#### THE PROSPECTS OF THE MONEY MARKET.

The phenomena of the money market during the last few months have been remarkable, because the causes which have affected it have been unprecedented. The revolutionary crisis in America is one of the most unexampled and unex pected events that have ever happened in the world, and it is not wonderful that it should have had peculiar effects which no one could have anticipated beforehand; and which have baffled the prophecies of the most sagacious, well-informed, and experienced persons.

The balance of the direct trade between this country and America is always, as we have frequently shown, extremely adverse to England. For the last few years the figures have heep

	Екр	to America.		From America to England.
100(	********	22,616,877 20,076,895	4	36,047,773 33,647,227
1858 1859	***********************	94 417 802	444	34,257,515 34,294,042
1860	**********************************	21,613,111	***************************************	44,728,271

The balance of the American trade was redressed by credits which England gives to America in other branches of her trade. England, as we have often before shown, has been the drance of America. The purchases of the United States in China and India were not paid for by exports to China and India, but by drafts on this country. As we were indebted to America, she cancelled her debts on China and India by bills upon us. Now that American purchases in the Fast bills upon us. Now that American purchases in the East, in France, and in this country have fallen far short of those which would have been made under happier circumstances, it is no wonder that America has been able to draw much bullion from this country to rectify the balance so deranged. We have often shown that she would take out her debts in

We have often shown that she would take out her deputs in cash, and she has done so. At what period the orders to the East from America began to decline it is not possible to know. But it is to be remembered that the American secession is no new matter; that Mr Lincoln was elected—in reality if not in law—many months ago; that ever since his election there has been a ebronic uneasiness throughout the Union, which must have diminished their buying ability, which must have reduced their orders to the East and to the world at large below their usual amount.

The precise amount of gold which America can draw from this country no one can by possibility conjecture. The ac-counts between nation and nation are too vast, involved, and complicated for theoretical analysis or statistical expression. An enormous sum she has taken from us, besides not send-ing to us her former supplies. It is not possible to say whether her effectual demand is now exhausted. Only experience can effectually decide.

The requirements of India are serious also. A large sum will be remitted to that country within a brief period, probably in actual bullion. The demands for railways amount, as we showed not long since, to the following sums :-2

# 

which must seriously diminish both the surplus capital and surplus money of Europe for some time to come. These causes tend to keep up the rate of interest in Lom

bard street, and there is another which is quite as important. We mean the effects of last year's had harvest. We hear in Lombard street that "bankers are poor," and the meaning is that their customers are poor. For several years before 1860 the agricultural interest of England en-joyed singular prosperity. Such large and such steady profits had not been made by the farmers for a long antecedent period. In 1860 the result was different. The losses of agriculture were great, and its profits were very small in comparison with previous years. In consequence the "bankers' balances," which are approximately proportional to the inland wealth of the country, are less than they used to be. The funds of Lombard street are diminished, and that diminution necessarily tends to raise the rate of interest.

Interest. But, on the other hand, there is a cause which is quite equally potent with all of these, and which tends to reduce the value of money. We mean the slackness of trade. It is of no consequence that the means of Lombard street are diminished, if the number of bills circulating there is diminished still more. There certainly is an indisposition to do business, which will counteract the demands upon our resources from India and from America.

There is likewise a subsidiary cause which may ultimately be very important, though, as it is of American origin, it necessarily partakes of the uncertainty of Transatlantic phenomena. American capital is certainly being sent hither for investment, and if the disturbances there are of long continuance, which is the preponderating probability, it is possible that much more may be sent here for security and for profit, as we know that after 1848 so much was sent to

us for similar reasons from all parts of Europe. It is said, we believe truly, that many Continental banks are discounting long bills in this market at the current rates of Lombard street; and this shows that they consider those rates to be "good certainties," possibly to be better than those which will be current within a few months. Whether they are right or wrong in their conjectural anticipations, Whether they are right or wrong in their conjectural anticipations, they are certainly right as men of business in taking a good rate "while it is going." When so many causes of such un-certain intensity are affecting the money market, it is only charlatanism to pretend to offer confident predictions. No prophecy is worth anything except it have a reason, and in a complex concurrence of unprecedented influences no reason can be worth very much. We, therefore, venture no pre-

[June 8, 1861.

diction. We would only observe, that the best and most experienced judges do not expect cheaper money, and that they acknowledge the possibility of dearer money, though they by no means expect immediately to see it.

THE UNCERTAINTY OF INDIAN FINANCE. THE uncertainty of Indian finance, proverbial as it has become, and perplexing as from its grave consequences it must ever be, has just received a singular illustration. On the 6th of February this year, just before the last Indian loan, Sir Charles Wood observed in his place in Parliament :--- "When Mr Wilson spoke about that time last year, " in proposing his Budget to the Indian Council, he estimated " the probable reduction in the military expenditure at " 1,700,000l, a subsequent calculation has made it 2,500,000l, " and it had actually been about 800,0001 more. There-" fore the reduction for the year had been 3,300,0001." But Mr Laing now tells us that the informants on whom Sir C. Wood then relied "mistook wishes for facts and " anticipations for realities." Mr Laing shows "that " there was not a reduction of 3,300,000/, as supposed by " Sir C. Wood, or even of 1,700,000/ as estimated by Mr "Wilson, but a positive increase of 213,000l in the total " expenditure of 1860.1 over that of 1859-60."

It was not from sanguine miscalculation or from individual misjudgment that Sir C. Wood put forth this erroneous estimate. He had express statements and elaborate details sent to him from Calcutta. It was upon these that he spoke : he did not add to them nor take from them. But how, then, with this recent and glaring experience, can we rely on estimates and conjectures from Calcutta P If they fail by 3,000,000l in half a financial year (for that is about the interval between the date of the despatches on which Sir C. Wood relied and the close of the financial year in India), what security have we that they may not be wrong by twice that amount in the entire financial year for which their most recent calculation is now before us?

Owing to an unfortunate peculiarity, Mr Laing's estimate is peculiarly subject to this doubt. It is, in the language of Indian financiers, an "Anticipation Sketch Estimate"; it is entirely in the future tense. He depends in his present estimate, as Sir C. Wood depended in the estimate which he made in February last, upon anticipated reductions in military and other outlay. he says, "we shall reduce our military expr "3,600,0001." We hope he may be successful. is not over sanguiue. But how can we be sure? " In 1861," expenditure by We hope he is not over sanguiue. What reliance is to be placed on the Calcutta anticipations ? We would not for a moment speak disrespectfully of Mr Laing himself; but he is necessarily in the hands of others. He admits that He tells us that certain gentlemen who have given efficient service upon certain economical commissions have reported "that so and so should be done, and that if so and so is done, such and such a sum will be saved." But whether within a single year any such reduction will, not in easy and hard reality, be ever effected, Mr Laing, with but a brief knowledge of India, can never certainly and surely know. "Persons on whom he can rely" may surely know. "Persons on whom he can rely" may tell him so, but those same persons told Sir C. Wood exactly what we have seen, and placed him unknowingly and unwillingly in the most humiliating position in which a Finance Minister can be placed-that of having given utterance to over-sanguine anticipations just when he was asking for a loan. There are, certainly, some men of imperious will and all-sufficient energy who would require that these reductions should be carried out, cost Mount these reductions should be carried out, cost what it might to individual claims, to class interests, or to local prejudices and antipathies. But the present Finance Minister of India is not one of these. His friends will agree with us in praising his discretion rather than his inflexibility, his pliability more than his decision. It is no extreme censure and no peculiar accusation against Mr Laing to say that he is not one of the men of intense and exceptional will of whom but a very few are ever to be found.

Mr Laing's Budget is in its details as follows. From the tables given below it will be seen that he anticipates that whereas

The expenditure of 1860-1 was The expenditure of 1861-2 will be	£ 45,154,449 41,054,699
Showing a reduction of	4,009,750 £
While the revenue of 1861-2 will be Whereas the revenue of 1860-1 was	41,294,595 39,285,731
Being an ingresse of	9.000 004

If we add the increase of revenue to the diminution of expenditure, we shall see how much this year is expected to be better than the last. We have-

Reduction of expenditure Increase of revenue	£ 4,099,750 2,008,864	
The deficit of last year was	6,108,614 5,868,718	

Consequently there will this year be a surplus of 239,896

It will indeed be a marvel of finance if a deficit of six millions should be changed into a surplus in a single year, and the marvel will be still greater than at first sight it would seem to be, because the new taxes which are imposed are but triffing.

Mr Laing proposes to obtain 500,0001 from taxation by the local Governments, on the character of which those Gavernments are themselves to decide. He expects upon various grounds, considerable aid from the increased yield of the ordinary sources of revenue, and he imposes an increase in the Excise and Customs duties upon salt, which, as it differs in the various Presidencies, and is not capable of a distinct explanation in English money, we give elsewhere in his own words. From it he expects a revenue of 598,3704, and apparently for sufficient reasons. Salt is a necessary of life in India to every person and to every family. So far, therefore, as it is desirable that the entire population—whether poor or rich—should contribute to the augmentation of the revenue, a duty on salt is a fair and a reasonable and satisfactory one, and we are glad to see that the additions recently made to it in India have been productive to the revenue without being oppressive to the consumer.

The real difficulty of Indian finance is a simple one:--How are we to tax the rich native who has grown wealthy under our rule, who would be plundered but for our rule, yet who would not of his own free will give us a rupee to save our Exchequer from bankruptcy and our Government from destruction ? Indirect taxation in this case is not effectual. If you tax an article, the native, whose wants are few and whose parsimony is great, instantly refuses to consume it. The tax fails, because it diminishes the consumption instead of augmenting the revenue. Direct taxation, therefore, is requisite, and for this purpose Mr Wilson introduced a modified and adapted imitation of our English income tax.

All persons who are interested in Indian finance were startled at the telegraphic account of Mr Laing's Budget which was first received. It stated that the income tax was to be abandoned, and yet that a surplus would be obtained. The abandonment is, however, an error. The income tax yields (as will be seen by the account below) nearly two milions this year; and though this is said to include arrears from last year, and therefore to be greater than it rightfully should be, we must remember that the tax is new, that its machinery is as yet imperfect, that some of its collectors have not been over partial to it, that its probable yield will be greater in future years, when custom has habituated the people to it, and practice has taught the officials to collect it.

<sup>6</sup> But although Mr Laing has not abandoned the income tax, he has censured it. He says :--"I have told you frankly "that, financially speaking, I think the income tax has been "a failure. It lays down a great and just principle that the "capital and trade of India, as well as her land, shall con-"tribute in a fair proportion towards the support of the "State. From that principle I believe no Government of "India will ever recede; and as regards incomes, which are "fixed and can be ascertained without prying into people's "private affairs, there is no fairer mode of applying it than "to by a percentage on the amount of income. But when you "come to trading and professional incomes, or incomes which

" cannot be ascertained without calling for complicated " cannot be ascertained without calling for complicated "returns and instituting private inquiries, I believe that " some fixed scale of assessment under a graduated licence " tax is a better mode of applying the principle. I would " almost lay this down universally, for I think it is a fatal " objection to a tax that it conduces to extensive demoralisa-" tion by holding out a premium to fraud, and that its in-" evitable tendency is to embark the Government in a con-" stant warfare with a large section of its subjects-a " warfare carried on by vexatious petty interference and " stant warfare carried on by vexatious petty interference and "inquisition on the one hand, and by evasion and chicanery " on the other. Certain I am, that India, at any rate, is no " on the other. Ortain I am, using as low as 20/ a year, " and that the Government would be wanting in their duty "vouring so to amend this portion of the income tax, as to "raise the necessary revenue in a manner loss " jection."

The answer to these remarks is a question. What is the wtax? Until we know what it is we cannot tell whether new tax? The "inquiries " to which Mr Laing objects are part of the machinery which is essential to the accomplishment of his object. We are preparing to tax the moneyed wealth— the trading, professional, and commercial industry of India. We cannot do so without finding out where that wealth is, in whose hands it lies, who is making money, and who is not making money. The difficulty of the inquiry is great, its details are tedious, its processes are harassing ; but in some form or other it must be made. We are preparing to tax *invisible* property, and there is an inevitable difficulty, which must be faced and not ignored, in ascertaining who is rich, and who is not rich, who possesses the species of wealth of which it is the characteristic to have no outward tangible and obvious tokens. its evils will be greater than than those of the income tax. and obvious tokens.

As far as the public can know, the scheme which Mr Laing is endeavouring to work out is the same which the Calcutta financiers were endeavouring to elaborate before Mr Wilson arrived in India. A "licence" scheme had scheme had Mr wilson arrived in India. A sicence scheme had been for many months before the Council of Calcutta, and the debates upon it were endless, aimless, and without Every one felt the difficulty, and no one saw how it rem could be overcome. The most necessary feature of the plan was that the rich trader should pay much for his licence and the poor trader should pay but little. But upon what prin-ciple was the separation to be made? How was it to be discovered which trader was wealthy and which was poor? A graduated licence tax has the essential difficulties of the income tax: it necessitates private inquiries, it involves complicated returns, it tends to embroil the Government with every discontented trader who believes that he is placed in a higher class than he should be, who fancies that he pays more than he ought. And, after all, a licence tax is not effectual. The graduation of a good income tax is complete. By means of it you get the same due proportion— the same just percentage of each man's means. But a licence tax necessarily lumps men into a few large classes, and makes every man in each class pay exactly the same, to the obvious gain of the rich and the obvious loss of the poor.

Under these circumstances, Mr Wilson decided to introduce the income tax ; but he was well aware that the mode of its collection in so large and so various a country as India might well need many modifications, which no English experience could anticipate, and which only local discretion could from time to time suggest. He, therefore, permitted discretionary modes of assessment according to the wants and necessities of particular districts, preserving only the principle of taxing trade and capital, and giving up more or less of the special

machinery which he himself preferred. It is with grave regret that we observe that Mr Laing has departed from this clear, definite, and yet pliable scheme, and has fallen back into the indefinite uncertainty of the old has fallen back into the indefinite uncertainty of the old Calcutta financiers. He censures a tax which yields two millions this year, and would doubtless yield far more under effectual superintendence and earnest management. He has only a tax in the future tense to substitute for it, and this is the very tax which every one has been searching for for years, but which no one has ever yet been able to find. We fear, therefore, that this Budget is not the end of the financial uncertainties of India. As we have shown, its

anticipated reductions are anticipations only; "orders" have been given, but last year the results were inconsiderable. Doubtless "something" will be done this year after so long delay and so much confident promise; but will that "some-thing" save us three millions and a half of annual charge? If it does not, there will be a deficit in India still, although Mr Laing obtains two millions from the income tax which he criticises and censures.

### THE DEATH OF COUNT CAVOUR.

THE foremost statesman in Europe,-the man whose life was of the highest political value to the world, and second only in importance to that of the Emperor of the French,-is no more. The death of Count Cavour is felt to be an event of the same unspeakable moment, though, as it seems to Englishmen, of exactly opposite tendency, with that which so suddenly snatched away the late Czar in the middle of the Crimean war. The death of Nicholas was the death-blow of the aggressive policy in Russia; and the enemies of Italy will no doubt dare to hope that the removal of the great leader of Italian regeneration will prove a catastrophe as fatal to the hopes which he inspired, and the far-sighted policy by which he advanced with sure and equal step to their realisation. But the parallel is utterly delusive. Count Cavour was the leader of an advancing age,

# THE ECONOMIST.

and did but represent a moral force which secured for his country the sympathy of all advancing nations, and the fear or respect of even the most retrogade. The power by which he worked was not his own, and does not die with him. Nicholas, on the other hand, represented a policy which belonged to the past rather than to the present; with strong unflinching determination he strove to stem the tide of European opinion, and he rallied for this purpose the forlorn hope of Russian barbarism. For his death, therefore, there was no remedy :---the power by which he had worked was dwindling flust even beneath his hands, and faded rapidly away when he was struck down. He restored and represented a dying tradition; Count Cavour created and represented a new spring of national pride and hope which will constitute the tradition of unborn generations.

The events of his short but crowded political career, which extended only over eleven years, -- and the most important part of it during which he was Prime Minister only over nine,-have been too often recapituated within the last two days to need formal narration here. Those years of his life in which the political character is chiefly formed were passed in England: he did not return to Piedmont until he was 32 years old; and hence it has been the greatest pride of Eng-lish statesmen to point to Count Cavour's wonderful success as in some sense a graft taken from a British stock. Nor is it mere national egotism to believe this. It was his clear-sighted financial creed, and a great financial speech in 1850, which first introduced him to power; and he had learned his political economy from Adam Smith. It was a speech on ecclesiastical jurisdiction, expressing his deep conviction that all Churches should be zealously restrained from interference with secular affairs, which first gained him extensive popularity in Italy ;-and such a Church he had seen in England and England alone. It was his steady belief in a Constitution worked by the natural aristocracy of a country, but yet in close connection with the popular mind, which gave him an instru-ment at once sufficiently powerful and sufficiently under control to carry out his great designs; and such a Constitu-tion he had seen only in England.

Yet, though England may have supplied him with political principles suited to his needs, it certainly could not have given him the consummate power with which he used them. Probably no English statesmen that ever lived would have exhibited, under such circumstances, so striking a combination of audacity and tact,—of courage to incur a great risk, and sagacity in measuring what risk would be too great,—of equal power to strike, and to hold back his own supporters from striking, according to the circumstances, as Count Cavour. No statesman known to history has even counted the cost of such great dangers with so cool and strong a mind. He was as strong in defeat as in success. It was nearly the first act of his political career, after the great disaster of Novara, to urge the duty of cordially strengthening Charles Albert's Government instead of indulging in useless recriminations. And his first great venture as a Minister was so contrived as to be a cordial to the Italian spirit, —a stimulant to the ex-hausted hopes of a long oppressed nation. The master-stroke of forcing Sardinia into a favourable comparison with Austria by sending an army to the Crimea, while Austria remained sullen and passive in the Principalities, gained him even far more power at home than abroad, because it raised the hopes and animated the national pride of Italy. Nor was it Count Cavour's fault if he was subsequently obliged to wound that national spirit in the equivalent rendered for the aid of France. Had England been willing in 1856 to unite with France and Sardinia in resolutely curbing the influence of Austria in Italy, the same great result might possibly have been obtained without the same humiliating price. It well known that Count Cavour applied, and applied in is vain, to Eagland for a counterweight to the influence of France,—and that the great debt of exclusive obligation afterwards incurred, was incurred in consequence of our refusal to interfere.

But neither in sending a Sardinian contingent to the Crimea, nor in the negotiation of the French alliance, did Count Cavour display so happy a combination of sagacity and daring, as in the occupation of the Umbrian Marches last year, and the summons to the Pope to dismiss his foreign auxiliaries. Had Garibaldi

been permitted to push on into the Roman territory: the revolution would have passed beyond the control of Sardinia, and an anarohy risked which would have brought down either an Austrian or an extended French intervention. Had Sardinia prohibited Garibald's movement upon the Boman territory, as she did the further movement upon Venetia, the unpopularity incurred would have probably overthrown the Sardinian Ministry and seriously risked the Sardinian leadership. The reasons for the movement were urgent and weighty, but the danger confronted was enormous. The Pope was driven to extremities,—Austria had a new and almost unanswerable excuse for marching to his aid, since the moral logic of the step would certainly have justified quite as well the invasion of Venetia,—and the Ultramontane party in France was irritated into an opposition so vindictive, that it was far from certain whether the Emperor might not be obliged to withdraw his countenance. It cannot be doubted that in discriminating the true moment to defy the Pope and take the formal guidance of the Neapolitam revolution, Count Cavour gave proof of the rarest and highest statesmanlike genius. He had before him a problem in which all the alternatives seemed equally menacing. He instinctively chose for his country the solution which involved danger indeed, but no humiliation,—not the loss of that headership which had been, during so many months of Garibaldi's enterprise, in partial abeyance; and the resolve raised him to a place in the nation's affections ot which he can now never be deprived.

That such a statesman should be cut off while Rome is still in the hands of France, and Venetia still in the hands of Austria, is more than tragic,—for in tragedy the inter-twining threads are all cut together,—but here the country's need continues, though the man who could best satisfy it is gone. In no one else can the same powers be found united ;—the capacity for ruling rightly, and the capacity for united; ----the capacity for ruling rightly, and the capacity for convincing a free people that they are ruled rightly; ---the power to win the confidence of an Italian Parliament as no one else could win it, and the power to use the authority so gained as no one else could use it. No English statesman except Pitt has ever gained a nonverse nearly equivalent to a distribution for Const a power so nearly equivalent to a dictatorship as Count Cavour has exercised for the past nine years over the grow-ing State of Sardinia. Nor is such a combination of practical sagacity and intellectual sagacity,—of the passion that sways, the reasoning that guides, the strength that retains, and the humour that fascinates men,—often seen combined in the same person. Ricasoli, Minghetti, Ratazzi, all seem dwarfed beside the great intellect and will which have so recently been put forth in all their power, not only to grapp new conquests, but to restrain his countrymen from snatch at the inaccessible. But that firm faith in the destini of his country expressed in his last hour by the dying statesman has been sown by him in so many Italian hearts that it will be impossible for them to despond. It was the last crowning triumph of his life to reconcile all the great men who had assisted him in the glorious work. And now, who had assisted him in the glorious work. And now, though in the bitterness of their loss, when they look at Rome and Venetia, many may feel inclined to echo the me-lancholy old words of patriotic despondency, "The harvest " is past, the summer is ended, and we are not saved," they will not allow themselves to doubt that the same Power which raised up Count Cavour for his work, and en-graved its purposes on the marvellous triumphs of his short administration, will find instruments noble enough to com-plete what he has so nobly begun.

### A M E R I C A. PROBABILITIES OF THE STRUGGLE.

THE prospects opened by the American disruption grow wider, but do not grow clearer, day by day. We see new issues, new possibilities, new dilemmas, but passion and bombast combine to throw a sort of hazy fog over the whole scene. We can dimly perceive fresh secessions rising in the distance, unexpected complications of the social problem at home, unforescen perplexities in relations abroad. Some results are already absolutely certain; others become hourly more probable; but in spite of all that is written for our enlighteenment by Americans here, and all that comes to us across the water, we are as far as ever from understanding

THE ECONOMIST.

what is really simed at, or what can possibly be achieved, by either belligerent. The South speaks of "the worse than "Austrian despotism" of the Free States. The North speaks of the "insolent rebellion and presumptuous demands" of the Slave States. Both parties (as has been tersely said) explain very clearly why they are fighting, but not at all what they are fighting for. The South says it is arming to enforce the right of secession—which, whether "a right" or not, has already become a fact which can neither be refuted nor undone; —and the North says it is arming to subdue the rebellion of the South—though, till excitement grew into the blind 'passion it has now become, the notion of absolute conquest and subjugation was either not named or was explicitly abjured. Its orators merely insisted on "repos-"essing" Federal property, which must be resold or restored as soon as the severance, already actual, shall have been formally acknowledged.

Now, however, that the accredited Representatives of the United States have begun to declaim with confidence on the imminent conquest and coercion of the South, we must give a word or two to what certainly seems a wild hallucination. We in England, whatever be our wishes, cannot bring elves to believe in the possibility of such an issue. Much is said of the alleged existence, importance, and forcible suppression of a strong Unionist minority in the second States; and, considering inherent probability as well as the unquestionable fact of the violence habitually done minorities in America, we have no doubt that it is d with perfect truth. As to the numbers, character, mid with perfect truth. social influence, and probable action of these Unionists, we are, and must remain, wholly in the dark. It is pretty clear, however, that be they many or few, poor or rich, they have neither the courage to make their action felt at home. , they e power to make their protest heard abroad. nor th ey might raise their heads doubt the -though at infinite riskin case of a disaster to the arms of the Southern Confederacy, or of long-continued suffering in consequence of the blockade. But in the meantime their repression is complete and their ence nil. Nor do we conceive that, even if all that infla is alleged as to their extent and importance as a party were true, it would render the conquest and reincorporation of eeded States much more likely to be effected, or much better worth attempting. After all allowances, in spite of all calculations, as the net result of the most sanguine estimates on ide, the conclusive facts will still remain-insureither mountable, undeniable, and not to be explained away ;- that the seceding States are now ten in number, that their aggregate white population cannot be short of 8,000,000; and that, of these, no one believes that fewer than five or six millions are genuine and passionate Secessionists. Now, the politician who believes that five or six millions of resolute and virulent Anglo-Saxons can be forcibly retained as citizens of a Republic from which they are determined to sepa-rate, or that they would be desirable or comfortable fellow-citizens if so retained, must have some standard for estimating values and probabilities which is utterly unintelligible to us. Parties who quarrel as a matter of temper may be reconciled or cooled; parties who quarrel over a question of abstract right, or about a division of profit, of property, or of spoil, may submit their claims to arbitration; subjects or sections who rebel against a recognised and powerful Government may be coerced, punished, extermi-nated, or cowed into submission. But to subjugate, to conciliate, to terrify, or to re-embrace many millions of free men who believe themselves to constitute independent and overeign States, who are trained to arms, who are inured to self-government, who from infancy and for generations have be have been accustomed to tyrannise and bully, but never taught to forbear, to submit, or to obey,—this is a feat which has never yet been achieved, and which no sober or ane man would attempt.

But the existence of a large Unionist minority in several of the States—a fact which it is as impossible to doubt as to measure—points, we think, to a different conclusion, and must have very important influence on the ultimate issue. It may very probably complicate secession with subdivision. Already the United States have shown marvellous aptitude for multiplication by the process which naturalists term Amparous generation. They propagate by splitting. Not only have newly-acquired territories divided and subdivided

themselves into distinct States, but old States have followed Maine, if we are not mistaken, or set the enticing example. owes its separate existence to this operation. Now, in the four Border States, Missouri, Kentucky, Virginia, and Maryland, the Secessionist party and the Unionist party, if not equally divided, are both so powerful, that neither can carry the State into the camp it favours without everytic a decrease of account of the interval. exercising a degree of coercion over its rival, which so mearly equal a rival can scarcely be expected to tolerate. Thus, Missouri is not naturally, either by soil or climate, a Slave State-that is, there is nothing in either which specially or imperatively dictates the employment of Slave labour; and many of the residents are already beginning to admit that it was a mistake ever to have insisted on its introduction. Sooner or later it will, we doubt not, become free; and, considering that it has no natural or necessary boundariesthat its limits are merely an affair of maps and parchments --there seems little reason why the free-soil portion which adjoins Kansas should not annex itself to that State, leaving adjoins Raises should not annex lisen to this state, terms the Slaveholders to form a new province, or to join one of their Southern neighbours. Again, why should the Kentucky Unionists be overborne by the Kentucky Secessionists, or attempt to overbear them? Why need half the citizens drag over the other half to a decision in which they do not agree and a lot in which they are not willing to participate --simply because they happen to form portion of a district which has been accustomed to act as a political unit in the old Federation? Virginia, too, we know, is nearly equally divided in opinions and sympathies. East Virginia is Slaveholding and Secessionist. West Virginia is free-soil, is zealous for the Union, and is yearly becoming rich, populous, and therefore powerful at the expense of its Negro-breeding co-inhabitants. Virginia, as a whole, cannot embrace either the Northern or the Southern side in the quarrel, cannot join either the old Union or the new Confederation, without inflicting an oppression and a wrong upon one-half of its citizens, — without, in fact, placing itself exactly in the citizens,—without, in fact, placing itself exactly in the same position as the aggregate Republic has been over since this unhappy controversy commenced. United Virginia will be a picture in miniature of what the "United States" are on a great scale—a nation divided against itself. But why should Virginia remain united, or continue to constitute one political integer? East Virginia has just the same right, and just the same motive, to separate from Western Virginia, as the South has to separate from the North. The original connection in each case was partly accidental, partly traditional, partly spontaneous;—in each case, as in every case in America, the will of the people was, and must always be, the supreme and inappellable tribunal—the ultima ratio regum. Nay, in the instance of the State, the matter is clearer than in the instance of the Federation ;--since there is no natural division between the North and the South; but Eastern and Western Virginia are divided by the Alleghany range.

621

Ultimately, we have little doubt, matters will work themselves out pretty much as nature and common sense suggest. The Americans are not people to be *coerced* in any direction, either in their larger or their smaller subdivisions. Those whose interests or whose sympathies incline them to unite or to remain united, will do so:—those whose interests or whose sympathies incline them to severance, will sever ; and no man or Government will be able to say them nay. Virginia may choose to split; Missouri may hesitate for a while; Kentucky may elect to remain obstinately neutral. But gradually the problem will solve itself. The Slaves in these border districts will grow more and more restless and fugitive; the more energetic, and therefore the more valuable, Negroes will escape into the the Free States, whence no law of extradition will then deliver them up ;—and their masters, finding their property growing daily more precarious, will be anxious to realise while they can, and will sell their Slaves South as speedily as possible. As soon as Slaves cease to be a desirable property to hold in Kentucky, Missouri, East Virginia, and Maryland, they will cease to be held there; and as soon as they are sold off and disappear, these States will fall into the Northern Confederacy as a matter of course. This will be the operation of natural influences, if events are left to work themselves out in peace. If once the passions of civil war be let loose, no man can foresee the issue. If Virginia, with its half million

# THE ECONOMIST.

of Slaves, be made the seat of hostilities, it will be almost impossible for the best efforts of both parties to prevent the strife being complicated by the horrors of a servile insur rection.

THE INTERFERENCE OF THE HOUSE OF LORDS WITH THE JUST CLAIMS OF CREDITORS IN BANKRUPTCY.

The Lords have made several alterations in the Bankruptey Bill which are of considerable importance. The point of real importance, from which no legal subtlety and no artificial complexity should ever be permitted to divert the attention of men of business, is the superintendence of the bankrupt's estate. The creditors should take care that they have the uncontrolled management of that estate; that they appoint good persons to manage it; that they watch over those persons efficiently and vigilantly. The single question which men of business should ask as to a Bankruptcy Act is, " Does it enable us to manage our own affairs or does it not?"

Sir Richard Bethell's Bill, as it went up from the House of Commons, did give to the creditors their rightful power. It enabled them to appoint a "creditor's assignee," who should be their agent—who should watch over their interests—who should be amenable to their control. It gave this assignee full power to act in the details of management, to wind up pending matters, to discharge just claims, to *liquidate* the entire estate easily and effectually.

The Lords have preserved to the creditors the right of appointing their own assignee, but have destroyed his powers. They have cut out all the clauses which gave bim his peculiar efficiency, and have left the name standing as a sort of titular rank. It is well known that several Lords of influence and eminence object to the management of an estate by the creditors, and wish to vest it in a Court of Law. They fancy that they thus obtain an effectual security against deceit and fraud. Those conversant practically with the subject are aware that they do not obtain it; they are aware that the Court is frequently made an engine of fraud; that much that is important is concealed from it; that much which is laid before it is erroneous; that it often decides in ignorance of the most important facts; and that it is left in that ignorance by the misconduct of a few and the neglect of many.

Ail who know the subject practically know that it is a difficult one; they know that no mode of winding-up a bankrupt's estate will ever be satisfactory; they know that it will always yield less than was expected; that those who anticipated much will be angry at receiving little; that those who have managed the estate will be excessively blamed for failure, and will not be excessively praised for auccess; but they know at the same time that the only chance is that in this difficult matter, as in others, people should be permitted to manage their own affairs; that if their failure is probable, the failure of others is certain; that hoping to administer a perplexed estate by the official agency of a Court of Law is simply sowing the seed of failure, and then hoping to reap the harvest of success.

### THE NEW TAX ON SALT IN INDIA.

THE following is Mr Laing's own account of his new tax on salt alluded to in a former article :---

"Salt will show a large increase, viz, from 3,391,630l in 1860-61 to 3,980,000l in 1861-62. In 1859, the rates of duty on salt were as follows:—

	Re	. 88.	p.	
Bengal	2	8	0	per maund.
Madras	0	14	0	-
Bombay	0	12	0	-
North-West	2	0	0	-
Punjab	2	0	0	
Oude			0	
overnment then proposed t	to 1	rais	e	the duty generally

Madrao	1	0	0		0	2	0	
Bombry	1	0	õ		0	4	a	
Funjab	2	2	0	********	ő	2	Õ	

The expectation of increased revenue has been fully realised. The produce of the salt duties (exclusive of imported salt) rose from 2,602,000/ in 1858-59, the last year of the old duties, to 3,391,000/ in 1860-61, showing an increase of 789,000/, to which must be added about 100,000/ for the indication of duty or imported and the salt of th 789,000%, to which must be added about 100,000% for the increase of duty on imported salt levied through the Customs. The slight increase of duty, therefore, imposed in 1859, and which I believe no one has felt, has produced nearly 1,000,000%, or two-thirds as much as the income tar. The fact is, the increase of duty had no effect what-ever in checking consumption. The amount per head, or for each family, paid for salt, is, as Mr Plowden conclusively showed in 1855, very slight, and the general rise of wages and increase of prosperity have made this slight. rise of wages and increase of prosperity have made this di amount comparatively still slighter; so that a large incre alight of consumption has gone on concurrently with an advance of duty. In Madras the returns show an average consump-tion of 480,000 maunds a month for the sixteen months since the duty was raised, as against 456,000 maunds per month for the corresponding period under the old duty. In fact a rise of duty of 121 per cent. coincided with an increase of consumption of 5 per cent, and the revenue gained 15 per cent. In Bombay an increase of 33 per cent, on the duty raised the revenue 36 per cent., showing here also an increase of consumption. In Bengal the result was still more favourable, and in the North-West the result was extraordinary, showing an increase of no less than 30 per cent. in consumption coincident with a rise of 25 per cent. in duty, In the face of facts like these, there could be no reasonable doubt that a further slight increase may be borne, without oppressing the people or checking consumption, especially as e approaching opening of the railways will, in many cases, cheapen the price of salt in the interior. It would not, how over, have been wise to hazard the results already obtained by too large an advance so soon after that lately made. Accordingly, after consultations with the local Govern the following additions have been made, viz., in Bengal, Bom bay, and Madras, 4 annas per maund, raising the duty to 34 rupees in Bengal, and 1-4 rupees in Madras and Bombay. the North-West and Oude, 8 annas, raising the duty to 3 In rupees and doing away with the preventive line at Allahabad. In the Punjab 1 rupee, assimilating the duty on this side of the Indus to that on the North-West. In Nagpore 1-8 rupees, and in Scinde 1 rupee per maund will be imposed where no duty now exists. A corresponding increase is made in the Customs duties on imported salt. The effect of these additions of duty, estimated on the actual rate of consump-tion, with some allowance for a possible falling off, though I see no reason to anticipate any, gives me an additional revenue of 598,3701."

### THE COMMERCIAL TREATY WITH FRANCE.

A SUPPLEMENT to the London Gazette, published on Wednesday, states that the Lords of the Committee of Privy Council for Trade have received, through Her Majesty's Secretary of State for Foreign Affairs, copies of the French Moniteur, containing Imperial decrees of the 27th and 29th May last, promulgating a treaty of commerce, concluded on the 1st May last, between France and Belgium, and extending its provisions to the United Kingdom, in excention of the 5th Article of the Second Supplementary Convention to the treaty of commerce between this country and France of the 23rd January, 1860: also a decree of the 29th May, fixing, in conformity with the provisions of such treaty between France and Belgium, the rates at which it establishes are applicable to the several classes of articles comprised in the tariff annexed to it.

The following are the modifications of, and the additions to, the tariff annexed to the supplemental conventions to the treaty with the United Kingdom, contained in the present treaty between France and Belgium. This list, taken in conjunction with the tariff annexed to the above-mentioned supplemental conventions, will show the duties at which articles of British produce or manufacture will be henceforth admissible into France.

Excise Durites. -- Modifications in Duties imposed by virtue of Article III., Second Supplementary Convention of 23rd November, 1860. -- Chloride of lime. 100 kilos, 7f 50c. Glass-ware, window-glass, and other white glass, 100 kilos, 2f. Glass bottles, 100 kilos, 80c. Artificial ultramarine, 100 kilos, 6f 75c. Sal anmoniae, 100 kilos, 10f.

ties, 100 knos, 50c. Artificial ultramarine, 100 knos, 61 for ammoniae, 100 kilos, 10f. IMPORT DUTIES.—Modifications in Import Daties fixed by Treaty of Commerce.—In French or British vessels :—Iron for ships' ballast, to pay as pig iron. Steel; hoop-steel, to pay as steel in bars. Steel in sheets or bands, brown, hot-rolled, of

### THE CIVIL WAR IN AMERICA.

THE following is a copy of the letter laid before the House of Commons by Lord John Russell last evening :-

Foreign Office, June 1, 1861. Foreign Office, June 1, 1861. My Lords,—Her Majesty's Government are, as you are aware, desirous of observing the strictest neutrality in the contest which appears to be imminent between the United States and the so-styled Confederate States of North America; and, with the view more effectually to carry out this principle, they propose to inter-dict the armed ships, and also the privateers of both partices, from carrying prizes made by them into the ports, harbours, road-steads, or waters of the United Kingdom, or of any of Her Ma-ient's colonies or prosessions abroad

steads, or waters of the United Kingdom, or of any of Her Ma-jesty's colonies or possessions abroad. I have accordingly to acquaint your Lordships that the Queen has been pleased to direct that orders in conformity with the principles above stated should forthwith be addressed to all proper authorities in the United Kingdom, and to Her Majesty's naval and other authorities in all quarters beyond the United Kingdom, for their guidance in the circumstances.—I have, &c., The Lords Commissioners of the Admiralty. J. RUSSELL. Similar letters have been addressed to the Secretaries of State for India, War, and the Colonies.

# Agriculture.

# STOCK FARMING OR CORN GROWING?

SEASONS recur from time to time in this country, which serve to remind us that grain-especially wheat-growing is not, cannot safely be made the basis of our agricultural system. Such was that of 1860. It was one of the great vices of the Corn Law that it operated as an encouragement to farmers to rely unduly upon grain growing for profitable farming. The ascertainment of this effect of restrictions on corn importation, which was accomplished by the Select Committee on Agricultural Distress of 1886, constituted the main argument with the more intelligent landowners and farmers in favour of free trade in corn. Indeed, from that period it has been an axiom with our leading agriculturists that the English farmers must not depend too much on corn growing. In the language of a witness examined liefore the committee, "they must not go to the barn's door for everything." Everything has since served to confirm that view, and year by year it has been SEASONS recur from time to time in this country, which serve to

more and more adopted by an increasing number of farmers. The events of last year have completed the general conversion of agricul-tural opinion from a reliance on corn growing to greater expecta-tions of profit from breeding or grazing. Indeed we are not sure that there are not signs of a somewhat too violent change of opinion on these points. There are districts in this country where husbandry exclusively, or almost exclusively pastoral will be found most advantageous; while there are others where, from local circumstances and the character of the soil, grain growing must ever form the main object of the husbandman. But taking the far greater part of the country, a combination of stock and corn farming will year by year, in the average of seasons, be found the most advantage and profitable method of cultivation. In corn growing, the English farmer has to compete with all the world in producing an article of the first necessity, for the production of which many of his competitors have important advantages over him in respect of sei and clinate. This need not discourage him, but it involves the ne-cessity of always growing the best crop the season will permit. In and climate. This need not discourage him, but it involves the ne-cessity of always growing the best crop the senson will permit. In average seasons he will find his nearness to the home market, the aids he may derive from the appliances of an advanced system of agriculture, and his own skill and energy, will enable him to com-pete with all foreign corn growers. Though the price of corn in a good season may be moderate, the English farmer, growing good crops, will have no reason to be dissatisfied with the returns from his corn land if he do not rely exclusively on corn growing.

crops, will have no reason to be dissitisted with the returns from his corn land if he do not rely exclusively on corn growing. In stock farming, the British farmer has advantages over all com-petitors. He has the best breeds of stock to be found in the world wherewith to conduct his operations. He has, if not a prac-tical monopoly of the market, so great an advantage over all im-porters of live stock as to secure him remunerative returns from his stock when stock imported from abroad cannot be sold at a profit. And, above all, stock farming is in this country far more independent of the casualties of season than grain cultivation. The numerous discussions and lectures at farmers' clubs and agricultural societies treating of stock and stock farming, which have of late been reported, indicate the present direction of the agricultural mind on these subjects, and the result will assuredly be most favourable to agricultural progress. What has of late years been called "high farming" has con-sisted of combinations of stock-feeding and corn growing, in which a large quantity of stock has been fed, affording thereby a great force of valuable manure, and, as the result, heavy crops of corn. Doubtless this may have been carried too far in particular in-stances, especially in cases of landowners farming their own pro-perty ; but for the most part, in cases of the anti-farmers—men who get their living by farming—the men who have farmed the highest perty; but for the most part, in cases of tenant-farmers—men who get their living by farming—the men who have farmed the highest have proved the most successful men in business. The particular point at which stock feeding may be carried too far for profit, is a matter for each farmer's own consideration, and it is one in which every farmer who is a man of business will soon determine for himself.

every farmer who is a man of business will soon determine for himself. It may perhaps be doubtful whether breeding stock may not have been too generally abandoned for feeding stock only. We believe that it has; and that a combination of breeding and feeding will be found on the greater number of English farms the most profitable plan of stock management. This must not, however, be confounded with any reaction to low farming, that is, to a system under which poorly-fed stock, and small crops, satisfied the farmer. Some such notion appears to have been suggested, in a paper on "The Comparative Economy of Grazing and Corn Growing," by Mer A. Burnett, in the recently published number of the "Journal of the Bath and West of England Agricultural Society," when he says : "Whether in the altered circumstances under which English arable husbandry is now practised, *low* farming conducted with skill and enterprise (for there is no incongruity in the association of terms) would not impart to the farmer's annual balance-sheet a better aspect than it derives from the present abnormal system of of *high* farming?" That is the question to which his paper —in some respects a useful one—is directed. He considers it to be a mistake to suppose that the demand for farm produce is capable of any such wide and indefinite increase as -in some respects a useful one-is directed. He considered it to be a mistake to suppose that the demand for farm produce is capable of any such wide and indefinite increase as in the case with articles of commerce and manufactures; the well-to-do classes do not consume more bread, meat, or that dairy He seems to overlook the fact that as the people become mor prosperous through the opening up of fresh commercial and manufacturing outlets, they become greater consumers, and con prosperous

[June 8, 1861.

625

sume better kinds of food. Thus the present demand for meat is due to the increased wages of the working classes, free trade in corn having kept the cost of bread at a moderate rate. Mr Burnett seems to apprehend that such an in-crease of the productions of husbandry may take place as to cause "a superbundance in the market," and asks whether "it would not be better to persuade the present generation of tillage farmers to pause a little in their struggle to outvie each other in efforts to extort from the soil an unwilling yield, and to bestow their thoughts on these questions: 1st, whether a more matural produce obtained by less expensive means of cultivation might not be more profitable; and 2nd, whether corn husbandry, in place of maintaining that supremacy which it has usurped in the last and present centuries, ought not in many instances to give place to pastoral management?" Now there can be little difficulty in answering those questions

lasi and present centuries, ought not in many instances to give place to pastoral management?" Now there can be little difficulty in answering those questions in the negative. Farmers should do all they can to increase their produce both of corn and cattle, and this may doubtless be often best effected by reducing the area yearly under corn, in order that a greater breadth of green crop or pasture may be secured. Too great dependence should not be placed on corn growing, but that implies no diminution of effort on the part of each farmer to "extort" from his land actually under corn cropping the largest possible amount of produce. It is of no use then to refer back to the days ef our ancestors when want of winter provender limited the extent to which stock could be kept, and the summer fallew supplied the principal means of renovating the tillage land. Mr Burnett, however, says: "The modern agriculturist, accus-tomed to regard the magnitude of the home-made dung-heap as the truest criterion of good and remunerative farming, may inquire by what momes the old husbandman, growing neither roots nor artificial hay on bisfarm, was enabled to keep his fields in a bearing condition?" The short answer is, that the old husbandman did not keep his fields in a bearing condition if his produce is compared with that of the modern farmer. Mr Burnett says that the old farmer plenghed in green crops as manure, and that he brought away from the towns nightsoil and other excrete which are now carried away by sewage. These are assumed as more than equivalent to the manure made on a modern farm by stock feeding. Surely this is invoine all that the modern farme by stock feeding. Surely this is invoine all that the modern farme by stock feeding. Surely this is invoine all that the modern farme by actor feeding. from the towns ngnisqui and other excreta which are now carried away by sewage. These are assumed as more than equivalent to the manue made on a modern farme by stock feeding. Surely this is ignoring all that the modern farmer has done and is still doing. From a comparison of Arthur Young's statistics with those of Mr Chird, the writer infers that the superiority of produce now, as compared with that of Arthur Young's day, does not exceed in wheat, seven bushels; in barley, one bushel; and in oats, four bushels per more. And that, although produce has not increased more than those quantities, rents have increased from 10s to 16s me area. He also professate to show that in the least improved names that those quantities, rents have increased from 10s to 16s per acre. He also professes to show that in the least improved counties, where the average increase of wheat per acre is less than two bunkels, rents have risen 10s per acre, while in the most im-proved counties rents have not risen more than 3s 7d per acre. These propositions will not bear the test of examination. The drift of the paper is to recommend less reliance on corn growing and more on dairy produce and meat. It is contended that excessive cost is incurred in manuring the arable land for which the corn grown yields no profitable return. The following is the winter's own summary of the conclusions deducible from his pre-vious statements :---<sup>th</sup> 1st. That expansive to a certain extent as are the demands of the population for breadstuffs, butchers' meat, and dairy produce, in proportion to the gradual increase of numbers and weakit, they are, nevertheless, far from unlimited, and there-fore the aim of the English farmer ought to be not to stimulate his fields by expensive means, and in an unavailing struggle with a unaversele wheat-growing climate, into excessive productive-ness, for that (the consumption being limited) would necessarily, if successful, tend to occasion glut and consequent depression of an unavourable wheat-growing climate, into excessive productive-ness, for that (the consumption being limited) would necessarily, if successful, tend to occasion glut and consequent depression of prine, but to farm economically, even although less crops should be the result, for that would assuredly conduce to uphold prices. Andly. We have suggested the great importance of en-couraging the habit of making the most of moderate means. Staly. We have shown cause why a large measure of reformed practice must he organised, that this must be in extending the bain of grazing husbandry, and that in devising new methods of maaging his corn fields the farmer will do well to remember that there was a time when cereal fertility in England was kept in pro-gressive advancement by tillage alone, unaccompanied by any alternation of green crops; or to speak more precisely, by tillage supplemented by manure from extraneous resources." Certainly thas is not very definite. A little consideration of the business of farming will show that the retrograde views of the writer are erroneous. A farmer has a certain acreage, for which he pays actioning will show that the retrograde views of the writer are erroneous. A farmer has a certain acreage, for which he pays rent, rates, and taxes; which (being arable) he ploughs, harrows, and aceds with grain or pulse of some sort. These are constant and large items of outlay. Without manure, or with but little manure, his wheat may vary from 16 to 20 bushels to the acre, that having been shown by Mr Lawes to be about the natural rate of produce on medium unmanured land. Other grains may be taken to bear a relative proportion

to be a rate of a medium unmanured land. Other grains may be taken to be a rate a relative proportion. Such is the position of what our writer calls the *low* farmer. Now the high farmer, incurring no more expense, may by means of manure about double his produce of corn. Can there be any doubt that his only care need be that he does not pay too much for his manure? Nor in truth is this ever done by the professional

farmer for any length of time. He soon finds whether his outlays for the sake of manure prove profitable or not.

BE JUST TO INDIA; Prevent Famine and Cherish Commerce. By A Member of the Cotton Supply Association. Manchester: B. Wheeler. Turs pamphlet consists of little more than a recapitulation of our various shortcomings in the government of India, with numerous suggestions for improvement in the form of extracts from Indian newspapers, evidence given before Parliamentary committees, and other sources. Some of the statements are entitled to consideration, but many are evidently imbued with that factions spirit which seems inseparable from all discussions respecting Indian matters. The author does not shrink from attributing to our wilfal mis-government not merely the mutiny, but the present famine. He government not merely the mutiny, but the present famine. He says, ": a docide and industrious people we have driven to revolt, and millions of them are now being exposed to the perils of famine"; a remark which in the first part is not only unfair but untrue, and in the second leaves it to be inferred that the famine is the direct consequence of the sepoy mutiny. He also accuses the English Government of allowing "the great works of irrigation, that the native Governments of a previous age had established all over the country for increasing the fertility of the soil, to fall into decay," apparently without the slightest justice.

EMANCIPATION IN THE WEST INDES. Two Addresses by E. B. UNDERHILL, Esq., and the Rev. J. T. BROWN. London: Published by the British and Foreign Anti-Slavery Society.

Published by the British and Foreign Anti-Slavery Society. THIS pamphlet contains two addresses delivered on their returns at a public meeting, by a deputation from the Baptist Missionary Society sent to visit the West Indies. They give, as might be expected, very flattering accounts of the character and prospects. of the Negro population, and profess to vindicate those classes from the charges of idleness, immorality, &c., which have been fre-quently brought against them. An attempt has also been made to prove that the West Indies have not generally deteriorated in prosperity, but with very little success. Occasionally also awk-ward passages appear respecting ruined estates, and the vice and dissipation of the chief towns, which will go far to modify the effect produced by the arguments in the addresses. In the second of the two, Mr Brown takes, among others, Mr Trollope roundly to task for alleged misrepresentations, in his work on the West Indies, respecting the religious progress of the Baptist denomi-nation. nation.

HANDBOOK TO QUEENSLAND. New Zealand Gazette Office. THE above work completes the series of handbooks for the Austra The above work completes the series of nancooks for the Austra-lian colonies. It gives a brief but at the same time sufficiently succinct account of the province of Queensland, its history, poli-tical institutions, natural resources, &c. To persons about to visit the colony, intending settlers, and others, this handbook will prove generally useful.

### GENERAL LITERATURE.

HISTORY OF THE SIEGE OF DELHI. BY AN OFFICER WHO SERVED

HISTORY OF THE SIEGE OF DELHI. By AN OFFICEE WHO SERVED THERE. Adam and Charles Black, Edinburgh. THIS is, we believe, the only attempt at a complete history of the Siege of Delhi, from the hasty descent of General Anson and the three regiments from their summer retreat among the hills round Simla to the fall of the city, and the march of the victorious army to the second relief of Lucknow, that has yet appeared. Vivid but incomplete pictures of this great struggle,—the turning point of the whole mutiny,—have been given in the letters and diaries of men whose names will be inseparably connected with the heoric deeds they describe; but these, written in the heat of action, are partially coloured by misconceptions, and by the with the heoric deeds they describe; but these, written in the heat of action, are partially coloured by misconceptions, and by the passions and prejudices of the moment ;—they lose in wholeness of view and in impartiality while gaining immensely in vividness and in keenness of interest. The time is certainly gone by when a book with Delhi upon its titlepage would be eagerly read and generally talked of, yet such talen as these of the siege of Delhi, or, of Lucknow, can scarcely become stale with age, or lose their per-manent place among the proudest, if the most sorrowful, remem-brances of the neiter. brances of the nation

brances of the nation. It would be superfluous at this date and in the cursory fashion that would alone be possible in these columns to enter into any of the details of this history. It will suffice to say that it appears to be compiled with care and accuracy from notes taken on the spot, from personal experience and inquiries, and from various private and published sources. The style is clear and concise; the tone moderate and impartial. The writer, while giving all praise to the valour, endurance, and final moderation in victory of the English, does not hesitate to condemn the blood-thirsty spirit shown by

[June 8, 1861.

many in the early stages of the mutiny, or to commend the fidelity of the native soldiers and servants who clung to our cause through the greatest trials and temptations—temptations from their own countrymen, and trials from the harshness and injustice with which they were too often treated by those whom they were so essentially serving. Once when a sudden assault upon the camp had been repelled, "The infantry, finding no one to fight with, turned their rage on a number of defenceless servants who had collected for refuge near the churchyard. Several wretches were butchered; some hiding behind the tombs. One woman was shot through the breast. It is idle to say that they mistook them for sepoys; so many sanguinary fights and executions had brutalised our men, who now regarded the life of a native as of less value than that of the meanest of animals. Nor had their officers endeavoured, either by precept or example, to correct them. Next day twenty-three syces, companions of those who had been killed, took the road to their homes. Men of humanity were shocked, and this made the their home their homes. Men of humanity were shocked, and this made the most reckless reflect. There were ten natives to every European in camp. In every troop of artillery there were four times as many natives as Europeans; in the cavalry two men to every horse. Without them the work could not go on."

From this time the natives were treated with greater humanity, and their services more appreciated. No one can be surprised that the exasperation of men so cruelly injured should have shown itself in some acts of violence and unjustifiable retaliation; but it is well that such things should be acknowledged as, perhaps, inevitable evils, and not defended, as they once were, as deeds of necessary and just retribution. In determining "to paint people in their natural hues," our author deserves, and we hope will obtain, the public support he asks for.

THE CORNHILL MAGAZINE for June. Smith and Elder. MACMILLAN'S MAGAZINE for June. Macmillan. TEMPLE BAR MAGAZINE for June. Temple Bar Office. THE DUBLIN UNIVERSITY MAGAZINE. June. No. 3 No. 342. Hurst and Blackett.

THE ST JAMES'S MAGAZINE. JUNE. No. 3, W. Kent and Co. THE EMILISHWOMAN'S DOMESTIC MAGAZINE. JUNE. No. June. No. 14.

S. O. Beeton, 248 Strand. Ma THACKERAY'S story in the "Cornhill Magazine" is of more than usual interest and artistic power in the present number, and in other respects it seems more than usually interesting. The paper on the "English Convict System" is perhaps scarcely so able as that on the Irish system in a recent number. That on the Study of History is very enod.

able as that on the Irish system in a recent number. That on the Study of History is very good. "Macmillan" is a very good number. There is, besides most graphic and able chapters of "Tom Brown," a valuable paper by Mr Ludlow on the American struggle. "Temple Bar" still depends on Mr Sala for the support of his very great and unquestionable but extremely disagreeable ability, and such in an enormous amount of eccemption that has the

"Temple Bar" still depends on Mr Sala for the support of his very great and unquestionable but extremely disagreeable ability, and sucks in an enormous amount of screaming trash from other quarters, as, for instance, the tale called "A Haunted Life." There is nothing in the present number of the "Dublin University Magazine" that requires especial notice, though many articles in which the topics of the day are handled with good sense and ability. In one, the "Linsh Poor Laws" are defended against the improvements of injudicious benevolence that would sap the independence of the poor by a more indiscriminate application of out-door relief. In another, the permanent nature of the Volunteer Movement is discussed, and some suggestions made as to its extension and support by both Government and people. Three are various in subject and pleasant in style. The "St James's Magazine" has some good names among its contributors. Professor Ansted's paper on "San Domingo" is well worth reading. It does not give a favourable impression of Negro industry, but it is confessedly slight and imperfect as a picture of the condition of the republic as a whole. The author of "Paul Ferroll" contributes the first number of a Polish tale of which we can only say that it is a souried reputation. The other

of "Paul Ferroll" contributes the first number of a Polish tale of which we can only say that it is as yet too early to judge whether it will prove worthy of its writer's acquired reputation. The other writers at any rate do not seem to agree with one amongst them-selves, who is of opinion that "space in the St James's is too precious to waste on what is scarcely worth telling." If, as we suppose, fashions and needlework, or other light feminine industries and recreations, are the staple commodities of the "Englishwoman's Domestic Magazine," none of its con-tributors will, we think, have cause to complain of the care and liberality shown in this month's number. The patterns are numerous, new, and pretty. If the letterpress is not of the first order, it is probably as good as can be looked for in a periodical of this kind.

# Foreign Correspondence. (FROM OUR CORRESPONDENTS.)

PARIS, Thursday,

The Legislative Body, yesterday, commenced the discussion of the Budget for 1862, and is continuing it to-day. As usual in this country, the Budget was referred to the examination of a Committee of the said Body, and that Committee has presented a report. This document, though drawn up in as favourable a spirit as possible to the Government, shows very clearly that in order to make the estimated receipts of the coming year approach the estimated expenses, the expedient of counting mere temporary resources as permanent branches of income has been employed, though it is neither excusable nor safe. The temporary resources referred to are the imposition of what is called the double decime (two-tenths) on all taxes, which though established in 1855 for two years only, has been maintained since; the increased tax on alcohol, the suspension of the sinking fund, &c. The report also complains that though the Government has none but temporary resources to deal with, it incurs expenses which are permanent, and which increase every year. It considers it a bounden duty to "call the solicitude of the Government to a situation which bears alike the burden of large military expenses and of great enterprises which are the work of peace," and prays it to "display great firmness in the administration of the finances, not to weaken the resources of old taxes, to check the increase of erpenses, and by prudent economy to place them in harmony with the amount of ordinary receipts."

The Budget of 1862 as presented by the Government amounts to 1,929,448,725f, and is 89,326,867f more than in 1861. The augmentation is ascribed to the expenses occasioned by the dif-ferent branches of the administration in the three new depart-mental service, to the planting of mountains and making roads through forests, to an increase in the debt occasioned by the consolidation of reserves of the sinking fund, and the employment of the surplus of the dotation of the army, &c., &c. But the Committee proposes to make sundry reductions and addi-tions, and the result is that the expenses, ordinary and extraordinary, are set down by it at 1,350,497,873f. The receipts, ordinary and extraordinary, are estimated by the Government at 1,941,030,275f, which are 100,254,605f more than in 1861. This increase is ascribed partly to the revenues from Nice and Savoy, partly to the normal increase in the taxe. According, however, to the Committee's estimate the total receipts will be 1,354,798,872f, leaving a surplus of 4,300,997f. It must be observed that the figures of the Committee do not include sums of 619,271,156f which appear for the sake of regularity in the accounts, both in the receipts and expenses, and which are called by the French " receipts and expenses d'ordre." For all the ministerial department is only (including colonies) 1,485,126f; that to the War department is, however, 27,467,777f. The total sum set down for the Marine is 126,015,419f; that of war is 372,972,421f. It is not stated what naval force is to be main-tained, but the effective of the army will be, it is announced, 400,000 men and 85,705 horses. The discussion in the Chamber did not make much progress. M. Kenigswarter, a deputy who possesses some authority in finan-The Budget of 1862 as presented by the Government amounts to 1,929,448,725f, and is 89,326,867f more than in 1861. The

The discussion in the Chamber did not make much pr M. Kœnigswarter, a deputy who possesses some authority in fin cial questions, recommended a reduction of expenses, particularly in the War department, and in the number of functionaries in all departments \_\_\_\_\_\_ In the v ar department, and in the number of functionaries in all departments,—and an increase of receipts by the establishment of an income tax. The latter, he added, would tend to equalize the burden of taxation which at present is shared very unequally among the different classes of society. M. Magne, the ex-Minister of Finance, replied, and very energetically affirmed that the Govern-ment has no intention of establishing a tax on incomes. The debate has been continued to-day.

ment has no intention of establishing a tax on incomes. The debate has been continued to-day. The Government has presented to the Legislative Body a bill suthorising it to commence the works of as many as 22 new rail-ways, most of them being embranchments of existing lines, or pro-longations thereof; also to give subventions to certain lines pre-viously decreed, and among them one not exceeding 1,500,000f to the Northern Railway Company, for modifications in the route to be taken by the Boulogne to Calais line. The 22 new railways form altogether a length of 1,325 kilometres (818 miles), and will cost, it is calculated, about 367,000,000f. Many persons are of opinion that before commencing new lines the Government would have done well to have completed those in course of execution, espe-cially as the financial situation of the country is not satisfactory. To begin these lines the Government asks for a grant of 10,000,000 in the present year, to be raised by an issue of Trea-sury bonds.

sury bonds. The Bank of France has published an account of the results of

hey wished to receive. In a amount represented by the rooty of bonds exceeds 9,000,000 sterling, and it is all required to be paid up in the course of the present year. The charges to be preferred against M. Mires and his partner, M. Solar, have been published. They are that the two embezzled money, shares, bonds, and other securities confided to them in their capacity as bankers, or gérants of the Caisse Générale des Chemins de Fer; and that they swindled the shareholders of the Pampeluna to Saragossa Railway out of the huge sum of 9,150,750f. They are also charged with having distributed dividends out of capital,—an offence severely punished under the present law on companies en commandite. The members of their conseil de surveillance, Count Simeon, a Senator, Baron de Pontalba, and other sare accused of complicity in the latter effence. Inconvenience existing in consequence of the manner of fixing the tonage of merchandise on board ship, varying in different ports in this country, the Minister of Commerce has charged a commission to devise some uniform plan, and has required the Chambers of Commerce of the great seaports to send delegates to it.

to it.

The Bourse to-day has naturally been much moved by the terrible news of the death of Count de Cavour, and a general decline compared with yesterday has taken place. The following is a comparison between the quotations of to-day and those of last Thursday:-

A DECREASE of Reserve of	728,476

The above return is rather unfavourable. A decrease has taken place both in the reserve and the bullion, in the latter case partly from a withdrawal of silver by the Indian Government for exportation. A considerable augmentation is shown in the other securities, while in the other deposits there is a very large diminution. The public deposits continue to be augmented by revenue payments.

Subjoined is our usual table, affording a compara-tive view of the Bank returns, the Bank rate of discount, the price of Consols, the price of wheat, and the leading exchanges, during a period of four years, corresponding with the present date, as well as ten years back, viz., in 1851 :-

In the corresponding week of 1851 the money market was easy, and the bullion at the Bank was steadily increas-ing. Large quantities of gold were being exported from The advices from the Cape reported a continu-California. ance of the Caffre war, but no important operations had taken place on either side.

In 1858, the rate of discount of the Bank of France was from 4 to  $3\frac{1}{2}$  per cent, the bullion having augmented two millions and three quarters sterling within a month.

In 1859, the Bank of England had just reduced their rate of discount from  $3\frac{1}{2}$  to 3 per cent. The French and Sar-dinian armies in Italy fully maintained their advantage over the Austrians. The disruption of the Derby Ministry was considered imminent, and the general appearance of politics was disturbed.

In 1860, the Italian question was absorbing attention, and in most quarters was regarded with much uneasiness. In the discount market money was easy and obtainable at a fraction below the Bank minimum of 4 per cent. The Committee of the Stock Exchange had just published their re-

# THE ECONOMIST.

upon the transactions of Pullinger, the fraudulent er of the Union Bank.

e amount of the "other" deposits, as compared with the "other" securities, showed, in 1851, a deficiency of 8831,4277; in 1858, a deficiency of 871,8377; in 1858, deficiency of 871,8377; in 1869, deficiency of 3,107,1507; and in 1860, a deficiency of 282,7427. In 1861, the deficiency is 9,148,5757. 7.282.7421.

DISCOUNT AND MONEY MARKET .- The principal feature in the money market this week has been an active demand on the Stock Exchange, owing to the Consol settlement, loans on Government securities yesterday morning having been obtained with extreme difficulty. Later in the day some considerable sums were borrowed from the Bank at 6 being the pressure was gradually mitigated. To, day there was more ease, and the rate declined to  $5\frac{1}{2}$  per cent. This temporary pressure has reacted upon the general market, and few transactions now take place below the Bank minimum, although early in the week the usual terms were 5<sup>±</sup>/<sub>2</sub> to <sup>±</sup>/<sub>2</sub> per cent. There does not, however, appear any want of capital, the moneyed houses being well supplied with funds, but the same tendency exists as for some time past, to exercise the greatest caution in doing business, and to contract operations as much as possible whenever the general market is at all disturbed. To-day rather more confidence was shown, but only the best short dated could still be negotiated below 6 per cent.

The following are the rates of discount in the principal cities of the Continent :-

	Bank Rate. Per cent.	Open Market. Per cent.
Paris	5	41
Vienna	6	
Berlin	4	
Frankfort	3	
Amsterdam	3	
Turin	6	
Brussels	3	
Hamburg		21
St Petersburg	6	

ENGLISH FUNDS .- The monthly settlement in the funds took place yesterday, and a large amount of stock being brought forward the market showed extreme heaviness, which was increased by the lamentable news of the death of Count Cavour. Consols at one period receded as low as  $89\frac{5}{8}$ , but afterwards rallied to  $89\frac{4}{8}$  to 90. The increased supply of stock at the present settling is due to the sales by public for reinvestment in Indian and other securities th yielding a higher rate of interest. The announcement of the new loan for India has also exercised a prejudicial effect. The comparative disfavour with which the British public are beginning to regard Consols as a permanent in vestment affords a great contrast to the feeling a few year ago. To-day the tendency has again been flat, and the final prices this evening were 89# to # for money, and 901 to # for the account, or a half per cent. lower than last Friday.

Exchequer bills were rather dull in the earlier part of the week, but the June descriptions have since been in slightly better demand, and closed to-day at par to 4s pre-mium, showing a slight rise. The March bills are without change at 6s to 2s discount. The increase in the rate of interest on India bonds has caused only a partial recovery, the last quotation being 30s to 20s discount

The Indian Five per. Cent. stock left off at 971 to 98 ex div. for the new account, being a decline of more than 1 per cent.

In the Stock Exchange, yesterday, owing to the scarcity of money, as much as 7 to 7<sup>1</sup>/<sub>2</sub> per cent. was paid to carry over purchases in Consols to the next account. <sup>•</sup> As regards Indian Five per Cents., transactions are reported to have taken place as high as 9 per cent. FOREIGN STOCKS.—The transactions in foreign stocks

continue on a very moderate scale, and the general tendency has again been flat. Sardinian has declined owing to the death of Count Cavour, but not to the extent that might have been anticipated. Turkish Six per Cents. of 1858 have also fallen, on the fear that further complications may arise not only in the settlement of the Italian question, but also as regards Eastern affairs. The Russian Four-and-a-half per Cent. loan of last year reached to-day 89 ex div. the price at which it was issued having been nominally 92, or deducting the allowance of interest; 90§. Mexican shows a fresh reduction of nearly 's per cent., and the late improve-ment in Portuguese and Spanish has not been maintained.

The closing price from Paris this evening was 67f 60c ex coupon, showing a decline of about three eighths per cent. compared with last week, but a recovery of nearly a quarter from yesterday's quotation.

The annexed reply of the Committee of Spanish American Bondholders with regard to the debt of New Granada to the Government recently established in that republic has just been published. Senor Martin has expressed his concur-rence in the view taken by the Committee :--

Committee of Spanish American Bondholders, 11 Austinfriars, London, May 31.

Sir,-I have the honour to acknowledge the receipt of your letter of the 1st inst., with the two enclosures contained therein, which I have laid before the Committee of Spanish American Bondholders.

Bondholders. This Committee, while always abstaining from taking any part in the political differences of New Granada, is at all times prepared to receive with respect any communication which may be addressed to it in relation to the foreign debt of that State.

to it in relation to the foreign debt of that State. But with regard to the notification contained in your letter, the Committee are under the necessity of stating to you that the agree-ment entered into with his Excellency Senor I. de Fransisco Martin for the arrangement of the foreign debt of New Granada, being concluded under every sanction and formality which can give force to any agreement whatever, being founded on an Act of the national Congress carried into effect by the Executive Govern-ment, cannot be effected by any change which may be contem-plated or impending in the Government or Constitution of New Grenada.

plated or impending in the Government or Constitution of New Grenada. This agreement has been framed in a spirit of most liberal con-cession towards New Granada, in the hope that, being brought within the limit of the financial capability of the Republic, it might be found to constitute a permanent settlement of the debt. The Committee can well believe that, as you are pleased to inti-mate, even more acceptable conditions might be presented to the bonholders. But, the agreement being once definitively con-cluded, the Committee feel that it would be contrary to every prin-ciple of business to open out any fresh discussion of the question. The Committee cannot but take this occasion of respectfully offering the expression of their fervent hope that the political dissensions now existing in New Granada may speedily be brought to an end, so that measures may be taken for developing the vast resources of that country, which the bondholders will cheerfully aid in doing whenever there shall be tranquility restored on a permanent basis.—I have the honour to be, Sir, your obedient servant, J. D. PowLES, Chairman of the Committee. of Spanish American Bondholders. Senor Don Juan M. de la Espriella, the first appointed Chargé of the Executive Power of the State. Subjoined is a list of the highest and lowest prices

RAILWAYS AND OTHER SHARES .- The railway market shows a reaction from the better prices of last week, owing partly to the publication of low traffic returns and partly to the news from Turin. To-day there has been a rather better feeling, but only a fractional recovery has taken place. A disposition still exists to press speculative sales, especially in the country, not merely on the American crisis, but also on the increased chances of a disturbance to the peace of Provide the state of the stat Europe arising from the iamentable event of yesterday.

In the colonial market, Indian guaranteed descriptions have generally maintained their late value, although the original East Indian stock is rather flatter. Canadian shares dull, especially Great Western.

631

The principal movement in foreign shares has been in Lombardo-Venetian, which, after falling yesterday to 1 to  $\frac{7}{2}$  dis., subsequently rallied, and closed this evening at  $\frac{2}{4}$  to  $\frac{5}{2}$ dis. The recent improvement in Great Luxembourg has been partly lost. Brazilian railway shares are flatter, while American show no material change.

In miscellaneous descriptions, the late inquiry for joint stock bank shares has diminished. Great Ship declined in the course of the week, but left off this evening the same as last Friday, at 5s 9d to 6s 3d. The new China and Japan Steam are quoted par to ‡ premium, and Natal Land a to § premium.

Subjoined is our usual list of the closing prices of the principal railway shares last Friday and to-day

FOREIGN EXCHANGES.—The rates continue firm, and are generally quoted higher. The news of yesterday has been followed by a movement in the rates on Vienna and Trieste unfavourable to the Austrian currency, indicating a signifi-

and want of confidence. BULLION.—The following is the weekly report of Messrs Pixley, Abell, and Langley upon the bullion movements during the week, and the transactions in Indian rupee paper : Gold.—The Owen Glendower has arrived from Anstralia with

during the week, and the transactions in Indian rupee paper : Gold.—The Owen Glendower has arrived from Australia with 57,000(, about half of which has been purchased for abroad, and the remainder will probably be sent to the Bank. The Prince of Wales is now hourly expected, having been spoken with off Co-runna some days since. The Magdalena has brought 35,687/ from the Brazils, and some considerable amounts of gold coin have been received from the Continent. The demand for export not having been very brisk during the week, about 150,000/ has been bought by the Bank. Sovereigns continue to be sent to America, the Arabia having taken 82,861/, and the City of Baltimore 161,4384, and the steamer leaving on the 8th will also take a large sum. The other exports comprise 58,000/ per Seine to the West Indies; 17,636/ per Indus to the East; and 50,000/ per Dane to the Cape. Silver.—The silver, ex Tasmania, has been sold at 50 of ge per oz standard, being a slight decline in price; there is but little demand for the East, and the market for the present is quiet at the above quotation. The Seine has taken 7,600/ to the West Indies, and the Indus 190,041/ to India and China. Mexican Dollars.—The dollars ex Tasmanian have been sold

Mexican Dollars.—The dollars ex Tasmanian have been sold at 59d per oz, being a decline of <sup>1</sup>/<sub>4</sub>d per oz; the market is very quiet, nor do we look for much improvement, unless the China quiet, n letters

quiet, nor do we look for much improvement, unless the China letters should contain orders. Exchange on India for drafts on Bombay and Calcutta is un-changed; for 60 days' sight drafts the rate is 1s 11 and to 2s. Bills with documents, 1s 11 and to 1s 11 and. Madras 60 days' sight bank drafts, 1s 11 and to 2s. India Government loan notes have been rather stronger, owing to the forwardhe parts from India and the site the hold the

drafts, 1s 11 % to 2s. India Government loan notes have been rather stronger, owing to the favourable news from India, and the rise that had taken place there on the announcement of Mr Laing's budget. We quote 5½ per Cents., 99¾ to 100¼, and 5 per Cents. 99¾ to 94¼. Quotations for Bullion.—Gold.—Bar gold, 77s 9d per oz std; bar gold, fine, 77s 9½ dper oz std; bar gold refinable, 77s 11d per oz std; United States gold coin, scarce. Silver—Bar silver, 5s 0¾ per oz std; bar silver, containing 5 grs gold, 5s 0¾ dper oz std; fine cake silver, 5s 5¼ dper oz; Mexican dollars, 4s 11d per oz; Spanish dollars (Carolus) in demand, scarce. About half of the 57.000/ in gold by the Owen Glendower

About half of the 57,000l in gold by the Owen Glendow has been taken for Spain.

The bar gold sent into the Bank to-day was 45,000l,

# THE ECONOMIST.

suspension has been announced of another old-established country bank, that of Messrs T. and R. Raikes and Co., of Hull. The liabilities are about 66,000/, while the assets are expected to realise 17s in the pound. The cause of the failure has not transpired.

The stoppage has also been announced of Messrs Mackay and Read, East India agents, of London, for about 30,000%.

The creditors of Mr Joseph Sutcliffe, at a meeting at Manchester, have agreed to accept a composition of 7s 6d in the pound without security, the insolvent to execute a deed of assignment. The committee of investigation reported that the bookkeeping has been very defective, and that apparently Mr Sutcliffe was without capital at a time when he represented himself to be worth 17,000l.

a meeting of the creditors of Messrs George Moorhouse and Co., it was agreed to accept 5s in the pound. The realisable assets represent 7,500l only, against 30,000l liabilities, and the firm appear to have been long insolvent.

The suspension is announced of Messrs D. and J. Thompson, merchants, of Dundee, with liabilities to the amount of about 40,000*l*, and assets showing a surplus. An offer has already been made to pay 20s in the pound. The disaster is stated to have arisen from the position of houses con-nected with Messrs Thompson in America.

PUBLIC COMPANIES .- The annual meeting of the Bank of British North America was held on Tuesday, when the report announcing a dividend at the rate of 6 per cent. per annum free of income tax was adopted unanimously. It was stated that the business during the past year has not improved to the extent previously anticipated by the Directors, the North American colonies not having fully recovered from their late depression. A large portion also of the abundant harvest of 1860 has not yet been got to market. In the first few months of the present year, however, a material improvement has taken place, while no bad debts have been incurred. The crisis in America is not expected to affect injuriously the business of the bank, notwith stand ing the extensive commerce carried on between Canada and the United States. It may in fact tend to increase the operations of this establishment by bringing a large quantity of Western produce through the colony. A considerable profit has been realised by exchange operations. A larger provision than usual has been made for contingencies, including a suit for about 8,000l, now before the Supreme Court of the United States, but which the Directors have every reason to believe will be decided in their favour. The new branch at Vancouver's Island has not realised previous expectation. A short discussion took place, in course of which it was mentioned, in reply to an inquiry, that the cause of the profits during the last four years having been one-third less than in the previous four, is the great depression in the colonies during the former period, together with the heavy losses of the bank in 1857 and 1858. A meeting of the London Chartered Bank of Australia

A meeting of the London Chartered Bank of Australia was held to-day, when the report, recommending a dividend of 3<sup>1</sup>/<sub>2</sub> per cent. for the past half-year free of income tax, the appropriation of 10,000*l* to the reserve, and of 1,500*l* to the colonial building fund, leaving a balance to be carried forward of 7,848*l*, was carried unanimously. The position of the bank was stated to be steadily and satisfactorily im-proving, and the Directors confidently look forward to the when the dividend may be increased. The present is the best yet issued. The bad debts in the past period report is the best yet issued. report is the best yet issued. The bad debis in the past half-year have been extraordinarily small, notwithstanding the occurrence of some serious failures in the colony, a result mainly due to the great care and caution exercised by the inspector and other officers of the staff. The bank premises at Sydney have been revalued, and 3,000/ written off on this account, owing to the depreciation of property in that city. The other branches stand in the books at their real value. The practice of allowing interest on deposits, which had been agreed to be abandoned by the managers of the various banks in Australia has not been ratified by the Directors of one of the leading establishments; but it is hoped that some stand may yet be made against its reintro-duction. A discussion took place with reference to the proposed addition to the reserve, and a proprietor moved

making a total of 70,000l since making up the returns in this evening's Gazette. About 344,000l in Australian gold is now overdue. FAILURES AND MERCANTILE EMBARRASSMENTS. — The that, instead of this appropriation, the dividend be increased 1 per cent. On a division, however, the motion was lost, only two hands being held up in its favour. In explanation of the apparently large sum in bullion held by the bank, it was mentioned that about 364,000l of the total repres gold, either sent or about to be sent to this country

At the half-yearly meeting of the Peninsular and Oriental Steam Company, the report recommending a dividend at the rate of 31 per cent. for the half-year free of income tax was agreed to. The various services were stated to have been carried on with remarkable punctuality during the last six months, and no casualty of any importance has occurred to The last addition to the active list is the Mooltan, the fleet. which has recently been fitted with the superheating apparatus to save coal, and has been tried satisfactorily, but has not yet made a sea voyage. It has been decided to lengthen the Ripon, an iron steamer built eighteen years ago, at the bow, and to supply her with new boilers, &c. The proposal of the Company to consolidate boilers, &c. the various services under one contract has been agreed to by the Government, but under a different form to the one first suggested. One of the provisions was that a certain sum should be paid for some small services hitherto performed gratuitously, of which the most important was the alternative fortnightly mail to China. Since then, the Government have determined to discontinue this service, although it costs no more than about 12,000%. Some discussion took place upon various points connected with the half-year's working, in the course of which the injury to trade by the disco tinuance of the fortnightly China mail was pointed out by several speakers. The fleet of the Company now consists of hers of 17,111 horse-power, and eight transport store 52 stean

and coal ships, of a total tonnage of 80,756 tons. At a meeting of the African Steam Company on Wednes day, the report recommending a dividend of 7s per share, or at the rate of 7 per cent. per annum free of income tax, was adopted after a short discussion. It was also determined to appropriate 1,000l out of the profits of the past half-year to the credit of the boiler fund account, which will now stand at 3,000l, and to write off 1,201l of the loss by the sale of the Gambia, which will thereby be reduced to 1,0004. During the past six months the service has been conducted satisfactorily, and the contract time has been kept. The ascertained loss on the sale of the Hope is 13,706/, which it is intended to provide for by instalments. No further information has been received as to the intentions of the Government with regard to the navigation of the Niger.

#### COMPARATIVE EXCHANGES.

COMPARATIVE EXCHANGES. The quotation of gold at Paris is about 2 per mille premium, and the abort exchange on London is 25.32 per listerling. On comparing these rates with the English mint price of 3/ 17s 10<sup>3</sup>/<sub>2</sub>d per ounce for standard gold, it appears that gold is about 4-10ths per cent, dearer in London than in Peris. than in Paris,

By advices from Hamburg the price of gold is  $427\frac{1}{2}$  per mark, and the short exchange on London is  $13.7\frac{1}{6}$  per 1l sterling. Standard gold at the English. Mint price is, therefore, about 4-10ths per cent. descer in

the English Mint price is, therefore, about 4-10ths per cent. dearer in London than in Hamburg. The course of exchange at New York on London for bills at 60 days' sight is 105<sup>1</sup>/<sub>2</sub> to 106 per cent., which, when compared with the mint par between the two countries, shows that the exchange is against England. But, after making allowance for charges of transport and loss of interest, the present rats leaves little, if any, profit on the transmission of gold to the United States.

WEEKLY CORN RETURNS.

#### COMMERCIAL EPITOME. FRIDAY NIGHT.

There was only a limited supply of English wheat on offer at Mark lane to-day ; nevertheless, all kinds met a dull inquiry, at prices barely equal to Monday. Foreign wheat was dull, and rather lower to sell. Spring corn sold heavily, and American flour was 6d per barrel cheaper. The imports from abroad this week are 20,460 quarters of wheat, 980 barley, 19,510 oats, 1,230 sacks and 21,970 barrels of flour.

At Liverpool, this morning, nearly all kinds of produce were heavy, and drooping in price.

neavy, and drooping in price. The receipts of old wheat at Alexandria on the 25th ult. had almost ceased; but some parcels of new had come to hand, which had been disposed of at very high prices. Barley, beans, and Indian corn were in limited request, at about previous currencies. Wheat, Saide, Pacha's produce, 34s to 35s; Saide beans, 27s 6d to 28s; Beheireh ditto, 25s 3d to 26s; and barley, 17s 6d to 18s 6d per quarter, free on board. Freights very firm, at 7s per quarter for beans.

quarter for beans. During the present week there has been a good though not brisk demand for cotton at Liverpool, the news from America relating to the crop being unfavourable, and inducing holders to remain firm in their demands. The sales of the week amount to 79,000 bales, of which 49,000 are to spinners, 17,000 on specu-lation, and 13,000 for export; quotations are the same as last week. To-day the market closes steady; sales 10,000 bales.

week. To-day the market closes steady; sales 10,000 bales. Messrs Briggs and Co. write as follows on the 25th ult., at Alexandria, in reference to the cotton trade :----- An active business has prevailed during the week past, although somewhat checked by the increased pretensions of holders, and also by the smallness of the stock, which is believed to be between 2,000 to 3,000 bales. The sales have been as follows :--36 bales low ordinary at 61-15d to 7d; 826 ordinary to middling, 7d to 8d; 1,187 good middling to fair, 8d to 84d; 332 good fair to good, 84d to 9d; 530 good to fine, 9d to 11d per lb, free on board. Freights by steamers are well supported, owing to the great desire of holders both of cotton and grain to get their stuff to market as quickly as possible. Cot-ton is at 9-16d and 5 per cent. per lb, by ships §ths to 7-16ths of a penny per lb. a penny per lb.

The public sales of tea held this week have been somewhat heavy; nevertheless, prices have ruled tolerably firm. In the private market, very little is doing.

The transactions in most descriptions of raw sugar have con-tinued limited, and, in some instances, prices have further de-clined 6d per cwt. Refined goods are the turn cheaper.

The annexed statistics, in reference to sugar and coffee, are furnished by Messrs Trueman and Rouse :--PORTS, for the Four Months ending 30th April, 1860 and 1861.

Scarcely any change has taken place in the value of coffee. The ansactions, however, have been chiefly confined to immediate rants. The cocoa market is heavy, at barely last week's quotations. Messrs Witherby and Son remark as follows in reference to the wants. 

Currants,—The market ousness has been on a very innice scale since the end of the March, but as the deliveries to the trade alone since that date have been 2,600 tons, it is inferred that dealers will soon be coming forward to replenish their stocks. There has scarcely been any variation in the value of good currants since last November ; low fruit then quoted at 25s to 26s is now becoming scarce at 27s, and on that description has the consumption mainly fallon. The stock of old fruit is the stock of old fruit is the stock of old fruit is then quoted at 23s to 26s, is now becoming scarce as art, description has the consumption mainly fallen. The stock of old fruit is very small. Raisins.—The clearances here for consumption in May were 432 tons, sgainst 560 in May, 1860, and about 115 tons for export. There has been a decline of 2s in red raisins, bringing prices to those which prevailed in March, and which led to considerable trade. This article is difficult to realise, even at the reduction. Middling sul-tions of the state of those which prevailed in March, and which led to considerable trade. This article is difficult to realise, even at the reduction. Middling sul-tanas have been sold at 41s; for beld at 44s; no buyers. Valentias quite neglected. No old fruit here of any kind. Owing to the fall in the value of wheat, the rice market has been in a depressed state, and, in some instances, the currencies have had a drooping tendency. Saltpetre has met a dull sale; nevertheless, we have no change to notice in the quotations. Both hemp and flax have ruled heavy, on former terms.

The following remarks are furnished by Messrs Powell and Co.

connection with the hide trade is the great reduction in the value of hides in the North American markets. This fact will double occasion a considerable exportation thence to Europe, and will also divert many shipments usually made to America to the Euro-pean markets."

pean markets." The second series of colonial wool sales terminated on Thurs-day. The catalogues comprised 13,672 bales Sydney, 20,860 Port Philip, 4,686 Van Diemen's Land, 13,792 Adelaide, 1,322 New Zealand, 1,014 Swan River, 8,450 Cape, and 2,379 bales foreign. With the usual attendance of home buyers, a large number of foreign ones presented themselves, who continued their operations from day to day with such vigour that the opening rates soon became permanently established, and the little change that took place throughout the series was against the buyer. This was particularly the case upon the finer descriptions, both clothing and combing, and upon Western Province or full-bodied Cape, which, throughout, have been 1d to 14d per lb dearer than during last sales. The short and heavy Algoa Bay and Natal wools, on the contrary, were difficult of sale, and barely supported the closing rates of March. The only other exception to the general firmness was in medium and ordinary Port Philip secoured skin wools. The private contract market for both home-grown and colonial wool is very inactive, yet prices rule about stationary. STATE OF THE SILK WAREHOUSES IN LONDON, May 31, 1860 and 1841.

Total . 10869 . ...... 18772 . . 21848 .... 6357 ... 7080 Messrs Churchill and Son have issued the annexed statement of

the COMPARATIVE STOCE of TIMBER at the PUBLIC DOCKS on JUNE 1.

Foreign deals
Fir timberloads 43,500 30,100 30,900
Colonial pine deals & battens, pieces 709,000 313,000 468,00
Spruce ditto
Pine timberloads 8,300 8,800 6,10
United States pitch pine timber 1,900 3,800 3,400
East Indian teake 2,900 6,000 15,00

The following observations are from Messrs Grant and Hodgon' monthly report of the tobacco trade :---" Considerable busines was transacted last month in all descriptions. Nearly all the de-sirable lots of home descriptions brought forward were freely takes, sirable lots of home descriptions brought forward were freely takes, at an advance on previous quotations, and buyers in some instances would have increased their purchases, but for the unwillingness of importers to progress with sales, excepting for very limited lots, and for parts of parcels only. Sales may be estimated at fully 3,048 hbds, viz., 462 hbds Virginia leaf, 703 hbds and tierces of strips, 517 hbds of Kentucky leaf, 960 hbds of strips, and 442 hbds of Maryland, part of which has been taken on speculation. The market closes with a very firm appearance. Imports, 253 hbds. Deliveries, 1,038 hbds, against 814 hbds in the correspond-ing month of last year. Stock, 18,163 hbds, against 16,549 hbds in 1860, 10,123 hbds in 1859, 8,222 hbds in 1858, 9,759 hbds in 1857, and 7,054 hbds in 1866.

Scotch pig iron has been in moderate request, at 48s 3d cash mixed numbers. A few parcels of spelter have changed hands at 16/10s per ton. Other metals have moved off slowly.

# MARKETS IN THE MANUFACTURING DISTRI CTS-

The advices at hand from the manufacturing districts, this week,

The advices at hand from the manufacturing districts, this week, are otherwise than favourable. A fair amount of business appears to have been transacted in goods for home consumption; but for export both to India and America, the inquiry has continued limited. The iron trade has raled steady; but the demand for coals has been much restricted. MAXCHESTER, June 6.—The market has continued extremely dull ad spiritless. Buyers of yarn for the Continent had been operating in the early portion of the week, as they had been doing for the few weeks before, but Count Cavour's decease would, it is thought to-day, prove somewhat of a check on further business. The accounts from India this week have been most discouraging, shoring heavy losses, especially from Bombay, on nearly all our products. Accordingly, India staple, which were almost the only aleable articles last week, have become more difficult of sale. The declension in India having proceeded step by step with the enhance-ment of cotton here, our manufacturers feel themselves in a most dangerous position, from which they can discern no present outlet. Other markets afford no hopes of making up the loss. HPARAT.

Prices are considerably lower for most sorts, and have a drooping tendency. Business continues almost at a standstill in yarns, and prices are depressed. The little that is done is chiefly for the home trade. The orders offered for abroad are at exceed-

ingly low rates. The piece branch of our market shows the most signs of life, though its condition is still unsatisfactory. Our home merchants are making inquiries for the home trade, though the or-ders given out are hitherto very few. LEXES.—The cloth markets have been flat. The sales have been to a very limited extent. Merchants, those in the home as well as those in the foreign trade, are holding off buying, as they find their stocks accumulating instead of diminishing. Those who wish to realise have to concede in price, but there is no disposition to force sales, and hence prices upon the whole are steady. English wools in the local markets are rather easier to buy. ROCHALE.—There has been a small attendance of buyers in both the wool and the fiannel markets, and the business done has been below an average. The local staplers have scarcely any short

both the wool and the flannel markets, and the business cone has been below an average. The local staplers have scarcely any short wools, for which there is a fair demand at late prices. Long wools are slightly easier. Though the sales of flannel are slow, manu-facturers will abate nothing in price, nor are they curtailing much in their rate of production. The demand for Yorkshire goods continues flat, and to effect sales some concession in price has to be made

<text><text><text><text><text> or quality.

### CORN.

### AMERICAN GRAIN AND FLOUR MARKETS.

New York, May 22.—With the continued plentiful receipts, the market for State and Western flour has become somewhat de-pressed, and dealers generally quote a depreciation in values of about 5c per barrel for common grades. Canada flour is steady, with a fair demand at previous prices. The demand for Southern flour continues fair, and prices are firmer.

tion of the sales have been to arrive. The common and inferior grades have been dull. Corn is in request, but prices are lower for Western and firmer for Southern.

Execut from 1st	1861.	ay.	1860.	
Whent		**********		

New York, May 25.—A full average business has been passing in flour since the above report, and prices have been well main-tained. Good and fine wheat is in fair request, at an advance of le to 2c per bushel; but inferior kinds are a dull sale. Corn, of useful and fine quality, is rather dearer. Inferior samples, how-ever, command very little attention.

EXPORT of BREADSTUFFS from the UNITED STATES to GREAT BRITAIN and IRELAND, since September 1, 1860.

# LONDON MARKETS.

#### STATE OF THE CORN TRADE FOR THE WEEK. MARK LANE, FRIDAY EVENING.

Notwithstanding that the supplies of English wheat on offer, this week, have been very moderate, the demand for both red and white parcels has ruled heavy, and prices have given way 2s per quarter. In foreign wheat-the imports of which have continued liberal-the transactions have been on a moderate scale, at a fall in value of 1s per quarter. Both English and foreign barley has commanded very little attention, at late currencies. Fine malt has sold steadily, other kinds slowly, on former terms. Oats, owing to the abundance of green food, have ruled the turn lower. Both beans and peas have been stationary in price; but the value of flour has had a drooping tendency.

The accounts at hand respecting the appearance of the wheat crop, are, on the whole, favourable. Some of them, however, state that the plant is very deficient in some quarters.

The Continental markets have continued somewhat heavy for wheat, on rather easier terms. Most kinds of 'spring corn, how-ever, have maintained late currencies. Advices from New York and Montreal state that large quantities of wheat and flour were in progress of shipment to England.

In Scotland, wheat has moved off slowly, and prices have had a cooping tendency. All other kinds of produce have commanded drooping tendency. All other kinds of produce have commanded very little attention, and the shipments to the South have fallen very off.

The Irish markets have been fairly supplied with wheat, which has met a dull inquiry, at depressed rates. Other articles have been offering at lower terms.

been offering at lower terms. The supply of English wheat at Mark lane, to-day, was very limited. Nevertheless, there was no activity in the demand for either red or white qualities, yet no further change took place in prices, compared with Monday. Foreign wheat was mostly taken in retail, at late rates; but where sales were pressed, less money, —say quite ls per quarter,—was accepted. Barley, oats, beans, and peas passed off slowly, at about previous currencies. The flour trade was dull, and American barrels ruled the turn in favour of hymere of buyers

of buyers. Mr E. Rainford thus reports the trade in floating cargoes :---Only 16 arrivals off coast for orders are reported up to last night since this day week, comprising 3 cargoes of wheat, 1 flour, 8 maize, 3 barley, and 1 beans, viz. :--Wheat, 1 cargo from Reque-jada, 1 Santander, 1 Odessa; flour, 1 Santander; maize, 2 Leg-horn, 1 Fatza, 1 Marseilles, 1 Philadelphia, 2 New York, 1 Ibraila; barley, 1 Solina, 1 Ibraila, 1 Constantinople; beans, 1 Saffi. The business this week in cargoes afloat is exceedingly inert, at drooping prices for wheat and maize, the latter having experienced an unusually rapid decline. For wheat the demand for France has tended to keep up prices, or we should have seen

them still lower. The following are the rates paid since the slat ult :--Wheat, arrived, per 496 lbs, Californian (for Havre), 682; per 492 lbs, Hungarian (for the Continent), 553; Taganrog (for the United Kingdom), a portion damaged, 508; Odessa Ghirka, 518 661 per 480 lbs, Ibraila (for the Continent), 468. Rye, arrived, per 480 lbs, Crimean (for Bordeaux), equal to 355. Maize, arrived, per 492 lbs, Moldavian (lay days few), 34s 3d; Galatz and Tuzan (1 cargo), 338; per 480 lbs, yellow American, equal to 338 l0d; Salonica, 32s 3d; Fatza, 328 låd. Barley, arrived, per 400 lbs, Turkish, 255 6d. Salonica, 32s 3d Turkish, 25s 6d.

#### COLONIAL AND FOREIGN PRODUCE MARKETS. TRANSACTIONS OF THE WEEK. FOR REPORT OF THIS DAY'S MARKETS, SEE " POST

MINCING LANE, FRIDAY MORNING.

MIRCING LANE, FRIDAY MORNING. SUGAR.— The public sales have been heavy, and in many cases prices showed a decline of 6d to 1s up to yesterday, when numerous parcels of foreign muscovado were offered. These, however, chiefly sold. The transactions otherwise have been moderate, excepting in floating earges, which still sell freely for the outports at present low rates. Total sales in West India for the three days reached 1,625 ceaks, including many parcels offered by auction: Barbadoes, 36s to 44s, 5t Lash, 32s to 39s; grainy Berbice, 40s to 43s per cwt. There were 10,360 tons landed last week, and 4,750 tons delivered, consequently the stack has increased to 54,800 tons, against 64,900 tons in 1860 at the same date.

Mauritius.-14,900 bags, by auction, were shout half sold: grey and yellow, 35s to 40s; brown, 30s to 34s 6d; grainy, 36s 6d to 45s; crystallised, 39s to 45s; 16s duty, 46s 6d per cwt.

Bengal .- 665 bags white Benares were taken in at 451 6d to 48s per cwt.

Natal .- 204 bags sold at 32s 6d to 35s 6d for brown, and 37s 6d to 39s 5d for yellow muscovado kind.

39s 6d for yellow muscovado kind. Foreign.—A large proportion of the muscovado sorts in the sales has found buyers at rather lower rates. 808 cesks 280 barrels Porto Rico; brown and low soft grey, 34s 6d to 37s; greyiah to fine yellow, 37s 6d to 46s 6d. 1,323 casks 176 barrels Cuba: brown, 31s 6d to 34s 6d; soft low grey to fine yellow, 55s to 41s. 2,371 bage Babia were taken in at 31s 6d to 37s. 333 bags from Singapore found buyers: bright yellow, 38s to 40s; black and brown, 28s 6d to 33s 6d. 974 boxes grainy white Havana in bond were taken in at 32s to 33s 6d. Five floating cargoes of Havana have sold for the United Kingdom: No. 13, 26s 6d; 12, 25s 6d; 9 h to 10h, 23s 9d to 24s per cwt. Refined.—Some transactions were renorted during the week at rather

25s 6d; 94 to 104, 23s 9d to 24a per cwt. Refined.—Some transactions were reported during the week at rather lower rates, but there is now more inquiry. Considerable contracts have been made in Dutch crushed for forward delivery last week. MOLASSES.—100 puns West India have sold at 18s to 19s per cwt. MELADO.—Of 570 casks in publics sale, a few lots dry realised 29s 6d to 34s; the remainder, of fair quality, taken in at 26s to 27s per cwt. Cocoa.—1,082 bags Bahis, offered by auction, were bought in at 55ato. 54s. 623 bage Trinidad partly sold at irregular prices: gray, 57s to 58s; ordinary mixed to fine, 59s to 95s per cwt. 103 bags Granda ware withdrawn.

XUM

## THE ECONOMIST.

Corres.—The arrivals of Ceylon have again been large, but 915 casks 546 barrels and bags plantation chiefly met with boyers, and generally at about the former value: fine ordinary to good middling, 675 dd to 76s. 767 bags ordinary native partly met with purchasers at assier rates: good ordinary, 61s to 61s 66. 134 packages Jamsica brought 64s to 72s 64. 1,690 bags St Domingo realised 60s to 61s for good ordinary quality, being rather chasper. Of 2,016 bags Bahia, the sound portion was taken in at 53s 64 to 53s. 772 bags Singapore withdrawn. 145 bags Madras: good ordinary Malabar kind, 63s per cwt. A floating cargo of Brazil has sold, of which no particulars transpired. Tag-Several public sales commenced yesterday, the catalogues com-

sold, or watch no particulars transpired. THA.--Several public sales commenced yesterday, the catalogues con-taining 33,625 packages. 16,340 passed, and 6,300 sold with fair spirit, common scented capers being id per lb dearer than at the last series. No change has occurred by private contract.

Rock-Transactions private contract. Rick-Transactions private contract. 13s 14j seft grain, 10: 3d to 10s 6d. 8,300 bags Rangoon, in public sale comprised a large proportion of damaged, which sold at full rates. Some of the sound was of old import, and sold at 9s 6d short prompt; 500 bags common Madras were taken in at 10s, also short prompt; but 1,432 bags Bengal found buyers; small and broken Dacca kind, 10s to 10s 6d; Ballam, 9s 7jd per cwt.

Lac Dyn .-- A few small parcels in public sale found buyers: native, ow to fine, 3 d to 7 d; middling marks, 1s to 1s 1d per ib. low

OTHER DISTUTYS.-Further business has been done in good Gam-bier at 16s d. Cutch dull at 22s to 22s 6d. 67 bales Bengal safflower were sold at barely previous rates, from 3l to 4l 12s 6d for ordinary and common quality. Bengal turmeric is less in demand at 16s to 16s 6d per cet. bier per cwt.

Drawoons.-At public sale, Jamaica logwood realised 42 17s 6d; Ja-ica fusic, 52 17s 6d to 62 per ton. DYEWOOD

RUBBER is dull. Is 3d cash has been accepted for sound, and 1d per 1h is for sea-damaged. 315 bales Guayaquil sold at 1s to 1s 01d per lb.

METALS generally are slow of sale. The last contracts made in spelter were at 16/10s per ton the spot. Stock on the 1st instant 4,900 tons, against 3,500 tons at the same date last year. Scotch pig iron is quiet, at 48s 3d per ton. Tin nominally unaltered. All kinds of copper are instin-

HEMP.--1,950 bales Manilla were bought in above the value. Rus-sian is dull at the quotations. The stock of Petersburg clean, on the lat instant, was 2,200 tons, or nearly the same as in the two preceding years at the same date.

JUTE.-The public sales, on Wednesday, contained 8,315 bales, which went of flatly, and at rather lower rates: from 13/ to 20/ 5s per ton for ordinary to fine. The stock is no 10,300 tons, against 13,400 tons last year at the same date.

Linsage, —On the spot there are sellers of Bombay at 55s per qr, and Calcuta at 62s to 52s 6d for ordinary to average qualities, up to 53s to 53s 6d for Patna; about 600 tons average quality arrived, sold at 51s 3d ceat, freight and insurance, including bags, and there are now buyers at 51s 6d; Bisek Sees or Agoff for shipment up to September 53s to 53s 6d delivered U.S. U.K.

Onza-Olive remains dull : Gallipoli on the spot has sold at 582 to continuan 511 10s, and a floating cargo at 542 per tun for Cronstadt. Fish oils fortnight.

quiet. Sperm, 99/ per tun sellers. Linseed oil firmer, at 201. Rape dull. Foreign refined can be obtained at 42/ per ton. Cocos-nut has been rather pressed for sale: by speculators Caylon, 44s 6d to 45s; Cocbin, 45s 6d to 46s. Palm quiet at 45s per cwt for fine.

TURPENTINE.—Another cargo of rough and spirits has arrived from Wilmington, which is going into store for better prices; the only sale of rough this week is 200 barrels taken for export at 16s per cwt. Some forced sales of spirits have been made by speculators at 42s 6d for American in human. in barrels.

TALLOW.-A further reduction of 1s 6d to 2s has been established up foreign, and the market remains dull. Y.C., 54s; for delivery in the 1 three months, 53s per cwt.

#### POSTSCRIPT. FRIDAY EVE

POSTSCRIPT. FRIDAY EVENING. SUGAR.—There is no change in the market to-day. 778 hhds West India sold, including a portion of 654 casks Barbadoes by action at 34s to 42s, and 56 casks grainy Demerat at 37s 64 to 41s 6d. 4,113 bags Mauritius were chiefly bought in above the value. 307 bags white Benares sold at 42s 6d to 44s for low to middling. 4,100 bags grocery Madras found buyers: middling to fine, 41s to 44s; once lot white (16s duty) 47s 6d; low to middling soft yellow, 35s to 37s. 1,500 bags native were withdrawn. 585 casks Cuba melado and sugar were taken in at 27s to 84s per cwt. native were withdrawn. in at 27s to 34s per cwt.

n "Ceylon sold 250 bags good gs Jamaica sold COCOA .- 221 bags Trinidad were withdrawn.

sold at 10s 11d per cwt.

SALTPETRE.-920 bags Bengal, refracting 42 to 3, were taken in at 37s 6d to 38s. 227 bags Bombay, refraction 501 to 424, sold at 31s per

TEA.-4,637 packages sold without any further change in prices.

CUTCH .--- I,520 bags part sold at 21s to 21s 6d per cwt for slightly stained.

TALLOW .--Y. C., 54s; last three months, 52s to 52s 6d; town, 52s 9d per cwt.

IRON .- Scotch pig, 48s 6d to 48s 9d per cwt. -

#### ADDITIONAL NOTICES.

REFINED SUGAR.—The home market for refined sugar remains very very quict; no particular alteration to note with respect to prices. Treacle rather easier. Dutch crushed continues firm; the demand very Trea languid.

languid. GREEN FRUIT.--Domand continues good. Oranges of all kinds im-proved in value. Some parcels Terceirs and Valencis, sold by Keeling and Hunt at public sale, went at an advance of 2s to 3s per package. No ovement in the price of lemons, in consequence of some parameters in the price of lemons, in consequence of some parameters and the market. Para nuts lower; Barcelon of co out alteratio

DEX FRUIT .- The only inquiry for currants is for low stuff under 27s, and very little if any is now to be had. A small parcel of fine is re-ported to be sold at 32s. These two quotations are the extreme range of our market prices. The accounts from Greece state that the crop will and v be probably 15 days later than last year. Raising, with the exception of nas at easier rates, are neglected. Sultanas are inordinary red Smyrnas at quired after at 41s to 42s.

COLONIAL WOOL.-The colonial wool sales closed yesterday at form rates. The East Indian low wool sold to-day at prices about the same at the last Liverpool sales.

at the last Liverpool sales. FLAX.--Market without alteration. Hums steady: a fair business done this week. COTTON.--Sales of cotton from Friday, 31st May, to Thursday, 6th June, inclusive:---1,300 bales Surat at 5åd for middling fair Broach, 5åd for good fair new Oomrawatty, 5åd to 5åd for ordinary to middling ofd Oomrawatty, 5åd to 5åd for ordinary to middling fair Dhollera, 5åd for good fair Compta; 150 bales Tinnevelly 6d to 6åd for fair to good ; 300 bales Western Madras 5 3-16d to 5åd for mid to fair to good ; s00 bales Western Madras 5 3-16d to 5åd for mid to fair to gjogod fair. The transactions this week are again but of moderate extent, and the market is quiet. Price of Surat is partially åd per 1b lower. Tinnevelly Madras is in limited demand, but as holders evince great firmness, prices are only a shade esaier, whilst Western Madras commands previous rates. About 2,000 bales Tinnevelly have been sold for arrival at 6åd, guaranteed good fair. nteed good fair. guar

uaranteed good fair. SLLE.-Slik market without change. Tonacco.-The market has shown less activity, but prices rem ery firm, and holders decline making sales unless at extreme quotatio Maranas.-No changes have occurred during the weak, but we hav ontinuance of that uniform stagnation which has now prevailed for

In at 245 to 548 per cwr. COFFEE-557 casks 134 barrels 252 bags plantation Ceylon a Steadily at 68s to 79s for fine fine ordinary to good. 250 bags g ordinary native brought 62s to 62s 6d. 25 casks 30 bags Jamaica at previous rates. 130 bags East India from Singapore were withdraw

Ricz.-10,046 begs new Rangoon were bought in at 10s 6d to 11s, and 2,413 bags old with short prompt at 9s 6d. 1,320 bags Bengal were withdrawn above the market value. A floating cargo of Rangoon

SPICE.-1,214 bags pimento sold at 2<sup>2</sup>/<sub>2</sub>d to 2<sup>2</sup>/<sub>5</sub>d. 47 bags white pepper and 8 casks Amboyna cloves were withdrawn. 51 barrels Jamaica ginger went at about previous quotations.

Yellow Russian	55	6	
Melted stuff	36	6	
Rough ditto	21	0	
Greaves	18	0	
Good dregs	7	0	

#### PROVISIONS

Bacon market steady at former prices; delivery very large. A great advance in Friesland, price 100s, and brisk market. Fine Jersey making 92s to 94s. Very little doing in other provisions.

#### METROPOLITAN CATTLE MARKET.

MONDAT, June 3.—The total imports of foreign stock into London, last reak, amounted to 5,814 head. In the corresponding period in 1860, we seelved 6,722; in 1859, 4,452; in 1858, 2,962; in 1857, 2,531; in 1856, 305; and in 1855, 2,880 head. 2.305; 8

received 6,722; in 1859, 4,452; in 1858, 2,962; in 1857, 2,531; in 1856, 2,305; and in 1855, 2,880 head. There was a full average supply of foreign stock on offer in to-day's market, in fair average supply of foreign stock on offer in to-day's market, in fair average supply of foreign stock on offer in to-day's market, in fair average supply of foreign stock on offer in to-day's market, in fair average supply of foreign stock on offer in to-day's market, in fair average supply of foreign stock on offer in to-day's market, in fair average supply of foreign stock on offer in to-day's market, in fair average supply of foreign stock on offer in to-day's being in attendance from the provinces, the beef trade relad standy, though not to say active, and in some instances prices were a shade higher than on Monday last. The general top figure for Scots was 4s 10d, but in some instances the quotation reached 5s per 8 lbs. From Norfolk, Suffolk, Resex, and Cambridgeshire we received about 2,200 Scots, &c; from other parts of England, 300 various breeds; and from Scotland, 600 Scots and crosses. No beast reached us from Ireland. Notwithstanding that the supply of sheep was on the increase, all good and prime breeds moved off streadily at full quotations, the best Downs having sold at quite fix 6 4d per 8 lbs; other kinds of sheep, however, were a dull inquiry, and 2d per 8 lbs lower than on this day se'nnight. Prime lambs sold readily at full quota-tions; but inferior breeds were dull at barely list rates. The top price was 7s per 8 lbs. We have to report a slow sale for calves at last week's prices. The supply of foreign calves was good. Surprises. Inverse 1860

#### POTATO MARKET.

SOUTHWARK WATERSIDE, Monday, June 3. - During the past week the arrivals both coastwise and by rail have been moderate, but owing to the warm weather, and it being a holiday week, the demand has been very limited, at a further reduction in prices. The following are this day's quotations :- Norkshire Flukes, 110s to 140s; Lincolnshire Regents, 80a to 90s; North Berwick ditto, 100s to 110s; Perth, Forfar, and Fife ditto, 65s to 85s; ditto, ditto Rocks, 60s to 70s; ditto, ditto Reds, 60s to 70s per ton. to 80s; 70s per ton.

BOROUGH AND SPITALFIELDS, Friday, June 7.—The supply of ne potatoes continues steadily to increase, the demand for them rules stead but by on means active, at from 6s to 14s per owt. Old qualities are ve dull, at from 60s to 130s per tou. new ady, very

#### ПОР MARKET.

HOP MARKET. BOROUGH, Monday, June 3.—The weather of the past week has been most favourable to the development of blight. In every district the plant is amothered with vermin to an extent which has not been known for years, and which threatens one of the severest blights. The duty has re-ceded to 90,0004. Our market has been much excited, and prices have ad-vanced 10s per owt. Mid and East Kents, 90s, 150s, 210s; Weald of Kents, 60s, 130s, 180s; Sussex, 60s, 80s, 135s; Yearlinga, 120s, 150s, 200s. FRIDAT, June 7.—The plantation accounts come, very unfavourable, and the duty is estimated at only 70,0004. The market is excited, and prices have advanced 10s to 20 per cwt.

HAY MARKETS.—THURSDAY, SMITHFIELD.—Meadow hay, 22 Os to 54 Os; clover, 34 10s to 64 Os; and "raw, 14 15s to 22 Os per load. Trade dull. CUMBERLAND.—Meadow hay, 22 Os to 54 Os; clover, 34 10s to 64 Os; and straw, 14 16s to 24 Os per load. Both hay and straw moved off dawny. and at our que

our quotations. WHITECHAPEL. - Meadow hay, 21 01 to 51 0s; clover, 31 10s to 61 0s d straw, 11 lis to 21 0s per load. A heavy demand.

#### COAL MARKET.

COAL MARKET. FRIDAY, June 7.—Wall's-end Hetton, 18s-Haswell, 19s-Stuarts, 10s South Hetton, 19s-Tees, 14s 94-Hartlepool, 18s 94-Braddyl's Hetton, ts-Russell'ss Hetton, 18s-Hough Hall, 17s-Kepier Grange, 17s 94-ellos, 18s-Eden, 17s-Woodhouse Close, 16s-Harton, 16s 94-Aeorg iose, 17s-Durham, 15s 64-Shinoliffe, 16s 94 -Hedley, 16s 64-Hal-with, 15s-Tanfield Moor Butes, 13s-West Hartley, 15s 64-Davidan's artley, 15s 64-Hastings Hartley, 15s 64. Ships at market, 55. 188-Ri Kelloe, Close,

### LIVERPOOL MARKETS.

### WOOL.

(FROM GUE OWN CORRESPONDENT.) FRIDAY, June 7.-The demand has been rather languid this week; prices, however, show no material change, as importers continue to be very fra and stocks light.

### CORN.

(FROM OUE OWN CORRESPONDENT.) FRIDAY, June 7.-Market very dull. Wheat declined 1d to 2d, and flour fully 6d. Indian som in moderate demand, at a decline of 6d. Hear difficult to sell, at a decline of 1s. All other articles unaltered.

#### METALS.

METALS. FROM OUR OWN CORRESPONDENT.) FRIDAY, June 7.—There is no change to report this week in manufas-tured iron; there is a continuance of great dulness, but prices for god iron cannot be quoted lower. For Scotch pig iron there has been a quit market, with little or no change to note in prices. The copper market is wery dull, there being little or no export demand. Lead is also little inquired for. In other metals only a moderate business doing.

EPITOME OF RAILWAY NEWS.

TRAFFIC RETURNS.—The traffic returns of railways in the United Kingdom for the week ending the 25th of May amounted to 576,802/, and for the corresponding week of last year to 554,562/; showing an increase of 24,240/. The gross receipts of the eight zailways having their termini in the metropolia amounted to 252,036/, and for the corre-sponding week of 1860 to 258,132/, showing an increase of 6,096/.

#### BAILWAY AND MINING SHARE MARKETS. LONDON.

LONDON. MONDAY, June 3.—The railway market opened this morning with increased buoyancy, Midland especially experiencing a further rise; but a reaction subsequently took place, partly in sympathy with Cossis, as partly on some realisations. Colonial descriptions generally remained unaltered. Grand Trunk of Canada stock closed at 19½ to 20, and Great Western shares 10½ to 11. In the foreign market a reduction occurred in Lombardo-Venetian. American securities showed increased steadinese, Illinois Central shares leaving off at 40 to 39½ dis, and New York and Eric, 21½ to 2. Mines were in little demand, and occasionally receded. West Seton, however, advanced. Joint stock hanks was about the same as on Saturday. In miscellaneous descriptions, 32 Katharine Docks stock and Peninsslar and Oriental Steam shares was higher.

Turning Dick and Pennania and Orleast Steam and way higher. Turspar, June 4.—The railway market showed further hearings day, and another general decine took place, Midland and Lanceshins and Yorkshire being especially depre-sed. South-Eastern and Sheffield and receded about 1 per cent. The final quotations were the lowest of the day, and the market closed with a very dull appearance. In these and in a market, fulling auranteed descriptions were fairly supported, notwith-standing the announcement of the new leas. Canadian were faite, Grand Trunk stock leaving aff at 194 to 3, and Great Western abare 106 to 3. Foreign descriptions were dull. South Austrian and Lam-bardo-Venetian rallied to 5 to 4 div. Cape debentures were 1 per ant-higher. In American securities. Virginia Six per Cards, and New York and Erie shares were lower. Illinois Central were last quoted 40 to 39 dis. The transactions in mines were unimportant, and in two or these scases a slight decline took place. Joint stock banks closed about the same as yesterday. In miscellaneous descriptions, there was an advant in Royal Mail Steam, and a reduction in Crystal Palsee. Great Ship recovered to 55 9d to 65 3d. WEDNESDAY, June 5.—The railway market was again depressed in the ariy part of the day, but partially rallied towards the close. In avver Yorkshire, and Berwick. North British, Sheffield, and Eastern Counting improved. The general transactions were snimportant. In the colosial market there was a better demand for Canadian descriptions, the fall price of Grand Trunk stock being 194 to 20, and of Great Wester in Pernambuco and Lombardo-Venetian. American securities were rather farmer, New York and Erie shares especially showing an advance. There were few transactionis mines, joint stock banks, and miscellaneous descriptions, and ne material change occurred. There were few transactionis mines, point stock banks, and miscellaneous descriptions, and ne material change occurred. higher. TUZSDAY, June 4.—The railway market sh Tuzsday, June 4.—The railway market sh wed further heavi

descriptions, and ne material change occurred. THURSENAT, June 6.— The railway market opened at a decline on the lower traffic returns, and was subsequently further depressed by the fall in Consols. Later in the day a partial rally took place, but the tendency at the close was again unfavourable. Midland left off § per cent. lower, and most of the other leading stocks § to §. North-Eastern descrip-tions exceptionally improved. No change of importance occurred in the colonial market. Grand Trunk closed at 19§ to 20, and Great Western of Caouda 10§ to 11. In fareign descriptions, Lombardo-Venstien readed on the announcement of the death of Count Cavour to 1 to § dis., bat closed slightly firmer, at § to § dis. Datch-Rhquish shares and Victor Emanuel obligations were also lower. American securities were quoted the same as yesterday. Mines were dull, and in one or two cases showed a d cline.

a decline. FRIDAY, JURO 7.—In the railway share market the dealings were ex-tremely limited, and prices show little variation of importance. Briatel and Exeter have receded to 98. Brightons to 1194. Midlands to 1204. North-Eastern Berwick to 1034 1034; and disto York to 914 914. Law-cashire aud Yorkshire have improved to 110<sup>4</sup>; and Manchester, Sheffield, and Lincoln to 43. The foreign and colonial lines were very inactive, and show no change in prices. South Austrian and Lombardo-Vanetins realits 15<sup>4</sup>. Great Luxemburg, 7<sup>4</sup>. Great Western of Canadi, 109 10<sup>5</sup>. Grand Trunk of Canada, 19<sup>4</sup>. East Indian, 100<sup>4</sup> 101: and Great Indian Feninsula, 98<sup>4</sup>.

# HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, Pure White Zinc Paint is cheaper than White Lead. most durable and beautiful paint known, and does not stain or discolour with the London s It is

aphere. ADULTERATIONS.-Several Paint Grinders have been selling Zinc Paint adulterated with Subjests of Barytes, some even to the extent of thirty per cent. Another White Zinc has been now intoduced containing impurities from the mode of manufacture which retard the drying. now intoduced containing impurities from the mode of manufacture which retard the drying. Whether these are sold under the name of "Improved Zinc Paint," or as the Number Two or Three qualities, no workman can produce good work with uach material. Workunen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work. To prevent the prejudice which the inferior article must produce, each Cask of Pure White The is stagmed.-

Zine is stamped— "HUBBUCK, LONDON, PATENT." THOMAS HUBBUCK and SON, WHITE LEAD, OIL, PAINT and VARNISH WORKS, 24 LIME STREET. "Among offer twists to which it has been subjected, has been that of painting the hold of a sugar vessel, which after a voyage to SK Kit's and back was found, after washing, to be as white as the first day the paint was applied "-Jony Bulk, September 14, 1850.

THE NEW SOCIETY OF PAINTERS in WATER COLOURS.-The Trenty-seventh Annual Exhibition of this Society is now coup-at their Gallery, 35 Pall Mail, mar St James's Palace. Adminster, 18 Catalogue, 64. Season tickets, 56. JAMES FAHEY, Sec.
