph Rowlandson, the only Harvard graduate of 1652, had gone to Boston to solicit aid, and Captain Wadsworth's company was slowly making its way over the difficult roads from Marlborough, but the Indians were beforehand. Several houses were at once surrounded and set on fire, and men, women, and children began falling under the tomahawk. The minister's house was large and strongly built, and more than forty people found shelter there until at length it took fire and they were driven out by the flames. Only one escaped, a dozen or more were slain, and the rest, chiefly women and children, taken captive. . . . Among the captives was Mary Rowlandson, the minister's wife, who afterward wrote the story of her sad experiences. . . . It was a busy winter and spring for these Nipmucks. Before February was over, their exploit at Lancaster was followed by a shocking massacre at Medfield. They sacked and destroyed the towns of Worcester, Marlborough, Mendon, and Groton, and even burned some houses in Weymouth, within a dozen miles of Boston. Murderous attacks were made upon Sudbury, Chelmsford, Springfield, Hatfield, Hadley, Northampton, Wrentham, Andover, Bridgewater, Scituate, and Middleborough. On the 18th of April Captain Wadsworth, with 70 men, was drawn into an ambush near Sudbury, surrounded by 500 Nipmucks, and killed with 50 of his men; six unfortunate captives were burned alive over slow fires. But Wadsworth's party made the enemy pay dearly for his victory; that afternoon 120 Nipmucks bit the dust. In such wise, by killing two or three for one, did the English wear out and annihilate their adversaries. Just one month from that day, Captain Turner surprised and slaughtered 300 of these warriors near the falls of the Connecticut river which have since borne his name, and this blow at last broke the strength of the Nipmucks. Meanwhile the Narragansetts and Wampanoags had burned the towns of Warwick and Providence. After the wholesale ruin of the great swamp fight, Canonchet had still some 600 or 700 warriors left, and with these, on the 26th of March, in the neighbourhood of Pawtuxet, he surprised a company of 50 Plymouth men, under Captain Pierce, and slew them all, but not until he had lost 140 of his best warriors. Ten days later, Captain Denison, with his Connecticut company, defeated and captured Canonchet, and the proud son of Miantonomo met the same fate as his father. He was handed over to the Mohegans and tomahawked. . . . The fall of Canonchet marked the beginning of the end. In four sharp fights in the last week of June, Major Talcott of Hartford slew from 300 to 400 warriors, being nearly all that were left of the Narragansetts; and during the month of July Captain Church patrolled the country about Taunton, making prisoners of the Wampanoags. Once more King Philip, shorn of his prestige, comes upon the scene. . . . Defeated at Taunton, the son of Massasoit was hunted by Church to his ancient lair at Bristol Neck and there, "betrayed by one of his own followers, he was surprised on the morning of August 12, and shot as he attempted to fly. "His severed head was sent to Plymouth, where it was mounted on a pole and exposed aloft upon the village green, while the meeting-house bell summoned the townspeople to a special service of thanksgiving. . . . By midsummer of 1678 the Indians had been everywhere suppressed, and there was peace in the land. . . . In Massachusetts and Plymouth . . . the destruction of life and property had been simply frightful. Of 90 towns, 12 had been utterly destroyed, while more than 40

others had been the scene of fire and slaughter. Out of this little society nearly 1,000 staunch men . . . had lost their lives, while of the scores of fair women and poor little children that had perished under the ruthless tomahawk, one can hardly give an accurate account. . . . But . . . henceforth the red man figures no more in the history of New England, except as an ally of the French in bloody raids upon the frontier."—J. Fiske, *Beginnings of New England*, ch. 5.

1686.—Consolidation of "Territory and Dominion of New England" under a royal governor-general.—"It was . . . determined in the Privy Council that Connecticut, New Plymouth, and Rhode Island should be united with Massachusetts, New Hampshire, Maine, and the Narragansett country, and be made 'one entire government, the better to defend themselves against invasion.' This was good policy for England. It was the despotic idea of consolidation. It was opposed to the republican system of confederation. . . . Consolidation was indeed the best mode of establishing in his colonies the direct government which Charles had adopted in November, 1684, and which was now to enforce. . . . For more than twenty years James had been trying his 'prentice hand' upon New York. The time had now come when he was to use his master hand on New England. . . . By the advice of Sunderland, James commissioned Colonel Sir Edmund Andros to be captain general and governor-in-chief over his 'Territory and Dominion of New England in America,' which meant Massachusetts Bay, New Plymouth, New Hampshire, Maine, and the Narragansett country, or the King's Province. Andros' commission was drawn in the traditional form, settled by the Plantation Board for those of other royal governors in Virginia, Jamaica, and New Hampshire. Its substance, however, was much more despotic. Andros was authorized, with the consent of a council appointed by the crown, to make laws and levy taxes, and to govern the territory of New England in obedience to its sovereign's Instructions, and according to the laws then in force, or afterward to be established. . . . To secure Andros in his government, two companies of regular soldiers, chiefly Irish Papists, were raised in London and placed under his orders."—J. R. 1702-1710.—Queen Anne's War (Second Intercolonial War).—Border incursions by French and Indians.—Final conquest of Acadia.—“But a few years of peace succeeded the treaty of Ryswick. First came the contest in Europe over the Spanish succession,” and then the recognition of “the Pretender” by Louis XIV. “This recognition was, of course, a challenge to England and preparations were made for war. William III. died in March, 1702, and was succeeded by Anne, the sister of his wife, and daughter of James II. War was declared by England against France, May 15th, 1702. The contest that followed is known in European history as the War of the Spanish Succession; in American history it is usually called Queen Anne's War; or the Second Intercolonial War. On one side were France, Spain, and Bavaria; on the other, England, Holland, Savoy, Austria, Prussia, Portugal, and Denmark. It was in this war that the Duke of Marlborough won his fame. To the people of New England, war between France and England meant the hideous midnight war-whoop, the tomahawk and scalping-knife, burning hamlets, and horrible captivity. To provide against it, a conference was called to meet at Falmouth, on Casco Bay, in June, 1703, when Governor Dudley, of Massachusetts, met many of the chiefs of the Abenakis. The Indians, professing to have no thought of war, promised peace and friendship by their accustomed tokens. . . . But, as usual, only a part of the tribes had been brought into the alliance,” and some lawless provocations by a party of English marauders soon drove the Abenakis again into their old French Alliance. “By August, 500 French and Indians were assembled, ready for incursions into the New England settlements. They divided into several bands and fell upon a number of places at the same time. Wells, Saco, and Casco were again among the doomed villages, but the fort at Casco was not taken, owing to the arrival of an armed vessel under Captain Southwick. About 150 persons were killed or captured in these attacks.” In February, the town of Deerfield, Massachusetts, was destroyed, 47 of the inhabitants were killed and 112 carried away captive. “On the 30th of July, the town of Lancaster was assailed, and a few people were killed, seven buildings burned, and much property destroyed. These and other depredations of war-parties along the coasts filled New England with consternation. . . . It was . . . resolved to fit out an expedition for retaliation, and as usual the people of Acadia were selected to expiate the sins of the Indians and Canadians. Colonel Benjamin Church was put in command of 550 men, 14 transports, and 36 whale-boats, conveyed by three ships of war. Sailing from Boston in May, 1704,” Church ravaged the lesser French settlements on the Acadian coast, but ventured no attack on Port Royal. “In 1705, 450 men under Subercase—soldiers, Canadian peasants, adventurers, and Indians, well armed, and with rations for twenty days, blankets and tents—set out to destroy the English settlements in Newfoundland, marching on snow-

shoes. They took Petit Havre and St. John's, and devastated all the little settlements along the eastern coast, and the English trade was for the time completely broken up. Subercase was made Governor of Acadia in 1706. The following spring New England sent Colonel March to Port Royal with two regiments, but he returned without assaulting the fort. Governor Dudley forbade the troops to land when they came back to Boston, and ordered them to go again. Colonel March was ill, and Colonel Wainwright took command; but after a pretence of besieging the fort for eleven days he retired with small loss, the expedition having cost Massachusetts £2,200. In 1708 a council at Montreal decided to send a large number of Canadians and Indians to devastate New England. But after a long march through the almost impassable mountain region of northern New Hampshire, a murderous attack on Haverhill, in which 30 or 40 were killed, was the only result. . . . In 1709 a plan was formed in England for the capture of New France by a fleet and five regiments of British soldiers aided by the colonists. But a defeat in Portugal called away the ships destined for America, and a force gathered at Lake Champlain under Colonel Nicholson for a land attack was so reduced by sickness—said to have resulted from the poisoning of a spring by Indians—that they burned their canoes and retreated. The next year, Nicholson was furnished with six ships of war, thirty transports, and one British and four New England regiments for the capture of Port Royal. Subercase had only 260 men and an insufficient supply of provisions.” He surrendered after a short bombardment, “and on the 16th of October the starving and ragged garrison marched out to be sent to France. For the last time the French flag was hauled down from the fort, and Port Royal was henceforth an English fortress, which was re-named Annapolis Royal, in honor of Queen Anne.”—R. Johnson, *History of the French War*, ch. 8.—“With a change of masters came a change of names. Acadie was again called ‘Nova Scotia’—the name bestowed upon it by James I. in 1621; and Port Royal, ‘Annapolis.’”—R. Brown, *History of the Island of Cape Breton*, letter 8.—See also CANADA: 1711-1713; U. S. A.: 1690-1748.

1744.—King George's War (Third Intercolonial War).—Hostilities in Nova Scotia.—“The war that had prevailed for several years between Britain and Spain [see ENGLAND: 1739-1741], inflicted upon the greater number of the British provinces of America no farther share of its evils than the burden of contributing to the expeditions of Admiral Vernon, and the waste of life by which his disastrous naval campaigns were signalized. Only South Carolina and Georgia had been exposed to actual attack and danger. But this year [1744], by an enlargement of the hostile relations of the parent state, the scenes of war was extended to the more northern provinces. The French, though professing peace with Britain, had repeatedly given assistance to Spain; while the British king, as Elector of Hanover, had espoused the quarrel of the emperor of Germany with the French monarch; and after various mutual threats and demonstrations of hostility that consequently ensued between Britain and France, war [the War of the Austrian Succession] was now formally declared by these states against each other [see AUSTRIA: 1718-1738 to 1744-1745]. The French colonists in America,

having been apprized of this event before it was known in New England, were tempted to improve the advantage of their prior intelligence by an instant and unexpected commencement of hostilities, which accordingly broke forth without notice or delay in the quarter of Nova Scotia. . . . On the island of Canso, adjoining the coast of Nova Scotia, the British had formed a settlement, which was resorted to by the fishermen of New England, and defended by a small fortification garrisoned by a detachment of troops from Annapolis. . . . Duquesnel, the governor of Cape Breton, on receiving intelligence of the declaration of war between the two parent states, conceived the hope of destroying the fishing establishments of the English by the suddenness and vigor of an unexpected attack. His first blow, which was aimed at Canso, proved successful (May 13, 1744). Duvivier, whom he despatched from his headquarters at Louisburg, with a few armed vessels and a force of 900 men, took unresisted possession of this island, burned the fort and houses, and made prisoners of the garrison and inhabitants. This success Duquesnel endeavoured to follow up by the conquest of Placentia in Newfoundland, and of Annapolis in Nova Scotia; but at both these places his forces were repulsed. In the attack of Annapolis, the French were joined by the Indians of Nova Scotia; but the prudent forecast of Shirley, the governor of Massachusetts, had induced the assembly of this province, some time before, to contribute a reinforcement of 200 men for the greater security of the garrison of Annapolis; and to the opportune arrival of the succour thus afforded the preservation of the place was ascribed. . . . The people of New England were stimulated to a pitch of resentment, apprehension, and martial energy, that very shortly produced an effort of which neither their friends nor their enemies had supposed them to be capable, and which excited the admiration of both Europe and America. . . . War was declared against the Indians of Nova Scotia, who had assisted in the attack upon Annapolis; all the frontier garrisons were reinforced; new forts were erected; and the materials of defence were enlarged by a seasonable gift of artillery from the king. Meanwhile, though the French were not prepared to prosecute the extensive plan of conquest which their first operations announced, their privateers actively waged a harassing naval warfare that greatly endamaged the commerce of New England. The British fisheries on the coast of Nova Scotia were interrupted; the fishermen declared their intention of returning no more to their wonted stations on that coast; and so many merchant vessels were captured and carried into Louisburg in the course of this summer, that it was expected that in the following year no branch of maritime trade would be pursued by the New England merchants, except under the protection of convoy."—J. Grahame, *History [Colonial] of the United States*, v. 2, bk. 10, ch. 1.

ALSO IN: P. H. Smith, *Acadia*, pp. 123-128.

1745.—King George's War.—Taking of Louisburg.—"Louisburg, on which the French had spent much money [see CAPE BRETON ISLAND: 1720-1745], was by far the strongest fort north of the Gulf of Mexico. But the prisoners of Canso, carried thither, and afterward dismissed on parole, reported the garrison to be weak and the works out of repair. So long as the French held this fortress, it was sure to be a source of annoyance to New England, but to wait for British aid to capture it would be tedious and uncertain, public attention in Great Britain being much engrossed by a threatened invasion. Under these circumstances, Shirley proposed to the General Court of Massachusetts the

bold enterprise of a colonial expedition, of which Louisburg should be the object. After six days' deliberation and two additional messages from the governor, this proposal was adopted by a majority of one vote. A circular letter, asking aid and cooperation, was sent to all the colonies as far south as Pennsylvania. In answer to this application, urged by a special messenger from Massachusetts, the Pennsylvania Assembly . . . voted £4,000 of their currency to purchase provisions. The New Jersey Assembly . . . furnished . . . £2,000 toward the Louisburg expedition, but declined to raise any men. The New York Assembly, after a long debate, voted £3,000 of their currency; but this seemed to Clinton a niggardly grant, and he sent, besides, a quantity of provisions purchased by private subscription, and ten eighteen-pounders from the king's magazine. Connecticut voted 500 men, led by Roger Wolcott, afterward governor, and appointed, by stipulation of the Connecticut Assembly, second in command of the expedition. Rhode Island and New Hampshire each raised a regiment of 300 men; but the Rhode Island troops did not arrive till after Louisburg was taken. The chief burden of the enterprise, as was to be expected, fell on Massachusetts. In seven weeks an army of 3,250 men was enlisted, transports were pressed, and bills of credit were profusely issued to pay the expense. Ten armed vessels were provided by Massachusetts, and one by each of the other New England colonies. The command in chief was given to William Pepperell, a native of Maine, a wealthy merchant, who had inherited and augmented a large fortune acquired by his father in the fisheries; a popular, enterprising, sagacious man, noted for his universal good fortune, but unacquainted with military affairs, except as a militia officer. . . . The enterprise . . . assumed something of the character of an anti-Catholic crusade. One of the chaplains, a disciple of Whitfield, carried a hatchet, specially provided to hew down the images in the French churches. Eleven days after embarking at Boston [April, 1745], the Massachusetts armament assembled at Casco, to wait there the arrival of the Connecticut and Rhode Island quotas, and the melting of the ice by which Cape Breton was environed. The New Hampshire troops were already there; those from Connecticut came a few days after. Notice having been sent to England and the West Indies of the intended expedition, Captain Warren presently arrived with four ships of war, and, cruising before Louisburg, captured several vessels bound thither with supplies. Already, before his arrival, the New England cruisers had prevented the entry of a French thirty-gun ship. As soon as the ice permitted, the troops landed and commenced the siege, but not with much skill, for they had no engineers. . . . Five unsuccessful attacks were made, one after another, upon an island battery which protected the harbor. In that cold, foggy climate, the troops, very imperfectly provided with tents, suffered severely from sickness, and more than a third were unfit for duty. But the French garrison was feeble and mutinous, and when the commander found that his supplies had been captured, he relieved the embarrassment of the besiegers by offering to capitulate. The capitulation [June 17] included 650 regular soldiers, and near 1,300 effective inhabitants of the town, all of whom were to be shipped to France. The island of St. John's presently submitted on the same terms. The loss during the siege was less than 150, but among those reluctantly detained to garrison the conquered fortress ten times as many perished afterward by sickness. In the expedition of Vernon and this against Louis-

burg perished a large number of the remaining Indians of New England, persuaded to enlist as soldiers in the colonial regiments. Some dispute arose as to the relative merits of the land and naval forces, which had been joined during the siege by additional ships from England. Pepperell, however, was made a baronet, and both he and Shirley were commissioned as colonels in the British army. Warren was promoted to the rank of rear admiral. The capture of this strong fortress, effected in the face of many obstacles, shed, indeed, a momentary luster over one of the most unsuccessful wars in which Britain was ever engaged."—R. Hildreth, *History of the United States*, v. 2, ch. 25.—"As far as England was concerned, it [the taking of Louisburg] was the great event of the war of the Austrian succession. England had no other success in that war to compare with it. As things turned out, it is not too much to say that this exploit of New England gave peace to Europe."—J. G. Palfrey, *History of New England*, v. 5, bk. 5, ch. 9.—"Though it was the most brilliant success the English achieved during the war, English historians scarcely mention it."—R. Johnson, *History of the French war*, ch. 9.

1745-1748.—King George's War.—Mortifying end.—Treaty of Aix-la-Chapelle, and restoration of Louisburg to France.—"Elated by their success [at Louisburg], the Provincials now offered to undertake the conquest of Canada; but the Duke of Bedford, to whom Governor Shirley's plan had been submitted, disapproved of it, as exhibiting to the colonists too plainly their own strength. . . . He therefore advised to place the chief dependence on the fleet and army to be sent from England, and to look on the Americans as useful only when joined with others. Finally, the Whigs determined to send a powerful fleet to Quebec, at the same time that an army should attack Montreal by the route of Lake Champlain; and so late as April, 1746, orders were issued to the several governors to levy troops without limitation, which, when assembled on the frontiers, the king would pay. From some unknown cause, the plan was abandoned as soon as formed. The general appointed to the chief command was ordered not to embark, but the instructions to enlist troops had been transmitted to America, and were acted on with alacrity. Massachusetts raised 3,500 men to co-operate with the fleet, which, however, they were doomed never to see. After being kept a long time in suspense, they were dispersed, in several places, to strengthen garrisons which were supposed to be too weak for the defenses assigned them. Upward of 3,000 men, belonging to other colonies, were assembled at Albany, undisciplined, without a commissariat, and under no control. After the season for active operations was allowed to pass away, they disbanded themselves, some with arms in their hands demanding pay of their governors, and others suing their captains. In addition to this disgraceful affair, the Provincials had the mortification to have a large detachment of their men cut off in Lower Horton, then known as Minas, situated nearly in the centre of Nova Scotia. The Canadian forces, which had traveled thither to co-operate with an immense fleet expected from France, determining to winter in that province, rendered it a subject of continued anxiety and expense to Massachusetts. Governor Shirley resolved, after again reinforcing the garrison at

Annapolis, to drive them from the shores of Minas Basin, where they were seated; and in the winter of the year 1746, a body of troops was embarked at Boston for the former place. After the loss of a transport, and the greatest part of the soldiers on board, the troops arrived, and re-embarked for Grand Pré in the district of Minas, in the latter end of December. . . . The issue was, that being cantoned at too great distances from each other, La Corne, a commander of the French, having intelligence of their situation, forced a march from Schiegnieto, through a most tempestuous snow-storm, and surprised them at midnight. After losing 160 of their men, in killed, wounded and prisoners, the party were obliged to capitulate, not, however, on dishonorable terms, and the French, in their turn, abandoned their posts. On the 8th of May, 1749, peace was proclaimed at Boston [according to the terms of the Treaty of Aix-la-Chapelle, concluded October 7, 1748], much to the mortification of the Provincials; Cape Breton was restored to France; and Louisburg, which had created so much dread, and inflicted such injuries on their commerce, was handed over to their inveterate enemies, to be rendered still stronger by additional fortifications. The French also obtained the islands of St. Pierre and Michelon, on the south coast of Newfoundland, as stations for their fisheries. [England reimbursed the colonies to the extent of £183,000 for the expenses of their vain conquest of Louisburg, and £135,000 for their losses in raising troops under the orders that were revoked.]—T. NEW FOREST.—"To create a new royal hunting ground in his English dominion, William the Conqueror ruthlessly demolished villages, manors, chapels, and parish churches throughout thirty miles of country, along the coast side of Hampshire, from the Avon on the west to Southampton Water on the east, and called this wilderness of his

making The New Forest. His son William Rufus was killed in it—which people thought to be a judgment. The New Forest still exists and embraces no less than 66,000 acres, extending over a district twenty miles by fifteen in area, of woodland, health, bog and rough pasture."—J. C. Brown, *Forests of England*, pt. 1, ch. 2, D.

NEW GUINEA, or Papua.—"This great island is [after Australia, the largest body of land in the Pacific [see BRITISH EMPIRE: Map of the World]]; from its northwestern to its southeastern extremity the distance is nearly 1500 miles; its area is equal to one and a half times that of France. It is abundantly watered and rich in varied productions. Nevertheless it has remained until our own time almost outside of the domain of civilized humanity. Most historians attribute the real discovery of the island, or at least of some among its attendant isles, to the Portuguese, Jorge de Menezes, in 1526 or 1527. It was not, however, until 1606 that the insularity of the land was practically demonstrated by the Spanish pilot Torres. But that discovery, carefully concealed as a state secret, buried in the archives of Manila, was finally forgotten by the Spanish themselves, and, after more than a century and a half, was newly made by English navigators. The expedition of Captain Cook opened an era of modern exploration on the New Guinea coasts, in which English, Dutch and French took part. The Dutch were the first to attempt an occupation of any part of the island [see MOLUCCAS], and in 1828 their government officially proclaimed possession of the western part of the island as far east as to long. 141° E. of Greenwich."—E. Reclus, *Nouvelle géographie universelle*, v. 14, pp. 617-20.—Until recent years no other attempts at the occupation of the island were made; but, after Fiji had been ceded to the British crown, in 1874, there began to be an agitation in Australia of proposals for securing control of eastern New Guinea. "It appeared that the claims of the Dutch, who had undoubtedly been intimately connected with the island since the beginning of the 17th century, were confined to a somewhat uncertain portion of New Guinea towards the west, the eastern part being admittedly a sort of No-man's land. Its shores had been continually visited for survey purposes during the present century by British ships, but no assertion of sovereignty over the numerous aboriginal tribes had been made by the British Government. On the occasion of the organization of Fiji [1874], strong representations as to the desirability of taking a similar course with regard to eastern New Guinea were made to the Secretary of State (Lord Carnarvon); but the Minister, after consulting the various Australasian governments, and finding them by no means unanimous, refused to take the step unless the colonies desiring it would undertake to contribute towards the expense likely to be incurred. The colonies were not prepared to assume this responsibility. . . . Thus the matter rested, until, at the close of the year 1877, the reported discovery of gold in New Guinea again brought the question prominently forward. The news immediately attracted numbers of Australian gold-diggers, and, following

in their wake, crowds of less reputable characters, who not only attempted to settle, or rather to lodge, in New Guinea itself, but took irregular possession of more than one of the numerous islands lying between Australia and New Guinea in Torres Strait, within the coast line of Queensland. Here they caused considerable trouble; and the Queensland Government, after acting as police authority in the islands in question for some little time without legal warrant, endeavoured to make its position constitutional with regard to them. In this it was successful. The British Admiralty, on the report of Commander Heath, certified that there was no known claim to the islands in question by any foreign power, and that there appeared no serious objection to the alteration of the Queensland coast boundaries for the purpose of including them. . . . Also at the request of the Queensland Government, the Admiralty stationed a war-ship at Port Moresby in New Guinea. But the Imperial Government, though pressed by representative bodies of various kinds connected with the colonies, still firmly declined to extend the principle of absorption by annexing any part of New Guinea itself to the Empire. The pressure, however, became very great. Companies were formed in Australia for the development of New Guinea. The Queensland Government's agent at Port Moresby began to assume more and more the character of an administrator of the country near the Port. . . . In February of the year 1883 the matter assumed a new phase by the definite offer of the Queensland Government . . . to bear the expense of the administration of New Guinea, if the Imperial authorities would sanction its annexation. The reasons urged by Queensland were, the increasing traffic through Torres Strait, the rapid development of coast industries, such as beche-de-mer [an edible sea-slug exported to China in large quantities] and pearl fishing, the danger of the escape of convicts from New Caledonia, and the inadequacy of the High Commissionership. The proposal of Queensland was being discussed by the Colonial Office in somewhat leisurely fashion, when the news reached Australia that a German association had been formed for the settlement of New Guinea. . . . Lord Granville (Foreign Secretary) declined to believe in the existence of the plan, at least so far as the German Government was concerned. The colonists took a different view; and, on the 4th April, 1883, the Queensland Government formally took possession of New Guinea in the name of Her Majesty. [See also QUEENSLAND: 1824-1900.] . . . Still . . . [the Imperial Government] declined to accede to the wishes of the colonists. . . . But the colonists did not intend to give way [and ultimately they carried their point]. . . . In April 1886 Sir Edward Malet and Count Herbert Bismarck signed at Berlin a declaration which marks out the limits of mutual acquisition in the Western Pacific. The German possession of Kaiser Wilhelm's Land, on the north-east coast of New Guinea, is definitely recognized; and an imaginary line, starting from its south-eastern corner, travels due east to the Salomon Islands, which it bisects, then north-east to the Marshall group, and finally due north to an indefinite point in the ocean. All to the west and north of this line is secured from British influence; Germany may not acquire any possession or protectorate to the south or east. Samoa, Tonga, and one or two other places, already provided for by other treaties, are excluded from the Declaration. The way being thus prepared, and the Queensland Government definitely undertaking to contribute

for 15 years an annual sum not exceeding £15,000 towards the expenses of the new possession, British New Guinea was, in June 1888, in pursuance of a new Act of Parliament passed in 1887, definitely created a possession of the British Crown. . . . Shortly before this date, the New Hebrides question had been temporarily settled by the mutual withdrawal, on the part of both England and France, of all territorial claims.—E. Jenks, *History of the Australasian colonies*, ch. 14.—See also MELANESIA: MALAY ARCHIPELAGO: People; MYTHOLOGY: Oceania: Melanesian.

1901.—British territory under Australia.—In 1901, control of British territory comprising more than 90,000 square miles, passed to the federal government of the new commonwealth of Australia.

1905.—Papua Act.—In 1905, the political organization of the island was completed by the Papua Act of the Australian Parliament.

1906.—Name changed.—The name of the British territory was officially changed to Territory of Papua in 1906.

1914.—German territory occupied.—German territory on the island of New Guinea, together with the adjacent Bismarck archipelago was occupied in 1914 by Australian forces.—See also BISMARCK ARCHIPELAGO; WORLD WAR: 1914: VII. German Pacific islands; AUSTRALIA: 1914-1915.

1920.—Status under League of Nations.—German possessions in and about New Guinea were given over to the commonwealth of Australia as mandatory under the League of Nations.—See also BRITISH EMPIRE: Extent; Treaties promoting expansion: 1920; PACIFIC OCEAN: Map.

NEW HAMPSHIRE, popularly known as the "Granite State" is a north Atlantic state of the United States and one of the original thirteen states of the Union. It is bounded on the north by the Canadian province of Quebec; on the east, by Maine, and the Atlantic ocean; on the south-east and south by Massachusetts; and on the west by Vermont. It has an area of 9,341 square miles of which 310 are water, and a population, 1920, of 443,083.

Resources.—New Hampshire, largely given over to agriculture, has 20,523 farms with a total of 2,603,806 acres of which 702,902 are improved land. The chief crops are hay, corn, oats, potatoes and apples. See U.S.A.: Economic Map.

1622-1679.—Colonization.—Union with Massachusetts.—Pioneering conditions.—"John Mason, the territorial proprietor of New Hampshire, was the promoter of its earliest settlements. His efforts contemplated the establishment of a great manorial estate of which he and his successors were to be the actual and titular heads. This design failed eventually, not because Mason and those who succeeded to his rights and adopted his plans were not powerful, persistent and well sustained by the home government, but because that style and theory of proprietorship and the form of government upon which it was, from the very nature of things, dependent, could not thrive, —indeed could not survive under the conditions which developed in New England."—G. F. Willey,

ed., *State builders*, p. 1.—As early as 1623, David Thomson "took possession of a grant of land made to him in 1622, apparently with the consent of Mason, at what is now Little Harbor in the town of Rye, but then called Pannaway. Possibly in the same year, 1623, William and Edward Hilton settled, under a grant to themselves, in what was afterward called Dover, some miles up the Piscataqua River, and this is alleged by some to have been the first actual settlement made in New Hampshire. As the Hiltons and Thomsons were friends of the Church of England, and neither Pilgrims like the Plymouth colonists of 1620, nor Puritans like those who soon after settled Massachusetts, it is probable they settled in New Hampshire, under some agreement with Mason and Gorges, who were ardent supporters of the state church. . . . Under this partnership [Mason and Gorges] and the previous arrangements, whatever they were, with Thomson, Walter Neale, and others, more than sixty men and twenty-two women were sent out by Mason and his partners, or adopted by them from other small colonies. . . . By . . . 1635 the little colony had become established, and the advantages of the situation were so many that it continued to grow in numbers and in wealth, and soon became a shipping and fishing station of some importance. Under the original name of Strawberry Bank, this particular settlement included all that is now Portsmouth, Rye, New Castle, Newington, and Greenland; a slight organization for local government was formed, and arrangements made for establishing there a church conformed to the ritual of the English Church, with glebe lands and proper support for a clergyman."—F. B. Sanborn, *New Hampshire (American commonwealths, pp. 4-5)*.—"This colony occupied a unique position from 1622, the year when Thomson's indenture was drawn and the first settlement definitely planned, to 1641-1643, when the four towns, Portsmouth, Dover, Hampton and Exeter, each an independent democracy, became, by their own choice, constituent parts of Massachusetts. This was the first union with the Bay colony. It was conditional on certain important privileges and guarantees, accorded to the four towns by the Massachusetts General Court. The time of this union, 1641-1679, constitutes the second period of New Hampshire history. It is in a large measure identical with that of Massachusetts Bay. The Masonian heirs succeeded in 1679, by influences exerted upon the home government in England, in the establishment of a separate province for the four frontier towns, then occupying a little break in the wilderness along the coast line and a few miles into the interior between Massachusetts bay and the territory of Maine."—G. F. Willey, ed., *State builders*, pp. 1-2.—"With every succeeding year the long, thin, sinuous line of settlements stretched farther and farther away to the northeast, fringing the wild shores of the Atlantic with houses and farms gathered together at the mouths or on the banks of the rivers, and with the homes of hardy fishermen which clustered in little groups beneath the shelter of the rocky headlands. The extension of these plantations was chiefly along the coast, but there was also a movement up the river courses toward the west and into the interior. The line of northeastern settlements began first to broaden in this way very slowly but still steadily from the plantations at Portsmouth and Dover, which were nearly coeval with the flourishing towns of the Bay. These settlements beyond the Massachusetts line all had one common and marked characteristic. They were all exposed to Indian attack from the

earliest days down to the period of the Revolution. Long after the dangers of Indian raids had become little more than a tradition to the populous and flourishing communities of Massachusetts Bay, the towns and villages of Maine and New Hampshire continued to be the outposts of a dark and bloody border land. French and Indian warfare with all its attendant horrors was the normal condition during the latter part of the seventeenth and the first quarter of the eighteenth century. . . . The people who waged this fierce war and managed to make headway in despite of it were engaged at the same time in a conflict with nature which was hardly less desperate. The soil, even in the most favored places, was none of the best, and the predominant characteristic of New Hampshire was the great rock formation which has given it the name of the Granite State. Slowly and painfully the settlers made their way back into the country, seizing on every fertile spot, and wringing subsistence and even a certain prosperity from a niggardly soil and a harsh climate. Their little hamlets crept onward toward the base of those beautiful hills [the White Mountains] which have now become one of the favorite play-grounds of America. . . . This life of constant battle with nature and with the savages, this work of wresting a subsistence from the unwilling earth while the hand was always armed against a subtle and cruel foe, had, of course, a marked effect upon the people who endured it. That, under such circumstances, men should have succeeded not only in gaining a livelihood, but should have attained also a certain measure of prosperity, established a free government, founded schools and churches, and built up a small but vigorous and thriving commonwealth, is little short of marvellous. . . . The people of New Hampshire were of the English Puritan stock. They were the borderers of New England, and were among the hardiest and boldest of their race. Their fierce battle for existence during nearly a century and a half left a deep impress upon them. Although it did not add new traits to their character, it strengthened and developed many of the qualities which chiefly distinguished the Puritan Englishmen."—H. C. Lodge, *Life of Daniel Webster*, pp. 1-2, 4.—See also NEW ENGLAND: 1621-1631; AMERICA: Map of early colonial grants.

1641-1679.—Claims of Massachusetts asserted and defeated.—According to its terms, the Massachusetts patent embraced a territory extending northward three miles beyond the head-waters of the Merrimack, and covered, therefore, the greater part of Mason's New Hampshire grant, as well as that of Gorges in Maine. In 1641, when this fact had been ascertained, the General Court of Massachusetts "passed an order (with the consent of the settlers at Dover and Strawberry-bank, on the Piscataqua), 'That from thenceforth, the said people inhabiting there are and shall be accepted and reputed under the Government of the Massachusetts,' etc. Mason had died, and confusion ensued, so that the settlers were mostly glad of the transfer. A long controversy ensued between Mason's heirs and Massachusetts as to the right of jurisdiction. The history of New Hampshire and Maine at this period was much the same. In 1660, at the time of the Restoration, the heirs of Mason applied to the Attorney-General in England, who decided that they had a good title to New Hampshire. The Commissioners who came over in 1664 attempted to re-establish them; but as the settlers favored Massachusetts, she resumed her government when they left. Mason's heirs renewed their claim in 1675, and in 1679 it was

solemnly decided against the claim of the Massachusetts Colony, although their grant technically included all lands extending to three miles north of the waters of the Merrimack river. John Cutt was the first President in New Hampshire, and thenceforward, to the American Revolution, New Hampshire was treated as a Royal province, the Governors and Lieutenant-Governors being appointed by the King, and the laws made by the people being subject to his revision."—C. W. Elliott, *New England history*, v. 1, ch. 26.—See also NEW ENGLAND: 1640-1644.

1680-1776.—Franchise qualifications. See SUFFRAGE, MANHOOD: United States: 1621-1776.

1681-1692.—First president and his immediate successors.—Second union with Massachusetts Bay.—Province government by royal commission reestablished.—"John Cutt, a man of the people, was the first president. He died in 1681, and was succeeded by his deputy, Richard Waldron. Under a new commission, Edward Cranfield held office from 1682 to 1686, his deputy, Walter Barefoote, having been the acting Governor in the latter part of the period. The four towns were made a part of the Dominion of New England in 1686. [See NEW ENGLAND: 1686.] This government, under Dudley and Andros, with its concomitants of abolished provincial legislatures and other measures absolutely abhorrent to the political sense of a large majority of the people of New England, survived only three years. The four New Hampshire towns, from the spring of 1689 to the closing half of the winter of 1689-90, governed themselves in the independent democratic fashion of the first period of their history. A second union with Massachusetts Bay was then effected, and continued during a period of two years. In 1692 a province government by royal commission was reestablished over the four towns. The course of events, with this unpretentious province, moved on through much adversity to the time of the achievement of a position and potency among the American dependencies of the mother country, in which, eighty-three years later, it was able to demand independence and join in a successful defiance of the imperial power of England."—G. F. Willey, ed., *State builders*, pp. 2-3.

1692-1775.—Intervening governments.—Provincial assembly.—Conventions.—Reorganization of militia.—"The intervening governments between 1692 and 1775 were administered by Samuel Allen, Governor, with John Usher, John Hinckes and William Partridge, Lieutenant or acting Governors, 1692-1699; the Earl of Bellomont with William Partridge, Lieutenant Governor, 1699-1702, the Governor dying in 1701; Joseph Dudley, Governor, with William Partridge, John Usher and George Vaughan, Lieutenant Governors, 1702-1716 (Eliseus Buegess having been appointed Governor in 1715, but declining the office); Samuel Shute, Governor, with George Vaughan and John Wentworth, Lieutenant Governors, 1716-1728; William Burnet, governor, with John Wentworth, Lieutenant Governor, 1728-1729; Jonathan Belcher, Governor, with John Wentworth and David Dunbar, Lieutenant Governors, 1730-1741; Benning Wentworth, Governor, with John Temple, Lieutenant Governor, 1741-1767; John Wentworth, Governor, with John Temple, Lieu-

tenant Governor, 1767-1775. Between 1675 and 1762, the people of New Hampshire participated in six wars against the French and Indians, aggregating thirty-eight years. The politics of New Hampshire in the Colonial period largely related to those persistent and irrepressible subjects, the Masonian title and the boundary line against Massachusetts. The provincial assembly was continued in New Hampshire until Governor Wentworth's departure in 1775. A succession of conventions, beginning July 21, 1774, finally resulted in the formal organization of a legislative body on a full representation of the people, and with a definite purpose of establishing a new state government. The importance and activity of the old assembly diminished at that of the successive conventions was augmented. . . . The convention which met in July, 1775, ordered a reorganization of the militia, and in 1777 the number of regiments had been increased to seventeen. The number of men enrolled was 16,710, and this comprised practically all residents of military age in the state."—G. F. Willey, ed., *State builders*, pp. 3-6.

1693-1910.—Development of public school system.—"From the first settlement by David Thompson at Pannaway, in 1623, until the union of New Hampshire with Massachusetts eighteen years later there is no record that any form of education was provided for the youth of the colony; but after the union, the small settlements at Hampton, Portsmouth, Dover and Exeter came under the excellent school laws of Massachusetts. . . . During the troublesome period between 1679 and 1692 . . . little was done for education. . . . The first year after their separation from the Bay Colony (1693) [a school law was passed for the building of a school house and remuneration of school teachers]. . . . In 1789 the general court of New Hampshire repealed all previous laws in regard to the common schools and started anew on the basis of taxing all the inhabitants of the several towns except non-residents, on the polls and real estate at the rate of five pounds for every twenty shillings that each town paid to the support of the state. . . . In 1827 the legislature passed a law the spirit of which remains active even to the present time. It accurately defined how the town should be divided into districts, and laid down provisions regarding the authority of school districts and their officers. The qualifications for teachers were raised and the law required all pupils to be provided with books, either by parents or guardians, or at the public expense in case of the needy. A superintending school committee were also to be appointed annually. . . . In 1845 the authority was given to any two or more contiguous school districts in any town or towns in this state to associate together and form a union for the purpose of establishing and maintaining a high school or schools for the instruction of the older and more advanced scholars belonging to the associated districts. In 1846 a state commissioner of common schools was appointed. . . . Two years later the 'Somersworth Act' was passed, which allowed school districts, independent of the town, to raise money for the maintenance of high schools. . . . In 1850 the office of the state commissioner of common schools was abolished, and in its place a board of county school commissioners was appointed. . . . This board of county school commissioners continued until 1867, when it was discontinued, and again one man was placed at the head of the educational affairs of the state. This officer was now termed the superintendent of public instruction, and he with the governor and council constituted the State Board of Education.

In 1868 a bill was passed requiring each county to hold a teacher's institute annually at the expense of the state. This law, followed closely by one passed in 1870 establishing a state Normal School, marks a period of decided awakening to the needs of educational improvement, and aside from a slight setback in 1874, when the state failed to make any appropriation for institutes and did away for a short time with a state superintendent, the progress in educational matters has been steady if not rapid."—G. F. Willey, ed., *State builders*, pp. 60, 63, 87, 90-94.—"The crowning institution of the public school system of New Hampshire is the New Hampshire College of Agriculture and Mechanic Arts. . . . It was established at Hanover, in connection with Dartmouth College, in 1866 and was based upon a land grant made by the United States government, valued at \$80,000. Here Culver Hall and Conant Hall were erected, which afterward came into the possession of the college. Congress made some appropriations. . . . In 1891, . . . an act of the legislature required the trustees to terminate its connection with Dartmouth College and to remove from Hanover to Durham. This was because Benjamin Thompson of Durham had bequeathed property to the institution amounting to \$800,000 with its accumulation of interest down to 1910, when the income of \$32,000 annually became available. The State appropriated \$100,000 for building purposes in 1891, and an additional appropriation of \$35,000 was made in 1893, when the college entered upon its new and expanding career."—E. S. Stackpole, *History of New Hampshire*, v. 3, p. 229.

1775-1776.—End of royal government.—Adoption of a constitution.—Declaration of Independence.—The New Hampshire Assembly, called by Governor Wentworth, came together June 12, 1775, in the midst of the excitements produced by news of Lexington and Ticonderoga. Meantime, a convention of the people had been called and was sitting at Exeter. Acting on a demand from the latter, the assembly proceeded first to expel from its body three members whom the governor had called by the king's writ from three new townships, and who were notorious royalists. "One of the expelled members, having censured this proceeding, was assaulted by the populace, and fled for shelter to the governor's house. The people

demanding him, and, being refused, they pointed a gun at the governor's door; whereupon the offender was surrendered and carried to Exeter. The governor retired to the fort, and his house was pillaged. He afterwards went on board the Scarborough and sailed for Boston. He had adjourned the assembly to the 28th of September. But they met no more. In September, he issued a proclamation from the Isles of Shoals, adjourning them to April next. This was the closing act of his administration. It was the last receding step of royalty. It had subsisted in the province 95 years. The government of New Hampshire was henceforth to be a government of the people. . . . The convention which had assembled at Exeter was elected but for six months. Previous to their dissolution in November, they made provisions, pursuant to the recommendations of congress, for calling a new convention, which should be a more full representation of the people. They sent copies of these provisions to the several towns, and dissolved. The elections were forthwith held. The new convention promptly assembled, and drew up a temporary form of government. Having assumed the name of 'House of Representatives,' they adopted a constitution [January, 1776], and proceeded to choose twelve persons to constitute a distinct and a co-ordinate branch of the legislature, by the name of a Council. [The constitution provided for no executive.] . . . The two houses assumed to themselves the executive duty during the session, and they appointed a committee of safety to sit in the recess, varying in number from six to sixteen, vested with executive powers. The president of the council was president of the executive committee. . . . On the 11th of June, 1776, a committee was chosen by the assembly, and another by the council of New Hampshire, 'to make a draught of a declaration of the independence of the united colonies.' On the 15th, the committees of both houses reported a 'Declaration of Independence,' which was adopted unanimously, and a copy sent forthwith to their delegates in congress."—G. Bartow, *History of New Hampshire*, ch. 6.

1783-1816.—Early state officers.—Fall of Federalists.—"The leaders in the Revolution naturally became the leaders in civil affairs upon the settlement of a permanent government. The first period under the constitution of 1783 will be included between the beginning of the new government in June, 1784, and the government under the amended constitution in 1793. By general consent the patriot Weare became president of the state and served from June, 1784, to June, 1785.

President Weare's war administration was in the most trying epoch through which the state has ever passed. . . . When Meshech Weare passed from the sphere of political activity the not unfriendly rivalry of John Langdon and John Sullivan for the honors of state became the most interesting feature of New Hampshire politics. Langdon succeeded Weare for one term; Sullivan succeeded Langdon for two terms. Langdon was again elected in 1788, and Sullivan was returned to office in 1780. Josiah Bartlett took office in 1790, serving three terms in succession. He was

the last to hold the title of president. Meanwhile the federal convention of 1787, of which John Langdon and Nicholas Gilman were the New Hampshire members, had formulated a constitution for the United States of America. . . . Under [the] new federal government John Langdon and Paine Wingate became senators in the winter of 1788-9, while Nicholas Gilman, Samuel Livermore and Abiel Foster were the first representatives in congress elected by this state. John Sullivan was appointed as the first district judge of New Hampshire by President Washington in the ensuing year. He was at the same time president of the state and held both offices until the end of his term as president in June, 1790. Senator Langdon, who was president of the state for the year 1788-9, resigned this office January 22, 1789, to take his seat in the senate. John Pickering then succeeded to the office as president of the state, and was the incumbent of it until the following June. This fact is often overlooked in tables of official succession and in political histories of the state. . . . Debt and paper money disturbed and deranged the business affairs of the new state and were the causes of great distress among the people. The disaffected elements were upon the verge of rebellion in 1780 and surrounded the assembled legislature in a clamorous mob. This uprising was successfully quelled under the discreet management of President Sullivan,—a display of military force being made under the command of the veteran, Cilley. . . . If the political standards of a free people may be fairly judged at any given time by the character of the chief magistrates whom they select, it may be said of New Hampshire that in no other period does this test respond as it does in that under review. . . . It was in this period that the prestige of service in the Revolution continued many of the old leaders in the highest prominence in the state. At the same time a later generation of politicians of transcendent ability was developing such statesmen-jurists as William Plumer, Jeremiah Smith, Jeremiah Mason and Daniel Webster, and the national service of Webster and Mason were not more useful to the state than were the achievements of Jeremiah Smith in the reform and construction of a system of jurisprudence, and what Plumer accomplished in the reforms of the political system embodied in the constitution of 1792, and in other lines of political effort, notably that which resulted finally in the Toleration Act of 1810. This was a period of ascendancy of the Federalists in this state the greater part of the time, but the not infrequent successes of Langdon and Plumer in contesting the governorship and the fatal mistakes of the party in its war policy and its alliance with the standing order in ecclesiastical affairs foreshadowed the sure approach of its complete and permanent failure as a political power. The Anti-Federalists, then known as Republicans—the Jefferson party of that day—controlled the state government in whole or in part from 1804 to 1812, Jeremiah Smith having for a single term broken in on the succession as governor in 1809. The court system had remained without material change, as far as the court of last resort was concerned, both in the province and state from 1609 to 1813. In these later years the Federalists having recovered control of the legislature and re-elected John Taylor Gilman, abolished the existing judicial system and reorganized the courts. This added fuel to the flames of opposition and added to the causes which were effectual in the final downfall of the party in 1816. Many important institutions had been established in the state be-

tween the close of the Revolutionary War and the termination of the War of 1812. One hundred and forty-two library associations were incorporated; sixteen academies, including Phillips or Exeter, were founded; the medical school at Hanover had its beginning in 1798; a Grand Lodge of Free Masons was organized in 1789 with General John Sullivan as Grand Master; the New Hampshire Medical Society had its inception in 1791; Concord became the permanent capital in 1807, and the State's Prison in that city was begun in 1811. . . . In the colony and Province periods the Congregational order had maintained its ascendancy as practically a state church, the town ministers having been elected by the people and supported by public taxation."—G. F. Willey, ed., *State builders*, pp. 24-27.

1814.—Hartford Convention. See U.S.A.: 1814 (December): Hartford Convention.

1850.—Revision of constitution.—"No revision of the constitution through the instrumentality of a delegate convention was undertaken after 1791 until 1850. The convention then assembled was an aggregation of men distinguished in various walks of life, and Franklin Pierce was made the presiding officer. The changes accomplished were limited in number, but important, progressive and beneficial at the three points of amendment on which ratification by the people was secured."—G. F. Willey, ed., *State builders*, p. 35.

1860-1865.—Part played in Civil War.—"The opposition to Lincoln and Hamlin in New Hampshire in 1860 was divided into three factions, although one candidate and his associate would have needed all the votes that were available. The state administration when Sumter fell was confronted by a difficult situation. President Lincoln had called for a regiment of New Hampshire men for three months' service. There was no emergency war fund in the New Hampshire treasury, no efficient existing militia system and no legislature in session. The Governor [Ichabod Goodwin], however, procured the means of equipping the regiment upon his own credit and the credit of patriotic banks and individuals, and Congressman Tappan, who was given the colonelcy, had the first New Hampshire regiment in the field before the legislature was assembled. In the intervening war period Ichabod Goodwin, Nathaniel S. Berry and Joseph A. Gilmore were the war governors. Frederic Smyth, sometimes erroneously designated as a war governor, was not inaugurated as Chief Magistrate until June, 1865, when the war had been concluded. Seventeen full regiments of infantry were sent into the service from New Hampshire. Col. Kent's regiment (the seventeenth), which was nearly filled, was not mustered. A large part of the men raised for it by its organizer were assigned to other regiments. The remaining part was consolidated with the veteran second regiment. The state also contributed a battalion of cavalry, afterwards augmented to a regiment, three companies of sharpshooters, a battery of light artillery and a regiment of heavy artillery. Besides these it furnished a liberal number of sailors for the navy."—G. F. Willey, ed., *State builders*, pp. 43-44.

1870-1905.—Railroad development.—"Since the business of railroading was inaugurated in this

state less than seventy years ago, its growth has kept in equal step with the development of commercial requirements. The present mileage, [1905] 1190 30-100 miles of main track and 521 92-100 of sidings is greater in proportion to wealth and population than in the case of any other New England state. The three stages of construction, competition and consolidation have been well illustrated in New Hampshire. From 1870 to 1890 intervened a period of railroad war which divided the people as partisans of one railroad system or the other, and this allegiance resembled in many ways the fealty which men have accorded to political parties. Since industrial peace ensued after the termination of the wars of the rival railroad corporations, and a single system has been developed and perfected, all the other industries of the state have felt the impetus and had the benefits of enlarged and highly organized railroad facilities, the extension of railroad lines, and marked reduction of rates, both in passenger and freight service, and innumerable administrative reforms."—G. F. Willey, ed., *State builders*, p. 57.

1876-1884. — Political affairs. — Constitutional convention.—Referee law passed.—Law against tramps.—State prison.—"In the year 1876 there was a notable movement in favor of total abstinence from the use of intoxicating drinks, furthered by the organization of Reform Clubs, although many persons were drawn into such clubs, who had always been total abstainers. . . . To aid the Centennial Exhibition at Philadelphia the legislature of 1875 voted to purchase ten thousand dollars' worth of the stock of the Centennial Board of Finance, which had been incorporated by the Congress of the United States. [See also CENTENNIAL OF 1876.] . . . The sixth constitutional convention assembled at the capitol December 6, 1876. . . . Thirteen amendments were submitted to the people, who voted upon them March 13, 1877. Eleven of the amendments proposed were adopted. The basis of representation was changed from ratable polls to population, granting a representative to every town having six hundred inhabitants and two representatives to a town having eighteen hundred inhabitants. Provision was made for biennial sessions of the legislature. The number of senators was increased from twelve to twenty-four. It was provided that registers of probate, solicitors and sheriffs should be elected by popular vote. The religious test was abolished although the word 'Protestant' was not struck out from the bill of rights till the year 1902. The time of holding elections was changed from March to November. The removal of persons from office for political reasons was prohibited. It was voted that no money raised by taxation should be used for the support of the schools and institutions of any religious sect or denomination. The majority of the convention of 1876 were not ready to obliterate all distinctions between Roman Catholics, Protestants, Jews and other religionists. They held that New Hampshire was still a Protestant State. Many wanted to so phrase the constitution as to place all persons, of every shade of religious belief, upon terms of equality before the law, but it took another quarter of a century to educate the people to this thought. . . . In 1878 the Labor-reform and Greenback parties united and in the State elections of that year the fusion party polled a million votes, of which New Hampshire cast 6,507 for Warren G. Brown for governor. The party elected fourteen congressmen. . . . The referee law, enacted about this time, removed a great number of small suits from the courts and greatly decreased the expense of litigation. . . . At this time tramps were invest-

ing the state. Governor Prescott recommended strong action to abate the nuisance and menace to society. A large number of ablebodied men, singly and in bands, were wandering about, refusing to work even for a night's lodging or a meal of victuals, 'filthy, lazy, idle and vicious.' To be compelled to work without compensation was the remedy suggested. Accordingly the legislature of 1878 enacted a law, which sent a tramp to the State Prison for fifteen months or more, where he was subjected to hard labor, and a reward of ten dollars was offered to anyone who would secure the conviction of a tramp. . . . A new State Prison was erected at this time, for which the legislature appropriated \$230,000. . . . Natt Head, as he was generally called, was elected governor in 1879 under the new law of biennial election. It had been the custom for a long time to re-elect a governor if possible, so as to give him two years of office. Henceforth he was elected for two years, and no effort has been made down to the present time to re-elect a governor, although the Constitution does not prohibit it. . . . In 1881 Charles H. Bell of Exeter was elected governor by a vote of 44,432, the largest vote cast up to that time for a governor, about three hundred thousand more than all his competitors received. The Greenback party had shrunk to one-twelfth its size two years before. . . . The State Board of Health was established by the legislature of 1881. Samuel Whitney Hale was elected governor by a small majority in 1883, receiving 38,402 votes."—E. S. Stackpole, *History of New Hampshire*, v. 4, pp. 123-125, 127, 129-131.

1908-1913. — Legislation. — In 1908, a direct primary law was enacted and drastic measures adopted for the control of railroad influence. In 1911, an act was passed to prevent corporations contributing to political campaigns; a public service commission was created; also a tax commission to take the place of the board of equalization. In 1912, three amendments were added to the constitution providing for the disqualification of voters convicted of certain crimes; for the election of officers by plurality votes; and for the changing of the basis of councilor districts from property to population. In 1913, a mother's pension act was passed; an arbitration board for labor disputes created (see ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1886-1920); an office of medical inspection in schools established; an act limiting the hours for women and children in industry was passed; and the Sixteenth and Seventeenth Federal Amendments (Income Tax and Direct Election of Senators) were ratified. In 1900, H. B. Quinby became governor and was succeeded in 1911, by Robert P. Bass, who in turn was followed by Samuel D. Felkner in 1913.

1911.—Employers' Liability Act.—The New Hampshire legislature, in 1911, passed a workmen's compensation law, containing an optional compensation clause. The act differs from that of most of the states in that it gives employers the chance to choose between liability under the common law, with the "fellow-servant" and "assumption of risk" rules swept away, and liability under the new compensation law. The workman, too, may choose between the two.

1916-1923. — Legislation. — Part played in World War.—Gubernatorial changes.—In 1910, a budget system was adopted; a department of agriculture created; and an act requiring cold storage concerns to be licensed. In 1917, an act providing for judicial procedure against price inflation was passed; a blue sky law enacted; and the hours for working women reduced. In 1918, a constitutional convention assembled but on ac-

count of the World War, adjourned without taking action. In 1919, the Federal Amendments, Eighteenth (Prohibition) and Nineteenth (Women Suffrage) were ratified January 15, and September 10 respectively. In 1921, the measures passed included the regulation of chiropractic practice; further safeguards against forest fires; protection of maternity and infancy; limitation of the investments of savings banks; and the taxing the transfer, at death, of personal property of non-residents. During the World War, the state furnished 14,374 men or .38 per cent of the entire Expeditionary Forces. The governors for the period covering 1915-1923 were as follows: Walter H. Spaulding, 1915-1917; Henry W. Keyes, 1917-1919; John H. Bartlett, 1919-1921; and Albert A. Brown, 1921-1923.

NEW HEBRIDES, a group of islands in the Pacific ocean (see MELANESIA), lying between the Fiji Islands and the coast of Queensland and comprising an area of 5100 square miles, and a population, in 1920, of about 60,000. Since 1906, Great Britain and France have shared the government of the islands, under a system which is known as the

Condominium, and which has not proven successful. Prior to 1914 the position had become so serious that Great Britain and France had agreed to a meeting to confer on the question. At the outbreak of the World War the question was set aside and nothing was settled. In 1921 it was suggested that the islands should be annexed by Australia, but Australia was already over-burdened with territory and did not desire the annexation. Japanese settlers had been invading the neighboring French islands of New Caledonia and practically owned the famous Michel mines there. On November 4th, 1921, in the Australian House of Representatives the prime minister announced that the French New Hebrides Company had offered to sell out to the government of Australia its entire business and land holdings. The minister did not recommend that the House should agree to the purchase, chiefly on the ground that it was doubtful whether the French Company would be allowed, by the French government to sell, but he stated that behind France stood Japan, and that if Australia did not come to terms the next effort at negotiation by the French Company would be in Tokyo. If the purchaser was Japan, how far the French government would be disposed to allow the French Company to sell its rights and how far the British government would protest is uncertain. As late as 1922 no practical arrangement with regard to the government of the islands had been made.

NEW JERSEY, familiarly known as the "Mosquito," or "Garden State," is one of the Middle Atlantic states of the United States. It is bounded on the north by New York; on the east, by the lower Hudson river, which separates it from New York, and by the Atlantic ocean; on the south and west by the Delaware bay and river with separates New Jersey from Delaware and Pennsylvania. The state has an area of 8,224 square miles, of which 710 square miles are water area; and a population in 1920, of 3,155,900.

Resources.—New Jersey is largely given over to market-gardening, fruit-growing and general agriculture. In 1920 the state had 29,702 farms with a total area of 2,282,585 acres, of which 1,555,607 acres were improved land. The state also has valuable fresh and salt water fisheries; the value of shell fish alone for the year 1919 amounted to \$6,700,000. New Jersey ranks second among the states in the production of zinc ore. The state also produces magnetic iron, manganese, talc, soap stone, graphite, building stone, Portland cement, coke, green sand marl, and clay. See U.S.A.: Economic map.

1640-1655.—Attempted colonization from New Haven, on the Delaware.—The London merchants who formed the leading colonists of New Haven, and who were the wealthiest among the pioneer settlers of New England, had schemes of commerce in their minds, as well as desires for religious freedom, when they founded their little republic at Quinnipiac. They began with no delay to establish a trade with Barbadoes and Virginia, as well as along their own coasts; and they were promptly on the watch for advantageous openings at which to plant a strong trading-post or two among the Indians. In the winter of 1638-1639, one George Lambertson of New Haven, while trafficking Virginia-wards, discovered the lively fur trade already made active on Delaware bay by the Dutch and Swedes (see DELAWARE: 1638-1640), and took a hand in it. His enterprising townsmen, when they heard his report, resolved to put themselves at once on some kind of firm footing in the country where this profitable trade could be reached. They formed a "Delaware Company," in which the Governor, the minister, and all the chiefs of the colony were joined, and late in the year 1640 they sent a vessel into Delaware bay, commanded by Capt. Turner, who was one of their number. Capt. Turner "was instructed by the Delaware Company to view and purchase lands at the Delaware Bay, and not to meddle with aught, that rightfully belonged to the Swedes or Dutch. . . . But New Haven's captain paid little heed to boundaries. He bought of the Indians nearly the whole southwestern coast of New Jersey, and also a tract of land at Passayunk, on the present site of Philadelphia, and opposite the Dutch fort Nassau. . . . On the 30th of August, 1641, there was a Town-Meeting at New Haven, which voted to itself authority over the region of the Delaware Bay. The acts of the Delaware Company were approved, and 'Those to whome the affaires of the towne is committed' were ordered to 'Dispose of all the affayres of Delaware Bay.' The first instalment of settlers had previously gone to the Bay. Trumbull says that nearly fifty families removed. As they went by New Amsterdam, Governor Kieft issued an unavailing protest, which was met, however, by fair words. The larger portion of the party settled in a plantation on Varkin's Kill (Ferkenskill. Hog Creek?), near what is now Salem, New Jersey. A fortified trading-house was built or occupied at Passayunk. This was the era of Sir Edmund Plowden's shadowy Palatinate of New Albion, and, if there is any truth in the curious 'Description,' there would seem to be some connection between this fort of the New Haven settlers and Plowden's alleged colony." The Dutch and the Swedes, notwithstanding their mutual jealousies, made common cause against these New England intruders, and succeeded in breaking up their settlements. The exact occurrences are obscurely known, but it is certain that the attempted colonization was a failure, and that, "slowly, through the winter and spring of 1643, the major part of [the settlers] . . . straggled home to New Haven. . . . The poverty and distress were not confined to twosome households who had risked their persons in the enterprise. The ill-starred effort had impoverished the highest personages in the town, and crippled New Haven's best financial strength." Yet the scheme of settle-

ment on the Delaware was not abandoned. While claims against the Dutch for damages and for redress of wrongs were vigorously pressed, the town still looked upon the purchased territory as its own, and was resolute in the intention to occupy it. In 1651 a new expedition of fifty persons set sail for the Delaware, but was stopped at Manhattan by Peter Stuyvesant, and sent back, vainly raging at the insolence of the Dutch. All New England shared the wrath of New Haven, but confederated New England was not willing to move in the matter unless New Haven would pay the consequent costs. New Haven seemed rather more than half disposed to take up arms against New Netherland on her own responsibility; but her small quarrel was soon merged in the greater war which broke out between Holland and England. When this occurred, "concerted action on the part of the New Englanders would have given New Holland to the Allies, and extended New Haven's limits to the Delaware, without any one to gainsay or resist. After the Commissioners [of the United Colonies] declared for war, Massachusetts refused to obey, adopted the rôle of a secessionist, and checked the whole proceeding. New Haven, with whom the proposed war was almost a matter of life and death, was justified in adverting to the conduct of Massachusetts as 'A provoaking sinn against God, and of a scandalous nature before men.' The mutinous schemes of Roger Ludlow and of some New Haven malcontents complicated the problem still more both for Connecticut and New Haven. Finally, just as an army of 800 men was ready [1654] to march upon New Amsterdam, tidings came of a European peace, and New Haven's last chance was gone. But the town did not lose hope. Plans for a new colony were slowly matured through 1654 and 1655, but "the enterprise was completely thwarted by a series of untoward events," the most decisive of which was the conquest of New Sweden by Stuyvesant in October, 1655. "But the dream of Delaware was not forgotten."—C. H. Levermore, *Republic of New Haven*, ch. 3, sect. 5.

1664-1667.—Dutch settlers along the Delaware.—English occupation and proprietary grant to Berkeley and Carteret.—Naming of province.—Newark immigration from New Haven.—"In 1664, just as the flourishing colony of New Amsterdam was about to take over the Dutch interests in the Delaware river region, came the English conquest of New Netherland in Manhattan, which was immediately followed, on October 11th 1664, by the surrender of the Dutch in this Southern region to the British crown. . . . On the surrender of the colony, they were all secured by the English in their personal possessions and most of them remained in the country, taking part in its ordinary affairs. There is no trace to-day in any part of New Jersey south of the Raritan of the old Netherland speech which still lives on in the mountains of . . . northern New Jersey."—J. D. Prince, *Netherland settlers in New Jersey* (*New Jersey Historical Society Collections*, series o, p. o).—"Before the Duke of York was actually in possession of his easily acquired territory [of New Netherland, or New York (see NEW YORK: 1664)]. on the 23d and 24th of June, 1664, he executed deeds of lease and release to Lord John Berkeley, Baron of Stratton, and Sir George Carteret, of Saltrum in Devon, granting to them, their heirs and assigns, all that portion of his tract 'lying and being to the westward of Long Island and Manhitas Island, and bounded on the east part by the main

sea, and part by Hudson's river, and hath upon the west, Delaware bay or river, and extending southward to the main ocean as far as Cape May, at the mouth of Delaware bay; and to the northward, as far as the northernmost branch of the said bay or river of Delaware, which is $41^{\circ} 40'$ of latitude, and crosseth over thence in a strait line to Hudson's river, in 41° of latitude; which said tract of land is hereafter to be called by the name or names of New Cæsarea, or New Jersey.' The name of 'Cæsarea' was conferred upon the tract in commemoration of the gallant defence of the Island of Jersey, in 1649, by Sir George Carteret, then its governor, against the Parliamentarians; but the people preferred the English name of New Jersey, and the other was consequently soon lost. The grant of the Duke of York from the crown conferred upon him, his heirs and assigns, among other rights appertaining thereto, that most important one of government; the power of hearing and determining appeals being reserved to the king; but, 'relying,' says Chalmers, 'on the greatness of his connection, he seems to have been little solicitous to procure the royal privileges conferred on the proprietors of Maryland and Carolina,' whose charters conferred almost unlimited authority. 'And while as counts-palatine they exercised every act of government in their own names, because they were invested with the ample powers possessed by the prætors of the Roman provinces, he ruled his territory in the name of the king.' In the transfer to Berkeley and Carteret, they, their heirs and assigns, were invested with all the powers conferred upon the duke. . . . Lord Berkeley and Sir George Carteret, now sole proprietors of New Jersey, on the 10th February, 1664, signed a constitution, which they made public under the title of 'The Concessions and agreement of the Lords Proprietors of New Jersey, to and with all and every of the adventurers, and all such as shall settle and plant there.' . . . On the same day that this instrument was signed, Philip Carteret, a brother to Sir George, received a commission as governor of New Jersey. . . . The ship Philip, having on board about 30 people, some of them servants, and laden with suitable commodities, sailed from England in the summer, and arrived in safety at the place now known as Elizabethtown Point, or Elizabeth Port, in August of the same year. What circumstance led to the governor's selection of this spot for his first settlement, is not now known, but it was, probably, the fact of its having been recently examined and approved of by others. He landed, and gave to his embryo town the name of Elizabeth, after the lady of Sir George. . . . Governor Carteret, so soon as he became established at Elizabethtown, sent messengers to New England and elsewhere, to publish the concessions of the proprietors and to invite settlers. In consequence of this invitation and the favorable terms offered, the province soon received large additions to its population."—W. A. Whitehead, *East Jersey under the proprietary governments (New Jersey Historical Society Collections, v. 1, period 2.)*—"In August, 1665, he [Governor Carteret] sent letters to New England offering to settlers every civil and religious privilege. Mr. Treat and some of his friends immediately visited New Jersey. They bent their steps toward the New Haven property on the Delaware Bay, and selected a site for a settlement near what is now Burlington. Returning by way of Elizabeth, they met Carteret, and were by him influenced to locate on the Passaic River. . . . Early in the spring of 1666, the remnant of the old New Haven, the New Haven of 1638, under the leadership of Robert Treat and Mathew Gilbert, sailed

into the Passaic. . . . In June, 1667, the entire force of the little colony was gathered together in their new abode, to which the name 'Newark' was applied, in honor of Mr. Pierson's English home. [Mr. Pierson was the minister at Branford, in the New Haven colony, and his flock migrated with him to Newark almost bodily.] The Fundamental Agreement was revised and enlarged, the most notable expansion being the following article: 'The planters agree to submit to such magistrates as shall be annually chosen by the Friends from among themselves, and to such Laws as we had in the place whence we came.' Sixty-four men wrote their names under this Bill of Rights, of whom 23 were from Branford, and the remaining 41 from New Haven, Milford, and Guilford. Most of them were probably heads of families, and, in all the company, but six were obliged to make their marks. . . . It seems to me that, after 1666, the New Haven of Davenport and Eaton must be looked for upon the banks, not of the Quinipiac, but of the Passaic. The men, the methods, the laws, the officers, that made New Haven Town what it was in 1640, disappeared from the Connecticut Colony, but came to full life again immediately in New Jersey. . . . Newark was not so much the product as the continuation of New Haven.'"—C. H. Levermore, *Republic of New Haven, ch. 4, sect. 6.*

1673.—Dutch reconquest. See NEW YORK: 1673.
1673-1682.—Sale to new proprietors, mostly Quakers, and division of the province into East Jersey and West Jersey.—Free constitution of West Jersey.—In 1673 Lord Berkeley, one of the original proprietors, "sold his one-half interest in the Province for less than \$5,000. John Fenwick and Edward Byllinge, two English Quakers, were the purchasers. A dispute arose between the new proprietors about the division of their property, and William Penn, who afterward became the founder of Pennsylvania, was chosen arbitrator to settle the difficulty, and succeeded to the satisfaction of all parties interested. Fenwick sailed from London, in 1675, in the ship 'Griffith,' with his family and a small company of Quakers. This was the first English vessel that came to New Jersey with immigrants. The party sailed up the Delaware bay, and entering a creek, landed on its banks three miles and a half from the Delaware;—this creek, and the settlement founded on it, Fenwick named Salem. This was the first English settlement permanently established in West Jersey."—J. R. Sypher and E. A. Apgar, *History of New Jersey, ch. 1.*—In July, 1676, the province was divided, Philip Carteret taking East Jersey, and the successors of Berkeley taking West Jersey. "Thereupon, Carteret, by will, devised his plantation of New Jersey to trustees to be sold for certain purposes, by him stated, in 1681-2. . . . He had not a peaceable time. Indeed, anything like constant peace was the lot of very few of New Jersey's early Governors. Governor Andros, of New York, disputed Carteret's authority; nay, failing by peaceable means to gain his point, he sent a party of soldiers by night [1678], who dragged Carteret from his bed, carried him to New York, and there kept him close until a day was set on which he was tried before his opponent himself in the New York Courts, and three times acquitted by the jury, who were sent back with directions to convict, but firmly each time refused. The authority of Carteret was confirmed by the Duke of York, and Andros was recalled. . . . The trustees of Sir George Carteret could not make sale of East Jersey. After

ineffectual attempts at private sale they offered it at public auction, and William Penn and eleven associates, most if not all Quakers, bought it for £3,400. It was too heavy a purchase, apparently, for their management. Each sold half his right to another, and so were constituted the twenty-four Proprietors. They procured a deed of confirmation from the Duke of York March 14th, 1682, and then the twenty-four Lords Proprietors by sealed instrument established a council, gave them power to appoint overseers, and displace all officers necessary to manage their property, to take care of their lands, deed them, appoint dividends, settle the rights of particular Proprietors in such dividends, grant warrants of survey, in fine, to do everything necessary for the profitable disposition of all the territory. . . . The new Proprietors were men of rank. William Penn is known to all the world. With him were James, Earl of Perth, John Drummond, Robert Barclay, famous, like Penn, as a Quaker gentleman, and a controversialist for Quaker belief and David Barclay. . . . Each Proprietor had a twenty-fourth interest in the property, inheritable, divisible, and assignable, as if it were a farm instead of a province. And by these means the estate has come down to those who now own the property. . . . In New Jersey . . . our Legislature has nothing at all to do with our waste or unappropriated land. It all belongs to the Proprietors, to those, namely, who own what are known as Proprietary rights, or rights of Proprietorship, and is subject to the disposition of the Board of Proprietors. . . . What is left in their control is now [1884] of comparatively slight value."—C. Parker, *Address, Bi-centennial celebration of the Board of American Proprietors of East New Jersey*.—The division line between East Jersey and West Jersey, as established by the agreement between the Proprietors, began at Little Egg Harbor and extended northward to a point on the Delaware river in 41 degrees of north latitude. "After this line had been established, John Fenwick's interest in West Jersey was conveyed to John Eldridge and Edmund Warner in fee, and they were admitted into the number of proprietors. In order to establish a government for the Province of West Jersey, provisional authority was given to Richard Hartshore and Richard Guy, residents of East Jersey, and to James Wasse, who was sent especially from England to act on behalf of the proprietors. These persons were commissioned on the 18th of August, 1676, by Byllinge and his trustees, in conjunction with Eldridge and Warner, and full power was given them to conduct the affairs of the government in accordance with instructions from the proprietors. Fenwick, who had founded a settlement at Salem, refused to recognize the transfer of his portion of the Province to Eldridge and Warner, and declared himself to be independent of this new government. It therefore became the first duty of the commissioners to settle this difficulty. All efforts, however, for that purpose failed. The original plan of the government was devised by William Penn and his immediate associates. It was afterward approved by all the proprietors interested in the Province, and was first published on the 3d of March, 1676, as 'The Concessions and Agreements of the proprietors, freeholders and inhabitants of the Province of West Jersey in America.' This constitution declared that no man or number of men on earth had power or authority to rule over men's consciences in religious matters; and that no person or persons within the Province should be in any wise called in question or punished, in person, estate or privilege, on account of opinion, judgment, faith or worship toward God

in matters of religion. . . . That all the inhabitants of the Province should have the right to attend court and be present at all proceedings, 'to the end that justice may not be done in a corner, nor in any covert manner.' . . . The executive authority of the government was lodged in the hands of commissioners, to be appointed at first by the proprietors or a majority of them; but after the further settlement of the Province they were to be chosen by the resident proprietors and inhabitants, on the 25th of March of each year. The first election for commissioners occurred in 1680. . . . One of the most remarkable features in this instrument is the fact that no authority is retained by the proprietary body. 'We put the power in the people,' was the language of the fundamental law."—J. R. Sypher and E. A. Apgar, *History of New Jersey*, ch. 3.

1674.—Final recovery by the English. See NETHERLANDS: 1674.

1688.—Joined with New England under governorship of Andros. See NEW YORK: 1688; U.S.A.: 1680-1689.

1688-1738.—Extinguishment of proprietary political powers.—Union of the two Jerseys in one royal province.—"In New Jersey, had the proprietary power been vested in the people or reserved to one man, it might have survived, but it was divided among speculators in land, who, as a body, had gain, and not the public welfare, for their end. In April, 1688, 'the proprietors of East New Jersey had surrendered their pretended right of government,' and the surrender had been accepted. In October of the same year, the council of the proprietaries of West New Jersey voted to the secretary-general for the dominion of New England the custody of 'all records relating to government.' Thus the whole province fell, with New York and New England, under the government of Andros. At the revolution, therefore [the English Revolution of 1688-1689], the sovereignty over New Jersey had reverted to the crown; and the legal maxim, soon promulgated by the board of trade, that the domains of the proprietaries might be bought and sold, but not their executive power, weakened their attempts at the recovery of authority, and consigned the colony to a temporary anarchy. A community of husbandmen may be safe for a short season with little government. For twelve years, the province was not in a settled condition. From June, 1689, to August, 1692, East New Jersey had apparently no superintending administration, being, in time of war, destitute of military officers as well as of magistrates with royal or proprietary commissions. They were protected by their neighbors from external attacks; and there is no reason to infer that the several towns failed to exercise regulating powers within their respective limits. . . . The proprietaries, threatened with the ultimate interference of parliament in provinces 'where,' it was said, 'no regular government had ever been established,' resolved to resign their pretensions. In their negotiations with the crown, they wished to insist that there should be a triennial assembly; but King William, though he had against his inclination approved triennial parliaments for England, would never consent to them in the plantations. In 1702, the first year of Queen Anne, the surrender took place before the privy council. The domain, ceasing to be connected with proprietary powers, was, under the rules of private

right, confirmed to its possessors, and the decision has never been disturbed. The surrender of 'the pretended' rights to government being completed, the two Jerseys were united in one province; and the government was conferred on Edward Hyde, Lord Cornbury, who, like Queen Anne, was the grandchild of Clarendon. Retaining its separate legislature, the province had for the next thirty-six years the same governors as New York. It never again obtained a charter: the royal commission of April, 1702, and the royal instructions to Lord Cornbury, constituted the form of its administration. To the governor appointed by the crown belonged the power of legislation, with consent of the royal council and the representatives of the people. . . . The freemen of the colony were soon conscious of the diminution of their liberties."—G. Bancroft, *History of the United States*, v. 2, pt. 3, ch. 2.

1693-1911.—Development of public school system.—Permanent school fund.—"The first school law of the state was enacted by the general assembly of East New Jersey, at Perth Amboy, on the 12th of October, 1693. . . . In 1695 this act was amended. . . . Under the operation of this law, schools were established in all parts of the province. . . . This was a complete recognition of the principle of taxing property for the support of public schools, which at that time was the most advanced legislation on this subject in America."—E. R. Meeker, *New Jersey, a historical, commercial, and industrial review*, p. 42.—"In 1816 the legislature set aside the sum of \$15,000 to be invested in a permanent educational fund. In the following two years, this sum was increased to \$113,238.78. A law in 1824 added a tenth of the State tax to the school fund. Previous to this each township was authorized to raise money by taxation to pay for the education of the children of poor parents. This authority was increased in 1828, so as to include the building and repair of school houses. A year later \$20,000 was apportioned among the different counties, and provision was made for the election of a committee in each township, with the authority to divide it into districts, to examine and license teachers, and to report each year to the governor. . . . In 1846 every township was required to raise the same amount that was contributed by the State, and township superintendents were authorized. . . . The year 1855 brought an epoch in the educational history of the State, when the first State Normal School was opened in Trenton. . . . A great advance was made in 1867, when the entire school system was revised and placed on a sound basis. This admirable law provided for the continual maintenance of the Normal and the Model School; for the examination and licensing of teachers; for raising the State educational fund to the right amount; for uniting State and local contributions; and for defining the functions of district and township trustees, of the city boards of education, of the county superintendents, of the State superintendent, and of the State Board of Education. Free scholarships in the State College of agriculture and the mechanic arts were established by the legislature in 1890, and appropriations for their maintenance by the State were provided for at the same time. . . . In 1881 the legislature passed an act which encouraged the establishment of schools for industrial education and provided for the appropriation each year to any district, which maintained such a school, of a sum of money equal to that raised in the district, not exceeding \$5,000. . . . In 1888 the act which stimulated the introduction

of manual training into the public schools was passed. . . . In 1896 a law was enacted which provides for a Retirement Fund, supported by contributions from the salaries of teachers, by means of which annuities are paid to teachers retired on account of age or disability. In 1905 an act was passed which provides for the payment of pensions by the school districts to teachers retired after a service of thirty-five or more years in the State, and twenty or more years in the district which grants the pension. These annuities and pensions amount in the former case to six tenths and in the latter to one half the average annual salary paid during the last five years of service. The general school act of 1871 first made our public schools free. . . . In 1894 all school districts in the State, except cities and boroughs, were abolished; . . . and text-books were furnished free to the pupils. . . . The year 1903 is most notable in the history of school legislation, because in that year the legislature made a complete revision and codification of the school law. Among many important changes it gave city school districts the power to change the method of selecting boards of education, and made all boards corporations, independent largely of local municipal government. It created 'boards of school estimate' in cities and authorized them to fix the amount of money to be raised for the maintenance of the schools. . . . The steady advance made by New Jersey in providing the means for training teachers was shown in 1906, when the legislature appropriated \$275,000 for the building and equipping of a new State Normal School, which was opened in Upper Montclair in September, 1908. . . . A radical change in the school law went into effect in 1911. The office of State Superintendent of Public Instruction was abolished and the terms of all the members of the State Board of Education closed June 30, 1911. A new board consisting of eight members was appointed by the Governor, to whom was assigned the duty of nominating a Commissioner of Education. His term of five years, with an annual salary of \$10,000, began June 30, 1911."—E. S. Ellis and H. Snyder, *Brief history of New Jersey*, pp. 208-214.

1774-1776.—End of royal government.—Adoption of a state constitution.—In the person of William Franklin, New Jersey was afflicted, at the outbreak of the Revolutionary struggle, with an arbitrary and obstinately royalist governor. Finding the assembly of the colony refractory and independent, he refused to convene it in 1774, when the people desired to send delegates to the Continental Congress. Thereupon a convention was held

at New Brunswick, and this body not only commissioned delegates to the general Congress, but appointed a "general committee of correspondence" for the Province. The committee, in May of the following year, called together, at Trenton, a second Provincial Convention, which took to itself the title of the "Provincial Congress of New Jersey," and assumed the full authority of all the branches of the government, providing for the defense of the Province and taking measures to carry out the plans of the Continental Congress. "Governor Franklin convened the Legislature on the 16th of November, 1775. No important business was transacted, and on the 6th of December the Assembly was prorogued by the governor to meet on the 3d of January, 1776, but it never reassembled, and this was the end of Provincial legislation in New Jersey under royal authority. . . . Though the Provincial Congress of New Jersey had to a great extent assumed the control of public affairs in the Province, it had not renounced the royal authority. . . . On the 24th of June, a committee was appointed to draft a constitution. . . . New Jersey was, however, not yet disposed to abandon all hopes of reconciliation with the Crown, and therefore provided in the last article of this constitution that the instrument should become void whenever the king should grant a full redress of grievances, and agree to administer the government of New Jersey in accordance with the constitution of England and the rights of British subjects. But, on the 18th of July, . . . [1776] the Provincial Congress assumed the title of 'The Convention of the State of New Jersey,' declared the State to be independent of royal authority, and directed that all official papers, acts of Assembly and other public documents should be made in the name and by the authority of the State." Before this occurred, however, Governor Franklin had been placed under arrest, by order of Congress, and sent to Connecticut, where he was released on parole. He sailed immediately for England. "When the State government was organized under the new constitution, the Legislature enacted laws for the arrest and punishment of all persons who opposed its authority."—J. R. Sypher and E. A. Apgar, *History of New Jersey*, ch. 10-11.—"The constitution adopted made no startling innovations in the existing mode of government; indeed it reflected to a large degree the political customs and habits as well as the administrative theories of the colony. . . . In accordance with the declaration of the organic law the government of New Jersey was vested in a governor, legislative council, and general assembly. To 'all inhabitants of this Colony, of full age, who are worth £50 proclamation money,' and who had resided for one year in the country in which they claimed a vote, was given the elective franchise in balloting for members of council and Assembly. . . . The usual privileges of free political action were given both branches of the Legislature, the Council being prohibited from preparing or altering any money bill, 'which shall be the privilege of the Assembly.' The choice of a governor fell not upon the people, but upon the members of the Assembly and Council in joint meeting. The term of office of the chief executive was limited to one year, he acting as president of the Council, chancellor, commander-in-chief of the militia, and surrogate-general, with power to constitute a privy council, composed of three or more members of council. The Council and the governor were designated a court of appeals at law as well as a court of pardons. No further provisions were made concerning the organization of new

tribunals or altering those already in existence. Upon the 2d of October, 1776, the Legislature confirmed all existing courts in New Jersey. The concentration of the appointing power in the joint meeting of the Council and Assembly is a characteristic feature of the constitution. . . . The assurances of religious freedom are made in no uncertain terms. Every person in the colony was granted the right of worshipping God 'agreeable to the dictates of his conscience.' No one could be compelled to attend a place of worship contrary to his faith, or be obliged to pay 'tithes, taxes, or other rates' for the purpose of building or repairing churches or supporting a ministry contrary 'to what he believes to be right, or has deliberately or voluntarily engaged himself to do.' . . . The hope of reconciliation, the possibility of a reunion, and the reestablishment of the crown's power in America led to the insertion of a constitutional proviso that if the colonies should be again taken 'under the protection and government of the crown of Great Britain this charter shall be null and void.' . . . The word 'Colony,' required by the constitution for use on the great seal, in commissions, in writs and indictments, was purely nominal. The first Legislature at Princeton refused to adopt the form and substituted 'State' on the great seal, while on the 20th of September, 1777, the word 'State' was declared by the Legislature as the official term by which New Jersey should be designated in commissions, writs, and indictments. . . . It was not until the passage of the constitution that the people were able to feel the awakening impulses of a larger degree of self-government. More than this, the constitution centralized power in the hands of the governor and the Legislature, where during the Revolution it was most needed."—F. B. Lee, *New Jersey as a colony and as a state*, v. 2, pp. 415-421.

1783-1784.—Jurisdiction over the Delaware river.—Free cities.—"New Jersey in 1783 entered into an agreement with Pennsylvania concerning their respective jurisdictions over the River Delaware. From the northwest corner of New Jersey to the point where the circular boundary of Delaware touches the river the Delaware was declared to be a 'common highway,' each State regulating the fisheries 'annexed to their respective shores,' that the same be not 'unnecessarily inter-

rupted during the season for catching shad.' In capital and other offenses, trespasses, or damages committed on the river the juridical investigation and determination was vested in the State where the offender was first apprehended, arrested, or prosecuted. A concurrent jurisdiction was further limited. In cases where vessels were at anchor or aground such vessels were considered as being exclusively within the jurisdiction of the nearer State. A distribution of 'all islands, eylots and dry land within the bed and between the shores' of the river from Trenton to the Delaware State boundary was also made. Later a similar arrangement was made concerning the islands between the extreme northwest boundary of New Jersey and the City of Trenton. Having adjusted the jurisdictional rights in the Delaware, Perth Amboy and Burlington were declared to be free cities for twenty-five years after October 1, 1784. . . . All goods immediately imported, except slaves, were declared to be free from all duties and imposts, except as affected by acts passed to raise a revenue for the use of the United States. Merchants in these free cities were exempt from taxes upon their stock or ships, the State retaining the right to pass a prohibitive tariff upon 'any goods, wares or merchandise . . . which may prove injurious to and discourage the manufactories of this State.'"—E. B. Lee, *New Jersey as a colony and as a state*, v. 2, pp. 378-379.

1812-1850.—General banking law.—In 1812, a general banking law was passed for the protection of depositors and this law remained in force until 1850.

1844.—Constitutional convention.—The constitution of New Jersey was revised in 1844. The governor, who had heretofore been chosen by the legislature, was now to be elected by the people. All property qualifications for voting and holding office were abolished.

1861-1865.—Part played in Civil War.—"The quota which New Jersey was first required to furnish [in the Civil War] was 3,123 men. More than three times that number were eager to volunteer. The funds offered by the banks and individuals exceeded half a million dollars. . . . The New Jersey brigade was mustered into the United States service at Trenton. May 1, 1861. . . . A battery and another regiment were added in July to the three regiments, the whole being known as the first New Jersey brigade. It served throughout the war . . . Of the troops whose service ranged from four years to one hundred days, New Jersey provided 79,348, with 8,057 additional men not credited to her. The total call was 78,248, and the whole number furnished was 88,305."—E. S. Ellis and H. Snyder, *Brief history of New Jersey*, pp. 173-176.

1876.—Non-regulation of town and county affairs by state. See STATE GOVERNMENT: 1890-1921

1884.—Franchise law.—After bitter struggles between rival railways and between railways and the state, a law was passed, in 1884, taxing railway franchises.

1897.—Constitutional amendments.—On September 28th several proposals of constitutional

amendment were voted on in New Jersey. One prohibitory of gambling was adopted by a small majority. Another, that would give the suffrage in school elections to women, was rejected by about 10,000 majority.

ALSO IN: F. B. Lee, *New Jersey as a colony and as a state*, v. 4.

1901.—Legal Aid association founded. See LEGAL AID: United States: Historical retrospect.

1904-1911.—Beginning of movement to break political power of trusts.—In 1904, under the leadership of Everett Colby, a movement (sometimes called the "new idea") was started to break the political power of the great corporations, including the railroads across the state, which had controlled the government for many years. (See TRUSTS: United States: Industrial Combinations.) By 1907, the influence of the reformers was sufficient to defeat John F. Dryden for the United States Senate, and to pledge both candidates for governor to enforce the laws against the corporations. J. Franklin Fort was elected governor; and a new primary law was passed to be effective in 1908. In 1910 an act was passed providing for the physical valuation of the railroads. Such a valuation could be used as a basis both for rate-fixing and for taxation. In the same year the child labor law was amended. By 1911 the reform movement had opened the way for the progressive governorship of Woodrow Wilson, who had been elected in 1910 (see U.S.A.: 1910 [August-November]), during whose incumbency the agitation against the trusts culminated in definite legal restrictions.

1909.—Opening of Hudson tunnels.—"The most enormous impulse given to New Jersey of recent years . . . came in Governor Fort's administration [1908-1911], in the opening of the tunnels under the Hudson River into New York, and the enlarged attendant facilities the Public Service Company provided. . . . Away back in the seventies of last century, New Jersey had been looking for the closer communication with the Metropolis across the stream. . . . She thought the hour of her deliverance had arrived when Col. D. C. Haskins . . . began to sink a shaft at the foot of Fifteenth Street, Jersey City, for an under-river tube into New York at Morton Street. The Colonel had unbounded faith in the success of his enterprise till a break in one of his compressed air caissons let the flood in on his workers and drowned twenty-one of them like rats in a cage. His English backers lost faith in his scheme, . . . and he found himself without further funds when he had tubed sixteen hundred feet from the shore line. Years afterward another body of Anglicans undertook to push the tube further into the river, but abandoned the effort when 1,200 feet more had been completed. The tunnel lay flooded with water for many years thereafter. Then William G. McAdoo came from Tennessee, . . . and . . . fell upon the enterprise on the Jersey shore that two companies had abandoned. . . . An inspection of the drowned tubes, both still intact, convinced him that the completion might be accomplishable. . . . He succeeded in interesting Walter G. Oakman, president of the Hudson Construction Companies, and Pliny Fisk and William M. Barnum, of the powerful banking house under the supervision of Charles M. Jacobs as Chief Engineer and J. Vipond Davies as his deputy. As many as 5,500 men were employed at one time in carrying forward the link between New York and New Jersey that it cost about \$70,000,000 to establish. Steel tubes were laid to Christopher Street in one direction, and to Cortlandt Street in

the other. The Christopher Street line was carried into the heart of the shopping district in New York City, and the subway on the Jersey side was extended all along the river front from the Pennsylvania station on Exchange Place, Jersey City, to the Lackawanna terminal at the foot of Newark Street, Hoboken. The river tunnel from Cortlandt Street was extended underground in New Jersey for a train service that now makes it possible to travel from Newark to Church Street, New York, in twenty minutes; or, by the Christopher Street tube, to Thirty-third Street, New York, in an even half hour. Contemporaneously with this magnificent development, the Pennsylvania Railroad Company, under the auspices of its president, Alexander J. Cassatt, instituted an electric service, for its passenger traffic, across the Meadows to Weehawken Heights, through the base of the mountain there, and then under the river to its imposing terminal at Thirty-second Street and Seventh Avenue, New York."—W. E. Sackett, *Modern battles of Trenton*, v. 2, p. 283.

1911-1913.—Governorship of Woodrow Wilson.—Social and labor legislation.—Geran Elections Act.—Creation of board of public utilities.—"Galveston Plan" of city government.—Anti-trust laws known as the "Seven Sisters."—The governorship of Woodrow Wilson (1911-1913) vitalized and carried forward some of the reform movements to an effective culmination in the state law. "In the face of the determined opposition of the machines of both political parties acts have been passed granting just compensation to working-men for injuries; reforming the election laws so as to enable the people to nominate and to elect candidates without the intervention of the party machines, and providing drastic punishment for corrupt practices at elections; constituting a public utilities commission with adequate powers for the regulation of public-service corporations; permitting cities to adopt the commission form of government; . . . reorganizing the administration of the public schools of the State [and a Practice Act simplifying procedure in court]. These measures . . . [caused] New Jersey to advance from one of the most backward to one of the most progressive States in the Union. . . . The Governor as the 'third house' of the Legislature [was] the most potent factor in bringing about the enactment of [his] enlightened programme of reform. This result constitutes a most notable achievement for one man."—J. M. Mathews, *New stateism* (*North American Review*, June, 1911).—The main provisions of the laws enumerated above are as follows: the employers' liability law "makes provision for the equitable distribution of the money which heretofore has been wasted in litigation. It may be operated under one of two sections. The first provides that the amount of liability for accidents shall be determined by suit in court, if the employer or employee shall so elect. But in case of suit, the old 'fellow-servant' and 'contributory negligence' clauses are eliminated. The second section provides for definite compensation for all injuries sustained by employees in course of their employment. . . . Our former Direct Primary Law only provided for the nomination of municipal officers, assemblymen and senators, by the people. Now it has been extended to every elective office, including the governor, congressmen, members of the county and state committees, and delegates to the national conventions. The State conventions of both parties are held at the same time, one week after the primaries."—H. E. Hosford, *Woodrow Wilson and New Jersey made over*, pp. 84-85.—"The Geran Elections Act . . . passed [1911]

. . . provides that a State convention of each party shall be held annually for the purpose of adopting and promulgating a party platform, which convention shall be composed of the party candidates who have been nominated at the party primaries for the office of member of the Assembly or State Senator, together with hold-over Senators, members of the State Committee, and 'the candidate of the party for Governor nominated at the said primaries in the year in which a Governor is elected, and in each year in which no Governor is elected the Governor of the State shall be a member of the convention of the political party to which he belongs.'"—J. M. Mathews, *New stateism* (*North American Review*, June, 1911).—"By this plan the number of delegates in each of our state conventions is cut down from nearly one thousand to less than eighty. Presidential Preference primaries are provided. . . . Personal registration is required in municipalities containing more than five thousand people. . . . The new Election Law is strongly reinforced by the Corrupt Practices Act. . . . The secrecy of the ballot is strongly safeguarded. . . . The new law makes fraudulent voting and ballot-box stuffing practically impossible. . . . The Public Utilities Board, appointed by the Governor [has], the power to investigate upon its own motion, or upon complaint of anyone in writing, any public utility; grants the Board authority to fix rates, to enter the premises of any public utility, to test appliances, to exact safe, adequate, and proper service, to require a system of accounts and annual reports kept in such form as the Board may prescribe; to determine whether increases of rates are reasonable, and to suspend the same where unjust, with the burden of proof to show that the increases are reasonable to lie wholly upon the public utilities corporation making the same. No public utility can make any unjust discrimination or preferential rate, extend its indebtedness, or issue stocks or bonds payable in more than one year from date, without the consent of the Board; nor can it sell, lease, or mortgage, dispose of or encumber its property, without the approval of the Board; nor transfer its stock to other companies. The Board . . . may refuse to make valid privileges or franchises granted to any public utility by any political subdivision of the State, where such privileges are not in the State's interest. . . . [It] may [also] compel the attendance of witnesses and the production of records, may exact any testimony, even though it incriminate witnesses. . . . Under the law, any person or public utility corporation which shall perform or assist in performing any act prohibited by the law, or any public utilities corporation which shall fail or neglect to perform its duties, as required by the act, shall be guilty of a misdemeanor. If any provision of the law is finally declared unconstitutional, no other provision is to be affected by the Court's decision. . . . Another step forward in progressive legislation was taken by the enactment of a statute which gives cities and municipalities of the State the privilege of adopting the commission form of government, under what was known originally as the 'Galveston Plan,' which provides for the complete abandonment of nomination of candidates for office by political parties, the abolition of ward boundary lines, the merging of the legislative and the executive functions in a commission, the right of the recall of elective officers, and the initiative and referendum. Add to this list of reforms the regulation of cold-storage, the substitution of indeterminate sentences for criminal offences, the rectification of abuses in connection with false weights

and measures, the reorganization of the State's school system, the abolition of contract labor in our penal institutions, the legislation in the interest of the blind, the regulation of the age, employment, safety, health, and work-hours of persons employed in mercantile establishments, an act for the safeguarding of business buildings against fire; a law compelling all railroad corporations to pay their employees twice monthly, and a law extending the civil service to employees of the State, counties, and municipalities, and we have one of the most remarkable records of legislation that has ever distinguished a single legislative session in this country."—H. E. Hosford, *Woodrow Wilson and New Jersey made over*, pp. 81-82, 84, 85-88, 88-89.—The most notable act of Governor Wilson's administration was the enactment of the seven anti-trust laws, sometimes called the "Seven Sisters." During his campaign for the Governorship and later in his Presidential campaign, Dr. Wilson had insisted that corporation guilt should be made personal; and in his annual message to the Legislature of 1913, he had adverted to it again as something the public welfare demanded. By the time the Legislature was ready to meet the abstract proposition, he had had it reduced to the concrete in a series of bills Chancellor Walker had drawn at his instance. . . . The nation was . . . interested in the broader and wider definition they gave to the term Trust. The definition, extracted from one of the acts, declares: A trust is a combination or agreement between corporations, firms or persons, any two or more of them, for the following purposes, and such trust is hereby declared to be illegal and indictable: First.—To create or carry out restrictions in trade or to acquire a monopoly either in intrastate or interstate business or commerce. Second.—To limit or reduce the production or increase the price of merchandise or of any commodity. Third.—To prevent competition in manufacturing, making, transporting, selling and purchasing of merchandise, produce or any commodity. Fourth.—To fix at any standard or figure whereby its price to the public or consumer shall in any manner be controlled any article or commodity of merchandise produce or commerce intended for sale, use or consumption in New Jersey or elsewhere. Fifth.—To make any agreement by which they directly or indirectly preclude a free and unrestricted competition among themselves or any purchasers or consumers in the sale or transportation of any article or commodity either by pooling, withholding from the market or selling at a fixed price or in any other manner by which the price might be affected. Sixth.—To make any secret oral agreement or arrive at any understanding without express agreement by which they directly or indirectly preclude a free and unrestricted competition among themselves or any purchasers or consumers in the sale or transportation of any article or commodity either by pooling, withholding from the market or selling at a fixed price or in any other manner by which the price might be affected. The animating principle of all the bills was that 'guilt is personal.' Not only was the offending corporation to lose its charter, under the act, but the directors, dummy or otherwise, were liable for prosecution for misdemeanor, with threat of an imprisonment and \$1,000 fine as the penalty. Holding companies were forbidden. Overcapitalization was penalized. Interlocking directorates were regulated. The crimes for which offending directors and officers might be pursued were specifically and definitely set out."—W. E. Sackett, *Modern battles of Trenton*, pp. 364-366.—"The seven new

corporation bills . . . [were] designed specifically for the reform of abuses in the existing New Jersey statutes. In their prohibitory clauses, they follow to a large extent the footsteps of the Federal Anti-Trust law as interpreted by the courts. . . . The most interesting aspect of the New Jersey proposals lies in the fact that they are made in New Jersey. . . . Laws were enacted in the early nineties, for the avowed purpose of attracting to New Jersey, for incorporation, mergers and combinations which could not find other States with laws sufficiently lax to suit their purposes. Briefly stated, they authorized the chartering of corporations with power to do pretty much anything. Under the charters granted, not only may the companies engage in such business as they choose, but they may do so merely by purchasing and holding the shares of other companies. Their powers in that regard are virtually unlimited; they may even buy and sell their own outstanding shares in the open market. Under the New Jersey corporation law, virtually all of the huge industrial combinations of the fifteen past years were chartered—including three which the United States Supreme Court has since forced into dissolution. The Standard Oil combination, the American Tobacco, the United States Steel, the International Mercantile Marine, the American Can, the American Woolen, are a few of the companies which obtained New Jersey charters. Counsel for the Northern Securities admitted, in the dissolution suit, that it was hypothetically possible, under the New Jersey charter of that company, for a small group of individuals, with a comparatively small amount of personal capital, to hold control of all the railways in the United States. These extraordinary charters, it is important to observe, were such as Wall Street, prior to the adoption of the New Jersey laws around 1893, had supposed no corporation in the United States could exercise. It would be difficult to say how much of the wild orgy of company promotion and stock speculation, from 1899 to 1901 inclusive, was directly due to mischievous facilities granted by New Jersey."—*Nation*, Jan. 23, 1913, p. 91.—See also TRUSTS: United States: Industrial combinations.

1913-1916.—Amendments ratified.—State-aided vocational schools.—In 1913, the Sixteenth and Seventeenth Federal Amendments (income tax and direct election of senators) were ratified. The vocational school law, passed 1913, provided for the organization of vocational schools in any district and for the union of two or more districts. In 1913, James F. Fielder became acting governor, filling out Woodrow Wilson's unexpired term of office, and was followed, 1914, by Leon R. Taylor, who served also as acting governor until the inauguration of James F. Fielder as the duly elected governor. In 1916 the Republicans were successful in electing Walter E. Edge, governor.

1914-1918.—New Jersey in World War.—War legislation.—Of the Americans engaged in the World War, New Jersey furnished 105,207 soldiers or 2.80 per cent. of the whole national force. The army camps situated in New Jersey were: Camp Dix, a national army camp, at Wrightstown; a Signal Corps Camp at Little Silver; an Ordinance camp at Methuchan; an embarkation camp at Dumont; and a chemical camp at Lakehurst. . . . In 1915 an effort of the legislature to weaken the anti-trust legislature of 1913 was defeated by the action of the governor in exercising his veto power. In 1917 New Jersey passed a brief statute providing that 'hereafter no person shall be nominated as a candidate for public office in this state . . . by a convention . . . except candidates for elec-

tors of president."—P. O. Ray, *Recent primary and election laws* (*American Political Science Review*, May, 1919, p. 265).—In 1918 a Board of charities and corrections was created.

1916-1919.—**Budget law.**—**Reform of financial administration.**—In 1916 the legislature passed an act creating an executive budget, under the control of the governor. In 1919 this budget was made permanent. "Under our plan for the compilation of our Executive Budget, the responsible head of the government determines the policy for extensions and improvements, and in a general way fixes the funds which are to be allotted to the several institutions. The total of the appropriation of the budget as fixed by the governor must be within the funds estimated as available for state purposes for the year. It is, however, within the province of the Appropriation Committee to revise any items which in its discretion should be amended. . . . New Jersey's Executive Budget, has, however, a wider purpose than that of distributing funds or controlling expenditures. It is a vital part of Governor Edge's plan for reorganizing New Jersey's administrative and fiscal affairs upon a business basis. In this particular it serves an important purpose in bringing the governor into vital contact with the needs and activities of the various state institutions."—A. W. Pierson, *New Jersey budget law* (*Proceedings of the Academy of Political Science*, July, 1918, pp. 70-71).

1917-1923. — **Legislation.** — **Administrative changes.**—The governors for the period 1917-1923 were as follows: Walter E. Edge, 1917-1919; William H. Runyon (acting) 1919; Edward I. Edwards, 1920-1922; G. S. Silzer, since 1923. In 1920, the legislature proposed and the people ratified a bond issue of \$28,000,000 for the construction of a bridge over the Delaware river as a part of the highway system, and a tunnel under the Hudson; and another bond issue of \$12,000,000 for a soldier bonus. In 1921, a law creating a state constabulary was passed over the governor's veto despite the opposition of organized labor; representatives of New York and New Jersey signed a port treaty April 30, which was approved by the legislatures of both states; a pension law was passed allowing state employees to retire at sixty years; a building commission was created to prepare a building code; an amendment was ratified in respect to elections doubling membership of political state and county committees, and giving women equal representation; equal rights in the custody of children were bestowed on mothers and fathers; a state real estate commission was created; and provision was made for referendum on state bond issue of \$14,000,000 for construction and equipment of additional buildings for charitable and correctional institutions; an extension to women of equal privileges in the holding of office and employment; and provision was made for the serving of women on juries. In 1921, a commission was created to revise the election laws.

NEW MEXICO: Geographical description.—**Resources.**—The three epochs,—New Mexico, sometimes called the "Spanish," or "Sunshine State," is a southwestern state of the United States. It is bounded on the north by Colorado; on the east, by Oklahoma and Texas; on the south by Texas and Mexico; and on the west by Arizona. The state has an area of 122,634 square miles of which 131 square miles are water and a population, 1920, of 360,350. In 1920, New Mexico had 20,844 farms with an area of 24,409,633 acres of which 1,717,224 acres were improved land given over to the production of cereals, fruit, vegetables, and cotton. Owing to aridity the state has not reached its ultimate agricultural possibilities. In 1911, the irrigated area had reached 750,000 acres; and the present Rio Grande project provides for reservoir construction for the irrigation of 180,000 acres in New Mexico and Texas. In 1920 there were 4,473,000 farm animals in the state; and the wool-clip amounted to 15,768 pounds. The national forest area covers 8,381,768 acres, and an additional 4,000,000 acres in private ownership. The state's mineral resources are gold, silver, copper, coal, zinc, and platinum. (See U.S.A.: Economic map.) "New Mexico has been under three different governments, to wit, under the Spanish government from 1530 (date of first entry by Niza) to 1821. From 1821 to 1846 under the Mexican government, and since 1846 under the American government, its history thus naturally dividing into three distinct epochs under the three governments. These three epochs were preceded by the pre-historic one, the coming to this continent of the first inhabitants, the Indians."—B. M. Read, *Popular elementary history of New Mexico*, p. 8.

Aboriginal inhabitants. See APACHE GROUP; KERESAN FAMILY; PUEBLOS; SHOSHONEAN FAMILY; INDIANS, AMERICAN: Cultural areas in North America: Southwest area.

1536-1581.—**First white man in New Mexico.**—**Early explorations.**—"Alvar Nunez Cabeza de Vaca, Spaniard . . . was the first white man [to visit New Mexico]. . . . In the year 1538 a Franciscan father, named Juan de la Ascension, discovered the Gila River in what today is the State of Arizona, and was before part of New Mexico. . . .

Father Niza was in Mexico when Cabeza de Vaca made his report, in July, 1536, to Mendoza and Cortés. Mendoza . . . finally made up his mind to send Fr. Marcos de Niza at the head of an expedition [to the Seven Cities], with the negro Estevanicoas guide, to colonize the country and christianize the Indians. Father Niza accepted the charge and started in 1539."—B. M. Read, *Popular elementary history of New Mexico*, p. 27.—In his great quest for treasure, Francisco de Coronado explored (1540-1542), parts of New Mexico, finding only Indian pueblos. (See also AMERICA: 1540-1541.) In the year 1581, Agustin Ruiz, or Rodriguez, a Franciscan friar and two of his brothers in the order of St. Francis with an escort of nine soldiers made an effort to penetrate the new country, the friars having been deserted by the soldier escort, succeeded in reaching Galisteo and then concluded to send one of their number back to Mexico in order to bring more brethren into the field. Brother Juan de Santa Maria having been selected proceeded directly south toward El Paso but on his way was killed by Indians. The other two settled in Puará in order to learn the Indian language but were soon separated by the murder of Brother Lopez and a few days later Brother Ruiz was also killed. "No sooner had the Franciscans in Mexico heard from the returning soldiers of the peril in which the three missionaries were left, than they made an urgent appeal that relief might be sent. This reached the ear of Don Antonio de Espejo, a wealthy Spaniard engaged in mining at Santa Barbara, who generously offered himself and his fortune to the work, if an expedition could be regularly authorized. This was soon accomplished by obtaining an official license of authorization from Governor Ontrueros of New Biscay, which also included the right to enlist all the soldiers necessary for the success of the undertaking. . . . From his extended explorations Espejo was well satisfied of the wealth of the country and especially of its mineral riches, but he concluded that a much larger and more powerful expedition than that which he commanded was necessary to insure success in colonization or in conquest."—L. B. Prince, *Concise history of New Mexico*, pp. 81, 85.

1595-1598.—Bonilla expedition.—Colonization.—San Gabriel, first capital.—"About 1595, a party was sent out by the governor of New Biscay to punish certain northern Indians who had been committing depredations, the expedition being commanded by a Portuguese named Francisco Leiva Bonilla. After he had accomplished his mission, the ambitious Bonilla concluded to use his little force in the conquest of New Mexico and, if possible, to reach the ever-alluring Quivira. He marched through a part of New Mexico and then started easterly . . . toward the object of his aspirations. Here a quarrel arose between himself and one of his lieutenants named Juan de Humana, which resulted in the death of the captain and in the assumption of the command by Humana. This man . . . pressed on towards the east and succeeded in reaching a point on the great grassy prairie of Southern Kansas or Northern Oklahoma, which was ever after referred to . . . as the 'Matanza.' The Indians of that region had been patiently waiting for an opportunity to bring about his destruction and at this point they concentrated their forces, set fire to the grass which surrounded his camp, and then, just before daylight, rushed upon the half-awakened Spaniards and destroyed the entire party with the exception of one mulatto girl and a man named Alonzo Sanchez. . . . [Oñate] made application in 1595 to

Viceroy Velasco for authorization to colonize the country. . . . The permission, with accompanying grants of power, was given in due time, on condition that the conquest and colonization should be completed within five years. Armed with this authority, Oñate lost no time in organizing his expedition. . . . The little army was accompanied by a large number of families for colonization, and all the provisions which seemed necessary for success. . . . On the 9th, he reached San Ildefonso, called Bové by the natives; and on the 11th came to the beautiful valley at the junction of the Chama with the Rio Grande, where he found the pueblo of Caypa on the eastern bank of the river. . . . They immediately determined to make this the official centre of the new kingdom. The very next day, July 12, 1598, they commenced the building of the new capital on the west side of the Rio Grande between that river and the Chama, in a place called Yunque, by the natives, and named the infant city, San Gabriel. . . . This date, July 12, 1598, may be considered as the birthday of European settlement. . . . The long line of colonists was now arriving, and the last were in the new city by the 18th."—L. B. Prince, *Concise history of New Mexico*, pp. 90-95.

1605-1729.—Removal of capital to Santa Fé.—Spanish governors of this period.—Their policy.—"In 1605 occurred the removal of the capital from San Gabriel to Santa Fé. . . . For fully three centuries the city of Santa Fé has been the capital of New Mexico. . . . Among all the capitals of the United States, Santa Fé stands unique. For antiquity and continuity it is the acknowledged head, counting many more years than Boston, which is its nearest rival. It is not only the oldest capital in the United States, but with one exception the oldest in all America; and it antedates by many years the capitals of the two most powerful empires of continental Europe, Germany and Russia. For three-quarters of a century after this removal of the capital, the records that we have of the history of New Mexico are quite meagre. . . . Two governors are mentioned during this period—Felipe Zotylo and Manuel de Silva—of whom we know little more than the names, except that Governor Silva went to Zuni in August, 1629, and left an inscription there which is his best monument. After them came Luis de Rosas in 1641, a governor Valdez, Alonzo Pacheco de Heredia, Fernando de Arguello in 1645, and Luis de Guzman; which brings us down to 1650. . . . For a number of years after the colonization, the best of feeling existed between the native Pueblos and the newcomers; but, as time went on, the Spaniards began to exact as duties those services which had at first been rendered from kindness. Little by little they assumed greater powers, introduced European laws, and punished the natives for the least infraction of a foreign code of which they had never heard. The favorite penalty was slavery, as that provided the labor of which the colonists stood in need, especially in the mines, where the serfitude was of the most harsh character. At the same time, the early Franciscans, who came as true missionaries, actuated by love, and easily won the hearts of the people, were succeeded by ecclesiastics of a more severe type, who sought to convert the natives by compulsion, and introduced the Inquisition and various forms of punishment, in order to compel the universal

observance of their religion. Under all the circumstances, the Pueblos, who had lived for generations an easy life of freedom and happiness, until the coming of the pale-faced strangers, naturally changed in their feelings from welcome and hospitality to hatred and a determination to expel the invaders whenever opportunity should be presented. The middle of the seventeenth century was filled with a succession of revolts and conflicts arising from this state of affairs. . . . About 1645, forty Indians were hung on religious grounds and many others were flogged and imprisoned, and this brought about a revolt, which however was short lived. Fernando de Ugarte y la Concha became governor in 1650, and shortly afterwards a plot was fortunately discovered by which the Pueblos and Apaches were to kill all of the soldiers on the night of Holy Thursday, when all would be in church. Shortly after this occurrence, there were conspiracies and risings among the Piros. In all of these cases the punishments were very severe. In 1653, Juan de Samaniego was appointed governor, and was succeeded by Enrique de Avila y Pacheco in 1656, and he by Bernardo Lopez de Mendizabal. The last named became involved in warm disputes with the officials of the Inquisition, and finally resigned in 1660. He was succeeded by Diego de Penalosa. Whatever may have been his failings, Penalosa was altogether the most picturesque character among all the New Mexican governors in the century between Onate and De Vargas. The earliest documents in the Archives of New Mexico, and the only one dated before the Pueblo Revolution, is signed by him. How it survived the conflagration of 1680 no one knows; but, brief as it is, it reflects credit on his administration. It orders that the Pueblo Indians be not obliged to work in spinning or weaving without the governor's license; that friendly Indians be well treated, but that wild tribes be not admitted to the town but compelled to lodge outside. . . . But the troubles and collisions with the officials of the Inquisition, which had driven his predecessor out of office, were soon revived with increased virulence. . . . After Penalosa, in 1664, came Fernando de Villanueva as governor, and he was succeeded by Juan de Medrano, Juan de Miranda, and Juan Francisco Trevino. This brings us down to 1670, when Antonio Otermin was appointed. Meanwhile the wild tribes of Indians of the plains, the Apaches of various names, began to make incursions and to fall upon the defenseless settlers and entire villages. The bad feeling between the Spaniards and the Pueblos became intensified by various grievances of which both parties complained, but especially by the severity accorded to the Indians. What they most needed was a leader of acknowledged ability, and in the excitement which followed the severe punishment of 47 Indians for alleged witch-craft in 1675, a man came into general notice who seemed by his fearless intrepidity as well as by his good judgment well fitted for the task. His name was Popé, of the pueblo of San Juan. It was the policy of the Spanish government, after the occupation of the country, to consolidate the Indian population in a comparatively small number of villages or pueblos, for various reasons, both political and religious. By this means they were the more easily watched and controlled, and at the same time, by grouping them around a mission church in each community, the prospect for proselyting was improved. Then came the revolution of 1680, and the extraordinary reduction in the Indian numbers and power during the brief period of their control."

L. B. Prince, *Concise history of New Mexico*, pp. 17-18, 32, 106-109.

1679-1800.—Indian uprising.—"By the end of the year 1679, all the Pueblo Indians, except the Pecos pueblo, had hatched the conspiracy and agreed on a day and hour for a general and simultaneous uprising. The secret was kept so well that the Spaniards never discovered the plan until too late. Juan Popé, an Indian from San Juan, then residing in Taos, was the leader of the insurrection. The 13th day of August, 1680, was the day agreed upon for the massacre of the Spaniards. . . . Juan Yé, governor of Cicuyé (Pecos) declined, with all his people, to join the conspiracy, and was the first to notify both Governor Otermin and Father Velasco, the priest at Cicuyé, of the impending danger. . . . Popé having learned that the Spaniards had discovered his plans, ordered that hostilities be commenced on the 10th instead of the 13th of August. . . . On the day fixed (August 10th) all the priests, soldiers, and colonists who had not heard of the insurrection, were taken by surprise and killed, before they had a chance to escape. From every direction thousands of Indians rushed to Santa Fe and made a sudden assault which was repulsed by 150 soldiers. . . . The great historical revolt was carried into effect all over New Mexico. . . . Popé now laid a siege, surrounding the city on all sides with an immense horde of savages, but remaining inactive until the 15th, when he sent an ultimatum to Otermin. . . . At break of day, August 16th, the soldiers and colonists formed in battle line, with the women and children in the center, and Otermin with his officers at the head, one thousand in all. The Indians met them with a terrific rush and the battle was commenced, lasting all day. At night the Spaniards retreated into the city and all crowded into the Palace building. The loss on the side of the Indians was very large and on the side of the Spaniards some few dead but many wounded. The siege lasted until the 23d day of August when the Indians cut off the water supply of the city, thus forcing the Spaniards to either escape or perish. Otermin, finding himself and his people in the extreme necessity of making a death struggle, resolved to fight or die in the effort. . . . The army formed in battle array, and made an assault upon the Indians with such fierceness that after a few hours' battle, they won the day with 300 Indians killed, the Spaniards losing one soldier only, though many had been wounded, among the latter being Otermin. This happened August 23, 1680. Thus were the Spaniards able to leave Santa Fe, all afoot and carrying on their shoulders the archives and their scant provisions, arriving at El Paso (now Jaurez) December 20, 1680. . . . Thus ended the achievement of the first conquest of New Mexico. . . . The loss of New Mexico to Spain was a thing Otermin thought it his duty to avoid, at least during his incumbency. Acting on that belief he again made an effort to reconquer the country by reëntering it next year, 1681, at the head of 200 mounted soldiers, but did not succeed in accomplishing his object, for on reaching Cochiti he saw that it would require a larger force to subdue the Indians, and went back to El Paso (now Jaurez), where he heard that Domingo Gironza Petriz de Cruzat had been appointed to succeed him as governor of New Mexico. . . . Don Domingo Gironza Petriz de Cruzat, like his predecessors, had a brilliant military record as a great general and he proved it by his frequent expeditions into New Mexico. He had only the title of governor of New Mexico, however, for he never succeeded during his first incumbency in affecting a permanent

conquest. Between 1683 and 1687 he made seventeen journeys into New Mexico, fighting every time all along the road from El Paso to New Mexico and being always victorious. In 1687, Cruzat was succeeded by Pedro Reneros de Posadas, who desolated the pueblo of Santa Ana, killing nearly all of its inhabitants, but before the year closed Cruzat was returned to the governorship, and he again made several expeditions into New Mexico, the last being in 1689, when he reached the pueblo of Zia, and was met by a hostile demonstration, which ended in one of the most severe battles of the conquest. He was opposed by nearly all the Indians from that province. The battle lasted the entire day, with a loss to the Indians of 600 killed and the capture of many prisoners. The battle was fought the first day of August, 1689. This last effort of Cruzat fills the gap between the expulsion of the Spaniards under Otermin, 1680, and the time of the second and permanent conquest by De Vargas [1602]."—B. M. Read, *Popular elementary history of New Mexico*, pp. 63-67.—The history of New Mexico in the eighteenth century was uneventful, being chiefly a story of petty disagreements among pueblos and occasional forays of the more warlike tribes, the Navajos, Apaches and Comanches.

1706.—Founding of Albuquerque. See ALBUQUERQUE.

1811-1848.—Close of Spanish régime.—New Mexico, a province of Mexico.—Trading expeditions.—"Alberto Mainéz succeeded Manrique in 1815, and governed until 1817, when he was succeeded by Pedro Marie Allande (1818), who acted until 1821, when Facundo Melgares succeeded him. During these six years (1815-1821) nothing was accomplished by the governors because the war with Mexico [1811-1821], which was then on against Spain, did not permit it, the country being greatly excited over the war and the frequent Indian depredations in New Mexico, which came to an end in 1821, when Mexico became an independent nation, Melgares' term closing the Spanish regime, which had lasted 223 years in New Mexico."—B. M. Read, *Popular elementary history of New Mexico*, p. 95.—Under the Mexican republic, New Mexico was called a province till 1824 when it was united with Chihuahua and Durango to form the Estado Interno del Norte. Several months later, it was separated from these two provinces and became a territory. It was officially designated as a department in 1836, and remained as such until ceded to the United States, in 1848, by the Treaty of Guadalupe Hidalgo. (See MEXICO: 1848.) During the late eighteenth century, trading expeditions began to enter New Mexico. In May of each year, after 1822, Missouri caravans of pack animals, and later wagon trains, set out for Santa Fé. The value of the goods carried in this way increased in value from \$15,000 in 1822 to \$450,000 in 1843.

1846.—American conquest and occupation by Kearney's expedition.—"While the heaviest fighting [of the Mexican War] was going on in Old Mexico [see MEXICO: 1846-1847], the Government [of the United States] easily took possession of New Mexico and California, by means of expeditions organized on the remote frontiers. New Mexico was wanted for the emigration to the Pacific. If we were to have California we must also have the right of way to it. In the hands of the Spaniards, New Mexico barred access to the Pacific so completely that the oldest travelled route was scarcely known to Americans at all, and but

little used by the Spaniards themselves. If now we consult a map of the United States it is seen that the thirty-fourth parallel crosses the Mississippi at the mouth of the Arkansas, cuts New Mexico in the middle, and reaches the Pacific near Los Angeles. It was long the belief of statesmen that the great tide of emigration must set along this line, because it had the most temperate climate, was shorter, and would be found freer from hardship than the route by way of the South Pass. This view had set on foot the exploration of the Arkansas and Red Rivers. But if we except the little that Pike and Long had gathered, almost nothing was known about it. Yet the prevailing belief gave New Mexico, as related to California, an exceptional importance. These considerations weighed far more than acquisition of territory, though the notion that New Mexico contained very rich silver-mines undoubtedly had force in determining its conquest. . . . With this object General Kearney marched from Fort Leavenworth in June, 1846, for Santa Fé, at the head of a force of which a battalion of Mormons formed part. After subduing New Mexico, Kearney was to go on to California, and with the help of naval forces already sent there, for the purpose, conquer that country also. . . . General Kearney marched by the Upper Arkansas, to Bent's Fort, and from Bent's Fort over the old trail through El Moro and Las Vegas, San Miguel and Old Pecos, without meeting the opposition he expected, or at any time seeing any considerable body of the enemy. On the 18th of August, as the sun was setting, the stars and stripes were unfurled over the palace of Santa Fé, and New Mexico was declared annexed to the United States. Either the home government thought New Mexico quite safe from attack, or, having decided to reserve all its strength for the main conflict, had left this province to its fate. After organizing a civil government, and appointing Charles Bent of Bent's Fort, governor, General Kearney broke up his camp at Santa Fé, Sept. 25. His force was now divided. One part, under Colonel Doniphan, was ordered to join General Wool in Chihuahua. A second detachment was left to garrison Santa Fé, while Kearney went on to California with the rest of his troops. The people everywhere seemed disposed to submit quietly, and as most of the pueblos soon proffered their allegiance to the United States Government, little fear of an outbreak was felt. Before leaving the valley, a courier was met bearing the news that California also had submitted to us without striking a blow. This information decided General Kearney to send back most of his remaining force, while with a few soldiers only he continued his march through what is now Arizona for the Pacific."—S. A. Drake, *Making of the Great West*, pp. 251-255.

1848.—Cession to the United States. See MEXICO: 1848.

1850.—Territorial organization.—Payment of Texas claim. See U.S.A.: 1850 (April-September).

1850-1851.—Framing of state constitution.—Failure to be admitted as a state.—"At a public meeting held in the city of Santa Fé, on the 20th of April, 1850, resolutions were passed, among others declarations requesting the military and civil governor, Colonel John Munroe, to issue a proclamation calling upon the people of the territory to elect delegates to a convention to be held at

Santa Fé on the 15th day of May following. Colonel Munroe issued the proclamation and the convention assembled at Santa Fé on the 15th day of May, 1850 . . . and after sessions lasting ten days framed a constitution for the state of New Mexico. . . . The constitution, as framed, shows that it was modeled after the constitutions of the newer states of the Union, and, among other things, contained a clause prohibiting slavery. . . . The constitution was adopted on the 20th of June, with little if any opposition, and at the same time officers were elected. The legislature assembled on the first of July of the same year at Santa Fé, where they elected two senators in congress. . . . At the state election Henry Connelly was elected governor and Manuel Alvarez lieutenant-governor. . . . Richard H. Weightman, one of the senators-elect went to Washington to present the constitution of New Mexico, ask for her admittance to the Union, and claim his seat. Upon his arrival he found that the compromise bill of September 9, 1850, in which was included the act organizing a territorial government for New Mexico, had just passed congress, which at once took precedence of the state organization. The new territorial government went into operation on March 3, 1851, James S. Calhoun having been appointed and sworn in as governor. The 'state' government of New Mexico 'so soon was done for that it wondered what it was begun for.'—R. E. Twitchell, *Leading facts of New Mexican history*, v. 2, pp. 271-277.

1850-1889.—Struggle for statehood.—The ninth article of the treaty with Mexico reads as follows: "The Mexicans in the aforesaid Territories, who shall not retain the character of citizens of the Mexican Republic, as stipulated in the foregoing article, shall be incorporated in the Union of the United States, and shall be admitted in opportune time (at the discretion of the Congress of the United States) to the enjoyment of all the rights of citizens of the United States, in accordance with the principles of the constitution, and, in the meanwhile, they shall be protected in the enjoyment of their liberty and property, and secured in the free exercise of their religion without any restriction." [From 1850 to 1911, the struggle to obtain the fulfillment of that promise was continuous.] . . . Almost all the Presidents of the United States, from that epoch down, had recommended the fulfillment of that article of the treaty of Mexico. . . . The New Mexico legislature began to petition Congress on the subject ever since 1847. In 1870 the legislature of the Territory decreed that a constitution should be submitted to the vote of the people for their adoption, but nothing was done. In 1872, the legislature again provided that the constitution that had been prepared in 1870, should be re-submitted to the people, but the time or limit which the law fixed for the counting of the votes having expired, the election was of no effect and the movement failed once more by effect of the law.—B. M. Read, *Illustrated history of New Mexico*, pp. 613-614.—A bill to admit New Mexico to the Union as a state was passed by both houses of Congress in 1875, but failed in consequence of an amendment made in the Senate too late for action upon it in the House of Representatives. Attempts to convert the scantily populated territory into a state were then checked for several years. In 1888, another enabling act was introduced by Representative William M. Springer, of Illinois, with the same result as Mr. Elkins' act. . . . In 1880, the New Mexico Legislature authorized the reassembling of another constitutional convention at Santa

Fé; the election for delegates to said convention was held; the delegates assembled in Santa Fé, remaining in session from September 3 to September 21. A constitution prepared by said convention refused to approve it."—*Ibid.*, p. 615.

1853-1867.—Gadsden Purchase Treaty.—Arizona set apart.—Invasion by Confederates during Civil War.—On December 30, 1853, the Gadsden Purchase treaty was signed, by which the United States bought from Mexico a long strip of territory, extending from the Rio Grande to the Gila, for ten million dollars; and by Act of Congress of August 4, 1854, this was added to New Mexico. In 1859 the people of southern New Mexico, including the Mesilla Valley and the settlements in the vicinity of Tucson, applied to Congress to form a new territory out of their section of New Mexico, to be called Arizona. In 1863, Congress established the Territory of Arizona. [See ARIZONA: 1864 (November).] . . . This reduced the area of New Mexico almost one-half, and it was further curtailed a few years later, when, by the Act of Congress of March 2, 1867, all that portion of the territory north of the 37th parallel of latitude was attached to Colorado. This left it as it still exists, with an average width of 335 miles, a length on its eastern boundary of 345 miles, and on the western boundary of 390."—L. B. Prince, *Concise history of New Mexico*, p. 17.—During the Civil War several conflicts took place within the territory. The Federals under Canby were defeated at Valverde by the Texans under Sibley, February, 1862. In March, Santa Fé was occupied by the Union forces but Sibley took possession a week later only to be forced out in April after the defeat of the Confederates in Apache cañon.

Also in: J. F. Rippey, *Boundary of Mexico and the Gadsden treaty* (*Hispanic American Historical Review*, Nov., 1921).

1879-1885.—Railroad development.—"The advent of the railroads in New Mexico was the beginning of an era of permanent prosperity for the people of the territory. The wonderful rapidity with which the great transcontinental transportation lines were constructed was not less marvelous than the astonishing awakening of the people to the fact that at last New Mexico was really in touch with the enlightened progress and modern methods of the people of the eastern states. The first passenger train into New Mexico brought the members of the legislature of the state of Colorado to Otero, on the line of the Atchison, Topeka and Santa Fé Railroad, in Colfax county, February 13, 1879. One year later the line had been constructed southward through the counties of Mora, San Miguel, and Santa Fé, over the Glorieta Pass, and southward to the valley of the Rio Grande. In five years more there had been constructed by three great railroad corporations one thousand two hundred and fifty-five miles of railway in New Mexico. These were the New Mexico and Southern Pacific Railroad Company, and the New Mexican Railroad Company, subsidiary corporations of the Atchison, Topeka and Santa Fé Railroad Company; the Atlantic and Pacific Railroad Company, the Southern Pacific Railroad Company, and the Denver and Rio Grande Railroad Company. . . . Physical conditions, as developed by a large number of surveys, demonstrated to the officials of the company that a route through the capital city of the territory was not feasible. . . . On March 10, 1881, all-rail connection across the continent, via New Mexico and Arizona, was established by the junction at Deming of the two divisions of the Southern Pacific Railroad. Deming was also the point of junction of this road with the Pacific Coast, the

Gulf and the northern cities of the United States. Almost simultaneously with the Atchison, Topeka and Santa Fé, the Denver and Rio Grande Railway was built into New Mexico from the north, near Antonito."—R. E. Twitchell, *Leading facts of New Mexican history*, v. 2, pp. 482-488.

ALSO IN: G. B. Anderson (compiler), *History of New Mexico, its resources and people*, v. 2, pp. 896-900.

1881-1917.—Education.—"Episcopalians, Methodists, Presbyterians, and Congregationalists, all established Mission Schools, and the first University of New Mexico was incorporated under the auspices of the last named, in Santa Fé, May 11, 1881. Its first preparatory school was opened September 17, 1881, and the cornerstone of Whiten Hall, its first permanent building, was laid October 21, 1882. . . . In 1888 a State University was established at Albuquerque, a school of Mines at Socorro, and an Agricultural School at Las Cruces, each supported by a special tax on all the assessable property of the territory. But it was not until 1890 that a real advance was made, in a passage of a school law worthy the name. Under the governorship of L. Bradford Prince a bill was framed by L. R. E. Paullin, which included all the features required in a modern school system. The State Superintendent of Public Instruction was to be named by the governor. . . . The work of the three normal schools—the Normal University at Las Vegas, which, while authorized in 1893, did not confine itself to purely normal work until 1903; the Silver city Normal established in 1904; and the Spanish-American Normal at El Rito—are all doing excellent work. . . . It was not until 1915 that a county unit law was passed which gave each county its own school taxes, and two years later another step forward was taken in making each county competent to administer its own school affairs."—G. W. James, *New Mexico*, pp. 418-420.

ALSO IN: L. B. Prince, *Concise history of New Mexico*, pp. 255-258.

1898.—Spanish-American War.—Roosevelt's Rough Riders.—"The principal event of territorial, not to say national, importance occurring during the administration of Governor Otero [1897-1906] was the organization of New Mexico's quota of volunteers for the war with Spain. . . . Governor Otero received word from the secretary of war asking what New Mexico could do in the matter of recruits for a regiment of western cowboys for special service and announcing that Captain Leonard Wood, U.S.A., would be the commander of such troops, with Theodore Roosevelt as lieutenant-colonel. When it was known that such a regiment was to be organized, Governor Otero was deluged from all parts of New Mexico with applications to join. Four troops was New Mexico's quota and these were mustered at Santa Fé within eight days after the presidential proclamation had been issued."—R. E. Twitchell, *Leading facts of New Mexican history*, v. 2, pp. 530-533.

1906.—Joint Statehood Act of Union with Arizona rejected by Arizona. See U.S.A.: 1906 (June).

1910-1911.—Constitutional convention.—Senator Owen's amendment.—Nelson resolution.—Statehood achieved.—"President Taft, in compliance with the promise previously made by the Republican party in its national convention, urged, recommended and demanded from Congress the adoption of an enabling act, which was approved June 20, of that year [1910]. . . . In virtue of that law, the governor of New Mexico issued on

the 20th day of June, 1910, his proclamation for an election of 100 delegates to the constitutional convention, in accordance with an apportionment made by the governor, the chief justice and the secretary of the Territory on the 28th of the month of June. . . . The election was held on Tuesday, September 6, 1910. . . . The convention met in Santa Fé on the 3rd day of October, 1910, . . . and adopted a republican constitution, in its form of government. . . . On January 21, 1911, the constitution was submitted to the vote of the people, and was approved by a large majority of votes."—B. M. Read, *Illustrated history of New Mexico*, pp. 615-617.—"The New Mexico constitution would be called progressive, except for the earlier and widely discussed Oklahoma constitution. . . . The convention . . . adopted a provision, in the article on mines and mining, that 'no children under the age of fourteen years shall be employed in mines.' The attempt was made to strike this provision out on the ground that it was legislation, and that the standard of fourteen set in the constitution for the employment of children in mines was two years too low. The convention, however, decided to retain this. The mining interests, which were largely represented in the convention, feared that the Legislature would fix the age limit at sixteen, and the friends of child labor reform feared that subsequent Legislatures would be so dominated by the mining interests that they would not go beyond the present territorial statute, which fixes the age limit at twelve. However, a general provision was inserted, which says that 'the Legislature shall enact suitable laws for the regulation of the employment of children.' The first section of the article on the judiciary department provides that courts inferior to district courts, and 'including juvenile courts,' may be established by law in any county or municipality of the state. Another provision will be of interest to the friends of prison reform: 'The penitentiary is a reformatory and industrial school, and all persons confined therein shall, so far as consistent with discipline and the public-interest, be employed in some beneficial industry; and where a convict has a dependent family, his net earnings shall be paid to said family if necessary for their support.' Leasing of convicts is forbidden. Under the article on education it is provided that 'every child of school age and of sufficient physical and mental ability shall be required to attend a public or other school during such period and for such time as may be prescribed by law.'"—A. J. McKelway, *Social principles of the new state constitution (Survey, Jan. 7, 1911, pp. 610-611)*.—"In the last moments of the regular session of the sixty-first congress, the 4th of March, 1911, the senate took in consideration the approval of the resolution which the day before had been approved by the house, whereby the constitution of New Mexico had been declared approved. Senator Owen, of Oklahoma, presented an amendment to the resolution which included the constitution of Arizona. Following a . . . discussion the vote was taken, with a result of 45 votes against, and 30 votes in favor of approving the amendment. The effect of the disapproval of the amendment was to delay the admission of New Mexico to the Union. The constitution having been approved by the President, remained in force, and it but needed the approval or disapproval by the next Congress. . . . Congress met in special session in April, 1911, and at once the tactics were resumed looking for the success of New Mexico's admission, but on account of the discord among some of the political coxcombs of the Territory, a most bitter fight was inaugurated,

which resulted in the adoption of amendments by the house of representatives with which the senate did not agree. From that month (April, 1911), the fight continued to the month of July (1911), when the house by a very large majority approved a resolution drawn by Congressman Flood, of Virginia, whereby the admission of New Mexico and Arizona was authorized on condition that New Mexico in its election of state officers should submit to the people the proposition that the constitution might be amended with less difficulty than was provided in the original constitution. That resolution was rejected by the senate, and another one offered by Senator Nelson as a substitute. . . . The Nelson resolution authorized the admission of New Mexico unconditionally ratifying the expression of approval by the 18,000 votes majority given in the Territory in favor of the constitution. It also authorized the admission of Arizona, eliminating from its constitution the clause in reference to the recall. The Nelson resolution kindled the political flame, and embittered the dispositions of the legislators to such a pitch that for several days the question was warmly debated, the question reaching its climax on August 10, by the rejection of the Nelson resolution, and the approval of the Flood resolution with slight amendments. The House concurred the next day (August 11) with the action of the senate. The presiding officers of the house and senate then signed the resolution and the same was at once forwarded to President Taft for his approval or disapproval. . . . On August 15th, Taft returned the resolution [unapproved] to congress accompanied by a message in which he gave his reasons for not approving it, namely: That because of the clause in reference to the recall in the constitution of Arizona he refused to approve the resolution; and that, with regard to New Mexico, he considered a constitution approved by a majority of over 18,000 votes as one of the best constitutions of the nation, and that he had already previously approved it with great pleasure, but that, inasmuch as the admission of New Mexico was now included in the Flood resolution, he could not approve it. . . . On the same day (August 15) Senator Smith presented another resolution, more or less identical with the Nelson resolution for the admission of both territories. The result was the appointment of a committee of both bodies (August 16) with the object of expunging from the Flood resolution the matter that was repugnant to the recalcitrants of both parties and to President Taft. . . . On Saturday, August 10th, in a debate, . . . the house unanimously approved the resolution. Without loss of time it was signed by the presiding officers of both bodies and was then forwarded to President Taft for his approval. . . . On Monday, August 21, A. D. 1911, at three o'clock p. m., President Taft affixed his signature to the resolution giving us thereby our complete political autonomy, . . . closing thus the . . . fight which for sixty-three consecutive years our patriotic . . . people had sustained, while the American government also was finally fulfilling the solemn obligation which it had imposed upon itself by the treaty of Guadalupe Hidalgo."—B. M. Read, *Illustrated history of New Mexico*, pp. 618, 620, 622-623.

ALSO IN: R. E. Twitchell, *Leading facts of New Mexican history*, v. 2, pp. 501-503.

1912-1921.—Legislation.—Elephant Butte dam.—Part played in World War.—Later legislation.—Governors.—In 1912, a corrupt practices act was passed; and the Sixteenth Federal Amendment (income tax) was ratified. In 1913, the Seventeenth Federal Amendment (direct election of senators)

was ratified. In 1914, constitutional amendments were adopted eliminating the Board of Tax Equalization, and reducing the term of state and county officers and making them eligible to succeed themselves. In 1917, a workmen's compensation act was passed. In 1918, a state prohibition law was passed. In 1919, a child welfare bureau was created; an establishment of state mounted police inaugurated; compulsory school attendance, and tax laws enacted, i. e., annual franchise tax on corporations, state inheritance and income taxes; a land settlement act was passed, and a tax commission created. In 1921, New Mexico made a general revision of its revenue code but made no change in the form of the tax commission created in 1919. The other enactments of this year were the regulation of employment and hours of labor of children; creation of the office of county flood commissioner; provision for the prevention of fire; regulation and control of fraternal benefit societies; prohibition of gambling; provision for equal rights and duties of both parents of minor children; regulation and limitation of working hours for women; provision of commission government for cities of between 3,000 and 18,000 inhabitants; and the creation of a state department of public welfare. In 1910, the Elephant Butte dam was completed and put into operation. This dam creates a reservoir by crossing the Rio Grande river about 1,200 miles north of El Paso and is considered the largest storage reservoir in the world. During the World War, the state furnished 12,439 men or .33 per cent of the whole Expeditionary Forces. The governors for the period 1911 to 1923 were as follows: William C. McDonald, 1912-1917; Ezequiel de Baca, January 1 to February 18, 1917; W. E. Lindsey, 1917-1919; A. Larrazolo, 1919-1921; M. C. Mechem, 1921—.

NEW NETHERLANDS COMPANY. See U. S. A.: 1607-1752.

NEW ORANGE, name given by the Dutch to New York after their recapture of the city from the English in 1673. See NEW YORK: 1673.

NEW ORLEANS, city in Louisiana, on the Mississippi delta, about 107 miles from the Gulf of Mexico. It is one of the chief cotton centers in the South. The city has an official area of 200 square miles, an actual area of about 40 miles and a population, 1920, of 387,210. The city is built on a swampy plain, below the level of high water on the Mississippi, from which it is protected by levees; and is divided into two sections, the new town of modern residences and office buildings, and the picturesque old town, where the famous Mardi Gras is held.

Early inhabitants. See CREOLE.

1718.—Founding of city. See LOUISIANA: 1717-1718.

1763.—Reserved from cession to England in Treaty of Paris, and transferred with western Louisiana to Spain. See SEVEN YEARS' WAR: Treaties.

1768-1769.—Revolt against Spanish rule.—Short-lived republic and its tragic ending. See LOUISIANA: 1766-1768; 1769.

1785-1803.—Fickle treatment of American traders. See LOUISIANA: 1785-1800; 1798-1803.

1798-1804.—Transferred to France and sold to the United States.—Incorporation as a city. See LOUISIANA: 1798-1803; 1812.

1866.—Riot and massacre. See LOUISIANA: 1865-1867.

1891.—Lynching of Italian assassins. See LOUISIANA: 1891.

1912.—Adoption of commission form of government.—In 1912, New Orleans adopted the commission form of government. The old form of government was superseded by a commission government of a mayor and four other commissioners elected on a general ticket. The administration was divided into five departments each of which was headed by a commissioner: (1) Public affairs under the mayor; (2) public finance; (3) public safety; (4) public utilities; (5) public property.

1918-1922.—Construction of canal. See CANALS: American canals; New Orleans.

1919.—Mississippi Valley Association.—In 1919, New Orleans "invited the people of the Mississippi Valley to organize an association for the purpose of capitalizing a valley-wide opportunity, that of the reestablishment of the north and south trade channels of low natural resistance, and the opening up of new foreign markets of great promise in Mexico, Central America, South America, Australia, the Philippines and the Orient. The association was formed . . . and through it the people of the Mississippi Valley now are coöperating for the development of their foreign trade."—W. Parker, *Railroad problems (Annals of American Academy of Political and Social Science, v. 86, Nov., 1919)*.

1921.—Poor relief. See CHARITIES: United States: 1921.

NEW PINAKOTHEK, Munich, museum noted for its collections of paintings of the seventeenth and eighteenth centuries, most of which are by Munich masters.

NEW PLYMOUTH, name given to settlement generally called Plymouth, in Massachusetts. It was later used to designate the entire colony. See MASSACHUSETTS: 1621.

NEW SMYRNA, colony in eastern Florida, near Mosquito inlet. In 1767 it was settled by people from the Mediterranean region under the leadership of Dr. Andrew Turnbull, a wealthy Scotchman. See FLORIDA: 1767-1774.

NEW SOUTH WALES, constituent state of the Commonwealth of Australia, in the southeastern part of the continent. It is bounded on the north by Queensland; on the east, by the Pacific ocean; on the south, by Victoria; and on the west, by South Australia. The area, inclusive of Lord Howe Island and the Federal Capital territory, is about 310,372 square miles; and the population, 1921, was 2,099,763. See AUSTRALIA: Location and physical features; also Map.

1821-1831.—Governors Brisbane and Darling.

—First stage of constitutional self-government.—"The end of Governor Macquarie's term of office marks the conclusion of the colony's infancy. . . .

The next Governorship, that of Sir Thomas Brisbane, marks a definite stage in the history of New South Wales. The discovery of the Bathurst Plains [see AUSTRALIA: 1787-1840] had put an end to all doubts of the ultimate ability of the colony to sustain an increasing population; and now, for the first time, the tide of free immigration began to flow. . . . The great achievement of Governor Brisbane's administration was the introduction of institutions which ultimately served as the basis of self-government in Australia. . . . We are now entering upon a period in which institutions will gradually take the place of men. This period begins definitely in the year 1823, with the passing of the first Constitutional Statute which operated in Australia. . . . By it the former military administration of justice, by a Judge-Advocate and military assessors, was superseded by a Supreme Court on an English model, with a Chief Justice, and the right to a trial by jury in civil cases, if both the parties agreed upon it. But in criminal cases the jury was still to consist of military officers, seven in number, although the prisoner was to be entitled to challenge them on any grounds for which an ordinary juror could be objected to in England. His Majesty in Council was, however, authorized to extend the jury system in any way deemed desirable; and, as a matter of fact, it was not very long before the jury system was introduced into criminal trials in Australia. Moreover, convicts were no longer to be excluded from giving evidence in Courts of Justice. . . . The political innovations made by the statute were also important. They provided for the appointment of a Council with legislative and financial powers, albeit under certain very substantial limitations. . . . This Council at first consisted entirely of Government officials, and was of course subject to no process of popular election. But, as Lord Bathurst explained in his letter which covered the warrant of appointment, it was intended by the Home Government that the new Council should at least to some degree represent the views of non-official colonists; and this pledge was redeemed in the year 1825 by the nomination of three independent members. . . . The other great political object of the statute was the separation of Tasmania (then known as Van Diemen's Land) from the mother colony. . . . The Home Government, at the time of the passing of the Act, apparently hesitated between complete and partial separation, and took powers for both. Lord Bathurst ultimately decided in favour of partial separation only; and Van Diemen's Land had to wait many years before becoming completely independent of the Government at Sydney. . . . The mother colony of Australia now started upon a career of progress and development which, in spite of stormy interludes, its maintained until the crisis of 1843. The marks of freedom and independence manifested themselves one by one. Freedom of the press was formally proclaimed in 1824, and although (as might have been expected) the liberty was at first abused, and caused much trouble during the governorship of Sir Ralph Darling (1825-1831), yet, under the more judicious rule of Sir Richard Bourke (1831-1837), the difficulties were removed. . . . In the year 1827

the colony was rich enough to support its own civil government; . . . and, a few years later, the Government of the colony began even to vote funds to assist the immigration of desirable colonists. . . . By a statute of the Imperial Parliament passed in the year 1828, the maximum number of the Council was raised to fifteen, and its legislative powers considerably increased. This important change virtually placed the official members of the Council in a minority in questions upon which the Government and the settlers as a whole were divided in opinion. . . . In the administration of justice still further steps towards a free model were taken; and the somewhat sweeping clause, which introduced the whole of existing English law en bloc, though it subsequently gave rise to some technical difficulty, was obviously calculated to afford the ordinary colonist substantial protection against the arbitrary action of Government."—E. Jenks, *History of Australasian colonies*, ch. 2-3.

1831-1855.—Convict transportation abolished. —Immigration stimulated.—Self-government secured.—Governor Darling was succeeded by "Major-General Sir Richard Bourke, K. C. B., [who] arrived in Sydney on the 2nd of December, 1831. . . . The six years during which Bourke administered the affairs of the colony were not only free from class warfare, but were distinguished by the rapid growth of industry and commerce, and the steady development of national life under new forms. In fact, the history of the colony as a free State, so to speak, may be said to date from Bourke's time. . . . Trial by jury in the Superior Courts—that is, by civilian instead of by military jurors—was granted in an optional form in 1833; and although representative government was still withheld by the Home authorities, the administration of public affairs was conducted by Bourke on constitutional principles, with very little resort to the arbitrary power which had made his predecessor's rule distasteful to the whole community. . . . The history of the colony during the Administration of Sir George Gipps, a Captain in the Royal Engineers, who arrived in February, 1838, assumes proportions altogether unknown to it under the rule of his predecessors. It is no longer occupied with the melancholy records of the convict class, or the bitter feuds between the Emancipists and the Exclusives. The state of society had changed; free immigration had begun to flow in; capital was introduced by settlers from abroad and invested in sheep and cattle stations; the system of assigned servants ceased in 1838, and transportation itself, which had been yearly growing more unpopular, was abolished by an order in Council two years later, although it was not finally extinguished until 1851. The most remarkable event of this period was the establishment of a new Constitution, under an Act passed by the Imperial Parliament in 1842. Representative institutions were at length conceded to the colony, although responsible government was still withheld. The new Legislative Council was composed of 36 members, of whom 24 were elected and 12 appointed by the Crown. . . . From 1840 to 1846, the colony was plunged in a state of depression which brought the shadow of ruin to every man's door. This was to some extent the result of a re-action from the inflated state of prosperity which had existed a few years before, when prices of land and stock rose to a fictitious value, and speculation in land absorbed all the floating capital in the country. Among the immediate causes of depression were the cessation of Imperial expenditure on transportation, and the withdrawal of Government deposits from the banks; the consequent pressure brought to bear

by those institutions on their customers; the substitution of free labour for that of the assigned servants, necessitating cash payment of wages; the locking up of capital in large purchases of land, which up to that time had been sold at five and subsequently twelve shillings an acre; and indulgence in excessive speculation, by which the ordinary industries of the country were deprived of capital. The result was that every branch of trade and industry fell into a state of utter collapse. . . . Politics at this time gave rise to a bitter struggle. Certain Crown Lands Regulations which Sir George Gipps had framed and issued in 1844, provoked determined opposition on the part of the squatters. . . . His proposal to tax the holders of Crown lands was denounced as tyranny. . . . The ultimate result was that the Council refused to renew the Land Act framed by Gipps, which had been passed for one year only, and the Governor's land policy was at an end. Sir George Gipps closed his career in New South Wales in July, 1846, and died in England the following February. . . . Sir Charles Fitzroy arrived in Sydney at a time when the colony had entered on an era of prosperity hitherto unknown in its history. . . . In the first speech he addressed to the Legislative Council on its meeting in September, 1846, a month after his arrival, he congratulated its members on the general prosperity of the country—a prosperity the more remarkable, inasmuch as the colony was 'only just emerging from those difficulties which were experienced under that monetary depression which affected all classes of the community.' Among the many striking evidences of the new life which had been infused into the colony at this time, mainly as a result of free immigration and the rapid extension of settlement in the interior, the most conspicuous were the movements set on foot for the construction of railways and the establishment of steam communication with England. The gradual increase in the tide of immigration had greatly contributed to promote the prosperity of the people. . . . Flocks and herds were driven further and further inland as each new discovery made the resources of the interior known; but stock-owners and settlers were met with the ever-increasing difficulty of finding a sufficient supply of labour. Convict labour was nominally cheap, but really dear at any price. . . . It gradually became recognized as a principle of State policy, mainly owing to Wakefield's teaching, that the revenue arising from the land should be appropriated to the purpose of promoting immigration. Under that system money was remitted by the Colonial Government every year to be expended by a Board of Emigration Commissioners appointed in London, who selected and despatched the best emigrants they could get. But American competition was keenly felt in the labour market, and the Government had to tempt people to emigrate to Australia by paying half the passage money and offering small loans to mechanics, who could be induced to leave England on no other terms. . . . The conduct of public affairs by the Council, in which [William Charles] Wentworth was the principal figure, had been so distinguished for statesmanlike ability that the capacity of the colonists for self-government could no longer be denied. But a still more potent influence had been at work. The great gold discoveries, which took place in 1840, had, in Wentworth's phrase, precipitated the colony into a nation, and the demand for free institutions came upon the Home Government with a degree of force it was impossible to resist. When, therefore, the popular advocate of self-government obtained a committee in 1852 to

prepare a new Constitution for the colony, in pursuance of the powers conferred on the Council by the Imperial Parliament, it was felt that the time had at last arrived when the life-long struggle of the patriot would be crowned with success. The second reading of the Bill was moved by him in the session of the following year, and was carried by a majority of 34 to 8. It was strongly opposed by a considerable section of the public on the ground that the Members of the Upper House should be elected, instead of being nominated by the Crown. But the nominee principle was considered essential by the framers of the Bill, for the purpose of reproducing the Constitution of the British Parliament as closely as possible; and in deference to those views, the Bill was passed as it stood. . . . The Bill [subsequently enacted by the Imperial Parliament] . . . was received in the colony in October, 1855. The old Legislative Council was finally dissolved on the 19th of December following, and the new Constitution was formally inaugurated by the Governor-General, Sir William Denison, who had succeeded Sir Charles Fitzroy in the beginning of the year. The establishment of responsible government brought about so great a change in the political system of the colony that from that date the current of its history may be said to run in a totally different channel. Other actors come upon the scene. The martial figure of the Governor disappears, his place being occupied by men henceforth known as the responsible Ministers of the Crown."—G. B. Barton, A. Sutherland, and F. J. Broomfield, *Historical review of New South Wales (Australasia Illustrated, v. 1, pp. 84-93)*.

ALSO IN: H. G. Turner, *Our own little rebellion, 1848-1918*.—Development of educational system.—"Prior to 1848 all education was in the hands of one or other of the four Churches which received State aid—Anglican, Roman Catholic, Presbyterian, and Wesleyan. The combined efforts of these bodies were only adequate to give instruction to less than half of the children of school age. They had, altogether, 12,000 in these schools; private schools, of unequal merit, taught about 6,000 more, and about 14,000 got no schooling. In 1848 a Board of National Education was incorporated, and State Schools established under its control. 'From that year until 1867, . . . two educational bodies co-existed, created by the same authority, and supplied with funds from the same source, the Public Treasury. The progress of the one was secured at the expense of the other; and, instead of mutual help and co-operation, jealousy of each other's success and division and consequent waste of means were the inevitable results.' [Under the Public Schools Act, 1866] Sir Henry Parkes in 1867 placed both kinds of schools under the authority of an incorporated Council of Education. [See below: 1855-1893.] . . . Instruction was divided into 'secular' and 'religious,' but the word 'secular' was defined to include undogmatic religious teaching as distinguished from polemical theology. In Denominational Schools the religious teaching might be given by the teachers. In the others it must be given in an hour set apart for the purpose each day in school-time by one of the clergy or some other accredited instructor. The Council took over 259 National Schools attended by 19,461 pupils and 310 Denominational Schools attended by 27,986 pupils. Sir Henry Parkes again completely transformed the system in 1880. All aid was withdrawn from Denominational Schools, and the control of the whole educational system of the colony was given to a responsible Minister. The teachers became civil servants and teaching

uniform. Attendance at school was made compulsory for all between the ages of six and fourteen years for seventy days in the year; fees were low and were remitted to the poorer parents; in 1906 they were remitted altogether; instruction was 'secular' in the sense explained above, and the facilities for religious instruction were retained. Only the Church of England avails itself of these facilities to any considerable extent. The Roman Catholics prefer to send their children to Catholic Schools, and other denominations are content with the 'secular' instruction. This measure placed the school system of the colony on a permanent basis which has never since been changed. At the date of the change 101,534 children were receiving instruction, of whom 22,716 were in Denominational Schools. . . . New South Wales has three grades of schools: the ordinary Public Schools; the 'Superior Schools,' where subjects for the Senior and Junior University examination are taught, numbering 1,429 in 1906; and five High Schools, of which two are for boys and three for girls. The number of pupils at these five schools was 723 in 1906. It is intended to reserve these schools as training schools for teachers, and use about twenty of the larger superior schools to take their place. The Hawkesbury Agricultural College also trains ten teachers yearly. . . . In Victoria and South Australia what are called 'Continuation Classes' have been established to give preliminary training to persons who propose to become teachers."—B. R. Wise, *Commonwealth of Australia, pp. 73-75, 81-82*.—"In New South Wales the changes in the scheme of [teacher] training are probably more radical than in other States. . . . All young teachers must pass through the college before entering on the work of teaching. . . . No period of apprentice teaching is now required before admission. . . . Two distinct types of course are provided—longer courses of two or more years, and a short course of six months. The latter course was introduced in 1911 in order to provide some training for the rural teacher in one-teacher schools who previously had received no systematic training. Though an improvement on previously existing conditions, it is far from satisfactory, and the position is still more serious when it is considered that out of every ten teachers appointed from the college seven have had this meagre preparation for the important work of teaching in the rural schools. . . . New South Wales has recently passed a Superannuation Act, which did not, however, come into operation till the conclusion of the war. . . . In each of the [Australian] States provision is made from the public funds for a system of bursaries, tenable at the secondary schools and the University. In 1916 New South Wales devoted over £40,000 to this purpose, an amount representing over 2 per cent. of the expenditure of the Education Department. . . . The Bursary Endowment Act of 1912 required the registration of all those non-State schools in New South Wales which desired to compete for the new State bursaries. The Truancy Act of 1916 requires the registration of all private primary schools."—A. Mackel, *Education in Australia* (M. Atkinson, ed., *Australia, economic and political studies, pp. 255-257, 260-261*).—See also EDUCATION: Modern developments: 20th century: General education: Australia.

1850.—Separation of colony of Victoria. See AUSTRALIA: 1839-1855.

1855-1893.—Colonial constitution.—Liberalized land policy.—Public Schools Act of 1866.—"The principles of the Constitution, as originally laid down, have never been altered, but there have been some changes in minor details. In New

South Wales, as in the other Australian colonies, the democratic element was increasing, and before long the Electoral Act was amended and the franchise reduced to practically manhood suffrage. At the same time, the old system of voting was abolished and all elections have since been conducted by means of the ballot-box. Various other amendments of the Electoral Act have taken place from time to time, and the few restrictions of political privilege which remained have been removed. . . . [Within the first five years of responsible government, under the guidance of Sir John Robertson, elaborate regulations were made for the alienation and occupation of Crown lands.] The circumstances of the colony had been greatly altered by the discovery of gold [see AUSTRALIA: 1839-1855; MONEY AND BANKING: Modern: 1848-1893], and the question of land settlement had to be dealt with in an entirely new spirit to meet the wants of a class of a different type to that contemplated by the framers of former enactments. . . . The Government were beaten by a large majority on the question of 'free selection before survey.' The Governor was urged to dissolve Parliament, but this he declined to do, and before long public sentiment underwent a complete change; the cry of 'free selection before survey' was made the watchword of the democratic party; and the measure on its re-introduction consequently became law. The Act of 1861 was intended to facilitate the settlement of an industrial agricultural population, side by side with the pastoral tenants, by means of free selection in limited areas. . . . The new Parliament did not confine its liberalism to the administration of the Crown lands. Before it had been many years in existence an Act was passed abolishing all grants from the State Treasury in aid of religious denominations, while a further levelling measure found its place on the statute book in an Act providing for the abolition of the law of primogeniture. . . . The whole country was terrorized for many years following 1860 by the exploits of bushrangers, and for a time the executive appeared to be incapable of dealing with these offenders. . . . Eventually the law prevailed, and bushranging and its accompanying evils were completely stamped out. . . . The Public Schools Act of 1866 . . . provided for two distinct classes of schools, though all schools receiving aid from the State were placed by it nominally under a Council of Education. The public schools were entirely under the control of this board, but the denominational schools were still managed to some extent by the various religious bodies to which they had hitherto belonged. . . . In 1880, State aid to denominational education was finally abolished. By the new Act, . . . the entire educational system of the colony was remodelled, the Council of Education was dissolved, and a Minister of Public Instruction created in its place. Public schools to afford primary instruction to all children without sectarian or class distinction were established, as well as superior public schools, in which a more advanced course might be followed."

1890.—General survey.—Comparison with Victoria. See AUSTRALIA: 1890.

1891.—Rise of the Labor party.—"The uprise of the Parliamentary Labour Party of New South Wales was a dramatic anti-climax to the defeat of Australian Trades Unionism in the disastrous maritime strike of 1890. . . . The workers were seemingly crushed in . . . [a] battle with the shipping interests in 1890. In 1891 the same bodies that had gone down in the Sedan of the year before emerged an organized Parliamentary force, holding the balance of power in the legislature of New South Wales. . . . The strike had injured many innocent interests, as it always did and always will. 'Could not a more enlightened remedy be found?' seemed to be one of the rational conclusions arrived at, and the Trades Unions co-operated with the victorious capitalists and their government allies, through the means of a commission, in an effort to find a way of settling trade disputes by the peaceful methods of arbitration. These efforts succeeded and left the Labour organizations free to devote their energies to the carrying out of a programme of Parliamentary action. Labour made up its mind to send men from its own ranks to the Legislature. It resolved to be represented by its own and not by another class. There were no insuperable difficulties in the way, as in Great Britain and Ireland Members were paid. The franchise was available, though not to the extent it soon afterwards became. Constituencies were small, and the mining, shearing, and maritime Labour elements were so comparatively large in the population of the colony that it only needed steady exertions in the constituencies to secure the return of a fair number of Labour members. Issues upon which differences existed in the Labour ranks were wisely subordinated to the one task of electing direct Labour men, and free traders, protectionists, and single taxers united in securing that object. They succeeded to an extent which astounded the whole public of Australia. In fact, a peaceful revolution had been created in the Parliamentary politics of New South Wales. The success at first seemed to be too great, and became, on that account, intoxicating and somewhat embarrassing afterwards. They won no less than 18 seats in Sydney alone, and emerged from the general election of June, 1891, 35 strong, while 5 more members were elected who called themselves Independents; with a government having only 40 supporters, and an opposition numbering 50."—M. Davitt, *Life and progress in Australasia*, ch. 41.

ALSO IN: M. Atkinson, *Australia, economic and political studies*, pp. 160-172.

1891-1903.—Woman's movement.—"In the mother colony (N.S.W.) no public movement to obtain the vote for women was made until 1891. . . . In March, 1891, a few women—eight only—met in a private house and decided to form a Woman Suffrage League and to begin active work. . . . Rich women in New South Wales were roused in 1898 when the Reid Government passed a Land Tax Bill, and, by its action, many women who owned land were at last forced to recognise the injustice of taxation without representation. They protested formally, and the Premier courteously acknowledged that their protest was reasonable. That was all! . . . The Woman Suffrage League, then growing desperate, asked that, as the women of South Australia, by this time enfranchised, would be able to vote in the Federal Referendum, soon to take place, they also might be allowed to

record their opinions on the proposed Federation. The Premier listened to this demand with some sympathy, but pointed out that, as rolls would have to be prepared for such a vote, the time necessary, and the expense, made it impossible for him to grant the request. But, as a consolation, he held out a hope that a Minister of the Crown would soon bring in a Suffrage Bill. This was again an empty promise. No Bill appeared. . . . In 1900, the Labour Party took up the matter, and sent a deputation to the Premier, and on 12th June the Governor's speech asked Parliament to consider it. Mr. Rose then brought forward a motion to submit the matter to a referendum, but this was easily defeated. Upon 9th November, 1900, Mr. Lyne, the first Premier to do so in New South Wales, introduced a Bill to enfranchise women of adult age. This was passed in the Assembly, but lost in the Upper House by three votes. In 1901, the State election took place, and Mr. (afterwards Sir John) See, the new Premier, openly advocated woman suffrage, and during the following year brought in a Bill, which was again carried in the Assembly, but lost in the Council. In 1902, the Premier again introduced a Bill, and the Council, no longer able to oppose a measure approved by the Federal Constitution, allowed it to pass. The Bill was returned to the Assembly in August, 1902. It received the King's assent on 4th July, 1903. The women of New South Wales voted for the first time on 16th December, 1903."—M. Anderson, *Women's movement* (M. Atkinson, ed., *Australia, economic and political studies*, pp. 274-275, 277-278).

1894.—Represented at colonial conference at Ottawa. See BRITISH EMPIRE: Colonial and imperial conferences: 1804.

1894-1895.—Free trade policy. See AUSTRALIA: 1804-1895.

1896.—Change in government of Norfolk Island.—Reannexation to New South Wales.—A change in the government of Norfolk Island was proclaimed in November, 1896, by the Governor of New South Wales, who came to the island, acting under directions from the British Colonial Office, and announced that "Her Majesty's Government has decided to appoint a resident magistrate. The object sought is to secure the impartial administration of justice, while leaving the local and municipal affairs of the island to be conducted by a council representing the inhabitants. In consideration of the fact that the Norfolk Island settlement originally formed part of the administrative colony of New South Wales, and that the legal business of the island and the registration of all land titles and transfers have uniformly been conducted by the Government departments at Sydney, Her Majesty's Government has decided to transfer the administration of the island to the Government of New South Wales. The Government of New South Wales has accepted the charge and as soon as the necessary arrangements have been completed Norfolk Island will be administered by the governor of New South Wales in council." "It will thus be seen that the Pitcairn community, which, for more than one hundred years, has governed itself by its own laws, is now abolished and that a new era has begun. The governor's legal right to annul the constitution given by the Queen when the community emigrated from Pitcairn was questioned. A deputation was appointed to wait on the governor, but he refused to discuss the subject further."—*United States Consular Reports*, May, 1897, p. 37.

1900-1901.—Labor legislation.—"The New South Wales Early Closing Act of 1900 . . . laid down a general rule, which no local authority could evade, and it provided for the closing of every shop within the specified classes. Evasion thus became extremely difficult. Shops were compelled to close at six p. m. on four days in the week, at one p. m. on one day, and at ten p. m. on another day. The particular days could be selected by a vote of the trades concerned. No exception was made . . . in favour of the small shopkeeper, although his cause was pleaded very eloquently by the Free Trade opposition. Experience had proved that the drastic inclusion of all shops in the trade without exception is the only effective method of securing early closing. Cases of hardship, which are easy to imagine, have proved few in practice; but even were they more numerous, private interests must give way. To allow even 'the poor widow,' who always figures on these occasions, to keep her small shop open after hours, would be unfair to the other shops in the neighbourhood. . . . The difficulty has been met in New South Wales by the Industrial Arbitration Court, whose awards have greatly improved the industrial status of shop assistants. [See ARBITRATION AND CONCILIATION, INDUSTRIAL: Australia: 1891-1912.] Besides providing for a minimum wage,—which is the only effective instrument against sweating—the Court has so regulated the practice of apprenticeship as to destroy the great abuse of engaging so-called 'learners,' or 'improvers' who were dismissed in their turn, so soon as they became entitled to receive wages. By these protective provisions, shop assistants have gained a new economic strength, which they are not likely to neglect. Certainly no Act of Parliament of recent years has been productive of greater and more direct advantages than that which has given the shop assistants of New South Wales a weekly half-holiday and their evenings to themselves. . . . The shearers . . . obtained an Act from the Parliament of New South Wales in 1901, requiring squatters to provide them with proper accommodations during the shearing season, but no State has followed the example of England in regulating, generally, the construction of cottages in the country or workmen's dwellings in towns. Again, certain classes of purchasers of small areas of Crown Lands, have their homesteads protected against seizure under any legal process; but no such exemption is conferred upon the property of any other person. Wage-earners are a specially favoured class; they have a right—which is denied to any other class of creditors—to attach monies due to a contractor who employs them, to satisfy a claim for wages, without resort to the expensive process of an action at law. They have also, in some states, a lien for their wages over the material upon which they were working, even although this has ceased to be in their possession and has been sold to a customer. . . . At the same time the wages of workmen are themselves protected against attachment by any process of law. . . . In the two large States of New South Wales and Victoria . . . it has been found impossible to pass a Workmen's Compensation Act, such as has been the law of England since 1897."—B. R. Wise, *Commonwealth of Australia*, pp. 291-292, 295-296.

NEW YORK: Population and area.—Location and geographical description.—Resources.—New York, the "Empire State," is one of the thirteen original states. It had a population (1920), of 10,385,227. New York receives the majority of the emigrants from Europe, great numbers of whom settle in both New York City and New York state. It ranks as the twenty-sixth state in size; area, 40,170 square miles, of which 1550 are water surface. It is bounded on the north by Lake Ontario, the St. Lawrence river and Canada; on the east by Vermont, Massachusetts and Connecticut; on the south by the Atlantic ocean, New Jersey and Pennsylvania; and on the west by Pennsylvania and Lake Erie. New York contains some of the most famous scenery in the Western Hemisphere: Niagara Falls; the St. Lawrence with its Thousand Islands; the Adirondacks, the Catskills, Lake Champlain, Lake George and Seneca Lake; the Mohawk and Genesee rivers with their picturesque valleys and falls; and the Hudson, "the Rhine of America." The latter forms one boundary of New York City, as Manhattan island lies at its mouth. The East river, forming the other boundary, is not a river, but a strait connecting the Upper bay with Long island sound. The harbor of New York is one of the most famous in the world. Staten Island, off New Jersey, forms the southwestern shore of the Upper bay and the northwestern shore of the Lower bay. The Lower bay (88 square miles) is bounded by Raritan bay, Sandy Hook bay and Gravesend bay, to which channels afford entrance from the Atlantic. The Lower bay is connected to the Upper bay by the Narrows, on which stand Fort Wadsworth and Fort Tompkins. The bar is Sandy Hook, about twenty miles south of Manhattan island. Bedloes island, with the Statue of Liberty, and Ellis island, the landing-place for immigrants, lie in the Upper bay (101 acres). New York is famous for its oyster fisheries, particularly off the coast of Long island. Until 1800 New York ranked first in value of its agricultural products. Its market-gardens on Long island and on both shores of the Hudson are extensive. New York is first of all states in the production of milk; the yearly sale bring about \$40,000,000. But-

ter yields \$10,000,000. The fruit orchards are fine, particularly apples; and the state is second to California in grapes, averaging yearly 253,006,361 pounds and \$3,901,677. Hops and tobacco are also grown in quantity. New York owns 1,814,550 acres in Adirondack and Catskill areas known as forest preserve, under control of a conservation commissioner. New York is first among states in value of manufactured products; the enormous power of Niagara Falls and great electric plants at Schenectady, Mechanicsville, Massena near the St. Lawrence river and other places have greatly increased the output. The manufactures are wide and varied. The total value of products (1910) was \$33,680,000. The chief industries are textiles, silk, fur felt hats, knit-goods, carpets, rugs, woolen goods, millinery, lace, fur garments, butter, cheese, condensed milk, patent medicines, chemicals, automobiles, paint, varnish, musical instruments, leather goods, printing and publishing. See U.S.A.: Economic map.

Aboriginal inhabitants.—"The streams that have their source in central New York offer an easy means of communication in every direction. These physical features made the Five Nations powerful—invincible—so long as they had only other savages to deal with. These physical conditions made it certain that New York would play a large and important part in the history of our country. Its preëminence in military, industrial and commercial affairs was predestined."—*Proceedings New York State Historical Association*, v. 15, p. 62.—"With a few exceptions the cities and the larger villages of the state, west of the Hudson River, have been located on old Indian trails. Most of the railroads of the state follow old Indian trails pretty closely. From 1700 to 1800, when there was a great movement of population to the west, a score or two of taverns sprang up on the route taken by those early pioneers, all of them on old Indian trails. The Great Central Iroquois Trail, . . . one of the great national highways of the continent . . . led from the Hudson River to Lake Erie. It began at Albany and led directly across the country to Schenectady. From this point to Rome there were two trails, one on each side of the river. That on the south side was most largely used, as the three Mohawk castles or villages were on that side, one at the mouth of the Schoharie Creek, one at Canajoharie, and the third at the town of Danube, Herkimer, nearly opposite the mouth of East Canada Creek. The trail led through these villages as well as through Fort Plain, Utica and Whitesboro. The trail on the north bank left the river at Tribes Hill and led to Johnstown, then back to the river near Fonda, from which point it led west passing through Little Falls, and joining the trail that ran along the south side of the river at Rome. There was only one trail leaning from Rome to the west. It first passed to the southwest through Verona to Oneida Castle, where the principal village of the Oneidas was located. From this place it led to Canastota, crossed the Chittenango Creek near Chittenango, passed near Manlius, crossed the Jamesville Creek at Jamesville, and led to Onondaga Hollow in the heart of the Onondaga country. This valley was the favorite part of the Onondaga country, and the location of the centre of government of the League of the Iroquois."—S. Williams, *Indian trails*, pp. 210-211.—See also ALGONQUIAN FAMILY; INDIANS, AMERICAN: Cultural areas in North America; Eastern Woodlands area; HORICONS; HURONS; IROQUOIS CONFEDERACY: Their conquests and wide dominion; STOCKBRIDGE INDIANS.

1610-1614.—First Dutch settlement.—Dutch explorers.—Cornelis Mey.—Settlement named New Netherland.—The Dutch had just emerged from their long contest for freedom (see NETHERLANDS: 1562-1566, and after) when Hudson's discovery invited them to establish a footing in America and obtain a share of the profitable trade in furs. The first venture, made by Amsterdam merchants, in 1610, had success enough to stimulate more, and in 1613 a settlement of four houses had been made on the Island of Manhattan; some small forts had been built on the river, and Hendrick Corstiaensen, its superintendent, was busy exploring the region and making acquaintance with the Indian tribes. In the course of the year, Captain Argal, of Virginia, returning from his expedition to Acadia (see CANADA: 1610-1613), ran in to the mouth of the river, called the Dutch to account as intruders on English territory, and forced Corstiaensen to promise tribute to the English crown; but the promise did not hold. "Active steps were taken, early in the next year, to obtain an exclusive right to the trade of those distant countries," and in March, 1614, the States-General passed an ordinance conferring on those who should discover new lands the exclusive privilege of making four voyages thither before others could have admission to the traffic. This ordinance "excited considerable animation and activity among adventurers. A number of merchants belonging to Amsterdam and Hoorn fitted out and dispatched five ships: namely, the Little Fox, the Nightingale, the Tiger, and the Fortune, the two last under the command of Adriaen Bloek and Hendrick Corstiaensen, of Amsterdam. The fifth vessel was called the Fortune also; she belonged to Hoorn, and was commanded by Captain Cornelis Jacobsen Mey. The three last-named and now well-known navigators proceeded immediately on an exploring expedition to the mouth of the Great River of the Mannhattans, but Bloek had the misfortune, soon after his arrival there, of losing his vessel, which was accidentally burnt. . . . He forthwith set about constructing a yacht, 38 feet keel, 44½ feet long, and 11½ feet wide, which, when completed, he called the 'Restless,' significant of his own untiring industry. . . . In this craft, the first specimen of European naval architecture in these waters, Skipper Bloek proceeded to explore the coast east of Manhattan Island. He sailed along the East River, to which he gave the name of 'The Hellegat,' after a branch of the river Scheld, in East Flanders; and leaving Long Island, then called Metoac, or Sewan-hacky, 'the land of shells,' on the south, he discovered the Housatonick, or river of the Red Mountain." Proceeding eastwardly, Bloek found the Connecticut river, which he named Fresh river, and ascended it to an Indian village at 41° 48'. Passing out of the Sound, and ascertaining the insular character of Long island, he gave his own name to one of the two islands off its eastern extremity. After exploring Narra-

gansett bay, he went on to Cape Cod, and there fell in with Hendrick Corstiaensen's ship. "While these navigators were thus engaged at the east, Captain Cornelis Mey was actively employed in exploring the Atlantic coast farther south. . . . He reached the great Delaware Bay, . . . two capes of which still commemorate his visit; one, the most northward, being called after him, Cape Mey [May]; another, Cape Cornelis; while the great south cape was called Hindlopen [Henlopen], after one of the towns in the province of Friesland. . . . Intelligence of the discoveries made by Bloek and his associates having been transmitted to Holland, was received there early in the autumn of this year [1614]. The united company by whom they had been employed lost no time in taking the steps necessary to secure to themselves the exclusive trade of the countries thus explored, which was guaranteed to them by the ordinance of the 27th of March. They sent deputies immediately to the Hague, who laid before the States General a report of their discoveries, as required by law, with a figurative map of the newly explored countries, which now, for the first time, obtained the name of New Netherland. A special grant in favor of the interested parties was forthwith accorded."—E. B. O'Callaghan, *History of New Netherland*, v. 1, bk. 1, ch. 4.

ALSO IN: B. Fernow, *New Netherland (Narrative and critical history of America*, v. 4, ch. 8).

1614-1921.—Fort Nassau.—United New Netherland Company succeeded by Dutch West India Company.—"It was perceived that, to secure the largest return from the peltry trade, a factor should reside permanently on the Mauritius River [North, or Hudson, as it has been successively called], among the Maquas or Mohawks, and the Mahicans [Mohicans], at the head of tide-water. Hendrick Christiaensen, who after his first experiment in company with Adriaen Bloek, is stated to have made 'ten voyages' to Manhattan, accordingly constructed [1614] a trading house on 'Castle Island,' at the west side of the river, a little below the present city of Albany. . . . To compliment the family of the stadholder, the little post was immediately named Fort Nassau. . . . It had been confidently affirmed that the year after the erection of Fort Nassau, at Castle Island, a redoubt was also thrown up and fortified 'on an elevated spot' near the southern point of Manhattan Island. But the assertion does not appear to be confirmed by sufficient authority. . . . The Holland merchants, who had obtained from the States General the exclusive right of trading for three years to New Netherland, though united together in one company [United New Netherlands Company] to secure the grant of their charter, were not strictly a corporation, but rather 'participants' in a specific, limited, and temporary monopoly, which they were to enjoy in common. . . . On the 1st of January, 1618, the exclusive charter of the Directors of New Netherland expired by its own limitation. Year by year the value of the returns from the North River had been increasing; and the hope of larger gains incited the factors of the company to push their explorations further into the interior. . . . No systematic agricultural colonization of the country had yet been undertaken. The scattered agents of the Amsterdam Company still looked merely to peaceful traffic, and the cultivation of those friendly relations which had been covenanted with their savage allies on the banks of the Tawasentha [where they had negotiated a treaty of friendship and alliance with the Five Nations of the Iroquois, in [1617]]. Upon the expiration of their special charter, the merchants who had

formed the United New Netherland Company applied to the government at the Hague for a renewal of their privileges, the value of which they found was daily increasing. But the States General, who were now contemplating the grant of a comprehensive charter for a West India Company avoided a compliance with the petition." In June, 1621, "the long-pending question of a grand commercial organization was finally settled; and an ample charter gave the West India Company almost unlimited powers to colonize, govern, and defend New Netherland."—J. R. Brodhead, *History of the State of New York*, v. 1, ch. 2-3.

1621-1646.—Dutch West India Company.—Purchase of Manhattan island.—Patroons and their colonies.—"When it became evident that the war [of the United Provinces] with Spain would be renewed, the way was opened for the charter of a company, so often asked and denied. Just before the expiration of the twelve years' truce, April, 1621, the great West India Company was formed, and incorporated by the States General. It was clothed with extraordinary powers and privileges. It could make alliances and treaties, declare war and make peace. Although its field of operations was limited to Africa, the West India Islands, and the continent of America, it could in case of war fight the Spaniards wherever found on land or sea. And finally, it was permitted to colonize unoccupied or subjugated countries. To it especially were committed the care and the colonization of New Netherland. The West India Company, after completing its organization in 1623, began its work in New Netherland by erecting a fort on Manhattan Island [called Fort Amsterdam], and another on the Delaware, and by reconstructing the one at Albany. It sent over to be distributed in these places 30 families, not strictly as colonists, to settle and cultivate the land, but rather as servants of the Company in charge of their factories, engaged in the purchase and preparation of furs and peltries for shipment. Some of them returned home at the expiration of their term of service, and no other colonists were brought out for several years. The Company found more profitable employment for its capital in fitting out fleets of ships of war, which captured the Spanish treasure-ships, and thus enabled the Company to pay large dividends to its stockholders. In 1626 its agents bought all Manhattan Island of the Indian owners for sixty guilders [twenty-four dollars] in goods on which an enormous profit was made; and about the same time they purchased other tracts of land in the vicinity, including Governor's and Staten Islands, on similar terms. The Company was now possessed of lands enough for the accommodation of a large population. They were fertile, and only needed farmers to develop their richness. But these did not come. . . . Accordingly, in 1620, the managers took up a new line of action. They enacted a statute, termed 'Freedoms and Exemptions,' which authorized the establishment of colonies within their territory by individuals, who were to be known as Patroons, or Patrons. An individual might purchase of the Indian owners a tract of land, on which to plant a colony of fifty souls within four years from the date of purchase. He who established such a colony might associate with himself other persons to assist him in his work, and share the profits,

but he should be considered the Patroon, or chief, in whom were centred all the rights pertaining to the position, such as the administration of justice, the appointment of civil and military officers, the settlement of clergymen, and the like. He was a kind of feudal lord, owing allegiance to the West India Company, and to the States General, but independent of control within the limits of his own territory. The system was a modified relic of feudalism. The colonists were not serfs, but tenants for a specified term of years, rendering service to the Patroon for a consideration. When their term of service expired, they were free to renew the contract, make a new one, or leave the colony altogether. The privileges of a Patroon at first were restricted to the members of the company, but in about ten years were extended to others. The directors of the company were the first to improve the opportunity now offered of becoming 'princes and potentates' in the western hemisphere. . . . In 1630, the agents of Director Killian Van Rensselaer bought a large tract of land on the west side of the Hudson River below Albany, and in July following other tracts on both sides of the river, including the present site of Albany. In July, 1630, Director Michael Pauw bought lands on the west side of the Hudson opposite Manhattan Island, and named his territory Pavonia. A few months later Staten Island was transferred to him, and became a part of his domain. . . . Killian Van Rensselaer also formed a partnership with several of his brother directors, among whom was the historian De Laet, for the purpose of planting a colony on his lands on the upper Hudson, to be known as the colony of Rensselaerwyck. He seems to have had a clearer perception of what was required for such a work than the other Patroons. The colony was organized in accordance with the charter, and on business principles. Before the colonists left Holland they were assigned to specific places and duties. Civil and military officers were appointed, superintendents and overseers of the various departments were selected, and all were instructed in their duties. The number of the first colonists was respectable. They were chiefly farmers and mechanics, with their families. On their arrival, May, 1630, farms situated on either side of the river were allotted to them, utensils and stock distributed, houses built, and arrangements made for their safety in case the natives should become hostile. Order was maintained, and individual rights respected. They were not long in settling down, each to his allotted work. Year by year new colonists arrived, and more lands were bought for the proprietors. In 1646, when Killian Van Rensselaer, the first Patroon, died, over two hundred colonists had been sent from Holland, and a territory forty-eight by twenty-four miles, besides another tract of 62,000 acres, had been acquired. The West India Company had changed its policy under the direction of new men, and no longer favored the Patroons. The Van Rensselaers were much annoyed, and even persecuted, but they held firmly to their rights under the charter. Their colony was prosperous, and their estate in time became enormous. . . . Of all the Patroon colonies Rensselaerwyck alone survived. It owed its existence mainly to its management, but largely to its situation, remote from the seat of government, and convenient for the Indian trade."—G. W. Schuyler, *Colonial New York*, introduction, sect. 1.—See also LIVINGSTON MANOR.

1634.—New Amsterdam.—Soon after the appointment of Wouter Van Twiller, who became governor of New Netherland in 1633, "the little town on Manhattan Island received the name of New Amsterdam . . . and was invested with the prerogative of 'staple right,' by virtue of which all the merchandise passing up and down the river was subject to certain duties. This right gave the post the commercial monopoly of the whole province."—Mrs. M. J. Lamb, *History of the City of New York*, v. 1, p. 73.

1638-1647.—Colony open to free immigration.—Free trade.—Kieft's administration.—Ruinous Indian wars.—"The colony did not thrive. The patroon system kept settlers away, and the paternal government of a trading corporation checked all vigorous and independent growth, while Van Twiller [Wouter Van Twiller, appointed governor in 1633] went steadily from bad to worse. He engaged in childish quarrels with every one, from the minister down. . . . This utter mis-government led at last to Van Twiller's removal. He retired in possession of large tracts of land, which he had succeeded in acquiring, and was replaced [1638] by William Kieft, a bankrupt merchant of bad reputation. Kieft practically abolished the Council, and got all power into his own hands; but he had some sense of order. . . . Despite his improvements, the place remained a mere trading-post, and would not develop into a colony. The patroons were the curse of the scheme, and too powerful to be overthrown; so they proposed, as a remedy for the existing evils, that their powers and privileges should be greatly enlarged. The Company had bought back some of the lands; but they were still helpless, and the State would do nothing for them. In this crisis they had a return of good sense, and solved the problem by destroying their stifling monopoly. They threw the trade to New Netherlands open to all comers, and promised the absolute ownership of land on the payment of a small quit-rent. The gates were open at last, and the tide of emigration swept in. De Vries who had bought land on Staten Island, came out with a company; while ship followed ship filled with colonists, and English came from Virginia, and still more from New England. Men of property and standing began to turn their attention to the New Netherlands; fine well-stocked farms rapidly covered Manhattan, and healthy progress had at last begun. Thus strengthened, the Company [1640] restricted the patroons to a waterfront of one mile and a depth of two, but left them their feudal privileges, benefits which practically accrued to Van Rensselaer, whose colony at Beverwyck had alone, among the manors, thriven and grown at the expense of the Company. The opening of trade proved in one respect a disaster. The cautious policy of the Company was abandoned, and greedy traders who had already begun the business, and were now wholly unrestrained, hastened to make their fortunes by selling arms to the Indians in return for almost unlimited quantities of furs. Thus the Mohawks obtained guns enough to threaten both the Dutch and all the

surrounding tribes, and this perilous condition was made infinitely worse by the mad policy of Kieft. He first tried to exact tribute from the Indians near Manhattan, then offered a price for the head of any of the Raritans who had destroyed the settlement of De Vries; and, when a young man was murdered by a Weckquaesgeek, the Governor planned immediate war." Public opinion among the colonists condemned the measures of Kieft, and forced him to accept a council of twelve select men, chosen at a public meeting; but "the twelve," as they were called, failed to control the governor. Acting on the advice of two or three among them, whose support he had secured, he ordered a cowardly attack upon some fugitive Indians from the River tribes, who had been driven into the settlements by the onslaught of the Mohawks, and whom De Vries and others were trying to protect. "The wretched fugitives, surprised by their supposed protectors, were butchered in the dead of a winter's night [1643], without mercy, and the bloody soldiers returned in the morning to Manhattan, where they were warmly welcomed by Kieft. This massacre lighted up at once the flames of war among all the neighboring tribes of Algonquins. All the outlying farms were laid waste, and their owners murdered, while the smaller settlements were destroyed. Vriesendael alone was spared. A peace, patched up by De Vries, gave a respite until summer, and the war raged more fiercely than before, the Indians burning and destroying in every direction, while trade was broken up and the crews of the vessels slaughtered." Kieft's life was now in danger from the rage of his own people, and eight men, appointed by public meeting, took control of public affairs, as far as it was possible to do so. Under the command of John Underhill, the Connecticut Indian fighter, who had lately migrated to Manhattan, the war was prosecuted with great vigor and success on Long Island and against the Connecticut Indians who had joined in it; but little headway was made against the tribes on the Hudson, who harassed and ruined the colony. Thus matters went badly for a long period, until, in 1647, the Company in Holland sent out Peter Stuyvesant to take the place of Kieft. "In the interval, the Indian tribes, weary at last of war, came in and made peace. Kieft continued his quarrels; but his power was gone, and he was hated as the principal cause of all the misfortunes of the colony. The results of his miserable administration were certainly disastrous enough. Sixteen hundred Indians had perished in the war; but all the outlying Dutch settlements and farms had been destroyed, and the prosperity of the colony had received a check from which it recovered very slowly. In Connecticut, the English had left the Dutch merely a nominal hold, and had really destroyed their power in the East. On the South River [the Delaware] the Swedes had settled, and, disregarding Kieft's blustering proclamations, had founded strong and growing colonies. . . . The interests of Holland were at a low ebb."—H. C. Lodge, *Short history of the English colonies*, ch. 16.—A more favorable view of Kieft and his administration is taken by Mr. Gerard, who says: "Few proconsuls had a more arduous task in the administration of the government of a province than bad Director Kieft. . . . Kieft, in a far distant province, with a handful of soldiers crowded in a dilapidated fort and a few citizens turbulent and unreliable surrounded on all sides by savages ever on the alert for rapine and murder, receiving little support from the home government, and having a large territory to defend

and two civilized races to contend with, passed the eight years of his administration amid turmoil and dissension within, and such hostile attack from without as to keep the province in continuous peril. . . . He has been generally condemned, but without sufficient consideration of the trials which he experienced, the anxiety to which he was subject, and the perplexities incident to a government over discontented, ignorant and mutinous subjects, and to the continued apprehension of outside attack. Left mostly to his own resources, and receiving no sympathy and little aid, his motives the subject of attack from both tavern and pulpit, and twice the object of attempted assassination, his rule as a whole, though disastrous, was not dishonorable."—J. W. Gerard, *Administration of William Kieft (Memorial history of the City of New York, v. 1, ch. 6)*.

1640-1643.—Expulsion of New Haven colonists from the Delaware. See NEW JERSEY: 1640-1655.

1647-1664.—Peter Stuyvesant and his administration.—Peter Stuyvesant, the director or governor who succeeded Kieft, "took possession of the government on the 11th of May, 1647. On his arrival he was greeted with a hearty and cordial reception by the citizens, to which he responded by reciprocal professions of interest and regard. He had for several years been in the Company's service as Director of their colony at Curaçoa, and was distinguished for his energy and bravery. Having lost a leg in an attack on the Portuguese settlement at St. Martin's, he had been obliged to return to Europe for surgical aid, whence, still retaining his former commission, he was sent to the charge of the Province of New Netherlands. Immediately on his accession he organized a representative Council of nine members from a list of eighteen presented to him by the inhabitants of the province, and gave his assent to various important provisions for the regulation of trade and commerce. By a conciliatory and just treatment of the Indians so recently in revolt he speedily gained their affection and goodwill, and by his judicious measures for their mutual protection restored peace and harmony among all classes."—S. S. Randall, *History of the State of New York, period 2, ch. 5*.—"The powers of government—executive, legislative, and judicial—which he [Stuyvesant] assumed, were quite extensive, and often arbitrary. Directly or indirectly, he appointed and commissioned all public officers, framed all laws, and decided all important controversies. . . . He directed churches to be built, installed ministers, and even ordered them when and where to preach. Assuming the sole control of the public lands, he extinguished the Indian title thereto, and allowed no purchase to be made from the natives without his sanction; and granted at pleasure, to individuals and companies, parcels of land, subject to such conditions as he saw fit to impose. In the management of these complicated affairs the Director developed a certain imperiousness of manner and impatience of restraint, due, perhaps, as much to his previous military life as to his personal character. . . . During the whole of his predecessor's unquiet rule a constant struggle had been going on between the personal prerogative of the Executive and the inherent sentiment of popular freedom which prevailed among the commonalty, leading the latter constantly to seek for themselves the franchises and freedoms of the Fatherland, to which, as loyal subjects, they deemed themselves entitled in New

Netherland. The contest was reopened soon after Stuyvesant's installation, and the firmness of both Director and people, in the maintenance of what each jealously considered their rights, gave indication of serious disturbance to the public weal." The governor, at length, in 1647, conceded "a popular representation in the affairs of government. An election was therefore held, at which the inhabitants of Amsterdam, Breuckelen, Amersfoort and Pavonia chose eighteen of 'the most notable, reasonable, honest, and respectable' among them, from whom, according to the custom of the Fatherland, the Director and Council selected 'Nine Men' as an advisory Council; and although their powers and duties were jealously limited and guarded by the Director's Proclamation, yet the appointment of the Nine Men was a considerable gain to the cause of popular rights. . . . The subsequent history of Stuyvesant's government is a record of quarrels with colonial patrons, with the English in New England, the

PETER STUYVESANT

Swedes on the South River, and last—not least—with his own people. In fact, the government was by no means well adapted to the people or adequate to protect them. The laws were very imperfect, and the Director and Council either incompetent or indisposed to remedy the serious defects which existed in the administration of civil and criminal justice."—H. R. Stiles, *History of the City of Brooklyn, v. 1, ch. 3*.—"Director Stuyvesant was recalled to Europe soon after the surrender [to the English (see below)], to vindicate his conduct . . . and . . . found himself the object of serious charges and most virulent attacks. He returned to this country in 1668, and died on his *houwerie* in 1672. . . . Throughout his chequered life he exhibited a character of high morality, and in his dealings with the Indians an energetic and dignified deportment, which contributed, no doubt, considerably to the success of his arms and policy. Alike creditable to his talents are his negotiations with the neighboring English colonies. His vindications of the rights of his country, on these occasions, betoken a firmness of manner, a sharpness of perception, a clearness of

argument and a soundness of judgment, combined with an extent of reading, which few of his contemporaries could equal, and none surpass. . . . It would afford pleasure were we justified in pronouncing a like panegyric on other parts of his administration; but none can review [his arbitrary resistance to just popular demands] . . . and his persecution of the Lutherans and other Nonconformists, without reprobating his tyranny, and regretting that a character, so faultless in other respects, should be stained by traits so repulsive as these, and that the powers of a mind so strong should be exerted in opposing rather than promoting civil and religious freedom. The hostility this part of his public conduct evoked redounds most creditably to the character of the settlers, whose struggles for freer institutions cannot fail to win for them our sympathy and regard."—E. B. O'Callaghan, *History of New Netherland*. v. 2, bk. 6, ch. 8.

ALSO IN: G. P. Fisher, *Colonial era*, ch. 6.—B. Fernow, *Peter Stuyvesant (Memorial history of the City of New York)*, v. 1, ch. 7).

1650.—Adjustment of boundaries with Connecticut.—To settle the long pending controversy between Dutch and English respecting the territory claimed by each on Long Island and at the mouth of the Connecticut river, Governor Stuyvesant went in person to Hartford, September, 1650, and opened negotiations. His hands were tied from the beginning by instructions from his company to press no claim to the extremity of a quarrel, because the English were too strong in America to be fought with. He assented, therefore, to the appointment of two arbitrators on each side, and he named Englishmen as his arbitrators. "The four agreed upon a settlement of the boundary matter, ignoring all other points in dispute as having occurred under the administration of Kieft. It was agreed that the Dutch were to retain their lands, in Hartford [the post of 'Good Hope,' established in 1633, and which they had continued to hold, in the midst of the spreading English settlement]; that the boundary line between the two peoples on the mainland was not to come within ten miles of the Hudson River, but was to be left undecided for the present, except the first 20 miles from the Sound, which was to begin on the west side of Greenwich Bay, between Stamford and Manhattan, running thence 20 miles north; and that Long Island should be divided by a corresponding line across it, 'from the westernmost part of Oyster Bay,' to the sea. The English thus got the greater part of Long Island, a recognition of the rightfulness of their presence in the Connecticut territory, and at least the initial 20 miles of a boundary line which must, in the nature of things, be prolonged in much the same direction, and which in fact has pretty closely governed subsequent boundary lines on that side of Connecticut. If these seem hard terms for the Dutch, and indicative of treachery on the part of their two English agents, it must be borne in mind that, by the terms of his instructions from his principals, Stuyvesant had to take the best terms he could get. The treaty of Hartford was dated September 10, 1650."—A. Johnston, *Connecticut (American commonwealths)*, ch. 10).

1653.—Grant of municipal government to New Amsterdam.—"An interesting moment arrived. A

new city appeared in the annals of the world. Its birth was announced on the evening of February 2, 1653, at the feast of Candlemas. A proclamation of the governor defined its exceedingly limited powers and named its first officers. It was called New Amsterdam. There was nothing in the significant scene which inspired enthusiasm. It came like a favor grudgingly granted. Its privileges were few, and even those were subsequently hampered by the most illiberal interpretations which could be devised. Stuyvesant made a speech on the occasion, in which he took care to reveal his intention of making all future municipal appointments, instead of submitting the matter to the votes of the citizens, as was the custom in the Fatherland; and he gave the officers distinctly to understand, from the first, that their existence did not in any way diminish his authority, but that he should often preside at their meetings, and at all times counsel them in matters of importance. . . . A pew was set apart in the church for the City Fathers; and on Sunday mornings these worthies left their homes and families early to meet in the City Hall, from which, preceded by the bell-ringer, carrying their cushions of state, they marched in solemn procession to the sanctuary in the fort. On all occasions of ceremony, secular or religious, they were treated with distinguished attention. Their position was eminently respectable, but it had as yet no emoluments. . . . There were two burgomasters, Arent van Hattam and Martin Cregier. . . . There were five schepens,—Paulus Van der Grist, Maximilian Van Gheel, Allard Anthony, Peter Van Couvenhoven, and William Beekman."—Mrs. M. J. Lamb, *History of the City of New York*, v. 1, ch. 10.

1655.—Subjugation of Swedes on the Delaware. See DELAWARE: 1640-1656.

1664.—English conquest.—New Amsterdam becomes New York.—The Navigation Act of Cromwell, maintained by the English after the Stuart Restoration, was continually evaded, almost openly, in the British American colonies; and it was with the Dutch at New Amsterdam that the illicit trade of the New Englanders, the Virginians and the Marylanders was principally carried on. "In 1663 the losses to the revenue were so extensive that the farmers of the customs . . . complained of the great abuses which, they claimed, defrauded the revenue of £10,000 a year. The interest of the kingdom was at stake, and the conquest of the New Netherland was resolved upon. . . . The next concern of the Chancellor [Clarendon] was to secure to the Crown the full benefit of the proposed conquest. He was as little satisfied with the self-rule of the New England colonies as with the presence of Dutch sovereignty on American soil; and in the conquest of the foreigner he found the means to bring the English subject into closer dependence on the King. James, Duke of York, Grand Admiral, was the heir to the Crown. . . . A patent to James as presumptive heir to the crown, from the King his brother, would merge in the crown; and a central authority strongly established over the territory covered by it might well, under favorable circumstances, be extended over the colonies on either side which were governed under limitations and with privileges directly secured by charter from the King. . . . The first step taken by Clarendon was the purchase of the title conveyed to the Earl of Stirling in 1635 by the grantees of the New England patent. This covered

the territory of Pemaquid, between the Saint Croix and the Kennebec, in Maine, and the island of Matowack, or Long Island. . . . A title being thus acquired by the adroitness of Clarendon, a patent was, on the 12th of March, 1664, issued by Charles II. to the Duke of York, granting him the Maine territory of Pemaquid, all the islands between Cape Cod and the Narrows, the Hudson River, and all the lands from the west side of the Connecticut to the east side of Delaware Bay, together with the islands of Martha's Vineyard and Nantucket. The inland boundary was 'a line from the head of Connecticut River to the source of Hudson River, thence to the head of the Mohawk branch of Hudson River, and thence to the east side of Delaware Bay.' The patent gave to the Duke of York, his heirs, deputies, and assigns, 'absolute power to govern within this domain according to his own rules and discretions consistent with the statutes of England.' In this patent the charter granted by the King to the younger John Winthrop in 1662 for Connecticut, in which it was stipulated that commissioners should be sent to New England to settle the boundaries of each colony, was entirely disregarded. The idea of commissioners for boundaries now developed with larger scope, and the King established a royal commission, consisting of four persons recommended by the Duke of York, whose private instructions were to reduce the Dutch to submission and to increase the prerogatives of the Crown in the New England colonies, which Clarendon considered to be 'already well-nigh ripened to a commonwealth.' Three of these commissioners were officers in the royal army.—Colonel Richard Nicolls, Sir Robert Carr, Colonel George Cartwright. The fourth was Samuel Maverick. . . . To Colonel Nicolls the Duke of York entrusted the charge of taking possession of and governing the vast territory covered by the King's patent. To one more capable and worthy the delicate trust could not have been confided. . . . His title under the new commission was that of Deputy-Governor; the tenure of his office, the Duke's pleasure. . . . When the news of the gathering of the fleet reached the Hague, and explanation was demanded of Downing [the English ambassador] as to the truth of the reports that it was intended for the reduction of the New Netherland, he boldly insisted on the English right to the territory by first possession. To a claim so flimsy and impudent only one response was possible,—a declaration of war. But the Dutch people at large had little interest in the remote settlement, which was held to be a trading-post rather than a colony, and not a profitable post at best. The West India Company saw the danger of the situation, but its appeals for assistance were disregarded. Its own resources and credit were unequal to the task of defence. Meanwhile the English fleet, composed of one ship of 36, one of 30, a third of 16, and a transport of 10 guns, with three full companies of the King's veterans,—in all 450 men, commanded by Colonels Nicolls, Carr, and Cartwright,—sailed from Portsmouth for Gardiner's Bay on the 15th of May. On the 23d of July Nicolls and Cartwright reached Boston, where they demanded military aid from the Governor and Council of the Colony. Calling upon Winthrop for the assistance of Connecticut, and appointing a rendezvous at the west end of Long Island, Nicolls set sail with his ships and anchored in New Utrecht Bay, just outside of Coney Island, a spot since historical as the landing-place of Lord Howe's troops in 1776. Here Nicolls was joined by militia from New Haven and Long Island. The city of New Amsterdam . . . was

defenceless. The Director, Stuyvesant, heard of the approach of the English at Fort Orange (Albany), whither he had gone to quell disturbances with the Indians. Returning in haste, he summoned his council together. The folly of resistance was apparent to all, and after delays, by which the Director-General sought to save something of his dignity, a commission for a surrender was agreed upon between the Dutch authorities and Colonel Nicolls. The capitulation confirmed the inhabitants in the possession of their property, the exercise of their religion, and their freedom as citizens. The municipal officers were continued in their rule. On the 29th of August, 1664, the articles were ratified . . . and the city passed under English rule. The first act of Nicolls on taking possession of the fort, in which he was welcomed by the civic authorities, was to order that the city of New Amsterdam be thereafter known as New York, and the fort as Fort James, in honor of the title and name of his lord and patron. At the time of the surrender the city gave small promise of its magnificent future. Its entire population, which did not exceed 1,500 souls, was housed within the triangle at the point of the island. . . . Nicolls now established a new government for the province. A force was sent up the Hudson under Captain Cartwright, which took possession of Fort Orange, the name of which was changed to Albany, in honor of a title of the Duke of York."—J. A. Stevens, *English in New York (Narrative and critical history of America, v. 3, ch. 10)*.—See also MASSACHUSETTS: 1660-1665.

1664-1674.—Province as the English received it.—Dutch institutions.—"In the year 1664, when the government passed to the English, New Netherland is said by the Chevalier Lambrechtsen to have consisted of three cities and thirty villages. Its population was then about ten thousand souls, exclusive of the Indians, who were important auxiliaries for trade and peltries. The inhabitants enjoyed a fair measure of freedom and protection. High roads already existed, and there were numerous owners of flourishing farms, or bouweries, and other real property, while urban life was well policed by proper laws. The treatment by the Dutch of the many English and other aliens who already dwelt within the Dutch territory was rather in advance of the age, while the jurisprudence established here by the Dutch, being largely borrowed from the high civilization of Rome, was certainly superior in refinement to the contemporary feudal and folk law introduced by the English in 1664. Theoretically, the administration of justice conformed to a high standard, and both Dutch and aliens were protected by adequate constitutional guaranties. We cannot for an instant presume that the institutions which half a century had reared were swept into oblivion by a single stroke of the English conquerors in 1664. It would be more rational to suppose that the subsidence of the Dutch institutions was as gradual as the facts demonstrate it to have been. Negro slavery was introduced by the Dutch, but it existed here only under its least objectionable conditions. A large measure of religious liberty was tolerated, although the Dutch Reformed Church was the only one publicly sanctioned. . . . New Netherland

was not altogether fortunate in its type of government, experience demonstrating that the selfish spirit of a mercantile monopoly is not the fit repository of governmental powers. Yet, on the whole, it must be conceded that the company's government introduced here much that was good and accomplished little that was pernicious. In 1664 it certainly surrendered to the English one of the finest and most flourishing colonies of America, possessing a hardy, vigorous, and thrifty people, well adapted to all the principles of civil and religious freedom. History shows that this people speedily coalesced with all that was good in the system introduced by the English, and sturdily opposed all that was undesirable. . . . It is certain . . . that after the overthrow of the Dutch political authority the English proceeded gradually to introduce into New York, by express command, their own laws and customs. Yet it requires a very much more extended examination of original sources than has ever been made to determine absolutely just how much of the English laws and institutions was in force at a particular epoch of colonial history. The subject perplexed the colonial courts, and it is still perplexing."—R. L. Fowler, *Constitutional and legal history of New York in the seventeenth century (Memorial history of the City of New York, v. 1, ch. 14)*.—"Although the New Netherland became a permanent English colony under the Treaty of Westminster in 1674 [see below], its population remained largely Dutch until nearly the middle of the next century. The prosperity of New York, growing steadily with the progress of trade and the exportation of grains, attracted emigrants from Holland notwithstanding the change of flag. Many families now living on Manhattan Island are descended from Dutchmen who came out after the English occupation. The old names with which we have become familiar in the early annals of New Amsterdam continue in positions of honour and prominence through the English colonial records. . . . During the last half of the eighteenth century the Dutch names are more and more crowded out by the English. . . . By the beginning of the nineteenth century, the Dutch names occur only occasionally. These Dutchmen not only preserved their leadership in public affairs, but carried on a large proportion of the city's trade. New York was an English colony, but its greatness was largely built on Dutch foundations. It is often said that the city became flourishing only after the English occupation. This is true, with the qualification that the Dutch trader and the Dutch farmer after that event had greater opportunities for successful activity. . . . Dutch continued to be the language of New York until the end of the seventeenth century, after which time English contended for the mastery with steady success. In the outlying towns of Long Island and New Jersey and along the Hudson River, Dutch was generally used for a century later. . . . In New York city the large English immigration, the requirements of commerce, and the frequent intermarriages of Dutch and English families had given to English the predominance by the year 1750."—B. Tuckerman, *Peter Stuyvesant, ch. 4*.—See also AMERICA: Map of early colonial grants.

1665.—Duke's laws.—"At a general meeting held at Hempstead, on Long Island [March 1, 1665], attended by deputies from all the towns, Governor Nichols presently published, on his own and the duke's authority, a body of laws for the government of the new province, alphabetically arranged, collated, and digested, 'out of the several laws now in force in his majesty's American colonies and

plantations,' exhibiting indeed, many traces of Connecticut and Massachusetts legislation. . . . The code [was] known as the 'Duke's Laws,' which Nichols imagined 'could not but be satisfactory even to the most factious Republicans.' A considerable number of immigrants seem to have come in on the strength of it from the neighboring colonies of New England."—R. Hildreth, *History of the United States, v. 2, ch. 17*.

1665-1666.—French invasions of Iroquois country, under Courcelles and Tracy. See CANADA: 1640-1700.

1673.—Reconquest of city and province by the Dutch.—The seizure of New Netherland by the English in 1664 was one of several acts of hostility which preceded an actual declaration of war between England and Holland. The war became formal, however, in the following year, and ended in 1666, ingloriously for England (see NETHERLANDS: 1665-1666), although she retained her American conquests. Then followed a period of hypocritical alliance on the part of Charles II with the Dutch, which gave him an opportunity to betray them in 1672, when he joined Louis XIV of France in a perfidious attack upon the sturdy republic. (See NETHERLANDS: 1672-1674.) During the second year of this last mentioned war, Cornelis Evertsen, worthy son of a famous Dutch admiral, made an unexpected reconquest of the lost province. Evertsen "had been sent out from Zealand with fifteen ships to harass the enemy in the West Indies, which was effectually done. At Martinico he fell in with four ships dispatched from Amsterdam, under the command of Jacob Binckes. Joining their forces, the two commodores followed Krynssen's track to the Chesapeake, where they took eight and burned five Virginia tobacco ships, in spite of the gallantry of the frigates which were to convoy them to England. As they were going out of the James River, the Dutch commodores met a sloop from New York," and received information from one of its passengers which satisfied them that they might easily take possession of the town. "In a few days [August 7, 1673] the Dutch fleet, which with three ships of war from Amsterdam, and four from Zealand, was now swelled by prizes to 23 vessels, carrying 1,600 men, arrived off Sandy Hook. The next morning they anchored under Staten Island." On the following day the city, which could make no defense, and all the Dutch inhabitants of which were eager to welcome their countrymen, was unconditionally surrendered. "The recovery of New York by the Dutch was an absolute conquest by an open enemy in time of war. . . . 'Not the smallest' article of capitulation except military honors to the garrison, was granted by the victors. . . . Their reconquest annihilated British sovereignty over ancient New Netherland, and extinguished the duke's proprietary government in New York, with that of his grantees in New Jersey. Evertsen and Binckes for the time represented the Dutch Republic, under the dominion of which its recovered American provinces instantly passed, by right of successful war. The effete West India Company was in no way connected with the transaction. . . . The name of 'New Netherland' was of course restored to the reconquered territory, which was held to embrace not only all that the Dutch possessed according to the Hartford agreement of 1650, but also the whole of Long Island east of Oyster Bay, which originally belonged to the province and which the king had granted to the Duke of York. . . . It was,

first of all, necessary to extemporize a provisional government. No orders had been given to Evertsen or Binckes about New Netherland. Its recovery was a lucky accident, wholly due to the enterprise of the two commodores; upon whom fell the responsibility of governing their conquest until directions should come from the Hague." They appointed Captain Anthony Colve to be Governor General of the Province. "Colve's commission described his government as extending from 15 miles south of Cape Henlopen to the east end of Long Island and Shelter Island, thence through the middle of the Sound to Greenwich, and so northerly, according to the boundary made in 1650, including Delaware Bay and all the intermediate territory, as possessed by the English under the Duke of York. . . . The name of the city of New York was . . . changed to 'New Orange,' in compliment to the prince stadtholder. . . . The metropolis being secured, 200 men were sent up the river, in several vessels, to reduce Esopus and Albany. No opposition was shown." Albany was ordered to be called Willemstadt.—J. R. Brodhead, *History of the State of New York*, v. 2, ch. 4-5.

1674.—Restored to England by Treaty of Westminster. See NETHERLANDS: 1674.

1674-1675.—Long Island and part of Connecticut annexed. See CONNECTICUT: 1674-1675.

1678-1780. Transition from Dutch to English government. See U. S. A.: 1678-1780.

1684.—Doubtful origin of English claims to sovereignty of Iroquois country.—"Colonel Dongan [governor of New York] was instrumental in procuring a convention of the Five Nations, at Albany, in 1684, to meet Lord Howard of Effingham, Governor of Virginia, at which he (Dongan) was likewise present. This meeting, or council, was attended by the happiest results. . . . Colonel Dongan succeeded in completely gaining the affections of the Indians, who conceived for him the warmest esteem. They even asked that the arms of the Duke of York might be put upon their castles;—a request which it need not be said was most readily complied with, since, should it afterwards become necessary, the governor might find it convenient to construe it into an act of at least partial submission to English authority, although it has been asserted that the Indians themselves looked upon the ducal insignia as a sort of charm, that might protect them against the French."—W. L. Stone, *Life and times of Sir W. Johnson*, v. 1, p. 15.

1684-1687.—French invasions of Iroquois country under De La Barre and De Nonville. See CANADA: 1640-1700.

1686.—Dongan charter.—"The year 1686 was distinguished by the granting of the 'Dongan Charter' to the city of New York. It was drafted by Mayor Nicholas Bayard and Recorder James Graham, and was one of the most liberal ever bestowed upon a colonial city. By it, sources of immediate income became vested in the corporation. Subsequent charters added nothing to the city property, save in the matter of ferry rights, in immediate reference to which the charters of 1708 and 1730 were obtained. . . . The instrument was the basis of a plan of government for a great city."—Mrs. M. J. Lamb, *History of the City of New York*, v. 1, p. 317.

ALSO IN: M. Benjamin, *Thomas Dongan and the granting of the New York charter (Memorial history of the City of New York*, v. 1, ch. 11).

1688.—Governorship of Sir Edmund Andros.—In April, 1688, Sir Edmund Andros, who had been made Governor-general of all New England in 1686, received a new commission from the King which "constituted him Governor of all the English possessions on the mainland of America, except Pennsylvania, Delaware, Maryland, and Virginia. The 'Territory and Dominion' of New England was now to embrace the country between the 40th degree of latitude and the River St. Croix, thus including New York and the Jerseys. The seat of government was to be at Boston; and a Deputy-Governor, to reside at New York, was to be the immediate head of the administration of that colony and of the Jerseys. The Governor was to be assisted by a Council consisting of 42 members, of whom five were to constitute a quorum. . . . The Governor in Council might impose and collect taxes for the support of the government, and might pass laws, which however were, within three

COL. THOMAS DONGAN

months of their enactment, to be sent over to the Privy Council for approval or repeal. . . . The seal of New York was to be broken, and the seal of New England to be used for the whole jurisdiction. Liberty of conscience was to be allowed, agreeably to the Declaration of Indulgence."—J. G. Palfrey, *Compendius history of New England*, v. 2, bk. 3, ch. 14.—See also NEW JERSEY: 1688-1738; U. S. A.: 1686-1680.

ALSO IN: Mrs. M. J. Lamb, *History of the City of New York*, v. 1, ch. 18.—J. R. Brodhead, ed., *Documents relative to colonial history of New York*, v. 3, pp. 537-554.

1689-1691.—English revolution.—Jacob Leisler.—Governor Slaughter.—News of the revolution in England which drove James II. from the throne, giving it to his daughter, Mary, and her husband, William of Orange, reached New York, from Virginia, in February, 1680, but was concealed as long as possible from the public by Lieutenant-Governor Nicholson. No disturbance of the authority of the latter occurred until after the people of Boston had risen, in April, and seized the Governor-General, Sir Edmund Andros, stripping his

authority from him and casting him into prison. (See MASSACHUSETTS: 1686-1689.) This spirited movement was followed a little later by like action in New York. Two parties had quickly taken form, "one composed of the adherents of James, the other of the friends of William and Mary. The former embraced the aristocratic citizens, including Nicholas Bayard, the commander of the city militia, the members of the council, and the municipal authorities. The friends of the new monarchs formed a large majority of the citizens. They maintained that the entire fabric of the imperial government, including that of the colonies, had been overthrown by the revolution, and that, as no person was invested with authority in the province, it reverted to the legitimate source of all authority—the people—who might delegate their powers to whomsoever they would. Among the principal supporters of this view was Jacob Leisler, a German by birth, a merchant, the senior captain of one of the five train-bands of the city commanded by Colonel Bayard, and one of the oldest and wealthiest inhabitants. . . . He was a zealous opponent of the Roman Catholics, and a man of great energy and determination. . . . Rumors of terrible things contemplated by the adherents of James spread over the town, and produced great excitement. The five companies of militia and a crowd of citizens gathered at the house of Leisler, and induced him to become their leader and guide in this emergency. Colonel Bayard attempted to disperse them, but he was compelled to fly for his life. A distinct line was now drawn between the 'aristocrats,' led by Bayard, Van Cortlandt, Robert Livingston, and others, and the 'democrats'—the majority of the people—who regarded Leisler as their leader and champion. At his suggestion a 'Committee of Safety' was formed, composed of ten members—Dutch, Huguenot, and English. They constituted Leisler 'Captain of the Fort,' and invested him with the powers of commander-in-chief—really chief magistrate—until orders should come from the new monarch. This was the first really republican ruler that ever attained to power in America. He took possession of Fort James and the public funds that were in it, and, in June, 1689, he proclaimed, with the sound of trumpets, William and Mary sovereigns of Great Britain and the colonies. Then he sent a letter to the king, giving him an account of what he had done." Lieutenant-Governor Nicholson made little attempt to assert his authority in the face of these demonstrations, but departed presently for England, "after formally giving authority to his councillors to preserve the peace during his absence, and until their Majesties' pleasure should be made known. . . . Nicholson's desertion of his post gave Leisler and the Republicans great advantages. He ordered the several counties of the province to elect their civil and military officers. Some counties obeyed, and others did not. The counter influence of Nicholson's councillors was continually and persistently felt, and Leisler and his party became greatly incensed against them, especially against Bayard, who was the chief instigator of the opposition to the 'usurper,' as he called the Republican leader. So hot became the indignation of Leisler and his friends that Bayard was compelled to fly for his life to Albany. The other councillors, alarmed, soon followed him. At Albany they acknowledged allegiance to William and Mary. They set up an independent government, and claimed to be the true and only rulers of the province. In this position they were sustained by the civil authorities at Albany." Leisler's son-in-law, Jacob Milborne, was sent with a force to take possession of their

seat of government, but failed to accomplish his mission. "Soon after this event a letter arrived at New York by a special messenger from the British Privy Council, directed to 'Francis Nicholson, Esq., or, in his absence, to such as, for the time being, take care for preserving the peace and administering the laws in His Majesty's province of New York.'" This letter was delivered by the messenger to Leisler. Bayard, who had come to the city in disguise, and attempted to secure the missive, was arrested and imprisoned. "From this time the opposition to Leisler's government assumed an organized shape, and was sleepless and relentless. Leisler justly regarding himself as invested with supreme power by the people and the spirit of the letter from the Privy Council, at once assumed the title of lieutenant-governor; appointed councillors; made a new provincial seal; established courts, and called an assembly to provide means for carrying on war with Canada. . . . Colonel Henry Slaughter was appointed Governor of New York, but did not arrive until the spring of 1691. Richard Ingoldsby, a captain of foot, arrived early in the year, with a company of regular soldiers, to take possession of and hold the government until the arrival of the governor. He was urged by Leisler's enemies to assume supreme power at once, as he was the highest royal officer in the province. He haughtily demanded of Leisler the surrender of the fort, without deigning to show the governor his credentials. Leisler, of course, refused, and ordered the troops to be quartered in the city. Ingoldsby attempted to take the fort by force, but failed. For several weeks the city was fearfully excited by rival factions—'Leislerians' and 'anti-Leislerians.' On the arrival of Governor Slaughter, in March (1691), Leisler at once loyally tendered to him the fort and the province. Under the influence of the enemies of Leisler, the royal governor responded to this meritorious action by ordering the arrest of the lieutenant-governor; also Milborne, and six other 'inferior insurgents,' . . . on a charge of high treason." The accused were tried, convicted and sentenced to be hanged; but all except Leisler and Milborne received pardon. These two appealed to the king; but the governor's councillors succeeded in suppressing the appeal. As Slaughter hesitated to sign the death-warrant, they intoxicated him at a dinner party and obtained his signature to the fatal document while his judgment was overcome. Before the drunken governor recovered his senses Jacob Leisler and Jacob Milborne had been hanged. "When the governor became sober, he was appalled at what he had done. He was so keenly stung by remorse and afflicted by delirium tremens that he died a few weeks afterward. Calm and impartial judgment, enlightened by truth, now assigns to Jacob Leisler the high position in history of a patriot and martyr."—B. J. Lossing, *Empire state*, ch. 8.—"The founder of the Democracy of New York was Jacob Leisler. . . . And Jacob Leisler was truly an honest man, who, though a martyr to the cause of liberty, and sacrificed by injustice, aristocracy, and party malignity, ought to be considered as one in whom New York should take pride—although the ancestors of many of her best men denounced him as a rebel and a traitor."—W. Dunlap, *History of the New Netherlands*, v. 1, ch. 12.

1720-1734.—Conflicts of royal governors with the people.—Zenger's trial.—Vindication of freedom of the press.—“In September 1720, William Burnet, the son of Bishop Burnet and godson of William III., entered upon the government of New York, burdened by instructions from England to keep alive the assembly which had been chosen several years before. This he did, to the great discontent of the people, until it had lasted more than eleven years. . . . But he was intelligent, and free from avarice. It was he who took possession of Oswego, and he left no stone unturned to defeat the French designs at Niagara.’ Nevertheless, for all his merit, in 1728, he was transferred to Massachusetts to make way for the groom of the chamber of George II. while he was prince of Wales. At the time when the ministry was warned that ‘the American assemblies aimed at nothing less than being independent of Great Britain as fast as they could,’ Newcastle sent as governor to New York and New Jersey the dull and ignorant John Montgomerie. Sluggish, yet humane, the pauper chief magistrate had no object in America but to get money; and he escaped contests with the legislature by giving way to them in all things. . . . He died in office in 1731. His successor, in 1732, was William Cosby, a brother-in-law of the earl of Halifax, and connected with Newcastle. A boisterous and irritable man, broken in his fortunes, having little understanding and no sense of decorum or of virtue, he had been sent over to clutch at gain. Few men did more to hasten colonial emancipation. . . . To gain very great perquisites, he followed the precedent of Andros in Massachusetts in the days of the Stuarts, and insisted on new surveys of lands and new grants, in lieu of the old. To the objection of acting against law, he answered: ‘Do you think I mind that? I have a great interest in England.’ The courts of law were not pliable; and Cosby displaced and appointed judges, without soliciting the consent of the council or waiting for the approbation of the sovereign. Complaint could be heard only through the press. A newspaper was established to defend the popular cause; and, in November, 1734, about a year after its establishment, its printer, John Peter Zenger, a German by birth, who had been an apprentice to the famous printer, William Bradford, and after-

ward his partner, was imprisoned, by an order of the council, on the charge of publishing false and seditious libels. The grand jury would find no bill against him, and the attorney-general filed an information. The counsel of Zenger took exceptions to the commissions of the judges, because they ran during pleasure, and because they had been granted without the consent of council. The angry judge met the objection by disbarring James Alexander who offered it, though he stood at the head of his profession in New York for sagacity, penetration, and application to business. All the central colonies regarded the controversy as their own. At the trial the publishing was confessed; but the aged and venerable Andrew Hamilton, who came from Philadelphia to plead for Zenger, justified the publication by asserting its truth. ‘You cannot be admitted,’ interrupted the chief justice, ‘to give the truth of a libel in evidence.’ ‘Then,’ said Hamilton to the jury, ‘we appeal to you for witnesses of the facts. The jury have a right to determine both the law and the fact, and they ought to do so.’ ‘The question before you,’ he added, ‘is not the cause of a poor printer, nor of New York alone; it is the cause of liberty.’ . . . The jury gave their verdict, ‘Not guilty.’ Hamilton received of the common council of New York the franchises of the city for ‘his learned and generous defence of the rights of mankind and the liberty of the press.’—G. Bancroft, *History of the United States*, v. 2, pt. 3, ch. 15.

1726.—Iroquois under protection of England.—“Governour Burnet . . . assembled the chiefs of the Iroquois at Albany [1726]; he reminded them of all the benefits they had received from England, and all the injuries that had been inflicted by France. He pointed out the evils that would flow to them from a French fort at Niagara, on their territory. The Indians declared their unwillingness to suffer this intrusion of the French, but said they now had not power to prevent it. They called upon the Governour of New York to write to the King of England for help to regain their country from the French of Canada. Burnet seized this opportunity to gain a surrender of their country to England, to be protected for their use. Such a surrender would be used by Europeans for their own purposes; but (in the sense they viewed and represented it), was altogether incomprehensible by the Indian chiefs; and the deputies had no power from the Iroquois confederacy to make any such surrender. . . . By the treaty of Utrecht . . . France had acknowledged the Iroquois and their territory to be subject to Great Britain.”—W. Dunlap, *History of New York*, v. 1, p. 280.

1773-1774.—Revolutionary spirit.—Vigilance Committee.—Sons of Liberty.—Committee of Fifty-One.—“In 1773 the tax on tea was imposed. On October 25th the Mohawks of New York, a band of the Sons of Liberty, were ordered by their old leaders to be on the watch for the tea ships; and it was merely the chances of time and tide that gave the opportunity of fame first to the Mohawks of Boston. . . . An ‘association’ was now circulated for signatures, engaging to boycott, ‘not deal with, or employ, or have any connection with’ any persons who should aid in landing, or ‘selling, or buying tea, so long as it is subject to a duty by Parliament’; and December 17th a meeting of the subscribers was held and a committee of fifteen chosen as a Committee of Correspondence that was soon known as the Vigilance Committee. Letters also were exchanged between the speakers of many of the houses of assembly in the different provinces; and January 20, 1774, the New York Assembly, which had been out of touch with the people ever since the Stamp Act was passed in the year after its election, appointed their Speaker, with twelve others, a standing Committee of Correspondence and Enquiry, a proof that the interest of all classes was now excited. April 15th, the ‘Nancy’ with a cargo of tea arrived off Sandy Hook, followed shortly by the ‘London.’ The Committee of Vigilance assembled, and, as soon as Captain Lockyer, of the ‘Nancy’ landed in spite of their warning, escorted him to a pilot boat and set him on board again. . . . April 23d, the ‘Nancy’ stood out to sea without landing her cargo, and with her carried Captain Chambers of the ‘London,’ from which the evening before eighteen chests of tea had been emptied into the sea by the Liberty Boys. The bill closing the port of Boston was enacted March 31st, and a copy of the act reached New York by the ship Samson on the 12th. Two days later the Committee of Vigilance wrote to the Boston Committee recommending vigorous measures as the most effectual, and assuring them that their course would be heartily supported by their brethren in New York. So rapid had been the march of events that not till now did the merchants and responsible citizens of New York take alarm. Without their concurrence or even knowledge they were being rapidly compromised by the unauthorized action of an irresponsible committee, composed of men

who for the most part were noted more for enthusiasm than for judgment, and many of whom had been not unconcerned in petty riots and demonstrations condemned by the better part of the community. . . . ‘The men who at that time called themselves the Committee,’ wrote Lieutenant Governor Colden the next month, ‘who dictated and acted in the name of the people, were many of them of the lower ranks, and all the warmest zealots of those called the Sons of Liberty. The more considerable merchants and citizens seldom or never appeared among them. . . . The principal inhabitants, being now afraid that these hot-headed men might run the city into dangerous measures, appeared in a considerable body at the first meeting of the people after the Boston Port Act was published here.’ This meeting, convoked by advertisement, was held May 16th, at the house of Samuel Francis, ‘to consult on the measures proper to be pursued.’ . . . A committee of fifty, Jay among them, instead of one of twenty-five, as at first suggested, was nominated ‘for the approbation of the public,’ ‘to correspond with our sister colonies on all matters of moment.’ Three days later these nominations were confirmed by a public meeting held at the Coffee House, but not until a fifty-first member was added, Francis Lewis, as a representative of the radical party which had been as much as possible ignored. . . . At the Coffee House again, on May 23d, the Committee of Fifty-one met and organized; they repudiated the letter to Boston from the Committee of Vigilance as unofficial, and prepared a response to another communication just received from Boston, by the famous messenger, Paul Revere. In this reply it was “urged that ‘a Congress of Deputies from the Colonies in General is of the utmost moment,’ to form ‘some unanimous resolutions . . . not only respecting your [Boston’s] deplorable circumstances, but for the security of our common rights;’ and that the advisability of a non-importation agreement should be left to the Congress. . . . The importance of this letter can hardly be exaggerated, for it was the first serious authoritative suggestion of a General Congress to consider ‘the common rights’ of the colonies in general. . . . The advice of New York was followed gradually by the other colonies, but even before a Continental Congress was a certainty, the Committee of Fifty-one, with singular confidence, resolved that delegates to it should be chosen, and called a meeting for that purpose for July 19th. . . . Philip Livingston, John Alsop, James Duane, and John Jay were nominated as delegates to be submitted to the public meeting, July 19th. The people met accordingly at the Coffee House, and after a stormy debate elected the committee’s candidate in spite of strong effort to substitute for Jay, McDougall, the hero of the Liberty Boys.” This election, however, was not thought to be an adequate expression of the popular will, and polls were subsequently opened in each ward, on the 28th of July. The result was a unanimous vote for Jay and his colleagues. “Thus, fortunately, at the very inception of the Revolution, before the faintest clatter of arms, the popular movement was placed in charge of the ‘Patricians,’ as they were called, rather than of the ‘Tribunes,’ as respectively represented by Jay and McDougall.”—G. Pellew, *John Jay, ch. 2*.—“The New York Committee of Fifty-one, having accomplished its object, appointed a day for the choice, by the freeholders of the city, of a ‘Committee of Observation,’ numbering sixty, to enforce in New York the Non-Importation Act of the late Congress; and when this new committee was duly elected and organized, with Isaac Low as chairman, the Fifty-One was

dissolved."—Mrs. M. J. Lamb, *History of the City of New York*, v. 1, p. 768.

1774.—First Continental Congress. See U. S. A.: 1774 (September); (September-October).

1775.—Conflicting interests of governor and patriots.—Action of Liberty Boys.—Committee of Sixty.—First Provincial Convention.—“The republicans of the province of New York, composing by far the greater portion of the inhabitants, labored under severe disabilities. Acting Governor Colden was a Loyalist, and his council held office by the King’s will. The assembly, though chosen by the people, continued in existence only by the King’s prerogative. They might be dissolved by the representative of the crown (the acting governor) at any moment. There was no legally constituted body to form a rallying point for the patriots, as in Massachusetts, where there was an elective council and an annually elected assembly. In all the other colonies there was some nucleus of power around which the people might assemble and claim to be heard with respect. But in New York they were thrown back upon their own resources, and nobly did they preserve their integrity and maintain their cause, in spite of every obstacle. The whole continent was now moving in the direction of rebellion. . . . The excitement in New York was equally intense. Toward the close of the preceding December, the Liberty Boys were called to action by the seizure of arms and ammunition, which some of them had imported, and had consigned to Walter Franklin, a well known merchant. These were seized by order of the collector, because, as he alleged, of the want of cockets, or custom-house warrants, they having been in store several days without them. While they were on their way to the custom-house, some of the Sons of Liberty rallied and seized them, but before they could be concealed they were retaken by government officials and sent on board a man-of-war in the harbor. . . . The republicans failed in their efforts, in the New York Assembly, to procure the appointment of delegates to the second Continental Congress, to be convened at Philadelphia in May. Nothing was left for them to do but to appeal to the people. The General Committee of sixty members, many of them of the loyal majority in the assembly, yielding to the pressure of popular sentiment, called a meeting of the freeholders and freemen of the city at the Exchange, to take into consideration the election of delegates to a convention of representatives from such of the counties of the province as should adopt the measure, the sole object of such convention being the choice of proper persons to represent the colony in the Continental Congress. This movement was opposed by the loyalists. . . . At first there was confusion. This soon subsided, and the meeting proceeded with calmness and dignity to nominate eleven persons to represent the city in a provincial convention to be held in New York on the 20th [April], who were to be instructed to choose delegates to the Continental Congress. On the following day the chairman of the Committee of Sixty gave notice of the proposed convention on the 20th to the chairmen of the committees of correspondence in the different counties, advising them to choose delegates to the same. There was a prompt response. . . . The convention assembled at the Exchange, in New York, on the 20th, and consisted of 42 members [representing seven counties outside of New York city]. Colonel Schuyler was at the head of the delegation from

Albany, and took a leading part in the convention. Philip Livingston was chosen president of the convention, and John M’Kesson, secretary. This was the first provincial convention in New York—the first positive expression of the doctrine of popular sovereignty in that province. They remained in session three days, and chose for delegates to the Continental Congress Philip Livingston, James Duane, John Alsop, John Jay, Simon Boerum, William Floyd, Henry Wisner, Philip Schuyler, George Clinton, Lewis Morris, Francis Lewis, and Robert R. Livingston, to whom were given full power, ‘or any five of them, to meet the delegates from other colonies, and to concert and determine upon such measures as shall be judged most effectual for the preservation and reestablishment of American rights and privileges, and for the restoration of harmony between Great Britain and her colonies.’ While this convention was in session intelligence of the bloodshed at Lexington was on its way, but it did not reach New York until the day after the adjournment.”—B. J. Lossing, *Life and times of Philip Schuyler*, v. 1, ch. 17-18.

1775 (April-September).—Sons of Liberty control of the City of New York.—End of royal government.—Flight of Governor Tryon.—“On Sunday the 24th of April, 1775, the news of the battle of Lexington reached the city. [New York City.] This was the signal for open hostilities. Business was at once suspended; the Sons of Liberty assembled in large numbers, and, taking possession of the City Hall, distributed the arms that were stored in it, together with a quantity which had been deposited in the arsenal for safe keeping, among the citizens, a party of whom formed themselves into a voluntary corps under the command of Samuel Broome, and assumed the temporary government of the city. This done, they demanded and obtained the keys of the custom house, closed the building and laid an embargo upon the vessels in port destined for the eastern colonies. . . . It now became necessary to organize some provisional government for the city, and for this purpose, on the 5th of May, a meeting of the citizens was called at the Coffee-House, at which a Committee of One Hundred was chosen and invested with the charge of municipal affairs, the people pledging themselves to obey its orders until different arrangements should be made by the Continental Congress. This committee was composed in part of men inclined to the royalist cause, yet, such was the popular excitement at the time, that they were carried away by the current and forced to acquiesce in the measures of their more zealous colleagues. . . . The committee at once assumed the command of the city, and, retaining the corps of Broome as their executive power, prohibited the sale of weapons to any persons suspected of being hostile to the patriotic party. . . . The moderate men of the committee succeeded in prevailing on their colleagues to present a placable address to Lieutenant-Governor Colden, explanatory of their appointment, and assuring him that they should use every effort to preserve the public peace; yet ominous precautions were taken to put the arms of the city in a serviceable condition, and to survey the neighboring grounds with a view to erecting fortifications. . . . On the 25th of June, Washington entered New York on his way from Mount Vernon to Cambridge to take command of the army assembled there. The Provincial Congress received him with a cautious address. Despite their patriotism, they still clung to the shadow of loyalty; fearing to go too far, they acted constantly under protest that they desired nothing more than to secure to themselves the rights of

true-born British subjects. The next morning Washington quitted the city, escorted on his way by the provincial militia. Tryon [Governor Tryon, who had been absent in England since the spring of 1774, leaving the government in the hands of Lieutenant-Governor Colden, and who now returned to resume it] had entered it the night before, and thus had been brought almost face to face with the rebel who was destined to work such a transformation in his majesty's colonies of America. The mayor and corporation received the returning governor with expressions of joy, and even the patriot party were glad of the change which relieved them from the government of Colden. . . . Meanwhile, the colony of New York had been ordered by the Continental Congress to contribute her quota of 3,000 men to the general defence, and four regiments were accordingly raised. . . . The city now presented a curious spectacle, as the seat of two governments, each issuing its own edicts, and denouncing those of the other as illegal authority. It was not long before the two powers came into collision." This was brought about by an order from the Provincial Congress, directing the removal of guns from the Battery. Shots were exchanged between the party executing this order and a boat from the ship of war "Asia"; whereupon the "Asia" cannonaded the town, riddling houses and wounding three citizens. "Hitherto, the governor had remained firm at his post; but finding his position daily growing more perilous, despite the pledges of the corporation for his personal safety, he determined to abandon the city, and took refuge on board the 'Asia.'"—M. L. Booth, *History of the City of New York*, ch. 16.

1777.—Adoption of constitution and organization of state government.—Religious freedom established.—"After the Declaration of Independence, the several colonies proceeded to form State governments, by adopting constitutions. In that business New York moved early. On the 1st of August, 1776, a committee of the 'Convention of the Representatives of New York,' as the provisional government was called, sitting at White Plains, in Westchester County, were appointed to draw up and report a constitution. The committee consisted of the following named gentlemen: John Jay, John Sloss Hobart, William Smith, William Duer, Gouverneur Morris, Robert R. Livingston, John Broome, John Morin Scott, Abraham Yates, Jr., Henry Wisner, Sen., Samuel Townsend, Charles De Witt and Robert Yates. John Jay was the

chairman, and to him was assigned the duty of drafting the Constitution. The Convention was made migratory by the stirring events of the war during the ensuing autumn and winter. First they held their sessions at Harlem Heights; then at White Plains; afterward at Fishkill, in Dutchess County, and finally at Kingston, in Ulster County, where they continued from February till May, 1777. There undisturbed the committee on the Constitution pursued their labors, and on the 12th of March, 1777, reported a draft of that instrument. It was under consideration in the Convention for more than a month after that, and was finally adopted on the 20th of April. Under it a State government was established by an ordinance of the Convention, passed in May, and the first session of the Legislature was appointed to meet at Kingston in July." The election of state officers was held in June. Jay and others issued a circular recommending General Schuyler for governor and General George Clinton for lieutenant-governor. But Schuyler "declined the honor, because he considered the situation of affairs in his Department too critical to be neglected by dividing his duties. The elections were held in all the Counties excepting New York, Kings, Queens, and Suffolk, then occupied by the British, and Brigadier General George Clinton was elected Governor, which office he held, by successive elections, for eighteen years, and afterward for three years. Pierre Van Courtlandt, the President of the Senate, became Lieutenant Governor, Robert R. Livingston was appointed Chancellor; John Jay Chief Justice; Robert Yates and John Sloss Hobart judges of the Supreme Court, and Egbert Benson attorney-general. So it was that the great State of New York was organized and put into operation at a time when it was disturbed by formidable invasions on its northern, southern, and western frontiers."—B. J. Lossing, *Life and times of Philip Schuyler*, v. 2, ch. 9.—The framers of this first constitution of the State of New York "proceeded at the outset to do away with the established church, repealing all such parts of the common law and all such statutes of the province 'as may be construed to establish or maintain any particular denomination of Christians or their ministers.' Then followed a section . . . which, it is believed, entitles New York to the honor of being the first organized government of the world to assert by constitutional provision the principle of perfect religious freedom."—D. 1786-1799.—Land-fee of Western New York ceded to Massachusetts.—Phelps and Gorham Purchase.—Holland Purchase.—Founding of Buffalo.—The conflicting territorial claims of New York and Massachusetts, caused by the overlapping grants of the English crown, were not all settled by the cession of western claims to the United States which New York made in 1781 and Massachusetts in 1785 (see U.S.A.: 1781-1786). "Although the nominal amount in controversy, by these acts, was much diminished, it still left some 19,000 square miles of territory in dispute, but this controversy was finally settled by a convention of Commissioners appointed by the parties, held at Hartford, Conn., on the 16th day of December, 1786. According to the stipulations entered into by the convention, Massachusetts ceded to the state of New York all her claim to the government, sovereignty, and jurisdiction of all the territory lying west of the present east line of the state of New York; and New York ceded to Massachusetts the pre-emption right or fee of the land subject to the title of the natives, of all that part of the state of New York lying west of a line beginning at a point in the north line of Pennsylvania, 82 miles west of the north-east corner of said state, and running from thence due north through Seneca lake to lake Ontario; excepting and reserving to the state of New York a strip of land east of and adjoining the eastern bank of Niagara river, one mile wide and extending its whole length. The land, the pre-emption right of which was thus ceded, amounted to about 6,000,000 of acres. In April, 1788, Massachusetts contracted to sell to Nathaniel Gorham of Charlestown, Middlesex county, and Oliver Phelps of Granville, Hampshire county, of said state, their pre-emption right to all the lands in Western New York, amounting to about 6,000,000 acres, for the sum of \$1,000,000, to be paid in three annual instalments, for which a kind of scrip Massachusetts had issued, called consolidated securities, was to be received, which was then in market much below par. In July, 1788, Messrs. Gorham and Phelps purchased of the Indians by treaty, at a convention held at Buffalo, the Indian title to about 2,000,000 acres of the eastern part of their purchase from Massachusetts. This purchase of the Indians being bounded west by a line beginning at a point in the north line of the state of Pennsylvania, due south of the corner or point of land made by the confluence of the Kanahasgaicon (Cannaseraga) creek with the waters of Genesee river; thence north on said meridian line to the corner or point at the confluence of aforesaid; thence northwardly along the

waters of said Genesee river to a point two miles north of Kanawageras (Cannewagus) village; thence running due west 12 miles; thence running northwardly, so as to be 12 miles distant from the westward bounds of said river, to the shore of lake Ontario. On the 21st day of November, 1788, the state of Massachusetts conveyed and forever quit-claimed to N. Gorham and O. Phelps, their heirs and assigns forever, all the right and title of said state to all that tract of country of which Messrs. Phelps and Gorham had extinguished the Indian title. This tract, and this only, has since been designated as the Phelps and Gorham Purchase. . . . So rapid were the sales of the proprietors that before the 18th day of November, 1790, they had disposed of about 50 townships [each six miles square], which were mostly sold by whole townships or large portions of townships, to sundry individuals and companies of farmers and others, formed for that purpose. On the 18th day of November, 1790, they sold the residue of their tract (reserving two townships only), amounting to upwards of a million and a quarter acres of land, to Robert Morris of Philadelphia, who soon sold the same to Sir William Pultney, an English gentleman. . . . This property, or such part of it as was unsold at the time of the decease of Sir William, together with other property which he purchased in his lifetime in its vicinity, is now [1849] called the Pultney Estate. . . . Messrs. Phelps and Gorham, who had paid about one third of the purchase money of the whole tract purchased of Massachusetts, in consequence of the rise of the value of Massachusetts consolidated stock (in which the payments for the land were to be received) from 20 per cent. to par, were unable further to comply with their engagements." After long negotiations they were permitted to relinquish to the state of Massachusetts all that western section of their purchase of which they had not acquired the Indian title, and this was resold in March, 1791, by Massachusetts, to Samuel Ogden, acting for Robert Morris. Morris made several sales from the eastern portion of his purchase, to the state of Connecticut (investing its school fund) and to others, in large blocks known subsequently as the Ogden Tract, the Cragie Tract, the Connecticut Tract, etc. The remainder or most of it, covering the greater part of western New York, was disposed of to certain gentlemen in Holland, and came to be generally known as the Holland Purchase.—O. Turner, *Pioneer history of the Holland Purchase*, pp. 325, 300-424.—"Much has been written and more has been said about the 'Holland Company.' When people wished to be especially precise, they called it the 'Holland Land Company.' . . . Yet there never was any such thing as the Holland Company or the Holland Land Company. Certain merchants and others of the city of Amsterdam placed funds in the hands of friends who were citizens of America to purchase several tracts of land in the United States, which, being aliens, the Hollanders could not hold in their own name at that time. One of these tracts, comprising what was afterwards known as the Holland Purchase, was bought from Robert Morris. . . . In the forepart of 1708 the legislature of New York authorized those aliens to hold land within the State, and in the latter part of that year the American trustees conveyed the Holland Purchase to the real owners. [The great territory covered by the Purchase surrounded several Indian "Reservations," large blocks of land, that is, which the aboriginal Seneca proprietors reserved for their own occupancy when they parted with their title to the rest, which they did at a council held in 1707. One of these Reservations

embraced the site now occupied by the City of Buffalo. Joseph Ellicott, the agent of the Holland proprietors, quickly discerned its prospective importance, and made an arrangement with his Indian neighbors by which he secured possession of the ground at the foot of Lake Erie and the head of Niagara river, in exchange for another piece of land six miles away. Here, in 1799, Ellicott began the founding of a town which he called New Amsterdam, but which subsequently took the name of the small stream, Buffalo Creek, on which it grew up, and which, by deepening and enlargement, became its harbor.]—C. Johnson, *Centennial history of Erie county, New York*, ch. 13.

1799.—Gradual emancipation of slaves enacted.—During the session of the legislature in April, 1799, "emancipation was at last enacted. It was provided that all children born of slave parents after the ensuing 4th of July should be free, subject to apprenticeship, in the case of males till the age of 28, in the case of females till the age of 25, and the exportation of slaves was forbidden. By this process of gradual emancipation there was avoided that question of compensation which had been the secret of the failure of earlier bills. At that time the number of slaves was only 22,000, small in proportion to the total population of nearly a million. So the change was effected peacefully and without excitement."—G. Pellet, *John Jay*, p. 328.—See also U.S.A.: 1860: Slavery concentrated, etc.

1817-1819.—Clintonians and Bucktails.—During the first term of De Witt Clinton as governor of the State, the feud in the Democratic Republican party, between his supporters and his opponents, which began in 1812 when he audaciously sought to attain the Presidency, against Madison, assumed a fixed and definite form. "Clinton's Republican adversaries were dubbed 'Bucktails,' from the ornaments worn on ceremonial occasions by the Tam-

many men, who had long been Clinton's enemies. The Bucktails and their successors were the 'regular' Republicans, or the Democrats as they were later called; and they kept their regularity until, long afterwards, the younger and greater Bucktail leader [Martin Van Buren], when venerable and laden with honors, became the titular head of the Barnburner defection. The merits of the feud between Bucktails and Clintonians it is now difficult to find. Each accused the other of coquetting with the Federalists; and the accusation of one of them was nearly always true."—E. M. Shepard, *Martin Van Buren*, p. 56.

1817-1825.—Construction of Erie canal.—"History will assign to Gouverneur Morris the merit of first suggesting a direct and continuous communication from Lake Erie to the Hudson. In 1800, he announced this idea from the shore of the Niagara river to a friend in Europe. . . . The praise awarded to Gouverneur Morris must be qualified by the fact, that the scheme he conceived was that of a canal with a uniform declination, and without locks, from Lake Erie to the Hudson. Morris communicated his project to Simeon De Witt in 1803, by whom it was made known to James Geddes in 1804. It afterward became the subject of conversation between Mr. Geddes and Jesse Hawley, and this communication is supposed to have given rise to the series of essays written by Mr. Hawley, under the signature of 'Hercules,' in the 'Genesee Messenger,' continued from October, 1807, until March, 1808, which first brought the public mind into familiarity with the subject. These essays, written in a jail, were the grateful return, by a patriot, to a country which punished him with imprisonment for being unable to pay debts owed to another citizen, and displayed deep research, with singular vigor and comprehensiveness of thought, and traced with prophetic accuracy a large portion of the outline of the Erie canal. In 1807, Albert Gallatin, then secretary of the treasury, in pursuance of a recommendation made by Thomas Jefferson, president of the United States, reported a plan for appropriating all the surplus revenues of the general government to the construction of canals and turnpike roads; and it embraced in one grand and comprehensive view, nearly without exception, all the works which have since been executed or attempted by the several states in the Union. . . . In 1808, Joshua Forman, a representative in the assembly from Onondaga county, submitted his memorable resolution," referring to the recommendation made by President Jefferson to the Federal Congress, and directing that "a joint committee be appointed to take into consideration the propriety of exploring and causing an accurate survey to be made of the most eligible and direct route for a canal, to open a communication between the tide waters of the Hudson river and Lake Erie, to the end that Congress may be enabled to appropriate such sums as may be necessary to the accomplishment of that great national object." The committee was appointed, its report was favorable, and the survey was directed to be made. "There was then no civil engineer in the state. James Geddes, a land surveyor, who afterward became one of our most distinguished engineers, by force of native genius and application in mature years, levelled and surveyed, under instructions from the surveyor-general," several routes to Lake Ontario and to Lake Erie. "Mr. Geddes' re-

port showed that a canal from Lake Erie to the Hudson was practicable, and could be made without serious difficulty. In 1810, on motion of Jonas Platt, of the senate, who was distinguished throughout a pure and well-spent life by his zealous efforts to promote this great undertaking, Gouverneur Morris, De Witt Clinton, Stephen Van Rensselaer, Simeon De Witt, William North, Thomas Eddy, and Peter B. Porter, were appointed commissioners 'to explore the whole route for inland navigation from the Hudson river to Lake Ontario and to Lake Erie.' Cadwallader D. Colden, a contemporary historian, himself one of the earliest and ablest advocates of the canals, awards to Thomas Eddy the merit of having suggested this motion to Mr. Platt, and to both these gentlemen that of engaging De Witt Clinton's support, he being at that time a member of the senate. . . . The commissioners in March, 1811, submitted their report written by Gouverneur Morris, in which they showed the practicability and advantages of a continuous canal from Lake Erie to the Hudson, and stated their estimate of the cost at \$5,000,000. . . . On the presentation of this report, De Witt Clinton introduced a bill, which became a law on the 8th of April, 1811, under the title of 'An act to provide for the improvement of the internal navigation of this state.' . . . The act added Robert R. Livingston and Robert Fulton to the board of commissioners, and authorized them to consider all matters relating to such inland navigation, with powers to make application in behalf of the state to Congress, or to any state or territory, to co-operate and aid in the undertaking. . . . Two of the commissioners, Mr. Morris and Mr. Clinton, repaired to the federal capital, and submitted the subject to the consideration of the President (Mr. Madison) and of Congress. In 1812, the commissioners reported that, although it was uncertain whether the national government would do anything, it certainly would do nothing which would afford immediate aid to the enterprise. . . . The commissioners then submitted that, having offered the canal to the national government, and that offer having virtually been declined, the state was now at liberty to consult and pursue the maxims of policy, and these seemed to demand imperatively that the canal should be made by herself, and for her own account, as soon as the circumstances would permit. . . . On the 10th of June, 1812, a law was enacted, reappointing the commissioners and authorizing them to borrow money and deposit it in the treasury, and to take cessions of land, but prohibiting any measures to construct the canals. . . . From 1812 to 1815, the country suffered the calamities of war, and projects of internal improvement necessarily gave place to the patriotic efforts required to maintain the national security and honor." But after peace had returned, the advocates of the enterprise prevailed with considerable difficulty over its opponents, and "ground was broken for the construction of the Erie canal on the 4th day of July, 1817, at Rome, with ceremonies marking the public estimation of that great event. De Witt Clinton, having just before been elected to the chief magistracy of the state, and being president of the board of canal commissioners, enjoyed the high satisfaction of attending, with his associates, on the auspicious occasion. . . . On the 26th of October, 1825, the Erie canal was in a navigable condition throughout its entire length, affording an uninterrupted passage from Lake Erie to tidewater in the Hudson. . . . This auspicious consummation was celebrated by a telegraphic discharge of cannon, commencing at Lake Erie [at Buffalo], and continued along the banks of the canal and of the

Hudson, announcing to the city of New York the entrance on the bosom of the canal of the first barge [bearing Governor Clinton and his coadjutors] that was to arrive at the commercial emporium from the American Mediterranean."—W. H. Seward, *Notes on New York* (*Works*, v. 2), pp. 88-117.—See also CANALS: American: Erie canal; BARGE CANAL; also below: 1809-1909.

1821.—Revision of constitution.—"The Constitution did not meet the expectations of its framers. The cumbersome machinery by which it was sought to insure the control of the People, through the supremacy of the Assembly, had only resulted in fortifying power practically beyond their reach.

DEWITT CLINTON

The Council of Revision was objected to because it had exercised the veto power contrary to the spirit of the Constitution, which was in harmony with the traditions of the Colony from the earliest conflict with the executive power; and because the officers who thus interposed their objections to the will of the Legislature, holding office for good behavior (except the Governor), were beyond the reach of the People. It was seen that this power was a dangerous one, in a Council so constituted; but it was thought that it could be safely intrusted to the Governor alone, as he was directly responsible to the People. The Council of Appointment, although not vested with any judicial authority, and in fact disclaiming it, nevertheless at an early day summoned its appointees before it, for the purpose of hearing accusations against them, and proving their truth or falsity. At a later day, more summary proceedings were resorted to. The office thus became very unpopular. Nearly every civil, military, and judicial officer of the commonwealth was appointed by this Council. In 1821, 8,287 military and 6,663 civil officers held their com-

missions from it, and this vast system of centralized power was naturally very obnoxious. The Legislature, in 1820, passed 'an act recommending a Convention of the People of this State,' which came up for action in the Council of Revision, on November 20th of the same year; present, Governor Clinton, Chancellor Kent, Chief Justice Spencer, and Justices Yates and Woodworth, on which day the Council, by the casting vote of the Governor, adopted two objections to it; first, because it did not provide for taking the sense of the People on the question; and second, because it submitted the new Constitution to the People in toto, instead of by sections. These objections were referred to a select committee, Michael Ulshoeffer, chairman, who submitted their report January 9, 1821, in opposition to the opinion of the Council, which was adopted by the Assembly. The bill, however, failed to pass, not receiving a two-third vote. Immediately thereupon a committee was appointed to draft a new bill. The committee subsequently introduced a bill for submitting the question to the people, which passed both Houses; received the sanction of the Council of Revision on the 13th of March, and was subsequently amended, the amendments receiving the sanction of the Council on the 3rd of April. The popular vote on holding the Convention was had in April [see INITIATIVE AND REFERENDUM: Development in the United States], and resulted as follows: 'For Convention' 109,346. 'For No Convention' 34,901. The Convention assembled in Albany, August 28, and adjourned November 10, 1821. The Council of Revision was abolished, and its powers transferred to the Governor. The Council of Appointment was abolished without a dissenting voice. The principal department officers were directed to be appointed on an open separate nomination by the two Houses, and subsequent joint ballot. Of the remaining officers not made elective, the power of appointment was conferred upon the Governor, by and with the advice and consent of the Senate. In 1846, two hundred and eighty-nine offices were thus filled. The elective franchise was extended. The Constitution was adopted at an election held in February, 1822, by the following vote: Constitution—For, 74,732; Against, 41,402. . . . The People took to themselves a large portion of the power they had felt it necessary, in the exercise of a natural conservatism, to intrust to the Assembly. They had learned that an elective Governor and an elective Senate are equally their agents, and interests which they thought ought to be conserved, they intrusted to them, subject to their responsibility to the People. The entire Senate were substituted in the place of the members who chanced to be the favorites with a majority in the Assembly, as a Council to the Governor, and thus the People of all the State were given a voice in appointments. The Supreme Judicial Tribunal remained the same. The direct sovereignty of the People was thus rendered far more effective, and popular government took the place of parliamentary administration."—E. A. Werner, *Civil list and constitutional history of New York, 1887*, pp. 126-128.—De A. S. Alexander, *Political history of the State of New York, v. 1, ch. 27*.—C. Z. Lincoln, *Constitutional history of New York, v. 1, ch. 4*.

1823.—Rise of Albany regency.—"The adoption of the new constitution in 1822 placed the political power of the State in the hands of Mr. Van Buren, the recognized representative leader of the Democratic party. Governor Clinton, as the end of his term of service approached, became as powerless as he was in 1816. . . . William L. Marcy was then State Comptroller, Samuel L. Talcott,

Attorney-General; Benjamin Knower, Treasurer; and Edwin Crosswell, editor of the 'Argus' and state printer. These gentlemen, with Mr. Van Buren as their chief, constituted the nucleus of what became the Albany Regency. After adding Silas Wright, Azariah C. Flagg, John A. Dix, James Porter, Thomas W. Olcott, and Charles E. Dudley to their number, I do not believe that a stronger political combination ever existed at any state capital. . . . Their influence and power for nearly twenty years was almost as potential in national as in state politics."—T. Weed, *Autobiography, v. 1, ch. 11*.—"Even to our own day, the Albany Regency has been a strong and generally a sagacious influence in its party. John A. Dix, Horatio Seymour, Dean Richmond and Samuel J. Tilden long directed its policy, and from the chief seat in its councils the late secretary of the treasury, Daniel Manning, was chosen in 1885."—E. M. Shepard, *Martin Van Buren, p. 96*.

Also in: T. W. Barnes, *Life of Thurlow Weed, v. 2, p. 36*.—De A. S. Alexander, *Political history of the State of New York, v. 1, ch. 26*.

1826-1832.—Anti-Masonic excitement.—**Abduction of Morgan.**—"The society of free-masons included a large number of the foremost citizens in all walks of life, and the belief existed that they used their secret ties to advance their ambitions. . . . This belief was used to create prejudice among those who were not members, and it added fuel to the fires of faction. At this juncture, September 11, 1826, William Morgan, of Batavia, a free-mason, who had announced his intention to print a pamphlet exposing the secrets of masonry, was arrested on a charge of larceny, made by the master of a masonic lodge, but found not guilty, and then arrested for debt, and imprisoned in jail at Canandaigua. He was taken secretly from that jail and conveyed to Fort Niagara, where he was kept until September, when he disappeared. The masons were charged with his abduction, and a body found in the Niagara River was produced as proof that he was drowned to put him out of the way. Thurlow Weed, then an editor in Rochester, was aggressive in charging that Morgan was murdered by the masons, and as late as 1882 he published an affidavit rehearsing a confession made to him by John Whitney, that the drowning was in fact perpetrated by himself and four other persons whom he named, after a conference in a masonic lodge. In 1827, Weed, who was active in identifying the drowned body, was charged with mutilating it, to make it resemble Morgan, and the imputation was often repeated; and the abduction and murder were in turn laid at the door of the anti-masons. The disappearance became the chief topic of partisan discussion. De Witt Clinton was one of the highest officers in the masonic order, and it was alleged that he commanded that Morgan's book should be 'suppressed at all hazards,' thus instigating the murder; but the slander was soon exposed. The state was flooded with volumes portraying masonry as a monstrous conspiracy, and the literature of the period was as harrowing as a series of sensational novels."—E. H. Roberts, *New York, v. 2, ch. 33*.—"A party soon grew up in Western New York pledged to oppose the election of any Free Mason to public office. The Anti-Masonic Party acquired influence in other States, and began to claim rank as a national political party. On most points its principles were those of the National Republicans. But Clay, as well as Jackson, was a Free Mason, and consequently to be opposed by this party. . . . In 1832 it even nominated a Presidential ticket of its own, but, having no national principle of controlling impor-

tance, it soon after declined."—A. Johnston, *History of American politics*, ch. 12, sect. 3, with footnote.—See also MASONIC SOCIETIES: United States: Abduction of William Morgan.

ALSO IN: T. Weed, *Autobiography*, ch. 20-30, 36, and 40.

1827.—Abolition of negro slavery.—"On the 28th of January, 1817, the governor sent a message to the legislature recommending the entire abolition of slavery in the State of New York, to take place on the fourth day of July, 1827. By an act passed some years before, all persons born of parents who were slaves after July, 1790, were to be free; males at twenty-eight and females at twenty-five years of age. The present legislature adopted the recommendation of the governor. This great measure in behalf of human rights, which was to obliterate forever the black and foul stain of slavery from the escutcheon of our own favored state, was produced by the energetic action of Cadwallader D. Colden, Peter A. Jay, William Jay, Daniel D. Tompkins and other distinguished philanthropists, chiefly residing in the city of New York. The Society of Friends, who never slumber when the principles of benevolence and a just regard to equal rights call for their action, were zealously engaged in this great enterprise."—J. D. Hammond, *History of political parties in the State of New York*, v. 1, ch. 22.—See also U.S.A.: 1860: Slavery concentrated, etc.

1835-1837.—Loco-Focos.—"The Van Buren party began to be called the Loco-focos, in derision of the fancied extravagance of their financial doctrines. The Loco-foco or Equal Rights party proper was originally a division of the Democrats, strongly anti-monopolist in their opinions, and especially hostile to banks. . . . The hatred which Van Buren after his message of September, 1837, received from the banks commended him to the Loco-focos; and in October, 1837, Tammany Hall witnessed their reconciliation with the regular Democrats upon a moderate declaration for equal rights."—E. M. Shepard, *Martin Van Buren*, pp. 293-295.—See also Loco-focos.

1846.—Revision of constitution.—During the twenty-five years of the existence of the constitution of 1821, "ten different proposals for amendments were submitted to the electors, who decided against choosing presidential electors by districts, but in favor of extending the franchise, in favor of electing mayors by the people, and in 1846 for no license except in the city of New York. The commonwealth grew not only in population, but in all the elements of progress and prosperity and power, and by the census of 1845 was shown to contain 2,604,495 inhabitants. Legislation had tended to the substitution of rights for privileges granted as favors. The tenure of land, especially under the claims of the patroons, had caused difficulties for which remedies were sought; and the large expenditures for internal improvements, involving heavy indebtedness, prompted demands for safe-guards for

the creditor and the taxpayer. The judiciary system had confessedly become independent, and required radical reformation. When, therefore, in 1845, the electors were called upon to decide whether a convention should be held to amend the State constitution, 213,257 voted in the affirmative, against 33,860 in the negative. The convention met June 1, 1846, but soon adjourned until October 9, when it proceeded with its task. John Tracy of Chenango presided; and among the members were Ira Harris of Albany, George W. Patterson of Chautauqua, Michael Hoffman and Arphaxed Loomis of Herkimer, Samuel J. Tilden of New York, Samuel Nelson of Olsego, and others eminent at home and in State affairs. The convention dealt radically with the principles of government. The new constitution gave to the people the election of many officers before appointed at Albany. It provided for the election of members of both houses of the legislature by separate districts. Instead of the cumbrous court for the correction of errors, it established an independent court of appeals. It abolished the court of chancery and the circuit courts, and merged both into the supreme court, and defined the jurisdiction of county courts. All judges were to be elected by the people. Feudal tenures were abolished, and no leases on agricultural lands for a longer period than twelve years were to be valid, if any rent or service were reserved. The financial articles established sinking funds for both the canal and general fund debt, forbade the loan of the credit of the State, and limited rigidly the power of the legislature to create debts, except to repel invasion or suppress insurrection, and declared the school and literature funds inviolate. Provision was made for general laws for the formation of corporations. The constitution required the submission to the people once every twenty years of the question whether a convention shall be called or not."—E. H. Roberts, *New York*, v. 2, pp. 567-569.

1863-1871.—Tweed Ring.—Between 1863 and 1871 the City of New York, and, to a considerable extent, the state at large, fell under the control and into the power of a combination of corrupt politicians commonly known as the Tweed Ring. Its chief was one William Marcy Tweed, of Scotch parentage, who first appeared in public life as an alderman of the city, in 1850. Working himself upward, in the Democratic party, to which he adhered, he attained in 1863 the powerful dignity of Grand Sachem of the Tammany society and chairman or "Boss" of the general committee of Tammany Hall. "At this time, however, the Tammany 'Ring,' as it afterwards was called, was not completely formed, and Tammany Hall, though by far

the most important political organization in the city, was not absolute even in the Democratic party. It had a bitter enemy in Mozart Hall, a political organization led by Fernando Wood, a former mayor of the city. The claims of Mozart Hall were satisfied in this same year, 1863, by granting to its leader the Democratic nomination to Congress. . . . Soon afterwards Tweed was appointed deputy-commissioner of streets. The 'Ring' was now fast consolidating. The enormous patronage possessed by its members enabled them to control almost all the nominations of the Democratic party to positions in the city. They provided their adherents with places in the city government, and when the supply of places became inadequate, they enlarged the city pay-roll to create new places. By means of the political influence they exerted over the Democratic party in the State, they packed the State legislature with their followers, and placed

SAMUEL J. TILDEN

upon the bench judges on whom they could rely. . . . In 1865 the Ring obtained control of the mayoralty. Its candidate, John T. Hoffman, was a man of much higher character than his supporters and associates. He was personally honest, but his ambition blinded him to the acts of his political friends. . . . In 1868 . . . Hoffman was nominated for governor and was elected. His election was secured by the grossest and most extensive frauds ever perpetrated in the city, e. g. illegal naturalization of foreigners, false registration, repeating of votes, and unfair counting. The mayoralty, left vacant by the promotion of Hoffman, was filled by the election of Hall [A. Oakey Hall] who took his seat on the 1st day of January, 1869. As Samuel J. Tilden said, by this election 'the Ring became completely organized and matured.' It controlled the common council of the city and the legislature of the State, and its nominee sat in the gubernatorial chair. Hall was mayor; Sweeny [Peter B. Sweeny, 'the great scheme of the Ring'] was city chamberlain or treasurer of both city and county; Tweed was practically supreme in the street

department; Connolly [Richard B.] was city comptroller, and thus had charge of the city finances; the city judiciary was in sympathy with these men." But great as were the power and the opportunities of the Ring, it obtained still more of both through its well-paid creatures in the state legislature, by amendments of the city charter and by acts which gave Tweed and his partners free swing in debt-making for the city. In 1871, the last year of the existence of the Ring, it had more than \$48,000,000 of money at its disposal. Its methods of fraud were varied and numerous. "But all the other enterprises of the Ring dwindle into insignificance when compared with the colossal frauds that were committed in the building of the new court-house for the county. When this undertaking was begun, it was stipulated that its total cost should not exceed \$250,000; but before the Ring was broken up, upwards of \$8,000,000 had been expended, and the work was not completed. . . . Whenever a bill was brought in by one of the contractors, he was directed to increase largely the total of his charge. . . . A warrant was then drawn for the amount of the bill as raised; the contractor was paid, perhaps the amount of his original bill, perhaps a little more; and the difference between the original and raised bills was divided between the members of the Ring." It is said that about 65 per cent. of the bills actually paid by the county represented fraudulent addition of this sort. The beginning of the end of the reign of the Ring came in July, 1871, when copies of some of the fraudulent accounts, made by a clerk in the auditor's office, came into the possession of the New York Times and were published. "The result of these exposures was a meeting of citizens early in September. . . . It was followed by the formation of a sort of peaceable vigilance committee, under the imposing title of the 'Committee of Seventy.' This committee, together with Samuel J. Tilden (long a leading Democratic politician, and afterwards candidate for the presidency of the United States), went to work at once, and with great energy, to obtain actual proof of the frauds described by the 'Times.' It was owing mainly to the tireless endeavours of Mr. Tilden . . . that his work was successful, and that prosecutions were brought against several members of the Ring." The Tammany leaders attempted to make a scapegoat of Connolly; but the latter came to terms with Mr. Tilden, and virtually turned over his office to Mr. Andrew H. Green, of the Committee of Seventy, appointing him deputy-comptroller, with full powers. "This move was a tremendous step forward for the prosecution. The possession of the comptroller's office gave access to papers which furnished almost all of the evidence afterwards used in the crusade against the Ring." At the autumn election of 1871 there was a splendid rally of the better citizens, in the city and throughout the state, and the political power of the Ring was broken. "None of the leading actors in the disgraceful drama failed to pay in some measure the penalty of his deeds. Tweed, after a chequered experience in eluding the grasp of justice, died in jail. Connolly passed the remainder of his life in exile. Sweeny left the country and long remained abroad. . . . Hall was tried and obtained a favourable verdict, but he has chosen to live out of America. Of the judges whose corrupt decisions so greatly aided the Ring, Barnard and McCunn were impeached and removed from the bench, while Cardozo resigned his position to avoid impeachment. The following figures will give an approximate idea of the amount the

Ring cost the city of New York. In 1860, before Tweed came into power, the debt of the city was reported as amounting only to \$20,000,000 while the tax rate was about 1.60 per cent. on the assessed valuation of the property in the city liable to taxation. In the middle of the year 1871, the total debt of the city and county—which were coterminous, and for all practical purposes the same—amounted to \$100,955,333.33, and the tax rate had risen to over 2 per cent. During the last two years and a half of the government of the Ring the debt increased at the rate of \$28,652,000 a year.”—F. J. Goodnow, *Tweed Ring in New York City* (Bryce's *American Commonwealth*, v. 2, ch. 88).

1867-1882.—Amendments to constitution.—The constitution of 1846 having provided for its own revision at the end of twenty years, if so willed by the people, the calling of a constitutional convention was approved by popular vote in 1866, and the convention of elected delegates assembled June 4, in the following year. Its final adjournment was not reached until February 28, 1868. The constitution proposed by the convention was submitted to the people in 1869, and rejected, with the exception of the judiciary article, which reorganized the court of appeals, and provided for a temporary commission of appeals, to determine the cases pending in the court, where business in arrears had accumulated to a serious extent. The rejection of the constitution framed in 1867 led, in 1872, to the creation by the governor and legislature of a commission for the revision of the constitution, which met at Albany, December 4, 1872, and adjourned March 15, 1873. Several amendments proposed by the commission were submitted to popular vote in 1874 and 1876, and were adopted. By the more important of these amendments, colored citizens were admitted to the franchise without property qualifications; a strong, specific enactment for the prevention and punishment of bribery and corruption at elections was embodied in the constitution itself; some changes were made in the provisions for districting the state, after each census, and the pay of members of the legislature was increased to \$1,500 per annum; the power of the legislature to pass private bills were limited; the term of the governor was extended from two years to three; the governor was empowered to veto specific items in bills which appropriate money, approving the remainder; the governor was allowed thirty days for the consideration of bills left in his hands at the adjournment of the legislature, which bills become law only upon his approval within that time; a superintendent of public works was created to take the place of the canal commissioners previously existing, and a superintendent of state prisons to take the place of the three inspectors of state prisons; a selection of judges from the bench of the Supreme court of the state to act as Associate Judges of the court of appeals was authorized; the loaning or granting of the credit or money of the state, or that of any county, city, town, or village to any association, corporation, or private undertaking was forbidden; corrupt conduct in office was declared to be felony. By an amendment of the constitution submitted by the legis-

lature to the people in 1882, the canals of the state were made entirely free of tolls.

1875-1881.—Stalwarts and Halfbreeds. See STALWARTS AND HALFBREEDS.

1881.—Adoption of code of criminal procedure. See CODES: 1848-1883.

1881-1883.—Appropriation for capitol at Albany.—Brooklyn Bridge.—Newburg celebration.—Niagara bridge.—An appropriation of \$1,000,000 was made in 1881 towards completing the capitol at Albany and \$1,250,000 for the completion of the Brooklyn Bridge. On Oct. 18, 1883, the 100th anniversary of the disbanding of the American Army of the Revolution was celebrated at Newburg. On Dec. 20, 1883, a new railroad cantilever bridge was opened across Niagara river.

1884-1885.—Roosevelt and Gibbs direct legislation.—Appropriation for Niagara Falls Reservation and Adirondack forest.—Frederick S. Gibbs and Theodore Roosevelt were largely instrumental in directing the legislation on the municipal affairs of New York City. An appropriation for Niagara Falls Reservation was made and the formal transfer of the property to the State took place July 16th with appropriate ceremonies. A bill was passed providing for a forestry commission for the Adirondack region.

1886.—Industrial arbitration board created. See ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1886-1920.

1886-1890.—Important legislation.—Election of 1888.—Floods of 1889.—Codification of labor, prison and insurance laws.—“During 1886 an amendment to the civil service laws was passed, intended to give honorably discharged soldiers and sailors a preference over others in appointments. This law has been practically inoperative since its passage. An act for the protection for our song-birds also became a law. This was followed in 1900 by a much more sweeping and stringent legal protection. . . . [A law was enacted to admit women to practice law on the same terms as men; and the other important bills provided for incorporation of political clubs; protection of natural oyster beds, regulation of the practice of veterinary medicine and surgery; authorization of the formation of gas companies; the prevention of the spread of contagious and infectious diseases; creation of a prison reform labor commission; better preservation of the health of children in institutions; assessment of telegraph, telephone and electric light lines; growth of free public libraries; and taxation of fire and marine insurance companies.] The legislature of 1887 enacted laws for the purchase and care of the old historic ‘State house’ at Kingston; for the collection and preservation of battle-flags; for the incorporation of ‘Young Men’s Christian associations’; . . . for the formation of building and loan associations; . . . to provide for adjustment of grievances between employers and employés and to create a state board of mediation and arbitration; to increase the lockage capacity of canals; to cooperate with the United States Government in suppressing pleuropneumonia; to establish a fish-hatchery in the Adirondacks; to prevent the spread of disease in peach-trees; to authorize a husband to convey directly to his wife and a wife to her husband;

to provide for organization of trust companies; to define and regulate the manufacture and sale of wines. The Republican convention (of 1887) met in Buffalo, May 16, and chose ex-Senator Warner for governor and S. V. R. Cruger for lieutenant-governor. The Democratic convention met at Buffalo, September 12, and re-nominated Hill and Jones by acclamation. Hill was elected with 650,464 votes, Miller receiving 631,203. John Clinton Gray was elected judge of the court of appeals over William Rumsey. Hornellsville, Ithaca and Middletown were incorporated as cities. Bills were passed, in the session of 1888, appropriating \$570,000 to continue the work of lengthening the locks and improving canals, \$143,260 to finish the State Library and Law Library, and \$287,000 for repairs to the assembly chamber. A bill was passed to substitute electricity for hanging, in the execution of death sentences. Laws were enacted for the incorporation of societies for providing play-grounds for children; police matrons in places of detention; schools for nurses; and to make provision for supplying water to Albany, Syracuse, Schenectady, Watkins and Little Falls. In 1883 various labor organizations of the State [had] sent to the legislature their protest against the 'contract system' then in operation in . . . the State prisons [which was in competition with free labor]. . . . A bill to abolish certain classes of contract labor was brought in, but failed of passage. The whole question was submitted to the people at the next election, and they voted to abolish the system entirely as soon as existing contracts expired. By 1888 many of the prisoners were idle, and Governor Hill called a special session of the legislature to consider the matter. An act was then passed forbidding the use of motive power in the prisons. . . . The year 1889 is memorable for the disastrous floods which occurred. New York suffered less than Pennsylvania, but the loss of life and property in the southern portions of the State was very great. . . . The State contributed \$500,000 to the Johnstown sufferers. . . . [Labor laws, prison laws and insurance laws were codified; a state board of lunacy was created; canals were voted \$6,000,000 to continue work of lengthening the locks; several new railroad laws were passed; several new militia laws were enacted; and the New York Dairymen's Association was voted \$4,000 to extend dairy knowledge throughout the State. In 1890 an appropriation of \$365,000 was made for repairs to the assembly chamber and work on the new capitol. Printing laws were amended. Corning and Gloversville were given city charters.] A difference between Governor Hill and legislature left at the close of the session nearly 200 bills in his hands unsigned, but many important measures became laws. Among them were the following: 1. A law requiring weekly payments to factory hands. 2. The 'corrupt practice law,' requiring candidates to render an itemized account of all election expenses. 3. The 'Saxton ballot reform law,' providing a secret ballot, and preventing all electioneering at the polls. 4. The 'personal registration law.' All these have done much to cleanse the State elections by preventing fraud and intimidation at the polls."—W. R. Prentice, *History of New York State*, pp. 462-465.

1891-1893.—State elections.—University extension.—Railway strike at Buffalo.—Bills for constitutional convention.—The Republican state convention met in Rochester, September 9, and nominated J. Sloat Fassett for governor and John W. Vrooman for lieutenant-governor. The Democratic state convention convened at Saratoga on

September 16 and nominated Roswell P. Flower and William F. Stechan for governor and lieutenant-governor. Flower was elected with a majority of 47,037. The legislature had a short session (January 6 to April 30) and passed 380 new laws. Many of these laws dealt with life insurance, fire insurance, real estate, canal bridges, repair and improvement of highways, voting, trusts, mortgages and employment bureaus. An appropriation of \$10,000 was made for university extension under the care of the regents; new charters were given to Buffalo and Albany; the charters of Syracuse, Kingston and Rochester were amended; Utica was allowed to extend its northern boundary, and Albany authorized to issue \$253,000 in bonds for the erection of public buildings. An important event in 1892 was the strike at Buffalo of the railroad switchmen, beginning August 13. The principal railroads affected were the Lehigh Valley, the Erie and the Buffalo Creek. To suppress acts of violence the governor called out the state militia to the number of 7,196 men. The troops were withdrawn August 25-27. Under authority conferred by the World's Fair Act, Governor Flower appointed three general managers for the New York exhibit at the World's Columbian Exposition at Chicago, for which an appropriation of \$300,000 was made. Laws were passed relative to state census, boundaries, Indians, election, legislation, salt-springs, municipal corporations, banks, insurance companies, penal codes, taxable transfers of property, adulteration of maple sugar, dentistry, labor, freedom of worship, preservation of human life, safety of workmen and public health. New bridges were provided for New York and Brooklyn and a charter was granted to the Manhattan and Long Island Bridge Company. "A bill passed by the legislature of 1892, calling a convention to revise the constitution of the state, provided for the election of 128 delegates by assembly districts, and thirty-two at large, but added nine more of whom the governor should appoint three to represent labor interests, three woman-suffrage claims, and three the advocates of prohibition. By the legislature of 1893 this act was set aside and a new enactment adopted, making the total number of delegates to the Constitutional Convention 165, all elective, and apportioning five to each senatorial district."—J. N. Larned.—Niagara Falls and Mount Vernon became cities. The areas of Rochester and Syracuse were enlarged. In 1893, the legislature passed 726 new laws. These dealt with banking, excise, coal, wills, marriages, agriculture and militia. Olean was given a city charter and Syracuse was authorized to have electrical subways. Laws were passed for the protection of the water supply of Brooklyn and New York. A second \$300,000 was appropriated for New York's exhibit at the World's Fair.

1894.—Amendment of constitution.—"By carrying the legislature in 1893, the democrats were able to place Edward Murphy, Jr., in the seat in the United States senate to which Frank Hisecock had been chosen six years before. The most important result, however, was the election of delegates to . . . [the] constitutional convention in which the Republicans secured a majority. The body met in Albany, May 8, 1894, and sat eighteen weeks, with Joseph H. Choate as its president."—E. H. Roberts, *New York*, v. 2, p. 720.—"The following are the most important of the changes made [in the sixth revision of the constitution]: 1. State and municipal elections were separated, by making the former come in the even-numbered years; the latter in the odd-numbered years. (Note: This ap-

plied only to Greater New York, Buffalo, Syracuse, Albany and Troy.) 2. Cities were classified. In the first-class were placed cities having a population of 250,000, or more; in the second-class those less than 250,000, but not less than 50,000; in the third class all others. 3. The judiciary of the State was re-organized. 4. The appropriation of State moneys to any institution of learning, wholly or in part under the control of any religious denominations was prohibited. 5. The use of voting machines was allowed. 6. The term of office of the governor, lieutenant-governor and the five elective State officers was again made two years. 7. The legislature was directed to meet on the first Wednesday in January. 8. The senate was made to consist of 50 and the assembly of 150 members. 9. The University of the State of New York and its regents were incorporated in the constitution."—W. R. Prentice, *History of New York State*, pp. 463-460.—The important features of the revision were set forth in an address by the convention to the people, as follows: "We seek to separate, in the larger cities, municipal elections from State and national elections to the end that the business affairs of our great municipal corporations may be managed upon their own merits, uncontrolled by national and State politics. . . . We have provided further safeguards against abuses in legislative procedure, by requiring that all bills shall be printed in their final form at least three days before their passage, prohibiting riders on appropriation bills, providing for notice to municipal authorities before special acts relating to the larger cities can take effect, prohibiting the issue of passes by railroad, telegraph and telephone companies to public officers, enlarging the express constitutional powers of the President of the Senate. . . . We have extended the prohibition against lotteries so as to include all pool-selling, book-making and other forms of gambling. . . . We have sought to throw greater safeguards around the elective franchise by prescribing a period of ninety instead of ten days of citizenship before that right can be exercised, so that naturalization may be taken out of the hands of campaign committees and removed from the period immediately before election. . . . We have modified the language relating to election so that if any mechanical device for recording and counting votes is so perfected as to be superior to the present system, the Legislature may make trial of it. We have established in the Constitution the well-tried and satisfactory system of registration of votes, forbidding, however, any requirement of personal attendance on the first day of registration in the thinly-settled regions outside of the cities and large villages, where voters would have long distances to travel to the place of registration, and we have provided for securing an honest and fair election by requiring that on all election boards election officers shall equally represent the two principal political parties of the State. We have provided for a new appointment of Senate and Assembly districts. . . . Attack has been made upon two rules laid down in the proposed measure for the guidance of the Legislature in future apportionments. One of these is the rule that no county shall have more than three Senators unless it shall have a full ratio for each Senator, although smaller counties may receive a Senator or an additional Senator on a major fraction of a ratio. . . . The other rule attacked is that no one county shall have more than one-third of all the Senators, and that New York and Kings county together shall not have more than one-half of all the Senators. . . . We

have declared in the Constitution the principle of civil service reform, that appointments and promotions are to be based upon merit and ascertained so far as practicable by competitive examination. We have sought by this to secure not merely the advantage derived from declaring the principle, but the practical benefit of its extension to the State prisons, canals and other public works of the State, to which, under the existing Constitution, the court of last resort has decided that civil service rules cannot be applied. . . . We have prohibited the contract system of convict labor [from and after January 1, 1897]. . . . We have authorized the Legislature to provide for the improvement of the canals, without, however, borrowing money for that purpose unless the people expressly authorize it. . . . We have required the Legislature to provide for free public schools, in which all the children of the State may be educated, and we have prohibited absolutely the use of public money in aid of sectarian schools. . . . We have so amended the present Constitution as to provide for a naval as well as a land force of militia. . . . In order to allow every voter to exercise a choice in voting on some of the important proposed amendments, we have provided that the Revised Constitution shall be submitted to the people in three parts, viz.: 1. That making an apportionment of Senators and members of the Assembly. 2. That pertaining to the improvements of the canals. 3. All the remainder of the proposed amendments as a whole."—*Journal of the Constitutional Convention, State of New York, 1894*, pp. 839-846.

ALSO IN: C. F. Horne, *History of the State of New York*, pp. 401-402.—W. C. Morey, *Government of New York*, pp. 51-53.

1894-1897.—Lexow investigation.—Public School Act.—Election of 1894.—Use of flag on school buildings.—Appropriation for Erie canal.—Reform of ballot.—"So many complaints had been made against the police department of New York by the 'society for the prevention of crime,' of which Rev. C. H. Parkhurst was president, that an investigation was ordered. This was conducted in 1894 by a legislative committee of which Mr. Clarence Lexow was chairman. The result was the indictment of many persons connected with the police department. . . . [A non-partisan board of police bill was passed in consequence. The Committee on elections revealed fraud at Coney island which resulted in depriving John McCarty of his seat in the Senate. In the session of 1894, about 700 bills were passed and 350 laws enacted. Many related to taxation, educational and charitable institutions, convicts, hazing in colleges, property held by foreign corporations, banks, elections and canals.] In 1886 a charter had been granted to a company allowing the use of the Falls [Niagara Falls] for the generation of electricity. Work was begun in 1803. In 1894 an appeal was made to the constitutional committee of the State to restrict the further use of this power. It was refused on the ground that such a restriction would constitute a monopoly of that power to those companies already chartered. . . . Previous laws intended to compel the attendance of certain pupils on the public schools had failed to be effective for lack of sufficient penalties; a more stringent law was therefore passed by the legislature of 1894. It placed private and parochial schools under the supervision of public school authorities in matters of attendance, and provided special attendance officers and ample penalties. In the fall election of 1894 the people ratified the new constitution by a

majority of 156,108, and elected as governor the republican candidate, Levi P. Morton, a former minister to France and vice-president of the United States. The legislative enactments of 1895 included a requirement that the United States flag be displayed on all school buildings, when schools are in session; made the study of the effects of stimulants and narcotics compulsory in all schools; provided for the use of the blanket ballot, and for the submission to the people of a proposition to appropriate 9 millions to enlarge the Erie canal. (Footnote: This act was approved by the people in November, 1895, by a majority of 343,770 votes.) . . . [It afterwards gave rise] to much controversy."—W. R. Prentice, *History of New York State*, pp. 475-476.—"In 1894, Levi P. Morton, who had earned distinction as minister to France and as vice-president with President Harrison, received a plurality for governor of 156,108, over David B. Hill, a faction of democrats casting their votes for Everett P. Wheeler. The republicans of New York in State convention in 1896 presented the name of Governor Morton as their candidate for president. The democrats divided on the issue of sound money, and at the polls a majority of 268,325 pronounced for presidential electors in favor of William McKinley, and Frank S. Black, republican, was chosen governor by a plurality of 213,052. The legislature in 1897 consummated the project pending for several years for the creation of Greater New York, by enacting its new charter." E. H. Roberts, *New York*, v. 2, p. 721.—"Henry George began the American agitation for the Australian ballot in 1886 in New York. In 1887 a bill for the reform was defeated in the legislature; and three years later, when public opinion compelled the old parties to grant the measure, they managed for a while to deceive the people with a sham. The New York ballot of 1890 did secure secrecy; but it encouraged straight party voting by arranging that one mark at the head of a ticket should stand for all the candidates of the party selected. Five years later, however, New York secured the true reform ballot."—A. M. West, *American democracy*, p. 665.

1896.—Greater New York City incorporated. See NEW YORK CITY: 1895-1897.

1896-1898.—Passage of Raines liquor law.—"The legislature was now strongly republican, and in full accord with the governor, who did not veto a single bill. One important measure before it was the 'Raines bill' [so called from its author, Senator John Raines], intended both to regulate the traffic in intoxicating liquors and to provide for local option. The passage of this bill met with vigorous opposition, but it finally became a law."—W. R. Prentice, *History of New York State*, pp. 476-477.—The Raines law heavily increased the tax on the selling of liquor, raising it to \$800 on common "saloons" in the city of New York; to \$650 in Brooklyn; to \$500 in other cities having more than 50,000 and not more than 500,000 inhabitants; and to rates in lesser cities and towns which ranged from \$100 to \$350. It forbade the licensing of any liquor shop within 200 feet of a schoolhouse or a church, and also forbade the opening of any new shop of that character in a residence district without consent of two-thirds of the property owners. It prohibited the sale of liquor on Sundays, except in hotels and clubs; but this provision furnished a means of evasion which was speedily brought into use. "Raines hotels" and "Raines Clubs," as they were called, sprang into existence everywhere, sufficiently answering the requirements of the law to escape its penalties. These and other defects were

considerably remedied by amendments of the act in April, 1897. It survived a powerful attack in the legislature at that time, the whole strength of the leading cities in the state being brought against the law. The country districts were generally united in supporting it, partly on principle, and partly because of the extent to which it lightened the burdens of taxation. By apportioning two-thirds of the enormous revenue raised under the act to the towns, counties and cities in which it is collected, and one-third to the state treasury, the Raines law fortified itself strongly in more than the moral sentiment of the people. Under the Raines law all local excise boards are abolished, and the whole licensing and regulating of the liquor traffic is placed under the supervision of a state commissioner.

1898.—Primary election law.—Other legislation.—Spanish American War.—An act which aims to make the political party caucus for nominating candidates, and for choosing delegates to nominating conventions, a "primary election," conducted under strict regulations of law and guarded by registration, was passed by the New York State legislature and signed by the governor March 23, 1898. "The legislature which met in January [1898] passed a large number of local bills, transacted the usual and necessary State business and adjourned early. Even while in session the members were evidently influenced by the feeling, then pervading the whole country, that war with Spain was among the possibilities. They passed many bills relating to armories and the State militia, and appropriated large sums of money for military purposes; while they also provided generously for schools and State charities. Governor Black called the legislature together in extra session, July 11, to provide for manner, time and places for receiving the votes of such citizens of the State as should be in the field during the November election. The county of Nassau was, in April, set off from Queens county. It is comprised within the limits of the towns of Hempstead, North Hempstead and Oyster Bay. . . . [New York] may justly share in the honors of the Spanish-American War.] . . . In response to the president's first call, New York sent two troops of cavalry, mounted, uniformed and fully equipped, and 12 regiments of infantry ready for the field. On receipt of the second call New York at once sent forward 3,772 men, who were placed in the regiments already formed. In June, the State was asked to furnish an additional force of three batteries and three regiments—in all 4,186 men. In addition to this land force the State furnished 851 men for the navy from her 'naval militia.' . . . [The total cost of the war to the state was \$789,625.]"—W. R. Prentice, *History of New York State*, pp. 479-480.

1899 (May).—Taxation of public franchises.—A measure of great importance, introducing a new and eminently just principle in taxation, was carried through the Legislature of New York in May, by the energetic influence of Governor Roosevelt. Recommended by the Governor in a special message on the 27th of March and passed in an unsatisfactory form, a bill to provide for the taxing of public franchises which did not promise successful working was being left on his hands when the Legislature adjourned. He promptly called a special session and renewed to it his urgent recommendations. Within a few days, the desired bill was passed by both Houses of the legislature, signed by the governor and became a law. The public franchises to which it relates are defined in its first section, as follows:

"The terms 'land,' 'real estate,' and 'real property,' as used in this chapter, include the land itself

above and under water, all buildings and other articles and structures, substructures, and superstructures, erected upon, under or above, or affixed to the same; all wharves and piers, including the value of the right to collect wharfage, cramage, or dockage thereon; all bridges, all telegraph lines, wires, poles, and appurtenances; all supports and inclosures for electrical conductors and other appurtenances upon, above, and underground; all surface, underground, or elevated railroads, including the value of all franchises, rights, or permission to construct, maintain, or operate the same in, under, above, on, or through streets, highways, or public places; all railroad structures, substructures, and superstructures, tracks, and the iron thereon, branches, switches, and other fixtures permitted or authorized to be made, laid, or placed on, upon, above, or under any public or private road, street, or grounds; all mains, pipes, and tanks laid or placed in, upon, above, or under any public or private street or place for conducting steam, heat, water, oil, electricity, or any property, substance or product capable of transportation or conveyance therein, or that is protected thereby, including the value of all franchises, rights, authority, or permission to construct, maintain, or operate in, under, above, upon, or through any streets, highways, or public places, any mains, pipes, tanks, conduits, or wires, with their appurtenances, for conducting water, steam, heat, light, power, gas, oil, or other substance, or electricity for telegraphic, telephonic, or other purposes; all trees and underwood growing upon land, and all mines, minerals, quarries, and fossils in and under the same, except mines belonging to the state. A franchise, right, authority, or permission, specified in this subdivision, shall, for the purpose of taxation, be known as a special franchise. A special franchise shall be deemed to include the value of the tangible property of a person, co-partnership, association, or corporation, situated in, upon, under, or above any street, highway, public place, or public waters in connection with the special franchise. The tangible property so included shall be taxed as a part of the special franchise."

1899-1901.—Tax legislation.—Ford Bill.—Conservation law.—Palisade interstate park.—Indian Education Bill.—Negroes in public schools.—"In the political field there have been few quieter years in the history of the State than 1899. The governor and legislature were in accord, and nearly every measure which passed the legislature received the governor's signature. Laws were enacted which were intended still further to protect the food supply of our great cities. Enlarged powers were conferred upon the governor for the protection of the elective franchise and for the punishment of crimes against the election laws. The high license law was amended and made more stringent in its penalties. The most important legislative measure of the year was with reference to taxation. When it is considered that besides the enormous sums raised by taxation for State purposes the people must meet other and often larger levies for county, municipal, and school purposes, the question how these taxes shall be levied becomes one of the most important with which the legislature has to deal. A large part of the property of the State, both real and personal, has always been beyond the reach of the tax-gatherer. Vast sums in the possession of churches and other ecclesiastical associations have never been taxed. Other and still larger sums are in the possession of individuals who manage to secrete their wealth. Many millions are in the keeping of savings banks and other depositories into which the assessor never enters. Besides

these there are many valuable franchises held by different corporations which have escaped taxation under decisions of the court of appeals given in 1891 and 1897, by which it was held that only the tangible real and personal property of such corporations could be taxed. A new franchise law known as the 'Ford bill' passed both houses of the legislature near the close of the regular session, intended to remedy this defect. Some of its provisions were unsatisfactory to the governor. He therefore withheld his signature and called a special session to meet on May 22. At this extraordinary session the bill as amended, again was passed by both houses and signed by the governor. This law made it the duty of the State assessors to assess every franchise in the State according to its value, even though it does not own a foot of real estate. (Footnote: It was estimated that this law would yield about 17 million in taxes, of which nearly 10 millions would be collected in New York city alone.) The legislature of 1900 was republican in both branches. It met January 3 and adjourned April 6, yet it passed 776 laws, 400 of which were purely local, having no application to the State at large. This growth of legislation is viewed with concern by many thoughtful men. . . . A comprehensive law for the preservation of our remaining forests, and fish and game was passed at this session. The act repeals most of the previous laws on these subjects, and is a serious effort to save from destruction those forest of the State which still border our rivers and clothe our mountains. Just complaint had long been made against the constant encroachment upon the Palisades of the Hudson. The legislature of 1900 passed a law . . . to create a commission having power to locate a 'Palisades interstate park,' and gives to this commission authority to purchase or condemn the necessary lands for the purpose of such park. . . . It was reserved for the legislature of 1900 to pass a stringent compulsory education law for the children of [the Indians on the Allegheny and Cattaraugus reservations]. It requires that every Indian child between the ages of six and sixteen shall be a regular attendant upon the school during a considerable portion of the year. . . . In 1894 a law was passed which permitted the school authorities of any incorporated city or village to establish separate schools for colored children. This act was repealed in 1900 and the following enacted in its place: 'No person shall be refused admission into or be excluded from any public school in the State of New York on account of race or color.'"—W. R. Prentice, *History of State of New York*, pp. 483-486.

1899-1909.—Barge canal.—On March 8, 1899, Theodore Roosevelt, then governor of New York, appointed a committee of private citizens, for service without pay, in studying and reporting on the policy to be adopted by the State of New York in dealing with its canals. . . . The appointed chairman of the committee was General Francis Vinton Greene. "We devoted the greater part of the year 1899 to a study of the subject, and made our report to the Governor under date of January 15, 1900. . . . As to our conclusions and recommendations, the first question to be decided was whether or not the canals should be entirely abandoned. It was claimed by many that canal transportation was antiquated and altogether out of date. . . . From a consideration of all [the] facts we reached our first conclusion—which, like all the other portions of our report, was unanimously adopted—to wit, 'That the canals connecting the Hudson river with Lakes Erie, Ontario and Champlain should not be abandoned, but should be maintained and enlarged. . . . With such data as we had available and with such

surveys as were possible during the year 1899, we estimated the cost of the project we recommended at \$58,804,668 for the Erie Canal and \$2,642,120 for the Oswego and Champlain canals, making a total of \$61,536,788. This contemplated a canal with 12 feet depth and suitable locks for carrying a barge of approximately 1,000 tons capacity from Buffalo to the Hudson river, but as to the Oswego and Champlain canals, it recommended only the completion of the work already undertaken to provide for boats of six feet draft. . . . It was ultimately determined to enlarge the Champlain and Oswego canals to the same size as the main canal between Buffalo and the Hudson river, and also to include the dredging of a 12 foot channel in the Hudson river, which we had anticipated would be done by the Federal Government. This enlargement of the project very materially increased the cost, and in the interval between the time of our report and the completion of the detailed report of the State Engineer, the prices of labor and materials had very largely advanced. In order to cover all possible contingencies, the State Engineer carried his estimate to \$101,000,000, and this was the amount appropriated by the Legislature and ratified by the people at the election of 1903."—F. V. Greene, *Inception of the barge canal project (Buffalo Historical Society Publications, v. 13)*.

1901-1904.—Odell administration.—Under Benjamin B. Odell, Jr., the Palisades park was created in conjunction with the New Jersey legislature, Stony Point park was bought and dedicated; a part of the New York charter revised; the new Terminal House Act passed; and drastic provision made for the suppression of anarchy.

1906-1910.—Governor Hughes.—As counsel to the legislative committee which investigated the scandals of life insurance management in 1905-1906 (see INSURANCE: Life: Development in the United States), the conduct of the investigation by Charles Evans Hughes resulted in his being chosen in 1906 candidate for governor. The Independence League which William R. Hearst had organized, and which had served him the previous year in his candidacy for mayor of New York (see NEW YORK CITY: 1905), had been recruited so successfully that it adopted Hearst as its gubernatorial nominee. Hughes alone on the state ticket of the Republicans was elected; Hearst alone on the ticket of the Democratic-Independence-League combination was defeated. Governor Hughes was thus placed, on the 1st of January, 1907, at the head of an administration in which every other elective office was filled by his political opponents. The most signal showing of the attitude of the public toward antagonists of Governor Hughes in the legislature occurred in connection with a bill, recommended by the governor in 1907, for the amendment of a disgraceful existing law relative to race-track gambling. The state constitution, as revised in 1804, prohibits all forms of gambling, and declares that "the Legislature shall pass appropriate laws to prevent offenses against any of the provisions of this section." In 1805 an act (known as the Percy-Gray law) was got through the legislature, professedly in obedience to this mandate of the constitution, which verbally prohibited betting on races, but penalized it only by providing that the loser of

a race-track bet might sue the winner and recover twice the amount of his bet, while betting and gambling in other places were punished heavily by imprisonment and fine. This scandalous favor to the race-track interests carried a bribe at the same time to the farmer of the state in the form of a cunning provision of the act, which appropriated five per cent. of the gross receipts of racing associations to the benefit of agricultural societies. Repeated attempts to correct so contemptuous a violation of the constitution had failed; but Governor Hughes renewed the attack. When the amending Bill that he recommended was put in suspense by a tie vote in the Senate, the governor called a special session of the legislature, and brought the question before the people in speeches which made a great stir. The racing interests in the state were so powerful that they almost defied defeat, and all their influence came into play. Meantime a special election to fill a vacancy in the Senate was pending in Western New York, and the issue on the race-track gambling bill was fought there, with the governor in the field, contending for an honest enforcement of the constitutional law of the State. The result of the election gave support to that contention, and when, at the special session, the bill in question was again called up in the Senate, as it could be, it was passed by a majority of one. The greater number of Republican senators who voted against it were retired to private life by their constituents at the senatorial elections of the ensuing fall. Almost everything of importance in New York legislation during the administration of Governor Hughes had its origin in his recommendations, and was carried by the weight of public backing. This was notably the fact in the case of the Public Service Commissions Act of 1907 which established an effective supervision and regulation of corporations engaged in public services, by placing over them two commissions, appointed by the Governor, one with jurisdiction in New York City, the other in the remainder of the State, both armed with large powers.

1907.—Gift of Letchworth park.—A gift to the state of a public park was made in January, 1907, by the Hon. William Pryor Letchworth. His great estate which embraces the finest and most famous scenery of the Upper Genesee river, lying on both sides of the cañon down which the river plunges in three successive falls. Improved with careful taste by half a century of Mr. Letchworth's care, it has been conveyed in trust to the state, under the future custody of The American Scenic and Historic Preservation Society.

1909.—Blackhand outrages. See BLACK HAND.

1909.—Historical commemorations.—Champlain and Hudson-Fulton.—Three notable events of the far past were commemorated in New York during the summer and autumn of 1909. The tercentenary year of Champlain's discovery, in July, 1609, of the lake which bears his name, was signaled by a week of historical pageants, fêtes, and gatherings for speech and ceremony, on and around the lake, beginning on the 4th of July. France, England, Canada, and the United States were represented in the addresses and exercises of the occasion, by the British and French ambassadors, the postmaster-general of the Dominion, President Taft and ex-Secretary Root, Governor Hughes of New York and Governor Prouty of Vermont. A large number of Indians took part in the pageants, occupying a floating island constructed for the occasion on the lake, and representing scenes of In-

dian life and warfare, the story of Hiawatha, and other reminders of the time when men of their race were the lords of the region of Lake Champlain. Greater interest was given to the double commemoration, in September, of Henry Hudson's exploration of Hudson river and of Robert Fulton's first practically successful steamboating on that river. The celebration of the event first named was timed appropriately on its third centennial anniversary. That of the second was belated by two years.

Holland joined in the Hudson commemoration, building and send over to New York an exact replica of Hudson's little ship, the *Halve Maen*, or *Half Moon*, in which his voyage was made. Fulton's steamboat, the *Clermont*, was also reproduced and the two quaint vessels, strikingly in contrast with the monster battle ships and ocean liners that surrounded them, gave a singular interest to the affair. Great Britain, France, Germany, Italy, the Netherlands, Mexico, Cuba, and the Argentine Republic took part in the naval parades which formed a feature of the celebration, and an imposing assembly of great ships of war was shown. Eight days, from Saturday, September 25, were devoted to church services, school exercises, historical exhibitions and processions, military and naval parades, aquatic sports, aeroplane flights, banquets to foreign guests, etc., in New York City, after which the *Half Moon* and the *Clermont* proceeded up the river and the celebration was continued in various towns.

1909.—Opening of Hudson tunnel. See NEW JERSEY: 1909.

1909-1910.—Gifts of land on the Hudson for parks.—In his annual message to the legislature, January 5, 1910, Governor Hughes announced the details of a munificent project of gifts proffered to the State for the purpose of creating a state park near the Hudson river. Mrs. Mary W. Harriman, widow of the late E. H. Harriman, offered to convey to the state a tract of about ten thousand acres of land in Orange and Rockland counties, to be held in perpetuity as a state park; offering further to give the State \$1,000,000 in trust, to be used for the purchase of land lying between the tract mentioned and the Hudson river, so that the park may have the advantage of a river frontage. Other gifts for similar purposes amounting to \$1,625,000 were announced as a result of the activity of the Palisades Park Commission, from residents of New York, New Jersey, and Philadelphia. John D. Rockefeller and J. Pierpont Morgan each subscribed \$500,000; Margaret Olivia Sage, William K. Vanderbilt, George F. Baker, James Stillman, John D. Archbold, Frank A. Munsey, Henry Phipps, E. T. Stotesbury, E. H. Gary, and George W. Perkins gave \$50,000 each; Helen M. Gould and V. Everit Macy contributed \$25,000 each, and Ellen F. James and Arthur C. James jointly gave a similar amount. These subscriptions were secured upon conditions stipulating, among other things, that New York State shall appropriate \$2,500,000 for the acquiring of land and the building of roads and general park purposes; that the State of New Jersey shall contribute a fair share, and that the State discontinue work on the new State prison at Great Bear Mountain in Rockland county, where preliminary work on the site for a new \$2,000,000 structure had been under way for several months.

1910 (August-September).—Convention at Saratoga.—Division in Republican party. See U. S. A.: 1910 (August-September).

1910-1912.—Laws passed.—Under John A. Dix the following became law: a compromise election bill providing for direct primaries in all but state offices; commissions to investigate manufacturing conditions in cities of the first and second class and to investigate the production, distribution and consumption of food products in the state; high-way improvement, pure food products, rapid transit subways; labor laws to prevent the working in factories of children under 16 at night, and for more than eight hours a day or six days in the week; males under eighteen for more than 54 hours or six days a week or between midnight and four in the morning and females under 21 before six in the morning or after nine in the evening or more than six days or 54 hours a week.

1913.—Impeachment of Governor Sulzer.—Labor legislation.—William Sulzer, elected governor of New York in 1912 with the support of Tammany Hall, began to advocate a state wide primary law and to assert his independence of Murphy, "Tammany boss." "After his break with Charles F. Murphy, Governor Sulzer took every opportunity to prove to the people of the state that he was no longer consulting the wishes of the boss. He had already sent to the legislature, three days before the last meeting with Mr. Murphy, the vigorous message disapproving the Blauvelt primary bill. When he finally resolved to burn all his bridges and resist Murphy at every point he concluded to make the fight for a genuine primary law the main issue between him and his enemies in the democratic party. He called into conference all the democratic county chairmen, all the members of the democratic state committee and representatives of all political parties and organizations in favor of a state-wide primary law. These meetings, held in the executive chamber and addressed by Governor Sulzer, stirred the state from end to end. Committees were appointed to prepare a primary bill and to promote its enactment by the legislature. Every time Governor Sulzer spoke for direct primaries he spoke with a feeling and earnestness that impressed those who listened to him with the idea that he had recently undergone a radical change in his opinions. He no longer veiled these opinions with equivocal language, but made plain in lucid and forceful English that he was for an honest, thoroughgoing direct primary law, because it was the only instrument by which the people could drive the bosses from power and restore popular government at Albany. Those who listened to his fervent plea for a direct primary law and denunciations of bosses were not aware at the time of his secret conferences with Charles F. Murphy and his many tribulations resulting from the arrogance of the boss. . . . May 20th, Charles F. Murphy and his aides held a council of war at Delmonico's, the private political headquarters of the boss. It was then and there resolved to 'get something' on Sulzer and endeavor to have him impeached and removed from office, if in the meantime he did not cease his attacks on the organization and stop his investigations into the high-way, prisons and other state departments. The Frawley committee, made up of senators and assemblymen, had been appointed before the legislature adjourned to pry into various matters. . . . On April 30th, the primary bill was defeated in the senate by a vote of 42 to 8. Opponents of the bill attacked Governor Sulzer rather than the measure itself. Tammany senators ridiculed and denounced the governor. Leader Wagner declaring that he was insincere in professing to be for direct primaries at all. Senator John F. Healy of Westchester county was sure that only a few people in

the state wanted the right to nominate their candidates and he was indignant that he should be asked to waste time in considering a proposition so absurd. The following day, May 1st, the assembly, after a stormy session, in which the Tammany leaders excoriated Governor Sulzer, defeated the bill by a vote of 93 to 47. The week previous Governor Sulzer had sent to the senate the nominations of John Mitchell for state commissioner of labor; John H. Delaney for commissioner of efficiency and economy; John N. Carlisle for commissioner of highways and John B. Riley for superintendent of prisons. By agreement, the nominations of Carlisle and Delaney were confirmed by the senate. Governor Sulzer had refused to nominate Mr. Delaney unless the Tammany leaders first agreed to confirm Mr. Carlisle's nomination for the state highway department. The senate refused, however, to confirm the appointment of Mitchell or Riley. The ostensible reason for the rejection of Mitchell was that he was not a democrat. The real reason, however, was that Mitchell was too independent and would insist upon being head of the labor department. No reason was given for the rejection of Judge Riley's nomination. Privately, the Tammany leaders admitted it was because he came from Clinton county and belonged to the democratic organization there, which had always asserted its independence of Tammany. Governor Sulzer sent in Mitchell's name twice to the senate and it was rejected each time. He appointed both men as recess appointees after the legislature adjourned. Attorney General Carmody held that Mitchell's appointment was illegal but that Riley could hold his office until his successor was appointed and confirmed by the senate. Carmody's decision was afterwards upheld by the courts. . . . At the extraordinary session of the legislature called by the governor to meet June 16th [for the purpose of passing a new primary law], the opportunity came. In addition to recommending enactment of a direct primary law, Governor Sulzer in his message recommended legislation amending the corrupt practices act. This was immediately seized on by the Tammany man as sufficient authority to amend the resolution adopted at the regular session creating the Frawley committee and to extend its powers. Senator George F. Thompson, republican member from Niagara and Orleans counties, was used as the agent of Tammany to accomplish this. He introduced a resolution June 25th in the senate by which it was resolved that the 'whole subject of any wrongful or unlawful influence aforesaid, and of receipts and expenditures of candidates for the elective office to be filled by the votes of the electors of the whole state, be referred to a certain joint legislative committee of the senate and assembly to examine into the methods of financial administration.' This Thompson resolution, amending that of Frawley adopted at the regular session, was held to arm the committee to go into the governor's campaign receipts and expenditures. [The Frawley committee held hearings and reported to the legislature.] . . . In concluding its report to the senate and assembly the Frawley committee drew the following inferences from the testimony it had taken: 'Governor Sulzer made a false public statement, when on July 30, 1913, he said that he was away campaigning and that he did not know of the campaign contributions omitted from his sworn statement. . . . We submit to the legislature that it was false when William Sulzer swore that he had received only \$5,460 of campaign contributions and that he did so with full knowledge that he had received an amount

many times that sum and had converted the same to his private uses; that he used contributions given to aid in his election for the purchase of stocks in Wall street which he or his agents still hold; that he has been engaged in stock market speculations at the time that he, as governor, was earnestly pressing legislation against the New York Stock Exchange which would affect the business and prices of the Exchange; and that there was evidence before this committee to sustain a finding that as governor he has punished legislators who opposed him by vetoing legislation enacted for the public welfare, and has traded executive approval of bills for support of his direct primary and other measures.' . . . [The legislature considered this report, debated it, and then voted on the question of whether the committee's findings justified impeachment of the Governor.] At 5:13 a.m., August 13th, the vote of 79 to 45 was announced by Speaker Smith and Governor Sulzer had been impeached. . . . [His trial was conducted by the senate together with the justices of the Court of Appeals. He was found guilty of three out of the eight charges against him.] The votes in the open session on the eight articles were: 1. Filing a false statement of campaign contributions. Guilty, 39; not guilty, 18. 2. Perjury, swearing this statement was true. Guilty, 39; not guilty, 18. 3. Felony, trying to bribe witnesses to withhold testimony from Frawley legislative committee. Not guilty, unanimous. 4. Misdemeanor, in attempting to suppress testimony by deceit, fraud and threats. Guilty, 43; not guilty, 14. 5. Misdemeanor, in wilfully preventing a witness from appearing before the Frawley legislative committee. Not guilty, unanimous. 6. Larceny, in converting campaign contributions to his private use. Not guilty, unanimous. 7. Corrupt use of office in attempting to influence the vote and actions of public officers. Not guilty, unanimous. 8. Using his authority or influence as governor in affecting the price of securities on the stock exchange. Not guilty, unanimous. Shall the Governor be removed from office? Yes, 43; no, 12. Shall William Sulzer be disqualified from again holding office? No, unanimous."—J. W. Forrest and J. Malcolm, *Tammany's treason: Impeachment of Governor William Sulzer*, pp. 57-58, 74-77, 103, 108, 120, 138, 173-174.—Governor Sulzer was then declared removed from office and Lieutenant Governor Glynn became governor. Mr. Sulzer, however, refused to leave the executive mansion and for some time the two men remained in Albany, each claiming to be the governor and each exercising executive functions.—In 1913 an eight-hour day was provided for women and children employed on public works. The labor department was reorganized.

1913.—**Bureau of social hygiene.**—The bureau of social hygiene was incorporated June 10, 1913, having been organized in 1911 for the study, amelioration, and prevention of those social conditions, crimes, and diseases which adversely affect the well-being of society, with special reference to prostitution and the evils associated therewith. It was a result of the work of the special grand jury appointed to investigate the white slave traffic in New York City, during the first half of 1910. It immediately established at Bedford Hills, a laboratory of social hygiene, under the direction of Dr. Katherine B. Davis, adjacent to the reformatory for women. In this laboratory the physical, mental, social, and moral side of each person committed to the reformatory is studied.

1914.—**Charters.**—Under Martin H. Glynn a law was passed to permit second and third class cities to adopt optional forms of charters.

1915.—Laws passed.—Constitutional convention.—Industrial commission.—Under Charles Whitman laws were passed to provide pensions for widowed mothers and child welfare; a military training commission was created; laws for improving state guard and naval militia. A constitutional convention was held, of which Elihu Root was president. The chief effort of the convention was directed toward the consolidation of the 152 departments and commissions of state under a few chief officers, responsible to the people. On advocating this plan Mr. Root said: "I am going to discuss a subject now that goes back to the beginning of the political life of the oldest man in this Convention, and one to which we cannot close our eyes, if we keep the obligations of our oath. We brag about the government of the Constitution. We have spent many days in discussing the posers of this and that and the other officer. . . . From the days of Fenton, and Conkling, and Arthur, and Cornell, and Platt, from the days of David B. Hill, down to the present time the government of the State has presented two different lines of activity, one of the constitutional and statutory officers of the State, and the other of the party leaders,—they call them bosses. They call the system,—I don't coin the phrase, I adopt it because it carries its own meaning,—the system they call 'invisible government' . . . Mr. Chairman, we all know that the halls of this capitol swarm with men during the session of the Legislature on pay day. A great number, seldom here, rendering no service, are put on the payrolls as a matter of patronage, not of service, but of party patronage. Both parties are alike. The system extends through all. Ah, Mr. Chairman, that system finds its opportunity in the division of powers, in a six-headed executive, in which, by the natural workings of human nature there shall be opposition and discord and the playing of one force against the other, and so, when we refuse to make one Governor elected by the people the real chief executive, we make inevitable the setting up of a chief executive not selected by the people, not acting for the people's interest, but for the selfish interest of the few who control the party, whichever party it may be. Think for a moment of what this patronage system means. . . . Mr. Chairman, this Convention is a great event in the life of every man in this room. A body which sits but once in twenty years to deal with the fundamental law of the State deals not only for the present but for the future, not only by its results but by its example. Opportunity knocks at the door of every man in this assemblage, an opportunity which will never come again to most of us. While millions of men are fighting and dying for their countries across the ocean, while government is become serious, sober, almost alarming in its effect upon the happiness of the lives of all that are dearest to us, it is our inestimable privilege to do something here in moving our beloved State along the pathway towards better and purer government, a more persuasive morality and a more effective exercise of the powers of government which preserve the liberty of the people."—E. Root, *Invisible Government* (*American Review of Reviews*, Oct., 1915).—Martin H. Glynn, succeeded as governor. Laws were passed relative to abolishing State conventions in party nominations; a workman's compensation law, measures restricting the hours of labor; the construction of certain types of tenement-houses; vocational and industrial education in public schools and medical inspection; vital statistics placed under the state department of health; and sale and securities by

brokers restricted by the anti-bucket shop law. A commission was appointed to examine the subject of pensions for widowed mothers and a department of economy and efficiency was created in public service. "Following the excellent work of the New York Factory Investigating Commission from 1912 to 1914 and the large amount of legislation which incorporated its recommendations into what was practically a rewriting of the labor law of the state, no more important or widely discussed labor legislation has been adopted in the state than the act of 1915 which created the New York Industrial Commission. It was a radical step taken by a conservative legislature. It placed in the hands of five men grave responsibilities, and gave them great powers—administrative, quasi-judicial, and quasi-legislative—for the adaptation, specific application, and rigid enforcement of the protection which the statute law of the Empire State had thrown around its millions of wage earners. It combined in one authority the functions of the largest labor department in any state of the union and the duties of the greatest workmen's compensation commission in the country. It touched intimately and at many points the welfare and the rights of at least 2,000,000 wage-earners and indirectly 1,000,000 more. These included hundreds of thousands of various nationalities, speaking many languages, some of them recent immigrants only partially adjusted to American life, but all living under the stress and strain of our most complex and severely competitive industrial conditions. . . . An unsalaried industrial council, with advisory powers only, was to be appointed by the governor, five members to represent employers and five to represent employees. Its purpose was not only advisory to the commission in matters of general policy, but also to the state civil service commission in certifying lists for appointments in the department, as well as to bring representative employers and labor men together for conferences on questions arising in the administration of the laws. As under the old law, temporary joint committees might be appointed to assist in the formulation of rules for different trades."—*Labor law administration in New York* (*American Labor Legislation Review*, June, 1917, pp. 227-252).

1917-1918.—Part in World War.—New York furnished 367,864 soldiers, which was 0.70 per cent of the whole American Expeditionary Force. Most of the laws passed during this period dealt with the new conditions produced by the World War. New York City was the scene of many imposing parades and ceremonies. Two military cantonments were established: the National Guard troops were stationed at Camp Mills, Mineola, and the National Army at Camp Upton, Yaphank. The former included troops of many States, as well as the 60th Regiment of New York, and the body trained here was called the Rainbow Division. Camp Upton sheltered selected men of the National Army from New York City. At Spartanburg, S. C., a camp for the former regiments of the New York National Guard was formed. On April 20, the 27th Division of the New York National Guard marched in review down Fifth Avenue; and on September 4, the first of the state's quota for the new national army paraded

on Fifth avenue. On September 11, the Seventh Regiment left for Camp Wadsworth, Spartanburg, S. C., followed on the 14th by the former 12th Regiment.

1919.—Bills.—Income tax.—In 1919, 4,000 bills were introduced in the legislature, but few became law. Among them were provisions for increase of salary for school teachers in rural districts and cities; a measure for cooperating with New Jersey in constructing a vehicular tunnel through the Hudson river between New York and New Jersey; reorganizing public service commission in New York City; establishing scholarships for soldiers, sailors and marines in the World War; the ratification of Federal Prohibition Amendment; for providing a bridge over the Mohawk river at Schenectady known as the Great Western Gateway. Bills were passed compelling boys between 16 and 19 to undergo military training. A military census of the state was taken, the National Guard was increased and there were legal provisions for registering aliens, creating a council of farms and markets, commissions on food, production and supply, council for state defense and the prohibition in public schools of text books containing seditious matter or material disloyal to the United States. An income tax law was passed by the legislature in 1919. This law provides for a graduated system of taxation. Incomes up to \$10,000 will pay 1 per cent; incomes from \$10,000 to \$50,000 will pay 2 per cent; and all incomes over \$50,000, 3 per cent per year. An exemption of \$1,000 is made in the case of unmarried men and \$2,000 in case of married men. A provision of the law also taxes business corporations $4\frac{1}{2}$ per cent. "For many years the state and local revenue system of New York, like that of all other American commonwealths, consisted of the general property tax. Under the economic conditions of the period and especially where the burden of taxation was comparatively slight this constituted a relatively satisfactory method. It was not until after the Civil War that complaints began to multiply. As in every advanced industrial and commercial community, it became increasingly difficult to reach personal property; and as the expenditures of government gradually rose, this inequality of burden became more and more patent. In New York, as the foremost industrial state of the Union, the incipient discontent took the form of the appointment of an investigating commission. Mr. David A. Wells, who approached the subject, flushed with the success of his efforts in reforming the federal internal revenue system, went so far in his reports of 1871 and 1872 as to recommend the abolition of the personal property tax. This suggestion, however, was so radical and premature that nothing came of it. Toward the beginning of the second decade of the present century a new situation developed. An unlooked-for tendency in the direction of vastly increased outlays on the part of both state and locality now appeared; the final fruits of a democracy which was determined to utilize government to achieve definite social ends disclosed itself. In the state government the ex-

penditures went up by leaps and bounds, not only because of the assumption by government of such functions as the care of the hospitals and the administrative supervision of many forms of industry and transportation but more especially because of the program of improved roads and of an enlarged Erie Canal. The result was that the augmented current expenses together with the provision for the rapid amortization of the large debt before long took up the entire slack of the so-called indirect taxes and rendered necessary in 1912 the reimposition of a state direct tax, first in a hesitant and then in a more determined way. It was thus made clear that the system of separation of source, which had done good service in the interval, could not be regarded as a final solution of the problem and that while it had indeed served to postpone the crisis and undeniably possessed certain elements of lasting worth, the next stage of reform must be sought elsewhere. In the meantime the local situation had become aggravated. Just as New York state in its fiscal reforms and in its adoption of the principle of separation of source paved the way for many other commonwealths, so what was happening in New York City repeated itself before long in the other industrial centers of the state. In New York, as elsewhere, personal property had almost entirely disappeared from the assessment lists, so that the local tax had become virtually a tax on real estate. As the local expenses increased by leaps and bounds and as the base of taxation was gradually narrowed instead of broadened, the tax rate began to climb to alarming figures. The real-estate interests now clamored for relief; and the public at large, which realized that the tax on buildings at least was shifted to them in the shape of increased rent, seconded the efforts of the real-estate owners. . . . By the end of 1918, however, the crisis in the state, as well as in some other cities besides New York, had become so acute that a special legislative committee, headed by Senator Davenport, was hurriedly constituted. As a result of its recommendations, and of the energy and sagacity of its chairman, the law of 1919 was enacted. Thus for the first time in American history a leading industrial state discarded the general property tax and substituted a general income tax on both individuals and corporations. . . . Summing up, then, the entire discussion, it will be realized that the New York law is of more than passing significance. It strikes out a new path in at least five points; in its close adherence to the language of the federal law, in its principle of local apportionment, in its treatment of residents and nonresidents, in its virtual elimination of personal property taxation and in its commanding importance as the paramount factor in the fiscal system. It is thus the first comprehensive attempt made in the United States by a leading commonwealth to substitute for an outworn and makeshift policy a well-rounded system of state and local taxation. From this point of view, it is of far more than local importance; for if, as is confidently to be expected, the law should prove to be a success from both the fiscal and the economic points of view, there is but little doubt that it will serve as a model to be followed by other states as they approach the stage of economic development attained in New York. The public at large, which is always more ready to criticize than to appreciate and which naturally looks askance at any method of extracting increased funds from the pockets of the unwilling taxpayer, can perhaps not be expected to recognize the far-reaching implications of the pres-

ent reform. But to the discerning student it is clear that what has been accomplished in New York is a real fiscal revolution, the beneficent results of which will gradually be realized by the community at large. In this sense the New York income-tax law of 1919 constitutes an important milestone in the economic and political development of the United States."—E. R. A. Seligman, *New York income tax* (*Political Science Quarterly*, Dec., 1919).

1920.—Expulsion of Socialists from New York state legislature.—Protest of Hughes.—Bills.—"The drama began in the Assembly on January 7. Speaker Sweet called upon the Sergeant-at-Arms to produce the five Socialists before the bar. . . . Mr. Adler, Republican floor leader . . . [read] a resolution denying seats in the Assembly to the five Socialists, 'pending the determination of their qualification and eligibility to their respective seats,' by a Judiciary Committee, yet to be appointed. This resolution recited that: (1) The five Assemblymen were members of the Socialist Party of America; (2) The party had declared 'its adherence to and solidarity with the revolutionary forces of Soviet Russia,' and was pledged to the furtherance of the international socialist revolution; (3) It had thereby endorsed the principles of the Communist Internationale, which was pledged to the violent overthrow of all organized governments; (4) The Assemblymen had agreed on joining to be guided by the constitution and platform of the Socialist party; (5) If they did not carry out the instructions of the dues-paying members of the party, they were subject to suspension from the party; (6) The Executive Committee, which might give them such instructions, might be made up of aliens or alien enemies; (7) The party had declared that only the class struggle could justify taking up arms; (8) The party had urged its members to refrain from taking any part in the war; (9) The party had been 'convicted of a violation of the Espionage act of the United States.' The charges, obviously, were charges against the Socialist party, not against the individual Assemblymen who were members thereof; and it was chiefly on that ground that the New York City Bar Association protested against the proceedings and sent a committee, headed by Charles E. Hughes, to Albany 'to safeguard and protect the principles of representative government which are involved in the proceedings.'"—L. S. Gannett, *Socialists' trial at Albany: A summary* (*Nation*, Mar. 20, 1920).—"The trial which was to determine whether representative Government should survive in the United States was opened in the Assembly Chamber at Albany on January 20, 1920. . . . The Judiciary Committee, acting with the 'reasonable speed' promised by Chairman Martin in his opening statement, took three weeks to frame its report. It was handed in on March 30, a little less than three months after the act of suspension. The report was by no means unanimous. With all the pressure that the Speaker brought to bear, the prosecution was able to muster a majority of only one, the vote of the Committee being seven

to six. . . . Upon motion it was decided that action upon these reports be taken March 31. An unusually large crowd gathered and packed the Assembly chamber on this day as early as 11 o'clock in the morning. At the very beginning a struggle opened between the Republicans and Democrats, the latter trying to have consideration of the reports postponed for 24 hours. The purpose of this was to relieve Governor Smith . . . of the duty of calling special elections, inasmuch as under the Constitution, a vacancy occurring after March 31, cannot be filled for the regular legislative term. A compromise was arrived at under which 'unlimited debate' was agreed upon, so that the proceedings might be dragged out until the day following. This would prevent the five Assemblymen from being immediately reelected in case their constituencies so voted. . . . Each accused Assemblyman was balloted upon separately. The first vote was upon Waldman. The result was 115 to 28, for expulsion. The Speaker then triumphantly announced: 'The resolution having been duly passed, I declare the seat of Louis Waldman vacant.' The same process was repeated at the end of the balloting on each Socialist member. Solomon and Claessens were declared expelled by a vote of 116 to 28. DeWitt and Orr, last to be voted upon, were permanently unseated by a vote of 104 to 40. Of the Republicans 98—taking the highest vote—voted for expulsion, 18 Democrats joining them, against 11 Republicans and 17 Democrats. A majority in both parties thus voted for expulsion."—L. Waldman, *Albany: The crisis in government*, pp. 50-51, 220-221, 229.—"Aside from their membership in the Socialist party there were no charges presented against these men as individuals. There is no question that they were legally elected. Briefly stated, the charges are that the Socialist party last August officially adhered to the revolutionary forces of Soviet Russia, and pledged its members to the International Socialists Union; that it has indorsed the principles of the Communist Internationale, which is pledged to the forcible overthrow of all organized governments, and requires its members in their political action to be guided by the constitutional platform of their party, those of its members who hold public office to follow the party's instructions under penalty of expulsion; that such instructions may be given by an executive committee made up in party by aliens; that the Socialist party has declared that the only justifiable use of arms is for the class struggle and has pronounced against the false doctrine of national patriotism; that it urged its members not to take part in the war against Germany; and that it is to the principles of this party, which has been convicted of violation of the Espionage Act of the United States, that these men have subscribed. Against this action of the Assembly there has been raised a great protest. Most notable among the expressions of this protest is that from Charles Evans Hughes, formerly Governor of New York, Justice of the United States Supreme Court, and Republican candidate for President. In his letter to the Speaker of the Assembly he says that 'the high prerogative of the Assembly to pass upon the qualifications of its own members should be exercised in accordance with the spirit of our institutions,' and that it is contrary, not only to that spirit, but to the fundamental principles of our Government 'for a majority to undertake to deny representation to a minority through its representatives elected by ballots lawfully cast.' In his judgment it is not American government to attempt to indict a political party. If men are plotting against the

Government, let them be ferreted out and punished according to our laws. But he regards it as a serious mistake to proceed against masses of our citizens combined for political action."—*Case of New York Socialists (Outlook, Jan. 21, 1920.)*

1920.—Bills.—Reforms.—The principal bills passed were for increase in salaries of public school teachers carrying an appropriation of \$20,500,000; regulation of boxing matches; bonus to military and naval veterans of the World War, bond issue not to exceed \$45,000,000; and rent laws occasioned by the housing situation. (See also NEW YORK CITY: 1920; HOUSING: United States: New York state legislation.) "In his annual message to the Legislature, just published, this Executive [Governor Smith] solemnly proposes the following ultra-radical laws: (1) a minimum wage; (2) the eight-hour day for all women workers; (3) maternity insurance for expectant mothers; (4) the extension of workmen's compensation to cover occupational illnesses and accidents; (5) the appointment of State physicians and nurses in rural communities now destitute of medical aid, in co-operation with those communities; (6) the ownership, development, and operation of all water-powers by the State; (7) State owned and operated grain elevators in three cities after the manner of the Nonpartisan League experiments in North Dakota; (8) the recognition of the production and distribution of milk as a public utility, subject to the control of the State in all details; and (9) the municipal operation of public utilities. . . . These recommendations for the extension of State control over such private industries as grain storage and the production and marketing of milk emanate from Governor Smith of New York. Yet, curiously enough, they do not seem to have aroused the chorus of disapproval in the daily press which would have arisen had a Western Governor urged, for instance, the socialization of the milk supply. The latter interferes with personal liberty and private business with a vengeance, yet Governor Smith sees no other way to assure a cheap and safe supply of milk for the masses."—*Nation, Jan. 17, 1920, p. 63.*—"Orthodox American traditions favoring diffusion of governmental powers still find an anchorage in the entanglement of our legislative bodies. So it seems, at least, after watching the brief legislative career of the New York reconstruction program. A non-partisan commission appointed by Governor Smith had recommended constitutional changes providing for the short ballot, centralizing in a few great departments the widely scattered administrative functions, lengthening of the governor's term and establishment of the executive budget. Prominent Republicans had helped to produce the plan, which in fact had its root back in the New York constitutional convention of 1915. It was endorsed by most of the strong chambers of commerce and civic bodies throughout the state. . . . [The program of reform recommended by the reconstruction commission were the following:] Secretary of state, state treasurer and state engineer and surveyor (now elective) made appointive by the governor. State comptroller's large administrative powers which made him almost a rival of the governor in his control of patronage, transferred to departments under the governor, leaving the comptroller simply as an elective auditor with a small office. Various important but much neglected boards made up of minor elective officers, ex officio, abolished. The present 187 boards, commissions and bureaus consolidated into twenty-one logical departments whose heads for the most part are to be appointed

by the governor with the consent of the senate and subject to removal by the governor 'in a manner to be prescribed by law,' which is likely to mean the requirement of senatorial consent in certain cases. No additional departments may be created hereafter. The legislature varied from the reconstruction commission's bill by dividing the department of taxation and finance and adding the superfluous department of architecture."—R. V. Ingersoll, *Short-ballot victory in New York (National Municipal Review, June, 1920).*—"The constitutional amendments advocated by the State Reconstruction Commission for an executive budget, for lengthening the governor's term to 4 years and for reorganizing the large number of widely-scattered administrative boards and commissions into 19 departments, all failed to pass. However, three alternative amendments to the same general effect as the amendment proposing to reorganize the administrative departments were adopted and will come before the next legislature for second approval. Another amendment adopted provides for a legislative instead of an executive budget. Three sedition bills, introduced by the Lusk Committee, providing for a bureau of secret police in the office of the attorney general, for the licensing of all schools and school courses, and for loyalty tests for teachers, were all vetoed by the governor, as were also the bills making members of the Socialist party ineligible for political action and making ineligible for office any member of a party which the courts might regard as endangering the government by its principles. [Similar school bills were passed the following year and signed by Governor Miller.] One of the bills for relieving the housing conditions provides that an increase of rent that is over 25 per cent more than the rent one year before is presumptively unjust and unreasonable. On the last day of the session a bill making substantial increases in the salaries of teachers in the public schools of the state was enacted. The bill appropriates \$20,500,000 for the purpose. Bills providing for bringing all industrial illness under the Workmen's Compensation Law [see also SOCIAL INSURANCE: Details for various countries: United States: 1920]; for a minimum-wage commission; for extending the 8-hour day to all women and minors in mercantile and industrial establishment; and several other welfare measures, failed to pass. The Walker-Gillett Bill, defining intoxicating liquors as those 'containing more than 2.75 per cent of alcohol by weight,' was passed and signed by the governor."—E. D. Graper and H. J. Carman, (*Political Science Quarterly, 1920, Supplement, pp. 74-75.*)—See also LIQUOR PROBLEM: United States: 1919-1920.

1921.—Poor relief. See CHARITIES: United States: 1921.

1921.—Bonus Act.—Traction.—Prohibition.—On August 31, the New York Court of Appeals ruled that the Bonus Act was unconstitutional, and provided for a bond issue of \$45,000,000 for the payment of the soldiers bonus. Laws were passed recognizing the state public service commission and creating for New York City a transit com-

mission of three members with power over local transportation. Governor Miller's special message setting forth his views as to how the City's traction problem should be solved was sent to the Legislature on January 24th. . . . Transportation, the Governor maintains, is a public function within the regulation of the police powers of the State. . . . He recommended to the Legislature that legislation be framed amending the public service law and placing all public utilities under the jurisdiction of a single State commission with provision for the creation of a commission of three with powers to investigate, unify and reorganize New York City's traction systems. These commissions, he urged, should be given complete power to work out the problem regardless of local franchise or contract provisions and power to readjust rates, despite the fact that rates might be already prescribed. The message fell like a bomb-shell in New York City. It met with strong approval in some quarters and with a storm of opposition in others. The loudest opposition came naturally from those connected with the Hylan Administration, but many New York Republicans, including the two Republican members of the Board of Estimate were frankly critical or hostile. . . . The Governor's bill was introduced on February 16 in the Senate by Senator John Knight of Wyoming County, Chairman of the Senate Committee on Public Service, and in the Assembly by Assemblyman Simon L. Adler of Monroe County, Majority Leader. As introduced the bill contained many provisions that had not been indicated in the Governor's message or in his statements to the newspapers, or in a letter which he wrote to General Oliver B. Bridgman, in which he outlined what he thought the procedure would be under the bill if it became law. . . . A public hearing was held on the bill at Albany on March 2nd, at which many cities of the State, in addition to New York City, were represented in opposition. The principal advocacy of the bill came from representatives of a New York City committee formed to further the measure. Prior to this hearing several amendments had been announced. After the hearing the bill was amended in a hundred or more places."—*Searchlight (Citizens Union, New York, Mar., 1921, pp. 1-3)*.—"The Knight-Adler bill, reorganizing the Public Service Commissions and creating a transit commission in New York City, was reported out of the Senate Committee on Public Service and the Assembly Committee on Judiciary to-day in a revised and more drastic form. . . . More power than was ever intimated by Governor Miller, who presided over the drafting of the measure, is given the transit commission by the bill as reported out. The commission is given power under a new amendment to increase fares in New York City the moment it is appointed by the Governor. Opponents of the bill declare this will mean an 8-cent fare. The most criticized feature of the bill, which permits the transit commission to force the city to take over any lines it sees fit, even though the city should unanimously vote against such a proposition, is retained. The power to increase rates of gas companies, electric light, telephone and other public utilities also is retained. With respect to gas and electric light companies, the bill is made even more drastic, so far as the consumer is considered, for it permits the fixing of a sliding scale of rates determinable upon the amount of gas or electricity used and the time at which it is used."—*New York Tribune, Mar., 9, 1921*.—"The Knight-Adler Bill passed the assembly on March 22 and was signed by the governor.

(See NEW YORK CITY: 1921: State transit commission.)—Other laws dealt with a charter commission to revise the New York City charter; repeal of presidential primaries; placing administration of the Income Tax law under the authority of the state tax commissioner; reorganizing the departments of labor and provisions regarding the employment of women and children; providing for the establishment of country libraries; abolishing the military training commission; provision for the protection of foreigners sending money abroad; commission on motion pictures and regulation of film exhibition. New York state's prohibition enforcement law, known as the Mullan-Gage Act, was declared constitutional by Judge John F. McIntyre in the court of general sessions, April 29, 1921. In making the ruling, Judge McIntyre said that the "State law is substantially the same as the Volstead Act which has been upheld by the Supreme Court of the United States," and that he "would hold the law unqualifiedly constitutional." "By this act intoxicating liquor is defined to be alcohol, brandy, beer, ale, wine, etc., and any spirituous liquids and compounds whether medicated, proprietary, patented or not, containing one-half of 1 per cent or more of alcohol by volume. . . . [It was] passed and approved by the Governor (Miller), April 4, 1921."—*State Introductory Number Record, New York Legislative Record and Index (Albany, Jan. 5-May 16, 1921)*.

1922.—Tolbert-Ullman Amendment.—New York-New Jersey vehicular tunnel.—Welfare laws.—"The New York legislature adjourned on March 18 after having passed a large number of highly important measures. Probably the most important constitutional amendment approved by the 1922 legislature was the Tolbert-Ullman amendment providing for a certain amount of municipal home rule. If the 1923 legislature also approves, it will then go to the voters for approval. For many years the cities of the state have been agitating for greater control over their local affairs. The annual appropriation bill carried almost \$103,000,000. But in addition to this there were many other appropriations made for specific purposes. These included \$5,500,000 for the New York-New Jersey vehicular tunnel, \$1,300,000 for canal improvement, \$2,500,000 for forest preserves, and \$1,000,000 for veterans' relief. The legislature approved the Port Authority plan for developing the port of New York in preference to the plan advocated by the New York City administration. Nine of the eighteen bills presented to the legislature by the Lockwood Housing Commission were passed by the two houses. These measures permit life-insurance companies to invest ten per cent of their assets in the erection of buildings for dwelling purposes; extend the emergency rent laws for New York until February 15, 1924; extend the tax-exemption building law until April 1, 1923; grant to mutual insurance companies the same rights to do business in the state as stock companies, subject to the supervision of the Superintendent of Insurance; prevent mutual companies from becoming stock insurance companies; and fix assessments as the basis for determining the reasonableness of rents. One measure which the committee considered of the greatest importance, that for the establishment of a trade commission for suppressing combinations in restraint of trade, was killed by the assembly rules committee. The legislature also passed a law simplifying election procedure. One section of the law provides that election officers may accept, in lieu of an examination of literacy at the registra-

tion place, a certificate of literacy issued by school officials, public or otherwise, under rules issued by the board of regents. It was also provided that women should have representation on country party committees. The state workmen's compensation law was revised and simplified in the interest of workmen. Several welfare laws were enacted during the session. Two measures outline the functions of the children's courts and boards of child welfare under the constitutional amendment adopted last November, and in accordance with the governor's recommendation further provision was made for the care of the blind, deaf and dumb by the state. Largely on account of Governor Miller's opposition, the provisions of the federal Sheppard-Towner maternity law were not accepted. Instead, the state legislature by enacting the Davenport Bill entered upon a maternity and infancy program to be carried out as an exclusively state function. There was appropriated for this purpose \$130,000. No action was taken on health insurance, the eight-hour day, and the minimum wage proposals."—H. J. Carman and E. D. Graper, *Political Science Quarterly*, 1922, *Supplement*, pp. 45-46.

1922.—Agreement of Building Trades Union with Lockwood housing committee. See HOUSING: United States: New York state legislation.

1923.—Walker-Donohue resolution.—Repeal of Mullan-Gage Act.—The Walker-Donohue concurrent resolution urging Congress to modify the Volstead law so as to permit the manufacture and sale of light wines and beer, was adopted by the Assembly February 20, by a vote of 78 to 64. Fourteen Republicans joined with the Democratic majority in supporting the resolution.

The Mullan-Gage Prohibition Enforcement Act was repealed by the Cuvillier Bill, signed by Governor Smith, June 1, 1923. This repeal was the subject of wide-spread discussion throughout the nation. In a letter to Wesley Wait of Newburgh, N. Y., President Harding said, "It will be obvious that many complex and extremely difficult situations must arise if any of the States shall decline to assume their part of the responsibility of maintaining the Constitution and the laws enacted in pursuance to it. The States are equipped with police organizations and judicial establishments adequate to deal with such problems. The Federal Government is not thus equipped." In a 4,500 word memorandum Governor Smith stated his reasons for signing the bill. He denied that the repeal of the Mullan-Gage Act would involve a nullification of the Eighteenth Amendment so far as the State of New York was concerned. "The mere omission to maintain a State statute in no way abrogates a Federal statute. . . . I am entirely unwilling to admit the contention that there was put upon the State, either by the Eighteenth Amendment, the Volstead Act, or the United States Supreme Court decision, any obligation to pass any law adopting into the State law the provisions of the Volstead Act. . . . The Eighteenth Amendment gives Congress and to each of the forty-eight states the concurrent right to enforce the amendment. It does not create a duty." "Repeal of the law, he said, would not make legal a single act which was illegal while it remained on the statute books. It would not make possible the traffic in light wines and beer. It would not interfere with rigid enforcement by the State authorities of the Volstead law. Repeal would transfer prosecution of prohibition cases to the Federal courts. It would do away with 'double jeopardy' of State and Federal prosecution for the violation of laws enforcing the Eighteenth Amend-

ment."—The United States (*New York Times Current History*, July, 1923, p. 683).

NEW YORK CITY.—New York is the largest city of the United States, and after London the largest in the world. It is situated in New York state, at the mouth of the Hudson river, which enters the Atlantic ocean through New York bay. New York harbor is one of the finest in the world, and has made the city the commercial metropolis of the western hemisphere. The territory comprised within the city is divided into five boroughs: Manhattan, Brooklyn, Bronx, Queens, and Richmond. The following details from the 1920 census of New York show that the native whites in 1920 numbered 1,164,834, an increase of 243,516 since 1910, and the foreign-born whites numbered 4,294,629, having increased by 546,758 since 1910. The foreign elements in the order of their numbers are: Russians, 994,356, Italians, 802,803, Irish, 637,744, Austro-Hungarians, 603,167, and Germans, 593,199. The greatest percentage of increase between 1910 and 1920 was that of the Italians.—Based on *Population of New York City (Independent, May 13, 1922)*.—The total population of New York City in 1920 numbered 5,620,048, and in 1922 was estimated at 5,839,738.

1524.—Discovery of New York bay by Verazano. See AMERICA: 1523-1524.

1609.—Henry Hudson's exploration of the river named after him. See AMERICA: 1609.

1610-1614.—Beginning of Dutch fur trade with Indians. See NEW YORK: 1610-1614.

1614-1677.—Earliest water supply of New Amsterdam.—Public wells.—"The Dutch, who first settled in New York, calling it New Amsterdam, made use of springs and ponds from 1614 up to late in the eighteenth century. They also dug wells, either one family for its own use, or several families combining to save expense. The first public well was dug in 1658 when Peter Stuyvesant was Director-General. Ten years later Governor Nicolls, under English rule, had a well dug in Fort Amsterdam and another outside at Bowling Green."—J. L. Stockton, *City's water supply (Outlook, Oct. 1, 1919)*.

1623.—First permanent settlement on Manhattan island.—"Bound by a provision of their charter to 'advance the peopling of unsettled lands,' the West India Company in 1623, sent to the 'wild coast' of New Netherland, thirty families of Walloons, a Protestant people of French extraction. The greater number of these industrious persons were destined for the settlement at Fort Nassau, but eight men were landed on Manhattan Island (foot-note—disposition of Catelyn Trico, taken in 1688 [New York Col. Mss.] . . .) and Captain Cornelis Jacobson Mey was made the first director over all the territory included within the jurisdiction of the Company."—J. M. Colton, *Annals of old*

1623-1644.—New Netherland a province of the Dutch West India Company. See NEW YORK: 1621-1646; 1647-1664.

1626.—Purchase of Manhattan island by Peter Minuit.—“In 1626 Peter Minuit came out as director general of New Netherland, and the government of the province became more formal and definite. A council of five assisted the director. . . . Minuit’s administration was distinguished by the purchase from the Indians of the entire island of Manhattan for sixty guilders or about twenty-four dollars. The transaction to the honest Dutch traders was so simple and proper that no glamour was

ment was an enclosed clearing for the protection of the cattle of the burghers. . . . Thus the site of the present Bowery was the first extensive clearing, outside the settlement, made on the Island of Manhattan.”—E. R. and M. A. Hewitt, *The Bowery (Historic New York, pp. 360-362)*.

1638.—European companies allowed to trade with province of the West India Company. See NEW YORK: 1638-1647.

1643.—Cosmopolitan nature of province.—A report of 1643 shows that not less than eighteen languages were spoken by the 400 or 500 inhabitants of New Amsterdam.

1653.—New Amsterdam becomes a city. See NEW YORK: 1653.

1657.—Burgher rights.—Only those inhabitants who possessed either the “great burgher right” or the “small burgher right,” or were employees of

NEW AMSTERDAM ABOUT 1667
 (From an old print)

thrown about it.”—E. H. Roberts, *New York, v. 1, p. 37*.

1633.—Grant of “staple right.”—In 1633 a grant of “staple right” gave to New Amsterdam the privilege of compelling all vessels passing her port either to sell their cargo or pay a duty.

1637-1647.—The Bowery.—“The town was a trading-post; but very early in its settlement it became evident to the ruminating minds of the Dutch West India Company that the fur trade was good, but that farmers they must have. . . . The West India Company accordingly offered each farmer free transportation over sea . . . and on his arrival the grant of a ‘bouwerie,’ or farm of partly cleared land partly ready for the plow. . . . Early in Governor Kieft’s reign, 1637-1647, the island between Wall Street and Fourteenth (approximately) was divided into six bouweries. . . . Mr. Valentine recounts the next attempt in the settlement of a little elevation at about the junction of Chatham Street and the Bowery. . . . Here a giant negro, known as Emanuel de Groot, was allowed to form a settlement. . . . In the midst of the settle-

the West India Company, were allowed to engage in commerce or work at any trade or profession. Only the “great burghers” could hold important offices.

1657.—Purchase of fire apparatus.—Late in 1657 “a more efficient fire protection was undertaken. Unpaid fire warders had long existed, whose duty it was to inspect fireplaces and chimneys. It was now determined to purchase fire ladders, hooks, and buckets. For defraying the original cost of these a tax of one beaver or eight florins was levied.”—E. D. Durand, *City chest of New Amsterdam (Historic New York, pp. 170-177)*.

1658.—First pavement of streets by the city.—Brewer Street, later called Stone Street, was the first thoroughfare in New York to be paved in the modern manner. It affords, also, one of the earliest instances of local assessment for public improvements. “The matter of this much-needed work had been debated by the burgomasters and schepens early in 1658, the alternative lying between the plan of requiring each lot-owner himself to perform the work, . . . and that of making the cost a gen-

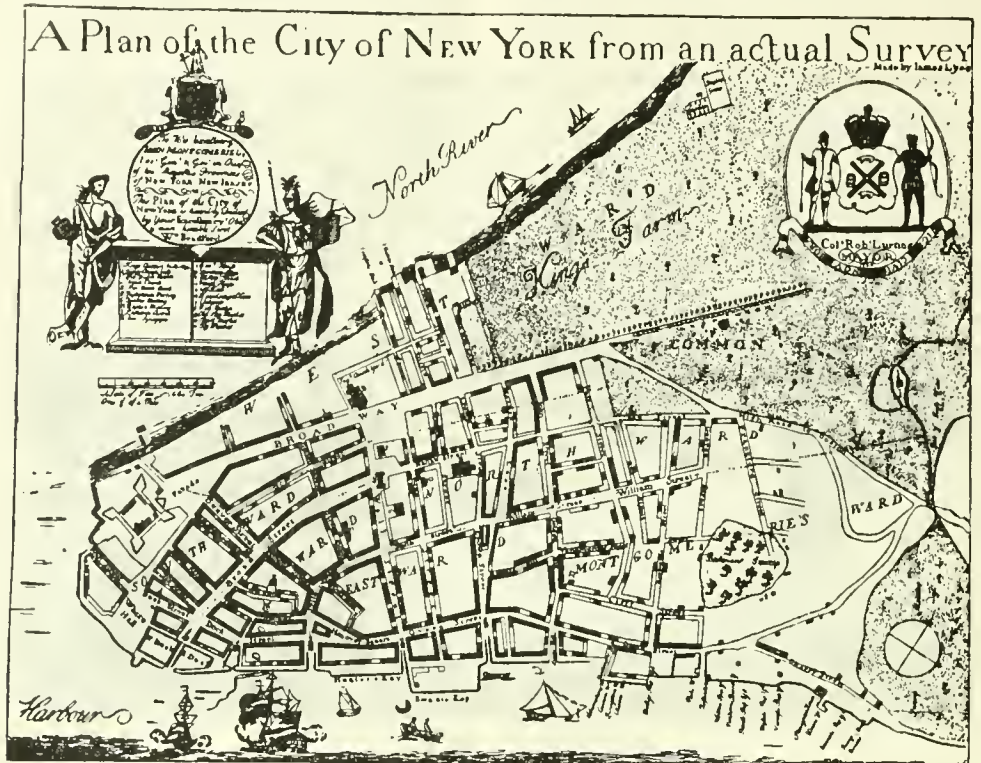

eral city burden. It was a petition of the citizens themselves along the street which proposed the intermediate and far preferable course of having the work done by the city and the cost assessed on the abutting property; such assessments they declared themselves willing to pay. This plan was adopted by the city council, January 21, 1658. Two burghers were appointed to manage the work."—E. D. Durand, *City chest of New Amsterdam (Historic New York, pp. 177-178)*.

1664.—English conquest. See NEW YORK: 1664.

1665.—Reorganization of government.—In 1665 the government was reorganized. The Mayor and

tending to low water mark. In 1708, Governor Cornbury granted the municipality the lands between high and low water marks on the Brooklyn shore, extending from Wallabout to Red Hook, and the right to control the establishment of all ferries from New York to the adjacent shores. In 1730, Governor Montgomery granted to the City the land under water of the North River to a line 400 feet offshore from low water mark, between a point about at the foot of King Street to Battery Place, and on the East Side between Whitehall Street and Corlears Hook. The Montgomery Charter also extended the City's jurisdiction to the low-water mark on the Brooklyn and Jersey shores. In 1833, however, an agreement was made with the

MAP OF NEW YORK CITY TWO HUNDRED YEARS AGO
Original drawn by James Lyne and printed by William Bradford, 1728

aldermen were to be appointed by the governor of the province.

1666.—New Harlem.—New Harlem was made a town within the city of New York.

1673.—Post road.—A post road was constructed from New York to Boston.

1673.—Recapture by the Dutch. See NEW YORK: 1673.

1683.—First New York assembly.—After a quarrel between the duke of York and the merchants of the city, the latter insisted that they would pay duty only if imposed by an assembly in which they were represented. The duke found it necessary to consent, and the first New York assembly met in October, 1683.

1686.—Dongan charter. See NEW YORK: 1686.

1686-1844.—Early water front development.—“In 1686, the Colonial Governor, Thomas Dongan, granted to the City of New York the waste, vacant and unappropriated lands on Manhattan Island ex-

New Jersey authorities by which the boundary line between the two States was fixed at the middle of the North River, New York, however, maintaining certain jurisdiction to the Jersey shore; that is, the State of New York retained exclusive jurisdiction over the waters of the Hudson River to low water mark on the Jersey shore, over ships and vessels, for quarantine and health purposes, to secure the interests of commerce and to preserve the public peace, etc. The Montgomery Charter gave the City the right to build wharves and piers and to make all necessary ordinances for regulating same. It also confirmed the City's power, granted by the Cornbury charter, to establish ferries from Manhattan Island to the opposite shores and to let or otherwise dispose of them. It was thus the City obtained exclusive rights of ferries to Brooklyn, Staten Island and New Jersey. . . . From the earliest time . . . the wisdom of increasing the City's dominion and control of the waterfront was fully

recognized; but, for a long time, the City was in no financial position to undertake any systematic improvement of the waterfront, and most of the wharves, piers and slips were built, during the early period of its history, by private capital on water grants fronting on privately owned upland. These grants of land under water prior to 1844 were nearly all made by the Common Council, thereafter by the Commissioners of the Sinking Fund; and, subsequent to 1770, contained reservations for public streets and avenues."—*Greater New York (Bulletin of the Merchants' Association, Feb. 5, 1917, pp. 12-13)*.

1701-1764.—Middle colonial period.—French and Indian War.—Royal governors.—Lord Cornbury.—Robert Hunter.—"The period between 1701 and 1764 is barren of events of great importance. . . . During this period the French and Indian wars troubled the peace of the city, and more than once she was called upon to furnish men and money for the protection of her northern frontiers."—C. B. Todd, *Story of the City of New York, p. 100*.—"In 1702, when Queen Anne had just ascended the throne, her nephew, Lord Cornbury, came out as governor. . . . [He] did the democracy a good turn by forthwith drowning the memory of its shortcomings in the torrent of his own follies and misdeeds. . . . He hated the popular party, and in all ways that he could he curtailed the political rights of the people."—T. Roosevelt, *New York, pp. 85-86*.—"Lord Lovelace succeeded Lord Cornbury as governor, and, on the former's death, in 1709, Colonel Robert Hunter was appointed Governor."—C. B. Todd, *Story of the City of New York, p. 100*.—"Robert Hunter . . . was a wise and upright man, who did justice to all, though, if anything, favoring the popular party. But the personality of the governor was rapidly becoming of less and less consequence to New York as the city and province grew in size. The condition of the colony and the policy of the British king and Parliament were the really important factors of the problem."—T. Roosevelt, *New York, p. 87*.

1712.—Negro uprising.—"During Governor Hunter's reign, a serious uprising of the negro slaves occurred. These were mostly Africans, as barbarous as when in their native wilds; and in 1712, a few of them, who had been badly treated by their masters, formed a plot to massacre the people indiscriminately. They met at midnight in an orchard not far from the present Maiden Lane, armed with guns, swords, butcher's knives, and other weapons, and, setting fire to an out-house, struck down the citizens who came running to put it out. Nine men were thus murdered and six severely wounded before any could escape and give the alarm; but at length the news reached the fort, and the Governor sent a detachment of soldiers to the scene, at the sight of whom the conspirators fled to the forests on the northern part of the island. Sentries were stationed at the ferries that night, and next day the militia was called out, and by beating the wood, succeeded in capturing all but six of the criminals, who committed suicide rather than suffer the vengeance of the whites. Those taken, twenty-one in number, were condemned and executed."—C. B. Todd, *Story of the City of New York, pp. 192-193*.

1725.—First newspaper. See PRINTING AND THE PRESS: 1704-1720.

1730.—Montgomery charter.—A new city charter was granted, which increased the privileges formerly given. It received its name from the fact that it was granted during Governor Montgomery's term of office.

1734.—Zenger's trial for libel. See NEW YORK: 1720-1734.

1740-1862.—Early pipe-line projects.—Public water works.—"Pumps became fashionable in the first half of the eighteenth century, and the old well-sweeps disappeared. A department of Overseers of Wells and Pumps was provided and taxes were levied to maintain it. In 1789, at the time of the formation of the United States, the Common Council of the City of New York approved bills for the repair of wells and pumps, amounting to over \$2,000. The most famous was known as the Tea Water Pump and was located at what is now Park Row, near Baxter Street. The water was fresh and pure. People came from all distances to use it. Later the water from the Tea Pump was taken around the town and sold from wagons somewhat resembling the sprinkling-carts of the present day. By the eighteenth century the city had increased in size. The people found it inconvenient to go to a well or a pump, or to buy their water. They desired to have the water brought to them. Private companies were anxious to do this for gain. In 1774 Christopher Colles proposed to erect a reservoir (a place for collecting and storing water) and distribute water by means of pipes made by boring holes through small tree-trunks. The water was to be pumped from wells into the reservoirs and distributed by the gravity system. The work was started, but was stopped because of the Revolutionary War. Nothing further was done until 1799, when Aaron Burr and several others organized the Manhattan Water Works Company. They had about twenty-five miles of mains and supplied two thousand families with seven hundred thousand gallons of water daily. This amounts to three hundred and fifty gallons a day per person. This company operated until 1842. The first public water-works system, Croton Aqueduct, was begun in 1837. A large dam was built. The reservoir that was formed was five miles long and covered four hundred acres. A step in advance was made over the older method of carrying water through tree-trunks. An aqueduct of masonry, a monumental structure thirty-three miles long, was built from Croton down to New York City over High Bridge. For four miles the aqueduct ran along Tenth Avenue to the Yorkville Reservoir in Central Park. This occupied thirty-seven acres. Iron pipes were used from here to the Murray Hill Reservoir, on the west side of Fifth Avenue, between Fortieth and Forty-second Streets. This occupied four acres. In 1800 the reservoir was removed to make way for the New York Public Library. Due to the necessity of increasing the water supply, the Croton Aqueduct Board was forced in 1852 to recommend a new reservoir, known as Manhatta Lake. This was completed in 1862. It is located in Central Park, between Eighty-sixth and Ninety-sixth Streets, covering ninety-six acres, and has a capacity of one billion and thirty million gallons."—J. L. Stockton, *City's water supply (Community civics pamphlet)*.

Also see: E. Wegmann, *Water supply of the City of New York*.—G. E. Hill and G. E. Waring, Jr., *Old wells and watercourses of the Island of Manhattan (Historic New York, pp. 213-214, 223-224)*.

1741.—Panic over alleged negro plots.—In 1741, "the city of New York became the scene of a cruel and bloody delusion, less notorious, but not less lamentable than the Salem witchcraft. That city now contained some 7,000 or 8,000 inhabitants, of whom 1,200 or 1,500 were slaves. Nine fires in rapid succession, most of them, however, merely the burning of chimneys, produced a perfect insanity of terror. An indented servant

woman purchased her liberty and secured a reward of £100 by pretending to give information of a plot formed by a low tavern-keeper, her master, and three negroes, to burn the city and murder the whites. This story was confirmed and amplified by an Irish prostitute, convicted of a robbery, who, to recommend herself to mercy, reluctantly turned informer. Numerous arrests had been already made among the slaves and free blacks. Many others followed. The eight lawyers who then composed the bar of New York all assisted by turns on behalf of the prosecution. The prisoners, who had no counsel, were tried and convicted upon most insufficient evidence. The lawyers vied with each other in heaping all sorts of abuse on their heads, and Chief-justice Delancey, in passing sentence, vied with the lawyers. Many confessed to save their lives, and then accused others. Thirteen unhappy convicts were burned at the stake, eighteen were hanged, and seventy-one transported. The war and the religious excitement then prevailing tended to inflame the yet hot prejudices against Catholics. A non-juring schoolmaster, accused of being a Catholic priest in disguise, and of stimulating the negroes to burn the city by promises of absolution, was condemned and executed."—R. Hildreth, *History of the United States*, v. 2, ch. 25.

1752-1827.—**Royal Exchange.**—"The event of the year 1752 was the building, by subscription, at the foot of Broad Street, of the Royal Exchange, for merchants. The building was supported on arches, the lower story being open—much as markets in southern cities now are. One room in the upper story was set apart as a meeting place for the merchants; a coffee-room, which later became a famous resort, was opened in one end. The Exchange stood until 1827, when it was succeeded by a finer building on Wall Street. It was the home of the first organization of merchants in the port."—C. B. Todd, *Story of the City of New York*, pp. 197-198.

1753.—**Opening of King's College.**—"For several years money had been raised, by lotteries, donations, etc., for the establishment of a college in New York city. Ten trustees had been appointed to take charge of the money, and "the vestry of Trinity Church offered to donate from the estate granted them by Queen Anne a site and the necessary grounds for a campus. This offer was accepted by the trustees, and in 1753 they invited the Rev. Samuel Johnson . . . to be first president. . . . The vestry gave to the college the use of their large room in the church building, and here in the autumn of 1753 the college was opened with an entering class of ten. . . . The first Commencement was held in June, 1758. . . . During the Revolution the college was dismissed. . . . On its reorganization in 1787, it was given the name Columbia."—C. B. Todd, *Story of the City of New York*, pp. 198-199.—See also UNIVERSITIES AND COLLEGES: 1746-1787.

1754.—**First public library.** See LIBRARIES: Modern: United States: First library in New York.

1790-1844.—**Growth of city.—Poor sanitary conditions.—Increased commerce.**—"Some idea of the growth of the trade of the Union may be derived from a statement of the rapidity with which the chief sea-ports developed. New York is a striking example of this. In the year 1790 the population of that city was only some thirty-three thousand. Ten years later the population was nearly doubled, being then sixty thousand; ten years later, and it had again doubled itself, being in the year 1820 quite one hundred and twenty thousand. In 1830, the number was over two hundred thousand (213,000 exactly), and in 1840 it had risen to 312,000. It is curious to notice, however, that the city was considered, at least by Europeans, as very insanitary, and as late as 1844 the compiler of McCulloch's *Dictionary of Commerce* speaks thus: 'The pools which were formerly abundant in the city and its vicinity have been completely filled up: a measure that has done much to improve the health of the population. In respect of cleanliness, however, New York is not to be compared with an English town. There is hardly such a thing as a sink or common sewer in the whole city; the night soil is collected in pits, of which there is one in every house, and being conveyed to the nearest quay is thrown into the water; but as these quays are made of timber with many projections, a great deal of filth is retained about them, producing in hot weather an abominable stench. The yellow fever, by which New York is sometimes visited, uniformly breaks out in the lower and dirtiest part of the town, and seldom indeed extends to the new and more elevated streets. It is now (1843) much less prevalent than formerly, and the general opinion seems to be that if stones were substituted for timber in the quays, sewers constructed, and proper regulations enforced as to cleanliness, the scourge would entirely disappear.' The commerce, however, of New York rapidly became most extensive, and about the year 1840 the value of the merchandise annually loaded and unloaded in the port was estimated at from one hundred to one hundred and twenty million dollars, and nearly two-thirds of the total imports of the States passed through it; though only between one-third and one-quarter of the exports went through it. A list of the exports and imports will show the chief items of commerce, though we are already familiar with its general outlines. The exports included wheat, flour, corn, rice and cotton; beef, pork and dried fish; furs, tobacco, timber, and coarse manufactured goods. The imports were mainly cotton, woollen and linen manufactured goods, hardware and cutlery, and other metal manufactures, all the preceding coming mainly from England, while silk goods and wines came from France and Spain; sugar and coffee from Brazil and the West Indies; and tea, spices, dye-woods and other similar products came from various parts of the globe. Even before the half-century was complete, the tonnage of the shipping using the port of New York was greater than that of any other city in the world except London."—H. deB. Gibbins, *Economic and industrial progress of the century*, pp. 132-134.

1795-1842.—**Education.—Public school society. Organization of Board of Education.**—"In 1795 Governor Clinton urged the creation of the New England type of common schools, and through the legislature a fund was created for the successful

carrying out of the scheme. In 1797 free schools were established in the State. The progress of the free school movement was slow, however, and old ideas of teaching only children whose parents were affiliated with the different religious bodies caused the education of many of them to be neglected. Public-spirited citizens desirous of providing means for the education of neglected children called a meeting in 1805 to consider the question, and shortly after petitioned the legislature for permission to incorporate a society having for its object 'the establishment of a free school for the education of poor children who do not belong to or are not provided for by any religious society.' On April 9, 1805, the petition was granted by the legislature and the society duly incorporated. . . . It was not until May 19, 1806, that the society saw the fulfilment of its benevolent scheme when apartments were rented in a house on what is now Madison street, and the school begun. . . . In 1842, Gov-

island in a regular and uniform way. This change was the result of the City Plan."—C. Hemstreet, *Story of Manhattan*, pp. 212-213.—The gridiron type was the one selected, the city from Fourteenth Street northward being laid out in rectangles, with Broadway and the Bowery running diagonally across them. Two thousand city blocks were provided for, each 200 feet wide. Public squares were also planned.—See also CITY PLANNING: United States; Lack of, etc.; Development.

1812.—End of "old New York."—"With the close of the war of 1812, the beginning of immigration from Europe on a vast scale, and the adoption of a more radically democratic State constitution, the history of old New York may be said to have come to an end and that of the modern city, with its totally different conditions, to have begun. The town has never, before or since, had a population so nearly homogeneous as just after this second war with Great Britain; the English blood

BROADWAY LOOKING SOUTH FROM ST. PAUL'S IN 1835

ernor Seward recommended to the legislature in his message that a law be passed extending the common school system of the state to the city, resulting in the forming of the Board of Education."—H. Macatamney, *Cradle days of New York*, pp. 98-100. 100.

ALSO IN: E. A. Hobson, *Educational legislation and administration in the state of New York from 1777 to 1850*, pp. 25 ff.—A. E. Palmer, *New York public school*.

1807.—City plan.—"The city was growing more rapidly than ever and the streets and byways met one another at every sort of angle, forming a tangled maze. To remedy this, a commission was formed of several of the prominent citizens to determine just what course the streets should take. Now this commission decided not to interfere with those that existed, but to map out the island above the city and plan for those that were to be. They worked for four years and then submitted, in the year 1811, what they called the City Plan. If you will look at a map, you will see at the lower part of the Island of Manhattan that the streets cross and recross each other in the most bewildering manner. And you will also see that above this jumble the streets and avenues extend through the

has never been so nearly dominant as at that time, nor the English speech so nearly the sole speech in common use."—T. Roosevelt, *New York*, p. 173.

1821-1834.—Mayor elected by common council.—In 1821, a state constitutional convention was held in New York. Among other things this convention abolished the Council of Appointment which had chosen the mayor of New York City. For the next thirteen years the mayor was elected by the common council.

1826.—Organization of National Academy of Design. See EDUCATION, ART: Modern: United States.

1830.—Tweed charter. See MUNICIPAL GOVERNMENT: Evolution of types.

1834.—Trade unions organized. See LABOR ORGANIZATION: 1825-1875.

1834.—First election of mayor by the people.—In 1834 the position of mayor was made elective, and thereafter he was chosen directly by the people. This reform was accomplished by amendment of the state constitution of 1821.

1835.—Politics.—Loco-Focos party struggle. See Loco-Focos.

1850.—Use of boycott. See LABOR STRIKES AND BOYCOTTS: 1809-1850.

1851-1920.—Development of city parks.—Central Park.—Smaller public parks.—“According to the United States Census, New York City has the largest acreage of parks of any city in the United States and spends more money than any other city on them; but even with his record we have three times as many people per acre of parks as Boston. Only one-ninth of Manhattan with its intensely congested population is devoted to parks; Brooklyn and Queens have one-fiftieth and Richmond less than one-five-hundredth so set aside. There are six extensive parks in the city which provide recreation for all ages. The varied attractions of Central Park range from the wonderful collections of art in the Metropolitan Museum to the outdoor features of lakes, picturesque walks and drives, and playgrounds.”—E. E. Smith, *Public provision for recreation (Community civics monograph)*.—The site of Central Park was chosen in 1851. In 1853, an act of the legislature allowed the city to condemn the necessary land. Washington Irving and George Bancroft were among the famous men who helped to plan the park. An open competition in submitting plans led to the choice of Olmstead and Vaux as the landscape architects. By 1859 they had completed their work. The Department of Public Parks was created “in 1872, when . . . twenty-five other small parks and Central Park [were] . . . placed in the care of the Park Commissioners. . . . Carl Schurz Park lies on the eastern shore of Manhattan Island, opposite the northern end of Blackwell’s Island. . . . The property was acquired by the city pursuant to the provisions of chapter 320 of the laws of 1887, known as the Small Parks Law. It embraces 12½ acres and cost \$522,118. It was first called East River Park, but in the Annual Report of the Park Department for 1911 the name was changed to Carl Schurz Park. . . . An important parkway which may be considered as forming a part of the New York City park system, and yet independent of it, is the Bronx Parkway, which lies along, the Bronx River partly within the city limits and partly in Westchester county. . . . It was 1913 before the territory was surveyed and the plans for the parkway were sufficiently matured to enable the [Bronx Parkway] Commission to begin the acquisition of land. . . . Not much work was done in 1918 owing to war conditions [but after the war, work was resumed].”—*Annual Report of the American Scenic and Historic Preservation Society*, 1920, pp. 137, 152, 162-164.—See also below: 1921-1922.

1853-1857.—Police system changed. See MUNICIPAL GOVERNMENT: Police defined.

1857.—Art education. See EDUCATION, ART: Modern: United States.

1857.—State police.—Clash with the city force.—When a state police was established in 1857, during the mayoralty of Wood, a clash occurred with the city police. This was only one of many riots that had disturbed the city’s peace since the beginning of the century.

1861.—Proposal for a separate state.—Outbreak of Civil War.—“At the outset of the Civil

War there was . . . an effort made to force the city into active rebellion. The small Democratic leaders, . . . ruffians who led the mob and controlled the politics of the lower wards, openly and defiantly threatened to make common cause with the South, and to forbid the passage of Union troops through the city. The mayor, Fernando Wood, in January, 1861, proclaimed disunion to be ‘a fixed fact’ in a message to the Common Council, and proposed that New York herself should secede and become a free city. . . . The independent commonwealth was to be named ‘Tri-Insula,’ as being composed of three islands, Long, Staten, and Manhattan. The Common Council . . . received the message enthusiastically, and had it printed and circulated. But when Sumter was fired on the whole current changed like magic. . . . The bulk of the Democrats joined with the Republicans to show . . . their fervent and patriotic devotion to the Union. . . . The Seventh Regiment of the New York National Guards . . . was the first in the whole country to go to the front and reach Washington.”—T. Roosevelt, *New York*, pp. 202-203.

Also in: *Letter from John Jay to S. P. Chase (American Historical Association, Annual report, 1902, v. 2, p. 493)*.—J. F. Rhodes, *History of the United States*, v. 3, p. 369.

1863.—Draft riots.—“A new levy of 300,000 men was called for in April, 1863, with the alternative of a draft, if the quotas were not filled by volunteering. The quota of the city of New York was not filled, and a draft was begun there on Saturday, the 11th of July. There had been premonitions of trouble when it was attempted to take the names and addresses of those subject to call, and in the tenement-house districts some of the marshals had narrowly escaped with their lives. On the morning when the draft was to begin, several of the most widely read Democratic journals contained editorials that appeared to be written for the very purpose of inciting a riot. They asserted that any draft at all was unconstitutional and despotic, and that in this case the quota demanded from the city was excessive, and denounced the war as a ‘mere abolition crusade.’ It is doubtful if there was any well-formed conspiracy, including any large number of persons, to get up a riot; but the excited state of the public mind, especially among the laboring population, inflammatory handbills displayed in the grog-shops, the presence of the dangerous classes, whose best opportunity for plunder was in time of riot, and the absence of the militia that had been called away to meet the invasion of Pennsylvania, all favored an outbreak. It was unfortunate that the draft was begun on Saturday, and the Sunday papers published long lists of the names that were drawn—an instance of the occasional mischievous results of journalistic enterprise. . . . When the draft was resumed on Monday, the serious work began. One provost-marshal’s office was at the corner of Third Avenue and Forty-Sixth street. It was guarded by sixty policemen, and the wheel was set in motion at ten o’clock. The building was surrounded by a dense, angry crowd, who were freely cursing the draft, the police, the National Government, and ‘the nigger.’ The drawing had been in progress but a few minutes when there was a shout of ‘stop the cars!’ and at once the cars were stopped, the horses released, the conductors and passengers driven out, and a tumult created. Then a great human wave was set in motion, which bore down everything before it and rolled into the marshal’s office, driving out at the back windows the officials and the policemen, whose clubs, though plied rapidly and knocking

down a rioter at every blow, could not dispose of them as fast as they came on. The mob destroyed everything in the office, and then set the building on fire. The firemen came promptly, but were not permitted to throw any water upon the flames. At this moment Superintendent John A. Kennedy, of the police, approaching incautiously and unarmed, was recognized and set upon by the crowd, who gave him half a hundred blows with clubs and stones, and finally threw him face downward into a mud-puddle, with the intention of drowning him. When rescued, he was bruised beyond recognition, and was lifted into a wagon and carried to the police headquarters. The command of the force now devolved upon Commissioner Thomas C. Acton and Inspector Daniel Carpenter, whose management during three fearful days was worthy of the highest praise. Another marshal's office, where the draft was in progress, was at Broadway and Twenty-Ninth street, and here the mob burned the whole block of stores on Broadway between Twenty-Eighth and Twenty-Ninth streets. . . . In the afternoon a small police force held possession of a gun-factory in Second Avenue for four hours, and was then compelled to retire before the persistent attacks of the rioters, who hurled stones through the windows and beat in the doors. Toward evening a riotous procession passed down Broadway, with drums, banners, muskets, pistols, pitchforks, clubs, and boards inscribed 'No Draft!' Inspector Carpenter, at the head of two hundred policemen, marched up to meet it. His orders were, 'Take no prisoners, but strike quick and hard.' The mob was met at the corner of Amity (or West Third) street. The police charged at once in a compact body, Carpenter knocking down the foremost rioter with a blow that cracked his skull, and in a few moments the mob scattered and fled, leaving Broadway strewn with their wounded and dying. From this time, the police were victorious in every encounter. During the next two days there was almost constant rioting, mobs appearing at various points, both up-town and down-town. The rioters set upon every negro that appeared—whether man, woman, or child—and succeeded in murdering eleven of them. . . . This phase of the outbreak found its worst expression in the sacking and burning of the Colored Orphan Asylum, at Fifth Avenue and Forty-Fourth street. The two hundred helpless children were with great difficulty taken away by the rear doors while the mob were battering at the front. . . . One of the saddest incidents of the riot was the murder of Colonel Henry J. O'Brien of the 11th N. Y. Volunteers. . . . Three days of . . . vigorous work by the police and the soldiers brought the disturbance to an end. About fifty policemen had been injured, three of whom died; and the whole number of lives destroyed by the rioters was eighteen. The exact number of rioters killed is unknown, but it was more than 1,200. The mobs burned about 50 buildings, destroying altogether between \$2,000,000 and \$3,000,000 worth of property. Governor Seymour incurred odium by a speech to the rioters, in which he addressed them as his friends, and promised to have the draft stopped; and by his communications to the President, in which he complained of the draft, and asked to have it suspended till the question of its constitutionality could be tested in the courts."—R. Johnson, *Short history of the War of Secession*, ch. 18.—See also U. S. A.: 1863 (July): New York.

flict, v. 2, ch. 21.—D. M. Barnes, *Draft riots in New York*.—E. H. Roberts, *New York*, v. 2, pp. 661-667.—J. F. Rhodes, *History of the United States*, v. 4, pp. 320-332.—J. B. Fry, *New York and the conscription of 1863*.

1863-1871.—Operations of Tweed Ring and Tammany Hall. See NEW YORK: 1863-1871.

1864-1921.—Board of Estimate and Apportionment.—Origin and history.—"The present broad powers of the Board of Estimate and Apportionment are not adequately indicated by its name. The *estimating* of the requirements of the various branches of the city government and the *apportioning* of funds in accordance therewith constitute but a small part of the many functions which it now performs. The board of estimate is, in fact, the board of directors of the municipal corporation of New York, and as such determines the policies of the city with reference to all financial matters, assessable public improvements, franchises, privileges and permits. Its control over these matters is almost absolute. A brief examination of the origin and history of the board shows, however, that until within comparatively recent years its function was simply to prepare estimates of the cost of government and not to exercise any administrative or legislative functions. Probably the first board with this name was a 'Board of Estimate and Apportionment' consisting of the Commissioners of the Metropolitan Police and the comptrollers of the cities of New York and Brooklyn. This board was established in 1864 to estimate the expense of conducting 'The Metropolitan Police District of the State of New York,' which embraced most of the territory later included in Greater New York, and to apportion the expense to the various units within this district; its authority was limited to the expenditure for police service. Under the Tweed regime a board of apportionment was created, in 1871, consisting of the mayor, the comptroller, the commissioner of public works (Tweed) and the president of the department of public parks. Up to this time it had been the practice of the Legislature to appropriate specific amounts for each department of the city government. The act of 1871 provided an assessment not to exceed two per cent on property valuations. The board of apportionment was to apportion the revenue from this tax among the various departments of the city and county governments. Under the reform charter of 1873 the mayor, the comptroller, the president of the board of aldermen and the president of the department of taxes and assessments constituted a board of estimate and apportionment to estimate the expense of conducting the city and county of New York. The tax rate was then based upon this estimate. This was apparently the first board of the name with authority to estimate the requirements and apportion the revenues to all departments. In 1893 the Corporation Counsel was added. The revised charter of 1901 made the board consist wholly of elective officials, . . . and increased its importance as an administrative body. In 1902 the powers of the Board of Public Improvements were transferred to the board of estimate. Three years later the franchise-granting power of the Board of Aldermen was transferred to the board of estimate, so that the present board not only performs the duties originally imposed upon it but also has control over many matters not originally contemplated."—*Municipal Year Book*, 1916, pp. 20-21.—"The present Board of Estimate consists (in accordance with the provisions of the Revised Charter of 1901) of eight members, all of whom are officials elected for four-year terms.

The mayor, who is chairman, the comptroller and the president of the Board of Aldermen have three votes each, the presidents of the Boroughs of Manhattan and of Brooklyn have two votes each, and the presidents of the Boroughs of the Bronx, Queens and Richmond have one vote each—a total of sixteen votes. The Board is subdivided into three standing committees, assisted by an investigating and engineering staff and corporation of experts attached to the official of the secretary of the Board. . . . The Board determines the policies of the city with reference to all financial matters, assessable public improvements, franchises, privileges and permits. Its control over those matters is almost absolute."—J. Caccavajo, *Board of Estimate and Apportionment (Guide to the Municipal Government, City of New York [pamphlet], p. 17)*.—See also MUNICIPAL GOVERNMENT: City finance.

1865-1878.—**Fraud and corruption.**—"For several years after the war there was a perfect witches' Sabbath of political corruption in New York City, which culminated during the mayoralty of Oakey Hall, who was elected in 1869. The democratic party had absolute control of the municipal government; and . . . the city was at the mercy of the ring [Tweed ring] of utterly unscrupulous and brutal politicians who then controlled that party, and who in time of need had friends among some of their so-called Republican opponents on whom they could always rely. Repeating, ballot-box stuffing, fraudulent voting and counting of votes, and every kind of violence and intimidation at the polls turned the elections into criminal farces. The majorities by which the city was carried for the Democratic presidential candidate Seymour in 1868, represented the worst electoral frauds which the country ever witnessed. . . . This was also an era of gigantic stock swindling. The enormously rich stock-speculators of Wall Street in their wars with one another and against the general public, found ready tools and allies to be hired for money in the state and city politicians, and in judges who were acceptable alike to speculators, politicians, and mob. There were continual contests for the control of railway systems, and 'operations' in stocks which barely missed being criminal, and which branded those who took part in them as infamous in the sight of all honest men; and the courts and legislative bodies became parties to the iniquity of men composing that most dangerous of all classes, the wealthy criminal class."—T. Roosevelt, *New York*, pp. 206-208.—See also NEW YORK: 1863-1871.

1866.—**International committee of Young Men's Christian Association established by Albany convention.** See YOUNG MEN'S CHRISTIAN ASSOCIATION: 1865-1870.

1867-1915.—**Bridges.**—Brooklyn Bridge, which spans the East river, "is a monument to the genius of the great engineer, John O. Roebling, who conceived it, and to his son, Washington A. Roebling, who, on his father's death, before his plans could be carried out, took charge of the work, and carried it to a successful completion. A charter for a Bridge Company to build this great work was granted by the New York legislature in 1867. The Company was organized in May, of that year, and in January, 1870, began the construction of the bridge. The towers, each 272 feet above tide water, were first built. Then, May 29, 1877, the first little wire, to serve as a nucleus for the pioneer cable, was run out from the towers. When 5,269 of these galvanized steel, oil-coated wires had been laid side by side—not twisted—and bound, the first of the four great cables—3,455 feet long, and capa-

ble of sustaining a weight of 12,200 tons—was complete. All were at last completed, and then came the suspending from them of the roadway and the building of the massive approaches of masonry on either side. On May 24, 1883, after thirteen years of labor, the structure was opened to the public. Impressive ceremonies attended the event."—C. B. Todd, *Story of the City of New York*, pp. 459-460.—The Williamsburg Bridge, begun in 1896 and opened in 1903, extends from Delancey Street, Manhattan, to Broadway, Brooklyn. The Queensboro Bridge, extending from 59th Street, Manhattan, to Long Island City by way of Blackwell's Island, is a continuous cantilever 7,449 feet long. It was opened to traffic in 1909. Manhattan Bridge, from Canal Street, Manhattan, to Nassau Street, Brooklyn, was begun in 1901, but not entirely completed until 1911. Ward's Island Bridge, spanning Hell Gate, carries railroad tracks from the mainland into Queensborough. It was begun in 1912 and opened in 1917. There are a number of important bridges across the Harlem river, among them Washington Bridge and High Bridge, the latter one of the finest stone bridges in America, and carrier of the old Croton aqueduct.

1869-1920.—**Transportation.**—Growth of rapid transit.—Elevated and subway lines.—Dual system.—"Shortly after the Civil War [1869] New York launched its first experiment in rapid transit—an elevated steam railroad. A few pessimists predicted horrible consequences from building an elevated road with all the accompanying ills of noise and smoke, but no sooner was the road in operation than the people themselves showed their appreciation of the road by moving uptown in large numbers; moreover they must have enjoyed the trips because they began to travel more frequently until the elevated road was overtaxed. When Father Knickerbocker began to investigate the causes of this congestion, he started at the business end of the island where he found the big six-story office buildings were being dwarfed by the new steel structures. These huge buildings were climbing higher each year and their spacious offices provided attractive quarters for new business. As the elevated service improved Father Knickerbocker saw his families move farther away from the business section. He watched anxiously as the crowds flowed into the narrow end of the island as if they were poured into the small end of a funnel too fast and were jammed. No one wished more elevated lines for the noise from the trains was too unpleasant and the obstruction of the street by the elevated structure itself was an additional cause of congestion. Therefore the only solution of the transit problem seemed to lie in the development of subways. The story of the growth of rapid transit lines is a very human mixture of political jugglery, mad speculation and petty bickerings between the companies. But added to this is a chapter of magnificent vision and splendid engineering."—M. B. Morse, *Transportation and communications (Community civics monograph, pp. 5-6)*.—The first elevated line, extending from the Battery to Fifty-ninth Street on Ninth Avenue, was built in 1870; the second, the Sixth Avenue line, opened in 1878, extended from the Bat-

tery to the Harlem river. Similar lines were built on Third and Second Avenues. On all these until 1902, trains were run by steam. In 1886 the first cable line was established on 125th Street; and in 1898 the underground electric trolley system was introduced all over Manhattan. In 1902 electricity supplanted steam on the elevated lines. The first subway line was opened for use in 1904, and extended from one end of Manhattan to the other, with a branch running from 104th Street to the Bronx. Not long after the first subway extension to Brooklyn was completed. Mar. 19, 1913, the city contracted with the Interborough Rapid Transit Company and the New York Municipal Railway Corporation for the construction and operation of new lines known as the Dual System. The New York Municipal Railway Corporation was formed in the interest of the Brooklyn Rapid Transit Company for the operation of the various lines to be constructed. The construction and equipment of the new system amounted to \$337,000,000 and provision was made in contracts for the amount to be borne jointly by the city and the two transit corporations. After a period of forty-nine years, dating from January 1, 1917, all agreements will end and the city will have complete control over the construction included in the dual plan. The contracts also stated that in the territory allotted to each company the rate for a continuous ride should be five cents. There were 618 miles of track. The system anticipated to carry more than 3,000,000 passengers per annum. During the year ending June 30, 1920, 2,364,775,067 were carried.—See also MUNICIPAL GOVERNMENT: Franchises in the United States.

1870.—Tweed's alteration of charter. See MUNICIPAL GOVERNMENT: Evolution of types.

1870-1921.—Metropolitan Museum of Art.—The Metropolitan Museum of Art is one of the public institutions supported in part by an annual City appropriation, in part by private interest and generosity. It occupies a building at Fifth Avenue and Eighty-second Street under a lease from the city. The charter was granted April 13, 1870. "Soon after [the granting of the charter], negotiations were entered into which consummated in the purchase of a collection of pictures, consisting chiefly of specimens of the Dutch and Flemish Schools, but containing also important works of Italian, French, Spanish and English masters. It became necessary to make immediate preparation for the custody and exhibition of these paintings. The Trustees took accordingly a lease for two years from May, 1871, of the building known as No. 681 Fifth Avenue, which, although too small for their purpose, was the most available habitation they could find. In 1872, The Metropolitan Museum of Art was removed from its temporary quarters . . . to 128 West Fourteenth Street. This large, double house, known as the Cruger Mansion, was leased for a number of years by the Trustees. The greenhouses and conservatories were fitted up for the exhibition of sculptures, and in one of its courtyards the Trustees built a picture-gallery. This gallery, lighted from the roof, had five times as much wall space as the old quarters on Fifth Avenue, and enabled the Trustees to extend the interest of the Museum by loan exhibitions of paintings, and the display of the Cesnola Collection of antiquities from Cyprus, a portion of which had already arrived in this country. The Museum remained in this building until the last days of 1879, and was daily open to the public from 10 o'clock A. M. until 6 o'clock P. M. On the 5th

of April, 1871, the State Legislature, at the request of the Municipal Authorities of this City, passed an act appropriating the sum of \$500,000, with which to erect a building in . . . Central Park, 'for the purpose of establishing and maintaining therein a Museum and Gallery of Art.' On April 22d, 1876, the Legislature authorized and directed the Department of Public Parks to make and enter into a contract with The Metropolitan Museum of Art, for the occupation by it of the building which was then being erected, and such other additions as may be made to it from time to time. On the 24th day of December, 1878, the Park Department executed a written agreement with The Metropolitan Museum of Art, by virtue of which the Trustees took possession of the building in Central Park, which was then finished; and during the year 1879 all the collections of the Museum were removed from the building on Fourteenth Street and transferred to their new home in Central Park."—G. H. Story, *Paintings in the Metropolitan Museum of Art*, pp. v-vi.—The second great accretion of pictures, and the most important event in the history of the Department of Paintings, occurred in 1888 when Henry G. Marquand gave 53 pictures which placed the collection immediately in a position of considerable prominence. The Van Dycks, the three Hals, the Rembrandts, the Vermeer, the strange and beautiful work ascribed to Lucas van Leyden, the double portrait of the early Florentine school, the variant of Van Eyck's Madonna of the Fountain, Saltash by Turner, these and the others of the donation fix the Marquand gift among the most notable benefactions ever made to public collections. The effect of the gift on the growth of the Museum and on the development of culture in America has been incalculable. . . . Mr. Morgan, besides his gifts of Columbus by Sebastiano del Piombo, The Assumption of the Virgin by Benvenuto di Giovanni, The Argonauts by Pesellino, and many more, has helped continually by lending works from his collection. With but few exceptions the pictures that he acquired since 1906 have been shown in the Museum and many have never left its walls since their purchase by him. The regular buying of paintings began in 1905, after the receipt of the Rogers Fund, the first of the great bequests and gifts of money by which the Museum has been enriched. The Nativity by El Greco was the first painting bought out of this fund, which for four or five years was the single great source available for purchases without restrictions as regards schools. With the Hewitt Fund, 1908, and the Kennedy Fund, 1910, the possibilities were largely increased, the latter in particular being utilized conspicuously for the benefit of the painting collection. Many of the important purchases of the last three years—Wolf and Fox Hunt by Rubens, Mars and Venus by Veronese, Three Miracles of Saint Zenobius by Botticelli, Meditation on the Passion by Carpaccio, Four Saints by Correggio, and others—are due to the Kennedy Fund. The purchases out of the Leland gift, 1912, are the Mouth of the Scheldt by Van de Cappelle and the Miracle of the Loaves and Fishes by Tintoretto."—B. Burroughs, *Catalogue of paintings in the Metropolitan Museum of Art*, 1914, *Introduction*, pp. ix, xi.—The Altmann collection, bequeathed to the museum in 1913 by Benjamin Altmann, include some of the works of Rembrandt, Corot, Franz Hals and Velasquez, works of the Flemish, Italian, Early Dutch, Spanish and German schools, also tapestries, rugs and statuary. There was installed (1921) in the "Gold Room" a series of twenty-two ceiling panels (in fresco transferred to canvas) by Pinturicchio that

were acquired in Paris, 1914.—See also METROPOLITAN MUSEUM OF ART.

ALSO IN: *Bulletins of Metropolitan Museum of Art of New York.*

1871.—Irish riots.—Collision between Orangemen and Catholics.—“An incident occurred July 12, 1871, illustrating the extent of foreign feeling, as well as foreign population, in New York. The Irish Orangemen proposed to celebrate on that day the Battle of the Boyne, and the Irish Catholics took offence at the parade which was announced. Threats of violence induced the police to forbid the parade, but at Governor Hoffman's request it was permitted. The National Guard as well as the police was invoked to protect the procession, but an assault was made, which was repulsed at the cost of several lives lost and several persons wounded.”—E. H. Roberts, *New York*, v. 2, p. 688.

1874-1892.—Restored Tammany government.—By the exposure and overthrow of Tweed and his “ring” in 1871, the Tammany organization was greatly discredited and crippled, but after a few years under the chieftainship of John Kelly and Richard Croker it recovered its control of the city government. “On election day, November 3rd, 1874, during a street row growing out of a political quarrel between Croker and James O'Brien, James McKenna was shot dead. Bystanders maintained that Mr. Croker fired the shot, and the Grand Jury indicted him for the crime. The trial jury, after being out for 17 hours, failed to agree. Public opinion at the time was divided, but it is the preponderance of opinion among those who are in a position to know that Croker did not fire the fatal shot. ‘Mr. Croker was born near Cork, Ireland, November 24th, 1843. His father was a blacksmith who emigrated to America in 1846, and settled in a squatter's shanty in what is now the upper portion of Central Park. From his thirteenth to his nineteenth year young Croker worked as a machinist. At a very early age he distinguished himself in the semi-social fist fights which were a part of the life of the ‘gang’ to which he belonged. He became, tradition has it, the leader of the ‘Fourth Avenue Tunnel Gang,’ and fought a number of formal prize fights, in which he came out victor. ‘At the beginning of the Tweed regime, according to his testimony before the Fassett committee (1890), he was attendant under Judge Barnard and other judges in the Supreme Court. Upon leaving that place, for some reason not known, he served as an engineer on a fire department steamer. In 1868 and 1869 he was elected an alderman. With a majority of his fellow members he sided with the ‘Young Democracy’ against Tweed, and was accordingly, with the rest of the board, legislated out of office. But he must have made his peace with the great ‘Boss’ soon after, for Comptroller Connolly appointed him superintendent of market fees and rents. In 1873 he was elected coroner. . . . In 1876 he was re-elected coroner. In 1883 he ran for alderman, with the understanding that if elected, thus establishing the fact of his constituents’ approval, Mayor Edson would appoint him a fire commissioner. During the canvass, a police captain, one of Croker's proteges, was responsible for a brutal clubbing, the feeling over which had the effect of reducing Mr. Croker's plurality to about 200. Mayor Edson, however, gave him the appointment, and he was reappointed by Mayor Hewitt. . . . In 1885 he caused the nomination of [Hugh J. Grant] . . . for sheriff. Mr. Grant, while in that office, according to Mr. McCann's testimony, gave \$25,000, in five presents of \$5,000 each, to Mr. Croker's two-year old daughter, Flos-

sie. Neither Mr. Croker nor Mr. Grant denied this transaction, though both declared that the sum was \$10,000 and not \$25,000. Mr. Grant furthermore declared that he gave it in consideration of Flossie being his godchild. In the meantime Richard Croker spent most of his time in England. From being a comparatively poor man, as testified in 1890, he became suddenly rich. From April, 1889 to February, 1890, he was city chamberlain at a salary of \$25,000 a year, but for sometime after that he held no public office, nor had he any regular business.”—G. Myers, *History of Tammany Hall*, pp. 267-268.—In 1892, the Tammany organization was described as follows: “In New York, the governing group discusses nothing openly. The Board of Aldermen is an obscure body of twenty-five members, with limited power except for mischief, its members being almost to a man high Tammany politicians who are either engaged directly in the liquor business or are in one way or another connected with that interest. So far as there is any meeting in which the rulers of New York discuss the public affairs of the community, such meetings are held in the Tammany wigwam in Fourteenth Street. But Tammany is not an organization which really concerns itself with any aspects of public questions, either local or general, excepting the ‘spoils’ aspect. It is organized upon what is a military rather than a political basis, and its machinery extends through all the assembly districts and voting precincts of New York, controlling enough votes to hold and wield the balance of power, and thus to keep Tammany in the possession of the offices. Its local hold is maintained by the dispensing of a vast amount of patronage. The laborers on public works, the members of the police force and the fire brigades, the employees of the Sanitary Department, of the Excise Department, of the Street Cleaning and Repair Department and of the Water and Dock and Park Departments, the teachers in the public schools and the nurses in the public hospitals, all are made to feel that their livelihood depends on the favor of the Tammany bosses; and they must not only be faithful to Tammany themselves, but all their friends and relatives to the remotest collateral degree must also be kept subservient to the Tammany dominations.”—A. Shaw, *Municipal problems of New York and London (Review of Reviews, Apr., 1892)*.

1880.—Central Park obelisk purchased. See EGYPT: About B. C. 1700-1400.

1890-1897.—Consolidation of New York, Brooklyn, and neighboring towns, in Greater New York.—“The project of uniting the cities of New York, Brooklyn, and the cities, towns and villages contiguous to the same, into one great municipality, although long mooted before 1890, first took definite form in that year, by the passage on May 8th, by the Legislature, of Laws 1890, Chap. 11, entitled ‘An Act to create a commission to inquire into the expediency of consolidating the various municipalities in the State of New York, occupying the several islands in the harbor of New York.’ . . . Pursuant to the provisions of this act, a commission consisting of the following members was appointed, viz.: Andrew H. Green, Frederick W. Devoe, John L. Hamilton, J. Seaver Page of New York; J. S. T. Stranahan, Edward F. Linton, William D. Veeder of Brooklyn; John H. Brinkerhoff of Queen's county; George G. Greenfield of Richmond county; Charles P. McClel-

land of Westchester county; and Campbell W. Adams, State Engineer and Surveyor, ex officio, and Albert E. Henschel acting as secretary. In 1893, the commission presented to the Legislature a bill providing for the submission of the question of consolidation to a vote of the residents of the various municipalities proposed to be united into one city. The following year the Legislature provided for the referendum suggested by the commission. . . . The following vote was cast upon the question of consolidation in the ensuing election on November 6, 1894: New York, for consolidation, 96,938; against, 59,959; Kings, for, 64,744; against, 64,467; Queens, for, 7,712; against, 4,741; Richmond, for, 5,531; against, 1,505; Mount Vernon, for, 873; against, 1,603; Eastchester, for, 374; against, 260; Westchester, for, 620; against, 621; Pelham, for, 261; against, 153. At the opening of the Legislature in 1895, the Commission of Municipal Consolidation Inquiry presented a report with a proposed bill declaring the entire district before mentioned (with the exception of the city of Mount Vernon) consolidated with the city of New York. The bill, however, failed of passage because of the addition of an amendment of referendum in the last hours of the session of 1895, too late for further action. The Legislature, as a result no doubt of this vote on consolidation, did annex to New York city the towns of Westchester, Eastchester, Pelham and other parts of Westchester county. Early in January, 1896, the Legislature appointed a joint sub-committee of the Cities Committees of both Houses to inquire into the subject of the proposed consolidation and report March 1, 1896. The committee made a report and submitted a bill favoring consolidation. The bill as reported was passed by the Legislature and was submitted to the Mayors of the cities of New York and Brooklyn, and to the Mayor and Common Council of Long Island City pursuant to the provisions of the Constitution. The bill was returned to the Legislature without the acceptance of the cities of New York and Brooklyn. The Legislature repassed the bill over the vetoes of the Mayors of New York and Brooklyn, and it became a law May 11, 1896, with the approval of the Governor. This act (L. 1896, ch. 488) is entitled, 'An Act consolidating the local governments of the territory within the city and county of New York, the counties of Kings and Richmond and Long Island City and the towns of Newton, Flushing and Jamaica and part of the town of Hempstead, in the county of Queens, and providing for the preparation of bills for enactment into laws for the government thereof.' . . . Pursuant to the act of consolidation, the Governor (Levi P. Morton) appointed on June 9, 1896, the following members of the commission to draft the proposed charter, viz.: Seth Low, Benjamin F. Tracy, John F. Dillon, Ashbel P. Fitch, Stewart L. Woodford, Silas B. Duteher, Wm. C. De Witt, George M. Pinney, Jr., Harrison S. Moore. Mr. Fitch having resigned from the commission, the Governor appointed Thomas F. Gilroy in his place. By virtue of the act, the following gentlemen were members of the commission: Andrew H. Green, president of the commission appointed by L. 1890, ch. 311; Campbell W. Adams, State Engineer; Theodore E. Hancock, Attorney-General; William L. Strong, Mayor of New York; Frederick W. Wurster, Mayor of Brooklyn; and Patrick Jerome Gleason, Mayor of Long Island City. The commission organized on June 25, 1896, appointed Benjamin F. Tracy as president and George M. Pinney, Jr., as secretary, and named William C. De Witt, John F. Dillon, Thomas F. Gilroy, Seth

Low, Andrew H. Green, Benjamin F. Tracy, and George M. Pinney, Jr., as a committee on draft of proposed charter."—M. Ash, *Greater New York charter, introduction*.—The committee submitted a draft charter to the commission on the 24th of December, with a report in which a fundamental feature of its plan is thus set forth: "It is clear that the work of administering all of the Departments over so large a space of territory, situated on three islands and partly on the main land, must be subdivided in order to be successfully done. The draft, therefore, proposes to divide the city into the five Boroughs which nature and history have already formed; that is to say: (1.) Manhattan, which consists of the island of Manhattan and the outlying islands naturally related to it. (2.) The Bronx; that is to say, all that part of the present City of New York lying north of the Harlem, a territory which comprises two-thirds of the area of the present City of New York. (3.) Brooklyn. (4.) Queens, consisting of that portion of Queens County to be incorporated into the Greater New York. (5.) Richmond, that is, Staten Island. Power is given to the Municipal Assembly to subdivide these Boroughs still further, in case of need. The Greater New York will start with these five Boroughs for administrative purposes. Your Committee have reconstructed the Borough system, as submitted in the tentative draft, upon lines which we are of one accord in believing to be a better and more appropriate development of the plan for the Greater New York." These lines give to each Borough various boards through which the prosecution of local improvements may be facilitated within the limits of small districts, but reserve to the Municipal Assembly the right to incur indebtedness and to authorize the making of contracts. The draft thus prepared was subjected to criticism in the commission and in public hearings, and, after amendment and revision, was reported to the Legislature in February, 1897, as the charter recommended by the Commission for the consolidated city called "The Greater New York." It received some amendment and was passed. On submission, as required by the State constitution, to the mayors of New York and Brooklyn and the mayor and Common Council of Long Island City, it was approved in Brooklyn and Long Island City, but returned without approval by the mayor of New York. The Legislature then re-enacted the bill, and it was made law by the governor's signature, on the 4th of May, 1897.

1893-1898.—Unification of districts.—City plan. See CITY PLANNING: United States: Survey of New York.

1894-1895.—Lexow investigation of Tammany government.—Election of Mayor Strong.—On the second Sunday in February 1892 the minister of a wealthy Presbyterian church, Dr. Charles Parkhurst, startled his congregation by preaching an outspoken political sermon, in which he attacked the Tammany administration in most unmeasured language. This sermon was the starting point of the new anti-Tammany movement. In 1894 the legislature sent a "committee, headed by Clarence Lexow, to investigate. Croker did not wait for the revelations, but took his departure for England, where he remained until the work of the committee had been completed. The chief interest of the Lexow committee was centered in the police department, and there it uncovered a scandalous condition. The department had become almost completely an adjunct of the Tammany organization. It was shown that appointments to the force and promotions there were made under

the direction of the Wigwam district leaders. To obtain appointments on the police force men were compelled to pay an average of about \$300, depending upon the district leader through whom they secured appointments. To secure a captaincy required the payment of from \$10,000 to \$15,000. This, of course, meant that the members of the police force were allowed absolute freedom in the matter of recouping themselves. A sort of private licensing system was worked out, granting immunity from the law. Disreputable houses were assessed \$25 and \$35 per month for each inmate. Women were allowed to solicit on the streets on a similar basis. Pool rooms paid \$3,600 a year, and gambling houses, policy shops, of which there were many hundreds in the city, added their quota to the stream of gold. Saloons paid \$20 a month as they had been doing for a long time. The evidence before the committee showed also that honest business had to pay for protection from the lawless element in the city. Thieves and other offenders against the law were allowed to ply their trade, as a result of their willingness to divide the spoils. This sort of blackmail and extortion on the part of the police department was made to yield a total of \$7,000,000 annually, according to the estimate of the grand jury. Public indignation was again aroused at the disclosures, and a new Committee of Seventy was formed to inaugurate another reform movement. William L. Strong, a dry goods merchant, was nominated for mayor by the Committee. He received the indorsement of the Republicans, and was elected. Theodore Roosevelt was made commissioner of police, and a vast improvement was immediately realized in the workings of this department. Jacob Riis, as Tribune reporter, and the Rev. Charles H. Parkhurst had long been students of the terrible conditions, and Roosevelt took them into active coöperation. The reform administration was a genuine success in many other ways. Graft was practically unheard of. There was efficiency in the various departments. Many public improvements were made, and the cause of education saw a new era of progress."—C. M. Stebbins, *Tammany Hall, its history, organization and methods*, pp. 63-65.

1895.—Consolidation of Astor, Lenox and Tilden foundations to form the New York Public Library. See LIBRARIES: Modern: United States: New York Public Library.

1897.—Election of first mayor of Greater New York.—Power of Croker as leader of Tammany Hall.—The first municipal election in Greater New York excited a passion of interest that was natural in the city itself, but extraordinary in the degree and the extent to which it spread, not only throughout the United States, but widely in the foreign world. The election was looked upon as the test of a vastly important experiment in the democratic government of an enormous city. The charter of the great consolidated municipality had lodged tremendous, unprecedented power and responsibility in the office of its mayor. The people were given an opportunity to determine by a single act of suffrage—by their choice of a single man—the character of their government. Democracy in municipal affairs, at least, had never been put on trial so sharply before. To a great number of the citizens of New York the duty of the hour was plain, and they promptly set their hands to it. Many months before the election they began the organization of a Citizens' Union, in which men of all political parties, sinking every other difference, should join for the defeat of Tammany and "Boss" Croker, and for the election to the

mayor's office of the best mayor to be found. With remarkable unanimity, their thought of the man turned to Seth Low, president of Columbia University, but one time mayor of Brooklyn, where his vigor, his firmness and his independence had been conspicuously proved. An extensive canvass of the city showed so widely spread a feeling in favor of Low that he was named at the beginning of September as the candidate of the non-partisan Citizens' Union. It was hoped that the whole opposition to Tammany Hall could be united in support of Low, representing as he did no partisan hostility to any organization in national or state politics. It was especially hoped and believed that the Republican party organization would endorse the choice of the Citizens' Union and make Low (himself a strong Republican) its own candidate. By nothing less than a general combination could the compact forces of Tammany Hall be overcome, and that fact was well understood. It was a fact so plain, indeed, that when the head of the Republican organization in New York persisted in setting a party candidate in the field, to divide the opposing voters of the city, there seemed to be small doubt of the intention with which it was done. The master politicians of the party were evidently more willing that the vast powers of the mayoralty, in the organization of the government of Greater New York, should be wielded by their prototypes of Tammany than that they should be given to independent hands. The party was obedient to them, and General Benjamin F. Tracy was put forward, by a Republican convention held September 28, in opposition to Low. The night previous, another candidate had appeared, in the person of Henry George, author of the economic doctrine of the "single tax," supported ardently by a large following, especially in the Democratic party. A section of that party, organized under the name of the United Democracy, had nominated George, and his nomination was endorsed a week later by a great assembly which claimed to represent the Jeffersonian Democracy of New York. On the 30th of September the nomination of the Tammany Democracy was given to Robert A. Van Wyck. Between these four principal candidates, the result of the election was only put in doubt by some question as to the strength of the Democratic vote which George would draw away from Van Wyck. It was a question extinguished sadly, three days before the election, by the sudden death of George. He had not been in good health, and the strain of the exciting canvass broke him down. His followers made a hasty nomination of his son, Henry George, Jr., in his place; but the personal prestige which might have carried a large vote with them was lost. Of the triumph of Tammany there was no longer any doubt, and no surprise was felt (though abundant grief and anger found expression) when the returns of the voting on November 2d were announced. Judge Van Wyck was elected by the ballots of 233,997 citizens, against 151,540 cast for Low, 102,873 for General Tracy, 21,693 for the younger George. Tammany would have been beaten if the Republican vote had gone to Low. Besides the four principal candidates here named, there were four other nominees who received small numbers of votes. Lucien Sanial, put forward by the Social Democrats, received 14,467; William T. Wardwell, named by the Prohibitionists, received 1,350; Patrick J. Gleason and Alfred B. Cruikshank, running with little more than some personal support, received a few hundreds of votes each. "In the latter part of 1897, after the success of Tammany . . . Mr. Croker spent some time

at the Lakewood Hotel, in Lakewood, N. J. It was commonly understood, and the newspapers all accepted the theory, that he there and then determined personally the Tammany men who should be appointed by Mayor Van Wyck to the many important and lucrative positions to be filled by the mayor under the Greater New York charter."—*Some things Richard Croker has said and done* (pamphlet), p. 9.

1899 (April-December).—Mazet investigation.—An investigation of charges against the city government, by a committee of the Legislature, Robert Mazet, chairman, was opened in April, 1899, the examination of witnesses being conducted by Frank Moss. The investigation followed lines much the same as those pursued by the Lexow committee, in 1894, and revealed much the same foul state of things, especially in the department of police. But there was evidently less earnestness in the committee; the probing of iniquities was far less thorough, and the whole proceeding was stopped with suspicious suddenness as soon as it drew near to prominent members of the party by which it was controlled. It called fresh attention to the rottenness in municipal politics, and it led to the creation of a new commission for the revision of the Greater New York charter; but otherwise it was most unsatisfactory.

1899-1900.—Ramapo water contract.—In August, 1899, Bird S. Coler, controller of the city, exposed a gigantic scheme of plunder involved in a contract with the Ramapo Water Company, which Tammany officials, assisted, it was said, by some interested Republicans, were attempting to crowd through the board of public improvements. The contract would have bound the city for forty years to pay to the Ramapo Company \$70 per million gallons for 200,000,000 gallons of water daily. Action on the subject was taken by the legislature, which, in March, repealed the Act of 1895, thus stripping the Ramapo Company of its extraordinary powers.

1900 (June).—Great fire at Hoboken piers. See HOBOKEN.

1900-1901.—Revision of charter.—Carefully as the Greater New York charter had been drawn, it proved unsatisfactory in the working, in various respects, and a commission to revise it was appointed in 1900. The report of the commission was submitted to the governor on the 1st of December, and transmitted, with his approval, to the Legislature in the following month. In the hands of the Legislature, the bill embodying the revised charter underwent considerable amendment. It was passed by the Senate on the 3rd of April and by the Assembly on the 4th, and went to the mayor of New York for the submission to his judgment which the state constitution of New York requires. Some of the more important changes in the charter made by the revision, as passed, are, an increase of the administrative powers of the presidents of boroughs; abolition of the municipal council and creation of a board of aldermen of 73 members; reorganization of various departments of the municipal administration.

1900-1903.—Beginning of tenement house reform.—"It was not until Governor Roosevelt's appointment of the De Forest Tenement House Commission in 1900 that the necessary remedial legislation took practical shape. This act itself was the result of many years' struggle against corrupt politicians.—Tammany Hall, the self-appointed guardian of the poorer classes, has been a bitter enemy of tenement reform,—and against vested interests. Its long delay had greatly exaggerated the problem; for meanwhile the conditions described

had accumulated in appalling volume. The commission, however, was of high civic character, and was composed of men, several of whom had made an exhaustive study of the tenement problem. The law which was passed as a result of their investigation was the first sweeping and effective tenement measure since the enactment in 1867 of the first tenement house act. The newly elected Low administration found the enforcement of this statute one of its most important responsibilities. The law created a new branch of municipal service,—the tenement house department; and gave the tenement commission, in the shape of an elaborate code of housing laws, important supervision over the building of new tenements and the maintenance of old."—B. J. Hendrick, *Great municipal reform* (*Atlantic Monthly*, Nov., 1903).

1901-1903.—Municipal elections.—Tammany's loss and recovery of the government.—Tammany Hall suffered defeat in the municipal election of 1901, the Hon. Seth Low being carried into the Mayor's office by a roused movement of reform which fused the elements of opposition to the corrupting Tammany power. Unfortunately the Mayor's term of office had been shortened to two years by the charter amendment of the previous year, and the term was too brief for much depth and thoroughness of reform; but the city was greatly cleansed during those two years. "With conditions favorable to its return to power, Tammany Hall took measures to make its ticket in the municipal campaign of 1903 headed by a candidate whose name stood for prestige and respectability. Tammany's candidate for Mayor was George B. McClellan, whose father of the same name, after serving as Commanding General in the Union Army during part of the Civil War, had been the Democratic candidate for President of the United States in 1864. A political protégé of Charles F. Murphy, George B. McClellan had seen service in Congress and had been selected by Mr. Murphy as Tammany's candidate for Mayor a considerable time before the campaign opened. Jealousy antagonistic to Tammany's domination and assertion of supreme power, the Brooklyn Democratic organization, then under control of "Boss" Hugh McLaughlin, opposed McClellan's nomination, but Mr. Murphy carried his point. To the amazement and chagrin of the Republicans and Fusionists, Tammany Hall then consummated a bold and astute political stroke by appropriating two of the three principal nominees of its opponents' ticket, and nominating them as Tammany candidates. These two men were Edward M. Grout and Charles V. Fornes, respectively occupying the offices of Controller and President of the Board of Aldermen under Mayor Low's administration. With Mayor Low they had been renominated. Thus did Tammany shrewdly weaken the other side and present itself as having two chief candidates of the same identity and capacity as those of the reformers. Mayor Low and his supporters did not accept this unhumorous situation complacently; they indignantly forced Grout and Fornes off their ticket. But the effect sought by Tammany had been produced. Mr. McClellan was elected Mayor by a plurality of 62,606. The vote resulted: McClellan, 314,782; Low, 252,086. Furman, candidate for Mayor of the Social Democratic party, received 16,506 votes; Hunter, the Socialist Labor party's candidate for Mayor, 5,205 votes. For the Prohibition ticket 869 votes were cast. In this election Tammany also elected its candidates, including Grout and Fornes, to all of the other important city offices, except the Presidency of the Borough of Rich-

mond. The results of the election practically gave Tammany Hall full control of the city."—G. Myers, *History of Tammany Hall*, pp. 305-306.

1901-1923.—Attempts to revise the charter.—"Since 1901, two attempts have been made to further revise the charter. On July 17th, 1907, the legislature passed an act authorizing the appointment of a commission of nine persons consisting of the mayor and comptroller of the city, a member of the board of aldermen, to be appointed by the governor and six other persons to be appointed by the governor, to examine into the local government of the city of New York and the counties contained therein, and the effect and working of the charter and to suggest such legislation as it might deem advisable relating thereto. The commission as required by the act made its final report to the governor on December 1st, 1907, indicating the confused condition of the statutory law affecting the city, and recommended various amendments but no legislation followed. On April 13th, 1908, the legislature passed an act to authorize the appointment of a commission to be known as the New York Charter Commission, to inquire into the local government of the city of New York, with power to investigate the manner of conducting and transacting business in the several departments, offices and boards thereof, to suggest legislation with respect thereto and in its discretion to draw a new charter and administrative code for the city. The governor on April 21st, 1908, appointed the commission, eight of the appointees having been members of the Charter Revision Commission of 1907. This commission made its report to the legislature on March 8th, 1909, accompanied by the draft of two bills comprising the charter proper and administrative code. In April, 1910, a new charter, differing from the one reported by the commission of 1908, was introduced in the legislature, but the bill failed of passage."—M. Ash, *Greater New York charter*, p. lxxii.—"The New York Charter Commission, appointed by the governor pursuant to the provisions of chapter 343, of the laws of 1921, submitted a report in 1923, together with a draft of an act designed to constitute a new charter of the city of New York."—*Report of the New York Charter Commission for the City of New York, 1923* (pamphlet).

1904.—Burning of steamer *Slocum*.—A catastrophe of such horror as to be historical attended the burning of the excursion steamer *General Slocum*, at New York, on the 15th of June, 1904. The boat left a New York dock in the morning with a Sunday-school picnic party aboard numbering about eleven hundred,—nearly all women and children. While passing through that part of the East river known as Hell Gate, within the New York City limits, fire was discovered in the forward part of the vessel. It was then flood tide, and the eddies and currents in those waters are very strong. The captain decided that it would be folly to attempt to land on either shore, or to beach his boat. He therefore headed the *Slocum* for an island two miles up stream. As the boat went forward at full steam, the fore-and-aft draught thus created fanned the flames and hastened her destruction. On the discovery of the fire by the passengers, the wildest panic ensued. It was found that the life-preservers with which the *Slocum* was equipped were worthless. No attempt was made to lower boats or life-rafts. The crew were engaged in trying to cope with the fire, but their efforts were futile. Within twenty minutes, the boat went to her doom, and of the women and helpless children who had embarked

so gaily an hour before, more than nine hundred were drowned or burned to death. Hundreds were saved by the heroic efforts of policemen, river men, and the nurses on North Brother Island, the seat of New York's hospital for contagious diseases, where the *Slocum* was finally beached. Most of those who met this awful death had come from a single densely populated district of New York's great "East Side." In some cases, whole families were wiped out.

1905.—Municipal election.—"The municipal election in 1905 was a triangular contest. Tammany Hall did not fear the Republican ticket headed by William M. Ivins for Mayor. But it did have intense uneasiness over the possibility of Mr. Hearst triumphing; his movement was too plainly making inroads among large numbers of voters that ordinarily would have voted the Tammany ticket. Tammany was particularly bent upon winning inasmuch as by the provisions of the revised charter the term of the incoming Mayor and other officials had been changed to a four-year incumbency. . . . [Hearst's personal following took the character for a time of a formidable political organization, incorporated under the name of the Independence League; and the wealth which Hearst had inherited, and which his prosperous newspapers replenished was spent in supporting the organization. He was nominated by the Independence League and Tammany renominated Mayor McClellan.] So effective were Hearst's onslaughts on 'Boss' Murphy and the elements represented by him that during the campaign Mayor McClellan repeatedly made promises that he would thereafter pursue an independent course, should he be reelected. Mr. Hearst's vote returns came in so heavily after the polls were closed that it looked as though he were certainly elected. That very night there was a strange interruption, lasting about an hour, in the public giving-out of the returns. Then as the returns were resumed, it appeared that although the vote between McClellan and Hearst was extremely close, McClellan had a little the better of it. The next day it was announced that Mayor McClellan was reelected by a close margin. Mr. Hearst and his followers declared that manifest fraud had been committed, and took steps to have a recount. Meantime while the process was dragging along, Mayor McClellan was widely criticized for his action in immediately claiming his reelection, opposing a recount, and not showing faith in the legitimacy of his claims by waiting with dignity until there had been a careful official recount. The final official recount gave this result: McClellan, 228,407 votes; Hearst, 224,929 votes; Ivins, 137,184 votes. It may be added here that in the very next year—in 1906—Hearst accepted a Tammany indorsement when he ran for Governor. . . . With the reelection of Mr. McClellan, Tammany Hall confidently looked forward to four more years of unquestioned control of the immense budget and enormous opportunities embodied in the rule of New York City."—G. Myers, *History of Tammany Hall*, pp. 322-323.

1905-1919.—Water supply from Catskill mountains.—In 1905 the City of New York procured authority from the legislature to construct the works necessary for an adequate supply of water, additional to that which had been drawn for many years from the Croton river for old New York and from the Ridgewood system for Brooklyn. The source determined on was in the Catskill mountains, including several streams, called creeks—namely Esopus, Rondout, Schoharie, and Catskill—having a total water-shed of 885 square

miles, and estimated to furnish about 770 millions of gallons daily, even in dry years. The plan of the project in its entirety contemplated the construction of eight great reservoirs for storing and controlling the waters derived from these streams. "By 1917, after an expenditure of one hundred and seventy-seven million dollars, water from the Catskill Mountains, traveling a distance of one hundred and twenty miles, was supplied to all the boroughs of the city. . . . Many engineering difficulties confronted the builders. A great dam had to be built across the Ashokan Valley. Lands in the valley had to be purchased, houses torn down, graveyards moved, and railways shifted. All this took time, men, and money. The Catskill system comprises various reservoirs, which store water, and aqueducts, which convey the water from the reservoirs to the city. [See also *AQUEDUCTS: American: Catskill.*] The Ashokan Reservoir comes first. It is twelve miles long and three miles wide, and covers about ten thousand acres with water from fifty to one hundred and ninety feet deep. The capacity of the reservoir is estimated at one hundred and thirty-two billion gallons. Aqueducts consisting of masonry and iron pipes carry the water underground through tunnels dug under mountains and even under the Hudson River to the Kensico Reservoir, located about three miles north of White Plains. This, the second reservoir, is four miles long and three wide. Fifty days of water supply for the city is stored there. From here the aqueduct runs sixteen miles south to the Hill View Reservoir, in the city of Yonkers. In some places the pipes that carry the water are more than seven hundred feet under ground—where they cross the Narrows to the Silver Lake Reservoir, in Staten Island. The Catskill water system is not wholly completed. [See below; 1923.] It is intended to furnish five hundred million gallons of water daily. Only about one-half that amount is supplied at present. The Schoharie Watershed when completed will supply the rest. Pumping-stations will be dispensed with in the present system as the water comes to the city by gravity. This means a saving of millions of dollars. At present the city is receiving six hundred million gallons of water daily. Forty millions are supplied by private companies, two hundred and fifty millions by the Catskill system, three hundred and ten by Croton. Each inhabitant of Greater New York is credited with using nearly two hundred gallons of water daily at a cost of two cents for that amount for each inhabitant. Supplying the people of the city with water is not all that must be done. The water must be pure. There must be a continuous flow. In case of drought water must be plentiful. The city must protect not only the water but the supply. There must be protection against accidents, bursting of mains, breaking of dams, and overflow of reservoirs. Refuse and sewage must not be permitted to reach the water. How is this work to be done? Who is to do it? Outside of the city there is a squad of mounted police that patrol the reservoirs and aqueducts. Repair companies are ready for any emergency. For the Croton system there are uniformed inspectors that guard the water and report breaks and leaks to the Water Department. The city maintains repair companies. These are ready night and day in case of accidents. New York has had some trouble keeping the people who live near the reservoirs from dumping sewage and garbage near them. Some progress is being made. Efforts have been made to raise sanitary standards of communities along the watershed. Rules under which the de-

partment has endeavored to protect the water supply from pollution were framed in consultation with the State officials, and suitable penalties for violations have been fixed. Water before it can be used must be purified. Four ways are used to remove impurities and germs. First, at the Ashokan Reservoir the water is aerated. This is done by two small reservoirs 250 x 500 feet, in the bottom of which are laid water-pipes four and five feet apart. At intervals of five and six feet in each pipe are nozzles through which the water under pressure rises forty to sixty feet and falls back into the reservoir as spray. All the water goes through this process. This mixture of air with the water causes oxidation of the vegetable organisms, and removes odors and undesirable gases. Second is coagulation. This removes the turbidity, small clay particles, from the water, which sometimes give it its brownish appearance. About two miles north of Kensico Reservoir a coagulation plant has been installed. This is so situated that it can mix with the water flowing into the aqueduct small quantities of harmless coagulant—alum—which will cause the particles of clay to settle to the bottom during the storage period in the Kensico Reservoir. Third is chlorination. Chlorine is introduced into the water flowing downstream from Kensico. This sterilizes the water before it reaches the city. Harmful bacteria are thus removed. Fourth is filtration. Provision has been made for a filtration plant about two miles below Kensico. Rapid sand-filters will be used. These will remove all other impurities from the water."—J. L. Stockton, *City's water supply (Community civics pamphlet)*.

1909.—Renewed struggle against Tammany.—Although Tammany elected its candidate for mayor in the municipal election of 1909, its domination was practically overthrown by the defeat of its nominees for all other offices of importance in the city government. A coalition of the Republicans with anti-Tammany Democrats and other organizations had presented a fusion ticket headed by a prominent and much-trusted business man, Otto T. Bannard. William R. Hearst entered the field again, as an independent nominee, and Tammany named William J. Gaynor, who had been one of its opponents, as a Democrat, in the past. Gaynor was elected by a plurality of 73,010, the vote cast for mayor being: Gaynor 250,678; Bannard 177,602; Hearst 153,843. The city comptroller, four of the five borough presidents, and the president of the board of aldermen, were elected by the Fusionists. By the election of George McAneny to be president of the Borough of Manhattan, a political reformer of great force, was brought into the city government. By controlling twelve of the sixteen votes in the important board of estimate, the opponents of Tammany stripped that organization of all power over public "jobs." As expressed in one of the journals of New York on the day after election, "after January 1 Charles F. Murphy and his associates no longer will say who shall have public franchises; they, too, will no longer fix the budget, sell the city's bonds, and pay political debts with salary

increases. In other words, the Tiger has lost his grip on the city's purse-strings, and this fact, perhaps, more than any other, has turned his den into a cavern of gloom."

1909 (June).—Wall Street investigation, so-called.—Report on Stock Exchange and other exchanges. See STOCK EXCHANGE: 1909.

1909-1919.—"Pay-as-you-go" policy.—"By 1909 there was complete confusion concerning what was the city's 'constitutional debt,' and therefore what was its 'margin' for further borrowing. The confusion in 1909 was due partly to the real complexity of the subject, . . . partly to a poor accounting system in the city departments, and partly to deliberate efforts by some of the previous administrations to camouflage the current expenses for the purpose of making the taxpayer's burden seem light, on the principle that 'the lighter the taxpayer's burden, the more votes for the administration.' This camouflage could be effected only by long-time borrowing, which would not show in the budget as then made out, putting thereby a treble burden upon the next generation. . . . The whole question was thrown into the courts, since honest and reputable people differed in their opinions of the margin, their estimates ranging from \$3,000,000 to \$300,000,000. Nevertheless we were still facing financial difficulties when the war broke out in 1914, and demands were made upon us which brought about the formulation of the pay-as-you-go policy. This was put into legal form by an act of the Legislature which laid down the principle that revenue-producing improvements—for water, docks, subways, etc.—might be paid for out of long-time bonds, fifty-year corporate stock, but that non-revenue-producing improvements must be paid for out of the tax levy. This was to take four years to go into full effect, each year a larger proportion being raised by taxation, till by 1918 all non-producing improvements (schoolhouses, paving, sewers, etc.) would be paid out of the current taxes."—L. Hall, *Paying the city's bills (Community civics pamphlet)*.—"New York city is a very large business corporation, with an income and expenditure of over \$200,000,000, about one-fifth of the federal government pre-war budget. Quite a little of this money goes into the purchase of materials and supplies, and with an increase in Dun's index price of about 100% since the beginning of the European War, the city had the choice of stopping practically all expenditures, of deferring payment for some of them, or of raising the tax rate to a degree that would have been alarming. There were objections to all three courses, but such an increase in the city's budget as would cause a reduction in the values of real estate through a too sudden increase in the tax rate, involved the immediate risk of eliminating the city's margin for new borrowing for construction purposes and creating a situation which the "Pay-as-you-go" policy had been intended to prevent. Rather than risk the development of an unhealthy situation in real estate conditions, Controller Craig suggested that at least for the period of the war the provision requiring the city to pay its non-revenue-producing expenditures out of current income should be modified in favor of a policy which would permit the city to fund such expenditures over a period not longer than the life of the improvements created. This policy, while less conservative than the 'Pay-as-you-go' policy adopted in 1914, is a great improvement on the plan which had been followed for years. The legislation which has been passed permitting this change will permit the city for the period of the war and one year afterward to issue corporate

stock and serial bonds up to \$15,000,000 annually for non-revenue-producing improvements, provided they mature and are redeemed within the estimated life of the improvement as certified in the resolution authorizing it. Its estimated useful life varies from fifty years for property believed to be permanent, such as water supply, rapid transit or sewers, down to fifteen years for expenditures for machinery and ten years for purposes not otherwise specified."—A. M. Anderson, *History of the pay-as-you-go policy (Proceedings of the Academy of Political Science, July, 1918, p. 110)*.

1910.—Cloak makers' union.—Protocol of peace. See ARBITRATION AND CONCILIATION, INDUSTRIAL: United States: 1910-1916; LABOR STRIKES AND BOYCOTTS: 1877-1911.

1910-1913.—Gaynor's administration.—"While graft in the police department may not have been fully eradicated during his administration, still it cannot be denied that he left that department in an infinitely better condition than he found it. . . . Without Mayor Gaynor, our extended subway system would probably not now be under construction, for his was the powerful personality in the Board of Estimate that continually counselled action and not talk."—Address by Henry Clews at Cooper Institute, New York, Sept. 23, 1913 (*pamphlet*), pp. 4-5.

1910-1920.—Growth of the Bronx.—In the decade from 1910 to 1920 the Borough of the Bronx grew astonishingly in population and importance. From a population in 1910 of only 431,000, it had increased in 1915 to 650,000, and in 1920 to 732,000—an increase of 69.8 per cent. The assessed value of real estate during the same period increased from \$494,000,000 to \$753,500,000. In size the Bronx now ranks with Baltimore, having only 1,810 fewer inhabitants in the last census.

1912.—Conference of Legal aid societies. See LEGAL AID: United States: Conferences and conventions; Legal aid societies in New York state.

1913-1917.—Mitchel's election and administration.—"In 1913 a Fusion committee of Republicans and independent Democrats nominated and secured the election of the recent New York City administration. Mr. Mitchel, the mayor, was elected by a large majority."—E. Dawson, *New York City election (American Political Science Review, Feb., 1918, pp. 110-120)*.—"Mr. Mitchel and his associates have now had nearly two years of opportunity and power. In this time his administration has demonstrated its character and quality, and given assurance of the permanent contribution it will make to the city's welfare. It has given the city a government of a non-partisan character. It has emphasized the professional character of municipal administration by seeking qualified experts for executive positions. It has brought to the forefront the social welfare aspects of government activity, and given emphatic and continuing emphasis to economy and efficiency. . . . It has kept itself in the position of recognizing from week to week and month to month the obligation it assumed on entering office to conduct the affairs of the city government with efficiency and to devote the resources of the city exclusively to public welfare."—H. Brùère, *Mayor Mitchel's administration of the City of New York (National Municipal Review, Jan., 1916)*.

1916.—Zoning acts. See CITY PLANNING: United States: Survey of New York.

1917.—Hylan's election.—"On November 6 last [1917], the city voted to substitute for this Fusion administration one made up wholly of Democrats, and almost wholly of the nominees of Tammany Hall. Hylan, the democratic candidate, received 297,000 votes; Mitchel 149,000. . . . The election was a sad exhibition of unorganized government. . . . The administration had made many mistakes; but opposition was as sharp against its most conspicuous services as its most serious errors. . . . The administration rendered no more important service than its adoption of the pay-as-you-go policy in handling the city's debts."—E. Dawson, *New York City election (American Political Science Review, Feb., 1918, pp. 110-120)*.

1918.—Influenza epidemic.—"The influenza epidemic that swept New York City in the fall of 1918 came at the time of all times when we were least armed to cope with it. Over-exertion in war work, a general sense of strain, a dearth of doctors and nurses, who had gone across the seas, all contributed to break down our defenses against it."—W. W. Rogers, *Guarding the health of the people (Community civics pamphlet)*.

1918-1921.—Elections.—Five cent fare issue.—Transit commission.—Meyer committee of investigation.—"John F. Hylan became mayor of New York City, January 1, 1918, having overwhelmingly defeated J. P. Mitchel, candidate for reelection on the fusion ticket. . . . After Mayor Mitchel's honest and efficient administration the people of the country in general shook their heads dubiously when the voters of our largest city decisively rejected Mitchel in favor of Hylan, protégé of Hearst and candidate of Tammany Hall. Naturally, Mr. Hylan's administration was closely watched by many voters of the city who expected to find not only inefficiency but also gross corruption. The newspapers remained generally hostile to the mayor. When he was not ridiculed and pictured as a bungler he was accused of sinister purposes. His appointments were often condemned. It was said that he appointed Tammany politicians and personal friends to office. Of course in doing so he was merely following a well-established American custom. New York, like many other cities, has had considerable difficulty in its dealings with public utility corporations. When the war came prices rose enormously. Transportation companies, formerly paying large dividends, now confronted with rising costs, made demands for increased fares. The mayor and his colleagues rejected all such proposals. They were blamed for failure to work out definite plans for the solution of the transportation problem and were frequently called obstructionists. The fact remains, however, that while in many cities car fares were increased and in some doubled, in New York the fare is still five cents. The great majority of the people believe that the mayor's stand is responsible for this. . . . The 1921 legislature, overwhelmingly Republican and extraordinarily submissive to Governor Miller's leadership, made the re-election of Mayor Hylan a practical certainty. Two measures especially strengthened the position of the mayor. The public service commissions were reorganized and a state-appointed transit commission with complete authority over the subject of transit in New York City was

established. Secondly, provision was made for a legislative committee to investigate the conduct of the Hylan administration. The transit law was attacked by the city administration and by local Republican leaders because it practically deprived the city of all control over its transportation system and because it was believed to pave the way for an increase in fare. The transit commission at once began a thorough investigation of its problem and on September 30 issued a preliminary report recommending a plan for municipal ownership of all railway lines in the city, payment for the property to be made on the basis of an honest valuation irrespective of the present capitalization and book values. Fares were to be based on the actual cost of operation, and there was to be no increase unless operation under the new conditions should demonstrate its necessity. Upon the full establishment of the plan, the transit commission was to be abolished. These proposals of the commission were at once attacked by the city administration though they were quite generally approved by the press. The comptroller saw in the plan only one good provision—that for the abolition of the transit commission, which he thought, however, should be put into effect at once. The mayor's commissioner of accounts detected a scheme for unloading on the city worthless liues and for an eventual eight or ten cent fare. It was also claimed that the issuance of the report a few weeks before the election was designed to fool the people into the belief that the commission was in favor of the five-cent fare and thus to weaken the mayor's chief campaign issue. The legislative investigating committee, headed by Senator Meyer, did not succeed in convincing the public that the Hylan administration was very corrupt and inefficient. On the contrary it did convince the people that its chief purpose was to produce campaign material and to 'get Hylan' at any cost. Although the committee's examination of city officials brought to light some things which did not tend to increase public confidence in the management of certain city departments, yet its methods were so apparently partisan that the investigation proved a boomerang and undoubtedly strengthened the mayor with the voters. . . . From the very beginning of the campaign it was clear that the odds were in favor of Hylan. . . . The election resulted in an overwhelming victory for the mayor and the Democratic ticket generally. Every single member of the newly elected board of estimate and apportionment, the city's actual governing authority, is a Democrat. Hylan's plurality was almost 418,000. The vote for mayor stood as follows: Curran, Republican-Coalition, 336,888; Hylan, Democrat, 745,874; Panken, Socialist, 83,200. Comptroller Craig's plurality was 240,252. Hulburt was elected president of the board of aldermen by a plurality of 268,728. The Democrats gained also fourteen seats in the board of aldermen, which will have fifty Democratic and fifteen Republican members. There is little doubt that the five cent fare issue was the greatest single factor in determining the result of the election. The voters were unalterably opposed to an increase in fare. Moreover they believed that the mayor's firm stand against such increase was the reason for the present five cent fare. Whether the mayor's stand was based on a conviction that the five cent fare was sufficient or that it was the best way to secure votes did not seriously concern them. Whatever his motives were, he had done what they wanted done. After the election was over even traction officials stated that they considered the vote a decided rejection of their arguments

for more than the present fare. Rightly or wrongly, the masses of the voters bailed the reelection of Hylan as their victory over the 'upper classes.'—E. D. Graper, *New York City Election (American Political Science Review, Feb., 1922)*.

Hedley, *Annual Report of the Interborough Rapid Transit Company for the Year ended June 30, 1921*.—*Report of the Joint Legislative Committee to Investigate the Affairs of the City of New York on the Finances of the City, Mar., 1922*.—*Reports of the New York State Joint Legislative Committee to Investigate the Affairs of the City of New York, 1921*.

1919.—Municipal election.—Defeat of Tammany.—“A number of important municipal elections were held in November. In New York City Tammany suffered a severe defeat. Fiorella H. LaGuardia, Republican, was elected as president of the Board of Aldermen over Robert L. Moran, holder of the office, by a plurality of about 1400 out of nearly 1,000,000 votes cast. Henry H. Curran, Republican, was elected as president of the Borough of Manhattan over Edward F. Boyle, Democrat, by a plurality of 1800. With these two officers the Republican secured a voting strength of five on the Board of Estimate and Apportionment, the actual governing authority of the city. The Tammany judicial ticket was also defeated. The Board of Aldermen remained Democratic by a slight plurality.”—H. J. Carman and E. D. Graper, *Political Science Quarterly, 1920, Supplement, p. 76*.

1919.—Organization of American Labor party of Greater New York. See LABOR PARTIES: 1918-1920.

1919-1923.—Port and harbor development.—New Jersey tunnel plans.—Port of New York Authority.—Staten island piers.—“The commission known as the Port of New York Authority consists of three Commissioners appointed by the Governor of the State of New York and three Commissioners appointed by the Governor of New Jersey. Two of the New York Commissioners must be resident voters of New York City and two of the New Jersey Commissioners must be residents of the New Jersey district affected. The original six Commissioners were named in the acts which created the commission with the designated three, five and seven year terms. Subsequent appointments are for terms of five years. Vacancies are filled by the Governor for the unexpired term of the retiring member. On April 30, 1921, the Port Treaty was signed by the representatives of the States of New York and New Jersey as provided in Chapter 154, Laws of 1921. A Port of New York District was established by this treaty and the Port of New York Authority was placed in jurisdiction. The compact entered into between the two States was approved by President Harding on August 23, 1921. The Port of New York Authority is directed by law to make studies, conduct investigations, hold hearings and conferences, and submit a comprehensive plan for the development of the Port to the Legislatures. The Port of New York District, included within the jurisdiction of the commission, extends roughly from the City Hall in Manhattan 25 miles to the north, 16 miles to the east, 23 miles to the south and 20 miles to the west, including the principal communities within what is called the Metropolitan District. It included within its radius 105 municipalities, upward of 8,000,000 residents and embraces 12 trunk line railroads, handling over seventy-five million tons of freight yearly, as well as the tremendous shipping of the largest seaport in the world, the foreign trade

alone involving the handling of over forty-five million tons per annum. . . . Chapter 260, Laws of 1906, created the New York Interstate Bridge Commission, which in conjunction with a similar commission in New Jersey was appointed to study the practicability of constructing a bridge over the Hudson River. In 1907 the Commissioner of Bridges of the City of New York was added to the commission through appointment by the Mayor. In 1913 the name of the commission was changed to New York State Bridge and Tunnel Commission and it was given authority to consider tunnel communication. Chapter 178, Laws of 1919, authorized the commission to proceed with the construction of a tunnel or tunnels between a point in New York City, near Canal Street, Manhattan, and a point in Jersey City, for the use of pedestrians and for vehicles not operated by public service corporations. The sum of a million dollars was appropriated by the State for the purposes of commission. The New Jersey Interstate Bridge and Tunnel Commission was given authority by that State to join New York in the undertaking and the same amount of money was appropriated. A contract was signed between the two States on December 30, 1919, the cost of construction, operation, repair and maintenance to be shared equally. Ground was broken for the tunnel October 12, 1920. The entire cost is estimated at 28 million dollars and the tunnel is expected to be open for traffic in 1924. It is to be a twin-tube cast iron tunnel, 29 feet exterior diameter, to accommodate four lines of traffic and two sidewalks for pedestrians, extending from the opening at the foot of Canal Street, Manhattan, to Twelfth and Provost Streets, Jersey City. . . . Chapter 700, Laws of 1921, provides for a freight and passenger tunnel under the Narrows between the Boroughs of Brooklyn and Richmond. The Board of Estimate and Apportionment is given authority to select the sites, to decide upon construction and to fix tolls, etc., in accordance with the provisions of the Charter for local improvements. The law requires that the construction of this tunnel shall begin within two years from the date of the passage of the law and the City is empowered to lease it to transportation companies when it is completed.”—J. Caccavajo, *Guide to the municipal government, City of New York (pamphlet), pp. 115-117*.—“The greatest single addition ever made to the pier capacity of the port of New York (or of any other port . . . is the long stretch of piers, none of them less than a thousand feet in length, which extends along the shore-line of Staten Island to the south of St. George's Ferry, between Tompkinsville and Clifton. This is an entirely new development, all of the piers having been constructed simultaneously, and well within a stretch of two years' time [1920-1921]. In width they vary from 125 to 200 feet, and in length from 1025 up to 1180 feet. The two widest piers, each 209 feet in width, and 1020 feet in length, carry double-deck sheds; the others are single deck.”—*New York City's Staten island docks (Scientific American, May, 1922)*.

Holland, *Linking New York and New Jersey (American City, Mar., 1921)*.—*Annual of port of New York, 1920*.—J. H. Cohen, *Greatest port in the world (Independent, Mar. 20, 1919)*.—T. E. Rush, *Port of New York*.—*New York Port and Harbor Development Commission, Report, 1920, p. 329*.—*Planning the greatest seaport development in the world (Current Opinion, Apr., 1922)*.

1920.—Housing shortage.—New rent laws.—“Recently a committee was appointed by Governor Smith of New York, composed of members of the Legislature, to investigate the shortage of houses and dwellings. It is known as the ‘Lockwood’ committee. [See HOUSING: United States: New York state legislature.] It appears that there has been for some little time an association of contractors whose practice was to pass their proposals through a so-called clearing-house. This clearing-house determined the cost on each piece of work and allotted the job to one contractor, who should pay a portion of the price into a fund to be distributed among those who did not bid for it. In this way prices were kept at a satisfactory level. The most extraordinary situation developed in the case of labour. Under the guidance of a leader a council was formed consisting of delegates from a large number of labour unions closely associated with the building trades. This council virtually held the entire industry in its hands. To prevent strikes, tribute had to be paid to certain officers. To force outside unions into membership, work on buildings was stopped until the contractor employing members of such unions had either discharged his men or paid a heavy penalty. When these men did apply for membership they were charged \$50.00 each and \$10.00 a week out of their salaries for the privilege of working. Of course, the President of the Council has been indicted and convicted.”—*Landmark*, Jan., 1921, p. 36.—“Perhaps the most constructive legislation enacted at the recent session was that designed to meet the emergency in the rent situation, chiefly in New York City. A series of twelve bills framed by the Joint Housing Commission and designed to check or prevent rent profiteering was passed and placed on the statute books before adjournment by the Governor’s approval. These bills were as follows:

“Amending the Real Property Law by providing that duration of monthly tenancies unless otherwise specified shall continue until October 1st, next following occupation (Chap. 130).

“Amending the Penal Law by providing for the punishment of landlords who refuse to live up to agreements to furnish light, heat and other service (Chap. 131).

“Amending the Code of Civil Procedure by providing that in dispossession proceedings where the landlord deems the tenant objectionable he must prove to the Court that the tenant is objectionable (Chap. 133).

“Amending the Code of Civil Procedure by providing that in eviction proceedings for non-payment of rent the tenant may obtain a temporary stay by depositing the amount of rent due with the Court clerk (Chap. 134).

“Amending the Code of Civil Procedure by adding a new section in relation to actions to recover real property, by providing that tenants may set up in the Supreme Court the same defense as in the Municipal Court, namely, that the rent is unreasonable, unjust or oppressive (Chap. 135).

“A special act limited in time to November 1st, 1922, providing that in New York City, Erie, Monroe and Westchester counties tenants who are defendants may set up the defense that an increase of rent of more than twenty-five per cent. is oppressive and unreasonable, thus shifting the burden of proof on the landlord (Chap. 136).

“A special act applying to the counties above mentioned, providing that where a final order has been issued in a hold-over proceeding the Court may grant a stay not to exceed six months in cases where the tenant cannot secure suitable prem-

ises elsewhere. As a condition of such stay the tenant must deposit with the Court clerk such amount as the Court may determine to be a fair rental for the premises (Chap. 137).

“Repealing a section of the Real Property Law relating to the liability of tenants holding over after receiving notice to quit (Chap. 138).

“Amending the Code of Civil Procedure in respect to New York City, Westchester, Erie and Monroe counties by adding a new sub-division providing that in cases of leases of one year or less the landlord cannot avail himself of summary proceedings unless the rent involved is not greater than the amount paid by the tenant for the month preceding default or has not been increased more than twenty-five per cent. in a year (Chap. 139).”—*Sixteenth Annual Report of the Citizens’ Union Committee on Legislation, 1920, pp. 25-26.*—“The New York rent laws were never intended to encourage building; they were passed to protect tenants from exploitation in the face of a serious shortage of homes. It cannot be said, however, that these laws have restricted building because this had already ceased before they were passed, and has not been resumed in other States where no such legislation exists. The New York Legislature of 1920 had two duties: one, to protect the public from exploitation in a crisis; the other, to relieve that crisis. The first task was accomplished.”—*Rent laws (Nation, Mar., 23, 1921).*

1921.—City budget.—“The budget for 1921 . . . reached the staggering amount of \$345,571,300.77, and to quote the ‘Evening Post,’ ‘The budget for 1921 is short an item of \$28,000,000, without which the city schools will have to close sometime before next summer. The Board of Estimate has calmly disregarded this matter, leaving it to the Legislature to take action to maintain the city’s educational system. Last year’s budget called for \$273,686,485.13, and that itself was significant as compared with the first budget after consolidation, that of 1899, which was \$03,520,082.03. This year, the tax rate will, according to Comptroller Craig, reach 2.85. There will likewise be an increase of the indebtedness of the city through its various forms of borrowing, including special revenue bonds, corporate stock notes, etc. The city budget must include appropriations for interest on these, on the Funded Debts, installments into the Sinking Fund, redemption of long-term notes, etc. The total amount of appropriation for Debt Service in the budget of 1910 was \$77,931,038.10. The total amount for the Debt Service in the budget of 1921 is \$105,528,527.30. In each \$100 of city revenue, the debt of the city absorbs about one-third, leaving not more than \$60 for all purposes of city and county government. The cost of government for the individual citizen will be \$62 in 1920, an increase of \$21 from the Mitchell administration.”—*Women and the city’s work, Jan. 11, 1921.*

1921.—State transit commission for the city.—The state legislature passed the Knight-Adler Public Utilities Bill late in March. This bill established a transit commission for New York City in addition to the state-wide public service commission. See NEW YORK: 1921.

1921 (February).—Building taxation ordinance.—“In February, 1921, the board of aldermen of New York City availed itself of a power conferred by one of the New York laws of 1920, by passing an ordinance exempting from local taxation for a period of ten years new buildings constructed exclusively for dwelling purposes. The ordinance grants exemption to the extent of \$1,000 for each living room, the total exemption not to exceed

\$5,000 for each single house or separate apartment. The enactment of this ordinance was followed by a notable increase in the number of building permits for dwellings."—*Miscellaneous items (American Political Science Review, Feb., 1922)*.

1921-1922.—City Hall park.—Park board control.—"The most satisfactory incident connected with the parks of the City of New York during the past year has been the encouraging prospect of the reclamation of the southern end of City Hall Park occupied by the old Post Office building. The history of the alienation of this property by the city and the erection of the Post Office will be found in our Annual Report for 1910 at pages 399-403, and references to the movement for the removal of the Post Office in the following reports: 1912, pp. 111-112; 1913, 116-120; and almost every subsequent Report in connection with the development of the Civic Center plan. . . . 'One of the greatest needs in this crowded and strenuous city is for more attractive open spaces. The removal of the old Mullett Post Office would extend City Hall park in a most attractive way, opening it to view from far down Broadway. The People of New York City contribute not only to postal receipts but to all other forms of Government revenue. There are few single achievements which they will more deeply appreciate than provisions for more adequate, mail service, which will include taking this ugly and obsolete building off one of the most precious pieces of park lands."—*Annual Report of the American Scenic and Historic Preservation Society, 1921-1922, pp. 76, 77-78*.—"The Park Board controls 8,500 acres of park land, maintains 120 miles of parkways, and operates 108 playgrounds and 9 recreation piers, in addition to public baths, gymnasias and bathing beaches. [Public golf links, tennis courts, baseball diamonds are maintained by the park department, also camping and playgrounds, and children's gardens. Band and orchestral concerts and motion picture exhibitions are given in summer.]"—J. Caccavajo, *Guide to the municipal government, City of New York (pamphlet)*, pp. 61-62.

1922 (May).—Trinity church celebration.—On May 7, Trinity church of New York City celebrated the 225th anniversary of the granting of its charter by William III of England. The Trinity Corporation is the richest church corporation in the world.

1922 (October).—Budget.—"On October 31, 1922, the Board of Estimate and Apportionment of the City of New York adopted what is unquestionably the largest municipal budget in the history of the world. From the detailed figures published in the City Record for November 14, . . . [a] table has been compiled, showing the

Net Total City Budget.....	\$330,172,517
Total County Budgets for Counties within the City.....	10,582,835
<hr/>	
New York County.....	\$5,403,032
Bronx County.....	1,238,077
Kings County.....	2,787,873
Queens County.....	884,707
Richmond County.....	268,246
New York's Share of State Tax.....	12,595,624

Total Budget for 1923..... \$353,350,976

amount appropriated to run each of the municipal departments of New York City for the year 1923. . . . [In the complete budget] 'salaries' covers all items designated . . . under the heading of personal

services, including salaries, wages, fees, and other similar expenditures. 'Other Expenses' includes equipment, supplies, repairs, maintenance of buildings, postage, telephone charges, printing, rent, interest charges, and all other items except personal services. . . . [according to the figures given].

—*World's largest municipal budget (American City Magazine, Dec., 1922, pp. 491-492)*.

1922 (December).—Traffic regulation.—The system of regulating traffic by flashlight on Fifth Avenue and other important thoroughfares has proved a great success, so that the system will be extended to other parts of the city as soon as appropriations for additional equipment are obtained. The five traffic towers in use during 1921-1922 were installed along Fifth Avenue by Dr. John A. Harris, special deputy police commissioner, at his own expense, and were originally in the nature of an experiment. The new signal towers installed in December, 1922, are constructed almost entirely of bronze, with a granite base 4 feet square and 3 feet high. They are 23 feet in height. The base has granite 'striking blocks' at each corner to fend off traffic and to protect the tower itself. The lower part of the structure is open so as to allow an unobstructed view up and down the avenue. The space at the top which houses the traffic policeman is enclosed in glass windows, so operated as to allow the policeman in the tower to open or close all of them at one time with a single swing of a lever. The towers are heated by means of an electric stove.—Based on, *New York City's traffic towers (American City Magazine, Jan., 1922)*.

1923.—Schoharie division of Catskill aqueduct.—Doubling water supply.—"The complete Catskill water supply project, as originally determined upon in 1905, called for the impounding of the waters of two streams in the Catskills,—the Esopus creek, and the Schoharie. The Schoharie reservoir, which is now under construction, will store 20,000,000,000 gallons of water. The aqueduct is of sufficient size to carry a maximum daily supply of 500,000,000 gallons into New York City, which is the maximum dependable amount of water that can be drawn from Ashokan and Schoharie during a period of dry years. . . . In building the aqueduct it became necessary to cross various valleys and depressions, and instead of attempting to carry the aqueduct across these places at grade and therefore at high level, recourse was had to invert syphons in the form of large steel pipes. To carry the maximum supply, three pipes of a diameter from 9, to over 11 feet, are necessary, but the Board of Water Supply engineers decided to construct, at first, one pipe sufficient for daily supply of 250,000,000 gallons, leaving the construction of the other two pipes to such time as the completion of the Schoharie and the growing needs of the city should call for a daily supply of 500,000,000 gallons. That time is within sight, and consequently the board has let contracts for the completion of the steel syphons throughout the whole length of the aqueduct. When completed cost will have reached \$6,253,000. It will be known that those huge pipes are among the longest, if not the largest ever built, for the inside diameter is 11 feet 3 inches. To protect the steel it is coated inside with two inches of cement mortar, outside with 6 inches of concrete." *Doubling New York's water supply (Scientific American, Feb., 1923)*.—"It is difficult to give an appreciative grasp of the magnitude of the Schoharie development in its entirety, but the following figures, furnished by the Board of Water Supply, may be of some help in this respect. The

construction of the dam includes about 396,000 cubic yards of earth excavation, 92,500 cubic yards of rock excavation, 617,000 cubic yards of repelling and embanking, 430,000 cubic yards of masonry, and the use of 480,000 barrels of Portland cement; and the building of the tunnel will involve about 600,000 cubic yards of rock excavation, 100,000 cubic yards of earth, 200,000 cubic yards of concrete masonry, and the employment of 445,000 barrels of Portland cement. The primary energy is electricity, and to furnish current for the tunnel work, a high-tension transmissive line was built from Saw Kill, near Kingston, where connection is made with the wires of a public service distributing system. This line is 48 miles long and was later extended six miles to supply current for the activities at Gilboa Dam. The undertaking is being carried along so rapidly now that there is every reason to believe that the Schoharie section of the Catskill water supply will be available for service before the close of 1924."—S. G. Roberts, *After Ashokan—What? Doubling the world's biggest water-supply system to take care of the future* (*Scientific American*, Aug., 1922).

NEW ZEALAND: Land.—Area.—Population.—Resources.—"The parallels of 34° and 48° S. enclose the main islands of New Zealand, but the extent of the land east and west is relatively small, for the islands lie between the meridians of 166° and 179° E. . . . The main islands are three—North Island (44,468 square miles), South Island (58,525 square miles), and Stewart Island (665 square miles). Thus though the land extends over fourteen degrees of latitude the area is only 147,000 square miles, for everywhere it is narrow. One hundred and eighty miles is the extreme breadth of the South Island, and 280 that of the North Island, which widens considerably in its middle portion. Originally the area of New Zealand, which was proclaimed in 1840, included these main islands only. In 1863 the boundaries were extended to include the Chatham, Bounty, Antipodes, Campbell, and Auckland groups of outlying islands, south and east of the main islands. In 1887 the Kermadec Islands lying to the north-east were added, and in 1901 the Cook and other islands extending as far north as 8° S. were proclaimed as part of the colony of New Zealand. The islands are the emergent part of a large submarine plateau, which, lying less than 500 fathoms beneath the ocean surface, extends beyond the Chatham, Campbell, and Macquarie Islands in the south and east, and also somewhat to the west in the latitude of Cook Strait."—A. J. Herbertson and O. J. R. Howarth, *Australasia* (*Oxford survey of the British empire*, pp. 375-376).—See also AUSTRALIA: Map.—"At the census taken . . . 17th April, 1921, the population, excluding Maoris, of the Dominion proper was 1,218,913. The census of the Maori population taken for the first week in April showed the number of the Native race to be 52,751, including 3,116 half-castes living as Maoris. The population of the Cook and other annexed islands at the same date was 13,209."—*Results of a census of the Dominion of New Zealand*, Apr. 17, 1921, pt. 1, *Population*, pp. 1-2.—See also BRITISH EMPIRE: Extent.—In contrast to Australia, the urban population of New Zealand is not very large. In 1921 the three largest cities—Auckland (157,757), Wellington, the capital (107,488), and Christchurch (105,670)—had alone passed the 100,000 mark. "Geologically this is one of the oldest bits of land now forming any part of the earth's surface. It has been repeatedly submerged and upheaved, and contains excellent deposits of coal, iron, gold, silver, copper, chrome, graphite, lead, mercury, mineral oils, sulphur and zinc, besides limestone, granite, marble and other building stones."—F. Parsons, *Story of New Zealand*, p. 3.—"Yielding abundant crops, and possessed of luxuriant pastures, New Zealand is in many respects an ideal land for the farmer and grazier and at a comparatively early period of its history, as a British settlement, it began to export wool, butter and frozen meats to the parent country. Now its shipment of these productions attains to proportions that make the Dominion one of the leading sources of supply of the British markets."—R. P. Thomson, *National history of Australia. New Zealand and the adjacent islands*, pp. 222-223.—Rabbits, which were introduced in 1800, grew to be a pest, but of late years their pelts have been made a considerable article of commerce. Since the difficulty of cleansing the fibre of New Zealand flax (*Phormium tenax*) has been overcome, the export of this commodity has also become considerable. "Another product of the soil, but often classed as a mineral, is the kauri gum, the resin of the well-known kauri pine—*Dammara*

australis, . . . a valuable resin, and . . . used for making varnishes. Many thousand tons are exported, and the average value of the yearly export is about half a million sterling. The gum is found at varying distances below the surface [and is supposed to be a residue from long-vanished forests]. . . . Coal is found throughout New Zealand. Bituminous coal is principally obtained on the west coast of the South Island; its quality is excellent. There are brown coals of varying quality found in many parts of New Zealand. . . . In addition to the coal deposits as store-houses of energy New Zealand has unrivalled water-power."—A. J. Herbertson and O. J. R. Howarth, *Australasia* (*Oxford survey of the British empire*, pp. 414-416, 419-421).

1375-1642.—Coming of Maoris.—Maori government and customs.—"The traditions of . . .

for rejecting these traditions, which accord with actual physical facts, just as the tradition of a migration from 'Hawaiki,' a Polynesian island, accords with linguistic facts."—Hellwald-Wallace, *Australasia* (*Stanford's compendium of geography*), v. 1, ch. 14, sect. 9.—"The Maoris of New Zealand . . . lived in strong tribes or clans, cultivated the soil, built canoes of remarkable size and strength, and were skilled in carving and in other arts. Physically they were a far stronger and more heavily built race than the Australian aborigines. In disposition they were bold and aggressive, and their greatest delight was in fighting. A battle was for meat and drink to them—the former literally, for they were inveterate cannibals. What their numbers were can only roughly be guessed at. They occupied the coastal regions of the North Island in considerable strength, though

TATTOOED MAORI

[the Maoris] lead to the conclusion that they first came to New Zealand about 600 years ago, from some of the islands between Samoa and Tahiti; but some ethnologists put the migration as far back as 3,000 years. [See PACIFIC OCEAN: B.C. 2500-A. D. 1500.] Their language is a dialect of the Polynesian, most resembling that of Rarotonga, but their physical characters vary greatly. Some are fair, with straight hair, and with the best type of Polynesian features; others are dusky brown, with curly or almost frizzly hair, and with the long and broad arched nose of the Papuan; while others have the coarse thick features of the lower Melanesian races. Now these variations of type cannot be explained unless we suppose the Maoris to have found in the islands an indigenous Melanesian people, of whom they exterminated the men, but took the better-looking of the women for wives; and as their traditions decidedly state that they did find such a race when they first arrived at New Zealand, there seems no reason whatever

the inland districts were more thinly peopled. The South Island, with the exception of the southern shores of Cook Strait, was almost empty. The Maoris were immigrants from warmer climes, and they did not thrive in the southern island, which extends southward to 48° of south latitude."—T. Dunbabin, *Making of Australasia*, pp. 156-157.—"The clothing of the natives consisted of flaxen mats, which they wrapped about their shoulders; tho frequently they wore nothing but a breech cloth. . . . The chieftainship was hereditary but not absolute. A chief could not sell land or make war or peace without the authority of the council, or assembly of the people. The women spoke and voted in the councils; chiefs and free men had as many wives as they chose. . . . There was no marriage ceremony, except the giving of the girl by the father or chief. Divorce consisted in turning your wife out of doors. Morality was not much esteemed till after marriage; then it became compulsory on pain of death. . . . Even before their

conversion, in spite of their cannibalism and incessant tribal wars, the Maoris were one of the finest bodies of savages that have been found. They held their land in common as the property of the tribe, and agriculture, fishing and fowling were the work of the community for the benefit of all.—F. Parsons, *Story of New Zealand*, pp. 14-18.

1642-1814.—Discovery and exploration by Europeans.—Tasman.—Captain Cook.—“In 1642, Tasman, a Dutch sea captain, sighted the islands, anchoring in what is now called Golden Bay, near the northwest point of the middle island. He tried to land to get water, but gave up the attempt on account of the hostile demonstrations of the natives. He did not land, but he was the first white man to see these islands, so far as we know. He reported his discovery when he returned to Holland, and the Dutch authorities named the new country New Zealand (new sea-land). Nothing further seems to have been known about this country until a century and a quarter later, when in 1769, Capt. Cook came in *The Endeavor* and landed on the northern island at Poverty Bay, where the town of Gisborne is now situated. He was the first white man to set foot on the soil of this new country. He shot a few of the natives who opposed him, and they returned the compliment by killing and eating the entire crew of a boat belonging to his companion ship *The Adventure*. For the most part, however, his relations with the natives were pleasant. He gave them some seed potatoes and the seed of cabbages and turnips, and turned pigs and fowls loose to furnish them with meat. From these pigs are supposed to have come the wild pigs that are still shot in the forests. He sailed entirely around the group, and passed between the northern and middle islands through what is now called Cook's Strait. He again visited the islands in 1773, 1774 and 1777. He wrote an interesting account of his observations which attracted much attention. After that, whalers and traders began to visit the new country, and in course of time a few settlers came and started the building of a colony.”—F. Parsons, *Story of New Zealand*, p. 4.—See also PACIFIC OCEAN: 1513-1764.—“The next English visitor was Vancouver, who in 1791, called at Dusky Bay on his way to the north-west coast of America. In 1792 the *Daedalus*, a store-ship which had met Vancouver at Nootka Sound, touched at New Zealand. Her commander, Lieutenant Hanson, kidnapped two Maori chiefs, who were sent to Norfolk Island that they might instruct the settlers there in the manufacture of the New Zealand flax. . . . The chiefs had little knowledge of the dressing of flax, a task left to the women and slaves, and in 1793 King took them home again, and presented them with seed potatoes and other vegetables. The first attempt to exploit the resources of New Zealand was made in 1792, when William Raven, master of the *Britannia*, left a gang of eleven men at Dusky Bay under William Leith, his second mate. . . . In 1803 the 31-ton schooner *Endeavour*, commanded by Joseph Oliphant, went to Dusky Bay after landing a sealing gang on the Sisters, near Flinders Island. . . . From that time on the Sydney sealers turned their attention more and more to the South Island of New Zealand and the off-lying islands, which furnished some phenomenally rich sealing grounds. . . . Some Governors

of New South Wales, King and Macquarie, for instance, claimed jurisdiction over New Zealand, and Macquarie appointed a missionary at the Bay of Islands to act as magistrate. But for most practical purposes New Zealand was a No Man's Land, and the happy hunting ground of runaway convicts, deserters from vessels, sealers, and bay whalers. As early as 1813 three Sydney merchant firms, Lord and Williams, Alexander Riley, and Thomas Kent, had put before Macquarie proposals for establishing a trade in New Zealand flax. They desired a monopoly for fourteen years; but though Macquarie reported in favour of this, the authorities in England would not grant the concession, and the proposal fell through, though later a lively trade in flax was developed.”—T. Dunbabin, *Making of Australasia*, pp. 158-161.

1815-1840.—Work of Christian missionaries.—Samuel Marsden.—Missionary contributions to agriculture.—Linguistic labors.—Maori response to missionary efforts.—“Whalers, sealers, runaways, and beachcombers were not the only emissaries of civilization to visit New Zealand. As early as 1814 Samuel Marsden, Senior Chaplain in New South Wales, established a mission station at the Bay of Islands. On his return voyage from London in 1809 [with two missionary laymen, William Hall and John King], Marsden had become acquainted with a Bay of Islands chief named Ruatara, who had worked his passage to London as a sailor. Marsden befriended the Maori and cared for him in illness.”—T. Dunbabin, *Making of Australasia*, p. 162.—Marsden kept Ruatara with him in Sydney for six months, then sent him back to New Zealand with some knowledge of agriculture, and a supply of wheat seed for distribution. “Without the chief's help Marsden might never have been able to establish himself in New Zealand. On reaching Australia, it was not thought safe, owing to local disturbances, to proceed to New Zealand immediately, and it was not till 1814 that Hall and Thomas Kendal, a new arrival from England, were sent by Marsden to open negotiations with Ruatara. The chief returned with them to Sydney, and on the 10th November, 1814, Marsden, accompanied by Kendal, Hall and King, sailed from Sydney Cove, and after an uneventful voyage reached the Bay of Islands on the 22nd December, 1814.”—R. and J. L. Stout, *New Zealand*, pp. 30-31.—“Samuel Marsden . . . [the] apostle to the Maoris was a plain, unassuming, kindly man, who made no claim to scholarship, brilliancy, wealth or rank; but had a practical working knowledge of human nature and an earnest zeal for the Christianization of the world. . . . It was Marsden's idea that the arts of civilization should prepare the way for Christianization. So the missionaries gave the Maoris better methods of agriculture, and various simple arts and handicrafts; and opened schools for their instruction. The news of these helpful novelties went like lightning through the land, and many chiefs visited the mission station at the Bay of Islands, and invited the missionaries to come and do similar work among their tribes. A little later the missionaries, with the aid of philologists in England, reduced the Maori tongue to a written language, which the natives had not before possessed; and translated the Scriptures and other works into Maori. [In 1834 they set up the first New Zealand printing press at the Bay of Islands.] Thus through the influence of Ruatara and the value of their gifts and instruction along industrial and civilizing lines, the missionaries were cordially received. . . . The missionaries carried civilization and the Gospel, and by their labors did much to prepare the way for

white colonization. The Maoris appreciated the kindly spirit of the missionaries, and the arts and implements they brought. They gave the missionaries land and food and a cordial hearing, but baptisms were very few up to 1830. Between 1830 and 1840 about one-fourth of the Maoris were converted to Christianity, and the converts rang so true that they earnestly opposed cannibalism, slavery and war, altho these institutions were all deeply imbedded in the habits and traditions of their race. The progress of the missionary work from 1830 was constant and rapid until the Christianization of the race was practically complete. From the first the missionaries were welcomed, and it may be said to the credit of both sides that for 50 years no missionary lost his life by the hand of a Maori, and during that time the race was changed from cannibalistic savages to Christians. They attested their sincerity by voluntarily liberating their slaves without compensation or reward."—F. Parsons, *Story of New Zealand*, pp. 8, 10, 16, 19. —A Wesleyan mission was established in 1822. Owing to native troubles it was not a success, but was re-established and afterwards flourished. The first Roman Catholic mission was not sent out until 1838.—See also MISSIONS, CHRISTIAN: Islands of the Pacific.

ALSO IN: A. Saunders, *History of New Zealand*, pp. 48-59.—M. Hertz, *New Zealand*, pp. 60-62.

1818-1838.—Native wars.—Hongi and Te Rauparaha.—Increase in white population.—"The missionaries had little sympathy with . . . the bay whalers, who occupied many points of the coast, mainly on the shores of Cook's Strait and in the South Island. Yet, reckless as these men were, they were in their way a civilising agency. Most of them had Maori wives and entered into friendly relations with the neighbouring tribes. Sometimes they took part in Maori quarrels and acquitted themselves in such a way as to earn the respect of the hard-fighting savages. . . . But the men who really paved the way for white occupation of New Zealand were the dealers in muskets and ammunition. The use of firearms in Maori warfare gave an immense advantage to those tribes who possessed the new weapons. The result was twenty years of bloodshed and slaughter which swept away many thousands of Maoris and led to migrations on a scale before unknown. The Ngapuhi tribe, settled round the Bay of Islands in the far north, which was frequented by whalers and traders, was the first to get hold of firearms, and they used them with terrible effect. As early as 1818 a Ngapuhi chief had armed his men with thirty-five muskets. But the man who really made effective use of the new arm was Hongi Ika, the 'Napoleon of New Zealand'. . . . Between 1821 and 1827 he carried slaughter and devastation far and wide. Whole districts were left without inhabitants. Hongi protected and favoured the missionaries, but he remained a heathen to the last. The members of his tribe were too scanty to enable him to make lasting conquests, and soon muskets ceased to be a monopoly. To obtain muskets the tribes traded away their most precious possessions, and unscrupulous white traders, mostly from Sydney, did a roaring business. Hongi was finally shot in the lung in a fight for which he had neglected to put on his armour, and after lingering for fifteen months he died. Only second to Hongi in fame was Te Rauparaha, known to the whalers as 'Satan' or the 'Old Sarpint.' A native of Taranaki, he, like Hongi, saw that nothing could stand against the white men's muskets. He had made a raid to Cook's Strait and noted the strategic value of Kapiti or Entry Island. He persuaded his tribe to

migrate and settle on this island, where they were safe from attack by land, and established on a fertile and easily defended island. He traded with the white men for muskets and other necessities of life and also protected a settlement of whalers on this island. For a score of years Te Rauparaha carried devastation far and wide along both shores of Cook's Strait and over the South Island."—T. Dunbabin, *Making of Australasia*, pp. 163-165.—"All this fighting of the Maori tribes made them more dependent on the trade they had with white men. They could neither make guns nor powder for themselves, and the tribe that could purchase none of the white man's weapons was sure to be slaughtered and eaten by other tribes. Hence white men were more eagerly welcomed, and in course of time nearly two hundred of them were living Maori fashion with the tribes. But it was at the Bay of Islands that the chief trading was carried on. For it was there that the kauri timber grew; it was there that the pigs were most plentiful and the cargoes of flax most easily obtained; and when a man named Turner set up a grog-shop on the shores of the bay all the whaling ships made this their usual place for resting and refitting. . . . In the year 1838 there were about 500 persons resident in the little town, which was now called Kororarika, but at times there were nearly double that number of people resident in it for months together. A wild and reckless place it was, for sailors reckoned themselves there to be beyond the reach of English law."—A. and G. Sutherland, *History of Australia and New Zealand*, p. 207.

1825-1840.—Early settlement.—Opposition by missionaries to annexation.—Attempt to federate Maori tribes.—French attempts at colonizing.—Land sharks.—The "period of ten years of terror and destruction, during which over 10,000 Maoris fell . . . [in the native wars] was followed by a time of peace of equal duration. Nearly 2,000 whites now lived in the country, mostly in the north, in the Bay of Islands. . . . The increasing immigration, the growing trade, the uncertainty of the law compelled England at last to take a definite step. In the mind of the Colonial Office the annexation was not a consummation devoutly to be wished. The Department would not formally annex the country. England was 'satiated' and had enough colonies. . . . It has to be added that the first New Zealand Company [formed by Colonel Wakefield of Australian fame], which in 1825 had sent an expedition of settlers, ended in a fiasco."—M. Herz, *New Zealand, the country and the people*, pp. 63-64.—"The Colonial Office essayed first to carry out its obligations by recognising the native 'sovereignty,' and to restrain its own subjects from acts of aggression and fraud against the natives by means of a resident. James Busby arrived in 1833 to take up this position. In informing the chiefs of the step it was proposed to take, Goderich wrote (14th June, 1832) that Busby would investigate all complaints they might make to him, and would endeavour to prevent the arrival amongst them of men who had been guilty of crimes in their own country—a reference, of course, to the escape of convicts from New South Wales and Tasmania. In consideration of the anxious desire which would be shown by the resident for the protection of the natives, they for their part were expected to show him a proper obedience and support, so that they might reap the full benefit of the friendship, and alliance with Great Britain. . . . Busby was given no more real power than . . . [British] consuls of the same period in Fiji and Samoa—so little, indeed, that he was often referred to as a man-of-war without guns. He was not even able to control

British subjects—the avowed object of his appointment. Here, as elsewhere, the missionaries were openly hostile to the introduction of British sovereignty, for the very human reason that it would tend to detract from the position of influence, almost of power, which they themselves held with the natives. . . . When Busby had been there as resident for two years he was much alarmed at receiving from 'a person who styles himself Charles, Baron de Thierry, Sovereign Chief of New Zealand and King of Nukuhiva, a formal declaration of his intention to establish in his own person an independent sovereignty in this country, which intention, he states, he has declared to their Majesties the Kings of Great Britain and France, and to the President of the United States.' Busby appealed to his compatriots to use all their influence with the Maori 'to inspire both chiefs and people with a spirit of most determined resistance to the landing of a person on their shores who comes with the avowed object of usurping a sovereignty over them.' For his own part he convened a meeting of the chiefs at Waitangi, 'to advise them of what was due to themselves and their country,' and the upshot was the Declaration of Independence of the United Tribes of New Zealand, which was signed on 28th October, 1835. William IV. had already presented the Maori with a flag, and in this declaration they entreated 'that he will continue to be the parent of their infant state, and that he will become its Protector from all attempts upon its independence.' New Zealand was then within the extended boundaries of the Colony of New South Wales, and Glenelg instructed Sir Richard Bourke, governor of that colony, that 'it would be proper that the chiefs should be assured, in His Majesty's name, that he will not fail to avail himself of every opportunity of showing his goodwill, and of affording to those chiefs such support and protection as may be consistent with a due regard to the just rights of others, and to the interests of His Majesty's subjects.' There were no other assemblies of the chiefs, and the proposed parliament never essayed to legislate for the infant state. But when at length in 1839 the Colonial Office was forced to approach the question of establishing British sovereignty in New Zealand, it proceeded on the assumption that the sovereignty recognised by William IV. was a real one, and instructed its envoy Hobson to negotiate as consul before developing into a lieutenant-governor.—G. H. Scholefield, *Pacific: Its past and future*, pp. 205-206.—'Influences were at work, however, leading the Government to look more and more favorably on annexation. Gibbon Wakefield and others interested in colonizing the new country, organized the New Zealand Company in England, and brought pressure to bear in high quarters, and events in the islands gradually transformed the missionaries into advocates of annexation. . . . [De Thierry] tried to enlist the sympathy of the French Government. Another Frenchman, Langlois, professed to have bought 300,000 acres in the middle island. A French Company was formed to colonize Langlois' land. [See also FRANCE: Colonial empire.] In this company, Louis Phillippe was a shareholder. In 1837 French Catholic missionaries, under Pompallier, were sent to labor among the Maoris. . . . Another thing that helped to convert the missionaries to annexation was the appearance of the 'land sharks'—shrewd adventurers who believed the colonization of New Zealand near at hand and bought large tracts of land for speculation. Many of the purchases were imperfect or fictitious. Boundaries were inserted by purchasers after the deeds had been signed in blank by the

sellers. The same land was sold three or four times. Some purchases were airily defined by a latitude and longitude. Almost the whole area of good land in the middle island was the subject of one professed sale. An Australian politician, [named] Wentworth, . . . 'bought' the island at a single stroke from nine wandering Maoris, picked up on the streets of Sydney, who had no right to sell any part of the alleged 'purchase.' The 'Wentworth Syndicate' paid them a little over \$1,000, or at the rate of about 1 cent for each 200 acres of the area claimed. By 1840 it was estimated that outside this middle island claim and the claim of the New Zealand Company, . . . 20,000,000 acres, or more than a third of New Zealand, had been gobbled up piecemeal by the land sharks, a good deal of it having been bought several times over from the Maoris by different purchasers. Including the Wentworth and New Zealand Company claims, as well as the piecemeal purchasers, the total was 82,000,000 acres, or 16,000,000 more than there were in [the whole of] New Zealand. . . . Before his death, in 1838, Marsden had come to see that the only hope for the country and the natives lay in annexation, and his ablest lieutenant, Henry Williams, felt the same way. The missionaries were recognized as the best element in the community, and their opinions had much weight in England. . . . The settlers, and traders and land sharks, the menace of French interference, the change of heart among the missionaries, and the pressure of the New Zealand Company, at last induced the Colonial Office to annex the islands. In 1839 a royal proclamation was issued, extending the political boundaries of New South Wales to include any territory that might be acquired by Her Majesty in New Zealand, and Captain Hobson arrived at the Bay of Islands, January 29, 1840, with a commission as Lieutenant-Governor, under the Governor of New South Wales. The history of New Zealand as part of the British Empire, dates from that day."—F. Parsons, *Story of New Zealand*, pp. 22-25.—"New Zealand was raised to the dignity of a separate colony by letters patent under the great seal of the 10th November, 1840. . . . The Charter authorised the Governor or the Lieutenant-Governor of the Colony, and at least six other persons chosen from such public officers within the Colony or such other persons as might from time to time be appointed by the Crown for that purpose, to constitute the Legislative Council, all the members of which were to hold their places at the pleasure of the Crown. . . . The Governor was also authorised to summon an Executive Council, composed of persons to be named in his Instructions. . . . On the 24th November, Captain Hobson, the Lieutenant-Governor of the Dependency, was, by commission, appointed Governor and Commander-in-Chief of the Colony of New Zealand."—J. Hight and H. D. Bamford, *Constitutional history and law of New Zealand*, pp. 148-150.

1837-1851.—Colonizing efforts of the New Zealand Association.—Difficulties of incorporation.—Association becomes New Zealand Company.—"In 1837 the New Zealand Association was formed, consisting of two classes of members, intending settlers, and those who were willing to found and govern the colony. . . . The Association proposed that an Act of Parliament should be passed, granting them powers of sovereignty for a limited period over a portion of New Zealand, and allowing them to purchase land from the natives and re-sell it to settlers. The proceeds of the land-sales were to be used, partly in further purchases from the natives, and partly in emigration. The government of the colony was, for a definite period,

to rest in the Association. On their approach to the Colonial Office asking for sanction to* this scheme, they met at once with the strong opposition of the missionary bodies. . . . The New Zealand Association had been established as a voluntary body with no pecuniary interest in colonization; and they stoutly protested against the condition that they should become a joint-stock company. The Government equally firmly insisted on the condition; and, after further correspondence and negotiation, the Association, in 1838, decided to introduce into Parliament a Bill to give effect to their [own] scheme. . . . The Bill was rejected on its second reading by 92 votes to 32. Further negotiations ensued, and the Association dissolved, to reappear as a joint-stock company, called the New Zealand Colonization Company. Now they found the Government unwilling to proceed on the ground that the promise of a charter had been made to a differently composed body. Finally, in 1839, the New Zealand Land Company, an amalgamation of the company of 1825, the New Zealand Association, and the Colonization Company, decided to commence the colonization of New Zealand without waiting for the sanction of the Government. The ship *Tory* was sent with a preliminary expeditionary party to purchase land from the natives, and a further body of emigrants was prepared to set sail soon afterwards."—R. C. Mills, *Colonization in New Zealand*, pp. 286, 288-289.—"The 'Tory' made an exceptionally fast passage and dropped anchor in Ship Cove on the 17th August. She remained in Queen Charlotte Sound until the third week in September, and then left for Port Nicholson, arriving there on the 20th September, 1839. Colonel Wakefield made large purchases of land, in and around Port Nicholson, from the natives and made what preparations he could for the expected colonists. On the 22nd January, 1840, the 'Aurora' arrived with the first immigrants sent out by the Company, and the settlement of Wellington was established on the shores of Port Nicholson. The Company continued active operations for many years, and up to the year 1843 it had sent out over 9000 immigrants and founded Wellington (1840), Wanganui (1840) and Nelson (1841), and had lent active support in the colonization of Taranki (1841), Otago (1848) and Canterbury (1850), most of the land purchases for these settlements being arranged by its officers."—R. and J. L. Stout, *New Zealand*, p. 35.

ALSO IN: A. Saunders, *Story of New Zealand*, pp. 112-153.

1837-1852.—Ideals of New Zealand Company.—Treaty of Waitangi.—Proclamation of annexation.—Friction between government and company.—"The New Zealand Company in its genesis [in 1837] was almost a philanthropic organisation. It originated in the high aspiration of Wakefield (to whose mind commercialism was abhorrent) to supplant the haphazard and lawless exploitation of New Zealand by a properly ordered system of colonisation, in which an off-shoot of the British race should be transplanted, with its social classes, its traditions, and its institutions of civilisation complete. The directors had no desire to make a profit out of the undertaking. They were chiefly men who, perceiving the destiny of England as a colonising Power, were anxious to bring the Government of England to the same view. The history of the first years of the Company and the difficulties in which it was soon enmeshed, must not be taken in derogation of the high principles by which the directors were animated. They were to a great extent due to the hostility of the Government both in England and

on the spot and to the blunders of some of its own officials."—G. H. Scholefield, *New Zealand in evolution*, p. 26.—"Captain Hobson's . . . instructions were to obtain recognition of British sovereignty from the native chiefs, and to induce them to agree that no lands should in the future 'be ceded either gratuitously or otherwise except to the Crown of Great Britain.' . . . No convict settlements were to be established in New Zealand, and no convict labour was to be used in the colony's development. . . . Immediately afterwards, Governor Hobson issued a proclamation which put an end to the acquiring of vast areas of land by private individuals or companies direct from the natives. The proclamation notified that in future the Crown would only recognise as valid titles to land derived from or confirmed by Her Majesty. This led later to a good deal of friction between the New Zealand Company and the officers of the Crown. Governor Hobson's chief duty was still to be performed, and that was to gain the acquiescence of the native chiefs to British Sovereignty. On the 5th February, 1840, he assembled a great number of chiefs and their peoples near Waitangi in the Bay of Islands. Through the mediumship of Mr. H. Williams, of the Church Missionary Society, who acted as interpreter, he announced his mission to the assembled natives. A good deal of discussion followed, and Hobson adjourned the meeting to allow of the matter being further considered. On the following day, the 6th February, 1840, the memorable Treaty of Waitangi [prepared by Busby] was signed by 46 head chiefs, in the presence of at least 500 of inferior degree. The Treaty was ultimately adopted and signed by 512 principal chiefs from all over the colony. The provisions of the treaty were embodied in three articles. Under the first the chiefs ceded the sovereignty of their dominions to Her Majesty. The second confirmed to the natives the full possession of their land, and gave Her Majesty the exclusive right of pre-emption over such lands as they might desire to alienate, and the third article extended to the natives the protection and privileges of British subjects. The Treaty has been well kept on both sides and has done much to foster the loyalty of the native race. On the 21st May, 1840, the Queen's sovereignty was proclaimed over the North Island by virtue of the Treaty of Waitangi, and over the South and Stewart Islands by virtue of the right of discovery. A secondary proclamation, at Port Underwood, of 17th June, 1840, claimed the sovereignty of the South Island also by virtue of the Treaty. In August, 1840, it was thought advisable formally to hoist the British flag at Akaroa, in order to avoid complications with the French who had sent out the corvette 'L'Aube' to establish a French colony at that place. The British ship sent post haste by the Governor on the arrival of the French at the Bay of Islands arrived at Akaroa some three days before the French vessel, whose captain on arrival recognised the validity of the British claims. Some French immigrants remained and their descendants are still to be found at Akaroa."—R. and J. L. Stout, *New Zealand*, pp. 35-38.—"The Treaty of Waitangi has been scrupulously honoured by the whites to the present day, often at great sacrifice of their own interests. This outstanding observance of justice and national obligations has not only had a most important effect on the national life of the New Zealand people, but it has contributed largely to giving the natives of New Zealand equal rights of citizenship with the whites, and enabling them to survive the advent of a preponderating white population. . . . It does not appear to have been in contemplation that the whole of New Zealand

should be proclaimed British territory. But before he had secured all the signatures of North Island chiefs to the Treaty of Waitangi, Hobson received intelligence which determined him to complete the sovereignty over the whole group. At the southern end of the North Island the expedition sent out by the New Zealand Company had established itself on the site of the present capital city of Wellington, and had elected a form of council for local government which Hobson conceived to be republican, and therefore tantamount to an act of defiance of the authority of the Queen."—R. and J. L. Stout, *New Zealand*, pp. 207-208.—Although working on parallel lines, and to the same end, Hobson and the New Zealand Company came at once into conflict. "There were, of course, faults on both sides. The Company's chief agent in New Zealand (Colonel Wakefield) and the Governor became of necessity as bitter partisans in the Antipodes as the Company itself and the Colonial Office were in England. The rivalry of the two authorities was disastrous for all parties. Harassed and opposed at every turn, the Company was first of all compelled to retrench and delegate some of its powers to affiliated companies (which organised separate colonies), and finally, when its funds were reduced and its credit was destroyed, it had sorrowfully to surrender its charter (1850). Hobson himself, worn out with the worries and anxieties of his position, unpopular both in Wellington and in Auckland, disliked by land-grabbers and genuine settlers, had died in harness in September, 1842. It was a sad prospect for New Zealand, but out of the ashes of the Company's hopes there survived seven sturdy colonies. All that Wakefield fought for was achieved. The British flag floated over New Zealand, and the foundations of the future Dominion had been laid, broad and strong, upon a basis of free, intelligent, and regulated colonisation. A charter granting representative government had actually been issued, though subsequently withdrawn for amendment. In 1852 the Constitution Act was finally passed by the British Parliament, and Wakefield himself went to New Zealand and sat in the General Assembly."—G. H. Scholefield, *New Zealand in evolution*, p. 28.

1843-1859.—First Maori War and resultant peace.—"When the Maories found that their rights to their lands which were to them an almost sacred property were being disregarded they began to consider how they could best resist. The first serious trouble about land began in the year 1843, when after the Maories had positively refused to sell certain ground near Cloudy Bay to Colonel Wakefield [of the New Zealand Company], he sent a party of surveyors to measure the land there. Thereupon the Maories pulled up the surveyors' pegs and threw down their huts. When the news of this action arrived in Nelson, Colonel Wakefield's brother procured a warrant for the arrest of the natives who had interfered with the surveying. . . . [But] when the Wakefields' people came across the natives they were defied by them. In the midst of the dispute one of the Europeans fired a shot which killed the wife of a Maori chief and thereupon the whole of the natives poured a volley in amongst the Europeans and continued to fire till the Englishmen fled, leaving most of their number dead upon the field. Because the Government saw that in this matter the Europeans were clearly in the wrong they took no steps to punish the Maories; but from the day of the encounter over the Cloudy Bay lands, a bad feeling grew up between the whites and the natives and in less than two years this feeling ended in a fierce attack on a settlement of the whites on the shores of the

Bay of Islands. Though this place contained a body of soldiers and sailors and was partly fortified, it was captured by the Moaries. By this action a war was commenced, which lasted nine months. As it proceeded there was much loss of life, both on the side of the natives and on that of the whites; but it finally ended in the complete submission of the tribes in arms. Scarcely had the troubles near the Bay of Islands been appeased when the mutual aversions of the whites and Maories broke out in the south of the North Island into hostilities which continued for nearly a year. After that there was peace between the two races till the year 1850."—R. P. Thomson, *National history of Australia, New Zealand, and the adjacent islands*, pp. 210-220.

1850-1855.—Establishment of representative government.—Types of provincial communities.—Provincial governments.—By 1850, the white population of New Zealand had increased considerably in spite of drawbacks occasioned by distance from the home countries; the disagreements between the New Zealand Company and the government, and the Maori War. There were at this time a number of settlements, and the South Island was commencing to fill up. But, as in the case of the colonization of the Atlantic Coast of America, the settlements were stretched out along the coast, at long distances from each other. They were in fact small, self-centered colonies, with no inter-communication except by sea, or rough land tracks of the most primitive kind. Moreover, they were divided not only by distance, but in a measure also by nationality. Of the original settlements the population of Wellington and Nelson, Whanganui, Taranaki, Hawke's Bay and Canterbury was for the most part English, Otago was Scotch, while Auckland was partly settled from Australia, and was preponderately of Irish descent. Otago was designed as a refuge for members of the Free Church of Scotland, and for a time only members of the Church of England were admitted to the province of Canterbury. Southland was still more Scotch than its parent colony Otago, and Marlborough quite as English as Nelson from which it branched off. "In 1846 a Constitution had been given to the colony, and representative institutions conferred upon its people by the Imperial Government. . . . But the young colony was as yet hardly ready for the boon. It was still involved in the turmoil of the first Maori war, its white population was small and scattered, and with few interests in common; and hardly any settler outside the inconveniently situated capital had the time or inclination to leave his store or farm for several weeks in every year, in order to obtain the empty honour of representing his country in a parliament at Auckland. In these circumstances representative government was little better than a farce; and on the advice of Governor Sir George Grey, the Constitution was first suspended, and finally withdrawn in 1848. Four years later [1852], . . . a new Constitution for New Zealand was approved by the Imperial Parliament, under which a Legislative Assembly for the whole country was to be held at Auckland; and the colony was now divided into six provinces, each of which was to have its separate District Council, whose large powers of control over local affairs could be checked by the veto of the governor of the colony. The six provinces were identical with the six original settlements; [three] other provinces were subsequently added as colonisation advanced, and the following twenty years marks the zenith of provincialism in New Zealand. The District Councils were exactly suited to this

stage in the growth of the colony, when Wellington was still jealous of Auckland, Dunedin of Canterbury, and all were isolated from, and independent of, each other."—A. W. Tilby, *Australasia*, v. 5, pp. 387-388.—Under the constitution of 1852 the Parliament was to be made up of two chambers: a chamber of representatives and a legislative council. The suffrage, if not universal, was at least very widely extended. The chamber was elected for five years and the legislative council nominated by the Government. . . . [The governor, Sir George Grey] would have wished this second chamber to be chosen by the provincial councils, more or less in the same way as the American Senate, but he could not carry his point in London. As for the cabinet—and this was the great flaw in the constitution—it was to be responsible only to the governor—a provision which led straightway to conflicts and deadlocks. Nor did the complexity of the system cease there. Understanding, in the light of experience, that decentralisation was, in great measure, established in New Zealand, the authors of the constitution had wished to give each province a separate representative assembly under the name of a provincial council. The idea was sound enough, but it had been needlessly complicated by the erection alongside of each council of an elected superintendent, chosen from the ministers to act as a sort of mock-governor. The thing might have suited a very populous century; it was simply absurd in a half-empty land, where political life was scarcely in existence. This new constitution was accepted in June, 1852, by the Imperial Parliament, and in January, 1853, was promulgated in New Zealand. Sir George Grey, . . . contented himself with inaugurating the provincial assemblies, and left to his successor the task of constituting the Central Parliament. . . . The temporary successor of Sir George Grey, Colonel Wynyard, summoned the first Parliament to meet at Auckland in May, 1854. The first elective assembly of the Colony was not ill-constituted; it included men of talent and men of sense [among them Edward Gibbon Wakefield]; but in the nature of things it was destined to slip into confusion and idle agitation. The first cabinet was composed half of officials, half of members of Parliament. Since the responsibility of ministers was not clearly defined, the almost immediate result was the formation of rival cliques, the fall of ministries and perpetual crises; in a word, so such disorder that everyone recognised that the responsibility of ministers to Parliament had become inevitable. In 1856 the first responsible ministry was formed under the leadership of Mr. Sewell. A few months earlier, in September, 1855, Grey's official successor, Colonel [Sir Thomas] Gore-Brown, had arrived. He loyally accepted the character of a constitutional governor which was imposed on him by the responsibility, henceforth complete, of the cabinet to Parliament. He retained no direct authority, except in relations with the Maoris, in accordance with the instructions of the Colonial Office. It was the last vestige of personal power which remained in New Zealand. All other questions came before the two Houses, who began their work by a series of petty squabbles which greatly affected the white man's prestige."—A. Siegfried, *Democracy in New Zealand*, pp. 35-37.—See also BRITISH EMPIRE: Characteristics of self governing colonies.

1853-1870.—Maori "King" movement.—Second Maori War.—"Hau Haus."—Confiscation

of land.—Maori settlement.—"When New Zealand attained self-government in 1852 the decentralising influence of the piecemeal method in which the country had been settled was shown by the fact that something like a Federal system was established. There were six provinces—Auckland, Wellington, and New Plymouth in the North Island, and Nelson, Canterbury, and Otago in the South. These were later increased to nine by the addition of Hawke's Bay, Marlborough and Westland; while Southland was for a while separated from Otago, though afterwards reunited to it. . . . The provinces enjoyed a large amount of autonomy. Each had a superintendent and a council with power to deal with local matters. Such subjects as the post office, the Customs, defence, and others affecting the country as a whole, were reserved for the Central Government. The financial arrangements were simple, but not satisfactory to everyone. The Central Government spent what it thought necessary and allocated what was left amongst the provinces. A fruitful source of friction was the dissatisfaction of the southern provinces with the heavy expenditure entailed by the Maori wars in the North Island. For peace did not last long in the North. In 1853 Grey, who had settled the first Maori war, was transferred to South Africa and his successors were soon in trouble with the Maoris, mainly over land matters. . . . [A land system] by which the Maoris could sell land to white settlers only through the Secretary for Native Affairs was in force; but settlers eager for land were continually trying to deal direct with the natives, some of whom claimed to be able to sell land to which they had no real title. In 1856 a number of Maori chiefs bound themselves to sell no more land to anyone. At the same time was set on foot the 'King' movement for uniting the Maoris under one chief, who could represent them in dealings with the Governor and the authorities. [In 1857, kingite meetings were held.] Several tribes united in choosing as their 'King' one Potatau; but he was an old man and not inclined to risk trouble, so that for some years the 'King' movement was no menace. But in 1860 war broke out over a block of land in the Waitara district of Taranaki. Curiously enough the Maori chief involved was that Wiremu Kingi te Rangitake . . . one of the chiefs who had refused to have anything to do with the King movement. The white settlers at Taranaki required more land and in 1850 the authorities arranged to buy a block, in spite of the opposition of Kingi, who occupied part of the land and also claimed that, as chief, he had the power of vetoing the sale of any land belonging to his tribe. The would-be sellers disputed this claim and the Government sided with them. . . . Browne [Colonel Gore-Browne], the Governor, proclaimed martial law in the Taranaki province, and Kingi and his followers threw in their lot with the King movement and called in the aid of the powerful Waikato tribes. The British regulars fought bravely, but they were out-manoeuvred by the Maoris in bush-fighting. The Maoris joyfully welcomed the excitement and there was a good deal of skirmishing. Then Browne was replaced, in 1861, by Grey, whose second term as Governor of New Zealand lasted from 1861 to 1868. Grey tried to conciliate the Maoris, and worked out a scheme for making the chiefs magistrates and police officers, with power to nominate representatives for the councils of their districts. But, in spite of his efforts, the Waikato Maoris would not give up the King idea, and the new King, Tawhio, was by no means so friendly as his predecessor

Potatau. As to the disputed Waitara block, Grey decided, after investigation, that it should be given back to Kingi. But unluckily, before it was returned, the authorities had taken possession of another area in Taranaki which belonged to white settlers but had been seized by the Maoris during the fighting. This seemed unfair to the Maoris and they began the war anew. Ten settlers were massacred for a start, all Europeans were driven out of the Waikato region, and the 'King Maoris' were eager for a trial of strength with the white men. But Grey had been having a road made into the Waikato country, and now he used it to send strong forces of British regulars and militia troops under General Cameron into the enemy's stronghold. A strongly fortified pah [native camp] at Rangiriri was taken after a gallant resistance and Cameron rendered useless the Maori's strong line of defence at Paterangi by carrying out a turning movement which cut the Maori's line of supply. A body of 300 Maoris hastily erected a stockade at Oraktau and successfully resisted a force more than four times their number. Then a gun was brought up and its fire reached the stockade, but when the Maoris, with whom were a number of women and children, were called on to surrender, they replied that they would fight on 'for ever and ever.' Singing the ancient war songs of their race, they marched against the superior English forces. Over half of them were killed and the rest dispersed. The war in Waikato was over. Elsewhere, however, the fighting dragged on. At the Gate Pah the warriors of the Tauranga tribe, hidden in rifle-pits, shot down at their leisure the officers of the attacking forces, under General Cameron, and they were forced to fall back with heavy loss. The Maoris abandoned the pah that night and six weeks later they were defeated in turn. Yet even then the war was not over. In 1864 a native 'prophet' began to preach in Taranaki a new religion, a strange compound of the ancestral beliefs of the Maoris and distorted ideas of Christianity. The fanatics who adopted this doctrine revived the long disused practice of cannibalism, mutilating and eating the bodies of their slain enemies. They were called the 'Hau-haus,' because their leader had assured them that if they shouted 'Hau-hau,' in honour of their god, the Angel Gabriel, as they charged they would be unharmed by the bullets of their opponents. The prophet seems to have fallen a victim to a bullet early in the proceedings, but the Hau-haus were not finally suppressed till 1870. Luckily most even of the King natives held aloof from the Hau-haus. Nevertheless, though the fanatics soon lost their hold in Taranaki, they held out for some time in the Wanganui district and their emissaries gained proselytes at Poverty Bay and about the Bay of Plenty. But here the friendly Maoris and in particular two chiefs, Te Kepa (Major Kemp) and Ropata, did most of the work of suppressing the movement. On the Wanganui Grey himself took over the command from General Cameron; and on July 21, 1865, with a mixed force of Maoris and colonists, he took the pah at Waeroa and put an end to the war in that region. For some years, however, the Hau-haus caused spasmodic outbreaks from time to time. Some 3,000,000 acres in Taranaki and elsewhere were taken over by the Government as forfeited. About a tenth of this was granted to Maoris who had stood by the authorities, and much the same area was restored to the Maori owners who submitted. Most of the rest was made available for sale to white settlers, while 400,000 acres between the Waikato and the Waipa were reserved for a series

of military settlements to be formed from members of the militia, who were to act as a barrier against the 'King' natives. The King Maoris in their turn proclaimed what they called 'Te Aikati,' the boundary line. Within this was the King country, which no white man and no Maori who sided with the whites might enter. For many years the 'King' Maoris remained in sullen isolation within this area. While the hostile Maoris thus cut themselves off from communication with the outside world, Grey provided for full recognition of the rights and privileges of the friendly tribes. The Maoris were allowed four members in the New Zealand Parliament, Maori schools were endowed, and their land customs were given the force of law. Grey's governorship, however, came to an end in 1868, mainly as a result of friction with the British army officers, Cameron and his successor General Chute. He left office regretted both by the white settlers and by the friendly Maoris. Hardly had Sir George Bowen succeeded him when there was a strange revival of the Hau-hau outrages. In 1865 a Maori named Te Kooti had been arrested as a spy, an accusation which he always denied, and sent with other prisoners to Chatham Island. On July 4, 1868, Te Kooti led a rising of the prisoners. They overpowered the guards, seized a schooner, and sailed back to . . . [Poverty bay]. Te Kooti and his followers broke through the attacking parties and massacred all the settlers they could find at Poverty Bay, without respect to age or sex. About the same time there was an outbreak in the west under a Hau-hau chief who revived cannibalism. . . . However, the 'King' Maoris held aloof from the Haus-haus and the friendly tribes rendered yeoman service in co-operation with the colonial forces under Colonel Whitmore. Te Kepa aided in the suppression of the western outbreak and Ropata joined in the storming of Te Kooti for months, until he took refuge in the King country, where he was allowed to remain and sank into obscurity. From 1870 onwards there was no more real trouble with the Maoris, though there has been occasional friction over the land question. The Maoris have settled down as a peaceful if not very progressive community, generally on very good terms with their white neighbours. New Zealand shared, though later and to a lesser extent, in the 'digging days' of Australia. In 1861 rich gold deposits were discovered at Gabriel's Gully and elsewhere in the bleak uplands of Central Otago. Swarms of diggers from Australia, as well as from other parts of New Zealand, poured into Otago and the population was soon increased fourfold. A little later came rich discoveries on the mountainous, storm-beaten, and heavily forested west coast of the South Island, where the influx of diggers gave rise to the province of Westland. Later, the best steam coal in Australasia was discovered on this coast. Gold was also found in the Thames Valley, in the North Island; but this had less effect on the movement of population."—T. Dunbabin, *Making of Australasia*, pp. 243-248.

1855-1873.—Provincial system at work.—Desire for centralization.—Government moved to Wellington.—"The provincial system was a wise measure of temporary policy, but it was certain

to become an anachronism and a burden when the Colony grew, and local isolation was broken down. As the years went by its defects became accentuated, its utility decreased, and it increasingly prejudiced the unification of the Colony and a comprehensive national policy. The foundations of the system were thus gradually weakened, and when finally its maintenance was found to be a barrier against the policy of the general government, the downfall of the provinces was speedily assured. Opposition was in some degree fostered by the ostentation of the provincial assemblies; one Superintendent was scrupulously referred to as 'His Excellency'; the Councils were mimic Parliaments, which copied from the Mother of Parliaments her state, her forms, her order of procedure; and the existence of these petty Houses within the bounds of a Colony with the population of a small city, was soon felt by many persons to be unnecessary and absurd. Further than this, the system produced inequalities, and encouraged local jealousies. Chief among the functions of the provincial councils was that of administering the waste, or unoccupied, lands in the respective provinces. Some could always find endowments for education and other public purposes, or moneys for roads and bridges; others were cramped by insufficient revenues, and hampered by circumstances which prevented settlement and thus rendered their lands of little real value. The provinces, although all subordinate to the central government, were in many ways like separate states, unequal, jealous, selfish and grasping. The South was rich: the North was poor. The South had broad acres, ready and apt for immediate settlement. Much of the North was owned by Maoris, settlement was confronted there with greater difficulties, and the native wars from 1860 both hampered occupation and aroused the antagonism of the South. It was, therefore, only natural that as the central government grew in stability, and means of transit and intercourse improved, many should turn against the provincial system and aim at the centralisation of all the important functions of state. Down to 1873 there were, in all, twelve ministries. The attention of Parliament was largely occupied by financial matters and administration, and later by the problem of the Maori wars, and it was round such topics as these that party warfare raged. But the provincial question was always present, and in no small degree effected a party cleavage. The final stage of the struggle may be dated from 1870."—J. Hight and H. D. Bamford, *Constitutional history and law of New Zealand*, pp. 280-291.—"For years the Southern members . . . inveighed against the inconvenience of having the seat of Government at Auckland, but Auckland provincialists were, naturally enough, bitterly opposed to such a change. . . . In 1863, however, an Act was passed appointing a Commission to report upon the subject; and the Commissioners, selected from the Australian Colonies, recommended Wellington as the capital. . . . On October 3, 1864, Wellington was made the capital of the Colony, and the session of 1865 was held there."—R. F. Irvine and O. T. J. Alpers, *Progress of New Zealand in the century*, p. 257.

1865.—Governor authorized to establish telegraphs as state monopoly. See TELEGRAPHS AND TELEPHONES: 1865.

1870-1876.—Continuous ministry.—Peace and progress.—End of provincial governments.—Public works policy.—"For a period of twenty years, from 1870 to 1890, New Zealand was governed, except for two short intervals, by a com-

bination, or a succession of combinations of rulers who constituted what will be known in its history as the 'Continuous Ministry.' The exceptions were the ministry of Sir George Grey (1877-1879) and the Stout-Vogel Coalition (1884-1887). During the remaining fifteen years the 'Continuous Ministry' held the reins of government. In the early seventies it was a Fox-Vogel-Atkinson combination; during the early eighties it was an Atkinson-Whitaker-Hall combination. Personal changes there were many; the position of Premier in the Combination changed no less than ten times within the period. Its policy, too, changed with the changing circumstances of the Colony. During the prosperity of the seventies; during the depression of the eighties, it was borrowing and retrenchment, but, though less and less, borrowing always. It has now come to be regarded as a 'Conservative' administration. Yet it passed many constitutional reforms in the direction of radicalism, and it extended, in some remarkable ways, the functions of the State."—R. F. Irvine and O. T. J. Alpers, *Progress of New Zealand in the century*, p. 291.—"The year 1870 marks the beginning of a new period of peace and progress. From now on the memories both of war and of autocracy fade into the past. Prosperity reappears and continues uninterrupted. . . . As for the colonists, their character and courage had been tested in a stern and merciless struggle. Now the Colony had won its spurs, and could begin its career as a peaceful and civilised land. The problems which next presented themselves were no longer exclusively colonial; they became social and political. . . . Up to 1870 ministers had generally governed without having any political programme in the usual sense of the word. As long as the conflict with the Maoris lasted, that struggle had naturally absorbed most of the energies of the rulers, and prevented other problems from making a due impression on their minds. Government was carried on from hand to mouth, and there was little time to devote to questions of principle, or reforms of a wide scope. When the security of the State was no longer daily threatened, the rulers had leisure to give themselves up to distant hopes and wider schemes. It was then that Sir Julius Vogel, financial minister, first published his scheme of public loans and public works. Borrowing, it is true, was no new thing in the Colony, for the ten years of war through which she had just passed had had as their first and fatal result the creation of a public debt which rose in 1870 to £8,828,000. . . . The great idea of Sir Julius Vogel was to borrow yet more, but to improve the Colony, to develop it, and to attract settlers. He was able to win over Parliament to his plans, and later to put them into practice. Behind the apparent vacillations of parties which followed 1870 he was really directing the country. He carried through his loans, and though under this system New Zealand ran heavily into debt, it is generally recognised to-day that the realisation of this programme brought prosperity."—A. Siegfried, *Democracy in New Zealand*, pp. 38-39.—The public works policy led as its direct consequences to the abolition of the provincial system of government. "From the first, there had been in the General Assembly a party strongly opposed to the continuance of these provincial legislatures. The confusion of land-laws, the chaos of education systems, the conflict in administrative machinery, had increased the opposition. The large land revenues of the Southern provinces roused the jealousy of the Northern. And now, when a comprehensive system of public works was pro-

posed, the existence of the provincial system proved an obstacle to its successful adoption. Sir Julius Vogel had been elected as a strong provincialist. His wise scheme for recouping the cost of railways by reserving as public estate the land through which they would pass . . . was defeated by provincialists, jealous for their lands. An equally wise measure for planting State forests to counter-balance the rapid deforestation of the country before the advance of settlement, was similarly defeated by provincialists. . . . These two checks turned Vogel from an advocate into an enemy of the system; and the provinces were doomed. . . . As a substitute for the provincial legislatures, a Local Government Act [in 1876] created 63 counties and an endless succession of subordinate governing bodies. There are separate councils to manage counties and towns; separate boards to control harbours, and roads, drainage and irrigation, hospitals and charitable aid; while educational, electoral and judicial districts overlap each other."—R. F. Irvine and O. T. J. Alpers, *Progress of New Zealand in the century*, pp. 286, 287, 289.—Provincialists "found an unexpected champion in Sir George Grey, who came out of his retirement, was elected Superintendent of the Auckland Province, and, a little later member for Auckland West. He at once became the acknowledged leader of the party, and threw the whole weight of his ability and prestige into the fight. It was, however, a lost cause. In the new Parliament of 1875 Major Atkinson, leader of the Lower House, introduced a Bill for the abolition of the provinces, and the fiercest opposition was powerless to stay its passage."—J. Hight and H. D. Bamford, *Constitutional history and law of New Zealand*, p. 297.

1870-1890.—Progress.—"Gold bubble."—Effect of "Works policy."—Depression.—"The decade 1870-1880 constituted a striking and even sensational period in the progress of New Zealand. . . . When it opened, New Zealand was a federation of nine small provincial settlements; it had a population of something under a quarter of a million and a public debt of a little over seven millions; and it possessed few facilities for communication or transit: there were but 700 miles of telegraphs and 46 miles of railways. When it closed, New Zealand was a unified colony; the provincial legislatures had been swept away and the government centralised in Wellington; the population had been doubled, the public debt trebled; and the government had constructed, out of borrowed money, some 4000 miles of telegraphs and 1100 miles of railways [see also TELEGRAPHS AND TELEPHONES: 1884-1904] with roads and bridges innumerable in most of the settled, and many of the unsettled, parts of the Colony. . . . [Already the "gold rush" of 1861 had brought New Zealand to the attention of seekers for adventure; after the discovery of gold in South Island 100,000 people reached the colony, chiefly from the British Isles, Australia and California. The inrush continued for some years; Westland was populated, and broke off as a separate province from Canterbury. The gold fever, however, was of comparatively short duration, for the fields though very rich did not prove to be of large extent, and by 1867 the bubble had burst. But a large proportion of the disappointed gold seekers turned their attention to other occupations, and though gold production decreased to less than a million, and after 1866 never again reached its maximum output of £2,844,000, the mines continued to bring in a steady income which later reached an average of about £2,000,000 a year. By 1869 the white

population was 237,000. But at this time there was little agriculture; there were no manufactures; practically the only exports were gold and wool, and the rich resources of the island were almost untouched. Then it was that Julius Vogel, who in 1869 was in the Fox Cabinet, brought forward his daring scheme, commonly known as the "Works policy," by which he purposed to open up the country with the aid of borrowed money; bring in large numbers of immigrants; create employment for them by the construction of railways, designed to provide communication from one end of the colony to the other, and ultimately to settle them on the land.] The immediate results of the Public Works Policy were political corruption and financial disaster; but subsequent history has proved that, if premature in conception and extravagant in administration, it has been productive of lasting good in accelerating the development of the colony. . . .

[Vogel's] projects met with immediate and almost universal approval. Parliament gave itself up unreservedly to his schemes; and for six years he enjoyed an amount of confidence never before given to one man in the House. Outside Parliament his *mana* was equally great. . . . The community had something to hope from a proposal to spend ten millions of borrowed money in the colony. . . . In the session of 1870 Parliament had passed Bills authorizing the floating in the London market of a loan of ten millions, and the sale of two and a half million acres of land to defray the cost of railway and other works and of state-aided immigration [which had formerly been in the hands of the provinces]. A rise in prices of wool and wheat had improved the Colony's credit and no difficulty was found in raising this and subsequent loans, though the rates were high; the promised means of inland communication had created a feverish demand for land, and the two and a half million acres, the price of which was to be spent by the provincial governments, found a ready market. . . . Next in importance to railway construction in Vogel's programme came state-aided immigration. Settlers were induced to come out to the Colony by part payment of their passage money and by grants of Crown lands. The prosperity of the Colony and the scope for employment it offered attracted many others; and between 1871 and 1881 the population increased from a quarter to half a million. . . . [Two commissioners, Dr. Featherston and F. H. Dillon Bell, were sent to Europe, and before long a stream of assisted emigration set in toward the colony from the British Isles, and definitely determined the national characteristics of the population. A number of north German and Scandinavian settlers were also sent out; but these were in the minority.] Vogelism had other results, however, than the creation of 40-acre settlements. It produced the wildest 'land-boom' the Colony has known. The North Island provinces had little land to sell; the natives there still held most of the territory. But the South Island provinces had broad acres; the revenue from the sale of these, by 'The Land Compact of 1856,' passed to the Provincial exchequers; and the legislatures vied with each other in selling their acres and swelling their revenues. . . . The worst feature of these sales by Provincial legislatures was that they were effected, in most cases, without any attempt to impose restraint on areas purchasable or to compel occupation or improvement. The result was that enormous blocks of fertile land were locked up in the hands of speculators and absentee-owners."—R. F. Irvine and O. T. F. Alpers, *Progress of New*

Zealand in the century, pp. 278-281, 283-285.—This landlocking produced a very unfortunate state of affairs. While the borrowed money lasted and speculation was rife, prosperity seemed to smile. But "the borrowing boom came to an end in 1879 and the next few years were a time of depression. It was at this period that legislation in New Zealand first took a decidedly Socialist trend. Large estates were taxed and were bought by the State and cut up into small farms. Insurance, hospitals, and other activities left to private enterprise in Australia, were brought under State control."—T. Danbabin, *Making of Australasia*, p. 249.—"With evenly balanced parties, Parliament was powerless in the next few years to cope with the evils that multiplied upon the unfortunate country. . . . Every effort was made to start new industries, and to find new markets for produce, but even where successful the benefit could not be reaped for some years to come. . . . [Not only was employment . . . scarce] but the industries that survived the depression were flourishing in a fictitious manner. Unprotected from the competition of English and foreign goods, which were dumped into New Zealand almost free of duty, the local manufacturers had to make reprisals upon the labor which was, unfortunately, all too abundant. Wages fell. Married men with families, compelled to choose between work at low pay and starvation, were at the mercy of circumstances. Boys came into competition with their fathers. . . . Female labour was similarly exploited. . . . Sub-contracting gave rise to 'sweating.' The cutting was remorseless. . . . Thousands of disappointed men, efficient, industrious, and temperate, left the colony in despair. Of those who remained many had emigrated from the Old World a few years earlier, full of hope and enthusiasm. They were now inconsolable agitators."—G. H. Scholefield, *New Zealand in evolution*, pp. 168-169.

1876-1890.—Grey administration.—Hall-Atkinson policy of retrenchment.—Suffrage.—State Socialism.—Meat and dairy industries.—In 1877 Vogel was followed in office by Sir George Grey, who received a mandate to retrench. This policy, however, was not carried out. "Grey as Premier preached economy, his colleagues practised extravagance; on the platform he had easily captivated the electors with his nebulous projects for the good of the 'unborn millions,' in the cabinet he proved an autocratic and tactless leader; was quite unable to control his colleagues; and soon quarrelled with the best of them. His majority was too small to allow him to carry his constitutional reforms; the land tax which he did carry did not produce the expected revenue; and when he left office in 1870, after two years of administrative muddling, the public debt had been increased by five millions; the revenue had diminished; and a fall in the prices of staple products had produced commercial depression. The time for taxation and retrenchment had come; and the Hall-Atkinson party were called to office to apply the drastic remedy. Their taxation took the form of a Property Tax of one penny in the pound on the capital value of every citizen's possessions. Their retrenchment was effected by the rough and ready method of a ten per cent reduction in all public salaries. Such a policy was not likely to be long popular. In 1884, accordingly, when Sir Julius Vogel returned to the Colony, he was soon restored to popular favour and again entered the House. He had become divorced from the old 'Continuous' party; and Sir George Grey had been deposed from the leadership of the 'Liberal' sec-

tion of the House, in which the most conspicuous member now was Sir Robert (then Mr.) Stout. The two joined forces and assumed office as the Stout-Vogel Coalition. Vogel as Treasurer pushed on borrowing and public works, though not with the old daring or the old extravagance. Stout and Balance devoted themselves to legislation in the direction of social improvement. So ill-matched a team did not long pull together, and 1887 found the Colony's finances still far removed from a condition of equilibrium. Once more Atkinson was called in to 'save the republic' by the same unpopular means of increased taxation and retrenchment. The customs duties were increased till they became, though nominally imposed for revenue purposes, practically protective. The salaries of the Governor and the Ministers and the honorariums of members of Parliament were cut down; and the number of members of the elective chamber was reduced from 95 to 74. The Colony had at last set its house in order; and when the Continuous Ministry had finally accomplished the ungrateful task, it was driven from office and made its exit from the stage of New Zealand politics. . . . Some important constitutional changes were effected during the period covered by the history of the 'Continuous Ministry,' all in the direction of increasing the popular control over the legislature. A Ballot Bill was passed on the eve of their accession to power. The principle of payment of members was established, thus removing an important restriction upon the selection of representatives. Members of the Legislative Council are paid £150, of the House of Representatives £240, per annum; with deductions for absence during session and a liberal allowance for travelling expenses. The duration of Parliament was reduced from five years to three; and in 1887-1889 Acts were passed removing anomalies then existing and placing the system of representation upon a strict population basis. To the 'country population'—that is to say people living outside of towns of 2000 or more inhabitants—28 per cent is added; and the total European population of the Colony thus ascertained, is divided by 70—the number of European members, and the quotient obtained gives the electoral quota. . . . The Maori population is divided into four electoral districts, each returning one native member to the House of Representatives; and two Maoris have seats in the Legislative Council. . . . But the most far-reaching constitutional change effected during these years was the adoption, in 1890 of the principle popularly known as 'one man, one vote.' The qualification for electors was two-fold. There was a 'property qualification' in virtue of holding property in an electoral district; and a 'residential qualification' in virtue of living in it. . . . The Act of 1880 forbade an elector to exercise a vote in respect of more than one constituency at the same election. It thus placed the franchise in New Zealand on what was practically a manhood basis. By a subsequent amending Act the last political privilege attached to the ownership of property was done away with in the colony. . . . 'State Socialism' in New Zealand, is often regarded as having begun in 1801; and, . . . that year did mark an important change in public opinion on socialistic legislation. But the colony had already, under the *régime* of the 'Continuous Ministry,' advanced far on the same path of development. The Public Works Policy placed in the hands of the State the ownership and management of the whole Railway, Telegraph and Telephone systems of the colony; the Central Government during the same period founded and endowed the

New Zealand University and established our State system of 'free, secular, and compulsory' education; and it undertook, in addition, the business of Life Insurance, a system of Land Transfer, and a Public Trust Office. In 1870, the Government of New Zealand, with a view to promoting thrift among the colonists, established a State Life Insurance office. . . . In 1870, also, Sir Julius Vogel established the Torrens system of Land Transfer in the Colony. All Crown Grants are now made under it; lands, alienated before it came into force, can be brought under it, where a clear title exists."—R. F. Irvine and O. T. J. Alpers, *Progress of New Zealand in the century*, pp. 203-208.—In 1882 a new industry arose, the freezing of the carcasses of sheep and cattle for export. From this date must be reckoned the growth of New Zealand's prosperity, for no other event in her history has had such an immense and lasting effect on her industrial progress. The first export of frozen meat was made in that year, and its value was about £20,000. It has continuously and steadily grown in importance, so that now the value has reached the annual sum of about £4,000,000. Land that was formerly used for growing cereals is now used for fattening sheep, with the result that the export of cereals has decreased. With the increase of population and the subdivision of the land into smaller allotments, two other industries have of recent years made great strides, the production of butter and of cheese. From the earliest days the export of butter and cheese was of importance, and it has become next in importance to wool and frozen meat. These changes in the agricultural and pastoral industries have led to great changes in the mode of dealing with the lands of the Dominion. At one time the largest areas of land were used for pastoral pursuits, and Crown lands were let on pastoral lease, called 'runs;' then came the sale and purchase of these lands, especially of land suitable for cereal production. With the development of the frozen meat industry, a more intensive pastoral occupation has arisen. Food is now grown in many districts for the winter feeding of stock. With the production of butter and cheese, co-operative dairies have been established, small farms have become remunerative, and a system of small holdings has grown up that was unknown in the early days."—M. A. Herbertson and O. J. R. Howarth, *Australasia (Oxford survey of the British empire, pp. 400-410)*.

1886-1906.—Forestry destruction.—State reserves and protection. See CONSERVATION OF NATURAL RESOURCES: New Zealand.

1890-1909.—Seddon-Ballance ministry.—Era of social and political experiment.—Land policy.—"On the 3rd of October, 1890, Parliament was dissolved and on the 5th of December the first election of Members of the House of Representatives took place under what was practically the one man one vote principle. In the January of the following year Sir Harry Atkinson's ministry resigned and another was called to power under the Premiership of Mr. John Ballance."—A. P. Douglas, *Dominion of New Zealand*, p. 397.—Ballance died in 1893, while still in office, and was followed by Richard Seddon, whom he had made minister of mines in 1890. The ministries presided over by these two men, Seddon and Ballance, were responsible for much of the advanced social legislation for which New Zealand became notable in the end of the nineteenth century. "Seddon retained office until he died thirteen years later; and the administration he formed outlasted his life six years, and survived six general elec-

tions. The ministry which was to pass some of the most novel and daring legislation that had ever been placed on any English statute book, and was to perform the hardly less remarkable feat of holding office continuously for over twenty years, in a country where the existence of parliament was limited to three years, began its career quietly enough. Retrenchment was the password everywhere; officials were dismissed, expenses cut down, and drastic economies effected in every department until the colony had recovered from the financial stress. The remedy was harsh but effectual. . . . Within a few months New Zealand turned the corner to prosperity; the Colonial Budget showed a surplus; and men who had been leaving the islands for Australia began to return with renewed hopes. Thus it was that when Seddon became Premier in 1893 the path was clear for immediate anxieties, and the first general election that was fought after his appointment increased his power. His government counted fifty-six supporters in a House of seventy-four."—A. W. Tilby, *Australasia 1688-1911*, v. 5, p. 394.—The most important legislation introduced before the death of Ballance was a measure designed to counteract the effects of Grey's early land Act, which had set the price of crown lands at five shillings an acre; but made no limit to the acreage which might be acquired by any one person. "The government had never ceased" . . . to buy up lands, sometimes on a moderate scale, when its funds were low, . . . sometimes on a large scale, when it was affluent. . . . There gradually arose in this way the territory of the State, which bears the name of Crown Lands. . . . An Act of 1892 (the Land Act) . . . resumed and, in a way, codified all preceding legislation on the point. . . . It sets up a system of lease in perpetuity, under which the State always retains the ownership of the land. . . . In this way the movement in favour of land nationalization in New Zealand stopped short, and became transferred into a crusade against large estates. This is, in fact, the whole point of the new legislation: to limit the area of Crown lands that one individual may acquire; and in certain circumstances it even goes so far as to compel the large landowner to sell against his will. . . . The advent of the Ballance-Seddon Ministry then had the result of inaugurating an entirely novel agrarian policy. The main idea of the earlier governments of the Colony had been that land must be sold to everyone who came, ceaselessly and without restriction or regulation. They thought that thus, in the natural course of immigration, the country would become inhabited and developed. So far this was all right. But no one had thought of the speculators, who always appear in a newly-opened country. . . . In 1891, 584 individuals or societies owned seven million acres. . . . [When the Ballance-Seddon ministry attacked the problem of these great estates, the] great point in the debate was the question whether Crown lands should ever be sold, even to the smallest colonist. The radicals regretted that the smallest portion of Crown territory should ever be definitely lost and become private property; while the conservatives protected this principle of private property. A compromise followed, and now the Government can dispose of Crown lands in several ways, which we give below: The buyer has to choose between three systems: sale, pure and simple; lease, with a purchasing power; and lease in perpetuity. [This last system was later abolished. See below: 1006-1000.] Under the system of sale pure and simple, one-fifth of the price must be paid on the spot, and the rest within a month. But the buyer does

not become the owner, in the full sense of the word, unless certain conditions of improvement and residence are fulfilled. . . . In the 'lease with a purchasing power,' the rent is fixed at 5 per cent. of the value of the land, and, the lease being for twenty-five years, the lessee has the right of purchase after ten years, at the price arranged in the beginning. These two systems are not new, and have nothing in them of a socialistic or even original nature. But in setting up the third system, lease in perpetuity, the legislators of 1892 were evidently influenced by certain socialistic doctrines. For twenty years the formula 'land nationalisation' had great popularity in New Zealand; and it found its way into legislation with the lease in perpetuity. Under this system the State retains the ownership of the land, and only gives to the occupier a lease of 999 years . . . The rent is 4 per cent. of the value of the land, and is not afterwards subject to any alteration, which is a great advantage for the lessee. In these circumstances his rights are practically equivalent to those of ownership, but he can enter into possession without laying down any capital, so that the very poorest are enabled to set to work and cultivate the soil without having recourse to a loan. Under the two latter systems (lease with a purchasing power and lease in perpetuity), as in the first, the lessee must observe certain conditions of improvement and of residence. . . . This excludes the speculator who only buys to sell again, without interesting himself in the least in making the land productive. But the Act does not only exclude the speculator; it directly prevents the formation of large estates. A clause in the Land Act of 1892 limits the area of Crown lands that one individual can acquire to 640 acres of first-class land, and 2000 acres of second-class. This limit is a maximum, and the Government may reduce it at pleasure. This is the explanation of the State's interest in keeping or adding to the Crown lands. It cannot prevent a small land-owner from selling his property to a richer one and thus helping to form large estates. But, now that the State itself owns the greater part of the land, . . . [it is easy to control the conditions of land tenure]. Every year the Government puts at the disposal of the colonists, either by sale or by lease in perpetuity, some of the Crown lands available; and during the . . . [ten years prior to 1911] the amount of Crown lands thus disposed of totalled from two to three million acres. The number of colonists thus given a stake in the land was between two and three thousand a year. . . . But the Seddon Ministry did not stop there. Having taken up the formula 'The Land for the State,' it devoted its attention to another formula: 'The Land for the People.' Every year some thousands of immigrants arrive in New Zealand and ask either for lands or for work. To these new-comers must be added such of the unemployed as the Department for Labour has been unable to place. It is therefore necessary to find some practical means of setting up people who have little or no capital. The experiments made with this purpose in view have been very interesting. Small farm associations, village settlements and improved farm settlements were some of the expedients proposed to make it easier for people without capital to get on their feet. The Act authorises and encourages, under the name of small farm associations, associations of at least twelve persons for the purpose of acquiring between them a certain tract of land. When the purchase has been made, roads are mapped out, and then the land is divided into sections which are distributed by lot among the

associates. Then the association comes to an end, and each person is once more free, having had the advantage of not being isolated and the chance of securing a really good lot. The system of village settlement is very similar. But under this latter system the Government advances to the colonists the capital necessary for preliminary expenses. . . . The improved farm settlements were intended to provide labour for the unemployed and if possible to give them a stake in the land. From time to time, when employment makes itself particularly felt, the Government selects a certain tract of waste land and sends the unemployed workmen to occupy it. They receive wages for clearing the land, and then, when it is ready for cultivation, they are given the land, which they themselves have prepared, on perpetual lease."—A. Siegfried, *Democracy in New Zealand*, pp. 180-186.—The graduated land tax also militates against the holding of large estates. "The first land-tax was imposed in 1878. The capital value of all land, less all improvements, was assessed at its selling value, and on this assessment, less a deduction of £500, the owner had to pay a tax of one halfpenny in the pound. In 1879 this tax was abandoned, and a tax upon all property real and personal, save agricultural implements in actual use, and property belonging to churches, public bodies or societies, ships, and policies of life assurance, was imposed. It was at first one penny in the pound. This property tax, with some amendments and at a varying rate, remained in operation till 1892. Provision was made in that year for a new scheme of taxation—land and income taxes. There were two kinds of land-tax, ordinary and graduated. The ordinary land-tax was imposed on the ordinary value of the land less a sum up to £3,000 for improvements. There was also a deduction of £500 allowed in certain cases. A graduated tax was provided. On land of the unimproved value of £5,000 and less than £10,000, the rate was an eighth of a penny in the pound. This rate increased by a graduate scale, the tax rising to six-eighths of a penny in the pound where the unimproved value of the land was of £210,000 or over. Since then the system of graduation has been maintained, though the scale of taxation has varied. . . . The result has been that the holders of large blocks of land have found it to be more profitable to dispose of their properties than to hold them. Since 1878 land has greatly increased in value, in some districts the increase being more than fourfold."—G. H. Scholefield, *New Zealand in evolution*, pp. 410-411.—The attack on the question of capital and labor by the Seddon ministry was as energetic as the attack on land-monopoly, and the results were, for years, the ideal of social reformers in other parts of the world. "There is not in any other country in the world a more valuable or more enlightened body of Labour laws than those now upon the statute book of this progressive colony. They cover almost every risk to life, limb, health, and interest of the industrial classes. They send the law, as it were, everywhere a worker is employed for daily wages to fling the shield of the state over him or her in the labour of livelihood. The bare enumeration of these laws will indicate the far-reaching ground they cover:—The Coal Mines Act, the Master and Apprentices Act, the Conspiracy Law Amendment Act, the Trade Union Act, the Servant's Registry Offices Act (for the protection of servant girls against the risks of dishonest offices of that kind), Contractors and Workmen's Lien Act, three amended Employer's Liability Acts, three amended Shipping and Sea-

men's Acts, two Shops and Shop-assistant Acts, the Factories Act, and the Industrial Conciliation and Arbitration Act of 1894. . . . The Industrial Conciliation and Arbitration Act, passed in 1894. . . . attracted much attention outside New Zealand."—M. Davitt, *Life and progress in Australasia*, ch. 68.—See also ARBITRATION AND CONCILIATION, INDUSTRIAL: New Zealand.—In the winter of 1890 an old-age pension act was added to the radical legislation of New Zealand. The Agent-General for New Zealand in England has described the measure in a review article, as follows: "As finally licked into shape, the act is one for giving a small pension to the poorest section of aged colonists without any contribution on their part whatever. Briefly summarized, any New Zealander—man or woman—who has come to the age of sixty-five, after living not less than twenty-five years in New Zealand, shall be entitled to 6s. 11d. a week, or £18 a year. The full pension is . . . paid to those whose income from any source is less than £34. When the private income is above £34 a year £1 is deducted from the pension for every £1 of such excess income. When, therefore, the private income is large enough to be £18 a year in excess of £34 no state pension is paid. In other words, no one who has an income of £52 a year is entitled to even a fraction of the pension. A rather more elaborate portion of the act deals with deductions to be made from the pension where the applicant for it is possessed of accumulated property. Under this the applicant's real and personal property are assessed, and his debts, if any, are subtracted from the total value thereof. Then he is allowed to own £325 without suffering any deduction therefor. After that he loses £1 of pension for every £15 worth of accumulated property. The result is that any one possessed of £600 worth of accumulated property ceases to be entitled to any allowance whatever. Men and women are equally entitled to the pension, and where a husband and wife are living together their property or income is divided by two for the purpose of the calculations above mentioned. That is to say, their united income must amount to £104 or their united property to £1,200 before they are altogether disentitled in any part of the pension. They may have, between them, an income of £68, or as much as £650 of property, and yet be entitled to draw their respective pensions in full."—*National Review*, Feb., 1890.—See also SOCIAL INSURANCE: Details for various countries: New Zealand: 1000-1912.—"It is continually asked what has been the effect of this interference with labour, this fixing of the wages, conditions, hours of labour, etc. . . . This at all events, can be said: strikes have been rare, and the Dominion is progressing. It is recognised that no industry is worth having if it cannot pay a living wage. The people in New Zealand believe that it is better to have no industries than to have a people steeped in misery, with physical health shattered, and with no hope of comfort or happiness. . . . In the Capital there is a Government labour department which has been in existence for 10 years. It supervises the various labour regulations, and the various agencies or various labour bureaux throughout the Dominion. . . . There are labour offices or bureaux throughout New Zealand, and in four of the cities there is a department to look after the unemployed. These branches deal with the unemployed, finding work for them and aiding them to get work. . . . The Government has always a considerable number of public works in progress, railways, roads, tracks, coal mines, etc., and the number of labourers employed by the State is

therefore large. . . . There is, as exists in England, a Workers' Compensation Act. It varies in some of its provisions from the English statute, but not in many vital details."—R. and J. L. Stout, *New Zealand*, pp. 165-167.

1891.—Represented at the council for federation. See AUSTRALIA: 1885-1892.

1893.—Universal Suffrage Act.—"A new Electoral Act was passed in 1893, and that Act was the first to create an equality of the sexes. Women had granted to them the same political rights as men, save that no woman could be elected as a member of Parliament. The freehold qualification was abolished, the residential qualification being the only one required. It was impossible thereafter to vote in more than one district, and all elections had to be held on one day. The ballot system was introduced in 1870."—R. and J. L. Stout, *New Zealand*, p. 96.—See also SUFFRAGE, WOMAN: New Zealand.

1894.—Represented at colonial conference at Ottawa, Canada. See BRITISH EMPIRE: Colonial and imperial conferences: 1894.

1897.—Refuses to become member of federation of Australian colonies. See AUSTRALIA: 1900: Federation of Australian colonies.

1897.—Represented at colonial conference in London. See BRITISH EMPIRE: Colonial and imperial conferences: 1897.

1897-1905.—Private charities.—Asylums. See CHARITIES: Australasia.

1899-1907.—Participation in Boer War.—Preferential and Reciprocal Trade Act.—"On October 11th, 1890, war began between Britain and the Boer Republics. On September 28th Seddon had moved in the House of Representatives that New Zealand offer the Imperial Government a contingent of mounted troops. The House approved by 54 votes to 5, and New Zealand had the distinction of being the first colony to line up beside the Motherland in the struggle. On October 21st the first contingent of New Zealanders left for South Africa. Between October 1880, and April 1902, ten contingents, totalling more than 6,000 men, sailed for South Africa, where they distinguished themselves alike by their skill and courage. The fruit of Seddon's visit to England in 1902 was his Preferential and Reciprocal Trade Act of 1903, which placed additional duties on certain goods not produced or manufactured in the Empire, and duties on foreign goods that were once imported free. This preferential trade was considerably enlarged in 1907, and has since been part of New Zealand's fiscal policy."—A. W. Shrimpton and A. E. Mulgan, *Maori and Pakeha*, pp. 353-355.

1900 (October).—Petition for annexation of Cook islands.—On the 10th of October, 1900, the earl of Ranfurly, governor of New Zealand, arrived at the Cook islands for the purpose of effecting the annexation of the islands to that colony, in accordance with the expressed wish of the natives. A British protectorate was declared over the group by Captain Bourke, of H. M. S. Hyacinth, in 1888. Since 1892 the interests of the protectorate had been guarded and directed by a British resident, paid by the New Zealand government, and the islands were now included within the boundaries of that colony. There are six islands in the group annexed (700 miles southeast of Samoa) the total population of which at the time of annexation was about 4,500. The inhabitants were "closely related to the Maori, and spoke almost the same language. They had petitioned in 1864 to be annexed, and their sympathies were entirely British. The way having been prepared

by a resolution in the New Zealand Parliament, the ariki of the group petitioned for annexation in 1900."—G. H. Scholefield, *Pacific: Its past and future*, p. 209.

1901.—Annexation of Cook and Niue, or Savage, islands.—"The inclusion of the Cook group in the boundaries of New Zealand was effected by an Order-in-Council in May 1901 under the authority of the Colonial Boundaries Act, 1895; and the change came into force the following month. Under the New Zealand act for the administration of the group the Federal Parliament previously existing is continued. Each island is governed by a council of nine members, the Resident Agent of New Zealand Government being ex-officio president. The Federal Council is presided over by the Resident Commissioner for the group. No ordinance has validity until assented to by the Government of New Zealand, which can also apply to the islands any New Zealand law it cares to. . . . Close to the Cook Islands is the outpost of Niue, or Savage Island, where German interests existed until 1899 which prevented British authority being set up. By the Samoa Convention Germany renounced her interests here, and the island was annexed to New Zealand in 1901. The natives of Niue are distinct from those of Rarotonga, and are of a roving disposition, so that of a population of 4500 about one-ninth are usually abroad in other Pacific islands."—G. H. Scholefield, *Pacific: Its past and future*, pp. 209-210.

1902.—Represented at imperial conference in London. See BRITISH EMPIRE: Colonial and imperial conferences: 1902.

1906-1909.—Liberal party and Liberal ministry.—Years of power.—Ward ministry.—Revolt against conciliation and arbitration system.—Leases-in-perpetuity abolished.—Social legislation.—Compulsory military training.—New voting system.—In June, 1906, the Liberal party in New Zealand experienced a great loss, in the death of Mr. Richard J. Seddon, its strong leader, and the Prime Minister of Government for some time past. His place was taken temporarily by Mr. Hall-Jones, until Sir Joseph Ward, then absent from the country, returned and received the chief ministerial seat. Since 1893 the Liberal Party had derived large majorities in Parliament from each triennial election. "Sir Joseph Ward entered upon what was, superficially at least, a wonderful political inheritance. The party had enjoyed fifteen unbroken years of power, its legislation had drawn the attention of the world, the Opposition had been routed at the elections of the year before, and the country was riding happily on a swelling tide of prosperity. In the Liberal-Labour party led by Ballance and Seddon, moderate Liberals marched with Radicals and Socialists. On one of the outstanding political questions, land policy, the party was divided into freehold and leasehold camps, whereas the Opposition was for the freehold. . . . It was the good fortune of Ballance and Seddon that in 1890, and the years following, nearly everything favoured an alliance between Liberalism, Radicalism, and Labour. It was Ward's misfortune that he succeeded to the Premiership when that alliance was about to show signs of weakening. It is doubtful if even Seddon, with ten more years of power, could have prevented the rise of an independent Labour party. The reconstruction of the Government almost coincided with a serious revolt against the conciliation and arbitration system. Serious strikes began to occur. From the passing of the Act of 1894 up to the end of 1905 there had been no strikes among unions. In 1906 there was a very short strike by the Auckland tramwaymen.

In 1907 there were twelve strikes, but all in one industry, slaughtering at freezing works. The following year there were the same number in different unions, including the Wellington bakers, the Auckland tramwaymen, and the West Coast miners. Other unions supported strikers by resolutions and money. [See also LABOR STRIKES AND BOYCOTTS: 1906-1913.] The outlook for peaceful methods was grave, and the Government made haste to amend the system by strengthening the conciliation side of it, writing fresh definitions of unlawful strikes, and imposing new penalties for infractions of the law. Fortunately public opinion supported the system. The new Ministry followed the lines laid down by its predecessors. Sir Joseph Ward had among his colleagues three men of note—Sir John Findlay, Attorney-General and Minister of Justice, . . . Mr. George Fowlds, an able and progressive Minister of Education, who was a prominent Single-taxer; and Mr. Robert McNab, who had made his name as a historian of the very early days of New Zealand, and now aspired to settle the land question definitely and boldly on radical lines. McNab brought in a leasehold Land Bill, but there was strong opposition to it in and out of Parliament, and it was modified. . . . The land problem had not been solved. . . . The land tax had had little effect in breaking up big estates; purchase by the Government and the stimulus of high prices ruling for land had been more potent factors. The intended effect of the tax had been negated to some extent by evasion. . . . The Government did a good deal. It increased the graduated land tax. It abolished in 1907, for future transactions, McKenzie's lease-in-perpetuity system, which now had few supporters, and substituted renewable leases, with periodical revaluation. It gave existing lessees the right to modify their tenure, or acquire the freehold. Eventually it set aside some millions of acres as an inalienable national endowment, the rents from which were to be devoted to old age pensions and education. But land monopoly continued to be a potent political cry, and was taken up with special force and effect by the Labour Party. Among a mass of other legislation may be singled out here the National Provident Fund Act of 1910, which encouraged the wage-earner to provide against destitution, incapacity, and old age, and the Licensing Act that gave people the opportunity of voting for or against national prohibition. By the year 1911 the population of the country had passed the million mark. In 1907 New Zealand officially ceased to be a Colony, and became a Dominion. The status of Australia and Canada, sister units in the Empire, made the change inevitable, but though the promotion in name was announced as momentous, it was received without enthusiasm. . . . Questions of defence forced themselves to the front. New Zealand had been lazily content with a system that had little to commend it. And in the session of 1909 following Sir Joseph Ward's attendance at a special naval defence conference in London, the Government passed an Act embodying the principle of universal training. Under the scheme of training put into operation boys served in the Junior Cadets from the age of twelve to the age of fourteen, and in the Senior Cadets from fourteen to eighteen, and then passed into the Territorials. . . . At twenty-five the Territorial passed into the Reserve and remained there for five years. No soldier could be compelled to serve outside the country. [See also WAR, PREPARATION FOR: 1909; New Zealand; Adoption of compulsory military training.] In 1908, three years after Seddon's last triumph, the Ward Government faced the electors. A new system of

voting was tried. The new system provided that where there was not an absolute majority the first two candidates must go to a second poll a fortnight later. . . . The Liberal party came back with a substantial majority, but its strength in the House, exclusive of Maori members, was reduced to forty-six, and the Opposition increased its numbers to twenty-six."—A. W. Shrimpton and A. E. Mulgan, *Maori and Pakeha*, pp. 361-364, 366-367, 371-372.

1907.—Represented at imperial conference in London.—Formulation of constitution.—Discussions of defense. See BRITISH EMPIRE: Colonial and imperial conferences: 1907.

1909.—Offer of a dreadnought to imperial navy.—"In 1909, at the Imperial Conference, Sir Joseph Ward sprung a surprise by offering a battle cruiser to the Government without consulting his constituents at home. They were in a mood to make him pay for it himself when he returned, but later developments so justified him that he became a sort of political idol for a while. When the cruiser visited New Zealand in 1913, the excitement knew no bounds."—S. Greenbie, *Imperial conference and the Anglo-Japanese Alliance (World's Work, July, 1921)*.—See also WAR, PREPARATION FOR: 1909: British imperial defense conference.

1909 (June).—Represented at imperial press conference. See BRITISH EMPIRE: Colonial and imperial conferences: 1909 (June).

1910.—Legislation against trade monopolies. See TRUSTS: New Zealand.

1910-1919.—Statistics of trade unions. See LABOR ORGANIZATION: 1910-1919.

1911.—Growth in prohibition sentiment. See LIQUOR PROBLEM: New Zealand: 1911.

1911.—Represented at imperial conference.—Discussion of naturalization laws, intercommunication, and social insurance. See BRITISH EMPIRE: Colonial and imperial conferences: 1911.

1911-1921.—Election of 1911.—Defeat of Liberal party.—Reform party in power.—In the elections of 1911 the parties stood equal. The following March Ward resigned and was followed by Thomas Mackenzie, a member of the cabinet. The Mackenzie government lasted three months, but was defeated in July, 1912. It was followed by the Reform party, the successor of the Conservative party under Massey, who was still in office in 1921.

1914-1918.—Part taken in World War.—Military Service Act.—Socialist agitation against conscription.—"Into the war against Germany New Zealand threw herself even more wholeheartedly, if possible, than Australia. In the earlier stages of the war volunteers came forward with as much readiness as in the Commonwealth, and later New Zealand did not shrink from conscription of men of military age to keep up the strength of her forces. Some young men went to Australia to escape conscription, but they were exceptions. The New Zealanders under General Godley fought with the Australians on Gallipoli. [See also AUSTRALIA: 1914-1915; WORLD WAR: 1915: VI. Turkey: a; a, 4, xx.] They distinguished themselves in France and also did excellent service in the Palestine campaign."—T. Dunbabin, *Making of Aus-*

tralia, p. 250.—The first expeditions were composed entirely of volunteers. But, as the war dragged on, it was recognized that some other method of filling up the ranks was advisable, and "on August 1, 1916, the Parliament of New Zealand enacted 'The Military Service Act, 1916,' establishing the Expeditionary Force Reserve. That Reserve consists of every male natural-born British subject resident in New Zealand, between the ages of 20 and 46 years inclusive, except members of the Expeditionary Force or men discharged from it, criminals, lunatics, and natives. The act may be extended to include natives by proclamation. Voluntary enlistment was to continue side by side with conscription until it was proclaimed that such enlistment should cease. . . . The 'No' vote in Australia encouraged the Socialist Anti-conscriptionists to enter upon a campaign, [against the act] in which it was claimed that Parliament had no mandate to initiate compulsory military service; that, had a referendum been taken in New Zealand, conscription would have been negatived in Australia, and that the Military Service Act should be repealed or a referendum taken. . . . [The regulations against sedition, which went into force in December, 1916, had the effect of stiffening this opposition, and] just before Christmas an Anti-Conscription Conference was held in Wellington at which numerous Labour bodies were represented. Resolutions were passed recommending a national campaign to secure the repeal of the Military Service Act. It was decided that representatives of the National Labour Party should take legal opinion as to whether [the act was in agreement with the Act of Constitution, in order to decide if a test case could be taken to the Supreme Court]. . . . A deputation from this conference waited on the Minister of Labour. The Government, it urged, was irritating the workers almost beyond endurance: New Zealand had already sent to the front enough men in proportion to her population: and there was great danger of the essential industries suffering. . . . At the end of January trouble began on the wharf in Wellington owing to the refusal of the men to 'dump' cargo (*i.e.* to discharge it in nets instead of slings) or to work after 5 p.m. if required; and to their restricting the number of boxes of butter in any one hoist to 30 instead of 48 as usual. . . . There was evidence of the introduction of a general 'go slow' policy; the result of which was to delay the shipment of produce to England. . . . The Government could not allow the continuance of a deadlock which held up food supplies for Great Britain. On February 10, under 'The War Regulations Amendment Act, 1916,' new War Regulations were published for the maintenance of industries essential for the public welfare. These regulations declared the lading and unloading of ships to be such an 'essential industry' and gave the Government power to declare any wharf a Government wharf. . . . Incitement to refuse effective service as a wharf labourer and other utterances or actions calculated to interfere with or delay unloading of ships were declared 'offences'. . . . [Early in February] concerted action was being taken throughout the Dominion by the coal miners for the adoption of a 'go slow' policy. . . . [The owners] met the miners and granted a war bonus of 10 per cent. and thought the matter settled. The evidence showed that the men had received instructions not to earn more than 12s. a day, and that the output in the mine that was under consideration by the Board had fallen by a third since the instructions were given. . . . The Government again responded by War Regulations, forbidding any seditious strike or lock-out. . . .

Pursuant to these regulations the coal mining industry . . . was also proclaimed an 'essential industry.'—*Round Table, June, 1917, pp. 625, 629, 631-633.*—See also LABOR STRIKES AND BOYCOTTS: 1917.—“During the war there was a keen demand for . . . [dairy products and wool] at high prices; and New Zealand, partly owing, it is true, to more care and caution in public finance, came out of the war far better financially than Australia.”—T. Dunbabin, *Making of Australasia, p. 251.*

1916-1921.—Place of New Zealand in empire.—Difficulties in proposals for closer imperial federation and an imperial parliament.—The World War created a new set of problems for New Zealand. Previous to 1914 she had been concerned mainly with her own internal development. The World War brought her into the midst of the whole society of nations and pointed out to her, as to Australia, her anomalous position as a power too great to act as a mere colony, and yet not independent as a nation. The conferring of the Pacific mandates on Australia and New Zealand as independent states still further emphasized the difficulties of her position. Suggestions for an imperial parliament of British states did not wholly satisfy the New Zealanders, and the whole question of re-adjusting the relations of the colony within the empire was still under discussion when the imperial conference met in London in June, 1921. “At the outbreak of . . . [the World War] New Zealand coöperated with Australia in occupying German Samoa and after the close of the war New Zealand received a mandate from the League of Nations to administer it. [See BRITISH EMPIRE: Treaties promoting expansion: 1920; SAMOA: 1914-1920.] New Zealand's rule in Samoa has not been regarded with unmixed favour by either the white or the native inhabitants and some of the chiefs petitioned for direct rule by Great Britain. . . . A good deal of the discontent, as in the territories administered by Australia under mandate, was no doubt due to the difficulties and troubles of the transition period. But there has been a movement . . . for a confederation of the various Pacific groups, Fiji, Samoa, the Solomons, the New Hebrides, and others, which would then form a unit in the British Empire. The difficulty is the lack of homogeneity in the populations.”—T. Dunbabin, *Making of Australasia, pp. 240-250.* See also PACIFIC OCEAN: 1918-1921.—“New Zealand was strongly wooed by Australian statesmen to enter the Commonwealth on its foundation; and, when she declined, the way was left open for her subsequent entry, should she so desire. The New Zealand people, as a whole, had no hesitation in deciding that these islands would do better to preserve their independence and work out their own national destiny. . . . [On the question of imperial federation] among the more thoughtful students of Imperial questions in this Dominion there is a well-defined dread lest, in adopting some form of federation, with a central Parliament exercising forms of compulsion on the hitherto free States of the Empire, we may be setting back the clock, and exposing the British Empire afresh to dangers from which it happily has been freed. Those who hold this view regard with misgiving any attempt to substitute some rigid material form of union for the spiritual ties of kinship which have hitherto held the Empire together.”—*Imperial union and the dominions (Quarterly Review, Jan., 1917).*

1921.—Censorship of press. See CENSORSHIP: World War.

1921-1922.—Depression and recovery.—In common with the rest of the world New Zealand suffered from depression during the post-war years. The large quantities of wool held by the imperial government made the new clip a drug on the market, and other war time arrangements resulted in a small income from other agricultural products. “The year 1921 closed in gloom. The high costs of production combined with heavy freights to make New Zealand's position on the world market a most difficult one. In 1922, however, serious efforts were made to restore order in Government finance, and to restore industry to a competitive basis, . . . [while the government made] very serious efforts to lead the way in the national economy movement. The revenue for the first seven months of the fiscal year (April-October, 1922) showed an increase of £220,111 over the corresponding period in 1921, . . . while the total reduction in expenditure for the same period, due to economies and savings, amounted to £220,766. . . . The Meat Export Control Board, constituted in 1921, . . . [had] eased the situation somewhat by effecting reductions in freight and freezing charges, and by affording improved conditions of marketing.”—*New Zealand (Economist, Feb. 17, 1923, p. 334).*—At the close of the year, 1922, it was stated that “Mr. Massey's prediction that before the end of the year public expenditure would be well within income . . . [was] already approaching fulfilment. Various favourable causes . . . helped towards this result; the enhanced prices for New Zealand produce, good seasons, and the absence of industrial strife, are among the principal. But even then, only a policy of vigorous retrenchment could have insured success. The main opposition to the retrenchment . . . had come from the Labour party. The same party . . . opposed the reduction of taxation as far as it . . . [affected] the banker, the business and professional man, and the large companies. . . . The cost of living . . . [was] falling, almost every item except rent being lower. . . . A further reduction of 3s.

a week in wages . . . [has] been decreed and accepted by the workers."—*New Zealand (Economist)*, Dec. 2, 1922, p. 1036)

NEWBURY, Battles of. See ENGLAND: 1643 (August-September); 1644 (August-September).

NEWCASTLE-UPON-TYNE, episcopal city and municipal county of England, capital of Northumberland, on the left bank of the Tyne, eight miles from its mouth. The port of Newcastle is the fourth in importance in the United Kingdom. In 1921 the population numbered 274,055. The city dates from the Roman Pons Ælii—one of the chain of forts by which the wall of Hadrian was fortified. On the withdrawal of the Romans, the

deserted camp became the residence of a community of monks and the town was called Monkchester. Robert, oldest son of William the Conqueror, commenced to build a castle in 1079 or 1080, hence the modern name Newcastle. The present castle was erected by Henry II between 1172 and 1177. Newcastle was the rendezvous of the armies which the first three Edwards led into Scotland. During the Civil War, 1642-1646, it declared for the king and sustained a ten months siege, by the Scots. See PONS ÆLI.

NEWCHWANG. See NIUCHWANG.

NEWCOMB, Simon (1835-1909), American astronomer and mathematician. Appointed professor of mathematics in the United States navy, 1861; director of the Nautical Almanac, 1877-1897; professor of mathematics at Johns Hopkins university, 1884-1894; author of several books on astronomy. See AVIATION: Development of airplanes and air service: 1896-1910.

NEWCOMEN, Thomas (1663-1729), English engineer. With Cawley and Savery, invented the atmospheric engine, 1705. See STEAM AND GAS ENGINES: Development up to Watt's time.

NEWFOUNDLAND, Dominion of: Geographic description.—Area.—Population.—Resources.—Newfoundland is a large island, roughly triangular in shape, lying directly across the mouth of the St. Lawrence river. "The geographical situation of Newfoundland gives it a position of some strategical importance; stretching across the entrance of the Gulf of St. Lawrence, it guards the entrance both from the North and the South. The island is almost cut in two by the large bays of Placentia and Trinity, and the southern peninsula of Avalon is joined to the main body of the island by a neck of land which at its narrowest point is only three miles across. . . . With regard to size, Newfoundland is the tenth largest island in the world. Its greatest length, from Cape Ray on the south-west to Cape Norman on the north, is 317 miles; its greatest breadth, from Cape Spear to Cape Anguille, is almost the same. Its area is 42,000 square miles, and it is therefore one-sixth larger than Ireland, and only one-fifth smaller than England."—*Dominion of Newfoundland and Labrador (pamphlet)*, pp. 8, 13-14.—See also CANADA: Geographical description; Map; BRITISH EMPIRE: Extent.—"The population is somewhere about a quarter of a million [1922]. Labrador, which is a dependency of Newfoundland, has an area of 120,000 square miles and a population of about 4,000. About one-fifth of the total number of inhabitants of Newfoundland resides in the capital city of St. John's, which is situated on the south-east coast. The greater part of the remainder of the population is found in the numerous outports which are all round the coast."—E. J. Edwards, *Report on trade and industrial resources of Newfoundland*, p. 6.—"With the exception of a few descendants of early French settlers and a few Mic-Macs, or half-breed Indians, . . . the entire population is of English, Scotch or Irish descent. . . . The education of the country . . . [in 1921 was] being effectively organised and improved. Agriculture is encouraged, and . . . the Fisheries are of apparently inexhaustible wealth, its mines, which include some of the largest iron mines in the world (at Bell Island) and its timber, which last provides the material for the great paper and pulp mills that are such a source of industry to a large proportion of the population, make Newfoundland a land full of promise."—*Dominion of Newfoundland and Labrador (pamphlet)*, pp. 6-7.

1498.—Discovery by John Cabot. See AMERICA: 1498; also Map showing voyages of discovery.

1500.—Visited by Cortereal, Portuguese explorer. See AMERICA: 1500.

1501-1578.—Portuguese, Norman, Breton and Basque fisheries.—“It is a very curious circumstance, that the country in which the Cabots started their idea for a navigation to the north-west, and in which they at first proclaimed their discovery of the rich fishing-banks near their Newfoundland-Isles, did not at once profit by it so much as their neighbors, the French and the Portuguese. . . . During the first half of the 16th century we hear little of English fishing and commercial expeditions to the great banks; although they had a branch of commerce and fishery with Iceland. . . . ‘It was not until the year 1548 that the English government passed the first act for the encouragement of the fisheries on the banks of Newfoundland, after which they became active competitors in this profitable occupation.’ [In Portugal, Cortereal’s discovery had revealed] . . . the wealth to be derived from the fish, particularly cod-fish, which abounded on that coast. The fishermen of Portugal and of the Western Islands, when this news was spread among them, made preparations for profiting by it. . . . According to the statement of a Portuguese author, very soon after the discoveries by the Cortereals, a Portuguese Fishing Company was formed in the harbors of Vianna, Aveiro and Terceira, for the purpose of colonizing Newfoundland and making establishments upon it. Nay, already, in 1506, three years after the return of the last searching expedition for the Cortereals, Emanuel gave order, ‘that the fishermen of Portugal, at their return from Newfoundland, should pay a tenth part of their profits at his custom-houses.’ It is certain, therefore, that the Portuguese fishermen must, previous to that time, have been engaged in a profitable business. And this is confirmed by the circumstance that they originated the name of ‘terra de Bacalhas’ [or Bacalhaõ] (the Stock-fish-country) and gave currency to it. . . . The nations who followed them in the fishing business imitated their example, and adopted the name ‘country of the Bacalhas’ (or, in the Spanish form, Baccallaos), though sometimes interchanging it with names of their own invention, as the ‘Newfoundland,’ ‘Terre neuve,’ etc. . . . The Portuguese engaged in this fishery as early as 1501, according to good authorities, and perhaps under the charter of Henry VII. In 1578, they had 50 ships employed in that trade, and England as many more, and France 150. . . . The inhabitants of the little harbors of Normandy and Brittany, the great peninsulas of France, . . . were also among the first who profited by the discoveries of the Cabots and Cortereals, and who followed in the wake of the Portuguese fishermen toward the north-west cod-fish country. . . . The first voyages of the Bretons of St. Malo and the Normans of Dieppe to Newfoundland, are said to have occurred as early as 1504. . . . They probably visited places of which the Portuguese had not taken possession; and we therefore find them at the south of Newfoundland, and especially at the island of Cape Breton, to which they gave the name, still retained,—the oldest French name on the American north-east coast. . . . The Spaniards, and more particularly the mariners and fishermen of Biscay, have pretended, like those of Brittany and Normandy, that they and their ancestors, from time immemorial, had sailed to Newfoundland; and, even before Columbus, had established their fisheries there. But the Spanish historian Nav-

arette, in more modern times, does not sustain this pretension of his countrymen. . . . We may come to the conclusion that, if the fisheries of the Spanish Basques on the Banks of Newfoundland and in the vicinity, did not begin with the voyage of Gomez [in 1525], they received from it a new impulse. . . . From this time, for more than a century, they [the Basques] appeared in these waters every year with a large fleet, and took their place upon the banks as equals by the side of the Bretons, Normans, and Basques of France, until the middle of the 17th century, when rival nations dispossessed them of their privileges.”—J. G. Kohl, *History of the discovery of Maine* (*Maine Historical Society Collections, series 2, v. 1, ch. 6, 8, with footnote*).

1583.—Formal possession taken for England by Sir Humphrey Gilbert. See AMERICA: 1583; BRITISH EMPIRE: Expansion; 16th century: North America.

1610-1655.—Early English attempts at colonization.—Grants to Lord Baltimore and Sir David Kirke.—“For 27 years after the failure of the Gilbert expedition no fresh attempt was made to establish a colony in the island. During this interval fishermen of various nationalities continued to frequent its shores. . . . The French were actively engaged in the prosecution of the fisheries in the neighboring seas. Their success in this direction strengthened their desire to gain possession of Newfoundland. Hence it is that in the history of the country France has always been an important factor. Having from time to time held possession of various points of the land, England’s persistent rival in these latitudes has given names to many towns, villages, creeks, and harbors. . . . In 1610 another attempt was made to plant a colony of Englishmen in Newfoundland. John Guy, a merchant, and afterwards mayor of Bristol, published in 1609 a pamphlet on the advantages which would result to England from the establishment of a colony in the island. This publication made such a deep impression on the public mind that a company was formed to carry out the enterprise it suggested. The most illustrious name on the roll was that of Lord Bacon. . . . To this company James I., by letters patent dated April, 1610, made a grant of all the part of Newfoundland which lies between Cape Bonavista in the north and Cape St. Mary. Mr. Guy was appointed governor, and with a number of colonists he landed at Mosquito Harbor, on the north side of Conception Bay, where he proceeded to erect huts. . . . We have no authentic account of the progress of this settlement, begun under such favourable auspices, but it proved unsuccessful from some unexplained cause. Guy and a number of the settlers returned to England, the rest remaining to settle elsewhere in the New World. Five years afterwards, in 1615, Captain Richard Whitbourne, mariner, of Exmouth, Devonshire, received a commission from the Admiralty of England to proceed to Newfoundland for the purpose of establishing order among the fishing population and remedying certain abuses which had grown up. . . . It was shown that there were upwards of 250 English vessels, having a tonnage of 1,500 tons, engaged in the fisheries along the coast. Fixed habitations extended at intervals along the shore from St. John’s to Cape Race. . . . Having done what he could during the active part of his life to promote its interests, on his return to England, in his advanced years, he [Whitbourne] wrote an account of the country, entitled ‘A Discourse and Dis-

covery of Newfoundland.' . . . His book made a great impression at the time. . . . So highly did King James think of the volume that he ordered a copy to be sent to every parish in the kingdom. The Archbishops of Canterbury and York issued a letter recommending it, with the view of encouraging emigration to Newfoundland. . . . A year after the departure of Whitbourne, in 1623, by far the most skilfully-organized effort to carry out the settlement of Newfoundland was made, under the guidance of Sir George Calvert, afterwards Lord Baltimore. . . . When Secretary of State he obtained a patent conveying to him the lordship of the whole southern peninsula of Newfoundland, together with all the islands lying within ten leagues of the eastern shores, as well as the right of fishing in the surrounding waters, all English subjects having, as before, free liberty of fishing. Being a Roman Catholic, Lord Baltimore had in view to provide an asylum for his co-religionists who were sufferers from the intolerant spirit of the times. The immense tract thus granted to him extended from Trinity Bay to Placentia, and was named by him Avalon, from the ancient name of Glastonbury, where, it is believed, Christianity was first preached in Britain. . . . Lord Baltimore called his Newfoundland province Avalon and his first settlement Verulam. The latter name, in course of time, became corrupted into Ferulam, and then into the modern Ferryland. At this spot, on the eastern coast of Newfoundland, about 40 miles north of Cape Race, Lord Baltimore planted his colony, and built a noble mansion, in which he resided with his family during many years. [But after expending some £30,000 upon the establishment of his colony, Lord Baltimore abandoned it, on account of the poor quality of the soil and its exposure to the attacks of the French. Not long afterwards he obtained his Maryland grant (see MARYLAND: 1632) and resumed the enterprise under more favorable conditions.] . . . Soon after the departure of Lord Baltimore, Viscount Falkland, Lord-Lieutenant of Ireland, hoping to permanently increase the scanty population of Newfoundland, sent out a number of emigrants from that country. At a later date, these were so largely reinforced by settlers from Ireland that the Celtic part of the population at this day is not far short of equality in numbers with the Saxon portion. In 1638, Sir David Kirke, one of Britain's bravest sea-captains, arrived in Newfoundland and took up his abode at Ferryland, where Lord Baltimore had lived. Sir David was armed with the powers of a Count Palatine over the island, having obtained from Charles I. a grant of the whole. [This was by way of reward for his exploits in taking Quebec (see CANADA: 1628-1635). Kirke] . . . governed wisely and used every effort to promote the colonization of the country. His settlement prospered greatly. The Civil War, however, broke out in England, and, Kirke being a staunch loyalist, all his possessions in Newfoundland were confiscated by the victorious Commonwealth. By the aid of Claypole, Cromwell's son-in-law, Kirke eventually got the sequestration removed, and, returning to Ferryland, died there in 1655, at the age of 56. At this time Newfoundland contained a population of 350 families, or nearly 2,000 inhabitants, distributed in 15 small settlements along the eastern coast."—J. Hatton and M. Harvey, *Newfoundland*, pt. 1, ch. 2.—"The prime importance of Newfoundland in the early days of English expansion lies undoubtedly in the fishery. As a training ground for seamen it outweighed the East Indian trade, and the men were more easily available in times of emergency. In 1615 it employed 5000 men and 250 ships of an

average burden of 60 tons. In the period 1630-40 these figures were doubled, the men numbering 10,680, and the total tonnage 26,700. At a time when the navy depended almost entirely upon the mercantile marine for its personnel, these figures are very significant, and go far to explain the sudden strength of the Commonwealth fleets in the Dutch war of 1652-4. . . . 'From the purely economic standpoint . . . Newfoundland conformed most closely to the canons of the mercantile system, and was the most valuable of the English dominions beyond the seas.'"—J. A. Williamson, *Short history of British expansion*, pp. 206-207.

1660-1688.—French gain their footing.—"With the possession of Cape Breton, Acadia, and the vast regions stretching from the gulf of the River St. Lawrence, and the mighty lakes, Newfoundland obtained a new value in the estimation of the government of France, as it formed one side of the narrow entrance to its transatlantic dependencies: consequently the pursuit of the fishery by its seamen was encouraged, and every opportunity was improved to gain a footing in the country itself. This encroaching tendency could not, however, be manifested without a protest on the part of the somewhat sluggish English, both by private individuals and by the government. Charles I. . . . imposed a tribute of five per cent. on the produce taken by foreigners in this fishery, to which exaction the French, as well as others, were forced to submit. During the distracted time of the Commonwealth, it does not appear that the struggling government at home found leisure to attend to these distant affairs, though the tribute continued to be levied. The Restoration brought to England a sovereign who owed much to the monarch of France, to whom he was therefore attached by the ties of gratitude, and by the desire to find a counterpoise to the refractory disposition of which he was in continual apprehension among his own subjects. It was not until 1675 that Louis XIV. prevailed on Charles to give up the duty of five per cent., and by that time the French had obtained a solid footing on the southern coast of Newfoundland, so that, with Cape Breton in their possession, they commanded both sides of the Gulf of St. Lawrence. Over a territory of some 200 miles in extent, belonging to the British sovereignty, they had built up imperceptibly an almost undisputed dominion. At Placentia, situated in the bay of that name, a strong fort was erected, sustained by other forts standing at intervals along the shore, and at the same place a royal government was established. How real was the authority assumed, and how completely was the English sovereignty ignored, needs no better proof than is furnished in an ordinance issued by Louis in the year 1681, concerning the marine of France. In this state paper, Newfoundland is reckoned as situate in those seas which are free and common to all French subjects, provided that they take a license from the admiral for every voyage. . . . Not less than half of the inhabited coast of Newfoundland was thus taken under that despotic rule, which, while swaying the councils of England to the furtherance of its ambitious designs, was labouring for the subjugation of the European continent. The revolution of 1688 broke the spell of this encroaching autocracy."—C. Pedley, *History of Newfoundland*, ch. 2.

1694-1697.—French success in war with England.—Treaty of Ryswick.—"On the accession of William III. to the throne of England hostilities broke out between the rival nations. In William's

declaration of war against the French, Newfoundland holds a prominent place among the alleged causes which led to the rupture of pacific relations. The grievance was tersely set forth in the royal manifesto: 'It was not long since the French took license from the Governor of Newfoundland to fish upon that coast, and paid a tribute for such licenses as an acknowledgment of the sole right of the Crown of England to that island; but of late the encroachments of the French, and His Majesty's subjects trading and fishing there, had been more like the invasions of an enemy than becoming friends, who enjoyed the advantages of that trade only by permission.' Newfoundland now became the scene of military skirmishes, naval battles, and sieges by land and water. [In 1692 the English made an unsuccessful attack on Placentia. In 1694, a French fleet, under the Chevalier Nesmond, intended for an attack upon Boston and New York, stopped at Newfoundland on the way and made a descent on the harbor and town of St. John's. Nesmond] . . . was repulsed, and instead of going on to Boston he returned to France. A more determined effort at conquest was made later in the same year. The new expedition was under the command of Iberville and Brouillon, the former being at the head of a Canadian force. The garrison of St. John's was weak in numbers, and, in want of military stores, could only make a feeble resistance; capitulating on easy terms, the troops were shipped to England. The fort and town were burned to the ground, and the victors next proceeded to destroy all the other adjacent English settlements; Carbonear and Bonavista alone proved too strong for them. The English Government at once commenced dispositions for dislodging the invaders; but before anything was attempted the treaty of Ryswick was signed, in 1697. This treaty proved most unfortunate for Newfoundland. It revived in the island the same state of division between France and England which had existed at the beginning of the war. The enemy retired from St. John's and the other settlements which they had forcibly occupied. Their claims upon Placentia and all the other positions on the south-west coast were, however, confirmed. The British inhabitants of Newfoundland were, therefore, once more left open to French attacks, should hostilities be again renewed between the rival powers."—J. Hatton and M. Harvey, *Newfoundland*, pt. 1, ch. 2.—See also FRANCE: 1695-1696.

1698-1729.—Rule of "fishing admirals."—Establishment of civil government.—"Prior to 1726 there was neither excellency nor justice, and the skippers of the west country [Devonshire, England] held uncontrolled sway, vouching the statute of King William (1698) for all their deeds. It was their real charter, and was declaratory of their custom. It recognised the first of them that chanced upon a harbour to be admiral there for the season, the second to be vice-admiral, and the third rear-admiral. It ordained no court, gave no compulsory jurisdiction, enacted no penal clauses—but what then? Who would question the right to his fishing-admiralship or set bounds to his power? As prosecutor, judge, jury, and executioner in his own case and that of his associates, he gave summary trial and sentence on the spot."—T. B. Browning, *Newfoundland (British America, British Empire Series*, v. 3, p. 266).—"For more than a century and a half settlement in Newfoundland was not only not encouraged, but was actu-

ally forbidden. The 'Merchant Adventurers' had become the proprietors of the island's fisheries, and through their influence laws were passed prohibiting colonization. Masters of vessels were put under bonds to return their crews to England at the end of the season, and settlement within six miles of the coast was made a penal offence. In the early days the sparse population of the country were under the rule of 'Fishing Admirals,' uncouth skippers appointed by the Merchants, and these administered laws in their own interests and appropriated for themselves the best fishing grounds, and generally harassed and oppressed the people. These rude fishing skippers represented Newfoundland as a barren waste and a land entirely unsuited for settlement, they themselves however, became rich and influential out of the proceeds of their voyages in search of fish. . . . Later on it was discovered that the reports about the country made by the Merchants and 'Fishing Admirals' were incorrect, and a period of progress commenced with the appointment of Naval Governors in 1729, the first of whom was Captain Henry Osborne. A system of Civil Government was then introduced, and courts were established; previously, accused persons had to be taken to England for trial. [The Supreme Court, which is still in existence, was established at this time.]"—*Dominion of Newfoundland and Labrador (pamphlet)*, p. 4.

1705.—English settlements destroyed by the French. See NEW ENGLAND: 1702-1710.

1713.—Relinquished to Great Britain by Treaty of Utrecht.—French fishing rights reserved.—In the twelfth and thirteenth articles of the Treaty signed at Utrecht, April 11, 1713, which terminated the War of the Spanish Succession (commonly known in American history as Queen Anne's War) it was stipulated that "All Nova Scotia or Acadie, with its ancient boundaries, as also the city of Port Royal, now called Annapolis Royal, . . . the island of Newfoundland, with the adjacent islands, . . . the town and fortress of Placentia, and whatever other places in the island are in possession of the French, shall from this time forward belong of right wholly to Great Britain. . . . That the subjects of France should be allowed to catch fish and dry them on that part of the island of Newfoundland which stretches from Cape Bonavista to the northern point of the island, and from thence down the western side as far as Point Riché; but that no fortifications or any buildings should be erected there, besides Stages made of Boards, and Huts necessary and usual for drying fish. . . . But the island of Cape Breton, as also all others, both in the mouth of the river of St. Lawrence and in the gulf of the same name, shall hereafter belong of Right to the King of France, who shall have liberty to fortify any place or places there."—R. Brown, *History of the Island of Cape Breton*, letter 9.—See also UTRECHT: 1712-1714; U. S. A.: 1690-1748.

1763.—Ceded to England by Treaty of Paris, with rights of fishing reserved to France. See SEVEN YEARS' WAR: Treaties; FISHERIES: 1763.

1763.—Control of Labrador, Anticosti and Magdalen islands. See CANADA: 1763-1774; LABRADOR: Name.

1778.—French fishery rights on the banks recognized in Franco-American Treaty. See U. S. A.: 1778 (February).

1783.—American fishing rights conceded in treaty of peace with the United States. See U.S.A.: 1783 (September).

1811-1894.—Sale of land permitted.—“Supply” system.—Bank failures.—“Sale of lands was first permitted in 1811. Some small parcels near the shore-line had, no doubt, been appropriated; but, as the terms of the holding were use in the fishery and sufferance, the governors of the day, admirals of the Royal Navy, deemed they were doing their country good service by tearing down houses, breaking up enclosures, and reducing garden-patches to a state of nature. A chimney was an object of special abhorrence, and the addition of a lean-to was sufficient to bring on the daring offender’s head the sharp justice of the quarter-deck. . . . The men of forty years ago [written in 1900] decried the mercantile system as indefensible in theory and ruinous in practice. The newer school of economists tells us that, with all its faults, it was a movement, a great and necessary movement, in national advancement and general civilisation; [but], . . . if you look to Newfoundland in 1825, and ask what justification it could show after so long trial, the answer must be that it left not one building that endures, not a local improvement attempted or realised, not a school, not a road. . . . [By the end of the eighteenth century, the merchant adventurers, who owned their own ships, had all but disappeared. Their place was taken by ‘capitalists’ who bought their fish, instead of catching it, and introduced, or developed the system of advances known as the ‘supply system,’ which attained] . . . its maximum in the sixties. . . . [It] had many features of a monopoly, for it centred in the hands of a small body of capitalists, called ‘merchants,’ who resided in the chief towns as St. John’s, Harbour Grace, Carbonear. It wielded almost absolute power over the main or sole industries of the country, the cod and . . . [important hair seal] fisheries, and . . . brought within its grasp the import as well as the export trade. . . . The mode of business was somewhat as follows: advances in truck, known as ‘supplies,’ . . . were dealt out to fishermen or middlemen in the spring at a charge debited which covered the risk of loss and prospective profit. In the autumn, or fall, a return was made of the season’s catch, which . . . was put to the credit side of the account, generally at a price that ruled in the local market. Further supplies were then required for the winter, and were had usually at the same rate, the balance, if any, being carried over to the next season. . . . In the sixties, in the heyday of ‘supply,’ there arose, and increased to alarming proportions, what is known as pauper relief. The Government had to step in and distribute sustenance to the people throughout large districts. Relief once given had to be continued, and prosperity in the fisheries seemed to make little difference in the result. . . . That a system so open to abuse should come to an end somehow, and at some time, had been long foreseen. The form in which the crash should come was not revealed till the 10th of December, 1894, when the Union and Commercial Banks, the only banks in the island, closed their doors. . . . The one institution that stood firm was the Savings Bank, a government institution.”—T. B. Browning, *Newfoundland (British America, British Empire Series, v. 3, pp. 264-271)*.

1818.—Fisheries Treaty between Great Britain and the United States. See FISHERIES: 1814-1818.

1826.—Institution of courts.—Courts were instituted in 1826, when the Supreme Court, which

still exists, received its charter. “Back to 1791, you find an establishment, tentative in its standing and jurisdiction, which was kept alive by annual acts lest any permanent encroachment should be made on the free fishery. . . . But prior to that time, nothing more tangible in the way of law could be obtained than ‘winter justices,’ constituted under executive order, whose decisions the bold west countrymen scoffed at and whose decrees they defied.”—T. B. Browning, *Newfoundland (British America, British Empire Series, v. 3, p. 265)*.—The Supreme Court consists of a chief justice and two assistant judges.

1832-1855.—Establishment of representative government.—“In the case of Newfoundland representative government had rather a stormy inception: the Legislature was distracted by a quarrel between the two Houses as to appropriation, which prevented the usual Acts being passed in 1837 and 1839; then questions of privilege led to much excitement and ill-feeling, and the interference of the Catholic clergy in elections produced strong party disturbances. . . . The colonists became more and more insistent in the demand for responsible government when they saw it established in the Provinces of Nova Scotia, New Brunswick, and Prince Edward Island. On the other hand, the Imperial Government were hampered in their desire to meet the wishes of the people by the fact that both France and America had important treaty rights on the coast of the Colony. . . . Eventually it was determined to give way, and the grant of responsible government was made [1855]. . . . In 1856, a dispatch from Mr. Labouchere, which has become famous in Newfoundland history, asserted that in the future there would be no question of altering the treaty obligations affecting the Colony save after full consultation with the Colonial Government.”—A. B. Keith, *Responsible government in the Dominion, v. 1, pp. 24-25*.

1854-1866.—Reciprocity treaty with the United States. See TARIFF: 1854-1866.

1867.—Provisions for entering Dominion of Canada. See CANADA, CONSTITUTION OF: 1867.

1871.—Treaty of Washington. See ALABAMA CLAIMS: 1871.

1877.—Halifax fishery award.—Termination of fishery articles of Treaty of Washington.—Renewed fishery disputes. See FISHERIES: 1877-1898.

1893-1895.—Higher education.—Discovery of copper and iron.—“In 1893 an act was passed to provide for higher education. This act makes provision for the appointment of a Council of Higher Education, with the view of promoting a higher standard of education throughout the colony by the holding of examinations and the awarding of prizes and diplomas and scholarships to successful candidates. The council is to consist of twenty-three members, and the Superintendents of Education and Headmasters of Colleges are members *ex officio*. The sum of \$4,000 annually is appropriated for the purposes of this act. . . . [The discovery of copper was made in 1857. The first mine was worked in 1864, and in 1902 Newfoundland ranked sixth in the copper producing countries.] It was not till 1805 that the first discovery of iron ore was made in Bell Island, Conception Bay, twelve miles from St. John’s. This proved to be one of the most remarkable and also one of the most valuable mines in the world.”—M. Harvey, *Newfoundland at the beginning of the twentieth century, pp. 156, 85*.

1895.—Union with Canada refused.—Terms proposed for the union of Newfoundland with the

Dominion of Canada were rejected, and negotiations abandoned.

1897.—Conference of colonial premiers with British colonial secretary. See BRITISH EMPIRE: Colonial and imperial conferences: 1897.

1897-1900.—Reid contract.—Question in politics.—In the fall of 1897 a line of narrow-gauge railway, with branches over six hundred miles in total length, was completed and opened to traffic. The main line of rail extends from the capital, St. Johns, to Port-aux-Basques, at the southwestern extremity of the island. The railway was constructed by a contractor, Robert Gillespie Reid, who agreed to operate it for seven years at his own expense, receiving therefor a land grant of 5000 acres per mile. In 1898 a new contract was made with Reid, which placed most of the resources of the island under his control. For an additional land-grant of 2500 acres per mile of road he undertook to operate the road for fifty years. By a present cash payment of \$1,000,000 to the colony treasury, he purchased the reversion of its right to the possession of the road at the end of that period. At the same time he secured the right to purchase from the government its telegraph lines and the dry-dock at St. Johns, for half a million dollars, and was given a monopoly for thirty years of the coast mail steam service, with an annual subsidy of \$750,000, he undertaking to maintain in it seven steamers, well equipped, and one to Labrador in summer. An extra subsidy was given for these steamers. This remarkable contract was bitterly denounced by a large party in the island, and the Imperial government was strongly petitioned to nullify the whole transaction; but the British Colonial Secretary, Joseph Chamberlain, while he characterized the contract as representing "the most unparalleled abrogation of its functions by a responsible government," decided that he could not properly interfere. The "Reid Deal," as it was known, then became a burning issue in Newfoundland politics, and the Ministry responsible for it, led by Sir James Winter, was ousted from the government in 1900. Reid was then arranging to transfer his Newfoundland contract and franchises to a company, which required the sanction of the colonial government. The new (Liberal) Ministry, of which Robert Bond was Premier, refused consent to the transfer unless Reid would amend his bargain with the colony in several very important particulars. He offered some concessions, but not to the extent demanded; and so the question between him and the Bond Ministry went into the canvass of 1900, for the election of a new Assembly, and the Conservatives, heavily backed by Reid, were defeated overwhelmingly, winning but 4 seats out of 36 in the Lower House of the Legislature. "The new Government appealed to the electorate in November, of 1900, the principal issue placed before the country being the modification of the railway contract made between the Government and Mr. Reid in 1898. The contest resulted in the Ministry being sustained by an overwhelming majority. . . . The Government set to work at once to carry out the popular will with respect to the railway contract of 1898. Negotiations were opened with Mr. Reid, which resulted in the whole railway system of the colony, the telegraph lines and 3,500,000 acres of land, acquired by Mr. Reid under the railway contract of 1898, reverting to the Government upon the payment to him of \$2,023,700. This was virtually the repayment to Mr. Reid of the \$1,000,000 which he had paid for the reversionary interest of the railway, together with the interest upon the same to date, and the payment of the sum of \$850,000

for all the land acquired him under the Railway Act, 1898. Mr. Reid entered into a new contract with the Government to operate the railway free of charge for fifty years, and the Government consented to his transferring this contract, and his remaining interests under the 1898 contract to a limited liability company, to be known as the Reid-Newfoundland Company. That company has been incorporated, and has entered upon its undertaking with exceeding bright prospects before it." —M. Harvey, *Newfoundland at the beginning of the twentieth century*, pp. 101, 105.

1898-1899.—Joint high commission for settlement of questions with the United States. See CANADA: 1898-1899.

1899-1901.—French Shore question.—The *modus vivendi*.—In 1899 the question of the French Shore became a serious international problem. The history of the question goes back to the date of Treaty of Utrecht. Agitation against French occupation of the Shore had been growing since that time, and it now reached a point where it could no longer be overlooked. "At the period of the negotiation of the Treaty of Utrecht, in 1713, by which the rights of the French fishermen were regulated [see above: 1713], thousands of French fishing vessels availed themselves of the inshore fisheries about the island; and that they might be not altogether without facilities for the drying and curing of their fish, they were granted under the Treaty the 'right to use a strip of the coast seven hundred miles long and half a mile wide.' Accompanying the Treaty, but, be it noted, not a part of it, was a declaration of King George, that British subjects on the island were not to interfere with these French coast rights by erecting permanent structures upon it, calculated to obstruct the operations of the French fishermen. This Royal declaration was harmless and unimportant when the population of the island was very small, and the French fishermen resorted to the inshore fisheries of Newfoundland."—B. Wilson, *Newfoundland's opportunity* (*Fortnightly Review*, Feb., 1899).—As the population increased, the treaty, and more the French interpretation of it, worked much hardship. "Between 1815 and [1886] . . . the condition of things on the [French] Treaty shore may be summarised as one of continual encroachment on the part of the French and weak toleration on the part of the British Government. The loose wording which characterises both treaties and declaration had been twisted by the French into meanings which could never have been contemplated, while without serious hindrance on . . . [the part of the British] they had contravened stipulations, the meaning of which leaves no opening for doubt. Forceful means had been taken, sometimes even by French cruisers, for preventing British fishing wherever it was likely to prove profitable, and the 'exclusive' right which . . . denied in principle [by the British] was in practice exercised. Instead of the stages and huts which were alone permissible by the treaty, substantial buildings had been erected, some of them factories provided with machinery for the canning of lobsters; while the terms 'fish' and 'fishery,' which the words of the treaty show to refer to nothing but cod were made to cover salmon . . . and lobsters. . . . Finally, the pretext afforded by the word 'interfering' in the royal declaration was used to prevent the utilisation of the coast by the English for other purposes besides fishing. With some 20,000 British subjects settled on the Treaty shore, it may be imagined to what a pass things had come when Lord Salisbury put his foot down firmly . . . and declared that no French officer

would be permitted to seize British boats, cut English nets, or drive British fishermen out of their own harbours. With a view to ameliorate matters there had been appointed, from the year 1846 onwards, seven different international Commissions, some of which resulted in arrangements conditional upon the assent of the Newfoundland Legislature. As might have been foreseen by anyone adequately acquainted with the local conditions, none of these compromises could have been accepted by the colony except at the cost of serious injury to itself, for which England offered no compensation. . . . In the event, none of these arrangements received the necessary local consent, and all proved abortive. In 1883 was constituted an eighth Commission, of which Sir Clare Ford, of the Diplomatic Service, and Mr. Pennell, of the Colonial Office, were the British members. After terms had been agreed upon, which again found no favour with the colonists, an amended arrangement was arrived at in 1886 [which the legislature of Newfoundland refused to ratify].—G. W. des Voeux, *My colonial service*, v. 2, pp. 141-143.—In 1886, the Newfoundland government passed a Bait Act, which prohibited the capture or sale of bait fishes, within Newfoundland waters, without special license by the government. The French government tried to have the act disallowed by the British government, but Sir William des Voeux, the governor, protested strongly against the disallowance, and the colonial conference, which met in London in 1887, sustained the Newfoundland government in the stand which it had taken. Thereupon the British government allowed the act, in spite of the protests made by France, but provided that it should not go into operation until 1888. In retaliation, however, the French government ordered that a lobster factory, which had been in operation on the French Treaty Coast, should be closed. This step was followed by an interchange of notes between the French and British governments on the subject, in the course of which the French contended that the Treaty of Utrecht had preserved to them full and exclusive rights to the shore, to the exclusion of the inhabitants of the island, and, in defiance of zoology, claimed that lobsters were "fish," and therefore came within the terms of the treaty. The British government, willing to defer to the French claims until a settlement could be made, directed removal of British factories on the shore, with the curious result that it was found that the act under which the removals were made had expired more than fifty years before. A test suit was brought by one of the factory owners in the Supreme Court. It was decided in his favor, and on being carried to the Privy Council the verdict was sustained. Meantime, a Royal Commission had found that on the Treaty Coast, which was 800 miles in extent, the French occupied only eight cod and nine lobster stations, which employed about 600 men, while the inhabitants who numbered 13,300 along that coast were debarred from the full use and enjoyment of their own shores. No wharves could be built, no permanent buildings could be erected within half a mile of the shore; and the railway which at that time was being constructed by Robert Gillespie Reid, was deflected 120 miles out of its course because of the French objection to a terminus on the shore. In 1890, a temporary agreement ("modus vivendi") concerning the lobster packing and other questions, was arranged between the British and French governments, which was extended from time to time, very much to the dissatisfaction of Newfoundland. Newspaper discussion on the subject was carried on in

both England and France, with an apparent show of readiness on the part of the latter country to bargain with the British for cessions in West Africa or elsewhere. Despite its reluctance, the Newfoundland legislature was prevailed upon in February, 1901, to pass an Act renewing the "modus vivendi" for another year. Several members who supported the measure declared that they did so for the last time, and only because of an unwillingness to embarrass the British government during the continuance of the South African war. The question, however, was not finally settled until 1904 when it was included in the Landsdowne-Cambon Convention.

1902.—British colonial conference at London. See BRITISH EMPIRE: Colonial and imperial conferences: 1902.

1902-1905.—Negotiations and senatorial destruction of the Hay-Bond Reciprocity Treaty with the United States.—In November, 1902, a Treaty of Reciprocity which would have settled the long-standing disputes over American rights of fishing on the Newfoundland coast, on terms of most equitable advantage to both countries, and especially favorable to the interests of the general public in the United States, was concluded and signed at Washington by Secretary Hay and the British Ambassador, Sir Michael Herbert. The Premier of Newfoundland, Sir Robert Bond, had taken a principal part in the negotiation, and the resulting document was known consequently as the Hay-Bond Treaty. It secured to the New England fishermen the coveted privilege of buying bait and other supplies and hiring crews in Newfoundland ports; and it admitted the greater part of American manufactures into the island duty free. On the other hand, it opened the markets of the United States to the fish and fish products, the coal, oil, and ores of Newfoundland, for the benefit of the consumers of the country. The treaty was hailed with satisfaction by the general public of the United States, but opposed by a few interests whose gains might be lessened if any breach in their monopoly of the sale of salted fish and coal and oil should be permitted. The majority which has seldom failed of late to be retainable in the United States Senate for the service of such private interests, against the public good, was promptly organized by Senator Lodge, first for pocketing the Treaty throughout more than two years, and finally for amending it to death, in February, 1905. The provisions that made it advantageous to Newfoundland were cut out, and the treaty was reduced to a state which made it insulting as an offer of reciprocity.

1905-1909.—Renewed disputes over American fishing rights on Treaty Coast.—Arrangement of a modus vivendi.—Agreement on questions to be submitted to a tribunal of arbitration at The Hague.—Constitution of the tribunal.—The endless friction that attended the exercise of treaty-rights by American fishermen in the Newfoundland fisheries was freshly roughened in the fall of 1905, by a new enactment of the provincial legislature, to prevent the sale of bait or outfits and supplies of any nature to foreign fishermen, and by orders from the minister of marine and fisheries forbidding vessels of American registry to fish on the Treaty Coast. This reopened debate between the state department at Washington and the foreign office at London, over the intentions and meanings of that first article in the Treaty of 1818 which has been a source of incessant

sant dispute for ninety-one years. The following is the language of the article:

"Article I. Whereas differences have arisen respecting the liberty claimed by the United States, for the inhabitants thereof, to take, dry, and cure fish, on certain coasts, bays, harbours, and creeks of His Britannick Majesty's Dominions in America, it is agreed between the High Contracting Parties that the inhabitants of the said United States shall have, for ever, in common with the subjects of His Britannick Majesty, the liberty to take fish of every kind, on that part of the southern coast of Newfoundland, which extends from Cape Ray to the Rameau Islands, on the western and northern coast of Newfoundland, from the said Cape Ray to the Quirpon Islands, on the shores of the Magdalen Islands, and also on the coasts, bays, harbours, and creeks, from Mount Joly, on the southern coast of Labrador, to and through the Streights of Belleisle, and thence northwardly indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson's Bay Company. And that the American fishermen shall also have liberty, for ever, to dry and cure fish in any of the unsettled bays, harbours, and creeks of the southern part of the coast of Newfoundland, here above described, and of the coast of Labrador; but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such portion so settled, without previous agreement for such purpose, with the inhabitants, proprietors, or possessors of the ground. And the United States hereby renounced, for ever, any liberty heretofore enjoyed or claimed by the inhabitants thereof, to take, dry, or cure fish on or within three marine miles of any of the coasts, bays, creeks, or harbours of His Britannick Majesty's Dominions in America, not included within the above-mentioned limits: provided, however, that the American fishermen shall be admitted to enter such bays or harbours, for the purpose of shelter, and of repairing damages therein, of purchasing wood, and of obtaining water, and for no other purpose whatever. But they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner whatever abusing the privileges hereby reserved to them."

With reference to the obstruction to American fishing in Newfoundland waters, the contention of Secretary Root was set forth in the following propositions:

"1. Any American vessel is entitled to go into the waters of the Treaty Coast and take fish of any kind.

"She derives this right from the Treaty (or from the conditions existing prior to the Treaty and recognized by it) and not from any permission or authority proceeding from the Government of Newfoundland.

"2. An American vessel seeking to exercise the Treaty right is not bound to obtain a licence from the Government of Newfoundland, and, if she does not purpose to trade as well as fish, she is not bound to enter at any Newfoundland custom-house.

"3. The only concern of the Government of Newfoundland with such a vessel is to call for proper evidence that she is an American vessel, and, therefore, entitled to exercise the Treaty right, and to have her refrain from violating any laws of Newfoundland not inconsistent with the Treaty.

"4. The proper evidence that a vessel is an American vessel and entitled to exercise the Treaty

right is the production of the ship's papers of the kind generally recognized in the maritime world as evidence of a vessel's national character.

"5. When a vessel has produced papers showing that she is an American vessel, the officials of Newfoundland have no concern with the character or extent of the privileges accorded to such a vessel by the Government of the United States. No question as between a registry and licence is a proper subject for their consideration. They are not charged with enforcing any laws or regulations of the United States. As to them, if the vessel is American she has the Treaty right, and they are not at liberty to deny it.

"6. If any such matter were a proper subject for the consideration of the officials of Newfoundland, the statement of this Department that vessels bearing an American registry are entitled to exercise the Treaty right should be taken by such officials as conclusive."

On the British side, Sir Edward Grey raised two principal objections to these propositions of Mr. Root: First—that "the privilege of fishing conceded by Article I of the Convention of 1818 is conceded, not to American vessels, but to inhabitants of the United States and to American fishermen"; second, that "inhabitants of the United States would not now be entitled to fish in British North American waters but for the fact that they were entitled to do so when they were British subjects. American fishermen cannot therefore rightly claim to exercise their right of fishery under the Convention of 1818 on a footing of greater freedom than if they had never ceased to be British subjects. Nor consistently with the terms of the Convention can they claim to exercise it on a footing of greater freedom than the British subjects 'in common with' whom they exercise it under the Convention. In other words, the American fishery under the Convention is not a free but a regulated fishery, and, in the opinion of His Majesty's Government, American fishermen are bound to comply with all Colonial Laws and Regulations, including any touching the conduct of the fishery, so long as these are not in their nature unreasonable, and are applicable to all fishermen alike."

To the first of these objections Mr. Root replied: "We may agree that ships, strictly speaking, can have no rights or duties, and that whenever the Memorandum, or the letter upon which it comments, speaks of a ship's rights and duties, it but uses a convenient and customary form of describing the owner's or master's right and duties in respect of the ship. . . . The liberty assured to us by the Treaty plainly includes the right to use all the means customary or appropriate for fishing upon the sea, not only ships and nets and boats, but crews to handle the ships and the nets and the boats. . . . I am not able to discover that any suggestion has ever been made of a right to scrutinize the nationality of the crews." As for the second objection, the American Secretary appealed to history against it. "The qualification," he said, "that the liberty assured to American fishermen by the Treaty of 1818 they were to have 'in common with the subjects of Great Britain' merely negatives an exclusive right. Under the Treaties of Utrecht, of 1763 and 1783, between Great Britain and France, the French had constantly maintained that they enjoyed an exclusive right of fishery on that portion of the coast of Newfoundland between Cape St. John and Cape Raye, passing around by the north of the island. The British, on the other hand, had maintained that British subjects had a right to fish along with the French,

so long as they did not interrupt them. The dissension arising from these conflicting views had been serious and annoying, and the provision that the liberty of the inhabitants of the United States to take fish should be in common with the liberty of the subjects of His Britannic Majesty to take fish was precisely appropriate to exclude the French construction and leave no doubt that the British construction of such a general grant should apply under the new Treaty. The words used have no greater or other effect. The provision is that the liberty to take fish shall be held in common, not that the exercise of that liberty by one people shall be the limit of the exercise of that liberty by the other."

As between these chief disputants in the matter, the first result of their exchange of arguments was a ready disposition to arrange some *modus vivendi*, under which peace might be kept on the fishing grounds until fresh undertakings could be planned for a lasting interpretation of the old enigmas in Article 1 of 1818. But the provincial Government of Newfoundland resented bitterly the imperial interference with its measures, charging that it was in violation of a pledge "given by the late Lord Salisbury in the House of Lords in 1891, to the effect that the colony had been given unlimited power with respect to its internal affairs." They were promptly told, however, that what concerned action under a British treaty went considerably beyond the internal affairs of their colony.

Considerable correspondence on the terms of the proposed *modus vivendi* brought an agreement on the 6th of October, 1906, set forth in the following communication from Ambassador Whitelaw Reid to Sir Edward Grey:

"I am authorized by my government to ratify a *modus vivendi* in regard to the Newfoundland fishery question on the basis of the Foreign Office Memorandum, dated the 25th ultimo, in which you accept the arrangement set out in my Memorandum of the 12th ultimo, and consent accordingly to the use of purse seines by American fishermen during the ensuing season, subject, of course, to due regard being paid in the use of such implements to other modes of fishery, which, as you state, is only intended to secure that there shall be the same spirit of give and take and of respect for common rights between the users of purse seines and the users of stationary nets as would be expected to exist if both sets of fishermen employed the same gear.

"My Government understand by this that the use of purse seines by American fishermen is not to be interfered with, and the shipment of Newfoundlanders by American fishermen outside the 3-mile limit is not to be made the basis of interference or to be penalized; at the same time they are glad to assure His Majesty's Government, should such shipments be found necessary, that they will be made far enough from the exact 3-mile limit to avoid any reasonable doubt.

"On the other hand, it is also understood that our fishermen are to be advised by my Government, and to agree, not to fish on Sunday.

"It is further understood that His Majesty's Government will not bring into force the Newfoundland Foreign Fishing-Vessels Act of 1906, which imposes on American fishing-vessels certain restrictions in addition to those imposed by the Act of 1905, and also that the provisions of the first part of section 1 of the Act of 1905, as to boarding and bringing into port, and also the whole of section 3 of the same Act, will not be regarded as applying to American fishing-vessels.

"It also being understood that our fishermen

will gladly pay light dues if they are not deprived of their rights to fish, and that our fishermen are not unwilling to comply with the provisions of the Colonial Customs Law as to reporting at a custom-house when physically possible to do so."

To explain the stipulation relative to "purse seines" it should be said that the New England fishermen claimed to be driven to the use of them, by the local regulations which hampered their fishing otherwise.

As formulated in the note of Ambassador Reid the *modus vivendi* was accepted by the British Government and went into effect. In due time thereafter the two governments entered upon a discussion of ways and means for accomplishing a definite and final settlement of the whole question of American rights in the Newfoundland fisheries. The outcome was an agreement signed at Washington on January 27, 1909, to the effect that the following questions shall be submitted for decision to a Tribunal of Arbitration, constituted as subsequent articles provide:—

"Question 1.—To what extent are the following contentions or either of them justified?

"It is contended on the part of Great Britain that the exercise of the liberty to take fish referred to in the said Article, which the inhabitants of the United States have for ever in common with the subjects of his Britannic Majesty, is subject, without the consent of the United States, to reasonable regulation by Great Britain, Canada, or Newfoundland in the form of municipal laws, ordinances, or rules, as, for example, to regulations in respect of (1) the hours, days, or seasons when fish may be taken on the Treaty coasts; (2) the method, means, and implements to be used in the taking of fish or in the carrying on of fishing operations on such coasts; (3) any other matters of a similar character relating to fishing; such regulations being reasonable, as being, for instance—

"(a) Appropriate or necessary for the protection and preservation of such fisheries and the exercise of the rights of British subjects therein and of the liberty which by the said Article 1 the inhabitants of the United States have therein in common with British subjects;

"(b) Desirable on grounds of public order and morals;

"(c) Equitable and fair as between local fishermen and the inhabitants of the United States exercising the said Treaty liberty and not so framed as to give unfairly an advantage to the former over the latter class.

"It is contended on the part of the United States that the exercise of such liberty is not subject to limitations or restraints by Great Britain, Canada, or Newfoundland in the form of municipal laws, ordinances, or regulations in respect of (1) the hours, days, or seasons when the inhabitants of the United States may take fish on the Treaty coasts, or (2) the method, means, and implements used by them in taking fish or in carrying on fishing operations on such coasts, or (3) any other limitations or restraints of similar character—

"(a) Unless they are appropriate and necessary for the protection and preservation of the common rights in such fisheries and the exercise thereof; and

"(b) Unless they are reasonable in themselves and fair as between local fishermen and fishermen coming from the United States, and not so framed as to give an advantage to the former over the latter class; and

"(c) Unless their appropriateness, necessity, reasonableness, and fairness be determined by the United States and Great Britain by common accord and the United States concurs in their enforcement.

"Question 2.—Have the inhabitants of the United States, while exercising the liberties referred to in said Article, a right to employ as members of the fishing crews of their vessels persons not inhabitants of the United States?

"Question 3.—Can the exercise by the inhabitants of the United States of the liberties referred to in the said Article be subjected, without the consent of the United States, to the requirements of entry or report at custom-houses or the payment of light or harbour or other dues, or to any other similar requirement or condition or exaction?

"Question 4.—Under the provision of the said Article that the American fishermen shall be admitted to enter certain bays or harbours for shelter, repairs, wood, or water, and for no other purpose whatever, but that they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein or in any other manner whatever abusing the privileges thereby reserved to them, is it permissible to impose restrictions making the exercise of such privileges conditional upon the payment of light or harbour or other dues, or entering or reporting at custom-houses or any similar conditions?

"Question 5.—From where must be measured the 3 marine miles of any of the coasts, bays, creeks or harbours' referred to in the said Article?

"Question 6.—Have the inhabitants of the United States the liberty under the said Article or otherwise to take fish in the bays, harbours, and creeks on that part of the southern coast of Newfoundland which extends from Cape Ray to Rameau Islands, or on the western and northern coasts of Newfoundland from Cape Ray to Quirpon Islands, or on the Magdalen Islands?

"Question 7.—Are the inhabitants of the United States whose vessels resort to the Treaty coasts for the purpose of exercising the liberties referred to in Article 1 of the Treaty of 1818 entitled to have for those vessels, when duly authorized by the United States in that behalf, the commercial privileges on the Treaty coasts accorded by agreement or otherwise to United States trading vessels generally?"

Of the remaining articles of the Agreement, IV. and V. provide for the determination of future questions that may arise, and for the composition of the Tribunal of Arbitration, which is to be chosen from the members of the Permanent Court at The Hague.

The agreement above was formulated at a conference in Washington between Secretary Root, Ambassador Bryce, Hon. A. B. Aylesworth, Canadian minister of justice, and Attorney-General Kent of Newfoundland. In March the following were chosen from the general membership of the Permanent Court at The Hague to constitute the tribunal for this arbitration, namely: Dr. Luis Maria Drago, Argentina; Jonkheer de Savornin Lohman, Netherlands; Judge George Gray, United States; and Sir Charles Fitzpatrick, Chief Justice of Canada, with Dr. H. Lammasch, of Vienna, to be umpire on points of disagreement.

The case for the United States was delivered to the British embassy at Washington, and that for Great Britain to the American embassy at London, on October 4. A little later it was announced that the *modus vivendi* of 1908 had been renewed until the termination of the arbitration proceedings.

1907.—Represented at imperial conference in London.—Formulation of constitution. See BRITISH EMPIRE: Colonial and imperial conferences: 1907.

1909.—A year of depression.—Scant earnings from fisheries.—Attitude toward confederation with Canada.—The year 1909 was one of great depression. The great majority of the population still had little to look to for their support except fishing, and the price of fish suddenly dropped to about half of what it was the previous season. This worked all the more hardship because in the decade just passed the price had steadily climbed until it had doubled itself. Moreover, the winter herring fishing was a failure; the seal fishery was below the average; the value of the whale fishery had almost vanished. Every form of industry, trade and commerce suffered, and to add to the sum of misfortunes the Bell iron mines closed for the winter season. It might have been thought that financial difficulties of such magnitude, coupled with the resulting loss of revenue to the government, would have turned the thoughts of the people toward union with Canada. On the contrary, feeling continued to be so strong against confederation that no party leader would think of weighing the advantages of such a union against the certainty of absolute political defeat.

1909 (July-August).—Imperial defense conference. See WAR, PREPARATION FOR: 1909; British imperial defense conference.

1909-1921.—Influence of Fishermen's Protective Union.—Profit sharing.—"In the history of Trade Unionism throughout the world there is no more romantic story than that of the formation and growth of the Fishermen's Protective Union of Newfoundland. . . . Since the creation of the Union [about 1909] 250 councils or local branches have been formed, and at Port Union, the headquarters of the movement, a model town is developing, and is indeed well on its way towards completion. Shipbuilding yards have been established, where vessels of over 400 tons have been constructed, and 40 departmental stores worked on the co-operative basis are found in most of the busier centres in the country. The kerosene lamp, at one time an indispensable article in the equipment of a fisherman's house, has been replaced to a large extent by [electricity]. . . . In addition to the establishment of a successful business undertaking the . . . [Union] controls a newspaper which imparts its influence over every district of the country. . . . This Union . . . is the only one which enters the political field, and at the last general election [written in 1921] succeeded in getting a direct representation of twelve members out of the thirty six members returned to the local Parliament. The F. P. U. has a Co-operative business with a turnover of three million dollars, imports its goods and buys and exports codfish. . . . One of the outstanding features of the economic life of the people is the acceptance of the profit-sharing principle by employers and employed. Fishermen are employed almost exclusively on this basis. The owner of the fishing schooner takes one half of the value of the catch and the members of his crew receive one half between them in equal shares. Thus it depends upon the worker himself how much his share will be."—*Dominion of Newfoundland and Labrador* (pamphlet), pp. 16-18.

1910.—Hague decision.—The difficulties that arose between the United States and Newfoundland regarding their respective fishing rights in

1905 were finally settled by the Hague Tribunal in 1910. The award states among other provisions, that Great Britain may make regulations regarding the fisheries without the consent of the United States, provided they do not violate the provisions of the treaty of 1818, and that the three-mile limit is to be measured from a straight line (not more than ten miles long) drawn across bays between the two points nearest the entrance. See FISHERIES: 1909-1910.

1911.—Discussion of naturalization laws and social legislation at imperial conference. See BRITISH EMPIRE: Colonial and imperial conferences: 1911.

1914-1918.—Expeditionary force in World War.—“The Naval Reserve in Newfoundland was formed in 1910, and . . . for many years prior to the War, the young seamen of the country did part-time service in the summer on the ships of the North Atlantic Squadron, and prepared themselves in this way for their arduous duties in the Navy. The pre-War establishment of the Newfoundland Naval Reserve was about 500, but in all 2,953 men were called to service in the Navy; . . . 107 of these men were killed in action and 124 were invalidated out of the Service through injuries received. Besides this number, there were a large number of Newfoundlanders who served in the regular Navy, having enlisted in other parts of the Empire. . . . In August, 1914, . . . [Newfoundland] at once offered five hundred men as a first contribution to the land forces of the Crown. . . . [By the middle of May, 1915 the Newfoundland battalion had increased to 2000 and the naval force to 1200.] The total numbers raised in the Dominion amounted to nearly 9,000, all ranks, of whom about 4,000 became casualties, including some 1,200 dead of wounds or sickness, or actually killed. No account is made here of Newfoundland enlistments in other forces, or of the Newfoundland Forestry Corps and the Newfoundland Royal Naval Reserve.”—*Dominion of Newfoundland and Labrador* (pamphlet), pp. 131, 134.—See also BRITISH EMPIRE: World War: 1914-1918; WORLD WAR: Miscellaneous auxiliary services: XIV. Cost of war: b, 8, ii.

1917.—Created a dominion.—Coalition cabinet.—In 1917, Newfoundland was created a dominion in recognition of its war services. An election was due during the World War; but a bill to extend the life of the legislature for one year was passed in August, and at the same time a coalition cabinet was formed. An excess profits bill, rejected by the council, was passed by the expedient of appointing four additional members, as provided for under the Constitutional Act. Thereafter, an act was passed which defines the powers of the upper house, and reserves money bills to the House of Assembly.

1917-1918.—Questions of defense, industry and raw materials at imperial war conferences. See BRITISH EMPIRE: Colonial and imperial conferences: 1917; 1918.

1918.—Conscription Bill.—The expeditionary force, which had served with distinction in Gallipoli and France, could no longer be kept up by the method of voluntary enlistment, and in consequence a Selective Conscription Act was passed.

1919.—Representation at Peace conference. See PARIS, CONFERENCE OF: Outline of work; VERSAILLES, TREATY OF: Conditions of peace.

1921.—Railway question.—Increased agricultural production.—Paper mills.—“The Railway situation . . . became a difficult one during the

year and the Premier stated in the Legislature [May 25, 1921] that when the Railway Commission's term of office expired the relations between the Reid-Newfoundland Railway and the Government would be a serious question. During the Session a measure was passed providing for the operation of the Railway system for one year ending June 1st, 1922, by the Reid-Newfoundland Co. The Government guaranteed a loss in operation up to \$1,500,000 under the provisions of the Bill, but the Company would meet losses above that figure; it was passed by a vote of 18 to 14. Sir George Bury, . . . [who] had been appointed Commissioner to investigate conditions . . . reported that since 1904 operating costs had exceeded earnings by \$5,750,000; that the Joint Commission of the Reid interests and the Government, appointed in 1920, and since in control, had not improved matters. . . . Sir Edgar Bowring, Newfoundland's High Commissioner in London, . . . [on November 24] pointed out again that Fishing no longer was the staple industry and that: ‘We get out of the land twice as much as we get out of the sea. Our potato crop, amounting to 600,000 barrels, is more valuable than our Labrador fisheries; our hay crop, combined with roots, such as turnips, is more valuable than our shore fisheries, while the live-stock trade—cattle, horses, sheep, goats, etc.—is more valuable than the Bank fishery; so that Newfoundland, which has always been considered entirely a fishing country, turns out to be an agricultural country.’ . . . In December H. D. Reid announced at St. John's extensive plans for the development of the natural resources of Newfoundland. . . . He had negotiated a contract with the Armstrong, Whitworth Co. Ltd., to develop the resources of the Humber Valley; by that project paper mills would be established twice the size of the Harmsworth plant at Grand Falls with a capacity of 1,000 tons daily; the contract guaranteed the expenditure of \$7,000,000 within two years with the establishment of aluminum works and other industries and extensive waterpower development. . . . In 1920, the Newfoundland Legislature . . . [rejected] Woman Suffrage and in 1921—the fourth year of operation—there were some Prohibition troubles in the Island-Dominion though nothing so marked as in Canada and the United States.”—J. C. Hopkins, *Canadian Annual Review of Public Affairs*, 1921, pp. 101-102.

NEZ PERCES, or Sahaptins.—"The Sahaptins or Nez Percés [the Shahaptian family in Major Powell's classification], with their affiliated tribes,

occupied the middle and upper valley of the Columbia and its affluents, and also the passes of the mountains. They were in contiguity with the Shoshones and the Algonkin Blackfeet, thus holding an important position, intermediate between the eastern and the Pacific tribes. Having the commercial instinct of the latter, they made good use of it."—D. G. Brinton, *American race*, p. 107.—In 1877 the Nez Percés under "Joseph" resisted being confined to their reservation in Idaho. The genius of their famous chief was displayed to advantage in his 1,000 mile retreat to the Canadian border. When within a few miles of safety he was forced to surrender to Colonel Miles on October 5, 1877.—See also IDAHO: 1834-1860; 1860-1878; U.S.A.: 1866-1876.

NGURU, mountainous district in the northeastern part of East Africa, west of Zanzibar. It was the scene of military operations during the World War. See WORLD WAR: 1916: VII. African theater: a, 13; a, 14.

NIAGARA: Name and its original applications.—"Colden wrote it [the name] 'O-ni-ag-a-ra,' in 1741, and he must have received it from the Mohawks or Oneidas. It was the name of a Seneca village at the mouth of the Niagara river; located as early as 1650, near the site of Youngstown. It was also the place where the Marquis de Nonville constructed a fort in 1687, the building of which brought this locality under the particular notice of the English. The name of this Indian village in the dialect of the Senecas was 'Ne-ah'-gä,' in Tuscarora 'O-ne-ä'-kars,' in Onondaga 'O-ne-ah'-gä,' in Oneida 'O-ne-ah'-gäle,' and in Mohawk 'O-ne-ä'-gä-rä.' These names are but the same word under dialectical changes. It is clear that Niagara was derived from some one of them, and thus came direct from the Iroquois language. The signification of the word is lost, unless it is derived, as some of the present Iroquois suppose, from the word which signifies 'neck,' in Seneca 'O-ne-ah'-ä,' in Onondaga 'O-ne-yä'-ä,' and in Oneida 'O-ne-arl.' The name of this Indian village was bestowed by the Iroquois upon Youngstown; upon the river Niagara from the falls to the Lake; and upon Lake Ontario."—L. H. Morgan, *League of the Iroquois*, bk. 3.

1679.—River navigated by La Salle. See CANADA: 1660-1687.

1687-1688.—Fort constructed by De Nonville and destroyed a year later.—"We arrived there [at Niagara] on the morning of the 30th [of July, 1687]. We immediately set about choosing a place, and collecting stakes for the construction of the Fort which I had resolved to build at the extremity of a tongue of land, between the river Niagara and Lake Ontario, on the Iroquois side. On the 31st of July and 1st of August we continued this work, which was the more difficult from there being no wood on the place suitable for making palisades, and from its being necessary to draw them up the height. We performed this labor so diligently that the fort was in a state of defence on the last mentioned day. . . . The 2d day of August, the militia having performed their allotted task, and the fort being in a condition of defence in case of assault, they set out at noon, in order to reach the end of the lake on their return to their own country. On the morning of the 3d, being the next day, I embarked for the purpose of joining the militia, leaving the regular troops under the direction of M. de Vaudreuil to finish what was the most essen-

tial, and to render the fort not only capable of defence, but also of being occupied by a detachment of 100 soldiers, which are to winter there under the command of M. Troyes."—Marquis de Nonville, *Journal of expedition against the Senecas (Historical writings of O. H. Marshall, p. 173)*.—"De Nonville's journal removes the doubt which has been entertained as to the location of this fortress, some having supposed it to have been first built at Lewiston. . . . It occupied the site of the present fort on the angle formed by the junction of the Niagara with Lake Ontario. . . . De Nonville left De Troyes with provisions and munitions for eight months. A sickness soon after broke out in the garrison, by which they nearly all perished, including their commander. . . . They were so closely besieged by the Iroquois that they were unable to supply themselves with fresh provisions. The fortress was soon after abandoned and destroyed [1688], much to the regret of De Nonville."—*Footnotes to the above*.

1725-1726.—Stone fort built.—Joncaire's wigwam.—Captain Joncaire "had been taken prisoner when quite young by the Iroquois, and adopted into one of their tribes. This was the making of his fortune. He had grown up among them, acquired their language, adapted himself to their habits, and was considered by them as one of themselves. On returning to civilized life he became a prime instrument in the hands of the Canadian government, for managing and cajoling the Indians. . . . When the French wanted to get a commanding site for a post on the Iroquois lands, near Niagara, Joncaire was the man to manage it. He craved a situation where he might put up a wigwam, and dwell among his Iroquois brethren. It was granted, of course, 'for was he not a son of the tribe—was he not one of themselves?' By degrees his wigwam grew into an important trading post; ultimately it became Fort Niagara."—W. Irving, *Life of Washington, v. 1, ch. 5*.—"In 1725 the Fort of Niagara was commenced by Chaussegross de Léry, on the spot where the wooden structure of de Denonville formerly stood; it was built of stone and completed in 1726."—W. Kingsford, *History of Canada, v. 2, p. 516*.

NIAGARA FALLS.—The falls of Niagara, famous for their beauty since they were first looked

upon by French explorers, are formed by the sudden plunge of the Niagara river, carrying the overflow of the Great Lakes from Lake Erie to Lake Ontario, over a high cliff, into a deep narrow gorge, which has been worn down through the Niagara escarpment by the ceaseless flow of water through untold centuries. The upper rapids, below Chipewewa, are about fifteen miles from Lake Ontario.

Preservation of scenic grandeur.—At the end of the nineteenth century, industrial organizations began to utilize the tremendous force produced by the sudden drop of the great volume of water in Niagara river. Fears were entertained that the withdrawal of water above the Falls would detract from their scenic beauty, and efforts were at once made to regulate the amount withdrawn. An act of Congress, designed "to preserve the scenic grandeur" of Niagara Falls, approved in June, 1906, authorized the secretary of war to grant permits for the diversion of water for the creation of power to an aggregate amount not exceeding 15,000 cubic feet a second, and to grant permits for the transmission of power from Canada to an aggregate quantity not exceeding 160,000 horsepower. The then Secretary of War, Taft, after careful investigations and hearings, granted permits for the diversion of the maximum amount of water under the act and for the admission of the maximum quantity of power. In reporting his decision Taft explained why he believed that the diversion authorized could be made without harm to the Falls: "I have reached [he said] the conclusion that with the diversion of 15,000 cubic feet on the American side and the transmission of 100,000 horse-power from the Canadian side, the scenic grandeur of the Falls will not be affected substantially or perceptibly to the eye. With respect to the American falls this is an increase of only 2,500 cubic feet a second over what is now being diverted and has been diverted for many years, and has not affected the Falls as a scenic wonder. With respect to the Canadian side, the water is drawn from the river in such a way as not to affect the American falls at all, because the point from which it is drawn is considerably below the level of the water, at the point where the waters separate above Goat Island, and the Waterways Commission and Dr. Clark agree that the taking of 13,000 cubic feet from the Canadian side will not in any way affect or reduce the water going over the American falls. The water going over the Falls on the Canadian side of Goat Island is about five times the volume of that which goes over the American falls. . . . If the amount withdrawn on the Canada side for Canadian use were 5,000 cubic feet a second, which it is not likely to be during the three years' life of these permits, the total to be withdrawn would not exceed ten per cent. of the volume of the stream, and, considering the immense quantity which goes over the Horseshoe Falls, the diminution would not be perceptible to the eye."—See also CANADA: 1000 (January); ELECTRICAL DISCOVERY: 1815-1021; Electric power: 1800-1021.

NIBELUNGENLIED.—"Of the bequests made to us of the [German] Popular Poetry of the time of the Hohenstaufen, by far the most important, in fact the most important literary memorial of any kind, is the epic of between nine and ten thousand lines known as the Nibelungen Lied. The manuscripts which have preserved for us the poem come from about the year 1200. For full a thousand years before that, however, many of the lays from which it was composed had been in existence; some indeed proceed from a still remoter antiquity, sung by primitive minstrels when the Germans were at their wildest, untouched by Christianity or civilization. These lays had been handed down orally, until at length a poet of genius elaborated them and intrusted them to parchment."—J. K. Hosmer, *Short history of German literature*, pt. 1, ch. 1.—"With an instinctive art, far different from acquired artifice, this Poet of the Nibelungen, working in the same province with his contemporaries of the Heldenbuch [Hero-book] on the same material of tradition, has, in a wonderful degree, possessed himself of what these could only strive after; and with his 'clear feeling of fictitious truth,' avoid as false the errors and monstrous perplexities in which they vainly struggled. He is of another species than they; in language, in purity and depth of feeling, in fineness of invention, stands quite apart from them. The language of the Heldenbuch . . . was a feeble half-articulate child's-speech, the metre nothing better than a miserable doggerel; whereas here in the old Frankish [Oberdeutsch] dialect of the Nibelungen, we have a clear decisive utterance, and in a real system of verse not without essential regularity, great liveliness, and now and then even harmony of rhythm."—T. NICÆA, or Nice, city in Bithynia. It was founded about 316 B. C. by Antigonus, one of the successors of Alexander the Great, and originally received the name of Antigonea. Lysimachus changed the name to Nicæa, in honor of his wife.

Capture by Goths. See GOths: 258-267.

325.—**First council**.—"Constantine [the Great] . . . determined to lay the question of Arianism [see ARIANISM] before an Œcumenical council. . . . The council met 325] at Nicæa—the 'City of Victory'—in Bithynia, close to the Ascanian Lake, and about twenty miles from Nicomedia. . . . It was an Eastern council, and, like the Eastern councils, was held within a measurable distance from the seat of government. . . . Of the 318 bishops . . . who subscribed its decrees, only eight came from the West, and the language in which the Creed was composed was Greek, which scarcely admitted of a

Latin rendering. . . . Its character, then, is strictly Oriental. . . . Of the 318 members of the Council, we are told by Philostorgius, the Arian historian, that 22 espoused the cause of Arius, though other writers regard the minority as still less, some fixing it at 17, others at 15, others as low as 13. But of those 318 the first place in rank, though not the first in mental power and energy of character, was accorded to the aged bishop [Alexander] of Alexandria. He was the representative of the most intellectual diocese in the Eastern Church. He alone, of all the bishops, was named 'Papa,' or 'Pope.' The 'Pope of Rome' was a phrase which had not yet emerged in history; but 'Pope of Alexandria' was a well-known title of dignity."—R. W. Bush, *St. Athanasius*, ch. 6.—"The first great general (œcumenical) council at Nicæa, just across the straits from Constantinople . . . was a magnificent display of worldly power, the first grand exhibition of what seemed to be the Church triumphant, but what was really the Church entering upon an alliance with the State,—an alliance full of all dangers to both parties. . . . The Council of Nicæa brings us to the question of the *belief* of the Church. . . . Men had not been content to take the simple account of Jesus as it appears in the New Testament stories, but had made a mystery out of it, and had gone into violent controversies on the question whether Jesus was God or a man, or both. Finally, a few years before the Council of Nicæa, the question was taken up by an Egyptian presbyter, named Arius, on one side, and Athanasius, afterward the bishop of Alexandria, on the other. Both admitted that Jesus was the Son of God, who had become an actual flesh-and-blood man to redeem the world from sin. Athanasius maintained, however, that Jesus was of the *same substance* with God and *co-eternal* with Him, while Arius denied both these points, because it seemed to him that Athanasius was either making two gods, or else dividing God into two parts. The Council of Nicæa was called mainly to settle this Arian-Athanasian controversy. It decided by a great majority in favor of Athanasius, and his doctrine has remained to this day the belief of the orthodox Catholic Church, both Greek and Roman, and has been kept by the vast majority of the Protestant churches which grew out of the Roman Catholic. Thus we see that at the time of the Council of Nicæa the Church had taken on the form, both as to belief and organization, which it was to maintain for fifteen hundred years."—E. Emerton, *Introduction to the study of the Middle Ages*, pp. 98-100.—See also NICENE CREED.

1096-1097.—**Defeat and slaughter of First Crusaders**.—**Recovery from Turks**. See CRUSADES: 1096-1099.

1204-1261.—**Greek empire**.—The conquest of Constantinople by the Venetians and the Crusaders, in 1204, broke the Byzantine empire into many fragments, some of which were secured by the conquerors and loosely bound together in the feudal empire of Romania, while others were snatched from the ruin and preserved by the Greeks, themselves. (See BYZANTINE EMPIRE: 1203-1204; 1204-1205; CRUSADES: Map of Mediterranean lands after 1204.) For the sovereignty of these latter numerous claimants made haste to contend. Three fugitive emperors were wandering in the outer terri-

ories of the shattered realm. One was that Alexius III, whose deposition of Isaac Angelos had afforded a pretext for the crusading conquest, and who had fled when Isaac was restored. A second was Alexius V (Murtzuphlos), who pushed Isaac Angelos and his son Alexius IV from the shaking throne when Constantinople resolved to defend itself against the Christians of the West, but who abandoned the city in the last hours of the siege. The third was Theodore Lascaris, son-in-law of Alexius III, who was elected to the imperial office as soon as the flight of Alexius V became known—even after the besiegers had entered the city—and who, then, could do nothing but follow his fugitive predecessors. This last was the only one of the three who found a piece of defensible territory on which to set up his throne. He established himself in Bithynia, associating his claims with those of his worthless father-in-law, and contenting himself with the title of despot, at first. But the convenient though objectionable father-in-law was not permitted to enjoy any share of the sovereignty which he acquired. Theodore, in fact, managed his affairs with great vigor and skill. The district in which his authority was recognized widened rapidly and the city of Nicæa became his capital. There, in 1206, he received the imperial crown, more formally and solemnly, anew, and rallied the Greek resistance which was destined to triumph, a little more than half a century later, over the insolent aggression of the Latin West. The small empire of Nicæa had to contend, not merely with the Latins in Constantinople and Greece, and with the Turkish sultan of Iconium, but also with another ambitious fragment of Greek empire at Trebizond, which showed itself persistently hostile. His successors, moreover, were in conflict with a third such fragment in Europe, at Thessalonica. But, ten years after the flight of Theodore from Constantinople, his empire of Nicæa "extended from Heracleia on the Black Sea to the head of the Gulf of Nicomedia; from thence it embraced the coast of the Opsikian theme as far as Cyzicus; and then descending to the south, included Pergamus, and joined the coast of the Ægean. Theodore had already extended his power over the valleys of the Hermus, the Caister, and the Mæander." Theodore Lascaris died in 1222, leaving no son, and John Dukas Vatatzes, or Vataces as his name is written by some historians, a man of eminent abilities and high qualities, who had married Theodore's daughter, was elected to the vacant throne. He was saluted as John III—assuming a continuity from the Byzantine to the Nicæan series of emperors. In a reign of thirty-three years, this prudent and capable emperor, as Gibbon expresses the fact, "rescued the provinces from national and foreign usurpers, till he pressed on all sides the imperial city (Constantinople), a leafless and sapless trunk, which must fall at the first stroke of the axe." He did not live to apply that blow nor to witness the fall of the coveted capital of the East. But the event occurred only six years after his death, and owed nothing to the energy or the capability of his successors. His son, Theodore II, reigned but four years, and left at his death, in 1258, a son, John IV, only eight years old. The appointed regent and tutor of this youth was soon assassinated, and Michael Paleologos, an able officer, who had some of the blood of the imperial Angelos family in his veins, was made in the first instance tutor to the young emperor, and soon afterwards raised to the throne with him as a colleague. In 1260 the new emperor made an attack on Constantinople and was repulsed. But on July 25, in the next year the city was taken by a sudden surprise, while 6,000

soldiers of its garrison were absent on an expedition against Daphnusia in the Black sea. It was acquired almost without resistance, the Latin emperor, Baldwin II taking promptly to flight. The destruction of life was slight; but the surprising party fired a considerable part of the city, to cover the smallness of its numbers, and Constantinople suffered once more from a disastrous conflagration. On the recovery of its ancient capital, the Greek empire ceased to bear the name of Nicæa, and its history is continued under the more imposing appellation of the Greek empire of Constantinople.—Based on G. Finlay, *History of the Byzantine and Greek empires, from 716 to 1453, v. 2, bk. 4, ch. 1.*—See also ROMANIA.

NICARAGUA: Geographic description.—Resources.—Population.—"Of the Isthmian States, Nicaragua ranks next in size to Guatemala, being nearly as large as England without Wales [area 49,200 square miles], but has little more than half the population of Salvador. It presents the outlines of a somewhat irregular equilateral triangle wedged in between Honduras on the north and Costa Rica on the south. The base of the triangle rests on the Caribbean Sea, where it extends . . . from Cape Gracias á Dios southwards to the mouth of the Rio San Juan, while the apex is clearly indicated by the Coseguina volcano at the south side of Fonseca Bay [on the Pacific side]. . . . In Nicaragua geographers distinguish three physical zones, which, going westwards, are—(1) The Mosquito sea-board, partly of coralline (marine), partly of alluvial formation; (2) The uplands of the interior with the Cordillera de los Andes, forming part of the original continental framework, and extending from Mosquitia to the great depression which is now flooded by Lakes Nicaragua and Managua; (3) The coast-lands between the lakes and the Pacific, which are mainly of igneous origin, and form a southern continuation of the Salvador volcanic system."—A. H. Keane, *Central and South America, v. 2, pp. 217-218.*—"A feature of Nicaragua are the two great lakes that occupy the curious depression in the west of the Republic. These are Lake Nicaragua, over a hundred miles in length by forty in width, the extent of which is about 3,700 square miles, . . . the largest sheet of water between Michigan on the north and Titicaca on the south—and Lake Managua. . . . It is the presence of . . . [Nicaragua] lake that caused so many engineers to advocate the Nicaraguan inter-oceanic canal in preference to that of Panama. [See CENTRAL AMERICA: Map.] . . . The chief mineral wealth of Nicaragua is met with in the wooded central zone, though the Bluefields River is notable for its washings. A certain amount of gold-mining has been carried on by British and American companies, while silver-mining has been carried on to a lesser extent. The chief products of the Republic are tropical fruits, especially bananas, coffee, tobacco, cotton, sugar, rice, cocoa, and maize. Among the characteristic growths are the coyol palm, which yields *Vino de Coyol*, or Coyol wine, and the chocolate-tree, which actually yields a more powerful essence of chocolate than the cacao. . . . The Nicaraguan rubber industry is growing in importance, although no rubber-trees

have yet been planted, the rubber being still obtained from the wild growths in the forest. . . . It is supposed that of the inhabitants of Nicaragua [who, according to the census of 1920, numbered 638,119] some two thousand are of unmixed European blood. The greatest proportion of the rest are of that mixed strain which is characteristic of most of the districts of Central America; in many of these, however, the evidence of Spanish blood is very strong. The wild Indian tribes, known as 'Bravos,' are estimated to number some 40,000 [written in 1917]. They are to be met with for the most part in the mountainous districts, . . . principally in the provinces of Chontales, Matagalpa, and Segovia. The Mosquito Indians are supposed to amount to about 20,000. These . . . were British subjects until the year 1860, and they still cling as far as is in their power to this nationality, and, moreover, still insist on employing the English speech in addition to their own tongue."—W. H. Koebel, *Central America*, pp. 207-210.—See also CENTRAL AMERICA: Aborigines; Population; LATIN AMERICA: Geographic description.

1522-1821.—Subjection to Spain.—Until 1718 the isthmus, including the province of Nicaragua, was subject to the viceroy of Peru, and from that year until 1821, to the Spanish representative at Bogota. See LATIN AMERICA: 1535-1700.

1821-1871.—Independence of Spain.—Brief annexation to Mexico.—Attempted federations and their failure. See CENTRAL AMERICA: 1821-1871.

1850.—Clayton-Bulwer Treaty.—Joint protectorate of the United States and Great Britain over proposed inter-oceanic canal.—"In December, 1846, had been ratified a treaty with New Granada (which in 1862 assumed the name of Colombia) by which a right of transit over the isthmus of Panama was given to the United States, and the free transit over the isthmus 'from the one to the other sea' guaranteed by both of the contracting powers. Under the shelter of this treaty the Panama Railroad Company, composed of citizens of the United States, and supplied by capital from the United States, was organized in 1850 and put in operation in 1855. In 1849, before, therefore, this company had taken shape, the United States entered into a treaty with Nicaragua for the opening of a ship-canal from Greytown (San Juan), on the Atlantic coast, to the Pacific coast, by way of the Lake of Nicaragua. Greytown, however, was then virtually occupied by British settlers, mostly from Jamaica, and the whole eastern coast of Nicaragua, so far at least as the eastern terminus of such a canal was concerned, was held, so it was maintained by Great Britain, by the Mosquito Indians, over whom Great Britain claimed to exercise a protectorate. That the Mosquito Indians had no such settled territorial site; that, if they had, Great Britain had no such protectorate or sovereignty over them as authorized her to exercise dominion over their soil, even if they

had any, are positions which . . . the United States has repeatedly affirmed. But the fact that the pretension was set up by Great Britain, and that, though it were baseless, any attempt to force a canal through the Mosquito country might precipitate a war, induced Mr. Clayton, Secretary of State in the administration of General Taylor, to ask through Sir H. L. Bulwer, British minister at Washington, the administration of Lord John Russell (Lord Palmerston being then foreign secretary) to withdraw the British pretensions to the coast so as to permit the construction of the canal under the joint auspices of the United States and of Nicaragua. This the British Government declined to do, but agreed to enter into a treaty for a joint protectorate over the proposed canal. [This treaty, which was signed at Washington April 19, 1850, and of which the ratifications were exchanged on the 4th of July following, is commonly referred to as the Clayton-Bulwer Treaty. Its language in the first article is that] . . . the Governments of the United States and of Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship-canal; agreeing that neither will ever erect or maintain any fortifications commanding the same, or in the vicinity thereof, or occupy, or fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito coast, or any part of Central America; nor will either make use of any protection which either affords, or may afford, or any alliance which either has or may have to or with any state or people, for the purpose of erecting or maintaining any such fortifications, or of occupying, fortifying, or colonizing Nicaragua, Costa Rica, the Mosquito coast, or any part of Central America, or of assuming or exercising dominion over the same; nor will the United States or Great Britain take advantage of any intimacy, or use any alliance, connection, or influence that either may possess, with any State or Government through whose territory the said canal may pass, for the purpose of acquiring or holding, directly or indirectly, for the citizens or subjects of the one, any rights or advantages in regard to commerce or navigation through the said canal which shall not be offered on the same terms to the citizens or subjects of the other."—F. Wharton, *Digest of the international law of the United States*, v. 2, ch. 6, sect. 150 f.

1855-1860.—Invasion of Walker and his filibusters.—"Ever since the time of Cortes there have been projects for connecting the two oceans through the lake of Nicaragua. . . . Hence Nicaragua has always been thought of great importance to the United States. The political struggles of the state, ever since the failure of the confederation, had sunk into a petty rivalry between the two towns of Leon and Granada. Leon enjoys the distinction of being the first important town in Central America to raise the cry of independence in 1815, and it had always maintained the liberal character which this disclosed. Castellon, the leader of the Radical party, of which Leon was the seat, called in to help him an American named William Walker. Walker, who was born in 1824, was a young roving American who had gone during the gold rush of 1850 to California, and become editor of a newspaper in San Francisco. In those days it was supposed in the United States that the time for engulfing the whole of Spanish America had come. Lopez had

already made his descent on Cuba; and Walker, in July, 1853, had organized a band of filibusters for the conquest of Sonora, and the peninsula of California, which had been left to Mexico by the treaty of Guadalupe Hidalgo. This wild expedition . . . was a total failure; but when Walker came back to his newspapers after an absence of seven months, he found himself a hero. His fame, as we see, had reached Central America; and he at once accepted Castellon's offer. In 1855, having collected a band of 70 adventurers in California, he landed in the country, captured the town of Granada, and, aided by the intrigues of the American consul, procured his own appointment as General-in-Chief of the Nicaraguan army. Walker was now master of the place; and his own provisional President, Rivas, having turned against him, he displaced him, and in 1856 became President himself. He remained master of Nicaragua for nearly two years, levying arbitrary customs on the traffic of the lake, and forming plans for a great military state to be erected on the ruins of Spanish America. One of Walker's first objects was to seize the famous gold-mines of Chontales, and the sudden discovery that the entire sierra of America is a gold-bearing region had a good deal to do with his extraordinary enterprise. Having assured himself of the wealth of the country, he now resolved to keep it for himself, and this proved in the end to be his ruin. The statesmen of the United States, who had at first supposed that he would cede them the territory, now withdrew their support from him: the people of the neighbouring states rose in arms against him, and Walker was obliged to capitulate, with the remains of his filibustering party, at Rivas in 1857. Walker, still claiming to be President of Nicaragua, went to New Orleans, where he collected a second band of filibusters, at the head of whom he again landed near the San Juan river towards the end of the year: this time he was arrested and sent back home by the American commodore. His third and last expedition, in 1860, was directed against Honduras, where he hoped to meet with a good reception at the hands of the Liberal party. Instead of this he fell into the hands of the soldiers of Guardiola, by whom he was tried as a pirate and shot, September 12, 1860."—E. J. Payne, *History of European colonies*, ch. 21, sect. 8.—"Though he never evinced much military or other capacity, Walker, so long as he acted under color of authority from the chiefs of the faction he patronized, was generally successful against the pitiful rabble styled soldiers by whom his progress was resisted. . . . But his very successes proved the ruin of the faction to which he had attached himself, by exciting the natural jealousy and alarm of the natives who mainly composed it; and his assumption . . . of the title of President of Nicaragua, speedily followed by a *decree reëstablishing Slavery* in that country, exposed his purpose and insured his downfall. As if madly bent on ruin, he proceeded to confiscate the steam-boats and other property of the Nicaragua Transit Company, thereby . . . cutting himself off from all hope of further recruiting his forces from the throngs of sanguine or of baffled gold-seekers. . . . Yet he maintained the unequal contest for about two years."—H. Greeley, *American conflicts*, v. 1, ch. 10.—See also CENTRAL AMERICA: 1821-1871.

ALSO IN: J. J. Roche, *Story of the filibusters*, ch. 5-18.

1860-1880.—Mosquito Coast autonomy.—A revolt by the Mosquito Indians against the suzerainty of Great Britain led to the treaty of Managua (January 28, 1860), by which Great Britain transferred to Nicaragua, the suzerainty of the coast from Gracias á Dios to Greytown. A measure of

autonomy was reserved to the Mosquito Indians, who refused to acknowledge the right of Nicaragua to interfere with them. The emperor of Austria was asked to arbitrate, and in 1880 decided in favor of the Indians.

1890.—Represented at first international American congress. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1890.

1894-1905.—Insurrection in Mosquito Indian strip.—Bluefields incident.—Nicaragua Treaty with Great Britain concerning Mosquito Territory.—In his annual message to Congress, December, 1894, President Cleveland referred as follows to disturbances which had occurred during the year at Bluefields, the principal town of the Mosquito district of Nicaragua, and commonly known as "the Bluefields Incident." "The so-called native government, which grew to be largely made up of aliens [after the treaty 1860] for many years disputed the sovereignty of Nicaragua over the strip and claimed the rights to maintain therein a practically independent municipal government. Early in the past year efforts of Nicaragua to maintain sovereignty over the Mosquito territory led to serious disturbances, culminating in the suppression of the native government and the attempted substitution of an impracticable composite administration in which Nicaragua and alien residents were to participate. Failure was followed by an insurrection, which for a time subverted Nicaraguan rule, expelling her officers and restoring the old organization. This in turn gave place to the existing local government established and upheld by Nicaragua. Although the alien interests arrayed against Nicaragua in these transactions have been largely American and the commerce of that region for some time has been and still is chiefly controlled by our citizens, we can not for that reason challenge the rightful sovereignty of Nicaragua over this important part of her domain."—*United States, Message and Documents: Abridgment*, 1894-1895.—In his Message of 1895 the President summarized the later history of the incident as follows: "In last year's message I narrated at some length the jurisdictional questions then freshly arisen in the Mosquito Indian Strip of Nicaragua. Since that time, by the voluntary act [1894] of the Mosquito Nation, the territory reserved to them has been incorporated with Nicaragua, the Indians formally subjecting themselves to be governed by the general laws and regulations of the Republic instead of by their own customs and regulations, and thus availing themselves of a privilege secured to them by the treaty between Nicaragua and Great Britain of January 28, 1860. After this extension of uniform Nicaraguan administration to the Mosquito Strip, the case of the British vice-consul, Hatch, and of several of his countrymen who had been summarily expelled from Nicaragua and treated with considerable indignity, provoked a claim by Great Britain upon Nicaragua for pecuniary indemnity, which, upon Nicaragua's refusal to admit liability, was enforced by Great Britain. While the sovereignty and jurisdiction of Nicaragua was in no way questioned by Great Britain, the former's arbitrary conduct in regard to British subjects furnished the ground for this proceeding. A British naval force occupied without resistance the Pacific seaport of Corinto, but was soon after withdrawn upon the promise that the sum demanded would be paid. Throughout this incident the kindly offices

of the United States were invoked and were employed in favor of as peaceful a settlement and as much consideration and indulgence toward Nicaragua as were consistent with the nature of the case."—*Ibid.*—By a new Treaty of Managua, dated April 19, 1905, Great Britain recognized the agreement made by Nicaragua in 1894, with the Mosquito Indians. The text of the treaty is as follows:

Article 1. The High Contracting Parties agree that the Treaty of Managua of January 28, 1860, is and shall remain abrogated.

Art. II. His Britannic Majesty agrees to recognize the absolute sovereignty of Nicaragua over the territory that constituted the former Mosquito Reserve, as defined in the aforesaid Treaty of Managua.

Art. III. In consideration of the fact that the Mosquito Indians were at one time under the protection of Great Britain, and in view of the interest that His Majesty's Government and the Nicaraguan Government take in their welfare, the Nicaraguan Government agree to grant them the following concessions:—

(a) The Government will submit to the National Assembly a law exempting, for fifty years from the date of the ratification of this Treaty, all the Mosquito Indians and the Creoles born before the year 1894, from military service, and from all direct taxation on their persons, property, possessions, animals, and means of subsistence.

(b) The Government will allow the Indians to live in their villages enjoying the concessions granted by this Convention, and following their own customs, in so far as they are not opposed to the laws of the country and to public morality.

(c) The Nicaraguan Government will concede a further period of two years for them to legalize their rights to the property acquired in conformity with the Regulations in force before 1894 in the Reserve. The Government will make no charge to the said inhabitants either for the lands or the measurement thereof, or for the grant of title deeds. For this purpose the title-deeds in the possession of the said Indians and Creoles before 1894 will be renewed in conformity with the laws, and, in cases where no such title-deeds exist, the Government will give to each family, at their place of residence, eight manzanas of land, if the members of the family do not exceed four in number, and two manzanas for each person if the family exceeds that number.

(d) Public pasture lands will be reserved for the use of the inhabitants in the neighbourhood of each Indian village.

(e) In the event of any Mosquito Indians or Creoles proving that the lands which they held in conformity with the Regulations in force before 1894 have been claimed by and allotted to other persons, the Government will indemnify them by the grant of suitable public lands of approximate value as near as possible to their present residences.

Art. IV. The ex-Chief of the Mosquito Indians, Robert Henry Clarence, will be permitted by the Nicaraguan Government to reside in the Republic of Nicaragua and to enjoy full protection so long as he does not transgress the laws, and provided his acts do not tend to incite the Indians against Nicaragua.

Art. V. The Mosquito Indians, and other inhabitants of the former Reserve, will enjoy the same rights as are secured by the laws of Nicaragua to other Nicaraguan citizens.

1895-1902.—In Central American Union. See CENTRAL AMERICA: 1895-1902.

1896-1898.—Revolutionary conflicts.—Vice President Baca of Nicaragua joined a revolutionary

movement which was set on foot in February, 1896, by the Clericals, for the overthrow of President Zelaya, and was declared provisional president. The rebellion had much support from exiles and friends in Honduras; but the government of that state sustained and assisted Zelaya. The insurgents were defeated in a number of battles, and gave up the contest in May. During the civil war American and British marines were landed on occasions at Corinto to protect property there. In 1897, and again in 1898, there were renewed insurrections, quickly suppressed.

1901-1906.—Represented at third international congress at Mexico.—Signs treaty of compulsory arbitration. See AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1901-1902: 1906; ARBITRATION, INTERNATIONAL: Modern: 1902.

1902.—Participates in second Pan-American congress.—Treaty of peace with other Central American states. See ARBITRATION, INTERNATIONAL: Modern: 1902.

1904.—Peace conference of Central American states. See CENTRAL AMERICA: 1904.

1904.—Arbitration of boundary dispute with Honduras.—In October, 1904, the United States government was informed that Nicaragua and Honduras had agreed to submit a boundary dispute to the King of Spain.

1905-1911.—Revolution.—Uprising against President Zelaya.—Breaking off of diplomatic relations with the United States.—Fall of Zelaya.—Dawson Agreement.—Zelaya's long régime (three terms, from 1898 to 1906) was comparatively peaceful, but his continuance in power created discontent and his aggressiveness disturbed Central America. "In October, 1909, a band of Nicaraguan Conservatives started a revolution at Bluefields. They won over Juan J. Estrada, the governor of the province of which that city is the capital, by proclaiming him provisional president, and thus secured control of most of the East Coast of the Republic. . . . The uprising was from the first regarded with sympathy throughout Central America and in Washington, for Zelaya's continual encouragement of revolutions in other countries had made him obnoxious to all of his neighbors, and had led to a general belief that his administration was the principal obstacle to the establishment of peace in the Isthmus. The relations between Nicaragua and the United States had been strained for some time, because of the friction caused by Zelaya's violations of the Washington Conventions, and because there had been a number of unpleasant diplomatic incidents. Nevertheless, both the United States and the other Central American countries remained at first ostensibly neutral in the contest. In November [1909], however, the execution by Zelaya's troops of two American soldiers of fortune, who held commissions in the revolutionary army, caused President Taft to break off diplomatic relations with the Liberal administration entirely, and to give the revolution his open, if indirect, support. The attitude of the American government was set forth in a note addressed by Secretary of State Knox to the Nicaraguan Chargé d'Affaires at Washington. 'Since the Washington Conference of 1907,' it stated, 'it is notorious that President Zelaya has almost continuously kept Central America in tension and turmoil.' . . . This note brought about Zelaya's fall, for he realized that he could not hope to maintain himself against open opposition of the

United States. After vainly attempting to come to an understanding with Secretary Knox, the Nicaraguan ruler yielded to the advice of President Diaz of Mexico and to the pleas of his friends at home, and resigned his position to Dr. José Madriz [1909]. . . . President Taft refused to recognize the new executive. The revolutionists also declined his offer to open peace negotiations. For a time, nevertheless, it appeared probable that President Madriz would be able to restore order. On February 22, 1910, a revolutionary army which attempted to invade the lake region was defeated and almost destroyed, and Estrada and the other leaders, with the remnants of their troops, were forced to retire to Bluefields. [The government at once tried to take the city but within a few weeks was forced to withdraw into the interior.] The Liberals in the capital, who had already lost the sympathy of many of Zelaya's former supporters by their wholesale political arrests and their partisan policy, were completely discredited by their failure to take Bluefields, and their government collapsed entirely when Estrada again approached the interior with a reinforced army. There were new outbreaks at several points in the lake region which it was impossible to suppress. . . . The agreement by which the Liberals had turned over the government to the revolutionary leaders had provided for a general amnesty, for a free election to be held within one year, and for the recognition of the debts contracted by both parties during the struggle. Little or no attention was paid to the two former articles, but the debts of both parties,—to members of the revolutionary forces,—were fully recognized, and, in so far as the condition of the treasury permitted, paid. . . . A large sum which had been left in the treasury by Dr. Madriz was soon exhausted, and new issues of unsecured paper money were resorted to. By April, 1911, the government admitted that the already depreciated currency had been further inflated to the extent of 15,000,000 pesos, and in the autumn of the same year 10,000,000 pesos more were secretly put into circulation. . . . The Republic was saved from falling into a condition of complete anarchy only by the assistance rendered to the new government by the United States. In October, 1910, the State Department sent Mr. Thomas C. Dawson to Managua to study the situation. . . . Through his good offices, the so-called Dawson agreement was signed on November 5 by the principal leaders of the revolution. This arrangement provided for the continuance . . . of Estrada at the head of the government, for the appointment of a commission containing American members to pass on all claims against the government arising out of the recent war and out of the cancellation of concessions granted by Zelaya, and for the negotiation of a loan treaty in the United States. A constitutional convention which met on December 31 elected . . . [Juan M. Estrada] provisional president for two years, and Adolfo Diaz vice-president. . . . Estrada's position was by no means an easy one. . . . When the Convention framed a constitution which would have made itself rather than the president the actual authority in the state, Estrada dissolved it. . . . Estrada later attempted to remove from office and imprison General Mena, who had used his control of the army to fill a new constituent assembly with his personal followers. The military leaders remained loyal to their chief, and prepared to secure his release by force. . . . [Estrada] . . . resigned, and Diaz succeeded to the presidency, with the consent of Mena. . . . General Mena had caused the Assembly to elect him President of the

Republic, in October, 1911, for the term beginning January 1, 1913, notwithstanding the protests of the United States Minister and of the Granada Conservatives, who asserted that this action was a violation of the Dawson agreement. The strength of the opposition to this proceeding encouraged President Diaz to attempt to throw off the control of the minister of war."—D. G. Munro, *Five republics of Central America*, pp. 227, 230, 232-234, 242.

1907.—War between Nicaragua, Honduras and Salvador.—Mexican and American mediation.—Washington peace conference.—General treaty of peace and amity.—Central American court of justice. See CENTRAL AMERICA: 1907; HONDURAS: 1900-1915.

1909-1911.—United States assumes financial responsibility.—Fourth international American congress.—Political situation. See DOLLAR DIPLOMACY; AMERICAN REPUBLICS, INTERNATIONAL UNION OF: 1910; CENTRAL AMERICA: 1911.

1912.—Mena's flight.—Diaz's election.—"On July 29, 1912, he [Diaz] . . . summarily removed [General Mena] . . . from office. . . . Mena fled to Masaya. . . . On September 25, General Mena surrendered at Granada to Admiral Sutherland, the commander of the American forces, and the rebels were confined to their positions at Masaya and Leon. A few days later, Admiral Sutherland ordered Zeledon to evacuate the Barranca Fort. . . . When the Liberal leader refused, American troops stormed and took the position. The war soon afterwards came to an end with the surrender of Leon to another American officer."—D. G. Munro, *Five republics of Central America*, p. 243. —"General Mena was taken to Panama, where he was detained under American surveillance in order to make certain that there would be no fresh attempts on the part of his adherents to foment trouble in Nicaragua. The Presidential elections were held on Nov. 2 [1912], without disorder, and the provisional President Adolfo Diaz, the only candidate before the people, was elected to succeed himself. The American marines were withdrawn from Nicaragua shortly after the elections."—*American Year Book*, 1912, p. 82.—Diaz was inaugurated on January 1, 1913.

Turner, *Nicaragua* (*Nation*, May 31, 1922). —J. S. Zelaya, *Revolution of Nicaragua and the United States*.

1912-1913.—New monetary system.—"The new monetary system, with the gold standard, provided for under the act of March 20, 1912, went into effect March 24, 1913. The new unit of value is the gold 'Córdoba,' of the same weight and fineness as the gold dollar of the United States. Paper currency is issued by the National Bank, and the outstanding, Government issues were retired at the rate of 1 córdoba for 12½ of the old pesos or dollars. Suitable provisions have been made for the maintenance of all coins and bank notes at par with gold. The metric system of weights and measures prevails."—*Nicaragua* (*Pan-American Union*, Dec., 1917, pp. 10-12).

Also in: C. W. Donville-Fife, *Guatemala and the states of Central America*, pp. 224

1913.—New constitution.—A new constitution was adopted in 1912, and confirmed and amended in 1913. The legislative power, under the new constitution, which went into effect April 5, 1913, is vested in a Congress composed of two chambers; the Senate and the Chamber of Deputies.

Congress meets annually at Managua, the capital, on the 15th of December, and holds 45 ordinary sessions and may be prolonged for five more. Provision is also made for extraordinary sessions upon call of the Executive. Senators and Deputies are elected directly by the vote of the people, the Departments of the Republic being divided into electoral districts, there being one deputy for each 15,000 inhabitants or fraction above 8,000. One Deputy and one Alternate is elected by each District. Each Department elects one Senator and one Alternate for each two Deputies to which it is entitled. An additional Senator is elected only if the number of Deputies becomes odd. All citizens over the age of 21 are entitled to vote, as are those over 18 years of age who are married, or who can read and write. The Chamber of Deputies is renewed by halves and the Senate by thirds every two years. The Executive Power is vested in the President of the Republic and a Vice-President, who must be native citizens of Nicaragua, over 30 years of age, and who are elected by direct popular vote, for a term of four years, beginning January 1 after their election. . . . The cabinet of five ministers is composed of the Minister of Government, Justice, Police and Charities, Minister of Foreign Relations and Public Instruction, Minister of the Treasury and Public Credit, Minister of the War and Marine, Minister of Fomento (Promotion) and Public Works."—*Latin-American Year Book for 1920*, pp. 521-522.

1913-1916.—**Bryan-Chamorro Treaty with the United States.**—"During the closing days of the Taft administration a new treaty [between the United States and] Nicaragua was signed. In consideration of a payment of three million dollars, to be expended on public works and education, the southern republic agreed to give the United States: (1) an exclusive and perpetual right to construct an inter-oceanic canal across its territory; (2) the right to use the Gulf of Fonseca on the Pacific as a naval base; and (3) substantial control of finances and foreign relations. In short, Nicaragua was to become essentially a protectorate of the United States. The Senate failed to act, and the task of establishing more regular relations between the two countries was inherited by President Wilson. Change of administration brought no change of policy, and on July 20, 1913, the treaty, slightly modified, was resubmitted for ratification. Action failing, the instrument was redrafted and again submitted in 1914. Finally, on February 18, 1916, it was ratified by the Senate, and on April 11 by the Nicaraguan Congress. The United States obtained—in addition to the exclusive canal right, a naval base in Fonseca Bay, and the control of fiscal administration—a ninety-nine-year lease of the Corn Islands, adjacent to the eastern terminus of the Panama waterway, and admirably adapted for a naval base. The new political relations between the two countries were described in terms closely resembling those of the Platt Amendment applying to Cuba; and the right of intervention for the preservation of Nicaraguan independence was clearly asserted."—F. A. Ogg, *National progress*, p. 258.—See also *LATIN AMERICA*: 1913.

ALSO IN: J. B. Moore, *Principles of American Diplomacy*, p. 401.—M. Wilcox, *Encyclopedia of Latin America*, pp. 571-572.

1916-1917.—**Election.**—In October, 1916, Emiliano Chamorro was elected president and inaugurated January 1, 1917, for the term ending December, 1920. The election aroused a good deal of bitter feeling as Chamorro was the candidate who

was believed to be committed to the American financial program.

1917-1920.—**In World War.**—On April 18, 1917, Nicaragua broke relations with Germany and declared war, May 8. At Versailles she was represented as an original member of the League of Nations and on April 5, 1920, ratified the treaty.—See also *LATIN AMERICA*: 1917-1918: Central America in the World War; *PARIS, CONFERENCE OF*: Outline of work; *VERSAILLES, TREATY OF*: Conditions of peace.

1918.—**Boundary dispute with Honduras.**—The decision rendered by the king of Spain regarding the boundary between Nicaragua and Honduras, which was submitted to him in 1904, was unsatisfactory to both countries. Troops were dispatched to the border but the suggestion of the United States that the troops be withdrawn and that the controversy be submitted to the United States for adjustment was accepted.

1921.—**Election.**—On January 1, 1921, Diego Manuel Chamorro, retiring minister to the United States, was inaugurated as president.

1921.—**Central American Union.**—Nicaragua did not enter the Central American Union which was organized in 1921. See *CENTRAL AMERICA*: 1921.

1922.—**Schools and universities.**—In 1922 there were in the country 356 elementary and 10 secondary schools, these latter being neither compulsory nor free, as they are in the hands of private individuals. There were also several state normal schools and three universities, namely the Central University at Managua, the Western and Northern at Leon and the Eastern and Southern at Granada.

1922 (August).—**Border troubles.**—Revolutionary and bandit activity on the border of Nicaragua, Honduras and Salvador led President Chamorro to propose a conference of the three governments with a view to united action to restore order. The presidents of the three countries with their respective ministers of foreign affairs, and the ministers of the United States in these republics met on board the *U. S. S. Tacoma* in the Gulf of Fonseca, on August 19-20, 1922, and drew up and signed a treaty. The general treaty of peace and friendship made in Washington, 1907, was renewed. Each republic undertakes to prevent political emigrants from making armed invasions or disturbing the peace. In case of invasions the government in whose territory it was organized must capture the guilty parties and punish them in accordance with the law. Leaders of all invasions must be expelled if the threatened republic requests the expulsion.—See also *HONDURAS*: 1922; *CENTRAL AMERICA*: 1922 (March-August).

NICENE CREED.—"The Council of Nicæa (325) adopted the Nicene Creed, which at once became the Eucharistic Symbol throughout the Christian world. [See NICÆA: 325.] It was subsequently enlarged by taking up into itself the Eastern form of the Apostles' Creed, and so superseded it in the East as a baptismal symbol also. This Creed was regarded as a sufficient statement of the Christian Faith by the early Church; and is still so regarded by the Greek and Anglican Churches, if rightly interpreted in accordance with the New Testament and apostolic tradition. But its statements, as those of all human documents, were capable of various other interpretations than the normal ones. Accordingly, when these erroneous interpretations arose in the form of serious heresies, it became necessary for the Church to rule out these heresies and to give the official, historical interpretation of the Apostolic Faith by œcumenical councils assembled for the purpose, in the fourth, fifth, sixth, and seventh centuries. . . . [The Nicene Creed together with the Apostles' and Athanasian Creeds] as officially interpreted by ancient œcumenical councils, constitute the fundamental Christian Faith. . . . These centuries constituted the heroic age of Christianity, the age of the Fathers of the Church; and therefore the Faith of that age, as expressed in its official Creeds, must always command more respect and authority than the Faith of any other centuries."—C. A. Briggs, *Fundamental Christian faith*, pp. 3-5.—The Creed of Nicæa, 325, reads as follows:

"We believe

In one God the Father Almighty, maker of all things visible and invisible:

And in one Lord Jesus Christ, the Son of God, begotten of the Father, only-begotten, that is, of the substance of the Father, God of God, Light of Light, true God of true God, begotten not made, of one substance with the Father, through whom all things were made, both those in heaven and those on earth; who for us men and for our salvation came down and was made flesh, entered humanity . . . and suffered, and rose the third day, ascended into heaven, is coming to judge the living and the dead:

And in the Holy Spirit."—W. A. Curtis, *History of creeds and confessions of faith*, p. 70.

NICEPHORUS I (d. 811), Roman emperor (Eastern), 802-811. See VENICE: 607-810.

Nicephorus II (c. 912-969), Roman emperor (Eastern), 963-969. See BYZANTINE EMPIRE: 963-1025.

NICHOLAS I, the Great, pope, 858-867. Engaged in three important struggles: between the eastern and western church; with Lothaire, king of Lorraine, who attempted to divorce his wife; and in the controversy regarding the right of bishops to appeal to Rome over their metropolitans.

Nicholas II, Gerbard, pope, 1058-1061. Continued ecclesiastical reform. See PAPACY: 1056-1122.

Nicholas III, Giovanni Gaetano degli Orsini, pope, 1277-1280. Strengthened papacy by concluding concordat with Rudolph of Hapsburg which guaranteed Romagna and Ravenna to the papacy, 1278; issued constitution for Rome, 1278; repaired Lateran and Vatican. See VATICAN: Ancient Leonine city.

Nicholas IV, Girolamo Masci, pope, 1288-1292. Crowned Charles II king of Naples and Sicily, 1289.

Nicholas V, Tommaso Parentucelli (1398-1455), pope, 1447-1455. Crowned Frederick III, the last emperor to be crowned in St. Peter's, 1452; encouraged art and learning. See ITALY: 1447-1480.

Nicholas V, Pietro Rainalducci, anti-pope, 1328-1330. Consecrated in Rome, 1328, during the pontificate of John XXII at Avignon.

Nicholas I (1796-1855), tsar of Russia, 1825-1855. Founded the Secret Police for reform of civil and military service; carried on unsuccessful war with Turkey, 1828; crushed revolution in Poland, 1830-1831; aided Austria in suppressing insurgent Hungarians, 1849; started war with Turkey in 1853, which resulted in the Crimean War, 1854. See EUROPE: Modern: Russian in the 19th century; Wars of the Great Powers (1848-1878); RUSSIA: 1825; 1825-1885; 1853-1854.

Nicholas II (1868-1918), tsar of Russia, 1904-1917. Forced to abdicate and arrested, 1917; entire royal family killed at Ekaterinburg, July 16, 1918. See RUSSIA: 1894; 1896 (May-June); 1904-1905 (October); 1914 (August); 1916: Opposition of Duma to cabinet; 1917 (March 8th-15th); 1918 (July); ARBITRATION, INTERNATIONAL: Modern period: 1898-1899; EUROPE: Modern: Russia in the 19th century; FINLAND: 1905; 1908-1909; WORLD WAR: 1915: III. Nicholas (Nikolai Nikolayevich) Grand Duke (1856-), Russian general. On general staff in war with Turkey, 1877-1878; president of the Council of National Defense, 1905-1908; in supreme command of the Russian armies, 1914; governor-general of the Caucasus, 1915. See RUSSIA: 1916: Opposition of Duma to cabinet; WORLD WAR: II. Eastern front: d, 2; 1915: III. Eastern front: i, 5; 1916: VI. Turkish theater: d, 1; 1916: VI Turkish theater: d, 5.

NICHOLAS OF CUSA, or Cues (1401-1464), French cardinal and philosopher. Archdeacon of Liège; leader of reform movement in the church; maintained the theory of the rotation of the earth. See SUFFRAGE, MANHOOD: 1300-1600.

NICHOLLS, Francis Tillon (1834-1912), governor of Louisiana, 1877-1880, 1888-1892. See LOUISIANA: 1878-1900.

NICHOLS, Robert Malise Bowyer (1803-), English poet. See ENGLISH LITERATURE: 1914-1922.

NICHOLSON, Sir Francis (1600-1728), British colonial governor. Lieutenant governor of Virginia, 1690-1694; governor of Maryland, 1694-1698; of Virginia, 1698-1705; of Acadia, 1713-1717; of South Carolina, 1710-1725. See VIRGINIA: 1684-1690; NEW YORK: 1680-1691.

NICHOLSON, William (1816-1865), Australian statesman. See AUSTRALIAN BALLOT: Origin.

NICHOLSON'S NEK, Battle of. See SOUTH AFRICA, UNION OF: 1800 (October-December).

NICIAS (d. 414 B. C.), Athenian general. Chief leader of the aristocratic faction in the Peloponnesian War; conducted unsuccessful expedition against Syracuse, 415-413 B. C. See SYRACUSE: B. C. 415-413; GREECE: B. C. 424-421.

NICIAS, Peace of (421 B. C.). See GREECE: B. C. 424-421.

NICKAJACK, proposed state to have been formed by seceding counties of northern Alabama and eastern Tennessee. See ALABAMA: 1801.

NICKEL PLATE-LEHIGH VALLEY RAILWAY: Plan for consolidation. See RAILROADS: 1921: Twenty rail systems proposed.

NICOLAIEVSKY RAILROAD: Construction in Russia. See RAILROADS: 1837-1908.

NICOLAITANES, ancient religious sect in Asia Minor. See CAINITES.

NICOLE, Pierre (1625-1695), French Jansenist. See EDUCATION: Modern: 17th century: Jansenist schools.

NICOLET, Jean, French explorer. Came to America with Champlain, 1618; explored the Great Lakes and the region around Wisconsin, 1634-1635. See CANADA: 1634-1637.

NICOLLS, Richard (1624-1672), British soldier and colonial governor. Captured New Amsterdam from the Dutch, 1664; governor of New York and New Jersey, 1664-1668. See NEW YORK: 1664.

NICOLSBURG, Peace of. See GERMANY: 1886.

NICHOLSON, Arthur, Baron Carnock (1840-); British diplomatist. Chargé d'affaires in Persia, 1885-1888; consul-general in Budapest, 1888-1893; minister in Morocco, 1895-1904; ambassador to Russia, 1905-1910.

NICOMEDIA, capital of ancient Bithynia, Asia Minor, on the Gulf of Astacus. It was founded in 264 B. C.

258.—Capture by Goths. See GOths: 258-267.
292-305.—Court of Diocletian.—“To rival the majesty of Rome was the ambition . . . of Diocletian, who employed his leisure, and the wealth of the east, in the embellishment of Nicomedia, a city placed on the verge of Europe and Asia, almost at an equal distance between the Danube and the Euphrates. By the the taste of the monarch, and at the expense of the people, Nicomedia acquired, in the space of a few years, a degree of magnificence which might appear to have required the labour of ages, and became inferior only to Rome, Alexandria, and Antioch, in extent of populousness. . . . Till Diocletian, in the twentieth year of his reign, celebrated his Roman triumph, it is extremely doubtful whether he ever visited the ancient capital of the empire.”—E. Gibbon, *History of the decline and fall of the Roman empire*, ch. 13. See ROME: Empire: 284-305.

303-305.—Persecution of Christians. See ROME: Empire: 303-305.

1326.—Capture by Turks. See TURKEY: 1326-1395.

NICOPOLIS, ancient city in the southern part of Epirus, Greece. “Augustus gave this name to a city which he founded, 31 B. C., in commemoration of the victory of Actium, on the site of the camp which his army occupied.”—C. Merivale, *History of the Romans*, ch. 28.

NICOPOLIS, city in Cappadocia. “The decisive battle in which Pompeius defeated Mithridates and ended the long Mithradatic wars was fought, 66 B. C., in Lesser Armenia, at a place near which Pompeius founded a city called Nicopolis, the site of which is uncertain.”—G. Long, *Decline of the Roman republic*, v. 3, ch. 8.

Battle of (48 B. C.). See ROME: Republic: B. C. 47-46.

NICOPOLIS, ancient city in Bulgaria, north of Tirnova, founded by Trajan.

Battle of (1306). See HUNGARY: 1301-1442; TURKEY: 1389-1403.

NICOSIA, capitol of Cyprus. It was sacked by the Turks in 1570. In 1921 the population numbered 18,461. See TURKEY: 1566-1571.

NICUESIA, Diego de (1465-c. 1511), Spanish soldier. Empowered by King Ferdinand to conquer and govern Castilla del Oro (modern Panama and part of Central America) 1508. See AMERICA: 1509-1511; COLOMBIA: 1499-1536.

NIEBUHR, Barthold Georg (1776-1831), German historian. See HISTORY: 26.

NIEDERSCHÖNFELD, Convention of. See AUSTRIA: 1743.

NIEMEN, river rising in Poland and flowing into the Baltic sea. Since 1919 it has formed the northern boundary of East Prussia. Its lower course is called the Memel. During the World War it was the scene of severe fighting between the Russians and Germans. See WORLD WAR: 1915: III. Eastern front: h; i; VERSAILLES, TREATY OF: Part XII: Section II: Chapter III.

NIEPCE, Joseph Nicéphore (1765-1833), French inventor. Associated with Daguerre in the invention of photography. See INVENTIONS: 19th century: Photography.

NIEPPE, town in northwestern France, about twelve miles northwest of Lille. It was a scene of fighting during the World War. See WORLD WAR: 1918: II. Western front: d, 9.

NIETZSCHE, Friedrich Wilhelm (1844-1900), German philosopher. See GERMAN LITERATURE: 1798-1896; ETHICS: 18th-19th centuries; WORLD WAR: Causes: Indirect: h, 2.

NIEUPORT, town in northwestern Belgium, on the Yser river, about twenty-one miles southwest of Bruges. From 1594 to 1609 it was the scene of fighting between the Dutch and Spanish. During the World War it was held by the Allies after prolonged fighting. See NETHERLANDS: 1594-1609; WORLD WAR: 1914: I. Western front: u, 6; v, 1.

NIFFER, city on the site of ancient Nippur, capitol of Babylonia. Archaeological explorations here have yielded important results. See BABYLONIA: First Babylonian empire.

NIGER, third largest river in Africa. It flows from the French Sudan through Niagara into the Atlantic ocean. See AFRICA: Geographic description.

NIGER COAST PROTECTORATE, Formation of. See NIGERIA, PROTECTORATE OF: 1882-1899.

NIGERIA, Protectorate of: Geographical description.—Population.—Trade and industry.—Nigeria, which lies in northwest Africa, comprises the basin of the lower Niger, and its affluents, including the Benue. Roughly speaking its coast line is along the shore of the Bight of Benin and the northern shore of the Bight of Biafra. From Rio del Rey it runs east and north to the western shore of Lake Chad and the French possessions, by which it is bounded on the west and north. The coast lands are low and swampy, and as the rainfall is exceedingly heavy, and the climate uniformly hot, this part of the country is very unhealthful for Europeans. Northern Nigeria, north of the Benue, is more hilly, and more temperate in climate. In fact, around Lake Chad, frosts are known in January and February. “Nigeria is not properly a name. . . . It is only an English expression which has been made to comprehend a number of native states covering about 500,000 square miles of territory in that part of the world which we call the Western Soudan. Ancient geographers called the same section of Africa sometimes Soudan, sometimes Ethiopia, sometimes Nigritia, sometimes Tekroun, sometimes and more often Genawah or Genowah—which, by the European custom of throwing the accent to the fore part of the word, has become Guinea; sometimes they called it simply Negro-land. Always, and in every form, their name for it meant the Land of the Blacks.”—F. L. Shaw (Lady Lugard), *Tropical dependency*, p. 7.—See also AFRICA: Map.—The British protectorate was declared over the region now known as Nigeria on January 1, 1900, after the charter of the United African company had been revoked (1899); when the territory first came under the control of the crown, it was divided into two protectorates, Northern and Southern Nigeria; which were aft-

wards united under one administration. "The area of 'Northern Nigeria' was about 255,700 square miles, that of 'Southern Nigeria,' including the colony, being about 76,700 square miles. [See BRITISH EMPIRE: Extent.] The former consisted for the most part either of open prairie and cultivation, or was covered by sparse and low forest of the deciduous 'dry zone' type. The central portion—Zaria and Bauchi—forms a plateau varying from 2,000 to 4,500 feet in altitude, with a bracing climate. The dry desert wind—the 'Hamattan'—which prevails in the winter months causes the temperature to fall rapidly when the hot sun goes down, so that the nights, especially on the plateau, are often very cold. The rainfall is small, decreasing towards the confines of the Sahara, which forms the northern boundary. Southern Nigeria, on the other hand, is situated in the zone of equatorial rainfall. A great part of the country is, or was till recently [written in 1919], covered by primeval forest. It is low-lying with the exception of the water-parting, which traverses it from East to West, and divides the watershed of the Niger and Benue to the North from that towards the sea in the South. The southern portion is interested by a network of salt-water creeks, bordered by mangrove-swamp or vegetation so dense that it forms almost a wall of giant trees and undergrowth interlaced with creepers. . . . The population of the North—described 60 years ago by Barth as the densest in all Africa—had by 1900 dwindled to some 9 millions, owing to inter-tribal war, and, above all, to the slave raids of the Fulani. But these dreaded horsemen could not penetrate the forests of the South, where a population estimated at 7¾ millions (probably an over-estimate) found refuge. [The total population at the end of 1921 was about 18,500,000.] These tribes are of purer negro stock than the Hausas and other negroids of the North. Though in the more open areas they show themselves to be admirable agriculturists, many of the delta tribes live in a semi-aquatic life in their canoes, fishing and collecting the abundant sylvan produce (especially of the oil palm), both for their own sustenance and for trade with the middlemen who carry it to the coast merchants. From a very early date the influence of Islam had made itself felt in the North, and the religious revival of the early years of the nineteenth century had formed the motive for the Fulani conquests, which swept the country from Sokoto in the northwest to Yola, 1,000 miles to the East, and from the Sahara to the confines of the Equatorial Belt. The social and religious organization of the Koran supplemented, and combined with, the pre-existing, and probably advanced, form of tribal administration handed down from the powerful Songhay Empire, which had extended from Chad to Timbuktu. The courts were served by judges erudite in Moslem law and fearless in its impartial application. The system of taxation was highly developed, and the form of Administration highly centralized. . . . The exports consist of raw materials, the principal of which are oil and oil seeds, hides, skins, cotton, cocoa, rubber and tinore. The imports are manufactured goods, textiles, hardware, etc., with salt and kerosene. Formerly the largest import consisted of trade gin for sale to the natives. . . . Nigeria has an enormous wealth and variety of products, a large and fairly industrious population, good communications by water and by railway, and the conditions of life and health are not worse than those of other tropical countries, and have rapidly improved."—F. D. Lugard, *Report on the amalgamation of*

Northern and Southern Nigeria, and administration, 1912-1919, pp. 5-8, 29.

1882-1899.—History of formation of Niger Coast Protectorate.—Conventions of Great Britain with Germany and France.—Settlement of boundary of French Sudan and Sahara sphere.—The following "Notes on the Niger Districts and Niger Coast Protectorates, 1882-1893," tracing the several steps by which the existing protectorate was formed, appear in a paper "presented to both Houses of Parliament by command of Her Majesty, 1899 (C.—9372)": "In 1882 a Company, entitled the 'National African Company, Limited,' was formed to take over the business of the 'United Africa Company, Limited,' in Central Africa and in the Niger Regions. In October, 1884, the Company purchased the business and objects of the 'Compagnie Française de l'Afrique Equatoriale.' In the same year various treaties were concluded between Consul Hewett and native chiefs of the Niger Districts, by which these territories were placed under British protection. On the 26th February, 1885, the General Act of the Berlin Conference was signed, Chapter V. of which contained an 'Act of Navigation for the Niger,' which applied, generally, to the Niger and its affluents the free navigation articles of the Final Act of the Congress of Vienna of 1815. In April-June, 1885, the British and German Governments entered into an Agreement, by an exchange of Notes, defining their respective spheres of action in the Gulf of Guinea. . . . On the 5th June, 1885, a Notification was inserted in the 'London Gazette' to the effect that a British Protectorate had been established over the Niger Districts; the territories comprised within the protectorate were defined. . . . On the 10th July, 1886, a Royal Charter was granted to the 'National African Company, Limited.' In July-August, 1886, a Supplementary Agreement was entered into between the British and German Governments defining their respective spheres of action in the Gulf of Guinea from the Rio del Rey to a point to the east and near to Yola. On the 18th October, 1887, another Notification was inserted in the 'London Gazette,' in which it was stated that the British Protectorate of the Niger Districts then comprised the following territories:—On the line of coast between the British Protectorate of Lagos and the right or western river bank of the mouth of the Rio del Rey, and all territories in the basin of the Niger and its affluents, which were or might be for the time being subject to the government of the 'National African Company, Limited' (then called the 'Royal Niger Company'), in accordance with the provisions of the charter of the said Company, dated 10th July, 1886. On the 5th August, 1890, a Declaration was signed by the British and French Governments, which contained the following clause:—"The Government of Her Britannic Majesty recognises the sphere of influence of France to the south of her Mediterranean Possessions up to a line from Say on the Niger to Barrawa on Lake Tchad, drawn in such manner as to comprise in the sphere of action of the Niger Company all that fairly belongs to the kingdom of Sokoto; the line to be determined by Commissioners to be appointed." On the 1st July, 1890, another Agreement was entered into between the British and German Governments defining their spheres of influence in the Gulf of Guinea and in other parts of Africa. On the 18th June, 1892, that portion of the Niger Protectorate which lies on, or to the north of, the 7 degree of north latitude was, by notification to the Signatory Powers of the Brussels Act, placed

under the terms of Art. 91 of that Act, within the zone of prohibition of alcoholic liquors. On the 14th April, 1893, an agreement was signed between the British and German Governments, in which it was declared that the right bank of the Rio del Rey waterway should be the boundary between the Oil Rivers Protectorate and the Colony of the Cameroons. On the 13th May, 1893, a Notification was inserted in the 'London Gazette,' announcing that the portion of the British Protectorate of the Niger Districts which was under the administration of Her Majesty's Commissioner and Consul would, from the date of that Notification, be administered under the name of the 'Niger Coast Protectorate,' and would cease to be known as the 'Oil Rivers Protectorate.' And on the 15th November, 1893, a further Agreement was signed between the British and German Governments defining the boundary between their respective spheres of influence in the region extending from the Rio del Rey to 'a point to the east of, and close to Yola,' and on Lake Chad. Between 1884 and 1893 numerous Treaties were concluded by the National Africa Company and by the Royal Niger Company with native Chiefs and others possessing territories in the basin of the Niger districts, by which they engaged to make no cession of territory or to enter into any Treaty negotiations with Foreign States without the previous consent of the British Government, and in return for which they were placed under British protection."—Great Britain, *Parliamentary Publications (Papers by command, C.—9372)*.—In October, 1897, after a number of threatening collisions between English and French claims and undertakings had occurred in the Niger region, representatives of the two nations met in Paris to negotiate an agreement concerning boundaries. The result of their work was embodied in a convention signed June 14, 1898, but not ratified by both governments until June 13, 1899. By this agreement, the frontiers separating the British colony of the Gold coast from the French colonies of the Ivory coast and Sudan, and the British colony of Lagos from the French colony of Dahomey, were defined with precision, and the British and French possessions east of the Niger were then in the fourth article of the Convention, delimited as follows: Starting from a point on the left bank of the Niger which is fixed by the median line of the Dallul Mauri at its mouth, "the frontier shall follow this median line until it meets the circumference of a circle drawn from the centre of the town of Sokoto with a radius of 100 miles (160 932 metres). From this point it shall follow the northern arc of this circle as far as its second intersection with the 14th parallel of north latitude. From this second point of intersection it shall follow this parallel eastward for a distance of 70 miles (112 652 metres); then proceed due south until it reaches the parallel of 13° 20' north latitude, then eastward along this parallel for a distance of 250 miles (402 230 metres); then due north until it regains the 14th parallel of north latitude; then eastwards along this parallel as far as its intersection with the meridian passing 35° east of the centre of the town of Kuka, and thence this meridian southward until its intersection with the southern shore of Lake Chad. The Government of the French Republic recognizes, as falling within the British sphere, the territory to the east of the Niger, comprised within the above-mentioned line, the Anglo-German frontier, and the sea. The Government of Her Britannic Majesty recognizes, as falling within the French sphere, the northern, eastern, and southern shores

of Lake Chad, which are comprised between the point of intersection of the 14th degree of north latitude, with the western shore of the lake and the point of incidence on the shore of the lake of the frontier determined by the Franco-German Convention of the 15th March, 1894." On March 21st, 1899, the following Declaration was added to the Convention, and ratified with it in the following June: "The fourth Article of the Convention of the 14th June, 1898, shall be completed by the following provisions, which shall be considered as forming an integral part of it:—

"1. Her Britannic Majesty's Government engages not to acquire either territory or political influence to the west of the line of frontier defined in the following paragraph, and the Government of the French Republic engages not to acquire either territory or political influence to the east of the same line.

"2. The line of frontier shall start from the point where the boundary between the Congo Free State and French territory meets the water-parting between the watershed of the Nile and that of the Congo and its affluents. It shall follow in principle that water-parting up to its intersection with the 11th parallel of north latitude. From this point it shall be drawn as far as the 15th parallel in such manner as to separate, in principle, the Kingdom of Wadai from what constituted in 1882 the Province of Darfur; but it shall in no case be so drawn as to pass to the west beyond the 21st degree of longitude east of Greenwich (18° 40' east of Paris), or to the east beyond the 23rd degree of longitude east of Greenwich (20° 40' east of Paris).

"3. It is understood, in principle, that to the north of the 15th parallel the French zone shall be limited to the northeast and east by a line which shall start from the point of intersection of the Tropic of Cancer with the 16th degree of longitude east of Greenwich (13° 40' east of Paris), shall run thence to the south-east until it meets the 24th degree of longitude east of Greenwich (21° 40' east of Paris), and shall then follow the 24th degree until it meets, to the north of the 15th parallel of latitude, the frontier of Darfur as it shall eventually be fixed.

"4. The two Governments engage to appoint Commissioners who shall be charged to delimit on the spot a frontier-line in accordance with the indications given in paragraph 2 of this Declaration. The result of their work shall be submitted for the approbation of their respective Governments.

"It is agreed that the provisions of Article IX of the Convention of the 14th June, 1898, shall apply equally to the territories situated to the south of the 14° 20' parallel of north latitude, and to the north of the 5th parallel of north latitude, between the 14° 20' meridian of longitude east of Greenwich (12th degree east of Paris) and the course of the Upper Nile."—Great Britain *Parliamentary Publications (Papers by command: Treaty series, no. 15, 1899)*.

1897.—**Massacre of British officials near Benin.**—Capture of Benin.—An unarmed expedition from the Niger Coast Protectorate, going, in January, on a peaceful mission to the king of Benin, led by acting consul-general Phillips, was attacked on the way and the whole party massacred excepting two, who were wounded, but who hid themselves in the bush and contrived to make their way back. The consul-general had been warned that the king would not allow the mission to enter Benin, but persisted in going on. A "punitive expedition" was sent against Benin the

following month, and the town was reached and taken on the 18th, but the king had escaped.

1901-1913.—Subjugation of North Nigeria—Kano expedition.—Anglo-French Agreement of 1904.—Completion of Kano railway.—In 1901 it was apparent "that the unrest and troubles of northern Nigeria could not be dissipated, nor peace, security, and prosperity permanently established, until the northern states had been brought fully under the supervision of the Government of Great Britain. The paramount overlord of the region was the Sultan of Sokoto. His authority was recognized throughout all the Hausa states and in the districts beyond, while the Emirs paid him tribute and were selected by him for their offices from the members of the ruling families, exercising their authority independently, however, in all local matters. Accordingly, Sir Frederick [Lugard] tried . . . to establish friendly relations with this renowned sovereign and his chief associate, the Emir of Kano, but without success. No reply was vouchsafed to the messages of the High Commissioner until May, 1902, when a letter of defiance was brought to his hand from the haughty ruler of Sokoto. Matters dragged along without change until the end of the year, when the approaching mission of the Anglo-French Delimitation Commission to mark the boundaries necessitated steps being taken immediately for its protection. On January 29, 1903, an expedition comprising some twenty-four British officers and seven hundred West African Frontier troops set out from Zaria for Kano and Sokoto. Considerable resistance was expected at the former town, since it was defended by a strong wall and moat. But the Emir, Aliyu, with two thousand horsemen, happened to be absent in Sokoto at the moment; and the place was easily and quickly taken. . . . After leaving a Resident and garrison in Kano and receiving the submission of the Emir of Katsena in the northern part of the province, the column advanced toward Sokoto. *En route* it met and defeated the forces of the returning Emir of Kano, and finally forced an entrance into the capital triumphantly without encountering serious resistance. The Sultan, Attahiru, fled and was deposed, a new Sarikin or king being nominated by the High Commissioner, after an assembly of the chiefs and elders had agreed unanimously upon the best candidate. Sir Frederick Lugard took advantage of the occasion to explain the changed situation to the native rulers and people and to outline the main features of the future British policy. He had come, he declared, to settle the country and to give it peace. Since the Sultan of Sokoto and a number of the Emirs, in whose name the treaties had been signed, had broken the Niger Company treaties, declared war on the British, and finally been beaten, the old treaties were dead and the sovereignty of the country, taken over by the Fulani through right of conquest, now passed to the British. . . . Before peace and security could be permanently established, however, one more military expedition was necessary. The ex-Sultan of Sokoto, the ex-Emirs of Kano and Bida, the Magaji of Keffi, and other dissatisfied leaders had collected a large following to dispute the control of the country with the British. After some maneuvering they were driven eastward to Burmi by the English forces, where with the assistance of a new Mahdi—son of the old Mallam Jibrella—they successfully repulsed their pursuers. The troops of the High Commissioner withdrew to Bauchi temporarily; but, being soon reinforced by a new expedition from Lokoja returned and stormed the town of

Burmi on July 27, 1903. It cost the British their commander and some eighty men; but the ex-Sultan, the Magaji, and most of the rebellious chieftains were slain in the conflict, and their following completely dispersed. With this victory, the pacification of northern Nigeria was practically complete." (See BORNU.) The Anglo-French Agreement of 1904 compounded the rivalry with France, and the territories left to the British had to be pacified. Germans and British subdued the resistance of remote tribes on the Anglo-German frontier and the British and French crushed those in the north who resisted European penetration. Resistance on the part of the Africans was hopeless, when the Europeans came to an understanding between themselves. "Only one serious outbreak, that of 1906, has occurred since then. . . . The main caravan routes were, meanwhile, improved and kept open, a transport department organized, and a wagon road built from Zonggeru to Zaria and Kano in 1904 and 1905. As early as 1900, Sir Frederick Lugard had asked for a railway; but it was not till 1907 that the Secretary of State . . . authorized the construction of a line 350 miles long from Baro on the Middle Niger to Kano. This has since been completed, . . . 928 miles in all. It is now [1911] possible to travel direct from the coast to the great mart of Kano—not far from the northern limits of northern Nigeria."—N. D. Harris, *Intervention and colonization in Africa*, pp. 140-152.

1914.—Amalgamation of Southern and Northern Nigeria.—In 1906 "southern Nigeria and Lagos became one administration under the title of the Colony and Protectorate of Southern Nigeria. . . . The North, largely dependent on the annual grant from the Imperial Government, was barely able to balance its budget with the most parsimonious economy, and was starved of the necessary staff, and unable to find funds to house its officers properly. Its energies were concentrated upon the development of the Native Administration and the revenue resulting from direct taxation. Its distance from the coast (250 miles) rendered the expansion of trade difficult. Thus the anomaly was presented of a country with an aggregate revenue practically equal to its needs, but divided into two by an arbitrary line of latitude. One portion was dependent on a grant paid by the British taxpayer, which in the year before Amalgamation stood at £130,000, and had averaged £314,500 for the 11 years ending March, 1912. On January 1st, 1914, the former Governments of Southern and Northern Nigeria were formally amalgamated with some fitting ceremonial. After the oaths of office had been taken at each capital—Lagos and Zonggeru—by the Governor-General, the Lieutenant-Governors, and the Chief Justice, etc., a Durbar was held on the great plain at Kano, which was attended by all the chief Moslem rulers from Sokoto to Chad, who met for the first time in common friendship to swear allegiance to His Majesty, and by representatives of the principal Pagan tribes. It was estimated that not fewer than 30,000 horsemen took part in the picturesque display."—F. D. Lugard, *Report on the amalgamation of Northern and Southern Nigeria, and administration, 1912-1910*, pp. 7-8.—"Sir Frederick Lugard became the first Governor-General of Nigeria, with A. G. Boyle as Lieutenant-Governor of the South and C. L. Temple, Lieutenant-Governor of the North, assisted by nominated Executives and General Councils. The composition of the latter is unusual. It contains, besides the Governor-General and members of the Executive Council, one member from each of the

Chambers of Commerce of Lagos and Calabar, one from the Chamber of Mines, four Europeans representing the commercial, shipping, mining, and banking interests of the country, and six natives."—N. D. Harris, *Intervention and colonization in Africa*, p. 158.

1914.—Public treasury.—Education.—Charles Temple, when acting governor, "completed the organization of the Beit-el-Mal, or provincial public treasury. One half of the total annual revenue of each province goes directly to the Nigerian Government and one fourth to the native Beit-el-Mal for salaries and public works. The remainder is distributed among the district, sub-district, and village officials in the proportion of two-fifths, and one-fifth. The Emirs receive a fixed annual sum commensurate with their position and the wealth of their states; and the other public expenditures are regulated by the Residents, the Waziri, for example, usually getting £1000. The payment of fixed salaries in this way has had the most beneficial effects, particularly in the courts, where much bribery existed on account of the low and uncertain income of the judges. . . . Elementary and technical schools, and an institution for the training of teachers, and the sons of chiefs, are . . . in operation near Kano. . . . Every scholar pays his way and is instructed in his own religion, African geography, agriculture, institutions, and in the elements of education. All the work is in the Hausa language and along practical lines, so that the youth may be kept constantly in touch and in sympathy with his own land and people."—N. D. Harris, *Intervention and colonization in Africa*, p. 156.

1914-1919.—Effect of World War on trade.—Abolition of slavery.—"The year 1914 opened . . . with prospects of great development and prosperity. This was arrested by the outbreak of war, but before the War ended, . . . a great recovery took place, and (as the Niger Company reports to its shareholders) a 'very promising trade with America' developed. . . . Soon after the outbreak of war all Germans were deported, their stocks, and later their immovable properties, were sold by a Receiver acting under the orders of the Supreme Court. . . . The conditions, as in other Colonies, imposed no restriction on sale to Allies or Neutrals. This gave rise to considerable controversy in Parliament. The estates realised very large sums, and were, I think, in all cases secured by British purchasers, to whom fell the entire trade hitherto carried on by the Germans. The enormous prices paid for these properties was believed to have resulted in giving a fictitious value to land at Lagos. The disturbing effect of the War differed in the early and later periods. They were caused in the first year by the Cameroon Campaign, in which Nigeria bore a large part; by local outbreaks among the primitive tribes caused by rumours that the British were about to leave Nigeria—rumours traced in some cases to German agency, in others due to the withdrawal of Political Officers and troops for the Cameroon Campaign or lent to the Imperial Government; and finally by the action of the British Banks which refused credits, and by the sudden disappearance of the German firms. In the later years of the War, the demand for oleaginous produce and the opening of the American market for hides, skins and other produce went far to reestablish trade, and the chief disturbing elements were the shortage—and even more the uncertainty—of shipping, the high ocean freights and the diminution and high prices of all imports. . . . In 1900 when the Administration of Northern Nigeria reverted from

the Chartered Company to the Crown, large armies led by Fulani chiefs annually raided for slaves, and had depopulated the country. With the conquest of the Moslem States, . . . [organized annual raids for slaves] were put an end to. By the abolition of the 'Legal Status' of slavery, a slave had power to assert his freedom. It was not, however, illegal to possess a slave, but the status was a voluntary one. All children born after March 31st, 1901, were free at birth. The sudden abolition of the institution of domestic slavery would have produced social chaos, and the wholesale assertion of their freedom by slaves was therefore discouraged. A slave freed by redemption was in native opinion and in his own eyes, truly a freeman, while one who was arbitrarily emancipated by Government (unless for good cause), or who asserted his freedom by desertion, was not. Redemption with the coöperation of the native courts was encouraged. . . . It may be said that to-day [1919] there are no slaves in the Moslem States who are not well aware that they can assert their freedom if they choose, that the native courts deal liberally and impartially with all cases, and that the masters not only acquiesce, but increasingly recognise the advantages of free labour, while all persons under 18 years of age are free-born. . . . The number thus liberated in the Northern Provinces increases steadily each year, and exceeded 55,000 at the end of 1917—with 7,212 in that year. Residents report that even as regards those who voluntarily remain, the old relation of master and slave is practically dead and is replaced by that of master and servant. The traffic in children, especially in the Benue regions, has been suppressed with difficulty and recrudescence from time to time. The example set by Government of prompt payment to the individual labourer (and not through the intermediary of a chief), the introduction of currency, and the unwearied counsel of the political staff, have all contributed to the formation of a free labour market. The former slave owners are appreciating the advantage of being relieved of the responsibility of maintaining their slaves, and the many other disadvantages of the system of slave-labour, since they can now enforce their contracts in the courts. Hired labour is now largely employed by them. In the Southern Provinces the new Slavery Ordinance decreed the emancipation of all persons 'heretofore or hereafter born in or brought into' the country, a decree of emancipation justified by the successive enactments against slavery in past years, and by the fact that Moslem law, which recognises the institution, is not applicable in any part of the Southern Provinces."—F. D. Lugard, *Report on the amalgamation of Northern and Southern Nigeria, and administration, 1912-1919*, pp. 30, 43-44.

NIHILISM.—"The reign of Nicholas I was an epoch of hard oppression. . . . It was under his sceptre, under his systematic oppression, that, by confession of the great revolutionary statesmen Herzen, Russian thought developed as never before."—E. P. Bazan, *Russia, its people and its literature*, bk. 2, ch. 1-2.—"The genuine Nihilism was a philosophical and literary movement, which flourished in the first decade after the Emancipation of the Serfs, that is to say, between 1860 and 1870. It is now [1883] absolutely extinct, and only a few traces are left of it, which are rapidly disappearing. . . . Nihilism was a struggle for the emancipation of intelligence from every kind of dependence, and it advanced side by side with that for the emancipation of the labouring classes from serfdom. The fundamental principle of Nihilism, properly so-called, was absolute individualism. It was the negation, in the name of individual liberty, of all the obligations imposed upon the individual by society, by family life, and by religion. Nihilism was a passionate and powerful reaction, not against political despotism, but against the moral despotism that weighs upon the private and inner life of the individual. But it must be confessed that our predecessors, at least in the earlier days, introduced into this highly pacific struggle the same spirit of rebellion and almost the same fanaticism that characterises the present movement."—Stepniak, *Underground Russia*.—See also EUROPE: Modern period; Russia in the 19th century; RUSSIAN LITERATURE: 1855-1889.

NIMEGUEN, or Nimwegen, city in western Holland, on the Waal, four miles from the German frontier. In ancient times it was the Roman Noviomagus, capitol of the Batavi. See BATAVIANS.

1591.—Siege and capture by Prince Maurice. See NETHERLANDS: 1588-1593.

NIMEGUEN, Peace of (1678-1679).—The war which Louis XIV began in 1672 by attacking Holland, with the coöperation of his English pensioner, Charles II, and which roused against him a defensive coalition of Spain, Germany and Denmark with the Dutch (see NETHERLANDS: 1672-1674, 1674-1678), was ended by a series of treaties negotiated at Nimeguen in 1678 and 1679. The first of these treaties, signed August 10, 1678, was between France and Holland. "France and Holland kept what was in their possession, except Maestricht and its dependencies which were restored to Holland. France therefore kept her conquests in Senegal and Guiana. This was all the territory lost by Holland in the terrible war which had almost annihilated her. The United Provinces pledged themselves to neutrality in the war which might continue between France and the other powers, and guaranteed the neutrality of Spain, after the latter should have signed the peace. France included Sweden in the Treaty; Holland included in it Spain and the other allies who should make peace within six weeks after the exchange of ratifications. To the treaty of peace was annexed a treaty of commerce, concluded for twenty-five years."—H. Martin, *History of France: Age of Louis XIV* (tr. by M. L. Booth), v. 1, ch. 6.—The peace between France and Spain was signed September 17. France gave back, in the Spanish Netherlands and elsewhere, "Charleroi, Binch, Ath, Oudenarde, and Courtrai, which she had gained by the Peace of Aix-la-Chapelle; the town and duchy of Limburg, all the country beyond the Meuse, Ghent, Rodenhuis, and the district of Waes, Leuze, and St. Ghislain, with Huyserda in Catalonia, these having been taken since that peace. But she retained Franche Comté, with the towns of Valenciennes, Bouchain, Condé, Cambrai and the Cambrésis, Aire, St. Omer, Ypres, Werwick, Warneton, Poperinghe, Bailleul, Cassel, Bavaï, and Maubeuge. . . . On February 2, 1679, peace was declared between Louis, the Emperor, and the Empire. Louis gave back Philippsburg, retaining Freiburg with the desired liberty of passage across the Rhine to Breisach; in all other respects the Treaty of Münster, of October 24, 1648, was reestablished. . . . The treaty then dealt with the Duke of Lorraine. To his restitution Louis annexed conditions which rendered Lorraine little more than a French province. Not only was Nancy to become French, but, in conformity with the treaty of 1661, Louis was to have possession of four large roads traversing the country, with half a league's breadth of territory throughout their length, and the places contained therein. . . . To these conditions the Duke refused to subscribe, preferring continual exile until the Peace of Ryswick in 1697, when at length his son regained the ancestral estates." Treaties between the emperor and Sweden, between Brandenburg and France and Sweden, between Denmark and the same, and between Sweden, Spain and Holland,

were successively concluded during the year 1679. "The effect of the Peace of Nimwegen was, . . . speaking generally, to reaffirm the Peace of Westphalia. But . . . it did not, like the Peace of Westphalia, close for any length of time the sources of strife."—O. Airy, *English restoration and Louis XIV*, ch. 22.

NINETY-FIVE THESES OF MARTIN LUTHER. See PAPACY: 1517: Ninety-five theses of Luther.

NINETY-TWO, The, members of the Massachusetts colonial legislature who refused to rescind the Circular Letter of 1768. See U.S.A.: 1767-1768.

NINEVEH, ancient Assyrian city, on the east bank of the Tigris, opposite the present Mosul. (See BABYLONIA: Map.) The first positive mention of it is in the code of Hammurabi about 2000 B.C. It later became the capital of the Assyrian kings and held a position of splendor under Sennacherib (705-681 B.C.). "In or about the year before Christ 606, Nineveh, the great city, was destroyed. For many hundred years had she stood in arrogant splendor, her palaces towering above the Tigris and mirrored in its swift waters; army after army had gone forth from her gates and returned laden with the spoils of conquered countries; her monarchs had ridden to the high place of sacrifice in chariots drawn by captive kings. [See ASSYRIA: Later Assyrian empire.] But her time came at last. The nations assembled and encompassed her around [the Medes and the Babylonians, with their lesser allies]. Popular tradition tells how over two years lasted the siege; how the very river rose and battered her walls; till one day a vast flame rose up to heaven; how the last of a mighty line of kings, too proud to surrender, thus saved himself, his treasures and his capital from the shame of bondage. [See ASSYRIA: Fall of the empire.] Never was a city to rise again where Nineveh had been." The very knowledge of the existence of Nineveh was lost so soon that, two centuries later, when Xenophon passed the ruins with his Ten Thousand retreating Greeks, he reported them to be the ruins of a deserted city of the Medes and called it Larissa. Twenty-four centuries went by, and the winds and the rains, in their slow fashion, covered the bricks and

stones of the desolated Assyrian capital with a shapeless mound of earth. Then came the searching modern scholar and explorer, and began to excavate the mound, to see what lay beneath it. First the French Consul, Botta, in 1842; then the Englishman Layard, in 1845; then the later English scholar, George Smith, and others; until buried Nineveh has been in great part brought to light. Not only the imperishable monuments of its splendid art have been exposed, but a veritable library of its literature, written on tablets and cylinders of clay, has been found and read. [See LIBRARIES: Ancient: Babylonia and Assyria.] The discoveries of the past half-century, on the site of Nineveh, under the mound called Koyunjik, and elsewhere in other similarly-buried cities of ancient Babylonia and Assyria, may reasonably be called the most extraordinary additions to human knowledge which our age has acquired." Z. A. Ragozin, *Story of Chaldea, introduction*, ch. 1-4.—See also ASSYRIA: Art and archaeological remains.

NITTI, Francesco Laverio (1868-), Italian statesman. Minister of finance, 1917; became premier and minister of the interior, 1919; resigned, 1920. See **ITALY**: 1909-1911; 1919: Internal affairs.

NIUCHWANG, or Newchwang, city and treaty port in the Manchurian province of Shing-king, China, about ten miles from the Gulf of Pechili. It was the sole port of entry for southern Manchuria until Dairen (Dalny) was developed as a port by the Russians and the Japanese. Originally Niuchwang was at the mouth of the Liao river, but by the setting of the coast has retreated inland. Niuchwang suffered in the Boxer disturbances of 1900 and in the Russo-Japanese War, after which the Japanese were constrained to restore the city to China.

NIUE ISLANDS, group of islands in the Pacific ocean, about 350 miles southeast of Samoa. In 1900 they were annexed to New Zealand. See **NEW ZEALAND**: 1901.

NIVELLE, Robert Georges (1856-), French general. Distinguished for success of campaigns in the World War, 1914-1915; made commander-in-chief of the armies of the north and northeast, 1916; unsuccessful in campaigns and dismissed, 1917; later served as governor-general of Algeria. See **WORLD WAR**: 1916: II. Western front: b, 14; X. German rule in northern France and Belgium: b, 1; 1917: I. Summary: b, 2; II. Western front: b, 2, iii; b, 3.

NIVOSE, fourth month of the French revolutionary calendar. See **CHRONOLOGY**: French revolutionary era, etc.

NIXON, Sir John Eccles (1857-1921), British general. Served in the Afghan and South African wars; inspector-general of cavalry in India, 1906-1908; given command of forces in Mesopotamia, 1915. See **WORLD WAR**: 1915: VI. Turkey: c, 1; c, 4.

NIZAM, title of the native ruler of the state of Hyderabad, India. See **INDIA**: 1662-1748; 1798-1805.

NIZAM DJEDID, Turkish military organization. See **TURKEY**: 1780-1812.

NIZHNI-NOVGOROD, capital of the government of the same name, Russia, at the confluence of the Oka and the Volga. It was founded by Yuri Vsevolodovitch, grand prince of Suzdal; in 1221 (see **RUSSIA**: Map: Growth of Russia in Europe: Map of Russia and the new border states), and annexed to Moscow in the 14th century. The municipality is divided into an upper and lower town; the upper town containing the Kremlin, and the lower the fair grounds, to which the city owes its renown. While the Volga fair was certainly in existence as early as the tenth century, its site was definitely fixed at

Nizhni-Novgorod only in 1817. In 1915 the population was 2,081,200.

NO, or **NO AMON**, names given to Thebes in the Old Testament. See **THEBES**, Egypt.

NO MAN'S LAND, term applied during the World War to the dangerous ground between the opposing lines of trenches.

NO MAN'S LAND, Africa, region between Kafaria and south Natal, now known as Griqualand East. See **GRIQUAS**.

NO MAN'S LAND, England.—In the open or common field system which prevailed in early England, the fields were divided into long, narrow strips, wherever practicable. In some cases, "little odds and ends of unused land remained, which from time immemorial were called 'no man's land,' or 'any one's land,' or 'Jack's-land,' as the case might be."—F. Seebohm, *English village community*, ch. 1.

NO POPERY RIOTS (1780). See **ENGLAND**: 1778-1780.

NOBEL, Alfred Bernard (1833-1896), Swedish chemist and engineer. Invented dynamite, explosive gelatine, ballistite and artificial gutta-percha; left large fortune for the establishment of the Nobel Prizes. See **CHEMISTRY**: Practical application: Explosives: Nitro glycerine; **NOBEL PRIZES**.

NOBEL PRIZES.—By the will of Alfred Bernard Nobel, the distinguished Swedish engineer and chemist, pupil of John Ericsson and inventor of dynamite and other explosives, five great prizes, averaging nearly \$40,000 each in value, were instituted, for annual reward to persons who shall severally have made the most important discovery or invention in the domain of physics, chemistry and physiology or medicine; to the writer who has produced in literature the most distinguished work of an idealistic tendency, and to the person who has most or best promoted the fraternity of nations, the abolition or reduction of standing armies and the formation and increase of peace congresses. The award of the two prizes first named to be made by the Royal Academy of Science in Stockholm; the third by the Caroline Medical-Chirurgical Institute in Stockholm; the fourth by the Swedish Academy in the same city; the fifth by the Storting or Parliament of Norway. (See also **SWEDEN**: 1901.) The presentation of prizes on the first award was made with impressive ceremonies on December 10, 1901, that being the fifth anniversary of Mr. Nobel's death. Each year since, the awards have been made on that anniversary day. The recipients of the prizes in the various divisions have been as follows:

Physics: 1901.—Wilhelm Conrad Roentgen, professor of physics at the University of Munich.

1902.—Divided equally between Henrik Anton Lorentz, professor of physics at the University of Leyden, and Peter Zeeman, professor of physics at the University of Amsterdam.

1903.—Half to Antoine Henri Becquerel, professor of physics at the École Polytechnique and at the Museum d'Histoire Naturelle, Paris, France, member Institut Française, and half to Pierre Curie, professor of physics at the University of Paris (Sorbonne) and teacher in physics at the Paris Municipal School of Industrial Physics and Chemistry, and his wife, Marie Sklodovska Curie, preceptress at the Higher Normal School for Young Girls at Sèvres.

1904.—Lord Rayleigh, professor of natural philosophy, Royal Institution of Great Britain, London.

NOBEL PRIZES

- 1905.—Philippe Lenard, professor of physics at the Physical Institute of Kiel.
 1906.—J. J. Thomson, professor of experimental physics at the University of Cambridge.
 1907.—Albert A. Michelson, professor of physics at the University of Chicago.
 1908.—Prof. Gabriel Lippman of the University of Paris.
 1909.—G. Marconi, Italy, and Prof. Ferdinand Braun of Strassburg.
 1910.—Prof. J. D. Van der Waals, Holland.
 1911.—Prof. W. Wien, Germany.
 1912.—Dr. Nils Gustaf Dalén, Sweden.
 1913.—Prof. H. K. Onnes, Holland.
 1914.—Prof. M. von Laue, Germany.
 1915.—Prof. W. H. Bragg and Prof. W. J. Bragg, father and son, England.
 1916.—Not awarded.
 1917.—Prof. Charles G. Barkla, Scotland.
 1918.—Prof. M. Planck, Germany.
 1919.—Prof. Stark, Germany.
 1920.—Prof. Ch. E. Guillaume, France.
 1921.—Dr. Albert Einstein, Austria.
 1922.—Prof. Niels Bohr, Copenhagen.

- Chemistry:** 1901.—Jakob Hendrik van't Hoff, of Holland, professor of chemistry in the University of Berlin.
 1902.—Emil Fischer, professor of chemistry in the University of Berlin.
 1903.—Svante August Arrhenius, professor at the University of Stockholm.
 1904.—Sir William Ramsay, professor of chemistry in University college, London.
 1905.—Adolf von Baeyer, professor of chemistry at Munich.
 1906.—H. Moissan, professor of chemistry at the Sorbonne, Paris.
 1907.—Eduard Buchner, professor of chemistry in the agricultural high school of Berlin.
 1908.—Prof. Sir Ernest Rutherford of the University of Manchester, England.
 1909.—Prof. W. Ostwald of Leipsic.
 1910.—Prof. O. Wallach, Germany.
 1911.—Madame M. Curie, France.
 1912.—Prof. V. Grignard and Prof. P. Sabatier, both of France.
 1913.—Prof. A. Werner, Switzerland.
 1914.—Prof. Theodore W. Richards, United States.
 1915.—Prof. A. R. Wilstätter, Germany.
 1916.—Not awarded.
 1917.—Not awarded.
 1918.—Prof. F. Haber, Germany.
 1919.—Not awarded.
 1920.—Reserved for award in 1921.
 1921.—Dr. Frederick Soddy, England.
 1922.—Dr. Francis W. Aston, England.

- Medicine:** 1901.—Emil Adolf von Behring, professor of hygiene and medical history at the University of Marburg, Prussia.
 1902.—Ronald Ross, professor of tropical medicine at the University college of Liverpool.
 1903.—Niels Ryberg Finsen, professor of medicine, Copenhagen, Denmark.
 1904.—Ivan Petrovich Pavloff, professor of physiology in the Military Academy of Medicine, St. Petersburg.
 1905.—Dr. Robert Koch, member of the Royal Academy of Science, Berlin.
 1906.—Profs. Ramon y Cajal (Spain) and Camillo Golgi, Italy.
 1907.—Charles L. A. Laveran of the Pasteur Institute in Paris.

NOBEL PRIZES

- 1908.—Dr. Paul Ehrlich of Berlin and Prof. Elie Metchnikoff (Russia) of the Pasteur Institute, Paris.
 1909.—Prof. E. T. Kocher, Switzerland.
 1910.—Dr. A. Kossel, Germany.
 1911.—Prof. A. Gullstrand, Sweden.
 1912.—Dr. Alexis Carrel (France) of New York.
 1913.—Prof. C. Richet, France.
 1914.—Dr. R. Barany, Austria.
 1915-1918.—Not awarded.
 1919.—Dr. J. Bordet, Belgium.
 1920.—Dr. A. Krogh, Denmark.

- Literature:** 1901.—René François Armand Sully-Prudhomme, member of the French Academy.
 1902.—Theodor Mommsen, professor of history at the University of Berlin.
 1903.—Bjornstjerne Bjornson, author, Norway.
 1904.—Half to Frédéric Mistral of France and half to José Echegaray of Spain.
 1905.—Henryk Sienkiewicz, author, Poland.
 1906.—Prof. Giosuè Carducci of Bologna, Italy.
 1907.—Rudyard Kipling of England.
 1908.—Prof. Rudolf Eucken of the University of Jena.
 1909.—Selma Lagerlöf, Sweden.
 1910.—P. J. L. Heyse, Germany.
 1911.—M. Maeterlinck, Belgium.
 1912.—G. Hauptmann, Germany.
 1913.—Sir Rabindranath Tagore, India.
 1914.—Not awarded.
 1915.—Romain Rolland, France.
 1916.—Verner von Heidenstam, Sweden.
 1917.—Karl Gjellerup and Hendrik Pontoppidan, Denmark.
 1918.—Not awarded.
 1919.—Carl Spitteler, Switzerland.
 1920.—Knut Hamsun, Norway.
 1921.—Anatole France, France.
 1922.—Jacinto Benavente, Spain.

- Peace:** 1901.—Divided equally between Henri Dunant, founder of the International Red Cross Society of Geneva, and Frederic Passy, founder of the first French peace association, the "Société Française pour l'Arbitrage Entre Nations."
 1902.—Divided equally between Elie Ducommun, secretary of the international peace bureau at Berne, and Albert Gobat, chief of the interparliamentary peace bureau at Berne.
 1903.—William Randal Cremer, M. P., secretary of the International Arbitration league, London.
 1904.—The Institute of International Law, a scientific association founded in 1873 in Ghent, Belgium.
 1905.—Baroness Bertha von Suttner for her literary work written in the interest of the world's peace movement.
 1906.—Theodore Roosevelt, president of the United States, for the part he took in bringing the Russo-Japanese war to an end. Money set apart by the president for the establishment of a permanent industrial peace commission.
 1907.—Divided equally between Ernesto T. Moneta, president of the Lombardy Peace union, and Louis Renault, professor of international law at the University of Paris.
 1908.—K. P. Arndolsen of Sweden and M. F. Bajer of Denmark.
 1909.—Baron d'Estournelles de Constant, Paris, and M. Beernaert, Belgium.
 1910.—Berne International Peace Bureau.
 1911.—T. M. Asser, Holland, and A. H. Fried, Austria.
 1912.—Not awarded.

- 1913-1914.—Elihu Root, United States, and M. Lafontaine, Belgium.
 1915.—Not awarded.
 1916.—Not awarded.
 1917.—International Red Cross Committee of Geneva.
 1918.—Woodrow Wilson, president of the United States.
 1919.—Not awarded.
 1920.—M. Léon Bourgeois, France.

NOBLE GUARD: Origin and duties. See **VATICAN:** 1744.

NOBLES, Roman: Origin of term.—“When Livy in his first six books writes of the disputes between the Patres or Patricians and the Plebs about the Public Land, he sometimes designates the Patricians by the name Nobiles, which we have in the form Nobles. A Nobilis is a man who is known. A man who is not known is Ignobilis, a nobody. In the later Republic a Plebeian who attained to a curule office elevated his family to a rank of honour, to a nobility, not acknowledged by any law, but by usage. . . . The Patricians were a nobility of antient date. . . . The Patrician nobility was therefore independent of all office, but the new Nobility and their Jus Imaginum originated in some Plebeian who first of his family attained a curule office. . . . The true conclusion is that Livy in his first six books uses the word Nobiles improperly, for there is no evidence that this name was given to the Patres before the consulship of L. Sextius.”—G. Long, *Decline of the Roman republic*, v. 1, ch. 11.—See also **ROME:** B. C. 146.

NOBUNAGA, Oda, Japanese chief. Acknowledged ruler of thirty provinces, 1568; opposed Buddhist priests and welcomed Christianity; protected and encouraged the Jesuits. See **JAPAN:** B. C. 600-A. D. 1853; 1334-1574; 1542-1593; 1549-1605.

NOCHE TRISTE, name given by the Spanish conquerors of Mexico to the night of June 30, 1520, when their forces were nearly annihilated. See **MEXICO:** 1520 (June-July).

NOETIANS AND SABELLIANS.—“At the head of those in this century [the third] who explained the scriptural doctrine of the Father, Son, and holy Spirit, by the precepts of reason, stands Noëtus of Smyrna; a man little known, but who is reported by the ancients to have been cast out of the church by presbyters (of whom no account is given), to have opened a school, and to have formed a sect. It is stated that, being wholly unable to comprehend how that God, who is so often in Scripture declared to be one and undivided, can, at the same time, be manifold, Noëtus concluded that the undivided Father of all things united himself with the man Christ, was born in him, and in him suffered and died. On account of this doctrine his followers were called Patripassians. . . . After the middle of this century, Sabellius, an African bishop, or presbyter, of Ptolemais, the capital of the Pentapollitan province of Libya Cyrenaica, attempted to reconcile, in a manner somewhat different from that of Noëtus, the scriptural doctrine of Father, Son, and holy Spirit, with the doctrine of the unity of the divine nature.” Sabellius assumed “that only an energy or virtue, emitted from the Father of all, or, if you choose, a particle of the person or nature of the Father, became united with the man Christ. And such a virtue or particle of the Father, he also supposed, constituted the holy Spirit.”—J. L. von Mosheim, *Historical commentaries*, 3d century, sect. 32-33.

NOETUS (fl. 3d century), religious leader of Smyrna. See **NOETIANS AND SABELLIANS.**

NOFELS, or Naefels, Battles of (1388, 1799). See **SWITZERLAND:** 1386-1388; **FRANCE:** 1799 (August-December).

NOGENT, Battle of (486). See **FRANKS:** 481-511.

NOGI, Kiten Marosuke, Baron (1840-1912), Japanese general. Governor-general of Formosa, 1896-1898; served in the Russo-Japanese War, 1904-1905. See **JAPAN:** 1902-1905.

NOLA, Battle of (88 B. C.). See **ROME:** Republic; B. C. 90-88.

NOLAN'S EXPEDITION. See **TEXAS:** 1799-1821.

NOLICURGAS, tribe of South American Indians. See **PAMPAS TRIBES.**

NOMAD, British battleship. It took part in the Battle of Jutland. See **WORLD WAR:** 1916: IX. Naval operations: a, 7.

NOMADES. See **NUMIDIANS.**

NOMADS, Modern. See **GYPSIES.**

NOMBRE DE DIOS, port on the eastern coast of the Isthmus of Panama. The first settlement, made by Columbus in 1502, was destroyed, and a new one established by the Spaniards in 1510. See **AMERICA:** 1524-1528; 1572-1580.

NOME, city on the northern shore of Norton sound, Bering sea, Alaska. Gold was discovered in its vicinity in 1898-1899 and the city was built during the great rush that ensued. It is now the commercial, industrial and educational center of Seward peninsula. See **ALASKA:** 1898-1899.

NOMENOË, or Nominioë (d. 851), duke of Brittany. In the hope of pacifying Brittany, Louis the Debonair named him governor, 826; kept peace through Louis' life; rebelled against Charles the Bold, who was forced to recognize the independence of Brittany, 846. See **BRITANNY:** 818-912.

NOMES, name given by the Greeks to the districts into which Egypt was divided from very ancient times. See **EGYPT:** State organization in the early period.

NOMOPHYLAKES.—In ancient Athens, under the constitution introduced by Pericles, seven magistrates called Nomophylakes, or “Law-Guardians,” “sat alongside of the Proëdri, or presidents, both in the senate and in the public assembly, and were charged with the duty of interposing whenever any step was taken or any proposition made contrary to the existing laws. They were also empowered to constrain the magistrates to act according to law.”—G. Grote, *History of Greece*, pt. 2, ch. 46.

NOMOTHETÆ, legislative commission, elected and deputed by the general assembly of the people, in ancient Athens, to amend existing laws or enact new ones.—Based on G. F. Schömann, *Antiquities of Greece: The State*, pt. 3, ch. 3. See **GREECE:** B. C. 4th century; Economic conditions.

NON-COMBATANTS.—“During antiquity and the greater part of the Middle Ages war was a contention between the whole of the populations of the Belligerent States. In time of war every subject of one belligerent, whether an armed and fighting individual or not, whether man or woman, adult or infant, could be killed or enslaved by the other belligerent at will. But gradually a milder and more discriminative practice grew up, and nowadays [1906] the life and liberty of such private subjects of belligerents as do not directly or indirectly belong to their armed forces are safe, as is also, with certain exceptions, their private property. This is a generally admitted fact. But opinions disagree as to the general position of such

private subjects in time of war. The majority of the European continental writers for the last two generations have propagated the doctrine that no relation of enmity exists between belligerents and such private subjects, or between the private subjects of both belligerents. . . . English and American-English writers have, however, never adopted this doctrine, but have always maintained that the relation of enmity between the belligerents extends also to their private citizens. . . . It is impossible to sever the citizens from their State, and the outbreak of war between two States cannot but make their citizens enemies. . . . Nobody doubts that such private individuals are safe as regards their life and liberty, provided they behave peacefully and loyally, and that, with certain exceptions, their private property must not be touched. On the other hand, nobody doubts that, according to a generally recognised custom of modern warfare, the belligerent who has occupied a part or the whole of his opponent's territory, and who treats such private individuals leniently according to the rule of International Law, can punish them for any hostile act, since they do not enjoy the privileges of members of armed forces. Although, on the one hand, International Law does by no means forbid, and, as a law between States, is not competent to forbid, private individuals to take up arms against an enemy, it gives, on the other hand, the right to the enemy to treat hostilities committed by private individuals as acts of illegitimate warfare. A belligerent is under a duty to respect the life and liberty of private enemy individuals, but he can carry out this duty under the condition only that these private individuals abstain from hostilities against himself. Through military occupation in war such private individuals fall under the territorial supremacy of the belligerent, and he can therefore demand that they comply with his orders regarding the safety of his forces. The position of private enemy individuals is made known to them through the proclamations which the commanders-in-chief of an army occupying the territory usually publish."—L. Oppenheim, *International law*, pp. 59-61.

NON-PARTISAN ELECTION LAW. See CHICAGO: 1920.

NON-PARTISAN LEAGUE.—"A league organized in North Dakota [1915] by Arthur C. Townley with the object of protecting the interests of farmers and securing for them a fair share of the profits on the sale of their produce." The precise program of the league was as follows: "State Terminal Elevators, Flour Mills, Stock Yards, Packing Houses, and Cold Storage Plants, State Hail Insurance, Exemption of Farm Im-

provements from Taxation, State Inspection of Dockage and Grading, Rural Credit Banks Operated at Cost. . . . The Farmers' Nonpartisan League was the name . . . chosen for [Townley's] organization. . . . [His] idea [was] . . . to fight money with money; to raise a fund large enough to make an effective campaign against the unlimited resources of the other side, and to get this from one of the poorest communities in the North. He had the audacity to make the annual dues six dollars—at a time when nine-tenths of those to whom he must appeal were poverty-stricken strugglers against bankrupting money rates and ruinous market conditions. Townley had the wit to perceive that he could hope to get it only by offering something tangible as well as the distant prospect of better conditions. He therefore made the six-dollar fee include a year's subscription to the last progressive magazine left in the East, and a year's subscription to the organ of the Nonpartisan League when that should be published. . . . The success he met with seems phenomenal, and plainly shows to what desperation the farmers had been driven. . . . In a short time . . . [Townley] had many organizers at work enrolling members and taking subscriptions on commission. . . . [and] 10 automobiles rolling through the state, with canvassers inside of them taking subscriptions and enlisting members; then 20, then 40, and then 60. He bought machines, ran in debt for them, chartered them, horrowed them. Steadily the figures of membership went up. By July he had 10,000, and when in September the League's newspaper, *The Nonpartisan Leader*, made its first appearance, it had 22,000 subscribers, every one of them a member of the League. It was about this time that the old-school politicians of the state woke up to the real nature of the work in hand. . . . Nothing was more familiar than farmer organizations; the junk-heap was littered with their remains. One more might add to the gaiety of nations, but would never threaten those that had sat so long in the seats of the mighty they had come to believe the seats their own. With the appearance of the *Leader* they awoke with a start. Twenty-two thousand members in about seven months were too significant to be ignored. In their own phraseology there was something doing, and from that moment on the League, bursting into sudden publicity, was obliged to fight its way inch by inch."—C. E. Russell, *Story of the Non-Partisan League*, pp. 213, 200-202, 203-204.—"The economic program of the Non-Partisan League of North Dakota came before the Supreme Court in *Green vs. Frazier* (252 U.S.—, 40 Sup. Ct. 499) in which taxpayers sought to enjoin the raising of funds by taxation to inaugurate a state bank, a state mill and elevator association and a state home-building association. The constitutional issue was whether such business enterprises are 'public purposes,' since it is established that taxation for a private purpose is a taking of property without due process of law. In rendering the opinion for a unanimous court Mr. Justice Day pronounced a somewhat Scotch verdict. Up to the final paragraph he is stating the facts and announcing general principles and attitudes. He then concludes by saying: 'Under the peculiar conditions existing in North Dakota, which are emphasized in the opinion of its highest court, if the state sees fit to enter upon such enterprises as are here involved, with the sanction of its Constitution, its Legislature and its people, we are not prepared to say that it is within the authority of this court, in enforcing the observance of the Fourteenth Amendment, to set aside such action by judicial decision.' So it is

settled that, if the conditions are sufficiently peculiar, a state may build, buy and sell dwellings, may run warehouses, elevators, flour mills and factories for 'manufacturing farm products' and may own and operate a bank. What makes the conditions peculiar and how peculiar they must be are not disclosed."—T. R. Powell, *Supreme Court and the constitution* (*Political Science Quarterly*, Sept., 1920).—In the election of 1920 the Non-partisan League supported Edwin Fremont Ladd for United States senator from North Dakota. Professor Ladd defeated Senator Gronna in the Republican primaries and was elected senator. He is a scientist of some note and has been president of the North Dakota Agricultural College. The state convention of the league, 1922, brought the retirement of Townley as national president and under the Minnesota sedition law he was forced to serve a term in jail. See NORTH DAKOTA: 1916-1921; 1919; 1921.

NOOTKA CONVENTION. See NOOTKA SOUND; OREGON: 1790-1805.

NOOTKA SOUND: Nootka Sound controversy.—"Nootka Sound is a small inlet on the western shore of Vancouver Island. . . . Made known to the world by Captain Cook in 1778. A few years afterwards a flourishing fur trade sprang up between the Northwest Coast and China. Nootka became the center of this trade, though it remained for several years without any settlement except an Indian village. On account of its sudden and growing importance, the Russians, English, and Spaniards all laid plans for occupying the port. It happened that all planned to carry out the project in the year 1780. . . . Though the Nootka incident can make no claim to rank in importance with the great events of that year, yet it was destined to have an influence on the movement then started and to be influenced in turn by them. . . . An English expedition from India and a Spanish from Mexico each sailed in the spring of 1789 to establish a colony at Nootka. The promoters of neither knew anything of the other. The Spanish commander arrived first and took possession. Nearly two months later the Englishman came. A quarrel ensued. The Spaniard seized the Englishman, imprisoned him, his officers and crew, and sent them to Mexico as a prize. A consort vessel arrived a few days later and met the same fate. Two other English vessels had been seized earlier. One of them had been released on bond and the other had been confiscated without adjudication. The Viceroy of Mexico, instead of acting on his own responsibility, reported the matter to the Government at Madrid. The Spanish Court complained to the British that subjects of the latter had violated the territorial sovereignty of the former, and demanded that the offenders be punished to prevent such enterprises in the future. The British Cabinet rejected the Spanish claim to exclusive sovereignty over the territory in question, and suspended all diplomatic relations until Spain should have offered a satisfactory reparation for the insult which His Britannic Majesty felt that his flag had suffered. Each Court refused to grant the demand of the other and stood firmly on the ground originally taken. . . . Each nation also called upon its allies for assurances of support and entered negotiations for forming new alliances. For a time it seemed that all Europe would be drawn into war over what, on the face of it, appeared to be an

insignificant quarrel between two obscure sea captains. . . . But far from being merely a dispute over a few captured vessels and a comparatively unimportant trading post, it was the decisive conflict between two great colonial principles, of which England and Spain were, respectively, the exponents. . . . The settlement of the controversy determined the subsequent position of England and Spain on the Northwest Coast. Later, after the United States had bought the Spanish claim, the Nootka Sound affair became a part of the Oregon controversy. For a time the dispute threatened to change the course of the French Revolution. It menaced the existence, or at least the expansion, of the United States. It promised to substitute English for Spanish influence in Latin America."—*Annual Report of the American Historical Association for the year 1904*, pp. 283-285.—See also OREGON: 1790-1805.
