GOULD'S POCKET MEDICAL DICTIONARY

FOURTH EDITION, NOW READY

30,000 Medical Words Pronounced and Defined

A Student's Pronouncing Medical Lexicon. Containing all the Words, their Definition and Pronunciation, that the Student generally comes in contact with; also elaborate Tables of the Arteries, Muscles, Nerves, Bacilli, etc., etc.; a Dose List in both English and Metric System, etc., arranged in a most convenient form for reference and memorizing. Thin 64mo. 838 pages. Flexible Morocco, net, \$1.00; Thumb Index, net, \$1.25.

FROM THE NEW YORK MEDICAL RECORD.

"This is a handy little volume of medical terms, convenient in shape and size and printed in clear type, which will doubtless be found extremely useful by students. A commendable feature is the insertion of tables of the arteries, muscles, nerves, micro-organisms, a comparison of the Centigrade, Reaumur, and Fahrenheit thermometric scales, and a list of drugs with their doses according to both the English and metric systems."

The Pocket Cyclopedia of Medicine and Surgery

A concise practical volume containing a vast amount of information on all medical matters of interest to the Druggist, including Diagnosis and Treatment of Disease, with Formulas and Prescriptions, Emergencies, Poisons, Drugs and Their Uses, Nursing, Surgical Procedures, Dose List in both English and Metric Systems, etc. By DRS. GOULD and PYLE. Based upon their large "Cyclopedia of Medicine and Surgery," and uniform with "Gould's Pocket Medical Dictionary."

Nearly 600 pages. Price, \$1.00. Full Limp Leather, Gilt Edges

FROM THE PHARMACEUTICAL ERA, NEW YORK.

"A very complete dose table, giving the doses of official and unofficial drugs in both the English and metric system, is one of the features of the 'cyclopedia.'"

FROM DRUG TOPICS, NEW YORK.

"The book is compiled in such a manner as to be of the greatest service to both the physician and pharmacist in the treatment of disease and the compounding of medicine. The most common forms of disease that affect the human system are listed, together with the symptoms, treatment, therapeutics, etc. Many efficient prescriptions are also included in this work."

PREFACE TO FOURTH EDITION.

The present edition of the Latin Grammar of Pharmacy and Medicine retains the essential features of the three earlier ones. Some changes and some additions have been shown to be advisable by the experience of the classroom and by the suggestions of reviewers and teachers.

Many exercises have been shortened or simplified, some have been omitted; all have been carefully reviewed and any forms or constructions for which the previous lessons have not prepared the student have been removed. All words lacking in the vocabulary have been supplied.

The statements of some of the principles of syntax have been altered, the chapters on the subjunctive have received special attention.

In accordance with the expressed wish of some pharmacists and physicians, the English method of the pronunciation of Latin has been explained.

All long vowels are marked; the mark of short vowels has been omitted except in rare instances.

Professor L. E. Sayre, whose name has been connected with this book from the first, has contributed a chapter on Prescription Writing and one on Chemical Terms, and a List of Pharmaceutical and Medical Terms with their Definitions.

Many additional prescriptions have been distributed through the earlier lessons and several have been added before the Reading Lessons in the latter part of the book. For these, also, thanks are due to Professor Sayre.

It is believed that these new features will increase the value and effectiveness of the book; and it is recommended that words from the list of pharmaceutical and medical terms be assigned early in the course as a part of each lesson until all are learned.

PREFACE TO FIRST EDITION.

This book is the outgrowth of experience. It was designed expressly to meet the needs of the first year pharmacy and medical students of this institution. Considerable experience in teaching such students had clearly shown that those who had not studied Latin were at great disadvantage compared with those who had acquired a fair knowledge of that language. were found to be much slower in understanding the terminology and securing a firm grasp of the subjects presented; and, without a clear knowledge of terms, satisfactory progress was im-To remedy this difficulty, all pharmacy and first year medical students were required to study Latin, using the same text-books as do classical students. The result was a great improvement, but not as great as was anticipated. was found to be still lacking. For though the student made fair progress in learning the language, he of course made no progress in learning the peculiar terminology of his subject. Here was another difficulty. How should it be met? very clear that if the student, while learning his Latin, could learn, at the same time, the names of drugs and many of the formulæ for preparing medicines, a great gain would be made. This would make the study of the language practical, and bear directly upon his life-work. But how could this be done? Where could a suitable book be found? Who had published it? These were some of our inquiries. Looking diligently in all directions, and searching carefully everywhere, we found to our surprise that no such book had yet been made. should we do? Give it up and go back to the old unsatisfactory way? In our perplexity a friend suggested that we make the desired book, or at least such a book as our experience in teaching showed that the pupil required; that if we thus supplied the needs of our own students, we should probably supply the needs of thousands of others. With no guide, therefore,

but our own experience and observation, we have prepared this little book for the special use of pharmacy and medical students.

The aim has been to make it as practical for these students as the philosophical unfolding of the principles of Latin grammar would permit. Our motto has been, "The minimum of theory and the maximum of practice."

In writing the exercises we have tried to avoid stiffness and formality, and make them lively and interesting, often carrying a connected thought through an entire lesson.

The questions to be answered in Latin, carried through many lessons, will be found very useful in requiring the student to master a large vocabulary early in his course. To the same end the teacher will find it profitable to require the student to recite chiefly without a book.

The book contains for translation many Latin prescriptions, and formulæ for preparing medicines, partly taken from books written recently, and partly from the old Roman writers Cato and Celsus.

We trust our "Suggestive Derivations" will also prove a valuable feature of the work, and prompt the student to much earnest study of a similar nature in the line indicated.

Our acknowledgments are due to Professor L. E. Sayre, the Dean of the Department of Pharmacy in the University of Kansas, for valuable suggestions and assistance in pharmacy; to Miss Adelaide Rudolph, Assistant Teacher of Latin in the same institution, for thoroughly testing the work in the classroom; also to Ginn & Co., for permission to follow, as far as might suit our convenience, the plan of Collar & Daniell's "Beginner's Latin Book."

Conscious that the book may contain many imperfections, we ask those into whose hands it may fall, to note and kindly send us such suggestions of changes as they think ought to be made, to the end that, if we are ever fortunate enough to reach a second edition, such suggestions may be utilized in making a better and more useful work.

INTRODUCTION.

In introducing the first edition of Robinson's Latin Grammar I referred to the fact that instructors in pharmacy and medicine realize the necessity of a thorough comprehension of the principles of Latin. I also alluded to the advantage of the use of a book especially prepared for students of this class. The use of the work, of which this is the fourth edition, has confirmed me in the opinion then expressed. After an experience of twelve years I feel prepared to emphasize the advantage of the use of this book by the student of pharmacy and medicine.

One of the attractive features of the work, to those for whom it is designed, is that the language of the prescription and the terminology of medical science is incorporated in the text throughout. This manner of presentation makes the study less laborious. Our experience has been that students in pharmacy and medicine who lack a knowledge of Latin can grasp its principles much more readily by this method and their interest is more easily secured from the beginning.

L. E. SAYRE.

THE LATIN GRAMMAR

PHARMACY AND MEDICINE.

CHAPTER I.

INTRODUCTORY.

ALPHABET.

- 1. The Latin alphabet is the same as the English, with the omission of w.
 - 2. Letters are divided into two classes:

Vowels	i, o, u, y	/.
I. Liquidsl, m	, n, r.	

Mutes—

(a) P-mutes ... p, b, ph. (b) T-mutes ... t, d, th.

3. Spirantsh, s, f.

4. Double consonants x, z. 5. Semi-vowels j, v.

3. ROMAN METHOD OF PRONUNCIATION.

I. Vowels.

ā like a in father. first a in aha.

ey in they. " e in them.
" i in pique.

ī i in pin. ō like o in bone. ŏ " o in obey.

ū " oo in boot. ŭ " oo in foot.

y between u and i, German \bar{u} .

II. Diphthongs.

ae like ai in aisle. au " ou in our. ei " ei in veil. oe " oi in toil.

eu like eh' oo (with the two syllables run together).

III. Consonants.

Most of the consonants have the same sounds as in English; but notice the following:

c like c in cave. " g in give. y in yes.
t in time. " s in sin.

v " w in win. " ks.

ch, th, ph, are sounded like k, t, p. bs and bt like ps and pt. " qu in quit. qu

su is sometimes sounded like sw in

gu is sometimes sounded like gw, as in lingua (lingwa).

When a consonant is doubled, both letters are sounded: il-le.

4. SYLLABLES.

- 1. In dividing a word into syllables, make as many syllables as there are vowels and diphthongs: gen-ti-ā'-na, bry-ō'-ni-a.
- 2. A single consonant is joined with the vowel following: hu'-me-rus, di'-gi-tus.
- 3. If there are two or more consonants between two vowels, as many are joined to the following vowel as can be pronounced at the beginning of a word or syllable: sac'-cha-rum, del-phī'-ni-um.
- 4. In compound words the division must show the component parts: ab'-est (ab, away; est, he is).
- 5. The last syllable of a word is called the *ultima*; the one next to the last, the *penult*; the one before the penult, the *antepenult*.

5. QUANTITY.

- I. Vowels are long or short.
- 1. Vowels are long-
- (a) Before nf, ns, often before gn, and sometimes before gm; they are generally long before j.
 - (b) A vowel formed by contraction is long: ni-hil, nīl.
- 2. A vowel is short before another vowel, a diphthong, or h, which is a mere breathing, not a consonant, and regularly before nt and nd.
 - II. Syllables are in quantity either long, short, or common.
 - 1. A syllable is long in quantity,—
 - (a) If it contains a diphthong or a long vowel: $x-r\bar{u}'-g\bar{o}$.
- (b) If its vowel is followed by x, z, or any two consonants (h is a mere breathing, not a consonant), except a mute with l or r: nux, plum'-bum, quas'-si-a.
- 2. A syllable is short if it contains a short vowel which is followed by another vowel or a single consonant: $d\check{\imath}$ - $\bar{e}s$, $n\check{\imath}$ -hil, $c\check{\imath}$ - $b\check{u}s$.
- 3. A syllable is common if its vowel, naturally short, is followed by a mute with l or $r: p\tilde{t}-gri$, $\tilde{d}'-gri$; that is, it is short in prose but may be long in poetry.

The signs -, -, =, are used to mark quantity, the first indicating that the syllable over which it is placed is *long*; the second, that it is *short*; and the third, that it is *common*.

All vowels not long are treated as short. In this book long vowels only are marked, except for special purposes.

6. ACCENT.

- 1. Words of two syllables are always accented on the first: cro'-cus, $cr\bar{e}'$ -ta.
- 2. Words of more than two syllables are accented on the *Penult* if that is long in quantity; otherwise, on the *Antepenult*: cin-na-mō'-mum, eu-phor'-bi-a.
- 3. (Important if the English pronunciation is followed.) In long words there is a weaker secondary accent. It falls on the second syllable before the principal accent if that is long or is the first syllable in the word; otherwise on the third syllable before the principal accent: cer"-e-brā'-lis, cat"-a-plas-mat'-i-bus. In still longer words there may be a third accent: des"'-til-lā"-ti-o'-ne.

7. ENGLISH METHOD OF PRONUNCIATION.

In the English method the letters have in general the same sounds as in English.

- I. Note the following points:
- r. In applying the rules that follow h is not to be considered as a consonant either when it stands between two vowels or in combination with any consonant.
- 2. When l or r follows a mute (see 2, II, 2) the two run together in pronunciation so easily that they give the effect of a single consonant. Therefore their effect on the sound of a vowel which precedes them is the same as that of a single consonant. This must be borne in mind in applying the following rules.

II. Syllables.

- 1. In the English pronunciation, as in the Roman, there are as many syllables as there are vowels and diphthongs.
- 2. A doubled consonant is sounded but once, as in English (compare penny and any).
- 3. When two consonants stand together within a word, the first is sounded with the preceding vowel, the second with the

following, por'-tus; but the combination of a mute followed by l or r is sounded with the following vowel, pa'-tris.

Exception: When a mute followed by l or r follows an accented short vowel sound, the mute is sounded with the preceding vowel and the l or r with the second vowel, $r \not e p' - le - o$.

- 4. More than two consonants standing together within a word are divided according to ease of pronunciation.
- 5. A single consonant between two vowels goes with the second, unless the first is accented and has its short sound. Then it goes with the first, ho-nō'-ris, cĕr'-a-sus.

III. Vowel sounds.

r. The true quantity of vowels, as marked elsewhere in this book, determines the accent of words (see 6), but it has nothing to do with the English pronunciation of the vowels. In the following table and in the remainder of this section the marking of the vowels indicates the English pronunciation, not the true quantity.

ā like	a in	mate) ă	like	a in	mat
ē ''	e ''	me	ĕ	"	e "	met
ī''	i "	ice	ĭ	"	i "	pin
ō ''	0 "	note	ŏ	4.6	0 "	not
ŭ "	u ''	dupe	ŭ	14	11 "	hut
页 ''	y ''	$m\hat{y}$	Ìў	"	у ''	myth.

- (a) In Latin, as in English, the sounds of the vowels are sometimes modified by the consonants which accompany them. Thus a before r followed by another consonant has the sound of a in far (\ddot{a}), $p\ddot{a}r'$ -tis; o in the same situation has the sound of o in for (\ddot{o}), $f\ddot{o}r$ - $t\ddot{u}'$ -na. (See also 7, III, 3, b, exc. 2.)
- (b) A preceded by qu and followed by dr is pronounced as in the English word quadrant; preceded by qu and followed by rt, it is pronounced as in quart.
- 2. Diphthongs.—Ae and oe are pronounced as e would be in the same situation: Cae'-sar, Daed'-a-lus (Dĕd'-a-lus); au is pronounced as in aught, eu as in neuter, ei and ui as i in kite, oi as in coin. Ei and oi are seldom used as diphthongs.
 - 3. Vowel sounds in final syllables.
- (a) A vowel has its long sound when it is the final letter, $s\breve{e}r-v\bar{\imath}$.

Exceptions: (1) Final a has the sound of a in Cuba (a) pil'-u-la.

Digitized by Microsoft®

- (2) Final *i* in *mihi*, *tibi*, *sibi*, is short in sound. (Some give the short sound to both vowels in these words.)
- (b) A vowel has its short sound when the syllable ends in a consonant, $r\bar{o}'$ -săs, $p\bar{u}'$ -er-is, $c\delta m'$ -pŏs, ser'-vŭs.

Exceptions: (1) Final es is pronounced like the English word ease, final os in the accusative plural as ose in dose; o in post has its long sound. (2) Final er, ir, and ur are undistinguishable as in English; final ar and or have the sounds of final ar and or in English words. (3) When the first part of a compound is entire and ends in a consonant, a vowel before this consonant is pronounced as in the simple word: \(\delta b\)-est, prod'-est, sic-ut.

- 4. Vowel sounds in any syllable but the final,—without regard to accent.
- (a) A vowel has its long sound when followed by another vowel or a diphthong (see 7, I, 1), \bar{o}' - $l\bar{e}$ - μm , $n\bar{v}'$ -h l, $v\bar{i}$ -ae.

Exceptions: (1) When i follows an accented a, e, o, or y and is followed by another vowel, it is a consonant and is equivalent to y in yes, $Tr\bar{o}'-ia$ (-ya). (2) U followed by a vowel has the sound of w, after q, and often after g and $s:qu\bar{\imath}, lin'-gua, su\bar{a}'-vis$. It then becomes a consonant. (3) I has the short sound if unaccented, $\bar{a}''-d\bar{\imath}-\bar{a}n'-t\bar{\imath}m$.

- (b) A vowel has its short sound before x or any two consonants except a mute followed by l or r (see 7, I, 1 and 2).
- 5. Vowel sounds in any syllable but the final, when the vowel is followed by a single consonant (except x) or by a mute followed by l or r (see 7, I, 2),—depending on accent.
- (a) In an accented penult a vowel has its long sound, $C\bar{a}'$ -to. Exception: U followed by bl, and a, e, i, or o, followed by gl or tl, are short in sound: $P\check{u}b'$ - $l\bar{\imath}$, $s\check{\imath}g'$ -la, $\check{A}t'$ -las.
- (b) In any accented syllable except the penult, whether the accent is principal or secondary (see 6, 3), a vowel has its short sound: $c\bar{e}r'$ -a-sus, $c\bar{e}r''$ -e-br \bar{a}' -lis.

Exceptions: (1) A, e, and o are long in sound if the single consonant (or mute followed by l or r) is followed by e, i, or p, and that by another vowel: $l\bar{a}'$ -ni-us, \bar{e}' -bri-us, \bar{o}' -di-um. (2) U has its long sound except before bl, $h\bar{u}'$ -me-rus.

(c) In an unaccented syllable (i. e., one having neither principal nor secondary accent) the vowel has its long sound.

IV. Consonants.

1. C and g before e, i, y, ae, and oe, are soft (like s in sit and g in gem). Elsewhere they are hard (like c in can and g in get).

Exceptions: (1) G is soft before a soft g, ag-ger (ag-ger). (2) C has the sound of sh before eu or yo preceded by an accented syllable: ca-du'-ce-us (ca-du'-shē-us), Sic'-us-us0 (Sĭsh'-us-us0). (3) See also the next paragraph.

- - 3. S has the sound—
- (a) Between two vowels in some words that have that sound in their English form: Cae-sar (Cē'-zar), mi-ser (mī'-zer), ro'-sa (rō'-za).
- (b) At the end of a word after e, ae, au, b, m, n, r: res, aes, laus, urbs, hiems, amans, pars.
 - 4. X has the sound—
 - (1) Of z at the beginning of a word, xan-thox'-y-lum.
- (2) Of gz between e or u and an accented vowel, ex-em'-plum (ĕgz-ĕm'-plum).
- 5. Elsewhere, s, t, and x are sounded as in the English words sit, tell, export: $s\bar{a}'$ -tis, $t\bar{e}m'$ - $p\bar{u}s$, $r\bar{e}x'$ - \bar{i} ($r\bar{e}k'$ - $s\bar{i}$).

8. CASES.

- 1. In Latin there are six cases: nominative, genitive, dative, accusative, vocative, and ablative.
- 2. These cases correspond to the following English equivalents:

The nominative, to the nominative.

The genitive, to the possessive, or objective with of.

Digitized by Microsoft®

The dative, to the objective with to or for.

The accusative, to the objective.

The vocative, to the nominative independent.

The ablative, to the objective with from, by, in, with.

The locative, a case denoting the place where, is used in some names of towns, and a few other words.

9. GENDER.

The gender, in some nouns, is determined by the meaning; in others, by endings.

- 1. Names of males are masculine: Æsculapius (a proper noun); MEDICUS, a physician.
- 2. Names of rivers, winds, months, and mountains are masculine: Danubius, Danube; Notus, south-wind; December, December; Appenninus, Apennines.
- 3. Names of females are feminine: Cornēlia (a proper noun); Fīlia, daughter.
- 4. Names of countries, towns, islands, and trees are feminine: America; Rōma, Rome; Sicilia, Sicily; pīnus, pine-tree.
 - 5. Indeclinable nouns are neuter: ĸīno.

The learner is supposed to be familiar with the ordinary grammatical terms, such as subject, object, predicate, case, mood, tense, voice, declension, conjugation, etc. No explanation of these terms will, therefore, be given.

CHAPTER II.

10. DECLENSION OF NOUNS.

- 1. There are five declensions.
- 2. In declension each case is formed by combining two parts—stem and termination.
- 3. The stem is the unchanged base to which the terminations are added.*
- 4. The termination is the case-ending that is added to the stem. In vowel stems the vowel of the termination combines with the final vowel of the stem.

^{*}The stem of a noun may be found, if a consonant-stem, by dropping the case-ending; if a vowel-stem, by substituting for the case-ending the characteristic vowel.

5. The declensions are distinguished from each other by the final letter of the stem and by the case-ending of the genitive

sing.

Dec.	I,	final	1etter	of stem	a,	gen.	sing.,	ae.

4.6	V,	"	"	**	ë	"	"	ě

FIRST DECLENSION.

11. Nouns of this declension are of the feminine gender; but see general rules (9).

The nominative singular ends in a and \bar{e} .

12. They are declined as follows:

SINGULAR.	PLURAL.
N. pilula, a pill.*	N. pilulæ, pills.
G. pilulæ, of a pill.	G. pilulārum, of pills.
D. pilulæ, to or for a pill.	D. pilulīs, to or for pills.
Ac. pilulam, a pill.	Ac. pilulās, pills.
V. pilula, O pill.	V. pilulæ, O pills.
Ab. pilulā, from, with, or by a pill.	Ab. pilulīs, from, with, or by pills.

SINGULAR.

	N.	aloē			 	 	 		٠.	٠.	.the aloe.
	G.	aloēs			 	 	 				. of the aloe.
	D.	aloë			 	 	 	.			.to or for the aloe.
	Ac.	aloër	ι.		 ٠.	 	 				.the aloe.
	V.	aloē			 	 	 				.O aloe.
	Ab.	aloē			 	 	 				. from, with or by the aloe.

The plural has the same terminations as nouns in a.

13. Table of Terminations.

NOUNS IN A.	NOUNS IN E.	
Singular.	Singular.	Plural.
N. a	N. ē	N. ae
G. ae	G. ēs	G. ārum.
D. ae	D. \bar{e}	D. īs
Ac. am	Ac. ēn	Ac. ās
V. a	$V.~~ ilde{e}$	V. ae
Ab. \bar{a}	Ab. ē	Ab. <i>īs</i>

^{*} The student must be very careful to decline words with the proper accent; thus pi'-lu-la, pi'-lu-læ, etc. (Eng. pron., pĭl'-ū-la, etc.) See 7. Remember that all unmarked vowels are short.

The pupil should commit to memory this table of terminations.

14. In Latin there is no article; pilula may mean either the pill, or a pill, according to circumstances; but when it is desired, in Latin, to express definiteness or indefiniteness, there are various ways of doing so, which will be understood later. In translating into English the exercises which follow, the pupil will use the definite or indefinite article, according as common sense shall dictate.

15. Rules of Syntax:

The subject of a finite verb is in the nominative case: Pilula est parva, the pill is small.

- 16. The direct object of a transitive verb is in the accusative case: Puella habet crētam, the girl has chalk.
- 17. A noun in the predicate, referring to the same person or thing as the subject, is put in the same case: Quinīna est bona medicīna, quinine is good medicine.
- 18. The indirect object is put in the dative case: Nautae pilulam dat, he gives a (or the) pill to the (or a) sailor.

VOCABULARY.

Nouns.

Belladonna, -ae, belladonna.

Charta, -ae, paper.

Cornēlia, -ae, Cornelia.

Fīlia,* -ae, a daughter.

Medicīna, -ae, medicine.

Nauta, -ae, M., a sailor.

Quinīna, -æ, quinine.

Tinctūra, -ae, a tincture.

Dat, (he, she, it) gives, is giving, does give. Non, not.

Dant, (they) give, are giving, do give.

Ægrōta, sick. Cērāta, waxed. Flāva, yellow. Fusca, brown, dusk, blackish.

ADJECTIVES.

Medicāta, medicated.

Multa, much, (pl.) many. Rubra, red. Et, and.

- 20. Observe that these adjectives are in the feminine gender to agree with the nouns. Nauta is the only masculine noun given.
- 21. The particle -ne is appended to the first word in a sentence as a sign of a question, and is not to be translated by any separate word: Est-ne agua pūra? Is the water pure? As a rule, that word of a sentence upon which the stress is to be laid, is placed at the beginning; frequently this is the verb.

Syllables thus appended are called enclitics; the accent falls on the syllable before the enclitic; as filia'-ne. The principal enclitics besides -ne, are -que, "and," and -ve, "or."

22. The dative is often used with est or sunt to indicate possession, and, when thus used, is called the Possessive Dative.

^{*} Fīlia has -ābus in the dative and ablative plural. Digitized by Microsoft®

EXERCISE. 3.*

1. Chartae medicātae. 2. Chartīs medicātīs. 3. Aquārum medicātārum. 4. Fīlia nautae. 5. Fīliābus Cornēliae. 6. Chartā cērātā. 7. Chartīs cērātīs. 8. Puella medicīnam habet. 9. Puellāe (dative) est medicīna. 10. Puellāe habent tīnctūrās. 11. Puellīs sunt tīnctūrae. 12. Cornēlia fīliae tīnctūram dat. 13. Fīlia nautāe tīnctūram belladonnae habet. 14. Cornēlia quinīnam amāram fīliae aegrōtae dat. 15. Pilulae quinīnae sunt parvae et amārae. 16. Mīstūra multārum medicīnārum nōn bona est. 17. Cornēlia fīliae pilulās flāvās dat. 18. Cornēliae amārās pilulās dant.

Answer the following questions in Latin. Every answer should form a complete sentence, like this: Estne pilula parva? Pilula est parva: (Yes)—1. Estne quinīna amāra? 2. Estne tīnctūra fusca? 3. Habetne puella tīnctūram belladonnæ? 4. Fīliæne Cornēlia pilulās quininæ dat? 5. Habentne multam medicīnam? 6. Estne māssa lenta?

EXERCISE. 4.

1. The medicated paper is red. 2. The tincture of belladonna is good medicine. 3. The girl has waxed paper. 4. They give pure water. 5. The girl gives bitter pills to the sailor. 6. CHAPTER X.

SECOND CONJUGATION.—ē VERBS.

50. Compare with the First Conjugation and observe the following points:

First—The present, imperfect and future indicative, active and passive, are like the same tenses of the First Conjugation, except for the change of the stem vowel \bar{a} to \bar{e} , and the retention of e before $-\bar{o}$ in the first person singular of the present.

Second—The perfect, pluperfect, and future perfect indicative have the same endings in both conjugations.

Third—In the subjunctive the present adds \bar{a} to the stem $mon\bar{e}$ - before the endings m, s, t, etc.; and the imperfect is like the imperfect of the First Conjugation except for the change of the stem vowel \bar{a} to \bar{e} . The perfect and pluperfect subjunctive have the same ending in both conjugations.

Fourth—The remaining parts of the verb are formed from their various stems as in the First Conjugation except for the change of \bar{a} to \bar{e} .

CHAPTER XXI.

ADVERBS AND THEIR COMPARISON.

- 97. Most adverbs are derived from adjectives and are dependent upon them for their comparison.
- 1. Adverbs from adjectives of the first and second declensions are formed by adding \bar{e} to the stem without the stem vowel:* timidus, timid; $timid\bar{e}$, timidy.
- 2. Adverbs from adjectives of the third declension are formed by adding ter to the stem: fortis, brave; fortiter, bravely. But stems in -nt (nom. -ns) lose the t before -ter: prudens, prudent; prudenter, prudently.
- 98. The comparative of the adverb is the accusative neuter singular of the comparative of the adjective: *fortius*, more bravely.
- 99. The superlative of the adverb changes the -us of the superlative of the adjective to \tilde{e} : fortissimus, most brave; fortissim \tilde{e} , most bravely.
- (a) Adverbs are also compared by the use of magis and māxime: ēgregiē, excellently; magīs ēgregiē, māximē egregiē.

Altus,	altior,	altissimus,	high.
Altē,	altius,	altissimē,	highly.
Prūdēns, Prūdenter,	prūdentior, prūdentius,	prūdentissimus, prūdentissimē,	prudent. prudently.

roo. When the adjective is irregular, the adverb has the same irregularity:

Bonus,	melior,	optimus,	good.
Bene,	melius,	optimē,	well.
Malus,	pējor,	pessimus,	bad.
Male,	pējus,	pessimē,	badly.

101. When the adjective is defective, the adverb is generally defective:

	dēterior,	dēterrimus,	worse.	
	dēterius,	dēterrimē,	worse.	
Novus,		novissimus,	new.	
Novē,		novissimē,	newly.	

102. A few not derived from adjectives are compared as follows:

Diū, Sæpe.	diūtius, sæpius,	diūtissimē, sæpissimē,	for a long time. often.
Satis,	satius,		sufficiently.
Nūper,		nūperrimē,	recently.

103. Most adverbs not derived from adjectives, as also those from adjectives incapable of comparison, are not compared: *hīc*, here; *nunc*, now; *vulgāriter*, commonly.

104. The accusative or ablative neuter singular of some adjectives form adverbs: mullum, multo, much; prīmō, at first.

CHAPTER XXX.

PRONOUNS.

- 132. Pronouns are divided into eight classes:
 - I. Personal, tū, thou,
 - II. Reflexive, suī, of himself,
 - III. Possessive, meus, my,
 - IV. Demonstrative, hīc, this,
 - V. Intensive, ipse, myself, yourself, etc.,
 - VI. Relative, quī, who,
 - VII. Interrogative, quis, who?
- VIII. Indefinite, aliquis, some one.

¹ Sub finem coctionis—towards the end of the boiling.

² Quarta quaque hora—every fourth hour; time when.

I. PERSONAL PRONOUNS.

133. PARADIGMS.

First Person.

Ego, I.

SINGULAR.

Plural.

N., ego, I.

G., mei, of me.

D., mihī (mī), to, for me.

Ac., mē, me. Ab., mē, by me. nōs, we.

nostrum or nostrī, of us.

nobīs, to, for us.

nos, us.

nobīs, by us.

SECOND PERSON.

$T\bar{u}$, thou.

N. V., tū, thou.

G., tuī, of thee.

D., tibī, to, for thee.

Ac., tē, thee.
Ab., tē, by thee.

vōs, you, ye. vestrum or vestrī, of you.

vobīs, to, for you.

vōs, you. vōbīs, by you.

II. REFLEXIVE PRONOUN.

134. Suī, of himself, etc.

suī, of themselves. sibī, to, for themselves.

PLURAL.

sē (sēsē), themselves. sē (sēsē), by themselves.

- 135. For the personal pronoun of the third person the demonstrative is, ea, id, he, she, it, is generally used.
- 136. The nominatives of the personal pronouns are only used for emphasis or contrast: Ego sum ægrōtus, tu valēs, I am sick, you are well.
- 137. The reflexive pronoun refers to the subject of the sentence or clause in which it stands. It is used only in the oblique cases (gen., dat., ac., abl.): Onnies homines se amant, all men love themselves.
- 138. In the first and second persons the oblique cases of the personal pronouns are used as reflexives: $M\bar{e}$ laudō, I praise myself.
- 139. "With me, with you," etc., are always expressed by mēcum, tēcum, sēcum, nōbīscum, vōbīscum, the preposition cum being always appended to the ablative of the personal pronoun.

III. POSSESSIVE PRONOUNS.

140. From personal pronouns and the reflexive are formed the possessives:

Meus, -a, -ummy, mine.	
Noster, -tra, -trumour, ours.	
Suus, -a, -umhis, her, its, their	r.
Tuus, -a, -umthy, thine.	
Vester, -tra, -trumyour, yours.	

- 141. Possessives are declined as adjectives of the first and second declensions; but mcus has in the vocative singular masculine generally $m\bar{\imath}$, sometimes meus, and in the genitive plural sometimes meum instead of $me\bar{o}rum$.
- 142. Suus, like suī, is used only reflexively; medicus suās medicīnās laudat, the physician praises his (own) medicine. Otherwise his, hcr, its, are expressed by the genitive singular of is, ējus; and their, by the genitive plural eōrum, eārum

VOCABULARY. 28.

RELATIVE, INTERROGATIVE, AND INDEFINITE PRONOUNS.

PARADIGMS.

Quī, Quis, Aliquis.

VI. RELATIVE PRONOUNS.

159. Quī, who, which, that.

S11	GULAR.			PLURAL.	
N., quī,	quæ,	quod,	quī,	quæ,	quæ.
G., cūjus,	cūjus,	cūjus,	quōrum,	quārum,	quōrum.
D., cuī,	cuī,	cuī,	quibus,	quibus,	quibus.
Ac., quem,	quam,	quod,	quōs,	quās,	quæ.
Ab., quō,	quā,	quō,	quibus,	quibus,	quibus.

160. Quīcumque and quisquis, whoever, are called General Relatives. The quī of quīcumque is declined like the simple relative quī. Quisquis, quicquid (for quidquid) and quōquō are the only common forms of quisquis.

VII. INTERROGATIVE PRONOUNS.

- 161. The Interrogative Pronouns are: 1. Quis, M. and F., quid, N., who, what? used without a noun, and declined like the relative, except in the nominative and the neuter accusative: quis hōc fecit, who has done this? 2. Quī, quæ, quod, which, what, declined like the relative pronoun, and used with nouns: quod extrāctum dedistī? which extract did you give?
- 162. The interrogative quis may stand with a noun: Quis medicus erat? which physician was it? Qui medicus erat? means: what physician was it? what it is a physician was it?

VIII. INDEFINITE PRONOUNS.

163. The indefinite pronouns are quis, M. and F., quid, N., used as substantives, any one, anything, and $qu\bar{\imath}$, $qu\omega$, quod, used as adjectives, any, and their compounds.

164. Aliquis, some one, some, any one.

	SINGULAR.

Observe the feminine nominative singular and the neuter nominative plural of *aliquis*, and compare them with the corresponding forms of *quis*.

- 165. Aliquis is used adjectively in the forms in -quī and -quod, and sometimes in the masculine aliquis. The feminine is used only as an adjective.
- 166. Besides quis and aliquis, the most important indefinites are quidam, quædam, quiddam or quoddam, a certain one, certain; quisquam, M. and F., quicquam, N., any one (no plural); quisque, M. and F., quidque or quodque, N., each one, every.
- 167. Quidam, quisquam and quisque are declined like the simple pronouns. Quidam changes m to n before d—quendam quorundam, etc.
- 168. Aliquis, some one, any one (without emphasis); quisquam, any one at all (emphatic). Quisquam is used chiefly in negative sentences and in questions implying a negative.
- 169. Aliquis hoc dixit means some one said this, but I don't know who; quidam, a certain man whom I know, but don't choose to name.
- 170. Rule of Syntax.—A relative pronoun agrees with its antecedent in gender and number, but its case depends on its construc-Digitized by Microsoft®

tion in the clause in which it stands. Medicus quī vēnit, the doctor who came; dosis quam dedit, the dose that he gave; medicāmenta quæ ēmit, the drugs which he bought.

171. Rule of Syntax.—The verb of which a relative pronoun is the subject agrees in person and number with the antecedent of the relative: Ego quī audīvī, I who heard; vōs quī legitis, you who read.

CHAPTER XLI.

PREPOSITIONS.

211. Thus far several prepositions have been used in the exercises, some followed by the accusative and some by the ablative.

212. Prepositions followed by the Ablative.

ri-
,

- 213. In, meaning into, to, after verbs of motion, and also when meaning towards and for, takes the accusative.
- 214. In, meaning in, on, at, after verbs of rest, takes the ablative.
- 215. Sub, under, up to, after verbs of motion, takes the accusative; after verbs of rest, the ablative.
 - 1. Subter, under, and super, over, sometimes take the ablative.
- 216. All prepositions, except the ten mentioned, and in, sub, subter, and super, are followed by the accusative only.

^{*} Which is able to do the same thing.

[†] A man must be employed.

[‡] Quī exsūgat, to suck out.

217. Expressions of Place.

Examine the following:

ı. İn İtaliā
2. In monteon the mountain.
3. Ad montemto the mountain.
4. Dē castrīsfrom the camp.
5. In castrato (or, into) camp.
6. Ab urbe from the city.
7. Fugit Corinthōhe fled from Corinth.
8. Corinthi at (in) Corinth.
9 Athēnīs, (nom. Athēnæ)at (in) Athens.
10. Syrācūsīs (nom. Syrācūsæ)at (in) Syracuse.
II. Carthagine or -ī
12. Rōmæat (in) Rome.
13. Rōmamto Rome.
14. Rōmāfrom Rome.
15. Cyprīin Cyprus.

- 218. Observe the ways of denoting the place in, on, at, to, from which.
- 219. Rule of Syntax.—The names of places not towns or small islands are generally put:
 - (1) In the accusative with ad or in to denote the place to which.
- (2) In the ablative with ab, de, or ex, to denote the place from which.
 - (3) In the ablative with in, to denote the place at or in which.
 - 220. The names of towns and small islands are put:
 - (1) In the accusative, to denote the place to which.
 - (2) In the ablative, to denote the place from which.
- (3) In the ablative, to denote the place at or in which. See 217, 9 and 10. But names of towns and a few other words in the singular of the first, second, and third declensions are in the locative case, which in the first and second declensions has the ending of the genitive, in the third declension e or i. See 217, 8, 11, 12, 15.
- (4) Domus, home, house, and $r\bar{u}s$, the country, have the same construction as the names of towns. These words have the locative forms $dom\bar{\imath}$, at home; $r\bar{u}r\bar{\imath}$, in the country.
- 221. Rule of Syntax.—Cause is expressed by the ablative without a preposition: Aeger erat vulneribus, he was ill because of his wounds.

Vocabulary. 40.

CHAPTER XLII.

THE SUBJUNCTIVE MOOD—IN DEPENDENT CLAUSES.

SEQUENCE OF TENSES.—CLAUSES OF PURPOSE.

- 224. Learn the subjunctive, active and passive, of amo, moneo, rego and audio.
- 225. Observe the similarity of form in the corresponding tenses of the subjunctive mood in the four conjugations.
- 226. The most common use of the subjunctive is in dependent clauses, and this use will be presented first.
- 227. In dependent clauses the tenses of the subjunctive conform to the following rule:
- 228. Rule of Syntax.—Principal tenses are followed by principal tenses: historical by historical.
 - 229. Examine carefully the following examples:
- 1. Videō quid faciās, fēceris, factūrus sīs,‡ I see what you are doing, have done, are going to do.
- 2. Vīdī quid faciās, fēceris, factūrus sīs,‡ I have seen what you are doing, have done, are going to do.
- 3. Vidēbō quid faciās, fēceris, factūrus sīs,‡ I shall see what you are doing, have done, are going to do.
- 4. Vīderō quid faciās, fēceris, factūrus sīs,‡ I shall have seen what you are doing, have done, are going to do.
- 230. Notice that in the independent clauses of these examples the *present*, the *present perfect* (the perfect with *have* or *has*), the *future* and *future perfect* are used, and in the dependent clauses the *present* and *perfect subjunctive*.

^{*} Of scraped verdigris. † Singulæ hēmīnæ, a half pint each.

[†] This is the present tense of the active periphrastic conjugation, meaning you are about to do. Digitized by Microsoft®

- 231. These deal with present and future time and are called principal tenses.
 - 232. Examine also the following:
- 1. Vidēbam quid facerēs, fēcisses, factūrus essēs. I saw what you did, had done, were going to do.
- 2. Vīdī quid facerēs, fēcissēs, factūrus essēs. I saw what you did, had done, were going to do.
- 3. Vīderam quid facerēs, fēcissēs, factūrus essēs. I had secn what you did, had done, were going to do.
- 233. Observe that in the independent clauses of these examples the *imperfect*, the *historical perfect* (the *perfect* without have or has), and the *pluperfect* are used, and in the dependent clauses the *imperfect* and *pluperfect subjunctive*.
- 234. These deal with past time and are called the historical tenses.
- 235. You will also observe that the subjunctive in all these examples is translated like the indicative.

CLAUSES OF PURPOSE.

236. Rule of Syntax.—Ut is used with the subjunctive to express a positive purpose, and $n\bar{e}$, a negative purpose; they may be variously translated.

Examine the following:—

Æger capit medicāmentum ut convalēscat, The patient takes medicine that he may get well, in order that he may get well, so that he may get well, to get well, for the purpose of getting well.

Alius capit medicāmentum nē æger sit, Another takes medicine that he may not be sick, in order not to be sick, so that he may not be sick, so as not to be sick, for the purpose of not being sick, lest he be sick.

CHAPTER XLIII.

THE SUBJUNCTIVE MOOD.—CLAUSES OF PURPOSE.

- 237. Learn the subjunctive of sum (37, 3) and its compounds (175-177).
- 238. Rule of Syntax.—Purpose is also often expressed in Latin by means of a relative pronoun followed by the subjunctive: Mīsit fīlium quī medicum cōnsuleret, he sent his son to consult the physician.
- 239. Rule of Syntax.—The ablative is often used to denote a characteristic or quality. When thus used it is modified by an adjective or a genitive: summā virtūte juvenis, a young man of the highest virtue; Medicus māgnō rērum ūsū, a physician of great experience.
 - I. This is sometimes called the descriptive ablative.
- 240. Rule of Syntax.—The genitive is also used to express characteristic or quality: medicamentum māgnī pretiī, medicine of great value; vir māximī cōnsiliī, a man of very great prudence.

241. Suggestive Derivations.

- 1. Gingīvītis, from gingīvæ, the gums, and -ītis, a termination denoting inflammation—inflammation of the gums.
- 2. Calefacients, from calidus, warm, and facere, to make—substances which excite warmth.
- 3. Dēsiccātīva, from dē, and siccāre, to dry—external remedies which dry up the humors or moisture from a wound.
- 4. Piperoid, from piper, pepper, and eidos, form—having the form of, resembling pepper.
- 5. Hēpatalgia, from Greek hēpar, gen. hēpatos, the liver, and algos, pain—pain in the liver.

CHAPTER XLIV.

THE SUBJUNCTIVE MOOD—SUBSTANTIVE CLAUSES.

Learn the subjunctive of volō, ferō, and eō (199, 201, 205).

- 242. A Substantive Clause is one that has the construction of a noun; it is used as the subject or object of a verb, or in apposition with a noun or neuter pronun.
- 243. Rule of Syntax.—Quin, why not, that not, introduces a substantive clause in the subjunctive after negative clauses denoting hindrance, prevention, and doubt, and after questions implying a negative answer, as:

Nihil impedit quin eam domum, nothing prevents me from going home; aegrē abstinuī quīn dicerem, I hardly refrained from saying; non dubito quin sapiens sis, I do not doubt that you are

[†] Of little experience in drugs. * Sub. after rel. of purpose. Digitized by Microsoft®

wise; quid impedit quin cam domum? what hinders my going home?

1. Observe that in the examples, the negative disappears in the English translation.

EXERCISE. 92.

2. Non est dubium quīn dīscipulus studiosus sit. 2. Non dubito quīn possit legere hōc præscrīptum;—"Recipe, sōdæ sulphātis ūnciam cum sēmisse, sōdæ phōsphātis ūnciam, syrupī rhamnī drachmās quattuor, aquæ menthæ piperītæ ūnciās sex." 3. Quid impedit quīn medicāmentārius spīritum camphorātum possit hāc formulā parāre?—"Recipe, camphoræ ūnciam ūnam, spīritus vīnī rēctificātī lībram ūnam. Mīscē." 4. Non dubium est quīn aliquis hāc formulā ūti possit. 5. Hīc puer non dubitat quīn hæc sit formula rēcta ad spīritum lavandulæ parandum *;—"Recipe, florum lavandulæ lībram ūnam, spīritūs vīnī rēctificātī lībras quattuor, aquæ fontānæ quantum sufficit. Post mācerātionem per vīgintī quattuor horās destīllando ēlicē lībrās quattuor."

EXERCISE. 93.

- r. What prevents the boy from being studious? 2. Nothing prevents him from being studious. 3. There is no doubt that he can turn this prescription to Latin:—"Take a drachm of the tincture of opium, six ounces of the mucilage of acacia, two drachms of the spirit of nitrous æther. Mix." 4. I do not doubt that he can repeat in Latin the formula for preparing * the tincture of cascarilla. 5. "Take five ounces of bruised bark of cascarilla, two pounds of rectified spirit of wine; macerate, express and filter."
- 244. Rule of Syntax.—Many verbs signifying to please or displease, benefit or injure, command or obey, serve, resist, believe, persuade, envy, threaten, pardon, and the like, take the dative: As, Prösunt sibi, they benefit themselves; placet mihi, it pleases me; nocet amīcō, he injures his friend; pāret legī, he obeys the law; persuadet mihi, he persuades me; crēde mihi, believe me.
- 245. Rule of Syntax.—Substantive clauses with ut, ne, and the subjunctive are used as the object of verbs meaning to admonish, request, command, persuade, permit, etc.

Exercise. 94.

- 1. Mē hortātur ut eam. 2. Eōs hortāmur ut ferant. 3. Mihi imperās ut eam. 4. Mihi imperāvit ut īrem. 5. Mihi persuadet nē eam. 6. Nōn est dubium quīn velint; voluerint. 7. Nemō dubitābat quīn vellent; voluissent. 8. Eī persuāsī ut lēgī pārēret. 9. Nōn dubium erat quīn mihi pāruisset. 10. Imperāvī ut amīcus īret.
- 1. He commands that we go; bear; be borne. 2. There is no doubt they will go. 3. He persuaded me to believe. 4. I had commanded him to go. 5. There is not doubt of his having gone.

CHAPTER XLV.

THE SUBJUNCTIVE MOOD.—CLAUSES OF RESULT.

- 246. Rule of Syntax.—The subjunctive is used with ut and quī, negative ut nōn, quī nōn, to denote result. Examine the following:
- 1. Nitricum acidum est tam forte ut ferrum exedat, nitric acid is so strong that it eats away iron.
- 2. Tanta vīs venēni fuit ut virum statim interficeret, so great was the strength of the poison that it killed the man immediately.
- 3. Nēmō est tam senex quī sē annum nōn putet posse vīvere, no one is so old as not to think he can live a year.
- 247. Rule of Syntax.—Substantive clauses with ut, negative ut non, are used:
- 1. As the object of verbs of doing, accomplishing, and the like: Gravitās morbī facit ut medicīnā egeāmus, the severity of the disease makes us need medicine.
- 2. As the subject of impersonal verbs meaning it happens, it follows, it remains, etc.: Accidit ut medicus non venīret, it happened that the physician did not come.
 - 248. Examine the following:
- 1. Timeō ut medicus veniat, I fear that the doctor will not come or is not coming.

- 2. Timeo ut medicus vēnerit, I fear the doctor has not come.
- 3. Timēbam ut medicus vēnisset, I feared the doctor had not come.
- 4. Timeo ne veniat, I fear that he is coming or will come.
- 5. Timeo ne venerit, I fear that he has come.
- 6. Timuī nē vēnisset, I feared that he had come.
- 249. Observe that after verbs of fearing, ut is translated that not, and $n\bar{e}$, that.

CHAPTER XLVI.

THE SUBJUNCTIVE MOOD.—CUM.

- 251. Cum is used with the subjunctive in three kinds of dependent clauses, temporal, causal and adversative (concessive).
- 252. Rule of Syntax.—Cum temporal, meaning when or while, takes the imperfect or pluperfect in the subjunctive when the principal verb is in a past tense, to mark the time of the action in the principal clause, as:
- 1. Cum medicus vēnisset, æger convaluerat, when the physician had come, the patient had recovered.
- 2. Cum æger febrī labōrāret, medicus vēnit, while the patient was suffering from fever, the physician came.
- 253. Rule of Syntax.—Cum causal, meaning since, takes the subjunctive after all tenses: as,—Cum omnia ferē medicāmenta stomachum lædant, since nearly all drugs injure the stomach.
- 254. Rule of Syntax.—Cum adversative, meaning though, takes the subjunctive after all tenses: as,—Cum tū nōn intellegās, tamen vērum est, although thou dost not (you do not) understand it, yet it is true.

CHAPTER XLVII.

THE SUBJUNCTIVE.—(Continued.)

INDIRECT QUESTIONS.

256. Rule of Syntax.—Indirect questions take the subjunctive, as:

^{*} Modum sēparandī solidās ā liquidīs rēbus.

[†] It is characteristic of a dainty appetite.

Examine the following:

- 1. Scio ubi sīs, fueris, I know where you are, have been, or were.
- 2. Sciam ubi sīs, fueris, I shall know where you are, have been, or were.
- 3. Sciī ubi sīs, fueris, I have known where you are, have been, or were.
- 4. Scierō ubi sīs, fueris, I shall have known where you are, have been, or were.
 - 5. Sciēbam ubi essēs, fuissēs, I knew where you were, had been.
 - 6. Sciī ubi essēs, fuissēs, I knew where you were, had been.
- 7. Scieram ubi essēs, fuīssēs, I had known where you were, had been.
- 257. Observe that the indirect question is translated by the indicative.
- 258. Notice also how these examples illustrate the rule for the sequence of tenses.
- 259. An indirect question is a question that has lost its interrogative form by becoming dependent on some verb of asking, telling, knowing, perceiving, doubting, or the like.
- 260. Indirect questions are introduced by an interrogative pronoun, adjective, or adverb, or by num, ne; sometimes by sī (to see if, whether): rogō quem vīderis, I ask whom you saw; sciō quot adfuerint, I know how many were present; rogāvī voluissentne, I asked whether they wished.
- (a) In *indirect* questions num does not show that a negative answer is expected.
- (b) Indirect double questions are introduced by the same particles as direct double questions (54): $rog\bar{o}$ utrum laudētur au culpētur, I ask whether he is praised or blamed; quaesīvit tūne au frāter esset, he asked whether it was you or your brother.

THE SUBJUNCTIVE—IN INDEPENDENT AND DEPENDENT CLAUSES.

WISHES AND CONDITIONS.

261. Rule of Syntax.—In wishes and conditions the present subjunctive is used of what may be fulfilled, the imperfect subjunctive of what is not true, the pluperfect subjunctive of what was not true. The same mood is regularly employed in the conclusion of such conditional sentences:

Examine the following:

- I. Utinam medicus veniat! would that the doctor would come! I wish the doctor would come! O, that the doctor would come!
- 2. Sī medicus veniat, puerō medicētur, if the doctor should come he would cure my boy.
 - 3. Utinam medicus adesset! O, that the doctor were here!
- 4. $S\bar{i}$ medicus adesset, lætus essem, if the doctor were here I should be glad.
- 5. Utinam medicus adfuisset! would that the doctor had been here!
- 6. Sī medicus adfuisset, puerō medicāvisset, if the doctor had been here he would have cured my boy.

CHAPTER XLIX.

THE SUBJUNCTIVE—IN INDEPENDENT CLAUSES.

262. Rule of Syntax.—The subjunctive is used in exhortations and commands. This use of the subjunctive is called the Volitive (volō), because it expresses the will of the speaker.

Examine the following:-

- 1. Consulamus medicum, let us consult a physician.
- 2. Në medicinam capiamus, let us not take medicine.
- 3. Capiat grāna decem ter diē, let him take ten grains three times a day.
- 4. Sūmās pilulam quinīnæ alternā hōrā, take a quinine pill every other hour.
- 5. Në medicamentarius medicamenta repugnantia miscuerit, let the druggist not mix incompatible medicines.
 - 263. The negative used with the Volitive Subjunctive is nē.
- 264. The Volitive Subjunctive is the usual form in giving the directions in Latin prescriptions.

All of the sentences for translation in this lesson are taken from a collection of Latin prescriptions written by English physicians. The vocabulary will be found after the exercises.

EXERCISE. 102.

- 6. Dysphagia, from dys, and phagō, "I eat"—difficulty in swallowing.
- 7. Dysphōnia, from dys, and phōnē, "the voice"—difficulty in speaking, imperfect pronunciation.
- 8. Dysthanatos, from dys, and thanatos, "death"—causing a painful death; also noun, that which causes a painful death.
 - 9. Lumbāgō, from lumbī, "the loins"—pain in the loins.

CHAPTER L.

THE IMPERATIVE.

Review the present and learn the future imperative, active and passive of the regular and irregular verbs.

- 266. Rule of Syntax.—The imperative is used in commands and entreaties: As,—cōnsulite vōbīs, prōspicite patriæ, cōnservāte vōs, consult for yourselves, look out for the country, preserve yourselves.
- 267. A negative command, or a prohibition, is generally expressed by $n\bar{o}l\bar{\imath}$ with the infinitive. As,— $N\bar{o}l\bar{\imath}$ putare, do not suppose (be unwilling to suppose). In the third person, sometimes in the second, $n\bar{e}$ with the present or perfect subjunctive is used: aeger $n\bar{e}$ capiat, $c\bar{e}perit$, Let not the patient take; $n\bar{e}$ capiās, $c\bar{e}peris$, do not take.
- 268. The third person of the imperative, found only in the future, is rare. The present subjunctive is used instead. See 262 and examples.

CHAPTER LI.

THE INFINITIVE—INDIRECT DISCOURSE.

269. Learn the infinitives of the regular and irregular verbs.

270. It will be seen that in the following illustrations the Latin infinitive is used essentially the same as the English infinitive:

Errāre hūmānum est, to err is human.

Turpe est mentīrī, to lie (lying) is base.

Latīnē loquī didicit, he learned to speak Latin.

Nēmō mortem effugere potest, no one is able to escape death.

271. The Infinitive with Subject-Accusative. Rule of Syntax.
—The infinitive, with subject-accusative, is used with verbs and other expressions of saying, knowing, thinking, perceiving, and the like.

272. Direct Discourse.

Medicus est, he is a physician.

Quinīna amāra est, quinine is bitter.

Sapiēns est, he is wise.

Nauta morbum perīculōsum contrāxit, the sailor contracted a dangerous disease.

273. Indirect Discourse.

Dīcit sē medicum esse, he says that he is a physician [lit., he says himself to be a physician].

Sentīmus quinīnam amāram esse, we perceive that quinine is bitter [lit., we perceive quinine to be bitter].

Putat sē sapientem esse, he thinks that he is wise [lit., he thinks himself to be wise].

Rūmor est nautam perīculōsum morbum contrāxisse, there is a report that the sailor contracted a dangerous disease [lit., there is a report the sailor to have contracted a dangerous disease].

274. Notice that there is no word in the Latin sentence which corresponds to the English word that in the translation.

Tenses of the Infinitive.

275. Rule of Syntax.—The present, the perfect or the future infinitive is used in indirect discourse, according as the time indicated Digitized by Microsoft®

is present, past or future with reference to the verb of saying, etc., by which the indirect discourse is introduced, as:

- 276. Observe that the tenses of the infinitive are not absolute, but relate to the time of the verb on which they depend.
- 277. Subordinate clauses of the indirect discourse take the subjunctive, as:

Clāmitābat, sī ille adesset, eōs ventūrōs esse, he cried out that they would come if he were present.

EXERCISE. 106.

1. Constat * medicos centum annis abhinc solitos esse sanguinem detrahere causā levissimā. 2. Ferunt † sīquis dolōrem capitis, tormina ventris, febrīculam levem, contūsionem malam, claudam manum vel pedem, vel aliquem ferē alium morbum vulnusve habuerit, solitōs esse sanguinem plēnō rīvō‡ extrahere, hirūdinēs multos alicuī partī corporis applicāre, vel cruentās cucurbitulās admovēre. 3. Videntur putāvīsse morbum sine sanguinis ēmissione vix posse curārī. 4. Dīcitur medicus scalpellum, înstrumentum utilissimum, die nocteque semper secum habuisse. 5. Librī veteres de medicīnā demonstrant hæc vera esse. 6. Amīcus dīcit sē librum veterem plēnum præscrīptionum de sectione venarum habere. 7. Amīcus idem dīcit sē invēnisse hæc præscrīpta et multa similia in illō librō: 8. "Sī prīmæ vēnæsectiōnī nōn cēdat morbus, tum repetātur. dolor perstiterit in lätere, mittantur sanguinis ūnciæ vīgintī ē brāchiō. 10. Sī convulsiō redeat, haud aliter, detrahātur sanguis per cucurbitulās trēs."

^{*} Used here as an impersonal verb—it is agreed, or is clear; lit.—"it stands together."

- 2. Brachiotomy, from brāchium, and the Greek tomē, incision—amputation of the arm.
- 3. Convulsion, from cum, with, and vellere, to tear, to pull together—a violent and involuntary contraction of muscles which usually contract only under the influence of the will.
- 4. Convulsionaire, a name given to those in the last century who had, or pretended to have, convulsions produced by religious impulses.
- 5. Ventricle, from venter, belly, and culus, a termination, meaning little—little-belly, a name given in anatomy to various parts.
- 6. Ventriloquism, from venter, and loquī, to speak—speaking in the stomach or belly.
- 7. Ventripotent, from venter, and potēns, powerful or large—big-bellied, or having a large abdomen.

CHAPTER LII.

PARTICIPLES-ABLATIVE ABSOLUTE.

- 279. Learn the participles of the regular and irregular verbs.
- 280. The present participle is declined like an adjective of the third declension ending in ns, see 75.
 - 281. All other participles are declined like fluidus, -a, -um (34).
- 282. Participles denote time, as present, past, or future, with respect to the time of the verb in their clause.

Examine the following:

- 1. Bibēns venēnum $\left\{ egin{array}{ll} \mbox{moritur, he dies,} \mbox{morietur, he will die,} \mbox{mortuus est, he died,} \end{array}
 ight\} while drinking poison.$
- 2. Camphoram valdē redolēns, smelling strongly of camphor.
- 3. Fluidum in modulum ferreum calefactum, sēbō illitum, īnfunde, pour the liquid into an iron measure which has been warmed and smeared with tallow.
- 4. Cruciātus doloribus non poterat dormīre, (because) racked by pains he could not sleep.
- 5. Febris crēscēns remedium præsēns postulābit, if the fever increases, it will demand a powerful remedy.

- 6. Medicus non arcessītus vēnit, though the physician was not summoned, he came.
- 7. Medicus vēnit tibi succursūrus, the doctor has come to help you. (Here the future participle succursūrus is used with a verb of motion to express purpose.)
- 283. Observe that the participle in the first example is equal to a clause of time; in the fourth, to a causal clause; in the fifth, to a conditional clause; in the sixth, to an adversative clause. In the second example it is used simply as an adjective, in the third it is equal to a relative clause.
- 284. The Ablative Absolute is grammatically independent of the rest of the sentence. It commonly consists of a noun or pronoun and a participle.
 - 285. Examine the following uses of the Ablative Absolute:-
- 1. Medicāmentō sūmptō, convaluit, when he had taken the medicine he recovered. [The medicine having been taken.]
- 2. Medicus, cūrātiōne ægrī dēsperātā, domum rediit, the physician, since he despaired of the cure of his patient, returned home. [The cure of the patient being despaired of.]
- 3. Æger convalèscet, febrī revertente, the patient will recover though the fever returns. [The fever returning.]
- 4. Empīricō arcessītō, amīcus moriētur, if the quack be summoned, our friend will die. [The quack being summoned.]
- 5. Puer tīnctūrās præparāvit, patre nec juvante nec præsente, the boy prepared the tinctures without his father's aid or presence. [His father neither assisting nor being present.]

Compare in each sentence the Latin and the corresponding translation.

286. Notice in the first sentence that the ablative absolute is used to indicate *time*, in the second a *cause* or *reason*, in the third an *adversative idea* (a *concession*), in the fourth a *condition*, in the fifth an *accompanying circumstance*.

- 3. Cochleārifōrmis, from cochlea, a shell, and fōrma, shape—shell-shaped or spoon-shaped.
- 4. Morbid, from morbus, disease—diseased, or relating to disease.
 - 5. Morbific, from morbus, and facere, to make—causing disease.
- 6. $S\bar{a}p\bar{o}n\bar{a}ria$, from $s\bar{a}p\bar{o}$, soap—the decoction of this plant forming a lather with water.
- 7. Sāpōnāriæ nuculæ, from sāpō, soap, and nux, nut—soapnuts; a fruit whose rind has saponaceous qualities.

CHAPTER LIII.

IMPERSONAL VERBS.

288. Many verbs, from their meaning, appear only in the third person singular.

These are called impersonal verbs, as having no personal subject.

289. These verbs may be classified as follows:-

1. Verbs expressing operations of nature and time of day: Pluit, it rains.

Vesperāscit, it is growing late.

2. Verbs of feeling:

Miseret mē miseriæ tuæ, I pity (it grieves me of) your misfortune.

Pudet mē tuī, I am ashamed (it shames me) of you.

Pænitet mē stultitiæ meæ, I repent of (it repents me of) my folly.

3. Verbs which have a phrase or clause as their subject: Accidit, it happens.

Licet tibi exīre, you may go out (it is permitted you to go out). Oportet tē scīre, you ought to know (it behooves you to know).

Placuit or placitum est mihi, I was pleased (it was pleasing to me).

290. Rule of Syntax.—The impersonal verbs miseret, pænitet, piget, pudet and tædet take the accusative of the person, and the genitive of the object or cause of the feeling.

PERIPHRASTIC CONJUGATIONS.

FUTURE ACTIVE PARTICIPLE:-GERUNDIVE.

291. The future active participle with the verb sum forms the Active Periphrastic Conjugation, as:

Sānātūrus sum, eram, etc., I am, was, etc., about to (going to, intending to) heal.

292. The gerundive with the verb sum forms the Passive Periphrastic Conjugation, as:

 $S\bar{a}$ nandus sum, eram, etc., I am, was, etc., to be healed; I deserve, ought, etc., to be healed.

- 1. Confection, from cum, with, and facere, to make—anything made up or preserved with sugar.
- 2. Dosiologia, from the Greek words dosis, gift, or dose, and logos, discourse—a statement of the doses that may be given.
- 3. Empiricus, from the Greek words en, in, and peira, trial—one who follows only experience; now used in a bad sense, meaning charlatan or quack.
- 4. Mastoid, from Greek mastos, a breast, and eidos, shape—nipple-shaped; the process of temporal bone behind the ear.
- 5. Mesosternum, from Greek mesos, middle, and sternon, the chest—the middle portion of the sternum.
 - 6. Melitūria, from mel, and ouron, urine—sweet urine, diabetes.
- 7. Officīnālis, from officīna, workshop, derived from opus, a work, and facere, to make—said of medicines kept in drug stores, ready made, prepared according to authorized formulæ.
- 8. Saccharometer, from saccharum, sugar, and metrum, measure—an instrument for determining the density of syrups.

CHAPTER LV.

GERUND-GERUNDIVE-SUPINE.

296. Learn the gerunds and supines of the regular and irregular verbs.

Gerund.

Examine the following:

Gen., cupidus tē audiendīdesirous of hearing you.
Dat., aqua ūtilis est bibendōwater is useful for drinking.
Acc., inter ludendumwhile playing or during play.
Ab., quattuor lībrās ēlice dēstīllandō . $\begin{cases} draw \ off \ four \ pounds \ by \ distilling \\ (distillation). \end{cases}$

The above examples illustrate the use of the gerund in the several cases.

297. Observe (1) its use is like that of the English verbal noun in ing; (2) that it governs the same case as its verb, but is itself governed like a noun. See genitive case above.

298. Gerund and Gerundive.

Compare the following couplets:

- Ars { medicinam parandi } the art of preparing medicine.
- D., Dat operam { artem exercendo } he attends to the practice of his art. Acc., Venit ad { [febrem medicandum]* } he came to cure the fever.
- Ab., Terit tempus { medicāmenta terendō } he spends his time in grinding medicāmentīs terendīs } drugs.
- 299. Observe (1) that the gerund is in the case required by the construction, and (2) that the gerundive agrees with its noun like an adjective.
- 300. The accusative of the gerund and gerundive is used with prepositions, chiefly ad, inter, in.
- 301. The accusative with ad is used to indicate a purpose. This construction is very common.

Supine.

302. Examine the following:

Juvenis ad urbem vēnit medicīnam exercitum, the young man came to the city to practice medicine.

- 1. In the above sentence exercitum has the same meaning as ut exercēret, qui exercēret, ad exercendam medicīnam, and other ways of expressing a purpose.
- 303. Rule of Syntax.—The supine in um is used after verbs of motion to express the purpose of the motion.

Hōc est difficile factū, this is difficult to do, or be done.

Hoc est jucundum audītu, this is pleasant to hear.

Horribile vīsū, shocking to see.

12

304. The use of the supine in \bar{u} , with such adjectives as indi-

^{*} This construction does not occur: the accusative or ablative of the gerund with a preposition never takes a direct object.

cate an effect on the senses or feelings, and with those that denote ease, difficulty, and the like, is a very common construction.

- 6. Phōtomania, from phōs, gen. phōtos, and mania, madness—light-madness, or insane delirium caused by light.
 - 7. Phōtophobia, from phōs, and phobos, dread—fear of the light.
- 8. *Phōtopsia*, from *phōs*, and *ōps*, the eye—a false perception of light, as of sparks, flashes of fire, etc., caused by certain conditions of the retina and brain, and by pressure on the eyeball.
- 9. Phōtūria, from phōs and ouron, urine—a luminous condition of the urine

PRESCRIPTION WRITING.

- 306. In the framing of a physician's prescription or directions to the apothecary or druggist it is well to observe the time-honored custom of placing every part of the formula or order—especially the remedial agents or ingredients—in a systematic order. To do this properly, a brief analysis of the prescription is desirable. We find the prescription to consist of five essential parts, as follows:
- 1. The *superscription*: In this we find the symbol & or Re. (*Recipe*, "take thou"). This character usually commences every prescription written in this country. In France P (*Prenez*, "take thou") is employed.
- 2. Following the superscription is the inscription. Here we find the important part of the recipe. It contains the ingredients or medicinal agents, which should be named in accordance with the pharmacopoeial terms. If these terms are abbreviated (see examples below), this should be done carefully so as to avoid ambiguity. The ingredients in the inscription should appear in the genitive case, as:
 - R. Tincturae Gentianae Compositae.
- (a) The quantities which follow the names of the ingredients are generally written in the apothecaries' characters, as:

Observe that the number of ounces is written in the Roman numerals, Roman numerals being always employed in connection with the apothecaries'—cabalistic—signs. The better way of expressing quantities is by employing the metric system, as:

(b) Observe that the Arabic figures are always used in connection

Digitized by Microsoft®

with the decimal system. The above figures mean: 120 cubic centimetres. If, however, the inscription should prescribe a solid, the figures would imply 120 grams—it being remembered that a cubic centimetre is a fluid gram.

Should the quantity of the ingredients be prescribed in the unabbreviated Latin, then the accusative case should be employed, as:

(Numbers from four to one hundred are not declined.)

- 3. The *subscription* follows the inscription. This consists in directions to the compounder. For example, "Misce, flat pilulas no. xx."
- 4. Now follow the directions to the patient. This constitutes the *signatura*. For example, "Sig.—For the fever; take a teaspoonful every 3 hours."
- 5. Name of the physician and date. Not infrequently the name of the patient for whom the recipe is intended is written either at the top or bottom of the prescription.

As before stated, the inscription is the essential part of the prescription. This part frequently consists of a number of ingredients, and, for convenience of study, it is customary to subdivide this into the following:

- (1) Base.—The remedial agent.
- (2) Adjuvant.—That which may assist the action of the base.
- (3) Corrigent, or Corrective.—An ingredient added to modify the action of the base in some way.
- (4) Vehicle.—This is often the bulky portion, used as a diluent, or to give proper form and consistency (excipient) to the whole.

A typical prescription would therefore appear about as follows:

Base, Potass. Acetatis ... 3 ij or 8.0
Adjuvant, Sp. Aetheris Nitrosi 3 ss or 15.0
Corrigent, Syrup. Tolutani ... 3 vj or 24.0
Vehicle, Aquae Anisi, q.s. ad 3 iv or 120.0

Misce, fiat solutio Subscription.

Sig.—Take a teaspoonful every 2 hours Signatura.
Fohn Doe, M.D.

It should be stated that the present tendency in prescribing is toward a greater simplicity. The base, or the essential part of Digitized by Microsoft®

the inscription, is frequently found accompanied with the vehicle only, as follows:

R .	Potassii Bromidi	or	4.0	
	Aquæ Cinnamomi	or	60.0	
Misc	ce, fiat solutio.			
Sig.	—Take one teaspoonful every 3 hours.			_

 $\mathcal{F}.\ D.,\ M.D.$

For further information concerning the prescription, see Remington's "Practice of Pharmacy," third edition, page 1113, or Thornton's "Dose Book and Prescription Writing."

PHARMACEUTICAL AND MEDICAL TERMS DERIVED FROM VARIOUS SOURCES.

(With Brief Definitions.)

341. PHARMACEUTICAL TERMS.

- Calcination (Lat. calcinatio, from calx, lime). The expulsion of volatile matters by heat, as in reducing chalk (calcium carbonate) to lime (calcium oxide) by driving off the combined carbonic acid.
- Carbonization (Lat. carbonizatio, from carbo, coal). A combustion of organic matter, reducing it to carbon.
- Clarification (Lat. clarus, clear + facere, to make). The clearing of liquids by the use of such agents as albumen, heat, etc.
- Colation (Lat. colatio, from colere, to strain). Straining.
- Comminution (Lat. con = cum, very, + minuere, to break into small pieces).

 Reducing to a powder by mechanical means.
- Decantation (Lat. de, from + probably canthus, tire, brim). Pouring off a clear liquid from its sediment.
- **Decoction** (Lat. de, from + coquere, to cook, boil). Boiling the substance in water.
- **Decolorization** (Lat. *de*, from + *color*, color). Depriving a substance of color, rendering colorless.
- **Desiccation** (Lat. de, from + siccus, dry). Driving off moisture by a current of warm air or artificial heat.
- Dialysis (Gr. dia, through + lysis, a loosing). The process of separating soluble crystalloids from colloids (as separation of salt from the white of egg) by a peculiar process allied to filtration.
- Digestion (Lat. digerere, to separate, arrange; from dis, apart + gerere, to carry). Treating the substance by a solvent kept at a high temperature for some time.
- Distillation (Lat. destillatio, from de, from + stillare, to drop). Heating a liquid to the boiling-point, collecting the steam therefrom, condensing the same to a liquid again by refrigeration.
- **Evaporation** (Lat. *evaporatio*, from *e*, out + *vapor*, vapor). Converting a liquid into vapor by means of heat.
- Expression (Lat. expressio, from ex, out + premcre, to press). To press or squeeze, as in making oil of almonds from sweet almonds. Extraction by means of strong pressure.

- Filtration (low Lat. filtratio, from filtrare, to strain). The purification of a liquid by passing it through porous or bibulous paper.
- Fusion (Lat. fundere, to pour, melt). Melting or rendering fluid by heat.
- Ignition (Lat. ignitio, from ignis, fire). Subjecting to an intense heat, often that of a blowpipe flame.
- Incineration (Lat. inceratio, from in, in + cinis, cineris, ashes). Burning a substance over a flame to ashes.
- Infusion (Lat. infusio, from in, in + fundere, to pour). Pouring boiling water on a drug in a suitable vessel, allowing it to stand, and then straining off the liquid.
- Levigation (Lat. levigatio, from levis, smooth). A process of grinding substances in the presence of water between flattened surfaces.
- **Maceration** (Lat. *maceratio*, from *macerare*, to steep). A process of soaking the powdered drug in a proper solvent to extract the virtues from the former.
- Percolation (Lat. percolatio, from per, through + colare, to strain). A process of extraction differing from maceration by allowing the solvent (menstruum) to pass through the drug by simple gravitation, the process being conducted in a glass vessel called a percolator.
- Sublimation (Lat. *sublimatio*, from *sublimis*, high, aloft). Strongly heating a volatile solid and collecting the vapors therefrom and condensing them.
- **Torrefaction** (Lat. torrefactio, from torrere, to roast + factio, a making). Roasting.
- **Trituration** (Lat. trituratio, from triturare, to thrash). Reducing to a very fine powder by mechanical means, such as the pestle and mortar.

342. MEDICAL TERMS, SYSTEMATICALLY ARRANGED.

- 1. Medicines which are said to act upon the blood and thereby affect or modify nutrition.
- Alteratives (new Lat. alterativus, from alter, the other). Medicines having the power to alter some abnormal or diseased condition, producing favorable change.
- Antacids (Gr. anti, opposite to + Lat. acidus, acid). Agents used to counteract, or neutralize, acidity.
- Refrigerants (Lat. refrigerare, to cool, from re, again + frigus, cool).

 Agents used to cool the fevered system and to quench thirst.
- Tonics (ultimately from the Gr. tonos, a stretching, tone). Medicines which produce a general and somewhat lasting stimulation upon all the function in the function of the stretching stimulation upon all the function of the stretching stimulation upon all the function of the stretching stimulation upon all the function of the stretching stretching stretching stretching.

- 2. Medicines whose action is mainly through the nervous system.
- Anæsthetics (Gr. anasthetikos, from a (an before vowels), not +aisthanomai,
 I feel). Agents which efface all sensation of pain, inducing profound stupor, ether and chloroform being typical anæsthetics.
- Analgesics (Gr. analgesikos, producing freedom from pain, from an = a, without + algesis, sense of pain).
- Anodynes (Gr. an = a, without + odyne, pain). Agents which reduce the sensation of pain, without inducing more than slight stupor.
- Antiperiodics (Gr. anti, against + periodikos, pertaining to a period).

 Employed to prevent recurrence of periodical attacks of fever, such as is experienced in malaria.
- Antispasmodics (Gr. anti, against + spasmos, a spasm). Used to allay spasms.
- Exhilarants (Lat. exhilarare, to make cheerful; ex, out (thoroughly) + hilaris, cheerful). Agents which temporarily excite or stimulate the nervous system.
- Narcotics (Gr. narkotikos, tending to benumb, from narkoun, to benumb). Stupefying agents, acting on the brain.
- Soporifics (Lat. sopor, heavy sleep + facere, to make). Agents which relieve nervous excitability and reduce nervous tension.
- Spinal Sedatives (Lat. *spinalis*, from *spina*, spine; *sedare*, to soothe). Medicines employed as motor depressants, reducing the activity of the cord.
- Spinal Stimulants (Lat. *stimulans*, pres. part. of *stimulare*, to incite). Agents which stimulate the activity of the spinal cord and motor apparatus.
 - 3. Medicines acting chiefly on the heart and circulation.
- Vascular Sedatives (Lat. vascularis, pertaining to vasculum [diminutive of vas], a small vessel; sedare, to soothe). Having the opposite effect to that of vascular stimulants, contracting the vessels and diminishing the circulation.
- Vascular Stimulants (Lat. stimulans, stimulating). Medicines having the effect of increasing circulation, dilating the cutaneous vessels; heart stimulants.

4. Medicines acting on special organs.

- Anthelmintics (Gr. anti, against + helmins, helminthos, a worm). A remedy that expels intestinal worms, vermifuge.
- Carminatives (new Lat. carminare, to card, to cleanse). Aromatics used for the purpose of expelling gas from the stomach and intestines, general stimulants.
- Cathartics (Gr. kathairein, to cleanse). Employed to promote intestinal evacuation, purgatives.

 Digitized by Microsoft®

- Cholagogues (Gr. cholos, bile + agogos, leading). Hepatic stimulants intended to remove accumulated bile from the intestinal tract, preventing its reabsorption.
- Diuretics (Gr. dia through + ouron, urine). Remedies increasing the secretion of the kidneys and promoting the flow of urine.
- Emetics (Lat. emeticus, emetic). Agents which produce vomiting.
- Errhines (Gr. en, in + rhis, rhinos, nose). Remedies producing sneezing, sternutatories.
- **Expectorants** (Lat. *expectorare*, to drive from the breast; *ex*, out + *pectus*, *pectoris*, breast). Agents promoting expectoration of bronchial secretions, cough remedies.
- Mydriatics (Gr. from *mydriasis*, enlargement of the pupil of the eye).

 Agents employed to produce dilation of the pupil.
- **Myotics** (Gr. from *myein*, to close the eyes). Agents which contract the pupil.
- Sialogogues (Gr. sialon, saliva + agogos, leading). Agents which promote secretion in the salivary glands, increasing the flow of saliva.
- Sudorifics (Lat. sudor, sweat + facere, to make). Sweat-producing remedies, also known as diaphoretics.

5. External remedies.

- Antiseptics (Gr. anti, against + septikos, from sepein, to make putrid).

 Agents which prevent or check fermentation and putrefaction.
- Astringents (Lat. astringens, pres. part. of astringe, to draw tight). Agents which cause the contraction of tissue, frequently used to reduce hemorrhage.
- Caustics (Gr. kaustikos, burning, from kaiein, to burn). Agents which when applied to the skin or other tissue destroy it, producing a slough.
- Demulcents (Lat. demulcens, pres. part. of demulceo, to soothe). Oily or mucilaginous drugs which have a local or soothing action and protective to the part under treatment.
- Disinfectants (Lat. dis, apart + infectus, past part. of infecre, to dip into, to infect). Agents which destroy germs of infection or which render them innocuous.
- Emollients (Lat. emolliens, pres. part. of emollio, to soften). Agents which soften the skin and tissue when applied locally.
- Epispastics (Gr. from epi, upon, to + span, to draw). Agents which blister the skin.
- Escharotics (Gr. escharotikos, causing a sear, from eschara, hearth, sear). See caustics.
- Rubefacients (Lat. ruber, red + facere, to make). Agents applied to the skin producing redness of the same, a mild irritation.
- Styptics (Gr. styptikos, causing contractions, from styphein, to contract).

 Agents which arrest hemorrhage; also called hemostatics.

CHEMICAL NOMENCLATURE.

343. Chemical nomenclature is a study peculiar to itself, and one that can be consistently treated but briefly in a work such as this. Chemical terms, however, are employed in the work—terms such as sulphate, sulphite, carbonate, etc. The student may be able to use these terms more intelligently if we give a few concise statements concerning them, as follows:

Salts that contain an acid whose name ends in "ic" (Latin, icus) have specific names which end in the syllable "ate" (Latin, -as, -atis), as carbonate and sulphate.* Therefore the terms sulphate, nitrate, carbonate, acetate, phosphate, etc., indicate that these chemical salts respectively contain sulphuric, nitric, carbonic, acetic, phosphoric acids, etc.

The prefixes "bi" (Latin bis, twice) and "per" (Latin per, through, thoroughly, very) are sometimes employed, as, for example, in bicarbonate of potassium, peroxide of barium. The prefix "bi" recalls the fact that to a given amount of potassium, etc., the salt contains twice as much carbonic acid as the carbonate. The prefix "per" shows that a very high, sometimes the highest, state of oxidation, etc., is present.

Chemical salts whose names end in "ite" (Latin -is, -itis), as in sodium sulphite, are formed from acids whose names end in "ous" (Latin -osus, full of, having the quality of); sodium sulphite therefore results from a combination of sodium and sulphurous acid.

The prefix "hypo" (Greek hypo, under) is applied to salts which are made of an acid containing less oxygen than an ousacid. We have therefore a salt of sodium made from hyposulphurous acid known as sodium hyposulphite.

^{*}The old spelling is here retained. Many scientists now prefer the spelling "sulfate," etc.

Digitized by Microsoft®

The syllable "ide" (Latin -idum) attached to the chemical name indicates that the element itself is combined with another element, or radicle, to form a salt. Thus we have iodide of potassium, which implies that the element iodine is directly united with potassium.

To recapitulate, a sulphate contains the sulphuric radicle or acid, the sulphite contains the sulphurous radicle, the hyposulphite contains the hyposulphurous radicle, and the sulphide contains the element sulphur, and so on with other inorganic "ates," "ites," "hypo-ites," "ides," etc.

A word further with regard to naming certain metallic compounds, such as iron and mercury. These elements and many like them combine with elements and radicles in two proportions. Those compounds in which the acidulous radicles are in lesser amount employ the syllable "ous," the higher amount being designated by the term "ic." Thus we have ferrous and ferric salts, and so we have mercurous and mercuric salts. In every pair of mercury compounds the mercuric contains twice as much complementary radicle, in proportion to the mercury, as the mercurous, as: Mercurous chloride, HgCl; Mercuric chloride, HgCl₂. Also, in every pair of iron compounds the ferric contains more of the complementary radicle, in proportion to the iron, than the ferrous, as: Ferrous chloride, FeCl₂; Ferric chloride, FeCl₃.

As above stated, it would be impossible to give any proper conception of chemical nomenclature in so limited a space, but the beginner may be helped by the above brief statements, especially if he supplements these by a more comprehensive treatment of nomenclature as found in almost every manual of chemistry.

P. BLAKISTON'S SON & COMPANY PUBLISHERS OF MEDICAL AND SCIENTIFIC BOOKS 1012 WALNUT STREET, PHILADELPHIA

Montgomery's Gynecology

A PRACTICAL TEXT-BOOK

A modern comprehensive Text-Book. By EDWARD E. Montgomery, M.D., Professor of Gynecology in Jefferson Medical College, Philadelphia; Gynecologist to the Jefferson and St. Joseph's Hospitals, etc. 527 Illustrations, many of which are from original sources. 800 pages. Octavo.

Cloth, \$5.00; Leather, \$6.00

*** This is a systematic modern treatise on Diseases of Women. The author's aim has been to produce a book that will he thorough and practical in every particular. The illustrations, nearly all of which are from original sources, have for the most part been drawn by special artists who, for a number of months, devoted their sole attention to this

"The book is one that can be recommended to the student, to the general practitioner-who must sometimes be a gynecologist to a certain extent whether he will or not—and to the specialist, as an ideal and in every way complete work on the gynecology of to-day—a practical work for practical workers."—The Journal of the American Medical Association.

Byford's Gynecology

Third Revised Edition

A MANUAL FOR STUDENTS AND PHYSICIANS

By HENRY T. BYFORD, M.D., Professor of Gynecology and Clinical Gynecology in the College of Physicians and Surgeons of Chicago; Professor of Clinical Gynecology, Women's Medical School of Northwestern University, and in Post-Graduate Medical School, etc. Third Edition, Enlarged. 363 Illustrations, many of which are from original drawings and several of which are Colored. 12mo.

Cloth, \$3.00

"As a book to help the student to quickly review what ought to be gotten up, so as to be prepared for the early examination, it is of great service. Such a book would also make a most excellent textbook for the college class room."—Virginia Medical Semi-Monthly, Richmond.

By JAMES TYSON, M.D.,

Professor of Medicine, University of Pennsylvania, Physician to the Philadelphia Hospital, etc.

The Practice of Medicine. Second Edition.

A Text-Book for Physicians and Students, with Special Reference to Diagnosis and Treatment. With Colored Plates and many other Illustrations. Second Edition, Revised and Enlarged. 127 Illustrations. 8vo. 1222 pages.

Cloth, \$5.50; Leather, \$6.50; Half Russia, \$7.50

** This edition has been entirely reset from new type. The author has revised it carefully and thoroughly, and added much new material and 37 new illustrations.

"We are firmly convinced that at the present time Dr. Tyson's book on Practice can be most heartily commended to both the practicioner and student as a safe, reliable, and thoroughly up-to-date guide in the practice of medicine."—The Therapeutic Gazette.

"The clinical descriptions are clear and full, and the methods of treatment described are those generally recognized as being the most modern and satisfactory."—The London Lancet.

Guide to the Examination of Urine. Tenth Edition.

For the Use of Physicians and Students. With Colored Plate and Numerous Illustrations Engraved on Wood. Tenth Edition, Revised, Enlarged, and in many parts entirely rewritten. Cloth, \$1.50

*** A French translation of this book has been published in Paris.

"The book is probably more widely and generally known and appreciated than any of its similars in subject and scope."—New York Medical Journal.

"The book is a reliable one, and should find a place in the library of every practitioner and student of medicine."—Boston Medical and Surgical Journal.

Handbook of Physical Diagnosis. Fourth Edition.

Revised and Enlarged. With two Colored Plates and 55 other Illustrations. 298 pages. 12mo. Cloth, \$1.50

"Like everything else emanating from this distinguished author this little book is replete with practical information from beginning to end."—The Chicago Medical Recorder.

"The author approaches his subject from a practical point of view and the little work will prove a good friend to the student."—
The American Journal of the Medical Sciences.

'In conclusion we may add that Dr. Potter's Therapeutics covers a wider field than many books which bear this title. He discusses a good many drugs which are rarely employed, and therefore the book is as useful to one who wishes to look for unusual information as it is to him who wishes a handbook for ready reference in the treatment of disease as he meets it from day to

day."—Therapeutic Gazette.

"The care with which Dr. Wilcox has performed his work is conspicuous on every page, and it is evident that no recent drug possessing any merit has escaped his eye. We believe, on the whole, this is the hest hook on Materia Medica and Therapeutics to place in the hands of students, and the practitioner will find it a most satisfactory work for daily use."—The Cleveland Medical Gazette.

"The important anatomical points are clearly set forth, the conditions indicating or contraindicating operative interference are given, the details of the operations themselves are brought forward prominently, and frequently the after-treatment is considered. Herein is one of the strong points of the book."-New York Medical Journal.

"We know of no series of books issued by any bouse that so fully meets our approval as these? Quiz-Compends?. They are well arranged, full and concise, and are really the best line of text-books that could be found for either student or practitioner." —Southern Clinic.

DA COSTA

Clinical Hematology

A Practical Guide to the Examination of the Blood by Clinical Methods. With Reference to the Diagnosis of Disease. With Colored Illustrations. Cloth, \$5.00

*** A new, thorough, systematic, and comprehensive work, its purpose being, first, to show how to examine the blood, and second, how to diagnose from such examination diseases of the blood itself and general diseases. The author's aim has been to cover not alone the field of original research, but to supply a book for the student, the hospital physician and the general practitioner. It will be found wanting in none of these respects.

The Pocket Cyclopedia of

Medicine and Surgery

Full Limp Leather, Round Corners, Gill Edges, \$1.00 With Thumb Index, \$1.25

Uniform with "Gould's Pocket Dictionary"

A concise practical volume of nearly 600 pages, containing a vast amount of information on all medical subjects, including Diagnosis and Treatment of Disease, with Formulas and Prescriptions, Emergencies, Poisons, Drugs and Their Uses, Nursing, Surgical Procedures, Dose List in both English and Metric Systems, etc.

By Drs. Gould and Pyle

Based upon their large "Cyclopedia of Medicine and Surgery." * * *

** This is a new book which will prove of the greatest value to students. It is to the broad field of general medical information what "Gould's Pocket Dictionary" is to the more special one of definition and pronunciation of words. The articles are concise but thorough, and arranged in shape for quick reference. In no other book can be found so much exact detailed knowledge so conveniently classified, so evenly distributed, so methodically grouped. It is Multum in Parvo. Sample Pages Free.

EDGAR'S OBSTETRICS

A NEW TEXT-BOOK

THE ILLUSTRATIONS in Edgar's Obstetrics surpass in number, in artistic beauty, and in practical worth those in any book of similar character. They are largely from original sources, are made to a scale, and have been drawn by artists of long experience in this class of medical work.

THE TEXT has been prepared with great care. The author's extensive experience in hospital and private practice and as a teacher, his cosmopolitan knowledge of literature and methods, and an excellent judgment based upon these particularly fit him to prepare what must be a standard work.
